INDEX

Titles of entries in the Encyclopedia are printed in **bold type**.

Subjects that are not entries are in normal weight type.

When an entry name is UNDERLINED in a list of several under a single subject, that entry has the fullest treatment of the subject.

Key linguistic forms that are not also titles of entries are printed in *normal weight italic type* and followed by a translation in inverted commas or a language name. (Only a selection of Celtic words and names cited as linguistic examples in the Encyclopedia are listed in the Index.)
