> It is concerning Catraeth's variegated and ruddy [land] that it is told—
> the followers fell; long were the lamentations for them,
> the immortalised men; [but] it was not as immortals that they fought for territory
> against the descendants of Godebawg, the rightful faction:
> long biers bore off blood-stained bodies.
> It was the fate of the condemned—certain doom . . .

Similarly, the Coeling are portrayed as the enemies responsible for the death of Cunedda in Marwnad Cunedda, and he, too, was a hero from the district of Manaw in Gododdin, according to *Historia Brittonum* §62.

Welsh *coel* as a common noun means 'belief or omen' and is cognate with Old English *hæl* 'lucky omen'. Old Irish *cél* 'auspicious' is a loanword from Brythonic. There is a second Welsh word which is a variant of *cofl* 'bundle'. The idea that the district of Kyle (older Cuil, Cyil) in south-west Scotland (Alba) preserves Coel's name is doubtful on two counts: for a Brythonic territory to simply have a man's name without a prefix (*Tir, Bro, Gwlad*) or a suffix (*-ing, -iawn, -ydd, -(i)awg*) is

uncommon; and the CYNWYDION of Dumbarton (see YSTRAD CLUD) seem to have been the chief dynasty of this area, not the Coeling. *Hen* is the regular Welsh word for 'old', cognate with Old Irish *sen* and Gaulish *seno-*; in genealogies, *Hen* often refers to an important ancestor figure. *Godebog* means 'protective'; cf. the 6th-century king Voteporīx who is commemorated on a bilingual stone from near Carmarthen (CAERFYRDDIN).

Cogidubnus, Claudius Tiberius (var. Cogidumnus) was a pro-Roman British king who ruled the client kingdom, later CIVITAS, of the Rēgni or Rēgnēnses, in what is now Sussex, during the mid- and later 1st century AD. In AGRICOLA 14, TACITUS, writing *c.* AD 98, states that *civitates* were given into the rule of Cogidumnus during the governorships of Aulus Plautius (AD 43–7) and Ostorius Scapula (AD 47–52) and that Cogidumnus had remained a faithful friend of Rome until his own time, thus implying a long reign. He is mentioned in a monumental dedicatory inscription (RIB no. 91) discovered at Chichester (NOVIOMAGOS), capital of the Rēgni, in which he is called *Legatus Augusti in Britannia* (the Emperor's representative in Britain). This exalted imperial status for a native ruler has few parallels; King Herod in the Middle East held comparable status.

An enormous Roman palace built at Fishbourne near Chichester in two stages in the mid- and later 1st century AD was probably Cogidubnus's residence. It covered roughly 100 metres square and contained elaborate mosaics and vast formal gardens within its internal quadrangle. The Rēgni were the one *civitas* in Roman Britain with a Latin name, which seems to signify 'people of the kingdom [of Cogidubnus]'. This tribe was created at the time of the Roman conquest from part of the traditional country of the Atrebates, who had lost ground during the period before the invasion under the pressure from the anti-Roman CATUVELLAUNI.

The ancestry of Cogidubnus is uncertain, although he most probably descended from the dynasty of the Atrebates (of Britain and originally also of GAUL), who can be traced back to Commios who served as CAESAR's representative to Cassivellaunos in 54 BC; Commios later fell out with Caesar and abandoned Gaul in 50 BC, after which he ruled the British Atrebates for roughly another 30 years. His sons (Tincommios, Eppillos, and Virica) pursued philo-Roman policies in the decades before the Claudian invasion of AD 43, and all three had spent periods in exile among the Romans. Cogidubnus had no successor, the usual practice being for client kings to be a transitional arrangement with their authority passing to the emperor at death. *Cogidubnus/-dumnus* is a Romanized Celtic name, the last element signifying 'deep' and 'the world'. His Roman names, Claudius and Tiberius, were those of recent emperors who had probably shown favour to him and his family.

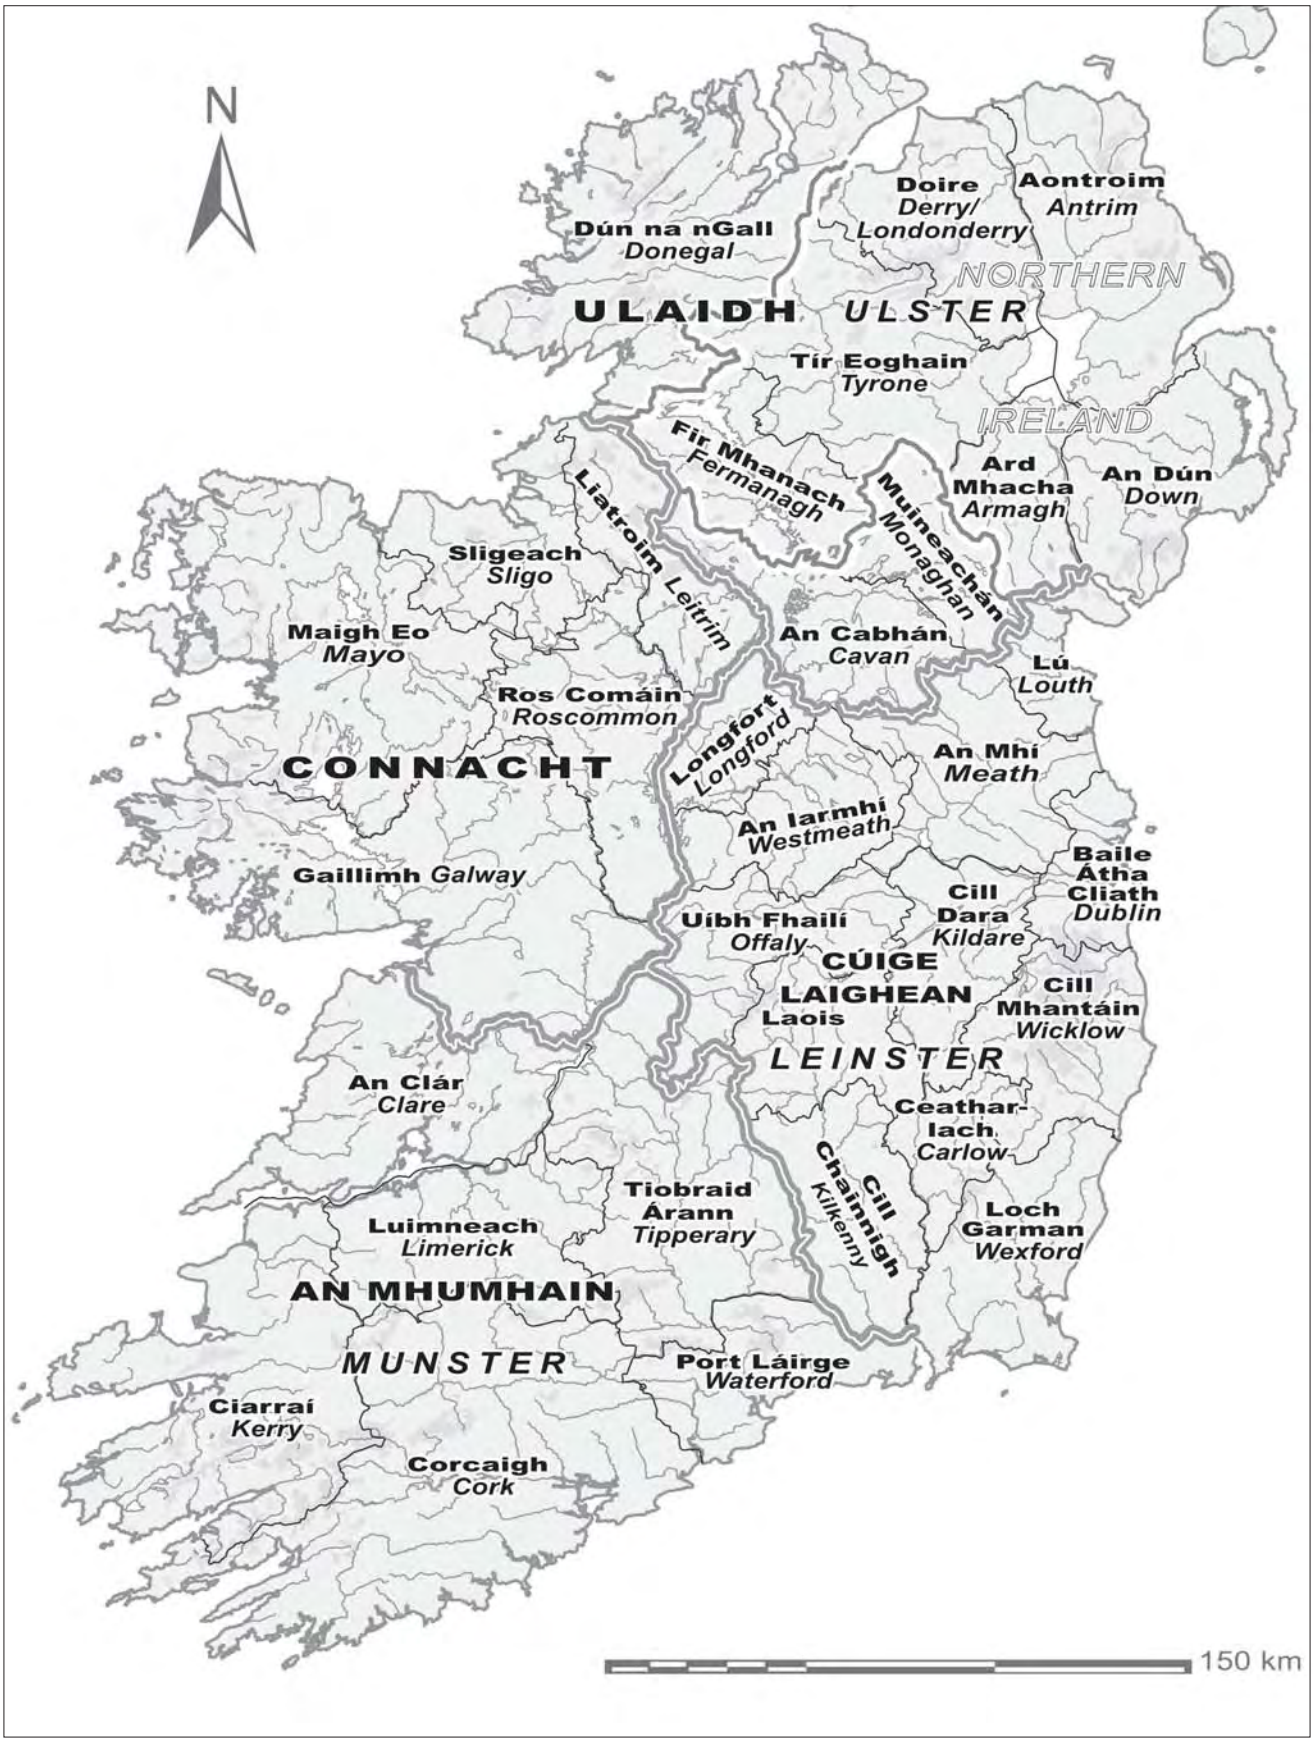
Cóiced (pl. *cóiceda*) was the term used for 'province' in early Ireland (ÉRIU). It literally means 'a fifth' (also Old Irish *cóiced*), and medieval Ireland had five provinces: ULAID (Ulster), CONNACHT, MUMU (Munster), LAIGIN (Leinster), and MIDE (Meath). In the modern reckoning of Ireland's traditional provinces—along with several lesser changes—most of what used to be Meath figures as northern Leinster. The Modern Irish form is *cúige*. The word *cóiced* occurs in 8th-century LAW TEXTS (e.g., *Miadslechta*) and in epic literature—furnishing the ULSTER CYCLE with the political background of a pentarchy, ruled by provincial kings of theoretically equal status, including CONCHOBAR of Ulaid and Ailill of Connacht. This arrangement, accepted as historical by MACNEILL in *Celtic Ireland*, assumes that the overkingdoms of Ulaid, Laigin, Connacht, Mumu and Mide all co-existed in antiquity—



Major territorial divisions of contemporary Ireland: 32 counties, four traditional provinces, and the Northern Ireland border

The 'heptarchy': major divisions of early Ireland as reflected in 'Lebor na Cert'

which probably oversimplifies historical reality. Although Mide clearly constituted an overkingship by the 7th century, its earlier status is uncertain; and even if Ulaid was by then contracting, certain overkings—for example, Fergus mac Aedáin (†692)—are described in the Annals of Ulster as *rex in Chóicid* (king of the Fifth—of Ulster). *Rí chóicid*, equivalent to *rí ruirech* of earlier law tracts, represents the highest order of kingship—'overking' of several mesne kings, each the lord of several local kings. Classical Irish polity was seemingly closer to the heptarchy (the five provinces plus the realms of Ailech and Airgialla) reflected in the 12th-century Lebor na Cert ('The Book of Rights'), where *cóiced* (presumably separated from any fractional meaning such as 'quarters' of a city), means 'province'. By this time, however, provincial readjustments had already changed Ireland's regional political structure.

Ailbhe MacShamhráin

coinage, Celtic

Celtic coinage first emerged in the late 4th to the early 3rd century BC (Middle La Tène period). Several Celtic tribes had connections with the Greeks through trade and as providers of mercenaries (see WARFARE) for various campaigns (Rankin, *Celts and the Classical World*), and the earliest Celtic coins copied Greek designs. These coins did not attempt to follow the various weight and metal purity standards of the Greek world, and they usually remained in the regions in which they were issued. Thus, it is not immediately clear to what extent the appearance of coinage among Iron Age Celts signals the transition to a true cash economy on the Mediterranean model; it could have been a continuation of earlier patterns of exchange of prestigious gifts between chieftains and followers. Of course, it is possible that the socio-economic function of Celtic coinage developed over time and varied from place to place.

§1. THE FIRST GENERATION OF CELTIC COINS

Three broad geographical zones are recognized for the Celtic prototypes (Allen, *Coins of the Ancient Celts*):

(1) An eastern silver belt followed the Danube from the Black Sea to the southern valley of the upper Elbe. The zone extended to the south of the Sava and to the north of the upper Theiss (Tisza), although there was a gap in the middle Theiss. Most of these coins derived from the Macedonian silver coins of Philip II (359–336 BC) and his successors, Alexander The Great (336–323) and Philip III (323–317). A later type, issued after the Roman conquest of Macedonia in 146 BC and found at the easternmost end of this zone, copied the tetradrachms (four-drachma coins) of Thasos in Thrace. Although all the coins of this zone are commonly called Celtic, some could easily belong to other so-called barbarian cultures.

Obverse of a gold coin from one of the first issues of the Parisii in Gaul, 2nd/1st century BC, showing human head with ornamental hair style, ultimately derived from Greek images

(2) Several southern silver groups copied the coins of three Greek cities: MASSALIA in GAUL, and Emporiai and Rhoda in Iberia. Another group copied Roman Republican *quinarii* (a *quinarius* is half a *denarius*). The Massalia imitations were found north of the Po in ITALY, and Emporian types were found in an area between the Dordogne and the Liger (Loire) rivers, and in an area from the west to the south-east of the Garonne. The Rhoda type was found between the two Emporian groups. Roman derivations were found all along the left bank of the RHÔNE, and extended, at their widest point, into Switzerland. Celtiberian coins, some inscribed with names in the CELTIBERIAN language were produced in eastern Spain from the 3rd to earlier 1st century BC—some with legends in the Celtiberian script and others with Greek letters (see SCRIPTS).

(3) The northern gold belt began to the east of the middle and upper Elbe, curved south-west to the border of Hesse and Thuringia, and then north-east to the mouth of the RHINE. The southern edge ran from the Danube, south-west of the upper Elbe to Switzerland, curving north-west to a point on the Rhône south of the sources of the Meuse and the Seine (see SEQUANA), and then westward to around La Rochelle on the French Atlantic coast. This zone included England from the south of the Humber to the mouth of the Severn (Hafren), and south to Dorset. The eastern part of the gold belt derived some of the issues from the stater of Alexander III of Macedon, but the prototype of the vast majority of regions is the stater of his father, Philip II. Some coins in Germany are without classical prototypes, and appear to be original Celtic designs.

§2. A GRAECO/CELTIC SYNTHESIS

After struggling with the foreign art form of the Greeks, the Celts began to assert their own styles on the coins. It seems that to identify the disc of metal as a coin, it was often essential to retain the Greek subjects. Since Greek gold coins were paid to the Celts for their military services, the form of the Celts' gold coins harkened back to these types, providing status to those who received them. The dominant design of the western gold belt was that of the gold stater of Philip II of Macedon, the obverse depicting the head of Apollo with short hair, and the reverse, a two-horse CHARIOT at full gallop. This coin was so popular that the Greeks continued to issue it after the death of Philip.

Two different styles began to assert themselves and draw away from classicism: Belgic (see BELGAE) and Armorican (see ARMORICA). The Belgic style in the north began a series of abstractions of the design. These were of a high artistic quality at first, and the earliest coins of the Parisii, a tribe close to the Belgic region, produced what is often considered to be the most beautiful Celtic coin of all. The style grew more abstract over time, and on the last coins of the British Durotriges appeared as little more than dots and dashes.

In north-west Gaul, the Armorican style evolved, reaching its peak at the time of the Gallic Wars (see CAESAR). It borrowed, and developed, some design elements from the earlier Celtic ART of the Rhine (Hooker, *Celtic Improvisations*), some of these themselves derived from Greek prototypes in metal and pottery—the vine scroll and especially the split palmette. The Armorican style is also rich in symbolism, with many subsidiary devices to the main themes.

Distinct styles also developed in the east, and styles associated with the Alpine Norici (see NORICUM) and, even further to the east, the BOII of the Hungarian plains are also highly characteristic (Göbl *Münzprägung*

und Geldverkehr der Kelten in Österreich; Göbl, *Ostkeltischer Typenatlas*).

§3. ROME AND THE END OF CELTIC COINAGE

The conquest of Gaul did not bring about an immediate end to Celtic coinage. Legends on coins became more common, and are known both in GAULISH and Latin (Allen, *Coins of the Ancient Celts*). The larger wartime coins of Armorica gave way to numbers of very small coins, increasingly debased in value (Gruel & Taccoen, *Celtic Coinage* 165–188).

In Britain, gold continued to be used until the Claudian conquest, although this gold was often heavily debased. The British TRINOVANTES, benefiting from increased Roman trade, issued coins in gold, silver, and bronze, with the smaller denominations bearing many Roman-derived designs (Van Arsdell, *Celtic Coinage of Britain*). Large numbers of one series of bronze coins have been found at Harlow Roman temple (see FANUM), apparently freshly minted and possibly for this specific use (France & Gobel, *Romano-British Temple at Harlow, Essex*). The largest hoard of British silver coins of the Atrebates also came from a religious site: Wanborough temple in Surrey (Haselgrove, *Iron Age Coinage in South-East England*). British coins in the peripheral areas maintained Celtic styles until the end of Celtic coinage.

The Celtic Coin Index at the Institute of Archaeology, Oxford, has detailed records and photographs of more than 30,000 coins, and much of this data is freely available on the World Wide Web.

§4. THE LINGUISTIC TESTIMONY OF CELTIC COINAGE

Since they are mostly of pre-Roman date, not mediated to us by Greek or Roman authors and copyists, and closely locatable and datable, the evidence of the coin legends is of great value for the early CELTIC LANGUAGES. This evidence is mostly limited to isolated personal, place, and tribal names, and titles, all often abbreviated. No complete sentences are known to appear on Celtic coinage. Forms of interest include: LITAVICOS 'ruler of the land' (see LITAVIS), perhaps a title from central Gaul; the Gaulish title VERGOBRETO[S] 'ruling magistrate' on the coins of the Lexovii, whose coinage also provides the form ARCANTODAN[, which may signify 'moneyer' (for Gaulish *arganto-* 'silver, money'); coins inscribed with the name of Caesar's great opponent VERCINGETORIX; the name or title NEMET['of special (sacred) privilege' on a coin from the Danube region (see NEMETON); the Celtiberian kings' names BITOΥΙΟC *Bituios*, BITOΥΚΟC *Bitukos*, PIΓANTIKOC *Rigantikos* which contain the Celtic elements 'king' **rīgo-* and 'world' **bitu-*); the title RIX and RICON (both meaning 'king') on coins of the British CATUVELLAUNI; CAMV[LODVNON] 'Colchester', VER[VLAMION] 'St Albans', and CALLEV[A] 'Silchester' as 'mint marks' in Britain; king TASCIOVAN[OS] (*c.* 20 BC–*c.* AD 10) of the British Catuvellauni, known to us only through his dynasty's coin legends and his subsequent appearance, as Old Welsh *Teuhuant*, in Welsh GENEALOGIES.

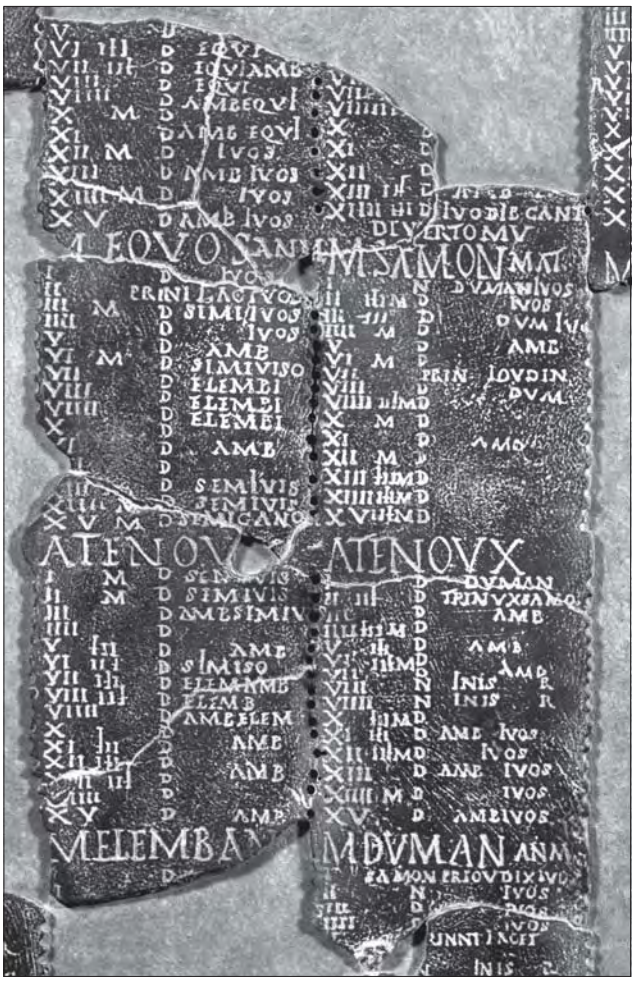
Coligny calendar

In 1897, 153 fragments of a large bronze calendar, now at the Musée de la civilisation gallo-romaine in Lyon, were discovered near Coligny (Ain, Burgundy, France). Two fragments of another calendar, known as Villards d'Héria, had been recovered nearby in the *département* of Jura nearly a century earlier, although they were not sufficient to allow a reconstruction. The fragments of the Coligny calendar represent nearly half the original calendar, and show that, although it is similar in form to other inscribed public calendars of the Mediterranean world, it is a lunar calendar where most classical examples are solar.

The calendar of Coligny covers a five-year span, including twelve lunar months of 29 or 30 days and two intercalary months inserted over the five-year period to keep the lunar calendar in line with the solar calendar. This still results in a solar year that is too



Detail from the bronze calendar from Coligny, Ain, France. Late 1st century BC

long on average (367 days), so that adjustments would have been necessary periodically. Each of the days has a small peg hole into which a marker could be inserted to note the date. The calendar contains many Gaulish words and numbers, written in the Roman script. Many of these are abbreviations of uncertain meaning.

Both the year and the months are divided into two halves. The first half of the month is 15 days long, and is followed by the word ATENOUX. This has traditionally been interpreted as 'returning night', although *-nox* would be expected rather than *-noux*. The month names, as attested, are SAMONI, DUMANN-, RIUROS, ANAGANTIO-, OGRONN-, CUTIOS, GIAMONI, SIMIUISONNA, EQUOS, ELEMBIU, EDRINI-, and CANTLOS. They are preceded on the calendar by M or MID, presumably the Gaulish word for month (cf. Old Irish *mí*, Welsh *mis*). Month names are followed by the abbreviations MAT and ANM, usually expanded to *matus* and *anmatus* and understood as 'auspicious' and 'inauspicious', respectively.

The translations of several of these month names are secure: SAMONI is cognate with Old Irish SAMAIN, and contains the root for 'summer' (Old Irish *samrad*, Old Breton and Old Welsh *ham*). GIAMONI, six months later, contains the word for 'winter'; again, compare Old Irish *gemred*, Old Welsh *gaem*. Although the meaning is secure, the starting-point of the calendar is not. SAMONI is usually identified with Irish *Samhain* 'November' as the starting-point of the year, but other plausible theories have been advanced (see McCluskey, ÉC 27.169 for a discussion). The other month names are more difficult to explain, with the exception of EQUOS 'horse' (cf. Old Irish *ech* 'horse', Welsh *ebol* 'colt'), a month-name also attested in some Greek dialects (Calabrian *Híppios*, Aetolian and Thessalonian *Hippodrómios*). RIUROS may contain the word for frost or extreme cold—Old Irish *réud*, Welsh *rhew*, Breton *rev*. CANTLOS resembles the preform of the Old Irish verbal noun 'to sing' *cétal*; cf., Early Welsh *cathl*. OGRONN- may be related to Old Irish *úar*, Welsh *oer* 'cold'. For a discussion of the other names, see Delamarre, *Dictionnaire de la langue gauloise*. Four quarter days are also marked on the calendar: 4 CANTLOS, 2 RIUROS, 4 CUTIOS, and 2 EQUOS. If SAMONI is indeed November, these days would be the autumn equinox, winter solstice, spring equinox, and summer solstice. There is no indication as to whether these days were celebrated or merely marked in order to calibrate the calendar with the solar year. One possible festival is mentioned, however: TRINOX SAMONI SINDIU 'this/ today [is the] three-night Samhain', presumably marking a festival that lasted for three days (for 'night' meaning '24-hour period', see CALENDAR §2). There is some indication that the period around the winter solstice was celebrated, at least in some areas; 18 December is marked as the feast of Epona on the fragments of another ancient calendar from Guidizzolo, near Mantua. Bernard Sergent has attempted to relate this to the Mari Lwyd and similar traditions, which occur around Christmas and the winter solstice in Wales (Cymru), Cornwall (Kernow), and Brittany (Breizh).

AM

Collectio Canonum Hibernensis (The Irish collection of canons) is a reference book of church law. It contains decrees on all aspects of Christian living, arranged according to subject, rather than chronologically. The *Collectio* makes much use of extracts from earlier works, and the compilers cited the Bible, both Old and New Testaments. They also used the writings of the fathers of the Church, such as Gregory the Great, JEROME and ISIDORE of Seville, as well as penitential literature and collections of canons which derived from the decrees of both the western and eastern churches, such as the *Statuta Ecclesiae Antiqua* and the *Collectio Dionysiana*. It has been suggested that the *Collectio* was originally based on a *florilegium* (collection) of extracts in circulation in Ireland (ÉRIU). Some of the *Collectio* has links with Old Irish vernacular law-codes (see LAW TEXTS), particularly with the secular law collection, BRETHA NEMED, composed in Munster (MUMU). For example, the *Collectio* compilers made ingenious use of Latin terms to correspond to the carefully defined types of suretyship (that is, a third party pledging to guarantee a contract) in native Irish law. The *Collectio* contains decrees promulgated by the two factions of the Irish Church who were known as *Romani* (Romans) and *Hibernenses* (Irish), according to whether their dating of Easter conformed to Roman or Irish practice (see EASTER CONTROVERSY). Since the *Collectio* contains materials from both sides, it is perhaps the product of a compromise between them. There is little evidence for the enforcement of the decrees since hardly any penalties are stipulated.

The *Collectio*, which was edited by Hermann Wasserschleben at the end of the 19th century, survives in manuscripts copied on the European continent, particularly in Brittany (BREIZH), and no manuscript of the text survives from Ireland. It is preserved in manuscripts in two recensions: A, the shorter, in 65 books, in which the latest author mentioned is Theodore of Canterbury (†690), and B, in 68 or 69 books, in which the latest author mentioned is ADOMNÁN (†704) of Iona (EILEAN Ì). The colophon (roughly 'end note') copied into the Paris manuscript, Bibliothèque Nationale, Latin 12021, gives the names of two compilers: CÚ CHUIMNE of Iona (†747) and Ruben of Dair-Inis (†725). They are described as *scribae*, that is, learned in scriptural law.

The reforming spirit, comprehensiveness and practical arrangement of the *Collectio* ensured its considerable influence on the European continent from the 8th century onwards. It dealt with subjects such as the administration of justice, the organization of the family, contracts, as well as matters that were not usually treated in canon law collections, such as the veneration due to martyrs and relics. In the late 8th and 9th centuries the *Collectio* spread, especially in areas with long Celtic traditions such as St Gallen, Switzerland, or where texts containing edicts from Rome were scantily reproduced. There was also an insular tradition of copying and excerpting passages from the *Collectio*, as may be seen from the Welsh and Anglo-Saxon evidence. The text was read by St Boniface, Archbishop Odo of Canterbury, Bishop Arbeo of Freising, SEDULIUS SCOTTUS, Wulfstan, and possibly the Carolingian Empress Judith. One theory suggests that there was a link between the decrees of the *Collectio* on KINGSHIP and the rituals of the succession of kingship, particularly the inauguration ritual, and that this was the inspiration for the anointing of Pippin in Francia. It has been conjectured that this was drawn up under the influence of Adomnán of Iona and a faction in the Irish Church which wished to alter the nature of these rituals in this period (see Enright, *Iona, Tara, and Soissons*). The book of marriage decrees in the *Collectio* also influenced later European conciliar texts.

Collen, St, is patron of Llangollen, Denbighshire, in north-east Wales (Cymru). His feast-day was 21 May, and his tomb and probable shrine lay at the parish church in a westward annexe now demolished, known in 1749 as 'the Old Church'. A 16th-century Life identified Collen's mother as Irish, and described a miraculous lily of Collen, whose gender was by then uncertain, at Worcester. Collen's name, meaning 'hazel', occurs also in Capel Collen, Rhiwabon (Denbighshire/sir Ddinbych); Castell Collen Farm, Llanfihangel Helygen (Radnorshire/sir Faesyfed); Trallwm Gollen, Welshpool (Montgomeryshire/sir Drefaldwyn); two Collen brooks, tributaries respectively of the Tywi at Llanegwad (Carmarthenshire/sir Gaerfyrddin) and the Trowi near Llanarth (Ceredigion); St Colan (Cornwall/Kernow); and Langolen near Briec (Brittany/Breizh).

Graham Jones

Collins, Michael (1890–1922) was one of the most charismatic, though controversial, leaders of the Irish War of Independence and one of the most powerful men in the new Irish Free State (Saorstát na hÉireann). His talent for conspiracy—freeing political prisoners from English gaols and evading capture as the 'most wanted man in Ireland'—and his assassination in the Irish Civil War made him one of the more romantic figures in 20th-century Irish history (see IRISH INDEPENDENCE MOVEMENT).

Born in 1890 near Clonakilty, Co. Cork (Cloich na Coillte, Contae Chorcaí), Collins emigrated to London in 1906 to work in the British Civil Service. It was there that he learned Irish at a branch of Conradh na Gaeilge and joined the secret Irish Republican Brotherhood (IRB; see IRISH REPUBLICAN ARMY). He returned to Ireland (Éire) in 1914 when threatened with conscription into the British army. For his relatively minor rôle in the Easter Rising he was interned until December 1916. Following his release, he became one of the key figures in the campaign for Irish independence, using his network of connections in the Irish Volunteers and the IRB. By 1917 he was a member of the Sinn Féin executive (see NATIONALISM) and Director of Organization of the Irish Volunteers. These posts enabled him to extend his secret intelligence network and further IRB aims in both organizations. Following the arrest of most nationalist Irish leaders in 1918, Collins took control of the revolutionary movement. He became President of the IRB and ensured that the radical wing of Sinn Féin won an overwhelming victory at the general election of 1918. Having organized the escape of Éamonn de Valera from Lincoln gaol in February 1919, he led the Irish War of Independence, which began on 21 January 1919, as Director of Military Organization, acting as Minister of Finance on behalf of the Dáil Éireann, the new Irish parliament, at the same time. When the British government under Lloyd George offered a truce and negotiations, Collins became a key, though very reluctant, member of the second Irish Treaty Delegation and, on 6 December 1921, he co-signed the compromise that granted Ireland dominion status. This ultimately led to the Irish Civil War and his own premature death (see Ó GRÍOFA). Substantial opposition to the treaty in the Dáil led to the choosing of Collins as Chairman of the Provisional Government, but the bitter differences of opinion between pro-treaty and anti-treaty forces meant that by June 1922 there was civil war. Collins, as Commander-in-Chief of the pro-treaty National Army, decided to lead from the front. Convinced that he would not be killed in his own country and therefore driving an open touring car, he was assassinated during his election campaign near Béal na mBláth, Co. Cork, on 22 August 1922. His death, which robbed the country of an outstanding political personality, illuminates the tragedy of civil war in the newly liberated Ireland.

Colmán mac Lénéni (†14 November 604) was a high-ranking Irish poet or *file* (see BARDIC ORDER). He is important as one of the earliest GAELIC poets who can be securely dated and located. The fragments of poems attributed to him which survive in the Irish bardic metrical tracts give us a valuable insight into the poet's craft at an early date, and also reveal a literary form which is already highly developed and thoroughly Christianized.

Colmán was the founder and (probably) the abbot of the monastery of Cluain Uama (Cloyne) in Munster (MUMU). He was a so-called 'ex-layman' (*aithlaec*), indicating a mid-life change of career. He seems to have been influenced to take up a religious calling by St Brenainn (Brandanus) of Clonfert (Cluain Ferta) in CONNACHT. According to traditions related by later texts, he abandoned poetry or poetic composition after becoming a monk, but in fact the surviving poems themselves contradict this idea, showing that he continued to compose Irish poetry up to his death.

The seven surviving fragments of Colmán's poetry have been discussed by THURNEYSEN (ZCP 19.193–205). More recently, Liam Breatnach has re-examined Early Irish METRICS, especially the *roscada* (unrhymed alliterative verses) and Colmán's verses, attempting to place them within the known types of early Irish poetry (*Metrik und Medienwechsel / Metrics and Media* 197–205). Stylistically, Colmán's poems stand between 'classical Old Irish syllabic poetry' and the *roscada*. They show a regular number of syllables per line with consonance, and frequently with end rhymes. The lines are linked together by alliteration. Two examples follow, which are printed showing alliteration and rhyme; syllable count and rhyme scheme are summarized in parentheses:

Dūn maic **Dāim** / *doë ōs* **r**o**i** (3^{1}a + 4^{1}a)
ronn tart / *tacht* **c**o**i**. (2^{1}b + 2^{1}a)

The fortress of Dāim's son, a rampart above a field,
a [putting on the] chain of thirst, a strangling of moans.

Nī·fordiuchtror / *for duain indl***is** (4^{3} + 5^{2}a)
iar cotlud / *chāin bindr***is**. (3^{2} + 3^{2}a)
*briathar Chorg***ais** / *cen anach ndīchmaircc* (4^{2}a + 5^{2}b)
deog nepmairc / *rath rīgmaicc*. (3^{2}b+3^{2}b)

Not with an inauthentic song do I awake after sleep of sweet dreams [DIL74, 102];
[it is] a word [fitting] for Lent without anything forbidden, a drink . . . the grace of the royal son [i.e., Christ].

The syllable count is quite regular, and there is also a consistent pattern of stresses.

The highly compressed or 'telegraphic' style of these excerpts shows Colmán's mastery of metaphor. The first extract appears to have been part of a praise poem to a chieftain whose generosity quenched the thirst of his guests and stilled their sorrow. The second example shows how Irish vernacular poetry was already thoroughly adapted to a Christian milieu by *c.* AD 600. Colmán makes the point that his versecraft is even fitting for Lent, the period of penance and cleansing before Easter and a time of intense asceticism in Irish MONASTERIES in the early Middle Ages.

Colmán lived early within the Old IRISH period (*c.* 600–900); therefore his language is rather archaic, and many words are unclear or difficult to identify. He used words which had become obsolete in the subsequent centuries: for example, *ser* 'star' (perhaps a loanword from Welsh), *adand* 'rushlight', *crapscuil* '?twilight' (from Latin *crepusculum*). However, the texts have not survived in a spelling that reflects 6th- or 7th-century pronunciation, but were updated in copying. For example, the vowels already show the characteristics of the later language; thus, 7th-century *ē* has become 8th-century or later *ia*, *ō* has become *ua*. Nonetheless, Thurneysen claimed that Colmán's language could be placed without much difficulty within the expected historical timeframe, that is, at the end of the 6th century.

Colum Cille, St (or Colmcille, Latin Columba, *c.* 521/9 to June 597), a descendant of Niall Noígiallach (Niall of the Nine Hostages), progenitor of the Uí Néill, was the founder and the first abbot of Iona (Eilean Ì). Apart from this, we have few details of the life of this important figure in the development of Irish Christianity. Our knowledge derives, almost entirely, from the *Vita Columbae* by Adomnán which, although based on solid traditions and earlier written accounts, was written almost a century after Colum Cille's death, and portrays him as an ideal monk and Christian. He remains one of the most popular saints of Irish and Scottish tradition. Many common stories, such as that he had to flee Ireland (Ériu) having made a pirate copy of a book, are much later inventions—and this specific tale, in the context of early medieval book production, is absurd!

Since Adomnán's *Vita* is episodic and without a chronological frame (although Colum Cille's death is at its end), much of our information comes from this statement: 'From his youth he devoted himself to growing in the Christian life, with God's help studying wisdom and keeping his body chaste . . . [and] he spent thirty-four years as an island soldier of Christ' (Second Preface). We know that he studied with Finnian of Clonard (see uinniau), and then founded several monasteries in Ireland before setting out in 563 for Iona, which became the centre for a large *familia* of monasteries in Ireland and Britain—it was a link-point between the Irish on both sides of the sea, and also between Ireland and Britain. Being on Iona made him 'a pilgrim for Christ' and allowed him to engage in missionary work among the Picts. He established many contacts both with other monasteries (e.g. Beann Chair/Bangor) and with rulers such as the Pictish king, Bruide mac Maelcon.

Many aspects of insular monastic spirituality (e.g., the rôle of islands) can be traced to the inspiration of Colum Cille, and he may have inspired others (e.g., Columbanus) to combine the notions of monastic exile with missionary work (see peregrinatio). Traditionally, several Latin hymns (e.g., the *Altus prosator*) have been attributed to Colum Cille, and his authorship cannot be excluded; Adomnán presents him as both a scholar and a scribe. A manuscript of the Psalms, known as the Cathach, probably dating from the 7th century but possibly the late 6th, is traditionally regarded as Colum Cille's pen work. Legend, reaching back almost to his lifetime (the Old Irish elegy known as *Amrae Coluimb Chille* [Poem for Colum Cille], on which see dallán forgaill), revered him as a patron of the poets.

Columbanus, St (mid-6th century–23 November 615) was born in Leinster (Laigin) and, according to Jonas of Bobbio who wrote his *Vita Columbani* in the 640s, he studied with Sinell, and later with Comgall at Beann Char (Bangor). In Ireland (Ériu) until *c.* 590–1, Columbanus left for the Continent on a peregrinatio. It is there that the exploits for which he is remembered took place, and it was there also, presumably, that he wrote. He is the most famous of the medieval Irish *peregrini* (international missionaries), and it is upon his life that the notion of 'the Irish re-converting Europe' is chiefly based. However, he is perhaps more significant as the first Irish person who has left a sizeable body of writings, and whose worldview we can therefore glimpse. These, in a polished Latin, indicate that he was a skilled theologian, well acquainted with the theological currents of his time. The extent of his *œuvre* is debated, but a consensus has emerged that 20 works, of the 34 attributed to him, are genuine, while six others may be 'Columbanus-plus-accretions'.

He arrived in the Vosges *c.* 591 and established several monasteries (e.g., Luxeuil) and convents there. In 603 Columbanus came into conflict with the local bishops over their authority, and appealed directly to Pope Gregory the Great. In this letter he defended the insular reckoning of Easter with an unapologetic intellectual self-confidence (see easter controversy), and reveals a perception of Europe as a Christian cultural unit, in which Irish, Britons, and Gallo-Romans were

equals as members of a common body, the Church. Later, having been expelled from Frankia over his refusal to bless King Theuderic's illegitimate sons, Columbanus with other monks, including Gall, travelled in what is now eastern France and Switzerland. Eventually, he quarrelled with Gall, who left him and became a hermit. Finally, *c.* 612, Columbanus arrived at Bobbio, near Piacenza in northern Italy, and established a monastery which became an important centre of learning. His ideas about monastic discipline remained widely influential until the 9th century (see MONASTICISM).

The name *Columbanus* is Latin, but was borrowed into IRISH at an early date with the Brythonic pronunciation **Colomman*, to give the Old Irish name *Colman/Colmán*, already common among men born in the 6th century.

Comgán mac Da Cherda (†641/5) is mentioned in the Irish ANNALS (Annals of Tigernach 641, Annals of Inisfallen 645) and GENEALOGIES (O'Brien, *Corpus Genealogiarum Hiberniae* 1.399), thus suggesting that he was a historical person, brother of Bran Find son of Mael Ochtraig, a king of the Dési of Munster (MUMU), present-day Co. Waterford (Contae Phort Láirge). His reputation, however, is based on his literary rôle as a holy fool. According to one tale (O'Keeffe, *Ériu* 34–41), he was transformed into a fool (*óinmit*) after sleeping with the wife of his father's druid. His folly was essentially of an inspired, religious kind, and his closest companion in the literature is St CUMMÍNE FOTA. A late medieval text, *Imtheachta na nOinmhideadh* (Journeys of the fools) recounts their bizarre adventures. As with other fools and madmen in IRISH LITERATURE, various pieces of poetry are attributed to him (see WILD MAN). He makes several cameo appearances in well-known sagas (e.g., *Liadain and Cuirithir*), where he acts as a go-between or discoverer of characters' identities. The form of his epithet (traditionally meaning 'son of two arts': i.e., sense and folly) is highly unstable (Ó Coileáin, *Ériu* 25.105 n.73).

Comhar (Co-operation) is a monthly magazine founded in Dublin (BAILE ÁTHA CLIATH) in 1942 by An Comhchaidreamh, an organization of IRISH-speaking university graduates. Its aim was to provide a platform where Irish speakers, particularly graduates, could discuss current events and questions of national importance, and also to provide a literary platform, especially for new writers. Its contents include contributions from all the major literary figures writing in Irish since its foundation in 1942, as well as reviews, literary articles and features on a wide range of political, cultural, social and economic issues. Prominent contributors include poets: Máirtín Ó DIREÁIN, Seán Ó RÍORDÁIN, Máire MHAC AN TSAOI, Cathal Ó SEARCAIGH, Nuala Ní DHOMHNAILL, Séamus Ó Céileachair, Seán Ó TUAMA, Liam Ó MUIRTHILE, Michael DAVITT, Seán Mac Fheorais; novelists and short-story writers: Donncha Ó CÉILEACHAIR, Séamus Ó Néill, Dónall Mac Amhlaigh, Séamas Mac Annaidh, Pádraig Ó CÍOBHÁIN, Seán Mac Mathúna, Eoghan Ó TUAIRISC, Breandán Ó hEithir, Liam Mac Cóil, Máirtín Ó CADHAIN. Since 1974, the magazine has been produced by Comhar Teoranta.

Common Celtic is a historical linguistic term which is used in this Encyclopedia for the oldest form of prehistoric Celtic speech differentiated from the other INDO-EUROPEAN dialects. Common Celtic is thus essentially synonymous in our usage with PROTO-CELTIC. Under either name we are considering an unattested proto-language, the speech of an original formative Celtic linguistic, living in a sufficiently compact area to maintain a language not varying with regional dialects. As an unattested language, the forms of Common Celtic are linguistic reconstructions to be cited with stars, thus Common Celtic **wiros* 'man, husband, hero'. There is, however, a difference in focus between Common Celtic and Proto-Celtic. The former emphasizes this stage as the theoretical common ancestor of all the attested CELTIC LANGUAGES and implies that a given reconstruction has been reached primarily through the method of 'intra-Celtic' comparison. The latter figures more as the theoretical 'missing link' between reconstructed Indo-European and attested Celtic forms. There can be some further subtle differences of meaning between Common Celtic and Proto-Celtic; for example, it is theoretically quite possible that by the point when Celtic had differentiated from Indo-European it still retained old features that were subsequently lost or changed in the same way in all the attested Celtic languages and thus must be reconstructed as Common Celtic. As one case in point, all the Celtic languages lose Indo-European *p* in most positions; therefore this is a Common Celtic feature. But traces of it still survive (perhaps in some positions as *h*, elsewhere as *w* or *w*^{b}) in the ROMANO-CELTIC place-name HERCYNIA SILVA and in UVAMO- 'highest' on the LEPONTIC inscription from Prestino. Thus, though Old Irish *athair* 'father' and Gaulish *atir* have lost Indo-European *p-*, we can reconstruct **φatīr* to show the likelihood that a weakened initial consonant had been present in the Celtic proto-language. For innovations occurring in most or all of the attested Celtic languages, but likely to be an innovation shared by them after the initial separation of dialects and spreading out from the inferred compact geographical homeland, such features may be termed 'pan-Celtic' rather than Common Celtic. Thus, lenition, the systematic weakening of consonants between vowels and in some other positions—a characteristic feature of the medieval and modern Celtic languages, but indicated only in traces in the Continental Celtic languages (all of which died out in ancient times)—is sometimes called a 'pan-Celtic phenomenon', thus implying that it might have spread between the Celtic languages after Common Celtic had already broken up.

The **Computus Fragment** is an Old Welsh commentary, written on one side of a single leaf of vellum dating from AD 850×910. It concerns a detail in the table (the *pagina regularis*) in BEDA's scientific works. The subject is a specific point concerning the CALENDAR and the calculation of the date of Easter (see EASTER CONTROVERSY). The text is clearly fragmentary and opens mid-sentence as follows:

> *. . . guidaur. Is·mod cephitor did hanaud. In ir·tritid urd, .i. in·trited retec retit loyr guor-hir seraul circhl, ir·ir tri VI[II] aur, is did ciman ha·c[e(ph)]i o-r bissei pan diconetent ir [tri] oith·aur hinnith . . .*
>
> . . . alphabet. It is how one gets a day from it. In the third row, that is, in the third course that the moon runs over the circuit of stars, from the three eight-hour [segments], it is a whole day that you will get from the remainder when those three eight-hour [segments] have been put together . . .

The Computus Fragment is a uniquely valuable source of linguistic information for aspects of the vocabulary, syntax, and morphology of the WELSH language at an early date, and also reflects the level of learning in early medieval Wales (CYMRU) and the adaptability of written Welsh as a medium for technical subjects first described in Latin texts. Some of the same points and a shared BRYTHONIC scientific vocabulary occur also in the mixed Old Breton and Old Welsh glosses in the Breton manuscript Angers 477, written in AD 897 (see BRETON EARLY MEDIEVAL MANUSCRIPTS).

An **Comunn Gaidhealach and Mòd**

An Comunn Gaidhealach (The Highland Association), founded in Oban (An t-Òban) in 1891, was for many years the only organization dedicated to promoting SCOTTISH GAELIC and its culture in Scotland (ALBA). The Mòd, An Comunn's annual festival of Gaelic music and arts, originally inspired by the Welsh EISTEDDFOD, remains the best-known manifestation of Gaelic culture in Scotland.

§1. AN COMUNN GAIDHEALACH

An Comunn Gaidhealach was founded with the mission of, *inter alia*, 'promot[ing] the cultivation of Gaelic Literature and Music and Home Industries in the Highlands' and 'encourag[ing] the teaching of Gaelic in Highland Schools'. From the beginning, the society was explicitly non-political in its orientation and dominated by the middle classes and the Highland gentry, many of whom knew no Gaelic.

Developing the Mòd quickly became the main priority for An Comunn and the organization never became a mass language revival movement in the

manner of CONRADH NA GAEILGE, founded in Ireland (ÉIRE) just two years later. Branches were formed in various parts of the HIGHLANDS and Islands, but these often concerned themselves primarily with organizing local Mòdan, which have been running since 1905.

Although An Comunn has been involved in a range of cultural and policy initiatives, especially with regard to Gaelic EDUCATION, the organization has long been criticized because of its explicitly non-political stance, and has indeed been held in disregard by many Gaelic activists. Following the creation of a range of new Gaelic organizations with more explicit functions (Comunn na Gàidhlig, the national Gaelic development agency; Comhairle nan Sgoiltean Àraich, the Gaelic Pre-School Council; Pròiseact nan Ealan, the Gaelic Arts Agency, for example), the exact rôle of An Comunn has become rather less clear, and to many it is simply known for organizing the Mòd and little more.

§2. THE MÒD

The Mòd, An Comunn's annual cultural gathering, was explicitly patterned on the *eisteddfod*. The first Mòd was held in Oban in 1892 and the event has been held continuously ever since, usually moving to a different location each year. Competitions involve individual and choral Gaelic singing, Gaelic poetic composition, Gaelic speech performance and so on.

The Mòd itself has long been criticized by commentators who take the view that it promotes a fossilized and inauthentic version of Gaelic culture. For much of the 20th century, Mòd judges and performers preferred the artificial 'drawing-room' style of singing associated with Marjorie Kennedy-Fraser's Edwardian rearrangements of traditional songs. This charge is rather less valid than it once was, with singing in the traditional style (*seann-nòs*) much more valued today. On the other hand, the Mòd remains centred on the competitions of Gaelic choirs, even though such choirs were unknown in traditional Gaelic communities.

Other charges relate to the perceived stuffiness and dated quality of the Mòd, which creates an image, for some, of Gaelic as old-fashioned, 'twee' and unappealing. Indeed, to some hostile commentators outside the Gaelic community, the Mòd is known as the 'Whisky Olympics'. Gaelic activists, meanwhile, are concerned about the long-standing dominance of the English language at the Mòd. Despite these shortcomings, the Mòd retains a flagship status and is recognized throughout Scotland as a manifestation of Gaelic culture.

Conall Cernach is one of the leading figures in the early Irish Ulster Cycle of tales, set in the prehistoric legendary era. A detailed overview of Conall in the context of the sagas is given in the article on the ULSTER CYCLE in this Encyclopedia. Specific aspects of his character, as expressed in various texts, are also treated in other entries, as noted below. Second only to the superhero CÚ CHULAINN in martial prowess, the status of Conall Cernach is made explicit in two well-known tales, the plots of which revolve around contention for the CHAMPION'S PORTION as the focus of heroic competition at FEASTS, namely FLED BRICRENN ('Bricriu's Feast') and SCÉLA MUCCE MEIC DÁ THÓ ('The Story of Mac Dá Thó's Pig'). In the latter, Conall displays his supremacy by taking the heads of enemies as trophies (see also HEAD CULT). Conall's close friendship with Cú Chulainn is apparent in his rôle as Cú Chulainn's comrade and avenger in the death tale of the latter, BREISLECH MÓR MAIGE MUIRTHEIMNI (The great rout of Mag Muirtheimne). Conall's father is AMAIRGEN MAC AITHIRNI, the poet of the ULAID. In some tales, his wife is Findchoem, daughter of CATHBAD, the DRUID of the Ulaid. Though primarily an Ulster Cycle figure, it is noteworthy that Conall also appears as the unyielding stalwart of the doomed King Conaire Mór in TOGAIL BRUIDNE DA DERGA ('The Destruction of Da Derga's Hostel'), a saga of the KINGS' CYCLES (see also IRISH LITERATURE [1] §6); 'crossover' of this sort is unusual and raises the question in which body of tradition Conall's character first developed, as does the remarkable absence of Cú Chulainn from the hierarchy of heroes in *Scéla Mucce Meic Dá Thó*, where Conall excels. As an essential warrior and tribal hero, Conall's character conforms to the code of conduct and value system discussed in the entry HEROIC ETHOS. The Irish name *Conall* is very common and is cognate with the Welsh

man's name *Cynwal*, both deriving from Old Celtic *Cunovalos*, which means something like 'Hound wielder'. It is noteworthy that the first element of the name is a form of the same word, meaning 'dog, hound, wolf', as occurs in the names of many heroes, most significantly *Cú Chulainn*. The epithet *Cernach* contains the common adjectival suffix (Celtic *-āko-*) and could mean 'prominent, having a prominence' or 'horned'; a connection to the horned god CERNUNNOS has been suggested.

Conan Meriadoc figures as a hero and founder in Breton LEGENDARY HISTORY and is given an important rôle in the scheme of ancient British history in the HISTORIA REGUM BRITANNIAE (*c.* 1139) of GEOFFREY OF MONMOUTH. The extent and substance of the Conan Meriadoc tradition before Geoffrey is unclear, and Conan's historical status as leader of the earliest BRETON MIGRATIONS in the 4th century is now considered very doubtful.

§1. CONANUS MERIADOCUS IN THE LIFE OF GOUEZNOU

Vita Sancti Uuohednouii (see UUOHEDNOU) is a Breton Latin text, of which only the prologue survives, recopied in a manuscript of the historian Pierre Le Baud (†1505). According to this prologue itself, it was written in 1019. It gives an account of the origins of Brittany (BREIZH), citing an earlier history:

> We read in the *Ystoria Britannica* that the BRITONS, under the command of Brutus and Corineus, subjugated *Albidia* [see ALBION], which they renamed 'Britannia', together with its adjacent islands by virtue of their martial valour. Seeing their numbers grow and their realm prosper, Conan Meriadoc—a warlike man and an orthodox Christian—crossed the sea to the Armorican gulf of GAUL with a multitudinous and infinite number of Britons, their number having then grown to greater than one small country could contain. His first seat was on the River Guilidon within the limits of Plebis Columbae [Plougoulm], in the place which is still called *Castrum Meriadoci*. He with his Britons conquered the whole land, from sea to sea and as far as the CIVITAS of the Andegavi, with all of Bro NAONED and Bro ROAZHON [*cum omni territorio Nannetensi et Redonico* '. . . all the country of Nantes and Rennes'] by means of praiseworthy heroism. He killed all the indigenous men, who still were pagan. (Koch & Carey, *Celtic Heroic Age* 405)

Fleuriot and Le Duc have searched for fragments of this pre-Geoffrey *Ystoria Britannica* in the notes of Pierre Le Baud under the title LIVRE DES FAITS D'ARTHUR (see also ARTHURIAN LITERATURE [4]). These notes amount to 173 Latin verses extracted from a narrative relating to Maximus (MACSEN WLEDIG) and Conan Meriadoc. The book was dedicated to Arthur III, duke of Brittany 1303–12. Nevertheless, Fleuriot argued that it was 'in the poetic metres of a more ancient text', and thus could have represented one of the sources used by Geoffrey and would reinforce Geoffrey's claim to have been inspired by a *liber vetustissimus* (very ancient book). However, the date range for the *Livre des faits d'Arthur* (954–1012) depends on that of the Life of Goueznou, itself disputed. Le Duc and other scholars accept the 1019 date of the author, the priest Guillaume, who dedicates his work to the bishop Eudo. Guillotel, on the other hand, argues for a date in the second half of the 12th century for a bishop Eudo or Yvo of LEON, and we may also consider identifying the author with a Guillaume le Breton (†*c.* 1225), a canon from Leon working at the court of the French king, Philippe Auguste (r. 1180–1223). Therefore, the Life of Goueznou and its traditions of Conan Meriadoc in Brittany might post-date Geoffrey.

§2. CONANUS MERIADOCUS IN HISTORIA REGUM BRITANNIAE

The usurpation of Magnus Maximus (AD 383–8), which provides the frame for Geoffrey's pseudo-historical tale of Conan, is a thoroughly attested historical event. Maximus, a Romano-British general of Spanish origin, led a revolt against the western Emperor Gratian in 383. He crossed the English Channel with his force of soldiers from Roman Britain and ruled Britain, Spain,

Gaul, and parts of North Africa, making Trier his imperial capital. The rule of Maximus is discussed further in the article on MACSEN WLEDIG. Already in the 6th century GILDAS, in his *De Excidio Britanniae* (On the destruction of Britain), reproached Maximus for having deprived Britain of its military resources and 'of a vast number of its youth who had accompanied this usurper . . . and who never returned home'.

Incorporating these facts, which can be verified from reliable sources, Geoffrey's account adds the following details: the Brythonic troops had 'Conanus Meriadocus' as their leader; Maximus named Conan king of ARMORICA, which he conquered by violence after seizing Rennes and having massacred all the men in the region; 30,000 soldiers and 100,000 'civilians' (*plebani*) came from Britain to Conan's land to make 'another Britain' of Armorica (*Distribuit eos per universas armorici regni nationes fecitque alteram Britanniam*). Following the death of Maximus in Rome, 'those of his men who could escape came to their compatriots in Armorica, which was already called the other Britain'. However, Geoffrey does not report the tradition (found in the Breton chronicles of the later Middle Ages) that Breton immigrants had taken native wives as spouses and had cut their tongues out so that they could not transmit their own language to their descendants, in a form of cultural genocide.

§3. 'KENAN' IN THE LIFE OF ST GURTHIERN

This *Vita* was compiled in the Kemperle Cartulary (Cartulaire de Quimperlé) between 1118 and 1127 by the monk Gurheden, and begins with a genealogy of the saint, presented as the distant descendant of BELI MAWR, son of Outham Senis (Outham the Old). The latter character corresponds to Eudaf Hen in *Breuddwyd Macsen* and Octavius in *Historia Regum Britanniae*. Beli, a legendary ancestor figure, well known in Welsh tradition, is given the brother 'Kenan', which is a Middle Welsh spelling (modern *Cynan*) corresponding to Breton *Conan*. This text thus shows that Conan was known in Breton legendary history some years before Geoffrey's book. Gurheden also gives the name of the source of this information: Iuthael, son of Aidan. Although Iuthael is a name known in both Brittany and Wales (CYMRU), *Aidan* is a Gaelic name known in Wales (see AEDÁN MAC GABRÁIN), but unknown in early Brittany, according to Tanguy. Furthermore, since many details of St Gurthiern's genealogy can be found again in the Welsh genealogy of St CADOC, the figure of 'Kenan' is probably a Welsh import.

§4. MERIADOC

The *Castrum Meriadoci* from the Life of Goueznou and *Castellum Meriadoci* in the *Livre des faits d'Arthur* should be compared with a reference by Marie de France (*c.* 1170) to a 'strong and brave castle' held by 'a knight whose name was Meriadu' in the *Lai de Guigemar* (lines 691–2; see BRETON LAYS). The Guigemar of this lay was son of the 'Lord of Leon', and his name, Breton *Guyomarc'h*, occurs in the house of the viscount of Leon (north-west Brittany). In the parish of Plougasnou, also in Leon, a place called Traon Meriadec (Meriadoc's valley) was recorded by the 15th century. In 1480 two feuding parties of this parish, named Hector and Arthur, still had the surname Meriadec.

§5. CONAN MERIADOC AND ST MERIADEC IN LATER DYNASTIC LEGENDS

Around 1500 Pierre le Baud stated, 'the writer of the *Livre des faits d'Arthur* calls the viscounts of Leon *Conanigènes*, which means that they descend from the line of Conan'. In the 15th century the House of Rohan sponsored the cult of St Meriadec as a tutelary saint of the family. The Life of Meriadec, bishop of Vannes (GWENED) survives in fragments. It confirms that:

> the blessed Meriadoc was from the race of the Bretons, descending in direct line from the family of King Conan the Magnificent. His natural father was minister of the duke of Lesser Britain, according to the chronicles. The viscount of Rohan was taken as his father. But one finds in antiquity that this viscount of Rohan and his successors, exclusively among the Bretons, descend in a direct line from the aforementioned Conan.

The Chapel of Stival, dedicated to St Meriadec and built in the second half of the 15th century near the castle which Jean II rebuilt in Pontivy, is decorated with frescoes showing the career of this patron saint. The caption of the first scene tells of 'St Meriadec, son of the Duke of Brittany, descended from the line of King Conan and closely related to the viscount of Rohan.'

This legend implied that the noble houses of Brittany

had chronological precedence over the French monarchy. Thus, the historian Alain Bouchart († *post*-1514) wrote of Brittany's 'eleven ruling kings, each one succeeding the other, between 386 and 690, [beginning] much earlier than the baptism of the Frankish king Clovis' (*c.* 466–511).

The legend of Conan Meriadoc fell into disuse after the Acte d'Union between Brittany and France in 1532. However, it regained a political dimension at the end of the 17th century when the Rohans claimed the status of 'foreign princes' at the court of Louis XIV in Versailles; this status was not recognized except for lineages of royal descent. The Duke of Saint-Simon ironically states in his *Mémoires*: 'they had forged a fanciful descent from a Conan Meriadoc who never existed, pretending that he had been king of Brittany in legendary times'.

The first volume of the *Histoire ecclésiastique et civile de Bretagne*, published in 1750, made an effort to re-establish Conan Meriadoc's historical status. This was followed by numerous other works from the beginning of the 19th century, but the research of the historian Arthur de la Borderie († 1901) finally exposed the medieval legend. Even so, some still see in it a distant recollection of the first Breton migration to Armorica. Fleuriot concluded that, among the chiefs of the Britons who had followed Maximus to the Continent, it was not improbable that one of them was called Conan (or rather Celtic **Kuna(g)nos* 'Little hound' at that date), but added cautiously, 'could one ever prove this?'

Bernard Merdrignac

Conan, Jean (1765–1834) was born in Gwengamp. As a child he went to work at Beauport Abbey (Kerity-Paimpol), where he learned to read and write both Breton and French. He spent some time as a fisherman in Newfoundland (where he was saved by local people after a shipwreck), and on his return home he was sent to defend the borders of the new French Republic, where he opposed the Chouans (Royalists), and took part in several famous battles (Fleurus, Hondschotte, Wattignies) in Belgium, France, and Germany.

Of the many copyists or transcribers of the literature of popular theatre in Breton since the late Middle Ages, Conan was remarkably productive. Seldom studied, only a dozen out of a total of around 150 works written by him have been published. In the 19th century his works were collected by Luzel and Le Braz, who later deposited them in public libraries in Rennes (Roazhon) and Paris.

The manuscript of his best-known work— *Avanturio ar citoian Jean Conan a Voengamp* (The adventures of citizen Jean Conan from Gwengamp)—was recently discovered in a private house, and has since been published. These 'adventures' are narrated in 7054 lines of Tregereg (Tregorrois) Breton (see BRETON DIALECTS), and draw on the traditional dramatic material to which Conan had long devoted himself.

Conchobar mac Nessa, legendary king of Ulaid in the pre-Christian period, is covered most fully in this Encyclopedia in the context of the Ulster Cycle. He also figures in several other entries noted in this summary. In current scholarship, the king and the episodes surrounding him are generally not considered to have a historical basis (see IRISH LITERATURE [1] §5). Portrayed at length in the sagas as essentially a great, beautiful, and, for the most part, good king, his attributes have often been considered by modern writers as evidence for the archetypal Celtic

king (see KINGSHIP). Nonetheless, Conchobar is not an ideal king, a state of affairs intelligible for both literary and ideological reasons. Since the warrior Cú Chulainn, as supreme hero, is the central figure of the Ulster Cycle overall, Conchobar as his nominal superior is necessarily regarded unfavourably by comparison, much as Agamemnon *vis-à-vis* Achilles in the *Iliad*. The literary necessity of warfare imperilling the kingdom of Ulaid as a backdrop for the great deeds of Cú Chulainn in Táin Bó Cuailnge implies that the king must first have failed in some sense to allow the warrior the rôle of saviour of his people. Furthermore, within the scheme of early Irish LEGENDARY HISTORY, the idealized polity of Ériu (ancient Ireland) had a single high-king at Tara (Teamhair), such as Conaire Mór in Togail Bruidne Da Derga ('The Destruction of Da Derga's Hostel') or Cormac mac Airt. As the king of a warring province (CÓICED), Conchobar was thus inherently less than ideal. In the tale Longas Mac nUislenn ('The Exile of the Sons of Uisliu') his character appears overtly negative in the socially destructive love triangle produced by his taking the young and beautiful Derdriu against her will, leading to Fergus mac Roích and other Ulster heroes going over to the tribe's enemies, Medb and Ailill of Connacht, at a critical stage. It is noteworthy that the heroic Finn mac Cumaill is depicted as an ambivalent character in the similar tragic love story, Tóruigheacht Dhiarmada agus Ghráinne ('The Pursuit of Diarmaid and Gráinne'). Remarkably, Nes is not a patronym, but the name of Conchobar's mother. It is Nes, daughter of Eochaid Sálbuide, who connives that Conchobar replace Fergus as king. In his conception tale (*Compert Conchobuir*), Nes is an amazonian woman warrior; though forced to marry Cathbad, in the complex scenario of the later version of the tale it is not Cathbad himself who is the king's father, though he does importantly foresee his future status and that his birth coincides with that of Jesus. The death of Conchobar is likewise simultaneous with the crucifixion in *Aided Conchobair* (The violent death of Conchobar).

Conn Cétchathach (Conn of the hundred battles) is a legendary Irish king who, according to the medieval Irish scholars who shaped LEGENDARY HISTORY, would have lived around the 2nd century AD. He was reckoned by the genealogists to be the ancestor of several leading dynasties of early medieval Ireland, including the pre-eminent Uí Néill. Within early medieval Irish doctrines of dynastic legitimacy, one often encounters the idea that the descendants of Conn were destined to monopolize the prestigious kingship of Tara (Teamhair), which came to be identified with the emerging concept of a high-kingship of Ireland (Ériu).

Conn's name was used to explain the names of major territorial divisions and population groups. Thus, *Leth Cuinn* 'Conn's half' means the northern half of Ireland. Connacht, the name of Ireland's traditional northwestern province, is often understood in traditional literature to mean the 'province of Conn'. Connachta of *Dál Cuinn* can mean either 'the people of Connacht' in a territorial sense, or 'the people of Conn' in a dynastic and genealogical sense, or both. According to the legend, his sons were Conlae (whose story is told in *Echtrae Chonlai*, The adventure of Conlae) and Art (*Echtrae Airt maic Chuinn*, The adventure of Art son of Conn), who himself fathered Cormac mac Airt, the idealized legendary king of Tara (*Echtra Chorbmaic Uí Chuinn*, The adventure of Cormac grandson of Conn).

An Old Irish text entitled *Baile Chuinn Chétchathaig* (The ecstatic vision of Conn Cétchathach) lists the kings of Tara from Cormac to Fínshnechta Fledach, who ruled AD 675–95. Intended as a prophecy issued by the clairvoyant dynastic founder Conn concerning his unborn progeny, the extent of the list probably indicates that the text originated as a piece of late 7th-century political propaganda. Possibly Fínshnechta was only the *rígdamna* or heir apparent at the time, hence a date somewhat before 675 is possible (see Murphy, *Ériu* 16.145–56). There is a 9th- or 10th-century reworking of this text, *Baile in Scáil* (The phantom's ecstasy),

in which it is the god Lug—in the company of a libation serving female personification of the sovereignty of Ériu (see SOVEREIGNTY MYTH)—who foretells the succession at Tara to Conn (Thurneysen, ZCP 20.213–27). The king-list contained in this text represents the official doctrine of descent from Conn as promoted by the Uí Néill propagandists *c.* 900.

Possibly of Old Irish date is *Airne Fíngein*, a tale concerning the birth of Conn. In it, one of the wonders foreshadowing his future greatness and allegorical significance for Ireland and the kingship of Tara is the magical appearance of five roads (probably to be taken as symbolizing the traditional five provinces of Ireland; see COÍCED) converging on Tara. There is a Middle Irish death-tale, *Aided Chuinn*, which tells of Conn's killing during preparations for the *Feis Temro* (FEAST of Teamhair) at the hands of a king of Ulster (Ulaid) named Tipraite Máil.

The name *Conn* is of uncertain origin. There is an uncommon Old Irish word *cond* meaning 'intellect' or 'mind', but the name Conn and its derivatives seem to have *-nn* rather than *-nd*. Alternatively, it is not impossible that the name is based on a popular analogy applied to *Leth Cuinn* and *Dál Cuinn*, which had originally meant 'Half of the chief (*cenn*)' and 'Tribe of the chief' rather than 'Half/tribe of Conn'; Old Irish *cenn* 'head, chief' derives from Celtic **kʷennom*, genitive **kʷennī*, and *cuinn* should have been its original Old Irish genitive form. In other words, that the legendary founder and his name may have been extracted analogically from earlier, misunderstood groups and territorial labels. At any rate, as he appears in the extant literature, Conn is more significant as a namesake, founder, ancestor, and granter of authority to historical rulers than as a hero or ideal ruler in his own right.

Connacht is the most north-westerly of the traditional provinces of Ireland (Éire), and extends westwards from the river Shannon (Sionna) to the Atlantic. Counties Galway, Mayo, Sligo, Leitrim, and Roscommon (Gaillimh, Maigh Eo, Sligeach, Liatroim, Ros Comáin) are within its modern borders. During the early medieval period, however, the province was more extensive, and incorporated the northern part of the Burren (Co. Clare/Contae an Chláir) and possibly parts of south Donegal (Contae Dhún na nGall) around the Erne estuary. The name *Connacht* (Anglicized *Connaught*) was derived from that of the population group name Connachta. The name Ναγναται *Nagnatai* is listed in Connacht in the *Geography* of Ptolemy of Alexandria (*c.* AD 150, but employing earlier sources). *Nagnāta* may be a Celtic name, meaning 'unknown', thus signifying a population centre of which Ptolemy's source for Ireland was ignorant. Connacht was divided between its fertile regions in the east, south and north-west and the rugged mountainous western region known as Iar-Chonnacht. The fertile areas were densely populated and many can be identified by the occurrence of the place-name element *mag* 'plain'. These plains include Mag nAidne, Móen-mag (around south Co. Galway), Mag nAirtig, Mag Luirg (north Roscommon) and most significantly Mag nAí (central and south Roscommon), the heartland of medieval Connacht. The royal ceremonial complex of the province, Crúachu (Rathcroghan, Co. Roscommon), is located in the centre of Mag nAí. Any king who wished to hold the provincial kingship had to dominate this part of Connacht to realize his goal.

Connachta is the name for a group of Irish dynasties descended from and called after the legendary king of Tara (Teamhair), Conn Cétchathach 'Conn of the hundred battles'. Their territory lay primarily to the west of the Shannon (Sionna) with its royal focal point at Crúachu (Rathcroghan, Co. Roscommon/Ros Comáin). The relationship between the Connachta and Uí Néill kings up to the late 7th century, and their possible identity, is crucial for a meaningful un-

Connacht and the Connachta; pre-modern groups and place-names in black; contemporary boundary of the traditional province shown as white line on grey

derstanding of 'Connachta' and of the origins of the Uí Néill dynasties. It has been suggested that the Uí Néill originally belonged to the Connachta, but that they expanded their territories into the midlands and northwards from the 5th to the 7th centuries, and by the late 7th century had lost their identity as Connachta and appear distinct. Another term current in early Irish literature and partially synonymous with the lands of the Connachta and Uí Néill is *Leth Cuinn*, meaning 'the half of Conn [Cétchathach]' and referring to the northern half of Ireland (Ériu). The term the 'Three Connachta' referred to the three dominant dynasties of the Connachta—the Uí Briúin, the Uí Ailello, and the Uí Fhiachrach, which were further divided into different branches, Uí Fhiachrach Aidne of south Galway (Gaillimh) and Uí Fhiachrach Muaide and Muirisce of north Mayo. An alternative name given to the Connachta was Fir Ól nÉcmacht, 'the men of the unintoxicating drinks'.

Edel Bhreathnach

Conradh na Gaeilge (the Gaelic League) was founded in Dublin (Baile Átha Cliath) in 1893. Founder members included David Comyn (Daithí Ó Coimín), Eoin MacNeill and Douglas Hyde (Dúbhghlas de hÍde). Its aims were: (1) the preservation of Irish as the national language of Ireland (Éire) and the extension of its use as a spoken tongue, and (2) the study and publication of existing Gaelic literature and the cultivation of a modern literature in the Irish language (see irish literature).

The organization established language classes which, by 1904, numbered almost 600 throughout Ireland as well as in Britain, with learners drawn from all socio-economic classes. The textbook used was *Simple Lessons in Irish* by Fr Eugene O'Growney (An tAthair Eoghan Ó Gramhnaigh). At first the teachers were untrained, but language-teaching methods employed in other countries—for example, the Gouin and Berlitz methods—were adopted early on, and in 1904 Munster College (Coláiste na Mumhan), the first of six training colleges for Gaelic League teachers, was established in Ballingeary, in the West Cork GAELTACHT.

In 1897 the League established the annual Oireachtas competition (see FEISEANNA), based on the Welsh EISTEDDFOD. The first Oireachtas was held in Dublin in 1898 in conjunction with the Feis Ceoil, an annual Irish musical festival. Initially, the competitions included categories in folklore, dramatic sketches and recitations. Literary categories were subsequently introduced and innovative writing was encouraged. Pádraic Ó CONAIRE, one of the early prize-winners, together with Patrick Pearse (Pádraig MAC PIARAIS), were instrumental in establishing the short story as a successful literary form in Modern Irish. Many Oireachtas prize-winners had their work published by the League's own publishing company, Clódhanna Teoranta, which was founded in 1908.

Pamphlets and newspapers played an important propaganda rôle in the work of the organization from the beginning. In 1894 the League took over *Irisleabhar na Gaedhilge* (the Gaelic journal), founded in 1882 by the Gaelic Union; in 1899 it established its own weekly paper, *An* CLAIDHEAMH SOLUIS (The sword of light) and in 1900 it assumed control of *Fáinne an Lae* (The ring of the day) and merged the two papers.

The achievements of the Gaelic League in securing the recognition of Irish within the EDUCATION system were significant. Having led successful campaigns to ensure that the language was taught in primary schools within normal school hours and that Irish was introduced as a teaching medium in Gaeltacht schools, it then campaigned to have Irish recognized as an examination subject by the Board of Intermediate Education. This aim was achieved with the passing of the Education Act of 1900. When the National University was established in 1908 the League became involved in the highly controversial campaign to make Irish an essential subject for matriculation. In 1910 the National University Senate made the language compulsory for matriculation as from 1913.

Primarily a cultural organization, albeit a radical one, the League became increasingly political and, as a result, Douglas Hyde, who had been president since its foundation, resigned in 1915. The 1916 Easter Rising (see IRISH INDEPENDENCE MOVEMENT), most of the leaders of which were Gaelic Leaguers, followed by the War of Independence and the Civil War, all contributed to a drop in membership from which the organization never recovered.

Although the cultural revolution advocated by its founders may not have fully succeeded, the Gaelic League achieved a great deal. Its policies regarding Irish in the education system were adopted by the independent State, founded in 1922. The Oireachtas, discontinued during some of the more turbulent years, was revived in 1939. It contributed significantly to the resurgence of Irish writing which took place during the following decades and remains a major annual Irish literary event.

The present-day headquarters of the Gaelic League are at 6 Sráid Fhearchair, Baile Átha Cliath 2.

Constantine, St (of Govan)

The only incontrovertible fact about this saint is the dedication to him of the parish church of GOVAN Old. The 6th-century burials and 9th-/10th-century sculpture at this church testify to its antiquity, but there is more uncertainty about its saint. He is probably commemorated in other churches in southern Scotland

(ALBA): in Kintyre, in Ayrshire, and in Galloway. To his cult may be attributed the popularity of this Roman name among royal families in northern BRITAIN in the 7th–10th centuries. There was clearly a series of legends about one or more saintly Constantines in the insular world, all of which employ 'the natural triple context—Roman, christian, and royal—of the use of the name' (Dumville, *Scottish Gaelic Studies* 19.234–5). The first saint and emperor Constantine—who was elevated to purple at the legionary fortress of York in 306—probably lies behind some of his associations; Constantine of Govan's feast day (11 March) is convincingly close to that of the 4th-century sainted emperor (10 March). However, the name was being suggestively re-used in Britain as early as 407–11, the reign of the would-be emperor Constantine III, and there are local cults of royal saints Constantine in Brittany (BREIZH), Cornwall (KERNOW) (with feast-days on 9 March), and Ireland (ÉIRE). The lections in the ABERDEEN BREVIARY ingeniously congeal all these legends, making him son of a Cornish king, husband of the daughter of the king of Brittany, a monastic miller in Ireland, disciple of Columba (COLUM CILLE) and KENTIGERN, preacher in Galloway, and martyr in Kintyre.

Continental Celtic

§1. INTRODUCTION

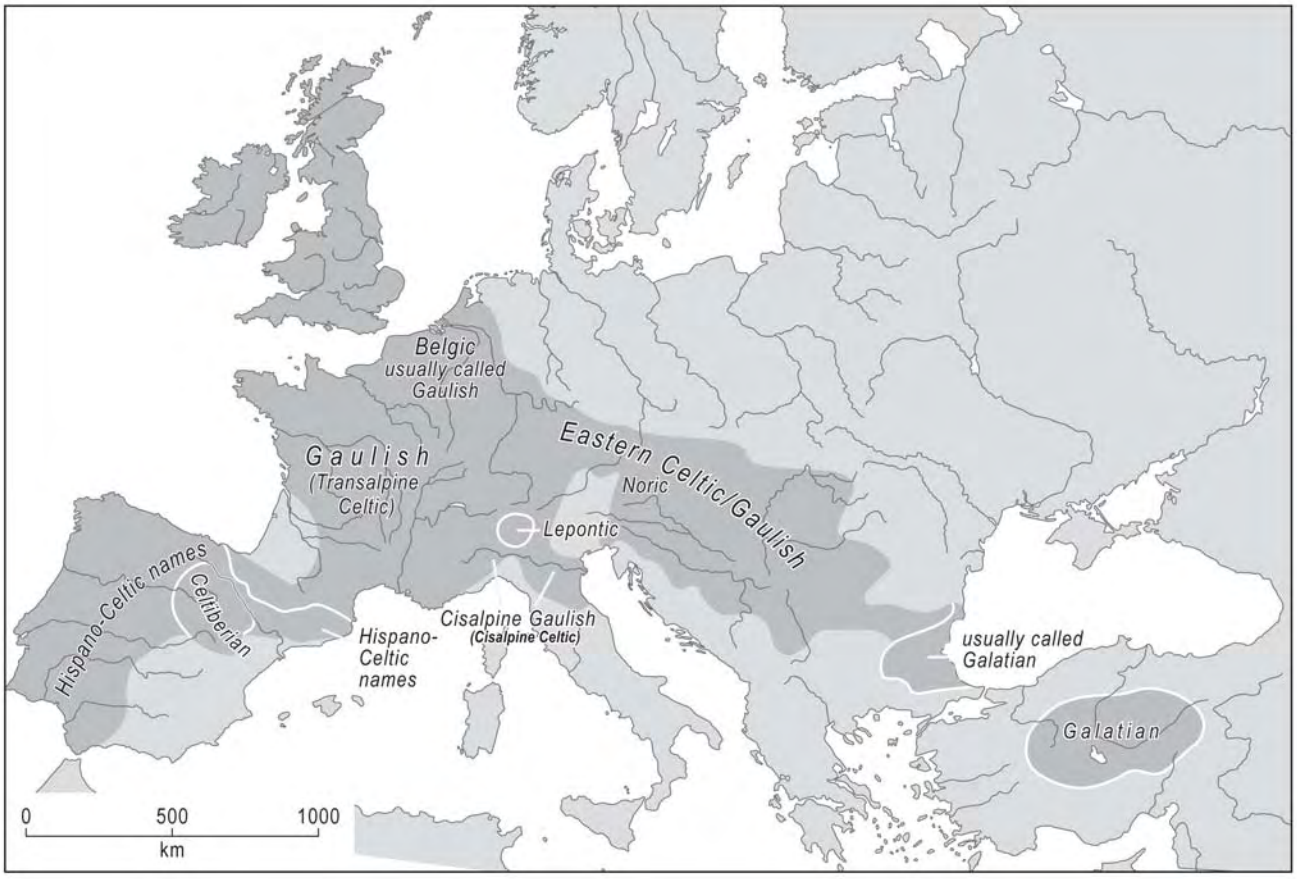
'Continental Celtic' refers to the Celtic languages spoken on the European continent during antiquity. Prior to the Roman and Germanic expansions, they were spoken throughout western and central Europe into the IBERIAN PENINSULA (with the exception of the Mediterranean coast) in the south-west, across northern ITALY and throughout the ALPINE region south-east into the BALKANS, and even into Asia Minor; they were also spoken in eastern Europe, though it is difficult to know to what extent and precisely where. Though the attestation of Continental Celtic is fragmentary, the record is significant enough for us to have learnt a great deal about its segmental phonology (system of sounds) and morphology (how words changed form to show grammatical relations) in the regions where it is more copiously documented, and even some facts about its syntax. Since Continental Celtic inscribed texts are attested from *c.* 575 BC in northern Italy to the 3rd or 4th century AD in TRANSALPINE GAUL, it has become increasingly important for the historical study of the CELTIC LANGUAGES in particular, and the INDO-EUROPEAN languages in general.

§2. THE LANGUAGES

In the Iberian Peninsula the principal Celtic linguistic testimony comes from Hispano-Celtic (also known as CELTIBERIAN), which was spoken in the northern *meseta* of present-day Spain. There are other linguistic remains scattered around the peninsula which resemble attested forms of Celtic, but their attestation is highly fragmentary (see GALICIA). Untermann argues that LUSITANIAN, a language spoken in the central area of present-day Portugal, which is known from only a few inscriptions, is a Celtic sister to Celtiberian (*Veleia* 2/3.57–76), but other scholars believe that any Celtic elements in Lusitanian were introduced via contact (e.g. Tovar, *Actas del III Coloquio* 231). Untermann (*Hispano-Gallo-Brittonica* 244–59) has also tentatively suggested that Tartessian, a language spoken in the south-western corner of the peninsula, near Cadiz, may contain Celtic elements.

In northern Italy there are traditionally said to have been two discrete Celtic languages spoken: LEPONTIC, which was concentrated in the northern Italian lake district, and Cisalpine GAULISH. Eska, however, argues that they were not separate languages, but variants of a single language he would call 'Cisalpine Celtic', whose differences reflect the distinct times and places at which they are attested (*Proc. Berkeley Linguistic Society* 24.2–11).

In present-day France and Belgium various dialects of Transalpine Celtic were spoken. These are usually called Gaulish, but the use of this blanket term risks the misleading implication that a single uniform vari-



Celtic-speaking regions of the ancient world (shown in darker grey) and the Continental Celtic languages

ety of Celtic was spoken throughout Transalpine Gaul.

There are also fragments of Continental Celtic languages attested in the BALKANS, where it is sometimes called 'Noric' (see NORICUM), and in the central portion of present-day Turkey, where it is known as GALATIAN. Most of this eastern Celtic material appears very similar to Gaulish/Transalpine Celtic.

§3. LINGUISTIC AFFILIATIONS

Traditionally, the interrelationships of the Celtic language family were based upon a single criterion, the treatment of the Indo-European phoneme */kʷ/*, it being either continued unchanged or fully labialized to */p/*, but this isogloss is seen as less important by most Celtic scholars today (see CELTIC LANGUAGES §5). Some scholars also attached special importance to the way in which the various Celtic languages reflected the Indo-European syllabic nasals */m̥, n̥/* as *am*, *an* or *en*, *em* in order to distinguish separate branches for Celtiberian, Lepontic, GALLO-BRITTONIC, and GOIDELIC (e.g. Lejeune, *Bulletin . . . de l'Académie Royale de Belgique* 64.119–20). However, it is now known that the proto-Indo-European syllabic nasals became *am*, *an* in PROTO-CELTIC, the variation across and within the individual Celtic languages being secondary developments. These facts, plus the considerable variation seen in the linguistic features of the Continental Celtic languages in particular, have caused some scholars to lose hope that Proto-Celtic can be reconstructed at all. A variety of views on the structure of the Celtic language family, therefore, is now found in contemporary scholarship:

(1) Some continue to employ the criteria listed above and separate Goidelic, Celtiberian, Lepontic, BRYTHONIC, and Gaulish from Proto-Celtic in that order (e.g. Schmidt, ZCP 41.164).

(2) Others maintain that there is a cleavage between Continental Celtic and INSULAR CELTIC (e.g. McCone, *Religión, lengua y cultura* 483–94). Among these, there is general agreement that Celtiberian separated from Proto-Celtic first, but it remains unresolved whether the Celtic of Transalpine Gaul was a different language

from that found in Cisalpine Gaul (e.g. Uhlich, *Akten des Zweiten Deutschen Keltologen-Symposiums* 2.277–304).

(3) Still others emphasize the close connections between Gaulish and Brythonic, an affinity easily accounted for on the basis of known historical and archaeological patterns during the IRON AGE and Roman period and therefore possibly not reflecting any dialect arrangement within the Celtic-speaking world earlier than the expansion of LA TÈNE culture from Gaul to Britain in waves beginning *c.* 400 BC (Koch, *Bretagne et pays celtiques* 471–95).

§4. LINGUISTIC FEATURES

Phonology. The representation of the sounds of the Continental Celtic languages is not straightforward, even within a single language area, much less Continental Celtic as a group. The evidence testifies to the fact that a number of sound changes had only recently been completed (hence, archaic orthography may not reveal a given change) or, in fact, were still in progress. One must also bear in mind that the indigenous SCRIPTS employed to engrave Celtiberian and Cisalpine Celtic inscriptions, and even the Greek script employed to engrave some Transalpine Celtic inscriptions (and the meagre records of Galatian which are embedded in Greek texts), may mask as much as they reveal of the actual sound patterns of these languages.

The vowel systems of the Continental Celtic languages preserve the late Indo-European five vowel system */i e a o u/* with a short–long opposition for */i e a u/*; inherited */ē/* > Celtic */ī/*, but may be vestigially preserved unchanged in a few tokens in Celtiberian; Celtic */ē/* continues the Indo-European diphthong */ej/* elsewhere; IE */ō/* is continued as Celtic */ū/* in final syllables and as */ā/* elsewhere. However, we find that a new */o/* arises in later Transalpine Celtic (including British and Goidelic) from the simplification of the diphthong */ow/*. In Cisalpine Celtic, inherited VN.T (that is, vowel+nasal+stop consonant) sequences regularly developed into Ṽ.T (nasalized vowel+stop consonant) (see LEPONTIC). This development is attested sporadically elsewhere in Continental Celtic and, indeed, in many of the ancient languages of the Mediterranean area. All six of the Indo-European diphthongs */aj ej oj aw ew ow/* are preserved in the earliest attested records of Continental Celtic, but even in these inscriptions there is some evidence for the simplification of */ej/* > */ē/*. Later we find */aj/* > */ī/*, */oj/* > */ī/*, */ew/* > */ow/*, and */ow/* > */ō/*.

The consonantal systems show similar variation. The stop consonants (which completely arrest the breath flow) have three places, namely, bilabial (articulation using both lips—*/b/*), coronal (the tip of the tongue at the front of the mouth—*/t, d/*), and dorsal (the surface of the tongue closing the breath flow on the top of the mouth—*/k, g/*), the last of which also occurs with a secondary bilabial articulation (*/kʷ, gʷ/*), thus yielding a four-way opposition. An inherited Indo-European voiceless–voiced opposition is continued, that is, the stop consonants may be articulated with the vocal chords still or vibrating, which gives us the three opposed sets above—*/t d, k g, k gʷ/*.

Proto-IE */p/* is generally completely lost in initial and intervocalic positions (see PROTO-CELTIC §2). However, Indo-European seems to occur as */w/* in both positions in the forms *uvamoKozis /uwamo-/* and *uvlTiauioPos /wultiawobos/* in an early Cisalpine Celtic inscription from Prestino (S–65) (Eska, *Münchener Studien zur Sprachwissenschaft* 58.63–80). The latter form has been particularly difficult to analyse, but possibly continues Indo-European **pl̥th₂wih₂-* 'the broad earth' and is cognate with the Transalpine Celtic *Letavia*, Old Welsh *Litau*, Middle Irish *Letha* 'Brittany', and probably also the British tribal name *Corieltauvi* (Koch, *Emania* 9.17–27).

Both of the labial-velars */kʷ, gʷ/* are attested in Celtiberian and are probably attested in earliest Cisalpine Celtic (though the Lugano script makes it difficult to be certain), but, by and large, they appear to be absent in Transalpine Celtic, in which */kʷ/* > */p/* (save in some religious terms, which are a notoriously conservative semantic category in many languages) and Proto-Celtic */gʷ/* > */w/* in British and Gaulish (Koch, *Hispano-Gallo-Brittonica* 79–95). All the Continental Celtic languages possess the nasals */m n/*, presumably with allophonic [ŋ] before /k/, /g/, */kʷ/*, and */gʷ/*; in later Cisalpine Celtic and with the exception of a few vestiges in Transalpine Celtic, final */m/* > */n/*. The liquids */l r/*, the glides */j w/*, and the sibilant */s/* are also found in all of the languages. In later Transalpine Celtic and Galatian, */w/* tends to be lost between vowels. The sibilant */s/* is also affected in this position. It is sometimes lost in

later Transalpine Celtic; in Celtiberian, it is usually represented by the characters conventially transcribed by scholars as *s* in this position (where it is likely to have been pronounced /*z*/), as opposed to the characters transcribed as *s´* (probably pronounced /*s*/; see SCRIPTS). Cisalpine and Transalpine Celtic also possess a phoneme known as the *tau gallicum* which immediately continues /ᵗs/ < /st/ (see also D. Ellis Evans, *Gaulish Personal Names* 410–20; Eska, SC 32.115–27).

§5. MORPHOLOGY

The nouns, adjectives, and pronouns of the Continental Celtic languages possess a much richer case system than is found in INSULAR CELTIC. There is evidence for all eight Indo-European cases—nominative, accusative, genitive, dative, locative, instrumental, ablative, vocative—though not in all numbers and declensions and not in all the Continental Celtic languages. The familiar three genders—masculine, feminine, neuter—are well documented, and there is some evidence for the dual number in addition to the singular and plural. Each of the languages has undergone some remodelling in their respective systems of nominal case endings. In Celtiberian, there is some evidence for the introduction of a feminine nominative singular *-ī*, genitive *-īnos*, on the model of the *-ū*, *-ūnos* paradigm, and genitive singular in *-o* in the *o*-stems has emerged on the analogy of the genitive masculine pronoun (Eska, *Hispano-Gallo-Brittonica* 41–2; Prosdocimi, *Studi Etruschi* 57.139–77). In earliest attested Cisalpine Celtic, the Indo-European *o*-stem genitive singular in **-osjo* is continued as *-oiso* (Eska, *Hispano-Gallo-Brittonica* 42, Eska & Wallace, *Incontri Linguistici* 24.140–1), but it gives way to familiar Celtic *-ī* later. Early Cisalpine Celtic also shows the replacement of inherited consonant stem dative singular *-ej* by instrumental singular *-i* in progress (Eska & Wallace, *Indogermanische Forschungen* 106.230–42), a change that is completed by the first appearance of Transalpine Celtic.

It is in Transalpine Celtic that we find the largest number of innovations; for example, the adoption of some *ī*-stem endings by the *ā*-stem declension (Lejeune, ÉC 22.88–93) and the merging of the dative and instrumental singular in the *o*-stem declension and of the dative and instrumental plural in all declensions.

In the verbal system, there is good evidence for the present, preterite, and future tenses, all in a variety of inherited formations. Both Cisalpine and Transalpine Celtic have also created a new *t*-preterite, in which an inherited perfect verbal ending is affixed to the inherited third person singular imperfect form of the verb. Verbal forms are attested in all six person/number (singular and plural) combinations, and in the indicative, subjunctive, and imperative moods, though not in all languages.

§6. SYNTAX

Owing to the fragmentary preservation of the Continental Celtic languages, the picture we have of syntax is far less complete than that of phonology or morphology. In Celtiberian, we find that the basic, unmarked order of the clause is consistently subject–object–verb. All of the core constituents of the clause must occur before the verb. Additional material, however—for example, adverbial phrases—could occur after the verb. This is the loose type of subject–object–verb configuration reconstructed for late proto-Indo-European. In earliest-attested Cisalpine Celtic, subject–object–verb appears still to be the unmarked configuration of the clause, but it had become possible for a core constituent, a noun phrase, to occur after the verb. This was, seemingly, the first step towards the unmarked configuration shifting to subject–verb–object as is found in later Cisalpine Celtic. (Interesting examples of later Cisalpine Celtic word order are found in the bilingual inscriptions of TODI and VERCELLI, in which the verb, as in later Insular Celtic, but unlike that in Latin parallel texts, shuns clause-final position.) In the much more copiously attested Transalpine Celtic, subject–verb–object remains the unmarked configuration (though archaic subject–object–verb configuration appears to have been possible in formal or ritualistic texts of a high register). An important syntactic innovation is observable in Transalpine Celtic (sometimes called 'Vendryes's Restriction'). This pattern required that an enclitic pronoun, i.e. an unstressed pronoun linked phonetically to the previous stressed word, had to be adjacent to that verb when functioning as the object of the verb. Since Celtic languages have a strong tendency to place these unstressed object pronouns in second position in the clause, the result was that the verb tended to move forward in the clause to be adjacent to its object. Thus, the appearance of Vendryes's Restriction as an emerging trend in GAUL on both sides

of the Alps, provides an important insight into the prehistoric background leading to the preponderance of verb-initial orders in Medieval and Modern Irish and Modern Welsh, one of the most striking features of the Celtic languages today.

The **Coraniaid** (Middle Welsh *Corryanyeit, Korannyeit, Coranyeit, Coranneit, Coranyeyt*) were a race of sinister otherworldly magicians who figure as one of the three national *gormesoedd* (foreign oppressions, invasions) in the Middle Welsh mythological prose tale, CYFRANC LLUDD A LLEFELYS. Like the magician MATH FAB MATHONWY in the Fourth Branch of the MABINOGI, the Coraniaid had great power through being able to hear any utterance that met the wind. The Coraniaid continued to be known in later Welsh folk tradition; for example, Ann GRIFFITHS refers to them in one of her hymns *c.* 1800: *Caiff Hotentots, Goraniaid dua' eu lliw, / Farbaraidd lu, eu dwyn i deulu Duw* 'Hottentots, blackest of Coraniaid, a barbarous host, will be taken into God's family'. The sense seems to be 'outlandish heathens'. Several explanations for the name have been suggested, including a likely connection with Welsh *cor(r)* 'dwarf', and a linguistically tricky equivalence with Breton *Korriganed* 'the FAIRIES'. Etymologies once proposed, but since rejected, include a common derivation with the Old Irish names for the PICTS (CRUITHIN), a tribal group of north-east Ireland—a derivation which is linguistically impossible—or with the British tribal name *Coritanni*, but this name is now read *Corieltau(v)i*. Koch compares Old Irish *corrguinecht* 'magic, wizardry', *corrguinech* 'magician, sorcerer': apparently a compound of *corr* 'crane' and *guin* 'the act of slaying, wounding'. There are other magical associations with cranes in early IRISH LITERATURE, but the particulars of the practice of *corrguinecht* are not certain.

Corc of Caisel (Conall Corc, Corc mac Luigdech) is the apical figure, although not the eponym, of the dominant Éoganacht dynastic families in the Irish province of Munster (Mumu). Date-guessing would place him in the 4th or early 5th century, but his significance derives from the genealogical and literary complex gathered around him. Traditionally, he is the 'founder' of Caisel Muman (Cashel), the prominent rock which became the royal centre of the Éoganacht kingship in the early Middle Ages. It has been thought significant that its name derives from the Latin *castellum*, and that from its earliest traditions the Éoganacht kingship appears to be Christian. Caisel is said to have been revealed by angels, and one 9th- or early 10th-century version of Corc of Caisel's finding of Caisel (*Senchas Fagbála Caisil* 'The Tradition of the Finding of Cashel') incorporates what is patently a royal, perhaps inauguration, liturgy for the Munster kings. Corc's story-cycle involves a wicked witch as foster-mother, a satirist mother, and a journey into Alba (Scotland, Britain), where he is rescued and befriended by a local poet, Gruibne *éces*; a near-disastrous union with the daughter of the Scottish king follows. Already in the early Middle Ages, this indicates that Pictish families (those of Mag Gerginn, modern Angus and the Mearns) were claiming descent from Conall Corc. Versions of these traditions were adapted around 1200 in poems by Muireadhach Albanach Ó Dálaigh for patrons in the Scottish lordship of the Lennox.

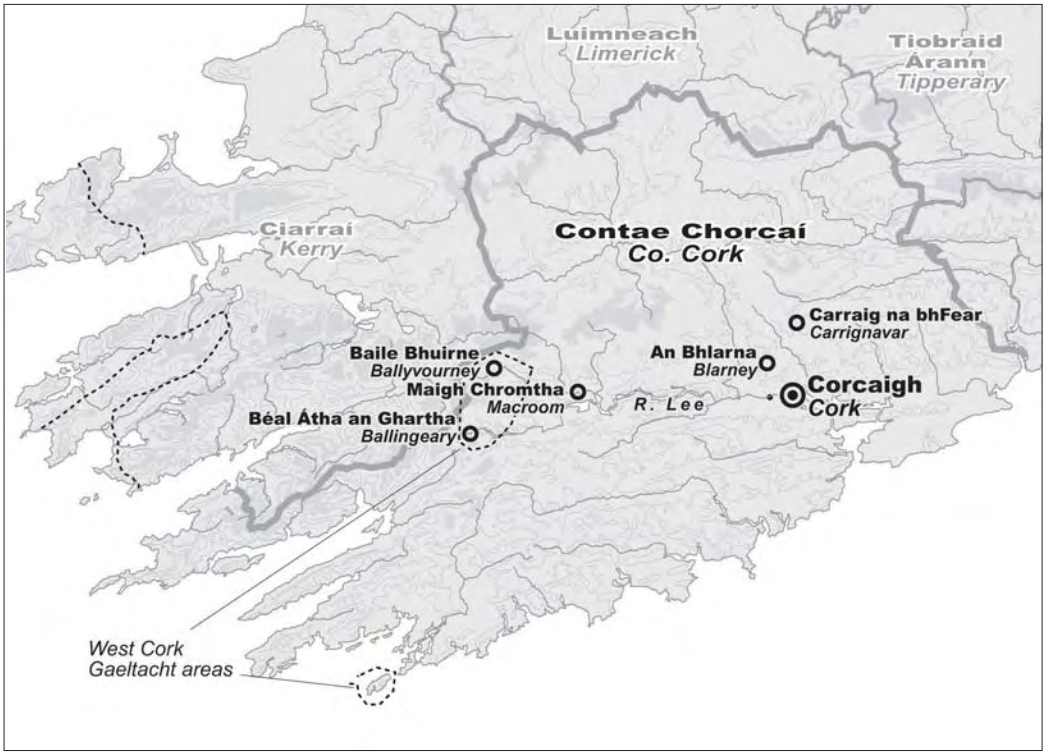
Corcaigh (**Cork**) is a city and county in the southern province of Munster (An Mumhain, Old Irish Mumu) in the Irish Republic (Éire). The city of Cork is situated on the river Lee, near the south coast of the country and is the second largest city in the Republic. Irish is still spoken in two areas of west Cork—Ballyvourney (Baile Bhuirne) and Ballingeary (Béal Átha an Ghaortha), both near Macroom (Maigh Chromtha).



The city and county have produced many famous scholars, politicians, and writers, among them Dáibhí Ó Bruadair (?1625–98), Tadhg Ó Donnchadha (1874–1949), Daniel Corkery (1878–1964), Frank O'Connor (1903–66), Seán Ó Ríordáin (1916–77), and Donncha Ó Céileachair (1918–60). Originally a 7th-century monastic settlement near the present-day cathedral named after Cork's patron saint, Finbarr, and subsequently a Viking town, Cork became an important educational centre during the Middle Ages. The scribal activities of members of the famous Ó Longáin family from Carrignavar (Carraig na bhFear), Co. Cork, from the late 18th to the late 19th century were a very valuable contribution to our knowledge of Irish literary tradition. Cork played a central rôle during the nationalist resistance of the early 20th century and the city suffered much devastation during the ensuing struggle for independence (see IRISH INDEPENDENCE MOVEMENT). Cork city is home to one of the Colleges of the National University of Ireland, originally founded as Queen's College in 1849, now University College Cork (or National University of Ireland, Cork/Coláiste na hOllscoile, Corcaigh). The university has produced many important Irish writers and scholars, including Seán O'Faolain (1900–91), Nuala Ní Dhomhnaill (1952–), and Seán Ó Tuama (1926–). It offers degree courses in Irish language and literature, and was also the first university to award a degree in Celtic Civilization.

About 8 km north of Cork city is Blarney Castle (*c.* 1446), in the village of Blarney (An Bhlarna), home to the world-famous stone, which allegedly confers the 'gift of the gab' to whoever kisses it.

The place-name *Corcaigh* is probably derived from the Irish word *corcach* 'marsh'.

Corkery, Daniel (1878–1964) was an Irish fiction-writer, playwright, historian, and politician who championed Gaelic and rural literature in Ireland (Éire). First a schoolteacher and civil servant, Corkery was professor of English at University College Cork from 1931 to 1947 and a member of Seanad Éireann (Irish Senate) from 1951 to 1954. He is best known for his short stories, set in southern Ireland, and his literary historical works, particularly *The Hidden Ireland* (1924), which shifted scholarly attention from Anglo-Irish literature of the 19th century to Gaelic. Now seen by some as excessively nationalistic (see nationalism), Corkery nevertheless helped rehabilitate Irish-language literature and paved the way for its revival in the 20th century. He also greatly influenced writers in English, particularly Frank O'Connor.

Brian Ó Broin

Cormac mac Airt was a prehistoric Irish king renowned in the Middle Ages for his unwavering truth and Solomonic wisdom. He was often called Cormac ua Cuinn or 'Cormac the grandson of Conn' after his more famous progenitor Conn Cétchathach (Conn of the hundred battles). Although his historicity is open to question, Cormac is said to have lived in the 3rd century AD, but by the time his exploits came to be written down in the early Christian period he had already become a creature of legend. As such, he played a major rôle in Irish literature, both in Fiannaíocht and in the Kings' Cycles of tales. Included in this latter category are some 15 texts in Old and Middle Irish that have been grouped by modern scholars into 'The Cycle of Cormac mac Airt' (Dillon, *Cycles of the Kings* 15–29). These sagas, poems, and anecdotes chronicle the major events in his life from his conception on the night before the battle of Mag Mucrama to his death in the otherworldly house at Clettech. The

most famous episode in this cycle centres on his first journey to Tara (TEAMHAIR), where he pronounced a *fírbreth* (true judgement) that at once revealed the falsity of the reigning king, Lugaid Mac Con, and established his own fitness to rule. It was this intimate connection with *fír flathemon* (ruler's truth) that set Cormac apart from other kings as the ideal sovereign of Irish tradition (cf. AUDACHT MORAINN; WISDOM LITERATURE). Other sources depict Cormac as a lawgiver and as a fount of gnomic wisdom, which he dispensed to his eldest son and successor Cairpre Lifechar (Ó Cathasaigh, *Heroic Biography of Cormac mac Airt* 60, 86). Cormac was also credited with the building of a number of magnificent structures on the Hill of Tara, including a massive stronghold that is described in rather fanciful terms in the metrical DINDSHENCHAS (Gwynn, *Metrical Dindshenchas* 1.28ff.). However, unlike his grandfather, the victor in a hundred battles, Cormac is not portrayed as a great warrior (Ó Cathasaigh, *Heroic Biography of Cormac mac Airt* 91). Whatever victories he enjoyed during his reign stemmed not from his prowess at arms but from his steadfast preservation of truth.

Dan Wiley

Cormac ua Cuilennáin/Cormac mac Cuileannáin (†908), bishop and king of CAISEL MUMAN from 902 to 908, when he was killed at the battle of Belach Mugna, belonged to one of the lesser branches of the ÉOGANACHT dynasties. The fullest version of his biography is to be found in the 17th-century compilation, the ANNALS of the Four Masters. He was brought up by the sage, Snedgus of Dísert Díarmada, who died in 890. In 902 he assumed the kingship of Caisel in place of Cenngégán. Five years later he and Flaithbertach led a Munster (MUMU) force against Flann mac Maelsechlainn, king of Ireland (ÉRIU), at Mag Léna (Offaly/Co. Uíbh Fhailí). After defeating him, they marched on into southern Meath (MIDE) and also defeated the Connachtmen and brought home hostages from the Uí NÉILL. The victories brought no lasting peace. In 908 Flann with Cerball, king of LAIGIN, and Cathal, king of CONNACHT, brought a great army against Cormac at Belach Mugna (Ballymoon, Co. Kildare/Contae Chill Dara). The Annals record the doom-laden prophecies accompanying Cormac, and his death is described in detail (Radner, *Fragmentary Annals* 153–9). In the coda of the annal entry he is described as 'a scholar in Irish and in Latin, the wholly pious and pure chief bishop, miraculous in chastity and prayer, a sage in government, in all wisdom, knowledge and science, a sage of poetry and learning, chief of charity and every virtue; a wise man in teaching, high king of two provinces of all Munster in his time . . .' (Radner, *Fragmentary Annals* 159).

A wide range of works have been attributed to him. They include LEBOR NA CERT ('The Book of Rights'), SANAS CHORMAIC ('Cormac's Glossary'), the manuscript compilation known as SALTAIR CHAISIL ('The Psalter of Cashel'), and numerous poems and tales. However, recent scholarship has tended towards the view that many of these attributions should be treated with scepticism (see Dillon, *Celtica* 4.239–49; Ó Riain, *Éigse* 33.107–30). Many of the poems and tales attributed to him await re-evaluation: it seems that there was a tendency to attribute works to him in order to enhance their status and that of the manuscript in which they were contained. In contrast to the prevailing trend, Breatnach has recently attributed the *Amra Senáin*, a poem in praise of St Senán, to Cormac on the basis of the historical associations in the poem and the language and vocabulary also attested in *Sanas Chormaic* ('Cormac's Glossary').

Paul Russell

Cormac ua Liatháin (Latin *Cormac[c]us nepos Lēthani*) was an Irish ascetic in the later 6th century, a contemporary and follower of St COLUM CILLE/Columba (†597). He is of special interest as a voyager

saint whose historical exploits anticipate the more fantastic adventures of St Brendan in Navigatio Sancti Brendani, as well as the vernacular Irish voyage literature or immrama, such as Immram Brain. Cormac is mentioned in three sections of Adomnán's *Vita Columbae* (Life of Colum Cille). Chapter 1.6 relates that he made three unsuccessful attempts to find an island hermitage on the ocean, and as he went out a fourth time from Eirros Domn (in Connacht) Colum Cille prophesied that he would fail once again since his companion was a monk who did not have his abbot's permission. In Chapter 2.42, we are told that Cormac and his sailors made a northern voyage. Colum Cille sought to ensure their safety by asking Brudeus king of the Picts (Bruide mac Maelcon) to use his authority over the sub-king of the Orcades (Orkneys), whose kingdom possibly also included the Shetlands, to guarantee that the voyagers would not be harmed if they landed on the islands. They were then blown off course by 14 days of winds from the south and experienced terrifying sea creatures on all sides. Though they were far away, Colum Cille and his monks were aware of all this and prayed for the wind to reverse; it did and Cormac returned gratefully. In Chapter 3.17, Cormac is one of four 'holy founders of monasteries' who set out to find Colum Cille and locate him on the island of Hinba. There they asked him to perform the eucharist, and as he did so a fiery light appeared above him and rose like a column. In the Old Irish Martyrology of Oengus Céile Dé, Cormac's feast day is 21 June and he is associated with the important Columban foundation at *Dermag a Mide* (Durrow in Meath). In a strange little tale that follows, Cormac cuts off Colum Cille's finger in a squabble over relics, and Colum Cille responds by prophesying that *coin* (dogs, wolves) would devour Cormac, a prophecy which was fulfilled, we are told, though we are spared the details. It also tells us that it was this Cormac against whom the sea rose in fulfilment of Colum Cille's word, apparently an allusion to *Vita Columbae* 1.6.

The **Cornish language**, like Breton, can be explained as having developed from a common ancestor, namely the south-western dialect of Brythonic. This means that, within the Brythonic subfamily of the Celtic languages, it is rather more closely related to Breton than to Welsh. Cornish may be usefully divided into four historical phases of development. (1) Old Cornish denotes the phase between about 800 and 1250, when the language was first emerging from its parent south-west Brythonic. Some scholars, following Jackson (LHEB), refer to a 'Primitive Cornish' period at *c.* 550–*c.* 800, but this usage is potentially misleading because of the dearth of evidence that Cornish and Breton were separate dialects at this early period, or even that Welsh was by then very distinct from a more general Brythonic. (2) Middle Cornish refers to the phase of the language between *c.* 1250 and *c.* 1550. (3) Late Cornish is the label most often given to the phase from *c.* 1550 to the period of decline in the 19th century, while (4) Revived Cornish is applied to the language between the mid-19th century and the present time.

The most characteristic feature of Old Cornish was the hard endings to consonants (specifically the dental stops */-d -t/*), which later softened in the Middle Cornish phase to *s*-like sounds (sibilants); the final *-nt* became *-ns*, e.g. the Old Cornish masculine name *Gerent* < British *Gerontios* (cf. Welsh *Geraint*) became Middle Cornish *Gerens*, and *d* became */z/*, perhaps by way of /ð/ (the English *th* in *breathe*), e.g., in Cornish *bys* */bīz/* < Celtic *bitu-* 'world', contrasting with Welsh *byd* and Breton *bed*, or Middle Breton *Meriadec* vs. Cornish *Meriasek*. Cornish during the Tudor (Tudur) period had many characteristics of the Middle Cornish phase, but also contained characteristics of the Late period, making texts from this time of crucial interest. Cornish reached its highest development as a literary language in the 15th and 16th centuries, as can be seen by the surviving literature, such as the Ordinalia, Beunans Ke (The Life of St Ke or Kea), Beunans Meriasek ('The Life of St

Meriasek'), and Gwreans an Bys (*The Creacion of the Worlde*).

In the early Middle Ages, south-west Brythonic as it developed into Old Cornish was spoken in parts of present-day west Devon and Cornwall (Kernow). By around 1100, Cornish was spoken from the river Tamar to Land's End. At that time, perhaps around 20,000 of Cornwall's estimated population of 21,000 may have spoken the language. By the Middle Cornish phase, around 30,000 of Cornwall's 50,000 inhabitants spoke Cornish, but by 1500 the language had retreated to Bodmin and the west.

Its decline may be attributed to several historical events, among them the Wars of the Roses, during which many old Cornish families disappeared, the discovery of America (many Cornish people travelled west) and the An Gof Rebellion of 1497, the Renaissance of learning (which spread English into Cornwall), the Reformation—which meant that the age-old intercourse between Cornwall and Brittany (Breizh) ceased to function within the framework of a common church, and the English Civil Wars. Cornish was spoken as late as 1595 in St Ewe, near Mevagissey, while monoglot Cornish speakers were found in Feock, near Truro, in 1640.

Though the language was still spoken in some easterly pockets, by 1700 it had become largely confined to Penwith and the Lizard in the extreme west of the peninsula. Thomas Tonkin noticed that a rapid decline occurred between 1700 and 1735. Despite the efforts of many scholars, the language was virtually unused by the turn of the 19th century, but fragments and pieces continued to be retained and collected, while earlier manuscripts were studied. There is also a possible mislaid manuscript, which might have contained sermons preached in Cornish by the Revd Joseph Sherwood in west Cornwall in 1680.

The language was revived by a number of scholars, including Henry Jenner and Robert Morton Nance during the late 19th and early 20th centuries. Nance's suggested system of Unified Cornish has since been re-evaluated, and Revived Cornish has undergone an internal review, prompting, perhaps temporarily, the prevalence of different kinds of 'Cornishes'. The language underwent a large literary revival during the 20th century (see cornish literature) and there are now numerous authors and poets writing in the language, as well as Cornish-language films and developing mass media. A useful reader in all phases of the Cornish language before the Revival has been edited by Kent and Saunders.

Cornish literature [1] medieval

The fact that medieval Cornish literature has often been dismissed by scholars in the field of Celtic studies as 'not Celtic enough' has done much disservice to writing from Cornwall (Kernow). While the medieval literature lacks the mythical or heroic elements of Irish literature or Welsh prose literature and Welsh poetry (see also heroic ethos), the territory's tradition is clearly more closely bound up with drama, community, and festival. The character of Cornwall's literary continuum is greatly affected by the fact that it was the first of the Celtic countries to be 'accommodated' into the English state.

§1. literature of the old cornish period

In the early medieval period, the earliest evidence of Old Cornish consists of several glosses from the 10th century, written on Smaragdus's Commentary on the classical grammarian Donatus, on the Book of Tobit found in the manuscript Oxoniensis Posterior (see glosses), and in the manumissions found on the Bodmin Gospels, which record the freeing of 122 slaves, of whom 98 were Cornish, and many had native Cornish names (see bodmin manumissions). Evidence during this phase also indicates considerable, but now lost, Arthurian material, as well as implying Cornish origins for the love story of Tristan and Isolt.

The longest surviving piece of early medieval Cornish, however, is the Old Cornish Vocabulary (*c.* 1100), which provides a long list of Latin words and their Cornish equivalents. It demonstrates the vitality of Cornish as a literary language and classifies everything from the biblical creator to animals and inanimate objects. This is followed *c.* 1150 by John of Cornwall's Latin *Prophetia Merlini* ('The Prophecy of Merlin'; see also myrddin), which expresses contemporary political and religious views in the guise of an ancient prophecy. The extant text, in Latin, is believed to have been derived from a Cornish source, and the Brythonic glosses indicate this.

§2. literature of the middle cornish period

The next text in the continuum is commonly known as the Charter Endorsement. It consists of 41 lines of Cornish from *c.* 1400, written on the back of a land charter from St Stephen-in-Brannel dated 1340. The text's theme is marriage, and it offers the couple advice on how to proceed:

an bar ma ze pons tamar
my ad pes worty byz fa
ag ol se voz hy a wra

On this side of the Tamar bridge
I pray thee be good to her
And all thy pleasure she will do.

Opinion regarding the text is varied: some scholars believe it is a fragment of a longer work, while others believe it to be a wedding speech.

The most significant trend during this phase, however, is the development of Cornish-language, community-based, liturgical and biblical drama, with a resolutely Cornish treatment, of which the trilogy known as the Ordinalia is one of the few surviving examples. Most parishes had their own play, sometimes based on saints' lives, synthesizing the contemporary with the ancient; for example, in the Passion, Christ's torturers travel to Market Jew (Marazion) in west Cornwall to obtain nails from a smith.

Broadly at the same time there emerged the elaborate and much underrated epic poem, *Pascon Agan Arluth* or 'The Poem of Mount Calvary', which has many similarities to the Passion play of the *Ordinalia*. Its quatrains are based on the canonical gospels with various apocryphal editions, though unlike the *Ordinalia* or Beunans Meriasek, it bears no explicit Cornish references. The oldest surviving copy was found at Sancreed in Penwith. The poem's quatrains are used to great effect at the moment of the crucifixion:

Newngo devethys an prys may tho agas theweth
Yn erna y fe dorgis ha dris ol an bys ef eth
Tewolgow bras a ve guris an houll a gollas y feth
Hay moy merthus me agris ys a rena ve yn weathe

Twas not come the time, but twas near his end,
In that hour there was an earthquake, over all ye world it was
Darkness great was made ye sunn left his face
And more wonders I believe then there were also.

The post-medieval and Tudor phase, however, curtailed much of this literary activity, and several other texts, that are known to have existed, have not survived. Nevertheless, Cornwall's medieval literature shows that a distinctly dynamic theatrical culture operated in the west of the British Isles.

Such a culture is exemplified and proven by the recent rediscovery in 2002 of a new Middle Cornish saint's play (contained in a mid-16th-century manuscript) based on the life of St Kea (see beunans ke). Kea is a saint venerated in Cornwall, Brittany (Breizh), and Wales (Cymru). A *vita* of Kea from Brittany survives in a French translation. The play is likely to have been intended for performance at a site near Kea in the Truro area called 'Playing Place'. The discovery of this play, which includes some Arthurian material, markedly increases the canon of Cornish literature.

Cornish literature [2] post-medieval

To Cornish scholars, this phase of Cornish literature is perhaps best referred to as the Tudor period. It contains within it four core texts which, although they have the characteristics of medieval or Middle Cornish, also have many of the linguistic earmarks of what would emerge as Late Cornish. This makes this post-medieval literature of immense interest to those concerned with the revival of Cornish. Politically, many of these texts came in the aftermath of the so-called An Gof (The smith) Rebellion of 1497 and the 1549 Prayer-Book Rebellion, both of which were mounted against the effects of the Reformation and Tudor centralism (see TUDUR).

The main texts are the two-day-long saints' plays Beunans Ke (*c.* 1500) Beunans Meriasek (1504); the Tregear Homilies (*c.* 1558), which consist of thirteen homilies, twelve of which were translated from the work of Bishop Bonner by John Tregear (*henna ew tha leverall in agan eyth ny* 'that is to say in our own language'), and Gwreans an Bys (*The Creacion of the Worlde*, 1611), the first day of a longer Helston-based cycle, probably written in the mid-16th century and detailing biblical events from the Creation to the Flood.

Other interesting texts of the period include various accounts of performances of Cornish drama at various locations from the river Tamar in the east to St Just in the west, showing how widespread the theatrical continuum was in Cornwall (Kernow). References in Launceston to the king and queen of Gall in lost texts indicate the presence of secular drama. The *Green Book of St Columb Major* (1589–95) contains a reference to a Robin Hood drama performed there, while interestingly the hagiographer Nicholas Roscarrock (*c.* 1548–1634) draws attention to an 'olde Cornish Rhyme' on the life of St Columb, now lost (see HAGIOGRAPHY).

Oliver Oldwanton's drama, *The Image of Idleness* (*c.* 1565–70), contains three Cornish characters—a Cornish priest named John Polmarghe (who is from Penborgh—a stage Glasney College), Maister Jewgur, and Syr Ogier Penkyles; the playwright uses the Cornish language in the line *Marsoye thees duan Guisca ancorne Rog hatre arta* ('If there is thee grief to wear the horn, give it home again'). The 1632 English play *The Northern Lasse* by Richard Brome also contains a garbled line of Cornish: *Pedn bras vidne whee bis creegas* ('Fat [or big] head, will you be hanged?').

One of the most fascinating surviving texts is *The Fyrst Boke of the Introduction of Knowledge* by the English poet Andrew Boorde, which includes a satire (*c.* 1547) on the English speech of various parts of Britain, including Cornwall, and also some phrases of remarkably good Cornish—one of the few secular pieces from this phase. Though aligning himself with English culture, Richard Carew's *Survey of Cornwall* (1602) makes valuable observations on Cornish language and literature, as well as providing a description of a performance of one of the mystery plays.

Also surviving from this phase—though hardly literature—is a curious explanation by a Cornish speaker, probably Richard Pentrey, witnessed by one Don Antonio Ortes during a visit of the king and queen of Spain to the English College for training priests in Valladolid in 1600, and a marriage banns certificate (1636) written by William Drake, rector of St Just-in-Penwith.

Cornish literature [3] 17th and 18th centuries

The Reformation is regarded as the main factor responsible for shutting down large-scale Cornish literary production, for destroying many extant texts, and for changing the Cornish people's perception of themselves. The Reformation also destroyed the age-old link between the Cornish and the Bretons. With Cornwall (Kernow) denied a Prayer Book and Bible, subject to the advance of English, and Cornish regarded as unrefined by the literary classes, post-Reformation literature began to be written by middle-class intellec-

tuals of the age who realized that the language was in danger of dying, while at the same time Cornish language and literature came to be 'ennobled', as scholars looked for the last vestiges of written work (see also REFORMATION).

Relatively early (*c.* 1667) within this group of post-Reformation Cornish texts there is a reference to one Richard Angwyn, a fluent writer, but this period of writing was vigorously initiated by William Scawen who, in 1680, described the causes of the decay of Cornish speech. John Keigwin (1641–*c.* 1720) of Mousehole translated a number of texts, and additional collectors and writers, such as the Newlyn-based Nicholas Boson (*c.* 1624–1703), his son John (1665–*c.* 1720), and his cousin Thomas, William Gwavas (1676–1741) of Paul, Henry Usticke and John Tonkin, both of St Just (Lanuste), William Rowe of Sancreed, Oliver Pender of Mousehole, James Jenkin of Penzance (Pen Sans), and Thomas Tonkin of St Agnes (Bryanek), also continued the tradition of writing in Cornish. They were encouraged in their work by the Celtic scholar Edward LHUYD, who arrived in Cornwall in 1700. Unlike the religious verse writers of Middle Cornish, these writers dealt with a greater variety of form, structure, and subject matter.

John Boson wrote a poem on the process of pilchard curing, and another poem offering advice to Cornishmen leaving for London's sexual hazards; James Jenkin wrote *Poems of Advice* on marriage and homemaking; Gwavas recorded proverbs and sayings and wrote short, pithy poetry (ranging from riddles to accounts of lazy weavers). Thomas Tonkin collected songs and verse in Cornish—most famously a translation of the folk song 'Where are you going, my pretty maid?' (*Pela era why moaz, moz, fettow teag?*)—while Nicholas Boson crafted a children's story, in an admixture of English and Cornish, entitled *The Dutchesee of Cornwall's Progresse to see the Land's End and Visit the Mount*. Perhaps the best-known work from this period is the folk tale *John of Chyhanor*, a retelling of the international story of the servant's good counsels, written sometime between 1660 and 1700. Boson's other major work on the state of the language was *Nebbaz Gerriau dro tho Cornoack* (A few words about Cornish), but this was completed in English. Lhuyd recorded the following prophetic ENGLYN from a parish clerk at St Just:

An Lavor gôth ewe lavar gwîr.
Na vedn nevra doas vâs a tavaz re hir;
Bes dên heb tavaz a gollas e dir.

The old saying is a true saying.
Never will come good from a tongue too long;
But man without a tongue shall lose his land.

From the same source we also have a fantastical Williamite celebratory British song, expressing similar sentiments to those found in the writings of John Tonkin, while in 1710 Gwavas wrote a letter seemingly to Cornish speakers in America. Numerous other scraps and fragments exist, not to mention some biblical translations. It is likely that more Cornish material existed, but that it was destroyed during the English Civil Wars, and during raids on Restormel Castle at Lostwithiel, a long-standing centre of the STANNARY PARLIAMENT. However, by the middle of the 18th century, literary production in Cornish had more or less reached a standstill.

Cornish literature [4] 19th and 20th centuries

Fragments of the CORNISH language in Cornwall (KERNOW) persisted into the 18th century, and the German Georg Sauerwein wrote two poems in Cornish in 1865. The so-called *Cranken Rhyme* was also offered by John Davey near Penzance in 1891. Early in the 20th century, at the start of the revival, Henry JENNER and Robert Morton NANCE composed much explicitly revivalist verse, such as *Can Wlascar Agan Mamvro* (Patriotic song of our motherland) and *Nyns yu Marow Maghtern Arthur* (King Arthur is not dead) respectively, though the often medieval thematic concerns soon progressed to the decline of industrialization and the

place of the language in the modern world.

Other important early writers in Revived Cornish include L. R. C. Duncombe-Jewell (b. 1866), R. St V. Allin-Collins (b. 1878) and E. G. R. Hooper (1906–1998). Probably the finest poets of the early part of the century were Edward Chirgwin (1892–1960), who was famous for diversifying the themes of modern writing in Cornish, and A. S. D. Smith (1883–1950), whose epic poem *Trystan hag Isolt* (1951; see also TRISTAN AND ISOLT) remains one of the revival's finest works.

One of the problems regarding the Cornish literature of this period is that there were many linguistic hobbyists who were content to write in Cornish, but who were disassociated from the territory. Much of the initial literature was circulated in limited magazines, and the assessment of the achievement of these poets is only just beginning to be realized. Allied to this, scholars are now beginning to reassess much of the achievement of literature in Cornwall, and this should lead to a wider appreciation.

Although the writing has been male-dominated, some successful female writers can be named, notably Katharine Lee Jenner, Phoebe Proctor (b. 1912), Helena Charles (1911–1997), Myrna Combellack, and especially Peggy Pollard (1903–1996), who wrote the agnostic play *Beunans Alysaryn* (1941) in the style of the earlier Cornish mystery dramas.

The novel has proved a more difficult form to develop in Cornwall; this is due to the relatively small number of speakers, though this is changing. The first full-length novel to be published in Cornish was Melville Bennetto's *An Gurun Wosek a Geltya* (The bloody crown of the Celtic countries; 1984). This was followed by Michael Palmer's *Jory* (1989) and *Dyroans* (1998).

Influential Cornish-language writers of the late 20th century include Richard Jenkin (1925–2002) and Richard Gendall (1924–)—two of the finest Cornish-language poets of their generation, the dramatist Donald R. Rawe (1930–), Anthony Snell (1938–), and N. J. A Williams (1942–), though Anglo-Cornish authors such as Arthur Quiller Couch (1863–1944), Charles Causley, A. L. Rowse, Jack Clemo, and D. M. Thomas have all intersected with aspects of the revival, and the continuum in Cornwall must be considered with this in mind.

Three emergent writers of the century are Tim Saunders (1952–), Nick Darke, and Alan M. Kent, all of whom have made critical assessments of the limited subject matter of the revival and advanced the literary continuum substantially. Saunders writes in Cornish, while Darke and Kent, though writing in Cornu-English, draw on much of the literary continuum of Cornish.

Courtly love, or *amour courtois*, is a theme in medieval European poetry that reached its first peak in Provence (south-eastern France). The Provençal court poets, the so-called troubadours ('finders, composers') were in their prime from the second half of the 11th century. The earliest known poet was Prince Guillaume IX of Aquitaine (1071–1127), grandfather of Eleanor of Aquitaine. The forms and subject matter of the troubadours' poetry were enthusiastically imitated all over western Europe. In northern France, these poets were called *trouvères*, the northern French cognate of troubadour. In Germany they were called *Minnesänger* (after a now obsolete Middle High German word *minne* 'love', which had a slightly more elevated meaning than its everyday synonym, Middle High German *liebe* 'love').

The chief theme expressed in poetry of this kind was that of unfulfilled love for an unattainable person, sublimated into poetic expression. Usually, this took the form of the poet's admiration for his patroness, i.e. his patron's wife, a married woman. This sublimated love is called *fins amors* in Provençal or *hohe Minne* in Middle High German, in contrast to vulgar physical love. The repertoire of the poets was not confined to love poetry, but also contained political poems, SATIRE, praise poetry, NATURE POETRY, etc.

Writers of the MATTER OF BRITAIN, such as CHRÉTIEN DE TROYES, used the ethic of courtly love to a great extent in their works (see also WELSH LITERATURE AND FRENCH), and this, in turn, influenced ARTHURIAN literature in English, German, and a number of other traditions.

The origin of poetry about courtly love is highly disputed; many authors suggest an Arabic origin (from the so-called *'Udhrī* love-poetry), which had been transmitted to Europe either via Spain or at the time of the crusades. An origin for the courtly love theme in Islamic civilization is favoured by Boase, but disputed by most other writers on the subject.

Other scholars consider the possibility of a local Provençal origin, incorporating elements from one or more sources, such as a cult of the Virgin Mary and the idealized treatment of women within the code of chivalry, and/or a spontaneous creative response to the class and sexual tensions inherent in the western European feudal society of the high Middle Ages. The society created by medieval arranged marriages resulted in many noble households with husbands a generation or more older than their wives, many of whom sought comfort in real or imagined adulterous relationships, such as those idealized by the troubadours. Recently, a continental Celtic origin has been suggested for the theme of courtly love, based on a myth of the Gaulish 'horse goddess', EPONA, preserved in the form of folkloric traditions.

With the marriage of Eleanor of Aquitaine and King Henry II Plantagenet of England in 1152, the literary fashion of courtly love was brought to BRITAIN. At the time many *trouvères* and troubadours were knights fighting on behalf of the king of England (e.g. Bertrand de Born or Savaric de Mauleon, governor of Bristol).

Courtly love came to Wales (CYMRU) during the course of the Anglo-Norman Marcher Lords' campaign to conquer south Wales. From the 12th century on, its traces have been detected in the work of the GOGYNFEIRDD, principally in the poems of HYWEL AB OWAIN GWYNEDD and CYNDDELW Brydydd Mawr. Some scholars, most prominently J. E. Caerwyn WILLIAMS, have disputed this interpretation. In the works of the 12th- and 13th-century *Gogynfeirdd*, the troubadour influence was in any event slight. Only after the downfall of the last independent Welsh prince in 1282 (see LLYWELYN AP GRUFFUDD) and the rise of the poets serving the post-conquest nobility (largely synonymous with the CYWYDDWYR) in the 14th century can a strong influence be seen, especially in the works of the greatest poet of later medieval Wales, DAFYDD AP GWILYM.

Poetry on courtly love must have come to Ireland (ÉRIU) in the wake of the Norman conquest in 1152. The DÁNTA GRÁDHA, a class of 'love poems' sharing numerous motifs with the Provençal material, appear comparatively late. Most of them have been dated by Tomás Ó RATHILE to the end of the Classical Modern period (see IRISH LITERATURE), i.e. the 16th and 17th centuries. However, earlier works are likely to have existed, but unfortunately have not survived.

Coventina was a deity who was worshipped in the Roman period. A sanctuary devoted to her was found in 1876 near the fort of Brocolita (modern Carrawburgh, Northumberland) on HADRIAN'S WALL. Instead of the central sanctuary or *cella* which would be expected in a Roman temple, an enclosure containing a well was found on the site. This is unusual, but a similar structure, with a spring and a sacred grove in the enclosure, has been found at the oracle of Apollo at Didyma in Asia Minor (near Yenihisar, Turkey). Numerous votive figures and gifts were found in the well, and also about 13,000 coins. Fourteen INSCRIPTIONS bear the name of Coventina. The troops stationed at Brocolita were Batavians from the area now called the Netherlands, and several individuals who are named in the inscriptions hailed from near the RHINE. The goddess was generally depicted as a water nymph and is called *nimpha* in one inscription (RIB no. 1527). There are also dedications to the *Matres* (see also MATRONAE) and other goddesses at the site. Traces of the cult of Coventina have also been found in GAUL, at Narbonne, and in north-west Spain (GALICIA). The spellings *Couuentina*, *Conuentina*, *Couintina*, and *Couetina* also occur. A Celtic etymology is possible, perhaps connected to the common GALLO-BRITTONIC place-

name element *venta*. Alternatively, derivation from Latin *conventio* 'assembling, meeting' is possible.

PEB

The **Cowethas Kelto-Kernuak** (Celtic-Cornish Society) was founded in 1901 by L. C. Duncombe-Jewell for 'the study and preservation of the Celtic Remains in the Duchy of Cornwall'. It was the first Cornish society formed explicitly to promote Cornwall (KERNOW) as a Celtic nation (see CELTIC COUNTRIES), and Duncombe-Jewell's primary goal was to have Cornwall recognized by the Celtic Association as a Celtic nation. The main aims of the society, published in *Celtia: The Journal of the Pan-Celtic Association* (see PAN-CELTICISM) and in Cornish newspapers, were to preserve ancient monuments, to continue national customs such as wrestling and HURLING, to revive the CORNISH language as a spoken tongue, especially the teaching of Cornish to schoolmasters, to revive the Cornish mystery plays (see CORNISH LITERATURE) and to 're-establish' the Cornish GORSETH of the Bards at Boscawen Un.

Effectively, this was the first solid articulation of the aims of the Celtic revival in Cornwall, and set an ideological precedent for a pre-modern, pre-industrial vision of Celtic Cornwall. The organization attracted many prominent members of Cornish society, especially writers and antiquaries: among the council members were Thurstan Peter, J. B. Cornish, and the Anglo-Cornish poet Arthur Quiller Couch. However, the association was largely inactive and failed to have any real impact among the Cornish people themselves. It did not have a newsletter or journal or meetings, and much of its activity was conducted in the pages of *Celtia*. Nevertheless, Duncombe-Jewell was a prominent member of the Pan-Celtic Association and raised the international profile of Cornwall. By 1903, however, the society had ceased to be operational, and Henry JENNER took over as spokesperson for the Celtic-Cornish revival, with Duncombe-Jewell abandoning his involvement. In many ways, the Cowethas Kelto-Kernuak was a precursor to much Celtic activism in Cornwall, including the Federation of Old Cornish Societies, the Cornish Gorseth, and Tyr ha Tavas (Land and Language).

PRIMARY SOURCE
The history of the organization may best be followed through contemporary articles in the journal *Celtia*.

Cras 'Murcens'

The OPPIDUM of Murcens was situated on the edge of the Causse de Granmat, 15 km east of Cahors, in the Lot region of France. A limestone cliff ensured its defence to the south and east; the other sides, fortified by a rampart, were more easily accessible, especially the northern side, where an isthmus linked the settlement to the plateau. The site covers a surface of 50 ha (around 125 acres). Here, in 1868, E. Castagné discovered a rampart made of horizontal beams embedded in a regular stone facing; the middle part of the wall was filled with loose stones. The width of the construction exceeds 10 m in some places, and the wall is preserved to a height of 4 m. At the intersection of most of the beams, a piece of square iron, 1 cm thick and 30 cm long, secures the connection.

Castagné immediately recalled the *murus gallicus* (Gaulish wall) described by CAESAR for Avaricum (*De Bello Gallico* 7.23), and brought this identification, which had been previously suggested by Jollois in 1843, to the attention of other scholars. Caesar, however, does not mention the iron spikes which are the recurring and original characteristic of this architecture of the Gaulish *oppida* (see GAUL) of the final LA TÈNE period. The site was newly excavated in the 1980s, when the architecture of the rampart was clarified and traces of the La Tène D settlement (2nd to earlier 1st century BC) located. Artefacts found on the site included numerous rotating millstones and imported amphorae (large ceramic wine vessels) from Italy, both emphasizing

the importance of the site as an economic centre. No trace of early Gallo-Roman occupation could be identified. The identification of Murcens with the hill-fort whose name was recorded as *Uxellodūnon* 'the high fort', already rejected by Castagné, has been abandoned.

critical and theoretical perspectives on the study of literatures in the Celtic languages

§1. INTRODUCTION

CELTIC STUDIES began in the second half of the 19th century, primarily as a linguistic discipline concerned with the Celtic family of languages (see CELTIC LANGUAGES). It has since developed into an interdisciplinary field which includes history, textual criticism, archaeology, anthropology, folklore, and many other disciplines alongside language.

From the beginning, Celtic studies derived its authenticity as an academic discipline by basing its methodologies on those of the classics. Greek and Roman classics has been a subject accorded special status and prestige in universities in the Western world as an ancient and demanding field of study. The three areas of interest taken over from the classics were philology (in the sense of the traditional, largely historical, study of language), literary criticism, and a specific editorial method developed for the teaching of Greek and Latin texts in schools and universities. Discovering who the 'Celts' were, as distinct from the 'Anglo-Saxons' of England or the 'Greeks and Romans' of the ancient world, was an additional part of the Celtic studies project from the beginning, one which drew, and is still drawing, on the social science disciplines of anthropology, archaeology, and ethnography.

§2. PHILOLOGY

The study of philology was perhaps the most significant building block of Celtic studies during its evolution as an academic discipline in the second half of the 19th century. As comparative historical linguistics developed during the 19th and early 20th centuries, Celtic, along with the Greek, Italic, Germanic, and Slavic families of languages, received particular attention from European scholars (see also INDO-EUROPEAN). Rudolf THURNEYSEN (1857–1940) made a significant contribution to the study of Old IRISH, identifying it as the earliest form of any of the Celtic languages which could be more or less fully retrieved from surviving texts, and producing the standard grammar in 1909 (translated from German to English in 1946).

In Wales (CYMRU), John RHŶS published his *Lectures on Welsh Philology* in 1877, the year he became the first Professor of Celtic at Oxford (Welsh Rhydychen), while his former student, John MORRIS-JONES, Professor of Welsh at BANGOR from 1895, produced the first comprehensive grammar of the WELSH language, *A Welsh Grammar, Historical and Comparative*, in 1913. It was also a Welsh scholar, Henry LEWIS, who produced handbooks of Middle CORNISH (1923) and Middle BRETON (1922).

Philology, like later varieties of linguistics, was positioned as a 'science' of language, involving a terminology and a set of methodologies apparently based on 'objective' scientific principles. The scholarly emphasis on language therefore authenticated Celtic as a legitimate field of study, like classics or Anglo-Saxon, and one that carried the guarantee of antiquity. Historical linguistics provided evidence not only for the ancient lineage of Celtic, which compared favourably with the similarly ancient Greek, Italic, and Germanic language families, but also for dating early texts in Irish and Welsh, many of which were pushed back in time as far as possible in order to provide Celtic literatures with a 'golden age' comparable to those of England and the classical world.

With the rise of linguistics as an academic discipline, along with other social sciences in the late 1950s and 1960s, historical linguistics, including philology, fell out of fashion, but continued to inform the study of the Celtic languages. Following the examples of Kenneth JACKSON and of Jackson's student Eric Hamp, the prolific American philologist active in the second half of the century, Calvert Watkins, Patrick Sims-Williams, John T. Koch, and others, have helped to sustain historical linguistics as a necessary tool of research into the history of the Celtic-speaking peoples.

§3. EDITORIAL METHODOLOGY

The first generation of editors of Celtic-language texts came from the antiquarian movement of the 18th

century, assisted by newly-formed cultural bodies pursuing nationalist agendas. In Ireland (Éire), the Royal Irish Academy (Acadamh Ríoga na hÉireann) was founded in 1785, and began collecting Irish-language manuscripts for its library, where many of the most significant manuscripts are still kept. In Wales, antiquarians such as William Owen Pughe, Owen Jones, and Iolo Morganwg (Edward Williams) made early Welsh texts available to a reading public through works such as their *Myvyrian Archaiology of Wales* (1801–7) (see also GORSEDD BEIRDD YNYS PRYDAIN).

With the spread of university colleges in both Ireland and Wales from the mid-19th century, and with the support of institutions such as the Irish Texts Society (CUMANN NA SCRÍBHEANN N-GAEDHILGE; 1898), the Board of Celtic Studies (1919) of the University of Wales (see BULLETIN), and the Dublin Institute for Advanced Studies (Institiúid Ard-Léinn; 1940), a second wave of academy-trained editors began to produce scholarly texts for their students. Their methodology, derived from classics, was primarily linguistic and philological: the texts were read not so much as evidence for a literary culture, but as evidence for the historical development of the language. In the standard format of introduction, text, notes, and glossary, the introduction gave prominence to manuscript history, linguistic features, and orthography, while the copious notes, often occupying far more space than the text itself, dealt almost exclusively with issues of grammar, philology and variant readings. Produced within the academy, the main function of these editions was to provide teaching texts with which to train scholars, who therefore inherited a particular format and style of editing, and a particular notion of the 'canon' of Celtic texts, which has survived through successive generations of scholars to the present day.

The theoretical basis of second-generation editing was the assumption that an 'original' text, as composed by a single author, was retrievable from a careful study of the manuscript record, relying on features such as orthography, philology, and linguistic forms, and that the task of the editor was to reconstruct the 'original' text, and its date of composition, from a scientific study of the empirical evidence. Relying on their considerable linguistic knowledge, scholars emended 'corrupt' readings and selected the 'best' reading from a number of manuscript copies to produce seamless texts, which, in fact, had never appeared in any manuscript, but were polished reconstructions made by skilful editors. These were claimed to be as close as possible to the 'original' text.

With the emergence of a third generation of editors in the context of post-1960 critical and oral-transmission theory, the existing editorial model has been modified, but its central aim of retrieving 'original' texts has not wavered. Most crucially, perhaps, the advent of computer technology has revolutionized the actual mechanics of editorial work for third-generation scholars, making large editorial projects feasible for the first time. Whereas the focus of second-generation texts was on the rôle of the editor as both expert and teacher, the focus of third-generation texts is on the reader, as consumer and interpreter. Edited texts have become 'user-friendly'. Already, on-line texts are appearing, where readers can download and interactively edit their own text, producing customized versions of individual texts which offer a genuinely radical challenge to the traditional concept of the single 'original' text.

§4. LITERARY CRITICISM

Approaches to literary criticism in Celtic studies have been largely borrowed from the empirical traditions of English, particularly those of literary history and genre studies. A significant function of literary history is to define the canon of recognized texts, and early histories of Celtic literature were responsible for a canon which has survived relatively unchanged to the present day. Literary histories of Ireland, prompted by the 'Irish revival' (see LANGUAGE [REVIVAL]), began appearing from the turn of the 19th and 20th centuries with Douglas Hyde's *A Literary History of Ireland* (1899; see DE H-ÍDE), while early historians of Welsh literature, such as T. Gwynn Jones and Saunders Lewis, gave prominence to the medieval texts which continue to dominate Welsh studies in the academy.

A major impetus for the generic approach in Celtic literary studies was the magisterial work of Hector M. and Nora Chadwick, *The Growth of Literature* (1932), which traced the development of similar generic types in classical, Celtic, Norse, and Anglo-Saxon literatures. Irish literature had been classified into 'cycles' as long ago as 1861 by Eugene O'Curry, and the work of the Chadwicks encouraged the division of Celtic-language texts into categories already identified in the

privileged canons of classical and Germanic literatures.

Ideologically, genre studies are based on the idea that texts can be interpreted in isolation from any external social or cultural context. In this sense, a genre is viewed as an identifiable universal type of literary work. Generic criteria tend to be exclusively textual—content, style, length, format, and so on—and establishing the criteria depends on pre-existing assumptions of what a particular genre ought to contain. Interpreting texts as part of an established genre, rather than as cultural products, enables critics to expound value judgements as to how 'successfully' a text performs within the definition of its genre, and therefore to rank texts as more or less successful versions of the genre. For example, the Welsh ARTHURIAN romances (see GERAINT; OWAIN; PEREDUR) are often read as the poor relations of the CHRÉTIEN DE TROYES masterpieces.

Another influential approach to literary criticism in Celtic studies has been the search for sources and analogues to explain the provenance and development of individual texts. Borrowed from the study of classical and Middle English literatures, where paths of borrowing and influence tend to be more clearly visible, this approach uses empirical data, especially the collection of themes and motifs, to posit relationships between texts and a preceding tradition, either oral or literary or both. Most of the critical work on the major canonical texts of Celtic literature has been, and continues to be, based on this approach.

The underlying assumption or subtext of such studies is, once again, the search for, and privileging of, what is imagined to be the oldest and therefore 'original' stratum of a text—the older its roots, the more 'authentic' the text. This premise has been a particularly important issue in Celtic studies, whose credibility as a discipline depended to some extent on its antiquity relative to literature in England.

The search for King ARTHUR as a historical figure in post-Roman BRITAIN, and the identification of Welsh sources and analogues for much of the later Arthurian tradition have been major strategies in authenticating early Welsh literature as a site of legitimate scholarly relevance. Similarly, the 'nativist' approach to early Irish literature, which has been characterized as assuming oral composition in some dim pagan past, asserts the antiquity of the literature and the 'purity' of its pre-Christian Celticity.

The 'sources and analogues' approach also rests on the liberal-empiricist theory of the single gifted author, a knowable individual whose path through his sources, whether consciously chosen or not, can be seamlessly retraced by the observant and well-read critic, as if the creation of a literary text had been a simple linear process rather than a complex web of interlocking texts, authors and audiences from different times and places.

The analysis of individual texts from the Celtic canon became more common from the 1960s onwards. It drew on the methodologies privileged by English literature, particularly those of Leavisite criticism (named from Francis R. Leavis [1895–1987]) and New Criticism, both of which flourished between 1940 and 1960 and share some common ideas. Both are based on a process model of communication which assumes that every text has a single 'right' meaning, put into it by its single (uniquely gifted) author, and that the critic's task is to retrieve this intended meaning directly from the text. In its focus on individual authors (whether known or 'lost'), valued for their skills in compiling and reworking older material, this model of communication produces a literary criticism which ignores or minimizes issues related to cultural production and theories of transmission or signification.

Leavisite criticism, which focused on the novel in English, made relatively little impression in the field of Celtic studies, where long narratives tended to be read in terms of their sources and analogues rather than as moral statements about social values, the basis of Leavis's definition of 'great literature'. However, the Leavisite approach did supply a new way for some Celtic scholars to think and write. This discourse of literary evaluation enabled, for example, Kenneth Jackson in his *Studies in Early Celtic Nature Poetry* (1935) to include lyrical assertions of authorial skill.

New Criticism, emerging as a direct response to the modernist aesthetic in literary texts, privileged form over content, high culture over popular culture, the obscure over the transparent, validating newness of expression within a deeply conservative political ideology. The central concern of New Criticism was with the text itself and the ways in which literary form and language created particular 'effects'. The text was almost totally decontextualized (viewed outside its social and historical context); the process of signification (establishing meaning within its social setting) was

completely sidestepped.

In its concern with poetry and form, New Criticism became the obvious tool for examining the collections of poetry which Celtic scholars were editing in increasing numbers, starting with T. F. O'Rahilly's Dánta Grádha in 1926 (see ó rathile). Parry's authoritative edition of his canon of the poems of Dafydd ap Gwilym in 1952 released an apparently coherent body of lyric poems composed by a single known author whose works could be closely examined using the then dominant New Critical approach. A flurry of articles followed in Welsh journals, examining individual poems, isolating images, conceits, rhetorical devices, semantic ambiguities and all the other 'effects' for which modernist poets were accorded special critical prestige, thereby endorsing the concept of the single gifted author whose responsibility for his work was distinct and separable from its social and political context.

Throughout the heat and dust of the 'theory wars' of the 1970s and 1980s, Celtic studies (like many other medieval disciplines) remained largely aloof, explicitly asserting that its concerns were primarily empirical and therefore atheoretical, while implicitly skipping over the theoretical implications of such a position. A notable exception was in the area of structuralism and its related techniques that could claim to be based on the empirical observation of particular elements which, organized into a pattern or structure, would reveal the text's 'real' meaning. Since Vladimir Propp, the Russian formalist author of the influential *Morphology of the Folktale* (1928), developed his narrative model specifically in relation to fairy stories and wonder tales, his work has had particular relevance for the study of Celtic narratives. The structuralist concept of the 'hero tale' as a universal type, expounded most famously by Joseph Campbell in his *Hero with a Thousand Faces* (1949), has been successfully exploited by a number of Celtic scholars, particularly in relation to Irish heroes, e.g. in Tómás Ó Cathasaigh's *The Heroic Biography of* Cormac mac Airt (1977). These works have largely been superseded, however, as it came to be realized that the theories relied on vague, non-culture-specific universals and did not necessarily fit a given cultural context.

As in most empirical research, however, the aims and objectives of the researcher will tend to determine the structural features which are recognized and selected as being in some way significant. Through undertaking such a selective process, the researcher in effect creates his or her own secondary 'meta-text' which then becomes the object of interpretation, as W. J. Gruffydd did in his reconstruction of a 'Pryderi saga' for the medieval Welsh prose wondertales, the Mabinogi. In many ways, then, structuralism represented no real break from the liberal-empiricism of earlier scholarship, and, in fact, worked to support the modernist aesthetic, concentrating on form and technique.

The liberal-empiricist project—to reveal the single 'right' meaning of a text and to attribute it to the single author—received its first serious critique from post-structuralist theory in the 1980s and 1990s. Post-structuralism challenges the concept of singularity and coherence in either text or author and draws attention instead to signifying practices, ways that meanings are made, both within the language of texts and in their social and political contexts. Initiatives such as Helen Fulton's *Dafydd ap Gwilym and the European Context* (1989), a contextual study of medieval Welsh poetry based on Marxist literary criticism, and Michelle O Riordan's *The Gaelic Mind and the Collapse of the Gaelic World* (1990), an explicitly post-structuralist interpretation of the Irish 'bardic mentality', have attempted to go beyond the limits of empiricism.

Despite its relatively conservative critical tradition, the discipline of Celtic studies was at the forefront of historicist interpretation, anticipating by many decades the critical movement known as New Historicism which developed in English literary studies as recently as the 1980s. New Historicism, consciously opposed to the ahistorical text-based approach of structuralism, addresses the historical contexts in which texts are produced and consumed. Largely unaffected by the strictly text-based methodologies of New Criticism or structuralism, Celtic scholars have long drawn on the apparently empirical evidence of history and archaeology to explain the origins and meanings of Celtic-language texts.

Early studies in Ireland include *Side-Lights on the Táin Age and Other Studies* (1917) by M. E. Dobbs, *The Oldest Irish Tradition: A Window on the Iron Age* (1964) by Kenneth Jackson, and James Carney's *Studies in Irish Literature and History* (1955), while numerous articles on the historical background of literary texts in the major journals for Irish studies, Ériu and Éigse, attest to the continuity of this approach right up to the present day. In Wales, historicist interpretation has been dominated by the debate surrounding the 'real' historical context of the Gododdin, a debate initiated by John Morris-Jones, J. Gwenogvryn Evans, and Ifor Williams in the first

half of the 20th century and continued by Kenneth Jackson and John T. Koch in the second half.

Feminist studies, which have proved popular in Celtic studies since the 1970s, can be regarded as a sub-genre of New Historicism, since they mainly depend on constructing the historical position of women in order to argue for their significance in particular texts. Attempting to retrieve the reality of women's lives or how women were perceived in early Celtic-speaking societies is itself fraught with difficulties, mainly lack of evidence, which has led to some flawed studies. Journal-length articles on various heroines of Irish or Welsh narratives help to make the texts more accessible to modern readers, but run the risk of imposing modern concepts of gender politics on texts which have a different kind of logic and function. Much feminist research is also under-theorized and draws its assumptions, methodology, and objectives from a liberal-empiricist ideology, focusing on the interplay of individual characters in the social world of the text and naively attempting to match this to an actual reality.

§5. CONSTRUCTING 'THE CELTS'

With the rise of political and linguistic NATIONALISM in the Celtic-speaking countries from the 1960s onwards, scholars began to re-examine the assumptions and stereotypes of 'Celticity' which had been laid down by Ernest Renan, Matthew Arnold, and other 19th-century writers. In the context of imperialism and ROMANTICISM, these glamorized views of 'the Celts' as a coherent race or tribe whose enhanced sense of magic and the natural world made them distinctively different from the sober industrialized Germanic peoples of England worked to position 'the Celts' as charmingly primitive and exotic 'others'.

Welsh and Irish scholars of the early 20th century largely accepted this view of themselves. Anglo-Irish writers, such as W. B. YEATS, relied heavily on the romantic translations of early Irish myth and saga produced by antiquarians (see ANGLO-IRISH LITERATURE), and the first literary histories of Ireland and Wales provided the evidence of unfamiliar literary practices to support the imperial consensus that the Celts were the colonial 'other', an alien 'race', congenitally different from their colonizers. This imperial viewpoint has been maintained up to the present time in much of the 'New Age' writing about the Celts, where constructions of an ancient Celtic SPIRITUALITY are grounded in a 'druidic' past invented in the 18th century. The tendency in this has been to ignore recent re-examination of the ancient and medieval literary descriptions of DRUIDS.

The impetus for change came mainly from British archaeologists who, in the 1970s, began to challenge the view that there had been a coherent people called the 'Celts' who spoke a language called 'Celtic'. Using archaeological, linguistic and historical evidence, contemporary scholars have deconstructed Matthew Arnold's view of Celticity and exposed the constructedness of the modern notion of 'Celticity' itself in any of its forms.

The pioneer in this field has been P. Sims-Williams, whose 1986 article, 'The Visionary Celt: The Construction of an Ethnic Preconception', contained a detailed critique of the Arnoldian view and its cultural and imperial basis (CMCS 11.71–96). Since then, further work in both archaeology and textual criticism, the latter drawing particularly on post-colonial theory, has continued the work of redefining the Celtic-speaking peoples into groups identifiable by language, location, and cultural practice.

§6. CELTIC LITERARY CRITICISM NOW

At the beginning of the 21st century, Celtic studies continue to embrace more or less the same repertoire of critical approaches that they deployed at the beginning of the 20th century. As the century progressed, Celtic studies moved from an initial dependence on the methodologies of classics to include those of English medieval scholarship, literature, and folkloristics. During the latter half of the century, other influences, notably comparative literature (introduced largely by the increasing numbers of American scholars entering the discipline) and some of the '-isms' from modern English literary studies, especially New Criticism, structuralism, and feminism, produced a wider range of research. At the same time, the historicist approach has been sustained throughout the century as the perennial favourite across the discipline, pointing to the close link between history, text, and language, which is the hallmark of Celtic studies.

Helen Fulton

Crosán (pl. *crosáin*), commonly translated 'buffoon' (DIL 550, 50), is a designation in Old, Middle, and Early Modern IRISH texts applied to a figure whose entertainment both offends and delights. The term is a derivative of Irish *cros* (cross) and entered the language from Latin *crux* (cross), the central symbol of the Christian faith (see Kelly, *Guide to Early Irish Law* 64 n.201; Vendryès, *Lexique étymologique de l'irlandais ancien* C 246–7; Ó Fiannachta, CMCS 19.92–4). With the added diminutive suffix *-án* (little cross), a secondary meaning 'buffoon' or 'jester' (glossed *scurrae* and *praeco*) developed for reasons that are unclear. The same semantic development took place in WELSH, where the common word for a 'jester' in the law texts is *croesan* (< W *croes* cross). J. H. Todd's assertion that the *crosáin* were 'cross-bearers in religious processions' who sang 'satirical poems against those who had incurred Church censure' (*Leabhar Breathnach Annso Sis / Irish Version of Historia Britonum of Nennius* 182 n.j) lacks textual support; however, the *crosáin* may have had some rôle in religious festivals. The extant sources offer hints, but no conclusive evidence.

The earliest reference to the *crosán* occurs in the Old Irish legal tract BRETHA NEMED *Toísech* (*c.* AD 750) and is repeated in a late Old Irish compilation of gnomic material (*Trecheng Breth Féne*) edited under the title, 'The TRIADS of Ireland'. The triad is characteristically brief and elusive, but suggests the poses of a ribald jester: *Tri neimhtighedur crosán: righi óile, righi theighi, righi bronn* 'Three things which confer status on a *crosán*: distending his cheek, distending his bag, distending his belly' (Binchy, *Corpus Iuris Hibernici* 6.2220.2 = Triads §116). Here *tíag* 'bag' (DIL 164, 13) may refer to the inflated bladder brandished by the jester or to his testicles, perhaps exaggerated in a comic performance (Kelly, *Guide to Early Irish Law* 65 n.203). The *crosán* does not figure among the lower grades of poets and entertainers named in other early Irish tracts on status, such as the *fuirsire* (jester), *clesamnach* (juggler), or *braigetóir* (farter) named in *Uraicecht Becc* (Kelly, *Guide to Early Irish Law* 64), or the *oblaire*, a 'buffoon without skill' (*fuirseoir gan dān*), who memorizes disparaging verses (Breatnach, *Uraicecht na Ríar* 113 §20). Nevertheless, he may have shared some of their comic attributes. The Welsh law tract *Llyfr Iorwerth* (13th century) offers a later, but similarly mocking, portrait of the *croesan* (jester) who, when presented with a horse by the chief groom, ties the end of the horse's halter to its testicles as he departs from the court of the king (Wiliam, *Llyfr Iorwerth* 9 §11.12).

Other references in Irish legal sources are more puzzling. A late gloss in the tract *Bretha Étgid* states that legal compensation is due for 'shaving the locks of the *crosáin*, the [monastic] students (*na scolóc*), and the shorn maidens (*na ningen mael*)', a grouping which may indicate affiliation with the lower stratum of a monastic community (Binchy, *Corpus Iuris Hibernici* 1.304.11–12). The lexicon of legal terms compiled by Dubhaltach MAC FHIRBHISIGH (1660) identified *crosán* as a skill associated with the *forcetlaid*, the third of seven grades of teachers in an Irish monastic school, and Eugene O'CURRY (1840), who arranged Mac Fhir-

bhisigh's lexicon alphabetically in Trinity College MS 1401 and supplied words from the context and other sources where necessary, translates *crosán* simply as 'criticism' (*Lectures on the Manuscript Materials of Ancient Irish History* 494–5).

Crosán is a derogatory designation in two satiric epigrams from an Irish metrical tract (Tract 3, *c.* 1060), edited by Rudolf THURNEYSEN and included in Kuno MEYER's collection of verse epigrams, *Bruchstüche der älteren Lyrik Irlands*:

> *Méthmac Muiredaig, mesce chírmaire,*
> *crossán líath ic linn*
> *screpall ar f[h]eóil n-aige, ónmit ar eoch mall,*
> *breccar claime i cinn.*
>
> (Meyer, *Bruchstüche der älteren Lyrik Irlands* 30 §66 = Thurneysen, *Irische Texte* 3/1.84 §71)
>
> A decadent son of Muiredach, the drunkenness of a comb-maker; a grey-haired, ale-drinking *crosán*; a scruple for ox meat; a fool on a slow horse; leprous spots on [his] head.

A second epigram from the same tract juxtaposes the 'wandering thieving *crosán*' (*crosán machaire ic merle*) with the *drúth . . . cen intliucht* (witless fool) and *sacard senóir ac súathad* (old priest engaged in kneading) (Meyer, Bruchstüche der älteren Lyrik Irlands 37 §88 = Thurneysen, *Irische Texte* 3/1.85 §83). The portraits recall the *clerici vagantes* or goliards, an amorphous class of wandering minstrels in medieval Europe who, as Helen Waddell has noted, thrived on the fringes of the Christian church and are repeatedly rebuked in church canons. Irish clerical scholars are among those chastised as *deceptores, gyrovagi, cursores* (deceivers, wanderers, and stragglers) (Waddell, *Wandering Scholars* 51), and Irish canons rebuke the 'cleric singing amid feasts' (Wasserschleben, *Die irische Kanonensammlung* 34). The ribald hero of the medieval Irish tale *Aislinge Meic Con Glinne* (The dream of Mac Con Glinne), who composes satirical verses and performs, *cáintecht 7 bragitóracht 7 duana la filidecht do gabáil* 'satire and farting and singing songs with poetry' (Jackson, *Aislinge Meic Con Glinne* 18), offers a vivid literary representation of such a figure.

The performance of a band of *crosáin* is described in the Middle Irish anecdote *Senadh Saighri* (Meyer, ZCP 12.290–1), where 'nine shaggy pitch black *crossain*' cavort at the burial of Donnchadh Reamhar, king of Ossary (†976). Their *duan agus oirfideadh* (verse and minstrelsy) praises music, fair women, and liberality towards poets, and the verses they recite are composed in the syllabic metre *snéadhbhairdne* ($8^2 4^2 8^2 4^2$). Two stanzas illustrate the spirit of the chant and its distinguishing metrical features: required alliteration in lines c/d, end rhyme (lines b/d), internal rhyme (lines c/d), and consonance* between lines c and lines b/d (that is, syllables showing phonetically similar consonants and the same vowel quantity):

> *Muinter Donnchaid móir mheic Cealdaigh* 8^2
> *coinde* ***úabhair****, 4^2
> *cliara* ***binne*** *bíd ac glaedhaigh,** 8^2
> ***sinne*** *ar* ***slúagaibh.**4^2
>
> *Slúaig ac milradh mhuighe lána* 8^2
> *tighe n-****óla,**4^2
> *óccmhná finna,* ***flaithi*** *fiala,** 8^2
> ***maithi*** ***móra.****4^2
>
> The people of Donnchadh Mór son of Ceallach—a proud meeting; sweet bands who are calling out; we are on hostings.
>
> Hosts hunting full plains; alehouses, fair young women, honourable princes, great nobles.

Clerics expel the band by sprinkling them with holy water and reciting the Mass; however, two poets present at the assembly memorize the chant. One of them, *in crossán Find húa Cinga* (the *crosán* Finn Ó Cuinn), may be the poet referred to as 'Moyle Issa called Crossan ffyn a King', who composed verse in a metre 'which is called Crossanaght' (Murphy, *Annals of Clonmacnoise* AD 1137). The historical details of the tale are inconsistent, as Brian Ó Cuív has noted (PBA 49.246–7); nevertheless, the tale seems to reflect the emergence of a stylistic innovation in bardic verse known as *crosántacht* (<*crosán*), compositions which mix entertaining prose anecdotes into traditional syllabic verse (see below). The appearance of *crosán* as a personal name may indicate, as Proinsias Mac Cana has argued (*Ériu* 25.138 n.47), a gradual upward movement of lower entertainers like the *crosáin* into the ranks of the learned class. For example, an English document (1601) refers to Patrick Crosbie, Mac-Y-Crossane (son of the

crosán), whose father had been a 'rhymer' to the O'Moore's of Co. Laois.

The comic antics and ambiguous status of the *crosán* are a theme in other Middle Irish texts. The three *crossáin* who entertain in the house of the hero FINN MAC CUMAILL are called *Cles* (Trick), *Cinnmear* (Headmad), and *Cuitmhedh* (Mockery) (MacNeill & Murphy, *Duanaire Finn* 1.27.25). In a poem which parodies the customary distribution of meat to guests at a FEAST according to social status, the *crosán* is served the 'rump' (*crochet*)—a portion traditionally awarded to one of noble status—and the 'fools' receive the 'kidneys' (O'Sullivan, *Celtic Studies* 121). Giolla Brighde Mac Con Midhe (†1272) names the *crosán* among those who occupied the monastic guesthouse and insisted on largesse at the expense of the poor:

> *A chuid don chrosán i gcéadóir,*
> *a gcuid do mhaoraibh na mionn;*
> *cuid an bhochta ar dáil is duiligh—*
> *cáir gorta i gcuilidh dá chionn.*
> (Williams, *Poems of Giolle Brighde Mac Con Midhe* 242.27)

> First let the *crosán* have his portion, let the stewards of relics have their share; it is difficult to dole out the portion of the poor man—there should be shortage in the storehouse because of him.

Several religious texts portray the *crosán* as a disreputable figure, though the attitude ranges from fierce condemnation to distant amusement. 'The Fifteen Tokens of Doomsday' envisioned the final damnation of *na druithi 7 na cainti 7 na crosanaigh* 'the harlots and the satirists and the buffoons' (Stokes, RC 28.318 §30); the arrival of the *crossáin* is ominously predicted in the *Book of Fenagh*; and the grouping *croessan a phuttein* (buffoon and harlot) in the Welsh *Buched Dewi* (Life of St David) is similarly derogatory (D. Simon Evans, *Buched Dewi* 20). The attitude in other Irish texts is more forgiving. The 'openly sinful' *crosán* named in the Life of Brenainn is the last to enter the saint's vessel but the first to win heaven, and is honoured as a 'wonderful martyr'. Similarly, in the late medieval tale *Immram Curaig Ua Corra* (The voyage of the Uí Corra), one member of a band of *crosáin*, called a *fuirseoir* (jester), joins a group of pilgrims seeking salvation. He promises to provide 'entertainment of the mind and spirit' (*airgairdiugud menman 7 aicenta*) that will not lessen their piety, and when he dies on the journey the pilgrims lament the loss of his delightful *airfitiud* (minstrelsy).

The *crosán* is associated with a style of composition known as *crosántacht* (see Meyer, *Senadh Saighri* above). The earliest example (*c.* 1560) occurs in J. Carney's *Poems on the Butlers*, and samples continue through the 17th and 18th centuries. Only a few later poems refer specifically to the *crosán*. The speaker of a *crosántacht* attributed to Tadhg Dall Ó HUIGINN announces that he is 'O'Caroll's *crosán*'; Tadhg Mac Dáire Mac Bruaideadha names the *crosán* among the poets who frequent the house of Maol Mordha Mac Suibhne (†1518); and a prose text composed for the same chieftain (Walsh, *Leabhar Chlainne Suibhne* 6 §5) reprimands the patron for bestowing gifts to the *crosáin* at the expense of more noble poets.

The 17th-century Irish poet Dáibhí Ó BRUADAIR provides the latest, but arguably the most vivid, portrait of the *crosán*. Ó Bruadair assumes the comic mask of a *crosán* in the wedding *crosántacht, Cuirfead cluain ar chrobhaing ghealGhall*, and brings comic voices rooted in the medieval tradition to a wedding feast celebrated in 1674:

> *Do chiu oidhche i mbrugh Í Bhreasail*
> *lucht um losaid;*
> *seoltar mé mar chrosán chugaibh,*
> *cosán cobhsaidh.*
> (Mac Erlean, *Duanaire Dháibhidh Uí Bhruadair* 2.56.15)

> I see one night, in the dwelling of Ó Breasail, people gathered about a table; I am sent off like a *crosán* to you; firm my path.

Various strands of the tradition intersect in Ó Bruadair's poem. The poet was probably familiar with the medieval tale *Seanadh Saighre*, through the version included in the 17th-century history of Ireland by Geoffrey Keating (Seathrún CÉITINN, *Foras Feasa ar Éirinn* 3.217–21). Popular performances of mock priests at wakes and masked 'strawboys' at weddings may also have influenced the performance. Ó Bruadair exchanges the mask of a *crosán* with that of a *sagart súgach* (merry priest), who enacts a bawdy marriage, leads the couple to bed, and blesses the union. Ó Bruadair's comic pose joins the medieval to the modern: the bawdy priest and *crosán* of the poem are reminiscent of the *sacard* (priest) and *crosán* juxtaposed in the Middle Irish epigram cited

above. Ó Bruadair's unified performance of verse, nonsense rhymes, and ribaldry gives coherence to the fragmented allusions to the *crosán* and reflects what seems to be a strain of licence within the Christian culture of medieval Ireland (ÉIRE), which continued for centuries in the oral, popular culture.

Crúachu/Crúachain/Rathcroghan

The earthworks at Rathcroghan, near Tulsk, Co. Roscommon, Ireland (Tuilsce, Contae Ros Comáin, ÉIRE) are identified with Crúachu or Crúachain, the legendary seat of the kings of CONNACHT and as the court of Queen MEDB and King Ailill, one of the principal sites related in the ULSTER CYCLE of tales. It is listed as the site of one of the three principal plains, feasts, fairs, households, and cemeteries of ancient Ireland (ÉRIU; see also TRIADS). This latter association is emphasized in the literature, which relates both its use as the burial ground for the kings of the CONNACHTA and also its OTHERWORLD associations centred on the otherworldly mound, SÍD Crúachan. For this reason, it has been suggested that the site ultimately derives its name from *crúach* 'mound, hill', i.e. from its alleged 50 burial mounds.

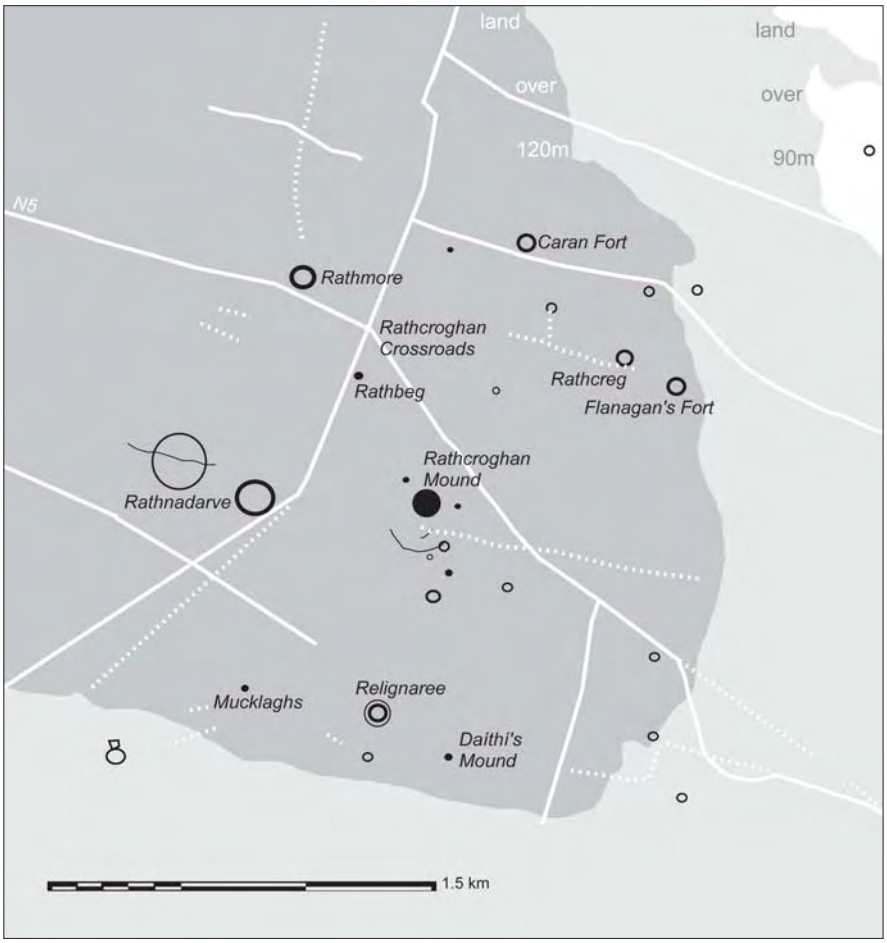
The site itself is a somewhat ill-defined precinct of over 50 monuments occupying some 800 hectares (about 1900 acres). The complex centres on Rathcroghan Mound, the most spectacular monument of the precinct. Approximately 85 m in diameter at its base and rising about 6 m high, the top of the mound is roughly flat. Geophysical prospection has indicated that the mound covers three circular timber-built structures of imposing size (diameters of 80 m, 35 m and 20 m), and a series of additional structures has been discerned near the surface of the mound.

Another prominent feature is Dáithí's Mound, an embanked mound around 40 m across, with a pillar stone mounted on its top, allegedly the burial place of Ireland's last pagan king. Although no burials were discovered during its excavation, material from the surrounding ditch indicated a date somewhere between the first centuries BC and AD.

The name of Relignaree (Reilig na Rígh, burial ground of the kings) retains the association of the royal cemetery, but in fact would appear to be a large earth and stone banked enclosure that measures approximately 100 m across and contained a smaller circular structure of around 48 m across. An even larger enclosure is that of Rathnadarve (Rath na dTarbh, ring-fort of the bulls), which measures 110 m in diameter.

In addition to numerous other burial mounds and ENCLOSURES are the Mucklaghs, a paired system of linear earthworks which run for a distance of between 100 m and 200 m; they are formed by upcast earthen banks some 2–3 m high and are presumed to represent a ceremonial function.

Oweyngat, the 'cave of the cats', is a natural limestone cave fronted by a souterrain (stone-lined underground structure) over which is inscribed in OGAM script VRAICCI MAQI MEDVVI 'of Fraích son of Medb', thus



Principal features of the Rathcroghan complex: mounds shown as solid circles; ring enclosures shown as open circles; modern roads in white; dashed white lines show trackways or linear earthworks

suggesting links to prominent characters in the early Irish heroic sagas (see IRISH LITERATURE; ULSTER CYCLE). The cave is popularly seen as an entrance into the Otherworld.

The striking parallels seen between the other 'royal' sites of EMAIN MACHAE and DÚN AILINNE are not quite so obvious at Rathcroghan, although the remote sensing evidence from Rathcroghan Mound, if proven by excavation, could reveal greater architectural similarities. The Mucklaghs might find a parallel with the 'banqueting hall' at Tara (TEAMHAIR), while there are traces of mounds, a ubiquitous feature at Rathcroghan, at Emain Machae, and an impressive series of mounds and enclosures, comparable to those at Rathcroghan, are seen at Tara.

Cruithin/Cruithni are Old Irish group names referring to the PICTS in north Britain and also to a tribal group, probably of British origin, who resided in north and east ULAID (Ulster) in the early medieval period. In the PICTISH KING-LIST, *Cruithne filius Cinge pater Pictorum* 'Pict son of Cing father of the Picts' figures as the legendary founder and namesake of the Pictish people. In historical times, the most important kingdom of the Irish Cruithin was Dál nAraidi in what is now the south of Aontroim (Co. Antrim). Congal Claen (also known as Congal Caech) was a Cruithnean king of Dál nAraidi who rose to the status of Ulaid's overking in AD 627. He is also listed as a king of TEAMHAIR (Tara), and thus came to be reckoned as an ancient *ard-rí* or 'high-king' of Ireland (ÉRIU) by later historians. Congal was killed in the battle of MAG ROTH in 637.

The name *Cruithin* corresponds to Welsh *Prydyn* 'the Picts' < **Pritenī*, and is closely related to the byform *Prydain* 'Britain'; compare also Greek Πρεττανοι *Prettanoi* 'the BRITONS' and the name BRITAIN itself. The group name is derived from Celtic *kʷritu-* 'form,

artefact', OIr. *cruth*, W *pryd*; cf. also W *prydydd* 'master poet, i.e. fashioner of forms'. The position of PRYDAIN and *Prydyn* in Welsh is that of a relic, its old meaning as the name of a people surviving only in the unconquered outlands beyond the Roman walls. In contrast, Gaelic *Cruithin, Cruithni* refers to an incomplete adstratum in Ireland, applied only to tribes on the northern and eastern maritime fringes of Ulaid (as well as to the Picts of Britain). From a purely linguistic point of view, *Cruithin* could be either the cognate of Welsh *Prydyn* or a borrowing between the Celtic languages as late as, say, the taking over of Latin *planta* to give OIr. *cland* 'children, descendants', at which time foreign *p* was still regularly taken over as Gaelic *q*, whence Old Irish *c*. If the Gaelic plural *Cruithnigh* /k´r´i:n´ij/ had also been used to mean 'the Britons' (i.e. BRYTHONIC Celts living south of the Forth–Clyde isthmus), this could account for the *Creenies*, alternatively known as *Gossocks* (cf. Welsh *gwasog* 'servile person') in medieval Galloway; see Watson, *Celtic Place-Names of Scotland* 178. In the later 20th century, some Protestant writers in Northern Ireland, for example Ian Adamson, have revived the idea of a Cruithnean ethnic identity as an ancient and indigenous, but non-Gaelic, cultural group.

Crwth is a Welsh term for a plucked and, from about the 11th century, a bowed 3- to 6-string lyre. The rectangular-shaped body, including the neck, is carved from a single block of sycamore. The back and pine soundboard are flat. Set obliquely, the bridge has one foot on the soundboard while another extends through a sound-hole making contact with the back, thus acting as a soundpost. The tuning of three octave pairs

(g g' c'' c' d' d'')

recorded by Barrington (1770) corresponds with information gleaned from 16th-century poetry and treatises on *cerdd dant* (see WELSH POETRY; WELSH MUSIC). Two strings lie to the left of the flat fingerboard and can be bowed as drones or plucked by the thumb of the left hand since the instrument, held against the chest, is supported by a strap around the player's neck. A flat bridge means that all six strings can be played simultaneously.

That a forerunner of the *crwth* existed in the early CELTIC COUNTRIES is suggested by vocabulary. *Crot* translates Latin *cithara* (a lute-like instrument) in the 8th-century Old Irish Würzburg GLOSSES, and Venantius Fortunatus (*c.* AD 540–*c.* 600) mentions an instrument he calls a *chrotta Britanna*, as distinct from both the Roman lyre and barbarian harp. The late 12th-century Middle English borrowing *crouthe* marks the popularity of the *crwth* in England up to the mid-14th century. However, by the 15th century it had become confined to Wales (CYMRU) and the border, where it shared with the HARP recognition as one of the two instruments suitable to accompany the performance of CERDD DAFOD. Essentially a medieval instrument, the *crwth* could not easily adapt to the new fashionable dance music of the Elizabethan court which became increasingly popular among the Welsh gentry as their traditional patronage of *cerdd dafod* waned. Although still played by a lower class of musician, the *crwth* was

gradually displaced by the Italian violin whose bright sound and wider range enabled it to play fast dance music with a choice of keys. By the 18th century the *crwth* was an object of antiquarian curiosity, and three instruments survive from this period. A recent revival of interest has led to the exploration of early performance practices.

Cú Chuimne (†747) was an Irish scholar and poet, connected with Iona (EILEAN Ì). Reputedly a pupil of ADOMNÁN, Cú Chuimne is the author of a theologically astute Latin hymn of praise to the Blessed Virgin Mary, *Cantemus in omne die.* According to one manuscript, he was one of the two architects of the important Irish compendium of ecclesiastical legal tradition, COLLECTIO CANONUM HIBERNENSIS. In literary tradition, he led a dissolute life, before reforming and returning to scholarship. *Cú Chuimne* is an Old Irish name meaning 'hound of memory', probably referring to the calling of a scholar.

Cú Chulainn, or Sétantae as he was called as a boy, is the principal warrior of the ULSTER CYCLE of early IRISH LITERATURE. Several of the stories in the Cycle are concerned with aspects of his extraordinary life and in this conform closely to the pattern known as the international heroic biography (Ó Cathasaigh, *Heroic Biography of Cormac mac Airt*). His birth is recounted in *Compert Con Culainn* (The conception of Cú Chulainn). While Dechtine, the sister (or daughter) of King CONCHOBAR mac Nesa of the ULAID is his mother, we learn that he had a divine father, LUG, and a terrestrial father, Sualtaim, and yet the Ulaid suspected that he had been conceived through a drunken incestuous encounter between Conchobar and his own sister. Ambiguity about the circumstances of his birth, inherent in this 'triple conception' marks him out as a person set apart from others.

In a section of TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley'), entitled *Macgnímrada Con Culainn* ('The Boyhood Deeds of Cú Chulainn'), his precocious exploits as a boy and the manner in which he gained his warrior name are recalled by some of the Ulster warriors. His encounter with Culann's monstrous hound may be taken to correspond to the hero's struggle with an OTHERWORLD monster in the international biographical pattern. His successful wooing of Emer daughter of Forgall Monach, followed by his training abroad in martial arts at the hands of the Amazonian Scáthach, is told in TOCHMARC EMIRE ('The Wooing of Emer'). This tale also contains *Verba Scáthaige* (The words of Scáthach), the prophetic poem uttered by his mentor, the instructress-in-arms Scáthach, which is also found independently and is considered to be one of the oldest compositions of the Cycle. Closely related to *Tochmarc Emire* is the short tale AIDED ÉNFIR AÍFE (The violent death of Aífe's one 'man' [i.e. son]), which tells how Cú Chulainn slew his only son in single combat. The combat of father and son, or of brother with brother, is a theme found in other traditions, most notably in the struggle between Sohrab and Rustem in the Persian *Shahnama*, or in that between Hadubrand and Hildebrand in the German *Hildebrandslied*. The theme occurs also in ARTHURIAN literature in the story of ARTHUR killing his son Amr which is alluded to in HISTORIA BRITTONUM and the MEDRAWD legend. It is uncertain whether the presence of this theme in the Irish saga is due to later borrowing from another tradition, or whether it reflects a shared inherited INDO-EUROPEAN motif.

Cú Chulainn's own death is related in BREISLECH MÓR MAIGE MUIRTHEIMNI (The great rout of Mag Muirtheimne). The earlier version of this tale is now fragmentary, and much of what survives is written in the somewhat obscure *rosc* style. Therefore, we are dependent on the later *Oidheadh Chon Culainn* (The violent death of Cú Chulainn) for a fuller account. This agrees

with the earlier version in telling that Cú Chulainn was killed, not by the superior martial skill of his adversaries—the family of Calaitín—but by violating his *gessa* (taboos; see GEIS) and through magic. In some cases, violation of his taboos is unavoidable and death seems fated for him. On being mortally wounded by venomous spears, he ties himself upright to a pillar, and then slays an otter (*dobarchú* waterdog) which he sees drinking his blood. Just as his career as the warrior Cú Chulainn (the hound of Culann) had begun by killing Culann's hound, so also his final deed involves the killing of a canine creature.

While tales such as these deal with central aspects of the hero's life, there are many others in which Cú Chulainn also plays a leading rôle. He is the youthful warrior who stands alone against the might of the CONNACHT forces in *Táin Bó Cuailnge*, eventually winning the day for Ulster. He proves himself to be the bravest and most pre-eminent of the Ulster warriors in FLED BRICRENN, where he vanquishes his opponents CONALL CERNACH and Loegaire Buadach in a series of martial tests, culminating in a beheading contest arranged by the shadowy Munster hero, Cú Roí mac Dáiri. The latter succeeds in humiliating Cú Chulainn in combat as they both strive for the beautiful Bláthnat, as related in *Aided Chon Roí*. Cú Chulainn and Bláthnat, however, conspire to kill him later.

There are other tales in the Ulster Cycle in which Cú Chulainn's rôle is muted or in which he does not appear at all. In some cases this is due to chronology: the events related in the tale were conceived of as having taken place either before his birth or after his death, as, for instance, in *Compert Conchobuir* (The conception of Conchobar) or in *Aided Ailella ocus Conaill Cernaig* (The death of Ailill and of Conall Cernach). In these and other cases other Ulster heroes take centre stage. For example, Conall Cernach alone upholds the honour of the Ulstermen in SCÉLA MUCCE MEIC DÁ THÓ (Tidings of Mac Da Thó's pig).

Cú Chulainn's name, meaning 'hound of Culann', is transparently explained by the episode in the *Macgnímrada Con Culainn*. His boyhood name *Sétantae* may mean 'knower of the roads', but comparison has also been made with the ancient British tribal name *Setantii* in what is now Lancashire, north-west England, a derivation which would require a borrowing from BRITISH to GOIDELIC in the 2nd–6th centuries AD, that is, after Goidelic had turned inherited Celtic *-nt-* > */dd/*.

Ruairí Ó hUiginn

Cú Roí mac Dáiri was a legendary Irish hero traditionally associated with Cathair Chon Roí (The fortress of Cú Roí), an inland promontory fort on the western edge of the Slieve Mish (Old Irish Slíab Mis) mountain range in Co. Kerry (Contae Chiarraí). He is usually depicted as a warrior king with magical abilities and frequently appears in the shape of an uncouth churl or ogre. Thus standing apart from other Irish heroes—who are more clearly idealized mortal warriors—Cú Roí has often been characterized by modern scholars as a 'demigod'.

Cú Roí plays a rôle in some of the oldest and best-known Irish heroic tales from the ULSTER CYCLE, among them MESCA ULAD ('The Intoxication of the Ulstermen'), TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley'), *Forfes Fer Fálchae* (The siege of the men of Fálchae), as well as the story of his tragic death, *Aided Chon Roí*. The latest of these describes how Cú Roí defeats and humiliates the greatest hero of the Ulster Cycle, CÚ CHULAINN, and is finally slain by the latter in a cowardly manner, through the involvement of a woman. The tale also provides the background to Cú Chulainn's own death, as described in BREISLECH MÓR MAIGE MUIRTHEIMNI (The great rout of Mag Muirthemne), since Cú Roí's son is the one who finally cuts off Cú Chulainn's head to avenge his father. *Aided Chon Roí* has been preserved in three medieval recensions, as an early modern Irish account in Seathrún CÉITINN's *Foras Feasa ar Éirinn*, and in various modern Irish versions from oral tradition, hence

making its textual development especially interesting.

Cú Roí is an example of an Irish hero whose tradition spread beyond Ireland (Ériu). The episode in Fled Bricrenn ('Bricriu's Feast'), where Cú Roí features as an ogre challenging the Ulster heroes to a head-cutting contest in order to determine who is Ulster's greatest hero, served as a model for the similar episode in the Middle English Arthurian poetic narrative *Sir Gawain and the Green Knight* (see also head cult). The name of Gawain's supernatural opponent Sir Berkilak most probably derives from the Irish word *bachlach* 'churl', which is the word used to describe the guise assumed by Cú Roí in the beheading episode in *Fled Bricrenn*. The *Estoire*, an early version of the Tristan and Isolt tale, contains some parallels to *Aided Chon Roí*, and the important collection of early Welsh poetry known as the Book of Taliesin (Llyfr Taliesin) contains an eulogy for Cú Roí, *Marwnat Corroi m. Dayry* (The death-song of Cú Roí mac Dáiri), which is the only literary piece in early Welsh on an Irish subject. The fact that the same section of the Book of Taliesin also contains elegies for Alexander the Great and Hercules in the traditional Welsh style shows that the Irish hero had likewise come to be viewed as a figure of some importance in international literature.

Cuilén Ring mac Illuilb was king of the Scots (*rí Alban*) 966–71. His Scandinavian epithet *Ring* ('ring', Old Norse *hringr*) reflects the Norse influence on the Scottish court in the 10th century. His father's name *Illulb* was also of Scandinavian origin, corresponding to Old Norse *Indulf*. Cuilén seized power from Dub son of Mael Coluim, whom he killed in 966. Cuilén seems to have been denied the throne of Ystrad Clud (Strathclyde), although this compact kingdom had formed part of his father's territories. Cuilén died and his forces routed while fighting against Rhydderch (Radharc) son of Domnall of Strathclyde in 971.

PEB

Cúirt (court, pl. *cúirteanna*) was a formal meeting of amateur poets in Ireland in the 18th century. As the bardic schools collapsed in the 17th century for want of patrons and students (see bardic order), *cúirteanna* replaced them as centres of poetic learning.

The *cúirteanna* were mostly confined to Munster (Mumu), with some similar gatherings in Ulster (counties Armagh/Ard Mhacha and Louth, see ulaid).

The Blarney *cúirt* (near Cork city/Corcaigh) was founded soon after the death of this school's last bard, Tadhg Ó Duinnín, by Diarmaid Mac Sheáin Bhuidhe Mac Cárrthaigh (*c.* 1632–1705).

Other well-known *cúirteanna* were those of Carrignavar, Co. Cork (Seán na Ráithíneach Ó Murchadha being chief), Sliabh Luachra near Killarney (Eoghan Ruadh Ó Súilleabháin), Rathluirc, Co. Cork (Seán Clárach Mac Domhnaill), Co. Louth (Pádraig Mac Giolla Fhiondain), Nobber, Co. Meath (Art Mac Cobhthaigh) and Sliabh gCua, Co. Waterford (Donncha Rua Mac Conmara).

Cynically modelled after the hated English court system, these courts appointed sheriffs (*sirriamaí*, sg. *sirriam*) and high sheriffs (*ard-shirriamaí*) who issued mock 'warrants' (*barántais*) as their bardic predecessors issued *gairmeanna scoile* (calls to school) to demand the presence of court members.

Cúirteanna might often involve mock or real contentions between the poets, as when Diarmaid Mac Cárrthaigh famously laments his dead mare in *An Fhalartha Ghorm* (The grey ambler), only to have other poets of the Blarney *cúirt* respond to the lament with

jesting verse of their own.

While *cúirteanna* dealt mostly with minor matters, the poems record minor and major events of the period. The Gaelic insurrection of Scotland (Alba) in 1745 is the subject of *Rosc Catha na Mumhan* (War song of Munster) by the Youghal poet Piaras Mac Gearailt (1702–95) and Aindrias Mac Craith (?1708–95) was exiled from Croom after angering the local priest in *Slán le Cromadh* (Farewell to Croom). A favourite *cúirt* poem-style was the aisling—a dream allegory imagining Éire as an abused woman praying for her liberation.

Without time for formal bardic schooling, the poets resorted to simpler poetic forms, and it is particularly out of *cúirteanna* that the amhrán was popularized.

With the Irish language in decline and literate speakers becoming ever scarcer, the *cúirteanna* had fallen into desuetude by the end of the 18th century.

Brian Ó Broin

Culhwch ac Olwen (Culhwch and Olwen) is the earliest extant Arthurian tale in any language and the most linguistically and stylistically archaic sizeable specimen of Welsh prose. Closely parallel copies of the text survive in the two most famous manuscript collections of Middle Welsh prose tales, namely the White Book of Rhydderch (Llyfr Gwyn Rhydderch) and the Red Book of Hergest (Llyfr Coch Hergest). Standard editions (Welsh and English versions) by Rachel Bromwich, D. Simon Evans, and Idris Foster did not appear until late in the 20th century, thereby greatly improving access relatively recently. At 1246 printed lines in these editions, the story is long. It is also complex. There is a frame tale—the wooing of Olwen, daughter of the giant Ysbaddaden, by Culhwch. Although it motivates the rest of the action and provides opportunities for a lyrical description of Olwen's beauty (lines 487–98) and grotesque humour with her father, this story is not central to the Welsh tradition, and its *dramatis personae* are chiefly known through this text. This part of the plot resembles a *tochmarc* or 'wooing' of the Irish sagas (cf., Edel, *Helden auf Freiersfüssen*) and has been analysed as a version of the tale 'Six Go Through the World' within the taxonomy of the international folktale (Jackson, *International Popular Tale and Early Welsh Tradition*).

Juxtaposed with the isolated story of Ysbaddaden's daughter is the great central hero of Brythonic tradition Arthur, already *penn teyrneð yr ynys honn* 'chief of the chieftains of this island' (lines 142–3). These two strands come together early in the action when the magnificently attired, but unrecognized, Culhwch arrives at his first cousin Arthur's thronging court to ask his assistance in seeking Olwen. The anonymous storyteller/author takes full advantage of this situation, having Culhwch claim his boon in the name of a vast list of the heroes and ladies of Arthur's court, in which various traditional catalogues are interwoven with imaginative, and often humorous, inventions. There is a similar inventive pastiche, as the grotesque giant is later found and confronted and reels off a catalogue of difficult tasks (*anoetheu*, sing. anoeth) which his prospective son-in-law must fulfil. These lead to a series of adventures—which overlap only partially with the list Ysbaddaden demanded—each of which could effectively stand on its own as an independent Arthurian tale. The longest of these is the hunt of the demon boar, Twrch Trwyth, and his piglets for the razor, scissors, and mirror needed to cut the giant's hair. Twrch Trwyth comes from Ireland (Ériu), swims across the Irish Sea, and is chased by Arthur and his men across a detailed terrain of south Wales (Cymru), giving rise to several traditional place-names, before crossing the Severn estuary into Cernyw (Kernow/Cornwall), Arthur's home country, for a climactic but inconclusive showdown with Arthur at the head of the mustered hosts of Dyfnaint (Devon) and Cernyw.

The tale's exuberant and eclectic character, its great lists of characters and tasks, the numerous naming tales and summarized traditional narratives brought in as asides render it a treasure trove of early Welsh tradition;

it is thus of comparable value to the TRIADS (Bromwich, TYP; see Edel, BBCS 30.253–67).

As discussed in the article on ARTHURIAN SITES, *Culhwch* shows some close points of comparison with HISTORIA BRITTONUM's topographical *mirabilia*, which include a reference to Arthur's hunt of the boar Troit in connection with the wondrous landmark named Carn Cabal, a name which, on the face of it, means 'horse's hoof', but is explained as 'the cairn named for Arthur's dog, Cafall'. Clearly, the Twrch Trwyth episode already existed in the 9th century, generating place-name lore, or perhaps affecting extant place-name lore, probably as an oral tale, but there is no hint that it had yet come together with the tale of the Giant's Daughter.

As a repository of early tradition, *Culhwch* has held great appeal for philological fossil hunters; in this vein, Jackson interpreted the giant's epithet *Penkawr* 'chief of giants' as containing a rare and archaic inflected genitive plural < Celtic **kawarom*, suggesting that the puzzling formula *teir Ynys Prydein* 'the three islands of BRITAIN' means Britain's southern two thirds, Britain beyond the Forth, and Ireland, and identified the place-name *Messur Pritguenn* 'measure of (Arthur's ship) Prydwen' in the Book of LLANDAF with the *Messur y Peir* 'measure of the cauldron' which occurs in a naming tale in *Culhwch* (*Ysgrifau Beirniadol* 12.12–23). An underlying theme in *Culhwch* of pigs as totem and nemesis has been explored by Hamp (ZCP 41.257–8) and Ford (*Celtic Language, Celtic Culture* 292–304). Koch has discussed the comparative Celtic affinities of the oath (*tyghaf tyghet* 'I swear a destiny', line 50) with which Culhwch's stepmother dooms him to the perilous quest for Olwen (ÉC 29.249–61).

Although *Culhwch* is freighted with tradition, Brynley F. Roberts, in a series of articles, has argued for the well-crafted literary qualities of the tale, seeing it as the work of a literate author as opposed to an oral storyteller, though one 'close to traditional modes of narration' (*Arthur of the Welsh* 77–80; *Craft of Fiction* 215–16).

Bromwich and Evans suggest that the extant version of *Culhwch* was most probably redacted in the last decades of the 11th century to *c.* 1100 (*Culhwch and Olwen* lxxxi–lxxxii). A similar date has been proposed by Roberts (*Arthur of the Welsh* 73; although he previously suggested *c.* 1050 in *Craft of Fiction* 214). But, according to Bromwich and Evans, the catalogues probably continued to take on new items between the period of composition and that of the extant 14th-century manuscripts (*Culhwch and Olwen* lxxxii). Sims-Williams points to a close parallel with a datable text in the similar rôles of BEDWYR and CAI as Arthur's chief companions in *Culhwch*, the poem PA GUR YV Y PORTHAUR, and the Latin *Vita Cadoci* of Lifris of Llancarfan of *c.* 1100 (*Arthur of the Welsh* 39; see also CADOC). One way or another, a major qualitative gap in language as well as literary style between *Culhwch* and the Four Branches of the MABINOGI should be accounted for; for example, a word meaning 'said' *amkaw6* occurs in *Culhwch* and virtually nowhere else. Studies by Arwyn Watkins, D. Simon Evans (*Ysgrifau Beirniadol* 13.101–13), and Mac Cana (*Ériu* 90–120; SC 14/15.174–87; *Studies in Brythonic Word Order* 45–80.), and the linguistic section of *Culhwch and Olwen* (xv–xxv) show ways in which the language of *Culhwch* agrees with Old Welsh usage, suggesting that the redaction belongs to the Late Old Welsh period, contrasting with the language of the Four Branches, which is so essential to Celtic scholars' description of the Middle Welsh linguistic stage as to be its definition.

Culloden, battle of

The campaign of 1745–6, which ended in the battle of Culloden, was the final attempt of the last descendant of the Scottish Stuart dynasty, Charles Edward Stuart—'Bonnie Prince Charlie', 'The Young Chevalier' or 'The Young Pretender'—to regain the throne of Scotland (Alba) and England. It followed in the wake of several earlier Jacobite rebellions, which had failed.

In 1744 it was decided that James Stuart's son, Prince Charles Edward Stuart, should use the Austrian wars of succession to make a bid for the throne of England and Scotland on behalf of his father. The assistance of a French force of 12,000 men had been promised, but the French fleet which had set out in support of Charles was scattered, with no replacement forthcoming. Prince Charles Edward Stuart decided to go it alone, landing on the west coast of Scotland with a handful of men and a shipful of weapons in July 1745.

A month later, over 1000 men had joined him, and at Glenfinnan on 19 August 1745 Charles proclaimed his father King James III of England and James VIII of Scotland. His army swiftly proceeded to the Lowlands, entering Edinburgh (Dùn Èideann) on 15 September 1745, cheered on by the crowds that lined the streets. Following an initial victory over government forces at Prestonpans (near Edinburgh) on 21 September 1745, he proceeded through England, badly overestimating the support he was likely to receive from Welsh and English Jacobites and from France. Although Charles and his army of about 5000 men went as far as Derby, he refrained from entering London, following the advice of Lord George Murray that a 30,000-strong government force would prove too powerful. His troops retreated to Scotland, winning the battle of Falkirk (between Glasgow and Stirling) on 17 January 1746, but moving on back into the Highlands. The greatly reduced force of 'Bonnie Prince Charlie' was finally vanquished by a 9000-strong government army at Culloden Moor (Scottish Gaelic Cùil Lodair) near Inverness on 16 April 1746. Prince Charles himself only escaped with the help of Lady Flora MacDonald of Uist (dressed as her maidservant Betty Burke) and other supporters.

If Bannockburn was the highpoint of the Scottish fight for independence, Culloden for many represents the darkest hour of the Scottish nation. The ensuing brutal oppression of the Highland people and their culture, the execution of many Jacobite leaders, the imprisonment or deportation of thousands of their followers and, last but not least, 'Bonnie Prince Charlie' himself, became the stuff of national myth. The defeat of 1746 sounded the death-knell for the clan-system and the traditional way of living in the Highlands, marking a major milestone in the decline of the Scottish Gaelic language, and setting back dreams of Scottish independence for centuries (see nationalism; scottish parliament).

MBL

Cumann Buan-Choimeádta na Gaeilge (The Society for the Preservation of the Irish Language, SPIL)

was established in Dublin (Baile Átha Cliath) in 1876. The founder members included An tAthair Eoin Ó Nualláin, Professor Brian Ó Luanaigh, P. W. Joyce, and Dáithí Ó Coimín. The aims of the society were to encourage those who could still speak the language to do so, to ensure that the language would be taught in schools in the Irish-speaking areas (see education), to provide books which would assist in the learning of the language, and to encourage the production of a Modern Irish literature, 'original or translated'. It was also hoped that the Society might produce a journal, partly in Irish, to help it pursue its aims. In 1878 SPIL succeeded in having Irish recognized by the Commission of National Education as a subject for which result fees would be paid, as was already the case with Greek, Latin, and French. Another important achievement of the Society was the publication of inexpensive editions of Irish books. Between 1877 and 1879 SPIL produced a three-part language primer, based on the Irish lessons which Fr. Uileog de Búrc had published in *The Nation*; these booklets were followed by school editions of Tóruigheacht Dhiarmada agus Ghráinne ('The Pursuit of Diarmaid and Gráinne'), *Oidhe Chloinne Lir*

('The Violent Death of the Children of Lir'), *Oidhe Chloinne Tuireann* ('The Violent Death of the Children of Tuireann'), and *Oidhe Chloinne Uisnigh* ('The Violent Death of the Children of Uisneach').

Internal differences in the Society led to a split in 1879 and the dissenting members formed the Gaelic Union. In 1881 the new organization, in which Ó Coimín had a prominent rôle, decided to establish a journal, and in November 1882 the first issue of *Irisleabhar na Gaedhilge / The Gaelic Journal* appeared. This bilingual journal, which was taken over by CONRADH NA GAEILGE (The Gaelic League) in 1894, lasted until 1909. Its editors included Ó Coimín, Seán Pléimeann, Eoghan Ó Gramhnaigh, Eoin MACNEILL, Seosamh Laoide, and Tadhg Ó DONNCHADHA ('Torna'). Although the preservation of the language, rather than its restoration, was the aim of those who founded *The Gaelic Journal*, it has been claimed that the revival and reclamation of the Irish language owes much to the paper which, thanks to its enlightened editors, helped prepare the ground for the cultivation of modern Irish as a literary medium.

Pádraigín Riggs

Cumann na Scríbheann nGaedhilge (**The Irish Texts Society**) was founded in 1898 in London—which is still its main base—as an offshoot of the Irish Literary Society. Among the aims of the latter society, which had been founded in 1892, was 'the study of the IRISH language', and this was carried over into the objects of its daughter society, together with the publication and translation of texts in the Irish language. Douglas Hyde (Dubhghlas DE HÍDE) was the first president of the Society, a position which he held until his death in 1949. The first chairman of the Council was Frederick York Powell, and the first secretaries were Norma Borthwick and the Irish scholar, Eleanor Hull (1860–1935). Almost immediately, the Society took steps to provide a 'handy Irish dictionary', a task urged upon it by the Irish clergyman and language supporter, Eugene O'Growney (Ó Gramhnaigh; 1863–99). The result was the publication, in 1904, of *Foclóir Gaedhilge agus Béarla/An Irish–English Dictionary* by Fr. P. S. Dinneen (UA DUINNÍN; 1860–1934). This was superseded in 1927 by a greatly enlarged edition, still the most popular reference work of its kind (see DICTIONARIES AND GRAMMARS). Dinneen paid tribute to the Society as 'a distinctive university, unchartered and unendowed', in which he himself was the holder of a 'Chair'. In addition to the dictionary, Dinneen edited four of the Society's main series of volumes between 1900 and 1914, including three volumes of *Foras Feasa ar Éirinn*, Geoffrey Keating's History of Ireland (see CÉITINN). The achievements of this series, now at volume 55, have been described as unparalleled. It includes standard, multiple-volume editions of *Duanaire Finn* ('Lays of Fionn'), mainly by Gerard MURPHY, the poems of Dáibhí Ó BRUADAIR by J. C. McErlean, the poems of Tadhg Dall Ó hUIGINN by Eleanor Knott, and the *Leabhar Gabhála* (LEBAR GABÁLA ÉRENN, 'The Book of Invasions') by R. A. S. Macalister. These volumes, all still in print, were seen through the press by successive secretaries of the Society, notably Maurice O'Connell and, the unrelated, Noel O'Connell. The Society also publishes a subsidiary series, now at volume 13, which features new introductions to editions in the main series and proceedings of annual seminars on the same subject. The Society has also begun to publish a new *Historical Dictionary of Gaelic Placenames / Foclóir Stairiúil Áitainmneacha na Gaeilge* for the *Locus* Project, which is based in University College Cork (CORCAIGH).

Cumbria: post-1974 county boundary in black, modern English–Scottish border in grey

Cumbria is today the name of the northernmost county on the west coast of England, bordering Scotland (Alba). The modern county contains the historic pre-1974 counties of Cumberland, Westmorland, the north-westernmost part of Lancashire, and smaller parts of the old North Riding of Yorkshire. The corresponding English name is first attested in the Anglo-Saxon Chronicle as *Cumbraland* (945) and *Cumerland* (1000), that is, 'land of the *Cymry*, i.e. Britons'. The first element is a Brythonic loanword, etymologically identical to Cymru, the Welsh word for Wales. As the name indicates, this area was one of the last strongholds of Brythonic speech in Britain outside Cornwall (Kernow) and Wales. This language was closely related to Early Welsh, and is usually called Cumbric by scholars; this term is also widely applied to Brythonic place-names and other linguistic evidence from northern England and southern Scotland generally, not just from Cumbria.

The kingdom of Rheged—famed in early Welsh poetry (see cynfeirdd; hen ogledd; urien)—included part, or perhaps all, of present-day Cumbria, but its boundaries are highly uncertain. This kingdom came under Northumbrian domination in the 7th century, possibly during the reign of the expansionist Ecgfrith (670–85). Northumbrian English rule continued on both sides of the Solway Firth through the 8th century. There is no evidence that the Brythonic kingdom centred on Dumbarton extended as far south as the modern county of Cumbria before 900.

In sources of the 10th and 11th centuries Latin *Cumbria* is used, possibly interchangeably with *(Strat-) Clutenses* 'Strathclyde' (see ystrad clud), to signify a kingdom comprising the interior of what is now south-western Scotland and roughly the northern half of modern Cumbria as far as Penrith. It is not clear whether these references invariably meant one kingdom or sometimes one of two; if the first, the power of Strathclyde had probably pushed south.

We have little evidence to demonstrate how Brythonic Cumbria and its dynasty were at this period. Jackson's theory that many of the Brythonic place-names of Cumbria belong to a secondary expansion or 're-conquest' of this time is possible, but uncertain (*Angles and Britons* 60–84). Only three rulers are specifically referred to as 'kings of the Cumbrians' in sources relating to the 10th century. Two of these have names that are probably Brythonic: an Owain, who reigned *c.* 915–*c.* 937, is mentioned by William of Malmesbury and Symeon of Durham; his son, Dyfnwal ab Owain (Dufnal, 'Donald'), died in Rome in 975 after leaving the throne. A king with the common Scottish name Mael Coluim, probably Dyfnwal's son, is mentioned by Florence of Worcester for 973. It is likely that the Cumbria ruled by these three included Strathclyde and parts of present-day English Cumbria.

Early in the next century we find Mael Coluim's brother with a Brythonic name—Owain the Bald (Owain ap Dyfnwal), mentioned by Symeon of Durham fighting on the side of Mael Coluim mac Cinaeda of Scotland at the battle of Carham, south of the river Tweed in 1018. That this Owain is called King of Clutenses, rather than Cumbria, may be significant. He is the last known king of the dynasty of Strathclyde–Cumbria. Political control of the region in the 11th century was unsettled, with victories claimed for Scotland, England, and the earldom of Northumbria. In 1092 William II (Rufus) of England, William the Conqueror's son, took Carlisle, driving out its ruler Dolphin, son of an earl of Northumbria with the Brythonic name *Gospatric* 'servant of St

Patrick' (see following article), and fixing the English–Scottish border at the Solway Firth, as today.

AM

Cumbric, as a linguistic term, refers to the Brythonic spoken in the early Middle Ages in the area approximately between the line of the river Mersey and the Forth–Clyde isthmus. Evidence for Cumbric consists of the following: (i) proper names surviving through the medium of Welsh, English, Irish, or Latin texts; (ii) two legal terms in the 11th-century *Leges inter Brettos et Scotos* (Laws of the Britons and Scots)—*galnes*, *galnys* 'blood-fine' (Welsh *galanas*), *kelchyn* 'circuit' (Welsh *cylchyn*) (see Jackson, LHEB 9–10; Lapidge & Sharpe, *Bibliography of Celtic Latin Literature 400–1200* item 1045); a third term, *mercheta* 'marriage fee', more probably derives from English or Norman French *marchet* 'market'; (iii) a few personal names in inscriptions, but most of these are early and in Romano-British spelling; (iv) place-names borrowed into English; (v) probably the early Welsh poetry of the Cynfeirdd set in north Britain.

In category (i) most of the names of north Britons, as found in pedigrees and annals, occur also in Wales (Cymru): e.g. Old Welsh/Cumbric *Dumn(a)gual* (Mod. Dyfnwal), Teudebur, *Elfin*, Eugein (Mod. *Owain*), Ceretic. However, there is a class of Brythonic male personal names that are rare in Wales, but common in north Britain; in these, *Gos*, var. *Cos* 'servant of' (Welsh *gwas*) is prefixed to the name of a saint: *Gos-patric*, *Gos-mungo*, *Gos-oswald*. That Celtic **wosto-* (Gallo-Roman *vassus*) became Cumbric *gos* is an interesting feature, but the variation of *gwa-* and *go-* is general throughout the Brythonic world—e.g. Welsh *golch* 'wash' = Breton *gwalc'h*—and does not have the character of a systematic sound law.

Category (v) above, the *Cynfeirdd* poetry, is the largest and potentially the most significant, but can only throw a slight and suggestive light on Cumbric. Although most modern scholars generally agree that some of this poetry was indeed composed in the Hen Ogledd ('Old North') as opposed to in what is now Wales, and was perhaps even first transcribed in the north, how much of it has such a history and how faithful our copies are to northern originals are uncertain. If we had any Cumbric texts continuously transmitted in the north, these could then be a basis for finding orthographic, dialectal, and other Cumbric earmarks in Welsh manuscripts of *Cynfeirdd* poetry, but there are no such survivals, only Welsh copies. As it is, the most distinctive linguistic features of this corpus appear to be archaisms—throwbacks that were probably once found throughout the entire Brythonic world—rather than features of regional dialect. And we would expect regionalisms to be rare in formal court poetry anyway. Even so, possible Cumbric dialect features can occasionally be seen. For example, in the *Peis Dinogat* interpolation (Llyfr Aneirin 1101–17A), an informal song to a child which Gruffydd (*Celtic Language, Celtic Culture* 261–6) has shown to be set in the English Lake District in Cumbria, there are a number of singulative animal names in *penn* 'head': *penn ywrch* 'a roebuck', *penn gwythwch* 'a wild sow', *penn hyd* 'a stag', *penn grugyar* 'a grouse', *penn pysc* 'a fish'. Referring to a single animal in this way is otherwise found only in Breton, and we have no evidence that the construction ever had any currency in the present-day Wales.

For the Brythonic place-names of southern Scotland (Alba), see Scottish place-names. Most place-names in northern England are of Norse or Old English origin. However, there is a scatter of Brythonic names throughout this extensive region, some of which clearly reflect a developed medieval language, much like Welsh, Cornish, or Breton. For example, *Liscard* on the Wirral peninsula, recorded as *Lisenecark* in 1260, reflects Brythonic **Lis-ən-Carrec* 'the court of the rock' (Welsh *llys y garreg*) with an example of the definite article in its original nasal form. The hill name *Penyghent* in west Yorkshire is attested as *Penegent* in 1307, reflecting **Penn-ə-gënt* 'hill of the heathens' (Welsh *pen y gynt*), in which the definite article before a consonant is merely the obscure vowel, like Middle and Modern Welsh *y*.

In the northern half of the modern county of Cumbria (see map), the territory of the kingdom of

Cumbria in the 10th and 11th centuries, we find the densest distribution of Brythonic place-names in England outside Cornwall (Kernow) and the Welsh border area, including the names of some of the most important places. For example, *Penrith*, the historic capital, means 'the main ford' (*Penred* in 1167, cf. Breton *Perret*, *Pen ret* in 871, and Welsh *Pen-rhyd*, formed from *pen* 'main, chief, head' + *rhyd* 'ford'), and *Carlisle* (Welsh *Caerliwelydd*) is derived from the British place-name *Luguvalion* (*Luguvallo* in the 3rd-century Antonine Itinerary). The river and lake name *Derwent* (near the setting of *Peis Dinogat*, see above) is based on the British **deru-* 'oak' (Welsh *derw*), and the mountain name *Blencogo* corresponds to Welsh *Blaen-cogau* 'foreland of cuckoos'.

Jackson proposed that Cumbric re-expanded into this area with the political control of Cumbria in the 10th century, following periods of Northumbrian and Norse dominance (*Angles and Britons* 60–84). Similarly, it is usually assumed that Cumbric speech survived more or less as long as, and wherever, rulers with Brythonic names ruled, for example, Owain ap Dyfnwal who ruled Strathclyde (Ystrad Clud) in the early 11th century. However, the usual pattern in the Celtic countries was for the older language to outlive the loss of sovereignty, sometimes by many centuries. Thus, Cumbric may have survived quite late in some areas, and a claim has been made that the 'shepherd's score', a special method of counting found in Cumbria and other parts of northern England, is a survival. In this system the numbers strongly parallel Welsh, for instance, *pimp* 'five', *dik* 'ten', *bumfit* 'fifteen', and Welsh *pump*, *deg*, *pymtheg*, although several words are clearly later rhyming creations: *yan* 'one', *tan* 'two', *tethera* 'three', *pethera* 'four', cf. Welsh *un*, *dau*, *tri*, *pedwar*. The system is not attested until the 18th century, and its ultimate origins may date to any time before that.

Although Cumbric is convenient shorthand for Brythonic evidence from northern England and southern Scotland and we have no acceptable replacement term, it would be misleading to think of it as a distinct language. Written Old Welsh, Old Breton, and Old Cornish of the 9th and 10th centuries are so similar as to be hard to distinguish from each other by linguistic criteria. If anything, Cumbric was even less different from Welsh than were the south-western dialects. Contemporary sources regard all four as the same language. For Beda there was one *lingua Brettonum* (*Historia Ecclesiastica* 1.1), and Latin texts from Wales and Brittany (Breizh) use the term *Brit(t)annice* and *lingua Brit(t)annica* for the vernacular. The recent English term *Cumbric* is merely an Anglicization of the root and suffix which occur in the Welsh name for the Welsh language, i.e. *Cymraeg*, which, loaned into Old Irish as *Combrec*, was used in Irish glossaries for any Brythonic word. Furthermore, to say that the *Cynfeirdd* poetry was first composed in Cumbric and then 'translated' into Welsh is a not a good characterization of the transmission process as this is now understood. Thus, the main fact is the essential unity of Brythonic in the early Middle Ages, and Cumbric is more correctly a geographic rather than a linguistic term. The status of Pictish as a language distinct from Brythonic remains unresolved, and will, of course, have a bearing on how we conceive of Cumbric and the Brythonic of north Britain.

Cumméne Find (Cumméne the Fair, Cumméne mac Arnaine, Latin Cummeneus albus), seventh abbot of Iona (Eilean Ì), was of Colum Cille's family and a nephew of Ségéne (5th abbot). He succeeded Abbot Suibne in 657, and died 24 February 669 (memorial in the *Martyrology of Tallaght*). The annals record that he visited Iona's monastic *familia* in Ireland (Ériu) in 661, and he probably made a similar visitation to Iona's missions in England (see monasticism). His abbacy saw a flowering of Iona's monastic culture: during his time we know that books were written there, its library was being built up and, probably, at this time the Book of Durrow, whose Eusebian Appa-

ratus indicates great scholarship, was produced, if not there, then in a related monastery. But he also encountered some setbacks. In 664 the council called by King Oswydd—who probably knew Cumméne—at Streanæshalch (Whitby) saw a break between Iona and churches which it had founded in England; and 664–8 was a period of devastating plague, although Adomnán says that Iona itself escaped. It was Cumméne who received Bishop Colmán of Lindisfarne back to Iona, en route to Inishboffin, after his argument for Iona's position was rejected at Streanæshalch.

Cumméne was the author of a *vita* of Colum Cille (probably entitled Liber de virtutibus sancti Columbae) and was therefore one of the first Irishmen, if not the first Irishman, to write hagiography. Apart from one fragment (in a smaller script on page 108a of Schaffhausen, Gen. 1), this work is lost, but it underlies many chapters of Adomnán's *Vita Columbae*; from its reference to Domnall Brecc, king of the Irish in Dál Riata, it must have been written after 642. It is a definite possibility that Cumméne Find and the Cummian of *De Controversia Paschali* (written before 652) are identical—if so, Cumméne was in an Irish Columban monastery before becoming abbot. The reason given against the identification is that the author of the letter was so critical of Iona's Easter dating (see easter controversy) that he could not have become abbot and let the practice continue; but it is equally possible that Cummian wrote so stridently to Ségéne of Iona (the letter indicates a close relationship) because of his concern about the practice of his own *familia*; and his duty to that *familia* could lead him to become its abbot, even knowing that in one aspect of their practice he had failed—as Adomnán later would fail—to convince his brethren.

Cummíne Fota, St (also Cummaine, Cuimine, Latin Cummenus or Cummianus Longus, 592–662) straddles the early Irish textual world as both an author and a fictionalized character. His reputation as a scholar (*sapiens*, Annals of Ulster 662) is fixed by his presumed authorship of the comprehensive penitential that goes under his name. Other Latin works have been attributed to him, with varying credibility: the hymn *Celebra Juda*, a commentary on Mark (see Bischoff, *Biblical Studies* 80–2), and the letter of *c.* 632 of 'Cummian' relating to the Easter controversy. There are some further indications of his involvement in native Irish law (Breatnach, *Peritia* 5.37). An elegy on the saint may be roughly contemporary with his death (Byrne, *Ériu* 31.111–22 but see Mac Eoin, *Ériu* 28.17–31). His associations are generally with west Munster (Mumu), and he is traditionally of the royal line of the Éoganachta Locha Léin (see éoganacht). His literary persona is quite the contrary: whilst displaying wisdom, sometimes unwittingly, he is depicted in various ways as a foolish saint, a fit companion for the holy fool Comgán mac Dá Cherda. In some tales he is seen as a wandering, shiftless cleric, in others as a cruel and capricious confessor. The ultimate development of this quixotic persona is his transformation into the wise and witty swineherd Marbán, brother to king Guaire Aidne in the later medieval tale *Tromdámh Guaire* (Ó Coileáin, *Ériu* 28.54).

Thomas Owen Clancy

Cunedda (Wledig) fab Edern/Cunedag was, according to early Welsh sources, a chieftain from north Britain who, in the 5th century, migrated to what is now Wales (Cymru) and expelled the Irish who had settled in parts of Gwynedd, Dyfed, Cydweli, and Gŵyr (Gower). He figures also in this tradition as the father of seven sons who gave their names to territories in north and west Wales and as the progenitor of the first dynasty of Gwynedd, which continued in power until Merfyn Frych ap Gwriad (Old Welsh Mermin map Guriat) came to power in 825. Historia Brittonum §14, as part of an account of the origins of the Gaels, relates:

> The Maic Liethain (i.e. the Munster Uí Liatháin) were in possession of Dyfed and other regions, that is Gŵyr and Cydweli, until they were driven out by Cunedda and his sons from all the regions of Britain.

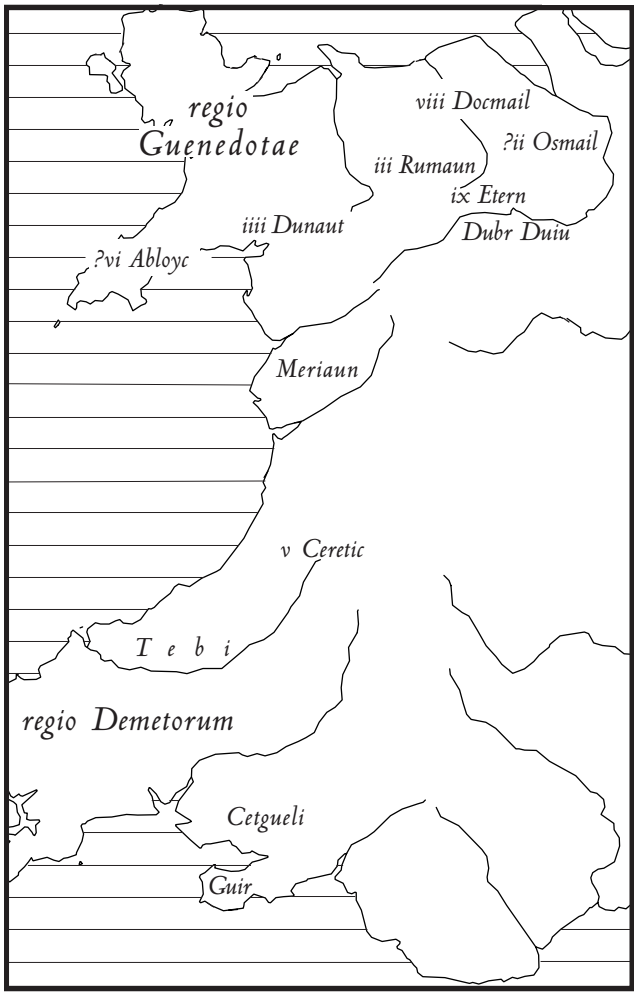
In *Historia Brittonum* §62, part of the 'Northern History', we are told:

> Maelgwn (Mailcunus) the great king was reigning amongst the Britons, that is in the realm of Gwynedd, for his ancestor, i.e. Cunedda (archaic Old Welsh Cuneda), with his sons, whose number was eight, had come from the northern region, from the country called Manau Guotodin (see Gododdin), 146 years before Maelgwn reigned, and they expelled the Irish from these regions with enormous slaughter, so that they never returned to inhabit them.

The Old Welsh genealogies in London, BL Harley MS 3859 supply the following information:

> These are the names of the sons of Cunedda whose number was nine: Tybion (Old Welsh Tipi[p]iaun) the first born who died in the region that is called Manaw Gododdin and did not come with his father and his aforementioned brothers. Meirion (Meriaun) his brother divided the possessions with his brothers: ii. Osfael (Osmail), iii. Rhufon (Rumaun), iiii. Dunawd (Dunaut), v. Ceretic, vi. Abloyc, vii. Einion Yrth (Enniaun Girt), viii. Dogfael (Docmail), ix. Etern (Edern). These are their boundaries: from the river called the Dee (Dubr Duiu) to another called the Teifi (Tebi). And they held many regions on Britain's west coast.

The legend of lands founded by Cunedda and his sons



Some scholars (such as Nora K. Chadwick, *Celtic Britain* 66–8; Wendy Davies, *Wales in the Early Middle Ages* 89; Thomas, *Celtic Britain* 118) have preferred to view the story of Cunedda as essentially an origin legend rather than history. Conversely, Miller (BBCS 27.515–32) and Gruffydd (SC 24/25.1–14) have argued for a core of veracity in the story (cf. Alcock, *Economy, Society and Warfare* 92f.). The Irish settlements in late Roman to post-Roman Wales are essentially factual, as shown by ogam inscriptions in Wales, place-name evidence (such as the derivation of the name of the Llŷn peninsula from Primitive Irish **Legenī*, i.e. Laigin 'Leinstermen'), and doctrines of Irish dynastic orgins for Dyfed and Brycheiniog. As to the district names, the pattern of derivation plainly shows names of territories deriving from those of men, four of whom

bore Roman names in the manner characteristic of sub-Roman/Brythonic rulers of the 5th century: (1) *Meirion(n)ydd* 'land of Mariānus', (2) *Osfeiliawn* 'land of Osfael', (3) *Rhufoniawg* < **Rōmāṇiācon* 'estate of Rōmānus', (4) *Dunoding* 'progeny of Dōnātus', (5) CEREDIGION 'lands of CERETIC', (6) *Afloegiawn* 'lands of Afloeg' (a personal name possibly signifying an 'ex-layman' who retired to the church), (8) *Dogfeiling* 'progeny of Dogfael', (9) *Edeirniawn* 'lands of Aeternus'.

Taking the 146-year interval of *Historia Brittonum* §62 literally, this gives a date of AD 401 going back from Maelgwn's 547 obit in ANNALES CAMBRIAE, somewhat earlier if the beginning or middle of his reign was meant. However, counting generations in Gwynedd's genealogy, 146 years is rather long—though not impossible—between great-grandfather and great-grandson, therefore a heyday later in the 5th century is another possibility.

Another strand of evidence is the archaic Welsh elegy known as MARWNAD CUNEDDA (Death-song of Cunedda) in LLYFR TALIESIN. This poem is consistent with the Latin sources above in the hero's name (which repeatedly scans as early Brythonic *Cunedag*), his father's name, *Edern* < Latin *Aeternus*, and localization in 5th-century north Britain. However, the sons, the migration to Wales, and the war with the Irish do not figure at all in the elegy, raising the possibility that the foundation legend was possibly manufactured by Gwynedd propagandists, who wanted a famous northern ancestor, perhaps because CADWALLON was seeking to enforce claims on Northumbria in the period 632–5. However, it is also possible that the migration and Irish war did take place and the sons founded their kingdoms, but that these events were of insufficient interest and importance for the north British poet who produced *Marwnad Cunedda*.

To sum up, it seems likely that Cunedda was an early post-Roman north British leader and a focus of early literary activity. It is also likely that men with Latin and Brythonic names listed as his sons did found small kingdoms in north and west Wales in the early post-Roman period and that these displaced Irish lordships. An appropriate historical context for both circumstances can be seen as a struggle for control of the Irish Sea zone in the vacuum created by the withdrawal of Roman forces from SEGONTIUM and other bases in west Britain. Nonetheless, the poem *Marwnad Cunedda* leaves room to doubt whether Cunedda ever fought the Irish or migrated to Wales, in which case the sons need not be his real sons and the subsequent kings of Gwynedd, the Maelgyning (descendants of Maelgwn), may not, in fact, be descendants of Cunedda.

As a central figure within the scheme of Welsh royal pedigrees, Cunedda came to figure prominently also, by the 11th century and possibly earlier, in the genealogies of saints. In the TRIADS he is named as the founder of one of the three great kindreds of Welsh saints (Bromwich, TYP no. 81).

The name *Cunedag* is a Celtic compound. JACKSON argued that the preservation of the final lenited *-g* /γ/ implies that the spelling goes back to a written source of pre-*c.* 750 or probably earlier (*Celt and Saxon* 30); despite Dumville's counter-arguments (*Arthurian Literature* 6.18–19), Jackson was probably right. Several scholars have proposed that the first element is the rare Welsh poetic word *cun* 'lord', followed by an archaically retained composition vowel, thus going back to a BRITISH **Counodagos* (Jackson, *Celt and Saxon* 30), which would have to mean 'having good lords'. More probably, the first element, as in GILDAS's Cuneglasus, is the 6th- or 7th-century spelling of the extremely common name element Celtic **cuno-* 'dog' (Isaac, BBCS 38.100–1; Koch, *Gododdin of Aneirin* cxxi–cxxii). The name thus means 'having good hounds', 'hounds' being a common kenning for warriors. *Marwnad Cunedda* says of his war-band, 'his hounds (*cŵn*) will keep vigil at his frontier'; therefore, this is how the poet understood the name. We also seem to have the 9th-century Old Welsh spelling of the same name in the 'SUREXIT' MEMORANDUM as *Cinda*. The spelling *Cunedda*, though unhistorical, is by now well established.

The title *gwledig* 'sovereign' is commonly applied to Cunedda in the genealogies compiled in the Middle Welsh period, but it is not found in sources predating *c.* 1100. Thus, we may doubt that this was Cunedda's title and rank in the 5th century or that Gwynedd's first dynasty claimed it to be so.

Cunobelinos (r. *c.* AD 10–*c.* 42) was, according to surviving evidence, the most powerful king in BRITAIN to rule in the final century of independence between CAESAR's expeditions of 55 and 54 BC and the invasion of the Emperor Claudius in AD 43. His career may be traced through both Roman notices and the sequence of his massive and varied issues of COINAGE, minted at both CAMULODŪNON and VERULAMION, as well as the issues of other members of his own dynasty and their rivals. On several of his coins Cunobelinos is said to be the son of Tasciovanos (r. *c.* 15 BC–*c.* AD 10). Some writers have lately written sceptically of this statement, believing it to be a political claim to succession rather than a genealogical fact. However, in the Old Welsh GENEALOGIES, he is *Cinbelin map Teuhant*, and this must be taken as independent confirmation since Tasciovanos is unknown apart from Iron Age coin legends and Old Welsh *Teuhant* could only have developed from British *Tasciovanos* by continuous oral tradition; in other words, he could not have been taken into Welsh tradition from some (now lost) Roman history.

The power of Cunobelinos sufficiently impressed the Romans for Suetonius (*Caligula* §44) to refer to him as *Britannorum rex* (king of the BRITONS). The distribution of his coinage clearly implies a status as the most powerful of the pre-Roman rulers, but Suetonius's assessment is too sweeping. The core area of the coins are the tribal lands of the CATUVELLAUNI and the TRINOVANTES north of the lower Thames. These two old rivals had apparently merged as a single state. From the beginning of his reign his coins appear heavily south of the Thames in Kent, where issues of the Atrebates had previously predominated. To the north, his influence may be traced in a scatter of his coins in the territory of the ICENI, but their own silver sequence continued, including legends which are probably abbreviated names of their independent rulers (**ANTED**, **AESU**, **SAENU**) as well as their tribal name, **ECEN** (Iceni). Further to the margins, the coins of the Corieltauvi in the north and the Durotriges and Dobunni in the west indicate continued independence.

The end of Cunobelinos' reign heralded a period of instability and increased Roman diplomatic and military involvement. In AD 39/40 his son Adminios (or Amminios) fell out with Cunobelinos and sought refuge with the Emperor Gaius (Caligula), who made preparations to invade Britain, but the troops assembled at the Channel grew restive, which led to the famous incident in which the erratic emperor ordered them to collect sea shells. About this time, a chieftain called Epaticcos son of Tasciovanos (thus apparently Cunobelinos's brother), minting coins derived from the issues of Cunobelinos, appears around the Atrebatic centre of CALLEVA, and in AD 42 Virica, king of the Atrebates, fled to Rome, an incident which provided the immediate opportunity for the Claudian invasion. Cunobelinos was succeeded by two further sons, Togodumnos and CARATĀCOS, who fought the Roman invaders in the coming years, the latter being the longer lived and more famous.

The name *Cunobelinos* is Celtic and means 'hound of the god BELENOS'. It was a fairly popular name in early Wales (CYMRU); the Old Welsh spellings *Conbelin*, *Cinbelin*, and *Conuelin* occur. In the HISTORIA REGUM BRITANNIAE of GEOFFREY OF MONMOUTH, Kimbelinus son of Tenvantius (derived from Old Welsh *Cinbelin map Te(u)huant*) figures accurately as one of the last kings of Britain before the Claudian invasion. In BRUT Y BRENHINEDD he is Kynuelyn uab Teneuan. Geoffrey's Kimbelinus is the ultimate source of Shakespeare's *Cymbeline*.

JTK

Cunomor/Conomor (*fl. c.* 550–*c.* 560) was a historical figure who ruled parts of Cornwall (KERNOW) and Brittany (BREIZH) at the period of the BRETON MIGRATIONS. His name is attested in early sources on both sides of the English Channel. It is derived from the BRITISH **Cunomāros* 'having great hounds', **cunes* 'hounds' being a common Celtic kenning for 'warriors' (cf. CUNEDDA).

Cunomor is mentioned in the contemporary *Historia Francorum* (History of the Franks; 4.4) by Gregory of Tours as Chonomor, where he is described as 'another count (*comes*) of that region', i.e. of Brittany. As Gregory explains, he hid the Breton chief Macliav from his enemies, concealing him in a tumulus with an air hole and saying that he was dead and buried under the mound. Macliav was the father of Waroch (*Historia Francorum* 5.19), the ruler also known as UUEROC, later Erec, the eponymous founder of the powerful Dark Age kingdom of Bro-Uueroc in south-east Brittany and, in later tradition, the enemy of Cunomor. Cunomor is mentioned in the 9th-century Breton Latin Life of St PAUL AURELIAN, written by Uurmonoc in 884. Uurmonoc describes a British king Marcus, also called Quonomorius. Cunomor is also mentioned in several other early saints' lives, including those of GILDAS and SAMSON.

In Cornwall, a stone from Castle Dore, near Fowey, bears what is probably a 6th-century inscription, reading:

[D]RVSTA
NVSHICIACIT
CVNO[M]ORIFILIVS,

'Here lies Drustan, Cunomorus' son'. If the reading *Drustanus* is correct and Uurmonoc's identification of Cunomor and Mark sound, the stone could be independent confirmation of historical figures known in the later Arthurian legend, Tristan (see TRISTAN AND ISOLT) and king Mark. *Cunomāros* gives the common early Welsh man's name Cynfawr, and the Welsh TRIADS contain a reference to a Kynvawr Catguduc; another genealogy refers to Gereint mab Erbin mab (*recte* grandson of) Kynvawr mab Tudwawl. (For the relationship between GERAINT and Erec/Gueroc, see TAIR RHAMANT; CHRÉTIEN DE TROYES.)

Over time in Brittany, the historical figure of Cunomor degenerated into the literary trope of a wicked king, cf. the rôle of King ARTHUR in the Life of Saint CADOC. Albert LE GRAND mentioned him in his 17th-century French-language *Vies des saints de la Bretagne armorique*, which had a strong influence on subsequent literary and oral tradition. In the Life of St Gildas, he describes Cunomor as '*Comte de Cornoüaille, un meschant et vicieux Seigneur, nommé Comorre*' (Count of KERNEV, a wicked and vicious lord, named Comorre). Comorre abducted and murdered Triphine, the daughter of Gueroc, the count of Vannes. Triphine was later brought back to life by Saint Gildas. Le Grand's story was adapted in the BRETON-language *Buez ar zent* (Lives of the saints). There, the story is told in the Life of Triphine and Comorre's son, Treveur (in the text, the names are spelled *Konomor*, *Trifina*, and *Tremeur*). Triphine was killed while she was pregnant, and Treveur was born after she was restored to life; Comorre was excommunicated and driven to the Menez Bre hills. In the 19th century Émile Souvestre collected a folk-tale in which Le Grand's story is mixed with elements of the Bluebeard tale (Aarne-Thompson type 312). In this version, the giant Comorre, king of Cornwall, has already slain four wives, fearing the outcome of a prophecy that he would be killed by his first-born son. While Comorre is away, Triphine discovers the tombs of the murdered women, and escapes with the help of the dead wives' four murder weapons. Comorre catches and beheads her, but Gildas brings her to life. Triphine gives birth to a son who is born able to speak. He asks for justice, whereupon Comorre's castle collapses upon him and kills him.

Curetán/Curitan (**Boniface**) was the bishop of Rosemarkie (*Ros Maircnidh*), near Fortrose on the Black Isle in the Moray Firth, Ross-shire, *c.* 690–710.

He was one of the witnesses at the Synod of Birr (a monastic town in Co. Offaly, Ireland) in 697, which proclaimed the Old Irish *Lex Innocentium* (Law of the innocents) also known as CÁIN ADOMNÁIN ('ADOMNÁN's Law'). This law held that women, children, and clerics should not participate in war as combatants or prisoners. Though Curetán's see was amongst the northern PICTS, his *Vita* (Life), in which he is called *Albanus Kiritinus Bonifacius*, says he was of Hebrew origin. According to his *Vita*, he was a contemporary of NECHTON SON OF DERELEI, king of the Picts (703–24), whom he is said to have baptized. An actual eastern connection for Curetán's cult might explain similarities in the iconography of the PICTISH Class II monuments at Nigg and Hilton of Cadboll (both near Rosemarkie) to that of Byzantine Christian art. Another possibility is that the tradition of Curetán's eastern background arose in the context of the EASTER CONTROVERSY, in which King Nechton had played an important part in bringing Pictland to Roman practice. The adherents of the Roman Easter attached special authority to the calendar doctrines of the Romans, Greeks, Egyptians, and Hebrews; a Dark Age Celtic churchman might thus be a 'Hebrew' by conviction. Curetán's name probably contains the Common Celtic diminutive suffix *-agnos*, Old Irish *-án*. The alternative *Boniface* is Latin.

St Boniface's day is the 16th of March, the date of the St Boniface Fair in Fortrose.

Curling players in Perth

Curling is a game played on ice and traditionally associated with Scotland (ALBA), but whose place and date of origin are uncertain. Visual evidence of games on ice appear in the 16th-century paintings of Pieter Breughel the Elder in Holland, and the terminology surrounding the game derives from the Continent. However, there can be no doubt that the game was nurtured, regulated and popularized in Lowland Scotland (see LOWLANDS) in the 19th century, and then exported to other countries. The game involves sliding stones over a sheet of ice towards a target or 'house', the object being to lay the stone as close to the centre as possible. With four players constituting a team, the stone is swept by two players directed by a 'skip', and the distinctive sound as it travels over the ice gives curling its nickname, 'the roaring game'. The Royal Caledonian Curling Club, founded as the 'Grand' Club in 1838, established itself as the ruling body, updating local rules and organizing national competitions. Outdoor curling, a feature of rural life in Scotland until the early 20th century, has been superseded by the modern indoor game on purpose-built rinks and is recognized as a major sport in many northern European countries and in North America.

Cusantín mac Aeda (**Constantine II**), king of ALBA (900–43; †952), was the grandson of CINAED MAC AILPÍN. It is under Cusantín that the kingdom of the PICTS became the kingdom of Alba in contemporary annalistic records (see ANNALS). He inherited the beleaguered position of his predecessor and cousin DOMNALL MAC CUSANTÍN, during whose reign 'the Norse devastated Pictland'. In Cusantín's third year the Norse attacks began with raids on the royal city of Dunkeld (Dùn Chailleann) 'and all Alba', but in the following year he achieved a victory over them in

Strathearn. The year 906 saw the swearing of a compact, on the moot-hill at the royal monastery of Scone (Caiseal Creidhi), between Cusantín and his bishop, Cellach. The tone of this compact, as recorded in the CHRONICLE OF THE KINGS OF ALBA, is both self-consciously GAELIC, in keeping with the new Gaelic name of the Pictish kingdom, and redolent of the ideals of Christian kingship. In both the ritual and the renaming of the kingdom, scholars have begun to see in Cusantín 'the real father of the nation' (Woolf, *In Search of Scotland* 44). Cusantín has long been known to Anglo-Saxonists as the hoary-haired king of the SCOTS whose son died at the battle of Brunanburh in 937. This battle was a product of the king's multiple alliances, particularly with the king of York and Dublin/BAILE ÁTHA CLIATH, Ólafr Guthfrithsson (934–41). It brought him into conflict with the ascendant king in BRITAIN, ÆTHELSTAN of Wessex. Cusantín retired to the monastery of Cennrígmonaid (St Andrews) around 943, where he apparently became abbot of the Céili Dé community. A strange legend, however, has him coming out of retirement to lead a raid on the English instead of his successor, MAEL COLUIM MAC DOMNAILL. Both his long reign and aspects of his ecclesiastically-charged affairs speak of a lasting influence on the identity of the Gaelic kingdom of Alba.

Thomas Owen Clancy

Cusantín mac Cinaeda (**Constantine I of Scotland**), king of the PICTS (862–*c.* 876), was the son of CINAED MAC AILPÍN and the first of his generation to rule, succeeding his uncle, DOMNALL MAC AILPÍN. Cusantín's reign, like those of his contemporaries around Britain and Europe, saw a new vigour and purpose among Norse warlords, and east-central Scotland was battered several times during his reign, with Ólafr and his army encamped in the heart of Pictland at one stage for three years. Cusantín seems to have slain Ólafr in 872 while the Norse king was collecting tribute from Pictland, no doubt continuing on from his sacking of Dumbarton Rock (Al Clut) and the subsequent ravaging of central Scotland. At this time Cusantín connived in the death of Arthgal map Dumnagual, king of the BRITONS of YSTRAD CLUD, for reasons that we do not understand (Annals of Ulster 872). Attacks were renewed under Halfdan, and the battle of Dollar saw Cusantín defeated and the Norse once more occupying Pictland. There is some doubt about the date of Cusantín's death, whether it was 876 (Annals of Ulster 876) or 877 (see Duncan, *Kingship of the Scots 842–1292* 11); according to one king-list, he died in Inverdovat, in Fife. His death appears to have unravelled the dynastic kingship for a time: his brother, Aed, was killed by allies after only a year, and Ciricius (Giric I), along with his foster-father EOCHAID SON OF RHUN, another grandson of Cinaed, seized the kingship for a decade, in a poorly understood interregnum. When contemporary ANNALS resume service for eastern Scotland upon the death in 900 of DOMNALL MAC CUSANTÍN, Cusantín's son, the kingdom he ruled was called ALBA (Annals of Ulster 900). With some justification, then, Cusantín and his brother Aed, although Gaels, may be seen as 'the last kings of the Picts' (Broun, *Oxford Companion to Scottish History* 106).

Thomas Owen Clancy

Cusantín mac Cuilén (**Constantine III**) was king of ALBA for a bare year and a half (995–7). Slain by his kinsmen and competitors, Cusantín was the last king of Alba from the dynastic segment descended from Aed mac Cinaeda mac Ailpín. His

death seems to have enabled a new family, the Clann Ruaidrí from whom Mac Bethad mac Findlaích was descended, to make claims to the kingship. His short reign helps to fix the date of a series of genealogies appended to Senchus Fer n-Alban as his genealogy, which takes his ancestry back to Cinaed mac Ailpín, and links this to the genealogies of the Cenél nGabráin (descendants of Aedán mac Gabráin). The decades of dynastic competition that preceded his reign may have given some urgency to the compilation of such genealogies.

Custantin son of Uurguist (**Cusantín mac Forgusa**) was king of the Picts *c.* 789–820. His reign has been championed in recent years as marking the zenith of Pictish power, a status partly owing to the recently discovered presence of his name (CUSTANTIN FILIUS FIRCUS) in an inscription on the magnificent and emblematic Dupplin cross (Forsyth, *From the Isles of the North* 237–44), from near the royal palace of Forteviot (Fothuir-tobaicht) in Strathearn. Until recently he was thought to have been of Gaelic descent, but this has been subject to reanalysis (Broun, *St Andrews Sarcophagus* 71–83). His family now emerges as a powerful and influential Pictish dynasty, perhaps related to kings earlier in the 8th century, whose lock on the kingship was only broken in the disastrous battle against the Norse in 839. Custantin's son, Domnall, would appear to have intruded into the kingship of Dál Riata for a time. It has also been argued (Clancy, *Scotland in Dark-Age Britain* 111–30) that Custantin was a patron of church reform. His connection with a Saint Constantine, found in contemporary Irish martyrologies, is uncertain (Dumville, *Scottish Gaelic Studies* 19.234–40), although one scribe plainly thought that it was the same person. His brother (Unuist), his son, and then his nephew succeeded him.

Cŵn Annwn (the hounds of Annwn) is the Welsh name for the supernatural dogs documented in the folklore of all the Celtic countries. Spectral hounds fall into several categories: those identified primarily by sound are associated with the Wild Hunt, pursuing the souls of the dead across the sky. The sound of these hounds of hell has been identified with the call of the curlew or wild goose. Hearing or seeing them was an omen of ill luck or of death. The terrestrial hound was usually either a 'Barguest', a shape-changer that preferred a canine shape, or a 'black dog', usually pictured as a mastiff similar to a Newfoundland, but as large as a calf. The Scottish *cù sìth* (fairy hound) is dark green, the colour of the fairies, and the hounds of Arawn in Pwyll, if they are correctly identified as a type of 'black dog', were shining white with red ears, also otherworldly colours. The animals are sometimes headless or fire breathing. Although not exhaustively catalogued, they are associated with treasure in Ireland (Éire) and Brittany (Breizh), with standing stones in Wales (Cymru) and Cornwall (Kernow), and with other landmarks, such as the Moddey Dhoo (Black dog) of Peel Castle in Man (Ellan Vannin). They can function like the banshee (bean sí) in Cornish and Scottish tradition. They can also presage storms, as in Brittany, or mark the spot where a disaster occurred, as in Wheal Vor in Cornwall. Traditions vary as to whether black dogs are actively harmful, merely an omen of death, or benign. Other names for them are 'yell hounds' (Cornwall), *cŵn wybr* (sky hounds, Wales), *paotred* (boys or guys, Brittany). There is also a reference to *cŵn y nos* (dogs of the night) in the poetry of Dafydd ap Gwilym.

Cydymdeithas Amlyn ac Amig (The companionship of Amlyn and Amig) was a very popular tale throughout Europe in the Middle Ages. The Welsh version is contained in Oxford MS Jesus III (LLYFR COCH HERGEST 'The Red Book of Hergest'). There is also a copy of the 'Llyfr Coch' version in MS Llansteffan 148 or Shireburn D 3 in the hand of David Parry, *c.* 1697. The main theme of the story, which is common to all versions in various languages, is the remarkable friendship of two young men who are born on the same day and are so similar in appearance that it is difficult to distinguish one from the other. Their loyalty to each other forces them to make appalling choices, which cause them to deceive their feudal overlord, cheat in armed combat, kill a fellow courtier and commit the heinous crime of sacrificing two innocent children, so that one may be healed of his leprosy by being washed in their blood. In some versions of the tale they achieve martyrdom by fighting in a holy war.

The various texts of the Amlyn and Amig story are traditionally divided into two groups: the romantic and hagiographic, a distinction which is not entirely accurate, since there are Christian overtones in the so-called romance versions and residual pagan elements in the hagiographic. The oldest extant version is a Latin poem in hexameter verse composed *c.* 1090 by Radulphus Tortarius, a monk of Fleury, although the evidence of the opening lines suggests that the poet was versifying an international popular tale: *Historiam Gallus, breviter quam replico, novit, / Novit in extremo litore Saxo situs*, 'The Gaul knows the tale, which I am briefly telling, the Saxon in his remote shore knows it'. The immediate source of the hagiographic group is the 12th-century Latin prose tale *Vita Sanctorum Amici et Amelii carissimorum* (Kölbing, *Amis and Amiloun* xcvii–cx), but the more distant origins are rooted in folklore. Some of the hagiographic versions, including the Welsh, have an epilogue in which the two friends are killed in action, fighting on the side of Charlemagne against the king of Lombardy, who was in conflict with the Pope. They are buried in two separate churches in Mortara in northern Italy, but the following morning, the bodies are found lying side by side in the same tomb. It is thought that there was a tomb in the Church of St Albin in Mortara bearing the name *Aemelius*. This was then associated with the well-known tale of a man who was cured of his leprosy by being washed in the blood of his companion's children. The inscription *et Amicus*, 'and his friend', was added to the tomb, and Christianized elements were introduced into the original pagan tale, which was then used to entertain pilgrims and to advertise Mortara as a desirable stopping place on the way to Rome (Bédier, *Les légendes épiques* 181). The Welsh version is unique in using the order *Aemelius et Amicus* (*Amlyn ac Amic*). The language and orthography suggest an early 14th-century date for the Welsh text; nevertheless, variations of style, syntax and orthography imply that the epilogue was composed by a different author from that of the main body of narrative. A Welsh analogue of the story is the 16th-century *Ystori Alexander a Lodwig* (Thomas Jones & Williams, SC 10/11.261–304). It also inspired Saunders LEWIS to write his verse-play *Amlyn ac Amig* (1940), in which the premise that salvation may depend on committing a seemingly irrational and abhorrent act found a powerful expression.

Cyfarwydd is a Welsh term connected etymologically with 'knowledge', 'guidance', 'perception', as, for example, in Welsh *gwybod* < *gwydd-+bod* 'to know' and Old Irish *ro·fitir* 'knows', both from the PROTO-CELTIC root *wēd-/wid-* 'know, see' (cf. also DRUIDS; FEDELM). In the first attestation of the word in Old Welsh, its plural means specifically 'guides' with reference to traditional boundaries of a piece of land in a charter in the LICHFIELD GOSPELS: *imal-i tiduch cimarguithieit* 'as *cyfarwyddiaid* may lead you'. The *cyfarwydd* was therefore the 'guide', the 'well-informed person', the 'expert', and later the 'storyteller'. His relationship with

the medieval poet is unclear. *Cyfarwyddyd*, meaning 'tale' or 'narrative', reflects the later semantic development of a noun which originally meant 'traditional lore' or 'traditional learning'. Two much-quoted sources suggest that poets would narrate *cyfarwyddyd* at court, and the term *cyfarwydd* (storyteller) may well be an occasional title that primarily denotes a function rather than a social or professional class. The storyteller is not listed among the 24 officers of the king's court in medieval Welsh LAW TEXTS, although the functions and status of the poet are described. Moreover, Welsh bardic TRIADS affirm a strong connection between poets and *cyfarwyddyd*, meaning traditional lore. We know little of the performance of the *cyfarwydd*—some sources suggest that he would narrate tales in the king's hall after a FEAST. His repertoire, together with the narrative techniques favoured by him, are reflected in the tales of the MABINOGI. According to GIRALDUS CAMBRENSIS in his DESCRIPTIO KAMBRIAE, one of the most famous storytellers of medieval Wales (CYMRU) was Bleddri.

Cyfranc Lludd a Llefelys (The adventure or encounter of Lludd and Llefelys) is a medieval Welsh prose tale (see WELSH PROSE LITERATURE) in which Lludd, king of BRITAIN, seeks the aid of his brother LLEFELYS, king of France, to rid his kingdom of three disastrous, supernatural 'oppressions' (Welsh *gormesoedd*; on the meaning of *gormes* and its etymology, see Sims-Williams, *History and Heroic Tale* 97–131). These *gormesoedd* are the race of CORANIAID, who can hear the slightest whisper and cannot, therefore, be overcome; a frightening cry every May Eve (*Calan Mai*; see CALENDAR), which makes all things and people barren; and the disappearance of prepared food and drink. Llefelys's cunning succeeds in overcoming all three. The cause of the cry is revealed as two DRAGONS fighting, and they are incarcerated in a stone chest (see DRAIG GOCH). This episode, whether separately from the *Cyfranc* or not, is obviously related to the account in the 9th-century HISTORIA BRITTONUM §42 of the discovery of the beasts by GWRTHEYRN (Vortigern). The *Cyfranc* is an independent (incomplete) narrative in LLYFR GWYN RHYDDERCH ('The White Book of Rhydderch') and LLYFR COCH HERGEST ('The Red Book of Hergest'), but it first occurs as an insertion into a 13th-century Welsh translation of HISTORIA REGUM BRITANNIAE ('History of the Kings of Britain') of GEOFFREY OF MONMOUTH, where it is introduced as part of the stock in trade of the professional storyteller, the CYFARWYDD, and it is subsequently found in all later Welsh translations of the *Historia*. The context of the tale is the LEGENDARY HISTORY of Britain, and its origin is probably an account of successive mythological invaders, reflected in Triad 36 (see TRIADS; BROMWICH). It has also been interpreted as a triad of Dumézilian functions theorized as fundamental to inherited INDO-EUROPEAN social structure—the priestly or sovereignty function, physical force or the function of the warrior, fecundity and the food-producing function (on the mythological parallels, see further LLEFELYS; NŌDONS).

Cymdeithas yr Iaith Gymraeg (The Welsh Language Society) was established as a direct action campaign group in 1962 with the objective of securing official status for WELSH on an equal footing with English in all spheres of public life in Wales (CYMRU). Its many achievements and the continuing influence of its policies in the wake of devolution (see CYNULLIAD CENEDLAETHOL CYMRU) make it one of the most

successful language pressure groups in western Europe.

The Society was formed as a result of growing concerns about the spiralling decline of Welsh speakers since the Second World War and frustration with the apathy and inaction of the authorities to address the problem, as expressed in the celebrated radio lecture, TYNGED YR IAITH, by Saunders LEWIS. Disillusioned members of Plaid Cymru (The Party of Wales; see NATIONALISM) took up Lewis's challenge of organizing a campaign of civil disobedience on behalf of the language at the party's national conference in August 1962. Within months members of the new Society were deliberately breaking the law as a means of drawing attention to the inferior public status of Welsh.

The Society's principal method of campaigning was, and remains, non-violent direct action. The 1960s, an age of worldwide protest, provided abundant inspiration for civil disobedience in Wales. This direct action included protest marches, sit-ins, non-payment of various taxes and licences, and criminal damage. During the course of its campaign for bilingual road signs, hundreds of Society supporters set upon English-only signs, either painting them green or uprooting them completely. Supporters were prosecuted for various offences and many faced fines or imprisonment.

Despite the fact that the active membership base has been relatively limited (numbering no more than a few thousand even at its zenith in the 1970s), many of the Society's campaigns have attracted widespread popular support from disenchanted friends of the language, especially within the highly respected Welsh-speaking intelligentsia. It has received its most fervent support from students, with the result that the Society's membership has traditionally been young, well educated, and middle class. However, its choice of campaign methods and its irreverent disposition have not endeared the Society to all in Wales, with the result that official and public opinion towards the Society has frequently been unfavourable.

Policies quickly evolved from matters of language equality and increased public status for Welsh to encompass a wide range of issues, including EDUCATION, broadcasting, housing and planning policy, tourism, and economic development. The Society has developed an increasingly holistic approach to its interests, pursuing bold and radical policies to safeguard Welsh as a living community language. Despite unswerving opposition and disapproval from the establishment to its demands, many of the Society's policies have gradually been accepted as valuable contributions to the language debate. The Society has also been credited with wresting many concessions from successive governments of the United Kingdom in London, albeit grudgingly, including a plethora of official documents now available in Welsh; bilingual road signs; the Welsh-medium radio service (see MASS MEDIA) and the Welsh-medium television channel (see S4C); material status for Welsh in the land-use planning system; and two Welsh Language Acts (1967 and 1993) (see LANGUAGE [REVIVAL]).

Cymmrodorion, The Honourable Society of (lit. 'The society of the ancient or original inhabitants'; see below) was founded by Richard Morris (1703–79), who had settled in London (Welsh Llundain) as a jobbing clerk and accountant, aided by his home-keeping brothers, Lewis and William (see MORRISIAID MÔN). It was conceived as a patriotic and charitable association with the dedicated purpose of restoring the literary heritage of the nation. In the early years it took the form of a convivial club for gregarious exiles in the capital, with monthly meetings held in WELSH in a spirit of *undeb a brawdgarwch* (unity and fraternity). In what has been called the 'associational world' of early 18th-century London, the Society supplied the lack of any institution in or for Wales (CYMRU) that could salvage the cultural inheritance. Richard and William Morris were avid collectors of manuscripts, and their library of books was left to the Welsh School in London, where they remained until they were deposited in the British Museum in 1844.

In the second half of the 18th century the Cymmrodorion and the other London societies, the

Gwyneddigion (see EISTEDDFODAU'R GWYNEDDIGION) and the Cymreigyddion, contributed substantially to the renaissance of Welsh learning and the Romantic revival. Membership of these societies was not mutually exclusive and many prominent literati, such as Owen Jones (Owain Myfyr, 1741–1814), co-editor of *The Myvyrian Archaiology of Wales*, and the polymath William Owen Pughe (1759–1835), belonged to more than one society. The more punctilious philologists and scholars of a later generation working in the same field came to regard the antiquarian theories and effusions of Pughe and Iolo Morganwg (Edward WILLIAMS) as charlatanry, but more recently historians have evaluated their contribution more generously. They are now seen as products of their age and circumstance who had a formative influence on the preservation and development of Welsh literary culture. The London Welsh societies were at first backward looking, although at the end of the century some of them tempered this conservatism with an active sympathy with the revolutionary movement in France. The Cymmrodorion were hostile to Methodism (see CHRISTIANITY), and therefore were not sympathetic to all developments in contemporary Wales, where the growth of Nonconformity led to a distancing from the influence of the degenerate life of the capital.

Richard Morris became president for life and ruled over the Society like a patriarch. He aimed to bridge social divisions in the cause of culture, so that the literati included the gentry of Wales and those professional men who had made distinguished careers in the capital. William Vaughan (1707–75) of Corsygedol, the first chief president (*penllywydd*), was succeeded by Sir Watkin Williams Wynn (1749–89), and then by the barrister Sir Watkin Lewes (1740–1821), Member of Parliament for the City of London and Lord Mayor in 1780. However, Morris's declared ambition to recruit 'all the aristocrats of Wales among us' was not completely fulfilled. His more scholarly brother Lewis proposed that the Society should found an academy, and his ambitious plans also included the establishment of a national library for Wales (see LLYFRGELL GENEDLAETHOL CYMRU). In its first phase (1751–87), the Society did not live up to this vision and it lapsed in 1785. Its collegiality had, however, anticipated the efforts at collaborative endeavour that were later to flourish within Wales.

A new chapter opened in the history of the London Welsh societies when the chapel took over from the tavern as the favoured place of meeting. The Welsh population of London was more representative of the homeland when the Cymmrodorion revived in 1820, largely at the initiative of *Yr Hen Bersoniaid Llengar* (The old literary clerics), as the sponsoring body of the eisteddfodau organized in Wales by the Cambrian Societies. The collaboration was soon undermined by disagreements over finance and different cultural values: the clerics distrusted the Anglicizing influence of the London Welshmen and their conception of the EISTEDDFOD as an elaborate musical festival. The petition of the London Welshmen in 1829 against the proposal to discontinue the Courts of Great Sessions (a legal institution peculiar to Wales at the time) was organized by the Cymreigyddion. The petitioners did not succeed in dissuading Parliament from passing the act to abolish the courts in 1830, but the London Welsh societies helped to raise national consciousness about the identity of Wales as a distinct entity. Before being discontinued in 1843, the Cymmrodorion had an ambitious publishing programme and presented medals for poetry and prizes to pupils from Welsh grammar schools.

The Society was revived again in 1873 and has been in continuous existence ever since. Editions of historical texts and documents appeared as occasional publications in the Cymmrodorion Record Series from 1889, and the journal *Y Cymmrodor* was published regularly from 1877 to 1951. The *Bywgraffiadur* was published in 1953, followed by the English version, *The Dictionary of Welsh Biography down to 1940*, in 1959, under the joint editorship of Sir John Edward LLOYD and R. T. Jenkins, and *Atodiadau/Supplements* in Welsh and English have been printed subsequently. The *Transactions*, containing the texts of lectures delivered to the Society as well as commissioned and refereed articles, have appeared annually without interruption since 1893. The present Honorary Editor is Dr Peter R. Roberts.

In its modern phase the Society has continued to fulfil an enabling function in the promotion of Welsh causes in public affairs. Its initiatives in advancing educational reform led eventually to the founding of a university college for Wales at ABERYSTWYTH in 1872 and the passing of the Intermediate Education Act of 1889. In 1880 the National Eisteddfod Association was formed under its aegis (see EISTEDDFOD GENED-

LAETHOL CYMRU). On the bicentenary of its foundation in 1951 it received a royal charter 'for the encouragement of Literature, Science and Art as connected with Wales'. The Society continues to act as a corporate sponsor of the arts, culture, and scholarship, and it has not outlived its usefulness in this rôle despite the growth of national institutions in Wales and a capital at Cardiff (CAERDYDD). In 2001 it celebrated the 250th anniversary of its foundation in good health. By 1778 the membership totalled 228, with 136 'corresponding members' in Wales itself. For many years the members living in Wales have far outnumbered those resident in England, and yet the ambivalent reputation of élitism which the Cymmrodorion acquired in its early years as a body of the London Welsh has not been entirely lost to this day among some of their compatriots.

The word *cymrodorion* ('aborigines', singular *cymrodor*) is first attested in the 17th century. It is a compound of the word *brodorion* (singular *brodor*), which appears in the sense of 'natives' also for the first time in the modern period. Previously, *brodorion* had occurred in dialect as a plural of *brawd* 'brother'. In *cymrodorion* the compounding preposition *cyf-*, which usually means 'with', is felt as having the force of *cyn-* 'before, previous'. The double *-mm-* of *Cymmrodorion* was standard Welsh spelling before the 20th-century reforms (see further GPC, s.v. *cymrodor*).

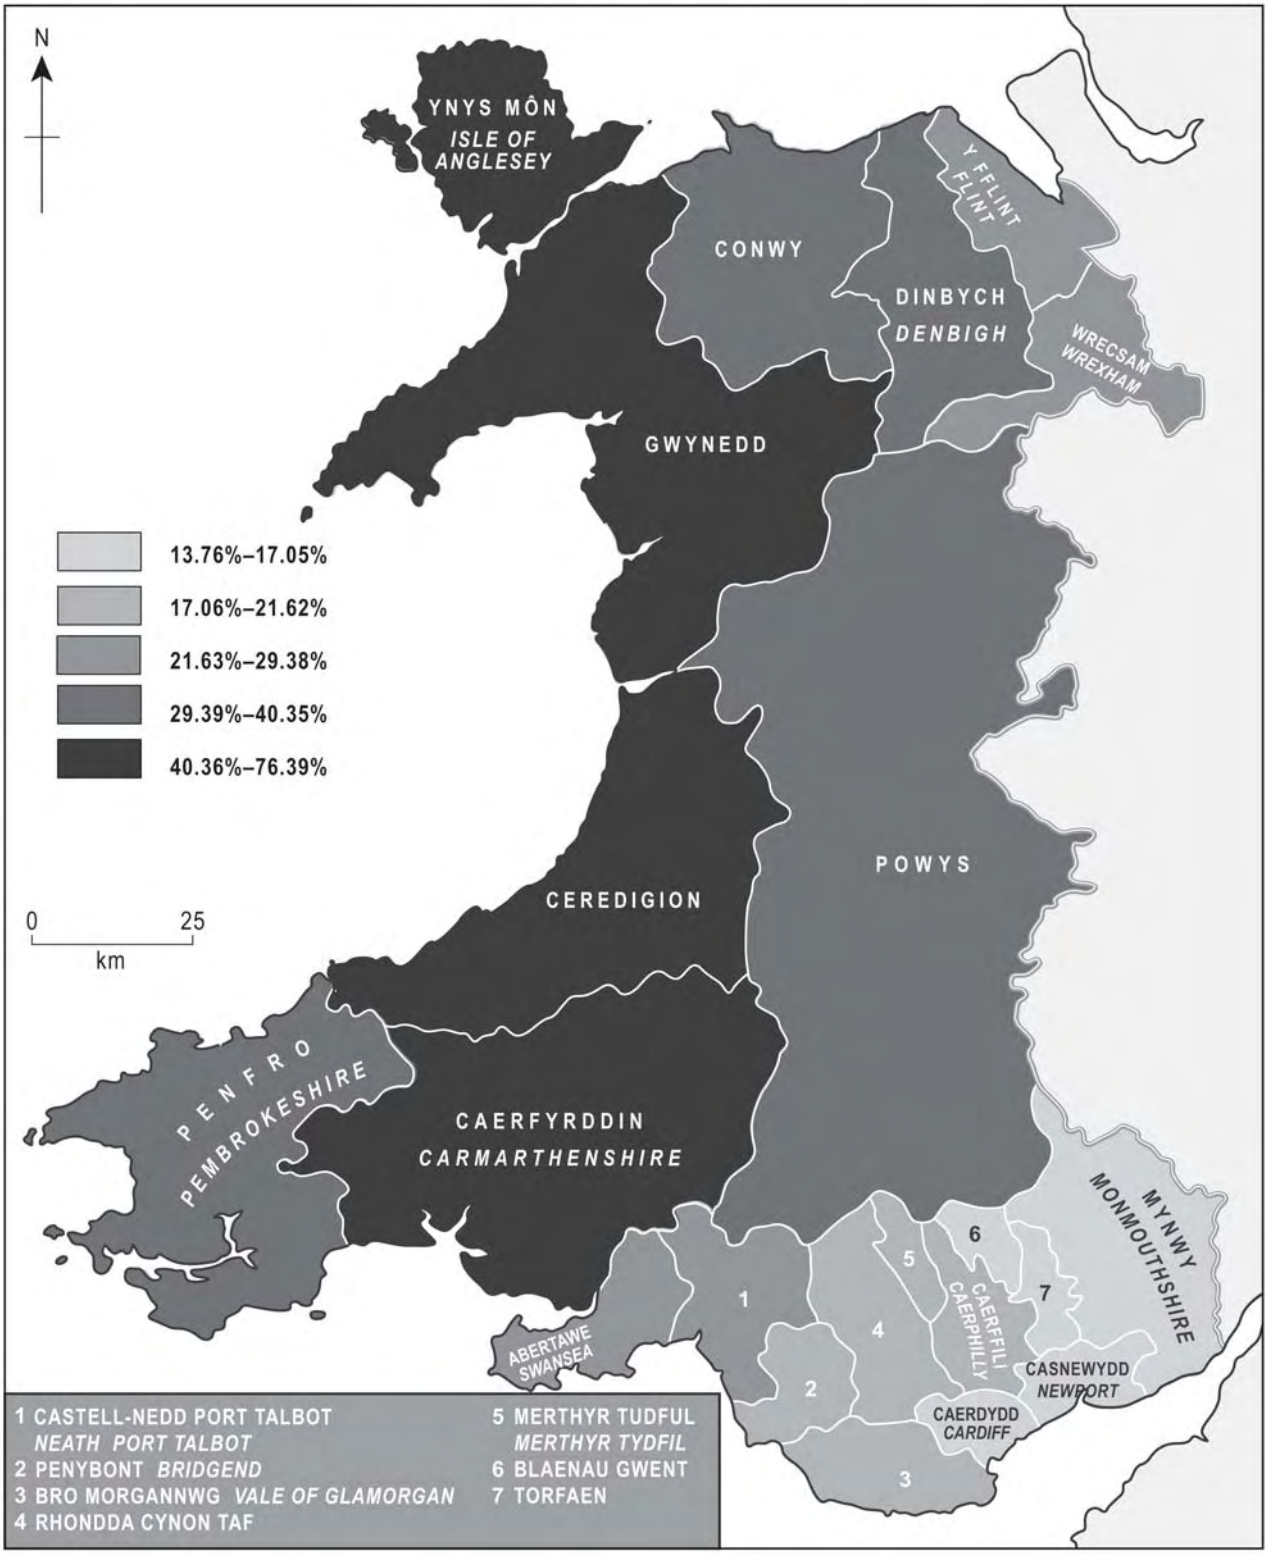
Cymru (**Wales**) is one of the six regions in which a Celtic language was spoken in modern times (see ELLAN VANNIN; KERNOW) or is spoken to this day (see ALBA; BREIZH; ÉIRE). Its eastern border with England roughly follows the 8th-century linear earthwork of Offa's Dyke (CLAWDD OFFA) from the mouth of the river Dee in the north to the Severn estuary in the south. To the north-west, west, and south the country is bounded by Liverpool Bay, the Irish Sea and the Bristol Channel. Its landmass covers 8015 square miles (20,758 km²). At the time of the latest census (2001) Wales counted 2,903,085 residents, represented in the British Parliament at Westminster by 40 Members of Parliament. The thirteen historic counties of Wales have twice been reorganized (in 1974 and 1996), and Wales is now subdivided into twelve counties and ten county boroughs, with its capital in Cardiff (CAERDYDD). With the establishment of the National Assembly for Wales (CYNULLIAD CENEDLAETHOL CYMRU) in 1999, Wales has gained a level of devolved political status within the United Kingdom (see NATIONALISM; SCOTTISH PARLIAMENT).

§1. WALES AND THE WELSH LANGUAGE

Due to its early incorporation into the English state and the resulting absence of national institutions, the native Celtic language assumed prime importance as the main national symbol in the 19th century. WELSH (Cymraeg) was spoken by 575,604 people (20.5% of the population) at the 2001 census, an increase of nearly 2% from the 508,098 speakers counted in 1991. Although this increase may partly be due to a rise in status, which made it desirable to claim knowledge of the language, it is still of huge symbolic importance since it represents the first increase in the total number of speakers for over a hundred years. The highest percentage of Welsh speakers within the population is found in the areas of the Welsh heartland (*Y Fro Gymraeg*) in the west and north of the country, but the highest numbers of speakers per square mile are found in the urban conurbations of south and north-east Wales. Unlike the other Celtic languages (with the exception, perhaps, of BRETON), Welsh has succeeded in developing an urban base: it boasts a lively rock and pop scene and a film and television industry unmatched by most of the lesser-used languages of Europe (see WELSH MUSIC; S4C; MASS MEDIA). Its literary scene is vibrant (see WELSH POETRY; WELSH PROSE LITERATURE). The main national festival, EISTEDDFOD GENEDLAETHOL CYMRU, held during the first week of August, attracts up to 200,000 people annually.

§2. EARLY HISTORY

Though there can be no absolute certainty about the distribution of languages in prehistoric times, it is



Contemporary Cymru/Wales: post-1996 counties and the Welsh language in the 2001 census. Percentages signify population over the age of 3 with one or more of the following skills: understanding spoken Welsh, speaking Welsh, reading Welsh, writing Welsh.

likely that Celtic-speaking groups were established in the area which was to become Wales as early as the Late Bronze Age (see LLYN FAWR). They entered history with the Roman conquest of parts of BRITAIN beginning in AD 43 and TACITUS's graphic description of the resistance which the Romans encountered. Within a a few years, the Romans were fighting in what is now Wales, facing the resistance spearheaded by CARATĀCOS (see also BOUDĪCA; CASSIVELLAUNOS; CUNOBELINOS; DRUIDS; MÔN). By the end of the 1st century, the tribes of Wales—the Deceangli, Demetae (see DYFED), ORDOVICES, and Silures—had been pacified, and Roman control was established within a quadrangle of major forts at Deva (see CAER) in the north-east, SEGONTIUM in the north-west, Moridūnum (see CAERFYRDDIN) in the south-west and Isca (CAERLLION) in the south-east. The period following the collapse of Roman power in Britain in AD 409/10 was marked by the rise of regional kingdoms (see ABERFFRAW; CERETIC; CUNEDDA; DEHEUBARTH; GWYNEDD; MATHRAFAL; POWYS) and the (re-)establishment of Christianity during the 'Age of Saints' in the 5th and 6th centuries (see HAGIOGRAPHY and saints' names). However, only a few rulers succeeded in uniting the country under a common overlord (cf. GRUFFUDD AP CYNAN; RHODRI MAWR), though there was a common legal and administrative system (see CANTREF; HYWEL DDA; LAW TEXTS). In the century following the Norman Conquest of England from 1066, Norman lordships penetrated most of south and west Wales; these areas and the parts of England nearest Wales became known as *Marcia Wallie* (the March of Wales). The last surviving Welsh kingdom, consisting of Gwynedd, Powys, and Deheubarth and recognized by Henry III in 1267, was bloodily subdued by Edward I in 1282, and LLYWELYN AP GRUFFUDD, the last 'Prince of Wales', was killed. Edward settled the question of Wales with the Statute of RHUDDLAN (1284) and an extensive programme of castle building. In 1301 he declared his first-born son, Edward II, Prince of Wales. Henceforth, the English king's first-born has assumed this title. A final nationwide rebellion against English rule (1400–15), mounted by OWAIN GLYNDŴR, proved unsuccessful. The ACTS OF UNION (1536–43) of Henry VIII made Wales an integral part of the emerging English central state, conferring upon Welshmen the same political rights as their English neighbours and evening out the patchwork of native and Anglo-Norman administrative and legal practices that had arisen in post-conquest Wales. But Union was achieved with disregard of Welsh cultural identity, particularly in the linguistic sphere, declaring English the official language at a time when the BARDIC ORDER was in decline and the Welsh language in danger of disintegrating into a spectrum of dialects. It is thanks to the BIBLE translations that a new literary standard was created. From the mid-16th century, Welsh was the language of religion within the established Church and from the 17th century also the emerging Dissenting chapels (see CHRISTIANITY). Unlike Catholicism, they stressed the importance of individual study of the scripture, with the result that a much higher literacy rate existed within the population of Wales than was usual in late 18th-century Europe (see CIRCULATING SCHOOLS; HYMNS).

§3. INDUSTRIAL AND POST-INDUSTRIAL WALES

From *c.* 1770 onwards Wales experienced unparalleled demographic and industrial changes. Large numbers migrated from the rural areas into the coalfields of the south and north-east, taking their language and traditions with them to create vibrant urban, Welsh-speaking communities. A golden age of Welsh publishing ensued. However, from the 1880s, immigrants from England by far outnumbered those from Wales itself. Coupled with a hostile state EDUCATION system from 1870, the linguistic Anglicization of the industrial areas was speedy (see LANGUAGE [REVIVAL]). Welsh was increasingly seen as the language of rural life, confined to the western and northern areas and a marker of low social status. But the 19th century also saw the rise of NATIONALISM (see also CYMRU FYDD; ELLIS) and national institutions such as EISTEDDFOD GENEDLAETHOL CYMRU and GORSEDD BEIRDD YNYS PRYDAIN, as well as the emergence of political giants such as David LLOYD GEORGE. By the beginning of the 20th century a national library and museum had been founded (see AMGUEDDFEYDD; LLYFRGELL GENEDLAETHOL CYMRU). The south Wales valleys developed a strong tradition of political radicalism which still holds true.

Following the First World War, the Welsh economy all but collapsed with the decreasing demand for the coal and iron on whose export it had been so highly dependent. High unemployment well into the 1930s meant high rates of EMIGRATION, especially from the

industrialized areas. Rural areas, though traditionally among the poorest in the United Kingdom, benefited from government subsidies. The Welsh economy only partly recovered after the Second World War, concentrating on low-skill high-technology jobs in the former coal and iron areas. The country still has a larger than average proportion of the population employed in agriculture, with sheep and cattle rearing dominant. Large stretches of mountain lands have been given over to timber production. Rural and coastal areas of Wales increasingly exploit their beauty and Celtic connections in order to promote tourism.

MBL

§4. THE NAME

Cymru 'Wales' is a modern respelling of *Cymry* 'Welsh people', plural of *Cymro* 'Welshman'. Middle Welsh *Kym(m)ry* had regularly meant both the people and the country. Etymologically, *Cymry* means people of the same *bro*, the latter signifying a compact home region; in BRETON, on much the same scale, *bro* means diocese. In an older Celtic sense, it is **kom-* + *mrugi-* 'persons within common borders'; cf. Old Irish *mruig* 'border'. The term *Cymry* first surfaces in MOLIANT CADWALLON, a poem set about 632/4 and addressed to the king of GWYNEDD. From this time onwards, the name *Cymry* gained ground at the expense of the term *Brython* 'BRITONS'. The corresponding language name *Cymraeg* is not attested as early as *Cymry*, but it does scan in early poetry in its trisyllabic Old Welsh form *Kymrä|ec* and is reflected in an Old IRISH loan-word *Combrēc*, found in the glossary of CORMAC UA CUILEANNÁIN and other early Irish glossaries. By the time the term *Cymry* had gained currency Anglo-Saxon rulers had already gained political control over most of the people and productive land of Britain. In the shift from the term *Brython* to *Cymry* it is not hard to see a new self-conscious minority status, a people made newly aware by changed reality that the limits of their ethnolinguistic group were no longer the seas encircling *Britannia* or *Ynys Prydein* 'Britain' (Charles-Edwards, *Celtic World* 703–36). That the cognate of *Cymry* has little or no currency in CORNISH and Breton strongly suggests that the term first arose after contact across the Severn Estuary had fallen off precipitously.

Wales. Old English *Wealas* 'Wales, the Welsh' has a general sense of 'foreigners', and was applied by Germanic peoples to ROMANO-CELTIC peoples of the former Roman Empire. Thus, German *Welsch* may signify French or Italian. The Germanic term seems to have been originally borrowed from the Celtic tribal name *Volcae*, a powerful group with branches in both southern GAUL and central Europe (where they would have had early contacts with Germanic groups). Celtic *Volcae* had meant 'beasts of prey, wolves' and probably also 'hawks', cf. Welsh *gwalch* (Jenkins, CMCS 19.55–67).

Cymru Fydd was a patriotic movement, literally 'Wales will be' but known in English as Young Wales. It was formed in London (Welsh Llundain) in 1886, primarily by emigré Welshmen, on the model of Young Ireland, its programme appearing as 'a manifesto against old age'. It conceived its nationalist mission in terms of a native cultural and linguistic tradition, and consisted mainly of the Welsh intelligentsia. Its most prominent members included medieval historian John Edward LLOYD, Oxford don and littérateur Owen M. EDWARDS, journalist Thomas Edward ELLIS (who became Liberal Member of Parliament for his native

Merioneth in 1886), and barrister W. Llewelyn Williams. The latter asserted that the Cymru Fydd movement was concerned with 'true politics'.

The second branch of the society was formed, significantly, at Liverpool (Welsh Lerpwl), but the movement was notably slow to put down roots in Wales (Cymru) itself; the branch established at Barry in 1891 was the first of its kind in south Wales. Thereafter, branches were set up in many parts of Wales, often closely linked with the traditional organization and personnel of the Liberal Party and the Nonconformist denominations (see CHRISTIANITY). The movement had published its own journal, *Cymru Fydd*, since January 1888, and won the backing of the Welsh popular press, particularly of the veteran Thomas Gee in *Y Faner* (The banner) and of the youthful David Lloyd George, elected Member of Parliament for the Caernarfon Boroughs in April 1890. Initially a cultural and educational movement, Cymru Fydd became, under the influence of T. E. Ellis and Lloyd George, a political campaign, with Ellis underlining 'the necessity of declaring for self-government'. Home rule thus became central to the Cymru Fydd programme, while Michael D. Jones and others even intended it to oust the Liberal Party and become an independent Welsh national party (see NATIONALISM).

The impact of the Cymru Fydd movement became apparent in the appointment of the Royal Commission on Land in Wales in 1892, the grant of a royal charter to a federal University of Wales in 1893, and the introduction of a succession of measures embodying the disestablishment of the Church in Wales (the denomination corresponding to the Church of England). But attempts to create a practical organization showed a distinct lack of direction. The efforts of its secretary, Beriah Gwynfe Evans, proved woefully inadequate. The movement was dealt a harsh blow in 1892 when T. E. Ellis accepted the position of junior whip in the parliament of Prime Minister Gladstone's fourth Westminster administration. From 1894 onwards it declined in the wake of Lloyd George's attempt to take over Cymru Fydd and fuse it with the Liberal Federations of North and South Wales. In August 1894 a meeting was convened at Llandrindod (Radnorshire / sir Faesyfed, now Powys) to frame the constitution of a national Cymru Fydd league. William Jones, MP (Caernarfonshire / sir Gaernarfon), and John Herbert Lewis, MP (Flintshire/sir y Fflint), spearheaded the campaign at Westminster and throughout Wales, and a new nationalist journal—*Young Wales*—was launched in January 1895.

The agitation came to a head at the famous Newport (Casnewydd) meeting of January 1896, when a motion to unite the Liberal Federations of North and South Wales, proposed by the poet H. Elvet Lewis, was heavily defeated. At the root of the dissension was a glaring clash of interest between delegates representing the Anglicized southern ports of Cardiff (Caerdydd), Newport, and Barry, and representatives of the remainder of Wales. In reality, many Liberals were indifferent to the national problems of Wales, with the possible exception of disestablishment of the Church.

Although Cymru Fydd branches survived in some towns and cities until the Second World War, after 1896 the ideal of Cymru Fydd was largely moribund—it became the victim of deep-rooted regional hostility and never succeeded in establishing a broad popular base. The skeleton of a Welsh National Federation survived the 1896 debâcle, but during the early and mid-20th century most Welsh politicians looked for success within the British political system. Welsh sectional, regional, linguistic, and class antagonisms lessened the appeal of a national political autonomy for Wales.

Cynddelw Brydydd Mawr (*fl. c.* 1155–*c.* 1195) is by far the most prolific of the Welsh court poets (Gogynfeirdd) whose work has survived: 3847 lines of his poetry have been preserved in 48 poems. He sang to the most important princes and noblemen of his age, most notably Madog ap Maredudd, prince of Powys (†1160), Owain Gwynedd (†1170), Owain Cyfeiliog (†1197), Lord Rhys ap Gruffudd of Deheubarth (†1197) and, possibly, Llywelyn the Great (Llywelyn ab Iorwerth, †1240).

Cynddelw was one of the most skilled and learned poets of this period. His poems contain a wealth of

references to characters and incidents in Welsh history, mythology, the TRIADS, various story cycles such as the MABINOGI, and legends associated with ARTHUR and Merlin (MYRDDIN). Linguistically, he was extremely accomplished: he had a thorough command of the WELSH language and the intricacies of its sentence structure, and enjoyed playing with the meaning of words and their phonology. He also knew when to exercise restraint, and some of his most effective lines are very simple and direct, but often tinged with irony. After praising HYWEL AB OWAIN GWYNEDD for his prowess and cruelty on the battlefield, he states simply: *Calanmai celennig i frain* (On the calends of May, a gift for ravens). By referring to the enemy's corpses as a calends gift for the ravens, Cynddelw alludes to the patron's custom of bestowing gifts upon his poet on the calends of May.

His repertory was vast. As well as traditional eulogy and elegy to individuals sung on ENGLYN and AWDL metres, he praised retinues, sang two love poems, a long ode in praise of the monastery of MEIFOD and its patron saint, TYSILIO, two poems addressing the Godhead, a deathbed poem, appeasement poems, poems of thanks, personal *englynion* eulogizing the death of his son, Dygynnelw, an *englyn* to a monk from Strata Marcella (YSTRAD MARCHELL) who refused his request to be buried there, and also, possibly, an eulogy for his own cockerel.

His work is preserved in four medieval Welsh manuscripts: the Black Book of Carmarthen (LLYFR DU CAERFYRDDIN), the HENDREGADREDD MANUSCRIPT, NLW Peniarth 3 (see HENGWRT) and the Red Book of Hergest (LLYFR COCH HERGEST). Some poems have also been preserved in NLW 4973 in the 17th-century hand of Dr John Davies, Mallwyd; the medieval source for some of the poems in this early modern manuscript has been lost.

Little is known of Cynddelw's background. The epithet 'Prydydd Mawr' (great poet), which also occurs in the name of the 14th-century poet Trahaearn Brydydd Mawr, has generally been taken to refer to Cynddelw's poetic genius, but it could also refer to his physique. The 16th-century poet Wiliam Llŷn claimed that Cynddelw hailed from the commote (see CANTREF) of Mechain in Powys, and this would tie in with the fact that his earliest poems were addressed to Madog ap Maredudd of Powys and his family, and also with the fact that he maintained his connection with Powys throughout his career. Unlike many of his contemporaries, it is probable that Cynddelw did not descend from a family of poets; his contemporary SEISYLL BRYFFWRCH reminds him of this in a poem which is preserved in the Hendregadredd Manuscript and which claims to be an *ymryson* (see YMRYSONAU) between the two for the *penceirddiaeth* (master-bardship; see BARDIC ORDER) of Madog ap Maredudd's court.

When Madog ap Maredudd died in 1160 it is presumed that Cynddelw became *pencerdd* (master-bard) of his chosen heir, Llywelyn, who was killed later in the same year. Powys was placed in a precarious situation, without a clear leader and with the *membra regis* vying against each other for supremacy, and it is possible that, during this unstable period, Cynddelw cast his lot with Owain Fychan, to whom he addressed a highly skilled ode echoing his elegy to Owain's father, Madog, in 1160. A short time later, however, it appears that he had moved north to GWYNEDD and associated himself with the powerful Owain Gwynedd, whose praises he sang until the death of his patron in 1170. In these poems, Cynddelw emphasizes Owain's superiority as ruler of his kingdom and as an effective battle leader. He was succeeded by his eldest son and heir, Hywel ab Owain Gwynedd, and it is assumed that Cynddelw became *pencerdd* to him upon his father's death. Cynddelw's longest poem—in which he refers to his patron as *brenin* and *rhi* (both words meaning 'king') and affirms his own exalted status as his poet—was addressed to Hywel. Later in 1170, however, Hywel was slain during a battle at Pentraeth, Anglesey (MÔN), by his half-brother, Dafydd, leaving Cynddelw bereft of his patron. Rather than remaining in Gwynedd and seeking the patronage of Dafydd and his brother Rhodri, he appears to have returned to Powys, where he composed an elegy upon the death of Iorwerth Goch, Madog ap Maredudd's half brother, in 1172. In 1179 Cynddelw sang a long and powerful elegy to Cadwallon ap Madog ab Idnerth of Maelienydd in southern Powys, the husband of Efa, daughter of Madog ap Maredudd. In 1187 Cynddelw mourned the killing of his former patron, Owain Fychan son of Madog ap Maredudd. During these years Cynddelw also praised Owain Cyfeiliog and his son, Gwenwynwyn. By the early 1190s, however, he was almost certainly in Deheubarth, singing the praises of Lord Rhys ap Gruffudd, but

since no elegy by him has survived to either Lord Rhys or Owain Cyfeiliog, both of whom died in 1197, it is presumed that he predeceased them both.

Ann Parry Owen

Cynddylan fab Cyndrwyn (? †15 November 655) was a Welsh chieftain who is known to us primarily from two substantial pieces of early poetry: (1) MARWNAD CYNDDYLAN, a 71-line AWDL on his death addressed to an unnamed king of GWYNEDD at ABERFFRAW, whose attitude is that of a contemporary court poem and is widely accepted as authentic; (2) the 113 ENGLYNION of *Canu Heledd* (Poetry of HELEDD), whose attitude is also contemporary, but the dramatic persona is not that of a court poet, but rather Cynddylan's bereaved sister Heledd, wandering alone through the deserted ruins of the war-ravaged kingdom. This ENGLYN cycle is usually assigned to the 9th or 10th century.

Some details of the historical context can be gleaned from these poems. Both *Marwnad Cynddylan* and *Canu Heledd* refer to a place called Tren, probably the river Tern in central Shropshire (Welsh swydd Amwythig). A stray *englyn* from *Canu Heledd* states that Cynddylan was part of the coalition headed by PENDA at the battle of Cogwy or Maserfelth, where OSWALD of Northumbria was slain on 5 August 642 (BEDA, *Historia Ecclesiastica* 3.9). The site of this battle was most probably near Oswestry in Shropshire, where Oswald was killed and crucified on 'Oswald's tree' (Welsh Croesoswallt). According to *Marwnad Cynddylan*, the hero answered the call to arms of *mab Pyd*, which refers to Panna son of Pyd, the latter being the Welsh name for Penda of Mercia, who is known to have had Welsh allies when he fought against the Northumbrians in the mid-7th century. *Marwnad Cynddylan* mentions a 'fight for the cattle (or the spoils) of Pennawg', which may refer to an attack known to have been made by Penda of Mercia and Welsh allies on the Northumbrian court at Bamburgh *c.* 650. The *Marwnad* describes a major, otherwise unknown, battle at Caerlwytgoed, the Roman fortified town of *Lētocētum* at Lichfield, Staffordshire. *Canu Heledd* describes desolation in several places for which probable locations can be found in Shropshire: including Pengwern (probably in Shrewsbury), Eglwysseu Bassa (Baschurch), Dinlleu Vreconn (the hill-fort of the Wrekin near Wroxeter), Romano-British *Vriconium*, and Ercal (High Ercall or Child's Ercall). There is some question as to whether these places represent a continuous recollection of the old pre-Anglo-Saxon landscape of what became western Mercia, or a later Brythonicizing of an already English countryside, in effect creative historical fiction. For example, *Baschurch* seems to be a purely English name and *Eglwysseu Bassa* a Welsh translation. Of course, it is possible that Cynddylan had ruled a linguistically mixed country in the 7th-century, including a community of Anglo-Saxon Christians.

Marwnad Cynddylan and *Canu Heledd* agree in portraying a military disaster in which Cynddylan fell, along with numerous noble kinsmen and comrades. The event itself is most plausibly identified with the battle of Winwæd, where Penda and all his many allies—called *duces regii* (royal generals) by Beda (*Historia Ecclesiastica* 3.27) and *reges Brittonum* (kings of the BRITONS) in HISTORIA BRITTONUM (§§64–5)—fell in battle against OSWYDD of Northumbria on 15 November 655. In the *englynion*, Cynddylan is once identified as ruler of POWYS. The royal lineage known as the Cyndrwynyn (progeny of Cynddylan's father, Cyndrwyn) do not seem to have survived into the 9th century, at which time *Historia Brittonum* (§§32–5) identified the kings of Powys as CADELLING, and ELISEG'S PILLAR traces the same group back to GWRTHEYRN. *Marwnad Cynddylan* mentions the Cadelling twice, viewing them with hostility, as if they were rivals.

JTK

Cynfeirdd (sing. *cynfardd*) is a WELSH term usually translated as 'first poets' or 'early poets'. It is a modern coining and is first attested with *Y Kynveirdh Kymreig* (the Welsh *Cynfeirdd*) of the antiquarian Robert VAUGHAN of Hengwrt (1592?–1667) (see Morris-Jones, *Cymmrodor* 28.10; Jarman, *Cynfeirdd* 1). In current usage, *Cynfeirdd* can be used with both wider and narrower ranges of meaning. For example, the 9th-century Memorandum of the FIVE POETS is sometimes regarded as defining, as well as dating, the *Cynfeirdd* exactly—five named poets of the 6th century, of which only two, ANEIRIN and TALIESIN, have surviving works attributed to them. On the other hand, in attempting an overall scheme of the history of Welsh poetry, it is conventional to divide the Middle Ages into three sections: (1) *Cynfeirdd*; (2) GOGYNFEIRDD (rather early poets), broadly synonymous with the term *Beirdd y Tywysogion* (Poets of the Princes), from the later 11th century to sometime after the end of Welsh independence in 1282; (3) CYWYDDWYR, roughly synonymous with *Beirdd yr Uchelwyr* (Poets of the Nobility), from about 1300. Within such a scheme, a category of the 'later *Cynfeirdd*' emerges, including a diverse mass of anonymous material such as saga ENGLYNION, secular praise poetry, religious poetry, NATURE POETRY, PROPHECY—including ARMES PRYDEIN—and poems associated with MYRDDIN, and the so-called mythological poetry of LLYFR TALIESIN. For these works of the 'later *Cynfeirdd*', see these articles and WELSH POETRY [1].

Taken on its own, without context or qualification, *Cynfeirdd* poetry refers to a corpus of surviving early Welsh verse, showing degrees and varieties of linguistic archaism, mostly in the AWDL metre (long monorhyming stanzas), which take the attitude of contemporary court poetry celebrating (largely military) events of the mid-6th to mid-7th centuries. Though not so widely accepted, the list may also include one elegy, *Marwnad Cunedda*, to a 5th-century figure. This *Cynfeirdd* corpus may be itemized as follows, giving an indication of the era with which each poem's contents deal, and thus potentially when the poems might have been composed, if they had indeed been first created as occasional works contemporary to the events described. Each item is discussed at greater length in this Encyclopedia as noted.

1. MARWNAD CUNEDDA 'The elegy of CUNEDDA' [commemorating an occasion of AD 383×490]
2. The LLYFR ANEIRIN corpus, including:
   (i) The GODODDIN [Battle of CATRAETH, mid- to late 6th century]
   (ii) The *awdl* on the battle of Srath Carruin [December 642]
   (iii) 'Reciter's Prologue' [probably post-dating *obsesio Etin* 'the siege of DÙN ÈIDEANN/ Edinburgh' 638]
   (iv) The cradle song *Peis Dinogat* 'Dinogad's cloak'
3. TRAWSGANU CYNAN GARWYN [commemorating events of 575×610]
4. *Awdlau* addressed to URIEN Rheged [commemorating events of 570×595]
5. ENAID OWAIN AB URIEN 'The soul of Owain son of Urien' [commemorating events of 570×595]
6. *Awdlau* addressed to GWALLAWG fab Lleënnawg of ELFED [commemorating events of 570×610]
7. MOLIANT CADWALLON 'The praise of CADWALLON' [commemorating events of 630–4]
8. MARWNAD CYNDDYLAN 'The elegy of CYNDDYLAN' [commemorating events of 5 August 642–15 November 655]

Cynferching (Middle Welsh Kynuerchyn), 'the descendants of Cynfarch', refers to a post-Roman northern BRYTHONIC dynasty, known to both historical and legendary sources. Its most famous members were URIEN fab Cynfarch (Old Welsh Urbgen map Cinmarc) and Urien's son, Owain (see ENAID OWAIN AB URIEN). Both are prominent in the CYNFEIRDD poetry, saga ENGLYNION, and ARTHURIAN literature. Three other members of the family are mentioned in the 'Northern History' section of HISTORIA BRITTONUM: RHUN AB URIEN (Old Welsh Run), Rhun's son Royth, and Royth's daughter Rhieinfellt, wife of OSWYDD. The saga *englynion* mention Pasgen(t) son of Urien and Urien's sister, Efrddyl (also in TYP no. 70). Urien (Urbgen map Cinmarch) occurs in the Old Welsh GENEALOGIES in BL MS Harley 3859. The family is prominent in Middle Welsh genealogies, including figures unknown in the early poetry such as Urien's daughter, Morfudd, and another son, Cadell. In the Life of St CADOC, Henninni daughter of Cinmarch figures as the ancestress of Cadoc's mother, Guladus. Another son, Rhiwallawn, is known from the TRIADS (TYP no. 62). Since Cynfarch appears in the genealogies as a descendant of COEL HEN, the Cynferching figure as a subgroup of the larger north British lineage known as the Coeling (descendants of Coel Hen) in Welsh tradition. The Cynferching are first identified as a group distinct among the Coeling in a triad embedded in the Middle Welsh genealogical tract *Bonedd Gwŷr y Gogledd* (Descent of the men of the north). It is possible that they were only identified as a special subgroup as late as the 11th or 12th century because of the importance they had assumed in various branches of Welsh literature by that time. On the other hand, according to *Historia Brittonum*, Urien led a coalition to besiege the Angles on LINDISFARNE, which included three other chieftains, two of whom, GWALLAWG and Morgan (Old Welsh Morcant), were Coeling, but not Cynferching; Morgan then turned on Urien and assassinated him. Therefore, the group claiming descent from Coel had once formed a meaningful political block, which broke down in the later 6th century, after which emphasis on the later ancestor Cynfarch would have been more pertinent.

The name *Cynferching* is Celtic, reflecting a notional Old Celtic **Kunomarkīnī* 'progeny of **Kuno-markos*', the latter name meaning 'warrior-stallion', literally 'hound-stallion'.

cynghanedd

WELSH POETRY can be divided into two main categories, namely free metre poetry and strict metre, or *cynghanedd*, poetry. *Cynghanedd*, meaning harmony (from the roots *cyf-* 'with' + *can-* 'sing'), is a sophisticated form of alliteration, sometimes combined with internal rhyme. Welsh poetry and a rudimentary form of *cynghanedd* are as old as the language itself (see CYNFEIRDD; WELSH), and can be described as a language within a language.

The rules of *cynghanedd*, known as CERDD DAFOD (poetic art), were fully developed by the Middle Ages. *Cynghanedd* may well have had its roots in Celtic culture, since comparable patterns are found in the strict metres (*dán díreach*) of Irish (see IRISH LITERATURE) and SCOTTISH GAELIC POETRY, and, likewise, in Middle Breton (see BRETON LITERATURE) and Middle Cornish (see CORNISH LITERATURE). The characteristic structures shared by the traditional strict metres of the various Celtic poetic traditions can be understood as specific outgrowths of the cross-cultural fascination with euphony of rhyme and consonant harmony. The Welsh poetic tradition was, to a large extent, an oral tradition, and even today well-versed poets of the strict metre can immediately detect an error in a line of poetry.

One of the earliest of Welsh poets was the late 6th-century poet TALIESIN. In his book *Taliesin Poems*, Meirion Pennar quotes from one of Taliesin's battle poems: *Wedi boregad, briwgig* (in the early spelling of the manuscript *a gwedy boregat briwgic*), which he translates as 'after morning clash, they were tenderised meat'. Pennar draws attention to the alliterative effect of the corresponding consonants (d b r g / d b r g): 'You could hear the spurt of blood; the sheer violence of it all' (Pennar, *Taliesin Poems* 15).

The poetic art was taught to students (*ysbasiaid*) by experienced poets or scholars called *penceirddiaid* (see

BARDIC ORDER). So thorough was the study that years went by before a student was accepted as a master of the art. Today, *cerdd dafod* is introduced in schools as part of the Welsh literature curriculum, but is not taught as a special subject. Evening classes sponsored by Departments of Continuing Education in Welsh universities have been popular and successful, and many 20th-century *prifeirdd* (winners of the chair or crown at the National Eisteddfod of Wales, see EISTEDDFOD GENEDLAETHOL CYMRU) have attended such classes. Over the centuries, rural poets known as *beirdd gwlad* have mastered the art and transmitted it to younger poets.

During the 1970s, young poets such as Alan LLWYD and others brought a fresh impetus to the learning of *cynghanedd*, which led to the formation of a new society, Barddas (Poetic art), whose aims were to encourage a keen interest in this poetic form. The society established and publishes a bimonthly periodical, also called *Barddas*, which contains contemporary poetry and articles. The wide popularity of the radio programme *Talwrn y Beirdd* (Bardic contest), in which teams of poets compete against each other under the chairmanship of Gerallt Lloyd OWEN, also reflects the revival of interest in *cynghanedd*. Several textbooks on *cerdd dafod* have been published during recent years, but the standard reference work remains Sir John MORRIS-JONES's scholarly volume *Cerdd Dafod*, first published in 1925.

Any student of *cynghanedd* must first be acquainted with the normal accentuation of words. In most polysyllabic words in Welsh the accent or stress rests on the penultimate syllable (*goben*). Accented monosyllables are, of course, stressed on their final syllables. A 7-syllable line should have a natural break in the middle of the line, and all consonants before the penultimate accent in the first half of the line should correspond exactly to the consonants before the penultimate accent in the second half. The end of the first natural break is called *gorffwysfa* (rest), and the end of the second, which is the last word of the line, is the *prifodl* (main rhyme).

In writing a strict-metre poem there are scores of rules to be observed and numerous variations, but the three main types of *cynghanedd* are as follows.

§1. CYNGHANEDD GYTSAIN

In this form, the consonants correspond to each other in each half of the line, as described above. We may take for example a line of *Cynghanedd Groes*, which is a subdivision of this class:

Gwaed y groes /a gwyd y graith (Ioan Madog)

The blood of the cross removes the scar.

Here the natural break in the line occurs after *groes* and the two main stresses fall on the accented one-syllable words, *groes* and *graith*. The consonants in each half correspond to one another, but those which come after the accented vowels of each half line (thus, *s* and *th* in this case) do not count.

A more sophisticated version of this type is known as *Cynghanedd Groes o Gyswllt*:

Y colyn cêl /yn y cwm

The hidden venom in the valley.

The natural break in this line is between *cêl* and *yn*, and the *c* and *l* in *cêl* have to be borrowed in order to complete the pattern (*c l n c*) in the second half of the line.

Another variation of this *Cynghanedd Gytsain* type is the *Cynghanedd Draws*, in which it may be necessary to ignore the middle order of consonants because of the natural break/pause in the line:

Myned /sydd raid /i minnau (Robert ap Gwilym Ddu)

I am compelled to depart.

The emphasis here is on *myned* and *minnau*, and the middle consonants (s dd r d) are ignored.

A further example based on this type is known as *Cynghanedd Draws Fantach*:

Bwlch ni ddangosai lle bu (T. Gwynn JONES)

No trace of where it was.

§2. CYNGHANEDD SAIN

This form consists of a combination of internal rhyme and alliteration. English-language poets who learned Welsh have made good use of this category, as we shall see below. Let us examine a line of this type:

Cleddau digon brau o bren (Lewys Glyn Cothi)

Flimsy wooden swords.

Note the internal rhyme in *cleddau* and *brau*, and also

the alliteration between *brau* and *bren*.

Another variation in this class is:

*Trallod*au, *b*ei*au* *b*y*wyd* (Edward Richard)

Trials and tribulations of life.

Since the accent is on the penultimate syllable, *beiau* and *bywyd* correspond correctly.

§3. CYNGHANEDD LUSG

This type of *cynghanedd* consists purely of internal rhyme and, although it is therefore the easiest of the *cynganeddion* to compose, it is very often the most pleasing to the ear:

*Lle roedd sgl*ein */ar bob cein*i*og* (Huw T. Edwards)

There was a gloss on every copper coin.

Note that the accented *ein* in the monosyllabic *sglein* rhymes with the accented penultimate syllable in *ceiniog*. The final unaccented syllable of a two-syllable word can also rhyme with the accented penultimate syllable, as in:

*Pan feddwn dal*ent *plentyn* (Gerallt Lloyd Owen)

When I had a child's talent.

Many English-language poets have discovered and written lines in *cynghanedd* (see ANGLO-WELSH LITERATURE). It is evident from the following lines (both of which contain *Cynghanedd Sain*) that Dylan Thomas, although he never mastered the Welsh language, was aware of *cynghanedd*:

To the b*urn* and t*urn* of time
When the morn*ing* was walk*ing* over the war.

Wilfred Owen, who had Welsh connections and spent his childhood holidays in Wales (CYMRU), also made use of *Cynghanedd Sain*:

The shad*ow* of the m*orrow* weighed on men.

The first English-language poet to experiment with *cynghanedd* was William Barnes, who learned Welsh and also the rules of *cerdd dafod*. His well-known poem 'Linden Lea' contains a line of *Cynghanedd Groes*:

Do lean down low/in Linden Lea.

Coleridge also made good use of rhyme and alliteration in a manner reminiscent of Welsh *cynghanedd* in 'The Ancient Mariner':

The south wind blew,
the white foam flew
the furrow followed free,
we were the first ever to burst
into that silent sea.

Gerard Manley Hopkins was by far the most successful user of *cynghanedd* in English-language poetry. While at St Beuno College in St Asaph (Llanelwy) in north Wales, he learned Welsh and studied *cerdd dafod*. The following lines indicate how he introduced *cynghanedd* into his work:

I wake in the Midsummer not to call n*ight*, in the *white* and the walk of the morning . . . (*Cynghanedd Sain*).

And fled with a fling (*Cynghanedd Draws*) /of the *heart* to the *heart* of the host (*Cynghanedd Sain*).

Many English-language poets are indebted to Hopkins for introducing them to *cynghanedd*. Rayner Heppenstall, for example, has a fine example of *Cynghanedd Groes* in his poem 'Sebastian':

Peace to the hand, /pace to the heel.

Cynghanedd Lusg tends to evade English-language poets, probably because so many lines of English verse end with monosyllables and the unstressed final syllables of English polysyllables often have obscure vowels (unlike Welsh), and thus make unsatisfactory end rhymes. However, the following lines by John Tydu Jones are exceptions:

Home of the b*ard* and C*ard*i

and

Dew on the newb*orn* m*orn*ing.

Vernon Jones

Peter Hain (Labour), Richard Livsey (Liberal Democrats), Dafydd Wigley (Plaid Cymru), and Ron Davies (Labour) celebrating the victory for devolution in the Welsh referendum in 1997

Cynulliad Cenedlaethol Cymru (National Assembly for Wales) is the elected body which sits in Cardiff (Caerdydd), the capital of Wales (Cymru). On 1 July 1999, the Cynulliad took over the responsibilities of the Welsh Office for the regional government of Wales within the United Kingdom. In its function, it may be compared to the Scottish Parliament, though its powers are more restricted.

Welsh nationalists from Cymru Fydd to Plaid Cymru (see nationalism) had campaigned for the devolution of government power to Wales since the end of the 19th century, but not until the latter decades of the 20th century did these initiatives bear fruit under Labour governments. Following a referendum in 1979, which failed to secure a majority in favour of devolution, and mounting pressure during the 1990s, a White Paper, *A Voice for Wales*, was published by the Labour government in July 1997. It proposed a second referendum, which was held on 18 September 1997, one week after the Scottish electorate had voted in favour of establishing a Scottish Parliament. In Wales 50.3% of the votes cast were in favour of an elected political body for the country, which was then set up by the Government of Wales Act (1998). On 6 May 1999, the first elections for Cynulliad Cenedlaethol Cymru or the National Assembly for Wales were held, and the Cynulliad met for the first time on 12 May 1999. Unlike the Scottish Parliament, the Cynulliad is a fully bilingual body, where members are able to address the assembly in the Welsh language and in which minutes appear bilingually.

The brief of Cynulliad Cenedlaethol Cymru is to develop and implement policies which reflect the needs of the people of Wales and to allocate within Wales funds awarded by the Treasury of the UK government. To that extent, it is less powerful than the Scottish Parliament, which possesses tax-raising powers. Among the domains in which the Cynulliad exercises power are agriculture, economic development, education and training, the environment, industry, local government, social security, and the Welsh language. So far, efforts have been made to develop educational and environmental policies distinctive to Wales, and to put some distance between Wales and Westminster. Nevertheless, the current popular perception is that devolved government has not yet won the hearts and minds of electors.

Cynulliad Cenedlaethol Cymru is composed of 60 members, of whom 40 represent constituencies and are elected directly. The remaining 20 members are elected in five larger electoral regions through the Additional Member System, which allocates four seats per region to the parties, depending on their share of the vote. The Cynulliad works through Subject Committees which reflect the balance of the political parties. In Regional Committees, members from each region assemble to lobby on behalf of their constituents. The rôle of the Committees is to advise the Cynulliad on the development and implementation of policies.

Elections are held every four years. At the election in 1999 the Labour Party won 28 seats, followed by Plaid Cymru with 18 seats, the Conservative Party with nine seats, and the Liberal Party with six seats. Since Labour failed to gain a majority, the Cynulliad became a genuine forum for all political parties in Wales. Following various reshuffles within the Labour Party, Rhodri Morgan became First Minister in 2000 and, under his leadership, in the elections of 2003 the Labour Party gained a slender overall majority, though the abysmally low turnout reflected the general indifference of the electorate to the outcome.

Although the first years of Cynulliad Cenedlaethol Cymru, the first Welsh parliament since that of Owain Glyndŵr, have not been easy, it is clear that its existence has strengthened Welsh nationhood by providing a focus for its politics. A handsome new debating chamber is currently being built in Cardiff Bay, and this new building will further enhance the standing of the Assembly government within Europe. Working within the Cynulliad each party strives to develop a distinctive Welsh profile, and if the recommendations of the Richard Commission in 2004 are implemented the powers of the Cynulliad are likely to increase appreciably over the coming years.

MBL

Cynwydion (Middle Welsh Kynnwydyon) is a name which occurs in Welsh genealogies for a north British dynasty of the post-Roman period. Its literal significance would be descendants of someone named *Cynwyd* (Old Welsh *Cinuit*), but it is possible that the ancestor figure was created to explain the group name, Celtic **Kunētiones*; the singular *Cunētio* is attested as a Romano-British place-name.

The descent of this group, its membership, and historicity are murky and controversial owing to a discrepancy in the Welsh sources. In the Old Welsh genealogies in BL MS Harley 3859, there are three lineages descended from Cinuit map Ceretic Guletic, all through Cinuit's son Dumngual Hen (Dyfnwal the old): (1) the main royal line of Strathclyde (Ystrad Clud), (2) a collateral line of Strathclyde including the well-documented 6th-century king Riderch (Rhyddderch Hael), and (3) a line leading to Clitgno Eitin (Clydno of Edinburgh; MS [C]linog), the father of the most famous hero in the Gododdin, Cynon fab Clydno. In the Middle Welsh *Bonedd Gwŷr y Gogledd* (Descent of the men of the north) several changes have occurred to harmonize the 12th-century state of traditions concerning the ancestry of Welsh kings, heroes, and saints. Thus, Cinuit map Ceretic and the main line of Strathclyde have vanished. The ancestor of Clydno Eidyn is now called Kynnwyd Kynnwydyon and has been made a descendant of the great northern patriarch Coel Hen, who was not Cinuit's ancestor in the Harleian genealogies. The fact that both Old Welsh Cinuit map Ceretic and Middle Welsh Kynnwyd Kynnwydyon occur a few generations back from Clydno Eidyn rules out the possibility of two 5th-century north British kings with the same name; rather, the genealogical doctrine had changed. *Bonedd Gwŷr y Gogledd* shows a weak historicity at several points; for example, Aedán mac Gabráin of Dál Riata was garbled into 'Gauran mab Aedan' and given a bogus Brythonic ancestry from Dyfnwal Hen. This may be mere ignorance or a desire to show that the current kings of Scotland were Britons. The expansion of pedigrees traced to Coel at this stage may likewise be a desire to simplify and systematize, but it should also be noted that the second dynasty of Gwynedd claimed descent from Coel through the Llywarch Hen of the saga englynion and may have wished to be related to as many luminaries as possible. Furthermore, by the 10th and 11th

centuries, a unified kingdom of Strathclyde/Cumbria —itself functioning increasingly as a subkingdom of Alba (Scotland)—had expanded into old Coeling territory around Carlisle (Welsh Caerliwelydd), and the Welsh genealogists may thus have wished to make the descendants of Cynwyd a branch of the Coeling to legitimize this annexation.

JTK

Cywydd is a Welsh metrical form in use from the 14th century to the present day. The term is cognate with the Old Irish *cubaid* (whose meanings include 'a letter of the OGAM alphabet'), and originally meant 'harmony' or 'song'. Four types of *cywydd* are listed by Einion Offeiriad in his account of the twenty-four metres (probably in the 1320s): *awdl-gywydd*, *cywydd deuair hirion*, *cywydd deuair fyrion*, and *cywydd llosgyrnog*.

The *awdl-gywydd* consists of units of two seven-syllable lines, the end of the first rhyming with the caesura of the second (*odl gyrch*), and the end of the second maintaining the main rhyme. Although little used by bardic poets it occurs in some free-metre verse of the early modern period, e.g.

O gwrthody, liw ewyn,
Gwas difelyn gudynnau,
Yn ddiwladaidd, da ei lên,
A'i awen yn ei lyfrau.
(Gruffydd & Ifans, *Gwaith Einion Offeiriad* 73)

The *cywydd llosgyrnog* is the most complex of the four, consisting of two, three or four eight-syllable lines with the *odl gyrch* followed by a seven-syllable line with the main rhyme (the *llosgwrn* 'tail'); it has been very little used. The following example is given in Einion Offeiriad's grammar:

Lliw eiry glennydd Mynydd Mynnau,
Lluoedd a'th fawl, gwawl gwawr Deau,
Llathrlun golau Oleuddydd;
Llifodd fy hoen o boen benyd,
Lluddiodd ym hun llun bun, lloer byd:
Lledfryd, nid bywyd, a'm bydd.
(Gruffydd & Ifans, *Gwaith Einion Offeiriad* 74)

The *cywydd deuair fyrion* consists of couplets of four-syllable lines and is also found in some early-modern free-metre poems, e.g.

Hardd-deg riain, hydwf, glwysgain,
Hoywliw gwenyg, huan debyg:
Hawdd dy garu, haul yn llathru.
(Gruffydd & Ifans, *Gwaith Einion Offeiriad* 72)

The only one of the four types commonly used by bardic poets was the *cywydd deuair hirion*, consisting of seven-syllable couplets with one line rhyming on a stressed syllable and the other on an unstressed one, and it is to this metre that the term *cywydd* normally refers. In fact, the example given in Einion Offeiriad's grammar does not feature the alternating stress pattern in the rhymes, and it has no CYNGHANEDD. This supports the theory that the *cywydd deuair hirion* derived from a simpler metre, known as the *traethodl*, which consisted of seven-syllable rhyming couplets and had no *cynghanedd*. (This metre was used by Dafydd ap Gwilym, e.g. Parry, *Gwaith Dafydd ap Gwilym* 137). The rhyme-pattern may have been influenced by the final couplet of the ENGLYN *unodl union*.

The *cywydd* has no set length, and can range from as little as twelve lines to well over a hundred, but medieval *cywyddau* are usually around sixty lines. Dafydd ap Gwilym is the first poet known to have made extensive use of the *cywydd*, and it is likely that his love poems popularized the metre, e.g. *Cystudd y Bardd* ('The Poet's Affliction'):

Hoywdeg riain a'm hudai,
Hael Forfudd, merch fedydd Mai.
(Parry, *Gwaith Dafydd ap Gwilym* 276)

A sprightly, fair maid would entice me:
Bountiful Morfudd, god-daughter of May.
(Thomas, *Dafydd ap Gwilym: His Poems* 203)

Dafydd ap Gwilym may also have been responsible for introducing *cynghanedd* into the *cywydd*, although he quite often left the first line of the couplet without *cynghanedd*. He also used the *cywydd* for praise poetry of a very personal kind to Ifor Hael, but it seems to have been his younger contemporary Iolo Goch who took the important step of composing traditional praise

in the *cywydd* metre with full *cynghanedd*. The earliest datable *cywydd* of this sort is that to King Edward III *c.* 1350 (Johnston, *Gwaith Iolo Goch* 2–3). By the end of the 14th century the *cywydd* had become accepted as the standard metre for all kinds of bardic poetry, and it continued to be so until the demise of the bardic order in the 17th century. Revived by neo-classical poets in the 18th century, the *cywydd* tradition was maintained by the EISTEDDFOD, both as a discrete composition and as one of the AWDL metres, and it is used to good effect by present-day practitioners of the strict metres.

Cywyddwyr

§1. THE TERM

The WELSH plural noun *cywyddwyr* (sing. *cywyddwr*) refers to poets who composed *cywyddau*, i.e. poems in the CYWYDD metre, from the 14th to the 16th centuries. A compound of *cywydd* and *gwŷr* 'men' (sing. *gŵr* 'man'), the word means literally '*cywydd*-men' or 'composers of *cywyddau*'. The term *cywydd* properly refers to a group of metres, of which the *cywydd deuair hirion* was the one used by most of the *Cywyddwyr*.

When, in the latter half of the 18th century, the terms CYNFEIRDD, 'early poets', and GOGYNFEIRDD, 'rather early poets', began to be used by Lewis Morris (see MORRISIAID MÔN) and others to describe Welsh poets from the earliest times to the 14th century, the medieval term *Cywyddwyr* was added to indicate the third and last chronological stage of strict-metre poetry in Wales (CYMRU), beginning in about 1300 and declining shortly after the ACTS OF UNION of 1536 and 1543. However, this chronological division is somewhat misleading since not all 14th-century poets were *Cywyddwyr*; a few composed only in AWDL and ENGLYN metres, the traditional metres used by the *Cynfeirdd* and *Gogynfeirdd*. The poets of the central and later medieval periods, comprising both *Cywyddwyr* and others, are sometimes described collectively as *Beirdd yr Uchelwyr*, or 'Poets of the Nobility'. Thus, the terms *Cywyddwyr* and *Beirdd yr Uchelwyr* overlap and are largely, but not precisely, synonymous.

Though the *cywydd* was revived by Edward WILLIAMS (Iolo Morganwg) at the end of the 18th century to form a key element in his vision of the modern EISTEDDFOD, and remains a central feature of *eisteddfod* competitions in Wales to this day, the term *Cywyddwyr* normally refers exclusively to poets of the central and late Middle Ages who composed in the *cywydd* metre.

§2. THE RISE OF THE CYWYDDWYR

The emergence of the *cywydd* metre as a prestige form of poetry, and hence the rise of the *Cywyddwyr* as poets who composed mainly or exclusively in this metre, occurred in the context of social and economic changes in Wales following the conquest of Gwynedd by Edward I in 1282–3. Before this date, court poetry (typically in the *awdl* and *englyn* metres) had been addressed to the ruling dynasties of Wales by the *Gogynfeirdd*, or *Beirdd y Tywysogion* 'Poets of the Princes', poets attached to the courts of the Welsh princes and lesser noblemen. Following Edward's suppression of the Welsh royal dynasties, the social and economic infrastructure of traditional court poetry largely disappeared. What arose in its place was a newly-empowered class of patrons, the *uchelwyr*, and a new prestige metre, the *cywydd*. The *Cywyddwyr* are therefore inseparable from the social group that supported them, the *uchelwyr*.

As the status of the *uchelwyr* improved from the late 13th century under English patronage, the leading families sought ways of establishing their class identity as the native élite in the post-1282 context. Offering support to court poets, trained to sing the praises of the lord who supported them, was one of the means by which the *uchelwyr* asserted their place in the social hierarchy, while confirming their commitment to Welsh cultural practices. Until well into the 14th century, the *awdl* remained the dominant mode of praise poetry to patrons, and most of the *Cywyddwyr* composed in the *awdl* and *englyn* metres, as well as in the *cywydd* metre, in order to demonstrate their skills in all three of the major bardic metres.

The *cywydd*, among the simplest of the twenty-four

bardic metres and therefore apparently disdained by the *Gogynfeirdd*, was revived in the early 14th century as a useful medium for the new themes of love and nature influenced by English popular song. After the Black Death, which ravaged Wales in 1349 and accelerated the pace of change in the social order, the *cywydd*, polished by the addition of some of the ornamental features of the *awdl*, became fully established as the prestige form of *canu mawl*, or praise poetry. By the 15th century, the rapidly increasing pool of *uchelwyr* patrons, both secular and clerical, were receiving the praises of their poets in the form of *cywyddau*. The revival of the *cywydd* and its rôle in reinvigorating medieval Welsh court poetry is regarded by many modern critics as the major literary achievement of the medieval period in Wales.

It was not only the style of poetry which changed after 1282, but also the manner of its production and reception as well. Whereas the *Gogynfeirdd* were semi-permanent fixtures at the courts of the great princes of Gwynedd, Powys, and Deheubarth, protected by the laws of the court (see law texts), the *Cywyddwyr* tended to be more mobile and self-employed. Most of the major *Cywyddwyr* had multiple patrons, though these were often members of the same extended *uchelwyr* families. More significantly, the *Cywyddwyr* moved freely between the manor houses of their *uchelwyr* patrons and the growing towns of Wales, which provided new audiences among the burgesses and trade-enriched merchants, English as well as Welsh. Poems by Dafydd ap Gwilym to Newborough and Guto'r Glyn to Oswestry (Welsh Croesoswallt) are among the *cywyddau* which acknowledge the significance of urban life to the status and fortunes of the *Cywyddwyr* from the 14th century onwards. In many ways, as D. J. Bowen has claimed, the *cywydd* was a bourgeois form.

§3. significant cywyddwyr

There are no surviving biographies of any of the *Cywyddwyr*, and information about their lives has to be inferred from references in the poetry and from what is known of their patrons. It seems fairly clear, however, that many of the *Cywyddwyr* belonged to the same socio-economic class as their patrons, being members of *uchelwyr* families who both supported and produced the professional poets of their age.

The earliest of the *Cywyddwyr* were composing at the same time as the last generation of *Gogynfeirdd* in the first half of the 14th century, and there is an obvious metrical and stylistic overlap between the older and newer forms of poetic composition. The first generation of *Cywyddwyr* included Iolo Goch, Dafydd ap Gwilym, Llywelyn Goch ap Meurig Hen, Gruffudd Gryg, Madog Benfras, and Gruffudd ab Adda, some of the most innovative poets of the medieval period. This is the generation credited with turning the *cywydd* into a professional metre, suitable for court poetry, while continuing to compose in the *awdl* and *englyn* metres.

Of this early group, Dafydd ap Gwilym stands out as truly exceptional, not only for the number of poems attributed to him in manuscripts (currently stabilized at around 150 in the canon published by Thomas Parry in 1952) but also for the virtually unbroken manuscript record of his work after 1450 and for the many references to him as a revered poet by later generations of *Cywyddwyr*. Iolo Goch, whose more modest canon of 37 *cywyddau* has been edited by Dafydd Johnston, is another significant poet of the early period notable for his praise poems to leading Welsh figures of the day, including Owain Glyndŵr.

Gruffudd Llwyd and his bardic apprentice, Rhys Goch Eryri, were both composing in the early years of the 15th century, each leaving a small surviving corpus of praise poems, love poems, and religious verse in both *cywydd* and *awdl* metres. But the dominant figure of the first half of the 15th century was Siôn Cent, whose religious verse is deeply philosophical and didactic. His younger contemporary, on the other hand, Dafydd Llwyd of Mathafarn, whose work spans the middle and later decades of the century, developed the *cywydd* as a vehicle for reinterpreting the ancient Welsh art of prophecy, composing about 40 such *cywyddau brud* as well as some elegies and praise poems.

The second half of the 15th century produced some of the most prolific and accomplished praise-poets among the *Cywyddwyr*, including Guto'r Glyn, Gutun Owain, Dafydd Nanmor, Lewys Glyn Cothi, Huw Cae Llwyd, Lewys Môn, and Tudur Aled. Their patrons comprised the full range of the medieval Welsh gentry, both secular and religious, including the Fychan (Vaughan), Griffith, Pilston, and Tudor (Tudur) families and senior members of the church. The tradition of love poetry established by the earlier generations was also strongly maintained by poets such

as Dafydd ab Edmwnd, Bedo Brwynllys, and Bedo Aeddren. Dafydd ab Edmwnd was particularly known for his metrical innovations at the Carmarthen (Caerfyrddin) *eisteddfod* of *c.* 1451, insisting on strict cynghanedd in the *cywydd* metres and increasing the complexity of many of the traditional twenty-four metres which formed the basis of the bardic system of training and grading. It was his pupil, Gutun Owain, a distinguished scholar and genealogist (see genealogies), who ensured that these changes were recorded in the 16th-century versions of the bardic grammar (see gramadegau'r penceirddiaid).

Dafydd ab Edmwnd was among the last of the great love-poets of the *Cywyddwyr*. Of the generation composing in the first half of the 16th century, Lewys Morgannwg (Llywelyn ap Rhisiart), a pupil of Tudur Aled, was one of the most prolific, with over a hundred of his *cywyddau* and *awdlau* surviving, mainly praise poetry and elegies. Gruffudd Hiraethog and his pupil, Wiliam Llŷn, also produced large numbers of *cywyddau* in praise of the Welsh gentry and were closely involved in discussions regarding regulations governing the bardic order. By the end of the 16th century, the tradition of praise poetry was itself in decline, maintained only by a few pupils of Gruffudd Hiraethog, such as Siôn Tudur, who was both a poet and a member of the gentry and whose satires draw attention to the gradual decay of the bardic profession, and Simwnt Fychan, who is remembered not only for his poetry but for his reworking of the bardic regulations, *Pum Llyfr Cerddwriaeth*.

While poetry as a profession was dominated by males in medieval Wales, there are some surviving *cywyddau* and *englynion* attributed to a female poet, Gwerful Mechain, who composed in the second half of the 15th century. As the daughter of Hywel Fychan of Powys, and therefore a member of a well-established family of *uchelwyr*, Gwerful belonged to the same social circle as many of the *Cywyddwyr* and their patrons, and was related by marriage to the poet Llywelyn ab y Moel. Among her surviving poems are a number of exchanges with Dafydd Llwyd of Mathafarn and Llywelyn ap Gutun, as well as the raunchy and humorous *cywyddau* for which she is particularly renowned.

§4. style and themes

The metre associated most closely with the *Cywyddwyr*, the *cywydd deuair hirion*, determined many of the stylistic possibilities of the poetry. Rhymed as a couplet (with rhyme between an accented and an unaccented final syllable), the metre lends itself to syntactic units of one couplet at a time, a style which became particularly refined in 15th-century praise poetry. Those poets of the 14th century, such as Dafydd ap Gwilym and Llywelyn Goch ap Meurig Hen, who continued to use the *awdl* metre for praise poetry alongside the *cywydd* metre, transferred modes of the *awdl* to the *cywydd*, including single-line sense units, alliteration at the beginning of a series of lines (*cymeriad*), and a series of repeated end-rhymes.

The 14th-century poets also tended to favour more complex syntactic units, often extending over several lines in counterpoint to the metrical logic of the couplet. Throughout the period of the *Cywyddwyr*, however, many poets used the couplet style to great effect, encapsulating neat and witty aphorisms within a single couplet or extending a dramatic comparison over a series of couplets. In general, the greater flexibility of the *cywydd* metre, compared to the *awdl*, encouraged a lighter and more humorous style of verse expressed through the innovative use of colloquial forms, compound words, and a highly figurative language of extended metaphor and imagery.

The *Cywyddwyr* practised a rhetorical and ornamental style that set their verse clearly apart from prose and from the simpler songs of minstrels and players. Apart from *cymeriad*, the most obvious adornment was *cynghanedd*, the system of consonantal repetition and internal rhyme applied to each line of verse in a number of variant patterns. For their rhetorical ornamentation, the *Cywyddwyr* drew on a common stock of European literary devices derived from Greek and Latin conventions, including metaphor, repetition, oxymoron, and paradox. Two devices particularly associated with the *Cywyddwyr* are *sangiad* and *dyfalu*. *Sangiad* corresponds to the Greek concept of 'parenthesis', and describes the insertion of additional phrases or asides, often in the form of a comment or value judgement, into a syntactic unit, a particularly helpful device in a strict syllabic metre governed by *cynghanedd*. The art of *dyfalu*, meaning 'to describe' or 'to deride', rests in the intricate development of a series of images and extended metaphors which either celebrate or castigate a person, animal or object. Dafydd ap Gwilym's poems to the wind (Parry,

Gwaith Dafydd ap Gwilym 117) and the mist (Parry, *Gwaith Dafydd ap Gwilym* 68) are frequently cited as classic examples of the technique of *dyfalu*.

The themes of the medieval *cywyddau* can be conveniently summarized as love, nature, religion, elegy, praise, and SATIRE, though most of the poems can be broadly categorized as either praise or satire. There are also a number of political poems, particularly the sub-genre known as the *cywyddau brud*, or prophetic poems (see PROPHECY). Many of the *Cywyddwyr* specialized in one type of poem rather than another, so that Dafydd ap Gwilym, Dafydd ab Edmwnd, and Bedo Brwynllys, for example, are famous for their love-poetry, while Iolo Goch, Tudur Aled, and Guto'r Glyn are particularly associated with praise poetry to patrons. The emergence of the *cywydd* metre is associated with lyric themes of love and nature, following trends from French and English verse, while the use of the *cywydd* for official praise poetry, taking over the function of the *awdl*, was commonplace by the 15th century. Prophetic poems, such as those by Dafydd Llwyd of Mathafarn, enjoyed a certain prominence during the 15th century in the context of the Wars of the Roses and the rise of the Tudor (Tudur) family.

Though satirical poems commonly appear in the form of *englynion*, especially in the 14th century, they were also composed as *cywyddau*. The *Cywyddwyr* directed their satire not only towards social groups regarded as inferior, such as itinerants, burgesses and English townspeople, but also towards each other. A number of *Cywyddwyr* exchanged colourful poems in the form of YMRYSONAU or 'contests' which included relentless satire and ridicule of the opponent, and may have formed part of the bardic competitions at which poets were graded. The *ymryson* between Dafydd ap Gwilym and Gruffudd Gryg in the 14th century, and one between Siôn Cent and Rhys Goch Eryri in the 15th century, both on the topic of what forms and subjects are proper to poetry, are among the best known. On the other hand, the *Cywyddwyr* also composed very moving elegies to each other, both before and after the actual death. Elegies to Dafydd ap Gwilym were composed by Iolo Goch, Madog Benfras, and his old opponent, Gruffudd Gryg, while Dafydd ap Gwilym composed elegies to Madog Benfras and Gruffudd Gryg, even though the latter was almost certainly alive at the time.

In both their language and themes, the *cywyddau* are clearly marked as products of their cultural positioning, closely connected to both English and French literatures in the medieval period. The enormous increase of English loanwords into Welsh, compared to the earlier *Gogynfeirdd* period, indicates the expansion of English settlement after 1282 and the gradual emergence of English as a prestige language. Gruffudd Gryg is credited with the first borrowing of English 'hobby-horse' into Welsh (*hobi hors*) in his *ymryson* with Dafydd ap Gwilym, while Dafydd himself seems to have coined borrowings such as *acses* 'access', *butres* 'buttress' and *sercl* 'circle'. Many borrowings from English by the *Cywyddwyr* reflect their increasing contacts with towns, trade and urban culture in Wales, e.g. *cwrel* 'coral', *dwbled* 'doublet', *ffair* 'fair', *fflwring* 'florin', and *lifrai* 'livery'.

A number of *cywyddau* resemble French poetic genres, particularly the *débat* and *pastourelle*. There are many echoes of the *fabliau* style in some of the comic poems, and there is one example of an *aubade* or 'dawn song' in the Dafydd ap Gwilym corpus (Parry, *Gwaith Dafydd ap Gwilym* 129). The conventions of love, descriptions of a woman's beauty, and evocations of the natural world which characterize much of their work clearly show that these poets belonged to a contemporary tradition of courtly entertainment which owed much to European vernacular popular song, such as the Harley Lyrics in English and the work of the *trouvères* in northern France, as well as to the echoes of classical Latin rhetoric preserved in the medieval Latin verse of the *clerici vagantes*. In their development of sub-genres such as the *cywydd llatai*, however, where the poem describes a love-messenger, usually a bird or animal, sent to the poet's beloved, the *Cywyddwyr* showed that they were not merely imitators of a common style but could produce innovative interpretations of standard themes in the medium of their own native language and versification.

§5. PERFORMANCE

Medieval *cywyddau* were composed to be performed in public, and to be sung rather than recited. The evidence of the poems suggests that the *Cywyddwyr* normally performed their own work, accompanying themselves on a HARP or CRWTH, a stringed instrument, though the musical accompaniment may have been provided or amplified, at least on some occasions, by professional musicians. In his *cywydd* describing a song he

composed for Dyddgu (Parry, *Gwaith Dafydd ap Gwilym* 142), Dafydd ap Gwilym claims to have written the music as well as the lyrics, while Iolo Goch, in his elegy for Dafydd, calls him *telyn llys a'i theulu* (harp of a court and its retinue; Johnston, *Iolo Goch: Poems* no. 21). A satire on the English burgesses of Flint (possibly by Tudur Penllyn) describes the poet singing an *awdl* at a wedding-feast in the town, while Dafydd ab Edmwnd's elegy for Siôn Eos, a harpist, alludes to the harpist playing both solo and as an accompanist to singers. These kinds of references to performance convey a general impresssion that the *Cywyddwyr*, as professional poets, formed a superior body among a variety of singers and musicians performing in the halls of the *uchelwyr*, to audiences of clerics, at celebratory gatherings such as fairs and wedding-feasts, and in public places in towns, such as taverns and market squares.

Not all *cywyddau*, however, were necessarily performed by the *Cywyddwyr* themselves, since there was a class of professional singers known as *datgeiniaid*, 'reciters'. These are mentioned in the earliest versions of the bardic grammar (see GRAMADEGAU'R PENCEIRDDIAID) as performers whose rôle is to enhance the songs they perform, and by the time the Statute of GRUFFUDD AP CYNAN was developed, in the 16th century, they are instructed to wait on the poets and to travel only in the company of a *pencerdd*, or master poet. Lewys Glyn Cothi describes sending a *datgeiniad* to sing to one of his patrons, Dafydd Llwyd ap Gruffudd, and Guto'r Glyn declares that Tomas ap Watcyn Fychan should have a hundred reciters to sing his praises. The *Cywyddwyr*, then, were often musicians and singers as well as poets, though they might be accompanied by professional musicians and singers, or even replaced by them.

§6. TRANSMISSION

The transmission of the poetry of the *Cywyddwyr* seems to have been almost entirely oral until the middle of the 15th century, when secular patrons began to commission manuscripts in significant numbers with the aim of recording what had become the mainstream tradition of bardic poetry. There are only two contemporary manuscript sources for any 14th-century *cywyddau*. The HENDREGADREDD MANUSCRIPT, dating from the early 14th century with additions up to the end of the century, is the earliest manuscript to contain some work of contemporary *Cywyddwyr*, Dafydd ap Gwilym and Gruffudd Gryg, but it is their *awdlau* and *englynion* which are represented, including a series of *englynion* thought to be in Dafydd's own hand; there are only two fragments of anonymous *cywyddau*.

Another major repository of Welsh literature dating from the last quarter of the 14th century, the Red Book of Hergest (LLYFR COCH HERGEST), also contains examples of *awdlau* and *englynion* by poets who are better known as *Cywyddwyr*: IOLO GOCH, Gruffudd Gryg, and Llywelyn Goch. There is only one example of a *cywydd*, a love poem by Iolo Goch, which suggests that the manuscript's patron, Hopcyn ap Tomas, did not yet consider the *cywydd*, at least in the form of love poetry, to be a formal mode of verse. The third important manuscript collection of the late 14th century, the White Book of Rhydderch (LLYFR GWYN RHYDDERCH), which contains mostly prose works, includes a series of *englynion* by Dafydd ap Gwilym written on a blank page, but no evidence of the *cywydd*, despite its evident popularity as a cultural form.

The main period of manuscript transmission of the work of the *Cywyddwyr* came after 1450 and is notable for the number of versions written by the bards themselves. Important manuscripts from the second half of the 15th century include National Library of Wales (LLYFRGELL GENEDLAETHOL CYMRU) Peniarth MSS 48 and 57(i), the earliest manuscripts to contain *cywyddau* attributed to Dafydd ap Gwilym, and a number of autograph manuscripts of the work of Lewys Glyn Cothi, dating from the 1470s. Bards themselves often acted as scribes, writing down their own verse and that of their contemporaries. Gutun Owain (*fl.* 1450–98), a particularly prolific writer, recorded bardic grammars and chronicles as well as the poetry of his age. Other contemporary *Cywyddwyr* whose work survives in their own handwriting, mainly in NLW Peniarth MSS 54, 55 and 67, include Gwilym Tew, Hywel Dafi, Hywel Swrdwal, Huw Cae Llwyd, and Dafydd Epynt.

Sixteenth-century manuscripts containing *cywyddau* were mainly the work of Welsh humanist scholars such as Elis GRUFFYDD (*c.* 1490–*c.* 1558), Thomas Wiliems (†1622), Humphrey Davies (†1635), and Dr John Davies of Mallwyd (†1644). Anthologies from this period include NLW Llanstephan MS 6 (*c.* 1520) and British Library Additional MS 14997 (*c.* 1540). Many of them are laid out with titles, rubrics, and other indications that the contents were to be read as well as to be

preserved for oral performance.

By the 17th century, the work of the *Cywyddwyr* was highly regarded among the native Welsh gentry as a mark of social status, and collections were made for the libraries of families such as the Wynns of Gwydir and the Vaughans of Corsygedol. Since PRINTING was still largely located in London and dominated by English-language publishing, Welsh texts continued to be hand-copied throughout the 18th century, generating a large corpus of manuscripts containing *cywyddau* which were copied and collected by scribes, clergy, and antiquarians. The Morris brothers of Anglesey (MORRISIAID MÔN), especially Lewis and William, were the most significant collectors and copyists of Welsh manuscripts in the 18th century, and made large collections of poems attributed to Dafydd ap Gwilym and other *Cywyddwyr*, forming the basis of the earliest printed editions in the latter part of the century.

§7. MAJOR CYWYDDWYR IN CHRONOLOGICAL ORDER

Dates indicate approximate lifespans and/or periods of activity as far as they can be documented.

DAFYDD AP GWILYM (*c.* 1315–*c.* 1350)
Madog Benfras (*c.* 1320–60)
Llywelyn Goch ap Meurig Hen (*c.* 1330–90)
Gruffudd ab Adda (*c.* 1340–80)

D

Dacians and Celts

Dacia was the ancient country north of the lower Danube, approximately coinciding with the territory of modern Romania. During the pre-Roman Iron Age, its inhabitants were closely related to the Thracians, as can be seen from their linguistic and archaeological remains. Thrace (Thracia) was the ancient name of the country corresponding roughly to modern Bulgaria and European Turkey. The Thracian language was Indo-European, but distinct from Celtic; some scholars have seen a special connection between the extinct Thracian and the modern Indo-European language Albanian. The Dacians developed a distinctive civilization during the second Iron Age (from roughly 500 BC), which reached an advanced stage of development and a social structure capable of supporting a large centralized kingdom in the last two pre-Roman centuries (the 1st BC and the 1st AD). They founded an empire under the authority of king Burebista in the 1st century BC. This state was then conquered by the Roman emperor Trajan in AD 106.

During the second half of the 4th century BC, the cultural influence of the Celts appears in the archaeological records emanating from areas to the west (the middle Danube, Alpine region, and north-west Balkans), where Middle La Tène material culture figured and where Celtic proper names were abundantly attested within the ancient period. This Celtic material appears in north-western and central Dacia and is reflected especially in burials (which have at the present time been more intensely researched and are consequently better known than the evidence from settlements).

Archaeological investigation, undertaken in the Celtic cemeteries of this period in western Dacia, has highlighted several Celtic warrior graves with military equipment (swords, spears, battle knives). This material suggests the forceful penetration of a military élite within the region of Dacia, now known as Transylvania, bounded on the east by the formidable barrier of the Carpathian range. The relationship of these militaristic bearers of La Tène culture with the indigenous Dacians was not invariably hostile. A pattern of co-existence and fusion is seen in sites of the 3rd and 2nd centuries BC from Transylvania, revealing domestic dwellings where a mixture of Celtic and Dacian pottery was in use. Moreover, a number of graves of the Celtic type contain vessels of Dacian type. The presence of the Celts appears to have provided a catalysing factor for the intra-Carpathian Dacian civilization. In this period, these Dacians of Transylvania borrowed from the newcomers the potter's wheel, superior technology in metal work, and probably commenced the Dacian tradition of coinage. Certain types of Celtic jewellery—fibulae (brooches) and the distinctive Celtic neckrings known as torcs—were also borrowed by the Dacians and adapted to local tastes.

The subsequent fate of the Celts in Transylvania remains uncertain. Evidence for definable La Tène groups peters out in the region in the 2nd century BC (most probably specifically after *c.* 150 BC). It is at about this time that Dacian culture underwent changes which led to its final mature phase, and the number of settlements attests to a growth in population and economic expansion. Trogus Pompeius and Justin mention a rise in Dacian authority under the leadership of King Rubobostes, which possibly suggests the end of Celtic dominance in Transylvania, that is, that they were possibly thrust out of Dacia by the growing power of an indigenous dynasty. Alternatively, some scholars have proposed that the Transylvanian Celts remained, but merged into the local cultural context and thus ceased to be distinctive archaeologically. It is possible that both processes were partially responsible for the disappearance of La Tène material in Romania. The presence of the Celts in other parts of Dacia, further

Celts and Dacians in eastern and central Europe: the areas outlined and labelled in white represent regional groups of eastern La Tène burials; hexagons represent oppida.

to the east (Moldova, Dobrogea) in areas associated with the group name Bastarnae, is controversial, but La Tène objects have been found there.

One pivotal historical episode was the defeat of several Celtic tribes by the Dacian king Burebista, probably around 60 BC, at which time his forces advanced to the middle Danube region. From this period, pottery of the Dacian type has been discovered in Celtic settlements in central Europe including Gomolava, Yugoslavia, and Budapest, Hungary. STRABO (*Geography* 7.3.11) tells the story of the destruction of the major central European Celtic tribes, the BOII led by Critasiros and the TAURISCI. Strabo also mentions the expeditions of Burebista against a group of Celts described as living among the Illyrians and the Thracians (probably the SCORDISCI). Archaeological discoveries in the settlements and the fortifications of the Dacians in the period of their kingdom (1st century BC and 1st century AD) show that relations between the Dacians and the Celts from the regions north and west of Dacia continued. For example, in the Dacian sites from western and central Dacia, there are late La Tène-type painted ceramic imports, specifically vessels with coloured designs made by working graphite into the fabric, some imported, others made by Dacian potters imitating Celtic prototypes.

Dafydd ab Edmwnd (*fl.* 1450–97) was a poet who hailed from Hanmer in Maelor Saesneg, northeast Wales (Cymru). Like the Hanmer family itself, Dafydd was a descendant of Sir Thomas de Macclesfield, who settled in Wales following the conquests of Edward I. He was the owner of a mansion called Yr Owredd in Maelor Saesneg, though he seems to have spent much of his time at Pwllgwepra, Northop. His bardic teacher was probably Maredudd ap Rhys (*fl.* 1440–83). Dafydd, in turn, is credited with teaching both his relative Tudur Aled and the poet-copyist Gutun Owain.

As a comfortably placed *uchelwr* (nobleman), Dafydd was probably not financially dependent upon his craft, and this is possibly one reason why he has left relatively few elegies and eulogies. Among these, however, are some of the most memorable poems of his day. His cywydd advising Rhys Wyn ap Llywelyn from Botffordd in Anglesey (Môn) not to marry an Englishwoman was seized upon by Saunders Lewis as containing the most exciting political statement made by a Welsh poet during the period of the Wars of the Roses (*Meistri a'u Crefft* 128). Another key poem is his elegy to Siôn Eos, a harpist who killed a man in a brawl in Chirk (Y Waun). The poem is in part a complaint against English law, which saw Siôn hanged. The Welsh Law of Hywel Dda, on the other hand, would have spared him.

Most of his poems, however, are love poems. In many ways they follow in the footsteps of Dafydd ap Gwilym, though they tend to be more formal expositions of female beauty, and demonstrate Dafydd ab Edmwnd's mastery of the technical aspects of cerdd dafod. Indeed, his contribution to the rules of poetry was important (see bardic order). In the eisteddfod held at Carmarthen (Caerfyrddin) *c.* 1451, where he was awarded a silver chair, he was responsible for changes that resulted in the introduction of stricter metres and in stricter rules for cynghanedd itself. Although these changes were criticized by later writers, they were probably designed to ensure that poetry remained a high-status craft whose requirements were demanding.

Dylan Foster Evans

Dafydd ap Gwilym, regarded by his contemporaries as well as by modern critics as the foremost poet among medieval Cywyddwyr, composed and performed poetry in the first half of the 14th century. There is little documentary evidence for his life, apart from the internal evidence of the poems. He was probably born *c.* 1315, in Brogynin, in the parish of Llanbadarn Fawr, near Aberystwyth in Ceredigion, and died *c.* 1350, possibly of the plague. Three of his contemporaries—Madog Benfras, Gruffudd Gryg, and Iolo Goch—composed elegies on his death.

Born into a prominent family of *uchelwyr* (noblemen), Dafydd received his training in the art of cerdd dafod from his uncle, Llywelyn ap Gwilym, constable of Castellnewydd Emlyn in 1343, while enjoying a formal education at the Cistercian abbey of Strata Florida (Ystrad-fflur) in Ceredigion (see cistercian abbeys in wales). References in the poems suggest that he travelled widely in Wales (Cymru) during the 1330s and 1340s, performing his poetry for the *uchelwyr* and for clerical (and possibly monastic) audiences. Significant patrons include Ifor ap Llywelyn ('Ifor Hael') of Basaleg in Morgannwg, and Ieuan Llwyd of Parcrhydderch in Ceredigion.

While upwards of 350 poems were attributed to Dafydd ap Gwilym by scribes of the 15th century and later, the canon of poems established by Thomas Parry in *Gwaith Dafydd ap Gwilym* (Cardiff, 1952) numbers around 150. Most are in the cywydd metre, but the collection also includes poems addressed to patrons in the englyn and awdl metres. Dafydd is particularly renowned for his courtly love songs and nature poems, often with a deeply religious subtext, but his output also includes humorous narratives about failed love-trysts reminiscent of the *fabliau* genre. Examples of other French and English genres in his work, such as the *pastourelle*, the *aubade*, and the *serenade*, attest to his familiarity with European traditions of court poetry, while numerous folk-tale and popular allusions suggest the influence of sub-literary traditions

associated with the *clêr*, the popular singers of medieval Wales.

Dafydd's contribution to the Welsh poetic tradition resides in his development of the *cywydd* metre as a stylish vehicle for court poetry; his assimilation of native Welsh traditions into the mainstream of European poetry; and the sheer range and quality of his verse, characterized by his versatile handling of CYNGHANEDD, the verbal wit of his puns and metaphors, and the seamless imagery of his poems of love and nature.

Helen Fulton

Dafydd Benfras (*fl.* 1220–58) was one of the medieval Welsh court poets known as the GOGYNFEIRDD, and is associated with the royal court of GWYNEDD in north Wales (CYMRU), where he sang to the major princes of the region between the second half of the reign of LLYWELYN AB IORWERTH and the early years of LLYWELYN AP GRUFFUDD. Although only 804 lines of his poetry have survived, he is regarded as one of the most accomplished poets of the period, his poems being well crafted and structured. He refers to himself as *pencerdd* (chief poet) and his poems exude the same self-confidence as seen (albeit to a greater extent) in the poetry of CYNDDELW Brydydd Mawr.

Apart from his association with Gwynedd, very little is known about Dafydd Benfras himself. (The epithet *penfras* literally means 'having a large head'.) BLEDDYN FARDD, Dafydd's contemporary and possible bardic pupil, wrote an elegy upon his death in which he refers to Dafydd as *un mab Llywarch* (the only son of Llywarch), and it has been suggested that Dafydd Benfras might well have been the son of the poet LLYWARCH AP LLYWELYN, who was probably the chief poet of Llywelyn ab Iorwerth until *c.* 1220. However, this testimony contradicts that of a 16th-century genealogy in the hand of Gruffudd Hiraethog, which claims that Dafydd Benfras belonged to a family of poets from Anglesey (MÔN) and that he was the son of one Dafydd Gwys Sanffraid. Another genealogy from the same source claims that the important 14th-century Anglesey poet Gruffudd ap Maredudd was a direct descendant of Dafydd Benfras. An attempt has been made to reconcile these two conflicting accounts of Dafydd's lineage by suggesting that *mab Llywarch* could figuratively mean 'bardic pupil' or even 'foster son of Llywarch', but this is unlikely. One must, therefore, decide between the contemporary evidence of Bleddyn Fardd, and the later evidence of the genealogy of Gruffudd Hiraethog. The latter is supported by a strong association between Dafydd Benfras and Anglesey which is attested in the poems and in references to him by later poets. The most recent editor of the work of Dafydd Benfras tends towards this second view.

We learn from the elegy by Bleddyn Fardd that Dafydd Benfras died in south Wales and was buried in Llangadog, far from his homeland in Gwynedd:

Uthr gwynfan chwerw, herw hirwae:
Eithr Gwynedd, ym medd, y mae.

Bitter [and] terrible lament, onslaught of long pain:
He is in a grave outside Gwynedd.

No mention is made in the poem of Dafydd's poetic skills; rather he is praised for his valour on the battlefield and for his generosity as a patron.

Eleven of the twelve surviving poems of Dafydd Benfras are sung in one of the AWDL metres, the other being a series composed in the ENGLYN metre. Thematically they are sung in the TALIESIN tradition, expounding the traditional themes of valour on the battlefield and generosity in the court, and, as mentioned above, the princes of Gwynedd were his main patrons. No religious poems as such have survived, but his poems demonstrate that he was well versed in the traditions of the Bible and the Apocrypha, and in one poem he addresses both God and Llywelyn ab Iorwerth. One

of his most notable poems is a series of *englynion* on the philosophical theme of the brevity of life, in which he reflects on the inevitability of the grave and the futility of all earthly wealth and ambition.

Ann Parry Owen

Dafydd Nanmor was a Welsh poet (*fl.* 1445–90) from Nanmor near Beddgelert in Snowdonia (ERYRI), GWYNEDD. He was exiled from his native region about 1453 because of love poems which he addressed to a married woman known as Gwen o'r Ddôl. He seems to have spent the rest of his life in south-west Wales (CYMRU). His principal patrons were the Tywyn family near Cardigan (ABERTEIFI), and his praise poetry to them over three generations represents some of the clearest evidence of the values of *perchentyaeth* ('householdership'). The advice poem which he composed in his old age to the young Rhys ap Rhydderch celebrates the continuity of noble stock, drawing on imagery from the Chain of Being. Among his love poems two are outstanding: an elegy for an anonymous girl, and 'Gwallt Llio', a description of a girl's hair that uses the technique of *dyfalu* (meaning approximately 'poetic description', literally 'imagining, conjecture') to dazzling effect. His style is renowned for its epigrammatic clarity, and he was a virtuoso exponent of verse forms, including an *awdl enghreifftiol* using all twenty-four strict metres (see AWDL; CERDD DAFOD; CYWYDD; ENGLYN; EINION OFFEIRIAD). His work displays some Latin learning, and it is possible that the group of his poems in Peniarth MS 52 (see HENGWRT) is in his hand. He composed a number of prophetic poems in support of the Lancastrian cause (see PROPHECY), and greeted the infant Henry Tudor (see TUDUR) as a future king soon after his birth in 1457. Some fifty of his poems survive, but the entire corpus has yet to be edited satisfactorily.

Dafydd Johnston

Dagda (Dagdae, Dagán) was one of the principal pre-Christian deities of Ireland (ÉRIU) commemorated in the MYTHOLOGICAL CYCLE of early IRISH LITERATURE, figuring in several texts as a leader or the king of the supernatural race, the TUATH DÉ, as in, for example, LEBAR GABÁLA ÉRENN ('The Book of Invasions') and the early tale DE GABÁIL IN T-SÍDA (Concerning the taking of the otherworld mound). The most extensive single surviving description of the Dagda is in CATH MAIGE TUIRED ('The [Second] Battle of Mag Tuired').

His name means 'good god' (< Celtic **Dago-dēwos*), in the sense of technical competence and excellence of performance, and is often cited with the definite article, i.e. the Dagda. One of his alternative names, Eochaid Ollathair ('father of all' or 'great father'), invites parallels to the Norse god Òðin (also known as Alfǫðr, 'all-father'), who is similarly versatile. His rôle as a father-god can also be deduced from surviving descriptions of him, and he is the father of several important characters in the Mythological Cycle, most importantly OENGUS MAC IND ÓC, a god excelling in youth and beauty, and the goddess Bríg, also known as BRIGIT. The Dagda has been interpreted variously as a sky god, storm god, earth god, and the sun. He is shown in several tales to possess great sexual potency, mating with many different goddesses, including BÓAND (the mother of Oengus Mac ind Óc) and the MORRÍGAN in the *Metrical* DINDSHENCHAS. His children include Áed Menbhrec, Bodb Derg, Cermat, Mider, and Ainge. He is also described as a great warrior and skilful in

magic. His characteristics suggest that the Dagda was a transfunctional deity associated with craft wisdom and bridging the distance between death and regeneration.

Even with all his powers, the Dagda is usually portrayed as gross and uncouth. Sent on behalf of the Túath Dé to the enemy camp in *Cath Maige Tuired*, he is mocked by the Fomoiri, who force him to drink an enormous quantity of porridge that has been poured into a hole in the ground. His greed is such that he eats it all and scrapes the bottom of the hole with his finger to get the last of it. He travels on to the Sligo coast, his penis exposed and the great size of his belly impeding his progress. Despite his grossness, he manages to seduce the daughter of Indech, who afterwards agrees to perform spells against the Fomoiri, although the Dagda's earlier sexual encounter with the Mórrigan has effectively ensured victory for the Túath Dé.

The Dagda has two fabulous material attributes, a cauldron of plenty (see cauldrons), and a club that can kill the living and raise the dead. The latter has led to comparisons of the Dagda with Heracles and the Gaulish figure Sucellus. The club is so huge that it has to be dragged on wheels. Owing to these attributes, some early modern scholars tended to see in the Dagda a throwback to 'primitive' beliefs and virtues of the Stone Age. In the trifunctional school of interpretation of Indo-European myths based on the work of Dumézil, the Dagda has been seen as exemplifying the third social function of wealth and food production. His cauldron, together with his omniscience, suggests that the Dagda might also have been a Celtic god of the Otherworld, and as such he has been identified with Donn and Dīs Pater.

Dál gCais (Middle Irish Dál Cais) is the name of an Irish kingdom and tribe of the early medieval period, centred on an area that is now eastern Co. Clare (Contae an Chláir). They first appear in the early 8th century as a branch of the population group known as Déisi Muman ('Déisi' or 'vassal tribes of Munster/Mumu'), settled on either side of the Shannon estuary. Those to the south and east of the river were known as the Déis Deiscirt and those to the north and west the Déis Tuaiscirt. By the beginning of the 9th century the lands of the Déis Deiscirt were overrun, probably by their neighbours to the west, the Uí Fidgenti, leaving the northern sub-kingdom standing alone.

The tribe is first referred to as the Dál gCais in 934, and the name can be seen as a by-product of innovative origin legend, which linked them with the previously dominant Éoganacht federation. This legendary pedigree derived the Dál gCais kings from traditional heroes assigned to the prehistoric period and gave them claim to the kingship of Caisel Muman: Dál gCais means 'people of Cas', named after Cormac Cas, son of Ailill Aulomm and brother of Éogan Már, legendary forefather and namesake of the Éoganacht tribes, who dominated Munster from the 6th to the 10th centuries. The creation of such a pedigree by the literary classes implies a political situation in which Dál gCais power had risen at the expense of the Éoganacht lineages. In the early 10th century other tribes of Clare, the Corca Mruad and Corca Baiscinn, came increasingly under the sway of the Dál gCais, who may also have extended their influence to the south of the Shannon estuary at this time. The 951 death notice of their king Cennétig mac Lorcáin in the Annals of Ulster calls him *rí Tuathmuman* ('king of Thomond, north Munster', approximately coextensive with the modern Co. Clare) and the Annals of Inisfallen, even more ambitiously, *rígdamna Cassil* 'royal heir of Caisel'.

It has been suggested that the rise of the Dál gCais at the expense of the Éoganacht was partly the result of machinations of the latter's traditional rivals, the Uí Néill kings of Tara (Teamhair), whose natural self-interest was to keep the Munster leadership weak with competing claimants to the kingship of Caisel (Kelleher, *North Munster Studies* 230–41). However, as Ó Corráin points out (*Ireland before the Normans*), the impotence of the Éoganacht and the resulting political

fragmentation of Munster can account for the success of Dál gCais without external factors. Arguing against an alliance with Tara at this period, Mael Sechnaill II of the southern Uí Néill invaded and laid waste Dál gCais territory in 950, when he also provocatively cut down the sacred tree (*bile*) at the royal inauguration site of Magh Adair.

The bitterness of the rivalry between the Dál gCais and the Éoganacht is reflected in the hostility in the hagiographic writings produced by the monks of their two main churches, at Killaloe (Cill Dalua) and Emly (Imleach) respectively. For instance, the Dál gCais saint Tairdelbach is described as smashing and burning the yew tree, the symbol of Emly and the Éoganacht (see Ó Corráin, *Ireland in Early Mediaeval Europe*).

The collapse of the Munster kingship in the mid-10th century was followed by a decade of sporadic warfare and constantly reconfiguring alliances, with the king of Dál gCais, Mathgamain mac Cennétig, and Mael Muad mac Brain of the Éoganacht Raithlinn the two main protagonists. By the end of this period Mathgamain, who had won the majority of direct encounters, appears to have been the *de facto* king of Munster. When Mathgamain was killed by Mael Muad following the treachery of his Uí Fidgenti allies, the kingship passed on to his brother, the renowned Brian Bóruma, who was to become the first convincing *Ard Rí na hÉireann* 'high-king of Ireland' from a dynasty other than the Uí Néill.

Following the death of Brian at the battle of Clontarf near Dublin (Baile Átha Cliath) in 1014, the power of the Dál gCais—or Uí Briain 'O'Briens' as they were henceforth known—fell into eclipse for several decades, but revived under Tairdelbach Ua Briain who, under the patronage of the king of Leinster (Laigin), succeeded in wresting control of Munster from his uncle, Donnchad. Tairdelbach succeeded subsequently in bringing Meath (Mide), Leinster, and Ulster (Ulaid) under his lordship. This trend continued under his son Muirchertach, who further expanded this sphere of influence to include Connacht.

After the death of Muirchertach in 1118 the supremacy of the Uí Briain came to an end and their lordship shrank back to their hereditary lands in Thomond. Following the Anglo-Norman invasion (1169–), they defended their territory more effectively than most Gaelic lordships and were still a powerful dynasty in the Tudor period (see tudur) when they became Earls of Thomond under the English policy of surrender and regrant.

A body of stories concerning the kings of the Dál gCais, the Dalcassian Cycle, is sometimes regarded as part of the Kings' Cycles (MacKillop, *Dictionary of Celtic Mythology* 113; Dillon, *Cycles of the Kings* 2). This material centres on the activities of Brian Bóruma and his son Murchad. Its prime source is the *Cogadh Gaedhel re Gallaibh* ('The War of the Gaedhil with the Gaill'), aiming to present the activities of Brian, especially at Clontarf, as patriotic and directed against the Norse rather than rival Irish warlords.

SÓF

Dál Riata (Dalriada, Early Old Irish Dál Réti) is the term universally used by modern scholars for the Gaelic-speaking kingdom which flourished in Argyll (Earra-Ghaidheal) between the 6th and 9th centuries AD. This name is, however, sparingly used in contemporary sources and its exact meaning and the chronology of its usage may be more complex than modern scholarship has allowed. Writing *c.* 730 the Northumbrian Beda explained the presence of Gaelic speakers in Britain thus: 'These came from Ireland under their leader Reuda, and won lands among the Picts either by friendly treaty or by the sword. These they still possess. They are still called Dalreudini after this leader, *Dal* in their language signifying a part.' In Argyll, the 2nd-century *Geography* of Ptolemy locates a tribe called Ἐπιδιοι *Epidii*, a name probably related to the common Irish *Eochaid*. Middle Irish pedigrees of the kings of the Scots include an Eochaid Riada (known in some versions as Cairpre Rígfota) who, if we assign an average number of years to generations, would have ruled in the 2nd century

AD, but by the period of the texts (900–1200) the migration had been redated to the time of FERGUS MÓR mac Erc whose obituary was noted in the ANNALS under the year 501. In its introductory passage the SENCHUS FER nALBAN claims that six of the thirteen sons of Erc settled in Scotland (ALBA), and this tale probably reflects the idea that there were six *cenéla* (kindreds) in Gaelic north Britain at the time this tract was originally compiled. The later portion of the tract, which deals with the military assessment of the 'three thirds of Dál Riata', names the three *cenéla* as Cenél nGabráin (based in Kintyre and Arran), Cenél Loairn (based in Mull and Lorne) and Cenél nOengusa. This last *cenél* was not descended from one of the six sons who were originally said to have settled in Scotland, but was principally located in Ireland (ÉRIU); however, a portion of them at the time of the text occupied at least part of Islay which, in the original scheme, had been assigned to the descendents of Fergus bec mac Erc. An additional unconnected tractate, *Cethri Prímchenéla Dáil Riata* (The four chief kindreds of Dál Riata), that appears to record information from *c.* 700, claims that the four 'chief kindreds' of Dál Riata were the three named above plus Cenél Comgaill, a group whose territory had been assigned to Cenél nGabráin in the *Senchus*. What all this indicates is that the position of the constituent kindreds within Gaelic Argyll was fluid throughout the period and that the genealogical doctrines which explain these relationships were equally fluid. It is also clear that part of the kingdom of Dál Riata was in Ireland, but whether this was just the lands of Cenél nOengusa or whether all seven of the kindreds descended from the sons of Erc were regarded as having land in north-east Ireland is less clear. It may well be that the scheme presented in the early part of the *Senchus*—which related the descent not only of the thirteen sons of Erc but also of the eleven sons of his brother Olchú—had originally been designed to explain the relationship of a much larger group of peoples in the north of Ireland and their offshoot in Argyll, and that the idea of a sub-grouping, which became known as Dál Riata, was a later development.

Scholars are not in agreement as to the internal organization of Dál Riata. Some see it as a typical Irish overkingdom with each of the *cenéla* functioning as a TUATH in its own right with a local king and assembly, whilst others, influenced perhaps by the king-list prefixed to the later Scottish king-lists, believe it to have been a single kingdom ruled by a strong centralized monarchy. For most of the historical period, from the mid-6th century to the end of the kingdom in the 9th century, the kingship, or overkingship, was held by Cenél nGabráin, although in the decades around 700 Cenél Loairn was sometimes able to challenge this monopoly.

Dál Riata is most famous for playing host to St Columba (COLUM CILLE) and his foundation of Iona (EILEAN Ì). Because of this we are relatively well informed about the kingdom from the period of Columba's arrival (*c.* 563) through to the mid-8th century when a copy of the Chronicle kept at Iona was taken to Ireland, where it was eventually incorporated into the Irish World Chronicle, an important forerunner of surviving versions of the Annals. Columba's contemporary AEDÁN MAC GABRÁIN (r. 574–608) is the most famous of Dál Riatan kings, partly because he features significantly in the hagiographical record of the saint but also because he seems to have been the most successfully aggressive of the kings of Dál Riata, campaigning widely in northern Britain and

establishing a regional hegemony in north-central Ireland. The large network of Irish cousins attributed to Dál Riata in the *Senchus* may reflect his ambitions in this area.

After the end of the extant Iona Chronicle coverage in the mid-8th century our understanding of the history of Dál Riata is reduced. In the 730s and 740s the Pictish king ONUIST son of Uurguist (Oengus son of Forgus) led a series of campaigns against the kingdom and some scholars see this as the effective end of its independent existence. By the middle of the 9th century a Cenél nGabráin dynast, CINAED MAC AILPÍN, made himself king of the PICTS and set the stage for the Gaelicization of all northern Britain. Precisely how this was achieved is far from clear. Equally the date of the disappearance of both Cenél nGabrain control over parts of Ireland and an independent kingdom in Argyll are unknown, but were presumably the results of the upheavals caused by the Vikings in the latter part of the 9th century.

Dallán Forgaill (the little blind one of the testimony) is the name given to a poet and character of early GAELIC literature. His real name may have been Eochu mac Colla, and he was perhaps from Co. Cavan (Contae an Chabháin), but there are conflicting traditions (see Clancy & Márkus, *Iona* 98). To him is attributed the Old Irish poem *Amrae Coluimb Chille*, an elegy on St Columba (COLUM CILLE), who died on 9 June AD 597. Details of the poem, such as a reference to its commission by 'Aed', probably the saint's cousin, King Aed mac Ainmirech (†598) of the Northern Uí NÉILL, and the absence of any trace of the legendary material found in St ADOMNÁN's *Vita Columbae* of *c.* 692, make it likely that *Amrae Coluimb Chille* is a genuine product of the immediate aftermath of the saint's death, though the poem awaits publication of a rigorous linguistic scrutiny. The poem is a tour de force, couched in a rhetorical style absorbed from earlier praise poetry, peppered with learned Christian references and Latin words—some Gaelicized, and others kept in Latin form—and dense passages, often in grammatically dismembered form. Its justifiable fame rests not only on its somewhat rococo literary qualities, but also as the earliest testimony to the historical St Columba (see Herbert, *Iona, Kells, and Derry* 9–12; Charles-Edwards, *Early Christian Ireland* 285–90). It is also the first in a series of important praise poems to the saint emanating from the Columban *familia*. Dallán himself became a character in tales, some of them centred on the circumstances of the composition of the *Amrae* (Herbert, *Iona, Kells, and Derry* 'Preface'), held to be repayment for Columba's intervention to prevent a proposed banning of the overly powerful order of professional poets. In other tales he is identified with the chief poet Eochu Rígéces (King-poet), and in these his personality becomes that of a conservative guardian of a faded literary tradition and its élite.

Damona, a Gaulish goddess whose name may mean 'great/divine ox' (cf. Old Irish *dam* 'ox' and the goddess names EPONA, MATRONAE, NEMETONA, SIRONA) is attested independently and in dedications that link her with Apollo Borvon, Apollo Moritasgus, and Albius (Mars Albiorix?). A ritual precinct that encloses sacred springs and thermal baths at ALESIA preserved both a statuary head, thought to depict Damona wearing a crown wreathed with ears of grain, and fragments of a left hand holding a snake. Consistently associated with curative waters and probably honoured as a healer, Damona shares her attributes—the snake and grain—with Greek Hygeia and Demeter respectively.

Dancing aboard the Bangor boat (1906)

The 'American Wake' from Riverdance

dances [1] Irish

Although dance and dancing must almost certainly have existed in early Ireland (Ériu), references to them are rare. Some dances came to Ireland with the Norman invasion in the 12th century and others were of earlier, presumably native, origin. Earlier use of words such as *cleasaíocht* (acrobatics) and *léimneach* (jumping; the cognate Middle Welsh *llamu* is also used for 'dancing'), indicate a form of dancing, but the modern Irish words for dance, *dámhsa* and *rince*, are loanwords, appearing in the 16th and 17th centuries respectively (cf. Welsh *dawnsio*).

The jig was well established in Ireland by the 18th century, towards the end of which the reel and hornpipe also became part of the dance and music repertoires in Ireland. These three are the most frequent dance rhythms of today, but slip jigs, double jigs, polkas, slides, and mazurkas are among the other popular dance steps current in Irish tradition.

Travelling dancing masters helped to increase the popularity of dancing, of particular dance forms and of various steps. These travelling dancing masters are well attested in many accounts and travelled from village to village, usually spending some weeks at each one. Normally, they stayed with a local family and, in return for bed and board, taught dancing free of charge to the members of the family.

Sets and half sets were the most popular dances throughout Ireland in the 19th and 20th centuries. Although they became less popular for many years, they regained their popularity in the 1980s and are now a vibrant part of traditional dance. They derive from the quadrille that was very popular in Paris during the time of Napoleon, and was brought to Ireland and England by the armies of the Duke of Wellington. The quadrille is based on a square dance of four couples and was developed to suit native Irish rhythms and music. The set dances contain several figures, and much of the nomenclature and movements recall their military origin. Many sets are associated with a particular region, e.g. 'The Mullagh Set' or 'The Conamara Set'.

Formerly, dances took place in peoples' homes, but by the middle of the 20th century the development of

commercial dance halls and changes in lifestyle, travel, and communication saw the decline of the custom of the 'house dance'. The Irish word *céilí* means an informal social gathering in a neighbour's house, but since the beginning of the 20th century it has often come to be used to describe an organized dancing session. As part of a policy towards the re-establishment of the IRISH language and related culture, the Gaelic League (CONRADH NA GAEILGE) banned several dances because they were seen to represent foreign introductions, and was largely responsible for reviving older figure dances and creating newer dances for the *céilí*.

Solo or step dancing is found in all parts of Ireland (ÉIRE) and allows for a demonstration of the individual's creativity and artistry in footwork. Travelling dancing masters taught these dances from the early 18th century until well into the 20th century. During recent years, the older, freer forms of solo dance have been taught and displayed at summer schools and festivals, while at the same time modern displays such as 'Riverdance' have drawn on traditional step dance forms.

dances [2] Scottish

Indigenous Scottish dances include weapon dances, ritualistic dances, dramatic dances, social dances, and solo step dances.

Scottish weapon dances involved step dancing as part of mock battles with dirks or cudgels or dancing over dirks or crossed SWORDS, two swords for the Gille Calum solo sword dance (*Dannsa a' Chlaidhimh*) or four broadswords for the four-man Argyll broadswords. Ritualistic hilt-and-point sword dances performed in Perth (Peairt) in the 16th century and in Papa Stour in the Shetlands (Sealtainn) until the late 19th century symbolically slayed a hero as a sacrificial victim and then brought him back to life. These dances were related to the guisers' play (in which one character was wounded or slain, and then resurrected by a comic doctor), and morris dances.

The death-and-resurrection theme recurs in the widely known dramatic dance *Cailleach an Dùdain* ('The Old Woman of the Mill Dust'), performed to the tune of the same name played on pipes or fiddle or sung as *puirt-a-beul* ('mouth music'). The dancing and pantomime of a man and woman suggest simultaneously the manoeuvres of weapon play and the flirtations of a mating ritual. In one version, both are armed with sticks. In another, the man has a druidic or magic wand (*slachdan druidheachd* or *slachdan geasachad*). The man eventually kills the woman and then magically revives her limb by limb. The mill dust is the dark dust of a variety of oats that blackens the face when threshed, resembling the blackened or masked face of a morris dancer.

The manoeuvring for position recurs in dramatic dances that imitate the antics of cocks before mating or a cockfight and incorporate circling or swinging, e.g. in *Ruidhleadh nan Coileach Dubha* ('The Reel of the Black Cocks') and *Cath nan Coileach* ('Combat of the Cocks'), both from Barra (Barraidh).

Early social dances were communal ring dances, performed around a venerable object such as a sacred tree, a holy well, or a BELTAINE fire, and accompanied by communal dance-songs, called carols, or by BALLADS. A leader chanted a narrative line of a verse, and those in the ring responded in unison with the chorus as they danced around in a circle holding hands. The vocal solo and response form may derive from the communal work song. The SCOTTISH GAELIC-speaking areas also had ring dances of this type, e.g. *An Dannsa Mór* ('The Great Dance'), known on the Isles of Skye (An t-Eilean Sgitheanach) and Eigg (Eige).

The *Ruidhleadh Mór* ('The Big Reel') from Skye is similar to a ring dance in which the circling stops as the dancers drop hands and perform setting steps on the spot before continuing around in a circle. This type of dance may have been the progenitor of the uniquely Scottish social dance called the reel. The reel consists of a travelling figure alternating with setting steps danced on the spot and sometimes swinging. In the old west Highland circular reel for two couples, the travelling figure describes a circle. In the eastern HIGHLANDS and the LOWLANDS, the 'reel of three' used a weaving figure-8 pattern for a travelling figure and was replaced by a 'reel of four' with a figure 8 with an extra loop. Such reels also introduced the use of raised arms or arms akimbo during setting or swinging, snapping the fingers, and heuching (giving

'Gilli Challum' by Ronald Robert MacIan (1803–56)

a sudden yelp of glee). Dances were accompanied by BAGPIPE, FIDDLE, or, in the Highlands, *puirt-a-beul*.

The Scottish tunes and travelling steps used for reels were applied to the English country dances introduced into Scotland (ALBA) after 1700. The unique Scottish contribution to the figures of the country dances was the figure 'set to and turn corners and then reels of three with corners', which derived from the setting, swinging, and travelling patterns of the reel. The rhythmic pattern of the travelling step—step, close, step, hop—is the basis for any step or dance historically referred to as a *Schottische* (German for 'Scottish').

The devising and teaching of setting steps to dance in the reels led to the development of solo dances that emphasized the display of numerous steps choreographed to match a specific tune that gave the dance its name. The earliest of these dances still featured travelling steps in a circle interspersed with setting steps. Each turn of setting steps had a different variation at first and then ended with the same set of movements.

The earlier form of setting steps in the Highlands was low to the ground, shuffling and beating out the rhythm of the melody with the feet. The feet were parallel, the arms hung loosely at the side, and the subtle movements caused very little vertical movement. Later the shuffles and beats were extended into the kicks, rockings, sheddings, shakes, balances, and raised arm movements known in modern Highland dancing. The influence of dancing-masters trained in French ballet brought turnout, vertical lift, and balletic leg and arm movements into the step dances in Scotland.

The Highland emigrants (see EMIGRATION) to Cape Breton, Nova Scotia, Canada in the years 1784–1820 retained the older, close-to-the-floor tap-dance style. They took with them *Ruidhleadh Cheathrar* ('Foursome Reel'), also known as *Ruidhleadh Bheag* ('The Small Reel'), and the eight-handed reel, *Ruidhleadh Mór* ('The Big Reel'). The Foursome Reel is similar to the old west Highland circular reel described, the setting steps performed with the dancers in a straight line or in a

square formation. In one form, the dancers swing each other instead of setting, and the travelling figure is performed by the diagonal pairs changing places. In the eight-handed reel, partners start facing each other in one large circle around the room. They set to and swing each other and, facing in the original direction, move on to the next person and do the same, and so on around the circle. Known as 'the wild eight', the dance was so boisterous in the mid-19th century that priests put a temporary ban on social dancing, and in some parish districts even went so far as to collect and destroy all the fiddles.

The older solo dances were forgotten in Cape Breton when reels gave way to French quadrilles, known as 'square sets', in 1890. In the revival of step dancing in solo dancing and within the square sets 60 years later, the steps consisted of very short sequences of movement assembled together extemporaneously rather than choreographed into longer segments with repetition to a specific tune.

Most of the competitive dances performed at HIGHLAND GAMES are not traditional Highland dances, but were devised by Lowland dancing masters in the 1790s and the early 1800s. During the 1950s and 1960s Joan and Tom Flett collected social dances and solo step dances in Scotland that show the variety of dances and steps once extant before the introduction of modern dances after the First World War and the standardization of Highland dancing in 1955. Frank Rhodes, a colleague and co-writer with the Fletts, also collected dances in the Hebrides (Innse Gall) and in Cape Breton in the 1950s and 1960s and noted the similarities and differences between the two related traditions.

dances [3] Welsh

Like the traditional dances of most countries, those of Wales (CYMRU) have been handed down from generation to generation in specific localities or communities. Although many of the figures and steps used are common to traditional British dances, it is the recurrence of certain figures in the majority of Welsh dances that links them in what may be termed a Welsh tradition. Dances were, in the main, connected with the seasons or with annual festivities such as May Day (*Calan Mai*), MIDSUMMER'S DAY, harvest time, Hallowe'en (*nos Galan Gaeaf*), Christmas, and New Year (see further BELTAINE; CALENDAR; SAMAIN).

With the exception of the clog dancing tradition, which has survived unbroken, dancing all but disappeared in Wales during the religious revivals of the Nonconformist Protestant denominations in the 18th, 19th, and early 20th centuries (see CHRISTIANITY), but regained popularity later in the 20th century. The Welsh Folk Dance Society was formed in 1949, but there were some developments prior to this: 1918 saw the 'Llanofer reel', a dance devised at the country-house of Llanofer, Gwent, being recalled. A group of Llanofer children performing the reel were filmed by URDD GOBAITH CYMRU (The Welsh League of Youth) in 1933. Hugh Mellor collected a huge number of Welsh folk dances, and Gwennant Gillespie (née Davies), who joined the staff of Urdd Gobaith Cymru in 1943, played a major part, until her retirement 30 years later, in furthering folk dancing as an important part of the movement's activities. The driving force behind the folk dance revival in Wales, however, was Lois Blake, an Englishwoman who, in the 1930s,

Owen Huw Roberts dancing to the accompaniment of David Elio Roberts on the harp and Robert Ifor Roberts on the clarinet

moved from Liverpool (Welsh Lerpwl) to Llangwm, Denbighshire (sir Ddinbych). Having been a member of the English Folk Dance Society for some time, she was astonished to find that so few dances were being performed in Wales compared with other parts of Britain. She began teaching local children and adults to dance and carried out a vast amount of research into Welsh dances and dancing. At this time she met the well-known musician and publisher from Llangollen in north-east Wales, W. S. Gwynn Williams (1896–1978), who had himself undertaken a great deal of research into Welsh music and folk dancing, and together they published a series of dance manuals. Lois Blake and W. S. Gwynn Williams, along with Emrys Cleaver and Enid Daniels Jones, were the founder members of the Welsh Folk Dance Society and became, respectively, its first president, chairman, treasurer and secretary.

Lois Blake travelled widely, visiting libraries and museums within Wales and in other parts of Britain, and meeting people who were interested in Welsh folk dances and dancing. The 17th- and early 18th-century publications of John Playford (1623–86?) and John Walsh (†1736) included dances and music with definite Welsh associations and as a result they were regarded as part of the Welsh dance tradition. Details of the 'Llangadfan dances' were discovered in 1920 among the papers of Edward Jones (*c.* 1729–95). Lady Herbert Lewis provided information on the dance called 'Cadi ha'. Lois Blake also met a remarkable lady by the name of Margretta Thomas, Nantgarw, south-east Glamorgan (Morgannwg), who remembered the dances performed at fairs and festivals in that part of Wales. Her daughter, the dialectologist Dr Ceinwen H. Thomas, recorded the details and transferred them to Lois Blake, who arranged for the dances to be published. The work of discovering, interpreting and publishing dances continues to the present day, under the scrutiny of the editorial panel of the Welsh Folk Dance Society, and new dances, based on the Welsh dance traditions, are composed and published.

Over the years, mainly through the efforts of Urdd Gobaith Cymru and the Welsh Folk Dance Society, the number of dance parties across Wales has increased. Folk dancing has been recognized on a national level through the Urdd National Eisteddfod, the National Eisteddfod of Wales (Eisteddfod Genedlaethol Cymru), the *Cerdd Dant* Festival (*Gŵyl Gerdd Dant*), and the Llangollen International Musical Eisteddfod (Eisteddfod Gerddorol Ryngwladol Llangollen), and increasing numbers of dance festivals, organized by the parties themselves, are held throughout Wales.

dances [4] Breton

In terms of its folk traditions, Brittany (Breizh) is recognized as one of the more culturally conservative regions of France, though adherence to older forms of practice naturally varies in degree from area to area. In the Romance-speaking region of Breizh-Uhel (Upper Brittany)—where the major towns were established—dances were borrowed from other cities very early and very thoroughly, thus contributing to the reinvigoration of the repertoire. Here, fragments taken from quadrilles or other figure dances mingled with older local traditions to create, by the early 19th century, a distinctive syncretized style. Dances such as *balanceuses*, *balancières*, *avant-deux* and *guedaines* have emerged as a result. Remnants of an earlier tradition have survived to this day in a vestigial *passe-pied*, and, over towards the linguistic border, in several *branles*.

Traditional dance in the Breton-speaking region of Breizh-Izel (Lower Brittany) has retained far more of its original nature, though here too there is some element of change and renewal. The oldest types of dance known in Western European culture are round dances formed by a closed chain of an unlimited number of dancers, who circle with a single repeated step. These are still in use and are well represented in the countryside of the modern departments of Aodoù-an-Arvor (Côtes d'Armor), Penn-ar-Bed (Finistère) and Morbihan. The name usually given to these dances in Lower Brittany is of the type *-tro*, *an dro*, *dañs-tro*, based on the word *tro*, meaning 'turn'.

In general, the *dañs-tro* is followed immediately by another dance, the *bal* (Old French *baller* 'to dance'), which involves changing the arrangement of the dancers between a round and a procession, with additional separation into couples. In the suite which brings the two dances together, the large collective *dañs-tro* thus breaks up into a more personalized form of expression. The suite has two parts (*dañs tro*, *bal*) in most of

Traditional Breton dancing in Surzur (1939)

KERNEV and GWENED, but has three parts in Upper Kernev, which is traditionally more conservative than other regions. Its composition recalls the designation *trikory* (from *tri c'hoari* 'three games'), given at the turn of the 15th and 16th centuries to a dance-step from Lower Brittany.

This suite of dances fulfils two social functions at once, being both a pleasurable leisure exercise and a reinforcement of existing social networks. But it is also peculiarly flexible, adapting to the needs of the moment. With the exception that no one dances during Lent, the dance is not tied to the religious or secular calendar, nor even to a seasonal one. Instead, it is closely linked to marriage days and to certain kinds of rural labour. Ceremonial at moments during a wedding, it becomes practical when used to separate buckwheat, soften flax or tramp down the earthen floors of threshing-areas or new houses.

Far from being always the same, the composite dance-step of the *dañs-tro* differs from region to region. The musical beat may be 8-count or 4-count, less often 3- or 6-count, and the rhythm may change. The most westerly group covers all of Kernev, with significant extensions into LEON and Morbihan: the dance characteristic of this region is known by the French name *gavotte*. To the east, two other areas spread over the linguistic border. The first is restricted to Aodoù-an-Arvor, where the dance is called *dañs fañch* or *dañs plin* in the west, and *ronde* or *rond* in the east. The second is in the Morbihan, where the dance is known as *en dro* around Gwened and *tour*, *pilée* and *pilé-menu* further east.

Another type of dance, also very old, is performed in a northern zone stretching west to east, from Upper Leon, between the road from Landerne (Landerneau) to Montroulez (Morlaix) to the north of the Monts d'Arrée, and also at the western edge of TREGER which adjoins it. Here the main element of the ensemble is not the closed chain but the double front, one consisting of men, one of women, facing each other. Where the circular disposition of the *dañs tro* reveals its affiliation with round dances of the greater European tradition, the double front of the *dañs Leon* and the *dañs Treger* marks a radical distinction: it bears some resemblance to the 'longways for as many as will' of British tradition, which may have influenced it.

As practised by the last few generations of genuinely peasant communities, Breton dances could be accompanied by instruments or voice, with some areas using both alternately: in some places, however, the arrival of instruments is relatively recent. In regions where musical instruments have been used for a long time the dances appear to have metamorphosed into new forms more readily. Thus in Lower Kernev and part of southern Gwened, the dances changed over time from a closed chain to an open chain, then to successively shorter chains ending up, in some cases, in couples.

Another form of renewal in the repertoire involves the recreation in a rural context of borrowed figures from urban dances. At least two of these new arrivals have become very widespread: the *jabadao* in the south, spreading in all directions from Quimper, and the *dérobée* in the north, spreading from Upper Brittany to Treger.

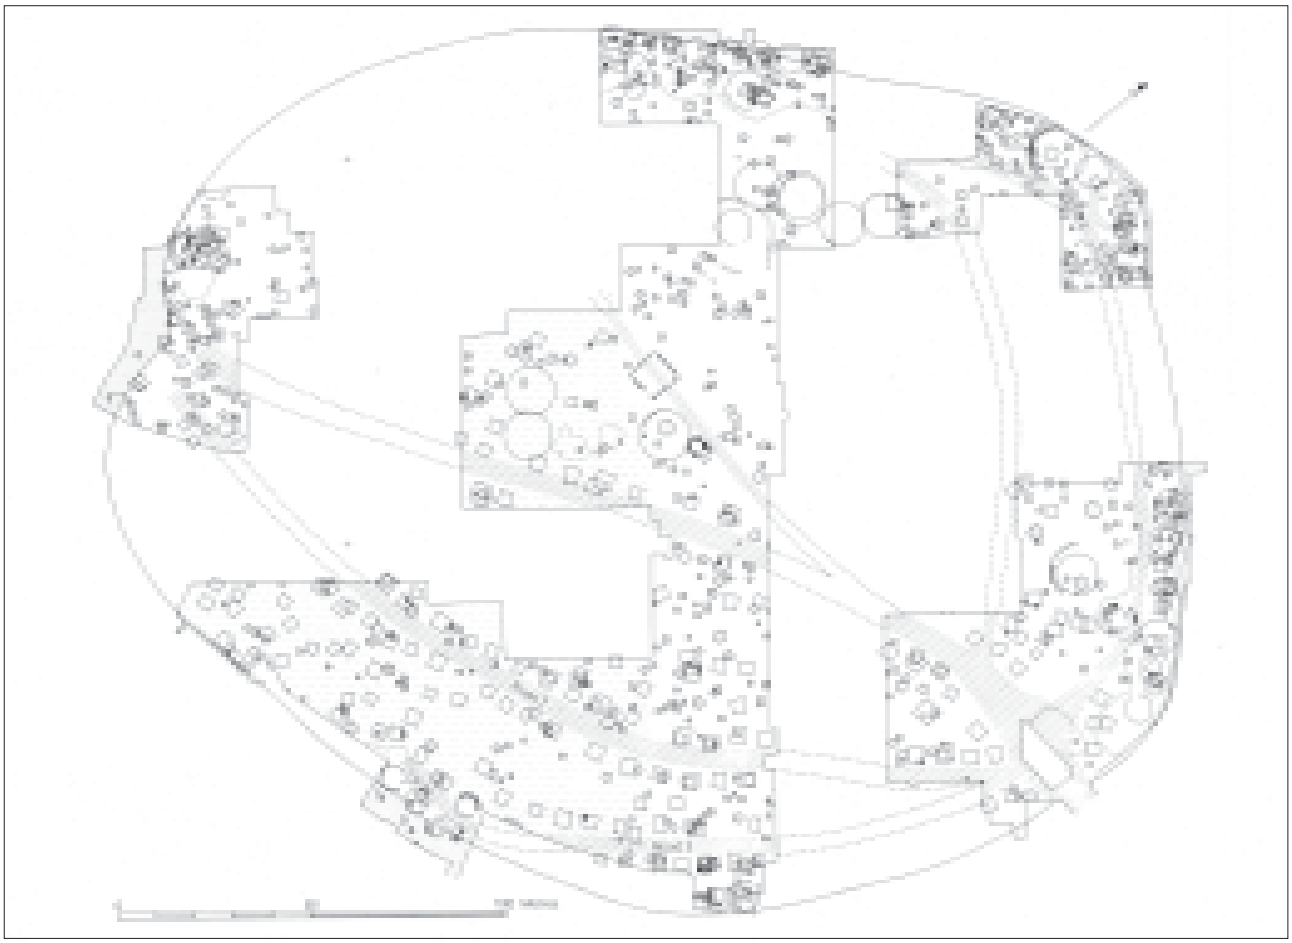
Danebury

The hill-fort of Danebury may be taken as representative of a series of successive stages in the social history of central southern BRITAIN in the pre-Roman Celtic IRON AGE. The site occupies a prominent position on the chalk downs of Hampshire, England. In its developed form, the main FORTIFICATION (the inner earthwork) enclosed an area of 5.3 ha (13 acres), which excavation showed to have been densely occupied. Outside the main defences, on the south-east side, the middle earthwork defined a corral attached to the fort. The whole complex lay within a much slighter ditched enclosure (the outer earthwork), which was probably of Late Bronze Age (*c.* 1200–*c.* 700 BC) date and represents the first stage in the definition of the hilltop.

Danebury has been the subject of a 20-year programme of excavations (1969–88), during which time 57% of the occupied interior (some 3 ha, 7 acres) has been totally excavated, resulting in a very large database—both structural and artefactual—reflecting on Iron Age society, economy and belief systems in southern Britain.

Occupation probably began in the late 6th or early 5th century BC with the construction of a palisaded enclosure occupying the hilltop, set within the Late



Danebury, late period, c. 350/300–c. 100 BC: excavated settlement area within the ramparts, showing roads, round houses, rectangular structures, and storage pits

Bronze Age ditched ENCLOSURE. Later in the 5th century the palisade was replaced with a rampart and ditch which had opposed entrances to the east and south-west. The rampart at this stage was faced with a vertical timber wall anchored back into the chalk-built rampart behind. In the middle of the 4th century BC there is some evidence of dislocation marked by a horizon of burning. This was followed by the refurbishing of the defences, now in glacis style (with a continuous steep slope from the crest of the rampart to the bottom of the ditch), and the blocking of the south-west entrance. The fort was intensively occupied in the 3rd and 2nd centuries BC, during which time its east entrance was strengthened on several occasions and provided with forward-projecting hornworks, creating a long corridor approach (and hence a defensive gauntlet for would-be attackers) to the gate itself which, in its later stages, was set within a gate tower. Occupation on a large scale came to an end in the early part of the first century BC, at which time the gate was destroyed in an intense fire, quite possibly as the result of enemy raiding. Thereafter, the old enclosure continued to be used, though on a much reduced scale, into the early years of the first century AD.

The history of Danebury fairly reflects the history of central southern Britain in the Iron Age. In the 6th–5th centuries BC, hill-forts were appearing quite widely, and were often vertically walled and provided with opposed entrances. Many of these early hill-forts went out of use in the 4th century, while a much smaller number were strongly refortified with only one enhanced entrance. Forts of this kind, intensively occupied in the 3rd and 2nd centuries, are referred to as developed hill-forts. Extensive field surveys carried out in the vicinity of the developed hill-forts of Danebury and MAIDEN CASTLE suggest that for many kilometres around the landscape was devoid of rural settlement, the implication being that

the population was now living within the forts.

Excavations inside Danebury showed that circular timber houses, streets, storage buildings and storage pits were already established in the 5th century, but the intensity of activity increased dramatically at the end of the 4th century, by which time a regular pattern of ROADS had developed and distinct zones of activity had been established. In the centre were buildings best interpreted as shrines, while houses occupied the peripheral space immediately behind the rampart. A main road ran across the centre of the site dividing an area dominated by storage pits from a zone of regularly arranged four- and six-post storage buildings.

Artefacts, animal bones and charred plant remains recovered from the excavations demonstrated the predominantly agricultural basis of the economy (see AGRICULTURE). Some items, such as salt, quern-stones, iron and bronze, were brought in from outside the region through exchange networks but, apart from ironsmithing and some bronze casting, there is little evidence of industrial activity within the settlement.

The belief systems of the community were amply demonstrated by the shrines in the centre of the fort and by special deposits (see HOARDS) placed in the grain storage pits when they had ceased to function as such. These special deposits, including animals, in whole or in part, grain, sets of tools, pots and human remains, were recovered from a high proportion of the pits and may well represent propitiatory offerings to the deities controlling the agro-pastoral cycle.

Barry Cunliffe

dánta grádha

The formal study of Irish courtly love poetry originates with the work of the Irish scholar T. F. O'Rahilly (Tomás Ó RATHILE). Between December 1915 and August 1916 he edited 37 poems in *New Ireland* under the general rubric 'Love Poems from Irish MSS'. These poems were published in book form in November 1916 as *Dánta Grádha: An Anthology of Irish Love Poetry*, with an introduction by another Irish scholar, Robin Flower (1881–1946). In 1925 O'Rahilly published *Laoithe Cumainn* (Love songs), a collection of 23 poems, including 15 from his previous work, but with no introductory essay. A year later, he published a second edition of *Dánta Grádha*, greatly expanded to 106 poems, 75 of which are anonymous. Of the 21 authors cited, some are little more than names to us. This volume also contained a substantial preface by the editor, and a complete recasting by Flower of his introductory essay.

Flower placed special emphasis on Gearóid Iarla (†1398), the first recorded poet of Norman descent to compose poetry in IRISH. Acquainted with both the French tradition of *amour courtois* and the Irish tradition of *bairdne* (bardic poetry), authors such as Gearóid Iarla were admirably placed for introducing COURTLY LOVE into Irish verse. Despite his emphasis on the French connection, Flower also underlined the close similarities between Irish courtly love poems and 16th-century English authors such as the Earl of Surrey and Thomas Wyatt the elder. In the later version of his essay, however, Flower gave much more prominence to the rôle of French literature, barely conceding the possibility of English influence. Normally a most perceptive critic, Flower was apparently caught up in the ideology of the emergent Irish Free State (see IRISH INDEPENDENCE MOVEMENT), finding it more acceptable to link the culture of Gaelic Ireland (ÉIRE) with Continental Europe than the recently departed enemy.

Flower's seminal essay dominated literary criticism of the *dánta grádha* until the final years of the 20th century. In recent years, a more nuanced approach has come to the fore, with Seán Ó TUAMA arguing for three periods of external influence on Irish courtly love poetry: (1) 1200–1400, French; (2) 1400–1550, French and English; (3) 1550 onwards, mainly English (*An Grá i bhFilíocht na n-Uaisle*). From this perspective, however, only Gearóid Iarla shows any possible trace of overt French influence. Given the late date of the bulk of these poems, it is more prudent to seek evidence for foreign influence in English, rather than French, sources, concentrating on poems in their totality rather than on mere thematic similarities. In fact, this approach has already yielded some very interesting

results. Riocard do Burc's *Fir na Fódla ar ndul d'éag* (The men of Ireland after dying), for example, is a free adaptation of Ovid's *Non ego mendosos ausim defendere mores, Amores* 2.4. Instead of deriving directly from the Latin, however, Do Burc's version demonstrates familiarity with Sir John Harrington's translation, posthumously published in his *Epigrams* (1618), and subsequently reprinted in 1625 and 1633–4. The interest in Ovid is evidence of the RENAISSANCE interest in the classics, while the surname Do Búrc indicates a bilingual member of Old English stock (i.e. families in Ireland descended from the 12th-century Anglo-Norman invaders), ideally placed to mediate between the English and the Gaelic worlds. An amateur poet, Do Burc's foray into verse shows that the realm of love poetry offered the possibility of breaking down the barriers erected by the hereditary professional literary caste to protect their privileged status (see BARDIC ORDER).

Pádraigín Haicéad (1600–54) is another amateur poet of Old English stock whose love poems in stress metre to Máire Tóibín merit scrutiny. The fact that the lady is a historical figure leads us away from the medieval world into that of the Renaissance, with its emphasis on the dignity of the human person. One of his poems cleverly adapts Ovid's tale of the sun and the marigold to describe his relationship with Ms Tóibín, but it is Haicéad's failure to render the wordplay between *marigold* and *golden Marie* in Irish that ultimately reveals his source—a poem by one Charles Best, published in *A Poetical Rhapsody* (1602). Haicéad also composed moving and witty poems to his male friends very much in the style of Herrick and Carew. His contemporary Piaras Feiritéir (†1653), another poet of Old English stock, resembles even more closely the work of English cavalier poets in the poems of friendship he composed for both male and females.

Bilingual members of Old English stock were at a distinct advantage in enriching the Gaelic literary tradition with the current trends in contemporary English verse. Members of the Gaelic aristocracy in both Ireland and Scotland (ALBA) also turned their hands to amatory verse, in keeping with the prevailing fashion across western Europe. Understandably, the professional poets did not take kindly to outsiders invading their domain, and responded in kind. When they involved themselves in composing love poetry, however, they did so with a certain sense of irony and wordplay, love for them being much more of a game rather than a matter of life and death. While Eochaidh Ó hEÓDHASA's *Ionmholta malairt bhisigh* (Change for the better should be praised) is usually interpreted as a light-hearted lament for the decline of classical syllabic poetry, it is equally possible to interpret Ó hEódhasa as claiming that amatory verse was both easier and more profitable than formal eulogy. The poem was composed around the time of the marriage of Rudhraighe Ó Domhnaill to Bridget Fitzgerald in 1603. Ó hEódhasa also composed a love poem to Bridget, pretending that it was written by his patron, Cúchonnacht Mag Uidhir. Bridget, in her turn, had a poem sent back to Ó hEódhasa, commissioning a professional poet or possibly composing it herself, in which she let Ó hEódhasa know in no uncertain terms that she had seen through his tricks. Ó hEódhasa replied in a final poem in which he plays both a male and a female rôle. This poem, a witty dialogue between two former lovers who have both betrayed each other, exhibits many of the characteristics of the answer-poem, a type of verse that came to the fore in the courts of James I and Charles I. The poetic interchange between Ó hEódhasa and Fitzgerald with the involvement of Ó Domhnaill and Mag Uidhir gives a very interesting insight into the recreational activities of the Gaelic aristocracy in the early 17th-century.

Mícheál Mac Craith

The **Danube** (**Dānuvius**) is the second longest river in Europe (2845 km from the confluence of the Brigach and the Breg; 2888 km from the source of the Breg). Its two headwaters, Brigach and Breg, have their origin in the Black Forest in south-west Germany, and join at Donaueschingen (Baden-Württemberg) to form the Danube. The river flows through south Germany, Austria, Slovakia, Hungary, Croatia, Serbia, Bulgaria, and Romania, before finally discharging into the Black Sea.

§1. DANUBIA IN THE IRON AGE AND ROMAN TIMES

The Greek historian HERODOTUS, wrote in the 5th century BC: '. . . the Ister [Danube], beginning in the land of the Celts (Κελτοί *Keltoi*) and the city of Pyrene, flows through the middle of Europe' (2.33). The location of Pyrene is unknown, but a confused reference to the Pyrenees has been suggested. In the IRON AGE (8th–1st century BC), the Upper Danube region was in the heartland of the HALLSTATT and LA TÈNE cultures, and many significant hill-forts and *oppida* (sing. OPPIDUM) have been found on the banks of the river, e.g. HEUNEBURG, MANCHING, KELHEIM. Place-name evidence in the Danube region points to an ancient Celtic-speaking population, with places such as Vienna (*Vindobonā* 'White or fair settlement'), Passau (ancient *Boioduron* 'Oppidum of the BOII, i.e. of the cattle lords)' and Lorch (*Lauriācum* 'Settlement of Laureus'), as well as SINGIDŪNON (modern Belgrade), bearing Celtic names. Most of the river-names in this region are also Celtic, e.g. the two headwaters Brigach and Breg (see BRIGANTES), the Inn, the Isar, and the Iller.

§2. THE NAME

In Roman records, *Dānuvius* at first referred only to the upper course of the river, with *Ister* as the name of the lower Danube. The latter is derived from Greek Ἴστερ, a name which was probably itself borrowed from the Thracian language. In modern European languages, the name is German *Donau*, Hungarian *Duna*, Serbo-Croatian and Slovak *Dunav*, and Romanian *Dunărea*. All of these forms (except *Ister*) imply an older **Dānou̯io-*. The Welsh river-name *Donwy* reflects this same original form **Dānou̯io-*, which is thus shown to have existed in PROTO-CELTIC. The English river-name *Don* is derived from a related Celtic **dānu-*; the nearby town of Doncaster was ROMANO-BRITISH *Dānum*, Old Welsh *Cair Daun*. The name *Danube* has been connected with the Irish goddess Danu (see TUATH DÉ) and the Welsh mythological ancestress DÔN, but the three names are distinct: the Irish has a short *a* or short *o*, the Welsh a Celtic short *o*, and *Danube* < **Dānou̯io-* a long *ā*.

Danube is probably derived from the INDO-EUROPEAN word **deh₂nu-* 'river', from the root **deh₂-* 'flow', cf. Vedic Sanskrit *dānu-* 'dripping fluid' (or 'gift'?), Ossetian *don* 'water, river'. It has been suggested that the name was an early loan into Celtic from its ancient neighbour to the east, the Iranian language of the Scythians of the eastern European and central Asiatic grasslands. (A kindred Iranian-speaking group, the Sarmatians, also penetrated ancient central Europe.) We have, for example, the Scythian tribal name Δαναοί *Dana(v)i* (reflecting Proto-Iranian **Dānav(y)a-*). The Slavic river-names *Don*, *Dniepr*, and *Dniestr* are borrowings from Scythian **dānu*, **dānu apara* 'upper river', **dānu nazdya* 'lower river'. Although these three river-names are loans from Scythian and the Danube also flows into the Black Sea, Welsh *Donwy* leaves no doubt that Celtic and Iranian had the same inherited river-name. Despite the views of earlier scholars such as Vasmer, who took *Danube* to be Iranian in origin, a Celtic source cannot be ruled out on linguistic grounds, and the name *Dānuvius* is first attested in the Celtic-speaking western region of the Danube basin. On the other hand, the lands north and west of the Black Sea are likely to have been home to early Indo-European-speaking groups in the 3rd millennium BC or even earlier, thus before the separation into the attested Indo-European branches or sub-families. Among place-names, river-names have a particularly high survival rate, for example, the many native American river-names in North America. Therefore, it is possible that *Dānuvius* is what is termed an 'Old European river-name' and predates the emergence of Celtic or Iranian as distinct dialects.

PEB, CW

Darogan yr Olew Bendigaid (The prophecy of the blessed oil), also known as *Hystori yr Olew Bendigaid* (The story of the blessed oil), is a prose political prophecy, probably of the first half of the 15th century. Peniarth 50 is the oldest surviving manuscript. It is possibly in the redactor's hand and written at Neath Abbey (Lloyd-Morgan, *Archaeology and History of*

Glastonbury Abbey 306–7; Lloyd-Morgan, THSC 1985.20). The redactor worked from an English Latin prophecy about Thomas Becket (archbishop of Canterbury, †1170). The blessed oil in question has been sent from heaven for anointing the rightful kings of England. In this Welsh adaptation, *England* is turned to *yr ynys honn* 'this island', the whole of BRITAIN, and established GLASTONBURY legends are used to put an ARTHURIAN frame around the story. Thus, the oil is brought to Britain by followers of Joseph of Arimathea, a principal figure in many versions of the GRAIL legend, and is later used by the semi-legendary 6th-century Archbishop Dubricius to consecrate ARTHUR. The oil, together with divine support, then enables Arthur to vanquish giants and to 'trample pagan Saxons underfoot' (Lloyd-Morgan, THSC 1985.16). The immediate political context for the text may reflect the fall and disappearance of the Welsh insurgent leader OWAIN GLYNDŴR (1408×1413), as suggested by Lloyd-Morgan (THSC 1985.20–2).

Davies, James Kitchener (1902–52) was born in Llwynpiod, Cardiganshire (now CEREDIGION), Wales (CYMRU), and educated in the same county at Tregaron and ABERYSTWYTH. He spent his working life as a secondary school teacher in the Rhondda, Glamorgan (MORGANNWG), where he was active in local politics as a nationalist (see NATIONALISM) and as a lay preacher and WELSH-language campaigner until his death from cancer.

All Kitchener's important work is associated either with the Rhondda or with the area around Tregaron: the controversial play, *Cwm Glo* (Coal valley, 1934–5), described conditions in the Rhondda coalfield in the 1920s; his verse play, *Meini Gwagedd* (Stones of vanity, 1944), presented the harsh reality of rural life he had known as a child; the dramatic monologue, *Sŵn y Gwynt sy'n Chwythu* (The sound of the wind that blows, 1952), reflects on the spiritual meaning of the wind, which penetrates the thick hedges of his Cardiganshire childhood and sweeps across the industrial Rhondda, a community stripped of all protection (see also WELSH DRAMA; WELSH POETRY).

If the strongest early influence on Kitchener's thought was the socialist Robert Owen, the formative experience was being exiled to England at the age of seven after the death of his mother, reinforced when his father sold the family home and moved to south Wales. This was unquestionably the source of the self-alienation which underlay the critical, analytical spirit which characterized his work.

Ioan Williams

Davitt, Michael (1846–1906) was born in Straide, Co. Mayo (Contae Mhaigh Eo), in the west of Ireland (ÉIRE), on 25 March 1846. This was in the middle of the potato FAMINE, which was particularly acute in Mayo. Davitt was reared in Haslingden, Lancashire, England, following his family's eviction from their smallholding in 1852. As a child labourer in a mill in England, he lost his right arm. Davitt joined the Irish Republican Brotherhood in 1865 and was imprisoned for treason felony in connection with arms smuggling between 1870 and 1877. Land reform was the great passion of Davitt's life. After a sojourn in America, he established the Irish National LAND LEAGUE on 21 October 1879 in order to promote the cause of the tenant farmers (see LAND AGITATION). In 1881 he was elected a Member of Parliament (UK) for Co. Meath (Contae na Mí) while in Portland Prison, but he was not allowed to take his seat. From mid-1882 he advocated land nationalization rather than peasant proprietorship.

Davitt was deeply committed to a non-sectarian and inclusive Irish NATIONALISM. He served as Home Rule Member of Parliament in Westminster, initially for North-east Cork (Corcaigh) and later for South Mayo, from 8 February 1893 to 25 October 1899, when he resigned in protest against the Boer War in South Africa. He was passionate about social justice and social reform, about the cause of the working man and of organized labour, and was an early supporter of the Labour Party in Britain. Davitt was international in his thinking and in his social radicalism. He travelled and lectured widely, including several visits to Russia in the period 1903–5, and was an influential journalist and writer. He died of blood poisoning in Dublin (BAILE ÁTHA CLIATH) on 30 May 1906 and was buried in his native Straide.

Laurence M. Geary

De Bhaldraithe, Tomás (1916–96) was a pioneering expert in Modern IRISH dialects, a renowned lexicographer (see DICTIONARIES AND GRAMMARS), and an editor of numerous important Modern Irish texts. A native of Ballinacor, Co. Limerick (Contae Luimnigh), he was educated in Dublin (BAILE ÁTHA CLIATH) at Belvedere College, by the Jesuits, and at University College Dublin, where he graduated in French and Irish in 1937. During a scholarship year (1938–9) spent at the Sorbonne, De Bhaldraithe's interest in dialectology was developed under the influence of his professors, Joseph VENDRYÈS and Marie Sjoestedt Jonval (author of *Description d'un parler irlandais de Kerry* [1938]). Returning to Ireland (ÉIRE) at the outbreak of the Second World War, he spent two years (1939–41) carrying out field research as part of a detailed study of the Irish of Conamara (see GAELTACHT). The results of this work were published in a series of articles ('Cainteanna as Cois Fhairrge') in *Éigse* 3–5 (1942–7) and in two ground-breaking monographs, *The Irish of Cois Fhairrge, Co. Galway: A Phonetic Study* (1945) and *Gaeilge Chois Fhairrge: An Deilbhíocht* [morphology] (1953). These works, as well as De Bhaldraithe's congenial association with his informants and their locale, did much to enhance the regard for 'Conamara Irish' among academics. After receiving his doctorate in 1942, De Bhaldraithe was a scholar at the Dublin Institute for Advanced Studies (INSTITIÚID ARD-LÉINN, 1942–3) and an assistant in the Department of Modern Irish in University College Dublin (1943–6). During this period, he was also a founding member of An Chomhchaidreamh, an organization of young, progressive language activists, and the vice-editor of their journal, COMHAR (1942–). De Bhaldraithe's abiding interest in Modern IRISH LITERATURE was manifest in several editions he produced over the years, most notably: *Nuascéalaíocht* 1940–1950, *Scothscéalta le Pádraic Ó Conaire* (1956), *Seacht mBua an Éirí Amach* [Pádraic Ó CONAIRE] (1967), and *Cín Lae Amhlaoibh* [Amhlaoibh Ó SÚILLEABHÁIN] (1970).

As a lecturer in University College Dublin from 1946 until 1960, De Bhaldraithe devoted himself to the compilation of his *English–Irish Dictionary* (1959). Despite its age, 'De Bhaldraithe's dictionary' remains an indispensable tool for users of the Irish language. In 1954 he established the university's dialect archive. De Bhaldraithe was Professor of Modern Irish at University College Dublin from 1960 to 1978, during which time he served as the advisory editor for the Irish–English Dictionary Project (resulting in the publication of Niall Ó Dónaill's *Foclóir Gaeilge–Béarla* in 1977) and completed his editions of *Cín Lae Amhlaoibh* (1970) and *Seanchas Thomáis Laighléis* (1977), 'GAELTACHT AUTOBIOGRAPHIES' of great linguistic, historic, and sociological interest. From 1978 until his retirement in 1986, De Bhaldraithe was Professor of Irish Dialectology at University College Dublin. During this period he directed several lexicographical projects and completed his own *Foirisiún Focal as Gaillimh* (1985), an invaluable lexicon for students of Co. Galway Irish and its literature.

With his sudden death at a public occasion on 24 April 1996, CELTIC STUDIES lost a great scholar whose work affirmed the relevance of the field to the life of the Irish nation. His greatest contribution was to make the fruits of linguistic and lexicographical research readily available to students of Irish language and

literature, and to the Irish-speaking communuity at large. Tomás de Bhaldraithe served on the Board of Directors of the Dublin Institute for Advanced Studies from 1961 until 1996. He had also been a member of the Royal Irish Academy (Acadamh Ríoga na hÉireann) since 1952, and served as the society's vice-president in the periods 1965–6 and 1981–3.

William J. Mahon

De Blácam, Aodh (Hugh Blacam) was a 20th-century Irish journalist, critic, and fiction writer. He was born in London in 1890 and died in Dublin (Baile Átha Cliath) in 1951. Having learned Irish from the essayist Robert Lynd (1879–1949), De Blácam moved to Ireland (Éire) to work as a journalist. He became an active member of Sinn Féin and began writing on nationalist issues (see NATIONALISM). In his work, which encompasses literary history, novels, short stories, and poetry, De Blácam draws on Irish myth and history, while strongly advocating the return of Gaeldom. Among his works is the heavily autobiographical *Holy Romans* (1920), a novel about an Ulster Protestant brought up in London, who becomes a Roman Catholic and Irish nationalist. De Blácam's *Gaelic Literature Surveyed* (1929), which gives an account of the history of Irish-language literature and puts it in a framework of reference to important works in Anglo-Irish literature, is still considered an important critical evaluation of Gaelic literature.

SELECTION OF MAIN WORKS
COLLECTIONS OF SHORT STORIES. *The Ship that Sailed Too Soon* (1919); *Patsy Kehoe, Codologist* (1922).
LITERARY WRITINGS. *Gaelic Literature Surveyed* (1929); *Black North* (1938).
NOVELS &C. *Holy Romans* (1920); *Druid's Cave* (1921).
POETRY. *Dornán Dán* (1917); *Songs and Satires* (1920).

De Clare, Richard (known as Strongbow, *c.* 1130–76) was a Norman nobleman from Wales (Cymru). His father, Gilbert de Clare (also known as Strongbow), was earl of Pembroke (Penfro). Richard succeeded his father in 1148, but Henry II of England stripped De Clare of his title upon the king's accession in 1154. De Clare's involvement with the affairs of Ireland (Ériu) began when Diarmait Mac Murchada (Anglicized as Dermot MacMurrough), the exiled king of Leinster (Laigin), came to Britain with the permission of Henry II to seek military aid.

There are two near-contemporary sources: Gerald of Wales (Giraldus Cambrensis) wrote a history called *Expugnatio Hibernica* ('The Conquest of Ireland'), composed in the 1180s, and there is an Old French (specifically, Hiberno-Norman) *chanson de geste* usually entitled 'The Song of Dermot and the Earl'. The *chanson de geste* is preserved in a single manuscript, written between 1226 and 1230. According to these sources, De Clare contracted with Mac Murchada to offer military assistance in return for the hand of Mac Murchada's daughter Aífe (modern Irish Aoife, sometimes Anglicized as Eve) and succession to the kingship of Leinster. De Clare and Mac Murchada landed at Wexford in 1170. They took the city, and managed to reconquer and hold Leinster. When Mac Murchada died the following year, Strongbow used both his marriage and his military might to establish himself king of Leinster. Henry II, displeased with the *de facto* independent Norman kingdom that resulted, came to Ireland himself. De Clare acknowledged Henry as his overlord, and after handing over Dublin (Baile Átha Cliath), Wexford (Loch Garman) and other coastal towns, was recognized as Lord of Leinster.

The family takes its name from their estates at Clare in Suffolk, England. The name is sometimes spelled De Claire, an incorrect etymology involving the French word *claire* 'clear, bright'. County Clare in Ireland is named after Thomas de Clare, a descendant of Richard's cousin Roger, earl of Hertford.

AM

De Gabáil in t-Sída (Concerning the taking of the otherworld mound) is a brief text, linguistically of Old IRISH date, which occurs in the Book of Leinster (LEBOR LAIGNECH). It throws light on the early development of several doctrines that find fuller expression in the longer later texts of the MYTHOLOGICAL CYCLE and Irish LEGENDARY HISTORY, including ideas about Ireland's supernatural race, the TUATH DÉ, the conquest of Ireland (ÉRIU) by the sons of MÍL ESPÁINE, and the nature and origin of the OTHERWORLD of the SÍD mounds.

At the opening of the narrative there is a convergence of the themes of the fertility of the land and the foundation of GAELIC Ireland. The underlying idea is that the first Irishmen skilfully manipulated social exchange with the gods so as to subordinate them and be entitled to ongoing sustenance in return:

> There was a wondrous king over the Tuatha Dé in Ireland, Dagán by name [i.e. 'the DAGDA']. Great was his power, even over the sons of Míl after they had seized the land. For the Tuatha Dé blighted the grain and milk of the sons of Míl until they made a treaty [*cairdes*] with the Dagda. Thereafter they preserved their grain and their milk for them.

The permanence of the *cairdes*, and the formal division of Ireland into a mortal surface world and the world of the *síd* for the Tuath Dé is made explicit in a version of the same events related at the beginning of MESCA ULAD ('The Intoxication of the Ulstermen').

In *De Gabáil in t-Sída*, there follows a second episode, a flashback deep into the pre-mortal mythological age, concerning the control of time by the inhabitants of the *síd* mounds:

> Great too was his [i.e. the Dagda's] power when he was king in the beginning; and it was he who divided the *síde* among the Fir Dé ['men of the gods']: LUG son of Eithliu in Síd Rodrubán, Ogma in Síd Aircheltrai, the Dagda himself however had Síd Lethet Lachtmaige . . .
>
> They say, however, that Síd in Broga [i.e. the megalithic tomb called Newgrange/BRUG NA BÓINNE] belonged to him at first. [OENGUS MAC IND ÓC] came to the Dagda seeking territory when he had made the division to everyone; he was a foster son of Midir of Brí Léith and of Nindid the prophet.
>
> 'I have nothing for you,' said the Dagda. 'I have finished the distribution.'
>
> 'Obtain for me then,' said the Mac Óc, 'just a day and a night in your own dwelling.' That was granted to him then.
>
> 'Now go to your house,' said the Dagda, 'for you have used up your time.'
>
> 'It is plain,' he said, 'that the whole world is day and night, and that is what was granted to me.'
>
> Then Dagán departed from there, and the Mac Óc remained in his *síd*.
>
> (Trans. Koch & Carey, *Celtic Heroic Age* 145)

This story is intriguing when we consider that many of these prehistoric burial monuments incorporate alignments with astronomical calendar events such as the solstices and equinoxes. The burial shaft at Newgrange, in particular, is illuminated only at daybreak on the shortest day of the year and a few days before and after it. Thus, the idea of tricky extension of a single day into eternity at this site had some four millennia of precedent behind it when our tale was written (see Carey, *Proc. Harvard Celtic Colloquium* 10.24–36).

Among the medieval Irish literati, *De Gabáil in t-Sída* was counted as one of the *remscéla* (fore-tales) of TÁIN BÓ CUAILNGE (Mac Cana, *Learned Tales of Medieval Ireland* 89), perhaps because a version of the same events is recounted in the ULSTER CYCLE saga, *Mesca Ulad*.

John Carey, JTK

De hÍde, Dubhghlas (Douglas Hyde)

(1860–1949) was a pioneering scholar of the Irish language, literature, and history, and first President of Ireland (ÉIRE). Hyde was tutored at home in Frenchpark, Co. Roscommon (Contae Ros Comáin), by his father, an Anglican clergyman, and became expert in Hebrew, Greek, and Latin. He learned IRISH from the farmers in their district. With a view to the Anglican priesthood, Hyde entered Trinity College Dublin (BAILE ÁTHA CLIATH), adding German and French to his languages. He won the university's gold medal for modern literature in 1884, gaining a BA in that subject. In 1886 he was awarded an LL D from Trinity College, also winning a prize in theology. Having already published extensively, including two sets of GAELIC stories collected from elderly Irish speakers, mostly of the Roscommon area, Hyde was Professor of Modern Languages at the University of New Brunswick in Canada from 1891 to 1892. On returning to Ireland he was appointed president of the National Literary Society, and his inaugural speech, 'The Necessity of De-Anglicising Ireland', which was published as a pamphlet, greatly influenced the burgeoning Gaelic movement. The following year (1893), he published the well-received *Abhráin Grádh Chúige Connacht / The Love Songs of Connacht*, and was subsequently appointed president of CONRADH NA GAEILGE (The Gaelic League) at its founding. Under Hyde's leadership, the League virtually steered Gaelic culture in Ireland for more than two decades. It was principally through his unusual Hiberno-English translations of Irish songs that he became known to W. B. YEATS, Lady GREGORY, J. M. Synge and others of the Irish literary revival, who were actively seeking a uniquely Irish idiom for their texts (see LANGUAGE [REVIVAL]; IRISH LITERATURE).

The songs and stories of CONNACHT were to remain a subject close to Hyde's heart, and he published widely on this subject, developing a particular interest in religious and love poetry. His 1906 volume—*Abhráin Diadha Chúige Connacht / The Religious Songs of Connacht*—remains highly respected.

In 1899 Hyde's very influential *Literary History of Ireland* was published, detailing Gaelic literature from the earliest times to the 18th century. Also in this year, as president of the Irish Texts Society (CUMANN NA SCRÍBHEANN NGAEDHILGE), he edited and translated *Eachtra Cloinne Rígh na hIoruaidhe / The Adventures of the Children of the King of Norway*. In 1917 he edited and translated *Gabháltais Shearluuis Móir / The Conquests of Charlemagne* for the same society.

Hyde's play *Casadh an tSúgáin* (translated into English as *The Twisting of the Rope* by Lady Gregory) was performed by the Gaelic League's amateur dramatic society at the Gaiety Theatre, Dublin, in 1901. It was the first dramatic work to be produced in Modern Irish (see IRISH DRAMA). With the assistance of W. B. Yeats and Lady Gregory, Hyde wrote a number of Irish plays over the next decade, tailoring them for production by activists.

Hyde toured America in 1905 on an enormously successful fundraising tour for the Gaelic League. He published an account of the journey in 1937.

In 1908 Hyde was appointed Professor of Modern Irish at University College Dublin, and remained in the post until his retirement in 1932.

Hyde resigned from Conradh na Gaeilge in 1915 after an acrimonious Ard-Fheis (AGM) in which Patrick Pearse (Pádraig MAC PIARAIS) spearheaded a move to alter the organization's constitutional goal to 'an Ireland, free and Gaelic'. He devoted himself for some years thereafter to the Celtic Congress, an organization whose goal was to unite the Celtic nations of north-western Europe (see PAN-CELTICISM).

Hyde served as a senator in Seanad Éireann (the Irish senate) from 1925 until 1938. When the redrafted Irish constitution of 1937 created the office of President, Hyde's nomination for the office was unanimously supported. Despite a stroke in 1940 he remained President until 1945, living afterwards in a state-provided house in the Phoenix Park, Dublin, called Ratra after his beloved home in Frenchpark, Co. Roscommon, which the Gaelic League had bought for him after his American tour.

Brian Ó Broin

De Paor, Liam (1926–98) was an Irish archaeologist and historian. Born in Dublin (BAILE ÁTHA CLIATH), he was educated at University College Dublin, where he later became lecturer. He collaborated with his wife, Máire (1925–94), on the volume *Early Christian Ireland* (1958), and in 1964 spent a year in Nepal as UNESCO adviser on historic monuments.

He wrote a regular column entitled 'Roots' for the *Irish Times*, and a collection of some of his most important essays on political and national issues was published as *Landscape with Figures: People, Culture and Art in Ireland and the Modern World* (1998).

PEB

De Paor, Louis (1961–), Irish-language poet, author, and editor, was born in Cork city (CORCAIGH) and graduated from University College Cork in 1981. His Ph.D. on the short stories of Máirtín Ó CADHAIN was published as *Faoin mBlaoisc Bheag Sin* (Inside that little skull; 1991). He jointly edited *Coiscéim na hAoise Seo* (A step forward in our time; 1991) with Seán Ó TUAMA and also edited two issues of INNTI (12 and 13). He lived in Australia from 1987 to 1996, where two bilingual collections of his poetry were published: *Aimsir Bhreicneach / Freckled Weather* (1993) and *Gobán Cré is Cloch / Sentences of Earth and Shore* (1996). De Paor belongs to the Cork *Innti* school of poetry—his style and language clearly influenced by Seán Ó RÍORDÁIN, Seán Ó Tuama, Michael DAVITT, and Liam Ó MUIRTHILE. In 2000, he received the Lawrence O'Shaughnessy poetry award.

De raris fabulis

§1. INTRODUCTION

Oxford, Bodleian Library MS 572, also known as *Codex Oxoniensis Posterior*, is dated on palaeographical grounds to the second quarter of the 10th century (Madan & Craster, *Summary Catalogue of Western Manuscripts in the Bodleian Library at Oxford* 2.170–4). The manuscript contains a scholastic colloquy, *De raris fabulis* (Concerning uncommon stories), which possibly originated as a 9th-century text (Dumville, *Anglo-Saxon Glossography* 66). Since it has been claimed that the colloquy contains GLOSSES in two early Neo-BRYTHONIC languages (WELSH and CORNISH)—and there has been a fair amount of attendant controversy on the subject over the years—the text is significant for CELTIC STUDIES. It is a key-case study in the problem of distinguishing the Welsh, Cornish, and BRETON languages of the early Middle Ages.

The colloquy has been edited several times and has drawn the attention of students of various disciplines. The text is also of great importance for the analysis of contemporary Latin learning in Britain, since the scholastic colloquy was a form frequently used in the Middle Ages, both for elementary instruction and as a means of acquiring a learned vocabulary. It has been argued that the origin of this genre can be found in

the bilingual phrasebooks of late antiquity, and several Latin colloquies are attested in the manuscripts of pre-Norman Britain. The colloquy is written in the form of a dialogue, which could also allow word substitutions within one syntactic pattern, e.g. 'Good morning, students, go to the river / to the spring / to the well'. Brythonic glosses (in ink), alongside the numerous Latin glosses, are found both incorporated into the main text and between the lines.

§2. OLD WELSH OR OLD CORNISH

The Celtic glosses were at one time considered to be Cornish—basically due to peculiarities of orthography—after H. Bradshaw's *Collected Papers*, and the Brythonic words were treated in various dictionaries as Old Cornish (e.g. Loth, *Les mots latins dans les langues brittoniques*, which is still usable). However, in 1893 J. Loth published a small note in which he reconsidered the linguistic aspect of the problem (RC 14.70), and now most of the Brythonic words are considered to be Old Welsh. The greatest number of examples could be as easily Old Welsh as Old Cornish, since the two languages remained very similar at this period—for example, *selsic* 'sausage', *tarater* 'awl', *ord* 'sledge hammer', *creman* 'sickle', *arater* 'plough', *iou* 'yoke', *notuid* 'needle', *hendat* 'grandfather', *henmam* 'grandmother', *modreped* 'aunts', *guin* 'wine', *med* 'mead', *fruidlonaid* 'fertility'. However, a few words must be Welsh and cannot be Cornish, since they show an older Neo-Brythonic stressed long *ō* becoming a Welsh diphthong *au* (later Welsh *aw*); this never happened in Cornish. Thus, for example, *guerclaud* 'enclosed field', *brachaut* 'a type of alcoholic drink', *plumauc* 'a type of furniture stuffed with feathers'. On the other hand, the list of the entries which had been believed to show Cornish characteristics is not extensive and open to question. According to Jackson (LHEB 55), this Cornish group includes: *iot* glossed *pultum* 'porridge' (Modern Welsh *uwd*—we might expect Old Welsh **iut*—Latin *pulsus*), *iotum* glossed *ius* 'juice', *tarater* glossed *scapa uel rostrum (i.foratorium)* (all on fo. 42a), and *torcigel* glossed *uentris lora* (fo. 43a). Jackson also notes that the letter '*e* is used for [ə], *b d g* for lenited *p t c*, and *d* for *th*, more often than is normal in OW'; in fact, this is a groundless argument—all these features are very common in Old Welsh. J. Loth's conclusion was that: '*Ces gloses ne proviennent probablement pas du pays de Galles actuel, mais d'un territoire limitrophe, rattaché linguistiquement à la principauté, comme le territoire du Gloucestershire ou du Somersetshire*' (These glosses probably do not originate from Wales itself, but from some bordering region, linked linguistically to Wales, such as the region of Gloucestershire or Somerset). This theory was rejected by Jackson (LHEB 56) on historical grounds; by this date, Gloucestershire and Somerset were—Jackson believed—English speaking. Jackson proposed that it was 'most probable that the text and glosses were written by a Cornishman in Wales or a Welshman in Cornwall'. He concluded: 'Since the script is Continental it is more likely to have been written in Cornwall, where the Continental hand was already in use in the early tenth century'. Since the text is apparently a copy from an earlier exemplar (on the layers see Lapidge, *Proc. 7th International Congress of Celtic Studies* 94–5; Porter, *Anglo-Saxon Conversations* 21–2), it could also be the case that the original was written at a Welsh scriptorium, and then changed in the style of the script and perhaps also minimally in the features of its Brythonic dialect when later copied outside Wales.

§3. OLD ENGLISH GLOSSES

The presence of several Old English glosses on fo. 42a–b, some of which were considered by H. H. E. Craster (RC 40.135–6) and edited by H. D. Meritt (*Old English Glosses* 57), makes this text of interest to Anglo-Saxon studies. The hand which was responsible for these dry-stylus glosses (scratched into the parchment without ink), and which is different from the main hand of the manuscript—but almost contemporary with it—is also accountable for the two glosses which were formerly considered Brythonic, but which are, in fact, Latin and (very probably) Anglo-Saxon, respectively. The use of more than one vernacular language for glossing this text suggests that this colloquy came from an area or monastery where both Brythonic and Old English were in use. The pro-Brythonic orientation of the text can be deduced from the fragment which occurs on fos. 45b–46a and which relates the British victory over the English.

§4. INCONCLUSIVE CASE FOR IRISH INFLUENCE

The text abounds in the so-called 'Irish symptoms' and Hiberno-Latin spelling features, such as *ti* for *si* (*ecletia*), interchange of *i/e*, *u/o*, *b/p* (as in *peregrinus*,

insola, cubis, see Lapidge, *Proc. 7th International Congress of Celtic Studies*, 95); however, all these features are also found in Latin manuscripts from Wales (Lindsay, *Early Welsh Script*; Charles-Edwards, *Studia Hibernica* 20.151). In the introduction to W. H. Stevenson's edition (*Early Scholastic Colloquies* ix), Lindsay drew attention to the phrase *non difficile*, which occurs several times in the text and which he considered 'a Latin version of the normal Old Irish preface to the answer of a question', i.e. Old Irish *ní annsae* 'not difficult'. If so, this detail might point to an Irish connection. However, as Jackson showed (LHEB 55), a similar phrase with the same rhetorical function occurs in the Old Welsh COMPUTUS FRAGMENT, namely *nit abruid* 'not difficult'; cf. Charles-Edwards, *Studia Hibernica* 20.151.

Alexander Falileyev

De Valera, Eamon (Irish Éamonn; 1882–1975) was, arguably, the most influential politician in 20th-century Ireland. One of the leaders of the Easter Rising and the Irish War of Independence (see IRISH INDEPENDENCE MOVEMENT), he became the longest-serving Taoiseach (Prime Minister) of Dáil Éireann, the parliament of Saorstát na hÉireann (Irish Free State), holding office from 1932 until 1948, and returning from 1951 to 1954. From 1959 until 1973 he served as Uachtarán na hÉireann, President of the Republic of Ireland. De Valera led Ireland on the road to independence and successfully negotiated its difficult early relationship with the United Kingdom. He established his country's independence by preserving its neutrality during the Second World War, and concentrating afterwards on gaining international recognition for ÉIRE.

Born Edward de Valera in New York on 14 October 1882, he came to Co. Limerick (Contae Luimnigh) in 1885 to be brought up by his grandmother. In 1898 he won a scholarship to Blackrock College, Dublin (BAILE ÁTHA CLIATH), and in 1901 he accepted a post as mathematics teacher at Rockwell College, Co. Tipperary (Contae Thiobraid Árainn). He changed his name to Éamonn when he joined CONRADH NA GAEILGE in 1908, marrying one of his Irish teachers, Sinéad Flanagan, in 1910. Enrolment in the language organization, as for Michael COLLINS and Patrick Pearse (Pádraig MAC PIARAIS), was his first step on the path to Irish national politics. In 1913 he attended the foundation meeting of the Irish Volunteer Force (see IRISH REPUBLICAN ARMY), set up in response to the unionist Ulster Volunteer Force formed earlier that year. During the Easter Rising he was in charge of the third battalion of the Irish Volunteers, the last to surrender to British troops on 30 April 1916. Although sentenced to death, along with the other leaders of the Rising, he was spared, probably because he had been born in the USA. As the only survivor, he quickly gained a prominent place in politics when released from prison in June 1917: he won the East Clare by-election, and was elected President of Sinn Féin and the Irish Volunteers. Re-arrested for his alleged part in the 'German plot' in May 1918, he escaped from Lincoln prison in England, with the help of Michael Collins, to become Príomh Aire (President) of the first Dáil Éireann in April 1919. He spent most of the War of Independence in the USA raising support for the Dáil, but negotiated the truce that ended it on 11 July 1921. His subsequent negotiations for independence, however, failed and he decided not to join the second delegation, headed by Arthur Griffith (see Ó GRÍOFA), which eventually signed the first Anglo–Irish Treaty on 6 December 1921. When the treaty was accepted by the Dáil, de Valera resigned as President and supported the anti-treaty forces in the ensuing civil war, although he later tried to end the military conflict.

De Valera's rise to political power in the Free State began with his resignation in 1926 from Sinn Féin and the foundation of his own party, Fianna Fáil. It won the general election of 1932, ushering in his long term as Taoiseach. He set about realizing his vision of a truly free Ireland, removing the oath of allegiance (to the English Crown) and the office of (the British) Governor General. In 1937, he introduced a new constitution, Bunreacht na hÉireann, which, among other things, changed the name of the country to Éire, gave both IRISH and English official status, claimed jurisdiction over the whole island, and laid the foundations for the Irish Republic which was declared in 1949. With the 1938 Anglo–Irish agreement, which followed the 'economic war' between Britain and the Free State, he wrung important economic concessions from Britain. During the Second World War, he persevered with the difficult task of preserving neutrality. The period after the war saw him hard at work raising Éire's international profile and preparing the ground for the country's entry to the European Economic Council (now the European Union) in 1972. Retiring from his office as President in 1973, he died in 1975.

Tragically, de Valera failed in the two tasks closest to his heart. Despite providing considerable public support for Irish-medium EDUCATION, as well as his enthusiastic personal support for the Irish language, his policies did not reverse its decline (see LANGUAGE [REVIVAL]); nor did he succeed in ending the partition of Ireland, though the enduring idea of Ireland as a single cultural and historical entity owes much to de Valera's efforts.

Eamon de Valera's wife, Sinéad (1879–1975), is best known as an author and translator of folk and fairy tales in both English and Irish, primarily aimed at children. Her most popular works include *Coinneal na Nodlag agus Sgéalta Eile* (The Christmas candle and other stories; 1944) and *Áilleacht agus an Beithidheach* (Beauty and the beast; 1946).

Their son, Rúaidhrí or Ruary de Valera (1916–78), succeeded Seán Ó RÍORDÁIN as Chair of Celtic Archaeology at University College Dublin in 1957. He was appointed Place-names Officer with Suirbhéireacht Ordanáis Éireann (Ordnance Survey Ireland) in 1946, and Archaeology Officer in 1947, posts which he held until 1957. Together with Seán Ó Nualláin, he wrote the *Survey of the Megalithic Tombs of Ireland* vols. 1–4 (1961–83).

MBL

Dean of Lismore, Book of the, is the most important manuscript of late medieval GAELIC poetry in Scotland (ALBA). Compiled between the years 1512 and 1526, primarily by the brothers Seamus MacGriogair (James MacGregor, the eponymous Dean) and Donnchadh MacGriogair, the work represents an effort of collection begun the generation before by Fionnlagh Mac an Aba, whose exhortatory poem to the brothers' father, Dubhghall MacGriogair of Fortingall, is included in the collection (Watson, *Scottish Verse from the Book of the Dean of Lismore* 2–5). Seamus MacGriogair was a notary public at a time when Scots law was dominated by the Lowland SCOTS language, and it is this cultural intersection which has given the manuscript its current rather intractable form. The Gaelic poems included in it are transliterated into an orthography based essentially on that of Lowland Scots. This orthography has proved to be the greatest single obstacle to editing the poetry, especially since most of it is uniquely preserved here. On the other hand, the orthography provides copious evidence for Gaelic dialects and historical morphology. Moreover, the manuscript contains not only Gaelic poetry but also poetry and prose in Scots, and some material in Latin.

The collection is testimony to two main strands of

tradition. The most important for Scottish Gaelic is the light it sheds on the vibrant and often unorthodox poetic scene in Perthshire and Argyll during the late 15th and early 16th centuries, particularly evidenced by the work of Donnchadh Caimbeul of Glenorchy and others belonging to the circle of the Campbells and the MacGregors (see macgregor poetry). Despite these links, it also contains poetry connected with the Clann Domhnaill (Clan Donald) Lordship of the Isles, including significant items related to its declining years in the 1490s. The other strand includes a large number of classical Irish poems (see irish literature [3]), some found uniquely here, including many by the Ó Dálaigh family, and this suggests that material from one or more earlier manuscripts is incorporated in the Dean's Book.

The Book is also omnivorous in its approach to verse. Alongside classical Irish poetry of the highest order, both from Scotland and Ireland (Éire), we have grimly scatological material, effecting love poetry in the courtly mode, heroic ballads, philosophical pieces and allegories. From the Dean's Book we also have poetry by at least four women, which must be balanced by the dedicated misogyny of other items.

A full edition of the contents is still awaited, though much has appeared in the form of either transcriptions (Quiggin, *Poems from the Book of the Dean of Lismore*), or full editions into conventional Gaelic orthography (Bergin, Gillies, Meek, Ross, Watson).

Deane, Seamus (1940–) is an (English-language) Irish poet, novelist and scholar. He was born in Derry/Londonderry (Doire) and educated in Belfast (Béal Feirste) and Cambridge. He taught Modern English and American literature at the National University of Ireland, Dublin (Baile Átha Cliath) and is now the Keogh Professor of Irish Studies at the University of Notre Dame, Indiana, USA. His poetry reflects his experiences in the divided society of Northern Ireland, and combines an emotional involvement with intellectual argument and historical and cultural awareness. His scholarly interests concern Irish cultural identity and its resonance in the literature.

Déchelette, Joseph (1862–1914) was a pioneering French archaeologist, whose *Manuel d'archéologie préhistorique celtique et gallo-romaine* provided an original synthetic overview of the great discoveries made during his lifetime in the study of the Iron Age in Gaul and central Europe. He elucidated the chronological sequence of cultures that culminated in the civilization of the vast late La Tène *oppida* of the century before Caesar's conquest (see oppidum). He was the founder of the Musée Joseph Déchelette in Roanne (Loire), France, which holds an important collection of Gaulish, Gallo-Roman, and Roman artefacts. He was killed in the First World War at the height of his career.

Book of Deer: seated figure with sword, Cambridge University Library MS li.6.32 fo. 4v.

Deer, Book of, is an insular gospel book, which was probably originally copied and illustrated in the 9th or 10th century, and was in the possession of the religious community of Deer, in Buchan, north-east Scotland (Alba), by the 11th century. It cannot be certain that the gospel book itself is a product of a Scottish scriptorium, though some have thought it likely (Geddes, *Proc. Society of Antiquaries of Scotland* 128.537–49; Marner, *Medieval Archaeology* 46.1–28). The illustrations are in a calligraphic, cartoon-like style, which has won few admirers from insular art historians used to the major gospel books, but deserves assessment in its own right. Other contents, additional to the fragmentary synoptic gospels and complete copy of John, are of signal importance. One is a liturgy for the anointing of the sick and dying, of a sort found in Ireland (Ériu) in the company of gospel books, which has suggested a relationship between these books and aspects of pastoral care. The most discussed aspect of the Book of Deer, however, is its collection of property

records, dating from the early 12th century, the latest from *c.* 1150, the earliest set being retrospective, and recording grants dating back to the 10th century. With one exception, these records are in the vernacular, and reveal some emergent signs of a local Scottish dialect of Gaelic; indeed, they are our earliest witness to it. There are also important and unique references to social institutions, such as the high grades of leadership *mormaer* (a term of Pictish or Brythonic origin) and Goidelic *toísech*, the land unit called the *dabach*, and other items, which have allowed historians to investigate something of the Gaelic world of 10th–12th century eastern Scotland. It is also a window, albeit a narrow one, on ecclesiastical houses and their patronage during this latter part of the early Middle Ages, prior to the major monastic transformation which would see Deer itself turned into a parish church, and later a colony of Cistercians develop a new community under the old name.

Deheubarth, its constituent regions, neighbouring kingdoms, and approximate mid 11th-century boundaries

Deheubarth, meaning 'southern (*deheu*) part (*parth*)', was one of the traditional Welsh kingdoms of the early Middle Ages. Established in the 10th century by Hywel Dda, it consisted mainly of the territories of the earlier territorial entities of Dyfed, Ystrad Tywi, Penfro, Ceredigion, and Brycheiniog. Its main court was at Dinefwr. From the central Middle Ages until the Anglo-Norman encroachments of the 12th and 13th centuries, Deheubarth was one of the main political units of Wales (Cymru) (besides Gwynedd, Powys, and Morgannwg) and the rulers of Deheubarth were often in a position to compete with those of Gwynedd for hegemony in Wales. From the late 11th century, Deheubarth came increasingly under the pressure of Norman power based in England and was repeatedly subjected to raids and Norman overlordship. Deheubarth experienced a renaissance under Lord Rhys ap Gruffudd (r. 1155–97). It was partly conquered by Llywelyn ap Gruffudd in 1263 before it became part of the Principality of Wales (*Pura Wallia*) in 1282 after the conquest and death of the last independent Welsh prince, Llywelyn ap Gruffudd of Gwynedd.

PEB

Deiniol, St, was bishop of Bangor (Gwynedd) and patron of its cathedral where pilgrims visited his miraculous image. Annales Cambriae records the death of Deiniol ('Daniel', feast-day 11 September) in

the year 584, calling him *Daniel Bancorum* ('Deiniol of the Bangors'), thus implying a link to Bangor Is-coed as well. A 12th-century text locates him at the Synod of Brefi (545) with David (Dewi Sant) and Dubricius, and among witnesses to a supposed grant to Kentigern by Maelgwn Gwynedd (†*c.* 547). The fact that three of the twelve churches under Deiniol's patronage are located in Flintshire supports traditions that he trained at Bangor Is-coed on the river Dee under his north British father, Abbot Dunawd, brother-in-law of Brochfael, king of Powys.

AM

Derdriu/Deirdre, the beautiful daughter of the storyteller Feidlimid mac Daill, was the focus of the tragic love triangle involving the young hero Noísiu mac Uislenn and Conchobar, king of Ulaid. In this basic narrative structure, the story is closely comparable to several unhappy love stories from the Celtic world, such as the early Modern Irish Tóruigheacht Dhiarmada agus Ghráinne ('The Pursuit of Diarmaid and Gráinne'), Tristan and Isolt in Arthurian literature, and Plutarch's accounts of the much admired Galatian high priestess Camma. The earliest of the surviving versions of Derdriu's story, and, artistically, one of the finest and most enduring, is the saga in Old Irish, Longas Mac nUislenn ('The Exile of the Sons of Uisliu'), the subject of its own Encyclopedia entry. *Longas Mac nUislenn* provides pivotal background to the central saga Táin Bó Cuailnge, and explains why the Ulster heroes were divided in their time of urgency; Derdriu is discussed in this context in Ulster Cycle §3. While the popularity of the Ulster Cycle tended in general to be eclipsed by Fiannaíocht in the early modern Gaelic world, the tale of Derdriu remained popular, and this accounts for the international popularity of the name Deirdre today. On the 18th-century Irish *Imeacht Dheirdre le Naoise* (The elopement of Deirdre with Noísiu), see Irish literature [4] §3. An oral Scottish Gaelic version was collected, translated, and published by Alexander Carmichael. The demythologized *Deirdre of the Sorrows* by the Anglo-Irish playwright J. M. Synge (1871–1909) was first performed in 1910. On the drawing *Deirdre of the Sorrows* by the Scottish artist John Duncan, see art, celtic-influenced [2] §2. The name *Derdriu* is given and explained in *Longas Mac nUislenn* by the druid Cathbad, as the unborn girl is heard crying out forebodingly in her mother's womb, 'It is well that the child may cry (*ro-derdrestar*)'. This verb is otherwise unattested, but the meaning is clear in context; it is probably related to Old Irish *dord* 'a noise, murmuring', *dordaid* 'to make a noise', and perhaps also *derdan* 'storm'.

Descriptio Kambriae ('The Description of Wales') is a portrayal of contemporary Welsh social life and mores by Gerald of Wales (GIRALDUS CAMBRENSIS), written in Latin. In this, one of his earliest works (1194), Gerald reveals his deep knowledge of the historical and regional geography of Wales (CYMRU). His analysis of features of the Welsh character is descriptive and shrewd, critical and complimentary. Always conscious of his descent from Norman Marcher lords and Welsh princes, Gerald attempts to be unbiased and dispassionate. The first book of the *Descriptio* gives a résumé of Welsh history and then portrays the admirable qualities of the Welsh. Simple folk following a rural life, they are of noble descent, courageous, hospitable, witty, and they delight in rhetorical skills. His scholastic training leads him to present the antithesis; the Welsh are fickle, inconstant, easily discouraged, prone to plunder, perjury, and to sexual sins, and they foolishly follow a system of inheritance that leads to fratricide and feuding. Gerald ends by giving advice to the English on how they should overcome and rule the Welsh. In the first edition this entailed devastating and recolonizing the whole country or making it an unpopulated forest and game preserve, but this cynical, jaundiced section was removed in a later edition, *c.* 1215. However, Gerald also advised the Welsh how they could withstand English invasion. The work has a symmetrical, antithetical structure, but although Gerald strives to be objective, his Welsh sympathies are unmistakable.

Since Gerald set considerable store by the value of political PROPHECY it is significant that the work ends with the prophecy of 'the old man of Pencader' to Henry II, that the Welsh, and none other, will be answerable for this piece of land on Judgement Day. The *Descriptio* is unique as a consciously written description of contemporary Welsh custom, manners, and society. It reveals Gerald at his disciplined best as a writer, but although he wrote as an experienced observer of Welsh life, he sometimes misinterprets what he sees and the formal, rhetorical pattern that he chose for his book occasionally leads him to overemphasize some features. As a result, his description must be used with care.

Brynley F. Roberts

Dewi Sant (**St David**) is remembered as a founder and a practitioner of ascetic monasticism. He is both patron saint of Wales (CYMRU) and symbol of the Welsh nation. The link between the two lies in the successful development of his cult.

An important expression of the cult of Dewi was a Life, composed in Latin by RHYGYFARCH, son of Sulien, in the late 11th century. It has been seen as an apologia for the antiquity, orthodoxy, and independence of the church and cult of Dewi in the face of the advancing Normans. There are various recensions and versions of the Life, including one by GIRALDUS CAMBRENSIS, and there is also a Welsh-language version composed in the 14th century. Together, they tell of the conflict and miracle surrounding the birth, youth, and ministry of Dewi. He was the result of a rape committed by Sant, a prince of CEREDIGION, on a nun called Nonnita (Welsh Non). His future significance had been communicated thirty years before by angels, both to Sant and to PATRICK, who was warned to move to Ireland (ÉRIU) and leave Vallis Rosina (Welsh Glyn Rhosyn) to Dewi. His birth, supposedly on the site of the ruined St Non's chapel, was marked by a violent thunderstorm. A stream of clear water burst forth for his baptism at Porth Clais which gave his sight back to a blind man. Dewi's education took him to Henfynyw (near Aberaeron in Ceredigion), and then to the unknown Winctilantquendi under Paulinus (probably not the apostle of Northumbria of that name). He is said to have founded twelve monasteries in various parts of Wales and what was to become

England, many of which patently had no connection with him, e.g. Repton and Bath. He founded his own monastery at Vallis Rosina, thought to be the Alun valley in which lies the present cathedral associated with Dewi. Here, he and his companions, having survived conflict with Boia, the local chieftain, and his wife, who were opposed to the settlement of Dewi and his community in the valley, followed a life of extreme austerity, dividing their time between worship, study and toil, eschewing the use of draught animals to till the fields, and living on a meat-free diet of bread, herbs, and water. Dewi's sobriquet of *Aquaticus* (Welsh Dyfrwr) is probably due not only to his diet but also to his daily habit of standing up to his neck in cold water to subdue the flesh. In company with two companions, Teilo and Padarn, he was urged in a vision to go to Jerusalem where the Patriarch made him archbishop and bestowed gifts on the three; Dewi's gifts included a tunic, a bell and a portable altar. After his return he was summoned to (Llanddewi) Brefi to address a synod of bishops called to defend the church against the Pelagian heresy (see pelagius). Here, the ground is said to have risen under his feet in order that he could be heard, and a dove, the symbol of the Holy Spirit, rested on his shoulder.

The time of his death was made known to him in an angelic vision. The tradition has been handed down that he died on Tuesday, 1 March, either 588 or 602 ad. In the Annales Cambriae the year of his death notice corresponds to 601 or (by another reckoning) 603. In the Irish Annals of Inisfallen his death is put at 589, but neither source would be precisely accurate to the year for this period; the modern '*anno domini*' dating is a secondary imposition onto older chronological reckonings. The 1 March date for Dewi's death is found already in our oldest source on the subject, the early 9th-century Irish Martyrology of Oengus Céile Dé.

The name *Dewi* reflects an early borrowing into Brythonic of the biblical name *David*. The names of Old Testament kings had become popular in Wales in the 6th century; Welsh kings named *Selyf* 'Solomon' and *Sawel* 'Samuel' were contemporaries of Dewi.

In early sources, the church of St David's, Pembrokeshire (Tyddewi, sir Benfro) is called Old Welsh *Miniu* (*Mynyw* in Modern Welsh spelling) and Old Irish *Cell Muini*. In the *Annales Cambriae*, Mynyw is regarded as the seat of a bishop in notices from the 9th century. These are almost certainly contemporary records. The scarcity of earlier notices is not an argument against the earlier episcopal status of St David's, since the interest of *Annales Cambriae* in the 7th and 8th century are mostly in north Britain, rather than Wales.

Dewr, Deifr (Old Welsh Deur, Old English Dere, Latin and Modern English Deira) is the name of a kingdom of the post-Roman period in what is now east and north-east Yorkshire, between the Humber estuary and the river Tees. Historically, Deira is known to us only as an Anglo-Saxon kingdom, and, from the time of Æthelfrith (r. 592–617), it functioned mainly as a subkingdom within the dominant northern English overkingdom of Northumbria. The name is probably of Brythonic origin and therefore it is likely that an undocumented Celtic polity in the area had been Anglicized through settlement and/or conquest (see anglo-saxon 'conquest'). However, the boundaries of early medieval Deira do not correspond closely to those of known Romano-British divisions, such as the civitas of the Parisi or that of the Brigantes, nor to the *territorium* of the town and legionary fortress of York, which served in the late Roman period as the headquarters of the important command of the *Dux Britanniarum*. A 5th- to 7th-century pagan Germanic cemetery, containing thousands of burials and covering over 30 acres (12 ha), was situated at Sancton, a short distance east of the Roman road running north from the fortified town at Brough-on-Humber/Petuaria Parisiorum. There is evidence of pagan Anglo-Saxon settlement elsewhere along the line of this road and near York itself with some material

as far to the north-west as Catterick (Catraeth).

The first well-documented Deiran king is Eadwine son of Ælle (r. 617–33), who ruled the whole of Northumbria, annexed the Brythonic kingdom of Elfed west of Deira, accepted Christianity from Paulinus in 627, and was overthrown and killed by Cadwallon. According to Historia Brittonum, the north Briton Rhun ab Urien (Old Welsh Run map Urbgen) had been instrumental in the conversion of Northumbria. A genealogy of Eadwine which goes back to the Germanic god Woden occurs in both *Historia Brittonum* (§61) and in English sources. Six generations before Eadwine in the *Historia Brittonum* list there is a reference to Soemil with the note that he first separated Deur from Bernech (Mod. Brynaich). It is not certain what the note means. Soemil would have lived in the 5th century, long before the English kept records. By the time the genealogy was compiled, the Bernician dynasty ruled Deira within a united Northumbria; perhaps the note is a claim that this was the original situation and that Deira had only temporarily broken away. In any event, there is no certainty regarding when Eadwine's ancestors—or any other Anglo-Saxons—first established themselves as kings of Deira. Some Romano-British survival and fusion with the Angles seems likely, at Catterick and York for example. In the more archaic B texts of the Gododdin, the Deirans are the main enemies of the northern attackers on Catraeth and the Bernicians are not mentioned. In Welsh heroic poetry, references to Deira are sometimes ambiguous, as the name *Dewr* is homophonous with *dewr* 'bold'. The etymology of *Dewr* is not certain, but the byform *Deifr* makes good sense as the reflex of British **Dubria* 'land of waters'.

Dialog etre Arzur Roue d'an Bretounet ha Guynglaff (The dialogue between Arthur, king of the Bretons, and Guynglaff) is a poetic prophecy in Middle Breton and perhaps the most important piece of popular verse to survive in the Breton language from this period. It survives only in poor 18th-century copies at multiple removes from the original (Piriou, *Actes du 14e Congrès* 2.474–5), which, according to Piette and Fleuriot, was composed *c.* 1450 (*Llên Cymru* 8.190; *Histoire littéraire* 1.157–8). One copy of 1710 has survived from a manuscript dated 1619. The *Dialog* contains 247 verse lines, but the form is so corrupt that it is certain that it is not the original composition. It tells how Arthur once caught the prophet Guynglaff (var. *Guiclan*, Modern *Gwenc'hlañ*) and forcefully pleaded with him. Guynglaff yielded and told Arthur what would happen before the world came to an end. There follow prophecies for the years 1470 to 1476 and 1486 to 1488, and generalities about the wars with the English and destructions committed by them. The fact that most of what was predicted never happened implies that the prophecies were composed before 1470 and that they embody wishful thinking about the future. There clearly have been later modifications; e.g., some of the prophecies can be related to events in the later 16th century (Piriou, *Actes du 14e Congrès* 2.478–80). Fleuriot proposed that the prophetic wildman of the woods, Guynglaff, is an avatar of the Brittonic Myrddin figure (*Histoire littéraire* 157–8; Piriou, *Actes du 14e Congrès* 2.477). Guynglaff can thus be viewed as the literary 'missing link' between the medieval Arthurian prophet Merlin (Myrddin) and the prophet *Roue Stefan* (King Stephen) of Modern Breton folklore. Piriou interprets the name *Guynglaff* as meaning 'blessed sick man' and presents some indirect evidence for the idea of epilepsy as a disease accompanied by supernatural powers (Piriou, *Actes du 14e Congrès* 2.492–3).

This is the oldest surviving Arthurian text written in Breton, and it is disappointing that it reveals little of the substance of the Breton Arthurian tradition. However, the consistent pattern in which Arthur is closely linked with a poet and visionary such as Merlin is noteworthy.

Dian Cécht is an Irish supernatural being or deity, the physician of the Tuath Dé. His name is subject to a variety of interpretations, but may be a combination of the Old Irish common words *dían* 'swift' and *cécht*, glossed as 'power'. He appears in the Mythological Cycle of medieval Irish tales.

In Cath Maige Tuired ('The [Second] Battle of Mag Tuired'), Dian Cécht is given as Lug's paternal grandfather, and he is called the son of the Dagda in the prose dindshenchas. Dian Cécht's children are also associated with medicine, especially his daughter Airmed and his son Miach. Both names are Old Irish common nouns, the names of dry measures (but note the similarity of Miach's name with the Middle Irish word *midach* 'doctor', an early borrowing from the Latin *medicus*).

In a battle against the demonic invaders, the Fomoiri, in *Cath Maige Tuired*, the three physicians and another of Dian Cécht's children, Ochtríuil, cast the mortally wounded warriors into a well called *Sláine* 'health', and they emerge alive and healthy. This may be a metaphor, as the healing is explicitly attributed to the doctors' incantations, but given the mythological context it is more likely to be a reference to the cauldron of regeneration of Celtic mythology (see cauldrons).

Dian Cécht forges an artificial fully functioning silver hand for Nuadu (see nōdons), who had lost his original hand in battle. Miach healed Nuadu completely, and Dian Cécht then killed Miach in a series of ever more severe wounds. Miach healed the first three, but could not heal the removal of his brain. After his death, 365 healing herbs grew out of his body. They were gathered and sorted by Airmed according to what they healed, but Dian Cécht mixed them up.

Dian Cécht is also invoked in a medico-legal text, *Bretha Déin Chécht*, which begins *Bretha dein checht o legib* 'The judgements of Dian Cécht concerning doctors'. The medical lore contained therein is all of eastern origin, mostly Arabic and Greek.

Diarmaid ua Duibhne is an Irish legendary figure best known through stories of his elopement with Gráinne, the betrothed of Finn mac Cumaill (see fiannaíocht; tóruigheacht dhiarmada agus ghráinne). Fostered by the love-god Aonghus Óg (Early Irish Oengus Mac ind Óc) of the Tuath Dé, Diarmaid was half-brother to a boy who was transformed into a boar fated to kill him. Diarmaid had a *ball seirce* (love spot) which made him irresistible to women. Gráinne, daughter of Cormac mac Airt, the legendary king of Tara (Teamhair), drugged the celebrants at her wedding to Fionn and put Diarmaid under a geis (sworn promise) to elope with her. The enraged Fionn and the Fianna (war-band) pursued the pair for 16 years before making peace. Years later, while hunting with the Fianna, Diarmaid was gored by the boar and left to die by Fionn.

Brian Ó Broin

Diarmait mac Cerbaill was, according to the Irish annals, king of Tara (Teamhair) between 544 and 565 and, according to the genealogies, great-great-grandson of Niall Noígiallach (Niall of the nine hostages), namesake and traditional founder of the dominant dynastic federation of early medieval Ireland (Ériu), the Uí Néill. The southern subgroups of the Uí Néill claimed descent from Diarmait: Síl nAedo Sláine (descendants, lit. seed, of Aed Sláine), centred in Brega in east-central Ireland, and traced their ancestry to Diarmait's son Aed Sláine (†604), whereas Cland Cholmáin (the children of Colmán), further west in Mide around Uisnech, descended from a second son, Colmán Már (†555/8).

The historicity of Diarmait is assured; Smyth has argued that the annals naming him are among the first contemporary entries (PRIA C 72.1–48). Writing in the 690s, Adomnán regards Diarmait's progeny as having been granted by God the prerogative of the kingship of all Ireland (*totius Euerniae*; *Vita Columbae* 1.14). This is a significant admission since Colum

Cille and Adomnán himself belonged to the northern Uí Néill lineage of Cenél Conaill, and he does not speak in such terms of his own closer relations, Domnall mac Aedo and his grandson, Loingsech mac Oengusso (†704), though both were *rex Hibernie* (king of Ireland) according to the annals. Evidently, Diarmait's pre-eminence was recognized in both the north and the south, though interestingly the annals record only defeats on the battlefield for him. Binchy attached special significance, as a milestone in the passing of pagan institutions, to the fact that Diarmait is explicitly named in the Annals of Tigernach as the last king to celebrate the *Feis Temro* (Feast of Tara), understood as both a fertility ritual and an inauguration of kingship, in 558 or 560 (*Studia Hibernica* 8.49–59). Diarmait developed as a central figure in the Middle Irish Kings' Cycles (§3). In hagiography, a number of stories show Ruadán and other saints in hostile opposition to Diarmait, which, taken together with Adomnán's claim and the record of the *Feis Temro*, presents a mixed tradition for the king's Christianity. Diarmait was killed by Aed Dub mac Suibni, king of the Cruithin and overking of Ulaid. There are several versions of his death-tale; these include the theme of a prophesied, difficult-to-achieve death, in this case involving a shirt made of linen from a single flax seed. In the version in British Library MS Egerton 1782, the theme of a multiple death is developed: Diarmait is pierced by Aed's spear, then the house is burnt around him, he drowns in an ale vat (cf. watery depositions §3), and the roof falls on his head.

dictionaries and grammars [1] Irish

§1. dictionaries

For approximately a thousand years Irish lexicographers concerned themselves with the words of their own language, which they explained in monolingual glossaries, often with supposed etymologies or providing native or foreign etymologies for more common words. The earliest of these is O'Mulconry's Glossary (*Descriptio de Origine Scoticae Linguae*), written between AD 650 and 750. Other early medieval Irish glossaries include the famous Sanas Chormaic of *c.* 900.

In the 17th century Irish scholars determined that their country should have dictionaries and grammars. The Irish Franciscans in Louvain published firstly Micheál Ó Cléirigh's *Foclóir nō Sanasán Nua* (1643), a traditional glossary. However, their efforts to publish a large Latin–Irish dictionary came to nothing, although we have notice of a substantial work begun by Baothghalach Mhac Aodhagáin, who died in 1654, and supplemented by a Fr. Ó Cuirnín. In 1671 this dictionary was felt to be incomplete, and was never published. It is now lost.

In 1662, another Franciscan, Risdeard Pluincéad, completed a large manuscript Latin–Irish dictionary in the friary of Trim (Baile Átha Troim). It was borrowed by the Welsh linguist and scholar Edward Lhuyd for use in the first Irish–English dictionary, included in Lhuyd's *Archaeologia Britannica* (1707), and in the 'Comparative Vocabulary' section of the same.

A manuscript trilingual dictionary by Froinsias Bhailis (Francis Walsh), *Dictionarium Latino–Anglo–Hibernicum*, was completed by Tadhg Ó Neachtain in 1729.

The next published Irish dictionary was *The English Irish Dictionary / An Foclóir Béarla Gaoidheilge* (Paris, 1732) by Conchobhar Ó Beaglaoich, assisted by Aodh Buidhe Mac Cruitín. Tadhg Ó Neachtain's large manuscript *Foclóir Gaeilbhéarlach* was completed in 1739. *Mémoires sur la langue celtique* by M. Bullet in 1753 contained an Irish–French dictionary. A large and neglected English–Irish manuscript dictionary was completed in 1760 by a Mr Crab, a schoolmaster from Ringsend in Dublin (Baile Átha Cliath). In 1768 Bishop John O'Brien published his *Foclóir Gaoidhilge–Sax-Bhéarla*, again in Paris, which included readings and misreadings from the Leabhar Breac, some entries on place-names and many plant names.

The most notable dictionary of the 19th century was by Edward O'Reilly, first published in 1817 with subsequent editions, including one with a supplement of archaic manuscript words brought out by John O'Donovan in 1877. Thomas de Vere Coneys's dictionary of 1849 is based mainly on the 19th-century editions of Bedell's Irish Bible.

The first published dictionary to do justice to the spoken language was that of Fr. Patrick S. Dinneen (Ua Duinnín) in 1904; a much-extended version appeared in 1927, published by the Irish Texts Society (see cumann na scríbheann n-gaedhilge). This remains the most useful dictionary to scholars and readers of 18th- and 19th-century literature. Tadhg O'Neill-Lane produced a small English–Irish dictionary in 1904 and a large one in 1916. Lambert McKenna (Mac Cionnaith) compiled a useful English–Irish dictionary in 1935, indicating sources. In 1957 An Gúm (the Department of Education) produced an English–Irish dictionary which provided much-required technical vocabulary, but it ignored the existence of dialect and register. This has since been supplemented by several technical dictionaries, and work on its replacement has been begun by Foras na Gaeilge.

In 1977 An Gúm produced a well-laid-out Irish–English dictionary. Words and meanings which do not occur in spoken Irish are marked '*Lit.*', the only concession to regional or temporal variation.

In 1975 the Royal Irish Academy (Acadamh Ríoga na hÉireann) concluded its (*Contributions to a*) *Dictionary of the Irish Language* (DIL), the first volume of which was edited in 1913 by Karl Marstrander. This is a large historical citation dictionary, based mainly on Old and Middle Irish materials, and was a momentous advance in Irish lexicography.

In 1978 work began on a similar project for Modern Irish—*An Foclóir Nua-Ghaeilge*—with Tomás de Bhaldraithe as general editor. The project has been badly under-resourced, and is currently confined to compiling a machine-readable corpus of Modern Irish to be published on CD-ROM.

LATE MANUSCRIPT IRISH DICTIONARIES

Bhailis, Froinsias & Tadhg Ó Neachtain, *Dictionarium Latino-Anglo-Hibernicum* (Dublin, Marsh's Library, Z3.1.13), 649 fos., 1712; Crab, [Irish–English] (Dublin, Royal Irish Academy 1155–57 [24 Q 19–21]), 900 fos., *c.* 1760; Mac Ádhaimh, Roibeard, [English–Irish] (Belfast, Queen's University Library), 1,388 pp., *c.* 1850; Ó Neachtain, Tadhg, *Foclóir Gaeilbhéarlach* (Dublin, Trinity College 1290 [H.I.16]), 1739; O'Connell, Peter, 'An Irish-English Dictionary' (London, BL, Egerton 83), 330 fos. in rough draft autograph, 631 in neat copy by J. O'Donovan, 1826; Pluincéad, Risdeard, *Vocabularium Latinum-Hibernum/Foclóir Laidne agus Gaoidheilge* (Dublin, Marsh's Library, Z4.2.5), 832 pp., 1662.

HISTORIC DICTIONARIES

§2. GRAMMARS

Auraicept na nÉces ('The Scholars' Primer'), the earliest Irish grammar, belongs to the Old Irish period, possibly as early as the 7th century. It was later augmented by commentary.

Irish bardic poets must have met prior to AD 1200 and agreed the rules of standard language to be used while composing poetry in the strict syllabic metres (see bardic order). These observations have been preserved in later manuscripts known as the *Irish Grammatical Tracts*, and *Bardic Syntactial Tracts*. Three

parts of speech were recognized: *focal* a concrete noun; *pearsa* an abstract noun (*pearsa lóir*), verbal noun or verb; and *iairmbéarla* a particle or unstressed word.

The German planter Sir Mathew de Renzy attempted to publish as his own an Irish grammar and prosody, now known as *Graiméar Uí Mhaolchonaire* from the author of the best surviving copy, which had been composed by Tadhg Óg, son of Tadhg Dall Ó hUiginn, until challenged by its true author. *Rudimenta Grammaticae Hibernicae* is a grammar and prosody written by Bonabhentúra Ó hEódhasa, OFM (†1614), for the use of his fellow Franciscans in Louvain, to whom he was teaching Irish. The grammar is in Latin, the prosody in Irish. The 17th-century grammars divide nouns into a five-declension system based on Latin.

In 1677 Fr. Francis O Molloy, OFM, published *Grammatica Latino–Hibernica* in Rome; it is defective in paradigms verbal and nominal. H. Mac Curtin (Aodh Buidhe Mac Cruitín) published in Lovain in 1728 an Irish grammar in English, the first really useful grammar for a learner of Irish, which he had plagiarized from the aforementioned Fr. Froinsias Bhailis, OFM, lexicographer, who had completed it in 1713. This was republished in 1732, along with the dictionary of Ó Beaglaoich and Mac Cruitín.

In 1808 William Neilson published his *Introduction to the Irish Language*, which dealt with Ulster Irish, and William Halliday his *Uraicecht na Gaedhilge: a Grammar of the Gaelic Language*. These were followed in 1809 by the Revd Paul O'Brien's *A Practical Grammar of the Irish Language*. In 1845 John O'Donovan published *A Grammar of the Irish Language*, which attempts to deal with all periods from Middle Irish to modern dialects.

The 20th century saw grammars intended for schools, notably by the Christian Brothers, who first published *Graiméar na Gaedhilge* in 1901. Also of note are the work of Fr. Gerald O'Nolan and the syntactical studies of Cormac Ó Cadhlaigh. In 1945 the spelling of Irish was reformed and the principles published in *Litriú na Gaeilge* by Rannóg an Aistriúcháin. In 1958 a standard grammar followed, *Gramadach na Gaeilge agus Litriú na Gaeilge: an Caighdeán Oifigiúil*, to be taught in schools and used in Government publications.

Stair na Gaeilge, edited by K. McCone and others, contains most useful grammars of Middle, Classical, Post-classical Irish and modern dialects.

In Early Irish, Johann Kaspar Zeuss extracted from the study of Old Irish and other Celtic glosses his *Grammatica Celtica* (1853). In 1908 J. Vendryès produced *Grammaire du vieil-irlandais* and in 1909 Rudolf Thurneysen his *Handbuch des Alt-Irischen*. A revised edition of this appeared in English in 1944 as *A Grammar of Old Irish*, and remains the indispensable Old Irish grammar.

dictionaries and grammars [2] Scottish Gaelic

The first major dictionary to mention the language is that of Edward Lhuyd, the well-known Celtic polymath, when he published *Archaeologia Britannica* in 1707 with its inclusion of an Irish–English dictionary and, as an Appendix to this, added a number of words from Scottish Gaelic. The work included a 'brief introduction' to the 'Irish or Ancient Scottish language', in which the language is that of the late Classical period in Irish, with a spelling and letter shapes deriving from this. Robert Kirk published several word lists in 1702, and by so doing provided subsequent dictionary makers with some source materials and effectively founded the history of Gaelic dictionary making, although his

'vocabulary and orthography were judged to be over-influenced by literary Irish' (Sanderson, *Secret Commonwealth by Robert Kirk* 8). The total number of words in one list was 430, and it was based on an earlier multilingual school dictionary, the *Dictionariolum Trilingue* of John Ray, where Kirk substituted words of Perthshire dialect for Latin words in that listing.

The first dictionary was published in Edinburgh (Dùn Èideann) by Alexander McDonald (Alistair MacDomhnuill) as a 'Gaelic and English Vocabulary'. This appeared in 1741 and was taken from a school dictionary intended to provide instruction in English and Latin. McDonald retained the English and substituted Gaelic for the Latin. The work is organized into sections on general semantic categories, in parallel columns and with no alphabetization of either column, in a total of 161 pages. It contains an Appendix of 30 pages where McDonald adds new 'words and terms that most frequently occur in Divinity', collected 'from the Irish Confession of Faith . . . Book of Common Prayer in Irish' (A. MacDonald, *Galick and English Dictionary* 162), and this Gaelic–English dictionary section is organized alphabetically by the Gaelic headword. He had worked on behalf of the Society for Propagating Christian Knowledge as a schoolmaster in Argyllshire, and his Appendix supplied Gaelic explanations for a number of words, for example, 'probationer' defined as 'someone who can prove himself in his learning'.

A total of nine Gaelic–English dictionaries appeared over the late 18th and 19th centuries, and the culmination of this lexicographical activity was the Gaelic–English dictionary of Edward Dwelly which appeared in 1909, and which has served as the reference point for all subsequent smaller dictionaries, since he included materials from most preceding works. It also includes a 'summary of a concise Gaelic grammar', and there have been few published separate grammars until very recently with *Gràmar na Gàidhlig*.

The paucity of new terminology has long been a bane of Gaelic, and several attempts have been made to counter this, the most recent being *Faclair na Pàrlamaid*/ Dictionary of Terms (See www.scotland.gov.uk/dictionary/_bin/).

Two threads wrap through the history of these dictionaries and grammars: the presence of Gaelic in a multilingual society in Scotland (Alba), and the effects of the Reformation on this society (see CHRISTIANITY). The results have meant that by the post-1600 period we find an increasing appearance of English borrowings, and an ever-present desire to avoid, as far as possible, connections with Irish, which is taken as a Roman Catholic—and hence foreign—influence.

dictionaries and grammars [3] Manx

Although the Manx Gaelic corpus includes texts dating to the 17th century, the first printed work did not appear until 1707. It is therefore not surprising that the earliest dictionaries and grammars were not published until the beginning of the 19th century. One of the earliest grammars was produced by John Kelly, whose *A Practical Grammar of the Antient Gael[i]c; or Language of the Isle of Mann, Usually Called Manks* was published in 1804. Kelly also planned an ambitious trilingual dictionary around 1805, but failed to publish after a fire at the printing office destroyed sections of it. Copy proofs for one section at least survive in the archives of the Manx Museum. Robert Thomson notes that there is some correspondence with Shaw's Gaelic dictionary (1780) (see DICTIONARIES AND GRAMMARS

[2] SCOTTISH GAELIC), which Kelly is known to have owned. Kelly's Manx–English dictionary was not published until 1866 in the Manx Society's series of publications, edited by the Revds Gill and Clarke.

The first half of the 19th century also saw the production of what has become the seminal Manx–English dictionary. Compiled by Archibald Cregeen and published on the Isle of Man (ELLAN VANNIN) in 1835, it was regularly reprinted throughout the 20th century. The main criticism remains Cregeen's predilection for classing nouns as feminine, a tendency which has been corrected by later dictionaries.

With the founding of YN CHESHAGHT GHAILCKAGH, the Manx Language Society, in 1899, antiquarian activity focused once more on Manx Gaelic. Edmund Goodwin's *Lessoonyn ayns Chengey ny Mayrey Ellan Vannin* (1901) was reprinted as *First Lessons in Manx* (1947) and later revised by Thomson. It continues to be regarded as one of the most important primers for the language. Until John Joseph (J. J.) Kneen's *A Grammar of the Manx Language* (1931), written in 1909–10 with the assistance of Professors E. C. Quiggin and Carl Marstrander, Goodwin's slim volume remained the first point of grammatical reference. Kneen's work on the language continued, producing a further volume on Manx Gaelic usage, *Manx Idioms and Phrases* (1938), and, in conjunction with the *Mona's Herald* newspaper, an *English–Manx Pronouncing Dictionary* (1938).

The latter half of the 20th century saw significant developments in the publication of reference books for Manx Gaelic. Originally intended in the 1950s as a Manx–English Dictionary combining the work of Kelly and Cregeen with a reverse of Kneen's dictionary, *Fargher's English–Manx Dictionary* (1979) was an attempt to 'provide some sort of basic standard upon which to build the modern Manx language of today and tomorrow' (vi). It followed patterns established in DE BHALDRAITHE's *English–Irish Dictionary* (1959).

George Broderick's study of the spoken language of the last native speakers resulted in a three-volume work published by Niemeyer (1984–6), *A Handbook of Late Spoken Manx*, comprising a grammar, a dictionary, and phonology.

In 1986, Manx Gaelic was added to the popular Usborne *First Thousand Words in . . .* series, adapted by Robert Thomson, Pat Burgess, Adrian Pilgrim and Audrey Ainsworth.

Phil Kelly, Manx Language Officer for the Department of Education, together with Mike Boulton and F. Craine, produced a reverse of Fargher's Dictionary (1991), which was revised and reprinted by Kelly in 1993. It was accompanied by a two-volume *Manx Usage* in 1993. Crucially for the internet age, Kelly's and other dictionaries have been made available online in searchable form.

An entry on dictionaries and grammars would not be complete without recognition of the work of teachers at a grass-roots level from the late 19th century to the present. There has been a succession of published and privately published lessons and exercises in Manx Gaelic which have inspired many learners of the language (see EDUCATION; LANGUAGE [REVIVAL]).

dictionaries and grammars [4] Welsh

The first printed Welsh dictionary was a Welsh–English dictionary, misleadingly titled *A Dictionary in Englyshe and Welshe* (1547), by William SALESBURY, translator of the Book of Common Prayer and the New Testament. He also produced an introduction to Welsh pronunciation (1550, 1567).

Three grammars were published during the 16th century. The first (1567–*post* 1584), by Gruffydd Robert (*fl.* 1558–98), is a classic of Welsh prose, which contains among other things a discussion of the Latin element in Welsh. The second (1592), in Latin, by Siôn Dafydd Rhys (John Davies of Brecon, 1534–*c.* 1619) draws on GRAMADEGAU'R PENCEIRDDIAID and, like them, is heavily influenced by Latin grammar. The third (1593), also in Latin, was by Henry Salesbury (1561–?1637), who also compiled an unpublished Welsh–Latin dictionary.

The greatest Welsh scholar until modern days was John Davies (*c.* 1567–1644) of Mallwyd, editor of the 1620 BIBLE, whose grammar (in Latin) (1621) and Welsh–Latin Latin–Welsh dictionary (1632) are among the most influential works of Welsh scholarship. The Latin–Welsh section is based upon an unpublished translation by Thomas Wiliems (1545/6–1622) of Thomas Thomas's standard Latin–English dictionary. The Welsh–Latin section formed the basis of the small Welsh–English dictionary with Welsh synonyms by Thomas Jones (1648–1713) the almanac-maker, published in 1688, and the Welsh–English dictionary (1753) of Thomas Richards (1709/10–90), which also contained a grammar based on that of Davies.

John Roderick (Siôn Rhydderch, 1673–1735), the almanac-maker, published the first English–Welsh dictionary (1725), and a grammar written in Welsh (1728) based upon *Gramadegau'r Penceirddiaid* and Siôn Dafydd Rhys's grammar. William Gambold (1672–1728) published the first Welsh grammar written in English in 1727, but failed to publish his Welsh–English English–Welsh dictionary, the latter part of which was used by John Walters (1721–97) in the compilation of his comprehensive English–Welsh dictionary (1770–94), directly or indirectly a major influence on all subsequent English–Welsh dictionaries.

The greatest influence on 19th-century Welsh was William Owen Pughe (1759–1835), the knowledgeable but incredibly idiosyncratic editor of a Welsh–English dictionary (1793–1803) and grammar (1803). Many dictionaries and grammars were published during the century, most of them extremely derivative. The standard grammar was that of Thomas Rowland (1824–84), published in 1853, which was valuable but remained heavily influenced by Pughe. D. Silvan Evans (1818–1903) edited a large two-volume English–Welsh dictionary (1847–58), and a historical Welsh–English dictionary (1887–1906), which, however, only reached the word *ennyd*. The fate of the comprehensive work by John Lloyd-Jones (1885–1956) on the vocabulary of early WELSH POETRY (1931–63) was somewhat better: it was published as far as the word *heilic*.

Edward Anwyl (1866–1914) published *A Welsh Grammar for Schools Based on the Principles and Requirements of the Grammatical Society* (1898–9), and later aided his brother, J. Bodvan Anwyl (1875–1949), with the initial revision of William Spurrell's Welsh–English (1848) and English–Welsh dictionaries (1850). These and later revisions were the standard dictionaries of the first half of the 20th century and remain valuable to this day. The work of O. H. Fynes-Clinton (1869–1941) on *The Welsh Vocabulary of the Bangor District* (1913) was a milestone in the study of Welsh phonetics and lexis.

Grammatical activity flourished during the 20th century. The most important grammar was undoubtedly John MORRIS-JONES's historical and comparative grammar of 1913, which however dealt only with phonology and 'accidence' (morphology). An unfinished draft of the section on syntax was published posthumously (1931). Morris-Jones's work exerted a powerful influence on subsequent grammars, the most important of which were those of Stephen J. Williams (1896–1992) on standard Modern Welsh and D. Simon Evans (1921–98) on Middle Welsh. Morris-Jones's work was complemented by the monographs of Melville Richards (1910–73) on the syntax of the sentence and T. J. Morgan (1907–86) on the mutations.

The second half of the century saw the publication of work on previously unstudied topics, covering a broader range of varieties and registers of Welsh, and the use of new methods and models of linguistics. Especially noteworthy among these are *Ieithyddiaeth* (Linguistics, 1961) by T. Arwyn Watkins, and Ceinwen H. Thomas's phonology, grammar, and glossary of her native dialect of Nantgarw in south-east Glamorgan (MORGANNWG, 1993), the glossary bearing comparison with that of Fynes-Clinton. The greater emphasis on the teaching of Welsh also led to the production of a large number of popular didactic works and of dictionaries. In the latter field H. Meurig Evans has been particularly active.

Twentieth-century lexicography also encompassed work in the field of terminology, and bilingual diction-

aries. The last decade has seen the production of electronic dictionaries and spelling-checkers and the completion of two of the most important and influential projects in the history of the Welsh language: *The Welsh Academy English–Welsh Dictionary* (1995) and *Geiriadur Prifysgol Cymru / A Dictionary of the Welsh Language* ([GPC] 1950–2002), the standard historical Welsh dictionary, as well as the publication of a third standard work, Peter Wynn Thomas's Welsh grammar (1996).

dictionaries and grammars [5] Breton

The earliest BRETON lexicography, as in the other CELTIC LANGUAGES, is in the form of occasional Old Breton glosses of Latin words found from the 9th century onwards (see BRETON LITERATURE). The function of these glosses, however, was utilitarian rather than systematic, and the first serious attempt to record the Breton language in a form useful for non-Breton speakers was the late medieval CATHOLICON, a trilingual Breton–French–Latin dictionary. This work, first printed at the end of the 15th century, was not superseded until the work of Julian MAUNOIR (1606–83) in the 17th century. In 1659 he published *Le sacré collège de Jésus* (The sacred school of Jesus), a catechism in Breton which included a Breton dictionary and grammar. Most of the works on the Breton language at this stage were produced by the clergy, many of

whom needed to learn Breton in order to be able to communicate with their parishioners. *Brezhoneg beleg* 'priest-Breton' is the name given to this clerical stage of Breton codification and production. Louis Le Pelletier (1663–1733) and Jean-François Le Gonidec (1775–1838) were important lexicographers of the period; both produced grammars, along with their dictionaries, and Le Gonidec also published Breton manuscripts.

The codification of Breton has been beset from the beginning by difficulties of orthography, both in representing the sounds of the language where divergent from Latin and French, and in representing the BRETON DIALECTS where divergent from each other. Both Le Pelletier and Le Gonidec used a Breton alphabetical order where the sounds of the letters determined their placement, following the traditional Latin order. As set out in *Yezhadur bras ar brezhoneg* (The big grammar of Breton), it is A B K D E F G H CH C'H I Y J L M N O P R S T U V W Z. This has largely been superseded by one which conforms more closely to the conventional order of the letters, regardless of sound: A B CH C'H D E F G H I J K L M N O P R S T U V W Y Z. (While EU, GN, NG, LH, and OU, and sometimes GW and ZH, are considered to be single letters in Breton, they are not treated that way for alphabetization purposes.) In 1744 Abbé Armeyrie published a Breton dictionary based on the dialect of Vannes (see GWENED). The controversy over which dialect(s) to represent, and which spelling system with which to represent it/them, has not been solved. The best guide to the diversity of Breton is Francis Favereau's 1997 dictionary and grammar, which uses the international phonetic alphabet to indicate the pronunciation in various dialects.

Most Breton dictionaries and grammars have been aimed at a French-speaking audience, but as early as 1903 J. Percy Treasure published an English-language grammar of Breton in Wales (CYMRU), and many of the publications dealing with Old and Middle Breton have been in English. The most important introduction to Middle Breton, Henry LEWIS and J. R. F. Piette's *Llawlyfr Llydaweg Canol* (Handbook of Middle Breton), first published in 1922, has been reprinted in Welsh and translated into German with additions and corrections, but has never been published in English or French. The late 1980s and 1990s saw the beginning of a wider interest in the Breton language, with dictionaries in German, Irish, Spanish, Welsh, and a number in English becoming available, as well as translations of Breton-language textbooks (see Per DENEZ). Also in this period, Yann Lagadeg and Martial Ménard published the first monolingual dictionary of modern Breton, *Geriadur brezhoneg gant skouerioù*. This period, too, has witnessed an increase in the user-friendliness of the dictionaries. Keys to pronunciation, usage, and grammar, absent or sparse in the early dictionaries designed for people living in Breton-speaking areas, are becoming standard.

dictionaries and grammars [6] Cornish

Cornish studies have benefited from a long history of collecting and publishing vocabularies, with much work being done by those who wish to revive the language; however, there remains a need for a scholarly historical dictionary, and even for a dependable dictionary of any kind without any reconstructed or conjectured forms.

§1. MANUSCRIPT GLOSSARIES

The earliest CORNISH dictionary could be said to be the Old Cornish VOCABULARIUM CORNICUM, a Cornish adaptation of Ælfric's Old English–Latin thematic glossary, preserved in the early 12th-century British Library MS Cotton Vespasian A.xiv, fos. 7a–10a. This was followed, half a millennium later, by several antiquarian GLOSSARIES such as those in BL Add. 28554 (the Gwavas Manuscript), National Library of Wales MS, Bodewryd 5 (Hawke, *Cornish Studies*, 2nd ser. 9.83–104), Thomas Tonkin's manuscript vocabulary in the so-called 'Bilbao Manuscript' (later published by William Pryce in 1790), the huge, yet extraordinarily misinformed, *An Lhadymer ay Kernou* by William Hals (BL Add. 71157), William Borlase's vocabulary (published in 1754 and 1769), Edward LHUYD's MS notebook, which accompanied him on his travels to Cornwall (NLW , Llanstephan 84) and which later supplied some of the material for the published vocabulary (1707), and, following in the same tradition, the extensive manuscript vocabularies prepared (but never published) by Charles Rogers, a Plymouth chemist (Rogers MS, 1861) and the Revd John Bannister (preserved in the Egerton MSS).

§2. PRINTED DICTIONARIES

The earliest printed dictionary of Cornish, compiled by Lhuyd and his team from evidence gathered from his field-trip to Cornwall (KERNOW) in 1700 and from copies he had made of several of the Middle Cornish texts, was published in his *Archæologia Britannica* in 1707, as 'A Comparative Vocabulary of the Original Languages of Britain and Ireland'. Much other Cornish vocabulary is to be found in several other sections. Despite being resident in west Cornwall, William Borlase's Cornish–English vocabulary of 1754 (pp. 376–413) is largely a derivative work with much input from Lhuyd's work. A revised second edition was published in 1769 (pp. 415–64). William Pryce's *Archaeologia Cornu–Britannica* of 1790, which contains an extensive 'Cornish–English Vocabulary', draws on both Lhuyd and Borlase, but is derived chiefly from the unpublished work of Thomas Tonkin and William Gwavas.

The first attempt at a historical dictionary of Cornish was the *Lexicon Cornu-Britannicum* of Canon Robert Williams, published in parts between 1861 and 1865. This work cites examples from the Cornish plays, with references and cognates from the other Celtic languages. It suffers somewhat from the author's mistaken attempt to align the orthography of Cornish with that of WELSH, but nevertheless remains a useful reference today. Unfortunately, it just predated the (re)discovery of BEUNANS MERIASEK (ed. Stokes), rendering it incomplete almost as soon as it was published, and necessitating Stokes's glossary to the play (*Archiv für celtische Lexikographie* 1.101–42) following his supplement to the *Lexicon* (Stokes, *Cornish Glossary*) and Joseph LOTH's extensive 'Remarques et corrections au *Lexicon Cornu–Britannicum de Williams*' (RC 23.237–302). Joseph Cuillandre, having collected extensive materials for an historical dictionary of Cornish and having published just a few lexical notes in the *Revue Celtique*, died before the work could be completed. Frederick Jago, having already published *The Ancient Language, and the Dialect of Cornwall: with an Enlarged Glossary of Cornish Provincial Words* in 1882, proceeded to 'reverse' the *Lexicon*, resulting in his *English–Cornish Dictionary* of 1887, which, whilst a less scholarly work than that of Williams, does include some independent matter, mostly collected from Penwith fishermen who still had some knowledge of the language.

Robert Morton NANCE, who inherited Henry Jenner's rôle as the leader of the Cornish language revival (see LANGUAGE [REVIVAL]), devoted years of study to the entire known corpus of CORNISH LITERATURE, culminating in his much condensed *Gerlyver Noweth Kernewek ha Sawsnek: A New Cornish–English Dictionary* of 1938, being a much more comprehensive

counterpart to his slightly earlier *English–Cornish Dictionary* (Nance & Smith, 1934). Although much smaller than Williams's *Lexicon*, the 1938 dictionary remains an indispensable work, marred (from the scholar's standpoint) only by the inclusion of many unmarked conjectural forms based on Welsh or Breton. The fact that they were unmarked seems to have been an oversight on Nance's part, as his draft revision in the (uncatalogued) papers of the Nance Bequest at the Courtney Library of the Royal Institution of Cornwall adds asterisks to most, if not all, of these conjectured forms, as well as a mass of further material from the 'Tregear Homilies' and other sources. Lack of funds ensured that all further editions (English–Cornish, 1952; Cornish–English, 1955, 1967, 1976; combined English–Cornish and Cornish–English, 1978) of both dictionaries omitted much of the material which would have been the most valuable for scholarly purposes. The 1938 dictionary has been reprinted (together with the English–Cornish edition of 1952) several times, as *Gerlyver Noweth Kernewek–Sawsnek ha Sawsnek–Kernewek* (1990, 1999). Nance also published several glossaries, including 'A Glossary of Celtic Words in Cornish Dialect' (1923) and, posthumously, *A Glossary of Cornish Sea-words* (1963), which is of particular importance to lexical studies. Martyn Wakelin studied the Cornish element in the English dialect of Cornwall in a useful volume published in 1975, but omitted the majority of the evidence by concentrating on the very narrow brief of the Leeds Survey of English dialects. Much useful lexical information is contained in Oliver Padel's important *Cornish Place-Name Elements* (1985).

§3. RECENT DICTIONARIES

There has been something of a spate of Cornish dictionaries recently, partly encouraged by the internal divisions within the revival movement which have spawned several orthographical systems, necessitating their respective dictionaries. The proponents of Kernewek Kemmyn (Common Cornish) have produced two new dictionaries based on a reappraisal of the existing texts, but retaining most of the semantic information from Nance's dictionaries. George's 'Gerlyver Meur' Cornish–English version (1993) is the most useful for scholarly purposes since it gives an indication of attestation and occurrence (see N. J. A. Williams, *Cornish Studies*, 2nd ser. 9.247–311), and his 'Gerlyver Kres' is a condensed two-way version (1998). Richard Gendall has produced a series of dictionaries based exclusively on his extensive study of the evidence of the Modern period of the language and the Cornish survivals in the English dialect of Cornwall, with brief details of attestation. Nicholas Williams (2000) has produced the most comprehensive English–Cornish dictionary published to date (with online addenda, including the new evidence from Beunans Ke), based on his own 'Unified Cornish Revised' version of the language, but with no details of attestation or authenticity, making it the least useful of the recent works from a scholarly point of view.

§4. GRAMMARS

Lhuyd was the first to systematically describe the grammar of Cornish in his *Archaeologia Britannica* (pp. 222–53), forming the basis for a number of subsequent works such as William Pryce's *Archaeologia Cornu–Britannica* of 1790. Edwin Norris reappraised the grammar in his *Sketch of Cornish Grammar*, which is more commonly found as part of *The Ancient Cornish Drama*, his edition of the Ordinalia and Vocabularium Cornicum. Henry Jenner attempted to simplify the grammar of (predominately) Modern Cornish in his *A Handbook of the Cornish Language* for those interested in learning the language in the early days of the revival movement, beginning a long tradition of revivalist grammatical works, which generally tend to simplify and generalize, although they can be useful from a scholarly viewpoint. Henry Lewis published the standard grammar of Middle Cornish in 1923, with a substantially revised edition appearing in 1946. Unfortunately, Lewis chose to ignore most of the valuable corrections and criticism communicated to him by the revivalists A. S. D. Smith and R. Morton Nance (posthumously published in 1968). The 1946 edition has been translated into German by Stefan Zimmer and into Dutch by Lauran Toorians, and an English translation by Glanville Price is in preparation. Smith's *Cornish Simplified* contains much useful information, although primarily intended for learners of Revived Cornish. Four valuable cyclostyled supplements to it, which were originally compiled by Smith in 1954–63, were published by E. G. R. Hooper in emended form as a single volume in 1984. Iwan

Wmffre's *Late Cornish* (1998) treats the grammar of Modern Cornish. Wella Brown's *A Grammar of Modern Cornish* is the most comprehensive grammar of the revived language, but Lewis's *Llawlyfr* remains the standard scholarly work.

Andrew Hawke

Dillon, Myles (1900–72) was a prolific Irish scholar who is probably best known for his work on the prose literature of early Ireland (ÉRIU). His publications demonstrate the breadth of his interests and expertise, and include several highly original comparative studies of Celtic and INDO-EUROPEAN languages and traditions. Dillon was born in Dublin (BAILE ÁTHA CLIATH) and died there, but he also spent significant periods abroad. He studied under Douglas Hyde (DE HÍDE) and Osborn Bergin (Ó HAIMHIRGÍN) at University College Dublin, and went on to teach in Ireland (ÉIRE), America, and Scotland (ALBA). As the Director of the Dublin Institute for Advanced Studies (INSTITIÚID ARD-LÉINN), Dillon was prominent in promoting the Institute's function as an academic publishing house. He was also assistant editor of the early Irish dictionary (see DICTIONARIES AND GRAMMARS) published by the Royal Irish Academy (ACADAMH RÍOGA NA HÉIREANN), and contributed to the *Catalogue of Irish Manuscripts* in the British Museum.

Dinas Basing, Abaty (Basingwerk Abbey), Flintshire (sir y Fflint), north-east Wales (CYMRU), was an abbey of the Savignac order founded in 1131, probably by Ranulf II, earl of Chester (CAER). Building began on the present site *c.* 1157, and the surviving buildings date from the 13th century. The Book of Aneirin (LLYFR ANEIRIN), transcribed in the later 13th century, and the Welsh text of the Black Book of Bas-

ing have been associated with the abbey's scriptorium. Basingwerk was for a time the home of the Welsh poet GUTUN OWAIN (*fl.* 1450–98), and part of the Black Book is in his hand. The abbey possessed the manor of Holywell (Treffynnon), and the shrine of St Winifred, with its well-chapel, was under its control.

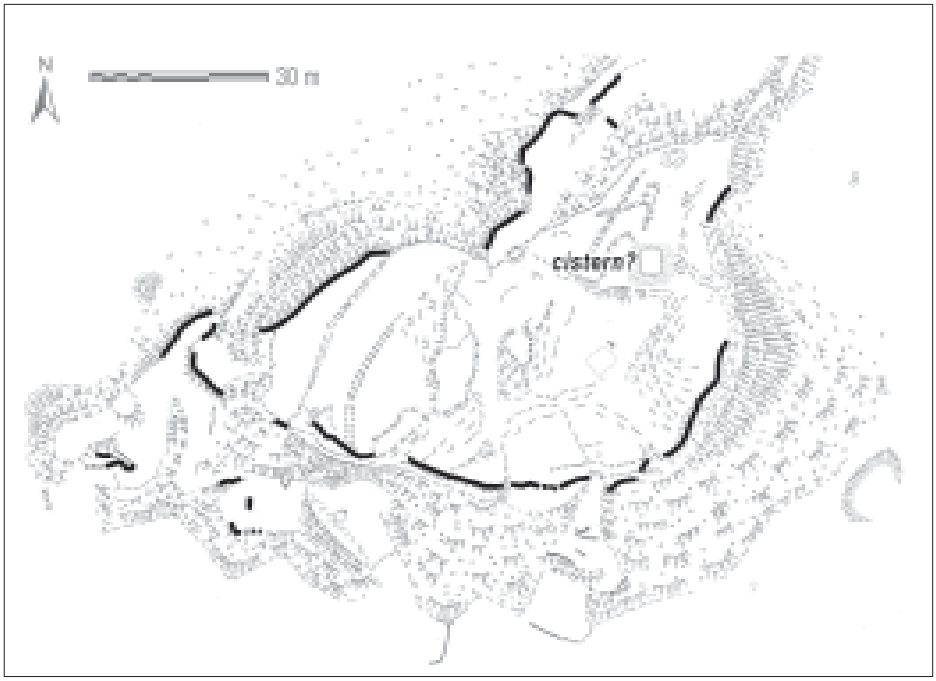
Dinas Emrys is a craggy hilltop with ruined FORTIFICATIONS which rises about 70 m above the Glaslyn valley in north Wales (CYMRU), and is thus in a good position to overlook and control one of the main routes into Snowdonia (ERYRI) from the south. Steep natural defences on the north and west, augmented by encompassing stone ramparts that stand about 3 m high where intact, enclose an area of roughly 1.2 ha (3 acres). The occupation debris is of mixed date, including late Roman and early post-Roman material. For example, an amphora (large ceramic WINE vessel, type Biv) from the eastern Mediterranean of the 5th or 6th century AD reveals that the site was a post-Roman aristocratic residence as well as a military strongpoint.

GIRALDUS CAMBRENSIS refers to *Dynas Emereis* (Citadel of Ambrosius) in north Wales in his *Itinerarium Kambriae* (1191). In the Middle Welsh mythological tale CYFRANC LLUDD A LLEFELYS, *Dinas Emreis*, previously known as *Dinas Ffaraon Dandde* (Citadel of fiery Pharaoh), figures as the place where the slumbering dragons were entombed in BRITAIN's remote pre-Roman past (see also DRAIG GOCH). The story thus ties in with that of the release of the DRAGONS in the presence of GWRTHEYRN and the wonder child AMBROSIUS during the building of a stronghold on a summit; the earliest surviving version is in the 9th-century Welsh Latin HISTORIA BRITTONUM. In this source, the place is said to be in Snowdonia (Old Welsh Heriri). It is thus likely, but not certain, that the tale's localization at Dinas Emrys had already taken place.

In the enclosed area on the hilltop there is a man-made pool or cistern, somewhat under 10 metres square. It has been suggested that this feature inspired the pool surrounding the sleeping dragons in *Historia Brittonum*. Although this is possible, evidence for this feature suggests a date in the central Middle Ages. Nonetheless, the medieval redigging of the Dark Age fort's cistern cannot be ruled out.



Plan of the fortified hilltop of Dinas Emrys

dindshenchas

The Irish term *dindshenchas*, later *dinnsheanchas*, means 'lore of high places'. Some of the lore clearly began as mythology, for example, the list of landscape features at the end of TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley'), caused by the fight to the death of two supernatural bulls (Patricia Kelly, *Aspects of the Táin* 76). However, the names and features mentioned differ between the two main versions, probably reflecting the storyteller's desire to make his tale relevant to his hearers (Ó hUiginn, *Aspects of the Táin* 44–9). In an earlier scene (O'Rahilly, *Táin Bó Cúailnge I* l. 699), the hero CÚ CHULAINN stands on a hill and gets his charioteer to identify to him each *prímdún* (chief fort) they can see between Tara (TEAMHAIR) and KELLS (Ceanannas).

Such a triangulation of Ireland (ÉRIU) was important for a society which needed to know where the boundaries of each local kingdom or TUATH ran, since ordinary people (unlike poets, lawyers, and clerics) lost status, and thus legal protection, in another's territory. Hills often marked the boundaries between territories, and because of the view this gave them were favoured as sites for ritual (e.g. *glám dícenn* 'endless revilement', supposedly fatal to the victim; Thurneysen, *Irische Texte* 3.1.96–7, trans. Stokes, RC 12.119–20; see also SATIRE) or for assembly (*Ualand*; Dillon, *Ériu* 11.50, trans. 61–2). An official in the church of Armagh (ARD MHACHA) in the 12th century was called *príomhchríochaire* (chief boundary keeper) (O'Donovan, *Annála Ríoghachta Éireann/Annals of the Kingdom of Ireland by the Four Masters* AD 1136; Pettiau, *Armagh* 127).

After their 8th year of study Irish poets were expected to be able to narrate all the traditional stories and explain the origin of place-names (*Dá ernail déc na filidheachta*; Thurneysen, *Irische Texte* 3.1 §2). An early story tells how MONGÁN mac Fiachna embarrassed his father's poet, Eochu Rígéigeas, for exclaiming: '*Sochaide lasa ndéntar rátha … co nach talla for menmain*', 'So many build castles … that they do not all find room in the memory' (Knott, *Ériu* 8.157, 159).

Another revealing story concerning poets, place-names, and heights is to be found in Edward Gwynn's edition of the *Metrical Dindshenchas* (3.532–3, introductory tale to p. 304, the poem on Echtge). Following the death of Flann mac Lonáin (?–896), his harper Ilbrechtach served another CONNACHT poet Mac Liac. He liked to go visiting south across Slieve Aughty to Limerick (Luimneach),

> carrying with him 12 bottles (*putraic*) and suitable victuals thereto. For there are 12 points of view in Slieve Aughty and he used to drink a bottle at each of them.

As they rested at one viewpoint, Mac Liac commented how good it would be to know the stories of every place they could see. Ilbrechtach unwisely replied that his late master knew them all. He was made to fast until the soul of Mac Lonáin appeared and gave Mac Liac the knowledge to compose the poem on Echtge.

A Mac Liacc (†AD 1016) is one of the named authors of *dindshenchas* poems, along with Cinaed ua hArtacáin (†974) and Cúán ua Lothcháin (†1024). A collection made in the 11th century appears in many important Irish manuscripts, and has been edited in 5 volumes by Edward Gwynn. There are also anonymous prose pieces on many of the names, edited from collections in different manuscripts by Whitley STOKES (*Folklore* 3.467–516; *Folklore* 4.471–97; RC 15/16). It is evident that later recensions were intended to include both verse and prose (Gwynn, *Metrical Dindsenchas* 4.92; Bowen, SC 10/11.113). Bowen lists articles on 218 different names, some of which are paralleled in surviving tales. The explanations are sometimes stories, sometimes etymological.

Many of the stories deal with mythological traditions and the people of the SÍD (a fairy rath or fort). As Máirín O Daly points out, there are far more allusions to the ULSTER CYCLE and the FINN MAC CUMAILL Cycle (FIANNAÍOCHT) than to the KINGS' CYCLE (O Daly, *Early Irish Poetry* 59–60). However, some saints appear—COLUM CILLE in the stories of *Coire Brecáin* and *Ailech*, and PATRICK in those of *Sliab Fuait*, *Brí Graige*, *Findloch Cera*, and *Tailtiu*. Many of the

dindshenchas poems also end with religious quatrains praising the coming of CHRISTIANITY, prompting Tomás Ó Concheanainn (*Ériu* 33.98) to attribute the latest recension to the poet Cuan Ó Lochán. Many of these final verses provide an additional *dúnadh* (closing echoing the first line) to a poem that already has one (Gwynn, *Metrical Dindshenchas* 4.16, 18, 76, 88, 90, 130), clear evidence for recomposition by a second poet.

Baumgarten has written about the place-name lore pervasive in secular literature as part of narrative style. The place-name *Adarca Iuchna* (the horns of Iuchna) plays a pivotal rôle in the story of Finn mac Cumaill's death. Finn drank from a well here, inadvertently breaking a taboo (GEIS) never to drink from a horn. Baumgarten also gives from ACALLAM NA SENÓRACH (Dialogue of [or with] the old men) two versions of an itinerary, which provides information and stylistic enrichment by its references to place-names, their alternatives, and their stories.

Stories based on place-names continued in Irish oral tradition in modern times. An example from Donegal (Tír Chonaill) explains *Loch Finne*, *Mín-an-áil*, and *Loch Muc* from the hunt for a monster sow (Joyce, *Origin and History of Irish Names of Places* 174–5) and a story from Co. Down (Contae an Dúin) includes the English house-name Mount Panther among place-names commemorating the chase of a magic cat (Fr [J.] O'Laverty, quoted by Hyde, *Ulster Journal of Archaeology* 2nd ser. 3.264 n.1).

Place-name lore analogous to Irish *dindshenchas* is also a feature of early Welsh literature. Many names are given explanatory stories or etymologies in, for example, the 9th-century Welsh Latin HISTORIA BRITTONUM and the Middle Welsh tales of the MABINOGI.

Kay Muhr

Diodorus Siculus (the Sicilian Διόδορος) was a Greek author from Agyrion in Sicily who wrote a world history, known as *The Historical Library* (Βιβλιοθήκη), between *c.* 60 and *c.* 30 BC. It survives in sizeable fragments. This work is important to CELTIC STUDIES because it preserves material attributed to the lost Celtic ethnography of POSIDONIUS, based on first-hand experience in GAUL in the earlier 1st century BC. Diodorus' fidelity to his source can be judged from his handling of his other sources and also from Posidonian passages paralleled by STRABO. Diodorus is thus one of the more important of the extant GREEK AND ROMAN ACCOUNTS of Celtic life in pre-Roman Gaul, and includes the following points (which are discussed more fully elsewhere in this Encyclopedia): an often-cited formulation on the learned classes, the BARDS and DRUIDS (31); a passage suggesting that the Gauls believed in REINCARNATION; a reference to the use of the CHARIOT in warfare by the Gauls (29.1); an origin legend of the Gauls claiming descent from HERCULES (5.24); an explanation of the mixed origins of the inhabitants of CELTIBERIA (5.33); an account of the Gauls' invasion of ROME under BRENNOS OF THE SENONES and the origins of the Celts in ITALY (14); and an account of the Gauls' invasion of Greece under BRENNOS OF THE PRAUSI, showing a parallel with the Welsh legendary hero BRÂN fab Llŷr (22.9).

Dīs Pater was the Roman god of wealth and the underworld, the realm of the dead, and was identified with the Greek Hades, also called Pluto (Πλούτων).

In *De Bello Gallico* (6.18) Caesar stated that all the Gauls believed that they were descended from Dīs Pater, as was taught to them by the druids. The Latin word *dīs* has two meanings: 'the rich one' or 'deity'. In the latter, generic sense, *diespiter* was often used for Jupiter, although Caesar refers to the two separately. It is unclear which of the Gaulish gods Caesar meant here. Mythological figures attested in inscriptions who *might* match the identification are Sucellus and Smertrius. In Irish tradition, the supernatural Donn mac Míled, who figures in legendary history as the first of the ancestral Gaels to die in Ireland and as the keeper of the house of the dead *Tech Duinn* (Donn's house), is a comparable figure (see also lebar gabála; míl espáine).

PEB

Dīviciācos of the Aedui (*fl.* 58 bc) was a key figure in the events of the Roman conquest of Gaul and is mentioned many times in Caesar's *De Bello Gallico*. He was Caesar's trusted friend, a pro-Roman tribal leader, holding the title *vergobretos* (translated by Caesar *magistratus*), elder brother and rival of the zealously anti-Roman Dumnorīx, ally of the Helvetii. In 61 bc he unsuccessfully asked the Roman Senate for aid against Ariovistus of the Germani. 'Diviciacus' gave the history of his desperate situation in a speech delivered in 58 bc to an assembly of Gaulish tribal leaders and Romans, as quoted by Caesar, who was present (*De Bello Gallico* 1.3.31). There had been two major tribal coalitions in Gaul: one led by the powerful Aedui with numerous allied tribes and a second led by the Arverni. The balance shifted when the Arverni and the Sequani invited the Germani from east of the Rhine as paid allies. The Aedui were heavily defeated, forced to swear an oath declaring perpetual submission to the Sequani by giving them hostages and receiving none in return, and compelled not to seek assistance from their Roman allies. However, Dīviciācos himself was free to speak since he had neither taken the oath nor given hostages. Within a short period of time the Sequani had lost a third of their territory to the Germani from across the Rhine under the leadership of Ariovistus, who was by then threatening the whole of Gaul. Moved by this speech, Caesar later fought and crushed the Germani in Gaul, though Ariovistus himself escaped across the Rhine. Dīviciācos was then restored to power.

Cicero (106–43 bc) states that he had met 'Diviciacus Aeduus', and describes him as a druid who claimed special knowledge of the natural world, including skills of prophecy (*De Divinatione* 1.41.90). We may conclude that the *vergobreti* and druids of Gaul had overlapping educational qualifications, or at least were not rigidly separate classes.

On the name *Dīviciācos*, see the following article.

primary sources
caesar, *De Bello Gallico*; Cicero, *De Divinatione*.

Dīviciācos of the Suessiones ruled this tribal group of the Belgae in north-east Gaul *c.* 100 bc. According to Caesar (*De Bello Gallico* 2.4), there was still living memory of Diviciacus in the 50s bc to the effect that he had been the most powerful chief in Gaul and had also ruled in Britain. While Caesar probably selected these details to provide a precedent for his own intended extension of the Roman conquest of Gaul into Britain, north-east Gaul and south-east Britain do resemble a single cultural province at the relevant period with regard to coinage and other features of high-status material culture of the ruling élite. We also have examples from a slightly later period of kings, tribes, and kingdoms astride the Channel, for example, Caesar's contemporary and inconstant ally, Commios of the Gaulish and British Atrebates.

South Belgic coinage inscribed DEIVICIAC is probably that of a later king of the same name. As well as Dīviciācos of the Aedui, the name is also attested in inscriptions from Lyon (Lugudūnon) as DIVICIAC[VS] (CIL 13, no. 2081) and Mainz (Moguntiācon) as genitive DIVICIACI. *Dīviciācos* is a Celtic masculine adjective used as a noun, probably based on the Proto-Celtic compound verb **dī-wik-* reflected in Old Irish *dī-fich-* 'fight back, avenge', Early Welsh *dïwg*, thus

meaning 'he who fights back, avenges'. Derivation from Celtic *dēvo-*, Gaulish *dīvo-* 'god' is less likely.

Divination, the foretelling of the future, can be done by reading the signs of the unmanipulated environment, or by performing an action and interpreting the results. The DRUIDS were said to practise a variety of divination rituals, including a method that involved observing the death throes of a human SACRIFICE (DIODORUS SICULUS 5.31). Medieval Celtic narrative includes many descriptions of divinatory behaviour. The best known is the *tarbfeis* (see FEIS), found in SERGLIGE CON CULAINN ('The Wasting Sickness of Cú Chulainn') and TOGAIL BRUIDNE DA DERGA ('The Destruction of Da Derga's Hostel'), in which a dream of the future king follows eating the flesh of a white bull. The same tradition may be reflected in the Welsh Dream of Rhonabwy (BREUDDWYD RHONABWY), in which the protagonist falls asleep on an ox-hide and dreams of the glorious ARTHURIAN past.

Divination, often performed playfully, continues to the present day. Hallowe'en, weddings, and funerals are held to be especially propitious for foretelling future marriages or deaths, but most saints' days have been associated with weather omens, and every major festival includes divination traditions (see CALENDAR). In Wales (CYMRU), a man could identify a future sweetheart on St John's Eve by walking around a church, plunging a knife into the keyhole of the door and saying, 'Here is the knife, where is the sheath?' (Owen, *Welsh Folk Customs* III). An Irish Candlemas custom was to light a candle for each member of the family, who would die in the order in which the candles burned out (Wilde, *Ancient Cures, Charms, and Usages of Ireland* 63).

For Celtic literary genres foretelling future events, particularly in the realms of politics and warfare, see PROPHECY.

Doire (**Derry/Londonderry**) is a district, county, and city on the river Foyle, about 6.5 km (4 miles) from Lough Foyle in Northern Ireland. Contemporary Irish annal notices concerning Derry begin in the 8th century, but the 7th-century *Vita Columbae* of ADOMNÁN indicates that Daire Calgaig was a significant landfall for travellers to and from Iona (EILEAN Ì); that place-name means 'the oak-wood of Calgach', and contains a personal name meaning 'swordsman' (cf. the Calgācus, who led the CALIDONES against AGRICOLA). This was the place later known as Daire Coluim Cille, i.e. modern Derry. It is thus possible that Daire Calgaig had been the site of a foundation by COLUM CILLE (St Columba) before his departure from Ireland (ÉRIU) to Iona in 563. While the ANNALS record a regular succession of monastic officials throughout the centuries, the main period of Derry's prominence was in the 12th century. Assisted by the political success of its royal patrons, the Mac Lochlainn dynasty, and by alliance with Irish church leadership in Armagh (ARD MHACHA), Derry supplanted KELLS (Ceanannas) as head of the Columban monastic familia *c.* 1150. These events are reflected in the composition of a new Irish-language version of the Life of the founder, which combined traditions from *Vita Columbae* with the assertion of Derry's preeminence among Colum Cille's churches. In 1613 a charter of James I granted rights to Derry to a number of London mercantile companies, resulting in the well-known name Londonderry, still favoured among Northern Ireland's Protestant community. The architecturally significant remains of the Renaissance walled town, with still impressive city fortifications, also date from this period. The partition of Ireland in 1920 placed the border between the city and part of its economic region, including Irish-speaking north Donegal (Tír Chonaill). Derry has figured importantly in the sectarian 'troubles' of 1968–94 and was the scene of such historical milestones as the Catholic civil rights

march of 5 October 1968 and the 'Bloody Sunday' shootings of 30 January 1972, in which 13 unarmed demonstrators were killed by the British Parachute Regiment (another subsequently died) and twelve were wounded. In the 2001 census the city's population was approximately 84,000 and that of the traditional county (Contae Dhoire) around 233,500.

Derry/Londonderry, Iona, Kells, and Armagh: modern county outlined in black, Northern Ireland border grey on white

Domhnall Ó Duibhdábhoireann, Book of (London, British Library, Egerton 88), is one of the most important medieval Irish legal manuscripts. It was written between 1564 and 1570 for the lawyer Domhnall mac Aodha Uí Dhuibhdábhoireann (O'Davoren), a member of the legal family of Cahermacnaghten, Co. Clare (Contae an Chláir). The manuscript was for the most part compiled at Park, at the Mac Aedhagáin legal school, in north-east Co. Galway (Contae na Gaillimhe). Typically for a law-book, the manuscript contains little ornamentation. The scribes of the manuscript frequently took turns at writing; since this work stretched over a length of time, significant changes in the penmanship of the individual scribes also occur. An authoritative analysis of the distribution of hands was recently published by W. O'Sullivan (*Celtica* 23.276–99). He demonstrated that, apart from the lawyer himself, a further 21 scribes were involved, several of whom were Domhnall's kinsmen. Identification of the names of most of these scribes was made possible by the numerous marginal notes in the manuscript, which also mention the time of their writing and include personal comments.

Several folios of the manuscript became detached during the 18th century, and they now comprise Copenhagen, Royal Library, Ny kgl. Saml. MS 261b, fos. 1–6 and Dublin, Royal Irish Academy MS 1243 (23 Q 6), fos. 33–52. The resulting diminished codex was one of the 191 manuscripts collected by the Irish scholar James Hardiman (*c.* 1790–1855) in the first quarter of the 19th century and purchased by the British Museum in 1832 from the bequest of Francis Henry Egerton, eighth earl of Bridgewater (1756–1829). It reached its present location in such disarray that the Irish historian Eugene O'Curry (1796–1862) was employed in 1849 to place the folios into the order in which they are presently bound.

The majority of texts in the manuscript are LAW TEXTS, for example, SENCHAS MÁR (The great tradition); these texts often consist of short extracted passages on a number of themes, complemented by a comprehensive commentary, rather than full editions. This suggests that Ó Duibhdábhoireann intended his book for practical use in his legal practice. Some literary texts were also included, including a dossier on the

legendary Irish hero Cú Roí mac Dáiri, which indicates that Ó Duibhdábhoireann also had literary interests.

Dòmhnall Ruadh Chorùna (Donald MacDonald, 1887–1967), Gaeldom's foremost First World War poet, spent most of his life in his native North Uist (Uibhist mu Thuath). He composed over 60 songs, all to traditional airs and metres, the earliest and most famous of which date from his time in the trenches of France or the immediate post-war years. It is their complex, honest mix of emotions and their journalistic eye for detail which give these songs their power: veering from bravado to pathos, from humanity to savagery within the same piece, accepting the need for killing but bearing witness to the terrible waste, loyal to the regimental *esprit-de-corps*, but undeluded about the British ruling classes. *Òran Arras* (Song of Arras) is astonishing in its artistry, its English coda 'march at ease' reverberating from verse to verse with unresolved degrees of pathos and irony. Technically much more intricate, *Nam Bithinn Mar Eun* (If I were a bird) also shows originality when it interrupts its lyricism halfway with 'the stench of death' and ends on the chilling image of the gas mask. MacDonald's most popular song is his only romantic work, *An Eala Bhàn* (The white swan). Many of the post-war songs are on local themes of praise, social change or morality. Although there are notable flashes of humour, a strong philosophical note sounds throughout his work.

Domnall Brecc, Welsh Dyfnwal Frych, was king of the Scottish DÁL RIATA (r. 629–† December 642) and grandson of AEDÁN MAC GABRÁIN. He was a major, though largely unsuccessful, military leader in both north BRITAIN and Ireland (ÉRIU) and came to figure importantly in early Irish, Hiberno-Latin, and Welsh literature. The defeat of Domnall Brecc in alliance with Congal Caech of ULAID by DOMNALL MAC AEDO in 637 was viewed in the LIBER DE VIRTUTIBUS SANCTI COLUMBAE (The book of miracles of St COLUM CILLE) of CUMMÉNE FIND as a decisive negative turning point for Dál Riata, after which it was dominated by 'foreigners', probably meaning the sons of ÆTHELFRITH, kings OSWALD (†642) and OSWYDD (†670) of Northumbria. Domnall Brecc was killed at the battle of Srath Caruin (Strathcarron) in central Scotland (ALBA) by the Brythonic king, EUGEIN map Beli (grandson of Neithon). The event is described in a Welsh AWDL, versions of which occur in the hands of both scribes A and B of LLYFR ANEIRIN (B1.1 = A.78, translated below). Domnall Brecc's death, which is noted to the month in the ANNALS of Ulster, is the only closely datable event mentioned in the GODODDIN corpus.

I saw an array that came from Kintyre,
who brought themselves as a sacrifice to a holocaust.
I saw a second [array] who had come down from their settlement,
who had been roused by the grandson of Neithon.
I saw mighty men who came with dawn.
And it was Dyfnwal Frych's head that the crows gnawed.

Old Irish *Domnall*, Welsh *Dyfnwal*, is a Common Celtic compound name < **Dumno-u̯alos* 'world-wielder'. The epithet *Brecc/Brych* means 'freckled' or 'pock-marked'.

JTK

Domnall mac Aedo maic Ainmirech (†642) was king of Tara (TEAMHAIR) and the first ruler to be called *rex Hibernie* (king of Ireland) in contemporary Irish ANNALS. He was a member of the Northern Uí NÉILL dynasty, specifically its Cenél Conaill branch. Thus, his hereditary lands were situated in the northern province of Ulster, present-day Co. Donegal in particular, and he was a close relative of St COLUM CILLE and many of the other early abbots of Iona (EILEAN Ì). In 637 Domnall defeated the coalition of Congal Caech ('Congal the One-eyed'), Cruithnean king of ULAID, and DOMNALL BRECC of the Scottish DÁL RIATA at the battle of MAG ROTH (Moira, Co. Down) (ADOMNÁN, *Vita Columbae* 3.5; Byrne, *Irish Kings and High-Kings* 112–13; Charles-Edwards & Kelly, *Bechbretha* 126–31; Sharpe, *Life of St Columba* 359–60). Congal was killed at Mag Roth. In this clash, the church of Iona sided with their Gaelic kin (i.e. Domnall mac Aedo's party) over their Gaelic neighbours and traditional patrons in Dál Riata; we can infer this from the surviving fragment of the LIBER DE VIRTUTIBUS SANCTI COLUMBAE of Cumméne, seventh abbot of Iona (657–69), a Cenél Conaill man himself. Congal Caech figures in the Irish king-lists as *Rí Temro* (king of Tara) preceding Domnall mac Aedo. Domnall's ascent thus represents a decisive turning point, as a major loss of political power for the CRUITHIN and Ulaid on the one hand, and a major step towards the permanent consolidation of the kingship of Tara by the Uí Néill on the other as an incipient high-kingship of Ireland.

The next king to be given the title *rex Hibernie* in the annals is Domnall mac Aedo's grandson, Loingsech mac Oengusso, who died in 704. The latter was a witness to CÁIN ADOMNÁIN ('Adomnán's Law') in 697, in which his title is given in its Irish form (*Rī Érenn*). Domnall is also styled *rex Scottorum* (king of the Scots, i.e. 'the Irish') in a synchronistic poem that Ó Cróinín has argued to be contemporary with Domnall's life (*Peritia* 2.79–80). A 'Domnall' also occurs in the correct position in the probably 7th-century list of kings of Tara in *Baile Chuind* 'CONN CÉTCHATHACH's Ecstasy' (ed. Murphy, *Ériu* 16.149). Yet, remarkably, neither of these Northern Uí Néill overkings is described by their kinsman Adomnán as high-kings, a status he reserves for DIARMAIT MAC CERBAILL, AED SLÁINE, and OSWALD. Instead, Domnall mac Aedo is called merely *rex valde famosus* 'a very famous king' (*Vita Columbae* 1.10; cf. Charles-Edwards & Kelly, *Bechbretha* 127f). One possible conclusion is that Adomnán anticipated that some of his intended audience would have rejected Iona's claims that Domnall and Loingsech were national high-kings. On the name, see DOMNALL BRECC; DOMNALL MAC AILPÍN.

Domnall mac Ailpín, known as Donald I King of the SCOTS (r. 858–62), was the son of AILPÍN MAC ECHACH and brother of CINAED MAC AILPÍN whom he succeeded as king of the PICTS and Scots. It is often assumed that he was the son of a Norse woman because his dynasty came to power through the assistance of Norsemen. He imposed the laws of DÁL RIATA on the Picts as well as the Scots and is called king of the Picts in the ANNALS of Ulster, thus reflecting the recent domination of Pictland by his brother Cinaed. Domnall mac Ailpín was probably assassinated in 862. He is buried on Iona (EILEAN Ì). His name, the source of the English name *Donald*, is Celtic and cognate with Old Welsh and CUMBRIC *Dumngual*, all of which derive from Celtic **Dumno-ŭalos*. *Domhnall* has been a common man's name in Ireland (ÉIRE) and Scotland (ALBA) at all historically documented periods.

PEB

Domnall mac Cusantín, known as Donald II of Scotland (ALBA), ruled from 889 to 899. He was

the son of Cusantín mac Cinaeda (Constantine I of Scotland) and the grandson of Cinaed mac Ailpín, the famous first Gaelic king of the Picts and Scots. Domnall is the first historical ruler to be described as *Rí Alban* (king of Scotland) in the Annals of Ulster (in his death notice). His predecessors were referred to as 'kings of the Picts'. His reign is in this way a significant milestone in the emergence of the Scottish identity of north Britain. He has also been seen as a key figure in the incorporation of the old Brythonic kingdom of Strathclyde (Ystrad Clud)/Cumbria into Scotland. Domnall restored the rule of Cinaed mac Ailpín's dynasty over Alba. His possible rôle in banishing the native aristocracy from Strathclyde is suggested by records which show that some of them appear in Gwynedd, north Wales (Cymru), *c.* 890 and the native dynasty peters out at about that time. Domnall was also the ancestor of a new dynasty who came to power over Strathclyde/Cumbria and ruled there until the 11th century as sub-kings under the kings of Alba. During his reign, Alba lost the archipelago of Orkney (Arcaibh) to the Vikings under King Harold Fairhair of Norway, who also gained ground on the facing mainland in Caithness (Gallaibh) and attacked Dunottar Castle near Stonehaven (Caladh nan Clach /Sròn na h-Aibhne). Domnall died in 899 and was buried on Iona (Eilean Ì). On the name, see Domnall Brecc; Domnall mac Ailpín.

PEB

Domnonia (French *Domnonée*) is the name of an early Breton principality, whose rulers were viewed as kings (*reges*) by some Breton sources, but as counts (*comites*) by the Merovingian Franks. One of its best documented rulers and monastic founders is Iudic-hael, who flourished in the first half of the 7th century. Although the exact extent of Domnonia is uncertain and probably varied over time, it comprised roughly the northern half of Brittany (Breizh), i.e. the regions which are now the Côtes-d'Armor (Aodoù-an-Arvor) and the northern parts of Finistère (Penn-ar-Bed). The name continues the tribal name *Dumnonii* (< Celtic *dubno-/dumno-* 'deep, the world'), who also gave their name to Devon (Welsh *Dyfnaint*) in England. Domnonia was probably settled, at least in part, from insular Dumnonia (see breton migrations). It is likely that British and Armorican Dumnonia functioned at times as a single sea-divided sub-Roman civitas and then as an early medieval kingdom. Another British tribe and Romano-British *civitas*, the *Cornovii*, gave its name to south-west Brittany (*Cornouaille* /Kernev), as well as to the territory west of Devon in England (Cornwall/Kernow). Domnonia is mentioned in the Life of St Uuinuualoe 1.1 as 'a country notorious for its sacrileges, unlawful feastings and adulteries'. Unlike the long-lived Kernev, Domnonia was not significant in the political or diocesan divisions of Brittany after the early Middle Ages and thus parallels the early submergence of insular Dumnonia east of the river Tamar within Anglo-Saxon Wessex.

AM

Dôn figures as the ancestress of three central characters in the Middle Welsh tale known as Math fab Mathonwy or, alternatively, as the Fourth Branch of the Mabinogi—Arianrhod, Gilfaethwy, and Gwydion. In the early Welsh Arthurian prose tale Culhwch ac Olwen, Dôn is named as the mother of the supernatural ploughman Amaethon mab Don (< **Ambaχtonos* 'ploughman-god') and the supernatural smith Gouannon mab Don (< **Gobannonos* 'smith-god'; see gofannon fab dôn). In the early 11th-century Breton Latin Life of St Iudic-hael, the legendary poet Taliesin also figures as the son of Dôn, *Taliosinus bardus filius Donis*; Taliesin is likewise connected with Dôn and other figures of the Fourth Branch in the mythological poem *Kadeir Kerrituen* (The chair of Ceridwen) in Llyfr Taliesin. In the Triads (TYP no. 35), Arianrhod is once called the daughter of Beli;

therefore BELI MAWR had perhaps figured as Dôn's consort. The GENEALOGIES of the 'Hanesyn Hen' Tract contain a list of *Plant Don o Arvon*, which indicates that her progeny had come to be localized in north Wales (CYMRU) as in the Fourth Branch.

In many modern discussions of Celtic mythology, Dôn is linked with the eponym of the mythological race of early IRISH LITERATURE, Tuatha Dé Danann (see TUATH DÉ) and the goddess of the river DANUBE (see Gruffydd, BBCS 7.1–4). However, these equations are phonetically unworkable: a cognate of Middle Irish *Danu*, BRITISH **Donū* or **Danū* would necessarily give Welsh ***Dyn* or ***Dein*. The authenticity and antiquity of Middle Irish *Danu* itself has been questioned by Carey (*Éigse* 18.291–4). Carey has elsewhere offered an interpretation of *Math* as a pre-Christian creation myth (*Journal of the History of Religions* 31.24–37), which suggests another possible etymology for the name Dôn, i.e. that it is the cognate of Old Irish genitive, dative, and accusative singular *don* 'place, ground, earth', the cognate of Greek nominative *khthōn* χθών, genitive *khthonós* χθονός 'the earth'. (There is no surviving attestation of the expected Old Irish nominative **dú*.) Welsh *Dôn* occurs only as semantic genitive, mostly preceded immediately by *merch* 'daughter', *mab* 'son', or *plant* 'children'. Thus, *Plant Dôn* as 'Children of the Earth' would be parallel to a second great mythological family in the Mabinogi, namely the children of LLŶR; cf. Old Irish *ler*, genitive *lir* 'sea'. They would also be comparable to the Titans of Hesiod who were likewise 'children of the earth' and primeval beings of the mythical age. Such a name would originally have resonated meaningfully with the COMMON CELTIC word for 'human being', namely **(g)donios* (lit. 'earthling'), whence Irish *duine*, Welsh *dyn*, Breton *den*.

Donnán, St (†617) is associated with the island of Eigg in the Small Isles off the western coast of Scotland (ALBA). Our historical knowledge of this saint is limited to the brief mention in the main hand of the ANNALS of Ulster (617.1), *combustio martirum Ega* 'the burning of the martyrs of Eigg', augmented by the later hand which adds 'the burning of Donnán of Eigg on the 17 April, with one hundred and fifty martyrs'. Various modern attempts to make this the early work of Vikings are highly fabulous: the culprits are more likely to have been local, perhaps unchristianized, secular powers. The ethnicity of Eigg (Pictish or Gaelic) prior to its monastic colonization is uncertain. The early 9th-century Martyrology of Tallaght preserves the names of 52 martyrs, including Donnán, which seems a more credible figure (Best & Lawlor, *Martyrology of Tallaght* 33). Two legends are preserved in the later notes to the Martyrology of OENGUS CÉILE DÉ. One explains that a rich woman, jealous of the land of Donnán and his monks, had brigands come and slaughter them; the other tells how COLUM CILLE refused to be Donnán's soul-friend because he would not be patron to people on their way to 'red martyrdom' (Stokes, *Félire Óengusso Céli Dé* 114–17). Another note, appended to both martyrologies, says that 'Stephen and Laurence and George . . . and all the martyrs of the world' were celebrated on Donnán's feast-day (Best & Lawlor 106–7; Stokes 114–15), and it may be that Donnán, as an actual Gaelic martyr, acquired a special interest. His kneecap is found in a strange relic-listing poem of, perhaps, the 8th century (Carney, *Celtica* 15.25–41).

Donnán's monastery was probably at the site of Kildonan on Eigg, from where there is an impressive collection of early medieval sculpture (Fisher, *Early Medieval Sculpture* 92–4). Eigg certainly continued as an active monastery into the 8th century, as shown by the obituaries of two ecclesiastical figures in the Annals of Ulster (725.7; 752.2). The cult of Donnán is fairly widely distributed throughout the Hebrides and down the west coast of Scotland as far as Wigtownshire (Watson, *History of the Celtic Place-Names of Scotland* 283, 165), and it may owe its popularity to the Scandinavian settlers of this region, later converted to Christianity and GAELIC speech, for whom the legend of a saint burned with his followers in a church may have stirred recollections of the life from which they had turned.

Thomas Owen Clancy

Dorbbéne (†713) was an abbot of Iona (EILEAN Ì) and a scribe. The earliest manuscript of ADOMNÁN's *Vita Columbae* (Life of COLUM CILLE) contains a colophon noting that the scribe was one Dorbbéne. This is almost certainly the man who, according to the ANNALS of Ulster (713.5), became head of the monastery of Iona in June AD 713, and died five months later on Saturday, 28 October AD 713. His genealogy indicates that he was a descendant of the Cenél Conaill branch of the Northern Uí NÉILL dynasty, and hence a distant cousin of Adomnán and Colum Cille. The peculiar wording of his obituary, with its description of his holding the *kathedra Iae* and its *primatus*, have led to some discussion about the meaning of these terms, and whether Dorbbéne was not also a bishop. This now seems less radical a suggestion than it would once have been, as episcopal holders of the Iona abbacy are gradually uncovered (Bourke, *Innes Review* 49.77–80; Bourke, *Innes Review* 51.68–71; Márkus, *Spes Scotorum* 115–38). Dorbbéne's succession interrupts the abbacy of DÚNCHAD, and it may be that it was in some way caught up with internal Iona politics concerning the dating of Easter (see EASTER CONTROVERSY), which remained unresolved until AD 716.

Thomas Owen Clancy

Douglas, Mona (1898–1987) was an influential cultural revivalist and a prolific collector of MANX MUSIC and dances, songs in the MANX language, and other Manx folk traditions (see FOLK-TALES). Childhood illnesses led to an unconventional upbringing which gave Mona Douglas a voracious appetite for poetry and literature. She began collecting folklore and music while still in her teens, and published her first collection of poetry in 1915. Her lifelong association with Celtic organizations began in 1917 when she was appointed Honorary Secretary of the Manx Society (Yn CHESHAGHT GHAILCKAGH) and admitted to GORSEDD BEIRDD YNYS PRYDAIN at the National Eisteddfod of Wales (EISTEDDFOD GENEDLAETHOL CYMRU). She worked in Wales (CYMRU) and in London during the 1920s, but returned to the Isle of Man (ELLAN VANNIN) in 1933. She combined farming with her post as a rural librarian, somehow finding time to write and publish poetry and articles on Manx traditional culture, and to collect and teach Manx music and dance. After her retirement she became a full-time journalist. She was the driving force in organizations such as Aeglagh Vannin (Manx youth), Ellynyn ny Gael (Manx arts) and in 1977 she revived the Manx traditional festival, Yn CHRUINNAGHT. In recognition of her work she received several honours and awards, including the Manannan Trophy (1972), presidencies of the Celtic Congress (see PAN-CELTICISM) and the Pan-Celtic Festival in Killarney (1980), first Manx delegate to the Welsh National Eisteddfod (1981), Member of the British Empire (1982), patron of the Manx Heritage Foundation (1986), and, posthumously, the Reih Bleiney Vanannan.

Dragons are fictitious monsters, typically lizard-like or serpentine in appearance. Originating in mythic symbolism and narrative, they are also popular adversaries in legend and FOLK-TALES. Dragon beliefs are found across Eurasian cultures, including biblical tradition. Although most of the dragon words in the CELTIC LANGUAGES are borrowed (e.g. Old Irish *drauc* and Welsh *draig* from Latin *dracō*, itself borrowed from Greek δράκων *drákōn*), this does not necessarily mean that dragon lore was not long-established among the Celts, since these imports may have replaced tabooed native words. The ram-horned serpent on the Iron Age GUNDESTRUP CAULDRON is one of a number of fantastic images on ritual objects and other ornamented works that may be meant to be a dragon (see further ART, CELTIC-INFLUENCED [1]). Dragons have been interpreted as representing both elemental forces and the blockage of creative influences (hence the dragon who guards a treasure). In folk-tale and legend they may also function quite simply as a needed ordeal for the hero, and they have often become focuses of affection and local identity. Geographical features, such as Cnoc-na-Cnoimh (Hill of the worm) in Sutherland, might be explained as being the result of the dragon's activities or death struggles. Ritually quarrelling dragons are found in the traditions of both Wales (CYMRU)—in HISTORIA BRITTONUM and CYFRANC LLUDD A LLEFELYS—and early Ireland (ÉRIU), e.g. the swineherds of TÁIN BÓ CUAILNGE's *De Chophur in Dá Mucado* (Of the *cophur* of the two swineherds). More conventionally, a hero fought a dragon—folk-motif B11.11. The hero PEREDUR of ARTHURIAN romance encountered two treasure-guarding dragons, and the hero of the *Táin Bó Fraích* ('The Cattle Raid of Froech') killed a water-dragon (*béist, míl*) in order to obtain some magic berries. Less successful was FINN MAC CUMAILL's son Dáire, who was swallowed by a dragon, but managed to cut himself (and the dragon's other victims) free. While several saints, including Armel, Beircheart, Carantoc, COLUM CILLE, Ciaran, PETROC, and SAMSON defeated dragon-like monsters, many dragon-slayers of local tradition—such as the lazy braggart Assipattle, who slew the Stoor Worm (Marwick, *Folkore of Orkney and Shetland* 139–44)—were farmers and labourers. Not all dragon imagery invoked evil. Dragon insignia were used in battle by the Celts of late antiquity and associated with qualities of leadership. The best-known legendary example is ARTHUR, who was provided by GEOFFREY OF MONMOUTH with dragon devices for his battle gear and a father named UTHR BENDRAGON. The DRAIG GOCH, a beloved national symbol of the Welsh, is quite different from the *gwiber* (from Latin *vīpera* 'viper'), a snake that was transformed into a troublesome winged serpent after drinking the milk of a woman and eating consecrated bread (Owen, *Welsh Folk-lore* 349). But there were also Welsh serpents which attached themselves to families and brought good luck and wealth (Simpson, *British Dragons* 36). The teasing snapdragons used in local pageants were an English phenomenon, but Simpson detects a dragon-like nature to the famous hobby-horses of Minehead (Somerset) and Padstow (Cornwall) (*British Dragons* 114); the latter town was named after St Petroc. Dragons could also be employed as nursery bogeys to frighten children away from the dangerous pits and ponds where they were said to dwell.

The **Draig Goch** (Red Dragon) is the national symbol of Wales (CYMRU). Its four-legged, barb-tailed, winged image is found on the Welsh flag, as well as on

Welsh singer Shirley Bassey performing in a dress incorporating the Welsh flag

product labels, advertising, and tourist memorabilia. Dragons were already popular Roman and Germanic military emblems in late antiquity. The Welsh word *draig* (Middle Welsh *dreic*) is an early loanword (see DRAGONS), and GILDAS refers to MAELGWN as *insularis draco* (dragon of the isle), which might have been one of the king's honorific titles or a term of abuse from his critic. Early WELSH POETRY identifies dragons with the virtues of warriors and leaders. The red dragon appears as a symbol of Brythonic identity (in opposition to the Anglo-Saxon invaders) in the story of GWRTHEYRN's castle in the early 9th-century HISTORIA BRITTONUM, in which a red dragon defeats a white one, a motif repeated in the Middle Welsh prose tale CYFRANC LLUDD A LLEFELYS. GEOFFREY OF MONMOUTH closely associated ARTHUR with dragons, and by the mid-13th century the Norman kings were co-opting both traditions as emblems of their own Britishness. Lofmark suggests that it is only the rise of the cult of St George which kept the red dragon from becoming a national emblem of England. By the mid-15th century the sons of Owain Tudor were employing the red dragon as heraldic devices, and Henry Tudor used a red dragon on a green and white field as one of his battle standards at the Battle of Bosworth in 1485 (see TUDUR). After the Stuart unicorn supplanted the Tudor dragon, the latter became increasingly rare as a royal or national symbol of England or Great Britain. Neither was it used as an emblem by important Welsh families (Lofmark, *History of the Red Dragon* 72), but it remained important enough as a symbol of Wales to be chosen for the royal badge for Wales in 1807. It continued to represent the Welsh on various royal insignia and flags until 1959, when the present red dragon on a green and white field was established as the national flag of Wales. The Red Dragon remains a symbol for both militant Welshness and for the Wales of the tourist.

Drest/Drust was the name of a king of the PICTS *c.* 724–9. The extant notices reflect a turbulent career, preoccupied with factional rivalry. According to the PICTISH KING-LIST, he ruled for five years, intermittently or jointly with his predecessor, NECHTON SON OF DERELEI. He probably compelled Nechton to retire to a monastery in 724, but was replaced by him again in 726 and, then, having overthrown Nechton for a second time, took him captive. Drest was driven out of Pictland by another rival, ELPIN, also in 726. He returned in 727, but was defeated by a fourth claimant, ONUIST son of Uurguist, who finally slew Drest in the battle of Druim

Derg Blathuug (the red ridge of 'Blathuug', site unknown) on 12 August 729, according to the ANNALS of Clonmacnoise.

Though Drest was a common Pictish name, it is this particular ruler who is sometimes identified as the historical basis of the Welsh legendary figure Drystan ap Tallwch, the figure on which the famous international legend of TRISTAN AND ISOLT (see also DRYSTAN AC ESYLLT) has been modelled. *Drust* is the form of the name found in texts which use Gaelic or Gaelicized spellings. *Drest* presumably reflects a native PICTISH or north BRYTHONIC pronunciation.

PEB

Drest/Drust son of Donuel, king of the PICTS *c.* 663–72, succeeded his brother Gartnait in 663. It is unclear whether their father, given as *Donuel* in the PICTISH KING-LIST and as *Domnall* in contemp-orary Irish ANNALS, was DOMNALL BRECC of DÁL RIATA. The two brothers paid tribute to OSWYDD of Northumbria, and rebelled against the Northumbrians after Oswydd's death in 670. According to the Annals of Tigernach, Oswydd's son ECGFRITH subdued the Picts and expelled Drest in 672. There is a slight discrepancy concerning the length of Drest's reign: the Pictish king-list records a six- or seven-year reign, whereas the contemporary annals give eight to nine years. The name *Drest*, also spelled *Drust*, *Drost*, was common among the Pictish rulers, as was its diminutive *Drustan* or *Drosten*. Forms of the latter were widespread in the Celtic countries during the early Middle Ages (see further DRYSTAN AC ESYLLT). His father's name *Donuel* is Celtic and possibly specifically the PICTISH form cognate with Old Irish *Domnall*, Old Welsh and CUMBRIC *Dumngual*, all from Celtic **Dumno-ualos*. *Donuel* might be an inflected genitive form of the Pictish nominative **Donual*, thus corresponding exactly to Old Irish *Domnaill*. On the common Gaelic name *Domhnall*, see further DOMNALL BRECC; DOMNALL MAC AILPÍN.

druids [1] accounts from the classical authors

§1. INTRODUCTION

We have no written accounts by the pre-Christian druids describing their own beliefs or system of learning. It is highly unlikely that any such texts ever existed in GAUL and improbable likewise for the rest of the pre-Christian Celtic world, in the light of what CAESAR said (*De Bello Gallico* 6.14; see also LITERACY §2):

> [The druids] are said to commit to memory a great number of verses. And they remain some 20 years in training. Nor do they judge it to be allowed to entrust these things to writing, although in nearly the rest of their affairs, and public and private transactions, Greek letters are used. It seems to me there are two reasons this has been established: neither do they wish the common people to pride themselves in the training nor those who learn to rely less on memory, since it happens to a large extent that individuals give up diligence in memory and thorough learning through the help of writing.

Thus, the classical sources have special value as the only literary evidence for the druidical order and its beliefs from a period when pagan Celtic religion was alive. For an overview of this material, see GREEK AND ROMAN ACCOUNTS (§10). By contrast, the druids of early Irish and Welsh literature are a marginal and largely fictional presence.

§2. DRUIDS AS PHILOSOPHERS

What is perhaps the oldest instance of this idea was ascribed to ARISTOTLE (see entry) by Diogenes Laertius, included in a list of classes of learned sages among other barbarian (i.e. non-Graeco-Roman) peoples. A similar list is given by Dion Chrysostom (*Orations* 49), who goes on to maintain that druids wielded great power over Celtic kings.

The druids figure as one within a three-fold distinction of Celtic men of learning in DIODORUS

Siculus (5.31), probably deriving from Posidonius:

> They have lyric poets called bards, who, accompanied by instruments resembling lyres, sing both praise and satire. They have highly honoured philosophers and theologians [those who speak about the gods] called druids. They also make use of seers, who are greatly respected.

Also drawing on Posidonius, Strabo (4.4.4) gives a version of the same formulation:

> As a rule, among all the Gallic peoples three sets of men are honoured above all others: the bards, the *vātes*, and the druids. The bards are singers and poets, the *vātes* overseers of sacred rites and philosophers of nature, and the druids, besides being natural philosophers, practice moral philosophy as well.

The 4th-century Roman historian Ammianus Marcellinus (15.9.8) repeats this threefold division.

That the philosophy of the druids was specifically akin to that of Greek Pythagoras (recognized for an emphasis on mathematical patterns and a belief in reincarnation) is stated by Hippolytus (*Philosophumena* 1.25), Clement of Alexandria (*Stromata* 1.15.70.), and Valerius Maximus (2.6.10).

§3. druidic afterlife beliefs

See reincarnation; Greek and Roman accounts §§10, 12. Lucan (*Pharsalia* 1.450–58) tells specifically of a druidic doctrine of an afterlife in an Otherworld.

§4. druidic science and natural magic

The idea that the druids maintained the Celtic calendar and understood the workings of the cosmos is widespread amongst the classical writers, thus Pomponius Mela (*De Situ Orbis* 3.2.18–19):

> [The druids] claim to know the size of the earth and cosmos, the movements of the heavens and stars, and the will of the gods. They teach, in caves or hidden groves, many things to the nobles in a course of instruction lasting up to twenty years.

A number of details occur uniquely in the *Natural History* of Pliny—druidical beliefs regarding medicinal plants, their uses, and various harvesting rituals, including the great reverence for mistletoe and the oak trees on which it grew and the elaborate rite in gathering it:

> . . . they lead forward two white bulls with horns bound for the first time. A priest in white clothing climbs the tree and cuts the mistletoe with a golden sickle, and it is caught in a white cloak. They then sacrifice the bulls while praying that the god will grant the gift of prosperity to those to whom he has given it. They believe that mistletoe, when taken in a drink, will restore fertility to barren animals, and is a remedy for all poisons. (*Natural History* 16.24)

There is also the curious description of an egg-like object, called an *anguinum*, made from the venom of snakes, reminiscent of the *mân macal* or *glain y neidr* (jewel of the snake) of Welsh folk tradition: 'The Druids value it highly: it is praised as insuring success in litigation and in going to audiences with kings' (*Natural History* 29.52).

§5. druids as judges

Caesar (*De Bello Gallico* 6.16) emphasizes the judicial function of the druids and interestingly states that execution of criminals and sacrifice of captives were functionally interchangeable in that both were believed to please the gods. Diviciācos of the Aedui was both a *vergobretos* or supreme tribal magistrate and a druid.

§6. druids as prophets

This is a recurrent theme, and there are specific anecdotes recorded by Lampridius (*Alexander Severus* 59.5) and Vopiscus (*Numerianus* 14; *Aurelianus* 63.4.5), which seemingly confirm druidical foresight with the subsequent history of the Roman Empire; see prophecy, cf. Dīviciācos of the Aedui.

§7. druids as historians

On the druidic doctrine of the origins of the peoples of Gaul preserved by Ammianus Marcellinus (15.9), see legendary history §2 (cf. belgae; flood legends). Another origin legend ascribed to the druids is that the Gauls were all descended from the god corresponding to the Roman Dīs Pater, god of death and the underworld, according to Caesar (*De Bello Gallico* 6.18).

§8. the status of the druids

According to Caesar, the status of the druids was

comparable to that of the *equites* of Gaul. We may take the latter to mean approximately 'warrior aristocracy':

> The Druids retire from war nor are they accustomed to any taxes. They have immunity from military service and are exempt from all lawsuits. (*De Bello Gallico* 6.14)

The picture of an élite status, free from the usual obligations and limitations of a Gaulish tribesman, is further enhanced by Caesar's description of their annual assembly, implying a nascent national learned and judicial class which transcended tribal divisions:

> At a certain time of the year they sit down in a consecrated place in the territory of the Carnutes [around modern Chartres, France], which region is believed to be the centre of all Gaul. To this place all come from everywhere who have disputes and the Druids bring forth their resolutions and decisions. (*De Bello Gallico* 6.13)

Both the high honour and extra-tribal status of the druids is illustrated by the following account recorded by Diodorus (5.31):

> Often when two armies have come together with swords drawn these men [the druids and bards] have stepped between the battle-lines and stopped the conflict, as if they held wild animals spellbound. Thus, even among the most brutal barbarians, angry passion yields to wisdom and Ares stands in awe of the Muses.

Explaining that the druids were considered the best of men, Strabo (4.4.4) gives much the same account; the common source is probably Posidonius.

§9. ROMAN REPRESSION OF DRUIDISM

According to Strabo (4.4.5), the Romans put an end to human SACRIFICE by the druids of Gaul. The sources are consistent in portraying the druids as taking part in sacrifice of all sorts (e.g. Diodorus Siculus 5.31), much of it described as inhumane in terms meant to shock readers and thus justify repression. Unspecified general repression of druidism occurred in Gaul under the emperors Augustus (r. 30 BC–AD 14) and Claudius (r. AD 41–54), according to Suetonius (AD 69–*c.* 140; *Claudius* 25).

§10. DRUIDS IN BRITAIN

According to Caesar (*De Bello Gallico* 6.13):

> It is believed the training for druids was discovered in Britain and from there it was transferred into Gaul. And now those who wish to learn the matter carefully depart for Britain for the sake of learning.

This passage has given some writers reason to believe that druidism might have been a pre-Celtic religion which later spread from the Atlantic periphery to the Continental heartland of the ancient Celtic world, but this statement was probably at least partly motivated by Caesar's wish to justify an extension of the Roman invasion of Gaul into Britain. In the next century the British druids of Anglesey (MÔN) were perceived by the Romans as an anti-Roman unifying force and were accordingly targeted; cf. also BOUDĪCA; CARATĀCOS. The storming of Anglesey in AD 60 is vividly described by TACITUS (*Annals* 14.30):

> Women in black clothing like that of the Furies ran between the ranks. Wild-haired, they brandished torches. Around them, the druids, lifting their hands upwards towards the sky to make frightening curses, frightened [the Roman] soldiers with this extraordinary sight. And so [the Romans] stood motionless . . . Then their commander exhorted them and they urged one another not to quake before an army of women and fanatics. They carried the ensigns forward, struck down all resistance . . . After that, a garrison was imposed on the vanquished and destroyed their groves, places of savage superstition. For they considered it their duty to spread their altars with the gore of captives and to communicate with their deities through human entrails.

§11. DRUIDS IN GALATIA

Although there is no direct documentary evidence, the related etymologies of the name of the Galatian tribal meeting-place *Drunemeton* [see NEMETON] and *druid* (see DRUIDS [2]), as well as the similarity of the Drunemeton and Carnutian assemblies and the judicial function of the Galatian tetrarchs, has led some modern writers to infer the presence of the order there; see GALATIA.

druids [2] romantic images of

The largest body of images of druids has come from Britain, and seminal to it was the engraving published in Aylett Sammes's *Britannia Antiqua Illustrata, or, The Antiquities of Ancient Britain* (1676). The picture was formed by a process of conflating classical descriptions and archaeological finds with extant iconographies of appropriate other types (such as wild men and holy men), who lent themselves to be reinterpreted as druids. Thus, Conrad Celtes's description of carvings found at the Fichtelberg in Saxony, Germany, recycled by John Selden in *Jani Anglorum Facies Altera* (1610), were grafted onto depictions of wild men, green men, and Christian hermits. Descriptions of pageants and theatricals in England make it clear that the visual representation of the WILD MAN or Ancient Briton was well established in the 16th century, and one of the earliest surviving images specifically identified as a druid, a design by Inigo Jones for Lodowick Carlell's *The Passionate Lovers* (1638), emanates from this performance tradition. Visualizations of Christian hermits, such as that engraved after Marten de Vos for *Solitudo, sive vitae Patrum Eremicolarum* (Solitude, or lives of the hermit fathers; 1594) seem to have been particularly influential, but Continental imaging of the druid himself was generally savage, as in the title-page of Schedius's *De Dis Germanis* (On the German gods; 1648). However, for English speakers, the location of the archetypical druid in Anglesey (MÔN), Wales, by Henry Rowlands in *Mona Antiqua Restaurata* (Ancient Mona restored; 723) had the most important consequences. Rowlands' image, though dependent on that published by Sammes, removed the druid's book with its Christian resonance and replaced it with an oak branch as a symbol of ancient and internalized wisdom—a shift of meaning to which Rowlands was presumably sensitized by his familiarity with the oral tradition of WELSH POETRY.

Subsequent imaging of druids, especially in the hands of Romantics, centred on concepts of ancient BRITAIN, and in particular of Wales (CYMRU), whose poetic and musical tradition came to be regarded as a living archaeology of the more benign aspects of druidical behaviour. Thomas Gray's poem 'The Last Bard' (1757) was based on mythical events in the 13th century, but in the flood of visual images that it released the bard was distinguished from the druid only by the addition of a HARP. Images of druid-bards continued from Thomas Jones's version of 1774 to that of John Martin in 1817.

William Blake's idiosyncratic visualizations of druidism emanated from a complex and highly personal theology. On the other hand, more widely distributed printed images—notably De Loutherbourg's *The Last Bard* (1784), and the sartorial splendour of Meyrick and Smith's return to the 'scientific' study of the subject, *The Costume of the Original Inhabitants of the Islands of Britain* (1815)—stimulated the production of a plethora of kitsch objects. The escape of the druid from intellectual to popular culture was most publicly manifested in 'Druid Inn' pub signs, the most notable of which is at Pontypridd in south Wales—the successor to the local hostelry of Dr William Price (1800–93), the celebrity of whose druidical costume had an appropriate outcome in his influence on the promotion of cremation as a self-conscious break with Christian funerary customs.

The more anti-social aspects of druidical behaviour presented a difficulty for 19th-century English society with its self-image of the world's exemplar of Christian virtues. The continued fascination with the subject was therefore focused on imaging the first contacts between Christian missionaries and disgruntled pagans. The most celebrated of this pious genre was Holman Hunt's *A Converted British Family Sheltering a Christian Priest from the Persecution of the Druids* (1850), but the moral and political potential of the subject had been realized earlier in the commission to Vincent Waldré to paint *St Patrick Lighting the Paschal Fire on the Hill of Slane* for Dublin Castle (see BAILE ÁTHA CLIATH), the home of the Anglicized

Ascendancy. The picture was appropriately completed at about the time of the Act of Union of 1800. Exploiting political potential in the opposite direction, Bellini's opera *Norma* (1831), set in Gaul, seemed to encourage ideas of national resurgency and provided splendid opportunities for druidical design in productions all over Europe and the United States.

The theatricality of the druid has provided a recurrent context for his imaging. The work of Iolo Morganwg (Edward Williams), familiar to William Blake, provided the source for the on-going *gorseddic* pageants of the Celtic nations. Though a forced marriage, the union of Iolo's Gorsedd Beirdd Ynys Prydain with the eisteddfod movement in Wales in 1819 was a success. In the regalia and robes designed by the Bavarian-born Hubert von Herkomer and the Welsh sculptor William Goscombe John (1860–1952), the archdruid Hwfa Môn (Rowland Williams, 1823–1905) became a living art object and icon.

druids [3] the word

The oldest attestation of the word can be found in Latin *druides* (pl.), which is probably a loan from Gaulish. It is also found in Old Irish *druí* and early Welsh *dryw* (Llyfr Taliesin, in a copy of the Middle Welsh period of a poem of Old Welsh date). All these forms are derived from Proto-Celtic **dru-wid-s*, pl. **druwides* 'oak-knower', as Pliny the Elder had already noted. The Old English word *drȳ* for a magician or wizard is a borrowing from Celtic (it is uncertain whether it was borrowed from Irish or Brythonic).

§1. druid = wren

Both Irish *druí* and Welsh *dryw* could also be used to signify the wren. Besides these, we find Breton *drew* 'merry, cheerful' (derived from 'wren') and Middle Irish *dreän* 'wren'. At first sight, it would seem strange that the word for wren could be the same etymologically as the word for druid, but, in fact, the wren was one of the prophetic birds, along with the raven, according to both Irish and Welsh tradition.

§2. further brythonic forms

Middle and Modern Welsh *derwydd* (also attested in texts of Old Welsh date such as Armes Prydein) and Old Breton *dorguid* (or *darguid*) seem to reflect an analogical reformation of inherited Proto-Celtic **dru-wid-* to **daru-wid-*, so that the form now contains a form of the word for 'oak' more recognizable in British, as in Welsh *dâr* 'oak tree' < **daru-*. Alternatively, the reformation could have been based on the stem form **deru-* that is found in Old Welsh *deruen(n)*, Modern *derwen* 'oak tree', also in the Romano-British place-name *Deruentio* and Old Irish *derucc* 'acorn' (< Proto-Celtic **deru-knut-* 'oak-nut'), or with the **doru-* that is very well attested outside Celtic (e.g. Greek δόρυ *dóry* 'tree trunk, wood' and Vedic Sanskrit *dā́ru-*). In other words,

the reformation was based on a popular understanding of the correct etymology.

Drunkenness as the result of consumption of alcohol is a common phenomenon the world over, but the Celts have been stereotyped as excessively prone to drunkenness from classical to modern times. The Celtic stereotype in GREEK AND ROMAN ACCOUNTS was founded on ancient perceptions of the Barbarian 'other' (that is, 'people unlike ourselves' from the writers' point of view), and accounts of drunkenness are not necessarily based on authentic observations of Celtic behaviour, although alcohol was certainly consumed in quantity on festive occasions (see FOODWAYS; WINE).

Alcohol was a standard feature of a FEAST, and many literary narratives were propelled by the excessive consumption of alcohol. The ULSTER CYCLE tale MESCA ULAD ('The Intoxication of the Ulstermen') recounts CÚ CHULAINN's journey with his companions across the breadth of Ireland (ÉRIU) on account of his drunkenness. Although this tale is comic, the magnitude of the journey and the changes wrought on Ireland's topography can also be read as mythic. The figure of MEDB may be another aspect of the cosmic importance of drunkenness; her name (Celtic **medwā* 'intoxicating' f.) is cognate with Welsh *meddw* and Breton *mezv*, both of which mean 'drunk, intoxicated' and are also cognate with English *mead*. Her name may reflect a rôle derived from the SOVEREIGNTY MYTH—a goddess whose prerogatives included the distribution of alcohol. In a Christian context, this can be seen reflected in the figure of Saint BRIGIT, whose miracles involve the production of ale.

The capacity and opportunity to drink large quantities of alcohol are seen as heroic. For example, much of the GODODDIN, an early Welsh poem, is devoted to the glories of the mead-feasts for the year prior to the battle. The chieftain's hospitality and ability to provide his warriors with enough alcohol to keep them pleasantly drunk for a year was seen as a testament to his worthiness as a leader.

The tradition also contains humorous and negative references to drinking. In the Welsh dialogue *Selyf a Marcholffus*, Marcholffus describes his wife's pedigree, including:

Tromddiod oedd vam Medd-dod,
Medd-dod oedd vam Meddw,
Meddw oedd vam Meddwen,
Meddwen oedd vam Meddwach,
Meddwach oedd vam Meddwaf oll.

Heavy drinking was Drunkenness's mother,
Drunkenness was Drunk's mother,
Drunk was Drunken Maiden's mother,
Drunken Maiden was the mother of Drunker,
Drunker was the mother of Drunkest of all).

Drystan ac Esyllt

The famous international tragic medieval love story of TRISTAN AND ISOLT is covered in a separate article. This entry treats Welsh versions of the tale, its Celtic origins and affinities.

§1. WELSH VERSIONS

There is no complete and coherent medieval Celtic version of the Tristan story. The Welsh Tristan fragments comprise: (1) a poem or fragments of two poems in LLYFR DU CAERFYRDDIN (Jarman, 74); (2) allusions in the Welsh triads to the three characters of the triangle—Drystan (Bromwich, TYP nos. 19, 21, 26, 41, 71, 72, 73, 80), Esyllt (nos. 26, 71, 80), and March (nos. 14, 26, 71, 73); (3) allusions by poets to Drystan and Esyllt, beginning with the GOGYNFEIRDD of the 13th century and more commonly by the CYWYDDWYR of the 14th to the 16th century; (4) *Ystorya Trystan* (The tale of Tristan), a mixed prose-verse text which occurs only in 16th- to 18th-century manuscripts (Bromwich, *Arthur of the Welsh* 209). In her edition of these poem(s), BROMWICH's discussion underscores the uncertainty of the relationship of the text to the Tristan story,

despite containing the names *D(i)ristan* and *March*. As to the date of the original, she draws attention to the retention of the verbal noun ending *-if* (proved by internal rhyme). This form was already shortened to *-i* in the Old Welsh COMPUTUS Fragment of the late 9th to the mid-10th century, and therefore this poem is likely to be of Old WELSH date.

Newly discovered texts of *Ystorya Trystan* have been edited by Rowland and Thomas (NLWJ MS 22.241–53). A separate history and authorship for the prose and verse portions are likely, and sharp differences distinguish these Welsh versions from the Continental Tristan romances (Rowland, *Early Welsh Saga Poetry* 252–4).

§2. CELTIC ORIGINS AND AFFINITIES

Celtic origin of the Tristan story is not in doubt, as confirmed by the fact that the principal characters of the love triangle (Drystan, Esyllt, and March, in their Welsh forms) bear names of Celtic, specifically BRYTHONIC, origin (Bromwich, *Arthur of the Welsh* 209). However, a different sort of Celtic origin—Pictish-plus-Old Irish—is also widely accepted (Bromwich, THSC 1953.32–60; Newstead, *Arthurian Literature in the Middle Ages* 122–33; Pearce, *Folklore* 85.145–63). It is possible that the story circulated in the Celtic world and accumulated local elements, in Pictland and Cornwall, for example, perhaps assimilating characters to local heroes with similar names. The Pictish/Irish-origin theory rests mainly on the recurrence of the names *Drust(an)* and *Talorg(en)* in the PICTISH KING-LIST (see also DREST; Marjorie O. Anderson, *Kings and Kingship in Early Scotland*) and the similarity between this love triangle and certain Irish tales, chiefly TÓRUIGHEACHT DHIARMADA AGUS GHRÁINNE ('The Pursuit of Diarmaid and Gráinne'). The PICTISH name *Drust(-)* is the cognate of Welsh *Drystan* (later *Tristan* in the romances). Pictish *Talorg(-)*, *Talorc-* has been taken as similar to *Tallwch*, Drystan's father's name in the Welsh sources. The difficulties with taking these names to be a decisive parallel are that nothing similar to *Talorc*/ *Tallwch* occurs in the Continental or English versions of the story and that Pictish *Talorc* and Welsh *Tallwch*, though similar, are not exact cognates. *Talorc* would probably have been understood as a compound meaning 'Pig-brow', although the actual etymology is unclear, and *Tallwch* as Welsh *tâl* 'brow' + *hwch* 'swine, sow'. As Drystan son of Tallwch appears in the Welsh TRIADS as one of the 'Three Powerful Swineherds', where he is connected with ARTHUR (Bromwich, TYP 44–8), an underlying Pictish dynastic tale is not necessary to explain the unique name *Tal-hwch*. The comparable Irish love story of Diarmaid and Gráinne does not appear as a written text until the Early Modern IRISH period and therefore would be too late to be the source of the Tristan tales. The reverse relationship is possible, i.e. deriving *Tóruigheacht Dhiarmada agus Ghráinne* from the Brythonic tale, at least partly (Bromwich, *Arthur of the Welsh* 222–3). A second Irish parallel involves a monster-slaying episode in TOCHMARC EMIRE ('The Wooing of Emer') in the ULSTER CYCLE. Although *Tochmarc Emire* is early enough, the episode has no echoes in the Welsh Tristan material.

The Cornish connections of the Tristan story seem to have more in their favour than the Pictish theory (Padel, CMCS 1.53–82). Key points in the case for a Cornish Tristan include the 5th- to 7th-century inscribed memorial to DRVSTA(N)VS CVNOMORI FILIVS 'Drystan son of CUNOMOR' (Fleuriot, *Histoire littéraire et culturelle de la Bretagne* 1.127–9), near the locale of the tale in Béroul's 12th-century French version of the romance at Castle Dore (cf. ARTHURIAN SITES), and the Old CORNISH place-name *Hryt Eselt* (Isold's ford) in a 10th- or 11th-century Anglo-Saxon charter, probably reflecting an older form of one of the two episodes set at fords in Béroul's version. Béroul's Tristan geography, Lantien (now Castle Dore), was a pre-Roman IRON AGE site and therefore could not possibly have been the actual stronghold of a historical Dark Age Marc Cunomor (Padel, *Arthur of the Welsh* 240–3).

JTK

Dub mac Mael Choluim was the great-great-grandson of Cinaed mac Ailpín (regarded as the founder of the kingdom of Alba) and was himself king of Scotland (*rí Alban*) from 962 to 966. He had previously been king of Strathclyde (Ystrad Clud; see also cumbria), where he was succeeded by Dyfnwal ab Owain. What is known of Dub's career illustrates how the old Brythonic polity of Strathclyde functioned at this period as a sub-kingdom of Gaelic-dominated Alba. It also shows the instability of succession within the tandem dynasties: Dub was driven from the throne by Cuilén Ring, a member of a rival branch of Cinaed's descendants. Soon after, he was killed by another rival party in Moray (Moireibh) and buried on Iona (Eilean Ì).

The name *Dub* is Gaelic (Modern *Dubh*), from a Celtic root meaning simply 'black' or 'black-, dark-haired', Welsh, Cornish, and Breton *du*.

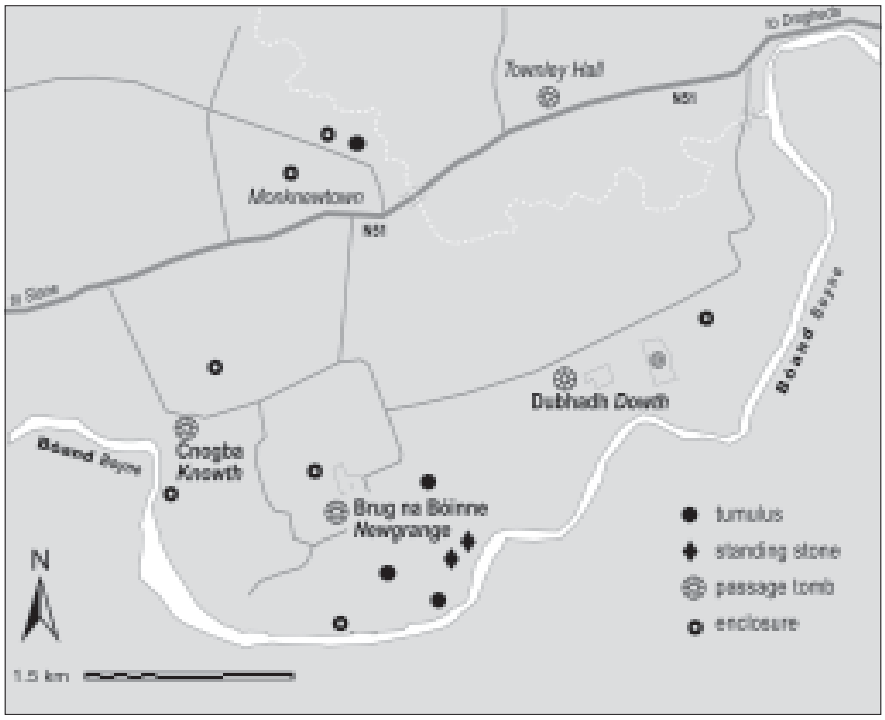
Dubhadh (Early Irish Dubad, also Síd mBresail, English Dowth) is an ancient circular mound roughly 85 m (280 feet) in diameter and originally about 16 m (50 feet) high. It lies somewhat over 2 km east northeast of a similar structure at Newgrange (Early Irish Brug na Bóinne, also Síd in Broga). Dowth is situated in the valley of the Boyne (Old Irish Bóand) in Ireland's east midlands. The mound of Dowth, like Newgrange and a third similar tomb nearby at Knowth, is on a hilltop and is thus visible on the horizon at a distance. Two megalithic passage graves have been located in the south-western sector of the mound. Like its sister tumuli, Dowth is probably a structure of the Neolithic period, dating to *c.* 3000 BC or a few centuries before.

Dowth, like Newgrange, is prominent in early Irish literature. The two sites are named together in the Ulster Cycle tale Tochmarc Emire ('The Wooing of Emer'; §§17, 40), where Cú Chulainn's figurative description of a journey 'between the god and his



Map showing the relationship of the main monuments in the Boyne Valley, Co. Meath

prophet' (*etir in dia 7 a fáith*) is later explained as between 'Newgrange and Dowth' (*etir cnoc Síde in Broga . . . 7 Síth mBresail*), i.e. the residences of the mythological figures Oengus Mac ind Óc and Bresal Bófháith. In a collection of dindshenchas in a verse attributed to a poet named Flann (probably Flann Mainistreach), the mound of Dubad and its name are explained as the work ordered by a king from Ireland's remote mythological past, here called Bresal Bódíbad. Bresal sought to build a tower to reach heaven, like the Tower of Babel, as Flann notes. He compels the men of Ireland to work raising the tower for a single day, and Bresal's sorceress sister casts a spell to fix the sun in the sky so that this one day lasts indefinitely. But Bresal is overcome with sinful lust and has sex with his sister, thus ruining the spell. The sun goes down, and the workers go home. Hence the name Dubad, meaning 'blackening' or 'darkening'. As with the early legends connecting Newgrange with Oengus Óc and the Dagda, the *Dinshenchas* of Dowth combines the themes of the magical manipulation of time that make one day eternity and sexual transgression. O'Kelly (*Newgrange*) and Carey have suggested that these tales reflect the beliefs of the megalith builders of prehistoric Ireland (Ériu).

Duchcov, in the Czech Republic, is the site of one of numerous examples of WATERY DEPOSITIONS known from the Celtic world. In a hot spring, the *Riesenquelle* (giant spring), in the township of Lahošt, north of Duchcov (then still known by its German name Dux), a bronze cauldron containing hundreds of fibulae and numerous other metal items was discovered. Most of these finds date to the late 4th and 3rd centuries BC, the La Tène B period (Kruta, *Celts* 295; see also CAULDRONS). The numerous characteristic fibulae with knob-decorated back-bent foot were recognized early as a diagnostic find of the La Tène B period, which led R. Beltz (*Latènefibeln* 676) to name fibulae of this style as Type Dux (now more commonly referred to as Duchcov). They represent a development from the wire fibulae of the La Tène A period, and lead on to the typical middle La Tène fibulae with a back-bent foot attached to the bow which were characteristic of the La Tène C period. Together with fibulae of the Münsingen type, they are the main type of fibula used in the La Tène B period (*c.* 350–*c.* 250 BC).

Since little else, other than that they were found in this hot spring, is known of the circumstances of the find, not much can be said about the purpose of their deposition, except that it fits well into the pattern of other La Tène period watery depositions. A votive offering for a god or goddess associated with the spring—given that it was a hot spring, probably one that was ascribed the power of healing, like similar finds at the hot springs in Aquae Sulis (Bath)—is a distinct possibility, but, due to the lack of written evidence, cannot be proved conclusively.

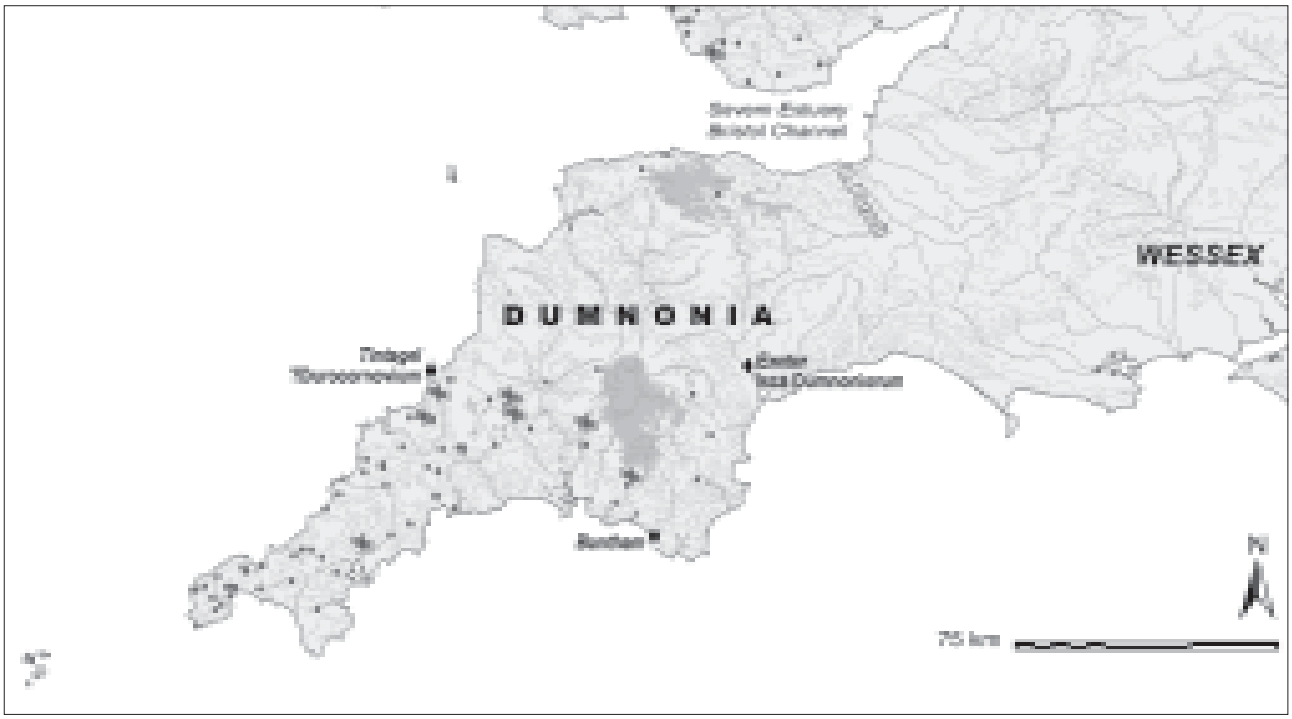
RK

Dumnonia is the Latinized name for a British kingdom which was located in the present English counties of Cornwall (Kernow), Devon and part of Somerset. It is named after the P-Celtic tribe, the Dumnonii or Damnonii (Δουμνονιοι in Ptolemy), which resided in this area from before the time of the Roman conquest. The eastern borders of the kingdom were probably delimited by the river Parret in the north. In the early medieval period, under constant pressure from the English kingdom of Wessex, this eastern border receded westwards until the whole of Somerset and Devon was eventually lost by the 9th century (cf. ANGLO-SAXON 'CONQUEST').

The difficulty in identifying a capital for post-Roman Dumnonia may therefore result from the fact that there was no one capital for any sustained period of time, the centre of power moving due to territorial contraction. A number of sites, including Tintagel



Post-Roman Dumnonia: the location of Early Christian inscribed stones are shown with black dots; the ogam symbol identifies sites of inscriptions in the Irish ogam script

(possibly the Romano-British Durocornovium) and Exeter (Isca Dumnoniorum) may all have been power centres of the kingdom at one time or other.

A post-Roman return by the Dumnonii to a self-governing British kingdom may have been more swiftly and more naturally achieved than elsewhere because, like most of Wales (Cymru), the civil power of Rome had failed to impose itself strongly on the region following military conquest. In both areas, this fact may be related to the prevalence of a system of smaller dispersed settlements which, unlike the more centralized south-eastern British tribal kingdoms, did not lend itself to Roman administration, modelled as it was on the Mediterranean city state.

Archaeological research gives the surprising indication that Dumnonia became more Romanized in the post-Roman period than it had been during the *Pax Romana*. Close trading links with Gaul and the Mediterranean, the use of Latin in inscriptions, and the adoption of Christian burial practice are among cited indications of this (Dark, *Britain and the End of the Roman Empire* 155–8). The aforementioned trading links are most notably proved by the sites of Tintagel and Bantham, where large quantities of Mediterranean amphorae have been recovered. As in prehistory and the Roman period, it is likely that Cornish tin played an important part in this trade. Several ogam stones in the western part of the kingdom are also indicative of a strong cultural contact with Ireland (Ériu).

As is the case with many of the post-Roman British kingdoms, very little is known about the history of Dumnonia. Gildas (*De Excidio Britanniae* §28), writing *c.* ad 550, mentions one Constantine of 'Damnonia' among five British kings of this time, and king-lists for the kingdom which cover the period from the late 5th to about the 9th century survive in some medieval Welsh sources. There is also an indication from such sources that a considerable body of Dumnonian legend/pseudo-history existed, much of which has since been lost, but some of which (such as the legend of Tristan and Isolt; see also drystan ac esyllt) was incorporated into Welsh tradition.

Precisely how closely this territory was linked with its namesake in Brittany, Domnonia, is not certain. Linguistic evidence suggests that many or most of the British immigrants of the post-Roman period who crossed south over the Channel were from Dumnonia (see Jackson, LHEB 3–30). The king-lists for the two areas share several names, for example, Cunomor, but it is difficult to assess whether any king held power

concurrently in both regions, and Thomas thinks this is unlikely (*Celtic Britain* 66; see also BRETON MIGRATIONS). The language of Dark Age Dumnonia can be called 'Primitive CORNISH', following the terminology established by JACKSON in *Language and History in Early Britain* (LHEB), though it needs to be borne in mind that at this period there was minimal linguistic difference between Cornish and WELSH, and still less between Cornish and BRETON.

The name, whence Welsh *Dyfnaint* 'Devon', is Celtic, based on the well-attested PROTO-CELTIC root **dumno-*, reflected in Old Irish *domon* and Welsh *dwfn*, meaning both 'deep' and 'world'. The name may have had significance in the ideological claims of the ancient tribe, but it may also have arisen because their territory was the first mainland to be reached from the Continent by the western sea route. There was an ancient tribe with the same name in present-day west-central Scotland (ALBA), around the Clyde estuary (see YSTRAD CLUD). The FIR DOMNANN which were prominent in Irish LEGENDARY HISTORY share the same name and may reflect an old branch of the same tribal group. The by-form *Damnonii* is old and may, if not purely scribal, indicate that the vowel of the first syllable was unaccented and could already be pronounced with an 'obscure' sound as in the Welsh. Gildas probably selected the by-form *Damnonia* as a pun on 'damnation' to castigate the tyrant Constantine.

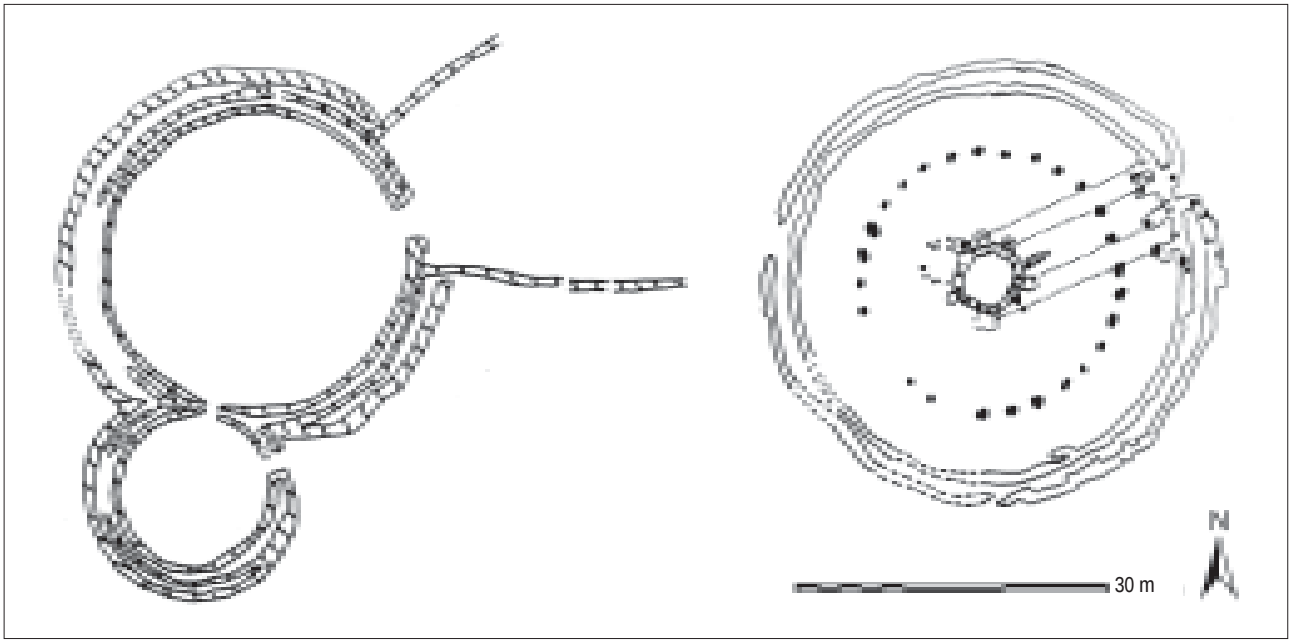
SÓF

Dún Ailinne was the legendary seat of the kings of Leinster (LAIGIN). It is mentioned as the site of a battle for the Leinster kingship in 728 and again *c.* 800. *Félire Oengusso* (see OENGUS CÉILE DÉ) contrasts the ancient and deserted pagan capital of the Leinstermen with the thriving Christian monastery of Kildare (Cill Dara). The site was first identified with the modern Knockaulin, Co. Kildare (Cnoc Ailinne, Contae Chill

Sketch plans of the final two stages ('Rose' on the left and 'Mauve') of the circular Iron Age ceremonial structures (henges) atop Dún Ailinne; the small circular structure at the centre of the Mauve plan has been interpreted as the base of a tower



Dara), by John O'Donovan, and this identification has not been challenged. The site was excavated during the period 1968–75.

Dún Ailinne occupies a hilltop and shows traces of occupation during the Neolithic (a circular ditched enclosure, Neolithic pottery, flint artefacts) and the Early Bronze Age (a food vessel). The main period of occupation is associated with the later Iron Age occupation, where it is stratified into three main phases, labelled by modern archaeologists as White, Rose, and Mauve. The White phase is marked by a circular slot about 22 m across which held timber uprights. This was immediately followed by the Rose phase, which saw the erection of two adjoining triple-slotted enclosures. The smaller of these enclosures was approached by a door to its north-east, while the much larger northern enclosure was fronted by palisades which formed a long funnel-shaped entrance. These structures were subsequently dismantled to make way for the Mauve phase structure: a large (42 m diameter) double-slot outer enclosure which surrounded a middle ring (25 m diameter) of timber uprights and then a central structure that has been interpreted as a tower that may have stood 9 m high. The site is enclosed by an external bank and an internal ditch, the type of hengiform arrangement encountered on other 'royal' sites of the period, e.g. Tara (Teamhair), Navan (Emain Machae). Radiocarbon dates suggest that the main period of the site spanned from the 5th century bc to the 3rd century ad, but that the three main Iron Age phases, which saw the deliberate dismantling of prior structures, may have lasted only decades rather than centuries.

Finds from the site include an iron sword and an iron spearhead, bronze fibulae and glass beads. The faunal remains were primarily of cattle and swine, and their slaughter patterns suggested that they were killed in the spring and autumn, possibly as part of seasonal feasts.

There are several striking architectural similarities between Dún Ailinne and Emain Machae. Both sites see a phase where triple-slotted figure-of-eight structures were erected and then followed by the building of a circular timber enclosure about 40–42 m in diameter with a main central feature (a post at Emain Machae and a 'tower' at Dún Ailinne). The interpretation of these features is a matter of some dispute since the Dún Ailinne timber structures have been generally reconstructed as open-air (unroofed) timber-built 'arenas' for ceremonial activity, while those at Emain Machae have been seen as roofed buildings. Nevertheless, the broadly similar sequence of comparable structures does suggest the widespread adoption of related ritual architecture, and perhaps beliefs, during the first centuries bc.

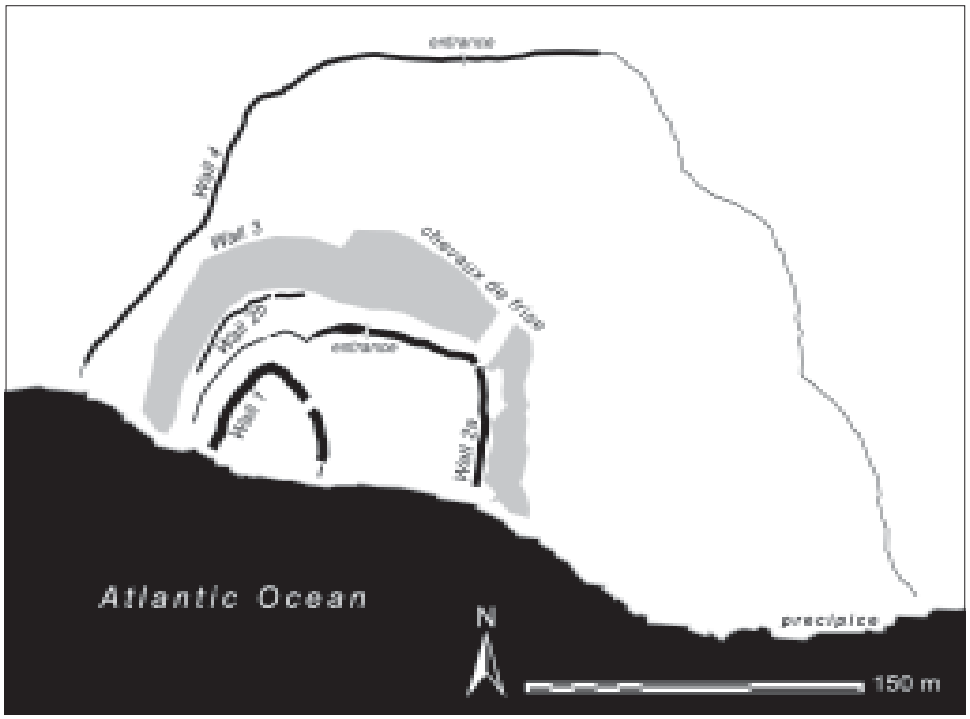
J. P. Mallory

Dún Aonghasa

The great stone enclosure of Dún Aonghasa is located on a cliff 87 m (about 270 feet) above the sea on Inis Mór, the largest of the Aran Islands (Oileáin Árann) situated in Galway Bay, off the west coast of Ireland (Éire). The site comprises an inner stone fort with two outer walls, fragments of a third, and a *chevaux-de-frise* (a broad band of relatively jagged upright stones placed to hinder access to the inner enclosure). The outermost defences enclose 5.7 ha (about 13 acres). The innermost enclosure is now open to the Atlantic along its southern side, and was probably originally protected by, at least, a low stone wall. All the ramparts are of dry-stone construction (that is, without mortar), the innermost surviving to 4.9 m in height, over 5 m thick, and with a slight external batter (that is, a broadening of the base for increased stability). Access to the interior was provided by a low, narrow, lintelled entrance (that is, with a horizontal stone beam) to the north-east.

The site was partially excavated by the Western Stone Fort project of the Discovery Programme (An Clár Fionnachtana) between 1992 and 1995. Occupation evidence dating from the Irish Middle and Late Bronze Age (*c.* 1400–*c.* 600 bc) was uncovered in the inner and middle enclosures, and included the remains of circular hut foundations, work areas, and walls. These dates came as something of a surprise, since previous thinking had tended to assign the site entirely to the Irish Iron Age (*c.* 600 bc–*c.* ad 400). Hut 1, for example, measured 4.8 m in diameter, and survived as



Plan of the fortifications at Dún Aonghasa, Inis Mór

low lines of foundation edging stones, part of a paved floor, and a stone-lined hearth. Evidence of habitation included limpet shells, animal bones, sherds of coarse pottery, clay mould fragments, and two clay crucibles for smelting bronze. This material was radiocarbon dated to 1063–924 BC (as recalibrated with reference to tree-ring dating), while earlier occupation material beneath the floor and running beyond the walls was dated *c.* 1300–*c.* 1000 BC. Not all of the structures identified were in use at the same time, though they do date to the general period of *c.* 1000–*c.* 800 BC.

When the innermost rampart was investigated, it was discovered that it consisted of a series of vertical stone walls. The first wall was double-faced with a rubble core, with additional 'skins' or faces added at later stages, gradually increasing the width. The core wall enclosed the original Bronze Age settlement. The additions to the original wall and the construction of the outer defences and ramparts remain undated.

The excavations also revealed that the economy of the site was based on sheep rearing, with the sheep primarily exploited for their meat rather than their wool. Cattle were the second most important domestic species, and pig bones were also recovered. Crucibles and moulds reflected the production of bronze SWORDS, spearheads, rings/ bracelets and pins which, in conjunction with the impressive setting and imposing defences, reflect the status and importance of the site and its inhabitants.

Today, Dún Aonghasa is a major tourist attraction in an IRISH-speaking (GAELTACHT) area. The site, however, does not figure in the folklore of the island. It is thus not clear whether the place-name, meaning 'the fort of Aonghus', refers to the early supernatural hero OENGUS MAC IND ÓC of the TUATH DÉ, who is also associated with the great prehistoric monument BRUG NA BÓINNE (Newgrange), a more obscure Oengus of the FIR BOLG of LEGENDARY HISTORY, or some other figure with the same common Irish man's name.

Michelle Comber

Dùn Èideann (Edinburgh)

Although it has an ancient pedigree, Edinburgh did not become Scotland's leading burgh until the 12th century, when the combination of a major royal castle, the wealthy Holyrood Abbey, and a vibrant market created the economic and political conditions for

Aerial view of Edinburgh Castle and the central city

success. At the heart of Edinburgh is the castle, perched upon an extinct volcano and towering over the surrounding settlement. Archaeological excavations have recovered occupation debris dating back to *c.* 800 BC (Driscoll & Yeoman, *Excavations within Edinburgh Castle 1988–91*). It is presumed that a hill-fort preceded the castle defences, though no prehistoric ramparts are visible today. A range of imported Roman goods dating to the 2nd and 3rd centuries AD are interpreted as an indication that the settlement was economically and politically important, perhaps serving as the regional centre for LOTHIAN.

In the early medieval poetic tradition preserved in the GODODDIN elegies Din Eidyn is identified as the seat of a great 6th-century king of the north BRITONS, but there are major problems with reading this poetry as straight political history. The first secure historical event is a siege of 'Etin' noted in an annal under AD 638, probably derived from a contemporary record made at Iona (EILEAN Ì; see also ANNALS). This notice has usually been seen in the context of the conquest of the Lothians by the Angles of North-umbria. In 934 Edinburgh is mentioned in relation to ÆTHELSTAN's northern raid, and later the fortress of Eden was abandoned to the SCOTS (between 954 and 962). From this point onwards, the castle served as a major Scottish royal centre, increasing in importance during the 11th and 12th centuries. The earliest surviving building in the castle is a chapel dedicated to St Margaret, which has been identified as part of a tower built by David I (1124–53).

During the Wars of Independence the castle was held by the English for 17 years until it was captured and slighted by Robert de BRUCE in 1314. The restoration of the castle as a royal palace was undertaken by David II in 1356, and the castle remained a major royal residence until the early 16th century. Although the royal residence was then superseded by Holyrood Palace, the castle remained an important military stronghold until the 18th century, as can be seen from

the impressive artillery defences. Today, there is still a token military presence in the castle.

Edinburgh developed into the most prosperous burgh in Scotland (ALBA). The castle stood at one end of the long High Street, the Royal Mile, which terminated at Holyrood Abbey. The core of medieval Edinburgh survives intact, thanks to the 18th-century creation of the Georgian new town to the north of the High Street. Midway along the High Street, in the heart of the medieval market, is Parliament Square, where legal buildings surround St Giles, the greatest parish church to be built in medieval Scotland. Throughout the medieval and post-medieval periods Edinburgh was the acknowledged administrative centre of Scotland, even if by the 16th century the royal presence was less regular. This is a position it retained even prior to the reinstatement of the SCOTTISH PARLIAMENT in 1998.

Stephen Driscoll

Dúnchad mac Cinnfhaelad (710–17) succeeded Conamail as eleventh abbot of Iona (EILEAN Ì), after the founder COLUM CILLE (†597). Like the founder himself, Dúnchad was of royal Irish descent and belonged to the Cenél Conaill sub-branch of the powerful northern Uí NÉILL dynasty. He was a key figure in the history of Iona, since the monastery had been the chief intellectual centre which promoted the insular position in the EASTER CONTROVERSY, and influenced adherents in Ireland (ÉRIU), DÁL RIATA, the kingdom of the PICTS, and Anglo-Saxon Northumbria. The Irish ANNALS record that in 716—during Dúnchad's abbacy and presumably as a result of his decision—Iona changed its reckoning of Easter, thus conforming with Rome and Canterbury. The fact that Dúnchad was a close relative of the founder and of the principal secular patrons of the monastery was probably a key factor in giving him the power to take this precipitous and long-delayed step. In September 716 a co-abbot named Faelchú was installed alongside Dúnchad, a fact which could be taken to mean either that his authority had been weakened by his controversial stand or that his health was already failing, since he died the following spring. Later in 717 NECHTON SON OF DERELEI, king of the Picts, expelled the Columban clergy from Pictland to Iona. Whatever the exact impetus for this momentous event, it appears that the death of Dúnchad had left Iona in a weakened position *vis-à-vis* its daughter houses and at least some of its traditional royal patrons in north BRITAIN. On the name *Dúnchad*, see DÚNCHAD MAC CRINÁIN. *Cenn Faelad* (genitive *Cinn Fhaelad*) is a common Old Irish man's name, meaning lit. 'head of wolves', probably figuratively 'leader of warriors'.

Dúnchad mac Crináin, known as Duncan I, king of Scotland (ALBA) 1034–40, was a pivotal figure during a turbulent and formative period of Scottish history. He was the last recorded king of the BRITONS of Strathclyde (YSTRAD CLUD) and the last king of Strathclyde-Cumbria, which apparently ceased to be a distinct political entity and merged with Alba in 1034. It is noteworthy that there is in fact a cognate Welsh name, which was in use among the northern Britons, namely the Old Welsh masculine name *Dinacat*, later *Dingad* (*Dinogat* occurs in LLYFR ANEIRIN) from a Common Celtic compound **Dūno-catus* 'having a fort in battle'. Therefore, *Dúnchad* is not certainly a Gaelic, as opposed to a Gaelicized BRYTHONIC, name. Dúnchad succeeded his grandfather MAEL COLUIM MAC CINAEDA (Malcolm II) in 1034 as king of Alba. In order to pave the way for his grandson, Mael Coluim had tried to eliminate all opposition by killing the possible rival candidates for the throne. Dúnchad's succession was challenged by MAC BETHAD son of Findlaech (Macbeth), whose claim to the kingship of Alba may have relied on, or been strengthened through,

his wife Gruoch, the grand-daughter of CINAED MAC DUIB (Kenneth III). Mac Bethad's own hereditary office was as *mormaer* ('earl') of Moray (Moireibh), a house that had also a claim to the throne of Alba. Dúnchad was defeated and slain in combat with Mac Bethad's army in 1040. He was the father of MAEL COLUIM MAC DONNCHADA (Malcolm III 'Canmore'), who defeated and killed Mac Bethad in 1057 and became unrivalled king of Alba in 1058, after defeating and killing the challenger, Mac Bethad's stepson LULACH.

Dúnchath mac Conaing was the ruler of the Scottish kingdom DÁL RIATA *c.* 650–4. According to SENCHUS FER N-ALBAN (Tradition of the men of Scotland), the ANNALS of Ulster and the Annals of Tigernach, he was the grandson of the powerful and aggressive king AEDÁN MAC GABRÁIN. Dúnchath was killed in 654 at the battle of Ráith Ethairt (alternatively Srath Ethairt, site unknown), fighting against TALORCEN SON OF EANFRITH, a Pictish king and a member of the Anglo-Saxon royal house of Bernicia (BRYNAICH). Dúnchath's name (var. *Dúnchad*) is of Celtic origin (see DÚNCHAD MAC CRINÁIN). His father's name *Conaing* is a borrowing from Old English *cyning* 'king' and reflects the international political aspirations of the Cenél nGabráin dynasty of Dál Riata (i.e. Aedán mac Gabráin's progeny).

Duns are a type of Scottish Late IRON AGE defended settlement which appear to have been constructed from the final centuries BC onwards. Excavations at Balloch Hill Dun, Argyll (Earra-Ghaidheal), moved the chronology of duns back several centuries, i.e. to the period from the 6th to the 1st century BC. These monuments were used, and in some cases reused, until the beginning of the medieval period; e.g. the dun at Ardifuir, Argyll, was reoccupied by metalworkers in the 5th or 6th century AD. Duns consist basically of small dry-stone built ENCLOSURES, usually with a fairly small internal area (less than 0.3 ha or one acre), but occasionally bordering on the size of small hill-forts. They are often sub-circular or oval in plan, but vary widely in their range of shapes and situations. They are sometimes seated upon coastal promontories (e.g. Dun Grugaig, Skye [An t-Eilean Sgitheanach]; Ness of Burgi, Shetland [Sealtainn]), thus forming what is known elsewhere on the Atlantic fringe as a cliff castle or promontory fort. Duns are also sometimes situated on the summit of hills (e.g. Dun Gerashader, Skye), but they are just as often to be found in places which are not notable for their defensive qualities. It has been noted that duns can be further divided into two types, i.e. enclosures and houses, the latter being roofed over. The walls tend to be high (up to *c.* 3 m) and quite thick. Duns are most plentifully distributed along the western seaboard from Skye and North and South Uist (Uibhist) in the north to Kintyre (Ceann Tíre) and Arran (Arainn) in the south. Like the BROCHS, with which they partially overlap in both distribution and construction, they are considered to be the defended homesteads of small farming groups, equivalent to the rounds and raths found in the more southerly parts of the Atlantic zone during this period. Indeed, their appearance and interpretation is very similar to that of the *caiseal* (stone-built ring-fort, see CASHEL) of the western coast of Ireland (ÉRIU) in particular. As is the case with brochs, duns are now viewed more in terms of the common features, purpose and origins they share with other defended settlements of the Atlantic zone during this period, rather than their singularity.

The term *dun* is a borrowing from Scottish Gaelic *dùn* 'hillock, fort, castle, &c.', which is Common Celtic; cf. Irish *dún*, and the now obsolete Welsh and Breton *din*, common in place-names. Forts and fortified towns with names in Celtic *-dūnon* (Latinized *-dūnum*) were common throughout the ancient Celtic world: e.g. CAMULODŪNON, LUGUDŪNON, SINGIDŪNON. The

Ness of Burgi fort, mainland Shetland, looking south over rock chasm to outer defences with blockhouse to rear. The outer wall shows in section above the chasm.

noun is probably related to the Gaelic verb *dùnadh* 'act of shutting, closing'.

SÓF

Dürrnberg bei Hallein is an important early centre of SALT mining in central Europe which was in use during the pre-Roman IRON AGE. The Dürrnberg complex has been the source of numerous and rich finds from graves and settlements dating from the HALLSTATT and earlier LA TÈNE periods. In the development of modern archaeology, materials from the site have been important in defining the characteristic material culture for a key period in a core area of Celtic-speaking west-central Europe.

§1. TOPOGRAPHY AND RESEARCH HISTORY

The Dürrnberg is situated south-west of Salzburg on the border between Germany and Austria. From the end of the 12th century AD until the cessation of commercial salt mining in 1989, the salt of the Dürrnberg mines was the most important economic factor in the Salzburg region. The site extended over an area of 2 km², mostly on what is now Austrian territory, but extending into Bavaria. The landscape is characterized by a series of small valleys and hilltops, mainly centred around the 802 m high Moserstein

Fig. 1: Overall view of Dürrnberg with the modern village and church on Lettenbichl and Moserstein; the Steigerhaushügel and the Ramsautal are in the foreground

Fig. 2: Beaked flagon of grave 112, excavated in 1932 by O. Klose

(Fig. 1). In prehistoric times the Raingraben valley provided the chief access to the Dürrnberg, protected by a hill-fort on the Ramsaukopf, which encloses the area on the eastern side.

The archaeological material from the Dürrnberg is extremely rich and originated from an outstanding range of different sources: graves, settlements, and the salt mines themselves. Each of these has produced a different selection of the material culture itself, in varying degrees of preservation, with the best preservation of organic materials due to salt in the mines and in waterlogged terrain in the settlements, mining entrances, and sometimes in wooden chambers.

During what may be regarded as the beginning of the modern discovery of the ancient salt mines of Dürrnberg, we have records that two miners' bodies were discovered in the mines in AD 1577 and 1616. These finds—popularly known as the 'men in the salt'—were made in the so-called *Heidengebirge* (pagan rock). From this time onwards, the miners began to be aware that the remains from the site belonged to an earlier epoch, referred to in popular tradition as a time 'some hundred years ago among the pagans'.

In 1831/3 Andreas Seethaler, a high-ranking official in the salt mines, described in his *Die allersten Celtischen und Römischen Alterthümer am Dürrnberg und zu Hallein an der Salza in Verbindung mit ihren Salinen* (The first Celtic and Roman antiquities on Dürrnberg and in Hallein at the Salzach in connection with the salt mines) a grave found on the Hallersbichl and gave a first over-

view of prehistoric sites (Penninger, *Die Kelten in Mitteleuropa* 150–8). Later in the 19th century, despite a couple of attempts to establish regular archaeological excavations on Dürrnberg, there were no successes comparable to those of the better-known Hallstatt, some 50 km to the east. This work had to wait until the first half of the 20th century when Martin Hell, Olivier Klose and, after the Second World War, Ernst Penninger worked on the site. Archaeological research increased during this period, and was especially stimulated by important finds such as the well-known bronze beaked flagon found by Klose in a CHARIOT burial in 1932 (Fig. 2). The second chariot grave 44/2 was discovered in 1954 by Penninger at the plateau of the Moserstein.

Two events accelerated and supported these efforts. First, a new all-weather road was built from Hallein to Dürrnberg between 1978 and 1982, which necessitated a large-scale rescue excavation, and doubled previous archaeological discoveries in a very short time. Secondly, a major international exhibition was held in 1980 in the local Keltenmuseum, entitled 'The Celts in Central Europe' (*Die Kelten in Mitteleuropa*). This superseded the first publications dealing with finds made prior to 1974. The need for a permanent archaeological research facility was then recognized, and a local research centre, the Österreichisches Forschungszentrum Dürrnberg (Austrian Dürrnberg Research Centre) was established in 1984 in the Keltenmuseum. Since that time, research projects and year-round archaeological work has led to large-scale excavations, especially in the various small-scale cemeteries. At the same time, work was also carried out on the settlement areas. Recently, in co-operation with several other institutions, the ancient salt mines themselves have been the subject of intensive investigation.

§2. SALT MINING

The SALT deposits of the Dürrnberg consist of the so-called *haselgebirge* (hazel mountains), a mixture of 40% to 95% pure salt (sodium chloride) together with clay and anhydrite or gypsum. The deposit was pushed upwards by tectonic movements during the formation of the northern calcareous Alps; these mainly overlay underground salt deposits. The whole deposit is covered by a layer of clay with a thickness of around 20–40 m, which protects the salt deposit against further leaching by fresh water. On top of the malleable and movable salt deposits, and causing even tectonic pressure on the salt, there are a number of calcareous outcrops. In central position is the Hahnrainkopf (1026 m). At the foot of the Hahnrainkopf are a couple of brine springs, which were presumably responsible for the discovery of the underground salt deposits by HALLSTATT-period Celtic miners in the 6th century BC. The prehistoric mining areas were mainly distributed around this hilltop because easy access to the salt was possible by shafts cut down diagonally from the slopes of the Hahnrainkopf. Until it was possible to carry out commercial mining in larger galleries, the prehistoric miners continuously had to extend the shafts in order to access new deposits. Our knowledge about the ancient working areas is in fact mainly based on mining in the historic period; mining exploited the salt deposits from the 13th century until 1989 (Stöllner, *Der prähistorische Salzbergbau am Dürrnberg bei Hallein 1*).

On the basis of the reports of miners in the historic period as well as of modern underground research, it is possible to reconstruct a rough overview of the prehistoric mines and to distinguish no fewer than twelve different mines, two of which had been worked simultaneously, especially in the Early LA TÈNE period. Research in the 1990s has modified the older views of Schauberger. The current archaeological record allows the reconstruction of large working galleries, in some cases more than 30 m wide, 4–10 m high and up to 200 m long. These galleries follow the salt by the

Fig. 3: Implements including beechwood handles, a whetstone, and an iron pick from the Iron Age salt-mines

construction of roughly diagonal chambers in which the Iron Age miners retrieved salt by hacking out large lumps. Organic material is preserved in remarkable condition through the saline environment, resulting in a mass of information concerning the tools (Fig. 3), the distribution of labour, and the clothes of the miners. Knowledge of their health and diet is based on the analysis of coprolites or paleofaeces, i.e. petrified excrement. On the basis of these data, one may suppose that the mining community consisted of a poorer and socially less favoured stratum of the contemporary Iron Age community. In addition, the small size of some shoes found in the shafts offers evidence for the employment of children in the mines. Contrary to the views of Schauberger and Pauli (cited below), the working groups in the mines must have been of considerable size, especially when taking into consideration the short period of time during which the chambers were worked. This can be calculated on the basis of some new dendrochronological dates (i.e. dates based on counting tree rings) from three such mining chambers which have been examined thoroughly. The working processes and the implements used provide evidence of distinctive and specialized professions: hewers, hauliers, carpenters, and the like. Besides natural ventilation, there is evidence of artificial thermal ventilation by heating the air through fire and the hundreds of wooden tapers which provided the main source of illumination below ground.

Further salt processing was presumably done on the dumped waste material in front of the mine entrances, either to purify and process rock salt as a trade product or to use it for leatherwork and curing meat. None of the ancient mining entrances identified so far have been sufficiently explored. Radiocarbon and dendrochronological (tree-ring) dates support the view that the mines were in use during the whole Celtic settlement period on the Dürrnberg, between the 6th and 1st centuries BC. Some of the richer parts of the salt deposits seem to have been exploited at more than one period. There could well be evidence for further small-scale activities during the Roman period.

§3. SETTLEMENTS

Stray finds offer evidence of exploitation of the natural brine springs since the Middle Neolithic (roughly 4th

millennium BC) and may suggest the presence of sporadic settlements. A permanent settlement had been established, based on the mining of underground salt, though not earlier than the late HALLSTATT period (Ha D1, earlier 6th century BC). There were close relations with the nearby hill-fort on the Hellbrunnerberg, a rich and therefore presumably chieftainly centre just south of the site of the modern city of Salzburg, especially in the early period. There exists only a slight scattering of Hallstatt finds combined with a RITUAL place for burnt-offerings (German *Brandopferplatz*) on the nearby Hallersbichl as well as some tomb-groups surrounding this early settlement. In the latest phase of the Hallstatt Iron Age (D3, *c.* 500 BC) and at the beginning of LA TÈNE A (first half of the 5th century BC) several important changes may have led to a regional concentration of the settlement activities on the Dürrnberg. A large trade and crafts settlement was established around the Ramsautal, the hill-fort on the Ramsaukopf and on the Moserstein. At the same time, the rich settlement on the Hellbrunnerberg was abandoned. Subsequently, settlement was concentrated on the Dürrnberg itself. From this time onwards, the complex craft and trade centre on the Dürrnberg existed, linked with the Salzach valley by a settlement which has been located below the modern town of Hallein. Even in this period, between the 5th and the 3rd centuries BC, the settlement area extended as far as the German side of the present international border. In the second part of the 4th and the beginning of the 3rd centuries BC, the settlement suffered a decline. Mud avalanches in the mine and regular flooding in the Ramsautal may indicate land exhaustion caused by intensive mining and other human activities on the Dürrnberg. In later centuries and into Roman times we see again a restricted core settlement on the Moserstein which reveals by then the decreased importance of the Dürrnberg.

Despite early investigations by Martin Hell and an excavation on the Hinterramsau, until the late 1970s there had been only restricted knowledge about settlement structure and construction techniques. In advance of the construction of the Dürrnbergstrasse, large cemeteries and even a couple of houses—well-preserved in some parts—and settlement quarters were discovered and excavated in and around the Ramsautal. This allowed a new insight into the nature of IRON AGE habitations on the Dürrnberg. The waterlogged conditions of the Ramsautal valley offered optimal conditions for recovering an extended settlement which exhibited a range of craft activities and which existed between the 5th and the 3rd centuries BC. Small-scale excavations have also brought to light a couple of well-preserved large houses up to 15 m in length. These houses were constructed on raised areas of dry land and were settled and rebuilt over generations. These more or less dry dwelling areas were secured by drains and wickerwork fences against the permanent moisture of the swampy area. The house constructions and their stratigraphy (i.e. their sequenced layers corresponding to successive time periods) show that living and craft activities were carried out in the same house-units, presumably over several generations, by the same families, or at least by related social groups. Besides bronze casting and iron working, there is evidence for meat processing and tanning, glass production, wood-working carpentry, tool making, lathes, pottery, and others. We must presume that these specialists worked not only for the community on the Dürrnberg, but also for the immediate hinterland where similar finished products have been found. The results of the excavations at the Ramsautal have also provided insights into the complex economic relations between the salt-mining centre of the Dürrnberg and its supporting region. This was situated in the Salzach valley and basin and in the Inn-Salzach area of the Bavarian and Salzburg Alpine promontory, which had the closest cultural links with Dürrnberg. There is also evidence of economic contacts with the ALPINE hinterland, especially with the Fritzens-Sanzeno culture, where pottery and brooches point to a fluctuating exchange of people such as seasonal workers and of trade goods, e.g. sheep, between those regions.

In addition, there are many examples of long-distance trade in rare raw materials such as amber, silk, and coral, as well as luxury goods found in the rich Dürrnberg graves—Etruscan and Greek vessels of pottery and bronze and even WINE from south of the Alps. Some graves can be interpreted as being those of traders, one of them presumably having come from the area of the Veneti and the head of the ADRIATIC.

§4. LATE HALLSTATT AND LA TÈNE GRAVES

The cemeteries spread over the whole area of the Dürrnberg in the early settlement phases were concentrated especially in three areas: the graves of the Eislfeld (around 80–100 graves); the graves of the Simonbauernfeld (a smaller grave group); and a larger group on the Hexenwandfeld. At the beginning of the IRON AGE occupation one can detect groups of 'founders' graves'. With the changes at the beginning of the 5th century BC new cemeteries were established, some devoted to warriors or other richer graves (Gratzenfeld-Putzenfeld, Kammelhöhe/Sonneben, Moserstein-Plateau Kurgarten, Osthang-Moserstein, Römersteig, Steigerhaushügel). Secondary burials of the Early LA TÈNE period can be observed in older burial mounds first built in the 6th century, especially on the Eislfeld. Graves of La Tène Bii (*c.* 350–*c.* 150 BC) and La Tène C (*c.* 250–*c.* 150 BC) are normally rare, especially in the older HALLSTATT burial-mounds, but are more common in the north-eastern zone of Dürrnberg, where new cemeteries have been found. In some cases we have new grave-groups and single graves from the 3rd and 2nd centuries, and sometimes very rich SWORD graves with wagon-fittings or rich women's graves which reveal that some kind of local upper class still existed at that time. The burial rate seems to have been continuously reduced from the 4th century, contrary to what can be deduced from the settlement evidence—the latter shows continual prosperity in the later phases of the Early and especially in the Middle La Tène periods (*c.* 350–*c.* 150 BC). Finally, evidence for graves of the latest settlement phases is still lacking, which is not surprising when set against the background of Late La Tène civilization in southern Germany.

Normally, the cemeteries or clusters of graves were situated on steep slopes or on obviously selected and clearly visible sites close to the settlements, especially around the major areas of population such as Moserstein or Ramsautal. It must be doubted whether the graves always were covered with mounds, especially in the case of the more recent graves constructed in calcareous gullies (German *Karrenrinnen*). Some graves seem to have been constructed with an eye to being accessible for later RITUAL practices—perhaps this was also a reason for locating them close to settlements and working areas.

The normal practice for the construction of graves was to build rectangular wooden chambers covered by

stones, inside which one or more persons were buried, cremated, or inhumed in an extended position. In some burials the chambers were used for two individuals, presumably indicating some sort of relationship, such as kinship. These multiple graves, together with gifts of amulets and brooches with elaborate decoration, exhibit a range of fanciful forms of clear symbolic importance and are a prominent feature of the Dürrnberg burials. Recent research has provided detailed information about burial customs and has produced further evidence of the building of new chambers over old ones. Up to four distinct layers are known. Secondary burial activities—the construction of a new chamber or a succeeding funeral—did not always leave the prior burial undisturbed. Some burial goods were removed and the earlier skeletons disarticulated. Later disturbance of earlier burial is frequently observed and may have had its origin in robbery or—more likely—in some kind of ritual practice involving two-stage burial.

The dead were normally equipped with drinking vessels and other dishes as well as the remains of joints of meat (pig, cattle, and sheep or goat; the latter two animals are not easy to distinguish archaeologically). This indicates a funerary FEAST as part of the rite of passage into the OTHERWORLD. In addition, there are single-edged knives (German *Hiebmesser*), shears, and status symbols such as wagons, weapons, complex belts, and special luxury items in richer and socially higher ranked graves.

From Hallstatt D (roughly 6th century BC) on, spears and axes appear in the personal equipment of men's graves, sometimes combined with some sort of status weapons like daggers, helmets, and swords with richly decorated scabbards. Rich costume articles, e.g. bracelets, anklets, beads, amulets, belts, and a substantial number of brooches are noticeable for women and also in the richer children's graves, even those of the very young. These are known in considerable numbers and with a wide range of grave goods, indicating some sort of local aristocracy. These rich graves of minors are in contrast to the unaccompanied infants' and neonatal burials close to and even in the floors of houses found in the Ramsautal and other settlement areas (Fig. 4).

Other, more outstanding, status symbols are known from rich male or female graves situated in special areas in the cemeteries, such as parts of wagons (graves 44/2, 112), a large bronze situla ('wine' bucket) of local manufacture and a bronze 'pilgrim flask' copying southern forms (44/2), the famous bronze Celtic beaked flagon (grave 112, see Fig. 2 above), a miniature golden boat (grave 44/1, Fig. 5), splendid axes (graves 46/2, 88), and imports from the Mediterranean world (graves 59, 44/2, Fig. 6;). Rings of gold may have been special gifts, and likewise large dress pins with double spiral heads. Even more exotic are ritual wands or sceptres and even a cowrie shell (grave 44/2). The social system of the Dürrnberg seems to have been more differentiated than was previously thought. Between the working population in the mines on the one hand and what is represented in the graves on the other, it is very unlikely that the whole population is represented in the latter. The cemeteries represent a cross-section of the higher class and more wealthy sections of a settled population. So far we cannot identify miners, seasonal workers, and craftspeople from

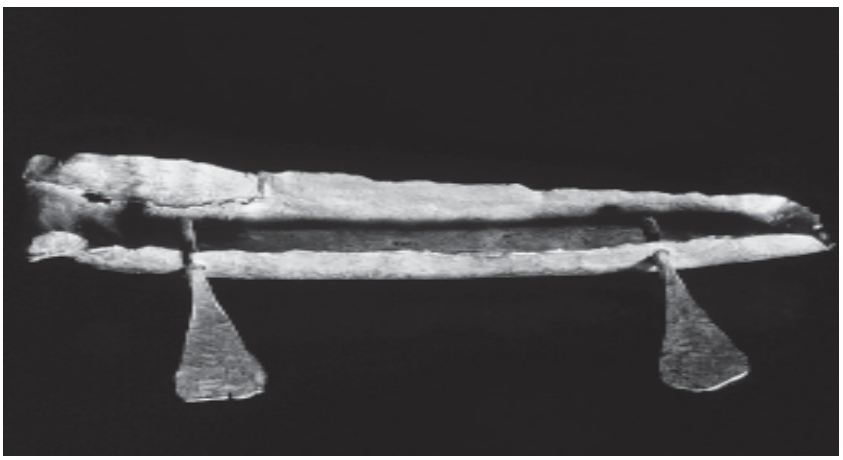

Fig. 5: Small golden votive boat from grave 44/1 as a sign of the salt trade on the river Salzach

grave-goods or on the basis of pathological evidence.

§5. CULTURAL LINKS

Dürrnberg and its northern ALPINE extension, the Inn-Salzach-region, are closely linked by culture. The connections are manifested in burial customs such as specific grave-goods in women's burials and in a widely comparable material culture. This may be due to the dependence of the mining society on an external supply of food and raw materials. The interaction between the Hellbrunnerberg and Dürrnberg is clearly demonstrable. We may postulate an important settlement in the Salzach valley which served as trading post, market, and administrative centre. At the beginning of the 5th century BC the Hellbrunnerberg settlement vanished just at a time when the settlement of the Dürrnberg was flourishing. Regional resettlement seems most likely, supported by connections in the settlement dynamics of the Salzburg basin and beyond. From the beginning of the 6th century BC the area was culturally linked with other Eastern Alpine regions within the East Hallstatt province. From the middle of the 6th century BC, however, connections with the West Hallstatt province began to increase, and were marked by changes in dress ornaments, burial rites, and pottery forms. It seems to be a coincidence rather than the result of any direct cultural influence that these changes are contemporary with the establishment of the IRON AGE complex on the Dürrnberg and its flourishing development in the second half of the 6th century BC. From then onwards, the area was a closely connected subzone of the West Hallstatt province. There are many reasons for believing that this situation was responsible for the important rôle which Dürrnberg played in the development of LA TÈNE culture at the beginning of the 5th century—a time when Dürrnberg reached its climax. The Celtic migrations in the 4th and 3rd centuries BC also changed the cultural and the basic economic relations of Dürrnberg. Connections with the Carpathian basin and the Alpine hinterland were apparently stronger in the 4th and the 3rd centuries. Late La Tène culture (*c.* 150–*c.* 15 BC) was more influenced by the culture of the late Celtic *oppida* in southern Germany than by NORICUM in the emerging Roman Empire (see OPPIDUM).

Thomas Stöllner (and thanks to Kurt Zeller)

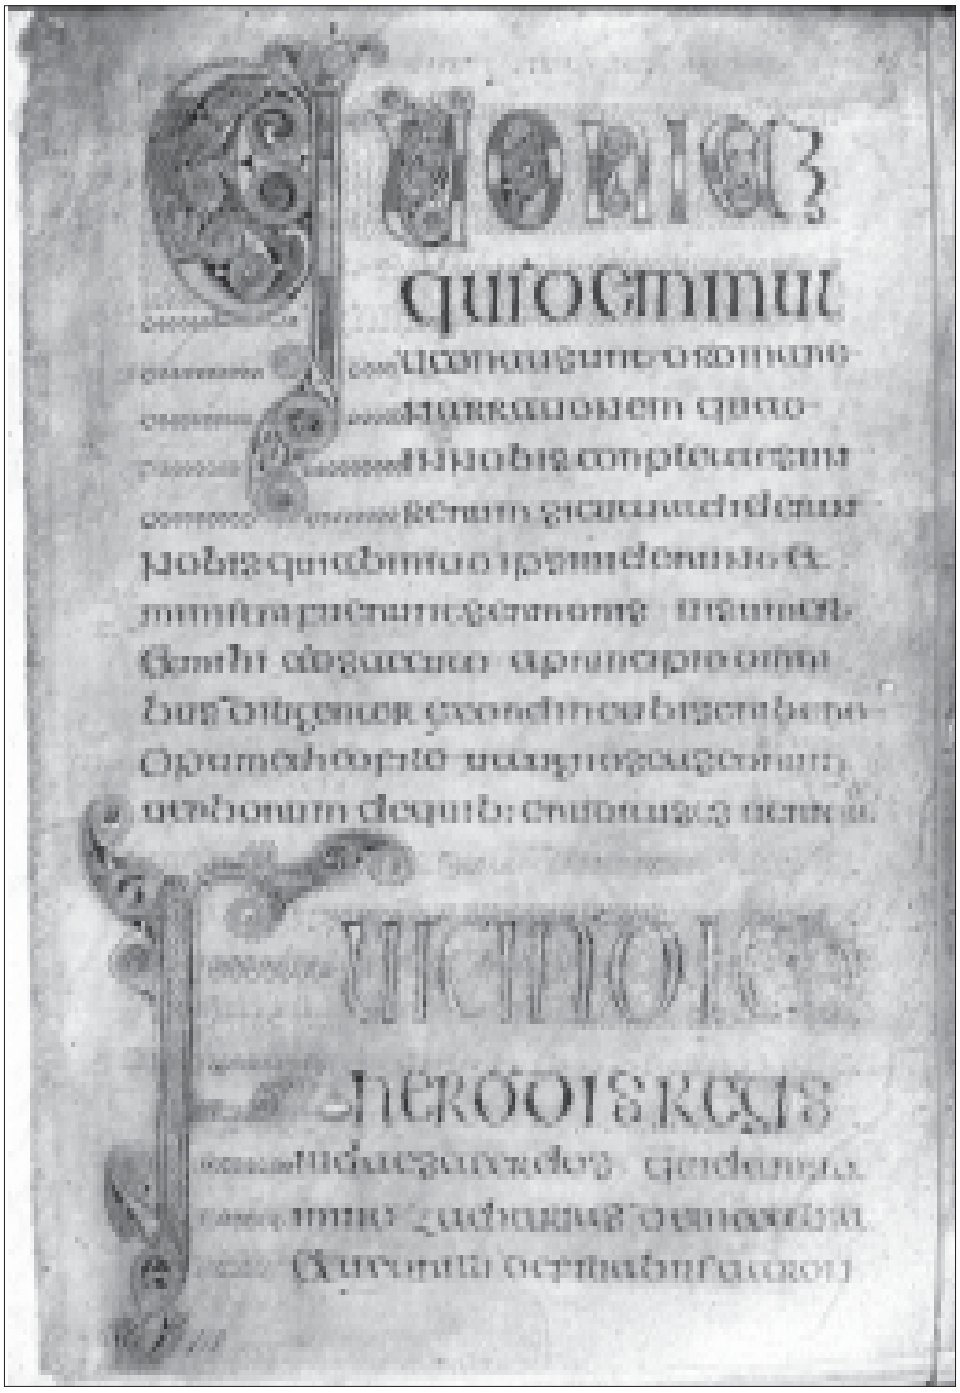
Durrow, Book of (Dublin, Trinity College MS 57 [A. 4. 5]), is most likely the earliest extant essentially complete illuminated insular gospel book. Besides its text of St JEROME's Latin version of the Gospels and various preliminaries (including framed canon tables,

fos. 8–10) written in a fine Irish majuscule script, the manuscript contains six carpet pages (pages covered with ornament but without text) and five pages displaying symbols of the evangelists. Elaborately decorated initials open each of the four Gospels and an important text in Matthew, and smaller decorated initials are used for the preface and the list of chapters. For several reasons, including ill treatment over the centuries, the codex is mainly a collection of single leaves, and when it was rebound in 1954 an attempt was made to adjust the order of several of the carpet pages and one of the evangelist symbol pages that were clearly out of place. This rearrangement left St Matthew's Gospel without a carpet page and although suggestions have been made that one or another of the surviving carpet pages once prefaced Matthew, it is more likely that its carpet page is simply lost. If so, allowing for pagination change after fo. 21v, the original arrangement of the major decorated pages was as follows: fo. 1v, a carpet page with a large double-barred cross; fo. 2r, a page presenting the four evangelist symbols around an interlaced cross; fo. 3v, a carpet page with trumpet spirals before the prefaces; fo. 21v, the Man, symbol of Matthew; the lost carpet page (that would have been fo. 22r); fo. 22r, the Matthew incipit; fo. 84v, the Eagle, symbol of Mark; fo. 85v, a carpet page with interlace roundels and a small central cross; fo. 86v, the Mark incipit; fo. 124v, the Calf, symbol of Luke; fo. 125v, a carpet page with interlace and geometric patterns; fo. 126v, the Luke incipit; fo. 191v, the Lion, symbol of St John; fo. 192v, a carpet page with panels depicting biting animals framing a small circled central cross; fo. 193v, the John incipit; and fo. 248r, a carpet page with a lattice-like design.

The order of equivalence followed by the individually pictured evangelist symbols is not the canonical Latin order established by St Jerome but most likely depends on that which was set out in the 2nd century by St Irenaeus. The symbol type of the four symbols page (fo. 2r) and those separately depicted are also quite unusual, the first possibly partially inspired by Coptic example, and the second—lacking the usual wings, halos and attributes—related to a type known as 'terrestial' found in the mid-6th century at San Vitale, Ravenna.

There are two inscriptions by the scribe of the Book of Durrow on fo. 247v, the second of which refers to the writer as St Columba (Colum Cille). On fo. 248v there is an 11th- or 12th-century addition recording a legal transaction concerning the monastery of Durrow, Co. Offaly (Darmhaigh, Contae Uíbh Fhailí), and on fo. IIv there is an inscription, added in the 17th century by the antiquarian Roderick O'Flarety, taken from the *cumdach* (book shrine), now lost, in which the manuscript had been placed at Durrow by Flann mac Mael Sechnaill, king of Ireland (Ériu), during the late 9th or early 10th century. Further evidence suggests that the book was at Durrow in the early 17th century, and was still revered as the Book of Colum Cille. Nevertheless, by the 1930s scholars began to question its attribution to the hand of Columba and its Durrow provenance. Indeed, the character of its script and its repertoire of Celtic, Anglo-Saxon, and Mediterranean ornamental patterns and iconographic formulations led a number of scholars to place its creation in Northumbria some time during the 7th century. Its date and place of manufacture remain difficult to establish and the manuscript remains the centre of an ongoing controversy regarding the relative importance of Northumbria and Ireland in the development of 7th- and 8th-century insular script and manuscript decoration.

In recent years, scholarly opinion has shifted from the Northumbrian thesis to the view that the Book of Durrow was created by Irish monks in a Columban scriptorium (manuscript-production centre), with two proposals emerging as most developed and credible. The first hypothesis rests mainly on palaeographic evidence which connects the book with the monastery of Rath Melsigi in Co. Carlow (Contae Cheatharlaigh), where the Anglo-Saxon missionary Willibrord spent several years before travelling to the Continent in 690. Manuscripts from Echternach associated with Willibrord have scribal similarities with the Book of Durrow, and this and other palaeographic evidence has led to the conclusion that the script developed at Rath Melsigi was employed in the creation of our manuscript at Durrow, probably early in the 8th century. The second theory depends upon recognition of an iconographic contiguity between the facing miniatures opening the codex—the cross-carpet page (fo. 1v), and the four evangelist symbols page (fo. 2r)—leading to the conclusion that these pages were intended to call to mind images of adjacent *loca sancta* (holy places) of the Holy Sepulchre in Jerusalem and the Easter rites they helped to inspire. The John carpet page (fo. 192v),



Book of Durrow, opening of the Gospel of St Luke, fo. 126r, showing decorated oversize initials

is seen as making similar reference to the Holy Sepulchre, and supports the thesis of a dominant Easter programme developed for the codex by Adomnán, ninth abbot of the Columban monastery of Iona (Eilean Ì), and a date for its creation on Iona of *c.* 685. Since it has also been postulated that the Book of Kells employs a more subtle and elaborate version of Durrow's Easter programme, this iconographic relationship associates the two manuscripts even more intimately than previously documented textual links and strengthens the possibility that they were both a product of the Iona scriptorium.

Martin Werner

Duval, Añjela (1905–81) spent her life on the smallholding where she was born in Traoñ an Dour, Ar C'houerc'had (Le Vieux Marché), in northern Brittany (Breizh):

Me zo ganet en un ti plouz
'Kreiz ar maezioù glas ha didrouz
E koantañ traonienn zo 'n Treger
Ma red enni sioul al Leger.
Ar barzh paour, 1964 (The poor poet; *Añjela Duval* 224)

I was born in a thatched house
Deep in the green and noiseless countryside
In the prettiest valley in Treger
Where the Leger silently flows.

Becoming an only child after the early death of two elder siblings, Charlez and Maïa (*Stourm a ran* 77; *Kan an Douar* 30–3), she soon established an intimate relationship with nature: 'Trees of my childhood years, tell me now, where does my deep love of you come from?' (*Traoñ an Dour* 68). Communion with the earth permeates her work: 'While your eyes can see nature's thousand wonders, while the tang of earth freshly ploughed and the delicate fragrance of the willow quickens your senses, do not say that age is a heavy burden' (*Stourm a ran* 116).

Añjela Duval turned to poetry at the age of 56: 'My beloved parents died in turn of old age, and one day I found myself alone in my home. And alone in winter by the fire after supper, instead of singing I just pined, my heart full of grief. For years I fought with sickness and despair' (*Kan an Douar* 64).

Then, in 1961, she received a valuable gift of books and journals containing most Breton writing since the 1920s. The corpus included creative works, dictionaries and grammars, largely products of the Gwalarn school whose founder Roparz Hemon was exiled in Ireland: 'But one day (such a wonder!), flown from Ireland, echoes of your monumental songs come to stir my heart' (*Kan an Douar* 65). The marriage of popular idiom to the substance of the written word, fuelled by an immense need for personal expression, then resulted in a unique body of work which continues to inspire the Breton language movement.

Twin themes in Duval's poetry are the demise of Breton civilization and the rise of French hegemony. Treatment of the first transports us into a world which has vanished, and the many glimpses afforded of this world ensure the endurance of the work as a social document. In 'Va c'hêriadenn' (My village) she says: 'The village has fallen silent, its face is the colour of death, its heart has ceased to beat. The cockerel is silent at daybreak, silent the clatter of wheels along the lane, the cart-driver's whip is silent (and his swearing!). Silent the neighing mare as she returns to her foal, the bull's droning bellow is silent, no cow lowing with heavy udder, the fields are fallow!' (*Kan an Douar* 114).

Añjela Duval greets the rise of French hegemony with dismay, indignation, outrage and desperation. The opening poem of *Kan an Douar*, 'Ne gavan ket plijus' (I don't like), makes the point: 'I loathe the sight of my country's old people pining in homes for the toil they once knew, and the young mothers of my country speaking the language of the oppressor to their babies' (*Kan an Douar* 17). By 1981 these and similar sentiments have been distilled: 'I will have seen . . . the stone houses ruined . . . the hedgerows levelled along with their chestnut, beech and oak . . . the pathways choked with briars . . . the Breton names of the fields erased from the signposts, Breton children become French, deaf and mute among the old people, and strangers in their own country' (*Stourm a ran* 136).

The imminent collapse of the Breton language casts a long shadow in Añjela Duval's work. She writes in strident tones on the subject. It is 'a crime to break the golden chain' of the language (*Stourm a ran* 127). French is '. . . no more than a corrupt Latin spoken by the soldiers and servants of Caesar' (*Stourm a ran* 61). 'The Celts have become Romans thanks to the cursed French' she writes (*Stourm a ran* 112).

The words *gouenn* 'race' and *gwad glan* 'pure blood' occur frequently. She also says: 'Ancestors of my forefathers from the Celtic Eden, see my tears spill on your ruined edifices' (*Traoñ an Dour* 109). And: 'In the eyes of God, in the eyes of the world, we are Bretons, we are Celts!' (*Traoñ an Dour* 99).

Añjela Duval never married. The fact that she was childless created a vacuum in her personal life: 'Who will carry on my anthem when I am gone?' she asks. 'Who will take up my arms as I have borne no son?' (*Stourm a ran* 93). Young Breton activists became her adopted sons. One she calls 'Yann-Kael [Kernalegen], child of my heart' (*Stourm a ran* 107). 'Our martyrs Yann-Vari and Yann-Kael' (*Stourm a ran* 110), she wrote, after he and another were killed in 1976 during a bomb

attack they were carrying out.

'The Faith. The Country. The Country's Land. All three are endangered', writes Añjela Duval (*Stourm a ran* 133). This trinity is at the heart of her verse: 'My song is a song of pity for the small farmers of my country. I proclaim my contempt for those who betray my land . . . the sacred Land of our Fathers' (*Traoñ an Dour* 108). The industrialization of farming angers her: 'So as to increase the work done by machine, the dumb beast must be contaminated' (*Stourm a ran* 117).

Ironically, Añjela Duval wrote in an idiom obscure to Breton speakers. Her language incorporated neologisms and archaisms which put her work beyond her fellows and neighbours. It has thus remained inaccessible to 'My brothers in toil: the small farmers' (*Stourm a ran* 59).

Her legacy is the culmination of great endeavour and it represents a considerable human achievement. Añjela Duval is of unrivalled stature in Breton-language literature in the latter part of the 20th century.

Diarmuid Johnson

Early medieval Dyfed, Ystrad Tywi, and Ceredigion, cantrefi, and political centres

Dyfed is unique among the regions and medieval kingdoms of what is now Wales (CYMRU) in continuing, in name and approximate geographic limits, what was a CIVITAS of Roman Britain and a Celtic tribe of the pre-Roman IRON AGE. In this respect, Dyfed is comparable to the post-Roman kingdoms of DUMNONIA in south-west BRITAIN and GODODDIN in the north-east. The tribal name *Demetae*, from which the Welsh *Dyfed* derives, is recorded in the *Geography* of PTOLEMY as Δημηται *Dēmētae*, though the two long vowels for short seem to be an error based on copying from source in Roman script (in which long and short *e* are not distinguished). Although the etymology is uncertain (Rivet & Smith, *Place-Names of Roman Britain* 333), a connection with Welsh *dafad* 'sheep', in the sense of 'tame, domestic', is possible.

In Roman times the tribal *caput* was the town of Moridūnon (Sea-fort), now Carmarthen (CAERFYRDDIN), preserving the old name with *caer* 'fortified town' prefixed. Somewhat paradoxically, the post-Roman dynasty of Dyfed did not arise from the old ROMANO-BRITISH aristocracy, but rather from an intrusive Irish group known as the Déisi (who probably arrived in the 5th century), whose collaterals in Ireland were based in the counties of Waterford (Port Láirge) and Meath (Old Irish MIDE). Tracing them in early Ireland (ÉRIU) is further complicated by the common noun *déisi* 'vassals'. The evidence for this migration is an Old Irish text, probably dating from the 8th century, usually called the 'Expulsion of the Déisi', which refers to their destination as *crich Demeth* 'the region of Dyfed' (see Dillon, *Celtica* 12.1–11; Ó Cathasaigh, *Éigse* 20.1–30; Coplestone-Crowe, SC 16/17.1–24). The tale includes a pedigree of the kings of Dyfed which corresponds closely with that found in the Old Welsh GENEALOGIES found in British Library MS Harley 3859. In fact, the name forms in the Irish list, e.g. *Goirtibe*[*r*] = Old Welsh *Guortepir*, show clear signs of being derived from Welsh rather than having developed continuously in an independent Irish tradition. The foundation legend is broadly confirmed by the concentration of Primitive Irish OGAM inscriptions and place-name elements of Irish origin (e.g. *meidir* 'road' < Ir. *bóthar*, *cnwc* 'hillock' < *cnoc*) in south-west Wales (see Richards, *Journal of the Royal Society of Antiquaries of Ireland* 90.133–62).

In the 6th century GILDAS denounced Dyfed's

reigning ruler Vorteporius as *tyrannus Demetarum* 'tyrant of the Demetae' (*De Excidio Britanniae* §31). This is the same man as the Guortepir of the genealogy and probably the same as the (Latin genitive) VOTEPORIGIS PROTICTORIS, ogam genitive VOTECORIGAS, named on a famous inscription from near Carmarthen. The Romanization of Dyfed's dynasty is reflected in the Old Welsh genealogy, where descent is claimed from *Maxim guletic* (MACSEN WLEDIG), and we find among the early names Roman titles such as *Triphun* < *tribunus*, as well as *Protector*, as on the Voteporix stone.

Another interesting detail is that the tribal name itself occurs as the ancestral name *Dimet* along with the rhyming doublet *Nimet* 'Man of privileged rank' (see NEMETON). The 7th- or 8th-century Life of St SAMSON uses the place-name *Demetia*. ANNALES CAMBRIAE refers to *Demetica regio* in an entry of 645, and this is also the Latinized form in ASSER's Life of ALFRED THE GREAT.

Dyfed figures as the chief setting of the first and third Branches of the MABINOGI, PWYLL and MANAWYDAN. The kingdom is said to have had a main court at ARBERTH (now Narberth, Pembrokeshire) and comprised seven hundreds (see CANTREF): Cemais, Pebidiog, Rhos, Daugleddau, Penfro, Cantref Gwarthaf, and Emlyn. Pwyll's son and successor PRYDERI is said to have added to his legacy the three *cantrefi* of Ystrad Tywi and the four of CEREDIGION. This legendary expansion probably reflects a historical development seen in 11th-century sources whereby a larger political entity comes to be called DEHEUBARTH 'southern region' or *dextralis pars Britanniae*, with its royal centre at Dinefwr.

Dyfed re-emerged with the consolidation of Cardiganshire, Carmarthenshire, and Pembrokeshire (sir ABERTEIFI, sir Gaerfyrddin, sir Benfro) in the local government reorganization of 1974. These three pre-1974 counties came back into being in 1993, but the official name of the old Cardiganshire is now Ceredigion.

Dyfnwal ab Owain/Domnall mac Eogain

was king of Strathclyde (YSTRAD CLUD) *c.* 962–75. In Irish sources his title is given as *Rí Bretan* 'King of the Britons'. He became king when DUB mac Mael Choluim left the throne of Ystrad Clud to become king of the Scots in 962. He prevented CUILÉN RING mac Illuilb from taking the kingship of Ystrad Clud, and his son Rhydderch slew Cuilén in 971. He was one of the eight northern rulers who took part in the act of submission to Edgar, king of the English, at Chester (CAER) in 973. He then seems to have abdicated in favour of his son Mael Coluim, whose reign was brief and unremarkable. Dyfnwal died after entering a monastery on a pilgrimage in 975. On Old Welsh and CUMBRIC *Dumngual* and the Gaelic cognate *Domhnall*, see DOMNALL BRECC; DOMNALL MAC AILPÍN. For his father's name, see ENAID OWAIN AB URIEN. Since both his name and patronym exist in BRYTHONIC and GAELIC forms, they are ambiguous in determining his cultural origin.

PEB

Dyfnwal ap Tewdor

(†760) was a king of Dumbarton (see YSTRAD CLUD) documented in early Welsh sources. 'Dumnagual map Teudebur' is listed as a ninth-generation descendant of Cinuit map Ceretic Guletic, probably the eponym of the CYNWYDION dynasty, in the Old Welsh GENEALOGIES in British Library MS Harley 3859, and the death of 'Dunnagual filius Teudubr' is noted in ANNALES CAMBRIAE. These records

imply significant channels for written records from north Britain to Wales (Cymru) during the 8th and 9th centuries. Dumbarton (Dùn Breatann) was under heavy military pressure during Dyfnwal's reign. Kyle (Cuil) in present-day Ayrshire fell to Eadberht (†768) of Northumbria and, according to the *Historia Regum* attributed to Symeon of Durham, Eadberht in alliance with Onuist son of Uurguist of the Picts captured Dumbarton itself on 1 August 756. Since *Annales Cambriae* 760 coincidentally notes a *Gueith Hirford* (battle of Hereford) between the Britons and the Saxons, some later historians have taken this and the death notice as one entry, i.e. that Dyfnwal fell at Hereford.

On the Celtic origins of the name *Dyfnwal*, cf. Domnall Brecc; Domnall mac Ailpín. The spelling *Dumnagual*, which preserves the vowel quality of the first syllable of Common Celtic **Dumno-u̯alos* and the unaccented vowel between the elements, is conservative and probably the 8th-century spelling. *Teudubr* appears, rather oddly, to be a compound of *tew* 'stout, fat' and *dŵr* 'water', both native Celtic words, but a Brythonic adaptation of Latin *Theodorus*, Greek Θεόδωρος, is possible; cf. Welsh *Tewdws* ~ Latin *Theodosius*.

JTK

E

Eadwine/Edwin, revered as a saint, was the Anglo-Saxon king of Northumbria (northern England) during the years 617–33. His hereditary base was the kingdom of Dewr (English and Latin Deira) in southern Northumbria, but he came to power by defeating and killing Æthelfrith, the pagan king of Brynaich (Bernicia, northern Northumbria) at the battle of the river Idle. He then ruled lands on both sides of Hadrian's Wall as a single kingdom. Born a pagan himself, Eadwine, along with many of his Anglo-Saxon subjects, accepted Christianity from the Roman missionary Paulinus in 627 or 628, becoming Northumbria's first Christian ruler.

From the standpoint of Celtic studies, Eadwine's reign is noteworthy for numerous and high-level relations with Wales (Cymru) and the Britons of the North (see hen ogledd), both friendly and hostile, as well as several mentions in early Welsh literature. One of his important palaces was a royal centre of pre-English origin at Yeavering in the Upper Tweed valley.

§1. eadwine and elfed

Before Eadwine came to power he lived as an exile, pursued by his ruthless and powerful rival Æthelfrith. In this same period, Eadwine's nephew Hereric was living under the protection of the Brythonic king Cerdig (Certic), probably the ruler of this name known to have been in power in Elfed (Elmet, in what is now West Yorkshire, England) at that time. At Cerdig's court, Hereric was assassinated by poison (Beda, *Historia Ecclesiastica* 4.23), most probably at the instigation of Æthelfrith. Early in his reign, Eadwine occupied Elfed and expelled its hereditary king Cerdig *c.* 617. This may be the same 'Ceretic' as the one whose death is recorded at a year corresponding to ad 616 or 618 in Annales Cambriae.

§2. eadwine and the cynferching dynasty of rheged

Although Beda credits the act to Paulinus, Historia Brittonum (§63) describes Eadwine's baptism as follows:

> Eadguin himself was baptised the following Easter, and 12,000 people were baptised with him. If anyone wishes to know who baptised them, Run son of Urbgen [Rhun ab Urien] baptised them, and for forty days he did not cease in baptising the whole rapacious race and through his teaching many believed in Christ. (Koch & Carey, *Celtic Heroic Age* 302)

Whether this account is true or not, it makes the claim that the native Brythonic Christian rulers of what was to become Anglo-Saxon Northumbria were responsible for the king and his people becoming Christians.

Evidence from the English side that Eadwine enjoyed harmonious relations with at least some of his north British Welsh subjects is implied by two details recounted by Beda. First, Eadwine's subjects (even a woman with a newborn child) could travel from sea to sea within his vast kingdom in safety. Second, the king had placed stands with bronze hanging bowls at springs found at roadsides so that travellers might refresh themselves (Beda, *Historia Ecclesiastica* 2.16). These bowls have been taken as referring to objects of a Celtic type, of which several 6th- and 7th-century examples have been found at Anglo-Saxon sites. Although Beda must be understood as taking pains to portray Eadwine as an ideal Christian ruler, these stories are consistent with the testimony of *Historia Brittonum* that Rheged's royal family and church enjoyed excellent relations with this English king.

§3. eadwine and gwynedd

According to Welsh tradition, in his youth Eadwine had been in fosterage at the court of Gwynedd. While this is not impossible, given his years of exile,

driven out of Northumbria by Æthelfrith, the story cannot be confirmed in an early and credible source. According to Beda (*Historia Ecclesiastica* 2.9), Eadwine exacted tribute from Anglesey (Môn) and the Isle of Man (Ellan Vannin) at the height of his power, which would imply that he had imposed himself as military overlord over the kings of Gwynedd—Cadfan and his son Cadwallon.

Moliant Cadwallon ('In Praise of Cadwallon') refers to Eadwine as ruling over Brynaich as *Tad rwy tuylluras* 'a father of excessively great deception'. As shown by the poem's editor, R. Geraint Gruffydd, the poet's attitude reflects the situation of 633, immediately preceding the campaign season in which Cadwallon overthrew Eadwine. The meaning of the line may be that, as a Deiran, Eadwine lacked a legitimate hereditary claim to Brynaich, as far as the court of Gwynedd was concerned. Gwynedd's first dynasty itself claimed a northern descent from Cunedda, and therefore put forward its own claim to Brynaich as a sounder one. It was not an idle boast. Cadwallon conquered and ruled Northumbria for a period of a year, as recounted by *Historia Brittonum* (§61):

> Osfird and Eadfird were two sons of Edgu[*in*] [Eadwine], and with him they fell in the battle of Meicen [Old English Haethfelth, 12 October 633], and the kingship was never revived from their lineage, for none from their line escaped from that battle, but rather they all were killed with him by the army of Catguollaun [Cadwallon], the king of the realm of Guenedota [Gwynedd]. (Koch & Carey, *Celtic Heroic Age* 302)

Moliant Cadwallon also pointedly mentions Gwallawg (of Elfed) as the hero or instigator of the battle of Catraeth, a site which significantly also figured as one of Eadwine's royal residences. The poem also anticipates *o Gymru dygynneu tân yn tir Elued* 'kindling fire in Elfed's land by the Welsh', suggesting that Eadwine's annexation of Elfed and expulsion of Cerdig (who was probably Gwallawg's son) were issues used to justify Cadwallon's successful campaign in Northumbria. The poem also mentions [*c*]*yfŵyre gynne Efrawc* 'the mustering for the burning of York'. Interestingly, the poem urges destruction in southern Northumbria, in and around Eadwine's hereditary lands, but speaks of his illegitimacy in the north, in Brynaich. Apparently, a political distinction is being made in the motives for Gwynedd's invasion of Eadwine's united Northumbria. The archaeologically revealed destruction of Eadwine's court at Yeavering probably occurred in 633/4 as part of Cadwallon's invasion. A fragment of another Welsh poem about Cadwallon, *Gofara Braint* (The river Braint floods), claims that Eadwine's head was brought to Gwynedd's court at Aberffraw.

If the story (§2 above) of Rhun son of Urien baptizing Eadwine in 628 is factual, it seems unlikely that Urien's dynasty, the Cynferching, had joined with Cadwallon in Eadwine's destruction in 633–34; more probably what remained of Rheged supported Northumbria or remained neutral.

Easter controversy

§1. INTRODUCTION

One might expect that the conversion of the pagan Anglo-Saxons, which began in 597, could have led to a cultural *rapprochement* with the Britons, who had possessed Christian institutions for centuries, since the later Romano-British period, as well as with the Irish and the Picts, who had also become Christians before the English. For a variety of reasons, discussed in the entries on Augustine, Beda, Caer, Christianity, this unified insular church never came about. Perhaps the single most important schismatic issue was the reckoning of Easter, which raged from the late 6th century to the late 8th century. It would be an oversimplification to identify one Easter computus as Celtic and the opposing system as Roman/Anglo-Saxon. At various times and places, we find particular groups of English, Britons, Gaels, and Picts using the insular

reckoning—an 84-year cycle attributed to the 3rd-century Syrian bishop, Anatolius of Laodicaea, in which Easter could not occur before 25 March, reckoned as the spring equinox. At other times, or in other places at the same time, the same groups followed Roman practice—a 19-year cycle attributed to Victorius in which Easter could occur as early as the more astronomically accurate equinox of 21 March. For over a century, this became the prime issue separating the English from the Brythonic church. To modern readers, the date of a movable holiday—which often coincided in both systems, anyway—may seem a trivial matter, but, for medieval cosmology, Easter—the resurrection of Christ—was the annual triumph of light over darkness and life over death. To calculate it incorrectly was to misunderstand fundamentally God's creation. Furthermore, the Easter computus was the centrepiece of early medieval astronomy, earth science, and timekeeping. It is thus no coincidence that Beda was simultaneously the leading proponent of the Roman computus (which eventually prevailed) and the greatest historian and scientist of the early Middle Ages, who unreservedly hated the Britons as heretics, and wrote his *Historia Ecclesiastica* with this bias.

§2. ST PATRICK'S COMPUTUS

During the 6th and earlier centuries, there had been competing systems, without any one of them achieving universality. Cummian (cf. CUMMÉNE FIND), in his letter arguing for the Roman Easter to Abbot Ségéne of Iona (EILEAN Ì), surveyed several Easter cycles. The first is attributed to *sanctus Patricius papa noster* (St Patrick our senior bishop). Another 7th-century Irish text contains the prologue of a computus ascribed to a Patricius. It was a 19-year cycle of the Alexandrian type sanctioned by the Nicene Council of 325 (Walsh & Ó Cróinín, *Cummian's Letter* 190). This cycle was observed by some Western churches in 384 and 387 (Ó Cróinín, *Peritia* 5.279–80; cf. Charles W. Jones, *Bedae Opera de Temporibus* 35–6). It was explained and defended at length by St Ambrose of Milan in a letter of 386 (McLynn, *Ambrose of Milan* 280–1; cf. Jones, *Bedae Opera de Temporibus* 35–7). At the time, the 'Romano-Briton' Magnus Maximus (MACSEN WLEDIG) ruled BRITAIN, GAUL, and Spain. A fanatical orthodox Christian, Maximus was eager to accede to Ambrose, who came to him as emissary of the rival emperor Valentinian II in 384×386 (Stancliffe, *St. Martin and his Hagiographer* 283); Maximus and his British following would no doubt have heeded Ambrose's letter of 386. Thus, it is not surprising that PATRICK—a son of the Romano-British élite and a third-generation Christian—used this Alexandrian computus.

§3. COLUMBANUS

By the beginning of the 7th century, Continental Roman Christians were agreed on the method of Victorius, while the Britons and Irish used a different, older 84-year cycle. COLUMBANUS, an Irish monastic leader who was working on the Continent, wrote to Pope Gregory the Great on the Easter question in 600:

> Why then, with all your learning . . . do you favour a dark Easter? I am surprised, I must confess, that this error of Gaul has not long since been scraped away by you, as if it were a warty growth; unless perhaps I am to think, what I can scarce believe, that while it is patent that this has not been righted by you, it has met with approval in your eyes . . . For you must know that Victorius has not been accepted by our teachers, by the former scholars of Ireland, by the mathematicians most skilled in reckoning chronology, but has earned ridicule or indulgence rather than authority. (Letter i, Walker, *Sancti Columbani Opera* 4–7)

In 603 Columbanus wrote to a hostile synod in Gaul in defence of the insular Easter, pleading 'we are all joint members of one body, whether *Galli*, *Britanni*, or *Iberi* [Irish]' (Letter ii, Walker, *Sancti Columbani Opera* 22–3).

§4. CUMMIAN'S LETTER

According to BEDA (*Historiae Ecclesiastica* 2.19), Pope Honorius I (625–38) wrote to the Irish (*Scotti*) exhorting them not to believe that their own small number at the extreme ends of the earth was wiser than the rest of the churches of the world in the matter of reckoning Easter.

Some southern Irish churches had adopted the Roman Easter by 632/3. Following a synod held by this group at Mag Léne, Cummian, one of their leaders, as noted above, wrote a letter to the abbot of Iona, the intellectual stronghold of the insular Easter. The letter argued for the Roman Easter on the basis of the superior authority of the *tres linguae sacrae*, the three sacred languages—Hebrew, Greek, and Latin—and

the intellectual insignificance and geographic marginality of the Irish and Britons (Walsh & Ó Cróinín, *Cummian's Letter*). In the 7th-century computus which Ó Cróinín has attributed to 'the circle of Cummianus', a similar theme of authoritative *principales linguae* (excluding BRYTHONIC and IRISH) is cited to justify the Roman Easter (PRIA C 82.405–30). Thus, the Easter issue had implicitly spawned an attack on learning in Irish or WELSH. 'Beccanus solitarius', who (along with Ségéne) was one of the addressees of Cummian's letter, was probably Beccán mac Luigdech who composed two 7th-century poems in Irish —*Fo réir Choluimb* (Bound to Colum) and *Tiugraind Beccáin* (The last verses of Beccán)—praising Iona's founder, COLUM CILLE (Walsh & Ó Cróinín, *Cummian's Letter* 7–15; Clancy & Márkus, *Iona* 129–34).

In 640 Pope elect John IV wrote to Ségéne and other Irish church leaders pressing the same point (letter preserved by Beda, *Historiae Ecclesiastica* 2.19).

§5. STREANÆSHALCH AND ITS AFTERMATH

In 664, at a council held at Streanæshalch (often called the 'Synod of Whitby'), Northumbria's church—which owed its foundation to Iona—accepted the Roman Easter. Colmán, the Irish abbot of LINDISFARNE, withdrew to Ireland (ÉRIU), by way of Iona (see CUMMÉNE FIND). Also present were the noble Anglo-Saxon Bishop Wilfrid, a strong adherent of the Roman side, and his patron, Prince ALCHFRITH. Presiding was Alchfrith's father, King OSWYDD, who, Beda tells us, supported the Insular Easter because he had been educated by the Irish and spoke their language perfectly. Beda writes that some churches of the Britons adopted the Roman Easter after the battle of NECHTANESMERE in 685, but does not say which ones. Before Iona came into conformity in 716, most non-Columban Irish foundations, including Armagh (ARD MHACHA), had followed the Roman Easter for some decades. ADOMNÁN, the abbot of Iona, accepted the Roman Easter before his death (†704). St ELFODDW was responsible for finally changing the reckoning in Wales (CYMRU) in 768, according to ANNALES CAMBRIAE. The Old Welsh COMPUTUS Fragment is a commentary on Beda's Victorian computus.

§6. TALIESIN, URIEN, CATRAETH, AND EASTER

In *Yspeil Taliessin, Kanu Vryen* (Spoils of Taliesin, poetry of URIEN), an early Welsh poem in LLYFR TALIESIN, there is a description of the poet and his patron at Easter:

> On Easter, I saw the great light and the abundant fruits.
> I saw the leaves that shone brightly, sprouting forth.
> I saw the branches, all together in flower.
> And I have seen the ruler whose decrees are most generous:
> I saw Catraeth's leader over the plains.
> (Koch & Carey, *Celtic Heroic Age* 364)

This description is unique in the CYNFEIRDD poetry. Points are being made, surely intentionally: Urien and his bard are overtly Christians; they observe the true Easter in which light has triumphed over darkness and all the plants are in flower—thus life has triumphed over death. Furthermore, the place was one of great Christian sanctity and priority in Northumbria—at CATRAETH (Catterick) thousands were baptized in 627, and when most of the kingdom relapsed into paganism during CADWALLON's invasion (633–5) the Roman mission continued under *Iacobus diaconus* ('James the Deacon') in the neighbourhood of Catterick. Thus, the poet has placed Urien and his own persona on the right side of two major crises in Northumbria's 7th-century church.

JTK

Ecgfrith (r. 670–†20 May 685), son of OSWYDD, nephew of OSWALD, younger half-brother of ALCHFRITH and FLANN FÍNA, was king of Northumbria. His relations with his neighbours—BRITONS, Irish, and

Picts—were characterized by aggression and oppression, and ultimately led to disaster and a long-term lessening of Anglo-Saxon influence in the Celtic countries, in the context of a general weakening of Northumbrian power. The near-contemporary Life of Wilfrid by Eddius Stephanus shows that Ecgfrith violently expropriated the church lands of the Britons in the Pennines in the period 671×678:

> Then St Wilfrid the Bishop stood in front of the altar, and, turning to the people, in the presence of the kings [Ecgfrith and Ælfwini], read out clearly a list of the lands which the kings, for the good of their souls, had previously, and on that very day as well, presented to him . . . and also a list of the consecrated places in various parts which the British clergy had deserted when fleeing from the hostile sword wielded by the warriors of our own nation . . . these are the names of the regions: round [?]Ribble and Yeadon and the region of Dent and Catlow [*iuxta Rippel et Ingaedyne et in regione Dunutinga et Incaetlaevum*] and other places. (Colgrave, *Life of Bishop Wilfrid/Eddius Stephanus* 36–7; regarding possible uncertainties on some of the place-names, see Sims-Williams, *Journal of Ecclesiastical Studies* 39.2.180–3)

As Smyth argues (*Warlords and Holy Men* 24–5; cf. Koch, *Gododdin of Aneirin* cxvi–cxvii), these confiscated lands probably belonged to the Christian Brythonic kingdoms of Elfed and Rheged. A comparable and broadly contemporary confiscation of Rheged church lands was Ecgfrith's grant of Cartmel (now south-west Cumbria) to St Cuthbert, giving him *omnes Britannos cum eo*, which is described in *Historia de sancto Cuthberto* (Jackson, LHEB 217, 241; Thacker, *St Cuthbert* 116). In 678 Ecgfrith imposed a puppet king and an English bishop, Trumwine, on the Picts (Beda, *Historia Ecclesiastica* 6.12). In a passage concerning events of 679, we see that Wilfrid and his patron, Ecgfrith, had expanded their claim:

> Wilfrid, Bishop of York, beloved of God, appealing to the Apostolic See . . . has confessed the true and catholic faith for all the northern part of Britain and Ireland, and for the islands which were settled by the peoples of the English and the Britons and also of the Irish and of the Picts and confirmed it with his signature. (Colgrave, *Life of Bishop Wilfrid / Eddius Stephanus* 114)

The rationale behind these claims must be that Northumbria did not regard itself to be divorced from the churches founded by Colum Cille, but rather that York was now empowered by default to lead the Columban federation, since Northumbria was orthodox but the mother church remained schismatic in the Easter controversy. This papally endorsed claim served as the charter for Ecgfrith's unprecedented and horrific attack on Brega in the Irish midlands in June 684. Beda and the Irish annals concur that many churches were destroyed at that time (*Historia Ecclesiastica* 6.26; Annals of Ulster 684: *Saxones Campum Bregh uastant 7 aeclesias plurimas in mense Iuni*). Beda attributes Ecgfrith's downfall not to the Picts who actually killed him, but to the prayers of the Irish for vengeance (*Historia Ecclesiastica* 6.26). In 686 Adomnán negotiated with Ecgfrith's successor, Flann Fína mac Ossu/Aldfrith, for the return of sixty captives taken during the incursion. It is likely that Ecgfrith's ravaging of Brega served as some sort of impetus for the humanitarian concerns of Cáin Adomnáin ('Adomnán's Law') of 697. On 20 May 685, at Nechtanesmere (possibly modern Dunnichen) in Pictland, the Northumbrian king and most of his army were wiped out by the Pictish Bruide mac Bili, king of Fortrinn (*Historia Ecclesiastica* 6.26; *Annals of Ulster* 686 [=685]; Historia Brittonum §57). Bishop Trumwine fled to Whitby as the hostile forces advanced (*Historia Ecclesiastica* 6.26). Beda describes the long-term political consequences of the battle:

> From that time the hope and strength of the dominion of the English began to ebb and flow away. For the Picts took possession of their country which the English had held; and the Gaels who were in Britain; and some part of Britons recovered their freedom, which they have now enjoyed for approximately forty-six years. [Beda was writing in 731.] Many of the English folk were either slain by the sword, or taken into slavery, or took flight from the land of the Picts.

Echtrai (sing. *echtrae*, Modern Irish *eachtraí*, *eachtra*), usually translated as 'adventures', constitute one of the traditional Irish tale types. One should include in the definition that the *echtrai* usually involve a lone hero encountering supernatural or otherworldly challenges (see IRISH LITERATURE [1] §§3–4). The term's etymological sense of 'going outside' or 'outing' (< Celtic **eχst(e)riio-*) is also meaningful. For example, in *Echtrae Nerai* ('The Adventure of Nera'), which is part of the ULSTER CYCLE (§4) and a *rem-scél* or 'fore-tale' of TÁIN BÓ CUAILNGE, the action begins on a SAMAIN night at the court of MEDB and Ailill at CRÚACHU, when Nera is challenged to go out to put a withe around a hanged captive outside. The presumably dead captive then speaks, sending Nera on a series of strange and horrific adventures into the OTHERWORLD (§3) and complete disjunction from earthly time (Carey, *Ériu* 39.67–74). Within the medieval Irish TALE LISTS, there are 14 *echtrai* in the A list and ten in B, but they have only three in common (Mac Cana, *Learned Tales of Medieval Ireland*): *Echtrae Nerai*, *Echtra Crimthainn Nia Náir* (The adventure of Crimthann Nia Náir), and *Echtra Con Culainn* (The adventure of CÚ CHULAINN); the last does not survive, at least under this name. Early Irish writers did not apply the term with precision. As discussed by Dumville (*Ériu* 27.73–94), there is an overlap especially between *echtrai* and IMMRAMA (voyage tales; see also VOYAGE LITERATURE). As well as the maritime element, the *immrama* also more usually include overt Christian themes than do *echtrai*. However, the oldest extant *eachtrae*, *Echtrae Chonlai* (The adventure of Conlae, discussed in VOYAGE LITERATURE §2), which is one of the early texts derived from CÍN DROMMA SNECHTAI, is in fact a voyage tale with Christian themes. On the relationship of *Echtrae Brain* (Adventure of Bran) and the extant voyage tale IMMRAM BRAIN, see BRAN MAC FEBAIL. *Echtra Mac nEchach Muig-medóin* ('The Adventure of the Sons of Eochaid Muigmedón'), an 11th-century foundation legend of the great UÍ NÉILL dynasty, is one of the most famous surviving examples of the Celtic SOVEREIGNTY MYTH (see also LEGENDARY HISTORY §2; cf. ARTHURIAN LITERATURE [6] §4). In it, Níall and his brothers are lost and weary after hunting (a common plot device); one brother after another goes out seeking water and confronts a hideous hag at the well who asks each of them for a kiss; Níall at last kisses and lies with her, at which point she is transformed into the beautiful personification of the sovereignty of Ireland (ÉRIU), conferring the right to rule on Níall and his progeny forever. On *Echtra Fergusa maic Léiti* (The adventure of Fergus son of Léite), see LUCHORPÁN. The *echtrae* genre continued into the later Middle Ages and modern times, becoming influenced by the international chivalric romance (see IRISH LITERATURE [4] §3).

JTK

Edgeworth, Maria (1768–1849) was a product of the Anglo-Irish ASCENDANCY and an important novelist who wrote on Irish themes. Her work is of interest to CELTIC STUDIES for several reasons. It reflects, in conscious and systematic detail, the spoken English of pre-FAMINE rural Ireland (ÉIRE), incidentally revealing much influence from spoken IRISH (see Flynn, *Proc. Harvard Celtic Colloquium* 2.115–86). It also reflects an important early stage in the formation of an Irish national consciousness and national litera-

ture in English (see NATIONALISM). She also contributed negatively to the formation of a stereotype of the native Irish population in English literature.

Edgeworth was born in England and moved to Ireland in 1782 to live with her father in Edgeworthstown. Apart from occasional travels in Britain and continental Europe, she lived in Ireland until her death in 1849. Biographers frequently remark on the impact of the 1798 Irish uprising on Edgeworth (see TONE; ACT OF UNION), particularly her exposure to the casualties of the uprising, and, later, her family's attempts to alleviate the suffering caused by the Famine of 1845. A writer almost as prolific as Lady Morgan (Sydney OWENSON), to whom she was (and is) often compared, Edgeworth published over two dozen volumes between 1795 and 1848, many of which went through multiple editions.

Education is a recurring concern in Edgeworth's work. Her father, Richard Lovell Edgeworth, was an education theorist and inventor. Until his death in 1817, Edgeworth collaborated with her father on several educational tracts, and also applied their principles in her fiction. Most of the fictional volumes are for children, making Edgeworth a key voice in the early history of children's literature, as well as a popular children's writer in her time. But she also wrote educational fiction for other groups, including the newly literate lower classes, in volumes such as *Popular Tales*. Her novels also frequently draw on didactic themes; *Ennui*, for instance, a novel in the first series of *Tales of Fashionable Life*, focuses on the re-education of the protagonist. Typically in such tales, benevolent elders reward dutiful subordinates, fostering behaviour which is shaped by a strong work ethic and a high regard for authority.

While many of her works for adults fall into the category of the novel of manners, and therefore bear comparison with Jane Austen's novels, Edgeworth was also a significant voice on the representation of Ireland. Her first and most-discussed novel, *Castle Rackrent* (1800), is notable for its representation of Hiberno-English dialect in both the text and an appended 'Glossary'. As Marilyn Butler notes, however, 'Irish traditions meant to the Edgeworths the survival of irrational and inefficient habits: they thought that extensive education among all classes was the best remedy for tradition' (*Maria Edgeworth* 364). Works such as *The Essay on Irish Bulls* (1802), *Castle Rackrent*, and *Ennui* (1809) suggest that some of the effects of such traditions are attractive-imaginative phraseology, a commitment to the local authority, but these are largely infantilized attributes and participate in the emerging stereotype of the Irish as lively in unproductive ways and with the ever-present risk that this liveliness would become unruliness.

Because of the ethnographic dimension of her Irish work and an attendant concern with the ways in which a culture enters modernity, Edgeworth is also frequently grouped with authors of the national tale, especially Lady Morgan and Sir Walter SCOTT. Scott was a friend and long-time correspondent, and several critics have traced a mutual influence, but Edgeworth found 'comparisons' of her work to that of her fellow Irish novelist Morgan 'odious', and echoes the conservative reviews in her description of Morgan's work: 'a shameful mixture . . . of the highest talent and lowest malevolence'; 'impropriety—& disregard of the consequences of what she writes' (*Maria Edgeworth* 448). The national tales which these writers produced are quite different, employing different notions of modernity as well as widely separated political perspectives. But they collectively register an early 19th-century concern with bridging the gap between the English metropole and the so-called 'Celtic periphery' in the wake of the 1800 Act of Union.

Julia M. Wright

education in the Celtic languages [1] Irish medium

§1. INTRODUCTION

IRISH-medium education is provided in two jurisdictions: the Republic of Ireland (ÉIRE) and Northern Ireland. In the Republic of Ireland, Irish-medium

education takes two forms—in the remaining Gaeltacht (Irish-speaking) regions, Irish-medium education is intended to be L1 (first-language) medium instruction, whereas the Gaelscoil (Irish-medium schooling) movement in non-Gaeltacht areas of the Republic of Ireland and in Northern Ireland is following a total immersion model with the vast majority of students having English as a home language.

§2. PRESCHOOL EDUCATION

Irish-medium preschools (*naíonraí*, sing. *naíonra*) are part of a national, primarily community and voluntary based, movement. Most *naíonra* leaders (*stiúrthóirí*, sing. *stiúrthóir*) work on a part-time basis and are dependent mainly on contributions (fees) from parents for their income (Hickey, *An Luath-Thumadh in Éirinn / Early Immersion Education in Ireland*). The first *naíonra* opened in 1968, and in 1974 a representative organization for *naíonra stiúrthóirí* was established. In 1978 the name of this organization was changed to Na Naíonraí Gaelacha (the Gaelic preschools), to highlight the pedagogical approach advocated—a combination of the positive aspects of both the preschool and playgroup models (Hickey, *An Luath-Thumadh in Éirinn / Early Immersion Education in Ireland*). In the same year, a national organization for the promotion of preschooling through the medium of Irish, An Comhchoiste Réamhscolaíochta, was established as a joint venture between Na Naíonraí Gaelacha and Bord na Gaeilge, the state board with responsibility for the Irish language.

An Comhchoiste Réamhscolaíochta employs a total of 15 advisors on a full- and part-time basis, who provide advice and support for *naíonra stiúrthóirí*. They run a short foundation-level course for *stiúrthóirí* on an annual basis and since 2000 have been running a part-time FETAC (Further Education and Training Awards Council) validated certificate course in childcare through the medium of Irish. An Comhchoiste also provides financial support to *naíonraí* in the form of grant-aid ranging from €1,810 to €10,800 per annum, depending on the number of children attending the *naíonra*. *Naíonraí* in Gaeltacht areas receive similar levels of support from Údarás na Gaeltachta (the Gaeltacht development authority). They also receive administrative support in relation to taxation and the handling of employment and personnel matters from Seirbhísí Naíonraí Gaeltachta Teo. (Gaeltacht Naíonra Services Ltd.), a subsidiary company of Údarás na Gaeltachta. In Northern Ireland, sources of funding for *naíonraí* include the Education and Library Boards and the Department of Education, and Altram acts as a representative and support body for the *naíonraí*. In recent years, some *naíonraí* in the Republic of Ireland have received capital and staffing funding under the Department of Justice, Equality and Law Reform's Equal Opportunities Childcare Programme for 2000–2006, which aims to increase the provision of preschool childcare services generally. However, lack of funding is still the major challenge facing the sector, with its consequent effects on the provision of suitable facilities and on the recruitment and professional development of staff.

§3. PRIMARY LEVEL EDUCATION (AGES 4–12 YEARS)

Schools in Gaeltacht regions generally teach through the medium of Irish at both primary and second level. The number of primary level Gaeltacht schools is 108, with a total number of 7507 pupils (Department of Education and Science, 1999/2000). Because of the rural nature of the Gaeltacht, the majority of these schools are small, with more than 50% of them having only three teachers or less.

Outside the Gaeltacht regions, the 1950s and 1960s saw a drastic reduction in the number of Irish-medium

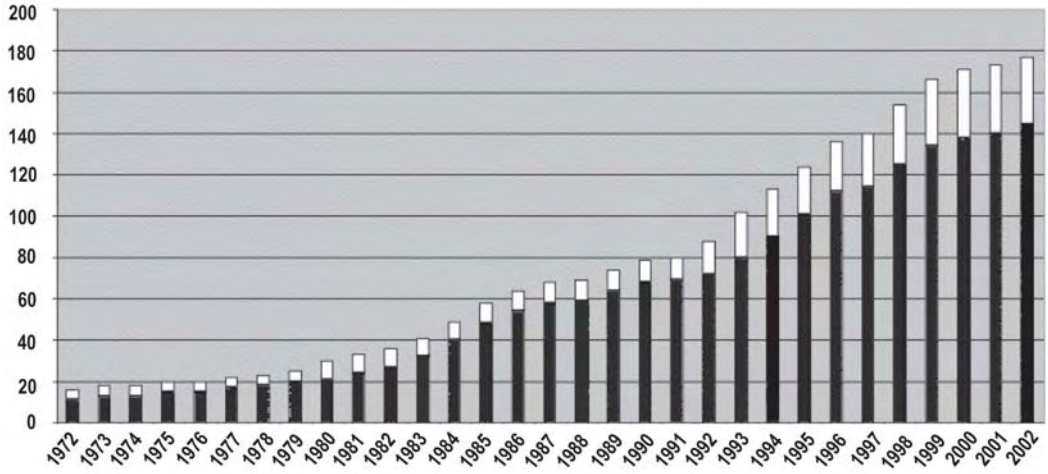

Table 2: Growth of the number of Irish-medium schools (vertical axis) outside the Gaeltacht regions, 1972–2002, primary schools in black, secondary in white (source: Gaelsoileanna)

schools. From 1972 onwards, however, a parent-based movement led to renewed interest and growth in Irish-medium schooling (see Table 2). Gaelscoileanna (Gael-schools) in the Republic of Ireland, and Gaeloiliúint (Gaelinstruction) in Northern Ireland act as representative and promotional bodies for Irish-medium schools in each jurisdiction respectively.

Current demographic trends suggest that the number of pupils receiving Irish-medium schooling in Gaeltacht areas will decrease, or at best, remain static in the future. The potential for growth in the Irish-medium school sector in non-Gaeltacht areas is still great, however, given that only 6% of primary level students are currently attending Irish-medium schools despite the fact that the potential demand at primary level is in the region of 30% (Ó Riagáin & Ó Gliasáin, *National Survey on Languages*).

Current challenges facing the sector include the supply of teachers qualified to teach through the medium of Irish, the provision of Irish-medium textbooks and other teaching resources, and planning issues relating to the establishment of new schools. Gaeltacht schools face additional challenges. With the continued shift of language patterns in Gaeltacht areas from Irish to English, Gaeltacht schools have to deal with a mixed intake of pupils, some who are native speakers of Irish and others who are not. A lack of forward language planning has left such schools struggling to deal with a complex linguistic situation without the resources, in terms of personnel and training, to do so.

§4. second-level education (ages 12–18 years)

In Gaeltacht areas, 20 second-level schools currently teach through the medium of Irish, with a total of 3340 pupils attending them (Department of Education and Science, 1999/2000). In non-Gaeltacht areas, the number of students receiving Irish-medium schooling has shown a steady increase in the period from 1972 to

Table 4: Statistics for Irish-medium second-level schools outside the Gaeltacht regions in 2002–03 (source: Gaelsoileanna)

2002 (see Table 2). This growth has been driven by the increased participation in Irish-medium schooling at primary level. Where initial numbers are not large enough to justify the establishment of new schools on an independent basis, the model adopted has been to establish semi-independent Irish-medium units within existing English-medium schools. This model has, so far, not proved completely satisfactory. While the percentage of students continuing in Irish-medium schooling from primary to second level is high in some cases, the overall percentage is regarded as disappointing. Research is currently underway into the reasons for this.

§5. THIRD LEVEL SECTOR

The National University of Ireland, Galway (Ollscoil na hÉireann, GAILLIMH) has a legislative responsibility in relation to university education through the medium of Irish, and currently offers a range of courses and modules through the medium of Irish at diploma, degree and postgraduate level. These include an MA in Translation Studies and Higher Diplomas in Education, Applied Communications and in Information Technology. A limited range of options is available through Irish for students at undergraduate level in several disciplines. Figures for the 2001–2 academic year show that a total of 218 students were following all or some of their studies through the medium of Irish. In its recently published strategic plan for the period 2003–8, the University has announced its intention of establishing an Irish-medium academy, Acadamh na hOllscolaíochta Gaeilge, which will have as its remit the development of Irish-medium teaching and research activities both on campus and in its three Gaeltacht centres. The focus of the new academy will be to provide for the specific needs of Irish speakers and Gaeltacht communities through the development of teaching and research activities in subject areas that are seen as being of strategic importance to their future development.

Fiontar (enterprise), the Irish-medium unit in Dublin City University offers two undergraduate programmes: a BSc in Finance, Computing and Enterprise and a BSc in Entrepreneurship with Computing/Applied Irish, and an MSc/Graduate Diploma in Business and Information Technology. Galway–Mayo Institute of Technology offers an Irish-medium BA in Business and Communication Studies, and the Letterkenny Institute of Technology offers a National Certificate in Office Information Systems. Teacher-training education is provided through Irish in St Mary's College of Education, Marino, and the University of Limerick is proposing to offer a new postgraduate programme in sociolinguistics in September 2003.

§6. LEGISLATIVE AND LEGAL DEVELOPMENTS

The legal and legislative provision for Irish-medium education has improved considerably in recent years. In the Republic of Ireland, the Education Act of 1998 contains several provisions relating to Gaeltacht and Irish-medium schools, including provision for the establishment of a state-sponsored support body for Irish-medium schools—An Chomhairle um Oideachas Gaeltachta agus Gaelscolaíochta (The Council for Gaeltacht and Gaelscoil Education). In Northern Ireland, provisions supportive of Irish-medium education in the Good Friday Agreement have led to the Education (Northern Ireland) Order 1998, which places a statutory duty on the Department of Education to encourage and facilitate Irish-medium education. In response to this, following consultation with interested parties, the Department established the promotional body Comhairle na Gaelscolaíochta (The Gaelschooling Council) in August 2000. with the remit of promoting and supporting the strategic development of Irish-medium education in Northern Ireland.

education in the Celtic languages [2] Scottish Gaelic medium

Education through the medium of SCOTTISH GAELIC was formally introduced into state education in Scotland (ALBA) in 1975. The previous year had seen a major reorganization of local government and the creation of a single local authority for the Outer Hebrides (Innse Gall). The new council, Comhairle nan Eilean, adopted a bilingual policy and initiated a bilingual education project which was partly funded by central government.

§1. HISTORY OF PROVISION

Prior to the introduction of the project, the use of Gaelic as a medium of instruction had been informal, unofficial and sporadic, and had been tolerated rather than encouraged. No provision was made for Gaelic in the 1872 Education Act which established state education in Scotland. This was despite the fact that around 250,000 of the population could speak Gaelic and that the language had been used as a medium of instruction in many of the previously independent schools run by churches and various societies. Official disdain for the language was reflected in the appointment of monoglot English-speaking teachers in Gaelic-speaking areas and the not infrequent practice of administering corporal punishment to children for speaking Gaelic in school.

§2. THE BILINGUAL EDUCATION PROJECT

The Bilingual Education Project began as a pilot, but was extended in phases to all schools in the Outer Hebrides. The project was not only pioneering in linguistic terms, but also adopted an innovative approach in curricular areas such as environmental studies. By the early 1980s, however, parents and language activists were voicing concern about the ability of this particular model of bilingual teaching to deliver linguistic competence in Gaelic comparable to that in English. Similar concerns were being expressed about a second bilingual scheme being trialled in primary schools in the Isle of Skye (Sgiathanach) by the Highland Regional Council. There was mounting concern about the rapid erosion of the language among young people, and a growing conviction that greater use of Gaelic as a teaching medium was required to stem this decline. Gaelic-medium playgroups were set up in various parts of the country and they laid the foundation for the development of Gaelic-medium education in primary schools.

§3. PRIMARY EDUCATION

Provision in the primary sector was instituted in 1985 with the opening of Gaelic-medium units in schools in Glasgow (GLASCHU) and Inverness (Inbhir Nis). The success of these units and the spread of Gaelic-medium playgroups fuelled demand for provision in other areas, and by 2003–4 there were 1972 pupils engaged in Gaelic-medium education in 60 schools. Of these, 49 are located in the HIGHLANDS and Islands, and almost all of the schools have parallel Gaelic-medium and English-medium streams. The first all-Gaelic school in Scotland opened in Glasgow in 1999 and 5 primary schools in the Hebrides, in which the Gaelic-medium stream predominates, have been designated Gaelic schools by the local authority.

Most pupils in Gaelic-medium education in urban areas come from non-Gaelic-speaking homes, although many have a Gaelic or Highland family background. A two-year immersion programme in the language is a feature of the curriculum in all Gaelic-medium schools, and Gaelic is the main language of instruction in

primaries at ages 3–7, although the balance of language use varies across education authorities and across the stages of the primary curriculum. All schools are bound by the National Curriculum Guidelines for ages 5–14, which specify that Gaelic-medium education should aim 'to bring pupils to the stage of broadly equal competence in Gaelic and English, in all skills, by the end of Primary 7'.

§4. SECONDARY EDUCATION

Gaelic first became an officially recognized medium of instruction in secondary schools in 1983, when the Bilingual Project in the Western Isles was extended to two secondary schools in Lewis (Leòdhas). The initial pilot project concentrated on the teaching of social subjects through the medium of Gaelic, and this focus was maintained beyond the project stage.

The first provision for pupils transferring from Gaelic-medium classes in primary schools was made in 1988 at Hillpark Secondary in Glasgow. By 2003–4, there were 15 schools providing some form of Gaelic-medium education to just over 300 pupils in various parts of Scotland. Gaelic-medium education in most secondary schools is limited to two or three school subjects, of which History is the most widely available. The subjects on offer vary from school to school, according to the availability of Gaelic-speaking subject teachers. The Scottish Qualifications Authority (SQA) offers Gaelic versions of the national Standard Grade examinations in history, geography, and mathematics in the Fourth Year, and it is anticipated that other subjects will, in the near future, be added to those currently available. Gaelic-medium pupils also study the language as a subject, and take the certificate Gàidhlig course designed for fluent speakers.

§5. TERTIARY AND HIGHER EDUCATION

Gaelic-medium education is not confined to the school sector. In the tertiary and higher sectors, some of the colleges of the University of the Highlands and Islands make provision for the language as a medium of instruction. The Gaelic College—Sabhal Mòr Ostaig—on Skye offers a range of certificate, diploma, degree and postgraduate courses taught through the medium of Gaelic. Lews Castle College also provides some courses in Gaelic at campuses in Stornoway (Steòrnabhaigh) and Benbecula (Beinn nam Faodhla).

§6. FUTURE PROSPECTS

Gaelic education has recently been made a national priority by the Scottish Executive (see SCOTTISH PARLIAMENT), and the requirement this places on local authorities to produce development plans and progress reports may help overcome two of the major difficulties experienced in Gaelic-medium education at present—a lack of overall planning and a shortage of teachers. Despite these shortcomings, Gaelic-medium education has been described, with some justification, as 'one of the success stories of recent Scottish education' by the General Teaching Council of Scotland.

education in the Celtic languages [3] Manx medium

In 1996 the first regular Manx preschool group was established in Braddan by Mooinjer Veggey (the little people), with six children learning Manx through play, songs, stories, and activities. Mooinjer Veggey expanded rapidly and by April 2002 it had four groups with over 80 children registered. Also in 1996, following pressure from parents of bilingual (Manx/English) children, the Department of Education agreed on a trial basis to provide a half-day a week language session taught primarily through Manx. This has been well supported, with around 20 children attending regularly.

In November 1999 parents of children at Mooinjer Veggey and the half-day class formed Sheshaght ny

Paarantyn (SnyP, Parents for Manx-medium Education) with the specific aim of lobbying the Manx Government for the establishment of full-time Manx-medium primary education. SnyP worked tirelessly over the next 18 months, meeting various politicians and government officials and building support until, in April 2001, the Isle of Man Department of Education agreed that full-time Manx-medium education would be offered.

In September 2001 a Manx-medium class opened in Ballacottier Primary School, Douglas (Doolish), with nine pupils between 4 and 5 years old. The class proved to be extremely successful and it is envisaged that it will develop into a dedicated Manx-medium school. Support for the class from parents remains strong, but finding sufficient resources and teachers may prove difficult in the future.

education in the Celtic languages [4] Welsh medium

The growth of WELSH-medium education—instigated by inspirational pioneers, and secured by dedicated teachers and committed parents—is one of the minor miracles of modern Europe. Education is the chief focus of the language struggle. It remains the central pillar of contemporary language transmission and offers a model that has been emulated in bilingual contexts worldwide.

The Butler Education Act of 1944 permitted Local Education Authorities to establish designated Welsh-medium schools, the first of which opened in Llanelli in 1947. By the early 1950s there were 15 designated schools, underpinned by a network of voluntary Ysgolion Meithrin (nursery schools), mainly in Anglicized areas. Parental pressure led to the establishment of Welsh-medium secondary schools in Rhyl (Ysgol Glan Clwyd, 1956), in Mold/Yr Wyddgrug (Ysgol Maes Garmon, 1962) and in Pontypridd (Ysgol Rhydfelen, 1962), and Ysgol Ystalyfera in the upper Swansea valley in 1967. Subsequently, a wide variation in the national pattern of bilingual teaching emerged, ranging from complete Welsh-medium to differing proportions of Welsh and English within the curriculum and subjects, dependent on both the sociolinguistic context of the catchment area and the Local Education Authority's language policy.

For 20 years, the acclaimed educational and sociocultural achievements of such schools led to a steady growth in bilingual provision characterized by an increasing number of children from non-Welsh-speaking homes. The Conservative Government's creation of a National Curriculum for Wales via the 1988 Education Act resulted in Welsh becoming a core subject, together with English, mathematics, and science, in all schools. The 1988 Act had far-reaching consequences. Welsh-medium education benefited from the additional resources expended on teacher training and the development of teaching materials in the 445 designated Welsh-medium schools (25.9% of the 1718 schools in 1990). English-medium schools also saw a significant growth in the teaching of Welsh. In 1990 barely half (50.7%, 870) the schools had classes where Welsh was taught as a second language. By 1997 this proportion had risen to 67.6% (1136). The Welsh Language Act of December 1993 further strengthened such trends by charging the statutory Welsh Language Board (BWRDD YR IAITH GYMRAEG) with a strategic responsibility for Welsh and ensuring that Local Education Authorities implement their agreed Welsh Language Education Schemes.

Consequent to these legislative reforms, the percentage of primary schoolchildren speaking Welsh fluently increased from 13.1% in 1986/7 to 16.0% in 1998/9. However, the percentage of primary schoolchildren speaking Welsh at home fell over the same period from 7.3% to 6.3%. In January 1999, 13.3% of secondary school pupils in Years 7 to 11 (the compulsory school age) were taught Welsh as a first language; the percentage has increased virtually every year since 1977/8, when the comparable figure was 9.3%. By 1999, 14.6% of pupils in Year 7 were being taught Welsh as a first language.

In 2001–2 there were 445 Welsh-medium primary schools, constituting 27% of the 1631 primary schools. A further 82 schools, 5% of the total, used Welsh as a teaching medium to some extent. In the remaining 1133 schools, 68% of all primary schools, Welsh was taught as a second language to 223,786 pupils. The number of full- and part-time primary teachers teaching

through the medium of Welsh was 2812, while 8277 teachers taught it as a second language.

Also in 2001–2, there were 52 Welsh-medium secondary schools—22% of the total number of 229 secondary schools—who taught 37,389 pupils, 20% of the 186,081 secondary pupils. The number of secondary pupils taught Welsh as a first language was 26,135, and those taught Welsh as a second language numbered 157,300. The number of secondary teachers teaching through the medium of Welsh was 1802, while 772 teachers taught Welsh as a second language. The range and quality of bilingual material to sustain the teaching of specialist topics has grown tremendously, thanks largely to the commissioning policy of ACCAC (Qualifications, Curriculum and Assessment Authority for Wales), the publishing programmes of the Welsh Joint Education Committee and the innovative resources provided by Acen (established in 1989 as a project within S4C, the Welsh television channel, to teach Welsh to adults) and a plethora of small, independent media and publishing companies.

Yet, despite such incremental growth, the lack of continuity of provision at each successive level in the educational system has diminished the effectiveness of national bilingual strategies. At the base of the pyramid in 2002, 13,349 children attended Mudiad Ysgolion Meithrin Welsh-medium playgroups, taught by 1,028 playgroup leaders and supported by a national network of Cylchoedd Ti a Fi (parent and toddler groups). At primary-school level, the percentage which can speak Welsh fluently continues to rise, but, when they transfer to high school, Baker and M. P. Jones (*Language Revitalization* 131) argue that around 40% of such secondary school pupils move from a first-language to a second-language category.

In addition, the lack of adequate investment in bilingual teacher training and the patchy recruitment of *athrawon bro* (peripatetic Welsh teachers) have weakened the firm bilingual foundations laid in the earlier years, as has the need to widen access to Centres for Latecomers, to avoid duplication in the provision of teaching resources, to strengthen Welsh for Adults provision, and to develop bilingual software and resources for IT and Special Educational Needs. Vacillation over the post-16 bilingual policies pursued by ELWa (Education and Learning Wales) and the absence of an effective national strategy, together with a lack of adequate funding and training in Welsh-medium higher education provision, have also impeded the effectiveness of Welsh-medium education.

By 2003, the educational policy reforms announced by the National Assembly for Wales (Cynulliad Cenedlaethol Cymru), together with its adoption of holistic programmes to realize its declared ambition of creating a bilingual Wales (Cymru), had not yet assuaged the fears of critics who argued that Welsh-medium education was in crisis, especially in the post-16 sector. Because the bilingual infrastructure was so underdeveloped and the vocational element almost non-existent, many opportunities were being lost for the effective training of a bilingual workforce. In order to sustain the momentum generated so assiduously by countless thousands of committed individuals, the Government of Wales is being urged to engage in a historically unprecedented and sustained level of investment in Welsh-medium education at all levels. Anything less would render the aim of creating a bilingual Wales within the medium term an unsustainable programme, open to charges of political self-deception.

education in the Celtic languages [5] Breton medium

Despite official French attitudes towards its regional languages in the 19th century, there is evidence, as bilingual textbooks testify, that the Breton language was used as the teaching medium in some small private schools during this period. In addition to this, religious instruction, mainly in the form of catechism, was taught through the medium of Breton in many areas of Lower Brittany (Breizh-Izel) well into the 20th century. With the passing of the Jules Ferry Laws in 1881–9, however, the French government's policy

regarding the medium of instruction was hardened to such an extent that the Breton language was persecuted in schools.

The 20th century witnessed active campaigning by various associations for Breton to be taught in schools. One of these, ABES (Ar Brezoneg er Skol 'Breton in Schools', founded in 1934), collected votes from more than 200 *communes* in 1936 in support of a motion calling for Breton in schools. Another movement was Ar Falz (The sickle), an association of lay teachers led by Yann Sohier (1901–35) who founded the monthly bulletin of the same name in 1933.

It was during the Vichy regime, in 1941, that the then Minister for Education, Jerôme Carcopino, passed a declaration lifting the ban on Breton in schools. Thus, this turbulent time saw the first true attempt at Breton-medium education, made by Sohier's successor, Yann Kerlann (Jean Delalande 1910–69), when he founded a residential school with nine pupils at Plestin-les-Grèves in 1942. This independent venture, funded entirely by voluntary contributions, taught all subjects through the medium of Breton until its closure in June 1944. Despite the subsequent illegality of Vichy declarations, the status of Breton in education was reaffirmed by the Deixonne Law of 1950–1, which authorized the teaching of regional languages in secondary schools.

Armañs ar C'halvez (Armand Le Calvez 1921–72) also founded a short-lived private school, Skol Sant-Erwan, in Plouézec in 1957, but it was not until 1977 that Breton-medium education truly gained momentum when, through the co-ordinated efforts of parents and teachers, the first Diwan (Germination) school was opened. The number of pupils attending these Breton-medium schools steadily increased each year, so that by the academic year 2000–1 there were 2414 pupils attending 30 nursery schools, 28 primary schools, 4 *collèges*, and 1 *lycée*. In 1997 the first batch of pupils sat their *baccalauréat* examination, having received all their schooling in Breton. Diwan schools are presently on the verge of being integrated into the French state system.

Children other than Diwan pupils can also receive their education through the medium of Breton, since there are bilingual schools and bilingual streams within both the public and Catholic (private) education systems. State bilingual schools and streams are supported by the parents' movement Div Yezh (Two languages), while Dihun (Awake!) represents the parents that are involved in Catholic Breton-medium education. The publication of textbooks and audio-visual materials for use in Breton-medium education is the responsibility of TES (Ti-embann ar Skolioù Brezhonek 'The Breton schools publishing house') based in Saint-Brieuc (Sant-Brieg).

education in the Celtic languages [6] Cornish medium

There is no Cornish Language Act, nor do CORNISH language, CORNISH LITERATURE or history feature in the National Curriculum of the United Kingdom. Education in Cornish has therefore, since the revival of the mid-19th century onward, been suppressed and underfunded. Provision is piecemeal at best, and non-existent at worst. Most people learn Cornish as adults at evening classes or studying independently on their own. There are a growing number of families who speak Cornish exclusively at home, but there are no facilities and few resources at present for such children to be educated in that medium.

Instruction in Cornish has therefore been dependent upon interested individuals working with the education system, most notably E. G. R. Hooper. Robert Morton NANCE's *Cornish for All* (1929) and A. S. D. Smith's *Cornish Simplified* (1939) were the standard textbooks for many years, followed by Richard Gendall's *Kernewek Bew* (Living Cornish, 1972). Other influential educators were Crystan Fudge, Graham Sandercock, Wella Brown, and Neil Kennedy. Subscribed magazines form a staple educative device within the learning community.

At the beginning of the 21st century, most primary schools in Cornwall (KERNOW) undertake some commitment to teaching core words and phrases in the Cornish language, but since the early 1990s there no longer exists a General Certificate of Secondary Education (GCSE) in the Cornish language. Secondary provision is extremely poor, though some schools do provide limited Cornish studies. Examinations in the

Cornish language are held by the Cornish Language Board, though these are almost exclusively in *Kemmyn* (one of the competing standard forms of revived Cornish). Grade Four guarantees bardic acceptance into the Cornish GORSETH. By means of annual competitions, the Gorseth supports language development, but, for the most part, these are outmoded and ineffective. The best practice is seen in work on 'non-standard' speech in schools, on the Internet, and in television programmes such as *Kernopalooza!* (1998; see MASS MEDIA).

Edwards, Sir Owen M. (1858–1920) was arguably the most important cultural figure in Wales (CYMRU) on the eve of the 20th century. A native of Llanuwchllyn, Merioneth (Meirionnydd), he was educated at the local church school, and at Ysgol Tŷ-tandomen and the Theological College, Bala. He studied at the University College of Wales, ABERYSTWYTH, the University of Glasgow (GLASCHU), and Balliol College, Oxford (Welsh Rhydychen). After graduating in 1887 he travelled on the Continent, and in 1889 he was appointed Fellow and Tutor in History at Lincoln College, Oxford. Following the death of Thomas Edward ELLIS, he was elected Member of Parliament for Merioneth (1899–1900). He returned to Llanuwchllyn in 1907 on his appointment as Chief Inspector of Schools of the Welsh Board of Education.

Edwards was the catalyst who opened up a new period in the history of Welsh creative writing by liberating Welsh prose from the artificiality imposed upon it by the lexicographer William Owen Pughe (1759–1835) and his followers. He was an indefatigable publisher, writer, and editor. He provided his fellow-countrymen with attractive, affordable reading material, and acquainted them with the history and traditions of Wales. He was also a pioneer in the field of children's literature, and through his books and the influential periodical *Cymru'r Plant* (1892–1920) he changed the content and style of the genre for young Welsh readers. He also had a lasting influence on EDUCATION in Wales. He campaigned successfully for Welsh-medium teaching and for a syllabus that reflected Wales's rich heritage. His motto was '*codi'r hen wlad yn ei hôl*' (to raise the old country to its former glory). This he did by stimulating a far-reaching cultural and national renaissance in the Wales of his period.

Efengyl Nicodemus (The gospel of Nicodemus) is a Middle Welsh translation of the Christian Latin apocryphal text *Evangelium Nicodemi*. It elaborates on the biblical account of the Crucifixion and Christ's descent into hell. The earliest Welsh translation can be found in the White Book of Rhydderch (LLYFR GWYN RHYDDERCH, NLW Peniarth 5).

Efnisien (Middle Welsh Efnyssyen) figures in the wonder-tale *Branwen* in the MABINOGI as the son of Euroswydd by Penarddun, daughter of BELI MAWR son of Mynogan; thus, Efnisien was the maternal half-brother of the protagonists Branwen and her brother Bendigeidfran. For a summary of the story and Efnisien's pivotal destructive part in it, see BRANWEN ferch Lŷr; cf. BRÂN fab Llŷr. Efnisien dies in the final climactic and mutually destructive battle between the Irish and the BRITONS. Regretting the carnage he has caused and his inability to help his own people, he has himself thrown into the *pair dadeni* (cauldron of rebirth; see CAULDRONS), with which the Irish warriors are revivifying their comrades, stretches out to rend the cauldron, and dies, breaking his heart in the feat. Mac Cana saw in Efnisien's rôle as troublemaker an explicit functional analogue with that of BRICRIU in the early Irish tale FLED BRICRENN ('Bricriu's Feast') in the ULSTER CYCLE, and thus possibly an example of direct borrowing from Irish narrative tradition into the Welsh. However, there is a major difference in that Efnisien's outrageous provocations are consistently motivated by his problematical sense of his own honour owing to his maternal link to the royal lineage within a patriarchal society (cf. Ó Cathasaigh). Bricriu, on the other hand, lacks Efnisien's dynastic motivation and appears to be a troublemaker by nature. Consequently, Efnisien's spectacular mutilations and murders have an air of tragic inevitability, which contrasts with the burlesque quality of the strife incited by Bricriu.

The name *Efnisien* is Celtic and is a negatived form of that of his good brother, NISIEN.

Éigse (Learning/Poetry), subtitled 'A Journal of Irish Studies', is one of the main specialist Irish journals dealing with CELTIC STUDIES. It is dedicated to all aspects and periods of IRISH and its literature. Numerous and extensive reviews of books (*Léirbmheas*) in its field are a regular feature. It was established in 1939 and is published for the National University of Ireland in Dublin (BAILE ÁTHA CLIATH). *Éigse* has been edited by the prominent Irish scholars, Gerard MURPHY, Brian Ó Cuív, Tomás Ó Concheanainn, and Pádraig Breatnach. The journal has been published in single annual volume format (no sub-parts) since the mid-1980s. Contributions are written in English or Irish.

Eilean Ì (**Iona**, also called simply Ì in Gaelic) is an island of the Inner Hebrides (Innse Gall) in Scotland, separated from the Island of Mull by the Sound of Iona. The island is only about 12 km² (4.5 m²), but was an important religious and cultural focal point during the Middle Ages, taking advantage of its geographically central position between Ireland (ÉRIU) and Gaelic Scotland. Iona was instrumental, likewise, in the Christianization of the PICTS in the later 6th century and the second conversion of Anglo-Saxon Northumbria in 635. According to the ANNALS, it was in 563 that COLUM CILLE (Columba; †597), the famous Irish saint of Northern Uí NÉILL royal lineage, founded a monastery on the island, which was to become pivotal in the establishment and the spread of the Celtic church (see CHRISTIANITY [2]). The island is also said to have been the location of the martyrdom of Blathmac, the monk who refused to reveal the location of Colum Cille's shrine.

As an unrivalled centre of learning in the early Middle Ages, the monastic scriptorium (manuscipt-production centre) on Iona produced several important documents, among them some of the earliest keeping of regular contemporary records in Britain, probably from the 6th century, leading to the compilation of the Iona Chronicle (*c.* 686–*c.* 740), now recognized as

the basis for the early Irish annals. The intellectual self-confidence of the scholars of 7th-century Iona, especially in matters of the calendar and record keeping, was an important factor in fuelling the EASTER CONTROVERSY, a controversy that Iona ultimately lost. This led to a sharp decline in its influence in Northumbria (after the council of Whitby in 664) and, in the early 8th century, in Pictland, as well as setbacks in the careers of ADOMNÁN and other leaders of the community. Although the case for the place of origin of the most famous illuminated gospel book, the Book of KELLS, remains controversial, evidence favours its being begun at Iona towards the end of the 8th or the opening years of the 9th century.

Iona was an important centre of medieval sculpture, and the island boasts the highest concentration of carved stone monuments anywhere in the Celtic world. Among them are the large, free-standing HIGH CROSSES, which begin to appear from around AD 800. It is likely that the Iona School is to be credited with having first placed a stone circle around the top part of a stone cross, the design feature now generally regarded as defining the 'Celtic cross'.

Unfortunately, Iona's central (and exposed) maritime position made the island an easy target for numerous attacks by Vikings and Irish kings between the late 8th and 10th centuries. A third and particularly devastating Viking raid occurred in 807. At the beginning of the 9th century a new Columban monastery was founded at Kells, Co. Meath (Cenannas, Contae na Mí), Ireland, and Iona was gradually losing its position as the main focus of the 'familia' of foundations of Colum Cille and his successors in favour of this new foundation. This shift is illustrated by the moving of the saint's relics to Kells in 877, which may also have been the time when the Book of Kells arrived on the site from which it is named, although the manuscript had possibly already left Iona in the wake of the raid of 807.

Although the importance of Iona waned in Ireland after the series of Viking raids in the early 9th century, its prestige rose in north Britain with the formation of the Gaelic kingdom of ALBA in the mid- and later 9th century. Since Iona was physically situated alongside or even within the territory of the old kingdom of Scottish DÁL RIATA and their early kings, such as AEDÁN MAC GABRÁIN, were closely associated with Colum Cille and his successors, the kings of Scotland, many of whom were buried at Iona, especially revered the holy site as connected with the origins of their dynasty.

During the mid-20th century, a Christian group, the Iona Community, rebuilt the ancient buildings on the island so that they could once again be used for worship. Although the abbey on Iona was consecrated in 1959 by the Church of Scotland, the project is ecumenical and attracts visitors from all Christian backgrounds.

Einion Offeiriad (Einion the Priest, *fl. c.* 1320–*c.* 1349) was a beneficed clergyman who was also the author of the first recension of the Welsh 'bardic grammar' (see GRAMADEGAU'R PENCEIRDDIAID). Nothing is known of his parentage and education, but he may have been preferred early by the powerful magnate Sir Gruffudd Llwyd to the rectory of Llanrug near Caernarfon, north Wales (CYMRU). Soon, however, he transferred his allegiance to an even more powerful magnate, Sir RHYS AP GRUFFUDD, and it was stated by the antiquary Robert VAUGHAN of HENGWRT in the early 17th century that Einion's grammar was composed 'in honour and for the praise of Rhys ap Gruffudd'; indeed, Einion's only surviving poem is a well-crafted AWDL in praise of Rhys. Rhys's power base lay chiefly in south-west Wales, and Einion was seemingly given land by him in both CEREDIGION and Carmarthenshire (sir Gaerfyrddin); he may have held church livings there as well. He died *c.* 1349, perhaps as a result of the first epidemic of the Black Death.

His grammar, written in WELSH, probably *c.* 1320, draws heavily on both elementary Latin learning (as represented by the Late Roman grammars of Donatus and Priscianus) and the oral instruction imparted by the Welsh master-poets to their apprentices (see BARDIC

ORDER). However, Einion himself probably composed the sections on the twenty-four metres (including three devised by him) and on the duties of the professional poets.

Éire (**Ireland**) lies west of Scotland (ALBA), the Isle of Man (ELLAN VANNIN), Wales (CYMRU) and England, separated from them by the North Channel, the Irish Sea and St George's Channel. It is home to the IRISH language and measures 84,429 km² (32,598 square miles).

§1. POLITICAL DIVISION

Over 80% of Ireland's land mass is taken up by the Republic of Ireland, Poblacht na hÉireann (also Éire for short, which can also mean the whole island), which covers 70,285 km² (27,137 square miles) and is subdivided into four traditional provinces and 26 counties. Its capital is Dublin (BAILE ÁTHA CLIATH), on the east coast. In 2002 there were 3,917,336 inhabitants (Central Statistics Office Ireland, www.cso.ie) in the Irish Republic, of whom over 93% were Roman Catholics. The six counties in the north-east of the traditional nine-county province of Ulster (Ulaidh, earlier ULAID), i.e. the remaining 20% of Ireland (14,147 km², 5462 square miles), were partitioned off through the British Government of Ireland Act in 1920. Known as Northern Ireland, with the capital in Belfast (Béal Feirste), they remain part of the United Kingdom. At the last British census taken in 2001, Northern Ireland had 1,685,267 inhabitants, of whom 40% were Roman Catholics and 60% belonged to various Protestant denominations (Northern Ireland Statistics & Research Agency, *Census 2001 Output* www.nisra.gov.uk/Census). It would be misleading to take these figures as indicating that 100% of Northern Ireland's population in 2001 professed and practised a religion and willingly identified with one of the sectarian communities; respondents to census questionnaires were not permitted to opt out of religious affiliation, and those who left this section of the form blank were controversially assigned to the figures of the Catholic or Protestant community on the basis of such factors as surname and address. Both the current predominance of Protestantism in the north-east of the island, which ultimately led to partition, and the decline of the Irish language are deeply rooted in the history of Éire and its cultural and political contacts with its English neighbour (see below).

§2. THE IRISH LANGUAGE

Ireland's Celtic language, Irish, closely akin to SCOTTISH GAELIC and MANX, is spoken as a native language in western parts of the island known as the GAELTACHT areas. In 1996, 1,430,205 people (about 30% of the population) in the Irish Republic—where it is the official language—claimed to be Irish speakers (Central Statistics Office Ireland, www.cso.ie). In Northern Ireland, 167,490 people, i.e. 10.35% of the population, claimed some knowledge of the Irish language in 2001 (Northern Ireland Statistics & Research Agency, *Census 2001 Output* www.nisra.gov.uk/Census). Following the FAMINE, numbers of Irish speakers fell rapidly—from 1,077,087 in 1861 (the first census to include the language) to 540,802 in 1926, but organizations such as CONRADH NA GAEILGE contributed to its revival (see LANGUAGE [REVIVAL]). It now has its own MASS MEDIA, and FORAS NA GAEILGE, a central language board, furthers its use, but its continued survival as a mother tongue cannot be taken for granted. Ireland and the Irish are secure in their national identity, which is expressed through the existence of Poblacht na hÉireann and through a host of national customs and traditions (see BAGPIPE; BODHRÁN; GAMES; HURLING; IRISH MUSIC) and a lively ANGLO-IRISH LITERATURE. Anglo-Irish authors such as James JOYCE and William Butler YEATS are as prominent in

Contemporary Ireland (Éire) and western Britain, showing the traditional provinces, the border between the Republic and Northern Ireland (black on white), and Gaeltacht (Irish-speaking) areas

the formation of Irish national identity and culture as are Irish Gaelic writers and poets such as Peig Sayers and Máire Mhac an tSaoi. The breadth of available national symbols and the distinctiveness and worldwide recognition of Anglo-Irish literature may explain why the Irish language and Irish literature are not as important to the Irish as, for instance, Welsh and its literature are for Welsh identity.

§3. the central and later middle ages

An outline of Ireland's past down to the Anglo-Norman incursions is given in the article on Ériu. It was over a hundred years before the Norman Conquest of England spilled over into Ireland. With mixed Norman, English, and Welsh forces, Richard de Clare, 'Strongbow', intervened on the side of the deposed king of Leinster (Laighin < Laigin), Diarmait Mac Murchada, in 1169. The English King Henry II landed in October 1171 to reconfirm conquest and nominally to oversee ecclesiastical reforms as authorized in the papal bull *Laudabiliter* (1155). Over the next hundred years, Anglo-Norman families such as the earls of Kildare, of Desmond and of Ormond (representing the Leinster Fitzgeralds, the Munster Fitzgeralds and the Butlers) built up huge estates. Often assimilated to Gaelic cultural norms through intermarriage and other contacts, from time to time anti-Irish legislation, such as the Statutes of Kilkenny,

was passed in order to reconfirm the Anglo-Norman aristocracy's originally distinct status. There is little evidence, however, that such legislation enjoyed much success outside an area around Dublin known as the Pale. In time, those families became known as the 'Old English', but some of them came to identify with the native Irish. The 14th century also saw a reassertion of Gaelic power over parts of Ulster, Connacht and Leinster, which went hand in hand with a flowering in IRISH LITERATURE and law in the 'Classical Modern Irish' period (*c.* 1200–*c.* 1600).

§4. PLANTATION AND OPPRESSION OF THE CATHOLIC POPULATION

In the 15th century, the English Crown introduced a policy of 'Surrender and Regrant' of lands by the king. Many Gaelic lords submitted, hoping to receive a modicum of protection, hardly realizing that they would then hold their lands courtesy of the English Crown. Henry VII's 'Poyning's Law' (1495) provided that future Irish parliaments and legislation had to receive prior approval from the English Privy Council. Having abolished the MONASTERIES and established a Protestant 'Church of Ireland' in 1537, Henry VIII proclaimed himself king of Ireland in 1541 and formally annexed the country to England. However, whereas England was becoming a Protestant nation, the majority of the Irish remained Catholic and refused the imposition of Protestantism, often seeking a last resort in rebellion (see BIBLE; CHRISTIANITY; RENAISSANCE).

The Elizabethan plantation of parts of Ireland laid the foundations for the Protestant ASCENDANCY of

Late medieval and early modern Ireland —places mentioned in the text

the Anglo-Irish landlord class which was to dominate life in Ireland down to the 20th century. English settlers were rewarded with Irish land for loyalty to the Crown in the Desmond Rebellions (1569–73, 1579–83) and Nine Years War (1594–1603), which occurred during the reign of Elizabeth I. Irish land was advertised in gentry circles, and taken up by the younger sons who would otherwise have gone empty-handed. Following the Flight of the Earls (1607), when the last truly great Gaelic lord, Hugh O'Neill (Aodh Ruadh), earl of Tyrone in Ulster, left Ireland for Spain with a small party of followers, it was clear that the dominant force in future Ireland would be English and Protestant. Under King James I, large parts of Ulster were settled by Scottish and English Protestants. When Oliver Cromwell crushed the 1649–50 rebellion during the English Civil Wars, with the loss of hundreds of thousands of lives, the subsequent distribution of lands among his soldiers and officers rounded off the process of redistribution of Irish lands among English and Scottish settlers. When the deposed James II (see JACOBITE REBELLIONS) was defeated at the battle of the Boyne (Bóinn; cf. BÓAND) in 1690, it only confirmed a process that had been underway for a century. By 1704, the harsh Penal Laws passed against Catholics by the Irish parliament had consolidated and expanded Protestant ownership of land and deprived the Catholic population of any political power they might have had left. Catholics were excluded from parliament by the introduction of unacceptable oaths and declarations; they were forbidden to own arms or a horse worth more than £5; they were not allowed to run schools, to vote, to serve in the army, or to engage in commerce or practise law. Less than 10% of Irish land was now owned by Catholics. Classical Gaelic learning and literature, robbed of its patronage and social base, disappeared with the Irish-owned lands. For the next 200 years, the Irish language and an oral literature would be kept alive by the lower orders in the western half of the island.

§5. UNION, FAMINE, AND NATIONAL REAWAKENING

Thus, the 18th century witnessed the Ascendancy at the height of its power. Trinity College Dublin, founded in 1593 for the education of Protestants, produced such figures as Jonathan Swift, Thomas MOORE, and Theobald Wolfe TONE. Dublin, the capital, was expanded to a grand plan, and the many Georgian mansions which are the pride of the Irish tourist industry were built. The Catholic population and members of radical Protestant denominations who were similarly oppressed formed secret societies such as the United Irishmen. Although the great 1798 rebellion led by Wolfe Tone was crushed, it resulted in the abolition of the Irish parliament and the full incorporation of Ireland into the English state by the ACT OF UNION passed in 1800. The new political unit was named the United Kingdom of Great Britain and Ireland, a term which survives in the current name of the United Kingdom of Great Britain and Northern Ireland. Members of Parliament now went to take their seats in London, which deprived the country of a permanent Protestant leadership for half of the year. Based in London, the upper classes began to feel more British than Irish; they became absentee landlords, and Protestantism became almost identical with Unionism. On the other hand, following the election of the Catholic Daniel O'Connell to a parliamentary seat and the emancipation of the Catholic population in 1829, an era began which would end with independence for most of the island. The Young Ireland movement of the 1840s, led by Thomas Davis through the pages of his paper, *The Nation*, and its unsuccessful rising of 1848, was a first expression of the movement for the repeal of the Union with Britain, which would grow into the independence movement.

Unification with Britain also brought new economic problems, as the value of agricultural produce and real estate plummeted. Too many people relied solely on the potato as their staple crop and diet, with the result that the onset of potato blight led to famine and EMIGRATION on an unprecedented scale. Between 1846 and 1851 almost half the population either starved to death or emigrated—a catastrophe which left the country paralysed for 20 years afterwards and which, to this day, has left deep scars in the Irish national psyche.

The 1860s saw a revival of national aspirations with the rise of Fenianism both in Ireland itself and among the Irish diaspora in Britain and the New World. The secret Fenian organization, the Fianna, aimed to secure political independence by injuring English interests, and staged another unsuccessful uprising in 1867. However, with the disestablishment of the Church in Ireland in 1869 and the 1870 Irish Land Act, the first concessions were made to Irish interests (see DAVITT;

LAND AGITATION; LAND LEAGUE). The national movement acquired a more constitutional character, with Charles Stewart PARNELL achieving substantial power through the Irish parliamentary party at Westminster, forcing the introduction of Home Rule bills and the passing of further Land Acts in the British parliament between 1880 and 1893. With Parnell's death, cultural nationalism developed alongside enthusiasm for preserving and reviving the Irish language, finding expression in the foundation of Conradh na Gaeilge and other organizations. These developments vastly increased support for the IRISH INDEPENDENCE MOVEMENT, led by men such as Michael COLLINS, Èamonn DE VALERA, and Art Ó GRÍOFA, with independence finally achieved in 1921.

§6. THE 20TH CENTURY: POBLACHT NA H-ÉIREANN

During the Irish War of Independence (1919–21) British forces were fought to a standstill by the guerrilla troops of the IRISH REPUBLICAN ARMY (IRA). The aftermath of this was the partitioning of Northern Ireland and the establishment elsewhere on the island of an independent state. The first name of the Irish state, adopted in 1922 after negotiations with the British Government granted independence to Ireland, was Saorstát na hÉireann or the Irish Free State. However, members of the government still had to swear an oath of allegiance to the British Crown, and the new state, as a dominion, remained part of the British Empire. These were two of the factors which contributed to a split in the IRA, and the subsequent short, but bloody, Civil War (1922–3) between the two factions. An uneasy peace was achieved in the fledgling state following the victory of those who supported the Anglo-Irish Treaty. A new constitution adopted in 1937 changed the name of the country to Éire (the ancient Celtic name of the island; see ÉRIU) and asserted its autonomy from the United Kingdom. On 18 April 1949, the country officially became a republic, changing its official name to Poblacht na hÉireann, Republic of Ireland, keeping Éire for short reference.

Poblacht na hÉireann is a parliamentary republic governed by the Oireachtas, a parliament consisting of the directly elected Dáil Éireann (166 members) and the Seanad (60 members), which is nominated by grand electors. The head of government is the Taoiseach or Prime Minister, and the head of state is the President (Uachtarán), elected directly every 7 years. Poblacht na hÉireann is a member of the United Nations and the European Union. The first official language of the Republic is Irish (Gaeilge), with English named as a second official language.

Following the Second World War, with emigration again rising, the protectionist high tariff policy pursued by Éire was abandoned and successive programmes of economic expansion put into place. The result has been a mixed-market economy—largely based on AGRICULTURE, chemical industries, high technology and services—which boomed since the 1990s. In particular, the development of the high technology sector, with Éire currently one of the world's leading exporters of computer software, has led to it being labelled the 'Celtic Tiger'. Like most other members of the European Union, the country introduced the Euro as its currency in 1999, replacing the punt (Irish pound).

§7. THE 20TH CENTURY: NORTHERN IRELAND

The forced plantations of English and Scottish Protestant settlers laid the foundation for the division of Ireland in the early 20th century and the current distribution of the religious denominations in Northern Ireland. The political loyalties within Northern Ireland have historically followed religious lines. The mostly Protestant 'Unionists' campaign for maintaining the union with the United Kingdom and, comprising about 60% of the population, are still in the majority. The 'nationalists' are mostly Catholics, with the political label signifying a preference for the six counties of Northern Ireland to be reunited with the rest of Ireland (see NATIONALISM). The terms 'loyalist' and 'republican', in a Northern Irish context, designate political and paramilitary groups which can be broadly viewed as more extreme unionists and more extreme nationalists, respectively, again tending to follow the Protestant–Catholic divide.

Following the Act of Union, Protestants came to feel more and more part of the United Kingdom, which led to attempts to block home rule legislation from the 1870s onwards. An organization in defence of the Protestant Ascendancy, the Orange Order, founded in 1795, was already in existence. It survives in Northern Ireland to this day, and its annual processions are often the starting point for sectarian violence. When Home Rule for the whole of Ireland was mooted in 1912,

Protestant Unionists led by Sir Edward Carson reacted by forming the 'Solemn League and Covenant to resist Home Rule' and establishing the Ulster Volunteer Force (UVF), an armed secret organization whose descendants still exist. Aware of the support Home Rule enjoyed in most of the island following the abortive Easter Rising (1916), Unionists began to restrict their demands to keeping Ulster within the United Kingdom, thus precipitating the partition of the island. In 1920 the Northern Irish political unit within the UK was created, which, especially under its first Prime Minister, Sir James Craig (1921–40), pursued a policy of strict Protestant leanings. It discriminated against the Catholic minority who lived within its borders and failed to restrain violence against them. In the 1960s a Catholic civil rights movement—emulating the African-American Civil Rights movement—arose, and sectarian violence began to increase. Violence against Catholics by the revived Ulster Defence Association (UDA) and the UVF led to a vast influx of recruits to the IRA, which had been in decline for some decades. British troops began to occupy the region in early 1969, ostensibly to 'keep the peace', but their very presence played a central rôle in fanning the violence between Protestants and Catholics which developed in the following decades. In March 1972, the Northern Irish parliament was suspended, following the escalation of communal violence between Catholics and Protestants, and direct British rule introduced. Following several failed initiatives in the 1970s and 1980s, a ceasefire was agreed between the IRA and the Unionist paramilitary groups in 1994, and discussions involving the Irish Republic were resumed in 1996. On 10 April 1998, the Belfast Agreement, or Good Friday Agreement, established a new 108-member Northern Ireland Assembly in Belfast, which was obliged to include both Protestants and Catholics in its executive and pass legislation only if factions of both agreed. Since the Good Friday Agreement, troops have been withdrawn and a new police force—Police Service of Northern Ireland—has been created. Between 1972 and 2000, over 3600 people were killed by sectarian violence and/or British troops in Northern Ireland.

The rapid industrialization of the region around Belfast in the 19th century, with textile industries, heavy engineering and shipping dominant, attracted a population that could not be sustained when those industries began to decline in the 20th century. Foreign companies have been slow to invest because of the political violence. Hence, the region is economically unstable, with the service sector its most important employer.

An **eisteddfod**, derived from the Welsh verb *eistedd* 'to sit', was from the beginning literally a 'sitting together', a session (probably competitive from its inception) of bards and minstrels intent on demonstrating their artistic skills in the presence of a noble patron.

The first recorded eisteddfod as recounted in BRUT Y TYWYSOGYON took place in the castle in Cardigan (ABERTEIFI) at Christmastide 1176, when Lord RHYS AP GRUFFUDD of DEHEUBARTH presided as bards and minstrels competed for the two prime Chair awards. This eisteddfod, it is said, was proclaimed a year in advance 'throughout Wales (CYMRU), England, Scotland (ALBA), Ireland (ÉRIU) and the other islands', giving reason to believe that it was on a scale hitherto unknown. Seen in the light of J. E. Caerwyn WILLIAMS's argument that Lord Rhys could have been impressed by the competitive 'puys' in France, the 1176 eisteddfod assumes even greater significance as a cultural

institution compounded of traditional practice and foreign influence.

Between 1176 and the middle of the 16th century huge and inexplicable gaps in the eisteddfod timeline leave us with no more than three eisteddfodau of whose authenticity we can be sure. Gruffudd ap Nicolas (*fl.* 1425–56), a worthy successor to Lord Rhys, presided over an eisteddfod held in Carmarthen (CAERFYRDDIN) *c.* 1451, and the Mostyn family in Flintshire (sir y Fflint) acted as patrons for two eisteddfodau held in Caerwys in 1523 and 1567, both of which received royal assent. All three would come to be seen by future embattled *eisteddfodwyr* as representing a golden age, but in fact they marked the inevitable demise of an age-old BARDIC ORDER. Their main purpose was to secure the status of the professional bards and minstrels who had been tutored and licensed to practise their art against the trespass of 'rogues and vagabonds', but the forces of social change were to prove irresistible. The bardic tradition petered out in the late 17th century.

In the 18th century a fistful of devotees kept alive, mainly in north Wales, a wan, tavern-housed eisteddfod culture. But 1789 would change everything. Prompted by Thomas Jones, a Corwen-born exciseman, the London-based Gwyneddigion Society responded to a call for a renewed patronage and in September of that year a Gwyneddigion-directed eisteddfod at Bala (see EISTEDDFODAU'R GWYNEDDIGION) provided a blueprint for the modern institution which, facilitated by the coming of the railways, would thereafter be at the heart of Welsh culture at local and national level.

With the end of the Napoleonic wars the eisteddfod movement made rapid progress. A band of patriotic clerics succeeded in establishing provincial societies, which between 1819 and 1834 held ten ambitious 'eisteddfodau' that attracted the support of 'the best people'. They were followed by ten spectacular eisteddfodau promoted by the Abergavenny (Y Fenni) Cymreigyddion Society between 1835 and 1853 (see EISTEDDFODAU'R FENNI), which attracted the interest of Continental Celtic scholars and by 1858, when the Revd John Williams (Ab Ithel, 1811–62) organized what was to be a fractious but epochal eisteddfod at Llangollen, the country was ripe for a properly constituted National Eisteddfod (see EISTEDDFOD GENEDLAETHOL CYMRU).

Hywel Teifi Edwards

Eisteddfod Genedlaethol Cymru (National Eisteddfod of Wales)

made its first appearance in 1861 in Aberdare (Aberdâr). A general meeting of *eisteddfodwyr* at the stormy Llangollen EISTEDDFOD of 1858 decided that the time was ripe for a fully-fledged annual national festival. In 1860, at the Denbigh/Dinbych eisteddfod, an association known as 'Yr Eisteddfod' was formed and an executive council was subsequently elected to promote a series of 'Nationals' at Aberdare (1861), Caernarfon (1862), Swansea/ ABERTAWE (1863), Llandudno (1864), ABERYSTWYTH (1865), Chester (1866), Carmarthen/ CAERFYRDDIN (1867) and Rhuthun (1868). Overcome with debts, 'Yr Eisteddfod' folded in 1868, but in 1880 Sir Hugh Owen inspired the creation of the National Eisteddfod Association, and the current ongoing series of 'Nationals' got underway at Merthyr Tudful in 1881. With the exception of 1914, for obvious reasons, it proved to be an unbroken series, a 'Radio eisteddfod' triumphing over hostilities in 1940.

In 1937 a more amicable relationship between the Eisteddfod Association and the GORSEDD BEIRDD YNYS PRYDAIN (Gorsedd of Bards) resulted in a new constitution and the creation of the National Eisteddfod Council, which, in turn, gave way in 1952 to the Court of the National Eisteddfod as the ultimate authority over eisteddfod proceedings. The Council functions as its executive and, through its subcommittees, secures a sound working relationship with representatives of the locality hosting the 'National'. The appointment of two full-time organizers in 1959 to serve north and south Wales, followed in 1978 by a full-time director based in Cardiff (CAERDYDD), revo-

Eisteddfod Genedlaethol Cymru (National Eisteddfod of Wales) 1913

lutionized eisteddfod administration and facilitated the organizing of a festival which currently attracts around 150,000 people at a cost of some two million pounds, defrayed, in the main, by central and local government grants, public subscription and local fundraising.

A peripatetic institution since its inception, now alternating only between north and south Wales, the location of the 'National' has long been a place of pilgrimage for Welsh people addicted to its mix of culture and *hwyl* (fun). Arguments in the wake of many a sodden festival for mooring it permanently to a professionally prepared site have not prevailed against the many who are convinced that, deprived of the attractions of differing geographical and cultural contexts, the 'National' would be much impoverished. Added to which is the obvious fact that its missionary rôle as a prime exhibitor of Welsh culture would be seriously curtailed. Notwithstanding the excellent television and radio coverage of its proceedings (see MASS MEDIA; S4C), nothing can compare with the actual presence of the 'National' in one's neighbourhood.

Today, it is generally accepted that the National Eisteddfod, held regularly during the first full week in August since 1918, exists to celebrate and foster WELSH-language culture. It was not always so. Rapidly Anglicized in the 1860s by would-be progressives who could see no utilitarian value in the mother tongue, the 'National' marginalized the Welsh language for the better part of a century. It took the revised constitution of 1937 to turn the tide by making Welsh the official language of its proceedings, and since 1950 when the 'All-Welsh rule', or the 'Welsh principle' as Cynan (Albert Evans-Jones, 1895–1970) described it, came into force, the 'National' has been true to its commission. It exists to convince a people, too many of whom are still bedevilled by a sense of cultural inferiority, that their language is indeed rich enough to meet the demands of modern life, and to provide a many-faceted opportunity for its enjoyment. And it challenges people to put to work throughout Wales (CYMRU) the creative vigour inherent in the Welsh language.

The National Eisteddfod has proved to be a launching pad for many successful careers. Its coming in 1861 coincided with the flowering of 'The Land of

Song', and singers of international repute, from Edith Wynne in the Victorian heyday to Bryn Terfel in our times, have been indebted to it. Chaired and crowned poets over the years have left their mark on Welsh literature (see WELSH POETRY), and winners of the Prose Medal and the Daniel OWEN Memorial Prize for novelists are likewise influential (see WELSH PROSE LITERATURE). By now, major awards are given for excellence in all the arts, there has been a concerted effort to encourage a greater interest in the sciences, scholarships are awarded to successful young contestants who wish to pursue careers in music and drama, and much more besides (see WELSH MUSIC; WELSH DRAMA). Down to the 1950s a 'National Winner' was a figure to be reckoned with in Wales. By today, he or she may not trail such a visible cloud of glory, but it still pays to win at the 'National'. It still matters to many people.

Critics of a stern countenance have frequently railed against the shortcomings of eisteddfod culture. Competition is said to be inimical to art; the vagaries of adjudication make a mockery of standards; tribal triumphs feed mere self-satisfaction. There have even been calls to translate the 'National' into an academy

Welsh-language poet and rock musician Twm Morys winning the Chair at the 2003 National Eisteddfod in Meifod, Powys

for the few who take their culture seriously. Nevertheless, it has kept to its brief as a popular festival whose competitions over the years have stimulated many fine performers and memorable performances in a context that encourages displays of egalitarian enthusiasm. It excites debate about literature, music, drama, and art; it allows the young, particularly since the coming of 'Maes B' (The B field), to revel in their pop culture and ward off eisteddfod sclerosis with a regular fix of irreverence. Its history is an unfailing source of legendry and exploits that grow ever more fabulous in recollection. Deprived of the 'National', Welsh culture would lose the major traditional signifier of its distinctiveness. It is irreplaceable.

In the past it has also served Wales well as a forum for debating national concerns, as an arena for protest and dissent, and as a platform for demonstrating a will to prosper. Supported as it now is by the National Assembly (see CYNULLIAD CENEDLAETHOL CYMRU), its continued success will still depend to a great extent on its readiness to agitate for the enlargement of a Welsh-speaking Wales. For far too long after 1861 it betrayed its purpose in pursuit of the patronizing commendation of 'onlooking nationalities', but it survived its self-betrayal to help reinvigorate the language which has been the tap-root of the Welsh experience for most of two millennia. As long as it continues to do so spiritedly it will not lack support.

Eisteddfod Gerddorol Ryngwladol Llangollen (International Musical Eisteddfod)

Born out of the devastating years of the Second World War, the Llangollen International Musical Eisteddfod was the inspiration of Harold Tudur (1908–88) and W. S. Gwynn Williams (1896–1978) who, with a dedicated team of volunteers, arranged the first festival in 1947.

A celebration of international song and dance, the festival was seen as a modest means of bringing back together international communities torn apart by six years of war. The whole ethos is based on friendly competition between folk-dance and choral groups, both youth and adult. Only very minimal token prize money is offered, for the winning of an EISTEDDFOD trophy is reckoned to represent the true value of success.

The festival is organized by a large team of volunteers, apart from five full or part-time staff, and is now traditionally held during early July. Competitors are traditionally housed with local residents for the whole week, with many giving special performances for the residents of the neighbouring communities in which they stay. Nowhere else in the world can be found such a divergence of global cultures as in Llangollen during the eisteddfod.

The dedication of these competitors is also worthy of mention, with groups travelling for many days by coach in order to compete in one of the competitions. The popularity of the festival remains undiminished after over half a century, with an astounding 114 different countries being represented since 1966.

An impressive number of international celebrities have also performed at the Llangollen International Musical Eisteddfod. Some, such as Pavarotti, competed at the festival with their hometown groups, many years before giving a solo concert, while other soloists include Placido Domingo, Bryn Terfel, Yehudi Menuhin and Julian Lloyd Webber.

Eisteddfodau'r Fenni (Abergavenny eisteddfodau)

were a series of eisteddfodau organized between 1834 and 1854 by Cymdeithas Cymreigyddion y Fenni (the Abergavenny Cymreigyddion Society) under the patronage and leadership of Lady Augusta HALL and Thomas PRICE.

Through their essay competitions, Eisteddfodau'r

Fenni fostered the study of the WELSH language, literature, and customs. They inspired the young Augusta Hall, for instance, to compose her famous essay on 'The Advantages Resulting from the Preservation of the Welsh Language and National Costumes of Wales' (see MATERIAL CULTURE) and also Thomas Stephens to produce important volumes such as *The Literature of the Kymry* (1849). As Thorne has shown (NLWJ 27.97–107), these eisteddfodau also assisted in the development of comparative linguistics in Wales (CYMRU). They are also relevant to PAN-CELTICISM, since it was at Abergavenny that representatives of two CELTIC COUNTRIES first assembled to celebrate their common ancestry and to make it a base for co-operation (see also LA VILLEMARQUÉ). Most importantly, Eisteddfodau'r Fenni developed the foundations on which EISTEDDFOD GENEDLAETHOL CYMRU would be created from the 1850s onwards.

Eisteddfodau'r Gwyneddigion

The Gwyneddigion was a literary society, with some philanthropic functions, which was founded in 1770 by a group of London Welshmen—Owen Jones (Owain Myfyr), Robert Jones (Robin Ddu yr Ail o Fôn), and John Edwards (Siôn Ceiriog). The name refers to the north Walian region and medieval principality of GWYNEDD. The society became the focus of the cultural life of the Welsh literati in London (Welsh Llundain), especially during the closing years of the 19th century. They appealed to a more plebeian audience than the rather more rarefied Honourable Society of CYMMRODORION. The most prominent members, including Owen Jones (1741–1814) and William Owen Pughe (1759–1835), did much to preserve and publish early Welsh texts in works such as *Barddoniaeth Dafydd ab Gwilym* (The poetry of DAFYDD AP GWILYM, 1789) and *The Myvyrian Archaiology of Wales* (1801–7). The Gwyneddigion came to be regarded as arbiters in matters of Welsh literature and learning, not only in London, but also in Wales (CYMRU) itself.

The institution of the EISTEDDFOD (bardic competition) had declined since the days of the professional bardic system of the Middle Ages (see BARDIC ORDER), but minor eisteddfodau were still being held in the 18th century. In 1789 Thomas Jones, an exciseman from Corwen, Merioneth (sir Feirionnydd), contacted the Gwyneddigion to seek their patronage for a local eisteddfod to be held at Corwen in May 1789. The society was supportive, but laid down stringent conditions in an attempt to regularize the amateur and rather chaotic local eisteddfodau and give them greater dignity and order. The Gwyneddigion decided to play no active rôle in the Corwen eisteddfod, but agreed to support an eisteddfod to be held in Bala (Meirionnydd, now Gwynedd) in September 1789. Thomas Jones, however, deliberately exaggerated the society's intentions, in an attempt to give the Corwen eisteddfod enhanced status, publicizing it as being under the aegis of the Gwyneddigion. The chair (as a token of the best poetry in the strict metres) was awarded at Corwen to Walter Davies (Gwallter Mechain, 1761–1849), with the Gwyneddigion as adjudicators (judges).

Rumours soon circulated that there had been some rather suspicious dealings in the chair competition and that, although the poems were supposed to have been composed *ex tempore*, Gwallter Mechain had been given the subjects beforehand. Letters preserved in the National Library of Wales (LLYFRGELL GENEDLAETHOL CYMRU) prove that there was indeed collusion between the adjudicators and Gwallter Mechain.

The Gwyneddigion openly patronized the Bala eisteddfod. Gwallter Mechain once more succeeded in currying favour with the society and won the main prize. The Bala eisteddfod did have one important development in that it produced what was probably the first official published adjudication. A judgement with explanatory literary criticism is now an essential feature of the National Eisteddfod of Wales (EISTEDDFOD GENEDLAETHOL CYMRU). The Gwyneddigion also urged the poets to break away from the confines of the more restrictive strict metres in order to promote the concept of a classical Christian epic poem as advocated by Goronwy Owen (see WELSH POETRY).

Eisteddfodau'r Gwyneddigion had a relatively short life, and they lost their impetus when Thomas Jones

left Wales in 1795. The eisteddfod increasingly became a source of entertainment rather than the sober breeding ground for poets which the Gwyneddigion had envisaged.

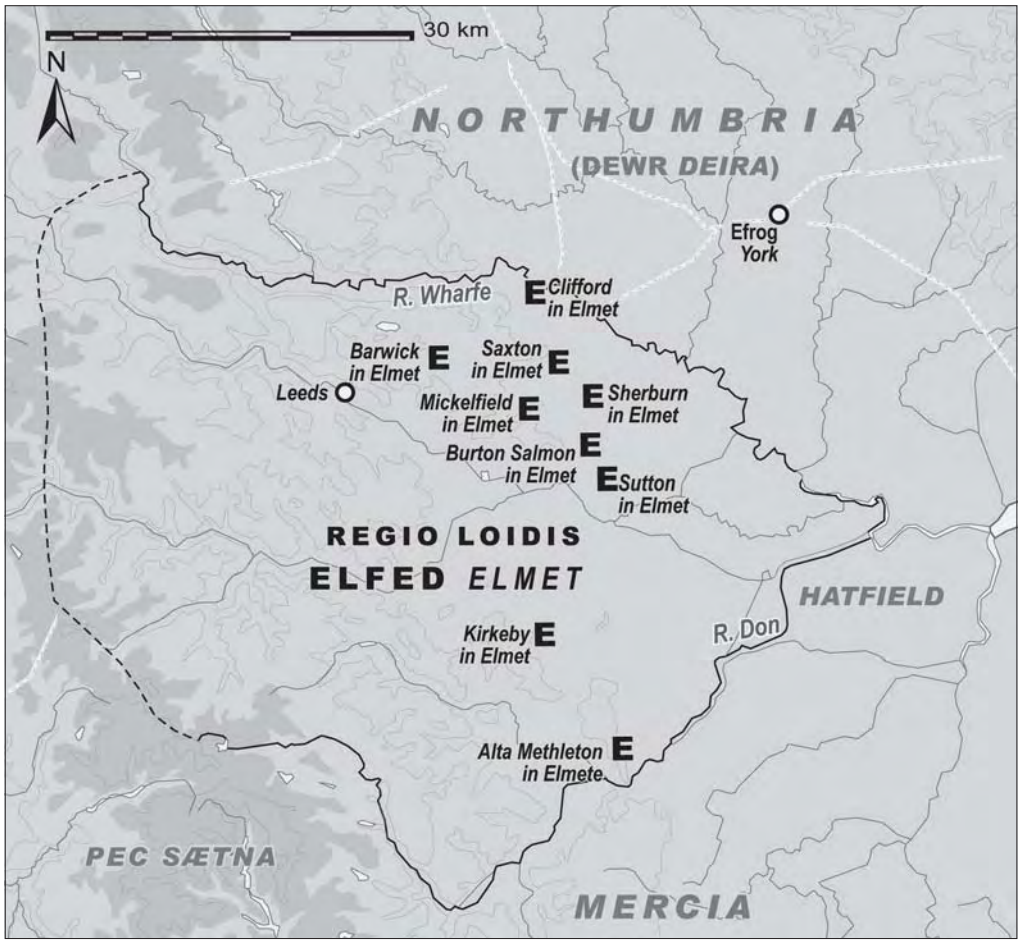
Glenda Carr

Elfed/Elmet is the name of an early medieval BRYTHONIC kingdom in what is now south-west Yorkshire, north-central England. It is particularly noteworthy as a Celtic kingdom situated well to the east of the latter-day frontiers of Wales (CYMRU) and Cornwall (KERNOW) and south of that of Scotland (ALBA), and yet it survived late enough to be well documented in the period when its Anglo-Saxon neighbours were becoming literate Christians. That Elfed is known only through the fortuitous survival of disparate bits of evidence alerts us to the likelihood that other Brythonic kingdoms, for which we have no extant historical records, survived into the 7th century in what are now core areas of England. We have three primary sources of evidence for Elfed: (1) place-names, (2) references in early WELSH POETRY, and (3) historical notices relevant to the kingdom's annexation by Northumbria, which are discussed in this Encyclopedia's entries on Elfed's last ruler CERTIC and the expansionist EADWINE of Northumbria (†633).

§1. PLACE-NAME EVIDENCE

Elfed is the modern Welsh form; the older form *Elmet* is preserved in several English place-names between the rivers Wharfe and Don in south Yorkshire, including



Elfed (Elmet) and neighbouring regions: 'in Elmet' place-names marked with bold E, approximate limits of the kingdom before 7th-century annexation by Northumbria in black (less certain western boundary dashed), Roman roads white with thin dashed line

Barwick in Elmet, Burton Salmon in Elmet, Clifford in Elmet, Mickelfield in Elmet, Sherburn in Elmet, and Sutton in Elmet. A grant of 1361 speaks of 'Kirkeby in Elmet', referring to present-day South Kirkby, south of Leeds, and a record of 1281 mentions an *Alta Methleton in Elmete*, probably modern High Melton, west of Doncaster. The Anglo-Saxon tribute list known as the Tribal Hidage places the *Elmed sætna* (Elmet dwellers) between the *Pec sætna* (dwellers in the Peak [District]) and the inhabitants of Lindsey and Hatfield, thus indicating an extensive landlocked territory astride the strategic frontier of the great kingdoms of Mercia and Northumbria. According to Beda, a district called *regio Loidis* (which gives its name to modern Leeds) included *silva Elmete* (the wood of Elmet; *Historia Ecclesiastica* 2.14), and many scholars have concluded that Loidis and Elmet were two names for more or less the same place. Both names are probably Celtic. There is also an Elfed in south Wales. More probably referring to the Pennine kingdom is a 5th- or 6th-century inscribed stone from the church of Llanaelhaearn in Gwynedd: ALIORTVS ELMETIACO HIC IACET 'here lies Aliortus of Elfed'.

§2. ALLUSIONS TO ELFED IN POETRY

Of the praise poems in the AWDL metre in the Book of Taliesin (Llyfr Taliesin), two are addressed to a Dark Age north British ruler named Gwallawg. He is described in one as *a·eninat yn ygnat ac Eluet*, probably to be translated 'who has been anointed magistrate of Elfed', suggesting the legitimacy of a church ceremony. A Madawg Elfed occurs among the heroes of the Gododdin. The epithet could simply mean 'Madawg from Elfed' but, as with the style of Owain Gwynedd or Urien Rheged, it could naturally be understood as 'Madawg, ruler of Elfed'. Given the proximity of the Gododdin's enemies in Deira (Dewr) and the battle site of Catraeth to Elfed, it would hardly be surprising had the leadership of the kingdom been involved, or even at stake, in that conflict. In Moliant Cadwallon, 'the land of Elfed' is again mentioned, this time as a place of imminent conflagration, along with recollections of Gwallawg and 'the great mortality of Catraeth'. This poet saw connections between 6th-century events in the Pennines and Cadwallon of Gwynedd's invasion of Northumbria in 633–5. Presumably, he wanted his audience to remember that the Britons had great champions and legitimate rulers in the region not long before. The claim was not soon forgotten by Welsh poets: also in *Llyfr Taliesin* is a 10th-century prophecy concerned with the messianic return of Cadwaladr, Cadwallon's son, whose anticipated deeds include operations beyond the Solway Firth (Merin Rheged) and ruling Elfed (proved by rhyme).

Elfoddw, St (Old Welsh Elbodug; †809) is called *archiepiscopus Guenedotae* (archbishop of Gwynedd) in his death notice in Annales Cambriae. At 768 in *Annales Cambriae*, it is stated that he changed the Britons' reckoning of Easter, and this is usually taken as signifying the last insular churches coming into conformity with Roman practice at that time (see EASTER CONTROVERSY; CHRISTIANITY). Those texts of Historia Brittonum which are attributed to Nennius call him *sancti Elbodugi discipulus* (disciple of St Elfoddw). Taken together, this evidence suggests that, because Elfoddw was responsible for a major reform of the calendar in the Welsh church, he was also a key figure for the keeping of historical records in Wales (Cymru) in the early Middle Ages. It is possible that the 8th-century bishops Elvogus of Llandaf and Eluoed of St David's (Tyddewi) are the same person.

Old Welsh *Elbodug* is a Celtic compound name deriving from Proto-Celtic **elu-* 'many' and **bodwo-* 'crow', which was also a divine name; cf. Old Irish Bodb.

Elidir Sais was one of the Poets of the Princes (Welsh *Beirdd y Tywysogion*; see GOGYNFEIRDD). He was active by 1195 and was still alive *c.* 1246. He was a native of Anglesey (MÔN), and it is possible that his father was the court poet GWALCHMAI AP MEILYR, since Gwalchmai had a son named Elidir. The reason for the epithet *Sais* 'Englishman' is not known, but speculation has focused around either exile in England or ability in English, and possibly both. Most of Elidir's extant poems are religious in theme. Two are short prayers for salvation; another contrasts God's bounty with human sinfulness, asserts the value of composing poetry to God, and concludes with another plea for heaven. In a predominantly homiletic poem, confession is mixed with warnings of Judgement and the need to be reconciled with God before death, for every sin will be measured. Another poem urges penance, recounts the events of Holy Week, and ends with a prayer. Yet another describes the fall of Jerusalem to Saladin in 1187 as an 'oppression' caused by God, and associates it with the exile of Dafydd ab Owain, once ruler of GWYNEDD, from Wales (CYMRU). Faith in God is reasserted at the end, implying that both wrongs will be amended. Elidir's elegy for Dafydd's brother Rhodri is also strongly religious in content, and there are two other elegies to prominent Gwynedd noblemen, and a *dadolwch*, or poem pleading for reconciliation, to LLYWELYN AB IORWERTH. Here, Elidir contrasts his unnatural separation from favour with gnomic references to the undisturbed rhythms of nature and society, and Llywelyn is warned to do his duty by fighting the English rather than invading neighbouring territories. A series of laudatory *englynion* (see ENGLYN) is attached to the end of the poem.

Barry J. Lewis

Elis, Islwyn Ffowc (1924–2004) was a major 20th-century writer of prose fiction in the WELSH language. He was born at Wrecsam, Denbighshire (sir Ddinbych) and raised in the vale of Ceiriog in north-east Wales (CYMRU). He first came to prominence as the winner of the Prose Medal at the 1951 National Eisteddfod at Llanrwst (see EISTEDDFOD GENEDLAETHOL CYMRU) with *Cyn Oeri'r Gwaed* (Before the blood cools), a volume of romantic and lively essays, but he is best known as a pioneering Welsh novelist.

When *Cysgod y Cryman* (Shadow of the sickle) was published in 1953, the public were enchanted by the professionalism and novelty of a young author who, for the first time in Welsh, dealt with the social issues of the day. He depicted the inevitable conflict between old and new in the aftermath of the Second World War, thrilling many generations with his narrative skills and panoramic canvas.

In 1955 he ventured to experiment further with the publication of *Ffenestri tua'r Gwyll* (Windows towards the dusk), a dark, modern psychological novel which disturbed rather than entertained its readers; it was a novel before its time, and was not fully appreciated by the reading public. This seems to have prompted the author to return to Lleifior, the flourishing farm of his first novel, and *Yn ôl i Leifior* (Return to Lleifior) was published the following year, satisfying the general public's need for an emotional family tale in a real society. From then on, Elis dedicated himself to producing a more accessible literature, at times experimental in form, missionary and politically challenging, but rather more reluctant to plunge to the psychological depths of his characters.

The main aim of his prophetic novel, *Wythnos yng Nghymru Fydd* (A week in the new Wales, 1957), which urged his readers to campaign for a successful Wales in which the Welsh language will flourish, is to convey a political message. This volume was also an important milestone in the development of political and prophetic prose in Welsh (see PROPHECY). The following year saw the publication of *Blas y Cynfyd* (A taste of prehistory), a light novel in which family and nationalist elements were interwoven. Once again, the message was simple but the plot complicated, reflecting the careful plotting of the serial radio drama on which it was based (see MASS MEDIA).

Islwyn Ffowc Elis broke new ground once again in *Tabyrddau'r Babongo* (The drums of the Babongo, 1961), a farcical satire based in Africa. The ingenuity, humour

and novelty of this thought-provoking novel won him an Arts Council of Wales award in 1962. It was he who also wrote the first Welsh science-fiction thriller, *Y Blaned Dirion* (The gentle planet, 1968). In 1970 and 1971 he published two short novels, *Y Gromlech yn yr Haidd* (Stones in the barley) and *Eira Mawr* (White-out), in a further attempt to reach a wider audience. Over the years he also published numerous essays and discerning articles of literary criticism.

Islwyn Ffowc Elis was acknowledged as a versatile author who took the Welsh novel to new and exciting directions. It is sometimes claimed that some tensions existed between the serious writer in him on the one hand and the entertainer and missionary on the other, and that his desire to widen the circle of readers in Welsh suppressed his literary skills at times. However, his varied collection of short stories, *Marwydos* (Embers, 1974), is a psychologically complex, discerning composition, which shows that he had the ability to combine all these elements in an ingenious way.

Eliseg's Pillar is a broken stone pillar, originally about 3.6 m (12 ft) high, located in Llandysilio-yn-Iâl near Llangollen, Denbighshire (sir Ddinbych). It has a lengthy Latin inscription, with Old WELSH names, dating to the earlier 9th century, which gives the genealogy of the kings of POWYS (Old Welsh POUOIS) and a unique version of their origin legend. The inscription was commissioned by king Cyngen (Old Welsh CONCENN) and commemorates his great-grandfather Elise (ELISEG), who is said to have taken the land from the English (ANGLI) by the sword. The genealogical sequence CONCENN FILIUS CATTELL . . . FILIUS BROHCMAIL . . . FILIUS ELISEG . . . FILIUS GUOILLAUC at the top of the inscription parallels exactly *Cincen map Catel map Brocmayl map Elitet map Guilauc* in the Old Welsh Powys GENEALOGIES in BL MS Harley 3859. Further down in the inscription, passers-by are invited to pray for Eliseg's soul, not an uncommon device in an early medieval commemorative inscription. It goes on to state that St Germanus blessed BRITU the son of GUARTHI[GIRN] (i.e. Vortigern/GWRTHEYRN) and SE[V]IRA the daughter of MAXIMUS (i.e. MACSEN WLEDIG); this seems to be the account of the foundation of the line. We have a similar, but different, story of Germanus, Guorthigirn, and his son in HISTORIA BRITTONUM, as well as an account of the descent of the kings of Powys from a virtuous commoner named Cadell (see CADELLING). Evidently, more than one doctrine was current in the 9th century. The pillar's origin legend is particularly ambitious in claiming descent from two rulers regarded as having held authority over the whole of BRITAIN before the *adventus Saxonum* (arrival of the Anglo-Saxons), and was evidently intended to justify the legitimacy of Eliseg's taking the area by force from the English. The stonecutter identifies himself as CONMARCH, thus bearing the same name as the eponym of the CYNFERCHING. The pillar is now in many parts illegible; readings rely on a transcription made by Edward LHUYD in 1696.

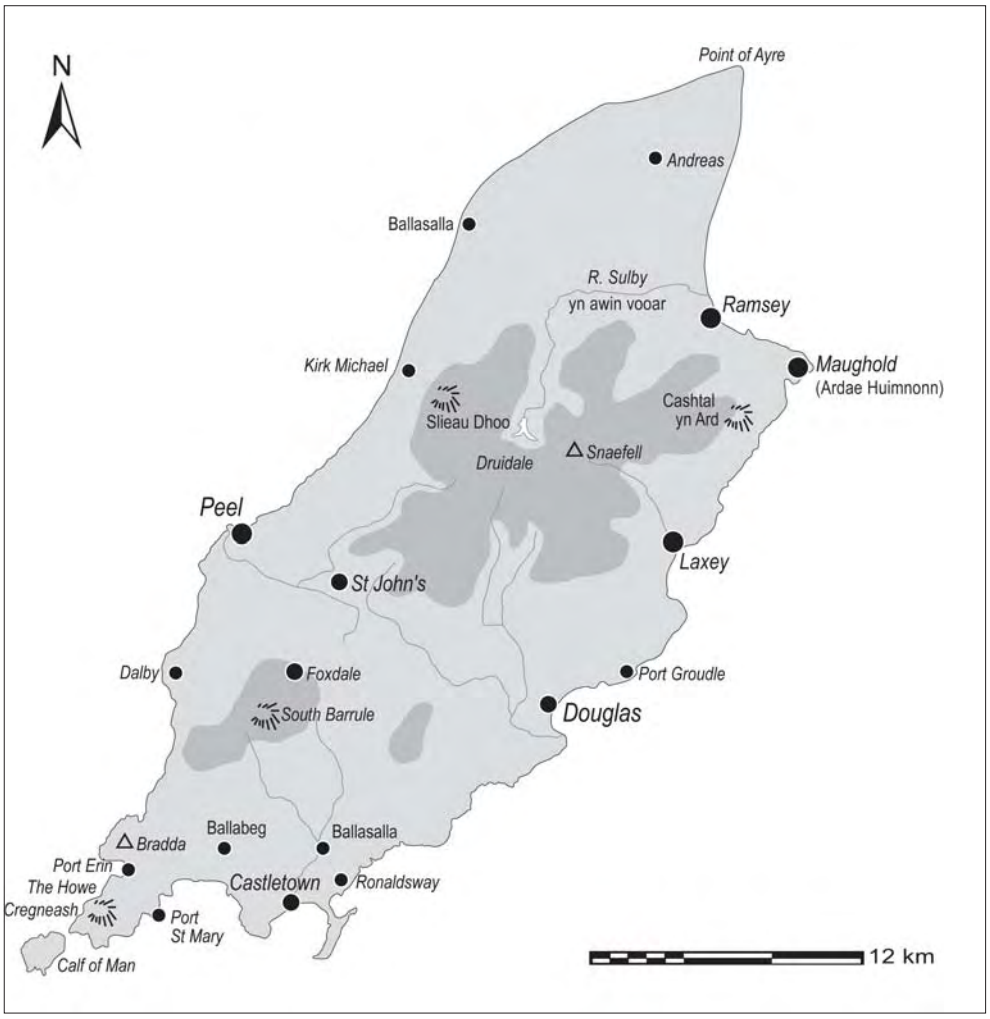
Ellan Vannin (Isle of Man)

§1. GENERAL BACKGROUND

The Isle of Man is not part of the modern political state of the United Kingdom, nor of Great Britain—either in the sense of being part of the island of



Britain or as the term is sometimes used synonymously for the UK. Man is a self-governing British Crown dependency and a member of the British Commonwealth. It recognizes the Queen or King of England, who, as sovereign, retains the title Lord of Man. The constitutional status and history of Man is discussed in detail in §8 below. Castletown was the ancient capital, but in the 1870s the Administration moved to Douglas, which then became the modern capital.

The Isle of Man is geographically part of the British Isles (the archipelago of Britain, Ireland/ Éire, and smaller islands off Europe's Atlantic north-west). It is situated in the centre of the Irish Sea, approximately 26 km south of Burrow Head (Scotland/Alba), 43 km south-west of St Bees Head (Cumbria, England), and 43 km east of Strangford Lough (Ireland). It is approximately 53 km long and 19 km wide, and its area is 365 km². At the south-western extremity is an islet called the Calf of Man, containing about 324 ha (about 700 acres) which is now a bird sanctuary.

A chain of mountains extends from north-east to south-west, the highest of which is Snaefell (620 m). These mountains are broken by a central valley which runs between Douglas and Peel. This was of great importance in the past, for it divided the island into two distinct portions, the 'north-side' and the 'south-side'. The northern plain, which extends from Ramsey to the Point of Ayre, is sandy in character and is relieved only by a low range of hills, the highest of which is only 82 m. Streams radiate from Snaefell, winding their way to the sea from all sides, forming narrow winding glens, which are studded with mainly fir, sycamore and mountain ash, interspersed with patches of gorse, heather and fern, which provide a striking and beautiful contrast to the bare mountain tops, although much planting of coniferous trees has taken place on the slopes during the 20th century.

The geology of the Isle of Man contains old stratified rocks traversed by numerous metalliferous lodes, some of them proving to be extremely productive, the

most important being the silver-lead and zinc lodes in the Laxey and Foxdale areas. Copper and iron ore were also found at Bradda and Maughold and elsewhere, but they were of comparatively small quantities. The Laxey Wheel, the largest working water-wheel in the world, was built in 1854 to pump water from the Laxey mines. Since the closure of the mines in 1929 it has not been required for this purpose. In 1965 it was bought by the Manx government and is now maintained as a working tourist attraction.

Much of the coastline of the Isle of Man is very rugged and steep, especially between Peel and the south, and between Ramsey and Castletown on the east coast. The main bays are on this coast—Ramsey, Laxey, Douglas, Castletown, and Port St Mary—the only two on the west coast being Port Erin and Peel. In the south of the island between Scarlett and Port St Mary the rock formations provide evidence that volcanic action has taken place.

As to its climate, the island is affected by its situation, being exposed on the south-west to the full force of heavy Atlantic gales, but it is also influenced by the warm Gulf Stream, and as a result the winters are relatively mild.

The earliest known inhabitants of the Isle of Man have been identified as Middle Stone Age hunter-gatherers from *c.* 7000 BC. Dating from the Copper and earlier Bronze Ages, *c.* 2500–*c.* 1500 BC, are the great stone circles, which usually contain within their precincts rough cists (stone-lined single graves of small dimensions). The Meayl Circle at Cregneash and Cashtal yn Ard at Maughold are good examples of these megaliths (large-stone monuments). See further §3 Prehistory, below.

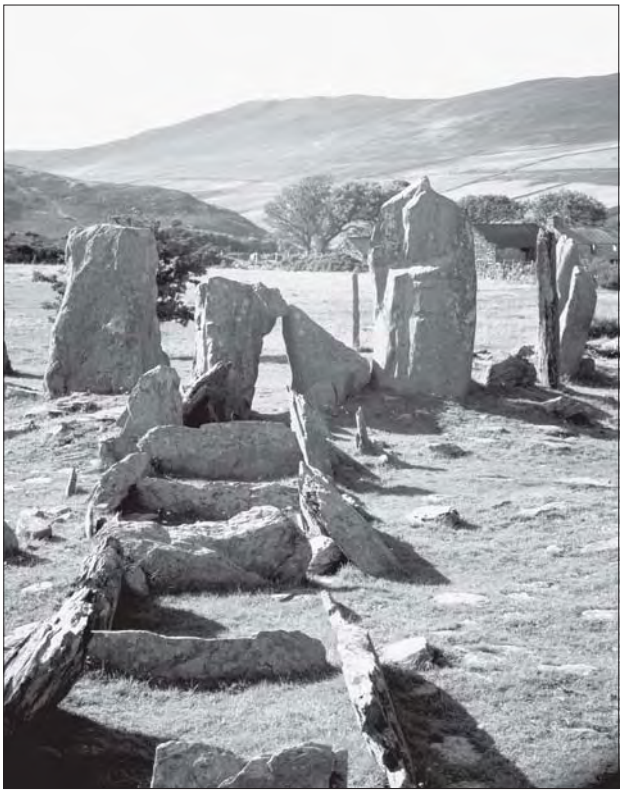
There are numerous early medieval monuments on the Isle of Man, including early Celtic keeills (small chapels) and sculptured crosses (see HIGH CROSSES). About a quarter of these crosses have inscriptions in early GOIDELIC, written in the OGAM script. In general, the stone crosses were rectangular in shape, some with rounded upper corners, and some, called wheel crosses, with the whole head rounded.

The arrival of the Vikings towards the end of the 8th century had an immense effect on the history and culture of the Isle of Man. Coming from Norway, the links between the two countries have survived up to the present time in the form of the Isle of Man's parliamentary system which has existed for well over a thousand years, being the oldest continuous parliament in the world. An annual open-air assembly of all the freemen at some central place where new laws were announced and disputes settled was an essential feature of the Norse system, and such an assembly was called the 'thing'—the Manx Parliament is called TYNWALD, the first part based on this word and the second on the Norse word *vollr* meaning field or meeting-place. This open-air meeting is still held annually on 5 July (old MIDSUMMER'S DAY) on Tynwald Hill at St John's, which is situated near the centre of the island.

For administrative and political purposes, the Isle of Man is divided into six ancient sheadings (Manx *seden* i.e. six). There are 17 ecclesiastical parishes within these sheadings and, with the exception of Marown, all of these touch the sea.

During the 19th century the main industries were farming, fishing (§10 below), and mining (§11 below), the majority of the land being cultivated, and at one

View of the five burial chambers of Cashtal yn Ard, Maughold



time there were over 700 boats in the Manx fishing fleet. During the 20th century, although farming and fishing were still important, the tourist industry flourished despite the interruptions caused by two world wars but, with the introduction of wider air travel since the Second World War, more and more people seek the sun outside the British Isles, thus causing a significant decline in the tourist trade. To counter the effects on the Manx economy, the government encouraged development in the manufacturing industries and the finance sector, and this sector is the major factor in the tremendous economic growth which has taken place in the latter part of the 20th century. As a result, there are better opportunities for employment, and many people have had to be recruited from outside the island, creating a large increase in the population, which, at the 2001 census, had risen to 76,535. Manx-born residents are now in the minority.

In Viking times, the coat of arms of the Isle of Man was a ship with sails furled, but after the Viking era ended this was changed to the three legs emblem, the earliest known examples being on the Manx Sword of State (*c.* AD 1230) and the 14th-century Maughold Cross. Since 1996, a peregrine falcon and a raven have been added as supports on either side of the shield, alluding to the custom of giving two falcons to each English monarch on coronation day. The motto that forms part of the coat of arms is *Quocunque jeceris stabit* (it will stand wherever you throw it).

Victor Kneale

§2. THE CELTICITY OF THE ISLE OF MAN

The date of the arrival of Celtic speech in Man is uncertain. Man was never incorporated into the Roman Empire, but the island was noted in GREEK AND ROMAN ACCOUNTS, where it was called variously *Monapia*, Μοναοιδα *Monaoida*, Μοναρινα *Monarina*, *Manavi*, *Mevania* (Rivet & Smith, *Place-Names of Roman Britain* 410–11). The Old Irish and Old Welsh names for the Isle of Man—*Mano* and *Manau*—also occur for an ancient district in north Britain along the lower river Forth (Foirthe; see GODODDIN). The name is probably connected with that of the island of MÔN (Anglesey), and possibly with the Celtic root reflected in Welsh *mynydd*, Breton *menez*, Scottish Gaelic *monadh* 'mountain' (on the INDO-EUROPEAN, see §5 below). Both *Manann* and *Manau* are associated with an early mythological figure connected with seafaring, Irish MANANNÁN and Welsh MANAWYDAN. From the early post-Roman centuries there is inscriptional evidence for Celtic of both the Goidelic and BRYTHONIC type on the island. The second dynasty of GWYNEDD in Wales (CYMRU) was founded by MERFYN Frych in 825; his father Gwriad is probably commemorated as Old Welsh GURIAT on an inscribed cross on Man, and the dynasty probably came from Man. The MANX language is a Celtic language of the Goidelic type, i.e. GAELIC. Although the Viking era had a great impact on the Isle of Man and there are several place-names of Norse origin such as *Snaefell* (snow mountain) on Man, Norse speech failed to survive on the island. The majority of place-names (see §5 below) and family names of Manx-born families are of Celtic origin. Manx was widely spoken on the island until the later 19th century, but since then it has rapidly declined, although in recent years efforts have been made to encourage its use, and it is now an optional subject in the schools (see EDUCATION). In Manx, an affectionate pet name *Ellan Vannin Veg Veen* (the dear little Isle of Man) is current for the island. According to traditional accounts, CHRISTIANITY was brought to the Isle of Man by the disciples of St PATRICK, and there are a number of place-names associated with him, for example, St Patrick's Isle, St Patrick's Well, St Patrick's Chair, St Patrick's Footsteps. Since 1977, Yn CHRUINNAGHT (The gathering) has been held annually as a self-consciously Celtic Manx national festival.

§3. PREHISTORY

Evidence from over 40 sites for the first Mesolithic (Middle Stone Age) hunter-gatherers who had arrived by around 7000 BC consists almost entirely of microlithic flint tools, similar to implements recovered from much of north-west Atlantic Europe (McCartan, *Recent Archaeological Research on the Isle of Man* 5–11). Between 5000 and 4000 BC these earliest inhabitants were apparently replaced by groups using much heavier tools

and weapons, which represent local developments in Man and Ulster (Ulaidh; earlier ULAID). They were also essentially hunter-gatherers, but pollen evidence shows that they had a greater impact on the landscape. They burned woodland clearings to encourage game, and eventually adopted cereal cultivation—a Manx site, at Ballachrink, Andreas, has the earliest pollen evidence (5,925±60 BP) for the use of cereals in the British Isles.

By around 3000 BC knowledge of AGRICULTURE, pottery, and polished stone tools—the Neolithic (New Stone Age)—had arrived (Burrow, *Recent Archaeological Research on the Isle of Man* 27–38). Manx inhabitants began to construct large megalithic tombs in which to bury their dead (Henshall, *Man and Environment in the Isle of Man* 1.171–6). The form and ritual associated with these monuments is so close to that visible on tombs in Ulster and south-west Scotland as to suggest that the island was part of a coherent local socio-economic system.

The Late Neolithic (or 'Ronaldsway neolithic') on Man saw a remarkable set of insular developments, unparalleled elsewhere (Burrow, *Proc. Prehistoric Society* 65.125–43). Between around 2800 and 2200 BC distinctive pottery (the Ronaldsway urns), flintwork (the hump-backed scraper and lozenge-shaped arrowhead), incised slate plaques, and the local exploitation of a local rock source for the production of the unique 'roughened-butt' axes were all characteristic.

If Ronaldsway provided evidence for a period of isolation and indigenous development, during the earlier Bronze Age (*c.* 2200–1500 BC) the island returned to the main stream (Woodcock, *In Search of a Cultural Identity*). Most of the types of ritual site, burials, pottery and flint artefacts present around the rest of the Irish Sea occur, often in quantity. The specific links are with Ireland (ÉRIU), especially the north-east. By this period a majority of the Manx lowlands had been cleared for the plough and significant inroads were being made into the uplands (Chiverrell et al., *Geomorphology* 40.219–36).

At some time during the Later Bronze Age (*c.* 1500–750 BC) a massive dominant hill-fort was constructed on South Barrule, the highest land in the south of the island. Flat cemeteries with cordoned urns became the norm. Bronze tools and implements were used in greater numbers and appear to show closer relationships with Britain.

The IRON AGE on Man runs from after 750 BC up to the arrival of CHRISTIANITY by around AD 500 (Gelling, *Man and Environment in the Isle of Man* 1.233–43). Until the 1st century of our era, sites, monuments and artefacts are rare. There is no pottery or metalwork. Settlement sites have been located on marginal land on the flanks of Slieau Dhoo in Kirk Michael and beneath the medieval walls of Peel Castle. Some of the 20 or so promontory forts date from this period (see FORTIFICATION).

During the 1st century, almost certainly due to the proximity of the Roman military, there seems to have been a period of prosperity. A number of very large circular timber houses were built, especially in the south of the island, that show direct contacts with the Empire, with metal and glass artefacts from far afield (Bersu, *Three Iron Age Round Houses in the Isle of Man*).

§4. THE ISLE OF MAN IN EARLY IRISH LITERATURE

Although Man did not produce any literary texts during the early Middle Ages which have survived, the island belonged to a literate early Christian Gaelic world and is often mentioned in early Irish texts. As well as its usual Old Irish name (*Mano*, genitive *Manann*), it also had literary place-names such as *Inis Falga* and *Emain Ablach* (Emain of the apples, cf. Welsh *Ynys Afallach* AVALON). Despite the Isle of Man's close geographical proximity to the east coast of Ireland and the south-west of Scotland—lying within sight of both, it usually

appears as a markedly exotic location in medieval Gaelic literature. Although it is mentioned in the ANNALS as an important prize in the territorial ambitions of various Irish and Scottish dynasties from the 6th century and its naturally strategic location for control of the facing coasts, in most of the tales it is a place associated with magic and isolation rather than with conquest and secular power politics. In other tales, which probably extrapolate the LORDSHIP OF THE ISLES back into the mythic past of the region, Man is a centre of power from which a high-king comes to make a circuit and to arrange the affairs and households of a disorderly Ireland. Another notable feature of its appearance in most of the tales is a lack of detail in the descriptions of the island. While medieval Gaelic literature is rich in onomastics, there is seldom a mention of particular locations on the Isle of Man, and our impressions of the island, based on the tales, are of a dark and misty place, beetling with tall craggy cliffs, and populated by very few and rather strange creatures. In this respect, the Man of the Irish sagas is similar, in its marked resemblance to the OTHERWORLD, to ALBA (Britain or north Britain) as it figures in the same corpus, even though Alba was from *c.* AD 845 the united kingdom of PICTS and SCOTS and a constant political reality in the Gaelic world. LOCHLANN is also comparable in seeming at times to be an Otherworld, but at other times a real Scandinavia.

There are consistencies then, as well as contradictions, in the portrayal of the Isle of Man in medieval Gaelic literature. It is sometimes presented as marginal and sometimes as central to the mythical geography of the culture. One of its most important and consistent associations in the tales is with the character MANANNÁN mac Lir, the sometime god of the Irish Sea. The Isle of Man, according to the authority of texts such as SANAS CHORMAIC ('Cormac's Glossary') and *Tochmarc Luaine* (The wooing of Luan), and to the meaning of his very name 'the little one of Man', is the home of Manannán. But the relationship between the character and the island is more complex than that between a man and his homeland. In some cases, Manannán even seems to be a personification of the island, and the association with Manannán is central to Man's place in medieval Gaelic literature.

Nevertheless, Man is not Manannán's only home, and Manannán is not the only important character to be associated with the Isle of Man. There are also connections between the magically powerful Midir, Cú Roí mac Dáiri, the smith Culann (CÚ CHULAINN's namesake) and the Isle of Man. Culann is located on the Isle of Man in versions of the boyhood deeds of Cú Chulainn, and it is to Man that CONCHOBAR goes in order to have Culann forge his battle armour. When, with the help of the magically powerful armour, Conchobar takes the kingship of Ulster (ULAID), he brings Culann from Man to live in honour in Ireland. Another reference to the Isle of Man occurs in *Aided Chon Roí* (The death of Cú Roí). In this story Midir is the king of the Isle and Cú Roí is the king's enemy who conspires, along with the Ulstermen, to raid the king's palace and steal his jewels. The Isle of Man in both these tales is associated with supernatural power, which is imported into Ireland, but it is only briefly mentioned, and its association with Cú Roí and Culann is exceptional. The supernatural power that flows from the island, however, is characteristic of its presentation in other tales as well. The Isle of Man appears to be far enough away from Ireland to be exotic and magical, but, at the same time, close enough to be a repository of Gaelic culture—the rich and strange people and things which are located there are clearly Gaels rather than foreigners.

This combination of exotic and mysterious marginality and cultural centrality is also characteristic of the Isle of Man in the story of the journey of SENCHÁN TORPÉIST, the legendary poet and tradition bearer. There are a number of versions of an episode in which Senchán travels to the Isle of Man in search of a poetess who had gone on a circuit of Ireland, Scotland, and Man. Kuno MEYER included three versions of this story in his edition of *Sanas Chormaic*, and Senchán and his troops find her on the Isle of Man later on in all three versions of the episode.

In contrast to the brevity of the above references, one of the most extensive poetic uses of the Isle of Man in all medieval Gaelic literature occurs in a poem in praise of Raghnall, king of Man and the Isles (1187–1229). Raghnall was the great-grandson of Gofraidh Crobh-bhán, or Gofraidh Mérach as he is named in this poem. In 1187 Raghnall took over a kingdom which had been founded by his grandfather on the Isle of Man, but which also, at times, incorporated Dublin (BAILE ÁTHA CLIATH) and some of the Hebrides.

Raghnall had strong Norse connections and is noted for his military prowess in *Orkneyinga Saga*.

Other Gaelic poems, including some written in praise of Feargal O'Reilly (†1291) found in the Book of the DEAN OF LISMORE, contain references to Manannán, and by implication to the Isle of Man. Most of these poems read as long excuses for the poet to show off his knowledge of tradition.

§5. PLACE-NAMES OF THE ISLE OF MAN

Early names, general. Only a few names are found in Man which definitely predate the arrival of Scandinavian (from the 9th century onwards). They include the name of the island itself: Man, probably from the INDO-EUROPEAN root **men-* 'rise', for example, a hill or mountain rising out of the water on the horizon; so is Man seen from the surrounding areas (cf. §2 above). *Douglas*, Irish *Dubhghlais*, PROTO-CELTIC **duboglassio* 'dark water', Welsh *du*, Irish *dubh* 'black, dark', with Welsh *glais*, Irish *glas*, *glais(e)* 'water, stream', is a name frequently found in the western areas of the British Isles, particularly in Ireland, Scotland, and western England. In Wales it appears as *Dulas*, and in south-west England as *Dawlish*, *Dowles*, *Dowlish*, *Develish*, &c. The name *Rushen*, Irish *roisean*, is a diminutive form of *ros* 'moor, heath, hill, headland, swamp, wood, &c.', and is an element also commonly found in the British Isles. The element *ard* normally means 'height', but in the parish of Maughold in the north-east of Man it may have the meaning 'headland', cf. Irish *aird*, originally referring to Maughold Head but later to the adjacent rounded hill of 'the Ards'. The name of Maughold Head appears in the Book of ARMAGH as *Ardae Huimnonn* (correctly *ardaí ?Manann*) 'the heights of Man' and could very well be considered as pre-Scandinavian. Other contenders would include *Appyn*, Scottish Gaelic *apuinn* 'abbeyland' (of which there are a few examples), and may refer to the early Christian period of Manx history (6th–7th centuries). The element is also common in Scotland. Finally, there are one or two names in *be-*, *bi-*, *ba-*, e.g. Bemahague, Billown, Balthane, probably representing names in Irish *both* 'hut, hermitage' plus a personal name—*both mo Thaidhg* 'my Tadg's hut', *both ghille Eòghainn* 'hut of the tonsured servant of John', *both Ultáin* 'Ultan's hut', i.e. names from the early Christian period.

River names. It is noteworthy that there are no old river names attested in Man of the type found in Britain or Ireland, e.g. *Dee* < f. of Celtic **dēwos* 'god', *Boyne* < *Buvinda* 'having white cows' or 'as white as a cow' (see BÓAND). The longest river in Man, the Sulby river, is some 22 km long and is known in MANX as *yn awin vooar* (Irish *an abhainn mhór*) 'the big river', and as such in English among the Manx people themselves. There is also the *awin ruy* (Irish *abhainn* + *ruaidh*) 'red river'. However, apart from Douglas, there is no trace in Man of the pre-Germanic British or Old European river names commonly found in Britain and Ireland.

Names of ancient monuments. Another category conspicuous by its absence—completely in this case—is meaningful sets of names for prehistoric monuments, e.g. graves, fortifications, &c. In Ireland and Scotland, such artefacts—fortifications in particular—bear names

which make clear that the local population fully understood their function, e.g. *dún, ráth, lios, caiseal, cathair*. In Man, such monuments, as well as large rocks, would all be termed *cashtal* (Irish *caisteal*) 'fortification'. The other elements are lost to Manx nomenclature.

Goidelic names. As with GOIDELIC names in Galloway (Gall Ghàidhil) in south-west Scotland which contain the place-name elements *sliabh* 'mountain, moor-hill' and *carraig* 'rock', names of this type in Man seem to date from the earliest Goidelic settlements on the island *c.* AD 500 and thereafter, e.g. *Slieau Dhoo* 'black mountain' (Irish *sliabh dubh*), *Carrick* '(the) rock' (Irish *carraig*). Names consisting solely of a noun (without the definite article), for example, *Rushen, Ard, Carrick*, would comprise the oldest names in Man. Names comprising a noun with the definite article, e.g. *Niarbyl*, from *yn arbyl* (Irish **an earball*) 'the tail' (rock formation—unless this is a prepositional form, *in earball* 'at the tail'), would be the next oldest, but are also seldom attested. Nevertheless, they are pre-Scandinavian. Names such as *Purt ny Hinshey, Cashtal yn Ard, Cronk y Voddy*, &c., have the form definite noun plus dependent definite noun in the genitive, and are in reality phrasal names. Names of this type, which are also to be seen in Ireland and Scotland, are relatively recent creations (12th/13th century), though they are occasionally attested in the 9th century outside Man. They form the overwhelming majority of Gaelic names in Man and in their present form are unlikely to be pre-Scandinavian, but may be reformations of earlier names.

Names in *balla* (Irish *baile*) 'settlement, farm, village, town' are the most common name type in Man. Except possibly for one or two examples, the general distribution of names in *balla-* seems to be post-Scandinavian. In Ireland, it can be shown that such names became much more common after *c.* 1150, possibly as result of Anglo-Norman influence where *baile* may be a translation of Latin *villa*. In Man, the first attestation of *balla-* is to be found *c.* 1280 in the Limites or Abbeyland Bounds attached to the Chronicles of Man, e.g. *Balesalach* (*Ballasalla*). However, most of the *balla*-names seem to be quite late. The earliest would be descriptive—*balla* plus adjective, e.g. *Ballabeg* 'little farm, &c.' (Irish *baile beag*), then geographically descriptive, with an attached noun in the genitive, e.g. *Ballacurree* (nominative *Curragh*) 'marsh farm' (Irish *baile curraigh* [*currach*]), and later with a personal name or surname as the specific, e.g. *Ballakelly* 'Kelly's farm' (Irish *baile (mh)ic Ceallaigh*), *Ballacorlett* 'Corlett's farm', a Manx surname containing Irish *mac* (*mhic*) plus the Scandinavian personal name *Thorljótr* (see MANX SURNAMES).

Scandinavian names. Many of the prominent natural features in Man, for example, valleys, mountains, coastal rocks, &c., bear Scandinavian names, e.g. valleys: *Cardle* < *kvernárdalr* 'mill river dale', *Eskdale* < *eskedalr* 'ashdale' (the older name for Dhoon Glen), *Groudle* < *grafdalr* 'narrow dale'; mountains: *Snaefell* 'snow mountain' (though this may be a translation of Irish *sliabh sneachta*, found also in Donegal), *Greeba* < *gnípa* 'summit', *Barrule* < *vörðufjall* 'cairn mountain'. Ramsey < *hrams-á* 'wild garlic river' and *Laxey* < *laxá* 'salmon river' are originally river names transferred to settlements. Many headlands and peninsulas bear Scandinavian names: *The Howe* (< *höfuð* 'hill, headland' or *haugr* 'hill, mound'), *Cregneash* < *krók-nes* 'crooked (indented coastline) promontory'. There are some 28 *vík*-names, e.g. *Fleshwick* < *flesja(r)-vík* 'green (grassy) spot creek', and 26 *by*-names (probably bestowed by immigrants originally from the Danelaw in England), e.g. *Dalby* < *dalr-by*) 'dale farm', *Sulby* < *súla-by* 'farm by the cleft fork (in a river)'. The element *staðir* 'farm' also occasionally appears, e.g. *Leodest* < *Ljótólfsstaðir* 'Ljótólf's farm', *Aust* < *Auðolfsstaðir* 'Auðolf's (Adolf's) farm'.

'*Inversion compounds*' are formed from two elements from one language, but set together according to the syntax of another language, and as such are a result of language contact, e.g. *Dreemlang* 'long ridge', i.e. Manx *dreeym* (Irish *driom*), with English dialect *lang* 'long', but in Gaelic word-order, viz. 'ridge long'. Scandinavian names of this type are scarce, but one or two examples are attested, e.g. *Toftar Asmund* (*c.* 1280) 'Asmund's hillocks' < Old Norse *toftir* 'hillocks' with the Scandinavian personal name *Ásmundr*, but *Ásmundar-toftir* in normal Scandinavian word-order, and *Crosyvor* 'Ivar's cross' (*c.* 1280) (with Scandinavian *kross* as a borrowing from Irish *cros*, itself a borrowing from Latin *crux*), Irish *cros-Íomhair*, Scandinavian *Ivars-kross*. The evidence for inversion compounds is scant, and as a result little can be said about them, other than that they appear to be a development of the later Scandinavian period in Man (*c.* 13th century and possibly later).

English names. Castletown and Peel are English. The name Castletown itself is first attested as *casteltown* in 1511. In the Abbeyland Bounds of *c.* 1280 Castletown appears as *uillam* (accusative case) *castelli*, which in all probability is a translation of Irish *baile a' chaistil* (*caisteal*), Manx *balley y chashtal*, although it is not known what the local people in fact called this town. Peel is first evidenced in 1595. Prior to that it was known as *Holmtown* (1417) 'island town' (< Old Norse *holmr* 'island' with Middle English *toun*, referring to the small island of St Patrick's Isle at the mouth of Peel harbour). Peel is Middle English *pele* (< Medieval Latin *pela, palus*) 'palisade, fortification' (referring to the same on St Patrick's Isle) and, like *Holmtown*, is probably an independent name bestowed upon the town by the English (garrison) inhabitants, and not a translation from the Manx, i.e. *Purt ny Hinshey* 'harbour of the island (St Patrick's Isle)', Irish *port na h-inse*. The use of the French definite article *le(s)*, as in *Le Calf* (1511) 'the Calf of Man (island)', *Lezayre* 'the Ayre' would date back to early English influence of the 14th century, cf. *Newton-le-Willows*, in Cheshire, &c.

Kirk-names. The parish names in Man comprise the element *kirk* plus the name of the saint to whom the parish church is dedicated, in Gaelic word-order—Kirk Maughold, Kirk Lonan, Kirk Braddan, &c. (although Kirk falls away in everyday speech). Originally, the element is Old Norse *kirkja* 'church', and the parish formation in Man seems to be part of a general development which was taking place in adjacent territories, e.g. northern England and south-western Scotland, where (in Galloway at any rate) Old Norse *kirk* has replaced earlier Irish *cill* (see also below) but retained the Gaelic word order. The development in Man seems to be similar and to have taken place around the same time (13th century).

In Manx, the generic for church is *keeill* (Irish *cill*) and this is the normal word for a ruined church or cell of the early Christian period. Many of these *keeills*, however, are of a later date, probably of the late Scandinavian period (13th century). In place-names, the element is used to denote small churches or chapels, e.g. *Keeill Woirrey* 'St. Mary's Church' (Irish *cill Mhoire*). In the genitive, it is found in such names as *Ballakilley* 'church farm' (Irish *baile cille*), *Lag ny Killey* 'the church hollow' (Irish *lag na cille*). Although CHRISTIANITY established itself in Man in the 6th/7th centuries and the building of cells or churches was set in motion to serve the new cult, it is not very probable that the present-day ruined *keeills* and the names attached to them survived in the memory of the Manx people from the beginning, right through the Scandinavian period to the present day, when older pre-Scandinavian settlement names have not survived.

§6. MATERIAL CULTURE IN THE HIGH MIDDLE AGES (11TH TO MID-16TH CENTURY)

Introduction. The late 11th-century Norse Kingdom of the Isles created a distinctive Norwegian/Celtic cultural entity in the northern Irish Sea. A complex of settlement patterns, tenurial systems and agricultural practices, some Scandinavian, some IRON AGE in origin, created a Manx material culture appropriate to a maritime capital. The evidence comes from rare documentary sources, architecture, and archaeology.

Settlement and tenure. Medieval settlement was disbursed; there were no villages or urban centres. Land division was based upon a primary unit known as the treen, which was subdivided into quarterlands and progressively grouped upwards into parishes and sheadings (E. Davies, *Trans. Institute of British Geographers* 22.97–116).

Spectacular necklace consisting originally of over 60 glass and amber beads, found in a richly furnished female Viking grave at Peel Castle, Isle of Man

In 1500 around 53,000 acres were enclosed (cf. Talbot, *Manorial Roll of the Isle of Man 1511–1515*). Lowland wetlands provided fuel, fish, and wildfowl, and the uplands grazing, fuel, and other raw materials.

Archaeological evidence. Three high-status sites dominate—Peel Castle (Freke, *Excavations on St Patrick's Isle, Isle of Man*), Castle Rushen (Davey et al., *Excavations in Castletown, Isle of Man, 1989–92*) and Rushen Abbey (Butler, *Journal of the British Archaeological Association* 141.60–104; Davey, *Rushen Abbey*). There is no evidence for the nature of settlement or the quality of life beyond these centres of power. None of the 700 or so quarterland farms—the backbone of Manx social and economic life—has been excavated.

The copper alloy finds consist for the most part of wire pins and needles, lace chapes, and dress accessories such as strap ends and belt fittings, with some evidence for the local repair of bronze vessels. Iron artefacts occur even less frequently. Even at Peel, only seven items were recovered—a very small proportion of the iron objects actually in use at any time in the medieval period. These vestigial assemblages establish that, at the main sites, metal was in widespread use for a range of purposes. They exhibit no particularly insular features and lie within the mainstream of the available technologies within the British Isles. The presence of a smelt for lead and possibly silver, owned by Furness Abbey, together with a number of iron working sites, show that the mineral resources of the island were being widely exploited.

Medieval glass is even more rare. Four sherds from a crumbling potash glass vessel were found at Peel, together with some 220 sherds of extremely weathered window glass, including ten with traces of grisaille decoration. Many fragments of window glass, fragments of a urinal and a lamp were recovered from Rushen Abbey, the latter within a burial.

Peel Castle has provided a wide range of information about the exploitation of natural resources, especially

animals, birds, and fish. Cattle form by far the largest group of animal bones, followed by sheep and pigs with a few horse, deer and dog bones. In contrast, of the 45 species of birds, only five were domesticated, yet at least 38 of them, mostly seabirds, formed part of the human diet. Fish were also important in the Manx economy, as is clear from the complex system of herring tithes. The 28 species identified at Peel imply both deep-sea and inshore fishing. Shellfish were also consumed in quantity. Manx medieval society not only relied on domesticated animals and birds, but exploited local populations of wild birds, fish, and shellfish to a high degree.

No medieval plant remains were recovered from either Peel or Castletown. At Rushen Abbey, trial trenches produced charred grains of wheat, barley, and oats. Documentary sources suggest that cereal production, especially of wheat, was an important element in Manx medieval AGRICULTURE. The limited surviving contemporary pollen evidence paints the same picture (Innes, *Dhoo Valley, Isle of Man* 11–13).

Locally handmade cooking wares continued in production until late in the 16th century (Davey, *Proc. Isle of Man Natural History and Antiquarian Society* 11/1.91–114). The island also received considerable quantities of imports from Britain and the Continent. The very limited evidence from other lower status sites suggests that, although imports were in general circulation, they were present in very small numbers outside the major centres.

Money. Although the five medieval coin hoards and rare single finds might imply a restricted use of currency, a number of factors suggest that money was in general use. The synodal statutes from the 13th and 14th centuries show that tithes, payable by the majority of the farms, were valued in monetary terms. Although payments in kind were also acceptable, it is clear from the records of episcopal payments of papal taxation that commodities such as sheep, honey or grain must have been cash convertible, as the diocesan valuation, at 660 florins for an incoming bishop, was a significant one

Peel Castle, Isle of Man

in regional terms (Storm, *Exactions from the Norwegian Church Province*). The money was generally paid late, and in instalments, but it was paid.

Architecture. The few surviving medieval buildings give some indication of economic activity. The 13th-century cathedral of St Germans at Peel is the pre-eminent ecclesiastical structure. Similar, good quality workmanship is in evidence at several chapels and parish churches. At Rushen Abbey most of the architectural fragments recovered from the excavations appear to be using imported sandstones, while the principal walls used finely dressed local limestone. Although the masons may have been brought in specially, the number of phases of workmanship in these structures implies resident skills in the Manx population. The buildings display competent lead working, slating, carpentry and glazing of a quality equivalent to their architecture and status. The bishop's tower-house at Bishopscourt is the only domestic building to survive.

Manx medieval landscape and society in an Irish Sea context. The Isle of Man had neither the open-field systems of north-west England (Youd, *Trans. Historical Society of Lancashire and Cheshire* 113.1–41) and lowland north Wales (Glanville R. J. Jones, *Archaeology of Clwyd* 186–202) nor the planned landscapes of Anglo-Norman Ireland (Mitchell & Ryan, *Reading the Irish Landscape*). There were no towns or villages. The beginnings of nucleation around the two medieval castles and at Ballasalla seem to date from the 15th century at the earliest. The parish churches are diminutive affairs—simple, single-celled extensions of pre-existing keeills. Only the cathedral of St Germans at Peel Castle is aisled. Two possible mottes and baileys are the only examples of a type of structure common in adjacent areas. There are neither moated sites—a major feature in south-east Ireland (Mitchell & Ryan, *Reading the Irish Landscape*), north-west England (Newman, *Archaeology of Lancashire*), and north Wales (Spurgeon, *Archaeology of Clwyd* 157–72)—nor manor houses. Instead, the island was owned and administered as a single entity by its kings and lords. The lack of moated sites and manors is a clear indication that society was much less vertically structured than, for example, in neighbouring areas of England—a feature of Manx social life that persists today.

§7. TRADITIONAL MAN-MADE LANDSCAPE DIVISIONS

The primary divisions of farmland were the 'treens', which are commonly believed to have been later subdivided into 'quarterlands'. The uplands, together with inaccessible river gullies and marsh, were set aside as unenclosed 'commons', although all were susceptible to improvement and absorption into farmland as 'intack', having been 'taken in' from the unenclosed lands. These terms are a mixture of MANX and English, and first come into the written record in the early manorial rolls of *c.* 1540. The treens have several times been associated by scholars with the distribution of early medieval chapels (Manx KEEILLS), although this has been shown to be sufficiently inconsistent to call such a link into question. No chronology yet exists to demonstrate whether all *keeills* are of a similar date.

More effective is to contemplate the landscape as having been divided, largely equitably, on the basis of its topography. This is particularly clear where the land rises gradually from seashore to upland, as here the treens, and the quarterlands within them, stretched from the coast to the edge of the commons, from which they were separated by a mountain hedge. The treens were frequently divided from each other by watercourses, and reliance was clearly placed upon natural barriers providing the limits of a holding. These traditional landholdings thus had access to the shore for fishing, seaweed, and flotsam; to wells and watercourses for water-supply; and to the upland commons for seasonal grazing, turf (peat) and stone, while at the same time sharing the most, and least, fertile soils.

The system shows signs of most adaptation in those areas where considerable land improvement has had to be made, and also where coastal erosion has either removed or added land. Such physical and adminis-

Druidale keeill, Michael, following excavation

trative changes hint at the considerable antiquity of the system as originally conceived. Demand for land resulted in the absorption of common land up-slope of original holdings. Here, the mountain hedge formerly defining the top of a holding became a subsidiary boundary, and a new mountain hedge had to be constructed.

The earliest extant Manx statutes from the 15th century allowed the creation of boundaries surrounding landholdings and from late in the next century included regulations—heights and materials—for their construction. These laws demonstrate a preoccupation with controlling the movements of livestock and of preserving crops from animal damage. It is considered probable, however, that enclosure did not become the norm until the 17th century. The characteristic Manx field boundary—a 'sod hedge'—is made from a combination of stone and earth, and could be quite large, but it is noticeable that later boundaries relating to the expansion of landholdings were often insubstantial and more heavily reliant on a vegetative topping of gorse to render them stock-proof (European gorse, *Ulex europaeus*, may have been introduced specifically for this purpose). A correlation between hedge age and the number per unit length of hedgeline of bramble sub-species has been cited as a possible dating medium, though this has not been tested extensively. Considerable areas of the traditional field pattern survive, although some farms were improved during the 1840s, and modern agricultural efficiency saw the removal of more boundaries, particularly in the 1980s. Stone walls were built to enclose new intack during the 19th century, as well as to divide the commons following disafforestation in the 1860s. This type of boundary, often built by imported labour (for instance from modern CUMBRIA), marks a complete change from the customary indigenous boundary construction, and is highly diagnostic.

Sources of water are traditionally closely associated with pagan Celtic religion and subsequently with the early Christian church (see CHRISTIANITY). Holy wells—their water believed to be good for eye, digestive

and skin complaints—were remembered, and continued to be used into the 20th century, and some are quite close to the early medieval chapels, perhaps hinting at possible association.

But closely associated with water sources are the traditional habitation sites. Fewer and fewer farmsteads survive unaltered by modern agriculture and conversion. Among those that do, there are few of the single-storey, two-roomed cottages with a hearth in each gable, except at the village folk museum of Cregneash, and virtually none of the earlier, single-roomed, central hearth cottages which would have been more closely comparable with Scottish blackhouses.

§8. THE MANX CONSTITUTION

The Isle of Man is a dependent territory of the United Kingdom, having full internal self-government. Its constitutional history is unique. Its legislature and customary law can be traced back to the kingdom of Man and the Isles, established by the Norsemen in the 10th century. In consequence, the Isle of Man justifiably claims to have the world's oldest parliament.

The Norse kingdom. The origins of the Norse KINGDOM OF MAN and the Isles are obscure, but it was well established by the 11th century. It was not a wholly independent kingdom, since the kings of Man owed allegiance to the kings of Norway, who regarded Man as one of their territories. The kingdom included all the Hebrides of present-day Scotland until 1156, and thereafter only the Western Isles. An important feature of the Norse kingdom was the annual open-air assembly known as TYNWALD, presided over by the king and attended by his officers, including the two deemsters who were the guardians of the customary law, and representatives of the people. Tynwald was primarily a judicial body, at which the customary law was also proclaimed. The customary law, about which little is known, was probably introduced by the Norse settlers. Elements of Norse udal tenure survived in Manx customary law to the 20th century.

Scottish rule. In 1266, by the Treaty of Perth, Magnus, king of Norway, sold Man and the Western Isles to Alexander, king of the SCOTS, for 4,000 marks and an annual payment of 100 marks. The Treaty provided that the people of Man should be subject 'to the laws and customs' of Scotland. Had the Treaty been fully implemented, Man would have been absorbed into the kingdom of Scotland. However, Scottish rule was short-lived.

Rule of the Montacutes. Between 1290 and 1333 control of Man passed to and fro between the Scots and the English during the Anglo-Scottish wars. However, following the battle of Halidon Hill in 1333, English control of Man was finally established, and Edward III then granted to Sir William de Montacute, who claimed Man by right of descent from the Norse kings, 'all the rights and claims which we have, have had, or in any way could have, in the Isle of Man . . . so that neither we, nor our heirs, nor any other in our name, shall be able to exact or dispose of any right or claim in the aforesaid Island.' The grant by Edward III effectively restored the Norse kingdom, but without the Western Isles. Sir William de Montacute, who had been created Earl of Salisbury in 1337, died in 1344 and was succeeded by his son who, in 1392, sold Man to Sir William Le Scroop. In 1399 Le Scroop was beheaded by Henry IV and Man then came into the absolute possession of the English Crown. It has remained a possession of the Crown ever since.

Rule of the Stanleys. In 1406 Man was granted by Henry IV to Sir John Stanley, his heirs and assigns, on the service of rendering two falcons on paying homage, and two falcons to all future kings of England on the day of their coronation. Thereafter, for over 350 years, the descendants of Sir John Stanley were the hereditary kings of Man, or 'Lords' as they were styled after 1504, until, in 1765, the second Duke of Atholl sold Man to the English Crown for £70,000. The REVESTMENT Act 1765 (of Parliament) provided that the Isle of Man should be 'unalienably vested' in His Majesty, his heirs, and assigns.

Throughout the period from 1406 to 1765 the kings or lords of Man rarely visited the island. They ruled through the captains or governors whom they appointed. Although the customary laws were respected and Tynwald continued to meet, English influence was pervasive. English was the language of government, although MANX Gaelic remained the language of the people until the beginning of the 19th century. The

Stanleys established courts on the English model, alongside the deemsters' courts in which the customary law was administered. The two systems gradually converged, but were not brought together until 1883.

During the 17th century Tynwald began to enact legislation in a recognizably modern form. Tynwald comprised the Governor and the principal officers, including the deemsters and the bishop, who formed the Lord's Council, later to become the Legislative Council, together with the twenty four 'Keys', originally a kind of jury, but later to be regarded as the representatives of the people, although generally appointed by the Lord. In the 18th century the Keys became the 'House of Keys' and elected a Speaker, emulating the House of Commons. Bills passed by Tynwald did not become law until approved by the Lord.

The Revestment and direct rule. The Revestment in 1765 did not affect the constitutional status of Man, except that the Governor and other principal officers were now appointed by the Crown, rather than the Lord, and the assent of the Crown rather than the Lord was required before a Bill passed by Tynwald became law. Tynwald continued to meet and enact laws. The courts continued to administer the customary law, although increasingly English legal precedents were relied on by the Manx courts, with the result that during the 19th century Manx law was to a great extent assimilated to English law.

However, after 1765 the British Government assumed complete control of the island's finances. The island's revenue, mainly customs duties, was remitted to London and, although it had been intended to manage the Manx revenue as a separate fund, in time it was treated as part of the revenue of the United Kingdom. Public expenditure had to be approved by the Treasury in London. In addition, the Governor was answerable to the Home Secretary, and the Home Office in London thus exerted effective control over the island's affairs. In form and in fact the Governor, or Lieutenant Governor as he was now styled, was the government. He presided over the Legislative Council and Tynwald, and was also the senior judge of the island's courts. For most of the 19th century, the island was largely governed by a form of direct rule from London, and was, for many purposes, treated as though it were part of the United Kingdom. Although Tynwald continued to enact legislation, increasingly Acts of the Westminster Parliament, which had had the power to legislate for the Isle of Man since the 14th century, were applied to the island.

Reforms of 1866. In 1866 the British Government agreed to allow Tynwald some control over public expenditure, and at the same time the House of Keys became an elected body and ceased to have judicial functions. In addition, Tynwald began to perform an administrative rôle by creating statutory committees to undertake specific functions. A Committee of Highways had been established in 1776 by Act of Tynwald, but by the end of the 19th century there were eleven such bodies, which became known as Boards of Tynwald. Subsequently, many other boards were formed as government assumed responsibility for new matters. The significance of these boards was that they were a form of local government, largely independent of the Governor. Local authorities were also created for the towns, villages, and parishes in the latter part of the 19th century.

20th century. In the 20th century the Manx constitution developed and changed in many ways, of which the following were the most significant:

(1) The House of Keys became the dominant element in Tynwald. Starting in 1919, the official members of the Legislative Council were progressively replaced by members elected by the House of Keys, which was itself given power, by Act of Tynwald, to override the Legislative Council.

(2) The British Government relinquished all control over the island's finances in 1958, leaving Tynwald in control of both taxation and expenditure.

(3) Between 1961 and 1992 almost all the executive functions of the Governor were transferred to other bodies answerable to Tynwald. The Governor retains certain constitutional functions and appoints, or advises on the appointment of, the judiciary, and is the representative of the Crown on the island.

(4) In 1986–7 the Boards of Tynwald were replaced by nine Government Departments, each headed by a Minister nominated by the Chief Minister, who is himself appointed by the Governor on the nomination of Tynwald. The Chief Minister and the Ministers, who must all be members of Tynwald, constitute the Council of Ministers, in effect the Cabinet of the

Manx Government.

(5) Since 1945 nearly all the functions that had been exercised by the British Government in the Isle of Man at one time or another, including those relating to the post office, customs and excise, telecommunications, merchant shipping, minerals, and the territorial sea, have been transferred to the Manx Government. The British Government is now only responsible for defence and foreign affairs and for the ultimate good government of the island.

(6) Parliament now enacts laws for the Isle of Man only in very limited circumstances. Tynwald has assumed responsibility for legislating on nearly all matters. Moreover, Tynwald is now recognized as having co-ordinate legislative powers with Parliament, so that Acts of Tynwald, which have received the Royal Assent, may repeal or amend Acts of Parliament extending to the Isle of Man.

(7) In 1972, when the United Kingdom joined the European Economic Community (EEC), the Isle of Man was excluded from the Treaty of Accession, except for free trade in goods and for certain other limited purposes.

(8) While the British Government retains responsibility for the island's international affairs, the Manx Government is now permitted to take part in international negotiations in regard to matters which directly affect the island.

Summary. The fundamental status of the Isle of Man as a separate legal jurisdiction, with its own government, legislature, courts and law, has not changed since the Norse kingdom came to an end in 1266. Man has never been part of England or of the United Kingdom, but it has never been an independent state in its own right. Since 1399 Man has been a possession of the English Crown. In the 20th century direct rule from London, which was imposed in 1765, was replaced by full internal self-government. However, the relationship of Man to the United Kingdom is still susceptible to change and will no doubt continue to change in the light of new circumstances as they arise.

§9. WOMEN'S VOTE (1881)

In the early months of 1881 TYNWALD (see previous section) amended the law as to the election of Members of the House of Keys, and delivered the first instalment of women's suffrage to vote in parliamentary elections within the British Isles.

The Election Bill was introduced into the House of Keys only 13 years after the historic passing of the House of Keys Election Act of 1866, which ended the ancient system of a non-elected, self-selecting oligarchy by enfranchising male ratepayers who held property valued at £8, around 8% of the island's 53,000 population.

The second Bill, introduced into the Keys on 5 November 1880, proposed to give the vote to every male person of full age who was not subject to any legal incapacity. However, the Manchester National Society for Women's Suffrage reasoned that by deleting the word 'male', women would receive the vote also. The Society organized public meetings on the Isle of Man to promote the issue, and public and press support grew to the extent that at the last such meeting a resolution proposing the extension of the vote to women was approved unopposed.

Public support proved crucial in persuading the Keys in favour of the Isle of Man becoming the first country in the world to legislate to give *all* women the vote in national elections. The House carried the motion, 16 to 3. The action of the Keys was widely applauded. Citing the example, campaigners in the UK voiced the hope that 'the House of Commons will not be less just in dealing with the claims of women ratepayers . . . than its sister assembly, the House of Keys'.

However, when the Bill was sent to the island's second chamber—the Council, the Lieutenant Governor, on the instruction of the British Government, advised that they could not endorse the Keys' decision because it would never receive Royal assent. Following political posturing, the Keys submitted to the Council, but took the unprecedented step of unanimously approving the following resolution:

> Resolved; that whilst accepting the proposition of the Council to confer the electoral franchise on female owners of real estate, and to exclude female occupiers, this House considers it right to record that their agreement to this proposal is solely with

> the object of securing the partial concession made by the Council towards female suffrage, instead of being compelled to lose the benefit of the proposed new Election Bill altogether; and that the opinion already expressed by the House, that male and female occupiers are equally entitled to vote, remains unaltered.

Thus the right to vote was extended to unmarried women and widows who owned property, comprising around 11% of the electorate. In the UK women had to wait until 1918 for the same right.

§10. FISHING

The traditional Manx fishery was based on the exploitation of herring and cod spawning and nursery areas of the north Irish Sea on either side of the island. Along with AGRICULTURE, fishing was of prime importance in the economy, with the two being closely linked. Seventeenth-century fishing regulations indicate the long-established responsibility of quarterland or more substantial farmers to have their boats with stipulated amounts of net in readiness for the annual mustering of the herring fleet (Gill, *Statutes of the Isle of Man, s.a.* 1610, 1613). Smaller farmers and crofters relied on the 'harvest of the sea' and were an important element in fishing crews until the later 19th century. The herring catch was of supreme importance and drift-net fishing continued to be used until the 1930s. Herring fishing played an important rôle in the island's commercial life, e.g. in the period *c.* 1770–*c.* 1840 when trade in red herrings to the Mediterranean and Caribbean replaced the now suppressed SMUGGLING.

Until the later 18th century open boats of 5–7 tons with four sweeps and a square sail, known as 'herring scoutes', were the standard vessels (Megaw, *Journal of the Manx Museum* 5/64.15–16). The improved 19th-century boats owed much to Cornish designs. Two-masted dandy smacks or buggers were widely adopted from *c.* 1830. In the 1870s the finest Manx sail fishing boats, known as 'nickeys', again derived from Cornwall (KERNOW), though local shipbuilders made modifications. These vessels were 13.5–16.5 m long with a beam of 4.5 m and suitable for the more exposed conditions of the Kinsale fishing. The last of the sail fishing boats were the 'nobbies'. Light rigged and smaller than the 'nickeys', they were typical of the declining Manx herring fishing after 1900.

The zenith of Manx fishing was attained in the 1880s. At that time, it was estimated that 13,000 out of a population of 53,000 were either directly or indirectly dependent on fishing (*Official Catalogue of the Great International Fisheries Exhibition*). Many fishermen of this era had an almost year-long commitment to their calling, although this made them more vulnerable than the crofter-fishermen when the shoals were absent, as during much of the 1890s. From the early 1860s many Manx boats joined in the spring mackerel fishing off southern Ireland (ÉIRE), particularly out of Kinsale. At the end of June they would return to fish for herring in home waters, or further afield out of Lerwick in the Shetlands. The autumn fishing off the east coast of Ireland often followed. Deep-sea long-line cod fishing was a late winter activity.

The present status of Manx fishing reflects profound changes following an early 20th-century decline in the herring fishery. Steam drifters from outside the island dominated the market and supplied the curers and kipperers who had from the 1890s become the main fish processors. From the 1930s traditional drift-net fishing was replaced first by ring-netting and later by trawling. Drastic depletion of fish stocks followed the exploitation of the spawning grounds to the east of the island by pickle curers and Klondykers in the 1970s. Ensuing fishing quotas have severely curtailed herring fishing to the extent that the formerly popular undyed Manx kipper is now difficult to obtain. By the 1990s fishing and farming together produced a mere 2% of Manx national income. A new fishing resource discovered close to Port Erin in 1937 in the form of scallops is the target catch of what remains of the Manx fishery. 90% of all fish landed is now scallops and queen scallops which occur over much of the north Irish Sea. The University of Liverpool's Marine Laboratory at Port Erin carries out biological sampling and other research relevant to the conservation of both herring and scallop stocks.

§11. MINING

Significant lead-zinc-copper vein deposits have been mined within a strike-parallel zone along the NE–SW axis of the Ordovician rocks of the Manx Group. The veins are typically associated with steeply inclined faults in these rocks, although veins in the Foxdale area pass into a granite host at depth. Ferrous metal in the form of hematite was also mined in the Maughold area.

Copper and iron staining on coastal rocks would have encouraged prehistoric mining. The first documented reference is a charter of 1246 authorizing the Cistercian monks of Furness to mine, transport, and sell minerals from the island. The Derby and Atholl Lords of Man entered into a succession of business partnerships with entrepreneurs from outside the island. The Crown purchase of the remaining feudal rights of the last Lord in 1829 stimulated a new interest in mining (Belchem, *New History of the Isle of Man* 214). Cornish expertise and labour played important rôles in Manx mining. The Manx mines, which truly came to fruition in the period *c.* 1830–90, were outstanding for a time among British sources of lead and zinc. Manx zinc output was probably equal to a fifth of all the zinc produced in the British Isles and in the region of 5% of all lead. In the period 1870–90 the two main centres, Foxdale and Laxey, were together employing up to a thousand men and boys. Significant amounts of silver also came from these centres. Laxey Mine achieved maximum zinc production in 1875 and a lead maximum in 1876. Foxdale achieved lead maxima in 1885 and 1891 (Lamplugh, *Geology of the Isle of Man*).

Overseas competition and exhaustion of the veins led to rapid decline with little significant production after 1920. The veins were steep and faulting was widespread. In the later stages, depths in excess of 650 m were reached and operations became very expensive. Since the island has no coal mines, much ingenuity was applied to the collection of water and the creation of hydraulic appliances. Local smelting had been characteristic of the 18th century, but all ores were exported for this process during the main period of mining.

The Great Laxey Wheel (or Lady Isabella), erected in 1854 to drain the Laxey mine, epitomized the optimism of the period when the speculative banker G. W. Noble was chairman of the mine and the Cornishman R. Rowe the mine's captain. This remarkable pitch back-shot wheel with a diameter of 22.1 m was the largest to be constructed at that time. Its designer was a local man, Robert Casement. Water from a wide catchment area, collected in a hillside cistern, ascended a stone-built tower to turn the wheel. Power from the wheel was transferred via the crank along the top of a *c.* 410 m stone viaduct by means of a sectional timber beam running on bogies. An inverted T-shaped rocker changed the horizontal movement of the viaduct rod to the vertical movement of the pump rods. The wheel is the island's most famous example of industrial archaeology.

F. J. Radcliffe

Ellis, Thomas Edward (1859–99) was an important Liberal politician and British parliamentarian who was influential in effecting numerous reforms beneficial to his native Wales (CYMRU). Ellis was born at Cynlas, Cefnddwysarn, near Bala in Merioneth (sir Feirionnydd), north Wales, and was educated locally at Bala grammar school, the fledgling University College of Wales, ABERYSTWYTH, and New College, Oxford. During his Oxford days he became an active member of the Essay Society, participated fully in social and political activities, and served on the Standing Committee of the Oxford Union Society. After graduating in Modern History in 1884 he worked briefly as a tutor to the Cory family of St Mellons, and in 1885 accepted a position as private secretary to the industrialist Sir John Brunner, the Liberal Mem-

ber of Parliament for Norwich, whom he assisted in his political activities. At the same time Ellis engaged in regular journalism, contributing pungent columns to the *South Wales Daily News* and other newspapers. In 1886 he was elected the Liberal Member of Parliament for his native Merioneth, immediately earning a reputation at Westminster as a champion of the national rights of Wales, and helping to press for the passage of the Welsh Intermediate Education Act of 1889. He was also one of the most prominent members of the CYMRU FYDD movement, founded in 1886.

His health had already begun to fail when he was taken ill with typhoid fever while on a visit to Egypt in 1889–90, following which he was presented with an impressive national testimonial. When W. E. Gladstone returned to power in 1892 he offered T. E. Ellis the position of Liberal junior whip. After prolonged heart-searching, he accepted, a move which caused much bad feeling in Liberal Wales. Although now hamstrung by the constraints of office, he helped to press for the appointment of the Royal Commission on Land in Wales in 1892 and for the introduction of measures for the disestablishment of the Church in Wales, since most of the population in Wales belonged to Non-conformist denominations (see CHRISTIANITY). In 1894 the Prime Minister, the Earl of Rosebery, promoted him to be his party's chief whip, a position he held until 1896. Ellis was prominent in the educational administration of Wales, and was a notably cultured, well-read, erudite individual. He married Annie J. Davies of Cwrt-mawr, Llangeitho, Cardiganshire (now CEREDIGION), in 1898, and died at the age of 40 at Cannes in France.

Elpin/Ailpín was the name of a king who ruled over the PICTS in the period 726–8. In the SCOTTISH KING-LISTS a ruler of DÁL RIATA with this name occurs for about the same period. The name itself is of interest for two reasons. First, since it contains a *p*, it is clearly not GOIDELIC in origin, but rather PICTISH or BRYTHONIC (see also Q-CELTIC; P-CELTIC). The corresponding Brythonic name *Elffin* is recorded in the early medieval kingdoms of GWYNEDD in Wales (CYMRU), and YSTRAD CLUD and RHEGED in north BRITAIN. Secondly, CINAED MAC AILPÍN was the famous first Scottish king of the united kingdom of Picts and SCOTS from about 843. Therefore, this patronym and its earlier currency among the kings of the Picts—one of whom also became king of the Scots—suggests some sort of Pictish (or Brythonic) background or acculturation for the founders of the united kingdom of ALBA. According to the PICTISH KING-LIST, Elpin ruled together with DREST for five years. In the ANNALS of Ulster it is noted that Elpin was defeated, with heavy losses, by 'Oenghus' (probably ONUIST son of Uurguist) in a Pictish internecine battle at Monid Croib (probably Moncrieffe Hill, Perthshire) in 727 (= 728) and again in the same year at a 'Castellum Credi', where he was put to flight.

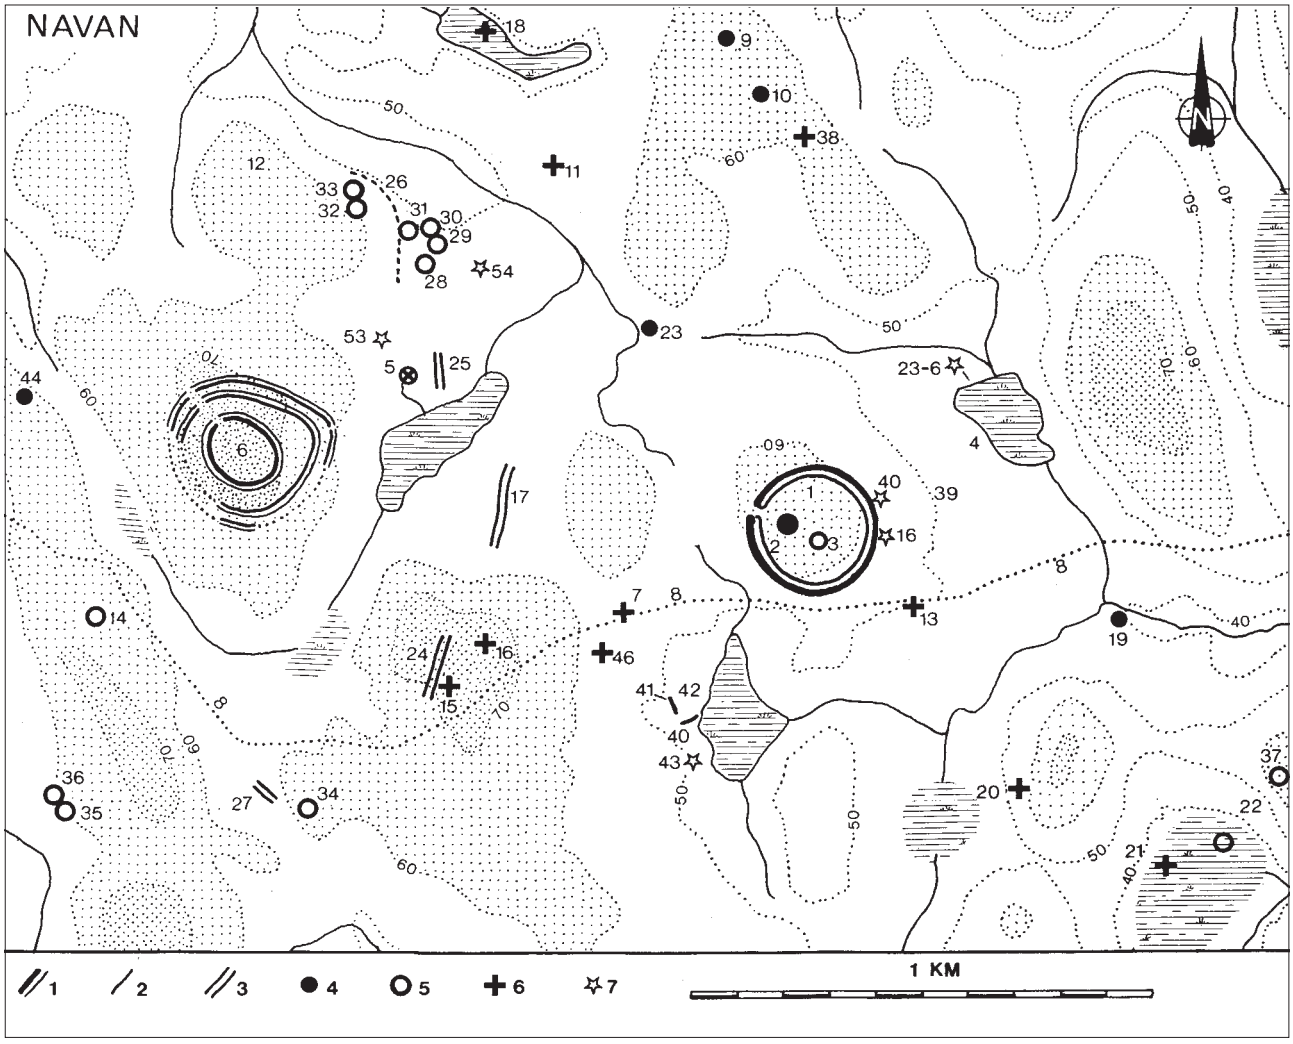
PEB

Emain Machae, the legendary capital of ULAID and the court of King CONCHOBAR and the ULSTER CYCLE heroes in early Irish tradition, is identified with Navan Fort, which is situated 2.6 km west of Armagh (ARD MHACHA). Navan Fort is the most prominent monument in an archaeological complex of sites dating from the Neolithic to the early medieval period. Other major monuments include Haughey's Fort, Loch na Séad (Loughnashade) and the King's Stables. The site has been variously identified with either the Ισαμνιον *Isamnion* or northern Ρεγια *Regia* of PTOLEMY's 2nd-century map of Ireland (ÉRIU).

The earliest evidence for settlement within the complex is to be found on the drumlin (glacial oval hill) on which Navan Fort was later constructed. It consisted



The Navan Complex near Armagh, Northern Ireland: antiquities in the landscape and ancient extent of bogs and lakes. Key: 1=bank-and-ditch; 2=linear-ditch; 3=double linear-ditch; 4=mound; 5=ring-ditch; 6=other type of site; 7=find spot. The large circular monument near the centre of the map is Navan Fort (Emain Machae). Loch na Séad is the lake to its north-east. The roughly circular trivallate hill-fort a kilometre to the west is the Late Bronze Age Haughey's Fort. The artificial ritual pool known as the King's Stables is on its north-east (site 5). Armagh is a short distance beyond the map's eastern edge.

of a series of pits containing Neolithic pottery and flint tools. Soil accumulated over this layer, and it was ploughed during the Bronze Age. Then, at approximately 1000 BC, there is abundant evidence for Later Bronze Age activity within the complex. At Navan a circular enclosure, some 46 m across, was made which consisted of a ring ditch (*c.* 5 m across and 1 m deep) and a series of internally erected timber posts. This structure is believed to have been used for a RITUAL function, in the absence of a more plausible explanation. For this period, far greater activity was found at Haughey's Fort, west of Navan Fort. This is a Late Bronze Age hill-fort, surrounded by three ditches, and enclosing a maximum area of *c.* 340 m by 310 m. The interior of the site has revealed the presence of two large circular timber structures and a series of pits and stakeholes. The pits have yielded small fragments of gold, bronze, glass beads, coarse pottery, animal bones, and charred barley seeds. The waterlogged ditches preserved the remains of bones, wood—both artefacts and the natural remains of trees and bushes from the vicinity of the ditches, seeds, pottery, and about 80 species of beetles. The economy of Haughey's Fort was based primarily on barley cultivation and the raising of cattle and swine; other domestic livestock was minimally present. Several dog skulls were recovered, and these are the largest known from prehistoric Ireland.

At the foot of the hill on which Haughey's Fort is situated lies the site known as the King's Stables. This is a circular embanked enclosure whose bottom had been hollowed out in the Late Bronze Age to form an artificial pool. Within it were found animal remains, some articulated as if either the entire animal or large portions of it had been deposited. Also recovered was the front portion of the skull of a young human male (see SACRIFICE; WATERY DEPOSITIONS).

Both Haughey's Fort and the King's Stables date to *c.* 1000 BC, and they appear to form an associated complex of sites which included elements of occupation (Haughey's Fort) and ritual (both Haughey's Fort and the King's Stables). Given the later developments at nearby Navan Fort, it has been suggested that Haughey's Fort served as a major tribal centre in Late Bronze Age Ireland, but it was probably abandoned by *c.* 900 BC as the centre shifted to Navan.

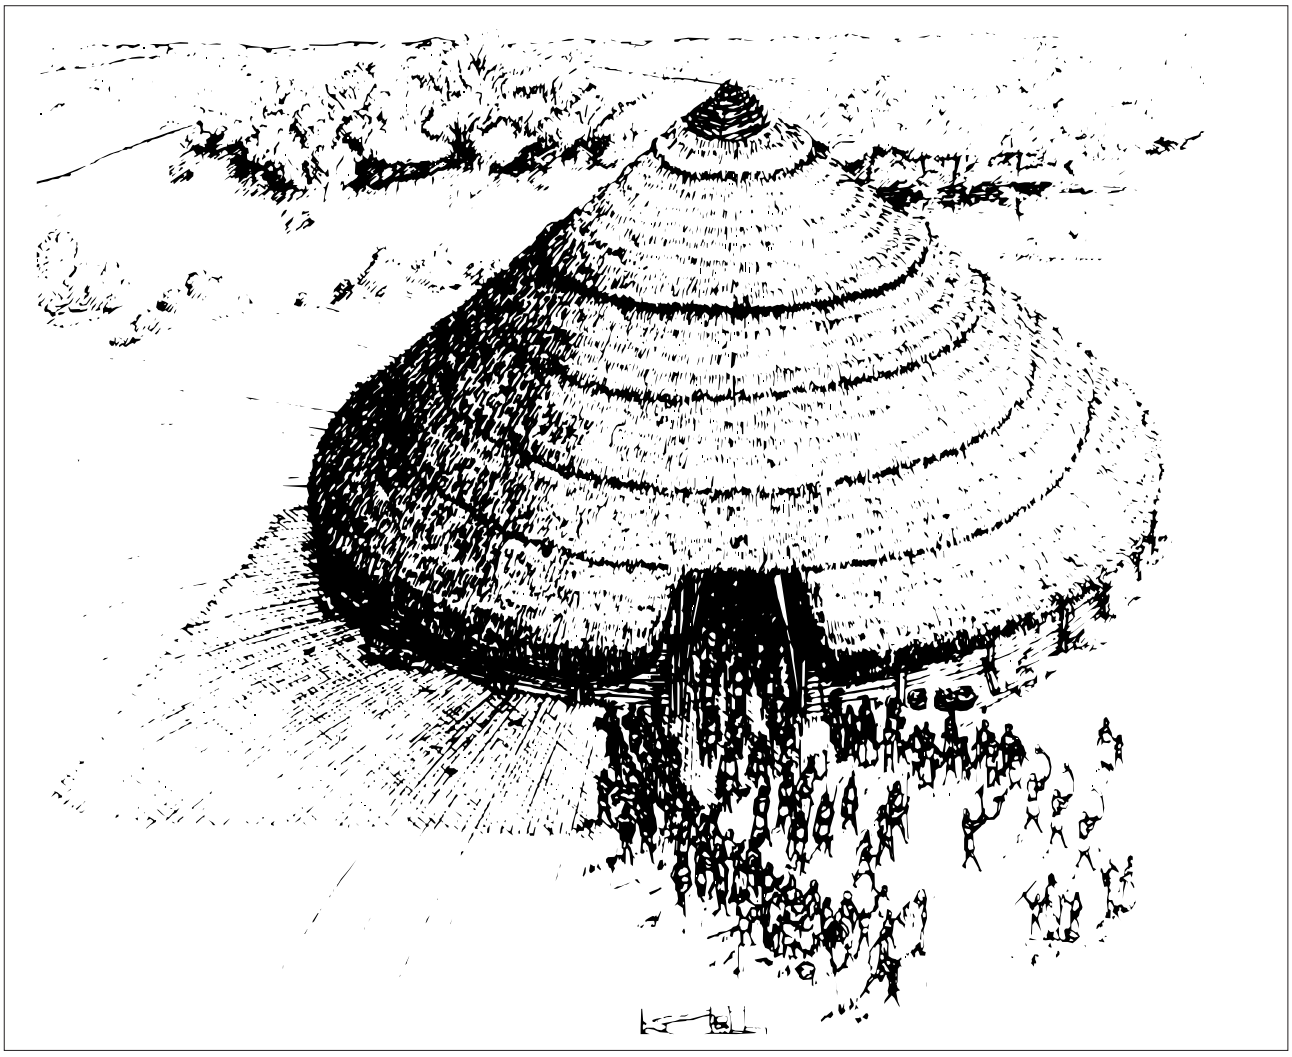
By *c.* 400 BC Navan Fort began to see a sequence of major architectural changes. Within the area of the earlier ditched enclosure was erected a series of figure-of-eight structures which consisted of a smaller round house, about 10–12 m in diameter, attached to a larger enclosure, some 20–25 m across and entered by way of a fenced walkway. Finds associated with these structures, which were regularly renewed, include coarse ceramics, a few bronze objects and the skull of a barbary ape—the latter seen as evidence for a distant gift exchange from North Africa along ocean trade routes across Europe's Atlantic Zone (remains of another ape have been recovered from a LA TÈNE site in Luxembourg).

At approximately 100 BC Navan underwent two major architectural changes. The occupants of the site surrounded the top of the hill with a hengiform enclosure, i.e. they encircled the hill with a large outer bank and an inner ditch. The earlier figure-of-eight structures were cleared away and replaced by a single circular building, constructed of *c.* 269 upright oak posts, which measured 40 m in diameter, hence the 'Forty Metre Structure'. The massive central post has been dated by tree rings to 95 BC. There is debate as to whether or how this structure may have been roofed, but it is presumed to be some form of large ritual building. No finds were associated with its floor. While the posts were still standing, possibly soon after they had been erected, the structure was transformed in three acts. The first involved filling the entire 'Forty-Metre Structure' with limestone boulders up to almost 3 m in height. Then the timber along the outer edge of the structure was burnt (several large charred oak beams were recovered from the bottom of the outer ditch) and, finally, sods were imported to cap the cairn and form an earthen mound some 5 m high.

Also within the main enclosure, excavations revealed the remains of three more circular wall-slots and a larger triple-ringed timber enclosure. These were cut through by a ditch whose later fill revealed an early medieval brooch.

At the foot of Navan Fort lies Loughnashade (Loch na Séad), a small lake that now occupies only one acre (0.4 ha), but probably spread over five acres (2 ha) during the heyday of Navan. In the late 18th century its boggy shoreline yielded four large bronze horns (see CARNYX), decorated in the La Tène style and probably contemporary with the 'Forty Metre Structure' and the outer bank and ditch. The practice of depositing musical instruments in bodies of water is well represented across north-west Europe during the Later Bronze Age and the IRON AGE.

The Navan complex provides numerous major issues of interpretation. The monumentality of the site suggests its ritual, if not political, importance in Iron Age Ireland. There are problems with reconciling this with its rôle as a later historical royal site, or rather a pseudo-historical royal site, since the earliest historical references to it as a capital of the Ulstermen appear long after its archaeological heyday. The proximity of Armagh, the traditional primatial see of St PATRICK, and the preservation of the name of the territorial goddess MACHA in the two place-names has inspired much speculation concerning a possible key rôle for greater Navan in the transition from pagan to Christian Ireland. The creation and encasement of the 'Forty Metre Structure' has invited much speculation: a timber temple, an OTHERWORLD structure (see also SÍD) intended to be set encased in stone, an attempt to replicate a megalithic monument (a passage tomb is known from the main Iron Age enclosure at Tara [TEAMHAIR]), or an attempt to symbolize within a single monument the three Celtic (and Indo-European) social strata of the Dumézilian theory. In terms of formal architecture, the 'figure-of-eight' houses and ENCLOSURES are best paralleled at other



Reconstruction of the 'Forty-Metre Structure' at Navan (Emain Machae), as it would have appeared c. 95 BC, with conjectural roof, before it was intentionally destroyed and capped with a cairn

so-called royal sites, such as Dún Ailinne and Tara; a large circular post-built structure of Iron Age date is also known from Dún Ailinne.

J. P. Mallory

Emania is an Irish journal established by J. P. Mallory in 1986 as the Bulletin of the Navan Research Group at Queen's University, Belfast (see EMAIN MACHAE). The articles, all of which are written in English, deal mainly with archaeology of the Irish Late Bronze Age, Iron Age, and early Middle Ages, as well as Irish and Indo-European historical linguistics, and the study of early Irish literature, especially the Ulster Cycle, including some edited texts and translations of primary Old and Middle Irish sources. *Emania* is usually published annually and each issue has a particular thematic 'focus'. It publishes new work rapidly and is aimed at a mixed readership of professionals and interested non-specialists.

§3. MAN

The 18th century saw the widespread emigration of young adults from the Isle of Man (ELLAN VANNIN), in spite of legislation in 1655 requiring the Governor's permission to do so. From the 1820s favourable reports from pioneering emigrants to Cleveland, Ohio, resulted in group migration, effectively establishing MANX-Gaelic-speaking communities in the area (cf. CELTIC LANGUAGES IN NORTH AMERICA).

In 1845 potato blight affected Manx farming communities, and the total loss of the crop in the following year, coupled with news of gold finds in America and Australia, resulted in a further burst of emigration between 1847 and 1851. Alongside the 19th century's general movement from rural to urban areas, improvements to transport links with the large north of England labour market served to attract Manx emigrants. The late 19th century encouraged emigration from the declining Manx mining industry to South Africa, Australia, the USA, and Canada.

The 20th century witnessed successive bursts of emigration due to economic pressures—most notably during the 1950s and 1970s. The latter period proved particularly problematic for the Manx Government, who introduced measures to attract new residents, resulting in a nationalist backlash (see NATIONALISM). The almost full labour market provided by the success of the finance sector reduced the need for the young working population to emigrate en masse.

The existence of Manx societies in Cleveland, Queensland, New Zealand, Dubai, and London, for example, shows the continued desire of the Manx diaspora to identify with the Isle of Man.

§4 .WALES

The movement of Welsh people to settle overseas has been smaller in scale than that from Ireland (ÉIRE) and Scotland (ALBA). Nor has it been as prominent a feature of the history of Wales (CYMRU) as internal migration to England. Nevertheless, people have emigrated from Wales since at least the 17th century. (An even earlier migration was claimed in the legend that Prince MADOG AB OWAIN GWYNEDD, and his followers settled in America in the late 12th century.) A period of significant migration during the late 17th and early 18th century was followed by a longer, more voluminous, and almost continuous phase between the 1790s and the early 1930s. The outward movement has continued since 1945, though on a smaller scale compared to the late 19th-/early 20th-century peak. Welsh emigrants have been notably diverse in terms of their geographical, social and occupational origins, their motives in emigrating and the destinations they have chosen. Wherever they have settled in significant numbers, they have rarely encountered hostility, and they have usually earned recognition as a small, but distinctive and locally influential group.

The absence or unreliability of statistical records make it difficult to make an accurate assessment of the actual number of emigrants, but it is certain this was higher than the recorded figures suggest. In the 19th century, when systematic records of emigration began to be kept by many countries, the British government did not differentiate between emigrants from England and Wales, whilst in the receiving countries many Welsh were classed as English. Extant official records state that at the end of the 19th century about 100,000 people who had been born in Wales were living in the USA, 13,500 in Canada, and 13,000 in Australia. The majority of Welsh emigrants have settled in what became the USA, but in the early 20th century greater numbers of Welsh people were moving within the British Empire, especially to Canada. During the last half-century, Canada and Australia have been the main destinations.

Like all emigrants, those from Wales have been stimulated to move by a combination of factors, among them personal considerations peculiar to each individual emigrant. To some, emigration has been a means of escaping severe economic distress and perceived or real cultural, religious, and political oppression within Wales. To others, perhaps the majority, the search for a

new life overseas has been a calculated quest for greater opportunities, a better life and even for adventure. It is likely that 19th-century Welsh emigrants were strongly influenced by economic considerations, often a combination of difficult conditions at home and the attractions of land or the higher wages overseas that skilled Welsh industrial workers could command. Other reasons have also been significant at various times. Many of the Baptists, Quakers, and Anglicans from mid and west Wales who settled in the Philadelphia area in the late 17th century were at the same time fleeing from religious persecution and attracted by the Pennsylvania colony's principles of religious freedom and toleration. Welsh people have also emigrated for political, cultural, and what might be termed nationalistic reasons (see NATIONALISM). Notable examples here are the various attempts to set up a new Wales in the American Colonies, prior to the American War of Independence, as well as the permanent *Gwladfa* in PATAGONIA, Argentina. The latter, established in 1865 in the Chubut valley, was founded in order to establish a proto-Welsh-language State free from English incursion. During its years of expansion between 1865 and 1914 the colony attracted between 3,000–4,000 Welsh people.

Nonconformist religion, *eisteddfodau* (sing. EISTEDDFOD) and choral societies have played a formative rôle in most Welsh immigrant communities, whilst in the USA and Patagonia Welsh newspapers were, and remain, important vehicles for maintaining Welsh ethnic networks and promoting activities. The flowering of Welsh-language culture overseas was largely, though by no means exclusively, due to the efforts of first generation settlers (see CELTIC LANGUAGES IN NORTH AMERICA §4). Attitudes towards the desirability of becoming fully absorbed into the host societies varied greatly, whilst the processes of adaptation and adjustment were complex and differed in pace and scale depending on local conditions. In time, usage of Welsh declined, churches closed and *eisteddfodau* became rarities. But since the 1970s, there has been an unmistakable expansion of Welsh ethnic awareness overseas and greater interest in Wales and a Welsh heritage, especially among the younger generation. This revival has manifested itself in the growing popularity of events such as the annual Welsh hymn-singing gathering, the North American Cymanfa Ganu and the closer ties between Wales and the Welsh in Patagonia.

§5. BRITTANY

See CELTIC LANGUAGES IN NORTH AMERICA §5.

§6. CORNWALL

Emigration may be seen as part of the ongoing experience of the Cornish people from the earliest times to the present, broadly related to 'push' factors in Cornwall (KERNOW), such as famine and economic decline, and 'pull' factors in other territories, such as mineral rewards. The earliest historically documented emigration experience for the Cornish was the number of south-western BRYTHONIC-speaking peoples who emigrated to Brittany (BREIZH), generally explained (dating from the 6th-century account of GILDAS) as motivated primarily by the pressure from Saxon invaders from the east (see BRETON MIGRATIONS). This age-old movement of peoples between Cornwall and Brittany continued until the Reformation. Over time, emigration out of Cornwall into the rest of the islands of BRITAIN and Ireland (ÉIRE) also occurred, most often where technical prowess in hard-rock mining was required, as in parts of Ireland, and the coal-mining regions of Wales (CYMRU) and England.

On the American continent, the Cornish—some of whom were possibly CORNISH speakers—were among the first waves of 16th-century settlers who travelled across the Atlantic, helping to found the famous Roanoke colony of 1585–6. More of a presence was made, however, in the 18th and 19th centuries in the opening up of the mining frontier as it moved westwards. Initially, the Cornish settled much of the mid-

west, mining first copper in the Upper Peninsula of Michigan and lead in Wisconsin and Illinois, but then moved westwards, into territories such as Montana, Arizona, and New Mexico, eventually making for the 1849 gold-rush in California.

Twenty-four years before the California gold-rush, Cornish miners went to Mexico to open the silver mines of Pachuca and Real del Monte. So-called 'Cousin Jacks and Jennies' also travelled to South Africa to mine copper, diamonds, and gold, playing an active part in the Zulu and Boer wars before the Union of South Africa was formed. Chile, Peru, New Zealand, and Canada were other favourites of the Cornish, who often travelled for farming opportunities as well.

Territories such as South Australia, founded in 1836, became important destinations for the Cornish, since, alongside copper mining, they offered religious freedom. The potato blight of 1845–6, though well documented in Ireland and Scotland (ALBA), had an impact in Cornwall too, causing massive emigration in the 1840s (see FAMINE). Around a third of the entire population of Cornwall had gone overseas by the end of the 19th century, and by this time the maxim that 'wherever in the world was a hole in the ground one was likely to find a Cornishman' seemed entirely true. This had a massive social effect on Cornwall; many Anglo-Cornish writers, such as Robert Stephen Hawker (1803–75) and the Hocking siblings, documented the process. A. L. Rowse (1903–97) was to comment: 'Not one is left in this country: all of them gone abroad, not to return, the home broken up' (Rowse, *Cornish Childhood* 23).

In the face of globalization in the 20th century there has been much rediscovery and reassertion of Cornishness in the territories of the Cornish diaspora, with a growing number of societies and gatherings in key locations of past and present Cornish activity, such as Mineral Point (where Cornish miners' cottages are preserved), Grass Valley (where male-voice choirs persist), Pen Argyl and Butte in the United States, and Burra and Moonta in South Australia. In such places, Cornish culture proliferates and festivals like the Australian Kernewek Lowender (Cornish enjoyment) unite aspects of pre-industrial, industrial, and post-industrial Cornish cultural identity, including an appreciation of a Celticity which links these traditions to those of the other CELTIC COUNTRIES.

Emvod Etrekeltiek an Oriant (Festival Interceltique de Lorient)

For over thirty years, each August the Interceltic Festival in Lorient (An Oriant), Morbihan, Brittany (BREIZH), has attracted a worldwide audience of all ages to enjoy the diverse music of the Celtic lands on the European Atlantic periphery. The festival in Lorient evolved from the earlier Festival des Cornemuses, a Breton piping and pipe-band championship, first held in Brest in 1953, which was moved to Lorient in 1971 in an attempt to reinvigorate the championships and encourage international participation (see BAGPIPE; BINIOU).

The Scottish Highland bagpipe (BINIOU *braz*) began to be used by Breton musicians at the end of the 19th century. Breton cultural activist Polig Montjarret founded pipe bands (*bagadoù*) during and after the German occupation of the Second World War in order to increase the number of traditional music players. Earlier, pairs of musicians had used the medieval Breton *bombard* along with the high-pitched *biniou kozh* (small pipes, lit. 'old bagpipe') to accompany dance music. However *bombard*, *biniou braz*, and drums produced a better balance in a larger band. The adoption of Scots and Irish pipe tunes aided the Breton musical revival, and led directly to the development of an inter-cultural 'Celtic music'.

The Festival des Cornemuses in Lorient invited musicians from the six CELTIC COUNTRIES and from the Celtic diaspora in the New World, as well as the Spanish regions of GALICIA and Asturias, which sometimes claim Celtic cultural heritage and have lively contemporary piping traditions. This helped to promote Brittany's distinctive Celtic identity which had survived hostility from the centralized French State and media.

As an inclusive, attractive spectacle, Emvod Etrekeltiek an Oriant augments traditional music with jazz, rock, and classical forms in its open-air and indoor concerts, parades, lectures, informal sessions, and communal dance. Major new works have been commissioned—a good example of which is the 1983 Lorient Festival Suite, which Shaun Davey composed for solo traditional players, singers and orchestra. It became *The Pilgrim*, and has been played in several countries with a reprise at Lorient in August 2001.

The port of Lorient was extensively rebuilt following the Second World War, and provides ideal open-air spaces, excellent access and accommodation. From the first Friday to the second Sunday in August, Lorient has attracted upwards of 500,000 spectators in recent years. To reach such levels of popularity is as much a tribute to its organization as to its concept. From the start, a small core of professional organizers called on a loyal cohort of voluntary helpers numbering several hundreds. They come from the participating Celtic lands, and organize the transportation, feeding, accommodation and, above all, performances by musicians, lecturers, exhibitors, and film makers, now numbering 4500 each year.

While younger events such as Celtic Connections in Glasgow (GLASCHU) and Celtic Colours in Cape Breton, Nova Scotia, Canada, feed from it, Emvod Etrekeltiek an Oriant is the prime showcase for listening to the songs which perpetuate the 'pure' traditions of the individual Celtic countries and the instrumental music which, through cross-fertilization, created the new self-aware phenomenon of 'Celtic music'. The piping competitions are as keenly contested today as formerly, and the festival has played a key rôle in defining, disseminating, and enhancing the prestige of a distinctive and eclectic modern Celtic culture.

Enaid Owain ab Urien (The soul of Owain son of URIEN; MS *Eneit Owein ap Vryen*; also known as *Marwnad Owain*) is an early Welsh poem attributed by many modern scholars to the historical 6th-century poet TALIESIN, partly on the basis of the subject matter—the poem commemorates a 6th-century northern BRYTHONIC hero—and partly on its inclusion in the LLYFR TALIESIN manuscript. Consistent with details found in other poems in this manuscript, as well as in the saga ENGLYNION on Urien and his sons, Owain is identified as lord of RHEGED and probably also the northern country of Llwyfenydd (MS *vδ llewenyδ*). His enemies are the men of England (Lloegr), and he is said to have slain Fflamddwyn (Flamebearer), a nickname that appears elsewhere in *Llyfr Taliesin*, apparently referring to an Anglo-Saxon leader of BRYNAICH. Vivid imagery includes a description of 'England's broad host asleep with light in their eyes'.

Several details suggest that *Enaid Owain* is late in the CYNFEIRDD corpus. First, the word *eneit*, the poem's keynote, means 'soul' in a thoroughly Christianized sense, not the older meaning 'life force' attested elsewhere. Metrically, it is a near flawless example of the *awdl-gywydd* metre of the canonical twenty-four metres of the later medieval period: fourteen-syllable lines with a break regularly falling at the word-final seventh syllable and marked by internal rhyme. The third line (of a total of eleven) is the only exception: both feet are six syllables. In line 6, the internal rhyme is *Fflamddwyn* : *fwy n/oc* 'more than', which would not have been possible in the 6th century, though viable by the 8th.

The poem's content is essentially a prayer for the hero's soul. The poet does not adopt the explicit attitude of singing on the occasion of Owain's death. Since Owain is otherwise famous in early WELSH POETRY, and eventually became one of the great heroes of international ARTHURIAN literature (cf. TAIR RHAMANT), concern for his soul among Christian men of letters might have inspired this polished poem a century or more after his death. Compare, for example, the 9th-century ELISEG'S PILLAR, where Cyngen of POWYS invites passers-by to pray for the soul of his great-grandfather, the warrior-king Elise.

Enclosures are an archaeological feature of IRON AGE settlements, highly characteristic of, but hardly limited to, ancient Celtic-speaking areas. This general term functions as an umbrella to cover several sub-categories—VIERECKSCHANZEN (rectangular enclosures), hill-forts, cattle stockades, and other areas of land delimited by earthworks, most commonly a bank and a ditch. The bank was often topped by a wooden palisade, and sometimes the outer face was retained and made sharply vertical with dry-stone masonry (i.e. without any mortar or cement; see FORTIFICATION).

In the eastern LA TÈNE area (present-day south Germany, Austria and the Czech Republic), most enclosures were *Viereckschanzen*, whose functions are still unclear. Further west, in GAUL, alongside other types of enclosures, there are also examples of *Viereckschanzen*, which seem to have counterparts in the south of England. In southern England and the western La Tène zone of the Continent, hill-forts and oppida (sing. OPPIDUM), also occur, with some large oppida also in central Europe (e.g. STARÉ HRADISKO); these are essentially fortified towns. Some *Viereckschanzen* seem to have had a ritual function (see FANUM). However, recent research and analysis suggest that most of them were fortified farmsteads rather than sanctuaries.

PEB

Englyn is a type of Welsh metre. Eight different kinds of *englynion* are listed among the traditional twenty-four strict metres, all with obligatory CYNGHANEDD (systematic line-internal sound correspondences) from the 14th century onwards (see AWDL; CERDD DAFOD; CYWYDD; EINION OFFEIRIAD). Two of these metres have only three lines—the *englyn milwr* (lit. 'soldier *englyn*') and the *englyn penfyr* (lit. 'short-end *englyn*') which are characteristic of the saga, gnomic, and NATURE POETRY of the 9th and 10th centuries (see ENGLYNION). It is not impossible that some examples, such as the *englynion* in the GODODDIN, might be older than this. The following famous example of the *englyn penfyr* (in which medieval spelling is retained) is from the HELEDD cycle:

Stauell Gyndylan ys tywyll heno,
Heb dan, heb gannwyll.
Namyn Duw, pwy a'm dyry pwyll?

Cynddylan's hall is dark tonight,
Without fire, without candle.
But for God, who will give me sense?

Of the four-line *englynion*, by far the most common from the 12th century onwards is the *englyn unodl union*. This famous example by TUDUR ALED (*c.* 1500) illustrates the syllabic structure—10, 6, 7, 7—and the *gair cyrch* which follows the main rhyme of the first line (like the *englyn penfyr*):

Mae'n wir y gwelir argoelyn—difai
Wrth dyfiad y brigyn
A hysbys y dengys dyn
O ba radd y bo'i wreiddyn.

It is true that one sees a faultless sign
In the growth of the shoot;
And man manifestly shows
From what grade his root is.

The first two lines are known as the *paladr* (lit. 'spearshaft' or 'ray'), and the last two as the *esgyll* (lit. 'wings'). The *esgyll* is equivalent to the *cywydd* couplet, and has the same rhyming pattern—one stressed syllable and the other unstressed, thus often involving vowels of different phonetic length. Reversing the order of *paladr* and *esgyll* gives the much less common *englyn unodl crwca*.

The *englyn cyrch* is characterized by the *odl gyrch* which rhymes the end of the third line with the caesura of the fourth, and corresponds to the *triban* ('three

prominences') in the free metres. Three other kinds of *englyn* use *proest* or assonantal rhyme (like consonants, but not identical vowels), and are distinguished by the types of vowels used, *proest dalgron* for simple vowels, *lleddfbroest* for diphthongs, and *proest gadwynog* ('chained *proest*') where alternate lines have full rhymes. *Englynion proest* are very common in the *awdlau* of the Poets of the Nobility (see CYWYDDWYR; WELSH POETRY).

From the earliest period *englynion* were normally used in extended series known as *cyngogion*, and later as a *cadwyn* or chain, linked by *cyrch-gymeriad* repeating a word or sound from the end of one line to the beginning of the next. In the work of the Poets of the Princes of the 12th and 13th centuries (see GOGYNFEIRDD) the *englynion* series seems to have been an alternative form to the *awdl*, and although it has been argued that the *englyn* was of a lower status and was used originally by the *bardd teulu* ('household bard'; see BARDIC ORDER), there is no firm evidence to support such a view. There are isolated instances of the use of *englynion* within *awdlau* by the Poets of the Princes, and this practice spread rapidly in the 14th century to become standard practice in the *awdlau* of the Poets of the Nobility. In the same period the single *englyn unodl union* came to be used as a form of epigrammatic expression, as seen in the example quoted above, and it was also used to good effect in bardic debates (YMRYSONAU) and flytings. The *englyn* has remained popular with folk poets from the 18th century until the present day, as many commemorative verses on gravestones throughout Wales (CYMRU) attest, and it is the mainstay of the contemporary flourishing of strict-metre poetry.

Dafydd Johnston

***Englynion*, saga**, is a term which describes a sizable body of early WELSH POETRY composed in the three-line metre known as the earlier type of ENGLYN; their metrical form is described in that article.

§1. THEMATIC CONTENT AND LITERARY FUNCTION

Although the early *englynion* are used for a wide range of subject matter (see below), themes of martial heroism viewed with the attitude of the grief and nostalgia of bereaved survivors have particular prominence in this material. In their concern with the values and HEROIC ETHOS of the war-band and looking to a heroic age set in 6th- and 7th-century BRITAIN, the saga *englynion* offer many points of commonality with the poetry in the AWDL metres attributed to the CYNFEIRDD. However, readers will perceive obvious differences. Whereas the attitude of the *awdlau* of ANEIRIN and the other *Cynfeirdd*, like those of the GOGYNFEIRDD of the 12th and 13th centuries, are intelligible as the sentiments of court poets, composed and performed for specific noble patrons for specific public occasions, the personas of the poets of saga *englynion* are felt more as characters in stories, as opposed to functionaries upholding a real social order at a particular point in history. These poetic personas, such as Llywarch Hen or HELEDD, are highly developed, emotionally and psychologically. And they are often in isolation, not declaiming their verses before the throng in the court, but in rude circumstances, in hardship, often out of doors, looking back, literally or in the imagination, over their former aristocratic way of life and residence, now ruined and desolate. Owing to these factors and also to the fact that dramatic *englynion* are sometimes spoken by leading characters in the prose tales—such as ARTHUR in CULHWCH AC OLWEN or GWYDION in MATH FAB MATHONWY, Ifor WILLIAMS influentially argued that these *englynion* represented a residue of dramatic verse dialogue in works that had been originally performed as lengthy narrative sagas of mixed prose and poetry. This theory finds a measure of support in the analogy of the early Irish ULSTER CYCLE, tales that are mostly prose, but include dramatic speeches by the leading characters in the metrical *rosc* style. Although Ford rejected this 'lost prose matrix' theory, we have to assume that a traditional narrative background was understood by the audience in order to appreciate the tragic destinies of the characters speaking the verses.

§2. AUTHORSHIP AND DATING

Since Llywarch Hen and Heledd appear to us to be more literary creations than real poets and neither is

named in the Memorandum of the Five Poets, the saga *englynion* are generally regarded as anonymous compositions, and may, in part, be growths of cumulative tradition. The fictionalization of the settings means that attempting to date these cycles according to the events and persons described is at best complicated and probably inappropriate. Although the main manuscripts for the corpus (Llyfr Coch Hergest, Llyfr Du Caerfyrddin, NLW Peniarth iii, NLW 4973a and 4973b, BL Additional MS 31055(T)) are mostly of the central or later Middle Ages, it is generally accepted that texts were composed during the Old Welsh period (ad *c.* 800–1100), a conclusion supported by fairly numerous throwbacks in the text and the language of the extant copies, as well as the fact that a newer form of the *englyn* (with four lines) became popular in the 12th century. One precious survival proves that *englynion* of this general type were being composed and committed to writing in Old Welsh, namely the three *englynion* in the Cambridge Juvencus manuscript of *c.* ad 900, in which a chieftain glumly broods over his drink, his retinue reduced to a single Frank, presumably an ignoble foreign mercenary.

Ni·canam, ni·guardam, ni·cuasam henoid,
cet iben med nouel,
mi a-m·Franc d'am an patel.

I do not sing, I do not laugh, I do not . . . tonight, though we drank fresh mead, my Frank and I, around our bowl.

§3. the llywarch hen cycle

Consisting of 303 lines in Rowland's edition, the central figure and main speaker is Llywarch the Old (or the Ancestor). He presents himself as an aged noble warrior, whose twenty-four sons have all been killed in battle, for which he now feels guilt. On the basis of internal evidence we can see that at least one reason for his responsibility is that he inculcated the heroic ideal in them and urged them to fight for honour and to protect the homeland. The sons whose heroism and doom receive the most attention are Gwên, Pyll, and Maen. The recurrent sense of personal doom is epitomized in the *englyn*:

Truan a dynghet a dynget y Lywarch,
yr y nos y ganet,
hir gnif heb escor lludet.

It was a doomed man's destiny that was destined to Llywarch, since the night he was born, long labour, without deliverance from exhaustion.

The theme of 'dooming a destiny' also occurs in *Culhwch* and *Math*, and has resonances elsewhere in Celtic tradition. The Llywarch *englynion* repeatedly allude to Urien of Rheged and his family (his sons and his sister Efrddyl), and the descent of both Llywarch and Urien from the common ancestor Coel Hen is found in the Middle Welsh genealogies known as *Bonedd Gwŷr y Gogledd* (Descent of the men of the north). However, most of the geographical associations belong, not to north Britain, but to eastern Wales (Cymru) and the border area, and on this basis Sims-Williams proposes that the cycle took shape at the Viking-age royal crannog (artificial island) at Llangors in Brycheiniog (CMCS 26.27–63).

The name *Llywarch* is Celtic; for the etymology, see Llywarch ap Llywelyn.

§4. the heledd cycle

The main discussions are in the articles Cynddylan and Heledd. In 339 surviving lines, the poetic persona is interestingly female—Heledd, the sister of the fallen hero Cynddylan, who laments her brother and his ruined kingdom, mostly in present-day Shropshire (swydd Amwythig) in England. *Canu Heledd* includes the hauntingly memorable and often quoted imagery, including *Stauell Gynðylan ys tywyll heno* (Cynddylan's hall is dark tonight) and descriptions of screaming bloody eagles devouring Cynddylan's corpse.

§5. the urien englynion

Comprising 177 lines, these verses are also discussed in the article on Urien. Although King Urien and his family are the subject, he is not the poetic persona, and it is not clear who is speaking. Thirty-six lines describe the ruined and overgrown hearth of what had been the court of Rheged. Forty-two lines are delivered by a poet in the macabre situation of carrying Urien's severed head; another 30 lines describe Urien's decapitated corpse. In the former, there is much penetrating wordplay on the multiple senses of *pen* (head, chief, leader) and *porthi* (carry, support [e.g. of a poet by his patron]). The situation is reminiscent of that in Branwen, in which seven survivors, including the poet

Taliesin, return from Ireland with the severed head of their king, Brân, and the *englynion* may intentionally echo this story:

> *Penn a borthaf ar vyn tu,*
> *penn Uryen llary—llywei llu—*
> *ac ar y vronn wenn vran ɓu.*
>
> The head I carry at my side, head of generous Urien—he used to lead a host, and on his white breast (*bron wen*) a black crow (*brân*).

The poet is convulsed by guilt, but is not necessarily the killer. It is likely that the Urien *englynion* reflect the same story as that which occurs in Historia Brittonum (§63), where Urien is said to have been assassinated by his own ally and kinsman Morgan (Old Welsh Morcant) while besieging the Anglo-Saxons on Lindisfarne. The *englynion* do agree with this account in as much as the event is said to have taken place in Brynaich and specifically at Aber Lleu, which could mean the mouth of the river Low, very close to Lindisfarne (Sims-Williams, CMCS 32.25–56). Since their setting and personnel are entirely northern, the Urien *englynion*, unlike the Llywarch Hen and Heledd cycles, raise the question whether the genre of the sagas originally developed in what is now Wales or in Dark Age north Britain. The fact that the Gododdin includes two *englynion*, one seeming to be a stray from the Llywarch Hen cycle, is certainly relevant to the issue, but is not immediately decisive one way or the other.

§6. some other types of early englynion

The three-line *englyn* was used for religious poetry as early as the group of nine found in the Juvencus manuscript. This is a copy of *c.* 900, and scribal errors indicate that there was an even earlier written original, though not necessarily much earlier. The verses on the death of Geraint at the battle of Llongborth differ from the foregoing cycles in that the poetic persona is not more developed or psychologized than that of, say, Aneirin in the *Gododdin*. A catalogue poem listing the battles of Cadwallon is of uncertain historical value. The *englyn* is the usual vehicle for the large body of early Welsh nature poetry, and the fact that the Llywarch and Heledd cycles often express the churning thoughts and observations of their personas while in isolation out of doors suggests how the saga and nature-poetry genres came to overlap. A similar affinity helps to explain why the *englyn* is often the vehicle for gnomes or expressions of eternal truths (thus comparable to Irish wisdom literature), occurring sometimes within the saga material, as statements of resigned destiny, but also in the nature poetry and other contexts. *Englynion y Beddau* ('Stanzas of the Graves', ed. Thomas Jones) occur as 228 lines in *Llyfr Du Caerfyrddin*. Listing the graves of heroes, it is a catalogue of heroic tradition and place-name lore. As such, these verses are a valuable source for early Welsh tradition, including allusions to many stories otherwise lost, in this respect similar to the Triads and the catalogues in Culhwch ac Olwen. As in the Geraint *englynion*, the *Beddau* stanzas contain an early allusion to Arthur (see also anoeth). Bedwyr is also named, and there is an allusion to the battle of Camlan.

For a variety of purposes, many of the major poets of Wales in the central and later Middle Ages continued to use the *englyn* (usually the four-line form), including several whose *englynion* are mentioned in other articles in the Encyclopedia: Cynddelw (see also bardic order [2] §7); Dafydd ap Gwilym; Bleddyn Fardd; Casnodyn; Dafydd Benfras; Elidir Sais; Gwerful Mechain; Llywarch ap Llywelyn; Seisyll Bryffwrch. *Englynion* were commonly mixed with *awdlau* within a single poem in the works of the Gogynfeirdd.

Enlli (**Bardsey**), historically the most important of the Welsh island centres of devotion, lies at the tip of the Llŷn peninsula. The origins of its religious associations are unclear, though it may have been connected with an early Christian settlement at Anelog, near Aberdaron. In his *Itinerarium Kambriae* of 1188, Gerald de Barri (Giraldus Cambrensis) relates that Enlli was occupied by monks whom he calls Colidei, usually understood to refer to the Irish monastic movement known as *Céili Dé* (Fellows of God). The Welsh vernacular tradition, however, associates the foundation of the island community with Cadfan and his successor as abbot, Lleuddad. Viking raids and other incursions from the 9th to the 11th centuries suggest that an unbroken ecclesiastical presence would have been unlikely. But from the brief *Vita* of the hermit Ælgar in the Book of Llandaf (*Liber Landavensis*), it may be inferred that individual hermits and small communities maintained the island's tradition of religious life.

By the high Middle Ages, Enlli was considered to be the burial place of numerous significant religious figures, including Deiniol, Beuno, and also Dyfrig (Dubricius), whose relics were said to have been transported from Enlli in 1120 by order of Bishop Urban for the consecration of Llandaf cathedral. In the *Liber Landavensis* it is also stated that Enlli was the burial place of the presumably symbolic number of 20,000 saints, confessors, and martyrs. The *Historia* of Gruffudd ap Cynan relates that he left a bequest to the church on Enlli upon his death in 1137, and the island itself was memorably celebrated in the *marwysgafn* (death-bed poem) of his court poet, Meilyr Brydydd. Its importance seems to have been recognized by Edward I who, in 1284, visited Enlli following his conquest of Gwynedd. By the 13th century a priory of Augustinian canons had superseded the earlier *clas* (monastic community), and from then until the Reformation the island became a major centre of pilgrimage. The dangers of the journey, and the nature of the hospitality offered, were described vividly (and sometimes ruefully) by the Welsh poets of the time. The priory was dissolved *c.* 1537, although the burial of the recusant Huw ap Rhisiart of Bodwrda there in 1580 suggests that the island itself retained its religious significance for the Welsh: a tradition which has been echoed by 20th-century poets, among them T. Gwynn Jones and R. S. Thomas (see welsh poetry; anglo-welsh literature). Enlli's secular community life since the Reformation has also been the subject of study, and writers and artists have continued to be associated with the island. A designated Site of Special Scientific Interest, Enlli was bought by the Bardsey Island Trust in 1979, and became a National Nature Reserve in 1986.

Entremont was a hill-fort (see oppidum) located on high ground 1.6 km north of Aix-en-Provence in the south of France. It was destroyed in 122 BC by the Romans, and Aquae Sextiae, present-day Aix, was founded in its place. During its heyday, Entremont extended over 4 ha (about 10 acres) and was fortified by walls, which remain partly preserved to a height of 4 m. On the north side these ramparts were further strengthened with towers. In the north-western part of the enclosure, a sanctuary (see fanum) was excavated; this was decorated with carved stone pillars with carved representations of severed heads (see head cult) and fragments of life-size figures. Fifteen human skulls which had been fixed to the stonework with nails were also found. Similar ceramic figures, representations of severed heads, and also the skulls themselves were found in the nearby fortified settlement at Roquepertuse.

Eochaid Buide (Hiberno-Latin Echodius), king of Scottish DÁL RIATA 608–†29, the son and successor of the formidable AEDÁN MAC GABRÁIN, is treated as a figure of historical significance in the Life of COLUM CILLE by ADOMNÁN (1.9) and in the ANNALS of Ulster. According to the former, before the 'battle of the Miathi', Colum Cille asked Aedán about the kingdom's succession. Aedán replied that he did not know which son—Artúr, Eochaid Find, or Domangart—would rule after him. To which the saint answered that none of those would succeed, but all three would fall in battle, slain by enemies. He added that if Aedán had younger sons, they should be brought, and the one who ran to Colum Cille would succeed; this, indeed, is what the young Eochaid Buide did. The prophecy was fulfilled: Artúr and Eochaid Find died fighting the Miathi, and Domangart fighting the Saxons. The story is meant to illustrate not only Colum Cille's supernatural foresight, but that he was to be heeded by kings specifically on issues of succession and military matters. Eochaid's death notice in the Annals of Ulster cites *Liber Cuanach* (The book of Cuanu) as saying that he was king of the PICTS, the first Scottish king for whom such a claim is made, thus asserting the long-term political ambitions of the SCOTS over 200 years before the traditional foundation of the unified kingdom of Picts and Scots under CINAED MAC AILPÍN. In the Middle Irish saga, *Fled Dúin na nGéd* (The feast of Dún na nGéd), Eochaid figures as the grandfather of the Congal Caech of ULAID (†637; see MAG ROTH), but, since the two were near contemporaries, this is doubtful. The common Old Irish man's name *Eochaid*—also the name of Eochaid Buide's brother—is Celtic and based on a word for 'horse', Old Irish *ech* < PROTO-CELTIC **ekwos*. In Scottish Dál Riata, the name perhaps commemorates the old local tribal name recorded by PTOLEMY as Ἐπιδιοι *Epidii* < Proto-Celtic **Ekwodiī* 'horsemen'. The epithet *buide* means 'fair' or 'red-haired'; cf. the Gaulish tribal name *Badio-casses*.

Eochaid son of Rhun was king of the PICTS (878–89). In the CHRONICLE OF THE KINGS OF ALBA, the only source of information about his reign, he is described as the 'son of the king of the BRITONS' and the grandson of CINAED MAC AILPÍN by a daughter. It has been assumed that his father was the Rhun who was son of Arthgal, king of the Britons of YSTRAD CLUD, killed in 872, but we do not know for certain that this Rhun was king of the Britons, and the chronology seems compressed. Eochaid came to power, presumably through this cognatic claim, after the killing of Aed mac Cinaeda and during a period of severe pressure on the Pictish kingship from Norse raids. He may himself have begun as king of the Britons, though this too is uncertain. His accomplice, in what the Chronicle describes almost as an interregnum or usurpation, was his foster-son Ciricius (Giric mac Dúngaile, according to other texts), there also called his *ordinator*. At any rate, for a decade Pictland was ruled by men whose power base seems quite different from that of

previous rulers. The Chronicle sees signs of divine disapproval in the eclipse on the feast-day of St Cyricius, after which Eochaid and his foster-son were expelled from the kingship. It has been pointed out that this eclipse occurred in 885; therefore our chronology for this reign (and indeed, the Chronicle as a whole) is in some way askew. Further problems are added if this is the Eochaid, 'king of DÁL RIATA', whose daughter Land was given in marriage to an Irish king, Niall Glúndub (Hudson, *Kings of Celtic Scotland* 56). As Dumville states (*Kings, Clerics and Chronicles in Scotland* 79), this episode offers 'rich material for speculation, enthusiastically seized by writers on ninth-century North British history from our chronicler to the present day'. On the name, see EOCHAID BUIDE.

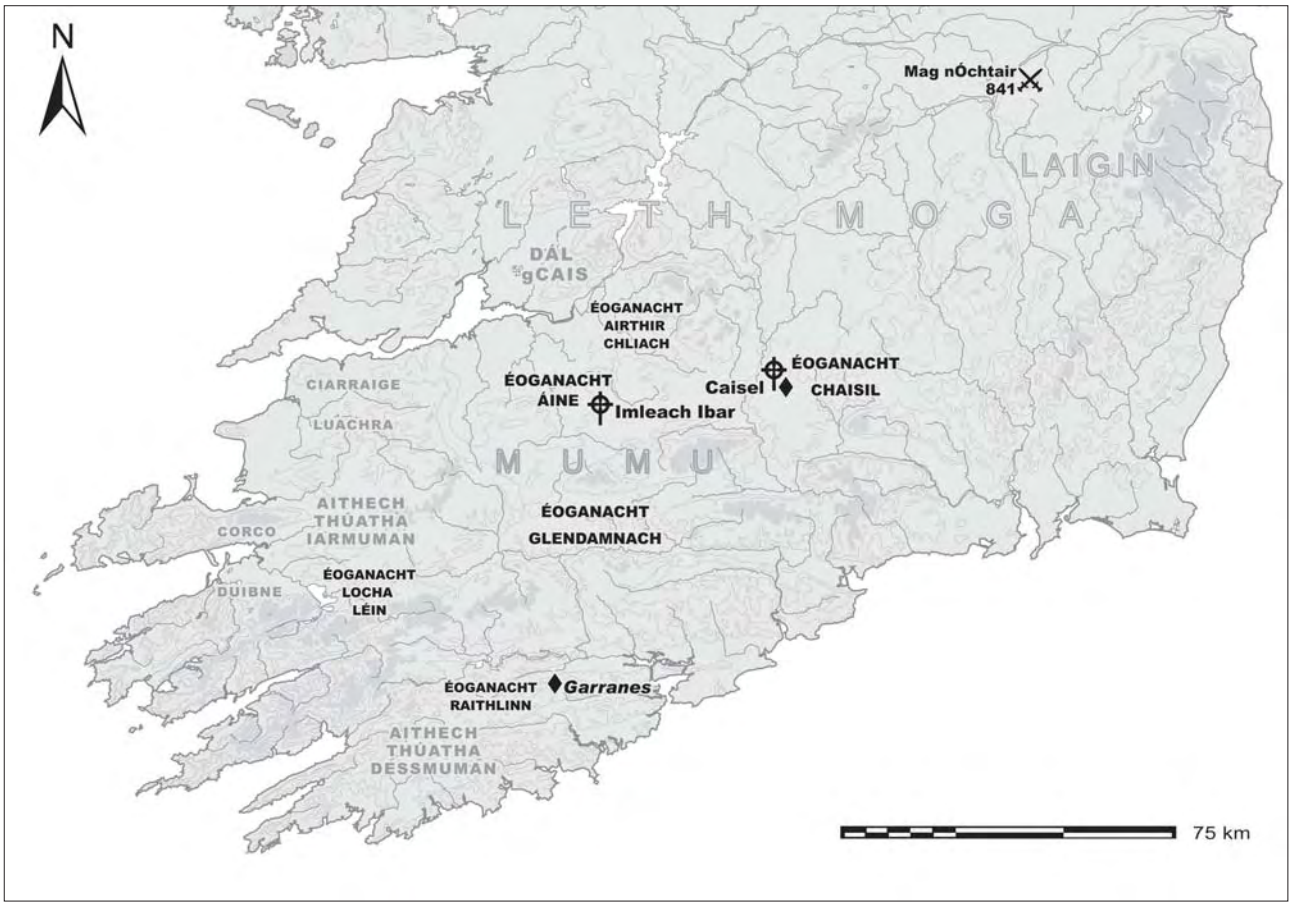
The **Éoganacht** were a powerful historic dynasty or, more properly, a federation of related dynasties who virtually monopolized the KINGSHIP of Munster (MUMU) from the 5th to the 10th centuries. Their power within the province was practically unchallenged up to the ascendancy of Mathgamain mac Cennétig of the DÁL GCAIS in AD 964.

The actual origins of the Éoganacht are obscure, but the shared identity of several septs (royal lineages) was based on a doctrine of common descent from Conall Corc (CORC OF CAISEL), the legendary founder of the royal seat at CAISEL MUMAN. Using the GENEALOGIES and counting generations back from his dated descendants, Corc would have flourished *c.* 400, and he was himself a distant descendant of Mug Nuadat, whose name means 'Servant of [the god] Nuadu' (see NŌDONS). Mug is also known as Éogan Taídlech or Éogan Fitheccach, bynames which probably arose to link Mug's story to the origin legend of the Éoganacht. Mug belongs to the remote prehistoric horizon of the pedigree. He is said to have originally divided Ireland (ÉRIU) in half, in an arrangement with CONN CÉTCHATHACH—Leth Moga (Mug's half), the southern half, and Leth Cuinn (Conn's half), the northern half. In the extant tradition, the usual understanding is that the Éoganacht dynasties are named from Éogan Már, grandson of Mug (himself also known as Éogan) and father of the first king of the line, Fiachu Muillethan, and more distant ancestor of Conall Corc.

The name *Éogan* is associated in early accounts with the Celtic word for the yew tree, Middle Irish *eó*, later also *í*, pointing to an Old Celtic name **Iwogenos* 'Born of the yew' (cf. Gaulish *Ivorīgi* 'Yew-king' [gen.]). In the legend of Conall Corc's founding of Caisel, a vision reveals that the royal seat of Munster was to be founded where a yew tree grew on a stone. The main religious foundation of the Éoganacht at Emly, Co. Limerick (Old Irish Imleach Ibar), derives its name from another Old Irish word for yew (*ibar* < Celtic *eburo-*), and a surviving decorated shrine from this site was made of yew-wood. These associations imply that the similar-looking Welsh name *Owain*, Old Welsh EUGEIN, would not be related, since the latter probably derives from Latin *Eugēnius*.

The central three septs of the dynasty, which inhabited east and central Munster—Éoganacht Chaisil, Éoganacht Glendamnach, and Éoganacht Áine—formed a core, with the great majority of the kings of Munster coming from these groups. There was a relatively stable centralized government in the province for a period in the 7th and 8th centuries under a system of kingship rotation amongst these three septs. A lesser sept closely related to that of Caisel was the Éoganacht Airthir Chliach.

An 8th-century genealogical poem (O'Brien, *Corpus Genealogiarum Hiberniae* 1.199–204) goes to some pains to show the importance of the outlying septs—Éoganacht Locha Léin and Éoganacht Raithlinn, naming them as overkings of the *aithech thúatha* or 'subject tribes' of Iarmumu (west Munster) and Dessmumu (south Munster), respectively. These two groups, particularly the former, were independent in most respects, though nominally conforming to the concept of a high-kingship at Caisel. From the accession of Feidlimid mac Crimthainn in AD 820 until the loss of the crown to



The Éoganacht in early medieval Munster (Mumu)

the Dál gCais, the Éoganacht Chaisil maintained a monopoly on the Munster kingship. This situation was facilitated by the loss of power of Éoganacht Locha Léin after the *aithech thúatha* of Iarmumu—including the Corco Duibne, Corco Orchae, and Ciarraige Luachra—transferred their allegiances directly to Caisel.

Such new dynastic cohesion at home allowed Feidlimid to become the most formidable rival produced by the Éoganacht to challenge the greatest power of Leth Cuinn, namely the Uí Néill overkings of Tara (Teamhair). Feidlimid carried out a long campaign of alternating warfare and political manoeuvring against Niall mac Aedo, the king of Tara at the time. However, his surprise defeat by Niall at Mag nÓchtair in AD 841 put an end to any Éoganacht hopes of attaining real Ireland-wide power. The provincial kingship of Munster, lost to the Dál gCais in the 10th century, was wrested back for several decades in the 12th century, during which time King Cormac Mac Cárrthaig commissioned the famous Romanesque chapel on the Rock of Caisel.

From an archaeological perspective, it has been suggested that a large trivallate ring-fort excavated at Garranes, Co. Cork, was a royal site of the Éoganacht Raithlinn. Garranes, where settlement activity has been dated to *c.* AD 500, has yielded evidence of long-distance trade connections with France and the eastern Mediterranean region in the form of exotic pottery and Merovingian glassware.

SÓF

Éoganán mac Oengusa (**Uuen son of Unuist**, r. 837–9) was king of both the Scots and the Picts, significantly some years before the usual date assigned to the foundation of the united kingdom of Alba by Cinaed mac Ailpín *c.* 845. The son of the Pictish king Unuist son of Uurguist and also a member of the main Cenél nGabráin dynastic lineage of Dál Riata, he appears in the king-lists of both peoples. He fell among heavy losses in a battle noted in the Annals of Ulster between the heathen Norse and the men of Fortrinn, roughly present-day Perthshire (Peairt). It is probable that Viking pressure contributed to the consolidation of Scottish and Pictish leadership, based in this inland region.

JTK

Ephorus, Ἔφορος (*c.* 405–*c.* 330 BC), of Cyme in Aeolia was a Greek author whose works included a 30-book universal history, Ἱστορίαι. It survives only fragmentarily, but was utilized by several later classical writers, some of whom were important sources on the ancient Celts: Diodorus Siculus (the main extant vehicle for Ephorus), Plutarch, Polyaenus, Polybius, and Trogus Pompeius. His works seem to have been the earliest extensive account of the Greek colonies of the western Mediterranean and their neighbours. Strabo (4.4.6) cites Ephorus as stating that Celtica was so large that it included most of the Iberian Peninsula down to Gades (Cadiz) in the neighbourhood of the Straits of Gibraltar and, in the same passage, that the Celts had, in earlier times (i.e. Ephorus' day), been strongly adverse to becoming fat, and punished young men who became potbellied. The former statement, though not decisive in proving that most of what is now Spain and Portugal was Celtic-speaking in the 4th century BC, is nonetheless important evidence in assessing the linguistic situation. Although Ephorus is never quoted as a source of information on Armorica, Britain, or Ireland, Hawkes thought it likely that Ephorus had transmitted the ancient names *Albiones* 'the Britons', and *Hierni* 'the Irish' (see ÉRIU), to the Greeks. However, these names are usually traced back to an older text—the Massaliote Periplus.

Epona's name is Celtic, specifically Gallo-Brittonic (P-Celtic), and means 'horse goddess'. She is the most abundantly attested Celtic deity of the Roman Empire. Evidence for her cult is strongest in central and eastern Gaul, as well as the military zones of the Rhine and Danube frontiers, and northern Roman Britain. Within the military, the cult recurs among, but was not limited to, cavalry units and units recruited from Gaul. Epona is mentioned by the Roman author Juvenal (see GREEK AND ROMAN ACCOUNTS §9), but we know of the cult mainly from INSCRIPTIONS and accompanying images, many on Romano-Celtic altars with a *focus* cut into the top for the pouring of libations or presenting other offerings. In the inscriptions, almost all of which are in Latin, with far fewer in Greek, she is sometimes called *dea* 'goddess' or *regina* 'queen' and is often grouped with other deities, for example, the following on an altar at Pförring, Bavaria:

CAMPES(TRIBUS) ET
EPONAE ALA I
SING(ULARIUM) P(IA) F(IDELIS)
C(IVIUM) R(OMANORUM CVI P(RAE)EST
AEL(IUS) BASSIANUS
PRAEF(ECTUS) V(OTUM) S(OLVIT) L(IBENS) M(ERITO)

> To the gods of the parade ground and to Epona, the devoted and loyal first *ala* [auxiliary cavalry unit] of *singulares*, Roman citizens led by the prefect Aelius Bassianus, in fulfilment of a vow. (CIL III nos. 5910 and 11909)

From Auchendavy on the Antonine Wall in Scotland (Alba), a Roman altar reads:

MARTI
MINERVAE
CAMPESTRIBVS HERC(V)L(I)
EPONAE
VICTORIAE
M(ARCVS) COCCEI(VS)
FIRMVS
C(ENTVRIO) LEG(IONIS) II AVG(VSTAE)

To Mars, Minerva, the Goddesses of the Parade Ground, Hercules, Epona, and Victory, Marcus Cocceius Firmus, centurion of the Second Legion Augusta [set up this altar]. (RIB no. 2177)

A small bronze plaque for a donkey cart found at the Gallo-Roman centre Alesia carries the punched inscription:

DEA(E) EPON(A)E. SATIGENUS SOLEMNI(S)
FIL(IUS).V(OTUM).S(OLVIT).L(IBENS)

To the goddess Epona, Satigenus son of Solemnis willingly fulfilled his vow.

The name *Satigenus* is Celtic.

The Epona cult was richly visual. Relief sculptures often show her riding a horse side-saddle, the goddess astride the horse being more common in the territory of the Treveri in north-east Gaul. She sometimes appears with a foal, particularly in the territory of the Aedui. Images showing the goddess enthroned were popular in the Rhine–Danube military frontier zone and are probably to be understood as imperial iconography. The figure of the horse cut into the hill at Uffington may reflect a related cult in pre-Roman Britain.

In Celtic studies, Epona is often mentioned—and attempts have been made to recover her myth—in connection with supernatural female characters in early Irish and Welsh literature who have strong thematic and narrative associations with horses, such as Macha and Rhiannon (cf. also sovereignty myth), as well as the Welsh folk custom of the Mari Lwyd. On the likelihood that traditions of Epona have survived in Continental chivalric romances, see Romance lyric (also Arthurian literature [6] §2; courtly love).

The root of the name *Epona* also occurs in Old Irish *ech* 'horse' and the Gaulish month name EQVOS found on the Coligny calendar, both from Indo-European **ék*wos* 'horse'. On this type of divine name-formation, cf. Damona; Matronae; Nemetona; Sirona.

Éremón mac Míled was a major figure in Irish legendary history and, according to Lebar Gabála Érenn and related texts, one of the sons of Míl Espáine. He was one of the primary leaders of the Milesians in their conquest of Ireland, and was married to Tea, after whom, according to the dindshenchas, both Teamhair Luachra (Co. Kerry) and Teamhair Breg (Co. Meath) are named.

Following the final defeat of the Tuath Dé by the Milesians at *cath Tailteann* (the battle of Tailtiu), Ireland was divided between Éremón and his brother Éber in accordance with a judgement pronounced by their brother and lawgiver, Amairgen mac Míled.

The country was divided along a glacial ridge, Eiscir Riada, which runs from Galway Bay in the west to near Dublin (Baile Átha Cliath) in the east. Éremón was given the northern half and Éber the southern in an arrangement which mirrors the (supposedly) later division of Ireland between Mug Nuadat and Conn Cétchathach (cf. éoganacht).

However, the agreement broke down during a dispute over several small hills, and in the ensuing war Éber was slain by Éremón, who assumed kingship of the island as a whole. Nonetheless, the strife among the descendants of Míl continued, and Éremón had to repeat his fratricide by killing Amairgen in *cath Bile Theineadh* (the battle of the tree of Teine) before order

was imposed. Éremón is credited also with sending the invading Picts (Cruithin) to Alba (Scotland) after they realized they were not powerful enough to engage him in battle.

Similar to the Mug/Conn division, the partition of Ireland by the sons of Míl was probably a creation of 7th- or 8th-century writers to explain and justify the ideological division of that period between the prestigious royal site of Caisel Muman and that of Tara (Teamhair). In their pseudo-historical and genealogical propaganda, the Éoganachta of the south-west and the Uí Néill of Ireland's midlands and north traced their lineages back to Éber and Éremón, respectively, which legitimized their regional hegemonies. It is only in the later (11th-century) *Lebar Gabála Érenn* that Éremón is seen to ascend to high-kingship through self-defence against the aggression of Éber. This newer doctrine reflects the increasing reality of an Irish national high-kingship from the 9th century onwards.

T. F. O'Rahilly (Ó Rathile) was no doubt correct that the name *Éremón* was based on Ériu (Ireland). Most probably, *Éremón* arose through the ingenious etymological speculation so characteristic of Irish learning in the early medieval period. For linguistic reasons, it is not likely to derive from an ancient cognate of the Sanskrit mythological figure *Aryaman* (though this Sanskrit name is possibly related to the Old Irish name *Airem* and the name of the Galatian chief *Ariamnes*, cf. Phylarchus).

SÓF

Erispoë was the son of Nominoë and leader of autonomous Brittany (Breizh). He reigned from 851 to 857, but had already taken on a leadership rôle at several points during his father's reign, even as early as 843. At one stage in the conflict with Louis the Pious, king of the Franks, Erispoë was recognized as Louis' vassal, and his lordship over the Breton marches (Frankish–Breton frontier zone) was confirmed. In 857 Erispoë was murdered by his cousin and foster-brother, Salomon, along with Salomon's brother, Almar.

AM

Ériu [1] is the Old Irish name for Ireland, corresponding to Modern Irish *Éire*. The spelling *Ériu* remains common in sources of the Middle Irish period (*c.* 900–*c.* 1200). The corresponding ancient form *Iveriō* and its earliest attestation are discussed in the entries on Massaliote Periplus and Avienus. For the several related names for Ireland and the Irish in Greek and Roman accounts, see Hibernia. The etymology of *Ériu* and the meaning and implications of some related forms are discussed in the next section of this article, and this is followed by an outline of early Ireland down to the Anglo-Norman incursions that began in AD 1169.

§1. ETYMOLOGY

Iverio (Primitive Irish **Īweriū* > Old Irish *Ériu*) is not attested until the 3rd century AD, but the people name derived from *Hierni*, *Iverni* Ιουερνοι, &c. (Primitive Irish **Īwernī* 'people of Iverio/Ériu' > Middle Irish *Érainn*) was recorded centuries earlier, showing the island's name to be at least as old. *Iverni* and *Iverio* are Celtic names. Celtic **Īweriū* derives from Indo-European **PiHwerjoHn* 'The Fertile Land' and is the cognate of Greek πίειρα *píeira*, Sanskrit *pīvarī*, feminine adjectives meaning 'fat, rich', mostly applied to land in Greek; cf. the district name Πιερία *Piería* in Thessaly. The place-name *Ériu* has, as a byform, a common Old Irish noun *íriu*, meaning 'earth, land'. The same Indo-European root **peiH-* 'to be fat, swell' is the base of two names of the ancestors of the Irish in legendary history, *Iär* (< **Īweros*) and *Íth*. They were probably originally eponyms (namesake founders), but by the literary period the connection was no longer obvious due to sound changes that had occurred already

in the prehistoric period. In Lebar Gabála Érenn, Íth was the first of the followers of Míl Espáine to see Ireland from Spain. Later, he is the first ashore and praises the country's abundance, addressing the indigenous Tuath Dé: '. . . you dwell in a good land. Abundant are its mast and honey and wheat and fish'. He is then the first Gael to die in Ireland. By the time of the *Geography* of Ptolemy (2nd century ad, using 1st-century sources), the group name Ιουερνοι *Iverni*, which had once referred to all the Irish, had been marginalized, appearing as a tribal name in the southwest. This agrees with usage in early Irish literature, where *Érainn* is used for tribal and dynastic groups, most notably in Mumu/Munster. However, sagas such as Togail Bruidne Da Derga ('The Destruction of Da Derga's Hostel') and *Cath Maige Mucraime* (The battle of Mag Mucraime) recall that prehistoric Érainn kings had ruled Teamhair (Tara) in the Midlands and held sway throughout Ireland. St Patrick uses *Hiberionaci* (*Epistola* §16), genitive plural *Hiberionacum* (*Confessio* §23) to mean 'the Irish', corresponding exactly to Modern *Éireannaí*, genitive *Éireannach* 'the Irish' < Primitive Irish **Īwerionākī*, **Īwerionākan*.

§2. when were the first irish?

Like the Isle of Man (Ellan Vannin), but unlike the other Celtic countries, Ireland as an island does not owe its creation to wars and migrations, but rather to rising seas at the end of the last Ice Age *c.* 10,000 bc. Thus, it is not misleading to speak simply of Ireland when referring to ancient times, rather than 'the territory that is now Ireland', as is sometimes necessary with the other countries. Similarly, when we ask who were the first Irish, this can simply mean the first human beings in Ireland, in which case the answer is the fishers and hunter-gatherers of the post-glacial Mesolithic from *c.* 7000 bc. If, alternatively, we mean the biological ancestors of the present inhabitants, we do not have enough ancient DNA from Ireland to attempt an answer, even if we were able to master the theoretical complexities of the issue. From the point of view of Celtic studies, the question of Irish origins usually focuses on the origins of the Gaels, meaning *Gaeilgeoirí*, speakers of the Irish language, or of an ancient language which became the Goidelic family and no other. Since Goidelic speech most likely became established in Ireland when there were few—or more probably, no—written records produced in or about Ireland, no certain date can be assigned to the emergence of the Gaels, and a large number of different theories have been advanced. In canvassing ancient Ireland below, we shall not concentrate exclusively on either possible definition—human beings in Ireland or Gaelic speakers, but will bear both in mind, noting when the two were certainly the same, were likely to have been the same, or most probably diverged.

§3. prehistory

Owing to its remoteness from the literate civilizations of the Mediterranean and having remained independent of Rome, there are almost no recorded events in Ireland before the 5th century ad. In part, this deficit is fortuitously redressed by the fact that many ancient oaks have been preserved in Irish bogs and have provided a method of absolute dating by their tree-rings, with a continuous sequence now extended well back into the 6th millennium bc, unrivalled elsewhere in the Old World. As well as the relatively small number of Irish archaeological sites preserving samples of wood adequate to yield to-the-year dates directly, the Irish oak sequence is used to check and correct (calibrate) the more common radiocarbon dating method. Thus, we have a sound framework of absolute dates for prehistoric Ireland.

The Mesolithic (*c.* 7000–*c.* 4000 bc). Middle Stone Age inhabitants are reflected mainly in distinctive stone tools (microlith industries), but circular huts occupied for all or most of the year over several centuries from around 7000 bc have been found at Mountsandel near Coleraine, Co. Derry (Cúil Raithin, Contae Dhoire). No scholar has convincingly suggested how the early hunters of post-glacial Ireland could possibly have spoken a language that evolved into Gaelic, nor any form of Celtic or Indo-European at all. Therefore, the Mesolithic inhabitants were not Irish in the ethnolinguistic sense. It is therefore almost certain that a pre-Indo-European language was spoken in Ireland before Celtic (whence Gaelic) was introduced. From the Old Irish period (*c.* ad 600–*c.* 900) onward, the Irish language has possessed both sounds and word-order patterns which appear exceptional when compared with those of the other Indo-European languages, and many linguists would see these features as

the likely results of the adoption of Celtic by Ireland's earlier pre-Indo-European population (cf. HAMITO-SEMITIC HYPOTHESIS).

The Neolithic (*c.* 4000–*c.* 2400 BC). On the beginnings of settled agriculture in Ireland, see AGRICULTURE [2]. Handmade decorated pottery of various sizes and shapes appears in the 4th millennium. Small, dispersed domestic settlements, suitable for nuclear or extended families, with various building types are the norm; for example, at Lough Gur, Co. Limerick (Contae Luimnigh) both rectangular and round structures are defined by postholes and stone footings.

The great megalithic tombs of the Neolithic have made an enduring impact on the Irish landscape and tradition. There are several subtypes: hundreds of 'court tombs' are distributed over Ireland's northern half; 'portal tombs' occur also in the north as well as pockets in west and south-east; the distinctively shaped 'wedge tombs' occur mostly in a dense arc from Antrim (Aontroim) in the north-east, over the western half to Co. Cork (Contae Chorcaí). Of the hundreds of passage tombs, distributed mainly over the north and east, the most famous are those of the valley of the Boyne (Old Irish BÓAND), including Newgrange (BRUG NA BÓINNE), Knowth, and Dowth (DUBHADH). Although these great tombs figure importantly in early Irish mythological literature, in beliefs concerning the OTHERWORLD (see also SÍD), in modern folk beliefs concerning the FAIRIES (and it has been suggested that actual Neolithic beliefs concerning the afterlife have survived in connection with them), it is doubtful that the megalith builders spoke a language that became Gaelic. However, Renfrew identifies Celts, including speakers of Proto-Irish in Ireland, among the first farmers in western Europe *c.* 5000–4000 BC, supposing that Proto-Indo-European spread from Anatolia on the 'wave of advance' of the settled agricultural way of life and then evolved locally throughout Europe and western Asia into the various historically attested Indo-European languages. This great time depth with millennia of local development seems unlikely in view of how similar the Irish of the OGAM inscriptions of the 5th- and 6th-centuries AD remained to the other ancient CELTIC LANGUAGES.

The Copper Age (*c.* 2400–*c.* 2200 BC). As in Britain, Brittany and other parts of France, southern Scandinavia, and Atlantic Spain and Portugal, daggers and other artefacts made of cast copper (sometimes hardened with arsenic) occur together as what has been termed a 'Beaker assemblage', named for the distinctive biconical, round-bottomed, usually decorated ceramic vessel, and also including archery equipment. Ornaments of sheet gold with geometric impressed decoration also appear at this stage. In Britain, Beaker burials are usually crouched inhumations, sometimes 'cists' lined with flagstones. But in Ireland, Beaker burials are found in the megalithic tombs, particularly the wedge type, possibly as later insertions into Neolithic monuments. A Beaker settlement at Newgrange is associated with the earliest horse remains in Ireland. Overall, the Beaker phenomenon has been seen as the arrival of the metal-using warrior aristocracy who had close cultural connections with the Continent. DILLON (with CHADWICK) and Harbison have argued for the Beaker Copper Age as the horizon to which the origins of the Irish language can be traced.

The Bronze Age (*c.* 2200 BC–). True bronze, as opposed to arsenic-hardened copper, alloys copper with about 10% tin, which was regularly in use in Ireland before the end of the third millennium BC. No doubt owing to the fact that Ireland possessed plentiful supplies of copper and, more especially, gold (in the Wicklow mountains and elsewhere), it enjoyed a particularly rich, and progressively richer, Bronze Age, as a vital node in trading networks linked to ARMORICA, BRITAIN, the IBERIAN PENINSULA, west-central Europe, and southern Scandinavia, with a growing diversity of artefact types—ornaments, vessels, weapons, and tools—and a steady technical advance in metallurgical skills. A few major trends—most of them paralleled elsewhere in north-west Europe—are noted here.

Beaker vessels gave way to a range of Early Bronze Age ceramic types known according to their shapes as bowls (lower profile) and the more elongated vases and urns, most of which have chevrons and other types of abstract linear decoration impressed on the exterior. Single (as opposed to collective) graves prevail, with these vessels in the burials, both cremations and crouched inhumations; stone cists are common.

Without associated burials, megaliths are hard to date, but it is likely that many of Ireland's standing stone alignments and circles, such as the complex at

Beaghmore, Co. Tyrone (Contae Thír Eoghain), date from the Early Bronze Age.

By the Middle Bronze Age (from *c.* 1500 BC), the simple cast flat dagger and axe-head of the Copper and Early Bronze Age have evolved into a range of sophisticated forms. The dagger has given way to the longer dirk and the long (up to about 30 cm) needle-like stabbing weapon, the rapier, both attached to handles of perishable material by means of two bronze rivets. The halberd is another adaptation of the early dagger form in which the pointed blade is attached at right angles to a shaft to be used as a dagger-axe. There are also true spears with bronze heads of varying lengths and blade shapes; these were attached to wooden shafts, often by means of both a concave socket and loops for tying with cord. Bronze axe-heads were attached to wooden hafts with a flange extending from the back of the head, opposite the cutting edge. One subgroup of this basic shape of axe is known as a palstave. From this growth in the bronze arsenal we can assume the rising social importance of bronze smiths and their warrior aristocratic patrons through the 2nd millennium.

Neck ornaments are prominent among Bronze Age gold work. Crescent-shaped sheet-gold lunulae with incised geometric design occur in the Early Bronze Age. Bar and ribbon TORCS, usually twisted and with a simple clasp formed by reverse bends at the two ends, become common in the Middle Bronze Age and are found in western GAUL and Britain, as well as in Ireland. These objects can be interpreted as displaying the special status of an emerging élite social group.

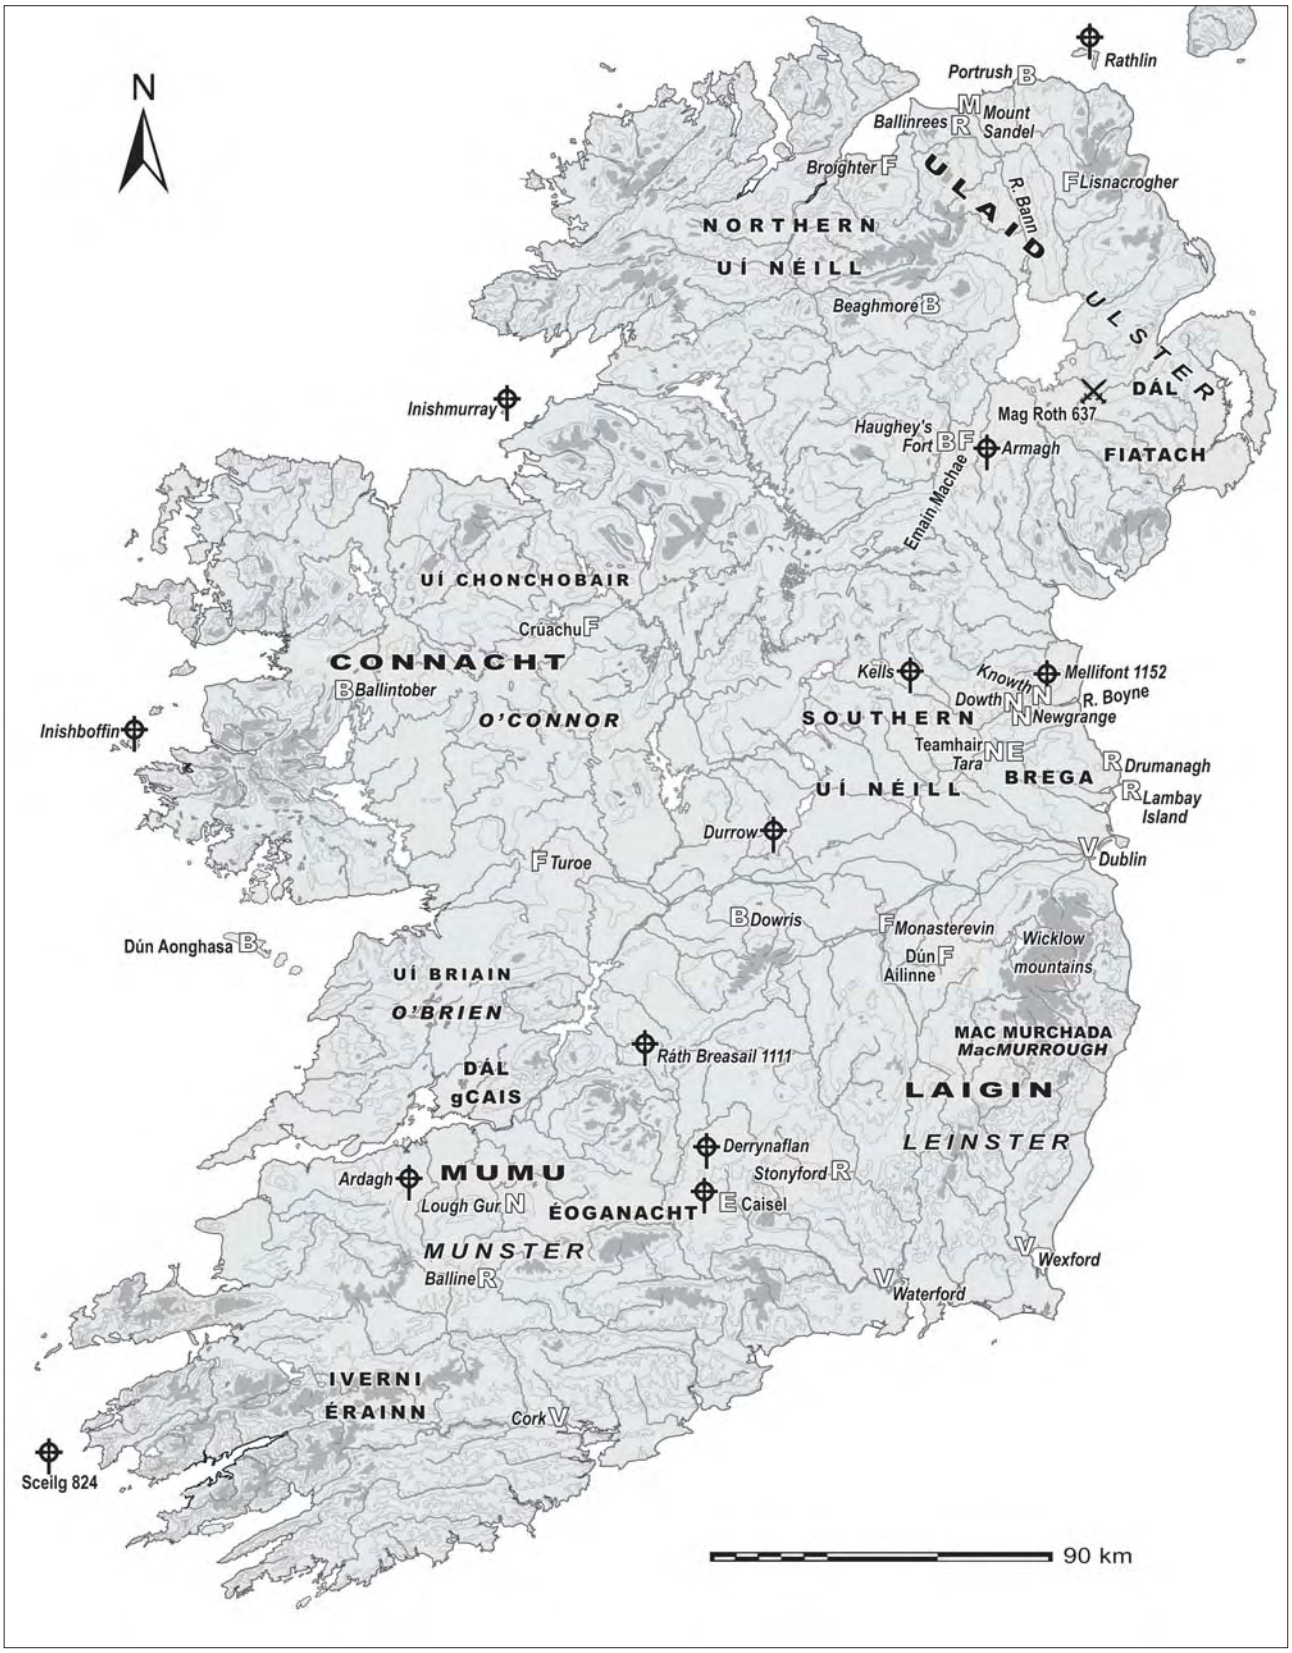
Also within the Middle Bronze Age, fine metalwork in both bronze and gold comes to be found more commonly in hoards from wet settings—lakes, rivers, and bogs—thus anticipating the WATERY DEPOSITIONS of the Celtic IRON AGE. Conversely, burials become rarer. Cult practices were evidently changing and, arguably, the religious beliefs behind them.

The Late Bronze Age (*c.* 1150 BC–). The tree-ring sequence reveals a major climatic disaster between 1159 and 1142 BC, which can be attributed to the effects of a massive eruption of Mount Hekla in Iceland. This point also appears to be a significant watershed for several cultural developments—some breaking with the past and others continuing trends noted in the Middle Bronze Age. Burials remain rare to non-existent, and we have no more ceramics for several centuries. By the early first millennium BC, there are CAULDRONS and tall buckets of riveted sheet bronze, but probably not in sufficient numbers to replace the discontinued pottery completely. At DÚN AONGHASA and Haughey's Fort near EMAIN MACHAE, massive fortified sites were built in the Late Bronze Age. Among the tool and weapon types, the socketed axe, with its single loop and bronze-economizing hollow interior socket, is widespread. True SWORDS appear with leaf-shaped blades, effective for slashing as well as stabbing, and parallel central European Late Bronze Age (HALLSTATT B) types. The first of these types is the Ballintober, named after a find in Co. Mayo; the Ballintober swords appeared by the 12th century BC and are widely distributed in northern and central Ireland, as well as Britain (numerous examples were found in the THAMES). Successive sword types correspond closely to the Continental sequence. Circular shields occur, such as the large bronze example from Lough Gur, Co. Limerick, decorated and strengthened with concentric circles of répoussé nobs.

A wide variety of rich gold ornaments are known from Late Bronze Age Ireland, for which we have specialist archaeological terminology (which may in some cases ignorantly conceal their actual function): elaborate three-part neck ornaments known as gorgets, also bracelets, sleeve-fasteners, and dress-fasteners. Bronze jewellery includes a variety of decorative dress pins.

Generally speaking, the richest and most abundant metalwork of the Irish Late Bronze Age is from its final stage, the Dowris Phase (*c.* 850–*c.* 600 BC), named for a remarkably rich watery deposition from Dowris, Co. Offaly (Contae Uíbh Fhailí). The period is at times called 'Ireland's First Golden Age' with reference to the second period of exceptional artistic brilliance in the 6th to 9th centuries AD (see ART, CELTIC [2]). The frequency of deposited hoards suggests that ritual disposal of wealth and status symbols—like the potlatch of the native Americans of the Pacific northwest—prevailed among Irish chieftains.

For the most part, Bronze Age settlements were still small and dispersed over the countryside, as they had been from the Neolithic and were to remain into the early Middle Ages. However, recent excavations at



Ériu, pre-Norman Ireland: places and groups mentioned in the article, various periods—M=Mesolithic site; N=Neolithic site; B=Bronze Age site; F=Iron Age site; R=Roman and/or Romano-British finds; E=Early Medieval secular site; V= Viking town

Portrush, Co. Antrim, have revealed a large concentration of houses of Late Bronze Age date, which now must be regarded as Ireland's earliest urban site.

In the light of the fact that many of the cultural features of Ireland at this period—watery depositions, swords based on Hallstatt A-B models, hill-forts, cauldrons, gold neck ornaments, &c.—can be linked to defining patterns of early Celtic Europe, Koch argues that a recognizably Celtic Ireland emerged in the Late Bronze Age. Mac Eoin proposes a slightly later horizon—the 7th century BC, when swords associated with the Hallstatt C Iron Age (Gündlingen type) appear in Ireland.

§4. PROTO-HISTORY AND THE IRON AGE

Ireland probably became known to the Greeks with its Celtic name in the 6th century BC and certainly no later than the 4th (see §1 above, further AVIENUS; MASSALIOTE PERIPLUS; EPHORUS; PYTHEAS). Detailed geographic information comes with PTOLEMY (2nd century AD, using 1st-century sources), who includes 16 tribal names. Although we do not have written records from Ireland itself until the 4th or 5th centuries AD, from the mid-1st millennium BC Ireland is no longer fully prehistoric, but rather proto-historic, known to the literary record. Proto-history belongs to roughly the same time period as the Iron Age in Ireland.

The Irish Iron Age is variously described as enigmatic, problematical, poor, and late. Since Ireland, unlike Britain or the Rhineland, has relatively little easily exploited iron ore, it is not surprising that it did not develop as an early centre of iron production (the Irish Gündlingen swords mentioned above are bronze). The LA TÈNE style never penetrated south-west Ireland at all and very little of it anywhere could possibly predate 200 BC. It may be that Ireland failed to develop an Iron Age until that late date and, if so, the Dowris phase might simply have continued for some centuries in isolation while Ireland's neighbours were already in the Iron Age. Alternatively, Iron Age material of the 7th–3rd centuries BC may somehow have escaped detection.

The great centres of assembly which figure as the most prominent settings for the ULSTER CYCLE and other early IRISH LITERATURE [1]—Tara/TEAMHAIR, EMAIN MACHAE, CRÚACHU, and DÚN AILINNE—have revealed to modern archaeology abundant evidence of varied building and ritualistic high-status activities of Iron Age date.

Although limited to Ireland's northern half and parts of Leinster (LAIGIN), Irish artistic masterpieces in the La Tène style include the TUROE stone, the Broighter hoard with its exquisite sheet-gold TORC and its unique golden boat, and the Lisnacrogher scabbards (see ART, CELTIC [1]). Since Ireland remained outside the Roman Empire, an 'Ultimate La Tène' was free to develop in the early centuries AD, as evidenced in objects such as the Bann disc and the Monasterevin bowl discussed in ART, CELTIC [2]. However, there are several examples of intrusive Roman material in later Iron Age Ireland, including what seem to be the burials of displaced north BRITONS on Lambay Island, Co. Dublin, which is possibly to be connected with the promontory fort at Drumanagh, nearby on the mainland, which has produced some Roman material and a system of ramparts paralleled in Britain and Gaul; what appears to be a Roman burial from Stonyford, Co. Kilkenny (Contae Chill Chainnigh); and sizeable hoards of late Roman silver at Balline, Co. Limerick, and Ballinrees, Co. Derry. Such a variety of materials, ranging over four centuries, probably reflect different types of contacts—political refugees from the Roman conquest of Britain (and possibly Gaul), trade, loot and/or tribute brought out of late Roman and an imploding sub-Roman Britain.

§5. CHRISTIANITY AND LATIN LITERACY

From the 4th century, Roman contacts would have carried with them some Christian influence, but well-organized and well-documented Christianization begins with the missions of PALLADIUS and PATRICK in the 5th century. The latter was also the founder of Ireland's Latin literature. In Patrick's writings, we see an Ireland which was still overwhelmingly pagan and dangerous for the fledgling church and its missionaries. A list of rules for early churchmen, which calls itself *Synodus I Sancti Patricii* (The first synod of St Patrick; ed. & trans. Bieler), but is probably of a somewhat later date, shows that a pagan establishment with a system of laws, pledges, and oaths sworn before soothsayers, was still a concern. However, by the late 7th century, in Muirchú's Life of Patrick and ADOMNÁN's Life of COLUM CILLE, for example, an ongoing rival pagan establishment seems to have been

of no real concern, and the saintly heroes' obstinate pagan rivals in the stories of the conversion in the HAGIOGRAPHY owe at least as much to wicked idol worshippers of the Old Testament as to recollections of actual Celtic paganism as their literary inspiration.

§6. EARLY VERNACULAR LITERACY

By Patrick's day, Irish had come to be written in its Old Celtic form in the OGAM script for short inscriptions on stone. By the end of the 7th century, Old Irish had become the vehicle of major literature with several genres—LAW TEXTS, poetry, religious texts, heroic sagas, science, glossaries and linguistics. In the last category, AURAICEPT NA NÉCES ('The Scholars' Primer') dates the beginnings of Irish vernacular literacy to the wake of the battle of MAG ROTH of 637. While this account, as it has come down to us, has been assimilated to the genre of LEGENDARY HISTORY, the date may be approximately right for this intellectual revolution. At least, it is doubtful whether any extant Old Irish text was committed to writing before 637, with the elegy of Colum Cille (†597) attributed to DALLÁN FORGAILL prominent among few possible exceptions.

§7. LEARNING AND THE CHURCH

In the early Middle Ages, Irish literature in both Latin and Irish was originated and copied (along with classical and early Christian texts from abroad) primarily in the MONASTERIES. The distribution of over 40,000 RING-FORTS, dating mostly to this period, over the Irish countryside reflects a continued pattern of dispersed defensible rural settlements in small family and extended-family groups. Thus, unlike the rest of Europe—where a system of territorial bishops was easily superimposed onto the CIVITAS structure of the Roman Empire—the bishops of Ireland were relatively weak and their territorial jurisdictions amorphous; therefore, the monasteries were the leading Christian institutions.

By the later 6th century, a movement known as PEREGRINATIO, which meant leaving Ireland forever to pursue a religious life abroad, had begun. The careers of Colum Cille in Britain and COLUMBANUS on the Continent provide early examples. The international impact of Ireland on the early Christian west reflects the confidence the Irish church had achieved in its faith and scholarship and also the decline and discontinuity in learning which had affected Britain and Merovingian Gaul following the collapse of the Western Empire and the emergence of the barbarian successor kingdoms, compounded by the conquest of Christian north Africa and Spain by Muslims in the 7th century.

As well as writing and transmitting texts, the Irish monasteries of the period *c.* 600–*c.* 900—Ireland's (Second) Golden Age—excelled in the visual arts. As discussed in ART, CELTIC [2], this was the period of the richly detailed illuminated gospel manuscripts (such as DURROW and KELLS) and the metalworking virtuosity of the Ardagh and Derrynaflan communion vessels. The security of the church within Ireland was underscored by the shattering impact of the attack on the churches of Brega in the east Midlands by the Anglo-Saxon King ECGFRITH in 684, but, whether due to ADOMNÁN's legislation or the military disaster which befell Ecgfrith the following year, this was to be an isolated incident. The manifest worldly success and wealth of the great monasteries was no doubt part of the motivation for zealous ascetics to seek remote hermitages, as well as inspiring the reform movement known as *Céili Dé* (Fellows of God), influential in the Irish and Scottish churches from the mid-8th century.

§8. EARLY SECULAR POLITICS

Although the dawn of Irish history may be said to coincide with Patrick in the 5th century, there is no contemporary record of political and military events until the ANNALS of the mid-6th century, at which point we find two ancient tribal groups of the south-east and north-east, who were to give their names to traditional provinces—the LAIGIN and the ULAID—near the top of the hierarchy within a bewildering pattern of overlapping regional tribes (see TUATH) and hereditary chiefdoms. Alongside these two, there were two newer dynastic federations, both claiming descent from 5th-century founders, who were consolidating their strength—the UÍ NÉILL, whose two main branches were based in western Ulster and the Midlands, and the ÉOGANACHT, divided into numerous subgroups in Munster (MUMU). By the late 7th century, the Laigin (split into more than one group) and the Ulaid (as the Dál Fiatach of Co. Down) were still in existence, but were no longer in serious national contention, their influence reduced

to secure core areas near the coast. Though not yet a political reality, the idea of a national high-king (*ard-rí*), associated with the pre-Christian assembly site of Tara (Teamhair) and monopolized by the Uí Néill, can be seen in written references emanating from Iona (Eilean Ì): thus, Adomnán describes Diarmait mac Cerbaill (†565), the common ancestor of the Southern Uí Néill dynasties, as the pre-eminent king of Ireland, and the Annals call both the Northern Uí Néill kings Domnall mac Aedo (†642) and his grandson Loingseach mac Oengusso (†704) *rex Hiberbnie* (king of Ireland). On the political level, the Éoganacht and Uí Néill usually remained secure within their geographic spheres, but the doctrine of national kingship contributed to inevitable collisions. Thus, the Munster king Cathal mac Finguine (r. 721–42) achieved several victories and claimed to be king of Ireland.

§9. the viking impact

Two years after the famous attack on Lindisfarne in 793, the Vikings rounded Britain to attack four Irish island monasteries—Iona, Rathlin, Inishmurray, and Inishboffin. Over the following generation, coastal attacks continued almost every year, gradually extending their range until the island-monastery of Sceilg, off the south-west coast, was struck in 824, at which point the Vikings were the dominant sea power on all sides of Ireland. Over the following two decades, raiding moved inland up the navigable rivers. But by the later 840s, the Irish kings had rallied somewhat, and the Vikings were never to achieve great land takings in Ireland as they did in 9th-century England. Permanent bases established in the mid-9th century—including Dublin (Baile Átha Cliath), Waterford (Port Láirge), Wexford (Loch Garman), and Cork (Corcaigh)—were Hiberno-Norse towns by the mid-10th century. These settlements are usually regarded as the first urban centres in Ireland, though this consensus needs to be qualified in the light of the concentrations of population, artisans, and wealth at the great monasteries, as well as the startling discoveries at Portrush mentioned above. The Viking towns introduced currency to Ireland, and provided a stimulus to international trade and to a range of economic activities.

Although a major Scandinavian kingdom never emerged on Irish soil, the Vikings were often pivotal in triangular struggles between native Irish rulers and, more generally, it was against the background of the Viking wars that the old equilibrium between the regional supremacies of the Uí Néill and the Éoganacht became unstable and national high-kingship became a reality. For example, the king and bishop (a common pattern for Éoganacht leaders) Feidlimid mac Crimthainn (†847) exerted considerable power throughout Ireland, pursuing an untraditional strategy, which included attacking enemy monasteries as military targets. Many modern historians regard the Southern Uí Néill ruler Mael Sechnall mac Maele Ruanaid (†862) as the first *de facto* high-king of all Ireland; he won victories and/or received the submission of rulers in every province. By the mid-10th century, the Dál gCais had emerged as a significant new group, eclipsing first the Éoganacht in Munster and, following a complicated series of struggles involving both Norse and native Irish rulers, they then achieved the high-kingship in name and fact under the famous Brian Bóruma (†1014), from whom they are subsequently known as Uí Briain 'the O'Briens' (descendants of Brian). The Uí Briain continued in a strong national position through the 11th century and into the 12th, when Brian's grandson Tairrdelbach (†1086) and great-grandson Muirchertach (†1119) held the high-kingship, after which they tended to be eclipsed by the Uí Chonchobair 'O'Connors' of Connacht.

Assessments of the Viking impact vary: primarily destructive raiding and warfare, primarily beneficial trade and founding of towns, or on balance irrelevant, with developments such as the O'Brien high-kingship working out long-standing internal trends. Although the Norse towns tended to play an auxiliary rôle in Ireland's political and military affairs, Dublin's influence on the Viking kingdom of York in the 10th century gave them a greater political influence in Britain (cf. æthelstan; armes prydein). For Ireland, one consequence was that Viking presence became increasingly Anglo-Norse, rather than simply Scandinavian. For example, as the Viking towns became Christian they tended to look to Canterbury rather than churches in Ireland, thus establishing a vector for Anglo-Norman influence in the 12th century.

The Irish monasteries remained the main patrons for learning and the arts, spheres in which major changes took place during the Viking age. Thus, Durrow, Kells, and the other great illuminated

gospels predate the Vikings, as do the masterpieces of early medieval metalwork (see ART, CELTIC [2]). Although it is a simplistic observation, it is possibly true that the decline of excellence in portable precious works and the broadly simultaneous heyday of the lavishly decorated and ponderous HIGH CROSSES were a direct response to Viking raids. The round towers, such a characteristic feature of the Irish landscape, belong to this period and were probably at least partly intended as places of refuge for churchmen during raids.

IRISH LITERATURE continued as an unbroken burgeoning tradition. However, the medium for the literature shifts from the richly complex, but stable and relatively uniform idiom of Old Irish, to the varied, rapidly evolving, and somewhat chaotic Middle Irish of the 10th to 12th centuries. It is likely that the physical insecurity of the monasteries (as centres of linguistic education) contributed to this upheaval.

§10. 12TH-CENTURY INNOVATIONS

By the 11th century, the Irish church, as it had developed from Patrick's time, came increasingly to be viewed from the outside as anomalous and ripe for reform. The abbots were too powerful and many of these were aristocratic laymen who had inherited their offices. Sexual morality among both laity and clergy did not conform to church doctrine. Both foreign and native reformers promoted new and stricter monastic orders, such as the Augustinians, followed by the Cistercians, who were introduced by St Malachy in 1142. A series of national synods, held at Cashel/CAISEL MUMAN in 1101, Ráith Bressail in 1111, and KELLS–Mellifont in 1152, strengthened and reorganized the diocesan system. The primacy of Armagh (ARD MHACHA) among Irish sees received official papal recognition, with Cashel in second position, and the bishop of Dublin removed from the jurisdiction of Canterbury. One negative consequence of these reforms was that, by shifting power and revenues to the bishops and new monastic orders, the structures that had nurtured Irish literature were weakened. Henceforth, the rôle of the monastic scriptoria waned and Irish literature came increasingly into the keeping of learned families under aristocratic secular patronage. This reorganization of Irish learning probably had a delayed but causal relation with the transition *c.* 1200 from Middle Irish to a new standard learned medium, Early or Classical Modern Irish (cf. IRISH LITERATURE [3]).

In 1155, more or less disregarding the reforms which had already taken place, the one and only English pope, Adrian IV, issued the Bull *Laudabiliter* authorizing the Anglo-Norman ruler Henry II to go to Ireland to reform the church. Henry did in fact come as a conqueror in 1171, but the immediate causes had nothing to do with *Laudabiliter*. Pushed out of Ireland by a coalition of the Dublin Norse and the allies of high-king Ruaidrí Ua Conchobair, king of Leinster, Diarmait Mac Murchada appealed for Henry's intervention, which led in the first instance to the invasion by Henry's subject Richard DE CLARE 'Strongbow' in 1169, an event usually regarded as the formal starting-point of Ireland's Anglo-Norman period. Though English political control was not to slacken until the 20th century, it is important to note that throughout the later Middle Ages the population remained overwhelmingly Irish-speaking. Many of the native Gaelic aristocratic families retained local power—the O'Briens, O'Connors, and MacMurroughs, for example. The Anglo-Norman élite themselves tended, within a few generations, to adopt the Irish language and customs, and to patronize classical Irish poets, just as the old native families did.

Ériu [2] (Ireland) is one of the principal IRISH journals devoted to CELTIC STUDIES (for others see AINM, BÉALOIDEAS, CELTICA, ÉIGSE, EMANIA). Founded in 1904 as the journal of the School of Irish Learning, it is now published annually by the Royal Irish Academy (ACADAMH RÍOGA NA HÉIREANN) in Dublin (BAILE ÁTHA CLIATH). The journal is devoted to all aspects and periods of Irish philology and literature, with some articles on other CELTIC LANGUAGES, written by academics, mostly in English, with occasional articles in Irish. A selected index has been published by the MLA in their international bibliography of books and articles on modern languages and literatures.

Eriugena, Johannes Scottus was born *c.* 810 and died in 877, somewhere in northern France, where he had taught theology since at least 851, whilst working at the court of Charles the Bald. The appellation *Scottus* is common for Irishmen (cf. SCOTS), but Eriugena 'of Irish birth' he gave to himself (cf. ÉRIU; 'Erigena' is incorrect). As an Irish monastic scholar labouring among the Franks, Eriugena's career may be seen as a continuation of the tradition of the PEREGRINATIO of itinerant Irish churchmen during the preceding centuries. Eriugena grafted elements of Greek Platonism into his Latin tradition, and produced the most original theology between Augustine of Hippo (354–430) and Anselm (1033–1109). One of the most striking features of his massive work on the Creator and His creation, the *Periphyseon* or 'On the Division of Nature', is his identification of God and the natural world as one and the same, God as Creator being but one of the 'divisions of nature' in Eriugena's scheme. This doctrine opened the *Periphyseon* to the charge of nature worship or pantheism, most strongly in the 13th century and again during the Counter-Reformation. Carey argues that Eriugena's thinking has a traceable context in early Christian Ireland, in which case Eriugena's apparent radicalism derives at least in part from his background and early medieval Ireland's productive and independent intellectual development. Eriugenian studies are a well-established branch of medieval studies, but have thus far more often been pursued from the vantage of the history of ideas rather than that of CELTIC STUDIES.

Ernault, Émile, a Breton Celtic scholar, was born in 1852 at Saint-Brieuc (Sant-Brieg) within the French-speaking region of north-central Brittany (BREIZH), and died there in 1938. He studied English and German, and began his career as a teacher of these languages at the École St-Charles at Saint-Brieuc. He learned BRETON as an adult and began to work with the journal REVUE CELTIQUE in 1876. Having been elected member of the *Société linguistique* in 1875, he met Henri Gaidoz, Henri d'Arbois de la Jubainville, and other important Celtic scholars. From 1881 to 1884 he studied at the Collège de France in Paris and received a Ph.D. in 1887. He was subsequently awarded the chair of Greek Literature and Institutions at the Collège de France, which he held until his retirement.

Most of Ernault's scholarly activity was focused on Breton. He edited Middle Breton mystery plays and

saints' lives, and made a major contribution to Breton metrics with his *L'ancien vers breton* (see BRETON LITERATURE). He also completed a dictionary of Gwenedeg (the Vannes dialect of Breton; see BRETON DIALECTS; GWENED). In the second half of his life, much of his activity was dedicated to the study of Breton words—lexicography and etymology (see DICTIONARIES AND GRAMMARS [5]).

PEB

Eryri (**Snowdonia**) is a mountainous region in north-west Wales (CYMRU). It traditionally included the mountain regions of Snowdon (Yr Wyddfa), the Glyders, and the Carneddau range. The ancient areas of Uwch Conwy and GWYNEDD approximately denoted Eryri's boundaries. In 1974 Snowdonia National Park (Parc Cenedlaethol Eryri) was established, which substantially expanded the area of Eryri to the south.

The first literary mention of Eryri occurs in the 9th-century HISTORIA BRITTONUM (§40), where an account is given of the downfall of the semi-legendary 5th-century king GWRTHEYRN (Vortigern). Pursued by his revolted Anglo-Saxon mercenaries and hated by his BRYTHONIC countrymen, the king's *magi* direct him to build a stronghold in a secure place on the far side of his kingdom. Such a place is found in Eryri, spelled in this source in its Old Welsh spelling *Hereri*, variant *Heriri*. The name for the area was officially recognized by the Welsh Princes, and LLYWELYN AB IORWERTH (Llywelyn Fawr) adopted the Latin title *Princeps Northwallie et Dominus Snowdonie*, Welsh *Tywysog Gwynedd ac Arglwydd Eryri* in 1230.

Eryri was an important factor in the strategic security of the kingdom of Gwynedd, forming a formidable barrier between the rest of Britain and Gwynedd's agricultural heartland in MÔN, the coastal strip of Arfon and the Llŷn peninsula. These same factors contributed to the relative ease of contacts between Gwynedd and Ireland (ÉRIU), an essential background to understanding the Irish colonists in Gwynedd who were said to have been expelled by CUNEDDA, and the important Irish aspects of the career of King GRUFFUDD AP CYNAN. The fact that the peaks of Eryri can be seen from the mountains of south-east Ireland also helps to explain the natural overseas links between these areas from prehistoric times.

The place-name *Eryri* has had two Celtic roots proposed to explain it: (1) that it describes a high place (cf. Latin *orior* 'I rise'; GPC s.v. *eryr*²), or (2) that it denotes the abode of eagles (Welsh *eryr* 'eagle', Old Irish *irar*). Of course, even if *Eryri* had not originally meant 'eyrie', this idea would automatically occur to any Welsh speaker, writer, or poet. GIRALDUS CAMBRENSIS (*c.* 1146–1220) mentioned the eagle of Snowdon, and many sources record the presence of eagles in the region until modern times. In a transferred sense, *eryr* is often used as a kenning for 'hero' in WELSH POETRY, which adds further significance to the place-name as the traditional mountain stronghold of the strongest and most militaristic independent Welsh kingdom, Gwynedd.

In Welsh literature, Eryri is associated with suffering and tragedy, and the first reference to the area appears in an AWDL by Hywel Foel ap Griffri ap Pwyll Wyddel (*fl. c.* 1240–*c.* 1300) from the HENDREGADREDD MANUSCRIPT. The most popular and enduring image of Snowdonia, however, was created by Thomas Gray (1716–71) in his poem *The Bard* (1757), in which the last Welsh poet throws himself from cliffs above the river Conwy into the raging waters.

In modern times, the traditional industries for the local population have been mining and farming. Shepherds are the subject of various FOLK-TALES: the most momentous is *Ogof Llanciau Eryri* (The cave of the youths of Snowdonia), in which a young man chances upon the host of ARTHUR's sleeping knights awaiting the call to battle. This is one of several places where variants of this folk-tale are localized; there are English and Scottish, as well as Welsh versions.

Eryri was considered to represent wild Wales from early modern times. For instance, Thomas Pennant notes that in 1618 a masque 'For the Honour of Wales' was accompanied by scenes from Snowdon painted by Inigo Jones (1573–1652).

View of Snowdon (Yr Wyddfa) from a frozen Llyn Ogwen

Yr Wyddfa (lit. 'the tumulus', Snowdon) is the highest peak in Wales (1085 m). It is associated with the warlike giant Rhita Gawr (or Ricca), who was killed by Arthur and buried at the summit. A version of this story occurs in Geoffrey of Monmouth's Historia Regum Britanniae.

Snowdon is the most famous and most visited mountain site in this region. The first recorded ascent was in 1639 by Thomas Johnson (†1644), who introduced the mountain as an important botanical site. The majority of visitors still travel to Snowdon for recreational or cultural reasons. In 1896 the Snowdon Mountain Railway opened, allowing access to a larger audience, and thereby expanding the mountain's rôle as a day-trip location.

Dolbadarn Castle at the foot of Snowdon inspired generations of artists and is immortalized in the studies of the great English landscape-painter J. M. W. Turner (1775–1851).

Esus/Aesus was a Gaulish god whose name appears in several compound personal names, though its etymology is unclear. He is mentioned by the Roman authors Lucan (*Pharsalia* 1.444–6) and Lactantius (*c.* AD 245–*c.* 325). According to the former, rites of human SACRIFICE were dedicated to him on altars in

Gaul (see further taranis; teutates). According to commentaries on Lucan, the god's victims were stabbed and hung from trees where they bled to death. The inscribed name esvs appears on the Paris stone monument known as the *Nautae Parisiaci* (the sailors of the tribe of the Parisi, from whom Paris takes its name; 1st century ad). There, he is depicted as a bearded man wearing the clothes of an artisan, standing beside a tree, the trunk of which he holds in his hand. Next to the figure of Esus a bull with three cranes and named tarvos trigaranus is depicted. This depiction is linked to a relief from Trier, Germany, where a beardless figure identified as Mercurius fells a tree in which three birds and a bull's head are visible.

PEB

Étar/Benn Étair (**Howth**) is a prominent peninsula guarding the northern side of Dublin Bay and the location of mythological events in early Irish literature. The peninsula is listed in the *Geography* of Ptolemy (*c.* ad 150) as the promontory or island of Αδρου *Andru* (variant Εδρου *Edru*). It probably corresponds to the place-name *Andros* which is mentioned in Pliny the Elder's *Natural History* of the 1st century ad. The present Anglicized name *Howth* is derived from Old Norse *höfuth* 'headland', which dates from the period of Norse domination of Dublin (Baile Átha Cliath) and its sea approaches in the 10th and 11th centuries.

The form *Benn Étair* repeatedly appears in medieval Irish tales. Crimthann Nia Náir, king of Tara (Teamhair), built a fortress known as Dún Crimthainn at the tip of the promontory. *Talland Étair* (The siege of Howth)—a tale from the Ulster Cycle—tells how the Laigin (Leinstermen) besieged the Ulaid (Ulstermen) at Benn Étair in revenge for the abduction of their women. In the lengthy late Middle Irish Fiannaíocht narrative, Acallam na Senórach (Dialogue of [or with] the old men), one incident tells how Artúr son of Béinne of the Britons stole Finn mac Cumaill's three supernatural hounds from their owner while they were hunting there. Other references to the Hill of Howth suggest that the place was associated with the kingship of either Brega or Dublin. A topographical poem on Achall (Skreen, Co. Meath) states that the King of Dublin, Amlaíb Cuarán (†980), gained the kingship (of Brega?) in Benn Étair (*ro-gab rígi i mBeind Étair*). Amlaíb's son, Sitryggr, is reputed to have endowed a church, which became the medieval parish church in the village of Howth. The castle and demesne were built on the site of the manor granted in the late 12th century by Henry II to Almeric I St Lawrence, whose descendants (through an indirect line) continue to reside there.

Études Celtiques is a current Celtic journal, established in 1936 by J. Vendryès and published in Paris. The journal appears annually and contains articles from all areas of Celtic studies, including the archaeology of the Continental Iron Age. It includes an extensive section of reviews of new publications in the field and publishes obituaries of some important Celtic scholars. While the majority of articles, particularly in the earlier editions, are written in French, articles in English are also accepted and appear more frequently in later issues. A selected index to the journal has been published by the MLA in its international bibliography of books and articles on modern languages and literatures. *Études Celtiques* is a publication of the Centre National de la Recherche Scientifique (CNRS).

Sandstone stele depicting a mythological being from Euffigneix

Euffigneix is an archaeological site in the *département* of Haute-Marne, France, where a sandstone stele was found depicting a bearded man wearing a TORC and with a BOAR carved in bas-relief on his chest. Each side of the torso carries the relief sculpture of a large human eye. The statue is dated to the end of the 1st century BC. The stonework shows the beginning of Roman influence on Gaulish sculptures. The circumstances of discovery are unclear, and the figure (usually presumed to be a deity) has no agreed-upon identification; Le Duc has suggested LUGUS. It is possible that imagery is meant to represent a narrative of shape-shifting (see REINCARNATION).

Eugein map Beli ruled the BRYTHONIC stronghold of Dumbarton (see YSTRAD CLUD). 'Hoan *rex Britonum*' defeated and killed DOMNALL BRECC of Scottish DÁL RIATA in December 642 at the battle of Srath Caruin, according to the ANNALS of Ulster. This victory is celebrated in two versions of one AWDL in LLYFR ANEIRIN, where Eugein is called 'grandson of Nwython', a reference to Neithon map Guiþno, who was a direct third-generation descendant of Cinuit map Ceretic Guletic, progenitor of the north British CYNWYDION dynasty. Eugein's brother or half-brother was BRUIDE MAC BILI, king of the Pictish Fortrinn and victor of NECHTANESMERE (685).

The king's name is the same as the common Modern Welsh *Owain*, probably a borrowing from Latin *Eugenius* (Jackson, LHEB 324), and the Old Welsh/CUMBRIC spelling *Eugein*, which occurs in the GENEALOGIES of BL MS Harley 3859, suggests that this is how their compiler understood it. A Eugenius held joint control over part of the Western Empire including BRITAIN in 392–4. On the father's Celtic name, see BELI MAWR.

Evans, Ellis Humphrey (**Hedd Wyn**) was born on 13 January 1887, the eldest son of Evan and Mary Evans of the Ysgwrn, a remote farm about a mile from the village of Trawsfynydd in Merioneth (sir Feirionnydd). He left the local school at fourteen to help on the farm. Long before he left school, his father had bought him a book on Welsh prosody, and Hedd

Wyn wrote his first correct ENGLYN before reaching twelve. Gradually, he became a master of CYNGHANEDD, and often competed in local EISTEDDFODau and literary meetings. His ambition was to win the chair at the National Eisteddfod (EISTEDDFOD GENEDLAETHOL CYMRU), and he came close to realizing that ambition at the National Eisteddfod of 1916, when one of the three adjudicators wanted to award the chair to him. Hedd Wyn decided to compete again the following year, but by the end of January 1917 he had become a private in the 15th Battalion of the Royal Welch Fusiliers, and was undergoing a period of intense training at Litherland Training Camp near Liverpool. After completing his basic training at Litherland he was sent to the Ypres Salient in Flanders, leaving Litherland on 9 June 1917. He eventually completed his AWDL, *Yr Arwr* (The hero), in mid-July 1917, in the small village of Fléchin in France, and the poem was sent from Fléchin to the National Eisteddfod office at Birkenhead. A fortnight later, on 31 July, Hedd Wyn died of wounds as his battalion pushed its way through the German lines towards Langemarck, on the very first day of the Third Battle of Ypres, otherwise known as the Passchendaele campaign. The Anglo-Irish poet Francis Ledwidge (1891–1917) was killed on the same day. Hedd Wyn was buried at Artillery Wood Cemetery, Boesinghe.

The chairing ceremony at the Birkenhead National Eisteddfod was held on 6 September. When the Archdruid announced the pseudonym of the winning entry, no one stood up to be chaired. The Archdruid then announced that the author of the prize-winning poem was Hedd Wyn, who had died of wounds sustained five weeks prior to the Eisteddfod. In what became a highly emotional scene and a historic event, the chair was draped in black, and the Eisteddfod became known as *Eisteddfod y Gadair Ddu* (The eisteddfod of the black chair).

A volume of Hedd Wyn's poetry was posthumously published in 1918. *Cerddi'r Bugail* (The shepherd's poems), edited by J. J. Williams, eventually sold 4000 copies, and a second edition was published in 1931. In 1923 a statue of Hedd Wyn, romantically and rather misleadingly portrayed as a 'shepherd-poet' by the London sculptor, L. S. Merrifield, was unveiled at Trawsfynydd.

Hedd Wyn was basically a romantic poet, much influenced by Shelley, but some of his last poems display a stark realism as disillusionment with the war set in. Hedd Wyn's story was eventually made into a film, HEDD WYN (1992). Directed by Paul Turner and written by Alan LLWYD, it won international awards and an Oscar nomination. Alan Llwyd also published a biography of Hedd Wyn, *Gwae Fi fy Myw* (1991), and edited a third edition of *Cerddi'r Bugail* (1994).

Evans, Gwynfor (1912–2005), was the first UK Member of Parliament to be elected for Plaid Cymru (The Party of Wales). He was born in Barry (Y Barri) in south Wales and educated at Barry Grammar School and the University of Wales, ABERYSTWYTH. He became active politically in the late 1930s in nationalist and pacifist movements. A conscientious objector during the Second World War, he became president of Plaid Genedlaethol Cymru (the national party of Wales) in 1945, a post he held for 36 years.

Evans sought to make Plaid Cymru a mainstream political party and distanced himself from the policies of his predecessor, Saunders LEWIS. Economic policies were developed, often based on Scandinavian models, and the party sought to draw upon the radical tradition, which by the 1950s had shifted from Liberal to Labour politics. Cross-party movements such as the Parliament for Wales campaign increased the party's profile and its electoral performance gradually improved in the 1950s. Evans himself contested Merioneth (Meirionnydd) on four occasions, and prior to the 1959 General Election entertained genuine prospects of victory, especially in the light of the local impact of the controversy over a reservoir project which drowned the Welsh-speaking village of Capel Celyn and the Tryweryn valley in order to supply water for urban areas in England.

By the 1960s Evans had established himself as a national figure, widely respected across the political

spectrum, again in stark contrast to his predecessor. In many ways he was a conservative figure. As a long-serving member and alderman of Carmarthenshire County Council and as president of the Congregational Union of Wales, he represented a brand of NATIONALISM that had particular appeal in rural Wales (CYMRU). This rural image was further compounded by Evans's own hostility to the Labour Party, which was partly rooted in his own experiences in local government. Within Plaid Cymru, however, Evans's leadership was criticized by a radical younger element which believed the party should become a LANGUAGE (REVIVAL) movement. At a time when the Labour Party was attracting a new generation of WELSH-speaking leaders, and following administrative devolution in 1964, such views were echoed in the Welsh press.

The main turning-point in his career came in 1966 when the death of Megan Lloyd George led to a by-election in Carmarthen (CAERFYRDDIN), which Evans won. He lost the seat in 1970, but won it back in 1974, before losing it again in 1979. His impact at Westminster was minimal and Evans was, by his own admission, uncomfortable there. However, Plaid Cymru became a major political force in north-west and south-west Wales and came near to a breakthrough in the south Wales valleys in the late 1960s and 1970s. During this period Evans's relationship with the more militant language movement often bordered on the ambivalent and he believed that such campaigns had cost his party valuable votes. However, in 1980 Evans placed himself at the forefront of a protest against a government change of policy with regard to a Welsh-language television channel (see MASS MEDIA) by threatening to embark on a hunger strike unless the decision not to introduce such a channel was reversed. Shortly before the hunger strike was due to begin the government backed down, and Evans regarded the victory as one of his greatest achievements.

Shortly afterwards Evans stood down from the presidency of the party and retired from active politics following a further defeat in the 1983 General Election. Plaid Cymru entered a period of transformation, and emerged in the 1990s with a much stronger local government base and a new generation of professional politicians. Gwynfor Evans was honorary president of the party until his death, and the key figure in its transformation from a fringe movement into a potential party of government in post-devolution Wales.

A good starting point for research on the politician is Evans's autobiography, *For the Sake of Wales*, a translation by Meic Stephens of a work originally published in Welsh. Evans's personal history of Wales, *Land of my Fathers*, now published as *Wales, a History: 2000 Years of Welsh History* contains valuable insights into his views of nationalism.

Evans, John Gwenogvryn (1852–1930) was born near Llanybydder in Carmarthenshire (sir Gaerfyrddin). He trained for the Unitarian ministry, but ill health cut short that calling in 1880 and he was forced to seek an alternative career. He and his family settled in Oxford (Welsh Rhydychen), where he came under the influence of Sir John RHŶS at Jesus College, even though his attendance at the university was spasmodic due to continuing poor health. Under the guidance of Professors Rhŷs and York Powell, Evans acquired the ability to read manuscripts which contained Welsh literature from the Middle Ages, and he developed an outstanding ability to produce accurate transcripts and diplomatic and facsimile editions of texts. Beginning in 1887, Rhŷs and Evans embarked on an ambitious scheme to publish significant texts in various editions in a series entitled *Old Welsh Texts*, for which Evans became largely responsible. To this series he later added his *Welsh Classics for the People*. He set exacting standards for the printed editions. Technical difficulties caused by using commercial printers forced him to undertake much of the composition work himself, and he eventually purchased his own printing press and employed a master printer, his nephew George Jones. The

work occupied him for much of his life and established his reputation as the foremost Welsh palaeographer of his day, and as a fine printer. He was awarded honorary degrees in recognition of his work by the Universities of Oxford and Wales, and he was also awarded a civil list pension in 1892 to enable him to continue his work.

The vast majority of Welsh literary manuscripts were held at that time in private libraries. Recognizing that producing edited scholarly texts required reference to all extant versions, Evans and his contemporaries at Oxford, with the support of certain Welsh Members of Parliament, persuaded the Historical Manuscripts Commission to appoint an appropriate inspector to survey and record the contents of those libraries. In 1894 Evans himself was appointed to the task. He travelled widely to visit libraries, and his detailed and painstaking *Report on Manuscripts in the Welsh Language* was published in seven parts by Her Majesty's Stationery Office, London, between 1898 and 1910. It provided the foundations for much subsequent Welsh literary scholarship.

In 1905 Evans and his family moved to 'Tremvan', Llanbedrog, a house he designed with his wife, Edith. He became a prominent member of society in Caernarfonshire (sir Gaernarfon) and Wales (Cymru). He strongly supported the movement to establish a National Library for Wales, recognizing the need to create a publicly accessible reference collection of manuscripts and books to facilitate the further study of Welsh literature. His unrivalled knowledge of Welsh collections still in private hands drew him into the work of ensuring that the most important of them were eventually gathered together at the National Library of Wales (Llyfrgell Genedlaethol Cymru) when it was finally established in 1907.

His over-ambitious schemes, his insistence on the highest technical standards, and his often contentious relationships with scholars, printers, and others with whom he collaborated, gained for him a reputation for being hypersensitive and difficult. Disagreements were compounded in Evans's later work when he often added incorrect textual and contextual interpretation and commentary to his transcriptions and reproductions of manuscripts. Some of those disagreements were reflected in unpleasant public and published debates (Morris-Jones, *Y Cymmrodor* 28.1–282; J. Gwenogvryn Evans, *Y Cymmrodor* 34.1–123). This may explain why his contribution to Welsh literary scholarship was not fully appreciated or acknowledged by his contemporaries.

F

Faelán was common as a man's name in Ireland (Ériu) in the first millennium AD and was borne by several important historical and mythological characters. Perhaps the most famous in surviving literary tradition is Faelán mac Finn, son of Fionn mac Cumhaill (Finn mac Cumaill) and one of the major champions of the Fianna (see fiannaíocht). His primary characteristics are a fanatical loyalty to his father and to Clann Baoiscne, as a result of which he becomes a major protagonist in aggravating their sporadic feuds with Clann Mórna and the high-king, which eventually resulted in the destruction of the majority of the Fianna at *cath Gabhra* (the battle of Gabhra). Faelán rarely takes a leading rôle in any major narrative tale, although one story collected by Jeremiah Curtin in Corca Dhuibhne, Co. Kerry (Contae Chiarraí), in the late 19th century is an exception. According to MacKillop, no fewer than ten members of the mythological Fianna Éireann (warrior bands of Ireland) were named Faelán (*Dictionary of Celtic Mythology*).

At least two and (due to inter-textual confusion) possibly as many as five saints named Faelán are recorded. The most notable of these are:

(1) Faelán of Fosse (†656), who was a follower of Fursa and abbot of Fosse in the diocese of Cambray in Gaul;

(2) Faelán of Glendeochquhy (possibly Glen Dochart) in Perthshire, Scotland (Alba). A 7th-/8th-century saint associated with the Scottish churches of Aberdour and Pittenween, the descent of this saint from the royal line of Laigin (Leinster) through his mother ties in with the fact that the name appears frequently in the king-list for the Uí Dúnlainge, kings of Leinster.

From the 8th century a major sept of the Laigin, the Uí Faeláin, with their royal seat at Nás na Rí (Naas, Co. Kildare), bear this name. Thirty-seven individuals named Faelán are recorded in the *Corpus Genealogiarum Hiberniae* (see genealogies). The name is also seen in the Ua Faeláin sept of the Déisi Muman in south-eastern Mumu (Munster), from whom is derived the modern Irish surname Ó Faoláin.

Faelán is derived from Old Irish *fáel* 'wolf' with the diminutive suffix *-án*, thus 'little wolf', and can be understood as arising from the common pattern in early Irish literature of animals used as metaphors for the warrior (other frequent examples include *seabhac* 'hawk', *leómhan* 'lion' and *eó* 'salmon'; cf. heroic ethos).

SÓF

fairies

§1. introduction

The word 'fairy' in modern English tends to be associated with the image of a diminutive, winged, magical being, usually female, of the type depicted in Disney films such as *Cinderella* and *Sleeping Beauty* or in popular conceptions of the tooth fairy. As an analytical category, however, the term is much broader, encompassing a range of supernatural entities sharing geographical space with mortals. Fairies are usually understood as a separate kind of being, though the perceived difference varies a great deal, depending on the time, place, and context of the fairy belief in question. Belief in fairies is found throughout the world, and the Celtic countries are no exception. Not all supernatural beings are fairies:

witches, ghosts, and revenants were once ordinary humans, and gods, devils, and demons are mythological rather than legendary beings, and were understood to exist in a different sphere. There is, nevertheless, a good deal of overlap in lore relating to fairies and to witches, devils, and the rest. Thus, for example, the Tuath Dé of Legendary History and the Mythological Cycle of early Irish literature are for the most part susceptible to interpretation as mythological beings or even pre-Christian gods, though clearly forming a continuum with the fairies of modern Irish folk belief.

Fairies occur in a wide variety of sizes and types, from diminutive to giant, and inhabit a diverse range of landscapes, from underground to outer space. They can have human or animal form, or both (see reincarnation). The fairy tradition includes named individuals such as the Cailleach Bhéirre or Cailleach Bheur of Ireland (Éire) and Scotland (Alba), magical beasts such as the Welsh afanc, and types or kinds of fairies such as the Cornish pisky or Irish leprechaun (see luchorpán). There are also monsters—another word whose common meaning of 'hideous creature' is misleading in this context. In folklore, monsters are not necessarily hideous beings, or those formed from two different types of animals (the heraldic definition, which is not significant in Celtic tradition), but is a technical term which refers to singular examples of magical beings such as the Breton Ankou.

Fairies are intimately associated with the landscape, and different types of fairies inhabit moors, mountains, caves, seas, lakes, and other natural features. Some of them, for example the giants, are often seen as extinct, having made their mark on the natural world by playing quoits or carrying stones in their aprons, the only evidence being the megalithic monuments and mountain-top cairns they left behind as a result of their activity. Giants survived at least into the heroic age, however, and there are many narratives in which a hero such as Arthur or Fionn (Finn mac Cumaill) bests a giant. Arthur and Fionn themselves occasionally appear as giants in folk-tales, especially in connection with accounts of the origins of megaliths and natural landscape features.

Who or what the fairies are—and where they came from—is accounted for in several different ways in the folk tradition. According to some informants, they are the souls of the dead, who exist in a kind of purgatory on earth, or more specifically the heathen (i.e. pre-Christian) dead, or even the evil dead. According to other accounts, they are fallen angels (cf. tuath dé) and, according to still others, they are merely natural phenomena, either material or spirit. These beliefs were held concurrently and varied from individual to individual, rather than being a result of regional or chronological variation. In the 19th century, David MacRitchie proposed that the fairy beliefs arose out of the memory of previous 'races' of people, such as the Picts, who had since been driven out (according to the prevalent 19th-century theory). This theory, though it is no longer held in academia, has been accepted into popular culture, particularly the expansion of the idea whereby fairies were real remnants of pre-Christian communities living a covert, underground existence, keeping their traditions alive in secret.

Fairies were believed to be a source of both good and ill in the Celtic countries, and fairy narratives were used to account for unexplained prosperity, good luck, or wealth, and also for illnesses and deformities. Many families traced their origin to a marriage between a fairy woman and a mortal man, or even a fairy animal (when in human form) such as the Scottish selkie. The Welsh story of Llyn y Fan Fach is a typical example: a man marries a fairy woman, who agrees to the marriage on the condition that her husband does not strike her; on the third strike, she will leave. The condition is broken in a series of three absurd situations, for example, the fairy laughs at a funeral when everyone else is crying, and she departs. She returned to impart medical knowledge to her children, and a family of physicians in the Myddfai area traced their descent from the protagonists of the story (see meddygon). This story was used as the basis for the novel *Iron and Gold* by the Anglo-Welsh writer Hilda Vaughan. Musical ability and second sight are common gifts of the fairies, and there are several traditional tunes in existence which are said to have been learned from the fairies, for example the Manx *Yn Bollan Bane* (The white herb/mugwort).

Autism, mental illness, nightmares, and strokes were all attributed to the malicious influence of the fairies. A changeling child, where the fairies exchanged a healthy human infant for one of their own kind, may have been a folk explanation for several medical conditions, and allowed the parents some detachment

from the situation. Unfortunately, it was believed that cruel or bizarre behaviour towards the child or in the child's presence could induce the fairies to take their changeling back, which had potentially disastrous results for the child. T. Crofton Croker (*Fairy Legends and Traditions of the South of Ireland*) cites a case from Tralee in 1826, in which a mother and grandmother killed a four-year-old child by drowning. The child could neither walk nor speak, and was thought to be fairy-struck; he was killed during the course of the cure. Fairy-struck or fairy-ridden (or hag-ridden) could also be a milder condition, where the human was used as a mount at night; the end result was nightmares and waking up unrested. David Hufford has identified this condition with a fairly common sleep disorder in which the normal phases of sleep are disrupted (*The Terror that Comes in the Night*). Sophia Morrison recounts the story of Ned Quayle, who was sickened after an encounter with a fairy pig (*Manx Fairy Tales*). He was cured by having a healer charm out the fairy shot, but he retained the mark on his leg. Fairies could also take their nourishment from common household products such as bread, butter, and cheese, and problems with the production of these items were often attributed either to fairies or to witches.

Another trouble was being pisky-led—becoming lost for a long time in a small or familiar area. Time in the fairy realm (see otherworld) runs differently from the mortal world, and contact with fairies can be dangerous for that reason alone. What may seem to be an hour or an evening spent dancing with the fairies can become a year, seven years, a lifetime, or hundreds of years, and the hapless mortal dancer often returns to find everything changed and everyone gone, turning to dust himself soon thereafter.

Because of their potential to cause harm or even death, great care was taken not to offend the fairies. Preventative measures included referring to them by such names as *An Sluagh Maith* or *Na Daoine Maith* (Gaelic for 'The Good People') or *Y Tylwyth Teg* (Welsh for 'The Fair Family'). Green clothing was avoided in some places, since green was the fairies' colour, and this has been adapted to a belief that green cars are unlucky. Iron was also effective in keeping the fairies away, a factor which MacRitchie and his followers attributed to their being memories of pre-Iron Age peoples.

Fairy belief was never universal, and whether fairies existed or not was a frequent topic of discussion in church sermons. Adolphe Orain reports a rather cynical exploitation of belief in werewolves from 19th-century Brittany: 'Young men amused themselves running through the countryside at night covered in a wolf skin to scare people. Criminals used this disguise to steal and ransack isolated habitations' (*Folklore de l'Ille-et-Vilaine*). The many comparisons of young warriors with wolves and dogs in early Irish literature suggest the antiquity of such beliefs and practices in the Celtic countries (see heroic ethos).

Fairy types specific to the individual Celtic countries are discussed below. The works of Katharine Briggs contain reasonably complete listings of fairy types and individuals; what follows here is only a sampling. Many of the fairy traditions are shared between the different countries, or between Celtic and English traditions, or beyond. The English words 'bogey', 'bug', 'puck', and others, are certainly related to such Celtic words as Cornish *bucca* 'hobgoblin, he-goat'; Scottish Gaelic *bòcan* 'hobgoblin'; Irish *púca* 'goblin'; Manx *boag* and *buggane* 'boggle, sprite'; and Welsh *bw(g)* 'ghost, bogey, hobgoblin, scarecrow'. The direction of the borrowings and the relationship to cognates in the Germanic languages are uncertain. Old Norse *púki* 'devil, fiend' has been proposed as a source, derived by Pokorny from Indo-European **b(h)(e)u-* 'inflate, swell', with a gutteral suffix. A relation with the words for male goat (e.g. Breton *bouc'h*, English buck) has also been suggested, as has onomatopoeia, but the evidence does not clearly support any hypothesis.

§2. ireland

While fairies may be designated in various ways in Modern Irish, the core terminology is based on the root *sí* or *sídh* 'fairy mound', thus *sióg* 'fairy', *síúil* 'fairy-like', *síscéal* 'fairy tale'. Nonetheless, it would probably be misleading to see the *aes síde* 'people of the fairy mounds' of Old and Middle Irish literature as simply and precisely the same phenomenon as the fairies of later Irish tradition. Although the two are generally to be equated, the more complex portrayals in the early literature of individual members of the *aes síde*—who are largely synonymous with the Tuath Dé—function in a different manner to that of folk tradition (see further fomoiri; síd). Other Old or

Middle Irish words for fairies exist, notably LUCHORP(ÁN), *sídaige/síthaige* 'fairy', again derived from *síd*, and several others with a range of meanings: *abacc, siabair, sirite*.

The fairy tradition of modern Ireland (ÉIRE) is extensive. T. Crofton Croker collected and printed several volumes of fairy lore, under the title *Fairy Legends and Traditions of the South of Ireland*, in the 1820s and 1830s. One of the first from the British Isles to record fairy lore, his works were translated into German, and their publication prompted the Grimm brothers to correspond with him. Later editions of his work reflect their influence. W. B. YEATS, an avowed believer in fairies, also used fairy traditions in his literary works, and is responsible to a large extent for the popularization of Irish fairy traditions.

§3. SCOTLAND

The queen of the fairies in Scotland (ALBA), sometimes known as queen of the witches, was Neven or NicNeven, a name Henderson and Cowan derive from *Neamhain*, Old Irish NEMAIN, a war-goddess (*Scottish Fairy Belief* 15). Variations on this name are found all over Scotland, and much of the terminology of the fairy tradition in Scottish Gaelic is similar to that of Irish.

As elsewhere, fairies and other supernatural afflictions could be kept away with iron, with a pierced stone (i.e. a stone with a hole through it, either natural or bored), with holly, or with rowan. Members of the community who have died have been seen among the fairies.

The Scots-language ballads of 'Thomas Rymer' and 'Tam Lin' describe a journey to and from the OTHERWORLD. Although not current in Gaelic areas, the BALLADS do show some influence from Celtic tradition, for example, the importance of Hallowe'en as the time to rescue Tam Lin (see SAMAIN). The association of the colour green with fairies is also very strong in Scotland. Elfland, where Thomas Rymer was taken, is described in opulent terms, reminiscent of the Irish otherworld.

§4. ISLE OF MAN

One of the best-known Manx fairies is the *fynnoderee* or *phynodderee*, a helpful brownie-type fairy of the home or farmstead. Like other brownies, he is a small, hairy, helpful being, who can be driven away by a gift of clothing. The *fynnoderee* may be a monster (see §1 for definition), and the word is used in the Manx BIBLE to translate what is 'satyr' in the King James Bible, in Isaiah 34:14 (*daemonia onocentauris et pilosus* 'hairy ass-centaur demons' in the Vulgate Latin Bible of St JEROME). Other types of fairy are the *buggane* 'elf, goblin', and the *glashtyn* or *glashan*. Sometimes used as the word for the water-horse, the word is also used for a malevolent, but stupid, fairy, similar to the Scandinavian troll.

Many objects of local significance were attributed to the fairies. A. W. Moore records several narratives of this type (*Folk-lore of the Isle of Man*). In one, a young man finds himself among the fairies, and is warned by a fellow mortal not to eat any of their food. Heeding the warning, he pours the liquid out of his cup, and the fairies and their captives disappear, leaving him holding the cup. He donated the cup to the church, Kirk Malew, and it was subsequently used for communion. Another legend explains the origin of a saddle-shaped stone as a fairy saddle used to enchant horses until a vicar caught the fairy with the horse, whereupon he vanished, leaving his saddle behind as a stone.

§5. WALES

In Wales (CYMRU), the fairies bore several euphemistic names: *Y Tylwyth Teg* throughout the country, but also *Bendith y (eu) Mamau* (the (their) mothers' blessing) in Glamorgan (MORGANNWG) and *Plant Rhys Ddwfn* (the children of Rhys Ddwfn, a figure not otherwise known) in parts of DYFED. An early Welsh fairy abduction narrative is told by Gerald of Wales (GIRALDUS CAMBRENSIS) in *A Journey through Wales*. The anecdote concerns one Elidurus who, at the age of twelve, was invited by two fairies into a subterranean world. The fairies are described as diminutive beings of normal proportions, with equally diminutive horses and dogs; they have long hair, a vegetarian diet, and no religious beliefs of note. Their language was identified as Greek, following the theories of LEGENDARY HISTORY current at the time.

The *Tylwyth Teg* milled their meal in human mills at night, and rewarded humans with coins obtained from other humans. Hugh Evans speculates that the *Tylwyth Teg* were also smokers because of the name given to a small clay object resembling a pipe, *cetyn y Tylwyth Teg*, pl. *catiau y Tylwyth Teg*). Himself a believer, he speculates

that humans may have learned the habit from the fairies (*Y Tylwyth Teg*).

The *pwca*, a sort of poltergeist, also appears in Welsh folklore, as do other creatures such as the *ŵyll* (sometimes *gŵyll*), roughly 'goblin' in English, and the *ellyll* 'spirit, phantom, ghost, fairy'. The 14th-century poet Dafydd ap Gwilym refers to *ellyll* in his poem *Dan y Bargod* (Under the eaves), seemingly in the sense of 'fetch', someone outside himself with strong emotion. The emotion in his case is love, but the word also occurs in Old Irish as the personal name *Ailill* (cf. medb), which may refer to someone permanently outside himself with battle-fury. It is difficult to tell which sense is meant in the Welsh triads, where the word occurs twice: *Tri Tharv Ellyll Ynys Brydein* and *Tri Gvyd Ellyll Ynys Brydein*. Rachel Bromwich translates these as the 'Three Bull-Spectres of the Island of Britain' and the 'Three Wild Spectres of the Island of Britain' (Bromwich, TYP 170–1), but they may equally have been water-bulls (see legendary animals) and fairies. Will-o-the-wisps are *tân ellyllon* (goblins' fire), and mushrooms and foxgloves are *bwyd ellyllon* (goblins' food) and *menig ellyllon* (goblins' gloves), respectively.

§6. brittany

In Brittany (Breizh), the association of supernatural entities with the dead is very strong. Many of them are considered to be part of the Anaon, the community of the souls of the dead. A great many of these revenants (those who come back from the dead) are atoning for sins committed during their lives—priests return to say forgotten masses at midnight, individuals who moved boundary markers return to carry the heavy stones at night, and the drowned lurk where they met their death, hoping to lure someone else to take their place. Souls also return in the form of animals: a thin cow in a field of fat ones indicates the soul of a miser, while a woman who did not want children returns as a sow with as many piglets as the number of children she 'ought' to have had. Standing stones are also sometimes understood to be the souls of the dead undertaking penance.

Other creatures, such as the *korrigan* (pl. *korriganed*), are much closer to the traditional dwarf of Anglo-Germanic tradition. One of the more important beings is the mermaid. Although ordinary sea-women (*morwreg*, pl. *morwragez*) were known, with the expected traits of combing long blonde hair and singing, these benevolent mermaids existed alongside more sinister figures known as *mari-morganed* or simply *morganed*. Unlike the *morwragez*, *morganed* were not half fish and did not dwell in the open ocean. They could control the weather, and would entice young fishermen under the sea and drown them. F.-M. Luzel collected a narrative from the island of Ushant (Breton Enez Eusa) in which a local family was supposed to have obtained its riches from these *morganed*, and there are also narratives of marriages between them and humans.

To protect themselves from malevolent *poulpikanned*, Bretons would keep a vessel filled with grains of millet or peas, which the fairies would be constrained to count. A folding knife could also be stuck into the ground, as close as possible to the fire, so that the blade and handle formed an acute angle. A string of eggshells would be hung in a stable, and the fairies would amuse themselves with this, rather than disturb the horses.

§7. cornwall

In addition to the piskies, the Cornish *spriggans* are small and ugly beings who, according to Bottrell, are to be found only where treasure is buried (*Traditions and Hearthside Stories of West Cornwall*). Hunt claims they are the ghosts of giants, who have all died out (*Popular Romances of the West of England*). Saint Michael's Mount was supposed to be the abode of a one-eyed giant (cf. Balor), and giant narratives account for the placement of many of the megalithic monuments of Cornwall (Kernow). Knockers or Tommyknockers are a prominent feature of Cornish lore. They are similar to German *kobalds*, but benevolent. They can be annoyed by human activities, especially whistling and swearing, and the presence of the cross. The sound of their knocking indicated a rich vein or lode, and was generally welcomed. The knockers were also called *buccas*, although the *bucca* was also encountered outside the mines. Robert Hunt mentions the *Bucca Dhu* and the *Bucca Gwiddhen*, Late Cornish for 'black bucca' and 'white bucca', respectively. He says that fishermen would leave an offering of fish on the shore for *Bucca Dhu*, just as miners were said to leave offerings of food for the buccas.

Both Hunt and Bottrell record variations on 'The Fairy Widower' in which a male fairy entices a young woman to agree to look after his child for a period of

time. She does so willingly, but upon breaking a taboo is sent home. All the narratives specify that the heroine was unhappy or discontent for a period of time after being sent home from fairyland, a reflection in narrative of the possibility of diagnosing depression and similar states as fairy-caused illnesses.

AM

The Irish **Famine** (1845–52) ranks as one of the worst natural disasters in modern European history. An estimated one million people died in a population of 8–8.5 million and up to 2 million emigrated. The immediate cause was a blight which devastated the potato—the staple food of the population. The adoption of the potato, a crop which originated in the Andes in South America, made it possible for the population to increase from 2 million in the 1740s to over 8 million on the eve of the famine. The increase was most pronounced in the west and north of the island, where the climate and land made it difficult to cultivate grain. The potato enabled families to survive on 1–2 acres (0.4–0.8 ha) of land, and these smallholdings underpinned an agrarian economy which exported livestock, bacon, dairy produce and grain to Britain. On the eve of the famine, Ireland (ÉIRE) produced sufficient food for 10 million people.

The potato blight left Ireland with an acute subsistence crisis. Families which had been self-sufficient in food were forced to buy it in the market, but supplies were scarce, prices soared, and labourers and small farmers could not afford to feed their families. A shortage of food, mass migration of starving people, the crowding together on public relief works or in workhouses, resulted in epidemics of typhus and other fevers. Most deaths were caused by disease, but thousands died of starvation.

During the famine, the response of the British government was a hotly debated topic, and it remains so today. Irish nationalists claimed that there was ample food in Ireland, even at the height of the famine, and that the crisis could have been resolved by banning exports. This claim does not withstand scrutiny. Although some food was exported during these years, exports were dwarfed by imports; if the food trade had been disrupted, many more people would have died. Other aspects of British policy are more questionable, for example, the decision to provide relief in 1846 in the form of public works rather than by providing food. Government soup-kitchens opened in the spring of 1847, and were soon feeding up to 3 million people, but in the autumn of 1847 the British authorities declared that the famine had ended, and that all further relief should be provided through the poor law.

Britain was determined that Irish taxpayers, particularly landowners, should bear most of the cost of famine relief. The famine was seen as confirmation that Irish rural society was inherently flawed, and many politicians and civil servants were determined that Irish smallholdings should be replaced by English-style capitalist farming. Their primary target was the Irish landlord class, but the latter survived the famine largely unscathed; the cost of Britain's effort at social engineering fell on the Irish poor. During the latter years of the famine, thousands of smallholders were evicted from their land by landlords who took advantage of the famine to consolidate holdings. Some died as a consequence, others emigrated or were crowded into workhouses.

By the early 1840s, up to 100,000 people were emigrating each year, and no part of Ireland was immune. Between 1845 and 1855 over 1.5 million emigrated to the USA, and a further 200,000–300,000 went to Canada (see CELTIC LANGUAGES IN NORTH AMERICA). Panic emigration in 1847 saw overcrowded ships crossing the Atlantic in mid-winter, many carrying fever-ridden passengers. The highest mortality was on ships travelling to Canada; since this was the cheapest route, it attracted the poorest emigrants. Liverpool was the major port for emigration to North America, but many of the Irish who arrived there did not leave because they were too poor or too sick. The influx of famine emigrants placed an enormous strain on health and welfare services in British and American cities, and it is not altogether surprising that it prompted an increase in anti-Irish and anti-Catholic prejudice. Many emigrants held Britain responsible for the famine and for their exile from Ireland. By the 1860s the Fenian Brotherhood, which was committed to bringing about an Irish republic by armed rebellion, had many recruits among the Irish in Britain and North America.

In Ireland, the collapse of the potato-based economy wiped out the agricultural labouring class, and this resulted in a more bourgeois, conservative Ireland. The family farm of 20–30 acres (8–12 ha) dominated post-famine Ireland. Farms were no longer subdivided; marriages became fewer, couples married at a later age, and dowries became the norm. Church attendance became universal, and traditional peasant customs such as patterns and holy wells were abandoned, perhaps because these had failed to prevent the famine. The IRISH language was another major casualty; a disproportionate number of famine victims and subsequent emigrants came from Irish-speaking areas in the west of Ireland.

fanum and sanctuary

Despite a wide diversity among the ancient Celtic ritual sites which have been investigated to date, it is possible to suggest a general description for Gaulish sanctuaries. These show numerous recurring characteristics, which seem to be systematic. The sites often exhibit a long continuity over a period of generations or centuries, during which they were rebuilt. The most dramatic shift in form is seen when the cult sites have a sustained life from the pre-Roman IRON AGE (*c.* 700–*c.* 50 BC) into the Roman period (which began shortly after *c.* 50 BC in central and northern GAUL, earlier nearer the Mediterranean).

One of a pair of carved wooden stags found in ritual shaft and well at the Fellbach-Schmiden sanctuary (viereckschanze), Baden-Württemberg, Germany, probably once decorated a structure at the top of the shaft, last quarter 2nd century BC

These cult sites were usually enclosed by a small earthen bank accompanied by a ditch (see ENCLOSURES). The length of these earthworks varies. At GOURNAY-sur-Aronde (Oise), the earliest example identified to date, the ditch is roughly 45 m along each side, but the ditch measures only 15 m at Bennecourt (Yvelines); both sites open to the east.

In the centre of the enclosure, several structures usually occur together, including an inner central ditch surrounded by several smaller ditches and buildings. The type of buildings found within Gaulish sanctuaries varies over time in the pre-Roman Iron Age. The earliest buildings were of wood (and thus revealed to archaeologists by post holes); these were followed by composite wood and stone structures, and finally by buildings entirely of stone. The last arguably show the influence of Mediterranean ideas concerning sacred architecture. Remains of cult practice, offerings, and SACRIFICE (see also RITUAL) have been found, mainly in pits and the enclosing ditches, and more rarely from the successive surface layers of soil or erosion deposits. Of the recurring portable finds with a superior survival rate, spectacular quantities of weapons are common, chiefly SWORDS, spears, and SHIELDS. The small wall which typically surrounds the inner enclosure and its structures is in many cases set within a much larger enclosure (about 10 ha). This outer precinct might have served as a central place of assembly or 'fair ground' for the widely scattered Celtic rural population, when they came together for such diverse activities as making and exchanging crafts, tribal gatherings, FEASTS, athletic contests, mustering prior to offensive military campaigns, or various sorts of displays and performances.

During the Gallo-Roman period, a temple constructed of masonry, the *fanum* 'sanctuary temple', was often added to these sites. This stone building consisted of a central space, the *cella*, and a peripheral part, the gallery. Both the *cella* and the gallery have a square floor plan. The same basic type was also common in Roman Britain in pre-Christian times. Even when none of the structure survives at the surface level, the characteristic shape of the Romano-Celtic *fanum* can easily be detected by aerial surveys. When investigated, sites of this type often reveal that the Roman temple was built on top of a sanctuary of the pre-Roman variety described above. Having functioned as a gathering point for several centuries in the Iron Age, these sites apparently retained an important social and ideological function long after the end of Celtic independence.

feast

§1. INTRODUCTION

The Celtic feast strikes modern readers as a pervasive social institution on which a complex of distinctive social values converge. Various types of evidence for it come from a wide range of places and periods—IRON AGE archaeology, GREEK AND ROMAN ACCOUNTS of the ancient Celts (§7), early Irish and Welsh heroic narratives, such as those of the ULSTER CYCLE and the MABINOGI, and court poetry down to the time of the extinction of the 'GAELIC order' in the 17th century in Ireland (ÉIRE) and the 18th-century in the Scottish HIGHLANDS.

Throughout this vast range, the Celtic feast stands out consistently as a place for the assembly and reconstitution of the dispersed rural tribal group (TUATH), economic gift exchange between chiefs and followers, the display and consumption of items of élite prestige, the defining and reconfirming—often competitively—of social identity and rank within a hierarchical society, and the confirmation of new social relationships, such as marriage alliances and the elevation of kings. Although one might think of these distinctive functions as virtually a non-linguistic definition of Celticity, none of them are exclusively Celtic, but may be found in many times and places as features of societies which could be characterized by such potentially misleading terms as 'primitive', 'oral' (see LITERACY), or 'small-scale'. These features seem distinctive to us because we live as citizens of modern states, in principle at least, equal before the law; the particulars of our identity and qualifications are documented, as are our principal social relationships and obligations; our financial means are quantified impersonally by cash value. Therefore, we have no need

for a great, ritualized public activity like the Celtic feast to define who we are and how we relate to the broader society. A second cause for caution, lest we define Celticity too much on the basis of the feast, is that in comparing diverse and often ambiguous types of evidence—such as text-free evidence from pre-Christian Hallstatt and La Tène burials from mainland Europe on the one hand versus highly fictionalized and fantastic narratives from medieval Ireland and Wales on the other—there is a tendency to explain one fact in terms of the other, and thus see things as being more alike than they might in fact be.

Feasting is mentioned many times in this Encyclopedia. The remainder of this article summarizes this material, arranged by general categories. The reader may pursue further details through the cross-references.

§2. general aspects

See drunkenness; foodways; wine.

§3. archaeological evidence

During the earlier Iron Age, Celtic west-central Europe developed contacts with the Mediterranean world, borrowing the institution of the symposium and related items of Greek and Etruscan paraphernalia, such as sieves and flagons for serving wine, and La Tène style ornament is often found on metal drinking vessels which have been interpreted as equipment for aristocratic feasting (see art, celtic [1] §§3–5; kleinaspergle). There is abundant evidence for (sometimes spectacularly) rich drinking vessels, other feasting equipment, and food and drink itself being central features of aristocratic burials in Hallstatt and La Tène periods in Gaul, central Europe, and Britain, for example, at Clemency, Dürrnberg (§4), Hochdorf, Hohmichele, Lamadelaine, Magdalenenberg (§2), Reinheim, Saint-Roman-de-Jalionas, Vix, Welwyn; cf. also vehicle burials. In pre-Roman Gaul, there is evidence for a type of animal sacrifice (§2) at which the flesh was then consumed, at sites including Ribemont-sur-Ancre and Fesques. For an interpretation of enclosed structures possibly used for ritual communal feasting in Iron Age Gaul, see fanum. A slaughter pattern suggesting seasonal feasting has been identified in Iron Age Ireland (Ériu) in the faunal remains of the traditional royal centre of Laigin at Dún Ailinne.

§4. the evidence of the classical authors

In general, see Greek and Roman accounts (§7). The foundation legend of Massalia involves the arrival of Greek travellers at a royal Gaulish wedding feast, see Aristotle. For Athenaeus' description (probably derived from Posidonius) of the extravagant feast of the Gaulish chieftain Lovernios as the occasion for praise poetry richly rewarded with gold, see bard [1]. For the account of the year-long feast and feasting halls of the Ariamnes preserved by Athenaeus, see the entry on his source, Phylarchus. For an account derived from Posidonius of exchange of precious metal vessels, heroic contention, and heroes submitting to have their throats cut at Gaulish feasts, see Athenaeus. Diodorus Siculus, drawing on Posidonius, recognized the similarity between accounts of the bestowing of choice cuts of meat on warriors at Gaulish feasts and the deeds of the Greek heroes of Homer, see champion's portion. A description preserved by Athenaeus of a feast at which Celtic hosts poisoned their Illyrian guests is quoted in the entry on Theopompus; cf. also Camma's poisoning of the wedding libation of Sinorīx.

§5. irish tradition

For the theme of heroic status competition through violent contention at feasts, see champion's portion (*curadmír*); Fled Bricrenn ('Bricriu's Feast'); Scéla Mucce Meic Dá Thó ('The Story of Mac Dá Thó's Pig'); Ulster Cycle. Rules and standards for royal feasts are set out in the 9th-century *Tecosca Cormaic* (The instructions of Cormac [mac Airt]), see wisdom literature. On *Feis Temro* (The feast of Tara), see Diarmait mac Cerbaill; Teamhair. On the Irish *tarbfheis* 'bull feast', see feis; sacrifice, animal (§1). At the mythological feast described in *Baile Chuinn* (Conn's ecstasy), the sovereignty of Ireland was promised to the descendants of Conn Cétchathach, see Tuath Dé (§4). In the tale *Altromh Tige Dá Medar* (The nurturing of the house of two milk vessels), the Tuath Dé are said to have achieved immortality at the feast of Goibniu. For the hostel or large banqueting hall as described in early Irish sources, see bruiden. Cf. also Medb; Mesca Ulad ('The Intoxication of the Ulstermen').

§6. WELSH TRADITION

For the year-long feast of heroes at the 'hall of Mynyδawc', see GODODDIN. For the feast of ARTHUR's court as a theme and narrative device, see GLEWLWYD GAFAELFAWR. For the wedding feast as an important theme and dramatic turning-point in the First Branch of the MABINOGI, see PWYLL. For the wedding feast as the venue for formally conferring status on a novice poet in the later Middle Ages, see BARDIC ORDER [2] §10. On the otherworldly 87-year feast, *yspyδawt urδawl benn* (hospitality of the noble [decapitated] head), of the Second Branch, see BRÂN; BRANWEN.

§7. VOCABULARY

There are several words in the CELTIC LANGUAGES which may be translated 'feast'. The best attested are Old Irish *fled*, Scottish Gaelic *fleadh* 'feast', Modern Irish *fleá*, Old Welsh *guled*, Modern *gwledd*, Breton *gloé*, all from PROTO-CELTIC **wlidā*, which is also attested in the Gaulish personal name *Vlido-rīx* 'king of feasts'. Old Irish FEIS is often translated 'feast' and descriptions in early sources generally involve animal SACRIFICE and feasting, but etymologically the word's main sense is 'spending the night'; cf. Old Breton *guest*, Welsh *gwest* 'night's stay'. In 20th-century Ireland, *feis* became a common word for a (GAELIC) cultural festival (see FEISEANNA). More recently, *fleá* has become common in this meaning.

Fedelm (variant spelling Feidelm), known by the early Irish occupational epithets *banfhili* (woman learned poet) and *banfháith* (woman prophet) and who declares herself to be from CONNACHT and to have received esoteric training in ALBA, possessing IMBAS FOROSNAI, is a character best known to modern readers as the striking figure who appears near the beginning of the action in TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley'), when she is questioned by Queen MEDB regarding the fate of her vast army in the impending action. Fedelm replies repeatedly, *at·chíu forderg, at·chíu rúad* 'I see it bloody, I see it red', and then goes on to describe poetically the disaster to be inflicted by CÚ CHULAINN's feats. VELEDA, as described by TACITUS, was a pagan prophetess with a closely comparable social rôle. It is likely that the *Táin*'s Fedelm *banfháith* is understood to be the same as the sexually provocative prophetess Fedelm 'of the lovely hair' (*Foltchaín*), who was Cú Chulainn's lover for a year and who caused the mysterious debility of the Ulster warriors (ULAID) through displaying herself naked to them in the brief ULSTER CYCLE tale, sometimes called 'Cú Chulainn and Fedelm' and edited by Meyer. Significantly, the word *Fedelm* most probably derives from the PROTO-CELTIC root *wēd-/wid-* 'know, see' (on the probably Gaulish cognate *uidlua*, see BRICTA; cf. CYFARWYDD; DRUID). However, the name was not uncommon; for example, Fedelm Noíchride (or Noíchrothach) is the daughter of King CONCHOBAR in *Táin Bó Cuailnge*, where she abandons her husband Cairbre Nia Fer for the hero CONALL CERNACH; in FLED BRICRENN ('Briciriu's Feast'), she is Loegaire Buadach's wife (see ULSTER CYCLE §3). The common man's name, Old Irish *Fedlimid*, OGAM genitive VEDDELLEMETTO, Modern *Féilimí* is probably related.

Feis (pl. *feissi*, Modern Irish pl. FEISEANNA, from Old Irish *foaid* 'spends the night with, sleeps', cf. Welsh *gwest* 'night's stay, lodging' < Celtic **west-*) is a term originally used to denote certain ceremonial feasts which had an element of coupling, such as marriages or the confirmation of a rightful king. However, *feis* gradually lost this ritualistic connotation and came to mean any kind of FEAST. *Feissi* mentioned in the Irish ANNALS and medieval IRISH LITERATURE include *Feis Temro* (the feast of Tara), which was the inauguration of the kings of Tara (TEAMHAIR). Such royal inauguration was also called *banfheis* (cf. *ban-* 'woman/female', Modern Irish *bainis* 'wedding'), thus called because it described the king's initiation through marriage with the tribal goddess. Among the practices associated with the selection rites of Irish sacral KINGSHIP was the *tarbfheis* (cf. *tarb* 'bull'). There is no historical documentation for this custom (although GIRALDUS CAMBRENSIS mentions a practice somewhat reminiscent of it). However, Irish literary accounts suggest that it was one of the methods used to determine a future ruler, particularly associated with supernatural notions of the kingship of Tara. Thus, in the early tale TOGAIL BRUIDNE DA DERGA ('The Destruction of Da Derga's Hostel'), the *tarbfheis* is used as the means of recognizing the claims of the legendary Conaire Mór mac Eterscélae as the rightful future king of Tara. A particularly detailed description of a *tarbfheis* is contained in the tale SERGLIGE CON CULAINN ('The Wasting Sickness of Cú Chulainn'), preserved in the medieval Irish manuscript LEBOR NA HUIDRE ('The Book of the Dun Cow'; *c.* 1106). In an interim passage, relatively unconnected to the rest of the tale, we find the following account:

> A white bull is being slaughtered and a man is chosen to eat and drink his fill of the meat and broth made from it. After that, the man falls asleep, while four DRUIDS are singing the 'Gold of Truth' over him. In his sleep, the future king is revealed to the man, who on waking gives a description of the true king.

***Feiseanna* and the Oireachtas** are festivals organized at local and national level in Ireland (ÉIRE) since the 1890s for the promotion of GAELIC language and culture. In 1898 the first provincial FEIS ('feast', pl. *feiseanna*, not a *feis ceoil*, 'music festival') was held in Macroom, Co. Cork (Maigh Chromtha, Contae Chorcaí), and similar *feiseanna* were held in the following months all over the country. The Gaelic League's

Ard-Fheis (National convention) of that year formalized the arrangement, licensing *feiseanna* for the Irish-speaking counties from then on (see CONRADH NA GAEILGE).

Feiseanna were a mix of education and entertainment: students both young and old competed to demonstrate knowledge of basic texts, while entrants with a broader knowledge of the language entered storytelling, essay-writing, recitation, or folklore-collecting competitions. There were additional events for instrumentation, singing, and dancing. Some *feiseanna* also included drama, translation, and versification. The political and cultural agenda of the *feiseanna* were sometimes obvious, as when entrants of essay competitions were told to deal with Gaelic heroes or advocate the national advantages of encouraging small farms or cooperativization. Some *feiseanna*, such as those of Antrim (Aontroim) and Wexford (LOCH GARMAN), had hugely popular competitions for local agricultural and industrial items, and their exhibitions drew many non-Irish speakers.

By 1903 there was already an informal gradation system whereby winners of local and provincial *feiseanna* moved on to higher competitions until they reached the national Oireachtas. By 1905 the word *feis* itself had become contentious, with the Gaelic League pressing to stop the word being used to advertise any gatherings other than theirs.

By 1908, although the Oireachtas and the Gaelic League had crested in popularity, regional *feiseanna* continued to thrive, only falling into abeyance during the 1920s. The Dublin *feis* was successfully revived in 1930, and by 1942 there were 5000 competitors. Often, where there was an active branch of the League, there were (usually annual) *feiseanna*, which were often the only community festivals. In 1943 there were 130 *feiseanna* around Ireland.

The Oireachtas was consciously modelled on the Welsh EISTEDDFOD (Ó Súilleabháin, *Scél an Oireachtais 1897–1924* 10–15) and has itself served as a model for all subsequent Oireachtais (pl. of Oireachtas) up to the present day. The first Oireachtas (envisioned as a language festival), founded by the fledgling Gaelic League, was held in 1897 to coincide with the first day of the second annual *feis ceoil* (a national festival which concentrated on Irish music and dance) in Dublin (BAILE ÁTHA CLIATH). The Gaelic League scheduled its *Ard-Fheis* to coincide with the festival from 1898 onwards. With a six-day programme and 1000 competitors by 1904, the festival was a natural congregation opportunity for cultural activists. Political rivalries in the League led to difficulties with the Oireachtas, however, and by 1913, even with the festival being held in Galway city (GAILLIMH), competition standards were considered low and locals stayed away. The festival was cancelled due to lack of interest in 1925 and not revived until 1939, albeit on a much smaller scale, at Dublin's Mansion House. There was a gradual growth of interest in the Oireachtas from then on and by 1968 the festival, now held annually in Dublin, was so large that events were being held in 21 centres around Dublin. A magnet for language activists, writers, and native speakers, the festival continued to grow, and from 1974 alternated venues between the provinces and Dublin. The festival's literary competitions have served as launching pads for many new writers in IRISH, and the financial incentives of the prize fund have ensured quality work that has often gone on to publication. Oral-performance competitions (such as those for SEAN-NÓS singing) are broadcast live to large audiences on Raidió na Gaeltachta, the national Irish-language radio service (see MASS MEDIA).

Brian Ó Broin

Féni is an Old Irish term which, in its most general sense, means 'the Irish people'. There are several more restrictive senses as well. In LAW TEXTS, *Féni* means legally competent freemen of the tribal polity (TUATH), and *fénechas* signifies the customary secular law of the Irish. In these senses, Irish people in SLAVERY were not *Féni*, and other groups are excluded by virtue of privilege, for example, clergy and the *filid* (the top rank of professional poets; see BARDIC ORDER). In early strata of the laws, *Féni* has tribal as well as sociological limitations, as in the proverbial statement: *batar trī prīmchinēla in Hére .i. Féni 7 Ulaith 7 Gaileōin .i. Laigin* 'there were three principal peoples in Ireland, namely Féni,

Ulaid, and Gaileōin, that is Laigin'. In later versions Érainn are added to the list (see ériu §1). In this formulation, it seems that *Féni* means the peoples whose rulers were reckoned in the genealogies as *Síl Cuinn* (descendants of the legendary Conn Cétchathach). The rulers of Connacht and the pre-eminent Uí Néill dynasties were thus included. The status of the Éoganacht of Mumu (Munster) is less clear. The genealogies come to treat them as close kin to *Síl Cuinn*; therefore they might count among the Féni of the early list. But they were possibly simply not yet of interest. Unlike the others, they had not supplied kings of Tara (Teamhair) in the early historical period, which is why the Érainn were added, since two of their legendary kings—Conaire Mór (see togail bruidne da derga) and Lugaid Mac Con in the Kings' Cycles—were portrayed in well-known sagas as prehistoric kings of Tara.

In Irish legendary history (§3), such as the texts Auraicept na nÉces and Lebar Gabála Érenn, the eponymous inventor of the Irish language (*Goídelg*; see gaelic) was a Scythian nobleman, Fénius Farsaid. Fénius appeared at Babel following the confusion of tongues and had the best parts of the 72 languages of the world 'cut out' to synthesize Irish. As Carey has shown, Fénius's name and story result from the fortuitous similarity between the Irish group name and that of Fenech, a character in a 3rd- or 4th-century Latin translation of the Hebrew apocryphal text *Liber Antiquitatum Biblicarum* of Pseudo-Philo. Like Fénius, Fenech ordered the building of sea-going ships and, more significantly, was the leader of the descendants of Japhet at Babel.

As to the etymology of *Féni*, a connection with Old Irish *féinnid* 'hunter, (tribeless) warrior' seems likely (cf. fían; O'Brien, *Ériu* 9.182–3). Wagner linked the name with *fén* 'wagon', thus an original group name meaning 'wagoners' (*Celtica* 11.264ff.). As a refinement of the first etymology, Hamp proposed that *Féni* and the partly synonymous *Goídil* (see gaelic) ultimately go back to the same root and had once belonged to a single paradigm: Indo-European **weidh-(e)l-o-* : **weidh-n-jo-*, with the same root as Old Irish *fíad*, Old Breton *guoid*, and Welsh *gŵydd*, all meaning 'wild, feral, uncultivated' < Proto-Celtic **wēdu-* < IE **weidh-* (GPC s.v. *Gwyddel*; Pokorny, IEW 1.1177). The original sense of Celtic **wēdniī* > *Féni* would thus be 'forest people' and it then developed the meaning 'warriors', which was applied to that class among dominant tribal groups. It is likely that the Welsh kingdom name Gwynedd and its old Latinization *Venedotia* also go back to this Celtic formation, an etymology which would suit traditions of Gwynedd's foundation by the migratory war-bands of Cunedda and his sons.

JTK

Fergus mac Róich is one of the main characters of the early Irish Ulster Cycle of Tales. He is present in a position of seniority and prominence in many of the stories, likened by Jackson to the Homeric Nestor, as respected elder warrior and nobleman, and is a multifaceted character.

§1. FORMER KING OF ULSTER

He lost the kingship of Ulaid to Conchobar, through the wiles of Conchobar's mother Nes in the earlier version of *Compert Conchobuir* (The conception of Conchobar). Even so, he retained much of his earlier status and sometimes appears as a virtual co-king, for example, in the beheading episode of Fled Bricrenn (§94), when Sencha mac Ailello responds to the mysterious axe-wielding churl's challenge:

> Conchobor put aside . . . for the sake of his sovereignty, and Fergus mac Róich also on account of his similar privilege. These two excepted, let whoever of you come who dares, so I may cut off his head tonight and he mine tomorrow night.

§2. SPOKESMAN AND BEARER OF ORAL TRADITION

Fergus often figures as the spokesman of the Ulaid and the mediator of their oral lore. For example, in *Fled Bricrenn* he makes the collective response to Bricriu's ominous invitations: 'No! For if we go our

dead will outnumber our living, when Bricriu has incited us against each other.' In *Fallsigud Tána Bó Cuailnge* ('How Táin Bó Cuailnge Was Found'), Fergus's spirit rises from his grave to recite the *Táin* to the 6th-century poet Senchán Torpéist (for an ancient Celtic parallel discussed by Freeman, see NICANDER OF COLOPHON). Similarly, *Macgnímrada Con Culainn* ('The Boyhood Deeds of Cú Chulainn') occur as a narrative flashback within the *Táin* related by Fergus to the inquiring Queen Medb.

§3. LEADER OF THE ULSTER EXILES

Following the tragic contest over Derdriu related in Longas Mac nUislenn ('The Exile of the Sons of Uisliu'), Fergus led the aggrieved Ulster warriors to their traditional enemies, Medb and Ailill, at Crúachu (see further ULSTER CYCLE §3). This is the situation during the *Táin*, where Fergus often acts as the guide for his new Connacht comrades as they invade Ulster (though his fighting on their behalf is half-hearted), as well as Medb's lover.

§4. PARAGON OF SEXUALITY

Fergus's exceptional virility is mentioned in some of the early texts, has resonances in Irish folk tradition, and has been of understandable interest to modern writers (see ULSTER CYCLE §5). His breaking of mountains with the miraculous weapon Caladbolg in the *Táin* (cf. also MIRACULOUS WEAPONS), has often been given a Freudian interpretation in this light. However, Fergus's relations with women lead to repeated downgrading of his status. In a burlesque reversal of the mighty Caladbolg, the jealous Ailill replaces Fergus's sword with a useless wooden one. As mentioned above, he ceases to be king of Ulaid following his involvement with Nes. Although not directly involved with the woman, he loses his tribe through his part in the Derdriu affair. And in the tale *Aided Fergusa maic Róig* (The violent death of Fergus mac Róich), he is speared to death by Ailill's blind poet Lugaid while engaged in love play with Medb in a lake at Mag nAí, during which the couple are described as resembling deer and vividly stirring up gravel from the lake bed. Hence, we may follow his sexual undoing—from his status as king to senior nobleman, to tribeless warrior/gigolo, and ultimately to a beast in the wild, hunted down as a beast.

§5. THE NAME

The first element of the common Gaelic name *Fergus* is undoubtedly 'man, hero', Old Irish *fer* < Celtic **wiro-s*. Celtic **Wiro-gustus* might mean either 'chosen man' or 'man force', the latter finding resonance with the sexual aspect discussed above, though this may only have been a popular perception of the meaning of the name. *Fergus* is sometimes confused with the second Old Irish name *Forggus* < Celtic **Wor-gustus* 'choice, best (man)', cf. OIr. *forggu*, Welsh *gorau*. The Old Welsh name *Gurgust*, Pictish *Uurguist*, probably goes with the second Celtic compound. *Róich*, nominative *Róach*, probably goes back to Celtic **Ro-ekwos* 'great' or 'divine horse, stallion', suggesting an old pagan totemic divinity or perhaps again reinforcing the sexual idea.

Fergus Mór mac Eirc (Big Fergus, or Fergus the Great, son of Erc, †501) and his kindred, the sons of Erc, figure in medieval Gaelic sources as the founders of the royal house of Scottish Dál Riata (Dalriada), and all the subsequent kings and queens of Scots claimed descent from him. According to the notice of his death in the Annals of Tigernach, 'he came with the people of Dál Riata [meaning the district of that name in what is now Co. Antrim, Ireland] and took a part of Britain and died there'. In the Middle Irish *Bethu Phátraic* (Life of Patrick), St Patrick blessed Fergus and his brothers when they were still in

Ireland (Ériu). Since the dynasty claiming descent from the sons of Erc is definitely historical and Fergus's great-grandson Aedán mac Gabráin is already well documented, Fergus himself tends to be viewed as historical. However, the entry in the Annals is too early to be a contemporary record, *Bethu Phátraic* cannot be treated as history, and 5th-century population movements from Antrim to Argyll (Earra-Ghaidheal 'coastland of the Gaels') in western Scotland (Alba) remain largely invisible archaeologically. Therefore, we cannot rule out the possibility that the story of the sons of Erc was invented to supply Scotland with eminently Christian founders and to explain linguistic, political, and cultural connections between Ireland and Scotland whose actual background was unknown, or had become politically inappropriate, in the literary period. Nonetheless, the kings who traced their line to Fergus did have a central rôle in the beginnings of Gaelic Scotland and with it the linguistic community which survives today as the speakers of modern Scottish Gaelic.

On the name *Fergus*, see Fergus mac Róich.

PSH

The **Fernaig Manuscript**, compiled by Donnchadh MacRath (Duncan MacRae, also known as Donnchadh nam Pìos, *c.* 1640–*c.* 1700) of Inverinate in Kintail (Ceann an t-Sàil) between 1688 and 1693, is an anthology of Scottish Gaelic poetry dealing predominantly with religious themes, but also including some examples of early Jacobite poetry.

The collection consists of two notebooks containing a total of 59 poems, and the spelling system used by the compiler is based on contemporary Scots orthography, rather than the traditional Gaelic system. Most material in the manuscript dates to the 17th century, though John Carswell and Sir John Stewart of Appin, both represented by two poems, belong to the 16th century. Only one poem—that by Giolla Brighde Ó hEódhasa (?–1614)—is by an Irish poet (see irish literature). Like the poems ascribed to Carswell (one of them is in the Book of the Dean of Lismore, and therefore earlier, and the other ascribed to Irish poets in Irish sources; see Thomson, *Foirm na n-Urrnuidheadh* lxxxviii), the presence of Ó hEódhasa's poem indicates a degree of familiarity with the learned tradition. A similar conclusion is suggested by the use of syllabic metres for over half of the poems (Kenneth D. MacDonald, *Companion to Gaelic Scotland* 72) and the use of a *ceangal* or binding quatrain in *Tá cogadh oirnn do ghnáth* (We are forever at war) by Alasdair Mac Mhurchaidh, a device common in Irish, but rare in Scottish Gaelic poetry (MacRae, *Lamh-Sgrìobhainn Mhic Rath* 131–3, MacGill-Eain, *Ris a' Bhruthaich* 205–6). The criteria for selection appear to lie in MacRae's political and religious convictions (MacKinnon, *Trans. Gaelic Society of Inverness* 11.316). He also draws on sources close to Kintail.

MacRae himself is represented by twelve poems on both religious and Jacobite themes. Fear na Pàirce (MacCulloch of Park, *fl.* late 16th–early 17th century), six of whose poems are present, was MacRae's maternal great-grandfather (MacKinnon, *Trans. Gaelic Society of Inverness* 11.317). Donald MacRae, minister of Kilduich and author of *An Cill-duthaich mo thàmh cha laigh dhomh sàmh* (In Kilduich, my abode, I cannot rest quietly; MacRae, *Lamh-Sgrìobhainn Mhic Rath* 224–31), was the compiler's brother (MacKinnon, *Trans. Gaelic Society of Inverness* 11.314, 317). Donnchadh MacRaoiridh (†*c.* 1630), Alasdair Mac Mhurchaidh (†1642), and his son Murchadh Mòr mac Mhic Mhurchaidh (†*c.* 1689) are poets with strong Kintail links (MacKinnon, *Trans. Gaelic Society of Inverness* 11.324–7: MacGill-Eain, *Ris a' Bhruthaich* 191–3); they are represented by four, four, and six poems, respectively.

The religious poetry in the manuscript reflects 'disillusionment with the changes and vanities of the world, coupled with religious aspiration' (Kenneth D. MacDonald, *Companion to Gaelic Scotland* 72); it may be significant here that many of the poets belonged to the Episcopalian church (Fraser, *Trans. Gaelic Society of Inverness* 57.74; see christianity).

The Jacobite material comments on the events of 1688 and employs a range of religious, political, and legal arguments in its discourse (Ní Suaird, *Scottish Gaelic Studies* 19.94–122; see further jacobite rebel-

LIONS). Two of the Jacobite songs are translations ('Jock Briton's lament' and 'The true Protestant's complaint', MacRae, *Lamh-Sgrìobhainn Mhic Rath* 233–8, 238–53).

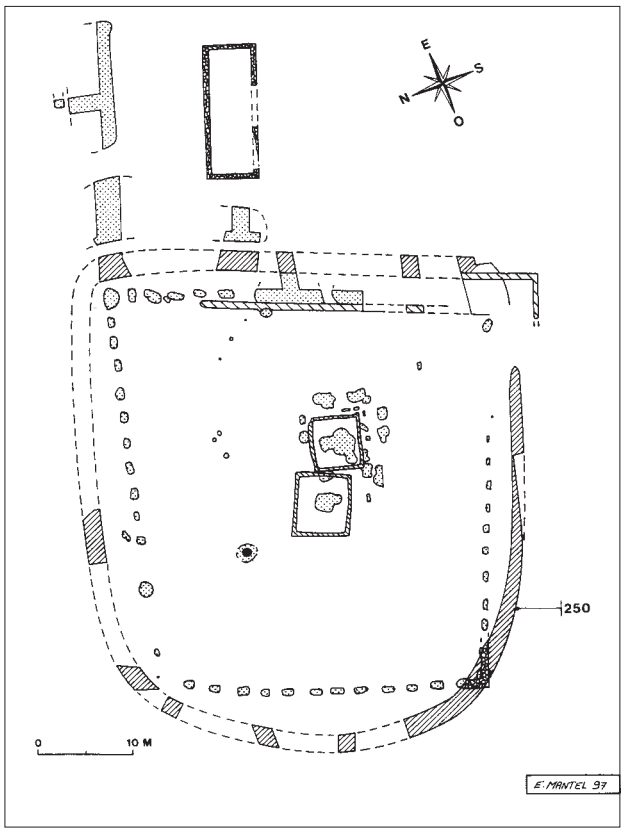
Fesques 'Le Mont du Val aux Moines' is an important RITUAL site of pre-Roman Celtic GAUL. The site is located in the *département* of Seine-et-Marne, France, thus in the north-east of ancient Gaul, in or near what was the country of the BELGAE at the time of CAESAR's conquest. The sanctuary of Fesques is located on the extreme end of a natural promontory. In its centre, several successive groups of ditches, two buildings surrounded by trenches, and a FANUM have been found. This central zone of 2000 m² is enclosed by a continuous deep ditch which could have functioned as a moat. There are remains of a passage through this ditch, with a door or gate. A rich assemblage of items has been found in the centre of the enclosure (COINAGE, fibulae, bracelets, pearls, &c.), as well as in the ditch (animal bones, goblets, human bones, iron weapons, &c.). The remains of animals found in the ditch resemble similar ones found in other sanctuaries of the region (see SACRIFICE; WATERY DEPOSITIONS). They show evidence of banquets where pork played a significant rôle (see FOODWAYS; FEAST).

The structures at Fesques are set within a larger ring wall, enclosing about 10 ha (24 acres), marked off by two parallel ditches dug on the western base of the promontory, on its north and south sides, and on the east side of the plateau. Between these two ditches, small ditches contained pairs of human feet, traces of people hanged looking towards the centre of the sanctuary. The internal ditch contained the feet and the heads of two-year-old cattle, some human remains and iron weapons, shield-bosses, SWORDS, and sheaths, dated to the Middle LA TÈNE period (*c.* 300–*c.* 150 BC). The ditches were filled in much later, in the 1st century AD.



Site plan of the central zone of the Middle La Tène sanctuary at Fesques

Fest-noz, literally a 'night party', is an event at which people experience traditional BRETON MUSIC and dance (see DANCES). Originally, a *fest-noz* was an event of the rural agricultural population in a small area of Brittany (BREIZH). In the late 1950s the idea of the *fest-noz* was appropriated by people such as the singer and cultural activist Loeiz Ropars, who saw it as an ideal

way to keep Breton dance and music traditions alive. Call and response singing (*kan ha diskan*), BINIOU-bombard duets, and the current Celtic band phenomenon all owe their hardiness as musical traditions to this revival of interest in the *fest-noz*.

A typical *fest-noz* includes music, a dance area, and a bar, so that people can alternately dance and drink. In contrast with the purely local dance and music tradition, the new *fest-noz* is an event where folk-music and folk-dance enthusiasts from all over Brittany meet to interact. This has resulted in a crossing, melding and, to some degree, a homogenization of Breton music which does not appeal to purists. However, most of the participants in the folk-music scene are thoroughly at ease with the *fest-noz* revival. Whatever one may think of the new *fest-noz*, it is the single most frequent type of event for Breton folk-music performance.

The *fest-noz* has also been responsible for the creation of a new genre of music—*fest-noz* music. Stylistically, this genre is instrumental dance music played on some combination of violin, diatonic accordion, bombard, flute, clarinet, BAGPIPE, guitar, and bouzouki. The influence of Irish folk music and of the hybrid genre of Celtic music on this style is extensive, but the music remains Breton through the overlapping melody lines characteristic of *kan ha diskan* and of biniou-bombard duets.

Fían 'warring and hunting band, *männerbund*' (pl. *fíana*; *fían*, *fianna* in later spelling) was a term used already in Old Irish texts to designate groups of warriors engaged in expeditions of acquisition, or (more specifically) groups of youths (*óic féne* 'young men of the *fían*') and social misfits bonded together in a formal or even ritualized fashion on the border zones between one TUATH and another, and engaged in violent activities. The kinship, if any, between the words *fían* and FÉNI (freemen, society) and the explanation of *fían* as coming from the same INDO-EUROPEAN root as English 'win' remain uncertain. Given the literary evidence, however, it would appear that the *fían* served a vital function in siphoning off undesirable elements from the social pool, providing an outlet for rambunctious behaviour (in early literature often expressed in bestial terms, with the wolf and the deer as the primary *fían* mascots) and, by means of its *rite de passage* activities, preparing at least some *féinnidi* (members of a *fían*, sing. *féinnid*) for the assumption of regular adult responsibilities, not unlike comparable male-bonding organizations in other civilizations, past and present. The *fían* way of life (*fíanaigecht* or *féinnidecht*) included hunting, fighting and raiding (in search of booty or revenge), martial and athletic games (*fíanchluichi*), and, if sources such as the 17th-century historian Keating (CÉITINN) are to be believed, special culinary procedures (involving the *fulacht na fían* 'cooking pit of the *fíana*'), and even training in poetry. The usefulness of *fénnidi* as mercenaries in a world where standing armies did not yet exist, and of *fían* violence as a way to deal with problems resistant to normal social solutions, contributed to the profoundly ambivalent attitude toward the *fíana* reflected in the literature, perhaps similar to the attitude towards the 'gallowglasses' of a later phase of Irish history. The occasional references to *fíana*, *fénnidi*, and *rígfhénnidi* ('chief *fénnidi*, leaders of *fíana*', sing. *rígfhénnid*; perhaps in some contexts 'king's *fénnid*') in literature thought to be of higher historical reliability such as law tracts (see LAW TEXTS), ANNALS, and certain early religious texts suggest that the institution was still in existence in the pre-Viking era, despite clerical condemnation of the destructiveness of *fíana* (a problem especially for ecclesiastical establishments, which, like *fíana*, tended to be situated in boundary zones), and the Church's horror at the tolerance of pagan rituals and beliefs which seemed to be a part of *fianaigecht*. It is now generally agreed that figures designated in early medieval saints' lives as *latrones*, *latrunculi* (robbers), or in Irish *meicc báis* (sons of death, evildoers)—dangerous raiders usually roaming in groups and sometimes characterized by mysterious signs worn on their heads—are in fact *fénnidi*, practitioners of the same institution as the *díberga* or *díbergaig* (brigands) and just plain *fíana* mentioned in early Irish sagas.

In those saints' lives, the holy men and women in question usually succeed spectacularly in converting such 'sons of death' from their non-Christian and

destructive ways. Similarly, in the 12th- or 13th-century text known as the ACALLAM NA SENÓRACH (Dialogue of [or with] the old men), the survivors of the *fían* of FINN MAC CUMAILL, the most famous such organization in medieval IRISH LITERATURE, have a conversion experience in the company of St PATRICK. Subsequently, the old warriors' latter-day adventures become a showcase for the power of CHRISTIANITY, and the text, supposedly a document of the *fénnidi*'s reminiscences about their heyday, a demonstration of the ability of Irish written culture to engage in productive dialogue with its pre-Christian heritage and with the oral tradition of performance. In the literary as well as later Irish and Scottish 'folk' developments of Fionn and his *fían* (in later Irish more often plural, *fianna*) the archaic institution takes on a new life and meaning, just as the heroics of this cycle of story, often designated in English as the 'Fenian', still reflects the original functions and characteristics of the *fían*—in fact, the word 'Fenian' derives from *fían*, genitive *fé(i)ne*.

Going back to MACPHERSON and the Ossianic controversy, the subject of the *fían* has been and remains a wellspring of Celtic scholarship. MEYER's *Fianaigecht* remains a valuable compendium of early literary references to *fíana*, especially when used in conjunction with Gerard Murphy's additions and corrections, in his introduction to his and Eoin MACNEILL's edition of the *Duanaire Finn*. Sjoestedt's seminal observations about the social function of the *fían* and its kinship to other Indo-European *männerbünde* (lit. 'male social groups') appeared in her *Dieux et héros des Celtes* (trans. Dillon). Schmitt usefully presents data on the European tradition of the 'wild hunt(er)'. Traces of the *fían* in early religious texts are adumbrated by Sharpe, while McCone contextualizes the fear of *fíana* expressed in early Irish literature. The importance of border zones in early Irish society is discussed by Ó Riain, while Nagy surveys what the *fían* did on or beyond the boundaries of the human world.

Fiannaíocht (earlier spellings *fíanaigecht*, *fiannaigheacht* 'Finn Cycle') is the most enduring narrative cycle in the history of Irish and Scottish Gaelic written and oral tradition. More accurately, it is a complex of smaller cycles having to do with various local heroes that grew out of, or were fitted into, a larger cycle centred on FINN MAC CUMAILL (Fionn mac Cumhaill in later spelling), a mixture of warrior, leader, and poet-seer, and on the institution of the FÍAN (in later Irish texts usually referred to in the pl., Modern Irish *fianna*), the hunting-warring band which serves (not unlike King ARTHUR's court) as a showcase for the rise (and sometimes fall) of promising young heroes. This cycle of stories, attested already in early vernacular literature, favoured in the later medieval and early modern phases of literary production, and living on in the repertories of Irish and Scottish traditional storytellers as late as the 20th century, is commonly referred to in English as the Fenian (from *fían*, genitive *féine*) or Ossianic cycle—the latter designation derived from the 18th-century Scottish popularizer and bowdlerizer of Fenian tradition James MACPHERSON's rendering of the name of an important figure in the cycle, OISÍN (Scottish Gaelic Oisean), the son of Finn.

§1. FIANNAÍOCHT AS INSTITUTION AND GENRE

While the *féinnidi* ('members of the *fían*', sing. *féinnid*) associated with Finn (a figure with deep mythological roots) form what has been the most celebrated *fían* over the last millennium, there are references to other *fíana*, both real and fictitious, in the early Irish literary corpus, and to other *rígfhéinnidi* ('chiefs of *fíana*', sing. *rígfhéinnid*), such as Finn's rival, Fothad Canainne. In some cases, *fían* seems to mean simply 'warband', but in many others it apparently refers to an institution with parallels in other Indo-European societies which was designed to prepare young males for adulthood (particularly, to acquaint them with the techniques of fighting and hunting, the rules of proper communal behaviour, and perhaps even those of poetic composition). *Fianaigecht* (like the word *fénnidecht*) originally denoted the esoteric society, culture, and lore of the *fían*, but by the 12th century it came to refer specifically to Finn's *fían*, to what they did and experienced, as well as to the stories about them, just as these heroes became the lone, albeit popular, vestiges of a bygone institution. In some medieval Fenian texts reflecting foreign

influence, *fiannaigheacht* can virtually be translated as 'chivalry', with Finn and other Fenian characters viewed as the native counterparts to the chivalrous heroes and heroines of Continental romance. In the idiom of modern Irish storytelling, the meaning of *fiannaíocht* has expanded to include heroic tales in general, just as the stories about Fionn and his *fianna* have come to be emblematic of the entire genre.

§2. EARLY LITERATURE

The earliest surviving IRISH LITERATURE offers only the tip of the iceberg of *fianaigecht*, perhaps because the stories about Finn and the *fían*, even if they were generally popular, were not on the agenda of the clerics composing literature. It is also possible that *féinnidi* and the life they led struck clerical sensibilities as being too pagan and too contemporary a topic. Finn, primarily associated in early texts with Leinster (LAIGIN) and Munster (MUMU), may also have been too 'southern' for early literati, whose bias is 'northern', or the wide-ranging nature of *fían* adventure may have initially worked against its incorporation into a literary tradition which felt more comfortable with clearly localized narrative. In the few traces of pre-12th-century Fenian narrative that we do possess, Finn is more *féinnid* than *rígfhéinnid*, more loner than leader, experiencing adventures beyond the range of the normal human sphere on his own—in particular, hunting down extraordinary wild creatures and supernatural adversaries, winning magical knowledge of, or other valuable commodities from, the SÍD, and composing poetry which reflects his mantic inspiration, derived from the OTHERWORLD. In the 12th-century text known as the *Macgnímartha Finn* ('The Boyhood Deeds of Finn'), the roughly contemporary text titled *Fotha Catha Cnucha* (The reason for the battle of Cnucha), and the renderings of this strand of the Fenian cycle in DINDSHENCHAS tradition, we have the earliest surviving witnesses to one of the most popular and longest-lived episodes of *fianaigecht*—the story of Finn's conception, birth, and youth.

§3. LATER MEDIEVAL LITERATURE

In the 12th and following centuries, as literary activity shifted from the ecclesiastical into the secular sphere, the stories about Finn and his men gained in popularity, solidifying their reputation as the *fían par excellence*, while the hunting and warring band becomes in the literary imagination a disciplined (albeit occasionally unruly) organization which comes together to hunt and fight for the high-king, and to protect Ireland (ÉRIU) from invasion. The characters of *fianaigecht* are by this time firmly grounded in the era of the legendary high-king CORMAC MAC AIRT, and the twilight of the Fenian heroes is set during the reign of Cormac's son, Cairpre Lifechar. The exploits of the younger members of the *fían*, heroic volunteers and recruits hailing from all four provinces, take centre stage for the composers of literary *fianaigecht* of the 12th and following centuries, and Finn's rôle as *rígfhénnid* pushes him into the narrative background, his leadership becoming a matter of appointment by the high-king of Ireland to a position which, like the high-kingship itself, was a 'national' institution with its headquarters at Tara (TEAMHAIR). Unless engaged in recreational hunting, the *fían(na)* of late medieval Fenian literature—for instance, the prosimetric ACALLAM NA SÉNORACH (Dialogue of [or with] the old men), and the prose texts *Cath Fionntrágha* (Battle of Ventry) and *Feis Tighe Chonáin* (Feast of Conán's house)—spend most of their narrative time responding to the summons of the *rígfhénnid* or the high-king on the occasion of national emergencies (such as invasions), as well as to pleas for help from human and supernatural visitors. While enjoying their outdoor life or gallantly performing their duties, the Fenian heroes usually become embroiled in adventures that involve fighting against mysterious adversaries, winning precious commodities, and (with telling frequency) travelling to and feasting in the Otherworld, of both the SÍD and transmarine variety. It has been observed that in many regards Finn and his men resemble ARTHUR and his 'court' as presented in early Welsh tradition, for instance, in CULHWCH AC OLWEN.

§4. EARLY MODERN FENIAN LITERATURE

From the medieval into the modern era, a synergistic relationship developed between the written and the spoken tradition of Fenian storytelling, a process of mutual borrowing which has made it impossible to speak in terms of purely literary or oral developments of Fenian story.

A staple of *fianaigecht* already attested in the earlier strands of the tradition and, like the story of Finn's youth, still to be found in the repertories of 20th-century oral storytellers in Ireland and Scotland

(ALBA), is the tragic tale of the affair between Finn's wife Gráinne, daughter of Cormac, and Finn's beloved kinsman and companion in the fían, DIARMAID UA DUIBHNE. The Early Modern Irish prose text TÓRUIGHEACHT DHIARMADA AGUS GHRÁINNE ('The Pursuit of Diarmaid and Gráinne') is the literary culmination of the perennial interest in this embarrassing episode of *fían* betrayal, a tale which features a villainously jealous instead of a heroic Finn, a *rígfhénnid* barely in control of his *fían* or his wife. The Diarmaid/Gráinne/Finn triangle is clearly cut from the same narrative cloth as that involving Noísiu/DERDRIU/CONCHOBAR, attested earlier in Irish tradition, and Drystan/ Esyllt/March in Welsh (see DRYSTAN AC ESYLLT), as well as other tales of roving-eyed wives and rival lovers centred on Fothad Canainne (another *rígfhénnid*, we recall), Gwyn ap Nudd (arguably, Finn's Welsh counterpart), and Finn himself in medieval Celtic literature.

Finn and the *fían*'s life beyond the pale, and the perennial contact with the supernatural which life on the margins provokes, clearly lie behind a popular Fenian story type, the *bruidhean* ('hostel' or specifically 'supernatural hostel'; see BRUIDEN), which is already attested in the earlier strata of *fianaigecht*, grows in importance in the tradition's later literary developments, and survives as part of modern oral Fenian lore. In this kind of tale, as represented for instance by the Early Modern Irish *Bruidhean Chaorthainn* (Hostel of Rowan), Fionn and his men accept an invitation to an otherworldly FEAST, only to find that they have been magically trapped in the hostel by an old enemy seeking revenge. Their rescue involves the intervention of a Fenian hero who did not come along to the feast (such as Diarmaid), and the otherworldly opponent and his allies are punished for their treacherous hospitality. The pattern of an unknown or incognito enemy issuing an invitation or a challenge to the *fían*, and being followed by the Fenian heroes into the Otherworld where various adventures ensue, is also to be found in many other Fenian tales, some primarily attested in literary form (such as the Early Modern Irish prose tale *Imtheacht an Ghiolla Dheacair* [Adventure of the troublesome lad]) and others which circulated widely in the oral traditions of Ireland and Scotland (such as the popular folk-tale 'Finn and the Big Man'). The pattern is also very much on display in the body of *fianaigecht* which has survived primarily in verse, in the *duan* or *laoidh* style of semi-narrative poetic composition sampled in the 16th-century Scottish Book of the DEAN OF LISMORE, the 17th-century Irish *Duanaire Finn* ('The Book of the Lays of Fionn'), an anthology written in Ostend which testifies to the popularity of *fiannaíocht* among Irishmen both at home and abroad, and other, later Irish and Scottish manuscript collections of this extensive body of material.

Fidchell (< *fid* + *chiall*, lit. wood-intelligence, the Irish cognate of GWYDDBWYLL) was a medieval Irish board game which seems to have been a favourite of the medieval Irish noble classes. According to an entry in the 9th-century SANAS CHORMAIC ('Cormac's Glossary'), a *fidchell* board had four sides with straight rows on it, and was used with black and white pieces by two players (Bergin et al., *Anecdota from Irish Manuscripts* 50). The object of the game seems to have been to 'slay' the opponent and remove his pieces. This is why *fidchell* and another, probably slightly less sophisticated, early Irish board game, *brandub*, are sometimes incorrectly translated as 'chess' or 'draughts', and *ficheall* is the term used for 'chess' in Modern IRISH. However, the game is probably related to the game of Tablut, as played by Laplanders in north Sweden (MacWhite, *Éigse* 5.25–35).

The importance of *fidchell* as a marker of social class is borne out by the early laws of FOSTERAGE, which state that it is the duty of the fosterer of a king's son to ensure the prince's training in *fidchell*. The importance

Contemporary Gaelic fiddle style: the Dubliners performing in Aberystwyth, Wales

of the game is also shown by the numerous references to it in Irish literature. For example, in an episode of the *Macgnímartha* (Boyhood deeds), Finn mac Cumaill's superior ability to play the game gives away his noble birth, while in Cath Maige Tuired ('The [Second] Battle of Mag Tuired'), the god Lug—the alleged inventor of the game—gains entry to the royal seat at Tara (Teamhair) by winning all the stakes at *fidchell*. One of the versions of Tochmarc Étaíne ('The Wooing of Étaín') is centred around a game of *fidchell*, played by Eochaid Airem, the king of Tara, with a powerful Otherworld king, Midir. The latter cunningly loses at first, so that Eochaid is encouraged to play for an unnamed stake. Predictably, Midir wins this time, and demands a hug and a kiss from Eochaid's wife, Étaín, only to elope with her on claiming the prize.

PSH

The **fiddle** is perhaps the most ubiquitous instrument in the regional traditions of the modern Celtic countries, being particularly associated with the Gaelic countries and their North American offshoots.

In Ireland (Éire) the fiddle, along with the uilleann pipes (see BAGPIPE), is the only commonly played instrument to have been in use in the native tradition for over 200 years, and thus the instrument has had a large impact on the traditional Irish repertoire, many tunes appearing from their style, range and notation to have been originally written on and/or for the fiddle. A similar situation exists in the Scottish tradition, with most tunes in the repertory being either 'fiddle-tunes' or 'pipe-tunes'. Again, fiddle-type has a long association with Scottish traditional music, with native compositions appearing alongside more classical material in books of music for the viol from the early 17th century on. The violin appeared in Scotland (Alba) in the late 17th century, fortunately coinciding with a boom in popular interest in traditional music and dance, upon which it was to capitalize.

The early history of the fiddle in Ireland is more obscure, probably because here it lacked the overlap

between traditional and classical styles notable in Scotland. In playing the Irish fiddle the left hand generally remains in the 1st position, which essentially means that the matters of tone, attack, volume and time value are controlled primarily by the bowing technique of the right hand. Tuning is generally to concert pitch. Decorative techniques used include rolls, trebles, cuts, droning, and sliding (*glissando*). There is much emphasis on regional traditions in Irish fiddle playing, though these have often tended to blur somewhat among modern fiddlers, with their eclectic influences. Some of the main regional styles and their foremost proponents are Sliabh Luachra (Tom Billy, Patrick O'Keefe), East Clare (Martin Hayes) and Donegal (The Glackins and the Peoples).

Cross-fertilization from the classical tradition has led to a more widespread use of techniques such as *scordatura* (altered tuning) and vibrato among Scottish fiddlers, although this seems to have been more widespread among 19th-century virtuosi such as Scott Skinner than those of today. The fiddle music of Shetland is renowned as a major regional offshoot of the Scottish tradition. While it may owe much of its roots to Norwegian influences, there is a strong element of Scottish and, to a lesser extent, Irish influence present in this style, with its pronounced rhythm, strong single bowing, and use of sympathetic vibrations and *scordatura*. This style has achieved greater international recognition in the last few decades through the playing of fiddlers such as Aly Bain and Willie Hunter.

The playing of Gaelic-style fiddle music in North America is strongest in the ethnically Scottish areas of Canada, particularly Cape Breton (e.g. Natalie MacMaster), and the Ottawa Valley, where the style also incorporates elements of the Irish and French traditions.

SÓF

Findlaech mac Ruaidri was ruler of Moray (Moireibh) in Scotland (ALBA) *c.* 1000–21. The surviving records show discrepancies regarding his status and the geographical extent of his authority, which are therefore likely to have been in dispute. He is described as *mormaer* (earl) of Moray in the ANNALS of Tigernach, whereas the Annals of Ulster call him king *rī Alban* (King of Alba). He is probably known to Norse tradition as the Earl Finnleikr mentioned in the *Orkneyinga Saga*, where an account is given of his struggle for power with the Viking Earl Sigurd the Stout of Orkney (Arcaibh) over control in Caithness (Gallaibh) on the northernmost mainland. This historical event would have occurred before 1014. According to the Annals of Tigernach, Findlaech was killed by his own people, the sons of his brother Mael Brigte. Findlaech was the father of King MAC BETHAD (the basis of Shakespeare's Macbeth).

The name *Findlaech* is intelligible as an early Gaelic name, though it is rare, comprising the elements *find* 'white, fair, blessed' and apparently *laech* 'layman, warrior' < Latin *laicus*, and thus possibly intended to mean 'Christian warrior'; on the other hand, the second element could be a form of *laeg* 'calf'. *Ruaidri* is very common as an early Irish name and derives from the PROTO-CELTIC **Roudo-rīχs* 'red(-haired) king'.

PEB, JTK

Finn mac Cumaill (also Find, Modern Irish Fionn mac Cumhaill) is the central figure of the 'Fenian' or 'Finn Cycle' of Irish and Scottish Gaelic hero tales and associated verse. His character is discussed in the context of this cycle in the article under the Irish name of the corpus, FIANNAÍOCHT. In the tales, Finn's primary social function is that of the leader of the renowned war-band, which is sometimes in service to the legendary king of Tara (TEAMHAIR), CORMAC MAC AIRT, but is also often portrayed as a group of huntsmen outside Irish tribal society altogether; on this important social institution, see the article under its Old Irish name FÍAN.

Thematic features of Finn's character and background are set out in the tale of his boyhood deeds,

Macgnímartha Finn, which is partly paralleled by the earlier *Fotha Catha Cnucha* (The reason for the battle of Cnucha). Finn's father Cumall had been the leader of the *fían* of Conn Cétchathach (Cormac's grandfather), king of Tara. He then fell in love with Muirne, the beautiful daughter of the druid Tadg, son of another druid Nuada (the latter name is significant, deriving from the Celtic divine name Nōdons). Tadg opposed the union, and Cumall forced the girl to elope, bringing the enmity of Conn and the rival *fían* of Morna and his sons. At the battle, Aed mac Morna lost his eye—and was henceforth called Goll (one-eyed)—and killed Cumall. Muirne, by now pregnant, hid from the pursuers, and her child Demne was then given into fosterage to two women druid warriors. Like the boy Cú Chulainn, Demne prodigiously grew and excelled in hunting, feats of weapons, and competitive sports. There are repeated episodes explaining how he was renamed Finn: he is once described as *finn* (fair) by youths whom he challenged; later, he is apprenticed to the poet Finn-éces, which accounts for Finn's subsequent fame as a poet. In an episode closely comparable to the transformation of the boy Gwion into the inspired Taliesin in Welsh tradition, Finn-éces set the boy to mind the cooking of wondrous salmon, infused with knowledge and inspiration. The *eó feasa* or *bradán feasa* (salmon of knowledge) is a key theme in Irish tradition. Finn accidentally burnt himself as he cooked, and in putting his thumb in his mouth received the inspiration himself, becoming a visionary. *Finn* can also mean 'enlightened' or 'blessed' in the spiritual sense, which is among the meanings of the cognate words in the other Celtic languages, such as Welsh *gwyn* and Breton *gwenn*, meanings which can thus be attributed to Common Celtic **windos*. The Old Irish verb *ro·finnadar* 'discovers, comes to know' and Welsh *gwn* 'I know' are also related. Thus, we may have some very old mythology here, in which the youth of destiny is at first *finn* in the everyday sense of 'fair-haired' and then ascends to become esoterically 'blessed' or 'self-revealed'.

There are Encyclopedia entries on Finn's hero sons, Faelán and Oisín, and the Fenian texts Acallam na Senórach ('Dialogue of [or with] the old men', a series of self-contained adventures set within a frame tale of an encounter with St Patrick) and Tóruigheacht Dhiarmada agus Ghráinne ('The Pursuit of Diarmaid and Gráinne', a tragic love story).

Fir Bolg figure in Irish LEGENDARY HISTORY among the tribes said to have settled in Ireland (Ériu) in the pre-Christian period (cf. also FOMOIRI; TUATH DÉ). However, it is probable that the tradition recollects a historical people. Many members of the west Munster tribes (Iar-Mumu) identified as Érainn have *Bolg* as an element in their personal names (O'Rahilly, *Early Irish History and Mythology* 75–84; Carey, CMCS 16.78–9). As discussed in the article on the Belgae, the name *Bolg* is probably cognate to that of the well-documented tribal group of late Iron Age north-east Gaul and south-east Britain, and also to the name of the leader of the Celtic invasion of Macedonia in 280 BC, *Bolgios* or *Belgios*. As legendary settlers of Ireland, they are first mentioned under the archaic form of their name *Builc* (without prefixed *fir* 'men') in the 9th-century Historia Brittonum (§14). Fir Bolg are also mentioned in the Old Irish tale Cath Maige Tuired ('The [Second] Battle of Mag Tuired'), where they are credited with dividing the country into *cóicid* (fifths, sing. cóiced), the provinces of Ireland. The exploits of the Fir Bolg are set out in greater detail in the late 11th-century Lebar Gabála Érenn ('The Book of Invasions'), which systematizes waves of settlers in the legendary prehistory of Ireland. Various etymologies for the name element *bolg* have been offered (Pokorny, ZCP 11.189–204; O'Rahilly, *Early Irish History and Mythology*; Lewis, *Féilsgríbhinn Eóin Mhic Néill* 46–61), which also appears, or a form looking much like it, in the names of some miraculous weapons, such as Cú Chulainn's lethal *gae bulga* and the sword Caladbolg wielded by Fergus mac Róich. However, a recent re-examination of these interpretations concluded that the early medieval Irish etymologists had the correct word root with their implausible-sounding *fir i mbalgaib* 'men in bags'—to be more correctly understood as men

who were bag-like when swelled up, i.e. bulging, with heroic valour in battle (Carey, CMCS 16.77–83). Although it is by now standard practice to refer to early Irish group names of this type (*Fir* + genitive plural tribal name) in English with the definite article, these names are definite anyway and do not require the Irish article.

PSH

Fir Domnann appear in Irish LEGENDARY HISTORY, commonly associated with two closely related or equivalent groupings, LAIGIN and Galeóin, and one may suppose that behind these three lay an old tribal federation. In early references the three names often appear to be interchangeable. As regards origins, the Fir Domnann are possibly of common origin with the historical groups in south-west BRITAIN and what is now south-west Scotland (ALBA) who bore the ancient Celtic form of the name, i.e. Dumnonii. The former British tribe was probably instrumental in founding the early medieval kingdom of DOMNONIA in northern Brittany (BREIZH). Based on these connections, O'Rahilly (Ó RATHAILE) suggested that the Fir Domnann were a P-CELTIC, pre-GOIDELIC people who, along with the Galeóin, invaded the south-east coast of Ireland (ÉRIU) from Britain. O'Rahilly's idea that these two groups were distinct from the Laigin (who he claimed as Goidelic) is not easily confirmed by the way the texts use the names; nor is his theory of a P-Celtic substratum in Ireland widely accepted by experts today. On the other hand, the Dumnonii do appear as an expansionist group on the shores of Britain nearest to Fir Domnann lands in south-east Ireland.

The early written sources provide evidence for the Fir Domnann in Cóice Laigean (Leinster, see also CÓICED), where at least one of their rulers, Mess-Telmann, is credited, in a probably 7th-century Irish poem, with the overkingship of the province and with wielding power from the royal site of Leinster at DÚN ÁILINNE. In this poem the tribal name occurs in its archaic form, sing. *Domnon* < Celtic **Dumnonos*. The place-name Inber Domnann (now Malahide Harbour) on the east coast also preserves the name. However, the area with the strongest place-name associations is in north-west Mayo (Contae Mhaigh Eo), in the barren wastes of Iorrais Domnann (the modern barony of Erris), and nearby Mag Domnann and Dún Domnann. The Gamanrad, one of the *aithech thuatha* (vassal tribes) in Iorrais Domnann, are considered to be a sept of the Fir Domnann and are listed in the story *Táin Bó Flidais* ('The Cattle Raid of Flidais') as one of the three warrior races of Ireland, along with the Clann Dedad of MUMU and Clanna Rudraigi of ULAID. The name *Fir Domnann* is based on the Celtic root *dumno-*, older *dubno-*, which means both 'deep' and 'the world'. The suffix *-on-* often occurs in Gaulish and British divine names; *Dumnon(i)ī* would therefore mean 'people of the god of the world'. It is not impossible that such a group name arose independently more than once among the pre-Christian Celts. Old Irish *fir* 'men' was often prefixed to old tribal names to clarify their meaning (cf. FIR BOLG).

Five Poets, Memorandum of the

Apart from the poems themselves, the earliest documentary evidence for court poets in early post-Roman BRITAIN is the castigation by GILDAS in his *De Excidio Britanniae* (On the destruction of Britain), a text pro-

bably belonging to the 6th century, of the sycophantic praise poets at the table of King Maglocunus (Maelgwn Gwynedd). The first source to name poets and provide a datable historical synchronism for their careers is a passage, sometimes called 'The Memorandum of the Five Poets', which occurs among the north British material in the 9th-century Welsh Latin Historia Brittonum.

> *Ida, filius Eobba, tenuit regiones in sinistrali parte Brittanniae, id est Umbri maris, et regnauit annis duodecim, et iunxit Din-Guairoi guurth Berneich. Tunc [O]utigirn in illo tempore fortiter dimicabat contra gentem Anglorum. Tunc Talhaern Tat Aguen in poemate claruit, et Neirin, et Taliessin, et Bluchbard, et Cian qui vocatur Gue[ni]th Guaut, simul uno tempore in poemate Brittanico claruerunt. Mailcunus magnus rex apud Brittones regnabat, id est, in regione Guenedotae . . .*
>
> Ida son of Eobba held kingdoms in the northern part of Britain, that is the Humber Sea, and he ruled twelve years [r. 547–59], and he joined Bamburgh to Brynaich. Then Eudeyrn at that time was bravely fighting against the English [or Anglian] people. Then Talhaearn Tad Awen, Father of poetic inspiration, was renowned in poetry, and Aneirin, and Taliesin, and Blwchfardd, and Cian who was called 'Wheat of Prophetic Verse', were at the same time famous in Brythonic poetry. Maelgwn the great king was ruling among the Britons, that is, in the kingdom of Gwynedd.

We know nothing else about the chieftain Eudeyrn. Of the five poets, no surviving material is ascribed to Talhaearn (Iron-brow). The order of the list and his paternal epithet suggest that he might have priority within the group and might have been the court poet of Eudeyrn. The wording of the passage also implies that Eudeyrn and Ida were enemies; therefore it is possible that Talhaearn's poems were concerned with this warfare, but this is conjectural. Nor do we have any surviving verse from Blwchfardd, though it is not impossible that Old Welsh *Bluchbard* is a scribal corruption of *Loumarch*, i.e. the Llywarch Hen to whom a cycle of early saga englynion are attributed. Nor are there extant texts attributed to Cian. But the second and third poets in the list are known Cynfeirdd (Early poets). Neirin certainly identifies the same Aneirin to whom the heroic elegies known collectively as the Gododdin are ascribed. Taliessin is an old spelling of Taliesin.

The chronological synchronization is fixed by the references to King Ida of Anglian Bernicia (Brynaich) and to Maelgwn. According to the Annales Cambriae, Maelgwn died in 547. The authority of this obit is, however, uncertain. The cognate Irish annals do not have an obit for Maelgwn, and this absence probably means that the entry does not go back to the earliest stratum of the Welsh annals either; in other words, it is a retrospective entry of some centuries after the fact. Beda tells us that Ida came to power in 547, a date which might confirm Maelgwn's obit, but it might just as well be its source. The synchronism for the five poets is apparently a very precise 547—when Maelgwn and Ida were both in power. However, if the poets were actually synchronized first with Maelgwn and then Maelgwn with Ida, then the conclusion that the five poets flourished during the generation ending at 547 would only be as good as the synchronization between the kings, and we have no second source confirming this. We might also question whether the author of *Historia Brittonum* really knew that these poets were Maelgwn's contemporaries or only had the name of five poets of long ago and put this together with what Gildas had said about the presence of praise poets at Maelgwn's court.

As to synchronizing the three leaders—Ida, Eudeyrn, and Maelgwn—the author of *Historia Brittonum* might have thought that the poets were contemporaries of Eudeyrn and Ida (and thus Maelgwn too) or of Maelgwn (and thus Eudeyrn and Ida too). It is also possible that some of the poets were known as contemporaries of one king and some of another. Although *Historia Brittonum*'s synchronizing methods do not inspire confidence, there is no provable blunder here; 547 is thus the date we have got for the active life of Aneirin, Taliesin, and the other three. The rock-solid conclusion afforded by the Memorandum is that by the early 9th century Aneirin and Taliesin were believed to have been famous Brythonic poets who had flourished in the 6th century. The young Taliesin of legend appears as a contemporary of King Maelgwn, a connection which is likely to have been influenced by the Memorandum.

JTK

Flann Fína mac Ossu (Aldfrith son of Oswydd) was an Irish-educated king who ruled Anglo-Saxon Northumbria (685–*c.* 705) at the heart of the period which is often called 'the Northumbrian Golden Age'. His reign was markedly peaceful following the expansionist regimes of his predecessors in the Bernician dynasty (see BRYNAICH), who included his father (OSWYDD †670), his uncle (St OSWALD †642), and his half-brother (ECGFRITH †685). Flann Fína is his Irish name and Aldfrith his English. Irish GENEALOGIES consistently portray him as belonging, through his mother, to the Cenél nÉogain branch of the Northern Uí NÉILL. Oswydd's two named wives were Rie*in*melth, daughter of Royth son of Ru*n* (Rhieinfellt ferch Rhwyth ap Rhun) of RHEGED and Eanflæd daughter of EADWINE of Northumbria.

The ANNALS of Ulster at his obit refer to Flann Fína as *sapiens* 'a learned man', placing him among the ranks of other 7th-century Irish *sapientes* such as Laidcenn mac Baíth Bannaig, CUMMÍNE FOTA, Ailerán of Clonard, Banbán, and Cenn Fáelad mac Ailello. English ecclesiastical sources confirm Flann Fína's reputation for learning and education among the Irish. The anonymous Life of St Cuthbert states that he was present at Iona (EILEAN Ì). BEDA's prose Life of St Cuthbert states variously that Flann Fína lived 'among the Irish isles' or 'in the regions of the Irish' for the love of learning. Abbot ADOMNÁN of Iona, who called him 'friend Aldfrith', visited him twice in Northumbria and presented him with a copy of *De locis sanctis* (On the holy places), which Flann Fína, acting as Adomnán's royal patron, had copied and disseminated throughout his kingdom.

English sources concur in acknowledging Flann Fína's learning. Beda (*c.* 731) described him as 'a very learned man in the scriptures' and 'a very learned man in all respects'. The Life of St Wilfrid, written between 709 and 731, called Flann Fína 'a very wise king'. Alcuin of York (†804), the noted Carolingian court scholar, referred to Flann Fína as being 'at once a king and teacher'. From ALDHELM (†709), abbot of Malmesbury and later bishop of Sherborne, Flann Fína received the long five-part 'letter to Acircius' which includes a typological essay on the number seven, a treatise on Latin metrics, and a collection of one hundred *enigmata* or riddles. Personal comments in Aldhelm's letter help confirm the depth of Flann Fína's learning.

Several Irish texts are attributed to Flann Fína under his Irish name. The most important of these is a wisdom text (see WISDOM LITERATURE) consisting of Old Irish three-word maxims called the 'Sayings of Flann Fína son of Oswiu' (*Bríathra* [or *Roscada*] *Flainn Fhína maic Ossu*). The maxims were compiled by an ecclesiastically trained redactor for the purpose of appealing to the private, individual conscience of a literate, secular audience.

Colin Ireland

Flann Mainistreach (†1056) was a famous Irish poet and historian, as well as lector at the monastery of Monasterboice, Co. Louth (Mainistir Buite, Contae Lú). Flann's family was very much connected with the monastery; for example, Flann's father seems to have held the same position as Flann himself. This close association with Monasterboice is also suggested by Flann's epithet *Mainistrech*, which literally means 'monastic, of the monastery', to be understood as short for 'of Mainistir (Buite)'.

Flann's poetry reflects his historical interests and deals with historical and pseudo-historical figures and events. Several poems found in LEBAR GABÁLA ÉRENN, an 11th-century Irish pseudo-historical text, have been ascribed to him. A well-read and educated man, Flann's poetry was particularly influenced by historical texts from outside the Irish world, for example, the *Chronicon*,

a world history by Eusebius (*fl.* 4th century). Flann is thus a good example of how the tension between traditional Irish learning and Latin-based ecclesiastical education could be skilfully fused.

PSH

Fled Bricrenn ('Bricriu's Feast') is one of the longer and most entertaining of the early Irish ULSTER CYCLE of tales and, from the perspective of modern readers, one of the best known. For general discussions of *Fled Bricrenn*'s significance within the corpus, see IRISH LITERATURE [1] §5; ULSTER CYCLE §3.

The story begins with a great and elaborately described feast and fabulous feasting hall prepared by the ingeniously malevolent BRICRIU with the intention of inciting the status-obsessed heroes and noblewomen of the ULAID against each other. The action soon settles into a sustained fierce three-way contest between Loegaire Buadach, CONALL CERNACH, and CÚ CHULAINN, each seeking explicit recognition as Ulster's greatest hero. The nature of the contest and venue change several times, entailing numerous adventures, including adjudication by Ulaid's traditional enemies MEDB and Ailill at CRÚACHU. The climax is a death-defying beheading game (anticipating by some three or four centuries a very similar episode in the Middle English Arthurian *Sir Gawain and the Green Knight*), in which the three heroes face the disguised axe-wielding Cú Roí, and only Cú Chulainn is brave enough to return to face the unkillable giant. For modern scholarship, *Fled Bricrenn* probably exceeds even TÁIN BÓ CUAILNGE as a source of comparison between medieval Irish heroic legend and the Celtic ethnography of GREEK AND ROMAN ACCOUNTS (§7), sharing with the classical texts, particularly the surviving texts based on the lost history of POSIDONIUS (i.e. ATHENAEUS, DIODORUS SICULUS, and STRABO), the themes of status display at the extravagant aristocratic FEAST (§5; see also BOAR; FOODWAYS; WINE), heroic contention at feasts, specifically for the CHAMPION'S PORTION (Irish *curadmír*), the HEROIC ETHOS in general, and the so-called Celtic HEAD CULT. So intriguingly close are the parallels between the ancient sources and *Fled Bricrenn* as to raise such possibilities as that the saga preserves an accurate 'Window on the Iron Age' through the phenomenal persistence of Celtic oral tradition from pre-Christian times (as argued by JACKSON) or that medieval IRISH LITERATURE has, through some unknown intermediary, been heavily influenced by classical accounts of the northern barbarians. Linguistically, the extant text is in the main Early Middle IRISH, probably 10th-century, though there are several throwbacks to Old Irish usage which imply an earlier written version. The presence of a good version of most of the text in the important manuscript LEBOR NA HUIDRE ('The Book of Dun Cow') and the accessible text and English translation published by Henderson in 1899 in the Irish Texts Society (CUMANN NA SCRÍBHEANN NGAEDHILGE) series have no doubt contributed to the special prominence of *Fled Bricrenn* in CELTIC STUDIES over the past century.

JTK

Fleuriot, Léon (1923–87) was a Breton scholar who originally came from Morlaix (MONTROULEZ). He studied history, devoting his career mainly to the language and history of early Brittany (BREIZH). His dictionary and grammar of Old BRETON remain the

standard works, the first systematic analysis of the subject since that of Joseph LOTH (1847–1934) in the previous century. Fleuriot's diligent study of manuscripts uncovered many previously unidentified Old Breton glosses, and he lobbied Romance philologists to consider GAULISH and CONTINENTAL CELTIC as potential sources for Romance words of unknown etymology. He held the Celtic Chair at the University in Rennes II (ROAZHON) from 1966, and counted President of the editorial committee of ÉTUDES CELTIQUES among his many honours.

flood legends

§1. PRE-CHRISTIAN CELTIC FLOOD LEGENDS

A passage attributed to the lost work of Timagenes of Alexandria (*fl. c.* 55–30 BC) throws light upon the migration/foundation traditions of the pagan Continental Celts:

> The DRUIDS recount that part of the population of GAUL was indigenous, but that some of the people immigrated there from outlying islands and the lands beyond the RHINE, driven out by frequent wars and violent floods from the sea. (Ammianus Marcellinus 15.9.4; cf. LEGENDARY HISTORY §2)

§2. ORIGIN OF LAKES AND RIVERS

The biblical deluge figures prominently in medieval Celtic attempts to explain their own history and origins. In addition to the great flood, smaller-scale floods are held to have occurred throughout the CELTIC COUNTRIES, accounting for the origin of lakes, rivers, and shallow bays.

There are numerous references to the belief that natural geographical features resulted from the release of pent-up water. LEBAR GABÁLA ÉRENN ('The Book of Invasions') describes the effect of the biblical flood on Ireland (ÉRIU), but also recounts several more localized events. Loch Rudraige is said to have burst forth when the grave of Rudraige, PARTHOLÓN's son, was dug. Six other lake bursts are listed in this section as having taken place in Partholón's time: Loch Láiglind (or Láiglinne), Loch Cuan, Loch nDechet, Loch Mesc, Loch Con, and Loch nEchtra. In Nemed, Loch Cál, Loch Munremair, Loch nDairbrech, and Loch nAinnind burst forth. Geoffrey Keating (Seathrún CÉITINN) describes the origin of Lough Foyle, Co. Donegal (Loch Feabhail, Contae Dhún na nGall), in the same terms. This occurs in Welsh tradition as well; for example, a lake burst traditionally accounts for the origin of Llyn Tegid (Bala Lake). The legendary childhood of TALIESIN took place at the bottom of what is now Llyn Tegid, and he subsequently reappears in a basket set adrift in the sea and caught like a salmon in a weir.

§3. DROWNED CITIES

The legend of a drowned city is by no means unique to Celtic culture; compare, for instance, the Greek story of Atlantis or the northern German story of Vineta. The Rennes DINDSHENCHAS records a story about the mythological figures BÓAND (Boyne) and her husband Nechtan. Bóand opened a well which only Nechtan could safely tap. The unstoppable flow resulted in the river Boyne, pushing Bóand herself to the sea. Nechtan's name is cognate with Latin *Neptunus*, the Roman god of the sea (see also Dumézil, *Celtica* 6.50–61).

The earliest instance of a drowned city in Welsh tradition is a poem in the Black Book of Carmarthen (LLYFR DU CAERFYRDDIN), *Boddi Maes Gwyddneu* ('The drowning of Gwyddno's plain', also known as Cantre'r Gwaelod 'The low CANTREF'). Although the poem obviously alludes to a traditional flood story, it is not itself a narrative poem. It addresses the figure of Seithennin, who appears in a Latin TRIAD (evidently a translation of a lost Welsh original) as one of three kings whose lands were inundated by the sea. The others are Helic mab Glannauc (Modern Welsh Helyg ap Glannawg), whose country Llys Helyg is in Conwy Bay, and the otherwise unknown Redwoe mab Regheth.

The bulk of the poem discusses Mererid, who left a well uncovered after a FEAST, which let in the sea to drown the land. A 19th-century legend from the Iveragh peninsula in Kerry (Ciarraí), Ireland, recounts the origin of Lough Currane (Loch Luíoch) in almost exactly the

same way.

Perhaps the most renowned example is the Breton city of Is or Ys (lit. 'lower'). A folk etymology derives the name of Paris from the Breton *par Is* 'like Ys'. The story first occurs in literature in the 16th-century Breton *Buhez Sant Gwenôle Abat* (Life of St Gwennole abbot; reprinted in Le Roux and Guyonvarc'h, *La légende de la ville d'Is*; see further UUINUUALOE). The inhabitants of Ys are destroyed through their general wickedness, influenced by the biblical stories of the flood and the destruction of Sodom. Only St Gwennole and King Grallon survive. In oral tradition, this wickedness finds focus in Dahut, King Grallon's daughter, who brings about the destruction of the city. In some versions, only Grallon's horse has the energy to escape the waves when Grallon casts his daughter Dahut into the sea. Her name is not attested until quite late, but seems to come from Celtic **dago-soitā* 'good in magic'. Dahut, along with Mererid and Bóand, may be a reflection of a SPRING DEITY. In recent times, the Ys legend has inspired the Welsh visual artists Ceri Richards and Iwan Bala.

There are numerous other drowned cities in Celtic tradition. Often, the stories take the form of an origin legend for a particular lake. A medieval version about Lough Ree (Loch Rí), Ireland, occurs in *Aided Echach* (The death of Eochaid) in LEBOR NA HUIDRE ('The Book of Dun Cow'). Local geography and optical and accoustical phenomena help to localize these traditions and keep them alive. The evidence of prehistoric geological shifts is often recorded by fossilized sea creatures found inland, sometimes at high elevations, and the remains of tree stumps are sometimes found in shallow bays or lakes. The partial sinking of the Scilly Isles off the west coast of Cornwall (KERNOW) in medieval times may have given rise to the Cornish legend of Lyonesse. In addition, irregular natural stone formations undersea often look like straight stone walls, usually interpreted as the ruins or foundations of a building. A bay or lake can also reflect sound, so that a distant church bell will sound as if it is tolling under the waves, a common motif in folk tradition both in the Celtic countries and internationally.

folk-tales and legends

§1. DEFINITIONS AND CONCEPTS

These two categories of traditional narrative are found throughout the world. In the academic study of folklore, 'folk-tale' is the name given to those tales which are understood to be fictional, told purely for entertainment. They are characterized by linear plots and the presence of casual magic. The term 'legend' has come to denote a wider variety of tales, from saints' legends (see HAGIOGRAPHY) to urban legends, which are plausible according to the worldview of traditional society, even though they may contain supernatural or magical elements. Another category of traditional narrative, the 'myth', includes stories of a sacred or cosmically important character. Myths are held to be true, although the setting of a myth is likely to be at an earlier stage of the world where different rules apply, so that otherwise impossible events are taken seriously. In CELTIC STUDIES, mythology (the corpus of myths) usually refers to pre-Christian mythology as recorded

in ART and later literature, there being essentially no narrative literature in the CELTIC LANGUAGES from the pre-Christian period. Other narrative genres such as narrative jokes have not been studied in depth in the CELTIC COUNTRIES. All these categories are analytical ones imposed by scholars. Native terminology varies from language to language, and does not necessarily maintain the same distinctions (for the native early Irish genres, see TALE LISTS).

§2. IRISH

The Irish folk-tale collections, both published and unpublished, are widely acknowledged to be some of the best and richest in Europe—over 43,000 versions of more than 700 tale types were indexed in Ó Súilleabháin & Christiansen, *Types of the Irish Folktale*, which only includes material collected until 1956. Most of these are to be found in the archives of the Irish Folklore Commission, which was active from 1935 to 1971. The wealth of documented Irish folk-tales is, in part, due to the efforts of early field collectors, who were in turn inspired by the Romantic Movement to try to recover elements of ancient mythological and literary traditions through the Irish folk-tale and legendary repertoires. Some of the heroic narratives collected in the 19th and 20th centuries did, indeed, tie into the narratives preserved in Old and Middle Irish, notably the FIANNAÍOCHT, Fenian tales, i.e. those concerning FINN MAC CUMAILL and his comrades.

Thomas Crofton Croker (1798–1854), a native of Cork (CORCAIGH), was one of the first to collect Irish folklore. He corresponded with the brothers Jakob Grimm (1785–1863) and Wilhelm Grimm (1786–1859), who translated his influential *Fairy Legends and Traditions of the South of Ireland* (1825) into German as *Irische Elfenmärchen* in 1826. Many other collectors were active in the 19th century, including the literary figures Lady Wilde (Jane Francesca Elgee Wilde, *c.* 1826–96) and William Butler YEATS (1865–1939).

Jeremiah Curtin (1835–1906) was born to an Irish immigrant family in Detroit, but took his first collecting trip to Ireland (ÉIRE) in 1887. He first published the folk-tales in the *New York Sun* newspaper and later in book form. Although only Curtin and a few of the storytellers were named in the publications, the actual process of collection involved many other people. Pádraig Ó Loingsigh explained to the folklorist Séamus Ó DUILEARGA that it was he who told the tales in Irish, but his father, Muiris Ó Loingsigh (Maurice Lynch), translated them into English for Curtin and was listed as the informant. Curtin's wife, Alma M. Cardell Curtin, took them down in shorthand, but, as was the case with many academics' wives of the period, she is usually not credited for her work.

Both Curtin and Wilde were criticized by Douglas Hyde (Dubhghlas DE HÍDE), another early collector, for their lack of fluency in Irish. His own collection, *Beside the Fire* (1910), was published bilingually, and in the 20th century folklorists placed a greater emphasis on collecting and publishing the Irish texts, though excellent unaccompanied English translations continue to be published, such as *The Folktales of Ireland* (1966) by Sean O'Sullivan (Seán Ó Súilleabháin).

Although the tales are largely the same as other folk-tales throughout the world, the method of narrating them in Ireland became very elaborate over time, developing 'runs'—sections of prose text heavily ornamented with alliteration and other poetic devices. The skill involved was recognized beyond the GAELTACHT, such that the Irish word for a professional storyteller—*seanchaí*, or its Scottish Gaelic cognate *seanchaidh*—was borrowed into English as *shannaghes* (plural) as early as 1534; it is now usually spelled *seannachie* or *sennachie*. The word is based on *seanchas* 'lore' (itself built on *sean* 'old'), and the prerogative of the *seanchaí* included many kinds of traditional lore, including factual material such as GENEALOGIES and history. Another word, used for anyone who tells a story, is *scéalaí*, based on *scéal* 'tale'. The stories were usually told at night around the fire, beginning with the host (*Ar fhear an tí a théann an chéad scéal*, The man of the house tells the first tale).

Although the bulk of Irish folk narrative scholarship deals with the folk-tale, there have been numerous serious studies of legends, including O'Sullivan's *Legends from Ireland* (1977). The Irish folklore journals BÉALOIDEAS and ÉIGSE contain many articles devoted to the study of folk narrative.

§3. SCOTTISH GAELIC

Folk-tales and legends are well attested in Scottish Gaelic tradition. Tales are scattered throughout some manuscripts from the 17th century onwards, though the bulk of the recorded material belongs to the 19th and 20th centuries. The pioneering collector of the mid-19th century was John Francis CAMPBELL, who, with several collaborators (J. Dewar, J. G. Campbell, Alexander Carmichael, and Hector Maclean), tapped into a storytelling tradition which was just beginning to decline as the ceilidh-house lost its importance in the social life of Scottish Gaelic communities.

In the 20th century, the School of Scottish Studies in Edinburgh (DÙN ÈIDEANN) has been pre-eminent in the collecting of tales, much aided by the advent of tape and video recorders. The material has come both from the settled population of the Gaidhealtachd (Gaelic-speaking area) and from Gaelic-speaking travellers. Closely related material was taken by emigrants to Nova Scotia, Canada, and survived there (MacNeil, *Sgeul gu Latha / Tales until Dawn*; see also CELTIC LANGUAGES IN NORTH AMERICA).

Versions of international tale types are well represented and several have been published and analysed in the journals *Scottish Studies* and *Tocher*, e.g. Donald Alasdair Johnson's *Righ Eilifacs* ('The King of Eilifacs'; Donald A. MacDonald, *Scottish Studies* 16.1–22), and Alasdair Stewart's tales *Stoiridh an Eich Dhuibh* ('The Story of the Black Horse') and *A' Maraiche Màirneal* ('The Maraiche Màirneal'; *Tocher* 29.270–91). Hero tales and descendants of the medieval Romance tales are similarly present in the corpus (Bruford, *Gaelic Folk-tales and Mediaeval Romances* 60–3, 251–67). An example is *An Ceatharnach Caol Riabhach* ('The Lean Grizzled Ceatharnach'), told by Donald Alasdair Johnson (Donald A. MacDonald & Bruford, *Scottish Studies* 14.134–54). The supernatural is present as a significant element in many tales, and much material deals exclusively with such phenomena, notably tales of the FAIRIES and other supernatural beings (cf. OTHERWORLD; SÍD; TUATH DÉ) and traditions about the Second Sight and the Evil Eye (MacInnes, *Trans. Gaelic Society of Inverness* 59.1–20). A narrative genre specific to Gaelic Scotland (ALBA) is that of CLAN tales, where events purporting to deal with historical characters are narrated in a distinctively terse style (J. G. Campbell & Wallace, *Clan Traditions and Popular Tales of the Western Highlands and Islands*; Dewar, *Dewar Manuscripts*; MacInnes, *Trans. Gaelic Society of Inverness* 57.388–9). More recent local traditions and small-scale anecdotes commemorating individuals have also been recorded (C. Lawson & B. Lawson, *Sgeulachdan a Seisiadar / Tales from Sheshader*).

Much attention has focused on the storytellers, their repertoire, and their narrative and memory techniques. Visualization seems to have been an important mnemonic aid (D. A. MacDonald, *Scottish Studies* 22.1–26; Bruford, *Scottish Studies* 22.27–44). Many storytellers had substantial repertoires, e.g. Duncan MacDonald (*Tocher* 25.1–32, 58) or Angus MacLellan (J. L. Campbell, *Scottish Studies* 10.193–7), and some tales took several evenings to tell in full.

§4. MANX

The first collection of Manx folk-tales was compiled by George Waldron in 1726, and was posthumously published in 1731. This collection, with its stories of giants and underground palaces beneath the island's medieval Castle Rushen and the fearsome Moddey Dhoo (black dog) of Peel Castle, has formed the basis for publications of Manx folk-tales ever since.

The folk-tales contain accounts of Manx 'mythology', including creation myths for the island, its people and 'Themselves' (the FAIRIES). The historical 'mythologies' also seek to place the Isle of Man (ELLAN VANNIN) within a wider cultural framework by identifying the island as the Ellan Sheeant (Isle of Peace/Holy Island) of Irish mythology and relating the island's creation to the great battle between Finn Mac Cooil (Middle Irish FINN MAC CUMAILL) and the Scottish giant, when a 'sod of earth' is thrown, thereby creating the Lough Neagh (Loch nEathach) in northern Ireland (ÉRIU) and the Isle of Man. Although the Manx folk-tales were originally peopled with heroes and deities from the early Irish myths and legends, by the 19th century the predominant figure was MANANNÁN MAC LIR. Manannán figured in the early Irish MYTHOLOGICAL CYCLE as god of the sea, but in Manx tales he became the first Manx ruler and was a shape-shifting magician-king (see REINCARNATION) and navigator.

The majority of Manx tales, however, relate to the fairy-folk. Manx fairies are portrayed as similar to the 'lil' folk' known in British and Irish folk beliefs and are small wingless creatures of supernatural origin who could not be called by their real name but by euphemistic terms such as 'Themselves'. The stories are primarily cautionary tales which highlight the dangers of associating with 'Themselves', and either relate to concerns over the taking of infants and adults by the fairies or of people trying to better themselves through 'trading' with the fairies. The need for protection and constant vigilance against the malicious intent of fairies and the fact that no one ever truly profits from dealings with the fairies are constantly emphasized.

Manx folk-tales relate to a whole bestiary of supernatural creatures, ranging from the relatively helpful but cantankerous Fynnoderee (or Phynnodderee, defined as a satyr) to the dangerous Tarroo-Ushtey (water bull) and the Glashtin (water horse). Of even greater danger was the Tehi Tegi, a beautiful temptress who could lure men to their doom and then revert to being an evil old sorceress, and the Buggane, a totally malicious hobgoblin.

The folk-tales are frequently both geographically and temporally specific, thereby enhancing their original claims for authenticity and apparent use as verbal controls and cautionary tales to both children and adults with regard to taking care in one's actions whilst visiting certain locations.

Although abridged versions of the folk-tales were published in guidebooks and tourist accounts throughout the 19th century, the tales also appear to have remained part of the island's oral tradition until the latter part of that century. They also provided a basis for much of the island's literature of the period, including Hall Caine's novels and T. E. Brown's dialect poetry. The seminal work was Sophia MORRISON's *Manx Fairy Tales* (1911), the last publication to depict folk-tales as examples of Manx folklore (see MANX LITERATURE [3]). Successive publications of folk-tales have been abridged and rewritten as collections of 'fairy stories' for a children's audience, with an emphasis on illustrating the stories for new generations of children.

§5. WELSH

The MABINOGI, a medieval collection of narratives, contain elements from pre-Christian mythology, the international folk-tale, local legend, and individual literary authorship. Retellings of these tales have been prominently featured in popular collections of Welsh folk narrative such as Joseph Jacobs's *Celtic Fairy Tales* (1892) and *More Celtic Fairy Tales* (1894), and Gwyn Jones's *Welsh Legends and Folk-tales* (1955). Early collectors looked for further information about medieval traditions in Welsh oral tradition and, although there was no additional material on the characters from the *Mabinogi*, traditions were collected relating to ARTHUR and Merlin (see MYRDDIN).

Many ARTHURIAN legends in Wales are local aetiological legends, explaining the origin of features such as *coeten Arthur* (Arthur's quoit) and the names of several megalithic monuments (e.g. in Pembrokeshire [sir Benfro] and in Gower [Gŵyr]). The legend of Arthur's Cave has been collected from several localities, in England as well as in Wales (CYMRU); W. Jenkyn Thomas's version from *The Welsh Fairy-book* (1907) involves a Welshman who comes across a soothsayer (*dyn hysbys*) in London. The soothsayer recognizes the Welshman's hazel staff as having come from outside Arthur's cave. The two return to Pontneddfechan in POWYS and enter the cave, from which they attempt to steal treasure. The soothsayer warns the Welshman not to touch a bell, but he breaks the taboo and the soothsayer has difficulty persuading King Arthur and his knights to go back to sleep. They leave the cave without the treasure and are unable to find it again.

Tales of the *tylwyth teg* (FAIRIES) are an important part of Welsh folk narrative tradition. In the modern period, the most widely known and frequently anthologized legend is that of the fairy bride of LLYN Y FAN FACH and the Physicians of Myddvai (MEDDYGON MYDDFAI), first printed in 1861 and studied in depth by John RHŶS (1840–1915) in *Y Cymmrodor* 4–6 (1881–3). Another well-known tale is the story of Gelert, made famous in English by the poem 'Beth Gêlert' by William Robert Spencer (1769–1834). In this story, Prince LLYWELYN AB IORWERTH of Wales returns from the hunt to find his household in disarray. He cannot find his infant son, but he sees his greyhound, Gelert, with blood on his muzzle and, jumping to the logical conclusion, he kills the dog. He later finds the child, unharmed, and the body of a wolf, which his own dog had evidently killed to protect the child. Full of remorse, Llywelyn builds a monument, Bedd Gelert (Gelert's grave) for his dog. The story of the misunderstood faithful hound is an international migratory legend which became attached to the village of Beddgelert in Caernarfonshire (sir Gaernarfon) as a way of explaining the name. In 1899 D. E. Jenkins espoused the theory that the story was deliberately attached to the village by an 18th-century innkeeper in a cynical ploy to attract tourists. His theory is widely believed, but subsequent research has turned up earlier references to the legend, though it is certainly also true that the story has been deliberately marketed towards tourists in the modern period.

There is no definitive collection of Welsh folk narrative. Many unpublished orally collected materials are housed in the Museum of Welsh Life, St Fagans (see AMGUEDDFEYDD AC ORIELAU CENEDLAETHOL CYMRU), and many of the folk-tales and legends published in WELSH have never been translated into English. Several of the English-language collections have been so heavily adapted that they are literary renderings of folk tradition rather than records of it, for example Iwan Myles's *Tales from Welsh Traditions* (1923), though this is by no means true of all English-language collections—see, for example, Brian John's series of Pembrokeshire folk-tales. Recent works continue to record contemporary genres of folk narrative, including urban legends (Huws, *Y Nain yn y Carped*, 1996) and supernatural legends (Lockley, *Ghosts of South Wales*, 1996).

§6. BRETON

As in the other Celtic countries, ROMANTICISM played an important part in inspiring the collection of Breton folk narrative. One of the early collectors was Émile Souvestre (1806–54) of Morlaix (MONTROULEZ). Unusually for his time, his two collections *Les derniers Bretons* (1836) and *Le foyer breton* (1844) included some analysis of both text and context as well as a few footnotes providing and explaining the BRETON as collected from oral tradition. On the whole, however, the printed versions of the tales were made to conform to French literary standards in both language and structure.

Perhaps the greatest of the Breton folklorists was François-Marie LUZEL (1821–95), whose prolific publications include works on legends, folk-tales, and folk-songs. Other important 19th- and early 20th-century folklorists include Elvire de Preissac, Countess de Cerny (1818–99), who collected both folk-tales and legendary traditions regarding St BRIGIT in Brittany (BREIZH); Anatole Le Braz (1859–1926), who published collections of folk-tales and legends, notably *La légende de la mort chez les Bretons armoricains* (The legend of death among the Armorican Bretons); and François Cadic (1864–1929), author of *Contes et légendes de Bretagne*. Two other collectors, Adolphe Orain (1834–1918) and Paul Sébillot (1846–1918), worked primarily in Upper Brittany (BREIZH-UHEL). Paul Sébillot was a significant contributor to folklore studies in France as a whole, coining the term *littérature orale* (oral literature), founding the series *Littératures populaires de toutes les nations* (Popular literature of all nations), and editing the journal *Révue des traditions populaires* (Review of popular traditions). Paul Sébillot's son, Paul-Yves Sébillot (1885–1971), was also an important Breton folklorist (see SUPERSTITIONS AND MAGICAL BELIEFS).

Comparatively few folklorists have published folk narratives in Breton. Most Breton-language versions, such as Bachellery's *La princesse plumet d'or* (The princess decked with gold), were published in the 20th century in journals such as ANNALES DE BRETAGNE, REVUE CELTIQUE, and ÉTUDES CELTIQUES. Some collections entirely in Breton have appeared, notably G. Milin's work *Gwechall goz e oa . . .* (Once upon a time there was . . .), which appeared in book form in 1924, and Yann Ar Floc'h's *Koñchennou euz bro ar ster Aon* (Folk-tales from the Aulne river country) in 1950. Per-Jakez HÉLIAS has published several folk narratives in Breton, and in 1984 the publisher Al LIAMM produced a five-volume collection of Luzel's folk-tales in Breton from manuscripts housed in the Kemper/Quimper library. Most of these had only ever been published in French translation, nearly a century before in 1887.

Lacking a medieval vernacular narrative tradition to inspire collectors, antiquarian interest in Breton folk narrative tradition has focused more on ballads than folk-tales or legends (see BARZAZ-BREIZ; LA VILLEMARQUÉ). More recent scholarship has found roots in Breton oral tradition for the Old French *lais* of Marie de France (see BRETON LAYS), and has brought examples of Merlin to light. The Merlin of Breton folklore is more akin to the MYRDDIN Wyllt of early Welsh tradition, a WILD MAN and prophet, than the court wizard of later ARTHURIAN tradition. Jef Phillipe printed some of these tales in his *War roudoù Merlin e Breizh* (On the track of Merlin in Brittany) in 1986.

Many of the classic Breton folk narrative collections, long out of print, are being republished, notably by Terre de Brume in Rennes, which reissues the original text along with an introduction and analysis.

§7. CORNISH

The narrative legacy of Cornwall (KERNOW) is complex. Much of the material available today is the product of various initiatives by collectors from the Reformation period onwards. Written versions of Cornish epic narratives have not yet been recovered, though the ARTHURIAN and TRISTAN AND ISOLT material was probably central to early Cornish narrative traditions. These particular tales or cycles of tales are still important features of Cornish legendary material and have been incorporated into hagiographical and landscape-related legends.

Cornwall has retained a significant body of saints' lore (see HAGIOGRAPHY). In the 17th century Nicholas Roscarrock compiled the earliest and to date the most comprehensive survey of hagiographical material relating to Cornwall. The legends of St PIRAN, St PETROC and St IA are still widely circulated.

The 19th-century collections of Robert Hunt and William Bottrell form the primary corpus of Cornish folk-tales in circulation today. Although Bottrell collected his material earlier (starting in the 1830s) and his collection arguably contains better narrative quality, Hunt's collection was published first, and is more widely recognized as the standard work on Cornish folklore. Robert Hunt was keeper of the Mining Record Office in Cornwall and his two-volume collection from 1865 includes giants, FAIRIES, lost cities, fire worship, demons, spectres, King ARTHUR, holy wells, sorcery, witchcraft, miners, and SUPERSTITIONS. William Bottrell's three-volume collection (1870, 1873, 1880) contained longer narratives and covered subjects ranging from witchcraft and changelings to fairies and pixies.

Since Hunt often drew on Bottrell's collecting efforts, Bottrell's versions of Cornish traditional narratives are often the basis for retellings. Among the most well-known of these narratives are the Mermaid of Zennor, the tale of Tregeagle, the Wrestlers of Kenidjack, the Legend of Pengersick, Tom and the Giant, Duffy and the Devil, and Madge Figgey and her Pig, many of them told in Cornu-English (that is, the Cornish dialect of English). Both Hunt and Bottrell also feature saints' tales associated with landscape features and monuments which seem to have developed over time and were not featured in Roscarrock's collection.

Narrative collecting activity continued into the early 20th century with the work of M. A. Courtney, J. A. Harris, and Enys Tregarthen, as well as Robert Morton NANCE and the Old Cornwall Societies. Cornish legends have by now been incorporated into a variety of contemporary art forms, including film, drama, and poetry (see MASS MEDIA; CORNISH LITERATURE). The poetry of Charles Causley draws on traditional narrative, and folk-tales also form an important part of new community festivals, best seen in Bolster Day at St Agnes, which was inspired by the story of the Giant Bolster and Saint Agnes. Contemporary retellings of Hunt and Bottrell include those by Rawe, Quayle and Foreman, and dramatized versions by the Bedlam and Kneehigh Theatre Companies. Recently integrated into the corpus is the late 20th-century 'urban legend', The Beast of Bodmin Moor.

Fomoiri is a name which designates a race of hostile beings frequently mentioned in Irish legend; they usually appear to be conceived as supernatural entities, and are often described as being monstrous in appearance. The first element in the name is clearly the preposition *fo* 'under', but the second is more mysterious: THURNEYSEN argued that it is cognate with the '-mare' in English 'nightmare' (Thurneysen, *Die irische Helden- und Königsage bis zum siebzehnten Jahrhundert* 64). Medieval etymologists took it to be *muir* 'sea', associating this with the Fomoiri's character as sea-raiders. The form *Fomóraig*, found from the Middle Irish period onward, reflects a reinterpretation of the second syllable as *mór* 'big' consequent on the term's use (its normal meaning in the modern GAELIC languages) as a synonym for 'giants'.

The Fomoiri feature in legendary-historical sources as the enemies of the first settlers of Ireland (ÉRIU), and also of some of its early kings (e.g. Macalister, *Lebor Gabála Érenn* 2.270–1, 3.120–5, 4.118–21, 5.190–1, 210–11, 220–1, 242–3, 248–9; Hamel, *Lebor Bretnach* §12); they also appear as the fierce and sometimes monstrous inhabitants of other islands (Thurneysen, *Abhandlungen der Königlichen Gesellschaft der Wissenschaften zu Göttingen*, 14.2.57; Knott, *Togail Bruidne Da Derga* ll. 902–33; Macalister, *Lebor Gabála Érenn* 41.10–11). In what is probably the earliest reference to them, a possibly 7th-century elegy for Mess-Telmann, a prince of Leinster (LAIGIN), they are spoken of as dwelling 'under the worlds of men' (O'Brien, *Corpus Genealogiarum Hiberniae* 20). In CATH MAIGE TUIRED ('The [Second] Battle of Mag Tuired') they are portrayed as a race opposed to and constrasting with the TUATH DÉ. This dichotomy has been seen as reflecting an Indo-European myth of 'the war of the gods', but seems more likely to be a concept originating with *Cath Maige Tuired* itself, in which the Fomoiri are identified with the Vikings. In other sources there seems, rather, to be an overlap or indeed identity between the Fomoiri and Tuath Dé: the Fomoiri are called 'the champions of the SÍD' (Gray, *Cath Maige Tuired* 34.187–8, cf. 48.447); a figure called Tethra is named as presiding over both races (references in O'Rahilly, *Early Irish History and Mythology* 483); the phrase 'demons and Fomóraig' is glossed 'i.e. Tuath Dé Donann' (Macalister, *Lebor Gabála Érenn* 32–3); and the late tale TÓRUIGHEACHT DHIARMADA AGUS GHRÁINNE ('The Pursuit of Diarmaid and Gráinne') portrays one of the Fomoiri as a servant of the Tuath Dé (Ní Shéaghdha, *Tóruigheacht Dhiarmada agus Ghráinne* 52–3). The main distinguishing factor seems to be that the Fomoiri are always portrayed in a negative light, the Tuath Dé only occasionally so.

The Middle Irish *Sex Aetates Mundi* includes *fomóraig* among the monstrous races descended from Ham son of Noah, in a context that suggests that the word is used as an equivalent of 'giants' (Ó Cróinín, *Irish Sex Aetates Mundi* 79, 100, 119, 134); the idea of descent from Ham is further explored in the genealogical literature (O'Brien, *Corpus Genealogiarum Hiberniae* 330–2).

Foodways is the term given to cultural practices which involve food, including which foods are eaten and the cultural contexts surrounding them (see CHAMPION'S PORTION; FEAST). Traditional Celtic foodways were largely limited to the products which were available in the local area.

§1. CELTIC FOODWAYS IN ANCIENT TIMES

Classical writers' depictions of the Celts often conform to the topos of the Northern Barbarian (see GREEK AND ROMAN ACCOUNTS, esp. §7 Feasting). A particularly valuable source is the ancient survey of dining customs by ATHENAEUS known as the *Deipnosophistoi*, whose sections on GAUL are heavily indebted to the

lost history of Posidonius. Elements of Athenaeus' descriptions of Celtic feasts bear a resemblance to those in the early Irish sagas, particularly Fled Bricrenn ('Bricriu's Feast') in the Ulster Cycle of Tales. Other commentaries, such as Caesar's statement in *De Bello Gallico* 5.12 that eating chicken, goose, and hare was taboo, should not be taken at face value. These may have been taboo at certain times or for certain groups of people, but it is highly unlikely that they were raised solely for pleasure, as Caesar states.

Cannibalism was alleged by classical authors (see sacrifice). In some examples these references appear as sensationalized ethnic slurs and are thus dubious, for example, Jerome writing *c.* ad 390–415 (*Adversus Jovinianum* 2.7):

> . . . I myself as a young man in Gaul [saw] Atticoti [other manuscripts—Scotti], a British people, feeding on human flesh. Moreover, when they come across herds of pigs and cattle in the forests, they frequently cut off the buttocks of the shepherds and their wives, and their nipples, regarding these alone as delicacies.

In the La Tène period of the pre-Roman Iron Age, some sites in Gaul and central Europe have produced human bones with cuts consistent with the intentional extraction of marrow. But, most food debris from Iron Age Celtic sites fails to reflect the regular consumption of human flesh. Alleged instances of cannibalism in extreme circumstances, for survival, may have occurred in siege situations, as at Saguntum (Celtiberia) under Hannibal, and at Numantia (also Celtiberia) under Scipio.

Otherwise, classical writers emphasize only those habits which are different from ordinary Greek or Roman practice, either in kind or in degree. As an example of the latter, both Strabo and Polybius mention the Celts' fondness for meat, and their (to their minds) excessive consumption of it. They also comment on the lack of products such as oil (the Celts used butter or lard) and pepper.

The foodways of the ancient Celts are known through linguistics and archaeology. Several animal and plant names have been reconstructed in Proto-Celtic and thus by implication go back to the Iron Age or earlier. Archaeological finds in Gaul and elsewhere confirm the linguistic evidence. The primary domesticated food animals were swine, cattle, and sheep. The pigs were domesticated from the European wild boar. Cattle were small and hardy, and probably largely black in colour, similar to the modern breeds of Kerry and Welsh Black cattle. The sheep were probably similar to the modern Hebridean, Manx Loaghten, and Soay breeds.

Chickens, dogs, ducks, geese, goats, and horses were also raised and eaten, though chickens are rare and dogs may have been restricted to particular medical or ritual contexts. Wildfowl included wild ducks and wild geese, indistinguishable archaeologically from the domesticated varieties, and probably other game birds. The wild boar, deer, and elk were also sources of food, and the bear, beaver, and hare may have been; rabbits may have been hunted in Celtiberia, where they were native, but they were not domesticated until the Middle Ages. From the seas, seal and fish were harvested. In the last category, words have been reconstructed for eels, salmon and, less securely, for herring.

Crops for which Proto-Celtic words have been reconstructed include barley, oats, and wheat, which were used for both bread and porridge. Other words for edible plants include acorns, apples, berries, blackberries, blackthorn (sloe), wild garlic, hawthorn, hazel nuts, mallow, mast (the fruit of the beech), mulberries, nettles, nuts, tubers, onions, rape (often called canola), seaweed, strawberries, and watercress. For example, the word for 'strawberries' is *subi* in Old Irish (*sú* in Modern Irish), *syfi* in Welsh, and *sivi* in Breton, and the word for watercress is *biror* (with the variant *bilar*, from which Modern Irish *biolar*), Welsh *berwr*, Old Breton *beror* (Modern Breton *beler*).

Many other plant-food sources have been reconstructed from pollen and seeds found in excavations. The grains rye and millet may have been Roman introductions. Other excavated seed evidence shows that peas, a kind of fava beans (*vicia fabia minor*), and vetch (*vicia satia*) were grown. The latter two may have been marked for livestock feed—vetch in particular is ideal for ruminants, but mildly toxic to humans. In addition, several plants now regarded as weeds may have served as food, including lambsquarters (*chenpodium album*) and orache or arrache (*atriplex patula*).

Honey was the staple sweetener. It was gathered from the wild, and beekeeping as an institution is probably quite early. Cattle provided not only milk but also

butter and cheese and other dairy products. Fermented grain and honey produced beer, mead, and a wide variety of other alcoholic drinks (see WINE). Details on food preparation are harder to reconstruct, but cooking seems to have been done largely on griddles or in metal CAULDRONS on andirons over an open fire. Tandoori-like clay ovens are also commonly found on the European continent.

§2. THE MEDIEVAL PERIOD

Until very recent times there was an element of gathering with regard to acquiring the necessities to sustain life—witness the importance of collecting fern and bracken from the *landes* (uncultivated scrub) in rural Brittany (BREIZH) until late into the 19th century. Nuts and berries were obtained from woodlands. Dams and weirs feature in early medieval texts about property, underscoring the importance of fish and eels. Small-scale hunting and trapping of animals occurred throughout the CELTIC COUNTRIES.

In most Celtic areas mixed farming was the dominant farming regime until the late Middle Ages, when specialized agricultural practices began to develop and there was a considerable increase in pastoral activity. Rearing animals—cattle (cf. TÁIN BÓ CÚAILNGE), pigs (cf. SCÉLA MUCCE MEIC DÁ THÓ), and a few sheep (numbers increasing in the later Middle Ages)—and growing crops were both essential. Wheat was grown for fine bread, barley and rye (usually a post-Roman introduction) for coarser loaves, oats for fodder, with buckwheat coming into Brittany in the central Middle Ages, though unusual in other Celtic areas. A few vegetables were grown, particularly in monastic gardens, and herbal preparations for good health are noted in hagiographic texts. The proliferation of tens of thousands of RING-FORTS in the Irish landscape in the 5th–8th centuries has been interpreted as signalling the inception of a full dairy economy and the consequent dramatic increase in yield per acre and population (McCormick, *Emania* 13.33–7). The Irish laws dating from the early medieval period show that cattle figured as a standard of value prior to the introduction of COINAGE by the Norse in the 10th century. A similar system is implicit in Wales (CYMRU) in the 'SUREXIT' MEMORANDUM and later LAW TEXTS.

Medieval Celtic literature contains numerous references to food. The 11th-century Irish text *Aislinge Meic Con Glinne* (The dream of Mac Con Glinne) contains a description of a land of Cockayne, a paradise of food, and presents a portrait of the Middle Irish view of abundance in the 11th century:

> The door of dried meat,
> The threshold of dry bread,
> The walls of soft cheese,
> Smooth pillars of old cheese,
> And juicy bacon joists
> Are laid across each other
> Old beams of sour cream,
> White posts of real curds,
> Supported the house.
> A well of wine just behind,
> Rivers of beer and bragget (after Jackson, 15)

Another important aspect of foodways is *not* eating. Mac Con Glinne uses both food-related SATIRE and fasting to make his point in the story. Fasting was an important element in the medieval church, but in Ireland (ÉRIU) it had a social function as well. A public fast against someone (*troscad*) was a way of compelling them to do something, discussed in the Brehon laws, and Irish hagiographies show saints using similar actions against God.

The Norman incursions in the 11th to 13th centuries brought many changes to the diet of the Irish and British Celts. In Ireland, at least, fallow deer (the red deer is native), pheasants, pike, rabbits, and mute swans were introduced in the Norman period. In Britain and Ireland, the plough replaced the ard at this point, the difference between them being a mouldboard which turns the soil vertically as well as on the surface.

Grain and dairy products continued to be the staple food throughout the medieval centuries. Wheat was the most highly esteemed crop, though barley and oats seem to have been more common, especially further north and in poorer soils. Meat was comparatively rare in the diet, and what was consumed was largely pork. Prohibitions against horseflesh are numerous in IRISH LITERATURE, indicating that it was no longer eaten by people of high social status. Apples are mentioned frequently, in both mythological and social contexts.

§3. MODERN CELTIC FOODWAYS

Following its introduction in the late 17th century, much of Ireland (ÉIRE) and Scotland (ALBA) came to

rely on the potato as a dietary staple. The potato blight which struck in the 1840s was accompanied by social upheaval (see CLEARANCES), and had disastrous long-term cultural effects through EMIGRATION, notably on the IRISH and SCOTTISH GAELIC languages.

During the FAMINE, many wild plants were relied upon to supplement the diet, including berries (especially blackberries), charnock (*raphanus raphanistrum*, a wild relative of the radish), nettles, and sorrel.

Nowadays, with increasing social and political ties to other European and world nations, the food consumed in the Celtic countries is changing rapidly, and assimilating to food customs of other places. This general similarity is enriched by local variety. Only a sample of the many traditional ingredients and individual recipes can be listed here.

Breton cuisine is distinguished by its extensive use of *krampouezh* (crêpes), made of buckwheat or wheat flour, and also by its baking (for example, the *kouign-amann* 'butter-cake'), cider, and seafood. Cider is traditionally drunk from small earthenware bowls.

The Cornish pasty, a pastry dumpling with a variety of fillings, is the best-known Cornish dish. This was an eminently practical dish for miners, since a pasty baked in the morning would still be warm at mid-day, and was easily portable. The miners' initials were often marked on the sides of the pasties, in order to prevent confusion.

In Ireland, potatoes, cabbages, and leeks feature in many local dishes, for example *bacstaí* (boxty) and *cál ceannan* (colcannon). Irish emigrant communities in the Americas have developed the custom of eating a corned beef and cabbage supper on St PATRICK's Day, and beer (sometimes dyed green) features in festival contexts throughout the day.

The best-known Manx recipe outside Man (ELLAN VANNIN) is jugged hare, but other recipes are also popular; the *sollaghan*, a sweetened oatmeal dish, is a traditional Christmastide breakfast, and Manx broth is associated with weddings and other festival events.

The haggis, a sausage made from rolled oats and sweetbreads, is the stereotypical Scottish dish. The word itself is English, and a similar item was a common feature of Lowland and English cuisine in the early modern period. Oats and whisky also feature prominently in Scottish cuisine, the latter used extensively for flavouring as well as being consumed on its own.

Krampouezh (crêpes), ubiquitous feature of modern Breton cuisine, at a food market

Bara brith (speckled bread) is a Welsh currant bread. The dish 'Welsh rabbit', usually, but incorrectly, spelled 'Welsh rarebit', refers to *caws pobi* (cheese on toast), but the name is an English *blason populaire* (traditional speech referring to a neighbouring community, place, or group). Another traditional Welsh dish is *bara lawr* (laverbread), made from seaweed and not actually bread at all. Both Scottish and Welsh cuisine use a relatively high proportion of lamb and mutton.

Wendy Davies, AM

Foras na Gaeilge (The Irish Language Agency) was established on 2 December 1999, under the terms of the Belfast (Good Friday) Agreement, with the aim of promoting the IRISH language throughout the island of Ireland (ÉIRE). As well as retaining the responsibilities of Bord na Gaeilge (Irish Language Board), which had been in existence since 1978, Foras na Gaeilge was given a wide range of functions to add to its effectiveness in promoting the Irish language, for example, in EDUCATION and terminology. The functions previously held by An Gúm regarding publishing and by the Terminology Committee have also been given to Foras na Gaeilge. Maighréad Uí Mháirtín was appointed chairperson and currently there are 15 other members on the Foras na Gaeilge Bord.

Foras na Gaeilge functions as a partner with Tha Boord o Ulstèr-Scotch to form the Language Body. The Language Body is one of the six North–South Bodies mentioned in Strand 2 of the Good Friday Agreement of 1998 (see ÉIRE § 7). In order to understand Foras na Gaeilge's strategic objectives and method of work, the organization's all-island terms of reference need to be considered.

Foras na Gaeilge's functions are:

1. to promote the Irish language;

2. to facilitate and encourage the use of Irish in speech and writing in public and private life in the South and, in the context of Part III of the European Charter for Regional and Minority Languages, in Northern Ireland where there is appropriate demand;

3. to advise both administrations, public bodies and other groups in the public and private sectors;

4. to undertake supportive projects and grant-aiding bodies and groups, as considered necessary;

5. to undertake research, promotional campaigns and public and media relations;

6. to develop terminology and dictionaries (see DICTIONARIES AND GRAMMARS);

7. to support Irish-medium education and the teaching of Irish.

Foras na Gaeilge functioned well in its first three years, especially in helping worthwhile initiatives on behalf of the Irish language both North and South, by funding Irish-language organizations, by setting up new partnerships, and through Foras na Gaeilge's own all-island activities. The following figure among the main aspects accomplished during this period:

core funding was given to 20 organizations, and over 100 substantial initiatives and 400 minor initiatives were funded North and South annually;

in the area of communications, Foras na Gaeilge embarked on a major all-island advertising campaign in the whole broadcasting sector North and South, and over 5000 people made direct contact with Foras na Gaeilge as a result;

a new contract was signed with the newspaper FOINSE, extra funding was given to the newspaper LÁ in Belfast for development purposes, to the magazine COMHAR, and an internet magazine www.beo.ie was established;

planning commenced to develop the provision of Irish-language textbooks and teaching resources, and the basic planning was carried out on a major 5-year initiative to provide a new Irish–English dictionary;

policy proposals were advanced in education, GAELTACHT, arts and broadcasting (see MASS MEDIA);

new contacts were established with the Department of Culture, Arts and Leisure, with the Department of Community, Rural and Gaeltacht Affairs, with Tha Boord o Ulster-Scotch, with the Joint Secretariat of the North–South Ministerial Council, with the other North–South Bodies, and with a wide range of other official organizations;

an effective partnership was established between Foras na Gaeilge, local authorities, regional health authorities, organizations in the broadcasting sector, Iomairt Cholm Cille (launched in 1997 'to foster support for the Gaelic language and develop links between Gaelic Scotland and Ireland'), the Department of Environment, and local government and organizations in the business world;

more than 50 books (textbooks, books for young people and other learning resources) were published in 2002 and 2003;

Foras na Gaeilge acquired an office in Belfast (Béal Feirste) and a Deputy Chief Executive/Director of Education Services was appointed;

in 2003 Foras na Gaeilge had a budget of almost €16m.

There are provisions in the Good Friday Agreement regarding television broadcasting. Two areas in particular are mentioned in the Agreement, expanding TG4's broadcasting signal in Northern Ireland and supporting the establishment and the development of an Irish-language television production sector in the North.

In 2002 Foras na Gaeilge made a submission on the UK Communications Bill 2002 in which it was requested that the Communications Bill be revised prior to its presentation to Parliament in November, to reflect the Government's intention, as clearly stated in the White Paper, to honour the Belfast Agreement and support public service broadcasting to an important minority group within the United Kingdom. It was requested that the Bill commit itself to making TG4 a 'must carry' service on all digital television platforms serving Northern Ireland, and to establishing a production and training fund for TG4 to support Irish-language programmes aimed at Irish speakers in Northern Ireland.

The British government signed the European Charter for Regional and Minority Languages on 2 March 2000. This gave recognition to the Irish language, Scottish Gaelic, Scots and Ulster Scots in regard to Part II of the Charter. The British government has said that it will specify the Irish language, Welsh and Scottish Gaelic in regard to Part III.

fortification [1] Continental

§1. INTRODUCTION

Iron Age fortifications, like those of other periods, are best understood as directly related to a given society's battle techniques/traditions. This is the common-sense view and was, until recently, the usual archaeological interpretation, since it is clear that innovations in weapons technology have often given rise to basic changes in the development of defensive earthworks. However, experts now increasingly recognize ancient fortifications also as important cultural statements which define group identity and status. Thus, each defensive structure must be viewed in its social and economic context, since it may have served as a demarcation of ethnic, economic, political, social, or territorial boundaries, but might have alternatively or also stood as a marker of power and prestige. Advanced types of composite ramparts, such as the *murus gallicus* (see below), together with their often imposing gateway constructions, must be viewed as monumental elements of the Celtic hill-fort or OPPIDUM.

The majority of fortifications date from the later Hallstatt period (*c.* 700–*c.* 475 BC) and Earlier and Later La Tène (*c.* 475 BC until Romanization). Continuous settlement at such sites was rare (e.g. Závist in the Czech Republic, see BOII), with a hiatus often occurring during the Middle La Tène period (*c.* 350–*c.* 200 BC).

Late Hallstatt and Early La Tène fortifications rarely exceed 30–40 ha (72–100 acres) and are mostly situated on naturally protected high plateaux. Defensive circuits of ramparts on islands and plateaux, as well as promontory sites partially defended by natural features (such as the sea or sheer cliffs), and the more typical hill-forts with single or multiple rings of defences have been discovered.

§2. RAMPART TYPES

Besides simple earthen 'dump' ramparts and dry-stone walls, other techniques of defensive construction

Excavation of the fortifications in the western precinct of the oppidum at Staré Hradisko, Czech Republic, in 1990

attested at late prehistoric sites include simple wattle-and-daub structures with palisaded walls and wooden box-type constructions, such as that found at Biskupin in Poland. By the Iron Age, more advanced methods of defensive construction had developed. The clay brick construction employed at the Heuneburg with its bastions is unique and does not seem to have been of great influence. It appears to have been an imitation of such techniques in use in the classical world, and will not be dealt with here. The main construction methods employed on Continental and southern British hill-forts and oppida are outlined below:

(1) The Altkönig-Preist type rampart was constructed of vertical wooden posts inserted in a dry-stone wall. These vertical timbers were exposed in the outer face of the rampart and, less often, in the inner face. The posts were earth-bound or supported on stone slabs positioned about 1–3 m apart. The thickness of the rampart varied between 3.5 m and 6 m. One variation of this method was the use of horizontal wooden beams, arranged lengthwise and crosswise, to link the vertical posts, with the space in between filled with a mixture of stone and soil. This type was prevalent in a region stretching approximately from the northern edge of the Alps in the south to Luxembourg in the north.

(2) The Kelheim-type rampart was a vertical post and stone panel-work arrangement, similar to the Altkönig-Preist type, but much simplified, with only one layer of horizontal beams anchored into the earthen rampart. In this form of rampart the inner face was often ramped gradually down to the ground level of the interior. This construction technique was mostly utilized in the eastern part of the La Téne cultural area.

(3) The Ehrang-type rampart was constructed of horizontal beams arranged lengthwise and crosswise and anchored to a stone wall which formed the defensive exterior, with the ends of the beams running crosswise through the rampart, visible in its outer face. The dry-stone facing of the outer walls was generally only a course or two thick and could not have survived any length of time without the timber-laced backing of earth.

(4) The *murus gallicus* technique described in Caesar's *De Bello Gallico* ('Gallic War') is a variant of the latter Ehrang type. In this type, the lengthwise and crosswise beams were fixed together at the point where they passed over one another by using large iron spikes. The bulk of the rampart was filled in with rammed soil and, as with the Kelheim-type rampart, the inner face was often ramped gradually down to the ground level of the interior. This type was first noted by Caesar at the siege of Avaricum in 52 BC and appears to have been popular in western Gaul. In this case, the deep ditch, which often lay immediately outside the rampart, sometimes possessed a near vertical inner edge, which was combined with the outer face of the rampart to form a sheer obstacle several metres high. Modern estimates based on excavated examples suggest that up to 700 man-hours may have been required for the construction of each metre length of such ramparts.

Several other variants on timber-laced ramparts composed of stone and earth—such as the Kastenbau type, the Fécamp type and the Basel-Münsterberg type—have also been identified by archaeologists.

§3. GATEWAYS

Besides simple entrance gaps in the walls accompanied by short passageways, several more elaborate gateway layouts are known. The typical gate was the *zangentor*, the pincer-gate, in which the gate passage narrowed towards the inside. The passageway, which frequently assumed a funnel shape, often had two lanes and was secured by a gatehouse (e.g. Závist, Bohemia, and Manching, Bavaria) or a gate tower (e.g. La Chaussée-Tirancourt, France). Otherwise, towers are rather rare. At their entrance point, gates could be as wide as 15 m (e.g. Bibracte, France; Titelberg, Luxembourg), but there were also very narrow passages with a width of only about 2.5 m (e.g. Kelheim, Bavaria). At several sites the entrance way featured extra walls or 'hornworks', which extended outwards from the main defences at a right angle near the gateway, thereby extending the passageway to the entrance considerably and, as a result, the exposure time of attackers to the efforts of the defenders (e.g. Danebury, Dorset).

fortification [2] Britain and Ireland

§1. INTRODUCTION

For their size, Britain and Ireland (Ériu) feature a diverse range of defensive monuments of late prehistoric date, many of which are primarily associated with specific geographical zones within these islands. The monuments also vary considerably in their scale, dating, layout and methods of construction. The term 'hill-fort' has, in the past, been applied in blanket fashion to these differing defended sites, but the revelations of ongoing archaeological research increasingly question the validity of such a simplistic approach. Furthermore, it has been proved through excavation over the last two or three decades that it is unsafe to assume that all hill-forts are primarily of Iron Age date. This is especially the case when, as noted above, the definition is taken to include a diverse range of different morphological types. It has now been demonstrated that the construction of many hill-forts occurred in the Late Bronze Age (i.e. *c.* 1200–*c.* 700 BC), with ongoing occupation or sporadic reoccupation in the Iron Age and sometimes the early medieval period. Indeed, in Ireland an Iron Age genesis has yet to be proved for any large defensive site (see Raftery, *Pagan Celtic Ireland* 58–60).

§2. HILL-FORTS

The most typical hill-forts are perhaps those situated in elevated positions and which consist of one or several rings of defences composed of earthen or composite earth/timber banks with external ditches. This type of site is most common in several areas of Britain, particularly mid-southern England, the Welsh Marches

and the Scottish borders (Cunliffe, *Iron Age Communities in Britain*, fig. 14.1; Rideout & Halpin, *Hillforts of Southern Scotland*), while in Ireland they are most plentiful in the north Munster (Mumu)/mid-Leinster (Laigin) area, with further clusters in the Wicklow Mountains and Co. Sligo (Raftery, *Pagan Celtic Ireland* fig. 32; Condit et al., *Emania* 9.59–62). In Ireland, Scotland (Alba) and northern England, earth is of necessity often replaced by stone as the main construction material. In Ireland, where multiple ramparts existed they generally tended to have a considerable space between them, thus forming several concentric rings (e.g. Mooghaun, Co. Clare, and Brusselstown Ring, Co. Wicklow). In Wales (Cymru) and southern England, early hill-forts appear to have generally been univallate (e.g. Danebury, Hampshire, and the Trundle, Sussex), in some cases later developing closely set multiple rings of two or three pairs of banks and ditches (e.g. Maiden Castle, Dorset). A similar pattern of development from univallate to closely set multiple banks and ditches can be noted for some Scottish sites, for example, Hownham Rings, Borders (Armit, *Celtic Scotland* 50–1). This phenomenon is often accompanied by the enclosure of a larger internal area. With a few exceptions, the hill-forts of west southern Britain—west Wales and the Devon-Cornwall peninsula—seem to have remained quite modest in size and to have retained fairly simple defensive arrangements (e.g. Caer Fawr, Ceredigion, and Castle Dore, Cornwall/Kernow). Several variations on the timber-supported earthen box-rampart have been recognized on sites in England and Wales, most often with a vertical outer face supported by vertical timbers backed by the earthen mass of the bulk of the rampart, often with a ramp sloping down to the interior surface (e.g. Poundbury, Dorset, and Moel y Gaer, Flintshire). In Scotland, the stone ramparts are often laced with timber, and high-temperature fusion of the stone resulting from the burning of the timber framing in antiquity has been noted at many sites, giving rise to the nomenclature 'vitrified forts'.

§3. oppida

Vast oppida (sing. oppidum), defended proto-towns of the Continental Final Iron Age, do not occur in Ireland, and in Britain are essentially restricted to the south-eastern part of England where one also finds coinage and the tribal groups identifiable as Belgae (see Fichtl, *La ville celtique* 18–19). This is the area of the 'core' tribes as defined by Cunliffe (*Iron Age Communities in Britain*), those groupings with strong cross-channel ties to Gaulish society in the century or so preceding the Roman conquest of Britain. The oppidum seems to have been adopted in the south-east from the 1st century BC, when these large defended sites appear to have been constructed in lowland locations near important river crossings, possibly with a view to controlling trade and transport, and with the course of the river sometimes forming part of the defensive perimeter of the oppidum. Examples of such 'enclosed oppida' are found at Dyke Hills, Oxfordshire, and at Winchester, Hampshire. The inspiration for these sites appears to have come from Gaul, a likelihood strengthened by the fact that several British sites —such as Calleva in Hampshire—feature defensive systems of the north Gaulish Fécamp type (massive 'dump' ramparts accompanied by a wide, flat-bottomed external ditch). At some locations, a complex array of interlinking banks and ditches was developed by the early 1st century AD. These 'territorial oppida', which typically enclose vast areas, generally do not appear to have had a single specific settlement focus, nor do the defences form a single enclosing element about a particular nucleus. At Camulodūnon (Colchester, Essex), the defences enclose an area of *c.* 16 km², and several different areas of Iron Age activity have been identified within them.

§4. western and northern coastal zones

The Atlantic-facing areas of Ireland and Britain feature a range of distinctive regional types of late prehistoric defended settlements which, while generally on a smaller physical scale than the large hill-forts and oppida of the agriculturally richer lowlands, are no less impressive and interesting in their own ways. What most of the following sites have in common, as indicated by their scale, is a continuing emphasis on the family or extended family as the social unit best suited to exploitation of the resources available in agriculturally marginal areas.

Promontory forts or 'cliff castles' are common along many coastal areas of the Atlantic and Irish Sea, where a cliff-top position is fortified, usually through the erection of a stone or earthen rampart across the

landward approach, the other sides being protected by a sheer drop. DUNS and BROCHS are two particularly Scottish types of dry-stone defended sites, most common on the coasts and islands of the west and north respectively (see HIGHLANDS). Small univallate forts are also to be found in south-west Wales, where they are called raths, and excavated examples at Walesland and Woodbarn, Pembrokeshire (sir Benfro), are clearly pre-Roman in origin (Wainwright, *Britannia* 2.48–108; Vyner, *Archaeologia Cambrensis* 135.121–33). Similar sites in Cornwall are termed rounds and, though few have been thoroughly investigated, some clearly have prehistoric beginnings, such as those at Crane Godevry, Gwithian, and Penhale, Fraddon (Thomas, *Cornish Archaeology* 3.37–62; Johnston et al., *Cornish Archaeology* 37/8.72–120). Along the west coast of Ireland, particularly in counties Clare and Kerry, as well as on the Aran Islands (OILEÁIN ÁRANN), a series of impressive dry-stone built forts are known. These sites, for example, DÚN AONGHASA, Aran, and Cathair Chon Raoi, Co. Kerry (Contae Chiarraí), are often positioned on cliff edges or promontories, and are marked out by the massive and often complex nature of their defensive architecture. Shared features include terraced ramparts and intra-mural passages and chambers. At several of these sites—including Doonamoe, Co. Mayo (Contae Mhaigh Eo), Dún Aonghasa and Ballykinvarga, Co. Clare—stone-built *chevaux de frises* form part of the defences, a feature shared with several hill-forts in Wales and Scotland, as well as the fort of South Barrule, Isle of Man (ELLAN VANNIN), where timber rather than stone was used. Although some examples, such as Dunbeg, Co. Kerry (Barry, PRIA C 81.295–329), and Dún Aonghasa (Cotter, *Discovery Programme Reports* 1.1–19, 2.1–11, 4.1–14), have yielded evidence for Late Bronze Age activity at the site, the dating of the stone forts themselves remains unresolved.

SÓF

fosterage in Ireland and Wales

Fosterage was a method of childrearing whereby adults, other than the natural parents, were given the charge of raising a child for a particular period of time and under certain specified conditions.

§1. IRELAND

When Ireland (ÉRIU) emerges in the historic period fosterage is a well-established tradition. Its roots appear to stretch into the INDO-EUROPEAN past, but as to the origins little is known. The terms applied to foster-father (*aite*) and foster-mother (*muime*) are considered terms of affection in Old Irish, deriving from a common international type of 'bay-talk' linguistic forms. *Altram*, the term for fosterage, carries the sense of feeding and nourishing, the basic requirements of a dependant. The related term *dalta* refers to the foster-child.

IRISH, like many other languages, does not distinguish in terminology between wet-nurse and foster-mother. The establishment of nursing as an optional first step in the fostering process is strengthened by the fact that the legal commentary mentions three age divisions within fosterage: the first age up to seven years; the second age from seven to twelve years; and the third from twelve to seventeen years. Therefore, the age when fosterage commenced could vary widely, depending on circumstances.

Fosterage was a formal contract within the Irish tradition. The medieval Irish legal material notes two types of fosterage: one for payment and one of affection (see LAW TEXTS). The fosterage fee was determined according to rank; it appeared to constitute a cattle payment and was returned with the child at the end of the fostering period. It cost more to foster a female child. At the core of fosterage was the education of the child, with a fine of two-thirds of the fosterage fee incurred if one of the required skills was not taught.

The type of education a child received was also linked to rank. There was a strong pastoral emphasis to the education of the children of the freeman grade (kiln-drying, woodcutting, use of the quern, the kneading-trough). The children of higher grades were taught more noble pursuits (board games, sewing, embroidery, horse-riding).

The responsibility for arranging and paying for the fosterage fell to both the maternal and paternal kin of the child (co-fostering). Each kin group provided half the fosterage fee. Protesting against a fosterage placement was an important right of the maternal kin. If the child was blemished in any way while in fosterage, the foster-father forfeited two-thirds of the fosterage fee. If the fosterage undertaken was one of affection, the foster-parents were not liable for the crimes committed by the foster-child. If it had been fosterage for payment which was undertaken, they would be financially responsible. The age of the child, the nature of the crime and the number of offences previously committed were taken into consideration. The foster-father paid for the fines committed, until he 'proclaimed' his foster-son to his natural father. By doing this he removed his financial responsibility for certain crimes if the child was habitually criminal. Furthermore, foster-parents in legal proceedings had the power of proof, judgement and witness over foster-children, features which were normally restricted to the natural kin.

Completion of fosterage was strictly regulated. The contractual nature of the process is highlighted, with two errors in fosterage noted—returning or taking the child prematurely, both of which resulted in compensation payment. The *sét gertha* (*sét* of maintenance) was an important payment made to the foster-child on completion of fosterage (*c.* 14 years of age for a girl and *c.* 17 for a boy). This payment ensured the maintenance of foster-parents in later life, illustrating the life-long commitment involved. Providing foster-parents with refection in poverty and maintenance in old age (*goire*) was an obligatory matter.

Foster-relations were a possible source for military and legal aid in times of need. The financial benefits in the form of compensation awarded to foster-relatives, when unlawful injury was inflicted on their fosterling or fellow-fosterling at any time of life, was a further factor in sustaining relationships. Although condemned by canon law and with legislation prohibiting its practice being issued on numerous occasions in late medieval Ireland, the range of short- and long-term benefits to fosterage played a large part in sustaining the power of the institution into the early modern period.

§2. WALES

In contrast to the detail Irish jurists provide on the institution, no reference is made to the institution of fosterage within a concise section of medieval Welsh legal material dealing with family law and the rights, legal capacity and markers in the life cycle of a child. It is stated that a child is 'at his/her father's dish', which may suggest proximity to their immediate family or may simply indicate that the father has ultimate legal responsibility wherever the child is reared.

The existence of fosterage is attested in a small number of legal entries. An important difference between the medieval Irish and Welsh tradition was the possibility of inheriting land through foster-relations in medieval Wales (CYMRU). If a nobleman (*uchelwr*) fostered (*meithryn*) his child with a bondman (*aillt*) with the consent of the lord, and if the child remained there for more than a year and a day, the foster-son would have earned the right to inherit the land of the *aillt*, or a share if other children survived. References within medieval Welsh legal material are concerned with inheritance and property rights, as opposed to the upbringing and education of the child.

Further evidence in the literary sources attests to existence of the institution in Wales, particularly within the stories of the MABINOGI. In one tale (PWYLL), the benefits of being a foster-parent are outlined, and include support from a foster-son (*mab maeth*) in later life, with an intensification in friendship between the foster-parents and natural parents. In both traditions, a fosterage relationship is noted as one which should bring prosperity to the households involved in the process. Some inherited Celtic vocabulary relating to fosterage has changed meaning in Welsh, for example, *cyfaill* 'friend', the cognate of Old Irish *comaltae* 'foster-brother', and *athro*, now 'teacher', but related to OIr. *altram* and possibly still meaning 'foster-parent' in early texts such as CULHWCH AC OLWEN.

Bronagh Ní Chonaill

The ***Four Ancient Books of Wales***, published by the Scot William Forbes Skene (1809–92), is a landmark volume in the study of early Welsh literature. Working with Welsh translators, Skene's aim was to publish the texts of some of the earliest WELSH POETRY from the original manuscripts and to provide an English translation. The four manuscripts containing early Welsh poetry used by Skene were the Book of Aneirin (LLYFR ANEIRIN), the Book of Taliesin (LLYFR TALIESIN), the Black Book of Carmarthen (LLYFR DU CAERFYRDDIN), and the Red Book of Hergest (LLYFR COCH HERGEST). The term 'Four Ancient Books of Wales' remains a useful shorthand for these four. He also included the JUVENCUS *englynion* and some TRIADS. Subsequent work has by now superseded most of the editions and translations of *The Four Ancient Books of Wales*, though some of Skene's identifications of northern places and peoples are still accepted.

Graham C. G. Thomas

Friel, Brian (1929–) is a distinguished Anglo-Irish writer of the 20th century and co-founder (with the actor Stephen Rea) of the Field Day Theatre Company of Derry (DOIRE). Educated in Derry, Maynooth (Má Nuad), and Belfast (Béal Feirste), in 1960 Friel abandoned teaching to write short stories. His play *Philadelphia, Here I Come!* (1964), which portrays the inner turmoil of an ineffective but imaginative protagonist contemplating emigration to America, was his first major international success. Friel has continued to write hugely successful plays, whose cultural and social contexts have direct bearing on Celtic studies, notably *Translations* (1980), which deals with the destruction of GAELIC culture in 1830s Ireland (ÉIRE), and *Dancing at Lughnasa* (1990), which examines the religious and sexual tensions of 1930s Ireland. Recently employing more allegory and symbolism, Friel has acknowledged the influence of Chekhov and Turgenev.

SELECTION OF MAIN WORKS

SHORT STORIES. *Saucer of Larks* (1962); *Gold in the Sea* (1966).
PLAYS. *Philadelphia, Here I Come!* (1964); *Translations* (1980); *Dancing at Lughnasa* (1990).
COLLECTION OF PLAYS. *Selected Plays* (1984).
COLLECTIONS OF SHORT STORIES. *Selected Stories* (1979); *Diviner* (1983).

Brian Ó Broin

Fulup, Marc'harid (Marguerite Philippe)

Much has been written about 19th-century collectors of Breton oral literature such as Aymar de Blois (1760–1852), Emilie Barbe de Saint-Prix (1789–1869), Alexandre LÉDAN (1777–1855), Jean-Marie de Penguern (1807–1856), Hersart de LA VILLEMARQUÉ (1815–95), François-Marie LUZEL (1821–95), and Anatole Le Braz (1859–1926). However, very little is known about the common people who transmitted to the collectors songs and FOLK-TALES, which had been handed down to them by their forebears. Of the latter group, the best known was Marc'harid Fulup, or Marguerite Philippe as her name was registered at birth.

Born in 1867 in Plûned (Pluzunet), a small rural community in the district of Trégor (TREGER), Marc'harid was the daughter of a tailor and a spinner-woman. She learned many Breton folk traditions at an early age from her mother, Yvonne Le Maillot, from Priel (Plouguiel), whose repertoire was astonishing. Marc'harid gained a reputation locally as a singer and storyteller, charming listeners during the long winter evenings in the farmsteads and manor houses with her *gwerzioù* (verses) and tales of miracles.

Marc'harid also practised the traditional cult activities associated with water, and was believed to have the ability to find 'miracle wells' with healing properties.

Handicapped from birth, and eventually losing the use of one hand, Marc'harid could support herself by begging and making pilgrimages on behalf of others. At the time, belief in the power of popular saints as

miracle healers of soul and body was very strong in Brittany (Breizh). Marc'harid went to the holy sites of Breton saints for people who wished to pray for grace or receive divine assistance, but did not have the time or the ability to make the pilgrimage themselves. She knew the traditional rituals associated with the various cult sites, as well as the many associated prayers and the different sorts of offerings which were supposed to attract the favour of healing wonders when placed at natural settings of wood and stone. Thus, she travelled on foot across the dioceses of Brittany, mainly Kernev (Cornouaille) and Leon (Léon), but also the Gwened (Vannetais).

On her pilgrimages Marc'harid heard various songs, tales and popular beliefs, and committed them to memory, thereby supplementing her knowledge of the oral traditions of her native districts of Lannuon (Lannion) and Trégor.

Recognizing Marc'harid's remarkable repertory of traditional material, folklorist François-Marie Luzel began to record it. Her powerful voice and exact memory survive today on recordings made in 1900 on wax cylinders by the linguist François Vallée (1860–1949). Present-day singers continue to make use of this legacy.

The *cigale aux brumes* (cicada of the mists), as she was nicknamed, died in 1909 and was buried in the paupers' corner in the cemetery of Plûned. A year later an American admirer, Ange Mosher, arranged for Marc'harid's remains to be transferred to a new grave, where her epitaph is a fitting tribute to such a prolific contributor to Breton oral history: *Eun dra hepken em euz graet en buhez: kana* (I did but one thing in my life: sing).

Gaelic

§1. MODERN USAGE

The word *Gaelic* appears in English in the 16th century referring to the language of the Scottish Highlanders—the language which linguists now call SCOTTISH GAELIC, and this remains, without further context or qualification, the most unambiguous sense of *Gaelic*. *Gaelic* is a borrowing from Scottish Gaelic *Gàidhlig*, and the related term *Gael* '(Scottish) Gaelic speaker, Highlander' (< Scottish Gaelic *Gàidheal*) also appears in Early Modern English. By the 18th century, *Gaelic* (alongside *Irish* and *Erse*) and *Gaels* were also sometimes applied to the Irish language and its speakers. As well as being a straight extension of the meaning of words already in use in English, this usage was supported by the corresponding Irish words *Gaoidhealg* and *Gaoidheal* (in Early Modern Irish spelling). More recently, the latter is spelled *Gael* in Irish, while a variety of dialect forms are in use for the language name: *Gaeilge*, from the old genitive *Gaoidhilge*, is the CONNACHT and standard form, *Gaolaing* is common in Munster (An Mhumhain < MUMU), *Gaelic* and *Gaolac* occur in Ulster (Ulaidh < ULAID). The corresponding Manx word *Gaelg* means the 'MANX language'. Irish and Manx can also be called *Irish Gaelic* and *Manx Gaelic* to avoid confusion with Scottish Gaelic, on the one hand, or the English speech of Ireland and Man (ELLAN VANNIN), on the other. Simply *Irish*, however, remains the preferred name for Ireland's Celtic language, both as the form established earlier in English and reflecting its status as the national language of Ireland.

Following the FAMINE of 1845–50, there occurred a revival of interest in the Irish language and its literature, and the term *Gaelic* was appropriated by this movement, as in, for example, the Gaelic League (CONRADH NA GAEILGE). The movement had overlapping ideals and adherents with Irish NATIONALISM; the connotation of *Gaelic* thus became extended to the group whose cultural identity was defined partly by the Irish language, but also by nationalism and often Roman Catholicism; cf. GAELIC ATHLETIC ASSOCIATION. In keeping with these recent meanings, historians now use *Gaelic* to designate the 'native Irish' from the period when medieval Ireland (ÉRIU/ÉIRE) ceased to be culturally homogeneous. Thus, 'Gaelic' rulers and institutions contrast with those of the Scandinavians settled in Ireland from the later 9th century, the Anglo-Normans from 1169, and the later Elizabethan and Cromwellian incomers (see ASCENDANCY). The 'Gaelic Order'—meaning the old system of patronage by Irish-speaking aristocrats for professional poets and scholars—is sometimes said to have ended with the defeat of Hiberno-Spanish forces at Kinsale (Cionn tSáile) in 1601 or some subsequent military milestone in the 17th century.

§2. DERIVATION

The Old Irish forms *Goídelg* 'Irish language' and *Goídel* 'Irish speaker, Gael' gave rise to the modern linguistic term GOIDELIC. They were (at the time) recent borrowings from the BRYTHONIC forms which became Middle WELSH *Gŵyddel* and *Gŵyddelec* (MacNeill, PRIA C 36.267; Greene, *View of the Irish Language* 14; Byrne, *Irish Kings and High-Kings* 8; Mac Cana, *Y Gwareiddiad Celtaidd* 168–9; O'Rahilly, PBA 21.325–6). The root corresponds to Old Irish *fíad*, Old Breton *guoid*, Middle Welsh *gŵyd*, all meaning 'wild, feral, uncultivated' (thus, e.g. GPC s.v. Gwyddel). The original sense of the ethnonym is, therefore, 'forest people', hence 'wild men, savages'. Hamp (*Proc. Harvard Celtic Colloquium* 12.43–50) proposed that the loanword *Goídil* (pl.) ultimately goes back to the same root as the nearly synonymous FÉNI. By the early Middle Ages, Welsh *Gŵyddyl* meant exactly the Gaelic-speaking peoples or SCOTS. In the 10th-century prophecy ARMES PRYDEIN, the colloca-

tion *Gŵyðyl Iwerðon, Mon, a Phrydyn* denotes both Ireland (Iwerddon) and north Britain or Pictland (Prydyn) as Gaelic lands.

The Brythonic preforms were *Guoidel* < British **Wēdelos* and **Guoidelec* < **Wēdelica*. The borrowing must have taken place after ancient British *w-* had become *gw-*. The earliest datable examples of this change in names borrowed into Irish from Brythonic occur in the Annals of Ulster at 657 (=658), *mors Gureit regis Alo Cluathe* 'the death of Guriat, king of Dumbarton', and at 622 (=623), *expugnatio Rātho Guali* 'the storming of Ráith Guali [Bamburgh]'. A different and earlier treatment is found in the name of the fourth abbot of Iona (Eilean Ì), a Briton named Uirgnou (*Vita Columbae* 3.19), who ruled *c.* 607–*c.* 623; the Irish form of his name is *Fergnae Brit*, thus borrowed without British *w-* > *gw-*, so that its *w-* thus regularly became Old Irish *f-* as in the native vocabulary. *Goídel* and *Goídelg* must thus have been borrowed later than *c.* 600. But it cannot have been much later, since these words appear in early Old Irish sources such as the archaic Leinster dynastic poem *Mōen ōen*, in the lines: *ar loingis | lóchet fiann | flaithi Gōedel | gabsus* 'After a sea voyage, a lightning bolt of war bands seized the sovereignties of the Gaels' (Meyer, *Über die älteste irischen Dichtung* 2.10; O'Brien, *Corpus Genealogiarum Hiberniae* 1.10). In the Old Irish stratum of Auraicept na nÉces ('The Scholars' Primer'), there is an origin legend of the Irish language according to which *Goídelg* was created from the best parts of the 72 languages of the world following the confusion of tongues at Babel, and the first man to speak it was named Goídel 'the Gael'.

The borrowing of the language name and corresponding group name in the 7th century can be understood in the context of an Irish people—relatively recently Christian, literate, especially in their own vernacular, involved in Britain through colonization (Dál Riata; Dyfed), centrally involved in the national churches of the Picts and Northumbria, and engaged in high-level missionary activity (peregrinatio) in Frankia and Italy. They were newly aware of themselves as a linguistically defined nation among many, coming into contact with new words and stories with which to express this awareness.

The popular idea that *Gaelic* is related to the names Gaul and Galatia is incorrect.

The Gaelic Athletic Association

(GAA; Irish Cumann Lúthchleas Gael) is the most important sporting administrative body in Ireland (Éire). It was founded in 1884 in Thurles, Co. Tipperary (Dúrlas Éile, Tiobraid Árann) by the Dublin-based schoolmaster Michael Cusack. Primarily formed as a reaction to the socially exclusive nature of the existing sporting bodies in Ireland, it also opposed the existing drinking and gambling cultures which surrounded athletic sports (see drunkenness), and sought to end the connection of Irish sportsmen with Anglocentric associations and sports. Initially concerned with athletics, it first drafted formal rules for hurling (*iománaíocht*), and then, in 1885, for Gaelic football (*peil Ghaelach*). Gaelic sports, which would eventually assume a special place in the social, cultural and national consciousness of the Irish people, were thus revived. They also came exclusively under GAA control.

From its inception the Association was avowedly nationalist, Catholic, and ruralist in its character and outlook. A struggle for control eventually developed between members of the Irish Republican Brotherhood (IRB), an organization dedicated to the violent overthrow of the British state in Ireland (see further irish republican army), and the Catholic clergy. Huge initial popularity was followed by periods of decline, but from 1901 a lasting revival occurred under IRB tutelage. A series of lapsed rules which excluded the 'un-Irish' from Association membership—notably members of the Crown forces and those involved in

rival 'foreign sports and games'—were quickly re-enacted.

These actions, and others, have often led to the GAA being seen as the epitome of the interaction between sport and politics in the British Isles. Along with the Gaelic League (Conradh na Gaeilge), the GAA was certainly a key element in the base of the cultural nationalism which pervaded Ireland before 1916. However, the GAA must also be recognized as a fairly typical example of the explosion of codified games which was widespread in late 19th-century Britain. Even in its exclusivity, the GAA was arguably typical, though it excluded men on grounds of perceived nationality, rather than class or race.

By 1915, the GAA was established as the leading popular sporting body in Ireland, and Gaelic football was Ireland's leading spectator sport. The sport's success was dependent mainly upon the fast-flowing nature of the game, but its supporters also made much of other attributes. Its uniquely Irish nature and the ideas of masculinity and fair play which the game was meant to promote were also stressed. Hurling, however, never assumed the same levels of popularity accorded to Gaelic football. A more technical game, it lacked appeal for some spectators. The high levels of skill required by players, at even a basic level, also discouraged many potential participants. However, the nature of hurling's image made it eminently suitable to be placed at the forefront of the cultural nationalist agenda of the GAA. While initially athletics, and then Gaelic football, created popular support and financial income for the GAA, it was always hurling which provided an established historical and cultural legitimacy.

Gaelic games emerged not only as the preferred pastime of the rural, Catholic, nationalist majority, but also as a bastion of political dissent. This stance hardened during the First World War, since players of Gaelic games were prominent in opposing conscription (i.e. by the British military) and attempts at taxing Gaelic sports were frustrated. Often perceived as the athletic arm of militant nationalism, GAA members were prominent on both sides during the Irish Civil War (April 1922–May 1923; see irish independence movement). However, partition and the establishment of the Irish Free State on 16 June 1922 led largely to reconciliation. In fact, led by the GAA, Gaelic games offered a new focus for national identity and unity in the southern state. Stressing their supposed ancient origins and their unique nature, Gaelic games provided a renewed, if somewhat insular, patriotism, as well as reinforcing local and county identities. Not least through its involvement in the Tailteann games at Dublin (Baile Átha Cliath) in 1924, 1928 and 1932, the Association became an important element in consolidating the identity of the new state. These 'Irish Olympiads' were created on the model of the games of the *Oenach Tailten* (Fair of Tailtiu) held on Lugnasad at Telltown, Co. Meath (Tailte, An Mhí), from the 6th to 9th centuries ad, and probably much earlier. The Tailteann Games also acted as a fillip to the tourist industry, and generated a favourable image of the new state in international eyes.

All these attributes, as well as popular acclamation, guaranteed Gaelic games a special rôle and status not only within Irish society, but also within the fabric of the state. The relationship eventually became a reciprocal one, with the granting of tax-free status to the GAA, and the effective state sponsorship of teams and facilities.

In Northern Ireland, the GAA provided an all-Ireland continuity for northern nationalists, and a focus which lay wholly outside the influence of the Stormont (i.e. Ulster unionist) government. The Unionist authorities displayed a marked ambivalence towards Gaelic sports, tempered with occasional attempts at suppression. Perceptions of Gaelic games as the exclusive preserve of Catholics and nationalists prevented their wider acceptance by the Protestant and Unionist communities. This, along with the popularity of soccer in the north, ensured that regular success for Ulster Gaelic sports teams was delayed until the 1960s.

Gaelic Society of Glasgow, Transactions of the, was a journal dedicated to aspects of Scottish Gaelic society and culture, ranging from

history and philology to folklore, and written both in English and Scottish Gaelic.

Five volumes of the *Transactions* were published between 1887 and 1958 by Comunn Gailig (*sic*) Ghlascho (Gaelic Society of Glasgow). The contributions, which were originally read to the Society, tended to be of an academic character. Volume 3 was published in 1908 under the separate title *The Old Highlands* and Volume 4 in 1934 under the heading *The Active Gael*.

Gaelic Society of Inverness, Transactions of the, are published by the Gaelic Society of Inverness, established in 1871. The objective of the Society (Comunn Gàidhlig Inbhir-Nis) is the cultivation of the culture and language of the Scottish Highlands, and it appoints its own librarian, bard, and piper. At the Society's annual meetings papers relating to Scottish Gaelic society and culture are read and subsequently published as *Transactions*. The papers are in English or Scottish Gaelic on subjects relevant to the Society's interests.

The **Gaeltacht** (An Ghaeltacht) is the collective name normally ascribed to those districts where the Irish language is spoken as the main vernacular language or is at least in a strong minority position. The word *gaeltacht* did not always refer to a specific geographical area. At the end of the 17th century, when it first appears in written form, it normally meant 'those who spoke Irish' or even 'the Irish heritage' itself. It was only with the Irish language and cultural revival (see LANGUAGE [REVIVAL]) at the end of the 19th and the beginning of the 20th centuries that the term acquired definite geographical connotations. The name *A' Ghàidhealtachd* in Scottish Gaelic is normally used to refer to the Highlands and Islands, i.e. those areas inhabited by the Gaels, as distinct from regions traditionally dominated by speakers of Scots, a close relative of English.

§1. HISTORY OF THE DECLINE OF IRISH

The Gaeltacht is not a single compact area, but rather a collection of scattered districts where Irish has survived. Irish came under attack with the first Anglo-Norman invasion in 1169 but, despite wars, plantations and institutional marginalization, remained in a relatively healthy state until the latter half of the 18th century. As the more Draconian anti-Catholic Penal Laws were allowed to lapse and a Catholic *petit bourgeois* class began to develop, the switch from Irish to English became more accentuated. Nonetheless, it is estimated that on the eve of the Great Famine (1845–52) there were approximately 4,000,000 Irish speakers, many of them monoglots.

The Catholic Emancipation Act of 1829 and the establishment of the National School system two years later contributed to the decline of Irish in that the former opened up possibilities for adherents of the Catholic religion—and this related to the vast majority of the Irish people—to enter professions that had hitherto been barred to them, and the latter in that it offered possibilities for obtaining a basic education to the masses—through the medium of English. The Great Famine accelerated the process of decline. By the end of the 19th century Irish was in free-fall and, had it not been for the establishment of the Gaelic League (Conradh na Gaeilge) in 1893 and the ensuing shift in public attitudes, it is doubtful whether the language would have survived long into the 20th century. Irish continued to be used as a community language only in scattered, remote and underdeveloped areas, mostly on the west and south coasts, known today as the *Gaeltacht*.

§2. STATE SUPPORT IN THE 20TH CENTURY

When the Irish Free State (Saorstát na hÉireann) was established in 1922, the revival of the Irish language became one of the primary objectives of the new state and Irish, alongside English, became an official language. Two main revival strategies were pursued: the inclusion of Irish as an essential subject on the

Location of the current designated Gaeltacht regions in Ireland

curricula of all schools (see EDUCATION) and the preservation and development of the Gaeltacht. Little attention would appear to have been given to status planning. A government-appointed commission, Coimisiún na Gaeltachta, reported in 1926. It showed the language to be in a critical condition in most of the Gaeltacht areas and made no fewer than 82 recommendations concerning education, industry, economy,

public administration, and the resettlement of Gaeltacht families. It designated two categories of Gaeltacht areas: Fíor-Ghaeltacht (fully Irish-speaking) and Breac-Ghaeltacht (partially Irish-speaking).

The Gaeltacht areas were formally recognized for the first time in the Housing (Gaeltacht) Act 1929, and townlands in 14 counties were included in the official Gaeltacht. The Gaeltacht boundaries were revised by means of a number of statutory instruments, and at the beginning of the 21st century Irish-speaking districts are recognized in only seven counties: Donegal (Contae Dhún na nGall), Mayo (Contae Mhaigh Eo), Galway (Contae na Gaillimhe), Kerry (Contae Chiarraí), Cork (Contae Chorcaí), Waterford (Contae Phort Láirge), and Meath (Contae na Mí).

Because of plantations of English and Scottish settlers, mostly in the 17th and 18th centuries, evictions of the original Irish inhabitants and their expulsion to marginal lands in the west of the country, the pattern of land ownership in much of Ireland (Éire) showed, and still shows, a marked unbalance. Many of the farm holdings in Gaeltacht areas were, and are, uneconomically small. This meant that EMIGRATION, usually to the United States or Britain, was one of the major factors militating against the maintenance of the Gaeltacht (see CELTIC LANGUAGES IN NORTH AMERICA; CELTIC LANGUAGES IN AUSTRALIA). Combating this threat proved to be a major challenge for successive governments.

A small number of Gaeltacht families were resettled in the east of the country during the 1930s. Two of these 'Gaeltacht colonies' were later accorded official recognition—Ráth Cairn and Baile Ghib, both in Co. Meath. Irish has survived reasonably well, especially in the former.

A state scheme of annual grants for Irish-speaking Gaeltacht families was set up and support given for other measures to improve living and working conditions in the Gaeltacht. In 1956 a special government department, with responsibility for the Gaeltacht and the Irish language—Roinn na Gaeltachta (Department for the Gaeltacht) was established. This responsibility has since rested with various different government departments; currently, it is within the sphere of An Roinn Gnóthaí Pobail, Tuaithe agus Gaeltachta (Department of Community, Rural and Gaeltacht Affairs). In 1957 the Government established Gaeltarra Éireann, a semi-state industrial development agency for the Gaeltacht. This was replaced in 1979 by Údarás na Gaeltachta (Gaeltacht Authority), some of whose members are elected by direct suffrage of Gaeltacht inhabitants. Údarás na Gaeltachta and its predecessor have achieved considerable success in providing employment opportunities for young Gaeltacht people, especially in the Cois Fharraige area in east Conamara and Gaoth Dobhair in the Donegal Gaeltacht. However, the establishment of industries by foreign investors has proved to be a mixed blessing in that it has tended to strengthen the position of English by introducing a new English-speaking management class.

§3. THE CURRENT SITUATION AND PROSPECTS

The state language-acquisition policy has succeeded in greatly increasing the number of people able to speak Irish. The 1996 Census showed that 1,430,205 persons in the state claimed to be able to speak Irish as opposed to 543,511 in the 1926 Census, the first taken after independence. Reg Hindley, by no means an optimist as far as the Irish language revival is concerned, observes:

> The metamorphosis of Irish from the disparaged and unwritten dialects of an impoverished and remotely located peasantry into the modern literary but second language of a privileged urban élite is indeed a great achievement and one without parallels except for the still more remarkable revival of Hebrew in the unique circumstances of modern Israel. (*Death of the Irish Language*)

The vast majority of these people have acquired Irish at school, and their knowledge and fluency may be limited in many cases. Learners are encouraged to visit the Gaeltacht in order to improve their fluency and pronunciation. This may have led to a rather romanticized perception of the Gaeltacht among learners. As Caoimhín Ó Danachair observes:

> For most of us the Gaeltacht is a place of happy memories, memories of sunlight on sea and mountain, of friendly people and song and laughter, of a different and romantic world. And there is a real danger that these happy memories may colour all too brightly our mental picture of the Gaeltacht, and obscure from our minds the urgent problem of whether the Gaeltacht districts can even be made self-supporting and self-reliant, and in good time be extended to include areas great enough to survive. (*View of the Irish Language* 112–21)

Irish summer colleges for post-primary school students are supported by the state and the students are normally accommodated with Gaeltacht families. This form of cultural/educational tourism is an important economic activity in most Gaeltacht areas.

In 1971 Raidió na Gaeltachta, an all-Irish radio service for the Gaeltacht, was set up. RnaG has studios in all the major Gaeltacht areas and broadcasts 24 hours per day nationally. In 1996 a national Irish-medium television service, TG4, was inaugurated. Although underfunded, it is succeeding in attracting a growing viewing public (see MASS MEDIA). Its main studios are located in the Conamara Gaeltacht.

Although the Gaeltacht literary tradition has primarily been one of oral literature, many Gaeltacht authors have made valuable contributions to modern literature in the Irish language. Indeed, one might credit some of them with developing a new genre of Irish writing—that of semi-autobiographical folk history (For an overview of this genre, see Nic Eoin, *An Litríocht Réigiúnach*; see also GAELTACHT AUTOBIOGRAPHIES; IRISH LITERATURE [6]).

The 1996 Census showed that of the 82,715 inhabitants of officially designated Gaeltacht areas, 61,035 claimed to be able to speak Irish. Declining levels of intergenerational transmission continue to be the main threat to the continued existence of the Gaeltacht. In its report, a recent Gaeltacht Commission made 16 main recommendations, and inclines towards orientating Gaeltacht policy in the direction of a more holistic approach than hitherto—by integrating it more into a national language-planning strategy as well as physical and spatial planning.

Dónall Ó Riagáin

'Gaeltacht autobiographies' is a term which is generally understood to refer to a distinctive corpus of 20th-century autobiographical writing, produced by natives of the IRISH-speaking districts and focusing—for the most part—on a description of communal life in those districts. Implicit in the term is an ideological opposition (GAELTACHT versus *Galltacht*), which was cultivated within the confluence of at least two cultural movements at the end of the 19th century. One of these was the cultural NATIONALISM of the GAELIC revival, which tended to idealize the Gaeltacht and its inhabitants as the repositories of true, uncorrupted Irishness. Another was naturalism, an aesthetic vision which induced artists and writers to look for inspiration in what they felt to be exotic and primitive cultures, for example, J. M. Synge, whose visits to the Aran Islands (OILEÁIN ÁRANN) in 1898–1900 were inspired by Pierre Loti's *Pêcheur d'Islande* [1886] and W. B. YEATS's recommendation that he went to Aran, where he could 'express a life that has never found expression'. A practical consideration which contributed to this confluence was the simple desire of Gaelic Leaguers (CONRADH NA GAEILGE) and foreign linguists to visit the more remote Irish-speaking districts, where the existence of a largely monoglot population would be more conducive to learning and research—hence the particular interest in the island communities of Aran (visited by Heinrich ZIMMER [1880], Fr. Eugene O'Growney [Ó Gramhnaigh, 1885], Eoin MACNEILL [1891], Franz Finck [1894–5] and Holger PEDERSEN [1895–6]) and the Blaskets (visited by Carl Marstrander [1907], Robin Flower [1910], George Thompson [1923], Carl Von Sydow [1924], and Kenneth JACKSON [1932]).

Descriptions of Gaeltacht life had been common fare in Irish-language journals since the 1890s, but the earliest extended piece of autobiography which falls under our definition is Fr. Peadar Ó LAOGHAIRE's *Mo Sgéal Féin* (My own story, 1915), a prosaic account of the author's background and subsequent involvement in the language movement.

It was not until the publication of Tomás Ó CRIOMHTHAIN's *An tOileánach* ('The Islandman', 1929), however, that a paradigmatic and productive form of 'Gaeltacht autobiography' was established. Key to this—and in keeping with the naturalistic aesthetic—was an author 'naïve' in Schiller's sense: that is, one who approached his subject with an instinctual and unidealizing point of view. Tomás Ó Criomhthain (1854–1937), a native

of the Great Blasket (An Blascaod Mór), was the epitome of this. He was an exceptionally good Irish speaker, much sought out by visiting scholars, and this distinction undoubtedly increased his determination to develop his latent literacy in the language. At the urging of Brian Ó Ceallaigh (1889–1936), who had visited the island in 1917 and shown him some writings by Maxim Gorky and Pierre Loti, Ó Criomhthain began to keep a journal containing his day-to-day observations of island life. These materials and, later, the manuscript of his autobiography, were sent to Pádraig Ó Siochfhradha ('An Seabhac') for editing, and published respectively as *Allagar na hInise* (Island crosstalk, 1928) and *An tOileánach* (1929). The latter was immediately recognized as a classic. Ó Criomhthain had a keen eye for detail, a natural subtlety and precision in his use of language, and a strong sense of the dramatic, especially in dialogue. His stated purpose in writing the autobiography was to provide future generations with a record of life on the island. *An tOileánach* was translated by Robin Flower and published as *The Islandman* in 1935. In subsequent years, several other writings by Ó Criomthain were published, most notably *Dinnsheanchas na mBlascaodaí* (Place lore of the Blaskets, 1935) and *Seanachas ón Oileán Tiar* (Lore from the Great Blasket, 1956).

Inspired by the success of Ó Criomhthain's book, and with the encouragement and assistance of the scholar George Thompson, another native of the Great Blasket, Muiris Ó Suilleabháin (1904–50), published an autobiography, *Fiche Bliain ag Fás* ('Twenty Years A-Growing'), in 1933. Ó Suilleabháin had spent his early childhood in the Dingle orphanage, and his book describes his life on the island from the time of his return there at the age of eight until his departure for a life on the mainland at the age of twenty-three. Given that the book was written by a young man—and one who had left the island—it is not surprising that Ó Suilleabháin's perspective is markedly different from that of Ó Criomhthain. The youthful exuberance of the narrative and the fond characterization of his neighbours and relations give the book a remarkable—if, at times, sentimental—charm. A best-selling translation by George Thompson and Moya Llewellyn Davies, entitled *Twenty Years A-Growing*, was published in the same year as the original.

A third seminal autobiography from the Great Blasket is that of Peig Sayers (1873–1958), a woman from the Corca Dhuibhne mainland who married into the island community. Unlike *An tOileánach* and *Fiche Bliain ag Fás*—the products of literate individuals, *Peig* (1936) is the edited transcription of an oral account. The author was renowned for the quality of her Irish and her talent as a traditional storyteller; and it is these talents, along with her woman's perspective on a life of extraordinary hardship, which account for the book's inherent interest and perennial popularity. Peig Sayers's other autobiographical narratives include *Machtnamh Seana-Mhná* (The reflections of an old woman, 1939) and *Beatha Pheig Sayers* (The life of Peig Sayers, 1970). Numerous other memoirs, letters, and autobiographical writings relating to the Great Blasket and the Corca Dhuibhne mainland have been published over the years. Among the more important of these are: Seán Ó Criomhthain's *Lá dár Saol* (A day in our life, 1969), in which the author (Tomás Ó Criomhthain's son) describes the final years of the Blasket community and his family's shift to life on the mainland; *Is Truagh ná Fanann an Óige* (A shame that youth does not last, 1953), by Peig Sayers's son, Mícheál Ó Gaoithín; and Tomás Ó Cinnéide's *Ar Seachrán* (Astray, 1981).

The success of the Blasket autobiographies demonstrated that there was a market for this variety of regional literature, and Gaeltacht autobiographies were subsequently produced by authors/narrators from other regions. Notable among these are Conchubhar Ó Síothcháin's *Seanchas Chléire* (Lore of Cape Clear, 1940), an oral account of the author's life on Clear Island (Co. Cork), and Colm Ó Gaora's *Mise* (Me, 1943), a description of the author's youth in Ros Muc (Co. Galway), his experiences as a travelling teacher for the Gaelic League, and his involvement with the IRA (Irish Republican Army).

The experiences of individuals who have left home are treated in the important sub-genre of Gaeltacht emigrant autobiography. The two most well-known of these are probably *Rotha Mór an tSaoil* (The great wheels of life, 1959), an oral account by a Donegal man, Micí Mac Gabhann (1865–1948), of his work experiences at the turn of the previous century in the Lagan valley, Scotland (Alba), and in the Klondike, and Dónall Mac Amhlaigh's *Dialann Deoraí* (An emigrant's diary, 1960), a memoir of a navvy's life in English cities in the period following the Second World War. A more

recent example is Maidhc Dainín Ó Sé's *A Thig Ná Tit Orm* (O my house, don't fall on me, 1987), in which the Corca Dhuibhne-born author describes his life in London and Chicago during the 1950s and 1960s.

Currently there is no indication that the Irish-language readership has tired of Gaeltacht autobiographies. The genre has proved flexible enough to deal with the ramifications of social, economic and cultural change, and in such writing members of the minority linguistic community stake their claim as engaged participants in the nation's continual reinvention.

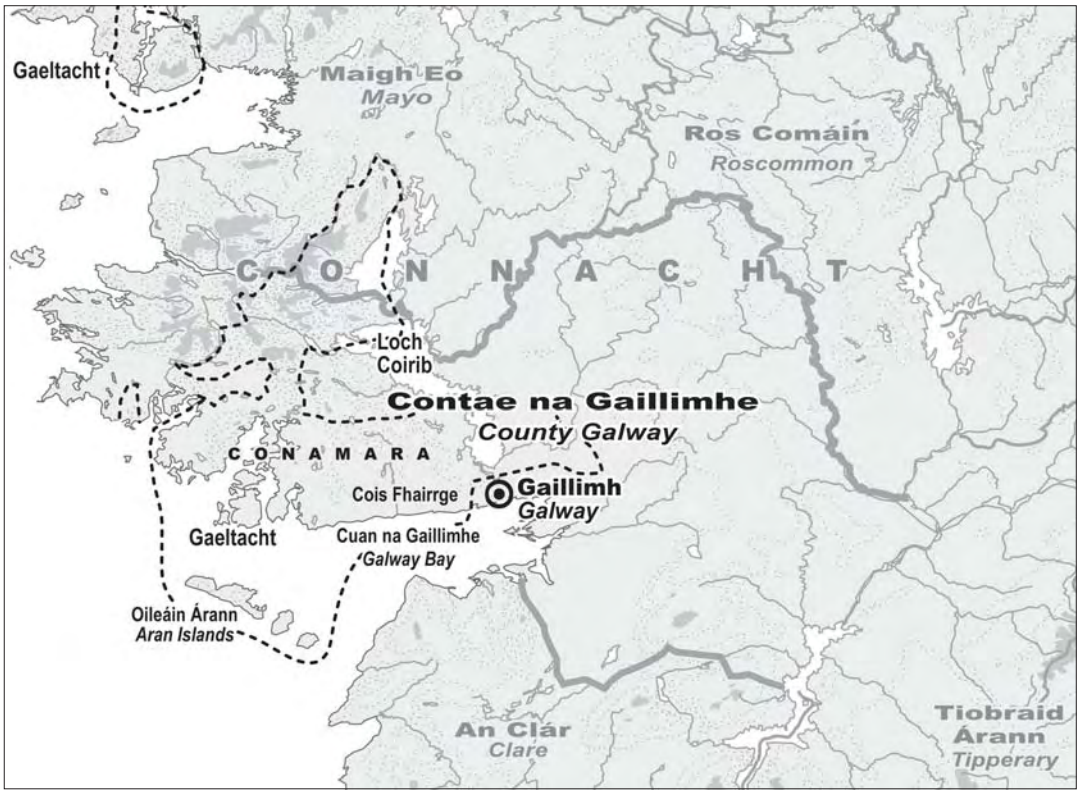
Gaillimh (**Galway**) (pop. 66,163 in 2002) is situated on the mouth of the river Galway (Abhainn na Gaillimhe), an extension of the river Corrib (Abhainn an Choirib) which runs from Loch Coirib into Galway Bay (Cuan na Gaillimhe). It is the county town of County Galway (Contae na Gaillimhe, pop. 209,077 in 2002), and a rapidly developing centre of commerce, industry, and tourism.

Galway is the site of a branch of the National University of Ireland, the diocesan cathedral (built 1965), and several theatres, most notably: An Taibhdhearc (an Irish-language theatre founded in 1928), the Druid (1975), and the Town Hall Theatre (1995). It is also host to several popular festivals such as the Galway Arts Festival (since 1978), the Galway Oyster Festival (1954), and the Galway Races (which predate their 'official' establishment in 1868 by more than a century).

The city originated as a ford and fishing village on the river Corrib, and was later developed as a port for commerce, serving Galway Bay on the south and Loch Coirib on the north. The earliest record of the name, which may mean 'the place of the foreigners', occurs in the Annals of the Four Masters for the year 1149, when Tairdelbach Ua Briain, with a force of Munstermen, invaded Connacht, razed Dún Gaillimhe (the fortress of Galway), and drowned Ó Lochlainn, the king of the Corco Mo Dhruadh (Corca Mruadh), in the Galway [river]. In the 1230s this strategic area was wrested from the O'Connors by Anglo-Normans under the leadership of Richard de Burgo, who then proceeded to erect a castle and fortifications. Galway is first mentioned as a town in the annals for the year 1247. The earliest of the city walls date from the reign of Edward I (1272–1307).

Two important religious establishments were built in Galway by the Anglo-Normans: a Franciscan friary in 1296 and the Cistercian parish church of St Nicholas (now the Protestant church of St Nicholas of Myra) in 1320. The vicarage belonging to the latter was changed into a clerical college in 1484. In later years these establishments played an important rôle in housing Gaelic scholars.

Noted for the loyalty of its 'Old English' élite, Galway was made a royal borough in 1396 and granted a municipal charter in 1484. It was effectively ruled by an oligarchy of merchant families (including the Blakes, Brownes, Frenches, Joyces, Kirwans, Lynches, and Martins) who built vast fortunes through trade with Spain, France, and Jamaica. During this period a Free School, established near Merchants Quay by Mayor Dominick Lynch in 1580, became an important educational and cultural centre for Catholic natives. Among the notable scholars educated there were Dr



Galway City, Co. Galway, and the Conamara Gaeltacht

John Lynch (?1599–?1673), An Dubhaltach Óg Mac Fhirbhisigh, and Ruaidhrí Ó Flaithearta. The school was maintained—despite a short lacuna due to its suppression under James I in 1615—until 1652, when the town was taken by the Cromwellians. This event also broke the combined political power of the merchant families, whom the Cromwellian garrison contemptuously dismissed as the 'fourteen tribes of Galway'.

The resulting economic decline of the town was not reversed until the end of the 18th century, when new agricultural markets arose in response to a rapidly expanding population in the countryside. In this period the focal centre of the town, Eyre Square (an Fhaiche Mhór), was constructed, and today it is bordered by several hotels, including the Great Southern Hotel.

For over a century, its proximity to the Gaeltacht has been considered one of Galway's most important cultural assets. Prior to the First World War, An Cladach (the Claddagh) on the south-western side of the river, was still home to a largely Irish-speaking fishing community. An Mionlach (Menlo), a mere three miles from the town centre, was, until recently, the south-eastern extension of the East-Galway Gaeltacht. At the present time, Irish-speaking communities are still to be found eight miles to the west of the city, in the coastal district of Cois Fhairrge. (Although, it must be said, the recent suburbanization of the locality, with the consequent influx of monolingual English speakers, has greatly altered its linguistic complexion.) Galway also served as an important centre for travel and commerce between the mainland and the Aran Islands (Oileáin Árann). Hence, it is not unusual to hear a little Irish spoken within the town.

Galway is the site of a constituent college of the National University of Ireland (Ollscoil na hÉireann). It originated as 'Queen's College' in 1845, at which time the great Irish scholar and historian James Hardiman (1782–1855) was appointed as librarian. It was designated University College Galway, following its incorporation into the National University in 1908. In 1998 it was officially redesignated as the National University of Ireland, Galway (or NUI, Galway). Because of its close connections with the Gaeltacht, a government act in 1929 determined that the University should have 'a special statutory responsibility with respect to the use of Irish as a working language'. As a result, applicants for teaching appointments are considerably favoured if they are able to fulfil the post using Irish. In addition, the faculties of arts, sciences, and commerce also offer courses through the medium of Irish. The University has a Faculty of Celtic Studies (Damh an Léinn

Cheiltigh), which includes the School of Irish (Scoil na Gaeilge) and the Department of Archaeology and History. The former is situated on campus in Áras na Gaeilge, a recently-built facility which houses faculty offices, meeting rooms and a theatre, and also functions as a cultural centre. In July 1979 the University hosted the Sixth International Congress of Celtic Studies.

Gairm (Scottish Gaelic 'call') was a quarterly journal written entirely in SCOTTISH GAELIC. Established in 1951 by Ruaraidh MacThòmais (Derick THOMSON) and Fionnlagh Domhnallach, the first issue was published in the autumn of 1952 by the publishing house also called Gairm. In later years, MacThòmais became the sole editor and 200 issues of the journal were published up to Autumn 2003. *Gairm* is a testimony to the development of modern Scottish Gaelic literature, and many important authors, such as Somhairle MACGILL-EAIN (Sorley Maclean), Iain MAC A' GHOBHAINN, George Campbell HAY, Dòmhnall MAC AMHLAIDH and MacThòmais himself, published their work in the journal. It also provided an outlet for prose writing in Scottish Gaelic and contributed greatly to the development of the Scottish Gaelic short story.

Galatia

§1. INTRODUCTION

The land in central Anatolia (ancient Asia Minor, present-day Asiatic Turkey including Ankara) east of the Halys river was settled by Gaulish invaders after 230 BC. The three major tribes, the Τολιστοβογιοι Tolistobogii, Τεκτοσαγες Tectosages, and Τροκμοι Trocmi, maintained their native language (GALATIAN) and many Celtic traditions for centuries under Roman rule. Thus, for example, the Galatians gathered together at a ritual place of assembly known as Δρυνεμετον *Drunemeton* 'sacred oak wood'; cf. DRUIDS; NEMETON. The Galatians may be the only Celtic group mentioned in the Bible, but it is possible that St Paul was addressing a primarily non-Celtic community in Asia Minor which had taken its name from its dominant Galatian neighbours.

§2. HISTORICAL BACKGROUND

Classical sources report that the Gauls crossed into what was then Phrygia in 278 BC, at the behest of Nicomedes I (r. *c.* 280–*c.* 250 BC), the Thracian ruler of Bithynia in north-west Anatolia. Phrygia had been conquered by Alexander III Seleucus in 301 BC, but his death *c.* 280 left an opportunity for change. Large numbers of Gauls came into Anatolia at this time. Classical commentators mentioned that they came in families, so that it appears to be a genuine migration rather than a gradual settlement or the integration of Galatian mercenaries into the local population. These incomers seem, at least partly, to represent a regrouping of the Celtic forces which had invaded Greece in 280–78 under BRENNOS OF THE PRAUSI. The main military leaders of the Celts entering Asia Minor were Leonorius (Lonnorios) and Luterius (or Lutarius).

Three principal Galatian tribes are historically attested: in the west, the Tolistobogii, with their capital at Blucium and centered around Pessinus (modern Ballihisar). To the east of the Tolistobogii, the Tectosages were centred around ANCYRA (now Ankara, the capital of Turkey), and the easternmost tribe was the Trocmi, with their capital at Ταυιον Tauion (now Büyüknefes). Another important city in Galatia was the old Phrygian capital, Gordion, renamed *Vindia* by the Galatians. The Celtic root **windo-s* 'white, fair' is found in Old Irish *find* 'white, fair' and Breton *gwenn* 'white'. It also underlies many European place-names, such as *Vindobona* (modern Vienna).

Each of the three tribes was governed by tetrarchs, groups of four. Three of these tetrarchs were military, but one was a 'judge', which has been interpreted as druid (Rankin, *Celts and the Classical World*). Certainly,

Central Asia Minor in Hellenistic times showing Galatian tribes and sites and neighbouring kingdoms

the place of assembly called *Drunemeton* fits with Caesar's account of the Gaulish druids. Over time, power was consolidated to one ruler for each tribe. Livy, in his *Ab Urbe Condita* ('From the Foundation of the City [of Rome]'), describes the occupation of Galatia by the Galatians (38.19):

Subsequently, more definite information was received from Oroanda to the effect that the Tolostobogii had actually occupied Olympus; that the Tectosagi going in a different direction had established themselves on another mountain called Magaba [east of Ankara], and that the Trocmi had left their wives and children in the care of the Tectosagi and gone to the assistance of the

> Tolostobogii. The chiefs of these three tribes were Ortiagon, Comboiomarus, and Gaulotus.

Livy also reports (38.16) that the three tribes had specific territories subject to them:

> . . . the Tolostobogii, the Trocmi and the Tectosagi, and in the end they divided the conquered territory of Asia into three parts, each tribe retaining its own tributary cities. The coast of the Hellespont was given to the Trocmi, the Tolostobogii took Aeolis and Ionia, and the Tectosagi received the inland districts. They levied tribute on the whole of Asia west of the Taurus, but fixed their own settlement on both sides of the Halys [now Kizil Irmak].

The most powerful ruler of the Galatians was Δειοταρος Deiotaros of the Tolistobogii, whose reign began in 63 BC. This Galatian dynastic name is clearly Celtic, deriving from PROTO-CELTIC **Dēwo-tarwos* 'divine bull'. He was given the title 'king' by the Roman Senate and seized power over the other two tribes, though his control over the region was not stable. He died in 40 BC. Galatia became a part of the Roman Empire in 25 BC.

§3. ARCHAEOLOGY

To date, archaeological finds which can be attributed to the Galatians in Asia Minor are extremely rare and come from no more than 19 sites. In most cases, these consist of single finds without stratification (that is, a sequence of successive layers) or further context. As such, for instance, the finds of iron fibulae of Middle LA TÈNE type from Čorum (Koşay, *Türk Arkeoloji Dergisi* 15.1), Kayseri (Polens, *Bonner Jahrbücher* 178.181–216), Sar, Andirin, Maraş and Pazarlik (Müller-Karpe, *Istambuler Mitteilungen* 38.189–99) and Priene (Bittel, *Assimilation et résistance à la culture gréco-romaine dans le monde ancien* 241–9) are isolated, as is the buckled anklet (*Hohlbuckelring*) from Finike (Schaaff, *Germania* 50.94 ff.). La Tène material from controlled archaeological contexts in Asiatic Turkey has been found in the excavations of Galatian tombs at Bolu (Firlati, *American Journal of Archaeology* 69.365–7) and Karalar (Arik, *Türk Tarik Arkeoloji ve Etnografya Dergis*i 2.102–67), and from the excavations at Boğazköy/Hattusa (Bittel, *Assimilation et résistance à la culture gréco-romaine dans le monde ancien* 241–9). The finds from Bolu are the most impressive. In the westernmost of two tumuli in local Anatolian tradition, two gold torcs, two gold bracelets with dog's-head terminals, a bronze horse bit and a gold belt buckle with a depiction of a bearded and moustached man's face were excavated (Firlati, *American Journal of Archaeology* 69.365–7). Similarly, at Karalar, a gold TORC was discovered in one of the three excavated tumuli. (Note in this connection that torcs of characteristic La Tène type are clearly represented on the statues of Galatian warriors produced at PERGAMON.) One of the Karalar tumuli—even though it had been completely robbed—could be identified as the tomb of the Galatian Deiotaros II, son of Deiotaros (Arik, *Türk Tarik Arkeoloji ve Etnografya Dergis*i 2.102–67). Several more finds from stratified contexts are known from the excavations of a graveyard and settlement remains at Boğazköy (ancient Hattusa), including several iron fibulae, a sword, a spearhead, local copies of the COINAGE of Alexander III, and Galatian pottery dating to the 2nd and 1st centuries BC. Pottery of the same type is also known, though only from unstratified finds, from Büyüknefes (Galatian Tauion), while coins similar to those from Boğazköy were part of a find from Gordion (Galatian Vindia) which has been dated to about 205 BC (Bittel, *Assimilation et résistance à la culture gréco-romaine dans le monde ancien* 241–9). Pottery which was found at Hačibektas was compared to Bavarian La Tène pottery (Müller-Karpe, *Istambuler Mitteilungen* 38.189–99); today, however, a direct connection between these pottery traditions is no longer believed to have existed. Generally speaking, all these finds which have been deemed 'typically Galatian' (with the exception of the buckled anklet from Finike, which might have come to its find-spot in any of several possible ways) are most probably not imports from central Europe, but rather local derivatives of La Tène material.

RK, AM

The **Galatian language** was a Celtic language first brought to Asia Minor (modern Asiatic Turkey) following the Celtic invasion of Greece in 279/8 BC and was established in GALATIA in north-central Anatolia by 260 BC. Late classical sources—if they are to be trusted—suggest that it survived at least into the 6th century AD. In a famous passage from his 4th-century Commentary on St Paul's letter to the Galatians (2.3), St JEROME states that Galatian was very similar to the language of the Treveri, a Gaulish tribe which inhabited the Moselle valley along the RHINE, and whose territory Jerome had visited (for the passage, see further CELTIC LANGUAGES §4). The corpus of Galatian is severely limited. There is, in fact, not even one surviving inscription engraved in continuous Galatian. Its attested lexicon of about 120 forms is known entirely from citations by Greek authors and from proper names embedded in Greek inscriptions and texts. According to Freeman (*Galatian Language* 13–15), the confirmed common Galatian words (all of which are inflected as though they were Greek) attested in the corpus are δρούγγος *drungos* 'nose', ταςκός *taskos* (glossed by Greek πάσσαλος 'peg', but probably actually 'badger'; see Katz, *Historische Sprachforschung* III.69 n.19; cf. Koch, *Journal of Celtic Linguistics* 1.101–18), and ὗς *hus* 'kermes oak' (surely borrowed from another language). Further possible Galatian words (according to Freeman, *Galatian Language* 15–18) are ἀδάρκη *adarkē* 'a medicinal agent', βαρδοί *bardī* (nominative plural) 'poets', κάρνυξ *karnyx* and κάρνον (accusative singular) 'trumpet', ἔμβρεκτον *embrekton* 'a beverage' (possibly borrowed from Greek), κόκκος *kokkos* 'a berry of the kermes oak' (most probably borrowed from Greek), cf. Welsh *coch* 'red', λειούσματα *leiusmata* or λεγούσματα *legusmata* 'a type of mail armour', μάρκαν *markan* (accusative singular) 'horse', cf. Welsh *march*, and τριμαρκισίαν *trimarkisian* (accusative singular) 'a three-horse battle group'. To this list can be added αδες *ades* (nominative plural) 'feet', ἰόρκους *iorkus* (accusative plural) and ἴορκες (nom. pl.) 'wild deer', cf. Welsh *iwrch* 'roebuck', and μανιάκαι *maniakai* (nominative plural) 'TORCS' (probably a borrowing from Persian). The famous name of the meeting place of the Galatians, Δρυνέμετον *Drunemeton* (accusative singular), is evidently composed of *dru-*, a compounding form of 'oak', and NEMETON 'sacred place'. Most of the other attested Galatian place-names and tribal names are obviously Celtic and quite similar to those found in the western ancient Celtic world, particularly GAUL: for example, place-names—'Αρτικνίακον *Artikniākon* 'holding of the son of Artos, the Bear', 'Εριγοβρογις *Erigobrogis* (containing *broga* 'country, district'), Οἰνδία *Vindia* 'Gordion' lit. 'white place', *Ecobriga, Petobrogen*; tribal names—Αἰγοσαγες *Aigosages*, Ῥιγοσαγες *Rigosages* (containing the Celtic word for 'king' *rīχs, rīgo-*), *Ambitouti* (a compound of Celtic *ambi-* 'around' and *toutā* 'tribe'; see TUATH), similarly *Toutobodiāci*, Τεκτοσαγες *Tectosages* ('journey-seekers'; a tribe of the same name, regarded by the ancient authors as a branch of the same group, was established in south-west Gaul).

The linguistic analysis of Galatian forms is sometimes impeded by the use of Greek characters (see SCRIPTS). As far as can be seen at the present time, Galatian shares a number of tendencies and developments with BRITISH and Transalpine Celtic (GAULISH) such as *eu* > *ou*, *ou* > *ō*, raising of *e* > *i* before nasal consonants (*m, n, ng*), loss of intervocalic *-u̯-* /*w*/ between vowels (though possibly a Greek feature), simplification of final *-χs* > *-s*, generalization of *-o-* as the stem vowel in compounds (for example, Galatian *Brogo-rīx* < Celtic **Mrogi-rīχs*), and the spread of the *-a-*/*-o-* declensions to what had originally been consonant stem nouns. In other words, the very strongly Gaulish appearance of the fragmentary Galatian corpus seems to bear out St Jerome's comparison.

Galicia, the north-western region of present-day Spain, is sometimes counted as one of the CELTIC COUNTRIES. However, unlike Scotland (ALBA), Brittany

Iron Age and Romano-Celtic Galicia, showing names in -briga (B) and find spots of La Tène gold torcs. The zone of hill-forts known as 'castros' is enclosed in the dashed white line. Post-Roman Britonia is labelled in white.

(Breizh), Wales (Cymru), Ireland (Ériu; Éire), The Isle of Man (Ellan Vannin), or Cornwall (Kernow), Galicia has had no Celtic language spoken by its inhabitants since, most probably, the early Middle Ages. The last Celtic language likely to have been spoken in the area was Brythonic in the region known as Britonia, which had received settlers from Brittany or direct from Britain during the post-Roman migration period (see breton migrations); a bishop with a Brythonic name, Mailoc, was present at Braga in 572.

The modern dialect of Galicia—Galician or Gallego—is a Romance language, related to Portuguese

and Spanish. A systematic investigation of Galician vocabulary of possible Celtic origin or with Celtic substratum effects in its syntax has yet to be carried out (see ROMANCE LANGUAGES). Identification by and of Galicians with the Celtic countries is based partly on the ancient historical linguistic evidence reviewed below, but more heavily as a recognition of their cultural and linguistic differentness from other regions of Spain and Portugal, the region's Atlantic climate, and such distinctive features shared with contemporary cultures of Atlantic Europe as the BAGPIPE.

If, as is the first criterion of this Encyclopedia, one bases the concept of 'Celticity' on language, one can apply the term 'Celtic' to ancient Galicia. The evidence of this Celtic past of Galicia in pre-Roman times is provided by the interpretation of a few names of deities, tribes, persons, and places mentioned in Roman texts or in Latin inscriptions from Galicia.

§1. PRE-ROMAN GALICIA

The pre-Roman civilization is commonly called the Castro Culture. The *castros* were hill-forts and were especially numerous throughout the Galician territory. The Celtic element *~brix, ~briga* meaning 'hill' or 'hill-fort' (Welsh *bre* 'hill') is very well attested in the IBERIAN PENINSULA, and in particular in Galician place-names. Indeed, it was the most common place-name element attested in ancient Gallaecia (or Callaecia): for instance, **Uindobriga* (now *Vendabre*) 'white hill-fort', *Nertobriga, Coeliobriga, Segobriga* (now *Segorbe*) 'hill-fort of the victory' or 'the mighty hill-fort', *Nemetobriga* (now *Mendoya* **Mendobria* < **Nemdobria*). *Nemetobriga* has a Celtic first element *nemeto-*, meaning 'sacred place', 'sanctuary' (see NEMETON). Many, or even most, of the modern Galician place-names ending now in *~obre, ~obe, ~ove, ~abre, ~ebre* and *~ubre* come from *~brix*, an early by-form of *~briga*. Most of these place-names occur in the province of La Coruña, i.e. in the old territory of the Arrotrebae. Their chief city was Brigantium, clearly a Celtic name, related to the tribal name BRIGANTES/*Brigantii*.

§2. ROMAN GALLAECIA

During the Roman occupation, Galicia was called Callaecia or Gallaecia, which included what is now Portugal north of the river Douro (ancient Durius). Gallaecia was divided into three *conventi* (sing. *conventus*). The *conventus* was a Roman administrative entity with a specific territory and capital, where power, justice and tax collection were centralized. The Conventus Lucensis, with Lucus Augusti (now Lugo, Spain) as capital, the Conventus Bracarensis, with Bracara Augusta (now Braga, Portugal) as capital, and the Conventus Asturum, with Asturica Augusta (now Astorga in the province of Leon, Spain) as capital, constituted ancient Gallaecia, whose territory thus was much larger than that of modern Galicia. Modern Galicia covers only Conventus Lucensis, to which it corresponds almost exactly.

Each *conventus* was inhabitated by several peoples. A good number of these bear Celtic names. Indeed, in Conventus Lucensis we find the *Arrotrebae*, a name containing the Common Celtic element *treb-* 'dwelling', still found in Modern Welsh *tref* 'town'. They were also called *Artabri*. Westwards we find another Celtic tribe, the *Brigantii*. Their name means the 'high ones', hence probably the 'overlords'. *Brigantes*, the close variant of this tribal name, occurred also in southern Germany, southern Ireland, and northern Britain. The name is also related to that of the Irish St BRIGIT and the goddess of the same name. Southwards we find the Neri, probably from INDO-EUROPEAN **ner-* 'male', 'hero', 'virile strength', and found in COMMON CELTIC **nertos* 'strong, strength'. The Neri were settled around the Promontorium Nerium (Nerion), otherwise called Promontorium Celticum, which is self-explanatory.

Southwards, the classical geographies locate the Celtici, divided into Celtici Supertamarci and Celtici Praestamarci, settled on the banks of the Tamaris river (now the Tambre). Eastwards were the Lemavi, whose tribal name has been interpreted as based on the Common Celtic name of the 'elm', which is also attested in the name of a Gaulish tribe, the Lemovīces. Northwards, on both sides of the border between the Conventus Lucensis and Asturum, we find the Albiones, from *albos, albios*, meaning 'upper-world, heaven, white'. This name is the same as that used for the ancient inhabitants of Britain (see ALBION).

§3. ANCIENT PERSONAL NAMES

Latin INSCRIPTIONS give a number of names that can be linked to names known from IRISH, GAULISH, or BRYTHONIC. Recurring names include *Camulus*, attested also in GAUL and Britain, and possibly related

to Old Irish *Cumall*, the name of Finn mac Cumaill's father; *Cloutius*, from Common Celtic **klouto-* meaning 'famous' and related to Old Irish *cloth* and Welsh *clod* 'fame'; *Caturonis*, from Common Celtic **katu-* 'battle, war-band'; *Eburus*, related to Old Irish *ibar* 'yew'; *Burrus*, probably meaning 'proud, sturdy, stout'; *Reburrus*, which has the same meaning as the previous name but with the intensive prefix *re-*, hence 'very proud'; *Ambatos*, comparable to Gallo-Latin *Ambactus* 'servant, subordinate' (cf. Welsh *amaeth(wr)* 'farmer').

§4. gods

Attested names include: *Bandua*; *Cosus*, equated with Mars (see interpretatio romana); *Reua*, whose name may be related etymologically to the name of the Irish demigod Cú Roí; *Bormo*, well attested in the Celtic world and in particular in Gaul (see borvo); Lugus, plural *Lugoues*, well attested in the Celtic world and corresponding to the Irish Lug, Gaulish *Lugus*, and the Welsh Lleu.

§5. celtic place-names in post-roman galicia

Several of these names have survived as modern Galician place-names, for example, Celtigos and Bergantiños. A post-Roman layer of place-names commemorates the settlement of *Brittones* 'Britons' in Galicia in the 5th and 6th centuries: for example, *Betanzos* and *Bertoña* in the province of La Coruña, *Bertoña* in the province of Pontevedra, and *Santa Maria de Bretoña* in the province of Lugo.

Gallo-Brittonic is a term used in Celtic studies to mean both Gaulish and British, common to Celtic Gaul and Celtic Britain. As a linguistic term, Gallo-Brittonic is also discussed in the article on Celtic languages. Other aspects of culture and history also show important aspects of commonality. For example, several gods, such as Epona the horse goddess, Mātrona (pl. Matronae) the divine mother (also the ancient name of the river Marne), and Maponos the divine son, were worshipped in both Gaul and Britain, each under the same name in both countries. The latter two and their names have regularly developed as the medieval Welsh mythological figures Modron and Mabon. Therefore, in such instances, it is not even particularly accurate to say that the ancient background of the Welsh wondertale is specifically British rather than Gallo-Brittonic. In the sphere of history, we know that, in Caesar's time, a tribe called the Atrebates held land in both Belgic Gaul and southern Britain (see belgae); both were ruled by a king whose name appears as COMMIOS on coins circulating on both sides of the Channel. Commios had served Caesar as his representative to the Britons' war leader Cassivellaunos; he thus evidently spoke British or a form of Gaulish which was so much like the British spoken by Cassivellaunos that it was no obstacle to communication. In the domain of archaeology, the La Tène style in general embraced most of Gaul and most of Britain; closely similar types of chariots, torcs, swords, shields, mirrors, wheel-made pots, and a whole series of coinage occur in both countries. Thus, to speak of a 'La Tène Gallo-Brittonic cultural phenomenon' can be meaningful.

This Encyclopedia takes a neutral view on the likelihood that Gallo-Brittonic had been a unified proto-language, from which Gaulish and the Brythonic languages (Welsh, Cornish, and Breton) are derived, and itself a descendant of Proto-Celtic. The Gallo-Brittonic phenomenon—comprising common phonetic innovations and shared proper names and other lexical items—could have resulted from known cultural influences exerted by Gaul during the Iron Age and Roman Period instead of, or as well as, a particularly close early relationship. Shared innovations defining Gallo-Brittonic linguistically are the following:

[1] Celtic *kw* (< Indo-European *kw*, *k´w*) > Gallo-Brittonic *p* (see p-celtic);
[2] Celtic *mr*, *ml* > Gallo-Brittonic *br*, *bl* (e.g. Gaulish

broga, Welsh, Breton *bro* 'country' = Old Irish *mruig*);
[3] Celtic *wo, we* can give Gallo-Brittonic *wa* (e.g. Gaulish *uassos*, Welsh *gwas* 'servant' = Old Irish *foss*);
[4] Celtic g^w (< Indo European g^{wh}) > Gallo-Brittonic *w* (e.g. Gallo-Brittonic TASCIOVANOS, with Celtic **g^wonos* 'slayer');
[5] early loss of *~g~* between vowels (as in examples of *Rīo~* < *Rīgo~* 'king');
[6] Celtic *dj* between vowels tended to give Gallo-Brittonic *~j~* (the sound in English *yes*: e.g. Gaulish *Badiocasses/Baiocasses*);
[7] first person singular verbs suffixed in *~mi*;
[8] Celtic **anman* 'name' > Gallo-Brittonic *anwan*: Old Welsh and Old Breton *anu*.

For the theory of Gallo-Brittonic language in Pictland, as opposed to more specifically a branch of Brythonic, see PICTISH language.

Gallo-Roman is a term which may be used to signify the culture and people of GAUL during the Roman period, placing special emphasis, as relevant, on their culturally and linguistically hybrid character and only secondarily, and where this can be proved, on mixed genetic ancestry. Thus, in this sense, TROGUS POMPEIUS may be referred to meaningfully as a Gallo-Roman author, as a writer from Roman Gaul who was aware of both his own Gaulish and Roman background, which formed part of his own acknowledged identity. For late Roman and post-Roman Gaul, the term Gallo-Roman may be used to distinguish the people and institutions whose roots lay in the old Roman province, thus distinguishing them from the incoming Germanic Franks or Goths, or the BRITONS entering ARMORICA, and these peoples' institutions.

Gallo-Roman also has a linguistic meaning. In the later centuries BC when Latin letters were first applied to Celtic names in CISALPINE GAUL and TRANSALPINE GAUL, 'Romano-Celtic' orthographic principles may be said to have come into being, and this system of assimilating Celtic words and names to written Latin may be called 'Gallo-Roman' with specific reference to the Celtic language of Gaul, GAULISH. (This orthographic system crossed the Channel in the 1st century BC to be used for native coin legends, thus forming the first stage of the ROMANO-BRITISH orthographic system, which continued until early Christian times.) Names and individual vocabulary items derived from Gaulish have most often been recorded with Latin case endings for the native ones, for example, CAESAR's *Vercassivellaunus* for Gaulish *Vercassivellaunos* (*De Bello Gallico* 7.76). Such Gallo-Roman assimilations were usual when Gaulish names or words appear in Latin texts. Since Latin, Greek, and Old Celtic languages such as Gaulish had cognate inflectional endings of INDO-EUROPEAN origin, Latin or Greek representations of Celtic forms frequently do not vary from what would be expected in 'purely' Celtic texts employing Roman or Greek letters. In this Encyclopedia, where there is no doubt over the correct Gaulish form of a word or name, and where no point is being made about the spelling which occurs in a specific Latin text, and especially if the form is also attested in a Greek or Gaulish text, it will generally be called Gaulish and written as Gaulish without special discussion.

With the representation of certain distinctive Gaulish sounds, Gallo-Romanisms sometimes penetrated into texts written continuously in Gaulish. For example, the name element 'king' was sometimes written *~riχs* using Greek χ, thus accurately reflecting the Gaulish pronunciation, but *~rix* is more common, thus conforming to Latin spelling habits and the Latin sound system. A Gaulish word BRICTA meaning 'spell of enchantment' is written without recourse to Greek letters as *brictom* (genitive plural) on the tablet from LARZAC, but with more phonetic accuracy as *briχtia* (instrumental) in the inscription from CHAMALIÈRES. Similarly, the distinctive Gaulish sound known as the 'tau Gallicum', probably [ʦ], could be written unambiguously with Greek ϑ(ϑ), but often the Gallo-Roman *s(s)* was substituted for Gaulish forms in both Latin and continuous Gaulish contexts (D. Ellis Evans, *Gaulish Personal Names* 410–20).

The term Gallo-Latin signifies non-classical Latin

usages attested in the Latin of ancient or medieval Gaul, and thus has a meaning distinct from Gallo-Roman.

Games and other traditional pastimes are well documented from all the CELTIC COUNTRIES, both among children and adults. These include contests of strength or agility such as the Scottish caber toss and Breton *gouren* (wrestling), and sporting events such as the Irish HURLING or the Welsh *cnapan*, a game similar to football but played with a coated wooden ball. These ball games were often played by a large number of people over an area encompassing several miles, and were often CALENDAR customs as well, played annually as a contest between the young men of neighbouring parishes.

Other sports were played on a smaller scale, for example, in Brittany (BREIZH) *kilhoù* (skittles or ninepins, a kind of lawn bowling; in *kilhoù kozh*, the pins are of three different heights) or CURLING in Scotland (ALBA). The board game of FIDCHELL (Irish) or GWYDDBWYLL (Welsh) is of great antiquity and high status, and seems to have been similar to chess. *Macgnímrada Con Culainn* ('The Boyhood Deeds of CÚ CHULAINN') demonstrate the hero's prowess through his ability at games, including *cammán* (hurley) and feats with a *bunsach* (small javelin or dart) and a *líathróit* (ball).

The nursery and playground games of younger children are very similar to those played in Anglophone regions and beyond, though there is no reason to assume that they are borrowings. Many have native names, for example, 'leap-frog', sometimes known in WELSH as *chwarae mochyn coed* 'playing badger'; compare the enigmatic expression *guare broch yg got*, Modern Welsh *chwarae broch yng nghod* 'playing badger-in-the-bag', used in the MABINOGI and by DAFYDD AP GWILYM, which seems to have a more sinister meaning (Ifor Williams, *Pedeir Keinc y Mabinogi* 136–7). Leap-frog is also known in Welsh in some parts of Wales (CYMRU) as *ffwtid* 'foot-it'.

Games were also played in the presence of the dead to pass the time at wakes (Ó Súilleabháin, *Irish Wake Amusements*).

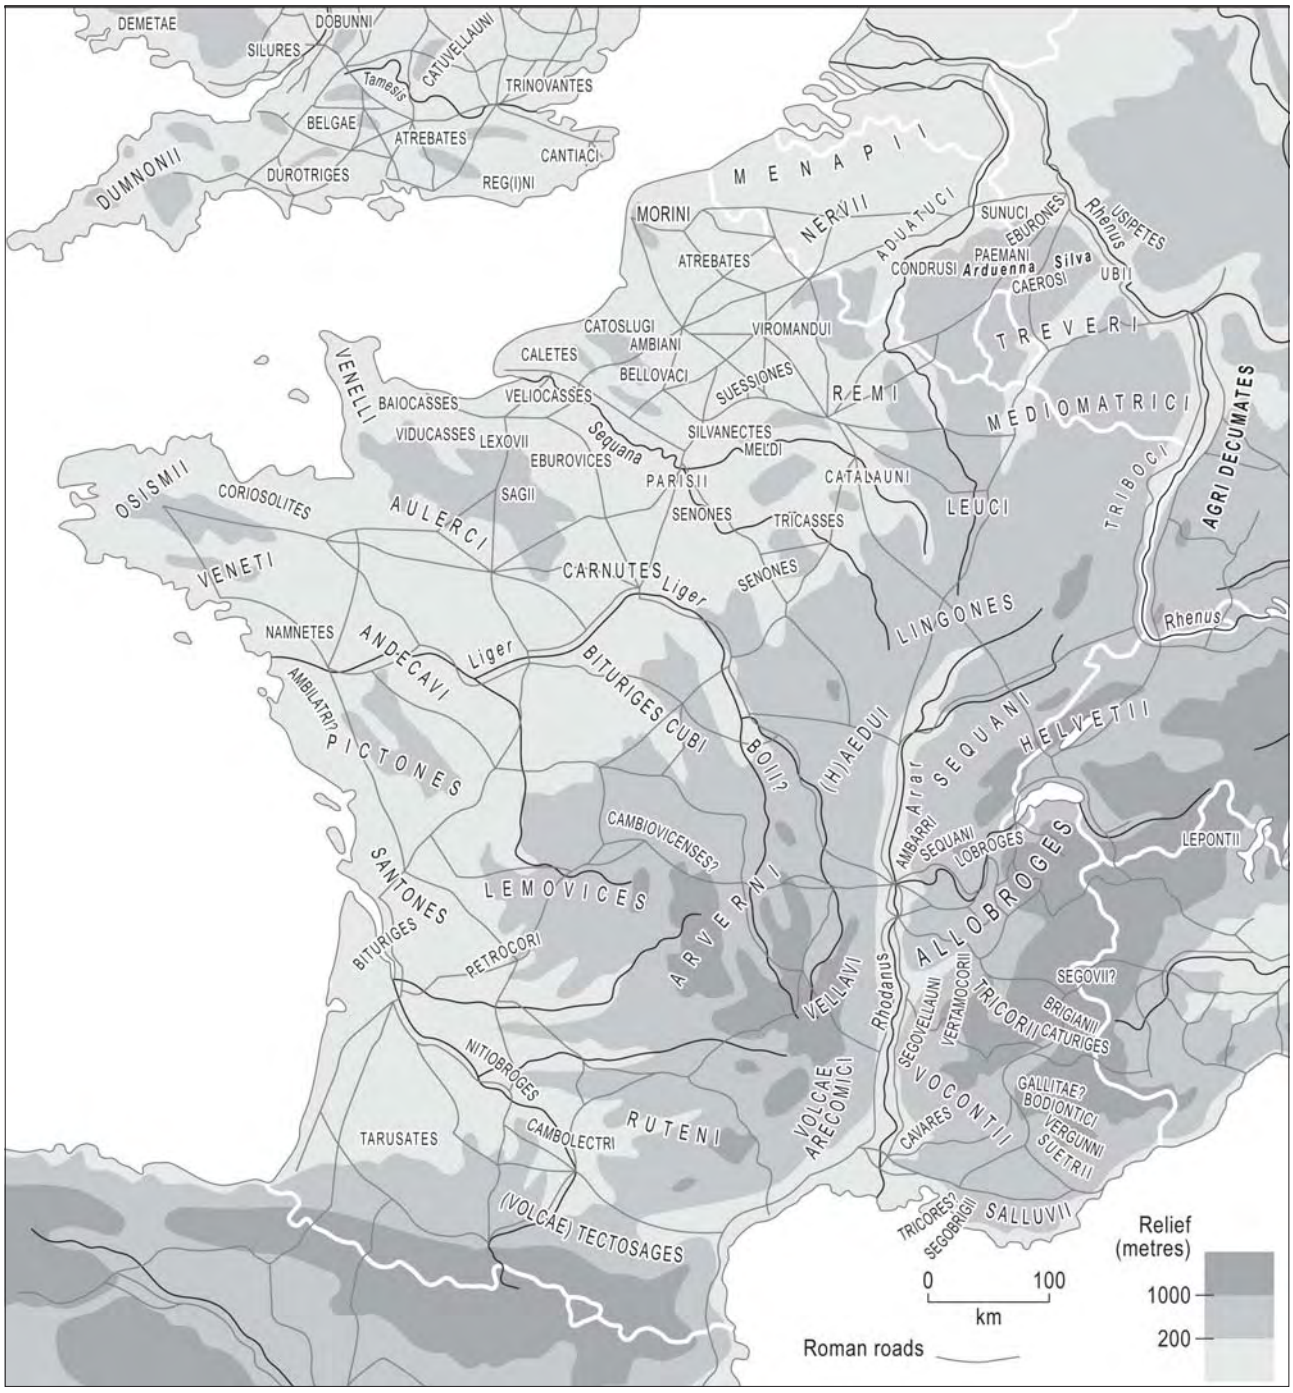
Gaul generally refers in modern usage to a region of ancient Europe bounded by the RHINE on the east, the Alps on the south-east, the Mediterranean on the south, the Pyrenees on the south-west, the Atlantic on the west, and the English Channel on the north-west. Adjacent regions of west-central Europe and the western ALPINE region are sometimes also regarded as parts of Gaul. Thus, 'Gaul' without further qualification usually does not include the Celtic-speaking regions of northern ITALY, and is thus synonymous with the more precise term *Gallia Transalpina* 'TRANSALPINE GAUL, Gaul beyond the Alps' (from the Roman point of view).

When referring to ancient Celts in northern Italy, the term CISALPINE GAUL, *Gallia Cisalpina* (Gaul 'this side' of the Alps) is usual. Although the evidence of LEPONTIC inscriptions suggests that CONTINENTAL CELTIC was already established in northern Italy by the 6th century BC or earlier, according to Roman historians such as LIVY the region was settled by Celts coming from Transalpine Gaul, beginning in the 5th century BC. The core of Cisalpine Gaul in the early historical period was the Po valley. This area was used as a base for raids further south, including the sack of ROME *c.* 390 BC, until the Gaulish defeat by the Romans at the battle of Telamon in Etruria in 225 BC.

CAESAR identified the inhabitants of Transalpine or *Comata* ('long-haired') Gaul north of the Roman Mediterranean province—*Gallia Narbonensis*, running along the Mediterranean from the Alps to the Pyrenees, annexed by Rome in the later 2nd century BC—as subdivided into BELGAE, Aquitani, and Celtae or Galli (*De Bello Gallico* 1.1). Caesar subdued the Celts of this northern region in a series of campaigns from 58–51 BC.

In the pre-Roman IRON AGE and Roman period—



Gaul in the later pre-Roman and Roman periods

i.e. mid-1st millennium BC to 5th century AD—this region, called *Gallia* in Latin, was inhabited to a large extent by speakers of CELTIC LANGUAGES, with increasing penetration by Latin and Germanic later in this period. By the later centuries BC, we find the Greek, and following them Roman, writers applying the name Κελτοί *Keltoi* or *Celtae*, namely 'Celts', to people in Gaul and parts of Central Europe and Spain (see EPHORUS; HECATAEUS; HERODOTUS). Many of the same groups on the Continent were also labelled *Gallī* or Γαλάται *Galatae*, that is, 'Gauls' and/or 'Galatians'. Latin *Gallia* means 'land of the Gallī'. The derivation of *Keltī* is unclear, but *Gallī* and *Galatae* most probably go with Old Irish *gal* 'boldness, ferocity', Welsh *gâl*

'enemy', probably related also to Welsh *gallu* 'to be able, power' (see GPC s.v. *gâl*). Sims-Williams has discussed the possibility that *Keltī*, *Gallī*, and *Galatae* are variants of the same name transmitted through different channels (CMCS 36.21–9).

Although thus a Celtic name, the notion of Gaul has mostly come down to us through Greek and Roman accounts. It is thus doubtful to what extent the boundaries of *Gallia* as we find them in classical sources, or the cultural and linguistic unity implied for it, had any basis in what the Celts themselves had originally meant by the term. In Breton, *Bro C'hall* < notional British **Brogā Gallon* 'country of Gauls' means France, and in Medieval and Modern Irish *gall* is used for the Vikings, and Normans, and English. But it is doubtful whether any of these meanings simply continue the original range of who did and did not call themselves *Gallī* in the pre-Roman Iron Age; rather, the meaning has been affected by the political fact of the Roman provinces of *Galliae* in late antiquity. As to 'Celts', whatever the range of *Keltī* had been in Hallstatt or La Tène times, *Celtica* was, in Roman times, officially an administrative region in what is now central France and this political fact is likely to have obscured, and possibly narrowed, the pre-Roman range of the name. The political end of the Roman provinces of Gaul (*Galliae*) came gradually in the 5th century with the foundation of Germanic kingdoms west of the Rhine and the establishment of Breton rule in Armorica. The victory of Clovis the Frank in 486 marks the end of Gallo-Roman power in Gaul, and we may speak of 'Frankish' or 'Merovingian Gaul' afterwards. It is important to bear in mind, however, that while such historical landmarks have a bearing on the cultural and linguistic history of western Europe, the transitions from a Celtic to a Celtic and Latin, to a Celtic and Romance and Germanic western Europe did not take place abruptly.

Philip Freeman, JTK

Gaulish (Latin *lingua Gallica*) is the term given to the ancient Celtic language or languages spoken over a core area which included most of present-day France, Belgium, and Germany west of the Rhine. Also, somewhat more loosely, Gaulish often covers the linguistic remains of the western Alpine region (roughly modern Switzerland) and northern Italy, where it is usually more specifically called Cisalpine Gaulish or Cisalpine Celtic (the latter term implies that Lepontic and Cisalpine Gaulish are to be viewed as earlier and later stages of the same language). By either the narrower or broader definition, Gaulish was the most extensive and best attested of the ancient Celtic languages. The main linguistic features of Gaulish, its dialect position, and the surviving evidence for the language are treated in the articles on Celtic languages and Continental Celtic. The alphabets used to write the Gaulish language are described in the article on scripts. Individual important Transalpine Gaulish texts are discussed in the articles on Alesia, Chamalières [2], the Coligny calendar, and Larzac. There are articles on the Cisalpine inscriptions from Todi and Vercelli; see also inscriptions [1]. A few further significant Gaulish texts are noted in the balance of the present article.

Châteaubleau (Seine-et-Marne), not far from Paris, was the find-spot in 1997 of a Gallo-Roman ceramic tile, probably of the 3rd century, with an apparently complete inscription in 11 lines in Roman cursive. Interesting forms with cognates in the Insular Celtic languages are numerous (see articles by Lambert and Schrijver in ÉC 34): for example, *uiroIono* in line 8 is probably precisely equivalent to Middle Welsh *gwiriawn* 'right, just' (cf. Old Irish *fírián*). One interesting feature is that old final consonants are generally lost in the language of Châteaubleau and, just as in the medieval and modern Celtic languages, we seem in consequence to have mutations of following initial consonants, which had assimilated to the old lost finals: for example, line 2 *a·peni* < **ak benin* 'and a woman'.

La Graufesenque (Aveyron) is a site in south-central France where Gallo-Roman pottery was mass-produced in the 1st and 2nd centuries AD. Graffiti in Roman cursive on shards and whole vessels include records in Gaulish kept by the potters. Together with this specialist vocabulary, we find the ordinal numbers from

'first' to 'tenth': *cintu(x)* 'first' (cf. Welsh *cyntaf*), *alos allos* 'second' (cf. Old Irish *aile*), *tr[itios]* 'third' (cf. Old Welsh *tritid*), *petuar* 'four[th]' (OW *petguarid*), *pinpetos* 'fifth' (OW *pimphet*), *suexos* 'sixth', *seχtametos* 'seventh' (OIr. *sechtmad*), *oχtumetos* 'eighth' (OIr. *ochtmad*), *na(u)met[os]* 'ninth' (OIr. *nómad*), *decametos* 'tenth' (Old Breton *decmet*).

. . . *dede* (. . .) *bratu dekantem/n*, written in Greek script . . . ΔΕΔΕ (. . .) ΒΡΑΤΟΥ ΔΕΚΑΝΤΕΜ/Ν '(donor's name) gave to (name of god[s]) a tithe in gratitude' occurs in versions as dedicatory formula on seven inscriptions on stone in the hinterland of the Greek colony of Massalia in southern Gaul: e.g. from Nîmes, ΚΑΡΤΑΡΟΣ ΙΛΛΑΝΟΥΙΑΚΟΣ ΔΕΔΕ ΜΑΤΡΕΒΟ ΝΑΜΑΥΣΙΚΑΒΟ ΔΕ[ΚΑΝΤΕΜ] *Kartaros Illanuiakos dede Matrebo Namausibo dekantem* 'K. I. gave the mother (goddesses) of Nîmes a tithe' (see Szemerényi, KZ 88.246–86).

Banassac (*Lozère*) was the find-spot of a ceramic cup with the Roman cursive inscription: *neddamon delgu linda* 'I hold the drinks of the nearest ones'; cf. OIr. *nessam*, Welsh *nesaf* 'nearest'; Middle Welsh *dalyaf* 'I hold'; OIr. *lind* 'beverage'. This was presumably a shared vessel for social drinking (see DRUNKENNESS; FEAST; WINE).

Spindle whorls, small heavy spherical or cylindrical objects used for spinning wool, have been found inscribed with brief, lively messages addressed to women: e.g. from the region of Autun, again relating to social drinking, **NATA VIMPI / CVRMI DA** 'lovely girl, give [me] beer'; cf. Welsh *gwymp* 'lovely', *cwrw* 'beer'.

Gebrinius or Mercurius Gebrinius is a deity attested by ten INSCRIPTIONS only and a 2nd-century shrine, all of which are located in Bonn, Germany. The interpretation of the epithet is difficult. One is tempted to think of a horned god, cf. Old Irish *gabor*, Welsh *gafr* 'goat' (cf. also names such as *Gabrus*, *Gabrinus*, &c.). The god was worshipped by the Ubii of eastern Gaul (see BELGAE). The word *Gebrinius* could thus be a dialect form used near the linguistic border with the Germanic languages. However, no convincing parallels have yet been found to support this theory. The god is often depicted as an animal whose head resembles a lion, while the remainder of the body is reminiscent of rather a fat sheep.

Geis (pl. *gessi*) is an Old and Middle Irish word for an important cultural concept which occurs frequently in early Irish literature. It may be translated approximately as 'taboo' or 'ritual injunction'. Taboos are central to early Irish storytelling as a means of motivating apparently irrational, heroic, or foolish action, destructive to the protagonist. Understanding taboos provides an excellent stepping-board to understanding early Irish folk religiosity in general (Borsje, *From Chaos to Enemy* 78–88). In Irish literary sources, taboos are referred to by several terms, including *airmit*, *airgart*, *búaid*, and *geis*. The last is the most frequently used and has become the standard scholarly term denoting taboos in early Ireland (Ériu).

§1. ETYMOLOGY

The most widely accepted derivation takes *geis* as a verbal noun of *guidid* 'prays, requests', hence suggesting that taboos arose from formal requests (Thurneysen, *Die irische Helden- und Königsage bis zum siebzehnten Jahrhundert* 80). This derivation would also account for Welsh *gwŷs* 'summons' on the basis of the same Common Celtic formation meaning 'verbal injunction'. More recently, however, Hamp has suggested derivation from Indo-European **ghed-* 'seize, take' with reference to how taboos shape the fate of those who have been placed under them (*Ériu* 32.162).

§2. FUNCTION OF THE GEIS

As represented in the narratives, legal and political authorities were not responsible for supervising how taboos were followed in early Irish society. Rather, taboos were thought to be enforced by culturally postulated powers thought to be responsible for the fates of individuals: gods, the HEROIC ETHOS, unspecified magical or cosmological powers, and/or the even less definable constraints of 'tradition'.

§3. ORIGINS

One possibility is that the concept of taboo was taken over by early Christian Irish writers from the Bible, where similar requests are well known and relatively common. However, this does not explain the dearth of similar responses among the non-Celtic European counterparts of the early Irish authors. Therefore, derivation from a native Irish pre-Christian cultural institution is more likely, though the evidence for such an institution is limited to the stories themselves and some Welsh comparanda. Something similar to the Irish *geis*, though using a different vocabulary, appears as the swearing of destiny (*tyngu tynged*) in the early Welsh tales MATH FAB MATHONWY and CULHWCH AC OLWEN. One could argue on this basis for either a Common Celtic institution or the borrowing of a literary device—most probably from Ireland to Wales (CYMRU)—within the medieval period.

§4. TABOOS IN CONTEXT

Whatever their precise origins on the level of early Irish and Celtic oral culture, taboos became literary devices for motivating action; they were thus increasingly independent of any original religious institution behind them. Van Hamel termed this type of literary taboo as *Märchen-gessi* (based on the German word *Märchen* meaning a fairy tale or a story, see Hamel, *English Studies* 1.6.27–32). Taboos are among the most common themes in early Irish literature.

Gessi were usually received at birth or when entering a new rôle in society. They were used to define the essence of human beings and social rôles. Thus, violating a taboo amounted to a violation of the essence of one's own nature, or one's social self. For example, in TOGAIL BRUIDNE DA DERGA ('The Destruction of Da Derga's Hostel'), a story dealing with the fate and kingship of the mythical ruler Conaire Mór, Conaire receives his taboos from a supernatural birdman. These include, among others, a taboo against travel out of Tara (TEAMHAIR) every ninth night, a taboo against permitting three red riders to enter the house of the red one before him, a taboo against restraining the quarrel of two of his servants, and a taboo against spending the night in a house from which firelight is visible (Knott, *Togail Bruidne Da Derga* §16). The story of Conaire Mór is basically a story of how to be a perfect ruler. Conaire fails in this task, and this failure is described through his failure to keep his taboos. The breaking of *gessi* is thus a standard device for anticipating the imminent downfall of the mortal hero or king. Thus, early Irish authors used taboos to define the limits and possibilities of human beings as members of society.

genealogies [1] Irish

The Irish genealogies, which detail the descent of the principal dynasties and families of GAELIC, and later Anglo-Norman, Ireland (ÉRIU), are an invaluable source for the history of early, medieval and—to a lesser extent—early modern Ireland (ÉIRE).

§1. THE CORPUS

The medieval Irish genealogical corpus is the largest of its kind for any country in Europe. The Welsh materials, though not as voluminous at so early a period, show numerous formal similarities to the Irish, and the two subjects may be used fruitfully to illuminate one another in the context of comparative CELTIC STUDIES. The recensions of Irish genealogies preserved in two great 12th-century manuscripts, the volume recently identified as the Book of Glendalough (*Lebor Glinne Dá Loch*, part of Bodleian MS RAWLINSON

B 502) and the Book of Leinster (Lebor Laignech), contain the names of some 12,000 persons (largely male), of whom a large proportion were historical figures—many with aristocratic connections—who lived at various times between the 6th and 12th centuries. Most of the remaining names purport to refer to the prehistoric period (i.e. the pre-Christian period) or are those of figures from Irish legendary history and mythology. The individuals whose names are thus preserved share over 3300 separate personal names and belong to one or other of some thousands of tribes, dynasties, or family groups. By the early 10th century some had already begun to bear surnames, the naming system in use in Ireland and among most of its neighbours today, so that an individual can be more concisely identified without the essential recourse to a father's name, lineage, tribal group, home district, epithet, &c. The numbers just cited can be doubled, if not trebled, if we also take into account the several extant genealogical collections compiled in various parts of Ireland between the 14th and 17th centuries.

§2. contents

The genealogies purport to trace the great majority of Irish people back to the family of one Míl Espáine (an Irish rendering of Latin *Miles Hispaniae* 'soldier of Spain'), with most of the dominant dynasties—outside Munster (Mumu) and east Ulster (Ulaid)—supposedly deriving from one of his sons, Éremón mac Míled. In addition, various subject peoples are traced to certain pre-Gaelic inhabitants of the island (that is, pre-Milesian within the pseudo-historical genealogical system, not necessarily to be taken to mean non-Irish speaking), most notably the Fir Bolg. The genealogical scheme as a whole fits into, and is made to corroborate, a series of origin legends which reach their fullest realization by the later 11th century in Lebar Gabála Érenn ('The Book of Invasions'). All are, in turn, tied into, and even modelled on, the genealogical scheme which underlies the Old Testament—Míl's descent is traced via Japheth son of Noah back to Adam, an idea which has been shown to owe its origins to a borrowing by 7th-century Irish literati from the works of Isidore of Seville.

Genealogical texts, in the strict sense, are principally of two types: (1) single-line pedigrees which trace an individual's ancestry back through paternal male forebears (father, paternal grandfather, &c.), theoretically to Adam; (2) *croeba coibnesa* ('branches of relationship' or *croebscaíled* 'ramification'), which detail the side-branches of a family down through the generations and which may enable one to construct a detailed genealogical table for an entire sept or extended family. Of course, purportedly genealogical texts may frequently contain various other incidental materials, both prose and poetry, including origin legends, portions of family history, or other items of less immediate and doubtful relevance.

§3. date

The earliest extant genealogical texts are a series of archaic poems in Irish relating to the genealogies of the kings of Laigin, some of which have had dates as early as the 5th century ascribed to them by modern scholars, but such extreme antiquity is now generally deemed unlikely, and the earliest of these poems is now more usually assigned to the 7th century. There are certainly some genealogical texts whose roots can with confidence be traced to the early 7th century. Other early Irish texts, such as the hagiographer Tírechán's late 7th-century account of St Patrick, also include some brief scraps of genealogical lore (see also hagiography). The medieval Irish genealogical corpus, in its current form, is thought to represent a revision made, probably in Armagh (Ard Mhacha), about the year 1100 of a text found in a lost Munster manuscript known as the Psalter of Cashel (Saltair Chaisil)—this latter is held to date from about a century earlier (*c.* ad 1000).

§4. written origins

While sometimes quite lengthy pedigrees may well have been committed to memory by members of the learned classes, the early genealogical texts betray their literate (i.e. non-oral) origins by the extensive use of Latin. Although the proportion of material in Irish rapidly increases, so that the 12th-century recensions are almost wholly in Irish, such formulae as *a quo, ut supra, ut dixit, ut alii dicunt, qui fuit,* &c. continue to be employed even in 17th-century versions of texts otherwise written in Irish. (In English and Anglo-Irish documents and compilations from the 16th and 17th centuries—such as the extensive collections by Sir George Carew—we also find some interesting Irish genealogical matter penned in English, while from the

early 18th century there is Roger O'Ferrall's celebrated, and as yet unpublished, collection of genealogies in English entitled *Linea Antiqua*.)

§5. PURPOSE

Genealogies were used from an early period in Ireland to support claims to power and territory, and therefore the forging of pedigrees to accord with changing political relationships and circumstances became something of a minor industry, akin to the forging of charters in other countries. Because of this, one cannot say that because a pedigree dates from a particular period it is to be deemed either reliable or unreliable; instead, it has first to be subjected to a range of critical tests. Whether early or late, it may be a wholly accurate record of a particular line of descent, it may be entirely fabricated, or—as often happens—it may lie somewhere between those two points. It should be noted, however, that a considerable amount of the material which can be independently verified is remarkably accurate.

§6. WOMEN IN THE GENEALOGIES

The Irish genealogies are almost entirely patrilineal and male dominated; women generally feature only incidentally. Compared to the situation in the secular genealogies, women fare rather better in the substantial body of early Irish saints' genealogies. And then there is the 12th-century BANSHENCHAS (lore of women), which traces the descents and marriage alliances of well-known women from Irish mythology and, following the coming of CHRISTIANITY, of women belonging to the royal dynasties of Meath (MIDE) and Laigin.

§7. LATER COLLECTIONS

The disruption caused to the system of native learning by the 12th-century Church reform, followed by the Anglo-Norman invasion of the late 1160s, caused a break in the preservation of genealogical material. The next genealogical manuscripts date from the mid-14th century onwards: the Ó Cianáin manuscript (Dublin, National Library of Ireland G 2–3) from the 1340s; the Uí Mhaine manuscripts (Dublin, Trinity College 1298) and the Book of Uí MAINE, as well as The Book of Ballymote (LEABHAR BHAILE AN MHÓTA), from the second half of the century; the Book of Lecan (LEABHAR MÓR LEACÁIN) from early in the 15th century; LAUD 610 and the *Leabhar Donn* from slightly later in that century, and various other collections down to the greatest of all, Dubhaltach MAC FHIRBHISIGH's Book of Genealogies compiled, mainly in Galway (GAILLIMH), in the middle of the 17th century. In the 18th century, and even the early 19th century, new copies of particular genealogical collections were occasionally commissioned—although very often the interest of the patron was purely antiquarian.

§8. INNOVATIONS

From the early 16th century onwards, a new development was the recording in Gaelic manuscripts of the pedigrees of many of the principal Anglo-Irish families—reflecting in many instances the degree of Gaelicization already undergone by such families. In some cases the matter is taken a step further with certain Norman families (e.g. the Plunkets, Powers, Bennetts, Dillons, et al.) being assigned a pseudo-Gaelic ancestry.

§9. SUMMARY

The genealogies represent a most important—and hitherto under-utilized—source for the student of the earlier phases of Ireland's history. It is one which can most effectively be used in tandem with the ANNALS; material in one of these sources can often be used to cross-check, or flesh out, material in the other. While the riches of the pre-Norman genealogical recensions have not yet been exhausted, the later collections—from the 14th century onwards—are still largely untapped. An index of this neglect is that only a small proportion of them have yet found their way into print, and still fewer have been subjected even to the most cursory of scholarly examinations.

genealogies [2] Welsh

Giraldus Cambrensis, writing at the end of the 12th century, stated that the Welsh bards had the genealogies of the princes, written in the Welsh language, in their ancient and authentic books and also retained them in memory from Rhodri Mawr (†878) to the legendary prehistoric patriarch Beli Mawr, and thence to Ascanius and Æneas (see trojan legends), and on even to Adam (*Descriptio Kambriae* 1.3). Even the ordinary people could recite their ancestry for up to six or seven generations (1.17).

§1. the oldest genealogies

The oldest pedigrees record the descents of the rulers of Wales (Cymru) and also of the British rulers of what is now southern Scotland (see alba; elfed; gododdin; rheged) and northern England (*Gwŷr y Gogledd* 'the men of the North'; see hen ogledd; coel hen). The pedigrees were handed down orally for centuries before being written down, and even the oldest surviving manuscript pedigrees are not originals, but later copies. The oldest original pedigree which has survived, though much of it is now lost or illegible, is the inscription carved on Eliseg's Pillar, near Valle Crucis Abbey in Denbighshire (sir Ddinbych; see cistercian abbeys in wales), which was established by Cyngen (Old Welsh Concenn), king of Powys, in the first half of the 9th century. This traces Cyngen's pedigree back through his great-grandfather Eliseg to Gwrtheyrn (Vortigern, Old Welsh Guarthigirn).

§2. the earliest surviving manuscripts

The earliest surviving manuscripts containing collections of pedigrees have been edited, many of them by Egerton Phillimore and P. C. Bartrum, and collectively by the latter, with full references to earlier editions (*Early Welsh Genealogical Tracts*, EWGT). An important collection of these pedigrees is contained in the British Library Harley MS 3859, written *c.* 1100 but probably compiled in the mid-10th century in the reign of Owain ap Hywel Dda (†988). It begins with Owain's pedigrees on his father's and his mother's side, and also includes those of the rulers of lesser dynasties in Wales and Brythonic north Britain. Other important collections are found at Oxford in Jesus College MS 20, dating from the late 14th century, with an emphasis on south Wales and including the pedigrees of Llywelyn ab Iorwerth (†1240) and Rhys Gryg (†1234), though most of the pedigrees date from very much earlier; and *Bonedd Gwŷr y Gogledd* (Descent of the men of the North) in the National Library of Wales Peniarth MS 45 (late 13th century), which gives the pedigrees of twenty princes of 6th-century northern Britain (see also llyfrgell genedlaethol cymru; hengwrt). The contents of a lost manuscript from the Hengwrt collection called *Hanesyn Hen* (Old history) are now only known from copies. The genealogies of *Hanesyn Hen* were copied with material from another lost manuscript into Cardiff MS 25 by John Jones of Gellilyfdy while he was in prison for debt in 1640. The original manuscripts probably dated from the first half of the 15th century and contained various groups of pedigrees, including pedigrees of saints, of ancient heroes, of the kings and princes of Wales, starting with Llywelyn ab Iorwerth, a list of the kings of the Britons, and also *Hen Lwythau Gwynedd a'r Mars* (Ancient tribes of Gwynedd and the March), a collection of pedigrees of the chief families of Gwynedd and the northern part of the border, the earliest pedigrees of non-ruling tribes, probably originally compiled in the 13th century.

§3. the function of genealogies

Under Welsh law a free man's place in society depended on his pedigree, and a knowledge of this was a legal necessity (see law texts [2]). His rights and responsibilities were determined by his kinship, which came into play in cases of compensation, for example of murder, the settlement of disputes, and compurgation of witnesses. Land was not inherited by the eldest son, but by all sons equally, and, failing sons, by nephews or cousins in the male line. This led after several generations to subdivision into ever smaller holdings of land, each held by men conscious of their status as free men, but whose economic situation had progressively declined.

§4. genealogies after 1282

Following the conquest of Wales in 1282 (see llywelyn ap gruffudd; rhuddlan), interest in pedigrees was maintained, and the pedigrees of the princes and lesser dynasties continued to be recorded. Some of the leading families claimed descent from the princely families in the male line, and others through a

maternal line. Welsh and British history, and a knowledge of the pedigrees of the princes and principal families, formed part of the repertoire of the bards (see BARD; BARDIC ORDER), who continued to praise the noble descent of their patrons in eulogy or elegy, sometimes following their patron's descent through many generations.

§5. GENEALOGIES AFTER 1450

From the mid-15th century some bards who were particularly interested in pedigrees and heraldry collected pedigrees as well as composing poetry. Unfortunately, much of their work has been lost, but there are important collections of pedigrees by GUTUN OWAIN (*fl.* 1450–98) and Ieuan Brechfa (*c.* 1430–*c.* 1500). The lists of the 'Five royal tribes', and the 'Fifteen tribes of Gwynedd' appear to have been compiled in the mid-15th century. An important group of what came to be called herald bards was formed by Gruffudd Hiraethog (†1564) and his disciples Wiliam Llŷn (†1580), Wiliam Cynwal (†1587/8), and Simwnt Fychan (†1606), who, in addition to their poetry, left collections of genealogies and heraldry. Gruffudd Hiraethog was appointed deputy herald for Wales by the English heralds, and in the course of his duties visited all parts of Wales recording the pedigrees of the gentry. In 1586 another bard, Lewys Dwnn (†*c.* 1616) of Betws Cedewain, one of whose bardic tutors was Wiliam Llŷn, was appointed deputy herald for Wales, and some of his original visitation manuscripts have survived, together with copies of others which are lost. The last of the traditional herald bards were Rhys Cain (†1618) of Oswestry (Welsh Croesoswallt) and his son, Siôn Cain (†*c.* 1650).

§6. COLLECTION OF PEDIGREES

The bardic system was in decline from the late 16th century, during which time the first gentleman antiquarians appeared, and friendly relations between them and the bards ensured the survival of many of the genealogical and bardic manuscripts. The most distinguished of these were George Owen of Henllys (†1613) in south Wales, and Robert VAUGHAN of Hengwrt (†1667) in north Wales. These antiquarians collected pedigrees, and some of them were appointed deputy heralds for parts of Wales.

With the ACTS OF UNION of England and Wales in 1536–43, Welsh law was abolished and partible succession with it. But although the Welshman's knowledge of his pedigree was no longer a legal necessity, the passion for pedigree continued, and many challenge pedigrees survive in the records of the Courts of Great Sessions, showing the relationship, sometimes very distant, of one of the parties to a suit to one or more of the officers of the court.

During the 17th century, general compilations of pedigrees were made, in which strenuous efforts were made to follow all the descendants of the old tribes. The principal collections were made by Peter Ellis (†1637), Robert Vaughan of Hengwrt, Griffith Hughes (*fl.* 1634–65), Owen and John Salesbury (compiled 1630–70), David Edwardes of Rhyd-y-gors (†1690), and the last great collection, the Golden Grove Book, was compiled in 1765. P. C. Bartrum has compiled the most reliable collection of Welsh medieval pedigrees based on an examination of most of the surviving manuscript sources down to the late 16th century (*Welsh Genealogies A.D. 300–1400*; *Welsh Genealogies A.D. 1400–1500*).

§7. RELIABILITY OF PEDIGREES

Although the early pedigrees stretched back to legendary heroes such as Brutus, who was believed to have given his name to BRITAIN, and sometimes to Adam, it is generally accepted that some of them are reliable as far back as the 5th century. Where the names of women are given, they are usually genuine in the earlier pedigrees. From the end of the Middle Ages, however, the pedigrees become gradually less reliable for the early period, and 'suitable' wives were supplied where the older pedigrees gave none. In addition, from the Tudor (TUDUR) period family pride and the readiness of the bards to provide their patrons with distinguished ancestry led to some faking of pedigrees.

Michael Siddons

Geoffrey of Monmouth (Sieffre o Fynwy) probably had a connection with Monmouth (Mynwy), but the nature of this connection is not known: he may have been born or brought up there. Although he seems to have been familiar with the area, his association with Oxford (Welsh Rhydychen) is better attested since his name—Galfridus, followed by Artur(us) in most of them—occurs as a witness in six charters relating to religious houses around Oxford between 1129 and 1151. In two of these charters he signs himself *magister*, perhaps indicating that he was a canon in the secular college of St George's. He was ordained priest at Westminster in 1152 and consecrated bishop of St Asaph, Flintshire (Llanelwy, sir y Fflint), at Lambeth shortly afterwards. There is no record of his ever having visited his cathedral or diocese before his death in 1154 or 1155.

Three Latin works bear his name. The Prophecies of Merlin (*Prophetia Merlini*), dedicated to Alexander, bishop of Lincoln, apparently circulated independently as a short book before being incorporated into his famous *Historia*, which was being written at the same time and of which it was intended to form part. Historia Regum Britanniae was 'published' about 1139, but was dedicated, though not in diverse textual editions, to different patrons (Robert, earl of Gloucester, most commonly, together with Waleron, count of Mellent, in a few, and in one to King Stephen and Robert jointly). At least two 'variant versions' are known, both probably later than Geoffrey. About 1148–51 Geoffrey 'published' *Vita Merlini* ('The Life of Merlin'), an ostentatiously learned work in hexameters which also draws on Welsh literary traditions about the poet-seer Myrddin and which bears little or no relationship with the narrative of Merlin in the earlier *Historia*. Although there are Welsh versions of *Vita Merlini* (see Brynley F. Roberts, NLWJ 20.14–39), the poem did not achieve the success of the *Historia*, which became one of the most widely read and influential books produced in medieval western Europe. Geoffrey purports to give an account of the history of Britain or, better, of the Britons, prior to the coming of the English (see anglo-saxon 'conquest'). The prologue is an extended narrative of the Trojan settlement of Rome (see trojan legends) and the peregrinations of Brutus and his followers until they reach Albion, subsequently renamed Britannia, where he establishes his rule and his line. Geoffrey recounts the names and many of the exploits of a succession of kings, and some queens, of Britain, through wars, civil strife and both foolish and sage governance, down to the coming of the Romans, invited to Britain to reduce internal feuding after their initial attempts at invasion had been thwarted. The history of Roman Britain gives way to the coming of the English, again by invitation and duplicity, and prophesied by Merlin. Arthur is the hero of organized and successful British resistance, but he is finally overcome and mortally wounded in the battle of Camlan, caused by the rivalry and disloyalty of his nephew, Mordred (Medrawd). The crucial wars for the overlordship of Britain follow and the book closes with an acknowledgement of English sovereignty and a prophecy of the restoration of British rule.

Geoffrey's *Historia* achieved immediate and almost universal popularity. This was in no small measure due to a number of contemporary interests to which Geoffrey responded skilfully, e.g. curiosity among the 12th-century Norman audience in England about pre-Saxon and pre-Roman Britain, concern about civil war, especially as an element in royal succession, good government, and the rôle of powerful queens, allied to current interest in a British hero, Arthur, and in what would now be termed 'Celticity'. But the success of the *Historia* was not only due to a shrewd reading of the market, for it is a well-planned and well-written narrative, marked by a skilful variation of pace and detail. Within the comprehensive record of British rulers are several vividly recounted individual episodes, but the dominant event of British history, the arrival of the English, is given the central place and the rôle of Arthur as the crucial figure here, reflected in the space given to this period in the overall plan of the book, was a major factor in its popularity.

Geoffrey's *Historia* was a personal response to the

English histories being written at the time, as his references to William of Malmesbury and Henry of Huntingdon make clear and, though he writes at times in a not wholly serious vein, he was able to reflect their style of writing history. The most significant element, however, in the reception of the book was the authority which Geoffrey claimed for it, that he had been given by Walter, archdeacon of Oxford (a co-signatory in two of the charters referred to above and provost of the college of St George), an ancient British book (in what we would call Brythonic Celtic or Early Welsh or Early Breton) which he had translated into Latin. The *Historia*, therefore, could be claimed to be the authentic history of Britain by the Britons themselves. Even allowing for a generous interpretation of 'translate', this cannot be taken at face value since there are too many Latin literary borrowings and contemporary influences here, as well as borrowings, creatively adapted, from recognized sources like Gildas, Historia Brittonum, and other histories, for this to be true. There are traces of Welsh tradition in the narrative, e.g. the traditional tripartite geography of Britain, Merlin, Maximianus (Macsen Wledig) and his British wife, stories about characters such as Vortigern (Gwrtheyrn), Cassivelaunus (Cassivellaunos), Cadualurus, the giant Ritho, some elements in the Arthurian story (interestingly, Geoffrey also refers to Walter as the oral source of part of the Arthurian story), but these are not predominant in the history. Nevertheless, before the idea of a genuine British source as one of those that Geoffrey used is dismissed out of hand, attention needs to be paid to material in Breton historical texts predating the *Historia*. More particularly, Geoffrey appears to have discerned central features of Welsh traditional history—the concept of Britannia, the Island of Britain, and of a succession of kings bearing a single crown, the loss of British sovereignty, and the rôle of messianic prophecy in the Welsh consciousness, and the significance of Rome in the British sense of the past. The novelty of the *Historia*, its detailed, comprehensive nature, but the lack of any corroborative evidence, eventually led to its rejection by 16th-century humanists. But throughout the Middle Ages, apart from a handful of critics, Geoffrey provided the standard history of early Britain and laid out 'historical' precedents for future rulers, civil and ecclesiastic. His book was reworked in a variety of forms and languages and some single episodes became literary themes in their own right, but most importantly Arthur was given a firm historical affirmation and context. In Wales, Geoffrey's influence was both more acute and long-lasting; see Brut y Brenhinedd.

Brynley F. Roberts

Geraint fab Erbin was a Welsh legendary hero, probably based on a historical figure, though the identity of this source is uncertain and a composite possible. The best documented historical Geraints were (1) Gerontius, the British-born general of Constantine III who was declared emperor by the Romano-British garrison and ruled Britain, Gaul, and Spain from 407 to 411, and (2) the king Gerontius or Geruntius of Dumnonia, to whom a letter was written by Aldhelm in 705; (2) is called Gerent in later sources. If they have any historical basis, the Arthurian associations of the literary Geraint would better suit a period between these two (Sims-Williams, *Arthur of the Welsh* 46–7). There is a hero called 'Geraint from the southern region' in the Gododdin, possibly composed in the later 6th century. A King Gerennius of Cornubia (i.e. Cornwall/Kernow) is mentioned in the Welsh Latin Life of St Teilo, and he would belong notionally to the period *c.* 500. In the Life of St Cybi, Gereint is said to have been the great-grandfather of the saint. However, the fact that Erbin figures there as Gereint's son, not his father as usual, suggests that this was a sloppy mishandling of

GENEALOGIES. Although *Gerontius* is attested in late Roman Britain and *Gereint* becomes common in genealogies of the Middle Welsh period (cf. CUNOMOR), and *Geraint* is very common in present-day Wales, the name is not common in Old Welsh, Old Breton, or Old Cornish sources.

§1. THE GERAINT ENGLYNION

Probably composed *c.* 800–*c.* 1000 is a series of verses in the three-line ENGLYN metre, similar stylistically to the saga ENGLYNION, concerning *Gereint fil' Erbin* and a battle fought at a place called Llongborth. He was possibly killed there, depending on how we understand the following representative verse:

> *En llogporth y llas «y» Gereint*
> *guir deur o odir Diwneint,*
> *a chin ri llethid ve llatyssint.*
>
> 'In Llongborth Geraint's bold men from the region of Dumnonia were slain, and before they had been killed, they used to kill' *or more probably* 'In Llongborth, Geraint was slain. Bold men . . .'

ARTHUR is mentioned in the poem and called *ameraudur* 'emperor' (< Latin *imperātor*). Perhaps the most natural reading is that the poet means that Arthur was actually at the battle in person (though a more figurative allusion is also possible). Even so, the historicity of the claim is not assured, but an early tradition placing Arthur with the men of Dumnonia is significant (cf. ARTHURIAN LITERATURE [3]). The location of the battle of Llongborth and its historicity are also in doubt. Possibly Langport, Somerset, England, is meant, or some miscellaneous *llongborth* 'ship harbour'; cf. Irish *longphort* used for Viking encampments. The late John Morris's proposal that Llongborth was Portsmouth/Portchester has found little subsequent support.

Rather different and differently arranged versions of the Geraint *englynion* occur in LLYFR DU CAERFYRDDIN ('The Black Book of Carmarthen') and the closely related LLYFR GWYN RHYDDERCH ('The White Book of Rhydderch') and LLYFR COCH HERGEST ('The Red Book of Hergest'), the first being the earliest.

§2. THE GERAINT TALE

Geraint is best known as the central figure of the Arthurian tale *Geraint,* which figures as one of the subgroup known as the Three Romances within the more broadly defined MABINOGI. The main discussion of this story and its origins is included in the entry on TAIR RHAMANT; see also ARTHURIAN LITERATURE [3]; WELSH PROSE LITERATURE [1]. Various aspects of the complicated issue of the relationship of the *Geraint* Romance to the Old French poetic narrative *Erec et Enide* of CHRÉTIEN DE TROYES are discussed in TAIR RHAMANT §3; ARTHURIAN LITERATURE [6] §1; CRITICAL AND THEORETICAL PERSPECTIVES §3; WELSH LITERATURE AND FRENCH, CONTACTS.

Gergovia was the central OPPIDUM of the Gaulish tribe known as the ARVERNI. Since the 19th century the site has been identified with an area on the plateau of Merdogne, south of Clermont-Ferrand. This identification was based mainly on local archaeological finds and a place named Gergoia, which is mentioned in a text of the 10th century AD and is located at the south-east flank of the plateau. However, the precise location of this site remains controversial, and several other locations have been suggested recently (Côtes de Clermont, Corent, le Crest, &c.).

Gergovia was the site of one of the greatest victories of the Gauls under VERCINGETORIX in 52 BC. The battle is described in detail in CAESAR's *De Bello Gallico* ('Gallic War' 7.36).

Following the Roman conquest, the oppidum of Gergovia was abandoned and the population moved into the valley of the river Allier, to the oppidum of

The hilltop site of the ancient oppidum of Gergovia and the surrounding landscape today

Nemessos (whose name is most probably a Celtic word meaning 'sacred grove'; see NEMETON). The settlement was renamed Augustonemeton 'sacred grove of Augustus', after the first Roman emperor. Augustonemeton is the present-day city of Clermont-Ferrand.

The high-plateau of Merdogne covers a surface of 0.7 km^2. Its fortifications are enhanced on the south and west sides by stone walls. In the enclosed area very few finds have been made, and these date mainly to years following the Roman conquest, specifically to the reign of Augustus. This is the main reason why doubts arose concerning the identification of the plateau of Merdogne with Gergovia, though John Collis's recent excavations in the Auvergne have confirmed the identification.

PEB

Germanus, St, was a late Roman nobleman, who, after studying law, received the title *Dux* (general) and governed more than one Roman province. He was later compelled to take holy orders and was then elected bishop of Auxerre (Autessiodurum) in 418. He is commemorated as a saint on 31 July.

§1. CONSTANTIUS' LIFE

Our main source for his career is a Life written *c.* 480×494 by Constantius of Lyon. This *vita*, as far as it can be checked, is historically accurate and an important source for CELTIC STUDIES, providing information on 5th-century BRITAIN, though Constantius wrote in GAUL and shows no firsthand knowledge of Britain himself.

Constantius relates (§12) that the bishops of Gaul, answering an appeal by their British colleagues, sent Germanus in 429/30 to refute the theology of PELAGIUS. Pope Celestine had approved this mission, which had been urged by PALLADIUS, a deacon and probably the same Palladius sent by Celestine as bishop 'to the Irish who believed in Christ' (*ad Scottos in Christo credentes*) two years later, as noted in the Chronicle of Prosper of Aquitaine. The great confrontation between

Germanus and conspicuously affluent British Pelagians occurred at a synod at St Albans (see ALBAN; VERULAMION). With his companion Lupus, bishop of Troyes, Germanus afterwards helped British soldiers to scatter a combined raiding force of PICTS and Saxons in a valley ambush known as the 'Alleluia victory'. Germanus directed his newly baptized army to startle their enemies by shouting 'Alleluia!', since it was the Easter season, from their concealed position (*Vita Germani* §§17–18). Archbishop James Ussher (†1656) identified the battle site with Maes Garmon (Germanus' plain) in Flintshire (sir y Fflint), not far from Chester, but it is doubtful that either Germanus' mission or Saxons in the early 5th century reached so far west.

Some years later (possibly in 447) and a year before his death, Germanus visited Britain again, this time accompanied by Severus, bishop of Trier, again to combat Pelagianism, evidently still influential among British Christians. He was this time received by the otherwise unknown Elafius, who is described by Constantius as 'the most considerable person in the land', to whose son Germanus restored the use of his crippled leg (§§26–7).

§2. LATER SOURCES AND DEDICATIONS

According to the First Life of St SAMSON (see also HAGIOGRAPHY [4]), Samson was instructed by Eltutus (ILLTUD), who was himself a disciple of Germanus. Muirchú, writing *c.* 690, similarly makes PATRICK a disciple of Germanus, a likely instance of the conflation of Palladius and Patrick in early hagiography. In the 9th-century inscription on ELISEG'S PILLAR Germanus is connected with GWRTHEYRN (Vortigern) and the founding of the dynasty of POWYS. Accounts given in the 9th-century HISTORIA BRITTONUM of the condemnation and pursuit of the incestuous Gwrtheyrn by Germanus (§§39, 47) and of Germanus' rôle in the downfall of Benlli, tyrant of Powys (§§32–5), derive from a source cited as *Liber Beati Germani* (Book of the blessed Germanus), which is clearly something other than Constantius' Life, probably a later British *vita* of the same saint. On the other hand, it is not impossible that *Historia Brittonum*'s Germanus and Welsh Garmawn or Garmon reflect different saints with the same name or similar names. In support of the equivalence, early Welsh tradition, as reflected in the tract *Bonedd y Saint* (Descent of the saints; see GENEALOGIES) says that the opponent of Gwrtheyrn came from France, and 31 July is also the Welsh saint's feast-day. However, Baring-Gould and Fisher (*Lives of the British Saints* 3.79) identified the Welsh Garmon instead with a bishop of Man (ELLAN VANNIN) with the Irish name MoGorman, who is said to have died in 474; his feast date is 3 July.

The 10th-century political prophecy ARMES PRYDEIN regards Garmawn as a patron saint of Britons, second only to DEWI SANT.

'Garmon' is the patron of several places in central and north Wales (CYMRU), including Llanarmon-yn-Iâl, where a miraculous image stood *c.* 1540, Llanarmon in Gwrtheyrnion (a district named from Gwytheyrn), Betws Garmon in Arfon, Capel Garmon, Llanarmon Dyffryn Ceiriog, and Llanarmon ym Mechain. On a Cornish dedication, see HAGIOGRAPHY [5] §1. Gorman or MoGorman is the patron of a chapel next to Peel Castle on Man.

Welsh traditions of Garmon/Germanus were the inspiration for Saunders LEWIS's verse play for radio, *Buchedd Garmon* (Life of Germanus).

Graham Jones, JTK

Gildas is best known as the author of *De Excidio Britanniae* (On the destruction of Britain), our only contemporary British source for events in BRITAIN in the 5th and earlier 6th century. Effectively, *De Excidio* is the starting point of historical writing in Britain, and was thus highly influential to subsequent writers of history as well as LEGENDARY HISTORY. As *Gildas Sapiens* ('Gildas the Wise'), he is known for a penitential (a book of religious penances assigned for various sins according to severity), and also for fragments of letters on pastoral questions relevant to the reform of the

British church and the growth of MONASTICISM. There is no general agreement among experts concerning the dates at which Gildas was writing, but a common estimate is *c.* AD 500–550.

§1. IMPORTANCE TO CELTIC STUDIES

The testimony of *De Excidio Britanniae* is of central importance as an eyewitness account of the events which formed the transition from Roman Britain to Anglo-Saxon England and the Celtic-speaking lands of the north and west of Britain (see also ANGLO-SAXON 'CONQUEST'). The text reflects a knowledge of BRYTHONIC speech. For example, Gildas uses the derogatory *lanio fulvus* (tawny butcher) for the king Cuneglasus, literally '(having) blue-grey hound(s)', making fun of common Celtic naming patterns which become ridiculous or derogatory in translation, here rendering a positive 'dog + colour' with a negative 'butcher (the behaviour of a dog gone bad) + colour'. Similarly, Gildas's *superbus tyrannus* (arrogant tyrant) probably refers to the 5th-century British leader otherwise known as Vortigernus (GWRTHEYRN), literally 'overlord'. Again, the element *super-* is cognate with the element *vor-*. Although Gildas had an impressive command of Latin, it is not unlikely that his first language was Brythonic Celtic.

§2. GILDAS AND THE CHURCH

Gildas was recognized as an authority on Christian doctrine and practice by the Irish churchman and missionary COLUMBANUS (†615). Revered as a saint, his cult is attested by church dedications in Brittany (BREIZH), Wales (CYMRU), and Cornwall (KERNOW). There are medieval Lives of Gildas in Latin from Brittany (also a fragmentary second recension) and Wales. He was also prominent in Welsh and Breton vernacular traditions.

§3. DE EXCIDIO BRITANNIAE

Although a foundational work of British history, it was not intended as a chronicle, but rather as a sermon directed at an educated audience of Gildas's contemporaries. *De Excidio* is structured as a short historical introduction (§§1–26), followed by the sermon itself (§§27–110, comprising a complaint against the kings [§§27–65] and a complaint against the clergy [§§66–110]). Wade-Evans (*Welsh Christian Origins*) and Grosjean (*Analecta Bollandiana* 75.158–226) challenged the authenticity and unity of the work, and put forward the thesis that it was written by two different authors. However, due especially to the fine philological analysis of Kerlouégan (*Le De Excidio Britanniae de Gildas*), it is now accepted that all parts were written by the same author at the same time, and belong together for reasons of internal logic and content as well as the consistency of the language and the history of the surviving manuscripts.

§4. THE DATE OF DE EXCIDIO

The first reference to Gildas and *De Excidio Britanniae* by a second writer is in the letter of Columbanus written *c.* 600 to Pope Gregory the Great (*Columbanus ad Gregorium papam* 6–7, 8). Our best historical synchronism for *De Excidio* implies that AD 547 was the latest possible date of completion, as deduced from the facts that MAELGWN Gwynedd (Maglocunus in Gildas's spelling) is mentioned and addressed in the work as a living contemporary (§33) and that ANNALES CAMBRIAE give 547 as the date of Maelgwn's death. Some sort of internal relative dating is implied by a lengthy and convoluted passage (§26.1) concerning the battle of 'Mount Badon' (*bellum Badonici montis*) and an interval of 44 years, most often understood as meaning that Gildas was writing 44 years after the battle. This statement has been understood in other ways by several interpreters, including BEDA in his *Historia Ecclesiastica* ('Ecclesiastical History'), who believed that the battle occurred 44 years after the Anglo-Saxons arrived in Britain. *Mons Badonis* is dated in *Annales Cambriae* to AD 516, which therefore might clash with dating the writing of *De Excidio Britanniae* before Maelgwn's death at 547. Since the 5th- and 6th-century dates of *Annales Cambriae* are not entirely trustworthy, the traditional dating has been challenged (Miller, BBCS 26.169–74; O'Sullivan, *De Excidio* 87–181; Higham, *English Conquest* 137–8). Kerlouégan maintains that, for purely philological reasons, the date should be put back as early as possible. The origin of the language and style of the *De Excidio* must lie in a thorough education, and the high standard of Gildas's learning is only conceivable in the context of Late Antiquity, in a school still connected with an unbroken Roman tradition. Roman rule had come to an end in Britain in AD 409/410. Nonetheless, a completion of

De Excidio not long before 547 has also been repeatedly defended in recent scholarship (Lapidge & Dumville, *Gildas* 51–9, 61–84; Snyder, *Age of Tyrants* 45–6; Dark, *Civitas to Kingdom* 258–60).

§5. LOCATING GILDAS

De Excidio contains only a few references to place-names, most of which are either unlocated or too widely known to give a clue which might reveal the writer's location. In the Breton and Welsh Lives of Gildas and other medieval sources from Wales, Gildas's origins are associated with Strathclyde (YSTRAD CLUD) and the PICTS. Further points favouring a northern Gildas are that he seems to be well-informed about the wars with the Picts and is well aware of both HADRIAN'S WALL and the ANTONINE WALL, though his account of their early history is ignorant. It is noteworthy in this connection that even Beda, who lived near the walls, had little information about them (*Historia Ecclesiastica* 1.5.26). A south British Gildas has recently been proposed by Dark (*Civitas to Kingdom* 260–6) and Higham (*English Conquest* 90–117). The supporters of a southern origin underline the fact that Gildas mentions only southern holy martyrs and gives a beautiful description of a fertile Britain which matches the agricultural south far better than the north. However, since the geographic introduction is very conventional and idealized, this is inconclusive. Placing *De Excidio* depends also on locating the five living kings denounced in the text and whether we think it possible for Gildas to castigate the ruler of his own area. But it has also been suggested that, rather than being geographically remote from his five enemies, Gildas's unusual name was the alias of an 'underground' pamphleteer.

§6. THE FIVE TYRANTS

Gildas denounces the following contemporary rulers: Constantius of DUMNONIA, a certain AURELIUS Caninus (probably in the region of Caerloyw [Gloucester]), Vortiporius of DYFED, Cuneglasus (very probably in north Wales), and Maglocunus (Maelgwn). The second, fourth, and fifth can be identified with figures in the Old Welsh GENEALOGIES in London, BL MS 3859: Guortepir of Dyfed, Mailcun, and Cinglas. Mailcun and Cinglas both figure as great-grandsons of CUNEDDA, the semi-legendary founder of GWYNEDD, who is datable to the earlier 5th century. The description of the tyrants seems to imply that Gildas knew something about the Celtic panegyric tradition, since his adjectives are sophisticated derivations from the names of the princes and he rebukes the BARDS at Maelgwn's court.

§7. THE END OF ROMAN BRITAIN AND THE ARRIVAL OF THE ANGLO-SAXONS

The process of the separation of the British provinces from the Empire is only briefly described in Gildas's account. He mentions the usurpation of Magnus Maximus (the MACSEN WLEDIG of Welsh tradition), and seems to be responsible for the tradition which blames Maximus for the military weakness of the BRITONS following his departure.

The only document which Gildas inserts into his text is a letter from the Britons to a Roman named 'Agitius' three-times consul (*ter consul*), traditionally identified with the 5th-century Roman general Aëtius, thus dating the letter to *c.* 446, the time of his third consulate. The *adventus Anglo-Saxonum* or arrival of the Anglo-Saxons in Britain, which figures as part of the same episode in the *De Excidio*, has thus also been dated to *c.* 446 or a few years later. This was how Beda understood the passage. However, other explanations have recently been advanced which imply a different date for the 'Letter to Agitius', which would be more in accordance with Continental sources. The Gallic Chronicle of 452 and Constantius' Life of GERMANUS both show uncontrolled military action by the Anglo-Saxons in Britain at a date earlier than 446. Gildas may have interpolated the *ter* 'thrice' into the original document from his own knowledge of the famous general's career, in which case the letter may in fact have been written earlier (Higham, BBCS 40.123–43). It might also have been originally intended for another Aëtius, thus producing a date of *c.* 428/429 (Casey & Jones, BBCS 37.281–90). According to Michael Jones, Britons on the Continent wrote to the Roman Aegidius in the north of Gaul (France) *c.* 470 and Gildas simply misunderstood the context of the letter (*Nottingham Medieval Studies* 32.141–55).

The Roman troops left Britain, leaving the Britons to fight alone against the Pictish and Scottish threat from the north. Anglo-Saxon *foederati* (i.e. barbarian allies), a common feature of the military policies of the late Empire, were recruited by the Britons under

a *superbus tyrannus*, to be identified with Uurtigernus in *Historia Ecclesiastica* (1.14.48ff.) and Guorthigirn in Historia Brittonum (§37ff.). The *foederati* rebelled and managed to gain control of part of Britain.

§8. BRITISH RESISTANCE AND BADONICUS MONS

There followed years of continuous warfare between Saxons and Britons. The latter regained their strength under Ambrosius Aurelianus, whom Gildas calls the last of the Romans in Britain to have had ancestors who had 'worn the purple', thus of imperial status. The campaign against the Anglo-Saxons climaxed at Badonicus mons, where the Britons were victorious (see ANNALES CAMBRIAE; ARTHURIAN SITES), about a generation before Gildas's time (*De Excidio Britanniae* §26.1). This battle initiated a period of relative peace, which had lasted up to the time of his writing and included the entire living memory of almost everyone alive at the time when Gildas wrote.

§9. GILDAS'S MORAL PURPOSE

Gildas presented historical events in order to admonish his contemporaries with his relentless message: the continuous sins of the Britons were punished by God. The Britons were *imbellis* 'cowardly, inept at war' and *infidelis* 'disloyal, unfaithful'. Their cowardice is shown in their repeated failure to hold their ground against Romans, Picts, Scots, or Anglo-Saxons. Their infidelity is directed against the Romans and the true Christian faith. Thus, God first sends the Picts and the Scots, and then the Anglo-Saxons, as instruments of his wrath. The Britons only withstand their adversaries in exceptional episodes of moral superiority. According to Gildas, the victory of *Badonicus mons* was won because the Britons had placed their faith in God and not in men. As a moral entity tried by history, Gildas's Britons are modelled on God's chosen people of the Old Testament, the Israelites (see also LEGENDARY HISTORY). In the second part of the *De Excidio*, Gildas makes numerous citations from the prophecies of Jeremiah, implying a bleak future for the Britons should they continue on their immoral course. Internal reform of the princes, the church, and the monks would, in the eyes of Gildas, be rewarded with victory over the barbarian invaders.

§10. GILDAS'S SENSE OF SELF AND GROUP

Although Gildas described the Roman government as harsh, he seems to have admired the Romans' military prowess and their effective measures against the barbarians. This is the reason why he later criticized the Romans for abandoning Britain. He clearly distinguished the Britons from the Romans and did not think of himself and contemporaries as belonging to the Empire any longer. The Picts, Scots, and Anglo-Saxons were simply barbarians and instruments of God's wrath, and thus their various victories were not to be understood as God's rewards to these peoples, though this was how the Anglo-Saxon Beda deftly recast Gildas's message.

§11. GILDAS AND MEDIEVAL HISTORIES OF BRITAIN

Beda made extensive use of Gildas for the first book of his *Historia Ecclesiastica*. The author of the 9th-century Welsh Latin *Historia Brittonum* does not name Gildas, but this work echoes some phrases of *De Excidio* and closely parallels its chronological structure down to his account of the battle of *mons Badonis*, a great victory attributed to Arthur. Gildas was also used by Giraldus Cambrensis and Geoffrey of Monmouth. Giraldus gives us a speculative answer to the question which vexed him, as well as others before and after him, namely: why does he not mention Arthur? Since Arthur slew Gildas's brother, the saint destroyed his books on the hero and wrote *De Excidio Britanniae* (*Descriptio Kambriae* 2.2). Although, in the elaborations and retellings, Arthur was to become central to the historical events described by Gildas, it is possible that his fame was not as great in Gildas's day and that Arthur was not in reality the victorious commander of Badon. Other modern writers have variously explained the omission as reflecting the fact that Arthur was so famous to 6th-century readers that Gildas did not have to name him, or that Gildas, though well aware of Arthur and his victory, did not consider him to be moral enough to be cited as a good example.

§12. THE PENITENTIAL

Gildas's zeal for a reform of the Church is also apparent in his other works—the *Penitential* and the letter fragments. These texts contributed to Gildas's reputation for asceticism and fervour for MONASTICISM, helping to earn his epithet *Sapiens* ('learned clerical scholar' as well as simply 'wise man'). The penitential of Gildas is

one of our earliest penitentials, probably predating that of Uinniau. It prescribes penances which are generally milder than those of the Irish penitentials, which may also be a sign that it was early, the later writers seeking to outdo it with their displays of zeal.

§13. the cult of st gildas

Gildas was later regarded as a saint (feast 29th January). In the 10th- to 11th-century Breton *Vita I S. Gildae* he appears as the founder of the monastery of Saint-Gildas in Rhuys (Morbihan). The Welsh Latin Life was written by Caradog of Llancarfan in the early 12th century. The contents of the *Vitae* are legendary and filled with the miracles typical of hagiography. They are thus not reliable sources for the historical Christian author, since they are works written several centuries after his lifetime. On the other hand, the place-name *Arecluta regio* (Strathclyde/Ystrad Clud) for Gildas's home country in the Breton Life is an archaic linguistic form and may point to an underlying older source (see hagiography [4] §2).

Alheydis Plassmann

Gill, William Henry, was born of a Manx family in Marsala, Sicily, on 24 October 1839. Between 1850 and 1858 he lived with his uncle, Revd William Gill of Malew, and attended King William's College near Castletown, Isle of Man (Ellan Vannin). On leaving school, he entered the United Kingdom Civil Service, rising to high office in the General Post Office, London. He returned to the island for vacations and from 1895 to 1898 he collected melodies from singers and musicians throughout the island (see manx music). Some of his arrangements of this material were published in *Manx National Songs* (1896) and *Manx National Music* (1898). He became known as 'the Grand Old Man of Manx Music'. He also collected and arranged material in England, particularly that associated with Sussex. He was a founder member of the Folk-Song Society established in 1898. His hymn 'Harvest of the sea' (the Manx fishermen's evening hymn), based on a secular song collected in the island, became particularly popular and, at the editors' request, was included in the Methodist Hymn Book of 1904, where the tune is called 'Peel Castle' (hymn 947). His variant of a traditional tune, 'Mylecharaine', with his own verses, first published in 1907, became accepted as the national anthem, 'O land of our birth'. He died on 27 June 1923 at Angmering in Sussex.

R. C. Carswell

Giraldus Cambrensis (Gerald de Barri/Gerallt Gymro/Gerald of Wales), who was born in 1146 at Manorbier Castle, Pembrokeshire (sir Benfro) and who died in 1223 at Lincoln, was a churchman and writer. He was a highly prolific Latin author who wrote widely about himself and his times, including first-hand accounts of Wales (Cymru), Ireland (Ériu), England, France, and Italy. His diverse experiences are reflected in his writings, which oscillate between originality and banality.

Born into a family of noble Welsh-Anglo-Norman Marcher lord stock, he was apparently destined from

an early stage for an ecclesiastical career which he hoped would culminate in the archbishopric of St David's (Tyddewi), but he rose no higher than archdeacon of Brecon (Aberhonddu) in the diocese of St David's. He may not have been completely incorrect in his claim that his two-fold prominent descent worked against him. The dominant figures in England at the time were King Henry II (1154–89) and King John (1199–1216), both of whom he knew and who knew him.

Many of his relatives took part in the military advances in Ireland from 1169 onwards which had been initiated by king Diarmait Mac Murchada (Dermot Mac Murrough) of Leinster (Laigin), who had been expelled from Ireland in 1166 and sought help from overseas. The Geraldines (named after Gerald's grandfather Gerald of Windsor) were to remain prominent in Irish politics for centuries to come.

In the 1170s Giraldus spent two spells of study in Paris and was taught by leading scholars of the time, some of whom had been taught by Peter Abelard. His years in Paris widened his intellectual horizons and enabled him later to write about Wales and Ireland in a wider comparative context.

In 1176 he failed to succeed his uncle David as bishop of St David's, but a few years later he worked for a while in the diocese and attempted some reforms in his archdeaconry. However, he kept in touch with the royal court. When, in 1185, Prince John was sent to Ireland by his father to superintend English control there, Giraldus was with him, no doubt, partly at least, because his relatives had played a considerable part in the English intervention in Ireland from 1169 onwards. Following John's departure, Giraldus stayed on with his relatives, for a year all in all, and gathered material for his two books on Ireland: *Topographia Hibernica* ('The Topography of Ireland') and *Expugnatio Hibernica* ('The Conquest of Ireland'), completed around 1189 (later revised several times) and dedicated to King Henry and King Richard respectively, which did not result in his further promotion.

Even prior to the completion of these books, Giraldus had a further public function to fulfil. In the spring of 1188 Baldwin, archbishop of Canterbury, toured Wales for six weeks preaching the Crusade, and Giraldus was one of his companions. Here again, his personal background (as well as his office of archdeacon) would have recommended him as a companion: he knew Wales reasonably well and was widely connected. (However, an episode from this time suggests that his grasp of Welsh was imperfect: when he preached the Crusade, according to him, people were eager to take the cross, but when his sermon was translated they gave it back!)

The lasting result of this tour were two further works by Giraldus: the *Itinerarium Kambriae* ('The Itinerary through Wales') and the Descriptio Kambriae ('The Description of Wales'), completed around 1194. These two books, as well as the two on Ireland, were the most original of his works; they are of lasting importance and provide the foundation of his fame. Interestingly, he himself was aware of this and wrote about it, albeit apologetically, in his later work *Speculum Duorum* ('The Mirror of Two Men'). Needless to say, they reflect the personality of their author in many ways, but this does not detract from their immense value as the first and, for a long time, the only works on these topics.

The next important stage in his life was his election to the bishopric of St David's in 1198 and his five-year struggle for recognition, not only as bishop but also as archbishop of Wales in this position, allegedly on the basis of historical precedent. He put all his energy into this task: he travelled three times to Rome, encountered personally more than once the cunning Pope Innocent III, conducted a great deal of research in his business, and produced massive documentation (in itself of immense value to the historian), but ultimately he failed. Rome could not be impartial in this issue; Innocent III could not afford (then) to lose England's support in his struggle with the empire. Nor could the English king afford to grant ecclesiastical autonomy to Wales, particularly in view of the increasing self-assertion of the remaining independent Welsh princes, particularly in Gwynedd, where Giraldus met with some support for his plan. For a variety of reasons, Giraldus lost his case. Soon afterwards he resigned his position as archdeacon in favour of a nephew, who proved to be most ungrateful and caused him a great deal of sorrow. Giraldus survived his defeat for two decades, which he seems to have spent mainly in England, writing and rewriting his books, including a voluminous autobiography, *De rebus a se gestis*. Of this, only a small part of the text has been preserved, but the complete table of contents shows that the bulk of

Pre-Roman stone altar with inscribed vegetal design from Glanon

Drawing of altar with Gaulish inscription from Glanon

the first section can be recovered from other works of his, mainly the *De invectionibus* (On invectives).

It is not clear what Giraldus' mother tongue was. His Latin was fluent, though not brilliant, and it is conceivable that he conversed in Latin with the Pope. He must have spoken French fluently, but it is conceivable that his family also spoke English. His writings do not demonstrate an extensive knowledge of Welsh.

Glanon, a Gallo-Roman town (Bouches-du-Rhône, France), was the capital of the Salluvii, a Gaulish or Ligurian tribe. Located 1 km south of present-day St-Rémy-de-Provence, it was first settled in the 6th or 5th century BC, near a sacred spring (see SPRING DEITIES). The settlement was in close contact with the Greek colony of MASSALIA (Marseille). In the 3rd century BC a Greek settlement named Γλανον *Glanon* was established there, though the name is GAULISH (cf. Old Irish, Old Breton, and Old Welsh *glan*, 'clean, clear, pure'), probably originally the name of the spring. Glanon was conquered by the Romans in the 2nd century BC, and the name Latinized as *Glanum*. In AD 270, the settlement was abandoned following a raid by Germanic tribes. The population then moved to nearby St-Rémy.

Many monuments are still visible in Glanon, e.g. a mausoleum and a triumphal arch of the Roman period. In addition to a FANUM of HERCULES (see INTERPRETATIO ROMANA), several other Roman monuments

and a few minor INSCRIPTIONS, two important Gaulish inscriptions in the Greek script of Massalia have been found here on votive altars (see SCRIPTS):

ΜΑΤΡΕ|ΒΟ
ΓΛΑ|ΝΕΙΚΑ|ΒΟ
ΒΡΑ|ΤΟΥ
ΔΕ|ΚΑΝΤΕΜ (G-64)

/mātrebo glaneikabo bratu dekantem/
'gratefully a tithe offering to the mothers [mother goddesses] of Glanon' (see further MATRONAE).

ΚΟΡΝΗΛΙΑΡΟ
ΚΛΟΙCΙΑΒΟ
ΒΡΑΤΟΥΔΕΚΑΝ[ΤΕΜ] (G-65)

/kornēlia rokloisiabo bratu dekantem/
'[from] Cornelia, to Those Who Can Hear, a tithe offering in gratitude'.

Glaschu (Glasgow)

The historical traditions enshrined in the 12th-century *vitae* of St KENTIGERN (†*c.* AD 612) maintain that Glasgow's ecclesiastical origins are to be found in a small cemetery on the bank of the steep-sided Molendinar Burn. This cemetery was presumably the 'green hollow' referred to by the earliest CUMBRIC-speaking inhabitants. It was reputed to have been consecrated by St NINIAN and subsequently adopted by Kentigern as the centre of a see established in the kingdom of Strathclyde (YSTRAD CLUD) in the late 6th century. Although the *vitae* probably embody some authentic material, the reworking of the tradition material is so substantial that all details relating to Glasgow's history prior to the foundation of the see by Earl David in 1114–18 must be treated with extreme caution. Contemporary documentation reveals that the first bishop, John, was established in Glasgow between 1114 and 1118 by David I, who at the time was ruler of CUMBRIA (Barrow, *King David I and the Church of Glasgow* 6–8; Barrow, *Charters of King David I* 53–4; Shead, *Scottish Historical Review* 48.220–5; Driscoll, *Innes Review* 49.95–114, n.2). Further details of the endowment of the cathedral do not appear until 1136 when, on the occasion of the dedication of the first cathedral church, an inquest enumerated the extensive holdings of the church of Kentigern. These included lands in the later Barony of Glasgow, the Upper Ward of Clydesdale, Tweeddale, Teviotdale, Annandale, and probably in Nithsdale. This rich endowment was supplemented by grants of GOVAN and the royal estate of Partick, probably on the occasion of the consecration of the new cathedral (Barrow, *Charters of King David I* 60, 72, 80–2; Shead, *Scottish Historical Review* 48.223). From 1136 onwards the cathedral's history is relatively well known, owing to the survival of extensive archives which have been available to scholars since the 19th century.

Glasgow cathedral was one of the most ambitious buildings ever to have been erected in medieval Scotland (ALBA) and is the best example of Gothic architecture to have survived here. The construction of a major church was entirely appropriate for a diocese fashioned from a former kingdom. The see extended south-east to Tweeddale and Teviotdale, south-west to Annandale and Carrick (skirting the diocese of Galloway), and west to Renfrew and the Lennox (Shead, *Historical Atlas of Scotland* 41–2, 154–5). As far as can be seen, Glasgow's diocese corresponded to the former kingdom of Cumbria, and the bishop of Glasgow was the principal ecclesiastical authority over all of the western territory then under the dominion of the king of the SCOTS (Shead, *Scottish Historical Review* 55.127–50).

In overall length (170 m), Glasgow cathedral was only surpassed in Scotland by St Andrews. The choir and the nave of the cathedral are about the same size (62 × 40 m), which reflects the size and importance of the chapter (ecclesiastical community) attached to the cathedral. The choir is screened off from the nave by a massive stone rood loft, a rare survival in Scotland. The nave, used by the laity, was provided with a large number of altars built against the columns. The church's most remarkable feature is the crypt, which extends under the full length of the choir and, owing to the slope of the ground, stands above ground. The complex arrangement of columns and vaults, which reveal the positions of the tomb of St Kentigern and

five other chapels in the crypt, has few rivals in Britain, either in scale or beauty.

The main body of the cathedral was built during the course of the 13th century, but some elements were added later in the Middle Ages. Archaeological excavations have revealed evidence for two distinct phases within the 12th century (Driscoll, *Excavations at Glasgow Cathedral 1988–1997*). These earlier cathedrals were built in the same location, but were on a much smaller scale. The earliest of these was consecrated in 1136, and replaced in 1197. Of the first, little can be said other than it was a highly ambitious Romanesque structure; the excavations recovered several painted architectural fragments which reveal that the interior was brightly painted with abstract patterns and figural scenes. The second cathedral was also built on two levels, and a very small portion of the south-east transept survives in the crypt, but it was replaced at the end of the 12th century.

Topographically, medieval Glasgow had two focal points. An ecclesiastical precinct grew up around the cathedral, and was home to a large community of priests and the destination of numerous pilgrims. A secular settlement developed around the market at Glasgow Cross nearer to the river (Shead, *Scottish Medieval Town* 116–32). Although Glasgow was relatively insignificant throughout most of the Middle Ages with respect to international commerce, the burgh was the most important market on the Clyde and dominated its hinterland.

Two periods of growth led to the emergence of Glasgow as the largest city in the CELTIC COUNTRIES of the post-medieval era. During the 18th century, trade in tobacco, sugar and rum stimulated large-scale manufacturing industries which drew labour from the countryside, including the HIGHLANDS. During the 19th century Glasgow's industrial growth was rapid, and the heavy demand for labour attracted ever-greater numbers of rural immigrants from all parts of Scotland and from Ireland (ÉIRE). The social and political configuration of modern Glasgow reflects these immigrant movements, and the Irish connections remain strong. Glasgow exerts a huge influence on the west of Scotland, and consequently is home to the largest number of GAELIC speakers outside of the Western Isles.

Glasney College

The collegiate church of Glasney in Penryn, Cornwall (KERNOW), was founded in 1265 by Walter Bronescombe, bishop of Exeter, and during the late medieval period it was a centre of church and literary life not only in Cornwall but throughout western Europe. According to legend, Bronescombe had a vision in which St Thomas the Martyr told him to build a church in the woods of Glasney at Polsethow. There he would find a hollow willow tree, its trunk containing a bee's nest. Its founding would fulfil the old Cornish prophecy: *In Polsethow ywhylyr anethow* (In Polsethow, shall be seen marvels [or dwellings]).

The collegiate church grew rapidly, and had 13 secular canons, one of whom was appointed provost. It received the tithes of 14 parishes around the river Fal estuary, and grew into a seat of learning. It was during the 14th century that the mystery play cycle known as the ORDINALIA was written at Glasney College, as well as numerous other CORNISH texts, such as Christmas and saints' plays now lost. Many local place-names are incorporated into the text of the *Ordinalia*. One Master John Pascoe, who obtained a prebend at Glasney *c.* 1463, was a crucial figure in Cornish literary culture and asserted considerable influence during its final phase (see CORNISH LITERATURE).

It is more than likely that the Cornish-born Middle English prose translator John Trevisa (*c.* 1342–1402) also attended Glasney, and some scholars argue that one Radolphus Ton, a priest at Camborne (Kammbron)

and the probable author of BEUNANS MERIASEK, was also a graduate of Glasney. Had Glasney College not been destroyed during the dissolution of the monasteries initiated by Henry VIII, it might have evolved into a native Cornish university.

Glastonbury, archaeology

While evidence of human activity during the Palaeolithic and the Mesolithic is well recorded in the wider landscape of Somerset, England, the first evidence of occupation near Glastonbury itself dates from the Neolithic (New Stone Age). Several timber and brushwood trackways have been discovered, mostly running southwards across the wetlands of the Somerset Levels from the dry-land 'islands' of Meare, Westhay, and Burtle on the one hand to the edge of the Polden Hills on the other. The oldest and best-known of these trackways is the Sweet Track, which was excavated in 1970. Its construction was precision dated by dendrochronology (tree-ring dating) to the winter of 3807–3806 BC (B. Coles & J. Coles, *Sweet Track to Glastonbury*). The vast amount of work required to construct such trackways demonstrates that the Glastonbury area must have been host to a relatively large, well-organized community during this period. A polished stone axe and some flint tools of Neolithic type were also found together on Glastonbury Tor itself, though no traces of actual domestic dwellings were recovered in the vicinity.

Such settlement evidence is similarly lacking for the Bronze Age around Glastonbury, though the construction of at least one trackway—that at Meare Heath (dated to the 2nd millennium BC)—shows that human activity continued to be on a scale sufficiently substantial to warrant and carry out such major collective undertakings.

Excavations by Arthur Bulleid in the late 19th century (Coles et al., *Arthur Bulleid and the Glastonbury Lake Village*) and subsequent reconsiderations of his records have produced a graphic and informative account of the Iron Age community inhabiting the edges of the marshlands at Glastonbury in the final centuries BC (see LAKE SETTLEMENT; B. Coles & J. Coles, *Enlarging the Past* 86–103).

There is little hard evidence for Roman activity at Glastonbury, though modest amounts of Roman pottery and tiles may suggest that a villa or other structure once existed in the environs of the later abbey. Small amounts of Roman pottery were similarly recovered during the excavations at Beckery, an early medieval daughter-house of Glastonbury lying some 1.5 km to the south-west of the abbey.

Ponter's Ball, a substantial linear earthwork, lies some 3 km south-east of Glastonbury. It runs NNE–SSW for a traceable distance of *c.* 1 km across what would, prior to the drop in the water levels, have been the only dry-land approach to the town. Consisting of a vast bank up to 10 m wide and 3.5 m high, it is flanked on its eastern side by a deep ditch. Limited excavation of this feature has been inconclusive as regards dating or function. On the basis of pottery recovered under the bank, the earthwork appears to have been constructed no earlier than the early medieval period, but this dating is not considered reliable. Parallels for this type of earthwork can be found in both Iron Age and early medieval contexts in Britain, and there is a range of different purposes which it could have served, such as defence, a territorial marker at the edge of a petty kingdom or the limit of monastic lands. Further focused investigation of this monument will be required before any confident assessment can be attempted.

Excavations on the summit of the Tor have revealed tantalizing evidence of early medieval ('Dark Age') activity at some time in the 5th to 7th centuries, but without yielding a clear account of the nature of this activity. Remains of the foundations of timber structures were accompanied by two partially destroyed graves, an elongated stone cairn and a metalworking area (Rahtz, *Archaeological Journal* 127.1–81). Finds recovered included sherds of imported eastern Mediterranean pottery of 'B-ware' type, copious butchered animal bone and a cast copper-alloy miniature head, all of which suggest that the individuals involved were of considerable social status. The nature of this

evidence may be related to early religious activity or perhaps a defensive occupation of the summit by a local warlord. The excavator now tends to favour the former religious explanation, though it is noted that these alternatives need not be mutually exclusive (Rahtz, *Book of Glastonbury* 59–60; cf. ARTHURIAN SITES; AVALON).

Whether the above is the case or not, a small Anglo-Saxon monastery was certainly in existence on the western shoulder of Glastonbury Tor by the 8th or 9th century. Evidence from this period includes the foundations of a church or communal building, along with several possible monks' cells. The remains of a wheel-headed cross recovered on the summit of the Tor are probably related to this foundation, which may also have been responsible for the establishment of Glastonbury abbey itself on more level ground to the west of the hill.

The position and size of the nearby roughly contemporary Anglo-Saxon foundation at Beckery show a striking similarity to that on the summit of the Tor. Sub-surface remains of a timber chapel and cemetery at Beckery were discovered and excavated atop the summit of Wirral Hill, the highest point of a pronounced ridge running south-west from the main mass of the Glastonbury 'peninsula'.

The origins of Glastonbury abbey are unknown and a British monastic foundation may well have existed at this site prior to the Anglo-Saxon conquest of the area, since there is considerable evidence of Romano-British Christianity in Somerset from an early date (see Rahtz, *Archaeology and History of Glastonbury Abbey* 3–37). Hard archaeological evidence for the development of the early medieval abbey is minimal prior to the 10th century, and is restricted to the extremely fragmentary remains of foundations recovered under the existing later medieval structures. Sub-surface remains of the earliest church mentioned in documentary references to Glastonbury abbey, the *vetusta ecclesia* (old church), have not been uncovered during excavation and were probably obliterated during the digging of a crypt in the 12th-century Lady Chapel. This 'old church', destroyed by fire in 1184, is referred to as of both wattle-and-daub and timber construction (possibly the former was replaced by the latter during rebuilding at some stage). The fact that it was known as the 'old church' (Old English *ealderchurche* and Latin above), along with its simple construction methods and the veneration in which it was apparently held, suggest it may have been very early indeed, possibly of 6th- or 7th-century date.

According to the early chroniclers William of Malmesbury (writing in the early 12th century) and William of Worcester (writing *c.* 1480), situated near the Old Church were two tall carved stone monuments described as 'pyramids' and also as 'crosses'. The latter label seems more suitable and, together with the assertions that the monuments featured carved panels of inscription and figurative art, suggest the tall tapering (hence 'pyramidal') HIGH CROSSES known in various forms throughout BRITAIN and Ireland (ÉRIU) in the early medieval period, most particularly the strongly tapering Northumbrian variety. Attempts to link these monuments with historical and pseudo-historical figures such as ARTHUR, St PATRICK and Joseph of Arimathea are afforded little credence and are not supported by the descriptions of the crosses, which were apparently engraved with several Anglo-Saxon personal names (for the origins and context of the apocryphal associations with Patrick and Arthur, including the faked 'discovery' of Arthur's tomb at Glastonbury, see Gransden, *Journal of Ecclesiastical History* 27.337–58; also AVALON).

St Joseph's Well, situated in an underground chamber attached to the Lady Chapel, was rediscovered in the early 19th century. Its position suggests it may have been part of the original foundation here, and it has even been surmised that the well could be a Roman construction which later came to form the nucleus of the early medieval abbey (Rahtz, *Book of Glastonbury* 84–7).

Strong traditional associations with Irish saints have been noted with regard to the early monasteries at Glastonbury and Beckery, with St Patrick and St BRIGIT respectively (Finberg, *Irish Ecclesiastical Record* 108.345–61; Robinson, *Journal of the Royal Society of Antiquaries of Ireland* 83.97–9). However, while an Irish connection for these foundations remains possible, at present there is no archaeological evidence to support such claims.

SÓF

Glauberg

The Glauberg is located in the eastern Wetterau in Hesse, Germany. It is a princely seat of the late Hallstatt and Early La Tène periods with associated princely tombs, which have produced some very spectacular finds during excavations in the final years of the 20th century.

§1. topography

The site is a long but rather narrow and flat plateau, rising steeply from the fertile river plains of the Nidder and the Seeme, and therefore an ideal location for a hill-fort. The hilltop itself was fortified with several walls, the main one enclosing the whole flat summit, which was *c.* 600 m in length and 150–200 m wide. On the western edge of the summit, within the area protected by the main summit wall, is a small depression around 25 m in diameter and 3 m deep, which contained a small pool fed not by a spring, but by surface water (until the watertight layers of clay which contained this depression were destroyed by demolition work after the Second World War). A second, much larger, area on the north-western slope of the plateau is protected by an angled wall of several hundred metres' length. This formed an annexe which included the springs on the north-western slope into the fortified area, even though the western end of this annexe wall does not connect to the main summit wall, leaving a relatively wide gap between its end at the base of the steep slope and the summit wall on the top. Several more section walls and ditches, which do not connect, can be found in the surrounding plains. The area defended by the main summit wall and the north-western annexe wall covers an area of roughly 20 ha (48 acres).

§2. history of research

Since the fortifications were quite clearly visible, at first it was thought that the Glauberg was a Roman fortification. It was the historian Johann Philipp Diefenbach (1786–1860) who first identified the fortifications as prehistoric, and an early excavation in 1844 uncovered several medieval finds. Only a chance find of an early La Tène torc fragment shortly before 1906 allowed a tentative dating of the prehistoric fortifications to the La Tène period. Excavations between 1933 and 1939 by Heinrich Richter (1895–1970) made it possible to establish a basic chronology for the Glauberg, providing evidence for settlement activity from the Neolithic onwards to the 13th century AD but, with the finds and documentation accidentally destroyed during the final days of the Second World War, no final assessment of the excavations was published. Further excavations between 1985 and 1998, carried out by the Landesamt für Denkmalpflege Hessen on the summit, mainly concentrated on continuing Richter's work to try to establish a firm dating of the fortifications and the settlement activity on the plateau. It was only in 1994 that the excavations were extended to the area below the summit itself, concentrating on a circular ditch construction—Tomb 1—which was excavated until 1996, when the famous stone statue was discovered, and again in 1999, when Tomb 2, adjacent to Tomb 1, was excavated.

§3. the princely seat

Given that, so far, most of the excavations which took place on the Glauberg have concentrated on the settlement site rather than the burial ground/sanctuary, surprisingly little is known of the Iron Age settlement itself. This is due to the fact that excavations concentrated mostly on the main summit fortifications rather than on the area within.

The fortifications surrounding the main summit, enclosing an area of about 8 ha and closely following the natural edges of the plateau, seem to have mostly been constructed from material recovered from the natural rock in the immediate vicinity, leaving considerable ditches behind them. Since they are built along the edges of relatively steep slopes, no effort seems to have been made to add ditches in front of them. The ditches which can be found in front of them and on the south-western part of the plateau are of medieval origin, when the Iron Age fortifications were partially reused. Although no final conclusion about the construction of these walls has yet been reached—different sections have shown differing features—the

main type of wall construction seems to have been a timber-framed rubble wall with a stone facing. Horizontal timbers were laid at close intervals; in the case of the eldest wall phase on the south-western end of the plateau, these were placed at such close intervals that the fire which destroyed this section burned at such high temperatures as to allow vitrification of the local basalt stones used in the wall construction.

Four entrances into the fortified hilltop have as yet been located, not all of which have necessarily always been operational. The main one always seems to have been the one towards the north-west, the so-called *Stockheimer Pforte*, where the walls form a narrow passage between inwardly curving walls, in a construction called *Tangentialtor* (tangential gate), and was additionally fortified by a gate tower. The *Düdelsheimer Pforte*, roughly in the middle of the southern wall, was constructed in the same way and seems to have been the other entrance to the princely seat. The two other gates, the south-west *Enzheimer Pforte*, now fortified with a medieval tower, and the north-west *Glauberger Pforte*, a simple gate construction, are probably of a later date than the Iron Age fortifications.

The large northern annexe wall, constructed as relatively simple, but quite massive, banks, stretched from the main hilltop fortification to cover most of the northern slopes. It seems to have been erected to include several natural wells within the boundaries of the fortifications, in order to guarantee a water supply for the inhabitants beyond the limited amount of water which could be gathered from the rainwater pool on the summit itself.

Although these rather impressive fortifications enclose an area of about 20 ha within the summit and northern annexe walls, next to nothing is known of the internal structure of the settlement. And, though the fortification is quite commonly referred to as a princely seat, no evidence for this has been found within the fortification itself. Prestige material goods which are usually thought to be diagnostic features for such important settlements, for example, imported Greek pottery or other southern imports, have not been found to date. Thus, the identification of the Glauberg as an early La Tène princely seat is based on the finds from the sanctuary/princely tombs located at the foot of its southern slopes.

§4. THE 'SANCTUARY'

It has long been known that there were significant sections of walls on the southern foot of the Glauberg from an early time, but their function has not been clear until lately, since these (in some places) quite substantial walls do not connect so as to allow any serious use as fortifications. Recent geophysical surveys have uncovered a series of massive ditches alongside, and sometimes extending well beyond, these walls. Together with recent excavations of the princely tombs which are part of that complex, these surveys have made it possible to determine that these walls and ditches, partially delimiting an area of about 1.5 km², formed part of what has now been interpreted as a large early La Tène sanctuary. Identification of the site as a sanctuary is implied by the association of some parts of this ditch construction, especially the massive subcircular ditch, about 50 m in internal diameter, probably resulting from the construction of the tumulus containing Tombs 1 and 2, and the two parallel ditches leading up to the 'entrance' into the area of this tumulus. These parallel ditches, with an average width of about 10 m and a total length of almost 400 m, have been interpreted as a 'processional avenue'. It connected the tumulus with the outer limits of the main wall and ditch system. South of this avenue, some 240 m from the first tumulus, a second tumulus has been located and excavated, within the main ditch system. The connection with the tombs indicates that the sanctuary, for whatever else it may have been used, had a function as a place of some sort of ancestor worship.

§5. TUMULUS 1, TOMB 1

Tomb 1 was found close to the northern edge of Tumulus 1, and measured about 4 × 2.9 m at the original surface. The burial chamber itself, found at a depth of about 2.5 m, measured roughly 2.3 × 1.1 m internally within a pit reduced to about 3 × 2.1 m. Its floor had been covered with leather, and each single grave good wrapped in cloth. The whole burial, which contained several extraordinary finds from the early La Tène period, seems to have been covered with a large cloth. The most remarkable finds are a beaked bronze flagon, finding its closest parallel in the famous beaked flagon from the DÜRRNBERG bei Hallein, Austria, which was found in the south-eastern corner of the burial chamber. It had originally been filled with mead,

and is one of the most impressive examples of early Celtic ART. It is decorated with a group of three figurines at its rim, a sitting human at the upper end of the handle with one human-headed quadruped on either side. The human heads of these flanking beasts are turned back to look at the sitting figure, and their front paws, pointing away from the sitting figure, rest on a human head. A gold torc was found around the neck of the skeleton, an adult man, 1.69 m tall, who died between his 28th and 32nd year. In addition to the pieces mentioned above, the man was equipped with an iron sword on his right side, three spears about 2 m in length with iron heads at his left side, and above them a quiver with three arrows and a wooden bow in a leather cover. A wooden, leather-covered SHIELD with a large iron boss and partial iron rim lay on his chest. Little of his clothing had survived: a leather belt with bronze applications and a belt-hook, as well as shoes with bronze and iron applications. Besides the torc, two gold earrings, a gold bracelet on his right wrist and a gold finger-ring on his right ring finger were found. There were two bronze bracelets lying on his hips, and another, broken bronze bracelet between the sword and the beaked flagon to his right, together with three fibulae.

§6. TUMULUS 1, TOMB 2

Located at the very spot where the avenue met the circular ditch surrounding Tumulus 1, a pit about 2.3 × 1.2 m wide and 1.2 m deep contained a flat wooden box which measured approximately 1.3 × 0.6 m and which probably had been originally covered by cloth or leather/fur. This box contained a creation burial of another adult male, about 30–40 years of age and approximately 1.7 metres tall. He was buried with a bronze flagon which had a tubular spout, again richly decorated in early La Tène style, with a sphinx-like figurine on its lid. The flagon had originally been filled with mead or another drink sweetened with honey. Besides this, the burial also contained an iron sword, a total of four iron spearheads, remains of a leather belt with a bronze belt-hook and applications. A fibula, a number of metal rings, and metal fragments of several more items were also recovered.

§7. TUMULUS 2, TOMB 3

Tumulus 2 was significantly smaller than Tumulus 1, with a diameter of only about 23–4 m, and contained a central burial in a pit approximately 2.7 × 1.4 m. While there seems to have been no wooden chamber or box in the case of this burial, a wooden floor was found about 1 m deep, on which the burial rested, and this may again have been covered by leather or cloth. Like the tombs in Tumulus 1, it was recovered as a whole block and is currently still being excavated under laboratory conditions. X-rays and preliminary results of the laboratory excavations, however, reveal that the burial, like Tomb 1, again seems to be a flat inhumation, containing at least an iron sword, several bronze rings, a gold bracelet and (probably) a gold finger-ring, a richly decorated bronze fibula, a belt-hook and a spearhead.

§8. THE STATUES

Probably one of the most impressive finds from the Glauberg tombs, perhaps even more so than the grave goods, are the fragments of three and one almost intact life-size stone statues. The fragments were found in further ditches north-west of the large circular ditch surrounding Tumulus 1. It is unclear where they originally stood, and why they were later destroyed and disposed of, but their destruction must have happened some time after the tombs were built, since the ditches were already partially filled with sediment when they were deposited in them. All four statues were made from local sandstone, which can be found as close as 3 km from the site.

Statue 1, affectionately called 'Glaubi', is almost complete (only the feet have been broken off), and is, as yet, the most detailed depiction of an early Celtic noble that has come down to us. Its remaining height is 1.86 m, and it depicts a human adult male, clad in composite armour, with overlapping layers of hide or linen giving a patterned impression at the front, and a large back decorated with leaf ornaments connected to the neck- and shoulder-protection which form part of the armour (see ART, CELTIC [1] §4 for photo). The statue also wears an early La Tène sword at the right hip, and holds a shield with a buckle and strengthened rim in the left hand in front of the torso. He wears a torc, a bracelet on his right wrist and a finger-ring on his right ring finger, as well as three bracelets on the left upper arm and a so-called 'leaf crown' on his head. It was probably painted, and mirrors, with the equipment it carries, the burial in Tumulus 1, Tomb 1 (see above). The other three statues seem to have been very

similar in design to Statue 1, even though there are some differences in detail.

Gleann Dá Loch (**Glendalough**) is a monastic site which extends for 3 km along a glacial 'valley' (*gleann*) floor with 'two lakes' (*dá loch*) in the Wicklow Mountains, Ireland (ÉRIU; ÉIRE). Founded by Coemgen (Kevin) in the 6th century, it soon became an important religious centre and, on the feast of Coemgen (3 June), the focus of an important pilgrimage which survived, vestigially, until the 19th century. It is frequently mentioned in the ANNALS, and several saints connected with it appear in the martyrologies. After 835 it is mentioned as suffering from Viking raids. However, Coemgen apart, no illustrious name (nor event nor text nor manuscript) was linked to it until 1162 when (St) Laurence O'Toole/Lorcan Ua Tuathail (its abbot between 1148 and 1154), became the first archbishop of Dublin (BAILE ÁTHA CLIATH). Gleann Dá Loch had become a large diocese in IIII (Synod of Ráith Bressail). In the later 12th century it became a Norman possession, and the see was united with Dublin in 1214. It declined after 1214, but today's extensive ruins are the result of the razing of its surviving buildings in 1714.

Thomas O'Loughlin

Glewlwyd Gafaelfawr is a character in Welsh ARTHURIAN literature. The oldest surviving text in which Glewlwyd appears is the dialogue poem, PA GUR YV Y PORTHAUR? (Who is the gatekeeper?), in which he is stubbornly blocking the entry of ARTHUR, CAI, and a host of the 'best men in the world' into a house (*tŷ*). In the early Arthurian prose tale CULHWCH AC OLWEN, Glewlwyd's rôle is somewhat reversed *vis-à-vis* Arthur: he bars the gate to Arthur's court at CELLIWIG against Arthur's favour-seeking cousin, the young hero Culhwch. As in the poem, there is prolonged contentious dialogue across the barred entry, in which Glewlwyd explains that he is Arthur's gatekeeper on the first day of January (which day this is). Glewlwyd then goes into the court to make a bombastic speech to Arthur explaining that Culhwch was the most handsome and noble looking of any man he had seen in his far-ranging travels throughout the world. It seems that such a scene was central to early Arthurian tradition and that Glewlwyd was integral (his epithet in fact suggests that holding the gate was his function), though Arthur's position with regard to Glewlwyd and the gate was variable. Compare the prolonged flyting at the gate of Tara (TEAMHAIR) in which LUG, the unrecognized champion of the TUATH DÉ, is at first denied entry by the gatekeeper Camall mac Rágail in the tale CATH MAIGE TUIRED ('The [Second] Battle of Mag Tuired') in the Irish MYTHOLOGICAL CYCLE. Arguably, these scenes recollect special rituals and taboos connected with the reassembly of the dispersed population of the tribe (TUATH) on special FEAST days, establishing in full the identity and status of all participants (cf. Koch, ÉC 29.249–61).

In the later Arthurian tales of the TAIR RHAMANT ('The Three Romances'), Glewlwyd is again present as Arthur's gatekeeper. In OWAIN *neu Iarlles y Ffynnon*, it is Glewlwyd who receives guests and travellers to Arthur's court, begins to honour them, and instructs them in the ways of the court. In GERAINT, Glewlwyd is said to act as gatekeeper only at three high festivals; as in *Culhwch ac Olwen*, Glewlwyd's deputies fulfil the function on less auspicious days. It is noteworthy that in the corresponding Arthurian romances of CHRÉTIEN DE TROYES, *Yvain* and *Erec et Enide*, there is no character like Glewlwyd. His presence in the Welsh romances shows native tradition reasserting itself on narratives derived from French.

The meaning of Welsh *Glewlwyd Gafaelfawr* is transparently 'Grey lord of the mighty grasp'. However, the gatekeeper of the Tuath Dé (above) raises the likelihood that popular etymology has reinterpreted **Cafwl*—the obscure Welsh cognate of Irish *Camall* from the attested Celtic divine name *Camulos* (see CAMULODŪNON)—as the meaningful epithet *gafael* 'grasp'.

Glossaries form a significant element of the literary remains of early Ireland (ÉRIU), not least because material which has not survived elsewhere is sometimes preserved as part of a glossary entry. Glossaries have a complicated life cycle and representatives of most stages are attested in Irish (Russell, ZCP 51.88–90).

They seem to start life as *glossae collectae* 'collected glosses', an ancillary document in which interlinear (written between the lines of the main text) or marginal glosses (written in the empty space towards the edge of the page) on a text are gathered together. Such entries typically consist of the lemma, that is, the word in the text, followed by the comment on the word. The content of these glosses is as varied as the interests of the various readers who have glossed the text: some are grammatical, some explanatory or etymological, others will range more widely and develop into exegetical texts in their own right. Given that these collections are text-based, they tend to be in textual order and remain important documents to be read alongside the original text, since they will often preserve better readings than the surviving copies of the main text; in some instances the main text has not survived or survives only fragmentarily (see below). An interesting but largely unpublished group of such glossaries is preserved in Trinity College Dublin MS 1337 (H.3.18), pp. 565–610, where there are glossaries to the *Amrae Coluimb Chille* (Poem for COLUM CILLE), *Félire Oengusso* ('The Martyrology of Oengus the Culdee', published in *Three Irish Glossaries* 124–40; see OENGUS CÉILE DÉ), and to literary texts, e.g. TOCHMARC EMIRE, *De Chophur in Dá Mucado* (see REINCARNATION), *Táin Bó Flidais* ('The Cattle Raid of Flidais'), &c.

A crucial step in the move away from a text-based glossary is alphabetization, usually only by the first letter (that is, all the words beginning with a particular letter would be grouped together, though not organized); the glossary then becomes useful independently of the text. They could then be amalgamated to produce bigger glossaries. An example of such a merged glossary, which has nevertheless retained a specialist focus, is *O'Davoren's Glossary*; it is based on a wide range of legal texts and is extremely important in that it preserves fragments of LAW TEXTS which have not otherwise survived. More general glossaries are *O'Mulconry's Glossary*, *Cormac's Glossary* (SANAS CHORMAIC), and *Dúil Drommma Cetta*. These glossaries seem to have arisen less through the 'hands on' gathering of material from texts and more from the incorporation of smaller glossaries and in some cases parts of glossaries (in that extra material is only found in certain letter blocks); indeed, blocks of material are often found to be common to more than one glossary and can supply important evidence for the growth of glossaries (Russell, ÉC 32.155–61).

While a specialist glossary, such as *O'Davoren's Glossary*, is largely preoccupied with elucidating difficult technical terms and arcane language, the general glossaries contain a vast range of different types of entry, from the single word explanation, rather like a modern dictionary entry, to a more complicated etymological explanation of a word, and even going as far as supplying tales to exemplify the use of a particular word. For their explanations, they often range across several languages, especially Latin, Greek, and Hebrew (regarded as the *tres linguae sacrae* 'three sacred languages' by scholars in the early Middle Ages), but are not averse to using languages closer to home, such as WELSH (Russell, *Hispano-Gallo-Brittonica* 166–82) and even PICTISH. One group of glossaries, represented by the Lecan Glossary, seems to have stood outside this cosmopolitan tradition and tends to offer one-word explanations in IRISH. At a later stage in the tradition, the large glossaries seem themselves to have been quarries for obscure words and treated as if they were texts from which words could be incorporated into other glossaries (cf. the glossary known as H3). Another later development is the growth of metrical glossaries where explanations are couched in the form of stanzas, usually in the *deibide* metre (IRISH LITERATURE [2]).

glosses, Old Irish

The stage of the IRISH language generally called Old Irish is best preserved in a large number of glosses and marginalia in Latin manuscripts, dating from the 7th century to about 900. Though many Irish LAW TEXTS, sagas from the ULSTER CYCLE and KINGS' CYCLES were also written in the Old Irish period, the glosses are of special importance in that they are in contemporary manuscripts, rather than surviving only in copies made in later centuries. For modern CELTIC STUDIES, the glosses were vital for the establishing of early Irish grammar, as demonstrated in R. THURNEYSEN's ground-breaking *Handbuch des Altirischen* (1909), revised and translated into English by D. A. BINCHY and O. J. Bergin (Ó HAIMHIRGÍN) as *A Grammar of Old Irish* (1946). They remain a convenient starting-point for the study of the early Irish language.

The majority of Old Irish glosses are found in manuscripts now kept in Continental libraries, among them Würzburg, Stiftsbibliothek, MS M.th.f.12; Milan, Ambrosian Library, MS C. 301; St Gallen, Stiftsbibliothek, MS 904; and Turin, Biblioteca Nazionale, MS F.vi.24. The Latin text of the St Paul's epistles form the main text for the 8th-century Würzburg glosses; these glosses were written first by the scribe of the main text followed by two gloassatos, the first of these apparently was copying from another manuscript. The Milan glosses are on a Latin commentary on the psalms and are later (9th-century) and generally more linguistically evolved than those of Würzburg, hence earning McCone's designation 'the earliest Middle Irish'; the manuscript was probably produced in Ireland and then came to Milan *via* the Irish foundation at Bobbio. The St Gall glosses are on the Latin grammar of Priscian (Priscianus Caesariensis, *fl.* 491–518) and thus have a double linguistic value, revealing both the Old Irish language itself and early Irish scholars' grasp of linguistic matters. The scribe of the Turin glosses is the same as that of Milan; the text is a fragmentary Latin commentary on St Mark's Gospel. Many glosses illustrate textual or linguistic matters discussed in the manuscripts, and they include direct translations, illustrations and definitions of linguistic terminology (quite extensive in the St Gall glosses). In the Irish MONASTERIES, where the manuscripts containing the glosses would have been copied and kept, the glosses would have been considered an essential part of the text, and a vital teaching and learning aid. The glosses can help to determine the extent of knowledge of Latin and grammatical awareness and the use of linguistic terminology by the early Irish, and also give some indication to what extent classical traditions and literature were known in Ireland (ÉRIU) during the early Middle Ages. In many manuscripts, Old Irish and Latin glosses appear intermingled, reflecting a bilingual intellectual milieu, though modern editions tend to focus on the former, publishing them with little or no context, thus making textual studies difficult and skewing the overview of early medieval Irish learning.

glosses, Old Welsh text on weights and measures

The text known as *De Mensuris Calculi* or *De Mensuribus et Ponderibus* consists of notes on weights and measures glossed in Latin and Old Welsh. The text occurs in the Oxford Bodleian MS Auctarium F. 4. 32, formerly known as 'Oxoniensis Prior', abbreviated Ox. 1 (see GLOSSES, OXFORD). The Old Welsh glosses are probably, but not certainly, contemporary with the early 9th-century main text. Despite its early date, the Welsh is not linguistically difficult, but interpretation is complicated by the specialist and technical nature of the subject, the system of measurements and values used in Late Antiquity, and it is sometimes unclear as to where we are reading the thoughts of more than one commentator, as, for example, in the following passage:

> *Dou punt petguar hanther scribl: prinit hinnoid IIII* aues et *U* qui adicit Luca[m]. *Ni choilam hinnoid amser is cihun argant agit eterin* illud: *ir pimphet eterin di'guormechis Lucas: hegit hunnoid in* [pre]tiu[m] benedictionis. *Hoid hoitou hou bein atar ha beinn cihunn.*
>
> Two pounds four half scruples: that buys 4 birds and the fifth that Luke added. I don't believe that because it is for the same amount of money that that bird goes: the fifth bird that Luke added: that one goes as an additional blessing (i.e. gratis). There would be problems if there were birds that were equal (in price).

Other items of specialist vocabulary include the otherwise unattested *guorennieu* 'ounces' (see GPC s.v. goren) and *hestaur*, pl. *hestoriou*, based on an early BRYTHONIC borrowing of a Latin term for a liquid measure, *sextārius* (cf. Old Irish *sesrae*).

glosses, Oxford

Marginal and between-line notes in Old WELSH occur in two early medieval manuscripts whose principal language is Latin, now in Oxford. Bodleian MS Auctarium F. 4. 34, also known as 'St Dunstan's Classbook', and called by ZEUSS 'Oxoniensis Prior' [Ox. 1], is a composite, part of which is a manuscript of *c.* AD 817, the *Liber Commonei* (The book of Commoneus; see Bishop, *Trans. Cambridge Bibliographical Society* 4.259–60), which includes two texts dealt with in their own articles in this Encyclopedia: the Alphabet of NEMNIVUS and the Latin and Old Welsh text on weights and measures (see GLOSSES). Originally separate from *Liber Commonei* and joined to it at GLASTONBURY abbey in the mid-10th century is a copy with OW glosses dating to the period AD 850×950 of Book I of *Ars Amatoria* (The art of love) by the Roman author Ovid (Publius Ovidius Naso, 43 BC–AD 17). Since *Ars Amatoria* was influential for Welsh love poetry in the later Middle Ages, it is significant that Welsh scholars copied and studied this text as early as *c.* 900. Several common Welsh words appear for the first time in the Ovid glosses: for example, *olin* 'wheel' (gl. rota), *lo* 'calf', *datl* 'dispute, argument', *helgha-ti* 'hunt!', *estid* 'sitting', *liaus* 'numerous', *paup* 'everyone', *budicaul* 'victorious', *gulan* 'wool', *guiannuin* 'spring (season)', *pui* 'what, who', *caitoir* 'female pubic region', *aperth* 'sacrifice' (gl. victima). The 10th-century Bodleian MS 572, known also as 'Codex Oxoniensis Posterior', contains the mixed Latin and Brythonic text DE RARIS FABULIS, discussed in its own article.

JTK

Gododdin is the name of a tribal kingdom in early north BRITAIN and also the title of a famous body of the earliest Welsh heroic poetry, mostly in the AWDL metre, which memorializes the heroes of that kingdom, their allies, and enemies in the 6th century AD.

§1. THE TRIBE, ITS TERRITORY, AND NAME

The tribal name occurs in the *Geography* of PTOLEMY

as Ωταδινοι *Otadini*, where their territory extends from somewhat north of the Forth in the present-day Scottish Lowlands down to the river Wear (Ptolemy's Ουεδρα *Vedra*), now Co. Durham, England. The post-Roman kingdom possibly extended further, down to the river Tees, in which case its frontier anticipated that of the Anglo-Saxon kingdom of Bernicia (Brynaich), which succeeded it. The tribe's territory thus included the massively fortified 40-acre (16 ha) Roman-period hilltop site at Traprain Law in Lothian, the find site of a spectacular hoard of late Roman silver, which has been ambiguously interpreted either as payment to the tribesmen as allies of Roman Britannia or loot taken in hostile raiding. Traprain Law was apparently abandoned in the 5th century.

Welsh *Gododdin* (Old Welsh *Guotodin*, Middle Welsh *Godoδin*, a form proved metrically many times) implies that the correct ancient form was *Votādīni*. *Fotudain* also occurs as an early Gaelic borrowing of the name. Early Irish *fothad* 'support' is perhaps the cognate word, and a legendary ancestor *Fothad* occurs in genealogies related to Fiannaíocht (see Rivet & Smith, *Place-Names of Roman Britain* 508–9). An actual connection between the Votādīni and the mobile war-bands of early Ireland (Ériu) cannot be ruled out.

Manau Guotodin occurs in sources of the Old Welsh period as the name of a district on the river Forth which included Stirling (OW Iudeu) and is said to have been the country of the origin of Cunedda and his sons, who figure as founders of Gwynedd's first dynasty.

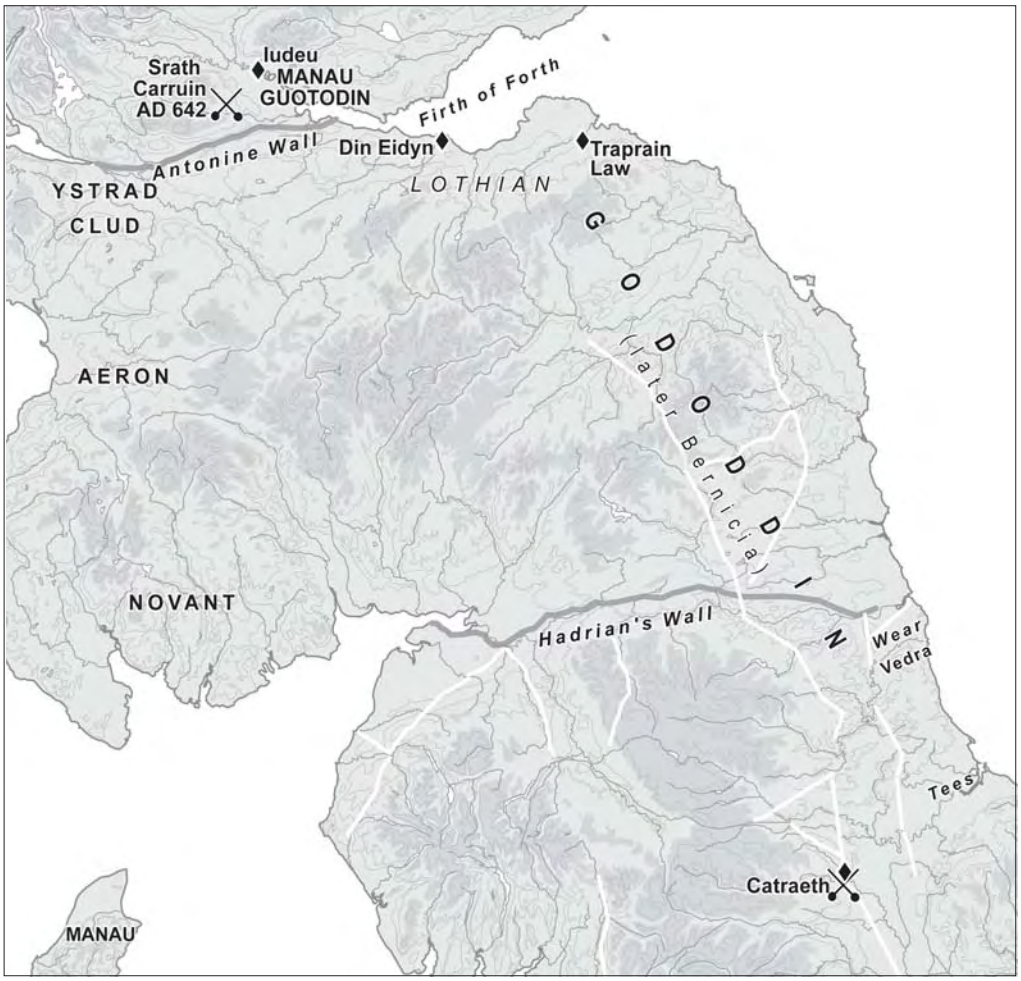
§2. the poetry

The verses called *Y Gododdin* are broadly synonymous with the contents of the 13th-century Welsh manuscript known as the Book of Aneirin (*Llyfr Aneirin*). The article on Llyfr Aneirin discusses the manuscript's contents and the partially overlapping threefold division of the text into the most innovative Text A, the more conservative Text B1, and the most archaic Text B2. Within the manuscript itself, Texts A and B1 attribute the elegies to the *cynfardd* (early Brythonic poet, pl. cynfeirdd) named Aneirin. Aneirin's historicity and 6th-century date are established by the Memorandum of the Five Poets in Historia Brittonum.

In all three texts, most of the verses are elegies commemorating warriors (individually or collectively) who came from Gododdin and sustained heavy losses in a battle at Catraeth, most probably Catterick, now in North Yorkshire, England. Another area of agreement between the three texts is that the greatest praise is lavished upon the hero Cynon, who is identified, rather than with Gododdin itself, with Aeron and Novant, both probably in what is now south-west Scotland (Alba). The genealogies place this Cynon in the Cynwydion dynasty of Strathclyde (Ystrad Clud). As well as the repeated allusions to an ill-fated expedition against Catraeth, another pervasive theme is that of a year-long feast of wine and mead, which the warriors shared before the battle and which is located repeatedly at Din Eidyn, i.e. Edinburgh (Dùn Èideann). The Gododdin war-band and its feast are many times accompanied by the descriptive term *mynyδawc* 'mountainous, of the mountain(s)' and, twice in Text A, by the alliterative *mynyδawc mwynvawr* 'mountainous luxurious'. *Mynyδawc* has been taken as the name of the chief, but is never clearly used in the corpus as a name, or even as a noun, and therefore could alternatively be a general descriptive epithet for the hilltop court, its feasting hall, and war-band. As well as Cynon, other figures were possibly leaders: one in the archaic Text B2 is called *Ut Eidin Uruei* 'Yrfai, lord (or supreme magistrate) of Edinburgh', explicitly presented as a battle commander and leader of men, though of humble birth, and, interestingly, his father had an English name, *Golistan* (i.e. *Wolstan*). Also mentioned (in Text A) is *Golygawt Godoδin*, said to have prepared the feast, arranging the ransom paid for Catraeth's land; since his epithet is the kingdom's name, he may have been its hereditary king (cf. Maelgwn Gwynedd).

§3. wider importance

Although the Gododdin certainly has the status of a literary classic in Wales (Cymru) today, it is unclear how famous it was in medieval Wales. Cynon and Golygawt are among very few of its heroes who were drawn into Arthurian literature. Connections to the genealogies are rare. In the 12th-century court poetry of the Gogynfeirdd, the works of Cynddelw and, most unmistakably, the *Hirlas* (Long-blue [drinking horn]) of Owain Cyfeiliog, there are intentional echoes of the *Gododdin*'s themes and vocabulary. More recently, the corpus has inspired poetic eulogies for the dead of



Gododdin, Din Eidyn, and Catraeth

the Falkland Islands' War of 1982, and the most compelling scene of the 2003 film *Dal: Yma/Nawr* ('Still: Here/Now') was the blood-spattered semi-nude actor reciting the *gwŷr a aeth Gatraeth* (men [who] went to Catraeth) series of verses from Text A.

The Gododdin poetry has a central importance in Celtic studies for three reasons: it is a sizeable specimen (over 1000 lines) of some of the earliest Welsh language and literature; it deals with important, though otherwise unknown, people and events in the virtually ahistorical period of British history, during which England and Wales emerged following the dissolution of Roman Britain; it conveys an absolutely relentless vision of the heroic ethos, in which the hero gives lethal prowess and, ultimately, his own young life, retrospectively 'paying for his mead' (*talu medd*), that is, for the life of luxury which his lord had provided him, and prospectively earning undying fame in the songs of the bards.

Further articles in this Encyclopedia, not yet noted as cross-references above, which deal with aspects of the *Gododdin*, include the following. On the survival of pre-Roman tribal kingdoms into post-Roman times, cf. Dyfed; Dumnonia. On Cunedda and his sons, see also Ceredigion. On the name *Manau Guotodin*, cf. Gofannon fab Dôn and GOIBNIU are mythological smiths in early Welsh and Irish literature respectively. The name formations are related—Welsh *gof*, Old Irish *gobae* 'smith'—but not identical, thus **Gobannonos* with the GALLO-BRITTONIC divine-name suffix *-onos* vs. **Gobeniū*. The two are often compared and regarded as cognate figures by modern writers.

Gouannon mab Don figures among the difficult tasks (see ANOETH) set by Ysbaddaden Bencawr for his prospective son-in-law in CULHWCH AC OLWEN: he is required to sharpen the iron implements of the mythical ploughman Amaethon mab Dôn. Like several of the children of DÔN, he plays a part in MATH FAB MATHONWY, slaying Dylan, the mysterious aquatic child of his sister ARIANRHOD. There is an allusion to *Caer Gofannon* (The stronghold of Gofannon) in one of the mythological poems in LLYFR TALIESIN, and a reference to *seith gwaew Gowanon* (seven spears of Gofannon) in the poem *Ymddiddan Myrddin a Thaliesin* (Dialogue of Myrddin and Taliesin); evidently he was thought of as the maker of famous weapons, like Goibniu.

Smith gods appear in ROMANO-BRITISH iconography. A mould from Corioritum (Corbridge, Northumberland, near HADRIAN'S WALL) depicts a god carrying tongs and a hammer over an anvil-like altar (Ross, *Pagan Celtic Britain* 251–2).

The ***Gogynfeirdd***, or 'rather early poets', as they have been known since the 18th century, comprise all of the poets who composed WELSH POETRY in AWDL and ENGLYN metres between *c.* 1137 and *c.* 1400. Most particularly, they are the Poets of the Princes (*Beirdd y Tywysogion*) of the period *c.* 1137–1282, so called because most were professional court poets and most of their surviving poems are eulogies and elegies for Welsh princes of the last century and a half of Welsh independence (ending in 1282/4). However, the appellation obscures the fact that several of the poets were not professional court poets—at least one of them was himself a prince, and another was a Franciscan friar—and the fact that their poetry includes religious and personal lyrics as well as formal bardic verse. It is rather the epoch in which they wrote, as well as their poetic conventions, that define these poets as a group. The *Gogynfeirdd*, however, include not only the Poets of the Princes but also poets who continued to work in the tradition of *awdl* and *englyn* metres for some time after the end of Welsh independence. These later *Gogynfeirdd* are also referred to as *Beirdd yr Uchelwyr*, or 'Poets of the Nobility', although the latter term also encompasses some of the CYWYDDWYR, who composed in metres which became more popular in the later Middle Ages.

From the 12th and 13th centuries some 12,600 lines of verse have survived, attributed to thirty-two *Beirdd y Tywysogion*, who are very unevenly represented. Poems ascribed to the great 12th-century poet CYNDDELW Brydydd Mawr account for 30% of the total corpus, while of several other poets' work only a single poem survives. It is more difficult to enumerate the later *Gogynfeirdd*, or to quantify their poetry, since a number of them composed both traditional *awdlau* and *englynion* and poems in the newer CYWYDD metre as well. The

principal medieval manuscript sources of the poetry of the Poets of the Princes are the Red Book of Hergest (Llyfr Coch Hergest), the Hendregadredd Manuscript and, to a lesser extent, the Black Book of Carmarthen (Llyfr Du Caerfyrddin).

The poetry of *Beirdd y Tywysogion* is most closely associated with north Wales (Cymru). More than a third of the surviving verse praises, laments, threatens or beseeches one or another of the princes of Gwynedd from Gruffudd ap Cynan (†1137) to Llywelyn ap Gruffudd (†1282), and a third of those poems are directed to Llywelyn ab Iorwerth (Llywelyn Fawr †1240). Tradition associates Gruffudd ap Cynan with the development and regulation of poetry and music in Wales, but there is little evidence that such tradition antedates the 16th century. The pre-eminence of Gwynedd in 12th- and 13th-century poetic culture probably has more to do with its political pre-eminence in Wales during that period. There is, however, poetry associated with south Wales as well, and especially with the court of the Lord Rhys (Rhys ap Gruffudd †1197) and his sons. One medieval chronicle describes an assembly convened by the Lord Rhys in Cardigan (Aberteifi) in 1176, at which poets and musicians competed for 'chairs'. A few tantalizing traces of ymrysonau, contentions between bards for pre-eminence within a particular court, or perhaps within the bardic order, survive in the poetry itself, but they fail to give us anything like a clear picture of the processes of poetic competition. South Wales is better represented in the surviving *Gogynfeirdd* poetry of the 14th century than it is by *Beirdd y Tywysogion*, but even in the later period, northern poetry predominates.

Meilyr Brydydd (*fl.* ?1100–post 1137), who celebrated the career of Gruffudd ap Cynan, is generally reckoned to be the first of the Poets of the Princes. A few earlier and anonymous poems have survived, but what survives from the period 1137–1282 is a torrent of verse by comparison. We may debate whether bardic eulogy was widely composed before 1137 but rarely recorded in writing. Nevertheless, the assurance with which the Hendregadredd Manuscript, a focused collection of the poetry of the Poets of the Princes, opens with Meilyr's *marwnad*, or lament, for Gruffudd ap Cynan, suggests that at least by the time that this book was being written at Strata Florida (Ystrad-fflur), *c.* 1300, a distinctive tradition was understood to have begun with Meilyr.

At least one of Meilyr's sons and two or three of his grandsons were court poets as well and, like the Welsh princes, they are said to be descendants of Cunedda Wledig. Thus, the genealogies of the poets attest the social status which was associated with their work. Meilyr and his sons are the only Welsh 'bardic family' of which we have certain knowledge, but familial links between various other poets have been suggested, so that it is thought to have been customary for poetry to be regarded as a hereditary profession. The surviving Anglesey (Môn) place-names Trefeilyr and Trewalchmai very likely commemorate grants of land to Meilyr and his son, the poet Gwalchmai ap Meilyr. The practice of rewarding court poets with grants of land was likely to have fostered the tendency to transmit the rôle within a family. The great and prolific poet Cynddelw was impugned in his own time for not being the scion of a bardic family, a fact which suggests that a tradition of poetry as a hereditary craft was already well-established by the mid-12th century. At the same time, it suggests that a talented and ambitious upstart could succeed as a poet in the courts of the most powerful rulers in Wales and, indeed, Cynddelw himself may well have been the recipient of a grant of land by Owain Gwynedd (†1170). There are some poets of whom we know so little that it is impossible to reconstruct even a sketchy outline of their careers. However, the case of a poet such as Peryf ap Cedifor, all of whose surviving verse laments the deaths of his own brothers and of the prince Hywel ab Owain Gwynedd, their foster brother, suggests that some of the poets may not have been professional court poets but rather aristocrats acquainted with the conventions of the verse.

Many of the *Beirdd y Tywysogion* associated themselves, exclusively or at least principally, with a single prince, and the association between the princely and the poetic families certainly endured for several generations in the case of Meilyr's family. He sang for Gruffudd ap Cynan, and his son Gwalchmai composed eulogies for Gruffudd's son, Owain Gwynedd, and his grandsons, Dafydd and Rhodri ab Owain. The terms *pencerdd* (chief of song) and *bardd teulu* (household bard) are used in the law texts and elsewhere. Although nowhere precisely defined, they are thought to refer to offices in a prince's court—those of official bard to the prince himself and of a poet associated

with the prince's retinue, respectively. It seems quite likely that Gwalchmai succeeded his father, Meilyr, as *pencerdd* to the Gwynedd princes. The evidence is complicated, however, by the fact that Gwalchmai is also credited with a eulogy and an elegy for Madog ap Maredudd, prince of Powys from 1132 to 1160. This case exemplifies the difficulty we have in understanding the relationships of poets and patrons during this period. In some cases, a poet's praise of another prince infuriated a patron, and necessitated a certain degree of self-abasement. In an 'exaltation' (*arwyrain*) of Owain Gwynedd, for example, Llywelyn Fardd acknowledges that he has been away from Gwynedd, at the court of Madog ap Maredudd in Powys, and asks Owain to receive him back into his good graces—recognizing the value of the services of a good poet! This reminds us that poets held some of the cards in this game, since it served a prince's ambition to attract as many highly regarded praise poets as possible. Owain Gwynedd, for example, is the object of praise by four of the *Beirdd y Tywysogion*, although his court poet was Cynddelw Brydydd Mawr, the greatest and most prolific of the poets. The situation would seem to have been complicated by the growth of the state in late 12th- and 13th-century Wales, with the consequence that an independent professional order, in which a *pencerdd* held the highest status, was increasingly, though never entirely, assimilated to the court hierarchy, and the *pencerdd* regarded as an officer of the court.

A poet might seek reconciliation with an alienated prince in a poem called a *dadolwch*. In none of the extant examples, however, is it possible to discern precisely the nature of the poet's offence. Llywelyn Fardd's *dadolwch* to Owain Gwynedd is described in the Red Book as occasioned by Owain's suspicion that Llywelyn had seduced his wife, yet nothing in the poem hints at such a situation. And, interestingly, the poet's prayer for readmission to the prince's good graces is often combined with direct exhortation: there is a curious overlap of the *dadolwch* with a kind of poem which would seem to be its opposite—the *bygwth* or 'threat', in which it is the destructive satire practised by the Continental Celtic bards that is implicitly threatened. A poem entitled *Dadolwch Llywelyn ap Gruffudd*, attributed to Elidir Sais, offers undisguised admonition as well as pleading for reconciliation. Both *dadolwch* and *bygwth* illustrate strikingly the situation of the court poet in 12th- and 13th-century Wales: while pretending to the privilege of counselling the ruler by right of inspiration, wisdom, and status, a privilege that might well have had its origin in the rôle of the ancient Celtic bards and druids, in the *realpolitik* of medieval Wales they were heavily dependent upon his favour for their safety and well-being.

A poet associated with a particular prince might also serve him in various other capacities. There is firm evidence that Einion ap Gwalchmai was one of Llywelyn ab Iorwerth's ministers, and other poets may have been similarly involved in the legal and administrative affairs of their princes. In general, the poets were closely associated, especially in Gwynedd, with what has been termed the 'ministerial élite' of 12th- and 13th-century Wales, members of a class of learned, privileged, and powerful professionals.

Formally, their poetry employs a dozen or so of the *awdl* and *englyn* measures which would come to be included among the twenty-four 'strict metres' of cerdd dafod. *Awdl* measures are often mixed within a single poem, and occasionally different *englyn* forms are combined as well. The poems vary enormously in length, from a few lines to three hundred. In longer *awdlau*, extended passages with a single end rhyme are very common; the very famous elegy for Llywelyn ap Gruffudd by Gruffudd ab yr Ynad Coch sustains a rhyme on *-aw* throughout its 104 lines. In general, it may be said that the poets make liberal use of alliteration, internal rhyme, and the line- and stanza-linking device known as *cymeriad*, although there are, of course, differences from poet to poet. Both the vocabulary and the syntax of medieval Welsh court poetry are famously difficult; some words, especially compounds, occur only once or twice in the written records of Welsh. The 12th-century verse, in particular, is often characterized by strings of nouns in uncertain and unstable relationship to one another. This syntax is rich in fertile ambiguity, but resistant to paraphrase. The *Gogynfeirdd* of the 13th and 14th centuries make freer use of finite verbs, but their poetry is still rich in epithets which employ a noun plus genitive noun as often as they do a noun plus adjective construction.

The poetry is rooted in earlier Welsh poetry. Nowhere is this more striking than in the *Hirlas* of Owain Cyfeiliog, which not only makes reference to the events commemorated in the Gododdin of

Aneirin, but echoes the earlier work in its structure—the celebration of many individual warriors, in its imagery of feasting, and even in many of its phrases. Other poets too make reference to the legendary *Gwŷr y Gogledd*, or 'Men of the North', to the Cynfeirdd, and to *Trioedd Ynys Prydein* (see triads), demonstrating that they value tradition very highly. It is also a highly conventional poetry, in which not only metres, themes, and images, but even exact phrases, recur in the work of various poets. In the qualities that they praise in their princes, too, *Beirdd y Tywysogion* look back to the heroic age. They celebrate noble lineage, martial prowess and protection of their people, and generosity—especially to poets—above all.

Allusion to the enemies, conquests, and battles of a prince invites use of the poems as sources for Welsh political history. However, they are eulogies rather than chronicles, and we can more reliably read the poems in conjunction with other sources in order to enhance our understanding of a particular moment in Welsh history than consider them as primary evidence. Having said this, the poetry can offer a real insight into the history so sketchily recorded in the major sources. Cynddelw's perspective on the disintegration of Powys following the death of Madog ap Maredudd in 1160 is a case in point.

Poetic praise extends to the praise of God in lyrics which combine bardic arrogance with a contrite spirit; praise of saints which focuses on their ecclesiastical foundations; and praise of women which incorporates elements of *amour courtois* (courtly love) as it was being elaborated in Provençal poetry of the same period. There is an ongoing debate about the degree to which these Welsh *rhieingerddi* may be indebted to the poetry of the troubadours. Certain features of the poems, however, such as the figure of the *llatai* or love messenger and that of the jealous husband, *yr Eiddig*, were to be very important elements in the poetry of the 14th-century *Cywyddwyr*. The poems by Gwalchmai ap Meilyr and the poet-prince Hywel ab Owain Gwynedd, identified as gorhoffedd, celebrate the life of the poet-persona—his conquests in love and war, his love of natural beauty and of particular places—in ways which suggest the personal narratives of *cywyddau* by Dafydd ap Gwilym and his contemporaries. So too, Hywel ab Owain Gwynedd's short poems in praise of women share some of the spirit of Dafydd's poems to Morfudd and Dyddgu. The continuity of the poetry with some of what precedes it in the Welsh tradition is thus offset by evidence that this poetry represents new literary energies and cultural practices. It is equally possible to read the Poetry of the Princes as a newfangled phenomenon, an aspect of changes in Welsh culture attendant upon the growth of powerful principalities in Wales and the Norman incursions of the 12th century, or as the flowering of an archaic common Celtic institution of bardic poetry.

The poems in traditional style addressed to the Welsh gentry by the later *Gogynfeirdd* have often been taken as reflections of the poets' adaptation to reduced cultural circumstances, and so they are. Yet it is important to bear in mind the fact that such poems to the *uchelwyr* survive alongside poems to princes from the period before Llywelyn's fall as well. For the most part, the poetry of the later *Gogynfeirdd* comprises the same mix of eulogy, religious lyric, love poetry and occasional verse as does that of the *Beirdd y Tywysogion*. A substantial number of short satirical poems attributed to these poets survive, however, while there are none among the extant work of *Beirdd y Tywysogion*. This raises questions about whether invective satire, the counterpart of eulogy, existed in early Welsh literary tradition, as it seems to have done among the Continental Celts of antiquity and as it certainly did among the Irish.

Goibniu, as smith of the Tuath Dé, is often listed among their personnel in the group of craftsmen, as in Lebar Gabála Érenn ('The Book of Invasions', recension 1, §71; cf. §§72, 98): 'Goibniu the smith and Luichne the carpenter and Créidne the artisan [bronze-smith] and Dian Cécht the physician'. As well as the legal tract *Bretha Déin Chécht*, which does survive (Binchy, *Ériu* 20.1–66), there is reference to *Bretha Crédine, Bretha Luchtaine,* and *Bretha Goibnenn* (Judgements of Créidne, Luchtaine, and Goibniu), which do not (Kelly, *Guide to Early Irish Law* 269). In Cath Maige Tuired ('The [Second] Battle of Mag Tuired' §122), Goibniu, Luchtha, and Créidne joined together in what resembled a modern assembly line to mass-produce swords, spears, and javelins (*dénam calc 7 gaí 7 sleg*) in preparation for the climactic struggle against the Fomoiri. Ruadán, the son of Bríg (see brigit) and the Fomorian king Bres, attempts to kill Goibniu who, though wounded, kills young Ruadán with his own spear (*Cath Maige Tuired* §125). In the Early Modern Irish *Altromh Tige Dá Medar* (The nurturing of the house of two milk vessels; see mythological cycle §3), the feast of Goibniu (*fleagh Goibhneann*) is said to protect the Tuath Dé from old age and death. As *an Gobbán Saor* the resourceful mason, the figure of Goibniu has remained popular in modern Irish folklore. For Goibniu's Welsh analogue and the etymology of the name, see Gofannon.

Goídel Glas was a major figure in Irish legendary history, especially in the origin legend of the Irish language. Said to be a Greek, he belongs to the legendary stage when the ancestors of the Irish had yet to arrive in Ireland (Ériu) and wandered the world encountering places, peoples, and events documented in the Bible and classical literature. In Auraicept na nÉces ('The Scholars' Primer'), he was the first speaker of Goidelic (Old Irish *Goídelg*), from whom the language is said to have taken its name. Even in the canonical Old Irish stratum of the *Auraicept* identified by Ahlqvist (*Early Irish Linguist*), we see a synthesis of earlier versions of the creation tale of Irish. Goídel's associate, Fénius Farsaid, figures as its co-founder at Babel (see féni); for linguistic reasons discussed in the entry on Gaelic, the legend cannot be older than the 7th century. His father has two names; thus Goídel is both Goídel mac Aingin and Goídel mac Etheoir. In Lebar Gabála Érenn ('The Book of Invasions'), Goídel (Middle Irish *Gaedel*) regularly receives the epithet *Glas* 'green, blue, young' and is said to be the son of Nél (a namesake of the Uí Neill dynasty of early historical times), and Fénius is said to have been Nél's father:

> . . . Gáedel Glas, from whom descend the Gaels, was born to Scotta, daughter of Pharaoh. It is after her that the Gaels are named 'Scots', so it is said:
>
> > The Féni were named after Fénius,
> > vigour without restraint;
> > the Gaels from generous Gaedel Glas,
> > the Scots from Scotta.
>
> It is Gáedel Glas who fashioned Gaelic from the seventy-two languages. (Koch & Carey, *Celtic Heroic Age* 229)

In the Scottish History of John of Fordun (*c.* 1300–85), the eponymous ancestor of the Gaels was the Greek 'Gaythelos' who married the Egyptian princess Scota and then founded the town of Brigantia (see brigantes) in Galicia, from which Ireland and Scotland (Alba) were colonized.

Goidelic is the specialist linguistic term for the closely related sub-family of Celtic languages to which Irish, Scottish Gaelic, and Manx belong. The history and linguistic properties of Goidelic are discussed in the articles on Irish and the Celtic languages. For the etymology of the word *Goidelic*, see Gaelic. In linguistic discussions, the everyday term *Gaelic* can mean essentially the same thing as *Goidelic*, but it has a wider range of cultural meanings as well. The term *Goidelic* is sometimes preferable to *Gaelic* to make a sharper linguistic focus explicit and to avoid some common popular misconceptions, such as the idea that *Gaelic* and *Celtic* are exactly synonymous. Goidelic/Gaelic is in fact a smaller subgroup within Celtic. Likewise, Q-Celtic is a subset of Celtic which includes Goidelic, but is more extensive than Goidelic, since it also includes Celtiberian; there are Q-Celtic traces in Gaulish as well.

The oldest stage of Goidelic attested—predating the loss of Old Celtic unaccented syllables—is usually called Primitive Irish and is reflected in the ogam inscriptions of the 5th and 6th centuries. The Old Irish of the period *c.* 600–*c.* 900 ad is as yet virtually devoid of dialect differences, and may be treated as the common ancestor of the Irish, Scottish Gaelic, and Manx of the central Middle Ages and modern period; Old Irish is thus sometimes called 'Old Gaelic' to avoid confusion. Beyond the narrowly linguistic frame of reference, aspects of literature and oral tradition shared between two or more of the three Goidelic languages may be termed a *Goidelic/Gaelic* phenomenon; for example, the heroic tales and songs of Fiannaíocht and folk traditions concerning the otherworld beings of the síd may be accurately labelled 'Goidelic'.

Golasecca culture is the term used for an Iron Age archaeological culture, dating roughly from the 8th to the 5th centuries bc, located at the southern end of the trade route across the Saint Gotthard pass and probably one of the main connections between the west Hallstatt-culture populations north of the Alps and the populations of the Po valley in northern Italy. The Golasecca culture covers roughly the area between this pass, Lake Maggiore and Lake Como and the Po valley, and shows some strong links to Hallstatt material. It seems likely that the culture acted as one of the main links for early Etruscan–Celtic trade across the Alps, leading to strong influences being exerted in both directions. Examples of this are four-wheeled wagons found in Golasecca burials (see vehicle burials), which show strong links with Hallstatt four-wheeled wagons, but, at the same time, the iron tires, wheel hubs and other pieces of metalwork demonstrate influences from central Italy. Various bronze sheet-metal vessels, including situlae, pilgrim flasks, and Etruscan beaked flagons, as well as various Golasecca exports north of the Alps, are clear evidence for wide-ranging trade links which extended from central Italy to Champagne, the Moselle and middle Rhine valleys, and, less frequently, even beyond that to western France and to Northern Germany (*I Leponti: Symposium Locarno 2000*; De Marinis, *Celts* 93–102).

The Golasecca culture is of special interest because the oldest inscriptions in a Celtic language come from it—the Lepontic inscriptions, written in the so-called Lugano Alphabet (Lejeune, *Lepontica*). The earliest of these inscriptions date back to the 6th and 5th centuries bc and the latest from the 2nd and 1st centuries bc, with a considerable gap of evidence and very few inscriptions from the 4th and 3rd centuries.

The strong Hallstatt influences from the 7th century bc onwards have led several scholars to speculate about an early Celtic migration into this area. This would fit in with the record given in Livy (5.34) of the first Gauls moving into the Po valley area in the time of the mythic king Tarquinius Priscus, but others have stressed the continuing local traditions to discount such migrations. It is thus far from clear how a Celtic language came to be spoken in the Golasecca culture, whether by military conquest, casual peaceful immigration of small groups of speakers of a Celtic language which intermixed with a local population, or just as a language spoken by those who crossed the Alps in either direction for the purpose of trade slowly replacing whatever local language that had been spoken in the area before.

The area occupied by the Golasecca culture is roughly consistent with the Celtic peoples of the

Location of the Golasecca culture

Insubres, Oromobii, and Lepontii mentioned in classical literature (see GREEK AND ROMAN ACCOUNTS), which has led various scholars to identify the population of the Golasecca culture with one or all of these historically attested ethnic groups (*I Leponti: Symposium Locarno 2000*; De Marinis, *Celts* 93–102).

La **Gorge-Meillet**, also known as Somme-Tourbe (Marne, France), is the site of a well-known chariot burial, a double tomb excavated in 1876 by E. Foudrignier. It remains one of the richest VEHICLE BURIALS so far discovered among the numerous examples found in the Champagne region. Its reconstruction can be seen in the Musée des Antiquités Nationales in Saint-Germain-en-Laye, near Paris. The main inhumation consists of a large trapezoid pit hollowed into the chalk soil and contains a two-wheeled CHARIOT, placed between the hollowed-out sides. The bandaging and metal fittings of the hub of the chariot have survived. The deceased was laid out on the floor of the chariot, surrounded by copious burial gifts of early LA TÈNE style, dating from the second half of the 5th century BC. The complete equipment of the Celtic warrior (a sword in its iron sheath, an iron javelin and an iron knife, a bronze helmet of the Berru type with the characteristic high, conical form) was accompanied by jewellery: circular buttons, a fibula decorated with coral, and a gold bracelet on the left wrist of the corpse. There was also pottery, of which a red vase with a small pedestal stands out, and, in a bowl, the quarter of a pig, deposited as provisions for the afterlife. Two iron *phalerae* (circular plates for holding straps in place) decorated with wrought-iron work and bronze bits and pieces of harness encrusted with coral indicate the richness of the horse trappings.

About one metre below the corpse, at the level of the wheels, a second corpse was buried in the same position.

The helmet from the chariot burial of La Gorge-Meillet

gorhoffedd

There are only two poems which occur with the title *gorhoffedd* and both appear in the 14th-century Hendregadredd Manuscript. They are the work of two known 12th-century poets: Gwalchmai ap Meilyr (*fl. c.* 1132–*c.* 1180), who was *pencerdd* (chief of song) in the court of Owain Gwynedd, and Hywel ab Owain Gwynedd (†1170), who was son and heir to Owain Gwynedd and one of the two known poet-princes of Wales (Cymru). The exact meaning of the word *gorhoffedd* is difficult to comprehend, as is its use as a title or category for the two compositions. This difficulty is compounded by the absence of the word *gorhoffedd* either as a title or a classification elsewhere in the early Welsh poetic tradition, and it is also unclear whether the two poems were given the title by the poets themselves or whether it was added later by the scribe of the manuscript (T. Gwynn Jones, *Rhieingerddi'r Gogynfeirdd* 9).

The word *gorhoffedd* is a compound of the common noun *hoffedd*, which has the various meanings of 'boast, vaunting, vain-glory; delight, pleasure, fondness and love', and the intensifying prefix *gor-*, meaning 'over-, super-, hyper-; very, exceedingly; high'. Ifor Williams originally proposed that the word *hoffi* 'praise' had taken on the secondary meaning of 'boast', and thus translated the word as 'boasting' (BBCS 2.39–41). However, the meaning of the compound appears to be more akin to 'unrestrained boast or great delight' and it is this definition which most accurately describes the tone of both compositions. Although boasting appears in each composition, the poems can perhaps be best described as expressions of intense delight and wonder at the world in which the poet finds himself.

The subjects of the two poems have traditionally been seen as those of nature, love, and war, but this seeming concordance belies the individual nature of each composition. Hywel ab Owain's composition, which is often seen as a combination of two separate poems, can be divided into two distinct parts, the first of which is devoted to praising the kingdom of Gwynedd and is, in this regard, similar to the type of poem known as *laudes urbium*. The second half of the composition appears to be a tongue-in-cheek praising of the various women whom the poet knows and the consequences of his amorous overtures towards them. The *gorhoffedd* by Gwalchmai ap Meilyr, however, is very different from that of Hywel ab Owain. The bulk of the poem is devoted to the praise of the poet's patron, Owain Gwynedd, and is, in this respect, very similar to traditional poetry of this type. It is in this praise of his patron that the poet boasts of his own prowess in battle when defending the kingdom of Gwynedd. However, the poet combines this praise of his patron and himself with a description of the beauty of the land around him and his great love for his wife, Genilles.

The inclusion of women as a topic in both poems has sometimes led to the categorization of these as *rhieingerddi* and as having been composed under the influence of the troubadour lyrics of Provence

(T. Gwynn Jones, *Rhieingerddi'r Gogynfeirdd* 40–3), but there is evidence which contradicts this attribution. However, there is some evidence which suggests that both poets may have used contemporary Latin sources as an inspiration for their own compositions. Although largely defying traditional categorization as regards subject matter, the two poems have been composed in a standard metre (AWDL) and belong squarely in the Welsh poetic tradition (see WELSH POETRY).

Gormfhlaith (†947) was an Uí Néill princess, the daughter of Flann Sinna (†916), whose life, due to her stunning series of dynastic marriages, was legendary and became the subject of several poems, some of which are actually ascribed to her. Gormfhlaith was apparently married to, or at least associated with, various kings: CORMAC UA CUILEANNÁIN, king and bishop of CAISEL MUMAN (†908), Cerball mac Muirecáin (†909), king of Leinster (LAIGIN), and Niall Glúndub (†919) of the Uí Néill. Gormfhlaith's connection with Niall Glúndub in particular has given rise to the suggestion that she was used as a figure to promote Niall's claims to the kingship of Tara (TEAMHAIR) and hence to the high-kingship of Ireland (ÉRIU). However, it has recently been argued that Gormfhlaith should not be seen as a sort of living representative of the mythic literary sovereignty goddess (Ní Dhonnchadha, *Seanchas* 229), as previously suggested (Mac Cana, ÉC 7.76–114, 356–413, 8.59–65; Trindade, ÉC 23.143–56), but that she might rather be an example of the ideals for noble women in medieval Ireland, whose main purpose in life was to marry. The name *Gormfhlaith* is an Old Irish compound signifying 'blue-sovereignty' or, if etymologically *Gorm-laith*, 'blue/dark-ale', and is part of the basis of the interpretation of her character in light of the SOVEREIGNTY MYTH.

Gorsedd Beirdd Ynys Prydain (The assembly of the bards of the Island of Britain)

§1. INTRODUCTION

The Gorsedd is an association of Welsh poets and musicians allegedly dating from the time of King ARTHUR and his court at Caerleon (CAERLLION). (On the etymology of the Welsh word *gorsedd* 'throne, ceremonial mound, ritual gathering', see ARBERTH; SÍD.) The modern incarnation was founded by Iolo Morganwg (Edward WILLIAMS, 1747–1826) in 1792, and linked to the EISTEDDFOD movement in 1819.

Iolo Morganwg belonged to a coterie of local Welsh-language poets in Glamorgan (MORGANNWG) in the 1770s, who believed strongly in the need for a cultural association to give prestige to neglected areas such as south Wales (CYMRU) and to raise the standing of Welsh literature in general. During his visits to London (Welsh Llundain) he learned about the Druid Universal Bond, founded by John Toland in 1717, and the Ancient Order of Druids, founded by Henry Hurle in 1781. He was also impressed with the resourcefulness of his London Welsh friends, especially those in the Society of Gwyneddigion, founded in 1770 (see EISTEDDFODAU'R GWYNEDDIGION), and by the fresh vigour in the eisteddfod movement in north Wales from 1789 onwards. He expanded his original vision of an association of Morgannwg bards to a much broader institution for all Welsh enthusiasts, claiming a kind of apostolic succession from the ancient DRUIDS.

§2. EMERGENCE

In 1791 the Gwyneddigion Society announced that a 'Gorsedd of Bards' would be held one year later on Primrose Hill in London. It was indeed there that the first ceremony was held by Iolo Morganwg and his friends on 21 June 1792, though the first detailed description only dates from the second Gorsedd, held there on 22 September of the same year. Iolo was

Gorsedd Beirdd Ynys Prydain at the Aberpennar Eisteddfod, 1946

accompanied by well-known compatriots, such as the harpist Edward Jones, the scholar William Owen Pughe, and Dr David Samwell. The earliest Gorsedd held in Wales itself is recorded for 21 May 1795 on Stalling Down (Bryn Owen), Cowbridge (Y Bont-faen). Although wartime regulations during the French Wars (1792–1806) precluded holding most public meetings, by 1798 Iolo had organized several more gatherings all over Wales, and a Gorsedd at Dinorwig (Caernarfonshire/sir Gaernarfon, north Wales) in 1799 was held in secret.

§3. connection with the eisteddfod

Bardic activities were not resumed until 1814, but the *nod cyfrin* or 'mystic sign' of the three bars, which is still used, appeared in Iolo Morganwg's hymnbook, composed for Welsh Unitarians, in 1812. Following the Napoleonic Wars, Iolo Morganwg and his friends lost no time: a Gorsedd was held at Pontypridd, Glamorgan, on 1 August 1814. By 1818 several Cymreigyddion or Cambrian societies were ready to organize regional eisteddfodau, and in 1819 Iolo persuaded the Cambrian Society of Dyfed, meeting for the eisteddfod at Carmarthen (Caerfyrddin), to hold a Gorsedd at the same time, the first such meeting associated with an eisteddfod. Iolo Morganwg had devised ceremonies and a liturgy, had a circle of small stones to symbolize Stonehenge, and awarded ribbons to each order: green for ovates, blue for bards, and white for druids. Today, the different orders are symbolized by the colour of the gowns worn at the ceremonies. Iolo Morganwg's son, Taliesin ab Iolo, followed in his father's footsteps as an organizer of the Gorsedd, but each eisteddfod and Gorsedd in the period from the 1820s to the 1850s was held on an *ad hoc* basis. During the Liverpool (Welsh Lerpwl) eisteddfod of 1840, the Gorsedd bards processed in sacerdotal white robes, but such rituals paled into insignificance in comparison with the colourful Llangollen eisteddfod of 1858, where the Gorsedd ceremonies were arranged by the High Church cleric and antiquarian John Williams, known under his bardic name of Ab Ithel. In the Mold Eisteddfod of 1873 the Gorsedd ceremonies were also colourful and particularly prominent.

In 1880 the National Eisteddfod Association was founded in order to provide a permanent basis for the

organization of Eisteddfod Genedlaethol Cymru (The National Eisteddfod of Wales), but it was not until the Wrexham Eisteddfod of 1888 that a permanent organization for the Gorsedd—Cymdeithas yr Orsedd (The Gorsedd society)—was set up and that the first archdruid (Welsh *archdderwydd*), David Griffith 'Clwydfardd', was appointed. The fact that Welsh was declared to be the sole language of the Gorsedd acted as a strong counterpoise to the Anglicizing tendencies within the National Eisteddfod itself in this period.

By the end of the 19th century, the ceremonies had been re-choreographed and their outward appearance stabilized. The robes and regalia with which present-day audiences are familiar were designed by the artists Sir Hubert von Herkomer and T. H. Thomas, who was known as 'Arlunydd Pen-y-garn'. The Cardiff (Caerdydd) Eisteddfod of 1899 was a pan-Celtic eisteddfod, with additional ceremonies for the delegations from Celtic countries, some of which have become part of the modern opening ceremony of the Gorsedd (see pan-celticism). The Bretons, for example, had forged a special sword made in two halves, to be fixed together whenever Welsh and Breton bards met, the idea of which was based on a poem written for the Abergavenny eisteddfod of 1838 by Alphonse de Lamartine (see eisteddfodau'r fenni).

The Bretons emulated the Welsh by forming their own Goursez in 1902, and the Cornish followed suit in 1928 with their Gorseth. In 1908 a delegation from the Gorsedd of Patagonia in Argentina (Welsh Ariannin) was received in Wales.

§4. the gorsedd in the 20th century

During the 20th century, Gorsedd ceremonies gradually became more solemn—W. S. Gwynn Williams, for example, set Iolo Morganwg's Gorsedd prayer to music in 1927. During his two archdruidicates and his long career as registrar of the Gorsedd, Albert Evans Jones, 'Cynan', redesigned the ceremonies, adding, for instance, the children's floral dance for the Machynlleth Eisteddfod of 1937. The modern Gorsedd has about 1300 members, some of whom are honorary, while others have joined by passing the examinations of the Gorsedd Board. It is particularly prominent in the proclamation ceremonies one year ahead of each National Eisteddfod, as well as in the ceremonies of the crowning of the bard, the chairing of the bard, and, more recently, the ceremony of the award of the prose medal. Until the year 2000, the archdruid was chosen from among the crown or chair winners, but since then the office has been open for election by all Gorsedd members. In 2001 Robyn Léwis, a holder of the prose medal, was chosen as the 27th archdruid since 1888, but the first to be elected according to the new rules.

§5. criticism of the gorsedd

From 1896 onwards, the very basis of the existence of the Gorsedd came under attack from a new generation of Welsh scholars led by John Morris-Jones, who claimed that it sprang from the overheated imagination of Iolo Morganwg and had no basis whatever in Welsh history. A second wave of criticism was initiated by Griffith John Williams, who had made his name as the uncoverer of the forgeries of Iolo Morganwg in the 1920s. By the late 20th century, however, the Gorsedd had been accepted as a Welsh national institution which was a product of the imaginative mythologizing of the late 18th-century Romantic movement (see romanticism).

Gorseth Kernow (Cornish Gorsedd)

The Gorseth in Cornwall (Kernow) has been in many ways the central institution in the Cornish Celtic revival (see language [revival]). Gorseth refers to both the ceremony and the body of bards which make up the assembly. Based on the Welsh ritual (see gorsedd beirdd ynys prydain), the first Cornish Gorseth was held at Boscawen Un stone circle in west Cornwall on 21 September 1928. This location was chosen because of the belief in a reference to it being a ritual site in the Welsh triads (*Beisgawen in Dumnonia*).

Gorseth Kernow, 1985

The establishment of a Gorseth in Cornwall was seen as a primary aim of the Cornish revival from its early days. It is possible that revivalists argued for a Gorseth as early as the 1880s. Since its origins in 1901, the Celto-Cornish Society (Cowethas Kelto-Kernuak) had campaigned for the establishment of a Cornish Gorseth. In the late 1920s Henry Jenner, who was already a member of the Breton Goursez, and Robert Morton Nance designed the format of the Cornish version of the ceremony, under the direction of the Welsh archdruid. With the support of the Old Cornwall Societies, in 1928 Jenner was made the first Grand Bard or Barth Mur of the Cornish Gorseth, with Nance as his deputy. When Jenner died in 1934, Nance succeeded him and he remained Grand Bard until 1958.

The actual ceremony and structure of the Gorseth differs little from its Welsh counterparts. However, there is only one grade, bard, which Jenner and Nance believed would best reflect the Cornish motto of 'One and All'. All bards were to wear a blue robe with a black and gold headband, symbolizing the colours in the arms of the Duchy of Cornwall. In the early 1930s Arthurian elements were added to the ceremony by Nance to symbolize further the relationship between King Arthur and Cornwall. These remain the most distinctive ceremonial elements to date.

Today, the Gorseth functions as an annual focus of Cornish revivalists, and serves to promote the Cornish language through literary competitions and by awarding those who have become proficient in the Cornish language with 'bardships'. The Gorseth in recent years has also become a way for Cornish activists to secure links with the Cornish diaspora through cultural exchange by awarding bardships to Australians, Canadians, and Americans (among others) who promote Cornish culture in their home countries (see emigration). The Cornish Gorseth has been an extremely contentious symbol of the Cornish revival. Opponents have argued that it is ineffective, invented (and therefore non-Cornish), and outdated. Other critiques have addressed the continuing ideological influence of the Welsh Gorsedd, and the ceremonial relationship with esoteric druidic orders (see also druids).

Since 1928, the Cornish Gorseth has awarded over 1000 bardships. It is notable for being the first of the Brythonic Gorsethow to appoint a woman, Ann Trevenen Jenkin, as Grand Bard.

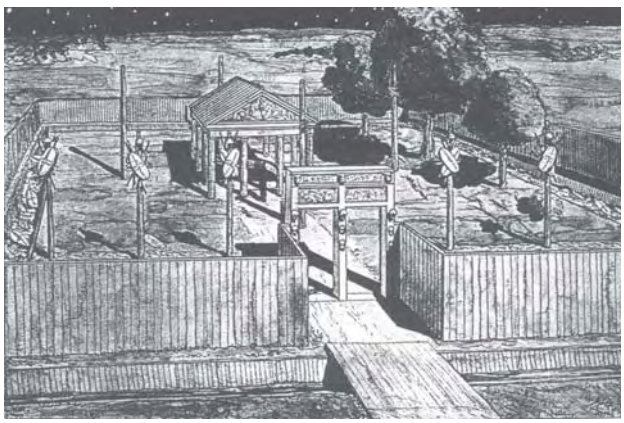
Amy Hale

Gournay-sur-Aronde is an important Celtic and GALLO-ROMAN sanctuary situated at 'Le Parc', Oise, France. Gournay was excavated from 1977 to 1984 by J. L. Brunaux. It is unique as a RITUAL site from the pre-Roman Gaulish period which provides an insight into certain sacrificial and votive practices. Located on the southern slope of the Aronde valley, the site overlooks some natural water sources and a swamp, which are about 50 m away.

Activity on the site begins in the Early LA TÈNE period (4th century BC), during which a primitive enclosure was built. The so-called *fosse aux vases* (ditch of the vases), which was discovered in the north of the sanctuary, dates from this initial building phase. In the 3rd century BC a Middle La Tène sanctuary followed the ground plan of the earlier structure, and the first period of intensive activity at the sanctuary occurred during the 3rd and 2nd centuries BC.

Reconstruction of the sanctuary at Gournay-sur-Aronde



The sacred area is limited by a rectangular enclosure measuring 40 × 40 m. The ditch which forms the enclosure is 2.5 m wide and 2 m deep, and has an entrance on the eastern side. A powerful fence fortified it on the outside. In the centre there successively developed a series of aligned pits and ditches, together with structures framed on posts where the remains of a building can be identified. These structures were used to hold the remains of animal SACRIFICES. The great central ditch, where most of the animal remains have been found, is interpreted as a sacrificial pit.

In addition to the remains of bones, both of humans and animals, a large number of weapons has been discovered in the main ditch. These had been first exposed as trophies, particularly at the porch which denoted the entrance to the sanctuary, so as to be seen by worshippers as they approached the sanctuary. In all, more than 200 armed warriors were sacrificed and displayed at this place. In addition to the evidence for arms and animals, ritual activity is evidenced by the permanence, regularity, and constancy of the deposits, which extend over a period of about one and a half centuries (roughly 250–100 BC). The pattern of continuous deposition suggests that the warriors and weapons were sacrificed at regular intervals and not merely irregularly as occasional spoils of war. These relics, eventually ruined by time and by man, were afterwards thrown into the ditch, which also served as a repository for animal carcasses. Sheep and pigs were slaughtered and consumed on the site, but there is no evidence for cattle and horses.

The Middle La Tène ritual activity was interrupted at the end of the 2nd century BC and was only taken up again during the Augustan period (27 BC–AD 14) with the construction of the Romano-Celtic FANUM. During the Gallo-Roman period a small settlement developed around the sanctuary. The fanum was used until the 4th century AD, when its abandonment probably coincides with the triumph of CHRISTIANITY over paganism in the Empire.

Goursez Gourenez Breiz-Izel (The Gorsedd of the peninsula of Lower Brittany)

The creation of the first Breton neo-druidic society is rooted in the context of the assertion of Breton regional identity at the end of the 19th century and in the links with Welsh neo-Celts. Following the foundation of the Breton Regionalist Union in August 1898, some of its members were invested as bards at the Cardiff National Eisteddfod (Eisteddfod Genedlaethol Cymru) in August 1899. Some of this group were anxious to establish a society in Brittany (Breizh) capable of playing a comparable rôle to that played by gorsedd beirdd ynys prydain (The assembly of the bards of the Island of Britain) in the defence of Welsh cultural identity—formally supporting poetry and other Breton-medium cultural activities. They met at Guingamp (Gwengamp) with other militants on 1 September 1900. There, Goursez Gourenez Breiz-Izel (The Gorsedd of the peninsula of Lower Brittany) was founded and placed under the patronage of the Archdruid of Wales (Cymru). This society, whose ceremonies were inspired by the Welsh example, took an active rôle in the Breton language (revival) movement, especially during the first quarter of the 20th century. The principal individuals involved were Jean Le Fustec (bardic name Ab Gwillerm, later Lemenik), Grand Druid from 1900 to 1903; François Vallée (Ab Hervé); Yves Berthou (Kaledvoulc'h), Grand Druid from 1904 to 1933; and François Jaffrennou (Taldir), Grand Druid from 1933 to 1956. They were succeeded by Pierre Loisel (Eostig Sarzhaw), then Gwench'lan Le Scouézec (1980), current Grand Druid of the Goursez, which today is called Breudeuriezh drouized, barzhed, ovizion Breizh (Brotherhood of druids, bards, and ovates of Brittany). Schisms have given rise to more esoteric societies: Kredenn Geltiek (Celtic belief, 1936) and Kenvreuriezh prederouriel an drouized (The philosophical collegium of druids, 1975).

Gourvil, Francis (1889–1984), a Breton scholar of place-names and personal names, is perhaps best known for his work on La Villemarqué and the Barzaz-Breiz, based on his doctoral thesis. Gourvil was highly critical of La Villemarqué's claim to have represented authentic folk-songs. The book was published before La Villemarqué's field notebooks came to light, studied by Donatien Laurent in *Aux sources du 'Barzaz-Breiz'*, and consequently Gourvil's analysis, while broadly accurate, must be considered in conjunction with later research.

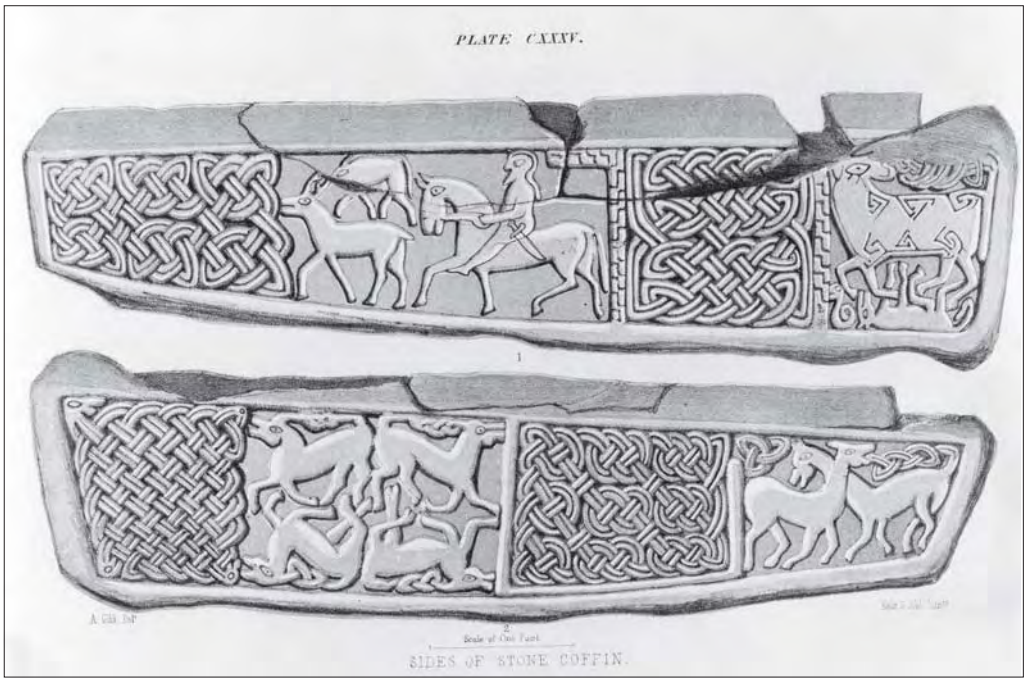
Govan is one of the oldest Christian sites in western Scotland (Alba) and, for a time, it was probably the principal royal centre in Strathclyde (Ystrad Clud), the last Brythonic kingdom in 'Scotland'. The clearest evidence of this former period of greatness is found in Govan Old Parish Church, which occupies a raised, oval enclosure which has protected it from encroachment by the shipyards and tenements. The church houses Scotland's third largest collection of early medieval sculpture, testimony to its political and religious importance during the 10th and 11th centuries. Govan was a large, wealthy parish, which exceptionally ran across a major river to embrace the royal estate of Partick on the north shore of the Clyde.

The meaning of the name Govan is disputed, but it probably derives from the Brittonic *gwo-/go-* 'small' and *ban* 'hill', which is thought to refer to the now demolished Doomster hill. An 18th-century engraving shows it as a flat-topped mound towering over contemporary cottages. Measurements made before its demolition record that it was about 45 m in diameter and stood about 5 m high. Although there is no contemporary medieval evidence regarding the function of the mound, antiquarian tradition suggests that the Doomster hill was a moot-hill or court hill. If so, this was a place of



Drawing of relief sculpture on stone sarcophagus from Govan

great political significance as the setting where the king came and exercised his legal authority. The stepped form can be paralleled at moot-hills at two other major Viking Age centres: the Tynwald on the Isle of Man (Ellan Vannin) and the Thingmote (Assembly moot-[hill]) of Dublin (Baile Átha Cliath; see Driscoll, *Innes Review* 49.95–114).

Small-scale archaeological excavations at Govan Old Parish Church have demonstrated that the oval boundary is ancient and that the elevation of the churchyard was caused by the rising ground level within the original bank and ditch. Radiocarbon dates show that the boundary ditch was dug no later than the 9th century. The site of the early medieval church has also been identified to the east of the modern church, along with traces of a very early Christian cemetery which goes back to the 5th century. Excavations have also exposed a road from the east, which linked the original entrance to the churchyard with the Doomster hill (Driscoll, *Stone of Destiny* 77–83).

The forty-seven pieces of sculpture known from Govan are strongly suggestive of royal patronage, and the majority are massive gravestones of the 10th and 11th centuries (Ritchie, *Govan and its Early Medieval Sculpture*). There are four monumental crosses, a strong sign that it was a major church. The oldest gravestones—the so-called hogbacks—are a type of house-shaped monument found in those areas of Norse settlement in northern England and southern Scotland, also known from the Rathdown area of southern Dublin, which formed part of the Norse zone of control. The Govan hogbacks are the largest known examples and date from around AD 900–1000. While the collection of cross-inscribed gravestones is by far the largest in Scotland, the most impressive sculpture is undoubtedly the monolithic sarcophagus, which is decorated with interlaced panels and features a mounted warrior at the hunt. The sarcophagus is widely considered to be a masterpiece of British sculpture, and its imagery invites a royal interpretation.

In the absence of historical records relating to the period of Govan's prominence, interpretation of the site's significance rests upon the archaeological evidence and later historical associations. The abundance of sculpture and the Doomster hill suggest that Govan was the political centre of the kingdom in the centuries which followed the demise of Dumbarton (sacked in AD 870) and the rise of Glasgow cathedral (founded AD 1114–18). Twelfth-century sources indicate that Partick was an estate of the royal house of Strathclyde, which provides a political context and source of patronage for this extraordinary collection (Macquarrie, *Medieval Scotland* 1–19). The character of the early sculpture and the form of the moot-hill both indicate Norse influence, and it is not unreasonable to suppose that there was a significant Scandinavian presence in the court.

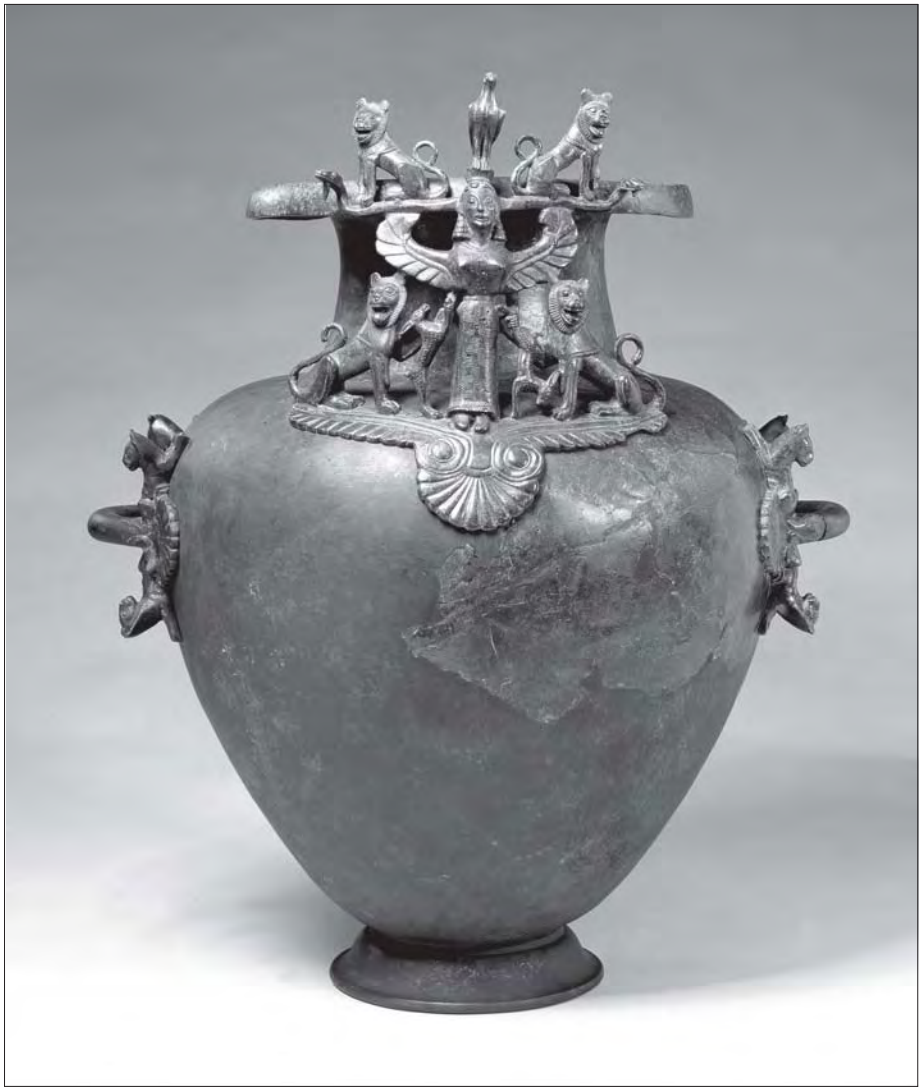
Grächwil is a site around 10 km north of Bern in Switzerland. The finds at Grächwil, including a bronze hydria (water jar) found during the excavation of two tumuli, are pertinent to CELTIC STUDIES, since the site belongs culturally and geographically to the western HALLSTATT region, which was probably the milieu of one or more of the CELTIC LANGUAGES during this IRON AGE period, roughly the 6th century BC. Grächwil also provides evidence for the infiltration of classical Greek influence into the culture of the aristocratic status and display of the Celts of the ALPINE region.

§1. THE SITE

On a small hill east of the road from Grächwil to Schüpfen, two large Hallstatt tumuli were excavated in the year 1851. The first tumulus had a diameter of about 30 m and was about 5.5 m high, though it was probably much larger in antiquity. In the uppermost layer, two secondary burials from the post-Roman migration period were found, which contained a sword, a knife, and other pieces of metal. In the lower levels, the remains of several burials were found, protected by layers of quarried stone. The central burial contained the remains of the iron tyres of several (probably four)



The bronze hydria from Grächwil

wheels and the iron attachments of a CHARIOT, and, close to these, the fragments of the bronze hydria.

The second tumulus was slightly smaller than the first. Although its exact dimensions have not been properly recorded, it was constructed in the same way as the first tumulus, but it only contained material which was considered insignificant by the 19th century excavators. As such, the second tumulus cannot be dated precisely, though it is likely that it was a Hallstatt tumulus like the first one, dating from the Hallstatt Iron Age (*c.* 750–*c.* 475 BC).

§2. THE BRONZE HYDRIA

The hydria, a bronze jug, has been called 'the most important and valuable piece of Greek art ever found on this side (i.e. north) of the Alps' (Bloesch, *Antike Kunst in der Schweiz* 23) and has been identified as a work in the Spartan style, most probably produced in the years around 580 BC in the Greek colony of Taranto in Puglia, Italy (Jucker, *Antike Kunst* 9.41–62).

Only the upper parts, mainly the two side handles and the central handle, and parts of the rim, shoulder, and body, are preserved. Most of the lower half and the foot were lost. The foot of the present-day reconstruction was fashioned on the model of other Italian bronze jugs. Furthermore, one of the two side handles is fragmented, and its reconstruction has been completed on the model of the other, which is completely preserved. As reconstructed, the hydria has two decorated side handles and an especially elaborate middle handle, all cast in bronze.

The middle handle is a very complex cast, showing a winged female goddess, identified as Πότνια Θηρῶν *pótnia thērôn* (queen of wild beasts). She wears a long, decorated dress, belted at the waist, and a crown; she holds a hare in each of her hands, one by the front legs and the other by the rear legs. She is accompanied by lions, with one of the paws of each lion resting at her side. On her crown an eagle is perched, and two snakes are attached to the sides of her head, with yet another lion sitting on each snake.

The hydria is of special interest since it documents wide-ranging trade connections from the central Alpine area to the Mediterranean in the later Hallstatt period (Hallstatt D, *c.* 600–*c.* 475 BC), thus fitting well into the picture of other precious imports known from aristocratic Hallstatt burials.

The **Grail** became, in the High Middle Ages, one of the most popular themes of the international literature concerned with the adventures of ARTHUR and his heroes (see ARTHURIAN LITERATURE [6]). More recently, it has become the subject of rekindled interest from the 19th century onwards, figuring centrally in some famous creative works, such as Wagner's opera *Parzifal*, Tennyson's *Idylls of the King*, T. S. Eliot's *Waste Land*, and numerous films, including prominence in the action and titles of *Indiana Jones and the Holy Grail* and the spoof, *Monty Python and the Holy Grail*. The Old French word *graal* (from Late Latin *gradalis*), meaning a kind of serving vessel, was first used in an Arthurian context by CHRÉTIEN DE TROYES in his unfinished *Perceval* or *Conte del Graal* of *c.* 1181, where it is described as golden, of fine workmanship, and covered with rare and costly precious stones. Chrétien's *graal* is part of a mysterious procession, preceded by a bleeding lance and candelabra, and contains a mass wafer, which miraculously sustains the life of an old king as his only sustenance. However, the broader significance and origin of the vessel are not explained in *Perceval*. In the corresponding Welsh tale PEREDUR, there is again a mysterious procession with a bleeding spear and a vessel carried by two maidens, but the word *graal* or Welsh *greal* are not used; rather the vessel is called *dyscyl vawr* (great dish), and it contains not a mass wafer, but a severed head. In the *Joseph d'Arimathie* or *Le roman de l'estoire dou Graal*, written in the period 1191×1202 by the Burgundian poet, Robert de Boron, the Grail is explained as the vessel of Christ's Last Supper, later used by his disciple Joseph of Arimathea to collect his blood at the crucifixion, and then brought by Joseph to the 'vales of AVALON' in BRITAIN (cf. DAROGAN YR OLEW BENDIGAID). Although there were various literary elaborations of the Grail in the 13th century—in Wolfram von Eschenbach's *Parzival*, for example, the Grail is a stone which produces savoury foods—Robert de Boron's version proved especially influential.

In Celtic studies, the Grail is of special interest at two chronological levels: first, that of possible Celtic and pre-Christian origins, and then, in texts from the later Middle Ages onwards which are adaptations or translations into the Celtic languages of Old French and Middle English stories of the Grail. For the earlier horizon, several writers, most prominently Loomis, have seen the forerunner of the Grail in the wondrous cauldrons of Celtic tradition, especially those which had miraculous life-sustaining or restoring qualities, such as the *peir dadeni* (cauldron of rebirth) of Branwen. It is especially suggestive that Arthur and his heroes are involved in quests for otherworldly cauldrons in two of the earliest Welsh Arthurian texts: *peir pen Annwfyn* (the cauldron of the chieftain of the Otherworld) in the poem Preiddiau Annwfn, and the cauldron of Diwrnach Wyddel (Diwrnach the Irishman) in the prose adventure Culhwch ac Olwen. The pearl-adorned cauldron in the poem has the significant property of not boiling food for a coward or a liar, which is reminiscent of the Grail's function as the supreme moral test for Arthur's questing knights. Within the archaeological record, the appearance of cauldrons and other fine metal vessels, especially in watery depositions (e.g. Llyn Fawr), shows that they had ritual significance as well as an everyday function in the Late Bronze and Iron Ages.

Pivoting on the striking disparity between the mysterious processions in *Perceval* and *Peredur*, namely the severed head in the Welsh *dyscyl*, studies by Sterckx and Leslie Jones have more recently seen aspects of the pre-Christian Celtic head cult reinterpreted in the Grail legends.

The later medieval responses in the Celtic languages to French and English Grail literature are discussed in several articles in this Encyclopedia. For *Peredur*, see also Tair Rhamant. For the 14th-century Welsh *Y Seint Greal* (The Holy Grail) or *Ystoryaeu Seint Greal* (Stories of the Holy Grail), see romances and Welsh literature and French, contacts; for the text's earliest manuscript, see Hengwrt. The 15th-century Irish *Lorgaireacht an tSoidhigh Naomhtha* (Quest for the Holy Grail), which is based on a lost Middle English version, is discussed in Arthurian literature [1] and Irish literature [1] §11. Several of the Continental Grail romances, as well as their possible Celtic antecedents, are discussed in Arthurian literature [6].

Gramadegau'r Penceirddiaid (The grammar books of the master-poets) is a text in Middle Welsh, a collection of tractates (Welsh *traethodau*) on various aspects of Welsh versecraft. It was compiled by Einion Offeiriad (Einion the Priest) *c.* 1320. The collection included sections on: i. orthography; ii. syllables and diphthongs; iii. the parts of speech, syntax and figures of speech; iv. the traditional metres; v. metrical faults; vi. how various persons should be praised; vii. how a professional poet should behave; viii. triads relating to versecraft. Within ten years, a clerical colleague of Einion, Dafydd Ddu of Hiraddug, a native of Flintshire (sir y Fflint), produced a fairly superficial but highly interesting revision of Einion's treatise. By an accident of preservation, this survives in a manuscript fully seventy years earlier than the earliest surviving version of Einion's work. Towards the middle of the 15th century, the professional poet Dafydd ab Edmwnd revised some of the traditional metres and aspects of cynghanedd, perhaps for the eisteddfod at Carmarthen (Caerfyrddin) *c.* 1450, and his revision was incorporated into a version of the grammar compiled by his pupil Gutun Owain. Gutun's grammar includes a new treatment of the grammatical material, as well as a first sketchy section on *cynghanedd*. Finally, around 1570, the professional poet Simwnt Fychan compiled his *Pum Llyfr Cerddwriaeth* (Five books of the art of poesy), which included much new material,

particularly a full section on *cynghanedd*, involving some rearrangement of Einion's original scheme.

Grannus, or Apollo Grannus, is one of several Gaulish deities equated with Apollo as part of the pattern known as INTERPRETATIO ROMANA, which assimilated Celtic deities to Graeco-Roman polytheism. He appears to have been a god of healing, and his aid was sought in many parts of the Roman Empire. Only in one inscription from Bonn is he directly invoked as Grannus. In the other 17 inscriptions the name Grannus is given as an epithet or byname of Apollo. INSCRIPTIONS pertaining to offerings to this god are found in the Rhineland; Musselburgh, near Edinburgh, Scotland (Baile nam Fiasgan, DÙN ÈIDEANN, ALBA); Brigetio, Hungary; Astorga, near the Galician border of Castile and Leon, Spain; Västmanland, west of Stockholm, Sweden; and Ephesus, on the Aegean coast of Turkey. The Latin name of the German city Aachen, *Aquis Granni* (at the waters of Grannus), indicates the presence of a sanctuary to Grannus, probably a sacred spring or well from Romano-Celtic times, though this place-name is only attested from AD 765 onwards (Ross, *Pagan Celtic Britain* 473).

The female consort of Grannus was SIRONA or Đirona, who is mentioned together with him in many inscriptions. In some of these examples, Sirona's consort is called simply Apollo, without the byname Grannus. *Sirona* is definitely a Celtic name, meaning something like 'star-goddess' (cf. Welsh *seren* 'star'), but the etymology of *Grannus* is less certain. A connection with Irish *grian* 'sun' would explain the equation with Apollo and align nicely with Sirona, but is not a smooth match linguistically. The Irish heroine's name *Gráinne* is another possible cognate, but is itself of uncertain etymology (see TÓRUIGHEACHT DHIARMADA AGUS GHRÁINNE).

Greek and Roman accounts of the ancient Celts

§1. INTRODUCTION

From the fragmentary records of the Greek geographer HECATAEUS of Miletus, writing on Mediterranean GAUL just before 500 BC, to the late Latin literature of the collapsing Roman Empire in the early 5th century AD, there is an unbroken, if uneven, account of the Celts in classical literature. Many of the earliest sources are no more than brief notes on Celtic towns and tribal movements, but, beginning with the 4th-century BC Athenian writers, a picture of a people and their way of life slowly begins to emerge. Often, the picture is an unflattering portrayal of war-mad, WINE-loving barbarians who delight in burning prisoners alive, or, conversely, a noble, brave, and unspoiled race still possessing the admirable virtues long lost in the Mediterranean world. The point of view of a particular Greek or Roman writer on the Celts may follow either extreme or lie somewhere in the middle, depending on the era, the motivations of the writer, and the particular Celtic group described. With the ancient Celts occupying lands from Ireland (ÉRIU) and the IBERIAN PENINSULA to eastern Europe and Asia Minor over a period of a thousand years, it is a grave mistake to expect perfect continuity in culture, religion, or any other aspect of their lives. It is likewise a mistake to expect the Gauls of CAESAR's day to be simply earlier versions of the medieval Irish and Welsh. And yet, just as there are cultural similarities among ancient Celtiberians,

British, and Galatians, there are also many common points between early Gauls and later insular Celts (see CELTIBERIA; GALATIA). Some of these features may be due to borrowing, cultural universals, or even coincidence, but when, for example, various manifestations of the god Lugus or the DRUIDS are found from ancient Spain and Gaul to medieval Ireland and Britain, we should acknowledge the common origins of such features, and use them to further Celtic studies of all periods.

§2. NAMES OF THE ANCIENT CELTS

The people we call the Celts were known by a variety of names in the classical world. From the late 6th century BC they were called Κελτοί *Keltoi* by the Greeks, but, beginning in the late 4th century BC, they were more frequently known as Γαλάται *Galatai*, a term which superseded, but did not replace, *Keltoi*, and which was not restricted to the Celtic Galatians of Asia Minor. The Romans generally called the Celts *Galli*, whether they were located inside or outside Gaul, but they clearly knew that these tribes were the same as those described by the Greeks as *Keltoi*. Some writers used hybrid forms such as Celt-Iberian, Celto-Ligurian, and Celto-Scythian to describe tribes of mixed Celtic descent. Other authors occasionally confuse the Celts and Germans, especially when a Celtic tribe was located east of the Rhine or a German tribe on the western bank, though most writers clearly distinguish the two peoples. The Irish and Britons, most commonly known as *Hiberni* and *Britanni*, respectively, were never called Celts, though the Roman historian Tacitus recognized the close similarity in culture between the British and Gauls (*Agricola* 11), and between the Irish and British (*Agricola* 24).

§3. THE CELTIC LANDS

The location and expansion of the ancient Celts in Europe and into Asia Minor are documented in classical literature from the earliest surviving notices. Hecataeus noted Celtic lands and towns in Mediterranean Gaul by 500 BC (see MASSALIA), while Herodotus placed them near the Danube 70 years later (*History* 2.33, 4.49), though his geographical knowledge of western Europe, as he admitted (3.115), was none too secure. The Greek geographer Pytheas of Massalia visited the Atlantic coast of north-west Gaul in the 4th century BC and recorded Celtic place and tribal names (Strabo, *Geography* 1.4.5). By the time of Caesar's invasion in the first century BC knowledge of the Celtic tribes in Transalpine Gaul was much more secure, as a result of increased trade, military contacts, and first-hand reports such as those by the Greek scholar Posidonius (*c.* 135–*c.* 50 BC). His ethnographic writings contain the most detailed information in antiquity on the Celts of Gaul, including descriptions of geography, warfare, poets, and religion. Unfortunately, his writings survive only in usage by later authors, including Athenaeus (*Deipnosophistae* 4.151–4, 6.246), Diodorus Siculus (*Historical Library* 5.25–32), Strabo (*Geography* 2.5.28, 4.1–4), and Caesar (*De Bello Gallico* 6.11–28), who also drew heavily on his own years among the Gauls.

The earliest written records of Celts south of the Alps include the mid-4th-century BC *Periplus* of Pseudo-Scylax, who places a Celtic tribe which remained behind after a raiding expedition at the head of the Adriatic (17–19). At roughly the same time, Aristotle notes the sack of Rome by the Gauls (Plutarch, *Camillus* 22.3). Polybius (*History* 2.17) and Justin (*Epitome of the Philippic Histories* 20.5; see TROGUS POMPEIUS AND JUSTIN), both writing well after the fact, emphasize desire for new lands and internal discord as motivating factors for the Celtic migration into northern Italy, while Pliny (*Natural History* 12.2) and Livy (*Ab Urbe Condita* 5.33) cite a developing appetite for southern goods. The Italian Gauls evoked fear and dread in Roman hearts for over 150 years, until the decisive Celtic defeat at Telamon in Etruria in 225 BC (Polybius 2.27–31).

Herodotus writes that Celts lived beyond the Pillars of Heracles in the 5th century BC (2.33), but Ephorus, in the next century, is the first writer to specifically place the Celts in Iberia, as far as Gades on the south-western Atlantic coast (Strabo 4.4.6). Diodorus relates that these Celtiberians were an intermixture of Celts and native Iberians, who excelled at all types of warfare and were defeated by the Romans only after a long and bitter conflict (5.33).

The expansion of the Celts from their homeland into eastern Europe and Asia Minor was first recorded in the mid-4th century BC by Theopompus (Athenaeus 10.443), who describes a banquet at which Celts in the Balkans poisoned and killed their Illyrian guests.

Alexander the Great's general Ptolemy Soter relates that around 335 BC a group of Celts living near the Adriatic met Alexander near the Danube (Strabo 7.3.8). When he asked what they most feared, they said nothing at all, except that the sky might fall on them—a response remarkably similar to the vow of Conchobar's Irish warriors before the final battle of the Táin Bó Cuailnge ('The Cattle Raid of Cooley'). Celtic mercenaries of the Sicilian tyrant Dionysius were fighting in Greece even earlier, in 369–68 BC, as Xenophon notes (*Hellenica* 7.1.20, 31), while the Atheneans had placed valued Celtic weapons in their Acropolis treasury by 351 BC (*Inscriptiones Graecae* 2.1438). Some Celts went as far as Scythia in present-day Ukraine (Diodorus 5.32; Plutarch, *Marius* 11), but the Gaulish movements in the east most noted by the classical authors were the invasion of Greece and the raid on Delphi in 279 BC (Justin 24.6–8; see BRENNOS OF THE PRAUSI), followed by Gallic attacks on the Ionian cities of the Aegean coast (*Greek Anthology* 7.492), and the eventual settling of the marauding Celtic tribes in central Asia Minor, thenceforth known as Γαλάτια Galatia (Justin 25.1–2; Strabo 4.1.13; Livy 38.16).

Britain and Ireland were at the far edge of the Celtic lands, but the classical world knew of both of them centuries before the expansion of Roman power into northern Europe. References to the *Albiones* (see ALBION) and *Hierni*, probably the British and Irish, in the late 4th-century *ad Ora Maritima* of Avienus may derive from Massaliote and Carthaginian sources of the 6th and 5th centuries BC (111–12). Pytheas certainly visited and wrote of Britain in the 4th century BC (Strabo 1.4.3, 2.4.1, 2.5.8), but it is Caesar's account of his brief expeditions into Britain in 55 and 54 BC which provides the first extensive records of the island (*De Bello Gallico* 4.20–38, 5.8–23). He noted that the coastal Britons had not long before emigrated from Gaul and differed little from their relatives on the Continent (*De Bello Gallico* 5.12–14), but that the interior of the island was occupied by a more primitive people. Caesar (*De Bello Gallico* 4.33, 5.16–17), Strabo (4.5.2), and Tacitus (*Agricola* 12) note the British use of war-chariots, reminiscent of Homer's heroes on the plains of Troy (and again later in the Irish tales of the Ulster Cycle), while Strabo also comments on the large size of the Britons and their primitive agriculture. The Claudian invasion of Britain in AD 43 and the subsequent expansion of Roman power throughout most of the island over the next few decades did not mark the end of Celtic British culture, which reasserted itself in the early 5th century AD after the Romans withdrew and the emperor Honorius bade them to look to their own defence henceforth (Zosimus 6.10.2).

Roman political power never reached Ireland, but the classical authors offer occasional comments on the island and its people. Caesar provides the first definite reference to Ireland in the mid-1st century BC, though it is only a brief geographical description of its relation to Britain (*De Bello Gallico* 5.13). Strabo deals at length with the cold weather, and is the first to describe the Irish people, though in unflattering terms as gluttonous, incestuous cannibals (1.4.3–5, 2.1.13, 2.5.8, 4.5.4). Pomponius Mela contradicts Strabo by praising Ireland's climate as superb for cattle, but is only slightly less critical concerning its inhabitants (*De Chorographia* 3.6). The short 1st-century AD passage of Tacitus is the clearest and most informative statement on Ireland in classical literature, revealing that some Romans had military intentions towards Ireland, were familiar with the land and its people, and were actively engaged in trade with the island (*Agricola* 24). Moreover, it gives us the earliest description of an individual Irishman, a petty king who was a camp-follower of Tacitus' father-in-law, Agricola.

In the next century, the Alexandrian geographer Ptolemy wrote an extensive description of Irish tribes, rivers, and towns, and again noted Roman trade with Ireland (*Geography* 1.11.7, 2.1–2). Little is written of Ireland in the 3rd century, but 4th-century authors regularly refer to the troublesome Scotti (see SCOTS), of probable Irish origin, who, along with their Pictish allies, raided, harassed, and terrorized the Romans of Britain and beyond (see PICTS). The Attacotti mentioned by Ammianus (*History* 26.4.5, 27.8.5) and others are of less certain origin, but, if they are Irish, it is interesting to note that there were Attacotti regiments serving in the Roman legions as far away as Illyria (*Notitia Dignitatum* East 9, West 5, 7) in the Balkans. The passages of Jerome are particularly interesting since he claims to have witnessed Attacotti or Scotti cannibalism (which of the two tribes depends on the manuscript) first-hand as a young man in Gaul (*Adversus Jovinianum* 2.7) and, in later years, accuses Pelagius, his influential nemesis, of being an ignorant,

satanically inspired, porridge-breathed heretic of Scottic lineage (*Commentary on Jeremiah* 1 Prologue, 3 Prologue). At roughly the same time, the orator Symmachus mentions the single recorded Irish export of classical times, huge Scottic dogs, so fierce he believed they must have been brought to Rome in iron cages (*Epistle* 2.77). The court poet Claudian and a few authors of the early 5th century provide a final glimpse of Roman views on Ireland. Claudian continues to describe Scottic invasions of Britain, which caused all Ireland to weep at their defeat by Roman arms (*Panegyric on the Fourth Consulship of the Emperor Honorius* 8.30–3). The remaining authors for the most part echo the geographical and ethnographic descriptions of earlier writers.

§4. LANGUAGES

Of the generally recognized ancient Celtic languages (GAULISH, GALATIAN, BRITISH, CELTIBERIAN, LEPONTIC, and IRISH), the classical authors provide direct information of varying degrees on only the first four, most notably on Gaulish, though even these references are not extensive and are seldom as helpful to linguists as the inscriptional evidence (see CELTIC LANGUAGES; INSCRIPTIONS). The ancient writers remark on Celtic language usage, vocabulary, and even phonology, most often in the form of off-hand comments rather than involved discussions, such as Varro's brief note that the citizens of Massalia were trilingual, speaking Greek, Latin, and Gaulish (Isidore, *Etymologiae* 15.1.63). As early as Caesar, classical authors mention Gaulish LITERACY, including the fact that the HELVETII of the Lake Geneva region conducted a census using Greek letters in the 1st century BC (*De Bello Gallico* 1.29), and that the druids of Gaul would never write down any of their sacred teachings, but used the Greek alphabet for business and personal correspondence (*De Bello Gallico* 6.14). The classical authors record approximately 500 Gaulish vocabulary items, though, for the most part, these are rather obscure floral and faunal terms, such as *bricumus* 'wormwood' (Marcellinus 26.41) and *alauda* 'lark' (Pliny, *Natural History* 11.121; Suetonius, *Caesar* 24).

The Gaulish language survived for centuries into, and perhaps even beyond, Roman rule. The 2nd-century AD Greek bishop Iranaeus had to learn a *sermo barbarus* (barbaric tongue), presumably Gaulish, to go about his missionary activities in the upper RHÔNE valley (*Adversus Haereses* 1). In the next century, the Roman jurist Ulpian records that Gaulish was a perfectly acceptable medium for official contracts, implying that there were those who had need of the Roman legal system in Gaul who did not know Latin (*Digest* 31.1). Even in the late 4th century AD, the great Latin poet and prefect Ausonius (*Epicedion in Patrem* 9–10) records that his physician father had only a rudimentary knowledge of Latin and relied on Greek for educated discourse. Since Ausonius was from an old Gaulish family, we can only infer that his father must have spoken Gaulish as a first language. As the 5th century was beginning, Serverus (*Dialogue* 1.27) records a conversation with two friends in which one of the speakers expresses his inadequacy in Latin and is invited to switch to 'Celtic or Gaulish', possibly two different dialects in Gaul.

The Galatians of Asia Minor knew Greek and used it solely for inscriptions, but we know from the classical authors that the Galatians spoke a dialect of Gaulish which survived for many centuries. Lucian records that a 2nd-century AD sorcerer, Alexander of Paphlagonia (on the Turkish Black Sea coast), had no trouble finding Celtic speakers, probably Galatians (*Alexander* 51). Two hundred years later, Jerome comments that the Galatians of his day spoke a language very similar to the Treveri of Gaul (around the city of Trier)—evidence for the survival of both Gaulish and Galatian (*Commentary on the Epistle to the Galatians* 2.3). The Galatian language was apparently still alive even in the 5th century AD, when St Euthymius in Palestine came across a Galatian monk who reverted to his native Celtic tongue after a supposed demonic possession (*Vita S. Euthymii* 55). The Greek and Latin writers record about 150 Galatian terms, such as *droungos* 'nose' (Epiphanius, *Adversus Haereses* 2.239), a possible cognate of Welsh *trwyn* 'nose' or Old Irish *srón* 'nose', though most items are personal names and place-names.

At the opposite end of the Roman world, the British, as both Tacitus and modern research confirm, spoke a language very similar to Gaulish (*Agricola* 11), though only a few British words were noted by ancient writers, for example, *covinni* 'north British chariots' (Tacitus; Pomponius Mela, *De Chorographia* 3.52; cf. Welsh *cywain* 'convey'). Little was written on the language of the Celts in Iberia, though Pliny cites *viriae* 'bracelets' as a Celtiberian word distinct from the Celtic word of the

same meaning, *viriolae* (*Natural History* 33.12).

§5. POLITICAL ORGANIZATION

Ancient Celtic society was essentially tribal, though on occasion larger units might form temporarily for purposes such as mutual defence against the Romans in Gaul or raids on Greek cities in the East. Caesar describes 1st-century BC Gaul as rife with political factions and loyalties based on client-patron relationships (*De Bello Gallico* 6.11–13), much like Rome in the same era. He says that the common people were little better than slaves in status, but that the warriors and druidic order shared power, dominating the tribal assemblies which were the centre of Celtic political life in Gaul as well as Galatia. Strabo notes that in earlier times each of the tribes of Galatia was divided into four sections called tetrarchies (government by four people), and that each tetrarchy was ruled over by a chief, a general, two assistants to the general, and a judge, possibly a druid (12.5.1). We have much less literary information on the social structure of the ancient insular Celts, though the tribal divisions of the British and Irish are clear from all descriptions. Rule by chieftains in Britain is specifically noted by Strabo (4.5.2), and the exiled Irish *regulus* (petty king) mentioned by Tacitus implies a similar structure in Ireland (*Agricola* 24).

§6. WOMEN

Many classical authors focus on the rôle of women in ancient Celtic society as being more independent than in Greek and Roman culture. Polybius tells the story of the Galatian queen Chiomāra who suffers brutality at the hands of a Roman centurion, but exacts revenge when he underestimates her by having him killed (21.38). Diodorus notes the physical strength and ability of Gaulish women (5.32), while Ammianus, writing several centuries later, states that Celtic women had a formidable character and would sometimes join their husbands on the battlefield (*History* 15.12). Ancient Celtic women had political power as well, a rare occurrence in the Mediterranean world. Tacitus describes the prophetess VELEDA as using her supernatural abilities to exert influence on her tribe's actions (*Historiae* 4.61; *Germania* 8), whereas CASSIUS DIO (*Roman History* 62) and Tacitus (*Annales* 14.35; *Agricola* 16) give a compelling picture of the British queen BOUDĪCA as a powerful and fearless leader against the Romans. However, Caesar presents another side of a Celtic woman's life, noting that a Gaulish wife whose husband died under mysterious circumstances was routinely questioned under torture, and that a living husband had the power of life and death over his wife and children, like the Roman *pater familias* (*De Bello Gallico* 6.19).

§7. FEASTING

The Celtic love of feasting found in medieval Irish and Welsh literature is also very much in evidence in classical writings (see FEAST). The wealthy Celt Ariamnes set up numerous banqueting halls and inside each put huge CAULDRONS with every kind of meat, grain, and wine, feeding everyone plentifully for a year (PHYLARCHUS, in Athenaeus 4.150), much like the year-long feast for the 300 doomed warriors of the GODODDIN, over eight centuries later. Posidonius says that the ancient Gauls feasted on whole joints of meat, and mentions their great love of imported Greek wine when available, as well as native honey beer, called *corma* (Athenaeus 4.152). *Corma* is cognate with Old Irish *cuirm* and Welsh *cwrw* (f.), 'ale, beer'. At these feasts, Posidonius says the best warriors would contend for the choicest portion, like the Irish warriors of FLED BRICRENN ('Bricriu's Feast') and SCÉLA MUICCE MEIC DÁ THÓ ('The Story of Mac Dá Thó's Pig'), sometimes engaging in a duel to the death (Athenaeus 4.154; Diodorus 5.28).

§8. HEROIC ETHOS

Bravery in battle is the one constant and dominant theme in Greek and Roman writings on the ancient Celts. In the 4th century BC, Aristotle says that the Celts were fearless in excess (*Nichomachean Ethics* 3.7.6–7), and Polybius gives extensive descriptions of Gaulish bravery against the Romans at Telamon in the next century, saying that the *Gaesatae* (spearmen; cf. Old Irish *gae* 'spear') component of the army even fought naked, terrifying the Romans with their 'strength and magnificence' (2.28–31). Many classical authors echo these themes of courage and martial ability in numerous passages, also noting the Celtic custom of offering single combat, like Menelaos and Paris in the *Iliad* (3.58–380). Like Homeric heroes, they collected booty from the slain, including the heads, which they would

display from their horses and in their homes as wartrophies (Diodorus 5.29), or make into libation bowls (Livy 23.24). Defeated warriors often preferred suicide to capture, as noted in classical literature (e.g. Polybius 2.31) and immortalized in the famous Pergamene statue of the beaten Galatian, who, at the end of a hopeless battle, slays himself, along with his wife (see PERGAMON).

§9. RELIGION

Ancient Celtic religion is represented with great diversity in the classical authors, but often suffers from the distorting filter of the INTERPRETATIO ROMANA, which placed native gods in more familiar Roman form. Caesar says that the Gauls were completely devoted to religion and worshipped Mercury most of all, as inventor of all the arts and ruler of journeys, trade, and money (*De Bello Gallico* 6.16–17). He adds that they also worshipped Apollo (to drive away diseases), Mars (to control war), Jupiter (to maintain order), and Minerva (to teach skills). In addition, some ancient sources say that the Celts near the ocean honoured the sea-born deities Castor and Pollux above all the gods (Diodorus 4.56). In the first century AD, LUCAN lists three native divine names, stating that the Gauls worshipped TEUTATES, ESUS, and TARANIS in bloody sacrifices (*Pharsalia* 1.444–6). Juvenal (*Satire* 8.155–6) and others mention the horse-goddess EPONA, whose worship spread among the Roman cavalry. The Galatians seem to have quickly adopted much of native Anatolian and Greek religion, but semi-Celtic cult names in Galatia such as *Zeus Bousourīgios* (containing Celtic *rīgios* 'kingly') and *Souolibrogenos* (containing *souoli-* ?'sun' and *brog-* 'country, borderland') suggest the maintenance of the old Gaulish religion as well (Mitchell, *Regional Epigraphic Catalogues of Asia Minor* 2.191, 203–4). Tacitus says that the British practised the same religious rites as the Gauls (*Agricola* 11), but nothing certain is reported concerning ancient Irish religion, though the statement of Artemidorus that fertility rites similar to those of Demeter and Core were performed on an island near Britain is intriguing (Strabo 4.4.6).

§10. THE DRUIDS

Caesar says that the Gauls greatly honoured the druids, who looked after all divine matters and sacrifices, both public and private (*De Bello Gallico* 6.13–14). He also notes that they acted as judges if a crime had been committed or in cases such as inheritance or boundary disputes, and that ignoring their judgements could result in excommunication from all tribal functions. Caesar continues that they met annually in the centre of Gaul, in the territory of the tribe of the Carnutes (near modern Chartres, 85 km south-west of Paris), and that one chief druid was selected by the vote of his fellow druids at the death of the previous leader. He also states that the druidic order was imported from Britain, where those students desiring the most careful education in druidic lore, which could last up to 20 years, still travelled. Many authors emphasize the druidic teaching on the immortality of the soul (e.g. Strabo 4.4.4; Caesar, *De Bello Gallico* 6.14; see REINCARNATION), while others note their peculiar rituals, such as augury, sometimes using mistletoe (Pliny, *Natural History* 16.95) or human SACRIFICE (Diodorus 5.31). Diodorus states that the druids were so important in Celtic society that they could step between warring Gallic armies and cause the fighting to cease merely by the authority of their presence (5.31).

§11. THE SOVEREIGNTY GODDESS

The ἱερός γάμος *hieros gamos* (Greek for 'sacred marriage') or sovereignty goddess is a theme in which a divine female embodiment of the land joins with the ruler in a symbolic marriage. This is a widespread motif, which occurs in stories from ancient Mesopotamia and Greece to medieval Ireland and Wales (see SOVEREIGNTY MYTH). It is also found in the classical sources on the Celts, for example, the foundation legend of Massalia (Aristotle in Athenaeus 13.576; Justin, *Epitome* 43.3). In the story, Greek traders arrive in the land of the Gaulish Segobrigii just as the marriage of the local king's daughter, Petta (Gyptis in Justin), is about to begin. She selects her bridegroom, in this case the surprised Greek Euxenos (literally, 'good guest'), by offering him a bowl of wine. The princess Petta as an embodiment of the land is further suggested by her name, which is probably related to Welsh *peth* 'thing', Old Irish *cuit* 'share, portion', and Pictish place-names in *Pet(t)-*, *Pit(t)-*, which seem to mean 'parcel of land'. The dangers of rejection by the sovereignty goddess are shown in the story of the Galatian queen and priestess CAMMA (Plutarch, *On the Bravery of Women* 257–8). Sinorīx murders her husband and rightful king

Sinātus, then persuades Camma to marry him. When the ceremony begins, Camma offers Sinorīx a drink, which he discovers—after drinking it—has been poisoned.

§12. REINCARNATION AND THE OTHERWORLD

Pagan Celtic views about an afterlife as found in later Irish and Welsh literature are often a mixture of REINCARNATION and an otherworldly land of the dead, and the classical writings on the ancient Celts also contain both beliefs. Caesar (*De Bello Gallico* 6.14), Valerius Maximus (2.6), and other Greek and Roman writers say that the ancient druids taught that souls were reborn in new bodies, as did the followers of the Greek philosopher Pythagoras. Pomponius Mela relates that the Gauls would even put off the completion of business and the payment of debts to the next life, while some threw themselves onto the funeral pyres of their loved ones to live with them anew (*De Chorographia* 3.2.18–19). However, NICANDER of Colophon relates that the Celts, as in some later Irish tales, would spend the night at the tombs of their heroes, hoping for visions (Tertullian, *De Anima* 57.10). Moreover, Silius Italicus says that the Celtiberians believed their dead would go to a kind of heaven if vultures ate their bodies (*Punica* 3.340–3). The Roman poet Lucan somewhat ambiguously says that after death the same spirit controlled the limbs in *orbis alia* or 'another world' (*Pharsalia* 1.454–8). It is likely that some ancient Celts viewed an afterlife in an OTHERWORLD as a temporary state before reincarnation, similar to Plato's Pythagorean myth of Er (*Republic* 10). In fact, such a temporary state is mentioned by Diodorus, who says that the Celts believed 'that the human souls are immortal and that after a prescribed number of years they begin a new life with the soul entering a new body' (5.28).

§13. POETS AND POETRY

The rôle of Celtic poetry and the poet–patron relationship, so important in later Irish and Welsh tradition, are also noted by the ancient Greek and Roman authors. In the second century BC, Cato the Elder says that the Gauls pursued eloquence as much as military glory (*Origines* 2.3), and *c.* 100 BC Pseudo-Scymnus relates that the Celts used music to soothe emotions at their public assemblies (*Periplus* 183–7). The writer Lucian visited Gaul, and puzzled over a portrayal of OGMIOS, the Gaulish HERCULES, as a wrinkled old man leading a crowd by a gold chain through their ears. A Greek-speaking Celt explained to him that they viewed eloquence of speech as the most powerful human ability, hence its association with the withered, yet mighty, Hercules. Posidonius related that Celtic leaders, like later Irish kings, carried well-compensated poets with them to sing their praises, for example, the Gaulish chief Lovernius who rewarded a tardy poet's song of praise and lament with a bag of gold (Athenaeus 4.152). Strabo (4.4.4) and Diodorus (5.31), also part of the Posidonian tradition, called the Celtic singers and poets βάρδοι *bardoi* (cf. Old Irish *baird*, Welsh *beirdd* 'bards') and noted that their songs could be either praise or SATIRE, again calling to mind the two-sided power of later Irish and Welsh poetry.

Gregory, Lady Augusta (1852–1932) was an Irish folklorist and playwright, influential in the

foundation of an Irish national theatre. Born Isabella Augusta Persse in 1852 in Roxborough, Co. Galway (Contae na Gaillimhe), she married her neighbour Sir William Gregory of Coole Park, a powerful civil servant and politician, in 1880. They travelled widely and had one son, Robert, who was killed in action in 1918.

Following Sir William's death in 1892, Lady Gregory's opinions moved gradually towards NATIONALISM under the influence of W. B. YEATS (whose friend she remained until her death). She was a co-founder, with Yeats and the playwright Edward Martyn (1859–1923), of the Irish Literary Theatre (later the Abbey) in 1899. Her lively sense of language influenced other writers, particularly Douglas Hyde (Dubhghlas DE HÍDE), whose work in IRISH she translated (having begun to learn Irish in 1898), and J. M. Synge (1871–1909), and her artificial but attractive 'Kiltartan English' remained a model for Irish dramatic dialogue for many years. She wrote at least thirty original plays for the Abbey and translated several more from French.

Lady Gregory published several highly influential retellings of Irish epics, including *Cuchulainn of Muirtheimne* (1902) and *Gods and Fighting Men* (1904). Her collections of folk-stories, published regularly from 1906 onwards, also strongly influenced writers of the period.

Following the death of the art dealer Hugh Lane in 1915 Lady Gregory, his aunt and biographer (1921), was responsible for much of his art collection which remained in Ireland (ÉIRE).

She sold Coole Park to the Irish Government in 1927, and died there in 1932.

SELECTION OF MAIN WORKS

Cuchulainn of Muirtheimne (1902); *Poets and Dreamers* (1903); *Gods and Fighting Men* (1904); *Book of Saints and Wonders* (1906); *Our Irish Theatre* (1913); *Kiltartan Poetry Book* (1918); *Visions and Beliefs in the West of Ireland* (1920); *Hugh Lane's Life and Achievement* (1921).

Griffiths, Ann (1776–1805) rose to posthumous fame as one of the foremost hymn writers of the Calvinist Methodist movement in Wales (CYMRU); she remains the most acclaimed of Welsh women poets.

She was born Ann Thomas, in Dolwar Fach, a farmhouse in the parish of Llanfihangel-yng-Ngwynfa in Montgomeryshire (sir Drefaldwyn). Most of the members of her comparatively well-to-do and initially Anglican farming family became converts to Welsh Nonconformity (see CHRISTIANITY) during the last decade of the 18th century. By 1798 Dolwar Fach was known as a meeting-place for the local Calvinist Methodists, and was registered as such in 1803. Ann Griffiths herself underwent a conversion experience in 1796, on hearing Benjamin Jones of Pwllheli (in north Wales) preach; it is likely that she began to compose her verses shortly afterwards. Her HYMNS cannot be dated more precisely, however, because she very rarely wrote them down, conceiving of them as very personal expressions of faith intended for her own use, rather than for public worship. They were preserved for posterity by a family servant, Ruth Evans, to whom she was in the habit of reciting them. The maid, herself illiterate, treasured her mistress's verses in her memory, and later recited them to her husband, John Hughes of Pontrobert, a Methodist preacher. He inscribed them in his journals, and gave them to Thomas Charles of Bala to include in his 1806 collection of new hymns, *Casgliad o Hymnau*. By that date Ann Griffiths, who had married a neighbouring farmer Thomas Griffiths in 1804, had died, of complications arising from child-birth. But the intensity and immediacy of religious feeling conveyed in her lyric verse, and the depth of the theological understanding they manifested, made them quickly popular with Welsh Nonconformist congregations, and they have always retained their appeal. Indeed, 20th-century critics convincingly argued that Ann Griffiths should be regarded as one of the great mystic poets of the Christian faith.

Y Groglith (The crucifixion text) is a Middle Welsh translation of the passion and crucifixion episode from the Gospel of Matthew. In the extant manuscripts, *Y Groglith* often follows a Welsh version of the Latin apocryphal text *Inventio Sanctae Crucis* (The discovery of the Holy Cross), which follows the fate of the Cross after Christ's passion and its eventual rediscovery by the emperor Constantine's mother, St Helen. In Peniarth 5 (Llyfr Gwyn Rhydderch), these two texts are found together with Ystorya Aðaf ac Eua y Wreic (The tale of Adam and his wife Eve), and form a continuous account of the Cross from its origins, through the Crucifixion, to its later rediscovery.

Gruffudd ab yr Ynad Coch (*fl. c.* 1277–83) was one of the Gogynfeirdd, or *Beirdd y Tywysogion* (Poets of the Princes). He belonged to a family of lawyers and poets associated with Arfon, in Gwynedd. He is best known for his 104-line monorhyming AWDL lamenting the death of Llywelyn ap Gruffudd, the last independent native prince of Wales (Cymru), in December 1282, but there are also six religious poems in *awdl* measures ascribed to him and consistent in style with the *marwnad* (elegy). The fact that there is only one poem for a noble patron suggests that Gruffudd may not have been a career poet, and a reference to dishonest lawyers raises the possibility that he was, like his father, a jurist. His mastery of poetic form, language, imagery and passion, however, imply a lifelong devotion to the craft of poetry (see CERDD DAFOD). *Marwnad Llywelyn ap Gruffudd* is, with good reason, one of the best known and loved poems in the Welsh language. The death of Llywelyn is presented implicitly as of the same order of magnitude as the death of Christ, with the poet perhaps regarding himself as among the Judases who had brought it about. Llywelyn's death is catastrophic rather than redemptive, however, and all of nature laments wildly the loss which is perceived as bringing utter devastation upon Wales. The other poems have a homiletic quality rare in the religious poetry of *Beirdd y Tywysogion*, though common among the later *Gogynfeirdd*. Gruffudd focuses on sin, decay, death, judgement, and hell, and seems more often to address his fellow men than to enter into a dialogue with God. He employs a wide variety of *awdl* metres, usually combining them within a single poem, though each of his poems sustains a single *prifodl* (principal rhyme). He makes regular use of *cymeriad* (line-linking repetitions), alliteration, and internal rhyme. All of his poetry is preserved in the early 15th-century Red Book of Hergest (Llyfr Coch Hergest).

Gruffudd ap Cynan (*c.* 1055–1137), king of Gwynedd, is said to have been born and reared in Dublin (Baile Átha Cliath). His grandfather, Iago

ab Idwal, was ruler of Gwynedd until killed in 1039. His mother, Rhanillt (Ragnell), was daughter of Ólafr, the Norse king of Dublin.

He appears to have spent the years from 1075 until around 1100 attempting to regain his perceived patrimony of Gwynedd. For a long time, he enjoyed limited success only and even had to suffer a spell in prison in Chester (Caer), overcoming conflict with other Welsh rulers and the Normans, as well as treachery among his own followers, which numbered not only the men of Gwynedd, but also Irishmen and Vikings. During this period, he enjoyed occasional successes, such as the victorious battle of Mynydd Carn (probably located somewhere in north Pembrokeshire) in 1081. He finally ruled Gwynedd from about 1100 onwards until his death in 1137. He is said to have increased peace and prosperity in the region and to have introduced new rules to the bardic order in Wales (Cymru). While there is no contemporary attestation for the latter claim, it is interesting to note that his reign ushered in a renaissance in Welsh court poetry (see welsh poetry).

The life of Gruffudd ap Cynan is well known to us through the only biography of a Welsh ruler to survive from the medieval period (D. Simon Evans, *Historia Gruffud vab Kenan*). It was originally composed in Latin, probably in the mid-12th century (though possibly as late as the early 13th), but has come down to us in a Middle Welsh translation, a partial copy of which is found in NLW Peniarth MS 17 (see hengwrt). The gaps in contents can be filled from later copies. The reliability of this document is the subject of much debate; it is clearly a Gwynedd production designed to legitimize the rule of Gruffudd, and thereby the rule of his descendants, who continued in power until the extinction of Welsh independence in 1282/4. The Latin original was thought to have been lost, but it is possible that a direct copy has been preserved in one of the 16th-century Latin versions of the text, which have always been assumed to be translations from the Welsh version.

Gruffydd, Elis (*c.* 1490–*c.* 1558), humanist and one of the first great prose writers of early Modern Welsh, was a native of north-east Wales (Cymru) and served the Tudor court in London (see tudur) and as a soldier in France. His works, surviving in his own hand, include a ponderous 'Chronicle of the Six Ages of the World' in Welsh, written *c.* 1548–52 and making eclectic use of both international and Welsh materials (oral, as well as written), interspersed with his personal commentary. The Chronicle has been published only in part. Gruffydd's significance and aspects of his work are treated in several articles in this Encyclopedia. For an overview, see romances. For his place within the literary developments of the medieval–early modern transition, see Welsh prose literature [2]. On Gruffydd's version of *Ystoria Taliesin* ('The Legend of Taliesin'), the popular biography of the mythological persona of the arch-poet of Welsh tradition, see Taliesin [2] §3. On Gruffydd's 'Death of Merlin' episode, see Myrddin. Gruffydd's manuscripts also preserve an early modern version of Cyfranc Lludd a Llefelys (see also llefelys), texts of the poetry of the Cywyddwyr, and a narrative based on the Welsh Hercules tradition (see hercules §3).

Guest, Lady Charlotte (1812–95), daughter of the 9th Earl of Lindsay, grew up at Uffington House, near Stamford, Lincolnshire. In 1833 she married the industrialist Josiah John Guest, owner of the Dowlais Iron Company in south Wales (Cymru). Her detailed journal (1822–81) relates how, among other things, she gave birth to ten children, founded schools for the education of the working classes in the Dowlais area (for both male and female pupils), and translated

all eleven tales of the *Mabinogion* (see MABINOGI) (together with the tale of TALIESIN) into English. Her huge multi-volume work (1838–46; 1849) presents the text in English and in WELSH, with detailed scholarly notes, variant versions in other languages of the three ARTHURIAN romances, illustrations, and facsimiles from the Red Book of Hergest (LLYFR COCH HERGEST) and from manuscripts of other versions. Revised editions of her translation were condensed, and the Welsh text omitted. Her translation was extremely well received by her contemporaries; her later critics find her work 'charming', though lacking in strict scholarship.

Following her husband's death, Lady Guest married Charles Schreiber, her eldest son's tutor, and travelled extensively on the Continent with him, collecting 18th-century ceramics. The Schreiber Collection can be seen today in the Victoria and Albert Museum in London.

Gundestrup cauldron

§1. INTRODUCTION AND DESCRIPTION

The Gundestrup cauldron was found in May 1891 during peat cutting in Rævemosen (fox bog), near the hamlet of Gundestrup at Aars in Himmerland, Northern Jutland, Denmark. Two days later it was claimed as *danefæ* (treasure trove), and was deposited at the Danish National Museum, where it has been ever since as one of its most precious objects (Müller, *Det store Sølvkar fra Gundestrup i Jylland*; Benner Larsen, *Historien om det store sølvfund fra Gundestrup*). The enigmatic depictions of deities and religious scenes on its 13 silver plates make the cauldron one of the most important works of ART of European prehistory, and probably no other work of craftsmanship has occasioned so much publication and dispute (Megaw, *Art of the European Iron Age* 131).

The Gundestrup cauldron weighs 8.885 kg, and is made of silver with a purity of 970 per thousand. The silver contains a minor proportion of gold, 3 per thousand, and also gold for gilding. The plates of the cauldron must originally have been held together by some sort of framework, perhaps of iron. At the edges of the plates are remains of soldering material, of almost pure tin. The bowl-shaped base of the cauldron has a depth of 21 cm, a diameter of 69 cm, and a circumference of 216 cm. There are five inner plates and seven outer plates, all with a height of *c.* 20 cm. The five inner plates measure between 40 and 43 cm lengthwise, the outer plates between 24 and 26 cm. One outer plate is missing. The cauldron also has a circular bottom plate, diameter 25.6 cm, which is considered the apogee of the plates, artistically and technically, with its dramatically raised bull figure. The technique could be described as fine hammered silverwork, with animal and human figures beaten up in a high repoussé (pressed out from the back) and further decorated with carefully punched patterns. The inner plates are not gilded, but the round bottom plate is fully gilded. The outer plates are partially gilded, deliberately setting off particular features. All torcs are gilded, probably meant to reflect the idea that gold was the preferred material for torcs. The hands, parts of the arms, hair and beard are gilded, and the breasts of the female figures are also marked out in this way (Villemos, *Nationalmuseets Arbejdsmark* 1978.78–84). Weapons and ornaments depicted make it reasonable to assume that it was made between 150 BC and the birth of Christ, probably in the 2nd half of the 2nd century BC.

§2. PLACE OF PRODUCTION

Two areas have been suggested as the geographical origin of the Gundestrup cauldron: Celtic GAUL and areas at the lower DANUBE, Thrace (Olmsted, *Gundestrup Cauldron*; Hachmann, *Bericht der Römisch-Germanischen Kommission* 71.565–903; Horedt, *Jahrbuch des Römisch-Germanischen Zentralmuseums Mainz* 14.134–43; Powell, *European Community in Later Prehistory* 181–210; Kaul, *Acta Archaeologica* 66.1–38). The motifs and objects demonstrate a certain ambiguity, since objects of Celtic type seem to be depicted alongside objects of non-Celtic type. For instance, some of the torcs shown belong to a normal Celtic type, while two, which have a conical 'gorget' at the junction of the buffer-like

A plate from the Gundestrup cauldron showing a tree lying flat, warriors mounted and on foot, three carnyces (battle trumpets) being blown, a dog, and a gigantic figure immersing a man in a large vessel

terminal knob and the ring body, appear to be of a non-Celtic, south-east European form. When it comes to technique and style, convincing parallels are found in Thrace (modern Bulgaria and Romania). Only here do we see animal figures with fur depicted using punch marks and in highly beaten and partially gilded silverwork. On the cauldron, long hair, such as that in a lion's mane, is marked by flamed or feather-like striped patterns, whereas short hair is depicted by bundles of lines in parallel rows. Parallels for this are seen, for example, on the north-west Bulgarian Rogozen treasure jug no. 156 (Marazov, *Rogozen Treasure* 93; Bergquist & Taylor, *Antiquity* 61.10–24; Kaul, *Acta Archaeologica* 66.1–38). Comparable material with regard to this style of animal representation is centred on north-west Bulgaria and adjoining south-west Romania. Whereas these finds mostly belong to the 4th century BC, other finds from Bulgaria, such as the plates from Stara Zagora, central Bulgaria (1st century BC), document the late existence of the Thracian silver art style comparable with what is seen on the cauldron (Komitee für Kultur d. Volksrepublik Bulgarien, *Gold der Thraker* 204 & 210; Marazov, *Rogozen Treasure* 81–3, Kaul, *Acta Archaeologica* 66.1–38). Although the Gundestrup cauldron, on the basis of its technique, can be perceived as Thracian work, it carries Celtic motifs and elements—the warriors have Celtic helmets, the carnyces should be seen as Celtic, and also Celtic torcs occur. The shape of the cauldron should be regarded as Celtic. Rather than seeking the different elements in different places in Europe, we should recognize that the cauldron's own ambiguity probably reflects the work of two tribes or peoples with different cultural traditions. We can then see whether there is an area which can satisfy the Gundestrup cauldron's own demands regarding cultural co-existence between a Celtic and a Thracian group. The Celtic tribe could be the Scordisci, settled around Belgrade (Singidūnon), who seemed to have 'filtered' into the territory of the Thracian Triballi. Historical sources indicate that when the Roman armies penetrated northwards during the second half of the 2nd century BC following their conquest of Macedonia, they faced an alliance of Scordisci and Thracians. In order to reinforce such an alliance or symbiotic relationship, some common tokens of the ritual-religious kind might have been needed. The Gundestrup cauldron can be regarded as a religious and political 'medium', reinforcing the mutuality of different societies (Kaul, *Gundestrupkedlen* 38–9; Kaul, *Centre and Periphery in the Hellenistic World* 4.46–7; Kaul, *Acta Archaeologica* 66.24–7; Kaul & Warmind, *Reallexikon der germanischen Altertumskunde* 13.195–213). It could be called a cauldron of unification, and many of its motifs could probably be understood equally as well by a

Thracian as by a Celt. We shall probably never learn how it came to Denmark. Perhaps it was brought back by the CIMBRI, who on their raid through Europe also had contacts with the Scordisci.

§3. MOTIFS AND INTERPRETATION

The outer plates depict one human figure or bust surrounded by smaller figures, often antithetically arranged. The inner plates all carry larger and more complicated scenes. On one inner plate a triple bull slaughter or SACRIFICE is seen. A second plate shows a female bust, probably a goddess surrounded or attacked by animals such as two elephants, two winged griffins and a wolf. The wheel-bearing bearded male bust on another of the inner plates is also surrounded by wolves and griffins. Another figure is holding the wheel, and underneath this person a ram-headed snake is seen. Another plate depicts a squatting antlered god with a TORC and the ram-headed snake in his raised hands. He is surrounded by many different animals, such as deer, lions, and a wolf, and a dolphin rider is also shown.

The plate with a procession of warriors is of particular interest for the archaeologist, since many identifiable objects are shown here, and it is worth considering possible interpretations related to the cultic or religious sphere. The scene is divided into two panels, a lower and an upper, separated by what could be interpreted as a horizontally lying tree. On the lower panel there is a procession of warriors facing left: six warriors with a SHIELD and a spear, one with a sword and a helmet carrying a figure of a wild BOAR, and finally three CARNYX players. To the left, an almost vertical standing dog seems to hold the procession back. To the left of this dog is a large figure dipping a person into a cauldron-like object. The uppermost panel shows four horsemen with helmets, seemingly being led by a ram-headed snake. The large man dipping one of the soldiers in what appears to be a cauldron could be interpreted as a rendering of human sacrifice—the death caused by drowning and the large person being a priest. The cauldron-like object may not actually be a cauldron, but rather a symbolic rendering of the sort of shaft used in the Celtic places of cult and worship, rectangular ENCLOSURES, where human remains bear testimony to some sort of human sacrifice (Hachmann, *Bericht der Römisch-Germanischen Kommission* 71.821–6). However, looking to a Celtic mythological background, other interpretations should be considered. The figure dipping the warrior may be a god, and we may be dealing with a representation of a mythical Celtic cauldron of revivification; compare, for example, the tale of BRANWEN in the medieval Welsh MABINOGI, where a 'cauldron of rebirth' (*Peir Dadeni*) revivified warriors slain in battle (Gricourt, *Latomus* 13.376–83). This could be what we are seeing: the dead warriors waiting for the immersion which will bring them back to life, probably in another world, in the bath of eternity, after which they were perhaps promoted to horsemen, being led to the after-world by the horned serpent. Such a mythological theme could have had a counterpart in the earthly ritual world—the warriors being initiated by means of a ritual cauldron such as the Gundestrup cauldron before battle. Although such an interpretation can be made with reference to much later insular Celtic myths, the possibility that this plate could be understood with reference to Thracian mythology is also possible (Marazov, *Thracian Tales on the Gundestrup Cauldron* 66–70), and it must be stressed that in the Celtic texts we find nothing which is reminiscent of the rest of the scene on this plate, except the supposed cauldron of immortality.

Although some of the figures on the cauldron are known from a ROMANO-CELTIC context, none of the motifs can be related to the medieval stories. The attempts by Olmsted to relate the Gundestrup cauldron scenes to TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley') have not seemed compelling to subsequent writers (Kaul & Warmind, *Reallexikon der germanischen Altertumskunde* 13.211–13). Despite this, it can be stated that many of the symbols and animals depicted make sense in a Celtic context. Bulls, boars, and birds of prey are important in the Irish and Welsh tales. On the other hand, neither dolphins nor elephants are mentioned in them. Nor are the Celtic stories full of composite fantastic animals. Animals of supernatural size and abilities are certainly numerous, but not beasts which are not found in nature, except perhaps in connection with water. In Thracian iconography, fantastic animals, as well as boars, bulls or heads of bulls, and birds of prey are common. The god with a wheel on one of the plates may be identified as a Romano-Celtic god, a variant of Jupiter, and it is

commonplace to identify him as the Celtic TARANIS (Kaul & Warmind, *Reallexikon der germanischen Altertumskunde* 13.211–13). The identification of the antlered god with torcs and the ram-headed snake as CERNUNNOS seems to be acceptable because of similarities with several Romano-Celtic depictions of such a god. However, the origins of this god might alternatively be placed in a south-east European or Hellenistic–Mediterranean context, closer in time to the cauldron (Kaul, *Acta Archaeologica* 66.18–22). Also, when dealing with the iconography and possible interpretations, the Gundestrup cauldron displays obvious signs of a culturally mixed origin, and while much of its content seems intelligible as part of Celtic religion, parts of it do not (Kaul & Warmind, *Reallexikon der germanischen Altertumskunde* 13.213).

Guthlac (675–714) is revered as one of the saints of early England. There is a near-contemporary Life, written by Felix for King Ælfwald of East Anglia (r. 713–49), in which Guthlac's background and career illustrate successive levels of Celtic–English cultural interaction. Of aristocratic Anglo-Saxon background, Guthlac was the son of Penwalh (a name which is either an Old English–Brythonic hybrid or simply Brythonic, cf. Welsh *pen* 'head, chief') and, like King PENDA, a descendant of Icel, the supposed progenitor of the dynasty of Anglo-Saxon Mercia. Guthlac was exiled 'among the BRITISH' and recognized BRYTHONIC spoken by protestors against his Fenland hermitage at Crowland, who were represented as armed British demons by his biographer. This anecdote implies that early WELSH or a language closely akin to it continued to be spoken in parts of eastern England *c.* 700 by a still restive native population, after more than two centuries of English dominance in the area. Moreover, Felix's demonization of the Christian BRITONS shows how the conversion of England often provided new metaphors for pre-existing hostility between the two groups rather than rapprochement. Guthlac's exile was possibly in GWYNEDD or northern POWYS, since a story associated with Einion Frenin, 'golden-handed prince of Llŷn', and known only from three late medieval manuscripts, tells of Guthlac's occupation of Dinas Brân, an IRON AGE hill-fort above Llangollen (Denbighshire/sir Ddinbych), after expelling its demons. Einion is given the alias 'Bartholomew Apostle', Guthlac's imagined protector, an association probably based on St Bartholomew's reputation for casting out demons.

Guto'r Glyn is one of several 15th-century CYWYDDWYR famous for their formal poems of praise, thanks, and request to noble Welsh patrons. Little is known of the poet's life, though the poems locate him in the area of Oswestry, now in Shropshire (Welsh Croesoswallt, swydd Amwythig). Assuming his elegy to Llywelyn ap y Moel, composed in 1440, was one of his earliest poems, and that he is the same as the Guto ap Siancyn who eulogized Abbot Rhys (†*c.* 1441) of Strata Florida (YSTRAD-FFLUR), the dates of Guto's life can be estimated as *c.* 1418 to *c.* 1493. His epithet may refer to the place-names of Glyn Ceiriog or Glyndyfrdwy, both near Oswestry, or to the Cistercian monastery of Valle Crucis (Glyn Egwestl), where he

retired in old age (see CISTERCIAN ABBEYS IN WALES).

Guto is also known for his nationalistic support of the Yorkist faction in the Wars of the Roses. During the French wars of the 1420s and 1430s he sang the praises of Welsh leaders in the field such as Richard Gethin and Mathew Gough. Later, he composed several praise poems to the Welshman William Herbert, earl of Pembroke, and one to Edward IV.

As well as travelling throughout Wales (CYMRU), Guto refers to visits he made to England, a country he disliked. In old age, complaining of his infirmities, he took refuge at Valle Crucis, and one of his last poems is addressed to Dafydd ab Iorwerth, abbot of the monastery. Opinionated, prolific, patriotic and sociable, Guto is commemorated in an elegy by GUTUN OWAIN.

Helen Fulton

Gutun Owain, or Gruffudd ap Huw ab Owain (*fl.* 1450–98), was a poet and copyist from the parish of Dudleston in the lordship of Oswestry, now in Shropshire (Welsh Croesoswallt, swydd Amwythig). He is thought to have been present at the EISTEDDFOD of Carmarthen (CAERFYRDDIN) *c.* 1451 in the company of his bardic teacher, DAFYDD AB EDMWND, though the earliest poems to have survived in his name date from the 1460s.

The most famous manuscript to which he contributed as a copyist is the collection of historical texts known as the Black Book of Basingwerk (Aberystwyth, National Library of Wales MS 7006; see LLYFRGELL GENEDLAETHOL CYMRU). Seven other manuscripts were written wholly or partly by him, and important texts copied by him include a bardic grammar (see GRAMADEGAU'R PENCEIRDDIAID), a brief history of the world, the oldest surviving copy of the *Llyfr Arfau* (a heraldic treatise), a collection of GENEALOGIES, and also medical texts which are accompanied by the most striking drawings to be found in Welsh manuscripts of this period (see MEDICAL MANUSCRIPTS). These texts amply support the impression given by a reading of Gutun's poems, namely that of a poet extremely well educated in the necessities of his craft.

Of the 66 poems edited by Bachellery, over 50 are *cywyddau*. Most are elegies and eulogies to patrons, mostly from north-east Wales (CYMRU), including a significant number addressed to abbots, with those of Valle Crucis foremost among them (see CISTERCIAN ABBEYS IN WALES). Although his eulogies and elegies have not received the same degree of acclaim as those of contemporaries such as GUTO'R GLYN, many of his poems remain memorable. In particular, a CYWYDD composed to ask for a gift of hunting dogs won the admiration of Saunders LEWIS in 1932:

> *Ymddiddan tuag annwn*
> *yn naear coed a wnâi'r cŵn,*
> *llunio'r gerdd yn llwyni'r gog*
> *a llunio angau llwynog.*
> (*Braslun o Hanes Llenyddiaeth Gymraeg* 1.133)

> They'd be conversing down to Annwn, / the dogs in the woodland's earth, / fashioning the poem in the cuckoo's groves, / and fashioning the fox's death.

Dylan Foster Evans

Gwalchmai ap Meilyr was one of the Poets of the Welsh Princes (see GOGYNFEIRDD); he flourished *c.* 1132–*c.* 1180. He was a son of MEILYR BRYDYDD and father to at least one poet, Einion ap Gwalchmai, and possibly a second, ELIDIR SAIS. The family was connected with Anglesey (MÔN), where the

village of Gwalchmai probably bears his name. Nine of his poems are extant. In his 'Poem to God' Gwalchmai employs praise and penitent petition, confessing a sinful life and promising to reform. This is accompanied by an eager desire to journey as a pilgrim to the Holy Land. His other religious poem, called his 'Dream' (*Breuddwyd Gwalchmai*) in the manuscript, appeals for God's comfort following the pain of losing his patron, his son, and then his wife, and ultimately seeks solace in charity and prayer. There follows in the manuscript a short and intriguing poem mixing gnomic utterances with sexual boasting and disillusionment about love, ending with a warning against doomsday. Two praise poems to Madog ap Maredudd of Powys—one an elegy—are preserved, along with one each to Owain Gwynedd and his sons Dafydd and Rhodri. The poem to Owain is known for its vivid description of an Anglesey battle of 1157. Gwalchmai's best-known poem is his gorhoffedd ('boast' or 'exultation'). In it, reminiscences of military exploits intermingle with thoughts of love, and the whole is accompanied by references to the beauty of early summer. The nature descriptions and insistent 'I' of this poem have exercised a powerful appeal for modern readers. Although linguistically challenging, Gwalchmai's poetry is highly rewarding for its variety of themes as well as poetic craftsmanship, and its range refutes the idea that Gogynfeirdd verse is lacking in variety.

Barry J. Lewis

Gwallawg ap Lleënnawg was a north Brythonic chieftain, ruler of Elfed in the later 6th century, and a member of one of the dynasties for whom descent from Coel Hen was claimed. The evidence for these identifications is discussed in the entry on Gwallawg's son, Certic, the last Brythonic ruler of Elfed. Gwallawg's greatest significance for the study of early Welsh literature is as the subject of two praise poems in the awdl metre in Llyfr Taliesin ('The Book of Taliesin'; see cynfeirdd). However, it is not certain whether these praise poems were traditionally attributed to the bard Taliesin (see taliesin [2] §1). One of these *awdlau* describes Gwallawg's office as 'anointed ruler/judge over Elfed' *a.eninat yn ygnat* a[*r*] *Eluet* (Ifor Williams, *Canu Taliesin/Poems of Taliesin* 12.21).

Gwallawg occurs in the Old Welsh genealogies in BL MS Harley 3859 and in the Middle Welsh genealogical tracts *Bonedd Gwŷr y Gogledd* (Descent of the men of the north) and *Bonedd y Seint* (Descent of the saints); for the collateral relationship of his lineage to that of Urien of Rheged, see Catraeth §3; Coel Hen; Cynferching. For the reference in Moliant Cadwallon to Gwallawg as the maker of the 'great mortality of [the battle of] Catraeth' and the possible significance of this for the Welsh invasion of Northumbria in 633, see Cadwallon; Catraeth §3; Eadwine. Gwallawg was a member of the alliance led by Urien which besieged the Angles of Brynaich, according to Historia Brittonum §63 (see catraeth §3; lindisfarne). In the saga englynion concerning Urien and his family, there is a reference to Gwallawg planning to make battle in Erechwydd, one of Urien's territories, and attack Elffin, presumably Urien's son of that name. Therefore, although this allusion lacks context, there may once have been a tradition that Gwallawg joined Urien's enemies when the north Britons' alliance broke up in lethal acrimony at Lindisfarne. Gwallawg is listed in later versions of three triads (TYP no. 5 'Three Pillars of Battle', TYP no. 6 'Three [?]Bull-Protectors', TYP no. 25 'Three Battle-Leaders'); in each of these, he has interestingly taken the place where Urien had been in the earlier version. By the 13th century, Gwallawg had been drawn into Arthurian literature; he appears among the heroes of Arthur's court in the tale Geraint *ac Enid* in the Tair Rhamant.

The name, Old Welsh *Guallauc*, probably derives from Gallo-Brittonic **Wellācos*, with **wello-* < Celtic **wer-lo-* 'excelling, better' (Welsh *gwell*, Old Irish *ferr*) and the same vowel change as that seen in the development of the Welsh personal name Cadwallon from the old Gallo-Brittonic tribal name Catuvellauni.

Gwassanaeth Meir (The Service of Mary, in Modern Welsh orthography *Gwasanaeth Mair*) is a Welsh translation of *Officium Parvum Beatae Mariae Virginis*, an office popular with lay people and the main component of medieval Latin Books of Hours and the later primers. The earliest copies of the Welsh translation are found in the two closely related 15th-century manuscripts, Peniarth MS 191 (probably from Pennant Melangell in POWYS) and Shrewsbury School MS xi, both kept at the National Library of Wales (LLYFRGELL GENEDLAETHOL CYMRU; see also HENGWRT). The translation, probably of the 14th century, does not follow any known lay liturgical Use, the closest parallel being the Dominican Use, and its purposes or for whom it was intended, lay or clerical, are not clear. The hymns in the Little Office are translated into strict metre verse in a style typical of the later court poets (see GOGYNFEIRDD; WELSH POETRY), but the psalms are rendered into free rhyming couplets and the *Benedicite* into the same metre but with an early form of CYNGHANEDD (like the hymns), both of which are unique in this period. The translation has been attributed to Dafydd Ddu of Hiraddug (see GRAMADEGAU'R PENCEIRDDIAID), and the work is evidence of the relationship which could exist between the church and the professional bards in the late Middle Ages.

Gwened (**Vannes / Vannetais**) is both a city and one of the four Breton-speaking regions of Lower Brittany (BREIZH-IZEL). The population of the city in 2001 was 60,000. The region is defined by the boundaries of the bishopric of Gwened, but it has significance beyond the sphere of religion. The four dioceses of western Brittany were areas of administration up to the French Revolution, and correspond to the four divisions of the BRETON language. The language of Gwened (Breton Gwenedeg, French Vannetais) is markedly divergent from that of the other three regions, historical *th* /ð/ having become /*h*/, parallel to the development of this sound in IRISH, rather than /*z*/ as in the rest of Breton (see BRETON DIALECTS). In one commonly used orthographic system, called *Peurunvan*, the sign *zh* is used to represent this sound, as in *Breizh*, understood to be pronounced *Breih* in Gwenedeg and *Breiz* in the other three dialect areas. Gwenedeg, like French, has an ultimate accent, as opposed to the penultimate stress accent found in the rest of Breton as well as WELSH and CORNISH. The bishopric of Vannes occupies roughly (though not entirely) the same area as the post-revolutionary *département* of Morbihan, of which Vannes is the capital. Both Gwened and Vannes come from the Gaulish tribal name *Venetī*. The name is probably not equivalent, at least not exactly, to Welsh GWYNEDD, Romano-Celtic *Venedotia*. *Venetī* was also the name of a non-Celtic but Indo-European people in northern ITALY, around modern Venice, who possibly inherited an identical Indo-European group name.

AM

Gwenhwyfar was ARTHUR's wife; variant name forms in French and English ARTHURIAN literature include *Guenevere*, *Guinevere*, *Guenièvre*, also Middle English *Wannour*, *Gwenore*, *Gaynore* (the last was reintroduced to become the popular Welsh name *Gaynor*). Texts of the HISTORIA REGUM BRITANNIAE

of Geoffrey of Monmouth show Latin spellings, including *Guenhuuera* and *Guanhumara*, the latter probably based on a misreading of an early Welsh **Guenhuiuar*. She is one of a small core of Arthurian figures and accoutrements—Cai, Bedwyr, Medrawd, the court of Celliwig, and the sword Caledfwlch—which belonged to the earliest observable core of Welsh Arthurian literature, and most survive in the subsequent international retellings.

In the earliest Arthurian prose tale, Culhwch ac Olwen, Arthur names his wife Gwenhwyfar among his most prized possessions, which he will not grant his cousin Culhwch, despite the great king's otherwise magnanimous generosity (passage quoted at caladbolg §2). Further on in *Culhwch*, she is described as *Penn Rianeb yr ynys honn* (chief of queens of this island [i.e. Britain]), in which the Proto-Celtic word for 'queen', **Rīganī* (cf. morrígan; rhiannon), is still used in its original sense, contrasting with the better attested sense of Welsh *rhiain* as 'maiden, lady'; her title and station thus correspond exactly to Arthur's *Penn Teyrneb yr ynys honn*. This title is confirmed and exalted—though possibly in a confused way—in Triad no. 56, *Teir Prif Riein Arthur* ('Arthur's Three Great Queens'), all of whom are named Gwenhwyfar.

The recurrent theme of Gwenhwyfar's abduction and rescue is found first in the early 12th-century Life of Gildas by Caradog of Llancarfan. The Welsh dialogue englynion of *Melwas and Gwenhwyfar* (edited by Mary Williams) is based on this same story. In *Historia Regum Britanniae*, Guanhumara is forced to marry the usurper Modred (i.e. Medrawd) during Arthur's absence. According to TYP no. 54 ('Three Unrestrained Ravagings'), Medrawd dragged Gwenhwyfar from her throne at Celliwig and struck her.

Gwenhwyfar is named in five Welsh Triads. TYP no. 53 ('The Three Harmful Blows') and TYP no. 84 ('The Three Futile Battles') report the tradition that the cataclysmic battle of Camlan was caused by a petty quarrel between Gwenhwyfar and her sister, Gwenhwyfach. The idea that Gwenhwyfar was responsible for the fall of Arthur and his heroes was thus already present in early Welsh tradition. TYP no. 80 ('The Three Faithless Wives') adds Gwenhwyfar as the fourth and worst 'because she shamed a better man than any'. Therefore, although we do not find it fully preserved in extant sources, it is possible that early Welsh tradition already contained a version of the tragic Arthurian love triangle, which is found in the later international romances with the hero Lancelot as the pivotal figure, for example, in the later 12th-century French verse romance of Chrétien de Troyes, *Chevalier de la Charette*, in the 13th-century Vulgate cycle and, developed to its full and familiar form, in Thomas Malory's 15th-century English *Morte Darthur*.

For the exhumation at Glastonbury in 1191 of Arthur and Gwenhwyfar, named as WENNEUEREIA in one reading of the accompanying inscription; see Avalon.

The name *Gwenhwyfar* corresponds exactly to Old Irish *Findabair*, the name of the daughter of Medb and Ailill in the Irish Ulster Cycle, a compound of *find* 'white, fair' and *siabair* 'phantom'. Like Gwenhwyfar, Findabair is responsible for the death of many heroes in the calamitous confrontation of Táin Bó Cuailnge ('The Cattle Raid of Cooley'). Thus, it is possible that not only the names but also the characters are of common origin. The forms of the names, *Gwenhwyfar* and *Findabair*, could either be Common Celtic cognates or borrowings in either direction. The parallel is thus exactly comparable with that of Welsh *caledfwlch* : Irish *caladbolg* and Twrch Trwyth : *Torc Tríath*. These three form a significant nucleus of old inter-Celtic borrowings or inherited elements in Arthurian tradition generally, and in *Culhwch ac Olwen* specifically.

Gwenllïan (†1136) was the daughter of Gruffudd ap Cynan, king of Gwynedd, and the wife of Gruffudd ap Rhys ap Tewdwr, king of Deheubarth.

Her most famous son was Rhys ap Gruffudd ('The Lord Rhys'). While her husband was away in Gwynedd seeking reinforcements for his campaign against the Anglo-Normans, Gwenllïan, on learning of Maurice de Londres's intention to counter attack, mustered and led the forces of Deheubarth against his garrison at Kidwelly castle. The Welsh suffered a heavy defeat and Gwenllïan was slain at a site near the town still known as Maes Gwenllïan (the Field of Gwenllïan). Citing the attention paid in the Mabinogi to infants and other possibly feminine interests, Andrew Breeze has recently proposed that this remarkable woman was the author of the Four Branches (*Medieval Welsh Literature* 75–9); although this theory has been widely rejected, Gwenllïan's career does invite rethinking of assumptions about gender rôles in medieval Wales (Cymru). Her leadership and bravery, reminiscent of Boudīca centuries before her and likened by Giraldus Cambrensis to Penthesilea, queen of the Amazons (*Descriptio Kambriae* 1.9), have become fixtures of the legendary history of Wales from the later Middle Ages to the present day. The Welsh artist Christopher Williams's drawing *Gwenllian* was preparatory for his painting *Wales Awakening* (1911), a feminine icon of romantic nationalism on a monumental scale (3 × 2 m). The name is a self-evident compound of Welsh *gwen* 'white, blessed' (f.) and *lliant* 'flood'. Numerous Welsh women are recorded subsequently with this name, including the youngest daughter of Prince Llywelyn ap Gruffudd, who died in 1337.

Gwerful Mechain (*c.* 1460–*post* 1502) is the only female poet of medieval Wales (Cymru) from whom a substantial corpus of poetry has survived. More poetry has been attributed to her than to any other Welsh woman during the Middle Ages. In view of the scarcity of material produced by women which has survived in the manuscripts from this period and beyond, her work is exceptional.

Gwerful was the descendant of a Welsh noble family from Llanfechain in mid-Wales. The canon of her poetry consists of works in two metres only, *cywyddau* and *englynion*. However, her subject matter is varied and is thus of interest from more than one perspective. She was famous for composing some of the most uninhibited and sexually explicit poems in the Welsh language: for example, *Cywydd y Gont* (Poem of the vagina) and *I Wragedd Eiddigus* (To jealous wives). For this reason, her work has become synonymous with erotic verse. However, the erotic poems represent only one aspect of her output. She also composed religious poetry, prophetic verse (see prophecy), and she also answered her male contemporaries forcefully in several ymrysonau (poetic contentions/debates). She also produced a skilful cywydd contemplating Christ's Passion on the cross, while her spirited poem defending women from misogynistic attacks is an important contribution to the fields of social history and feminist literary criticism:

'I'w gŵr am ei churo'

Dager drwy goler dy galon—ar osgo
I asgwrn dy ddwyfron;
Dy lin a dyr, dy law'n don,
A'th gleddau i'th goluddion.

'To Gwerful Mechain's husband for beating her'

May a dagger through your heart's collar slant to the bone of your breast, your knee break, your hand bruise, and your own sword pierce your bowels.

One of the most intriguing aspects of her work is the manner in which she manipulated poetic conventions. Her poetry offers us a new and different perspective. By parodying, reversing, and subverting traditional themes and debates found in the poetry of male bards, she gives expression to female experiences. Her work reveals that it was possible for a woman in late medieval Wales to absorb the learning required to compose in the strict metres, and also to talk openly about sex. It seems that she was fully accepted by her contemporaries and had managed to secure a position within what we would regard as exclusively male preserves.

Gwernig, Youenn (1925–), musician and poet, was originally from Scaër, Brittany (BREIZH). He emigrated to the United States as a young man (see CELTIC LANGUAGES IN NORTH AMERICA §5), and lived in New York until his return to Brittany in 1969. While in the United States, he met Jack Kerouac and other artists of the beat movement, which influenced his own poetry. His novel, *La grande tribu* (The great tribe), deals with the Breton immigrant community in New York. In 1983 he was made responsible for BRETON-language television programming on the channel France 3 Ouest in Rennes (ROAZHON; see MASS MEDIA).

Gwerthefyr (Old Welsh Guorthemir), son of GWRTHEYRN (Vortigern), was a leader of the BRITONS in their warfare against the Saxons in Kent in the 5th century. He is not mentioned by GILDAS or BEDA, but Gwerthefyr is nonetheless more probably a historical figure than a literary invention. In the long section of the 9th-century Welsh Latin HISTORIA BRITTONUM which is devoted to Gwrtheyrn (§§31–49), a subsection enumerates Gwerthefyr's battles (§44): the first was fought on the Derguentid (presumably the Old Welsh name for the Darenth in Kent), the second at the place called Episford in Old English and Rith-er-gabail (Ford of the seizing) in Old Welsh. There, the English leader Horsa fell, as did Gwerthefyr's brother Cateyrn (OW Cattegirn). The third was fought in open country near the inscribed stone by the Gallic Sea; the barbarians were beaten and were drowned as they struggled to board their ships like women. This last site has been identified with the Roman fort and monument at the harbour of Richborough, near where Horsa and Hengist are supposed to have landed with their Jutish mercenaries a few years earlier. The fact that battle sites and BRYTHONIC place-names in south-east England are remembered in this passage is significant, but this could have more than one explanation: either that the tradition was formed very early—in the 6th and 7th centuries—when there was still a vestigial Brythonic-speaking population in south-east England, or that it was later shaped by Brythonic men of letters in contact with Kent and able to synthesize Anglo-Saxon and Brythonic accounts. The fact that ELISEG'S PILLAR claims Gwrtheyrn as an ancestor for the 9th-century CADELLING shows that there would still have been an interest at that time in portraying Gwrtheyrn's family heroically resisting the English.

Historia Brittonum (§44) maintains that Gwerthefyr died soon after the third battle. He had commanded his men to build his tomb by the coast, in the port from which the English had been driven, as a talisman preventing their return. But they did not follow his instructions. Thus, we have a legend very much like the MABINOGI'S burial of BRÂN'S head facing France to protect BRITAIN from foreign invasion (*gormes*). The protective burial of Gwerthefyr's dismembered body in Britain's chief ports is mentioned in the TRIADS (TYP no. 37). As discussed by Goetinck, Gwerthefyr and Brân belong to a small group of heroes—which also includes CADWALLON and his son CADWALADR—who are remembered in Welsh tradition with the epithet *Bendigaid*; it seems that the four of them shared a reputation as Britain's (would-be) saviours from foreign invaders. The story of the burial of Brân's decapitated head raises the possibility that *bendigaid* is in fact a misunderstanding of an older epithet based on the word *pen* 'head'. In *Historia Brittonum*, the story of Gwerthefyr elaborates Gildas's account of the Britons' successful rally against the destructive ANGLO-SAXON 'CONQUEST'. As such, his story is functionally similar to the list of ARTHUR'S twelve battles (*Historia Brittonum* §56) and the story of URIEN'S siege of LINDISFARNE (§63). Like Arthur and Urien, the great war-leader Gwerthefyr repeatedly defeats the Anglo-Saxons and is never once defeated by them. Gwerthefyr and Urien push

the invaders into the eastern sea. All three die undefeated at the peak of their glory, but somehow failing to ensure Britain's future despite their best efforts. As Vortimer, Gwerthefyr is an important figure in the LEGENDARY HISTORY of GEOFFREY OF MONMOUTH, who follows the account in *Historia Brittonum*.

The name *Gwerthefyr* derives from the Celtic compound **Wertamo-rīχs* 'summit-king'. On whether this was originally a title rather than a name, see GWRTHEYRN. In the Book of LLANDAF, an 8th-century charter concerns a church at *Gurthebiriuc* (Modern Welsh *Gwerthefyrïwg*), now Worthybrook near Wonastow in south-east Wales (CYMRU). This place-name derives from British **Wertamorīgācon* the 'land' or 'estate of Gwerthefyr'. In Old Welsh sources, the name *Guortepir*, corresponding to the *Vorteporius* of Gildas, for a 6th-century king of DYFED, is kept distinct from *Guorthemir*, but in Middle Welsh texts the two tend to fall together as *Gwerthefyr*, the former unhistorically taking the form of the latter.

Gwreans an Bys ('**The Creacion of the Worlde**') is a biblical drama which was probably written for outdoor performance in or near Helston, Cornwall (Henlys, KERNOW), and is part of a larger work, similar to the ORDINALIA, which gives additional insight into popular theatrical culture in medieval Cornwall. Given Helston's history of pageant (Furry Dance and *Hal-an-Tow*), the play may be linked to long-term festival activity there. A colophon reveals that the text was written by William Jordan and dated 1611, but this is probably just a transcription, with the actual text being written much earlier. The incorporation of the Rood legend (relating to the Cross) and Adam's consignment to limbo indicate a Catholic work, while the likely presence of the story of the Virgin in any second play would have contributed to the rest of the cycle's loss and destruction at the time of the Reformation.

There are marked similarities to the first play in the *Ordinalia*—namely *Origo Mundi*—either formulaic or borrowed, but *Gwreans an Bys* contains additional sequences. For example, Lamech—a descendant of Cain, the author of moral deterioration and the first polygamist—an apparently poor-sighted huntsman, meets his infamous forebear and kills him by accident. Additionally, the play contains the rebellion of Lucifer, and the unusual character of Death, who offers a homiletic speech. In many ways, the play is more structurally and linguistically sophisticated than *Origo Mundi*.

The 7-syllable line is not strictly followed in the text, but 8-syllable lines would become 7-syllable in actual speech if the elision of vowels is recognized. It was first translated into English by the Mousehole CORNISH-language scholar John Keigwin (1641–1716) at the request of the bishop of Exeter, Sir Jonathan Trelawny.

Kent and Saunders have recently argued that, though common to many dramas across Europe, the subtitle 'with Noye's Flood' may have had special significance to Cornish mining communities, where it was believed that their mineral wealth was given to them by the redistribution of the earth's resources in the aftermath of God's cleansing of the world through the Flood. 'The Creacion of the Worlde' has been somewhat neglected in the corpus of CORNISH LITERATURE, and has not been performed in its entirety since the 17th century.

Gwrtheyrn (**Vortigern**) was a powerful historical leader in 5th-century BRITAIN and subsequently became a central figure, of generally bad reputation, in LEGENDARY HISTORY and ARTHURIAN literature. He was, nonetheless, not universally reviled in the earlier 9th century, at which time the ruling dynasty of POWYS claimed descent from him

(GUARTHIGIRN) on ELISEG'S PILLAR (see also GENEALOGIES [2] §1). Beginning with the *De Excidio Britanniae* (On the destruction of Britain) by GILDAS, he is represented as instrumental in bringing the Anglo-Saxons to Britain as mercenaries, who soon after revolted against the BRITONS, laid waste to their towns, and seized land for uncontrolled settlement (see ANGLO-SAXON 'CONQUEST'). Since Gildas correctly uses Latin technical terminology for a treaty (*foedus*) between late Roman authorities and barbarian allies, his account is credible, and is possibly based on 5th-century written sources. In all but one extant manuscript of *De Excidio*—where he is called *Vortigernus*—he is designated only by the punning *superbus tyrannus* (proud usurper). BEDA'S *Historia Ecclesiastica* (completed in 731) follows Gildas's account closely, but he does supply the name and an exact date for the arrival of his Anglo-Saxon mercenaries (*foedarati*) at 449, though this may be based on a misunderstanding of Gildas. For the *Historia Brittonum* of 829, the tragedy of Gwrtheyrn is nearly the overarching central theme; a great deal of information has been added, much of it from legend and HAGIOGRAPHY, and of uncertain historical value. Several of these picturesque details were used by GEOFFREY OF MONMOUTH in his HISTORIA REGUM BRITANNIAE ('The History of the Kings of Britain') of *c.* 1139, and thence became established fixtures of the legendary history of Britain: for example, the beguiling of Gwrtheyrn by the beautiful daughter of the Saxons' leader, Hengist, and the 'Treachery of the Long Knives' (*Brad y Cyllyll Hirion*) in which Hengist's men massacred their hosts, the 300 elders of Britain, at a FEAST. For the story of Gwrtheyrn's doomed stronghold, the red and white dragons, the wonder child AMBROSIUS, and its localization in Snowdonia, see DINAS EMRYS; DRAIG GOCH; ERYRI.

In addition to Eliseg's Pillar, Gwrtheyrn is linked with the area which is now east-central Wales (CYMRU) by the old CANTREF name *Gwrtheyrnion* < British **Wertigerniāna* 'land of Gwrtheyrn' (see further BRYCHEINIOG). Gwerthefyrïwg, a district named from his son, was near the present border, by Monmouth (Trefynwy). Gloucester (Welsh Caerloyw), which is not far to the east, on the river Severn, is the place of origin implied by Gwrtheyrn's genealogy (*Historia Brittonum* §49): *Guorthigirn Guortheneu, filius Guitaul, filii Guitolin, filii Gloiu* 'Gwrtheyrn the excessively thin, son of Vitalis, son of Vitalinus, son of Gloucester'. Thus, the various territorial connections of the family suggest holdings over a sizeable but coherent area in the southern and central Welsh–English border country. Legendary history and modern historians until recently tended to view Gwrtheyrn's power as extending over all or most of what had been Roman Britain, as implied by the basic details of the accounts of Gildas and Beda, in which Gwrtheyrn was concerned with the defence of the Britons against the PICTS in the north and granted the Saxons land on the east coast.

A circumstantial case that Gwrtheyrn was a supporter of the theological teachings of PELAGIUS (who was declared a heretic in 418) has been advocated by several modern writers, including the CHADWICKS. In *Historia Brittonum* (§39), Gwrtheyrn is condemned by St GERMANUS for fathering a child with his own daughter and, on the basis of reliable 5th-century sources, we know that Germanus of Auxerre went to Britain in 429, and again several years later, to combat a wealthy and influential party of Pelagians, though Gwrtheyrn is not named. Scholars in recent years have been more reluctant to write 5th-century history from medieval legend, but, as Broadwell has argued, the case for Gwrtheyrn's Pelagianism has not been decisively disproved.

Gwrtheyrn, Old Welsh *Guorthigirn*, Latinized *Vortigernus*, Old English *Wyrtgeorn*, &c., has tended to be treated by most early and modern writers as a name. But, since it is not common and means appropriately 'overlord', it is possible that it was originally a title or, at least, a meaningful assumed name. As a Romano-Briton born in the 4th century, whose immediate ancestors were southerners with Roman names (see above), to bear a Celtic name at all is somewhat noteworthy. Furthermore, Gwrtheyrn's younger contemporaries GWERTHEFYR and RIGOTAMUS were also important leaders whose names meant 'supreme king'; it would be quite a coincidence had these three been birth names, though the latter, Welsh *Rhiadaf*, does recur. In the political discontinuity of the immediate post-Roman period, the unprecedented class of would-be national rulers might well have found it necessary to articulate their status in ways immediately intelligible to the monoglot-BRYTHONIC mass of the population. *Foirtchernn*, the Old Irish cognate of *Gwrtheyrn*, appears in the Book of ARMAGH for

an individual who was a contemporary of St Patrick, and hence also of Gwrtheyrn. Irish *Goirtigern*, a borrowing of Old Welsh *Guorthigern*, occurs in versions of Auraicept na nÉces ('The Scholars' Primer') and Lebar Gabála Érenn ('The Book of Invasions') as the name of mankind's shared pre-Babel language; Koch suggests that this odd usage came about through a blending of the biblical Tower of Babel with the story of the divine destruction of Gwrtheyrn's stronghold (*Cair Guorthigirn*), as in *Historia Brittonum* (§§42, 48).

Gwyddbwyll (lit. *gwŷdd* 'wood' + *pwyll* 'sense') is the Welsh cognate of Irish FIDCHELL and, like it, a board game, appearing in similar circumstances in medieval literature. It occurs in the Middle Welsh romances *Breuddwyd Macsen* (Macsen's dream; see MACSEN WLEDIG) and Breuddwyd Rhonabwy (Rhonabwy's dream). In *Breuddwyd Macsen*, the game is a luxury item: *clawr aryant a welei y'r wydbwyll, a gwerin eur arnei* 'he saw a silver board for chess, with gold men on it'. In *Breuddwyd Rhonabwy*, Arthur and Owain ab Urien play a series of games of *gwyddbwyll*, again on a silver board with gold men. As they play, they are updated with reports of the parallel conflict between Arthur's men and Owain's ravens. Either *gwyddbwyll* or an equivalent Breton game (the word occurs in Old Breton glosses as *guidpoill* and *guidpull*) probably accounts for the presence of chess in Old French Arthurian tales. For example, in the early 13th-century anonymous romance *Perlesvaus*, when Gawain is at the castle of the Fisher King, he sees the procession of the Holy Grail and the bleeding lance. Immediately afterwards, he is left alone in the hall, and begins to play chess with an invisible opponent, Gawain moving the ivory chessmen and the opponent using the men of gold. He loses two games and breaks off before he can lose the third; after this, he is expelled from the castle (see also BRETON LAYS). Welsh *gwyddbwyll* and Breton *gouezboell* are used for 'chess' in the modern languages.

Gwydion ap Dôn, like his sister Arianrhod and his brother Gilfaethwy, is one of the central characters in the Middle Welsh tale known as Math fab Mathonwy, the Fourth Branch of the Mabinogi. He is a magician and, early in the tale, uses his magic powers to instigate a war with Pryderi of Dyfed to distract his uncle, King Math, so that lovesick Gilfaethwy can rape Math's virgin footholder, Goewin. Math, also a great magician, then condemns Gwydion and Gilfaethwy to three years as successive pairs of male and female animals who breed with one another (see REINCARNATION). When Math tests Arianrhod as a possible replacement virgin footholder, she gives birth to the aquatic child Dylan and a 'small thing', which is subsequently fostered by Gwydion and later appears as Lleu. Gwydion uses magic to outwit the three destinies (Welsh sing. *tynged*) which Arianrhod swears on the boy with the intention of frustrating his achievement of full personhood, denying him a name, arms, and a wife. Gwydion tricks Arianrhod herself into performing the first two rites of passage, and with Math conjures up a woman of flowers, Blodeuwedd, as Lleu's wife. After Lleu is wounded by his unfaithful wife's lover Gronw, Gwydion uses a sow to track him, discovers him in the form of an eagle and restores him to human form (cf. BOAR).

In the TRIADS, Gwydion is named among the 'Three Great Enchantments' (TYP no. 28) and as one of the 'Three Golden Shoemakers' (TYP no. 67). The latter

refers to the episode in *Math* in which Gwydion disguises himself as a maker of shoes with gold buckles to deceive Arianrhod into naming his apprentice, Lleu. *Caer Wydion* is attested as a Welsh name for the Milky Way, and there are traditions of a son of Gwydion named *Huan* 'sun' (on which, see BLODEUWEDD); compare with this the similarity of *Lleu* and Welsh *lleuad* 'moon'.

Allusions in the 'mythological poems' of LLYFR TALIESIN imply that versions of Gwydion's story were known outside the *Mabinogi* and at an earlier date. For example, in the poem *Kadeir Kerritven* (Chair of Ceridwen 36.3–4): *Gwydyon ap Dôn dy·gy[un]ertheu | a hudvys gvreic o vlodeu* 'Gwydion ap Dôn who by his powers made a wife from flowers'; similarly, in *Kat Godeu* ('The Battle of the Trees' 25.26ff.), where Lleu is possibly speaking: *Am swynnwys i Vath . . . Am swynwys i Wytyon . . . o Euron o Vodron . . . A nu ym gowy namyn Goronwy* 'Math created me by enchantment . . . Gwydion made me by enchantment . . . from [?]Gwron, from Modron . . . no one (?) struck me down except Goronwy (i.e. Gronw)'. If Old Welsh *Lou Hen map Guidgen* is correctly interpreted as 'Lleu the Old, son of Gwydion', this would bear two important implications: namely, that in the older tradition Gwydion had in fact been Lleu's father, rather than foster-father, and that his name had earlier been the fairly common Old Welsh man's name *Guidgen* (Mod. *Gwyddien*; cf. Old Irish *Fidgen*, appositely < Celtic **Widu-genos* 'born of trees') and was later assimilated to the mythological name suffix found, for example, in *Amaethon*, GOFANNON FAB DÔN, MABON, MODRON, RHIANNON. Perhaps also compare the episode in the 7th- or 8th-century Breton Latin Life of St SAMSON which describes a 'Bacchanalian ritual' play at the direction of a *Guedianus comes* in *pagus Tricurius* north Cornwall (KERNOW).

Gwynedd was a kingdom in north Wales (CYMRU) which emerged as the Roman hold on BRITAIN weakened. One of the earliest examples of the name in its familiar Latinized form, *Venedotia*, appears on a 6th-century inscribed stone at Penmachno at the head of the Conwy valley, which commemorates a VENEDOTIS CIVES 'citizen/tribesman of Gwynedd'. The name is probably Celtic, but more than one etymology has been proposed; possibilities include a common origin with the Old Irish term FÉNI 'Irish people', also 'legally competent freemen', and/or FÍAN 'war-band (outside the tribe)'. The kingdom's foundation myth was linked with CUNEDDA, but its first king for whom we have contemporary documentation was MAELGWN in the mid-6th century, one of the five British rulers denounced by GILDAS. The core of the kingdom was the mountain mass of Snowdonia (ERYRI); this made it easy to defend and contributed to its emergence as the most powerful and successful native Welsh kingdom. The 7th century saw an ultimately unsuccessful struggle with the Anglo-Saxon kingdom of Northumbria. In 825 a new dynasty came to power in the shape of MERFYN (Frych) ap Gwriad, and the subsequent political history of independent Wales was to be associated with the descendants of Merfyn. His son RHODRI MAWR (†878) was the first to bring other kingdoms under his rule, though only for his lifetime. The kingdom subsequently came under the rule of HYWEL DDA of DEHEUBARTH, and in the late 10th and early 11th centuries it may have been under the overlordship of the Norse kingdom of Dublin (BAILE ÁTHA CLIATH).

The revival of Gwynedd began in 1039 with the coming to power of an intrusive warlord, Gruffudd ap Llywelyn. He brought more of Wales under his rule than any other ruler, before or after, but his involvement in English politics at a sensitive time, coupled with his ruthlessness within Wales, led to his downfall and death in 1064. The last quarter of the 11th century saw the return of the line of Merfyn Frych in the shape of GRUFFUDD AP CYNAN. Despite the vicissitudes of the early part of his reign, including a Norman onslaught in 1098, he was able to pass on a stronger kingdom to his son and successor OWAIN GWYNEDD in 1137. Although Owain's death in 1170 was followed by a power struggle among his sons, his grandson, LLYWELYN AB IORWERTH, emerged as the dominant ruler in Wales,

and his grandson, Llywelyn ap Gruffudd, was recognized by the English crown in the Treaty of Montgomery of 1267 as Prince of Wales and overlord of the other Welsh rulers. But a succession of crises in Anglo-Welsh relations led to two wars, in 1276–7 and 1282–3. Llywelyn's death in action in 1282 and the capture and execution of his brother Dafydd in 1283 meant the end of political independence. Gwynedd passed into the possession of the English crown, and under the Statute of Wales of 1284 (see RHUDDLAN) it was divided into the three counties of Anglesey (Môn), Caernarfon, and Merioneth (Meirionnydd). These three counties were amalgamated to reform the county of Gwynedd in the reorganization of 1974. The Isle of Anglesey (Ynys Môn) was separated from Gwynedd in 1995.

Many monuments bear witness to the early history of Gwynedd. They include the Roman fort of Segontium at Caernarfon, the early medieval village of Din Llugwy on Anglesey, monastic remains on Bardsey (Enlli), at Penmon in Anglesey and at Cymer near Dolgellau, along with numerous churches and castles, both those built by the native princes and the magnificent chain of fortifications raised by Edward I following the conquest of 1282.

Gwynedd: the post-1995 Welsh counties and places mentioned in the article

H

Hadrian's Wall is a stone- and turf-built barrier which bisects the mainland of Britain from the Irish Sea to the North Sea. It runs some 80 Roman miles (117 km) from the fort at Bowness (Maia, var. Mais) on the Solway Firth in the west to that at Wallsend (Romano-British Segedūnum 'Strong-fort') on the Tyne estuary in the east.

§1. the building of the wall

The only Roman reference to the reason behind the wall's construction states that its purpose was 'to separate the Romans from the barbarians' (*Vita Hadriani* 2.2). It appears that there had been much trouble with the native population of north Britain during the first years of the reign of the Emperor Hadrian (ad 117–38), one 2nd-century writer noting how a large number of soldiers under Hadrian had been killed by the Britons. This fact may have encouraged the emperor to secure that part of Britain within which maintenance of Roman rule seemed feasible, tightening the occupation of the restive Brigantes, while cutting off the influence of bellicose free tribes further north—the Calidones, Maeatae, and their allies. The wall would not have served as a convincing defence against large-scale military assault. It is probably better regarded as a means of controlling social traffic and trade between the free northern tribes and the native population within the Roman province, as well as a forward observation post and a deterrent to raiding and cattle plundering. Archaeological investigations indicate that the building of the wall commenced shortly after Hadrian's visit to Britain in ad 122, possibly even during that same year.

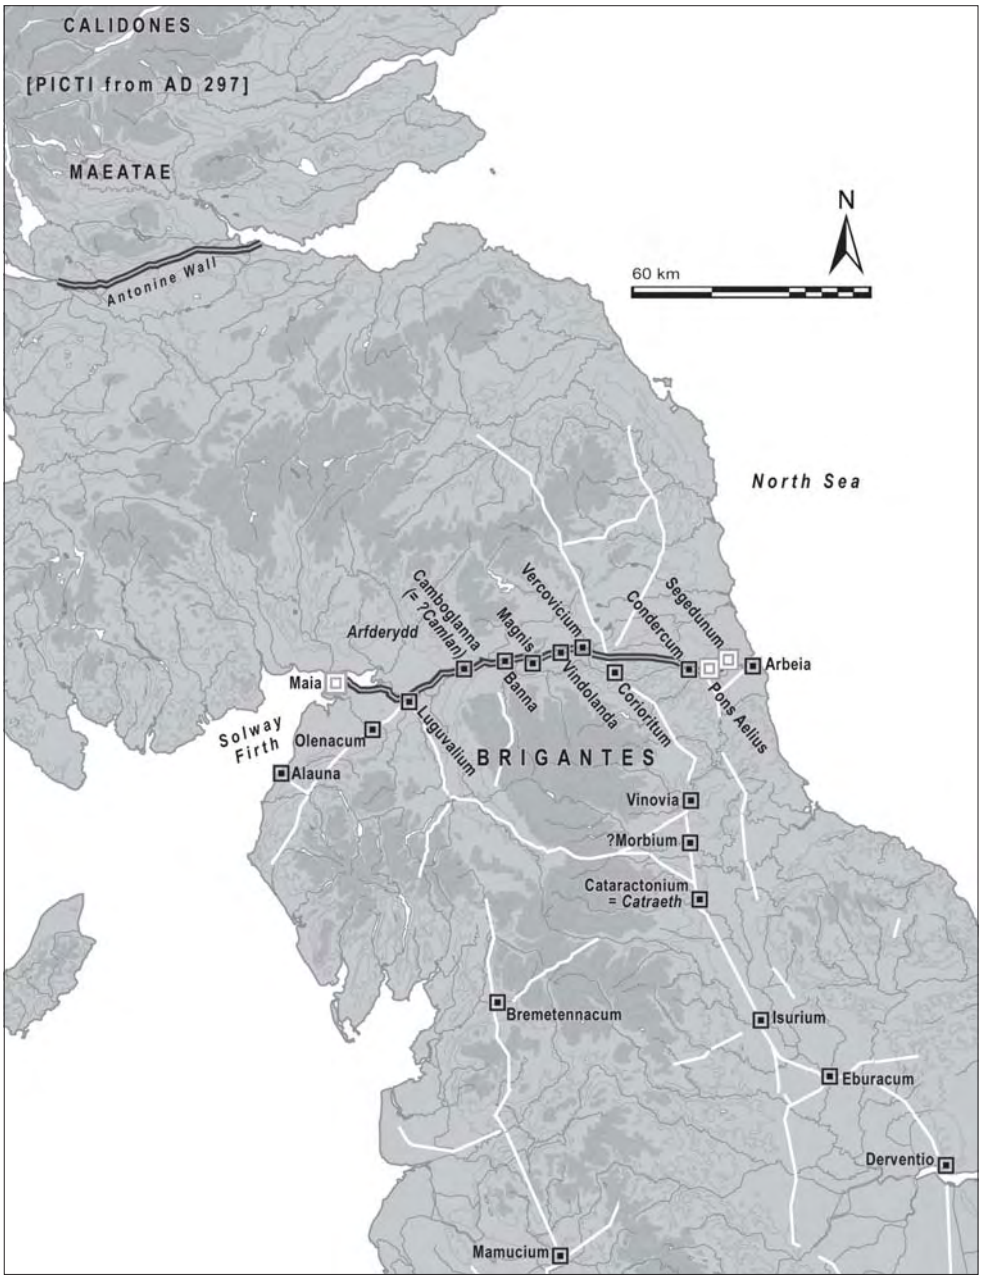
§2. the structure of the wall and the hadrianic frontier

The wall originally varied from 2.2 m to 3.1 m in width and was up to 4.65–6.2 m high. In construction, advantage was taken of topographical features, particularly slopes and ridges offering a clear vista northwards. The western part of the wall—as far east as the crossing of the river Irthing—was built of turf, while the eastern section was of stone. Most of the length of the wall was accompanied on its northern side by a wide ditch (the *vallum*), and several substantial bridges, such as those at Newcastle (*Pons Aelius*) and Willowford, form part of the overall structure. Small forts or 'mile castles' were constructed up against the southern side of the wall at intervals of roughly a mile, most with gates allowing controlled access to the exterior. In addition, two evenly spread smaller turrets were positioned along the wall between each two mile castles.

Evidence from inscriptions indicates that during construction the bulk of organization and execution was carried out by three legions: *legio II Augusta*, *legio XX Valeria Victis* and *legio VI Victrix*. The fact that three slightly different layouts for both turrets and mile castles occur seems to indicate that each of the legions in question worked to a different specific design. Some 16 larger garrison forts are known to have been built along the inner line of the wall, which they appear to post-date. Several of these, including Wallsend and Birdoswald (Banna), have been extensively excavated.

One 19th-century estimate of the scale of works suggested it would have taken a workforce of 10,000 men around 6 months to construct the curtain wall alone, and while this estimate is now considered somewhat flawed it gives some idea of the size of the undertaking. The forts of the wall were manned primarily by auxiliary troops, though large contingents of legionaries were also present during times of conflict such as the latter part of the 2nd century.

The differing effects of Hadrian's Wall on the native population living on either side of it are difficult to assess. There is no indication that the wall's chosen position corresponded with any pre-existing tribal boundary and, in fact, it appears to have been built in



Hadrian's Wall and Roman Britain's northern frontier zone: Roman roads shown in white, forts and fortified towns with evidence of early post-Roman activity shown as black squares

the territory of the Brigantes. The archaeological evidence from native sites, such as that at Milking Gap near the wall fort at Housesteads (Vercovicium), does not show any tendency for those in the hinterland of the wall rapidly to become 'civilized' or take on Roman types of settlement or dress.

§3. THE WALL IN THE HISTORY OF ROMAN BRITAIN

There is no indication that Hadrian's Wall was abandoned in the short period from *c.* 145 to *c.* 162 during which the ANTONINE WALL, some 130 km further north, was the limit of Empire. Although defences were scaled down at this time, substantial rebuilding works were undertaken in the 160s when the Antonine Wall was relinquished, apparently in a climate of intensified military pressure from the northern tribes. It was probably at this time that the western section of Hadrian's Wall was converted from turf to stone construction. In the 3rd century, prolonged peaceful conditions saw an increase in civilian settlement in proximity to the wall, much of which comprised soldier's families and those supplying goods and services to the garrisons. This quiet period also saw a loosening of army discipline, and many parts of the wall appear to have fallen into disrepair. Extensive renovations were carried out during the reign of Constantius

(AD 293–306), who visited Britain and carried out raids north of the wall against the Picti (PICTS), who are first mentioned by that name in AD 297.

§4. LATE ROMAN AND EARLY POST-ROMAN TIMES

The rôle played by Hadrian's Wall in the turbulent final century of Roman rule is unclear. There is no obvious evidence of fighting or destruction, not even at the time of the *barbarica conspiratio* ('barbarian conspiracy') of AD 367, when we know that the Picts raided south of the wall. Nor is there any archaeological evidence that the wall was overrun around AD 409/10, when centralized Roman government in Britain came to an end, though the somewhat confusing account of the 6th-century writer GILDAS tells of such events. K. Dark and S. P. Dark have assembled evidence for a military reoccupation of 13 forts and a further six Romano-British fortified towns on and around Hadrian's Wall in the 5th or 6th centuries. Many of the forts may have been taken over by local Romano-British warlords, and excavations at several of these have produced evidence of use and occupation in the subsequent centuries. For example, at Birdoswald a timber hall was erected over the site of a granary within the fort in the early 5th century, and a commemorative inscription from the same site using a variation of the *hic iacit* (here lies) formula bears the BRYTHONIC personal name BRIGOMAGLOS. Although Gildas was ignorant of the origins of the wall, he was acutely aware of it and had a strong sense of its historical importance. It is also noteworthy how much of the CYNFEIRDD poetry, such the GODODDIN, the AWDL*au* concerning GWALLAWG, and MARWNAD CUNEDDA, point to a tradition of continued hostility in post-Roman times at or near the Hadrianic frontier. Similarly, the early entries in ANNALES CAMBRIAE record battle sites identifiable with places on or near the wall, such as CAMLAN (AD 537) and ARFDERYDD (AD 573). The Old Welsh name for Hadrian's Wall was *Guaul* (HISTORIA BRITTONUM §38).

§5. HADRIAN'S WALL TODAY

Modern interest in Hadrian's Wall began with antiquarian speculations in the early 19th century, and archaeological investigation continues in the present day. The wall was designated a UNESCO World Heritage site in 1987 and its upstanding remains attract hundreds of thousands of visitors each year.

SÓF

hagiography in the Celtic countries [1] Irish

§1. INTRODUCTION

Hagiography (writings on the saints) survives mainly in the form of accounts of the lives of saints (*vitae sanctorum*), calendars, and martyrologies (lists of saints for every day of the year). Native Irish hagiography was written down over a period of 1000 years, beginning between 650 and 700 with four Latin Lives (two of PATRICK, one each of BRIGIT and COLUM CILLE) and ending in the early 1600s with the Franciscan scheme for the collection of Ireland's ecclesiastical literary remains, which culminated in the publication in Louvain in the 1640s of John Colgan's *Acta Sanctorum* and *Trias Thaumaturga* (see MAC COLGÁIN).

§2. EARLY LATIN LIVES

Late 7th-century rivalry between the churches of Armagh (ARD MHACHA), Kildare (Cill Dara), and Iona (EILEAN Ì) led to the composition of Latin Lives for Brigit, Patrick, and Colum Cille. Brigit's biographer, Cogitosus, ascribed to Kildare 'supremacy over all the monasteries of the Irish . . . from sea to sea'. Both of St Patrick's early biographers, Muirchú and Tírechán, sent him on triumphal journeys as a means of extending the influence of Armagh and promoting the interests of its ecclesiastical families. Neither biographer showed much interest in southern Irish churches. ADOMNÁN (†704), while attributing to Colum Cille (†597) visits to many churches in Ireland (ÉRIU)—including Clonmacnoise (Cluan Mhic Nóis) and Terryglass (Tír Dhá Ghlas)—also commented indirectly on the then ongoing EASTER CONTROVERSY by delaying the date of his subject's death to avoid a clash with the 'Easter festival of joy'.

§3. EARLY VERNACULAR LIVES

Between around 800 and 950, one Latin (Brigit's *Vita Prima*) and three vernacular Lives—of Brigit, Patrick, and Adomnán—were written at Kildare, Armagh, and at Iona's successor as head of the Columban *familia*, KELLS. Brigit's vernacular Life bestowed on the saint a unique status equal to that of a bishop. Patrick's Tripartite Life expanded greatly the itinerary attributed to the saint in his earlier Lives, especially with regard to Munster (MUMU), where Armagh's influence had increased. *Betha Adamnáin* ('Life of Adomnán'), commented on church–state relations in the midlands around 950 from the point of view of the authorities in Kells.

A second vernacular Life was composed for Brigit in the 11th century; extracts from it are cited in *Liber Hymnorum* ('Book of Hymns'), which dates from around 1100. While the Middle Irish Life of Patrick may belong to the same period, that of Colum Cille has been dated to the mid- to late 12th century.

§4. 12TH-CENTURY LIVES

Despite the root and branch nature of the 12th-century reforms (see ÉRIU §10), during the first 50 or so years they failed to stimulate hagiographical activity. There is little or no hagiography in the manuscripts of the period from 1050 to 1150. Paradoxically, Irish hagiography was then being compiled abroad, at Lagny, near Paris, where a Life partly based on Irish oral witness was written for Fursa, and at Clairvaux, where Bernard wrote a Life of Malachy of Armagh (†1148). In England, a Life of Brigit was written by Laurence of Durham in the 1140s, while GEOFFREY OF MONMOUTH wrote a Life of Modwenna (Moninne) in the early 12th century at Burton-on-Trent.

After 1170, against the background of the Anglo-Norman invasion, numerous saints' Lives were written in Latin, the only language shared by Irish and English. Among these was the early 13th-century Life of Abbán, which used the English church of Abingdon to make its point.

§5. COLLECTIONS OF SAINTS' LIVES

Sharpe (*Medieval Irish Saints' Lives* 297–339) and Herbert (*Studies in Irish Hagiography* 39) have proposed a date as early as the 8th century for the O'Donohue group of Lives in the *Codex Salmanticensis*, but this would place a collection in Ireland long before anywhere else. More acceptable is Bieler's dating (*Four Latin Lives of St Patrick* 233–4) of a Regensburg Schottenkloster collection to the late 12th century. This collection was made for inclusion in the Great Austrian Legendary. During the 14th century, collections began to be compiled in Ireland. The earliest, *Codex Salmanticensis*, which was possibly compiled at Clogher (Tyrone) in the early to mid-14th century, was followed by collections made shortly before and after 1400 for houses of Augustinian canons on Saints' Island, Westmeath (Oxford, Bodleian Library MS, Rawlinson B 485) and Abbeyderg, Longford (Oxford, Bodleian Library, MS, Rawlinson B 505). Two Franciscan collections were made during the 15th century: one probably at Kilkenny (Dublin, Marsh's Library MS Z 3. 1. 5), the other (Dublin, Trinity College MS 175) in south Leinster (LAIGIN). The same period witnessed the production of vernacular Lives, notably in south Munster and CONNACHT, and the preparation of some vernacular collections. The early 16th century saw the production of some saints' Lives in north-west Ulster (ULAID), including *Betha Colaim Chille* (Life of Colum Cille, 1532) by Manus O'Donnell (Maghnus Ó DOMHNAILL ?–1563).

§6. HAGIOGRAPHY IN THE PERIOD 1580–1650

Towards the end of the 16th century, the mainly Jesuit and Franciscan Irish colleges on the Continent initiated a new round of interest in saints' Lives. The Franciscan scheme for the collection of Ireland's ecclesiastical remains, which was based in St Antony's College, Louvain, ensured the survival of numerous texts which would otherwise have perished. At home in Ireland, Anglo-Irish scholar-collectors ensured the survival of the main collections of Latin Lives. Despite the fact that much of this activity was supposed to inform new histories of regional CHRISTIANITY and illuminate the great religious disputes of the day, both groups occasionally exchanged materials.

§7. THE LITURGICAL TRADITION

Two types of liturgical hagiographical record survive: calendars, which recorded the feasts commemorated in one or very few churches, and martyrologies, which provided much more substantial lists. The earliest surviving record, the *Depositio Martyrum* of AD 354, was a CALENDAR of feasts celebrated in Roman churches.

The earliest martyrology, spuriously named Hieronymian after St Jerome (†*c.* 420 = Eusebius Hieronymus), was compiled in the late 6th or early 7th century, possibly at Luxeuil. All later martyrologies are based on the bare names of the Hieronymian lists, including the so-called historical versions, inaugurated by the Anglo-Saxon theologian and historian Beda (†*c.* 735), which added biographical details. Beda's work was supplemented in the 9th century by Ado of Vienne (†875) and Usuard of Paris (†*c.* 875). Historical and Hieronymian martyrologies continued to be copied throughout the Middle Ages. The now standard Roman martyrology, which is historical in character, was first drawn up on the instructions of Pope Gregory XIII (†1585).

§8. the irish martyrological tradition

Two martyrologies—one prose (Martyrology of Tallaght), the other verse (Martyrology of Oengus; see oengus céile dé)—were compiled at the monastery of Tallaght (Tamhlacht), now south Dublin, around 830. Many features of the prose martyrology point to a provenance in Northumbria for its exemplar, which was an abbreviated Hieronymian text. Before reaching Tallaght, the martyrology passed through the monasteries of Iona and Bangor (Beann Char), where it received some Irish additions. However, the bulk of these were added at Tallaght. When a new copy of the prose text was made shortly after 1150 for inclusion in the Book of Leinster (Lebor Laignech), a few names were added from a copy of the Martyrology of Ado, which had reached Dublin (Baile Átha Cliath) in the early 11th century. Now preserved in a 13th-century copy made at Christ Church, this version of Ado also served as a source for the Martyrology of Gorman, the Commentary on Oengus, and the Drummond Martyrology, all of which date from between 1168 and 1175. The earliest, Gorman, also made extensive use of a copy of the Martyrology of Usuard. Other martyrologies were compiled at this time at Lismullin, near Tara, (Martyrology of Turin) and Lismore (Martyrology of Cashel). Preserved in the same late 12th-century manuscript as the Martyrology of Turin is an Irish version of the metrical Martyrology of York.

Churches located in the English sphere of influence used copies of Usuard or Ado's work, of English provenance but containing some Irish feasts. A copy of Usuard, perhaps the last of its kind, was made at the Youghal Franciscan friary shortly before 1500. Following the revival of learning in the second half of the 14th century, several new copies of the Martyrology of Oengus were made *inter Hibernos* (among the Irish). The latest native martyrology of note was that of Donegal, which the annalist and historian Mícheál Ó Cléirigh (?1590–1643) and at least one other collaborator prepared in the 1620s.

§9. calendars

The early 9th-century Karlsruhe calendar is the only surviving pre-Anglo-Norman text of this kind. Numerous (mostly unedited) calendars survive from churches in areas under English influence, notably Dublin and Meath (Mide). The earliest post-Norman calendar from a church *inter Hibernos* forms part of a late 14th-century poem.

Pádraig Ó Riain

hagiography in the Celtic countries [2] Scotland

§1. the earliest evidence

The earliest surviving *vita* from what is now Scotland (ALBA) is ADOMNÁN's *Vita Columbae* (Life of COLUM CILLE), written on Iona (EILEAN Ì) *c.* 700 AD, though we know that it is based in part on a book of Columba's virtues written a generation earlier, LIBER DE VIRTUTIBUS SANCTI COLUMBAE. *Vita Columbae* treats Columba's miracles in thematic groups in three books rather than in chronological sequence; but Book III does follow a chronological pattern of antenatal and birth stories, youth, maturity, old age and death, and posthumous miracles. Many of the stories located in and around Iona itself seem to be based on the eyewitness reminiscences of Columba's monks, and was probably collected within a generation of his death in AD 597.

No other *vitae* survive from this period. There is an 8th-century Latin poem, *Miracula Nynie Episcopi* ('The Miracles of Bishop Ninian'), written at WHITHORN (Taigh Mhàrtainn) during the Anglian occupation of Galloway (Gall-ghaidheil), arguably based on an earlier Celtic *vita*; this is connected with, but not directly ancestral to, the 12th-century *Vita Niniani* attributed to Aelred of Rievaulx. The legends of St KENTIGERN, which in their present form are 12th-century and later, may contain late 7th- to early 8th-century material embedded within much later texts. A brief account of the death of Donnan of Eigg (*c.* 617) copied into LEBOR LAIGNECH ('The Book of Leinster') is of uncertain date.

§2. the viking period

There is little evidence of hagiographical activity in Scotland during the Viking period (*c.* 790–900). The death of Blathmac mac Flainn, tortured and murdered by Vikings on Iona in 825 AD, is recounted in heroic verse by Walafrid Strabo of Reichenau, but not by any Irish writer. Likewise, the saintly career of St CATROE of Wassor and Metz, who had earlier lived in central Scotland, survives in a Continental *vita* written in AD 982–3.

§3. the high middle ages

The fashion of writing *vitae* underwent a revival in the 10th and 11th centuries, but these were increasingly vernacular or mixed Hiberno-Latin lives. No Scottish example survives, but JOCELIN OF FURNESS's *Vita Kentigerni* acknowledges as one of its sources a *codiculum stilo Scottico dictatum* (a little book dictated in the Scottish, or Irish, style) containing the saint's life and acts, which probably indicates a 10th- or 11th-century Hiberno-Latin *vita*. From the same period comes a fantastic version of the foundation legend of Laurencekirk in Mearns, found embedded in the writings of a prolific Canterbury hagiographer. It has probably been preserved because it contains an anecdote about Queen Margaret's pilgrimage to Laurencekirk. The story shows clearly that the dedication of Laurencekirk was always to the obscure Canterbury saint, and not (as has often been supposed) to St Laurence the Martyr.

These are not the only Celtic foundation legends for Scottish churches which survived into the High Middle Ages. The foundation legend of St Andrews (Cill Rìmhinn, older Cennrígmonaid) survives in two versions, which describe how the king of the PICTS, ONUIST son of Uurguist (*c.* 727–61), founded the church in thanksgiving for victory in battle to house relics brought from Constantinople. The once very important church of Abernethy (Obair Neithich) also had an elaborate foundation legend which locates its foundation in the remote Pictish past and links it with the *familia* of St BRIGIT of Kildare (Cill Dara).

Other *vitae* of the 12th century support the greatness of individual saints whose churches were becoming centres of pilgrimage. Notable among them are the *Vita Niniani* attributed to Aelred of Rievaulx and the two lives of St Kentigern written for the cathedral of Glasgow (GLASCHU). One of them, a *Historia Beati Kentigerni*, composed for Bishop Herbert (1147–64), was preserved in fragmentary and anonymous form because it provided information about St Kentigern's mother, Teneu. The other, Jocelin's *Vita Kentigerni* (*c.* 1180), is of considerable interest because it is possible

to disentangle various threads which went into its make-up.

Another 12th-century *vita* which has survived is the anonymous *Vita Sancti Servani*. Its localized collection of miracles, set mostly in south-west Fife (Fìobha) and the surrounding area, reads like the territorial claims of an early church at Culross (Cùl Rois).

In a different category comes a small group of *vitae* of 11th- and 12th-century 'royal saints'. Chief among these is the *Vita Margaretae Reginae* by Thurgot, prior of Durham. This survives in two versions. The longer version was written 1104×1107, but the shorter version may be an earlier draft composed very shortly after the queen's death in 1093. The fuller version was addressed to Queen Matilda, Margaret's daughter who married Henry I of England. Aelred of Rievaulx wrote a *Lamentatio* of her brother, King David I, in hagiographic style, which he dedicated to the future King Henry II of England (therefore datable 1153×1154). A third *vita* of a 'royal saint' is Jocelin's *Vita Waldeui*, concerning the life of Abbot Waldef of Melrose (†1159), son of Earl Simon I de Senlis, King David's stepson.

§4. LATE MIDDLE AGES

On the whole, the hagiographic legacy of Scotland is slender between these 12th-century productions and the end of the 15th century. Medieval inventories of the books of Scottish cathedrals make references to *Legenda Sanctorum*, but most of these have been lost, or survive only as fragments. Manuscripts such as the Sprouston Breviary with its lessons and canticles for St Kentigern, or the *Breviarieum Bothanum* or Fowlis Easter Breviary, with its lessons for Scottish saints, are relatively rare. Another rarity is a vernacular verse collection of saints' lives, formerly attributed to John Barbour, *The Legends of the Saints*; among its apostles, evangelists, virgins, confessors and martyrs, mostly drawn from the *Legenda Aurea* and the *Specula* of Vincent of Beauvais, are lives of St Machar of Aberdeen (Obair Dheathain) and St NINIAN of Whithorn. Other nationalistic chroniclers of the later Middle Ages such as John of Fordun (writing *c.* 1385), Andrew of Winton (*c.* 1410), and Walter Bower (*c.* 1440) made much of earlier Scottish saints, using hagiographical materials which are now lost. But Bower in particular may have been conscious of the relative shortage of writings about Scottish saints, since he felt the need to expropriate large numbers of Irish saints into his huge *Scotichronicon* and pass them off as Scots.

§5. THE BREVIARUM ABERDONENSE

Around half a century after Bower wrote, the task of giving Scotland a large-scale national hagiography was taken in hand by William Elphinstone, bishop of Aberdeen, possibly in response to the promptings of King James IV. His *Breviarium Aberdonense* (ABERDEEN BREVIARY), published in Edinburgh (DÙN ÈIDEANN) in 1510, is the most important collection of Scottish saints' lives, in the form of short lessons for their feast-days and, in a few instances, hymns, responsories, and antiphons. There seems to have been a conscious attempt to spread the net over the whole of Scotland, to include saints from every diocese and to have a sprinkling of obscure and little-known local saints as well as national heroes such as St Ninian and St Margaret.

The sources used by the Breviary were various. Hector Boece tells us that Elphinstone made a collection of legends of saints 'sought out in many places' in a single volume, presumably preparatory to drawing up the propers of saints in the Breviary. In some cases the source is clear enough, but it is not always clear whether the compilers of the Breviary used a well-known existing *vita* of a saint, or a less well-known local legend. In the case of St Kessog, venerated around Loch Lomond (Loch Laomuinn) and at Auchterarder and elsewhere, the compilers seem to have had access to a *vita* originating at Luss on Loch Lomond, from which they extracted one miraculous episode from Kessog's boyhood which seems to have contained an allusion to the practice of fostering the sons of sub-kings at the court of the high-king of Munster (MUMU). In the case of St Kentigern, the lessons appear to derive not directly from Jocelin's *Vita Kentigerni*, but from one of its sources, the little volume described by Jocelin as *codiculum stilo Scottico dictatum*; they are closely related to the canticles in the Sprouston Breviary.

For its lessons for St Colum Cille (Columba), the Breviary appears to have used a late medieval legend rather than Adomnán's *Vita*, though this was known in Scotland and was turned into Latin verses by a later 16th-century commendator of Iona. Other parts of

the office for St Colum Cille appear to be in some way related to the 12th-century *Betha Coluimb Chille*. Similarly, the lessons for St Adomnán are connected with a 10th-century Irish vernacular life. In the case of St Serf, the compilers of the Breviary appear to have used a Life very closely related to, but not identical with, the *vita* mentioned above. For St Margaret of Scotland, the compilers have used Thurgot's *Vita Margaretae*, but with very little direct quotation. For St Blane, the office appears to combine material from the cathedral of Dunblane (Dùn Blàthain) with older traditions connected with Kingarth on Bute (Bòd).

There is a tendency in the Breviary to claim saints as Scots who were in fact Irish. St Finnbarr, venerated at Dornoch and Barra (Barraidh), is made son of a Caithness nobleman related to a local king called Tigernach; but the incident described in the readings has been lifted from an Irish Life of St Finbar of Cork (Corcaigh) which locates it, and King Tigernach, in south Munster.

The Breviary includes a good deal of local legend and tradition. For example, the lessons for St Patrick allude to his supposed birth at Old Kilpatrick on the Clyde (Cluaidh) near Dumbarton (Dùn Breatann), and also to traditions relating to 'St Patrick's Well' and 'St Patrick's Stone' near the kirkyard. These were important places of pilgrimage in the Middle Ages. For many of its 80-odd Scottish saints, the Aberdeen Breviary provides our only information.

hagiography in the Celtic countries [3a] Welsh

The Welsh saints (*sant*, pl. *seint*, now *seintiau*; derived from the Latin *sanctus, sancti*) were monks, clerics, and anchorites, men and women from the period between the 4th and 8th centuries (the 'Age of Saints') who were noted for their learning, preaching, establishing religious settlements, and living as hermits. Very little contemporary evidence exists—the early churches were built in earth and timber and the saints' Lives (*Vitae*) were not written until centuries later—but there is little doubt that they played an important rôle in their own time and after the Norman Conquest.

Wales (Cymru) was essentially Christianized by the end of the 5th century. In 313 Christianity had received official approval and support in the Roman provinces of Britain (as in the rest of the Empire), which included what was to become Wales. After the end of Roman rule in 409/10, Romano-British Christianity survived and continued to develop in the West, blending there with forms and ideas introduced through the western sea routes from Gaul and the eastern Mediterranean, with its concepts of monasticism and eremitic desert life. Although the terms 'Celtic church' and 'Celtic Christianity' have been subjects of controversy and wrongly described in such a way as to imply virtually a distinct religion, they remain useful concepts in the limited sense explained above. In Wales, the focal point for this confluence of ideas appears to have been in the south-east—especially centred around the kingdom of Ergyng, home of Dyfrig/Dubricius (5th century). In the traditions of the Welsh saints, Dyfrig figures as the first saint of the 'Celtic church'. However, the dates of the historical Dyfrig relative to those of St Patrick cannot be established by contemporary documents of the 5th century. The saints soon disseminated their concepts, in Wales and abroad, especially in the Celtic lands of Scotland (Alba), Ireland (Ériu), and Brittany (Breizh), and with a distinct lack of attention to their pagan neighbours in England (for which the 8th-century Anglo-Saxon Christian Beda was to repeatedly condemn the Britons). The church organization of bishops and dioceses, which was used in Romanized areas, did not suit Wales because it lacked towns; there the bishops became associated with particular tribal kingdoms which

emerged or, in some cases, re-emerged in the post-Roman period. The saints were local figures; most remained known only in local lore, but a few extended their areas of activity or had more widely spread cults. This is most notably true of saints Beuno, Cadoc, David (Dewi Sant), Deiniol, Gildas, Illtud, Padarn (of Llanbadarn Fawr), Samson, and Teilo. Because dedications lack clear dating, one cannot be certain whether they indicate the range of the saint's activity or only of his cult's later influence. Nevertheless, dedications provide a generalized location and degree of relative importance, as seen in the fact that David had over fifty churches and thirty wells dedicated to him in south (mostly south-west) Wales, more than twice as many as were dedicated to any other saint, or that Samson had most of his dedications in Brittany, where he was principal in establishing the Celtic church. The saints travelled as missionaries and retreated as hermits, but their most visible activity was in setting up religious communities, the *clasau*, which served as monasteries and centres of learning and which characterized the Welsh church even long after the Age of Saints.

Traditions about the Welsh saints persisted throughout the centuries, anchored in each one's *clas* and area of activity, but they were not compiled into *Vitae* in Wales until the end of the 11th century when the Norman Conquest led to religious and political change. The Normans aimed to replace the old system of *clasau* with Latin monastic orders, such as the Benedictines, and newly created dioceses which would have precise territorial boundaries and follow Continental patterns of ecclesiastical government. The Welsh church was to be brought under the strict control of Canterbury and Rome. In the 12th century in particular, both Welsh and Anglo-Norman clerics employed *Vitae* of the saints to argue the case for their place in the new hierarchy. Welsh clerics composed *Vitae* defending the honours and rights of their saint and, by extension, his establishment, both above other Welsh saints and in opposition to Canterbury's authority. Anglo-Norman clerics, drawing on the local traditions of their newly acquired territories, likewise composed *Vitae* to assert their church's claims. Grants of land and privileges, such as sanctuary or freedom from taxation, especially when made by kings or acknowledged by other saints, were particularly significant as clerics used the *Vitae* to vie for recognition by both secular authorities and the Pope of their church's superiority. The two most striking examples of this are the competition carried out in the apparently answering *Vitae* of Cadoc and David and in the *Liber Landavensis* (Book of Llandaf, *c.* 1130) in which the Norman-created diocese of Llandaf claimed to itself saints Dyfrig, Teilo, and Oudoceus (who had probably not been recognized as a saint previously) and all their privileges in an attempt to assert itself as the archiepiscopal seat of Wales (see also CARADOG OF LLANCARFAN; RHYGYFARCH). In both strongly Welsh houses and in more Normanized ones, the *Vitae* were composed in Latin. Welsh translations exist for only two saints, David and Beuno, and they were written into a manuscript in another period of upheaval—the 14th century when the Welsh were suffering from the fall of Llywelyn ap Gruffudd and the loss of independence. Other translations into Welsh appear in later periods for both the Welsh saint Gwenfrewi (late 16th century) and for non-Welsh saints from the broader Catholic tradition.

Traditions of the Welsh saints are recorded not only in the prose Lives but also in medieval poetry, antiquarians' reports, and contemporary folklore. Wherever they appear and whether told in the sequence of a Life or presented as discrete events, whether in narrative form or in mere allusion, they exhibit certain patterns and are expressed largely through shared motifs (though each saint also has distinct traditions). Male saints generally are proclaimed in their saintliness before their births (David is prophesied thirty years in advance); have a precocious childhood during which they perform wonders (Mechyll begins his devotions in the cradle; Cadoc carries live coals without harm); set out on their travels, establishing churches, gathering followers, and performing more wonders (David warms and de-poisons the waters at Bath); come into conflict with a secular power, either kings or beasts (Cadoc disables King Maelgwn Gwynedd and then his son Rhun when they invade his territories; Samson, Pedrog (Petroc), Gildas, and Carannog all overpower DRAGONS); rule a territory, ensuring peace and prosperity; die and continue performing wonders. Female saints do not begin their Lives until they reach nubility, when they must earn their sanctity by rejecting the advances of a male, but after that they do many of the same things as male saints do, though often with a

more domestic or gentle character. (Whereas male saints tend to shelter wild goats and stags, Melangell shelters a hare from hunters.) Both men and women come of royal blood and are often related to Jesus either through Mary's sister or her cousin Anna.

Although Gildas wrote of a British Aaron and Julian of *urbs legionis* (probably Caerleon/Caerllion) martyred in Roman persecution at the time of Emperor Diocletian (r. AD 284–305), the Welsh saints of hagiography were not martyrs. In this respect, the Welsh Lives differ significantly from those of the Continental saints.

The Welsh saints were, however, notable for their curses and the violence in their lives. Their miracles, which presumably demonstrated their access to God, were more often raw displays of power than of kindness. Although they performed healing miracles, they more frequently cursed and punished those who crossed them (melting, swallowing by the earth, blindness, petrification), and the punishments generally far exceeded the cures in variation and narrative strength. They demonstrated their power through control, whether of people, animals, or elements. Samson, Gildas, Paul, Cadoc, David, and Ieuan Gwas Padrig all caused birds who were eating the corn to walk into a barn and remain there until they promised not to disturb the crops any more. Deiniol, Cadoc, and Tydecho used stags and wolves to plough their land. Illtud drove back the sea. Saints could create fire, raise wells, and ride rocks across the sea. Fire and rain did not harm the saints' possessions. In a very clear statement of the superiority of spiritual over earthly power, the saints also bring under their control a variety of secular rulers (several kings, but most particularly Arthur and Maelgwn). No matter how the conflict begins, it usually ends with the king granting the saint land, rights of sanctuary, and freedom from taxation (those privileges so essential to establishing a church's dignity).

Saints continued to play a part in Welsh culture in modern times, mostly in the localities in which they had begun. People living in a saint's territory may point to the saint's well or seat or may tell the legend relating to the saint. Wells, which were used for healing both physical ailments and social ills (e.g. cursing a thief), often served as a focus for a cult and sometimes became the most visible connection with the saint. Gwenfrewi's well became an important site of pilgrimage not just for the Welsh but even more so for the English, especially from the 14th to the 19th centuries, though this was occasionally somewhat suppressed by anti-Catholicism, as occurred during the Reformation and the Civil Wars (1642–8). Dwynwen's well is still sometimes resorted to by people calling on her power to grant wishes and divine the future in matters of love. Most famously, David, the patron saint of Wales and the only one canonized, is celebrated on 1 March with school pageants and concerts, lectures, dinners in social organizations (whether antiquarian societies or rugby clubs), and the use of national symbols such as wearing leeks or daffodils and eating *cawl* (a Welsh vegetable soup). His 'death-bed' injunction (as reported in his Life) 'to hold fast to your faith and belief, and do the little things you heard and saw from me' is frequently cited on the day. Since the opening of the Welsh Assembly (Cynulliad Cenedlaethol Cymru) in 1999, there has been a growing desire to make St David's Day (Gŵyl Ddewi) a legal holiday in Wales.

hagiography in the Celtic countries [3b] Welsh lives of non-Celtic saints

Hagiography makes up a large group of religious prose texts in the Middle Welsh period (*c.* 1100–*c.* 1400). Only two of the medieval Welsh saints' lives in the Welsh language concern native saints: the lives of

St David (Dewi Sant) and St Beuno. Even these, however, go back to Welsh Latin sources. Otherwise, Welsh literature shares the common stock of saints of medieval Europe. Judging from what has been preserved, there seems to have been a certain predilection in Wales (Cymru) for holy virgins such as St Catrin (*Buchedd Catrin Sant*), St Margaret (*Buchedd Fargret*), Mary Magdalen (*Buchedd Fair Fadlen*), and St Mary of Egypt (*Buchedd Mair o'r Aifft*; cf. the Middle Irish Beatha Mhuire Eigiptacdha), whose Lives were gathered together in Llyfr Gwyn Rhydderch ('The White Book of Rhydderch', Peniarth 5). A similar interest in devout women can be observed in the central and later Middle Ages in England and Ireland (Ériu; Éire). An increasingly important source for saints' Lives from the 14th century onward—in Wales and elsewhere in Europe—is the *Legenda Aurea* (The golden legend), a legendry composed by Jacobus de Voragine *c.* 1263–73. Whereas these Lives usually still contain at least a nucleus of historicity, the legendary aspect prevails in collections of miracles. One such collection of miracles is those of St Edmund of Canterbury (*Gwyrthyeu Seint Edmund Archescop Keint*, which occurs in NLW Peniarth 14 [later 13th century] and again in Peniarth 5); interestingly this text seems to have hardly any parallel outside Wales, and its source is still uncertain.

hagiography in the Celtic countries [4] Breton

§1. introduction

Despite heavy Scandinavian attacks followed by the Viking occupation of Brittany (Breizh) and the disruption of its monasteries in the period AD 914–37, as well as numerous other historical and environmental factors working against the lengthy survival and transmission of texts written on perishable materials in north-western Europe, a sizeable and significant body of early medieval Breton saints' lives survives in Latin—the largest such corpus from any of the Celtic countries. General discussions of this material may be found in the articles Breton literature [1] §2 and Christianity in the Celtic countries [5] §1. Several individual Breton *vitae sanctorum* are discussed in entries on particular saints: Gildas; Iudic-hael; Melor; Paul Aurelian; Samson; Uuinuualoe (Gwenole); Uuohednou (Goueznou). On St Meriadoc, see Conan Meriadoc.

§2. early material

The First Life of St Samson of Dol has been regarded as a work of the early 7th century—thus the earliest of the Celtic *vitae*—predating the early Latin lives of Brigit, the hagiography of Patrick by Tírechán and Muirchu, and Adomnán's *Vita Columbae* (Life of Colum Cille), but a more recent argument for a mid-8th-century composition would put *Vita I Samsonis* after this corpus of 7th-century Irish hagiography. In either event, the beginnings of Breton hagiography clearly predate and do not owe their initial inspiration to the so-called 'Carolingian Renaissance', which began in Charlemagne's kingdom towards the end of the 8th century.

As Jackson noted, some Romano-British spellings of proper names in the Breton *vitae* imply the use of older written records, going back to, or close to, the 6th-century era of the saints themselves: *Maglus Conomagli filius* in the Life of Uuinuualoe, *Tigernmaglus* in the Life of Paul Aurelian, and *Arecluta regio* (Strathclyde/Ystrad Clud) in the Life of Gildas. While Jackson was probably right to claim that the last—our oldest evidence for the concept of Strathclyde—'can only come from contemporary [i.e. 6th-century] manuscripts', the old personal name forms might also reflect

the hagiographers' research activities on old inscribed stones from churches and other sites associated with the saints; for example, a now lost inscription from Plourin in Finistère, read in 1716 as ( )NOMAILI FILIVS UENOMAILI. Even where the names and dates of authors exist, questions of the date and nature of the sources remain.

§3. CHRONOLOGICAL LIST

There follows a selective list of some important Breton saints' lives with more-or-less secure dates:

Vita I S. Samsonis—7th or 8th century
Vita I S. Guenaili (First Life of Guenhael)—8th/9th century
Vita I S. Machutis (First Life of Malo)—later 9th century
Vita I S. Turiaui (First life of Turiau)—later 9th century
Vita S. Machutis by Bili—866×872
Gesta Conwoionis et aliorum sanctorum Rotonensium (The story of Conuuoion and other saints of Redon) by Ratvili, bishop of Alet—866×872
Vita S. Uuinuualoei by Uurdisten, abbot of LANDEVENNNEG—*c.* 880
Vita S. Pauli Aureliani by Uurmonoc—884
Vita II S. Samsonis—9th/10th century
Vita, translatio et miracula S. Maglorii (Life, translation, and miracles of Magloire)—9th/10th century
Vita et translatio S. Machutis—earlier 10th century
Vita II S. Turiaui—10th/11th century
Vita S. Conuuoionis (Life of Conuuoion)—10th/11th century
Vita S. Briocii (Life of Brioc)—10th/11th century
Vita I S. Gildae—10th/11th century
Vita III S. Tutguali (Third Life of Tutual)—10th/11th century
Vita S. Uuohednouii—1019
Vita S. Iudicaeli by Ingomar—earlier 11th century
Vita II S. Gildae—11th century
Altera translatio S. Maglorii—later 11th century
Vita I S. Maudeti (First Life of Maudez)—later 11th century
Vita III et miracula S. Turiaui—11th/12th century
Vita S. Gurthierni (Life of Gurthiern)—beginning of the 12th century.

As is clear from the above, it was common practice for lives to be rewritten and brought into line with more recent interests and attitudes, rather than simply copied.

§4. CONTENT AND AFFINITIES

The Breton *vitae sanctorum* are diverse in their contents and are thus of interest from a variety of perspectives. In them, several saints are said to have come from BRITAIN, such as Gildas, as already noted, and Samson, whose background is located in DYFED and Gwent. In the Life of Tutual, the saint is presented interestingly as the grandson of King Riwal, who had crossed the Channel to found DOMNONIA. Thus, the Lives may preserve historical recollections of the rôle of missionaries in the BRETON MIGRATIONS. Early Breton and Merovingian Frankish rulers are often mentioned, which is sometimes also of historical value for this poorly documented period (5th–7th century), though these rulers are usually portrayed as simplistic tyrants, serving as foils for the saints' virtue and miraculous powers to match any secular potentate. The Life of Uuohednou mentions Vortigern (GWRTHEYRN) and ARTHUR in an introductory section of LEGENDARY HISTORY. Among the supernatural elements, healing miracles figure prominently, as in hagiography worldwide, but other elements have more specific affinities with the other Celtic literatures. For example, the weird decapitation and revivification of St Melor bears comparison with the manifestations of the HEAD CULT elsewhere in the Celtic world. St Malo's voyage to a mysteriously appearing island is similar to episodes in NAVIGATIO SANCTI BRENDANI ('The Voyage of St Brendan') and in IMMRAMA (voyage tales) in Old Irish. In Uurdisten's Life of Uuinuualoe, we find the character *Alba Trimammis* (White of the three breasts), who corresponds exactly to the Welsh mythological ancestress Gwen Teirbron found in the genealogical tract *Bonedd y Saint* (Descent of the saints). A genealogy in the Life of Gurthiern (whose name corresponds to Welsh Gwrtheyrn) gives the names of several characters who appear in the Welsh *Breuddwyd Macsen* (Dream of MACSEN) or are prominent elsewhere in Welsh tradition: 'Gurthiern son of Bonus, son of Glou [= Gloyw 'Gloucester'], son of Abros [= AMBROSIUS] . . . son of BELI, son of Outham Senis [= Eudaf Hen], son of Maximianus [= Macsen], son of Constantius, son of Helena, who they say found Christ's cross'. The Life

of Iudic-hael contains a martial eulogy which shares several themes with *Y* Gododdin, and a conception legend with close parallels to Welsh Pwyll and the Irish foundation legend of the Uí Néill dynasty, Echtra *Mac nEchach Muigmedóin* ('The Adventure of the Sons of Eochaid Muigmedón').

§5. literary and social contexts

As opposed to isolated activity, the writing of the Breton *vitae sanctorum* formed a vital part of Brittany's living culture in which cult activities centred on saints' relics and holy places, and the doctrines expressed in the hagiography—and often modified as the Lives were recast by successive writers—must be understood in terms of the competing claims of rival religious foundations and those of their noble secular patrons. Many of the ideas about the native Breton saints and their wonders, first found in the Lives, reappear centuries later in Middle Breton religious literature, modern folk-tales, ballads, and traditional activities, such as parish processions and pilgrimage routes, which have continued to the present day in connection with the saints, their feast-days, traditional bishoprics and other holy sites (cf. fulup). In this sense, some of the oldest literature from the Celtic world is integral to the formation of contemporary Breton identity.

hagiography in the Celtic countries [5] Cornish

§1. introduction

Cornwall (Kernow), like other Celtic regions, has a relatively large number of saints. There are around 140 known Cornish saints (Orme, *Saints of Cornwall*, esp. p. 22 and map 2). In terms of medieval hagiography (in the sense of written texts), however, Cornish saints are sparsely represented. We have surviving Lives of only a few Cornish saints, and only St Petroc is the subject of a Life (in fact, several) entirely composed in Cornwall. Nevertheless, by the early 17th century, the antiquarian Nicholas Roscarrock was able to collect a surprising amount of information from oral and written sources about many Cornish saints.

§2. saints outside texts

The bulk of our evidence for Cornish saints is place-name evidence and church dedications. There are two particular place-name elements: *lann*, perhaps best translated 'church-site' (cf. Welsh *llan*, Breton *lann*), since its exact meaning (in particular when it does not refer to a parish church) is debatable, and *eglos* 'church'. The personal names attached to these are reasonably enough taken as names of 'saints'. The very notion of what constitutes a saint is ambiguous: the fact that, in about 20 of the 50 or so parish names in *lann*, the name appearing in the place-name is not that of the reputed patron saint of the church suggests that there might have been more than one person remembered as having a rôle in the foundation. It is arguable that these are names of people locally commemorated; perhaps, then, we should consider them as much saints as those remembered (often faintly) as patron saints, who otherwise can be as little-known as those whose names only appear in the place-name.

Almost all of these saints are Celtic, in that they have BRYTHONIC names and are visibly local. Of these Celtic saints (listed in Orme, *Saints of Cornwall*, with statistics summarized on pp. 21–3), around 80% are known in Cornwall at one site only; where there is more than one cult site, these are generally fairly widely separated. Moreover, around half of the total of these Celtic saints are unknown outside Cornwall and Brittany (BREIZH). Most of these church dedications seem to date from before the Norman Conquest. A 10th-century text (Vatican Codex Reginensis Latinus 191, fos. iiv–iir), which can be best explained as a list of Cornish saints, suggests a relatively early proto-parochial structure. Cults in Cornwall, it seems, were installed early and relatively firmly retained, were notably small and local, and permeated medieval settlement patterns.

Of the saints with non-Celtic names, the original dedication of St GERMANUS either to a Cornish saint of this name or to the famous Germanus of Auxerre is debatable, even in the eyes of the medieval church there. We also find medieval dedications to Martin, Stephen, Mary, Michael, and the Devon Saint Sidwell, as well as some 15 or so lesser international saints, some of which clearly replaced earlier Cornish dedications.

§3. MEDIEVAL LIVES

The only extant Lives which seem to have been composed entirely in Cornwall are those which emanated from Bodmin Priory concerning St Petroc. There are two Latin prose Lives, a versified version of one of these, a series of *miracula* (miracles), an account of the theft of the saint's relics in 1177, and a collection of genealogical material. The extraordinarily rich material concerning St Petroc sets him apart from all other Cornish (and many Celtic) saints. It is remarkable, however, that the earlier Life is found only in Breton manuscripts (one complete copy and several fragmentary copies). All the other texts concerning Petroc are found uniquely in the Gotha manuscript of hagiography, a 14th-century manuscript probably assembled at Hartland Abbey in Devon, but now in Germany. This manuscript also contains unique copies of several other west-country texts (including the so-called Life of St PIRAN, the Life of St Rumon, as well as the Life of St Nectan).

The contrast to the relatively large numbers of Lives of Irish and Breton, and (to a lesser extent) Welsh saints is striking. This situation, as Nicholas Orme has commented (*Analecta Bollandiana* 110.341), no doubt owes a good deal to the relative scarcity of large religious houses in Cornwall in the Middle Ages. Most such Lives as we have originated in three major west-country houses, only one of which is actually in Cornwall; these are Bodmin (the Lives of St Petroc), Hartland (whose patron saint was Nectan), and Tavistock (responsible for the Life of St Rumon).

Cornwall is, however, well supplied with subsidiary hagiographic texts, some of which are pre-Norman. In addition to the invaluable 10th-century list of saints (mentioned above), there are several calendars of saints, liturgical documents, various genealogical tracts (mostly in a Welsh context), lists of resting-places of saints, and charter material. Moreover, there are various Lives of Cornish saints composed and adapted outside Cornwall: the so-called Life of St Piran is more or less a Life of the Irish St Ciarán of Saigir with the ending altered to reflect the saint's death and burial in Cornwall; this would seem to have been accomplished at Exeter in the 13th century. The Life of St Rumon, an adaptation of the Life of the Breton St Ronan (a demonstrably different saint with an etymologically different name), was written at Tavistock Abbey (in Devon, south-west England). There are medieval Latin Lives of Breton saints honoured in Cornwall, but of Breton provenance; these include Saints Budoc, Brioc, Corentin, Gwinear (Fingar), Kai (?), Maudez, Melaine, MELOR, Meriadoc, Méen, PAUL AURELIAN, and UUINUUALOE. There are also medieval Latin lives of Welsh saints (Carannog, Cybi—who is one of the rare saints given a Cornish birth, Cyngar, CADOC, perhaps COLLEN—the subject of a later medieval Welsh Life, Keyne, and Padarn), as well as other west-country saints (Nectan, Sidwell, the subject of fragmentary traditions) who also have dedications in Cornwall. Some, but not all, of these Lives include Cornish episodes. Not all of these identifications are straightforward, and some (notably the English Neot and the Welsh and/or Breton Non) are distinctly problematic.

In 1330 Bishop Grandisson of Exeter (the combined diocese of Devon and Cornwall) ordered that Lives of Cornish saints who were otherwise unknown should be written down in their local parishes, in double or even triple copies (Hingeston-Randolph, *Register of John*

de Grandisson 1.585). Nevertheless, the number of Latin Lives emanating from the local parish (as opposed to monastic houses) is small: the Life of St Piran might have been adapted at Perranzabuloe rather than at Exeter; there are hints of a local Cornish version of the Life of St Gwinear (demonstrably different from the Breton Life of the same saint); there are also hints of three other Lives. These hints are found in the writings of the 16th-century antiquary John Leland, who made a précis of a Life of St Breage, and in his notes on the saint (perhaps still quoting the Life) referred to two other Lives, of Saints Elwin and Gwinear. Leland also took a note from a Life of St Ia as well. Also undoubtedly local in origin are the two Lives of saints composed in Cornish: the early 16th-century dramatized version of the Life of St Meriadoc (Beunans Meriasek), the only extant vernacular Life of a Cornish saint until the discovery in 2002 of Beunans Ke; and the Cornish verses mentioned by Nicholas Roscarrock as the source of his account of St Columb.

Hall, Lady Augusta ('Gwenynen Gwent')

Augusta Waddington Hall or Lady Llanofer (1802–96), who was also known under the bardic name 'Gwenynen Gwent' ('The Bee of Gwent'), was one of the foremost 19th-century campaigners for Welsh cultural causes, especially the Welsh language, the triple or 'Welsh' harp, Welsh music, and Welsh dance. She also developed the Welsh national costume from Welsh pre-industrial peasant dress (see material culture).

Lady Llanofer was born Augusta Waddington at Llanofer near Abergavenny, Monmouthshire (Y Fenni, sir Fynwy), the daughter of a rich English businessman who had bought the estate ten years previously. In 1823 she married Benjamin Hall of Aber-carn, a Member of Parliament and government minister, mainly remembered for championing religious toleration in Wales (Cymru) and for 'Big Ben', the famous London clock-tower built during his time as MP and named in his honour. He was ennobled in 1859 and died in 1867. The couple built the famous Llys Llanofer (Llanofer Court), and it was there Lady Llanofer died, after a long life, having inspired several generations of Welsh cultural nationalists.

Lady Llanofer's enthusiasm for all things Welsh was possibly kindled in childhood by a family friend, Lady Coffin-Greenly, of Llwydlas, Herefordshire (Welsh swydd Henffordd), and later by Thomas Price ('Carnhuanawc') at the Brecon eisteddfod of 1826. She studied Welsh folk costumes, and first came to the attention of the Welsh public by winning the prize at the Cardiff (Caerdydd) eisteddfod of 1834 for the best essay on the importance of retaining the Welsh language and folk costumes. She, and most servants and employees of her court, usually wore a version of the Welsh costume which she had devised. In the same year, she helped to found Cymreigyddion y Fenni (the Abergavenny Welsh scholars' society), which organized a series of highly successful eisteddfodau from 1834 to 1854 (see eisteddfodau'r fenni). These became famous for laying the foundations for pan-Celtic co-operation when, in 1838, the first Breton delegation was received at one of their eisteddfodau (see la villemarqué; pan-celticism). Through her brother-in-law, the ambassador Baron Bunsen, Lady Llanofer built bridges between Welsh and distinguished Continental scholars, furthering Celtic studies in Wales by attracting such scholars to her court and her eisteddfodau.

Throughout her life, she used her social status and financial resources to revive the tradition of the Welsh

triple harp—which she believed to be the true national instrument of Wales—by donating harps as eisteddfod prizes, employing court harpists and providing free lessons for promising young players. She preserved folk DANCES, such as the 'Llanofer Reel', and assisted collectors such as Maria Jane WILLIAMS in their work.

She was a keen artist and patronized a school of Welsh native sculptors who were encouraged to produce portrait busts and historical sculptures. She was also one of the founders of the Welsh Manuscripts Society in 1837, collected Welsh books, and bought the large manuscript collection of Iolo Morganwg (EDWARD WILLIAMS), which is now at the National Library of Wales (LLYFRGELL GENEDLAETHOL CYMRU).

Like many other Welsh nationalists, Lady Llanofer was deeply disturbed by the attack on everything Welsh contained in the government report of 1847, which became known as *Brad y Llyfrau Gleision* ('The Treachery of the Blue Books'). She encouraged her friends to publish counter-attacks, and in 1848 she helped to found Llandovery College, Carmarthenshire (Coleg Llanymddyfri, sir Gaerfyrddin), a private school with Welsh as a core subject. In 1850 she founded *Y Gymraes* (The Welshwoman), a women's magazine designed to improve the standards and morals of Welsh womenfolk and provide reading matter in their own language. Together with her husband, she opened a Welsh-language church in London (Welsh Llundain), and in 1870, due in part to the pressure she exerted on Prime Minister Gladstone, the first Welsh-speaking bishop in over two hundred years was appointed in Wales, namely Joshua Hughes of St Asaph (Llanelwy).

Following her death, Lady Llanofer's daughter, Lady Augusta Herbert (1824–1912) or 'Gwenynen Gwent yr Ail' ('The Second Bee of Gwent'), continued the tradition of supporting Welsh traditions and keeping the court and estate of Llanofer Welsh-speaking until just before the First World War.

The most prolific chronicler of the life and times of Lady Llanofer was Maxwell Fraser (1902–80), whose numerous articles on her chosen subject appeared mainly in the *National Library of Wales Journal* throughout the 1960s. These still provide the most reliable source for research in the field.

Hallstatt [1] the archaeological site

§1. INTRODUCTION

Located in the ALPINE zone of Upper Austria, the Hallstatt archaeological site consists of several monuments, the most famous being the cemetery in the Salzbergtal on the Hallstatt SALT mountain. Remains of settlements of the Hallstatt and LA TÈNE periods and prehistoric mining activity from the Urnfield (Late Bronze Age), Hallstatt (Early IRON AGE), and La Tène (Later Iron Age) periods are also known from the site. Today, Hallstatt is a World Heritage Site.

§2. THE HISTORY OF RESEARCH AT HALLSTATT

Initial finds of so-called 'men in the salt' were treated according to the standards at that time. One miner discovered in 1734, for instance, was reburied in the area of the modern graveyard of Hallstatt one day after he was found in the mountain (Mahr, *Das vorgeschichtliche Hallstatt* 10–1).

In 1846, during gravel mining on the salt mountain, seven inhumation burials were discovered and recognized as archaeological finds by Johann Georg Ramsauer, the chief miner in the Hallstatt salt mines. In the following years until 1863, Ramsauer excavated 980 graves, while several smaller excavations in the following decades recovered another 290 burials (Barth, *Prunkwagen und Hügelgrab* 26). In the years 1937–9, in another major excavation campaign by Friedrich Morton, a further 62 burials were recovered. Over the following decades, modern salt-mining activity within the salt mountain was monitored by archaeologists, but no new excavations were carried out. Since 1994, the Hallstatt cemetery has once again been the site for excavations, directed by Anton Kern from the Natural History Museum in Vienna, which have identified at least another 53 burials.

§3. THE GEOMORPHOLOGICAL SITUATION

The archaeological sites of Hallstatt are located on the salt mountain, a steep mountain rising over Lake Hallstatt in the Upper Austrian Alps, amid very impressive Alpine scenery. The cemetery itself lies at an altitude of *c.* 1100–1200 m at the lower end of the so-called Salzbergtal ('salt mountain valley') on the steep slopes of the Niederer Sieg, *c.* 450 m above Lake Hallstatt and directly above the modern lakeshore village of Hallstatt. The Hallstatt period settlement sites and mine entries were located higher up in the Salzbergtal. Most of these features were covered by a massive landslide which engulfed the valley in prehistoric times (*c.* 350 BC), probably bringing the salt mining activity to an end there (Barth, *Prunkwagen und Hügelgrab* 25–6). There are several indications that, further up the Salzbergtal, La Tène period settlement and mining activity occurred following the landslide, but no large excavations have yet been carried out in this area. Another La Tène period settlement is located on the Dammwiese, *c.* 1.5 km to the west, higher up the mountain than the Salzbergtal (Mahr, *Mitteilungen der Prähistorischen Kommission* 2.332–3).

§4. THE HALLSTATT CEMETERY

It has long been held that the Hallstatt cemetery contained around 2000 burials, of which 1270 were recovered during the excavations. Around 45% of these were cremations, and the rest were inhumation burials, mainly dating to the periods of Hallstatt C and Hallstatt D (*c.* 750–475 BC), with a small number of even more recent ones, dating to the Hallstatt/La Tène transition horizon and the earliest La Tène period (5th century BC) (Barth, *Prunkwagen und Hügelgrab* 26–31). These graves are exceptionally rich, containing an extremely high number of large bronze vessels and other metal objects, which indicates not only that the salt mining carried out in the Hallstatt mountain was economically highly profitable, but also that the cemetery was limited to the higher strata of society (Barth, *Prunkwagen und Hügelgrab* 26–8). However, the new excavations, carried out in the lower areas of the cemetery, show that a much higher density of burials exists in this area of the cemetery, and thus new estimates run to a total of 5000 to 8000 burials in the cemetery. The new burials, though fitting well with the others from the older excavations, contain far fewer metal items, but have large quantities of ceramics which were missing or not recovered in the earlier excavations.

§5. THE PREHISTORIC SALT MINES

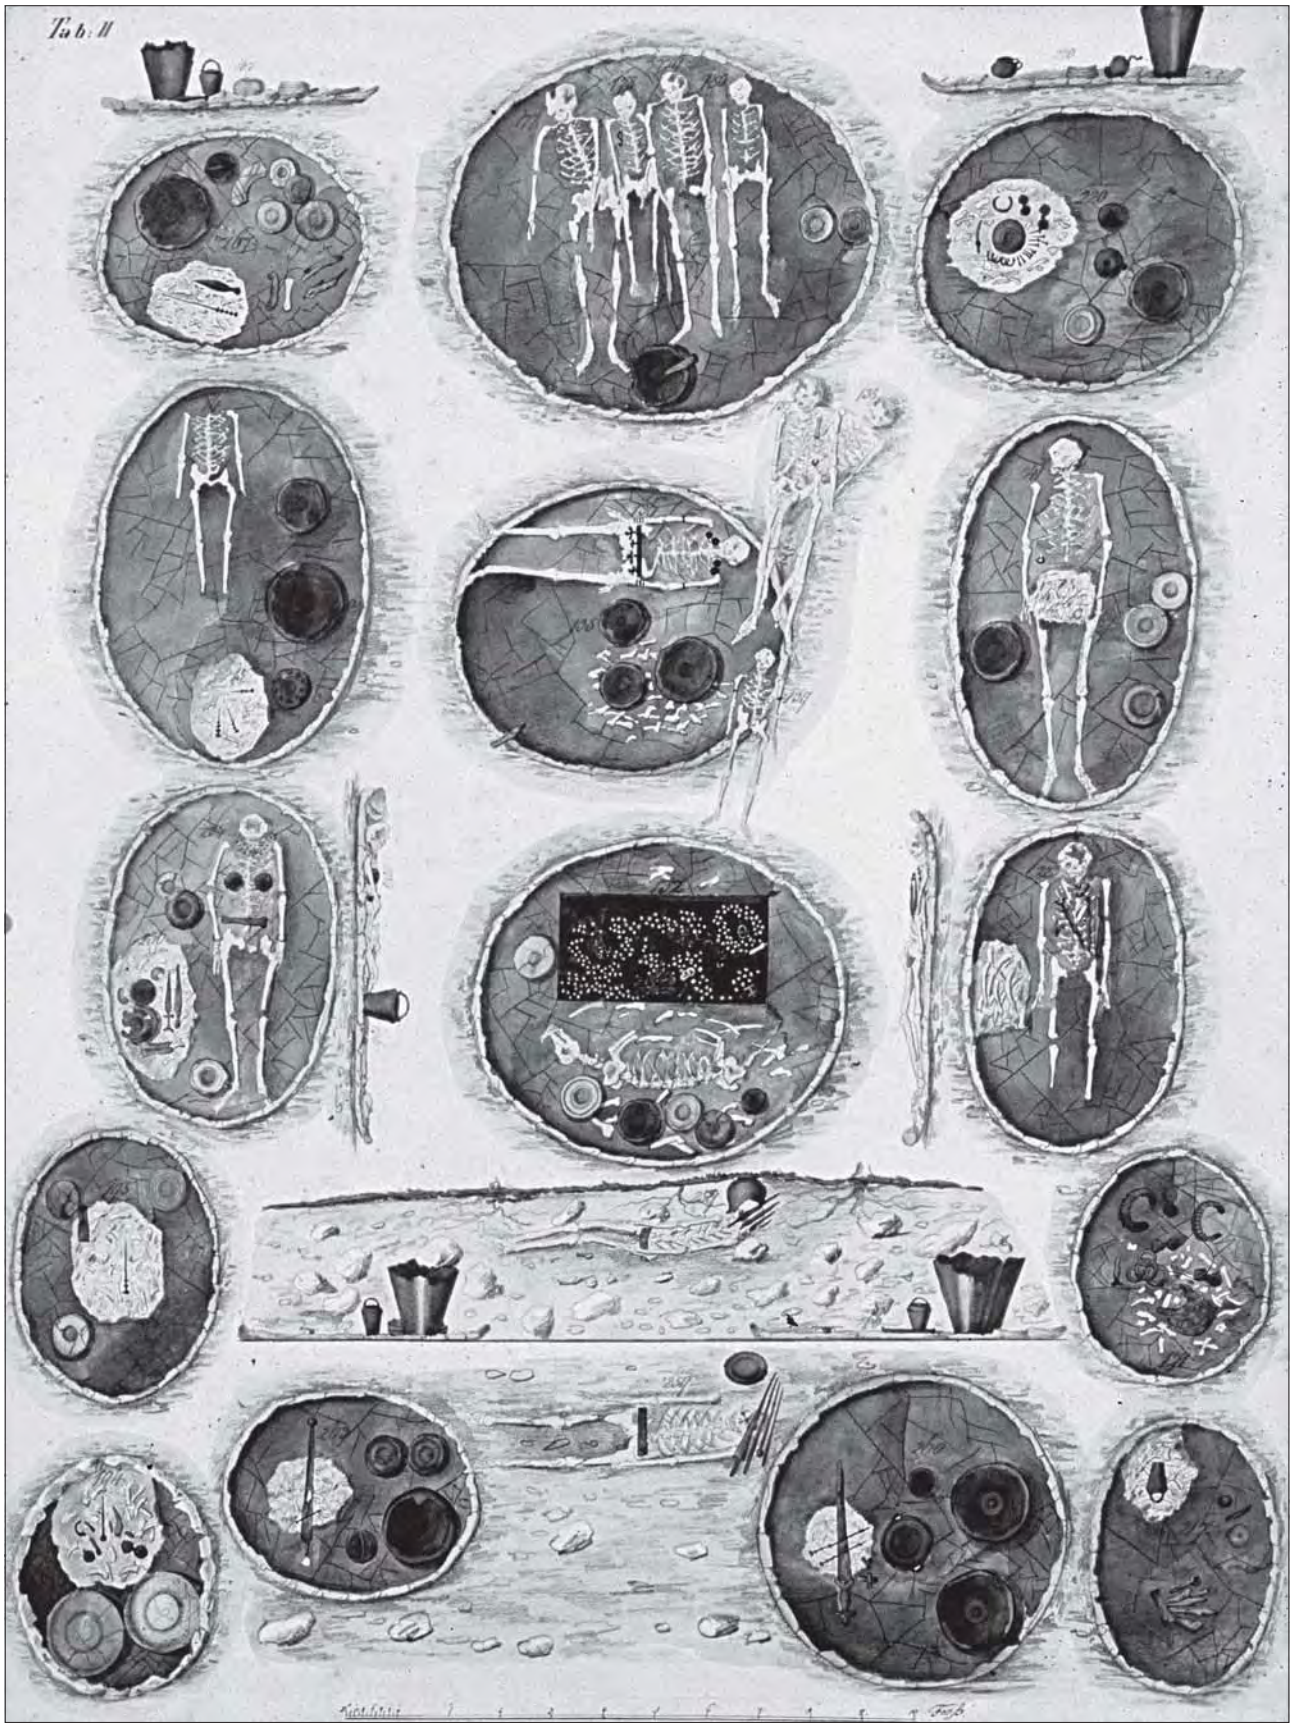
Prehistoric salt-mining activity at Hallstatt began in the Late Bronze Age, in the 12th/11th century BC, in the *Nordgruppe* (northern group), the earliest mining techniques being adapted from copper mines; copper had been mined nearby in the Austrian Alps for some centuries previously, during the Middle Bronze Age. The greatest known depth reached below the surface by this salt-mining activity is 215 m at the *Colloredokehr*; the largest known shaft, in the *Flechtnerwerk*, was 17 m wide. This mine was closed some time towards the end of the Bronze Age (*c.* 800–750 BC), with new mining activities starting in the 8th century BC in the *Ostgruppe* (eastern group). Here, the mining technique had already been adapted to the specific necessities of salt mining. This mine was most probably destroyed by the landslide which covered most of the Salzbergtal, probably in the mid-4th century BC. Mines were then moved over to the Dammwiese, where a new mining area, the *Westgruppe* (western group) was opened (Barth, *Prunkwagen und Hügelgrab* 21–6).

§6. SETTLEMENT ACTIVITY IN HALLSTATT—SALZBERGTAL AND DAMMWIESE

Settlement remains were recovered during several excavations in the Salzbergtal, but these were more extensive on the Dammwiese. Several log buildings have been excavated in the Salzbergtal (Barth, *Archaeologia austriaca* 13.538–45), and during the most recent excavations since 1994 several buildings for producing salted bacon and settlement layers from the Urnfield period in the 12th/11th century BC have been uncovered. On the Dammwiese, excavations in 1890 recovered the remains of a waterlogged settlement from the La Tène period, with the lower parts of wooden buildings, drains, and workplaces preserved on an area of over 3000 square metres (Mahr, *Mitteilungen der Prähistorischen Kommission* 2.307–66).

§7. THE FUTURE OF HALLSTATT

With the new excavations in the cemetery and the ongoing excavations within the salt mines, new results from Hallstatt can be expected in the next few years. These excavations will be supplemented by several



Original drawing 'Tab. II' by the Austrian artist Isidor Engl, made at the time of the excavations at Hallstatt of Georg Ramsauer, illustrating a variety of prehistoric burial rites and grave goods

projects to reassess the old finds from the excavations in the cemetery and in the mines, and also by expected publications regarding the new finds and the well-preserved organic materials found within the salt mines.

Hallstatt [2] the Hallstatt culture

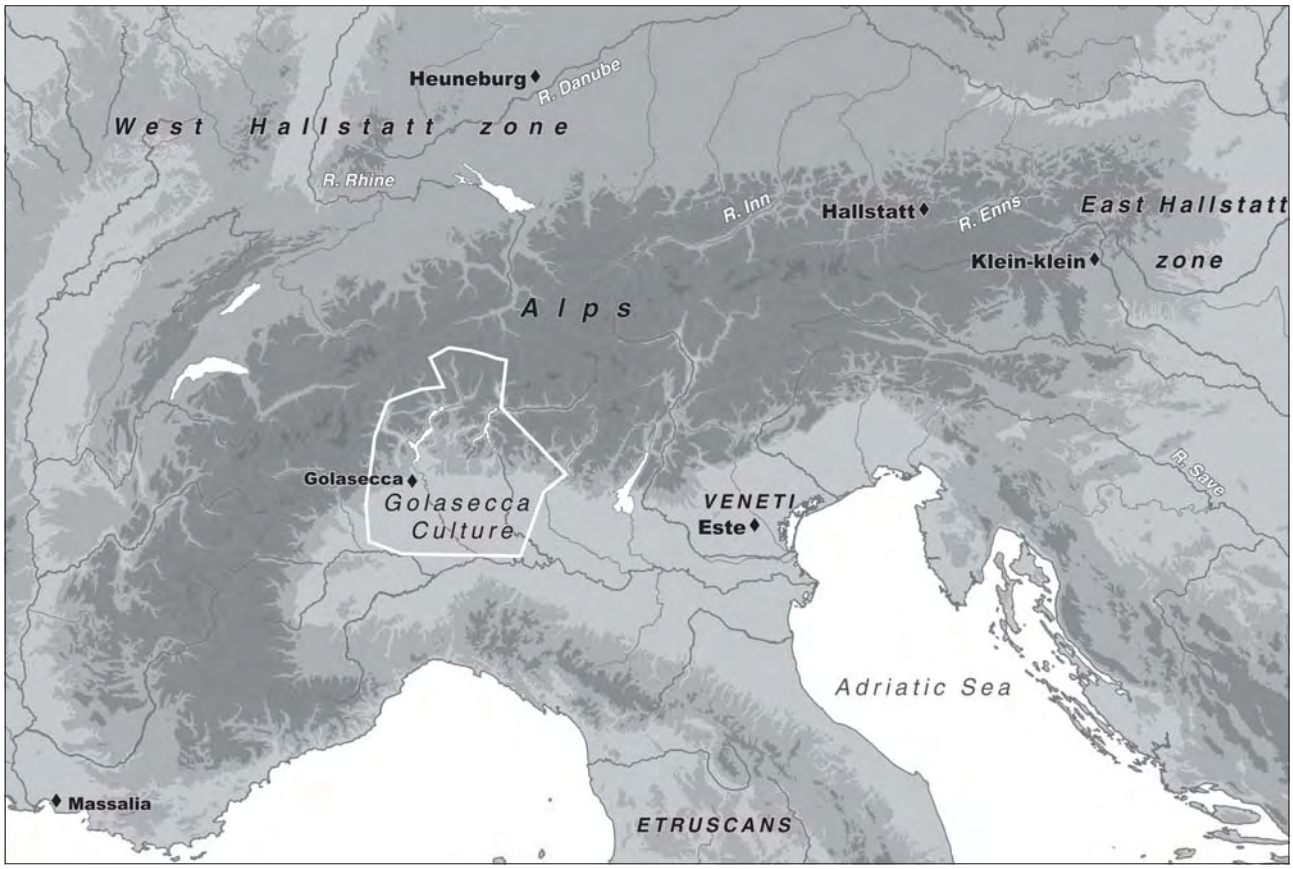
§1. THE HALLSTATT PERIOD AND ITS CHRONOLOGY

The term 'Hallstatt culture', named after the famous archaeological site in Upper Austria, has been used since the last quarter of the 19th century (see HALLSTATT [1]). Initially, the term Hallstatt culture referred mainly to a certain style, discernible from the Late Bronze Age, the latest phases of the Urnfield culture (Hallstatt A and Hallstatt B), extending from *c.* 1200 to *c.* 750 BC. Today, the term more usually refers to the Early IRON AGE phases of this style, known as Hallstatt C and Hallstatt D, and connected elements of social structures, burial rites, and settlement patterns, though the interpretation of all of these elements remains open to reinterpretation. Hallstatt C and D precede LA TÈNE Iron Age cultures in many areas. The typological and chronological separation of the Hallstatt Early Iron Age culture from the preceding Urnfield Late Bronze Age culture and the following later Iron Age La Tène culture has been the subject of numerous scientific discussions, which have by no means come to a conclusion. On the basis of scientific dating methods and the evidence of the so-called 'southern imports' from the more chronologically secure Mediterranean world, the Hallstatt Iron Age culture has been dated to about 750–475/450 BC (Spindler, *Die frühe Kelten* 23ff.; Kimmig, *Importe und mediterrane Einflüsse auf der Heuneburg*). The later Hallstatt culture has been connected with the ethnic label 'Celts', Greek Κελτοί *Keltoi*. However, caution is advised, since equating archaeological material finds and ethnic groupings is problematic, especially since, in the field of prehistoric research, there is as yet no universally accepted definition for 'archaeological culture' or 'ethnic group'. However, the connection between the region of the Hallstatt Iron Age cultures and groups who spoke early CELTIC LANGUAGES is more secure.

§2. GEOGRAPHICAL LOCATION AND EXTERNAL CONTACTS

The term 'Hallstatt culture' refers to material found in an area stretching from eastern France to western Hungary, and from southern Germany to Slovenia. Discussions about the external boundaries of the culture and its internal geographical differentiation have been ongoing since research on the site began (Müller-Scheessel, *Die Hallstattkultur und ihre räumliche Differenzierung* 25ff.). In order to do justice to the many regional variations, reference is often made to multiple Hallstatt cultures, which are then geographically specified, for example, 'inner Alpine Hallstatt culture' or 'south-east Alpine Hallstatt culture' (Müller-Scheessel, *Die Hallstattkultur und ihre räumliche Differenzierung* 18ff.).

The principal division is between an east and a west Hallstatt area. Although it is difficult to determine a specific boundary between them, a more general border zone can be identified running north–south in the area between the rivers Inn and Enns, and the river Moldau. Hallstatt itself is situated in this zone, as is clearly reflected in the mixed or transitional nature of the material found in its cemeteries. The outward borders of the west Hallstatt culture are variously drawn, either defining a relatively small area around south-west Germany, northern Switzerland, and eastern France, or a larger one extending to the Czech–Bavarian borders, the east German mountains and central France (Wamser, eastern France; Zürn, Württemberg; Torbrügge, the Upper Palatinate). The definition of the east Hallstatt area varies similarly, especially as regards its northern border. Thus, the Czech Republic and Slovakia are often regarded as belonging to the area, but sometimes it is viewed as a smaller area, entirely south of the DANUBE. It is generally agreed that the eastern and southern borders are located around the rivers Danube (where it turns south near Budapest), Kulpa, and Save. East Hallstatt contains the cultural areas and groups around Horákov in Moravia (Podborský, Horákov-culture), the Kalenderberg in eastern Austria (Nebelsick, Kalenderberg-group), the



The Alps, geographical core of the Hallstatt culture south of the Danube (western and eastern zones), and its influential neighbours to the south—Massalia (Marseille), the Golasecca culture, the Etruscans, and the Veneti

Sulmtal in southern Austria (Dobiat, Klein-klein), and the various Krainer groups in Slovenia (Slovenian Styria).

The situation in the inner Alpine area, because of its function as a mediator with southern cultures, deserves special attention. The rich grave goods found in Hallstatt graves in the zone which includes eastern France and south-west Germany provide evidence of the trade connections which developed between the Mediterranean and the areas north of the Alps in the Hallstatt D period (*c.* 600–*c.* 475/450 BC). The development of the Greek colony of Massalia (Marseille) on the Ligurian coast from *c.* 600 BC must be seen in this context (Kimmig, *Jahrbuch des Römisch-Germanischen Zentralmuseums Mainz* 30.5–78; Kimmig, *Importe und mediterrane Einflüsse auf der Heuneburg*; Zeitler, *Archäologisches Korrespondenzblatt* 20.61–73). Further contacts existed with the Etruscan culture area in and around Tuscany (Aigner-Foresti, *Etrusker nördlich von Etrurien*), mediated through the north-west Italian Golasecca culture in Lombardy and Tessin (Pauli, *Die Golasecca-Kultur und Mitteleuropa*; Schindler, *Der Depotfund von Arbedo TI* 43–54) and the Este culture of the Veneti of north-east Italy. The latter has especially caught the attention of archaeologists because of the outstanding metalwork in the situla style (named from the decorated sheet-bronze north Italian wine buckets or *situlae*; Frey, *Die Entstehung der Situlenkunst*; Lucke, *Die Situla in Providence* [*Rhode Island*]). In addition to contacts with Mediterranean civilizations, a second line of cultural influence was maintained with the Iranian-speaking Scythians and other steppe nomads to the east.

§3. graves, settlements, and the material

The west Hallstatt zone is characterized by relative homogeneity, especially as regards burial customs and gifts: graves situated in chambers beneath hills were usually richly furnished with weapons, four-wheeled wagons (see chariot), and harnesses for pairs of horses (Pare, *Wagons and Wagon-Graves of the Early Iron Age in Central Europe*). The main weapon in the earliest period (Hallstatt C, *c.* 750–600 BC) was the iron sword

of the Mindelheim-type (Gerdsen, *Studien zu den Schwertgräbern der älteren Hallstattzeit*), replaced in later periods (Hallstatt D) by the dagger (Sievers, *Mitteleuropäischen Hallstattdolche*). Other material innovations in Hallstatt D were the emergence of different kinds of fibulae (Mansfeld, *Die Fibeln der Heuneburg*). The endowment of graves with, in some cases rather elaborate, sets of pottery points to the introduction of high-status drinking customs which have been connected with the Greek term of the *symposium* (Krausse, *Hochdorf III*).

East Hallstatt, apart from the completely different forms of ceramics, is differentiated from the west by its different metal forms and burial customs. In contrast to the rather uniform western grave goods, there are defensive weapons (SHIELDS, helmets, body armour), spear-heads, and axes, as well as riding-harnesses. Relief scenes on metal vessels in the situla style mentioned above show people equipped with military and feasting equipment which correspond to objects found in the graves.

In contrast with the relatively rich evidence found in Hallstatt graves and cemeteries over the whole area, only a few known settlements have been excavated in modern times. One of the best-known settlements of prehistoric research is the HEUNEBURG on the upper Danube in Baden-Württemberg, Germany (Gersbach, *Ausgrabungsmethodik und Stratigraphie der Heuneburg*; Gersbach, *Baubefunde der Perioden IVc–IVa der Heuneburg*; Gersbach, *Baubefunde der Perioden IIIb–Ia der Heuneburg*).

Jutta Leskovar

Hamel, Anton Gerard van, was a Dutch Celtic scholar; he was born on 5 July 1886 and died at Utrecht on 23 November 1945. After achieving a first degree at Amsterdam, van Hamel took up a teaching post in Middelburg (Zeeland) in 1910 and was awarded his Ph.D. at Amsterdam in 1911. In the same year he moved to Berlin to study under Kuno MEYER. From 1915 to 1917 he was a lecturer in Dutch and Low German at Bonn University. In 1920 he was appointed lecturer in Celtic at Leiden, and in 1923 he became Professor of Old Germanic at the University of Utrecht, where he succeeded in establishing a chair of Celtic, which has continued at the university to the present day. Van Hamel published widely in comparative linguistics, mainly Celtic and Germanic, and on Celtic folklore, mythology, and heroic tales. Celtic scholars today still use, as standard editions, van Hamel's texts of 'The Birth of CÚ CHULAINN', the Middle Irish version of HISTORIA BRITTONUM, and Irish voyage tales (IMMRAMA, see also VOYAGE LITERATURE). As well as extensive publications in English and some in German, van Hamel published copiously on Celtic studies in Dutch, work which is not widely accessible outside the Netherlands.

SELECTION OF MAIN WORKS

Hamito-Semitic hypothesis

The Insular CELTIC LANGUAGES (BRYTHONIC and GOIDELIC), from their oldest full attestation in the earlier Middle Ages, differ strikingly from the rest of the earlier attested INDO-EUROPEAN languages in syntactic and morphosyntactic structure, with over 20 major differences, going far beyond the languages' verb-subject-object word order profile. In most of these respects, INSULAR CELTIC agrees structurally with an unrelated and geographically remote language group in north Africa and the Middle East: the subcluster of Afro-Asiatic, comprising Semitic (including Arabic and Hebrew), ancient Egyptian, and Berber. Celticists have been aware of these similarities since 1900, and several of them—John MORRIS-JONES, Julius POKORNY, and Heinrich Wagner—have advocated some form of Celtic/Hamito-Semitic prehistoric contact by way of explanation, notably a pre-Celtic substratum of north African provenance in the British Isles. Most Celticists either ignore the issue, dismiss the resemblances as coincidence, or focus on deriving certain of the features from pre-existing Indo-European prototypes.

There are two problems here: the substantial disagreement with Indo-European, and the considerable agreement with Hamito-Semitic. Both problems merit serious attention, all the more so when both occur together. In particular, the latter problem—and the crucial question of considerable coincidental resemblance—cannot even be stated within an Indo-European perspective, but demands a typological, cross-linguistic approach. Gensler ('Typological Evaluation of Celtic/Hamito-Semitic Syntactic Parallels') addresses this issue, examining around 20 shared Celtic/Hamito-Semitic features as found (or not found) in a genetically and geographically well-balanced sample of 85 languages across the world. Around half of these features turn out to be shared quirks: globally rare features which run counter to a clearly present global norm. The multiple co-occurrence of quirky features is like throwing two weighted dice (biased, say, for '5') ten times, and having the dice come up in agreement each time—but never with the expected value '5'. Two randomly selected languages may well show multiple structural resemblances, but they are highly unlikely to have ten shared quirks. These results make coincidence maximally unlikely as an explanation, and hence lend support to an explanation based on historical contact, though without any concrete proposal as to the form of such contact. However, given the great time depth of human occupation in Ireland (ÉRIU), BRITAIN, and the rest of western Europe, a substratum language preceding Celtic and related to attested languages of north Africa and the Middle East would be one obvious possibility. Such an explanation by no means contradicts an Indo-European provenance for some of the anomalous Insular Celtic features, but complements it.

harp, Irish

The earliest known Irish word for a harp-like instrument is *crott* (< Celtic **kruttā*), with which we may compare *chrotta*, the word used by Venantius Fortunatus (*c.* 530–*c.* 600) to describe the type of harp favoured by the BRITONS. The 8th-century Wurzburg GLOSSES use this word to translate Latin *cithara* 'zither'. However, a variety of contemporary harp types is implied in an Old Irish tract on the PSALMS (Meyer, *Hibernica Minora* 1.11.17), which states that *cithara* is a 'generic term for every [kind of] harp' (*is cithara ainm cenelach cacha croiti*). While there is no textual evidence for determining precisely the type(s) of 'harp' designated by *crott* in the 8th and 9th centuries, representations in stone carvings suggest that it was some form of quadrangular harp rather than the triangular frame harp which gained ascendancy in the 11th and 12th centuries. Some kind of small harp appears to be

designated by the term *mennchrott* (var. *benncbrott*) in early Irish texts. The *Dictionary of the Irish Language* (DIL) tentatively takes the first element in this compound to be *menn-* 'clear' (as of sound). But the occasional spelling with *benn-* and etymological glosses, even if not historically accurate, suggest that the instrument was 'peaked' in some way, with a peaked fore-pillar perhaps, or else double-peaked, as in a Grecian-style lyre. In one instance, *beannchrott* is glossed by *tiompán* (H.4.22, 67 or 65; see O'Curry, *Lectures on the Manuscript Materials of Ancient Irish History* 305–6), a three-stringed instrument which is mentioned in texts from the 8th to the 17th century and appears to have been exceedingly popular.

While not a 'harp' in the usual sense, the *tiompán* (Old and Middle Irish *timpán*) appears to have been a lyre-like instrument akin to the rotte (cf. *chrotta*) or dulcimer, and either plucked or played with a mallet or a bow. The lack of technical specificity in the word *crott* (*cruit* in Middle and Modern Irish) and the close connection between the harp-playing and *tiompán*-playing traditions are evident from a Middle Irish legal commentary which states that '[the word] *cruit* [is used] for *timpán*, or *timpán* is used for *cruit*, or *cruit* for itself' (Dublin, National Library of Ireland MS G3. f. 44d = Binchy, *Corpus Iuris Hibernici* 6.2281.10–11). It is worth noting in this connection that the Welsh cognate CRWTH designates—in the later Middle Ages at any rate—a bowed rotte rather than a triangular harp.

The earliest known Irish depiction of a triangular frame harp is on the 11th-century shrine of St Maedóc. In its classic form, most famously represented by the 14th-century 'Brian Boru' (BRIAN BÓRUMA) harp in Trinity College Library, Dublin (BAILE ÁTHA CLIATH), it was a small, heavy, and low-headed instrument, held on the knees in playing. It may be that *cláirseach*, an alternative term for 'harp' which came into use in the 14th century, originally served to distinguish the newer instrument—with its massive soundboard (*clár*) carved from a single piece of willow—from the older instruments. The metal strings, approximately 30 of them, were plucked with the fingernails, producing a distinctive bell-like tone. The post-medieval development of this type was considerably larger, floor-standing, and tall-headed, with up to half again as many strings.

Little is known of the kind of music which was played on the Irish harp in the Middle Ages. There is evidence, however, of contact between Irish and Welsh harpers, and the 16th-century Robert ap Huw manuscript may give us some indication of an improvisatory style of harp music which was common to both countries, and possibly related to the musical aesthetic found in 'classical' Scottish piping (see BAGPIPE).

The classic source for a description of medieval Irish harp playing is *Topographia Hiberniae* by GIRALDUS CAMBRENSIS. Comparing Irish harpers with those of Britain, Giraldus marvelled at their ability to play intricate melodies at a fast tempo while maintaining sweetness of tone and introducing modal and rhythmic variation. Some of his comments suggest that this music—with its fully rounded intervals of fourths and fifths—was designed to produce sensual enjoyment rather than edification within the scholastic medieval norms of proportion and constraint (Weller, *Welsh Music History* 2.12, 22). This accords with an oft-repeated formula in early Irish sources whereby harpers provided their patrons with *goltraighe*, *geantraighe*, *suantraighe* (i.e. music to produce sorrow, glee, and slumber). The harp was also used to accompany the professional reciter (*reacaire*) of bardic poetry, and the 13th-century poet Giolla Brighde Mac Con Midhe refers to music of 'the sweet-stringed *cruit* and *tiompán*' in this capacity. In return for services to his patron chief, the medieval Irish harper received gifts of land and stock, and enjoyed a free status and legal privilege unavailable to other entertainers.

It is clear from 18th-century poetry that the harp was an instrument played in taverns as well as large houses. By the last quarter of the century, however, the number of players was in serious decline. In response, James Dungan, a wealthy native of Granard, Co. Longford (Gránard, Contae Longfoirt), financed and organized three competitive 'balls' in Granard during the years 1781, 1782, and 1785. He was fired by romantic nationalist impulses and an awareness that similar competitions were being held for pipers in Scotland (ALBA). In turn, these events inspired individuals associated with the United Irishmen to organize a 'Harp Festival' in Belfast (Béal Feirste) in 1792. Most of what we know about the tunes, tunings, modes, ornamentations, and terminology of the traditional harpers was garnered by Edward Bunting

(1773–1843) at this festival, where he interviewed the ten participating harpers and transcribed their tunes. The oldest of these, Denis Hempson (1695–1807), still played in the old style, plucking the wire strings with his fingernails. His repertoire included compositions by known harpers such as Ruairí Dall Ó Catháin, and John, Henry, and Darby Scott (from the 16th century), William and Thomas Connellan (from the 17th century), and Cornelius Lyons and Toirdhealbhach Ó Cearbhalláin (from the 18th century). The most renowned of these—in his own time and in ours—was Ó Cearbhalláin (1670–1738), whose 200 or so compositions, almost all of them named in honour of patrons and friends, were heavily influenced by Italian baroque art music. Ó Cearbhalláin also composed a considerable body of song poetry set to his airs. A lively description of the life and social circles of an 18th-century harper may be found in the 'Memoirs' which Bunting collected from the blind harper Arthur O'Neill (1734–1816).

The earliest published collection containing a selection of tunes associated with the harp was John and William Neal's *A Collection of the Most Celebrated Irish Tunes* (Dublin, 1724), but the largest and most comprehensive collections are Edward Bunting's own manuscripts and his published volumes: *A General Collection of the Ancient Irish Music* (1796), *A General Collection of the Ancient Music of Ireland* (1809), and *A Collection of the Ancient Music of Ireland . . . to which is prefixed a Dissertation on the Irish Harp and Harpers* (1840).

In the early years of the 19th century, the Belfast Irish Harp Society and a similar organization in Dublin attempted to maintain the harp tradition by employing older musicians (such as Arthur O'Neill) to teach young pupils, many of whom were orphans or blind children. But the musical taste of the public no longer sought out the old and peculiar sound of the wire-strung harp. The playing of the harp—the major symbol of romantic NATIONALISM—was revived in 19th-century Ireland (ÉIRE), but the new style of 'Irish harp' introduced for this purpose was merely a small, gut-strung version of the ordinary concert harp, and no effort was made to revive traditional styles. The harp music of this period is largely associated with parlour music and the songs of Thomas MOORE (1779–1852). Since the 1960s, however, a new generation has returned to Bunting's manuscripts and conducted experimental research on the old style and repertoire. As a result, the playing of the wire-strung harp has been revived and developed. In addition, harp playing has been reintegrated with the rest of Irish traditional music and with its particular emphasis on lively dance music (see DANCES; IRISH MUSIC).

The symbolic association of the harp with Ireland has existed since the 14th century, when it featured as a heraldic device. This was formalized by Henry VIII, who had it placed on Irish coinage in 1534 (despite the fact that legislation against harp players was first promulgated during his reign.) Ironically, the instrument itself and its music appear to have enjoyed some popularity in the English court, and an Irish harper named Cormac MacDermott was maintained there by Elizabeth I and James I. The latter was the first to include the harp on the royal coat of arms. Eventually, the symbol was appropriated by nationalist movements such as the Catholic Confederation of the 1640s and the United Irishmen of the 1790s. As the symbol par excellence of romantic nationalism, it has found a permanent place in popular culture as the logo of the Guinness Corporation and the national symbol on Irish coinage and stationery.

harp, Welsh

The Welsh harp (*telyn*) figures within the medieval BARDIC ORDER as described in the laws attributed to the 10th-century king HYWEL DDA (see LAW TEXTS), where it was used as accompaniment to the declamation of the poetry of the bards. The instrument in this period in Wales (CYMRU) was about two feet (0.6 m) high, and strung with delicate horsehair strings, as opposed to the brass strings of its Irish counterpart. Welsh harpers shared with the Irish certain techniques in playing the instrument: nails as well as fingertips were used and, contrary to Continental practice, the harp was placed on the left shoulder.

The use of the medieval instrument gradually ceased during the 16th and 17th centuries. It has been suggested that it was in order to counter this decline that the Anglesey (MÔN) harpist Robert ap Huw created his manuscript of harp music, set out in tablature, in 1623. By the 18th century the meaning of the tablature was a mystery to musicians, and only during the 20th century have musicologists been able to interpret it satisfactorily.

The 18th century proved to be the age of the triple harp (*telyn deires*) in Wales. It arrived, via the English court, from Italy, where it was invented around 1600. It had two outer rows, tuned to the diatonic scale, together with a central row, which provided chromatic notes. In Wales, it was played on the left shoulder, in keeping with tradition. Welsh harpers in London performed on the triple harp to the admiration of such eminent musicians as Handel, whereas in Wales, during the 18th and 19th centuries, the harp was played by gypsies, blind men, rich and poor, and its most usual settings were within taverns and gentry mansions, or even outdoors. It provided accompaniment both for dancing (see DANCES) and for singing or declaiming (the latter art related to the medieval use of the harp described above). The practice of singing or reciting to the harp was developed by musicians such as John Parry, 'The Blind Harpist' (?1710–82), Edward Jones, 'Bardd y Brenin' (1752–1824), and, later, John Parry, 'Bardd Alaw' (1776–1851), who collected airs for use in *penillion* or *cerdd dant* singing (see WELSH MUSIC). Further efforts to retain and revive the tradition were made in the 20th century with the establishment, in 1934, of Cymdeithas Cerdd Dant Cymru (The *cerdd dant* society of Wales).

The popularity of the triple harp ensured employment for many men as harp-makers during the 18th century. Among the most successful was John Richard (1771–89) of Llanrwst in Denbighshire (sir Ddinbych). When he moved to live and work at the mansion of Sackville Gwynn (1714–94) near Llandovery, Carmarthenshire (Llanymddyfri, sir Gaerfyrddin), he became a key figure in the spread of the triple harp from north to south Wales. By the 19th century south Wales had become a battleground between the triple harp and the new pedal harp, developed by the Frenchman Sébastien Erard (1752–1831). Some considered the triple harp to be a symbol of Welsh identity, and it was fiercely defended by Lady Augusta HALL of Llanofer and by the Cymreigyddion Society. By the 19th century, however, others had become aware of the advantages of the pedal harp; John Thomas, 'Pencerdd Gwalia' (1826–1913), enjoyed a successful career as a virtuoso on the new harp.

Nansi Richards relaxing with lunch and her harp

In spite of the deep mistrust with which it was viewed during the Methodist revival (see CHRISTIANITY), the harp has continued to prosper. Both triple and pedal harps—and indeed the small harp—continue to be played. The triple harp survived in the playing of Nansi Richards (1888–1979), and is currently enjoying a revival and a new influx of players. The small harp is played by folk musicians, while the pedal harp is used to accompany *cerdd dant* singers and also as a solo instrument in its own right.

hat, Welsh

A tall black 'beaver hat', often worn over a lace bonnet, was part of many pre-industrial peasant women's dress in Wales (CYMRU). A stylized version became part of the national costume popularized by Lady Augusta HALL from the 1840s (see MATERIAL CULTURE) onwards. It is now most often worn by performers of traditional music and by schoolgirls on St David's day (see DEWI SANT).

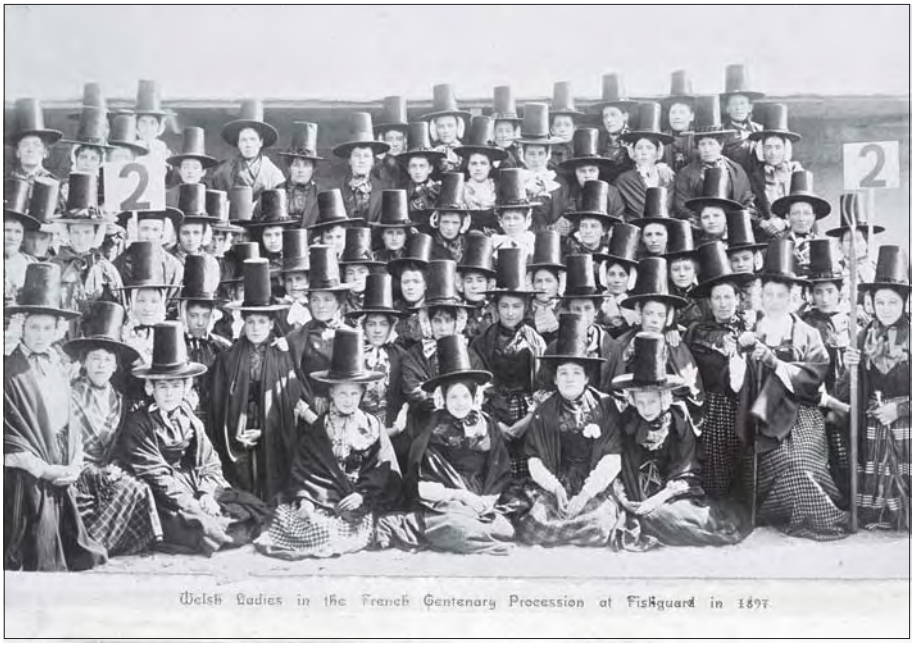
MBL

Hay, George Campbell (Deòrsa Mac Iain Dheòrsa, 1915–84), one of the major Scottish Gaelic poets of the 20th century, was born in Elderslie, Renfrewshire. Following the death of his father, the Kintyre-born minister and novelist John MacDougall Hay, in 1919, George Campbell Hay spent seven formative childhood years in the fishing community of Tarbert (An Tairbeart), and learned SCOTTISH GAELIC from his mother's Gaelic-speaking relations and the local families. Although he was sent away again at the age of ten for schooling in Edinburgh (DÙN ÈIDEANN), these years established his identification with the Gaelic-speaking, maritime culture of Kintyre (Ceann Tíre). His earliest poetry (dating from 1932)—consisting mostly of lyrical reflections on his experience in Tarbert—was already exquisitely crafted and deeply influenced by traditional and classical Gaelic models. After completing a classics degree at Oxford (1934–8), Hay returned to Scotland (ALBA)



Welsh women in 'traditional' hats at the French Centenary Procession at Fishguard (Abergwaun) 1897

and became active in the Scottish nationalist movement (see NATIONALISM). His poetry from this period was particularly caustic—though not without humour—and reflected his political stance.

Following the outbreak of the Second World War, he fled conscription and spent several months in hiding in the wilds of Argyll (Earra-Ghaidheal) before his subsequent arrest and enlistment in the Army Ordnance Corps in June 1941. His duties in north Africa, Italy, and Macedonia largely consisted of interpreting, and it was during this time that he produced much of his best work (some of it in Norwegian, French, and Italian). A nervous breakdown in 1946 and several subsequent serious bouts of mental illness and hospitalization left him unfit for employment. Nevertheless, he managed to publish three collections of poetry: *Fuaran Sléibh* (Mountain spring; 1948), *Wind on Loch Fyne* (1948), and *O na Ceithir Airdean* (From the four directions; 1952) in the post-war period.

In the 1960s and 1970s, a new generation of publishers, students, and Gaelic political activists discovered Hay's work, and for him this was a productive period, marked by various journal publications and contributions to a major anthology (MacAmhlaidh, *Nua-Bhàrdachd Ghàidhlig*). As a nationalist, Hay's poetry always reflected his commitment to Scotland and to the Gaelic-speaking community. His most extraordinary work, however, succeeds in relating the difference of Gaelic culture to the corresponding differences of other minority cultures. For example, in *Mochtàr is Dùghall* (Mochtar and Dùghall; 1982), a poem cycle which he had begun writing in north Africa, the personal and family histories of an Arab and a Scottish soldier—both killed by the same hand-grenade—are explored and interrelated with great sensitivity and outrage. It is in work of this sort that Hay earned his recognition as a poet of international stature. Along with Sorley Mac Lean (Somhairle MACGILL-EAIN) and Derick S. Thomson (Ruaraidh MACTHÒMAIS), he is regarded as one of the pre-eminent 20th-century Scottish poets to write in Gaelic. His complete works have been magnificently edited (with translations, notes, and biographical material) by Michel Byrne and published as *The Collected Poems and Songs of George Campbell Hay*.

William J. Mahon

head cult

§1. INTRODUCTION

There is ample evidence of head cults or cults of the severed head in Europe from Mesolithic times (Middle Stone Age, *c.* 10,000–*c.* 5000 BC). In CELTIC STUDIES, there is a particularly important convergence of archaeological evidence for pre-Christian cult practices (see SACRIFICE), together with an iconographic fascination with severed heads in both pre-Christian and early medieval ART from the CELTIC COUNTRIES. Decapitation also occurs as a prevalent literary theme in several genres within the CELTIC LANGUAGES, as well as in GREEK AND ROMAN ACCOUNTS of the Celtic world and Latin texts by Celtic writers. In Celtic RITUAL and RELIGIOUS BELIEFS in general, the head has played such an important rôle that Anne Ross has called it 'the most typical Celtic religious symbol' (Mac Cana, *Celtic Mythology* 101).

For the Celts, the severed head of an enemy may have been proof of a warrior's valour, providing confirmation of the number of enemies he had slain in a battle. But the efforts taken to preserve and display heads, and the frequency with which they are depicted, point to their religious importance as symbols of the supernatural, perhaps the seat of the soul, warding off evil, as well as conferring on the keeper the wisdom and energy of the person to whom it once belonged. Judging on the basis of classical accounts and

archaeological finds, the cult of the head seems to have been most developed in southern Gaul, while it may only have developed late in the British Isles, perhaps with the coming of the Romans (Woodward, *Shrines and Sacrifice* 54–5), and the oil-soaked skulls kept near the forum in 4th-century Wroxeter in present-day Shropshire show that the Romano-British head cult persisted to the very threshold of the Christian period. Numerous references in the insular Celtic literatures, especially the Irish tales of the Ulster Cycle (cf. Irish literature [1] §5) and Fiannaíocht, reflect ideas in Christian times about head-hunting which are strikingly reminiscent of classical accounts relating to practices and traditions in ancient Gaul, for example, in the account of Athenaeus derived from Posidonius. In the 9th- or 10th-century Irish mythological saga Cath Maige Tuired ('The [Second] Battle of Mag Tuired'), it is said that Dian Cécht, physician of the Tuath Dé, was so skilled that he could heal any wound 'unless his head is cut off, or the membrane of the brain or his spinal cord is severed' (§99); for modern readers—familiar with the idea that brain death equals medical death—this seems normal, but this reference is remarkable considering how few pre-scientific cultures understood the brain and central nervous system as having such pre-eminent importance.

§2. classical accounts

Surviving Greek and Roman accounts of head-hunting and the severed head in Gaul consistently stress the horrific barbarity of the practices, which may simply and honestly reflect the civilized sensibilities of writers such as Posidonius and his readers, but would also have carried the covert agenda of justifying the Roman conquest as necessary to civilize Gaul. According to Diodorus Siculus,

> [the Gauls] decapitate their slain enemies and attach the heads to their horses' necks. The blood-stained booty they hand over to their attendants, while they sing a song of victory. The choicest spoils they nail to the walls of their houses . . . They preserve the heads of their most distinguished enemies in cedar oil and store them carefully in chests. These they proudly display to visitors, saying that for this head one of his ancestors, or his father, or he himself refused a large offer of money. It is said that some proud owners have not accepted for a head an equal weight in gold' (Koch & Carey, *Celtic Heroic Age* 13).

Similarly, Strabo writes,

> . . . the barbaric and highly unusual custom (practised most of all by the northern tribes) of hanging the heads of their enemies from the necks of their horses when departing from battle, and nailing the spectacle to the doorways of their homes upon returning. Posidonius says . . . The heads of those enemies that were held in high esteem they would embalm in cedar oil and display them to their guests, and they would not think of having them ransomed even for an equal weight of gold. (Koch & Carey, *Celtic Heroic Age* 18–19)

To understand the ideology behind such accounts, note that in the medieval Irish and Welsh law texts the value of an individual's honour was called, literally, his 'face-price', Old Irish *lóg n-enech*, Welsh *wynebwerth*, and that the price of a great man's slighted honour could be a plate of gold the width of his actual face, as King Matholwch was compensated in Branwen.

According to Livy's description of a battle between the Boii and the Romans, during which the Roman general Posthumius was killed, the general's body was carried to the most prestigious temple of the tribe and there decapitated, the skull being cleaned and mounted with gold to serve as a cup in honour of the deity (see silva litana).

§3. archaeological evidence

Severed heads are a recurring theme in Continental Celtic sculpture, and severed heads and skulls seem to have been part of the architecture and equipment of sanctuaries and other sacred enclosures. The Pfalzfeld pillar—one of the earliest and most ornate Celtic sculptures discovered to date—is adorned with carved heads on each side, and must have been crowned by another head, which has now disappeared. Depictions of Janus- and triple-headed deities have come to light on many major sites, and are depicted on precious items such as the gold bracelet found at Rodenbach. Important sanctuaries such as Chamalières, Gournay-sur-Aronde, and Ribemont-sur-Ancre—the latter two also extremely important in the context of Celtic human

sacrifice—have yielded human skulls near the entrance, away from other finds, possibly indicating their display as part of entrance structures (Brunaux, *Heiligtümer und Opferkulte der Kelten* 64–5, 68); cf. also the practices at the cemetery of Manre and Aure in Belgic Gaul.

The most spectacular sites connected with the cult of the severed head are Roquepertuse and Entremont, both situated near Marseille (Massalia). Their location is interesting since the 'savage altars' of the Treveri and the Ligurians mentioned by Lucan were in this area (*Pharsalia* 1.441–4.). The three monolithic pillars found at Roquepertuse, which formed a kind of portico, featured niches in which human skulls were most probably displayed. They may have been the skulls of enemies or, according to new interpretations, of venerated ancestors and respected warriors (Lescure, *Heiligtümer und Opferkulte der Kelten* 80). In addition, a double-headed deity, which seems to have been part of a larger sculpture, guarded the doorway, and a freeze of horses' heads adorned the temple walls. At Entremont, the tribal centre of the Saluvii featured a tall stone pillar carved with twelve severed heads, along with human skulls nailed into niches. The javelin embedded in one of them suggests that they had been warriors. Among the other sculptures in the sanctuary are those of a horseman with a head suspended from his saddle and warrior gods depicted with carved human heads in their hands (Green, *Exploring the World of the Druids* 7–8). Further north, at the Býčiskála cave in Bohemia, a human skull was found placed inside a cauldron, and a second skull had been fashioned so as to function as a drinking cup (Green, *Exploring the World of the Druids* 84).

As well as direct archaeological evidence for decapitation as a cult practice among the Continental Celts, the severed or disembodied head is also a common artistic motif in the La Tène style, as discussed in the articles on Italy (for the head motif at Brescia) and religious beliefs §1.

According to Woodward, interest in heads in Britain developed much later. Several cult heads in stone have been found, as well as metal face masks such as the famous large tin mask found in the culvert of the sacred spring at Bath in 1878, which stemmed from Roman times, (Woodward, *Shrines and Sacrifice* 54–6). The cult of the head seems to have experienced a revival with the coming of Christianity when, in connection with the cult of the saints, healing wells were often reinterpreted as holy wells. One is reminded of the case of Gwenfrewi, whose well sprang where her blood met the ground after she had been beheaded (Woodward, *Shrines and Sacrifice* 127–9).

However, there are finds which may point to the existence of a much earlier head cult on the British Isles. At St Albans, Hertfordshire, for instance, the skull of a teenage boy, who seems to have been battered to death before being skinned and defleshed, has been discovered. There are signs that the skull was displayed on a pole inside the temple before finally being deposited in the central pit (Green, *Exploring the World of the Druids* 76). A head discovered at Corbridge (Corioritum) in Northumberland, which is thought to represent Maponos, has been found to have a hollow on top which may have been used for libations. An antler carved with faces was found at Blaenau Ffestiniog, Gwynedd, Wales (Ross, *Pagan Celts* 51), and the famous hill figure at Cerne Abbas was probably originally shown carrying a severed head.

§4. references in the insular celtic literatures

Severed heads are an omnipresent feature of the Ulster Cycle tales. In Scéla Mucce Meic Dá Thó ('The Story of Mac Dá Thó's Pig'), Conall Cernach wins the 'champion's portion' by displaying 'the head of Connacht's most vaunted warrior at his belt'. Fled Bricrenn ('Bricriu's Feast') similarly climaxes with a beheading episode which underscores an unchallengeable claim to the 'champion's portion'. Cú Chulainn accepts a challenge by an ugly herdsman to behead him if he were allowed to do the same to Cú Chulainn the following night. When Cú Chulainn takes up the challenge and beheads the giant, he picks up his severed head and walks off, but nonetheless does not shirk his half of the bargain. On the relationship of this story to the closely parallel 'beheading game' episode in the Middle English Arthurian tale *Sir Gawain and the Green Knight*, see Cú Roí.

Cú Chulainn, in his rôle as Ulster's single-handed defender throughout most of Táin Bó Cuailnge ('The Cattle Raid of Cooley'), is given to cutting off the heads of his enemies, which he then takes home or displays on the spot. After he has killed the sons of Nera and their charioteers, he decapitates them and

displays their heads on a 'forked pole in the middle of the ford with four heads on it dripping blood down the stem of the pole into the current of the stream' (O'Rahilly, *Táin Bó Cúalnge* 154). The sons of Nechta are likewise killed, and their heads transported back to Emain Machae 'in the chariot'. In same tale, Cú Chulainn encounters Ferchú Loingsech and his followers, and 'forthwith struck off their twelve heads. And he planted twelve stones for them in the ground and put a head of each one of them on its stone and also put Ferchú Loingsech's head on its stone' (O'Rahilly, *Táin Bó Cúalnge* 209). For the displaying of the severed heads of Cú Chulainn's killers and the enemy's brain kept as a trophy at the Ulaid's court at Emain Machae, see Ulster Cycle §3.

In the *Branwen* branch of the Mabinogi, Bendigeidfran (Brân), when fatally wounded, commands his seven surviving heroes to cut off his head and carry it with them to the White Mount in London, and then to bury it in order to protect the kingdom against invasion. They spend seven years at Harlech and 80 years in the Otherworld, and 'here appears the motif of the living head which is almost a commonplace in Celtic tradition—during all this time Bendigeidfran's head remained uncorrupted and provided them with as pleasant company as he himself had done when he was alive' (Mac Cana, *Celtic Mythology* 78). On the mysterious procession in which a severed head is carried in the Welsh romance Peredur, see Grail.

See St Melor for an elaborate decapitation legend in Breton hagiography.

Hecataeus Ἑκαταῖος (*fl. c.* 500 BC, †*c.* 476 BC) was a Greek author from the city of Miletus on the Aegean coast of Asia Minor. He produced a work called the *Perigēsis* (or Περίοδος γῆς), which included a map of the world and commentary on various places and peoples. This work survives in fragments. Book I *Europa* Εὐρώπη of the *Perigēsis* contains the oldest extant text to mention a people called Κελτοί, i.e. Celts, in the following passages mediated to us by the later Greek writer Stephan of Byzantium:

> Narbon [in southern Gaul]: trading centre and city of the Celts . . . Hecataeus calls them Narbaioi. [Fragment 54]
>
> Massalia: a city of Ligurians near Celtica, a colony of Phocaeans. [According to] Hecataeus in his *Europa*. [Fragment 55]
>
> Nyrax [perhaps Noricum]: a Celtic city. [According to] Hecataeus in his *Europa*. [Fragment 56].

Hedd Wyn (1992), a film based on the life of the poet Ellis Humphrey Evans (Hedd Wyn), who fell in the First World War, was the first Welsh-language film to be nominated for an Oscar. Directed by Paul Turner and written by Alan Llwyd, it received the nomination

Scene from the film 'Hedd Wyn' featuring the main hero

in 1993 in the Films in a Foreign Language category.

Ellis Humphrey Evans, better known by his bardic name, Hedd Wyn, won the chair at the 1917 Birkenhead National Eisteddfod (Eisteddfod Genedlaethol Cymru), but had died of wounds sustained on the opening day of the Passchendaele campaign five weeks prior to the Eisteddfod. When it was revealed at the Eisteddfod that the author of the chair-winning poem had fallen in the war, the chair was draped in black, and the Eisteddfod became known as *Eisteddfod y Gadair Ddu* (the eisteddfod of the black chair). The film based on this celebrated event won several international awards, the most important, apart from the Oscar nomination, being the Royal Television Society Award for Best Single Play, 1992, the Spirit of the Festival Award at the Celtic Film Festival, 1993, First Prize at the Belgium Film Festival, 1994 and also First Prize at the Settimana Cinematografica Internazionale, Cinema Inglese Contemporaneo, Verona, Italy, 1995. Huw Garmon, who played the part of Hedd Wyn, won the Best European Actor award at the Festival Internationel de Programmes Audiovisuels, Cannes, France, in 1993, for his performance.

Heidelberg is a German city in the state of Baden-Württemberg where an important Iron Age sculpture was found in 1893 in the western part of the city centre. The sculpture, which is dated to the late 5th or early 4th century BC (La Tène A), is a fragment of a human head, 31 cm high, showing the upper part down to the nose. It probably formed part of a grave stele, since the head bears the so-called leaf crown, a characteristic

The fragmentary stone head from Heidelberg, Baden-Württemberg, Germany

trait of Celtic aristocratic graves, also found on the Pfalzfeld pillar and the Glauberg stele.

Heledd ferch Cyndrwyn has the important distinction of being the first major female character in Welsh literature. Whether originally a historical figure or a literary invention, Heledd's persona is that of a mid 7th-century princess localized in regions of Powys now in Shropshire (swydd Amwythig), England. The central themes of the verses uttered by her persona are the death in battle of her brother, the warrior-prince Cynddylan, and the subsequent devastation of their kingdom and destitute wanderings of the bereft poet. For the extant 339 lines of the 9th-/10th-century poetic cycle known as *Canu Heledd* (Poetry of Heledd), see ENGLYNION. On the 7th-century historical background, see also Marwnad Cynddylan. It is possible that the character and story of Heledd were directly inspired by this older elegy of Cynddylan in the AWDL metre, which refers to a fierce battle from which 'no brother returned to his sister'. The letters *eledd* have been placed strangely in the margin of its first line in the earliest manuscript, which might have suggested the feminine name of a bard who had composed lamentations on Cynddylan's death. In the Welsh TRIADS Heledd figures as one of the 'Three Unrestricted Guests of Arthur's Court, and Three Wanderers' (together with Llywarch Hen, TYP no. 65), and also as one of the *Tri Engiryavl*, usually translated as 'three violent ones' (TYP no. 76), but which makes more sense as 'three driven mad by grief'. As a common noun, *heledd* means a salt pool or saline estuary. Ifor Williams suggested that the intended sense here could be a reference to the salt of her heartbroken tears. On the other hand, the name could be a throwback to pre-Christian Celtic beliefs according to which lakes and rivers were often identified with goddesses, giving rise to the poetic theme of the river in flood as it grieves for the death of its human consort, the land's king. An alternative reading is *Hyledd*, of uncertain etymology, but again occurring in place-names. In the Heledd *englynion*, she has the alliterative epithet *hwyedig*, a word which can mean a hawk and is related to *hwyad(en)* 'duck', but a second *hwyedig* is an adjective meaning 'elongated, extended', ultimately based appropriately on the same root as *hiraeth* 'longing'. *Canu Heledd* is a well-known literary classic in Wales (Cymru) today, which is at least one factor in the continued popularity of the name. It abounds with simple and repeated haunting images, such as the line *Stafell Cynddylan ys tywyll heno* (Cynddylan's hall is dark tonight), which inspired the deeply psychological feminist narrative *Tywyll Heno* (Dark tonight) by Kate Roberts.

Hélias, Per-Jakez (1914–95) was a major figure in Breton literature during the final third of the 20th century. He wrote both in Breton and in French, and his work embraces several genres: journalism, radio drama, creative prose and verse. *Le cheval d'orgueil* (The horse of pride), the autobiographical French-language text of his best-known work *Marh ar lorh* (1986), met with phenomenal success and gave Hélias celebrity status. Among Helias's principal literary works in Breton are two collections of poetry: *Ar men du* (The black stone; 1974) and *An tremen-buhez* (The pastime; 1979). An important theme in his poetry is the fact of language, and its power to define. '*Brezoneger ma 'z on, war ma zeod emañ ma herez, birviken ne vo deoh*' (Breton speaker that I am, my heritage lies on my tongue; it shall never be yours), he writes, and again: '*Ar brezoneg eo ma mestr, ha me ki dezañ*' (Breton is my master, and I am its dog). Hélias owes his individuality to his modest upbringing and rigorous education. Like Maodez Glanndour and Añjela Duval, for Helias, writing in Breton was a vocation. His *Marh ar lorh* is rooted in the Bigoudenn region, south-west of Kemper (Quimper), and the work's regionality was central to its success. Hélias also published works on local customs, language, and folklore.

The **Helvetii** were a Celtic-speaking tribe (probably more accurately to be regarded as a tribal confederation) who inhabited the western ALPINE region around Lake Constance and Lake Geneva. CAESAR (*De Bello Gallico* 1.1) notes that they excelled over the rest of the Gauls in valour due to the constant military threat from their German neighbours (see CIMBRI AND TEUTONES; WARFARE). Their original home may have been located to the north, in what is now Germany. In 58 BC, because of population pressures, they attempted to migrate into GAUL (and, according to Caesar, to conquer the whole of Gaul) at the instigation of the wealthy Helvetian nobleman Orgetorīx. Caesar countered the Helvetii to protect Roman interests and alliances. He defeated them in battle near Toulon (*De Bello Gallico* 1.24–9) and the survivors were sent home, but the precedent for direct Roman involvement in Gaulish affairs soon led to the Roman subjugation of the whole of Gaul. Caesar notes that the Helvetii kept records using the Greek alphabet, a claim supported by numerous finds of Gaulish texts using the Greek alphabet of MASSALIA throughout southern France (see SCRIPTS). Within the Roman Empire, the Helvetii formed a CIVITAS with its *caput* (chief town) at Aventicum, modern Avenches, Switzerland. During the rule of Augustus, the Helvetii belonged to the province of *Gallia Belgica* (see BELGAE), but later became part of *Germania Inferior*. The Germanic Alamanni overran their territory and sacked Aventicum in AD 259/60.

The Celticity of the Helvetii is demonstrated by their proper names. For example, *Helvetii* itself is probably based on the root seen in Welsh *elw* 'gain, profit' and the Old Irish prefix *il-* 'many, multiple'; thus, the ethnic name probably asserted the numerousness of the people. *Orgetorīx* is a Celtic compound and means 'leader of killers' (D. Ellis Evans, *Gaulish Personal Names* 108–9). In the case of Geneva, *Genua* (var. *Genaua*) was the name applied by Caesar to a pre-Roman OPPIDUM there; it is a pre-Roman Celtic name, corresponding to Breton and Old Welsh *genou*, Modern Welsh *genau* 'mouth (of a river)' (Lambert, *La langue gauloise* 37; cf. RIVER NAMES), which suits the place. In modern times, *Helvetia* has been used as a Latin name for Switzerland.

Hemon, Roparz, born Louis-Paul Némo in Brest on the west coast of Brittany (BREIZH) in 1900, became one of the most influential figures in the Breton movement. A prolific writer, he produced dictionaries, grammars, translations, essays, and numerous works of literature.

He founded the literary revue *Gwalarn* (North-west, 1925–44), which did much to promote modern BRETON LITERATURE and standard written BRETON. In 1941 he took charge of the Breton broadcasting service, Radio Roazon–Breiz (Radio Rennes–Brittany, see MASS MEDIA) and was appointed head of Framm Keltiek Breizh/L'Institute Celtique (Celtic institute of Brittany) when it was founded in 1941. He also established another literary journal, *Sterenn* (Star, 1940–2), and a weekly newspaper, *Arvor* (Coastal area, 1941–4). He was later punished for these wartime activities with the loss of his civil rights. He subsequently moved to Ireland (ÉIRE), where he accepted a post in the Dublin Institute for Advanced Studies (INSTITIÚID ÁRD-LÉINN). He continued to produce creative and academic works and established another journal, *Ar Bed Keltiek* (The Celtic world, 1951–71). He died in Ireland in 1978.

Hemon encouraged others to write in Breton, and led by example with his translations of many classical

works. His knowledge of English and Esperanto meant that he had access to extensive sources of literature. An English teacher by profession, he encouraged learners of Breton by establishing a correspondence course, and by inventing Brezoneg Eeun (Simple Breton, 1935), a simplified form of Breton. He also raised funds to donate free Breton books to schools and translated children's works, including Andersen's *Little Mermaid* (*Plac'hig vihan ar mor*, 1928).

Among his literary works are novels, such as *Mari Vorgan* (Mermaid, 1962), *Nenn Jani* (1974) and *An aotrou Bimbochet e Breiz* (Mr Bimbochet in Brittany, 1927); collections of short stories, e.g. *Kleier eured* (Marriage bells, 1943), *Ho kervel a rin en noz* (I shall call you in the night, 1954); plays such as *Lina* (1926) and *Roperzh Emmet* (1944–8), and poems e.g. *Pirc'hirin ar mor* (Pilgrim of the sea, 1933). As well as various modern dictionaries, his linguistic works include a historical dictionary of Breton and an edition of Christmas hymns in Gwenedeg, the Vannes dialect of Breton (1956; see BRETON DIALECTS; DICTIONARIES AND GRAMMARS; GWENED).

Gwenno Sven-Myer

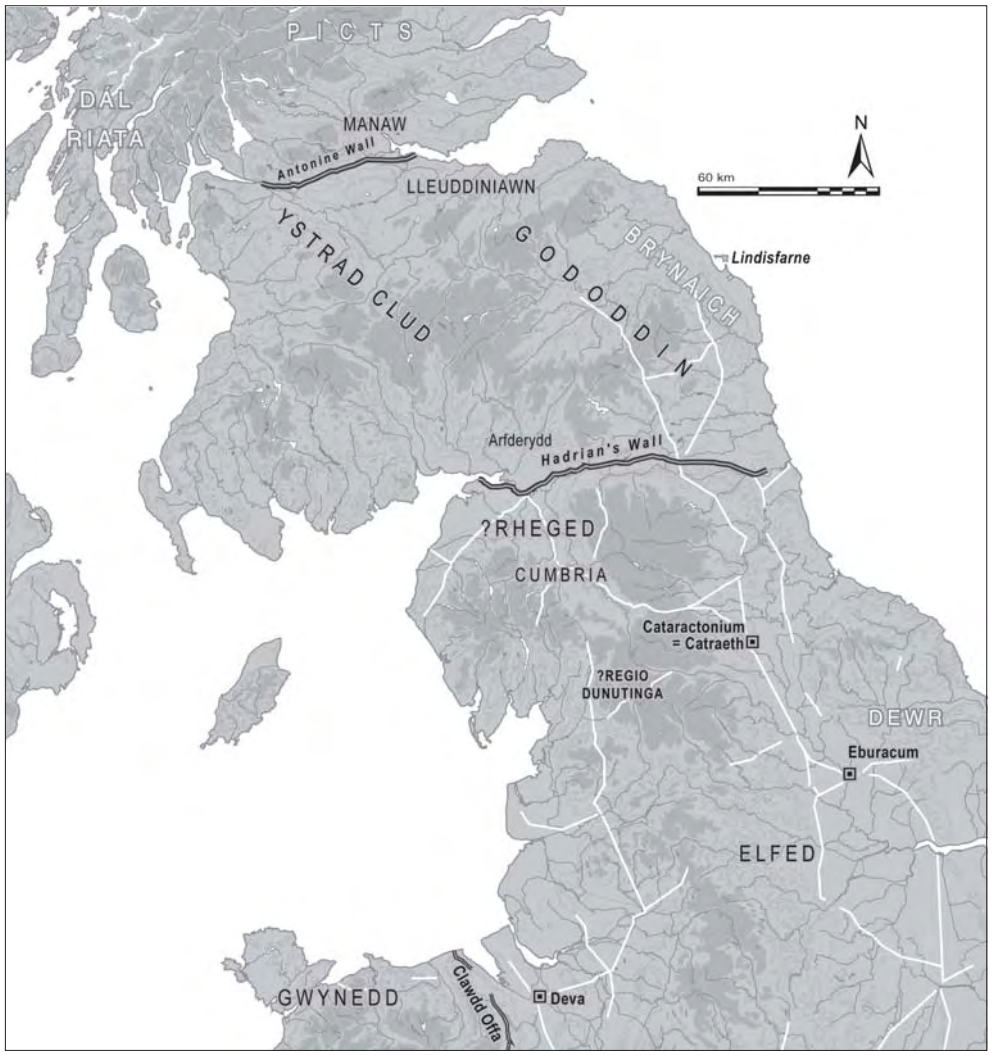
Yr **Hen Ogledd**, English 'the Old North', is a term used in the study of early Welsh literature and history signifying the BRYTHONIC-speaking peoples of what are now parts of northern England and southern Scotland (ALBA) especially with references to BRITAIN's early post-Roman period.

§1. DEFINITION

The term 'Old North' carries two important shades of meaning. First, it is distinct from north Wales (CYMRU), that which is called in Modern Welsh *gogledd Cymru* or simply *y gogledd* (the north). Such a distinction is already anticipated in the more innovative A-text of the GODODDIN (A.4.43), where there is a description of a joint force of men of [*G*]*wyneb a Gogleb* 'GWYNEDD and the north', where the northernmost region of Wales, as we think of it today, the country west of Offa's Dyke (CLAWDD OFFA), is specifically not included in 'the north'.

The second important distinction is that 'the Old North' does not simply mean early north Britain. Rather, the term focuses on that part of north Britain which was inhabited by BRITONS, rather than by PICTS, SCOTS, or Anglo-Saxons. It is this part of Britain which had formed the northern military zone of the Roman provinces, the Britanniae, whose strong points had been the legionary forts of York (Eburācum) and Chester/CAER (Dēva), the numerous lesser forts along HADRIAN'S WALL and the ANTONINE WALL, and the road system linking this all together. Within its conservative frame of reference, medieval Welsh tradition—even once effectively confined to what is now Wales—still tended to see its geographic extent as the island as a whole (Ynys Prydain) or the southern two thirds of it that had been Roman Britain.

The geographic term *yr Hen Ogledd* is closely connected with groups called in the 12th-century GENEALOGIES *Gwŷr y Gogledd* 'Men of the North' (most of these northern pedigrees go back—though without the sobriquet—to the Old Welsh genealogies in BL MS Harley 3859). Hence, Pictland, DÁL RIATA, and Northumbria—once its territory had fallen into English hands—are usually not included in the Old North, at least as modern scholars use this term. However, such a rigidly cultural and linguistic definition might be a modern historical concept somewhat askew from the original meaning. In the 10th-century political prophecy ARMES PRYDEIN, *Gwyr Gogleb* (Men of the North) are listed early on, figuratively taking the



The old Brythonic north, places mentioned in the article, with Roman roads in white

esteemed first place (*kynteb*); it is nonetheless not altogether clear who the poet thought they were. The Picts who were present in the war-band of Gododdin may well have been understood to have been included in *Gogleb* in the collocation quoted above, and it would now be hard to tell whether the famous Aedán mac Gabráin of Dál Riata—who is known from the prophetic poetry attributed to Myrddin and other branches of Welsh tradition—would have been excluded by a medieval cyfarwydd from the 'Men of the North' because he was a Gael.

From the perspective of Welsh literature, *yr Hen Ogledd* refers to those parts of north Britain which were as integral to early Welsh tradition as was Wales itself: i.e. the parts where poems transmitted in Wales through the medium of the Welsh language were believed to have been composed—works attributed to Aneirin, Taliesin, Myrddin, and anonymous Cynfeirdd; parts considered to be homes of heroes famous in Wales, such as Urien and his son, Owain; parts whose noble lineages—such as the Coeling (see coel hen), Cynferching, and Cynwydion—were preserved and systematized by genealogists in Wales. In this sense, the Old North contrasts not only with the Pictish, Scottish, and Anglo-Saxon regions of north Britain, but also in another way with Brittany (Breizh) and Cornwall (Kernow)—lands which were Brythonic speaking and well known as such in early Wales, but which did not figure nearly as importantly in any branch of early Welsh literature.

It is likely that contacts between Wales and the north were simply closer for a longer time, and therefore that the Brythonic dialects Welsh and Cumbric remained more similar to one another. It must also be important that both dynasties of independent Wales's most powerful kingdom, Gwynedd, were traced back to the north—the first to Cunedda of Manaw and the second to Coel Hen through Merfyn Frych.

§2. DIVISIONS OF THE OLD NORTH

Some of these are well documented and are covered in their own articles in the Encyclopedia: ELFED, GODODDIN, RHEGED, YSTRAD CLUD (Strathclyde, partly synonymous with CUMBRIA), as well as lesser kingdoms or subkingdoms, such as Aeron, probably in south-west Scotland, Manaw and Lleuddiniawn (LOTHIAN), probably both once subdistricts of northern Gododdin. The *regio Dunutinga* mentioned in Eddius Stephanus' Life of Wilfrid reflects a minor north Brythonic kingdom named from a ruler Dunaut; the place may be recollected in the north Yorkshire place-name *Dent*. Since Bernicia (BRYNAICH) and Deira (DEWR), the two subkingdoms of Anglo-Saxon Northumbria, both have Brythonic names, it is likely that they had once had Brythonic rulers as well. It is also likely that there were other such kingdoms whose names have not survived or not certainly been identified.

After the end of Roman Britain in 409/10, the Brythonic north probably never formed a coherent entity for more than transient supremacies and coalitions, such as Urien's coalition at LINDISFARNE. The battle of ARFDERYDD is remembered as a disastrous struggle with north Britons on both sides, and the poems in the AWDL metre addressed to GWALLAWG imply that most of his enemies were in the country of Gododdin and Gododdin's allies. It is striking how frequently early poetry, ANNALES CAMBRIAE, and the TRIADS show Britons fighting Britons in post-Roman times near what had been the late Roman frontier of Hadrian's Wall.

The **Hendregadredd Manuscript** (*Llawysgrif Hendregadredd*) is one of two main sources of poetry of the GOGYNFEIRDD, the other being the Red Book of Hergest (LLYFR COCH HERGEST). Begun *c.* 1300, it is the work of a methodical compiler and editor whose intention was to bring together systematically in one volume the work of the poets who sang to the Welsh princes before 1282. During the first quarter of the 14th century no fewer than 19 different scribes, probably belonging to a large monastic scriptorium, possibly Strata Florida (YSTRAD-FFLUR), continued his work by adding poems in the spaces he had provided. Poetry to the princes of GWYNEDD predominates, and the work of CYNDDELW Brydydd Mawr is prominent. Poems by some poets from the DEHEUBARTH and POWYS are also included. By the second quarter of the 14th century the manuscript belonged to Ieuan Llwyd of Parcrhydderch, Llangeitho (*fl.* 1333–43), in CEREDIGION, and poetry, including some praising him and his family, was added in the remaining space by 20 different scribes. Subsequent owners included the poets Wiliam Llŷn (1534/5–80) and Rhys Cain († 1614), before it came into the possession of Robert VAUGHAN of Hengwrt. It disappeared from the HENGWRT Library, but was rediscovered in 1910 in a wardrobe at Hendregadredd near Porthmadog, the home of Judge Ignatius Williams.

The **Hengwrt and Peniarth** collection of manuscripts is the foremost ever brought together in Wales (CYMRU) by one individual. It comprises not only most of the important surviving medieval and renaissance Welsh manuscripts but also others in English, Latin, French, and CORNISH. The manuscripts assembled by the antiquary Robert VAUGHAN (*c.* 1592?–1667) of Hengwrt, near Dolgellau, form the basis of the

collection, augmented by some of the manuscripts of Edward Lhuyd purchased in 1807. The collection was acquired by William Watkin Edward Wynne (1801–80) of Peniarth near Tywyn, Merioneth (sir Feirionnydd), in 1859 through the bequest of Robert Vaughan's descendant, Sir Robert Williams Vaughan, 3rd baronet. Here, the Hengwrt manuscripts were combined with those already at Peniarth, and the whole collection, comprising over 560 volumes, was catalogued by Wynne, who retained the earlier Hengwrt manuscript numbers and numbered the Peniarth manuscripts for the first time, producing the so-called 'Ancient' Peniarth numbers. When John Gwenogvryn Evans catalogued the Welsh manuscripts for the Historical Manuscripts Commission in 1898, he renumbered the Hengwrt and Peniarth manuscripts in a single sequence and it is this which is used today.

Although a catalogue of the Hengwrt manuscripts survives in Robert Vaughan's own hand (NLW MS 9095) and another made in 1658 by William Maurice (†1680), Cefn-y-braich (NLW , Wynnstay MS 10), the stages in the formation of his collection are only partially understood. Vaughan's zeal for collecting began at an early age, and he seems to have acquired collections of manuscripts owned by other antiquaries such as Jaspar Gryffyth (†1614), John Lewis, Llynwene (†1616), 'Sir' Tomas Wiliems, Trefriw (†1622), John Davies, Mallwyd (†1644), the poets Rhys and Siôn Cain, who had previously acquired the manuscripts of Wiliam Llŷn (1534/5–80) and, towards the end of his life, the manuscripts of his friend, John Jones, Gellilyfdy (†1658).

The Black Book of Carmarthen (Llyfr Du Caerfyrddin) is given pride of place in the Historical Manuscripts Commission Report, being designated Peniarth MS 1. The Book of Taliesin (Llyfr Taliesin) is Peniarth MS 2 and the White Book of Rhydderch (Llyfr Gwyn Rhydderch) is Peniarth MSS 4 and 5. Peniarth MS 11, written *c.* 1400, contains the earliest copy of the Grail Romances, and Peniarth MS 14, a composite manuscript written by various hands of the late 13th and early 14th centuries, contains religious prose texts in Welsh. Among the other treasures in the collection are early copies of the historical texts *Dares Phrygius* (see ystorya dared), Brut y Tywysogyon, and Welsh and Latin versions of Geoffrey of Monmouth's Historia Regum Britanniae; the earliest copies of the Laws of Hywel Dda, both in Latin and Welsh (see also law texts); an extensive collection of the work of the 'Poets of the Nobility' (see cywyddwyr); pedigree and genealogical manuscripts, especially those written by the poets Gruffudd Hiraethog (†1564), Wiliam Llŷn, and Rhys and Siôn Cain; the transcripts of John Jones, Gellilyfdy; and the historical and genealogical writings of Robert Vaughan himself. Among the non-Welsh manuscripts are 12th-century copies of Beda's *Ecclesiastica Historia Gentis Anglorum* ('Ecclesiastical History of the English People'; Peniarth MS 381) and Henry of Huntingdon's *Historia Anglorum* ('The History of the English'; Peniarth MS 382), a unique early 16th-century copy of the Cornish play Beunans Meriasek (Peniarth MS 105) and the earliest copy of Chaucer's *Canterbury Tales* (Peniarth 392), which had belonged to Andrew Brereton of Llanfair-is-gaer, near Caernarfon.

In 1905 following extended negotiations, Sir John Williams, baronet, secured a reversionary interest in the Hengwrt/Peniarth Manuscripts and in 1909, they were transferred to the newly established National Library of Wales (Llyfrgell Genedlaethol Cymru) in Aberystwyth. Forty manuscripts not included in this sale were purchased by the National Library in 1980 and 1981.

Hercules in Celtic legend and literature

§1. pre-christian mythology

Ogmios was identified with the Greek hero Heracles and his Roman adaptation Hercules (see interpretatio romana), as can be seen in a description by Lucian of Samosata (*c.* ad 120–*post* 180) of an image,

in which the iconography of the classical hero was combined with unusual features, such as golden chains linking his tongue to the ears of happy followers, an icon of mighty eloquence (on this passage, see further OGMIOS). The Irish supernatural champion Ogma (credited with the invention of the OGAM alphabet) and the shadowy Welsh Eufydd son of DÔN (corresponding to Old Welsh *Oumid* in the GENEALOGIES) are probably akin to Ogmios; for the linguistic equivalence to be exact, we must suppose an earlier **Ogomios*; cf. *Lug'dūnum* alongside LUGUDŪNON.

According to a foundation legend recorded by DIODORUS SICULUS, in which elements of a characteristic Celtic SOVEREIGNTY MYTH are evident, Heracles was the ancestor of the Gauls:

> A famous man, they say, formerly ruled Celtica, to whom was born a daughter of gigantic stature, far surpassing all others in beauty. But she, glorying in her strength and her wondrous beauty, refused to marry any of her suitors, considering none of them worthy of her . . . Heracles arrived in Celtica and stayed there in the city of ALESIA. Having seen him, and marvelled at his nobility and physical preeminence, she eagerly accepted his advances—her parents had given their consent.
>
> . . . she bore to Heracles a son named Galates, who far outstripped his fellow tribesmen in nobility of spirit and strength of body. When he had grown to manhood and succeeded to his father's kingdom, he took possession of much of the adjacent territory and performed mighty deeds of war. The fame of his valour having spread far and wide, he called his subjects 'Galatae' [i.e. Gauls] after himself; from them all Galatia [i.e. GAUL] was named.

§2. HERCULES IN MEDIEVAL IRISH LITERATURE

Stair Ercuil ocus a Bás ('The Life and Death of Hercules') is a 15th-century Early Modern Irish adaptation of William Caxton's English version of a Hercules narrative, which is itself based on the relevant section in Raoul Lefèvre's *Recueil des histoires de Troye*. It survives in a single manuscript written by Uilliam Mac an Leagha (*fl.* 1450), who was probably also the translator. The Gaelicized Anglo-Irish family of the Butlers may have been his patrons. As in his other adaptations of English sources, Mac an Leagha employed established Irish literary techniques in *Stair Ercuil,* including extensive use of alliterating phrases in descriptive passages, in order to create a text which would appeal to its new audience. Whereas Caxton presents the life of Hercules as a didactic, chivalric romance, Mac an Leagha presents it as a heroic biography, but, in contrast to the blatantly heroic CÚ CHULAINN of the ULSTER CYCLE, Hercules is also involved in intellectual activities.

§3. HERCULES IN EARLY WELSH TRADITION

In LLYFR TALIESIN there is a short heroic elegy, in the traditional style of the *marwnadau* (death-songs) of native heroes, entitled in the manuscript *Marwnat erof* (Death-song of ?Erof), but the hero's name throughout the body of the text is spelled twice *Ercwlff* and then twice *Ercwlf*. The poem is for the most part standard bardic praise; Hercules is, for example, called *mur ffossawt* 'rampart of battle', the standard epithet for native heroes. But there is a reference to the 'Pillars of Hercules' (*colofneu Ercwlf*); therefore, the poet evidently knew who this was. In the Welsh TRIADS, Ercwl figures as one of the 'Three Men who received the Might of Adam' (TYP no. 47). An *Ystorya Ercwlf* was included in the 16th-century Welsh 'World Chronicle' of Elis GRUFFYDD.

Hercynia silva

The Greeks and Romans knew the vast and vaguely defined woods stretching from the RHINE to the Carpathian mountains and the Black Sea as the Hercynian forest. CAESAR claimed that at least 60 days were needed to travel its length (*De Bello Gallico* 6.24–5). The name is of probable Celtic origin, from the INDO-EUROPEAN root **perkʷu-* ('oak'), derivatives of which are attested with a variety of meanings, including 'thunder' and 'thunder-god' in Baltic and Slavic. Suffixed formations similar to *Hercynia* are seen, for example, in Lithuanian *perkúnija* 'thunder storm', and in Germanic with Gothic *fairguni* 'mountain'. The initial *h-* of *Hercynia* suggests that Indo-European *p*, which was generally lost in this position in Celtic (see CELTIC LANGUAGES), had been transferred into Latin or, more probably Greek or some other intermediate language, at the stage when the consonant was greatly softened, but not yet fully lost. The name is attested in Greek as Ἀρκύνια *Arkunia* from the time of ARISTOTLE (384–322 BC; *Metereologica* 1.13, 20), also attested as Ἑρκυνίος (δρυμος) *Herkunios*. The Black Forest is a remnant of this ancient woodland. An ancient tribe with the derived name *Hercuniates* are attested living north of the river Drava and the bend of the Danube, in what is now western Hungary.

Philip Freeman, JTK

Herodotus Ἡρόδοτος (*c.* 484–*c.* 425 BC), the author of a famous *History* in Greek, provides extensive ethnographic information about northern barbarian peoples of the IRON AGE, most notably the Scythians and related pastoral nomads of the east European and central Asian steppes. This information is often of use to Celtic scholars since the steppe nomads were in contact with ancient Celts in central Europe. Herodotus also makes one brief mention of the Celts (Κελτοί):

> . . . the Ister [DANUBE], beginning in the land of the Celts and the city of Pyrene, flows through the middle of Europe. The Celts live beyond the Pillars of Hercules [Straits of Gibraltar] and border on the Cynetes, who are the westernmost inhabitants of Europe.
>
> (*History* 2.33, trans. P. Freeman)

Pyrene is otherwise unknown; it is sometimes thought that the name is to be connected with the Pyrenees mountains, implying a confused western geography, as though the Danube flowed from the Atlantic or western Mediterranean to the Black Sea. On the other hand, the early presence of the Celts around the middle and upper Danube—the ALPINE region and vicinity of HALLSTATT—would be sound information. An identification of Pyrene with the strongly Greek-influenced fortified town at the HEUNEBURG has also been suggested.

heroic ethos in early Celtic literatures

§1. INTRODUCTION

The hero is a widespread international concept and may be defined in a variety of ways. A key common feature is that the hero achieves personal fame in a struggle against odds. The character of the hero may have either a factual or a fictional basis. Both are found in the early Celtic literatures, and the distinction is often blurred. The fictional or fictionalized hero may be mortal or immortal. One of the prevalent themes of Celtic heroic literatures (as well as other heroic literatures) is that the hero himself is short-lived, but the hero's fame contrasts poignantly as being everlasting. The pre-modern Celtic heroes most often excel in feats of physical force: competitive games, hunting and, by far the most common, combat. In this respect, the hero corresponds to one of three major divisions or 'functions' which Georges Dumézil believed to have existed in Indo-European society, namely the warrior function. Such a Dumézilian interpretation has encour-

aged generalizations between the reality of Celtic warrior society (as reflected in the written accounts of wars, archaeology of weapons and FORTIFICATIONS, and attitudes to war in the early LAW TEXTS) and the ideal, as found in heroic literature. In other words, scholars such as H. M. CHADWICK and Kenneth JACKSON (*Oldest Irish Tradition*) have seen the heroic ages as celebrated in medieval Irish and Welsh literatures to be substantially valid reflections of periods of dominance by warrior aristocracies in Celtic-speaking societies. Some recent work tends to deal with heroic literature as a phenomenon in its own right, with a more indirect and complicated relationship to the warrior societies of the ancient Celtic world and European Middle Ages. No written descriptions of Celtic warriors have survived which can be proved to be wholly free of the influence of Greek and Roman epic, ultimately indebted to HOMER. For the Christian period (including all BRYTHONIC and GOIDELIC literature), the Bible also served as a powerful literary model with numerous heroes.

As well as heroes and warriors, both Goidelic and Brythonic traditions provide many instances of the poet and/or visionary who achieves eternal fame in a struggle against the odds. The pan-Gaelic hero FINN MAC CUMAILL figures as a visionary and poet, as well as a champion and a war leader. The pan-Brythonic TALIESIN, on the other hand, is usually presented as a superlative poet and visionary, but rarely as a warrior.

§2. THE CELTIC HERO IN THE ANCIENT WORLD

The heroic behaviour and ideals of Celtic groups was a well developed theme in classical literature, as discussed in several entries in this Encyclopedia, including GREEK AND ROMAN ACCOUNTS (especially §8); also POSIDONIUS; FEAST; HEAD CULT; ATHENAEUS; DIODORUS SICULUS; STRABO. This picture can be supported by archaeology, at least in so far as the latter demonstrates the dominant influence of a warrior aristocratic class in the Celtic lands. In numerous rich burials, distributed widely across the Continent and Britain in the HALLSTATT and LA TÈNE periods, one finds sophisticated weaponry, together with fine metal jewellery and feasting equipment, all pointing to a widespread system of shared values in displayed military status and luxury goods. The conjunction of this material in graves implies the belief that the hero's status and fame continued beyond death, a cult of heroic immortalization. There are several representations of Celtic warriors in Hellenistic sculpture, and the *Galatomachia* (battle of the Gauls/Galatians) became a popular subject in the last centuries BC (see CIVITALBA; PERGAMON). Celtic statues of Celtic warriors also occur, often together with high-status burials, as at GLAUBERG and HIRSCHLANDEN. Warriors are also depicted in répoussé relief work on sheet metal, for example, the duelling figures and the armed hero mounted on a four-wheeled wagon on the bronze funerary couch from HOCHDORF and several armed warriors shown in elaborate and mysterious mythological scenes on the famous GUNDESTRUP CAULDRON. Such examples are probably to be understood as hero tales recorded visually.

A few classical heroes achieved fame in the medieval CELTIC COUNTRIES and were drawn into their native genres of heroic tales and praise poems; see ALEXANDER THE GREAT; HERCULES; SCÉLA ALAXANDAIR; TROJAN LEGENDS.

§3. CONCEPTS OF THE HERO IN EARLY IRISH LITERATURE

In general, see IRISH LITERATURE [1] §5; FIANNAÍOCHT; ULSTER CYCLE.

The hero and the boundary

An antithesis has been identified in Celtic tradition in which the 'hero of the tribe', champion and defender of his people (CÚ CHULAINN, for example), contrasts with the 'hero outside the tribe', a wanderer and outlaw (Finn mac Cumaill, for example). Marie-Louise Sjoestedt proposed this idea in a study published in 1940 (see *Gods and Heroes of the Celts* 57–91). Although this formulation had a strong influence on subsequent scholarship, it is not clearly supported by the earliest Irish sources. In these, the words FÍAN, *fiallach*, applied to troops of outlaws in the later literature, are used for the war-bands of kings; the term *fénnid* 'warrior' (which is derived from *fían*) is regularly used for a royal champion. Rather than two separate classes, we should probably think of two aspects of a single category. Thus, Kim McCone has suggested that many of the 'outlaws' (*díbergaig*) may have been adolescents, who were living an anarchic existence as they awaited the initiation which would reintegrate them into the settled society of the TUATH or kingdom (CMCS 12.1–22).

We can obtain further insight into the dual rôle of the early Irish hero by focusing on the warrior's association with the boundary. The boundary of the *tuath* was of paramount importance in early Irish society. With the exception of certain privileged classes, no one retained his status or legal rights if he left his own *tuath*: in other words, he became an outlaw. The warrior was charged with defending the boundary against attack, or crossing it to conduct raids on neighbouring territories. According to circumstances, therefore, he was either a 'tribal' champion or a lawless marauder. Such opposites appear in the Ulster Cycle hero Conall Cernach. In the story of Cú Chulainn's taking up arms, Conall Cernach appears guarding the border of the kingdom, ready to extend his protection to any visiting poet, and to challenge any warrior (O'Rahilly, *Táin Bó Cuailnge* 21, 143–4). In Scéla Mucce Meic Dá Thó ('The Story of Mac Dá Thó's Pig'), by contrast, Conall boasts that he kills a man of the province of Connacht every day and burns Connacht's settlements every night; and the tale as a whole portrays warriors as raiders and cattle rustlers (Meyer, *Hibernica Minora* 199–207/62; Thurneysen, *Scéla Mucce Meic Dathó* 15–16).

This close association of the warrior with the boundary has an interesting corollary: besides guarding the border of his *tuath*, he may be imagined as standing on the threshold of the supernatural realm. Cú Chulainn's many encounters with immortals may reflect this idea, and indeed some texts portray him as having close ties with the people of the síd, or even refer to him as a *sirite* 'sprite, imp'. Note also that the Ulster Cycle druid Cathbad goes raiding as a *fénnid* in *Compert Conchobuir* (The conception of Conchobar; Meyer, RC 6.174, 178–9). A character named Ferchess, we are told, 'was both a prophet and a *fénnid*', and was hence able to see the secrets of the *síd* (O Daly, *Cath Maige Mucrama* 1.38–9). The pre-eminent example of this complex of associations is Finn mac Cumaill, celebrated both as warrior and as visionary poet.

The hero as cú *'dog, wolf'*

The hero's ambivalent character and his association with the concept of the boundary were aptly symbolized by the dog (Irish *cú*). The guard dog is tame to his own people, but a wild beast to trespassers from outside. The dog's capacity to be both wild and tame is also reflected in the use of *cú* to mean not only 'dog' but also 'wolf' (often specified as *cú allaid* (wild dog). The same word could designate the protector of a settlement and the raider who attacked out of the wilderness. The legal literature displays the same metaphor when it uses the term *cú glas* (grey dog = wolf) for a man wholly without ties, a foreigner from overseas.

The hound's usefulness depends upon its ability to distinguish between friend and foe, 'insider' and 'outsider'. In *Scéla Mucce Meic Dá Thó* the hound Ailbe, which 'used to defend all of Laigin', is called upon to decide whether the men of Ulaid or Connacht are allies by exercising the 'great knowledge of a hound' (*rús con*) (Meyer, *Hibernica Minora* 199–207/57, 63; Thurneysen, *Scéla Mucce Meic Dathó* 1, 18). The loss of this ability to distinguish can make the warrior a menace to his own people: Cú Chulainn, returning from a raid beyond the border, threatens to kill everyone in the stronghold until disarmed by a ruse (O'Rahilly, *Táin Bó Cuailnge* 25, 147–8).

Cú Chulainn (lit. 'Culann's dog') is indeed the figure in whom this symbolism is most fully expressed. His name is explained with one of his earliest exploits, when he slew and then assumed the duties of the monstrous hound of the blacksmith Culann (O'Rahilly, *Táin Bó Cuailnge* 17–19, 140–2). This close identification is reflected in his geis against eating dog flesh. He appears as watch-dog of his province most dramatically in the Táin Bó Cuailnge ('The Cattle Raid of Cooley'), guarding the border single-handedly against the armies of Ériu (Ireland).

The analogy between outlaws and wolves sometimes overlaps with the notion that outlaws actually assumed wolf form. When it is said in Togail Bruidne Da Derga ('The Destruction of Da Derga's Hostel') that Conaire's foster-brothers went 'wolfing' (*faelad*), it is difficult to know whether this is meant metaphorically or concretely (Knott, *Togail Bruidne Da Derga* 7). The concrete interpretation is unambiguous, however, in such works as the 11th-century Latin poem *De Mirabilibus Hiberniae* (On the wonders of Ireland), which describes men whose souls leave their bodies and take the shapes of wolves (Gwynn, *Writings of Bishop Patrick* 62–3).

For bands of young men marauding as werewolves in 19th-century Brittany (Breizh), see fairies §1.

Monstrous attributes of the hero

The uncanny, anti-social side of Cú Chulainn's persona finds dramatic expression in the *ríastrad* or 'distortion' which sometimes accompanied his battle frenzy. In the often elaborate descriptions of this horrific transformation, the features most consistently mentioned are the twisting of his body inside the skin, the monstrous distension of his mouth, and the projection of one eye onto his cheek while the other sinks deep into his head (e.g. O'Rahilly, *Táin Bó Cuailnge* 14, 51, 68–9, 137, 171, 187). Deformities comparable with some elements of the *ríastrad* are attributed to giants and demonic beings elsewhere in the literature, but the complex as a whole appears to be peculiar to Cú Chulainn. An attenuated echo of the concept may, however, be present in one of the versions of *Aided Chonchobuir* (The violent death of Conchobar), which speaks of the Connacht hero Cett mac Mágach as 'the most grievous monster (*béist*) in Ériu' (Meyer, *Death-tales of the Ulster Heroes* 4–5).

Another superhuman characteristic ascribed to Cú Chulainn is extraordinary body heat. When embarrassed at the sight of naked women, he is thrown into three vats of water, of which the first bursts and the second boils (O'Rahilly, *Táin Bó Cuailnge* 25, 148). This may be no more than an illustration of the fiery force of shame, which finds comparable expression in other Irish tales. A more telling example of this occurs later in the *Táin* when he is described sitting naked with 'the snow melted a man's length around him, on account of the greatness of the heat (*bruth*) of the warrior' (O'Rahilly, *Táin Bó Cuailnge* 49, 169). We may compare the hero Cai in the Welsh tale Culhwch ac Olwen: rain evaporated before it touched him, and he could light a fire by touching the kindling (Bromwich & Evans, *Culhwch and Olwen* 14; Ford, *Mabinogi* 132).

One of the later accounts of Cú Chulainn's *ríastrad* portrays him as swelling up like a bladder, and several other references to warriors puffed up or swollen by martial ardour are found in Middle Irish sources. Water monsters are described in similar terms, for example, in the versions of the death tale of Fergus mac Léti; again, hero and monster share key characteristics. It may be significant that Cai too is said to be able to grow 'as tall as the highest tree in the wood' (Binchy, *Ériu* 16.36, 38, 42; Bromwich & Evans, *Culhwch and Olwen* 14; O'Rahilly, *Táin Bó Cuailnge* 94, 207).

Some of these motifs may have deep roots in Celtic tradition. The theme of swelling may be connected with the widespread use of *bolg* 'bag, bladder' in early Irish proper names, and indeed with such Continental Celtic names as Belgae and *Bolgios* or *Belgios*. Within other Indo-European traditions, the same underlying concept may appear in the Homeric formula μένος 'εμπνειν *ménos empnein* 'to blow spirit into' (*Iliad* 20.110), used of the process in which divinity invigorates the hero. The cognate phrase *mànas api-vat* in Sanskrit has the sense 'inspire', with sacred rather than warlike applications, and the word *inspire* itself comes from Latin words meaning 'to breathe in'. By analogy, the Indic *tápas*, the supernatural 'heat' acquired by ascetics, may be a distant cognate of the heat of Irish warriors.

§4. THE HEROIC ETHOS IN EARLY WELSH POETRY

As long as Welsh poets enjoyed the support of a militaristic aristocracy, the traditional heroic value system was very much in evidence in praise poetry. Although royal patronage was cut off with the loss of Welsh independence in 1282, the patrons of the later medieval Cywyddwyr continued to be praised for martial prowess. But, as discussed most especially by Jarman, probably the most intensely heroic piece of Welsh literature is the early Welsh Gododdin, concerned chiefly with events of 6th-century north

Britain. Although most of its verses are completely preoccupied with heroic themes, *Y Gododdin* avoids monotony, achieving a turbulently dynamic effect by juxtaposing diverse—and often intentionally paradoxical—themes with extreme compression of verbal expression.

This quality may be illustrated well enough with one awdl (long stanza) drawn from the most archaic text (as copied by scribe B, retaining the Old Welsh spelling of his source), but virtually any verse could be chosen at random to make the same point. Thus, *awdl* B2.26 opens with the lines (1186–9): 'I receive [?]embroidery | from the hand of Heini, | one who excels in protecting us, | possessing most distinguished reputation', stressing the stock virtues of the nobleman—generosity, maintaining a protected and luxurious lifestyle for his dependents in the court, and personal fame'. The following lines use the idea of fame as a bridge from the refined openhandedness of the hero in the court, to lethal prowess at the tribal border (ll. 1190–5), as discussed above for the Irish sagas: 'He slew a great host | to earn renown. | The son of Neithon slew | men with gold torcs | a hundred chieftains | so that it might be considered'. We see the hero's own status enhanced by the quality as well as the quantity of his slain foes, where the traditional emblem of rank, the gold neck-rings of the Celtic Iron Age, is employed as vivid shorthand figure for exalted nobility. Then, the following lines take it a step further from what feels like a hyperbolic summit, to come from the hero's general reputation to the specific battle which is the primary subject of the poem (ll. 1196–), itself the poignant paradox of the luxurious intoxicating feast which led inexorably to the bitter battle: 'It was better still when he went | with the men to Catraeth. | He was a fosterling, a wine-fed hero | of extensive courage . . . He was a scatterer of mail coats. | He was hard; he was impetuous | on the back of his horse. | No soldier girded his flanks in grey [armour] | who performed skilful feats with his spear and shield, | and his sword and dagger— | who would be a better man.' A concise image, like scattered mail coats, is enough to conjure up a complete battle scene in the listener's imagination. A new and conclusive tone is sounded at the end: having excelled in a complex constellation of virtues, the poet judges that the hero is (among) the best of men. Bearing in mind how different an extended and entertaining early Irish prose narrative such as Fled Bricrenn ('Bricriu's Feast') is from a stark elegy in *Y Gododdin*, the underlying value system remains much the same, as does the literary goal, namely declaring and immortalizing the superlative rank of the hero.

The cycles of saga englynion centred on the figures of Llywarch Hen, Heledd, and Urien are sometimes termed 'post-heroic', a designation which has more than one meaning. In their dates of composition, these *englynion* probably belong to the 8th to 10th centuries and are thus in absolute terms likely to be later than *Y Gododdin* and the other heroic *awdlau* attributed to the Cynfeirdd. Secondly, the poetic persona's attitude focuses on the period after the death of the hero(es). The perspective of Llywarch is that of an old noble warrior who has outlived his twenty-four sons, all killed in battle. The hideously ravaged corpse of the hero is described at length in Heledd's laments for Cynddylan, and the anonymous persona of the Urien *englynion* delivers a long monologue over the hero's severed head. The Heledd cycle also includes prominently a prolonged description of Cynddylan's ruined hall and kingdom, and the Llywarch poetry considers the desolate hearth of Rheged. Especially in the case of Llywarch, post-heroic can mean not merely set after the idealized heroic age and lamenting its fallen worthies, but also a sober questioning of its values, since Llywarch questions himself for exhorting his sons to uphold the code and thus meet their fate in combat. The concept of a post-heroic age is also meaningful as a historical context in that military reversals had brought about the retreat of Brittonic controlled territory before Anglo-Saxon advance in the centuries immediately before the composition of the *englynion* cycles. It seems more likely, however, that the *englynion*'s view of heroism has more to do with its genre than nascent anti-militarism in Viking Age Wales (Cymru), when we take into account the continuity of heroic themes, and even the verbal formulae used to express them, from *Y Gododdin* down to the praise poems of the Gogynfeirdd to the Welsh princes of the 12th and 13th centuries (see next section).

§5. other manifestations of the heroic ethos in celtic literatures

The general conservatism and traditionalism of Celtic-

speaking societies is often remarked upon. The consistency of heroic values across time and space in the Celtic world is a fair example of this continuity. One precious indication that the heroic ethos had been celebrated by the poets of medieval Brittany (Breizh) is the Latin martial eulogy of Iudic-hael, whose themes and images are striking similar to those of *Y Gododdin*; for example,

> . . . in the manner of farmers in their fields, sewing seed, Iudic-hael scattered his javelins,
> . . . he shared out many horses equipped with fine metal trappings;
> . . . And from the many corpses strewn over the earth behind him, dogs, vultures, crows, blackbirds, and magpies were sated;
> And many were the towns in which there resided wailing widowed wives . . .

Although Gaelic Fiannaíocht—as an oral and literary tradition of heroes of old—could continue under centuries of English political and military domination, the praise poetry created for the warrior aristocracy themselves usually came to an abrupt end when a Celtic society suffered conquest by a non-Celtic group. Thus, poetry which often echoed the themes and diction of *Y Gododdin* continued in the court poetry composed for Welsh princes by the *Gogynfeirdd* down to the loss of Welsh independence in 1282. This resemblance is especially striking in the works of the greatest *gogynfardd* Cynddelw and in the *Hirlas* (Long-blue [drinking horn]) attributed to Owain Cyfeiliog. In the Gaelic world, native chiefs continued to lead war-bands and patronize poets until the early 17th century in Ireland (Éire) and until 1746 in Scotland (Alba), and, down to the end, the 'panegyric code' of the traditional Gaelic praise poets had a strongly heroic character, as well as esteeming the illustrious lineage and open-handed generosity of the patron in highly formulaic terms (see scottish gaelic poetry [2] §1).

John Carey, JTK

Heuneburg was a Celtic aristocratic settlement (*Fürstensitz*) near Hundersingen on the upper Danube.

§1. THE SITE AND ITS GENERAL HISTORY

North of Herbertingen in Baden-Württemberg, Germany, an Early Iron Age hill-fort is situated on a steep slope above the river. The eastern foot of the hill touches the river, which has been diverted in modern times to flow alongside it. The nearly triangular hill stands out approximately 60 m from the valley, which is 4 km wide. Because of its naturally dominant position above the Danube valley, it was repeatedly selected for fortified earthworks and ramparts in prehistory: first during the Late Neolithic period (4th /3th millennium BC), and subsequently over a span of about five centuries from the Middle Bronze Age, with rebuilding at intervals into the early Urnfield period (16th–11th centuries BC). In historical times, it was again fortified, first during the reign of the Merovingian Franks (6th–7th centuries AD), during the period of the Hungarian raids (10th century AD) and, for the last time, during the 11th century AD as the residence of a count. From this hill-fort all the important trading routes which passed through the area could be seen and easily controlled: the waterway of the Danube, several fords which crossed the river, and roads which turned north or south from this point. This prominent topographical position and the mineral resources in its western hinterland were the basis for the development of the Heuneburg into a centre of political and economic power during the period of the rise of a 'feudal' aristocracy in the west Hallstatt world.

§2. THE FIRST SEQUENCE OF IRON AGE ACTIVITY

At the end of the 7th century BC, during the Hallstatt Iron Age, an aristocrat from this region built a fort located on the ruins of the earlier fortifications on

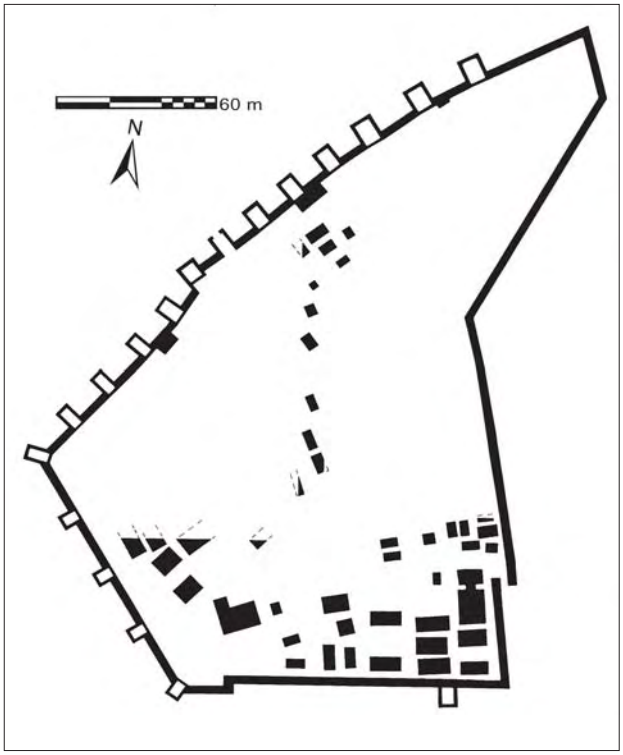
Aerial photograph of the hilltop site of the Heuneburg as it appears today

the top of the hill, and at the same time founded a much bigger unfortified settlement north-west of its glacis. The most likely interpretation is that both sites seem to have been built by the labour of the inhabitants of the numerous cottages and villages of this chiefdom, and that these lower ranking people were obliged to do so as a compulsory service. Such a procedure is consistent with an apparent process of strengthening and consolidating the leader's position, a process in which the construction of forts played a key rôle in imposing power over the surrounding area during the Early Iron Age. It is a reasonable conjecture that this leader gained wealth and power by exploiting the rich iron ore layers of the Swabian Alp, a mountainside close to the Heuneburg. It can also be assumed that this was the prince buried in the central chamber of the 'princely burial mound' (*Fürstengrabhügel*) named Hohmichele, which is located nearby.

The hill-fort covers an area of approximately 3 ha (about 7.2 acres) and was fortified with a trench and a wall in traditional timber-laced construction. The internal structure of the fort suggests a rural settlement. The construction of the next phase of the fort adopted a radically untraditional design, with its defences and architecture showing southern influences, unique north of the Alps. The aristocrat who built the 'Hellenized' fortification at this stage had clearly established strong and far-reaching connections with the Mediterranean world, in particular with the Phocaean Greek colony of Massalia. The fort at Heuneburg was now modelled on the Greek examples of urban fortifications, with a wall 3 m thick consisting of sun-dried mud-bricks on a foundation of Jura limestone. The wall was further reinforced by close-set external rectangular bastions on the north and north-west sides of the hill-fort, which were particularly subject to attacks, and presumably also on the western side, which had similarly accessible approaches from the surrounding area. The wall had two gates: one on the north-west side towards the open settlement, and another close to the south-east corner of the fortification overlooking the Danube, at the end of a valley leading to the river. In the southern area which has been excavated, the internal settle-

ment was organized with specialized quarters orientated along the main path leading from the *Donautor* (Danube gate) into the fort. Various craftsmen had their workshops located here, particularly metal workers (except blacksmiths). The houses and workshops can be interpreted on the basis of post-holes. One house which covered an area of 130 m² has been excavated in the south-western part of the fort. The whole built-up area was rebuilt twice without substantial changes to the plan. Later, the gate in the north-west was demolished, a new tower was placed in the western part of the south-eastern corner of the wall, and inside the enclosure the structure of the buildings was partly changed. A building located close to the *Donautor*, which was presumably used as an arsenal, is conspicuous since it covers an area of 202 m². Following a major fire, the damaged towers and the wooden parapet of the wall were renovated, and the buildings inside the fortified area were restored to their earlier layout. Heuneburg's imposing distinctive appearance in the Late Hallstatt period, resembling a Greek town, and the evidence for intensive contact with the western Mediterranean suggest that the hill-fort might be the mysterious Celtic town of Pyrene, mentioned by Herodotus in the 5th century BC as situated on the upper course of the river Danube.

Site plan of the Heuneburg showing late Hallstatt period fortifications, with the bastions on the west, and major excavated internal features



Later, as a result of hostile military action, both fort and open settlement were sacked and again burned, this time thoroughly and decisively. With the destruction of the fort, the founding family, whose large funeral monuments were erected on both sides of the Danube, seems to have disappeared, and the traditions of occupation, fortification, and burial come to an end.

§3. The second sequence of Iron Age activity at Heuneburg

Another aristocratic family took possession of the ruins soon after a third fire disaster, and a new fort was built on the site. These new rulers also founded an unfortified settlement, which was situated south of its burned-down predecessor. On the site of the former settlement the new occupants established a necropolis, which was eventually to consist of four large tumuli, arranged in a half circle.

Unlike the previous phase, this newer Iron Age hill-fort at Heuneburg did not continue the Mediterranean ideas of fortification (such as the densely packed external bastions). In this newer phase, the enclosure was fortified with a palisade, followed by post constructions which, during the first two sub-phases, as in former times, left gaps for two gates: one on the south-eastern side at the site of the earlier gate, and the other on the north-western side, a little further west than its predecessor, at the foot of a then 1000-year-old earthen wall which had been built during the Middle Bronze Age.

In this newer phase of building and occupation, the organization of the walled settlement consisted of a loose assembly of houses, storehouses, and workshops in fenced-in enclosures. Larger gaps in the settlement pattern might be the result of crossbar constructions which are not revealed in the pattern of the post-holes. During the first three sub-phases of this period, large three-aisled houses were the predominant structures, along with smaller buildings of other types. These huge

buildings covered an area up to 407 m², and were erected in the southern part close to the protecting wall. These aisled halls were rebuilt in the same location at each of the three sub-stages. Over the course of time, the density of buildings within the fort decreased. At the final sub-stage, we can identify traces of what might have been an area of aristocratic occupation, indicated by Greek black-figured pottery. More Greek pottery and amphorae (ceramic wine vessels), imitations of Italic pottery, fibulae (brooches) which originated from the Eastern Alps, a mould to make handle-mounts, and incised wheel-made pottery show that these newer owners of the Heuneburg maintained the far-reaching trade activities of their predecessors. The hill-fort was destroyed for the last time in the Early La Tène period (mid-5th century to around 400 BC), once again by fire.

Hibernia, more correctly *Hivernia*, is an ancient name for Ireland (Ériu). Greek Ἰβερνία *Ibernia* is attested, but is not very common. Caesar gives the first definite reference to Ireland in Latin literature in the first century BC (*De Bello Gallico* 5.13), though the *gens Hiernorum* 'people of Ierne/ Ériu' of Avienus (*Ora Maritima* 111) probably draws on a lost Greek coastal itinerary of Massalia (Marseille) which is as early as the 6th century BC. This ethnic name is based on the Greek place-name Ιερνη /*īernē*/ 'Ireland'. Later, in the 2nd century AD, Ptolemy uses Ιουερνία /*īwernia*/. Strabo and others paint an unflattering portrait of Ireland as a cold and miserable land inhabited by gluttonous cannibals (*Geography* 1.4.3–5, 2.1.13, 2.5.8, 4.5.4), but later reports are more informed and favourable. Tacitus says that the Roman general Agricola considered invading the island and that Hibernia was visited regularly by Roman merchants (*Agricola* 24), while Ptolemy records a detailed description of the geography of Ireland, including tribal and river names (*Geography* 2.1–2). Later writers mention the lack of snakes in Ireland (Solinus, *Collectanea Rerum Memorabilium* 22.2–5), the export of hunting dogs (Symmachus, *Epistle* 2.77), and the raids of the Irish Scotti (see SCOTS) on Britain (Claudian, *Panegyric on the Fourth Consulship of the Emperor Honorius* 8.30–3, using the spelling *Hiverne*). Pomponius Mela (*fl. c.* AD 43) and Juvenal (*fl.* early 2nd century AD) use the form *Iuverna*. The Antonine Itinerary (early 3rd century AD) uses dative *Hiverione*, implying nominative *Iverio*. Similarly, St Patrick in his *Confessio* uses *Hiberione* 'in, to, from Ireland', probably meaning that his basic Latin nominative form was *Hiberio*, modelled on spoken Primitive Irish **Īwerijū*, which became Old Irish *Ériu*. In general, the form *Hibernia* is the most common in medieval Latin, including the early writers Orosius, Isidore, and Beda. Ultimately, these forms are derived from the ancient Celtic names for Ireland and its inhabitants, and survive in the Early Irish names *Ériu* < Celtic **Īwerijū* and *Érainn* < Celtic **Īwernī*.

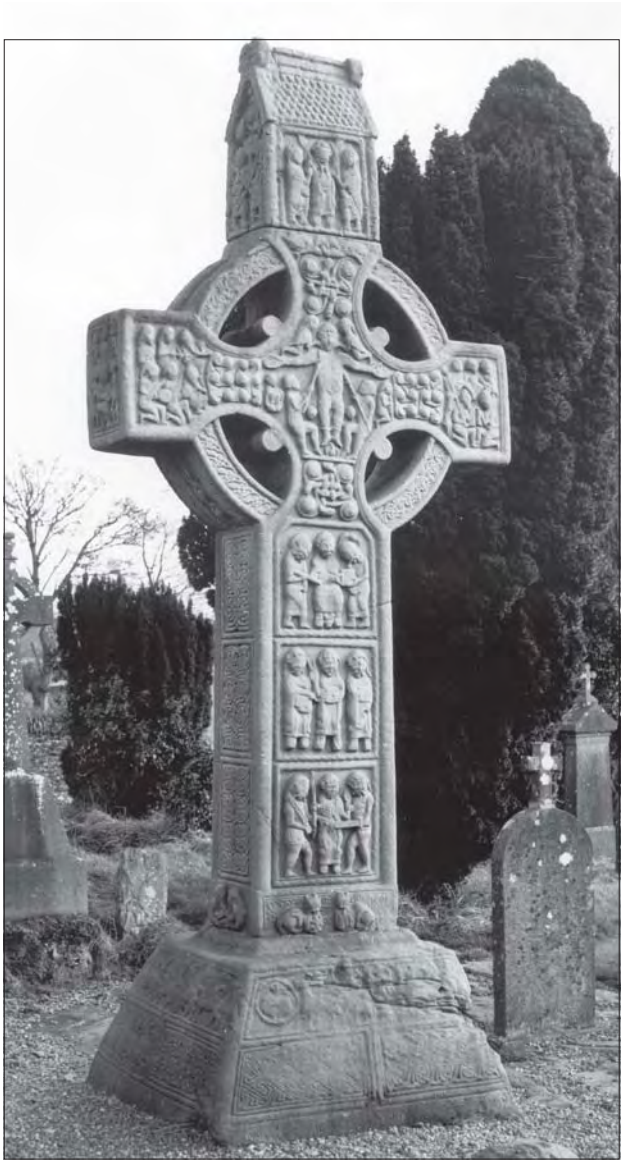
high crosses, Celtic

These are large free-standing stone crosses and cross slabs, usually carved in relief with a variety of ornament: figural iconography, animal and occasionally plant motifs, and abstract patterns; some have INSCRIPTIONS. They are found in Ireland (Éire), Scotland (Alba), Wales (Cymru), the Isle of Man (Ellan Vannin), and Cornwall (Kernow), and may be dated *c.* AD 750–1150. There is a parallel tradition of similar crosses in Anglo-Saxon and Viking England.



Muiredach's Cross, Monasterboice, Co. Louth

§1. historiography

Edward Lhuyd (1660–1709) was responsible for noting many crosses for the first time. In-depth study of these crosses began in the 19th century, and may be exemplified by the early catalogues of Stuart (*Sculptured Stones of Scotland*), Westwood (*Lapidarium Walliae*), and Langdon (*Old Cornish Crosses*), and continued during the 20th century with those of Allen and Anderson (*Early Christian Monuments of Scotland*), Kermode (*Manx Crosses*), Nash-Williams (*Early Christian Monuments of Wales*), and Harbison (*High Crosses of Ireland*).

§2. distribution, context and function

Large free-standing crosses are found throughout Ireland, especially in the east and south-east, throughout Wales (mainly in coastal areas and predominantly in the south), in Cornwall, and in parts of Scotland. In eastern Scotland and the Isle of Man a related form, the cross slab, was preferred. Although their distribution is more widespread in some areas in the Viking period, most are concentrated on significant ecclesiastical sites of monastic character, e.g. Clonmacnoise, Co. Offaly (Cluan Mhic Nóis, Contae Uíbh Fhailí) and Iona, Argyll (Eilean Ì, Earra-Ghaidheal), the foundations which had the resources and commanded the patronage to produce them. Some have survived *in situ*, indicating that they stood adjacent to the church or in the cemetery. Others were located at gateways, in the market-place, on boundaries and on ecclesiastical land. These monuments were symbols of power, protection, piety, and patronage. They could act as *foci* for graves and, among the Vikings at least, as individual grave-markers. They might have been objects of contemplation and were possibly incorporated into Christian ritual. They could also commemorate events, mark areas of sanctuary and record land ownership (Hamlin, *Ireland and Insular Art* 138–40; Edwards, *Medieval Archaeology* 45.33–8).

§3. form and manufacture

All the surviving Celtic crosses and cross slabs are carved from stone. Large wooden crosses would also have been made, but none is extant, though a carved boss which may have been part of one was found in Viking Dublin (Baile Átha Cliath). The tallest cross (6.45 m) is at Monasterboice, Co. Louth (Mainistir Buite, Contae Lú). These monuments are of cruciform shape and may be monolithic or composite, the pieces jointed with mortices and tenons, thereby demonstrating the influence of carpentry techniques. A distinctive feature are the cross heads, which usually have the cross arms linked by a ring; the resultant form is considered characteristically Celtic. In Ireland many crosses also have capstones; some are house-shaped and may represent reliquaries. Cross shafts may be quadrangular or slab shaped, according to the properties of the stone, and are either set in the ground or stand in a base. In some areas, notably Pictish Scotland

and the Isle of Man in the Viking period, the manufacture of rectangular cross slabs with large crosses carved on them was preferred, probably because of the nature of the chosen stone. Geological identification has shown that the stone for most crosses was quarried locally, but sometimes, e.g. the Iona crosses (Fisher, *Early Medieval Sculpture in the West Highlands and Islands* 131–3) and Carew, Pembrokeshire (sir Benfro), it was transported considerable distances by sea. The crosses would have been carved either in monastic workshops or by itinerant sculptors. The more elaborate examples would have taken considerable time and resources to produce. The main carving tools were flat and pointed chisels, and the surfaces were smoothed with abrasives. Various stages in the carving process are visible on the Unfinished Cross, Kells, Co. Meath (Ceanannas Mór, Contae na Mí). Finished monuments may have been painted (Stalley, *Irish High Crosses* 11–13).

§4. iconography

In Ireland the ornament on many crosses of the 9th and 10th centuries is dominated by Christian iconography, mainly from the Old and New Testaments. For example, on Muiredach's Cross, Monasterboice, the west face is carved with the Crucifixion on the cross head and related scenes on the shaft, while the east face has the Last Judgement on the cross head with other scenes, including the Fall of Adam and Eve and Cain killing Abel, below. The Christian symbolism of some of the iconography may be complex (Veelenturf, *Dia Brátha*). It is thought that the main models were Continental, specifically Carolingian (Harbison, *High Crosses of Ireland*), but other earlier Christian models may also have been influential (Stalley, PRIA C 90.135–58). Details of dress, e.g. brooches, are, however, native, and swords are of Viking type. Christian non-biblical images, e.g. St Paul and St Anthony in the desert being brought bread by a raven—thought to symbolize the monastic life—are less common. Hunting scenes, possibly with Christian significance, may have been favoured by secular patrons and were popular on both sides of the Irish Sea, e.g. South Cross, Castledermot, Co. Kildare (Díseart Diarmada, Contae Chill Dara), and the Hilton of Cadboll stone, Ross and Cromarty. In Scotland, on sculpture of the 8th and 9th centuries, biblical iconography is less common, though scenes of David, chosen as an Old Testament forerunner of Christ and for his kingly virtues, are widespread, e.g. Iona and Nigg, Ross and Cromarty. In Pictish areas cross slabs sometimes show battles, and there are a few scenes of a probably pagan character, e.g. Aberlemno 2, Angus (Henderson, *Picts* 134–57). On 10th-century Manx cross slabs the Viking patrons chose scenes from pagan Norse mythology, e.g. at Andreas, Odin being devoured by the wolf at the battle of Ragnarök, which may be juxtaposed with Christ trampling a serpent on the other face, thereby signifying the triumph of Christianity over paganism (Margeson, *Viking Age in the Isle of Man*; Bailey, *Viking Age Sculpture in Northern England* 101–42). In Wales and Cornwall iconography on crosses and cross slabs of the 9th–11th centuries is infrequent, with the Crucifixion being the most common image.

§5. animal and plant ornament

Celtic crosses have two main types of animal ornament. First, exotic, mythological, and fantastic beasts, e.g. lions, griffins and centaurs, are sometimes found in Ireland and Pictland, e.g. Bealin, Co. Westmeath, and Rossie Priory, Perthshire. They are thought to be derived from imported illuminated manuscripts such as the Physiologus (Henderson, *Picts* 134–42). Secondly, animals, e.g. lions, serpents, dragons, birds, even men, are combined with interlace to produce complex patterns, e.g. Killamery Cross, Co. Kilkenny (Contae Chill Chainnigh), and Aberlemno 2. Such motifs on sculpture are often derived from more complex animal ornament in insular illuminated manuscripts, e.g. The Book of Kells, and decorated metalwork. Plant ornament consists mainly of vine-scroll, sometimes inhabited with animals and birds, which is symbolic of the Eucharist. It is derived from the Mediterranean and is characteristic of Anglo-Saxon sculpture in the 8th and 9th centuries. It is much rarer on Celtic crosses, though examples may be found on the Kells Tower Cross, Co. Meath, on the Hilton of Cadboll stone, Ross and Cromarty, and at Penally, Pembrokeshire.

§6. patterns

Celtic crosses are characterized by a variety of abstract ornament—interlace, spirals, frets and chequer-board patterns—constructed with the aid of a compass, ruler and grids. Spirals and frets have their origins in Iron Age La Tène art, but the origins of interlace are less

clear. The West Cross, Ahenny, Co. Tipperary (Contae Thiobraid Árainn), is carved almost entirely with such ornament, recalling metalwork models. Some Pictish cross slabs have particularly complex patterns, while those on monuments in Wales and Cornwall are much simpler.

§7. VIKING-STYLE ORNAMENT

In the 10th–12th centuries crosses and cross slabs in areas of Viking settlement were carved with successive and overlapping styles of Viking ornament: Borre, Jellinge, Mammen, Ringerike, and Urnes (Bailey, *Viking Age Sculpture in Northern Ireland* 53–72). The Scandinavian types were frequently transformed by mixing them with native interlace and animal patterns. Cross slabs in the Isle of Man, e.g. Gaut's Cross, Kirk Michael, are carved with Borre ring-chains. There are less common Jellinge and Mammen animals on a second cross slab from Kirk Michael and on Thorlief's Cross, Braddan. Ringerike ornament on stone sculpture, e.g. a cross slab from Dòid Mhàiri, Port Ellen, Islay, is rare. Urnes is confined to late 11th and 12th-century crosses in Ireland, and is found outside areas of Viking settlement, e.g. Tuam, Co. Galway (Tuaim, Contae na Gaillimhe). Other ornament, e.g. ring-knots and 'T' frets, is also considered to be Viking influenced.

§8. PICTISH SYMBOLS

Cross slabs of the later 8th and 9th centuries in eastern Scotland, e.g. Rosemarkie (Ros Mhaircnidh), Ross and Cromarty, Meigle 1, Perth, and Kinross (Cinn Rois), are sometimes carved with Pictish symbols. These carvings, e.g. crescent and V rod, mirror and comb, 'Pictish beast', are enigmatic. They could symbolize rank, tribal grouping, or the names of those who commissioned the monuments or were commemorated by them (see further PICTISH; PICTS).

§9. INSCRIPTIONS

A significant number of Celtic crosses and cross slabs are carved with inscriptions. In Wales and Cornwall, Latin was the chosen language; in Ireland and DÁL RIATA, IRISH; in eastern Scotland, Pictish, in either the roman or OGAM alphabets, or occasionally Latin; and, in Viking settled areas, Old Norse runes. Inscriptions may proclaim the patronage of kings and ecclesiastics and bonds between church and state, e.g. the Cross of Scriptures, Clonmacnoise (Cluan Mhic Nóis; Harbison, *Ulster Journal of Archaeology* 58.43–54). They may record events and entitlement to land, e.g. ELISEG'S PILLAR, Denbighshire (sir Ddinbych); Merthyr Mawr, Glamorgan/MORGANNWG (Edwards, *Medieval Archaeology* 45.34–8). Some are commemorative, e.g. Ballaugh, Isle of Man. Exceptionally, two Manx cross slabs name the sculptor: Gaut.

§10. DATING AND CHRONOLOGY

Most Celtic crosses and cross slabs cannot be closely dated, and their dating and chronology are a matter of continuing academic debate. A handful of Irish crosses, three monuments in Wales, and probably the Dupplin Cross, in Perthshire, Scotland, are datable by inscription, since they name figures otherwise attested in the documentary record. Their language and epigraphy may also be significant. These methods can help to build up a chronological framework. However, when used judiciously, art-historical comparison between different monuments and the motifs carved on them and objects in other media, notably metalwork and manuscripts, both within Britain and Ireland and beyond, continues to play a vital rôle in attempting to establish broad dates and relative chronologies. The technology of the monuments, as well as their historical and archaeological context, may also be relevant. It is generally believed that the earliest Anglo-Saxon crosses date from the 8th century. These may have given rise to their Celtic counterparts, though some would prefer to see this as a parallel development (Edwards, BBCS 32.393–410). Pictish cross slabs have been dated to the second half of the 8th century and the 9th century, and the somewhat experimental crosses at Iona in Dál Riata to the mid- to late 8th century. The earliest cross datable by inscription in Ireland is Bealin, *c.* 800. The inscriptions on two crosses at Clonmacnoise name kings of the southern Uí NEILL in the later 9th and early 10th centuries (Harbison, *Ulster Journal of Archaeology* 58.43–8). In Wales most crosses and cross slabs are probably of 9th-century to early 11th-century date. The earliest cross datable by inscription is Eliseg's Pillar, Denbighshire, which belongs to the 9th century. The Viking style cross slabs on the Isle of Man probably span the 10th and early 11th centuries. In Cornwall the erection of crosses may not begin until the 10th century, but continues into the 12th century and even later. In Ireland there appears to have

been a revival in cross-carving in the late 11th and 12th centuries, and in the West Highlands and Islands earlier Celtic crosses influenced the production of new crosses in the 14th century (Fisher, *Early Medieval Sculpture in the West Highlands and Islands* 23).

§11. THE CELTIC REVIVAL

In the second half of the 19th century and the early 20th century one result of burgeoning antiquarian interest in the early Christian period in Ireland, coupled with nationalist aspirations, was that the carving of Celtic crosses resumed, modelled on their early medieval counterparts. They functioned primarily as grave-markers, e.g. in the cemetery of 19th-century Catholic bishops at Maynooth, Co. Kildare (Má Nuad, Contae Chill Dara; Sheehy, *Rediscovery of Ireland's Past* 73–5). In Scotland, Wales, the Isle of Man, and Cornwall similar crosses may also be found in graveyards, or occasionally functioning as war memorials. Arthur G. Langdon, author of *Old Cornish Crosses*, was responsible for designing new ones, e.g. in St Stephen by Launceston churchyard.

The **Highland Games** can best be defined as a social gathering (whether informal or formal) organized around musical and sporting competition. The origin of the Games remains unclear, and thus recourse to folklore provides a romantic image which has been sustained since their Victorian 'invention' around the 1820s. According to tradition, the Games were begun during the reign of Mael Coluim mac Donnchada, 'Ceann Mór' (i.e. Malcolm Canmore, king of Alba, who lived 1031–93), when the king initiated a hill-run up Creag Choinnich in Braemar (Bràigh Mhàrr) to find the fastest athletes, who would be fit enough to be royal messengers. A more prosaic possibility is that the Games originated as a method of choosing the best men at arms by developing athletic events to test the contestants for strength, stamina, accuracy, and agility. In other words, there were probably many antecedent forms of sport and cultural practices, which existed before their formalization into what can now be recognized as the Highland Games.

Whatever the origins, the modern idea of the Highland Games began in Braemar, where it can be traced to the Braemar Wright's Society (a charitable organization, later reconstituted as the Braemar Highland Society in 1826) founded in 1816. The patronage of Queen Victoria in 1848 gave the Braemar Highland Games the royal seal of approval, after which they began to mushroom—a development which lasted until the beginning of the 20th century, at which period most of the currently recognized Highland Games were established. The competitions have remained much the same to the present day, and include the following: athletics—hill races, jumping, pole-vaulting, sprinting; heavy events—putting the stone, throwing the hammer, tug-of-war, wrestling, and, of course, tossing the caber. There are also musical events: Highland dancing (see DANCES), pipe bands, and piping (both *ceòl beag*/light music and *ceòl mòr*/classical music), usually referred to as *pibroch*, a corruption of the Gaelic word *piobaireachd* (see BAGPIPE).

In the period prior to the establishment of the Games, the cultural transformation of the Highlands continued apace after the failure of the 1745 Jacobite rebellions, which, in turn, saw the Gaelic Diaspora in which thousands of Gaels were cleared from the Highlands and Islands to resettle in the New World—the American colonies (and the later US), Canada, Australia, and New Zealand (see CELTIC LANGUAGES IN AUSTRALIA; CELTIC LANGUAGES IN NORTH AMERICA). The influence of these population movements cannot be overestimated, since the Highland Games have had a direct influence on international athletics, especially on Canadian and American sport.

Hammer throwing at the Highland Games

Paradoxically, some of the ROMANTICISM, which reached its apotheosis with Sir Walter SCOTT (1771–1832), can still be seen at Highland Gatherings today. This can be best summed up as Balmorality ('kitsch' symbols of the Highlands which have since been appropriated by Scotland as a whole as markers of national identity). As the popularity of the Games increased, parts of the Highlands were transformed into a sporting playground for the rich and privileged, which was in stark contrast to the everyday life of an ordinary Highlander. And again, paradoxically, the landed gentry who were partially responsible for the repression of GAELIC culture were now seen as leading doyens of that very culture. Thus, the symbols of the Highland Games today are completely divorced from their original social context. The modern Highland Games are a major tourist attraction and appear to satisfy the stereotypical image of Scotland to a world-wide audience. This can still be seen at the Braemar Highland Games—the premier World Games—which mark the end of the season.

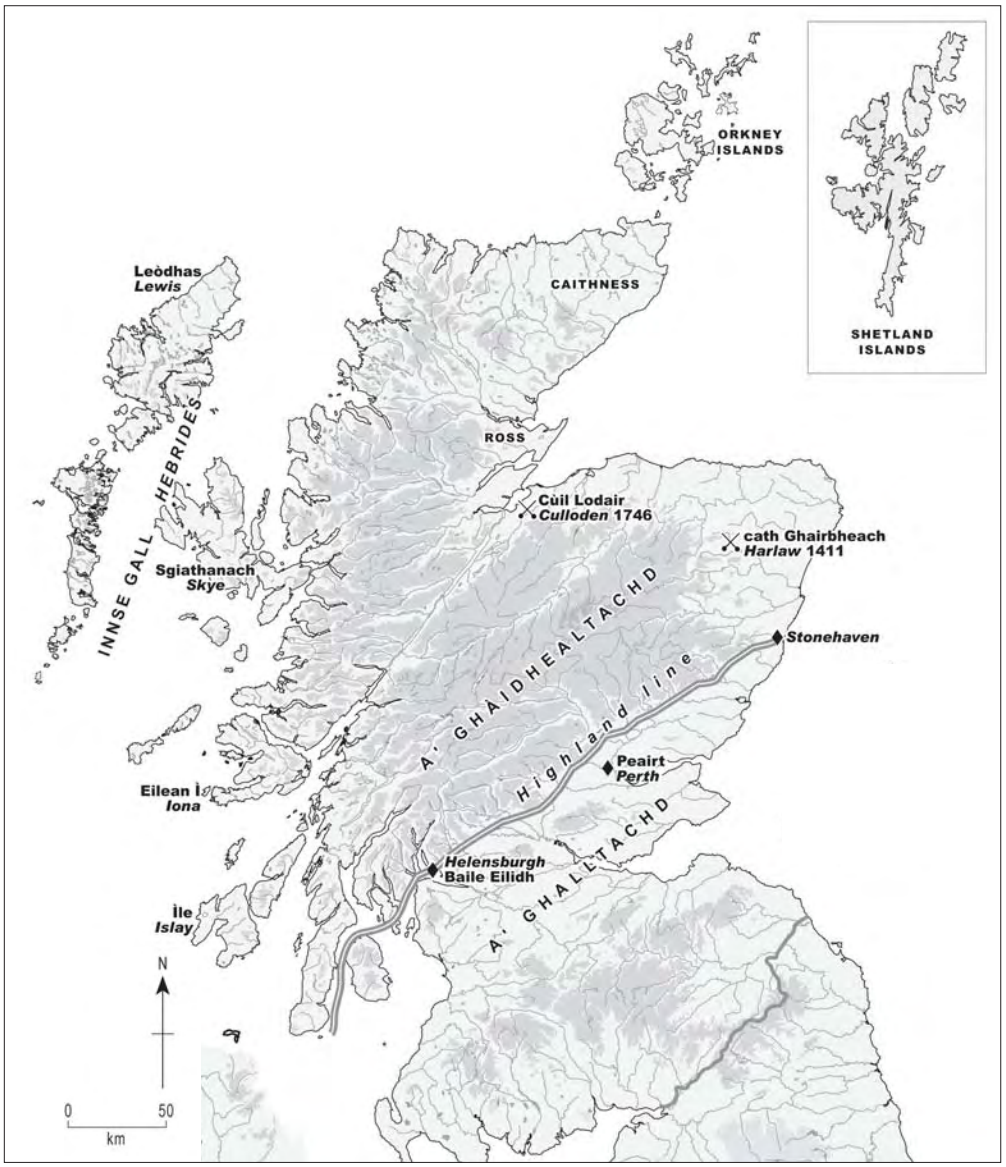
Andrew Wiseman

The **Highlands and Islands** cover a large area of northern Scotland (ALBA) which can be geographically identified by a geological boundary fault (known as the Highland line), running from Helensburgh in the south-west to Stonehaven in the north-east, which divides the Highlands (A' Ghàidhealtachd) from the LOWLANDS (A' Ghalltachd). This division, though geographic, can also be compared with a cultural and linguistic divide, which, at one point, was more or less conterminous with the boundaries of GAELIC speakers. However, this process only began to take place during the Middle Ages, and the divide only became apparent during the modern period (17th century) when SCOTTISH GAELIC began slowly to decline and recede towards the Highlands.

According to the traditional history of Gaelic Scotland, the Scots began to migrate from Ulster (Ulaid), in north-east Ireland (Ériu), to Argyll (Earra-Ghaidheal 'the coastland of the Gaels') before AD 500, and established the kingdom of Dál Riata under Fergus Mór mac Eirc (†*c.* AD 501; see also LEGENDARY HISTORY). To all intents and purposes this was an Irish colony, which became the embryonic kingdom of the Scots. Dál Riata (named from the ancestral tribal group which originated in a small region of north-east Ulster) was organized around the TUATH, a political grouping of around 2000 or more people, presided over by a *rí* or king. By the 7th century there were three distinct kindreds in Dál Riata, namely, Cenél Loairn (Kindred of Loarn), Cenél nOengusa (Kindred of Oengus) and Cenél nGabráin (Kindred of Gabrán). The last of these kindreds, in the main, provided the overkings for Dál Riata; this was the dynasty of the powerful late 6th-century ruler Aedán mac Gabráin. This burgeoning Scottish Dál Riata came under political pressure, both from within and particularly from outside, especially under an aggressive expansionist policy pursued by the Scots against their near neighbours, the Picts. Political stability between the two peoples was not realized until the reign of Cinaed mac Ailpín (†858), who united the Scots and the Picts *c.* 843. This new-found cooperation may have been caused by the arrival of a common enemy, namely the Vikings.



The Highlands and Islands of Scotland, the Highland line, and the modern English–Scottish border

Previous to this, St Columba (Colum Cille, †597) had established a monastic settlement on Iona (Eilean Ì) in AD 563, and from this base had begun a missionary movement to convert the pagan population to Christianity. The effect of this gradual conversion of the Picts may help to explain the cultural victory of the Scots, who eventually gave their name to Scotland. Not only was Iona of religious and political significance, it was also a centre of immense cultural importance, where the monks most probably produced the Book of Kells *c.* 750×*c.* 800 and where sculptors produced monumental art.

Not long afterwards, at the turn of the 8th/9th centuries, a new threat emerged in the form of Viking invaders who began raiding the Hebrides and the western and northern seaboards of the Highlands. At first, they came in search of booty, but then began to settle in larger numbers, especially in the Hebrides, Orkney, Shetland, and Caithness. Linguistically, Norse began to predominate in these areas, where Scandinavian dialects held sway in the latter three regions until early modern times. However, Gaelic held its own in the Hebrides, and was still expanding to encompass the greater part of mainland Scotland. Evidence for the expansion of Gaelic is provided by settlement place-names (see scottish place-names).

The Norse settlements established in the Highlands and Islands during the 9th century owed a nominal allegiance to the emerging kingdom of Norway. However, over the course of time various local rulers began increasingly to assert their independence. During the three centuries which followed, a political unity, known latterly as the Lordship of the Isles, was to form in the Highlands and Islands under a powerful Gall-Ghàidheal (i.e. a Gael allied with the Norse), namely Somerled (Somhairle Mac GillBhrìde †1164), from whom descended the powerful Clan Donald (Clann Dòmhnall). Gaeldom under the hegemony of the Lordship of the Isles, a semi-autonomous kingdom, eventually saw political stability and a cultural golden age under John MacDonald of Islay (†*c.* 1386)—the first to be styled *Dominus Insularum* 'Lord of the Isles'—and his successors. Patronage of the arts, indicated by the Book of the Dean of Lismore 1512×1526 and in the commissioning of Highland monumental sculpture, bears witness to the vitality of Gaelic cultural achievements at this time. A close relationship was also maintained with Gaelic Ireland at both cultural and political level. However, this semi-independent lordship became increasingly embroiled in Scottish politics, causing it to come into conflict with the Scottish Crown as the latter tried to gain influence in the Highlands and Islands. Such was the power of the Lordship of the Isles over the area, however, that this proved futile. At the battle of Harlaw (*cath Ghairbheach* 1411), Donald of the Isles (†*c.* 1420) fought to uphold his wife's claim to the earldom of Ross, but his advance was checked and, though the claim was eventually conceded, it proved to be a pyrrhic victory. Such was the resolution of the Crown to curtail the lordship's influence that it was eventually forfeited in AD 1493. Nevertheless, during the half century following the forfeiture, there were no fewer than six attempts to restore the lordship, but they all ended in failure. Giolla Coluim Mac an Ollaimh (*fl.* 1490) lamented their fall as follows:

> *Ní h-éibhneas gan Chlainn Domhnaill*
> It is no joy without Clan Donald.

The collapse of the Lordship of the Isles created a power vacuum which destabilized the Highlands and Islands, leading to the period known as *Linn nan Creach* (the era of plunder). Tribal jealousies and clan feuds, substantially checked during the time of the lordship, broke out with renewed vigour as many clans jockeyed for predominance and influence. The emergence of Clan Campbell (who allied themselves with the Edinburgh (Dùn Èideann) establishment as a political force—at the expense of Clan Donald—can also be seen at this time. This aroused the Scottish government to take some sort of action. Through a process of political intrigue and manipulation, the government sought a policy of divide and rule in order to exert control over the region. The medieval Scottish kingdom, despite its Gaelic origins, became increasingly hostile towards both Gaelic and the Gaels. Politically, the Statutes of Iona (AD 1609) were an attempt by the Scottish Crown to Anglicize the leaders and institutions of Gaelic society so that they could gain better control of the area. Soon after, in 1616, an Act was passed in order to set up parish schools in the Highlands so that:

> the youth be exercised and trayned up in civilitie, godlines, knawledge, and learning, that the vulgar

> Inglische toung be universallie plantit, and the Irische language, whilk is one of the chief and principall causes of the continewance of barbaritie and incivlitie amongis the inhabitants of the Ilis and Heylandis, may be aboilshet and removeit . . . (MacInnes, *Celtic Connection* 107)

The stereotype of the Gael as barbaric, backward, bellicose and alien, which had its origins in the Middle Ages, was continually being reinforced.

The upheaval of the English and Scottish civil wars during the 1640s had a major impact not only on Scotland but on the Highlands as well, and further fragmented a politically unstable region. Support for the Stuart monarchy by many of the Highland clans shaped the destiny of the revolt against the Covenanters initiated by Montrose (1612–50) and Alasdair MacColla Ciotaich (†1647). Although it eventually ended in defeat, many Highlanders maintained their loyalty to the exiled Stuarts. These Jacobites (a name derived from Jacobus, the Latin for 'James', thus referring to the exiled James VII) supported armed JACOBITE REBELLIONS with the aim of reinstating the Stuarts, who had been removed during the Glorious Revolution of 1688. The last claimant to the throne, Prince Charles Edward Stuart (1720–88), arrived in Scotland in 1745, and signalled the last Jacobite uprising, known as the '45. The subsequent defeat of the Jacobites by the Hanoverian army at CULLODEN (1746) transformed the Highlands for ever. The system of clanship, which had underpinned Gaelic society, was largely dismantled, as the Highlands and Islands became a part of the British state. This process, already well under way from the time of the UNION of 1707, was accelerated by the collapse of the Jacobite movement. Chiefs and their subordinates increasingly turned their backs on their Gaelic heritage and culture, and became alienated from their own people.

The introduction of a capital economy in the region also had negative effects as tacksmen (the Highland gentry) found that their status had changed from military leaders to estate managers, and, with the additional burden of increased rents, the Highlanders began to emigrate to the New World in great numbers. In effect, the Highlands and Islands had now been, more or less, subdued. Dr Samuel Johnson (1709–84) remarked upon this during his famous voyage to the region (1773):

> There was perhaps never any change of national manners so quick, so great, and so general, as that which has operated in the Highlands, by the last conquest, and the subsequent laws . . . Of what they had before the late conquest, there remains only their language and poverty. (Newton, *Handbook of Scottish Gaelic Culture* 69)

On the other hand, the rehabilitation of the Highlands and the Gaels was already under way through the works of James MACPHERSON (1736–96), a key figure in the Romantic movement in European literature and the arts (see also OISÍN; ROMANTICISM). The Gaels were presented as 'noble savages', a complete reversal of their unqualifiedly negative portrayal by their English and Lowland enemies during the '45. Sir Walter SCOTT (1771–1832) further perfected the ideal and romantic image of the Gael in his various poems and novels.

Despite the region's status as an international aesthetic touchstone, the Highlands and Islands suffered major depopulation and economic turmoil during the 19th century as the result of large-scale CLEARANCES and emigration. The introduction of large sheep-farms caused enforced displacement of Gaels by landlords who no longer had use for the tenants or their traditional way of life. This led to the Gaelic Diaspora, where many emigrated to the Lowlands of Scotland and also to the New World: the American Colonies and, later, the United States, Canada, Australia, and New Zealand (see CELTIC LANGUAGES IN AUSTRALIA; CELTIC LANGUAGES IN NORTH AMERICA). This period also saw the reorganization of land tenure known as crofting, a system based on smallholdings. During the 1880s, however, the unrest of the crofting population against the region's landlords had begun, and this led to the formation of the Highland Land League. Land which had been previously cleared was seized illegally. Political pressure eventually led to the Crofters Act of 1886, which led to security of tenure. Successive land reforms by the British government alleviated the situation to some extent, but failed to restore the economic vitality or population levels which had preceded the clearances.

Up to the period of the clearances and well into the 19th century, the Gaelic-speaking communities can be equated, approximately, with the geographic extent of the Highlands and Islands. At the beginning of the

20th century there were around 200,000 speakers of Gaelic in Scotland. This number has declined ever since (for a variety of reasons), and the number of Gaelic speakers in Scotland is now under 65,000. Paradoxically, interest in this culturally distinctive area has been renewed and Gaelic revivalism—closely connected with the land reform movement of the 1880s—has been to the fore since then, particularly during the last decades of the 20th century (see LANGUAGE [REVIVAL]).

Beginning in 1992, the University of the Highlands and Islands (Oilthigh na Gaidhealtachd 's nan Eilean) has developed as a higher education institution with fourteen constituent partner colleges across the region (from Shetland in the north to Perth and Argyll in the south), taking increasing advantage of high technology to link its geographically dispersed student body and resources. SABHAL MÒR OSTAIG on Skye (Sgiathanach) is a UHI partner institution excelling in Gaelic studies.

The history of the Highlands and Islands is inextricably connected with their linguistic and cultural heritage. Whether or not Gaelic and indeed the Highlands and Islands will survive—let alone, flourish—as a distinct region is at present uncertain.

Statue of the 'Prince' of Ditzingen-Hirschlanden, Kr. Ludwigsburg, front view, height 1.5 m, c. 500 BC, Württembergisches Landesmuseum, Stuttgart

Hirschlanden is an archaeological site near Ludwigsburg (Baden-Württemberg) where a tumulus was excavated. The main find was a statue of an ithyphallic man (i.e. with an erect penis) with folded arms, wearing a conical hat, a TORC and a belt. Like HOCHDORF, the grave is connected to the princely seat on the HOHENASPERG. Another connection with Hochdorf is the form of the hat, which was at first thought to be a pointed helmet, but, following the discovery of a birch-bark hat in the Hochdorf grave, it is more likely that the statue's headcover merely represents such a hat. The features of the statue—hunched shoulders, broad hips and muscular thighs—show a Mediterranean influence. A similar figure from the 6th century BC has been found at Vestini, Italy. The position of the left hand, with outstretched thumb,

has Etruscan parallels. The statue probably originally stood on top of the tumulus.

PEB

Historia Brittonum (The history of the BRITONS) is a historical work in Latin, with numerous Old Welsh names and some GLOSSES, which was compiled in Wales (CYMRU) in the first half of the 9th century and was popular in Britain and France in the Middle Ages.

§1. THE NATURE OF THE TEXT

Historia Brittonum is an important source for Roman BRITAIN and Wales and the Brythonic north (*yr* HEN OGLEDD) for the 5th to the 7th centuries. However, much of the contents are picturesque, fantastic, and clearly unhistorical, with the result that some view the work as a whole as belonging to the genre of LEGENDARY HISTORY rather than history *per se*. On the other hand, unlike, for example, the Middle Irish LEBAR GABÁLA ÉRENN ('The Book of Invasions'), *Historia Brittonum* deals mostly with the historical period, and the reality of most of the individuals named in it can be confirmed from other sources. Charles-Edwards has applied the label *origo gentis* (origin of a people) to the work, allowing for the combining of historical and legendary elements in a common pattern of medieval accounts of national origins.

Historia Brittonum was the single most important source used by GEOFFREY OF MONMOUTH in creating his HISTORIA REGUM BRITANNIAE ('History of the Kings of Britain', *c.* 1139). It thus figures as influential in the early formation of ARTHURIAN literature and the Arthurian framework for Britain's legendary history. Nonetheless, while many of its episodes anticipate *Historia Regum Britanniae*, it is unlike Geoffrey's even and coherent fictionalized chronicle. Rather, diverse sources have been incompletely synthesized: Latin historians of late antiquity (such as Orosius' 'History against the Pagans'), HAGIOGRAPHY relating to GERMANUS and PATRICK, Anglo-Saxon and Welsh GENEALOGIES, north British memoranda of uncertain origin relating to the period 547–687 (the so-called 'Northern History'), native heroic poetry, lore of places and place-names (cf. DINDSHENCHAS), and an Irish text resembling an early version of *Lebar Gabála* itself. *Historia Brittonum*'s most important single source was the historical material in the 6th-century *De Excidio Britanniae* ('The Destruction of Britain') by GILDAS. Although diverse sources are apparent, Dumville has noted *Historia Brittonum*'s 'uniform Latinity' to argue against the approach favoured by some Celtic scholars who previously tried to disengage old texts from *Historia Brittonum* as if a compiler had quoted continuous pieces of text verbatim. It will strike any reader approaching the original text with some knowledge of Latin that it is neither rhetorically ambitious nor challenging in any of its diverse sections, and is consistently much easier to read than, for example, *De Excidio*, BEDA's *Historia Ecclesiastica*, or the 7th-/8th-century Life of St SAMSON.

§2. CONTENTS

Following the traditional chapter numbers and the version of the text preserved in London BL MS Harley 3859, §§1–6 present a scheme of the six ages of the world since the creation, based on the Bible. There follows a description of Britain, derived from Gildas, but introducing other elements, most importantly TROJAN LEGENDS of the origins of the Britons and the story of their eponymous founder, Brutus or Britto, with numerous details inspired by VERGIL; §12 gives a brief account of the origins of the PICTS, importantly regarded as arriving after the Britons; §§13–15 describe a series of settlements of Ireland (ÉRIU), making use of a now-lost early Irish pseudo-historical text; §§19–30 give an account of Roman Britain, including the campaigns of Julius CAESAR and the British-based renegade emperor, Carausius. There follows some apparent confusion between Constantine the Great, who was in fact elevated to the throne in Britain in 306, and the 5th-century Romano-British emperor, recognized also in GAUL and Spain, Constantine III (§25). Maximus (MACSEN WLEDIG) similarly has a confusing doublet 'Maximianus' (§§26–7, 29); §28 and §30 describe the end of Roman Britain as an uprising in which the Britons killed Roman generals; §§30–49

concern the unfortunate and infamous King Gwrtheyrn and the *adventus Saxonum ad Britanniam* (the coming of the English to Britain), giving a colourful and legendary hybrid account which draws on a lost *Liber Beati Germani* (Life of Germanus) and includes the tale of the wonder child Ambrosius and the Draig Goch as one of a series of versions of the king's death and the destruction of his stronghold, making use of a wealth of oral tradition; §§50–5 present a concise Life of Patrick closely related to Irish hagiographical materials in the Book of Armagh; §56 is the list of Arthur's twelve victorious battles; §§57–65 make up the 'Northern History', which is structured as a series of Anglo-Saxon royal genealogies interspersed with notes on Brythonic rulers who were variously connected with one or more of the English kings. These notes include information on several figures who are the subjects of articles in this Encyclopedia: Maelgwn and his ancestor Cunedda, Urien (and his siege of Lindisfarne), Cadwallon, Cadafael, Cadwaladr, Oswald and his brother Oswydd of Brynaich, Eadwine of Dewr and his occupation of Elfed; §62 contains the Memorandum of the Five Poets, including the Cynfeirdd, Aneirin and Taliesin; §66 begins with some chronological calculations followed by a list of the Old Welsh names of the 'Twenty-eight Cities of Britain'. Ultimately, the twenty-eight *civitates* (sing. civitas) go back to Gildas's description of Britain (*De Excidio* §4). Each city name has OW *Cair* 'fortified town' prefixed to it. As far as these can be identified, most are now in England, and the Welsh names for them are often still in use today, for example, *Cair Ligualid*, Modern *Caerliwelydd* 'Carlisle'; §§67–75 contain the *mirabilia* (wonders) of Britain and Ireland—local legends and remarkable places, often accompanied by place-name tales. The writer knew some of these places first-hand.

§3. date and authorship

There are eight recensions (manuscript families) of *Historia Brittonum*, and numerous manuscripts; these vary significantly, and the relationship between them is complex. There is a rather free Middle Irish translation, the *Lebor Bretnach*. One of the best and best-known versions (through Morris's edition and translation) is that in Harley 3859, a copy of *c.* 1100. According to Dumville, all the variants can be explained starting with the premise of an original which resembled this 'Harleian' text. It contains a clear reference to the fourth year of the reign of King Merfyn of Gwynedd (r. 825–44), implying writing in that year, i.e. 829/30, which is confirmed in §4, dating its present to 796 years after Christ's Passion. However, not all manuscripts contain these synchronisms, and some modern writers have found it especially interesting that the Breton manuscript, which had been at Chartres and was destroyed in the Second World War, attributes the text to *filius Urbagen* (the son of Urien), apparently meaning Urien of Rheged, who is especially prominent in the 'Northern History', a section which was not, however, contained in the anomalous Chartres text. One further reason for considering the possibility that there had been an earlier version of the text, as much as 140 years older than the synchronisms of 829, is that the last historical events mentioned are the battle of Nechtanesmere (OW *gueith Linn Garan*) in 685 and St Cuthbert's death in 687. The possibility of a prototype for the *Historia Brittonum* as early as this could be ruled out if its use of Beda's *Historia Ecclesiastica* of 731 could be proved: although the two histories deal with many of the same events from starkly opposed national perspectives, Beda does not name his Brythonic sources, the Welsh text does not name its English ones, and the case remains open. In any event, it is unlikely that a son of Urien could still have been alive as late as the 680s. There is also a 'Gildasian recension', so named because it attributes *Historia Brittonum* to Gildas, another chronological impossibility. Many modern scholars have believed the recension in which a prologue attributes the text to a 'Ninnius' or 'Nennius'. We know of a Welsh scholar active in the early 9th century with a similar name—the man who created the alphabet of Nemnivus. Secondly, the 'Nennian Prologue' describes the author's own activity as 'making a heap' of all he could find, a characterization striking many readers as fitting the guileless and eclectic text. A further point is that Nemnivus based his alphabet on Anglian runes, and the author of *Historia Brittonum* made use of more than one Anglo-Saxon source and knew some Old English, and thus had similar qualifications. So widely accepted was the attribution to Nennius that one often sees *Historia Brittonum* referred to as 'Nennius', in much the same way as the Ecclesiastical History is called

'Bede'. However, Dumville has argued that the Nennian Prologue is a later forgery and was never part of the recensions which now lack it; the work should therefore be treated as anonymous. Although Dumville's case has been widely accepted, and one can hardly ignore the fact that only one recension mentions Nennius at all, Field has since argued that, because the prologue rebuked British scholars as ignorant, the other recensions understandably omitted the passage as offensive. Beneath the authorship question, there are some theoretical issues. Are we seeing the activities of an author or rather a compiler? Must *Historia Brittonum* have a formal authorial starting point, as opposed to beginning as an informal workbook, a miscellany of notes, or a commentary on Gildas which gradually grew before it was later—and not altogether successfully—dressed up as a 'History of the Britons'?

JTK

Historia Regum Britanniae ('The History of the Kings of BRITAIN') is the common title, given since the 1587 (Commelinus) edition, of a largely fictitious history of pre-Saxon Britain written by GEOFFREY OF MONMOUTH, which first appeared *c.* 1139. The work greatly influenced the writing of history and ARTHURIAN LITERATURE until the end of the Middle Ages, and continued to influence Welsh and Breton historiography into early modern times. The author and contents of the *Historia* are discussed at length in the article on Geoffrey. The work shows considerable interest in, and bias towards, the Bretons, and many of Geoffrey's spellings of proper names resemble Old Breton spelling more than Old Welsh. There was a considerable Breton presence in Monmouth (Welsh Trefynwy) from the late 11th century.

There is general agreement about the types of pre-Norman Welsh sources to which Geoffrey of Monmouth had access when he wrote the *Historia Regum Britanniae*. These include GILDAS's *De Excidio Britanniae*, HISTORIA BRITTONUM, ANNALES CAMBRIAE, Old Welsh GENEALOGIES similar to those surviving in London, British Library MS Harley 3859, and saints' lives similar to those in the Book of LLANDAF. The *Historia* was especially popular in Wales (CYMRU): Welsh translations began to be produced by the earlier 13th century (see BRUT Y BRENHINEDD). There are approximately 60 extant manuscripts which contain Welsh-language versions of the *Historia Regum Britanniae* (see Griscom 585–99; Brynley F. Roberts, *Brut y Brenhinedd* xxiv–xxxix). As translation literature whose source is extant, the *Brutiau* (Chronicles) are often regarded as being of secondary importance. However, it should be borne in mind that these are not straight translations in the modern sense. Welsh tradition frequently reasserts itself in Geoffrey's text in the areas of proper names and the alteration or supplementation of narrative content. For example, the Llanstephan 1 version inserts the native mythological tale CYFRANC LLUDD A LLEFELYS.

Detail of a gold neckring found in the hoard at Erstfeld, Switzerland

Hoards and depositions were relatively common features of religious practice during the late Bronze Age and the Iron Age within the cultural regions known to have spoken Celtic languages in ancient times. The best attested are watery depositions, e.g. La Tène, Llyn Cerrig Bach, Llyn Fawr, Dowris (Ireland/ Ériu), Battersea, and Duchcov. However, depositions in ditches, pits, caves, and built features such as the earthworks found in various types of fortification are also known; depositions in the open air, either in sanctuaries (see fanum; viereckschanzen) or in exposed spaces such as mountain passes have also been recorded.

Items deposited were often of considerable value: weapons, mainly swords, scabbards, spearheads and shields, as in the Gaulish sanctuaries of Gournay-sur-Aronde and Ribemont-sur-Ancre; helmets, as in the Förkhoard or the Pass Lueg find (Austria); jewellery, sometimes even gold torcs or bracelets, as in the Erstfeld (Switzerland) or the Snettisham hoards, or brooches, as in the Duchcov hoard. Less frequently, wagons or chariots, as in the Hallstatt period Býčískála cave hoard from the Czech Republic, and tools and agricultural implements, as in the Linz-Gründberg hoard (Austria), were deposited. As often as not, items deposited were intentionally damaged (made useless) prior to deposition. Examples include swords folded several times and bent spearheads.

Frequently, a relatively distinct local deposition pattern can be determined, with one find type, or at least items of similar use-related purpose, e.g. weapons of different kinds, forming the large majority of items within a single hoard, though mixed hoards are also known. Quite often larger hoards, especially those in sanctuaries, are found in conjunction with animal bones, less frequently also human bones, indicating that sacrifices were carried out at the same site, probably together with the deposition of the hoards.

Another notable feature of such hoards is that many appear to be associated with liminal space (that is, on the boundary of a region or precinct), and are found either interred in city walls, as in Linz-Gründberg, sometimes close to, or in, gateways, or in ditches enclosing sites interpreted as sanctuaries, as in Roseldorf/Schmida. Other examples are depositions in association with bridges across rivers, as in La Tène, Port Nidau, or Cornaux-les-Sauges (Switzerland), or close to the way to or on mountain passes, as on the Pass Lueg or in the case of the Erstfeld hoard.

While no clear-cut distributional pattern can be established, watery depositions seem to have been the more common practice in Britain and Ireland and in western Continental Europe, while deposition in ditches, pits and caves are most common in the zone north of the Alps, in eastern France, Germany, the Czech Republic and northern Austria; in most of the inner Alpine region, deposition in exposed locations or cremation prior to deposition was preferred.

Hochdorf

Eberdingen-Hochdorf is a burial mound in Baden-Württemberg, Germany, associated with the hill-fort of HOHENASPERG. It represents the late western HALLSTATT culture, an archaeologically identifiable culture which extended from south-western Germany and northern and central Switzerland to eastern France in the 6th–5th centuries BC. This prehistoric culture is unique within central Europe in the 6th-century because of its fortified aristocratic tombs and sites and its close relations with the Mediterranean world. Moreover, the connections between the late western Hallstatt culture and the Greek, Etruscan, and northern Italian regions resulted in new cultural patterns. These had the effect of fundamentally altering and ultimately causing the breakdown of aristocratic Hallstatt culture on the one hand, and serving as a catalyst for the rise of LA TÈNE culture on the other.

The aristocratic residences (*Fürstensitze*) such as the one at Hohenasperg were chiefly established on hilltops so that their prominent position would dominate the surrounding lower plains, as on MONT-LASSOIS near Châtillon-sur-Seine in Burgundy, France. The pattern of settlement is quite regular, with detached settlements located at a distance of about 100 km from each other. Each hill-fort was probably the centre of a separate territory ruled by a chief (see HEUNEBURG).

Different explanations have been proposed for the rise of these sites. Some models suggest that the importation of southern luxury goods enabled the formation of this upper class, who, by controlling the distribution of these items, were able to consolidate and extend their power. An alternative possibility is that southern merchants may have travelled to already established trading or political centres, excluding more remote regions from these commercial contacts. No such aristocratic seats have been found among the Hallstatt settlements in Bavaria, for example. In this region, the upper class appears to have lived in fortified farmsteads (*Herrensitze*), of which many have been discovered by aerial photography. Conversely, such defended farms are absent from regions which have the aristocratic residences.

The Hohenasperg region covers an area of about .06 km², but the site has been markedly changed by construction and settlement in medieval and modern times, with the result that all archaeological layers have been erased on the summit. For the assessment of the history of this hill-fort we depend on the surrounding burials, situated either directly at the foot of the hill or up to a distance of 10 km. The earliest graves are located at the greatest distance, while the more recent ones tend to be closer to the settlement. Three of the most important graves show the development of aristocratic society during the course of about three or four generations: the tumulus of Hochdorf, dated to *c.* 550 BC; the Grafenbühl, *c.* 500 BC; and, finally, the lateral chamber of the KLEINASPERGLE *c.* 450 BC, which contains a funeral from the La Tène A period. This is the most recent grave to come to light in the Hohenasperg region.

The tumulus of Hochdorf was investigated in 1978–9. Together with the burial at VIX (near Mont-Lassois) it contains the only central grave chamber which had not been disturbed in antiquity. The mound, with an original height of around 6 m and a diameter of 60 m, was almost completely worn down by erosion and cultivation by the time of its discovery. This impressive mortuary monument was fully excavated, and yielded extraordinary information on the construction of the tumulus and the progress of the funeral. For the funeral ceremonies, a platform was banked up in front of the open decorated burial chamber with an entrance way of dressed stone. This entrance leads into the chamber from the north. The outside of the tumulus is enclosed by a stone ring and strong oak posts, which retain the earthen bank. The grave pit in the centre of the tumulus measures 11 m² and is 2.5 m deep, and contains an outstanding chamber construction. The inner burial chamber of 4.7 m² is made of oak beams and is protected by an outer chamber of 7.4 m². The gap between them and the roof is packed with about 50 tons of stone, effectively sealing the tomb in the ground

like a bank vault against grave robbers.

A man of unusually tall stature (*c.* 185 cm) and around 40 years old was buried in this grave. In contrast to the graves of the eastern Hallstatt culture, weapons for defence or attack are less conspicuous in his grave, implying that he was possibly not a warrior. The flat conical hat made of birch bark, adorned with circle patterns and punched decorations, gives a warrior-like impression. His characteristic antenna dagger should perhaps be regarded a symbol of social rank rather than a weapon. The golden necklace, like those found in nearly all aristocratic tombs, seems to be another such sign of status. The famous, almost life-size sandstone statue, which was discovered at a tumulus near HIRSCHLANDEN (about 10 km away from Hochdorf), shows a Hallstatt man wearing a hat, antenna dagger, and TORC. Articles which were used in daily life were also recovered, including a comb, razor, other toiletries, a small iron knife, a quiver with arrows and, finally, a small pouch with three fish-hooks, and these give some clues about the habits of the dead man.

Among the equipment typical of such a rich grave are a four-wheeled wagon with harnesses for two horses (though, typically of Hallstatt wagon burials, the horses themselves were not interred) and a drinking service and dinner set. These are arranged to serve nine people. Nine drinking horns are suspended from the southern chamber wall. Eight of them are made of horn of aurochs (native Eurasian wild cattle), but the ninth is of iron, and can hold five litres of liquid. A large bronze cauldron was found, decorated with three bronze lions on the rim and three handles with roll attachments. This piece seems to have been produced in Magna Graecia (southern Italy) and is probably monumental, as is the famous krater of Vix (see CAULDRONS). These enormous bronze objects are certainly not commercial goods but rather sovereign gifts, demonstrating the social position of their owners very clearly. However, the cauldron of Hochdorf did not contain Greek WINE, but, as pollen analysis has proven, was filled with about 400 litres of local honey mead from a late summer harvest. The dead man was laid out on a bed or couch for a symposium (banquet or feast). The bed measures 2.75 m in length and is supported by eight cast bronze female figurines; in scanty acrobatic costumes, they stand on small spoked wheels so that the bed could be rolled. The southern custom of reclining during festivities seems to have been adopted here. Although the bed shows strong Italian influence, it may have been produced locally rather than imported.

The four-wheeled wagon, 4.5 m long including the shaft, was entirely covered with a decorated sheet of iron, revealing the high technical standard of this early Celtic society. The deceased was wrapped in finely woven coloured textiles, some of which were erroneously long thought of as made from Chinese silk. The whole chamber was lined with fabrics and decorated with flowers.

The grave at Hochdorf is still a very traditional burial, with only the Greek cauldron definitely imported. Southern influence becomes obvious mainly in the banquet equipment. The drinking horns and the bier show Greek or northern Italian influence. The grave of the Grafenbühl, on the other hand, looks completely different, being more recent by one or two generations. Unfortunately, this grave chamber was looted in antiquity; therefore, only a few scattered remains were preserved of the originally very rich grave furnishings. For this reason, the reconstruction is quite different from that of the Hochdorf grave, and is very speculative. But it is certain that Grafenbühl had been much more richly furnished than Hochdorf. Of course, nothing is left of the gold, but small residues of fine gold threads from brocade attest to its original splendour. Only a few parts of the wagon have been saved, and among the other objects there is a tripod with bronze lion feet. Inlay of amber and ivory reveal the existence of a Greek wooden κλίνη *klinē* (a dining couch), as was found in shaft grave 3 of Kerameikos in Athens. A sphinx with an amber face, an ivory-handled iron Etruscan rattle, ivory lion feet, and an ivory fan or mirror handle are listed among further imported goods. They were already antiques when deposited, mostly dating back to the 7th century BC. The grave furnishings in Grafenbühl are much less traditional than those of the Hochdorf tumulus.

The development of the aristocratic burial tradition in this region continues up to the tumulus of Kleinaspergle, which is about 50 years later, hence mid-5th century. The dead woman was cremated, a southern funeral custom. Among some typical Early La Tène objects, the drinking service corresponds perfectly with southern models. It consists of a cauldron, a stamnos (earthenware wine jar), a ribbed bucket, a beaked

Bronze couch on which the corpse was laid out from the princely tomb at Hochdorf

flagon, the ends of two drinking horns, and two Attic red-figured cups. The flagon was not imported; its handle shows the artistic style of Early La Tène in its clearest articulation.

These three graves demonstrate the development of aristocratic society during the 6th and early 5th centuries. The earliest tombs were enclosed in monumental barrows, with very traditional grave furnishings, and isolated large and very precious imported goods. Imports from the south became more frequent, smaller, and less expensive over time. Attic ceramics figure in the latest graves. Southern ideas and customs were adopted in the artistic style, banquet customs, and burial rites; these were not mindless imports, but were imitated and assembled locally. The ornamentation on the handle of the wine flagon from the Kleinaspergle represents the final product of this development.

Compared with the burials, we know very little of the settlements. Around the Hohenasperg there has not been one systematic excavation; they have all rather been rescue excavations. These show open hamlets of limited size with shifting locations over time. They start at the end of Hallstatt D1 and continue until the beginning of La Tène B (roughly 600–300 BC). Then, a general break in the settlements occurs, as in the burials. The discovery of a settlement only 400 m from the Hochdorf tumulus and its systematic excavation from 1989 to 1993 have yielded very useful information on the living quarters in the area and also new ideas on the function of the aristocratic residences. Since these excavations were only completed in 1993, the analysis is not yet comprehensive.

On a slight southern slope above the actual village of Hochdorf an area of .03 km² in total has been excavated, which uncovered a complete settlement. It contained large houses (140 m²), dug-in huts between 3 and 8 m long, storage pits, granaries and fenced-in rectangular areas. All these structures show a rectangular system; therefore, the settlement seems to have followed a regular plan. A reconstruction of the site shows an open, undefended rectangular hamlet of about ten to twelve homesteads; the plan anticipates that of the oppida of the Late La Tène period. The finds are exceptional, and show the social status of this hamlet. Wheel-turned local pottery is very well represented here in comparison to other sites, implying that the inhabitants had enjoyed a position of economic privilege. Six red-figured Attic potshards from kulikes (wine-cups), dated at around 425 BC, are among the outstanding finds. A balance cast in bronze, 11.5 cm long, with tare weights to zero the scale, is surely imported, and could have been used for checking the weight of metal coins. Blacksmithing, bronze casting and, above all, textile production are widely attested. Future research on the animal bones and the botanical remains should give further information on the social structure, economic base, and craft specialization in this settlement. Some questions remain unanswered, such as why the village was moved some 300 m to the east in the Hallstatt D2 and D3 phases (late 6th century BC). The settlement may have been the rough equivalent of a country seat belonging to rulers of the Hohenasperg.

During the 7th century, many settlements on hilltops emerged in the region of the western Hallstatt culture, out of which some developed central power with supraregional importance. They were mostly situated along trading routes, for example, the tin route to Britain, on

which Mont-Lassois and the centre of the Biturīges (Bourges) were located, or the routes along the valleys such as the rivers Rhine, Neckar, or Danube. Technical expertise was especially developed at these centres, promoting the manufacture of textiles, the forging of iron and bronze objects, and skilled production of ceramics on potters' wheels. These centres maintained intensive commercial contacts with northern Italy (see also golasecca culture). Following the foundation of the Greek colony of Massalia (modern Marseille) around 600 BC, trading relations also began with southern France.

The funeral equipment of the social leaders became increasingly exotic and extravagant. In the course of the 5th century, the principal sites and their surrounding rural villages came to an end. For about 200 years until the formation of the later oppida civilization a general stagnation can be observed in the region, while the development beyond this region takes a much more dynamic course in such other areas of the La Tène Celtic-speaking world as the central Rhine, Champagne, and Bohemia (see boii). The documented Celtic migrations into Italy and the Balkans do not seem to be the cause of the end of these feudal sites, but rather the result. It is only in sites from the end of the 2nd and in the 1st centuries BC that extraordinary discoveries from south-west Germany come to light again, for example, the wooden statues excavated from the pit of Schmiden (see viereckschanzen), dated to 123 BC.

Hohenasperg was an aristocratic seat on a hilltop west of Ludwigsburg (Baden-Württemberg). Although the site has never been excavated because of the dense modern settlement now built up around it, the numerous Early Iron Age burials nearby and its dominant position in the countryside suggest that it was an important hill-fort in the Late Hallstatt period. The monuments connected with the Hohenasperg are, among others, the Late Hallstatt burials

Engraving of the castle and prison on Hohenasperg hill c. 1840

Map of the Hohmichele necropolis, with its five clusters in the centre, the south-east and the west. The settlements of the beginning of the Late Hallstatt period (Hallstatt D1) are shown hatched in the map. Immediately to the east of the Hohmichele there is a quadrangular entrenchment, from the late La Tène period. Map: After Landesdenkmalamt, Baden-Württemberg. Topographical survey: D. Müller.

of Grafenbühl and Kleinaspergle, as well as the aristocratic graves at Hochdorf and Hirschlanden. The later burials are closer to the actual settlement than the older ones.

PEB

Hohmichele is an important mound with multiple burials in south-west Germany. Investigations carried out in the 19th century yielded finds dating from the end of the Urnfield culture (Hallstatt B2, 9th/8th century BC) to the older Hallstatt Iron Age (8th/7th century BC). However, more recent finds show that burials took place here as late as the 5th century BC. Situated on a hilltop *c.* 2 km to the west of the Heuneburg, an important Iron Age hill-fort, Hohmichele is the highest and best-preserved burial site in central Europe. It seems to be within the central group of a total of five clusters of burial sites, all belonging to the same necropolis, which covers an area of 1.2 km^2 and comprises at least 37 separate burial mounds. Other burial mounds discovered in the vicinity of Heuneburg are at Rauhen, Lehen, Lehenbühl and, perhaps, Bettelbühl and Ringenlee. All are major burial sites from the early Late Hallstatt period (roughly 750–575 BC).

§1. HISTORY OF EXCAVATION

Between 1856 and 1890, eight burial mounds within the Hohmichele group were partly or completely levelled for land reclamation, with scant recording of the process and resulting finds until 1937 when G. Riek undertook professional archaeological excavations. Only Mound XVII has so far been subject to detailed examination, undertaken by B. Arnold in 1999–2000.
