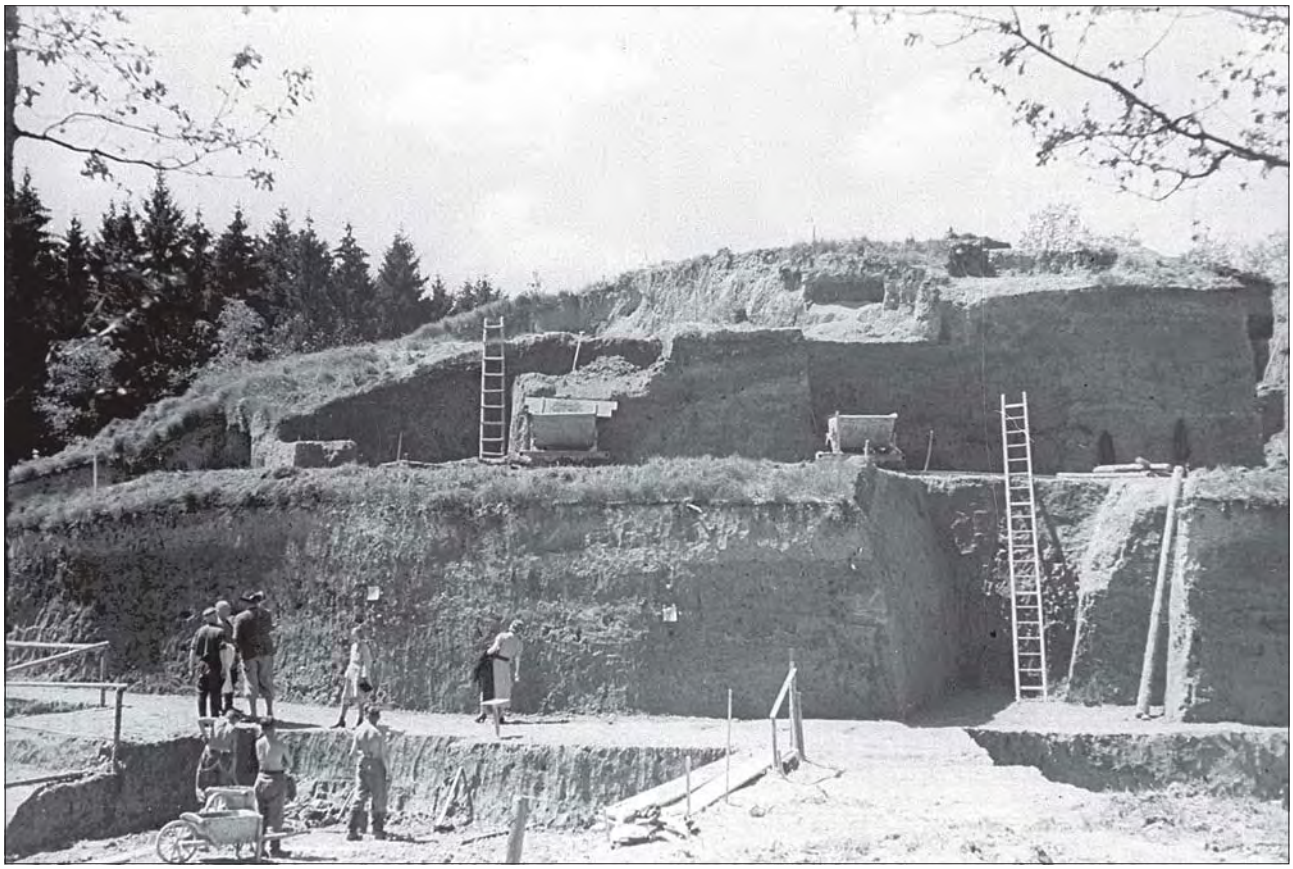
When Hohmichele was first excavated in 1937, its massive size—85 m in diameter, with a height of 13.5 m from its base—made it necessary to level the crest of the mound to a height of 6 m from the base. From the resulting platform, an area in the centre of the mound was investigated. Large parts of the resulting south-east quadrant were reduced to a height of 2.45–2.15 m. In the resulting north-east quadrant, a strip was



The Hohmichele during the excavation in 1939, viewed from the east. The upper part of the mound down to the level of the field train was completely excavated.

excavated, leading from the perimeter of the mound inwards to within a distance of 12.5 m of the centre. The project had to be abandoned in autumn 1938 because of the political situation, and the mound remained in this disturbed condition until 1954–6, when it was covered up again. The excavation had removed approximately a quarter of the total mass of the mound, around 45,000 m².

§2. Construction, structure, function

The construction of Hohmichele belongs to the early period of the Iron Age hill-fort of Heuneburg, with the central tomb being constructed at some point between the end of the 7th and the early 6th century BC. The last of the subsequent burials took place in the second half of the 6th century BC.

Although excavations down to the base of the mound have not been carried out systematically, the structure of the Hohmichele is clearly recognizable. The burials in the Hohmichele show no signs of having been in tomb pits below the level of the original ground surface. The discovered tombs were clearly set out on the mound surface at a succession of built-up levels, as, for instance, in the case of the funeral pyres (see Tomb IX below). It can be concluded that the mound reached its final pre-excavation height of 15–16 m only after a succession of burials, each of which required raising the mound.

It has been assumed, due to the great age of this burial mound and its striking dimensions, that the original founder of the Heuneburg Iron Age fortified settlement was buried in the central chamber. However, the long period of construction for the Hohmichele indicates that its extraordinary monumental dimensions had more than the single motive of memorializing one person of very high status. The need of a whole group of people to present themselves as the descendants of an important ancestor may have played a crucial part in the decision to reuse the mound over an extended period of time. Since other nearby large burial mounds also show signs of repeated use, similarly raising the mound further with each burial, it is quite

possible that individual communities or lineages in the vicinity of the Heuneburg distinguished their group identity via these 'cemeteries'. The emergence of these monumental mounds may even be the result of competition between the groups as they strove to emulate one another in ostentatious expenditure of resources for status competition.

Recent investigations in the surroundings of the Heuneburg have identified three different settlements, dating from the beginning of the Late Hallstatt period (*c.* 650–*c.* 600 BC), located near the burial mounds, at a distance of *c.* 150 to 300 m from the mound clusters in the south-west, the centre and the south-east of the whole necropolis. In two cases, the settlements were on low hilltops, which probably only provided sufficient room for a group of five to eight farms. Most of the other burial sites with large burial mounds have been connected with settlements nearby, interpreted as the settlements of the scattered peasant population involved in the construction of Heuneburg.

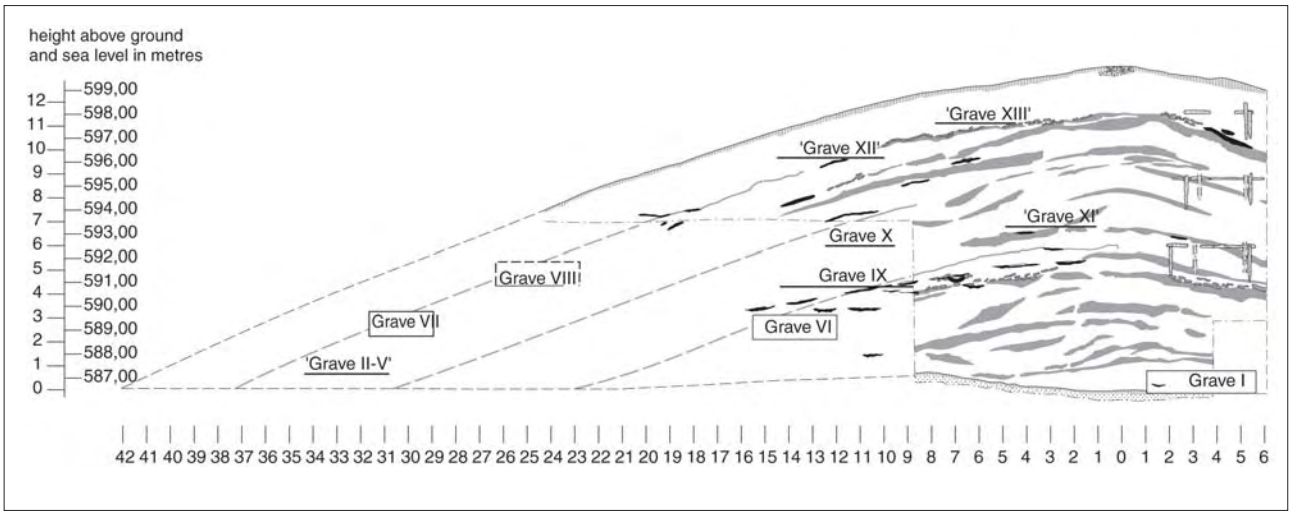
§3. MAIN BURIAL (TOMB I)

For the main burial (Tomb I) a wooden chamber of 5.7 m by 3.5 m had been erected, using sawed oak and conifer planks. However, it was obvious that the chamber was robbed and most artefacts removed in ancient times, probably after Chamber VI (see §4 below) had been built and covered with roughly 1 m of soil. Some objects were discovered in the trench dug for the robbery in front of the chamber. Although there are no skeletal remains, the preserved tomb goods—mainly wagon and horse trappings (see CHARIOT; VEHICLE BURIALS), glass and amber jewellery, but also samples of fur and gold-threaded fabrics—suggest the interpretation of a male and female double burial. It is probable that, following this burial, Hohmichele was raised to a height of no more than 5 m with a diameter of about 50 m.

§4. BURIAL CHAMBER VI

On a levelled area cut into the side of the mound, Chamber VI, measuring 3.0 × 2.5 m, had been erected 2.15 m from the mound's perimeter. Fortunately, this tomb had never been robbed before excavation, probably because of its position towards the perimeter of the mound, which would not have been the usual place for robbers to look. Evidence from the preserved tooth remains suggests that two bodies had been buried in elaborately ornamented garments and laid upon fur on the floor of the chamber. The burial gifts and their positioning in the tomb again lead to the conclusion of a male and female burial. The male body had been laid to rest fully dressed, with fibulae (brooches), a sheet metal belt plate, and TORC (neck ring). The female body was accompanied by necklaces with 351 amber and around 2360 glass ring beads, but only one metal dress fastener, a bronze fibula. Among the burial goods were a four-wheeled wagon and trappings for two draught-horses, elaborately ornamented with bronze trimmings. The couple were buried with an eating and

Projection of the excavated finds onto the mound profile viewed from south to north (after G. Riek)



Bronze vessels from Chamber VI

drinking set which consisted of an iron carving-knife, a bronze plate, and a cauldron and ladle. The only weapons found were 51 arrows in a quiver—with no trace of the bow. There are indications that all the grave goods had been completely covered with cloth. As in a similar tomb found at HOCHDORF, the dead may also have been covered with cloth. The male was probably positioned centrally within the burial, below the front of the wagon. The female had been laid under the wagon, beside the man.

The interpretation of the basic social significance of the finds is straightforward: the wagon and horse trappings indicate the ceremonial wagon journey of people of high rank. The gift of metal dishes, though reduced to the minimum number, but of a much higher quality than those found in other tombs, matches the tradition of burial gifts including large sets of dishes (see FEAST). However, conclusions as to the significance of the weapons are less clear. They could have been intended for combat and thus identified the deceased as a warrior, but they might also signify a personal passion for hunting or that the deceased belonged to an elevated social group who retained hunting as a defining class privilege.

§5. TOMB IX (THE CREMATION BURIAL)

Beside Tomb I, and approximately 1 m above Tomb VI overlapping it, a cremation burial was discovered and labelled Tomb IX. It seems to be one of the rare cases in which a cremation following an older ritual tradition (common in the Late Bronze Age) is found overlapping a more recent burial, in which bodies had been interred, revealing the slowly changing burial tradition. Tomb IX was the site of a funeral pyre on which a female body between 18 and 30 years of age had been cremated and her ashes buried on the remains of the pyre, together with an extensive set of ceramics—large vessels, probably filled with food, and plates and bowls for dining. There may also have been a small wooden tomb structure, of which no trace has survived.

§6. SMALLER TOMBS

On one side of the mound, two tombs dating from a slightly later period were discovered. These contained inhumations in small wooden boxes. Tomb VII, presumed to be that of a female, contained costume accessories; Tomb VIII, presumed to be that of a male, contained spearheads and dress accessories.

§7. DIFFICULTIES OF INTERPRETATION

The significance of some finds cannot be assessed clearly. Four rectangular stone structures, though often called Tombs II–V, cannot be defined as tombs with absolute certainty. These contain fragments of finds not paralleled in the burials and are situated at the south-eastern edge of the mound. The minute remains of burnt bones at the sites of funeral pyres on the mound crest, named Tombs X–XIII, are probably not cremation burials but cremation sites, from which the remains were almost completely removed to be buried outside the mound. There is also evidence for more than 25 fire pits, presumably built on the mound surface at various stages of its construction, and which were possibly connected to a continuous funeral rite, but this is not certain.

Various other finds discovered within Hohmichele may have found their way into the mound, with the soil taken from the surroundings of the mound for building purposes. For example, numerous fragments of older Middle Bronze Age coarse clay pottery, and also household potsherds from the early Urnfield culture, may point to as yet undiscovered Bronze Age settlements from more than one period in the surroundings of Hohmichele. Burnt costume accessories, as well as typical tomb ceramics of the early Urnfield culture, point to the likely presence of earlier burials, which may have been levelled in the process of

gathering soil as building material for Hohmichele. There is also some indication that, for the construction of Hohmichele, even recent tombs of the Hallstatt period—quite close in time to, or only slightly older than, the mound—were disturbed, and that some of the burial objects they contained thus found their way into the building material for Hohmichele. Such stray finds from several periods suggest scope for future research in and around the site.

Siegfried Kurz

Holder, Alfred (1840–1916) was a German classicist and philologist. His main field of research was Latin philology, but he is best known for his *Alt-celtischer Sprachschatz*, a collection of Celtic names and place-names, as well as words from ancient epigraphic and manuscript sources and modern place-names which he thought likely to be of Celtic origin. Although this work was published between 1896 and 1913, it is still of great value, since most of his etymological judgements and the quality of his sources remain undisputed, and no comprehensive work has since re-examined all this material.

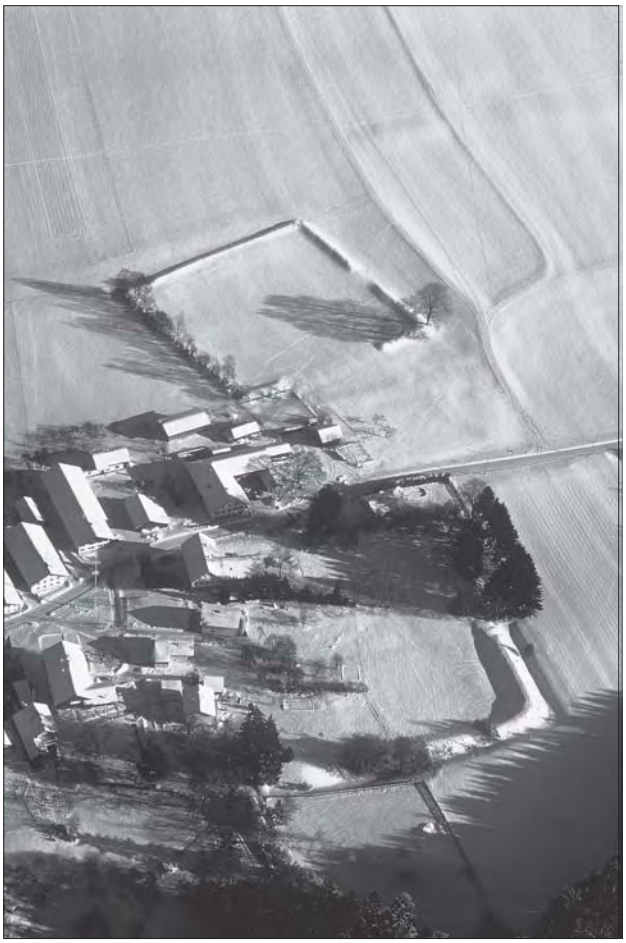
Holzhausen is an ensemble of two VIERECKSCHANZEN (rectangular ENCLOSURES), which has repeatedly entered into discussions of the religion, rite and RITUAL of the Celts of the pre-Roman IRON AGE. The site is located in the community of Strasslach-Dingharting in the district of Munich, Germany.

Enclosure I is on the slope of a hill, and measures 100 m (north side) × 130 m (west side) × 111 m (south side) × 143 m (east side). The western wall is concave, and the north, south, and east sides are badly eroded, but, where best preserved, the earthwork rampart is still 4 m high. The northern part encloses a spring, and the inside gently slopes from west to east. At the eastern rampart, a gate opening remains visible.

Enclosure II lies 90 m east of Enclosure I, and its sides measure 87 m × 97 m × 92 m × 96 m. The walls are preserved up to 1.8 m and the ditches are partly filled up. During the excavations undertaken by K. Schwarz between 1957 and 1963 a ditch with post-holes was discovered under the earthen rampart, which suggests that, at an earlier stage, the site had been enclosed by a fence. Three wells and a building which was erected in two stages were also found here. The whole complex was built in a sequence of five phases.

Aerial photograph of the Viereckschanze at Holzhausen



From the third phase onwards, the area was completely enclosed and the deepest of the three wells (18.35 m, in the south-west) was dug. In Phase 4, the south-western well was filled, and a new well, 6.1 m deep, was dug on the north side. At the bottom of the well a sharpened pole was found. It is not clear whether the building in the western corner of the enclosure had a ritual function or not. Schwarz interpreted the whole structure as a ritual enclosure, the building as a temple, and the well in the northern corner as an offering pit. Günther Wieland, on the other hand, has interpreted these pits as wells rather than offering pits. Deep pits with vertical shafts dropped into them, dating from the Bronze and Iron Ages and often with surrounding rectangular earthworks, have been found at numerous locations in west-central Europe and Britain. These are often interpreted as ritual sites, though the issue remains somewhat controversial.

Homer's archaic Greek epics, the *Iliad* and the *Odyssey*, were not known either in the original or in translation in medieval western Europe, where the common language of literate learning was Latin, until the 14th-century rediscovery of the Homeric texts. Nevertheless, the Middle Ages were familiar with Homer through classical and patristic (that is, early Christian) Latin literature. Allusions to Homer and to Homeric characters are found in the writings of Irish scholars such as SEDULIUS, ERIUGENA, Dicuil, &c. LEBOR LAIGNECH ('The Book of Leinster') lists 'Homer of the Greeks' (*Homer o Grecuib*) as one of the 'three poets of the world'. The subject-matter of the *Iliad* was well known in the West through Latin adaptations, especially the popular 'Dares', translated into IRISH as early as the 10th century (TOGAIL TROÍ) and into WELSH in the 13th century (YSTORYA DARED). The Odyssey fared worse, but the medieval Irish saga MERUGUD UILIXIS MEIC LEIRTIS ('The Wandering of Ulysses son of Laertes') shows that the gist of the story must have been known via VERGIL and allusions in patristic literature.

The Greek ethnographer POSIDONIUS compared the lifestyle of the Celtic warriors to the world of the Homeric heroes, and parallels between the heroic world of Irish saga and Homeric epic were explained as Irish borrowings from Homer. In particular, the 'watchman device', which occurs widely in Irish sagas (Carney, *Studies in Irish Literature and History*), has been compared to the *teichoskopia* in Book 3 of the *Iliad*. However, since first-hand knowledge of Homer can be ruled out and no Latin intermediaries are forthcoming, the case for Homeric borrowing is tenuous, especially as the device is commonly found in traditional literatures elsewhere (Sims-Williams, SC 12/13.87–117). Joseph Nagy has persuasively debunked another supposed borrowing, the rising of the river Cronn in TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley'), which has been compared to the rising of the Skamandros in the *Iliad* (Nagy, *Celtica Helsingiensia* 129–48).

Homer and the problem of the Homeric authorship of the *Iliad* and *Odyssey* have been of central importance in the rediscovery of classical literature in the West from the RENAISSANCE onwards. In early CELTIC STUDIES, the Homeric example has exerted a powerful influence on the study of heroic poetry and prose tales. For example, the controversy surrounding the Ossian (see OISÍN) of MACPHERSON and the approaches of the early antiquarian scholars to the WELSH POETRY attributed to the CYNFEIRDD, especially the GODODDIN, were much coloured by the thinking of early classicists concerning the *Iliad* and *Odyssey*. The CHADWICKS' approach to early Celtic texts in their *Growth of Literature* was to a large extent shaped by ideas which had emerged in the study of the Homeric problem. JACKSON's important lecture on the ULSTER CYCLE, *The Oldest Irish Tradition: A Window on the Iron Age*, saw the entire thematic structure of the Irish sagas and even the characters of individual Ulster heroes such as CÚ CHULAINN as closely comparable to those of the *Iliad*.

Bronze figurine holding war trumpet from Hradište, near Stradonice

Hradište, near Stradonice, is the site of a Celtic OPPIDUM or late LA TÈNE fortified urban site in the Czech Republic. It is located strategically overlooking the valley of the river Berounka, in the region of Plzeň in western Bohemia. From the basin of Plzeň an important trade route began, which followed the river Radbuza southwards to cross the Bohemian forest into the DANUBE basin. Rich deposits of mineral ores in the surrounding area were the source of the wealth of the Stradonice area, which had consequently emerged by the 3rd century BC as an important industrial region of Iron Age Celtic central Europe, perhaps specificially within the territory of the powerful and well-known group called the BOII. The oppidum was probably founded in the middle of the 2nd century BC, and developed rapidly as a centre of this industrial region. In the following years the settlement became an affluent centre of trade, with elaborate craftsmanship and its own COINAGE. Around 120 BC a large wall was built around the settlement, which covered about 90 ha (about 216 acres). There are several characteristic parallels with the oppidum of Závist, e.g. the ground plan of the gates.

Hughes, John Ceiriog ('Ceiriog', 1832–87), poet, was born at Pen-y-bryn, Llanarmon, Denbighshire (sir Ddinbych). After a rudimentary education in the local school, followed by a short period reluctantly working on his father's farm, he was apprenticed to a printer in Oswestry (Welsh Croesoswallt). Finding this just as

uncongenial, he was in Manchester (Welsh Manceinion) by 1849 with thoughts of becoming a grocer, but he soon found his feet as a railway agent at the London Road goods station. He married Annie Roberts in 1861 and in 1865 returned to Wales (Cymru) to work for the Cambrian Railway Company as stationmaster at Llanidloes. He moved finally in 1871 to Caersŵs, Montgomeryshire (sir Drefaldwyn), where he managed a six-mile single line serving the Van Copper Works. That venture soon failed, and Ceiriog died on 23 April 1887, leaving a widow and four children.

A lyrical poet with a gift for wedding words to traditional Welsh airs, he far outstripped all his contemporaries in popularity. Following the assault on Welsh self-esteem by the 'Blue Books' of 1847, Ceiriog came to be loved as the poet of national reassurance, starting with his epochal love poem *Myfanwy Fychan* in 1858 and his equally celebrated pastoral *Alun Mabon* in 1861. His first collection, *Oriau'r Hwyr* (Evening hours, 1860), was a huge success and was followed by *Oriau'r Bore* (Morning hours, 1862), *Cant o Ganeuon* (A hundred songs, 1863), *Y Bardd a'r Cerddor* (The poet and the musician, 1864), *Oriau Eraill* (Other hours, 1868), *Oriau'r Haf* (Summer hours, 1870) and *Yr Oriau Olaf* (The final hours, 1888). He also collaborated with the musician Brinley Richards (1819–85) to compose *Ar D'wysog Gwlad y Bryniau* (God bless the Prince of Wales) in 1862 and subsequently in 1873

Hurling match between Kilkenny and Offaly, Ireland

to compile *Songs of Wales*, a best-selling collection of traditional airs for some fifty of which Ceiriog wrote words infused with a winning patriotism (see also WELSH POETRY).

Hurling or hurley (Irish *iománaíocht*) is a traditional ball and stick game played in Ireland (ÉIRE); it is largely akin to football, and should not be confused with a similarly named sport formerly played in Cornwall (KERNOW). The Irish game is traditionally attributed a 2000-year history, being recognized in Brehon law (see LAW TEXTS) and prominent among the deeds of mythological heroes, for example, *Macgnímrada Con Culainn* ('The Boyhood Deeds of CÚ CHULAINN') in the TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley'). The Statutes of KILKENNY (1366), designed to prevent the further Gaelicization of English colonists in Ireland, forbade them from playing the game. Later legislation sought to prevent the dissemination of the game into the colonial enclave of Galway (GAILLIMH), and its playing on the Sabbath. Despite these actions, the game remained popular into the 18th century, when it became a focus for landlord and even vice-regal sponsorship. Following the uprising of 1798 and the attendant rise in social and sectarian tensions, this élite patronage was largely withdrawn. Partly as a consequence, the game declined in frequency and popularity. Later rural depopulation and changes in acceptable modes of conduct further accentuated the decline. By 1870 the game was rarely played. In that year, however, the Dublin University Hurley Club drew up the first formal rules for the game. In 1879 a controlling body, the Hurley Union, was formed, and matches played against English hockey clubs. In 1884 the founding of the GAELIC ATHLETIC ASSOCIATION (GAA) led to an alternative focus for hurlers which was seen as less elitist and more nationalist in complexion. The Hurley Union subsequently dissolved, with all-Ireland hurling championships being established under GAA auspices in 1887. The sport continuously evolved into its modern form, which it had largely reached by 1913. Originally centred in Dublin (BAILE ÁTHA CLIATH), the sport became most popular in Munster (see MUMU). In Northern Ireland the sport was slower to establish itself, and remains a minority interest, largely due to its perception as an exclusively Catholic and Nationalist pastime by the Protestant and Unionist communities.

hymns, Welsh

Hymns are songs of praise to God, usually for congregational use. The earliest Welsh religious and scriptural verse which has survived consists of 33 poems composed between the 9th and 12th centuries. It is presumed that the major part of public hymnology previous to these would have been in Latin. The best known of the early hymns and poems is *Gogonedog Arglwydd, henffych well* (Greetings, glorious Lord), which was recorded in the Black Book of Carmarthen (LLYFR DU CAERFYRDDIN) *c.* 1250 and was still in use as late as *Emynau'r Eglwys* (the hymnal of the Church in Wales) in 1941.

From the following period, of the Poets of the Princes (GOGYNFEIRDD) *c.* 1103–1282, a fair amount of religious verse survived, and it can be presumed that some 'unofficial' hymn writing also continued. It is significant that in GWASSANAETH MEIR (*c.* 1380–1400) the division between the hymns and PSALMS follows roughly the contrast between the more polished aristocratic tradition and the freer verse of the peasant tradition.

The REFORMATION did not immediately bring a flourishing of hymn writing. Psalm singing was the norm. William Midleton (*fl.* 1550–*c.* 1600) completed a strict metre translation of the Psalms, published

posthumously in 1603. This was followed by a more successful free verse translation by Edmwnd Prys (1621), several of whose psalms are still in common use. This was developed further at a very popular level in *Canwyll y Cymru* (Candle of the Welsh, 1646) by Rees Prichard (1579–1644), whose verse is generally moralistic but whose carols *Awn i Fethlem* (Let us go to Bethlehem) and *Rhown Foliant o'r Mwyaf* (Let us give the greatest praise) are still frequently sung in church services. A handful of psalms, hymns and poems by Morgan Llwyd (1619–59) are the most significant production of this period, aesthetically speaking. However, as contrasted with the majestic *Myfi yw'r Atgyfodiad Mawr* (I am the great Resurrection) by Ellis Wynne, the common pre-Methodist custom of translating English hymns or paraphrasing scripture left little scope for originality.

Then, in Carmarthenshire (sir Gaerfyrddin), William Williams of Pantycelyn became the epicentre of a truly remarkable upsurge of hymn writing. Beginning in 1744, it was to continue for over a century. Among the hymnists who were fostered by Pantycelyn's leadership were geographical neighbours of his, all of whom were Calvinist in thought and experience. William Williams, undoubtedly the greatest Welsh-language writer of the 18th century, was not only a hymn writer, but a writer of epics, elegies, odes, and historical, psychological, and theological prose.

The hymn is a notoriously difficult genre since it so easily gravitates into doggerel. In Pantycelyn's work there was the dramatic adventure of discovery and also the freshness of amazement and passion and intellectual rigour. None of his contemporaries came near him in the high number of hymns of the finest calibre. Some rose to heights in a handful of hymns each, whereas the intensity of quality in Pantycelyn's work was maintained in scores of energetic lyrics. Even when in *Caneuon Ffydd* (Songs of faith, the interdenominational hymnal published in 2001) the number of compositions by him was stripped to the bone, and only 87 included, this was achieved only by omitting great works such as *Dyn dieithir ydwyf yma* (I am a stranger here), *Beth yw'r achos bod fy Arglwydd* (What is the reason that my Lord), and *O! cymer fy serchiadau i'n glau* (Take my affections sincerely).

The secret of the strength of the south-western group of hymnists in the second half of the 18th century and of the mighty northern group in the first half of the 19th was the combination of meaningful doctrinal thought and a sustained emotional dedication. When both these faltered, the Welsh hymn tended to collapse into subjective froth and objective vacuity. In the first 18th-century group, Dafydd Jones (1711–77) of Caeo, a drover, senior to Pantycelyn, is often known as the adapter of Watt's *Psalms*; but he was also the author of several powerful original hymns, such as *Wele cawsom y Meseia* (Behold, we have received the Messiah) and *Mae plant y byd yn holi* (The children of the world are asking). Junior to Pantycelyn, and second to him during that period in the nobility of some of his hymns, was Morgan Rhys (1716–79), who wrote *O agor fy llygaid i weled* (Open my eyes to see), *Pechadur wyf, O Arglwydd, sy'n curo wrth dy ddôr* (I am a sinner, O Lord, who knocks at your door), *Fyth fyth rhyfedda'r cariad* (I shall always forever marvel at the love) and *Deuwch holl hiliogaeth Adda* (Come ye all of Adam's issue), besides two notable omissions from *Caneuon Ffydd*, *Beth sydd i mi yn y byd* (What is there for me in the world) and *Gwnawd concwest ar Galfaria fryn* (There was a conquest on the hill of Calvary), whose sharpness in the realization of sinfulness may have proved rather much for modern compilers.

Another of this Carmarthenshire group was John Thomas (1730–?1804), who, besides writing a remarkable autobiography *Rhad Ras* (The gift of grace, 1810), wrote *Ei nabod Ef yn iawn / Yw'r bywyd llawn o hedd* (Knowing Him well is a life full of peace), and *Ac am fod Iesu'n fyw* (And because Jesus lives). An extension of this group was the Glamorgan (Morgannwg) triad: Dafydd William (1720/21–94), author of *Anghrediniaeth gad fi'n llonydd* (Disbelief, leave me alone), *Hosanna, Haleliwia, fe anwyd Brawd i ni* (Hosanna, Halleluiah, a Brother is born to us), *O'r nef mi glywais newydd* (I heard news from heaven), and *O Arglwydd, dyro awel* (O Lord, give a breeze); together with John Williams (?1728–1806), who sang *Pwy feddwl, pwy 'madrodd, pwy ddawn* (What thought, what phrase, what talent), and *Pwy welaf o Edom yn dod* (Who do I see coming from Edom); and Thomas William (1761–1844), who wrote *Adenydd fel c'lomen* (Wings like a dove), *O'th flaen, O Dduw, rwy'n dyfod* (Before Thee, O God, I come), and *Y Gŵr wrth Ffynnon Jacob* (The man by Jacob's fountain).

Still in south Wales (Cymru), David Charles (1762–

Welsh rock icon Cerys Matthews sings the hymn 'Arglwydd, Dyma Fi' (Lord, here I am)

1834) drew this exceptional flourish of activity to a quiet close with *Rhagluniaeth fawr y nef* (The great providence of heaven), *O fryniau Caersalem caf weled* (From the hills of Jerusalem I may see), and *O Iesu mawr, rho'th anian bur* (O great Jesus, give Thy pure nature). His brother, Thomas Charles, moved north from Carmarthenshire to Bala in Merioneth, and was recognized by Pantycelyn as the leader of a new generation of Calvinistic Methodists.

Although Edward Williams (Iolo Morganwg), one of the founders of Unitarianism in south Wales, composed over 3000 hymns and psalms, by the beginning of the 19th century the centre of hymnal gravity had shifted to mid and north Wales. Edward Jones (1761–1836), of Maes-y-plwm, was the first notable exponent, and the finest of the Denbighshire (sir Ddinbych) hymn-writers: he was the author of *Llond y nefoedd, llond y byd* (He fills the heavens, fills the world), *Cyfamod hedd, cyfamod cadarn Duw* (The covenant of peace, the mighty covenant of God), and *Pob seraff, pob sant* (Every seraph, every saint). He was followed by the most remarkable of this mid and northern group, namely Ann Griffiths, the passionate scriptural 'mystic', who composed ('wrote' is possibly not the word in her case) arguably the greatest hymn in the language, namely *Rhyfedd, rhyfedd gan angylion* (Wonder, wonder of the angels). With some occasional scraps, the number of her hymns can be extended to thirty, but among this small handful are to be counted: *O am gael ffydd i edrych* (O to have the faith to look), *Mae bod yn fyw o fawr ryfeddod* (To be alive is a great wonder), *Am fy mod i mor llygredig* (Though I am so corrupted), *O na bai fy mhen yn ddyfroedd* (O that my head were full of waters), *Wele'n sefyll rhwng y myrtwydd* (There he stands between the myrtles), *Ni ddichon byd a'i holl deganau* (The world and all its trinkets cannot), *O am dreiddio i'r adnabyddiaeth* (O to pierce into the knowledge), *Gwna fi fel pren planedig, O fy Nuw* (O make me as a planted tree, dear God), and several other intense hymns of the highest quality. In other words, she is easily second to Pantycelyn in the wonder of her expression, and sometimes exceeds him in sheer beauty and imaginative energy.

Hymn writing now veered towards Gwynedd, and became more classical in tone and polished in craftsmanship. But the central tenets of the Christian

revelation and biblical faith were still unshaken. Robert ap Gwilym Ddu (Robert Williams, 1766–1850) wrote *Mae'r gwaed a redodd ar y groes* (The blood that ran on the cross) and excels in majesty of tone. Pedr Fardd (Peter Jones, 1775–1845) was the third most accomplished hymn-writer produced by Calvinists in Wales. His works included *Cyn llunio'r byd, cyn lledu'r nefoedd wen* (Before the forming of the world, before the spreading of the glorious heavens), *Daeth ffrydiau melys iawn* (Very sweet streams came), and *Dywedwyd ganwaith na chawn fyw* (It's been said a hundred times that I may not live). A noteworthy successor among the most significant writers of this group was Ieuan Glan Geirionydd (Evan Evans, 1795–1855), an important developer of ROMANTICISM but rather overrated as a hymn-writer. A greater writer generally, however, and a trenchant writer of three heart-wrenching hymns was Eben Fardd (Ebenezer Thomas, 1802–63).

After 1859, the hymn dragged along for a while, with the former presuppositions which underpinned its thrust gradually being replaced by encroaching humanism. There was a very fine hymn by the Wesleyan Ehedydd Iâl (William Jones, 1815–99) and several competent compositions by Gwilym Hiraethog (William Rees, 1802–83) and David Charles junior (1803–80) which developed more and more towards Christian sentiment but retracted somewhat from evangelical balance, together with individual strong compositions by Eryron Gwyllt Walia (Robert Owen, 1803–70), David Jones (1770–1831), Roger Edwards (1811–86) and Islwyn (William Thomas, 1832–78). Up to that point, Welsh 18th- and 19th-century hymnology had provided one of the major contributions to the country's literature.

At the beginning of the 20th century, Elfed (Howell Elvet Lewis, 1860–1953) wrote smoothly and comfortably. He was the last of the moderately charming imitators of Pantycelyn and the foremost among several hymnists who prepared a series of professional hymnbooks. But the central thrust of classical reformed CHRISTIANITY had now been almost abandoned. Nonconformity threw up an occasional gesture: hymns were prepared for 'sections' deemed useful in hymnbooks and for moral themes. Some single hymns written by George Rees (1873–1950), Lewis Valentine (1893–1986), and Rhys Nicholas (1914–96) were pleasing efforts in an intruding desert.

The different demands of modern times are reflected in the content of the recently published collection of Welsh hymns, *Caneuon Ffydd* (2001). On the one hand, there remains the Georgian lyricism (of the great 18th- and early 19th-century hymnists) among emulators of an old tradition, and on the other a surfeit of translations of what are usually known as choruses.

Hywel ab Owain Gwynedd (†1170) was a medieval Welsh prince and poet. He was the oldest illegitimate son of Owain ap Gruffudd ap Cynan (OWAIN GWYNEDD, †1170), one of the most powerful rulers of 12th-century Wales (CYMRU). His mother is named in a 13th-century list of Owain's children as Ffynnod Wyddeles ('Ffynnod the Irishwoman'; the Irish name is probably Fiannat). Hywel's date of birth is not known, but two poignant elegies to him attributed to Peryf ap Cedifor testify that he was fostered by Peryf's father, Cedifor. He is given two epithets in contemporary sources: *Gwennwys* 'of Gwent' and *Gwyddel* 'the Irishman'. It appears that Hywel was appointed by his father as his successor and that in 1139 the south of CEREDIGION was put in his hands. For 14 years his name appears regularly in BRUT Y TYWYSOGYON, reflecting his success in expanding his authority into northern Ceredigion and Meirionnydd (Merioneth) at the expense of his uncle, Cadwaladr, and in establishing an alliance with his southerly neighbours, the sons of Gruffudd ap Rhys of DEHEUBARTH, against the Norman lords of south Wales. A turning point came in 1150, however, when

his former allies began to oust him from his lands, leaving him by 1153 without a single foothold in Ceredigion. There is scarcely a reference to him in the chronicles for the remaining 17 years of his life, suggesting that he may have lost his father's favour and the prominent position he formerly enjoyed. This is confirmed by the fact that it is on his earlier achievements that CYNDDELW focuses in his great eulogy to him, almost certainly composed in support of Hywel's bid for the throne soon after Owain's death in 1170. It was this struggle among Owain's sons for supremacy in GWYNEDD that resulted in the killing of Hywel during the same year by his half-brother Dafydd at a battle in Pentraeth in Anglesey (MÔN). His death and subsequent burial at BANGOR (Gwynedd) is vividly depicted by Peryf ap Cedifor who, along with his six brothers, had fought side-by-side with his foster-brother.

Eight poems are attributed to Hywel by early 14th-century hands in the HENDREGADREDD MANUSCRIPT collection of the work of the Poets of the Welsh Princes. Two of them, which refer to Owain Gwynedd's victories against Henry II's Welsh campaign in 1157, are possibly fragments of an eulogy to his father. The rest are light-hearted love poems addressed to unknown and sometimes unnamed noblewomen. Unlike most of the GOGYNFEIRDD corpus, these poems appeal to the modern reader. In the self-deprecatory tone he uses, his ironic humour and direct yet sophisticated style, Hywel foreshadows DAFYDD AP GWILYM. The five short love poems, with their emphasis on the lady's beauty and nobility and her unwillingness to consort with the poet, were probably intended as courtly entertainment. The remaining piece, known as GORHOFFEDD *Hywel* (Hywel's boast), may well consist of two poems. The first, which contains an expression of Hywel's love and longing for his native north Wales as well as boasting of his amorous and military feats, may have had a serious political intent. The poet may be using the conventions of a native genre of boasting poetry and fashionable themes and motifs to present an appeal to his father for a new lordship, possibly after the loss of Ceredigion. The second opens on an elevated and formal note, but it swiftly degenerates into a boastful listing of the number of women who had offered Hywel sexual favours in payment for his poems of praise to them, closing with the proverb *ys da daint rhag tafawd* (Teeth are good for stopping the tongue).

Nerys Ann Jones

Hywel Dda (†*c.* 950) ruled over an extensive part of Wales (CYMRU) between AD 943 and 950. He was the grandson of RHODRI MAWR and the son of Cadell, ruler of Seisyllwg (see CADELLING). Cadell died in 911 and, in accordance with Welsh custom, the realm was divided between Hywel and his brother Clydog. Hywel is known to have married Elen, the heiress of Llywarch ap Hyfaidd, king of DYFED. With the death of his brother in 920, Hywel united the whole of Seisyllwg and Dyfed to form a new kingdom, later called DEHEUBARTH. This kingdom remained in the hands of his descendants for centuries.

Following the death of Edward the Elder, Hywel was among the Welsh princes who paid homage to his successor ÆTHELSTAN on the banks of the river Severn in 926/7. According to ANNALES CAMBRIAE, Hywel embarked on a pilgrimage to Rome in 928, perhaps following in the footsteps of ALFRED THE GREAT, who had twice visited Rome in his childhood.

Between 928 and 949, Hywel's signature with the title *regulus* appears at the head of those of all other minor Welsh princes as witness to numerous Anglo-Saxon charters. It has been suggested that his recurring presence in the West-Saxon courts reflects his aspiration to strengthen the ties between England and Wales. The fact that he named one of his sons Edwin is also considered to reflect his Anglo-Saxon sympathies. Hywel is exceptional among the Welsh in that he did not join the uprising of 937 in the alliance against Æthelstan, which culminated in the battle of Brunanburh.

IDWAL AB ANARAWD, king of GWYNEDD, and his brother Elisedd were killed in battle against the English in 942, and Hywel saw his chance to supplant Edwin's

sons and take control over Gwynedd and Powys. In doing so, he extended his power over a large part of Wales. No attempt was made by the English Crown to suppress his progress. This is seen by some as a reflection of his sycophantic attitude towards the English, but Kirby has seen him as an astute politician who viewed it as a wise strategic move to ally with the English rather than joining the Vikings in their campaign against them (WHR 8.1–13). It has been argued that Hywel could have no sympathy for the Anglo-Saxons who killed his grandfather in 878, who forced his uncle to submit in 893–4, and who insisted on the submission of Hywel and his brother in 918. But Hywel should rather be seen as an intelligent, cunning ruler who concealed his motives behind a passive mask when visiting the courts of the English.

Hywel was the only early Welsh king whose imprint survives on a coin; it has once again been argued that the Hywel Dda penny minted at Chester (Caer) imitated the coinage of the kings of Wessex and Mercia. The coin which has survived is similar to the coins of Eadmund (939–46), the younger brother and successor of Æthelstan, but its importance is now questionable. Hywel's confidence increased following Æthelstan's death in 940. The earliest Welsh chronicle was compiled shortly after Hywel's death, and it has been suggested that it was instigated by his patronage.

The most famous and most documented act attributed to him is that of compiling a law-book, but the earliest texts relating his part in this important achievement are at least two centuries later than Hywel's own time. Throughout the Middle Ages, Welsh law was known as the Law of Hywel. According to the law texts, he summoned six wise laymen from each hundred (cantref) in Wales, as well as important clergy, to an assembly at the Tŷ Gwyn ar Daf in Dyfed. The members of the assembly prayed and fasted for the blessing of God on their amendment of the Welsh laws and traditions. The story, in different forms, appears as a prologue or epilogue to most of the Welsh law-books, and with time becomes more and more elaborate, reflecting the propaganda needs of different periods. The nucleus of the story remains basically the same, but it is hard to distinguish between what is true and what is later fabrication.

It is probable that Hywel played some part in the first compilation of written Welsh law. Following his conquest of north Wales and Powys in 942, his elevated status would have given him authority over nearly the whole of Wales, a position which would have enabled him to revise the varying traditions of the different regions of Wales. Such a degree of unity was unknown under any other Welsh prince. It is his name, and that of no other king, which has been linked with Welsh law throughout the Middle Ages and up to the present day. This suggests that there is at least an element of truth in the law-books' account. It has also been suggested that his involvement with the West Saxon kings might have inspired him to revise the native laws, as Alfred and Æthelstan did in England. The prologues to the Welsh laws have some elements in common with the prologue to Alfred's laws, which are contemporary with Alfred himself (Edwards, *Celtic Law Papers* 137–60).

The laws of the king and his court are afforded a prominent place in the law texts, which suggests that royal authority inspired their compilation. The texts themselves contain traces of Old English words, for example, the Welsh word *distain* (steward) stems from the Old English *disc-thegn*, and Welsh *edling* (heir apparent) stems from OE *aetheling*. This could again be seen as a reflection of Hywel's connection with the courts of Wessex.

Hywel's period was marked by an outburst of literary activity, perhaps stimulated by the Carolingian renaissance. The poem Armes Prydein, which possibly reflects the scenario of the battle of Brunanburh, was composed in the first half of the 9th century, and the archetypes of the Historia Brittonum and the *Annales Cambriae* originate from the time of Owain ap Hywel Dda. Stephen J. Williams considered the orthography of the Welsh found in the Latin texts of the laws to contain passages in the Welsh of the end of the 11th century, and it is possible that a version of the laws was written in the 10th century.

The use of the epithet 'Good', with reference to Hywel, belongs to a period later than his, and there is no evidence that it was used in the 10th century; nevertheless, he is the only Welsh ruler to whom this epithet is attributed. The first reference to Hywel in this way is found in the 12th-century *Liber Landavensis* (Book of Llandaf), and it has been argued that the title stemmed from a cult associated with the name of Hywel in hagiography and designed to further the good name of the royal family of Deheubarth. The

common Welsh man's name *Hywel* (Old Welsh *Higuel, Houel,* Old Breton *Hou(u)el, Hoel*) is a compound of the Celtic affirmative prefix **su-* and verbal root **wel-* 'see'; as an adjective, *hywel* means 'visible' (thus applied to a person probably 'open, forthright', rather than 'good-looking' or 'having good vision').

I

Ia, St, is considered one of the most important saints of Cornwall (Kernow), having given her name to St Ives (Porth Ia). According to her hagiographical legend, Ia sailed from Ireland (Ériu) to St Ives Bay, but her party was slaughtered on arrival. Ia, however, was welcomed by another local chieftain named Dinan, who had a chapel built for her. She is said to have sailed across the Celtic Sea on nothing more than a leaf, similar to St Piran's millstone.

Ia has been much celebrated in west Cornwall, and her altar-tomb was held in St Ives church during the medieval period. There is a driftwood statue of St Ia in the present Catholic church in St Ives. Her feast-day is 3 February.

Iago ab Idwal Foel (Iago, son of Idwal the Bald, Idwal ab Anarawd) was king of Gwynedd, 952–79 (or possibly 950–79). He should not be confused with another Iago ab Idwal, king of Gwynedd and Powys 1033–9, who was Gruffudd ap Cynan's grandfather.

Iago and his brother Ieuaf came to power following the death of their father Idwal, but were expelled in the same year by Hywel Dda, who annexed Gwynedd. Following Hywel's death in 950, they re-emerged and prevented the sons of Hywel from maintaining their father's hegemony over north Wales (Cymru). During his reign, Iago had well-established contacts with the Anglo-Saxon kings. He attended the court of the West Saxon king Edred in 955, and acknowledged the overlordship of King Edgar at Chester (Caer) in 973. He imprisoned his brother Ieuaf in 969, and was expelled from Gwynedd by Ieuaf's son, Hywel, in 974. He later returned to power, but was finally driven out in 979, and taken captive by an army of Irish Vikings.

Iago is the Welsh form of the biblical name *Iacob*. *Idwal* is a hybrid of Old Welsh *iud* 'lord, chief' and the Common Celtic masculine name element *-walos*, which had perhaps meant something like 'ruler', but is not attested as a common noun.

Iberian Peninsula, Celts on the

The Celts were only one of many groups in Iberia, which consisted of a complex cultural and linguistic mosaic (De Hoz, ZCP 45.1–37; Almagro-Gorbea, *Celts* 388–405). Both Indo-European and non-Indo-European languages are known in the area through epigraphy and onomastics. Distribution maps indicate that Indo-European was used mostly in the north and the west, and the non-Indo-European 'Iberian' languages in the east and the south. Within the Indo-European area there are many variations and, even within the areas notionally of Celtic speech, there are non-Celtic elements, e.g. names with an initial *p-* such as *Paramus* or *Palantia* (De Hoz, *Los celtas* 379–92). The only well-documented Celtic language from the area is the Celtiberian of north-central Spain.

Although the material culture recovered by archaeologists does not enable distinctions to be made between language groups or establish any equivalence between

ethnicity and language, historical sources can, if used with caution, illuminate economic, social and religious aspects of 'Celtic' society on the peninsula (e.g. Tranoy, *La Galice romaine*).

§1. ARCHAEOLOGY

Archaeological research has focused on the settlements, known as *castros*, which are generally walled ENCLOSURES situated on hilltops or in other defensible positions and containing sufficient dwellings to indicate that they were sites of permanent habitation. They seem to have been both widespread—from the Atlantic to the Ebro—and in long use, and the type lasted for over a millennium. They vary considerably in size, from half a hectare (just over an acre) to over 60 ha (Almagro-Gorbea and Dávila, *Complutum* 6.208–33). This seems to be a regional difference. In GALICIA, for instance, there are literally hundreds of *castros*, most of them very small, less than two hectares, with the largest being only 20 ha. In the southern Meseta, on the other hand, there are only a few dozen *castros*, but the average size is about 20 ha (about 48 acres), with the largest, Ulaca (Ávila), being 60 ha. The population of these two regions may thus have been numerically equivalent, but their distribution was differently organized, either for cultural or for economic reasons.

One possible explanation is the difference in natural resources. Galicia has minerals, abundant wild food species, timber, and land suitable for cattle-breeding. Such resources could adequately support small numbers of people. Central Spain, on the other hand, is resource-poor, but the land is suitable for growing wheat, grazing sheep, and raising pigs. In principle, its population should have been able to generate a food surplus to trade for those commodities which it did not have, such as metals. There would have been an advantage in concentrating the population into more centralized settlements, which would have left more land available, created a larger pool of workers, and provided a secure market area for early trading centres.

Demographic data is not easily obtained, and we do not generally know the population size, even within the *castros*. It may have been considerable: the 4-ha *castro* at La Hoya, Alava, for instance, is calculated as having a minimum population of around 2400 between the 5th and 4th centuries BC (Llanos, *Los Celtas en la Peninsula Ibérica* 110–13). Despite the difficulties, demographic studies are currently being undertaken on CELTIBERIA (Almagro-Gorbea, *Entre celtas e íberos* 45–60) and on the Vettones, another Celtic tribal group in Iberia (Álvarez-Sanchíz and Ruiz Zapatero, *Entre celtas e íberos* 61–75).

We are better informed about chronology, since Martín Almagro-Gorbea has made a synoptic analysis, supported by an extensive bibliography (*Castros y Oppida en Estremadura* 13–75). In his view, the use of *castros* is first seen towards the beginning of the Late Bronze Age, in the 12th century BC, and is then widely adopted, so that between the 9th and the 7th centuries *castros* are built throughout the entire area. He describes this as a 'proto-Celtic' phase, which is succeeded by three 'Celtic' phases, each lasting about two centuries. The 'proto-Celtic' phase coincides in time with cultural interaction with foreign traders, which had a cumulative effect upon the development of *castros*. There were also internal pressures and developments.

During the 7th and 6th centuries, which Almagro-Gorbea calls the 'initial Celtic' phase, the *castro*-dwellers lived mostly in circular houses, laid out in no apparent system; the people of the Meseta had access to imports from the 'Iberian' region (i.e. along the Mediterranean coast), including painted ceramics and specific metal artefacts such as double-spring fibulae, belt-hooks and short swords. In the 5th and 4th centuries BC the *castros* were fully developed with simple but formal planning, including at least a street system and rectangular houses. In this phase, too, there are large cremation cemeteries outside the walls of the Meseta *castros*, with deposited grave goods of ceramics, jewellery, and weapons. There are imports of artefacts from France and 'Iberian' Spain, and also of new techniques such as wheel-turned ceramics.

In the 'final Celtic' phase, from the 3rd century BC, some *castros* became genuine urban developments or oppida (sing. OPPIDUM), characterized not by size but by more elaborate street plans and by symbolic constructions such as public areas, ostentatious FORTIFICATIONS, or structures of a RITUAL function. The eastern oppida were increasingly exposed to Mediterranean influence and at this time acquired the use of writing, COINAGE, the rotary quern, and the fine-woolled sheep, probably brought in from Italy. This breed of sheep required shearing, as opposed to the coarser-woolled sheep, which was plucked at moulting-

Celts in the ancient Iberian Peninsula: wholly or partly Celtic place- and group names are shown in black (largely absent from the south-eastern quarter); the zone of the most densely distributed castros in the north-west is outlined in white, and the area of the historical Celtiberians (c. 100 BC) and Celtiberian linguistic evidence is outlined in black.

time (Pliny, *Natural History* 8.190–3). The status of wool is evidenced from the finds of sheep shears in the so-called 'warrior graves', i.e. those with weapons; at the 99-tomb cemetery of La Mercadera, Soria, shears were found in seven of the 43 weapon graves (Lorrio, *Necrópolis Celtibéricas* 41).

Almagro-Gorbea's chronological sequence is confirmed at La Hoya, which seems to have been continuously occupied for over a thousand years, from *c.* 1300 BC to *c.* 150 BC. Around 15% of the site has been excavated, and this has revealed three phases: firstly, a dispersed layout; then, closer-packed individual houses; and, finally, terraced housing with common partition walls (Llanos, *Poblamiento Celtiberico* 302–8). Both the houses and the outer walls show an increase in thickness and solidity over the period.

Despite some continuity of cultural practice at La Hoya, evidenced by infant burials within the houses during all phases, its economic basis changed over time. At first, there was a subsistence economy of pastoralism and hunting (still using flint); later, there was an increased emphasis on cereal growing and some development of manufacture (wheel-turned ceramics and bronze); later again, there is evidence for trade, and bronze was replaced by iron. The adjacent cremation cemetery can be correlated from its grave goods with the 5th/4th-century level of the *castro*, a time which shows some differentiation in wealth between households, at least in the ceramics inventory. Within the *castro*, at this time there are also indications of non-residential 'cultural spaces'. La Hoya never became an oppidum, but it shows the same trend

towards a more elaborately structured urban life.

Household studies are deficient for the whole region, but it seems that in all the *castros* of central Spain most houses were similar in construction techniques, and differed qualitatively from one another only in size and the quality of floor and wall-rendering. Most dwellings had a central hearth, a storage area and some sort of working area, particularly for weaving. House excavations frequently produce the clay loom weights typical of the European warp-weighted (vertical) loom, which seems to have been used for weaving both woollen and linen fabrics.

We have already noted that, from the 5th century BC onwards, quantities of weapons were buried as grave goods in the *castro* cemeteries. This interest in weapons cannot be disconnected from the presence of foreign armies close to the Celtic areas, since archaeology abundantly confirms the historical information about the involvement of Celtiberian mercenaries, working first for Greek colonies, then for both the Romans and the Carthaginians during the Punic Wars (Griffith, *Mercenaries of the Hellenistic World* chap. 8). This experience must have profoundly affected the lives of individuals and of society in general: the mercenariat enabled men who might have been landless to acquire wealth, status, and a knowledge of foreign ways. The Celtiberians were certainly quick to learn and experimented with weaponry and armour, as we can deduce from the sequence of archaeological finds. At first, they seem to have been interested in the European long sword, but they finally opted for shorter weapons—the La Tène 'antenna' dagger, the Mediterranean/Iberian short sword and the curved falcha (a single-edge curved sword like a machete); they also adopted the Italian 'jockey-cap' helmet (Stary, *Zur eisenzeitlichen Bewaffnung und Kampfesweise in Mittelitalien*; García-Mauriño Múzquiz, *Complutum* 4.95–146).

In the 1930s the finds of foreign artefacts led archaeologists such as Pedro Bosch-Gimpera to formulate an 'invasion hypothesis', whereby people moved across the Pyrenees into northern Spain, introducing both Celtic languages and social structures (PBA 26.25–148; Untermann, *Poblamiento Celtiberico* 18–20). This view was not actually examined during the period of intellectual stagnation under the Salazar and Franco regimes (1930s–1970s), and Bosch-Gimpera died in exile, without ever having the opportunity to re-examine his evidence. In the 1980s, however, the 'invasion hypothesis' was refuted, and it is no longer accepted by archaeologists (Ruiz Zapatero, *Poblamiento Celtiberico* 25–40).

§2. ethnicity

Roman-period sources provide the names of various people in the region, but such authors describe the 2nd and 1st centuries BC. There had undoubtedly been shifting boundaries and movements of people, particularly during the Punic Wars, with the result that the various territories were probably quite different in configuration from those of earlier centuries. Many impressive oppida are not mentioned in the texts, and the study of coins indicates that there were cities and people sufficiently important to have a mint, who are not otherwise recorded (Blanco García, *Los Celtas en la Peninsula Ibérica* 123). The texts themselves present numerous difficulties, as Capalvo has shown in relation to variant readings of Strabo's *Geography* (*Poblamiento Celtiberico* 455–70).

Despite these problems, most scholars agree on the following nomenclature: Galicians, Asturians, Cantabrians, and Basques (ancient Vascones) were all living in the areas which still bear their name in northern Spain. Of these, only the Galicians are likely to have spoken a form of Celtic as their principal language. Their territory extended as far south as the northern bank of the Duero/Douro river. In the west, south of the Duero, there was an ill-defined group of people collectively known as the Lusitanians, whose fragmentary linguistic remains indicate that they spoke an Indo-European language similar to Celtic, but retaining Indo-European *p* and, therefore, not falling within the usual defining features of the Celtic languages (see lusitanian). To their east were the Vettones (approximately the Spanish Extremadura, Ávila, and Salamanca provinces) and the Carpetani (approximately the Toledo and Madrid provinces). To their north, along the middle Duero, were the Vaccaei (approximately the Palencia and Valladolid provinces). Further east, from Segovia to Soria, along the upper reaches of the Duero through to the Ebro as far east as Zaragoza, and south to the Teruel and Guadalajara provinces were the Celtiberians, made up of several subgroups who are linguistically and historically the best-documented of all of the Celts of Iberia (Lorrio, *Los Celtíberos*; Burillo Mozota et al.,

Celtíberos). Roman sources also mention the Celtici, located in southern Portugal and around the river Guadiana. While some scholars consider these to be a genuinely 'Celtic' people (e.g. Pérez Vilatela, *Lusitania* 105–203), De Hoz suggests that the name is a late one (*Los celtas* 359–60). The evidence from archaeology is ambiguous and, on the whole, does not support any early settlement of 'Celtic' people in the south-west (Fabião, *Entre celtas e íberos* 227–46).

§3. CELTIBERIAN EPIGRAPHY

The Celtiberian INSCRIPTIONS and dedications are an invaluable source of information on social, political, and religious matters. As noted earlier, writing was introduced sometime in the 3rd century BC. The script is broadly adapted from Iberian (De Hoz, *Actas de la reunión sobre epigrafía hispánica de época romano-republicana* 49–54), and is used in a variety of contexts, from graffiti on ceramics through to large formal texts, as on the bronze plaques from Contrebia Belaisca, now BOTORRITA (Eska, *Towards an Interpretation of the Hispano-Celtic Inscription of Botorrita*; Beltrán et al., *El tercer bronce de Botorrita*). All the inscriptions refer to males. They are normally described by name and patronymic, and often by the name of the people (or city) to which they belong. De Hoz (*Celtíberos* 150) gives the example of the Contrebia bronze hand-shaped 'hospitality token', now in Paris, which reads:

LUBÓS ALISOKUM AUALO KE KONTEBIAS BELAISKAS

> Lubos, of the Alisokos, son of Aualos, of Contrebia Belaisca (Almagro-Gorbea, *Celts* 391).

Although the Celtiberian wars have been the principal focus of research (see NUMANTIA), linguists have been studying the epigraphic material since the 1890s, and archaeologists have been excavating Celtiberian sites for over two centuries. Since the 1980s there has been a positive explosion of archaeological work, re-analysing older excavations as well as conducting new surveys.

§4. GALICIANS

The Roman province of *Callaecia*, also *Gallaecia*, which designated both Spanish Galicia and Portugal north of the Douro, has a good claim to be considered at least partly 'Celtic'. Scholars have noted possibly non-Celtic elements in divinity names such as *Bandua*, *Arantio*, or *Naeva* (De Hoz, *Los celtas* 373), but many personal names are of Celtic type. De Hoz's most recent assessment is that 'the north-west should not be considered a Celtic zone as a whole, but only as a territory in which there are Celtic enclaves' (*Entre celtas e íberos* 85). Archaeologically, Galicia shares the *castro*-settlement type, as noted above, but it is idiosyncratic in its use of monumental stone sculpture and architectural decorative carving, as at SANFINS.

Galicia had abundant deposits of gold and was therefore of considerable interest to the Romans. Regrettably, we do not have the sections of POLYBIUS which dealt with 'the gold and silver mines of Spain' (*History* 3.57), but there are useful descriptions by Pliny the Elder, which are confirmed by archaeology (*Natural History* 33.66–78; see Bird, *Papers in Iberian Archaeology* 341–63; Domergue, *Catalogue des mines et des fonderies antiques de la Péninsule Ibérique* 482–94). The many fine gold pieces recovered from *castros* in Gallaecia are distinctive in style and suggest a specific cultural usage (Raddatz, *Die Schatzfunde der Iberischen Halbinsel* 172–97). Pre-Roman Galician gold work is particularly notable for its 'orientalizing' techniques, which ultimately derive from the culture of Tartessos, near Gibraltar, or from the Phoenician and Greek colonies of southern Iberia (Pingel, *Die vorgeschichtlichen Goldfunde der iberischen Halbinsel*; Fernández Goméz, *Orfebrería Prerromana*).

Strabo has little to say about Gallaecia, and his *Geography* used material collected principally by POSIDONIUS and, to a lesser extent, by Polybius (Lasserre, *Géographie* 2.xxviii–xxxix). He believed that the people 'all live the same way' (3.3.7), but this view is contradicted in Tranoy's meticulous study of the epigraphy and archaeology (*La Galice romaine*).

Aedeen Cremin

The **Iberians**, Greek Ἴβηρες *Ibēres*, Latin *Hibēres*, were a non-Indo-European (and, therefore, non-Celtic) people who lived in ancient Spain, along the Mediterranean coast in the east, near the lower river Ebro, ancient Ἴβηρος, *Hibērus*, from which they were probably named. As well as isolated Iberian proper names in Greek and Roman accounts, several short inscriptions survive in the semi-syllabic Iberian script, largely inspired by the Phoenician alphabet, which had penetrated the western Mediterranean via Carthage. The Iberian writing system was essentially the same as that used for the neighbouring Celtic language, Celtiberian (see also scripts). Some ancient writers regarded the Celtiberians as a mixture of Celts and Iberians (see celtiberia), and it is likely that the Celtiberian language had been influenced by contact with Iberian, as may also have been the case with a second ancient Indo-European language, Lusitanian, spoken in parts of what are now Portugal and western Spain. Archaeology reveals numerous cultural contacts between these languages' respective areas during the pre-Roman Iron Age. In Celtic studies, the idea of a pre-Celtic Iberian substratum, not just in Spain, but also in Gaul, Britain, and Ireland (Ériu), was once common. This is suggested partly by the statement of Tacitus (*Agricola* 11) that the Silures of what is now south Wales (Cymru) were of Spanish origin, partly by now defunct racial theories, mistaken etymologies of Hibernia (Ireland) and, more substantially, on the basis of syntactic and phonetic peculiarities of the Insular Celtic languages, setting them apart from Indo-European typologically and possibly pointing to the influence of some earlier language (see hamito-semitic hypothesis). Thus, the idea that the Iberians had been the pre-Celtic people *par excellence* achieved popular currency and some imaginative literary responses, such as R. Williams Parry's poem *Yr Iberiad* (The Iberian), in which he attributed to this ancient inherited strain in the Welsh character a special closeness to nature. However, the original extent and importance of the Iberians has perhaps been exaggerated because—settled on the coast nearest Greece and Rome—their name was extended early on to the whole Hispanic peninsula as Iberia (Greek Ἰβηρία, Latin *Hibēria*), and too little is known of their language to reach conclusions regarding its possible impact as a substratum. No certain relationship has yet been established between Iberian and any other known language, not even the other attested non-Indo-European languages of the region, such as the ancient Tartessian of southernmost Spain and the surviving Basque of the north-east and Berber of Morocco. Nor is it clear whether Iberian was a single language with dialects or a group of languages. Although the Iberian script was deciphered by Gómez-Moreno in 1949, the inscriptions identified as Iberian are still poorly understood.

JTK, PEB

The **Iceni** were an Iron Age tribe native to what is now eastern England. The tribe is first attested historically at the time of the Roman invasion of AD 43, but numismatic evidence suggests the existence of a distinct tribal grouping in the area from *c.* 65 BC. The Iceni are not overtly referred to by Julius Caesar with regard to his sorties in Britain of 55–54 BC. However,

one tribal group mentioned as living north of the Thames, the Cenimagni, may be the same people (John Davies, *Land of the Iceni* 14–43). By AD 50 the Iceni were under the control of Rome, though they retained the nominal title of independent allies until the death of king Prāstotagos, at which time harsh enforcement of 'provincialization' by the Roman forces sparked off the famous revolt of AD 60/61 under Prāstotagos's widow, Boudīca.

Although exact estimates of the territory of the Iceni differ somewhat (see Martin, *Land of the Iceni* 82), it clearly included what is now Norfolk, northern Suffolk and part of east Cambridgeshire. Cunliffe considers the Iceni to be one of the tribes of the 'south-eastern core' under his system of classification (*Iron Age Communities in Britain*). While the Iron Age archaeology of East Anglia shares, to some extent, the 'core' features of Continental influence in areas such as socio-political structure, COINAGE issue and ceramic technology, the region also clearly possessed a strong individual identity expressed through the material remains.

In terms of settlement, the territory of the Iceni lies outside the main area of OPPIDUM construction in England (see Cunliffe, *Iron Age Britain* fig. 3). No large defended settlements have yet been excavated, though several candidates exist. The capital of the CIVITAS of the Iceni under Roman rule, *Venta Icenorum*, was situated at Caistor St Edmund, a little to the south of Norwich, and it seems likely that an important pre-Roman settlement existed here. While no Iron Age buildings have yet been uncovered at this site, numerous Iron Age artefacts—including La Téne fibulae, terrets, and coinage—have been recovered. Another significant site yet unexcavated is Woodcock Hill, Saham Toney, situated at a river fording point where a large hoard of Icenian coinage was recovered. Iron Age ENCLOSURES of probable religious significance have been investigated at Snettisham, where several spectacular hoards of TORCS were recovered, and at Fisson Way, Thetford.

A notable aspect of the culture of the Iceni appears to have been the extent of hoarding and expenditure of conspicuous wealth by the social élite. The above-mentioned site at Snettisham, with over 175 complete and fragmentary torcs of gold and electrum, illustrates this point well, as do other rich hoards of torcs from Bawsey and North Creake (Sealey, *Proc. Prehistoric Society* 45.165–78). Hoards of elaborate horse trappings, such as that from Westhall, also occur with unusual frequency in this region.

In contrast to the striking proclamation of identity expressed in the hoard evidence, the coinage of the Iceni tended to follow patterns set by neighbouring tribes, with the style of their gold issue dependent on that of the Trinovantes/Catuvellauni to the south and their silver strongly influenced by the Corieltauvi to the west. The Iron Age pottery sequence in Norfolk bears some distinctive characteristics (Percival, *Land of the Iceni* 173–84). Decorated bowls are absent, as are any significant quantities of 'Belgic' wares in the 1st century BC (see BELGAE). The influence of the Aylesford-Swarling culture (named from type sites in Kent) is, however, found in the form and decoration of native handmade pottery, which continued to be produced well into the 2nd century AD.

Icknield Way (Old English *Iccenhilde weg*), the English name for the ancient road running from Norfolk to Dorset, probably preserves the tribal name.

SÓF

Ida son of Eoppa (r. 547–559) is recorded as the first Anglian king of Brynaich in north Britain. He is mentioned in the Anglo-Saxon Chronicle (AD 547) and in Beda's *Historia Ecclesiastica* (5.24) as the founder of the dynasty to which Æthelfrith, Oswald, Oswydd, Alchfrith, Ecgfrith, and Flann Fína mac Ossu/Aldfrith belonged. In Ida's day, his fledgling dynasty's control was probably limited to present-day coastal Northumberland, around the sea-girt strongholds of Bamburgh and Lindisfarne. Both the 9th-century Welsh Latin Historia Brittonum and early English sources say that Ida built the fort at Bamburgh (known as Din Guairoi in the Welsh sources and Dún Guaire in Old Irish). Ida is relevant to Celtic studies in that he is mentioned in the North British section of *Historia Brittonum* as an opponent in warfare against kings of the northern Britons,

and is said there to have been a contemporary of Maelgwn Gwynedd and of five poets, including Taliesin and Aneirin, who were then famous in Brythonic poetry (see also cynfeirdd). Since Ida is closely datable, he provides a historical anchor for several undated events and historical figures on the Celtic side for a period in which there are few dated events. Although most of his dynasty bore Germanic names, it has been suggested that the name *Ida* is related to Old Welsh *iud*, Modern *udd* 'chief, lord', also common as a personal name element, which is itself probably derived from Latin *jūdex* 'judge' and had come to be used as a title for post-Roman rulers in former lands of the Western Empire.

Idwal ab Anarawd or Idwal Foel ('the Bald'), son of Anarawd ap Rhodri Mawr, was king of Gwynedd between 916 and 942. The known events of his turbulent career provide some political context to the 10th-century prophetic poem Armes Prydein (The great prophecy of Britain). Idwal paid homage to the West Saxon king Edward the Elder in 918, together with Hywel Dda and Hywel's brother, Clydog. Idwal maintained close relations with the West Saxon court during the reign of Æthelstan, whom he visited several times between 928 and 937. Later, relations between Gwynedd and Wessex deteriorated, and Idwal died fighting them in 942. His sons Iago (see iago ab idwal foel) and Ieuaf were expelled when Gwynedd was annexed by Hywel Dda. The name *Idwal*, Old Welsh *Itgual*, is a compound of OW *iud* 'chief' probably from Latin *iūdex* and the native Celtic element *-walos*.

Illiam Dhone Rebellion

In 1651 William Christian (1608–63) led a rising of the people of the Isle of Man (Ellan Vannin) in defiance of their hereditary overlord, the Earl of Derby. When the Derby family regained possession of the island following the restoration of the English monarchy in 1660, Christian was arrested, found guilty of treason and shot by a firing squad. He thus acquired the popular status of martyr, as well as the soubriquet in the Manx language, Illiam Dhone ('Brown-haired William'). Although Christian's leadership of the rising of 1651 is well documented, doubts remain about his character and motives, and it is uncertain whether he was universally respected as a patriotic hero by his contemporaries.

William Christian was the third son of one of the richest and most powerful Manxmen of the period, Ewan Christian (1579–1656), who was deemster (he held the traditional Manx office of judge) of the northern part of the island from 1605 until his death. Ewan led the resistance to the changes to the system of land tenure in Man, which were pressed by James Stanley (later 7th Earl of Derby) from the 1620s onwards and which represented a major threat to the fabric of Manx society. Ewan's cousin, Edward Christian (†1661), was also an influential figure in Manx politics, being appointed Governor by Stanley in 1628, but then imprisoned in 1643 for having himself led an insurrection. The Manx were increasingly resentful of the anachronistic feudalism of their relationship to the

Stanley family, which would be accentuated by events in the British Civil Wars of 1642–51.

Stanley became 7th Earl of Derby in 1642, and was an unbending supporter of the Royalist cause. Following military reverses in 1644, most of his property on the mainland was sequestered (taken over by Parliamentary forces), and he was compelled to live in the Isle of Man for the next seven years. His presence, together with that of his family, other exiled Royalists, retainers and troops, increased the burden on the Manx, especially when famine threatened in 1649. The Manx were also deeply concerned about the threat posed to themselves by the Earl's inflexible loyalty: they would have been aware of Cromwell's massacres in eastern Ireland (Éire) at Drogheda and Wexford (Loch Garman) in 1649. William Christian was, by this time, a valued officer of the Earl's staff, having been appointed Receiver-general as well as captain of the island's militia. When the Earl left the island in August 1651 to join Prince Charles (Charles II), he entrusted to Christian the safety of both the island and his family. But, as news filtered through of Cromwell's victory at the battle of Worcester on 3 September (followed by the Earl's capture, and eventual execution), the Manx decided to make a move. When the English invasion fleet anchored in Ramsey Bay at the end of October it was obvious that the only sensible option was to ignore the continuing intransigence of the Countess of Derby and to capitulate, which the Manx—led by Christian—duly did.

Christian continued as Receiver-general under the new Lord of Man, Thomas Fairfax, and was appointed Governor in 1656. He appears, however, to have been high-handed and harsh towards his fellow Manx and, on two occasions, he was also charged with embezzlement. He was eventually dismissed from office in 1658, and in 1659 he slipped away to England, where he seems to have continued to be politically active and may have manoeuvred to try to prevent the restoration of the Earls of Derby as Lords of Man in 1660. Whatever he attempted, he failed, and it is said that he spent some time in Fleet Prison. Having been apparently freed without charge, he returned to the island in 1661, believing that he was protected by the general amnesty issued earlier by King Charles II. Just over a year later—and the reason for the delay is not clear—he was arrested by Charles, 8th Earl of Derby. The trial was of dubious legality and the Earl was subsequently censured by the Privy Council. This was, however, too late to save Christian, who was executed at Hango Hill near Castletown on 2 January 1663.

William Jeffcoate

Illtud, St, is well attested in Breton and Welsh HAGIOGRAPHY (e.g. the Life of Leonorus, and the Breton *vita* of GILDAS), where he is presented as a figure of religious authority and great learning. Importantly, 'Eltutus' appears in the oldest of the Brythonic Latin saints' lives, the 7th- or 8th-century first Life of SAMSON. There, he is described in detail as a wise and highly educated man, a disciple of, and ordained *presbyter* (priest) by, St GERMANUS, and Samson's teacher. The Life of St Brioc confirms that Illtud was a fellow-disciple, with Brioc, of Germanus. According to the 9th-century Life of PAUL AURELIAN by Uurmonoc, Illtud taught Paul, David (DEWI SANT), Gildas, and Samson. If reliable, these details would place Illtud's career in the 5th century, possibly beginning in GAUL, though we should remember that Germanus visited BRITAIN twice, the first time *c.* 429. More than 20 places in Wales (CYMRU) and several more in Brittany (BREIZH) are under Illtud's patronage and/or take their names from him. It has also been conjectured that Illtud's name (recorded in many variant spellings) might explain the dedication of 'St Aldate' churches at Gloucester and Oxford. In the 9th-century HISTORIA BRITTONUM, Illtud is attributed a miraculous altar in Gower (Gŵyr). In the saints' lives, he is repeatedly connected with the regions of DYFED and Glamorgan (MORGANNWG) in south Wales, as well as Brittany, called both *Brittannia* (*Ulterior*) and *Letavia* and, more specifically, with a hermitage on *insula Piro*, i.e. Ynys Bŷr (Caldy Island) in the Bristol Channel, and the important monastery bearing his name, Llanilltud Fawr (rather unfortunately Anglicized Llantwit Major). The

latter had been the site of a large Romano-British villa, and thus provides a significant example of a centre of Roman civilization continuing as a focus of post-Roman Christianity and learning. The place is mentioned many times in the Book of Llandaf, where its Old Welsh name is given as *Lann-Iltut*. An inscription on stone, now in the church at Llanilltud, has been dated both to the 10th century and more probably to the 7th, and names an Iltutus as well as a Samson. However, since these names recurred in the Brythonic world in the early Middle Ages, the inscription is better understood as evidence for a tradition centred on this place, rather than referring specifically to the 5th-/6th-century saints. A surviving Life of Illtud—possibly written by, or reworked by, Caradog of Llancarfan—describes him as an Armorican cleric who took service with 'Poulentus, king of Glamorgan', but this detail appears to be an adaptation of a story about St Cadoc and Paul of Penychen, a cantref of Glamorgan. There is a passing reference to Arthur—said to be Illtud's cousin—and the king's magnificent court (see arthur in the saints' lives), as well as several stories concerning Illtud's dealings with a king of Glamorgan with the common early Welsh name *Meirchiaun* (from Latin *Marcianus*). Illtud's name is Celtic, deriving from **Elu-toutos* '[the man] of many tribes'. His feast-day is 6 November.

Imbas forosnai (from *Old Irish imb-fhiuss/imb-fhess* 'encompassing knowledge' + *for·osna* 'lights [up], kindles'; hence, 'encompassing knowledge which enlightens') was one of the three supernatural skills from which poets derived their special high status in early Ireland (Ériu); for other such powers, see satire. In practice, it allegedly enabled the poet to foresee future events and describe them in poetic form. The most complete description of how the power of *imbas forosnai* could be evoked is found in Sanas Chormaic ('Cormac's Glossary'), the oldest part of which has been ascribed to the bishop-king Cormac ua Cuilennáin (†908). According to the glossary, the poet would chew a piece of the raw flesh of a pig, dog, or cat, offer the produce to the gods, then put two palms around his cheeks and fall asleep. In his dream, future events would be revealed to him (Stokes, *Trans. Philological Society* 1891/4.156–7; Meyer, *Sanas Cormaic* 64; Chadwick, *Scottish Gaelic Studies* 4.98–100). There are several examples of *imbas forosnai* being practised in Irish literature (Meyer, *Anecdota from Irish Manuscripts* 5.28; O'Rahilly, *Táin Bó Cúailnge* 2–4), particularly in the Finn Cycle (Meyer, RC 5.194–204; Meyer RC 25.344–9; see fiannaíocht). *Imbas forosnai* is even mentioned in an important collection of early Irish legal tracts called Senchas Már (The great tradition; *c.* AD 800), where it is described as one of two magic skills (*forṅ-osnai imbos*) used by the *filid* (poets) to reveal hidden things (Thurneysen, ZCP 16.175–9). The collection also includes an account of how the legendary hero Finn mac Cumaill crushed his thumb in the door to a síd (fairy mount) and henceforth was able to foresee the future by sucking his thumb (Meyer, RC 25.348–9).

Imbolc (1 February) is the least understood of the Old Irish quarter days. It is associated with the feast-day of St Brigit (*Féil Lá Bríde*) and with Candlemas

(2 February). Sanas Chormaic ('Cormac's Glossary') gives the name as *oí-melg* 'ewe-milk', but this seems to be a folk etymology. In contemporary Ireland (Éire) the day is understood to be the first day of spring. A hedgehog emerging from its hole was interpreted as a weather omen, a possible origin of the American Groundhog Day. In some areas, work which required wheels was forbidden on St Brigit's Day. A common ritual associated with the day was the making of a diamond-shaped cross (*cros Bríde* or *bogha Bríde*) of straw, rushes, or wood. An 18th-century poem attributes the crosses with protecting the house from fire, and this belief is still current. Many other beliefs and traditions associated with St Brigit are also practised on this day.

AM

Immram Brain maic Febail (The voyage of Bran son of Febal) is the earliest extant voyage tale (*immram*, pl. IMMRAMA) in Irish, possibly dating to the 7th or 8th century. It consists of two poems of 28 stanzas each, together with introductory, linking, and final prose passages. The first poem is uttered by an Otherworld woman to Bran mac Febail. She invites him to her paradisal island, a land without sickness or death. Supported by four legs, the island is called Emnae (cf. Emain Ablach, a poetic name for the Isle of Man) or Tír inna mBan (The land of [the] women), and is surrounded by many other wonderful islands. The woman foretells the birth of Christ and the power of his kingdom.

On his voyage, Bran meets the sea-god Manannán mac Lir driving a chariot across the sea. To Manannán, the sea is a flowery plain. He recites another poem to Bran describing his country as a 'plain of delights' (*Mag Mell*). Original sin has not come to this land and the people enjoy a life of innocent sexual pleasure and general contentment (Mac Cana, *Ériu* 27.95–115). Manannán predicts the Fall, and prophesies both the coming of Christ and the birth of his son, Mongán mac Fiachnai.

Bran and his companions reach their destination and remain there for many years, though it seemed to be only one year. On their return, one of the crew turns to ashes on touching Irish soil. Bran relates the story of his voyage, writes it down in ogam and sails away again.

Immram Brain contains a tantalizing amalgam of traditional and Christian elements. A clear parallel is drawn between the Incarnation and the birth of Mongán. James Carney considered it to be a Christian allegory showing Man in general, and Mongán in particular, as seekers after paradise, possibly written in commemoration of the historical east Ulster king Mongán mac Fiachnai, who died *c.* AD 625 (Carney, *Latin Script and Letters* 193).

Immrama (sing. *immram*), meaning 'voyages', occurs in the medieval Irish TALE LISTS as one of the native categories of narratives. As discussed notably by Dumville, this category is closely related to, and overlaps somewhat with, the ECHTRAI or 'adventures'. The voyage is generally to the Otherworld or to a series of fantastic otherworldly places. Extant *immrama* include *Immram Curaig Maíle Dúin* (The voyage of Mael Dúin's coracle) and Immram Brain *maic Febail* (The voyage of Bran son of Febal), and the Hiberno-Latin 'Voyage of St Brendan' (Navigatio Sancti Brendani) is also indebted to the native genre. The main discussion of this tale type is contained in the article on VOYAGE LITERATURE. The word *immram* is in origin a noun derived from the Old Irish compound verb *imb·rá*, *imm·rá* 'rows around'.

Imtheachta Aeniasa (The wanderings of Aeneas) is the Irish prose adaptation, thought to date from the early 12th century, of the *Aeneid* of Vergil (70–19 bc). *Imtheachta Aeniasa* has survived in three 14th-/15th-century manuscripts, in the context of other texts which deal with events in classical antiquity (see trojan legends). These manuscripts form an incipient cycle, and this arrangement provides a vital clue to their redactors' interests—the provision of historical information about the period in the form of prose narratives. The Vergilian source is thoroughly reworked following Irish stylistic and narrative conventions. An important structural change is the addition of a prologue and an epilogue. The prologue is based on the 5th-century Latin prose text intended to be taken as a translation of the contemporary account of the destruction of Troy ascribed to Dares Phrygius (cf. ystorya dared); it sets out the reasons for the banishment and exile of Aeneas in the context of Greek history. Aeneas's later account of his travels at the court of Queen Dido in Carthage, which follows Vergil, is retained, and contradicts the prologue's version in important details; *ordo naturalis* (natural order) is thus only imperfectly restored. The epilogue places the travels of Aeneas in the context of Roman history, and asserts that not only Roman rulers but all the rulers of the world descend from Aeneas. The prologue and epilogue are further indications of the historiographical perspective of the Irish adaptation.

In Cath Catharda (The civil war) is a Middle Irish translation of *Bellum Civile*, Lucan's epic poem about the power struggle between Caesar and Pompey. One of the longest Middle Irish prose tales (6167 lines), it was evidently popular, and became an influential model for native chronicles, such as *Cogadh Gaedhel re Gallaibh* ('The War of the Gaedhil with the Gail') and *Caithréim Thoirdhealbhaigh* (The triumphs of Turlough).

Like the Irish Alexander chronicle (Scéla Alaxandair), *In Cath Catharda* is prefaced by an enumeration of world empires taken from Isidore. The Irish compiler also drew on the Christian historiographers Orosius (*fl.* early 5th century) and Beda. He frequently incorporated explanatory glosses from a Latin commentary on Lucan into his Irish text. *In Cath Catharda* is probably the most effective of the classical adaptations, and certainly the most 'native', in the sense of being adapted to Irish literary tastes. The translator successfully cuts, expands and restructures the Latin text. The central battle of *Pharsalia* is greatly expanded, while Books 8–10, dealing with the aftermath of the battle, have been cut. Lucan's difficult and allusive poetry is rendered into clear and rhythmic prose, characterized by abundant use of native motifs and formulas.

Indo-European is a related group (or 'family') of languages spread over large parts of Asia and most of Europe. By modern colonization, it has also been carried over to the Americas, Australia, and parts of Africa. It comprises a dozen major branches and several ill-defined minor languages or sub-groups (see map). The term 'Indo-European' or 'Proto-Indo-European' also refers to the common ancestral language, spoken in later prehistory, from which the attested members of the family descend. That there is such a family and that its members have a common ancestor are facts established by the branch of linguistic sciences known

as the 'historical comparative method'. The essential principle is that languages which show extensive and systematic resemblances (in their vocabulary, their sound systems, and grammars) must have developed from what was once a single language (with one vocabulary, sound system, and grammar). This common language was necessarily the cultural property of a community which existed at a particular time and in a territory sufficiently compact and undivided for its people to have functioned as a linguistic community, that is, to stay in contact with one another. The principle with Proto-Indo-European and the Indo-European languages is essentially the same as that with Latin and the ROMANCE LANGUAGES of today (French, Italian, Portuguese, Spanish, Romanian, &c.). However, in the case of Latin, we know that it was the language of ancient Rome, that it spread with the military expansion of the Roman Empire, and then broke up into local vernaculars in Europe after the Empire disintegrated. In the case of Indo-European, the common ancestor belonged to a much earlier horizon, before documentary records, and a process more or less analogous to that of the ebb and flow of Latin with the Roman Empire can only be inferred.

Celtic is one of the twelve branches of Indo-European. Therefore, all the individual Celtic languages are also Indo-European languages. Using the model of a human family, we may think of the CELTIC LANGUAGES as being more closely related to one another: for example, IRISH and WELSH would be siblings. But a Celtic language would be more distantly related to a non-Celtic Indo-European language: for example, Irish and Hindi would be cousins, but neither is related to Hungarian or Tamil. Much more distant relationships beyond the Indo-European family have been proposed, but are not universally accepted.

§1. THE INDO-EUROPEAN BRANCHES OR 'SUB-FAMILIES'

The following list of Indo-European languages is arranged according to the earliest appearance of documentary records:

1. The Anatolian languages are first attested with some proper names and technical terms in Assyrian texts of the 20th century BC. No language of the Anatolian group survives today. Hittite is the best known Anatolian language. At present, around 25,000 clay tablets in the Hittite language have been recovered, datable to the time-span *c.* 1570–*c.* 1220 BC and written in the cuneiform script. Other Anatolian languages are Palaic, Luwian, Lycian, Lydian, Carian, Sidetic, and Pisidian. All were spoken in what is now Asiatic Turkey (see GALATIAN for the Celtic language in the same geographical region).

2. Greek is attested from the 14th century BC, the period of the Mycenaean and Minoan civilizations of the Aegean Late Bronze Age. In the earliest Greek texts, the syllabic script called Linear B was used, but the knowledge of this script was lost with the demise of the Mycenaean civilization. From *c.* 800 BC texts using the Greek alphabet appear. A diversity of ancient dialects gave way first to the predominance of Attic Greek (the dialect of Athens). From the 4th century BC onwards, the so-called *Koinē* became the usual form of Greek in use throughout Greece itself and the extensive lands which had come under Greek influence following the conquests of ALEXANDER THE GREAT (356–323 BC) and Greek colonies in the Mediterranean. In late antiquity, a distinctive Byzantine Greek emerges (the predominant language of the Eastern Roman Empire), from which Modern Greek has developed.

3.–4. The Indo-Iranian (formerly called Aryan) languages comprise two major groups:

3. Indic (or Indo-Aryan), and

4. Iranian,

as well as the minor third group of Nuristani languages from the Hindu Kush mountains in north-eastern Afghanistan, only discovered in the 19th century.

The oldest forms of Indic and Iranian are so close to each other that they might be regarded as dialects. Their common ancestor, Proto-Indo-Iranian, can be reconstructed almost completely through the evidence of early religious poetry. First indirectly attested in some personal names and horse-chariot terminology from the Mitanni kingdom in present-day northern Syria *c.* 1400 BC, Indo-Aryan languages are spoken up to the present day. There is a vast body of literature; the earliest relied on oral composition and transmission, later written in various indigenous SCRIPTS and the Arabic script. Surviving literature in Old Indic or Sanskrit begins *c.* 1000 BC (or even earlier; the exact date cannot be determined with certainty since the oldest literature was strictly oral). The earlier stage is called 'Vedic' (from *c.* 1000 BC to *c.* 500 BC), while the

later stage is called 'Classical Sanskrit' (from *c.* 500 BC; it very soon became a standard learned language, comparable in status to Latin in Europe during the Middle Ages). The Middle Indic languages (Pālī and the literary languages termed 'Prākrits') begin *c.* 500 BC, and the Modern Indic languages begin to appear *c.* AD 1000. These include Hindi, Urdu, Bengali, Marathi, Gujarati, Singhalese, and Nepali, and also the Romani dialects of the gypsies, which were spoken widely over the Near East, Europe, and in parts of the New World.

The oldest extant documents of Iranian (on contemporary media) are the INSCRIPTIONS of the Achaemenid Empire, the dynasty of Cyrus, Darius, and Xerxes. This language is termed Old Persian and belongs to the period *c.* 520–*c.* 330 BC. However, parts of the holy book of the Zoroastrians, the *Avesta*, may be more than 500 years older, though it survives only in later copies; the language in this book is called Avestan. The third Old Iranian language, Median, is only attested in a few words. The Middle Iranian languages (Parthian, Middle Persian, Sogdian, Bactrian, Chwarezmian, Khotanese, &c.) were all spoken in south-western and central Asia. During the first millennium AD, Middle Iranian lost ground to the expansion of Turkish-speaking tribes. Most prominent among the Modern Iranian languages is Modern Persian (or Farsi; dialects are Dari, Tajiki), but other languages continue to flourish, including Pashto in Afghanistan, Baluchi in south-west Pakistan, Kurdish, and Ossetic (in the Caucasus).

5. The Italic languages fall into two larger subgroups—Latino-Faliscan and Sabellic (e.g. Osco-Umbrian and Southern Picene)—and individual languages, such as Venetic. Latin, the language of Rome, is attested from the 6th century BC onwards. Its direct offsprings continue vigorously today in the Romance sub-family (see above). All other Italic languages died out in the first centuries AD or earlier.

6. Celtic is attested almost as early as Italic (see CELTIC LANGUAGES).

7. The oldest documents of Germanic are runic inscriptions of the 2nd century AD. North Germanic (Scandinavian, with the exclusion of Finnish) and West Germanic (Anglo-Saxon or English, Frisian, Dutch, and German) live on. Modern English is thus a Germanic language. East Germanic (which included Gothic, Burgundian, and Vandal) died out in the early Middle Ages, with the exception of Crimean Gothic, which may have lived on till the 16th century.

8. Armenian is well attested from the 5th century AD; both Eastern Armenian and Western Armenian (now dispersed outside its homeland in eastern Turkey) are living languages.

9. Tocharian is attested in two dialects: East Tocharian and West Tocharian, or Tocharian A and Tocharian B. It was spoken in central Asia, in what is currently Xinjiang (Sinkiang) province, China. The documents found belong mostly to the 6th–9th centuries AD. Tocharian was replaced by Turkic dialects during the period of expansion of Turkic and Mongol political power. It has many features which parallel the Western Indo-European language groups Italic, Celtic, and Germanic.

10. The first attested form of Slavic is Old Church Slavonic, in which we have records from the 9th century AD. Old Church Slavonic was originally the dialect of the Slavs of Thessalonika (Saloniki) in Greece. There are three sub-groups of Slavic languages: East Slavonic (Russian, Ukrainian, Belorussian), South Slavonic (Bulgarian, Macedonian, Serbo-Croatian, Slovenian), and West Slavonic (Polish, Czech, Slovakian, Sorbian, and some extinct minor dialects in Germany and Poland).

11. The Baltic languages were first written in the 16th century. The western Baltic language, Old Prussian, from former eastern Prussia, died out in the 18th century. The eastern Baltic languages, Lithuanian and Latvian, were, for political reasons, rarely written before the 20th century. Baltic shows numerous shared features with Slavic, and therefore 'Balto-Slavic' is often considered to be a single sub-branch of Indo-European.

12. Albanian is attested from the 15th century onwards; the two major dialects today are Geg (in Kosovo and northern Albania) and Tosk (in southern Albania, and in enclaves in Greece and Italy).

There are also several minor branches of Indo-European. These branches are called 'minor', because there are very few texts or even words attested from each of them. They are:

Phrygian: known from a few hundred inscriptions from central Turkey. Old Phrygian is attested from the 8th–4th centuries BC, and Late Phrygian from the 2nd and 3rd centuries AD.

Macedonian (not to be confused with the modern Slavic language of the same name): known from a few

Approximate distribution of the major Indo-European branches or sub-families at their earliest attestations

glosses and proper names from present-day northern Greece. It seems to be closely related to nearby Greek.

Thracian: originally spoken in present-day Bulgaria and southern Romania and known from two inscriptions and some glosses from the classical period, proper names, and loanwords from Thracian into Romanian.

Dacian: known from some glosses in classical writers, and from personal names and place-names in their original territory of present-day Romania. It might be linguistically close to Thracian, but there is insufficient data to prove this.

Illyrian: known from some glosses in Greek authors, and from personal names and place-names in their original territory in the north-western Balkans.

Messapic: known from a few hundred inscriptions, dating from the 5th–1st centuries BC, which were found in southern Italy. This might be a variant of Illyrian.

Finally, Lusitanian.

§2. Reconstructing Proto-Indo-European

The existence of the Indo-European language family was already presumed by the first Europeans who learned Sanskrit, and anticipated by linguists of the 18th century. Sir William Jones (1746–94), a judge in India during British rule and an expert on Indian languages, clearly articulated the theory of the common ancestry of Sanskrit, Greek, and Latin. (A non-Welsh-speaking Welshman, *Cymro di-Gymraeg*, Jones was introduced to the King of France by the British ambassador as, 'a man who can speak all languages but his own'.) The theory was proven only in 1816 by Franz Bopp's demonstration that the grammatical structure of verbal flexion (as used, for example, to express the tense and person) was practically identical in Sanskrit, Greek, Latin, and Gothic. Bopp proved that all the variations observed over time in one language, or at any given time between contemporary dialects or languages, are due to the effects of systematic changes in the sound patterns or analogy, or to contacts with other languages. Since then further research has elucidated the principal details of the history of the whole group, and reconstructed the common ancestor, Proto-Indo-European. The workings of the Indo-European sound system are now understood in great detail. The morphology (that is, such features as the personal and case forms of the verb and changes in the endings of the noun to express different grammatical functions) is known to a high degree, and

much of the Proto-Indo-European vocabulary can be reconstructed with confidence. Basic patterns of Indo-European word order are implied by similarities in the early attested languages. Similarities in poetic formulae or stock phrases among such early texts as the Greek *Iliad*, the Vedic hymns, and Hittite religious formulae bring us to the threshold of recovering fragments of Proto-Indo-European traditional oral poetry.

Other aspects of Indo-European remain topics of scholarly debate and require further research, for example, the degree of relatedness between the branches, including possible intermediary common ancestors such as Balto-Slavic (see above), Italo-Celtic, and Greco-Armenian. There are also various ideas about the historical evolution of common Indo-European itself through historical (actually pre-historical) stages.

§3. MORPHOLOGY

Indo-European is highly inflectional, and the grammatical elements (morphemes) usually express several functions at once. On the basis of the vocabulary of reconstructed Proto-Indo-European, we can gain an insight into the culture of the people who spoke it. Unfortunately, the disciplines of archaeology and historical linguistics have tended to develop independently, and the procedure of bringing disciplines together to form a composite picture remains in its infancy. It is especially difficult since the Proto-Indo-European homeland has yet to be located with certainty in time and space. The original geographical nucleus was possibly quite small, may well have moved over a period of generations or centuries, and must then have expanded relatively rapidly to account for the wide geographic range of the early languages. Some scholars favour a date for Proto-Indo-European in the 3rd millennium BC, while others believe that the branches must already have separated by *c.* 3000 BC. The speed of linguistic change is unpredictable, and can vary tremendously between two neighbouring languages, or even within one single language. It is known that social change often precipitates linguistic change, but linguistic science cannot yet predict the rate and nature of those linguistic changes. Migration and substantial influence from other languages will also have effects. For example, English and Afrikaans have developed inflectional systems which are simpler than those of their relatives in the Germanic group. We may thus think of them as having changed their basic grammatical type, and becoming languages in which considerably less information is expressed by inflection.

Fame, hospitality, and truth are pivotal for Indo-European ethics, as shown by the concord of early poetry in the early Indo-European branches. Celtic shares this heritage fully. But, as we see from anthropology, comparative religion, and comparative literature, these values are not confined to peoples who speak Indo-European languages.

§4. PHONOLOGY

Proto-Indo-European had three distinct sets of consonants similar in sound to English *k* and (hard) *g*. In the 'palatal' set, the top of the tongue was placed further forward to the top of the mouth, on the hard palate. In the 'velar' set, the tongue was further back on the velum or soft palate. The difference can be felt by noting the different position of the tongue in the initial consonant of English palatal *keel* vs. velar *call*, or palatal *geese* vs. velar *gause.*

A subgroup of Indo-European languages in the west, including Celtic, turned the IE palatals to velars. These are called *centum* languages, from the Latin word for 'hundred', pronounced */kentum/* in classical times, with an initial velar for an IE palatal; compare Welsh *cant* (also with *k-*), Irish *céad* 'hundred'. The *centum* group contrasts with a *satem* group (mostly in the east of the Indo-European geographical range), named from the Old Iranian word for 'hundred'. In the *satem* group the IE palatals have remained distinct from the velars.

Proto-Indo-European also had a series of voiced aspirated consonants: b^h, d^h, g'^h, g^h, and g^{wh} (similar to English *sub<u>bh</u>uman*, *a<u>dh</u>ere*, *pig<u>h</u>eaded*, *log<u>h</u>ouse*, *egg-<u>wh</u>ite*).

Inniu (Today; March 1943–August 1984) was initially a monthly and then, from 1945, a weekly newspaper in

Irish. It was established by Glún na Buaidhe (The victorious generation), an offshoot of the Gaelic League (Conradh na Gaeilge). Aimed primarily at Irish speakers outside the Gaeltacht, its subject matter included national and international events, sport, features on literature, film, music, and a page for schools.

Innti (In it/her) was originally a poetry broadsheet produced by students at University College, Cork (Coláiste na hOllscoile, Corcaigh), with the first issue, edited by Michael Davitt, appearing in 1970. Its aim was to publish new poetry in the Irish language, and its contributors, to date, have included all the major poets writing in Irish, for example Seán Ó Ríordáin, Máirtín Ó Direáin, Máire Mhac an tSaoi, Nuala Ní Dhomhnaill, Michael Davitt, Colm Breathnach, Louis de Paor, Liam Ó Muirthile, Biddy Jenkinson, and Cathal Ó Searcaigh. Some of these had their first poems published in *Innti*. Poetry reviews, and interviews with well-known poets, including Eoghan Ó Tuairisc, Somhairle MacGill-Eain (Sorley Maclean), and Seán Ó Tuama appeared in later issues. The most recent issue, *Innti* 15, appeared in 1996.

inscriptions in the Celtic world [1] ancient

§1. introduction

One of the widespread misconceptions concerning early Celtic culture is that it was almost entirely non-literate. But, surprisingly, the Celtic epigraphic record begins *c.* 575 BC, nearly as early as that of Rome. This mistaken view has probably arisen as an over-generalization of Caesar's statement that druids could spend up to 20 years memorizing their sacred knowledge and that it was not permitted to be written down (*De Bello Gallico* 6.14). Yet, in the very same passage, Caesar tells us that Greek characters were used in virtually all other aspects of everyday life, both public and private (he uses the adverb *fere*), and the fact that Diodorus Siculus reports that the Celts of Transalpine Gaul would sometimes throw letters into funeral pyres so that the deceased might read them (5.28) certainly suggests a significant degree of literacy in part, at least, of the ancient Celtic world. This is also implied by the fact that the two Latin-Cisalpine Celtic bilingual inscriptions from Todi (RIG 2/1, *E–5 = S–142) employ Roman characters to write the Latin texts, but native Etruscoid characters to write the Celtic texts (see scripts). This is an indication that a sufficient degree of literacy existed to care about utilizing the proper script for each language.

It is no surprise that it is exclusively epigraphic documents (i.e. inscribed texts) which have survived the ravages of time. This article will summarize, by geographic region, the types of texts which are now attested.

§2. the iberian peninsula

The majority of Hispano-Celtic (also known as Celtiberian) inscriptions are engraved in a Celtic adaptation of the semi-moraic (often termed 'syllabic') and semi-segmental (i.e. alphabetic) Iberian script (see iberian peninsula; iberians). A minority of later-attested inscriptions are engraved in Roman characters. While it is difficult to date any individual inscription with precision, it appears that none can be dated earlier than *c.* 180 BC and probably none later than the end of the 1st century AD.

The best known of the Hispano-Celtic inscriptions are the three texts engraved on bronze tablets from Botorrita (ancient Contrebia Belaisca), *c.* 20 km to the south-west of modern-day Zaragoza. The most interesting of the three inscriptions is Botorrita I, which has 125 words of connected text on its front surface (face A) and 61 words on its reverse (face B). While it is now generally agreed that the text on face B is a list of 14 names in the Celtiberian onomastic formula (Motta, *Annali dell Dipartimento di Studi del Mondo Classico . . . di Napoli* 2.99–123), the content of the text on face A remains much in dispute. It has been

proposed that it is a *lex sacra* (sacred law) (e.g. Eichner, *Erlanger Gedenkfeier für Johann Kaspar Zeuss* 9–56; Meid, *Die erste Botorrita-Inschrift*) or a *lex municipalis* (municipal law) (Eska, *Towards an Interpretation of the Hispano-Celtic Inscription of Botorrita*), or, more recently, a legal proclamation involving several communities concerning technical aspects regarding the development of an irrigation system (Bayer, *Veleia* 16.109–35). With regard to the last, it is worth noting here that the Botorrita II inscription (also known as the Tabula Contrebiensis), a Latin inscription which bears the date 15 May 87 BC, is a court decision concerning the right of way for an irrigation system.

The Botorrita III inscription is introduced by a sentence of 11 words engraved over two lines. Below the heading, in smaller characters, are four columns of text: the first three 60 lines in length, the last 40 lines. These contain 537 words, many at the ends of lines abbreviated, the very large majority of which are onomastic forms; while most of these are of Celtic origin, some are Latin, Iberian, or Greek.

The Botorrita IV inscription is a fragment of a larger text, engraved on both faces of the bronze tablet. It contains 26 complete forms and 25 or more additional forms which are fragmentary or damaged engraved over 10 lines on face A and eight on face B. It seems probable that its text belongs to a legal proclamation, much like Botorrita I.

The most common type of inscription in the Hispano-Celtic corpus is the *tessera hospitalis*, a type of document which functioned as evidence of a pact between two parties, typically, an individual or family group and a community. Such texts vary from being composed of a single word to the 26 words of the inscription from Luzaga (Untermann, *Monumenta Linguarum Hispanicarum* K.6.1). They indicate the individual or family group and/or community participating in the pact and, occasionally, words which explicitly signify that the object upon which the inscription is engraved functioned as a *tessera hospitalis*.

There is only one example of a funerary inscription in the Hispano-Celtic corpus. It was discovered on the island of Ibiza, and is composed of the name of the deceased in the Celtiberian onomastic formula: *TiŕTanoś aPuloCum leTonTunoś Ce PeliCioś* (Untermann, *Monumenta Linguarum Hispanicarum* K.16.1) 'Tridanos of the Abulocoi, son of Letondu, a Beligian'. (The Celtiberian script characteristically does not distinguish between the sound *p* vs. *b*, *k* vs. *g*, and *t* vs. *d*; therefore, modern Celtic scholars conventionally use upper-case *P* for the ambiguous *p*/*b* character, *K* for *k*/*g*, and *T* for *t*/*d*.)

At the site of PEÑALBA DE VILLASTAR (Untermann, *Monumenta Linguarum Hispanicarum* K.3), which appears to have been a place of religious pilgrimage, several inscriptions in Roman characters (as well as a few in Iberian characters) have been discovered. The best known, and longest, of these contains 19 words in two compound sentences and appears to involve, at least in part, a dedication to the pan-Celtic deity LUGUS (Untermann, *Monumenta Linguarum Hispanicarum* K.3.3). The other inscriptions at the site are much shorter and mostly made up of names, one of which is labelled as VIROS VERAMOS (K.3.18) 'highest man'; perhaps it is a political title.

Finally, we may note that there are a significant number of legends on COINAGE and a small number of inscriptions on various types of ceramic wares and loom weights, as well as a single one on a spindle whorl. The coin legends typically bear the name of the community where they were struck, either in nominal or adjectival form, the others the name of a family group.

Ceramic tile with a Gaulish text inscribed in Roman cursive script found in 1997 at Châteaubleau, Seine-et-Marne, France

§3. TRANSALPINE GAUL

Transalpine Celtic inscriptions are attested engraved in Greek capitals of the type used in MASSALIA (Marseille) and both Roman capitals and cursive, frequently in *scriptio continua* (linked characters). The epigraphic tradition began *c.* 225 BC in Greek characters exclusively, Roman characters becoming common after CAESAR's conquest (i.e. after *c.* 50 BC), and the use of Greek characters ceasing by *c.* AD 50. It is difficult to know when the epigraphic tradition elapsed, but it would not be unreasonable to date some inscriptions as late as the 3rd century AD; Plumergat (Pluvergad) in Brittany (BREIZH) might be as late as the 4th.

The most significant inscriptions are three lengthy texts engraved in Roman cursive from CHAMALIÈRES (Puy-de-Dôme), LARZAC (Aveyron), and Châteaubleau (Seine-et-Marne), in order of discovery. The Chamalières inscription is composed of 64 words engraved in *scriptio continua* on a thin lead sheet which was deposited in a sacred spring. Although there is much agreement about the general segmentation of the text (though not concerning all the word divisions) and many details of interpretation, the large amount of scholarship which it has attracted has not resulted in consensus regarding the genre to which it belongs. Opinions range from a curse—hence, a malevolent text (e.g. Lambert, *La langue gauloise* 150–9)—to a charm (e.g. Meid, *Gaulish Inscriptions* 38–40)—hence, a benevolent text—to, most recently, a text to be employed during an initiation ritual (Eska, *Indo-European Perspectives* 33–59).

The Larzac inscription is engraved on both sides of two lead plaques which were deposited in a tomb.

It contains over 160 words in two hands in *scriptio continua*, some of which have been damaged at the edges of the plaques; consequently, the text cannot be read continuously. This inscription has not received as much attention as the Chamalières inscription, and its interpretation, unsurprisingly, has not been far advanced. At this point, it appears that it may record the imprecations of female magicians. There is some reason to believe that the text contains some Latinisms.

The Châteaubleau inscription is engraved on a ceramic tile and contains *c.* 90 words in *scriptio continua*. It was only recently discovered, in a rubbish pit, and therefore has not received much attention as yet, though it has been suggested that it is a legal document. (Other inscriptions from Châteaubleau engraved on tiles are discussed by Lambert, ÉC 34.117–33.)

Apart from these lengthy texts, one of the most common types of inscriptions from Transalpine Gaul, in which a verb often occurs, is the dedicatory inscription. Among these is a series of 12 inscriptions, engraved in Greek characters, which are built around the core verbal expression ΔΕΔΕ ΒΡΑΤΟΥ ΔΕΚΑΝΤΕΜ/Ν *dede bratu dekantem/n* 'dedicated the tithe in gratitude' (Lejeune, *Studies in Greek, Italic and Indo-European Linguistics* 135–51; Szemerényi, KZ 88.246–86). These inscriptions normally included the name of the person making the dedications in the nominative and the name of the divine recipient(s) in an inflected dative ending. Another series of 13 inscriptions contains the preterite (simple past tense) verb which occurs in the third-person singular as IEVRV, ειωρου, and which probably means something similar to 'dedicated' (its etymology remains in dispute). These inscriptions usually provide the name(s) of the person(s) making the dedication in the nominative, often the name of the divine recipient with an inflected dative ending and, sometimes, the name of the object dedicated in the accusative (Lejeune, *Recherches de linguistique* 110–8). Some dedicatory inscriptions employ other verbs, e.g. the inscription from Bourges (Cher) has 3rd singular preterite LEGASIT 'placed', and an inscription from Argenton-sur-Creuse (Indre) has *readdas* 'gave', while others do not have an overt verb at all. One of the latter, from Villelaure (RIG 1, *G–154), known only from modern transcriptions, appears to be constructed in the passive voice: ΟΥΑΤΙΟΟΥΝΟΥΙ ΣΟ ΝΕΜΕΤΟΣ ΚΟΜΜΟΥ ΕΣΚΕΓΓΙΛΟΥ *Uatiounui so nemetos Kommu Eskengilu* 'To U. this holy (thing was dedicated) by K. E.' (Prosdocimi, ZCP 43.199–206; see also NEMETON).

One of the most interesting Transalpine Celtic texts is the calendar of COLIGNY (Ain), which dates from the late second century AD. It contains roughly 60 words, often highly abbreviated, on 150 fragments (which form less than half of the original). These remains allow us to reconstruct a period of five years of 12 months each, plus two intercalary (inter-year) months. The months are divided into halves of 14 or 15 days. A small number of fragments belonging to a similar calendar from Villards d'Héria (Jura) have also been discovered.

A discrete body of inscriptions from the 1st- and 2nd-century AD ceramic factory at La Graufesenque (Aveyron) provide an interesting record of Transalpine Celtic and Latin in close contact. These graffiti are particularly important because they furnish us with a complete set of the names of the ordinal numerals from 'first' to 'tenth', as discussed in the article on GAULISH.

A variety of lesser types of Celtic inscriptions are also known from Transalpine Gaul, including propriety engravings which usually list only the name of the owner of the object (though one from Les Pennes-Mirabeau (RIG 1, G–13), εσκεγγολατι ανια/τει/ος ιμμι *Eskengolati ania/tei/os immi* 'I am the plate(?) of E.', is an *iscrizione parlante* (inscription which speaks [from the point of view of inscribed object]), various kinds of inscriptions which express various human sentiments concerning affection or sexual desire (Lambert, *La langue gauloise* 122–8; Meid, *Gallisch oder Lateinisch* 13–25), and drinking (Eska, BBCS 39.16–23), as well as over 300 coin legends. One other particularly noteworthy inscription from Lezoux (Puy-de-Dôm), engraved upon a large fragment of a ceramic plate, is composed of 48 words over 11 lines of cursive script. Thus far, interpretations have suggested that the text concerns eating (Fleuriot, ÉC 17.127–44), forms a collection of moral maxims (Meid, *Anzeiger de philosophisch-historischen Klasse* 123.45–8), or is comprised of a series of statements about battle (McCone, *Die grösseren altkeltischen Sprachdenkmäler* 107–17).

§4. CISALPINE GAUL

There are about 150 Cisalpine Celtic inscriptions and they are almost exclusively engraved in the Lugano script, one of many which were derived from the northern variety of the Etruscan script. The one exception to this rule is the inscription from Voltino (Piemonte), which is engraved partly in Roman characters and partly in the Sondrio script, another Etruscoid script. As in the Celtiberian script, SCRIPTS of the Etruscan type characteristically do not distinguish between the sound *p* vs. *b*, *k* vs. *g*, and *t* vs. *d*; therefore, modern Celtic scholars conventionally use upper-case *P* for the ambiguous *p/b* character, *K* for *k/g*, and *T* for *t/d*. Of the total of 150 Cisalpine inscriptions, there are about 140 'LEPONTIC' inscriptions, and these are attested from *c.* 575 BC to the end of the first millennium BC, while the eight 'Cisalpine Gaulish' inscriptions probably date from *c.* 150–*c.* 50 BC.

Most Cisalpine Celtic inscriptions are of the proprietary or funerary type. The proprietary inscriptions are typically composed of the name of the owner of the object which bears the engraving, either in the nominative case (the usual subject form) or the genitive case (the usual possessive form). Some in the nominative are accompanied by the owner's patronymic (a special form derived from the father's name).

Funerary inscriptions are engraved on stone slabs or pillars, or, more commonly, on funeral vases. They typically provide the name of the deceased in the nominative case, though the dative and genitive also occur. (An inscription from Oderzo [*Od 7], previously identified as being in the non-Celtic Venetic language, engraved in a combination of characters from the Atestine Venetic and Lugano scripts, *padros pompeteguaios kaialoiso*, has now been shown actually to be another Cisalpine Celtic funerary inscription [Eska & Wallace, *Historische Sprachforschung* 112.122–36].) A subset of these, usually engraved on large monuments, bear the word *Pala*, evidently a word for 'memorial stone' or something of the sort, preceded by the name of the deceased, usually accompanied by his/her patronymic, in the dative case, e.g. *slaniai uerKalai Pala* (S–3) 'the Pala-stone of S. daughter of U'.

Some funerary inscriptions are of greater length. An inscription from Carcegna (S–122) provides not only the name of the deceased in the dative case, but also the names of the two dedicants, evidently his daughter and wife, in the nominative: *meTelui maeśilalui uenia meTeliKna aśmina KrasaniKna* 'U. daughter of M. (and) A. daughter of K. for M. son of M.' An inscription from Vergiate (S–119) is noteworthy because it contains two verbal sequences and the accusative (direct object form) singular *Palam*, which is otherwise attested only in the nominative case (see above): *PelKui Pruiam Teu KariTe iśos KaliTe Palam* 'T. put(?) the *Pruia for Belgos; he raised the Pala-stone'. It thus appears that two funerary operations are described, probably the situating of the tomb and the raising of the memorial stone. These two operations are perhaps inclusively denoted in the third person singular preterite verb *KarniTu* (third plural *KarniTus*) in two longer 'Cisalpine Gaulish' inscriptions. The inscription from San Bernardino di Briona (RIG 2/1, E–1 = S–140) lists five dedicatees as the subject of its plural verb, but not the deceased by name, unless he is indicated by *TaKos TouTas /dagos toutās/* 'TaKos of the tribe', perhaps a political title, which is engraved from bottom to top along the left edge of the stone. The two Latin-Cisalpine Celtic bilingual inscriptions from TODI (RIG 2/1, *E–5 = S–142) translate *KarniTu* with both third person singular LOCAVIT 'situate' and STATVIT 'erect'.

The last of the longer funerary inscriptions is from Voltino and is interesting because the names of the deceased, evidently a married couple, are Latinized and

engraved in Roman characters (except that an Etruscoid character is employed to represent the *tau Gallicum* sound (see CONTINENTAL CELTIC), which evidently could not be straightforwardly represented by Roman characters, while the Celtic text on the monument is constructed as an *inscrizione parlante*: TETVMUS SEXTI DVGIAVA SAŚADIS *tomedeclai obalda natina* 'T. son of S. (and) D. daughter of S. (are buried here, or an implicit idea to that effect); O., their dear daughter, set me up'. Note that the roots of the Cisalpine Celtic *KariTe* in the Vergiate inscription discussed above and *to- -declai* at Voltino are both found in Old IRISH, namely *do·cuirethar* and *ro·lá*, respectively, both belonging to the verb to 'put', a verb which forms its tenses and moods with more than one root in the manner of English *go* and *went*.

There are two dedicatory inscriptions from Cisalpine Gaul. An inscription from Prestino (S–65), *uvamoKozis Plialequ uvlTiauioPos ariuonePos siTeś TeTu* 'U. B. gave *siTeś* to U. A.', is built around the third singular preterite verb *TeTu* /*dedu*/ 'gave', which is cognate with Transalpine Celtic *dede* discussed above. The second inscription is from Ornavasso (S–128) and does not contain a verb: *laTumarui saPsuTai Pe uinom naśom* 'wine of Naxos [a Greek island] for L. and S.'

Finally, we may note that several coin legends are known, which bear 17 forms in total.

§5. OTHER LOCALES

There are a few inscriptions attested elsewhere in Europe which testify to the widespread geographic dispersal of the ancient Celts, as well as the extent of literacy among them. The most interesting of these are what appear to be two curse tablets discovered at Aquae Sulis (modern BATH) in ancient BRITAIN. Their texts are set out by Tomlin, BBCS 34.18–25, but have, so far, resisted interpretation (not altogether a surprise, given the genre). There are also 260 coin legends with 61 forms attested in ancient Britain (De Bernardo Stempel, ZCP 44.36–55).

Finally, we can also note that ancient Celtic inscriptions have been discovered in the BALKANS (e.g. Eichner et al., *Arheološki vestnik* 45.131–41). A very interesting form from this area is *olloso*, which appears to be the word 'all' with enclitic definite article (Eichner's idea, as noted by Watkins, *Studia Celtica et Indogermanica* 540). According to Calvert Watkins, it 'might be the earliest manifestation of the Balkan areal feature of postposed article' (i.e. 'the' following its noun or pronominal, a distinctive feature of the languages of the Balkans today).

Joseph Eska

inscriptions in the Celtic world [2] early medieval

There are perhaps as many as 1500 early medieval inscriptions surviving from Celtic-speaking regions, with the total increasing every year through archaeological excavation and chance discovery. The majority are carved on public stone monuments, but more than a handful of non-lapidary inscriptions are also extant, ranging from formal texts on deluxe metalwork to informal texts on domestic implements and graffiti. In general, the texts are short and of little literary interest, though there are a few extended or even metrical inscriptions from Wales (CYMRU). As early witnesses, uncontaminated by later scribal revision, inscriptions are of vital importance to the linguist. Their interest to the historian can scarcely be over-emphasized, illuminating, as they do, many aspects of contemporary culture and society, including patterns of ecclesiastical patronage, land ownership, and the reception and dissemination of artistic and intellectual influences.

Those texts consisting of more than a simple personal name are in Latin and/or the vernacular, with

The pink granite stone 167 cm above-ground height from Langombrac'h, Morbihan, Brittany, with the early medieval inscription: **Crox Brit[. .] et mulier[is] Drilego, [fi]li Conb[ri]ti. Hoc opi[s e]orum quicumque ligauirit** *'the cross of Brit(ou), son of Conbritus and of his wife Drilego. Whoever shall read this work of theirs, (pray for their souls)'*

marked regional variation in the preference for one over the other. In Ireland (Ériu), Latin inscriptions are very rare; yet, among the many in Wales there is only one in the vernacular, at Tywyn, Merioneth (sir Feirionnydd). In Scotland (Alba), there are examples of both, with a preference for the vernacular, especially after the 7th century. The majority of inscriptions employ forms of the roman alphabet, though over a quarter of the extant total are written in the ogam alphabet. Around 50 inscriptions in western Britain use both. The occasional appearance of Celtic personal names in the Scandinavian runic inscriptions of the British Isles suggests that at least a few Celtic speakers were literate in runes.

Following more or less immediately from the Roman tradition of inscriptions on stone in use within the

civil and military zones of Roman Britain, the earliest post-Roman inscriptions date from the 5th and 6th centuries and are carved on undressed pillars, sometimes re-used menhirs (prehistoric standing-stone monuments), prominently situated in the landscape. The texts are often written vertically rather than horizontally, and record individual personal names—most often male—in the genitive case. They tend to have a patronymic or tribal affiliation. This class of monument includes more than 300 'orthodox' ogam pillars of Ireland and Irish colonies in Britain, as well as the smaller numbers of capital-letter Latin inscriptions of southern Scotland, Brittany (BREIZH), Wales, and DUMNONIA. While several of these inscribed stones are explicitly funerary in purpose, it is clear that some performed additional or separate functions. Their physical location implies that one such rôle was to claim ownership of land. In formal terms, the parallels with PICTISH symbol stones are strong, and there may be a case for including them in this category of 'individual inscribed memorials'. Artistic and epigraphic influence from GAUL is reflected in many ecclesiastical inscriptions in this early period.

The 7th century marks something of a watershed in Celtic epigraphic traditions. Thereafter, individual memorials are rare, and inscriptions are commonly to be found on dressed slabs or crosses in a church or graveyard setting. The simplest of these is the remarkable series of several hundred Irish monastic grave-slabs, incised with a single name and a cross. Only a small minority of the many free-standing crosses and upright cross-slabs of the period are inscribed. Those which do incorporate texts commemorate the patrons of these major Christian monuments, and a very few record grants of land. There are also a small number of scriptural texts and invocations. While never a straightforward indicator of the level or extent of literacy, inscriptions provide important information regarding contemporary attitudes to the written word. Continued use of a non-roman script (ogam) begs comparison with the runic tradition, and the prominence given to the vernacular is in striking contrast to other areas of early medieval Europe. The only later medieval inscriptions from a Celtic-speaking region to be the subject of a detailed study are the important collection of monuments in the west HIGHLANDS and Islands of Scotland, produced during the cultural effloresence of the LORDSHIP OF THE ISLES (Steer & Bannerman).

Institiúid Ard-Léinn Bhaile Átha Cliath

(Dublin Institute for Advanced Studies; DIAS) is an academic research institution located in the heart of Dublin city (BAILE ÁTHA CLIATH). It is made up of two schools dedicated to research and publication in the fields of CELTIC STUDIES and cosmic physics. DIAS was founded in 1940 under the auspices of the Irish President Eamon DE VALERA by an act of Dáil Éireann (Irish parliament). The School of Celtic Studies, which continued the work begun by the School of Irish Learning (see Kuno MEYER, R. I. BEST), employs several full-time permanent members of academic staff, and also regularly awards research scholarships to promising young scholars. Its library contains an exceptional collection of books and manuscript microfilms and represents the most comprehensive research facility for the study of the IRISH language, literature, and manuscripts, as well as other branches of Celtic studies.

The School of Celtic Studies is a participant in the Irish Script on Screen (ISOS) project, which, in cooperation with the National Library of Ireland (LEABHARLANN NÁISIÚNTA NA HÉIREANN), the Royal Irish Academy (ACADAMH RÍOGA NA HÉIREANN) and Trinity College, Dublin, produces digital versions of Irish manuscripts in order to make them more widely available to the public. The project is hosted by the School of Computer Applications, Dublin City University and can be accessed at http://www.isos.dcu.ie/.

A well-known academic publishing house, DIAS also produces a large number of books from all areas of Celtic studies, the journal CELTICA and an annual newsletter.

PSH

Insular Celtic is used to refer to the CELTIC LANGUAGES and other types of cultural phenomena which are termed Celtic as they developed and emerged in Ireland (ÉRIU) and BRITAIN. For example, the term 'insular Celtic ART' is sometimes used to mean the distinctive LA TÈNE-derived forms of Ireland and Britain in the IRON AGE, as well as aspects of their continuity into the early Middle Ages.

The Insular Celtic languages consist of two major families: (1) GOIDELIC, manifested in the ancient period as the Primitive Irish of the OGAM inscriptions, the ancestor of the medieval and modern languages IRISH, SCOTTISH GAELIC, and MANX; (2) BRYTHONIC, attested fragmentarily in the later pre-Roman Iron Age and Roman period as the language called Old British or (as in this Encyclopedia) simply BRITISH, the ancestor of the living languages WELSH and BRETON, the revived CORNISH, and the extinct CUMBRIC. Most of the evidence favours placing PICTISH also among the Brythonic languages.

As languages which took shape in Britain and Ireland, the Scottish Gaelic of Canada and the Welsh of PATAGONIA are to be counted as Insular Celtic, even though these groups have now been outside the British Isles for generations (see CELTIC LANGUAGES IN NORTH AMERICA). At a greater time depth, Breton is classed as Insular Celtic rather than CONTINENTAL CELTIC, even though the home of the language and culture has been the European mainland for some 1500 years. Although FALC'HUN argued that the Breton language was an evolved form of GAULISH, most scholars believe that the ancestor of Breton speech was brought from Britain (as the name would imply) by the historically documented BRETON MIGRATIONS in the early post-Roman period.

Some scholars (e.g. Cowgill, Greene, McCone) have argued that Insular Celtic was in fact a unified prehistoric proto-language, like INDO-EUROPEAN or PROTO-CELTIC. The case, however, is difficult to assess. The most striking parallelisms between Goidelic and Brythonic—beyond sharing the generally Celtic peculiarities of systematic changes affecting the Indo-European sound system and common vocabulary—are matters of syntax, the sentence-initial verb, for example. This Insular Celtic syntactic evidence is entirely medieval and modern and, therefore, cannot be easily compared with that of the ancient Continental Celtic languages, which did not survive to produce medieval evidence and for which there is limited syntactic evidence of any sort. On the other hand, the case for a common post-Proto-Celtic ancestor of British and Gaulish, usually called GALLO-BRITTONIC, would be mutually exclusive with the possibility of a genetic Insular Celtic (see Schmidt, *Proc. 7th International Congress of Celtic Studies* 199–221; Koch, *Bretagne et pays celtiques* 471–95.). A third possibility is that there was neither an isolated Insular Celtic nor a Gallo-Brittonic proto-language, but rather a continuum of separating dialects in contact and incompletely sharing various linguistic innovations arising from various local centres, which then spread by trade and social interaction.

'Insular Neo-Celtic' is a useful shorthand in encapsulating a number of facts. Of the several ancient Celtic languages, only Brythonic and Goidelic survived into the medieval and modern periods, at which time this Insular group were the only Celtic languages to develop extensive written literatures; they also shared in these periods such characteristic parallel developments as systematic losses of syllables and weakening of consonants. Thus, one may usefully consider a multifaceted 'Insular Neo-Celtic phenomenon', to whatever extent this phenomenon is the result of some combination of shared inheritance, centuries of contact within close geographic proximity, or possible substratum effects from PRE-CELTIC PEOPLES of prehistoric Ireland and Britain.

Interpretatio romana (Roman interpretation) is a Latin term used in Celtic studies to refer to widespread related phenomena in which a pre-Christian Celtic god was identified in ancient times, in one way or another, with one or more Roman god. It is thus one of the most important factors affecting how ancient evidence for Celtic religion is to be understood. The most usual types of identification include dedications in which the Roman and Celtic divine names are paired up, as name and epithet, or—with or without the Roman divine name—the Celtic divine name is accompanied by the Roman iconography most often associated with a particular god. The reverse is also possible, that is, Celtic features in the representation accompanied by a Roman divine name. In some cases the equation can be inferred from incomplete evidence; for example, we may lack the Celtic name for the god, but the representation or its context is partly non-classical and implies cultural hybrydization. In one regard at least, the term *interpretatio romana* is too narrow and potentially misleading: many of the gods and textual sources involved are in fact Greek, particularly in the evidence relating to the eastern Celtic area and other Hellenized areas, such as the hinterland of Massalia; thus, the term *interpretatio graeca* might, at times, be more strictly accurate. In this connection, we should bear in mind that the Roman religious system had already been largely assimilated into that of the Greeks by the era of the expansion of the Empire into Celtic territory and that some Roman divinities—such as Hercules and Apollo—had been taken over from the Greeks. At a deeper level, this Graeco-Roman syncretism is relevant in that it reflects a long-standing mind-set whereby classical thought sought to harmonize alien polytheistic systems with its own. We should remember that, for a believer in Graeco-Roman polytheism writing to an audience of believers and describing Celtic religion—in no doubt that there actually was a Jupiter, Mercury (Mercurius), and Mars—it would not have been a matter of impartially recording details like a modern anthropologist, but rather of determining to which of the various very real gods the alien Celtic names and unfamiliar cult practices referred. This mentality lay at the core of the genius of cultural assimilation which made the Roman Empire possible. For modern Celtic scholars, such classical tendencies have created the potential pitfall of making pre-Roman Celtic and Graeco-Roman religions appear more similar than they in fact had been to begin with. Another complicating factor for understanding Celtic religion on the basis of evidence from the Roman period is the common Indo-European heritage of the Romans, Greeks, and Celts. Thus, Celtic religion had been partly classicized through cultural contact, but also partly resembled Graeco-Roman religion in the first place, owing to a common inheritance.

Further general discussions of *interpretatio romana* (and *interpretatio graeca*) are found in this Encyclopedia at Greek and Roman accounts §9 and religious beliefs §2. Specific instances of this phenomenon are covered in several entries as summarized below. For the equation of Gallo-Brittonic Belatucadros with Mars, see Adriatic. Belenos is often equated with Apollo. For the identification of Belisama (?Brightest) and Minerva, see also Vaison-la-Romaine. A native god named Cosus was equated with Mars in Galicia. Grannus is frequently found as the Gallo-Roman byname of Apollo. For the identification of the Celtic Lugus and Roman Mercurius, see also Arverni; Caesar; Lleu; religious beliefs §2. For the identification of Gaulish Moccus (god of pigs) with Mercurius, see boar. Romano-British Nōdons is once equated with Mars. Greek Heracles, Roman Hercules was identified iconographically with the Gaulish god of eloquence Ogmios and possibly also with the British giant cut into the hillside at Cerne Abbas (cf. also glanon); Hercules also figures in a foundation legend as the father of Galates, progenitor and namesake of the Gauls. In the case of the Celtic goddess Rosmerta, she sometimes appears with Roman Mercurius as her consort. Diverse identifications for a single Celtic god are common: thus, Borvo, a god of springs, was often equated with Apollo, but at least once with Hercules. The well-attested Romano-British Cocidius is equated most often with Mars, but also with the Roman god of the woods Silvanus,

and the Celtic Toutatis (i.e. TEUTATES) and once with the otherwise unknown Celtic Vernostonus. SŪLIS, the goddess of the spring at BATH, is identified with the Roman Minerva and possibly also the Celtic NEMETONA (Goddess of sacred privilege; see also NEMETON), who was also worshipped on the site and had similar attributes. Sūlis Minerva's consort was LOUCETIOS (God of lightning) Mars. The Celtic Teutates (God of the tribe) is found equated with Roman Mars and Mercurius, as well as the Graeco-Roman Apollo and the Celtic Cocidius. In the story of the Galatian heroine CAMMA, there is an added dimension to *interpretatio graeca*: not only was she the high priestess of the goddess identified with Artemis, but was also in some sense the Graeco-Celtic goddess's human representative. Similarly, Queen CARTIMANDUA's rank and power can be partly explained in terms of the cult of the Romano-British Brigantia in her territory, where this divine name is a minimal Latinization of the native **Brigantī* (see BRIGIT), tribal goddess of the BRIGANTES.

Iolo Goch was a Welsh poet who flourished during the years 1345–97. The epithet *Coch* (red) referred to the colour of his hair. His family were freemen who held land in the vale of Clwyd, most of which they lost at the time of the Edwardian conquest (see LLYWELYN AP GRUFFUDD; RHUDDLAN). He seems to have been educated as a chorister, probably at the cathedral church of St ASAPH (Llanelwy), and he received patronage from churchmen of that diocese throughout his life. He also had powerful patrons throughout Wales (CYMRU), such as the Penmynydd family in Anglesey (MÔN), Sir Hywel ap Gruffudd, constable of Cricieth castle, and Sir Rhys ap Gruffudd of Carmarthenshire (sir Gaerfyrddin). It may have been in support of Sir Rhys's military recruitment that he sang in praise of King Edward III around 1350. One of his poems describes a bardic circuit which extended across the country from the north-east to the south-west, one of the few pieces of concrete evidence for what is believed to have been common practice. Iolo is best known for his association with OWAIN GLYNDŴR, whose court at Sycharth he memorably described, but it is likely that he died before Glyndŵr's uprising in 1400.

Iolo Goch's most significant contribution to the Welsh poetic tradition was his development of the CYWYDD, already popularized by the love poetry of his older contemporary DAFYDD AP GWILYM, as a medium for traditional praise poetry, including much of the language and imagery of the court poets of GWYNEDD. He was a serious commentator on current affairs, as seen in his long poem on Sir Roger Mortimer's Irish campaign and his claim to the English throne in the 1390s. His apparently radical celebration of the virtues of the humble ploughman was in fact deeply conservative in its concern for social stability in the interests of the landowning class, and it was probably a direct response to the Peasants' Revolt of 1381.

The most recent edition of Iolo Goch's work contains 39 poems, though there is a substantial body of apocrypha attributed to him in the manuscripts and debate continues over the authenticity of a few poems. His output was varied, and in addition to the main body of eulogy and elegy he was one of the pioneers of the poem requesting or giving thanks for a gift, and also composed religious poetry, love lyrics (including the only *cywydd* in the Red Book of Hergest [LLYFR COCH HERGEST]), and vituperative bardic SATIRES, both humorous and deadly serious, two of them directed against a Franciscan friar. His most powerful poems are his elegies, such as that to his cousin Ithel ap Robert, which contains an impressive description of his funeral procession.

Ipf and Goldberg were the centres of an IRON AGE group of settlements, located close to each other at the western edge of the Nördlinger Ries in southern Germany. Activity at these sites continued down to the later centuries BC, by which time there was evidence for Celtic speech in this area, which is near the upper DANUBE.

§1. IRON AGE SITES IN THE NÖRDLINGER RIES

The flat basin of the Nördlinger Ries, with its fertile ground and smoothly undulating landscapes at its edges, is among the most important ancient settlement areas in south Germany. From the 6th millennium BC onwards, a remarkable amount of finds and artefacts from the Neolithic and Bronze Ages (*c.* 2500–*c.* 750 BC), and from the Iron Age (*c.* 750–c. 150 BC), reveal a comparatively dense population. The western edge of the Nördlinger Ries is dominated by the 668 m-high Ipf mountain (see photo), a huge outlier from the range of the Swabian Alps which overlooks the basin. Its extended fortifications date back to the Late Bronze Age. A large number of settlements, cemeteries, and groups of burial mounds from the HALLSTATT and LA TÈNE periods surround Ipf. Several Celtic VIERECKSCHANZEN (four-sided enclosures) are evidence that this area was an important centre of settlement during the Early and Late Iron Age.

Although only a few minor test excavations—by Friedrich Hertlein in 1908–11—have been carried out on Ipf, Goldberg, which is situated only 4.5 km away from this site, on the other hand, is well known in the development of modern prehistoric research because of the major excavations led by Gerhard Bersu, during which he discovered several layers of settlement activity dating from the middle Neolithic period (roughly the 4th millennium) up to the Celtic period (that is, the Iron Age). On several levels, mostly on the southern edge of the Ries, FORTIFICATIONS and sacrificial sites were established during different prehistoric periods. The concentrations of settlements during the Bronze and Iron Ages are also demonstrated by the large number of burial mounds and necropoleis, mainly preserved in the large forests at the edges of the Ries basin.

One of the main factors which favoured the development of this Iron Age cluster of settlements is its location in regard to the ancient trade routes. The location of Ipf on the western edge of the Ries overlooking an important trade route from the river Danube, through the Eger valley along the edge of the Swabian Alps, could explain the function of the site, with its huge protective fortifications, as an important station in the prehistoric trade network. It should also be borne in mind that in the region immediately adjoining Ipf to the south large deposits of bean ore (a special kind of iron ore) are to be found, whose exploitation during the Iron Age is suggested by the remarkable concentration of burial mounds and *Viereckschanzen*.

Following an aerial survey by the photogapher and archaeologist Otto Braasch, new excavations were conducted between 1989 and 1995 by the local archaeological office in the valley near BOPFINGEN. These led to unexpected evidence: remains of Celtic settlements were found in the valley of the Eger river; these were located on an ancient alluvial fan, which is completely covered by soil today. This alluvial fan belongs to a small river which flows from the edge of the ridge of the Swabian Alps. A system of trenches which belonged to a Celtic *viereckschanze* was also excavated.

An aerial survey carried out by Otto Braasch in 1998 led to the discovery of an Iron Age system of small ditches at the foot of Ipf, which form rectangular constructions. They were found on the edge of a hill which formed a spur overlooking the Eger valley, in an area which is intensively cultivated. This has led to erosion, which endangers the archaeological sites. The excavations to save these features have revealed palisade systems which date from the Late Hallstatt and Early La Tène periods (6th–5th century BC). The excavations have also unearthed evidence which throws new light on Celtic iron-smelting technology and the economic basis of the Iron Age settlements around Ipf and Goldberg.

Structures of several farms, each with its own ditch systems and palisade ENCLOSURES were discovered. These structures, which are on average 10,000–15,000 m², are complex and suggest a continuous settlement at the site during the Early Iron Age. The

location of the settlement was chosen deliberately: the farms were built in the Brown Jura directly above iron seams/layers, which surface at this site. In some pits iron slag was found, which proves that iron ore from the seams was smelted and processed here, but the search for the smelting furnaces has as yet yielded no results. Several *grubenhäuser* (sunken floor huts) and numerous spindle whorls prove that other craftsmanship was also practised. The new findings and their evidence may mean that, in the area around Ipf, we are dealing with a very different group of settlements during the earlier Iron Age. In the later Hallstatt period, archaeologists assume the existence of an aristocratic residence on the summit of Ipf, to which several working quarters are connected, for example, the iron forges in Osterholz, where the iron ore was exploited and processed on site.

High-quality finds, such as Late Hallstatt ceramics made on the potter's wheel and sherds of Greek amphorae, underline the social and economic significance of the site and the important function of Ipf in the hierarchy of Late Iron Age settlements.

§2. IPF

Ipf's exposed strategic location was used for building extended fortifications on the plateau of the mountain and its eastern slopes. These date back mostly to the Late Bronze Age and the Early Iron Age (i.e. early to mid-1st millennium BC).

Evidence of prehistoric settlements is even older, and date from the Early Bronze Age and the Late Neolithic period (roughly the 3rd millennium BC). Some finds from Roman times and the early Middle Ages attest to the use of the mountain in historical times as well.

The flat plateau of the summit lies 210 m above the valley of the river Sechta. With its steep slopes towards the north, west, and south, it offers an ideal defensive position (see photo).

Only the eastern slope, which fell away gently, needed extensive fortification, and this has been preserved up to the present day in the form of enormous ramparts. In these ramparts the remains of stone walls up to 5 m wide are preserved, with the internal wooden framework in different techniques, which can only be approximately placed in a chronological sequence. The core of the prehistoric fortification is formed by the oval summit plateau, with its largest diameter measuring 185 m.

The modern path up to the summit seems to correspond roughly to the prehistoric entrance. It leads through an area of the lower fortification, where the ancient gate can be assumed to have been located. Crossing a second wall (intermediate wall), an impressive partition wall is reached, which offered a supplementary safeguard towards the gently dipping eastern slope. The core of the fortification was formed by the rampart around the summit plateau, with a ditch which

Aerial view of Ipf and Goldberg

View of the surviving ramparts at Ipf, showing intermural ditch and traces of stone surfacing

was 10–15 m deep (see second photo). On the northern side, a smaller system of walls ran downhill. They enclosed funnel-shaped pits called spoon and pan, which were interpreted as cisterns or wells, and thus connected them to the fortification. Further west, the largest of the three funnel-shaped pits was found, the so-called 'cauldron'. These wells tapped into a water-bearing layer between strata of the Jurassic limestone.

The only excavations undertaken on this mountain were carried out around 100 years ago when the German archaeologist Friedrich Hertlein dug several small test trenches at the eastern edge of the plateau in 1907/8. The excavations showed that the rampart consisted of dry-stone masonry (i.e. without mortar) with wooden frames (called *murus gallicus*, Gaulish wall; see FORTIFICATION). In the middle wall a wooden framework with stone elements was discovered, which also suggests dry-stone masonry. Without a more thorough examination these walls could be dated to any time from the Neolithic period to the La Tène period. The most plausible interpretation is a dating of the upper ramparts to the Urnfield period (Hallstatt Late Bronze Age, *c.* 1200–*c.* 750 BC), which were later extended. On the plateau, Hertlein identified a stratum which was 1.5 m wide and which contained a large amount of pottery from the Urnfield and Hallstatt Iron Age periods.

During the examination of three cuts of the outer rampart at the east side, which encloses extensive parts of the eastern slope of the mountain, walls consisting of posts (25–30 cm in diameter) on the front side and segments of dry masonry which were 1–1.5 m wide were found. The front wall was intact to a height of 0.6 m. It is dated to La Tène times and is interpreted as an extension of the fortification to an OPPIDUM. A wheel-shaped pendant and a *Regenbogenschüsselchen* (rainbow cup, a type of coin), which are said to have been found on Ipf, could be taken as evidence for this theory.

This outer rampart enclosed a terrace which adjoined the southern section, though no remains of the wall are visible today. In the course of agricultural use the rampart was levelled. Nowadays, the terrace is characterized by several recent agricultural terraces.

§3. THE INTERPRETATION OF THE FORTIFICATIONS

During the Late Hallstatt period (roughly the 6th century BC), the fortifications on Ipf seem to have had a central function, i.e. Ipf is assumed to have been an early Celtic aristocratic residence or the seat of a chieftain, like the hill-forts on HEUNEBURG or HOHENASPERG. But the archaeological evidence is not sufficient to prove this assumption. A black burnished sherd from an imported Greek vase and the fragment of a small imported glass bottle are important evidence for the special status of this site. None of the characteristic burial mounds containing élite burials have been found in the area around Ipf. In relation to Ipf, two large burial sites have been identified near Bopfingen-Meisterstall and Bopfingen-Trochtelfingen which unfortunately do not contain well-equipped graves. A further problem which hampers the

overall interpretation of the site is the fact that most of the burials around Ipf and Goldberg date almost exclusively from the Middle Hallstatt period (Hallstatt C, *c.* 750–*c.* 600 BC), while finds dating from the Late Hallstatt period (Hallstatt D, roughly the 6th century BC) are very rare.

On the other hand, Ipf is located in an excellent geographical situation overlooking the Ries, on the outskirts of the Swabian Alps with its rich iron ore. Recent excavations of Iron Age palisade structures located between Ipf and Goldberg during the summer of 2000 have confirmed the exploitation and processing of iron ore just 2 km away from Ipf in the Brown Jura. Thus, Ipf, with its extensive protecting fortifications, can be seen as an important junction/centre for the trade route between the Danube river, the Swabian Alps, and the region around the river Neckar.

The alternative interpretation of the outer ramparts of Ipf as part of an oppidum, that is, a major fortified Late La Tène proto-urban conglomeration, is also insecure. It is based on Hertlein's discovery of the timber-laced wall and a few finds which have been arbitrarily selected.

§4. GOLDBERG

The exposed mountain plateau of Goldberg is a clear-cut outlier, which consists of freshwater limestone, located at the western edge of the Nördlinger Ries. In prehistoric times hilltop settlements were situated on its high plateau. This plateau is 250 m long and 150 m wide, and towers 60 m above the flat plain of the Ries, and offers itself as a strategically suitable place for a defensible settlement. Originally, the surface of the plateau, which is still 40,000 m² today, was much wider. But, on three sides of the mountains, the yellow golden tertiary limestone was mined in three small quarries, and thus the size and the shape of the high plateau were transformed. Only at the west side of the mountain has the original shape been preserved, where the ridge of the mountain is connected to the heights at the edge of the Ries. Here, prehistoric ditches and ramparts, which barred the site against the hinterland, were found.

Goldberg gained significance in archaeological research from 1911 to 1929 as a result of groundbreaking excavations led by Gerhard Bersu. During these campaigns he dug wide areas of the plateau and uncovered several phases of settlements dating from the Neolithic period to the Iron Age. Bersu identified a series of occupational strata which he organized within a scheme of Goldberg I–IV. For the first time, a stratigraphical chronology of three different cultures (Goldberg I–III) could be identified, and thus the foundations for the chronology of the Middle and Late Neolithic (roughly the 4th and earlier 3rd millennium, respectively) in south Germany were laid.

The Iron Age hilltop settlement of Goldberg IV, from the 7th and 6th century BC, is characterized by fortifications in the form of ditched enclosures. The finds show that the plateau was settled, in terms of the sequence of cultural types, between Late Hallstatt C and Hallstatt D2. As shown by Bersu, the hill-fort had a large ditch or moat and a timber-faced wall at the western side of the mountain, and a (fragmentarily preserved) large ditch enclosing the north and north-east side of the mountain. The plan of the settlement shows a large number of different buildings—houses and outbuildings—made of posts, which unfortunately cannot be ascribed to the different strata of the settlement, since they do not overlap. Nonetheless, according to the German archaeologist Parzinger, two phases of settlement can be identified. Unfortunately, the floor plans of the buildings do not allow their function to be determined except on a very basic level (e.g. smaller storage buildings, as opposed to larger buildings). But in the north-east corner of the plateau a greater complex of buildings, consisting of two- and three-aisled post constructions is separated from the other buildings by a palisade with an entrance.

This 36 × 36 m enclosure has been compared to the larger ditch and palisade constructions—the so-called manor houses—of the south Bavarian Hallstatt culture. Archaeologists have interpreted this as the seat of a local aristocrat. At the same time, this evidence is seen as indicating social differentiation, which finds its expression in fortified hilltop settlements, of presumed high status, and differentiated settlement patterns.

Following a short hiatus in the settlement, a new composite timber-framed wall with a ditch was erected during the early La Tène period (roughly the 5th century BC), but the excavations showed only a few buildings and *grubenhäuser* (sunken floor huts, buildings with a floor below ground level), which give the impression of small farmsteads. Bersu interpreted this

evidence as some sort of *Fluchtburg* (a hill-enclosure which is only used in situations of acute danger).

Goldberg is only 4.5 km away from Ipf, and both had active Hallstatt settlements. Since the latter is largely unexcavated, it is not possible to offer any suggestions about its settlement during the Hallstatt period. Therefore, the settlements in the plains must be taken into consideration in order to draw conclusions about the local community as it related to the hilltop site. Up to the present time, systematic excavations have been carried out only on a settlement which contains a workshop (at which more than one kind of metal was worked) near the Ohrenberg in the community of Kirchheim-Benzenzimmern.

The history and the archaeology of Goldberg are displayed in the form of numerous objects in the Goldberg Museum in Goldburghausen. The mountain is an important natural and archaeological landmark, and is protected as a natural reserve as well as a registered cultural monument.

§5. VIERECKSCHANZEN

In the immediate surroundings of Ipf, there are three Celtic VIERECKSCHANZEN, all within a distance of 2.8 km. One of them, located in the forest near Kircheim-Jagstheim, is extremely well preserved. The second site, near Bopfingen-Flochberg, was excavated between 1989 and 1992, while the third one, located near Kirchheim-Osterholz, was discovered during a geophysical survey in 2000. Attempts to interpret these impressive monuments, which are remarkably well-preserved in the wooded regions because of the lack of disturbance by settlement and ploughing, have taxed generations of archaeologists. Explanations range from late Celtic farmsteads as predecessors of Roman manor houses and cattle sheds, to fortifications, or ritual sites. These divergent attempts at interpretation are due to the poor state of the research; only a small part of the south German *Viereckschanzen* has been surveyed archaeologically. The extensive excavations of the *Viereckschanzen* of Ehningen, Bopfingen, and Riedlingen, all located in Baden-Württemberg, and the recently excavated Pankofen *Viereckschanze* in Bavaria create a new, improved basis for research and discussion.

§6. KIRCHHEIM-JAGSTHEIM

The well-preserved site of Jagstheim lies just 150 m south of the village chapel, on the road to Kirchheim in the forest of Kirchheimer Holz. It is located on the gently sloping north-eastern side of the ferruginous sandstone plate which overlooks the surrounding area. The site, which is covered with ancient deciduous forest, is easily visible. The north-eastern corner of the site and parts of the adjoining sides which are not covered by the forest have been completely levelled out as a result of agricultural use. In the west and south the walled enclosure is especially well preserved. The ditch situated in front of the wall is visible, but at the eastern flank the ditch is only partially preserved. It measures 67 m on the north side, 89 m on the east, 72 m on the south, and 84 m on the west, which shows that this was one of the smaller structures of this type. The wall is for the most part especially well preserved; its outer slope measurement at the south-east corner is 2.8 m, and the ditch at this corner is still 1 m deep. The gate was located near the middle of the eastern side, and it can be located today by the 7 m gap in the wall.

Irish drama encompasses non-theatre-based dramatic rites and performances, formal theatre, professional and amateur drama groups, and radio and television productions in the IRISH language (see also MASS MEDIA).

§1. INTRODUCTION

In arguing for the inclusion in the definition of drama not merely theatricality but the performing arts, Fletcher highlights the peculiar course of the history of Irish drama. Although the Irish did not develop conventional theatre until the 20th century, other forms of drama had flourished. Dramatic dialogues were common in the literary and oral traditions, as evidenced

in *Aighneas an Pheacaig leis an m-Bás* (The contention between the sinner and death, 1899) by Pádraig Denn (1756–1828) and *Racaireacht Ghrinn na Tuaithe* (The humorous storytelling of the countryside, 1924) by Tadhg Ó Conchubhair (*c.* 1838–1925). Indigenous ritualistic forms of folk drama, such as *Brídeoga*, 'Biddy Boys' or 'Biddies', active on the eve of the festival of BRIGIT (31 January), and the Wren Boys on St Stephen's Day (26 December), were common. Popular assemblies associated with rites of passage, of which the merry wake is the most notable, featured dramatic amusements and games. The disguised participants in the CALENDAR activities were locally based, but the *crosáin* (sing. CROSÁN), professional entertainers, and other travelling performers are well documented in the tradition. Socio-political reasons ensured that these non-theatrical forms of drama gradually weakened. Furthermore, unlike English-language drama in Ireland (ÉIRE), the unsettled history from the 16th century onwards meant that there was no significant Irish-speaking urban middle-class around which institutional theatre and its necessary components of dramatists, actors and audience could develop.

§2. IRISH AND THE THEATRE

It was with the first LANGUAGE REVIVAL at the close of the 19th century that activists sought to marry Irish and theatre. Contemporaneous with and, despite ideological tensions, to a degree influenced by the efforts of W. B. YEATS and Lady Augusta GREGORY to create an Irish drama in English, Douglas Hyde (Dubhghlas DE HÍDE) and other pioneering figures in Irish-language drama faced major challenges. These included learning the basics of stagecraft and developing a vocabulary of dramatic terms. The early word for a play, *cluiche* 'a game', gave way to *dráma*. The coined term for a theatre, *amharclann*, found favour, while a rival word, *taibhdhearc*, only survived in the name TAIBHDHEARC na Gaillimhe, Galway's Irish-language theatre. CONRADH NA GAEILGE (The Gaelic League) actively promoted drama at its annual Oireachtas competitions and gatherings (see FEISEANNA), with its branches staging plays such as those by Hyde. In 1913 Na hAisteoirí (The actors) and Na Cluicheoirí (The players), dedicated drama troupes, were established in Dublin (BAILE ÁTHA CLIATH), but efforts to further the drama movement suffered in the turbulent period between 1916 and 1923 (see IRISH INDEPENDENCE MOVEMENT).

With the birth of the Free State (Saorstát na hÉireann), a drama co-operative called An Comhar Drámuíochta (The drama partnership) emerged in 1923 to stage plays at Dublin's Abbey Theatre (Amharclann na Mainistreach). Soon in receipt of modest government funding, An Comhar continued its work for twenty years. However, in contrast to the situation in Galway (GAILLIMH) where Taibhdhearc na Gaillimhe was established with similar funding in 1928, An Comhar failed to find a permanent home, and both it and its government grant were subsumed into the Abbey in 1942. Through the vision of Ernest Blythe (Earnán de Blaghd, 1889–1975), managing director 1941–67, the Abbey reconstituted itself as a bilingual national theatre with regular professional performances in Irish. But, citing financial reasons and its temporary relocation following a devastating fire in 1951, the Abbey gradually retreated from its mandate. It declined to stage multi-act Irish plays, limiting itself to its annual pantomime and to short plays staged after the curtain descended on productions in English.

Outside Dublin, An Taibhdhearc remained open, while the perseverance of the Donegal GAELTACHT's troupe, Aisteoirí Ghaoth Dobhair (The Gweedore actors), founded in 1932, was rewarded with its own theatre, Amharclann Ghaoth Dobhair (Gweedore theatre), in 1961. Yet, the decision by the cultural organization Gael Linn to lease a church basement on Dublin's St Stephen's Green as Amharclann an Damer (The Damer theatre) in 1955 was a fillip for Irish drama in the capital, and ushered in what is now recognized as the golden age of Irish theatre, 1955–70. The continuity provided by the Damer encouraged exciting and innovative work by a new generation of playwrights, including Seán Ó TUAMA and Eoghan Ó TUAIRISC, and looked certain to have provided

Dublin with a permanent professional Irish theatre and troupe. Momentum and opportunity were lost, however, when the Damer became unavailable.

Although the Abbey Theatre, now established in its new complex, declared itself by 1967 ready to mount performances in Irish in its Peacock Theatre, this policy quickly dissipated. Since the 1970s professional performances in Irish at the Abbey complex have been few. Despite a temporary return by Gael Linn to the Damer in the 1970s, professional or high-quality productions in Irish in Dublin were scant in the 1980s, though university and amateur troupes under the auspices of An Comhlachas Náisiúnta Drámaíochta (The national drama association), the coordinating body for amateur Irish drama, which has been based in the Conamara Gaeltacht since 1972, remained active. But, apart from these and RTÉ Radio's weekly drama slot, there was little evidence during the period 1975–85 that Irish drama was alive in Dublin. In 1987 a new Galway-based professional troupe of actors, Na Fánaithe (The wanderers), received funding and toured extensively over a five-year period. Professional theatre returned to Dublin in 1993 with the founding and funding of Amharclann de hÍde (Hyde's theatre) which, though without a permanent home, staged plays in the capital and beyond until the venture ceased in 2001.

The emergence in the late 1990s of Aisling Ghéar (Keen vision), a professional group in Belfast (Béal Feirste), and hints that new blood and fresh ideas could revitalize Taibhdhearc na Gaillimhe have compensated somewhat for the demise of Irish drama in Dublin. However, the most dramatic change has come about with the arrival of TG4 (formerly Teilifís na Gaeilge) in 1996. Apart from encouraging writing, TG4 has, through its major soap-opera *Ros na Rún* (Headland of secrets), provided opportunities for actors, directors, and technical staff and, in making a large television audience familiar with the series, has boosted stage productions involving cast members. Thus, despite failures in Dublin, the retreat by RTÉ from regularly scheduled radio productions, and the striking reluctance of Raidió na Gaeltachta to develop this genre, there is hope and some evidence that the Cinderella of Irish art and literary forms may yet realize its full potential.

§3. IRISH PLAYWRIGHTS

This category includes those who have written either extensively or occasionally for the stage, for radio and for television.

As a form of artistic expression new to Irish at the end of the 19th century, aspiring writers had few models apart from earlier and contemporary English drama from which to learn their craft. Initial attempts were frequently flawed; for example, one-act plays were performed with multiple scenery-changes. The most successful early playwright, Douglas Hyde (Dubhghlas DE HÍDE), whose work benefited from collaboration with Lady Augusta GREGORY and W. B. YEATS, penned ten short plays between 1901 and 1904. Drawing their inspiration from Irish folk culture and history, Hyde's pieces also mirrored the values of the Irish-Ireland movement. Despite Hyde's pioneering work, few other early plays were notable either for their technique or artistic merit, with the majority focusing on peasant, language or historical themes which supported the aims of the language revival. Ironically, however, Hyde's first and most memorable work, *Casadh an tSúgáin* (The twisting of the rope, 1901), is now generally viewed as the prototype of the English-language peasant play for which the Abbey Theatre subsequently became (in)famous. Though Piaras Béaslaí (1883–1965) attempted to break away from peasant themes in his historical dramas, *Cormac na Coille* (Cormac of the wood, 1909), *An Danar* (The Dane, 1929) and *An Bhean Chródha* (The brave woman, 1931), these plays never matched the success of his comedies written for Na hAisteoirí (The actors) and An Comhar Drámuíochta (The drama partnership).

An Comhar and Galway's TAIBHDHEARC na Gaillimhe provided a stage for innovative work. *Dorchadas* (Darkness,) by Liam Ó FLAITHEARTA (Liam O'Flaherty), a play which remains unpublished in Irish, dealt with fratricide in the Gaeltacht and caused minor controversy when An Comhar staged it in 1926. Micheál MAC

Liammóir's *Diarmuid agus Gráinne* (Diarmuid and Gráinne, 1935), a linguistically exuberant retelling of the Finn Cycle love story (see fiannaíocht; tóruigheacht dhiarmada agus ghráinne), was, both in theme and execution, the perfect curtain-raiser for An Taibhdhearc in 1928. Séamus de Bhilmot's *'San Am Soin* (At that time, 1944), in which Barrabas is portrayed as a Jewish freedom-fighter/terrorist, remains an impressive, if flawed, play, while *An tÚdar i nGleic* (The author struggling), an unpublished script by Labhrás Mac Brádaigh (1913–58), was replete with experimental narrative devices.

A series of translations by Liam Ó Briain (1888–1974) from French, especially of work by the Catholic writer Henri Ghéon (1875–1944), represented a desire to bring European works to the attention of Irish writers and audiences alike, but also pointed to a heavy dependence on translations in the absence of quality original plays. However, the varying fortunes of the Irish drama movement ensured that few writers dedicated themselves to drama. Séamus de Bhilmot (1902–77), Máiréad Ní Ghráda (1896–1971), whose plays *An Triail* (The trial, 1978) and *Breithiúnas* (Judgement, 1978) discussed important contemporary social issues in the 1960s, and more recently, Antoine Ó Flatharta (1953–), who writes for stage and for television, have been exceptions. Other established writers have also been drawn to drama. These include Críostóir Ó Floinn (1927–), Eoghan Ó Tuairisc, Seán Ó Tuama, and Brendan Behan whose *An Giall* (1981), premiered at Amharclann an Damer (The Damer theatre) in 1958, was subsequently reworked and repackaged in English as *The Hostage*. At present, the decision of prominent writers such as Biddy Jenkinson, Éilís Ní Dhuibhne (1954–), Liam Ó Muirthile (1950–), and Alan Titley (1947–) to turn to drama has resulted in several outstanding plays and fresh excitement about Irish drama.

Pádraig Ó Siadhail

The **Irish independence movement** (1900–23) was inspired by the ideas of Theobald Wolfe Tone and the Young Ireland Movement of the 1840s, and built on the achievements of the Irish parliamentary party led by Charles Stewart Parnell in the late 19th century (see also davitt; land agitation; land league). At the end of the 19th century, the growing sense of Irish national identity found expression in organizations such as the secret Irish Republican Brotherhood, the Gaelic Athletic Association and Conradh na Gaeilge, and also in the Irish literary renaissance of Lady Gregory and William Butler Yeats. The early 20th century was a period of even greater activity, culminating in the passing of the Home Rule Bill (1914), the Easter Rising (1916), the War of Independence of 1919–21 and the Irish Civil War of 1922–3. Although Ireland was partitioned and most of the province of Ulster (see ulaid) would remain within the United Kingdom, the struggle for independence ended victoriously with the establishment of the Irish Free State (Saorstát na hÉireann) in 1922 (see éire).

A decisive step in the direction of independence was taken in 1905 when Sinn Féin was founded by Art Ó Gríofa (Arthur Griffith) as an umbrella for the various nationalist organizations. Ó Gríofa's policy of political abstention enabled nationalists to supersede 19th-century parliamentarianism while avoiding, for a time, military confrontation. Economically, Ó Gríofa promoted protectionism and self-sufficiency based on small businesses, a policy continued until after the

Second World War. Sinn Féin contested its first election in 1908, but without success, and for the following years the initiative seemed to pass back to the Irish Parliamentary Party. It introduced a Home Rule Bill to the British Houses of Parliament on 11 April 1912, an act which caused over 218,000 Protestant Unionists in Ulster to sign a 'Solemn League and Covenant' against Irish independence, highlighting the differences between the four Unionist counties of Armagh (Contae Ard Mhacha), Antrim (Aontroim), Down (Dún), and Derry (Contae Dhoire) and the rest of the island. With the tacit approval of the British security forces, weapons were imported and an Ulster Volunteer Force was founded to fight against independence. On 25 November 1913, Irish radical circles led by the Irish Republican Brotherhood (IRB) reacted by establishing the Irish Volunteer Force, which soon had branches all over the island and began to prepare for armed insurrection.

The Home Rule Bill was passed by the British Parliament in September 1914, but Home Rule was indefinitely postponed due to the outbreak of the First World War. Nationalist circles felt betrayed, the more so because thousands of Irish soldiers had enlisted in the British army, hopeful that this would enhance their chances of independence. Parts of the IRB and the Irish Volunteers began to prepare for armed battle. However, a divided leadership meant that, when the rebellion occurred on Easter Monday, 24 April 1916, the expected mobilization of forces took place only in Dublin (Baile Átha Cliath), and the insurrection was doomed to failure almost from the beginning. Irish Republican forces, numbering no more than 1500, seized various public buildings in Dublin city centre. From the General Post Office, Patrick Pearse (Pádraig Mac Piarais) proclaimed the Irish Republic. The Easter Rising, as it became known, never spread beyond Dublin. Martial law had been declared by the Tuesday, British troop reinforcements arrived very quickly, and the centre of Dublin was bombarded from a warship. Consequently, the Republican forces capitulated on Saturday, 29 April 1916. The aftermath of the Easter Rising was bloody: sixteen of its leaders were executed, robbing Irish nationalist circles of much of their leadership, but also providing heroes and martyrs to the cause. Over 3500 people, many of them not connected with the Rising, were arrested and sent to English prisons or internment camps.

The heavy-handed way in which the British government crushed the Rising mobilized a much greater part of the Irish population than before for the cause of Irish independence. A radicalized Sinn Féin, now led by Eamon de Valera, swept to victory in the 1918 elections; out of 105 seats at Westminster, Sinn Féin won 73. Only parts of Ulster voted Unionist, returning six Members of Parliament. Implementing Ó Gríofa's policy, the Sinn Féin MPs refused to take their seats, instead constituting their own parliament, Dáil Éireann. It first assembled on 21 January 1919, marking the beginning of the Irish War of Independence. The Republican forces, now known as the Irish Republican Army or IRA, under Michael Collins, began a guerrilla war intended to oust British troops stationed in the country. The British government responded by sending large numbers of troops and auxiliary police forces, the most notorious of whom, the 'Black and Tans', conducted a campaign of terror and arson against the population of the Irish Republic, including the original 'Bloody Sunday' of 21 November 1920. The six mostly Protestant counties of the north-east, which were against independence, were granted Home Rule. Public opinion in Great Britain and the rest of the world soon turned against British military aggression in Ireland. The First World War still loomed large, people yearned for peace, and many condemned the violence against the Irish population. In addition, the British government realized that, while it would not lose this war, the guerrilla tactics of the IRA would prevent it from winning. It offered a truce which, on 11 July 1921, ended the War of Independence. De Valera, in his office as President of the Dáil, and Ó Gríofa, his vice-president, travelled to London to meet the British Prime Minister Lloyd George, but their demands to end the partition of Ireland and the granting of independence to a Republic of Ireland fell on deaf ears. A second delegation, lead by Ó Gríofa and including Collins, was dispatched to London in October 1921, and eventually signed the Anglo-Irish Treaty of 6 December 1921, which granted dominion status to the 26 counties of the south of Ireland, thus creating the Irish Free State, but also upheld the partition of the island. On 7 January 1922, the Dáil passed the Anglo-Irish Treaty, with 64 members voting for it and 57 against. The Treaty thus split the house and divided the Republican movement into pro-Treaty

and anti-Treaty forces. On 9 January 1921, President De Valera resigned in protest and, defeated in the re-election for the presidency by Ó Gríofa, he and his followers walked out of the Dáil. Ó Gríofa became the Leader of the House, forming the Provisional Government of the Free State. Increasing worries concerning anti-Treaty IRA activities led to the banning of the Army Convention of 26 March 1922. The general election held on 16 June 1921 showed greatly increased support for the Treaty party. Thus, on 28 June 1922, Michael Collins, as Commander-in-Chief of the pro-Treaty National Army, attacked the Four Courts garrison seized by the rebel IRA, which marked the beginning of the Irish Civil War. Government forces soon prevailed, owing to the factionalism of the anti-Treaty forces and the stringent measures adopted by the government. By 24 May 1923, the Civil War was over. It had claimed the lives of 927 people, among them Art Ó Gríofa, Michael Collins, and those executed by the Provisional Government. The young Irish state, however, had survived the war. Conversion from 'Free State' to Republic began in 1932 with the victory of de Valera's Fianna Fáil party.

The impact of these developments on the IRISH language and CELTIC STUDIES were manifold and are not easily gauged in their entirety. For one, the Irish Republic (Éire) became, and remains, the only independent nation state with a Celtic language as its fully fledged national language. In practical terms, this development and the cultural NATIONALISM underpinning it has led to state support for Irish-medium EDUCATION at all levels, for publishing and other MASS MEDIA in Irish, GAELTACHT communities, and Celtic scholarship. However, the nationalist hope that Irish could be easily revived as the everyday speech of the majority in an independent Ireland now appears naive. The Irish political example has thus proved as much a cautionary tale as an inspiration to the other CELTIC COUNTRIES and their LANGUAGE (REVIVAL) movements. On the other hand, some assessments of the achievements and failures of the Republic have arguably shown an excessive negative preoccupation with disappointing statistics for native speakers in the Gaeltacht, overlooking advances in Celtic scholarship and the flowering of a vibrant bilingual literary culture, much of it accomplished by learners of Irish within the framework of independence.

MBL

Irish language

§1. INTRODUCTION

In the historical period, Irish was spoken not only in Ireland (ÉRIU; ÉIRE) but also in Scotland (ALBA) from the 5th century onwards and, for several centuries between the 6th and 9th centuries, in south-west Wales (CYMRU) and the Llŷn (Lleyn) peninsula. Linguistic evidence for the former is provided by the continued presence of speakers of a GOIDELIC language, SCOTTISH GAELIC, in Scotland and the clear dialectal links between that and northern dialects of Irish. For the latter, the occurrence of a large number of bilingual INSCRIPTIONS in Latin and OGAM Irish, together with the detailed historical evidence, leave us in no doubt of a long-term Irish presence in Wales. However, from the 9th century onwards, Irish has been spoken in Ireland and western Scotland. The gradual separation of Scottish Gaelic has had the effect of restricting the range of Irish to Ireland itself. Within the island itself, Irish was by no means the only language of communication; during the medieval period Latin seems to have been used from the 4th century onwards at the latest and, judging from the earliest loanwords, as a spoken language. Similarly, the early influx of ecclesiastics from areas of west BRITAIN, including Wales, indicates that a BRYTHONIC language may also have been spoken,

though perhaps in a restricted milieu. Its impact was not just lexical, but also affected the morphology of the language. Likewise, from the late Old Irish period onwards, Old Norse was spoken at least in the Viking centres of Dublin (Baile Átha Cliath), Limerick (Luimneach) and Waterford (Port Láirge), &c., and the lexical input into Irish from this contact was considerable. Even within the medieval period, English was beginning to have an effect, and in the Norman period it became increasingly influential. Within the modern period, English has become so dominant that outside the specially designated Gaeltachtaí (and even within them) it is feared that Irish is dying out.

It is conventional to divide the history of Irish into the following periods: Primitive Irish, from the separation of Goidelic and Brythonic up to the apocope or loss of final syllables; the term Archaic Irish is applied in this Encyclopedia to an interval between apocope and syncope or the loss of internal unstressed syllables (though some writers used this term for the next phase); Early Old Irish (from the first appearance of syncope to the end of the 7th century); Classical Old Irish (8th and 9th centuries); Middle Irish (10th to 12th centuries); Classical (or Early) Modern Irish (13th to 16th centuries); Modern Irish (17th century to the present).

§2. PRIMITIVE IRISH AND THE EMERGENCE OF THE OLD IRISH GRAMMATICAL SYSTEM

Apart from the earliest names for Ireland and the Irish (see ÉRIU) and the names in the Greek script on Ptolemy's map, the earliest evidence for continuous Irish is written in ogam. It seems likely that the ogam script was created in the late 4th or early 5th century. The 5th and 6th centuries witnessed most of the major phonological changes in the language, for example, the phonemicization of lenition and palatalization following the loss of most final syllables. For the non-specialist, these developments may be explained briefly as follows. In Primitive Irish the consonant /*t*/, written ogam T, was a single grammatically significant sound or 'phoneme' and one letter; however, it had four sounds depending on where it occurred in a phrase. Thus, between vowels, and in some other positions, the phoneme /*t*/ had the weakened or lenited sound, tending to [ð], the *th* sound in English *breath*. Before short and long *e* and *i*, both sounds of /*t*/ tended to be articulated more to the front of the mouth, that is, to be palatalized, thus unlenited palatal [t′] with roughly the sound in English *Christian* and lenited palatal [ð′] as in *Scythia*. But these four sounds [t t′ ð ð′] were still not grammatically significant and could still all be written with ogam T unambiguously, because the vowels which determined their special articulations were still there. Following apocope and syncope, the conditioning vowels had in many cases dropped out and the four articulations could thus contrast in the same phonetic environment. At this point they became grammatically significant, and lenition and palatalization were thus 'phonemicized' or 'grammaticalized'. Some, but not all, of these contrasts are revealed in the ogam spelling system, which continues in some respects to present a picture of the language before phonemicization took place. Thus, we may compare ogam LUGUDECCAS with the Old Irish *Luigdech* /ˈluɣ′ð′əχ/ and CATUVIR with the Old Irish genitive *Caithir* /ˈkaθ′ər′/, where the later forms show the effects of lenition, loss of final syllables, and syncope. However, as the latter example indicates, gradual changes such as the loss of most final syllables are reflected in the INSCRIPTIONS (CATUVIR would be *CATUVIRI in its earliest form); for example, the development of the feminine genitive singular ending **-iiās* can be exemplified from the ogam inscriptions as follows: /-iia(:)s/ (MAQI ERCIAS) > /-eias/ or /-e(i)ab/ (MAQI RITEAS) > /-e(i)a/ (MAQI ESEA) > /-e/ (MAQI RITE), corresponding to Old Irish *Maic Reithe*. However, it does not follow that the inscriptions from which these examples derive can be placed in chronological order on the basis of these forms. The writers of these inscriptions were capable of both maintaining conservative orthographies and making errors which betray contemporary usage; within one inscription it is possible to find forms which apparently reflect different chronological stages of the language: in MAQI-TTAL MAQI VORGOS MAQI MUCOI TOICAC we may contrast the loss of *-i* in -TTAL and TOICAC with its preservation in other words. In broad terms, then, ogam was originally used to write a language which had final case endings, no phonemic lenition of intervocalic consonants and no syncope. Ogam T and D respectively correspond to Old Irish /*t*/ and /*d*/ in

absolute initial position but to /ð/ and /δ/ in intervocalic position; thus, RITTECC (or perhaps correctly RETTECC): Old Irish *Rethech* /*R´eðəχ*/. The doubling of consonants seems to be haphazard; a possible bias towards duplicated stops corresponding to later non-lenited stops has been suggested but, if there is anything to it, the conditions have yet to be fully established.

Phonological features. The period of Primitive Irish—i.e. that which post-dates the emergence of Goidelic and Brythonic and pre-dates the earliest manuscript evidence—witnessed major changes. A full catalogue of these changes is not attempted here; instead, several of the major developments are considered, approximately in chronological order, though this is less easy in some cases where the changes took place in stages. All the INSULAR CELTIC languages were subject to a weakening of the articulation of intervocalic consonants, irrespective of whether they were in the same word or not; thus, an initial consonant could weaken if preceded by a word with a final vowel, especially if the words were in close syntactic connection. This weakening of articulation, termed lenition, was originally simply a phonetic phenomenon, and remained so as long as the conditioning factors remained in place. In Irish, lenition had the effect of reducing original voiced stops [b d g] to voiced fricatives [v δ *f*] and the voiceless stops [t k] to voiceless fricatives [ð χ], e.g. Celtic *[bereti] > Primitive Irish *[b´er´eð´i] (> OIr. *beirid* 'he carries', *[ga:bitus] > [ga:viðuh] (> OIr. *gábud* 'danger'), &c. Several different factors seem to have brought about the phonemicization of lenition. The most important of these was the loss of final syllables, which brought about the final stage of the grammaticalization of lenition; for example, in Primitive Irish the collocation of the possessive pronouns */*esyo*/ 'his' (lit. of him) and */*esyās*/ 'her' with the noun */*tōða*/ 'tribe' would phonetically have been as follows: [esyo ðo:ða] 'his tribe' and [esya:s to:ða] 'her tribe'. Following the masculine pronoun, the initial [t] was intervocalic and thus lenited to [ð], but this did not occur after the feminine pronoun; the lenition is caused by the intervocalic position of the consonant. With the loss of final syllables we end up in Early Old Irish with /*a ðōð*/ 'his tribe' and /*a tōð*/ 'her tribe', and thus Classical Old Irish *a thúath* and *a túath* respectively. Here, the loss of final syllables in both noun and pronoun has removed the conditioning factors, and thus /*t*/ and /*ð*/ have become contrastive and are the only markers of the gender of the pronoun. However, the loss of final syllables was not a single catastrophic event, nor indeed did it affect all final syllables; final liquids /*r r´ l l´*/ and unlenited stops (e.g. /*d d´*/) seem to have protected the preceding vowel from loss, e.g. OIr. *bráthir* /*brāðir´*/ 'brother' < PROTO-CELTIC */*brātīr*/ (cf. Latin *frātēr*, etc.), OIr. *berat* '(they) carry, let them carry' < Primitive Irish */*berod*/ < Celtic */*beront*/. In essence, the vowels which were lost were final short vowels unprotected by a liquid or unlenited stops; other final syllables survived, e.g. OIr. *firu* < */*wirūh*/ < Celtic */*wirūs*/ 'men' (acc. pl.), *máthair* /*māðir´*/ 'mother'. The loss of final syllables was, therefore, a piecemeal process.

Another important development was the rise of a set of palatalized (slender, Irish *caol*) consonants side by side with the basic (broad, Irish *leathan*) set; thus, beside /*p t k b d g*/, &c., developed /*p´ t´ k´ b´ d´ g´*/, &c., which arose before a front vowel which in some environments either then disappeared or was modified. The distinction between palatal and non-palatal consonants thereby became, in certain instances, grammatically crucial, e.g. OIr. *berait* /*b´erəd´*/ 'they carry': /*b´erəd*/ *berat* 'let them carry', /*eχ*/ *ech* 'horse' (nom. sing.): /*eχ´*/ *eich* 'of a horse' (gen. sing.) or 'horses' (nom. pl.). Phonetic palatalization is widespread in many languages; for example, we may compare English *coop* with [k-] and *keep* with [k´-]. It is far less common, however, for the distinction to become phonemicized as it did in Irish. As with the loss of final syllables, the distinctions observable in Old Irish were the outcome of a gradual process of spreading palatalization.

Following the loss of final syllables, the pressure of the initial stress accent had the effect of reducing polysyllabic words by the syncope of the second syllable, and of the fourth syllable in a five- or six-syllable word. The quality (palatal vs. non-palatal) of the resulting consonant cluster was determined by the syncopated vowel. It would appear that vowels in such syllables had been reduced either to a front vowel /*ɪ*/ or a back vowel /*a*/, the former leaving palatalization behind when it was syncopated, the latter not, e.g. OIr. *toirthech* /*tor´ð´əχ*/ 'fruitful' (< */*tor´ɪðəχ*/ < *toret-āko-) beside *debthach* /*d´evðəχ*/ 'contentious' (< */*d´evaðaχ*/ <

**debutāko*-). This constitutes the last systematic stage of palatalization, but the palatal form of a consonant has continued to be the marked variant even up to the modern language; for example, from Middle Irish onwards there has been a tendency to use palatalization to mark the feminine gender.

Morphology: the nominal system. Irish inherited a series of nominal declensions corresponding to those attested in other INDO-EUROPEAN languages. Although Irish lost its final syllables, several features seem to have come together to provide a sufficient number of distinctions for a case system to be maintained. For example, to take a relatively simple case, the declension of *fer* 'man' contains forms which display the effects of vowel affection and palatalization and also cause different mutations of the following closely associated words (as shown here by superscript letters—N for nasalization, L for lenition): *fer* (nom. sing.), *fer*^{N} (acc. sing.), *fir*^{L} (gen. sing.), *fiur*^{L} (dat. sing.), *fir*^{L} (nom. pl.), *firu* (acc. pl.), *fer*^{N} (gen. pl.), *feraib* (dat. pl.). Added to these distinctions was a relatively fixed word order. The standard ordering of elements in Old Irish was V(erb)–S(ubject)–O(bject); genitives followed the noun which they modified. The combination of these syntactic and morphological features seem thus to have maintained enough distinctions for a case system to survive. However, the system was finely balanced and a change, such as the reduction of final vowels to /-ə/, as discussed above, was potentially very damaging to the continued existence of the declensional patterns in the later language.

Morphology: the verbal system. The verbal system of early Irish provides a full system of tenses, moods and voices. The feature which is unique to the insular Celtic languages and is most fully realized in Old Irish is the double system of 'absolute' and 'conjunct' verbal inflection. The system operated essentially as follows: when a simple verb was used in a declarative sentence with no negative or interrogative particle or conjunction, it occupied the first position in the sentence and took the 'absolute' form, e.g. *léicid* /ˈL´ēg´ð´/ 'he leaves', but if it was preceded by a particle of any sort, it took the 'conjunct' form, e.g. *ní·léici* /n´iˈL´ēg´i/ 'he does not leave', *in·léici*? /inˈL´ēg´i/ 'does he leave?', &c. In both cases, the stress was on the first syllable of the verbal element. Compound verbs worked in a similar way, except that the preverb (compounding preposition) took the place of the particle; thus, *do·léici* 'he throws' had the same stress pattern as *ní·léici*. But, when the compound required another verbal particle, a negative or an interrogative, the preverb was amalgamated with the verb, e.g. *ní·teilci* /n´īˈt´el´g´i/ 'he does not throw'. Thus, simple verbs have a double system of inflection, but the stem remains unchanged. Compound verbs have a double stem formation, conventionally known as deuterotonic and prototonic respectively (referring to the moving position of the stress accent), e.g. *do·ˈbeir*/ˈ*taibr*- 'give', *as·ˈbeir*/ˈ*ep(e)r*- 'say', *do·ˈgní*/ˈ*dén*- 'do', *im·ˈsoí*/ ˈ*impai* 'turn', &c. The pretonic particles (those preceding the stress accent), whether preverbs or grammatical particles (such as the negative *ní*), also carried enclitic, infixed pronouns, elements which were always unstressed and often non-syllabic. In early Old Irish a pronoun could be suffixed to a simple verb, e.g. *sástum* 'it feeds me' (*-um* 1st sing. pronoun), *léicthi* '(he) leaves it', *bertius* 'he carried them', but infixed into a compound verb, e.g. *dom·beir* /domˈv´er´/ 'he gives me': *do·beir* 'he gives', &c. But by late Old Irish the infixed pronoun had been generalized as the standard pattern; with a simple verb, an empty preverb *no* (probably in origin a sentence connective) was used, e.g. *nos·bert* 'he carried them', *nom·sása* 'it feeds me', &c.

Sources. The earliest evidence for the language can be found in the place-names preserved in PTOLEMY's *Geography*, e.g. *Buvinda* Βουουινδα corresponding to Old Irish *Boänd* (modern Boyne; see BÓAND), *Auteini* Αωτεινοι (or perhaps /ōtīni/) to Old Irish *Uaithni*, &c. The other source is the vast amount of largely onomastic material preserved in the OGAM inscriptions.

§3. OLD IRISH

The preceding brief survey has considered phonological and morphological features of early Irish. However, there are further aspects of Old Irish to which attention should be drawn and which throw light on

the socio-linguistic and intellectual status of the language. For example, despite the political fragmentation of early Ireland and the extension of the language into extensive regions of western Britain, the surviving scanty remains of Old Irish preserved in contemporary sources show surprisingly little linguistic variation, apart from at the orthographical level. This raises the question how we might characterize the language. Given that there is orthographical variation, it is unlikely to be a *Schriftsprache*, a written form of the language which bears little relation to the spoken language. Furthermore, it is possible to detect change through time, for example, the replacement of suffixed pronouns by the infixed type. In addition, there seems to be very little in the way of dialectal variation. This may be due to our inability to detect it; for example, very little of the early source material can be located with any degree of confidence, and the type of source material, with very little continuous prose and a vast number of GLOSSES on Latin texts, is not helpful. Various instances have been suggested, for example, the alternation in prepositional relative clauses between (a) preposition + *-(s)a*, e.g. *forsa·mitter* (Wb. 6b22) 'on whom you pass judgement', and (b) resumptive pronoun patterns, e.g. *nech suidigther loc daingen dó* (Ml. 87d15) 'anyone on to whom is established a strong place', *ní·fail ní nad·taí mo dligeth-sa fair* (Sg. 26b7) 'there is nothing on which my law does not touch'; the latter is common in Brythonic, but nothing compels us to assume a regional explanation in Irish for this alternation in pattern. The most recent suggestion to account for the nature of Old Irish is that it represents a single dialect elevated to special status (as in late standard Old English [Winchester], Castilian Spanish, French from Île de la France), perhaps the Irish of the north, reflecting the dominance of the Uí Néill. Its widespread use was partly because it was spoken by the *áes dána* (the learned classes), and perhaps also by the nobility, as the common spoken and literary language.

Despite the relatively standard nature of Old Irish, certain texts seem preoccupied with the idea of registers; for example, AURAICEPT NA NÉCES (an early text on grammar, the core of which dates to the 7th century) claims *it é cóic gné bérla tóbaidi .i. bérla Féne 7 fasaige na filed 7 bérla etarscarta 7 bérla fortchide na filed tríasa n-agallit cach dib a chéle 7 íarmbérla* 'there are five types of chosen language: the language of the Irish, the sayings of the poets, the separated language, the concealed language of the poets by which they speak to each other, and obscure (*or* unaccented) language' (Calder, *Auraicept na n-Éces* 100–2 [ll. 1302–16] = 244–5 [ll. 4619–52]). However, it is likely that these terms, and others like them in other texts, are more concerned with the fine distinctions made by the *literati* than with significant sociolinguistic distinctions. On the other hand, it has been observed that in the Old Irish glosses there are features which one would normally term Middle Irish, were they not occurring in Old Irish texts, for example, the spread of the *s*-preterite beyond its normal range, e.g. *forur·aithminset* (Ml. 135a1) 'that they have remembered', the spread of the *f*-future, e.g. *do·emfea* (Ml. 128c8) 'he will protect', and, most strikingly, hyper-correct deutertonic forms, e.g. *nech dod·fhongad* (Ml. 36a21) 'anyone who used to swear it', where a simple verb *tongid* has been analysed as a prototonic form of a compound verb and had a pronoun infixed into it. Such examples suggest that the scribes of these glosses were capable of writing a relatively high register of Old Irish, but at the same time spoke a less formal register, which, in several important ways, seems to have been closer to Middle Irish.

Sources. Given the attention usually devoted to Old Irish, the sources for the language are surprisingly thin, if our attention is to be restricted to texts written in the period from 700 to 900 and surviving in contemporary manuscripts. They amount to short passages in Old Irish in the Book of ARMAGH, the Cambrai Homily (both dating to the early 8th century), and the three main collections of GLOSSES on Latin biblical and grammatical texts: the Würzburg (Wb.) glosses (*c.* 750) on the Pauline epistles, the Milan (Ml.) glosses on a commentary to the PSALMS (*c.* 800), and the St Gall glosses on Priscian (*c.* 850, though probably containing different strata of material). The glosses can range from single word translations or comments to relatively long commentaries which go far beyond the text and often go off at a tangent from it; the glossing on Romans xi.33 (*O altitudo divitiarum sapientiae et scientiae Dei . . .*) provides a good example: there is a concise gloss *nís·fitir nech* 'no-one knows them' (Wb. 5c15) on *investigabiles* and also a long discussion in the adjacent margin on the whole verse (Wb. 5c16). The St Gall glosses on Priscian are particularly interesting in providing com-

mentary on a grammatical text: the glossator was forced to think about linguistic terminology in Old Irish. It is not clear how familiar he was with the terminology of the *Auraicept*, but he was certainly capable of producing his own set of neologisms. Recent approaches have emphasized the importance of considering the glosses in relation to the manuscript tradition of the texts in which they are found.

In addition, there is a vast amount of material preserved in later manuscripts, the originals of which have, for one reason or another, been attributed to the Old Irish period. The attribution may be on linguistic grounds, i.e. among later linguistic forms the text in question contains forms which were current in the Old Irish period. It is then assumed that the later forms are scribal modernizations and that there was an underlying Old Irish original which has not survived in an unadulterated form. One editorial approach to such texts is to attempt to normalize the text to a notional original, but there are difficulties; for example, the target language is not as uniform as might at first appear: both the Würzburg and Milan glosses contain forms which might be better described as Middle Irish, and thus there is a danger that the original text is made more Old Irish than it ever was originally. Moreover, more and more evidence is emerging that scribes were capable of writing in 'archaizing' registers and of thus creating good Old Irish forms well into the Middle Irish period. Where verse is concerned, metrical considerations, especially rhyme, may have the effect of anchoring a text more firmly in its period; for example, a rhyme which shows /*a*/ only rhyming with /*a*/ and not with /*e*/ or /*i*/, demonstrating that unaccented final vowels were still distinct, is usually regarded as belonging to the Old Irish period, though the ability to control such rhymes seems to have still been alive as late as the first quarter of the 10th century.

§4. MIDDLE IRISH

The mixed nature of Middle Irish has long been recognized, but interpretations have varied. It has been described despairingly as the chaos between the 'order' of Old and Modern Irish, a literary eclectic language including archaic and dialectal forms, or as consisting of three strands: Old Irish, Modern Irish, and that which corresponds to neither, in different proportions in different texts. These descriptions also vary as to the degree of explanatory force they bring to the question. The two latter versions acknowledge that the nature of the language varies considerably, depending on the text. Much of this, in turn, depends on the nature of the texts, whether they are modernized versions of texts composed in Old Irish or texts composed within the Middle Irish period itself; but, given that Middle Irish texts are often themselves preserved in much later manuscripts, the latter type are themselves subject to modernization. At the early end, dating has also been confused by the realization that scribes of the early Middle Irish period were capable of producing good, archaic-looking Old Irish.

Phonology and morphology. In comparison with early Irish, the developments within late Old and Middle Irish were far less catastrophic, though, in part, they may have been concealed behind a consistent and conservative orthography. Most of the changes involved reductions in the articulation of pretonic elements (before the main stress accent) and in post-tonic syllables (after the accent) in reaction to the word-initial stress. With the apparent exception of /*u*/, internal vowels seem to have been reduced to /*ə*/ by the Classical Old Irish period, and their spelling then determined by the quality of the flanking consonants. Apart from the merger of /*a*/ and /*o*/, final vowels, where it was important to maintain the distinctions for as long as possible, seem to have survived as distinct entities into the early Middle Irish period, when they fell together as /*ə*/. The consequences for nominal declensions where the grammatical distinctions were carried by final vowels were potentially catastrophic; for example, among the declensional forms of *céile* 'companion', *céile* (nom., acc., gen. pl.), *céili* (gen. sing., nom. pl.), *céliu* (dat. sing., acc. pl.) were now all pronounced /*k′ēl′ə*/. Within Old Irish, the maintenance of these distinctions seems to be confirmed by the accuracy of the rhyming patterns in verse,

which indicate that the vowels were still kept apart. On the other hand, evidence collected from the Old Irish glosses suggests that confusion was relatively common, especially in the Milan and St Gall glosses. Similarly, with internal vowels, confusion over /*u*/ is attested. This raises the question of when these reductions occurred in the spoken language. It is possible that these changes took place as early as the 8th century in speech, though the distinctions may have been maintained in higher registers. What emerges from a consideration of Middle Irish nominal system is that the main preoccupation was avoidance of homophony, especially between singular and plural; accusatives and genitives could probably be distinguished by word-order patterns, and datives were by now almost entirely governed by prepositions, but distinctions of number were crucial. This was not a new problem; in Old Irish, the nominative plural of neuter *o*-stem nouns had already been problematic in that they were often identical to the singular (the inherited ending was */-*a*/ and therefore did not cause palatalization like the masculine nominative plural). A longer ending in *-a*, probably deriving in origin from the feminine nominative plural, e.g. *túatha*, spread to the neuters, and tended to occur if there was no other plural marker, such as a numeral or the plural form of the article. In Middle Irish this went further, and vowel final nouns tended to acquire plural endings from consonant stem nouns, especially from the lenited dental stem nouns, e.g. OIr. *céile* (nom. sing.): *céili* (nom. pl.)—MIr. *céile* /*kʹēlʹə*/: *céileda* /*kʹēlʹəðə*/, &c.

Middle Irish witnessed some wholesale redevelopments of the verbal system. The loss of the neuter gender, together with the reduction of unstressed vowels to /*ə*/, reduced the series of infixed pronouns to chaos, out of which arose the modern system of independent, accented object pronouns. The breakdown of the infixed pronoun system was one factor in the erosion of the absolute/conjunct system (though it was preserved to a greater degree in Scottish Gaelic and Manx), since there was less need for pretonic perverbs in which to infix pronouns. The most frequent development was the creation of new simple verbs based on the prototonic forms of compound verbs, such as verbal nouns and imperatives, e.g. OIr. *do·léici*: *·teilci*—MIr. *teilcid* 'throws', *do·sluindi*: *díltai*—MIr. *díltaid* 'denies', &c. The paradigm was further clarified by the development of clear single sets of endings, notably 3rd sing. *-enn*/*-ann*. The complex pattern of tense formations dependent on the class of verb was also ripe for simplification. For example, depending on the stem class of the verb, the Old Irish future was marked by an *f*-suffix, reduplication of the initial of the verbal stem (with or without an *s*-suffix), or by a lengthened stem vowel, e.g. *léicfid* 'he will leave': *léicid* 'he leaves', *bebaid* 'he will die': *báid* 'he dies', *memais* 'he will break': *maidid* 'he breaks', *béra* 'he will carry': *beirid* 'he carries'. Middle Irish displays a confused situation where each type seems to be becoming generalized at the expense of the others.

Sources. The sources for Middle Irish are far more substantial than for Old Irish, even if we apply the rule of contemporaneous manuscripts. The most important collections of material are those preserved in the main manuscripts of the 12th century: Lebor na hUidre ('The Book of Dun Cow'), Oxford, Bodleian Library, Rawlinson B 502, and the Book of Leinster (Lebor Laignech). The dating of Middle Irish texts has been a long-standing problem. Few texts can be firmly dated: *Saltair na Rann* (Psalter of verses) was probably written in 988. *Cogadh Gaedhel re Gallaibh* ('The War of the Gaedhil with the Gall') has been recently dated to 1103–13. Another approach is to consider the corpora of poets whose obits fall within this period, for example Flann Mainistreach (†1056). But, in general terms, analysis of linguistic features is better at giving us a relative chronology of the texts than anything absolute; for example, studies of verbal systems or declensional forms may allow us to decide that the language of one text is more evolved in a particular direction than another, but not necessarily when it was composed.

§5. MODERN IRISH

From the 12th century onwards, a standardized (possibly artificial) form of language was developed for use in the poetical schools. In contrast to Old Irish, Classical Modern Irish contained dialectal material from different areas, including Scotland. In addition, it

contained a mixture of chronologically different forms and usages, some of which were recognizable from Old Irish and others which had developed in Middle Irish and were forerunners of modern forms. There was an archaic element of forms not in use in the spoken language, e.g. infixed pronouns and an inflected copula, &c., though it is still possible to find instances of the modern uninflected copula and independent pronouns. On the other hand, modern speech forms might be used beside older forms, e.g. *calann/colann, naoidhe/nuaidhe, beireann/ beir*, &c. There are also modern forms which show variation (perhaps dialectal), e.g. gen. pl. *teach/ teagh/ toigheadh*: OIr. *t(a)ige*.

In addition to the poetry preserved from this period, a valuable source for the spoken language of the period is the tracts of the bardic schools (see BARDIC ORDER), which were devised as the guides to proper usage, the *Irish Grammatical Tracts* and the *Bardic Syntactical Tracts*. But, in order to teach proper usage, it was necessary on occasion to refer to inappropriate usage (labelling it *lochtach* 'faulty'). Thus, for example, we learn that in the spoken language (*gaoidhealg*) the cluster of *-chth-* was pronounced as if it were *-ch-*, since the latter pronunciation is stigmatized as *lochtach* (Bergin, *Irish Grammatical Tracts* I §88).

Signs of official bilingualism and living Irish: characteristic Irish road signs near the Kerry Gaeltacht

§6. DIALECTS IN MODERN IRISH

It is customary to discuss Modern Irish in terms of three dialects: Munster (An Mhumhain), CONNACHT, and Donegal (Dún na nGall). Even so, it is important to bear in mind that even within the officially designated Gaeltachtaí (sing. GAELTACHT), situated largely in the western fringes, the spoken language is not always widespread. Linguistically, the differences between the dialects conform to a broad (but not universal) principle that the Munster dialects are more conservative in morphology than Connacht and Ulster, but can be more innovative in phonology. A selection of features is considered below.

Phonology. The position of the stress accent offers a useful range of comparative evidence. In Munster the stress is usually on the first syllable, e.g. *capall* /ˈkapəL/, but in a disyllabic or trisyllabic word it is on the second syllable if that syllable is long, e.g. *bradán* /brəˈdān/, &c. When the stress is on the second syllable and it begins with /r l n/, the preceding vowel is often syncopated, e.g. *cráiste* < *carráiste*. Elsewhere, the stress is invariably on the first syllable, though in Connacht there is some evidence that there was an earlier, perhaps more widespread, stress on the second syllable, e.g. /ˈbrədān/, *pʲráiste* < *paráiste*, *bʲreán* < *biorán*, &c. The effect of the initial stress pattern seems to have been most strongly felt in the northern dialects where unstressed long vowels are shortened, e.g. *bradán* /ˈbradan/, though there is also a general tendency to shorten long vowels anyway, e.g. *lán* /lan/.

Nominal morphology. There is a general tendency for nominal morphology to become simpler as one moves further north. For example, Munster still preserves relatively complex rules for the formation of the genitive singular: (a) broadening or palatalization of the final consonant, e.g. *capaill, brád, dóthan, athar*; (b) final consonant palatalized and *-e* added, e.g. *bróige*; (c) end

consonant broadened and *-a* added, e.g. *feóla*; (d) consonant added to vowel, e.g. *ceártan, fiched*; (e) *-(e)ach* added, e.g. *catharach*; (f) stressed vowel altered, e.g *laé*; (g) no change, e.g. *rí, file, tine*, &c. But in northern dialects the distinction between cases both in the singular and plural is greatly in decline, even in the genitive. As in Middle Irish, the crucial distinction to be maintained is between singular and plural, and this has given rise to some very complex plural markers, especially in Connacht, e.g. *lucht* 'load': pl. *luicht, luchtannaí, luchtaíl* (*-aíl* as a plural marker being unique to Connacht), but even in Munster, which tends to be more conservative, we find plural markers such as *~acha, ~anna, ~í, ~íocha*. The short plurals do, however, survive in some dialects as the number form after numerals, e.g. *ubh* 'egg': *sé uibhe*: *uibheachaí*.

Verbal morphology. In all dialects, it is usual for the original 3 sing. *~idh* to be replaced by *~ann*. For the more northern dialects, including Connacht, this form in *~ann* has then become the standard present tense analytic form of the verb to which pronouns are added to mark person. The original synthetic forms of verbal inflection are best preserved in Munster dialects, e.g. *molaim* 'I praise' (synthetic): *molann mé* (analytic), though some synthetic forms are preserved in all dialects, especially in the conditional. Another feature is the reduction of verb classes from three in Munster: (a) single syllable (usually < loss of internal fricative, e.g. *báim* < *báidhim*); (b) verbs with broad consonant in the personal endings; (c) verbs with *~í~* in the ending (except for the future in *~ó~*), e.g. *bailím*, to two in Connacht: (a) single syllable stem, but also including verbs ending in *~gh* and *~áil*; (b) disyllabic stems, mostly ending in *~aigh* (3 sing. in *-aíonn*), and to a virtual complete loss of verb classes in northern dialects.

Sources. There are two main sources of Classical Modern Irish: the vast quantities of bardic poetry preserved in manuscripts from the 16th century onwards, much of which remains unedited, and the tracts of the bardic schools which were devised as the guides to proper usage: the *Irish Grammatical Tracts* and the *Bardic Syntactical Tracts*.

Evidence for the spoken dialects has been preserved on tape in recordings from the early part of the 20th century onwards. This rich collection of material has been exploited in various ways, from the detailed discussion of a single dialect to a survey of features throughout all the dialects.

Paul Russell

Irish literature [1] early prose (*c.* 700–*c.* 1600/1650)

§1. INTRODUCTION

The scope of this article is material written in the IRISH language (Old, Middle, and Early Modern Irish periods) in the broad category which we might term—from our own cultural perspective—literary prose fiction. This article is intended as a first overview of a truly vast subject, and the reader is directed to the cross-references for more detailed discussions of specific topics.

§2. TEXTS AND THE MANUSCRIPT TRADITION

Irish prose texts have been written in manuscripts since at least the 8th century. However, owing to both factors of historical discontinuity and the local environmental conditions (such as a wet climate and acid soil), very few manuscripts in Ireland (ÉRIU) itself survive from the Old Irish period (*c.* 600–*c.* 900), and none of these is a collection of Irish-language literary prose fiction. Therefore, we rely on surviving later copies. Thus, to conclude that an Early Irish text is of Old Irish (or whatever) date is now a matter of knowing who the author was and when he worked. However, very often Early Irish prose is not attributed to a named author,

or the named author is a semi-legendary figure who belongs more to a fictional frame around the fictional tale than to the actual circumstances of its composition and initial publication. Therefore, the dating of early Irish prose texts must often rely on such factors as Old Irish linguistic features peaking through an incompletely modernized copy, other textual factors as can be deduced by comparing a range of manuscript copies based on a common lost source, or the political agenda of the tale: does it, for example, propagandize the ancestors claimed by a particular medieval Irish dynasty or the founder of a particular monastery?

Although we have no collection of tales surviving in a manuscript of the Old Irish period, we do know the name of one such important collection, now lost, but mentioned in later copies of the tales which it contained. This is Cín Dromma Snechtai ('The Book of Druim Snechta').

§3. categories

The early Irish writers had their own system of classification for the tales, for example, such categories as echtrai 'adventures' and immrama 'voyage tales'. This system is well attested in the medieval Irish tale lists and is often confirmed in the traditional titles given to the individual tales. However, most modern Celtic scholarship is based on a largely imposed modern system of classification, which has proved useful, but for which we would do well to bear in mind that the writers and readers of early Ireland did not necessarily view their literary tradition in anything like these terms. The following conventional groups are in general use:

(1) the Mythological Cycle, dealing with Tuath Dé (tribe of the gods), whom many modern scholars have taken to be survivals of the ancient pre-Christian deities of Ireland;

(2) the Ulster Cycle, tales of the heroes of the legendary royal hall of Emain Machae, Red Branch (*Craebruad*), heroic tales about the Ulaid (people of Ulster), whose central hero is Cú Chulainn;

(3) the Kings' Cycles, sagas about the ancient kings, reckoned, probably anachronistically, as having ruled all Ireland;

(4) Fiannaíocht, Fenian Cycle, tales and ballads about a war-band (fían) led by the hero Finn Mac Cumaill, also sometimes called the Ossianic cycle from Finn's son, the hero Oisín;

(5) Romances, beginning generally later (after the Anglo-Norman incursions from 1169) and showing inspiration from popular Continental and English tales of the High Middle Ages.

§4. the mythological cycle

The Irish Mythological Cycle may be defined as tales whose central characters are the *aes síde* (people of the síd mounds) or Tuath Dé. The Mythological Cycle has often been used as a source of information on the mythology (narrative accounts concerning Christian gods and other supernatural figures and events) of the pre-Christian Celts. This approach is at least somewhat problematical, since the extant Irish texts all belong to the Christian period and most are the product of monastic composition and copying. To get from the Irish Mythological Cycle to pre-Christian Celtic mythology some further piece of confirming evidence is needed, for example, Greek and Roman accounts of ancient Celtic myths or the independent survival of closely similar details in the early supernatural tales of Wales (Cymru). Thus, for example, one of the leading figures of the Irish Tuath Dé is the omni-competent Lug, whose name links him to the Gaulish and Celtiberian god Lugus and whose name and story are comparable to those of the figures of the Welsh Mabinogi, Lleu and Llefelys.

Three tales from the Mythological Cycle which have received a fair amount of attention from modern scholars are Cath Maige Tuired ('The [Second] Battle of Mag Tuired'), Tochmarc Étaíne ('The Wooing of Étaín'), and *Aislinge Oengusa* ('The Dream of Oengus'; see aisling; oengus mac ind óc) from the 8th century.

The *echtrai*, adventure tales about travels into the Otherworld, have mythological content, but the protagonist is usually a mortal hero who belongs to another of the cycles. The *immrama*—also involving travels to the Otherworld, located here on islands in the western ocean—can be viewed as a genre of hybrid origin, incorporating Christian and Latin themes into the native patterns of the *echtrai*. Navigatio Sancti Brendani was, in medieval Europe, a highly influential Hiberno-Latin supernatural voyage adventure with strongly Christian themes.

§5. THE ULSTER CYCLE

The geographical setting for the Ulster Cycle is the south-eastern part of the traditional province of Ulster (Ulaid), the present-day counties of Armagh (Ard Mhacha) and Down (An Dún), as well as the north of Leinster (Laigin), i.e. the counties of Louth (Lú) and Meath (An Mhí). The central focus of the action is the royal court of Ulster's high-king Conchobar at Emain Machae (the present-day archaeological site of Navan Fort) on the outskirts of Armagh. The action is set in the remote past: from time to time in the tales it is shown that the life of Cú Chulainn is believed to have been contemporary with that of Christ, which is likely to have been a thematic imposition of a monastic writer rather than a survival of a chronological scheme from pre-Christian times. Archaeology has recently shown that the high-status assembly centre at Emain Machae reached a climax of activity with a ritual destruction at 95/94 BC. However, few scholars would today claim that Cú Chulainn, Conchobar, or any of the other Ulster heroes reflect actual figures of any chronological horizon at Navan.

Several elements distinguish the Ulster Cycle from other epic tales: (1) the warriors are consistently depicted as chariot fighters; (2) Cú Chulainn—like the Greek high hero Achilleus, to whom modern scholars have often compared him—chooses a short life and eternal glory over a long undistinguished life; (3) the elaborate aristocratic FEAST in which the heroes of one or more tribes are gathered is often the venue for contention between heroes and competition for status; (4) heads of rivals are taken as trophies (see HEAD CULT).

The major tales from the Ulster Cycle which have received most attention from scholars are Táin Bó Cuailnge ('The Cattle Raid of Cooley'), Fled Bricrenn ('Bricriu's Feast'), Scéla Mucce Méic Dá Thó ('The Story of Mac Dá Thó's Pig'), as well as several of the *remscéla* (fore-tales) which explain the background to the *Táin*, for example, *Faillsigud Tána Bó Cuailnge* (How *Táin Bó Cuailnge* was found), *Compert Con Culainn* ('The Conception of Cú Chulainn'), Tochmarc Emire ('The Wooing of Emer'), Longas Mac nUislenn ('The Exile of the Sons of Uisliu'). The violent death of Cú Chulainn (see BREISLACH MÓR) and the death tales of several other Ulster heroes provide denouements. The important 9th-century *Táin Bó Fraích* ('The Cattle Raid of Froech') also has an Ulster-Cycle setting.

§6. THE KINGS' CYCLES

In contrast to the Ulster Cycle, which deals mainly with the HEROIC ETHOS, the Kings' Cycles are more concerned with such issues as: (1) the origins of peoples and dynasties; (2) anecdotes about famous representatives of various dynasties; (3) accounts about battles which have altered the course of history in such a way as to explain doctrines relating to the *status quo* at the time the tale was written; (4) anecdotes which explain customs and rites.

According to Gerard Murphy, the Cycles concern legends about historical figures rather than entirely fictional characters. A representative example for this cycle is *Genemain Cormaic* (The birth of Cormac [mac Airt]), the legendary ancestor of the Uí Néill dynasty or dynasties, who played a dominant rôle in Irish secular power in Ireland from the 5th century AD until the death of King Mael Sechnaill II in 1022.

Other examples of this genre are: (1) *Orgain Denna Ríg* ('The Destruction of Dind Ríg'), a version of the origin legend of the Laigin (Leinstermen) composed in the 9th century; (2) *Longes Chonaill Corc* (The exile of Conall Corc), a tale from the 8th/9th century about the origin of the Éoganacht dynasties of Mumu (Munster); (3) *Fingal Rónáin* (The kin-slaying of Rónán), the tragic story set in the historical period of the killing of the prince Mael Fhothartaigh by his father Rónán, king of the Laigin (†624), written in the 10th century. (4) *Buile Shuibne* (Suibne's madness) is a 12th-century tale concerning Suibne, a fictional 7th-century king of east Ulster, who was cursed by a saint and became mad after having witnessed the terrors of the battle of Mag Roth and lived in the wilderness among birds and animals. The Irish Suibne legend has close parallels with that of the mad Welsh poet and prophet, Myrddin. (5) In another tale, in Togail Bruidne Da Derga ('The Destruction of Da Derga's Hostel'), the spirit of the heroic tales is combined with an interest in the origin of the tribal dynasties of the Kings' Cycle and the fateful intrusion of the Otherworld into dynastic affairs; the Ulster-Cycle hero Conall Cernach is prominent in the tale. The story tells of the supernatural doom and violent death of the ideal legendary king Conaire Mór of Teamhair (Tara). The earliest version is found in the 11th-century manuscript Lebor na hUidre ('The Book of Dun Cow'), but the text can be traced back linguistically to the 9th century.

§7. A CHANGE OF TASTE IN LITERATURE

In the 12th century a significant change took place in the reception of Early Irish prose literature. One of the main reasons was the neglect of heroic literature such as the *Táin* and the Kings' tales. Such heroic and historical literature could be sustained only as long as the following conditions were maintained: (1) the writers and redactors were acting in a monastic field in which contact with Greek and Latin literature was maintained and where Irish-language literature glorifying great secular figures was not considered barbaric; (2) royal patrons existed who found the tales supportive of their own interests and values.

The political and ecclesiastical reality in Ireland in the central Middle Ages changed in several ways which proved harmful to the native literary tradition. Continental monastic orders such as the Cistercians—who became strong in Ireland from the early 12th-century—looked unfavourably on secular Irish scholarship since it did not conform to the precepts of an international hierarchy (see CISTERCIAN ABBEYS IN IRELAND). Thus, the focus of Irish scholarship was shifting from the MONASTERIES to the secular bardic schools (see BARDIC ORDER). The reforms of the 12th-century Irish church also strengthened, enriched, and reorganized the sees of bishops at the expense of the old native monastic foundations, thus impoverishing the institutions which had formerly maintained the scriptoria. A new political situation developed following the advent of the Anglo-Normans in 1169, bringing about a downward mobility for the native Gaelic *ríg tuatha* (kings of tribes), in which they came increasingly to approximate vassal lords within a European feudal system. The change became visible in the replacement of Cú Chulainn and the warriors of the *Craebruad* (Red Branch) by the new national hero FINN MAC CUMAILL and his FÍAN (troop of mercenaries).

§8. THE FENIAN OR OSSIANIC CYCLE

The tradition about Finn and the Fían is given the Irish name FIANNAÍOCHT, which is often, but somewhat misleadingly, translated as 'Fenian literature', a term having modern Republican political overtones which are lacking from the Irish. The name 'Ossianic' is also used for this cycle, since many ballads about Finn are ascribed to his son OISÍN. 'Ossianic' also refers to the controversial adaptation and publication of Scottish *Fiannaíocht* by JAMES MACPHERSON.

The Fenian Cycle consists of prose tales and long passages of verse which are called *Laoithe Fianaigheachta* (Fenian lays/ballads). Recognized important tales within the cycle include *Finn agus Cúldub*, TÓRUIGHEACHT DHIARMADA AGUS GHRÁINNE ('The Pursuit of Diarmaid and Gráinne', which is not attested until the Classical Modern Irish period), and ACALLAM NA SENÓRACH (Dialogue of [or with] the old men). Oral *Fiannaíocht* did not depend on royal patronage or monastic scholarship for survival. These tales and songs continued to circulate vigorously in Ireland (ÉIRE), Gaelic Scotland (ALBA), and Nova Scotia well into the 20th century (see CELTIC LANGUAGES IN NORTH AMERICA).

§9. THE ROMANCES

As stated above, significant changes in the political situation in Ireland occurred after the 12th-century church reforms and the Anglo-Norman invasion. These had a lasting effect on Irish prose literature. One effect of the change was the development of romances, which show many parallels with contemporary romances from France. Although these tales also concern heroes and adventures, the romances contrast with the Ulster and Kings' Cycles in several respects. There is a preoccupation with love stories and miracles, and magic is a frequent element. Although it is difficult to define closely, the grandly heroic and archaic epic tone of the older tales is replaced by a more everyday register. The setting is often vague and unrealistic, in the manner of fairy tales. The structure of the narratives is more apparently a series of events, rather than the complex structures affected by deep-seated associations and traditions found in the older native tale types. The stories often conform to well-attested folklore types, both as collected in modern Ireland or more broadly throughout Europe. The characters are usually more clearly depicted than in FOLK-TALES, but they are less prominent than the episodes, themes, and motif.

In the later Middle Ages, the style and attitude characteristic of the romances came to effect the retelling of the old native tales, where these survive. The difference is clearly visible in a comparison of the Old Irish version of *Longas Mac nUislenn* (a tale of the Ulster Cycle) from the 8th/9th century with its Early Modern Irish version *Oidheadh Chlainne hUisneach* (The violent death of the children of Uisniu) from the 14th century.

§10. TRANSLATION LITERATURE

Irish versions and adaptations of classical tales appear in the 12th century, with the following important examples: (1) Togail Troí (The destruction of Troy), an Irish adaptation of *De Excidio Troiae* which is ascribed to Dares Phrygius (see TROJAN LEGENDS); (2) Imtheachta Aeniasa (The wanderings of Aeneas) based on Vergil's *Aeneid*.

§11. IRISH ARTHURIAN TALES

Lorgaireacht an tSoidhigh Naomtha (The quest for the Holy Grail) is the only direct translation of a well-known Arthurian tale which has been transmitted in an Irish manuscript. Despite the Celtic origins of Arthur, the pan-European phenomenon of Arthurian tales penetrated Ireland only late and relatively thinly. From the 15th century onwards, Arthurian tales were translated, and characters and themes were borrowed into Irish prose literature.

Irish literature [2] early poetry (*c.* 600–*c.* 1200)

§1. INTRODUCTION

Verse in pre-literate Ériu (Ireland) was the particular preserve of a learned class whose members are usually referred to as 'poets' but might more accurately be called 'seers'. The names by which they were known in Irish varied at different periods, with *fili* (pl. *filid*) being the most common designation (see BARDIC ORDER [1]). Of similar meaning are *druí* (pl. *druid*) and *éces* (pl. *écis*), all based on roots originally meaning 'to see' or 'to know'. These words illustrate the multiple rôles (social, legal, and mantic) of the seer as custodian of all knowledge necessary for the smooth functioning of society, largely without recourse to writing. Unlike the BARD, whose original sphere of activity appears to have been the composition of praise poetry, the *fili* was not primarily a composer of verse. Rather, the *fili* merely used poetry as the form in which to transmit his message or teaching. At first, the *filid* operated exclusively in an oral mode, reflecting Caesar's report on the refusal of the Gaulish DRUIDS to commit their teachings to writing (*De Bello Gallico* 6.14). Over the course of time, their poems were written down, either by *filid* or by monks in the MONASTERIES, from the 6th century at the latest.

From that time onwards there is evidence of literary activity in the Irish language in the monasteries, at first religious or ecclesiastical, but later covering the same ground as the secular poets. The monastic input to early Irish literature was so great that between the 6th century and the end of the 12th we know of no poet who was not either a member of a monastic community or in some way associated with a monastery. Neither do we know of any manuscript which was produced outside a monastic scriptorium. The history of Irish poetry during those centuries, as of Irish literature in general, is the story of the interaction between two cultural influences: the native, orally-based, tradition of the *filid* and the literary tradition of the monasteries, influenced primarily by Latin, but also Greek and other Continental sources.

Early Irish monasteries were not the massive stone buildings we know from the later Benedictine and Cistercian tradition (see CISTERCIAN ABBEYS IN IRELAND), but clusters of thatched huts surrounded

by a rampart. Each hut played its rôle in the life of the monastery, housing the abbot, the monks, or their guests, and serving as scriptorium (manuscript production centre), kitchen, or brewery, perhaps with a stone oratory as the only building capable of surviving the centuries. The monasteries were very much part of the rural communities in which they were situated, and they participated in local politics and even in wars. The large monasteries functioned like wealthy landowners, acquiring clients who farmed monastic land and owed the same dues to the monastery as they would to a secular lord (see further LAW TEXTS). The most important contribution to the literary history of Ireland was made, not in the hermitages or small communities of the coasts and islands, but in the great monasteries of the fertile inland river-valleys: Armagh (ARD MHACHA), Clonenagh (Cluain Eidnech), Clonmacnoise (Cluan Mhic Nóis), Kildare (Cill Dara), Killeshin (Cill Oisín), Lismore (Lios Mór), Monasterboice (Mainistir Buite), and the like, where the easier living allowed the leisure for literary pursuits.

§2. THE EARLIEST SURVIVING VERSE

The earliest surviving Irish verse, which has been dated to the second half of the 6th century, was partly social—probably composed by secular poets—and partly religious or ecclesiastical, and therefore is to be attributed to ecclesiastics who had a knowledge of Irish versification. The earliest poet known to us by name was COLMÁN MAC LÉNÉNI (†604) of Cloyne, Co. Cork (Cluain, Contae Chorcaigh). He had been a warrior but later became a monk, and fragments of his verse from both periods of his life survive.

A poem which can be dated with some certainty to the same era is the lament for the death of COLUM CILLE (St Columba, †597), *Amrae Coluimb Chille* (Poem for Colum Cille). In the 11th-century prose introduction to this poem it is ascribed to DALLÁN FORGAILL, said to have been the chief secular poet of Ireland in the 6th century. However, the thoroughly ecclesiastical character of the poem, with its biblical and patristic references and frequent Latin loanwords, together with the monastic character of the virtues for which Colum Cille is praised, show that the author must have been an ecclesiastic. The poem twice refers to the river Tay (Tatha) in Scotland (ALBA), making it likely that it was written in a Scottish rather than an Irish environment, probably by a member of Colum Cille's own community on Iona (EILEAN Ì). It uses pronouns in the first person plural to denote the relationship of the speakers to the saint, e.g. 'he has passed away from us', 'our diadem'. It was composed in 597 or 598, as shown by the reference to Colum Cille's recent demise and by the mention of the poet's patron, Aed. Since at least the 11th century, Aed has been taken to be Aed mac Ainmirech, king of Tara (TEAMHAIR) and Colum Cille's cousin, who died in the battle of Dún Bolg in 598. Metrically, the poem is loosely structured, with lines of varying length and frequent, though irregular, alliteration.

Luccreth moccu Ciara, who is thought to have been a contemporary of Colmán mac Lénéni, has left two important poems which claim an Ulster (ULAID) ancestry for certain population groups in the south ofÉriu. One of these poems, *Conailla Medb Mí-Churu* ([Queen] MEDB had contrived injurious contracts) seems to represent, in very obscure language, a primitive version of the saga TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley'; see also ULSTER CYCLE).

Two poems are attributed to Laidcenn mac Bairceda of Dál nAraidi (in east Ulster), styled 'the chief poet of Ireland', which list the kings of Leinster (LAIGIN) from the 5th-century Énna Cendselach back to the mythical early invaders of Ireland. Laidcenn is undated, but the style and language of his poems place him in the same period as those already discussed.

SENCHÁN TORPÉIST was a 7th-century poet who is better known for the rôle allotted to him in later tales such as *Scéla Cano meic Gartnáin* (The tales of Cano meic Gartnáin) and *Tromdám Guaire* (Guaire's band of poets) than for the verse attributed to him, most of which is clearly of a later date. The tales portray him as a cantankerous old man who flouts the hospitality of his royal hosts.

Cenn Faelad mac Ailello, who is called *sapiens* (Latin for 'wise man') in the annalistic notice of his death in 679, was a member of the royal family of the Northern Uí Néill, and is credited with legal and grammatical works as well as with the authorship of verses on heroic themes, some of which may well be as old as the 7th century (see also AURAICEPT NA N-ÉCES; LEGENDARY HISTORY; MAG ROTH).

From the 7th century we also know of several religious poets whose work illustrates the piety and the intellectual life of the Irish Church at the time. In mid-century, Beccán mac Luigdech of Iona composed two poems in praise of Colum Cille, while in the final years of the century, at the time of Colum Cille's centenary, a similar poem is attributed to Adomnán mac Tinne (†704), the well-known author of *Vita Columbae* (Life of Colum Cille). Also in the middle of the century, Ultán (†657) of Ard mBreccán, who is otherwise known as an early biographer of St Patrick, is credited with a poem in praise of St Brigit. About the same time, Colmán moccu Cluasaig (*c.* 661) of the monastery of Cork (Corcaigh) composed a poem with the opening line *Sén Dé donfé fordonté* (May God's blessing lead us, help us), which calls on God to help as he had helped many named biblical figures in their difficulties. This is a version of the Church's prayer for the dying known as *commendatio animae in extremis*.

The 8th century produced a poet who was regarded by later generations as the equal of Homer and Vergil, Ruman mac Colmáin (†747). He was a member of a family settled near Lough Erne (Loch Éirne) and descended from Lugaid son of Loegaire mac Néill, all 5th-century kings of Tara. His mother was of the Cenél nÉndai, descended from a brother of the same Lugaid, and the family lived at Trim, in the modern Co. Meath (Baile Átha Troim, Contae na Mí). This explains how Ruman's family came to be identified with Trim, where they were known as Síl Rumain. In Trim his brother Cormac (†746) was abbot of the monastery, and his son Cenn Faelad (†821) was scribe, bishop, and abbot. Of Ruman's verse, only one complete poem survives, in a 15th-century copy which has been subjected to some modernization. It is a very original portrayal of a rough sea, in which the unusual metre may have been intended to imitate the motion of a boat in a storm.

§3. ROYAL POETS

It was not unusual for kings to have verse ascribed to them, though one cannot be altogether sure that they were the actual authors. The earliest of these royal poets is perhaps also the most interesting. He was called Flann Fína in Irish, and is identified with Aldfrith, king of Northumbria from 685. His mother was said to have been Fín, daughter of Colmán Rímid, king of the Northern Uí Néill and uncle of Cenn Faelad mac Ailello mentioned above. This would mean that Cenn Faelad and Aldfrith were first cousins. Aldfrith is thought to have spent time in an Irish environment, as did his father Oswydd, and therefore he would possibly have known Irish, as Beda tells us Oswydd did (*Historia Ecclesiastica* 3.25). Some poems are attributed to Flann Fína, but none of them, in their surviving form, can be as old as the 7th century.

Verses quoted in the annals are ascribed to Aed Allán (†743), king of Tara, and Cú Bretan mac Congusa (†740), king of Fir Rois (Louth [Contae Lú] and environs). Cú Bretan was reputedly the only king to survive the battle of Allen (722), and his verses relate to this battle. A later royal poet was Flannacán mac Cellaig (†896), king of Brega (in east-central Ireland), who commemorated in verse the deaths of the heroes of Irish saga. This is important, not for its literary qualities but for the evidence which it provides for the existence of these stories in a datable context. An interesting series of more than a dozen poems is ascribed to Gormfhlaith (†948), daughter of Flann Sinna (†916), king of Teamhair. She was married in turn to three kings: Cormac ua Cuilennáin (†908), king of Cashel (Caisel Muman), Cerball mac Muirecain (†909), king of Leinster, and Niall Glúndub (†919), king of Tara. The poems seem to have formed part of a lost saga about Gormfhlaith which told of her fall from her royal estate to poverty in her later years. There are striking similarities between her life story and that of Suibne Geilt, the king who became a madman, in *Buile Shuibne* (Suibne's madness), which also consists of prose and verse (see further myrddin). Both are close to each other in date, which would be in the 12th century. Since some verse attributed to Gormfhlaith and an anecdote which may have belonged to the saga are contained in the Book of Leinster (Lebor Laignech), this dating would seem to be justified.

§4. RELIGIOUS VERSE

In the mid-8th century Blathmac, son of the above-mentioned Cú Bretan, composed poems in honour of the Virgin Mary—testifying to an early devotion to Mary in Ireland—and on the childhood of Jesus, deriving from the apocryphal 'Infancy Gospel of Thomas'.

A reflection of tensions between church and state can be seen in the verse attributed to Fothud na Canóne (†819). Two poems, *Cert cech ríg co réil* (The tribute of every king is clearly due) and *Eclas Dé bíi* (The church of living God) assert the rights of the church against the claims of kings. The latter poem claims the freedom of monks from military service, a dispensation credited also to Adomnán a century earlier. Fothud na Canóne (a sobriquet meaning 'the foundation of the canons') has also left a versified rule for the Christian life, including monks and lay people, and even kings. This may well be an authentic work of his, whereas the other poems mentioned are either much revised or were composed at a later date.

In the early 9th century also, Oengus mac Oengabann (Oengus Céile Dé) of the monastery of Clonenagh (Cluain-Eidhnech), a follower of the monastic reform movement identified with Mael Ruain (†792) of Tallaght, composed *Félire Oengusso* ('The Martyrology of Oengus'), a verse calendar with a quatrain for every day of the year commemorating the feasts of saints—Irish and foreign—and based on the Martyrology of Tallaght. According to tradition, Oengus showed his composition to Fothud na Canóne in 804, and received his blessing on the work. If there is any truth in this story the text which Fothud na Canóne saw must have been an early draft of the *Félire*, since we know that the work was not completed in the form in which it now survives until after 811, when the latest reliably identified saint mentioned in the *Félire* died.

In the later 10th century Airbertach mac Coise Dobráin (†1016), teacher and later superior of the monastery of Ros Ailithir (modern Rosscarbery, Co. Cork [Ros Cairbre, Contae Chorcaigh]), was the author of a poem on the geography of the world and of several poems on biblical themes, including, most likely, the great epic, *Saltair na Rann* (The verse psalter), on the creation, fall, and redemption of mankind, which was in the process of composition in 988. In the later 11th century Mael Ísa Ua Brolcháin (†1086) of Armagh died while visiting the monastery of Lismore, Waterford (Lios Mór, Contae Phort Lairge). In the contemporary notice of his death in the Annals of Ulster he is said to have been learned in wisdom and piety, and skilled in the poetry of both languages, i.e. Irish and Latin. Eight religious poems survive which are certainly his, and several more of which the authorship is less certain. The most interesting of the poems belongs to the latter category, a poem of 40 lines in which the author addresses an old psalter as though it were a woman with whom he had slept when he was a child; as an older man, he is reunited with the book after it had belonged to four others, and he finds that age has taken its toll.

§5. COURT POETRY

Compared with the profusion of praise poems known from the period 1200–1600, the preceding period, i.e. the years 600–1200, shows few examples of the genre. That this absence is due to the vicissitudes of transmission and not to any failure of the earlier poets to praise their patrons is shown by the survival in the Middle Irish metrical tracts of short extracts from such poems quoted to exemplify particular metres. One excellent but anonymous poem in praise of a Leinster prince survives in the 9th-century manuscript in the monastery of St Paul in Kärnten, Austria. Flann mac Lonáin (†896 or 918) was a Connacht poet whose surviving work consists largely of encomiastic verse (praise poetry), much of which has either been modernized or fabricated at a later date. Other poets who praised their royal patrons were Dallán mac Móre, who sang in praise of Cerball mac Muirecain (†909), king of Laigin, and Urard mac Coise (†990), some of whose dealings with his patron, Domnall Ua Néill, king of Ireland, are narrated in the contemporary tale Airec Menman Uraird maic Coise (The stratagem of Urard mac Coise). Mac Liag (†1016) is said to have been poet to Brian Bóruma (†1014), king of Ireland, but the poems attributed to him are all of a later date, emanating from the saga which grew up around Brian in the 15th and 16th centuries.

§6. HISTORICAL VERSE

In the 9th and following centuries the distinction between secular and religious poets became less marked than before. Monastic scholars took an ever livelier interest in topics of Irish and world history. Orthanach ua Caellâma (†839), bishop of Kildare, has three poems of Leinster (LAIGIN) interest attributed to him, two dealing with local history and one a tribute to St BRIGIT, patroness of Leinster. Mael Muru (†887) was attached to the monastery of Fothain Mura in the north of Donegal (Dún na nGall), though he is nowhere described as a cleric. To him is ascribed the authorship of a poem on the origins of the Irish people, including a version of the story of the origin of the PICTS of Scotland. CORMAC UA CUILENNÁIN (†908) was king and bishop of Cashel, but his scholarship extended to history and language. As a poet, his reputation resulted in many poems being attributed to him in later centuries, only one or two of which can possibly be his work.

In the period between the 10th and the 12th centuries verse on historical topics predominated. The definition of 'history' to which these poets subscribed included mythological narrative and the LEBAR GABÁLA ÉRENN ('The Book of Invasions') type of LEGENDARY HISTORY which had emerged in monastic environments since the 8th century. Thus, Cinaed ua Artacán (†975) has left several poems dealing with the mythology of Brega, as has Flann mac Mael M'Aedóc (†979), superior of the monastery of Killeshin (Cill Oisín), on the heroic deeds of the Leinstermen and on the origin of the *Bórama* (lit. 'reckoning of cattle'), a tribute said to have been imposed on the people of Leinster by the kings of Tara. Three historical poets are brought together in a note in LEBOR NA HUIDRE ('The Book of Dun Cow') 2919ff.: Eochaid ua Flannacán (936–1004) of Armagh, the author of a poem on the origin of the fortress of Ailech, described in the ANNALS of Ulster as 'a master of poetry and historical lore', whose books were used by Eochaid Eolach ua Céirín, the author of a poem on the history of LOCH GARMAN in LEBOR LAIGNECH ('The Book of Leinster', 26780–26980) and by FLANN MAINISTREACH (†1056) many of whose poems have survived, including those on the history of the dynasties of Ailech, MIDE, and Brega. Flann's sources were annals, in many ways similar to the surviving annals, regnal lists, and GENEALOGIES. His was clearly a literary aim, to versify material which already existed in documentary form. The same literary purpose is evident in his poem on world kingship, which is based on the doctrine of Eusebius of Caesarea (*c.* AD 260–340) of successive world kingships. The note in *Lebor na hUidre* lists the manuscripts which Eochaid Eolach and Flann Mainistreach used in compiling the text *Senchas na Relec* (The lore of the royal burial-places) of Ireland. These were located in the monasteries of Armagh and Monasterboice, and were identified by their own particular names, indicating that they were manuscripts of some repute.

Historical poets of the later 11th century were Gilla Coemáin (*fl.* 1072), author of poems listing the kings of Ireland and synchronizing world history with Irish events, and Dubliter ua Uathgaile (*fl. c.* 1100) of Killeshin, who is credited with a prose and verse tract on the Six Ages of the World, though he may in fact have written only the long poem on the same subject with which the tract closes. Dependent to some extent on Dubliter's poem, and therefore datable to the 12th century, is a synchronizing poem by Gilla in Choimded ua Cormaic of the Uí Fhidgeinte, from Tullylease (Tulach Leis), in which he summarizes the versions known to him of several early sagas. He also composed an important poem listing the poets and historians of Ireland. Gilla Mo Dubda ua Caisite informs us that he came from Ard Breciffin in Co. Meath (Contae an Mhí) and was writing in Daim-Inis, an island monastery in Loch Éirne, in 1147. His principal work is the BANSHENCHAS, a long poem commemorating the famous women of history and legendary history from Eve to the poet's own time. A prose version of the text, based on the poem, also exists. The sections of these works which relate to the 11th and 12th centuries provide valuable information on the marriage patterns of the time.

The explanation of the origin of place-names was a favourite topic of verse (and prose) composition in the 11th and 12th centuries. Traditional stories explaining the origin of well-known place-names were not enough to satisfy the public taste for onomastic lore. New stories were invented which had no basis in tradition, and it even appears that names were sometimes concocted to be the vehicle for stories 'explaining' their origin. Place-name literature was called DINDSHENCHAS (lore of high places) and exists in verse and

prose recensions, as well as forming part of most tales since the 9th century at the latest. The great collection of prose and verse place-name stories, which is found complete or fragmentary in many manuscripts, seems to have had its origin in the work of 10th-century poets such as Cinaed ua Artacán and Cúán ua Lothchain and to have been collected in the 12th century. To the same century belongs the Fenian tale Acallam na Senórach (Dialogue of [or with] the old men), which, though not primarily a *dindshenchas* document, contains many place-name stories and poems. In the mid-12th century Gilla na Naem ua Duinn, a scholar in the monastery of Inis Clothrann in Lough Ree (Loch Riach), composed a long poem summarizing the contents of the collection. This was the last independent contribution to the *dindshenchas*, though the interest in the origin of place-names persisted well into Modern Irish.

§7. SAGA POETRY

The earliest narrative prose texts, from the 8th and 9th centuries, contain occasional passages in verse. In the earliest tales, these are used to report speech said to have been uttered in metrical form, usually the heightened speech demanded by solemn or dramatic situations, as when the two heroes Conall Cernach and Cet mac Mágach, addressed each other at the climax of Scéla Muicce Meic Dá Thó ('The Story of Mac Dá Thó's Pig') or when, in Longas Mac nUislenn ('The Exile of the Sons of Uisliu'), the druid Cathbad prophesied the calamity which the unborn Deirdre (Derdriu) would bring on Ulster. At first, the use of verse was restricted and many tales contain no verse. With the passage of time, however, verse was more frequently introduced and the occasions on which it could be used were increased. By the 11th and 12th-centuries, the tales consisted largely of verse connected by prose passages. Sometimes, the verse repeated in metrical form the events just told in prose. One also encounters dramatic lyrics with a very short prose introduction setting the scene for the poem, as in Créide's lament for Dínertach. The next step in this progression was the development of a free-standing narrative verse. This appeared in the 12th and following centuries, exemplified principally by the Fiannaíocht (Fenian) ballads which provide an alternative narrative medium to the contemporary Fenian prose tales. It is not clear, however, whether this narrative verse was a totally indigenous development or to what extent it was influenced by the growth of the international ballad at the same period. Occasionally, it is evident that a poem found in a tale was originally an independent composition inserted into the tale. Such is the 9th-century love song *A Bé Find, in raga limm?* (Fair Lady, will you go with me?), which is awkwardly interpolated into the tale Tochmarc Étaíne ('The Wooing of Étaín'; see also reincarnation) and has close parallels in later Irish folk-songs, e.g. *Plúirín na mBan Donn Óg* (Little flower of the brown-haired young woman) or *Úrchnoc Chéin mhic Cáinte* (The green hill of Cían mac Cáinte).

§8. ANONYMOUS AND MISATTRIBUTED VERSE

By far the greatest part of early Irish verse is anonymous because, for most of the period, it was not customary for poets to attach their names to their work. Only in the 11th and 12th centuries did it become at all common for poets to identify themselves by giving their names in a stanza at the end of a poem. Earlier poets are identified in the headings prefixed to poems in the manuscripts. In many cases these attributions are patently false, as when poems are attributed to mythical or early historical characters or when the late language of a poem attributed to an early poet reveals the impossibility. But even plausible attributions must be questioned, since certain well-known poets, such as Flann Mainistreach and Mael Ísa Ua Brolcháin, were frequently credited with having composed poems which they did not create.

Many anonymous poems and fragments survive from the earliest period discussed above. These are principally the gnomic verses quoted in the 7th- and 8th-century law texts. These are usually short and often obscure, stating in pithy maxims the principles and formulae of the ancient laws.

Almost all the saga verse is anonymous or attributed

to the characters in the story. Occasionally, the verse quoted is introduced with a formula such as 'as the poet said', without naming the author more precisely. Some of these poems, on account of their language or style, may be identified with some likelihood as the work of particular poets, but most of them remain as anonymous as the tale in which they are embedded.

The most pleasing poems of the whole early Irish corpus are the anonymous lyrics written in the Old Irish period and identified as NATURE POETRY or 'hermit poetry', whether or not they were written by real hermits. These short poems manifest familiarity with, and appreciation of, nature and the ability to express this in well-crafted verse which has a lightness and a brightness lacking in most early verse. Other short poems deal with the great themes of love, mourning, and the passing of youth, and show a great depth of feeling.

§9. METRICS AND THE TRAINING OF THE POETS

The most common metre of the earliest poetry has seven syllables to the line and three syllables in the last word in the line. Other metres show a disyllabic or trisyllabic ending in a less structured line. Poems with shorter lines, in particular, showing in general an accurate syllable count and regular stress-pattern, can be read either as syllabic or as accentual metres. In all these verse forms alliteration is prevalent, linking words within the line or linking lines together. Lines may be organized in stanzaic or in stichic form. Rhyme, which begins to appear in stanzaic poems, is probably borrowed from the Latin hymns current in the early Irish church. [However, a native Celtic source has also been claimed, since rhyme is a central principle in the verse systems of WELSH, CORNISH, and BRETON from the earliest surviving texts.] The extent of Latin influence on other features of this early verse is also a matter for debate. After the 7th century, stanzaic syllabic metres with rhyme and alliteration began to predominate. These, in a wide variety of patterns, were the normal metrical forms in use between the 7th and the 17th centuries. The aspirant poet received his training by belonging to the entourage of a senior poet for seven or more years. The subjects which he was expected to study are set forth in curricular form in the Second Metrical Tract (11th-century in its surviving form), while the First and Third Tracts list and exemplify the metres in use (see BARDIC ORDER; METRICS).

§10. THE END OF THE PERIOD

The 11th-century reform of the church, usually associated with the name of Pope Gregory VII (r. 1073–1085), had its effect on the Irish church, particularly in the 12th century when a series of synods gave the Irish church a diocesan organization for the first time, resulting in the loss of power and revenues for the Irish MONASTERIES (see also ÉRIU §10). Foreign religious orders were introduced from the Continent, particularly the Cistercians, who arrived in the 1140s and spread quickly, with a large number of new foundations. The older Irish monasteries were either given over to the new orders or turned to other uses such as cathedral or parish churches. The new orders had no sympathy for the mode of life of the Irish monasteries, least of all for the cultivation of Irish-language literature, which was foreign to them in language and tradition, and in no way conformed to their own expectations of monastic life. This expulsion of literature from the monasteries brought to an end the 600-year symbiosis of Irish MONASTICISM and Irish literature.

Gearóid Mac Eoin

Irish literature [3] classical poetry

Classical Irish poetry was the most highly prized and respected genre of IRISH writing during the period from approximately 1200 to 1650. It was the product of professional, trained poets working in a strictly regulated language, Classical Modern Irish (Gaoidhealg),

and adhering to the strictest metrical code ever prescribed for the medium of poetry in the history of Irish literature (*dán díreach* 'straight verse'). This code had developed gradually throughout the Middle Irish period (900–1200; see Ó Cuív, *Éigse* 12.273–90), and it was fixed in or around the beginning of the 13th century. The classical language is also that of the same period, 'modern' in the sense that it was based on the language which emerged from the highly volatile Middle Irish period (*c.* 900–*c.* 1200), but 'classical' in that it was fixed and unyielding to developments postdating its creation. At the beginning of the period it would have been a regular lingua franca for the whole area it served (Ireland/ÉIRE and GAELIC Scotland/ ALBA), but by the end of that period, with the emergence of the modern dialects, it would have sounded rather quaint and stilted in many quarters.

The classical or 'bardic' poets (*filidh*), whose profession was hereditary, spent many years training in schools of poetry in order to master the language and the METRICS and, in particular, to familiarize themselves with the works of the master-poets of the genre (see BARDIC ORDER). Their textbooks, which have survived in the form of the grammatical and syntactical tracts (Bergin, *Irish Grammatical Tracts*; McKenna, *Bardic Syntactical Tracts*), show a deep reverence for the craftsmanship of the major poets of the 13th to the 15th centuries, and the emphasis in the training of the poet was on imitation of the best models rather than the development of a new or unique style. Classical poetry, for this reason, tends to be 'conventional' rather than 'creative'; though each official poem is a unique creation in itself, this conventionalism was the quality which determined its value for the person celebrated in it. Therefore, most poets tended to use not only the same prescribed language and metrical form, but also a common stock of themes, motifs and metaphors, so that the genius of the gifted poet—the one who had *tiodhlaicthe ón Tríonóid* (gifts from the Trinity), as one poet puts it—is seen in the ease with which he mastered the medium and the fresh expression he gave to well-known themes.

The bardic poet offered his patron immortality of fame, and often found himself at loggerheads with the church, which was competing in the same market and offering a similar product, immortality of the soul (Ó Cuív, *Éigse* 14.87–106). A well-wrought piece of craftsmanship by a master-poet could claim a considerable prize (20 cows), and the poets guarded their profession jealously. The greatest prize of all, of course, was an appointment as official court poet (*ollamh flatha* 'professor to a prince'), which guaranteed not only full-time permanent employment but also the *fearann ollamhnachta* (professorial land), an estate which went with the post and was held tax-free (Breatnach, PRIA C 83.37–79). The privileges and responsibilities of the *ollamh flatha* are referred to again and again by poets who held the position, none more so than Eochaidh Ó hEODHASA, *ollamh flatha* to Aodh MágUidhir (Hugh Maguire, †1600), in his famous, though as yet unpublished, *Mór an t-ainm ollamh flatha* (Great is the title *ollamh* to a prince).

The poet's main duty was to validate his patron's position, usually as head of the family (*ceann fine*); in the case of an aspiring prince, cultivation of the poets might secure their support for his candidature for the same position. The validation took the form of a praise poem (*dán molta*), which might be an inauguration ode celebrating the patron, while retrospective validation was the main theme of the official elegy (*marbhnadh*), which might or might not include a battle-roll (*caithréim*). The qualities most commonly celebrated are valour, nobility, and, in particular, generosity. Although these might be extolled in similar ways by many poets, each poem is tailored to fit the individual being celebrated by including his name (his title, e.g. Ó Néill 'the O'Neill', if he was head of the family at the time of composition), his parents' names, sometimes a lengthy genealogy, his residence, battles in which he took part and/or other specifics relating to his career, ending, after closing the poem itself, with complimentary verses to his wife. But the tailoring might go further. A young prince aspiring to the headship of the family might be supported in a poem celebrating the qualities of youth with a theme-setting opening line such as *Maith an locht airdríogh óige* (Youth is a good fault in a great king) or *Ní haineamh óige i bhflaithibh* (Youth is not a fault in princes). A prince whose family knew more glorious circumstances than those in which he found himself might be reminded of that glorious past and encouraged, as in the case of one 14th-century MacCarthy (Mac Cárrthaig) prince in west Kerry (Ciarraí), to follow the example of Moses and lead his people out of their current bondage back to their

promised land, in this instance Cashel (CAISEL MUMAN). But of course not all potential patrons were of native Gaelic stock and the professional poets were shrewd businessmen as well as accomplished artists. Anglo-Norman patrons could easily be accommodated in the scheme of things by an appeal to a well-known fact of Irish history and pseudo-history, namely that successive invaders, including the Gaels, had established their rights by the sword and displaced the former occupants of their lands. One 14th-century poet, the celebrated Gofraidh Fionn Ó Dálaigh, gives expression to bardic polity with the words:

I ndán na nGall gealltar linn
Gaoidhil d'ionnarba a hÉirinn;
Goill do shraoineadh tar sál sair
i ndán na nGaoidheal gealltair

In poems composed for the foreigner
we promise that the Irish will be expelled from Ireland;
the expulsion of the foreigner is the guarantee
in poems composed for the Irish.
(McKenna, *Dioghluim Dána*, poem no. 67)

What better expression of the tailored nature of the fabric of bardic verse?

Of the approximately 2000 poems in strict *dán díreach* which have survived from the period, around 1500 have been published in one form or another. It is hoped that all of this material, both published and unpublished, will soon be available on CD-ROM.

Damian McManus

Irish literature [4] post-classical (from the 'Flight of the Earls' to the FAMINE)

§1. INTRODUCTION

The departure of O'Neill and O'Donnell (the defeated native chiefs of Tyrone and Tyrconnell) and their allies for exile on the Continent in September 1607 and the subsequent plantation of Ulster (ULAID) completed a process which entailed the eclipse of the old GAELIC order: the native lordships were wiped out, Brehon law (see LAW TEXTS) was replaced by English common law and Gaelic patrician culture began to crumble. If Sir John Davies (*A Discovery of the True Causes of Why Ireland was Never Entirely Subdued*, 1612) on the one hand believed that he could soon make the Irish become English, the northern poet Fear Flatha Ó Gnímh, writing about 1622, stated that Ireland (ÉIRE) had already become a new England in all but name. Neither belief was correct. In lamenting the death of Ireland in another of his poems Ó Gnímh was not, any more than any other of the poets, suggesting that the native population of Ireland had been extirpated; rather was he acknowledging that the traditional upper-class way of life, with which the existence of the professional poets was inextricably bound, had ceased to be, and that the resulting loss of the patronage which sustained the poets would entail the demise of their profession. This, no doubt, was seen by the poets as a profound tragedy, and indeed it was so, but it was not the end of literature in IRISH, for a rich harvest of writing in prose and verse was produced in the 17th and 18th centuries, in which the themes and tropes of the classical period continue to appear, together with genres, themes, and tropes which are hardly represented at all in the earlier literature.

§2. POETS AND POETRY

The dominant and defining feature of the literature of the Early Modern Irish period (*c.* 1200–*c.* 1650) is the strict syllabic verse (*dán díreach*) of the professional poets (see BARDIC ORDER). Nevertheless, it is abundantly clear that verse in other forms was also produced in that period, including verse in accentual metres (*abhrán*/*amhrán*) and in freer syllabic metres (*óglachas*),

and that such verse was produced in sufficient quantity and was held in such esteem—by some patrons at least—as to be seen by the professional composers of strict syllabic verse, such as Giolla na Naomh Ó hUiginn in the 14th century (McKenna, *Book of Magauran* 28.2–4), to constitute a real threat to the dominant position of their product. That Ó hUiginn's fears were not groundless is demonstrated by the presence in *Leabhar Branach* (ed. Mac Airt) of several poems in accentual metre, including one (no. 16) by the celebrated Tadhg Dall Ó hUiginn (1550–91). In another poem (no. 26) in the same *Leabhar Branach*, Fearghal Mac Eochadha states that his patron's literary taste is poor and, in support of his claim, points to the fact that there is many a facile poem (*dán bog*, lit. soft poem, a poem of superficial content or in free syllabic metre, or both) in his poem-book. In fact, in the classical period, professional poets used freer syllabic metres in composing satires, love poems, coarse poems, &c. (Ó Macháin, *Téacs agus Údar i bhFilíocht na Scol* 7–8). It is not surprising, then, that poets of the post-classical period who composed verse in accentual metres and in *óglachas* demonstrate a great facility and subtlety in their use of them, for they were not composing in new forms, but were working in a well-established tradition which, however, was amenable to innovation, as is shown by the rise in the 17th century of the combination of syllabic and accentual verse forms in the (*trí*) *rainn is ambrán* structure.

The Dominican priest Pádraigín Haicéad (*c.* 1600–54) was undoubtedly the outstanding Irish poet of the 17th century, in terms of the variety and intensity of his poetry and the sophistication of his use of the language and of the metres, both accentual and syllabic (see Ní Cheallacháin, *Filíocht Phádraigín Haicéad* ix–xx). While his public verse, such as his elegies for members of the Butler family and his commentaries on public affairs, is strongly traditional, his personal poems offer a striking revelation, expressed in a truly personal voice, of a complex personality. Although frequently engaged in bitter controversy, he was also capable of extremely warm affection: for Ireland (the pain of separation from her is vividly felt in some of his poems), for music and for musicians, and particularly for his friends, both male and female, his love for whom inspired some fine verse (Ó Beoláin, *Merriman agus Filí Eile* 50–64). The verse of Haicéad's contemporaries, Fr Seathrún Céitinn (*c.* 1580–*c.* 1644) and Piaras Feiritéir (?–1653; see Ó Beoláin, *Merriman agus Filí Eile* 38–49), though often inventive in language and imagination, lacks the force of his. Like him, they both composed attractive verse in the *amour courtois* (courtly love) tradition and are represented together with other 17th-century poets in Thomas F. O'Rahilly's *Dánta Grádha* (Mac Craith, *Lorg na hIasachta ar na Dánta Grá*; Ó Háinle, *Promhadh Pinn* 10–36; Ó Tuama, *Filí faoi Sceimhle*; Ó Tuama, *An Grá i bhFilíocht na nUaisle*).

Political verse of the 17th century contains several salient themes which represent a marriage of aspects of 15th- to 16th-century French political literature with material from the earlier native tradition (De Bhaldraithe, *Measgra i gCuimhne Mhichíl Uí Chléirigh* 210–19; Ó Tuama, *Éigse* 11.3.201–13). Haicéad and Céitinn, both of whom spent time on the mainland of Europe, must surely be among those responsible for this productive development. While their verse is representative of the patrician response to the country's problems, a group of long poems, five of which have been published by Cecile O'Rahilly in *Five Seventeenth-century Political Poems* (1952), are more demotic in language and sentiment, 'and . . . offer cumulative evidence to prove the appalling social and political conditions of the period [1640–59] in Ireland' (O'Rahilly, *Five Seventeenth-century Political Poems* viii).

Religious allegiance could cause friction, but the appeal by Giolla Brighde Ó hEodhasa OFM to a friend to return to Roman Catholicism (Mhág Craith, *Dán na mBráthar Mionúr* no. 9) is far gentler than the earlier attack on priests who converted to Protestantism by his confrere Eoghan Ó Dubhthaigh (Mhág Craith, *Dán na mBráthar Mionúr* no. 27). Aodh Mac Aingil's Christmas poem (Mhág Craith, *Dán na mBráthar Mionúr* no. 30), infused by Franciscan pietism, is a delightful piece, but the period also saw the production of several gloomy, moralizing poems on the *memento mori* theme by Muiris Mac Gearailt (*fl.* 1600–26), Tomás Déis, bishop of Meath (An Mhí; 1622–52), and others (Nicholas Williams, *Dánta Mhuiris Mhic Dháibhí Dhuibh Mhic Gearailt*; O'Rahilly, *Dánta Grádha* nos. 98, 101–6; see Ó Háinle, *Éigse* 32.47–58; Ó Háinle, *Promhadh Pinn* 61–73).

The rise of a new well-off but uncultured class, whether of native or planter stock, was greatly resented by the poets, who gave vent to their disgust in many

poems. This is particularly keenly expressed in the work of Dáibhí Ó Bruadair (?1625–98) and Aogán Ó Rathaille (?1670–1729), both of whom would have wished to live as professional poets patronized by the nobility but found their aspirations dashed as the social conditions in which the poet might subsist changed radically. Both saw their own descent into poverty as reflecting, and being reflected in, the country's misfortunes. Ó Bruadair lived through the rebellion of 1641, the Cromwellian period, the upset caused by the Popish plot, the war of the two kings—William and James II—and the subsequent perfidy associated with the Treaty of Limerick of 1691, all of which he discussed in several poems in a remarkably dense idiom, including 'The purgatory of the men of Ireland' and 'The shipwreck' (Mac Erlean, *Duanaire Dháibhidh Uí Bhruadair 3*). Ó Rathaille's sense of his own continuity with the poets of the patrician past is clearly reflected in the many elegies he composed and also in his satires. On the other hand he used the new allegorical political vision poem (aisling) to fine effect, particularly in the beautiful 'Brightness of brightness', to express his view of the contemporary state of Ireland and his pessimism regarding her future (Dinneen & O'Donoghue, *Dánta Aodhagáin Uí Rathaille*).

The political *aisling* was to become one of the defining features of 18th-century verse in Irish. Ireland (Éire) as a beautiful but sad woman appears to the poet in rural surroundings; he describes her misfortunes and predicts the arrival of the rightful Stuart king (or another) to save her. This formula, treated with particular linguistic flair by such Munster poets as Seán Clárach Mac Domhnaill (1691–1754) and Eóghan Ruadh Ó Súilleabháin (1748–84) who sought to lift the spirits of their audience, was repeated scores of times until worn threadbare. Meanwhile the Ulster poet Art Mac Cumhaigh (1738–73) expressed the hope that a return of the Uí Néill dynasty would bring salvation. By the second half of the 18th century, however, the poets had come to accept what they were: schoolmasters, scribes, casual labourers, ordinary men of the people who composed for the people in their provincial dialects. Such were Seán Ó Murchú na Ráithíneach (1700–62), Piaras Mac Gearailt (?1700–?92), Tadhg Gaelach Ó Súilleabháin (?–1795), Seán Ó Tuama (?1708–75), and Aindrias Mac Craith (?1708–95) in Munster (see mumu); Riocard Bairéad (?1740–1819) in north Connacht; and Séamas Dall Mac Cuarta (?1647–1733), Cathal Buí mac Ghiolla Ghunna (?1680–1756), and Peadar Ó Doirnín (?1700–69) in Ulster (see ulaid). The meetings, discussions, and contentions of the poets at their 'courts' of poetry throughout Munster (Ó Conchúir, *Saoi na héigse* 55–81) sustained their inventiveness and sharpened their talents, which they poured into verse on very many diverse topics. Some aspects of the interaction between the poets and the clergy (some of whom were also poets) are reflected in 18th-century verse (Heussaff, *Filí agus Cléir san Ochtú hAois Déag*). Occasional poems, including humorous ones, were composed in large numbers; poems of repentance were common; but so also were mocking, satirical, and scatological poems. The warrant (*barántas*), a genre which consists of an imitation of the legal warrant, became the vehicle for much ribald humour and mockery (Ó Fiannachta, *An Barántas 1*), and Brian Merriman/Mac Giolla Meidhre (?1745–1805) made the proceedings of the law courts, combined with the setting of the love *aisling*, the basis for his impressive poem, *Cúirt an Mheon-Oíche* (The midnight court; ed. Ó Murchú), in which he offers a bawdy analysis of matters of sex, fertility, marriage, and celibacy. Although *Caoineadh Airt Uí Laoghaire* (The lament of Art O'Leary; ed. Ó Tuama; see also Ó Buachalla, *An Caoine agus an Chaointeoireacht*), the fine lament on the death of her husband (1773) which is attributed to Eibhlín Dubh Ní Chonaill, is deeply traditional in inspiration and sources, it nevertheless gives expression to the intensity of her love for him. In *Eachtra Ghiolla an Amarráin* (ed. Walsh, *Poet's Manuscript*) Donncha Rua Mac Conmara (1715–1810) gives a vibrant account of an emigrant's journey to Newfoundland. The stories and poems of the Fianna continued to be a much-loved part of the folk repertoire (see fiannaíocht; finn mac cumaill), and even spawned new literary additions, such as Mícheál Coimín's *Laoi Oisín ar Thír na nÓg* (ed. Comyn; see oisín; tír na n-óg). Although a large amount of the verse of the 18th century is not particularly distinguished, a significant proportion of worthwhile poetry was produced, and the variety of the matter and its treatment, particularly in the four lengthy poems just mentioned, gives eloquent testimony to the vibrancy of Irish poetry of the period.

By the turn of the 18th century, however, Irish verse

had begun to lose much of its vigour. A significant number of poets continued to ply their trade well into the following century and some, such as Diarmaid na Bolgaí Ó Sé (*c.* 1755–1846), Antaine Raftearaí (1784–1835), and Art Mac Bionaid (1793–1879), were quite prolific. However, they sang principally for a local audience about contemporary events and personalities; their style was generally rather prosaic and they tended to rely heavily on traditional metaphors and images and on references to classical mythology (Ó Fiaich, *Léachtaí Cholm Cille* 3.19–37; Ó Héalaí, *Léachtaí Cholm Cille* 3.38–57; Ó Muraile, *Léachtaí Cholm Cille* 3.58–78). But, just as many *aislingí* by earlier 18th-century poets and anonymous love poems (Ó Tuama, *An Grá in Amhráin na nDaoine*), which were presumably composed at some time during the same century, entered the folk repertoire of song and survived by virtue of being married to attractive tunes, so too did many examples of this less distinguished verse of the late 18th and early 19th centuries.

§3. PROSE

The first half of the 17th century is remarkable for the volume of religious and historical prose writing which was produced. Both kinds represent a response to important contemporary challenges, while the authors of some of the significant body of creative literature written during the 17th and 18th centuries also engaged with current issues.

No attempt was made to mediate the tenets of the REFORMATION to the people of Ireland through the medium of IRISH until Elizabeth I became Queen of England (see TUDUR), and her practical recognition of the fact that Irish was the language of the majority of the Irish population drew only a reluctant response from the reformed clergy in Ireland (ÉIRE). Eventually, just after Elizabeth's death, William Daniel (Ó Domhnaill, *c.* 1570–1628) in 1603 published the translation of the New Testament that he and his collaborators had made (see BIBLE), and in 1608 he published his translation of the Book of Common Prayer (Nicholas Williams, *I bPrionta i Leabhar*). John Richardson (1664–1747) published a new, and less satisfactory, translation of the Book of Common Prayer in 1712 (McAdoo, *Éigse* 2.250–7). William Bedell (1571–1642), an Englishman who became Provost of Trinity College in 1627, learned Irish and set about the mammoth task of having the Old Testament translated into Irish. He completed this in 1640, but, owing to the Rebellion of 1641 and Bedell's death in 1642, the translation remained unpublished until 1685 (Nicholas Williams, *I bPrionta i Leabhar*). The Roman Catholic Counter-Reformation response in Irish came initially from Europe where authors such as Giolla Brighde Ó hEódhasa (?–1614), Flaithrí Ó MAOLCHONAIRE (?1560–1620), and Aodh Mac Aingil (1571–1626) had access to publishing facilities, particularly at Louvain (Ó Cléirigh, *Aodh Mac Aingil agus an Scoil Nua-Ghaeilge i Lobháin*); later works produced in Ireland, those of Seathrún CÉITINN (Geoffrey Keating), for example, were not printed and circulated in manuscript. Beginning with Ó Maolchonaire's *Desiderius* (Louvain, 1616), a substantial series of translations was made, some of which, such as

Bonaventúr Ó Conchobhair's *Buaidh na Naomhchroiche* (1650), were not published. Most of these translations and Céitinn's massive treatise on death, *Trí Biorghaoithe an Bháis* ('Three Shafts of Death') are not essentially concerned with rebutting the teaching of the reformers. However, Ó hEodhasa's catechism (Antwerp, 1611; Louvain, 1614; Rome, 1707; see Mac Raghnaill, *An Teagasg Críosdaidhe*), which closely follows the models set by Peter Canisius and Robert Bellarmine and itself became a model to be followed by later Irish authors, Mac Aingil's work on the sacrament of penance, *Scáthán Shacramuinte na hAithridhe* (Louvain, 1618; Ó Maonaigh, *Scáthán Shacramuinte na hAithridhe*) and Céitinn's on the Mass, *Eochair-Sgiath an Aifrinn*, have a distinct Counter-Reformation edge and are concerned to expound and defend Catholic doctrine (Mac Craith, *Léachtaí Cholm Cille* 30.28–64). Although the authors of several of those works make the plea that their stylistic defects should be ignored since they wrote to teach religion and not to provide models of Irish, their writings are stylistically interesting (Ó Dúshláine, *An Eoraip agus Litríocht na Gaeilge*). It is also significant that 17th-century works such as the translation into Irish of The Rule of St Clare (1636) and of Rules associated with the Franciscan Order suggest that Irish, as well as being the language of doctrinal instruction, was seen also as the language through which the religious life of those orders was to be lived.

At the other end of the spectrum from religious literature are the bawdy satire *Pairlement Chloinne Tomáis* (Nicholas Williams, *Pairlement Chloinne Tomáis*) and the large progeny which it spawned. Based on two sessions of a parliament of peasants, the *Pairlement* consists of two parts, the first probably written about 1610–15, the second some fifty years later, in which contempt for the boorishness of the upstart churls of the time is trenchantly expressed. Aogán Ó Rathaille's brief social satire, *Eachtra Thaidhg Dhuibh Uí Chróinín*, is strongly influenced by the *Pairlement*, while two short works which are closely related to it have an ecclesiastical focus: *Comhairle Mhic Clamha* (ed. Ó Dufaigh & Rainey) provides a harsh criticism of the ignorance of the Catholic clergy of the later 17th century while *Comhairle Comissarius na Cléire* (Ó Dufaigh, *Studia Hibernica* 10.70–83) ridicules the holding of ecclesiastical synods, which were very frequently convened in the same period. A further extensive text on the same model and to a significant extent derived from Erasmus's Colloquies (Stewart, *Celtica* 7.135–41) is *Párliament na mBan* (The parliament of women; ed. Ó Cuív) which Domhnall Ó Colmáin composed in 1670: here, an assembly of upper-class women deliver rather dull speeches on moral and social behaviour appropriate to their class and also on behaviour suitable for lower-class people.

The 18th century saw the production of further religious works such as Conchubhar Mac Cairteáin's *Agallamh na bhFíoraon*, Tadhg Ó Conaill's *Trompa na bhFlaitheas*, and Uaitéar Ó Ceallaigh's *Stair an Bhíobla*, all of which were translations (there were also two translations of *The Imitation of Christ*, an anonymous one of 1762 and one by Domhnall Ó Súilleabháin published in 1822) or were heavily influenced by originals in other languages.

Much of the Counter-Reformation defence of the Catholic faith was based on the historical argument, and it is clear that early 17th-century historians writing in Irish were concerned to provide a reliable version of the story of the Irish people, based on due respect for genuine sources and their evidence (Ó Buachalla, *Studia Hibernica* 22/23.59–105). This is certainly true, in principle at least, of the work of Mícheál Ó Cléirigh who was sent by his Franciscan superiors in Louvain to Ireland to gather material for the lives of the Irish saints and who with his associates compiled in 1632–6 the great *Annála Ríoghachta Éireann* (ed. O'Donovan 1–7), and of Seathrún Céitinn's influential history, *Foras Feasa ar Éirinn*. However, Ó Cléirigh's work is not really a history of Ireland, being in the main limited to west Ulster (Ulaid) and north Connacht, and its annalistic format and archaizing style reduce its interest as literature, while Céitinn, though he established a fine prose standard, was rather too uncritical as a historian. Even less critical than Céitinn and more tortured in style than Mícheál Ó Cléirigh was Lughaidh Ó Cléirigh (?1580–?1640) whose *Beatha Aodha Ruaidh Uí Dhomhnaill* (Life of Red Hugh O'Donnell; ed. Walsh), written between 1616 and 1632, is more a panegyric than a biography (Mac Craith, *Irisleabhar Mhá Nuad* 1994.45–54). Tadhg Ó Cianáin's diary of the Flight of the Earls in 1607 (Walsh, *Flight of the Earls*); and Toirdhealbhach Ó Mealláin's journal of the 1641–7 Rising (Ó Donnchadha, *Analecta Hibernica* 3.1–61) are important sources of information on contemporary events (De Barra & Ó Fiaich, *Imeacht na nIarlaí*).

Romantic tales, both those based on the Fenian (FIANNAÍOCHT) tradition and imitations of Continental models, continued to be popular in the 17th and 18th centuries, though it is difficult to establish when some of them were composed. Most of the Early Modern Fionn tales are considered older than the 17th century by some scholars (Murphy, *Ossianic Lore and Romantic Tales of Medieval Ireland* 49), though Bruford (*Béaloides* 34.42) assigned *Tóraigheacht Taise Taoibhghile* 'probably' to the 17th century, whereas its editor felt it had been composed in the 16th century (Ní Mhuirgheasa, *Tóraigheacht Taise Taoibhghile* xiii). Three romances which seem to date from the early 17th century show evidence of French and Italian influence: *Eachtra Mhacaoimh an Iolair* by Brian Ó Corcráin (*fl.* 1608), *Eachtra Mheléra agus Orlando* and *Eachtra Ridire na Leomhan* (Hollo, *Nualéamha* 57–71; see ECHTRAI). Much later in the century a minor explosion of creativity in the south-east Ulster area produced a sizeable collection of romantic tales, beginning perhaps with *Tóruigheacht Gheanainn Ghruadhsholais* in 1679, which revive the old ULSTER CYCLE heroes and introduce them into the standard romantic setting (Ní Chléirigh, *Coimheasgar na gCuradh*; Ní Chléirigh, *Eachtra na gCuradh*; Ní Mhuirgheasa & Ó Ceithearnaigh, *Sgéalta Rómánsuíochta*), while towards the end of the century Fr Maghnus Ó DOMHNAILL translated three tales from the Spanish of Juan Perez de Montalvan.

In the early years of the 18th century Seán Ó Neachtain (?1645–1729) composed two interminable pseudo-Ossianic tales in which Fionn (FINN MAC CUMAILL) and his associates are presented as chivalrous European knights. Another work by Ó Neachtain, *Iacobides et Carina*, is a fictionalization of recent historical events, the hero of the title being James Fitzjames, duke of Berwick and bastard son of King James II, while his *Stair Éamain Uí Chléirigh* (see Mahon, *History of Éamon O'Clery*) brings him almost into the stream of the modern novel, for, though it is an allegory, the main character is rather well drawn and there is a strongly realistic feel to the story's delineation of an alcoholic's decline into degradation and subsequent recovery (Ó Háinle, *Éire–Ireland* 21.4.118–19).

The mock-heroic *Mac na Míchombairle* (ed. Watson), which was perhaps composed before the end of the 17th century, may have been intended by its anonymous author to ridicule the romantic tales just as Cervantes did in *Don Quixote*. If so, in view of its immense popularity throughout the 18th and 19th centuries, it may have had some influence on one or two authors such as Seán Ó Neachtain and, later in the 18th century, Mícheál Coimín (1688–1760), author of *Eachtra Thoroilbh mhic Stairn* (Ó Neachtain, *Torolbh mac Stairn*) and *Eachtra chloinne Thoroilbh*, who introduced elements of realism and verisimilitude into their tales. On the other hand, contemporary English literature may also have had a part to play in this, and in particular in a late 18th-century re-writing of the Deirdre story (see DERDRIU), *Imeacht Dheirdre le Naoise* (Ó Buachalla, ZCP 29.114–54), which has some remarkably sophisticated touches of characterization and Gothic atmospheric elements. The Gothic influence is strong, too, on a substantial series of sketches which Amhlaoibh Ó SÚILLEABHÁIN (1780–1838) wrote in the early 19th century and which he may have intended to form sections of a novel (McGrath, *Cinnlae Amhlaoibh Uí Shúileabháin* 4.170–296; Mac Craith, *Fiadhach is Tóir is Scéalta Eile*). Here, too, there is much social realism, while in his *Tóruidheacht Chalmair mhic Mhearchuradh* (ed. Ó Domhnaill), which he composed in 1826, Ó Súilleabháin took traditional Irish romance in a new direction by introducing references to late 18th-century historical events and persons in Ireland, Europe and America. Ó Súilleabháin's *Cín Lae* (Diary) which he wrote in the years 1827 to 1835 (McGrath, *Cinnlae Amhlaoibh Uí Shúileabháin* 1–4; De Bhaldraithe, *Cín Lae Amhlaoibh*) is, of course, not a fictional work, but contains some fictional writing and much social reportage which could have provided useful guidelines in the further development of Irish prose, as could some work by Dáibhí de Barra (1757/8–1851), in particular his *Cath na Deachún* (Ó Cuív, PRIA C 61.1–21) which is based on a historical event.

But it was not to be. The small amount of creative prose produced in Irish in the 18th and 19th centuries might have been sufficient to sustain the tradition and point to new directions, were the voice of Irish prose literature not stifled in the middle of the 19th century. Writing of the song tradition, George PETRIE, in the preface to *The Ancient Music of Ireland* (1855), referred to the 'awful, unwonted silence' in which the country was enveloped as a result of the Great FAMINE of 1845–52. The silence that descended on Irish prose remained unbroken almost until the end of the century.

Cathal Ó Háinle

Irish literature [5] 19th century (*c.* 1845–*c.* 1922)

§1. IRISH LITERATURE PRIOR TO THE GAELIC REVIVAL [1893]

The period between the Great FAMINE (1845–52) and the establishment of the Gaelic League (CONRADH NA GAEILGE) in 1893 has often been characterized as the bleakest epoch in the history of Irish literature. Creative prose writing, vigorous in the 17th century, was virtually non-existent, and poetry, though esteemed and widespread in IRISH-speaking areas, was undistinguished by the thematic and formal experimentation which had characterized the best of 17th- and 18th-century verse. It is no surprise, moreover, that the deterioration of the language and its literature are popularly associated with the Famine. If Irish speakers constituted half of the population in the period before the Famine, they accounted for less than a third by the time of the 1851 census.

However, there were important continuities, without which the linguistic and literary revival which occurred towards the end of the century would have been unimaginable. As mentioned above, the composition of popular song-poetry continued to thrive. It was, however, increasingly oral in character, less sophisticated metrically, and prone to verbosity and cliché. Nevertheless, it was the authentic voice of the Irish-speaking community and—albeit in a local context—was still capable of reaching high notes of sincerity, passion, and humour. Among the more prominent poets representative of this type were Colm de Bhailís (1796–1906) in Conamara, the farming brothers Marcas (†1848) and Peatsaí Ó Callanáin (1791–1865) in east Galway (GAILLIMH), Seán Ó Duinnshléibhe (*c.* 1825–*c.* 1900) in Corca Dhuibhne, and Pádraig Piarais Cúndún (1777–1856), who emigrated from Cork to Utica, New York, in 1828.

Another important continuity lay in the fact that Gaelic manuscripts were still being compiled at the beginning of this period, and it is clear that the literature in the native language could still attract a listening audience. A new departure was marked, however, by the gradual integration of traditional scribal activities with popular publishing interests. For the first time, Irish was appearing in publications aimed at a large audience, most notably in song collections and in the 'Gaelic Departments' of periodicals such as *The Nation* (1842–), the *Irish-American* (1856–) in New York, the *Tuam News* (1866–), and *The Gael* (1881–) in Brooklyn (see CELTIC LANGUAGES IN NORTH AMERICA). Publishers thus came to play a crucial rôle in maintaining an awareness of a national literature, as well as the potential for its revitalization. John O'Daly (1800–78), for example, with his bookshop and publishing enterprise in Dublin (BAILE ÁTHA CLIATH), brought together disparate groups with an

interest in Irish literature: scribes, antiquarians, Young Ireland activists and other nationalists. His bilingual editions of Edward Walsh's *Reliques of Irish Jacobite Poetry* (1844), his own *Poets and Poetry of Munster* (1849) and *Irish Language Miscellany* (1876) were highly successful, and served to introduce traditional Irish poetry to a sympathetic non-Irish-speaking audience. As a co-founder and honorary secretary of the Ossianic Society (1853), O'Daly published several volumes of Fionn-Cycle material, including prose texts as well as verse (see FIANNAÍOCHT; OISÍN). One of the Society's editors, the Louth-born scribe Nicholas O'Kearney (*c.* 1802–65), produced good translations of verse by Burns and others, as well as some original compositions inspired by historical and contemporary events.

In mid-century Ulster (see ULAID) and north Leinster (see LAIGIN), an efflorescence of poetic composition was largely due to the financial support and enthusiastic encouragement of Robert MacAdam (1808–95), a founding member of the Ulster Gaelic Society (1830) and the editor of the *Journal of the Ulster Archaeological Society* (1853–62). As part of a manuscript-collecting project in the period 1842–58, he employed several Irish-speaking scholar-scribes who were inspired, in turn, to original composition. One member of this circle was Aodh Mac Domhnaill (1802–67), a native of Meath (see MIDE), who produced some 40 humorous and topical poems, as well as a prose treatise on natural philosophy, one of the few significant works of original Irish prose prior to the Gaelic revival of the 1890s. Others included Art Mac Bionaid (1793–1879), a fine satirical poet from south Armagh (ARD MHACHA), and the Meath scribe Peadar Ó Gealagain (1792–1860), whose natural and unpretentious verse comprises a valuable social document for the history of his region during the Famine years.

A third individual whose educational and publishing interests played an important rôle in the subsequent revival was Canon Ulick Bourke (1829–87), a native of Co. Mayo (Contae Mhaigh Eo) and a first cousin of John MacHale (1791–1881), archbishop of Tuam. Bourke was a member of the Ossianic Society, and during the 1850s compiled the *College Irish Grammar* (1856) and supplied 60 'Easy Lessons or Self-Instruction in Irish' for *The Nation* (eventually published in book form in 1860). In the following decade, while president of St Jarlath's College, Tuam, he oversaw the publication of Irish columns in several journals (including the *Tuam News*) and successfully publicized the Irish-language issue on both sides of the Atlantic. He was a founding member of the Society for the Preservation of the Irish Language (CUMANN BUAN-CHOIMEÁDTA NA GAEILGE, 1876) and the Gaelic Union (1880), and his establishment (along with David Comyn [1854–1907]) of the *Gaelic Journal* (*Irisleabhar na Gaedhilge*) in 1882 was a landmark event in the movement to renew the literary tradition. It is in the *Gaelic Journal* (1882–6) that Bourke published his *Beatha Sheághain Mhic Éil* (The life of John MacHale), the first modern biography in Irish.

§2. PROSE OF THE GAELIC REVIVAL

The revival of creative prose in Modern Irish commences with the serialized publication in the *Gaelic Journal* (1894–7) of Fr Peadar Ó LAOGHAIRE's *Séadna*, the retelling of a folk-tale concerning a man who sells his soul to the devil. With its rural style of humour, lively dialogue, and superb, idiomatic Irish, *Séadna* was an immense success. By present-day standards, it may be lacking in characterization and psychological development, but its lively language and affinities with oral narrative made it appealing to Irish learners and native speakers alike. In addition to convincing the Gaelic League that the sponsorship of creative writing would be a useful venture, Ó Laoghaire's work strengthened the case—in what was a hotly debated issue at the time—for using the spoken Irish of the GAELTACHT as the basis for a new prose standard. *Séadna* was not published in book form until 1904. In the meantime, Fr Patrick Dinneen (Pádraig UA DUINNÍN) published *Cormac Ua Conaill* (1901), which has the claim at least of being the first historical novel in Irish.

Irisleabhar na Gaedhilge was adopted as the official organ of the Gaelic League in 1895, and in the following year it decided that a festival modelled on the Welsh EISTEDDFOD would help to stimulate new writing. Accordingly, the first Oireachtas was held in May 1897 (see FEISEANNA). In the following year, a short-story competition was added, which was won by 'Conán Maol' (Pádraig Ó Séaghdha, 1855–1928, a native of Kenmare, Co. Kerry/Contae Chiarraí). 'Conán Maol's' first published collection, *An Buaiceas* (The wick), appeared in 1903, and he is now generally recognized as the first short-story writer of the revival. His stories,

which usually involve idealized heroic characters in historic settings, suffer from poor structure and lack of characterization. They do, however, represent a determined shift away from the model of oral narrative.

Another writer much admired at the time was 'Gruagach an Tobair' (Pádraig Ó Séaghdha, 1864–1955), who published a series of short stories in the *Gaelic Journal* (1903–5) under the title *Annála na Tuatha* (The countryside annals). While the language of these stories was lively and humorous, their dependence on stock comic characters and their want of intellectual substance leave them deficient by any literary criteria. The only author to develop the humorous, rural-based short story in a controlled, sophisticated and effective way was Pádraig Ó Siochfhradha ('An Seabhac', 1883–1964), a native of Corca Dhuibhne, whose *An Baile Seo 'Gainne* (This village of ours [1913]) still makes delightful reading. Some years later, he reproduced his success in extended form with a comical picaresque novel, *Jimín Mháire Thaidhg* (Jimmy son of Mary, daughter of Thaidhg, 1921).

One of the challenges facing the revivalists was how to foster an urbane, modern prose which engaged with contemporary social realities. Views on the issue were split between nativists (cf. NATIVISM)—who regarded the Irish language as a bulwark against the moral degeneracy emanating from England and the Continent—and progressives, who hoped to forge a modern literature open to inspiration from without. Patrick Pearse (Pádraig MAC PIARAIS), the most influential advocate of the progressive position, is properly regarded as the first modernist prose-writer in Irish. He argued that short stories should have a 'definite art form' (rather than an oral-narrative form) and be expressive of an individual point of view. The short stories in his first collection, *Íosagán agus Sgéalta Eile* (Little Jesus and other stories, 1907), largely embodied these desiderata; they are carefully structured, and their characters are delineated with some psychological depth. Pearse's second collection, *An Mhathair agus Sgéalta Eile* (The mother and other stories, 1916), contains his masterpiece, *An Deargadaol* (The devil's coach-horse), a disturbing social critique in the guise of a first-person oral narrative.

It is generally agreed that the finest writer of creative fiction in this period was Pádraic Ó CONAIRE (1882–1928). Following Pearse, he urged fellow writers to be honest and fearless in their revelation of life. The best of his early stories, written in London, examine the spiritual desperation of socially alienated individuals. His willingness to touch on themes such as sexual desire and alcoholism did not endear him to the conservative wing of the literary establishment.

Ó Conaire also produced a fine novel, *Deoraíocht* (Exile, 1910). This fictitious autobiography of a maimed Conamara man living in London is a strange and brooding psychological novel, the first of the genre in Irish. Ó Conaire's *Seacht mBuaidh an Eirghe-amach* (Seven victories of the uprising, 1918), a collection of stories dealing with the events of 1916, is of some interest as a literary projection of contemporary attitudes.

Two worthwhile novels which deal with Irish nationalist mentalities before and after 1916 are, respectively, *Caoimhghin Ó Cearnaigh* (Kevin Kearney, 1913) by Liam P. Ó Riain (1867–1942) and *Mo Dhá Róisín* (My two Róisíns, 1920), the first novel by the Donegal writer, 'Máire' (Séamas Ó GRIANNA, 1889–1969), who later came to be recognized as one of the most important and influential stylists of the 20th century.

One of the more interesting progressive writers of the period was Liverpool-born Piaras Béaslaí (1883–1965), whose short stories (from the period 1912–20) remained unpublished until the appearance of *Earc agus Áine agus Scéalta Eile* (Earc and Áine and other stories) in 1946. Béaslaí's remarkable novel *Astronár* (Astronaut), which examines the various responses of individuals to colonial domination in a fictional Eastern European country, was serialized in *The Freeman's Journal* in 1921, but was not published in book form until 1928.

Translations deserve some mention in this section on prose, since they were recommended as catalysts for the production of original literature (O'Leary, *Prose Literature of the Gaelic Revival* 363). The Gaelic League published scores of them, including translations of Old Irish tales, contemporary writings in English, and classics of European and English literature. Among the most successful were: Fr Peadar Ó Laoghaire's *Aesop a Tháinig go hÉirinn* (Aesop who came to Ireland, 1900–3) and *Don Cíochoté* (Don Quixote, serialized 1913–14; published as a book, 1922); Donnchadh Pléimeann's *Eachtra na nArgonátach* (The adventure of the Argonauts, [1904]); Mícheál Breathnach's *Cnoc na nGabha* (1906), a translation of Charles Kickham's *Knocknagow*; Tadhg

Ó Donnchadha's *Cuaird an Domhain i gCeithre Fichid Lá* (1912–13), a translation of Verne's *Le tour du monde en 80 jours*, and Piaras Béaslaí's *Eachtra Pheadair Schlemiel* (1909), a translation of Von Chamisso's *Peter Schlemihls wundersame Geschichte*.

§3. POETRY OF THE GAELIC REVIVAL

The extensive forum opened up by Irish-language journals encouraged the creation of verse addressed to a wide, non-local audience. Douglas Hyde (Dubhghlas De hÍde, 'An Craoibhín Aoibhinn') was himself one of the most prolific producers of such poetry, and a collection of his verse, written throughout the 1880s and 1890s, *Ubhla den Chraoibh* (Apples of the branch, 1901), holds the claim of being the first book of one poet's verse to be published during the revival. Hyde's poetry is strained and uninspired, and suffers from a thematic myopia which was endemic in the work of many of his contemporaries: the idealization of the Irish past, the Irish language, and the Irish-speaking countryside.

Within Gaelic League circles there was great dissatisfaction with poetry composed on English metrical models, and for the first Oireachtas (see FEISEANNA, 1897) it was decided that compositions entered for the poetry competitions should all be in traditional syllabic or assonantal verse. The most successful of the traditional stylists was 'Torna' (Tadhg Ó Donnchadha, 1874–1949), whose 1905 collection, *Leoithne Andeas* (Southern breezes), while conventional in its themes, demonstrated that complex AMHRÁN metres could be used to produce effective modern verse.

With regard to thematic innovation, Patrick Pearse (Pádraig Mac Piarais) again stood in the modernist vanguard. He is the first poet of the period who allows his own desires, motives, and notions of duty to be brought under scrutiny. For a formal model, he usually follows the syllabic metrical structures of 16th- and 17th-century personal poetry (such as those found in DÁNTA GRÁDHA). In a small but impressive corpus, published in *Suantraidhe agus Goltraidhe* (Lullabies and sad music, 1914), and *Collected Works* (1917), Pearse's blend of the modern and the traditional, the personal and the political, is both effective and enigmatic. Other modernists who experimented with syllabic forms include Piaras Béaslaí, whose prison poems, published in *Bealtaine 1916 agus Dánta Eile* (May 1916 and other poems; 1919) show some of Pearse's influence, and Áine Ní Fhoghlú (Aine Ó Néill, 1880–1932), the only female poet of note, whose love poems from the period 1916–19 were published in *Idir na Fleadhanna* (Between the festivities, 1922).

There was at least one poet who looked beyond Ireland (ÉIRE) for inspiration. The influence of classical French verse is evident in the work of Liam S. Gógan (1891–1979), one of the best and most original poets to emerge during our period. His *Nua-dhánta* (New poems, 1919) was to mark the beginning of a long and distinguished poetic career.

William J. Mahon

Irish literature [6] since 1922

§1. PROSE 1922–39

Most of the original prose produced in the decades following the establishment of the Free State was—in

one form or another—a 'regional literature' which focused on the economic struggles of the rural Irish-speaking community and its forms of social interaction. A classic paradigm for the genre may be found in the realist fiction of Séamus Ó Grianna ('Máire', 1889–1969), the author from Rinn na Feirste (Co. Donegal/Contae Dhún na nGall) who had already enjoyed considerable success with his political romantic novel *Mo Dhá Róisín* (My two Róisíns) in 1921. In his short-story collection *Cith is Dealán* (Showers and sunshine, 1926), Ó Grianna shifted away from nationalist themes, and depicted instead the foibles and vicissitudes of human nature as manifested in small village society. His stories are well crafted and marked by an acute and sympathetic sense of irony. Ó Grianna's rich Irish is a tour de force in its own right, and goes a long way to disguise his weakness in psychological characterization. *Caisleáin Óir* (Golden castle, 1928) is his finest sustained work, a romantic novel set against a background of rural poverty and emigration. Ó Grianna's later novels (eight of them, published between 1940 and 1968) were competent narratives and sold well, but they failed to break new thematic ground and slipped into the repetition of effective but uninspired formulae. A volume of memoirs, *Saoghal Corrach* (An eventful life, 1945), is an engaging record of his early education and intellectual development.

Regional fiction was produced by many of Ó Grianna's contemporaries in the 1920s and 1930s. Among the most prominent of these were 'Fionn Mac Cumhaill' (Maghnas Mac Cumhaill, 1885–1965) from Na Rosa (Co. Donegal), Pádraig Óg Ó Conaire (1893–1971) from Ros Muc (Co. Galway/Contae na Gaillimhe), Tomás Bairéad (1893–1974) from Maigh Cuilinn (Co. Galway), Seán Ó Ruadháin (1883–1966) from Gaoth Sáile (Co. Mayo/Contae Mhaigh Eo), and Nioclás Tóibín (1890–1966) from An Rinn (Co. Waterford/Contae Phort Láirge).

The regional literature of the period also includes the uniquely important Gaeltacht autobiographies. The seminal works in this genre are the three produced by the Great Blasket authors Tomás Ó Criomhthain, Muiris Ó Súilleabháin, and Peig Sayers: (respectively) *An tOileánach* ('The Islandman', 1929), *Fiche Blian ag Fás* ('Twenty Years A-Growing', 1933), and *Peig* (1936). Promoted as classics since their first publication, and translated into best-sellers, they played an important part in shaping popular, mid-20th century notions of Irish identity.

Life outside the Gaeltacht is represented in a small but eclectic and interesting corpus of creative prose. *Cúrsaí Thomáis* (Thomas's progress, 1934), by Éamon Mac Giolla Iasachta (Edward MacLysaght, 1887–1986), is a richly textured novel set in rural Co. Clare (Contae an Chláir). The Dublin suburbs and London provide the setting for *Lucht Ceoil* (The music-makers, 1932), an ambitious novel by 'Barra Ó Caochlaigh' (Art Ó Riain, 1893–1968) which explores moral failure within middle-class urban society. The city is likewise the backdrop for the short stories of Leon Ó Broin (1902–91) and Mícheál Mac Liammóir (1899–1987). Fiction set further afield includes Seán Óg Ó Caomhánaigh's romantic adventure, *Fánaí* (The wanderer, 1927), which is set in North Dakota, and Piaras Béaslaí's *Astronár* (Astronaut, 1928), a study of nationalist and colonialist mentalities in a fictitious Balkan country.

From a critical point of view, the most distinctive work in pre-war creative fiction was produced by Seosamh Mac Grianna ('Iolann Fionn', 1901–90) and Liam Ó Flaithearta (Liam O'Flaherty, 1896–1984). Mac Grianna's prose shares the same richness of language as that which characterizes the work of his brother (Séamus Ó Grianna), but his thematic concerns are more profound, and may be seen as a response to the political and cultural malaise of the post-Civil War Free State (see Irish independence movement). The best of his early writing includes the novelette *Dochartach Dhuibhlionna* (Doherty in Dublin, 1925)—a brooding portrayal of an individual's spiritual disintegration within the urban environment—and the short stories in *An Ghrádh agus an Ghruaim* (Love and gloom, 1929). His master-work, however, is *Mo Bhealach Féin* (My own way, 1940), a picaresque autobiographical narrative (largely recounting a foot journey made through Wales/Cymru), which incessantly registers the author's sense of alienation, his distrust of authority, and his futile search for an unsullied, heroic Irish integrity. The open-structure and paranoiac and misanthropic elements in this work anticipate postmodern stylistics, and are likewise symptomatic of the mental illness which put an early end to the author's writing career.

Liam Ó Flaithearta's five Irish-language short stories from the period (published in periodicals in 1924 and

1925) are powerful portrayals of animal and human nature, all set against the primitive background of the author's native Aran Islands (Oileáin Árann). These early stories did not appear in book form until the publication of *Dúil* (Longing) in 1953, a collection which also included the author's work from 1946 to 1952. Ó Flaithearta never produced more than 18 short stories in Irish, but they are unsurpassed for their perfect construction, clarity, and naturalistic vigour.

§2. WARTIME AND POST-WAR PROSE

By the end of the 1930s, a younger generation of writers—those who had grown to maturity within the new state—had come to share a critical view of the nation's cultural and political institutions. One axis of this movement emanated from the Gaeltacht, and is most powerfully represented in the writing of Máirtín Ó Cadhain (1905–70). The short stories in Ó Cadhain's first collection, *Idir Shúgradh agus Dáiríre* (In jest and in earnest, 1939), are conventional in theme, but distinguished by an extraordinarily rich and confident use of the Conamara dialect. Ó Cadhain was interned during the Second World War, on account of his Republican affiliations, and his work from this period is increasingly focused on the internal dispositions of his characters. His stories in *An Braon Broghach* (The dirty drop, 1948) and *Cois Caoláire* (Beside Caolaire; 1953) are uncompromising in their depiction of the grim social realities of Conamara in the early part of the century. His sensitivity for the psychological plight of female characters is especially evident in these stories. Nevertheless, Ó Cadhain has a humorous side, and this is particularly evident in *Cré na Cille* (The clay of the graveyard, 1949), a *sui generis* satirical novel based on the reported conversations of the squabbling deceased in a Cois Fharraige graveyard. The cutting satire of this novel subverts the popular idealization of the Gaeltacht and serves—ironically—to redeem it at a recognizably fallible level.

Ó Cadhain's attack on the romanticized Gaeltacht is paralleled in the humorous work of Brian Ó Nualláin ('Myles na Gopaleen', Flann O'Brien, 1911–66). In *An Béal Bocht* (The poor mouth, 1941)—a merciless parody of the regional literature—the Dublin-based Ó Nualláin ridiculed the popular stereotypes and clichés which were being promoted by the Gaelic establishment in lieu of an effective rural and urban language policy.

Growing impatience with government lethargy eventually led to a popular revitalization of the language movement (notably, in the university), the establishment of the literary journal Comhar (1942), and the appearance of an independent Irish-language publishing house, Sáirséal agus Dill (1945). The writing generated within this movement is increasingly concerned with the spiritual crisis arising from modernization. Séamus Ó Néill's *Tonn Tuile* (The water's surface, 1947), for example, is a sophisticated psychological novel which traces the breakdown of a marriage in middle-class Dublin. It is within the exciting literary conflux of this period also that Liam Ó Flaithearta—who had been writing for Seán O'Faoláin's iconoclastic journal, *The Bell*—resumed his writing in Irish and published his definitive short-story collection, *Dúil* (1953).

§3. PROSE FROM THE 1960S

Regional literature was still popular at the onset of the 1960s, but backward-looking and nostalgic narrative modes were being replaced by description and critical assessment of existing conditions. Críostóir Ó Floinn's *Caoin Tú Féin* (Lament yourself, 1955)—a novel set in Corca Dhuibhne—was an early manifestation of this trend. Pádraig Ua Maoileoin's *Na hAird Ó Thuaidh* (The heights out northwards, 1960), an absorbing sketch of contemporary life in the same region, is a particularly fine example from non-fiction.

Autobiographical writing dealing with the emigrant experience in Britain and America also emerged at this time. The seminal works were *Rotha Mór an tSaoil* (The great wheels of life, 1959), Micí Mac Gabhann's account of prospecting in the Klondike, and Dónall Mac Amhlaigh's *Dialann Deoraí* (An emigrant's diary, 1960), a memoir of the author's experience as a navvy in 1950s England. (The genre has since been taken up by many others, including Pádraig Ó Snodaigh, Mícheál Ó Siochrú, Colm Ó Ceallaigh, and Maidhc Dainín Ó Sé.) Mac Amhlaigh also produced two collections of short stories and a novel dealing with the same themes. Of a different type altogether, his *Schnitzer Ó Sé* (1974) is a comical satire aimed at the contemporary Irish media establishment.

Some excellent historical fiction was produced in the 1960s, most notably, several novels—all set in the 18th century—by Liam Ó Catháin (1896–1969),

Proinsias Mac an Bheatha, and Eoghan Ó Tuairisc (1919–82). The latter's *Dé Luain* (Monday, 1966) is an exceptionally fine novel dealing with the Easter Rising.

In terms of thematic and stylistic innovation, the two most influential writers of the 1960s were Máirtín Ó Cadhain and Diarmaid Ó Súilleabháin (1932–85). In his eight novels published between 1959 and 1983, Diarmaid Ó Súilleabháin explores the problem of recovering idealism and cultural wholeness in an increasingly shallow and materialistic Irish society. Ó Súilleabháin's challenging prose makes much use of the stream of consciousness.

In Ó Cadhain's work of this period, a short-story trilogy comprised of *An tSraith ar Lár* (The series laid low, 1967), *An tSraith Dhá Tógáil* (The series in construction, 1970), and *An tSraith Tógtha* (The series constructed, 1977), the urban setting becomes increasingly prominent in the author's exploration of social disconnection and alienation. The second of these collections is particularly noteworthy for its experimentation in language (anticipating, in the case of his 'A Simple Lesson', the bracketed prose of the deconstructionists) and surrealistic modes of the 1980s.

As an intellectual and a political activist, Ó Cadhain had a strong student following, and his writing had a tremendous influence, which is readily discernible in the prose of the younger writers who emerged in the 1970s. Notable in this regard is the prolific work of Pádraic Breathnach (1942–), a native of Maigh Cuilinn (Co. Galway), whose stories (commencing with the publication of *Bean Aonair agus Scéalta Eile* [A single woman and other stories, 1974]) are set in the author's native Gaeltacht and are rich in idiomatic language. The short stories of Seán Mac Mathúna (*Ding* [Wedge, 1983], *Banana* [1999]) are also highly regarded.

The influence of Ó Cadhain in respect to stylistics has been especially fruitful in the work of the scholar and critic, Alan Titley (1947–). Titley's work combines political and social astuteness with a keen talent for satire and linguistic playfulness. His first novels, *Méirscrí na Treibhe* (The scars of the race, 1978) and *Stiall Fhial Feola* (A fine strip of meat, 1980) are trenchant political and social critiques. Titley has produced some of the boldest experimental prose to date, particularly in the short stories in *Eiriceachtaí agus Scéalta Eile* (Heretics and other stories, 1987). With *Fabhalscéalta* (Parables) in 1995 he has single-handedly established the fable as a viable satirical genre in Irish writing.

Post-modern Irish-language fiction emerged in the mid-1980s with the publication of *Cuaifeach Mo Londubh Buí* (My yellow blackbird's squalls, 1983), the first volume of a surreal trilogy by Séamas Mac Annaidh (1961–) in which personal identity is explored through the lenses of Babylonian mythology and international politics. Since then, its themes and techniques have been taken up by many of the best contemporary authors, including Micheál Ó Brolacháin (*Pax Dei* [The peace of God, 1985]), 'Robert Schumann' (*Kinderszenen*, [1987]), Liam Prút (*Désirée*, [1989], and *Geineasas* [Genesis, 1991]), and Micheál Ó Conghaile (*An Fear a Phléasc* [The man who exploded, 1997]), Pádraig Ó Siadhail, Dara Ó Conaola, Ré Ó Laighléis, Daithí Ó Muirí, Liam Mac Cóil, and Lorcan Ó Treasaigh.

Since the 1960s, sexuality has become a major thematic concern in Irish prose and, for that reason, it deserves mention here. Pioneering novels dealing with the topic include Pádraig Ua Maoileoin's *Bríde Bhán* (Fair Brúde, 1967), Diarmaid Ó Súilleabháin's *Maeldún* (1972), and *Lig Sinn i gCathú* (Lead us into temptation, 1976) by Breandán Ó hEithir (1930–90), the first novel in Irish to be included on the national bestsellers' list. Beginning with his controversial *Súil le Breith* (Expecting a birth, 1983)—a novel about a priest's sexual relationship with his housekeeper—Pádraig Standún has since explored sex, society, the clergy and religious culture in a series of eight unpretentious popular novels. Psychological and social issues related to various forms of sexual orientation are starkly dealt with by Micheál Ó Conghaile (1962–), most notably in his short-story collection *An Fear a Phléasc* (1997) and the novels *Sna Fir* (In the men, 1999) and *Seachrán Jeaic Sheáin Johnny* (Jack Seán Johnny's wanderings, 2002).

§4. POETRY

Little extraordinary poetry was produced between the two World Wars, the most notable work being that of Séamus Ó hAodha (1886–1967) and Liam S. Gógan (1891–1979). Their verse from this period is pleasing and finely crafted, but it lacks the note of modernity which already distinguished contemporary verse in English. This was to change during the War, and their later collections—published from the 1940s to the 1960s—were fully in step with developments outlined

below. Ó hAodha's most powerful composition is *Speal an Ghorta* (The scythe of famine, 1945), an Oireachtas-winning centennial poem about the Great Famine. Gógan, using the metaphor of a canal boat, beautifully evinces the political and cultural torpor of the Irish state in *Liobharn an Stáit* (The state galley, 1946).

Modern Irish poetry truly came of age in the 1940s with the establishment of Comhar (1942) and the publication therein of work by an upcoming generation of modernists. The best of this verse was subsequently republished in Seán Ó Tuama's *Nuabhéarsaíocht, 1939–1949* (New verseology, 1950), a milestone anthology in which the work of three young poets—Máirtín Ó Direáin (1910–88), Seán Ó Riordáin (1916–77), and Máire Mhac an tSaoi (1922–)—was especially prominent.

For Máirtín Ó Direáin, his experience as an Aran islander living in the city forms the artistic basis for a critique of modernity. In his view, the spiritual richness engendered by the struggle for existence (as represented by life on Árann) has been exchanged for a superficial, soulless prosperity. There is a pronounced nostalgia in Ó Direáin's early verse, but this is counterbalanced by a striking use of archetypal landscape imagery (sea, stone, clay, tree) which gives his work a stark immediacy. Ó Direáin writes in free verse, but his rhythms and use of ornamentation are solidly rooted in traditional verse and the spoken language. Ó Direáin also produced a lively collection of autobiographical essays entitled *Feamainn Bealtaine* (May seaweed, 1961).

Seán Ó Ríordáin, a native of Baile Mhúirne, Co. Cork (Contae Chorcaí), was a victim of tuberculosis, and mortality and human imperfection are major themes in his work. In the introduction to his first published collection, *Eireaball Spideoige* (A sparrow's tail, 1956), Ó Ríordáin outlines a theory of poetic imagination whereby the artist aims at rediscovering the hidden but perfect and essential nature of all things, whether animate or inanimate, singular or aggregate, or even human creations (including poetry itself). Ó Ríordáin's verse is characterized by strong rhythms, a formal structure, and a wild and extravagant use of intense imagery and symbolism.

Máire Mhac an tSaoi was the first major female literary figure of the period under discussion, and indeed from the start of the Gaelic revival. In her first published collection, *Margadh na Saoire* (The exchange of freedom, 1956), she explores a variety of personal themes, especially love and relationship between men and women. Her verse is highly flexible in register, but carefully and exquisitely crafted. It displays a deep familiarity with the older literary tradition and a confident sense of working from within it.

Some other poets of note from the War and post-War period include: Brendan Behan (1923–64), whose corpus is small, but fresh and impassioned; Eoghan Ó Tuairisc (1919–82), whose major collection, *Lux Aeterna* (Eternal light, 1964), contains a powerful meditation on the bombing of Hiroshima (*Aifreann na Marbh* [Mass for the dead]); and the dramatist Micheál Mac Liammóir, whose single collection of verse, *Bláth agus Taibhse* (Flowering and form, 1964), contains some marvellously atmospheric prose poems. Among the more important poets whose work appeared in the 1960s and 1970s are: Seán Ó Tuama (1926–) himself, Pearse Hutchinson (1927–), Críostóir Ó Floinn (1927–), Conleth Ellis (1937–88), Tomás Mac Síomóin (1938–), Liam Prút (1940–), Caitlín Maude (1941–82), and Mícheál Ó hAirtnéide (Michael Hartnett, 1941–99), a successful poet in English who shifted to writing exclusively in Irish between 1975 and 1984.

The major influence in the spectacular burgeoning of Irish poetry in the 1970s and 1980s was the establishment in 1970 of the University College Cork based journal Innti by Michael Davitt (1950–). Indeed, what *Combar* has been for Seán Ó Tuama's generation, *Innti* was for Davitt and his contemporaries. (Nor was this entirely accidental, since Ó Tuama—through his poetry seminars at UCC—had a close association with the student-poets there, and introduced them to Seán Ó Riordáin and his work.). Collectively, the work published in *Innti* reflects the whole gamut of influences which affected Ireland in the 1960s and 1970s: the questioning of authority and old social paradigms, the sexual revolution, the emergence of a confident sense of Irish identity which envisioned new possibilities for the language, and the rise of international pop music. Stylistically, the work of the '*Innti* poets' maintains a marvellous balance between an informal, conversational tone on one hand, and polished crafting on the other (a balance reflecting the influence of the American 'beat poets' on one hand, and the influence of Ó Riordáin and traditional verse on the other). In addition to Davitt, the most

prominent poets to have emerged from this group are Gabriel Rosenstock (1949–), Liam Ó Muirthile (1950–), Cathal Ó Searcaigh (1956–), Nuala Ní Dhomhnaill (1952–), Louis de Paor (1961–), and Colm Breathnach (1961–).

For the peripatetic Cathal Ó Searcaigh, the rugged beauty of his native district around Gort a' Choirce (Co. Donegal/Contae Dhún na nGall) provides a poetic landscape in which he grounds his integrating explorations into eastern spirituality and homosexual love. His work is highly crafted and lyrical.

For Nuala Ní Dhomhnaill, it is the world of language—of traditional oral narrative and myth—rather than the physical terrain which provides a zone in which to explore the sexual and maternal aspect of womanhood. Her work is powerful and well crafted, but characterized also by a frank and earthy sense of humour. Two other female poets whose work has drawn considerable attention in recent years are Biddy Jenkinson (1949–) and Áine Ní Ghlinn (1955–).

Irish music

The term 'Irish traditional music' is currently used to designate an eclectic body of music which, in the past, has variously been described in publications as 'Irish', 'ancient Irish', 'national Irish', 'popular Irish', 'old Irish folk', and 'Irish traditional'. The term is problematic, especially given the fact that much of this music is not Irish in origin, or, in every sense, traditional. Much of the repertoire, for example, was introduced from Britain and Scotland (Alba) in the 17th and 18th centuries, and from Continental Europe in the 19th century. Continental Baroque music greatly influenced the compositions of the 18th-century harpers, whose music was largely a classical 'art music' directed at the gentry. Nevertheless, with regard to the greater part of the music currently played, publicly performed, or published in books and audio-recordings, there is little dispute among practitioners and their habitual listeners as to what the term 'Irish traditional' designates. When the suitability of the term is called into question, it is usually as part of a meta-discourse dealing with the issue of conservatism versus innovation in musical practice. At any rate, a reasonable effort can be made to describe this entity on the basis of what is generally and uncontroversially felt to fall under the designation of 'Irish traditional music'.

It is a living, popular tradition which has been transmitted to the present generation by a large number of older musicians in various localities, whether in Ireland (Éire) or in the Irish diaspora in Britain, North America, and Australia (see CELTIC LANGUAGES IN NORTH AMERICA; CELTIC LANGUAGES IN AUSTRALIA). Contrary to some popular misconceptions, it is not in essence a 'revived tradition'. It is primarily oral with reference to transmission (which frequently occurs within families), primarily conservative in its aesthetics, and primarily recreational (rather than professional) with regard to practice. This is not to say that organized efforts to promote and teach the music—most notably in the case of the organization Comhaltas Ceoltóirí Éireann (Congress of the musicians of Ireland; 1952)—have not played a significant rôle in maintaining popular interest in it and turning it—whether for good or for ill—into a worldwide phenomenon. Similarly, published collections of music, recordings, and performances by professional groups have all had a

Musicians in common social setting in a pub in Ireland

pervasive influence, without destroying the oral, conservative, and amateur focus of the tradition.

The music is primarily conservative in the sense that older tunes and older styles are highly regarded and largely determine the aesthetic parameters within which innovation is felt to be legitimate. Stylistic experimentation, new composition, and borrowing are not discouraged. Indeed, the present-day vitality of Irish music is a product of the creative tension between the communal conservatism and individual innovation. Innovations, however, undergo a 'trial period' before the community of practitioners and listeners accept or reject them. In spite of the increasing attempts from the outside to commercialize it, the tradition has acted as a self-regulating system: 'there is a community of taste between composer, performer, and listener' (Irish Traditional Music Archive).

The corpus of Irish traditional music—as represented in published and recorded materials dating back to the 17th century—is comprised of several strata which may be set out in a rough chronological order:

(1) The oldest stratum is represented by the words and music associated with ritual performances, labour, and children's games. These include laments (or 'keens', Irish *caointe*), lullabies, plough-songs, 'whistles', and gaming rhymes.

(2) Next, chronologically, are the *Laoithe* FIANNAÍOCHT (Fenian lays), ballads associated with the legendary hero Fionn mac Cumhaill (older FINN MAC CUMAILL) and his son OISÍN. This ballad cycle reached its full development in the 16th century, and several *laoithe* were extant in the repertoire of singers until the end of the 19th century. The chant-like melodies associated with them were highly distinctive and would appear to represent a genuine medieval inheritance. Some hymn tunes and religious carol tunes might also be assigned to this period. In performance, prior to the 18th century, these BALLADS were probably accompanied by the HARP or the *tiompán*, an instrument which may have resembled a lute, dulcimer, or bowed psaltery (cf. the Welsh CRWTH).

(3) Much of the present-day dance-music repertoire (including treble-time jigs and marches) appears to have originated in traditional pipe marches dating back to 16th and 17th centuries. A descriptive piece known as

Máirseáil Alastraim (Alastair's march), still played by pipers throughout the 19th century, may actually be a contemporary composition to commemorate the defeat of Alasdair Mac Domhnaill at the battle of Cnoc na nDos, Co. Cork, in 1647. Portions of the original piece still survive in the present-day repertoire.

(4) Some of the older Gaelic love songs would appear to be at least as old as the 17th century, and songs of all kinds—many composed in the 18th and 19th centuries—are still extant in the tradition. These are typically sung *ar an* SEAN-NÓS (in the old style), an unaccompanied solo performance characterized in most regions by a considerable degree of vocal ornamentation, subtle variation, and an absence of emotive vocal or physical gestures. Song composition in the traditional style is still to be found in the GAELTACHT.

(5) Some of the traditional harp music collected by Edward Bunting (1773–1843) and others is associated with musicians who lived in the 16th and 17th centuries. There is nothing in this pre-Baroque music which would call such a dating into question. At the end of this period and into the 18th century, the native harp tradition—represented most notably in the compositions of the harpist and poet Toirdhealbhach Ó Cearbhalláin (Turlough Carolan, 1670–1738)—came largely under the influence of Continental Baroque style. Through various channels, both oral and written, portions of the old harp repertoire have survived until the present day.

(6) In addition to actual performance, numerous musical collections in the late 17th and early 18th centuries helped to disseminate a corpus of popular DANCES and melodies throughout Britain and Ireland. This was grafted on to the native musical tradition, and developed in characteristically Irish ways. In this period, the 'reel' (particularly in its Scottish form) and the hornpipe take root and flourish in Ireland. Somewhat later, Scottish strathspeys are imported and transformed into 'highlands', 'barn dances', and 'single jigs'.

The oldest instruments associated with this music, and still used in performance, are the violin (see FIDDLE), uilleann (originally 'union') pipes (see BAGPIPE), and flute (be it the simple-system wooden concert flute, fife, or 'tin whistle'). It is likely that some form of tambourine (see BODHRÁN) was used for dance music in an early period. Instruments which have since been included in performance include free-reed instruments such as the concertina, melodeon, accordion, and mouth organ, and also stringed instruments such as the banjo, mandolin, guitar, and bouzouki.

(7) In the early 19th century popular Continental dances (the mazurka, the *redowa*, the polka, the waltz, and the sets of quadrilles) were introduced into Ireland, along with new melodies and rhythms.

The earliest published collection of traditional Irish music was John and William Neal's *Collection of the Most Celebrated Irish Tunes* (Dublin, 1724). Edward Bunting's *General Collection of the Ancient Irish Music* (1796) was based on transcriptions of harp music performed at the Belfast Harp Festival of 1792 and, along with his later publications (*A General Collection of the Ancient Music of Ireland* [1802], and *Ancient Music of Ireland* [1840]), comprises an invaluable record of what was then a fading instrumental tradition. In 1855 George PETRIE, who had originally assisted Bunting as a transcriber, published his *Ancient Music of Ireland*, a work which included a wide-ranging discussion of the music as well as a good selection of dance music. Petrie's manuscript collection—containing 2148 pieces in all—was eventually edited by Sir Charles Stanford and published as the *Complete Collection of Irish Music, as Noted by George Petrie* (1902–5). The best known and most influential of collections of Irish music are surely those of Capt. Francis O'Neill, the Cork-born superintendent in the Chicago Police Department. Two of these, *The Music of Ireland* (1903) and *The Dance Music of Ireland* (1907) were targeted at traditional musicians themselves, and were highly popular. In recent years, the most highly regarded compilation of the living dance music is probably Breandán Breathnach's five-volume series, *Ceol agus Rince na hÉireann* (1963–99).

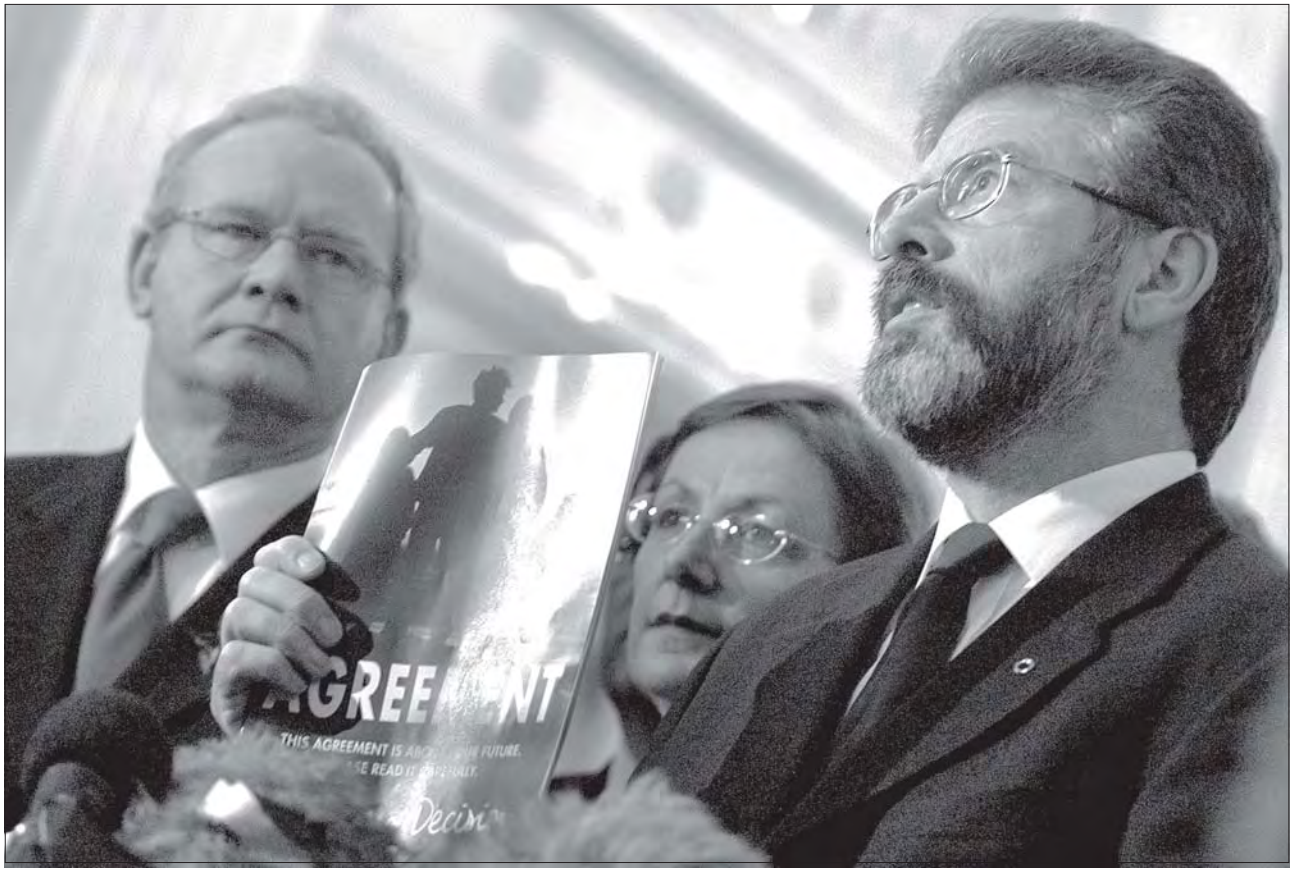
The **Irish Republican Army** (IRA, Óglaigh/Fianna na hÉireann) is an organization whose aim is to establish an independent united republic in Ireland (ÉIRE) by force. It was originally founded under the name Irish Volunteers (Óglaigh na hÉireann) on 25 November 1913 as a militia to defend the introduction of home rule against the opposition from the Ulster Volunteer Force. A small radical section broke away at the beginning of the First World War, and staged an uprising at Easter 1916. Following the failure of the rising, the organization was quickly re-established, slowly coming into violent conflict with the authorities which led to the Anglo-Irish War, 1920–1. At the same time Sinn Féin (lit. 'We ourselves'), the political representatives of republicanism in Ireland, won the general elections of December 1918 and set up their own Irish parliament, Dáil Éireann. It brought the Volunteers under its authority as their official army, which then became known as the IRA (Irish Republican Army). The bulk of the organization, nevertheless, refused to accept the Dáil's constitutional compromise with Britain, signed in December 1921, which recognized partition and created the Irish Free State. This led to a civil war, which began on 28 June 1922.

Although defeated by April 1923, the IRA did not accept the legitimacy of the Free State or Northern Ireland, and did not hand in their arms. Between 1923 and 1969 the IRA maintained a political and, at times, military opposition to these two entities without much success. Over time, a large number of its members decided to accept the existing states. The success of these political groupings, beginning with the creation of Fianna Fáil in 1926, left no option open to the IRA

Political leaders of Irish republicanism, Martin McGuinness and Gerry Adams, at the time of the 1998 'Good Friday' peace agreement



but a military campaign. The first of these was launched in January 1939 and ended in December 1944 when the movement was virtually wiped out. A new campaign was launched in 1956 by a re-organized IRA, but ended in failure in 1962.

Hoping to attract a mass following, the movement then moved to the left, leading to a renewed split in the organization at the Army Convention of 1969. The militarists broke away and formed the Provisional IRA, while the remainder became known as the Official IRA, which suspended military operations in May 1972. The Provisional IRA has sustained its campaign of violence for almost 30 years, but with changing tactics. The initial belief that an armed uprising could bring about a British withdrawal gave way from the mid-1970s to the concept of the 'long haul', which would gradually sap the British will to stay. Since the early 1980s the use of violence has been combined with an attempt to establish Sinn Féin as a political force. The acceptance of political means in the two-pronged approach of the 'armalight and the ballot box' led to the formal recognition of the Irish Republic by Provisional Sinn Féin in 1986 and the subsequent creation of the traditionalist Republican Sinn Féin. By 1994 successful involvement in politics had brought about a serious reappraisal of the rôle of physical force, leading to the formal suspension of the military campaign. This cleared the way for Sinn Féin to enter into the compromise political settlement of the 1998 'Good Friday Agreement'. This again led to some disagreement in the organization and the emergence of the Continuity Army Council, which is connected to Republican Sinn Féin, and the formation of the Real IRA in 1995. Both these organizations favour the continued use of force.

As an emblem of Irish national identity, the Irish language has always been and continues to be an element promoted in the communications, publications, and slogans (e.g. *Tiocfaidh ár lá*, Our day will come) of various branches of militant Irish republicanism, though hardly to the exclusion of English as the usual language of most Irish communities.

The **Iron Age** was a cultural as well as a chronological era in which iron was the predominant material for the manufacture of implements and weapons. In historical linguistic terms, iron use among speakers of ancient Celtic languages can be attributed to the Common Celtic horizon; a Proto-Celtic word **isarno-* 'iron' can be reconstructed on the basis of Gaulish *Isarno-* (in proper names), Old Irish *ïarn*, Old Breton *hoiarn*, Old Welsh *haern*, Old Cornish *hoern*.

§1. cultural

The idea of the development of mankind and of civilization through a succession of different ages can be traced back in European philosophy and cosmology to the Greek poet and rhapsodist Hesiod of the 7th century BC. In his *Works and Days* (109–201; see Lovejoy & Boas, *Primitivism and Related Ideas in Antiquity* 25–32), he describes a mythological history of mankind from an affluent Golden Age to his contemporary laborious Iron Age. This concept of a successive order of ages associated with materials of descending wealth may well have influenced the chronological use of the term Iron Age (see §2. below). In its cultural meaning, however, it simply characterizes cultures by the predominant material used for the manufacture of implements and weapons. On a worldwide perspective the beginning of Iron Age cultures differs widely in time. Therefore, the Proto-geometric period of Greece (11th/10th centuries BC) or the Villanova period of Italy (10th/9th centuries BC) are early Iron Age cultures in the same way as the Spanish *conquista* was a conflict between an European Iron Age culture and the contemporaneous Stone Age cultures of Meso-American and South America in the 16th century AD.

When and where the first iron was smelted and forged is difficult to determine. Since iron is easily destroyed by corrosion, many early objects might have been lost. However, the earliest datable finds of iron objects point towards Asia Minor as the region where the technologies of iron producing and iron working were developed. Iron objects dating back as early as the 5th and 4th millennia BC are known from modern Iran, Iraq and from Egypt, and are mostly manufactured from metallic meteorites (Waldbaum, *Coming of the Age of Iron* 69–98). An iron dagger made of smelted and forged iron in the early Bronze Age burial K from Alaça Hüyük, Turkey, (Collis, *European Iron Age* 30–2)

dates from as early as the middle of the 3rd millennium BC, as well as a small iron object in Treasure L from Troy, which is associated, for example, with polished stone axes made of nephrite, jadeite and lasurite (Tolstikov & Treister, *Gold of Troy*, catalogue no. 226). In the 2nd millennium BC, iron weapons and other objects made of iron are reported, e.g. from the Hittite Empire (Letter of King Hattušiliš III, see Collis, *European Iron Age* 32; Anitta-text, l. 75, see Neu, *Der Anitta-Text* 14–15). The first millennium BC saw the replacement of bronze by iron during a longer-lasting and continuing process. In temperate western and northern Europe, the Bronze Age–Iron Age transition generally took place in three stages (Snodgrass, *Coming of the Age of Iron* 336–7). In a first stage, iron was mainly used for the ornamentation of bronze objects. In the second stage, bronze and iron weapons and implements were present simultaneously, though bronze was still the predominant material. The last and third stage was finally a fully established Iron Age with limited use of bronze, mainly for jewellery and decoration. Iron Age cultures emerged in Cyprus and in the Aegean during the 11th century BC, and in the Levantine coastland and in Asia Minor during the 10th century BC. Through the mediation of Phoenician and Greek colonization, Iron Age cultures developed in northern Africa, in the Spanish and Adriatic coastlands, and in Italy and Sicily during the 8th and 7th centuries BC. At approximately the same time, the cultures of the Iron Age HALLSTATT period flourished in temperate Europe. In the 7th and 6th centuries BC Iron Age cultures finally emerged in the hinterlands of the Spanish and French coastlands. In BRITAIN, iron smelting and forging developed during the 7th century (Cunliffe, *Iron Age Communities in Britain* 24–7), whereas the beginning of the Irish Iron Age is still debated, due to a remarkable scarcity of finds (Raftery, *Pagan Celtic Ireland* 26–37).

§2. CHRONOLOGICAL

With regard to its chronological use, the term Iron Age indicates the last period of the Three-Age System established by C. J. Thomsen in 1818 (*Ledetraad til Nordisk Oldkyndighed og Historie* 37–91). Originally a more theoretical classification of antiquities in the collection of the Museum of National Antiquities in Copenhagen, J. J. A. Worsaae confirmed the chronological system of three subsequent prehistoric ages—Stone Age, Bronze Age, and Iron Age—by archaeological fieldwork (Gräslund, *Birth of Prehistoric Chronology*). The Iron Age was initially divided into two periods by H. Hildebrand in 1874. He used the finds from the eponymous sites at HALLSTATT (Austria) and LA TÈNE (Switzerland) to describe a '*groupe de Hallstatt*' and a '*groupe de la Tène*' (Hildebrand, *Congrès International d'Anthropologie et d'Archéologie Préhistoriques, 7e session* 592–601.). Hildebrand's '*groupe de Hallstatt*' was then further separated into an older and younger phase by O. Tischler (*Correspondenz-Blatt der Deutschen Gesellschaft für Anthropologie* 12.121–7.). Tischler's older phase (Hallstatt A and B) is now known as the Urnfield period (so called for the prevailing burial rite) and his younger phase was finally named the 'Hallstatt period' *sensu stricto* by N. Åberg (*Bronzezeitliche und früheisenzeitliche Chronologie* 2.1–11). Therefore, today, the Iron Age in temperate Europe is separated into the Hallstatt period and the La Tène period.

The Hallstatt period, as the older of these, occurred in the first half of the 8th century BC, and the transition to the subsequent La Tène period took place during the first half of the 5th century BC. Due to its definition as the last prehistoric period in European prehistory, the end of the La Tène period is usually linked with the expansion of the Roman Empire to the north. Therefore, in France, for example, the La Tène period is regarded as ending as early as 58/52 BC with the conquest of GAUL by Julius CAESAR; in southern Germany, its end is connected with the campaigns of Drusus and Tiberius, stepsons of the emperor Augustus, in 15 BC, and, in southern BRITAIN, the La Tène period came to an end as late as AD 43 with the invasion of the Claudian army. Outside the frontiers of the Roman Empire (as, for example, in Ireland/ÉRIU and north Britain), the Iron Age is conventionally divided into a pre-Roman Iron Age, lasting approximately to the birth of Christ, and a Roman or peri-Roman Iron Age, usually regarded as ending with the 'Migration Period' of the 4th to 6th centuries AD.

Isidore of Seville, St (*c.* 560–636) was one of the most prolific and influential of early medieval writers. As an encyclopedist, his *Etymologiarum sive Originum Libri XX* (An etymological collection or the origin of 20 books, known as the *Origines*) made the classics accessible to medieval writers. His *De Natura Rerum* (On the nature of things), dedicated to the Visigothic King Sisebut in 612–13, provided an explanation of geography and climatology. Isidore wrote three historical works: the *Historia Gothorum Vandalorum et Sueborum* (The history of the Goths, Vandals, and Suebi), the *Chronica Mundi* (Chronicle of the world), and the *De Viris Illustribus* (Concerning illustrious men); his *Synonyma* (Synonyms) was a grammatical treatise. His exegetical works include the *Differentiae* (Differences) and the *De Ortu et Obitu Patrum* (On the birth and death of the fathers). Isidore's liturgical work, the *De Ecclesiasticis Officiis* (Concerning ecclesiastical offices) was also popular. The canonical collection known as the *Hispana* (Spain) has also been attributed to him. These texts influenced the work of early medieval writers throughout the Celtic world.

It has been argued that Isidore's writings first spread to Ireland (Ériu) in the 7th century. The Irish claimed to know the date at which Isidore wrote his *Origines*, which they called the *culmen* or *summa* (epitome) of knowledge. An anecdote in the Book of Leinster (Lebor Laignech) tells us that Senchán Torpéist (†663) exchanged the heroic saga Táin Bó Cuailnge ('The Cattle Raid of Cooley') for a copy of the *Culmen* from the Continent. Knowledge of Isidorian writings among the Irish is attested in three ways: (1) by the surviving manuscripts of Isidore which went through Irish hands; (2) by citations from his writings in Hiberno-Latin works; and (3) by the possible influence of his style on native Irish writings.

Fragmentary manuscripts of the *Origines* which are believed to have been written in Ireland in the 7th century survive at St Gallen, Switzerland, and at Longleat House, England. Textual criticism of Isidorian writings was undertaken by the Irish, as can be seen from a letter written by Colmán to Feradach, which mentions an attempt to emend a MS of the *De Ecclesiasticis Officiis* of Isidore on the Continent. The *Origines* and the *De Natura Rerum* were used by an Irish computist (a scholar working on tables for calculating the date of Easter; see EASTER CONTROVERSY) before 658.

Isidore's exegetical and grammatical writings appealed particularly to Hiberno-Latin authors. Laidcenn (†661) cited Isidore's *De Ortu et Obitu Patrum* in his *Ecloga de Moralibus in Iob* (Selections on the morals in Job) and he used Isidore's *Origines* in his *Lorica* (Breastplate). The *Hisperica Famina*, dated to 651–64, were influenced by the *Origines*, the *De Natura Rerum*, the *De Differentiis Verborum* (On different words) and the *Synonyma*. The *Synonyma* are regarded as the source of the Irish fondness for Hisperic Latin, an extremely obscure Latin that developed in early medieval Britain and Ireland. The Collectio Canonum Hibernensis (*c.* 700–725) included among its sources Isidore's *De Ecclesiasticis Officiis*, his *Sententiae*, his *Chronica*, his *De Natura Rerum*, his *Quaestiones in Vetus Testamentum*, his *Epistula ad Massonam* and his *Origines*.

While 7th- and 8th-century biblical commentaries and grammatical treatises used Isidore, there has been debate whether these were written in Ireland or in Irish centres on the European continent. Grammatical works associated with Irish scholars who used Isidore, such as the *Anonymus ad Cuimnanum*, *Malsachanus*, and the *Ars Ambrosiana*, were not necessarily written in Ireland. Isidore's writings on genealogy and history influenced Hiberno-Latin writings such as the 'Old Irish Chronicle', from which all surviving Irish ANNALS seem to derive. The Irish also on occasion attributed their own writings to Isidore's authorship. The Pseudo-Isidorian *De Ordine Creaturum*, which derives from the mid-7th century, cites the *Differentiae*, and by the 8th century almost all Hiberno-Latin authors used Isidorian texts.

The Irish computists, exegetes and grammarians who read Isidore's writings lived and worked mainly in south-east Ireland, and are referred to as the 'Romani'

in contemporary texts. These authors may be linked with the native Irish lawyers who drew up the 7th- and 8th-century LAW TEXTS. These law codes, written in Old IRISH, tend to use etymologies, perhaps inspired by Isidore's works. The author of the 7th- or 8th-century 'canonical stratum' of the Old Irish grammatical text AURAICEPT NA NÉCES ('The Scholars' Primer'), traditionally attributed to Cenn Faelad mac Ailello (†678), used the *Origines*. In a St Gallen manuscript of Priscian, Old Irish GLOSSES survive which quote Isidore.

Isidore's writings affected writers in other Celtic-speaking realms. In Scotland (ALBA), which shared the Irish traditions through its church and partly GAELIC-speaking population, the *Origines* were used by ADOMNÁN, who wrote his *De Locis Sanctis* at Iona (EILEAN Ì) between 680 and 700.

In Brittany (BREIZH), Isidore's influence is not evidenced as early as it was in Ireland. Hisperic Latin was known in Breton schools in Carolingian times. Surviving manuscripts, copied in the 9th century in Brittany, contain not only texts of Isidore's *Origines* but also, in the margins of other Latin texts, glosses which quote the *Origines*. Echoes of the *Origines* can sometimes be found in Breton hagiographical texts such as the *Gestae Sanctorum Rotonensium* and the *Vita major Winwaloei* (see UUINUUALOE).

Although there are no known MSS of Isidore which stem from Wales, later Welsh literature, such as the court poetry of the Welsh princes (see GOGYNFEIRDD) and the series of TRIADS known as *Trioedd Arbennig*, echo Isidorian ideas. It has been shown that, directly or indirectly, Isidore was an inspiration for some of the poems of the Book of TALIESIN on the subjects of cosmology and natural history. Isidore was also used as a source for GEOFFREY OF MONMOUTH's Taliesin discourses in the *Vita Merlini*, which themselves derive from Welsh vernacular tradition (see MYRDDIN).

Italy, Celts in

The area of most intensive evidence for Celtic-speaking groups in ancient Italy is bounded by the southern Alps on the north, the country of the Etruscans of Etruria on the south and west, the ADRIATIC sea on the east, and was centred on the fertile broad valley of the river Po and its tributaries. The present article may be usefully read together with that on this specific region, CISALPINE GAUL, and its accompanying map.

§1. CELTIC TRIBAL GROUPS IN ITALY

Several early historical sources tell of one or more Celtic invasions of Italy. One frequently cited by classical authors and presumably authoritative, was the universal history of the Aeolian EPHORUS (*c.* 405–*c.* 330 BC), only fragments of which survive. Much like the ancient Greek Ionian geographers, Ephorus apparently considered the Celts a uniform and undiversified, yet far-flung, ethnic group spread across north-western Europe.

According to LIVY, the Lepontii spoke a Celtic dia-

lect and came to Italy at the time of the legendary ruler Tarquinius Priscus, i.e. around 600 BC (*Ab Urbe Condita* 5.34.1). Their tribal name reflected in present-day Val Leventina, north of Bellinzona. Recently, epigraphic remains from the early 6th century BC which confirm the Celticity of the LEPONTIC language were discovered at Castelletto Ticino.

Some two centuries later, at the beginning of the 4th century BC, ancient historical accounts taken together with archaeological evidence suggest that a further wave of Celts from GAUL forcefully entered the Po valley and slowly penetrated southward towards the Apennines. With this in-migration Celtic tribes ended Etruscan domination of Transpadania (northern Italy beyond the Po), founding their own tribal centres in the area. Nevertheless, some non-Celtic and probably pre-Celtic indigenous groups continued, such as the Italic-speaking Veneti (see INDO-EUROPEAN) at the north-western head of the Adriatic (*Caput Adriae*), and also extended in pockets up the valleys of the southern ALPINE region further north and east, remaining largely culturally independent from both Etruscan and Celtic influences in the pre-Roman period.

The Celtic tribe or tribal confederation known as the Insubres came on the scene *c.* 400 BC, south-east of the Lepontii in the region between the rivers Po and Oglio rin the area of the GOLASECCA CULTURE of the early IRON AGE. The Insubres subsequently established a major proto-urban centre called MEDIOLANON, an Old Celtic compound name meaning aptly 'middle of the plain', present-day Milan. The idea of ruling a territory from its notional centre can be paralleled elsewhere in the Celtic world, underlying, for example, the ideological importance attached to the central province of Meath (MIDE) in early Ireland (ÉRIU).

One of the larger Celtic tribes of Cisalpine Gaul was the Cenomani, who settled the area around Bergamo (ancient Bergomum), Brescia (ancient Brixia), and Verona, particularly south-east of Verona, around Zevio and Isola Rizza. Some of the oldest LA TÈNE style finds in Italy, dating to the end of the 4th century BC, come from this region. A central sanctuary was situated south of Brescia in Manerbio, where a famous hoard deposit was discovered; dating from the end of the 2nd century BC, it contained silver Padanian drachmas and numerous silver phalerae (decorative metal horse trappings) ornamented with images of human heads (see COINAGE; HEAD CULT).

What is now Emilia-Romagna was settled by the BOII, one of the most famous Celtic tribal groups. Their name literally means 'cattle owners' and thus signifies propertied freemen. Around Bologna (BONONIA), the former Etruscan Felsina, various sanctuaries have been recovered which date from the time of the collapse of Etruscan power in the 4th century. Some of the most important Celtic sites in the area are those situated south of Bologna at MONTE BIBELE de Monterenzio (Vecchio), Ceretolo, and beside the former 6th–5th century BC Etruscan centre at Marzabotto (Etruscan Misa?) in the valley of the Reno, due west of Monte Bibele.

The Celtic neighbours of the Boii towards the coast were the Lingones (a name perhaps related to Old Irish *lingid* 'leaps, dances'), who apparently settled the surroundings of Ferrara. But other areas nearby were probably in the hands of other Celtic groups, e.g. ancient Spina on the Adriatic, occupied by the Boii, and the hill country to the south, probably occupied by the SENONES (cf. Old Irish *sen* 'old'). The latter region includes the important Celtic necropolis of *c.* 400 BC at San Martino in Gattara along the Lamone, which lies above the Celtic settlement Brisighella (an ancient **Brixia Gallia*), south-west of Ravenna.

The Senones occupied the mountainous region between Ancona and Senigallia (ancient Sena Gallica), beginning *c.* 396 BC. Some concrete evidence of a persistent Etruscan presence in the area can also be found there. However,among this region's best-known Celtic necropoli, representing the highest social classes, are those at nearby Santa Paolina di Filottrano, MONTEFORTINO di Arcevia (*c.* 350–*c.* 200 BC), Moscano di Fabriano, and San Ginesio.

Soon after the settlements in the Early La Tène period *c.* 400 BC, various Celtic groups from the Po Valley and elsewhere in northern Italy began plundering areas on the other side of the Apennines, areas in Umbria, Etruria, and even Latium with ROME. In 387 BC, in a battle near Allia, the Celts defeated the Roman army and went on to occupy Rome, on which see BRENNOS OF THE SENONES.

§2. MILITARY REVERSALS AND ROMAN COLONIZATION

Although the Romans later succeeded in confining the Celts to the Po valley, members of some Celtic groups

frequently participated as mercenaries in numerous battles on the Italian peninsula. Throughout the 3rd century BC, Rome repeatedly fought the maritime north African Phoenician colony of Carthage for control of the Mediterranean, and at the same time penetrated former Etruscan territories in the Po valley: in 268 BC, the Roman colony at Arminium (modern Rimini) was founded encroaching on the Senones, then in 218 Cremona and Placentia (modern Piacenza) on the upper Po. Nevertheless, it took another quarter of a century before the Cisalpine Celts were finally defeated in a battle near Mutina (modern Modena) in 193 BC, where 1471 golden TORCS were taken as a portion of the booty. Soon after the foundation of the Adriatic colony and trading emporium at Aquileia in 181 BC, Celtic tribes from the Padanian lowlands became heavily Romanized and vanish from historical sources as distinct cultural groups.

§3. THE CELTIC LEGACY IN ITALY

The Celts of northern Italy had various sorts of cultural impact on the Romans (in metallurgy and new techniques for building the CHARIOT and other wheeled vehicles, for example), as well as an influence as a linguistic substratum on Latin and the ROMANCE LANGUAGES. However, it is a complex matter to ascertain how much of this influence occurred in Italy within the republican period and to what extent it was supplemented and reinforced by the later assimilation of Celtic speakers as the Empire expanded into Celtic-speaking regions around and beyond the Alps, Spain, and BRITAIN.

Mitja Guštin

Iudic-hael was a ruler of Armorican DOMNONIA, northern Brittany/BREIZH, *c.* AD 600–*c.* 640. He is remembered as a warrior-chieftain who extended his borders at the expense of the Merovingian Frankish king, Dagobert. Iudic-hael is also revered as a saint and founder of monasteries. Our most informative source is the Latin saint's Life written by the Breton monk Ingomar (Incomaris Grammaticus), who is known to have been active between 1008 and 1034. The text survives in two manuscripts of *c.* 1400 of *Chronicon Briocense* (the Chronicle of Saint-Brieuc, Bibliothèque Nationale, Latin MSS 6003 and 9888), and a better version is found in the 16th-century BN Latin MS 9889; there is also a French epitome of 1505 by the historian Pierre Le Baud. One consistent disparity between the Latin texts is that BN Latin 9889 follows the Frankish line that Breton rulers were counts, whereas the Chronicle calls Iudic-hael king.

Iudic-hael is probably of greatest interest to CELTIC STUDIES because of the literary contents of Ingomar's Life (on which see also BRETON LITERATURE §1). The Life contains an elaborate conception tale of the hero, the gist of which is as follows (the Latin and French

texts of this story are published in Fawtier, *Mélanges d'histoire du moyen âge*): weary after hunting, Iudic-hael's father Iud-hael sleeps and has a vivid dream of a steep mountain in the very centre of Brittany. From its top a wondrous metal pillar rises to the heights of the open sky, one side of the pillar adorned with weapons and armour and the other with liturgical vessels and other church treasures. Iud-hael sees a young woman he knows, named Pritell, and she speaks enigmatically to him. When the king awakes, he sends a servant to relate the dream and have it interpreted by the great seer and traveller from overseas named Taliesin son of Dôn, who was residing at the monastery of Gildas at Ruys in the country of Uueroc in southern Brittany. Taliesin foresees that the son of Iud-hael and Pritell will be a great secular leader and then a great leader of the Breton church. On the implications of the persona of Taliesin in this story, see Taliesin [2] §1. The numerous analogues (Gallo-Greek, Irish, and Welsh) to this conception tale/foundation legend are discussed in Arthurian literature [2]; legendary history §2; sovereignty myth.

The interest of Ingomar (or his source) in one of the Cynfeirdd (early Brythonic poets), namely Taliesin, is especially significant, since the Life of Iudic-hael also contains a heroic praise poem in Latin, which shows signs of having been translated from Brythonic and contains themes strikingly similar to those of the early Welsh Gododdin. For example, compare the praise poem's second verse 'in the manner of farmers in their fields, sowing seed, Iudic-hael scattered his javelins, each landing wherever he intended' to *Y Gododdin* B1.18.315–17: 'Before he was slain, mighty was the sword stroke / of the hero who had once scattered his ash wood [spears] from the four clefts / of his hand while he was mounted upon a bright slender steaming [steed]', also A.262 'he scattered (literally, sowed [as seed]) his spears'. With verse 5, 'and from the many corpses strewn over the earth behind him, dogs, vultures, crows, blackbirds, and magpies were sated' compare *Y Gododdin* B2.39.810–11: '[Cynon] reckoned [the deeds of] his gauntlet, measuring in grey eagles; [for] in urgency, he made food for scavengers'. In verse 6, 'many were the towns in which there resided wailing widowed wives', the unidiomatic Latin *viduae mulieres* can be explained as a word-for-word translation of the Brythonic *gwrageb gwyb̊w* found in *Y Gododdin* B1.11.273–4/A.23.264–5: 'He made men prostrate / and wives widows before his death'.

The name Iudic-hael is either the diminutive of his father's name Iud-hael (which means 'Generous lord', and survives in Welsh as *Ithel*) or is possibly based on its old oblique stem *iūdic-*. The first element is probably derived from Latin *iūdex* 'judge', which was used for post-Roman chieftains. *Hael* 'generous' < Celtic *sagilos* is a common honorific. For modern forms of the name, see Breton language §1.

JTK

J

Jackson, Kenneth Hurlstone (1909–91), one of the most eminent Celtic scholars of the 20th century, was born in Beddington (Surrey, England). He graduated with first-class honours in the Classical Tripos from St John's College, Cambridge, in 1931. From 1931 until 1935 he studied Anglo-Saxon, Norse and Celtic under Hector M. and Nora CHADWICK at Cambridge, WELSH under Sir Ifor WILLIAMS and Thomas PARRY at the University College of North Wales, BANGOR (GWYNEDD) and IRISH under Osborn Bergin (Ó hAIMHIRGÍN) at Dublin (BAILE ÁTHA CLIATH). The fruits of his early labour were *Early Welsh Gnomic Poems* and *Studies in Early Celtic Nature Poetry*, both published in 1935, two volumes which are still consulted today. He was appointed Lecturer in Celtic at Harvard University in 1939, promoted to Associate Professor in 1940 and to Professor in 1949. In 1950, he became Professor of Celtic Languages, Literature, History and Antiquities at Edinburgh University, a post which he held until his retirement in 1979, when he was made an Honorary Fellow of St John's College, Cambridge.

Jackson published on many aspects of Celtic history, language and literature of the dark and early middle ages, but his *magnum opus* is *Language and History in Early Britain* (1953), which traces the phonology of the British dialects from Roman times down to the 12th century. Other major volumes include *A Historical Phonology of Breton* (1964), *The Oldest Irish Tradition: A Window on the Iron Age* (1967) and his edition of the GODODDIN (1969). His work inspired a whole generation of scholars. 'His achievements', according to J. E. Caerwyn WILLIAMS, another supreme scholar of the 20th century, 'inspired unqualified admiration among colleagues of his own age and reverential awe in those who aspire to succeed them' (SC 26/27.202).

MBL

Jacobite poetry is essentially poetry concerned with the Jacobite cause, namely to return the main line of Stuarts to the united English and Scottish throne. It has its literary roots in the vernacular praise poetry which celebrates the achievement of the CLAN chief. Loyalty to the rightful king emerges as a powerful motif in the SCOTTISH GAELIC POETRY of the time of the Civil Wars (1642–51), when many Highland leaders supported Charles I, and remained a strong element of Jacobite propaganda throughout the period; *dìleas* 'faithful, loyal' and *còir* 'right, rightfulness' are key words used in political discourse (see KINGSHIP; Ní Suaird, *Scottish Gaelic Studies* 19.103–5, 123–6). Following the accession of William and Mary in 1688, the Jacobite viewpoint began to dominate the scene of GAELIC

political poetry to such an extent that very little contemporary anti-Jacobite material is extant, though it is clear that such texts did exist. In connection with the 1745 Rising, Mac Mhaighstir Alasdair, for instance, berates the Oban poetess for her support for the House of Hanover, but no poetry of the poetess herself survives (Thomson, *Introduction to Gaelic Poetry* 167). Donnchadh Bàn Mac an t-Saoir's *Òran do Bhlàr na h-Eaglaise Brice* (A song on the battle of Falkirk; MacLeod, *Òrain Dhonnchaidh Bhàin* 2–7) is sometimes cited as an example of anti-Jacobite poetry, but the poet's Hanoverian attitude only forms a thin veneer over his Jacobite sympathies (Gunderloch, *Scottish Gaelic Studies* 20.99–103).

Historical events from the departure of James VII (of Scotland) and II (of England) in 1688 to the death of Charles Edward Stuart ('Bonnie Prince Charlie') in 1788 are clearly reflected in Gaelic poetry (see further jacobite rebellions). Reactions to the accession of William and Mary range from a discussion of their lack of political legitimacy—for instance, Iain Lom MacDomhnaill's *Òran air Rìgh Uilleam agus Banrìgh Màiri* (Song to King William and Queen Mary; MacKenzie, *Òrain Iain Luim* 202–13) or the political poetry in the Fernaig Manuscript—to a celebration of the battle of Killiecrankie in 1689, e.g. Iain Lom's *Cath Raon Ruairidh* (The battle of Killiecrankie; MacKenzie, *Òrain Iain Luim* 190–201), and *Coille Chragaidh* (Killiecrankie; Ó Baoill, *Gàir nan Clàrsach* 184–91) by the Maclean poet Iain mac Ailein (John son of Allan). The battle was a victory for the Stuart faction, but it did not have wider repercussions in favour of the deposed monarch because of the death in the battle of the leader, John Graham of Claverhouse. The unpopularity in Scotland (Alba) of the Union of Parliaments in 1707 is also reflected in Gaelic poetry, e.g. Iain Lom's *Òran an Aghaidh an Aonaidh* (A song against the Union; MacKenzie, *Òrain Iain Luim* 222–9).

The third rebellion of the Jacobites, the Rising of 1715, was accompanied by a range of propaganda poetry. Roll-calls of clans and leaders expected to flock to the Jacobite cause were a prominent feature; often there was an element of wishful thinking in the list of hoped-for participants, as in *Òran nam Fineachan* (Song of the clans; Ó Baoill, *Gàir nan Clàrsach* 23–7), an example of a traditional *brosnachadh* (incitement) by Iain Dubh mac Iain mhic Ailein (Black John son of John son of Allan, *c.* 1665–*c.* 1725), a Clanranald MacDonald. Sìleas na Ceapaich (Sìleas MacDonald) brings a female voice to the Rising. Particularly effective among her political poems is *Do dh'Arm Rìgh Sheumais* (To King James's army; Ó Baoill, *Poems and Songs by Sìleas MacDonald* 44–9), which captures the sense of suspense as the campaign hangs in the balance before fizzling out. Her sequence of three poems on the indecisive battle of Sheriffmuir discusses the battle in considerable detail.

Most extant Jacobite poetry is concerned with the Rising of 1745/6 and its aftermath. The most significant figure is Alasdair Mac Mhaighstir Alasdair, who may already have participated in the '15; not only was he the leading poet of the '45, but he also took an active part in the campaign itself, gaining the rank of captain in Charles Edward's army. Mac Mhaighstir Alasdair's range of Jacobite verse is considerable. His *Òran do'n Phrionnsa* (A song to the prince; Campbell, *Highland Songs of the '45* 48–51; Thomson, *Gaelic Poetry in the Eighteenth Century* 41–3) expresses both expectation of Charles Edward's imminent arrival and the firm belief in victory (Campbell, *Highland Songs of the '45* 48–9):

Dh'éireadh ar n-ardan 's ar n-aigne,
'S chuirte air a' phrasgan ruaig.

Our proud spirits would awaken,
And we'd put the mob to rout.

Òran nam Fineachan Gàidhealach (Song of the Highland clans; Campbell, *Highland Songs of the '45* 72–85), another *brosnachadh*, belongs to the time when a Jacobite expedition was eagerly anticipated and begins with that most typical of Jacobite activities, a toast to the rightful king, before listing all the clans which the poet expects to join. The list includes clans such as the Campbells and the MacKenzies, who were loyal to the government. Detailed discussion of Jacobite political thought and its historical background combines with biting criticism of King George and his supporters in *Teàrlach mac Sheumais* (Charles son of James; Campbell, *Highland Songs of the '45* 52–61). Mac Mhaighstir Alasdair's poetry composed after Culloden indicates that Jacobites viewed their defeat in that battle as a temporary setback, not the end of the cause, e.g. in the rousing *Fuigheall* (A fragment; Campbell, *Highland Songs of the '45* 116–21), which recounts an array of past

victories before launching into a spirited exhortation to the Gaels to rise again with Charles Edward and take revenge. The expectation of Charles Edward's imminent return and success is also the central premise of *Òran a Rinneadh 'sa Bhliadhna 1746* (A song made in the year 1746; Campbell, *Highland Songs of the '45* 94–105; Thomson, *Gaelic Poetry in the Eighteenth Century* 50–9); this song anticipates this event in a reference to the ancient belief that the rightful king's rule is attended by wealth and plenty (Campbell, *Highland Songs of the '45* 94–7):

So a' bhliadhna chòrr
An tilg a' ghrian le meadh-bhlàths biadhchor
Gathan ciatach oirnn;
Bidh driùchd air bhàrr an fheòir,
Bainn' us mil gun luach, gun mhargadh,
Airgiod agus òr.

This is the wonderful year
When the sun with soft and fertile warmth
His lovely beams shall shed on us;
Dew shall cover the grass,
Milk and honey shall be had unasked,
Silver and gold.

The Badenoch poet Iain Ruadh Stiùbhart (John Roy Stewart, 1700–49) was a military man by profession, and this is reflected in his songs on the battle of Culloden, composed when he was in hiding following the end of the Rising: *Latha Chuil-lodair* (Culloden day; Campbell, *Highland Songs of the '45* 168–75; Thomson, *Gaelic Poetry in the Eighteenth Century* 97–101) and *Òran Eile air Latha Chuil-lodair* (Another song on Culloden day; Campbell, *Highland Songs of the '45* 176–85).

Mo Rùn Geal Òg (My fair young love; Black, *An Lasair* 174–9; Thomson, *Gaelic Poetry in the Eighteenth Century* 184–7), attributed to Christiana Fergusson, shows a different and personal reaction to the Rising; the song is a lament for the poet's husband who was killed at Culloden, and praises and mourns him in vivid images:

Cha tog fidheall no clàrsach,
Pìob no tàileasg no ceòl mi;
Nis o chuir iad thu 'n tasgaidh
Cha dùisg caidreabh dhaoin' òg' mi.

No harp or fiddle will lift me,
No pipe, chess or music;
Now you've been buried
Young folk's banter can't rouse me.

The song existed in oral tradition in the 20th century (Black, *An Lasair* 446), e.g. in a version sung by Flora MacNeil (*Craobh nan Ubhal*, track 8).

The prohibition on the wearing of tartan was imposed indiscriminately by the Disclothing Act of 1747 on loyal and Jacobite clans alike, a measure which provoked widespread outrage which is strongly reflected in poetry. Mac Mhaighstir Alasdair responded with *Am Breacan Uallach* (The proud plaid; Campbell, *Highland Songs of the '45* 154–63), a song with a waulking-song refrain praising Highland dress and affirming Jacobite loyalty. Donnchadh Bàn Mac an t-Saoir composed *Òran nam Briogais* (The song of the breeches; MacLeod, *Òrain Dhonnchaidh Bhàin* 8–15) in which he combines resentment with a humorous exposé of the advantages of the kilt. Even Rob Donn MacKay (MacAoidh), who belonged to a staunchly Hanoverian clan, voiced his displeasure in terms of support for the Jacobites in *Òran nan Casagan Dubha* (The song of the black cassocks; Thomson, *Gaelic Poetry in the Eighteenth Century* 111–17; Campbell, *Highland Songs of the '45* 236–45):

'S i mo bharail mun éighe
Tha 'n aghaidh fhéileadh is osan
Gum bheil caraid aig Teàrlach
Ann am Pàrlamaid Shasainn.

I think this proclamation
Against the kilt and the short hose
Shows that Charles has an ally
In the Parliament of England.

An Suaithneas Bàn (The white cockade; Campbell, *Highland Songs of the '45* 286–91) by Uilleam Ros is an elegy composed on the death of Charles Edward Stuart, and may be regarded as the end-point of Jacobite poetry; composed nearly 40 years after the Rising, there are touches of nostalgia here that would not have been possible in the poetry contemporary to the '45.

While containing a great deal of conventional praise and dispraise for clans and individuals, Jacobite poetry shows clearly that detailed knowledge of the political arguments of the time was current in the Highlands and was used publicly to win or maintain support for the cause.

The **Jacobite rebellions** were a series of revolts which wracked the British Isles between 1689 and 1746. Their aim was to restore the fallen House of Stuart to the thrones of its three kingdoms.

The Jacobite movement took its name and inspiration from King James II (of England) and VII (of Scotland), whose name was 'Jacobus' in Latin, and whose disastrous reign from 1685 to 1688 had ended in the collapse of his regime and in his own humiliating flight into French exile. However, while the overwhelming majority of his former English and Lowland Scottish subjects were to remain firmly united in their opposition to both Roman Catholicism and to the brand of political absolutism which he had so forcefully championed, the GAELIC Irish, together with many of the Highland Scots, saw in Jacobitism a means to safeguard their religious faith and indigenous cultures, and to free themselves, decisively, from the domination of a remote, and Anglicized, central government (see SCOTTISH PARLIAMENT).

Such entrenched ideological positions, when coupled with bitter dynastic rivalries and the struggle between England and France for power in Europe and the control of colonies, helped to ensure that risings in favour of the exiled James II, and later his son—James Edward Stuart, the 'Old Pretender'—and grandson—Charles Edward Stuart, the 'Young Pretender' and 'Bonnie Prince Charlie' of legend—effectively disfigured the political development of the British Isles for more than half a century.

The early victory of Claverhouse's Highlanders at the battle of Killiecrankie (Coille Chneagaidh), on 27 July 1689, was more than offset by crushing defeats for the Jacobites at Dunkeld (Dùn Chailleann), on 18 August 1689, and at Cromdale, on 1 May 1690. The massacre of the MacDonalds of Glencoe (Gleann Comhainn) by regular Highland troops loyal to the government on 13 February 1692 effectively signalled the end of the first Scottish rising, as the other CLAN chiefs rushed to make their peace with the authorities. In the meantime, Jacobite resistance in Ireland (ÉIRE) had also collapsed as the result of defeats at the battles of the Boyne (1 July 1690, see BÓAND) and Aughrim (Eachro, 12 July 1691). Discouraged by the sorry example set by James II at the Boyne and crushed by the weight of the penal laws and the wholesale expropriation of their lands, Irish support for Jacobitism was henceforth confined to those soldiers—known as the 'Wild Geese'—who chose to continue to fight on the Continent in the service of France or Spain. Scotland (ALBA) was now to be the prime location for all subsequent risings.

An expedition backed by France was aborted in 1708, due to bad weather, but in 1715 a major rising in the HIGHLANDS backed by French landings offered the prospect of success. However, poor generalship led to the defeat and surrender of one Jacobite army at Preston (12–14 November 1715) and the squandering of the opportunity of a victory by another at Sheriffmuir (13 November 1715). The belated arrival of the Old Pretender on Scots soil did little to lift spirits or to stem the tide of desertions over the winter months, and the clans dispersed back to their homes in February 1716.

A fresh rising, backed this time by Spain, was crushed by regular troops at the pass at Glenshiel (Gleann Seile, 10 June 1719), bringing relative peace to the Highlands for almost a generation. However, in the summer of 1745, the 'Young Pretender' staged an opportunistic landing on the west coast of Scotland. After initial reluctance, the clans rallied to his father's banner and government forces scattered before his advance. Edinburgh (DÙN ÈIDEANN) fell to him and at Prestonpans (21 September 1745) a Hanoverian army

was scattered by a daring night attack. Confident of success, the Jacobites headed south into England, but with their supply lines seriously overextended they were forced to turn back at Derby (7 December 1745) and begin the long retreat back to Scotland. One last victory was achieved by Lord George Murray, at the battle of Falkirk (An Eaglais Bhreac, 17 January 1746), but on Culloden Moor (16 April 1746) an outnumbered and unfed Jacobite Highland army was decisively defeated in less than 25 minutes by Hanoverian troops. The battle was steeped in tragedy and irony, for more Scotsmen served on the side of the government that day than upon the side of the Pretender. The Prince's subsequent flight entered folklore, but brought the Jacobite risings to a sorry end and abandoned those who had fought on his behalf with such bravery to a vengeful Hanoverian administration, resolved to destroy both the clan system and the cultural identity of the Highland people (see also JACOBITE POETRY).

Jarman, Alfred Owen Hughes (1911–98) was Professor of Welsh at the University of Wales Cardiff (CAERDYDD) between 1957 and 1979. A native of BANGOR (GWYNEDD), he was educated at that city's University College, graduating with high honours in both WELSH and English in 1932–3. Under Sir Ifor WILLIAMS's tutelage he undertook research on the evidence for the MYRDDIN/Merlin legend in early WELSH POETRY, gaining his MA in 1936. After teaching extra-mural classes in Gwynedd for some years, he was appointed lecturer in Cardiff in 1946 and remained there for the rest of his life. He was a leading authority on the legend of Myrddin/ Merlin, on the ARTHURIAN legend in general, the manuscript LLYFR DU CAERFYRDDIN ('Black Book of Carmarthen'), and on early Welsh poetry. With his wife Eldra (of the north Wales gypsy family 'Teulu Abram Wood'), he also wrote an account of the Welsh gypsies.

R. Geraint Gruffydd

Jenkinson, Biddy, is the pseudonym of a female Irish poet, born in the 1940s, who claims that her poetry is not 'confessional' and, therefore, that details of her biography are irrelevant to an understanding of her work. She writes in IRISH, and has stated that she prefers not to be translated into English in Ireland (ÉIRE) 'as a small rude gesture to those who think that everything can be harvested and stored without loss in an English-speaking Ireland'. She has published five collections of poetry and a collection of short stories.

Jenkinson's language is essentially literary, drawing on archaic Irish forms and on specialist botanical and zoological vocabulary with clever use of neologisms and wordplay. Historical, literary and mythological personages feature prominently in poems in which human love in its various manifestations and the relationship between the human race and the natural world are explored with sensitivity and, above all, with an irreverent sense of humour.

SELECTION OF MAIN WORKS
POETRY. *Baisteadh Gintlí* (1986); *Uiscí Beatha* (1988); *Dán na hUidhre* (1991); *Ambras Neimhe* (1997); *Mis* (2001).
COLLECTION OF SHORT STORIES. *An Grá Riabhach* (2000).

Pádraigín Riggs

Jenner, Henry (1848–1934) is often considered the father of the CORNISH language revival. He was born at St Columb Major in mid-Cornwall (KERNOW). In the 1870s Jenner became aware of the oral traditions of

Cornish in Penwith (Penwyth), and in the course of a long career at the British Museum Library he discovered the *Charter Endorsement*, a Middle Cornish secular text of 41 lines. In 1877, at the centenary commemoration of the death of Dolly PENTREATH, Revd W. S. Lach-Szyrma enlisted Jenner in the project of gathering Cornish-language survivals from Newlyn (Lulyn) fishermen for the purpose of promoting the revival of Cornish.

Jenner's most recognized early achievement in the Cornish revival was the *Handbook of the Cornish Language* (1904), written at the suggestion of L. C. Duncombe Jewell, founder of the Celto-Cornish Society (COWETHAS KELTO-KERNUAK). In his handbook Jenner famously asks, 'Why should Cornishmen learn Cornish? . . . The question is a fair one, the answer is simple. Because they are Cornishmen.' Also in 1904 Jenner persuaded the Celtic Association to allow Cornwall to become a fully recognized member. In 1920 Jenner assisted Robert Morton NANCE in the establishment of the Federation of Old Cornwall Societies, and in 1928 he became the first Grand Bard of the Cornish GORSETH.

Over the course of his career Jenner wrote numerous journal articles on subjects ranging from ARTHURIAN place-names in Cornwall and TRISTAN AND ISOLT to Cornish language and Celticity. He was also one of the first poets writing in Revived Cornish. Jenner was also fluent in BRETON and was made a bard of the Breton GOURSEZ as early as 1901, helping to make ideological and political links between revivalists in Cornwall and Brittany (BREIZH). Jenner's NATIONALISM was very conservative. Although he believed in assertions of Cornish Celtic identity, he was against separatism and remained a fervent royalist. Towards the end of his life he became a Roman Catholic, prompted by what he personally believed to represent the truest form of Celtic spiritual expression.

Amy Hale

Jerome, St, Εὐσέβιος Ἱερώνυμος Eusebius Hieronymus (*c.* AD 345–420), was born at Strido near Aquileia in the ADRIATIC region. A pupil of Donatus, Jerome was the greatest scholar in the Roman Empire in his age, working from Latin, Greek, and Hebrew sources. His most famous work was the *Biblia Vulgata* or Vulgate Latin Bible, which became the standard text, superseding the *vetus latina* or 'Old Latin' translation. In addition, his standard writings include importantly a world chronicle, based on the Greek Chronicle of Eusebius of Caesarea (†AD 340).

Although primarily considered as an author of late antiquity and Father of the Church, Jerome has several important connections to CELTIC STUDIES. As a traveller and linguist, Jerome recorded the interesting detail that the inhabitants of GALATIA in his day spoke their own language as well as Greek and that this language was similar to that of the Treveri in east-central GAUL, thus implying that both GALATIAN and GAULISH survived to *c.* AD 400 (for the passage [*Commentary on the Epistle to the Galatians* 2.3], see CELTIC LANGUAGES §4; GREEK AND ROMAN ACCOUNTS §4).

Jerome shows both first-hand awareness of, and colourful hostility towards, Celtic people from BRITAIN and Ireland (ÉRIU). For example, he refers to his opponent, the probably Romano-British heresiarch PELAGIUS, as being weighted down with 'Irish porridge' (*Commentary on Jeremiah* 1 Prologue 3; see CHRISTIANITY IN THE CELTIC COUNTRIES [1] §1) and also likens him to a 'giant Alpine barking dog'. Both remarks provide sidelights on Pelagius' physique, negative ethnic stereotypes about Celtic groups current in ancient times, and the incidental facts that the Irish were, as early as this, known as eating porridge, and the Alps as the home of large breeds of dogs. The idea that the ancient Irish had been cannibals, which recurs repeatedly in medieval literature, can be traced to a statement by Jerome presented as a sensationalized eyewitness account of the cannibalism of the SCOTS or Atticoti, both of whom were insular groups who came from outside the Roman provinces of Britannia; for an English translation of the passage (*Adversus Jovinianum* 2.7), see FOODWAYS.

Numerous quotations from the Bible in St PATRICK's writings are mostly from the pre-Jerome *vetus latina*, but he possibly used the Vulgate version of Judges. Since Jerome's text was published in the 380s and there

is no current argument that Patrick wrote earlier than that, this point is not decisive for Patrick's date, though it does strengthen the case that Patrick had been in Gaul as a young man. The early Irish psalm-book known as *An* Cathach (*c.* 600) uses Jerome's translation. Of the great early Christian illuminated manuscripts from the Celtic countries, Jerome's version of the Gospels is the text in the Book of Durrow (cf. also art, celtic [2] §3), and also the Irish-influenced Breton Gospels of Saint-Gatien (Paris, Bibliothèque Nationale, New Latin 1587; see breton early medieval manuscripts). The text of the Book of Kells is mostly Jerome's Vulgate with some sections from the *vetus latina*.

Jerome's scholarship was known and utilized by early Hiberno-Latin writers, such as those responsible for the Collectio Canonum Hibernensis (The Irish collection of canons). The prestige which the early Irish linguistic tradition—and particularly its etymological method—accorded to the *tres linguae sacrae* (the three sacred languages, i.e. Latin, Greek, and Hebrew) was due in no small part to Jerome's work and the high reputation of his method (cf. sanas chormaic). Jerome's Chronicle was an important source for the medieval authors of legendary history in the Celtic countries.

Jocelin of Furness (*fl.* 1175×1215) was a Cistercian monk and 'specialist hagiographer' from the monastery of Furness, now in Cumbria, who wrote *vitae* of saints for communities in Scotland (Alba), Ireland (Ériu) and, probably, England as well. His significance lies in his participation in the process of reworking, re-presenting and transmitting traditions of Celtic saints to the new Anglo-Norman ecclesiastical and secular élite of 12th- and early 13th-century Britain and Ireland. Perhaps his earliest work is the Life of Kentigern, written for the ambitious Cistercian Bishop of Glasgow (1175–99), also called Jocelin, formerly abbot of Melrose. His other major work was a compendious Life of Patrick (1180×1201), written for the Archbishop of Armagh (Ard Mhacha), the Bishop of Down (an Dún) and, most importantly perhaps, the ruler of Ulster (Ulaid), John de Courcy, a man with Cumbrian landholdings (see Duffy, *Colony and Frontier in Medieval Ireland* 1–27). Two other works complete this set: a Life of Helena, mother of the Emperor Constantine, in which he lays strong emphasis on her supposed British background as daughter of King Coel (see coel hen), eponym, supposedly, of Colchester; the other is a Life of Waltheof (1207×1214), a relatively contemporary man, abbot for a time of the Cistercian monastery of Melrose in Roxburghshire, and relative of the Scottish King David I, to whose grandson, William the Lion, the work is dedicated. Only in this last work does Jocelin work from raw materials; elsewhere his rôle is as a skilful re-shaper of earlier traditions. Little is known of his background or chronology, though he may have been the Jocelin, abbot of Rushen, a daughter-house of Furness on the Isle of Man (Ellan Vannin), mentioned in a charter of 1188. Although the name *Jocelin* is not Celtic, it was very popular in Brittany (Breizh) in the Middle Ages.

Thomas Owen Clancy

John of Cornwall was born around 1125 and died in 1199 or 1200. The form of his name probably indicates that, although he was born in Cornwall (KERNOW), he lived most of his life elsewhere.

In 1155 at the request of Robert Warelwast, bishop of Exeter (1155–60), he translated the 'Prophecies of Merlin' (see MYRDDIN) from their 'BRITISH' original into 167 Latin hexameters. To this translation he appended a prose commentary and interlinear glosses. Once regarded as a mere *réchauffage* of passages taken from the seventh book of GEOFFREY OF MONMOUTH's *Historia Regum Britanniae*, the 'Prophecies of Merlin' are currently thought to contain much material unknown to Geoffrey, and derived, at least to some degree, from prophecies in CORNISH, BRETON, or WELSH. FLEURIOT (ÉC 14.50) concluded that the 'British' vocabulary found in John's commentary and glosses, though markedly distorted by a copyist unfamiliar with the original language, displayed features which belonged to the common parent language of Cornish and Breton. John of Cornwall's 'Prophecies of Merlin' represent that rare example, therefore, of a text concerned with the MATTER OF BRITAIN and based on a 'British' original, but which is not itself in a Celtic language.

John studied rhetoric in Paris with Thierry of Chartres and theology with Peter Lombard, Maurice de Sully, and Robert Melun. He must have become fairly well known in court circles because he was recommended to the king by Gerard Pucelle to fill the bishopric of Tyddewi (Saint David's) when it became vacant in 1176 (see DEWI SANT). According to Gerald of Wales (GIRALDUS CAMBRENSIS), however, Gerard was informed by a royal secretary that John's knowledge of Welsh was one of his chief liabilities for consideration for that position (Brewer et al., *Giraldi Cambrensis Opera* 1.133).

At around this time, and in anticipation of the Third Lateran Council (announced in 1176), John composed the *Eulogium ad Alexandrum Papam tertium*. Haring considered the *Eulogium* the most informative treatise in the 12th century on the controversy over the Hypostatic Union, but concluded that John's abilities 'hardly surpass the sterile formalism of grammatical logic' (*Mediaeval Studies* 13.255). There is no reliable evidence that John argued his case at the Lateran Council when it met in the spring of 1179, though he may have been in Rome at that time. John revised the *Eulogium* several times, and copyists made their own additions to the work. Five manuscripts of the *Eulogium* survive, all from the 12th and 13th centuries.

John was witness to four charters of Walter of Coutance, another Cornishman, when Walter was bishop of Lincoln (1183–4), and served as a judge-delegate in a case involving the abbey of Oseney, near Oxford in 1192. There is good evidence that he taught theology at Oxford. Rathbone claimed John as 'the first secular master in theology in Oxford in the latter part of the 12th century of whose writings we have a record' (*Recherches de théologie ancienne et médiévale* 17.52–3). Our John of Cornwall may be the person of that name who served as archdeacon of Worcester in 1197.

Michael Curley

Jones, David James (Gwenallt, 1899–1968), poet, critic and scholar, was born at Allt-wen, Pontardawe, in the Swansea valley, Glamorgan (MORGANNWG), the eldest child of migrants to industrial south Wales (CYMRU) from adjacent rural Carmarthenshire (sir Gaerfyrddin). His upbringing in this tightly-knit, chapel-going, but increasingly Anglicized, community, in the shadow of steelworks and coalmines, at a time of considerable political unrest coinciding with the growth of socialism in the years prior to and during the First World War, was to provide an inspiration for much of his creative work and was described by him in an essay, *Credaf* (I believe, 1943), and evoked in an unfinished prose work published posthumously as *Ffwrneisiau* (Furnaces, 1982). The perceived contrast between that industrial society and the idyllic, rural and traditionally-Welsh way of life in Carmarthenshire as described by his parents, and confirmed by his own childhood visits, was a stimulus of similar importance.

By the age of 16, Gwenallt had apparently rejected the Liberal Nonconformity typical of his parents'

generation, and become an International Socialist; his refusal to serve in the First World War stemmed as much from his socialist convictions as his pacifism, and resulted in imprisonment for much of 1917–19, an experience on which he drew extensively in his novel, *Plasau'r Brenin* (The king's mansions, 1934).

In October 1919 Gwenallt entered the University College of Wales, ABERYSTWYTH, where he graduated with a BA in Welsh (1922) and English (1923). Following two years' postgraduate study (he graduated with an MA in Welsh, 1929), he spent a further two years as a schoolteacher at Barry Grammar School for Boys, before being appointed to the post of lecturer in the Department of Welsh at Aberystwyth in 1927. He remained a member of staff there until his retirement in 1966.

Although Gwenallt's academic interests were wide-ranging, his contributions as a scholar increasingly focused on the Welsh literature of the 18th and 19th centuries. He was a founder member of Yr Academi Gymreig (The Welsh academy), and first editor of that society's periodical, *Taliesin*.

Gwenallt's contribution to Welsh culture lies overwhelmingly in his reputation as a poet. He first gained prominence by winning the Chair at the Aberystwyth College EISTEDDFOD in 1922. He gained national recognition in 1926 when he won the Chair at the National Eisteddfod (EISTEDDFOD GENEDLAETHOL CYMRU) held at Swansea (ABERTAWE) for his AWDL, *Y Mynach* (The monk); this was the occasion when he adopted the bardic name Gwenallt. He won his second national Chair at BANGOR in 1931 for *Breuddwyd y Bardd* (The poet's dream). Both successes were famously overshadowed by events at the National Eisteddfod held at Treorci in 1928, where his *awdl*, *Y Sant* (The saint), was denied the Chair because the adjudicators considered the poem to be morally depraved.

Gwenallt's importance as a poet lies chiefly, however, not in these eisteddfodic *awdlau* but in five volumes of verse: *Ysgubau'r Awen* (The sheaves of the muse, 1939), *Cnoi Cil* (Ruminating, 1942), *Eples* (Leaven, 1951), *Gwreiddiau* (Roots, 1959) and the posthumous *Y Coed* (The trees, 1969). A Christian nationalist by conviction by the 1930s, much of his verse is on overtly religious themes; however, his faith provides a consistent world-view even in poems on secular topics. A common motif in his work is an attempt to reconcile apparently disparate ideologies and entities, on the basis of his own unified vision of life. In his response to the people, movements and events which moulded Wales and the world around him in the mid-20th century, Gwenallt may appropriately be considered a 'national' poet. Although the main themes and subjects of his poems are notably consistent throughout his literary career, there are striking differences in style, for example, the definite and accelerating shift towards *vers libre*, longer line-lengths and slacker rhythmical patterns as his career progresses. Gwenallt's poetry is notable for its use of non-literary vocabulary for particular effect, and also for its striking imagery, often drawn from medieval sources, such as the MABINOGI, or from the industrial landscape of south Wales.

Among the most important of 20th-century Welsh poets, Gwenallt's popularity has declined in recent years, not least because of his uncompromising Christian vision.

SELECTION OF MAIN WORKS

POETRY. *Y Mynach a'r Sant* (1928); *Ysgubau'r Awen* (1939); *Cnoi Cil* (1942); *Eples* (1951); *Gwreiddiau* (1959); *Y Coed* (1969).
COMPLETE WORKS. James, *Cerddi Gwenallt* (2001).
PROSE. *Plasau'r Brenin* (1934); *Credaf* 52–75 (1943), republished in Meredith, *Gwenallt* 55–79; *Ffwrneisiau* (1982).
LITERARY CRITICISM &C. *Yr Areithiau Pros* (1934); *Blodeugerdd o'r Ddeunawfed Ganrif* (1935); *Y Ficer Prichard a 'Canwyll y Cymry'* (1946); *Bywyd a Gwaith Islwyn* (1948); *Y Storm* (1954); *Iorwerth Glan Aled* (1954); *Cofiant Idwal Jones* (1958).
RECORDING. *Gwenallt* (Cyfres yr Aelwyd a'r Ysgol, 5: WRL 516).

Christine James

Jones, Robert Maynard (Bobi Jones, 1929–) is a well-known poet, man of letters, scholar, educationalist, and language activist. Born in Cardiff (CAERDYDD), he was the first person from a non-WELSH-speaking

home to become a professor of Welsh, a post which he held at the University College of Wales, ABERYSTWYTH, 1980–9. He began his career as a teacher, before going on to lecture in Trinity College, Carmarthen (CAERFYRDDIN), and in the Education Department at Aberystwyth. Influenced by Francophone linguistic scholars during periods of study abroad, he has worked long-term on a project outlining the parameters of literary criticism, tracing the relationship between the theoretical concept of '*langue*' through 'motivation' to 'discourse'. His educational interests include the development of language in children and the teaching of Welsh as a second language; the latter is the subject of *Dysgu Cyfansawdd* (Compound learning, 2003). As a scholar, he worked on the three medieval Welsh ROMANCES (see TAIR RHAMANT). An extremely productive literary critic who writes as a convinced Calvinist, he taught creative writing at university level. Among his major themes are the Christian tradition, and CYNGHANEDD. His own poetry has recently become more concise in form in the two volumes *Ynghylch Tawelwch* (Concerning silence, 1998) and *Ôl Troed* (Footprint, 2003). He is also a writer of short stories and a novelist, and has created a large corpus of literature in the Welsh language. Perhaps two of his greatest social contributions are the founding of Yr Academi Gymreig (The Welsh academy) and of CYD, a charity which brings together adult learners of Welsh with fluent speakers. His love for the Welsh language and its literature is an important driving force in his work.

SELECTION OF MAIN WORKS

LITERARY CRITICISM &C. *I'r Arch* (1959); *Y Tair Rhamant* (1960); *Highlights in Welsh Literature* (1969); *Pedwar Emynydd* (1970); *Sioc o'r Gofod* (1971); *Tafod y Llenor* (1974); *Llenyddiaeth Gymraeg 1936–1972* (1975); *Llên Cymru a Chrefydd* (1977); *Seiliau Beirniadaeth* (1984–8); (with Thomas) *Dragon's Pen* (1986); *Llenyddiaeth Gymraeg 1902–1936* (1987); *Cyfriniaeth Gymraeg* (1994); *Crist a Chenedlaetholdeb* (1994); *Tair Rhamant Arthuraidd* (1998); *Ysbryd y Cwlwm* (1998); *Mawl a'i Gyfeillion* (2000); *Mawl a Gelynion ei Elynion* (2002); *Beirniadaeth Gyfansawdd* (2003).

ESSAY. 'Why I Write Welsh', *Planet* 2.21–5 (1970).

M. T. Burdett-Jones

Jones, Thomas Gwynn (1871–1949) was a journalist, biographer, scholar, translator, a poet of immense importance *per se* and the most original, prolific, and profound of a group of poets dubbed by their elders as 'the New School'. In mid and late Victorian times much WELSH POETRY was rarely what other ages regard as poetry (its content was quasi-philosophical and theologically opaque, see BARDD NEWYDD) and only questionably WELSH (for its style and diction belonged neither to the language of Welsh literary tradition or contemporary colloquialism). T. Gwynn Jones's *Ymadawiad Arthur* (The passing of Arthur), for which he was awarded the Chair at the National Eisteddfod (EISTEDDFOD GENEDLAETHOL CYMRU) in BANGOR in 1902, marked a literary renaissance. Its narrative content connected it with native legend and its deceptively easy style and splendid use of CYNGHANEDD gave it a characteristic which was at once new and classical. At 31 years of age Gwynn Jones was a masterly pioneer who had steeped himself in medieval mythology and in the poetic techniques of the Poets of the Princes (see GOGYNFEIRDD) and the CYWYDDWYR of the Middle Ages. Although untrained as a scholar—in 1902 he was a sub-editor with a Caernarfon newspaper—he later edited the poems of the late medieval poet TUDUR ALED. Other influences on his early life and literary work included Thomas Gee and Emrys ap Iwan, the one a Liberal radical, the other a nationalist, who both, in contrasting if complementary ways, helped to shape post-Victorian Welsh thought: Gwynn Jones's biographies of them (1913, 1912) embody that contrast.

Between 1902 and 1927 Gwynn Jones wrote other major poems based on legendary Celtic characters and

tales: *Gwlad y Bryniau* (The land of the hills) in 1909, Tir na n-Óg (The land of the young ones) in 1910, *Madog* in 1917, *Broseliawnd* in 1922 and *Anatiomaros* in 1925. In the preface to *Caniadau* (Songs, 1934), in which these poems were collected (along with shorter poems in strict verse and brilliant lyric poems), the poet, not for the first or last time, dismisses interpretations about their philosophy and states that each of them deals with 'life as [he] experienced it', though he chose to use some of 'our forefathers' tales to try and portray it'. Such statements have not hindered later critics from recognizing in these poems of exquisite beauty a noble critique of 20th-century philistinism, for they are interpretations of tales of romance, civility, and spiritual or sometimes psychological expeditions which end in loss, barbarity, and death. Gwynn Jones's last collection of poems *Y Dwymyn* (The fever, 1944), again technically inventive, emphasizes more starkly the dark disjointedness of modern life.

His literary prowess and obvious, if untutored, scholarship led to his appointment to the staff of the National Library of Wales (Llyfrgell Genedlaethol Cymru) and then to the Gregynog Professorship of Welsh Literature at the University College of Wales, Aberystwyth. The academic produced not only the two-volume edition of *Tudur Aled* (1926) and the study of *Rhieingerddi'r Gogynfeirdd* (The *Gogynfeirdd* poetry to noble women, 1915), but also a volume of literary history, *Llenyddiaeth y Cymry* (also 1915), and studies such as *Bardism and Romance* (1914) and *Welsh Folklore and Folk-custom* (1930). Gwynn Jones was also an important translator, among other works, of Faust and *Macbeth*; a novelist (the early, discursive but very entertaining *Gwedi Brad a Gofid* [After treachery and sorrow, 1898] was followed in 1923 by the elegant *John Homer* and *Lona*); an essayist; and a dramatist.

He is, indisputably, one of the great writers of Welsh literature.

Derec Llwyd Morgan

The ***Journal of Celtic Studies*** was established in 1949 by Professor Howard Maxwell Meroney and published by Temple University, Philadelphia, Pennsylvania. Its editorial board included the major Celtic scholars Kenneth Jackson and Vernam Hull, Professor of Celtic at Harvard, and the first volume contained papers in honour of Fred Norris Robinson, founder of Celtic studies at Harvard. Three volumes of the journal were issued between 1949 and 1982. They contain academic articles, written in English, relating to all areas of Celtic studies. These articles cover all periods and, although they focus mainly on Celtic languages and literature, several also address issues pertaining to Celtic archaeology and folklore.

Joyce, James Augustine Aloysius (1882–1941) was born in Rathgar, Dublin (Baile Átha Cliath), into a middle-class Catholic family who suffered increasing hardship as a consequence of the father's intemperance. He was educated by Jesuits at Belvedere, Clongowes, and University College. In 1904, accompanied by Nora Barnacle, who was to remain his lifelong partner, Joyce fled what he saw as the intellectual, spiritual, and political paralysis of Dublin, and thereafter settled initially in Trieste. From 1920 he lived in Paris and eventually in Zürich, Switzerland. Through the 1920s and 1930s he suffered numerous eye operations (which left him very nearly blind), and he died from a duodenal ulcer in 1941. Initially a confirmed Parnellite (see PARNELL), he largely rejected the Celtic revival as sentimental folklorism aligned with a British imperial

image of Irish culture (see CELTICISM; PAN-CELTICISM, ROMANTICISM). He had also espoused socialist principles and held some sympathies with the Sinn Féin of Arthur Griffith (Art Ó Gríofa); yet, he disavowed stringent NATIONALISM, which he saw as duplicating the values of the British Empire. He remained opposed to all forms of imperialism and was a committed pacifist.

Joyce published two volumes of poetry: *Chamber Music* (1907) and *Pomes Penyeach* (1927), but is primarily known as a prose writer. He portrayed the Dublin which he had left behind in his collection of short stories, *Dubliners* (published after years of difficulty in 1912). His stultifying home life, religious education and sense of social oppression are described in his first novel, *A Portrait of the Artist as a Young Man* (1916). Joyce never returned to Dublin after a brief visit in 1912, but retained a lifelong interest in his native city and in the political fortunes of Ireland (ÉIRE). In his only play, *Exiles* (1918), the autobiographical lead character explains that he cannot return to Ireland since he feels rejected and deceived by his country. Although initially banned for obscenity, it was the publication of *Ulysses* (1922) which assured Joyce's immense literary reputation. Set in Dublin on 16 June 1904, *Ulysses* dramatizes the relations between the autobiographical Stephen Dedalus, and the Irish Hungarian Jew, Leopold Bloom, and his wife Molly. It has been praised for the sympathetic humanity with which it chronicles the intimate lives of its main characters; its liberal championing (unusual among modernist writing) of 'the ordinary man' personified in Leopold Bloom; its determination to map in meticulous detail so much of Edwardian Dublin; its commentary on the patriarchic, nationalist, and imperial ideologies of the time; the virtuosity of its narrative techniques, including pioneering use of 'stream of consciousness'; and its often ironic restatement of western literary traditions. *Finnegans Wake* (1939) is composed in a richly allusive portmanteau language—'alphybettyformed verbage' as the book calls it—which was the culmination of Joyce's lifelong narrative experimentation. Such self-conscious celebration and subversion of the English language and literary forms characterizes his work.

Joyce's achievement was immense: he was soon widely accepted as the leading prose writer in English in the 20th century and a pre-eminent figure in European modernism. His work revolutionized the novel genre, taking it from the realistic traditions of the Victorian era towards the post-modern form of the post-war period, and has been instrumental in the development of post-structural and deconstructive critical thought. The standard biography is Richard Ellmann's *James Joyce*.

Although Joyce wrote in English, his eclectic and allusive style drew in many IRISH-language words, names, and sources. In this respect, CELTIC STUDIES have an important contribution to make to Joyce studies (see O Hehir, *Gaelic Lexicon for* Finnegans Wake).

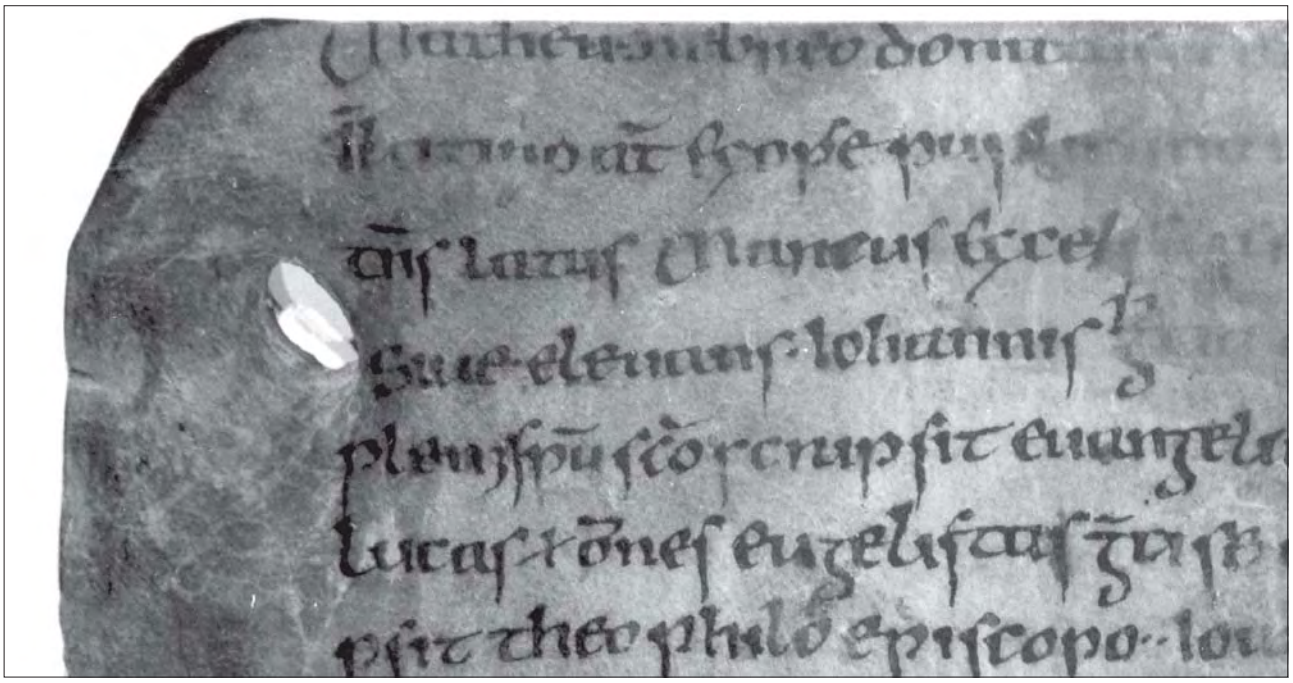
John Nash

The **Juvencus Manuscript** (Cambridge, University Library, MS Ff. 4.42) is one of the most important sources of Old WELSH surviving in contemporary media of the Old Welsh period (*c.* 800–*c.* 1100), and is thus on a par with other major sources covered in other articles in the Encyclopedia: the DE RARIS FABULIS; COMPUTUS Fragment; marginalia in the LICHFIELD GOSPELS; and Oxford GLOSSES. The manuscript contains the following items of special interest to CELTIC STUDIES: the Juvencus glosses, the three Juvencus saga ENGLYNION (discussed in that article), and the nine Juvencus religious *englynion*. The manuscript also contains a cryptogram using Greek letters by a priest with the Old Welsh name *Cemelliauc* (Mod. *Cyfeilliog*), the etymological meaning of which is 'friendly' or 'like a foster brother' < Celtic **komaltiākos*, possibly the same person as the bishop 'Cameleac' of Ergyng (now south-west Herefordshire, England) captured by the Vikings in 914 according to the Anglo-Saxon Chronicle. This detail provides one slight clue as to the region where the manuscript might have been made. The main text is *Evangeliorum Libri*, a Latin verse rendering of the story of the Gospels,



Detail of folio 1v of the Juvencus Manuscript, Latin text beginning with etymologies of the names of the Evangelists: Matheu[s] (line 1), Marcus (line 3), Iohannis (line 4), and Lucas (line 6)

written in the 4th century by the Spanish priest Juvencus. The manuscript is mostly the work of some ten scribes who worked in the later 9th and earlier 10th century. The main and first scribe (Scribe A) bore the Old Irish name *Nuadu* (see NŌDONS §2), as provided in a closing Old Welsh note, *araut di.Nuadu* 'a prayer for Nuadu' (fo. 55r). While it is likely that he was Irish and also that this was simply his name, it is possible that this master penman took his sobriquet from the Nuadu 'of the Silver Hand' of the Irish MYTHOLOGICAL CYCLE. Along with the Latin and Welsh glosses, there are a few Old Irish forms, showing the manuscript to have been the product of a centre in which both Welsh and Irish monastic scholars were at work, in both Celtic languages, as well as Latin. The glosses are noteworthy as the source of early attestations of many common Welsh words: for example, *isel* 'low' (4r), *cruitr* 'sieve' (8v), *scipaur* 'barn' (8v), *reatir* 'waterfall' (15v), *anu* 'name (nominative)' (16r), *anbodlaun* 'unwilling' (19r), *trucarauc* 'merciful' (22v), *gulip* 'wet' (32v), *tonnou* 'waves' (32v), *lestir* 'vessel' (33r).

The saga englynion were written into the MS between approximately AD 850 and 905, and errors in the text suggest a copy of an earlier written work. The nine religious *englynion* were written around the same time and celebrate the wonders of God's creation, as in the third englyn below:

> *Di·cones* Pater *ha·rimed* | *presen.*
> *Is·abruid i·cinimer.*
> *Ni-s·acup, ni-s·a-r-cup leder.*
>
> The Father made the wonders of the world.
> [Describing] how many their number is difficult.
> Letters do not, cannot take hold of them.

They, too, were copied from an older original, as indicated by such errors as *hared* 'speech' for *araut* 'prayer' (required by the rhyme) and the false start *pbetid* 'Christendom, the world'. On the religious thought in these verses, see further CHRISTIANITY, CELTIC §3.

K

Karaez (**Carhaix**) is a town of historic importance in north-east Kernev, thus centrally located in Breizh-Izel, the Breton-speaking region of Brittany (Breizh). In Roman times, it was the urban centre for the civitas of the Osismii, the westernmost of the Gaulish tribes of Armorica. The earliest attested name for the town is Gallo-Roman *Vorgium*. In the Middle Ages we encounter the new name, Latinized *Carophesium*; it has been proposed that this is related to Latin *quadruvium*, literally 'four ways', i.e. 'cross-roads', since six Roman roads converged at Carhaix. Another possibility is that *Carophesium*, *Kar-ahez*, &c., had originally meant 'fortified town of the Osismii'.

The central location of Karaez/Carhaix within the ancient road network and Breton-speaking Lower Brittany: Roman roads shown in white, the 20th-century linguistic frontier as a dotted black line

The Cornish parish and village of Saint Michael Caerhayes, recorded as Caryhays in 1242, may be cognate. King Richard I, Cœur de Lion, was defeated by his Breton vassals at Carhaix in 1197. The name is also associated in legend with Ahez, the wicked daughter of King Gradlon (see flood legends). A 16th-century Latin reference describes her as a giantess, buried beneath a dolmen in the vicinity, and gives the folk etymology of *Quer-Ahez* (city of Ahez). Owing to its central location and position within the road network, Carhaix is important to the study of the Breton dialects as a place where a number of local features met and from which linguistic innovations spread.

AM

Keeill is a Manx Gaelic term which refers to a small, dry-stone-walled Christian chapel or oratory (see also ellan vannin §7, with photograph). Some sites which are no longer extant may be traced by the equivalent place-name element, e.g. Balla*kil*pherick (SC 225 713). There are approximately 180 sites known on the Isle of Man, mostly in rural locations without extant secular structures in the vicinity. There is some evidence, as in Ireland (Éire), for a link with land units, with 47% of the sites near major divisional boundaries (Lowe, 'Early Ecclesiastical Sites'), though the reason for this relationship is uncertain. It is not certain whether the keeills all date to the same period, nor is it clear how they are to be subdivided into distinctive groups. All are now disused and rarely survive to a height of more than half a metre; most are no longer

visible above ground. The buildings were superseded by larger, mortared structures once congregational worship and territorial parishes became the norm, probably in the 12th century. The sites of some of these later buildings may overlie the earlier keeill. Several keeills are associated with an enclosed cemetery (Manx Gaelic *rhullick*, cf. Old Irish *reilic*). At some locations, it is apparent that the extant keeill was built over pre-existing graves. The development of enclosed cemeteries has been interpreted as a phenomenon of the 8th century and later (Petts, *Burial in Early Medieval England and Wales* 24–46), but this need not imply that there were no keeills earlier than that, but rather that the majority of the surviving examples belong to a later phase of construction, probably during the Norse hegemony. Despite many of the sites being excavated in the first two decades of the 20th century by the pioneering Manx archaeologist P. M. C. KERMODE (see also HIGH CROSSES), there is no comprehensive absolute chronology. A report on a more recent excavation at Ballaquayle (SC 2565 8125) has described the post-holes of a wooden structure, perhaps representing the first keeill on the site and possibly analogous to the first phase wooden church on Church Island, Co. Kerry. The keeill excavated at Peel Castle in the 1980s was shown stratigraphically to have been both constructed and demolished during the earlier Norse period, before the end of the 11th century (Freke, *Excavations on St Patrick's Isle, Peel, Isle of Man* 132). The discovery of this site serves as a reminder that the whole corpus is not necessarily represented by the combined record of archaeology, place-names, and oral tradition.

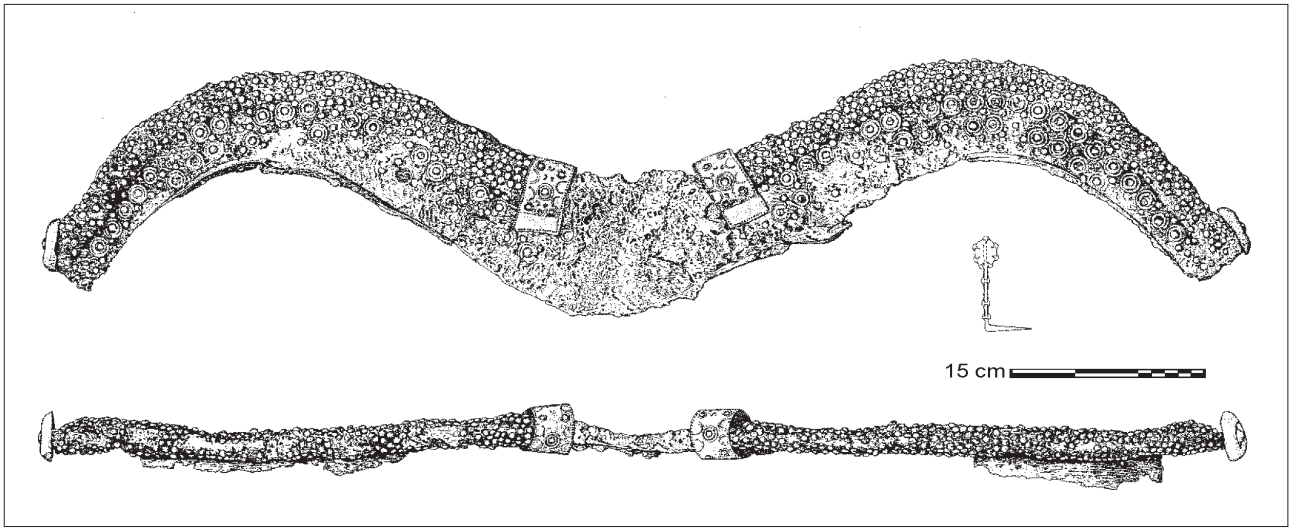
Kelheim is the site of an IRON AGE OPPIDUM in the south of Germany, at the confluence of the rivers DANUBE and Altmühl. Covering a surface of over 600 ha (1440 acres), it is one of the largest oppida in Europe. It was identified by P. Reinecke with the oppidum Αλκιμοεννις *Alkimoennis*, mentioned in PTOLEMY's *Geography*. The etymology of this name is obscure, and its Celticity is thus uncertain. However, the site is well within the core area of ancient Celtic place-names in continental Europe, and its material culture is of standard Late LA TÈNE type and thus resembles that of areas for which there is evidence of Celtic speech from at least the time of CAESAR's campaigns in GAUL (*c.* 60–*c.* 50 BC).

Yoke for a two-horse team found at Kelheim



Kelheim is located in the midst of a very rich prehistoric landscape, with the earliest settlements dating from the Palaeolithic (Old Stone Age). The oppidum is surrounded by three ramparts: the 'Altmühl wall' along the river Altmühl in the north; the 'outer' wall in the west, which starts at the Danube in the south, crosses the Michelsberg and then runs to the Altmühl; and the 'inner' wall in the centre which encloses the top of the peninsula between the two rivers. South of the Danube the hill-fort on Frauenberg, which overlooks the place where the Danube breaks through the mountainside, is part of the same system of defensive works. The geographical setting suggests that not all of the territory enclosed by the walls was settled. The main function of the ramparts and enclosures must have been to secure the strategic passage through the valley of the Danube. The oppidum of Kelheim was excavated between 1964 and 1980 by F. R. Herrmann and others.

The outer wall of the oppidum was built in three stages, the inner wall in two stages, the Altmühl wall in one. All of these were earthen walls with a stone facing and gaps for supporting posts and a sloping bank on the inside for easy ascent by the inhabitants defending the oppidum (see FORTIFICATION). The objects found inside the walls comprised jewellery, dress ornaments, weapons, tools, wagon and harness parts (see illustration), bones, and pottery. These mostly belong to La Tène D1, *c.* 150–50 BC. This forms the chronological basis for the history of the site. The third phase of the outer wall and the construction of the Altmühl wall took place at the same time. The particular system of stone-faced walls with support posts is significant for the eastern cultural province of La Tène oppida and has parallels in other Bavarian oppida (see, e.g., MANCHING) and in Bohemia (see BOII; STARÉ HRADISKO).

PEB

Kells (**Ceanannas Mór**) is a town around 16 km north-west of Navan (An Uaimh), near the river Blackwater, Co. Meath (Contae na Mí). It is best known for its association with the renowned late 8th-/early 9th-century illuminated gospels, the Book of KELLS which, though most probably produced mainly at the Columban monastery of Iona (EILEAN Ì), was kept at Kells during medieval times. The Columban monastery at Kells was evidently founded at the beginning of the 9th century, the most likely meaning of the figurative entry in the ANNALS of Ulster for 804: 'Ceanannas was given without battle to the melodious Colum Cille this year'. In 807, Kells (in its less vulnerable inland site) took over from Iona as the administrative centre of the large *familia* of MONASTERIES associated with COLUM CILLE (521/9–97), following several ferocious Viking attacks on the Scottish island monastery. None of the original structures of the Columban monastery at Kells remains—the site is now covered by the Protestant parish church. However, five 10th-century HIGH CROSSES survive, along with a pre-Norman round tower, and Colum Cille's house (*Teach Colaim Chille*), similar in structure to St Kevin's church at the monastery in Glendalough, Co. Wicklow (GLEANN DÁ LOCH, Contae Chill Mhantáin).

PSH

Kells, Book of (*Codex Cenannensis*)

The Book of Kells (Dublin, Trinity College Library MS 58 [A. I. 6]) is the most richly decorated and iconographically complex of the large format, illustrated Latin gospel-books produced in the British Isles between the 7th and 10th centuries. Its place and date of origin remain problematic, but current scholarly opinion favours the view that it was begun at the Columban monastic foundation on the Hebridean island of Iona (EILEAN Ì) towards the end of the 8th or early in the 9th century and sent to KELLS in Co. Meath, Ireland (Ceanannas, Contae na Mí, ÉRIU), either shortly after the monks of Iona had established a sanctuary there from Viking attack in the early 9th

century or, together with relics of St Columba (Colum Cille), in 877. Although scribal activity and decoration may have continued at Kells, the manuscript was never completed. Moreover, 28 leaves are missing from the codex, whose original number of calfskin leaves has been established at 370. Significant groupings of leaves have disappeared from the opening and from the last four chapters on the Passion of Christ in the Gospel of St John. There is reason to believe that theft of the manuscript from the church at Kells some time before 1017 may account for the loss of the book's cover and book shrine as well as most of its missing pages. In any event, as attested by 11th- and 12th-century charters added to the book, it was at Kells through much of the Middle Ages. Sent to Dublin (Baile Átha Cliath) around 1653, it was entrusted to Trinity College a few years later.

The text of the Book of Kells is based on the 4th-century *Biblia Vulgata* or Vulgate Latin Bible, translated by St Jerome, combined with some sections from the pre-Jerome *vetus latina* or 'Old Latin' translation. Two sets of accessory texts are usually employed in early medieval Gospels: those opening the codex and those that accompany each of the separate Gospels. In this

manuscript only the canon tables (concordances of Gospel passages common to two or more of the Evangelists compiled in the 4th century by Eusebius of Caesarea) survive from the first series. As for the second set, these texts are eccentrically grouped with the canon tables before the opening of St Matthew's Gospel. As many as four scribes, using a bold script known as 'insular majuscule', laboured over the text and, because of overlapping of script and painted ornament, the possibility exists that the scribes were also the artists who elaborately decorated the manuscript.

Attempts at reconstructing the original plan of decoration are controversial, but it is likely that each of the four Gospels was prefaced by a page bearing the image of the four evangelist symbols around a cross and a second page with a portrait of the author of the Gospel. Then, beginning with the greatly enlarged and ornamented initials of the incipit page, came the opening of the Gospel text itself. If this is so, the codex has lost its portrait of St Mark and its four evangelist and portrait pages in the Gospel of St Luke. Besides these groupings at the Gospel openings, Matthew 1:18, the start of the nativity story, is given special prominence. The page displays a greatly enlarged and embellished monogram of the Greek form of Christ's name (chi-rho), and is preceded by two full-page miniatures, the first with an image of Christ Enthroned, the second dominated by a large double-barred cross filled with ornament and set against a minutely detailed ornamented ground. Similarly, a sequence with a full-page Madonna and Child miniature facing an elaborately ornamented text page appears in the preliminaries, another with a miniature of the Arrest of Christ at Matthew 26:31, and a third set with a full-page image of the Temptation of Christ is at Luke 4:1. Internal evidence suggests another such sequence—with a blank page for a never completed Crucifixion miniature—was intended for Matthew 28:38. Mention should also be made of two isolated ornamented incipits with prominent figural elements—one with the *Erat autum* of Mark 15:24–5, the other with the *Una autum sabbati* of Luke 24:1—which may represent a hitherto unknown kind of conflated incipit-illustration (*incipit*, Latin '[here] begins', was used as the opening in medieval manuscripts to mark the beginning of a text, but illustrations could be employed for the same purpose). There is also the curious page which contains the concluding words of St John's Gospel and displays, among others, a figure identified as 'the angel of the Lord' and a winged lion. The page quite possibly presents an abbreviated image of the Ascension of Christ. Additionally, the evangelist symbols variously grouped are introduced into the preliminaries, including the canon tables.

The highly embellished incipit pages, full-page miniatures, and the canon tables are all elegantly ornamented with figural, animal, foliate, and geometrical details, and the simpler text pages are also filled with an extraordinary and seemingly infinite miscellany of these motifs drawn from the repertoire of Celtic (La Tène), Anglo-Saxon, and Mediterranean styles integrated into the insular or Hiberno-Saxon style of early medieval Britain and Ireland. In terms of delicacy and meticulousness of touch and almost hallucinatory inventiveness, the decoration of the Book of Kells is unmatched in the circumscribed world of insular manuscript design and even the larger sphere of early medieval book art.

Although it represents the summit of insular book production, the Book of Kells stands apart from the insular tradition in two important respects: the painting technique employed by its artists and the placement of three of the full-page miniatures within the manuscript. Generally, in insular decorated books, colours are applied as layers over a preliminary ink drawing which remains visible, but in the Book of Kells three or more layers of pigment are applied, i.e. a ground layer over the ink drawing, an overlay of opaque pigment and, at the end, linear additions in ink or pigment. On some pages a three-dimensional effect was achieved, but unfortunately this has been largely destroyed by later flattening of these pages. This unprecedented layering technique is matched in novelty by miniature deployment. In other insular gospel-books, miniatures are placed at the beginning or at the end of the codex and/or at the separate Gospel openings, but in the Book of Kells, three full-page miniatures do not follow this rule: the Madonna and Child page introduced after the canon tables, and the Arrest and Temptation miniatures, each placed in the body of the manuscript, respectively in Matthew and Luke.

In recent years much attention has been directed at discovering the multivalent Christian meanings

Virgin and Child from the Book of Kells, fo. 7v, Trinity College Dublin, MS 58 (A.I.6)

suspected in the Arrest and Temptation miniatures, the other miniatures, smaller figural and other groupings, and even individual 'decorative' details. The use of biblical exegesis in this endeavour has yielded new perspectives on the spiritual character of the iconography of particular pages in the manuscript. Attempts have also been made to delineate an overarching programmatic impulse. The fact that the Arrest and the Temptation illustrations are each accompanied by a page of enlarged and ornamented text having liturgical importance (they are almost certainly lections, respectively readings for Quadragesima Sunday in Lent and Holy Thursday), has led to the hypothesis that a lections system giving great emphasis to the Lent and Holy Week rites affected the choice and placement of some picture pages and a number of the full-page incipits. It has even been proposed that in addition to the pages which may mark or illustrate Easter readings, some of the other miniatures and particular 'ornamental' details were intended to bring to mind an assembly of Easter associations.

Much remains unclear about the origin, date, and decoration of the manuscript. Its precise relationship to other insular and continental manuscripts has yet to be fully examined. Indeed, there are so many unresolved questions concerning the Book of Kells that we may be certain that the enigmatic masterpiece will continue to inspire significant research by scholars in a host of disciplines.

Kentigern, St (†*c.* AD 612) is remembered as the first bishop of Glasgow (GLASCHU) and one of the most important of the northern BRITISH saints. The saint's name is Celtic (**Kuno-tegernos*) and means 'hound lord', but he is commonly referred to by his hypocoristic (pet) name, Mungo. Glasgow cathedral was the burial place of the saint and developed into his principal shrine, following the endowment of the see by Earl David in 1114–18.

The earliest traditions relating to the historical Kentigern are contained within two *vitae* commissioned by successive bishops during the 12th-century (Forbes, *Lives of S. Ninian and S. Kentigern*). These lives draw upon early medieval material, the historical value of which is difficult to assess, and opinions differ widely even as to the date of the earlier strata embedded in the 12th-century versions (Jackson, *Studies in the Early British Church* 273–357; Macquarrie, *Saints of Scotland* 117–44). The consensus is that aspects of an authentic 7th-century Kentigern tradition survive within the existing *vitae*, but the degree to which they have been doctored does not inspire confidence in the uncorroborated detail. For instance, a comparison of the earlier fragmentary *vita*, compiled during the episcopacy of Bishop Herbert (1147–64), with the version by JOCELIN OF FURNESS, completed during the episcopacy of Bishop Jocelin (1175–99), shows a strong hand at work updating and sanitizing the *vita* for a late-12th-century audience. Because of the uncertainties surrounding the *vitae*, only the barest details concerning Kentigern can be accepted as historically correct. Reduced to its essence, the tradition maintains that Kentigern was the grandson of the British king of LOTHIAN, that he was educated by St SERF at Culross, and that he became a monk. He travelled to Glasgow to bury a holy man named Fergus at the site of an existing cemetery. As a consequence of political disruptions he travelled widely through CUMBRIA and lived at Hoddom as well as Glasgow. At the time of his death, around AD 612 (Macquarrie, *Saints of Scotland* 118), his biographers present him as being founding bishop of Glasgow cathedral, presumably bishop of the northern BRITONS. It has been proposed that Kentigern was the same person as a churchman with a similar name attested in GAUL, Gonothigernus of Senlis (Gough-Cooper, *Heroic Age* 6).

Pre-12th-century church dedications indicate that veneration for Kentigern was strong throughout the Brythonic kingdom of Cumbria; there are eight dedications in the present-day county of Cumbria in England (Barrow, *King David I and the Church of Glasgow* 6; Bowen, *Saints, Seaways and Settlements* 83–4). Among these Kentigern dedications is the early medieval foundation in Annandale at Hoddom, a centre of some importance in both the 8th and 12th centuries, which has recently been excavated (Lowe, *Trans. Dumfriesshire and Galloway Natural History and Antiquarian Society* 66.11–36; Scott,

Trans. Dumfriesshire and Galloway Natural History and Antiquarian Society 66.36–45).

Whether Glasgow was actually the seat of bishops in the 7th century, by the 9th century it seems to have been second to Govan in importance (Driscoll, *Innes Review* 49.95–114). Only with the refoundation of the see in the 12th century does Glasgow secure its episcopal status, thanks in part to the burgeoning interest in the cult of Kentigern. Enthusiasm for the cult is clearly apparent in the flurry of building work, which saw a succession of three major campaigns of enlargement within the space of the 12th century and culminated in the completion of the existing cathedral. As the excavations have shown, these successive phases of building and enlargement were all within a relatively limited area, and the fixed point throughout was probably the site of Kentigern's tomb.

Stephen Driscoll

Kentigerna, St (*c.* 700–34), a Scottish anchoress, is unusually well documented in reliable sources and thus provides solid evidence for aristocratic Irish influence on the Scottish Church in the 8th century. As 'Caintigernd', she is identified in her 734 death notice in the Annals of Ulster as the daughter of Cellach Cualann (†715), king of the Uí Mail, from Kilranelagh, Co. Wicklow (Contae Chill Mhantáin), overlord of Leinster (Laigin). Her three sisters and their marriages are also recorded, and two of her brothers succeeded their father as kings of the Uí Mail. According to the Aberdeen Breviary, Kentigerna was the daughter of the King of Leinster and married a king called 'Feriacus'. She later went to Scotland (Alba) with her brother Comgán and her son Faelán (the Scottish saint of that name). She retreated to Inchcailloch (Inis Chailligh, 'Nun's island') in Loch Lomond. Her name is Celtic (cf. KENTIGERN), but, in her case, the first element is possibly Old Irish *caen* 'fair' (< Celtic **kaṇio-*) rather than *con-* 'hound' (< **kuno-*), unless she took the name in honour of the earlier male saint revered in the same region. In any event, a woman's name in *-tigern(n)* 'lord' is unusual.

PEB

Kermode, Philip Moore Callow (1855–1932) was the founder of the academic study of Manx natural history and archaeology, instigator of the Manx Archaeological Survey, and first curator of the Manx Museum. Largely self-taught, he succeeded in placing the Isle of Man (Ellan Vannin) firmly on the map of international scholarship and of imparting a sense of the importance of their cultural history to his fellow Manxmen and women.

'After Cormorants' in *Science Gossip* (1876) was followed in 1880 by his first list of Manx birds in *Jefferson's Almanack*. He took part in the British Association bird migration project between 1881 and 1883, and in 1885 he published lists of mammals and butterflies: 'we have begun the formation of lists illustrative of our Fauna and Flora, which by degrees we hope to perfect'. The following year he wrote an 'Introduction to the study of Lichens'. His 'Contributions to a vertebrate fauna of the Isle of Man' was published in 1893 in the *Zoologist*. In 1897, as secretary of the British Association Committee, he excavated the Close-y-Garey elk which now stands at the entrance of the prehistoric gallery in the Manx Museum.

Despite this impressive record as a naturalist Kermode is now better known as the founder of Manx archaeology. His excavations at the Meayll Circle in 1893 were followed in 1904 by his list of *Manks Antiquities*. Best known at home and abroad for his untiring work on the magnificent series of Manx crosses, he spent a great proportion of his working life locating, identifying, deciphering, conserving, publishing, and presenting the crosses to his country-

men (cf. HIGH CROSSES). The culmination of this activity was the publication of *Manx Crosses* and the opening of the cross-house at Maughold, both in 1907.

The Manx Archaeological Survey was established in 1908, with Kermode as its secretary. Its brief was to examine, parish by parish, the 'KEEILLS or Chapels, and Rhullicks or Christian Burial Grounds' of the island—a massive task, involving excavation and restoration as well as the compilation of a survey on over a hundred sites. Four reports were issued between 1909 and 1915 and a fifth was edited by William Cubbon in 1935. As late as 1926 Kermode excavated the Neolithic tomb at Ballafayle, Maughold, and in 1927 the Viking ship burial at Knock y Doonee, Andreas.

Kermode was a founder member of the Isle of Man Natural History and Antiquarian Society (1879–). He was the first secretary of the society, its editor for 25 years, and also its President on five occasions between 1886 and 1929. As first Director of the Manx Museum he spent the final ten years of his life organizing the collections and presenting them to the public.

Kernev (French Cornouaille, English [rarely used] Cornwall) is one of the four Breton-speaking regions of Lower Brittany (BREIZH-IZEL). The region is defined by the boundaries of the bishopric of Cornouaille, but it has significance beyond the realm of religion. The four dioceses were areas of administration up to the French Revolution (1789–99), and correspond to the four divisions of the BRETON language. The name is that of a historic Breton principality, which comprised mainly what are now the southern parts of Finistère (see the maps with the article BREIZH). It continues the tribal name of the Cornovii, who also gave their name to Cornwall (KERNOW) in Britain. In medieval Latin sources, Kernev is called Cornubia. Another British tribe and Romano-British CIVITAS, the Dumnonii, gave their name both to the northern half of Brittany (Breizh) and the territory to the east of Cornwall in England (Devon; see DOMNONIA; DUMNONIA). The nature of the political relations between Kernev and Insular Cornwall is not certain. For example, we cannot tell whether they ever formed a single kingdom, but it is often assumed that Kernev was settled, at least in part, from Cornwall (see BRETON MIGRATIONS). According to contemporary information reported in the *Historia Francorum* (History of the Franks) of Gregory of Tours, Brittany was split in 567 with the creation of Bro-Uueroc in the south-east (now GWENED) under Count Macliau (father of the kingdom's namesake, UUEROC); the west, including what became Kernev, went to Count Budic. Important historical centres in Kernev are KARAEZ (Carhaix) in the north-east and Kemper (Quimper) in the south-west. Karaez began as a Roman town and *civitas* capital. Called *Civitas Aquilona* or *Kemper Courentini* (combining the Brythonic word for 'confluence' with a personal name) in early medieval sources, Kemper has long been the seat of Kernev's bishop, and goes back to the 5th century according to medieval claims. Owing to its central location, the speech of Kernev has an intermediate position within the BRETON DIALECTS, with a high degree of mutual intelligibility.

Kernow (**Cornwall**) is one of the six regions in which a Celtic language was spoken in modern times or has been spoken continuously up to the present time (see ALBA; BREIZH; CYMRU; ÉIRE; ELLAN VANNIN; also CELTIC COUNTRIES). Situated at the tip of the south-western peninsula of BRITAIN and covering 1376 square miles (3564 km²), it is physically divided from the rest of the island by the river Tamar, and this has helped to preserve the sense of an independent territory. The 2001 census recorded 501,257 inhabitants in the region.

The county town of Cornwall is Truro, and the 1974 subdivision into six council areas consciously revived old Cornish names: Penwith, Kerrier, Carrick, Restormel, Caradon, and North Cornwall.

The CORNISH language, closely related to WELSH and BRETON, is attested in a variety of texts, arguably of some literary importance, especially the medieval plays (see BEUNANS KE; BEUNANS MERIASEK; ORDINALIA). The language went into steep decline after the Reformation (see BIBLE) and disappeared around 1800, with partially successful attempts at revival being made from the end of the 19th century (see LANGUAGE [REVIVAL] MOVEMENTS; COWETHAS KELTO-KERNUAK; DICTIONARIES AND GRAMMARS). Although the existence of the Cornish language initially reinforced early assumptions of a Celtic Cornwall, its Celticity (see CELTICISM) has been a topic of debate for over a century. Even within the field of CELTIC STUDIES, Cornish matters are generally under-researched. The death of the language, Cornwall's status as an English county, the relative prominence of Irish, Welsh and Scottish politics, and internal ambivalence concerning Cornwall's identity may account for this.

Cornwall and its inhabitants, speakers of a P-CELTIC language, were part of the wider post-Roman kingdom known as DUMNONIA, successor of the Romano-British CIVITAS and pre-Roman Celtic tribe of the Dumnonii (whose name survives in the neighbouring county of Devon). Cornubia was recorded as early as *c.* AD 700 as the name for the west of Dumnonia. Cornish *Kernow* corresponds exactly to Welsh *Cernyw* and, in medieval Welsh literature, for example, CULHWCH AC OLWEN and the TRIADS, it sometimes refers to a much larger region than the modern county, including what is now Somerset, immediately south of south Wales. The English name *Cornwall* combines the Celtic tribal name *Cornovii* and Anglo-Saxon *wealas*, a Germanic term applied to Romanized foreigners and also the source of Modern English *Wales*. In Roman times, a tribe called the Cornovii formed a *civitas* in west-central Britain, with its urban centre at Wroxeter (Romano-British Vriconium), near modern Shrewsbury. A post-Roman migration from this area to the south-west is possible, but there could have been an old subgroup of the Dumnonii with the same name as the tribe in the midlands. KERNEV in south-west Brittany is also a form of this name, and post-Roman migration from south-west Britain is a likely explanation for this connection (see BRETON MIGRATIONS). Sea-borne economic and cultural contacts between ARMORICA and south-west Britain have been intense since the Neolithic period (*c.* 4500 BC) and have contributed decisively to the cultural distinctiveness of Cornwall at many successive prehistoric and historical horizons. The close similarity between the Breton and Cornish languages must be understood in this context.

In AD 936 ÆTHELSTAN, king of Wessex, fixed the border between his kingdom and Cornwall at the river Tamar. Following the Norman conquest of 1066, Cornish lands formed a Norman earldom. In 1337 Edward III created the Duchy of Cornwall to provide for his eldest living son and to take control of the Stannaries, an indigenous form of government (see STANNARY PARLIAMENT). Until the 17th century, Cornwall was governed by the household of the Duke of Cornwall, which left it relatively free of administrative interference from the Crown. Although the rôle of the Duchy is now diminished, the Duke of Cornwall still appoints the High Sheriff of Cornwall. Both the Stannaries (parts of which persisted into the 19th century) and the existence of the Duchy have shaped an awareness of cultural difference, as well as providing a distinctive political status. In the 20th century they became the focus of an ethno-nationalist movement (see NATIONALISM; GORSETH). In 2000 a Senedh Kernow (Cornish parliament) campaign for an independent Cornish authority was initiated with the aim of winning greater political self-sufficiency, similar to that devolved to Wales and Scotland (see CYNULLIAD CENEDLAETHOL CYMRU; SCOTTISH PARLIAMENT).

Like many of the other Celtic regions, Cornwall's economy was dominated by agriculture well into the 18th century, with the low-lying areas used for dairy cattle and the moors for rough grazing by sheep. Naturally, the long coastline and the sea have played an important part in Cornwall's history and economy, from SMUGGLING in early modern times to today's booming tourist and surfing industry. For centuries, Cornwall has been famous for its pilchards, which are mainly exported to the Catholic countries of southern Europe. The relatively rare element tin was abundant in early Cornwall, and its tin and copper stores have been exploited since the Early Bronze Age (*c.* 2000 BC) —bronze being an alloy of approximately 10% tin and

Cornwall/Kernow showing its traditional divisions or 'hundreds'

90% copper—and continued to the copper boom of the 18th and 19th centuries. Both copper and tin mining, however, declined after the 1870s, with the last tin mines closing in the 1980s. Thus, Cornwall provides a remarkably early example of a post-industrial society. Since the discovery of china clay in 1746, clay mines have been another source of income for the Cornish. Although not as numerous as before, the clay mines north of St Austell (Astol) still dominate the local landscape.

Kevredigez Broadus Breiz (L'Union régionaliste bretonne / The National Association of Brittany) was founded in Morlaix (MONTROULEZ) on 13 August 1898 as a French regionalist association. Following early initiatives taken in parts of France, such as Provence (1854) and Nancy (1865), regionalism became a more organized movement towards the end of the 19th and the beginning of the 20th century.

Kevredigez Broadus Breiz was established following the dissemination of a manifesto which deplored the increasing threat to the regional way of life in France,

and which claimed that all initiative was being taken away from the 'natural and historical formations of province and town' and that 'the same economic regime was imposed on the country, despite differences of interests and needs'. Kevredigez Broadus Breiz was organized as five sections: administrative decentralization, economy, history and literature, BRETON language and literature, and fine arts.

Régis de L'Estourbeillon, president from 1902 to 1946, anchored Kevredigez Broadus Breiz in economic and political conservatism and the defence of a rural lifestyle which valued a strong traditional sense of propriety. A schism—led notably by militants involved with professional and economic organizations, the bards of the GOURSEZ, and the defenders of the language—gave rise to the Fédération régionaliste de Bretagne (Regionalist federation of Brittany). Overtly autonomist or separatist, as opposed to regionalist, movements then asserted themselves. Nevertheless, the Kevredigez Broadus Breiz remained very active in the inter-war period and until the 1940s. Some of its aims were adopted after the Second World War by the Comité d'étude et de liaison des intérêts bretons, (Research and development committee for Breton interests), who campaigned for decentralizing legislation.

Kilkenny, Statutes of

In 1366 the Anglo-Irish parliament at Kilkenny (Cill Chainnigh) passed a series of statutes directed at the perceived threat of Gaelicization to the English colony in Ireland (ÉIRE). Although very little in the statutes was new, the specific laws passed in 1366 are seen as significant because they represent an attempt to systematize and codify existing laws. The Statutes forbade the use of IRISH and the expression of Irish culture to the extent that these contrasted with English culture, and amounted to cultural protection legislation for the Anglo-Normans. Specifics such as forbidding the English to use the Irish language or to marry the Irish were enacted to maintain the distinction between the two groups, while other Acts, such as those forbidding native Irish to hold certain ecclesiastical offices or to foster children (see FOSTERAGE), were intended to encourage English social ascendancy. They also promoted English social institutions, for instance, English common law over Brehon law (see LAW TEXTS), and denigrated the native Irish institutions such as the BARDIC ORDER. The legislation was haphazardly enforced, and was not entirely successful; it was repealed in the parliament of 1613–15.

kilts

The Scottish kilt of today is a male garment, resembling a knee-length, pleated skirt, typically made from tartan fabric (see TARTANS and accompanying illustration). The earliest evidence for a garment ancestral to the modern kilt is found in ART and descriptions from around the late 16th century, and indicate a large rectangular cloak, fastened about the shoulders and belted around the body. The clearest early description comes from a passage in the Irish *Beatha Aodha Ruaidh Uí Dhomhnaill* (Life of 'Red' Hugh O'Donnell, 1571–1602) describing Scottish mercenaries: 'their exterior dress was mottled cloaks of many colours with a fringe to their shins and calves, their belts were over their loins outside their cloaks.'

Seventeenth-century depictions show this style, known variously as the belted plaid, *breacan fèileadh*, *fèileadh mòr* or great kilt, and it is a common feature of formal portraits of noblemen with Highland connections. The alteration of the belted plaid into two parts—the kilt with sewn pleats, known as the *fèileadh beag* or small kilt, and a separate smaller plaid worn over the shoulders—is first noted in contemporary records in the 1720s, though depictions through the mid-18th century primarily show the great kilt. Prohibition of the kilt for ordinary wear as part of the Dress Act of 1746, combined with its popular use as a uniform by some Scottish military units, helped

to convert the garment into an icon of national identity. When the Act was repealed in 1782, the kilt had become firmly fixed in the popular imagination not simply as a characteristic Highland garment, but as a national costume for Scotland (ALBA) as a whole.

The expansion of the kilt from a Scottish to a pan-Celtic symbol (see PAN-CELTICISM), sometimes accompanied by distinctive national variants, was a 20th-century development. Within Scotland itself there have been movements to return the kilt to its status as everyday clothing rather than a costume for special occasions.

Kingdom of Man and the Isles

Following Viking raiding and later settlement in BRITAIN and Ireland (ÉRIU), the Isle of Man (ELLAN VANNIN), together with the 'Hebrides' (Innse Gall)—31 larger and many hundreds of smaller islands off the west coast of Scotland (ALBA)—became a petty kingdom under the theoretical control of the King of Norway. During most of the 11th century power had swayed between kings based in Dublin (BAILE ÁTHA CLIATH), Man, and Orkney. It was not until 1079, with the successful attack on Man by Godred Crovan, that the political situation began to clarify. In some form or another, the kingdom survived until it was ceded by Norway to Scotland under the Treaty of Perth in 1266.

Norse settlement in Man and the Hebrides had been much less complete than in the Northern Isles. Place-name, epigraphic, and archaeological evidence suggests considerable mixing of the incoming and native populations (see SCOTTISH PLACE-NAMES). The kings of Man and the Isles themselves appear to be of mixed Norse-Gaelic origin. Although runic inscriptions in Old Norse occur throughout the area, the names of the kings' wives and mothers, and nicknames such as Godred 'Crovan' and Olaf 'Dubh', include mixed linguistic elements, and imply at least a bilingual society. The composition of an elaborate praise poem in IRISH addressed to the Manx king provides further evidence, and probably represents a decline in the use of Norse by the late 12th century.

Godred Crovan died in 1095. A period of uncertainty followed, which was only ended by the accession of Olaf I, Godred's youngest son, in 1113. Olaf had been brought up in the English court, and introduced many new ideas to Man and the Isles during his 40-year reign. For example, he persuaded the reforming Savignac order, with the donation of lands and other rights, to found a daughter house at Rushen Abbey in 1134.

Following Olaf's murder in 1153, Godred II reigned until his death in 1187. This period saw the rise of Somerled (Somhairle Mac Gillbhrìde, †1164), ruler of coastal Argyle (Earra-Ghaidheal), who defeated the Manx king twice and forced him to share control of the kingdom, Somerled taking Mull (Muile) and Islay (Ìle), and Godred Skye (An t-Eilean Sgitheanach) and Lewis (Leòdhas). Godred's eldest, illegitimate son, Reginald, succeeded and ruled for a further 40 years. Although primogeniture was not established as a general rule in Gaelic-Norse society, Olaf, Reginald's younger brother, having been given the island of Lewis, attempted to improve his position, eventually defeating and killing his brother at the battle of TYNWALD Hill in 1228.

Reginald had sought to protect his independence by coming to an arrangement by which he received payment from the King of England for providing naval protection of the access to the English coasts—presumably from the Scots, Irish, and Norwegians. Olaf found himself even more indebted to the English while earning the displeasure of Norway. At the same time, the increasing power of the Scottish throne and the relative disarray shown by Somerled's successors, together with the declining power of the Lords of Galloway, meant that the kingdom was coming under increasing pressure from all sides.

Olaf II's son, Harald I, initially refused to acknowledge his subjection to Norway. Once forced to do so, he suffered the political embarrassment of being knighted by Henry III. He journeyed to Norway, made his peace, married the king's daughter and was drowned on the return journey in 1248. His brother, Reginald II,

succeeded briefly, but, following his murder, his youngest brother, Magnus, became king in 1252. Relations between Scotland and Norway came to a head at the battle of Largs in 1263, in which Haakon of Norway was forced to retreat by Alexander III of Scotland. Magnus, who had gone to assist Haakon but was not actually in the battle, himself returned to Man where he remained, virtually a prisoner, until his death in 1265. By the Treaty of Perth in 1266 the whole of the Kingdom of the Isles became Scottish. The Chronicles of the Kings of Man and the Isles, written at this time, appear to have as their prime motive a desire to establish the legitimacy of Godred and his descendants.

From 1266 onwards, though the Scots claimed Man for the next century or more, it fell increasingly under the authority and, finally, the control of the English, the island being granted by Henry IV to Sir John Stanley in 1406. The core of the remaining parts of the kingdom stayed under the influence of Somerled's sons, though not without periods of strife between them. The shadow of the development of central power in Scotland greatly reduced the independence of the Macdonalds, whose LORDSHIP OF THE ISLES, based first at Finlaggan on Islay and latterly in Skye, represented the direct successor to Godred's island empire.

Kings' Cycles, medieval Irish

§1. INTRODUCTION

Modern scholarship now generally regards the Kings' Cycle, or Cycles, as one of the four main classifications of early Irish narrative literature (see TALE LISTS; IRISH LITERATURE). The term embraces several prose sagas, poems, and anecdotes which focus on the exploits of certain early Irish kings and dynasts generally not treated in the ULSTER CYCLE, FIANNAÍOCHT, and the MYTHOLOGICAL CYCLE. The Kings' Cycles are also distinct from these other three categories in that the central figures of these categories are not kings, but warrior heroes (in *An Fhiannaíocht* and the Ulster Cycle) and the supernatural TUATH DÉ (in the Mythological Cycle). While an exact count has not been made, Myles Dillon estimated that 'some seventy' works belong to the Kings' Cycles (*Cycles of the Kings* 2). The vast majority of these texts are written in Old and Middle IRISH, starting from around the 8th century AD, although stories about particularly famous kings such as CONN CÉTCHATHACH and his grandson CORMAC MAC AIRT continued to be composed in the Early Modern Period (1200–1650). Set against the chronological framework of Irish history and LEGENDARY HISTORY, the stories span a period of almost 1500 years, from the 3rd or 4th century BC to the 10th or 11th century AD, the longest period covered by any of the Cycles (see §2). They are united, however, by their common focus on 'matters of importance for the community', matters such as the origins and migrations of population groups, the foundation of dynastic lines, the affirmation or disaffirmation of kingship, and the outcome of memorable conflicts (Murphy, *Saga and Myth in Ancient Ireland* 47–8). Even so, these tales are not historical in the modern sense; the 1500-year time span extends a full millennium behind the horizon of contemporary historical records in early Ireland (ÉRIU) and legendary and mythological devices are common features of the narratives. Consequently, the Irish king tales find their closest analogues in *Heimskringla* (Orb of the world, *c.* 1220), a collection of sagas about the early kings of Norway, written by the Icelandic poet Snorri Sturluson (1179–1241).

§2. THE KINGS

According to Irish tradition, the kings who appear in the Kings' Cycle of Tales had, in fact, existed and could thus meaningfully be claimed as ancestors by latter-day tribes and rulers. However, it is doubtful whether this was true of any of the figures belonging to periods earlier than the 5th century AD; these prehistoric kings are more likely to be products of oral myth and legend or the creations of medieval writers. If we thus leave aside the issue of whether particular kings actually existed, but ask ourselves instead during which period—according to Irish tradition—did they live, the earliest figure to appear in the Cycles is LABRAID

Loingsech, the mythical ancestor of the Leinstermen, whose notional reign was in the 3rd or 4th century BC (Dillon, *Cycles of the Kings* 2). The latest would no doubt be a historical figure, but here the question is at which point in Irish history do the exploits of kings become the concern of a different literary genre. Thus, whether Domnall ua Néill (†980) or Brian Bóruma (†1014) is the latest king to appear in the Cycles hinges upon the academic question of whether or not *Cogadh Gaedhel re Gallaibh* ('The War of the Gaedhil with the Gail') is part of a Kings' Cycle. Some scholars argue for the exclusion of the tale because it is a work fundamentally distinct in many respects from the bulk of traditional Irish saga literature, not surprisingly as Brian and his successors were themselves bold innovators. *Cogadh* breaks from tradition as ambitiously innovative political propaganda and appears to adopt new features of the Latinate literary genre of history (see Dillon, *Cycles of the Kings* 117).

Although kings from each of the five provinces appear in the Cycles, not all of the ten or so great dynasties of the historical period are represented. In fact, a greater number of the kings in the Cycles have genealogical ties to the Uí Néill lineages of the north and midlands than to any other dynasty. This Uí Néill slant is so overwhelming that it remains thus even if we exclude from the count the prehistoric kings of the Connachta who figure in the genealogies as progenitors of the Uí Néill. The Uí Néill also have the distinction of having produced the most recent kings to appear in these stories (if we exclude Brian Bóruma). All of these late kings belong to the northern branch of Cenél nEogain, i.e. Fergal mac Maele Dúin (†722), Aed Allán (†743), Niall Frossach (†778), Aed Oirdnide (†819), and Domnall ua Néill (†980). Provincial dynasties are also represented in Kings' Cycle texts. Thus, there are narratives of Connachta kings such as Dathí mac Fiachrach (†445) and Guaire Aidne (†662), in addition to the legendary prehistoric legendary Connachta (i.e. descendants of the prehistoric Conn Cétchathach), also ancestors of the Uí Néill. From Munster (Mumu) legend come figures such as Conall Corc (Corc of Caisel) and Éogan Már; from Leinster (Laigin), Brandub mac Echach (†605) and Rónán mac Aedo (†623); and from Ulster (Ulaid), Fiachnae mac Baetáin (†626) and Fergus mac Léite, whose death-tale contains the earliest extant reference to the leprechaun (see LUCHORPÁN).

§3. THE INDIVIDUAL CYCLES

For ease of reference, modern scholars have grouped the kings' tales into 'a number of separate cycles' based on the characters who appear in them (Dillon, *Cycles of the Kings* v). Not surprisingly, the largest of the individual cycles is the one associated with Cormac mac Airt—progenitor of the Uí Néill, an ideal ruler of peerless fame, and the most celebrated king in early Irish literature, second perhaps only to Conchobar mac Nessa of the Ulster Cycle. Leaving aside many works of Fenian literature in which he also plays a part (as the contemporary of Find and his heroes), the Cycle of Cormac mac Airt consists of some 15 separate narratives in prose and verse (see Ó Cathasaigh, *Heroic Biography of Cormac mac Airt*). Cormac's notional prehistoric *floruit* is usually reckoned as the 2nd or 3rd century AD. The second largest cycle is that of Diarmait mac Cerbaill, the Uí Néill king of Tara (Teamhair) who was killed in AD 565. His Cycle consists of about 13 texts, most of which are written in late Middle Irish. Other kings popular in the literature include Conn Cét-Chathach (Conn of the hundred battles), Mongán mac Fiachna, and Guaire Aidne, although most other rulers treated in the Cycles appear in only a handful of narratives, usually three or less.

Since many of the stories which comprise the individual Cycles were written at different times and in different places, they do not survive together in a single manuscript, but rather as independent texts or as parts of larger collections of historical lore. One of the most important of these collections is the *Scélsenchas Laigen* (Traditional stories about the Leinstermen), which is preserved in Rawlinson B 502, an early 12th-century manuscript currently at the Bodleian Library, Oxford. This collection includes such accomplished and well known tales as *Fingal Rónáin* (The kin-slaying of Rónán) and *Esnada Tige Buchet* ('The Melodies of the House of Buchet'). Other important collections of King-Cycle material occur in the so-called *Fragmentary Annals* (Radner), *Cóir Anmann* (The appropriateness of names; Stokes, *Irische Texte* 3/2.285–444), and 'The Laud Genealogies and Tribal Histories' (Meyer, ZCP 8.291–338) contained in the 15th-century manuscript Laud 610, also kept in the Bodleian Library, Oxford. This last compilation preserves some of the oldest extant texts in the Cycles,

including *Scél Éogan ocus Cormaic* (The story of Éogan Már and Cormac mac Airt).

kingship, Celtic

§1. INTRODUCTION

The rôle of kings in ancient and medieval Celtic-speaking lands was in many respects comparable to that of societies around the world at a parallel stage of development—tribal and largely rural, a hierarchical ranking of classes, placing great store on personal honour, with a warrior aristocracy near the top of the pyramidal structure. Without a cash economy based on a fully developed impersonal currency standard, surpluses were exchanged as gifts entailing personal obligations between granter and recipient. At the apex of such small-scale societies, the successful king had to begin with a recognized illustrious lineage. He had to excel as a war leader. His share of surplus wealth had to be enhanced, often through leading successful raids against neighbouring tribes, to be generously and wisely distributed as gifts to ensure the loyalty of followers.

§2. ARCHAISM AND INNOVATION

One of the leading ideas of 20th-century Celtic studies—especially strong in the sub-fields of the study of LAW TEXTS, WISDOM LITERATURE, and the historical and comparative study of the vocabulary of institutions in PROTO-CELTIC and INDO-EUROPEAN—was of a unique and uniquely conservative social institution of kingship. An important strand in this case, as made by D. A. BINCHY and Proinsias MAC CANA, for example, was that Celtic kingly office of historical times preserved archaic traces of a social rôle in which the functions of ruler, judge, and priest had once been undifferentiated. The ideas of Georges Dumézil regarding the trifunctionality of Indo-European mythology and the society which gave rise to it—the fertility function of the food-producing class, the physical force of the warrior class, and the wisdom function of the kingly/priestly class—have proved especially influential for Celticists. Such a concept of a Celtic 'sacral kingship' has afforded into the highly mythologized accounts of idealized rulers, such as Conaire Mór and CORMAC MAC AIRT in the KINGS' CYCLES. Consonant with the approach of Kenneth H. JACKSON, the relationship of king CONCHOBAR and his restive warriors in the ULSTER CYCLE has been seen as more or less accurately portraying the social reality of the pre-Christian Celts.

More recently, historians such as Donnchadh Ó Corráin have argued for a more dynamic and pragmatic kingship, seeing, for example, in the trends towards Ireland-wide high-kingship among the Uí NÉILL, ÉOGANACHT, and DÁL GCAIS flexible responses to patterns of power in Scandinavian and Carolingian kingdoms. Note also that at the time of the campaigns of CAESAR in GAUL (60–50 BC), many of the tribes had already given up the institution of kingship and were ruled instead by magistrates called *vergobreti*. Such findings of innovation among the free Celtic governing classes, nevertheless, do not discount the fact that Celtic vocabulary, literature, and legal principles relating to kingship preserve numerous inherited and apparently primitive features, however much these could be disregarded as hollow conventions in practice. Furthermore, even 'hollow' conventions, as long as their significance is appreciated, provide a vocabulary for articulating political claims and were thus skilfully manipulated as propaganda in early Ireland, though probably not slavishly adhered to as sacred traditions.

§3. SOME LITERARY CONVENTIONS OF KINGSHIP

Numerous intriguing features of kingship recur so frequently in early IRISH LITERATURE and are so well developed that we must assume that they were widely understood, whether or not they were still believed or practised. For instance, the idea that the king must be

unblemished is widespread and is used, for example, to account for the way in which the historical 7th-century king of Ulaid, Congal Caech (Congal the one-eyed, †653) forfeited the kingship of Tara (Teamhair) after being partially blinded by bees, as described in the legal text *Bechbretha* (Bee-judgements). The same idea is found in the Mythological Cycle where Nuadu (see nōdons) forfeits the kingship of the supernatural race, the Tuath Dé, after losing his arm in battle, even though he is fitted with a perfectly functioning prosthetic arm, whence his epithet *Airget-lám* 'silver arm/hand' (see also cath maige tuired).

Physical perfection is probably integral to the general idea that the tribal king figures as a virtual linchpin of the cosmic order, assuring the beneficial harmony between the natural universe and his people. In the wisdom text Audacht Morainn (The testament of Morann), it is specifically the *fír* (justice, rightfulness, lit. truth), which ensures abundance of fish in the streams, gathered foodstuffs, and all agricultural produce. In the tale Togail Bruidne Da Derga ('The Destruction of Da Derga's Hostel'), it is stressed that during Conaire's ideal reign the weather was always perfect and even the wolves had a truce with their prey.

On the opposite side of the coin, in *Cath Maige Mucrama* ('The Battle of Mag Mucrama'), Lugaid Mac Con's reign in Tara ends after a false judgement of his is declared to be such by young Cormac mac Airt: on the spot, the wall of the house collapses at Tara, and no plants grow until Mac Con leaves the kingship. Such examples show how the wasteland theme—which was of central importance to the international Arthurian literature of the Grail—arose from traditional Celtic narrative expressions of the ideology of kingship. On the Welsh side, the *hud ar Ddyfed* (enchantment of Dyfed) episode in the Mabinogi—in which the kingdom is magically cleared of all dwellings, livestock, and crops, as well as human inhabitants—is a comparable allegory of kings tried by supernatural forces.

The king's special relationship with the forces of the Otherworld determining the fate of mortals is also reflected in the many *geissi* (sing. geis) or 'taboos' which restrict his actions. In *Togail Bruidne Da Derga*, Conaire's *geissi* are enumerated—including a taboo against permitting three red riders to enter the house of the red one before him—as part of the inauguration rite. Later, after he has issued a false judgement showing favouritism to his foster-brothers, supernatural forces conspire to create improbable situations in which Conaire is forced to break his taboos one by one, so that eventually three 'living dead' red riders overtake him as he is driven onward to his inexorable doom in 'the Hostel of the Red God' (*Bruiden Da Derga*). In this respect, the paradigm of king and that of the great hero are not fundamentally different; Cú Chulainn also breaks his *geissi*—constrained by strangely inauspicious events—in *Oidheadh Chon Culainn* (The violent death of Cú Chulainn).

The idea that the king is wedded to the woman personifying the sovereignty of his kingdom—though not confined to Celtic material—has been viewed as the central myth of Celtic tradition and is discussed in the article sovereignty myth.

That Ireland had a single *ard-rí* (high-king) associated with the site of Tara is a pervasive premise in the Kings' Cycles and legendary history. However, in the Ulster Cycle, the kings of the provinces (*cóiceda*, sing. cóiced) seem to be the top tier. As a political doctrine, an Irish national kingship is first articulated in 7th-century sources from Iona (Eilean Ì)—Adomnán's *Vita Columbae* (Life of Colum Cille) and the death notices of Domnall mac Aedo (†642) and his grandson Loingsech mac Oengusso, both called *Rex Hibernie* in the annals. But practical control by one king over all or most of Ireland first became a reality only fitfully in the Viking Age (see ériu).

In Welsh material, Brân holds the office of high-king of Britain in the *Mabinogi*, and the notion of a primeval high-kingship pervades Historia Regum Britanniae ('The History of the Kings of Britain'), published *c.* 1139, as well as Brut y Brenhinedd (Chronicle of the kings) derived from it. Arthur is saluted as *pen teyrneð yr ynys honn* (chief of chieftains of this island, i.e. Britain) in Culhwch ac Olwen. On the other hand, the idea is absent from earlier sources, such as the writings of Gildas in the 6th-century and is clear-cut only in the purely legendary pre-Roman chapters of the 9th-century Historia Brittonum (History of the Britons). On the implications of the names/titles of the 5th-century rulers known as 'Supreme King', see Gwrtheyrn, Gwerthefyr, and Rigotamus. In pre-Roman times, several tribes did coalesce around Cassivellaunos to resist Caesar and, a century later, Caratācos managed to

fight on in the west and north with authority as an inter-tribal war-leader even after the lands of his native Catuvellauni had fallen. The closest approximation we have to a pre-Roman peacetime British high-king would be Caratācos's father Cunobelinos, but the fragmentation that provided the opportunity for the Roman invasion of AD 43, a few years after his death, shows pre-Roman high-kingship to have been more of a remarkable accomplishment than a stable institution.

§4. terms and their implications

Within the rich vocabulary of chieftainship in Old Irish, two words stand out as being especially pervasive and fundamental concepts, and the fact that they have been inherited from Proto-Celtic and Indo-European words with much the same meaning as the Irish strongly implies that they simply preserve very old cultural concepts, once general throughout the Celtic world. These words are *rí* 'king' (Gaulish and British *rīx*, cf. Latin *rēx*) and *tuath* 'people, tribe, tribal land' (Gaulish *toutā*, Welsh and Breton *tud*, cf. Germanic *thiuda* whence German *Deutsch*). Most importantly, the terms define one another reciprocally: a *rí* is one who rules a *tuath*; a *tuath* is what is ruled by a *rí*. The corresponding words are found as compound names in the other Celtic languages, thus Welsh *Tudyr* and Tudur from Celtic nominative **Touto-rīχs* and *Tudri* from the old genitive **Touto-rīgos*; both forms are also attested in Gaulish. This Indo-European word for 'king' derives from the verbal root **Hreg´-*, meaning to stretch out straight', i.e. lit. 'to rule'. The medieval Irish glossators remarkably understand this connection between *rí* and their verb *rigid* 'stretches out, extends, rises'. The *tuath* being a dispersed rural population, the *rí* had to gather them together in an *oenach* (assembly; cf. Modern Irish *aonach* 'fair') in order to direct them in group action. These specially kingly functions *vis-à-vis* his *tuath* included enacting a *rechtage* (new or extra law), leading *slógad* (hosting against an enemy tribe, cf. Welsh *lluydd*), and concluding a *cairdes* or *cairde* (treaty, cf. Welsh *cerennydd*) with another tribe. The struggles or alliances between tribes, in theory, involved individuals only through their kings, the average tribesman or tribeswoman having no recognized status at all outside the tribe, hence the special importance of the border and the transformation of the warrior from refined courtier to bestial manslayer at the frontier (see heroic ethos). The identity-giving function of the *rí* and his *tuath*—taken together with the idea discussed above that he maintained not only the social order, but also the natural order—explains the commonplace in the tales in which a journey into the wilderness beyond the frontier rapidly descends into a frightful Otherworld adventure. The closed system of the Irish *tuath* has an interesting echo in the tightly closed community of Arthur's court in *Culhwch ac Olwen*; only Arthur himself can break the rules of his own court to admit his cousin, wisely explaining that his own status depended on permitting such noble heroes as Culhwch to approach him for favour.

Other Celtic words, meaning approximately 'king', are worth noting. On Welsh *brenin* and its etymology as 'consort of [the goddess] Brigantia' see Brigit (cf. also brigantes; cartimandua; sovereignty myth). Celtic **tigerno-*, attested in both British and Gaulish names (cf. Old Irish *tigernae* 'lord') became the most common word for 'ruler' in post-Roman Britain; Gildas, with savage punning rhetoric, equated this native term with Latin *tyrannus* (tyrant, usurper), a pejorative sense which still clings to Modern Welsh *teyrn*. An early word meaning 'leader' appears on a 5th- or 6th-century inscribed stone as both ogam Irish and British genitive TOVISACI: *tywysog* now means 'prince' in Welsh, the regular descriptive title used for Prince Charles, for example; while in Ireland, the corresponding *Taoiseach* is now the correct title, in both Irish and English, for the Prime Minister of the Irish Republic (Éire).

Kinsella, Thomas (1928–) is well known in Celtic studies as the translator of Irish-language texts: Seán Ó Tuama's *An Duanaire 1600–1900* and most especially *The Táin*, the highly accessible and most popular English version of the Táin Bó Cuailnge ('The Cattle Raid of Cooley'), the central saga of the Ulster Cycle of Tales. As well as a fairly extensive back-matter apparatus relating to manuscript sources, Kinsella's *Táin* also includes several of the saga's associated *remscéla* or 'fore-tales': *De Faillsigud Tána Bó Cuailnge* (How the *Táin Bó Cuailnge* was found), *Compert Conchobuir* (The conception of Conchobar), *Ces Noínden* (The debility of the Ulstermen), *Compert Con Culainn* (The conception of Cú Chulainn), Tochmarc Emire ('The Wooing of Emer'), Aided Énfhir Aífe (The violent death of Aífe's one man, i.e. son), and *De Chophur in Dá Mucado* (Of the *cophur* of the two swineherds). Kinsella is also the anthologist of the *New Oxford Book of Irish Verse*. He was born in Dublin (Baile Átha Cliath) in 1928, and studied at University College Dublin. He is also well known as an English-language Irish poet (see anglo-irish literature). He won the Guinness Poetry Award in 1958 and the Irish Arts Council Triennial Book Award in 1961. He has written influentially on the linguistic division in Irish identity and literary culture. He established and administered the Irish Tradition study programme in Dublin until his retirement in 1992. He was a director of the Dolmen Press and Cuala Press, Dublin, and in 1972 he established the Peppercanister Press. He has also taught in the United States as a member of the faculties of Southern Illinois University and Temple University, Philadelphia.

Kinship, Celtic, is known largely from medieval Irish and Welsh sources. How far conclusions based mainly on Irish and Welsh law (see law texts), though with some help from non-legal sources and from the analysis of kinship terms, can help scholars to define the nature of Celtic kinship in antiquity is difficult to say. Quite apart from theories which would see Irish and Welsh as forming an 'Insular Celtic' group within Celtic, there is the undoubted fact that the Irish and the Welsh were in sufficiently close contact in the post-Roman period to permit some influence of one form of kinship on another. A further difficulty is that there remains considerable debate over some aspects of early Irish kinship.

Both the earliest Irish and Welsh sources exhibit a kinship system which is too complex to be characterized by a single adjective such as 'agnatic' or 'bilateral'. Kinship differed according to which element of social structure was otherwise involved. If it was status, kinship was partly bilateral (taking into account both paternal and maternal ancestry); if it was the holding and transmission of land, kinship was agnatic or patrilineal; if it was alliance, notably in feud, kinship was a bilateral alliance of kindreds which were themselves patrilineal.

For status, the rank of a mother mattered as well as the rank of a father. This emerges, for example, from the example which prompted F. J. Byrne's discovery of the significance of Irish *dercu*. In the Rawlinson genealogies there is a genealogical statement of the relationship between four dynasties within the Cruithni (Cruithin) of north-eastern Ireland (Ériu). Three of these dynasties—Uí Choelbad (Choílduib), Uí Echach Cobo, and Latharnae—were descended from ancestors born as triplets. A fourth, Uí Dercu Chéin,

stemmed at a later date from seven sons born to the same father, Crond, but by a different mother. The mother who bore the triplets, Indecht, belonged to the Ulaid, the most powerful people of the north-east of Ireland; the other woman, who bore the ancestors of the Uí Dercu Chéin, Findchaem, belonged to the Ciannachta (of Glenn Geimin and of Brega). This statement was designed to show the equality of the three dynasties descended from the first marriage: not only did they have the same father and mother, but they were born at the same time. The Uí Dercu Chéin, however, were inferior to the other three: they were born to a woman of somewhat lower status, and they were born later than their half-brothers. As Byrne perceived, the descent of the Uí Dercu Chéin from a woman of the Ciannachta is implied by their name. When a man was ascribed to the Ciannachta, he was said to be *moccu Chéin*; the corresponding term for a woman was *dercu Chéin*. *Der* (*dar*), however, is the worn-down relic of the Indo-European and Proto-Celtic word for 'daughter', preserved in the Gaulish tablet from Larzac as *duxtir*, but almost entirely ousted in Old Irish by *ingen*. The name Uí Dercu Chéin is thus likely to be of considerable antiquity.

Kinship and status also interacted within early Irish marriage. An Irish nobleman enjoyed high rank because he had many cattle, which he could advance as fiefs to ordinary commoners. The latter could expect to inherit land, but they needed to become base-clients of a noble in order to gain enough cattle to sustain normal mixed farming. The inheritance of commoners was largely of land, which normally passed down from father to son. The kinship of inheritance for commoners was thus essentially agnatic. For nobles it was different, since their high rank depended on cattle. The highest form of marital union in Irish law was 'a pairing of joint-contribution', when both bride and bridegroom contributed movable wealth, most importantly cattle, to their farming resources. Since the normal Irish commoner did not have sufficient cattle to farm independently of a lord, it is unlikely that he could give enough cattle to his daughter to sustain 'a pairing of joint-contribution'; the best he could hope for was to arrange 'a pairing of man-contribution', in which the major asset coming to the married pair was the land—and that came to the husband by inheritance. For a noble, therefore, wealth came both from mother and from father, since movables were as important in his resources as land.

The inheritance of land was normally partible among all the recognized sons, irrespective of the nature of the union between father and mother. The sole importance of the latter was that the father only had the choice to acknowledge or reject a son if that son was born to a secret union. In Irish law, it is only probable that there was provision for a re-sharing of the land between grandsons and great-grandsons; in Welsh law, this is explicitly stated. Similarly, in the earliest Irish legal texts, it appears that if a line of descent died out, so that land could not pass down in the normal way from father to sons, it passed to collateral kinsmen within a group known as the *derbfhine*, 'certain kindred'. This comprised the descendants of a common great-grandfather. Its counterpart in Welsh was known as the 'joint-heirs' and it stretched out to the first cousin, *cefnderw*, and second cousin, *cyfer-derw*. Both these terms for collateral kinsmen contained a word, *derw*, which is cognate with Irish *derb* as in *derbfhine*. Once one gets to the third and fourth cousins in Welsh, the term *derw* disappears; similarly, in Irish, the *derbfhine* was followed by the *iarfine* and the *indfhine*. This correspondence prompted the theory that a form of kindred defined by *derb* and *derw* (Celtic **derwos*), and which was crucial for inheritance, could be attributed to the period before Irish and Brythonic diverged.

If this theory is accepted, there is a corollary. In both Ireland and Wales (Cymru), there is a pattern of shallower kindreds (kindreds containing fewer generations) generating over time much deeper kindreds, only for these to be replaced by others. The group to which a man was ascribed by saying that he was *moccu* X (for example, *moccu Chéin*) was regarded as a form of kindred by some early Irish sources. Yet, it seems to have fossilized by *c.* 700. Similarly, the large *cenedl*, well attested in Welsh law, was largely moribund by the time of the 14th-century surveys. The Welsh *gwely* (bed), originally a metaphorical term for a nuclear family, became, by the 15th and 16th centuries, a kindred of considerable depth. There appears, therefore, to have been a relative stability in the shallow kindred primarily relevant for inheritance, but much greater change in the deeper kindreds, usually of more political importance.

Kleinaspergle, south of the town of Asperg (district of Ludwigsburg/Baden-Württemberg), is the site of the grave of an IRON AGE Celtic prince. Like HIRSCHLANDEN, HOCHDORF, and other barrows in the area, it seems to be connected to the hill-fort of HOHENASPERG. It is 6 m high and measures 60 m in diameter. The mound was excavated in 1879, but the contents of the main burial chamber had already been plundered long before. In a smaller adjoining chamber a rich burial from the Early LA TÈNE period was found. It contained jewellery and a large ensemble of drinking vessels, the most famous being two large drinking horns covered in gold leaf, with impressed curvilinear decoration and naturalistic ram's head terminals. A plain bronze cauldron, a Celtic beaked flagon, an Italic

Red-figured Attic kylix (drinking bowl), showing the inner surface, from Kleinaspergle, Baden Württemberg, Germany, second half of 5th century BC

cordoned bronze bucket, and an Etruscan bronze *stamnos* (a tall two-handled drinking vessel) were also discovered on the site. Greek imports permit a relatively close dating for the burial as a whole, and thus help to establish the chronology for the early phase of the La Tène style. The burial is probably a generation later than the Greek objects: two Attic kylikes (drinking cups from the city-state of Athens) were found: one is a red-figure ware piece for which the artist is known from other objects as 'the Amphitrite painter' (*c.* 450 BC, dating after Beazley), the other is a black glazed kylix, the work of Sotades. Gold leaf had been applied to both kylikes by a local artisan. The burial shows the importance of direct Italian and Greek influence in the aristocratic drinking culture of the transalpine Celtic world. The absence of weapons has been taken as negative evidence that this is the burial of a high-ranking woman.

Koerich 'Goeblange-Nospelt' is an aristocratic necropolis in the district of Goeblange, Luxembourg, datable to the final pre-Roman LA TÈNE and the early GALLO-ROMAN periods. Finds there have permitted important inferences relating to both political history and continuity of culture and religion in this area of north-east GAUL.

In 1966 four burial chambers were excavated between the villages of Goeblange and Nospelt, about 20 km from the OPPIDUM of the TITELBERG (Pétange). These TOMBS contained horsemen of the Treveri, a Celtic-speaking tribal group of the BELGAE.

With the exception of one Roman amphora (ceramic WINE vessel) of Dressel 1B type, the first two tombs (C and D), dating from La Tène D2B (i.e. *c.* 50–30 BC, the two decades following CAESAR's campaigns in Gaul) contained purely Gaulish material. The two other tombs, put up at the beginning of the reign of the emperor Augustus (30 BC), show a furnishing composed of a mixture of Gaulish and Gallo-Roman forms. The wealth of tombs A and B is mainly attested by the numerous southern imports, such as Italian bronze vessels from Arrezzo (eastern Tuscany) and amphorae of Italian and Iberian provenance. The presence of spurs in all the tombs indicates that the men buried were horsemen. Their status as warriors is shown by the presence of weapons: richly decorated long SWORDS of Late La Tène Gaulish type were found, and also, in tomb A, a Roman short sword or *gladius*. The continuity of burial practice from pre-Roman to Romanized horizons implies that the mounted warriors buried at Goeblange-Nospelt belonged to the pro-Roman faction of the Treveran nobility. They had benefited from the largesse of Rome and had not been forced to disarm with the defeated followers of VERCINGETORĪX.

In 1993 this aristocratic necropolis was thoroughly examined with all its associated finds: the remains of the funeral pyres, the shards of amphorae, and the offering pits. Beside the horsemen's tombs a fifth burial was excavated at this time. This tomb contained the

cremated remains of a woman who had died during the 2nd decade BC. The grave goods included 8 fibulae (brooches), a mirror, 8 bronze containers, an Iberian amphora, a plate from Arezzo, and local Belgic pottery. But it is principally the evidence it provides for an ancestor cult which makes this tomb exceptional (see RITUAL). A *dolium* (a very large jar of globular form, with a wide mouth) of which the bottom had been cut out, had been positioned on the ceiling of the burial chamber at the time when the small cairn (ritual heap of stones) was piled up on top of the tomb. This arrangement has to be interpreted as evidence for the practice of libation, in which the surviving kindred poured wine down to the dead woman. In the soil of the embankment of the cairn 58 coins had been deposited in small pits often together with the bones of cremated birds (see SACRIFICE). These coins, partly burnt, too, date from the Augustan period up to Lucius Verus (r. AD 161–9), and thus document sacrificial deposits on the tomb of this woman for a period of more than 150 years. In the mid-2nd century AD the ceiling of the burial chamber collapsed. The hollow was closed again with a paving of sandstone flags in the centre of which two terracotta statues of the mother goddesses (MATRONAE) were deposited.

Jeannot Metzler

Kostolac-Pečine is a site where a late IRON AGE graveyard was discovered on the Pečine fallow in the vicinity of the important Roman city of Viminacium (modern Kostolac in Serbia). The site is important for Celtic studies since it shows that LA TÈNE material had come into this area from the north-west in the 3rd century BC. This intrusion has been correlated with the arrival of the peoples who coalesced as the historically attested SCORDISCI, a people regarded as Celts in the GREEK AND ROMAN ACCOUNTS, an identification supported by the Celtic proper names associated with the group. Thus, Kostolac-Pečine has been taken as evidence for Celtic expansion into the BALKANS at this period. Forty-three graves were found, of which nine contained remains identifiable as those of a pre-La Tène 'native' population (i.e. Pannonian-Illyrian cultural groups; see PANNONIA). Inventories of grave goods indicate that the remainder, comprising 17 inhumations and 17 cremation graves, belonged to the oldest influx of peoples using La Tène-style artefacts. It is this latter group which has been identified with the historical Celtic Scordisci, who arrived in the first half of the third century BC.

In the La Tène inhumation burials, the bodies were placed along the side of a rectangular grave pit. Jewellery and ornaments were placed on the bodies, while artefacts such as weapons were placed with the men. Cremation burials show that the remains of the deceased, together with some metal parts of personal dress of distinctive regional type, were placed at the bottom of a smaller oval or circular pit. Ritually destroyed weapons were routinely found in male inhumation burials. In all graves—both male and female and even those of children—vessels and selected parts of animals were placed in the grave pits.

Artefacts found in the graves of the 'native' inhabitants (as distinguished negatively by the relative lack of incoming La Tène material) consisted of items typical of those of the fading Early Iron Age in the Balkan regions of Pomoravje and Podonavje. These items included objects with eastern European and Italian associations, such as Scythian earrings made of

Terracotta kantharos with zoomorphic handle typical of Eastern La Tène areas from Csobaj, Hungary

silver wire and Certosa-type fibulae (brooches), as well as some artefacts reminiscent of early La Tène fibulae of the MÜNSINGEN and DUCHCOV types and parts of iron chain-link belt sets.

In male burials of intrusive La Tène type, typical weapons, such as SWORDS, shield bosses, and spears were found, and also Early La Tène type fibulae such as, for example, a specimen with coral ornamentation related to types common in west-central Europe and even as far afield as Britain, and clay vessels with zoomorphic handles, which are typical of East Celtic groups. A Greek oinochoe (a vessel used for ladling WINE) made from very fine clay may indicate a connection between the necropolis and Celtic tribes returning to the Podonavje region after invading Greece in 279–278 BC (see BRENNOS OF THE PRAUSI) and then contributing to the ethnogenesis of the Scordisci.

According to another theory, the necropolis may be connected with a slightly earlier stage, i.e. it may reflect the Celtic groups gathering for the march on Greece, which was to be led by the Brennos and Bolgios.

Kynniver Llith a Ban (lit. 'As many readings and excerpts . . .') was the first substantial printed book to appear in WELSH and also represents the first attempt by William SALESBURY to provide his fellow-countrymen with a Welsh translation of the BIBLE. It is a sturdy quarto of 176 pages, published in London (Welsh Llundain) in 1551 by the reformer Robert Crowley on Salesbury's behalf, and probably printed by Richard Grafton: six copies are now extant. Prefaced by an appeal to the four Welsh bishops and the bishop of Hereford (Welsh Henffordd) to authorize the work, the book contains a translation of the liturgical epistles and gospels included in the Book of Common Prayer of 1549, the use of which was made mandatory by the First Act of Uniformity. In all, 183 biblical passages are translated by Salesbury, of which seven come from the Old Testament, the rest from the New. These passages were taken from the English 'Great Bible' (1539, 1540), but Salesbury also made extensive use of Desiderius Erasmus's Greek New Testament of 1535 and Sebastian Münster's Hebrew Bible of 1534–5; nor did he forget earlier translations into Welsh. While the work is somewhat marred by Salesbury's linguistic exuberance —as a humanist he aspired to both variety and dignity of diction and orthography—it nevertheless represents a notable achievement.

L

Lá (Day; 1984–) is a weekly newspaper in IRISH which covers national and international events, with an emphasis on events relevant to the Irish language and other minority languages, as well as the politics of Northern Ireland. Book, theatre, and art reviews are featured, and there is also sports coverage. The paper contains a section for learners of the language and there is a substantial schools supplement aimed both at GCSE (General Certificate of Secondary Education) and Leaving Certificate students. Produced in Belfast (Béal Feirste), *Lá* is a sister paper of the *Andersonstown News*, *South Belfast News*, and *North Belfast News*.

La Tène [1] the archaeological site

§1. INTRODUCTION

The archaeological sites of La Tène and HALLSTATT are the two sites which probably had the greatest influence on the development of archaeology and CELTIC STUDIES. They were responsible for shaping archaeological concepts of the European IRON AGE well into the 1970s, and the second phase of the Iron Age over much of Continental Europe is still called La Tène. Before more critical approaches were developed in the late 20th century, which could be used to attempt to synthesize archaeological and linguistic evidence, Celtic was often treated as almost synonymous with La Tène with reference to the period from *c.* 475 BC to the advance of cultural Romanization. This use of the term 'Celtic' for La Tène type culture, or Hallstatt and La Tène type cultures, is still not obsolete even at the beginning of the 21st century, particularly in Continental archaeology. But, by now, it is increasingly appreciated that speakers of non-Celtic languages may have used objects of La Tène type, and that La Tène material culture may never have reached some areas which were Celtic-speaking in the Iron Age (for example, south-west Ireland [ÉRIU]).

§2. DISCOVERY OF THE SITE

La Tène is situated on the northern shores of Lake Neuchâtel, in the marshes of Epagnier, around 100 m north of the present estuary of the Thielle canal, which leads out of the lake. Originally, the site must have been situated in a branch of the river Thielle which was already silting up, and was probably defunct (Dunning, *Celts* 366).

The site itself consists of the remains of two bridges across the river Zihl/Thielle, the remains of houses and palisades, and, perhaps most importantly, numerous WATERY DEPOSITIONS, especially of weapons and other characteristic high-status metal objects, which came to be seen as classic expressions of the second phase of the Iron Age. It was discovered in 1857 by Hansli Kopp, a local antiquarian who detected wooden stakes submerged under *c.* 0.5 m of water, and he soon recovered the first weapons from between them. Unfortunately, in the years following his discovery, the site was looted for treasures.

§3. EXCAVATIONS AND FINDS

The first official excavation at La Tène took place in connection with the first water engineering scheme undertaken by the Jura region of Switzerland. Between 1880 and 1885 excavations were carried out by E. Vouga, F. Borel, and W. Wavre. From 1906 to 1916 annual excavations were undertaken, under the direction of W. Wavre and P. Vouga, during which large areas surrounding the site of the initial exploration were examined.

The first excavations undertaken by E. Vouga identified the main features of the site: two bridges, now called Pont Vouga and Pont Desor, which had crossed

Detail of iron sword scabbard with animal ornamentation, from La Tène, canton Neuchâtel, Switzerland (Musée Cantonal d'Archéologie)

the course of the Thielle around 110 m apart. Pont Vouga, the narrower bridge which was *c.* 4 m in width, was closer to Lake Neuchâtel than Pont Desor, which was *c.* 6 m wide. The bridge piers of Pont Vouga were over 70 m in length. Dendrochronological dating of the wood places the construction of Pont Vouga *c.* 250 BC. A SHIELD found close to the bridge was found to have been made from the wood of a tree felled in 229 BC (Müller, *Der Massenfund von der Tiefenau bei Bern* 84). In the former river-bed, downstream from Pont Vouga, numerous beams, planks, and other parts of the bridge were found, suggesting that it finally collapsed into the river (Vouga, *La Tène*; Schwab, *Archéologie de la 2e correction des eaux du Jura 1*). In the same area, several skeletons and numerous other finds were discovered.

Several rows of posts were also discovered on the north-eastern side of the excavation site, where the old river bank had been, and have variously been interpreted as defensive palisades, river-bank reinforcements, and harbour facilities (Dunning, *Celts* 366–7). The remains of five buildings which had once stood on the banks were excavated by E. Vouga, and the archaeological objects found were mainly concentrated within these buildings.

In total, around 2500 objects have been recovered from the site, in an area which extends for *c.* 25 m along the bank downstream from Pont Vouga and about the same length along the course of the bridge into the river; most of these objects were found during P. Vouga's excavations between 1906 and 1916. Egloff's 'short list' of finds includes: '166 SWORDS (often with scabbard), 269 spearheads, 29 shields (complete or in fragments), 382 fibulae, 158 belt-clasps, 50 knives, 25 razors, 52 pincers, 11 sickles, 22 scythes, 8 bronze CAULDRONS with iron hoops, 2 wooden yokes, 32 clamps, 58 phalerae [ornamental metal discs], 41 axes, a hundred or more special tools (burins [pointed chisel-like tools], files, shears), dozens of iron ingots' (*Celts* 369). Apart from these, domestic pottery and other household items have been found, and also remains of CHARIOTS and carts. To date, only the swords and scabbards have been examined and analysed in detail (De Navarro, *Finds from the Site of La Tène 1*).

§4. INTERPRETATION

Based on the main features of the site and the objects which it has yielded, a large number of divergent interpretations for it have been offered. Even before the first official excavation had taken place, the site had been interpreted as a lake village, on account of the heavy stakes present in the river-bed, or perhaps an arsenal, because of the large number of weapons found. E. Vouga, basing his interpretation on structure and finds, claimed that the site had either been a fortified urban site (OPPIDUM) or an observation point on the road which linked the RHÔNE and the RHINE.

Joseph DÉCHELETTE took a new approach in 1914, interpreting the site as a type of customs outpost for collecting tax, while Paul Vouga thought it to be a defended emporium, fortified by a palisade and mainly inhabited by warriors, and built to protect the strategic position between the three lakes of Neuchâtel, Bienne and Morat. In the 1950s Raddatz and Wyss interpreted the place as a cult site (see RITUAL). Their theory was supported by Rolle, who examined traces of blows found on human skulls at La Tène, and suggested that human SACRIFICE had been carried out at the site. De Navarro, in his analysis of the swords, then proposed that La Tène was a cult site which contained a sacred enclosure surrounded by a palisade, with the sacrifices carried out on the bridges.

Following the discovery of another collapsed bridge a few kilometers downstream, at Cornaux, Schwab

advanced the theory that La Téne had been a settlement with port facilities and bridges, which were all destroyed following a dramatic rise in the waters of Lake Neuchâtel. However, analysis of the sediments in the La Tène area by Berger and Joos do not indicate flooding or strong currents in the area of the bridges (Dunning, *Celts* 366–8). Most recently, Müller has returned to the idea that the site was a sanctuary, drawing parallels with clearly identifiable sanctuaries such as Mirebeau, Faye-L'Abesse and Gournay (Müller, *Der Massenfund von der Tiefenau bei Bern* 76–112).

La Tène [2] the La Tène period

§1. EARLY HISTORY OF THE IDEA

The archaeological site of La Tène at the north-eastern point of Lake Neuchâtel has been known at least since 1857. In the following years, Ferdinand Keller, who had first cut his archaeological teeth in England, interpreted the site and notably a series of fine iron swords with decorated scabbards, as the remains of a Celtic village of pile dwellings which belonged to the Helvetii, well known from the campaigns of Julius Caesar in 58 BC and as recorded by him in his *De Bello Gallico*. The refinement of a museum typology into three periods—Stone, Bronze, and Iron—in 1836 by Christian Jurgensen Thomsen, the first curator of the Danish National Museum of Denmark, was followed by the Swede Hans Hildebrand, who had already coined the term 'La Tène culture' as early as 1870. In 1872, on the basis of differences in particular in the form of brooches of basic 'safety-pin' type found at both the Austrian salt-mining site of Hallstatt and at La Tène, he argued that these denoted successive periods marking the end of the Bronze Age and the beginning of the Iron Age. The mining surveyor Johann Georg Ramsauer, who began the first scientific investigations at Hallstatt, indeed regarded the graves which he uncovered between 1846 and 1863 as those of Celts. Hildebrand expanded his views when, as General Secretary to the Congrès Internationale d'Anthropologie et d'Archéologie Préhistorique held in Stockholm in 1874, he proposed a two-part division of what was now seen firmly as a Celtic Iron Age, borrowing the name 'Hallstatt' for the earlier phase and using 'La Tène' for the later.

Then, as now, the concept of an ancient Celtic culture had its unbelievers, notably Ludwig Lindenschmit, first director of what was to become the Römisch-Germanisches Zentralmuseum in Mainz. In 1852 Lindenschmit published his excavation of a rich grave at Weiskirchen, Kr. Merzig-Wadern. Wrongly ascribing an imported Etruscan bronze wine jug as Roman, he went further astray in failing to recognize the richly decorated indigenous metalwork as Iron Age, setting a pattern, in a period of growing German nationalism, of largely regarding such native material as Roman, even when imported objects were identified—correctly—as being of Italian origin. While Lindenschmit continued to deny a native origin for much of the finer products of what today is still conventionally regarded as early Celtic art, between 1858 and 1881 he attempted a chronological and typological ordering of material within Germany. At much the same time, the Frenchman Gabriel de Mortillet, an engineer banished to Italy for his political beliefs, was also attracted to the finds which were coming to light in and around the Swiss lakes. At the 1871 Congrès Internationale d'Anthropologie et d'Archéologie Préhistorique held in Bologna, de Mortillet drew attention to what he considered to be archaeological evidence for the historically documented incursions of Celts into northern Italy in the late 5th century BC. Supported by the Swiss Émil Desor, who had been working in and around Lake Neuchâtel, de Mortillet compared material found in graves in the area of Marzobotto, near Bologna (Bononia), with that which was emerging from Iron Age cemeteries in the Marne region of north-eastern France. Thus, a firm link was considered to have been established between the archaeologically determined La Tène 'culture' and two areas in which Celts were said to have been active according to the Greek and Roman accounts.

In this period the fine metalwork recovered from

rich burials in the Rhineland was, for the first time, being recognized as indigenous Celtic rather than much later Germanic products or Mediterranean imports. In 1870 Ernst aus'm Werth identified as 'Gaulish copies' of Etruscan motifs some of the material discovered in a CHARIOT burial at WALDALGESHEIM near Mainz, and in 1889 the classical scholar Adolf Fürtwängler gave the first thorough analysis of early Celtic art in his re-examination of finds from another rich burial, one of two discovered a generation earlier at Nonnweiler-SCHWARZENBACH, Kr. St Wendel. Fürtwängler, while demonstrating the manner in which this material borrowed and transformed contemporary Greek motifs, again did not regard these as native products, but rather as having been produced for native use in the Greek colony of MASSALIA (ancient Marseilles).

In 1881, and again in 1885, Hildebrand's scheme of Iron Age cultures was further elaborated by Otto Tischler. The Hallstatt period was subdivided into two: an earlier period of graves with iron swords (now known as Hallstatt C) and a later phase where the heavy iron swords were replaced by shorter dirks or daggers (Hallstatt D). The La Tène period had three phases: Early, Middle and Late, or I, II, and III, established largely on the basis of Tischler's observation of the evolution of the SWORD and—once more—brooch typology. The latter was due not only to the large numbers which were being recovered from the Iron Age cemeteries of France, western Switzerland, and northern Italy, but from such occasional spectacular finds as that made in 1882—a ritual deposit of more than 1500 bronzes placed in a spring near the Bohemian town of DUCHCOV, okr. Teplice. Tischler's early phase was marked by brooches with a simple recurved foot and comparatively short swords with open chapes to the scabbards. In the middle phase, the foot of the brooch was linked to the bow with a collar, while the swords were longer and with chapes which closely followed the contour of the scabbard. In the late phase, the brooches were cast in one piece, with the foot fused to the bow, and swords were longer, heavier, and with rounded rather than tapering tips. Tischler, who, incidentally, was the first to observe similarities between the motifs found on several of the iron Swiss sword scabbards and contemporary COINAGE, not only also regarded all this material as representing the material culture of the ancient Celts, but regarded the two main periods—those of Hallstatt and La Tène—as marking an unbroken cultural continuum, both assertions which remain debated to the present day.

There were developments further to the east. In Slovenia, the then Provincial Museum of Ljubljana had excavated prehistoric pile dwellings in Carniola during the 1870s, fired by the discoveries in the Swiss lakes. The museum's director, the zoologist Dragotin Dezman, began carrying out major excavations as a result of which he defined a La Tène period in Slovenia only a few years after the publication of Tischler's scheme for the Iron Age of Europe. Between 1905 and 1914 the Slovene-born Duchess Paul Friedrich of Mecklenburg excavated key cemetery sites for the understanding of eastern aspects of the early Iron Age, not only in her native Carniola but also at Hallstatt. In the west, Louis Napoleon, nephew of Napoleon Bonaparte who became Emperor Napoleon III in 1852, encouraged excavations and amassed collections which were to form the nucleus of the Musée des Antiquités Nationales in St-Germain-en-Laye. Napoleon III was particularly keen to identify those native sites associated with Caesar's conquests of GAUL. In the course of this work the layers associated with Roman material of Caesar's date (50s BC) and later could be related to earlier levels with Gaulish material only, thereby establishing one of the first fixed points in absolute La Tène chronology. With the extension of road and rail networks in the later 19th century, archaeological investigations into the Iron Age of north-eastern France also expanded, and have continued unabated into the 21st century.

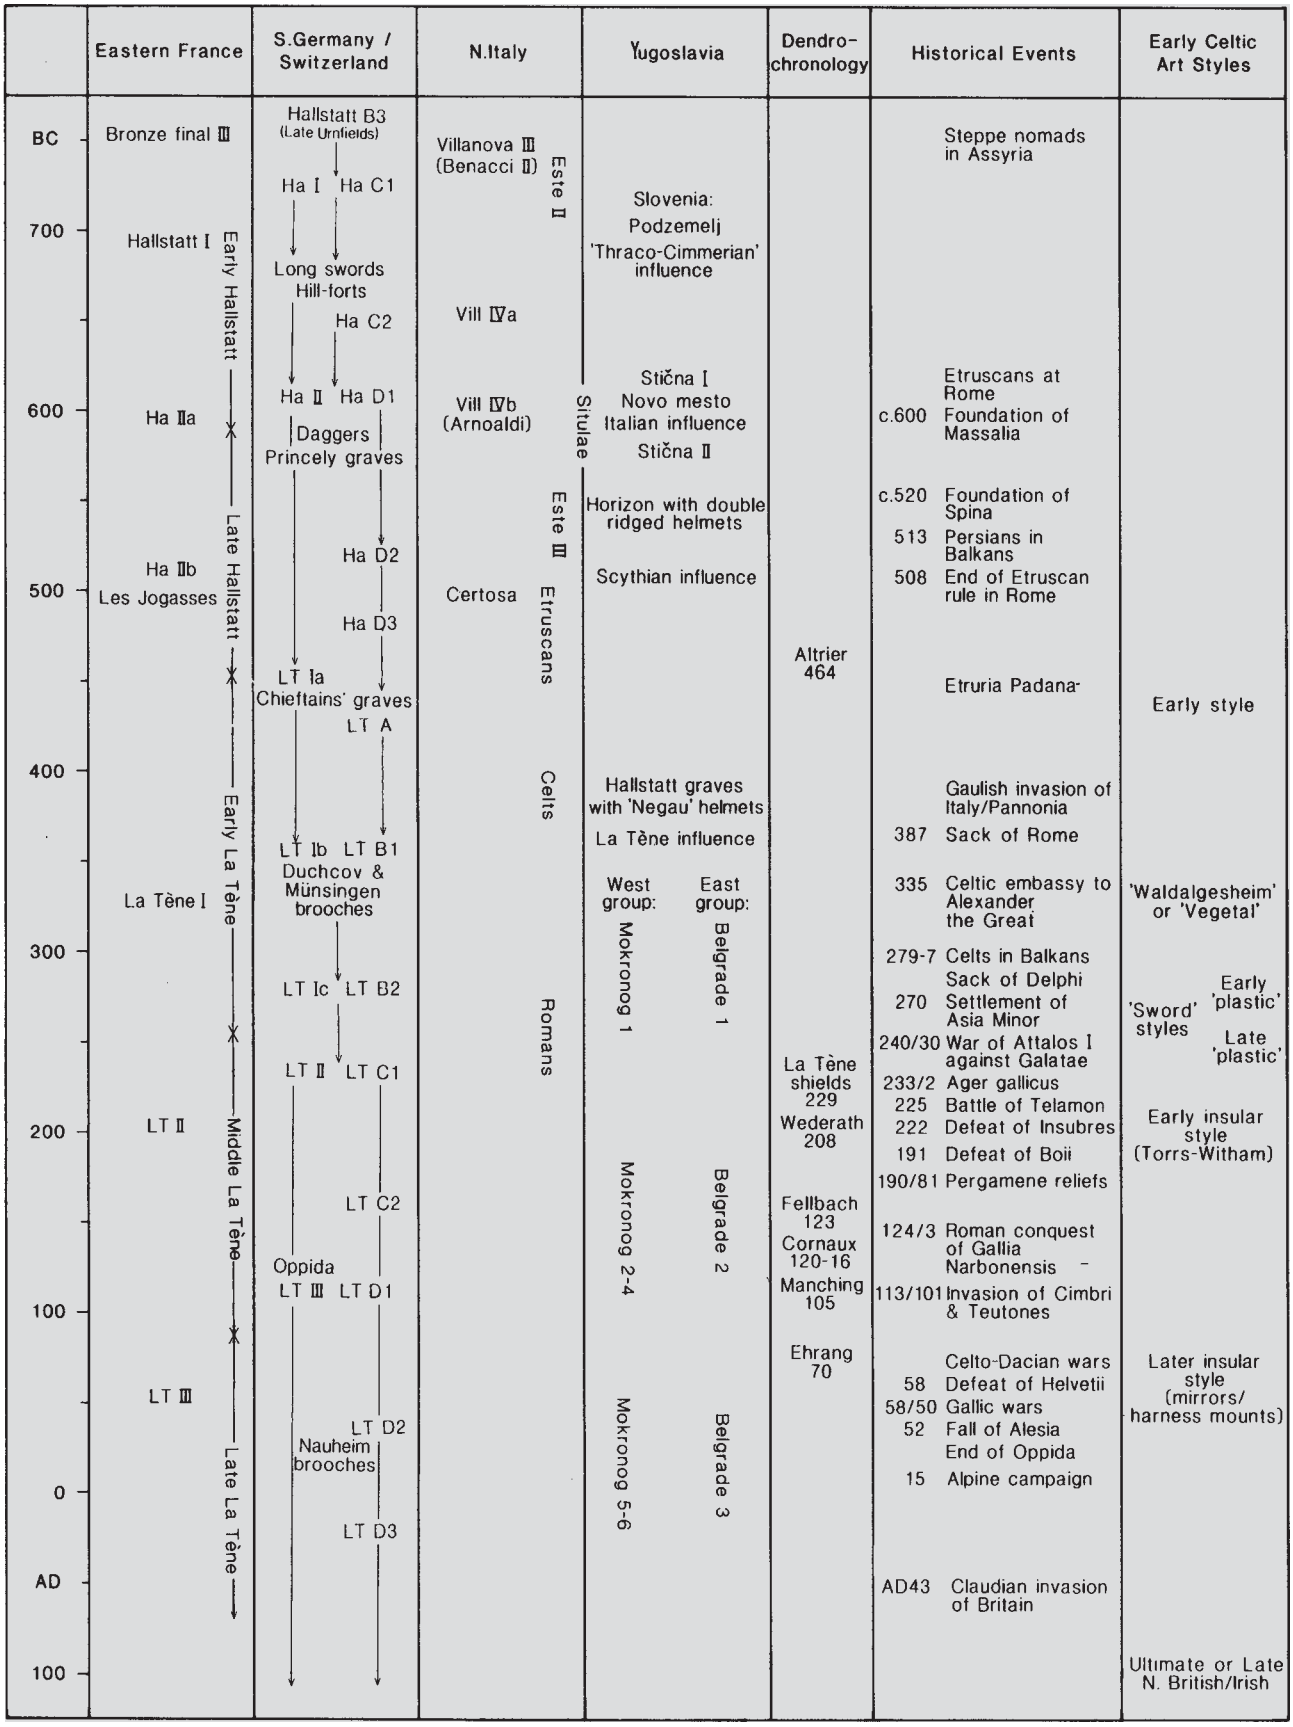
At the end of the 19th and the beginning of the 20th centuries, Martin Hoernes, based in Vienna and working in the eastern part of what was then still the Austro-Hungarian Empire, and Joseph DÉCHELETTE, a native of Roanne who was killed in the First World War, were refining Tischler's scheme based on detailed knowledge of their respective regions, while in publications issued between 1896 and 1912, another Swede, Oscar Montelius, was offering absolute dates for Tischler's three main La Tène phases, dates which were again based on a close analysis of Italian material. Déchelette, whose posthumous *Manuel d'archéologie préhistorique celtique et gallo-romaine* represents the first attempt to produce a study of Europe from the earliest times to the coming of the Romans, was at

pains to point out the apparent similarities in the material culture of the Late La Tène fortified settlements (or 'oppida', to borrow Caesar's term). Here, Déchelette was following the interests of Napoléon III, whose study of Caesar's conquest of Gaul led him to inaugurate the large-scale excavation of Mont Beuvray, ancient BIBRACTE, centre of the AEDUI. Déchelette also recognized the major contribution to the understanding of the later Iron Age in Europe made by Jozef Píc of the National Museum in Prague who, as part of a major project to publish all the Celtic finds in Bohemia, issued in 1903 an examination of material from the OPPIDUM of HRADIŠTE, near Stradonice—identified as ancient Mārobudum. This account was translated into French by Déchelette some three years later. To La Tène I, II, and III, Déchelette added La Tène IV as a descriptor for the Iron Age cultures of the British Isles. The main refinements to the earlier attempts at a periodization of the European Iron Age which followed were first of all based on a study of the cemetery archaeology of Bavaria by Paul Reinecke. In a series of publications 1902–25, Reinecke, following Tischler, developed an Iron Age scheme with Hallstatt A and B covering the Late Bronze Age or 'Urnfield' period, Hallstatt C–D for the early Iron Age, and then three phases for the La Tène period—thus, Hallstatt C–D followed by La Tène B–D. Recognizing, however, the existence in north-east Bavaria of an early group of La Tène barrow burials, Reinecke added a new La Tène A phase to his scheme, a phase which clearly pre-dated that of the Celtic invasions of Italy. In western Switzerland the Deputy Director of the Swiss National Museum, David VIOLLIER, published in 1916 detailed chronological divisions for the La Tène cemeteries of the Swiss plateau from La Tène I–III where La Tène I was further subdivided into La Tène Ia–c. This has remained largely unchanged, if refined by, for example, F. R. Hodson's 1968 computer-based seriation analysis of the MÜNSINGEN-Rain cemetery outside Bern.

§2. RE-EVALUATION AND OVERVIEW OF THE LA TÈNE PERIOD AND CULTURE

All Iron Age chronological systems have been developed from local typological systems based, to a large degree, on the analysis of grave goods. These systems were never intended to have a pan-European application. Nevertheless, some major common features are shared by the various regional systems. The late Hallstatt regional groupings of barrow cemeteries with four-wheeled wagons clearly dedicated to the élite are replaced in La Tène A/Ia by groups of similar rich barrow cemeteries with two-wheeled chariots (see VEHICLE BURIALS). These were concentrated in north-eastern France, the middle RHINE and western Bohemia. La Tène Bi/Ib saw a marked reduction of the élite burials, which are replaced by flat grave cemeteries. Chronologically, this period is contemporary with a major expansion east and south into northern Italy—the time of the Gaulish invasions. This period saw the development of the Vegetal or Waldalgesheim Style with its obvious influence from Graeco-Etruscan motifs; La Tène Bii/Ic is also related to a continuation of movements east as far as the BALKANS and ultimately across to the Anatolian plain. Middle La Tène C/II is seen as a period of consolidation into several distinct regional groups still buried in flat cemeteries with a marked number of graves with weapons suggestive of a warrior class, a view which is supported by classical accounts of the employment of Celtic mercenaries throughout the Mediterranean. This period also saw the introduction of the first indigenous coinage, initially copied from contemporary Hellenistic staters. The final main phase, La Tène D/III, has always been considered as marked by an increase in tribal centralization based on a number of oppida, several of considerable size and larger than many medieval towns. A feature of Late La Tène was a greater degree of uniformity across Europe from eastern Slovakia to northern France, a uniformity which was, in fact, more perceived than real. The Late La Tène phase ends with the gradual spread of the Roman Empire across central and western Europe completed by the middle of the 1st century AD with the conquest of lowland BRITAIN.

In the past half-century there have been many refinements to the basic chronological schemes just described. In addition to the absolute chronology offered by the occurrence in late Hallstatt or early La Tène contexts and again in Late La Tène, following contact with the gradually all-pervasive power of Rome, of datable imports from the Mediterranean world, radiocarbon and—of even greater value—dendrochronological estimations (by means of tree rings) are continuing to refine the time frame. Regional



Chronological table of the Hallstatt (Ha) and La Tène (LT) periods, after Ruth Megaw & Vincent Megaw, Celtic Art

refinements have been made in several areas—a distinctive eastern Hallstatt zone has been identified, while in the west the rich graves of Hallstatt C and D have been regarded as marking the first stages of a 'Celtic' culture. Celtic in this sense is relatively remote from the linguistic definition; in other words, this usage should not be taken to mean that a language which had not previously existed came into being around 750 BC. On the other hand, this archaeological sense of 'Celtic' may come close to the early central European groups which the Greeks first identified as Κελτοί *Keltoi*. Whether the succeeding La Tène period of around 500 BC marks a totally new, if overlapping, development or simply an evolution from that which went before remains a matter for debate.

One aspect which certainly seems to mark the beginning of a new culture, at least in material terms, is the art of the rich or 'chieftainly' graves of La Tène A, found mainly in north-eastern France and the Middle Rhine and across to Bohemia. This is what the classical archaeologist Paul Jacobsthal described in detail in 1944 as 'Early Celtic Art', an art style which he regarded as developing in part from preceding indigenous Hallstatt, but also showing borrowings from, and variations of, classical motifs.

Much of the work on the chronology of the European Iron Age has been concerned with the defining of regional chronologies and the refinement of their dating, which still reflect the basic periodization first established by Otto Tischler and Paul REINECKE; brooch typology is still central. For example, one may now subdivide the final La Tène D1 and D2 phases associated with the main period of the south German oppida such as MANCHING, near Ingolstadt. While their beginnings go back at least to the early 3rd century BC and they cannot have survived the campaigns of Tiberius and Drusus in AD 15, the oppida already seem to begin to decline in the middle of the 1st century.

§3. THE IRON AGE IN BRITAIN AND IRELAND

The chronology of the Iron Age in the British Isles and Ireland (ÉRIU) still presents many difficulties. Sir John Evans, who had excavated at Hallstatt in 1846 and, in 1886 with his son Arthur Evans, a cremation cemetery at Aylesford in Kent, regarded the latter as evidence of an intrusive 'late Keltic' culture of *c.* 150 BC with its origins in northern France and the territory of the BELGAE. In 1895 the then Sir Arthur Evans gave the Edinburgh Rhind lectures—never published—on 'The Origins of Celtic Art'. Evans foreshadowed Jacobsthal in drawing attention not only to Etruscan and classical Greek features but what he saw as Scythian and also the metalwork of the northern Adriatic—or what would now be termed the 'Eastern Hallstatt zone'. Apparent evidence, this time for links with La Tène sites in the Marne, was that found in the chariot graves of the fortuitously French-sounding ARRAS district in east Yorkshire, first examined between 1815 and 1817, once more interpreted in terms of settlement by invaders.

Further work on settlement sites and hill-top FORTIFICATIONS in southern Britain provided the foundation for a tripartite scheme developed by C. F. C. Hawkes between 1931 and 1959, largely followed by V. G. Childe in 1940 for other regions. This ABC of the insular Iron Age was regarded as corresponding, respectively, to the Continental Late Hallstatt, Early and Late La Tène—equating with the putative Belgic invasion. In several papers in the 1960s F. R. Hodson drew attention to the weakness of many of these supposed links, in particular the considerably restricted amount of material of proven Continental origin found in insular contexts and a system largely dependent on local pottery sequences. Hodson, in fact, advocated a return to the 'culture' approach of Childe. While movements across the English Channel cannot be entirely discounted, notably with regard to the origins of so-called 'insular' La Tène art, the continuing antipathy towards what has been termed 'the invasion hypothesis' has virtually led to the abandonment of the terms 'Hallstatt' and 'La Tène' as chronological descriptors for the Iron Age of the British Isles and Ireland. This is particularly the case for Ireland, where one of the most troublesome aspects of what has been termed 'the enigma of the Irish Iron Age' is the absence of Continental material, let alone anything which can definitely indicate a movement from the Continent.

§4. LIMITATIONS AND 'CELTOSCEPTICISM'

There is no doubt that the basic Hallstatt–La Tène chronology has been applied much too widely on the Continent, as in the British Isles. There seems to be little typological—or cultural—support for its use, for example, in the eastern Balkans or around the Black Sea. Some would go further; there has been much

debate concerning the equation which is often made between archaeological phases—however defined—and 'cultures', a correlation between material manifestations and regional ethnicities or identities. In particular, a group of English archaeologists has questioned the existence not only of a pan-European Celtic society, but also the view that La Tène (let alone late Hallstatt) periods equal ancient Celtic society. The same scholars deny the very existence of insular Celts at any time in insular prehistory. And, from there, it is a small logical step to an argument for the abandonment of the very terms 'Hallstatt' and 'La Tène'.

J. V. S. Megaw, M. Ruth Megaw

La Villemarqué, Théodore Hersart de, was born at Quimperlé, Brittany (Kemperle, BREIZH), on 6 July 1815. He was the son of a Breton nobleman, and became a Breton scholar, a pioneer folklorist, and a link between Welsh and Breton scholarship.

§1. ACHIEVEMENTS

La Villemarqué had a conventional French education, but probably knew the BRETON language from neighbours and servants. He himself claimed in 1837 that he had been a monolingual Breton speaker until the age of eight, but, given the family's social status and the fact that his father spoke no Breton, this claim is doubtful.

At first showing little interest in Breton, he went to Paris in 1834 to study at the Faculty of Law, but turned to medieval and Breton studies, having read *The Myvyrian Archaiology of Wales* (see Edward WILLIAMS, 'Iolo Morganwg'), books on medieval bards and Breton folklore. These topics were being raised in Paris, and aroused great interest among Romantic scholars such as Le Gonidec. Through Le Gonidec, who was a friend of Thomas PRICE, 'Carnhuanawc', and the Breton scholar A. F. Rio, who had married a Welshwoman, he made contact with Welsh scholars. With the encouragement of the French government, La Villemarqué led a delegation to Wales (CYMRU) in October 1838, at the invitation of Lady Augusta HALL and the Abergavenny Cymreigyddion (see EISTEDDFODAU'R FENNI). On 11 October 1838 he was received at Abergavenny as a bard in the Gorsedd of Bards, under the bardic name of 'Barz Nizon' (after Le Plessix-Nizon, the country seat of the Villemarqué family near Pont-Aven). He became convinced of the veracity of the druidic visions of Iolo Morganwg and of the genuine antiquity of bardic traditions (see DRUIDS; GORSEDD BEIRDD YNYS PRYDAIN).

On his return to Paris he prepared his celebrated collection of Breton songs, published as BARZAZ-BREIZ (The poetry of Brittany) in Paris in 1839. The book had immense literary success, and was reviewed widely and translated into the major European languages. A second edition was called for, and in this La Villemarqué added several historical poems which he claimed went back to the 4th and 5th centuries. In 1850, he published *Poèmes des bardes bretons du VIe siècle*, poems which seem to be inspired by the earliest WELSH POETRY. Although he devoted his energies to organizing the brotherhood of Breton bards, the Breuriez Breiz (from 1857 onwards), and to such events as the International Celtic Congress at Saint-Brieuc (Sant-Brieg) in 1867 (see PAN-CELTICISM), his main preoccupation was producing new editions of the *Barzaz-Breiz*. He died at home, near Quimperlé, on 8 December 1895.

His writings attracted many to the neglected field of Breton studies, and were one of the chief inspirations for the flowering of Breton culture from the 19th century to the outbreak of the First World War.

§2. CRITICISM

During the 1860s and 1870s the authenticity of *Barzaz-Breiz* began to be criticized by various scholars of Breton, most notably by F. M. LUZEL in his *Gwerzioù Breiz-Izel: Chants populaires de la Basse-Bretagne* and by Joseph LOTH, partly on the particular grounds that the wording of the songs recorded by La Villemarqué had been doctored, and partly because many of the poems were nowhere near as ancient as he had claimed.

La Villemarqué kept silent on this question. In 1959 Francis Gourvil published his monumental criticism of the *Barzaz-Breiz*, doubting the authenticity of much of its content. The remarkable discovery of some of La Villemarqué's field notes in 1964, however, stimulated further revision. Donatien Laurent's study of the works found many of the songs collected to be genuine representatives of oral tradition, albeit 'Bretonicized' to replace French-derived words with native Breton words. It is also clear that some of his works were his own literary creations, particularly the material added for later editions.

SELECTION OF MAIN WORKS

Barzaz-Breiz (1839, 1845, 1867); *Poèmes des bardes bretons du VIe siècle* (1850).

Prys Morgan

Laare-studeyrys Manninagh (**Centre for Manx Studies**) is an academic unit of the University of Liverpool founded in 1992 under the directorship of Dr Peter Davey (Reader in Archaeology). Based in Douglas on the Isle of Man (Ellan Vannin), it is managed by a committee made up of representatives from three partner organizations: the Isle of Man Department of Education, Manx National Heritage and the University of Liverpool.

The Centre's first major focus was a multi-volume project entitled *A New History of the Isle of Man*, published by Liverpool University Press, with the first volume on the modern period (1830–1999) appearing in 2000, edited by John Belchem.

Primarily a research and postgraduate teaching unit, the Centre offers a Postgraduate Diploma and an MA in Manx studies, as well as the supervision of postgraduate research students. The Centre also acts as a central information point for all researchers in Manx studies, maintaining a research register and giving advice to undergraduates, postgraduates and university staff from all around the world. Aids which have been developed to facilitate research and teaching include bibliographies for many subject areas within Manx studies.

The Centre has a strong research profile in Manx archaeological, cultural, environmental and historical studies, and aims to further the international recognition of the Isle of Man in these areas. Interdisciplinary and multidisciplinary approaches to research are key to the Centre's philosophy.

Research projects have included:

Archaeology

an archaeological and landscape survey of the Meayll peninsula, centred on Cregneash, 1994–7;

preparation of the publication of the report on Peel Castle Excavations 1982–7;

an interdisciplinary study of the Peel embayment 1994–2004;

work in Ballaugh Glen at The Port and upper Glen Dhoo, 1996–7;

excavations at Rushen Abbey, Ballasalla, 1998 onwards.

Culture: language

recording the Man sociolinguistic survey of spoken English in the Isle of Man, 1996 onwards;

management of the Manx Place-name Survey; six of seven volumes were published by 2004.

Culture: music (see MANX MUSIC)

work on the West Gallery tradition of church music;

Manx hymn-writers;

'traditional' music;

popular music of the tourist industry, 1870–1970;

music and cultural revivalists such as Mona Douglas.

Environment

The Quaternary of the South of the Island 1996–7;

soils maps;

post-glacial geomorphic evolution of the Manx upland.

History

Castle Rushen Papers;

A New History of the Isle of Man five-volume project;

the Baume papers.

Dissemination of research is made possible through regular seminar days and conferences, and through the publication of research reports, monographs and

books, in association with other publishers.

To coincide with the Centre's 10th anniversary in 2002, an e-Journal, *Studeyrys Manninagh* (Manx studies) was launched. Available freely on the web, it consists of a variety of material: articles, record series, theses and dissertations, bibliographies, catalogues, papers and abstracts published elsewhere; see www.manxstudies.ac.im.

Breesha Maddrell

Labraid Loingsech mac Ailello Áine was the legendary ancestor of the LAIGIN (Leinstermen). Although his historicity is questionable, according to the medieval systematizing of the pre-Christian period he became king of Ireland (ÉRIU) in the 3rd or 4th century BC, which makes him the earliest ruler treated in the KINGS' CYCLES (Dillon, *Cycles of the Kings* 2). In his youth, he was known as *Moen* (mute) because he never spoke. One day, however, while playing HURLING, young Moen received an injury which caused him to cry out. From then on, he was called *Labraid* (speaker). As a young man, Labraid was expelled from Brega (now Co. Meath / Contae na Mí) by Cobthach Coel, his great uncle, but he later returned as Labraid Loingsech (Labraid the exile, or the seafarer) and killed Cobthach at Dind Ríg (Stronghold of kings; near modern Leighlinbridge).

Labraid Loingsech is the subject of a poem in early Old Irish which probably dates from the 7th century, *Mōen ōen* ('Moen alone' or 'Moen uniquely'). Also using the name Labraid, the poem tells of his leading the lightning bolt of Laigin's war-band (FÍAN) and of his overseas exile (*loinges*), likens him to a gryphon, and is throughout a fine example of the HEROIC ETHOS, ending on the overtly pagan note, 'Moen son of the sole king Áine is one god among the gods'. *Orgain Denna Ríg* ('The Destruction of Dind Ríg') is the subject of an early Irish tale and an archaic poem. A different tradition found in LEABHAR BUIDHE LEACAIN ('The Yellow Book of Lecan'), in *Foras Feasa ar Éirinn* (Compendium of wisdom about Ireland) by Geoffrey Keating (Seathrún CÉITINN), and in Modern Irish folklore depicts Labraid as an Irish Midas: a king with horses' ears who killed his barbers to keep his blemish secret (Ó Cuív, *Éigse* 11.167–79).

Laigin (**Leinster**), Early Modern Irish Laighin, is Ireland's traditional south-eastern province.

§1. DEFINITION AND EXTENT

In early historic Ireland (ÉRIU), Laigin designated a group, with sub-tribes, as well as a kingdom, also known as CÓICED *Laigen* 'the province of Leinster'. In current usage, the province of Leinster (Cúige Laighean) is understood to mean the counties of Dublin (BAILE ÁTHA CLIATH), Wicklow (Cill Mhantáin), Wexford (LOCH GARMAN), Kilkenny (Cill Cheannaigh), Carlow (Ceatharlach), Laois, Offaly (Uíbh Fháile), Meath (An Mhí), Westmeath (An Iarmhí), Longford (Longphort), and Louth (Lú). Of these, the first seven lay within the ancient province, while Meath and Westmeath broadly correspond to an area often reckoned to be a central fifth province (*Coíced Midi*) in early IRISH LITERATURE. Louth had been south-east Ulster (ULAID, *Coíced Ulad*) and, in fact, figures as CÚ CHULAINN's home country, with much of the action of the ULSTER CYCLE taking place there. The geographical boundaries of early historical Leinster were defined by the river Liffey and the bogs of Offaly in the north, and the uplands of Ossory (Osraige) in the west. It was apparently a more coherent tribal territory than other provinces; the records note few non-Laigin subject tribes (*forthuatha*) in the south-east, major exceptions being the Fothairt, Benntraige, and Loígis.

§2. PREHISTORY AND PROTOHISTORY

Making use of Irish LEGENDARY HISTORY, some modern scholars have believed that the Laigin arrived

in Ireland (along with the closely related Fir Domnann) as an already coherent group in a pre-Goidelic invasion from Britain or Gaul (e.g. O'Rahilly, *Early Irish History and Mythology*; Warner, *Emania* 9.44–52), rather than emerging on Irish soil. MacKillop derives the name *Laigin* from that of the god Lug (*Dictionary of Celtic Mythology* 258), but this is linguistically unlikely. An early loan from Latin *legiones* (legions) is not impossible. In any event, *Laigin* is a plural noun; therefore, its use as a people name predates that as a province name. Early texts use the group names *Laigin* and *Gáileóin* interchangeably.

Archaeological evidence suggests that the Leinster area had significant ties with Roman Britain, for example, the Roman or highly Romanized Stonyford burial, Co. Kilkenny, and material from the fort of Rathgall, Co. Wicklow. On the linguistic side, archaic poems concerned with Leinster's dynasty (*Mōen ōen, Núadu Necht, Énde Labraid*) have a high proportion of rare or otherwise unattested secular Latin loanwords: for example, *legión* < *legiōn-em*, *Ailpeóin* < *Albiōn-*, and *Mercúir* < *Mercurii*. The tradition of pre-Patrician saints in the south-east is another indication of possible Roman influence. That the name *Laigin* survives attached to some significant places in north Wales (Cymru)—such as the *Llŷn* Peninsula and *Porth Dinllaen*—is evidence for the prominence of the *Laigin* in that part of Britain in Roman and/or early post-Roman times.

In the genealogies (including the poetry noted above) and the kings' cycles, the origins of the Laigin are traced back to a legendary ancestor named Labraid Loingsech, whose heroic biography is contained in the tale *Orgain Denna Ríg* ('The Destruction of Dind Ríg'; see Ó Cathasaigh, *Éigse* 33.1–18).

The church of St Brigit at Kildare (Cill Dara) was of importance to the kings of Leinster. For the case for Brigit as a Christianized tribal goddess, see Brigit; Brigantes; (cf. Byrne, *Irish Kings and High-Kings* 155–6).

§3. the early middle ages

Once we enter the more solid historical record of the annals from the 6th century, we find Leinster's kingship contested between the rival Uí Dúnlainge and Uí Cheinnselaig lineages, a situation fundamentally different and more consolidated than that in the archaic dynastic poems, in which kings of the Uí Bairrche and Uí Dego had not yet been excluded from the succession. From ad 738 to 1042 Leinster's kingship was monopolized by the Uí Dúnlainge of the Liffey plain, with their power base at Naas (Nás na Rí), though looking back to an earlier royal site at Knockaulin (Dún Ailinne). The Uí Dúnlainge were themselves sub-divided into three groups: the Uí Fáeláin, Uí Dúnchada, and Uí Muiredaig, among whom the kingship rotated regularly in a tripartite arrangement. The Uí Cheinnselaig were situated further south in what is now Wexford, with their capital at Ferns (Ferna Mór). They eventually gained the upper hand over their Uí Dúnlainge rivals in the 11th century.

The earliest annalistic references to the Laigin show them at war with the Uí Néill, who eventually wrest the territory north of the river Liffey from them. This southward retreat appears to have been halted following the battle of Dún Bolg in ad 598, in which the Laigin

The contemporary province of Leinster (Cúige Laigbean) and the 11 counties understood to comprise it

Laigin (early Leinster), groups and places mentioned in the article: groups outside Laigin are shown in grey type, and the names of peoples first emerging in Viking or Anglo-Norman times are printed in brackets

under Brandub mac Echach of the Uí Cheinnselaig heavily defeated the Uí Néill overking Aed mac Ainmerech. Nonetheless, strife between these two kingdoms continued over the following centuries, much of it caused, ostensibly, by the Cattle Tribute of Leinster (*Bórama Laigen*), a payment demanded annually by the Uí Néill and often contested in battle. The *Bórama*'s origins are traced back into the prehistoric period, as a blood-fine (*éraicc*) owed Tuathal Techtmar, a legendary ancestor of the Uí Néill, for the dishonourable death of two daughters married to Eochu, king of Leinster. The Bórama symbolized the overlordship of the Uí Néill in Leinster, thus encroaching on the potential sphere of influence of their arch-enemies, the Éoganacht kings of Munster (Mumu).

§4. the viking age

The Uí Dúnlainge had to deal with the Norse kingdom of Dublin as well as the Uí Néill. From its foundation in 841, this Viking town grew rapidly in influence. As the political situation of the Viking Age stabilized, the Laigin were as often to be found allied with the Scandinavians as arrayed against them. Indeed, one of the last Uí Dúnlainge kings of Leinster, Maelmórda mac Murchada, fell fighting alongside Sigurd, jarl of Orkney, against the army of Brian Bóruma at the

battle of Clontarf in 1014.

The two most notable kings produced by the Laigin were both of Uí Cheinnselaig lineage. The first of these, Diarmait mac Mael na mBó, became king of Leinster around 1046 and extended his power by seizing the kingship of Dublin in 1052. Following a prolonged campaign, he eventually defeated Donnchad Ua Briain, king of Munster, in 1063 and set up Toirdealbach Ua Briain as a friendly and subordinate king in that province (see DÁL G-CAIS). Controlling Leinster, Munster, and Osraige, Diarmait was effectively overking of Leth Moga (the southern half of Ireland). He was killed in 1071 in a battle with Conchubar ua Maelsechnaill of the southern Uí Néill. His namesake and great-great-grandson, Diarmait Mac Murchada, is infamous in Irish history as Diarmait na nGall (Diarmaid of the Foreigners), who created the political alliance which resulted in the Anglo-Norman conquest of most of Ireland.

§5. ANGLO-NORMANS AND GAELIC SURVIVAL

Leinster was the province most successfully colonized initially by the Norman incursions, which began in 1169. Nonetheless, substantial areas remained in the hands of Gaelic lords descended from the Laigin up until the 17th century. The fastnesses of the Wicklow mountains were held by the Ua Broin (O'Byrne), descendants of the Uí Faeláin, while the Ua Mórdha (O'More) retained their independence in Laois, as did the Ua Conchubhair (O'Connor) in Offaly and the Mac Murchada (McMurrough) in northern Wexford. It was under the leadership of a member of the latter group, Art Mac Murchada Caomhánach (Art McMurrough Kavanagh), that the Gaels reconquered much of the province in the later 14th century, decimating the armies of Richard II in guerrilla warfare among the forests, bogs and mountains. At this time, several of the Irish noble families were more powerful than they had ever been in pre-Norman times, and in this context it is interesting to note that the kingship of Leinster was the longest surviving of all the Irish provincial kingships, with the last Mac Murchada to claim the title dying in 1631 (Smyth, *Celtic Leinster* 111).

During the Desmond and Nine Years Wars, the Gaelic lords of Leinster joined the Fitzgeralds and O'Neills against the forces of Elizabeth I. Their greatest military success of this period was achieved in 1580, when a large English force under Arthur Grey were routed by the Gaelic fighters ('kerns' and 'gallo-glasses') of the Ua Broin and Ua Tuathail (O'Toole) under Fiach Mac Aodh Ua Broin (Fiach MacHugh O'Byrne) and James Eustace at Glenmalure in the Wicklow mountains. The defeat at Kinsale (Cionn tSáile) in 1601 was as disastrous and final for the Gaels of Leinster as elsewhere throughout the country, and its aftermath saw their refuges in the vast forests of Offaly, Wicklow, and Wexford fall to the axes of the colonists.

SÓF

Lailoken is a character who appears in some medieval Scottish texts, a hermit with visionary powers living in extreme hardship in the wild. He is closely parallel to the Irish SUIBNE GEILT and the Welsh MYRDDIN (Merlin), and many writers have regarded the three as sharing a common north British origin. For an overview of the related legends of Lailoken and the other two figures, see WILD MAN. This entry discusses the extant texts which mention Lailoken, the sources of this material, early identifications of Merlin with Lailoken, Christian aspects of the Lailoken story, and the name.

§1. LITERARY SOURCES FOR LAILOKEN

The Scottish sources for Lailoken occur within material for the Lives of St KENTIGERN compiled shortly after the early 12th-century Anglo-Norman reorganization of the Scottish Church, and in some particulars depend on pre-Norman antecedents. The late 15th-century Kirkstall compendium (London, BL, MS Cotton-Titus A 19 fos. 76–80) contains a fragmentary Life of St Kentigern written for Herbert, bishop of Glasgow 1147–64. This Life of

Kentigern survives only in this manuscript and briefly recounts the saint's *infantia* (childhood). Immediately preceding this (fos. 74–5b) are two Lailoken stories: 'Kentigern's encounter with Lailoken', and 'Lailoken in King Meldred's court'. According to its scribe, the Life of Kentigern was composed '. . . from matter found in a little book of his [Kentigern's] miracles and recounted to me in the living voice of the faithful'. This Herbertian Life of Kentigern was superseded thirty years later by another Life, written by JOCELIN OF FURNESS, probably before 1185, which survives in two manuscripts. Jocelin drew upon a text which he says was 'stained . . . by uncultivated diction', and contained '. . . something . . . against sound doctrine and the Catholic faith'—no doubt Kentigern's conception tale. He thus found '. . . another little book, rendered in "Scottic" manner . . . abounding . . . in solecisms', and put together 'in the way of restoration the matter collected', rectifying its Latin style. Jocelin's 'little book' was probably a Hiberno-Latin composition, the same as had been used to compile the earlier Life of Kentigern. In the earlier Life, St Servanus (see SERF), learning of the babe Kentigern's discovery, utters a GAELIC phrase, which indicates Gaelic roots for one of Jocelin's sources. The 'little book'—probably a product of 11th-century Gaelic influence from the kingdom of ALBA on Strathclyde (YSTRAD CLUD)—was known to the Herbertian author, and continued in use at Glasgow (GLASCHU) until it was superseded.

Jackson's plausible reconstruction for the sources of these Lives of Kentigern and the two Lailoken stories involves a 'Scottish Life' (immediate predecessor of the 'little book'), which drew upon 10th- to 11th-century sources, perhaps including materials of Gaelic provenance. This 'Scottish Life' would be the probable source for much legendary matter in the Lives of St Kentigern, including popular elements, and stories concerning Lailoken and 'Rederech' (RHYDDERCH HAEL) in Jocelin's Life (all of which have close Irish parallels), as well as 'Kentigern's encounter with Lailoken' and 'Lailoken in King Meldred's court'. This 'Gaelic' material came to Jocelin's Life either through the earlier Life of Kentigern or directly through the 'little book'. The compiler of the 'Scottish Life' might have received such matter from oral or from written sources, or from both. The Lailoken and Rederech materials of Jocelin's Life, 'Kentigern's encounter with Lailoken', and (perhaps) 'Lailoken in King Meldred's court' may date back well into the 11th century—even to a time when written or spoken CUMBRIC sources were available, as the Brythonic name Rederech suggests. The wild-man material '. . . was probably a well-established popular tale in Cumbric Strathclyde belonging to the battle of ARFDERYDD before the Gaelic immigration ever took place, but it would be quite at home in an Irish saint's Life'; and the Lailoken episode in Jocelin's Life of Kentigern may also be at least partially dependent upon the earlier Life.

§2. THE IDENTITY OF LAILOKEN AND MYRDDIN

Cotton-Titus A 19's 'Kentigern's encounter with Lailoken' is anticipated and paralleled closely by Bower's earlier, abridged version of the same text in his 15th-century rendition of Fordun's *Scotichronicon*. In the Cotton Titus manuscript, 'Kentigern's encounter with Lailoken' and 'Lailoken in King Meldred's court' are headed *Vita Merlini Silvestris* (The Life of Merlin Silvester) in the same hand as that which transcribed GEOFFREY OF MONMOUTH's *Vita Merlini* (Life of Merlin) immediately preceding them, and Bower heads his version of Kentigern's encounter with Lailoken *De mirabili paenitentia Merlini vatis* (Of the penitential marvels of the seer Merlin). Both manuscripts thus show knowledge of the Merlin of *Vita Merlini* and of Welsh tradition, especially as he was seen by writers of the later 12th century, notably GIRALDUS CAMBRENSIS, as distinct from the rather different portrayal of Merlin in Geoffrey's earlier HISTORIA REGUM BRITANNIAE of *c.* 1139.

The scribe of 'Kentigern's encounter with Lailoken' considers the rumour that Lailoken was one and the same as the 'extraordinary prophet of the BRITONS, Merlyn'. However, Bower's rendition lacks this clause, and this awareness of Merlin is thus probably the result of manuscript transmission between *c.* 1151 (the composition date of Jocelin of Furness's Life of St Kentigern) and the early 15th century. Bower associates the Lailoken of 'Kentigern's encounter with Lailoken' with 'Merlinus Silvester'. Other indications of Bower's access to slightly variant sources for the 'Kentigern's encounter with Lailoken' story are small changes in wording, and the name of the river in which Lailoken dies (*flumen Tuēdense* 'river Tweed', rather than the corrupt form of 'Kentigern's encounter with Lailoken').

§3. LAILOKEN'S PENITENCE

'Kentigern's encounter with Lailoken' homiletically focuses on worthy partaking of the sacrament, drawing upon the Order of the Mass for Maundy Thursday and the institution of the Eucharist. Kentigern's leaving the consecrated host on the altar for Lailoken to receive —neither offering nor refusing it—is motivated by church law regarding participation in communion by the mentally and spiritually afflicted. His exhortation to the brethren not to judge also accords with the Epistle for Holy Thursday, the 'Parable of the Great Sinner', or penitent thief of the Crucifixion (1 Cor. 11.23–32), and, like the archetypal penitent thief, Lailoken is to be translated immediately to glory because of his temporal sufferings.

§4. THE NAME

Lailoken is apparently a Brythonic name corresponding to the Middle Welsh word *llallawc*, and more specifically to its diminutive *llallogan*. In the Myrddin poetry, only the *Cyfoesi* include the epithets *llallawc* or *llallogan*, by which Gwenddydd addresses her brother Myrddin. The terms appear elsewhere only in the Llywarch Hen cycle (see ENGLYNION), in both cases 'a name . . . used for an amiable greeting', meaning 'brother', 'friend', 'lord' or 'honoured-one'. The notion that Lailoken's name and aspects of his character originate in an historical member of the household of Lollius Urbicus (*fl.* AD 140) is tendentious. The source is more probably *llall* 'other one', related to *arall* 'other' and, more distantly, *ail* < Celtic **alios* 'second'. Carney noted easy adaptation of the epithets to an Irish milieu, by their phonetic similarity to the adjective *allaid* 'wild', in his view the basis for the name of Suibne's 'British' alter-ego, Alladhán/Ealadhán.

lake settlement

§1. MESOLITHIC AND NEOLITHIC BACKGROUND

The edges of lakes have been popular sites for human habitation worldwide from the earliest times. In western Europe, Mesolithic hunter-gatherers were attracted by the abundant resources of plants and animals inhabiting the rich ecology of such locations, which provided a reliable and renewable source of food and other materials. Excavated examples of these first lake settlements—such as Star Carr, Yorkshire, England (Clark, *Excavations at Star Carr*) and Friesack, near Potsdam, Germany (Gramsch, *Wetland Revolution in Prehistory* 65–72)—stretch back over 10,000 years into the past. At these sites, modification of the occupied part of the lakeshore was achieved through the construction of a dry, stable platform of birch logs and brushwood which was occupied on a seasonal basis. Later, from around 4000 BC, some sites in the ALPINE region display vast numbers of vertical piles being driven into the lake bed in the shallow waters adjacent to the shoreline. At Hauterive-Champréveyres, on the edge of Lake Neuchâtel, Switzerland (Burri et al., *Jahrbuch der Schweizerischen Gesellschaft für Ur- und Frühgeschichte* 70.35–50), and at Hornstaad-Hörnle, on the Bodensee, Germany (B. Coles & J. Coles, *Enlarging the Past* 34–40), these piles supported platforms upon which Neolithic people built small villages of timber-framed houses.

§2. INSULAR BRONZE AGE

In Ireland (ÉRIU) and BRITAIN, excavations indicate an increase in lake settlement activity in the Late Bronze Age from around 1200 BC. This phenomenon coincides with a more general increase in defended settlements, weaponry production, and a marked climatic downturn. More frequent lake settlement at this time may be linked to the latter factors, reflecting a preference for easily defensible locations in an apparently bellicose

society where conflict was on the increase and/or where people were being forced to live in agriculturally marginal areas due to climatic deterioration and the resulting population pressure. Some of the Irish sites occupy lakeside positions extending somewhat into the shallows in a similar manner to the Continental pile-dwellings; for example, Clonfinlough (Moloney et al. *Excavations at Clonfinlough, Co. Offaly*) and Ballinderry 2 (Hencken, PRIA C 47.1–76) in Co. Offaly and Knocknalappa in Co. Clare (J. Raftery, *North Munster Antiquarian Journal* 3.53–71). However, some lake settlements of the later prehistoric period in Ireland—such as some of those in Lough Gara, Co. Sligo (see Fredengren, *Crannogs* 183–90)—are wholly or largely artificial platforms raised well above the water's surface, possessing a substantial perimeter palisade and constituting islands cut off from the shoreline. In this sense, these examples fit the definition of a true 'crannog' (Irish *crannóg*), a title more commonly applied to such structures in early medieval Ireland and Scotland (see below). In England, the vast Late Bronze Age platform—with an area in excess of 2 ha (about 3 acres)—and causeway excavated at Flag Fen, Cambridgeshire (Pryor, *Flag Fen Basin*) and a lesser-known but similar example from Shinewater Park, Sussex, are impressive and intriguing structures, but whether they are settlements, ritual centres, or served some other social purpose is uncertain.

§3. INSULAR IRON AGE

For the important Continental IRON AGE lake site on Lake Neuchâtel, see LA TÈNE [1].

In Britain, the Iron Age lake village at GLASTONBURY was a settlement of round houses, each raised above the water level on its own individual mound of clay, accompanied by outdoor working areas, the whole being surrounded by a timber palisade. Data from excavations indicate that the settlement was occupied for at least 150 years, beginning around 250 BC, and that the population grew gradually over that time to an estimated 200 or so individuals (B. Coles & J. Coles, *Enlarging the Past* 86–103). Excavations at the slightly earlier Iron Age wetland site at Meare, around 5 km from the Glastonbury lake village, suggest that it was a place of periodic gatherings such as markets and/or festivals rather than a settlement. In comparison with the preceding Bronze Age, definite Iron Age lake settlements are rare in Ireland, following the trend for settlement in that period in general. The only possible excavated example is the crannog at Rathtinaun, Lough Gara, Co. Sligo (Contae Shligigh), where Late Bronze Age occupation continued into the beginning of the following era (B. Raftery, *Pagan Celtic Ireland* 32–5), though recent re-examination of the radiocarbon evidence from this site casts doubt on it ever having experienced Iron Age occupation (O'Sullivan, *Archaeology of Lake Settlement in Ireland* 97).

Late prehistoric lake settlements in Ireland and Britain share several common features. The material recovered on them often indicates that the inhabitants were relatively well off, with decorative artefacts of bronze, amber, and glass not uncommon from excavations and surveys. Also, evidence of water transport, such as piers (Glastonbury), paddles (Clonfinlough), and boats themselves (Lough Eskragh and Glastonbury), emphasizes the fact that travel would have been conceived and practised as much—if not more—in terms of waterways as roads or trackways. Lake settlement during this period was mirrored by settlement in other wetland environments, such as the banks and islands of large rivers (e.g. Runnymede Bridge, on the THAMES in Surrey, England), estuaries (e.g. Goldcliff on the Severn estuary in Gwent, Wales, and several sites on the Shannon estuary in Ireland), and marshlands (Assendelver Polders, Netherlands).

§4. MEDIEVAL AND EARLY MODERN CRANNOGS

In the early medieval period, the use of lake dwellings in the Celtic-speaking lands appears to have been essentially confined to Ireland and Scotland (ALBA), where crannogs were a popular form of dwelling (about 1200 have been identified in Ireland and at least several hundred in Scotland). Different definitions have been advanced for crannogs, but—as outlined above—the main defining features are generally that they are mainly or wholly artificial islands (most often round or oval in plan) built of timber, stone, and peat, raised well above the surrounding water level and endowed with a palisaded perimeter. In some parts of western Ireland, particularly Conamara, Co. Galway (Contae na Gaillimhe), crannogs are surmounted by CASHELS (stone-built early medieval forts), rather than the more conventional wooden palisade (O'Sullivan, *Archaeology of Lake Settlement in Ireland* 128).

There is considerable variation among investigated crannogs in terms of many attributes, including size, purpose, apparent status of occupants and length of occupation. Several of the excavated sites have been interpreted as 'royal' centres or residences, due to the exceptional nature of the material recovered, including exotic imports of pottery and decorative metalwork, as well as the range of craft activities practised and the exceptional size of the crannog and/or the dwellings upon it. Examples of such 'royal' crannogs include Lagore (Hencken, PRIA C 47.1–76) and Moynagh Lough, Co. Meath (Bradley, *Ríocht na Midhe* 9.3.50–61), in Ireland (linked with the early medieval septs of Uí Néill Brega and Mugdorna respectively), Buiston, Ayrshire, in Scotland, and Llan-gors, Powys, in Wales (Campbell & Lane, *Antiquity* 63.675–81). The latter example, linked to the royal house of the early Welsh kingdom of Brycheiniog, is currently the only certain example of a crannog known in Wales (Cymru).

Most crannogs appear to have been primarily places of residence, whatever other activities took place upon them, though there are exceptions. One such is the small site at Bofeenaun, Co. Mayo (Keane, *Irish Archaeological Wetland Unit Transactions* 4.167–82), which appears to have been devoted solely to ironworking. Also, while the crannog at Lough Faughan, Co. Down (Contae an Dún), hosted other activities, metalworking appears to have been its main *raison d'être*. Although primarily an early medieval site-type, there are plenty of documentary references which make it clear that crannogs continued to be inhabited in Ireland, for military purposes at least, up until the 15th century. The archaeological evidence supports this, with later medieval material recovered in significant quantities from several sites (e.g. Lough Faughan, Co. Down; Newtownlow, Co. Westmeath). In Scotland, their use into the 17th or even the 18th century is related to hunting and feasting by high-status clansmen, as portrayed in contemporary Gaelic verse, and also, possibly, as a neutral location at which treaties and disputes could be dealt with (Morrison, *Landscape with Lake Dwellings* 66–8).

Many important questions remain regarding crannogs: is it valid to regard the early medieval variety as a development of the late prehistoric examples, and the related question whether early medieval crannog construction may have been introduced into Scotland from Ireland or vice versa; to what extent were their locations decided purely by defensive factors, or was there a special social significance to their situation in lakes which has not yet been fully grasped?

SÓF

Lamadelaine is a burial ground in Luxembourg which dates from the 1st century BC. It is significant in Celtic studies because it reveals elaborate ritual practices and other features of cultural life in a region known to have been occupied at the time by the Treveri, one of the Celtic-speaking tribes of the Belgae of north-east Gaul. In particular, evidence from Lamadelaine shows the intimate connections between notions of funerary rituals and formal feasting among the pre-Christian Celts.

Lamadelaine is one of the cemeteries connected to the oppidum of the Titelberg. It consists of 70 graves and 18 offering ditches, grouped in three distinct concentrations. The exceptional degree of preservation of animal remains has shed light on the previously unknown details of animal sacrifice among the Iron Age Celts. There are several indications that the animals' bodies were exposed to the open air for some time before being cremated. The sacrifice of pigs was followed by dividing the offering: one portion was placed on the pyre, another was deposited in the tomb, but the choice portion was given to the living, to be

Buried pig and offerings from Tomb 1, Lamadelaine

eaten during a banquet (see FEAST). When it was time for the tomb to be closed, the cremated parts were placed in it first; offerings of unburnt meat followed, sometimes laid out in a manner which recreated the image of a pig by using some scattered pieces and, finally, vases to fill in the gaps in order to give a complete reconstitution of the shape of the animal. This type of ritual practice, which was very carefully followed during the early phase of the necropolis, disappeared over the course of time. Eventually, all the offerings were put on the pyre, and the contents of the TOMBS becomes uniform, thus showing the levelling out of long-standing and distinctive indigenous customs as a result of the incoming wave of Romanizing cultural conformity in the land of the Treveri.

land agitation in the Celtic countries [1] Ireland

The last quarter of the 19th century witnessed three phases of land agitation in Ireland (ÉIRE): the LAND LEAGUE (1879–82), the Plan of Campaign (1886–91), and the United Irish League (1898–1903). The first phase of the agitation is generally termed the 'land war', though some historians extend the term to include the two later phases. The 'land war' was not a war in the conventional sense, but was rather a social revolution, which resulted in the demise of Irish landlordism. The land agitation in Ireland has a broader relevance to CELTIC STUDIES as part of the immediate economic and social context for the development of nationalist and Gaelic revivalist movements at the time (see LANGUAGE [REVIVAL]; NATIONALISM); furthermore, the economic distress was most acute in western Ireland, which was home to most of the Irish-speaking communities in this period.

§1. CAUSES OF THE LAND WAR

The agrarian militancy which convulsed Ireland from the late 1870s onwards would have been inconceivable a few years earlier. Following the massive dislocation and mortality during the Great FAMINE, the country experienced a period of relative prosperity. In the post-Famine decades, insolvent estates changed hands, uneconomic and unsustainable plots of land were consolidated into larger holdings, and there was a switch from tillage to less labour-intensive pastoral farming. From the mid-1850s to the late 1870s, productivity and price increases far outstripped the rise in agricultural rents. In these generally buoyant years, the majority of Irish landlords adopted a relatively benign attitude to their tenants and, in the main, harmonious relations existed between them.

The years 1877–9 witnessed a succession of wet and cold seasons, poor harvests, falling prices, and reduced demand, all of which threatened the economic gains which the majority of Irish tenant farmers had experienced from the mid-1850s onwards. The agricultural crisis was most severely felt in the west of Ireland, where small farmers were once again threatened with bankruptcy, eviction and starvation. Tenants looked to their landlords for relief, but there was a general resistance to granting voluntary rent reductions—a refusal which gave rise to considerable discontent in the west and transformed popular attitudes to landlords. The insistence on customary rents exposed the vast cultural and political gulf which separated landowners and tenants, reawakened memories of dispossession, and revived concepts of the rightful ownership of Irish land.

The long shadow of the Famine created the economic and social context for agrarian militancy, but there was also a specific political dimension. The political climate in the late 1870s was fundamentally different to what it had been thirty years earlier. A novel alignment of political forces was evolving, a 'new departure' which involved elements of the revolutionary Irish Republican Brotherhood or Fenian organization—the radical wing of constitutional nationalism—led by Charles Stewart PARNELL, and agrarianism, personified by Michael DAVITT, a Fenian on ticket-of-leave from an English prison. A new land agitation was central to this conjunction of agrarian, parliamentary and revolutionary forces. As recent scholarship makes clear, this combination of land agitation and nationalist politics, the linking of the agrarian cause to a political programme, offers the only satisfactory explanation of the late 19th-century 'land war'.

§2. THE THREE PHASES OF AGRARIAN AGITATION

The LAND LEAGUE was launched with two declared objectives in October 1879: to protect the tenant farmers against their landlords in the short term, and ultimately to make them owners of their holdings. The movement began in Mayo (Contae Mhaigh Eo), one of the country's poorest counties, and spread to the south and east of Ireland in the following year. The Land League was a national movement, but the Plan of Campaign and the United Irish League were more restricted. All three drew their numerical and inspirational strength from the poorer western half of the country. Each phase had a common foundation: the difficulties faced by tenant farmers in meeting their rental obligations in times of agricultural recession. The strategies were also broadly similar: each was predicated on a form of mass mobilization and motivation, a tenant collectivity which was banded and bonded by a brilliant orchestration of publicity and propaganda, promises and intimidation. 'Moonlighting', or the activities of agrarian secret societies, including physical assaults and threats, arson and the maiming of farm animals, gave added steel to the widely implemented policy of social ostracism, or boycotting, as it came to be called. The main targets were those involved in evictions, that is, the legal process of dispossessing defaulting tenants, and individuals who took farms from which others had been evicted, so-called 'landgrabbers'. The press and local leadership were hugely influential in orchestrating the response to landlordism and in welding a far from homogeneous Irish rural population into a cohesive and disciplined mass movement.

While land agitation in late 19th-century Ireland was sparked off by agricultural recession and a downturn in economic activity, it was always more than an elemental response to adverse economic circumstances. The more radical nationalists believed that the 'land war' was not an assault on the institution of landlordism alone, but also an attack on the landlord class as part of the English garrison in Ireland, for landlords were widely regarded—and regarded themselves—as a considerable obstacle to the repeal of the ACT OF UNION. The leading proponents of the land agitation made no secret of the

fact that their actions had political as well as agrarian objectives, and that their ultimate aim was self-government, in other words, the establishment of a home rule parliament in Dublin (Baile Átha Cliath).

§3. CONSEQUENCES

The 'land war' cut through the layers of traditional deference which the ordinary people of Ireland had displayed to the higher social classes, and, in the process, brought them to a new level of political consciousness and organization. More tangibly, the recurring phases of agrarian militancy resulted in a series of Land Acts, beginning with that of 1881 which legalized tenant rights and introduced the concept of dual ownership in the land. It culminated in major Land Purchase Acts in 1903 and 1909, which revolutionized land ownership in Ireland. The demise of landlordism did not lead to the transfer of the land of Ireland to the people of Ireland, as the great clarion call of the ideologues demanded, but into the possession of the occupying tenants. It can be argued that the incomplete nature of the reform contributed to an early and mid 20th-century Irish agriculture as unenterprising and unimaginative in the hands of the conservative middling and strong farmer class as it had been in the time of their previous English landlords.

land agitation in the Celtic countries [2] Scotland

Scottish land agitation was mainly restricted to the Highlands, and seems to have been a belated reaction to the clearances, the potato famine of 1846 and the worsening economic situation of the crofters and cottars as the 19th century progressed. Although sporadic incidences occurred during the 1870s, it reached its zenith with the 'Highland land war' or 'Crofters' war' of 1883–8. The action taken by various communities ranged from rent strikes and repossessing grazing rights to the slaughtering of sheep and deer on former common lands and taking up arms against the police. Troops were called to quell the unrest and battleships were stationed in the Outer Hebrides in case they would be needed. Miraculously, no lives were lost as a result of the confrontations.

The first phase of the 'Highland war' began with the protests of the crofting communities of Glendale (Gleann Dail) and Hùsabost on the Isle of Skye (An t-Eilean Sgitheanach) in 1882, when rents were withheld and sheriff-officers forcibly evicted tenants. For their actions, five of the local leaders, the 'Glendale martyrs', were sentenced to two months in prison. The publicity which accompanied their trial brought the plight of the crofting communities to the attention of politicians and reformers such as Charles Frazer-Mackintosh (MP for Inverness), Alexander MacKenzie (editor of the *Celtic Magazine*) and G. B. Clark (a radical land reformer). They founded the Highland Land Law Reform Association (1883; Highland Land League from 1886), of which branches were established all over the Highlands, to campaign for the righting of crofting grievances. In response to the unrest and the agitation of the Highland Land League, a Royal Commission on the Crofters and Cottars of Scotland, chaired by Lord Napier (hence, Napier Commission), was set up in 1883. Its members collected evidence in the Highlands in 1883–4, and the published report is an exhaustive monument to the sufferings of the Highland tenantry in the 19th century and a damning indictment of the landlords and those who perpetrated the clearings. Like the report of the Royal Commission on Lands in Wales, published in 1896, the Napier Report is a valuable historic source which reveals the voices of the disenfranchised and the dispossessed. The Crofters' Holdings Act, passed in 1886 as a result of its work, gave larger crofts security of tenure. This Act conferred on them the rights to rent arbitration through the new Crofters' Commission, to compensation for improvement of the land, and to inheritance of tenancies.

After 1886, the 'Highland war' went into its second phase, which lasted until 1888. The landless cottars,

whose grievances had not been addressed by the Crofters' Holdings Act, were encouraged by the Highland Land League to commit land raids in order to repossess lands taken from them during the clearances. Such raids took place between 1886 and 1888 and centred on the Isle of Lewis (Leòdhas), where the percentage of cottars was especially high. With the improvement of the socio-economic conditions of the crofters and cottars, thanks partly to fairer rents awarded by the Crofters' Commission and partly to the upsurge in the fishing industry and in AGRICULTURE, agitation subsided in the 1890s.

land agitation in the Celtic countries [3] Wales

The land question in 19th-century Wales (CYMRU) was not just an economic but also a social, cultural and political issue. Around 60% of the land was at this time parcelled into large estates of over 1000 acres, owned by just 571 individuals. This élite, English-speaking and Anglican, was increasingly distinguished from the rest of the population; the tenantry, by contrast, were WELSH-speaking Nonconformists (see CHRISTIANITY). Moreover, they lived in a society where the occupation of land was not simply a means of gaining a livelihood, but was also a way of securing social status. The land question, which had its origins in the 1840s and climaxed in the 1890s, thus touched society at every point.

Discontent was first expressed by the radical dissenter and journalist, Samuel Roberts of Llanbrynmair (1800–85) in his two books, *Diosg Farm* (1854) and *Farmer Careful of Cilhaul Uchaf* (1881). These encapsulated the core grievances of tenant farmers during the second half of the 19th century: the depredations of game, the confiscation by the landowner of the value of improvements to the property effected by the tenant, and insecurity of tenure.

Similar principles were being agitated elsewhere in Britain at this time, notably by Richard Cobden and John Bright, doughty opponents both of the power the élite derived from their control of the land. Interestingly, it was from the circle around Cobden that the next champion of the Welsh land question, Henry Richard (1812–88), emerged. Like Roberts, an ordained minister and radical journalist, he penned a series of 'letters' on conditions in Wales for Cobden's *Morning Star* newspaper in 1866. Citing Roberts's experiences, he argued that the landowners charged farmers cripplingly high rents, offered no security of tenure, and undermined all attempts at decent husbandry by their preservation of game. To these charges of financial exploitation, he added that of political coercion. The tenant's lack of secure tenure rendered him vulnerable to bullying at election time: the price of a 'wrong' vote in Wales, said Richard, was eviction.

The 'land question' thus developed a new, 'political' edge in the 1860s, and Richard, returned to parliament in 1868, escalated the controversy by claiming in the House of Commons that large numbers of Liberal-voting tenants had been evicted by their Tory landlords following the 1868 election. In public meetings, he stressed that there was a land question in Wales as real as that in Ireland (ÉIRE), and the solution was the same: Wales needed a Land Act.

It did not get one. The disintegration of Gladstone's government between 1872 and 1874, together with the relative prosperity of AGRICULTURE in the 1870s, ensured that no head of steam built up behind the demand. Only in the 1880s, when the farming economy went into sharp recession, did it re-emerge; when it did, its impact was dramatic.

The 'tithe war', a period when hard-pressed farmers in north Wales refused to pay their tithes, marked the high-point of conflict over the land question. For five stormy years, the flames of discontent were fanned by increasingly nationalistic radicals such as the MPs Tom ELLIS (Merioneth) and Bryn Roberts (Caernarfon South), the journalist, T. J. Hughes ('Adfyfr'), and the veteran proprietor of *Baner ac Amserau Cymru* (The banner and times of Wales), Thomas Gee of Denbigh. Gee even organized a Land League in 1887, seeking rent reductions and compensation for improvements. The idea of a Land Act for Wales along the Irish model was repeatedly canvassed in radical circles.

Once again the government set its face against such a measure; instead, it set up a Royal Commission to examine the Welsh land question. Its Report (1896) suggested some additional legislation for Wales, beyond the Agricultural Holdings Act (1883), to regulate the relationship between landlords and tenants. However, by this point, the context of the agitation had changed radically. The Tithe Rent Charge (1891) stilled the tithe agitation and killed off grass-roots agitation for land reform; the nationalist aspirations of Welsh radicalism, meanwhile, were dealt a crushing blow by the collapse of CYMRU FYDD in 1896.

Yet, the land question was finally resolved, through market forces rather than legislation. By 1914, landholding had lost its social, political and economic advantages. The great landowners—not only in Wales, but across Britain—sold up, leaving the farmers in charge of their own destiny.

Matthew Cragoe

The **Land League** (1879–82) was the first of three phases of LAND AGITATION which occurred in Ireland (ÉIRE) in the last decades of the 19th century.

A powerful mass movement, the Land League embraced agrarian agitation, parliamentary politics and revolutionary activity. Its tactics and ideology were sophisticated, its achievements real and substantial. The movement secured important concessions for the tenant farmers against their landlords, and affected a social revolution by making peasant proprietorship inevitable. The Land League contributed significantly to the membership, organization, and leadership of nationalist politics, to increased democracy in the country and, ultimately, to the achievement of national self-government (see NATIONALISM). It is of further contextual interest to CELTIC STUDIES in that much of its impetus came from in and around IRISH-speaking communities in the west.

The movement originated in the worldwide agricultural depression of the late 1870s, and was given direction and focus by the nationalist political movement led by Charles Stewart PARNELL. The agitation began in the west of Ireland with a huge tenant demonstration at Irishtown, County Mayo (Contae Mhaigh Eo), on 20 April 1879, which was partially organized by Michael DAVITT. In mid-August, Davitt established the Land League of Mayo, which he converted on 21 October into the Irish National Land League, with Parnell as president. The League's immediate objective was to secure rent reductions and to prevent evictions. Its ultimate aim was tenant proprietorship.

These aspirations were given concrete expression in the Land Act of 1881, a revolutionary measure which conceded the three *F*s—fair rent, fixity of tenure, and free sale. The Act provided for the establishment of land courts where tenants could apply to have their rents fixed by arbitration for a period of 15 years and, as long as these judicial rents were paid, the tenant could not be evicted. The tenant was also entitled to sell his interest, or his occupancy right, for the best price he could obtain. By legalizing the three *F*s, the Land Act of 1881 established a system of dual ownership of the soil between landlord and tenant, a development which made peasant proprietorship a certainty in the long term. More immediately, the rent provisions of the Act had the effect of reducing the average rental by just over 20%, and this went a long way towards satisfying the demands of many Irish tenants.

However, the Act did not meet the needs of all tenants—leaseholders, and those in arrears of rent were excluded—and the agitation continued. The Land League's principal leaders, including Parnell and Davitt, were imprisoned, and the movement was outlawed in October 1881. These developments unleashed a wave of agrarian violence which continued throughout the following winter and spring. The prevailing anarchy of these months prompted Gladstone, the British Prime Minister, to negotiate the so-called Kilmainham Treaty with Parnell at the beginning of May 1882. Under its terms, the government agreed to release the imprisoned leaders and to amend the Land Act of 1881. In return, Parnell promised to discourage outrages and intimidation, and to support Liberal reform initiatives. The agreement thus ended the first phase of agrarian militancy.

Landevenneg / Landévennec, Abbey of

§1. ORIGINS

The only document which gives an account of the foundation of the monastery of Landevenneg/Landévennec (Old Breton Landeuinnoch) is the *Vita Sancti Winwaloei*, edited *c*. 880 by its abbot Wrdisten (Uurdisten). It relates that St UUINUUALOE (Modern Breton Gwennole, Modern French Guénolé) was born of Welsh parents who had emigrated to ARMORICA, to Ploufragan near Saint-Brieuc (Sant-Brieg). He is said to have been educated by a monk with the Old Breton name Budoc (cf. Old IRISH *buadach* 'victorious') on the island of Lavret (archipelago of Bréhat), and then to have moved with eleven companions to a site near Brest harbour to found the monastery.

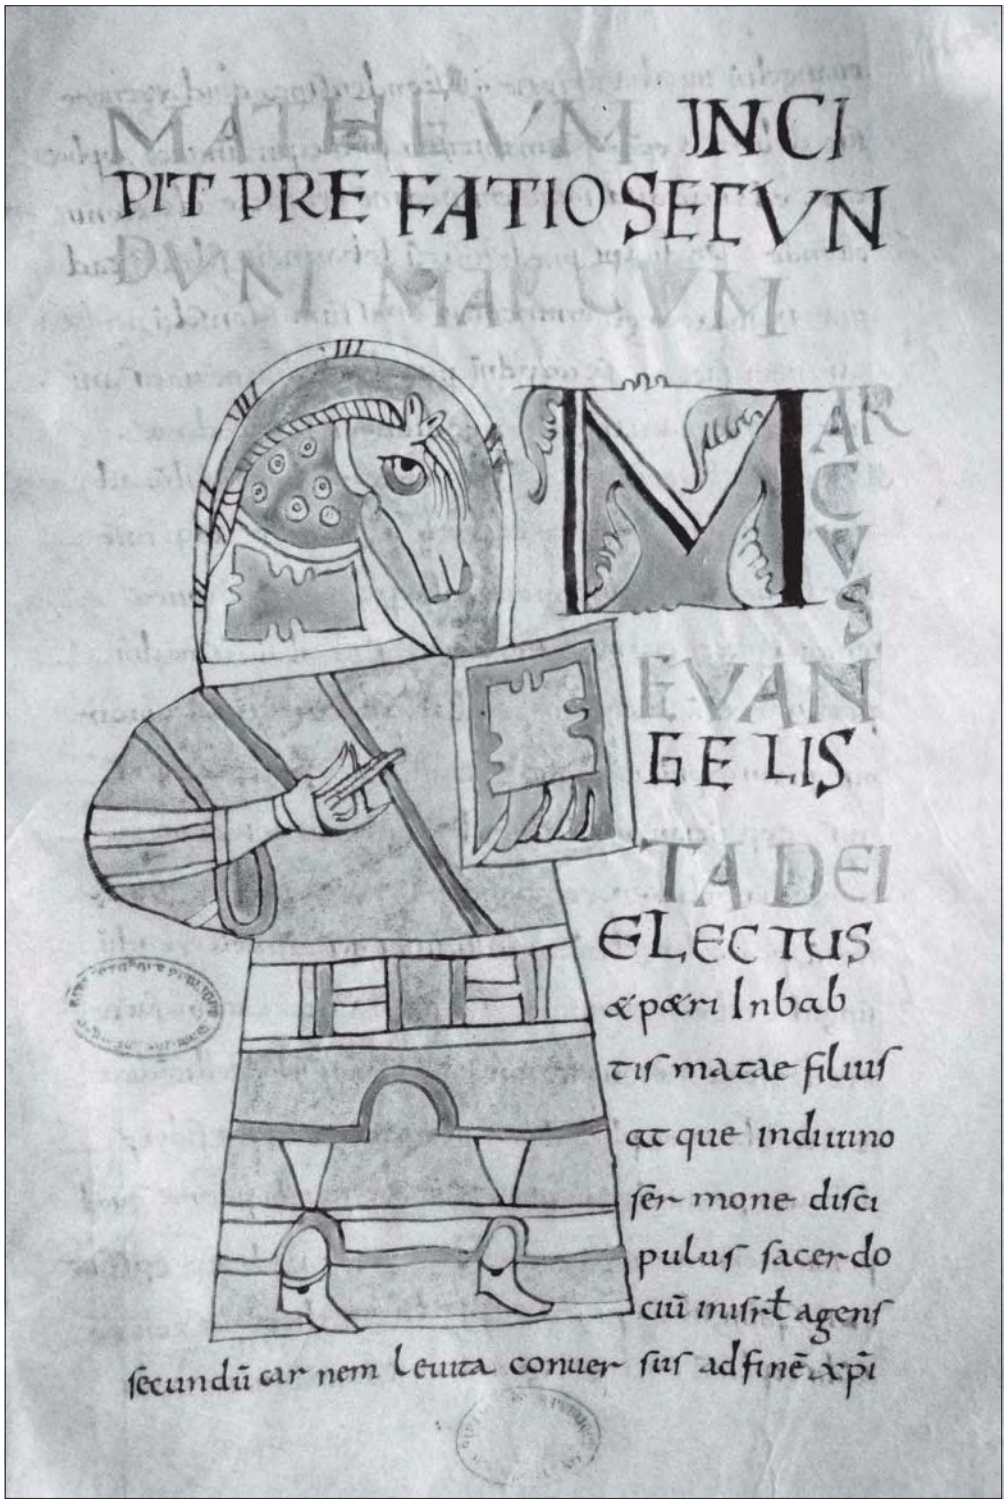
It is impossible to give exact dates to the historical events behind these episodes in the HAGIOGRAPHY. A traditional date of AD 485 for the foundation is perhaps too early. Nonetheless, the coming of Uuinuualoe's family to the St Brieuc area at roughly this time fits well with our general understanding of the BRETON MIGRATIONS in the post-Roman centuries, during which a sizeable population of insular BRITONS became established in what had been Gallo-Roman Armorica. The settlements of these Britons were to affect permanently the cultural and linguistic character of the west and north of the peninsula which now bears their name. These migrations coincide broadly with the period of Anglo-Saxon and Irish raiding, followed by settlement, across what had been Roman BRITAIN. Drawing on the account of GILDAS in the 6th century, many writers have explained the foundation of Brittany (BREIZH) in terms of flight from Britain's barbarian invaders. In parallel developments at roughly the same time, the Germanic Franks took control of most of what had been the north of Roman GAUL in the late 5th century.

The majority of the Britons arriving in Armorica in the 5th and 6th centuries seem to have already been converted to CHRISTIANITY, and their settlements were organized as Christian communities. The pattern can still be seen clearly on the map of Brittany in an early stratum of Breton place-names. The numerous names in *Plou-* commemorate early Breton parishes (cf. Welsh *plwyf* 'parish' < Latin *plēb-em*). Names in Old Breton *Lan(n)-* (cf. Welsh *Llan-*), which literally meant 'enclosure', refer to early churches and monasteries. The monastic education of Uuinuualoe, as well as the foundation of the monastery at the end of the Brest harbour—in a place naturally accessible to new settlers sailing in from western Britain—fits very well into the religious context of this first period of Christian organization, as can be understood from the evidence of these early place-names. Thus, *Te-Uuinnoch* is an Old Breton hypocoristic or pet-name for Uuinuualoe; therefore, the place-name *Landevenneg* signifies the monastic enclosure of Uuinuualoe.

Modern interpreters of Breton Christianity have often regarded it as having a 'Celtic' character, which can be distinguished from the church foundations whose roots lie in the Roman world. Celticity, in this sense, has been seen in such aspects as the small-scale community organization based on native systems of KINSHIP and inheritance, a CALENDAR which includes special holidays commemorating native saints (including some feasts with arguably pagan Celtic antecedents), and unique RITUAL practices connected with local holy sites.

Conversely, in the early Middle Ages, the church of what had been the Roman Empire was deeply influenced by missionary activity which emanated from Celtic-speaking countries. Thus, the influence of the major Irish MONASTERIES and important figures such as St COLUM CILLE of Iona (EILEAN I) and St COLUMBANUS, the founder of Luxeuil and Bobbio, was felt in Frankish Gaul. Vigorous MONASTICISM, as promoted by this zealous Irish movement of overseas exiles for faith (for which the contemporary Latin term was PEREGRINATIO), gained the favour of Merovingian Frankish princes from around 600. This period of influence of 'Celtic' structures and ideas on the church of Frankia remained strong until the late 8th century, when Charlemagne, followed by his son Louis the Pious, imposed the Benedictine Rule on all monasteries.

We have no surviving documentary history for the first three centuries of the monastery founded by



St Mark's Gospel showing a man with the head of a horse (Breton **marc'h***), Montreuil MS 8, fo. 42, 9th century AD, thought to have originated from Landevenneg Abbey*

Uuinuualoe. The Landevenneg charters which name historical figures of the 4th, 5th, and 6th centuries are all probably later forgeries (see CHARTER TRADITION). However, the monastery's existence in Merovingian times is confirmed by archaeological evidence. The first sound historical reference to it occurs in a decree of 818 by the Frankish emperor Louis the Pious; in it, he imposed the Benedictine Rule on the community and its abbot (who bore the Breton name Matmonoc) instead of the tradition described as 'having come from the SCOTS', i.e. from the Gaels of Ireland (ÉRIU) and Iona. In this decree, we see clearly the implication of an older rule shaped by the ideas and customs of the Irish *peregrinatio*.

Soon afterwards, documents reveal a period of great and extroverted cultural vigour at Landevenneg, and in Brittany as a whole. The political context favoured Breton expansion in the 9th century under Nominoë, Erispoë, and Salomon, at the expense of a Frankia badly governed by Charlemagne's successors. At the same period, the Landevenneg scriptorium (a centre for producing and copying manuscripts) produced a lavishly illuminated gospel book, which is found today in New York (Public Library MS 115). It is the earliest manuscript known from Finistère (Penn-ar-Bed) and displays many points of comparison with the famous insular gospel books, such as those of Kells and Lindisfarne (see BRETON EARLY MEDIEVAL MANUSCRIPTS). Two successive Lives of Uuinuualoe were composed—one written by the monk Clement, one (mentioned above) by his abbot, Uurdisten—and one life of Saint Paul Aurelian, written by Uurmonoc in 884 for the bishop of Leon. At this time, the abbey was very strongly linked to the local secular power of the Breton dynasty of Cornouaille (Kernev), but it was also already well integrated into the Benedictine Continental mainstream, including the architecture of the monastery buildings. By exceptional good fortune, excavations have brought to light, almost complete, the foundations of this typical Carolingian monastery.

§2. THE MIDDLE AGES

In the following centuries, the prosperity of the monastery remains apparent, but seems to have been rather fragile. The monks themselves were painfully aware of the peril; since the middle of the 9th century Vikings had been raiding all over Brittany, with devastating effect. In the year 913 they plundered the abbey, which was as easily accessible to Scandinavian seaborne raids as it had been, a few centuries before, to early Christians from Britain. The date is confirmed by the annals of the abbey, today in Copenhagen:

> 913 *Eodem anno destructum est monasterium sancti Winwaloei a normannis.*
>
> In this year the monastery of Saint Uuinuualoe is destroyed by the Northmen.

The monks fled to Montreuil-sur-mer, where they built a second monastery, which was also consecrated to Saint Uuinuualoe (called there St Walloy), whose relics they had brought with them. After about 40 years, they returned to Brittany, but the relics remained in Montreuil.

The returning monks found a monastery in ruins, and their first task was to rebuild it. In the 11th and 12th centuries they built a Romanesque ensemble: church, cloister, and dormitories. The walls of the abbot's house remain, and date from this period. At this time, the lords of Cornouaille ensured the material funding of the monastery by extensive donations of income-producing land. These grants were expressed formally in writing and assembled in a cartulary which dates from the middle of the 11th century. The Cartulary of Landevenneg is today kept at Kemper (Quimper, Bibliothèque municipale 16).

The 11th and 12th centuries were the golden age of monasticism, in Brittany as well as in France, though the impact of the pre-eminent French monastery of Cluny did not reach as far as Brittany. In contrast, in the following centuries, not much is known about the development of Landevenneg. However, the list of abbots did continue without interruption. We do know that the abbey in the later Middle Ages was very attractive to robbers—both local brigands and English pirates raided around Brest. Thus, it was necessary to surround it with full functional fortifications, which, by the 13th century, contained ramparts, a watch way, turrets, and a moat. The wars of Breton succession in the 14th century brought English invaders back, in spite of the defences. At about the same time, the monks established the cult of Notre Dame de Folgoat in the woodland near the abbey; it became very popular and still flourishes today, transferred to nearby Lesneven.

The 15th century was freer from military threats, but the dukes of Brittany increasingly interfered in the appointment of the abbots, seeking the candidates most loyal to themselves. This pattern of secular intervention was to continue after the unification of Brittany and France in the 16th century. From then on, the King of France imposed his men; the abbots were called 'commanders', and their main concern was to harvest the riches of the abbey, which had become a feudal fiefdom or 'royal abbey'. The monastic community resisted these corrupting tendencies, and there were some positive achievements. The monastery buildings were partly reconstructed in the Gothic style, but the Huguenot wars, and the vandalism of rampaging troops, led to their ruin at the end of the 16th century.

§3. MODERN TIMES

Throughout France in the 17th century, the monasteries formed associations in order to unite against outside pressure, and Landevenneg joined the congregation of St Maur in 1636. Strengthened by this association, monastic life was revived, new buildings were erected, and cultural life experienced a flourishing period. A history of the abbey was published by Dom Noël Mars in 1648, and a Breton–French dictionary between 1728 and 1752 by Dom Louis Le Pelletier.

However, already by the mid-18th century, the abbey had entered into an irreparable decline, suffering from the repercussions of the Jansenist controversy (a Catholic theological controversy in the early 18th century) and also from anti-monastic attitudes which accompanied the Enlightenment. The monastic community was effectively reduced to five or six members only. In 1766 the abbey lost its abbatial rights to the Bishop of Cornouaille. In 1792, in the midst of the French Revolution, the last four monks were expelled and the abbey sold off with little notice. Landevenneg fell into oblivion.

§4. REVIVAL

Over the following century and a half, the site of Landevenneg had seven successive owners. From 1825 onwards, the old abbey was reduced to ruins. However, at the beginning of the 20th century the Christian conscience of the Bretons became increasingly scandalized by these venerable ruins. One important factor was a monastic community, founded in 1878 near Landevenneg, at Kerbénéat, which recognized in the restoration of Landevenneg a compelling mission on its doorstep. Secondly, the Breton cultural movement Bleun-Brug, founded in 1905, started a campaign for the restoration of the site. Finally, in 1950 the monks bought back the property with financial and moral support from all parts of Brittany. They began a programme of rebuilding and reconstruction, whose crowning achievement was the inauguration of a new monastery and, subsequently, in 1965, the consecration of its church.

Today, still under the patronage of St Gwennole, a community of 30 monks pursues a tradition of more than a thousand years of prayer, work, and brotherly life. In 1981 Landevenneg founded a daughter house in Haiti with seven brothers, the Morne Saint Benoît. In 1985, celebration of the traditional 1500th anniversary of the original abbey was marked by a programme of religious and cultural events.

language (revival) movements in the Celtic countries

All the modern Celtic languages—BRETON, CORNISH, IRISH, MANX, SCOTTISH GAELIC and WELSH—have, since early modern times, required efforts to ensure the survival of communities of native speakers. In the case of Cornish and Manx, special efforts have been required to re-establish such communities. As with many smaller languages in Europe, Celtic language movements emerged as part of 19th-century NATIONALISM, and it is due in no small measure to the activities of 'language nationalists' that the Celtic languages have survived at all, or are being revived. The process of language reproduction (transmission from one generation to the next) in minority settings has been an important sub-field of the academic discipline of sociolinguistics since the Second World War (Fishman, *Reversing Language Shift*). From the mid-20th century onwards, Celtic language movements have increasingly benefited from the conclusions drawn from sociolinguistic research (Fishman, *Can Threatened Languages Be Saved*).

MBL

language (revival) movements in the Celtic countries [1] Ireland

§1. LANGUAGE MOVEMENTS PRIOR TO 1922

During the 18th and early 19th centuries, IRISH was widely spoken, particularly in rural Ireland (ÉIRE). Just before the Great FAMINE (1845–50), the numbers of Irish speakers were probably at their highest in history in absolute terms, though under 45% as a proportion of the population. By the mid-19th century, the population itself had declined, and the percentage of the population who spoke Irish had declined to just under 30% (Fitzgerald, PRIA C 84.117–35).

Although several learned societies concerned with the Irish language had been founded in pre-Famine Ireland, their main concern was with the early literature and ancient documents of Ireland. However, a more active concern with the decline in the numbers of Irish speakers developed in the post-Famine years, and the Society for the Preservation of the Irish Language (CUMANN BUAN-CHOIMEÁDTA NA GAEILGE) was established in 1876. Its objectives were broadly to encourage the use of Irish, to promote the growth of a modern literature in Irish and to advocate the teaching of Irish in primary schools (see EDUCATION). A splinter group, the Gaelic Union, emerged in 1879 with the aim of promoting Irish in secondary schools by producing cheap school books in Irish. Three years later *The Gaelic Journal*, which marked 'a turning point in the entire language movement', was founded (Ó hAilín, *View of the Irish Language* 91–100). With David Comyn as its first editor, it was an important catalyst in the development of a modern Irish prose style.

The most influential language organization in the 19th century—the Gaelic League (CONRADH NA GAEILGE), established in 1893—went beyond the objectives of earlier organizations. Its founding members included Douglas Hyde (Dubhghlas DE HÍDE), David Comyn, Eoin MACNEILL, and Fr. O'Growney (An tAthair Eoghan Ó Gramhnaigh). The Gaelic League was not simply concerned with trying to preserve the Irish language, but rather with its revival in areas where it had ceased to be spoken, and with the creation of a new modern literature in Irish (see IRISH LITERATURE). Organizationally, the Gaelic League was modelled on the lines of mass political and social movements rather than learned societies (McCartney, *Milestones in Irish History* 117–27). Within 15 years of its foundation, some 950 branches (with an estimated membership of 100,000) had been established. As the movement developed, the basic shape emerged of what later became the language policy of the new Irish Free State, with a strong emphasis on education policy, teaching methods, teacher training, developing a standard language and promoting a creative literature, securing the employment of competent Irish speakers in the public service and maintaining the Irish-speaking heartland. The term 'revival' was used to express this expansionist thrust, but there is no evidence that the League understood it to imply the displacement of English (Ó Cuív, *View of the Irish Language*). In fact, its policy statements clearly envisaged a bilingual society.

By 1917, the political independence movement incorporated the Gaelic League among its elements (see IRISH INDEPENDENCE MOVEMENT). Not surprisingly, therefore, the new native government in 1922 adopted a broad strategy to enhance the social and legal status of Irish, to maintain its use in areas where it was still spoken and to promote and revive its use elsewhere.

§2. LANGUAGE POLICY SINCE 1922

The magnitude of the task was revealed by the census of 1926. Only 18% of the population were returned as Irish speakers, nearly half of which lived in scattered bilingual or monolingual communities along the western and southern coasts (collectively referred to as the GAELTACHT). The remaining Irish speakers, most of whom had learned the language at school, lived in largely English-speaking communities.

The Gaeltacht. In strictly economic terms, state-sponsored socio-economic development in the Gaeltacht has had an appreciable measure of success since 1970. Following a long period of decline, population levels have increased again and non-agricultural employment has grown. However, the progressive shift to English continues. While community use of Irish remains very much higher than the national average, the Gaeltacht

now accounts for less than 2% of the national population, the communities are very fragmented and a sizable minority of the residents in these areas do not use Irish at all.

Education. The maintenance of relatively stable rates of bilingualism over recent decades is mainly due to the capacity of the schools to produce competent bilinguals. Most Irish children learn Irish as a subject in both primary and post-primary school, but, despite some 13 years' experience in the case of the average child, these programmes produce only a small number of fully competent active users of Irish. Paradoxically, in a period when Irish-language policy in the schools generally is experiencing considerable difficulties, the number of Irish immersion primary schools in English-speaking areas continues to grow. In 1981, there were 28 such schools; at present, there are over 100.

Media and Cultural Life (see also MASS MEDIA). An Irish-language radio station was established in 1972, and an Irish-language television service commenced broadcasting in 1996. There are two weekly newspapers in Irish (see FOINSE; LÁ), and some national and regional newspapers regularly carry Irish-language material. There is a lively literary scene in Irish, and about 100 books are published annually. There are occasional theatrical productions in Irish in the main cities, with one theatre exclusively dedicated to putting on plays in Irish (see TAIBHDHEARC NA GAILLIMHE). Core audiences and readerships reflect the low levels of social use of Irish, but sizable minorities (*c.* 20%) take an infrequent but consistent interest.

§3. THE IRISH LANGUAGE IN 2000

Although the population of the Gaeltacht has declined in both absolute and relative terms, there has been a gradual, but continual, revival in the ratios of Irish speakers in other regions. In the 1996 census, 1,430,205 people were returned as Irish speakers. This represented 43.5% of the population of the Irish Republic, and is encouraging compared with 18% in 1926.

However, national language surveys, most recently in 2000, suggest that census statistics overestimate the numbers fluent or nearly fluent in Irish, and that a more realistic figure would be about 10%. They further indicate that fewer than 5% of the national population use Irish as their first or main language, while a further 10% use Irish regularly, but less intensively.

Public Attitudes. A majority of the Irish public perceive the Irish language as having an important rôle in defining and maintaining national cultural distinctiveness. Thus, the general population is willing to accept a considerable commitment of state resources to support the Irish language and its survival. This even includes the implementation of legal requirements on certain groups within the society, such as teachers and civil servants, to ensure their continued ability to use Irish in their work. Although a majority of the Irish public would appear to espouse some form of bilingual objective, it would also appear that the proportion holding the revival position as traditionally understood has slipped during the 20th century.

While the effort to re-establish Irish as a national language has not been successful, neither can the impact of Irish language policy be described as negligible. Since 1922 there has been some real measure of maintenance and revival, and the pattern of bilingualism has consequently expanded. However, the long-term future of the Irish language is no more secure now than it was then.

Pádraig Ó Riagáin

language (revival) movements in the Celtic countries [2] Scotland

Compared to similar initiatives in Ireland (ÉIRE) and Wales (CYMRU), SCOTTISH GAELIC revival movements have always been frail and marginal. Without doubt, this weakness is related to the lack of a nationalist impulse in the Gaelic movements: Gaelic has largely been seen as a Highland phenomenon, and not as an essential or central component to the national identity of Scotland (ALBA) as a whole.

Scottish Gaelic revival movements trace their origins to the late 18th century, and can be connected to comparable intellectual and political initiatives elsewhere in Europe during this era. In Scotland, however, the Ossianic controversy gave particular force to these efforts (see MACPHERSON; OISÍN): the authenticity and value of the Gaelic tradition had been challenged and attacked, prompting efforts at 'the vindication of the Gael'. Gaelic societies were founded in London (1777), Glasgow (GLASCHU, 1780), Edinburgh (DÙN ÈIDEANN, 1784), and elsewhere.

Gaelic revival efforts must be considered against the background of chronic economic hardship and population decline in the Gàidhealtachd (Gaelic-speaking region; see HIGHLANDS). The 19th century witnessed the CLEARANCES and mass emigration; the 20th saw the catastrophes of world war and ongoing economic stagnation. Cultural self-confidence was in short supply, and efforts at cultural assertion or self-defence were fragile. Although mainstream cultural nationalism in 19th-century Scotland made much use of the trappings of Gaelic culture—tartanry and the like—little interest was expressed in the language of the Gaels.

Political activism in the Gàidhealtachd became more forceful in the later decades of the 19th century, particularly in connection with the LAND AGITATION in defence of tenants' rights. There was also a linguistic dimension to these struggles: for example, the total exclusion of Gaelic EDUCATION from the Education (Scotland) Act 1872, which established state education in Scotland, prompted a vigorous defensive campaign among activist Gaels. These activists correctly perceived that forced education of Gaelic monoglots in what remained essentially a foreign language would have a powerfully detrimental effect on the maintenance of the language. Although some scope for Gaelic was conceded from 1905 onwards, these campaigning efforts were largely unsuccessful, and Gaelic education remained marginal until the end of the 20th century.

Another important revival initiative of the late 19th century was the campaign for a Chair of Celtic in the University of Edinburgh. The key player was John Stuart Blackie, Professor of Greek in the university and an enthusiastic learner of the language. Fundraising campaigns were conducted throughout the Gàidhealtachd, with thousands of ordinary crofters contributing to the cause. The campaign proved successful, with Donald MacKinnon being appointed to the new Chair in 1882.

The creation of An COMUNN GAIDHEALACH (The Gaelic League) in 1891 was an important milestone, since this was the first organization founded with the objective of defending and promoting Gaelic culture. An Comunn has been hampered from the outset, however, by its explicitly non-political stance, and it never succeeded in inspiring a broad-based language movement of the kind which emerged in other CELTIC COUNTRIES.

In the early 20th century, revival efforts in a different vein involved literary and cultural initiatives by Gaelic intellectuals, notably Ruairidh Erskine of Marr and Angus Robertson, who endeavoured to modernize the language in various respects. These efforts were followed by the 'Scottish Renaissance' of the 1920s and 1930s, when writers and activists such as Hugh MacDiarmid took a keen interest in Gaelic and relocated it within a new nationalist discourse.

A new burst of energy appeared in the 1960s and then intensified during the 1970s and 1980s. This renewed vigour can be understood as part of the 'ethnic revival' witnessed in peripheral regions of Europe and elsewhere. Several campaigning groups—Comunn na Cànain Albannaich (League of the Scottish language), Ceartas (Justice), Strì (Struggle)—were founded, most of them short-lived but nevertheless influential. Welsh-language campaigning was an inspiration to activists who marched for more Gaelic broadcasting or painted out English-only road signs.

Government funding of Gaelic organizations, including An Comunn Gaidhealach and the Gaelic Books Council (Comhairle nan Leabhraichean, founded 1968) began in the mid-1960s; from this point, it can be said that the maintenance of Gaelic became an objective of government policy. It is now customary to speak of a 'Gaelic Renaissance' in Scotland from the early 1980s onwards. The roots of this renaissance can be traced back to the 1960s and 1970s, but matters gathered pace rapidly during the 1980s across a range of fields, notably in education but also in broadcasting, arts and culture. Substantially increased government funding was an important factor in the success of these initiatives.

Local government reorganization in 1974 meant that the Western Isles, the strongest Gaelic-speaking area, became a distinct political entity for the first time, with its own local authority, Comhairle nan Eilean (Council

of the Isles). The Comhairle quickly introduced a bilingual policy and began a bilingual project in the schools. This was the first time that Gaelic had really been used in the educational system in Scotland to any meaningful extent. This project led to the opening of the first Gaelic-medium primary school units in 1985, an initiative which has now spread throughout the country; more than 2000 schoolchildren are now being educated through the medium of Gaelic. Sabhal Mòr Ostaig, the Gaelic college on Skye (Sgiathanach), once the site of disused farm buildings and now a degree-granting institution within the University of the Highlands and Islands (Oilthigh na Gaidhealtachd 's nan Eilean) with state-of-the-art facilities and unique architecture in a striking landscape, has been a flagship of Gaelic development (see EDUCATION).

Since the mid-1990s, however, positive momentum has clearly diminished, most obviously regarding the slowdown in the growth of Gaelic-medium education, and the lack of progress has led to a pervasive sense of frustration among Gaelic activists. The key criticism involves the lack of a secure legal basis to underpin Gaelic development efforts, and campaigners have pressed for a Gaelic Language Act based on Welsh legislation. To date, these aspirations remain unfulfilled; substantive policy initiatives from the Labour government, elected in 1997 at the UK level, are still awaited. The creation of the devolved Scottish Parliament and Scottish Executive in 1999 have not yet resulted in any major developments in Gaelic policy, an outcome which should be unsurprising, given the lack of any meaningful connection between Scottish national(ist) movements and Gaelic revivalism over recent centuries (see NATIONALISM).

Wilson McLeod

language (revival) movements in the Celtic countries [3] Isle of Man

Academics have been too hasty in declaring the death of the Manx Gaelic language alongside that of its last traditional native speaker, Ned Maddrell, in 1974. In fact, the continued decline in the Manx Gaelic-speaking population throughout the 19th and much of the 20th century has been countered so successfully that, in September 2002, a Manx Gaelic-medium class was established.

An awareness of the decline of Manx Gaelic was expressed in the press in the 1820s when letters to the editor argued either for its retention or discontinuation. Nevertheless, apart from occasional Manx societies, which were more concerned with religious education than the promotion of Manx Gaelic as a community language, it was not until the 1880s that the language revival movement gained significant momentum. Once again, letters and articles in and about the language in the Manx press effectively led to the founding of the Peel Manx Society, followed soon afterwards by the establishment of Yn Cheshaght Ghailckagh (YCG; The Manx Language Society) in 1899.

The society aims to preserve and promote the language and its associated culture. Its efforts to introduce Manx Gaelic to the school curriculum in 1905, with Manx scholar J. J. Kneen as the teacher, were, however, short-lived. Nevertheless, it continues to provide an important focus for the revival in the 21st century.

The first half of the 20th century saw Manx Gaelic being taught largely on a voluntary basis, and reliant on primers associated with Yn Cheshaght Ghailckagh by Goodwin and Kneen, for example (see DICTIONARIES AND GRAMMARS). Youth movements such as Aeglagh Vannin, itself inspired by Urdd Gobaith Cymru, included Manx Gaelic in their programmes of activity.

From the 1930s, a small group of language activists (Mark and Tom Braide, Walter Clarke, Charles Craine, Douglas Fargher, Leslie Quirk and William Radcliffe) sought out the last native speakers in order to achieve fluency in the language, making recordings in the 1950s. In this way, a sense of continuity has been maintained between past and present speech communities.

Eamonn de Valera met Ned Maddrell on a visit to the island in 1947, which prompted him to request the Irish Folklore Commission to make recordings of the last native speakers. This was followed in turn by the Manx Museum's Manx Folklife Survey (1940–70), which effectively provided comment on the language as remembered for the period *c.* 1910.

Yn Cheshaght Ghailckagh was given a new injection of life with the organization of Oieghyn Ghaelgagh

(Manx language nights) in the early 1970s, and the publication of new material. The official support which had been lacking to the revival came as a result of a motion to TYNWALD by Charles Cain MHK in December 1984, proposing that: 'Manx Gaelic should be supported and encouraged by all agencies of Government and Boards of Tynwald . . .' This led to the formation of the Select Committee on the Greater Use of Manx Gaelic, whose report was presented to Tynwald in July 1985, marking the beginning of a new era in the revival of the language. Coonceil ny Gaelgey, the Manx Gaelic Advisory Council, was established to provide official translations.

Manx Gaelic teaching in schools was realized in January 1992 on a peripatetic basis under the direction of Dr Brian Stowell and was funded initially by the Manx Heritage Foundation. At that time, 20% of the whole school population expressed a wish to learn the language. The programme has expanded to offer GCSE and A-level equivalent courses.

The year 1997 saw the significant step of establishing a Manx Gaelic-medium playgroup, Mooinjer Veggey (Little people), out of which came demands for the establishment of Manx medium primary education. The Manx Heritage Foundation continues to support the language, most notably in the form of Yn Greinneyder (Manx Language Development Officer).

Two major steps were also seen in 2003: the Manx Government's announcement on 14 February that the European Charter for Regional or Minority Languages would extend to the Isle of Man (ELLAN VANNIN), and the inclusion of aims for the language in the Government Plan (2003–6).

language (revival) movements in the Celtic countries [4] Wales

The WELSH language movement encompasses all the individuals and organizations who maintain that the Welsh language is worth preserving, reviving, and extending its domains of use. Most prominently, those participating in the language movement have been people who identify themselves as Welsh and who have a strong sense that the language is necessary to Welsh identity. Throughout its history, the language movement in Wales (CYMRU) has been closely associated with the idea of Welsh nationhood (see NATIONALISM). From the later 20th century, the movement has also benefited from shifting international attitudes increasingly sensitive to, and supportive of, cultural and linguistic diversity. On the other hand, new technological developments and the pressure on state organizations and institutions to control costs (by cutting down on Welsh-language provisions) mean that there will always be a rôle for the language campaigner in Wales.

§1. ANTIQUARIAN BEGINNINGS

The roots of the Welsh language movement lie in romantic nationalism and the efforts of the cultural intelligentsia within the Welsh middle classes to prove that Wales possessed native traditions and national institutions, and should therefore be considered a distinct nation (Morgan, *Eighteenth Century Renaissance*). The beginnings of the movement can be traced to London (Welsh Llundain), where, in 1751, the Honourable Society of CYMMRODORION was founded 'to cultivate . . . a Language so excellent in itself, so fruitful in many venerable and undoubted Monuments of Antiquity, . . . and to make it more thoroughly and generally understood' (Jenkins & Ramage, *History of the Honourable Society of Cymmrodorion* 229). In 1771 the more radical Gwyneddigion Society, which pursued similar aims, was established. The first Cymmrodorion Society came to an end in 1789, but was resurrected in 1820. The main aim of this newly formed society was to support the Cymmrodorion societies which had sprung up in centres throughout Wales and their regional eisteddfodau (Welsh literary and cultural competitions). The early efforts of these societies led to the preservation and publication of early manuscripts of great philological importance (see CELTIC STUDIES), the revival of the Welsh EISTEDDFOD, and the honing of the language as a tool of modern expression through the coining of new words for modern concepts, orthographic reforms, and exploring the early stages of the language.

§2. THE MODERN LANGUAGE MOVEMENT

Following the introduction of an English state-school system in 1870 and the mass in-migration of English-speaking workers into the coalfields of Wales, the Welsh language became increasingly relegated to the home and family life. The growing impact of the state on citizens' lives and the inclusion of a question relating to the Welsh language in the British census from 1891 onwards raised awareness of the state of the language, which was excluded from prestigious social groups and the social domains connected with them and was threatened by numerical decline in the face of the English language. However, owing to the absence of national institutions, it became the primary symbol of Welsh nationality, the key to its literature and traditions. This status was reinforced in the 20th century when it became obvious that Nonconformity, as a *de facto* 'national religion' in Wales, was on the wane (see CHRISTIANITY). The decline of Welsh as the most obvious remaining sign of nationhood sparked off a modern language movement which would concentrate on the cultivation of Welsh as a spoken and written language, the achieving of legal status for the language and its introduction as a medium of EDUCATION, the survival of its publishing industry, and its use in the electronic MASS MEDIA. After the Second World War, methods derived from the American civil rights movement were adopted, especially by the Welsh Language Society (CYMDEITHAS YR IAITH GYMRAEG), and new initiatives focused on adult learners of Welsh and the preservation of Welsh-speaking communities.

§3. CULTIVATING WRITTEN AND SPOKEN WELSH

The third Cymmrodorion Society (1873) was no longer dominated by antiquarians. It was a national body and an important institutional participant in the National Eisteddfod (EISTEDDFOD GENEDLAETHOL CYMRU), which had, by this time, become a national institution, focused on developing the Welsh language in all fields of life. The Dafydd ap Gwilym Society (Cymdeithas Dafydd ap Gwilym, 1886) sprang up among the nationally minded students and scholars of Oxford (Welsh Rhydychen). This society went on to develop a Welsh orthography which became the basis for the principles of the University of Wales *Orgraff yr Iaith Gymraeg* (Orthography of the Welsh language, 1928), and which remains the authoritative standard today. From the end of the 19th century a new wave of local Welsh societies organized Welsh lectures, concerts, and St David's Day celebrations (see DEWI SANT). These societies also began to conduct local campaigns for the use of the Welsh language in schools, libraries, law courts, and administration. The sheer numbers of their total membership—the Cardiff Cymmrodorion, for instance, counted over 1200 members in 1909—made them a force to be reckoned with. In 1913 they joined forces by forming the National Union of Welsh Societies (Undeb Cenedlaethol y Cymdeithasau Cymraeg). This organization was active until 1942 and, during its heyday, boasted over 80 member societies with an aggregate membership of about 10,000 (Löffler, THSC 1997.124–52).

Other organizations emerged to provide for specific groups of Welsh speakers. Urdd Gobaith Cymru Fach (The league of hope of dear Wales) was founded in 1922 to ensure the continued use of Welsh among children and teenagers. It took until 1967 for a similar organization for Welsh women to emerge, when a Welsh-speaking Women's Institute, dissatisfied with the organization's English-only policies, seceded to establish a Welsh-medium society. A year later, Merched y Wawr (Women of the dawn) became a fully-fledged national organization with its own periodical, *Y Wawr* (The dawn). By 1996, Merched y Wawr had 280 branches with *c.* 7500 members. In order to attract younger women, Clybiau Gwawr (Clubs of the dawn) were also launched.

§4. LEGAL STATUS FOR THE WELSH LANGUAGE

The agenda of the language movement in 20th-century Wales has attached primary importance to gaining legal status for the Welsh language. Clause 17 of the 1536 Act of Union had effectively banned Welsh from public administration and the courts of law at a time when the overwhelming majority of the inhabitants of Wales spoke Welsh only (see ACTS OF UNION). At the beginning of the 20th century, Welsh speakers still had no right to use their native language in the courts. When the use of Welsh was later permitted, translation costs were charged to the individual. Following a period of local campaigning and a parliamentary report unfavourable to the cause, a united movement comprising the National Union of Welsh Societies, Plaid Cymru (the Party of Wales), and the Welsh League of

Youth (Urdd Gobaith Cymru) arose in 1938 to collect signatures on a petition to the British parliament demanding official status for the Welsh language. The petition, with 365,000 signatures, was presented to the House of Commons in 1941, and led to the passing of the Welsh Courts Act 1942, which reconfirmed English as the official language of Wales (Andrews & Henshaw, *Welsh Language in the Courts* 98–9). Further campaigns conducted in the 1960s, most notably by the Welsh Language Society established in 1962, led to the passing of the Welsh Language Act 1967. This Act provided that in the courts of Wales 'anything done in Welsh . . . shall have the like effect as if done in English', but added that in cases of doubt the English version of a document should prevail (*Welsh Language Act 1967* 3). State agencies were still under no obligation to provide Welsh-language services. The 1967 Act's limited provisions for official equal status for Welsh triggered further campaigns, which were to continue for the following 25 years, until the passing of the currently valid Welsh Language Act 1993. This legislation provided that 'in the conduct of public business and the administration of justice in Wales the English and Welsh languages should be treated on the basis of equality', though this principle was considerably weakened by the nebulous qualifying clause 'so far as is both appropriate in the circumstances and reasonably practicable' (*Welsh Language Act 1993* 3). The Act also established Bwrdd yr Iaith Gymraeg (The Welsh Language Board). Because of the limited scope of this Act, which places no obligation on the private sector and does not require even state organizations to produce all their material bilingually, a fresh campaign for all-encompassing legislation has been underway since the mid-1990s.

§5. welsh-medium education

The first society to campaign for the introduction of Welsh into the curriculum was the Society for the Utilization of the Welsh Language, founded at the Aberdare National Eisteddfod in 1885 and renamed Cymdeithas yr Iaith Gymraeg (The Welsh language society) in 1901 (Hughes, *Arloeswr Dwyieithedd*). It was followed in 1927 by the first Union of Welsh teachers (Undeb Athrawon Cymreig), in whose periodical, *Yr Athro* (The teacher), schemes for teaching subjects such as chemistry through the medium of Welsh were introduced for the first time. The current Undeb Cenedlaethol Athrawon Cymru (The national union of teachers of Wales) came into existence in 1946.

Following the Second World War, campaigning took on a new intensity, and the state responded by increasing its provision of Welsh-medium education. The first Welsh-medium school, a private venture, had been founded in Aberystwyth in 1939 on the initiative of the cultural nationalist Ifan ab Owen Edwards, and the pressure group Mudiad Ysgolion Cymraeg (Welsh schools movement, renamed Rhieni dros Addysg Gymraeg/Parents for Welsh Medium Education in 1984) was founded. It campaigned so successfully for the establishment of Welsh-medium schools within the state sector that, by 1997, there were 445 Welsh-medium primary schools, with 50,398 pupils, and 50 secondary schools, with 34,566 pupils. Efforts to develop Welsh-medium pre-school education coalesced in 1971 with the establishment of Mudiad Ysgolion Meithrin (The Welsh pre-school movement), which, in 1997, was responsible for 570 Cylchoedd Meithrin (playgroups), and 386 Cylch Ti a Fi (mother and toddler groups) (Aitchison & Carter, *Language, Economy and Society* 140). Since 1999, the organization Twf: magu plant yn ddwyieithog/Raising children bilingually, which is administered by the language company Cwmni Iaith Cyf. on behalf of the Welsh Language Board, is responsible for promoting raising children bilingually from birth. Its activities range from providing workshops for midwives and health visitors to developing bilingual games and providing language statistics.

Discussions held during the 1950s concerning the feasibility of establishing a Welsh-medium college petered out without result, and a policy of concentrating higher education through the medium of Welsh at the university colleges of Aberystwyth, Bangor (Gwynedd) and, later, Carmarthen (Caerfyrddin), was adopted. In 1979 the Welsh Language Teaching Board was founded to oversee such provision. However, by the 1990s, Welsh-speaking students increasingly felt that provision for them was still inadequate, and began a protest campaign to improve the situation. Despite numerous rallies and demonstrations, no major improvements had been achieved by the first years of the new millennium, apart from a concession from the Welsh Assembly's Minister for Education to re-examine the proposal of a 'Federal College' (Richard Wyn Jones,

Failure of the University of Wales 9; see also CYNULLIAD CENEDLAETHOL CYMRU).

§6. PUBLISHING AND THE MASS MEDIA

During the 19th century, the Welsh press experienced a 'golden age' unparalleled by any other Celtic language, but it faced steep decline in the first half of the 20th century. Inter-war efforts to generate a revival, beginning with annual book festivals held by the National Union of Welsh Societies and book-selling campaigns by Urdd Gobaith Cymru, eventually led to the establishment of the Welsh Books Council (Cyngor Llyfrau Cymraeg, later renamed Cyngor Llyfrau Cymru) at Aberystwyth in 1964. Compared with similar initiatives for other minority languages, the Welsh Books Council has been extremely successful in sponsoring publications in the Welsh language and English publications relating to Wales, as well as organizing their distribution (D. R. Thomas, *Contemporary Wales* 9.40–55). Publishing a daily paper, however, has proved difficult. With *Y Byd* (The world), such a paper is planned for 2005.

The growth of Welsh-language mass media has often been described as one of the success stories in the world of lesser-used languages, but, when the BBC began transmitting radio programmes in 1923, regular Welsh-language broadcasts were not planned. As late as the the 1970s, only around 15 hours of Welsh broadcasts per week were provided. However, energetic campaigning by numerous societies and individuals, led by the Welsh Language Society, resulted in the establishment in 1979 of Radio Cymru, which was broadcasting around 112 hours of Welsh-language programmes per week by the end of the 1990s. Major restructuring of schedules in 1998, however, resulted in the introduction of more English-language songs and more frequent use of English words and phrases in these programmes. This sparked the formation of the pressure group Cylch yr Iaith (The language circle), whose aim is to preserve the integrity of the existing Welsh-language service.

Decades of campaigning for a Welsh-language television channel came to a head in 1980 when Gwynfor EVANS, then president of Plaid Cymru, threatened to go on hunger strike over the matter. The campaigners were successful and Sianel Pedwar Cymru (S4C) began transmitting programmes in November 1982, and was broadcasting *c.* 30 hours of Welsh television per week, 80% at prime time, by 1998.

§7. ADULT LEARNERS OF WELSH

During the course of the 20th century, but especially in its second half, interest in learning Welsh by monoglot English speakers in Wales has grown, taking its inspiration from the revival of Hebrew as a spoken language after the Second World War. Urdd Gobaith Cymru paved the way by introducing the rank of *dysgwr* (learner) in 1932 in order to enable children who were learning Welsh to join the organization. The movement was boosted when the poet, academic, and prominent Welsh learner, R. M. (Bobi) JONES, published his *Cymraeg i Oedolion* (Welsh for adults) in 1965–6. Among the host of local initiatives and language classes, the organization CYD (Welsh speakers and learners together), founded in 1984, stands out. It organizes language courses and leisure activities through the medium of Welsh, mainly for adult Welsh learners, and runs the *Dysgwr y Flwyddyn* (Learner of the year) competition at the National Eisteddfod of Wales. In 1978 a consortium of local people and organizations on the Llŷn peninsula in GWYNEDD converted the quarrying village of Nant Gwrtheyrn into a language-learning centre which offers courses and accommodation for children and adults.

§8. WELSH-SPEAKING COMMUNITIES

In the 1970s Welsh-language organizations began to explore the link between economic infrastructure and language decline, especially in rural areas—out-migration of young Welsh speakers because of lack of employment and affordable housing with parallel in-migration of affluent English speakers—in order to counteract these underlying causes. This led to the establishment of organizations such as Adfer (Restoration) in 1975, which bought houses to restore and rent to Welsh speakers at affordable prices, and to the Welsh Language Society's campaign, *Nid yw Cymru ar werth* (Wales is not for sale), against the sale of houses in Welsh-speaking areas as second homes (Llywelyn, *Welsh and their Country* 244–52). In 1989 the 'designated Welsh language economic development agency' Menter a Busnes was set up with the brief 'to maximise the economic potential of Welsh speakers' (Price, *Economic Development and Lesser Used Languages* 89). In its wake

came the establishment of various Mentrau Iaith (Language ventures), which conduct surveys on the relationship between the local economy and language use, assist Welsh speakers in establishing or developing businesses, and support firms in search of a bilingual policy. By 2004, 25 such regional language ventures had been launched.

Following in the footsteps of Cymdeithas yr Iaith, the organization Cymuned (Community) was founded in 2001 to counter the threat posed to the remaining Welsh-speaking communities by the substantial influx of English speakers and the lack of employment for local people. Their slogan 'Tai, Gwaith, Iaith' (Houses, work, language), highlights their approach. Cymuned's aims include stemming the in-migration of English speakers, preventing the sale of housing stock as holiday homes, helping incomers to learn the Welsh language and galvanizing the resources within the communities.

language (revival) movements in the Celtic countries [5] Brittany

Interest in the Celtic west in the European ROMANTICISM of the 19th century paid special attention to Brittany (BREIZH) and was thus partly instrumental in the creation of the first *emsav* (language revival movement), which lasted until the First World War. As in other parts of Europe, romantic NATIONALISM stimulated, and was in turn stimulated by, progress in the modern sciences of linguistics and the study of literary texts. By the 1820s, Le Gonidec (Ar Gonideg) had fixed and codified the grammar, syntax, and spelling of BRETON. Throughout the following century, philologists such as Joseph LOTH, Émile ERNAULT, and Frañsez Vallee continued his work, and unified the spelling of three of the four main BRETON DIALECTS.

BARZAZ-BREIZ, a compilation of Breton BALLADS published in 1839 by Kervarker (Hersart de LA VILLEMARQUÉ), was an important milestone for literary modernism in Brittany, coinciding with the starting point of recent BRETON LITERATURE. Subsequently, modern poetry, plays, and other works were published by Brizeux, Yann-Ber Calloc'h (Bleimor), Loeiz Herrieu, and Tanguy Malmanche.

The literary revival was accompanied by a strengthening of cultural contacts with the other CELTIC COUNTRIES, symbolized by Celtic congresses and the creation of the Gorsedd des bardes de Bretagne (GOURSEZ) in 1901 (see PAN-CELTICISM). It also coincided with the birth of a culturally self-conscious Breton press. The most influential magazines of the period were *Feiz ha Breiz* (Faith and Brittany), *Kroaz ar Vretoned* (The cross of the Bretons), and *Dihunamp* (Let us awake!), and political magazines such as *Breiz Dishual* (Free Brittany).

The first of many petitions in favour of the teaching of Breton was organized in 1870 (see EDUCATION), but was ignored by France's highly centralized government, which banned the use of Breton in both school and church at the very beginning of the 20th century.

Roparz HEMON, a writer of short stories, novels, and dictionaries, as well as a translator, essayist, and poet, dominated the second *emsav*, which lasted until the end of the Second World War. From 1925, he directed a new literary magazine, *Gwalarn*, in which many famous contemporary works were published. The writers who contributed to *Gwalarn* included Fañch Elies (Abeozen), Jakez RIOU, Youenn Drezen, as well as Roparz Hemon himself. Other publications, such as *Feiz ha Breiz*, *Dihunamb*, SAV and *Studi hag ober* (Study and work), also contributed to the linguistic movement.

During the German occupation of France, the Education Minister insisted on the unification of Breton across the four dialects before allowing the teaching of Breton in schools. The new orthography, devised in 1941 and known as *Peurunvan*, was widely adopted by the press, by writers and also by *Gwalarn*.

Language militants used the opportunity created by the occupation to give priority to Breton speakers for civil service posts in Brittany. Success in schools was limited but symbolic: Kerlann opened the first monolingual primary school, while state schools included the history and geography of Brittany in the curriculum and taught Breton for one hour per week. This created a new demand for schoolbooks, grammar books, dictionaries, and lexicons. New publishing houses were founded, including Skridoù Breizh (Publications of Brittany) and Presses Bretonnes de Rennes.

The Institut Celtique, created in 1941 and directed by Roparz Hemon, federated the various language initiatives. Roparz Hemon could also be heard for an hour each day on Radio-Rennes.

The end of the war in 1945 put a stop to this progress as the new French government reverted to its pre-war language policy. Furthermore, the post-war purge was used as a means to end all Breton initiatives, whether political, cultural, or linguistic. The leaders of the Breton movement were either arrested or went into exile. The Breton press was suspended. A handful of students, Ronan Huon, Per Denez, Youenn Olier, and Arzel Even, carried on the defence of the language, thereby triggering the third *emsav*. In 1946 *Al* Liamm (The link), a new monthly literary magazine directed by Ronan Huon, took the place of *Gwalarn*.

After the war, private initiative tried to remedy the lack of official Breton teaching: Skol Ober (Work school) and Skol dre Lizer (School through letters) offered correspondence courses and Kamp Etrekeltiek ar Vrezhonegerien (KEAV, Inter-Celtic camp for Breton speakers) organized summer camps. The cultural movement reorganized itself under Kendalc'h (Maintenance, holding together), which federated various associations, Celtic circles, and youth organizations.

In December 1950, the *loi Deixonne* was passed, which allowed a small amount of teaching of Breton in schools. However, this created a rift among language activists, since university authorities refused to recognize the orthography of Breton agreed upon during the occupation, and developed a new 'university spelling' (*skolveurieg*), adopted by a new publisher, Emgleo Breiz, by the writer Per-Jakez Hélias, and by the literary magazine *Brud*, later known as *Brud Nevez*, whereas *Kuzul ar Brezhoneg* (The Breton language council) published books and magazines in *peurunvan*. These included *Al Liamm* (for literature), *Preder* (Concern, consideration: philosophy and sciences), Hor Yezh (Our language: philology), *Skol* (School: pedagogy), *Gwerin* (Folk: folklore), *Barr-Heol* (High sun: Catholic review) and *Waning ha Wanig* (a magazine for children).

By the 1960s, there was a new kind of activism which often expressed itself through songs. *Festoù-noz* ('Night parties', an avenue for traditional songs and dances, sing. fest-noz), recitals of *kan ha diskan* songs (traditional two-singer ballads used as dance music; see breton music; dances), recitals, and singers such as Alan Stivell and Glenmor (Ar Skanv) rekindled pride in the language and culture of Brittany.

Lobbying in the 1960s and 1970s led to the Cultural Charter for Brittany (1978). The policy of regionalization in the 1980s allowed elected representatives to subsidize local initiatives. Bilingual road signs were erected, and, a few years later, Ofis ar brezhoneg (The Breton language office) was created to help with translations, new terminology and data collection.

The first network of monolingual Breton schools (Diwan) was opened in 1977. This now covers nursery, primary, and secondary education, and there are plans to develop a Breton-language university by 2005. At the time of writing, these schools do not have full public status. Other school networks, such as Div Yezh ('Two languages', public-sector schools) and Dihun ('Awake', Catholic schools) offer bilingual education. Although parental demand is high, the development of such schools is hampered by the lack of suitably qualified teachers.

Nowadays, there are numerous newsletters and magazines, and several publishers produce materials in the Breton language. Some 9000 adults are learning Breton, and undergraduate and postgraduate studies are offered at the universities of Rennes (Roazhon) and Brest. The theatre scene is lively, and radio and television stations broadcast daily in Breton (see mass media). However, language activists still have to rely on local initiatives and resources. Progress is steady, but slow, compared to the rapidly declining population of Breton native speakers.

language (revival) movements in the Celtic countries [6] Cornwall

Although the revival of the CORNISH language is often historically attributed to the end of the 19th and early 20th centuries, it may be more productive to assess the most recent revivalist impulse as part of a longer process of resistance against language and culture loss. Perhaps the first explicit movement devoted to the revival of Cornish occurred in the 18th century, when a group of Cornish scholars—among them John Keigwin, Nicholas Boson, and Thomas Tonkin—tried to prevent the loss of the language. They worked to collect and translate Cornish while it was still spoken as a community language.

In the 19th century, the first preservation and translation efforts can be seen in Edwin Norris's translation of *The* ORDINALIA (1859), Robert Williams's *Lexicon Cornu-Britannicum* (1865), and Frederick W. P. Jago's *The Ancient Language and Dialect of Cornwall* (1882) and *An English-Cornish Dictionary* (1887). Although these indicate a growing interest in Cornish, they were not designed to revive Cornish as a written or spoken language. The modern Cornish revival began in the 1870s, when the Newlyn-based Revd W. S. Lach-Szyrma (1841–1915) and Henry JENNER collected Cornish words still in use by Newlyn (Lulyn) fishermen in order to educate the wider public about the continuing existence of Cornish and to promote its wider usage.

Many 20th and 21st century revivalists date the start of the revival to the publication of Jenner's *Handbook of the Cornish Language* in 1904. This book was designed to continue Cornish in a form based on the period of its decline as a community language in the 18th century, but it is unclear whether or not Jenner ever intended the book to be used to revive spoken Cornish on a large scale. The real pioneer of revived Cornish is Robert Morton NANCE. He developed Unified Cornish in the 1930s with the express aim of creating a system of Cornish which would be easy to learn and appropriate for speakers and writers. He based Unified Cornish primarily on medieval texts, arguing that the medieval period represented a 'golden age' of Cornish usage, which was confident and linguistically unadulterated by English. Unified, therefore, became the standard for revived Cornish usage until the 1980s.

From the late 1990s advocates of the different forms have co-operated more fully in order to gain more public recognition and funding for the language. The three kinds of Cornish—Unified, Kemmyn, and Modern—may now be more profitably seen as different forms of the same language. External observers should bear in mind that the forms have more in common than their differences, and this has contributed to widening language use communities. In 2000 the Government Office for the South West ordered the first ever government assessment of the position of Cornish. This revealed continued growth of the language, as well as further integration of the language in public life and in the MASS MEDIA in Cornwall.

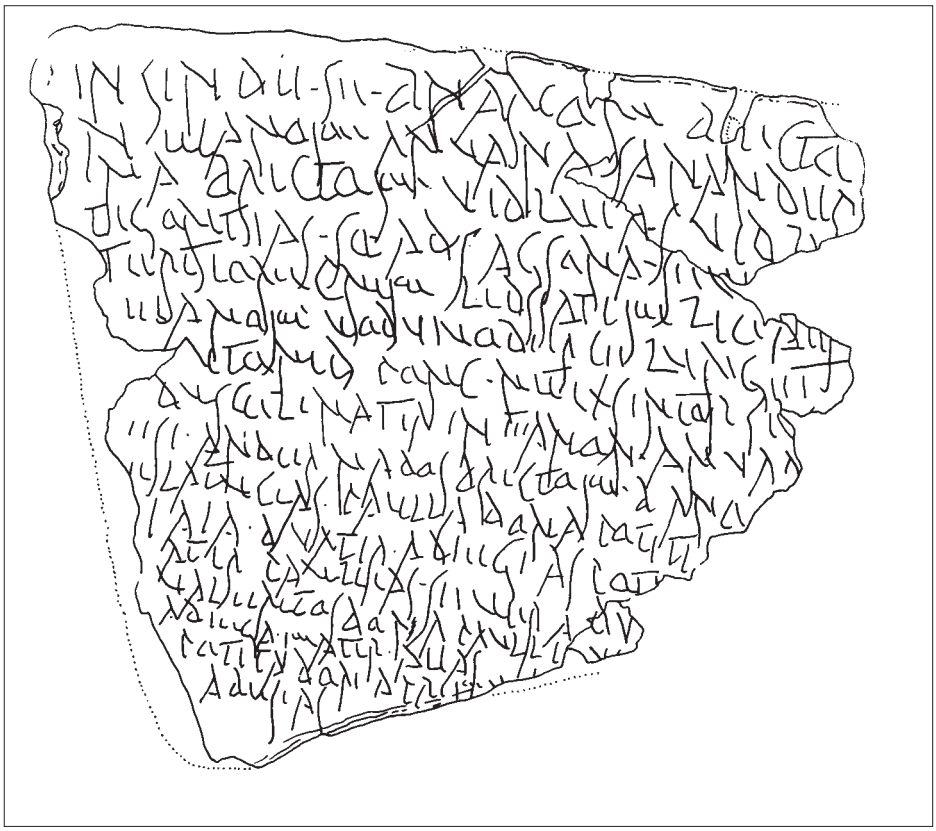
Larzac, more fully l'Hospitalet-du-Larzac, is the name of a village in southern France near which lies a GALLO-ROMAN burial ground, the find spot of two lead tablets of the later 1st century AD, discovered in 1983 lying atop a funerary urn and inscribed in Roman cursive script in the GAULISH language. The Larzac inscription—inscribed on both sides of the tablets—is to date the longest text in Gaulish. For a general description, see INSCRIPTIONS [1] §3. Although portions of the tablets have broken off, the text contains numerous words easily interpreted on the basis of the



Drawing of the Larzac tablet, inscribed in the Gaulish language in Roman cursive script, face 1a, after Lejeune et al., Études Celtiques 22 (1985), 106

better attested Insular Celtic languages: for example, *anuana* 'names' (cf. Old Breton sing. *anu*, pl. *enuen*), *indas mnas* 'these/the women' (Old Irish *inna mná*), and several kinship terms—*matir* 'mother' (OIr. *máithir*), *duxtir* 'daughter', probably also *atir* 'father', *dona* (perhaps meaning 'woman' and/or 'wife'). Interpretations thus far have focused on the likelihood that the text is preoccupied with the magical practices of a coven of women sorcerers; elements of the magical vocabulary of the inscription are discussed in the article on bricta. The following is the text of tablet face 1a (see illustration) and a tentative translation:

In-sinde se—: bnanom bricto |
n,—eianom anuana sanander |
na;—brictom uidluias uidlu[. .]
tigontias so. Adsagsona Seue*r*[*im*]
Tertionicnim lidssatim liciat*im*
e*i*anom uo-dui-uoderce-lunget.
utonid ponc ni-tiχsintor s*i*[*es*],
duscelinatia int(-)eanom anua*n*[*im*]
esi andernados brictom:
Bano[*na*] (*duχtir*)
Flatucias, Paulla dona Potiti[. .],
Ai[*i*]a duχtir Adiegias, Pot*i*[*tos*?]
atir Paullias, Seuera du[χ*tir*]
Ualentos dona Paulli*u*[. .],
Adiega matir Aiias,
Potita dona Prim[*i*] (*duχtir*)
Abesias

Herein: a magical incantation of women, their special infernal names, the magical incantation of a seeress who fashions this prophecy.

The goddess Adsagsona maintains Severa daughter of Tertiu in two cult offices, (as) their scribe(?) and offering maker.

Below, where they shall be impressed, the prophetic curse of these names of theirs is a magical incantation of a group of practitioners of underworld magic: Banona daughter of Flatucia, Paulla wife of Potitos, Aiia daughter of Adiega, Potitos father of Paulla, Severa daughter of Valens [and] wife of Paullos(?), Adiega mother of Aiia, Potita wife of Primos daughter of Abesa.

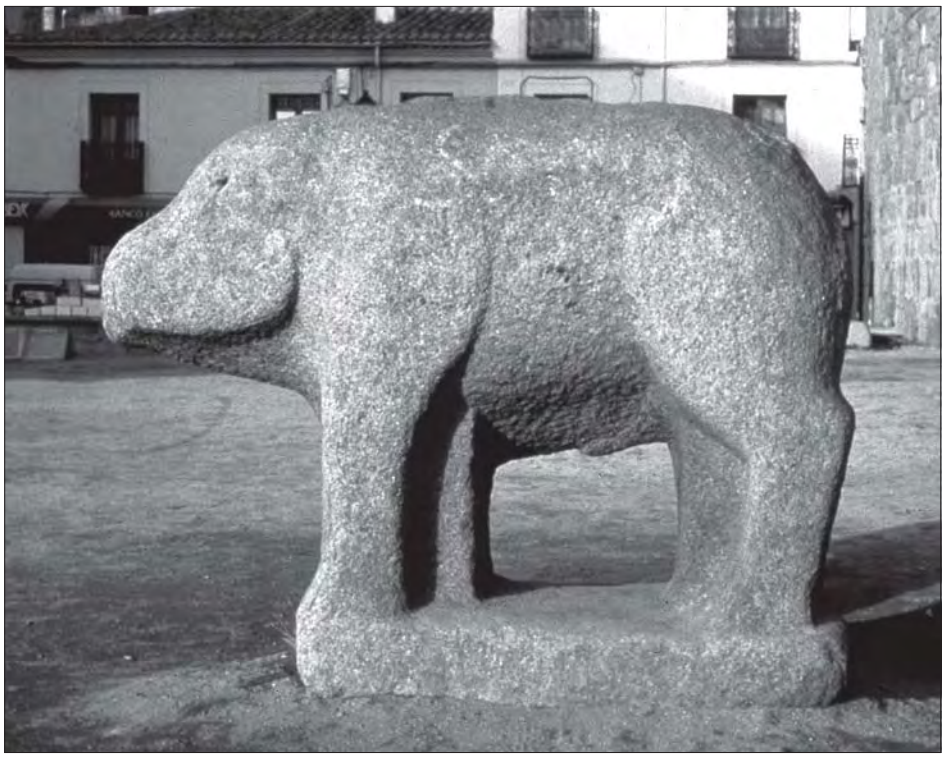
Las Cogotas (Cardeñosa, Ávila) is a pre-Roman *castro* (fort) on the granite upland above the river Adaja in the southern Meseta of central Spain (see IBERIAN PENINSULA). Excavated 1927–31 and in the 1980s, the site has three components: a fortified upper town surrounded by a high stone wall, a lower fortified area with stock enclosures and ceramic kilns, and an adjacent cemetery with at least 1600 cremated burials (Álvarez-Sanchís, *Los Celtas* 266–9).

Stratigraphy shows that the present *castro* (LC II) overlies an earlier settlement (LC I) in which there were distinctive handmade ceramics, with excised or incised geometric ornament. This ceramic type was widely distributed, both north and south of the area. Prior to the advent of C-14 dates (effectively in the 1980s) the pottery was a valuable chronological marker, and archaeologists still use the term 'Las Cogotas I' to identify a cultural phase which roughly corresponds to the Later Bronze Age, approximately the 12th to the 9th centuries BC. The area was strategically located for trade between the northern and southern Mesetas, and also had access to copper ores. These factors may have contributed to the widespread use of LC I ceramics, and would explain the presence of imported objects such as bronze axes and fibulae safety pins.

The second phase at Las Cogotas is represented by the *castro*, which is of standard type, around 15 ha (36 acres), at an altitude of 1156 m. The walls of the upper town are up to 10 m thick, and are defended on the shallower slope by *piedras hincadas* (*chevaux-de-frise*), an outer defence of sharp stones set vertically, a style of defence well known from other parts of Iberia, as well as from Wales (CYMRU) and Ireland (ÉIRE). This led some authors to suppose that the *castro* represented the arrival of new, possibly 'Celtic', people, who displaced the existing 'native' people (Romero Canicero & Jimeno Martínez, *Los Celtas* 183–7, 219–20). Current opinion, however, tends to see the new building techniques as simply a borrowing, on a par with the acquisition of ironworking or of free-standing stone sculpture.

The IRON AGE cemetery appears to have been divided into four zones, separated by empty areas, which may indicate a social geography. A study of 1469



One of the six massive granite sculpted 'verracos' (depicting a bull or a boar) from Las Cogotas hill-fort, Ávila, Spain, c. 400–200 BC

tombs showed that only 247 or 16.8% contained grave goods, and these were generally poor. The 'warrior' element in burials is less than one might expect for a fortified site, weaponry being found in only 3% of the graves. Spearheads, daggers, SHIELDS, and curved-foot fibulae were made of iron, while bronze was used mainly for annular fibulae, rings, and belt hooks (Kurtz, *La Necrópolis de Las Cogotas* 87, 157–72).

The Iron Age site shows none of the importance of its Late Bronze Age predecessor. The material culture from both the dwellings and the cemetery suggests that the *castro* was a small farming town, with an economy based on stock-rearing, occupied from the 8th century BC and abandoned in the 3rd century BC. Its functions may have been taken over by the town of Abula, modern Ávila, around 8 km upstream.

Whether or not this site was occupied, in part or in whole, by Celtic-speaking groups is open to question. In the historic period, this site was located in the territory of the tribe known as the Vettones, and later belonged to the Roman province of Lusitania (Álvarez-Sanchís, *Los Vettones*). The LUSITANIAN language is so little known linguistically that it cannot be defined beyond the broad category of Indo-European with some Celtic influences (De Hoz, *Los Celtas* 382–3, 406). On the other hand, Celtic place-names and the decidedly Celtic CELTIBERIAN language are attested in central and eastern Meseta, not far from Las Cogotas.

The most significant artefacts on the Iron Age site, other than the walls, were fragments of at least six granite statues of bulls in the lower enclosure (Arias Cabezudo et al., *Catalogo de la escultura zoomorfa protohistorica y romana* 35, 61–5, 137; Álvarez-Sanchís, *Complutum* 4.159). Such nearly life-size statues of bull or BOARS are typical of the Vettones, particularly in the Ávila region, where over 100 have been found. Known collectively as *verracos* (boars), they are rarely found *in situ*, though their weight precludes their having been relocated very far from their place of manufacture. The few still in context are close to stock enclosures, as at Las Cogotas. Their function is unknown.

The concept of free-standing sculpture ultimately derives from the non-Celtic groups of southern Spain, who themselves borrowed the idea from the east Mediterranean colonies on the south coast. But sculptures similar to the *verracos* of the Vettones are found also further north and west, particularly among the Zoelae of northeast Portugal (Tranoy, *La Galice romaine*, map VIII). These monuments may represent a cultural link between the mineral-rich lands of north-west Iberia and the entrepreneurs of the south.

Aedeen Cremin

Laud 610, *Leabhar na Rátha*, also known as *Saltair mic Ruisdeard Buitilléir* (Mac Ruisderd Butler's psalter') is an important medieval Irish vellum manuscript. Oxford, Bodleian Library, MS Laud Misc. 610, as it exists now is made up of fragments of two separate manuscripts: the larger section, the *Leabhar na Rátha* proper, was compiled and written for Éamonn Mac Ruisdeard Buitilléar, head of a branch of the Ormond Butlers. Éamonn's court was at Ráth an Photaire (Pottlerath), Kilkenny, and this is probably where, between 1453 and 1454, two scribes, Seán Buidhe Ó Cléirigh and Gilla na Náomh Mac Aodhagáin, wrote most of Éamonn's manuscript.

The other fragment making up Laud 610 is from the White Earl's Book, a manuscript which originally belonged to Éamonn's uncle, Séamus Mac Séamuis Buitilléar, fourth earl of Ormond (1390–1452), known as the White Earl. It was written by an unknown scribe between the years 1410 and 1452, and passed into Éamonn's possession after his uncle's death.

Joined together, the two manuscripts were relinquished in 1462 to the 8th Earl of Desmond as part of a ransom for the release of their previous owner. The codex was acquired in the early 16th century by Sir George Carew, president of Munster (†1624). Carew's son, Sir Thomas Stafford, later donated it, along with other Irish manuscripts, to Archbishop Laud of Canterbury. In 1636 the latter presented these to the University of Oxford, to be deposited in the Bodleian Library, where they now form part of the Laud collection.

Leabhar na Rátha is remarkable for its numerous colophons and marginalia, several of which claim that the Saltair Chaisil ('The Psalter of Cashel') was used as a source. The contents are of the miscellaneous nature characteristic of medieval Irish manuscripts. On 107 folios, *Leabhar na Rátha* proper contains religious material, such as saints' lives, for example *Betha Senáin* (The Life of Senán), genealogies and passions, as well as genealogical material mostly concerning Munster (Mumu). The manuscript further holds some poetry, an incomplete version of Sanas Chormaic ('Cormac's Glossary'), the dindshenchas (Lore of high places), fragments from the Fiannaíocht, as well as a dossier of material concerning the legendary Munster king Cú Roí mac Dáiri—both poetry and prose. The 36 folios from the White Earl's Book mostly contain *Félire Óengusso* ('The Martyrology of Oengus Céile Dé') and Acallam na Senórach (Dialogue of [or with] the old men).

PSH

law texts, Celtic [1] Irish

§1. introduction

Early Irish legal texts fall into three main categories: ecclesiastical law written in Latin; 'laws' (*leges*, Irish *rechtgai* or *cánai*) promulgated by mixed ecclesiastical and secular assemblies and written in Irish; and legal tracts in Irish for the instruction of judges and aspirant judges within the native tradition of law. Ecclesiastical law overlapped in content with native Irish law, and both occasionally use material from each other, but the main focus of concern of each was different; moreover, the longest text of ecclesiastical law, the Collectio Canonum Hibernensis, explicitly warns the secular scholar (*mundialis sapiens*) not to meddle with cases pertaining to the Church. In each of the first and third categories, ecclesiastical law and native law, a single great compilation dominates the surviving textual evidence: the *Collectio Canonum Hibernensis* (The Irish collection of canons) on the one hand, and the Senchas Már (The great tradition) on the other.

§2. ecclesiastical law in latin

The *Collectio Canonum Hibernensis* was compiled between 716 and 725 by two scholars, one from Munster (Mumu) and the other from Iona (Eilean Ì). Ruben was given the exceptional description in his obit in 725 of '*scriba* (lit. scribe) of Munster', suggesting that he was the leading scriptural scholar and ecclesiastical judge of a province noted for the better part of a century for its support of Roman custom. Cú Chuimne, probably a younger man, died in 747; he was a leading scriptural scholar of Iona in the generation after its great abbot, Adomnán. The text reflected the expertise of the two authors. The *Hibernensis* was a legal text which constantly appealed to textual authority, and the primary authority to which it appealed was the Bible. Other authorities were ecclesiastical history, the Fathers of the Church, and the decrees of the apostolic see, as well as synods, both old synods of the 4th and 5th centuries and Irish synods. Among the latter, the *Hibernensis* cited both those of the Roman party within the Irish Church and those of the *Hibernenses* (Hibernians). The approach demonstrated a concern to establish unity in the Irish Church after the end of the Easter controversy in 716, when Iona adopted the Roman Easter. But the concern for unity went further than a desire to bring peace after a single controversy, however divisive. The *Hibernensis* exists in two main recensions: A and B. The A Recension was the work of Ruben and Cú Chuimne; the B Recension underwent further revision, and it also began with a preface setting out its aims. These were to guide the ecclesiastical judge through a thicket of authorities, which were by no means always in clear agreement. In the A Recension, too, this aim can be clearly perceived in the way the text handles disagreements in its authorities. It appears to have been this ability to assemble the authorities on a given topic, and then to distinguish the scope and interpret the meaning of conflicting passages, which recommended the *Hibernensis*

to Carolingian scholars. It was a tool for exegetes, whether or not they also acted as judges.

In Ireland (Ériu), however, the *Hibernensis* had a further rationale. The relatively few synodal texts which survive outside the *Hibernensis* show that it was accepted that leading scriptural scholars would participate in synods alongside bishops and the heads of the major MONASTERIES. Authority in the 7th-century Irish Church was exercised by those who had the highest rank; this could be attained by more than one route, and among these routes was expertise in biblical exegesis. What this meant in practice is well exemplified by the Letter of Cummian, himself a scriptural scholar, to Ségéne, abbot of Iona, and Beccán the hermit, written in 632 or 633. On the one hand, he appeals to the authority of synods, while on the other he deploys a battery of texts systematically arranged. It is evident that this conception of the authoritative sources of law allowed, and even necessitated, a considerable freedom of manoeuvre to the ecclesiastical judge.

§3. ECCLESIASTICAL LAW IN IRISH

The few surviving ecclesiastical *cánai* are only a remnant of the many promulgated between *c.* 680 and 830. References in the ANNALS show that promulgations were especially frequent in the second half of the 8th century. Fortunately, the surviving texts include one of the most important, CÁIN ADOMNÁIN ('Adomnán's Law'), or, as it is called in the annals, 'The Law of the Innocents', referring to the non-combatants whom it sought to protect. The typical *lex* or *cáin* of the annals belonged to a dead saint and was promulgated by the heir of that saint in co-operation with a major king and, at least sometimes, at a major assembly of clergy and laity. Some provinces had *cánai* of their own, for example, Munster (MUMU) and CONNACHT; but others—Leinster (LAIGIN) and Ulster (ULAID)—seem to have been sufficiently subject to the Uí Néill to ensure that they were, for these purposes, part of Leth Cuinn, Ireland's northern half. Since a *cáin* belonged to a dead saint, it was natural, and probably common, that it should be accompanied by a circuit of the relics, as Adomnán's relics were taken to Ireland from Iona in 727 when his *cáin* was renewed.

The mode of enforcement of the *cáin* was also distinctive. It appears to have remained in force for a limited period. That is why it could be renewed and why there could be first, second, and third *cánai* of the same saint. The penalties were, in general, higher, but also more equal, than in the ordinary native law: *Bretha Crólige* (Judgements on sick maintenance, lit. 'Judgements on blood-lying') remarks in passing that its provisions for compensation according to rank, *díre*, applied only within the native Irish law, *Fénechas*, whereas in Church law and in *cáin*-law there were no distinctions of status governing the payment of compensation for wounding and killing. The Latin texts suggest that this was not entirely true, but it was sufficiently so to make the basis of enforcement quite different. The penalties attached to infringement of a *cáin* were divided between the church of the saint and local lords; since all received a share, all had an interest in enforcing a *cáin*. There were also special officers appointed by the church of the saint and guarantors given by local kindreds and even kingdoms.

The surviving *cánai* are all ecclesiastical in character. Yet, an early 8th-century legal tract on status, *Críth Gablach*, cites *recht Adamnáin* as one of 'the three *rechtgai* which it is right for a king to pledge upon his peoples'. Distinct from such *rechtgai rig* was the *rechtge fhénechais*, the 'decree of Irish law', which was adopted by the peoples but enforced by the king. It is evident, therefore, that there was a tradition of mixed royal and popular law-making, and this goes some way to explain the way the Würzburg GLOSSES of the 8th century perceived the activities of Irish *brithemain* 'judgement-makers, judges', namely as 'making *rechtgai* for kings'. These enactments, however, if they were written down, did not survive, and it is not difficult to imagine why this might have been so. Some of them, as described by *Críth Gablach*, were in any case temporary decrees directed to address particular emergencies, such as the invasion of Brega in 684 by ECGFRITH of Northumbria. Even when a *cáin*, such as that of Adomnán, was designed to have permanent effects, its machinery of enforcement appears to have lasted only for some limited period of years. As for the *rechtgae Fhénechais*, if the decree adopted by the peoples of some part of Ireland were to be adopted into the law of the Irish as a whole, that would not be because of the authority behind its first promulgation. As the ecclesiastical *cánai* show, decrees affecting the whole of Ireland were very rare.

§4. NATIVE IRISH LAW

The native law, however, claimed to be the law of all the Irish. The old Introduction to the SENCHAS MÁR, the major vernacular Irish law book, begins with a question and answer in the textbook style derived from Latin grammars such as the *Ars Minor* of Donatus: 'The *Senchas* of the men of Ireland, what has maintained it? The joint memory of the old men (or: of two old men), transmission from one ear to another, chanting of poets, amplification by the law of the letter, strengthening by the law of nature, for those are the strong rocks by which the judgements of the world are fixed.' This passage was artfully phrased: it was the beginning of a long and elaborate written text, and yet it perceived the transmission of the law as oral; it claimed to be distinctively Irish, and yet it extended a welcome to the influence of ecclesiastical law and the law of nature, two forms of law intrinsically authoritative among all men; it was the preface to a law book for *brithemain*, and yet claimed to be preserved by the chanting of the *filid* (see BARDIC ORDER [1]). Although the reference to 'the men of Ireland' might be taken to imply that it was current among the population of the island and not of the Irish settled overseas in Britain, the validity of Irish law must have extended at least to the Irish territories in what is now Scotland (ALBA), for its effects are traceable several centuries later.

The *Collectio Canonum Hibernensis* was a large-scale statement of the law composed of 'books' devoted to particular legal topics, such as marriage or bishops. To some extent, the arrangement of the whole text follows a logical order, though that is by no means true of the whole. It is even less true of the *Senchas Már*, a law book composed of what modern scholars call 'tracts', comparable in extent to the 'books' of the *Hibernensis*. Some of these tracts are relatively systematic in their internal organization, but it is rarely possible to see what might have connected one tract with its neighbours. Parts of the *Senchas Már* are linked, instead, by having come from a single source; just as the *Hibernensis* was an overview constructed from smaller texts, so also was the *Senchas Már*, and some of these texts came to the compilers in groups. Therefore, for example, *Bechbretha* (Bee-judgements), was very probably from the same source as its neighbour, *Coibnes Uisci Thairidne* (Kinship of conducted water), a text on legal problems arising from conducting a water-supply for a mill across more than one holding of land. These two texts are not especially closely related in subject matter, but distinctive features of vocabulary and approach confirm a common authorship.

The *Senchas Már* had grand aspirations from the start to be a law book for all the Irish, and yet there were legal texts from Munster (see BRETHA NEMED), which occasionally differ on particular points, though the substance of the law is very similar. One tract in the *Senchas Már* contains a version of the legend of PATRICK's encounter with LOEGAIRE MAC NÉILL, king of Tara (TEAMHAIR), a legend familiar from the *Vita Patricii* (Life of Patrick) by Muirchú. Another tract, *Din Techtugud* (On taking possession), shows a concern for relations between the FÉNI and the ULAID. Finally, the first tract after the Introduction, *Di Chetharshlicht Athgabála*, begins with a leading case concerning Asal son of CONN CÉTCHATHACH, who gave his name to the CONNACHTA, Leth Cuinn, and Dál Cuinn. These hints suggest that the *Senchas Már* originated in the northern half of Ireland, in the territories of the Uí Néill. Its aspirations to an authority over all the men of Ireland thus accord with similar aspirations felt by the Uí Néill and by Patrick's principal church, Armagh (ARD MHACHA).

The most likely date for the *Senchas Már* is the first half of the 8th century. Similarly, the *Bretha Nemed* has been dated to the middle years of the 8th century. Some important texts, such as *Críth Gablach*, may not have formed part of any law book, but it, too, seems to belong to the first half of the 8th century. Some of the tracts within the *Senchas Már* are probably of the 7th century, which suggests that the major compilations of the 8th century were the culmination of an extraordinarily fertile period in legal writing. THURNEYSEN argued that it was unlikely that the compilation of the *Senchas Már* and the *Hibernensis* were unrelated; he suggested that the *Hibernensis* came first and that the *Senchas Már* was put together as a counterpart for native law of what the *Hibernensis* had achieved for the law of the Church. This suggestion cannot be proved, but the reference to ecclesiastical law at the beginning of the Introduction to the *Senchas Már* offers some support and, on general grounds, it is very likely to be correct. Similarly, the *Bretha Nemed* quote from the *Hibernensis*.

Yet, in spite of the parallels between the major texts of Irish law, native and ecclesiastical, their modes of

thought are normally very different. Occasionally, vernacular tracts cite textual authority, as the *Bretha Nemed* quotes the *Hibernensis*, but this is very far from the constant citation of texts which is one of the essential characteristics of the *Hibernensis*. The normal mode of exposition in the *Senchas Már* is a description of what the law is; if the law is what the text says it is, the problem of authority does not arise. The tract purports to set out what judges have judged, are judging and will judge. Occasionally, one can look behind this easy assumption of the authority of a learned tradition and of judges as its exponents. Individual, even controversial, writing can be found; but that is not the explicit stance of the texts.

T. M. Charles-Edwards

law texts, Celtic [2] Welsh

§1. INTRODUCTION

Medieval Welsh law was separate and distinct from the English common law and Roman canon law. It is uncertain when Welsh law first came into being, but the manuscripts attribute the law to king Hywel ap Cadell, known as HYWEL DDA 'the Good' (†949/50), and a story describing how he gathered many nobles together to 'create' the law is found at the beginning of most of the law-books. This was probably an attempt to give the law religious and royal credibility in the face of attacks from Norman churchmen. Although it is highly unlikely that Hywel Dda was the author of any surviving law-book, he may have had some connection with legal activity, and Welsh law may therefore date from as far back as the 10th century. The law itself is a complicated, compensation based system and, though it contains many archaic elements, it was also a sophisticated and highly developed legal system. The Law of Hywel Dda was seen as a unifying factor among the Welsh in the turbulent Middle Ages, but this was not without its drawbacks—there were several attacks on Welsh law by English kings and Norman clerics, and Welsh law was one of the factors used as a justification for the conquest of Wales (CYMRU) in 1282. Following the conquest, the law was not immediately superseded by English law, but it

survived for some time in certain situations; for example, land law was used until the 16th century, and Welsh law survived in the March of Wales until the Acts of Union in 1536–43, since the Marcher lords often adopted the more profitable elements of both Welsh and English law to create a hybrid legal system.

§2. texts and surviving copies

Most of the law texts which survive date from the 12th and 13th centuries. The scarcity of Welsh legal material of earlier date is not surprising, since Welsh vernacular manuscripts in general are abundant only from the 13th century onwards. The political situation in Wales in the 12th and 13th centuries was also a significant factor: many of the earliest manuscripts are Iorwerth manuscripts, reflecting the law in north Wales. Gwynedd was the dominant dynasty in Wales in the 13th century, and some features of the Iorwerth law texts, such as the emphasis on royal rights (the laws of court) and the important rôle played by the queen, may reflect the rise of royal power in Gwynedd under Llywelyn ab Iorwerth and Llywelyn ap Gruffudd. Furthermore, following the pattern of English law, the 13th-century law texts may be an attempt to emulate the establishment of law-books in England.

The Welsh law texts have a significance which goes beyond their legal implications, since law manuscripts form a large part of the surviving Welsh-language manuscripts from the Middle Ages, particularly in the 13th century, and as prose texts they are a valuable source of technical and everyday medieval Welsh vocabulary. They demonstrate a variety of styles and techniques, and represent an important body of practical texts written in the vernacular.

§3. the three redactions and the tractates

There are three 'redactions' or groups of Welsh law manuscripts: Cyfnerth, Blegywryd, and Iorwerth. The law itself as found in the manuscripts can be further divided into sections, which consist of many chapters, commonly called 'tractates'. These tractates do not necessarily occur in the same order in the manuscripts, and it is difficult to set a date for the law in general as the tractates may vary in date, and they themselves are a mixture of early and late additions; in extreme cases individual sentences may date from different periods. Iorwerth manuscripts have a triadic arrangement, and the law-books comprise the laws of court, the laws of country, and the judges' test book. This threefold division is not found in the Blegywryd and Cyfnerth texts, but there is a clear distinction between the laws of court and the laws of country. The Blegywryd and Cyfnerth texts also contain a large collection of triads which is not found in Iorwerth.

Aneurin Owen (1792–1851) edited all the law manuscripts known at the time and published his work in two volumes, entitled *Ancient Laws and Institutes of Wales*. In his first volume he gave what he imagined to be a basic statement of Welsh law, and his second volume, called the 'anomalous laws', contained the material found in the manuscripts which he did not feel fitted in with his basic statement. Recent scholarship has revealed that there is much of value in his second volume. Although each manuscript containing a text of Welsh law is unique, Owen divided the manuscripts into three codes (four including the Latin), and gave them names according to the region from which he believed they originated. They have now been renamed after persons mentioned in the prologues of each group: Owen's Gwentian Code became the Cyfnerth redaction, the Dimetian Code became the Blegywryd redaction, and the Venedotian Code is now known as the Iorwerth redaction. In addition to naming the four groups, Owen also gave each manuscript an alphabetical letter as a siglum, and the manuscripts are still referred to in this way today.

§4. organization and contents

The prologue is usually the first part of any law-book, and it relates the story of Hywel assembling worthies—lay and ecclesiastical—from each cantref in Wales to the 'White House', to discuss law. The prologues show that the meeting was not to create law for Wales, but to reform existing law. Since Welsh law was often under attack by the Norman clerics, who believed that Welsh law was contrary to Church law, the inclusion of clerics at the assembly was the prologue's defence against such criticism. The law was also under threat from the native rulers, who felt they were able to change or abolish sections at will; therefore, the prologues were a message to those rulers, to demonstrate that protecting the law was one of their duties as princes. The closest parallels to the Welsh prologues are in the English law-books, though, by the 12th century, a

prologue was seen as part of a law-book rather than an unusual addition to it. The purpose of the solemn prologues was to give a royal and holy origin to the law of Wales.

Most law texts follow the prologue with the laws of court, which detail the everyday life of the king's court, and list all the officials, their duties, their responsibilities and dues. This section was already considered antiquated by the time of writing of the earliest manuscripts, and several of the Blegywryd scribes omitted the laws of court altogether, explaining that they were no longer in use.

In the Iorwerth laws of country, and in the second half of the Blegywryd and Cyfnerth books, several tractates are given on issues outside the law of court. The law of women was preoccupied with the status of women, marriage, divorce and children; several different recognized unions were listed, and after seven years a couple could divorce and divide all their goods, excluding the land, according to the rules set out. Women were seen in some ways as a commodity, marriage was a contract, and a woman would have an *agweddi*, goods which were paid to her if her husband left her without just cause. Land law gives details of how to conduct cases for land, the different tenures in Welsh law, and how to claim land legally. The suretyship tractate was the law of contract, and in any kind of obligational relationship a person called a surety was used as a guarantee on contracts and debts. An archaic hand-binding ceremony also featured in forming contracts, and the surety would then have to ensure that both sides kept their promises. There is also a short tractate on corn damage, listing the payments due to farmers whose corn was damaged by trespass by another person's animals. Iorwerth redaction manuscripts also have sections on joint ploughing contracts, injury to animals, church protection and a tractate on children, which covers paternity and offences by children.

The Iorwerth test book (*Llyfr Prawf*), which is stated as the section a lawyer needed to know in order to practice law, has the value of wild and tame, also found in the other redactions, which is a long list giving the value and purpose of animals, and a list of prices for common household items, essential for paying compensation. The other section of the test book in Iorwerth is the crucial three columns of law; this is criminal law, and the three columns are homicide, theft and arson. The value of parts of the body and a section on special witnesses whose word is always accepted, the nine tongued-ones, is often found with the three columns in the Blegywryd and Cyfnerth redactions.

In Welsh law, each person had a life value, *galanas*, which was to be paid to the family if the person was killed; it was calculated on a sliding scale according to status. According to the laws, society was hierarchical, with the king at the head of society, the bondmen at the bottom, the freemen in between. Women were not persons in their own right in law; their value was calculated according to their husbands (or fathers if they were unmarried) and they were not entitled to hold land or speak in court. The other people of low status were the aliens, people from outside Wales. Their position was similar to that of the women. The *sarhaed* (injury value) was half of a person's *galanas*, and was an additional compensation to be paid for a deliberate injury: it was to compensate the insult. If a person was killed accidentally, only the *galanas* was paid, but if a person was killed as a result of a deliberate attack by another, then there was insult involved and the killer would then have to pay both *galanas* and *sarhaed*. *Sarhaed* was also payable for all deliberate injuries; therefore, if someone cut off another person's finger, the offender would have to pay the value of the finger and his *sarhaed*. The death penalty was only used for certain cases of theft in Welsh law; the reasoning may have been that theft was a stealth crime, whereas homicide was (usually) openly committed. A stealth act undermined society, and therefore was punishable by death. The complicated *galanas* system, however, was developed in order to prevent blood feud and revenge killings between kindred, and therefore the *galanas* payment would be divided between the homicide's parents, siblings, cousins, second cousins and so on, and, when it was paid, it was then divided in the same way between the victim's family. In this way, everyone would pay the penalty for the killing, and everyone in the victim's family was compensated.

Also found as part of the law texts is the additional material called 'the anomalous laws' by Aneurin Owen. This material is often found in the later, 15th-century law-books, though some of the material may be early. Several genres are found within this material—for example, there are large collections of TRIADS, distinct from the lists found in *Trioedd Ynys Prydain* and similar

collections. These triads were mnemonic lists and, since the lawyers would traditionally have had to memorize the law in order to practise, the material would have had some practical use in the education of lawyers. The triads are only found in the Cyfnerth and Blegywryd manuscripts, possibly because the justices in north Wales still had formal training, and therefore memorized the triads. In south Wales, local landowners would be called upon to act as justices, and there are several sections in the Blegywryd law-books giving the duties and responsibilities of the justices, and some sections covering the use of actual books in the court cases. Also found in the 'anomalous laws' are collections of *damweiniau*, sentences beginning 'if it happens . . .' found mainly in Iorwerth manuscripts and perhaps preferred to triads in the north. They are sentences which list the possible exceptions to the rules found in the tractates, and may be material for training lawyers, or exercises in law. Models also feature among the additional material: there is a collection of model plaints in some manuscripts which simply state what happened, and would have been the first step in the legal process, and some model *cynghawsedd*, showing how to argue a case. The question-and-answer sentences were probably for testing would-be lawyers on their knowledge of the law in the legal schools. This additional material found in the later law-books often has a practical use, and may reflect the law in action. Although the law of Hywel Dda officially ceased to exist following the Acts of Union of 1536–43, in actual fact, the legal principles underlying the law were still used, in particular in the March; there are examples of legal cases from the March of Wales, such as the *dadl croes* (the placing of a cross on land as a proof of ownership of that land) from Brycheiniog, which combine English and Welsh elements.

§5. WELSH LAW MANUSCRIPTS

Medieval Welsh law is found in around 40 extant manuscripts dating from the mid-13th century to the 15th century. Some parts of the law texts found in these manuscripts, however, may be much earlier in date.

The Cyfnerth redaction comprises seven manuscripts: *U–Z*, and *Mk*, a privately owned manuscript unknown to Owen. These manuscripts are the shortest of the law-books, and they may reflect an early text of the law. This is a very loose grouping, and there is much variation within it, but some internal groupings become clear: *X* and *Z* are close in content as well as their northern orthography, and form one group. *W*, *V*, and *Mk* have southern vocabulary and orthography, and are closer to the Blegywryd redaction than the other manuscripts. *U* is southern and shorter than the other manuscripts, and also contains a text of the Book of *Damweiniau*, unusual for a Cyfnerth manuscript. *Y* stands alone, since it is a composite book: the laws of court are from Cyfnerth, but the remainder of the book is Blegywryd.

The Iorwerth texts, manuscripts *A–E*, *G*, *K* and *Lew*, often occur in the oldest surviving manuscripts, and may reflect the law as it was in Gwynedd during the reigns of Llywelyn ab Iorwerth and Llewelyn ap Gruffudd. All the Iorwerth manuscripts are close in content, and form a distinct group, unlike Cyfnerth and Blegywryd. One manuscript that could be appended to this group is called *Llyfr Colan*, an

Illustration of 'y barnwr' (the judge) from NLW MS Peniarth 28

incomplete manuscript which contains a concise, revised version of the Iorwerth redaction. The Book of *Damweiniau* is often found appended to the Iorwerth manuscripts, and appears to be of northern origin.

The Latin texts of the laws themselves form five groups, Latin A–E, and are probably translations into Latin from Welsh texts. They are not written entirely in Latin; Welsh words are often left as they are, possibly because there was no Latin word for a Welsh legal concept, and in the Latin D manuscript in particular, whole sections are left in Welsh. The five groups are not entirely distinct from each other, but neither do they form one textual group. A Latin D-type text was translated back into Welsh, and became the basis for the Blegywryd redaction.

Blegywryd texts are southern, and the 13 manuscripts are fairly consistent in order and in content. There are two groups: the four manuscripts *O*, *Tr*, *I* and *S* do not have a law of court, and the positioning of the large triad collection is different in this group to the order found in the *L* group. Apart from the laws of court, the same material is found in the complete manuscripts of both groups. Some of the later Blegywryd texts, however, show signs of editing by scribe-copiers, and these later texts often have a so-called 'tail' of additional material, taken from the other redactions (for example, manuscript *J* has a tail consisting mainly of Iorwerth material), some from oral sources, and legal rules condensed into triadic form. One manuscript, *Q*, has a complete copy of the Book of *Damweiniau* in its tail, as well as several tractates from Iorwerth woven into its main section. In the case of another 15th-century manuscript, *S*, the tail is actually longer than the 'main' manuscript, and contains 15th-century law, possibly for practical use.

Le Grand, Albert (†1640), not to be confused with St Albert 'le Grand' (the Great) of Cologne and Paris (*c.* 1206–80), was born around 1600 in Morlaix

(Montroulez). He was a member of the Dominican order of *Frères Prêcheurs* (Friars preachers), and the author of the influential French-language *Les vies des saints de la Bretagne armorique* (The Lives of the saints of Armorican Brittany), which first appeared in 1636. Although largely based on Latin hagiographies, his work also contained elements from oral tradition, including the first mention of the drowned city of Ys (see FLOOD LEGENDS). The work continued to be augmented and updated, in 1659, 1680, 1837, and 1901. A Breton equivalent, *Buhez ar zent*, was also widely published. As part of his fieldwork on the saints, Le Grand drew and measured early medieval inscribed stones in Brittany (Breizh). These drawings are of special value since, in some cases, they are the only evidence for now lost monuments containing early Celtic names for noteworthy individuals, and Le Grand's representation of spelling and letter forms are accurate enough to permit close dating by today's experts: e.g. the 9th-/10th-century + HEC CRUX . BUDNOUENUS ABAX IUBSIT FACERE ISTAM 'This cross, Abbot Budnouenus ordered it to be made' on his drawing of a six-foot-tall cross-inscribed stone, formerly in Landunvez, Finistère.

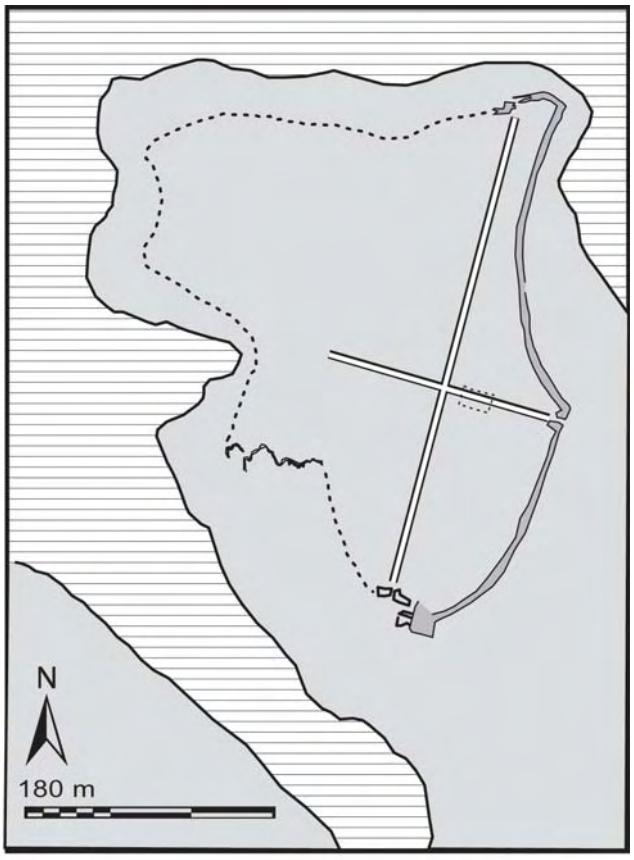
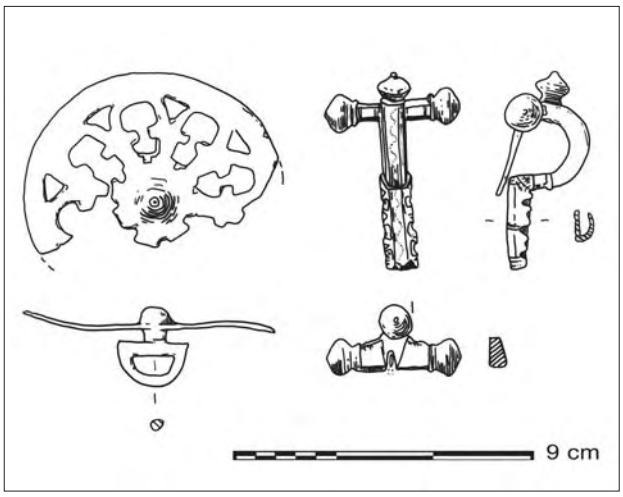
Le Yaudet, Côtes-d'Armor (Aodoù-an-Arvor), is an archaeological site whose testimony is significant for understanding the Breton migrations and the social and historical background to the establishment of the Brythonic speech in the Armorican peninsula. The evidence of the site also demonstrates elements of cultural continuity between the late pre-Roman Iron Age, through the Roman period, and into the post-Roman migration period. Le Yaudet is a promontory which commands the mouth of the river Léguer, 7 km west of the town of Lannion (Lannuon) on the north coast of Brittany (Breizh). The site, well located to serve as a port, is surrounded by sheltered anchorages, while the river offers a convenient passage which leads deep into the Armorican peninsula. In early documents, Le Yaudet is often referred to as 'the old town', a reference, most probably, to upstanding lengths of the Roman defensive wall, parts of which are still visible. A programme of excavations, which began in 1991, has shown that the site was probably continuously occupied from the Late Bronze Age (*c.* 1200–*c.* 700 BC) to the present day. Scattered finds of Neolithic and Early Bronze Age date reflect sporadic use in the earlier prehistoric period.

In the Late Bronze Age there is some evidence to suggest that the promontory may have been defended on the landward side by a rampart built of granite blocks. It was probably towards the end of the 2nd century BC that the defences were rebuilt on a larger scale, with a stone-fronted rampart that not only cut off the promontory from land approach but also

Plan of late Roman Le Yaudet, showing the river mouth, promontory, the roads (in white), and line of fortifications with entry gates





Small prestige objects from Le Yaudet, 4th/5th century, phalera (harness ornament) and crossbow brooch

encircled it on the seaward side (see FORTIFICATION). During the 1st century BC the defences were twice refurbished and enlarged. The last phase may relate to CAESAR's campaigns of 56 BC.

Occupation continued on a reduced scale throughout the Roman period, and in the late 3rd century AD, at the time of the Gallic Empire of British-based Carausius and Allectus, the site was refortified with a new wall built on top of the earlier rampart. As part of the redefinition of the site, the interior seems to have been provided with an orthogonal system of ROADS. It is likely that the reorganization was, at least in part, inspired by the need to defend the Channel coasts against the threat of pirate attack, and may imply a military presence.

Throughout most of the 4th century there is little evidence of activity and the site may have been abandoned, but a new phase of activity can be recognized at the end of the 4th and the beginning of the 5th centuries. A silver coin, a crossbow brooch, and a phalera from a horse harness hint at high-status occupation, possibly by *foederati* (a category of mercenaries in Roman employ) from BRITAIN. If so, this may represent an early stage in the British migrations to ARMORICA.

By the early 6th century the interior of the site was under regular cultivation. Fields were worked by the 'lazy-bed' method and were provided with large ovens for on-site corn drying. The contemporary settlement area has not yet been identified, but it probably lay around the church where the present village now clusters. By the 11th century the village had spread over the earlier fields to occupy the sheltered area immediately behind the rampart, but during the 14th century this part of the settlement was abandoned and reverted to agricultural land, the village being reduced to a few houses around the church which form the nucleus of the present settlement.

The name *Le Yaudet* reflects a Brythonic borrowing of the Latin term CIVITAS (genitive *civitatis*) 'tribal canton'. This derivation may carry implications for the late Roman or early post-Roman status, military and political organization of the site.

Leabhar Bhaile an Mhóta ('The Book of Ballymote') is an important medieval IRISH vellum manuscript. It was written at Ballymote, Co. Sligo (Baile an Mhóta, Contae Shligigh), in the house of the local ruler Tomaltach Mac Donnchaidh. The original owner seems to have been Maghnus Ó Duibhgeannáin (†1452), one of the scribes. Two other scribes are named as Robeartus Mac Sithigh and Solamh Ó Droma. All three were pupils at the famous law school of the Mac Aedhagáin (MacEgan) family, and it is not unlikely that the Book of Ballymote was used in that school for teaching purposes. Written towards the end of the 14th century, the manuscript was sold in 1522 to Aodh Dubh Óg of the Ó Domhnaill rulers of Tír Conaill for the exorbitant price of 140 milch cows. Until 1686, the whereabouts of the manuscript are vague, when it reappeared on record as part of the collection of Trinity College Library, Dublin (BAILE ÁTHA CLIATH). In 1720 a certain Dr Raymond 'borrowed' the manuscript without providing any bond or other security. Finally, in 1785, it was presented by the antiquarian General Charles Vallancey to the library of the newly founded Royal Irish Academy (ACADAMH RÍOGA NA HÉIREANN), constituting the first manuscript of a now substantial collection of codices.

The Book of Ballymote at present consists of 251 folios, having lost some folios during its turbulent life. It is written in two columns and many capital letters are decorated in a variety of colours. The puzzling number of writing styles used have been analysed and ascribed to the respective scribes by Tomás Ó Concheanainn (*Celtica* 14.15–25). The facsimile, published by the Royal Irish Academy in 1887, while a good reproduction, is not entirely reliable; therefore, recourse needs to be taken to the original for accuracy.

The contents of the Book of Ballymote are very similar to those of the Book of Lecan (Leabhar Mór Leacáin), and the scribes of both manuscripts used the same source for at least some of the material. Among the sources cited in the Book of Ballymote are many famous medieval manuscripts such as Saltair Chaisil ('The Psalter of Cashel'), Cín Dromma Snechtai ('The Book of Druim Snechta'), and the *Leabhar Gleann Dá Locha* ('The Book of Glendalough'; see rawlinson b502). The texts cover many different areas, ranging from genealogical, historical and religious matter to prose tales (both classical and other) and legal material, hence illustrating the typically miscellaneous character of medieval Irish manuscripts. Genealogies occupy the largest parts of the manuscript, covering over 150 folios, followed by a version of the dindshenchas, which takes up some 60 folios. Other important texts included are *Sex Aetates Mundi* (The six stages of the world), Lebar Gabála Érenn ('The Book of Invasions'), Lebor na Cert ('The Book of Rights'), Senchus Fer n-Alban (Tradition of the men of Alba), *Senchas Naomh Érenn* (Tradition of the saints of Ireland), *Cóir Anmann* (The appropriateness of names), *Uraicecht Becc* (The small primer), Auraicept na nÉces ('The Scholars' Primer'), *Compert Conchobuir* (The conception of Conchobar), *Echtra Cormaic* (The adventure of Cormac), and the banshenchas (The lore of women).

PSH

Leabhar Breac, earlier *Lebor Brecc* ('The Speckled Book'), but originally known as *Leabhar Mór Dúna Doighre* ('The Great Book of Duniry'), is an important medieval Irish vellum manuscript. *Leabhar Breac* was mentioned by the historian Geoffrey Keating (Seathrún Céitinn, *c.* 1580–1644) as one of his sources, but he is probably referring to to a different codex. Céitinn's contemporary, historian Mícheál Ó Cléirigh (1575–1643) used a manuscript called *Leabhar Mór Dúna Doighre* in 1629, and this name also appears in the manuscript itself (fo. 47a). Dún Daighre (Duniry, in the barony of Leitrim, Co. Galway / Liatroim, Contae na Gaillimhe) was the location of a school of law, poetry, and literature, run by the Mac Aedhagáin (MacEgan) family, who were in possession of the book for many centuries and who may have been connected with its compilation. The entire manuscript seems to have been written between 1408 and 1411 by a single scribe, who can probably be identified as Murchadh Riabhach Ó Cuindlis, a member of a professional scribal family. Ó Cuindlis did much of his writing in Múscraige Thíre (the baronies of Upper and Lower Ormond, Co. Tipperary / Contae Thiobraid Árainn) and probably worked at the Mac Aedhagáin law school at Cluain Lethan (maybe north of Lothra [Lorrha] in the barony of Lower Ormond). Ó Cuindlis was a pupil of Gilla Ísu Mór Mac Fir Bisig (Mac Firbis, †1418), whom he helped to write the Leabhar Mór Leacáin ('The Book of Lecan') and some of his writing is also found in Leabhar Buídhe Leacáin ('The Yellow Book of Lecan').

The *Leabhar Breac* may originally have contained 144 folios, as an early 18th-century note suggests, but now only 142 folios remain. At some point, probably during the 18th century, the codex was broken up into two volumes. The larger of the two has been in the Royal Irish Academy (Acadamh Ríoga na hÉireann) since 1789. There, its contents were described by Eugene O'Curry (?1784/?1796–1862), who also rearranged the contents and had it rebound accordingly. Volume 2, which only consists of nine folios, as well as a single,

detached sheet, was acquired by George Smith, College Green, Dublin (Baile Átha Cliath). After 1844, all became the property of the Academy, where the parts of the manuscript were reunited.

The writing in the manuscript was in double columns, with some coloured illumination. There is considerable variation in the size of the script, with particularly large capital initials at the beginning of paragraphs.

The *Leabhar Breac* contains much religious and devotional material and is an important source of early Irish ecclesiastical and theological writing, including *Fís Adomnáin* ('The Vision of Adomnán') and *Betha Coluimb Chille* (The life of Colum Cille). It also contains a heavily glossed version of *Félire Oengusso* ('The martyrology of Oengus Céile Dé'), a copy of Sanas Chormaic ('Cormac's Glossary'), *Aislinge Meic Con Glinne* (The dream of Mac Con Glinne), and a fragmentary history of Philip and Alexander the Great.

PSH

Leabhar Buidhe Leacáin ('The Yellow Book of Lecan') is one of the great medieval Irish vellum manuscripts which form our main sources for early Irish literature. It is a composite made up of miscellaneous manuscripts owned by the Welsh antiquarian Edward Lhuyd (*c.* 1660–1709), which he acquired during a tour of Ireland (Éire) between 1699 and 1700. Lhuyd had 16 codices bound together at random and numbered their columns 1–998. The name *Leabhar Buídhe Leacáin* originally referred only to part of this heterogeneous volume (cols. 370–400 and 573–958), as demonstrated by a marginal entry (col. 380) by Ciothruad mac Taidg Ruaid (son of Red Tadhg). Hence, this section was chosen to stand at the beginning of the rather disappointing facsimile edition. The reasoning behind the binding of these manuscripts together in one volume was perhaps that they all once belonged to the library of the hereditary learned scribal family of the Mac Fhirbhisigh (MacFirbis) based at Lackan (Leacán) in the parish of Kilglass, Co. Sligo (Contae Shligigh). Indeed, most of the 16 codices contained in *Leabhar Buídhe Leacáin* were written by members of this family. The time and place of writing range from the late 14th to early 16th century and from Sligo (Sligeach) and Galway (Gaillimh) to Tipperary (Tiobraid Árann) and Cork (Corcaigh).

Following Lhuyd's death, his manuscripts were purchased by Sir Thomas Sebright (†1736), whose son John presented the entire collection to Trinity College, Dublin (Baile Átha Cliath), in 1786. Prior to this event, the final ten folios (cols. 959–98) had become detached from the rest of the codex and were subsequently sold separately. They now constitute Dublin, National Library of Ireland MS G 4.

Given the nature of its creation, it is not surprising that *Leabhar Buídhe Leacáin* contains a wide selection of literary genres and texts, ranging from religious poetry and other religious material to historical, genealogical, medical, and legal texts. It is also a main source for some of the most famous early Irish literary saga texts, among them a version of the early Irish epic Táin Bó Cuailnge ('The Cattle Raid of Cooley'), Togail Bruidne Da Derga ('The Destruction of Da Derga's Hostel'), Longas mac nUislenn ('The Exile of the Sons of Uisliu'), *Orgain Denna Ríg* ('The Destruction of Dind Ríg'), *Immacallam in Dá Thuarad* ('The Colloquy of the Two Sages'), Fled Bricrenn ('Bricriu's Feast'), Tochmarc Étaíne ('The Wooing of Étaín'), and *Aided Chon Roí* (The violent death of Cú Roí). It also contains early voyage-tales, including Immram Brain *maic Febail* (The voyage of Bran mac Febail) and *Echtrae Chonlai* (The adventure of Conlae), as well as one of the two complete extant copies of Sanas Chormaic ('Cormac's Glossary') and a copy of *Amrae Coluimb Chille* (the elegy for Colum Cille attributed to Dallán Forgaill), and also dindshenchas (lore of high places). Overall, *Leabhar Buídhe Leacáin* is an excellent illustration of the interests and range of knowledge of a hereditary learned family in Ireland during the later Middle Ages.

PSH

Leabhar Mór Leacáin ('The Book of Lecan'), also known as *Leabhar Mór Mhic Fhir Bhisigh Leacáin* (The great book of the Mac Firbis of Lecan), is an important medieval IRISH vellum manuscript. Like the LEABHAR BUÍDHE LEACÁIN ('The Yellow Book of Lecan'), it is associated with the famous family of hereditary poets and historians of the MAC FHIRBHISIGH. It was written in the house of Gilla Ísu Mór Mac Fir Bisig (†1418) at Leacan (Co. Sligo / Contae Shligigh). Gilla Ísu was also the principal scribe; the other two hands are those of his pupils, Adhamh Ó Cuirnín and Murchadh Riabhach Ó Cuindlis. *Leabhar Mór Leacáin* was begun before the death of Ruaidri Uí Dubda (†1417), king of Uí Fiachrach, and probably completed in late summer 1418.

The early history of the manuscript is vague, but by 1686 it was in the possession of Trinity College, Dublin (Abbott, *Catalogue of the Manuscripts in the Library of Trinity College, Dublin* 338), and noted missing in 1702. A year later, it re-emerged in France, in Collège des Irlandais, Paris, whose Superior presented it in 1787 to the Library of the Royal Irish Academy (ACADAMH RÍOGA NA HÉIREANN).

The Book of Lecan originally consisted of 311 folios, but nine leaves became detached from it and now form part of Dublin, Trinity College, MS 1319 (H. 2. 17) (pp. 172–87 and pp. 192–3). It is generally written in double columns, with crudely illuminated capitals, and it has been noted that those folios which are less colourful tend to be later additions (O'Curry, *Catalogue of Manuscripts in the Royal Irish Academy* 879). Among the manuscripts quoted as sources are *Leabhar Gleann Dá Locha* ('The Book of Glendalough'; see RAWLINSON B 502), SALTAIR CHAISIL ('The Psalter of Cashel'), CÍN DROMMA SNECHTAI ('The Book of Druim Snechta'), *Lebor na Nuachongbála* ('The Book of Noghoval', see LEBOR LAIGNECH), and the books of FLANN MAINISTREACH (†1056).

As is typical for the cyclopaedic early codices of Ireland (ÉRIU), the contents of the Book of Lecan are wide-ranging and include LEBAR GABÁLA ÉRENN ('The Book of Invasions'), AURAICEPT NA NÉCES ('The Scholars' Primer'), *Cóir Anmann* (The appropriateness of names), LEBOR NA CERT ('The Book of Rights'), BANSHENCHAS (The lore of women), DINDSHENCHAS (Lore of high places), *Naomhshenchas* (The lore of Saints), as well as a large selection of genealogical material. The contents strongly resemble those of the Book of Ballymote (LEABHAR BHAILE AN MHÓTA), a manuscript written at Ballymote, Co. Sligo, at roughly the same time, and at least some of the material goes back to a common source.

PSH

Leabharlann Náisiúnta na hÉireann (The National Library of Ireland), located in Dublin (Baile Átha Cliath), aims to collect and preserve Irish publications (including newspapers, periodicals and journals), together with material of Irish interest or Irish origin published abroad. The Library also collects manuscripts, prints and drawings, photographs, and ephemeral material of Irish origin and Irish interest.

The National Library of Ireland traces its origin to the Royal Dublin Society (founded as the Dublin Society in 1731), the earliest rules of which had provided for the establishment of a library. The concept of developing this library as a national public library gained currency during the middle decades of the 19th century, having been first articulated in 1836 by a Select Committee of the House of Commons in Westminster. It was given a major impetus in 1863 when Dr Jasper Robert Joly, a discriminating collector of books, prints, sheet music, maps, and manuscripts, donated his collection to the Royal Dublin Society. In his deed of gift Joly stipulated that '[if] a public library should be established in Dublin under the authority of Parliament . . . analogous to the library of the British Museum in London . . . it shall be lawful for the said Society to transfer the collection to the trustees of such public library or institution'.

The Dublin Science and Art Museum Act 1877 provided for the establishment of a National Library of Ireland and a National Museum of Ireland (Ard-Mhúsaem na hÉireann). The greater part of the Royal Dublin Society library, including all of Joly's bequest, was purchased by the state as the new National Library's foundation collection. An agreement of 1881 provided that the Library should operate under the superintendence of a Council of twelve trustees, eight of whom are appointed by the Royal Dublin Society and four by the government. Under legislation enacted in 1997 by the Dáil (Irish parliament), the Library is soon to become an independent corporate body with a Board of Directors appointed by the relevant Minister.

In the decades immediately following its foundation, the Library had very much the character of a large provincial library within the greater United Kingdom; in effect, the library of the British Museum continued to act as the national library for Britain and Ireland (Éire). (For example, the Museum library continued to have legal deposit right for Ireland.)

With the foundation of the Irish Free State (Saorstát na hÉireann) in 1922, the character and rôle of the Library changed considerably. In 1927 the first Irish copyright legislation provided that the National Library should have legal deposit right over publications within the state. The Library also began to allocate greater resources to the collection of manuscript material. In 1943 responsibility for the Office of the Ulster King of Arms (the heraldic authority for Ireland) was transferred to the Library, together with the archives of the Office dating back to the 16th century.

The Library's current collections of some six million items constitutes probably the most outstanding collection of Irish documentary material in the world. Books, serials, newspapers, manuscripts, maps, photographs, official publications, prints, drawings, political memorabilia, literary correspondence, and ephemera are included.

In the Department of Printed Books there are an estimated one million volumes, including many old and rare items. Among the incunabula is *Defensorium curatorum contra eos qui privilegiatos se dicunt*, by Richard Fitzralph, archbishop of Armagh (Ard Mhacha), who died in 1360. The Library's copy was printed in Paris in 1485. Another item of Irish interest is *Purgatorium S. Patricii in Hibernia* (see PATRICK). Consisting of only two leaves, it was printed in 1475. There is also a fine copy of the Nuremberg Chronicle, 1493. Among the rarities acquired with the Joly Collection is Thomas Carue's *Lyra*, printed in Venice in 1651, of which only two other copies are known. The Library also holds a copy of Carue's *Intinerarium*, printed in Mainz in 1639. Practically all the first editions of David Rothe, John Colgan (*Acta Sanctorum*; see Seán mac colgáin), Nicholas French, and the other Irish writers of the 17th century are represented in the collection.

The Library first actively sought manuscript material in 1927 when the then Librarian, Dr R. I. Best, issued a public appeal for material relating to Ireland's War

of Independence and Civil War (see IRISH INDEPENDENCE MOVEMENT). In 1931 the Library purchased 178 GAELIC (Irish-language) manuscripts from the collection of Sir Thomas Phillips at Cheltenham. However, the first notable accession of Gaelic material dates from 1907, when the executors of the celebrated Irish scholar David Comyn (1854–1907) presented his collection of 36 Irish manuscripts to the Library.

Since the establishment of a separate Department of Manuscripts in 1949, acquisitions of literary papers, political papers, family and estate collections, Gaelic manuscripts, and business and organizational archives have continued apace. Apart from collecting manuscript material, under Director Dr Richard Hayes the Library initiated a major survey of Irish manuscript material overseas. Various scholars abroad contributed to the work of locating Irish manuscripts. Dr Ludwig Bieler, the eminent palaeographer, was commissioned to survey early medieval material in European archives and libraries. All the material identified is listed in the 11-volume Union catalogue *Manuscript Sources for the History of Irish Civilisation*, published in 1965, and the 3-volume supplement published in 1979, and much of it was microfilmed on behalf of the National Library.

The Library's Gaelic manuscript collection now numbers some 1300 items and ranges in date from the 14th to the 20th century. It is generally representative of the surviving corpus of IRISH LITERATURE, lore and history. The Library holds the earliest surviving example of a book of praise poetry, the 14th-century *duanaire* of Tomás Mag Shamhradháin, known as the Book of Magauran. The collection also covers much of the prose and poetry of the modern period with writers such as Aogán Ó RATHAILLE, Peadar Ó Doirnín, Eóghan Ruadh Ó Súilleabháin and Brian Merriman (Brian MAC GIOLLA MEIDHRE) represented. Apart from the literary material, the collection includes genealogical, hagiographical and religious material, and DINDSHENCHAS (Gaelic place-name lore). There are also several legal texts, some of which incorporate 'Brehon' law (see LAW TEXTS). Especially important in the collection is the relatively large number of MEDICAL MANUSCRIPTS, dating from the 15th century onwards, mainly translations of Latin texts imported from Britain and the Continent.

In 1961 the School of Celtic Studies at the Dublin Institute for Advanced Studies (INSTITIÚID ARD-LÉINN) began publication of a series of fascicles containing a detailed catalogue of the Library's Gaelic manuscripts.

Colette O'Flaherty

Lebar Gabála Érenn ('The Book of the Takings of Ireland', often called 'The Book of Invasions') is a Middle Irish text, probably first composed in the later 11th century. It details a series of prehistoric invasions of Ireland (ÉRIU) and the legendary history of the Gaels (the ethno-linguistic Irish) from times corresponding to the biblical Genesis down to their taking possession of Ireland under the leadership of the sons of MÍL ESPÁINE.

§1. THE TEXT AND ITS EARLY TRANSMISSION

The immediate sources of *Lebar Gabála*'s anonymous author were seven lengthy didactic poems, composed by four poets who worked in the 10th and 11th centuries: Eochaid ua Flainn (†1004), FLANN MAINISTREACH (†1056), Gilla Coemáin (*fl.* 1072), and the more obscure Tanaide Eólach (†*c.* 1075?). *Lebar Gabála* was the single most influential document in the Irish pseudo-historical corpus (see LEGENDARY HISTORY). Although it is not the first text seeking to bring accounts of Ireland's remote past into Christian systems of world history, it innovated in two notable respects. Firstly, the author turned the series of poems into a single exposition by fitting them into a continuous prose narrative—much of it mere paraphrase of the verse, but providing a fair amount of additional detail as well. Secondly, he combined the story of Ireland (with a succession of ancient legendary inhabitants) with the story of the Gaels, who were believed to have lived in

many parts of the world before taking possession of Ireland. Having brought the Gaels as far as Spain, he breaks the narrative to insert an account of Ireland's pre-Gaelic settlements, and then returns to the Gaels and the conquest of Ireland by the Milesians, the sons of Míl Espáine.

Lebar Gabála enjoyed great and almost immediate success: within a few generations of its first composition it existed in at least three recensions, several sub-recensions, and an indefinite number of manuscripts. Although the profusion of variants makes it impossible to speak of the work as presenting a single account in any narrow sense, it remains broadly true that the vision of the Irish past to be found there enjoyed canonical status down to, and beyond, the eclipse of the old GAELIC order in the 17th century. It was the principal source for Keating/CÉITINN's account of Ireland before St PATRICK, and continued to exert a powerful influence on such major 20th-century Celtic scholars as Eoin MACNEILL and T. F. O'Rahilly (Ó RATHILE).

§2. IRELAND'S LEGENDARY HISTORY ACCORDING TO THE LEBAR GABÁLA

As mentioned above, the versions of *Lebar Gabála* differ in several respects. Some of these differences, notably with regard to the events of the Gaelic migration, are quite pronounced. The précis that follows is based on the version known as the 'first recension', accepted here as the closest approximant to the work's lost exemplar.

Lebar Gabála begins with the biblical story of the Creation, and discusses Noah's descendants with particular attention to Japheth's progeny and the peopling of Europe. We are told how Fénius came to Babel and invented the *bélra Féne* (that is, 'the speech of the Irish' or Gaelic). His son Nél went to Egypt and married Scota, the Pharaoh's daughter, who bore GOÍDEL GLAS, the eponymous ancestor of the Gaels. Following the flight of the Israelites, Goídel's descendants returned to Scythia, where they spent generations struggling against the heirs of Nél's elder brother, Noenual. At length, the Gaels were driven out, and wandered for many years: they were menaced by the singing of a siren, and visited the famous Rhipaean mountains in Thrace (these legendary mountains are located at various extreme points; here, they may be identified with the Rhodope mountains). After that, they settled for a while in the Maeotic marshes of Scythia, and at last sailed the length of the Mediterranean and conquered Spain. Here, Bregon built the city of Brigantia and a tower from whose top his son Íth glimpsed Ireland.

The focus then shifts to Ireland and its several settlements. Before the Noah's Flood came Cesair, with three men and a multitude of women. Cesair also descends from Noah; she is his granddaughter through an extra-biblical fourth son, Bith. Two of the men died, and then all of the women; Fintan mac Bóchra alone survived the flood in a cave, and then lived on until the coming of CHRISTIANITY to Ireland. Although something similar to this episode appears to have been mentioned in the lost Old Irish manuscript known as CÍN DROMMA SNECHTAI, Cesair's own place in the sequence of the settlement was not a secure one. Cesair is not mentioned in the earliest sources for Irish legendary history, but is included for the first time in the 10th-century tale *Suidigud Tellaich Temra* (The establishment of the household of TEAMHAIR; see Best, *Ériu* 4.121–72) and in the verse of Eochaid ua Flainn, and this inclusion is queried in some versions of the *Lebar Gabála*.

First after the Flood came PARTHOLÓN, whose time in Ireland was marked by the clearing of plains, the eruption of lakes (see FLOOD LEGENDS), and a battle against the sinister and mysterious FOMOIRI. His people were annihilated by a plague, leaving only Tuán as a survivor. Next came Nemed, who won several battles against the Fomoiri and enslaved them. After his death, however, they conquered his descendants in turn and subjected them to an onerous tribute. Finally, they rebelled and attacked the Fomoiri's chief stronghold, both armies being virtually wiped out in the battle and inundation which ensued. Those of Nemed's people who survived dispersed in three groups: the ancestors of the TUATH DÉ went to 'the northern islands of the world' and the ancestors of the FIR BOLG to Greece, while a third troop became the first BRITONS.

After two centuries of slavery in Greece, the Fir Bolg returned to Ireland. They divided the island into 'fifths' (*cóicid*; sing. CÓICED 'province'), and established KINGSHIP there for the first time. In the thirty years of their sovereignty, the succession was generally violent. The last of their rulers, Eochu mac Eirc, was one of the perfect kings of Irish tradition: under him the climate was benign, crops flourished, and there was no falsehood (cf. AUDACHT MORAINN; TOGAIL BRUIDNE DA DERGA).

The Fir Bolg were overthrown by the Tuath Dé, who are portrayed as coming to Ireland out of the sky and using their powers to turn day into night; though *Lebar Gabála* assigns them a human ancestry, a supernatural element is clearly present, and later in the text they are sporadically identified as Fomoiri or demons. Much of the account of their occupation is taken up with a series of GENEALOGIES which seems to have already existed in the time of Eochaid ua Flainn; the author also draws on an early version of CATH MAIGE TUIRED ('The [Second] Battle of Mag Tuired').

At last, the narrative returns to Spain and the Gaels. We are told how Íth journeyed to Ireland, where he was killed by the jealous Tuath Dé; his nephews, the sons of Míl, led an expedition to avenge him. After conversations with the island's three eponymous goddesses, they confronted the three kings at Tara. AMAIRGEN MAC MÍLED, their chief poet, was called upon to judge between them, and said that his own people should go nine waves' distance back out to sea and then try to land again. With a poem he calmed the magical storm with which the Tuath Dé attempted to prevent this second landing:

> I invoke the land of Ireland:
> surging is the mighty sea,
> mighty is the upland full of meadows,
> full of meadows is the rainy wood,
> rainy is the river full of waterfalls,
> full of waterfalls is the spreading lake,
> spreading is the spring of multitudes,
> a spring of peoples is the assembly,
> the assembly of the king of Teamhair.
> Teamhair is a tower of tribes,
> the tribes of the sons of Míl . . .

The Gaels then gained the mastery of Ireland.

Lebar Gabála concludes with a long account of all of the kings who ruled Ireland until the time of Patrick. In some versions, the list was brought down to the time of writing.

John Carey

Lebor Laignech ('The Book of Leinster'), also known as *Lebor na Nuachongbála* ('The Book of Noghoval'), is one of the earliest surviving manuscripts written entirely in the IRISH language (for others, see LEBOR NA HUIDRE; LEABHAR MÓR LEACÁIN; LEABHAR BHAILE AN MHÓTA; Book of DOMHNALL Ó DUIBHDÁBHOIREANN; Book of UI MAINE). It was probably compiled by Aed Ua Crimthainn, the last known abbot of the monastery of Tír-Dá-Glas (Terryglas) on the Shannon, now Co. Tipperary (Contae Thiobraid Árainn), near Lough Derg, and several of his pupils, between the years 1151 and 1224. However, it has also been suggested that the manuscript was compiled or transcribed for Aed by Finn Mac Gorman, bishop of Kildare (†1160) (O'Curry, *Lectures on the Manuscript Materials of Ancient Irish History* 186). Terryglas burned down in 1164; therefore, the manuscript must have been completed elsewhere.

The name 'Book of Leinster' was given to the manuscript by the scholar John O'DONOVAN (1806–61) because of its strong Leinster provenance; a name adopted also by R. Atkinson in his facsimile edition. However, since then, R. I. BEST has argued convincingly that the original name was *Lebor na Nuachongbála* (*Book of Leinster* 1.xi–xvii). Best noted that a certain 'Book of Noghoval' was cited several times as the source for several short extracts in London, BL, Add. MS 4821, written in the early 17th century by the antiquarian Sir James Ware (1594–1666). At that time, Ware was a guest in the house of Rory O'Moore, whose family had been lords of Noghoval from at least the early 15th century, at Ballina. Rory's grandfather had a mortgage on Clonenagh, the residence of the Uí Chrimthainn, coarbs (ecclesiastical heirs) of Terryglas, hence making a connection between the main writer of the manuscript and the Book of Noghoval.

Best's suggestion is supported by the scribe of Dublin, Royal Irish Academy MS B. iv. 2, who, in 1627, copied some texts from the Book of Leinster and claimed that his exemplar was called *Leabhar na h-Uachongbála*

(Thurneysen, *Die irische Helden- und Königsage* 34), probably a misrepresentation of *na nuachongbála* 'of Noughaval'. Further substantiation of Best's argument is that the manuscript was found in the 14th century in Sradbally, Co. Laois (An Sráidbhaile, Contae Laoise), a monastic settlement originally called Nuachongbáil (Noughaval/ Noghoval 'of the new foundation'), later known as Oughaval (Ó Concheanainn, *Éigse* 20.213). It has been suggested that the manuscript was taken there after the burning of Terryglas, though Clonenagh would also be a possibility (A. Gwynn, *Celtica* 5.11).

Finally, an association with the family of the 12th-century king of Leinster (Laigin) Diarmait Mac Murchada has been proposed (O'Curry, *Lectures on the Manuscript Materials of Ancient Irish History* 186; Ó Concheanainn, *Éigse* 20.214), though this hypothesis has been challenged (Ó Corráin, *Ériu* 28.74; see also Thurneysen, *Die irische Helden- und Königsage* 35 and O'Sullivan, *Celtica* 7.25), and should probably be rejected.

Lebor na Nuachongbála was purchased by the Welsh antiquarian Edward Lhuyd (*c.* 1660–1709) on his tour in Ireland (Éire) *c.* 1700. His manuscript collection was acquired by Sir Thomas Sebright (†1736) following Lhuyd's death and presented to the library of Trinity College, Dublin, (Baile Átha Cliath) following the death of Sir Thomas's son, John Sebright, in 1786.

Lebor na Nuachongbála is the most substantial of the early Irish codices and credits several manuscripts as its sources, among them the famous Saltair Chaisil ('The Psalter of Cashel'). In turn, selections from it were included in a significant number of other important early medieval manuscripts including Leabhar Buídhe Leacáin ('The Yellow Book of Lecan'); Leabhar Bhaile an Mhóta ('The Book of Ballymote'); Leabhar Mór Leacáin ('The Book of Lecan'), and *Leabhar Gleann Dá Locha* ('The Book of Glendalough'; cf. Rawlinson B 502). In addition to this, the famous annalist Michéal Ó Cléirigh (?1590–1643) and the Irish historian Geoffrey Keating (Seathrún Céitinn, *c.* 1580–1644) mention that they used *Lebor na Nuachongbála* for their works (Best et al, *Book of Leinster* 1.xiii).

On some 200 folios, *Lebor na Nuachongbála*, characterized as 'the last fling of the learned ecclesiastics of the unreformed Irish church' (O'Sullivan, *Celtica* 7.26), contains the cyclopaedic collection of texts so typical for medieval Irish codices. The contents range from early Irish tales, poetry, and genealogies to religious material and historical matter, including the earliest version of the metrical dindshenchas (Lore of high places) and a new redaction of Lebar Gabála Érenn ('The Book of Invasions'). Among the saga material are some of the best copies of the work of the 12th-century redactor who, according to Thurneysen (*Die irische Helden- und Königsage* 33), reworked some of the best-known tales of the Ulster Cycle, such as Táin Bó Cuailnge ('The Cattle Raid of Cooley') and Mesca Ulad ('The Intoxication of the Ulstermen').

PSH

Lebor na Cert ('The Book of Rights'), in Modern Irish spelling *Leabhar na gCeart*, relates the rights of the Irish kings, and the duties owed to them by the Irish sub-kings. According to Irish tradition the book was begun by St Patrick's colleague St Benignus *c.* AD 450, and was revised and enlarged by Cormac ua Cuileannáin, king and bishop of Cashel (Caisel Muman) *c.* 900. D. A. Binchy considered that the text in its extant form reflected a political situation which could not be older than the 11th century. The two earliest versions are found in the Book of Ballymote (Leabhar Bhaile an Mhóta), compiled in 1390, and the (Great) Book of Lecan (Leabhar Mór Leacáin),

compiled *c.* 1400. The first printed edition was published by John O'Donovan in 1847, and a new edition was prepared by Myles Dillon for the Irish Texts Society in 1962 (Cumann na Scríbheann nGaedhilge).

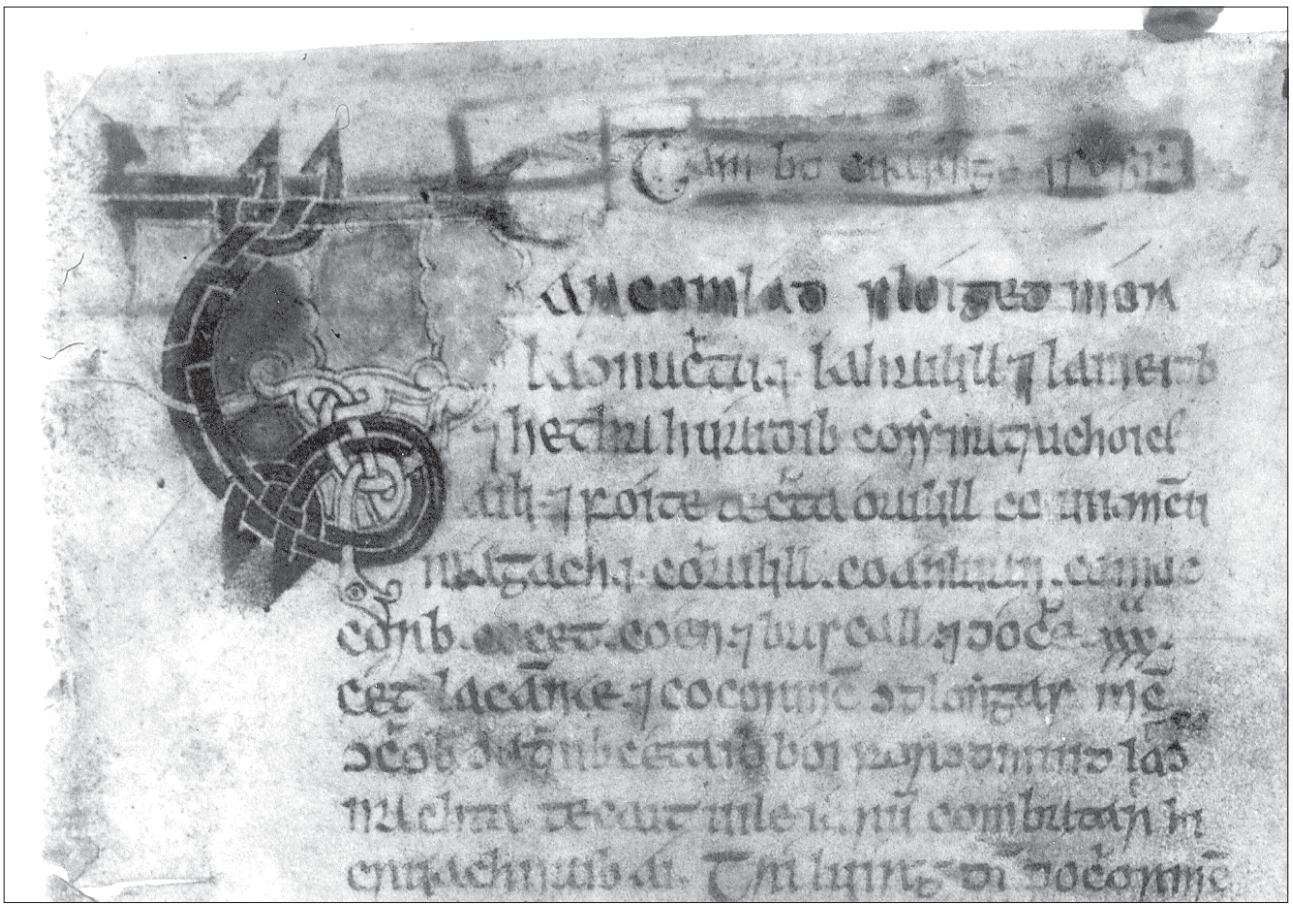
PEB

Lebor na hUidre ('The Book of the Dun Cow') is the oldest extant Irish manuscript which was written entirely in the Irish (Gaelic) language rather than in Latin. It was compiled by three scribes, called A, H, and M by R. I. Best (*Ériu* 6.163). M was the main scribe, though A wrote the first few folios, and reviser H finally erased, rewrote, and added to the manuscript. The assignment of the letter M to the main scribe is due to a marginal note in the manuscript which mentions a 'Maoilmhuire mac mic Cuind na mbocht' (†1106), killed in the cathedral which belonged to the famous monastery of Clonmacnoise (Cluain Mhic Nóis), eight miles (*c.* 13 km) from Athlone (Áth Luain). The dating of the compilation of the manuscript to 1106, as well as its Clonmacnoise provenance, is based on the identification of Maolmuire as the main scribe. In support of this argument, Heinrich Zimmer pointed out that the well-connected Maolmuire, who, in the Annals of the Four Masters, is called *cend Cēled ndē* (head of the Céili Dé; for the Céili Dé monastic movement, see

*Lebor na hUidre, fo. 55a, the opening of Táin Bó Cuailnge: after the faint heading (***Táin Bó Cúailnge inso sís***), it reads—* **Tarcomlád slóiged mór la Connachtu .i. la hAilill 7 la Meidb . . .** *'Connacht, that is, Ailill and Medb, had a great hosting . . .'*



Christianity [1]), would have had access to the variety of literary documents necessary to compile so diverse a manuscript (Zimmer, KZ 28.671–75). However, Zimmer added that the original redactor of *Lebor na hUidre* was more likely to have been Flann Mainistreach (†1056), the famous abbot and sage of the monastery of Monasterboice, Co. Louth (Zimmer, KZ 28.676–89). More recently, Tomás Ó Concheanainn has suggested that Maolmuire did not write the hand M, but rather the hand called H (*Éigse* 15.277–88 and *Éigse* 20.214–25), thus challenging both the date and place of writing of the manuscript. However, Ó Concheanainn's conclusions have been contested by Hans Oskamp, who also suggested that the restoration of *Lebor na hUidre* must have happened some time before 1130 (*Éigse* 16.177–82). While the exact date and place of writing of the manuscript remain under discussion, it is clear that the language of some texts contained in *Lebor na hUidre* considerably predates 1106.

Little is known of the early history and provenance of the manuscript. The 14th-century tale *Faillsigud Tána Bó Cuailnge* (How Táin Bó Cuailnge was found) claimed that the manuscript was kept in the monastery of Clonmacnoise. It also alleged that it had been made from a miraculous cow-hide which could grant eternal life to those who died on it. There is also a legend connecting *Lebor na hUidre* with St Ciarán, claiming that when the saint was about to go to study with St Finnian of Clonard (Cluain Ard), he vainly requested from his parents a cow to take with him. Despite this refusal, one cow, called *Odhar Chiaráin* (Ciarán's dun cow), followed the young man and wondrously sustained not only St Ciarán during his studies, but also twelve bishops, their retinues and guests. Although it is highly improbable that such a remarkable hide would have been turned into a vellum manuscript, the legend underlines the esteem in which a manuscript containing secular tales was held. Characteristic for early medieval Irish manuscripts, the *Lebor na hUidre* is a collection of texts, ranging from religious, historical material to romantic tales. Indeed, it is of particular interest to literary scholars, since it contains the earliest surviving versions of many of the most famous and important early Irish tales. Among them are the early Irish epic *Táin Bó Cuailnge* ('The Cattle Raid of Cooley') and other tales from the Ulster Cycle such as Fled Bricrenn ('Bricriu's Feast'), *Siabarcharpat Con Culainn* ('The Phantom Chariot of Cú Chulainn'), Serglige Con Culainn ('The Wasting Sickness of Cú Chulainn'), and Mesca Ulad ('The Intoxication of the Ulstermen'). The manuscript also contains the early voyage tales (immrama) *Immram Curaig Maíle Dúin* (The voyage of Mael Dúin's coracle) and Immram Brain *maic Febail* (The voyage of Bran mac Febail). Also included is a copy of the very early Gaelic poem, *Amrae Coluimb Chille* (Poem for Colum Cille) attributed to Dallán Forgaill.

PSH

Lédan, Alexandre-Louis-Marie (1777–1855) was born at Morlaix (Montroulez). His father was a shoemaker, and nothing in his social background hinted at a career as a printer. Material support from members of the clergy enabled him to learn to read and write, and later to take up an apprenticeship. In 1792 he began to train with the printer François Guilmer.

Following the *loi Jourdan*, which instituted conscription, Lédan was called to arms in 1798. Six months later he was sergeant of the *colonne mobile* in Morlaix. After a period in Brittany (BREIZH), he was sent south to the Vendée, and finished his service at the printing works of the military port in Brest, created in 1801. Discharged in 1802, he returned to work with his former employer as an overseer.

Lédan became self-employed in 1805, with the support of Abbé David. In this period the two main customers of printers were the government and the clergy. After his printing house was established, he was entrusted with the works of the subprefecture and the communities around Morlaix. In 1814 he received the title 'printer to the bishop', and was thus entrusted with the right to print catechisms for LEON and the part of TREGER which was located in the department of Finistère (Penn-ar-Bed).

Periods of political instability are inevitably problematic for printers. At the time of the Hundred Days (spring 1815, between Napoleon's escape from Elba and Louis XVIII's reascension to the French throne), Lédan printed texts in favour of the return of Napoleon. These texts were printed at the demand of customers, but the act of printing them earned him a reputation as a Bonapartiste, and his printing work was subject to particular scrutiny for the following ten years. At the same time he lost the monopoly of printing for the subprefecture, but this decision was the act of the provisional sub-prefect, M. de Beaumont, whose relations with Lédan were often strained, and not of the central government.

This setback propelled Lédan to start publishing works in the BRETON language, mainly targeted at the rural population. Even before setting himself up as a self-employed printer, he had shown an interest in the Breton language by translating political texts, and from 1805/6 onwards he printed canticles, songs relating news, and *colportage* (inexpensive, mass-produced literature). He collected numerous texts and manuscripts, as well as material from oral tradition. After some editing, he printed a selection of what he had gathered, including *Rimou ha goulennou evit an eureujou* (Rhymes and questions for marriages) and the tragedy *Buez ar Pevar Mab Emon* (The life of the four sons of Emon), both of which proved successful.

He worked as a translator and adapter, and produced texts such as *Simon a Vontroulez* (Simon from Morlaix), a 'manual' for civil education for Breton speakers, *Beilladegou* (Social evenings), a course in agriculture, and his *Conferançou*, a small encyclopedia of geography, history, and the sciences. In 1829 he published a summary of Breton history. Conscious of the importance of songs for the transmission of information among the rural Breton-speaking population, he also composed numerous BALLADS on the historical and tragic events of his time,.

The works of Lédan were more extensive and varied than those of his fellow printers. He was not unique in printing texts in Breton, nor even in editing them. What distinguished him from his colleagues was the fact that he provided his audience with a wide choice of reading matter, with the aim of both edifying and entertaining, meeting the demands of his market at some cost to his professional reputation.

Lédan became a significant figure for those interested in BRETON LITERATURE, and he received visits from Thomas PRICE ('Carnhuanawc') in 1829, Jules Michelet in 1831, and John Bowring in 1833. He became the archetypal 'mongrel printer', whom Hersart de LA VILLEMARQUÉ vilified in his crusade for a pure language, cleared of its French loans. Lédan indeed used French loanwords, in accord with many of his contemporaries who reacted against a Breton which was excessively literary and out of reach of the average Breton speaker. Lédan himself was read and appreciated, as can be seen by the number of texts which came off his presses and which achieved economic success for him.

legendary animals

Supernatural beings in Celtic tradition extend beyond the humanoid FAIRIES. In addition to the AFANC, DRAGONS, and the hounds of hell (see CŴN ANNWN), there are both ancient and modern beliefs describing fairy animals. All the CELTIC COUNTRIES have water-horses or water-bulls. Also known as kelpies (cf. Gaelic *cailpeach* 'heifer', 'colt') or pookas (< Irish

púca) in English, the animal can take human form, and even marry mortals. The Breton story of *Paotr Pen-er-Lo* is typical: a wild horse appears, gentle and mild, but once mounted, the horse gallops into a body of water (a lake, river, a swamp, or the sea), drowning or merely ducking its passengers. Sometimes, as in the Irish tale of *Gille Dheacair*, the horse can extend to take an unusual number of riders. The extendable horse is also found in medieval Continental romance in Bayard, the devil's horse who was given to the four sons of Emon. Many of the CELTIC LANGUAGES use the literal 'water-horse', as in Gaelic *each-uisge* 'water-bull', Manx *tarroo-ushtey*, but more specific names also exist, e.g. Irish *púca*, Manx *glashtyn*, Welsh *(g)ëyll*.

More recently, a belief in feral panther-like animals has been documented in the British Isles, including Wales (CYMRU; e.g. *bwystfil y Bont*) and Cornwall (KERNOW; e.g. the beast of Bodmin Moor). Rational explanations have been proposed, such as a breeding colony of escaped exotic animals, but their existence remains unproven, and in legend they are sometimes given preternatural attributes. It is possible that these legends are related to beliefs about the ferocity of the European wild cat (*felis sylvestris*), which was widespread in much of Britain until the 19th century but is now confined to northern Scotland (ALBA) (subspecies *grampia*). Another wild animal attributed with magical attributes is the Eurasian common shrew (*sorex araneus*), which was literally 'fairy mouse' (*luch-sith* or *luch-shìth*) in Gaelic. It was believed to cause paralysis of the spine in farm animals.

In addition to these species of supernatural creatures, there are several named legendary animals. CULHWCH AC OLWEN lists a series of long-lived animals: Mwyalch Cilgwri (the blackbird of Cilgwri); Carw Rhedynfre (the stag of Rhedynfre), Cuan Cwm Cawlwyd (the owl of Cwm Cawlwyd), Eryr Gwernabwy (the eagle of Gwernabwy), and the oldest, Eog Llyn Lliw (the salmon of Llyn Lliw). This last is probably a reflex of the salmon of knowledge (Irish *éo fis*), which conferred wisdom and poetic skill upon FINN MAC CUMAILL (see also FIANNAÍOCHT; BÓAND). Magical animals in medieval narrative are often the result of transformation or reincarnation, for example, the brown bull of Cooley in TÁIN BÓ CUAILNGE and the raven forms of the MORRÍGAN.

AM

legendary history of the Celtic peoples

§1. definitions and background

The terms 'legendary history', 'synthetic history', and 'pseudo-history', used more or less interchangeably, designate ostensibly historical writing which deals with a period prior to that for which authentic historical documentation is available. In practice, such writing reflects the endeavours of a learned class to knit together pre-existing legends, supplementing these with speculation and fresh invention, in order to create a framework which is internally coherent, and also compatible with established historical models. The most prominent pagan example is that of Rome. Culturally dependent upon the Greeks, and lacking traditions which connected them with the wider scheme of things, Roman historians put forward the claim that their city's founders were the descendants of refugees from the fall of Troy, the central incident of Greek epic tradition (see TROJAN LEGENDS). This doctrine in turn exercised a powerful influence on subsequent pseudo-historians.

In a Christian context, the foreign model to which native traditions had to be accommodated was represented by the Bible, as interpreted and elaborated upon by the Fathers of the Church. Here, the stakes were higher than in the Roman case, since, besides commanding cultural prestige, the Church laid claim to supreme authority in matters of belief. In early medieval Europe, certain Christian sources seem to have been especially influential.

Foremost among these was of course the Bible itself, specifically those early chapters of the Book of Genesis which deal with mankind as a whole. The enumeration of the descendants of Noah, and the account of the dispersion of races and languages at Babel, were of particular interest to those seeking clues to their own people's origins in the Scriptures.

With the official toleration of CHRISTIANITY under the Emperor Constantine (AD 313), the Church sought to co-ordinate Biblical tradition with pagan historiography. Eusebius of Caesarea (†340) produced a massive Chronicle which covered all of history since the birth of Abraham: it was schematically arranged in a series of columns (for Egyptians, Greeks, Persians, Romans, Israelites, &c.), allowing events throughout the world to be synchronized with one another year by year. The Chronicle was translated into Latin and brought down to his own times by St JEROME (†420), and periodically updated by subsequent writers such as ISIDORE of Seville (†636) and BEDA (†735). The Eusebian scheme had great attractions for later pseudo-historians. Besides the abundant information which it contained, it provided a chronological scaffolding to which further peoples could be attached. Synchronisms of legendary events with sacred history, or with the 'world kingships' which Eusebius employed as chronological subdivisions, are particularly clear symptoms of the system's influence.

The sack of Rome by the Visigoths in AD 410, a catastrophe which many attributed to the abandonment of the old religion, stimulated some writers to develop a theology of history through which such events could be understood in Christian terms. St Augustine's *Civitas Dei* (City of God; 413–26) is the most impressive of the works produced to meet this need: its great impact in the Middle Ages probably owed as much to the concrete information which it contained as to the arguments which it proposed. Orosius' more anecdotal *Historiae Adversus Paganos* (History against the pagans; 417) was also widely read.

Beginning in the later patristic period with histories of the eastern and western Goths by Cassiodorus (†*c.* 583) and Isidore respectively, a series of writers began to furnish accounts of the origins of various barbarian peoples who had occupied territories of the former Roman Empire. Histories of the Franks are particularly well represented in this period. Already in the 7th century, we find the claim that the Franks, like the Romans, derive from Troy. It is possible that the Franks took this idea over from their GALLO-ROMAN predecessors: Ammianus Marcellinus, writing in the 4th century, mentions the theory of a Trojan origin among the notions then current regarding the peopling of Gaul (Rolfe, *Ammianus Marcellinus* 1.178–9; see further below and TROJAN LEGENDS).

§2. GAUL

We have no lengthy literary text of legendary history from ancient GAUL—neither in the vernacular, like the Middle Irish LEBAR GABÁLA ÉRENN, nor in Latin, like the pseudo-historical material in the HISTORIA BRITTONUM. The DRUIDS did have doctrines concerning the origins of the Gauls (see below) but, in light of CAESAR's well-known statement regarding the druids' unwillingness to commit their teachings to writing (*De Bello Gallico* 6.14), it is inherently unlikely that any written pseudo-history would have been produced in pre-Roman Gaul, and there are no references to any. On the other hand, we do have, within the extant GREEK AND ROMAN ACCOUNTS of the ancient Continental Celts, numerous traditional stories of origins which go back to the remote and prehistoric past, and these show points of comparison with the legendary histories of the medieval CELTIC COUNTRIES. Since this material has always been mediated to us through Greek and/or Roman writers, we cannot be immediately certain to what extent the classical authors have shaped these traditions according to familiar literary models (see INTERPRETATIO ROMANA), as opposed to accurately recording Gaulish oral tradition. Greek or Roman content is to be expected, especially in a case such as the versions of the foundation legend of MASSALIA (Marseilles), which has not only come down to us exclusively through Greek, but also celebrates the foundation of a Greek colony on the fringe of Celtic territory. Nonetheless, this legend pivotally involves Celtic characters and Celtic proper names (for example, the tribe *Segobrigii* and princess *Petta*), as well as showing parallels with foundation legends from the medieval Celtic literatures, such as *Echtra Mac nEchach Mug-medóin* (a foundation legend of the Uí Néill dynasty) or the legend of the conception of St IUDIC-HAEL.

Origin legends from Gaul frequently contain eponymous (namesake) founders comparable to ÉREMÓN MAC MÍLED of ÉRIU (Ireland), GOÍDEL GLAS of the Gaels, or Britto or Brutus of the BRITONS (see

below). For example, the story of the foundation of Gaul preserved by DIODORUS SICULUS tells of the union of the gigantic and beautiful daughter of an ancient king of Celtica with Hercules producing a hero and leader named Galateis, from whom the Gauls (Greek Γαλαταί *Galatae*) were named. (This story is quoted at length in the article on HERCULES.)

Many of the colourful descriptions preserved of the invasion of Greece in 280–78 BC by the Gauls under Bolgios or Belgios and BRENNOS OF THE PRAUSI have the flavour of hero tales as opposed to history. Thus, according to Timagenes (a Greek writer of the 1st century BC) as preserved by STRABO (6.1.12–13), the treasures deposited in the pools of Tolosa (Toulouse) were said to have been the sacred treasure from Delphi carried back to Gaul by retreating warriors; this WATERY DEPOSITION acted as a talisman preserving the sovereignty of the Tectosages in south-west Gaul until it was looted a second time by the conquering Roman general Caepio in 106 BC.

Ammianus Marcellinus provides an account of doctrines promulgated by the druids concerning the origins of the population of Gaul:

> The Drysidae [druids] say that a part of the people [of Gaul] was in fact indigenous, but that others had poured in from remote islands and the regions across the RHINE, driven from their homes by continual wars and by the inundation of stormy sea. Some assert that after the destruction of Troy a few of those who fled from the Greeks and were scattered everywhere occupied those regions, which were then deserted. But the inhabitants of those countries affirm this beyond all else, and I have also read it inscribed upon their monuments, that Hercules, the son of Amphytrion, hastened to destroy the cruel tyrants Geryon and Tauriscus, of whom one oppressed Spain, the other, Gaul; and having overcome them both that he took to wife some high-born women and begat numerous children, who called by their own names the districts that they ruled . . . (15.9, trans. Rolfe 1.179)

A variety of traditions is summed up in the foregoing, including a précis of the Hercules tale, somewhat different from the version of Diodorus. We recognize also ancient Gaulish FLOOD LEGENDS. The mention of migrants from *insulae extimae* (furthest islands), together with Caesar's statement that the druids' teaching was said to have originated in BRITAIN (*De Bello Gallico* 6.13), may be taken to suggest that some Gauls claimed British or possibly even Irish origin. There seem to be two different versions of a legend of eastern origin. Caesar is quite clear on the point that people called BELGAE in north-east Gaul were said to have migrated from east of the Rhine and that the like-named Belgae of Britain had recently (in Caesar's day) migrated from Gaul. It is thus likely that the Belgae—like the Tectosages of south-west Gaul—preserved legends of the veterans of the invasion of Greece as their founders and that they counted the war leader Belgios as their eponymous founder (Koch, CMCS 20.1–20). Thus, a Trojan legend recognizably akin to the epic of Roman origins, the *Aeneid*, may have been adopted by Gauls, who already possessed their own account centred on the westward flight of heroes who had been nearly annihilated in an epic struggle against the Greeks. Ammianus' attribution of this information to the earlier author Timagenes leaves it unlikely that the Gauls could have first adopted the Trojan story as a direct response to the *Aeneid*. It is worth remembering that VERGIL was himself a native of what had been CISALPINE GAUL, and it might therefore be taken as evidence that areas whose cultural background was Celtic had early on proved fertile ground for Trojan origin legends.

§3. IRELAND

Potentially indigenous doctrines. It is in the context sketched in the first section above that Ireland's legendary history began to be formulated, and the underlying premises, the structure, and much of the content of the resulting scheme are to be explained primarily in terms of Christian influence. But this is not the whole story. A certain amount of native tradition must also have been

incorporated into the system, however much it may have been manipulated in the process. Indeed, several doctrines in the medieval sources can only be plausibly explained as reflections of pre-Christian indigenous belief. Before surveying the development of Irish pseudo-historical literature, we will accordingly look briefly at some indications of what may have preceded it.

Although it is not a part of the standard teaching presented in the various versions of the Middle Irish Lebar Gabála Érenn ('The Book of Invasions'), other sources mention the doctrine that all of the Irish descend from a figure named Donn mac Míled, and go after death to an island called Tech Duinn (the house of Donn; see otherworld). Donn, or Éber Donn, is presented as one of the sons of Míl Espáine (< *miles Hispaniae* 'a soldier from Spain'), a manifestly non-traditional figure; but the idea that the ancestor of the race also rules over the realm of the dead cannot be so easily put down to external influence. In fact, it strikingly echoes Julius Caesar's report that the Gauls believed themselves to be the descendants of Dīs Pater, god of the underworld (see greek and roman accounts). The Irish sources appear to reflect a tenet of Celtic paganism, for which parallels can be found elsewhere in the Indo-European world.

Lebar Gabála states that the first Gael to set foot in Ireland was named Íth: he alarmed its rulers, three kings of the Tuath Dé, by the justice of his judgements and the eloquence of his praise of the land, and was killed in consequence. The curious name *Íth*, identical with a noun meaning 'fat, lard, grease', can be explained as a close relative of the name Ériu (Ireland), both deriving from the Indo-European root **peih-* 'to be fat, to swell'. But this etymological connection would only have been apparent in a prehistoric phase of the language, indicating that Íth himself is a figure of considerable antiquity.

When Ireland is finally won by the Gaels from the Tuath Dé, it is not by force of arms: the decisive figure in the conquest is Amairgen mac Míled, chief judge and chief poet of the sons of Míl. It is by the power of the word—or, to put it in another way, by the power of truth—that Ireland is wrested from its supernatural masters. At a climactic moment Amairgen gains the upper hand by addressing Ireland both as land and as a woman, the destined mate of Ireland's kings. What Íth had threatened to do by his fair speech, Amairgen achieves by the same means. Here, the themes of Ireland's former ownership by the old gods, of the magical power of poetry and/or truth, and of the identification of the land with a tutelary goddess who must be won by the rightful king, all point not to clerical influence but to a native inheritance (see sovereignty myth; bardic order).

The third of the themes just mentioned is also reflected in the idea—again absent from *Lebar Gabála*, but attested elsewhere—that the first Gaelic settlers of Ireland intermarried with the Tuath Dé. The 9th-century poem by Mael Muru discussed below states this explicitly; another early account of the settlement seems to present a Christianized version of the doctrine by identifying the women as 'Hebrews'—Tuath Dé, 'People of God', being a term applied to the Israelites as well as to the indigenous immortals.

These are only some of the most striking elements in the pseudo-historical scheme for which pagan antecedents may reasonably be postulated; others can only be proposed more tentatively, or with an array of supporting evidence which would be inappropriate in a discussion of the present scope. With some sense of the twofold heritage on which it drew, we may now consider the surviving evidence for the tradition's gradual development.

Old Irish sources. The earliest traces of a blending of native origin legends with monastic learning appears in the dynastic poetry of the Laigin (Leinstermen). Their ancestor Labraid Loingsech is said to have conquered the lands of Éremón mac Míled, one of the sons of Míl Espáine and a figure almost certainly invented by the pseudo-historians (O'Brien, *Corpus Genealogiarum Hiberniae* 1). Somewhat later, but still probably in the 7th century, long poems listing the kings of the Laigin and the Éoganacht dynasty of Mumu (Munster) were augmented by verses tracing their lineage back to Adam (O'Brien, *Corpus Genealogiarum Hiberniae* 3–4, 6–7, 201–2). The genealogical emphasis is significant: interest in the distant past was never divorced from its relevance to the present, and even the remotest forefathers of the Gaels were made to enact the rivalries and shifting ascendancies of their medieval progeny (see genealogies).

The grammatical text Auraicept na nÉces ('The Scholars' Primer'), perhaps first written in the 8th century, opens with a story which identifies the origins

of the Gaels with that of their language. At the Tower of Babel, where the one original language of humanity had been divided into seventy-two, the eponymous Fénius (< *bélra Féne* 'Fénius' language', a term applied to Irish legal diction, but also, in a more basic sense, the Irish language; see FÉNI) and Goídel 'Gael, Gaelic speaker' create the IRISH language by assembling parts of all the other tongues (Ahlqvist, *Early Irish Linguist* 47–8).

Several of the scattered passages which quote or claim the authority of the lost collection CÍN DROMMA SNECHTAI (*c.* 8th century) relate to legendary history. Besides the account of the 'Hebrew' women mentioned above (Hull, ZCP 19.155–60), there are references to the settlements of Ireland by PARTHOLÓN and the FIR BOLG, to its occupation before the biblical Flood by an immortal woman named BANBA, and to the struggle for its possession between the Gaels and the Tuath Dé (Macalister, *Lebor Gabála Érenn* 2.176, 196; 3.22–4, 124, 144; 5.52–4, 76–8). Taken in the aggregate, this evidence indicates that most of the elements which make up the framework of *Lebar Gabála* were already current at this early date, but we do not know how developed they were or to what extent they were parts of a unified system.

Such a synthetic system appears for the first time in a work emanating from Wales, the HISTORIA BRITTONUM (as redacted 829/30). Besides its testimony regarding British tradition, discussed below, this furnishes us with two accounts of the legendary history of Ireland (Morris, *British History and the Welsh Annals* 20–1, 61–2).

The first of these describes a series of settlements, all apparently originating in Spain. First, comes a colony led by Partholomus, eventually wiped out by a plague; then, another led by Nimeth, who presently takes his people back to Spain; finally, a settlement led by 'three sons of a Spanish soldier' (*trēs filii militis Hispaniae*), almost all of whom are drowned as they attack a mysterious glass tower. But one shipload survives, and from them descend the subsequent inhabitants of Ireland.

The second account, which the author claims to derive from 'the most learned of the Irish', focuses not on the antecedents of Ireland but on those of the Gaels themselves. They are made to descend from a Scythian nobleman resident in Egypt. Banished following the drowning of Pharaoh's army in the Red Sea, he journeyed for forty-two years through northern Africa—the itinerary is drawn directly from Orosius (see §1)—and eventually reached Spain. His descendants lived there for almost a thousand years, then sailed to Ireland. The departure from Egypt at the same time as the Israelites, and the forty-two years' wandering, reflect a deliberate likening of the Gaels to the Hebrews; where the Franks and Britons aspired to the same origins as the Romans, the Irish modelled themselves on the Israelites.

Here, the coherent framework whose absence is noted above is at last present. Although there are sharp and significant differences from the system found in *Lebar Gabála*, the similarities are more striking still; indeed, some correspondences of detail are so close that a textual link between *Lebar Gabála* and *Historia Brittonum*'s Irish source should be postulated.

It should be noted, however, that an important structural step remains to be taken. *Historia Brittonum* gives us not one account, but two: the story of the settlements of Ireland has not yet been fused with that of the origins of the Gaels. This separate treatment was to continue for some time yet. It is neatly exemplified by two texts which can probably be assigned to the latter part of the 9th century: SCÉL TUÁIN MEIC CAIRILL ('The Tale of Tuán son of Cairill'), and the poem *Can a mbunadus na nGoidel?* (Whence is the origin of the Gaels?)

In the former, St Finnian of Moville (see UINNIAU) is entertained by a hermit named Tuán. Tuán lists the settlements following Partholón as being those of Nemed; of the FIR DOMNANN and Fir Bolg; of the Gáileóin (a tribe of north Laigin believed to be of ancient origin) and Tuath Dé; then, of the sons of Míl. Here, the introduction into the sequence of the Fir Bolg (grouped together with the Gáileóin as well as the Fir Domnann in later accounts) and of the Tuath Dé brings the scheme much closer to its final form (Carey, *Ériu* 35.93–111).

Can a mbunadus is plausibly attributed to the poet Mael Muru of Fahan (†887); where *Scél Tuáin* can be compared with *Historia Brittonum*'s first discussion of Irish origins, the poem deals with the subject of the second. Much of its narrative matches what we have seen in the *Historia Brittonum* and the *Auraicept*: Fénius goes from Scythia to Babel to study languages; his descendants settle in Egypt until the flight of the Israelites; after many wanderings they come to Spain, where they remain until their conquest of Ireland.

Instead of journeying across Africa, however, the Gaels are made to return to Scythia, and then to spend an extended period in the Maeotic marshes at the mouth of the river Don on the Sea of Azov. At length, they reach Spain by sea—modifications which may reflect the influence of the *Aeneid*, and of some of the Frankish chroniclers. In other respects, Mael Muru appears to preserve traces of native tradition: the poem speaks of Donn's house as the home of the dead, and of marriage alliances between the Tuath Dé and the sons of Míl, doctrines whose significance was discussed in §1 above (Todd & Herbert, *Leabhar Breathnach* 220–71).

Middle Irish sources. The Middle Irish period (roughly AD 900–1200) saw the consolidation and embellishment of the pseudo-historical framework which had evolved in the preceding centuries. The tale *Suidigud Tellaich Temra* (The establishment of the household of TEAMHAIR), perhaps written in the 10th century, includes a summary of Ireland's settlements as proof of the supreme knowledge of a sage consulted concerning the country's landmarks and territories. This is a figure even older than Tuán—Fintan mac Bóchra, who came to Ireland before the Flood with Noah's granddaughter, Cesair. (The name *Fintan* significantly reflects a Celtic etymology **Windo-senos* 'white' + 'old'.) The addition of Cesair's settlement is the main development in the scheme which the *Suidigud* reflects. In describing the wanderings of the Gaels it gives an account close to that in *Can a mbunadus*, and indeed it cites a quatrain from it (Best, *Ériu* 4.121–72).

Fintan reappears as an authority on place-names in the DINDSHENCHAS (lore of places), a massive assemblage of verse and prose devoted to the etymologies of place-names. Although its contents in fact derive from many authors and many periods, an introductory paragraph claims that the whole of the *dindshenchas* was revealed by Fintan: as in the *Suidigud*, the occasion was an assembly allegedly convened at Teamhair (Tara) by DIARMAIT MAC CERBAILL (†565; Stokes, RC 15.277–9). Besides this framing anecdote, the several versions of the *dindshenchas* contain many tales set within the pseudo-historical scheme.

Of particular importance for this scheme's development were the compositions of didactic poets who were writing in the 10th and 11th centuries; the most important among them were Eochaid ua Flainn (†1004), FLANN MAINISTREACH (†1056), and Gilla Coemáin (*fl.* 1072). These men produced exhaustive verse compendia of historical and pseudo-historical information which dealt both with the Irish past and with Eusebian world history. Many of these were to remain authoritative sources of legendary history as late as the 17th century: Eochaid's poems on Partholón, Nemed, the Tuath Dé, and the sons of Míl; Fiann's catalogue of the kings of Ireland before St PATRICK; and Gilla Coemáin's accounts of the origins of the Gaels and of Irish history as a whole.

Five poems by Eochaid, Flann, and Gilla Coemáin, and two more by Tanaide Eólach (†*c.* 1075), provided the basis for the treatise which came to be called *Lebar Gabála Érenn*. Already before the end of the Middle Irish period (*c.* 1200), *Lebar Gabála* had become the central text of Irish legendary history.

Two more works should be mentioned in any survey of the Middle Irish evidence: *Lebor Bretnach* (The British book) and *Sex Aetates Mundi* (The six stages of the world). The former is a translation into Irish of the *Historia Brittonum*; in his version of the section on Irish legendary history, the translator draws upon his own knowledge to supplement the testimony of the Latin original (Todd & Herbert, *Leabhar Breathnach*; Hamel, *Lebor Bretnach* 21–7). The *Sex Aetates* is primarily concerned with biblical chronology and genealogy, but mentions Fénius in passing as the Scythian inventor of the Irish language (Ó Cróinín, *Irish Sex Aetates Mundi* 73–5, 115–16). *Lebor Bretnach*, *Sex Aetates*, and *Lebar Gabála* show no signs of mutual influence in their earliest versions; subsequent redactors of each, however, drew heavily upon the others.

Subsequent reception. As mentioned above, *Lebar Gabála Érenn* became the authoritative account of Ireland's legendary history. Individual tales were given historical anchorage by reference to its doctrines. Thus, a Middle Irish redactor used passages from its account of the Tuath Dé to provide an introduction for CATH MAIGE TUIRED. GIRALDUS CAMBRENSIS, visiting Ireland in the 1180s, had direct or indirect access to a text of the 'first recension', and transmitted its doctrines to a European audience (O'Meara, *History and Topography of Ireland* 92–9; O'Meara, PRIA C 52.156–61). In the great struggle to save Gaelic learning in the early 17th century, *Foras Feasa ar Éirinn* by Geoffrey Keating

(Seathrún Céitinn) and the Annals of the Four Masters depended on *Lebar Gabála* as their primary source for all of the events prior to the arrival of St Patrick. A new recension of the work itself was prepared by Míchél Ó Cléirigh (Macalister & Mac Neill, *Leabhar Gabhála*). Throughout this period, however, the pseudo-historical tradition appears not to have undergone any significant further development: to the extent that they modified it at all, scholars sought only to harmonize inconsistencies, and to produce a truly definitive vision of their most ancient past.

§4. GAELIC SCOTLAND

The Scottish Gaelic tradition of legendary history was closely related to the Irish tradition for most of the Middle Ages. The Gaels in Scotland (Alba) were portrayed as an offshoot from Ireland (Ériu) as early as *c.* AD 731, when Beda in his *Historia Ecclesiastica* ('Ecclesiastical History') 1.1 wrote that the Gaels, led by their chieftain Reuda, took Dál Riata by force and treaty from the Picts. According to this tale, the name Dál Riata was taken from their leader Reuda, and meant 'Reuda's portion/share'. Cairpre/Eochaid Riata early in the Dál Riata genealogies is likely to be this Reuda.

However, there was another version of the settlement story, reflected in a 7th-century poem by Beccán mac Luigdech and the genealogical tract *Cethri Prímchenéla Dáil Riata* (The four chief kindreds of Dál Riata), which could also date from the early 8th century. In Beccán's poem St Colum Cille is associated with 'Erc's region', while the tract portrays the main Dál Riata kindreds as descendants of Erc son of Eochu Munremar. Senchus Fer n-Alban (The tradition of the men of North Britain) depicts the same scheme, with the additional (possibly 10th-century) statement that Erc's sons took Alba. Both the Annals of Tigernach and the Dál Riata king-lists (see scottish king-lists) state that Fergus Mór mac Erca took Dál Riata, but these could also be 10th-century or later versions of the legend. In the Dál Riata genealogies both Erc and Cairpre/Eochaid Riata are depicted as descendants of the Irish, linking them into the Irish genealogical scheme for all their peoples, ultimately being derived from Scotta the Scythian and Goídel Glas (see above; auraicept na n-éces; lebar gabála érenn). Yet another version of the settlement legend is found uniquely in the 9th-century Welsh Latin Historia Brittonum, which states that 'Istoreth son of Istorinus held Dál Riata with his people'; the source of this statement is uncertain.

The destruction of the Picts by Cinaed mac Ailpín (r. 842/3–858) was an important element in the foundation legend of the kingdom of Alba. This idea, first found in the Chronicle of the Kings of Alba, compiled 971×995, had become (by the time of the 11th-century verse history of Scottish kings known as the 'Prophecy of Berchán') a treacherous slaughter of the Pictish nobility in a hall at Scone (perhaps originally Forteviot) by Cinaed mac Ailpín. The tale, which contradicts the contemporary evidence that Cinaed and his successors up to 876×900 viewed themselves as Pictish kings, was clearly designed to explain the disappearance of Pictish language and

identity. In later Scottish king-lists these actions were presented as following the killing of Cinaed's father, Ailpín, in Galloway (Gall Ghàidhil), perhaps indicating that Cinaed avenged his father by destroying the Picts.

Although the Picts were destroyed, their territories, according to later histories, were viewed as having continued in use, albeit with different names. The late 12th-century text *De Situ Albanie* (On the foundation of Scotland/North Britain) describes the seven divisions of Scotia, sub-dividing each into two regions. While the concept of seven divisions was probably derived from the seven sons of Cruithne in the PICTISH KING-LIST (see also CRUITHIN), the extent to which the regions in *De Situ Albanie* actually reflect Pictish regions is uncertain; however, the text itself makes it clear that these divisions were perceived as longstanding.

From the 10th century, the kings of Alba portrayed themselves (perhaps correctly) as descendants of the Cenél nGabráin kings of Dál Riata, rather than the successors of Pictish kings. The royal genealogies and the late 11th-century *Duan Albanach* (Scottish poets' book) added the kings of Alba onto Cenél nGabráin genealogies and king-lists, while in the 11th century a genealogical descent from the other royal kindred of Dál Riata, Cenél Loairn, to LULACH (king of Alba and Moray/Moireibh 1057–8), cousin of MAC BETHAD (Macbeth), was created by combining two separate Cenél Loairn genealogies. The main difference in *Duan Albanach* is that the name 'Alba' was supposedly named after its first settler, Albanus, brother of Brutus—a view probably taken from *Historia Brittonum* (see below), many manuscripts of which have an Albanus as brother of Britto (= Brutus; see TROJAN LEGENDS). However, the Irish origins of Scottish Gaels continued to be depicted throughout the Middle Ages (for example in the GAELIC version of *Historia Brittonum*, *Lebor Bretnach*, probably written in the kingdom of Alba in the late 11th century), but the Wars of Independence led to less of an emphasis being placed on Ireland. To stress the primary nature of the Scottish settlement, the Gaels were presented as having come to Scotland more directly, rather than via Ireland.

The 'St Andrews' Foundation Legend' was another reaction to English claims, this time by the archbishopric of York to ecclesiastical supremacy in Alba. The foundation legend, written 1093×1107, was St Andrews' reaction, a tale in which 'Ungus', a king of the Picts, won a battle with the help of St Andrew. Then, supposedly, Ungus donated St Andrews (*Cennrígmonaid*) in gratitude, to house the relics of St Andrew, which were brought from Constantinople to St Andrews by St Regulus. In the tale, St Andrews is then made head church of the Picts, and therefore also of the subsequent Gaelic church in Alba.

§5. WALES

The indigenous origin legends of the Welsh have been preserved only in allusions in *Enweu Ynys Brydein* (The names of the island of Britain; Bromwich, TYP 228–9) and some TRIADS. Although *Enweu Ynys Brydein* occurs first in the 14th-century manuscript LLYFR GWYN RHYDDERCH (Aberystwyth, NLW, Peniarth MS 4–5), its core may have been written before the 12th century and there is no doubt that it contains archaic material. According to this text, the names by which the island of Britain was first known are *[C]las Merdin*, 'before it was taken and inhabited', *Y Vêl Ynys*, 'after it was taken and inhabited', and *Ynys Brydein*, when it was conquered by Prydein son of Aedd Mawr. *Prydein*, Modern Welsh *Prydain*, is the usual Welsh name for BRITAIN. This succession of three names appears to represent two successive occupations of the originally empty island, but nothing is said of the nature of the settlements or the identity of each group of settlers. *Clas* is 'an enclosed space, people' (and, most commonly, a religious community); Merdin, in the LLYFR COCH

Hergest version, Myrdin, is taken to be an older spelling for Myrddin. Nothing in the stories and poems associated with the seer Myrddin (who corresponds to Merlin in English and Continental Arthurian literature) suggests that he had a part in an origin tale. His legendary associations place him in the historical context of 6th-century north Britain, while the personal name has been explained as a back-formation from Caerfyrddin (Carmarthen), where the second element is the Celtic place-name *Moridūnon* 'sea fort'. It is, therefore, an open question who or what this Merdin may have been. *Y Vêl Ynys*, Modern Welsh *y fêl ynys*, is a 'proper' compound of two nouns, 'the honey island', the significance of which is not now apparent, unless it refers to the fruitfulness of the land as in some modern place-names, and cf. Exodus 3:8. The transparency of the name, whether correct or not, explains why, unlike *Clas Merdin*, it was preserved as a traditional name for the island in the work of some 14th- and 15th-century poets, though they may not have had any further information. Prydein son of Aedd as the eponymous conqueror is the last in the list, but there is no narrative of, or other reference to, his conquest. He does, however, figure in the genealogy of Gruffudd ap Cynan († 1137) of Gwynedd. Part of his genealogy as given in *Historia Gruffud vab Kenan* (13th century) is a combination of a traditional pedigree and one taken from Historia Regum Britanniae ('History of the Kings of Britain') of Geoffrey of Monmouth. It appears that the former is a 'pre-Galfridian' pedigree (i.e. compiled before Geoffrey of Monmouth's *Historia*), preserved by the Welsh learned class and retained by the author of *Historia Gruffud vab Kenan* in spite of his acceptance elsewhere in the genealogy of the authority of the *Historia Regum*. Prydein's appearance in a genealogy suggests that the legendary history not only recorded his conquest, which gave its name to the island, but also the names (and perhaps the exploits) of his descendants (or successors), as well as his predecessors. Such an annotated genealogy or king list would thus represent a basic 'British Book of Conquests' analogous to the Irish Lebar Gabála Érenn, as suggested by P. C. Bartrum (BBCS 23.1–6).

Indigenous legendary history had a mythic character, remnants of which remain in the Four Branches of the Mabinogi and the triads, relating to, for example, the families of Dôn, Llŷr, and Beli Mawr, and, in particular, the usurping of the crown of the island of Britain by Beli's son Caswallon (Cassivellaunos) during the absence of King Bendigeidfran (Brân) son of Llŷr in Ireland (Ériu). But much of the narrative of indigenous Welsh myth was lost as the European Christian learned traditions became more dominant; see above. In Wales (Cymru), the native origin legends and their sequential character were displaced by versions of the classical and biblical legends, which carried more authority. The concept of a succession of settlers was lost in favour of a single eponymous hero, called Brutus or Britto (the singular of *Brittones* 'Britons'). The 9th-century Welsh Latin compilation Historia Brittonum (§7) simply refers to 'Brutus, a Roman consul'. But, further on, the text gives two different explanations: from the 'Annals of the Romans' (§10) comes the story of Britto/Brutus, grandson of Aeneas, who fled after the sack of Troy (see trojan legends); and, from 'the old books of our elders' (§17), an account of Britto, a descendant of Japheth, Noah's son. From Britto, his brothers, and cousins, most of the European nations claimed descent. In §18, the Trojan and biblical origins are combined. The theme of invaders was not forgotten, however, but its application changed. Where the native and 'Brutus' legends sought to claim and to justify British hegemony, the development of the traditional history of the Roman and post-Roman periods made reference to the origins of the nations of contemporary Britain: Irish, Picts, Saxons, and Britons. The priority of the Britons within Britain is stressed. They had come to the island in the Third Age of the world, whereas the Irish had secured Ireland only in the Fourth Age, and the Picts and Saxons were even later arrivals (*Historia Brittonum* §§7, 15, 16). Nevertheless, British sovereignty could no longer be claimed as absolute. This is the theme also of Triad 36, *Teir gormes a doeth y'r Enys Hon, ac nyt aeth vrun drachefyn* (Three oppressions came to this island, and not one of them ever went back). *Gormes* 'oppression' is used here for invading settlers: mythic Coraniaid or historical *Gwydyl Fychti* ('Irish-Picts') and Saxons. But the defining phrase is that none of these ever returned whence they had come. The *Coraniaid* were destroyed, as related in the tale of Lludd and Llefelys (see cyfranc lludd a llefelys). But the other two remain in Britain as *gormesoedd* 'oppressions', as the Welsh

prologue to BRUT DINGESTOW (§§2–3) specifically noted, using this key word *gormes*. The Romans were not part of this scheme of successive *gormesoedd* (oppressions): they returned home after their long sojourn, and the 'conquest' described in 'Maxen's Dream' is an alliance of Britons and Romans, rather than an invasion (see MACSEN WLEDIG). The Romans were an important element in Welsh traditional history, but not as a *gormes*.

The field of reference of legendary history in *Historia Brittonum* and *Enweu Ynys Brydein*, as well as in the tales and the triads, was the island of Britain, rather than the more compact and recent successor in Wales. *Ynys y Cedyrn*, 'the island of the mighty', is the (mythic) name used in the Four Branches of the Mabinogi. Sometimes, Welsh legendary history views Britain geographically—in its measurements, islands, and rivers—but often conceptually as the British entity, political and cultural. Essential to the concept of the island of Britain is the unity of Britain and the sovereignty of the BRITISH (in the sense of speakers of BRYTHONIC), who had formerly ruled 'from sea to sea' and were now represented by their remnant, the Welsh (*Historia Brittonum* §9). Political unity is symbolized in the 'crown of London' and the 'three realms of Britain': Wales, Cornwall (KERNOW), and the North (HEN OGLEDD). Sovereignty is expressed in the titles 'Lord of Britain' given, rhetorically, to URIEN of RHEGED (6th century) and CADWALLON of Gwynedd (7th century) and in the war song *Unbeiniaeth Prydein* (Sovereignty of Britain), sung before battle according to the Welsh laws (see LAW TEXTS), and single kingship is implicit in, e.g. the pre-Galfridian genealogy/king-list of Prydein son of Aedd. British unity, hegemony, and sovereignty were themselves myth, but Britain's post-Roman *adventus Saxonum* (coming of the English) brought traditional history and political reality together. GILDAS is the first to express the *adventus Saxonum* and its aftermath in terms of the 'loss of Britain' and to introduce this concept into Welsh historiography. The theme of the loss of sovereignty and unity, with the logical corollary that the English invasions are the turning point in Welsh history, becomes dominant, but also gives rise to the psychological reaction of hope of renewal and restoration expressed through political vaticinations (prophecies). *Historia Brittonum* (§§40–2) gives an account of the red dragon 'of our people' (see DRAIG GOCH), which drives out the white dragon 'of the people who have seized many peoples and countries in Britain'. The 10th-century poem ARMES PRYDEIN *Vawr* (The great prophecy of Britain) develops the theme of a returning British messianic deliverer in a contemporary political situation.

The concept of the 'British' island of Britain probably owed much to the memory of the Roman province of Britannia. Britain as part of the Empire was a powerful historical theme, as is suggested by hints of stories in the triads and elsewhere about the family of Beli Mawr, Caswallon and the arrival—and initial repulsing—of the Romans. The Roman theme was also developed in the figure of the Emperor Maxen (Macsen Wledig) in genealogies and 'Maxen's Dream', reflected also in *Historia Regum Britanniae*. Other stories relating to the arrival of the English and the part of Vortigern (GWRTHEYRN) in their reception have a similar function in presenting invasion and conquest in a moralizing light as the consequence of foolishness or treachery. These are part of the wider traditional history, as are the separate origin legends of many of the Welsh kingdoms, e.g. DYFED, Gwynedd, BRYCHEINIOG, POWYS, which serve to define territorial and tribal identity. In its broader outlines, Welsh legendary history can be seen to have achieved its functional pattern of national origins, unity, sovereignty, loss (following the English settlements), and vaticination of renewal—all in the context of the island of Britain—by the 9th century in *Historia Brittonum*. These were to be the themes which would later inform Geoffrey of Monmouth's *Historia Regum Britanniae* in the 12th century and account for its particular significance for Welsh audiences. Political PROPHECY would be an integral part of the Welsh literary tradition until its apparent fulfilment in the coming of the partly Welsh TUDUR/Tudor dynasty to the 'crown of London', but the central themes never lost their resonance in popular Welsh historiography.

§6. BRITTANY

Although the Breton saints' lives seem to give a coherent picture of the succession of rulers in the 4th to 7th centuries, a great deal of this is medieval historical fiction. Brittany's legendary history begins with CONAN MERIADEC, said to have landed in Brittany (BREIZH) in 396, later extolled as the founder of the house of Rohan. Following Conan, most of these medieval legendary accounts of Breton origins give the names of the rulers of early DOMNONIA (Northern Brittany). An 11th-century legendary history with the beginnings of an Arthurian orientation is suggested by the LIVRE DES FAITS D'ARTHUR and the Life of St UUOHEDNOU. From the 12th century, medieval Breton historians generally adopted GEOFFREY OF MONMOUTH's scheme of succession of the rulers of ancient BRITAIN, in which ARMORICA played a central rôle in numerous key episodes. Geoffrey's authority among Breton historians lasted until the 16th century; thus, the history of Brittany tended up to this time to be attached and adapted to ARTHURIAN sources. Geoffrey's HISTORIA REGUM BRITANNIAE ('History of the Kings of Britain') swept aside or covered an older layer of pre-Galfridian Arthurian traditions from which only traces and fragments can now be recovered.

This scheme based on Geoffrey was continued by the hagiographer Albert LE GRAND in his *La vie gestes, mort, et miracles, des saincts de la Bretaigne armorique* (Nantes, 1637), and hence figured in devotional literature until the 19th century, and even into the 20th in peripheral works. The earliest 'standard' version of this 'Galfridian' pseudo-history can be found in *Chronicon Briocense* (ed. Le Duc & Sterckx). Although this medieval view of Brittany's past still aroused scholarly debates and arguments in the 17th century, modern historians no longer defend or analyse what is now universally viewed as a largely fictionalized vision of the past. More legends can be found adapted or translated into Old French as the so-called BRETON LAYS, often connected with Arthurian characters and settings in early medieval Brittany and Britain.

§7. THE PICTS

Very little legendary history by the Picts survives; this is not surprising since the extinction of the PICTISH language and culture probably led to a neglect of Pictish documents. The surviving tales exist because they were retold by outsiders, increasing the likelihood of misunderstandings and alterations, with the result that some of the material may not be Pictish in origin at all. The Picts were influenced by the GAELIC historiographic tradition, a consequence of the important Gaelic rôle (of Ireland/ÉRIU and DÁL RIATA) in the Pictish Church. BEDA (*Historia Ecclesiastica* 1.1) probably used a Pictish source for his account of the Pictish settlement; however, the Pictish story was itself probably influenced by Irish learned tales, since it takes the Picts from Scythia to Pictland via northern Ireland (the home of the Irish group, who had the same Old Irish name as the north British Picts, namely CRUITHIN). Further along, the Picts, having moved to northern Britain, asked the Irish for wives, because they had no women with them. The Irish agreed only if the Picts chose a king from the female line, should the succession come into doubt. In later Gaelic versions of this tale from the 9th century onwards, female-line succession is compulsory, but whether this reflected actual Pictish practice is disputed. The Picts' Scythian origin probably derived from a misreading of Servius' commentary on VERGIL's *Aeneid*, taking the Latin adjective *picti* 'painted' to mean the Picts (nominative plural *Picti*) in a passage on Scythia. Alternatively, the episode in Scythia, which occurs also in Irish legendary history, could derive from learned speculation on an imagined etymological link between *Scythia* and *Scotti* 'the Gaels'; if so, this part of

the Pictish origin story at least would not originally have pertained to the Picts at all. Later, the 11th-century Middle Irish adapation of the Welsh Latin HISTORIA BRITTONUM, *Lebor Bretnach*, brings the Picts from Thrace, possibly through a misreading of the *Aeneid* as suggested above. The later Gaelic tales usually call the leader of the Picts 'Cruithne mac Cinge'. This Gaelic name also appears as the first Pictish king in the PICTISH KING-LIST, a Pictish document which displays Gaelic influence, and *Cruithne* means 'Pict' in Old Irish. The *Series Longior* Pictish king-list also included seven sons of Cruithne, most of whom bore the name of Pictish territories, the so-called 'Pictish provinces'. This sequence was probably based on a story that Pictland was divided by the seven sons of Cruithne, though in the Pictish king-list this is used to stress the essential unity of Pictland from ancient times. Another Pictish tale may be reflected in the Pictish king-list note which states that Drust son of Uerp fought a hundred battles and lived a hundred years. *Series Longior* also includes a condensed foundation-legend for Abernethy (Obair Neithich), involving the exile of Nechtan son of Uerp in Ireland, his taking of the Pictish kingdom through St BRIGIT's intercession, and his subsequent gift of Abernethy to God and Brigit; this, possibly, is a later, Gaelic, tale, but *Uerp* is arguably a Pictish spelling (cf. NECHTON GRANDSON OF UERB).

Leiden Leechbook (Leiden MS, Vossianus Latin fo. 96A) is unique among early medieval manuscripts containing Celtic words in that it is a medical compilation. Three of its four pages contain three Latin texts, while one page contains a multilingual text, including BRYTHONIC and IRISH words. Whitley STOKES described the Brythonic forms as the earliest surviving examples of Old BRETON, and this, until recently, has been the received opinion. The manuscript has been assigned to various dates between the 8th and the 10th centuries. Newer assessment of the palaeographical evidence (the style of the writing hand) of its insular script suggests a similarity to the Cambridge JUVENCUS MS, which would suggest a date in the later 9th to mid-10th century. There is nothing Continental in the letter forms, and one would expect at least some Continental influence if this were the 9th- or 10th-century product of a scribe trained in Brittany (BREIZH).

The first leaf (recto [right] and verso [left]) contains two lists of recipes in the Latin language which are paralleled in other major recipe collections known in the Middle Ages. The second leaf (verso) has the beginning of a regimen prescribing a pattern of living which should be followed throughout the months of the year. Folio 2 recto consists of the list of recipes which contain many Neo-Brythonic (that is, WELSH, CORNISH, or Breton) words and one Irish form (an Irish gloss is also found on folio 1 verso). It is this hybrid text which has attracted most attention. The Neo-Brythonic words are mainly nouns (plant names or the names of illnesses), but there is at least one verb. The plant names fall into three categories: inherited words (such as *guærn*, cf. Modern Welsh *gwern*, Old Irish *fern* 'alder'; *cæninn* 'leek', *mæl* 'honey'; *dæru* 'oak', *del* 'leaves'), compounds which could be viewed as later coinages (e.g. *ælilub* 'salve plant'), and Latin loanwords which are sometimes Brythonicized, for example, *laur* 'laurel' < Latin *laurus*. The recipes are normally written in a combination of Latin and vernacular, e.g. *Item ad elæuandum os: boet, boror, radix uitonicæ, grana til [...] per cæruisam sanat*, literally 'for raising a bone: beet, watercress, root [of] betony, grains [of] lime [mixed] with beer heals'. Careful analysis of the linguistic forms suggest that the original language of the text may well have been Breton, though the possibility of it being a Cornish or Welsh text should not be excluded. If it is Breton, it seems likely that the text was copied by an insular British scribe (see also MEDICAL MANUSCRIPTS). The uncertainty over the dialect must be understood as a consequence of the fact that the Brythonic languages had not yet diverged much from one another by *c.* 900.

Leon (French Léon) is one of the four BRETON-speaking regions of Lower Brittany (BREIZH-IZEL); it is defined territorially by the boundaries of the bishopric of Leon. The four traditional dioceses (KERNEV/Cornouaille, Leon, TREGER, GWENED/Vannes) were areas of administration up to the time of the French Revolution, and correspond to the four main divisions of the BRETON DIALECTS. Leon formed the westernmost part of the early medieval principality of DOMNONIA. In medieval sources the region is called *pagus Leonensis*, for earlier *pagus Legionensis* (country of the legion), a name which points to its foundation as part of Roman or early post-Roman military deployments. Leon's traditional capital is the seat of the diocese at Saint-Pol-de-Léon on the north coast, founded in the early Middle Ages (see PAUL AURELIAN). Its main city lies to the south-west at the important modern naval and merchant port of BREST, site of the GALLO-ROMAN fortified town of Gesocribate, which had belonged to, or was at least situated in, the tribal CIVITAS of the Osismii (see ARMORICA). One of the early medieval names for Brest is *urbs Legionum* (city of the legions), suggesting that this had been the base of the army or armies from which the province takes its name.

AM

Lepontic

§1. INTRODUCTION

'Lepontic' is the traditional designation for a discrete group of approximately 140 INSCRIPTIONS clustered around the town of Lugano in the northern Italian lake district. The large majority are proprietary (signifying ownership) or funerary in nature, though there are two dedicatory inscriptions and 16 coin legends. The entire corpus is engraved in the Etruscan-derived script of Lugano (see SCRIPTS). This body of Lepontic can be arranged into the following chronological periods: Early (*c.* 600–*c.* 400 BC), Middle (*c.* 400–*c.* 200 BC), and Late (*c.* 200–*c.* 1 BC). The Early and Middle Lepontic texts antedate virtually all other CONTINENTAL CELTIC inscriptions. (Eska & Wallace, *Historische Sprachforschung* 112.122–36, demonstrate that an inscription from Oderzo [conventionally referred to as *Od 7] in ancient Venetia, which had previously been interpreted as Venetic in language, is, in fact, in Lepontic.)

§2. AFFILIATION (DIALECT POSITION)

There has been considerable controversy concerning the relationship of Lepontic to 'Cisalpine GAULISH' (see also CISALPINE GAUL) in particular, and its position in the Celtic family tree in general. Schmidt (for example, ZCP 41.164) takes the essential diagnostic dialect feature to be the shift of INDO-EUROPEAN /*kʷ*/ to Lepontic /*p*/ (but see below). Lejeune also uses this criterion, to which he adds his proposed sound change of the Indo-European syllabic nasals /*m̥, n̥*/ > Lepontic /*em, en*/ as a key criterion (*Lepontica* 121–3; *Bulletin . . . l'Academie royale de Belgique* 64.118–21). Schmidt, however, views Lepontic /*em, en*/ as a secondary development from /*am, an*/, which is the reflex of Indo-European /*m̥, n̥*/ in CELTIBERIAN, Gaulish, and BRYTHONIC (KZ 90.184). Lejeune thus sees Lepontic and Cisalpine Gaulish as separate languages. However, many Celtic linguists at present consider the change of Indo-European /*kʷ*/ to /*p*/ to be relatively unimportant, and the treatment of the Indo-European syllabic nasals remains unclear inasmuch as there is only a single potentially relevant example, accusative plural *siTeś* (S–65), in which the nasal consonant does not appear as such at all. While it is likely that *siTeś* continues Indo-European **sēd-n̥s*, as Lejeune proposed, it is also possible that earlier *-ans* became *-eś* or that this accusative plural ending has taken its vowel analogically from the nominative *-es* (Uhlich, *Akten des Zweiten Deutschen Keltologen-Symposiums* 296). McCone has set out some reasons to believe that Lepontic is not a separate Continental Celtic language, but an early form of Gaulish (*Towards a Relative Chronology of Ancient and Medieval Celtic Sound Change* 68–9). Eska has sought

to demonstrate that the linguistic features of Lepontic are entirely consistent with the view that it is a chronologically older and geographically peripheral dialect of Cisalpine Gaulish (*Proc. Berkeley Linguistic Society* 24.2–11; this position has been adopted by Solinas, *Studi Etruschi* 60.312, and Watkins, *Studia Celtica et Indogermanica* 540). On the other hand, Uhlich has argued that Lepontic is a language separate from Transalpine Gaulish, largely on the basis of the consistent disappearance of /*m*/ and /*n*/ before the stop consonants /*p, t, k*/ and the consistent appearance of inherited **nd* > *nn* (*Akten des Zweiten Deutschen Keltologen-Symposiums* 277–304).

§3. PHONOLOGY

As the earliest attested variety of Continental Celtic, Lepontic may well be expected to preserve features which have disappeared elsewhere in Celtic (see CONTINENTAL CELTIC languages for a description of the linguistic features of Continental Celtic in general). Eska argues that the character *v* represents /*φ*/ (a sound similar to [f] with both lips together) < Indo-European /*p*/ in the Early Lepontic form *uvamoKozis* (S–65), the first element of which continues **upamo-* (*Münchener Studien zur Sprachwissenschaft* 58.63–80). The same sound is probably also attested, in the same inscription, in the difficult form *uvlTiauioPos*. It is also noteworthy that Indo-European /*kʷ*/ may be preserved in the Lepontic forms *Kualui* (S–29) and *Kuaśoni* (S–20) (though the script conceals whether the character transcribed as *K* represents /*k*/ or /*g*/). Possible further evidence for the retention of /*kʷ*/ in Lepontic is the form *aTeKua* (S–126) beside *aTePa*[? (S–118) and *aTePu* (S–7). The only other example of the labialization of /*kʷ*/ > /*p*/ occurs in the enclitic conjunction *-Pe* 'and' (S–128) < **-kʷe*, which is attested in an inscription from the Late period. The diphthong /*ei*/ is preserved in Lepontic in word-final position in the *n*-stem dative singular forms *aTilonei* (S–12), *Piuonei* (S–26), and]*Kionei* (S–1), as well as in the apparent *i*-stem dative singular *sunalei* (S–28). An important innovation identified by Uhlich is that inherited sequences of vowel+nasal+stop consonant /VNT/ consistently appear as a (nasalized) vowel + stop consonant /ṼT/ in Lepontic (as well as Cisalpine Gaulish as it appears when written in the Etruscoid script of the inscriptions), e.g. *PiuoTialui* (S–3) < Indo-European **gʷiw-ont-* (Uhlich, *Akten des Zweiten Deutschen Keltologen-Symposiums* 280, 293).

§4. MORPHOLOGY

Early Lepontic attests several examples of *o*-stem genitive singulars in *-oiso*, which appear to continue Indo-European **-osjo*. Middle and Late Lepontic (like Cisalpine Gaulish) form thematic genitive singulars in *-i*. (De Hoz argues that several forms in *-u*, which have been viewed as non-neuter nominative singular *n*-stems, in fact continue *o*-stem ablative singular **-ōd* in genitive (possessive) function, thus providing a third *o*-stem genitive singular form for Lepontic, see *Studia Indogermanica et Palaeohispanica* 315–29; cf. the criticism of Eska, *Hispano-Gallo-Brittonica* 34–7.) In the area of verbal morphology, Lepontic has developed an innovative simple past tense, a *t*-preterite which appears to continue inherited imperfect (habitual past tense) forms in *KariTe* and *KaliTe* (S–119) (Schmidt, ZCP 41.177–8; Eska, *Historische Sprachforschung* 103.81–91). The Lepontic inscriptions show several suffixes for giving the name of an individual's father: vowel + *-kno-*, *-io-*, and *o*-stem genitive singular *-ī* (all of which are known also in Cisalpine and Transalpine Gaulish). Lepontic alone also uses *-alo-* in this function; its origin remains mysterious. It is possible that Lepontic also used *-on-* in such a function (Tibiletti Bruno, *Rendiconti dell'Istituto Lombardo* 100.316, 102.388; Lejeune, *Lepontica* 53; Eska, *Hispano-Gallo-Brittonica* 36, 43–4).

§5. SYNTAX

Little can be said about the order of the Lepontic clause, since only three examples with verbs, all from the Early period, are attested. One inscription from Prestino (S–65) appears to preserve the unmarked (i.e. syntactically neutral) subject–object–verb configuration reconstructed for PROTO-CELTIC (and regular in CELTIBERIAN):

[$_{\text{subject}}$*uvamoKozis Plialeθu*][$_{\text{indirect object}}$*uvlTiauioPos ariuonePos*][$_{\text{direct object}}$*siTeś*][$_{\text{verb}}$*TeTu*]

An inscription from Vergiate (S–119), which contains the other two verb phrases, provides evidence for two syntactic types. The first clause seems to place special focus on the indirect object 'to Belgos'. The second clause is subject–verb–object, as is very common in

the Gaulish inscriptions. This may have been the neutral order for the Lepontic sentence; at least, it was a grammatically possible order:

(a) [$_{\text{indirect object}}$*PelKui*][$_{\text{direct object}}$Pruiam] [$_{\text{subject}}$Teu][$_{\text{verb}}$ KariTe]

(b) [$_{\text{subject}}$ *isos*][$_{\text{verb}}$KaliTe][$_{\text{direct object}}$ Palam]

Characteristic Middle La Tène material from the Marne region: detail of Bronze neckring from grave II, Courtisols, 13 cm diameter, later 4th century BC

Les Jogasses is an important IRON AGE cemetery located in the *département* of Marne, north-east France. The site provides a case-study of the transition from HALLSTATT to LA TÈNE periods in one community within a region central to both cultures and situated within the core of the Celtic-speaking zone of ancient Europe. The cemetery is located at the border of the modern communities of Cuis and Chouilly. It was discovered in 1850, and Abbé Favret undertook systematic excavations at the site from 1923 to 1926. The cemetery was in use between the end of the 6th and the second half of the 4th century BC. The Hallstatt

TOMBS are situated towards the centre of the cemetery, and the La Tène tombs at the periphery. Not all the graves have been excavated, but 125 of the 203 known tombs contain grave goods. The distribution changes between phases 1 and 2: at first, women are buried separately from the men; then, later groups of family burials containing men, women, and children appear. One tomb contains a four-wheeled wagon, a typical feature of Hallstatt aristocratic burials, but there is no abrupt change in the grave goods between the Hallstatt and La Tène periods. This suggests that the La Tène culture developed spontaneously within a western Hallstatt milieu.

M. Lévery

Letnitsa is the site in the BALKANS (modern Bulgaria) where 23 gilded silver appliqués were found in a bronze crucible in 1963. The material itself is probably the work of Thracians rather than Celts, but is of interest to CELTIC STUDIES for several reasons. There are stylistic parallels with the LA TÈNE style to the west and especially objects with mixed Celtic and Thracian affinities such as the GUNDESTRUP CAULDRON, and there is also an implicit narrative content which reflects tales of mounted heroes, goddesses, hunting scenes, and monsters, with analogues to some of the central themes of the HEROIC ETHOS of the Celtic world.

The appliqués, of different shapes, have ears for hanging, and probably made up a set for the horse harnesses. In view of their style of manufacture, they were most probably the products of two workshops; twelve appliqués have animal representations only. They show either fighting animals or animals in hieratic positions, or only their heads; many of these appliqués with animal representations show parallels to the Scytho-Siberian animal style and/or the representation of animals in Greek art.

Of exceptional interest for Thracian mythology are the 11 appliqués with anthropomorphic representations: eight riders, two female characters, and a scene representing the sacred marriage (*hieros gamos*) of the SOVEREIGNTY MYTH. The eight appliqués with riders make up an iconographic whole, though they have a series of individual features. In six appliqués some riders face right with a spear in the left hand; others take the opposite stance. Five riders have armour and beards, but are not identical, and have different symbols behind them. One appliqué represents an armoured rider, with a quiver on his back, attacking a bear with the spear, and another shows a boar being killed. Another appliqué shows an armoured rider holding a bowl in his right hand with a feline in the back. All the horses are portrayed in an attitude of formal procession, harnessed, and standing erect; the riders have no helmets, shields, and no scene represents warlike combat. The representations of human heads (two male and one female) may suggest either the epiphany of a deity or some prestigious ancestor. The horse heads may emphasize the heroic character of the rider, given the close relation between the hero and the horse, both in war and in hunting. One unresolved question is whether these scenes represent the heroic biography of only one character, namely, key scenes from the history of a certain Thracian dynast, or representative

Gilded silver harness ornament from the grave at Letnitsa, Bulgaria, showing a hero on horseback, who has killed a boar and is fighting a bear, height 5cm

moments for the entire Thracian aristocratic class, either hunting or advancing to war. On balance, the heroic biography of a Thracian dynast—depicting hunting, libation, and investiture scenes—would best explain the scenes. We do not appear to have scenes of a war; the riders have no helmets or shields, nor is any human confrontation depicted.

A female character is shown on one appliqué riding a hippocampus (a mythical sea monster). On a different appliqué there is another female character, with a mirror in her right hand, standing behind a 'DRAGON'—a snake with three heads and mammal ears. These scenes may depict a female deity, probably the supernatural woman connected with the myth of the hero-cavalier. The erotic scene on one appliqué, one of a kind in the Thracian world, depicts either the divine origin of a dynast or a sacred union between a dynast and a goddess to ensure the prosperity of his kingdom. The treasure of Letnitsa depict scenes of the hero-rider mythology from the so-called 'golden century' (*c.* 350–*c.* 250 BC) of the Thracian dynastic rulers. It thus belongs to the period of the high point of Celtic cultural influence in eastern Europe (and consequent interaction with the Thracians), the invasion of Greece in 279/8 BC, the founding of GALATIA in the following decade, and soon after the founding of the Celtic kingdom of Tylis not far from Letnitsa.

Levroux is the name applied to two archaeological sites, situated 1.5 km apart, in Indre, central France, which serve as a microcosm of important economic and social developments which were widespread in GAUL and Celtic central Europe in the last two centuries BC. Like Basel and BREISACH, Levroux is typical of the evolution of Middle and Late LA TÈNE proto-urban sites. The earlier site, to the south, was an unfortified settlement of the 2nd century BC, covering 10 ha (24 acres) on a plain. Fieldwork has revealed a variety of structures below the present ground surface there, including wells, storage pits, and elaborately furnished workshops, which yielded quantities of pottery and bones, a range of iron and bronze artefacts, metal-working slag, as well as COINAGE and associated moulds used for striking coins. Numerous amphorae (large imported ceramic WINE vessels) indicate that this settlement—though an undefended provincial site, not situated on any major trade route—commanded long-distance trade, probably because it was the site of a mint and also on account of the general productivity of its metal working. This settlement was abandoned early in the first century BC, and an OPPIDUM, known as the Colline des Tours (the hill of the towers), developed in the period 80–70 BC on high

ground to the north, and continued beyond Caesar's conquest of Gaul in the 50s BC. The occupied summit was encircled by a *murus gallicus* (see FORTIFICATION) which enclosed a space of about 20 ha (48 acres), where the activities previously carried out in the open village resumed. Small finds, gathered mainly on the surface, comprise hundreds of stamped bronze coins, a small statue, and decorated bronze plates (all displayed in the Museum of Châteauroux and Issoudun), and rich furnishing from the reign of Augustus (30 BC–AD 14). Later, a Roman settlement—whose name is recorded as *Leprosum*, the ancient forerunner of *Levroux*—developed between the oppidum and the old open village.

Olivier Buchsenschutz

Lewis, Henry (1889–1968) was one of the most important scholars of Welsh and the other Celtic languages during the 20th century. Born in Clydach in the Swansea valley, Glamorgan (Morgannwg), and brought up in the neighbouring district of Ynystawe, he studied at the University College of Wales, Cardiff (Caerdydd), where he was appointed assistant lecturer in 1918. In 1920, he became Professor of Welsh at University College of Wales, Swansea (Abertawe), where he spent the rest of his working life.

His contributions to Celtic studies range from researches and editions of medieval and early modern Welsh poetry and prose (see WELSH PROSE LITERATURE) to re-editions of monumental basic works, Welsh lexicology, and grammars of the Brythonic languages. He prepared the first standard edition of the work of the Welsh court poets (see GOGYNFEIRDD)—*Hen Gerddi Crefyddol* (1931)—and was one of the co-editors of *Cywyddau* Iolo Goch *ac Eraill* (1925). He made Holger Pedersen's imposing *Vergleichende Grammatik der Keltischen Sprachen* available in English as the revised and condensed *Concise Comparative Celtic Grammar* (1937). His researches into the Welsh lexicon included a study of Latin loanwords in Welsh, published as *Yr Elfen Ladin yn yr Iaith Gymraeg* (The Latin element in Welsh, 1943). Lewis produced classic handbooks of Middle Breton and Middle Cornish for Welsh readers: *Llawlyfr Llydaweg Canol* (1922) and *Llawlyfr Cernyweg Canol* (1923). His highly accessible studies on the development of the Welsh language, published as *Datblygiad yr Iaith Gymraeg* (1931), were originally prepared as evening lectures for coalminers in south Wales and—recognized as an excellent introduction to a difficult subject—have been translated into English and German. *The Sentence in Welsh* (1943) proved seminal for the subsequent study of word order in Welsh and Gaulish.

Outside his strictly academic work, Lewis was interested in the preparation of a 20th-century edition of the Welsh Bible. He co-edited *Beibl y Plant* (The children's Bible) and was a member of the editorial board of one of the most popular and widely used Welsh hymn-books, *Y Caniedydd* (The songbook).

SELECTION OF MAIN WORKS

Llawlyfr Llydaweg Canol (1922); *Llawlyfr Cernyweg Canol* (1923); *Datblygiad yr Iaith Gymraeg* (1931); (with Pedersen) *Concise Comparative Celtic Grammar* (1937); *Yr Elfen Ladin yn yr Iaith Gymraeg* (1943); *Sentence in Welsh* (1943).

EDITIONS. (with Thomas Roberts & Ifor Williams) *Cywyddau Iolo Goch ac Eraill* (1925); *Chwedlau Seith Doethon Rufein* (1925); (with Diverres) *Delw y Byd* (1928); *Beibl y Plant* (1929); *Hen Gerddi Grefyddol* (1931); *Brut Dingestow* (1942).

Lewis, John (1548?–1616) was a barrister and an antiquary of Llynwene, Llanfihangel Nant Melan, Radnorshire (sir Faesyfed), in Wales (Cymru). He was born at Harpton Court in the parish of Old Radnor (Pencraig) and was called to the Bar at Lincoln's Inn in 1570. An avid admirer of Geoffrey of Monmouth's account of 'The Matter of Britain', he cudgelled enemies of the Brutus legend (see TROJAN LEGENDS) and Arthurian traditions in his only published work, *The History of Great Britain*, which appeared, thanks to the editorial good offices of the antiquary and genealogist Hugh Thomas of Breconshire (sir Frycheiniog),

in 1729, long after the Tudor controversy over the spurious chronicle of Geoffrey had died down.

Lewis, Saunders [1] the politician

Saunders Lewis (1893–1985) was born in Wallasey, Cheshire (swydd Gaer) and was brought up in a conventional late-Victorian household, strongly influenced by the values of the Nonconformist denominations: his father was a Methodist minister and his maternal grandfather was Owen Thomas, a celebrated preacher. His early contact with Wales (CYMRU) was limited to family holidays in Anglesey (MÔN), a link that became more tenuous as he enrolled as a student of English at Liverpool University where he met his future wife, Margaret Gilcriest, who was of Irish Catholic background. Lewis volunteered for military service in 1914, returning to complete his academic studies after the war.

During and after the war Lewis, influenced by the works of Maurice Barrès and by Emrys ap Iwan (Robert Ambrose Jones, 1848–1906), gradually came to regard himself as a Welsh nationalist. By the early 1920s, when he embarked on an academic career as a lecturer in Welsh literature (a subject he had hardly studied) at Swansea (ABERTAWE), he began to develop a reputation not only as a writer and critic but also as a political thinker. In 1925, he was a founder member of Plaid Genedlaethol Cymru (the Welsh Nationalist Party; see NATIONALISM), becoming its president a year later. For the next 15 years Lewis was the most influential figure within the fledgling party. Developing ideas based on a Welsh-European medieval heritage, his apparent opposition to modern industrial society and his avowed opposition to the English language mystified most Welsh people. Worse still, many opponents accused him of viewing the working classes with contempt, of having an anti-democratic streak and even of sympathizing with the fascist regimes of the 1930s. For many, this was compounded by his conversion to Roman Catholicism, which seemed to confirm Lewis's standing as an outsider.

In 1936, aware that his fellow-countrymen were rejecting his message, Lewis, along with Lewis Valentine (1893–1986) and D. J. Williams (1885–1970), committed a symbolic act of arson at Penyberth, on the Llŷn peninsula in north-west Wales, where a medieval Welsh farmhouse with literary connections had been demolished to build an army firing range. For a short time, Lewis and his colleagues enjoyed a great surge of public support, leading to the refusal of a jury at Caernarfon Crown Court to convict. However, once the case was moved to the Old Bailey in London and Lewis and his colleagues were sentenced to nine months in Wormwood Scrubs, it became apparent that public support was short-lived.

Lewis remained as party president until 1943, though his actions cost him his post at Swansea. For 15 years he survived on the charity of supporters and by writing occasional newspaper columns, where his views were respected, if seldom widely supported. In 1942 Lewis contested the University of Wales parliamentary seat in a celebrated by-election, but was defeated by a Liberal candidate, Professor W. J. Gruffydd (1881–1954), who had been prevailed upon to stand as a stop-Lewis candidate. The fact that this was the one seat where Plaid Cymru entertained any hopes of success reflects the limited appeal both of the party and its president's political views. Following his defeat, Lewis withdrew from political life.

His one great intervention in later years—his radio lecture, TYNGED YR IAITH (The fate of the language) in 1962—saw Lewis deliver a far clearer and more explicit message than in the 1930s. Although intended as an appeal to Plaid Cymru to abandon parliamentary aspirations and become a language movement, it directly led to the formation of the Welsh Language Society (CYMDEITHAS YR IAITH GYMRAEG), one of the catalysts for the regeneration of the language.

Lewis regarded his political career as a failure and his political impact remained minimal. However, the fact that modern opponents of the party which he helped to found regularly invoked his name reflects his legacy as one of the most controversial political figures of 20th-century Wales.

Lewis, Saunders [2] the literary figure

§1. THE PLAYWRIGHT

Although still surrounded by controversy, J. Saunders Lewis (1893–1985), remains the most significant modern Welsh dramatist. From his early days as a student in Liverpool (Welsh Lerpwl) after the First World War, he immersed himself in contemporary English and WELSH DRAMA. Plays and performers encountered at this time left deep impressions on him: Sybil Thorndyke's *Medea*, for example, and Synge's *Playboy*, presented in London by the Abbey Players. YEATS's symbolist plays, Goethe's dramatic theory, the practice of Gémier and Dullin in Paris and the writings of Gordon Craig all inform his early creative and critical writing on theatre. His move to Cardiff (CAERDYDD) in 1921 marked the beginning of an engagement with theatre and drama in Wales (CYMRU), which, though intermittent, continued almost until his death.

Despite being no more than part of a multifaceted career, drama was never far from the centre of his life, except during the period between 1925 and 1936, which began with the foundation of Plaid Cymru, the Nationalist Party of Wales (see NATIONALISM), and concluded with the trial in Caernarfon, GWYNEDD. Even that long abstention is attributable in part to his disappointment with the reception of *Gwaed yr Uchelwyr* ('Blood of the Nobility') and the failure of the Cardiff Cymmrodorion Society's attempt to set up a national theatre in 1922. Saunders Lewis's relative isolation from theatrical practice was largely the result of circumstances. Theatre for him was a dynamic encounter between the sophisticated audience and the professional performer, trained to respond to the most complex demands of dramatic literature. Clearly the conditions of such an encounter were not often found in WELSH-speaking Wales between 1919 and 1975, but when they were not the dramatist was often more than grateful for access to the alternative performance spaces offered by the radio and by television (see MASS MEDIA).

Saunders Lewis's long career as a dramatist falls into four separate phases which, though they partly reflect changes in the dramatist himself, resulted in the main from the way he responded to the creative opportunities available to him. His apprenticeship falls into two halves: (1) the years from 1919 to 1924 saw the decisive move from English to Welsh, the frustrated attempt to create a new theatre and the composition of the two first acts of *Blodeuwedd*; (2) 1936 to 1940, the years immediately before and after his imprisonment (see previous article), saw the production of the two verse plays for radio, *Buchedd Garmon* ('The Life of St GERMANUS') and *Amlyn ac Amig* (see CYDYMDEITHAS AMLYN AC AMIG). The period from 1949 to 1954 began with the establishment of Robert Wynne's theatre at Garthewin, Llanfair Talhaearn, Denbighshire (sir Ddinbych) and Morris Jones's theatre company, which spurred Saunders Lewis to finish *Blodeuwedd* (1949). At Garthewin *Eisteddfod Bodran* (1950), *Gan Bwyll* ('With Care', 1952), and *Siwan* (1954), were all staged for the first time. From 1954, however, Saunders Lewis responded to new opportunities resulting from increasing collaboration between the Arts Council, BBC Wales and the National Eisteddfod (EISTEDDFOD GENEDLAETHOL CYMRU). *Gymerwch Chi Sigaret?* ('Will You Have a Cigarette?', 1955) was written for the Arts Council company and performed at Llangefni, Anglesey (MÔN). *Brad* ('Treason'), commissioned by the Eisteddfod at Ebbw Vale (Glyn Ebwy), was performed there in 1958 and later at Llangefni, directed by Herbert Davies. *Esther* (1959) was commissioned by Emyr Humphreys for the BBC, but performed at Llangefni by Cwmni Drama Môn (Anglesey Drama Company). *Excelsior* (1961) and *Problemau Prifysgol* ('University Problems', 1962), were also commissioned by the BBC, though because of the legal problem with the former the latter was not performed until it was staged at the National Eisteddfod at Barry (Y Barri) in 1968. *Cymru Fydd* ('The Wales of the Future'), also commissioned by the Bala National Eisteddfod in 1967 and toured by Cwmni Theatr Cymru (Theatre Company of Wales) under Wilbert Lloyd Roberts before being televised, ends this phase of the dramatist's career.

In 1967 Saunders Lewis was seventy-four, and though he lived for another twenty-two years, commissioned work for radio and television was all he produced after *Cymru Fydd*. He adapted his own historical romance, *Merch Gwern Hywel* (1964), for the radio (1967) and for television (1976). *Y Cyrnol Chabert* ('Colonel Chabert', 1969) and *Cell y Grog* ('The Cell of the Gallows', 1974), were also written for the radio, while *Branwen* (1973) and *Dwy Briodas Ann* ('Ann's Two Marriages', 1973), published together as 'parlour dramas', like his last play, *1938* (written in 1975, but not broadcast until 1978), were commissioned for BBC television.

Clearly, *Cymru Fydd* marked a decisive turning-point in respect of the dramatist's attitude to the theatre and the world around him. Although his earlier works continued to be respectfully performed through the 1970s and 1980s, notably by Cwmni Theatr Cymru under both Wilbert Lloyd Roberts and Emily Davies, the audiences left to Welsh-language theatre in those years showed little sympathy with the main thrust of his work. If it seems ironic that he continued to write for television because he was so out of sympathy with the mainstream Anglo-American culture, one motive for doing so was to maintain at least some ground for a culture founded on the principles laid down in central Christian texts such as Augustine's *City of God*.

However, while *Cymru Fydd* marked the point at which the strongest supporters of Saunders Lewis's cultural nationalism were alienated from the content of his drama, it also represented a formal crisis in his career as a dramatist. After *Cymru Fydd* the focal point of Saunders Lewis's drama narrowed. The increasing bitterness that some have seen in his later work is belied by the continuing ability to create characters like Ann Williams in *Dwy Briodas Ann*; yet, plays such as *Branwen* and *Cell y Grog* clearly reflect an increasing lack of interest in the world of those satisfied, as Dewi Rhys's father put it, merely to eat their daily bread.

Saunders Lewis's current reputation as a dramatist suffers partly because the historical importance of his rôle within the on-going nationalist movement (see NATIONALISM and previous article) has sharpened resistance to his cultural conservatism. At the same time, the crisis in Welsh-language theatre has persuaded many that his achievement represents a barrier to future progress. The world in which his plays were created, however, belongs by now to the fairly distant past. If they continue to possess dramatic potential, it will be because they incorporate strategies of response and resistance which continue to be viable for a minority-language culture even in a 21st-century world to which Lewis would have been a stranger.

Ioan Williams

§2. POET, NOVELIST, AND LITERARY CRITIC

The range and variety of Saunders Lewis's literary interests are remarkable and no appraisal of his achievements should ignore his seminal contribution as a literary critic, a novelist, and a poet. His writing was characterized by a conservative cast of mind which also, paradoxically, was suffused with an extraordinary breadth of learning and a commitment to some of the liberating cultural influences of continental Europe. He first made his mark as a critical writer when he published *A School of Welsh Augustans* (1924), a study, based on a master's thesis undertaken at the University of Liverpool, of English influences on 18th-century Welsh classical poetry. Three years later he published WILLIAMS *Pantycelyn* (1927), a penetrating appraisal of Wales's 'Sweet Singer' within a Romantic context. His oblique approach generated considerable controversy but, undeterred by the negative response of some of his 'most bitter' critics, Lewis pursued his hard-hitting agenda by publishing a series of provocative studies on individual writers, including *Ceiriog* (1929, see HUGHES) and *Ieuan Glan Geirionydd* (1931). He fluttered even more Protestant dovecots in 1931 by celebrating the Welsh Catholic tradition in pre-Union Wales in *Braslun o Hanes Llenyddiaeth Gymraeg* (1932). By this stage he had acquired a reputation as a writer profoundly influenced by French and Italian culture, and he took pride in declaring that the work of the Welsh CYWYDDWYR in the 14th and 15th centuries stood comparison with any comparable literature in Europe. His essays on literary subjects are available in three volumes: *Ysgrifau Dydd Mercher* (1945), *Meistri'r Canrifoedd* (1973), and *Meistri a'u Crefft* (1981).

In 1930 Lewis published his first novel. *Monica* was a bleak, but powerful, depiction of the corrosive influence of lust in a petit-bourgeois setting in English-speaking Wales. It caused a considerable stir in Welsh-speaking Nonconformist circles, and more than three decades passed before a second novel, *Merch*

Gwern Hywel (The daughter of Gwern Hywel, 1964), emerged. This work—described by Lewis as 'a historical romance'—focused on the relationship between the daughter of an affluent farmer and a less well-to-do Methodist preacher. This proved to be his last novel.

During the Second World War Lewis blossomed as a poet of considerable merit, though his forthright stance on the industrialization and Anglicization of Wales continued to antagonize his critics. *Y Dilyw, 1939* ('The Deluge', 1939), published in a short collection of poems entitled *Byd a Betws* (The world and the church, 1941), was such an ill-judged indictment of life in depressed industrial valleys that it aroused a storm of protest. More memorable—for literary reasons—are his poems *Mair Fadlen* ('Mary Magdalen', 1944) and *Marwnad Syr John Edward Lloyd* (Elegy to Sir John Edward Lloyd, 1948), both of which are held in the highest esteem by the most astringent literary critics. Although he published only 53 poems, Lewis composed works of great beauty: *Siwan a Cherddi Eraill* (Siwan and other poems) appeared in 1956 and a complete collection was published in *Cerddi Saunders Lewis* (1986).

It has been claimed that Saunders Lewis was the greatest Welsh-language writer since Dafydd ap Gwilym. In 1951 he received the medal of the Honourable Society of Cymmrodorion, and in 1983 he was awarded an honorary doctorate by the University of Wales. He was nominated on two occasions for the Nobel prize for literature. Lewis was a major intellectual force in 20th-century Wales and his literary works continue to attract considerable critical attention and to generate lively debate.

Lewys Glyn Cothi or Llywelyn y Glyn was a Welsh poet (*fl.* 1447–89). His home was in the royal forest of Glyn Cothi, near Llanybydder in Carmarthenshire (sir Gaerfyrddin), and there is reason to believe that he was educated at the collegiate church of Abergwili, where he may have been trained as a scribe. He is the earliest Welsh poet known to have kept copies of his own poems. Two substantial manuscript collections in his own hand have survived (Peniarth MSS 70 and 109; see HENGWRT), and he copied other poems into books belonging to patrons, for example, the Red Book of Hergest (Llyfr Coch Hergest) when it was at Tretower, Breconshire (Tretŵr, sir Frycheiniog). Peniarth MS 109 contains drawings of patrons' coats of arms above many of the poems, evidence of his detailed knowledge of heraldry. Another large collec-

tion in Llanstephan MS 7 is almost certainly a copy of a lost manuscript in the poet's hand. These manuscripts have preserved an unusually large corpus of poetry, a total of 238 poems, in very dependable texts. Almost a third are AWDL*au* and the rest CYWYDD*au*. They provide evidence for an extensive network of patrons encompassing the whole country, but focused in particular on two areas, his native Tywi valley and the border region of Radnorshire (sir Faesyfed, now part of POWYS). During the Wars of the Roses (1455–85), he was a supporter of the Lancastrian cause, following the local Nicholas family, and composed several prophetic poems to the exiled Jasper Tudor (see TUDUR), but he also had prominent Yorkist patrons such as the Herberts and the Vaughans in south-east Wales (CYMRU) during the reign of Edward IV (1461–83). He lived to celebrate the coronation of Henry VII in 1485. Lewys's poetry is outstanding for its effortless artistry, and very often conveys the rhythms of ordinary speech. His best-known work, and one of the most popular of all medieval Welsh poems, is his heartfelt elegy on the death of his five-year old son, Siôn.

Dafydd Johnston

Lhuyd, Edward (*c.* 1660–1709) was a Welsh naturalist, antiquary, and pioneering linguist in the field of the CELTIC LANGUAGES. Born Edward Lloyd around 1660, he was the illegitimate son of Edward Lloyd of Llanforda, Oswestry, Shropshire (Welsh Croesoswallt, swydd Amwythig) and Bridget Pryse of Gogerddan, CEREDIGION, both of gentry families. Lhuyd (he used the form Lhwyd more regularly in personal correspondence and L(h)uyd in Latin and published work) was brought up by his father, who had serious scientific interests and was a knowledgeable horticulturalist, and entered Jesus College, Oxford, in 1682. He quickly became acquainted with members of the new scientific community at the university and the Ashmolean Museum, and left his college without taking his degree to become assistant to Dr Robert Plot, Professor of Chemistry and Keeper of the museum, around 1685. He himself was made Keeper in 1691. His duties at the museum allowed him to develop his interests in botany, palaeontology, and conchology. His fieldwork rapidly led to his becoming an expert in the flora of Snowdonia (ERYRI)—the so-called Snowdon lily, *Loydia serotina*, was one of his discoveries. He also greatly expanded the museum's collections of 'formed stones' and shells. He published the first comprehensive classified list of British fossils in 1699.

Lhuyd shared the broad interests of many of his contemporaries and was an enthusiastic, but prudent, antiquary. Invited by Edmund Gibson in 1693 to be responsible for the additions and revisions to the Welsh sections in his new English edition of Camden's *Britannia* (which appeared in 1695), he undertook a tour of Wales (CYMRU) to see for himself and to learn at first hand what he could of the antiquities of the Welsh countryside. He was thus able to supplement his own fieldwork by establishing a network of local observers with whom he corresponded and excerpts from whose letters he could use in his descriptions. This work proved to be a crucial turning-point in Lhuyd's career. He acknowledged his commitment to the subject and, inspired by the county and regional surveys which he saw colleagues in England embarking upon, and encouraged by some of the gentry, especially in Glamorgan (MORGANNWG), he began to formulate ideas for a comprehensive survey of Wales and the Celtic-speaking countries which would include natural history, antiquities, social customs, literature and languages, and much else.

Using his position at the museum as a base, Lhuyd published a 'Design' describing the project and soliciting support in 1695, and distributed wide-ranging questionnaires ('Parochial Queries') to Welsh parishes the following year. The expanded network of correspondents, not only in Wales but now also in Cornwall (KERNOW), Scotland (ALBA) and Ireland (ÉIRE), became even more important, and with a small group of assistants he embarked in 1697 on an extended research tour of Wales, the Scottish HIGHLANDS, Ireland, Cornwall and, briefly, Brittany (BREIZH), returning in 1701. The notebooks, transcripts, manuscripts, books, and specimens were brought to Oxford to join the mass of correspondence with colleagues

which Lhuyd had continued throughout his tour.

He had planned a series of volumes corporately entitled *Archaeologia Britannica*, but succeeded in writing only the first of these, *Glossography* (1707), before his untimely death, aged 49, on 30 June 1709. This volume was intended to be a guide for historians and antiquaries who wished to use unfamiliar linguistic evidence in their researches. It contains grammars of Irish, Cornish, and Breton; Irish, Breton, and Welsh dictionaries; catalogues of Irish and Welsh manuscripts; descriptions of early Welsh (and 'British') orthography with directions on how to read ancient manuscripts, and an analytic description of early Welsh poetry. However, the opening sections of the book—'Comparative etymology', 'Comparative vocabulary of the original languages of Britain and Ireland'—and a later section—'British etymologicon'—reveal Lhuyd (and one of his pupils) attempting to formulate the patterns of phonetic correspondence between European languages and to establish criteria to distinguish between cognates and chance similarities, essential if historians were to be able to track the movements of peoples (see also indo-european). In spite of Lhuyd's death at the beginning of what would have been the mature creative period of his career, *Glossography* and his correspondence allow us a glimpse of what would have followed: he had discerned the significance of stratigraphy (the relative chronology of superimposed layers) in archaeological excavations; he had recognized and described some of the defining features of Old Welsh orthography; he had put the relationship of P-Celtic and C-Celtic (that is, what later came to be called Q-Celtic) on a firm basis and, most innovatively, he had begun to recognize the principle of language change and to lay the foundations for the phonetics of comparative European linguistics. It is a measure of his greatness that the significance of his linguistic work was not recognized until the new age of linguistics in the 19th century.

Liber de virtutibus sancti Columbae (The book of miracles of St Colum Cille) by Cumméne Find, seventh abbot (657–69) of Iona (Eilean Ì), survives only as a fragment preserved within the *Vita Columbae* (Life of Colum Cille) of Adomnán, who is likely to have used the *Liber de virtutibus* as a source of information for other episodes in the *Vita*. The fragment tells that Colum Cille prophesied to King Aedán mac Gabráin of Scottish Dál Riata that God would bring disaster onto the king's descendants should they ever attack the saint's kin in Ireland (Ériu). Colum Cille (*c.* 521/9–597) belonged to the lineage of the powerful Northern Uí Néill dynasty of Ireland. The text then explains how the prophecy proved to be true: the attack at Mag Roth in 637 by Aedán's grandson, Domnall Brecc, against the saint's cousin, Domnall mac Aedo, had brought grief to Dál Riata and its subjection to foreigners (*extranei*) down to the writer's

day. (Dál Riata was dominated by the English kings of Brynaich from *c.* 655 to 685.) The prophecy itself would supposedly have been uttered in the 570s. The fact that Colum Cille founded the monastery of Iona where he did, in Scotland (Alba), would necessarily imply that his Northern Uí Néill kin and Iona's Dál Riatan overlords had been on sufficiently good terms at the time, in 563. In 634/5, when King Oswald of Northumbria came to power, he superseded Dál Riata's king as Iona's most powerful secular patron. These developments probably strained relations between the Irish and Scottish kings, and destabilized Iona's traditional mediating rôle.

When the party from Iona debated the reckoning of Easter before King Oswiu/Oswydd at the Easter debate at Streanæshalch (Whitby) in 664, the chief argument favouring their position was the list of 'miraculous deeds' (*virtutum miracula*; Beda, *Historia Ecclesiastica* 3.25) of Iona's founder, Colum Cille. Whitby, therefore, was a likely occasion for Cumméne to put together a written collection of Colum Cille's miracles (*virtutes*). This possibility is even more compelling when we consider that the point of the one surviving fragment summarized above was that Dál Riata was ruled by foreigners—i.e., by King Oswiu himself, the sponsor of the Whitby meeting—because of Colum Cille's prophecy. In other words, *Liber de virtutibus sancti Columbae* attributed the supremacy of Northumbria's monarchy in north Britain to the posthumous intercession of Iona's founder.

Liber Flavus Fergusiorum also known as *Leabhar Buí na bhFearghasach* (The yellow book of the Fergus family) is an Irish medieval vellum manuscript, written between the second quarter of the 14th and the first half of the 15th century. It was initially assumed that only a single scribe had been involved (Gwynn, PRIA C 26.15), but the significant differences in the writing has led to the conclusion that there must have been several (Royal Irish Academy, *Catalogue of Irish Manuscripts* 10.1255). The manuscript is of Connacht provenance and is associated with the famous Ó Mael Chonaire (O'Mulconry) learned family from Co. Roscommon (Contae Ros Comáin). The name suggests that it belonged to a particular family and, while there is no historical proof for this, that the *Liber Flavus Fergusiorum* was part of the personal collection of a certain Dr John Fergus, probably a member of a medical family from Connacht. The notion of a family heirloom is further corroborated by the bequest of his entire collection to Trinity College, Dublin (Baile Átha Cliath), with the exception of the *Liber*, which was passed on to Fergus's daughter.

At present, *Leabhar Buí na bhFearghasach* is bound in two volumes; the first volume consists of 37 folios and the second of 55 folios. This was probably done after the famous Irish historian Eugene O'Curry (?1784/?1796–1862) had borrowed the manuscript from Fergus's daughter in 1841 and restored the badly jumbled folios into their correct sequence.

The contents of the manuscript are mostly of a religious nature, and the predominantly short texts include the description of miracles, *Fís Adomnáin* ('The Vision of Adomnán'), as well as a Life of St Mo-Ling. Some legal items and a small number of secular tales, *Táin Bó Flidais* ('The Cattle Raid of Flidais') and *Echtra Mac nEchach Muig-medóin* ('The Adventure of the Sons of Eochaid Muigmedón', on which see echtrai), are also included.

PSH

The evangelist Luke with his symbol, the calf, from the Lichfield Gospels. Chad 5, a Latin charter with Old Welsh proper names (e.g. the lay witnesses **Arthan filius Cimulch, Iudri filius Iudnerth** *in the first line below the border) is written in the margin and has been damaged by trimming.*

Lichfield Gospels, marginalia

The Old Welsh marginalia in the Lichfield Gospels belong to the small corpus of materials, which also includes glosses, the Computus fragment, and the Juvencus englynion, written in the Welsh language during the Old Welsh period (*c.* ad 800–*c.* 1100) which have survived in copies from this period. These marginal notes are diplomatic memoranda in mixed Welsh and Latin; they concern the ownership of property (including the book itself) and contain witness lists with numerous Old Welsh names. They are of interest to Celtic studies for linguistic reasons and for throwing light on early social organization. The manuscript itself, which is also known as 'The Book of St Chad', dates from the 2nd quarter of the 8th century and may have been produced in Wales (Cymru), though an origin in Northumbria or elsewhere in Anglo-Saxon England is also possible. The Old Welsh memoranda are often referred to as Chad 1–7.

Chad 1, also known as the *Ostenditur hic* memorandum, contains five Old Welsh masculine personal names: *Gel hi* (twice) < Celtic **Galo-segos*, *Ariht iud* (twice; Modern *Arthudd*) < Celtic **artos* 'bear' + Latin *iūdex* 'judge, chief', *Cingal* < Celtic **Cuno-galos*, the saint's name *Teliau* (Modern Teilo), *Cincenn* (Modern *Cyngen*) < **Cuno-cennos*, and *Grip iud* (Modern *Gruffudd*), actually a compound borrowing of Latin *gryphs* 'gryphon' and *iūdex*.

Chad 2 is better known as the 'Surexit' Memorandum (see that article).

Chad 3 concerns a holding called *Treb Guidauc* (The

wooded settlement, *Tref Wyddog*), which was given over by a man named Ris (Modern Rhys) and the tribe of Grethi. We are interestingly told that the reader may be guided by *cimarguithieit* (that is, 'guides' or oral 'tradition bearers', Modern Welsh *cyfarwyddiaid*; see CYFARWYDD). A *census* or tribute due from the property is set out: 40 loaves and a ram in the summer (*douceint torth ha maharuin in ir ham*), 40 loaves in the winter and a sow (*douceint torth in ir gaem, ha huch . . .*), and so on. The witnesses include men with Old Welsh names of Celtic origin: *Guurci* ('man'+'dog'), *Cinguernn* < Celtic **Cuno-wernos* 'dog'+'alder', *Collbiu* 'hazel'+'living'. The witness named Cutulf probably had an Anglo-Saxon name. The priest Saturnnguid bore an interesting hybrid Latin-Celtic compound name.

Chad 4 is partly illegible; Ris and Gurci figure again in the transaction with the same list of witnesses, and several places are mentioned, including a 'meeting place' *Cibracma*. Here, the *census* of the property is given its Welsh name, *hi chet* 'its tribute'.

Chad 6 contains a lengthy Old Welsh boundary clause, very similar to the numerous boundary clauses which occur in the charters of the Book of LLANDAF (see also CHARTER TRADITION).

Chad 7 gives an interesting example of a sentence with an initial subject and medial verb, anticipating the standard prose style of the Middle Welsh period: *Mormarh Tutnred* [. . .] *ha rodes Alt Guhebric D*[*e*]*o et S*[*an*]*c*[*t*]*i Elivdo* 'Morfarch Tudnerth gave [the place called] Allt Chwefrig to God and St Teilo'.

Chad 8 is a list of masculine personal names, mostly native Old Welsh.

As to dating, the date of Chad 2 is discussed in 'SUREXIT' MEMORANDUM. Chad 3 and Chad 4 may predate 840 if the Nobis in their witness lists is the *Nobis episcopus* (Bishop Nobis) mentioned at that date in ANNALES CAMBRIAE before his election as bishop. Nobis is a rare name of uncertain origin. Chad 5 has him as bishop, which could imply a date either side of 840. Chad 6 and 7 belong to the latter half of the 9th or the early 10th century.

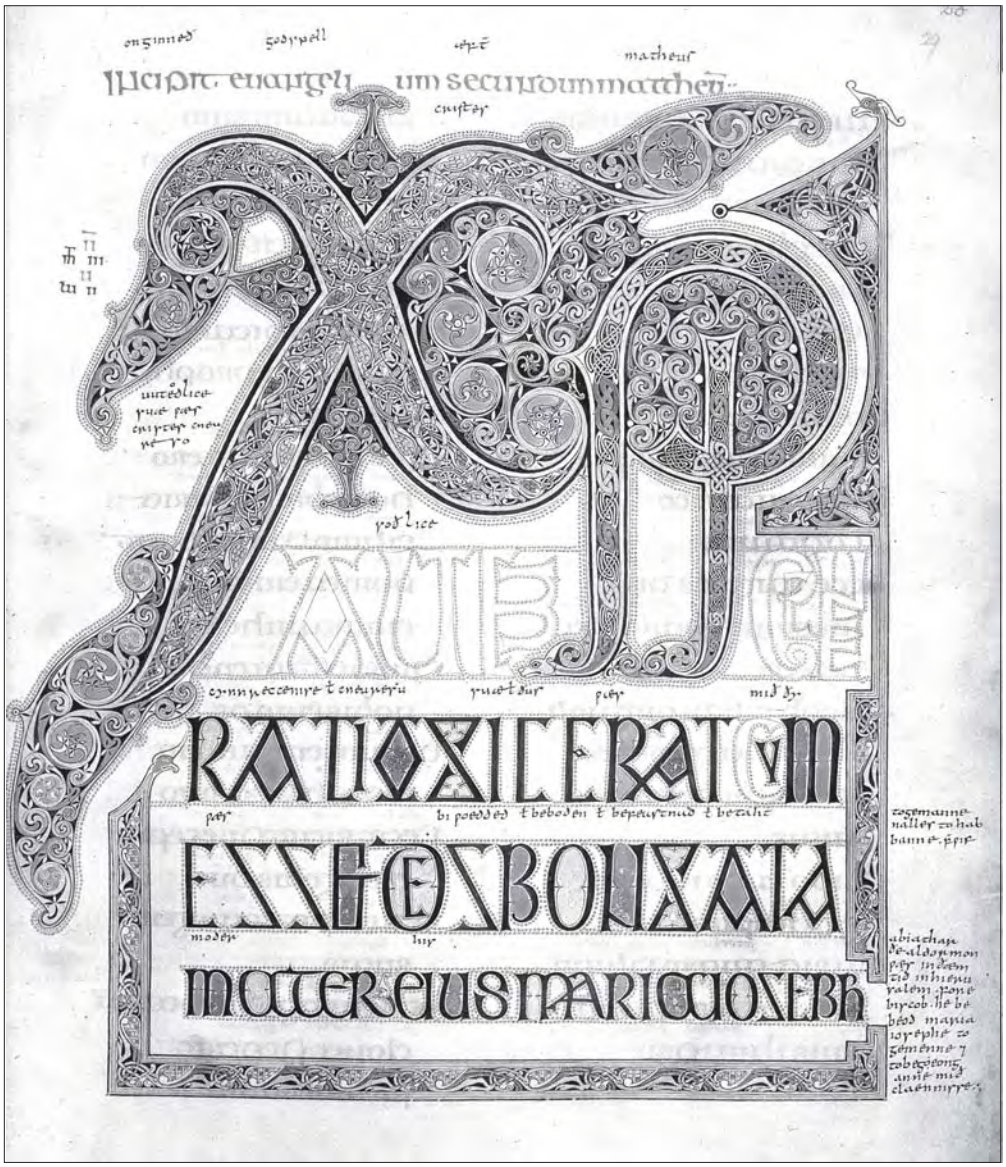
Lindisfarne, now also called Holy Island, linked by a tidal causeway to north-east England, was the site of a major medieval monastery (see MONASTICISM) of special interest to CELTIC STUDIES as an Irish foundation and as a centre of Celtic and Anglo-Saxon intellectual and artistic interaction in the 7th and 8th centuries. In 635, shortly after overthrowing CADWALLON, King OSWALD of Bernicia (BRYNAICH) summoned the monk Aedán (St Aidan, †651) of Iona (EILEAN Ì) as the first missionary bishop of the kingdom of Bernicia. This event effectively marks 'Northumbria's second conversion', following the turmoil of the Welsh occupation of 633–5. It also represented the momentous extension of the Columban Federation (churches founded by St COLUM CILLE and his followers) to include the largest and the most powerful of the Anglo-Saxon kingdoms. Aedán established himself on the island, within sight of Bernicia's fortified court at Bamburgh on the mainland. His successor Finán (†661), another monk of Iona, built a church of oak with reed thatch in the Irish manner, according to BEDA, and was, like his predecessor and successor, a strong supporter of the insular reckoning of Easter. Finán also baptized Peada (†656, son of PENDA, the pagan king of Mercia) and his followers at Wallbottle, thus extending Irish ecclesiastical influence south of the Humber into central England. A third Iona monk, Colmán (†676), became bishop in 661. It was during his rule, in 664, that the famous council at Streanæshalch (Whitby; see EASTER CONTROVERSY) was held. Colmán subsequently departed for the Irish monastery of Inishbofin (Inis Bó Finne) with many of his Irish monks and some like-minded English clergy when the decision was taken in favour of the 'Roman' Easter computus. Although this was to be the end of the Insular Easter in England, it was not the end of Irish influence at Lindisfarne; the continuity of its traditions in other spheres is shown, for example, in the gospel book of Lindisfarne (see ART, CELTIC [2]) produced by its English Bishop

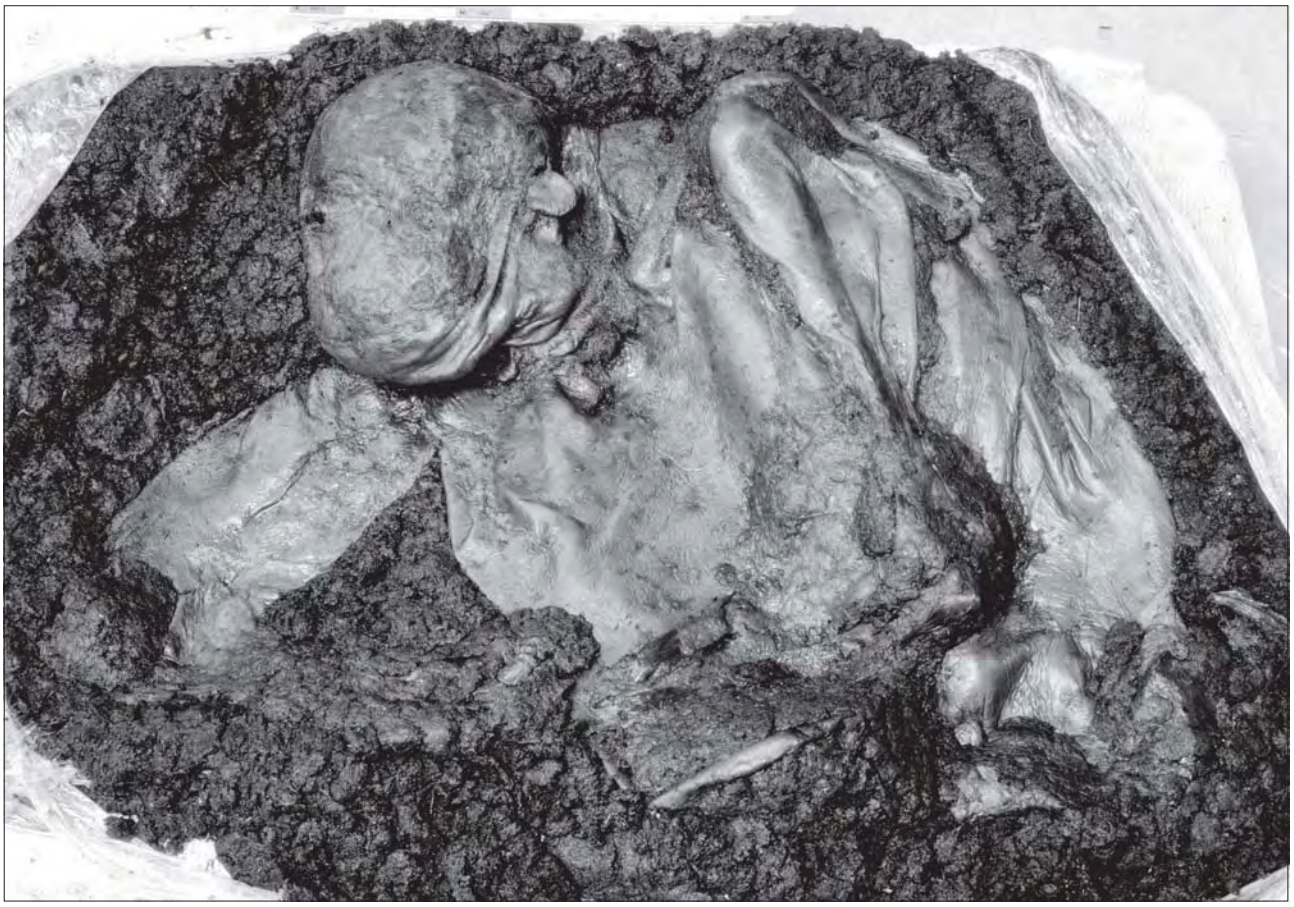


Chi-rho page at the beginning of the Gospel of Matthew from the late 7th- or early 8th-century Lindisfarne Gospels, London, BL, Cotton Nero D. IV fo. 29. Old English glosses include **godspell** *for Latin* **euangelium** *at the top.*

Eadfrith (r. 698–721), which is closely related to the books of Durrow and of Kells, also magnificent products of Irish foundations in the Columban Federation. This artefact, with its Celtic affinities, often figures in modern accounts of Northumbria's culturally hybrid 'Golden Age', bracketed by Lindisfarne's foundation in 635 and the monastery's brutal sacking by the Vikings in 793.

According to Historia Brittonum (§63), Lindisfarne, there called *insula Medcaut,* had been a base for the pagan Angles of Bernicia in the later 6th century, when it was besieged by a coalition of four Brythonic kings led by Urien of Rheged. Urien was then assassinated out of envy by one of his kinsmen and erstwhile allies, Morgan (Old Welsh Morcant; see also cynferching). It is likely that this episode near Lindisfarne forms the immediate background to the moving saga englynion regarding the head and corpse of Urien. While modern scholars have generally accepted this story as true, this reference to Lindisfarne in *Historia Brittonum* probably owes more to the island's ecclesiastical importance in the 7th and 8th centuries than to its military importance in the 6th. That the place was of interest to the Welsh writer is also shown by the incorrect statement in *Historia Brittonum* (§65) that St Cuthbert (†687) died there; in fact, he died on the hermitage of Farne seven miles away, and his miraculously undecayed body was then reinterred at Lindisfarne in 698.

On Lindisfarne's modern associations with the concept of Celtic Christianity, see Christianity, Celtic; spirituality §3.



'Lindow Man': the preserved corpse of the Iron Age man discovered in the bog at Lindow Moss, Cheshire

The name occurs Latinized in Beda's *Historia Ecclesiastica* as *ecclesiae Lindisfarnensis*, and is of uncertain origin. The first element has been derived by some modern writers from the English district name 'Lindsey' < Romano-British *Lindēnses*, originally referring to the *territorium* around the Roman town of Lincoln and its inhabitants, ultimately from Celtic *Lindon* (pool), but there is no historical reason to connect Lindisfarne with Lindsey far to the south. However, since the island has fresh water on it, Celtic 'pool' makes sense and could be either Brythonic or Goidelic. The second element is presumably the same as that which occurs for the nearby Farne islands, but the etymology of this is also obscure. The completely different Old Welsh name *Medcaut* corresponds to Lindisfarne's Old Irish name *(Inis) Medcóit*. Both of these derive from Latin *(insula) medicātūs*, in the sense of 'island of healing'. If this name is as old as Urien's siege, then Lindisfarne was apparently already known as a holy island, perhaps visited by pilgrims seeking cures, before Aedán's foundation.

Lindow Moss, near Manchester, England, is where an amazingly well-preserved body in the bog, the so-called Lindow Man, and a partly preserved skull, which is likely to be female, were discovered in 1984. Lindow Man was approximately 25 years old, had a beard and short hair, and was found naked. Several samples from different parts of the body were radiocarbon dated and

summed up into a date range, centring on the early 5th century BC (Stead et al., *Lindow Man* 29). He died from a blow to the back of his skull, was strangled and had his throat cut, all in a rapid succession. Human SACRIFICE and a relation to the threefold or multiple death in early Irish vernacular literature (as in the death tale of King DIARMAIT MAC CERBAILL, for example) have been seen in this evidence. X-ray examination showed that he had a fractured jaw and a broken neck. Furthermore, it has been suggested that he did not only die in a druidic ritual, but was a druid himself (Ross, *Life and Death of a Druid Prince*). The remains of Lindow Man can currently be seen in the British Museum. The English place-name *Lindow* is of Celtic origin, Old Welsh *Linn Dub* 'Black pool'; the corresponding Irish phrase *lionn dubh* also means 'melancholy'.

Georg Schilcher

Litavis is the name of a Celtic goddess whose cult is attested in east-central GAUL during the Roman period. Her name is significant; on the one hand it provides a link to INDO-EUROPEAN religion and, on the other, it corresponds exactly to one of the Celtic names for Brittany (BREIZH)—Middle Irish *Letha*, Welsh *Llydaw*, Old Welsh *Litau*, Old Breton *Letau*, Latinized *Letavia*. In medieval learned tradition these names can also mean 'Latium', the district around Rome in central Italy. In the Irish version of HISTORIA BRITTONUM, *Lebor Bretnach* (§26), *Bretain Letha* means 'Britons of the Continent or ARMORICA, i.e. Bretons'.

There are four GALLO-ROMAN dedicatory inscriptions in the French *département* of Côte-d'Or to MARTI CICOLLUI ET LITAVI, the goddess Litavis and her consort Cicolluos, identified with the Roman war god, Mars (see INTERPRETATIO ROMANA). *Litavis* (probably *Litauī* in GAULISH) is cognate to Vedic Sanskrit *Pṛthivī́*, a feminine epithet of the divine earth. In the Vedic hymns *Pṛthivī́* is repeatedly referred to as 'mother earth' and is often paired with the sky father, Dyaus; she is described as shining and great, supports the mountains and woods, and scatters the rain. Both the Celtic and Sanskrit goddess names go back to Indo-European **pl̥tH$_a$wiH* 'the broad one', from the Indo-European root **pelH$_a$-* 'to spread out flat'; cf. Irish *leathan*, Welsh *llydan*, Breton *ledan* 'broad'. The Old English *folde* 'earth' is also cognate with *Litavis*. According to THURNEYSEN, the semantic development in Celtic was first to 'broad land, continent', which then became the INSULAR CELTIC name for that part of the Continent nearest and most familiar to BRITAIN and Ireland (ÉIRE).

There is also a Gaulish adjective derived from *Litauī* and used as a name or title—*Litaviccus* (in CAESAR's *De Bello Gallico*), sometimes spelled on the same chieftain's coinage as LITAVICOS, corresponding exactly to Welsh *Llydewig*, meaning 'pertaining to Brittany'. *Litavicos* signifies 'sovereign of the land' (cf. Welsh *gwledig* 'sovereign' < *gwlad* 'land') or, in terms of the SOVEREIGNTY MYTH, 'consort of the goddess of the land'. It is possible that *Llydewig* is also sometimes a title in Welsh, as in *Eneas Ledewic o Lydaw* 'Aeneas Llydewig from Latium', in the medieval *Bonedd y Saint* (Descent of the saints). Emyr Llydaw, a shadowy figure from early Welsh tradition (Bromwich, TYP 346–7; Bartrum, EWGT 57–67) reflects an ancient *Ambiorīχs*, which was the name of the well-attested historical leader of the Belgic Eburones who fiercely opposed Caesar (*De Bello Gallico* 6.24–41; 6.2–9, 29–43; 8.24–5); he was possibly remembered as 'Ambiorīχs of the mainland (*litauī*)' by followers who made their way to the BELGAE of Britain. The British tribal name *Corieltauvi*, in what is now east-central England, may also contain *litauī* '(goddess of the) land', together with an initial element Celtic **cor̥io-* 'army'.

literacy and orality in early Celtic societies

§1. the advent of literacy

Modern society is built upon the written word. To us, it may appear obvious that the storing of information by means of writing is superior to forms of transmission from speaker to listener reliant on human memory. Nonetheless, we are probably more conscious today of alternative possibilities for non-literate information storage than people had been as recently as the mid-20th century because of the increasing application of other means of spreading or sharing information in the electronic age.

Literacy requires writing, but for every region and society in Europe there is a part of its history which pre-dates the advent of writing, stretching back into an unfathomable past. Thus, the past everywhere may be visualized as a relatively brief period of recorded history preceded by an immeasurable prehistory. For those regions of Europe where the Celtic languages are, and have been, spoken, it is useful to think of an intermediate stage of 'proto-history' as well. This third term covers a period in real time from the mid-1st millennium BC to the mid-1st millennium AD, during which Celtic-speaking peoples were within the purview of the literate Graeco-Roman world—and thus had a place in world history—and for which we have fragmentary indigenous inscriptional remains in various epigraphic scripts in some of the ancient Celtic languages: Lepontic, Celtiberian, Gaulish, Galatian, British, and ogamic Primitive Irish. However, none of these Celtic proto-historical writings have preserved what modern readers would recognize as a full-scale literary text or chronicles of past events; perhaps none were ever produced at that stage. Whether using the Roman script, Greek, Etruscoid, Iberian, or ogam characters, those traditional ways of writing the ancient Celtic languages generally failed to persist into the Middle Ages. The fact that all of these systems used for Old Celtic languages, with the possible exception of the last, arose in the context of pre-Christian systems of learning was probably a key factor in their failure to survive. Thus, a new written tradition and the horizon of full history seem to appear abruptly to us in the early Christian period, within the intellectual context of the church. The medieval Celtic countries contrast with the ancient in that both major literature and documentary history were produced in Latin, and the Celtic vernaculars and the literary traditions have continued without a comparable subsequent break into the modern period.

§2. oral culture and tradition

If one defines writing as the fixing of speech by graphic symbols, one admits at the same time that speech has a history, even though largely unattested, which precedes writing and continues along with writing. And if one takes this notion seriously and in all its implications, oral culture is imaginable alongside written culture and, indeed, is initially the *raison d'être* of written culture.

Our perception of the inherent superiority of literate culture over oral culture may arguably apply to our own world, but it cannot be mechanically transposed into past societies. Here, the history of writing itself can be instructive. For it is a fact that when the Greek alphabet, the basis of our writing, was developed in the 8th century BC, it did not find widespread application for about 300 years.

Within this interval, the archaic period of Greek civilization, lie the roots of the Homeric epics, which have come down to us as written texts, though held by the Greeks to go back to Homer's oral poetry. One particularly important approach to the Homeric problem has been the ethnographic analogy of the modern South Slavic epic oral poets explored by Milman Parry and Albert Lord. These poets perpetuated a heroic tradition through a technique of 'oral formulaic composition' not reliant on writing, even though they lived in a culture which used writing for other purposes. Starting from such a situation of co-existence of written and oral culture, possibly after a relatively long and stable co-existence, oral tradition may inspire, or be recast as, written literature.

Caesar's oft-quoted account about the druids of the Gaulish Celts conveys a revealing message: they considered it improper to entrust their learning to writing, though they used the Greek alphabet in nearly everything else, in their public and private accounts. According to *De Bello Gallico* (6.14), the Celts had become acquainted with the Greek writing system by way of acculturation, but made use of it in a restrictive manner, excluding their esoteric cultural material. They did so by choice, and apparently because they had other

adequate means of retaining cultural matter of importance to them. In this respect, it is relevant that Caesar reports that the druids underwent a long training. Here, we may think of techniques which—whatever their precise details—might meaningfully be termed 'educated memory', for which the written word is not necessarily an obvious or adequate substitute.

§3. THE INSULAR NEO-CELTIC WORLD

The early situation of the Latin alphabet was much the same as the Greek, and it was in fact derived from the Greek. It likewise was used from the 8th century BC onwards, but for a long time only sparingly; the same can be said about the application of the Latin alphabet to other languages in the European west.

The Celtic societies which survived into medieval times and beyond became thoroughly acquainted with Latin alphabetic writing in the course of Romanization (in BRITAIN) and/or Christianization (in Ireland/ÉRIU). Eventually, by the 6th or 7th centuries, their native languages, BRYTHONIC and GOIDELIC, were also written—continuously and not just isolated Celtic proper names in Latin texts—with the help of the Latin alphabet. Even before we find Goidelic written with the Latin alphabet, the Irish had used OGAM—an alphabetic script of 20 symbols—to write it. However, this writing system was unsuitable for lengthy texts, and this is likely to have been an important factor leading to ogam's eventual replacement by Roman letters.

§4. TECHNICAL OBSTACLES

The Greek alphabet suited the Greek language best and, already, its application to Latin implied some adaptations and an increase in difficulties. This was the case with all other languages which were written in the alphabet. Putting the various vernaculars into writing was not easy: sound systems are invariably more complex than the available 24 letters of the alphabet, and every system of writing thus entails a learning process which comprises the adaptation of the skeleton of the alphabet to the sound system of a particular language, whose inventory of distinctive sounds or phonemes will always be more numerous. This is why devising the principles necessary to write the various languages took a considerable time. It was a major intellectual achievement. Knowing how to write one language will not automatically allow someone to write a second language which he can speak but had never been taught to write. Thus, for example, St PATRICK (working at some time in the 5th century) could write Latin, and two of his little books (*opuscula*) have survived. He could also speak Brythonic and Goidelic, but there is no evidence that he could have written continuous texts in either Celtic language, or that the intellectual revolution which opened the door to full Celtic vernacular literacy had yet occurred.

Material circumstances are also important. The bulk of writing in the Mediterranean world of antiquity was done on papyrus, a material easily and cheaply available and producing a surface which was easy to write upon. The bulk of writing in the Middle Ages was done on animal skin, parchment or vellum, a material which, while freely available in cattle-raising societies such as the Celtic countries, was quite expensive. The transformation of the raw material into a surface for writing required great technical expertise and thus an elaborate economic and social context. In addition, writing on animal skin was much more difficult than writing on papyrus. Thus, there was a great change in the material context of writing between classical antiquity and the Middle Ages.

§5. CULTURAL OBSTACLES

At no time were medieval societies built upon the written word in the manner the Roman world had been. Although alphabetic writing was available wherever CHRISTIANITY was introduced, and thus, with effort and application, the means to write the vernacular languages, several centuries were to pass before they were widely written. While attention has been drawn to the technical difficulties and intellectual challenges encountered in writing the vernaculars in the Middle Ages, it should also be taken into account that these societies already possessed self-sufficient means of cultural storage and transmission inherited from the past. Therefore, there was no immediate need to apply Roman letters to the oral vernaculars at the first opportunity. These means of cultural transmission had been available before writing arrived; their history is lost in the unattested centuries, but there are reasons to believe that they had been adequate to the needs of the respective societies. It can be taken that such cultural storage and transmission required care for its maintenance and entailed great social prestige. The

ethnographic analogy of preliterate societies encountered by anthropologists in modern times show that in such societies tradition, tradition bearers, and the techniques of tradition bearers enjoy high status. Thus, it is not so surprising after all that these institutions should have persisted in times when alphabetic writing was available. As in the case of the druids of GAUL, the mere availability of alphabetic writing did not upset an established order or preliterate learning.

On the other hand, it requires considerable mental effort for us to acknowledge that written works were in the Middle Ages still marginal products of a society which functioned predominantly orally and that even the language of these written works was ultimately the product of an oral culture. Over centuries, technical advantages of written material over oral material would influence written products, with cross-referencing or even linear arguments, but these advantages of written culture, obvious to the modern mind, took a long time to be discovered and then applied. Modern literary scholars may find it hard to place the objects of their attention into a wider context—the context of the still primarily oral culture of the Middle Ages—instead of taking them as naturally and centrally representative of their culture.

§6. THE RÔLE OF THE CHURCH

In the early Middle Ages, the only institution which could not do without writing was the Church. In western Europe, Latin was the language most frequently written in a Christian milieu and for the purpose of the religion. It is thus ecclesiastical institutions which taught and transmitted the skills necessary for the production of written material, and it is there that one finds the material and intellectual context for such expertise. In what had been the Western Roman Empire, Vulgar Latin was the regular spoken language for the Christian religion. When the Christian religion was brought into foreign societies, teaching had to be done in the vernacular language of the recipients. Not surprisingly, in many societies the first efforts to write the vernacular took place in the service of the Christian religion. In Old Irish, the likely priority of a highly learned vernacular religious poem such as *Amrae Coluimb Chille*, an elegy for St COLUM CILLE, believed to have been composed on the occasion of his death in AD 597 and attributed to DALLÁN FORGAILL, is an important case in point. Afterwards, these technical innovations could be applied outside the immediate concerns of Christianity.

Livre des faits d'Arthur is a Breton Latin verse text which is important because it reflects the state of Breton LEGENDARY HISTORY before it came under the heavy influence of GEOFFREY OF MONMOUTH in the 12th century. The original poem was probably composed between 954 and 1012. It survives fragmentarily in 173 hexameters in a 15th-century manuscript, which was probably the workbook of the antiquarian and historian Pierre Le Baud, who is also responsible for the title—the only evidence that ARTHUR had been a central figure in the complete text. The subject-matter of the extant verses deals with the Continental exploits of the ROMANO-BRITISH general Maximus (so called using the correct Latin form of his name, thus contrasting with HISTORIA REGUM BRITANNIAE, HISTORIA BRITTONUM, and Welsh MACSEN WLEDIG) and the Briton CONAN MERIADOC. Conan's title is given as *dux*, rather than *rex* as in *Historia Regum Britanniae*, which throws light on how Geoffrey enhanced sources to develop the theme of a continuous ancient British KINGSHIP.

Livy (Titus Livius, 59 BC–AD 17 or 64 BC–AD 12), a native of Patavium in the Venetic area of northern Italy, not far from CISALPINE GAUL, was a Latin writer and author of a history of Rome in 142 books, *Ab Urbe Condita Libri* (Books on the foundation of the city [of Rome]). This work is one of the most important sources of GREEK AND ROMAN ACCOUNTS of the ancient Celts, and includes information on the following subjects discussed in articles in this Encyclopedia: an account of the first Gaulish migration into the ALPINE area and, under BELOVESUS, to the Po valley propelled by the BITURĪGES in the 6th century BC (5.34); a detailed account of the Gauls' invasion of ROME under BRENNOS OF THE SENONES (5.35–55); references to the north Italian town of BONONIA/Bologna in the pre-Roman period (33.37.4, 37.57.7, 39.2.5–6); information on the invasion of Greece by BRENNOS OF THE PRAUSI, including the defection of his allies Lonnorios and Lutarios (38.16.1–2); a description of the foundation and territorial division of GALATIA by Celtic tribes (38.19); an account of the Celtic victory at SILVA LITANA and the taking of the Roman general's head as a trophy there (23.24); an identification of the TAURISCI of the Balkans as Celts (43.1.4–12, 43.5).

Llanbadarn Fawr, one of the premier early monastic sites in Wales (CYMRU), was founded—according to early traditional sources—in the 6th century by St Padarn. This tradition is consistent with the saint's name, which derives from Latin *Paternus* and was common in Britain in Roman times and into the 5th and 6th centuries, but less so afterwards. In the 11th century, Llanbadarn Fawr was home to an important scriptorium (monastic workshop for producing manuscripts) as well as the seat of a bishop.

The south transept of the present large cruciform church, principally of the 13th century, houses two crosses from the pre-Norman period. Briefly a Benedictine cell in the 12th century, Llanbadarn was later a possession of the Cistercian abbey of Vale Royal in Cheshire, whose convent partly reconstructed the chancel in the 15th century. Now a parish church, Llanbadarn was restored in 1868–70.

The church and village of Llanbadarn Fawr are situated in northern CEREDIGION and nowadays form a single conurbation with nearby ABERYSTWYTH.

Llancarfan, Cartulary of, is a series of 14 Latin charters appended to the Life of St CADOC (1095×1104) by Lifris of Llancarfan (see also CHARTER TRADITION). These charters refer to grants of land to the Church in south Wales and contain BRYTHONIC proper names, most importantly in the lists of clerical and lay witnesses. As Wendy Davies has shown (*Early Welsh Microcosm* 3), the texts of the charters themselves go back to the 7th and 8th centuries. The spelling of the names was never consistently updated in copying. The charters thus provide valuable evidence for the language and LITERACY in Wales (CYMRU) before the beginning of the Old WELSH period *c.* 800: for example, *Atderreg* (§60, *c.* 590–625?) appears in later Welsh as *dadŵyre(in)* 'resurrection', in which the old long vowel of the second syllable had become a diphthong before the Old Welsh period; similarly, with the same feature in the final syllable, *Cunhape* (§61, pre–*c.* 720) elsewhere *Canapoi* with the diphthong, *Eudoce episcopus* (§65, *c.* 650 or earlier) = St Euddogwy. The Celtic adjectival suffix *-āko-* became Brythonic *-oc* and then regularly appears in Old Welsh as *-auc*, but in the Llancarfan charters it is generally still *-oc*, e.g. *Guedhoc, Branoc, Danoc, Catoc, Geintoc, Mesioc, Gassoc.* Charters §57 and §58 have Cadoc himself and his Irish associates, Finnian Scottus (§57) and Macmoil prior (§58), as witnesses and are likely to be forgeries. As a group, these charters have many witnesses in common with the larger corpus of charters preserved in the Book of LLANDAF and dated by Davies. The

latest datable Llancarfan charters, §55 and §56, have Llandaf associations to *c.* 765. In Old Welsh the place was called *Nant Carban*, often Latinized *Carbani vallis*; it possibly contains a Proto-Celtic **karbantom* 'CHARIOT'.

JTK

Llandaf, Book of (*Liber Landavensis*) is formally a luxury Gospel of Matthew (fos. 5–28), 'Vulgate' Latin text (see JEROME), followed by some hundred folios of texts relating to the history of the Church in south-east Wales (CYMRU) during the 5th to 11th centuries. It was originally bound between wooden covers and then adorned with a mid-13th-century gilt-bronze figure of Christ in Majesty, now kept separately. With some later additions and signs of use, the manuscript is mostly a production of the mid-12th century, a period at which Norman power had been well established for some decades in the area. The Welsh materials brought together in it can be seen as an effort to rearticulate the ancient identity and claims of the native church within this new framework of political power. These materials include HAGIOGRAPHY in Latin: Lives of Saints Elgar (Ælfgar), SAMSON, Dyfrig (Dubricius), TEILO (Teliau), and Euddogwy (Oudoce). There is a legal text in Late Old WELSH, *Braint Teilo* (Old Welsh *Bryein Teliau* 'The privilege of St Teilo'), which enumerates the rights and exemptions which Teilo's churches and their lands had obtained from the kings of MORGANNWG in pre-Norman times. There are 150 charters relating to pieces of land in south-east Wales granted to the church, including places in the old kingdom of Ergyng, now in England (see CHARTER TRADITION). These charters are of special interest since Wendy Davies has shown that they can be closely dated over a continuous span from the later 6th to the 11th century on the basis of some 900 individuals recurring in the overlapping witness lists. Initially, Davies's thesis met with some scepticism from historians, but the evolving spelling and phonology of the witnesses' names, as investigated first by Davies herself (BBCS 28.553–7) and then by Koch and Sims-Williams, has provided overwhelming evidence that the names in the earliest charters reflect the written Brythonic of the 7th and 8th centuries. In fact, the Llandaf witness lists now provide probably our best evidence for how BRYTHONIC was written *c.* 600–*c.* 800, and even that it was written during this period. Many of the charters also contain boundary clauses in continuous Old Welsh, which are an important source for early attestations of plant and settlement names, landscape terminology, and directional words. The Book of Llandaf in general, and its saints' lives especially, share several characters and key proper names with the HISTORIA REGUM BRITANNIA of GEOFFREY OF MONMOUTH; thus, the intellectual milieu of the manuscript is pertinent to the study of the formation of the ARTHURIAN LITERATURE of the High Middle Ages.

Llefelys/Lleuelis/Llywelus is one of two protagonists of the Middle WELSH prose tale CYFRANC LLUDD A LLEFELYS (The adventure or encounter of Lludd and Llefelys). The name *Llefelys* appears to be a compound, the first element of which is the same as seen in the simplex name of the important pan-Celtic supernatural figure, Welsh LLEU, Old Irish LUG, CELTIBERIAN and Gaulish LUGUS. Part of the reason for making this equation is parallelism with other texts and the underlying mythology (on which see below). The etymology of the second element of *Llefelys* is

less apparent. As explained in the article on Nōdons, the name of Llefelys's brother Lludd (although it has developed a new initial consonant by analogy) is of common origin with the names of the supernatural figures, the Old Irish Nuadu, the Welsh Nudd, and Romano-British Nōdons. Having recognized this fact, the Irish mythology surrounding Nuadu confirms that Llefelys is to be connected with the Irish Lug in character as well as name. Thus, elements of the Welsh story of Lludd and Llefelys resonate with features of the story of the Irish Nuadu and Lug, for which the principal source is the Old Irish mythological tale Cath Maige Tuired ('The [Second] Battle of Mag Tuired'): like Nuadu, Lludd is a king whose kingdom is blighted by oppressors, including a failure of the food supply and fertility in both cases; like Nuadu's kinsman, Lug, Llefelys is disinherited, but returns from afar to assist his stricken male relative and to restore the blighted kingdom by means of extraordinary knowledge and skill. Taken together, the shared names and themes suggest an inherited Common Celtic source behind *Cyfranc Lludd a Llefelys* and *Cath Maige Tuired*, i.e. a myth of Lugus and Nōdons.

Lleuelis, the usual spelling in the Llyfr Gwyn Rhydderch/Llyfr Coch Hergest text of the *Cyfranc*, is ambiguous as to how it should be modernized; *Llefelys* is the form used in this encyclopedia, since it is by now the most common form used by Celtic scholars. Ford, however, writes this as Modern Welsh *Lleuelys*, thus emphasizing the connection with Lleu, the central hero of Math fab Mathonwy and counterpart of the Irish Lug. In the 16th-century text of *Cyfranc Lludd a Llefelys* recorded by Elis Gruffydd the spelling is *Llywelus*, suggesting that the name was then pronounced like the common Welsh name *Llywelyn*, except for the final consonant. As discussed in connection with Llywelyn ab Iorwerth, *Llywelyn* probably goes back to a British compound divine name **Lugu-belinos* ('Lugus + Belinos') via Old Welsh */Louvelin/*.

Llên Cymru (The literature of Wales) is a journal, published by the Board of Celtic Studies of the University of Wales, devoted to the history of Welsh literature. The first issue, under the editorship of Griffith John Williams, was published in 1950, and its current editor is Professor Gruffydd Aled Williams, Head of the Department of Welsh at the University of Wales, Aberystwyth. Articles are published in Welsh, and the journal, which contains a substantial review section, is significant for the study of all periods of Welsh prose and Welsh poetry.

Lleu Llaw Gyffes (Lleu of the skilful hand) is the protagonist of the Middle Welsh prose tale Math fab Mathonwy, also known as the Fourth Branch of the Mabinogi.

Lleu is first introduced into the Mabinogi text as a 'small thing' (possibly to be understood as the foetus of a child) left behind by Arianrhod (alternative name form Aranrhod) when she hurriedly leaves the presence of Math, Gwydion, and Gilfaethwy after she has given birth to Dylan Ail Ton (Dylan the son of the wave). This 'small thing' is taken by Gwydion and placed in a cloth in a chest in his room. Some time later, Gwydion opens the chest to discover a well-formed baby boy, whom Gwydion decides to rear himself. When Gwydion later approaches Arianrhod with the lad for her to receive as her son, she answers by swearing three destinies (Welsh sing. *tynged*) on the lad: that he may not be named except by her, that he may not have weapons except those given by her, and that he may not have a wife of this earth. As to the first two destinies, Gwydion succeeds in outwitting Arianrhod into giving the lad a name, Lleu Llaw Gyffes, and weapons. The third destiny is overcome by Gwydion and Math who create a wife for Lleu out of flowers, Blodeuwedd. On no occasion are we told who the actual father of Lleu might be (but see Hughes, *150 Jahre "Mabinogion"* 61–2 and *Math uab Mathonwy* xxv–xxvi).

The name *Lleu/Llew* occurs in four TRIADS (see Bromwich, TYP 420–2), one of which portrays Lleu as a warrior. This portrayal is supported by a single reference in a poem in LLYFR TALIESIN 33.23–5. His name also occurs in ENGLYNION *y Beddau* ('The Stanzas of the Graves', LLYFR DU CAERFYRDDIN 18.106–8), where we are told that his grave is located under the sea near the grave of his kinsman. Although the latter is not named in the poem, we can assume that this is a reference to Dylan Ail Ton who, according to the text of *Math*, is Lleu's brother. Lleu has given his name to Dinas Dinlle(u), the remains of an ancient fort on the north-west coast of Wales (CYMRU). Less than two miles to the south lies the grave of Dylan Ail Ton (as per the allusion in *Llyfr Du Caerfyrddin* 18.10–13).

There are two variants of the name of this character, *Lleu* and *Llew*. The former is probably the original version, proven by rhyme in at least two poems. One of these is the first of the three stanzas in *Math* sung by Gwydion to Lleu in the form of an eagle in the oak-tree; here *Lleu* rhymes with [*g*]*eu* (falsehood) and *o ulodeu* (from flowers; see Hughes, *Math uab Mathonwy* xxix–xxxiv). The other is in a poem in *Llyfr Taliesin* (35.24–6) where *Lleu* rhymes with *gynheu, (Din)lleu,* and *kadeu* (battles, troops). The Old Welsh form which would regularly turn into Middle Welsh *Lleu* is attested in the Old Welsh GENEALOGIES as *Lou Hen map Guidgen,* probably to be understood as 'Lleu the Old (or the Ancestor), son of Gwydion'. Nevertheless, the spelling *Llew* is more usual in the Mabinogi text, the form probably having arisen by the ambiguities of early Welsh spelling and also suggested by analogy with the epithet so often attached to his name *Llaw Gyffes* 'skilful hand'. The name *Lleu* is probably also related to that of the Welsh mythological figure LLEFELYS. It is also cognate with the name LUG (Modern Lugh) in IRISH tradition and with the name LUGUS, which occurs in CONTINENTAL CELTIC inscriptions from PEÑALBA DE VILLASTAR and CHAMALIÈRES and has been preserved in various place-names in GAUL and elsewhere in western Europe, e.g. Lyons, Laon, Leignitz. The Old Celtic place-name LUGUDŪNON in fact contains the same two elements (in reverse order) as the Welsh *Dinlleu* mentioned above; cf. also *L(l)eu-ure* in the GODODDIN < Celtic **Lugu-brigā* and LOTHIAN, Welsh *Lleuddiniawn* < **Lugudūniānā*.

It is generally accepted that Lugus/Lug(h)/Lleu was one of the gods of the early Celts, a god connected with crafts, learning, and art, like the Roman god MERCURIUS (see also INTERPRETATIO ROMANA).

Lloyd, Sir John Edward (1861–1947) was arguably the greatest Welsh historian of all time. Born in Liverpool (Welsh Lerpwl) to parents of Montgomeryshire (sir Drefaldwyn) stock, he served his apprenticeship as a historian at the University College of Wales, ABERYSTWYTH, and Lincoln College, Oxford (Welsh Rhydychen). Heavily influenced by the CYMRU FYDD (Young Wales) movement, he returned to Aberystwyth in 1885 as a lecturer in WELSH and history, and seven years later he took up the joint post of registrar and lecturer in Welsh history at the University College of North Wales, BANGOR. In 1899 he was raised to the Chair of History, a post which he held with great distinction until his retirement in 1930. Lloyd is best known for his seminal masterpiece *A History of Wales: from the Earliest Times to the Edwardian Conquest* (2 vols., 1911), which revolutionized the study of early medieval Wales (CYMRU) and which, written in a characteristically grand manner, has stood the test of time. Twenty years later he published *Owen Glendower* (1931), a volume based on his Ford Lectures. Lloyd contributed around 110 articles on eminent Welshmen to the *Dictionary of National Biography* and until his health broke down he was editor of the *Dictionary of Welsh Biography*, to which he contributed 62 articles on a wide range of subjects. Lloyd was a consummate historian: every publication that bore his name was

the outcome of a meticulous and critical reading of the sources. He might have been less than inspiring as a lecturer, but only dullards and cynics failed to admire the massive learning which underpinned his work. Rightly did Saunders LEWIS celebrate his name as 'the lantern-bearer of lost centuries'.

Lloyd George, David, 1st Earl Lloyd-George of Dwyfor (1863–1945), was born in Manchester (Welsh Manceinion) and brought up at Llanystumdwy, Caernarfonshire (sir Gaernarfon). He was a native WELSH speaker and was British Prime Minister between 1916 and 1922.

Lloyd George qualified as a solicitor in 1885 and was elected the 'boy Alderman' of Caernarfonshire County Council in 1888. He became the Liberal Member of Parliament for Caernarfon Boroughs at a by-election in April 1890 and soon acquired a reputation as a spokesman on Welsh matters, such as the Disestablishment of the Church in Wales (see CHRISTIANITY) and the growth of Welsh national sentiment. Following the failure of the CYMRU FYDD (Young Wales) movement, of which he was a member, he increasingly turned away from Welsh issues and focused on those affecting the whole of Britain. Having come to national prominence as one of the most outspoken opponents of the South African War (the Boer War, 1899–1902), and as the champion of the campaign against the Balfour Education Act of 1902, Lloyd George first entered the Cabinet as Prime Minister Campbell-Bannerman's President of the Board of Trade in December 1905. In April 1908 Prime Minister Asquith promoted him to be his own successor as Chancellor of the Exchequer, in which position he introduced an array of far-reaching social reforms and launched an attack on the House of Lords by introducing his famous 'People's Budget'. He initiated a new land campaign shortly before the outbreak of the First World War.

Initially a somewhat reluctant supporter of the war effort, in May 1915 Lloyd George became minister of munitions, then Secretary of State for War in July of the following year, and finally Prime Minister in succession to Asquith in December. He undoubtedly displayed the crucial resourcefulness and resolute leadership required at this critical juncture. In December 1918 he was re-elected at the head of a Conservative-dominated coalition government which faced a formidable array of domestic and foreign difficulties during the ensuing four years. During this period negotiations took place between the British government and leaders of the IRISH INDEPENDENCE MOVEMENT (including Eamon DE VALERA). Thus, Lloyd George was a key party in the creation of the Irish Free State (Saorstát na hÉireann, see ÉIRE) and the foundation of a separate Northern Ireland in 1921/2. Lloyd George's coalition government collapsed in October 1922, and he was ejected from office and seemed destined to spend the rest of his days in the political wilderness, mistrusted by many Liberals and by the British public at large.

Following Asquith's retirement, Lloyd George returned to the Liberal leadership in 1926, and made a superhuman effort to return to political power in the 'We Can Conquer Unemployment' general election of 30 May 1929. Again he failed, subsequently becoming one of a tiny group of 'Lloyd George Liberals' following the constitutional crisis of the summer of 1931. His last effort to recapture the headlines was the launch of the 'New Deal' proposals to his BANGOR constituents in January 1935 and the subsequent establishment of the Council of Action for Peace and Reconstruction. Again, both initiatives proved unsuccessful. Much of his dwindling energy in the 1930s was devoted to the drafting of his mammoth *War Memoirs*, but he did intervene to great effect to help to secure the resignation of Neville Chamberlain as Prime Minister in May 1940. Having unexpectedly accepted an earldom in the New Year's Honours List in January 1945, Lloyd George died at his home in Cricieth on 26 March of the same year. As a public speaker noted for his powers of political oratory in Welsh as well as English and for many years a familiar figure at the National Eisteddfod (EISTEDDFOD GENEDLAETHOL

Cymru), Lloyd George had an enduring impact on Welsh national consciousness as well as British political life, in which he earned the nickname 'the Welsh wizard' in recognition of his extraordinary political skills.

Llwyd, Alan (1948–) is one of the most dominant figures in contemporary Welsh literary life, having made a significant impact as a poet, editor, critic, biographer, and scriptwriter. He was born in Dolgellau, brought up at Cilan on the Llŷn peninsula, and educated at the University of Wales, Bangor. Following brief periods as a bookseller and professional editor, he has been the administrative officer for Y Gymdeithas Gerdd Dafod (The society for strict-metre poetry) since 1983, and editor of its influential journal *Barddas* (Bardic lore) since its inception in 1976, initially in conjunction with Gerallt Lloyd Owen.

A prolific and highly skilled poet, who came to prominence by twice winning both the crown and chair at the National Eisteddfod (1973, 1976; see EISTEDDFOD GENEDLAETHOL CYMRU), his innovative use of CYNGHANEDD, in both strict and free metres, has placed him at the forefront of its resurgence during the last quarter of the 20th century. In the course of a poetic career that already includes 13 collections of verse, he has developed a voice that ranges from the sensual to the ironic, and a view of the world in which global concerns are often intertwined with a personal perspective.

As editor, critic, and biographer, his numerous publications illustrate the missionary zeal with which he has endeavoured to chart the Welsh literary tradition, a tradition he has continually strived to revitalize in his own creative work. At the beginning of the 1990s he turned his attentions to scriptwriting and gained immediate success as the scriptwriter of the Oscar-nominated film Hedd Wyn (see also EVANS, ELLIS HUMPHREY).

Llion Jones

Llwyd, Morgan (1619–59) was the most complex and fascinating Puritan writer in Stuart Wales (Cymru). Born of gentle stock at Cynfal Fawr in the Vale of Ardudwy in Merioneth (sir Feirionnydd), he was educated at Wrexham grammar school. In 1635 he was converted to the Puritan cause by the eloquence of Walter Cradock and swiftly threw in his lot with pious middling sorts who worshipped in separatist groups like that at Llanfaches, Monmouthshire (sir Fynwy), and who mounted a challenge both to Royalist authority and the Arminian element within the established church. Llwyd served the parliamentary forces as a chaplain during the Civil Wars and then joined other zealous Welsh Puritan saints in his native land in a bid to win the hearts of his benighted countrymen.

Impatient with 'dumb dogs' who did not preach and self-seeking grandees who obstructed Puritan efforts to reconstruct society on radical lines, Llwyd came to believe that the fall of the four world-empires and the return of Christ to govern on earth with the saints in a glorious fifth monarchy which would last for a thousand years were about to be fulfilled. Dubbing the beheaded Charles I 'the last King of Britain', he threw himself into the task of spreading the Puritan

gospel under the auspices of the Act for the Better Propagation and Promotion of the Gospel in Wales (1650–3). Although still based in Wrexham, he evangelized far and wide, venturing even as far as the Llŷn peninsula, where he caused a considerable stir by brandishing his Bible and preaching raucously in Pwllheli market. In an age of cynicism and opportunism, Llwyd's spiritual idealism stands out like a beacon.

But it is for his literary brilliance that Morgan Llwyd is best remembered. During the 1650s he published eight works in WELSH and three in English, all of which (though probably beyond the comprehension of all but the most literate and committed Puritans) were written with unfailing grace and distinction. Two of his best-known works—*Gwaedd ynghymru yn wyneb pob Cydwybod* (A cry in Wales to every conscience) and the compelling classic *Llyfr y Tri Aderyn* ('The Book of the Three Birds')—appeared in the summer of 1653 when the hopes of saints who aspired to be God's chosen few were at their peak. But when Oliver Cromwell wound up the Barebones Parliament in December 1653 Llwyd retired in silent contemplation to the wings. Heavily influenced by Böhmenism and Quakerism, he came to believe that the key to eternal happiness lay in the heart. He died, aged forty, in 1659, his final years being clouded by poor health, domestic strife, and theological turmoil. Llwyd was no mean poet, but his prose works, written at a time when Welsh society had been turned upside down, mark him out as a literary genius.

Geraint H. Jenkins

Llyfr Ancr Llanddewibrefi ('The Book of the Anchorite') is an important 14th-century manuscript which contains the earliest and the most extensive extant collection of Welsh theological and religious prose tracts (see WELSH PROSE LITERATURE). It derives its name from a valuable note appended to the preface of the first text, which states that the manuscript was written in 1346 at the request of Gruffudd ap Llywelyn ap Phylip ap Trahaearn of Cantref Mawr by a friend of his, an anchorite (religious hermit) of Llanddewibrefi. The anchorite was probably both compiler and scribe of the manuscript, rather than the composer or translator of its texts, since these show frequent signs of copying. Altogether it contains 17 items. Classed as Oxford, Jesus College 119, the manuscript is now kept at the Bodleian Library, Oxford. It is a small vellum quarto, i.e. calfskin parchment folded into fourths, written in a regular monastic-type hand and comprises 144 folios (double-sided pages), some of which have been lost, as traces of the original numbering indicate.

§1. CONTENT

The contents of the manuscript may be broadly described as a miscellany of popular texts which are apocryphal, didactic, exegetical (commentary on the Bible), mystical, hagiographical (lives of the saints), and devotional in character, although, strictly speaking, the final item is secular rather than religious.

These texts, following the order in which they occur in the manuscript, are as follows: (1) *Hystoria Lucidar* 'The story of Lucidar' (this name is an error by the translator, who has taken the Latin *elucidarium* 'book of enlightenment' to signify the name of a person rather than a book); (2) *Y Modd ydd aeth Mair i nef* 'The way in which Mary went to heaven'; (3) *Cysegrlan Fuchedd* 'Holy living'; (4) *Historia o Fuchedd Dewi* 'The story of the life of [St] David' (see DEWI SANT); (5) *Historia o Fuchedd* BEUNO 'The story of the life of [St] Beuno'; (6) *Historia Adrian ac Ipotis* 'The story of Hadrian and Epictetus'; (7) *Credo Saint Athanasius* 'The creed of St Athanasius'; (8) *Py Ddelw y Dyly Dyn Gredu i Dduw* 'How a man should believe in God'; (9) *Pwyll y Pader o Ddull Hu Sant* 'The meaning of the Lord's Prayer according to the interpretation of St Hugo'; (10) *Rhinweddau Gwrandaw Offeren* 'The virtues of hearing Mass'; (11) *Rhinweddau Gweled Corff Crist* 'The virtues of seeing Christ's body'; (12) BREUDWYT PAWL EBOSTOL 'The dream of Paul the Apostle'; (13) *Am Gadw Dyw Sul* 'On keeping Sunday'; (14) *Rhybudd Gabriel at Fair* 'The annunciation of Gabriel to Mary'; (15) *Efengyl*

Ieuan Ebostol 'The Gospel of John the Apostle'; (16) *Y Drindawd yn Un Duw* 'The Trinity as One God'; (17) *Historia Gwlad Ieuan Fendigaid* 'The story of the realm of John the blessed', i.e. Prester John.

These works are generally translations of Latin originals, the outstanding exception being *Cysegrlan Fuchedd*, otherwise known as YMBORTH YR ENAID 'Sustenance of the soul', a mystical treatise which is apparently an original Welsh composition. They are all to be found distributed in other manuscripts of the period.

§2. DATE

Since the anchorite's note occurs within the first text contained in the manuscript, it has been argued that the date 1346 may refer to this text alone and that the other texts may have been copied later, or possibly earlier. However, as Daniel Huws has remarked, the note occurs at the end of a quire of four leaves of vellum which have every appearance of having been added *after* the rest of the manuscript was complete. In addition, if the note referred to the first text alone, one would expect to see it at the end of that particular text and not at the beginning. It may therefore be confidently concluded that the manuscript was written in 1346 and not *c.* 1346.

§3. THE SCRIBE

The scribe states that he was an anchorite at Llanddewibrefi (CEREDIGION). Therefore, his place of solitude would no doubt have been in the vicinity of the collegiate church founded there in 1287 by Thomas Bek, bishop of St David's (Tyddewi), to regenerate spiritually the Teifi valley after the ravages of war. Since he writes in a monastic hand, he presumably spent some time in a religious house. The same hand may also be seen in extensive parts of Peniarth MSS 5, 18, 46, 47 in the National Library of Wales, ABERYSTWYTH (see LLYFRGELL GENEDLAETHOL CYMRU).

§4. THE PATRON

Gruffudd ap Llywelyn ap Phylip ap Trahaearn of Cantref Mawr, the friend for whom the manuscript was written, lived in Rhydodyn, near Caeo in Carmarthenshire (sir Gaerfyrddin). He hailed from a family which was distinguished for its patronage of Welsh literature, and on his mother's side was descended from the great RHYS AP GRUFFUDD, Lord of DEHEUBARTH and patron of the abbey of Strata Florida (YSTRAD-FFLUR) in the 12th century. Commissioning an anchorite to produce a manuscript is typical of certain cultured members of 14th- and 15th-century Welsh gentry, especially in mid- and south Wales (CYMRU), who encouraged various clergy and professional scribes to form collections of prose and verse and to translate Latin and French texts. Another famous example from the same general area is LLYFR GWYN RHYDDERCH ('The White Book of Rhydderch'), a manuscript associated with the name of Rhydderch ab Ieuan Llwyd of south Ceredigion and written about the same time.

§5. SUBSEQUENT HISTORY

The manuscript remained a treasured possession of the Rhydodyn family for at least four generations after the time of Gruffudd ap Llywelyn ap Phylip ap Trahaearn and was later donated to Jesus College, Oxford, by Thomas Wilkins of Llan-fair, Glamorgan (MORGANNWG), not long before his death in 1699. It subsequently came into the possession of Richard Thomas, a genealogist and antiquarian from the parish of Ynyscynhaearn in Caernarfonshire (sir Gaernarfon) who had studied at Jesus College and been under-librarian there before his early death in 1780. In 1781 the manuscript was among the books of Griffith Roberts, a surgeon of Dolgellau and a book-collector. Roberts later sold it to Owen Jones (Owain Myfyr, 1741–1814) and William Owen Pughe (1759–1835), but, on realizing that the manuscript really belonged to Jesus College, they returned it in 1806. It is now kept at the Bodleian Library, Oxford.

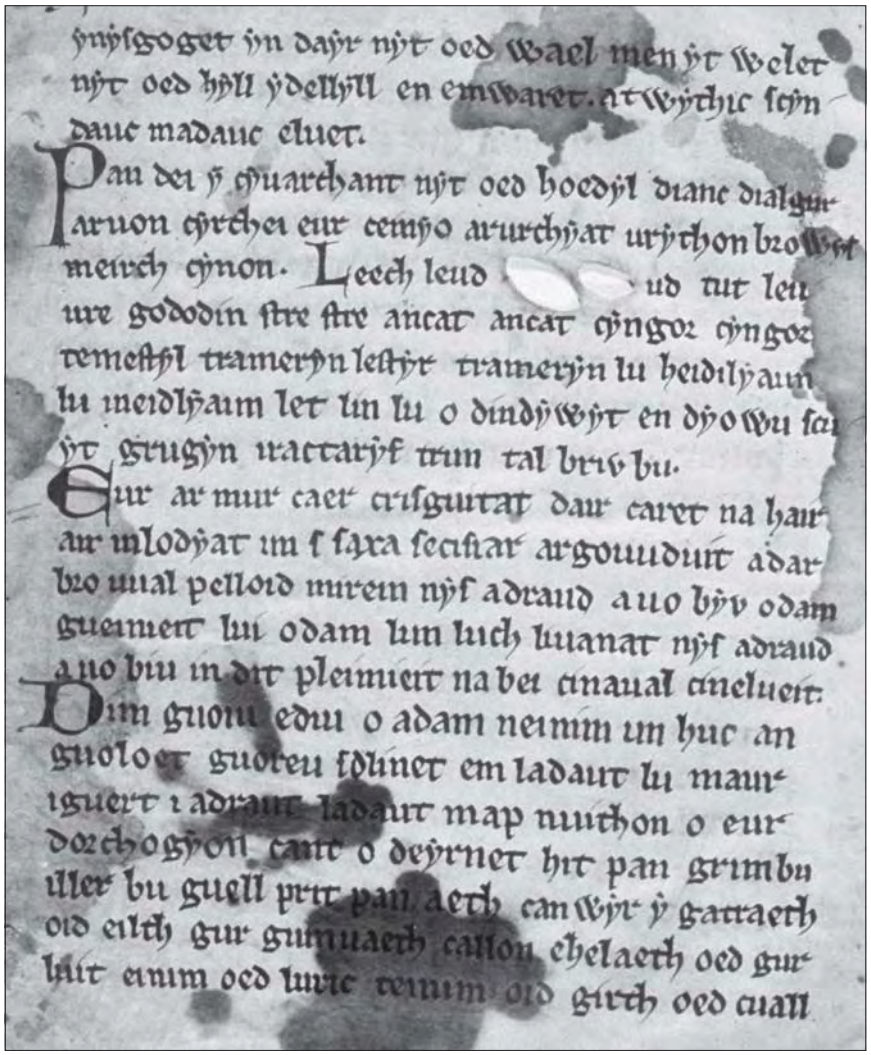
R. Iestyn Daniel



Llyfr Aneirin, page 34, in the hand of scribe B. After verses celebrating the heroes Madauc Eluet and Cynon, there is the shift to denser survival of archaic orthography from the awdl *beginning —* **Leech leud [ ] ud | tut leu ure | Gododin stre | stre ancat . . . ,** *which can be tentatively translated 'The stone of Lleu's tribe, the tribe of Lleu's hill-fort at Gododdin's border; the border was held . . .'*

Llyfr Aneirin ('The Book of Aneirin'), one of the so-called 'Four Ancient Books of Wales', is a later 13th-century manuscript, the contents of which are broadly synonymous with *Y* Gododdin, the corpus of early Welsh heroic poetry of which this is the only significant surviving copy. Huws estimates that a further 34 manuscripts of *Y Gododdin* were produced between 1587 and 1807, all copies of *Llyfr Aneirin* (either directly or at one or more removes) and all made after ten pages of its original 48 had already been removed (Brynley F. Roberts, *Early Welsh Poetry* 43–56). See Aneirin, for the internal attributions of *Y Gododdin* to the early Welsh poet (*Cynfardd*, pl. Cynfeirdd) of that name. The name *Llyfr Aneirin* is first found applied to the manuscript in the *Archaeologia Britannica* (1707) of Edward Lhuyd.

§1. the scribes and their texts

Apart from the team of Klar, O Hehir, and Sweetser, who detected the work of three scribes in *Llyfr Aneirin*, most researchers have seen only two (called A and B). They worked at roughly the same time, though A's activity apparently preceded that of B. However, rather than simply continuing to copy from the same source where A left off, B was apparently using different sources, and thus some 29 of B's 42 verses (mostly in the awdl metre) appear to be close or loose variants of one of the 88 *awdlau* in A's text. It is Text B that is physically truncated and, had it originally continued much as its surviving portion, the ten missing pages would have contained 220 manuscript lines (*c.* 390 verse lines) to make *c.* 40 verses, which would have made B's count roughly equal to that of A. Even so, there is little reason to suppose a canonical *Gododdin* text of some 80–90 *awdlau*, especially as there is no close correspondence between the order of the corresponding verses in A and B. Furthermore, there is an abrupt shift between B's twenty-third and twenty-fourth *awdlau* (the latter being a variant of A's forty-eighth *awdl* and

B's own third) from a halting Middle Welsh spelling to a consistent Old Welsh spelling. It is therefore evident that B was working from two exemplars of *Y Gododdin*, one in Middle Welsh spelling and a second in Old Welsh spelling, which he chose not to or, more probably, did not know how to modernize. In effect, then, we have three textual versions—A, B1, and B2—witnessed in one manuscript. Since the first two *awdlau* of B1 are clearly secondary and peripheral to the heroic elegies which form the main body of *Y Gododdin*—B's second verse (B1.2) is the 'Reciter's Prologue' (see below)—and its third *awdl* (B1.3) is a variant of the one which begins the archaic text (i.e. verse B2.24), Isaac has made a good case for supposing that the triple variant B1.3=B2.24=A48 reflects the original first verse of the *Gododdin* collection as a whole (*Journal of Celtic Linguistics* 2.65–91).

§2. CONTENTS

The bulk of *Llyfr Aneirin* (pp. 1–24, 30–8), in the hands of both scribes, comprises heroic elegies in the awdl metres, called collectively the GODODDIN and discussed in that article. On the central military event commemorated in these *awdlau*, see CATRAETH §1. On the themes celebrated in the elegies, see HEROIC ETHOS.

Even within the verses concerned with Gododdin's heroes and the battle of Catraeth, there is evident unevenness, chronological layers, and verses which make sense as later commentary explaining other verses; for example, in A.45 the poet calls himself 'I and not I, Aneirin', describes himself strangely as a chained worm-covered captive 'who sang the *Gododdin* before the dawn of the following day', and makes reference to the special knowledge of TALIESIN. Beyond this mixed core conventionally called *Y Gododdin*, the following verses in the manuscript stand out more overtly as being something different and/or later:

B1.1=A78 celebrates the victory of the BRITONS of Dumbarton over DOMNALL BRECC in December 642 (cf. EUGEIN map Beli);

B2.2=A.52 is the 'Reciter's Prologue', in which a later poet addresses the court referring to Aneirin's death and the cessation of Brythonic poetry (and, presumably, Brythonic courtly life) in the realm of Gododdin (see ANEIRIN §2.);

A.44 is a stray verse from the saga ENGLYNION of Llywarch Hen;

A.87 is a poem addressed to a child 'Dinogat', charmingly relating his father's hunting adventures and localized in what is now the English Lake District (see further CUMBRIC).

On pages 25–30, there are four long and difficult poems in hand A, whose rubrics in the manuscript indicate that they are separate. The title of each one labels them a special literary form, *gwarchan*: *Gwarchan Tutvwlch*, *Gwarchan Adebon*, *Gwarchan Kynvelyn*, and *Gwarchan Maelderw*. The last is explicitly attributed to Taliesin, rather than Aneirin, in a long rubric (translated at CATRAETH §1), which also explains that it is worth the value of 363 songs in a poetic competition (see YMRYSONAU), one for each man who went to Catraeth, thus apparently worth as much as the whole *Gododdin*, as if there had been one poem for each hero said to have gone to Catraeth in the A text. The Old Irish verb *for.cain* which corresponds to *gwarchan* means 'teaches', etymologically 'sings over'. In the 'Reciter's Prologue', Aneirin's '*gwarchan*' presumably means *Y Gododdin* itself.

JTK

Llyfr Coch Hergest ('The Red Book of Hergest'), measuring 34 × 21 cm and now comprising 362 parchment folios, is the largest, thickest and heaviest of all WELSH manuscripts of the Middle Ages (see also the FOUR ANCIENT BOOKS OF WALES). Its name derives from the colour of its binding and its later association with Hergest, near Kington, Herefordshire (swydd Henffordd). It contains most of the major pre-1400 prose texts of medieval Welsh literature, together

with a large selection of GOGYNFEIRDD poetry, which has led to its being justifiably called a one-volume library. It begins with the historical texts YSTORYA DARED, BRUT Y BRENHINEDD and BRUT Y TYWYSOGYON, followed by tales from the Charlemagne Cycle, the *Imago Mundi*, and CHWEDLEU SEITH DOETHON RUFEIN (Tales of the seven sages of Rome). Grouped together are the classic literary prose-works of medieval Wales: the MABINOGI, the three ARTHURIAN romances OWAIN *neu Iarlles y Ffynnon*, PEREDUR *fab Efrawg*, *Ystoria* GERAINT *fab Erbin*, the native Arthurian tale CULHWCH AC OLWEN, together with *Breuddwyd* MACSEN WLEDIG, CYFRANC LLUDD A LLEFELYS, and YSTORYA BOWN DE HAMTWN. The Arthurian tale BREUDDWYD RHONABWY occurs earlier in the manuscript. Other prose works include LLYMA PROPHWYDOLIAETH SIBLI DOETH (Sibyl's prophecy), TRIADS, two series of proverbs, the medical recipes attributed to MEDDYGON Myddfai, *Brut y Saeson* (Chronicle of the Saxons), and the grammatical treatise attributed to EINION OFFEIRIAD. Absent are the religious and didactic prose texts which were popular in medieval Wales and the texts of Welsh native law (see LAW TEXTS). The Red Book is also one of two main sources for the work of the *Gogynfeirdd*, especially those of the 14th century, the other being the HENDREGADREDD MANUSCRIPT. Although it contains the Llywarch Hen saga ENGLYNION, the poetry in LLYFR ANEIRIN and most of that in LLYFR TALIESIN is not included.

The manuscript was written sometime after 1382 by three scribes working together, the chief of them being Hywel Fychan ap Hywel Goch of Builth (Buellt), and probably for Hopcyn ap Tomas of Ynysforgan near Swansea (ABERTAWE), for whom the scribes wrote other manuscripts. By the end of the 15th century the manuscript had come into the possession of the Vaughans of Tretower, Breconshire (sir Frycheiniog), possibly through forfeiture after Hopcyn's grandson Hopcyn ap Rhys was attainted in 1465. While at Tretower, the poet LEWYS GLYN COTHI added two odes addressed to Sir Thomas Vaughan and his sons (see AWDL). At some stage afterwards, it passed to the branch of the Vaughan family residing at Hergest. It was probably here that Sir John Price or Prys of Brecon (1502?–55) saw it in 1550. It was seen by William SALESBURY between 1565 and 1568 with Sir Henry Sidney at Ludlow. By the early 17th century, the manuscript had returned to Glamorgan (MORGANNWG); when Dr John Davies of Mallwyd (*c.* 1567–1644) saw it in 1634, it was in the possession of Sir Lewis Mansel of Margam, who had married Sir Henry's granddaughter Catherine. By the end of the century, it was owned by Thomas Wilkins (†1699), rector of Llanfair, Glamorgan, and in 1701 his son presented it to Jesus College, Oxford. At the time, it was on loan to Edward LHUYD and found among his papers after his death in 1709. It was with some difficulty that the college recovered it.

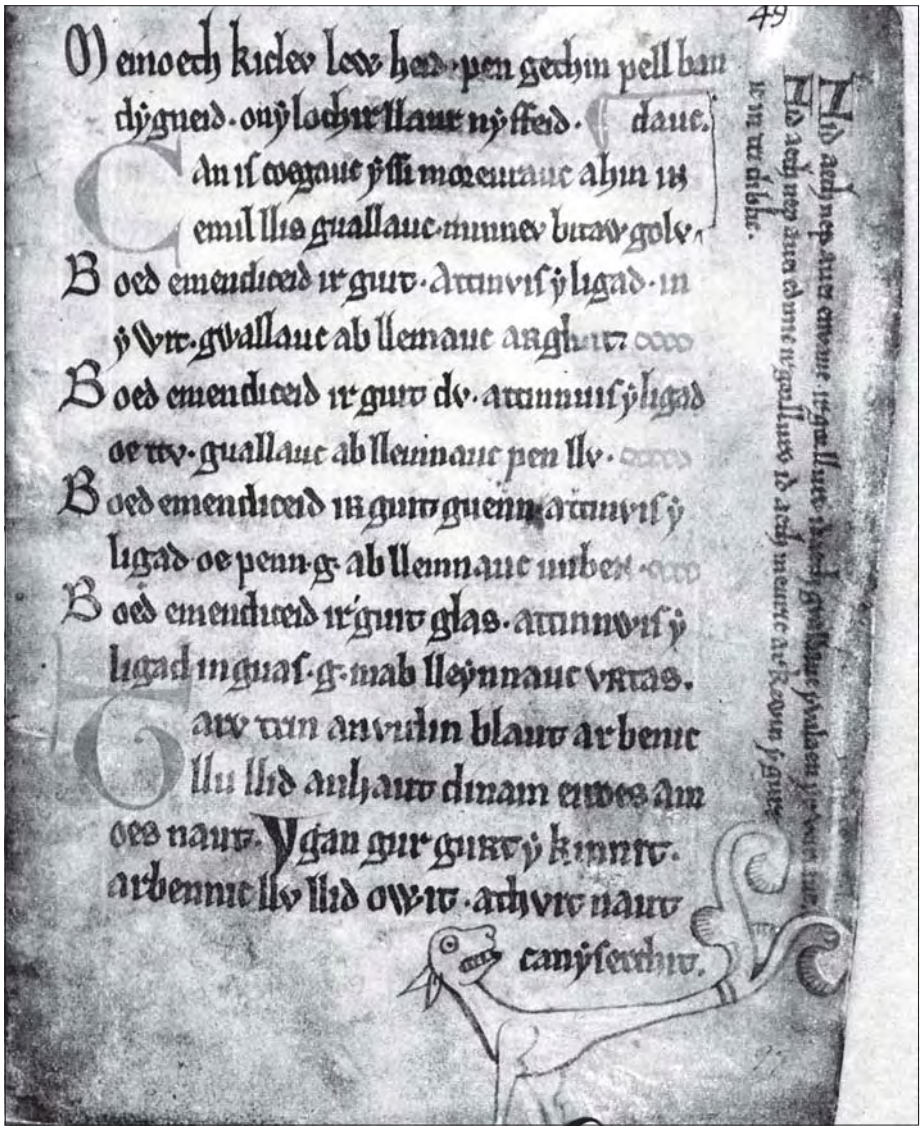
Graham C. G. Thomas

Llyfr Du Caerfyrddin ('The Black Book of Carmarthen'), the work of a single scribe writing *c.* 1250, is one of the earliest surviving manuscripts written entirely in the WELSH language (see also FOUR ANCIENT BOOKS OF WALES). Essentially a poetry manuscript, its contents include poems with religious themes such as *Mawl i'r Drindod* (Praise to the Trinity) and *Dadl y Corff a'r Enaid* (Dialogue between the body and the soul), panegyric and elegiac odes such as CYNDDELW Brydydd Mawr's 'Elegy to Madog ap Maredudd' (†1160), and poems relating to legendary heroes of Dark Age Britain, especially MYRDDIN, a warrior of the 'Old



Llyfr Du Caerfyrddin, NLW MS Peniarth 1, fo. 49r. The poem in the middle of the page, which begins with a large initial C in red ink, is a series of 3-line englynion, *concerning the story of how the northern chieftain Gwallawg ap Lleënnawg lost an eye to a goose.*

North' (see HEN OGLEDD), who went mad during the battle of ARFDERYDD (dated in ANNALES CAMBRIAE to AD 573) and lived as a wild man in the Caledonian Forest (see CALIDONES), where he received the gift of PROPHECY. Lines referring to this legend are found in the prophetic poems *Yr Afallennau* (The apple trees) and *Yr Hoianau* (The greetings), although the hero is not named. In *Ymddiddan Myrddin a Thaliesin* (Dialogue between Myrddin and TALIESIN), Myrddin encounters the poet Taliesin, who also possessed the art of prophecy. There are also dialogue poems between ARTHUR and the gatekeeper GLEWLWYD GAFAELFAWR (PA GUR YV Y PORTHAUR?), and between Gwyddno Garanhir and Gwyn ap Nudd, the OTHERWORLD lord. Other legendary verse includes poems recording the legends of Seithenyn and the drowning of Cantre'r Gwaelod (see FLOOD LEGENDS), and Ysgolan and the burning of the books, a series of verses recording the graves of Welsh heroes, and verses to GERAINT fab Erbin.

The Black Book of Carmarthen is traditionally associated with Carmarthen Priory, where it is believed to have been kept before its rescue by Sir John Price or Prys of Brecon (1502?–55). It was later acquired by the antiquary Robert VAUGHAN of Hengwrt (1592?–1667). In 1905 the manuscript, together with the rest of the HENGWRT manuscripts then at Peniarth near Tywyn, were secured for the Welsh nation by Sir John WILLIAMS, baronet, and in 1909 were transferred to the newly established National Library of Wales (LLYFRGELL GENEDLAETHOL CYMRU) at ABERYSTWYTH.

Graham C. G. Thomas

Llyfr Du o'r Waun ('The Black Book of Chirk') is one of the most interesting manuscripts of medieval Welsh law (see LAW TEXTS). In Aneurin Owen's *Ancient Laws* it is designated by the siglum A, a siglum being a conventional abbreviation used to refer to a particular manuscript. It contains an incomplete copy of the WELSH-language Iorwerth redaction of the laws. Its title and association with Chirk in Denbighshire (Y Waun, sir Ddinbych), north-east Wales (CYMRU), seem not to predate the 16th century. It was granted a central position in the subject by J. Gwenogvryn EVANS, on account of his assertion that it was the oldest surviving law manuscript; he dated it to 1200 (*Report on Manuscripts in the Welsh Language* 1.ii, vii–viii), later re-dating it to 1220 (*Y Cymmrodor* 34.76–7). Its prominence was maintained by the fact that it was the first law manuscript to be published in its entirety: Gwenogvryn Evans published a facsimile in 1909 (filling the gaps with manuscript E [London, BL Additional MS 14931]); a diplomatic edition was published by Timothy Lewis (ZCP 20.30–96); and Timothy Lewis based his *Glossary of Medieval Welsh Law* upon it. However, more recent scholarship has moved *Llyfr Du o'r Waun* further towards the margins of medieval Welsh law. Firstly, it is unlikely to have been copied before 1250 and, secondly, it has been shown that its text is not the archetype of the Iorwerth redaction, but rather a representative of one branch of the manuscript tradition (Wiliam, *Llyfr Iorwerth*, xxvi–xxix).

Nevertheless, it remains important in codicological and palaeographical terms (that is, in the study of manuscripts and early writing). The main text seems to have been copied by six scribes. The main scribes are conventionally labelled A and D, with other hands contributing additional material such as the *marwnad* (elegy) to LLYWELYN AB IORWERTH of GWYNEDD on the lower margins of pages 42, 45, and 47, and the addition of proverbs on an empty page at the end of a quire (booklet of pages sewn into a bound book) on page 32. The number of contributions from so many scribes may go some way towards explaining the manuscript's notorious reputation as a manuscript full of strangely spelt and mangled words. The manuscript is less idiosyncratic when viewed as a product of six scribes with individual orthographical habits, even if these six are not perfectly consistent. There are some oddities such as the spelling of /*ð*/ as *s* or *sh*, which is unique to this manuscript. For example, *seysuet* 'seventh' appears for Modern Welsh *seithfed* /*seiðved*/ , though this may be a dialect feature; cf. Breton *seizhvet* /seizvet/. It is not clear whether we need to invoke Anglo-Norman spelling systems to account for these oddities or indeed the vagaries of a copy produced by dictation. The unprofessional layout of the manuscript, with its variable number of lines per page, its number of contributing scribes, and the lack of a consistent 'house' style suggest that this is not the product of an ecclesiastically centred scriptorium (centre for the production of manuscripts), but rather perhaps that of a legal school. To judge from its main contents—a copy of the Iorwerth redaction of the Welsh laws—and its additional material (much of which has a Gwynedd focus), it was probably copied in north Wales, and more specifically in the north-west.

Llyfr Gwyn Rhydderch ('The White Book of Rhydderch') reflects the first known attempt to assemble in a single manuscript the main secular and religious prose of medieval Wales (CYMRU). Originally bound as one volume, it now comprises two separately bound volumes: Peniarth MSS 4 and 5 (see HENGWRT), in the National Library of Wales (LLYFRGELL GENEDLAETHOL CYMRU). Apart from Patrick's Purgatory (PURDAN PADRIG), Peniarth 4 contains secular narrative Welsh prose texts, including *Pedeir Keinc y* MABINOGI; the three ARTHURIAN romances (Y TAIR RHAMANT): OWAIN *neu Iarlles y Ffynnon*, PEREDUR, and GERAINT *fab Erbin*; the native Arthurian tale CULHWCH AC OLWEN, and the tales *Breuddwyd* MACSEN WLEDIG and CYFRANC LLUDD A LLEFELYS. The religious and didactic Welsh texts are found in Peniarth 5, and include *Imago Mundi*, the EFENGYL NICODEMUS (The gospel of Nicodemus), Our Lord's Passion, the tales of Judas Iscariot and Pontius Pilate (YSTORYA BILATUS), the Life of the Blessed Virgin Mary, the lives of Saints Catherine, Margaret, Mary of Egypt, and Martha, and the Miracles of St Edmund. Also present are tales from the Charlemagne Cycle and YSTORYA BOWN DE HAMTWN.

Written *c.* 1350 for Rhydderch ab Ieuan Llwyd of Parcrhydderch, Llangeitho, CEREDIGION, it is the work of five contemporary scribes (one was the so-named anchorite of Llanddewibrefi, who wrote LLYFR ANCR LLANDDEWIBREFI [Oxford, Jesus College MS 119] for Gruffudd ap Llywelyn ap Phylip in 1346), probably active in the scriptorium at the nearby abbey of Strata Florida (YSTRAD-FFLUR). Rhydderch's family had been literary patrons for many generations. Welsh versions of TRANSITUS BEATAE MARIAE and the History of Turpin were made by Madog ap Selyf for Gruffudd, son of Rhydderch's great-great-grandfather MAREDUDD AB OWAIN, and Brother Gruffudd Bola translated the Athanasian Creed into Welsh for Maredudd's daughter, Efa. These texts are found in the White Book. Rhydderch's father possessed the HENDREGADREDD MANUSCRIPT and he himself patronized the early CYWYDDWYR. Additions in the manuscript include lines added to the text of *Culhwch ac Olwen* by Hywel Fychan ap Hywel Goch, one of the scribes of LLYFR COCH HERGEST (The Red Book of Hergest), four ENGLYN*ion* by DAFYDD AP GWILYM, added before 1400, and a poem by Llywelyn Moel in the first half of the 15th century. The manuscript was still in the possession of Rhydderch's descendants until the end of the 16th century, when it then passed into the hands of Elisau ap Wiliam Llwyd (†1583) of Rhiwaedog, Llanfor, near Bala, his grandmother being the daughter of Elisau ap Gruffudd ab Einion whose 1489 *obit* is recorded in Peniarth 5, fo. 65, and whose great-grandmother was Rhydderch's daughter. From the end of the 16th century, the manuscript was the subject of antiquarian interest. Among those who consulted it were Richard Langford of Trefalun (*fl. c.* 1565–72), Roger Morris, Coed-y-talwrn (*fl.* 1590), 'Sir' Thomas Wiliems of Trefriw (1550?–1622?), and Jaspar Gryffyth (†1614). In 1634 it was in the possession of John Jones, Gellilyfdy (*c.* 1578/83–1658?), and was acquired after Jones's death in 1658 by Robert VAUGHAN of Hengwrt.

Graham C. G. Thomas

Llyfr Taliesin ('The Book of TALIESIN'), one of the so-called 'FOUR ANCIENT BOOKS OF WALES', is a

manuscript of the first half of the 14th century; it contains 60 Welsh poems, all of which were probably composed in the 12th century or earlier. Apart from some poems' titles and marginalia, the manuscript is the work of one professional scribe, whose name is unknown, but who copied four other extant manuscripts: NLW , Mostyn 117 (Brut Dingestow), NLW Peniarth 6 (part iv, part of the tale of Geraint), and two law texts of the 'Cyfnerth' family (London, BL, Harley 4353 and BL, Cotton Cleopatra A.xiv). Haycock has detected traces of southern Welsh in the usage of the scribe.

The name *Llyfr Taliesin* cannot be shown to have been used before Lhuyd's *Archaeologia Britannica* (1707). However, many of the poems in the collection name Taliesin or otherwise imply attribution to him, refer to characters and episodes of the Taliesin tradition, or appear generally to be the kind of things which medieval poets and scribes might have assumed to be the work of the pre-eminent bard and shape-shifting visionary of legend. It is likely, but not certain, that this collection had already been put together before our copy was made, but in some of the poems throwbacks to earlier language and spelling occur more frequently (as in Trawsganu Cynan Garwyn), indicating a history of transmission which was not altogether uniform.

The collection was usefully subdivided into literary categories as follows by Ifor Williams (*Poems of Taliesin* xviii–xix), noting the manuscript page where each poem begins and giving totals for each category. This list, though not necessarily recovering the native literary classifications of medieval Wales (Cymru), conveys a sense of *Llyfr Taliesin*'s contents and some impression of its organization:

'Poems of the Legendary Taliesin': 1, 7, 8, 19, 23 (*Cad Goddau* [Battle of the trees], see Haycock, *Celtic Linguistics* 297–331), 27, 30, 31, 33, 34, 35 (*Cadair Ceridwen* [The chair of Ceridwen], see Haycock, *Cyfoeth y Testun* 148–75), 36, 40[1] (*Canu y Medd* [The song of mead], see Haycock, *Dwned* 1.7–23), 40[2] (*Canu y Cwrw* [The song of ale], see Haycock, *Dwned* 4.9–32), 41 (a total of 15 poems);

'Religious and Scriptural Poems' (see Haycock, *Blodeugerdd Barddas o Ganu Crefyddol Cynnar*): 3, 10, 44, 46, 52, 53, 73 (a total of 7 poems);

'Poems to Gwallawg': 29, 63 (2 poems);

Prophecy: 13 (Armes Prydein), 28, 38, 70, 72[1], 72[2], 74, 76, 78, 80 (a total of 10 poems);

'Poems (mostly Eulogies)':
to Dinbych-y-pysgod (see Bromwich, *Beginnings of Welsh Poetry* 155–180; Gruffydd, *Edmyg Dinbych*): 42;
Trawsganu Cynan Garwyn: 45;
to Alexander the Great: 51, 52 (2 poems);
to Arthur (Preiddiau Annwfn): 54;
to Urien: 56, 57, 58, 59, 60, 61, 62, 65 (8 poems);
to Ercwlff (Hercules): 65;

'Elegies [death-songs, *marwnadau*]' (7 poems):
Madawg ac Erof: 66;
Cú Roí: 66;
Dylan: 67;
Enaid Owain ab Urien: 67;
Aeddon (see Bromwich, *Beginnings of Welsh Poetry* 155–180; Gruffydd, *Ildánach Ildírech* 39–48): 68;
Marwnad Cunedda: 69;
Uthr Ben(dragon): 71;

Canu y Byd Mawr (Song of the macrocosm): 79;

Canu y Byd Bychan (Song of the microcosm [see Haycock, *Essays and Poems Presented to Daniel Huws* 229–50]): 80.

Llyfrgell Genedlaethol Cymru (National Library of Wales) located in Aberystwyth, Ceredigion, and funded principally by the National Assembly for Wales (Cynulliad Cenedlaethol

Cymru), is the pre-eminent documentary resource for research and learning in Welsh and Celtic studies.

§1. introduction

Housed in an imposing neo-classical building on a hill overlooking Cardigan Bay, the Library is visually an outstanding example of a national library, but is also unusual. Firstly, it is not the library of a sovereign state, but of a country-within-a-state that until very recently enjoyed little political self-determination. Secondly, its interpretation of what it collects, preserves and gives public access to is much wider than most other national libraries. Indeed, the term 'library' is an inadequate pointer to its contents and activities. It merely suggests the range of printed, manuscript and archival collections, not to speak of the paintings, prints and drawings, maps and photographs, sound and moving images, and digital material stored within its walls.

§2. origins and development

The National Library's roots lie in the second half of the 19th century, when an ascendant sense of Wales (Cymru) as a nation led to calls for the creation of national institutions (see nationalism). An organized, nationwide concern for the discovery and recording of Wales's documentary and archaeological heritage can be recognized even earlier, in the founding of the Welsh Manuscripts Society in 1836, and of the Cambrian Archaeological Association in 1846. A meeting convened during the National Eisteddfod (Eisteddfod Genedlaethol Cymru) at Mold (Yr Wyddgrug) in 1873 resolved that:

> . . . it is desirable on many grounds that a National Library should be formed, consisting chiefly of rare books and manuscripts in the Welsh Language, and in other languages, where they relate to Wales or to its people.

A committee was established to pursue this aim, and the University College at Aberystwyth, founded the year before, offered accommodation for an embryonic collection.

It took another 34 years before a National Library came into legal existence. As the beginnings of a national collection grew slowly in the College, a small but influential group of men worked to gain statutory status and financial support for a true National Library. Following a long campaign, led by the Liberal Member of Parliament for the Flint Boroughs, John Herbert Lewis (his contribution is assessed by Thomas Parry), a Royal Charter was granted in March 1907. This established a National Museum in Cardiff (Caerdydd; see amgueddfeydd), and a National Library in Aberystwyth. The locations were hotly contested. Aberystwyth's case was based not only on the College's collection, but also on the availability of the site, donated by Lord Rendel, and the promise of manuscript and other collections by the Library's most influential supporter, and its first President, Sir John Williams.

The Library's early decades, chronicled by W. Ll. Davies and David Jenkins, were dominated by two main concerns: building the collections—acquisition of legal deposit status through the Copyright Act of 1911 was crucial—and constructing the new building. Funds were scarce and progress slow. The Library opened in temporary accommodation in Laura Place in 1909. The foundation stone was laid on the new site two years later, but the completed building, first occupied in 1916, was not officially opened until 1955. By now its original design, by Sidney Kyffin Greenslade, had been modified. Since then three major extensions have been added to the rear to store the rapidly expanding collections (Daniel Huws summarizes the building's history to 1994).

§3. collections and services

The newly established Library collected widely: not only books and manuscripts, but almost any two-dimensional object which in some way documented Wales or the other Celtic nations. Remarkably quickly, thanks to collectors such as Sir John Williams and the assiduous first Librarian, John Ballinger, the Library became home to most of the key manuscripts for which it is famous. The Black Book of Carmarthen (Llyfr Du Caerfyrddin), The Book of Taliesin (Llyfr Taliesin), The White Book of Rhydderch (Llyfr Gwyn Rhydderch), The Black Book of Chirk (Llyfr Du o'r Waun) and Peniarth 28 (both containing the laws of Hywel Dda), the Hendregadredd Manuscript, and the Hengwrt Chaucer were joined by a host of other manuscripts and archives documenting early Welsh literature and history. Graphic material such as prints and drawings were also collected from the beginning.

Printed works constitute the bulk of the Library's

holdings. The presence of a substantial general research collection built on legal deposit, together with overseas material purchased selectively, give depth to the study of Welsh and Celtic subjects, where the Library has an unsurpassed collection of books, newspapers, serials, and ephemera. In total there are some 4.6 million published items.

The early manuscripts were soon joined by a much larger collection of archives, as the Library became a *de facto* record office for Wales. With the exception of most central records of government, stored in the Public Record Office, nearly all kinds of Welsh records are represented: those of the Church in Wales and nonconformist denominations (see CHRISTIANITY), of landed estates, of businesses and public organizations, of distinguished politicians, writers, musicians, and artists. Today the collecting scope remains wide, though archives of local significance are likely to be found in the county record offices.

The early drawings and prints led to the collection of other graphic materials, notably maps (one million items, many collected via legal deposit), paintings (chiefly portraits and landscapes) and photographs (some 750,000 items). The National Screen and Sound Archive of Wales, created in 2001 from two previously existing collections, includes Welsh-language and other sound recordings of Welsh and Celtic interest, videos, and films, together with a huge collection of television broadcasts. New media continue to proliferate. Digital material is increasingly important: an extension of the law of legal deposit is considered the key to successful collection in future.

Preservation is as crucial as collecting: the life of material is prolonged by ensuring favourable storage conditions and by intervening in some cases through conservation. Access and information services include study facilities, enquiry services, access to catalogues, schedules, and indexes, and provision of copies. To interpret the collections and encourage their use publications are issued, exhibitions are mounted and toured, and events and online displays are organized. In 2004 a new visitor centre, with a multi-media theatre at its centre, was opened to attract new audiences and new kinds of use of the Library. Those unlikely to make a visit benefit from online services and facilities, including digital and digitized material available on the Library's website.

Llyma Prophwydoliaeth Sibli Doeth (Here is the prophecy of Sibyl the Wise) is a Middle WELSH prophetic text with strong apocalyptic tendencies. It is based on the Latin 'Oracles of the Tiburtine Sibyl'. The so-called 'Fifteen Signs Before Doomsday' is another such Middle Welsh apocalyptic text.

Llyma Vabinogi Iessu Grist (Here is the 'MABINOGI' of Jesus Christ) is the title given to Middle WELSH translations of the Latin apocryphal text *Pseudo-Matthaei Evangelium* (Gospel of the Pseudo-Matthew). The text supplements the canonical Gospels, satisfying the pious curiosity about the birth and childhood of the Virgin Mary and the infancy of Christ, on which the Evangelists were silent. Three independent early translations, usually called *Llyma Vabinogi Iessu Grist*, demonstrate the popularity of this apocryphal gospel in medieval Wales (CYMRU).

Llyn Cerrig Bach is the site of the only major weapon deposit of the IRON AGE in Wales (Lynch et al., *Prehistoric Wales* 189, 214–15). It is named after a nearby lake—the Welsh place-name means 'small lake of the stones'—located in a boggy area near the west coast of Anglesey (MÔN), about 5 miles from Holyhead (Caergybi). Since pre-Roman Anglesey is known to have been an important sanctuary of the DRUIDS, the WATERY DEPOSITION at Llyn Cerrig Bach has attracted special attention in CELTIC STUDIES.

During the works at the local Royal Airforce Station's runway in 1942, various items of metal and bone were discovered, and in 1943 J. A. Jones, Resident Engineer of the Ministry of War, submitted drawings of the finds to the National Museum (see AMGUEDDFEYDD AC ORIELAU CENEDLAETHOL CYMRU). On being informed of the importance of their finds, the workers started to collect all items they could find (Fox, *Find of the Early Iron Age from Llyn Cerrig Bach*). Some 144 items of iron and bronze, and a vast number of bones (ox, dog, horse, pig and sheep) have been found, but it is probable that this represents only a small portion of the original deposit.

Decorative sheet bronze mount with curvilinear Insular La Tène designs, from the Iron Age votive deposit, Llyn Cerrig Bach, Anglesey

The finds include weapons, for example SWORDS, scabbards, daggers, spears, a shield boss, gang-chains, a pair of bean-shaped plaques, and a crescent plaque, which could have been used for decorating shields (Savory, *Guide Catalogue of the Early Iron Age Collections* 30). Also found were parts of CHARIOTS or carts and horse gear featuring nave hoops, bridle-bits, one chariot horn cap, probably a terminal of a yoke (Savory, *Guide Catalogue of the Early Iron Age Collections* 33), many iron tyre segments, and even one complete tyre. Items of economical, technical or religious interest include parts of two CAULDRONS, blacksmith tongs, currency bars, and a trumpet of the Irish Lough-na-Shade type (so named after four trumpets found in the lake of this name below EMAIN MACHAE).

The lake seems to have been used from the 2nd century BC as a votive deposit, and probably became disused prior to the expedition of Suetonius Paulinus to Anglesey in AD 60/61 (Green, *Celts* 609). In 1946 the objects were thought to have been gathered from distant regions, and it was believed that the lake must have been a major shrine, known all over the British Isles. However, later finds from north Wales (CYMRU) support the idea that all the equipment was in local use (Lynch et al., *Prehistoric Wales* 189, 214–15). No stratigraphical analysis of the site has been done, nor has it been excavated since a road had been built right through the area in 1945.

Daniel Capek

Objects from the Llyn Fawr hoard

Llyn Fawr is an important archaeological site located in Glamorgan (Morgannwg), south Wales (Cymru), around 18 miles north-east of Swansea (Abertawe). The Llyn Fawr hoard was recovered when the peaty mountain tarn was drained during the installation of a water reservoir in 1910–11, and was first presented in 1921 by O. G. S. Crawford and R. E. M. Wheeler. Fifteen years later, in 1936, other finds, which had also been recovered in 1910–11, namely a second bronze cauldron and a fragment of a Hallstatt C iron sword, were handed over to the National Museum of Wales (see amgueddfeydd ac orielau cenedlaethol cymru). The Llyn Fawr hoard consist of 24 objects, namely:

1. two bronze cauldrons;
2. six socketed bronze axes;
3. three socketed bronze gouges;
4. two winged chapes (a type of scabbard fitting);
5. a bronze razor;
6. a bronze belt-clasp;
7. an ornamental bronze-plate;
8. three bronze discs;
9. two bronze sickles;
10. an iron sickle;
11. an iron spearhead;
12. an iron sword.

The whole first collection from the Llyn Fawr hoard can be regarded as a unitary deposit, and all objects date to the latest Bronze Age and earliest Iron Age, *c.* 650 bc (Crawford & Wheeler, *Archaeologia* 71.133–40). But, if Llyn Fawr was a sacred water, a range of objects covering an extended period of time might have been expected (Fox & Hyde, *Antiquaries Journal* 19.369–404). Another explanation for the Llyn Fawr hoard is that it could be a single ritual deposit made by local folk following a successful raid (Savory, *Guide Catalogue of the Early Iron Age Collections*). The two bronze cauldrons are of class B1, of which many examples were found in Ireland (Ériu), and therefore represent Atlantic trade (Cunliffe, *Iron Age Communities in Britain*). The iron sickle, which is closely similar to Irish examples in bronze, proves that iron production was already established, but the imitation of bronze types shows that this change took place gradually. The iron spearhead is of a common and simple type, and cannot be related with either local manufacture or with imports from the Continent (Cunliffe, *Iron Age Communities in Britain*). The Hallstatt C iron sword, on the other hand, must surely be an import (Savory, *Guide Catalogue of the Early Iron Age Collections*). The place-name means merely 'large pool'; *llyn*, having been originally neuter (Proto-Celtic **lindom*), is usually feminine in south Wales.

Thomas Muhsil

Llyn y Fan Fach

The story of the lady of Llyn y Fan Fach, a glacial lake in the Carmarthenshire Beacons, is perhaps the most famous of all Welsh FOLK-TALES. The fullest version is the composite text published by Ab Ithel (John Williams) in *The Physicians of Myddvai*, though fragmentary versions collected orally were published at an earlier date by Richard Fenton and in a letter by Siencyn ap Tydvil in the *Cambro Briton*.

The story tells how a shepherd boy from Blaensawdde wooed and won a fairy lady who had appeared from the lake, bringing with her a dowry of sheep, goats, and cattle. One of the conditions of the match was that the husband would not strike her three times without cause. Years later, after she had borne him three sons, he broke the taboo and the lady returned to the lake, calling her cattle after her by name in a rhyming stanza. The broken-hearted sons searched for their mother, who appeared to them several times and gave them a bag of medical recipes at places associated with them by name, such as Pant y MEDDYGON. The sons became the famous Physicians of Myddfai.

The tale is one of several of lake fairy stories discussed by Sir John RHŶS under the heading 'Undine's Kymric Sisters', and has received much subsequent scholarly attention. For the Stith Thompson school it is redolent with international folk-tale motifs such as 'the fairy water bride', 'the breaking of taboo', and 'the gifted descendants of fairy–mortal marriages'. It also uses formulaic numbers, particularly the number three. The boy waits three days to meet the maiden, he offers the fairy three kinds of bread, 'three causeless blows' must not be struck, and the couple have three sons (see also TRIADS). The story conforms to many of Axel Olrik's 'epic laws of folk narrative', such as the laws of similarity (the boy has to distinguish between the lady and an identical sister) and the laws of contradiction (the lady cries at a wedding, the boy is the son of a widow).

The second part of the story has a strong onomastic bent, and associates the gifted descendants with local place and farm names. It has been suggested that the legend, as recorded in its fullest form, consists of a fusion of two tales—an early lake legend and a later, local onomastic tale associating the fairy with the traditions of the historically renowned doctors of the area connected with the royal court of Dinefwr.

W. J. Gruffydd suggested that the story had an ethnic explanation. The fairies represent the pre-Iron Age population of the area who were forced to live in caves and lake dwellings when the powerful ironworking Celtic peoples came. To the invaders, these peoples of a different ethnic type would have appeared alien but very similar to one another. Ffransis Payne argued that the names by which the fairy called her cattle, such as *Mu wlfrech* (Brindled cow), describe the cattle types which would have been found in Britain between the Iron Age and the early Middle Ages. The reference to a white bull from the king's court recalls the white cattle of the court of Dinefwr. The rhyming list of cattle names as well as other parts of the tale containing rhyming passages seem to presuppose a long antecedent oral history for the story. Most recently, the many recorded versions have been studied by those interested in the nature of orality.

Llŷr, called Llŷr Lledlaith '?half-speech' in the TRIADS (TYP no. 52), is the ancestor of important figures in the Second and Third Branches of the MABINOGI: BRÂN fab Llŷr, BRANWEN ferch Lŷr, and MANAWYDAN fab Llŷr. He has no actions in these tales, but in the triad he is said to have been imprisoned by Euroswydd, who figures in the *Mabinogi* as the father of EFNISIEN and NISIEN, half-brothers of Branwen and Brân. Therefore, it seems likely that there had been a tale concerning the circumstances of the brothers' conceptions. A reference to the presence of the 'sons of Llŷr' over 'joyless liquor' in the mythological poem *Kadeir Talyessin* (TALIESIN's [bardic] chair) in LLYFR TALIESIN probably refers to the OTHERWORLD feast in *Branwen*.

Llŷr, meaning 'sea', occurs as a common noun in early WELSH POETRY. For the etymology of the name and

the relationship to the Irish Manannán mac Lir *filius maris* 'son of the sea' (*ler*), see MANANNÁN and CARADOG FREICHFRAS. For the possible mythological parallel with *plant Dôn* as 'children of the earth', see DÔN; cf. also LEGENDARY HISTORY §5. *Llŷr* also occurs in the place-name Llanllŷr in CEREDIGION, the site of a 13th-century Cistercian nunnery (see CISTERCIAN ABBEYS IN WALES) and an early medieval inscribed cross slab, which reads TESQUITUS DITOC | MADOMNUAC O|CCON FILIUS ASA|ITGEN DEDIT 'the small waste plot of Ditoc (which) Occon son of Asaitgen gave [Saint] Madomnuac' (Nash-Williams, *Early Christian Monuments of Wales* 100–1), in which the saint's name and *Occon* are probably Irish.

JTK

Llywarch ap Llywelyn ('Prydydd y Moch', *fl.* 1174/5–1220)

was the chief poet of LLYWELYN AB IORWERTH (Llywelyn Fawr), ruler of GWYNEDD, and one of the major Poets of the Princes (see GOGYNFEIRDD; WELSH POETRY).

There is, however, very little personal information about him. Some references in his work suggest that he did not inherit a family tradition of poetry, and the nickname 'Prydydd y Moch' (the poet of the pigs) may refer to his humble origins. References in legal documents suggest his descendants lived in the parish of Cefn, Denbighshire (sir Ddinbych), and this may have been his home also, if so, probably as a gift of land from Prince Llywelyn.

In the construction and vocabulary of the poems, Llywarch shows himself to be a master of the complex poetic tradition in which he had been trained (see BARDIC ORDER, CYNGHANEDD). Even the earliest of his poems are technically faultless, while the latest that can be dated with any certainty do not reflect any diminution in his skills. If he is indeed the author of all the poems attributed to him, his career spanned fifty years, many of those as chief poet to the premier prince of Wales—a remarkable feat of stamina. His poems also reflect a belief in the status and power of his craft, and include two *cerddi bygwth* (threatening poems), threatening Dafydd ab Owain Gwynedd and Gruffudd ap Cynan ab Owain Gwynedd with dire physical consequences if they withhold from him his rightful reward of gifts (see SATIRE). He even compares praising Gruffudd with casting pearls before swine, and the daring of this comparison is another possible explanation of the sobriquet 'Prydydd y Moch'.

His earliest poems were composed in honour of Dafydd and Rhodri, the sons of OWAIN GWYNEDD, who fought for power in Gwynedd after their father's death. He praised them for their generosity and valour, in the traditional forms, with many mythological references. During the same period, he composed three poems in praise of Llywelyn ab Iorwerth when the latter was still a youth, possibly to celebrate his accession to manhood at fourteen.

When Llywelyn came to power, Llywarch found him both a worthy subject of his poetry and also a leader with whose policies for unifying Wales (CYMRU) he was in full agreement. Llywarch composed a series of AWDL*au* which link Llywelyn's actual conquests with those of past heroes. They include a magnificent poem which probably celebrates Llywelyn's conquests during 1213. It urges the princes of POWYS to accept him as their rightful leader and includes the strikingly direct line:

> *Ai gwell Ffranc no ffrawddus Gymro?*
>
> Is a Norman better than a fierce Welshman? (Elin M. Jones, *Gwaith Llywarch ap Llywelyn* 222).

Llywarch ap Llywelyn also sang the praises of those princes in Wales who supported Llywelyn, and the last of his poems which can be dated was probably composed around 1220. It praises Rhys Gryg of DEHEUBARTH when Llywelyn was trying to establish a lasting peace agreement with him.

Llywarch's poems are therefore typical of his age, with one tantalizing exception. *Awdl yr Haearn Twym* (Ode to the hot iron) is addressed to the red-hot iron used in trial by ordeal, and in the poem Llywarch begs the iron to prove him innocent of the death of an otherwise unidentified man named Madog. Nothing is known of the circumstances in which this poem was composed.

The name *Llywarch* is an inherited Celtic name. It is well-known as the name of the central character of one of the traditional cycles of Welsh saga ENGLYNION, Llywarch Hen ('Llywarch the Old' or 'the Ancestor'). The name is attested in both Old Welsh and Old Breton as *Loumarch*, deriving from British **Lugu-marcos* 'the stallion of [the god] LUGUS' (Welsh LLEU).

Elin M. Jones

Llywelyn ab Iorwerth (known as Llywelyn Fawr, 'Llywelyn the Great', †1240) is remembered for two major achievements: the reintegration of GWYNEDD after the divisive conflicts which had afflicted the dynasty in the period following the death of his grandfather, OWAIN GWYNEDD, in 1170, and the broad political supremacy which enabled him to create an alliance of the princes of Wales (CYMRU) as the basis for an autonomous PRINCIPALITY OF WALES to be held under the king of England.

The precise chronology of his rise to power is uncertain, but he had secured mastery over the entire historic kingdom of Gwynedd by 1199 or very soon afterwards. Aggressive intervention in lands beyond his frontiers, especially in POWYS Wenwynwyn, provided early indications of wider ambitions, but John, king of England, who allowed Llywelyn to marry his daughter Joan in 1205, took no action against him until 1211. In that year, drawing into his alliance several princes who had resented Llywelyn's intervention, John mounted a major campaign which forced the prince into a formal submission by which he was required to cede Perfeddwlad (the 'Middle Country' between the rivers Conwy and Dee [Dyfrdwy]) and hand over his bastard son Gruffudd to the king. John's subsequent assertion of royal authority in Wales raised fears among his recent allies, and the following year Llywelyn was able to bring them into a military alliance against the king which he was able to maintain until 1216.

Clauses in the Magna Carta of 1215, providing for the abrogation of the submission in 1211 and the release of Gruffudd, mark a partial acknowledgement of Llywelyn's authority in Wales, but it was evident that the prince was bent on the creation of permanent bonds with the princes of Wales by which they would hold their lands in fealty to Llywelyn, thereby creating a dominion which he would hold in fealty to the king of England. The conception of a principality (*principatus*), in which political power would be concentrated in the hands of a single prince, saw its birth at this time.

After the cessation of hostilities in the realm, during the course of which Llywelyn had joined the barons opposed to King John, the council of the young King Henry III came to an agreement with Llywelyn at Worcester (Welsh Caerwrangon) in 1218. Its terms marked a recognition of the prince's power in Wales, but his wish for a formal political settlement by which he would be ceded the homage and fealty of the princes was not countenanced. The king was prepared to endorse Llywelyn's decision in 1220 that Dafydd, the son of Llywelyn's marriage with Joan, should succeed him, to the exclusion of Gruffudd. Llywelyn hoped that Dafydd, helped by the advantage of his kinship with the monarchy, would be able to achieve the political objectives of the dynasty, but, when the heir came of age in 1227 and did homage to the king, he was promised no more than succession to the 'rights and privileges' which would come to him upon his father's death, a form of words that the king would be able to interpret according to his own wishes at the appropriate time.

Meantime, especially in the period between 1228 and 1234, Llywelyn was engaged in vigorous campaigns in the March of Wales, initiatives probably stimulated less by a wish to appropriate the marchers' lands than to exert pressure on the king to acknowledge by formal treaty his hegemony over the princes' lands. At times of difficulty the king would intimate his readiness to negotiate a peace treaty, but no agreement ever materialized, leaving Llywelyn with an unrecognized supremacy and his son with an uncertain inheritance. In due course Dafydd was forced to accept that his authority would be limited to Gwynedd and that his father's broader supremacy could not be sustained.

Llywelyn's rise to power and his ascendancy are

celebrated in poetry, notably in the work of Llywarch ap Llywelyn, known as 'Prydydd y Moch', and his death was mourned by Einion Wan and Dafydd Benfras in verse which, while dwelling upon the prince's martial capability and his generosity, can hardly be said to capture the magnitude of an achievement which saw, for the first time in history, a political formulation of Welsh nationhood.

J. Beverley Smith

Llywelyn ap Gruffudd (†1282), the last independent Welsh prince, also known as Llywelyn the Last (Llywelyn ein Llyw Olaf), was the second of the four sons of Gruffudd ap Llywelyn (†1244) and grandson of Llywelyn ab Iorwerth (Llywelyn the Great). He showed early political resolve when, soon after the accession of Dafydd ap Llywelyn (†1246), he established himself as lord of a small portion of Perfeddwlad (the 'Middle Country' between the rivers Conwy and Dee [Dyfrdwy]), and then, after his father's death, joined forces with Dafydd in resistance to the King of England. This placed him in a strong position when Dafydd died without heir in 1246, and his elder brother Owain, returning from captivity in England, could do no more than share Gwynedd Uwch Conwy (Gwynedd above, i.e. west of, the river Conwy) with Llywelyn. Owain and Llywelyn exercised lordship until 1255 when their younger brother Dafydd, seeking a share of the patrimony and finding Owain sympathetic to his ambitions, brought the matter to a head at the battle of Bryn Derwin on the Lleyn (Llŷn) peninsula, Gwynedd.

Llywelyn's triumph and his advance into Perfeddwlad, until then in the hands of the Crown, gave him sole control over Gwynedd in its entirety, and he moved forthwith to establish, by alliance with the princes, a supremacy over Powys and Deheubarth. By 1258 he was in a position to assume the style 'Prince of Wales', an indication that military alliance was taking the form of a political association, and he pressed King Henry III to grant him the homage of the princes of Wales (Cymru) and to accept his homage for a principality of Wales. The king refused to negotiate a peace on this basis until, after a sequence of offensives in the March of Wales and an alliance with Simon de Montfort and the barons who were in resistance to the Crown, the King finally conceded him, by the treaty of Montgomery of 1267, the principality of Wales and the title 'Prince of Wales'. He was granted the homage of all the Welsh lords of Wales, to be held in return for Llywelyn's homage to the king for the principality. It marked the recognition of the unification under the authority of a single prince, for the first time in the entire history of the nation, of the lands held under Welsh lordship. Llywelyn's rise to power and his ascendancy were celebrated by the poets Dafydd Benfras and Llygad Gŵr.

By 1277 friction with the marcher lords and disagreement with Edward I led to conflict in which Llywelyn was forced to concede the territories he held outside Gwynedd and to accept the humiliating treaty of Aberconwy, ceding Perfeddwlad and acknowledging Dafydd ap Gruffudd's right to a share of the patrimony, though Llywelyn was allowed, for his lifetime, to retain Dafydd's share. Llywelyn initiated an action before the King's justices, claiming against his adversary Gruffudd ap Gwenwynwyn the cantref of Arwystli and part of Cyfeiliog. The action tested the king's willingness to admit that cases concerning land in Wales should be determined according to Welsh law, Llywelyn resting his claim to Welsh law upon the treaty of 1277 and a natural right derived from Welsh nationality. War in 1282 stemmed, however, not from these arguments but from the frustrations Dafydd ap Gruffudd felt in exercising lordship over the lands in Perfeddwlad which he had been given in recompense for his share of Gwynedd Uwch Conwy. Llywelyn became the acknowledged leader of Welsh resistance, and the record of his exchanges with Archbishop Pecham in November 1282 provides an invaluable statement, not only of the considerations which took the princes into war in 1282, but the enduring aspirations, reflected in an assertion of the right to Welsh law and a sense of history, which had led to the political unity represented by the principality of Wales.

Llywelyn was killed in combat, in circumstances that are far from clear, near Builth (Llanfair-ym-Muallt) in the March of Wales, on 11 December 1282. His death was commemorated in two magnificent elegies, in

contrasting styles, by BLEDDYN FARDD and GRUFFUDD AB YR YNAD COCH.

J. Beverley Smith

Llywelyn ap Seisyll (†1023), a usurper to the throne of GWYNEDD, was possibly a descendant of King ANARAWD through his mother. The ancestry of his father is unknown, but some scholars have suggested that he was a prince from DEHEUBARTH. Llywelyn married Angharad, daughter of MAREDUDD AB OWAIN, and was involved in the affairs of Deheubarth. According to BRUT Y TYWYSOGYON, Llywelyn (whom it calls 'king of Gwynedd and foremost and most praiseworthy king of all the BRITONS [*Brytanyeit*]') defeated an Irish pretender named Rhain, who claimed to be a son of Maredudd ab Owain. After Llywelyn's death the following year, the second dynasty of Gwynedd (the descendants of MERFYN [†825] along the male line) regained power under IAGO AB IDWAL FOEL. On the common Welsh name *Llywelyn*, see LLEFELYS. On *Seisyll*, see SEISYLL AP CLYDOG.

PEB

Llywelyn Fardd (Llywelyn the BARD/poet) is the name of two or more of the GOGYNFEIRDD, or *Beirdd y Tywysogion* (Poets of the Princes). The first flourished *c.* 1125–1200, and the second *c.* 1215–80, though these dates may represent a conflation of the careers of two poets. Llywelyn Fardd I seems to have been a native of Meirionnydd (Merioneth). This is suggested by the love of place apparent in his *Canu Cadfan*, an AWDL of praise for the 6th-century saint, his monastery at Tywyn, in Meirionnydd, and the contemporary abbot of that monastery, Morfran. He also served princes of POWYS and GWYNEDD, including OWAIN GWYNEDD (†1170). His poems are preserved in the early 14th-century HENDREGADREDD MANUSCRIPT and the late 14th-/early 15th-century Red Book of Hergest (LLYFR COCH HERGEST). Another Llywelyn Fardd composed a poem in honour of LLYWELYN AB IORWERTH of Gwynedd, probably *c.* 1216, no later than 1240, and perhaps as early as 1187. There is also a poem for Owain ap Gruffudd ap Gwenwynwyn, the lord of one section of Powys, which is attributed to Llywelyn Fardd. This poem was composed no earlier than *c.* 1277 and perhaps as late as 1291. The impossibility of dating the praise poems precisely, combined with the length of the period between the earliest possible date for the Llywelyn ab Iorwerth poem and the latest for the *Mawl Owain ap Gruffudd ap Gwenwynwyn* (104 years), suggests that we may be dealing with two poets, rather than one, from a total of three *Gogynfeirdd* known as Llywelyn Fardd. In any case, the poems suggest that he was (or they were) native to Powys, a principality much divided and diminished in the 13th century, but we know nothing more. Two *awdlau i Dduw* (odes to God) would seem by virtue of their style and their placement in manuscripts to be the work of the later Llywelyn Fardd, but the *Arwyddion cyn Brawd* ('Signs before Judgement Day') seems more likely to be a 12th-century poem and, if the attribution to Llywelyn Fardd is correct, Llywelyn Fardd I is probably the author. On the common Welsh name *Llywelyn*, see LLEFELYS.

Loch Garman (**Wexford**) is a town, population 9,443 in 2002, approximately 75 miles (120 km) south of Dublin (BAILE ÁTHA CLIATH) in Ireland (ÉIRE), seat of the county of the same name. Both the English and Irish names refer to Wexford harbour at the mouth of the river Slaney. *Garman* is the Old Irish word for

'weaver's beam', and by extension 'headland, bar', referring to the headland of Rosslare Point. Wexford, first attested as *Weisford*, is a Norse word in origin. The element *-ford* comes from Norse *fjorðr* 'firth, inlet'. The first element is of more uncertain derivation, but is probably Old Norse *veisa*, glossed in Latin as *palus putrida* 'fetid swamp', but also simply meaning mud, mire, or silt, referring to the mud banks of Wexford harbour.

Wexford's harbour and proximity to the Welsh coast have ensured the commercial, maritime, and military importance of the city. The town was developed as a port by the Viking settlers, and used by the Anglo-Normans to launch their invasion in the 12th century. Following its recapture by Diarmait Mac Murchada and his Norman allies in 1169 (see DE CLARE), it was granted to Robert FitzStephen and his brother Maurice FitzGerald, both sons of Nest daughter of Rhys ap Tewdwr. In 1649 the town was taken violently by Oliver Cromwell, whose troops massacred civilians as well as soldiers. The United Irishmen were a strong presence in Wexford, and the town was the main seat of the insurgency of 1798.

AM

Lochlann (also Lochlan, Lochlainn, Lochlaind) in Irish narratives, is the name for a region, often with mysterious qualities of an OTHERWORLD, located somewhere north of ÉRIU (Ireland) across the sea. More concretely, the term can simply refer to Scandinavia. In Irish tales, various deadly invaders come from Lochlann: Fomorians (see FOMOIRI), Norsemen, hideous club-wielding giants called Searban Lochlannach, warriors, raiders, and pirates. The Lochlannaig, residents of Lochlann, appear occasionally in the tales of the Fenian (FIANNAÍOCHT), e.g. ACALLAM NA SENÓRACH (Dialogue of [or with] the old men), *Oidhe Chloinne Tuireann* ('The Violent Death of the Children of Tuireann'), *Bruidhean Chaorthainn* (Hostel of Rowan). There, they function in much the same way as the Fomoiri of the MYTHOLOGICAL CYCLE, as ancient, formidable, supernatural enemies. Lochlann has been glossed variously as 'Scandinavia', 'Norway', or 'Denmark', reflecting memories of Viking incursions. In the Old Irish mythological tale CATH MAIGE TUIRED ('The [Second] Battle of Mag Tuired]), Lochlann is the gathering place of the Fomorians and is connected with Scythia, thus implying a vague and anachronistic concept of the geography of northern and eastern Europe. The Welsh *Llychlyn*, which is possibly borrowed from Irish, also refers to Scandinavia and has comparable fantastic overtones, though the theme is less developed than in the Irish in the surviving texts.

Loegaire mac Néill (†*c.* 463), an Irish king famous in the literary tradition, was the son of NIALL NOÍGIALLACH, founder and namesake of the UÍ NÉILL dynasties of the north and midlands of early medieval Ireland (ÉRIU). Beyond the historical horizon—which effectively commences in Ireland with the earliest contemporary ANNALS, probably of the mid-6th century—Loegaire is very well documented in the retrospective annals, GENEALOGIES, HAGIOGRAPHY, and other early literary genres; therefore, there can be little doubt that he actually existed. However, his exact dates, deeds, the extent of his power, &c., have probably been supplied by later writers to suit the claims of his descendants and of the church of Armagh (ARD MHACHA).

In the archaic list of the kings of Tara (TEAMHAIR) recited in *Baile Chuinn* (The ecstasy of CONN [CÉTCHATHACH]), 'Loígaire' occurs between his father 'Níell' and his brother 'Corpri'. According to the later 7th-century account of St PATRICK by Muirchú moccu Macthéni, Loegaire was the king who, in the company of his DRUIDS, was confronted and ultimately converted by the saint at Tara (Latinized *Temoria*). The scene of the obstinate pagan king and his wizards outdone by the miracles of the Christian holy man became a favourite theme in IRISH LITERATURE, and it was used to draw Loegaire anachronistically into the ULSTER CYCLE, in the tale *Siabarcharpat Con Culainn* ('The Phantom Chariot of CÚ CHULAINN'), in which

Patrick raises Ulaid's superhero from hell to impress the king. While we cannot definitively disprove that Patrick met Loegaire, Patrick does not name the king in his own writings, and it is on balance more likely that the story was invented in the 7th century, at which point Patrick was revered as Ireland's most important saint, the Uí Néill were the most powerful rulers, and the special prestige of the pre-Christian royal site at Tara was developing as a literary theme. Furthermore, Muirchú's contemporary, bishop Tírechán, represents Loegaire as dying a pagan, buried upright facing south to ward off his traditional enemies, the progeny of Dúnlaing of Laigin. In other words, we are not on safe ground to consider Loegaire as Ireland's first Christian king or even to date Loegaire from Patrick or Patrick from Loegaire.

Longas mac nUislenn ('The Exile of the Sons of Uisliu', also called *Longas mac nUisnig*) is a tale of the Ulster Cycle, probably composed in the 9th century or *c.* 900. It is the tragic love story of the beautiful Derdriu and the rivals King Conchobar and the young hero Noísiu mac Uislenn. For modern readers, *Longas mac nUislenn* stands out as one of the most affecting and creatively satisfying of the early Irish tales. Within the Ulster Cycle it functions as one of the *remscéla* (fore-tales) of the central epic Táin Bó Cuailnge ('The Cattle Raid of Cooley'), explaining why Fergus mac Roich and other heroes of the Ulaid have gone over to their people's enemies. For a fuller discussion of the tale, comparable Celtic love stories, and later retellings, see Derdriu, cf. also Ulster Cycle §3; Conchobar. Later echoes of the tale are also mentioned at Irish literature [4] §3 and art, Celtic-influenced [2] §2.

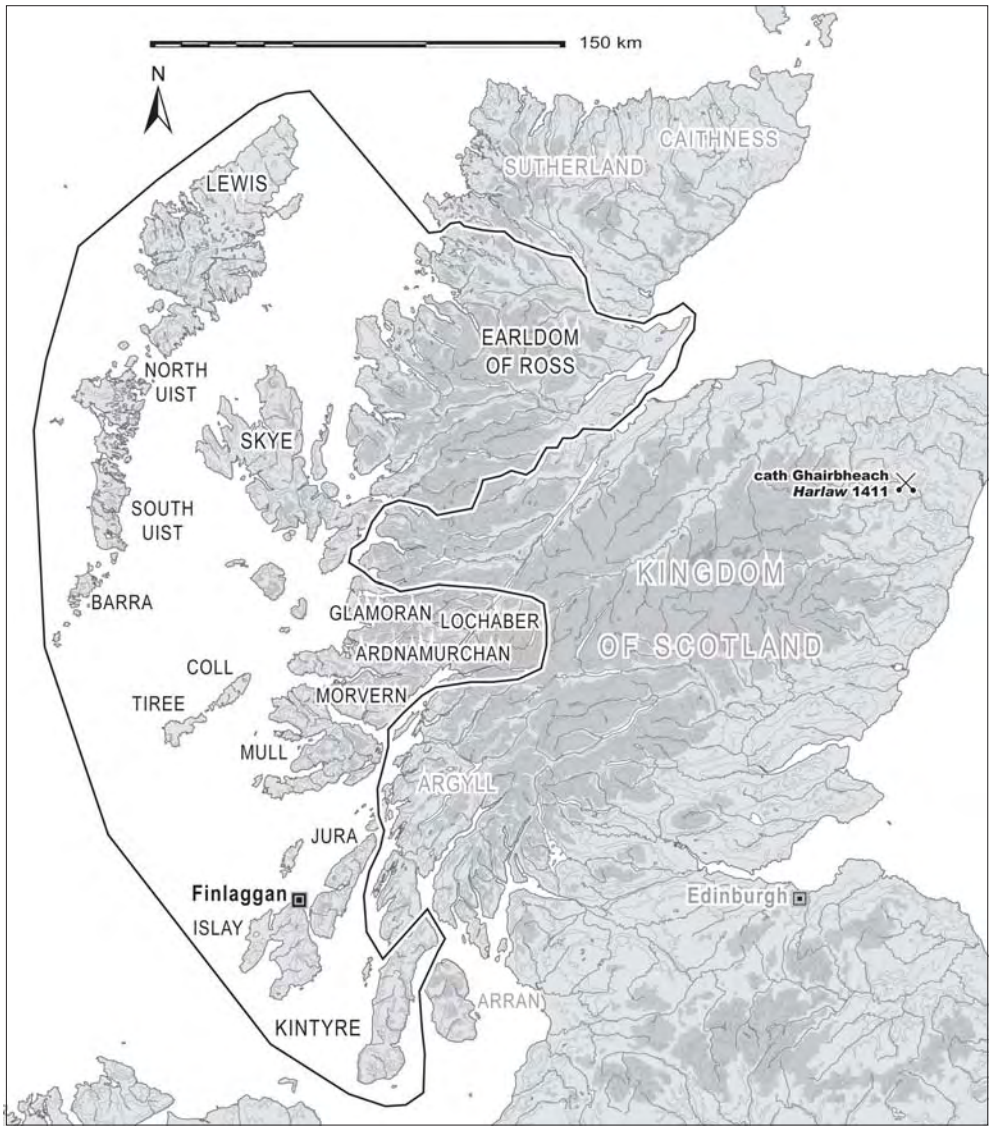
Lordship of the Isles is a term, taken from contemporary usage (*dominus insularum*), used to describe the dominion of the Clann Domhnaill as exercised within the framework of the kingdom of the Scots *c.* 1330–1493. This was a continuation of the earlier Kingdom of Man and the Isles (see R. Andrew McDonald, *Kingdom of the Isles*; Woolf, *Oxford Companion to Scottish History* 346–7) and inherited the triangulated cultural perspective of that kingdom, looking to a Scandinavian past and to Irish cultural and political links as much as to Scottish court society in the Lowlands, increasingly estranged in its rhetoric from the Highlands. The first of the descendants of Domhnall, grandson of the great Somerled (Somhairle Mac Gillbhrìde †1164), to be accorded the title *dominus insularum* was Eoin son of Aonghas Óg, from 1354 onwards. He shrewdly fused dominion which he had acquired through inheritance from collateral branches of the wider kindred with lands and titles acquired through marriage, a theme repeated by his descendants. Something of the scale of his dominion at his death in 1387 is seen in the view of the Irish annals that he was *rí Innse Gall* 'king of the Isles'. His son and grandson sought, through marriage alliances, to expand their dominion eastwards, into the earldom of Ross, and also tried to capitalize on weaknesses of the Scottish royal dynasty of the Stuarts, into which they had married, seen most vividly in the brutal battle of Harlaw in 1411. Such ambition was viable in the hands of skilled leaders: the last of the lords of the Isles, Eoin, was flabby and showed poor judgement; his schemes led to forfeiture and censure, internal dissension and the assassination of his son, and ultimately to the final forfeiture of the lordship in 1493. Schemes to revive the lordship continued until the death of his grandson Domhnall Dubh



The Lordship of the Isles at its maximum extent in 1424

in 1545. The Clann Domhnaill lordship is generally seen as a beacon of patronage of the Gaelic arts, especially poetry and sculpture, both of which are preserved in abundance. The Book of the Dean of Lismore, in particular, contains many classical Gaelic poems in praise of patrons from the lordly line or their allies (see scottish gaelic poetry). From various sources, also, we know about the impressive conciliar structure of the lordship's governance; their main headquarters at Finlaggan in Islay (Ìle; see Caldwell & Ewart, *Scottish Historical Review* 72.146–66), and the Books of Clanranald preserve an impressive Clann Domhnaill oriented view of Gaelic history. Nonetheless, recent scholarship is challenging the dominant mode of historiography which reads the lordship as a unique and conservative bastion of Gaelic language and culture, and is increasingly seeing the lordship, despite its unique frontier position, as one of several impressive Gaelic lordships in later medieval Scotland (see Boardman & Ross, *Exercise of Power in Medieval Scotland*).

Thomas Owen Clancy

Loth, Joseph (1847–1934) was one of the founders of modern Celtic studies in France. He was born at Guémené-sur-Scorff (Ar Gemene), Morbihan, Brittany (Breizh), which is located near the dialect and diocesan boundary separating the Vannetais (Bro Gwened) from Cornouaille (Kernev); see further Breton dialects.

Loth worked mostly as a teacher in Quimper (Kemper) in south-west Brittany, in Saumur in the Loire valley, and finally in Paris, where he studied at the École Pratique des Hautes-Études and the Collège de France. During this period he met Henri Gaidoz, Henri d'Arbois de Jubainville, and other Celticists. He was awarded his diploma at the École des Haute-Études in 1883 and his doctorate in 1884. In the same year, he began teaching Greek language and literature at the Faculté des Lettres in Rennes (Roazhon), where he became Professor in 1889 and was Dean of Faculty from 1889 to 1910. During his 26 years at Rennes his interest in Celtic studies expressed itself in a remarkable level of activity. In 1886 Loth founded the important learned journal Annales de Bretagne; in 1911 he became editor of Revue Celtique. Following the death of d'Arbois de Jubainville in 1910, Loth was appointed to the Chair of Celtic at the Collège de France—a post he held until 1930.

Loth is best remembered for his work on early Breton history and language, on the Latin element in the other Brythonic languages, and for his contributions on Arthurian literature, which appeared in his numerous articles in *Revue Celtique*. His doctoral thesis on the Breton migrations of the 5th and 6th centuries was published in 1883 as *L'émigration bretonne en Armorique*. Other important works encompass *Les noms des saints bretons* (1910) on Breton saints' names, and his lexicological studies *Vocabulaire vieux-breton* (1884) and *Les mots latins dans les langues brittoniques* (1892). He is also remembered as one of the first translators of the Welsh Mabinogi into the French language. His study of Welsh poetic metres, published in his *Introduction au Livre noir de Carmarthen et aux vieux poèmes gallois* (1900–2), led to a heated controversy in print on the subject between himself and the leading Welsh philologist of the day, John Morris-Jones.

Lothian is a region of south-east Scotland (Alba). In the present (post-1995) system of regional authorities West Lothian, Mid Lothian, and East Lothian (Scottish Gaelic Lodainn an Iar, Meadhan Lodainn, Lodainn an Ear) make up a compact urbanized area south of the Firth of Forth and either side of the Scottish capital and south-eastern metropolis of Edinburgh (Dùn Èideann). In the Middle Ages, Lothian referred to a larger territory, which extended from the present English border at the river Tweed and Cheviot hills, to Stirling in the north-west, as well as including Edinburgh itself. As a region suiting a prosperous mix of pastoralism and arable agriculture, this greater Lothian was naturally the richest and probably the most densely populated area of pre-industrial Scotland. It is also historically the most deeply Anglicized. As Jackson proposed, Anglian Bernicia (Brynaich) under Oswald probably took over Lothian as a result of *obsesio Etin* (the siege of Edinburgh), noted in some annals at 638. The evidence of Scottish place-names suggests a fairly substantial Anglo-Saxon settlement in the area and contrastingly slight Gaelic and Scandinavian influence. Lothian was never ruled by the Norse. Thus, Lothian may be characterized as the cradle of the non-Gaelic Anglian Scots culture of the Scottish Lowlands. A system of local organization in shires, as in England, prevailed there in the central Middle Ages, and Lothian has tended to represent a standard Scottish identity in modern times, figuring centrally, for example, in the influential fiction of Sir Walter Scott.

Nonetheless, Lothian is of interest to Celtic studies for several reasons. First, prior to 638 it had formed part of the northern Brythonic kingdom of

Approximate extent of Lothian when the region was incorporated into Scotland, 973–1018

Gododdin. Brythonic place-names are as thick on the ground there as anywhere outside Wales (Cymru), Cornwall (Kernow), or Brittany (Breizh), indicating a high level of survival and a less than overwhelming Anglian settlement. The hagiography of the Celtic St Kentigern of Glasgow (Glaschu) looks back to Brythonic Lothian as his home country. It should also be borne in mind that King Oswald himself and the 7th-century church of Bernicia were heavily influenced by Gaelic culture by way of the island monastery of Iona (Eilean Ì) and the cult of its founder, St Colum Cille. The Bernician grip on Lothian was not all that strong and seems to have been partly rolled back in the north-west after the great Pictish victory of Nechtanesmere in 685. A Pictish symbol stone found at Edinburgh and a scatter of place-names of Pictish type in Lothian may date to this period.

Northumbrian power never fully recovered. The powerful Viking kingdom of York (867–954) stood on what had been southern Northumbria (Deira/Dewr), cutting off Lothian from Anglo-Saxon England and setting the stage for permanent annexation by Gaelic Scotland to the north after Viking power waned. During the reign of King Illulb (Indulf, 954–62) Edinburgh was occupied by the Scots. In 973 the Anglo-Saxon King Edgar received the homage of Cinaed mac Mael Choluim (Kenneth II of Scotland) and granted Lothian in return, which was probably merely a confirmation of the current political reality. Scottish control over the region was permanently consolidated at the battle of Carham on the Tweed in 1018, where Mael Coluim mac Cinaeda (Malcolm II), with allies from Strathclyde (Ystrad Clud), defeated the Northumbrian Earl Uhtred. While these events brought Lothian under the Gaelic dynasty and aristocracy of Alba and imparted an enduring Scottish identity, the Gaelic language gained little ground there, and Lothian's cultural importance within Scotland proved an important factor in the spreading de-Gaelicization of subsequent centuries.

The name *Lothian*, attested as Welsh *Lleuddiniawn*, is of Celtic origin, from **Lugudūniānā* 'the country of the fort of [the god] Lugus'; see further Lleu; Lugudūnon.

Loucetius (for Celtic *Loucetios*) is a Romano-Celtic divine name which occurs in nine inscriptions in Germany and France and in one inscription in Britain (at Bath, where the god was worshipped for his healing powers by an individual from the civitas of the Treveri, a tribal group of the Continental Belgae). In addition, the variant *Leucetius* occurs three times. He is often equated with the Roman war-god Mars (see interpretatio romana). The name is related to Gothic *liuhaþ* 'light', Old Irish *lóchet*, Welsh *lluched*, Old Cornish *luhet*, Breton *luc'hed-enn* 'lightning'. The Gaulish and Brythonic imply a Proto-Celtic **louk(k)et-*, in which case, the Irish is borrowed, but a Celtic by-form **loukent-* is also possible. 'Mars of lightning' or 'bright/ shining Mars' may point either towards a metaphorical link between battle and thunderstorm (cf. Old Irish *torannchless* for the heroic 'thunder feat') or the bright heroic aura of the hero, such as the *lúan* of Cú Chulainn. The consort of Mars Loucetius is Nemetona the 'goddess of sacred privilege' or the 'goddess of the holy grove (nemeton)' at Klein-Winternheim (Germany) and Bath, otherwise identified as Victoria.

Low Countries, Celts in the

§1. INTRODUCTION

In the Netherlands, the Celts have never been seen as 'national' ancestors, and the assumption of a Celtic presence in the Netherlands other than, for example, as travellers, traders, and mercenaries in medieval and modern times has only rarely received critical and expert attention. Much of the present-day historical identity of the Netherlands is based in the period of the Dutch Revolt against Spanish rule and the creation of the Dutch Republic in the early 17th century. During the same period, classical sources such as Tacitus' *Germania* became known. Hence, the ancient Batavians were adopted by the Dutch Republic as ancestors of whom they could be proud: they also revolted against foreign (Roman) rule. Tacitus' title already suggested to the modern Dutch that this part of their history was Germanic, not Celtic. Later, in the 19th century, Dutch scholarship tended to follow German and, since both Dutch and Frisian are Germanic languages, no questions were asked about the ethnic or linguistic affiliation of the Batavians and their contemporaries. Until recently this has been the situation in linguistic studies, and the history of language in the Netherlands before the arrival of Germanic remains largely ignored (but see below). This tendency can be illustrated by the practice of place-name studies in the Netherlands, where names are categorized as either Germanic, Roman, or pre-Roman. However, this last category is rarely specified.

With the rise of archaeology as an academic discipline, it was realized that no clear-cut discontinuity could be perceived between Iron Age material from the southern Netherlands and that from Belgium. For mainly ideological reasons, in Belgium the ancestors (the so called 'Old Belgians', taken to be Caesar's Belgae) were labelled Gauls, and hence Celtic. The matter was 'solved' by incorporating the archaeology of the southern Netherlands within Belgian archaeology, as, for example, in the work by De Laet, which has for long been a landmark, and more implicitly by Roymans (e.g. *Tribal Societies in Northern Gaul*). The basic geographical division is formed by the Rhine and Waal (and Meuse) rivers, where they pass through the Netherlands from east to west. In fact, this division between north and south is old and plays an important rôle in Dutch self-identification, but, though it did at some times reflect a political division (notably the border or *limes* of the Roman Empire), in its more recent state it is far more a matter of ideology than of historical (ethnical, religious, or linguistic) reality.

Following the Second World War, ethnic terms fell out of favour in archaeology, and the Dutch no longer desired to be associated with Germanic ancestors; 'Iron Age population' and '(Roman period) natives' became the generic terms. Only recently has the subject been reopened to debate (Van den Broeke, *Kelten en de Nederlanden* 33–60). In Belgium, this rethinking of the pre-Roman cultures did not take place and the Iron Age population continued to be considered Gaulish, and thus Celtic. Here, another socio-political debate weighed heavily on archaeological and historical inter-

pretations, namely the much debated linguistic border between Dutch (Flemish) and French (Wallonian).

§2. LANGUAGE

Although in the first half of the 20th century it was accepted that the southern Netherlands belonged to the sphere of Celtic culture, the linguistic effect of this influence was considered minimal. Only between ten and fifteen Celtic loanwords have been identified in Dutch, some of them recent and virtually all shared in common by the Germanic languages. A handful of place-names is also considered Celtic, but late attestation and transmission makes this material often hard to evaluate properly. (Here also, the location of a place-name in the north or south of the Netherlands could tip the interpretative balance by triggering preconceptions about where Germanic- and Celtic-speaking groups are presupposed to have been.) ROMANO-CELTIC place-names in the Netherlands, for example, *Coriovallum* (Heerlen), NOVIOMAGOS (Nijmegen), *Lugdunum* (often taken to be 'Leiden', but see below), and formations with *-(i)acon*, have sometimes been taken as less than decisive in proving the predominance of Celtic speech in the area; they have rather been taken as a reflection of a Roman 'fashion' to use Celtic (GAULISH), when coining new place-names. A recent survey of names of places, tribes, persons, and gods preserved in INSCRIPTIONS and texts from the Roman period makes it clear that this explanation is untenable (Toorians, *Keltisch en Germaans in de Nederlanden*). In fact, names which are undoubtedly Germanic are rare and appear to occur only in the (far) north of the country in the early period of Roman occupation. Quite a few names are not transparent and cannot be assigned to any known language but, perhaps most surprising, the number of clearly Celtic names is far too great and varied to be understood as the product of a 'fashion' for Gaulish place-name elements (along the lines of the proliferation of French *-ville* in place-names in the US).

The fact that both the name of the pre-Roman tribe, the *Eburones*, and those of their chiefs—*Ambiorix* (whence Welsh *Emyr*) and *Catuvolcus*—are transparently Celtic clearly indicates that the Romans did not introduce the Celtic element to the Netherlands. It was already there before Caesar's conquest. Two 1st-century leaders of the Frisians are named *Verritus* and *Malorix*, again names which have obvious parallels in Celtic, not in Germanic. In the later Roman period, more Germanic names can be found, apparently as the result of a (linguistic) intrusion from the north(-east) which, for some time at least, must have been checked by the border of the Roman Empire, the *limes*.

In 1990 the chance discovery of an inscription in which the well-known god Hercules Magusanus appears as *Hercules Magusenus* confirmed Fleuriot's suggestion that this name is Celtic: *magus* 'servant, &c.' + *senos* 'old' (ÉC 21.235–6), corresponding exactly to the Late BRITISH personal name MAHOVENI (Jackson, LHEB 521). The more common spelling *Magusanus* can be explained as the result of Germanic influence, both phonetic and by reinterpretation of the second element of the compound as a suffix (Toorians, *De temple van Empel* 108–10). After this was recognized, other examples of Germanization were identified, showing that various mechanisms were used in this process (Schrijver, *Amsterdamer Beiträge zur älteren Germanistik* 41.13–22; Schrijver, *Kelten in Nederland* 69–87; Schrijver, *North-Western European Language Evolution* 35.3–47; Toorians, *Amsterdamer Beiträge zur älteren Germanistik* 56.17–22; Toorians, *Kelten in Nederland* 33–42; Toorians, *Keltisch en Germaans in de Nederlanden*; Toorians, *Oudheidkundige Mededelingen uit het Rijksmuseum van Oudheden te Leiden* 75.131–6). The conclusion must be that during the Roman period Celtic and Germanic existed side by side and that a certain amount of Celtic was assimilated into the Germanic language of the local upper class. Either the Batavian élite was speaking a Germanic language in which native Celtic elements were borrowed and adapted, or this élite (probably a small group) was Celticized but spoke Celtic with a heavy Germanic accent and in which ill-understood names were adapted.

In a ground-breaking article, Schrijver argued that the vowel systems of early medieval Coastal Dutch and Late British Celtic showed so many similarities that coincidence must be ruled out (*North-Western European Language Evolution* 35.3–47). The conclusion, instead, ought to be that North Sea Germanic came into being thinly superimposed over a substratum of what is now termed North Sea Celtic, a language which seems to be closely related to Late Gaulish and Late British Celtic and which may have been spoken as late as the 6th or even 7th century AD. (Further inland there may

have been an intermediate stage in which a strongly Celticized Latin developed into a Romance language, which possibly was the lingua franca in the trade centre of Dorestad.) The coastal wetlands of Belgium and the Netherlands may have formed a kind of refuge area where a small but persistent group of Celtic speakers survived well into the early Middle Ages. The full implications of these conclusions are still to be examined.

For Belgium, the discussion is obscured by the fact that a linguistically Celtic Iron Age is taken for granted, and most research is concentrated on the history of the modern linguistic border which divides the country in two between Flemish (Dutch) and French. In this respect, both archaeology and place-name studies have envisioned violent 'Germanic invasions' that took place in what is now Belgium, beginning in the 3rd century AD. As in the Netherlands, specialist knowledge of Celtic linguistics has hardly played a rôle in this work, which has focused almost exclusively on a clash between Romance and Germanic. The chief advocate of these theories was the late Maurits Gysseling (1919–97) in a long list of scholarly publications. A good summary of these views is given in Gysseling (*Algemene Geschiedenis der Nederlanden* 1.100–15) and—combined with archaeological data—Lamarcq & Rogge (*De taalgrens*). Linguistically and Celtologically better equipped are Loicq (*La Vie Walonne* 69.92–117), Loicq & Michel (*Bulletin de la Commission royale de toponymie et de dialectologie* 68.229–380), and Toorians (*Keltisch en Germaans in de Nederlanden*). In fact, Gysseling (*Naamkunde* 2.157–80) did perceive a pre-Germanic substratum, but he did not consider it Celtic and coined the name 'Belgic' for it.

On the whole, Germanic names from classical sources in Belgium are rare and most of the 'invasion names' are based on medieval material which is projected back in time. A more likely interpretation seems to be that during the (later) Roman period small bands of barbarians were allowed to settle within northern GAUL, where they must have assimilated in a short period of time. In the 4th century this influx gained such momentum that assimilation in both directions took place, with romanized Gauls—and even Romans—taking over elements of barbarian (Germanic) culture. Whether this also implied the adoption of Germanic language as well is far from clear, and not very likely as long as Roman administration was still functioning. What should rather be expected linguistically is romanization. Schrijver's theory of a Celtic—and a Romance (Picardian)—substratum in (western) Flemish dialects supports the idea that Germanic language entered the area relatively late (*North-Western European Language Evolution* 35.3–47; *Kelten in Nederland* 69–87).

§3. NORTH SEA CELTIC AND ROMANCE

'North Sea Germanic' is a term used to cover several linguistic developments common to coastal Dutch dialects (in both the Netherlands and Flanders), Frisian, and English (an earlier term for the same group is 'Ingwaeonic'). As Schrijver demonstrates, the North Sea Germanic vowel system shows some peculiarities which do not occur—or do so only considerably later—in other Germanic languages, but are strikingly similar to contemporary developments in BRYTHONIC. Thus, North Sea Germanic clearly avoided *ā* and had already developed central rounded vowels */ö/* and */ü/* in the 5th century AD. The explanation for these strikingly similar and contemporary developments shared by Brythonic and North Sea Germanic is very probably that the ancestors of speakers of North Sea Germanic had previously spoken a Celtic language closely related to British Celtic. When these people became speakers of Germanic in (approximately) the 5th and 6th centuries AD, they acquired the new language imperfectly—as adult learners of a second language invariably do—thus keeping their distinctive 'Celtic accent'. The result was that the sound system of the new language became locally distorted in ways resembling that of the older indigenous language. We may thus think of a 'North Sea Celtic' as underlying 'North Sea Germanic' in both Britain and the Low Countries.

§4. WORDS AND PROPER NAMES

Helinium. In Roman times this was the name for the estuary of the river Meuse. Schrijver (*Amsterdamer Beiträge zur älteren Germanistik* 41.13–22) has shown this to be related to Welsh *heledd* 'salt-marsh', *hêl* 'meadow along the side of a river, marsh' and Cornish *heyl* 'estuary'. The initial *h-* from earlier **s-* is significantly like the development found in Brythonic (cf. SALT).

kaai, kade. Schrijver (*North-Western European Language Evolution* 35.36–7) also suggested that the Dutch word *kaai, kade* 'quay' is a direct borrowing from Celtic into Dutch, from which it was passed on into other

Germanic and Romance languages. This is supported by the name *Dea Seneucaega* found in an inscription from *c.* AD 230, in which the element *-caega* can be interpreted as Celtic **kagjo-* (Welsh *cae* 'field, enclosure').

Levefano on the ancient geography known as the *Tabula Peutingeriana* and several river names, such as *Lieve*, *Leve*, and *Leu(ve)*, can be derived from an INDO-EUROPEAN root **pleu-* 'stream', with characteristic PROTO-CELTIC loss of initial **p-*. Germanic variants, for example, *Flevo* (in classical sources) and Modern Dutch *Vlie(t)* also occur frequently (Toorians, *Keltisch en Germaans in de Nederlanden* 102–3, 121).

Lugdunum. When humanist scholars of the University of Leiden (founded in 1574) started publishing, they latinized the name of the city to *Lugdunum Batavorum*. Since both the city of Leiden and its name are no older than medieval times, this equation is misleading and the traditional occurrence of Leiden in lists like 'Lyon, Laon, Loudun, &c.' is incorrect. The name on the *Tabula Peutingeriana*, which the Leiden humanists probably borrowed, actually refers to a Roman fortress and settlement near present-day Katwijk (to the west of Leiden, near the old estuary of the river Rhine) and is now submerged in the North Sea. This fortress is traditionally called Brittenburg and is known from 17th-century descriptions and depictions. Archaeological surveys have remained unpublished (but see Weerd, *Studien zu den Militärgrenzen Roms* 3.284–90). Therefore, in fact, the name LUGUDŪNON does occur at the Dutch coast, but should not be equated with Leiden.

Nehalennia. In 1970 the crew of a fishing boat near Colijnsplaat in the waters of the Oosterschelde (province of Zeeland) found in its nets a Roman altar with sculpted front and votive inscription. This led to the start of the first campaign of literally fishing for altars, resulting in a spectacular number of votive altars devoted to a presumably local goddess, Nehalennia. The name of this goddess was already known from a small group of comparable altars found in the mid-17th century near the village of Domburg on the island of Walcheren (Zeeland). A few other examples are known from elsewhere near the Roman Empire's Rhine frontier, e.g. Cologne. To date, the name *Nehalennia* appears—in slightly variant readings—complete or in fragmentary form on 114 altars from Colijnsplaat, 25 from Domburg, and a handful of other inscriptions. The name is by far the most frequently occurring name of any of the Gaulish gods (cf. Jufer & Luginbühl, *Les dieux gaulois*), that is, if the name is Gaulish at all. Dutch (and Belgian) archaeologists have always regarded Nehalennia as a Germanic name, even though the supposed Germanic etymology by Bogaers & Gysseling (*Oudheidkundige Mededelingen uit het Rijksmuseum van Oudheden te Leiden* 52.79–85) is not very satisfying. Authors from other nationalities often present Nehalennia as a Celtic goddess but, in fact, the name has defied etymological interpretation. Various names of dedicants are clearly Celtic, but these persons may not have been native to the area where the altars have been found. Most of these dedicants were merchants, ship owners, or sailors. For a recent corpus of the altars from Colijnsplaat (with bibliography), see Stuart & Bogaers, *Nehalennia*.

Baudecet. In 1989 an inscription on a small golden plaque was discovered during the excavation of a (Roman) temple area in Baudecet, not far from Namur in Belgium. When this was first published (Plumier-Torfs et al., *Latomus* 52.797–825) several elements in the short text were tentatively identified as Celtic. Loicq (*La Vie Wallonne* 69.109–12) and Toorians (*Keltisch en Germaans in de Nederlanden* 128–32) also take this text to be essentially Gaulish. The *Recueil des inscriptions gauloises* (RIG 2/2, *L–104), however, argues that this text is not Celtic, but rather an Orphic text in some mediocre kind of Greek, written with Latin letters. Obviously, this discussion has not yet been closed. If the text does appear to be Gaulish in the end, it is by far the northernmost text in this language ever found.

§5. ARCHAEOLOGY

As explained in §1 above, most Dutch archaeologists shun terms such as Germanic or Celtic. As in place-name studies, objects (or their decorations) which are typically HALLSTATT or LA TÈNE are simply interpreted as import goods indicative of trade and gift exchange, but of no significance in relation to the native language of the indigenous population. Thus, for many Continental archaeologists, 'Celtic ART' has become the mere name of a specific style, without any ethnic or linguistic reference implied. To confuse matters further, Belgian (including Flemish) archaeo-

logists—unlike their Dutch counterparts—do tend to call the whole Iron Age in both Belgium and the southern Netherlands 'Celtic'. Also Kuhn's idea (Hachmann et al., *Völker zwischen Germanen und Kelten*) of a 'Northwest Block' of 'people between Germans and Celts' still lingers on.

Archaeology has brought to light within the Netherlands several finds which clearly relate to both Hallstatt and La Tène cultures and which—even if they are imported from further south—may well indicate an intense contact with, and influence emanating from, centres of culture from which Celtic speech may have spread together with these objects. Although lacking the splendour of HOCHDORF, WALDALGESHEIM, or VIX, for example, several distinctively 'princely graves' with remains of wagons or CHARIOTS and bronze vessels have been discovered, all of them in the southern Netherlands and in the river area. The finest and best-known example is the princely grave from Oss (province of Noord-Brabant). Others are known from Ede, Overasselt, Rhenen, Wijchen (in the province of Gelderland), Baarlo, Meerlo, and Venlo (province of Limburg). Bronze decorations of horse trappings and characteristically La Tène style TORCS have been found further north, for example, in the province of Drenthe, and a chariot burial is known from Nijmegen. No oppida have been discovered, but smaller strongholds dating from the Late pre-Roman Iron Age have been found recently both in the south (Voerendaal, Weert) and in the north-east (Drenthe and Groningen) of the Netherlands. Temples of the Gallo-Roman type and open air sanctuaries (see VIERECKSCHANZEN) have been found, with famous examples in Elst (near Nijmegen), Nijmegen, and Empel ('s-Hertogenbosch). The latter may have been an important sanctuary of the Eburones, which in Batavian times was re-outfitted with a stone temple. Here, the name *Hercules Magusenus* was discovered, together with large numbers of offerings, including objects decorated in a La Tène style reminiscent of Waldalgesheim, and gold and bronze Celtic COINAGE (Roymans & Derks, *De tempel van Empel*). Surveys of this Iron Age material can be found in De Laet (*Prehistorische kulturen in het zuiden der Lage Landen*, from a Belgian point of view), Roymans (*Tribal Societies in Northern Gaul*), Van den Broeke (*Kelten en de Nederlanden* 33–60) and Hofman et al. (*Kelten in Nederlanden*).

Belgium yields a wider scope of archaeological finds which correspond to the material culture from parts of what might be considered the core area of Celtic-speaking Gaul (north-eastern France, for example). Thus, there is a group of chariot burials in the southern Ardennes (province of Luxembourg), several hilltop FORTIFICATIONS (some with *murus gallicus* type walls) in the Ardennes (cf. ARDUINNA), a late Hallstatt/early La Tène OPPIDUM at the Kemmelberg in the far south-west of Flanders and two or three more (largely unexplored) oppida near Kortrijk (Kooigem), Kester (province of Vlaams-Brabant, west of Brussels) and Louvain (Kessel), rich graves containing horse fittings and bronze vessels from the ALPINE region, square or rectangular enclosed open-air sanctuaries, as well as other finds which in a French or Alpine context would certainly be labelled 'Celtic'. One quite atypical trait common to most of Belgium and the Netherlands is that burial during the Iron Age takes the form of cremation, with inhumation graves only in a few rare and exceptional examples. Good surveys can be found in De Laet (*Prehistorische kulturen in het zuiden der Lage Landen*), Roymans (*Tribal Societies in Northern Gaul*), Fichtl (*Les Gaulois du nord de la Gaule*) and—for Flanders only, with a good bibliography—De Mulder (*Kelten en de Nederlanden* 1–32). More popular surveys with useful bibliographies for Wallonia are Bonenfant et al., *Forteresses celtiques* and Bellaire et al., *Guide des sites préhistoriques et protohistoriques de Wallonie*. Recent discoveries from the Bronze and Iron Ages in Belgium and the Netherlands are regularly presented in *Lunula: Archaeologia protohistorica* (since 1993 as the annually published proceedings of conferences organized by the Cellule Archéologie des Âges des Métaux, backed by the Société Belge d'Études Celtiques).

The Kemmelberg with its oppidum is well known to Iron Age archaeologists because a small potsherd of black Attic ware was discovered there. This is the most north-western find-spot for this type of Greek pottery to date (Van Doorselaer et al., *De Kemmelberg* 41). In the interior of the oppidum, evidence was found for pottery production of a type now known as 'Kemmelberg ware', and distinguished by both general shape and decoration patterns. This type of pottery was traded in a wide area in what is now north-western France and Belgium. Surprisingly, a nearby artificial mound measuring about 30 m in diameter and 3.5 m high seemed never to have contained a burial of any

Some examples of Celtic place- and group names and archaeological sites in the Low Countries. Pre-Roman fortified sites are shown as circles, Roman towns and forts with Celtic names as squares, and Romano-Celtic temples as temples. Modern national boundaries are white.

kind and has been termed a 'cenotaph' (Van Doorselaer et al., *De Kemmelberg* 34–8). The suggestion that coastal salt production formed part of the power base of this oppidum has recently been refuted (Van den Broeke, *Archaeological and Historical Aspects of West-European Societies* 193–205).

To the east, the Belgian province of Limburg has recently seen two remarkable discoveries. The first consists of a hoard of a gold torc, torc fragments, and (unminted) gold coins; these were found in the village of Beringen (north north-west of Hasselt) (Van Impe et al., *Archeologie in Vlaanderen* 6.1–124). The other is a group (presumably a hoard) of no less than 107 gold coins dating from the mid-1st century BC and found in Heers (south of Hasselt, not far from Tongeren and near the linguistic border). These coins—82 of the Eburones, 23 of the Nervii, and the rest of various origins—are almost certainly related to the revolt of the Eburones against Julius Caesar in 54 BC (Scheers & Creemers, *Prehistoria 2000* 1.174–9). Similar hoards from the same period were discovered earlier in Thuin (province of Hainaut: two hoards) and in Fraire (province of Namur).

In the south (Ardennes), remains of deposition rituals—sometimes with beheaded humans (see HEAD CULT)—have been found in caves; well-known examples include the Trou de l'Ambre, near Éprave, and the caves near Han-sur-Lesse (both province Namur). WATERY DEPOSITIONS of bronze vessels, weapons, and other valuable objects in rivers or swamps are known from virtually all over Belgium and the Netherlands.

§6. CONCLUSION

A synthesis of archaeological and linguistic evidence suggests the following general interpretation concerning the later prehistory of the Low Countries. Most

probably an Indo-European language was already spoken there during the Bronze Age (i.e. *c.* 2000–*c.* 750 BC). During the late Hallstatt and early La Tène period (i.e. from *c.* 800 BC) a material culture and social patterns similar to those of the Celtic-speaking core areas of west central Europe gained ground. We thus might suppose that this also implied a linguistic Celticization. As a result, in the late Iron Age (and still at the time of the arrival of Caesar's legions) most of the Low Countries was Celtic-speaking. Two qualifications are important here: (1) we do not know whether Celtic became the sole language, rather than just one of an unknown number of languages in the area; and (2) it is still much debated if and how far north of the Rhine Celtic was spread.

Perhaps already in the Late Iron Age (*c.* 150–100 BC), a Germanic language had entered the area of the present-day Netherlands from the north-east. By this time, the material cultural influence from the south (i.e. late La Tène) was diminishing and gave way to influences from the north-east. This development seems to have been temporarily stopped by the Roman conquest, which resulted in a cultural division between a romanized south and a Germanicized north (-east), with the Rhine as a political and cultural border. Perhaps Roman rule supported the remaining Celtic language in the south. The Batavians in the river area in the central Netherlands appear to have been strongly romanized, both culturally and linguistically.

As a result, the coastal strip probably remained Celtic-speaking well into the post-Roman period, while the north-east came fully under Germanic linguistic influence. When the coastal area later became linguistically Germanic, it kept a strong Celtic 'accent' which gave rise to the dialect phenomenon called here 'North Sea Germanic'. In the strongly romanized central area, it is likely that a Romance language with a strong Celtic substratum developed, which may have been spoken well into the second half of the first millennium. This may have been the lingua franca of the important trade centre of Dorestad, as recently proposed by Schrijver (see Toorians, *Keltisch en Germaans in de Nederlanden*; Toorians, *Spiegel historiael* 36.112–17, 146).

A better understanding of the regional developments and of the chronology of these processes is still required, but it can no longer be doubted that Celtic was once spoken in the Low Countries, and the material evidence of Hallstatt and La Tène cultures in the region should no longer be dismissed as stray gifts from chiefs in the Alpine region or middle Rhine area to non-Celtic 'barbarian' peoples in the far north.

Lowlands of Scotland

The expansion of the Anglo-Saxon language (*Englisc*) in south-east Scotland (ALBA) after *c.* AD 636 (see BRYNAICH; GODODDIN; YSTRAD CLUD), combined with Celtic, Norman, and Scandinavian cultural traditions, laid the foundations for a non-Celtic-speaking ethnic identity, distinguished by urban growth and innovations in administration and law. The Lowlands were receptive to European developments in culture, trade, and war and became largely Presbyterian in religion after 1560 (see CHRISTIANITY). However,

the typical Lowland landowner, the laird, presided over a kin-based society in which the blood feud was common until the 17th century.

The Lowlands emerged as a clear concept during the 14th century; John of Fordun defined the people of the plains as speaking Theutonica ('German', in recognition of the Germanic origin affiliation of the Anglo-Saxon Scots). By the 15th century the terms 'Lawland' and 'Lawland men' had entered Scottish speech. It became the regular practice of the Reformed Church of Scotland (after 1560) to distinguish parishes as Highland or Lowland on account of the language spoken: GAELIC or SCOTS.

Two regions—the Borders and the north-east — stood apart from the rest of society. The Border kindreds carried on private warfare with equivalent networks across the Anglo–Scottish frontier, despite the policies of central government, while the north-east straddled both Gaelic and Lowland societies, and continued to exhibit a martial way of life until the mid-18th century.

Following the 1707 UNION with England, the decline of the traditional kin-based society of the Lowlands accelerated and was replaced by an industrial-based way of life which looked to markets in the British Empire rather than traditional European outlets. Lowland speech, deriving from *Englisc*, diverged and developed until, like SCOTTISH GAELIC in its differentiation from the parent GOIDELIC or Old IRISH, it had become a distinct language. It became employed at the Scottish court from the 1370s, in parliament (1390s), and the burghs (by the 1430s), and by 1494 it had assumed the Latin name *Scottis* (Scots) in addition to *Inglis* (English). Scottish *makars* (poets) such as Henryson, Dunbar, and Lindsay developed the literary identity of Scots during the 16th century. After 1603, however, the written language came under the increasing influence of English despite the fact that a full vernacular continued to be spoken. Following the political Union with England in 1707, Scots was reclassified as 'provincial dialect', and quickly lost its former national status. However, the General Register Office for Scotland estimated 1.5 million speakers in 1996 and the language continues to be a primary defining factor of Lowland Scottish identity.

Lucan (Marcus Annaeus Lucanus, AD 39–65) was a prolific author of Latin prose and poetry, including the extant epic poem in ten books *Bellum Civile*, more often called *Pharsalia*. *Bellum Civile* is one of the important GREEK AND ROMAN ACCOUNTS of the ancient Celts, and its testimony relates to the following subjects discussed in several articles of this Encyclopedia: the arrival of the Celts in ITALY in the 5th and 4th centuries BC and the Gaulish invasion of ROME *c.* 387 BC (5.27–29); the doctrine of the DRUIDS that there was REINCARNATION of soul in a body in an OTHERWORLD or another sphere ('Death, if what you [druids] say is true, is but the mid-point of a long life'; 1.450–58); an image of the Gaulish god OGMIOS as a HERCULES of spell-binding eloquence (1.6); a Celtic sacred grove near MASSALIA (see also NEMETON) where three Gaulish gods (TARANIS, TEUTATES, and ESUS) received human SACRIFICE (1.444, 491–5).

IN CATH CATHARDA (The civil war) is a translation into Middle IRISH rhythmical prose of Lucan's epic, and also draws on a Latin commentary on the text.

Luchorpán (pl. *luchorpáin*) is a supernatural figure whose most obvious characteristic is its diminutive size. According to Irish LEGENDARY HISTORY (see also LEBAR GABÁLA ÉRENN), the *luchrupáin* (*sic*) were the children of Noah's cursed son Ham, alongside the FOMOIRI, the

legendary supernatural beings often described as sea raiders and later also as giants. The *luchorpáin* are also mentioned in some of the earliest Irish literary sources, and probably the most significant account is found in the tale *Echtra Fergusa maic Léiti* (The adventure of Fergus son of Léite). It describes how that king of Ulaid falls asleep by the side of the sea, is carried to the water by three *lúchorpáin*, but awakes when his feet touch the water. He manages to catch three of his little captors, who ask for 'a life for a life' (*anmain i nanmain*) (Binchy, *Ériu* 16.38). Fergus demands three wishes, one of which is to be able to survive underwater in any lake, sea, or the like. This is granted, though Loch Rudraige (Dundrum Bay, Co. Down) is exempted. Fergus cannot resist this loch, however, and is thus faced with a fearful water monster (*muirdris*), resulting in Fergus's face being permanently distorted. While this disfiguration disqualifies him from kingship, Fergus finally slays the monster, but dies in the attempt. The underwater world is considered as an Otherworld location in early Ireland (Ériu), pointing to the supernatural origin of the *lúchorpáin*. The aquatic associations are further supported by the term *abacc* (corresponding to Welsh afanc < Proto-Celtic **abanko-*), which is used as an equivalent to describe the small creatures, and which is supposedly derived from the early Irish word for river (*ab*).

Modern Irish *leipreachán* (and many related forms), Scottish Gaelic *luspardan*, and English 'leprechaun' are all derived from the medieval term, and at least some of the medieval characteristics, such as its small size and supernatural origin, as well as a potentially beneficial outcome if captured, are retained. In some cases, he is even seen as some sort of water sprite or depicted as wearing red and green, colours associated in Irish tradition with supernatural beings (see fairies). However, the 'leprechaun' in modern folklore is most often portrayed as a miniature shoemaker of great wealth and equipped with a magic purse or crock of gold. Modern Irish and Scottish folklore knows of many different methods in which one can benefit from capturing this little craftsman, who is recognized well beyond the Gaelic world.

Luchorpán is a compound, the second element of which is clearly *corpán*, diminutive of *corp* 'body' < Latin *corpus*. The first is probably the name of the mythological figure Lug, originally a Celtic god Lugus, though derivation from Celtic **lagu-* 'small' is also possible.

PSH

Lug (Modern Irish Lugh) is the pre-eminent figure of the supernatural Tuath Dé of the Irish Mythological Cycle and continuing into modern folklore. He often figures specifically as their king, most notably in the epic Cath Maige Tuired ('The [Second] Battle of Mag Tuired', probably written *c.* 900). Although the Irish Lug belongs to literature of the Christian period, he is often explicitly called a god. In the early Irish literature, Lug has several recurring epithets, most commonly *Lámfota* (Modern Irish *Lámh fada* 'of the long arm'), referring to his prowess with the spear or sling, though possibly also his ability as a ruler. Other epithets include *Ildánach* or *Samildánach* (having many skills/arts), and *Maicnia* (youth-warrior or lad-warrior).

As to ancestry, Lug is called *mac Ethnenn* or *mac Ethlenn* (from his mother Eithne or *Eithliu, though this later came to be treated as a father's name), and *mac Céin* (son of Cian son of Dian Cécht, god of healing; in some texts this Cian is called 'son of Cáinte'). Lug is consistently presented as the maternal grandson of the malevolent one-eyed Balor, leader of the Fomoiri, a demonic race who are the mortal enemies of the Tuath Dé. In *Cath Maige Tuired* Lug assumes the kingship of the Tuath Dé in Tara (Teamhair) during the crisis resulting from the maiming of their king Nuadu (see nōdons) and his replacement by the tyrannical half-Fomorian Bres mac Elathan. In the climax of the tale's action, the omni-competent Lug leads his people to victory against their oppressors and pierces the magical 'destructive eye' of Balor, thereby killing him.

Outside the Mythological Cycle, Lug figures as Cú Chulainn's supernatural father in *Compert Con Culainn* (The conception of Cú Chulainn) and elsewhere in the Ulster Cycle. In *Baile in Scáil* (The phantom's ecstasy) he is the companion of the female personification of the sovereignty of Ireland (Ériu) in the Otherworld, and thus has an essential rôle in the confirmation of rightful kingship. He is also an impor-

tant figure in Irish LEGENDARY HISTORY, in which the Tuath Dé are represented as historically earlier rulers and inhabitants of Ireland, and the 11th-century LEBAR GABÁLA ÉRENN ('The Book of Invasions') includes much information about Lug. For example (using the section number of Carey's translation in *The Celtic Heroic Age*), Lug's foster-mother was Tailtiu of the FIR BOLG, eponym of the traditional Fair of Tailtiu (§§60, 69, likewise *Cath Maige Tuired* §55); he instituted funeral games at the season of the festival of LUGNASAD, named after him (§69); he slew Balor at Mag Tuired and then held the kingship for forty years (§70); he was a famous spearman (§74).

Like Cú Chulainn and FINN MAC CUMAILL, the comparable super-heroes in the Ulster Cycle and FIANNAÍOCHT, Lug is generally the epitome of a young warrior or *óglach* (hence the epithet *Maicnia*), being supremely strong, nimble, beautiful, and skilful. He is further linked to these two super-heroes by similar or identical possessions. The magical *Corr Bolg* (crane-bag) and its contents were, at different times, possessed by both Lug and Finn, while the 'lightning spear' of Lugh, *Gae Assail*, is reminiscent of the *Gae Bolga* of Cú Chulainn. One striking link between Lug and Finn is that their names have overlapping meanings as common adjectives: 'bright, shining, light' and 'white, bright', respectively. Such details were the basis of O'Rahilly's still influential contention that these three characters are variations on the same theme (e.g. *Early Irish History and Mythology* 271, 277–9).

Many modern writers refer to Lug as a 'pan-Celtic' god, since his name is cognate with that of the LUGUS worshipped in CELTIBERIA and GAUL and of the supernatural LLEU Llaw Gyffes of the Welsh MABINOGI (cf. Tovar, BBCS 29.591–9). Like its equivalents in CONTINENTAL CELTIC and BRYTHONIC, Irish *Lug* was the base for numerous derived proper names from an early date: for example, Primitive Irish LUGUDECA, LUGUDECCAS, LUGUNI, LUGUQRIT, LUGUNI, LUGUTTI, LUGUVECCA (cf. LUGUDŪNON). The man's name *Lugaid* (< **Lugu-dek-s*) is very common in both medieval Irish literary and historical sources, and in some texts *Lugaid* is used for Lug. The tribe of the *Luigni* had branches in counties Meath and Sligo (cf. MacKillop, *Dictionary of Celtic Mythology* 270).

Owing to the meaning of the name noted above, several modern writers identify Lug as a sun god (note that Welsh *lleu* can also mean 'light, bright' or 'shining'). An alternative function as god of the oath (Old Irish *luge*, Welsh *llw*) has been suggested (Koch, ÉC 29.249–61, developing an argument suggested in Wagner ZCP 31.22–5). Set formulae for the swearing of oaths in Irish, Welsh, and Gaulish conspicuously avoid the use of these nouns in oaths directed to Lug/Lugus/Lleu (e.g. the Ulster Cycle's repeated elliptical oath *tongu do dia toinges mo thuath* 'I swear to the god by whom my tribe swears', as opposed to the more obvious *Luigim luigi luigis mo thuath* 'I swear the oath which my tribe swears'). Note also the avoidance of the word for oath and this name in the Welsh formula *mi a dyghaf dyghet iŵaw* 'I swear a destiny on him (i.e. on Lleu)' in MATH FAB MATHONWY. Similarly, in *Cath Maige Mucrama* ('The Battle of Mag Mucrama') in the KINGS' CYCLES, there are avoidances connected with 'mouse' (Old Irish *luch* < Proto-Celtic **luku^{t}s*). Such avoidance patterns may indicate that a taboo existed proscribing profanation of the name of the deity, a characteristic found in many religions, or revealing it—and thus giving its power—to enemies.

SÓF

Lugnasad/Lughnasadh (1 August) marked the beginning of the harvest season. The word (*Lughnasa* in Modern IRISH, *Laa Luanys* or *Laa Lunys* in MANX) clearly contains the name of the important Irish mythological figure LUG, and this association may go

back to Common Celtic, if the theory is correct that the Roman festival on that date in honour of Augustus in Lugudūnon (modern Lyon, France) began as a Gaulish festival in honour of the Celtic god Lugus. Cormac ua Cuilennáin wrote: *Lugnasad .i. nāsad Loga maic Ethlend .i. aonach nofertha lais im t[h]aite foghmair in gach blīadhain im thoidecht Lugnasad. Cluiche nō aonach, is dō is ainm nāsad* 'Lugnasad, that is Lug mac Ethlenn's *nāsad* [festival], that is a fair which was held by him [=Lug] at the beginning of harvest every year at the coming of Lugnasad'. He may have been referring to a local festival, or to the *Oenach Tailten* (fair of Tailtiu), held at what is now Telltown, Co. Meath (Contae na Mí). This was arguably the most important festival in ancient Ireland (Ériu), held by the claimant to the kingship of Ireland. The annals indicate that it was supposed to be held annually on Lugnasad, barring exceptional circumstances, though after the 9th century it was celebrated irregularly. Máire MacNeill suggested that the *Féil na n-airemon* (ploughmen's festival), celebrated by Colum Cille, was held on Lugnasad.

MacNeill has identified Lugnasad traditions throughout the British Isles, and Daniel Melia sees the Grande Tromenie processional of Brittany (Breizh) as a Lugnasad celebration, but outside the Goidelic regions this identification is based on circumstantial evidence, for example, the Fair of St Morvah in Cornwall (Kernow). The English and Scottish festival of Lammas (lit. loaf mass) is believed to be Celtic in origin, since the date is not celebrated in other Germanic countries.

AM

Lugudūnon/Lugudūnum or Lugdūnum, present-day Lyon, was a Gallo-Roman city located at the confluence of the rivers Rhône and Saône. It was founded during the reign of the Emperor Augustus (r. 27 bc–ad 14), reportedly on the site of an older Gaulish town. The Roman town was located on the hill now called Fourvière (< Latin *Forum veteris* 'old forum'), and extended in Roman times to an island between the Saône and two branches of the Rhône which were called *Rhodanus* and *Dubris*. The word *Rhodanus* became *Rhône*; *Dubris* means 'at the waters', as in the modern place-name Dover in Kent, England, from Romano-British *Dubrās*, cf. Welsh *dwfr* and Breton *dour* 'water'.

Lugudūnum was the capital of the Roman province *Gallia Lugdunensis* which extended north-west from the Rhône towards Armorica (present-day Brittany/Breizh). The name *Lugudūnum* (Gaulish *Lugudūnon*) is usually taken to mean 'fortified town of Lugus'. (Maier has recently, though inconclusively, questioned this etymology, see *Ériu* 47.127–35.) The common Romano-Celtic place-name element *dūnum* corresponds to Gaelic *dùn* and Welsh *din* 'fort', and the name *Lugudūnum* is closely comparable to the place-name *Dinlleu* (Gwynedd) and *Dinlle* (Shropshire, England), which contain the same two Celtic elements in reverse order. The former is also linked with the figure of Lleu (the Welsh cognate of Lugus) in the tale of Math fab Mathonwy (see also mabinogi).

At the beginning of August a festival in honour of the Emperor Augustus was held in Lugudūnum. This custom has been identified with the Irish festival which is linked with the mythological character Lug, namely Lugnasad (31 July/1 August; see also calendar). This correspondence can be seen as further evidence for connecting Lugudūnum with the pan-Celtic god Lugus, identified with Irish Lugh, and Welsh Lleu. However, the date for the festival may have been influenced, in part or in whole, by the imperial cult of Augustus, whose rites were celebrated in August. Of course, if there is a connection, the causation could have been the reverse, that is, Lugudūnum might have been selected as a suitable location to celebrate the cult of Augustus because the festival of its native namesake occurred at the same time.

The name *Lug(u)dūnum* was attested in Roman times at several locations over the territory occupied by Celtic groups: *Lugdunum Convenarum*, now St-Bertrand de Comminges (Garonne); *Lugdunum Consoramorum*, now St-Lizier (Ariège); *Lugdunum Vocontiorum*, now Montlahue (Drôme); *Lugdunum Batavorum* (near Leiden, The Netherlands; see low countries); *Lugdunum Remorum*, now Laon (Aisne); and *Lucdunus*, now Loudon (Sarthe). The name has also been

preserved in many present-day place-names without ancient attestations, for example, *Lion-en-Sullias* (Loiret), *Laons* (Eure-et-Loire), *Laudun* (Gard), *Lauzun* (Lot-et-Garonne), *Monlezun* (Gers), *Montlauzun* (Lot), *Loudun* (Vienne). A Λουγιδουνον *Lugidūnon* is given on Ptolemy's map of Germania, and has been located either near the source of the Neisse at the Polish-Czech-German border or in Westphalia in Olden-Lügde, near Pyrmont. However, the Latinization of *Leiden*, Netherlands, as *Lugdunum* is probably a learned invention of the Middle Ages. Middle Welsh *Lleuddiniawn* occurs for 'Lothian' (in southeast Scotland/Alba) and its people, for example, *Lleuδinyawn dreuyt* 'Lothian's settlements' in a 12th-century poem by Gwalchmai ap Meilyr (see J. E. Caerwyn Williams et al., *Gwaith Meilyr Brydydd* 9.155). This implies a Celtic preform **Lugudūn̯iānā* 'the country of *Lugudūnon*', where the town name may be an alternative name or epithet for Dùn Èideann (Edinburgh; see Koch, *Gododdin* 131).

PEB

Lugus is the name of a Celtic god attested in Spain and Gaul. *Lugus* also corresponds exactly to the inherited Proto-Celtic form which became Old Irish *Lug* (Modern *Lugh*), the name of the most centrally important figure of the Tuath Dé in the Mythological Cycle and also the most important supernatural being in the heroic biography of Cú Chulainn in the Ulster Cycle. *Lugus* is also the exact cognate of Welsh *Lleu* in the Mabinogi and the first element of *Llefelys*. For the evidence of an inherited Celtic myth of Lugus recoverable by comparison of early Irish and Welsh tales, see Lug, Lleu, Llefelys, Cath Maige Tuired, Nōdons §3. For two important Continental Celtic inscriptions which name Lugus, see Peñalba de Villastar and Chamalières [2].

A Latin inscription from Uxama (modern Osma) in Celtiberia is dedicated to a group of divine Lugoues: *Lugouibus sacrum L. L. Vrcico collegio sutorum d. d.* (CIL 2.2812). While there are some uncertainties of interpretation, it is clear that the dedication was made on behalf of a guild of shoemakers, a striking detail considering that Lleu appears as a shoemaker in Math fab Mathonwy and the Welsh triads. Altars from Galicia similarly commemorate *Lucoubu* and *Lucubo*, which appear to be plural forms of the same divine name. Several modern writers, including, influentially, Mac Cana, have argued that when Caesar wrote (*De Bello Gallico* 5.17.1) that Mercurius was the most widely worshipped of the gods of the Gauls, he was referring to Lugus. However, Maier (*Ériu* 47.127–35) correctly observes that, as a believer in Graeco-Roman paganism, Caesar might naturally have simplified a complex pattern of local gods with diverse cults and names to line up with what he held to be the one true pantheon. Nonetheless, Caesar's description of the Gaulish Mercury as *omnium inventor artium* (inventor of all crafts) remains reminiscent of Lug's epithet *samildánach* (possessing many skills), suggesting a common identity as the divine genius of the peripatetic Celtic artisan class. On the place-name evidence, see Lugudūnon (cf. lothian). Note also Romano-British *Lugu-valium* 'Carlisle', Welsh *Caer-Liwelydd*. Maier's suggestion that *Lugu-* in these place-names might rather mean 'lynx' as an epithet for the hero should be weighed against the fact that there is no example proving that Irish *lug*—or any equivalent word in any of the Celtic languages—ever meant 'lynx'. Comparable ancient tribal names include *Lugii* in east-central Europe, *Lugi* in north-easternmost Scotland (Alba), *Lougei* and *Luggoni* in north-west Spain. There are a great number of Celtic personal names with the element *lugu-*, including Celtiberian *Luguadicus*, Gaulish *Lugudunolus*, *Luguri*, *Luguselva*, Ogam Irish LUGUAEDON, LUGUDECCAS, &c. (see further lug), the common Old Irish man's name *Lugaid*, Welsh *Llywarch* < **Lugu-markos*, and *Llywelyn* < **Lugu-belinos*. For the etymology of *Lugus* and traces of taboo avoidance in connection with the name, see Lug.

Lulach *Fatuus* (the 'Fool' or 'Prophet', *c.* 1030–58) became king of Scotland (ALBA) in 1057. He was descended from two royal Scottish families. His mother was Gruoch, the historical basis of Shakespeare's Lady Macbeth and grand-daughter of King CINAED MAC DUIB (Kenneth III). Lulach's father was Gilla Comgáin, *mormaer* (earl) of Moray (Moireibh), who died in 1032. That same year, Gruoch married MAC BETHAD (Macbeth). Thus, Lulach succeeded his step-father Mac Bethad as king of Alba. He soon became the main target of MAEL COLUIM MAC DONNCHADA (Malcolm III of Scotland) in his drive to reclaim the throne of his father, DÚNCHAD MAC CRINÁIN (Duncan I), Mac Bethad's predecessor. Lulach was killed by Mael Coluim in 1058 at Essie in Strathbogie, Aberdeenshire (Obair Dheathain). He was buried on Iona (EILEAN Ì) and thus treated as a legitimate Scottish king.

His name is uncommon and is perhaps related to that of the legendary medieval visionary and wild man of Strathclyde (YSTRAD CLUD), LAILOKEN, who figures in the hagiography of St KENTIGERN. This association might also throw light on his strange epithet. A similar name or epithet also associated with the north British feral prophet is the form *llallawc* and its diminutive *llallogan*, which is connected with MYRDDIN in medieval Welsh prophetic poetry (see WELSH POETRY).

Lusitanian is the name given to the language of three INSCRIPTIONS and the non-Latin proper names which occur in several Latin inscriptions. These inscriptions occur in the area where classical sources placed the people known as the Lusitani, in the centre of present-day Portugal. It is difficult to date these texts, but it seems that they were written in the 1st century AD. Together, the three Lusitanian inscriptions contain only 58 words, of which one, namely INDI 'and', appears 10 times; therefore, it is extremely difficult to analyse this language. What does seem clear is that it is an INDO-EUROPEAN language; however, opinions differ as to whether this is a member of the CELTIC LANGUAGES or forms a separate, otherwise unknown, branch of Indo-European. The reasons for considering Lusitanian a separate, i.e. non-Celtic, branch, are as follows. It retains Indo-European *p*, as seen in the Lusitanian word PORCOM 'pig'; loss of IE *p* is generally taken as one of the key defining features of Celtic. Lusitanian retains *eu* and *ou* as two distinct diphthongs, which seem both to have become *ou* in Celtic, though the evidence from CELTIBERIAN on this point is somewhat ambiguous. Lusitanian shows a nominative plural ending for the *o*-stems in *-oi* (as Greek); however, the nominative plural ending for this declension in Celtiberian is not known, therefore, it might also have been *-oi*. Moreover, Lusitanian uses INDI for 'and', whereas Celtiberian employs *-kue* and possibly *uta*. On the other hand, the proponents of the Celtic language theory (notably Untermann & Wodtko, *Monumenta Linguarum Hispanicarum* 4.723–58) believe that the retention of *p* could be an archaism in Lusitanian, and that the similarities in vocabulary and proper names override the phonetic and syntactic arguments of the proponents of the non-Celtic Lusitanian theory. If the IBERIAN PENINSULA was in fact home to two (or more) Celtic languages in ancient times, this conclusion would carry important implications for the formation and spread of the group, involving multiple strata of contacts with west-central Europe, probably spanning centuries. As a region on the extreme Atlantic margin of Europe, it would not be inherently surprising for pre-Roman Lusitania to have been the home of an archaic dialect, whose more innovative siblings were to be found in areas such as eastern Spain, GAUL, and BRITAIN.

Luzel, François-Marie (Fañch an Uhel, 1821–95) was a collector of folk songs and FOLK-TALES in Brittany (BREIZH). Born in Plouared, in the TREGER dialect area of Côtes-d'Armor, he began collecting and recording traditional material in this area. He recorded folk songs as a young man, but his career as a folklorist did not get underway until after his publication of the BRETON manuscript play *Sainte Tryphine et le Roi Arthur* in 1863. He collected a large number of BALLADS from oral tradition, published as *Gwerzioù Breiz-Izel* (Ballads of Lower Brittany) in 1868 and followed eventually by *Sonioù Breiz-Izel* (Songs of Lower Brittany) in 1890. He was one of the first and most vehement to criticize the authenticity of the ballads in Hersart de LA VILLEMARQUÉ's BARZAZ-BREIZ, a view which held sway until Donatien Laurent partially vindicated La Villemarqué in 1989. Luzel also published photographs and several works on folk-tales and legends, including the influential two-volume *Légendes chrétiennes de la Basse-Bretagne* (1881) and the three-volume *Contes populaires de la Basse-Bretagne* (1887), working with Marc'harid FULUP and other informants. The field manuscripts for *Contes Populaires* were kept in the library at Kemper (Quimper), and were published from 1984 to 1994 under the Breton form of his name, Fañch An Uhel, and the Breton title *Kontadennoù ar bobl*.

Mabinogi/Mabinogion

§1. the four branches

Mabinogi refers to *Pedair Cainc y Mabinogi* ('The Four Branches of the Mabinogi'), four tales generally known as Pwyll Pendefig Dyfed, Branwen ferch Llŷr, Manawydan fab Llŷr and Math fab Mathonwy. These four tales are the only ones that have a true claim to the title *Mabinogi*. The earliest complete texts of the *Mabinogi* are found in the White Book of Rhydderch (Llyfr Gwyn Rhydderch, *c.* 1350) and the Red Book of Hergest (Llyfr Coch Hergest, *c.* 1400). Portions of the second and third branches appear in Peniarth 6 (*c.* 1250). There is a general consensus that the tales were written down for the first time *c.* 1050–1120, though they circulated orally, in some form or another, prior to this, when tales such as these were the domain of the cyfarwydd (storyteller). Their author is unknown, though names such as Bishop Sulien and his son Rhygyfarch have been suggested. Since the term *mabinogi* contains the Welsh word for 'son, boy' (*mab*), many have argued that the tales are to do with youth: 'juvenile tales, tales written to while away the time of young chieftains' (William Owen Pughe); 'the traditional material—mythical, heroic, genealogical—which (the *Mabinog* or bardic apprentice) had to acquire' (Alfred Nutt); 'youth or story of youth' (W. J. Gruffydd, who argues further that the tales originally formed the life-cycle of the young hero Pryderi). Hamp, on the other hand, argues that the term describes 'a collection of material pertaining to the god Maponos or Mabon' (THSC 1975.243–9). Whatever its origin, *mabinogi*, in the context of the Four Branches, may best be defined as a collection of tales consisting of more or less related adventures.

§2. the eleven tales

The *Mabinogi* forms part of a collection of eleven medieval Welsh prose tales known as the *Mabinogion*. This title was popularized by Lady Charlotte Guest in her 19th-century translation of the tales. The term is almost certainly a scribal error for the authentic *mabinogi*, and found in a single manuscript only. However, since the suffix *-(i)on* is a very common plural ending in Welsh, *mabinogion* has become an extremely convenient label to describe this corpus of native tales and, though a misnomer, it is by now well established. Although found in the White and Red Book manuscripts (and fragments elsewhere), the tales were not originally conceived as a collection—they all vary in date, authorship, sources, background and content. The dating and chronology of the tales is problematic; even so, we can assume that they were written down some time between the end of the 11th and the beginning of the 14th centuries. Their content varies greatly. Resonances of Celtic mythology are apparent in the Four Branches of the Mabinogi since the author uses traditional material to reinforce his own views regarding proper social conduct. Culhwch ac Olwen's dovetailing of two well-known international themes—the Giant's Daughter and the Jealous Stepmother—serves as a framework for a series of independent Arthurian tales in which Arthur, together with warriors such as Cai and Bedwyr, helps Culhwch win his bride. Peredur, Geraint, and 'The Lady of the Fountain' (or Owain *neu Iarlles y Ffynnon*) also draw on Arthurian material, although it is Arthur's knights who are the central figures, rather than Arthur himself. They betray foreign influences, and correspond in varying ways to the metrical French romances of Chrétien de Troyes. Even so, they remain stylistically and structurally within the Welsh narrative tradition.

'The Encounter of Lludd and Llefelys' (Cyfranc Lludd a Llefelys) first appears, in an abbreviated form, in a 13th-century translation of Geoffrey of Monmouth's Historia Regum Britanniae. The

A fo ben bid bont ***'Let him who would be a chief be a bridge': the giant Bendigeidfran (Brân) makes himself a bridge for his followers in the animated film*** **Y Mabinogi/ Otherworld** *(2002)*

story relates how Lludd overcomes three oppressions which came to Britain, and draws on the same pseudo-historical background as 'The Dream of Maxen' (see MACSEN WLEDIG). In this tale, the Roman emperor Magnus Maximus meets a maiden whom he eventually marries, and this is followed by a collection of onomastic tales and an account of the founding of Brittany (BREIZH). A second dream, 'The Dream of Rhonabwy' (BREUDDWYD RHONABWY), presents a satirical view of the Arthurian past, and is an extremely sophisticated piece of writing, probably the latest in the corpus. Despite their differences, the eleven tales of the Mabinogion draw heavily on oral material and on the storytelling techniques of the medieval *cyfarwydd*. Performance features are an integral part of their fabric, partly because the 'authors' inherited pre-literary modes of narrating, and partly because the written tales were composed for oral delivery, so that their reception and dissemination continued to have an influence on both style and structure.

Sioned Davies

Mabon fab Modron is a character with mythological attributes found in medieval WELSH PROSE LITERATURE. He and his mother also have direct pagan Celtic antecedents as MAPONOS (the divine son) and Mātrona (the divine mother), often worshipped as a triad of MATRONAE; the cults of both are attested in GAUL and BRITAIN. (On these divine-name formations, see GALLO-BRITTONIC; GWYDION.)

In CULHWCH AC OLWEN, Mabon fab Modron figures as one of the difficult and tortuously complex quests (see ANOETH) set by the giant Ysbaddaden for his prospective son-in-law, Culhwch, and Culhwch's band of ARTHURIAN heroes. Mabon was required for the hunt of the monstrous boar TWRCH TRWYTH, and it is told that he was taken away from his mother when he was three nights old, and that no one knew where

he was, or in what condition, whether alive or dead. If Hamp is right that MABINOGI had orginally meant 'material pertaining to Mabon/ Maponos', the abducted child PRYDERI of the Four Branches was perhaps originally identical to Mabon. In *Culhwch,* the quest for Mabon sends the Arthurian company on a series of adventurous digressions, including the quests for the oldest animals who might have been witnesses to the primeval abduction. Finally, they are led by the Salmon of Llyn Llyw up the tidal Severn (Welsh Hafren) to release Mabon from the cruellest of all imprisonments—crueller than that of Lludd Llaw Ereint (see NŌDONS) and Greid ab Eri—at the fortified town of Caerloyw (Gloucester). Although these three names imply a traditional triad, the extant TRIADS list as the 'Three Exalted Prisoners' (TYP no. 52): LLŶR Llediaith, Gwair ap Geirioed (probably the same Gweir as described as a prisoner in PREIDDIAU ANNWFN), along with Mabon ap Modron. In the action in *Culhwch,* ARTHUR and CAI figure prominently in Mabon's release. Mabon then takes part in hunting the Twrch Trwyth, including the climactic pursuit into the Severn, where it is Mabon who takes from the boar the razor needed to shear Ysbaddaden.

Closely related to *Culhwch* in its list of heroes and adventures is the poem PA GUR YV Y PORTHAUR? (Who is the gatekeeper?), in which *Mabon am Mydron* appears in Arthur's band described as a 'servant of UTHR BENDRAGON', in what is probably the first extant reference to the latter figure.

The grave of Mabon am Mydron is described at Nantlle in north Wales in the version of *Englynion y Beddau* ('Stanzas of the Graves') in NLW Peniarth 98B. A *Mabon am Melld* (Mabon son of Lightning) is also named in *Pa Gur*. This may be a different figure, but it is possible that *Mellt* was the name of Mabon fab Modron's father; *Meldi* occurs as a Gaulish tribal name, and the singular *Meldos* as a divine name (cf. LOUCETIOS 'god of lightning' worshipped at BATH not far from Gloucester and the Severn). Mabon fab Mellt is also named in *Culhwch* among the hunters of the boar Ysgithrwyn. Since this short episode is something of an anticipatory doublet of the great Twrch Trwyth hunt, this Mabon may also be a briefer doublet of Mabon fab Modron.

A Mabon is also mentioned in connection with an Owein (presumably URIEN's son) in a poem in LLYFR TALIESIN, with the opening line *Kychwedyl am doδyw o Galchuynyδ* (News has come to me from [the land of] Calchfynydd). This could be another Mabon—the name is attested as Old Breton *Mapon* in a charter, for example, and a Mabon is one of the children of BRYCHAN Brycheiniog—but Modron is connected with the legend of the birth of Owain ab Urien in TYP no. 70 (the 'Three Fair Womb-Burdens') and related accounts (see MODRON).

The Romano-British Maponus and Mātrona cults were also well developed in regions around HADRIAN'S WALL later associated with Urien and his CYNFERCHING dynasty. The survival of the Mabon tradition in the area in post-Roman times is indicated by the village name *Lochmaben* in Dumfriesshire and the place-name *Clochmabenstane* near Gretna, in which the element 'stone' has been added before the name in Gaelic and after it in Anglo-Saxon (on these names, see also MAPONOS). On the possible equivalence of Mabon and (Lugaid) Mac Con of the Irish KINGS' CYCLES, see O Daly, *Cath Maige Mucrama*; Koch, *Ildánach Ildírech* 63–80.

Mac a' Ghobhainn, Iain (1928–98), also known by the name Iain Crichton Smith, was a writer of short stories, novels, novellas, plays and poetry in English and SCOTTISH GAELIC. His contribution to modern GAELIC literature is immense, and he is generally acknowledged as one of the greatest of the 20th-century writers of Scotland (ALBA). Although born in Glasgow (GLASCHU), he was brought up on the Isle of Lewis (Leódhas); his affinity to the island and subsequent personal conflict with island society pervades much of his work.

As the author of five short-story collections in

Scottish Gaelic, and of the first collection by a single writer, he could easily be attributed with the title of the father of the Gaelic short story. His short stories are possibly the first, and finest, examples of psychological and philosophical stories in Scottish Gaelic. His novella, *An t-Aonaran* (The hermit, 1976), was also highly innovative, and extended the existential themes from his stories to a longer work—again the first of its kind in Scottish Gaelic.

His five collections of Gaelic poetry for adults, mostly in free verse, illustrate, among other things, the poet's desire to gain a true perception of his reality. Although not well-known for his plays, they won him awards at national Mòds (see COMUNN GAIDHEALACH) and he made a significant contribution to the revitalization of SCOTTISH GAELIC DRAMA.

Recurrent themes throughout his work include bilingualism, biculturalism, isolation, mortality, perception, and a quest for self-comprehension.

MacAmhlaidh, Dòmhnall (Donald MacAulay, 1930–) was born on Bernera, a small island off the island of Lewis (Beàrnaraigh, Leódhas), Outer Hebrides, in Gaelic-speaking Scotland (ALBA). He was educated at the Nicolson Institute, Stornoway (Steòrnabhagh), and at the University of Aberdeen, where he graduated in Celtic and English in 1953. MacAmhlaidh was Reader in Celtic at Aberdeen University for much of his working life, before taking over the Chair of Celtic at the University of Glasgow from Derick Thomson (Ruaraidh MACTHÒMAIS). MacAmhlaidh's main contribution to the academic field of CELTIC STUDIES has been in SCOTTISH GAELIC linguistics. He was also one of the early exponents of *Nua-bhàrdachd*, the Scottish Gaelic renaissance movement of the 20th century (see SCOTTISH GAELIC POETRY [5]). MacAmhlaidh's poetry is far removed from the marked rhythmic and auditory patterns of traditional Scottish Gaelic poetry, and his *vers libre* is characterized by highly intellectual discourse combined with sublime sensitivity. MacAmhlaidh has done little self-translation, and because of the insight and the analysis required to access his work, not to mention the occasional linguistic difficulties presented by his superb command of the rare Bernara dialect, much of his literary output remains untranslated.

Mac an Bhaird was the surname of an important family of IRISH bardic poets from Donegal (Contae Dhún na nGall) in the north. They played a significant rôle in the cultivation and transmission of IRISH LITERATURE in the Classical Modern Irish period (from the 13th to the 17th centuries). In the ANNALS of the Four Masters more than 20 members of the family are mentioned, all of whom were in close association with the O'Donnell (Ó Domhnaill) dynasty of Donegal. Aodh Buidhe Mac an Bhaird (*c.* 1580–1635) was renowned as a scholar and historian, as well as being a poet. Important Mac an Bhaird poets included Fearghal Óg (*c.* 1550–1620), Eoghan Ruadh (*c.* 1570–1630), and Laoiseach (*fl.* 1600). One of the recurrent themes associated with the Mac an Bhaird family is the lament for the decline of the traditional GAELIC society, which can be understood against the historical background of the declining military fortunes of the native aristocracy who opposed the Elizabethan English.

Mac an t-Saoir, Dòmhnall (Donald Macintyre, 1887–1967, also known as the Paisley Bard) was the most prolific and versatile traditional Scottish Gaelic poet of the 19th and 20th centuries. Macintyre hailed from South Uist (Uibhist mu Dheas), but economic necessity forced him to leave the island in the 1920s, and he eventually became a bricklayer in Paisley, on the Clyde. His published collected verse totals almost 10,000 lines of extraordinary metrical and lexical exuberance. Stylistically drawing on 17th- and 18th-century traditions, his work has fierce intellectual acuity as well as 'tremendous verve, wit and humour, and a richness of linguistic texture . . . probably unequalled in [the 20th] century' (Derick Thomson, quoted in Macintyre, *Sporan Dhòmhnaill* xxvi). While willing to play the rôle of Poet Laureate (as in his elegies for George VI or eulogies to the young Queen Elizabeth), a strong vein of political radicalism runs through Macintyre's work, exemplified in early attacks on landlordism in the incendiary *Gillean Àird-Mhaoile* (Lads of Àird-Mhaoile) or in his magisterial *Aoir an Luchd Riaghlaidh* (Invective against the ruling classes, *c.* 1940). His poetic voice is strongly extrovert, and the small amount of verse which he produced during his service as a regimental piper in the First World War is typically brash and humorous. During the Second World War, he composed violent panegyrics to the Highland battalions and an excoriating attack on Mussolini. The few songs by Macintyre still performed are humorous (and, as always, technically brilliant)—*Sporan Dhòmhnaill* (Donald's purse), *Òran na Cloiche* (The stone of destiny song) and *Buth Dhòmhnaill 'Ic Leòid* (Donald MacLeod's pub), but he may have considered his *magnum opus* to be the (allegorical?) epic which won him the bardic crown in 1938: *Aeòlus agus am Balg* (Aeolus and his bellows).

Mac an t-Saoir, Donnchadh Bàn (Duncan Ban Macintyre, 1724–1812) is not only one of the greatest, but also the best loved, of SCOTTISH GAELIC poets, perhaps because he took the view of the common man and articulated it with dazzling fluency. Born in Campbell (Caimbeul) territory at Druim Liaghairt in upper Glen Orchy, Argyll (Gleann Urchaidh, Earra-Ghaidheal), he fought on the Hanoverian side

at the battle of Falkirk in 1746 and willingly celebrated the Campbell aristocracy throughout his life. Yet, he was no Whig. It was possibly the need to bite his tongue politically that gave him a posthumous reputation as a simple song-maker. He worked as a stalker in the Argyllshire hills until 1766, when the introduction of sheep-farming forced him to leave for Edinburgh (Dùn Èideann), where he found congenial employment in the City Guard. Being unable to read or write, before leaving the Highlands he dictated his poems to the Revd Donald MacNicol (1735–1802) of Lismore. They were published in 1768; six more editions followed, bringing his surviving corpus to over 6000 lines. Thanks to the magnificent *Moladh Beinn Dóbhrain* (The praise of Ben Doran) and *Òran Coire a' Cheathaich* (The song of the misty corrie), Mac an t-Saoir is principally known for detailed delineations of wild nature, but he was much more than a painter in words: such poems contain hidden depths, and his range includes satire, bawdry, humour, drinking-songs, praise of female beauty and acute reflections on the times.

MacAoidh, Rob Donn (Robert MacKay, 1714–78) was a non-literate cattle-drover from Durness (Diùirnis, also called Dubhrinn), in the far north-western corner of the Scottish mainland. He has been described by a Marxist critic, Donald John MacLeod, as 'the greatest pre-20th century Gaelic writer'. Although not everyone would agree with this judgement, his poetic achievement was certainly remarkable. Strongly encouraged by his parish minister, Murdoch MacDonald (1696–1763), who read the works of Alexander Pope to him, Rob Donn came to rule the MacKay country with the lash of his satire, sparing neither high nor low. This represents not a capitulation to the Presbyterian Church and its obsession with social control, but a mutually beneficial alliance between ancient poetic privilege and modern spiritual dynamic. Rob Donn's egalitarianism earned him a respect in Sutherland (Cataibh) which has survived even the CLEARANCES and the virtual disappearance of the Gaelic language from the county. This may be because he represents a golden age when society remained in a multi-layered state of cultural cohesion and because, almost inadvertently, his songs chronicle that society in its final stage: the good, the bad, the ugly, the comic, and, just occasionally, the beautiful. Due to the freedom with which he uses the Sutherland dialect, his poems are not easy to read; the shortest and simplest, such as *Spìocairean Ruspainn* (The Rispond misers), tend to be the best. Over 200 of Rob Donn's poems survive, thanks mainly to Mackintosh MacKay, who published a substantial edition of his work in 1829.

Mac Bethad/Macbeth, king of Alba 1040–57, was a more prosaic character than the tragic tyrant immortalized by Shakespeare, who followed the story developed by successive chroniclers. He sprang from a dynasty which seems to have been based around the Moray Firth in the north of Scotland. This dynasty, which descended from one Ruaidri whose *floruit* is to be placed in the last quarter of the 10th century, was sometimes accorded the title *rí Alban* (king of Scotland) by Irish chronicles and at other times given the title *mormaer Mureb* (earl of Moray). It is often assumed that they were the rulers of Moray but that they contested the KINGSHIP of Alba, though some scholars have argued that a separate 'kingdom of Moray' existed independently of the rule of the kings in Scone (Caiseal Creidhi). The pedigree of Lulach, Mac Bethad's cousin and his successor as king, claims that the family descended from the Cenél Loairn of the 7th- and 8th-century Dál Riata. The link to this dynasty in the pedigree is too short and is clearly fabricated, but it may reflect a general belief

concerning the leading kindreds of Moray. Mac Bethad's father, FINDLAECH, was styled *rí Alban* when he was slain by the sons of his brother Mael Brigte in 1020. One of those sons, Mael Coluim, was also afforded the title *rí Alban* on his death in 1029. Nonetheless, neither Findlaech nor Mael Coluim appear in the SCOTTISH KING-LISTS produced by later generations of Scottish royal historians. Instead, Mac Bethad's right to the kingship was ascribed to his maternal descent from MAEL COLUIM MAC CINAEDA (1005–34), a relationship for which there is no early evidence.

That Mael Coluim or Malcolm II was indeed succeeded by his daughter's son, DÚNCHAD MAC CRINÁIN (Duncan I). It was this Dúnchad who, in 1040, was killed 'by his own people', according to the ANNALS of Ulster, and by his *dux* Mac Bethad, near Forres (Farrais) in Moray. It seems clear from these descriptions that Mac Bethad had recognized Dúnchad's kingship, and we must not assume that he had stood in opposition to the southern king as his father and cousins seem to have done. Dúnchad's own sons were young children at the time of his death and Mac Bethad assumed the kingship, perhaps reviving his father's claim, but possibly in the right of his wife, Gruoch, who belonged to the main line. His reign appears to have been as stable as that of most Scots kings. He faced a rebellion in 1045 led by Dúnchad's father Crínán (also called Crin or Crónán), the abbot of Dunkeld (Dùn Chailleann). Marianus Scotus records that *c.* 1050 Mac Bethad 'scattered silver like seed' in Rome, and this probably means that the king himself went on a pilgrimage, as many of his neighbours did around this time.

In 1054 Mac Bethad was faced with an invasion led by Siward, earl of Northumbria, in which he appears to have been worsted. Siward is said to have set up Malcolm, 'son of the king of the Cumbrians', as king. Although later chroniclers and, following them, Shakespeare, assumed that this was MAEL COLUIM MAC DONNCHADA (Malcolm III), it probably refers to the 'liberation' of Strathclyde (YSTRAD CLUD), in part or in whole, which had been annexed by Mael Coluim II *c.* 1030. Mac Bethad survived as king for several more years. He was mortally wounded in battle at Lumphanan in Aberdeenshire (Lann Fhìonain, Obair Dheathain) in 1057 and died of his wounds. Although his killer is identified as Mael Coluim mac Donnchada, the kingship passed to his step-son and cousin, Lulach.

Mac Cana, Proinsias (1926–2004) was a Celtic scholar who contributed much to both IRISH and WELSH studies. A native of Belfast (Béal Feirste), he held appointments at that city's Queen's University, the University of Wales ABERYSTWYTH, University College Dublin, Harvard University and the Dublin Institute for Advanced Studies (INSTITIÚID ÁRD-LÉINN). He was President of the Royal Irish Academy (ACADAMH RÍOGA NA HÉIREANN) 1979–82 and was honoured by several universities and by the British Academy. His work was wide-ranging but focused mainly on three areas: the storytelling tradition of medieval Ireland (ÉRIU) and Wales (CYMRU) with its roots, at least partially, in Celtic mythology; the transition from paganism and orality to CHRISTIANITY and LITERACY in early Ireland; and the comparative syntax of the Welsh sentence. He also interested himself to good effect in the fortunes of the Irish College in Paris.

Mac Cionnaith, An tAthair Lambert (Revd Lambert McKenna, 1870–1953) was a Jesuit teacher and an IRISH scholar. He specialized in Irish bardic poetry of the Early Modern or Classical Modern Irish period (*c.* 1200–*c.* 1650), taking a

particular interest in poetry with religious themes (see IRISH LITERATURE [3]). Mac Cionnaith was a prolific editor and translator, and his work in the field has generally not been superseded. He was born in Dublin (BAILE ÁTHA CLIATH) and died there.

MacCodrum, John (Iain Mac Fhearchair, †1779) is known both as a poet dealing with a wide range of themes and as a tradition bearer who specialized in historical matters and SCOTTISH GAELIC ballads. Some poems extant in the McLagan Collection of manuscripts may have been taken down from the poet's own recitation. William Matheson was able to collect versions of most of MacCodrum's songs, along with various traditions about the poet, from contemporary tradition on the Hebridean island of North Uist (Uibhist mu Thuath) in 1938. MacCodrum was not only remembered for his skill as a poet, especially of impromptu verse, but also for his gift of witty repartee (see Matheson, *Songs of John MacCodrum* 204–17).

Much of MacCodrum's poetry is mainly concerned with the affairs of the people of his native North Uist, though there are also songs in praise of various aristocratic figures of his time, mostly MacDonalds. His work exemplifies the rôle of the poet as spokesman for, and commentator on, the community in which he lived. Sir James MacDonald of Sleat (†1766) appointed MacCodrum as his official BARD in 1763 and was accordingly commemorated in a panegyric song, *Òran do Shir Seumas MacDhomhnaill* ('A Song to Sir James MacDonald') and an elegy, *Marbhrann do Shir Seumas MacDhomhnaill* ('Elegy to Sir James MacDonald'). MacCodrum's best-known song, *Smeòrach Chlann Domhnaill* ('The Mavis of Clan Donald'), balances praise of North Uist with praise of CLAN Donald and may have served as the model for MAC MHAIGHSTIR ALASDAIR's famous *Smeòrach Chlann Raghnaill* ('The Mavis of Clanranald') (Matheson, *Songs of John MacCodrum* 240). Visits to MacCodrum by Mac Mhaighstir Alasdair are documented where both poets recited their poetry to each other (Matheson, *Songs of John MacCodrum* xxi–xxii). The JACOBITE REBELLIONS of the poet's lifetime are under-represented in the poet's work; there is only *Òran mu 'n Éideadh Ghàidhealach* ('A Song on the Highland Dress'), which comments on the legislation prohibiting the wearing of TARTAN (see further MAC AN T-SAOIR).

Humour plays a significant rôle in MacCodrum's poetry. Some of this targets the poet himself, for example, *Òran a' Bhonn-a-sia* ('The Song of the Halfpenny'), which tells how the poet mistakes a halfpenny coin for a guinea and tries to buy a large round in the inn. *Caraid agus Nàmhaid an Uisge-Bheatha* ('The Friend and Foe of Whisky') discusses the effects of strong drink from two opposing viewpoints. SATIRE is also present in MacCodrum's work: *Aoir Dhomhnaill Friseil* ('Satire on Donald Fraser') accuses an incomer tacksman of dishonesty and sharp practice. *Òran do na Fogarraich* ('Song to the Exiles') is an early comment on the causes and effects of emigration to North America and shows the poet as the provider of social commentary.

MacCodrum is an example of a non-literate poet who acquired a wide range of historical, traditional, and contemporary knowledge through oral channels, though some of his sources are likely to have been literate men, for example, Neil MacMuirich (Matheson, *Songs of John MacCodrum* xxvii–xxviii) or John MacQueen, minister of North Uist (Matheson, *Songs of John MacCodrum* xxi–xxii).

Mac Colgáin, Seán (John Colgan, ?1592/1587–1658) was an Irish hagiographer and historian. Born in Co. Donegal (Contae Dhún na nGall), he studied for the priesthood in Glasgow (GLASCHU) and entered the Franciscan Order at Louvain in 1620. Mac Colgáin taught theology in Belgium and Germany, but finally

returned to the college at Louvain, where he continued the work begun by Hugh Ward (†?1634) and Patrick Fleming (†1631), particularly on saints' lives and ecclesiastical history. His edition of ecclesiastical material from early Irish manuscripts remains a vital scholarly resource, particularly since at least some of his source material has since been lost. Like Hugh Ward, Mac Colgáin, together with Micheál Ó Cléirigh (?1590–1643), also worked on expanding the library at the Franciscan College of Louvain. As a result, the library became one of the finest collections of early Irish manuscripts and Irish and Latin texts relating to Irish history and saints, and provided an ideal resource for Mac Colgáin's own scholarly work. Despite numerous administrative commitments and failing health, Mac Colgáin produced several editions, of which the *Acta Sanctorum Hiberniae* (1645) is probably the best known. He may also have been the author of a patriotic poem addressed to a member of the Ua Néill of Tyrone (Tír Eoghain).

MacCormaic, Iain (John MacCormick, 1859–1947) was a prolific writer of Scottish Gaelic fiction and the author of the first Gaelic novel to appear in print. A native of the island of Mull (Muile), MacCormaic spent most of his adult life in Glasgow (Glaschu), where he undertook various jobs to supplement his income from writing. As part of Glasgow's flourishing Gaelic community, he had the opportunity to associate with other Gaelic writers such as John MacFadyen, Henry Whyte, and Hector MacDougall, and, like them, he came under the influence of Roderick (Ruaraidh) Erskine of Marr, whose various publications provided outlets for these writers' work. MacCormaic's novel *Dùn-Àluinn* was first published in 1912, marking a significant milestone in the development of Scottish Gaelic literature (see SCOTTISH GAELIC PROSE). Essentially a historical romance written by an urban Gael as entertainment for urban Gaels, the novel also contains a strong element of socio-historic commentary by incorporating the theme of the CLEARANCES. The influence of traditional oral tales on MacCormaic's novel is evident, both thematically and stylistically, while at the same time he pushed the boundaries of Gaelic writing into new areas with this sustained piece of fiction. He also wrote many plays and short stories in Gaelic (see SCOTTISH GAELIC DRAMA), a great number of which found their way into print, and his success as a writer is evident from the frequency with which his name appears as a Mòd prize-winner in the literary competitions (see COMUNN GAIDHEALACH). His published collections of stories include *Oiteagan o'n Iar* (Squall from the west, 1908), *Seanchaidh na h-Airigh* (The tradition bearer of the hill pasture, 1911) and *Seanchaidh na Tràghad* (The tradition bearer of the shore, 1911), in addition to his novelette, *Gu'n d'Thug i Spéis do'n Armunn* (Have regard for a hero, 1908). Among his published plays are *Rath-Innis* (1924), *Am Fear a Chaill a' Ghàidhlig* (The man who lost his Gaelic, 1925), *An t-Agh Odhar* (The dun cow, 1931), and *An Ceòl-sithe* (The fairy music, 1925). As well as literary endeavours, his 1923 publication in English, *The Island of Mull*, reflects his strong antiquarian interest in HIGHLAND tradition and folklore.

Sheila Kidd

(MacDhòmhnaill), Iain Lom (John MacDonald, *c.* 1624–post 1707) was a Scottish Gaelic poet, who was a MacDonald propagandist and an astute political observer. He was a descendant of

the chiefly family of the MacDonalds of Keppoch (A' Cheapach), who themselves traced their ancestry back to John, first Lord of the Isles (MacKenzie, *Òrain Iain Luim* xxi; see also LORDSHIP OF THE ISLES). Traditions concerning his life are sometimes contradictory: some sources suggest that he was non-literate while others maintain that he spent some time in Spain training for the priesthood though he was never ordained (MacKenzie, *Òrain Iain Luim* xxvi).

Iain Lom's poetry is concerned with individuals, with CLAN affairs, and with national politics as seen from a GAELIC perspective. The range of discourse in his work covers intense personal emotion, as well as expressions of savage hatred directed at enemies and precise and intelligent analysis of events.

The murder of the chief of Keppoch and his brother in 1663 elicited a determined response from Iain Lom in a series of poems urging revenge, notably a lament for the victims, *Cumha do Mhac Mhic Raghnaill na Ceapaich agus a Bhrathair* ('A Lament for MacDonald of Keppoch and His Brother', MacKenzie, *Òrain Iain Luim* 108–13) and *Murt na Ceapaich* ('The Keppoch Murder', MacKenzie, *Òrain Iain Luim* 82–93). Here, he condemns the murderers, close relatives of the victims, but also strongly criticizes Clan Donald at large for their inaction following the murder, particularly Sir James MacDonald of Sleat (Slèite) and MacDonell of Glengarry (Gleann Garadh). While Iain Lom had to spend some time in exile in Kintail (Ceann an t-Sàil, in the western HIGHLANDS) to avoid reprisals from the murderers (MacKenzie, *Òrain Iain Luim* 279), the poem eventually spurred Sleat into action. His brother, An Ciaran Mabach ('Stammering Ciaran', Archibald MacDonald), led an expedition to Keppoch in which the murderers were killed (A. MacDonald, *Trans. Gaelic Society of Inverness* 32.94–5); Iain Lom, in turn, celebrates this in *An Ciaran Mabach* (MacKenzie, *Òrain Iain Luim* 128–31). *Òran do Aonghas Òg Morair Ghlinne Garaidh* ('A Song to Angus Òg Laird of Glengarry,' MacKenzie, *Òrain Iain Luim* 94–101) combines praise of MacDonell of Glengarry with a warning about the effects of disunity of Clan Donald which might develop as a result of Glengarry's claim to the chiefship of the entire clan. Iain Lom warns that dissension within the clan would affect their ability to defend themselves from their enemies. His most famous song, *Là Inbhir Lòchaidh* ('The Battle of Inverlochy', MacKenzie, *Òrain Iain Luim* 20–5) is an eyewitness account of almost journalistic descriptiveness of the victory of a Royalist army, led by Montrose, over a Covenanting force (i.e. the forces allied with Cromwell during the 'English' Civil Wars) under Argyll in 1645. Iain Lom presents the event in terms of a confrontation between MacDonalds and Campbells, and mocks the Campbells' defeat in expressions of savage exultation.

While *Là Inbhir Lòchaidh* only hints at the wider relevance of the battle in the context of the Civil Wars, Iain Lom shows his interest in national politics elsewhere. *Crùnadh an Dara Rìgh Teàrlach* ('The Crowning of King Charles II') expresses the poet's delight at the Restoration of 1660 (MacKenzie, *Òrain Iain Luim* 76–81); it appears that Iain Lom was appointed poet-laureate in Scotland (ALBA) by the King, with a salary of £100 sterling, which the Scottish Exchequer reduced to £100 Scots (MacKenzie, *Òrain Iain Luim* xxxviii). *Òran air Rìgh Uilleam agus Banrìgh Màiri* ('A Song to King William and Queen Mary') discusses the Revolution of 1688 in some detail, commenting particularly on the relationship between James II and his daughter Mary and the resulting violation of the king's sovereign right (MacKenzie, *Òrain Iain Luim* 202–13). A key event in Highland terms of the Revolution, the battle of Killiecrankie in 1689, is commemorated in two poems: *Òran air Feachd Rìgh Seumas* ('A Song to the Army of King James', MacKenzie, *Òrain Iain Luim* 184–9) and *Cath Raon Ruairidh* ('The Battle of Killiecrankie', MacKenzie, *Òrain Iain Luim* 190–7). Both commemorate the valour of various branches of Clan Donald, but also recognize the significance of the loss of the Royalist leader, Graham of Claverhouse, and both give the impression of being an eyewitness account. In *Òran an Aghaidh an Aonaidh* ('A Song against the Union') Iain Lom condemns the UNION of 1707, praising the Duke of Atholl for his opposition to it but criticizing the Duke of Queensberry for his rôle in promoting it (MacKenzie, *Òrain Iain Luim* 222–9).

Iain Lom's praise poetry and his elegies have individuals from various contexts as their subject. Clan Donald is well represented, as is Alasdair mac Colla, the leader of the MacDonalds at Inverlochy (Inbhir Lòchaidh), for his part in the battle of Auldearn (Allt Éireann, 1645) in *Òran do Alasdair Mac Cholla* ('A Song to

Alasdair Mac Cholla', MacKenzie, *Òrain Iain Luim* 26–7); *Cumha Alasdair Mhic Cholla* ('A Lament for Alasdair Mac Cholla', MacKenzie, *Òrain Iain Luim* 34–9) commemorates his death in Ireland (ÉIRE) in 1647. *Òran do Shir Dòmhnall Shlèite* ('A Song to Sir Donald of Sleat', MacKenzie, *Òrain Iain Luim* 146–51) is a lively eulogy which makes effective use of a range of typical praise imagery. Outside Clan Donald, Iain Lom selects his addressees from the ranks of the Royalist party. Montrose, whose rôle in the battle of Inverlochy Iain Lom fails to acknowledge in his poem on the battle, is the subject of *Cumha Mhontròis* ('A Lament for Montrose,' MacKenzie, *Òrain Iain Luim* 56–9), an elegy in which Iain Lom combines personal grief, reflection on the political situation, and condemnation of those who betrayed the Royalist leader.

Throughout his work, Iain Lom acts as a public poet, concerned with praise or criticism depending on what the situation required, and very aware of his responsibilities in forming opinions and in offering information and explanation to his audience.

MacDhun-lèibhe, Uilleam (William Livingston[e], 1808–70) stands alongside MÀIRI MHÒR (alias Màiri Nic a' Phearsain) and Iain MAC A' GHOBHAINN as one of the most distinctive SCOTTISH GAELIC poetic voices of the 19th century. Born in Islay (Ile) and taking to the trade of a tailor, his adult life was spent in various parts of the mainland before he settled in Glasgow (GLASCHU). Having received his early schooling in Islay, he was to some extent an autodidact, teaching himself Latin, Greek, Hebrew, French, and WELSH. MacDhun-lèibhe nurtured a strong antiquarian interest in his native *Gaidhealtachd* (HIGHLANDS), and during his mainland travels acquainted himself with local topography, place-names and folklore. This was to fuel his nationalist convictions, a blend of NATIONALISM which was both GAELIC and Scottish, and which was to find its first outlet in his prose writing and subsequently in his Gaelic verse. His history of Scotland (ALBA), *Vindication of the Celtic Character* (1850), shows him as a polemicist intent on the defence of the Scottish nation against the English. The natural follow-up for the poet from these polemical writings were his epic battle poems, which presented a fresh outlet for his nationalist sentiments. Some are based on historical events, such as *Cath Monadh Bhraca*, centred on the first century AD battle of Mons Craupius (see AGRICOLA), and *Cath Allt a' Bhannaich*, which dealt with BANNOCKBURN. Others, such as *Na Lochlannaich an Ile* ('The Norsemen in Islay') and *Blàr Shùnadail* ('The Battle of Sunadale'), are loosely based on legend and history. These poems serve in part as a vehicle for MacDhun-lèibhe's nationalism, with SCOTS and Gaels as victors against invaders, and they may be seen as an attempt at vindicating the Gael and revitalizing confidence in what was a period of social upheaval in the Highlands as a result of clearance, famine, and emigration. Variable in quality, MacDhun-lèibhe at times demonstrates a flair for innovation in his epics when incorporating traditional lore and using free verse, while at other times there is evidence of contradictions in his nationalist ideology, as, for instance, in his support for the British Empire's colonization of other countries and the rôle of Highland soldiers in this. MacDhun-lèibhe is, however, more commonly associated with poetry of the CLEARANCES, despite the fact that this constitutes a proportionately smaller quantity of his verse than his battle poems. Composed in response to clearances carried out in his native Islay by John Ramsay of Kildalton in the early 1860s, *Fios thun a' Bhàird* ('A Message to the Poet') is the best known of his anti-clearance poems, with the poet drawing on the strong tradition of nature poetry in Gaelic in order to present a stark view of an Islay in which the human world has been all but banished from the natural landscape.

Sheila Kidd

MacEacharn, Dòmhnall (Donald MacKechnie, 1836–1908) was a Scottish Gaelic poet, but is more noted for his distinctive style of prose. Born in Jura in the Hebrides (Diùra, Innse Gall) in 1836, he settled in Edinburgh (Dùn Èideann) where he was one of a circle of urban Gaels which included Professor Donald MacKinnon (first Professor of Celtic, University of Edinburgh), Alexander Carmichael (Gaelic folk collector, author of Carmina Gadelica), and the popular Gaelic poet Niall MacLeòid. His prose writing consists primarily of essays, including a series of essays on animals such as *An Cat* (The cat), *An Cù* (The dog), and *Am Fiadh* (The deer). In these writings, his whimsical observations on these creatures' behaviour offer light philosophical musings on the nature of man and his life. One feature of his style is his tendency to mock some of the elements which formed the bedrock of Gaelic literature, whether traditional heroic imagery, proverbial lore, or the Bible, and applying them to his animal subjects to humorous effect. MacEacharn's interests stretched beyond the bounds of Gaelic literature as he turned his hand to translating verses from the Persian *Rubaiyat* of Omar Khayyám into Gaelic. His collected prose and poetry, *Am Fear-Ciùil* (The man of song), first appeared in print in 1904 and ran to a further two editions over the years.

Sheila Kidd

Mac Fhirbhisigh, Dubhaltach (*c.* 1600–71), genealogist, translator and scribe, was probably born in Lackan, Co. Sligo (Leacán, Contae Shligigh). Little is known of his early life, but he may possibly have received some education in Galway (Gaillimh) and from the learned family of Mac Aodhagáin in north Tipperary (Contae Thiobraid Árainn).

His earliest works, which date from the early 1640s, were copies of the glossary *Dúil Laithne*; fragmentary Annals of Ireland (Éire), from south Leinster (Laigin), made for Dr John Lynch; the early legal tract *Bretha Neimheadh Déidheanach* (see BRETHA NEMED), and the important early annals, *Chronicum Scotorum*. In Galway in 1645 he transcribed the historico-genealogical text, *Senchas Síl Ír* from the Book of Uí Maine, which is now incorporated in the Book of Genealogies. He completed, in 1647, an Irish translation of texts relating to the Rule of St Clare for the Poor Clares nuns in Galway, and early in 1649 he was working on his monumental *Leabhar Genealach*, or Book of Genealogies, a compendium of Irish genealogical lore, the main text of which was completed by the end of the following year, with further additions made in 1653, 1657, and 1664. This work has long been recognized as the most important source for the study of Irish family history, and is also of considerable importance to pre-17th-century Irish historians since it details the ancestry of many significant figures in the history of Ireland.

In 1656 Mac Fhirbhisigh apparently drafted the 'Marriage Articles' (in English) when his hereditary lord, Dathí Óg Ó Dubhda (David O'Dowda), married Dorothy O'Dowd. During the same year he compiled a work on early Irish authors, which is now lost, except for a partial copy begun in 1657 and completed in 1666.

Mac Fhirbhisigh was listed as liable to pay hearth-tax on a dwelling in Castletown, Co. Sligo in the early 1660s. The only contemporary printed reference to him is contained in a book published in France in 1662: *Cambrensis Eversus*, by John Lynch. By the end of 1665 he was employed by the Anglo-Irish scholar Sir James Ware, and during this time in Dublin (Baile Átha Cliath) he compiled English translations for Ware from the Annals of Inisfallen and of Tigernach and the (now lost) Book of Lecan (Leabhar Mór Leacáin), and wrote an account, in English, of the early Irish bishops. Having returned to Castletown by the spring of 1666, he compiled an Irish tract on early Irish bishops and commenced an abridged version of the Book of Genealogies. He was back in Dublin when Ware died on 1 December 1666. On his return to Connacht, he sought patronage from Sir Dermot O'Shaughnessy in south Galway, and composed a poem in his honour. He may have sought support from the Marquess of Antrim, and he left important manuscripts in the hands of the local learned family of Ó Gnímh at Larne. He later returned to his home town of Lackan and in January

1671, some miles away at Doonflin, he was stabbed to death by one Thomas Crofton in disputed circumstances.

Nollaig Ó Muraíle

MacGill-Eain, Somhairle (Sorley Maclean, 1911–96) is widely regarded as the most influential SCOTTISH GAELIC poet of the 20th century. Born in Oscaig, on the island of Raasay (Ósgaig, Ratharsaigh), his commitment to the language and its oral and literary traditions was undoubtedly nurtured by a family which could, on both sides, boast of singers, pipers, and poets. After attending the local school in Raasay, MacGill-Eain went on to secondary school in Portree on Skye (An t-Eilean Sgitheanach). He was precociously political, and by the age of twelve, in his own words, he was 'an idealist democratic revolutionary with a deep attraction to socialism' (*Ris a' Bhruthaich* 9–10). By the age of sixteen—in the year before he matriculated at the University of Edinburgh (DÙN ÈIDEANN)—he had already begun to compose poetry in both English and GAELIC, largely on the models of the Gaelic song-poetry with which he had been raised. At Edinburgh he studied English, and there his poetic sensibilities came under the influence of the metaphysical and symbolistic traditions as represented in the poetry of Donne, Blake, Shelley, Eliot, and Pound. However, it was the poetry of the 'Scottish Renaissance'—and the left-wing Scottish NATIONALISM of Hugh MacDiarmid (1872–1978) most of all—which convinced him that poetry should be passionately engaged and committed to the improvement of human society.

After graduating with first-class honours in 1933, he became a school-teacher in Skye (1934), Mull (1938), and Edinburgh (1939). During this period, the horrific events of the Spanish Civil War (1936), pressing family concerns, and two love affairs led him to conceive of a poetic project which perceived these tensions as a dialectic. From a profoundly Marxist perspective, he related the experience of Gaelic Scotland (ALBA) to currents of politics and literature elsewhere in Europe. In contemporary fascism, for example, he saw the same evils of landlord capitalism and imperialism that resulted in the CLEARANCES of the HIGHLANDS, the depopulation of the *Gaidhealtachd*, and the demise of its language. At the same time, his poetry in this—his most productive—period, explored the shaky relationship between political commitment and love. His first major publication, with Robert Garioch, was *17 Poems for 6d* in 1939. MacGill-Eain had harboured some guilt for having involved himself with poetry rather than 'action' against the fascists in the Spanish Civil War. With the outbreak of the Second World War, however, he applied for military service and eventually enlisted in the Royal Signal Corps in 1941. Posted in North Africa, he was wounded several times, and seriously so in the battle of El Alamein. He was discharged from the army in 1943, the same year as the publication of his most important collection, *Dain do Eimhir agus Dain Eile* (Poems to Eimhir and other poems). This sequence of love poems, exploring the relationship between politics and love, was a landmark in the history of SCOTTISH GAELIC POETRY, and convinced a generation of contemporaries that Gaelic could take its place as a modern and relevant literary language. MacGill-Eain returned to teaching in Edinburgh after his discharge, and married Renee Cameron in 1946; they had two daughters.

In his own view, MacGill-Eain was not a 'full-time professional poet'. Nevertheless, his output in subsequent years, albeit modest, was consistently excellent. *Hallaig* (*Gairm*, 1954) is one of his finest and best-known poems. It is a haunting and disturbing meditation on the disappearance of a small human community on Raasay as a result of the clearances. MacGill-Eain's later publications include contributions to *Four Points of a Saltire* (with George Campbell Hay, William Neill, and Stuart MacGregor) in 1970 and *Nua-bhàrdachd Ghàidhlig* (with Deorsa Mac Iain Deorsa, Ruaraidh MACTHÒMAIS [Derick Thomson], Iain MAC A' GHOBHAINN, and Domhnall MACAMHLAIGH) in 1976. His collected poetry, with English translations, was first published in Manchester under the title *O Choille gu Bearradh / From Wood to Ridge* in 1989.

From 1956 until his retirement in 1972, MacGill-Eain served as the headmaster of Plockton High

School, Wester Ross, and during this time he was a leading activist in the campaign to assure a place for Gaelic in the secondary-school syllabus in Scotland (see EDUCATION). He was the recipient of five honorary doctorates. In 1987 he was made freeman of Skye and Lochalsh, and in 1990 he was presented with the Queen's Medal for Poetry. MacGill-Eain died at the age of 85 on 24 November 1996.

Mac Giolla Iasachta, Éamonn (Edward Anthony MacLysaght, 1887–1986) was an Irish author, genealogist, and historian. His parents emigrated to Australia, but were originally from Co. Clare (Contae an Chláir). Mac Giolla Iasachta was educated in Britain and Ireland, and was a senator of the Irish Free State (see ÉIRE) and a journalist in South Africa (1932–7), before becoming Chief Genealogical Officer and Keeper of Manuscripts at the National Library of Ireland (LEABHARLANN NÁISIÚNTA NA HÉIREANN), 1943–55. His publications reflect his varied interests and experiences, and include several books in IRISH.

SELECTION OF MAIN WORKS

Mac Giolla Meidhre, Brian (Brian Merriman, ?1749–1805), who held a farm and taught mathematics in the parish of Feakle, Co. Clare (An Fhiacail, Contae an Chláir) is renowned as the author of *Cúirt an Mheon-Oíche* ('The Midnight Court', [1780], a boisterous poem of 1026 lines (in assonantal couplets) which is generally regarded as a masterpiece of Modern IRISH LITERATURE. In this work—which appears to have a considerable autobiographical element—the dreaming bachelor-poet is arrested by the bailiff of the local fairy court and put on trial before their queen, Aoibheall, for neglecting the sexual and matrimonial expectations of the women of Ireland (ÉIRE). Various 'witnesses', including a young, malcontent wife and her crabbed husband, provide comic dialogue. Its stark sexuality and ostensible critique of clerical celibacy led Frank O'CONNOR to suggest that Mac Giolla Meidhre's work was inspired by Burns and Voltaire. However, serious scholarship in the last 40 years has demonstrated that all the necessary models were already available in traditional compositions preserved and produced in local 'courts of poetry' (see CÚIRT). The *Cúirt* borrows language from 17th-century political and devotional poetry in CAOINEADH metre—most notably Murchadh Riabhach Mac Namara's *Na Críochaibh Déanacha* (The last things)—and demonstrates the influence of *Eachtra Ghiolla an Amaráin* (The adventure of the unfortunate fellow) by Donnchadh Rua Mac Con Mara (1715–1810). The *Cúirt* has frequently been described as a parody of the traditional AISLING (dream-vision) poem, and while it is true that Mac Giolla Meidhre uses the *aisling* motif as a device for framing the narrative, its internal structure and thematic movement—and even its language—are more closely related to the comic parody of legal warrants found in *barántas* (warrant) poems. Two other poems—both of which are short and rather unextraordinary—are attributed to Mac Giolla Meidhre: *An Mhacalla* (The echo) and *An Poitín* (Poteen, i.e. moonshine).

Mac Giolla Meidhre—who did in fact marry, and had two daughters—was still in Clare in 1797, when he received two prizes from the Dublin Society for his flax crops. He moved to the city of Limerick (Luimneach) in 1802, and earned a living there as a teacher of mathematics until his death on 29 July 1805. Since 1967, an annual summer school (Scoil Shamraidh Mherriman) has been held in Co. Clare in the poet's honour.

William J. Mahon

MacGregor poetry

The MacGregor poems form a thematically connected group of songs dealing with the persecution of CLAN Gregor at the hands of the Campbells in the 16th and 17th centuries. A core group of four songs shows strong internal evidence of having been composed by women. Of these, *Cumha Ghriogair MhicGhriogair Ghlinn Sréith* (Lament for Gregor MacGregor of Glenstrae) can be dated to *c.* 1570, the date of the execution of the honorand, the chief of Clan Gregor, by Cailean Liath, chief of the Glenorchy Campbells (Watson, *Bàrdachd Ghàidhlig* 244–6). It is generally attributed to his wife Mór, or Marion, Campbell. Details of persons and events connected with the execution of the chief are historically verifiable, and thus support her claim to authorship (MacGregor, *Polar Twins* 122–4). Using the framework of a classical metre, *séadna*, Mór combines the themes of grief at her husband's death, reminiscences of their life together, concern for her infant son, and hatred of the perpetrators (MacGill-Eain, *Ris a' Bhruthaich* 77). Vivid imagery blends with intensity of emotion in the poem, and Sorley Maclean (Somhairle MACGILL-EAIN) considered it 'surely one of the greatest poems ever made in Britain' (*Ris a' Bhruthaich* 77). The lament has entered the oral tradition as *Griogal Cridhe* (Darling Gregor), and several versions have been recorded in the 20th century (RunRig, *Play Gaelic*; *Clò Dubh, Clò Donn*); these usually contain only a few quatrains which focus on emotionally charged sequences. *Rìgh gu mór mo chuid mhulaid* (Lord, great is my cause of grief) has also been ascribed to Mór Campbell, but would seem to be earlier than the lament (MacGregor, *Polar Twins* 124–8 and 140–1).

Female authorship is also likely for *Clann Ghriogair air Fogradh* (Clan Gregor in exile, Watson, *Bàrdachd Ghàidhlig* 242–3; see further MacGill-Eain, *Ris a' Bhruthaich* 122–3), *Saighdean Ghlinn Liobhann* (The arrows of Glenlyon, Watson, *Bàrdachd Ghàidhlig* 239–41; Ó Baoill, *Gàir nan Clàrsach* 68–73) and *MacGriogair a Ruadhshruth* (MacGregor of Roro, Watson, *Bàrdachd Ghàidhlig* 237–9; Ó Baoill, *Gàir nan Clàrsach* 54–9). These poems probably belong to the period of persecution of Clan Gregor in the late 16th and early 17th centuries, since they deal with themes such as violence, loss, and an uncertain and threatened existence, though there are also glimpses of pride in the bravery and nobility of certain MacGregor men (Thomson, *Scottish Gaelic Studies* 8.13–14). Tunes are extant for *Clann Ghriogair air Fogradh* and *MacGriogair a Ruadhshruth*.

The authors of *Rann air Griogar Odhar Àrd* (Rhyme on sallow-skinned, tall Gregor, Angus MacDonald & Archibald MacDonald, *MacDonald Collection of Gaelic Poetry* xxxi, 178) and *Ruaig Ghlinne Freòin* (The rout of Glen Fruin, Thomson, *Scottish Gaelic Studies* 8.17; Newton, *Bho Chluaidh gu Calasraid* 212–15) are likewise anonymous. The battle of Glen Fruin, fought in 1603 between the Colquhouns and the victorious MacGregors, may provide a wider context for both poems, which appear fragmentary. *Ruaig Ghlinne Freòin* was clearly composed by a participant in the battle some time after the event. *Rann air Griogar Odhar Àrd* praises the prowess of Gregor MacGregor, who took part in the battle and was a nephew of the Gregor of Glenstrae who was executed in 1570, though the poem would seem to refer to a different engagement, the battle of Beinn Todhaig in *c.* 1611 (Newton, *Scottish Gaelic Studies* 20.156).

Mac Grianna, Seosamh ('Joe Fheidhlimidh' Green, 1901–91), a brother of Séamus Ó GRIANNA, was born in Rannafast (Rann na Feirste) in the Co. Donegal GAELTACHT. Having qualified as a national school-teacher in 1921, he was subsequently denied teaching posts due to his involvement with the Republican side during the Irish Civil War in 1922–3 (see IRISH INDEPENDENCE MOVEMENT). He turned to writing and contributed numerous articles and stories to the Irish-language journals of the day. From 1933 until 1953 he translated literature for the government's Irish-language publication scheme, *An Gúm*. His first collection of short stories, *An Grá agus an Ghruaim* (Love and despondency), was published in 1929. *Pádraic Ó Conaire agus Aistí Eile* (Pádraic Ó Conaire and other essays) followed in 1936. Wales (CYMRU) is the subject of *An Bhreatain Bheag* and is largely the setting of his caustic memoir, *Mo Bhealach Féin* (My own way). Disillusioned with *An Gúm* and with the political climate of the new state, and suffering his first bouts of mental illness, Mac Grianna gave up creative writing in 1940. His only novel, *An Druma Mór* (The big drum), was published in 1966, 33 years after its completion. In spite of the brevity of Mac Grianna's productive literary career, he is highly regarded for the taut, powerful style and excellent IRISH of his published work. Mac Grianna died in 1991, having spent 30 years in the Letterkenny mental hospital.

William J. Mahon

MacLachlainn, Eòghan (Ewen MacLachlan, 1773–1822) was a noted Scottish Gaelic scholar, translator and poet. Born in Lochaber, he entered King's College, Aberdeen (Obair Dheathain), in 1796, obtaining an MA in 1800. Subsequently, he remained at King's College as a student of divinity and also as librarian while discharging the duties of parish schoolmaster in Old Machar before becoming head of a new grammar school in Aberdeen. As a GAELIC scholar he undertook a study of the manuscripts of the Highland Society of Scotland, transcribed the Book of the DEAN OF LISMORE, and collaborated with the Revd Dr John MacLeod on the Highland Society's *Dictionarium Scoto-Celticum* (1828). He translated the first seven books of the *Iliad* into Gaelic, experimenting with the metres of Gaelic BALLADS. As a poet, he composed in SCOTTISH GAELIC, Latin, and English. MacLachlainn's Gaelic verse reveals not only classical influences but also those of 18th-century Gaelic poets, most notably Alasdair MAC MHAIGHSTIR ALASDAIR and Donnchadh Bàn MAC AN T-SAOIR, and his compositions include poems on each of the seasons after the style of these poets.

The **Maclean poets** form a distinctive group among the SCOTTISH GAELIC poets. They were active from the 16th century to the middle of the 19th, and their output consists predominantly of a corpus of vernacular praise poetry (as opposed to higher-style poetry in learned classical GAELIC), much of it addressed to chiefs of several branches of the Macleans. They figure among the earliest Scottish Gaelic poets

whose poetry has been recorded, the earliest extant poem being *Caismeachd Ailean nan Sop* (The war-song of Allan of the wisps) by Hector Maclean of Coll, composed *c.* 1537 (Ó Baoill, *Duanaire Colach* 1–2, 47–51; Sinclair, *Na Bàird Leathanach* 23–8).

The work of Eachann Bacach (*fl.* 1650) is characterized by its assured use of polished imagery, for example, in the lament *A' Chnò Shamhna* (The hallowe'en nut, Ó Baoill, *Eachann Bacach and Other Maclean Poets* 14–25). He was associated with Sir Lachlann, 16th chief of the Macleans of Duart in the mid-17th century (Ó Baoill, *Eachann Bacach and Other Maclean Poets* xlvi). Eachann Bacach is described as *aos-dàna* in some sources, indicating that he operated in a semi-official capacity at a level below that of the classical BARD.

Mairearad nighean Lachlainn (Margaret daughter of Lachlann, *c.* 1660–*c.* 1730/1751) may have been a MacDonald (MacGill-Eain, *Ris a' Bhruthaich* 179–80), though she composed songs to various Macleans of Duart and of Brolas (MacGill-Eain, *Ris a' Bhruthaich* 181–2; Sinclair, *Na Bàird Leathanach* 177–216).

John Maclean ('Bàrd Thighearna Cholla', the Laird of Coll's bard, 'Am Bàrd Mac-Gilleain', the bard Maclean, 1787–1848) holds a special position. Initially, he was bard to Maclean of Coll, and composed praise poetry to him and others. In 1819 he emigrated to Nova Scotia where he composed his most famous poem, *A' Choille Ghruamach* (The gloomy forest, Watson, '*Am Bard an Canada*', *Bàrdachd Ghàidhlig* 14–19), in which he compares his sociable existence in his native Tiree (Tiriodh) with the difficulties he faced in the uncultivated wilds of Canada. Some of his poetry appeared during his lifetime (Maclean, *Orain Nuadh Ghaedhlach*), and A. Maclean Sinclair published material by him in several books.

Anja Gunderloch

MacLeod, Norman ('Caraid nan Gaidheal', 1783–1862) was the 19th century's foremost writer in SCOTTISH GAELIC, leading the way in developing the genres, themes and styles of secular writing. A native of Morven (Mòr Bheinn, Highland, formerly Argyll), he was ordained as a minister of the Church of Scotland in 1825, and served as a minister in Campbeltown, Campsie, Stirlingshire, and, latterly, at St Columba's in Glasgow (GLASCHU).

The first quarter of the 19th century witnessed a rapid expansion in the school system within the HIGHLANDS, and MacLeod was heavily involved in this through the scheme of the General Assembly of the Church of Scotland, which began establishing its own schools from 1825. These schools, along with those of other contemporary bodies involved in the provision of education in the Highlands, taught through the medium of Gaelic (see EDUCATION). The lack of books available in the GAELIC language which could be used in these schools prompted the General Assembly to request MacLeod to prepare a collection of texts for this purpose, and the result was his *Cochruinneachadh* (Collection), which appeared in 1828. It was here that his best-known piece of writing was first published, *Long Mhór nan Eilthireach* (The great emigrant ship), depicting the scene as an emigrant ship prepares to leave the Highlands.

This dearth of reading material was also the catalyst for his establishing a periodical, *An Teachdaire Gaelach* (The Gaelic messenger, 1829–31), the first periodical in Gaelic to last beyond a few issues. He was to produce a second journal a decade later, *Cuairtear nan Gleann* (Visitor of the glens, 1840–3) and was also a regular contributor to the Church of Scotland's monthly *Fear-Tathaich nam Beann* (The visitor of the peaks, 1848–50). Gaelic prose published prior to *An Teachdaire Gaelach* consisted almost entirely of religious texts, many of which were translations into Gaelic. As editor and one of the main contributors to this publication MacLeod introduced to Gaelic literature a range of secular texts, from expository writings on technological developments and the natural world to writing on Highland history, in addition to literature of a morally and spiritually uplifting nature. MacLeod's own writings for this periodical demonstrate a conscious attempt to make the written word accessible to those being educated in Highland schools

who were generally more accustomed to oral than to literate culture. His prose includes essays and sermons which reveal some stylistic influence from biblical language. However, he also turned to a new genre for Gaelic prose, the dialogue (*còmhradh*), in order to present readers with a form of writing rooted in everyday speech, albeit a relatively formal form of speech. His choice of the *còmhradh* may have been influenced by John Wilson's *Noctes Ambrosianae*, which appeared in *Blackwood's Magazine* from 1825. By using a small number of fictional Highland characters, the genre lent itself to the discussion of a broad range of topics including politics, emigration, education and social change, while allowing the writer's viewpoint and that of the Establishment, voiced by figures of authority such as the schoolmaster or the catechist, to prevail. Other writers, such as the Revd Alexander MacGregor, followed MacLeod's lead in using the dialogue, but MacLeod remains the writer most closely associated with the genre. A collection of selected writing by MacLeod entitled *Caraid nan Gaidheal* was published posthumously by his son-in-law, the Revd Dr Archibald Clerk.

During the Highland potato famine of 1836–7 Norman MacLeod was active in raising awareness in the LOWLANDS and in England concerning the plight of his fellow Gaels. The campaign in which he was involved saw over £150,000 being raised to alleviate the effects of famine. As a result of this crisis MacLeod became a proponent of emigration, which he saw as a means of easing the pressure of population in the Highlands in order to avoid a repeat of the famine. He used his second periodical, *Cuairtear nan Gleann*, to provide prospective emigrants with information in Gaelic about emigrant destinations including Upper Canada (now Ontario), Australia, and New Zealand. In addition to his endeavours in promoting the Gaelic language within Highland education, in 1833 he took an interest in the Presbyterian Church in Ulster (see ULAID) and was actively involved in encouraging the use of IRISH for preaching. His contribution included preaching in Ireland (ÉIRE) and the preparation of a metrical version of the Psalms of David in Irish in 1836.

MacLeod's scholarly projects also extended to the compilation of *A Dictionary of the Gaelic Language* (Glasgow, 1831), which he edited along with the Revd Dr Daniel Dewar. The epithet by which he is often known, 'Caraid nan Gaidheal' (Friend of the Gaels), marks the respect in which he was held by his fellow Highlanders. His son, John MacLeod, who wrote his biography, describes the many different types of assistance which Gaels in Glasgow sought from him and records that 'no consul in a foreign port could have more applications from distressed countrymen'. (J. N. MacLeod, *Memorials of Norman MacLeod* 201).

Mac Liammóir, Micheál (Michael Willmore, 1899–1978) was an author and a graphic artist. He is significant as an example of a stylish polymath and urbanite who learned a Celtic language and expressed himself in it by choice with an element of creative self-reinvention. He was born in Willesden, London, though his birthplace is sometimes said to have been Cork (CORCAIGH), and he died in Dublin (BAILE ÁTHA CLIATH). During 1907–14 he lived in London, and for the last four of those years he was a child actor. He learned IRISH in a class held by the Gaelic League (CONRADH NA GAEILGE) and studied painting at the Willesden Polytechnic. It has been claimed, though this is disputed, that he also studied at the Slade. In 1916 he came to Ireland (ÉIRE), and quickly became well known as an artist; his paintings were exhibited in Dublin, London, Sicily, Paris, and Berlin. His artistic style was influenced by the art nouveau movement, notably the work of Russian illustrators and the Victorian English artist Aubrey Beardsley. In 1928 Mac Liammóir founded the Gate Theatre with Hilton Edwards, and from then onwards he became active as a playwright and actor. He published in Irish and English, mainly plays, essays, poems, and translations from English and Russian.

Mac Meanmain, Seán Bán (Seaghan Mac Meanmain, 1886–1961) was a 20th-century Irish author. He was born in Iniskeel near Glenties, Co. Donegal (Inis Caoil, Na Gleannta, Contae Dhún na nGall) and died in Dublin (BAILE ÁTHA CLIATH). A native speaker of IRISH, he became a teacher at the McDevitt Institute in Glenties. Although probably best known for his short stories, *Scéalta Goiride Geimbridh* (Warming stories for the winter, 1915), *Inné agus Inniu* (Yesterday and today, 1929), and *Ó Chamhaoir go Clapsholas* (From daybreak to twilight, 1940), he also wrote plays, a novel and several historical works. Mac Menmain's work was based on his personal experiences and reflect the values of his generation and upbringing in rural Donegal. His style of writing is clear and unaffected, and his work is considered a valuable source for dialect studies.

SELECTION OF MAIN WORKS
Sgéalta Goiride Geimbridh (1915); *Inné agus Inniu* (1929); *Trí Mhion-Dráma* (1936); *Ó Chamhaoir go Clapsholas* (1940); *An Margadh Dubh* (1952); *Crathadh an Phocáin* (1955); *Stair na hÉireann* (1956).
NOVEL. *Fear Siubhail* (1924).
COLLECTIONS. *Cnuasach Céad Conlach* (1989); *An Chéad Mhám* (*Scéalta Gairide Geimbridh, Fear Siúil, Inné agus Inniu*, 1990); *An Dara Mám* (*Mám as mo Mhála, Mám eile as an Mhála Chéanna, Crathadh an phocáin*, 1991); *An Tríú Mám* (*Ó Chamhaoir go Clapsholas, Rácáil agus Scuabadh*, 1992).

PSH, PEB

Mac Mhaighstir Alasdair, Alasdair (Alexander MacDonald, *c.* 1698–*c.* 1770) is the best-known SCOTTISH GAELIC poet of the 18th century, with an output ranging from formal odes and Jacobite propaganda to nature poetry and sexually explicit verse (Black, *Mac Mhaighstir Alasdair* 37–9; see SCOTTISH GAELIC POETRY). Mac Mhaighstir Alasdair brought considerable intellectual and poetic vigour to his work, and is one of the important innovators of Gaelic literature in the 18th century, though a full critical edition of his work remains a desideratum.

Brought up an Episcopalian by his clergyman father, he converted to Presbyterianism in the 1720s, perhaps to improve his employment prospects, and to Roman Catholicism around 1745 (see CHRISTIANITY); the cause closest to his heart, however, was Jacobitism (see JACOBITE REBELLIONS). His account (in English) of the Rising of 1745 is extant: 'Journal and Memoirs of P—— C—— Expedition into Scotland etc.' (Lockhart, *Lockhart Papers* 2.479–510).

While employed as schoolmaster and catechist by the Society in Scotland for the Propagation of Christian Knowledge (SSPCK), Mac Mhaighstir Alasdair produced a pioneering Gaelic–English vocabulary for school use (MacDonald, *Leabhar a Theagasc Ainiminnin*, see DICTIONARIES AND GRAMMARS; Black, *Mac Mhaighstir Alasdair* 24–30; Thomson, *Alasdair Mac Mhaighstir Alasdair* 17–19). The other publication prepared by him was a selection of his own poetry, *Ais-eiridh na Sean Chánoin Albannaich* (Resurrection of the ancient Scottish language).

Mac Mhaighstir Alasdair's teaching career ended when he chose to join the army of Charles Edward Stuart ('Bonnie Prince Charlie') at the start of the 1745 Rising, attaining the rank of captain. A substantial section of his work thus consists of JACOBITE POETRY, a major aim of which being to incite support for the cause, both before and after the Rising (Thomson, *Alasdair Mac Mhaighstir Alasdair* 11–12).

Mac Mhaighstir Alasdair's education, probably in part gained at the University of Glasgow (GLASCHU), familiarized him both with the classics and with contemporary literature in English. This is illustrated by his nature poetry; *Òran an t-Samhraidh* ('Song to Summer') and *Òran a' Gheamhraidh* ('Song to Winter') owe some inspiration to poems by Allan Ramsay and James Thomson (Thomson, *Gaelic and Scots in Harmony*

95–9 and 113). *Smeòrach Chlann Raghnaill* ('The Mavis of Clanranald') combines the theme of nature with a celebration of CLAN Donald as well as Jacobite elements; *smeòrach*-poems form a small genre in the 18th century (see also John MACCODRUM). Mac Mhaighstir Alasdair's classical learning comes to the fore in several of his poems, including *Guidhe no Ùrnaigh an Ùghdair do'n Cheòlraidh* ('Entreaty or Prayer of the Author to the Muses'), a request to the nine Muses, Apollo, and Minerva to grant him poetic skill. *Marbhrainn do Pheata Coluim* ('Lament for a Pet Dove'), his only elegy, untraditional in its choice of subject, follows the Latin model of Catullus. In *Moladh an Ùghdair do'n t-Seann Chànain Ghàidhlig* ('In Praise of the Ancient Gaelic Language') he argues for the superiority of Scottish Gaelic over all other languages.

There is some love poetry: *Òran d'a Chéile Nuadh-phòsda* (Song to his newly-married wife) and the extravagant *Moladh Mòraig* ('Praise of Morag'), which mimics the movements of the *ceòl mór* music of piping and seems to have a real or imagined extra-marital affair as its subject (Campbell, *Very Civil People* 177). *Mìomholadh Mòraig* ('Dispraise of Morag'), on the other hand, heaps abuse on the character of Morag (tradition relates that the latter poem was Mac Mhaighstir Alasdair's reaction to his wife's displeasure at *Moladh Móraig*; see Black, *Mac Mhaighstir Alasdair* 18–19).

Other poems of dispraise are aimed at individuals of a differing political persuasion, for example, the Oban poetess or members of clan Campbell (*An Airc* 'The Ark'; *Aoir do na Caimbeulaich* 'Satire on the Campbells'; see Campbell, *Very Civil People* 179–83).

Sexually explicit verse includes *Tinneas na h-Urchaid* (Venereal disease) and consists of a graphic warning of its dangers. Here, Mac Mhaighstir Alasdair is concerned for the moral and physical well-being of the people in his charge in the mining settlements of Ardnamurchan (Black, *Mac Mhaighstir Alasdair* 21–2). *Moladh air Deagh Bhod* (Praise of a good penis) is in a lighter mood. However, along with much of Mac Mhaighstir Alasdair's other scatological and satiric material, this particular poem was deliberately omitted from most published collections of his work (Arbuthnot, *Rannsachadh na Gàidhlig* 163–4; Campbell, *Very Civil People* 179).

Much more popular with editors was *Birlinn Chlann Raghnaill* ('Clanranald's Galley'), which is also Mac Mhaighstir Alasdair's longest poem. It is both a spirited and imaginative description of a stormy winter voyage between the Hebrides (Innse Gall) and Carrickfergus in Ireland (ÉIRE) and a celebration of the strength and expertise of the crew (Thomson, *Alasdair Mac Mhaighstir Alasdair* 34–8).

Anja Gunderloch

MacMhuirich, Ruaidhri (Roderick Morison, 'An Clàrsair Dall', The blind harper, *c.* 1656–1713/4) was one of the last professional harpers in Scotland (ALBA). He also composed poetry in vernacular GAELIC (see SCOTTISH GAELIC POETRY). Born in Lewis (Leòdhas) as the son of a well-off tacksman, Ruaidhri lost his sight in his teens following a bout of smallpox, and trained as a harper to earn a living. A few harp tunes attributed to Ruaidhri are extant (Matheson, *An Clàrsair Dall*, 164–74). He eventually entered the service of Iain Breac MacLeod of Dunvegan (Dùn Bheagain), sixteenth chief of the CLAN. This was an unofficial appointment, since it would have been inappropriate for Ruaidhri, a member of the gentry himself, to take up the lowly employment of a harper; officially, he became one of Iain Breac's

tacksmen. Following the exile of James VII of Scotland (James II of England; see JACOBITE REBELLIONS), Ruaidhri was removed from Dunvegan and settled in Glenelg on the mainland opposite Skye (An t-Eilean Sgitheanach); it appears that his strongly Jacobite sympathies were at variance with Iain Breac's non-committal political stance (Matheson, *An Clàrsair Dall* lvii–lviii). Only seven of Ruaidhri's songs are extant. Of these, two are elegies: *Creach na Ciadaoin* ('Wednesday's Plundering') commemorates Iain Breac who died in 1693, and *Cumha do Fhear Thalasgair* ('Lament for the Laird of Talisker'), which was composed for John MacLeod (†*c.* 1700), who befriended Ruaidhri in Glenelg. *Òran do Iain Breac Mac Leòid* ('A Song to John Breac MacLeod) is a conventional piece in praise of his patron. In *A' Cheud Di-luain de'n Ràithe* ('The First Monday of the Quarter') a short section praising MacLeod of Talisker (Talasgair) is followed by a roll-call of clans who might be tempted to steal Ruaidhri's cattle; the complimentary tone of this passage suggests that Ruaidhri intended the song to be an 'insurance policy' against cattle raiders. *Féill nan Crann* ('The Harp-key Fair') is a humorous song, making use of sexual innuendo based on two meanings of the word *crann*: 'harp key' and 'penis'. *Òran mu Oifigich Àraid* (A song about certain officers) highlights Ruaidhri's Jacobite sentiments in its criticism of those who chose to adhere to the Hanoverian side. Ruaidhri's most famous song is *Òran do Mhac Leòid Dhùn Bheagain* ('Song to MacLeod of Dunvegan'), which was addressed to Iain Breac's son and successor, Ruaidhri (†1699). The song juxtaposes a reminiscence of the entertainment and hospitality at Dunvegan in Iain Breac's time with stinging criticism of the young chief who preferred to spend his time away from his estates, failing to fulfil his obligations of taking care of his people and squandering his resources.

Ruaidhri's poetry is a typical example of vernacular verse; his best use of imagery occurs in passages dealing with music.

MacNeacail, Aonghas (1942–), poet, journalist, and broadcaster, hailed from the Uig district of Skye (An t-Eilean Sgitheanach). He has fashioned a new lyricism, emerging initially as a poet of love and nature. He has reconstructed and re-energized elements of Gaelic and Celtic myth and folklore (see FOLK-TALES) to link with modern 'New Age' concerns of ecological harmony and the feminine principle. Traditional images of nature, of fishing and hunting, and occasional echoes of the folk-song tradition are deployed in non-traditional settings and given new contemporary resonances; he also finds links with Native American culture and Zen Buddhism. His typical voice is celebratory and anti-puritanical, but issues of cultural politics are also prominent. More recently, his poetry has reflected his travel experiences, treating, for example, change and conflict in Europe. MacNeacail has been an enthusiastic collaborator with other artists, notably the illustrator Simon Fraser, and composers Bill Sweeney, Alasdair Nicolson, and Andy Thorburn. He has also written for theatre, film, and television. Since the 1970s, he has been one of the most prominent advocates for GAELIC language rights in Scotland (ALBA; see further LANGUAGE [REVIVAL] MOVEMENTS).

SELECTION OF MAIN WORKS

Michel Byrne

MacNeill, Eoin (1867–1945) was an eminent scholar of IRISH language, law and early history, a nationalist revolutionary and a statesman of the Irish Free State (ÉIRE). He played an instrumental rôle in the foundation of CONRADH NA GAEILGE (the Gaelic

League) and the Irish Volunteers, two organizations which had a huge influence on the course of 20th-century events in Ireland.

He was born John MacNeill, the sixth of eight children, in the rural community of Glenarm, Co. Antrim (Contae Aontroma), and was educated at St Malachy's College, Belfast (Béal Feirste), where he distinguished himself academically from an early age, coming first in Ireland in his senior examinations. Between 1885 and 1887 he studied modern languages and then economics, jurisprudence and constitutional history at the Royal University of Ireland. Having completed his degree he turned to learning Irish, of which he had little previous knowledge, and quickly achieved a high level of proficiency. In 1893 his interest in Irish led him to become one of the founders of Conradh na Gaeilge, along with Douglas Hyde (De hÍde) and others. During the following years, he was one of the main driving forces of the Irish-language revival movement, being at times editor of both the *Gaelic Journal* and the Claidheamh Soluis, as well as a regular contributor to both. In 1908 he retired from leadership capacities within the movement to concentrate on scholarship. The same year saw the founding of the National University, with MacNeill elected to the newly established professorship of Early and Medieval Irish History in Dublin (Baile Átha Cliath).

His most fruitful period of scholarship was between 1908 and 1916, during which time he published several monographs and papers of importance and insight. Although often criticized by later scholars (whose own work has not always held up as well as MacNeill's), his work during this period did much to define early Irish history and separate it from myth and legend. He was also instrumental in the establishment, in 1928, of the Irish Manuscripts Commission set up to research and publish ancient Irish texts, and he remained chairman of this body until his death.

Following the creation of the Ulster Volunteers as an anti-Home Rule force, MacNeill proposed the setting up of an opposing paramilitary body in an article entitled 'The North Began' published in the *Claidheamh Soluis* in 1913. During the same year he became a founding member, along with Bulmer Hobson (1883–1969) and O'Rahilly, of the Irish Volunteers. MacNeill was Chief of Staff at the time of the 1916 Rising, and attempted to stop the rebellion when it was realized that military success was impossible. After the Rising, MacNeill served one year of a life sentence in prison in England. He was released in June 1917 and elected to the executive of Sinn Féin. Following agitation by members of the party, he was reinstated to his professorial position in 1918.

When the first Dáil Éireann was convened in January 1919, MacNeill was elected Minister for Finance, with changes to positions as Minister of Industry and also Speaker between then and 1921. He was a staunch supporter of the Free State against the Republicans during the Civil War and held the position of Minister for Education in the provisional government from 1922. MacNeill's repeated and vocal defence of the government policy of executing prisoners during the Civil War earned him enduring hatred among Republicans. Between 1923 and 1925 he was the Free State representative on the Boundary Commission set up to review the borders between the aforementioned territory and Northern Ireland. His resignation, tendered on realizing the Commission was unable to make any meaningful changes, led to much unfair recrimination and his withdrawal from politics. The remainder of his life was dedicated once more to study, and he held the presidency of both the Royal Irish Academy (Acadamh Ríoga na hÉireann) and the Royal Society of Antiquaries of Ireland before his death in 1945.

SÓF

Macpherson, James (1736–96) published a series of poems which he portrayed as his English translations of the 3rd-century epic compositions of the GAELIC poet Ossian (Scottish Gaelic *Oisean*, Irish OISÍN). The first in the series is the small-scale *Fragments of Ancient Poetry* of 1760, followed by the epics *Fingal* in 1761 and *Temora* in 1763. Most of the subject matter is based ultimately on Scottish FIANNAÍOCHT. Although an instant success with the reading public, Macpherson's poems split the literary establishment into two camps, one arguing in favour of the authenticity of the work and the other against. A protracted investigation by the Highland Society of Scotland concluded that while there were texts attributed to Ossian current in the HIGHLANDS these were very different from the material produced by Macpherson (see further Mackenzie, *Report of the Committee of the Highland Society* 151–4). While some of Macpherson's pieces are more or less loosely based on several genuine Gaelic BALLADS (Thomson, *Gaelic Sources of Macpherson's Ossian* 14–68), much of his work is the product of his own imagination, following contemporary theories about ancient literature and using sources such as HOMER and the Bible as models (see further Stafford, *Sublime Savage* 24–37). His motivation may have been a desire to bring a prestigious part of Gaelic literature to the attention of an English-speaking readership, and he may well have believed that the ballads were part of a larger epic which he would be able to recover from ancient manuscripts (see further Gunderloch, *Orality, Literacy, and Modern Media* 45–7). Although Macpherson acquired several Gaelic manuscripts, among them the Book of the DEAN OF LISMORE, on his collecting tours in the Highlands he did not find any epics (Stafford, *Sublime Savage* 184). Macpherson's poetry first took shape in English, and the Gaelic text of his works which appeared in 1807 is a translation of these originals into flawed Gaelic (Thomson, *Gaelic Sources of Macpherson's Ossian* 85–90). In the wider context of European literature, Macpherson's work is regarded as seminal in the genesis of ROMANTICISM (Stafford, *Sublime Savage* 4). In Gaelic Scotland (ALBA), the Ossianic controversy inspired a wave of collecting of SCOTTISH GAELIC POETRY from contemporary oral tradition which recorded not only a substantial corpus of Gaelic ballads but also a variety of other verse genres (Thomson, *Gaelic Sources of Macpherson's Ossian* 5–9).

Anja Gunderloch

Mac Piarais, Pádraig (Patrick Pearse, 1879–1916) was an educationalist, a writer, and a revolutionary, who was best known as leader of the Easter Rising and for his subsequent execution (see IRISH INDEPENDENCE MOVEMENT). However, his NATIONALISM was initially more cultural than political, for he believed that the Irish rôle in the world lay in maintaining its distinctiveness, not in achieving independence. He idealized the life of the people of Conamara (the strongly Irish-speaking west of Co. Galway/Contae na Gaillimhe), where he spent much of his time and about which he wrote extensively in IRISH and English. He became involved with the Gaelic League (CONRADH NA GAEILGE) as a teenager and edited their journal, *An* CLAIDHEAMH SOLUIS (The sword of light), from 1903 to 1909. Assuming that the cause for the decline in Irish culture lay with the national EDUCATION system, he believed that Ireland (ÉIRE) could be de-Anglicized through a reform of that system. Taking the initiative in 1908, he founded St Enda's, an innovative bilingual secondary school which fostered all things Irish, with a strong sense of an inherently Irish-speaking Irishness informing the curriculum.

As a result of the radical opposition of unionists to the proposed introduction of home rule, Pearse's nationalism became increasingly political. He became convinced that Britain would never voluntarily grant Ireland autonomy and began to favour the use of

force. This also came to the fore in his writing, which emphasized the need for a blood sacrifice to awaken the Irish nation. He was involved in setting up the Irish Volunteers in 1913 and became their Director of Operations. He joined the Irish Republican Brotherhood (see IRISH REPUBLICAN ARMY) and was co-opted on its Supreme Council and the secret Military Council, which organized the 1916 Rising. His graveside oration at the funeral of the old Fenian (Irish Nationalist) Jeremiah O'Donovan Rossa in 1915 ended with the much-quoted line: 'Ireland unfree shall never be at peace' and was a factor in kindling the Rising. He was made Commander-in-Chief during the Rising and has been identified with violent resistance to British rule ever since.

Joost Augusteijn

MacThòmais, Ruaraidh (Derick S. Thomson, 1921–) was born in Payble on the Isle of Lewis (Leódhas) and was Professor of Celtic at the University of Glasgow (GLASCHU) from 1963 until 1991. His contribution to Gaelic culture in the second half of the 20th century has been monumental. He has written trailblazing articles and books in a wide range of areas of literature and history, including a detailed examination of Gaelic sources for James MACPHERSON's 'Ossian' (OISÍN) and research into the MACMHUIRICH bardic dynasty. In a more popularizing vein are his *Introduction to Gaelic Poetry* (1974), *The Companion to Gaelic Scotland* (1983), and his *New English–Gaelic Dictionary* (1981). His publishing ventures have included the longest running Gaelic periodical GAIRM (200 issues from 1952 to 2002), the SCOTTISH GAELIC publishing house 'Gairm Publications', and the Gaelic Books Council, which has provided an outlet for popular and literary writing in GAELIC, and an opening for every major poet or prose writer in the language. MacThòmais is also the most enduring poetic voice of the 20th century, and his vigorous engagement with free verse has influenced most of the poets who succeeded him. Although his poetry deals with a wide variety of themes, it has provided the most sustained and profound exploration of bicultural exile, of the bond tethering him to his native place, and the heavy price paid for his intellectual freedom. These themes of loss (loss of childhood, of emotional security, of traditional Gaelic society, of language) and of the creative, redemptive power of memory are explored in some very memorable symbolist poems in his first and second collections, culminating in the sequence *An Rathad Cian* (1970), which celebrates Lewis both as a community and as a creative (and monstrous) obsession. Subsequent collections have treated political themes, multicultural Glasgow, the submersion of Gaelic and Scottish culture, age and change, with poetic sequences becoming a favoured format. His poetry is marked by great technical skill and versatility, understated irony (with occasional flashes of withering anger), and an astonishing ability to recapture sensuous triggers of memory, in which he grounds his symbolism.

Michel Byrne

Macha is the name of a female supernatural figure or goddess in early IRISH LITERATURE. As such, she figures as one of the supernatural race known as the TUATH DÉ and appears among their ranks in the sizeable tale of *c.* 900, CATH MAIGE TUIRED ('The [Second] Battle of Mag Tuired'). Macha also appears in the collection of traditions on noteworthy women known as the BANSHENCHAS (for the text, see Dobbs, RC 47.283–339). She is also repeatedly listed in the group (usually a triad) of war-goddesses, often along with BODB (later Badb) and NEMAIN, the leading or overarching persona usually being the MORRÍGAN.

Macha's most important literary associations are with ULAID (Ulster) and the ULSTER CYCLE of Tales. She is the namesake of the large hilltop IRON AGE assembly site EMAIN MACHAE (Twins of Macha) and also of the nearby town of Armagh (ARD MHACHA 'High place of Macha'), the latter being most famous as Ireland's primatial see, with strong traditional associations with St PATRICK, but it has also yielded remains which suggest a pagan sanctuary of the 3rd century AD. Macha is the central character of the brief and well-crafted explanatory narrative known either as *Ces Ulad* or *Noínden Ulad*, the conventional English titles being 'The Debility of the Ulstermen' or 'Pangs of the Ulstermen'. In it, a mysterious woman arrives at the home of the wealthy Ulster landowner, Crunniuc mac Agnomain. She immediately begins keeping the house and then sleeps with him. A long while later she becomes pregnant, and Crunniuc goes to an *oenach* (tribal assembly or fair), where he foolishly boasts that his wife can run faster than the king's horses. Crunniuc is held on pain of death unless he can make good this outrageous claim. Macha is summoned, runs the race, and saves Crunniuc, though giving birth on the spot in agony. She reveals her name, giving it and that of her twins (*Emain Machae*) to the place, and at the same time cursing the Ulstermen that they will henceforth be as weak as a woman in childbirth at the days around SAMAIN. The story thus explains both the strange name of Ulster's royal seat and the peculiar detail that the majority of the Ulstermen are out of action during most of TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley'). The story of a woman from the OTHERWORLD mistreated by her mortal husband has a Welsh parallel in the tale of LLYN Y FAN FACH and *Lanval* in the BRETON LAYS.

Several modern Celtic scholars (e.g. W. J. Gruffydd and Proinsias MAC CANA) have seen in Macha's horselike attributes, taken together with the evidence of the pagan Celtic horse-goddess EPONA and the horsewoman RHIANNON of the Welsh MABINOGI, evidence for a centrally important pan-Celtic horse goddess. Further strands of this argument have included the White Horse of UFFINGTON, the modern south-Walian custom of the MARI LWYD, and the function of the white mare in the Irish royal inauguration ritual reported by GIRALDUS CAMBRENSIS.

Macsen Wledig is the central character in the Middle Welsh tale *Breuddwyd Macsen* (the dream of emperor Maxen), which is one of the eleven tales collected and translated by Charlotte GUEST as the *Mabinogion* (see MABINOGI §2). This story and the related accounts discussed below are noteworthy as a clear case of the events of Roman Britain forming the basis for medieval Welsh and Breton literature.

§1. BREUDDWYD MACSEN

The text occurs in the famous manuscripts LLYFR GWYN RHYDDERCH and LLYFR COCH HERGEST. In the story, Macsen, king of Rome, weary after hunting, has a dream in which he sees a beautiful country beyond steep mountains and in it a beautiful castle described in sumptuous detail. He falls in love with a maiden whom he sees there, and awakes with debilitating lovesickness. After sending messengers to find the country and the maiden, he eventually finds Elen daughter of Eudaf (Elen Luyddawg 'Helen of the hosts') in north Wales (CYMRU) and marries her. As

empress of Rome, Elen is responsible for the building of three Roman fortresses in Britain, the most important of which is in Arfon, thus SEGONTIUM near Caernarfon. Macsen is summoned back by unrest in Rome, accompanied by Elen's brother Cynan and British hosts; they remain on the Continent, and their settlement there is used to explain the foundation of Brittany (BREIZH) and why a BRYTHONIC language akin to WELSH is spoken there.

As a Celtic wondertale, *Breuddwyd Macsen* has affinities to several other works in which an irresistible destined bride is seen in the dream of a young ruler: the Old Irish 'Dream of OENGUS MAC IND ÓC' (on which see also BRUG NA BÓINNE), the Breton Latin Life of IUDIC-HAEL, and the Scottish Gaelic *Am Bròn Binn* (on which see ARTHURIAN LITERATURE [2]), as well as the French prose romance *Artus de Bretaigne* (see ARTHURIAN LITERATURE [6] §1). As in the Modern Irish AISLING genre in general, there can be a political implication to these stories, as a type of SOVEREIGNTY MYTH conferring legitimacy on the dynasty founded by the union of the dreaming prince and dreamed-of woman.

§2. MAGNUS MAXIMUS

The Welsh name *Macsen* has resulted from scribal confusion between Latin *Maximus* and *Maxentius*. *Breuddwyd Macsen* is one of several Welsh and Breton literary reflections of the historical Magnus Maximus, a native of Roman Spain, proclaimed emperor by Roman troops in Britain in 383. Maximus and his Romano-British forces crossed to the Continent that year; he defeated and killed the reigning western emperor Gratian, quickly establishing control over GAUL, Spain, and parts of north Africa, as well as Britain, and set up his imperial court in Belgic Gaul at Augusta Treverorum (modern Trier). Maximus received baptism in 383, probably from Britto, bishop of Trier, and pursued zealously orthodox Christian policies during his reign, seeking advice and favour in face-to-face meetings with the leading western churchmen of his day, St Martin of Tours and St Ambrose of Milan (see also EASTER CONTROVERSY §2). His Christian activism became controversial in 385 when he took the unusual step of pursuing a secular prosecution for heresy against Priscillian of Ávila and his well-to-do followers. Priscillian himself and six of his closest associates were beheaded, and two others were exiled to *Sylinancis insula*, which is the first extant reference to Scilly, off Cornwall (KERNOW), and a reminder of where Maximus's control remained most secure. The Priscillian affair became a scandal since it was claimed that the heretics' property was confiscated to finance Maximus's impending war against the rival emperors. Until 388, Maximus managed to hold his own against the eastern emperor Theodosius and the second western emperor Valentinian II who controlled Italy and Dalmatia. He was defeated and killed while advancing on Italy in 388, and his son and heir Victor was soon after chased down and also killed.

§3. LEGENDARY HISTORY

According to GILDAS's *De Excidio Britanniae*, Maximus deprived Britain 'of its immense youth who had accompanied this usurper . . . who never returned home'. Subsequent Welsh and Breton sources tend to view Maximus as legitimate, but continue to maintain that troops were permanently withdrawn. The Welsh Latin HISTORIA BRITTONUM (redacted in 829/30 and where the name is given as 'Maximianus') tells that his soldiers and their families were settled in ARMORICA, becoming the founders of Brittany. Many modern writers find it inherently likely that many of his Romano-British soldiers in fact remained in Gaul, but there is no consensus as to exactly where they settled. The surviving 173 verses of the Breton Latin LIVRE DES FAITS D'ARTHUR deal mostly with the exploits of Maximus (see also ARTHURIAN LITERATURE [4]). In HISTORIA REGUM BRITANNIAE (5.9–16), 'Maximianus' has a major rôle and is closely associated with the legendary Breton founder CONAN MERIADOC (corresponding to *Breuddwyd Macsen*'s Cynan); he also marries a British woman, the daughter of Octavius (corresponding to Eudaf).

§4. GENEALOGIES

Maximus became a fashionable ancestor in early medieval Wales and Brittany. In the inscription on ELISEG'S PILLAR, Maximus is made the ancestor of the CADELLING of POWYS through an otherwise unknown daughter. In the Old Welsh GENEALOGIES in BL Harley 3859, *Maxim Guletic* is made an ancestor of one royal northern lineage and the kings of DYFED. (On the title *gwledig*, Old Welsh *guletic* 'great

sovereign, emperor', see AMBROSIUS.) In the latter pedigree, *Helen Luidauc* is not Maximus's wife as in the later tale, but rather St Helen the mother of Constantine the Great (AD 285–337), fictitiously presented as the remote ancestor of 'Maxim'. A similar doctrine is found in the genealogy in the Breton Latin Life of St Gurthiern, where he appears as 'Maximianus, son of Constantius, son of Helena' (see HAGIOGRAPHY [4] §4). The historical Christian emperor Constantine son of Constantius Chlorus and Helen was proclaimed Caesar by Roman forces in Britain in 306; his story was thus prone to confusion with that of Maximus. Most Celtic scholars no longer argue that Maximus's name in the pedigrees should be seen as evidence for security arrangements made by him in the 4th century.

Macutus, Monastery of St

The early Christian monastery at Maughold is one of only two known on the Isle of Man (ELLAN VANNIN) and by far the best preserved. It lies on a spur of land beneath the prehistoric hill-fort on Maughold Head and now consists of an irregular stone boundary which contain some four acres (*c.* 1.6 ha), the sites of at least four KEEILLS (small chapels) and a church dating at least in part from the 11th century. The eastern boundary is known to consist of a massive stone-revetted earthwork surrounded by a ditch—very much in the manner of Irish MONASTERIES of the same period (Kermode & Bruce, *Manx Archaeological Survey 4*). A large number of early Christian and Norse cross slabs have been recovered both from within the monastic enclosure and from chapel sites in the rest of the parish (Kermode, *Manx Crosses*; cf. HIGH CROSSES). There have been no modern excavations at the site.

The monastery at Maughold appears to have flourished during the 7th to 9th centuries, in a period when the federation of churches founded by St COLUM CILLE (†597) and his successors had considerable influence in Man. Many of the extant cross slabs date from this period. INSCRIPTIONS in the OGAM and Norse runic SCRIPTS from the site and neighbouring keeills imply that the monastery may still have been in operation as late as the end of the 12th century, some decades after the arrival of the reformed orders on the island (see CHRISTIANITY). The survival of the monastery into the mid-12th century is confirmed by a description of a procession of priests and clerics preserved in the Chronicles as the occasion of the miraculous slaying of Gilcolm by Maughold's staff in 1158 (Broderick, *Cronica Regum Mannie et Insularum*, fo. 38r).

Excavations at Peel Castle between 1982 and 1987 located the remnants of a probable second Manx monastery of this period, including part of its cemetery, crosses, and a further keeill site. Unfortunately, the construction of the later 13th-century cathedral and castle on the site has obscured the earlier evidence.

An account of the conversion of St Macutus (or Macc Cuill moccu Greccae) is given in the Book of ARMAGH. Macutus is portrayed there as a wicked man of the ULAID (Ulstermen), converted by St PATRICK and sent out onto the Irish Sea in a one-man coracle as penance. He arrived on the Isle of Man and was greeted by two Christian holy men, Conindrus and Rumilus (the latter is a Celticized form of the Latin name *Romulus*). The story of these early Manx Christians, preceding Macutus's arrival from Ireland, has been taken, together with the presence on Man of early medieval inscriptions which are BRYTHONIC in language and style, to suggest that Man had first been converted from BRITAIN, possibly during the late Roman period (which ended AD 409/10). Manx dedications provide more straightforward evidence for missionary activity on Man from Ireland (ÉRIU), or the GAELIC world more generally. For example, there

are seven keeills dedicated to the major Irish saint Brigit, who is said to have received the veil from Macutus, thus emphasizing in hagiography the links between the traditional Christian founders of Man and Ireland (Moore, *History of the Isle of Man* 68–9).

P. J. Davey

Maddrell, Ned, was the last native speaker of Manx Gaelic. He was born on 20 August 1877 at Corvalley on the Howe, near Cregneash, and died on 26 December 1974, aged 97, at his home in Glen Chass near Port St Mary. Due to the size of his family, he went as a young boy to live in Cregneash with his great-aunt Paaie Humman (Margaret Taubman), who could scarcely speak English. As he pointed out in his native tongue: *ec yn traa shen, v'ad loayrt Gailck ayns dy chooilley thie bunnys ayns yn boayl* (they spoke Manx in almost every house at that time).

Ned was raised in a community which still lived in a world where the old Manx traditions, customs, and language were very much to the fore. He recalled how the people of Cregneash often assembled at one another's houses and one of the favourite diversions was the telling of stories about fairies and bugganes (bugbears).

He spent his later life on the land, working for some time as curator of the Manx Folk Museum at Cregneash. In July 1947 Éamonn De Valera, then Taoiseach of Ireland (Éire), visited Cregneash and met him—an occasion which Ned cherished for the rest of his life. Ned's meeting with De Valera proved the catalyst for a major project to record the last surviving native Manx speakers. These recordings provide essential examples of native spoken Manx to contemporary Manx speakers, who have learned Manx as a second language, and also to Celtic linguists.

It saddened Ned Maddrell that so many of his contemporaries and people older than him were apparently reluctant to admit their knowledge of the Manx language, a sociolinguistic situation common in disadvantaged Celtic-language communities in recent times. By the time he died, however, the decline in the fortunes of Manx had ceased and a new mood of optimism existed among Manx speakers and supporters.

Madog ab Owain Gwynedd ('Prince Madoc') is a figure from Welsh legendary history who is credited with the discovery of America in the late 12th century. He landed, according to modern American versions of the story, in Mobile Bay, Alabama. The narrative is often incorrectly referred to as a myth, probably following the charismatic Welsh historian Gwyn A. Williams's influential *Madoc: The Making of a Myth*, but formally it is a legend.

According to the story in its several variants, Madoc was a son of Owain Gwynedd (†1170), who, disillusioned by the internecine warfare of his family following the death of his father, gathered supporters and set sail for some unknown land in the far west in a small fleet led by his ship, traditionally known as *Gwennan Gorn*, and settled in the new land. Although the existence of an underlying medieval tradition of the Madoc legend cannot now be proved, the story has parallels with the Irish genre of immrama, and may reflect mythological beliefs about the location of the otherworld as an island in the west.

There are a few isolated references to Madoc in Welsh medieval poetry (see llywarch ap llywelyn), though without reference to his New World discoveries. Later, he came to be known beyond Wales (Cymru), as attested in late medieval Flemish poetry and in the early Spanish maps of the New World. The legend took on a new relevance and acquired its familiar geographical bearings in the 16th century with the new awareness of America in Britain during the time of the Tudor (Tudur) dynasty. Madoc was mentioned in Humphrey Lhuyd's history of Wales, printed by David Powel in *The Historie of Cambria* (1584). Dr John Dee, Queen Elizabeth I's astrologer, used Madoc as a way of persuading the Queen to embark on a new 'British Empire' in North America. The legend came

into play during the formation of a new national ideology with the American Revolution (1775–83), this time emphasizing the existence of a tribe of Native Americans who might be the descendants of Madoc and his companions. By the 1780s, stories of Welsh Indians had become commonplace in America. Some observers claimed these to be the Mandan people, then located in the Dakota territory, who were reputed to have blue eyes and speak Welsh (Gwyn A. Williams, *Madoc* 68–88).

The supposed similarity between Mandan, a Siouan language, and the WELSH language probably arose from the fact that English colonists were inclined to identify the unknown, unfamiliar Native American languages with the unknown language with which they were familiar, Welsh. This may have been aided by the fact that some of the sounds of Welsh, for example, *ch* [χ] and *ll* [ɬ], are also found in some Native American languages, but not in standard English. Nevertheless, there is no historical linguistic relationship between Welsh and any Native American language. The presence of blue eyes and blond hair among the Mandans can also be explained as a result of long-term contact with Europeans, since these features were not observed at first contact.

In 1791 Dr John Williams published his account of the Madoc story, which Iolo Morganwg (Edward WILLIAMS) included in one of his collections. 'Madoc fever' spread among the Welsh, and several schemes designed to go to 'discover' the Mandans were concocted. John Evans of Waunfawr in Caernarfonshire (sir Gaernarfon) went in search of them from 1792 to 1799, in the process of which he mapped the Missouri river, which, incidentally, assisted the Americans in their westward expansion after the United States acquired this territory in 1803. Robert Southey's poem 'Madoc', published in 1805 and identifying the Welsh Indians with the Aztecs, only added to the excitement. The Mandans turned out not to be Welsh-speaking and, tragically, the tribe was largely wiped out by smallpox in 1838.

The notion of a Welsh-speaking tribe deep in America was so fascinating to Welsh antiquarians and scholars of the Romantic period because it helped them define their own ethnicity and nationality by providing international proof for the historicity of their nation. A similar legend—that of a Welsh-speaking Slavonic tribe, the Sorbs or Wends, in what is now Poland—was discussed in Welsh antiquarian journals at the same time.

However, by the 1820s, the rapid exploration of the whole of America and advances in Welsh scholarship meant that the veracity of the legend began to be doubted. The famous essay 'Madoc: An Essay on the Discovery of America by Madoc ap Owen Gwynedd in the Twelfth Century' by Thomas Stephens, judged the best entry at the 1858 Llangollen EISTEDDFOD, should have laid the story to rest. However, its hold on the judges' imagination was so strong that they decided not to award him the first prize, and the essay was not published until 1892. In Welsh-American circles, newspaper and journal articles exploring the 'Welsh Indians' appeared well into the 1890s. The legend disappeared from view at the end of the First World War until it was resurrected as an academic subject in the latter half of the 20th century.

Mael Brigte mac Tornáin/Mac Durnan was abbot of Armagh (ARD MHACHA) and Iona (EILEAN Ì). Like Iona's founder COLUM CILLE and many of its early abbots, Mael Brigte belonged by descent to the Cenél Conaill branch of the powerful Northern Uí NÉILL dynasty. He seems to have been educated at Armagh, where he took over the abbacy in 888. Following the death of Abbot Flann mac Maíle Dúin of Iona in 891 he also became abbot there. This unusual arrangement reflects factionalism in the succession at Armagh during the 9th century on the one hand, and, on the other, the decline and turmoil of Iona after nearly a century of intermittent Viking attacks, to which the Hebridean monastery was particularly vulnerable. As a result, it is likely that Iona was actually unoccupied, or virtually so, at this time. Accordingly, Mael Brigte's activities focused on the mainland of Ireland (ÉRIU). He intervened in a tribal battle in 893 and ransomed a pilgrim of the BRITONS in 913 in Munster (MUMU). An illuminated IRISH gospel book attributed to Maeielbrithius mac Durnan

(probably Mael Brigte) is kept at the Lambeth Palace Library in London. It was donated to Christ Church Cathedral, Canterbury, by Mael Brigte's contemporary, the powerful Anglo-Saxon king Æthelstan (†939). In Mael Brigte's obit (†927) in the Annals of Ulster and *Chronicon Scotorum*, he is called *comarba Pātraic ocus Coluim Cille* (successor of Patrick [of Armagh] and Colum Cille [of Iona]).

The name *Mael Brigte* is Irish; it is made up of two inherited Celtic elements, and signifies 'the devotee (lit. tonsured one) of St Brigit'. As such, it is an interesting incidental witness to Brigit's cult in the Northern Uí Néill-dominated strongholds of the cults of Patrick and Colum Cille.

PEB

Mael Chiaráin ua Maighne was abbot of Iona (Eilean Ì) in 986, having succeeded Mugrón in 980. During his abbacy, the monastic community seems to have become intact again, following a series of Viking attacks. Among those who joined the monastic community at this time was the Dublin Viking king Ólafr Sigtryggson, who died there in 981. In 986 Iona was again raided by a group of Danish Vikings, and Mael Chiaráin and 15 monks were slain. His successor was Dúnchad ua Robocáin, who probably resided at Raphoe in Donegal (Ráth Bhoth, Dún na nGall), rather than on Iona.

PEB

Mael Coluim mac Cinaeda (Malcolm II of Scotland) was king of the Scots 1005–34. He was the son of Cinaed mac Mael Choluim (Kenneth II, son of Malcolm I) and an Irish princess from the plain of the Liffey in northern Leinster (Laigin). Mael Coluim played a major rôle in several internal dynastic struggles for the kingship of Alba. He slew his predecessor Cinaed mac Duib (Kenneth III) at Monzievaird in latter-day Perthshire in 1005. Dunkeld (Dún Caillen) in central Scotland was burned in 1027 in what was, according to the Annals of Ulster, an internal struggle in Alba. Mael Coluim was presumably directly involved since his daughter Bethoc married Crinan, abbot of Dunkeld. Mael Coluim had no male heirs, and his successor Dúnchad mac Crináin (Duncan I) was the issue of the union of Bethoc and Crinan. Following Mael Coluim mac Cinaeda's death, Mael Coluim's grandson Dúnchad was killed by Mac Bethad (the historical core of Shakespeare's *Macbeth*).

Mael Coluim's external policies include a dynastic marriage between one of his daughters and Sigurd, Norse earl of Orkney, in 1008. But the main thrust of his activities was towards Bernicia (Brynaich), the eastern English–Scottish border region, and he is of special historical significance in the consolidation of Gaelic Scottish power in the country south of the Forth (Foirthe). He raided Durham in 1006, but was driven back with heavy casualties by the Northumbrian earl, Uhtred. Together with his sub-king Owain ap Dyfnwal, known as Owen the Bald, of Strathclyde (Ystrad Clud), Mael Coluim inflicted a major defeat on the Northumbrian earl, Eadulf, at Carham on the river Tweed, then advancing to Bernicia's southern border at the Tees. About this time, he became a major benefactor of the church at Durham in present-day north-east England, thus restating his territorial challenge on the ecclesiastical front. His ambitions between the Tweed and Tees were forcefully countered by the Anglo-Danish king, Knut (Canute, Cnut), who conquered up to the present border on the Tweed and probably continued in an incursion into Lothian during 1031–2.

Mael Coluim died at Glamis in 1034 and was buried on Iona (Eilean Ì). He is the first king to be called King of Scotia as well as of Alba, by a contemporary chronicler (Marianus Scotus). Prior to his time, Scotia was more usually a name for Ireland (Ériu). Having no male heirs, Mael Coluim was the last king of Alba descended along the direct male line from its first Gaelic king, Cinaed mac Ailpín (†858).

Both the names *Mael Coluim* and *Cinaed* were common among the early Scottish leaders. Both are of Celtic derivation, though the element *coluim* (nominative *colum*)

is a borrowing of Latin *columba* 'dove', specifically a reference to St Columba or Colum Cille, founder of Iona, with Gaelic *mael* signifying 'the devotee' or 'disciple of' (lit. 'tonsured one'); the name's recurrence shows the strength of the Columban cult among the early kings of Scotland.

Mael Coluim mac Domnaill (Malcolm I of Scotland) ruled as king of Alba 942–54. Mael Coluim's reign may be seen as pivotal in the process of the extension of Alba's power towards and beyond the Solway into what had been an independent Brythonic kingdom, thus anticipating the boundary of latter-day Scotland. He was the son of *rí Alban* (king of Alba) Domnall mac Cusantín (Donald II of Scotland) and a direct descendant of Cinaed mac Ailpín, the first Gaelic king of Alba as the unified kingdom of the Picts and the Scots from *c.* 843. Mael Coluim apparently came to power peacefully, when his cousin Cusantín mac Aeda (Contantine II) abdicated for a monastic life at St Andrews in 943. During his kingship, Mael Coluim was an important figure in the struggle between the Viking kingdom of Dublin (Baile Átha Cliath) and the Anglo-Saxons over the control of York, the leading secular and ecclesiastical centre in northern England, which was at the time under Scandinavian domination and closely linked to Dublin. At first, Mael Coluim supported the Dublin Norse. Later on, after the Anglo-Saxon King Edmund of Wessex drove Ólafr Siggtryggson of Dublin from Cumbria, Mael Coluim was recognized as overlord of the subkingdom of Strathclyde–Cumbria (Ystrad Clud), and was thus viewed as a friendly presence on England's northern frontier. Mael Coluim was killed in an internal conflict with the men of Moray (Moireibh) in 954 near Dunottar; his obit in the Annals of Ulster accords him also the title *rí Alban*. He was buried at Iona (Eilean Ì).

On the name *Mael Coluim*, see the previous entry.

PEB, JTK

Mael Coluim mac Donnchada (Malcolm III 'Canmore' [from *Ceann Mór* 'big head' or 'great chief'], *c.* 1031–93) was the founder of the Canmore dynasty of Scottish kings. He was the eldest son of Dúnchad mac Crináin (Duncan I), who was killed and succeeded by his now infamous cousin Mac Bethad (Macbeth) in AD 1040. Macbeth was killed in battle in 1057, and Malcolm III eventually succeeded him to the Scottish throne.

The reign of Malcolm III was the longest in the 11th century, and the crown remained in the hands of the Canmore lineage until 1290. His second marriage to an Anglo-Saxon princess, Margaret (†1093), had a significant impact on Scotland (Alba). She began to introduce Continental and English influences to the Scottish court, and her highly pious outlook, influenced by her upbringing in newly converted Hungary, led to fundamental changes in Scottish religious practice. Margaret was canonized in AD 1250, and became the subject of probably the first biography of a Scottish sovereign ever written. Malcolm and Margaret had six sons, of whom three, Edgar (1097–1107), Alexander I (1107–24), and David I (1124–53), succeeded to the Scottish throne, as well as two daughters, of whom one—Edith, later known as Maud/Matilda—became queen of England, while the other, Mary, was mother of Queen Maud of England.

On the name *Mael Coluim*, see Mael Coluim mac Cinaeda.

PSH

Mael Rubai, St (*c.* 641–*c.* 722) was the founder of the monastery at Apor Crossan, present-day Applecross (A' Chomraich), in the Scottish Highlands. He was an important figure in the history of early Irish ecclesiastical foundations in what is now Scotland (Alba). Mael Rubai's name is spelled in various ways, depending on the period and linguistic context, including Maolrubha, Maelrubha, Mulray, Mourie, and Maree. Etymologically, it derives from the Old Irish *mael* 'bald, tonsured, servant of' and *ruba* 'bush, thicket, copse, spur of land'. It is Latinized as Malrubius, and he has been incorrectly identified with Saint Rufus, a Roman saint of the imperial era from Capua. Mael Rubai is mentioned in several Irish annals, including the Annals of the Four Masters and the Annals of Ulster. According to these and to genealogical references, Mael Rubai's father was Elganach (or Elgad or Mael-gonaich), a direct descendant through the male line of Niall Noígiallach, and his mother was Subtan or Suaibsech. Her uncle, with whom Mael Rubai studied, was St Comgall, the founder abbot of Beann Char (Bangor [Ireland]). Comgall was one of the Dál nAraidi, a sub-group of the Cruithin. The Old Irish words Cruithin and Cruithni also refer to the Picts, among whom Mael Rubai spent most of his career; therefore, confusion over his reputed Cruithnean origins is not impossible.

Mael Rubai founded Apor Crossan in 673. *Apor* is the Pictish cognate of Welsh and Breton *aber* 'river mouth' and *crossan* is ultimately from Latin *crux* 'cross', either through Old Irish or Pictish. Several other places in the north of Scotland take their names from Mael Rubai, including Loch Maree (Loch Ma-Ruibhe) and Kilarrow parish on the island of Islay (Cill-a'-Rubha, Ìle).

His death is recorded in the Irish annals under the year 722. A later tradition, that he was slain by Vikings, is unfounded. His feast-day is celebrated on 21 April in Ireland (Éire), and on 27 August in Scotland.

Arthur Mitchell, writing in 1860, maintained that the people of the area around Loch Maree referred to 'the God Mourie' rather than St Mourie, and quoted local ecclesiastical records from the 17th century which mention bulls being sacrificed to St Mourie on 25 August. These records also speak of 'pouring milk upon hills as oblations'. The latest of these sacrifices took place in 1678 on the Isle of Maree (Eilean Ma-Ruibhe) in Loch Maree, for the health of one Cirstane [Kirsten] MacKenzie. She recovered. The island is also the location of a well which is dedicated to the saint, reputed to be effective in the cure of lunacy, and the ruins of a 7th-century chapel.

AM

Maelgwn Gwynedd (†547) is the best documented 6th-century Welsh king, as he is castigated at length by his contemporary Gildas as the climax of the section of *De Excidio Britanniae* in which five kings are denounced. However, Gildas's accusations lack most of the details that would be of use to historians: no dates or datable events, no location for Maelgwn's court or limits of his realm, though Gildas does say that he was more powerful than most of his fellow rulers and had deprived many of their lives (all nameless). According to Gildas, Maelgwn left his first wife and throne to take holy orders, but the woman and church are not identified. He later returned to the secular world violently, killing his unnamed uncle the king and marrying the uncle's unnamed widow. And he was the patron of unnamed immoral praise poets.

The genealogies place Maelgwn firmly in Gwynedd: he was Cunedda's great-grandson and the great great-grandfather of Cadwallon (†634/5). By some point in the Old Welsh period (9th–12th century), the so-called mythological poetry of Llyfr Taliesin identified his court as Degannwy, overlooking the Conwy estuary in north Wales (Cymru), which is indeed a high-status post-Roman site. Because of his 547 death notice in Annales Cambriae and prominent naming in a synchronizing passage in Historia Brittonum (which makes him contemporary with Ida of Brynaich and the Cynfeirdd), Maelgwn has become a linchpin in the chronology of Dark Age Wales: the implications and historical value of these dates are discussed in the articles on Cunedda and the Five Poets. The idea that Maelgwn belongs to the generation after Arthur is part of the scheme

of LEGENDARY HISTORY in HISTORIA REGUM BRITANNIAE and can be understood as based on GEOFFREY OF MONMOUTH's use of the *Annales Cambriae* obit and textual arrangement of *Historia Brittonum*. That much of the Welsh legend of TALIESIN takes place at Maelgwn's court—where the protagonist challenges the king's uninspired bards—can be seen as a literary development of the idea that Taliesin and Maelgwn were contemporaries (as *Historia Brittonum* says) and that Maelgwn's court poets were wicked sycophants (as Gildas says). Although Maelgwn's reputation is sometimes negative in Welsh literature—owing no doubt to Gildas's florid denunciation—there was no attempt to write him out of history or remove him from the lineage of Gwynedd's first dynasty, who are, in fact, sometimes called *Maelgyning* for their famous ancestor. MOLIANT CADWALLON boasts of descent from Maelgwn. He is listed in the exalted company of Arthur and DEWI SANT at Mynyw (St David's) in the TRIADS ('Three Tribal Thrones', TYP no. 1).

A proverb concerning his death appears in the later B manuscript of *Annales Cambriae*: *hir hun Wailgun en llis Ros* 'the long sleep of Maelgwn in the court of Rhos'. The 17th-century antiquarian Robert VAUGHAN explains this proverb by recounting a traditional tale located at Llan-rhos near Degannwy: Maelgwn's retainers believed that he had overslept, but, when they went to rouse the king, they discovered that he had in fact died of the yellow plague.

The name *Maelgwn* is a compound of Celtic **maglo-* 'prince' (Old Irish *mál*) and **kuno-* 'hound, wolf'. The same name appears in a bilingual inscription from Nevern as Romano-British MAGLOCVNI and ogam MAGLOCUNAS, both genitive. Gildas writes Latin vocative *Maglocune*, which though it appears phonologically to be an Old Celtic form, implies ignorance that the nominative had originally been **Maglo-kū*. The name had split in two, Old Welsh *Meilic* from the old nominative as well as *Mailcun* from the oblique stem. The father of the Pictish king BRUIDE MAC MAELCON had the same name, which BEDA wrote *Meilochon*; chronologically, it is possible that this was Maelgwn Gwynedd, but we have no evidence either to confirm this possibility or rule it out.

Mag Roth, now Moira, Co. Down (Contae an Dún), was the site of a battle fought in 637, in which high-king Domnall mac Aedo of the Northern Uí NÉILL defeated the coalition of Congal Caech (also known as Congal Claen) of ULAID and Domnall Brecc of Scottish DÁL RIATA. Congal was killed there. This battle was to have important and historical implications, and pivotal significance is attached to it in several branches of early IRISH LITERATURE. Mag Roth is viewed from various vantages in several articles in this Encyclopedia. From the perspective of the writers of 7th-century Iona (EILEAN Ì), the battle broke the 575 'Treaty of Druimm Cett' between the northern Uí Néill and AEDÁN MAC GABRÁIN of Dál Riata. On these near-term political consequences for Ireland and north Britain, see LIBER DE VIRTUTIBUS SANCTI COLUMBAE; DOMNALL MAC AEDO; DOMNALL BRECC. In retrospect, the doctrine concerning Mag Roth in *Liber de Virtutibus* is of epochal significance, defining it as the milestone which divinely sanctioned the right of foreigners (i.e. the English) to rule the Gaels of Scotland (ALBA).

Mag Roth came to be viewed as the occasion for establishing the IRISH language as a learned written vernacular, cultivated alongside Latin in the MONASTERIES. In the bizarre account in 'The Scholars' Primer', it was at this battle that the renowned grammarian, legal author, and poet Cenn Faelad *sapiens* (learned man, monastic scholar) had his 'brain of forgetfulness' (*inchinn dermait*) struck from his head so that he was afterwards able to assemble and organize 'such an extent of poetry, words, and writing'; see AURAICEPT NA NÉCES; ÉRIU; IRISH LITERATURE [2] §2.

A second important Irish literary figure who, according to the literary tradition, was created as a psychic casualty of Mag Roth was Suibne, whose battle-induced madness and feral existence in the woods are central to the tales *Buile Shuibne* (Suibne's madness), *Cath Maige Ratha* (The battle of Mag Roth), and *Fled Dúin na nGéd* (The feast of Dún na nGéd);

see further SUIBNE GEILT; WILD MAN. As with Cenn Faelad, Suibne's horrific experience at Mag Roth was viewed ironically as beneficial because of the 'stories and poems' he produced in his madness; see SUIBNE GEILT §1. On the comparable battle-inspired prophetic madness of the Welsh MYRDDIN, see WILD MAN; ARFDERYDD. Underlying the literary rôles of Cenn Faelad mac Ailello, Suibne, and Myrddin, we can detect the primitive pre-literary idea that it fell to the traumatized battle survivor to convey his experience to his people in vivid words.

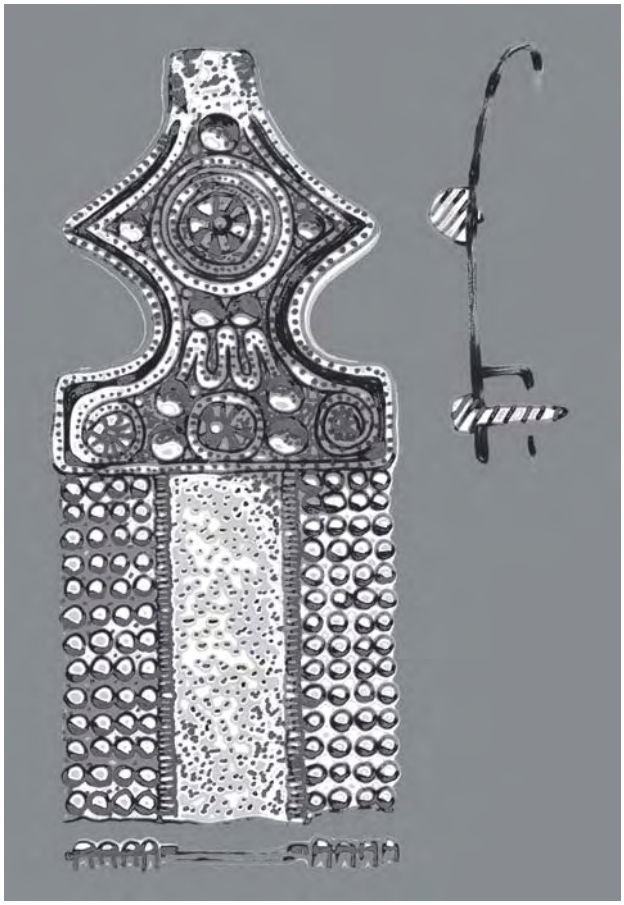
Drawing of a decorative scabbard plate from the Magdalenenberg burial



Magdalenenberg is a large HALLSTATT period tumulus discovered near Villingen, Baden-Württemberg, Germany. It has been recognized as the largest tumulus in the west Hallstatt province, with an original diameter of *c.* 102 m and a height of *c.* 8 m. The site is located on the southern edge of the modern town of Villingen, on the western side of a small wooded hill named Laible. It was identified as an artificial hill in 1887 when it still measured 100 m in diameter and c. 7 m in height. In 1890 an excavation on behalf of the town council of Villingen recovered the remains of the central burial chamber. The hill was completely re-excavated between 1970 and 1973 and later rebuilt *in situ*, to form an impressive landmark once again (Spindler, *Die frühen Kelten* 134). All the burials date from the early phase of the late Hallstatt period, Hallstatt D1, *c.* 625–*c.* 550 BC (Burmeister, *Geschlecht* 46).

The central rectangular burial chamber was surrounded by massive stone packing *c.* 30 m in diameter and 3.5 m in height. The wooden burial chamber itself, 8.2 m long, 6 m wide, and with an original height of *c.* 1.5 m, is the largest burial chamber of its kind known from central Europe (Spindler, *Die frühen Kelten* 135). The huge oak beams, from which the burial chamber was built, were remarkably preserved. Dendrochonology (tree-ring dating) determined that the oaks used for this construction were felled in 616 BC, at the very beginning of Hallstatt D1 (Friedrich, *Baubefunde der Perioden IIIb–Ia der Heuneburg* 172). However, dendrochronology also revealed that the burial chamber had already fallen prey to grave robbers in prehistoric times, by dating three wooden spades found in the tomb to 575 BC (Bittel et al., *Die Kelten in Baden-Württemberg* 498; Friedrich, *Baubefunde der Perioden IIIb–Ia der Heuneburg* 169–80). Besides the skeleton of the deceased, dislocated parts of which were found across the whole burial chamber, and the remains of a pig, which probably was a food offering included in the original burial (see FEAST), only a few of the original grave goods remained. Parts of a four-wheeled wagon (see VEHICLE BURIALS), a horse bit, and some toiletries (tweezers and a curette for removing ear-wax) could be recovered (Spindler, *Die frühen Kelten* 135–6).

For the remainder of the Hallstatt D1 period, Magdalenenberg was used for secondary burials, probably for the local community (Müller, *Prähistorische Zeitschrift* 69.211–3), with 126 of an estimated

140 secondary burials recovered during the excavations undertaken in the 1970s. These burials were situated in roughly concentric rings around the central burial chamber, and contain inhumations of people from several social strata. It has been assumed that burials at the site ceased with, or before, the robbing of the central chamber (Burmeister, *Geschlecht* 46–56). These graves also contained several pieces interpreted as foreign imports, among them a belt hook from the Iberian Peninsula (Mansel, *Europa celtica* 153–65).

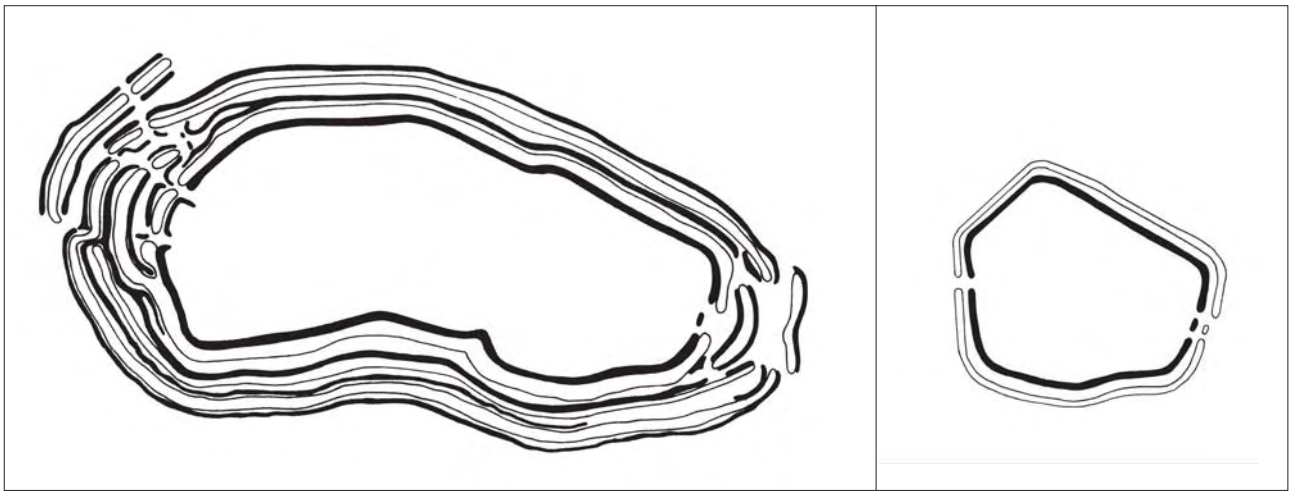
RK

Magdalensberg is a hill-fort located on a hilltop (1058 m in altitude) between the rivers Glan and Gurk in Carinthia (Austria), the ancient realm and Roman province of Noricum. It was occupied during the transitional period between the final pre-Roman Iron Age and the beginning of the imperial Romano-Celtic period, i.e. during the period when Celtic languages are well attested in the Alpine area. The site's position ensured control over one of the main trade routes from Italy to the Danube, as well as the Drava valley, thus controlling a route that linked northern Italy to Pannonia. The settlement, comprising the hill-fort and adjoining settled terraces, covered a surface of 350 ha (840 acres). While the occupation of the hilltop might date back to the 2nd century BC, the hillside was first settled in the 1st century BC. The site was finally abandoned in favour of Virunum (now Zollfeld) in AD 45 (this place-name is probably of Celtic origin, containing the root seen in Gaulish *viro-*, Irish *fear*, Welsh *gŵr* 'man').

In two buildings, one a timber and mud daub construction, the other a timber house, a large number of imported goods, including *terra sigillata* (Samian ware, a hard-fabric mass-produced earthenware made from the reddish-brown clay), northern Italian brooches, and other items which clearly originated in northern Italy prove the close trading relations with the Roman world. Over 300 inscribed objects are evidence for the two-way nature of the trade in the 1st century BC. The main export was iron, and iron made in Noricum had an excellent reputation in Roman times, according to remarks by Petronius and Pliny. The analysis of iron finds at the Magdalensberg has proved that ore was used to produce a technically accomplished steel there.

The evidence of Roman *denarii* rather than indigenous Norican silver coinage, together with the imported brooches and other foreign products even in the earliest strata suggest that the hillside settlement on the Magdalensberg was not founded until the area had come under Roman control, in other words, no earlier than 50 BC, or, even more likely, during the Augustan period (30 BC–14 AD).

Stone head of the indigenous woman from Magdalensberg, Carinthia, 1st century AD



Maiden Castle. The earlier Iron Age fort, which occupied the eastern end of the hilltop c. 500 BC is shown on the right. The plan of the hill-fort at its greatest extent c. 200 BC approximately 800 metres from east to west is on the left.

PEB

Maiden Castle is one of the largest hill-forts in Britain. It is located on the north side of the valley of the South Winterborne, 3 km south-west of Dorchester in south Dorset. The hill rises 132 m above sea level at the eastern end. The underground of the hill is dominated by chalk, and the surrounding area is good fertile soil and rich in iron. The site was occupied from the Neolithic to the late Roman period. In the later pre-Roman IRON AGE it was the main settlement of the Durotriges (Birkhan, *Kelten* 254).

The earliest evidence for human occupation is the early ditched hilltop enclosure of the type known as a 'causewayed camp'. It dates to the early Neolithic and consists of two concentric ditches on the eastern edge of the later fort. Remarkable finds are child burials and gabbro pottery, which was imported from west Cornwall (KERNOW) (Sharples, *English Heritage Book of Maiden Castle* 47). The local pottery is of the Hembury or south-western style. After the enclosure was abandoned a bank burrow was built, but evidence of domestic activity is rare before *c.* 500 BC, when Maiden Castle became an important industrial centre. Moreau suggests that there were around 4000 inhabitants *c.* 400 BC (*Die Welt der Kelten*). The early Iron Age hill-fort enclosed an area of 6.4 ha (*c.* 16 acres); it was protected by a rampart 8.4 m high and a V-shaped ditch, and had a single entrance in the north-west and a double entrance in the central east. In the middle Iron Age this settlement was extended to 19 ha (45 acres) to the west, an additional 3.5 m was added to the height of the rampart, and it was enclosed by a bank 2.7 m high.

During the period following the enlargement typical Iron Age houses were built on the site. Early excavators interpreted the material culture as of the HALLSTATT type, mixed with LA TÈNE elements (Wheeler, *Maiden Castle* 12), on the basis of Continental analogues. The pottery changed from standardized shouldered jars to a wide range of vessels and bowls. There is also evidence that the textile production and metalworking took place inside the settlement. The Roman invasion of BRITAIN under Claudius between AD 43 and 47 had a decisive impact on Maiden Castle. A so-called 'war cemetery' behind the inner bank of the entrance outworks, where the remains of a man with a spear-head or ballista bolt still embedded in his backbone were found, indicates that the hill-fort was probably stormed by Romans at this time, probably under the command of the general, later emperor, Vespasian (Sharples, *English Heritage Book of Maiden Castle* 121).

Δουνιον *Dūnion* meaning '(pertaining to) the hill-fort' is listed by PTOLEMY as the name of the town of the Durotriges; this may mean Maiden Castle, though Roman fort inside the Hod Hill hill-fort is

also possible (Rivet & Smith, *Place-Names of Roman Britain* 145). At around AD 70 the hill-fort was abandoned and the inhabitants moved to Durnovaria (Dorchester). However, the hilltop was still important to the identity and spiritual life of the community, as indicated by the fact that after AD 367—when Roman Britain was officially Christian—a Romano-Celtic pagan temple was built in the north-eastern area of the fort. After the temple was abandoned, the last evidence of occupation is a 16th- and 17th-century barn built in the eastern entrance (Sharples, *English Heritage Book of Maiden Castle* 130).

Sir Mortimer Wheeler undertook the first excavations on the site during the years 1934–7. In 1985, during an English Heritage rescue project to repair Maiden Castle, excavations were carried out by Niall Sharples.

Julia Weiss

Màiri Mhòr nan Òran (Màiri Nic a' Phearsain/Mary MacPherson/Màiri Nighean Iain Bhàin, 1821–98) is generally regarded as the foremost poet of the 19th-century Highland LAND AGITATION movement. Born and raised on the Isle of Skye (An t-Eilean Sgitheanach), much of her life was spent on the mainland, in Inverness (Inbhir Nis), Glasgow (GLASCHU) and Greenock (Grianaig), before she returned to her native island for the last years of her life. She composed over 9000 lines of verse, all dating to the 1870s and 1880s, and although she was able to read her own verse, she did not write any of it.

The catalytic event which prompted her to start composing at such a relatively late stage in her life was her apparently false conviction and imprisonment in 1872 for theft. Her claim of innocence is a recurrent theme in her verse and was a cornerstone of her poetic inspiration: *Se na dh'fhuiling mi de thàmailt a thug mo bhàrdachd beò* ('It is the shame I suffered which brought my poetry to life'; Meek, *Màiri Mhòr nan Òran* 110). Thus, Màiri's outrage at her own mistreatment by the authorities found release in verse, and in the crofters' campaign she found a mirror of her own struggle for justice. Her land agitation verse, which found outlets in the pages of pro-crofter newspapers and at meetings of Gaels in Glasgow, draws on the traditional functions of Gaelic poetry to praise heroes and to incite at times of conflict, to celebrate victories and to satirize enemies. The Bernera Rioters are celebrated in *Ceatharnaich Bheàrnaraigh* (Soldiers of Berneray), the victorious people of the Braes eulogized in *Òran Beinn Lì* (Song of Ben Lee), and the Gaelic-speaking electorate urged to vote for pro-crofting candidates in elections, as in *Brosnachadh nan Gaidheal* (Incitement of the Gaels). Enemies of the crofters such as Sheriff William Ivory become the objects of her SATIRE, as in *Òran Cumha an Ibhirich* (Song of mourning for Ivory). The English and the clergy are targets for much of her criticism, with the English representing those who prosecuted her in court and the perceived perpetrators of CLEARANCES, while the clergy as a body are censured for their failure to stand up for the Gaels' rights.

Although vigorous in her incitement and condemnation during the campaign for crofters' rights, Màiri Mhòr demonstrates a residual loyalty to the status of the CLAN chief, in her case Lord MacDonald, a loyalty which sits uneasily alongside her censure of the general conduct of Highland landlords with their disregard for their tenants. There is a tendency in her verse, in common with most of her contemporaries, towards nostalgia, in her case for the Skye of her youth, a sentiment heightened by her exile and by the fact that Glasgow Gaels would have formed the core of her audience. The strength of Màiri Mhòr's poetry lies in the overwhelming sense of injustice, both personal and communal, which underpins her compositions and in the way in which she both represents and fuels the increasing confidence of the Gaels in their own rights.

Màiri nighean Alasdair Ruaidh (Mary MacLeod, Mary daughter of red-haired Alasdair, *c.* 1615–*c.* 1707) was a leading SCOTTISH GAELIC poet of the 17th century. She was attached to various powerful families of the MacLeods, especially the MacLeods of Dunvegan and the MacLeods of Bernera (Beàrnaraigh). Màiri was born in Harris (Na h-Earradh) but spent much of her life at Dunvegan in Skye (Dùn Bheagain, An t-Eilean Sgitheanach), acting as nurse to three generations of children of the chiefly family (Watson, *Gaelic Songs of Mary MacLeod* xiv–xv). She had a particularly close relationship with Sir Norman MacLeod of Bernera, a near relation of the Dunvegan family; tradition relates that she composed *An Talla am Bu Ghnàth le MacLeòid* ('MacLeod's Wonted Hall') for him as an example of the kind of elegy she would produce in the event of his death (Watson, *Gaelic Songs of Mary MacLeod* 113–14). Màiri also spent some years in exile from Dunvegan—the islands of Mull (Muile), Scarba, and Pabbay in Harris variously described as her place of exile. The reasons for her banishment are shadowy; it appears that she offended the chief with one of her songs, but it is unclear in what way (see further MacInnes, *Scottish Gaelic Studies* 11.3–25). As a practitioner of an aristocratic, high-class type of vernacular verse, Màiri may have been seen as encroaching upon the territory of official poets attached to the chief. This suggestion surfaces again in the tradition that she was buried face-down in Rodel churchyard in Harris because she produced a style of poetry which was probably seen as the preserve of male poets (Matheson, *Trans. Gaelic Society of Inverness* 41.11–25).

Praise of leading men is the dominant feature of Màiri's poetry, in the form of elegies as well as poems addressed to living individuals. Several MacLeod gentlemen feature as the subject of her poetry, though she also composed verse to a MacDonald of Sleat (Slèite) and a MacKenzie of Applecross (A' Chomraich). In the poetry composed during her exile praise is interwoven with her longing for Dunvegan. Màiri's verse is characterized by her accomplished use of panegyric imagery, giving detailed if idealized vignettes of aristocratic life in the HIGHLANDS of her time.

Anja Gunderloch

Manannán mac Lir is an Irish mythological figure who figures in the native literature as the ruler of a mysterious marine or submarine kingdom, variously called *Emain Ablach* ('Emain of the apple trees' identified with the Isle of Man [ELLAN VANNIN]), *Mag Mell* ('the plain of games'), or *Tír Tairngiri* ('the land of promise'), all of which are designations for the OTHERWORLD. His name ('Manannán, son of the sea') reinforces the idea that he is a marine deity. His patronym was later re-interpreted as a personal name. MANAWYDAN fab Llŷr in the Welsh MABINOGI is sometimes regarded as a cognate figure. In SANAS CHORMAIC, the glossary of CORMAC UA CUILEANNÁIN (†908), Manannán is described as a famous merchant of the Isle of Man, observer of the skies and seasons, called by the Gaels and BRITONS alike *filius maris* or *mac lir* 'son of the sea'. It would therefore seem that the epithet *mab llŷr* was already attached to the Welsh figure Manawydan by around 900. However, the characters Manannán and Manawydan in their respective Irish and Welsh tales have little in common with one another apart from vaguely similar names and cognate epithets/fathers' names. These circumstances might be explained in either of two different ways: (1) the originally independent Manannán and Manawydan underwent a learned convergence at the hands of men like Cormac and his scholars, aware of both Irish and Welsh tradition, or (2) the story of an ancient hero and namesake of the Isle of Man gradually diverged in Ireland (ÉRIU) and Wales (CYMRU), though remaining recognizable due to the name. In either event, it is no doubt significant that the name for the Isle of Man, Old Irish *Mano*, genitive *Manann*, and Welsh *Manaw*, appeared to be contained in the two names. The Welsh patronym Llŷr sometimes appears as *Lludd* (see NÓDONS).

Manannán figures in the early Irish prose tales *Compert Mongáin* (Birth of MONGÁN), IMMRAM BRAIN MAC FEBAIL (The voyage of BRAN MAC FEBAIL), and SERGLIGE CON CULAINN ('The Wasting Sickness of CÚ CHULAINN'). In these tales his attributes variously include begetting a wondrous child

on a mortal woman through shape-shifting into the form of her husband, driving a chariot yoked to dolphins across the sea (which appears to him as a flowery meadow), and a cloak of forgetfulness which obliterates Cú Chulainn's memory of his lover from the Otherworld. In later texts he is counted among the Tuath Dé, and is, among others, a giver of magical gifts. He is an important figure in Manx literature and folk-tales, where popular tradition holds that he was the eponymous first king of the island.

Manawydan fab Llŷr (Manawydan son of Llŷr) is the name commonly given to the Third Branch of the Mabinogi. In the Second Branch, Manawydan goes to Ireland (Ériu) with his brother Brân the Blessed (Bendigeidfran), king of Britain, to rescue his sister Branwen. Upon his return, he discovers in the Third Branch that his nephew Caswallon has seized the crown of Britain for himself (see cassivellaunos). Having no wish to fight with him, Manawydan accepts Pryderi's offer of land in Dyfed, together with Rhiannon, Pryderi's widowed mother, as a wife. An enchantment falls on Dyfed, and Manawydan and Rhiannon, together with Pryderi and his wife Cigfa, travel to England to seek work. Upon their return to Dyfed, Pryderi and his mother are imprisoned in a magic fort, which then vanishes. Manawydan succeeds in securing their release by capturing the wife of Llwyd son of Cilcoed, the magician who had placed the enchantment on Dyfed to punish Rhiannon and Pryderi because of the ill treatment of his friend Gwawl son of Clud in the First Branch (see pwyll). In this branch and in the triads, Manawydan is known as 'one of the three golden shoemakers' and also as 'one of the three humble chieftains' of the Island of Britain. He is listed as one of Arthur's men in Culhwch ac Olwen and in a poem in Llyfr Du Caerfyrddin, while in Llyfr Taliesin his name is linked with Pryderi. The name Manawydan son of Llŷr corresponds closely with Manannán mac Lir, the Irish sea god; however, the characters are very different. Koch has suggested that his story derives from events connected with Caesar's invasion of Britain in 54 bc. Manawydan is presented in the Third Branch as a wise and patient figure who prefers to use words rather than the sword. Many have argued that the author of the *Mabinogi* had chosen Manawydan as the exponent of his own personal philosophy.

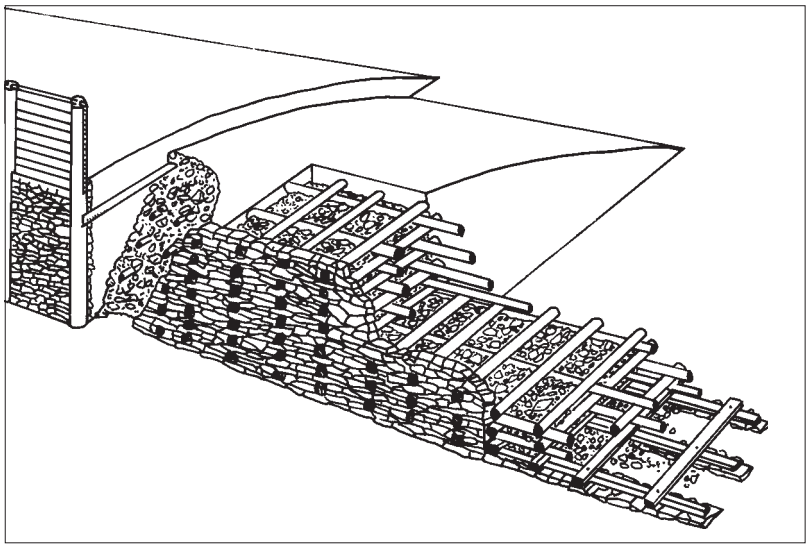
Manching, near Ingolstadt, Bavaria, Germany, is an oppidum which dates from the end of the La Tène period (La Tène C and D, final centuries bc). One of the largest prehistoric settlements in central Europe (Krämer & Schubert, *Die Ausgrabungen in Manching*), this site was one of the central places of the Celtic tribe of the Vindelici (Maier et al, *Ergebnisse der Ausgrabungen 1984–1987 in Manching*). Excavations undertaken in the years 1955–1961 and 1984–1987 have made it one of the best researched Celtic settlements from any part of Europe.

Around 1 km south of the Danube, near the mouth of the river Paar, an area *c.* 2.2–2.3 km in diameter is enclosed by a massive defensive wall with an original length of *c.* 7 km. Two small brooks which originally crossed the enclosed area were diverted along the outer side of the wall, thus giving an additional, natural defence to these sections (Krämer & Schubert, *Die*



Drawing showing two successive phases of the 'murus gallicus' at Manching, Bavaria, 2nd to 1st century BC

Ausgrabungen in Manching 23–6). Several more archaeological features have been located in the immediate vicinity of the oppidum itself, among them a VIERECKSCHANZE, *c.* 1.4 km to the south, and several iron smelting facilities (Krämer & Schubert, *Die Ausgrabungen in Manching* 44–7).

The wall, which originally surrounded the whole settlement, consisted of several straight segments which joined together at obtuse angles. It was originally built using the *murus gallicus* (Gaulish wall) technique, and was later rebuilt as a timber-framed wall (*pfostenschlitzmauer*; see further FORTIFICATION). There were probably four main gates in the wall, of which the east gate has been excavated (Endert, *Das Osttor des Oppidums von Manching*).

Inside the enclosed area the settlement consisted of an agglomeration of fenced farmsteads, as is typical for central European oppida. Three main settlement phases can be distinguished (Maier et al, *Ergebnisse der Ausgrabungen 1984–1987 in Manching* 56–64), which can be dated roughly to La Tène C, DIA, and DIB (that is, from around 200 BC and continuing into the 1st century BC; Maier et al, *Ergebnisse der Ausgrabungen 1984–1987 in Manching* 326–34). Settlement density varied markedly in the interior, and large areas of low density occupation were probably even used as farmland within the wall of the oppidum (Krämer & Schubert, *Die Ausgrabungen in Manching* 37–43).

Manre and Aure are two sites in the French *département* of Ardennes which contain large IRON AGE burial grounds (Le Mont-Troté and Les Rouliers, respectively). By the Final LA TÈNE period, on the eve of CAESAR's conquest, the area was under the control of tribes known as BELGAE. The two necropoleis, contemporary with each other and dating from the end of the HALLSTATT to the Middle La Tène period (that is, roughly 550–250 BC), contained 188 inhumations, of which one was a double CHARIOT burial (see VEHICLE BURIALS). In addition, 26 ENCLOSURES (20 round, 4 square, and 2 oval) were found, some earlier than the burials, which had partially cut through them. Five successive phases can be distinguished, comprising 19, 28, 39, 44, and 13 of the graves, respectively. In 32 burials the skulls had been removed (see HEAD CULT). Of the ditches which enclosed the burials, 119 contained pottery, mainly of the 4th and 3rd centuries BC (periods 3, 4, and 5).

Most of the women's graves contained jewellery, allowing a broad subdivision into richer and poorer female burials. In the 54 women's graves of the richer group, 18 TORCS, 32 bracelets, and 9 earrings, one of which was made of gold, were found. The 73 poorer women's graves contained 51 beads of coral, 33 bronze, 3 blue glass, and 1 amber bead.

The male burials are distinguished by weapons: 6 SWORDS, 3 daggers, 6 knives, 11 spearheads, one SHIELD.

Other items found in the graves of both sexes include 26 fibulae, 26 belt hooks, some objects for personal hygiene, and 62 animal offerings (24 pigs, 23 sheep, and 15 cows; see SACRIFICE).

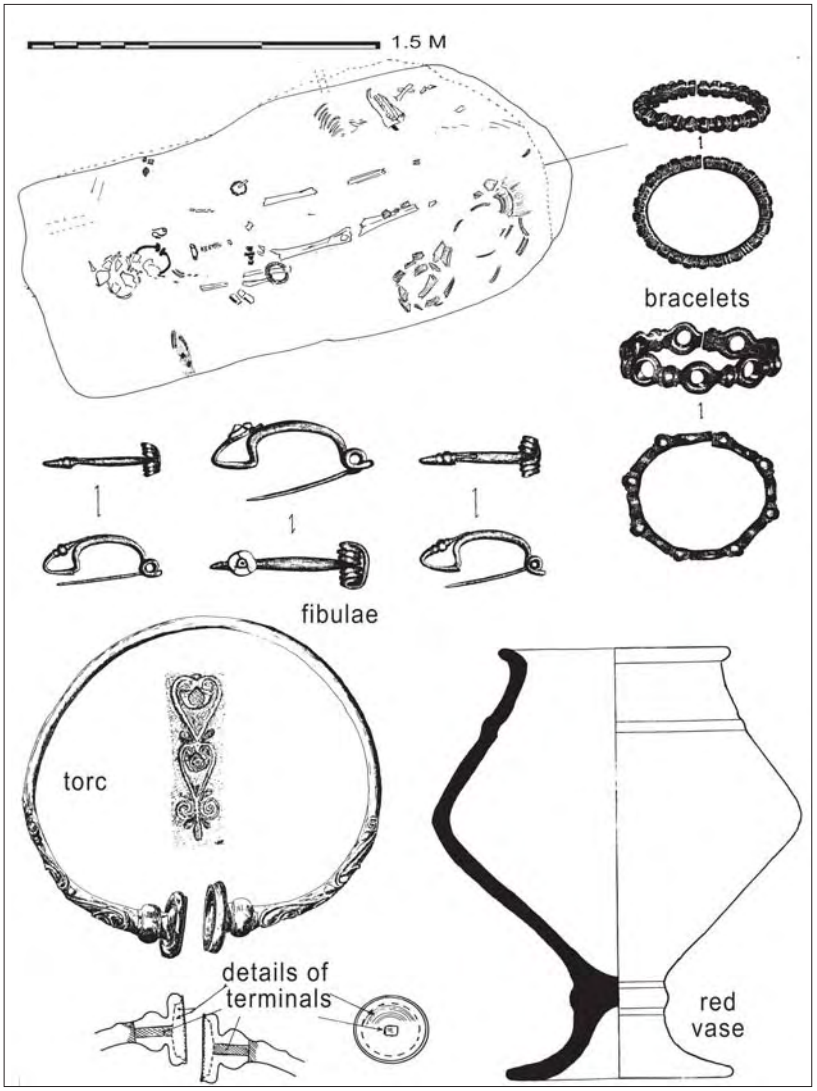
Manx language [1]

Like IRISH and SCOTTISH GAELIC, Manx (Gaelg in Manx) developed from Old Irish. The language became extinct when the last native speaker, Ned MADDRELL of Cregneash, died in 1974. Much material from the last generation of Manx speakers, however, was recorded on ediphone, on tape, and in phonetic transcription. The written remains of Manx are also extensive and include two versions of the Book of Common Prayer, the Bible, numerous ballads and folk-songs, sermons and hymns, a translation of Aesop's fables and of Milton's *Paradise Lost* in rhyming couplets (see MANX LITERATURE).

§1. MANX ORTHOGRAPHY

To those familiar with Irish or Scottish Gaelic, Manx orthography is remarkable. Unlike its sister languages, which are written in varieties of the historical GAELIC orthography, Manx uses a spelling system based on English phonetic values. Thus, Manx *ching* 'sick', *dreggyr*



Sketch plan of grave no. MT133.1 with details of its grave goods, Manre and Aure, Ardennes, France

'answered', *fockle* 'word', *jannoo* 'to do' and *mish* 'I, me' correspond to Irish *tinn, d'fhreagair, focal, déanamh* and *mise*, respectively. This orthography first appeared in print in 1707, but is likely to have originated in the mid-16th century. A somewhat different, but related, orthography was used *c.* 1610 by John Phillips, bishop of Man, for his translation of the Book of Common Prayer. Phillips's variant spelling system does not appear to have survived him.

Attention has been drawn to the similarities between Manx spelling and the orthography of the Scottish manuscript known as the Book of the DEAN OF LISMORE. Donald Meek has recently shown that Scottish Gaelic in the 15th and 16th centuries was not infrequently written in an English- or Scots-based orthography in parts of Gaelic Scotland (ALBA) which were close to English-speaking areas (*Gaelic and Scotland* 131–45). One such region from which we have an example of Gaelic in Scots orthography was Ayrshire and Galloway. This area had close connections with the Isle of Man (ELLAN VANNIN). At an early date, Galloway was actually part of the KINGDOM OF MAN itself. It is not unlikely that the distinct spelling system of Manx was introduced into the island during the 16th century from Scotland by Manx-speaking clerics with a view to translating the scriptures into the language.

Uniquely in the Gaelic world, Man was Gaelic in speech, yet within the Norse sphere of influence. The diocese of the island is SODOR and Man, where Sodor is Norse and means 'southern islands', a reference to the Hebrides as seen from Norway. The site of the Manx parliament is TYNWALD (Tinvaal in Manx), which is in origin Norse *Thingvöllr* 'hill of assembly'. We know of no classical Irish poets from Man, and there were no bardic schools there. This apparent lack of a Gaelic literary tradition in Man was probably the reason why the language was not written until the Reformation period.

§2. THE DISTINCTIVE FEATURES OF MANX

Phonetically, Manx was close to the Irish of east Ulster (see ULAID) and the Gaelic of south-west Scotland. The similarities between Manx and Scottish Gaelic are so great that the two are usually classified together as Eastern Gaelic. In Eastern Gaelic the Old Irish present tense has acquired a future sense, and the present is usually expressed by periphrasis. Thus, Irish *tig sé* 'he comes' is etymologically identical with Scottish *thig e* and Manx *hig eh*, which both mean 'he will come'. 'He comes' is *tha e a' tighinn* in Scottish and *t'eh cheet* in Manx, respectively (lit. 'he is coming').

Unlike other Gaelic dialects, Manx did not develop an epenthetic vowel between *r, l* and a following consonant. Thus, *jiarg* 'red' and *jiolg* 'thorn' are both monosyllabic. In Manx, the reflex of *-sc-* has become *-st-*, written *sht, st*, for example *ushtey* 'water' and *fastyr* 'evening' (Old Irish *fescor*). Manx also exhibits the curious phenomenon known as pre-occlusion. When a stressed syllable ends in *m, n* or *ng*, the consonant has developed an unexploded homorganic stop immediately before it. Thus, *trome* 'heavy', *bane* 'white' and *lhong* 'ship' are pronounced [tro^{b}m], [bɛ:^{d}n] and [lugŋ] respectively.

Manx also stands apart from Irish and Scottish Gaelic in that its inflection and syntax have been so de-Gaelicized that the language has many of the features of a pidgin. The particle *ag* has become fused with the verbal noun in many verbs which begin in a vowel. Thus, *gra, gee, ginsh, giu* (< *ag ibhe*) are the Manx verbs for 'say', 'eat', 'tell' and 'drink', respectively. Manx has largely dispensed with the difference between dependent and independent forms of the verb in relative sentences and questions. Manx says '*C'raad t'ou* (< *ta ou*) *goll*?' 'Where are you going?' where Irish prefers '*Cén ait a bhfuil tú ag dul*?' Manx has also almost entirely abolished the autonomous forms of the verb. In Manx, for example, one says '*Va mee ruggyt ayns Nherin*' 'I was born in Ireland', where Irish would say '*Rugadh in Éirinn mé* '. Most remarkably, Manx uses the substantive verb *ta* (cognate with Latin *stat* 'stands') where the usage of the other Gaelic languages demands the copula *is* (< INDO-EUROPEAN **esti* 'is'). Some commentators have unconvincingly suggested that the many non-Celtic features in Manx are a result of English influence. In the early 17th century there was little, if any, English spoken in Man, yet Phillips uses *ta* widely for *is* in his translation of the Prayer Book. Phillips writes, for example, *kré ta duyne gy vel us agyntagh er*? 'what is man that thou art mindful of him?', *ta fokylyn yn chiarn fokelyn glan* 'the words of the Lord are pure words' and *Ta knock Seion ynyd alin* 'The hill of Sion is a fair place'. Comparable expressions would be quite impossible in Irish or Scottish Gaelic. The partial pidginization of Manx is best ascribed,

not to English, but to the earlier contact with Norse, a language itself closely related to English.

Some Norsemen had begun to settle in Man as early as *c.* AD 830. Within a generation or two there were probably three languages in the island: the Gaelic of the original inhabitants, the Norse of the Viking settlers, and a variety of Nordicized Gaelic. Because the Norse were the dominant group in the island, it is reasonable to assume that in time their Nordicized Gaelic eventually displaced the earlier Gaelic of Man.

§3. MANX AND THE IRISH OF MUNSTER

A further remarkable feature of Manx is its lexical and other similarities to the Irish of Munster (Elsie, *Dialect Relationships in Goidelic*). Manx *mooar* 'great' and *jarood* 'forget', for example, are immediately reminiscent of the Munster forms *muar* and *dearúd*. The most striking correspondence between Manx and the Irish of Munster (An Mhumhain, Old Irish MUMU) lies in the matter of word-stress. In most words, Manx has a pattern of stress identical with Ulster Irish and Scottish Gaelic, e.g. *skaddan* 'herring' and *beggan* 'a little', both stressed on the first syllable. In some words, however, Manx exhibits Munster stress, where the emphasis is on the long second syllable, for example, *bug'gane* 'goblin' and *faa'saag* 'beard'. There are even words in Manx which exhibit variants with both varieties of stress, for example, *caraig* 'beetle' (Irish *ciaróg*) which in Manx has two forms: ['karog] or [ke'rɛ:g].

The evidence suggests that initial stress is the original pattern. Forward stress is therefore likely to be a later phenomenon. Attempts have been made to explain the differing stress patterns in Manx by assuming that both the shortening tendency and the stress-shifting tendency were present at different times in the language. This explanation has little to recommend it; if both propensities were present in Manx, both ought to be found in the other Gaelic dialects also. Yet Manx alone exhibits such a mixed pattern of stress. It is more probable that forward stress in Manx is connected with the only other Gaelic dialect that exhibits such a feature, the Irish of Munster.

All the early kings of Man about whom we know anything were either Gaelicized Norsemen from Waterford (Port Láirge) or members of the O'Briens of Thomond (Tuadh Mhumhan, north Munster). In every case we can be sure that they spoke the Gaelic of Munster. If the Irish of Munster and the Norse of Munster alike had connections with Man, and indeed were kings of Man at various times in the 11th and 12th centuries, it is not difficult to imagine that their Irish left its mark upon the Gaelic of Man. The population of Man was so small that even a relatively limited number of speakers could have had far-reaching effects upon the linguistic character of the island.

§4. THE VOCABULARY OF MANX

The Manx lexicon contains several interesting archaisms. A noteworthy example is the expression *Laa'l chybbyr ushtey* 'Day of the water font' for Epiphany, a reference to the practice of blessing holy water for the following year on 6 January. Another striking term is the common word *eirinagh* 'farmer'. This appears to be an extended use of the Irish *airchinneach* 'lay tenant of a bishop'. In the Isle of Man the bishop was for centuries the most important landowner. MANX SURNAMES are also distinctive. Irish *mac* 'son' is usually reduced to *K*, *C*, or *Qu* in them to give such forms as *Comish* < *Mac Thomáis* 'son of Thomas', *Kermode* < *Mac Dhiarmada* 'son of Dermot' and *Quayle* < **Mac Fáil* < **Mac Páil* < *Mac Póil* 'son of Paul'.

Manx language [2] cultural societies in the 19th century

Before the founding of Yn CHESHAGHT GHAILCKAGH in 1899, the 19th-century cultural movement in the Isle of Man had seen two main societies whose objects related in part to the MANX Gaelic language.

The first, the Manks Society for Promoting the Education of the Inhabitants of the Isle of Man, Through the Medium of their own Language, was

founded in 1821 as a response to two organizations in Scotland (ALBA) and Ireland (ÉIRE): the Society for the Support of Gaelic Schools, and the Irish Society for Promoting the Education of the Native Irish, Through the Medium of their own Language. It was, however, more of an attempt to promote Protestantism (see CHRISTIANITY) in the form of religious tracts translated from English than to promote Manx Gaelic as a viable community or literary language.

The second, the Manx Society for the Publication of National Documents, was founded in 1858. Its object was to be 'the publication of all the valuable and scarce Books, or Parts of Books, relative to the History and Antiquities, the Religion and Laws, the Charities and Education, the Fishery and Agriculture, the Interests and Rights of the Isle of Man'. Although one of its aims was to collect and preserve all available remains of the Manx language, A. W. MOORE noted in vol. 2 of his journal, *The Manx Note Book*, in 1886 that this had only resulted in the republication of Dr Kelly's *A Practical Grammar of Ancient Gaelic* (1859) and, in 1866, *An English and Manx Dictionary / Fockleyr Manninagh as Baarlagh* (see DICTIONARIES AND GRAMMARS). Nevertheless, the Manx Society's final volume was an edited version of Bishop Phillips's translation of the Book of Common Prayer into Manx Gaelic (1610) by A. W. Moore, with the assistance of John RHŶS, and printed by Oxford University Press on behalf of the Society (1893–4; see MANX LITERATURE [2]). The Society met for the last time in 1892, but was not disbanded until 15 years later in 1907, leaving behind it some 33 volumes.

Manx language [3] death

In socio-historical and sociolinguistic terms, the decline and death of Manx can be summarized as follows. After the passing of Man (ELLAN VANNIN) into the English Crown dominions in 1399, English began to establish itself as the language of administration and law, and of the towns, where it existed alongside Manx without displacing it. Because of Man's isolation and owing to the necessity of the few English settlers for their sustenance to cultivate the goodwill of the Manx people, the small world in which Manx existed was thus initially protected. However, the language became increasingly exposed to English from *c.* 1700 onwards, due to a changing set of circumstances brought on essentially by SMUGGLING or 'the Running Trade'; participation in the Trade led to the revesting of Man in the British Crown, which, in turn, led to impoverishment in Man (see REVESTMENT). This resulted in the EMIGRATION of Manxmen (and others) in the latter part of the 18th century. Simultaneous in-migration of English speakers *c.* 1800–20 and further emigration from the Manx heartland during the 19th century began to tilt the balance (*c.* 1840–80) in favour of English. The advent and increase of tourism and a more organized system of EDUCATION imported from England during these years hastened this trend, with the result that those born to Manx households *c.* 1860–80 became the last generation to receive Manx from the cradle.

In line with a general trend in Western INDO-EUROPEAN languages away from synthetic (highly inflected) towards analytical structure (isolating units of meaning), Manx progressed in this direction more so than her sister languages in Ireland (ÉIRE) and Scotland (ALBA). Looking at the decline of Manx in formal linguistic terms, a definite trend towards simplification and reduction can be seen. Language death in Manx affected and attacked right across the spectrum: its phonology (both vowel and consonant phonemes), and its morphophonology (initial and final mutation, i.e. systematic and meaningful modification of sounds used in combining words in sentences), which inevitably lead to simplification in its morphology. Mutation and gender are mutually supporting systems, and the reduction of one will necessarily involve the other. The loss of final mutation, which led to indistinctiveness between singular and plural marking in the nominal system, resulted in morphological innovation in the introduction of a suffix plural in order to maintain number distinction. In the phonology, the main result was (a) wild allophonic variation (i.e. a meaningful sound could be pronounced in widely varying ways), particularly in the vowels, which leads to indistinct perception, (b) loss

of the palatalization rule ('broad' vs. 'slender' consonants as in IRISH and SCOTTISH GAELIC), which leads to indistinctiveness in number marking (corrected by the application of a suffix), and (c) the loss of fortis-lenis and neutral-palatal contrast in the resonants (/L, N, R/) which would have led to indistinctiveness in tense marking in verbs with an initial resonant.

Concomitant with this was the significant introduction of confusion in the morphosyntax and syntax of Late Manx (19th century), whereby loss of competence in expressing tense in the verbal system and the introduction of standard answer forms in 'yes–no' questions could lead to interference in communication and understanding. In addition, the copying and borrowing of idiom and lexemes from English into Manx syntax led to Manx becoming virtually a code for English. However, the final deathblow to the language was the non-use of Manx over a long period of time, which led to inadequacy of expression and uncertainty of idiom, i.e. to significant reduction in the ability of Manx to function as a viable language. This, along with the negative social prejudices disadvantaging Manx, was significant and decisive in the decay and demise of Manx as a community language. The main destructive causes of language death in phonology, morphosyntax and syntax, lexicon, and phraseology, have, as if in a pincer movement, conspired to extirpate Manx altogether.

Manx literature [1] overview

§1. EARLY MAN AND THE GAELIC TRADITION

From the earliest emergence of MANX, and throughout subsequent stages of the language, when it developed in a manner identical to or closely resembling that of the native languages of Scotland (ALBA) and Ireland (ÉRIU), Man (ELLAN VANNIN) seems also to have shared a similar bardic tradition. Man is mentioned in 'Cormac's Glossary' (SANAS CHORMAIC); SENCHÁN TORPÉIST, the celebrated semi-legendary 7th-century Irish bard, is supposed to have described visiting the island and being impressed by its literary school. A priori, it seems unlikely that any such organized endeavour would have survived the English takeover of the island in 1289, since Gaelic culture lacked influential patrons in Man, in contrast to other Gaelic-speaking areas. Yet, Aodh Mac Aingil, poet, master of literary IRISH, and briefly Bishop of Armagh (ARD MHACHA), was somewhat mysteriously reputed to have been sent to Man from Co. Down (Contae an Dún) in 1585 to further his education, presumably in poetry. Any conclusions must remain speculative, since there is no surviving Manx literature from this period.

§2. EARLY MANX TEXTS

The earliest datable work in Manx is the so-called *Manannan Ballad* or 'Traditionary Ballad', the composition of which is tentatively dated to *c.* 1500. This poem outlines Manx history from the introduction of CHRISTIANITY onwards, and was preserved in manuscript form in the 18th century, in connection with the contemporary enthusiasm, largely politically motivated, for the recovery of former oral traditions. In the main, surviving or recovered texts in Manx tend to be religious in character and content, and there is a preponderance of translations or adaptations of already existing texts, usually from English, other CELTIC LANGUAGES, or Latin. A major achievement was the translation into Manx by Bishop John Phillips of the Book of Common Prayer (1610; see MANX LITERATURE [2]). The work survives in manuscript from *c.* 1630, though two centuries were to pass before a printed version became available.

The first full-length text to be published in Manx was *The Principles and Duties of Christianity* (1707) by Thomas Wilson. An enlightened and enterprising pragmatist, Wilson (bishop of SODOR and Man 1697–1755) also set in motion the translation of the Bible into Manx. St Matthew's Gospel, translated *c.* 1728, was published in 1748, and a revised version, together with the other Gospels and the Acts of the Apostles, appeared in 1763, the Epistles and Revelation following in 1767; the appearance of the Old Testament in its entirety, together with part of the Apocrypha, com-

pleted the biblical translation project in 1775. The Manx Bible, translated by diverse hands, established a written standard for the language, and remains a supremely important source for our knowledge of Manx.

Texts published at around the same time as the completion of the biblical project include Paul Crebbin's translation, *Yn Fer-raauee Creestee* (The Christian Monitor, 1763), and Thomas Wilson's *Shibber y Chiarn* (The Lord's Supper, 1777). In 1796 Thomas Christian published an abridged adaptation of Milton's 'Paradise Lost' in heroic couplets. While the subject matter is Milton's, *Pargys Caillit* transfers the sense rather than the literal meaning of the original: the text has undergone such a thorough rearrangement and reprocessing that the result may be said to fall half-way between a translation proper and an original work on an identical theme. Homilies, catechisms, sermons, and a translation of Bunyan's *Pilgrim's Progress*, all dating from the late 18th and early 19th centuries, survive in manuscript form.

The 'carvals' make up the principal body of original and uniquely Manx texts. These songs on religious themes, ranging from 50 to 300 lines in length, offer the greatest interest. This genre continues the traditions of the professional Gaelic poets of the Middle Ages. Many carvals have a Christmas theme, while others treat more abstract subjects such as charity and temperance, feature the fall of Man or the Last Judgement, or focus on one specific biblical personage. Some 150 have been collected, of which A. W. Moore published around 75 in 1891 as *Carvalyn Gailckagh*.

Non-religious compositions in Manx included *Baase Illiam Dhone*, a lament for the Manx martyr and patriot William Christian, executed in 1662. This eulogy, like the well-loved folk-song *Ny Kirree fo Niaghtey* (The sheep under the snow) dated to 1700, and the 'Fin and Oshin' fragment, from the Gaelic tradition (see FIANNAÍOCHT), were all recovered in the 18th century. Apart from religious themes, the emphasis in Manx writing has until recently concentrated on folkloristic and anecdotal reminiscences. Edward Faragher (1831–1908) recorded, at the instigation of Archdeacon Kewley, recollections of his life as a fisherman, in addition to composing verses and translating Aesop's fables into Manx Gaelic. At the time, only the latter were published; however, the original prose has now been printed in a bilingual edition as *Skeealyn 'sy Ghailck: liorish Neddy Beg Hom Ruy / Stories in Manx*. John Clague (1842–1908) published *Cooinaghtyn Manninagh / Manx Reminiscences*, a collection of folklore and anecdote, in 1911 (see FOLK-TALES [3]).

§3. THE ERA OF THE LANGUAGE MOVEMENT

As regards more solid and sustained contributions to original Manx writing, the next half-century was a period of relative fallowness as far as original literature was concerned. During this period, the movement to preserve Manx took the form of a linguistic study of the language, supported by lexicographical endeavours such as Douglas C. Fargher's ambitious *Fargher's English–Manx Dictionary* (see DICTIONARIES AND GRAMMARS [3]) and the crucial project of recording the surviving native speakers.

Since the 1970s, however, an increased level of interest in the Manx language and support from several sources, both official and unofficial, have encouraged the production of new original works in Manx, as well as translations, adaptations and republications. An important example of the latter is *Pargys Caillit*, reissued, together with 'The Hermit', in 1995, with an introduction and notes by R. L. Thomson. However, the preoccupations reflected in modern original works differ markedly from those evidenced in the earlier literature. Lewis Crellin, John Crellin, Colin Jerry, and George Broderick cooperated on the volume entitled *Skeealaght* (Storytelling), published by Yn Cheshaght Ghailckagh (The Manx Society). In 1979 Broderick's new English translation from the original Latin of the *Chronicles of the Kings of Man and the Isles* appeared, accompanied by a partial translation into Manx by Brian Stowell and Robert Thomson. John Gell, who had for seven years published the Manx-language magazine *Coraa Ghailckagh* (Manx voice) on behalf of Yn Cheshaght Ghailckagh, published the bilingual text *Cooinaghtyn My Aegid as Cooinaghtyn Elley* (Reminiscences of my youth and further reminiscences) in 1977. At the time of his death in 1983 Gell was working on a full-length novel in Manx. In 1978 Colin Jerry published the first of his booklets entitled *Kiaull yn Theay* (Music of the people.) Other small collections of hymns and songs in Manx followed, such as Fenella Bazin's *Ree ny Marrey* (King of the sea). Song lyrics, both new and recovered, constitute an important area of activity; the efforts of Colin

Jerry, Robert Carswell, and others have extended the sphere of interest in the Manx language by marrying it to the strong musical traditions of the community.

Latterly, the Manx language has enjoyed some measure of official government support, and since the 1990s literary endeavours have been encouraged by various awards for new Manx writing within all genres. Robert Corteen Carswell, founder and former editor of the Manx-language magazine *Fritlag* (The rag), was the first recipient of the Allied Irish Bank's prize for original work in Manx Gaelic, awarded for his volume of poetry, *Shelg yn Drean* (Hunt the wren, 1994). In 1992 Adrian Pilgrim, who has produced numerous songs and hymns, won the 'Poetry in Manx' category at Yn CHRUINNAGHT (a week-long inter-Celtic festival held annually at Ramsey) for his *Lhie ny Greiney* (Sunset), possibly the first sonnet ever to be published in Manx. Another prize-winning author and translator is Joan Caine.

Brian Stowell has reached a wide audience through the publication of weekly instalments of his popular and original 'Vampire' serial, annotated for the ease of learners, in the *Manx Independent* newspaper. He has also published a Manx-language translation of *Alice in Wonderland*. In 1997 Stowell published a brief overview of contemporary Manx poetry, illustrated by examples from his own work and that of Robert Carswell and Adrian Pilgrim, in *Writing the Wind: A Celtic Resurgence* (ed. Crowe). Other works currently available include stories translated from Welsh by Arthur S. B. Davies.

The numerical paucity of surviving original Manx-language texts is in part attributable to the strength of oral rather than written traditions, as well as to other socio-economic and cultural factors. The bias towards religious texts is easily explained by the dominant rôle formerly played by the Church and its officials in EDUCATION and in society at large. The preponderance of translated works reflects the traditional Manx duality of attitude towards their own intellectual validity and that of their language. As the output of modern writers in Manx gains momentum and increases in ambition and confidence, achieving ever-higher standards in respect of literary quality, a Manx literary tradition is gradually establishing itself and attaining distinction. The numerical upsurge of Manx speakers and learners encourages the conviction that new Manx writing will find an appreciative audience among present and future generations.

Jennifer Kewley Draskau

Manx literature [2] the Manx Prayer Book and Bible

The Anglican Book of Common Prayer has twice been translated into MANX. The first version is also the first major text extant in Manx in a nearly contemporary manuscript. From external evidence we know that it was completed by John Phillips (a native of north Wales, rector of Andreas and archdeacon of Man 1587–, bishop of SODOR and Man 1605–33), with the assistance of Hugh Cannell, in 1610/11. The unique manuscript dates, on internal evidence, from around 1630. The translation is made from an English version of 1604, issued by James I after the Hampton Court conference, deriving for the most part from the second Prayer Book of Edward VI (1552). Contemporary criticism suggests that the orthography was devised by Phillips himself, and was unfamiliar to the critics. Its character is roughly English as regards the consonants, but for the vowels WELSH appears to be the model, including a high frequency for the letters *w* and *y*. (This use of *w* is concealed by the printed edition, which uses *u* to represent both the *u* and *w* of the manuscript.) The spelling has a good deal in common with that used by English speakers in the

16th and 17th centuries in representing Irish placenames and personal names, except that the distinction of palatal and non-palatal consonants is generally made, more widely even than in the later spelling. This feature of the spelling system suggests that palatalization (that is, the double set of opposed 'broad' and 'slender' articulations found in all the medieval and modern GOIDELIC languages) was in Manx more striking to the English or Welsh ear than the corresponding consonants in SCOTTISH GAELIC and IRISH. Phillips died in 1633, and his translation was not printed until 1893–4.

The second version is based on the English post-Restoration revision of 1662, in which all the biblical matter (except the Psalter) was replaced by the Authorized Version of 1611. The great bulk of the text had therefore to be translated afresh, but the Psalms were only lightly revised, and remained very close to the older version. This revised version of the Psalms was carried over to the Bible unchanged either to save labour or to avoid questions arising from different renderings of the same text. The first edition of this second version, in the now established spelling, was printed in London in 1765 and frequently thereafter, with some corrections from the New Testament of 1775.

The translators were necessarily members of the clergy, since no one else who knew the language was literate in English and used to translating the one language into the other. The final leaf of the 1765 edition declares the translation to have been made by the clergy of the diocese under the direction of Bishop Hildesley, and subject to the revision of Matthias Curghey, Philip Moore, and James Wilks. Hildesley was not competent to take part in the translating, but was very active in soliciting funds for publication.

The liturgical parts of the Prayer Book are complete in the Manx version, except for the Prayers to be used at Sea, and the Forms of Ordination, but with the rubrics left in English, unlike Phillips's version, which is completely Manx. The 1765 version also omits all the preliminary matter, except the Proper Lessons for Holy Days and Sundays throughout the year, and the Proper Psalms for certain days. In later editions, the Order for reading the Psalter and other Scripture, the Calendar and Lectionary, and the Rules for Feasts and Fasts and for finding Easter, were added, entirely in English. The only other item added in the later editions is the selection of Metrical Psalms in Manx authorized by Hildesley in 1761 on the recommendation of the Vicars General Robert Radcliff and Matthias Curghey, but apparently circulated at first in manuscript only.

The translation of the Bible begins with Thomas Wilson (bishop 1698–1755). (No evidence exists for the earlier belief that Phillips had translated the Bible.) Tradition relates that he and John Curghey (Braddan) and William Walker (Baflaugh), his Vicars General, began the work while imprisoned together in Castle Rushen in 1722 in the course of a quarrel between Governor Home and the bishop. The first trace of it, however, is a version of St Matthew in 1748, in a limited edition for the clergy, which seems to have been in the nature of a trial. Here, the enterprise seems to have paused, though there are hints that further books were being or had already been translated. The four Gospels and Acts appeared in 1763, by this time encouraged by Wilson's successor, Mark Hildesley (bishop 1755–72), with the Epistles and Revelation in 1767. The survival of some of the translators' drafts shows that this second volume had been apportioned among some of the clergy and then edited by Phillip Moore.

Hildesley adopted the same method in tackling the Old Testament. This appeared in two volumes printed at Whitehaven: in 1771–2 Genesis to Esther (of which some drafts also survive), and in 1773 Job to Malachi, with Wisdom and Ecclesiasticus from the Apocrypha. A revised edition of the New Testament, uniform with the two volumes of the Old, followed in 1775. The Bible was printed in one volume (without the apocryphal books) in 1819, and a reprint of this issued in 1979. The remainder of the Apocrypha, apart from Maccabees, was published from a manuscript of uncertain provenance, also in 1979. Both the Prayer Book and the New Testament continued to be reprinted at intervals during the first half of the 19th century.

The translation is for the most part made from the text of the English Authorized Version, with occasional use of the marginal alternatives. It might be thought that the translators, who all had Latin and Greek, would be a little more independent, and there is evidence in the drafts that alternative interpretations from the Septuagint were occasionally offered, but rejected by the editors, so that it may be that the translators' remit excluded criticism of the Author-

ized Version text. They were clearly aware of the pitfalls for the unwary in words that had changed their meaning since 1611, and render them appropriately. The main departures from the Authorized Version are to be found in obscure passages in the prophetic books which, rightly or wrongly, are clarified. One thing the editors did not do was to correct the grammar of the translators, and therefore the language varies considerably from one book to another, probably with the age and personal history of the writer. The spelling, however, is almost perfectly uniform throughout—a tribute to the copyist and proofreader, John Kelly.

Manx literature [3] Manx folklore

Manx folklore is a unique mixture of the folklore o the surrounding countries of the Irish Sea. As a result, many aspects of Manx folklore are variations of broader British and Irish folkloric themes but, in contrast, others are unique to the Isle of Man (ELLAN VANNIN).

The first published account of Manx folklore appeared in 1731 and, in common with other early Manx publications, concentrated on folk and fairy stories (see FOLK-TALES). The first accounts, containing CALENDAR customs, rites of passage, and other folkloric themes, were primarily examples of commercial antiquarianism, and appeared in 19th-century guidebooks and tours of the Isle of Man. As a result, little or no folklore was collected in the original MANX Gaelic, and academic antiquarianism, together with a more methodical approach to the collection of Manx folklore, did not begin until the 1880s and 1890s. The seminal work to result from this period was the publication of *The Folk-Lore of the Isle of Man* by Arthur William MOORE (1891), a founder member of the island's antiquarian society, national museum, and language society, and a leading cultural revivalist (see LANGUAGE [REVIVAL]).

Moore and other antiquarians and revivalists considered themselves to be 50 years too late to be able to collect any material of worth, and believed that the important lost opportunity had been the visit by J. F. CAMPBELL in 1860. Unfortunately, he had curtailed his folklore-collecting visit to the island because the Manx could not (or would not) understand his GAELIC.

One of the underlying themes running through all Manx folklore was an all-encompassing belief in FAIRIES, together with the powers of individuals to ill-wish others. The fairies or 'Themselves' were perceived as a society and culture of small human-like creatures, dressed in green, who occupied a parallel dimension on the island, only occasionally coming into contact with Man. Their interaction with humans could range from the benevolent and mischievous to the totally malevolent. As a result, the need to be constantly on one's guard meant 'Themselves' were either to be placated or constantly guarded against. Therefore, small gifts of food would be left by the fireside at night, but iron pokers would also be laid across the cradle of infants to prevent them being exchanged for changelings. Mountain-ash crosses (*crosh cuirns*) were put on door lintels and were tied to cows' tails, and primroses were strewn over the thresholds on May Eve for added protection. The need for protection was also an important element in belief systems relating to ill-wishing, together with the means of identifying those responsible. Iron was again believed to be an important and potent form of defence.

Another theme running through Manx folklore is one of 'mischief', similar in nature to the Feast of Misrule. This was expressed in a variety of calendar customs. These included young people setting fire to the gorse on the hilltops on May Eve and the twelve nights of singing and dancing during *Y Kegeesh Ommydagh* (the 'foolish fortnight' period over Christmas). It also included legitimized begging by groups of young men, later children, as they went from house to house on *Hop-tu-naa* (All Hallow's Eve—with turnip lanterns and singing) and throughout Christmas with the White Boys mummer's play, the Mollag band and Hunt the Wren on St Stephen's Day.

The last comprehensive publication on Manx folklore—*The Folklore of the Isle of Man* by Margaret Killip—appeared in 1975, and the view was expressed at that time that the island's folklore was in the final stages of decline before being totally lost. Since then,

however, there has been a dramatic revival in the physical expression of Manx folklore, linked for the most part to parallel cultural revivals and a growing awareness of language, music, and dance. These are most significant with regard to May Eve, *Hop-tu-naa* and Christmas celebrations.

Manx literature in English, 20th-century satirical poetry

This is a form of poetry, presented either in oral or written form, generally in the English language, which gives voice to public opinion on the actions of Manx government (see TYNWALD) and locally influential commercial organizations. The genre has a long history, currently unresearched, but, in the context of social and cultural change experienced by the Isle of Man (ELLAN VANNIN) in the latter part of the 20th century, the poets appear to have been particularly active.

A key feature of the genre is the humorous but direct criticism of its subjects, who are often seated in the audience when the poems are publicly performed. It has been suggested that to be successful a joke must reflect consensus (Douglas, *Implicit Meanings* 107). Here, the laughter which reveals the audience's agreement leaves the 'subject/victim' in no doubt as to opinion on the issue under scrutiny. In the absence of an official political 'opposition' in the Manx parliament, satirical poetry may be one medium through which the public, via their poet-representative, can express their opinions while retaining good social relations.

In its written form, examples range from submissions to Manx newspapers from members of the readership, to Vera Martin's weekly column, 'Kelly's Eye' (mainly in the *Isle of Man Examiner*) of the 1970s, in which the fictional Kelly family discussed matters of concern to the Manx public.

In oral form, the poetry is usually performed by the author at various social gatherings, either spoken or set to music, often using traditional Manx tunes (see MANX MUSIC). Many of the poets are unknown beyond the halls where performances take place, but others have had their work published in written or audio form. Paul Lebiedzinski used the medium in the 1970s/1980s to communicate concerns that the offshore finance industry and its 'incomers' were having a detrimental effect on the Manx way of life. More recently, Vinty Kneale's collection includes satirical looks at both local and global matters, while Dot Tilbury, a civil servant and a renowned contemporary exponent of the art, hilariously takes politicians to task over a range of local issues by ridiculing their planning and policy decision-making processes.

Susan Lewis

Manx music, traditional

Although there is a wealth of 19th-century manuscript material and eyewitness accounts, the story of music in the Isle of Man (ELLAN VANNIN) before 1800 is more fragmentary and has to be pieced together from documentary evidence, comparison with music from neighbouring regions, and a form of musical archaeology.

Several strands emerge. Little needs to be said

about the music of the gentry since it generally reflected that of contemporary Western Europe. The music of the countryside was more distinctive and falls into three broad categories: dance, song, and worship.

Dance tunes generally derived from the popular repertoire found elsewhere in the British Isles. Some 6/8 melodies, perhaps survivals from the medieval period and often linked to ritual occasions, were accompanied by voices, a solo instrument, or clapping. By the 1800s, popular dances included jigs, quicksteps, waltzes, and marches, accompanied on formal occasions by instrumental bands. The earliest collection of instrumental tunes dates from the 1820s, embracing a wide variety of flute tunes.

Singing has always been a strong tradition in Man. The main song collection is contained in the Clague Notebooks (*c.* 1890–5), of which many are either directly linked to primitive Methodist hymns or are Manx adaptations of popular British tunes. Several ballads seem to be specifically Manx, including both the major and minor versions of 'Mylecharaine', which was performed on almost every public occasion in the 19th century before becoming the Manx national anthem in 1907 (see GILL). 'Ellan Vannin' is perhaps the best-known Manx song. Composed in 1840, it relates strongly to a group of similar tunes which all deal with farewell or loss.

Carvals (carols) were at the heart of Manx song. While a few celebrate Christmas, most deal with other aspects of biblical stories, particularly the prodigal son. The earliest dated survivals are from the 1600s, but some undated tunes proclaim medieval origins. Carvals featured at Oiell Verrees, important events held in church on Christmas Eve after formal services. These have close links with the Welsh *plygain* (traditional morning service at Christmas with unaccompanied carols). Large numbers of locally composed hymn-tunes survive in manuscript and memory, many with fine tunes and competent harmonization. An impressive number of surviving manuscripts shows the importance of formal music in church and chapel. A variety of anthems range from the simple to the challenging, many in a style referred to as 'West Gallery'. These could be performed *a cappella* and on special occasions were often accompanied by ad hoc church bands, a tradition which survived into the 20th century.

The most popular instrument was the FIDDLE. Music was often associated with folklore, and supernatural powers were often attributed to fiddle-players. By the 1700s, the modern instrument had replaced earlier forms described by visiting commentators, but by the end of the 19th century traditional fiddle playing had died out, superseded by popular music of the thriving tourist industry. There are strong indications of links between education, music-making, and social mobility as the island became affected by industry and tourism during the course of the 19th century.

Manx surnames

Manx people, like the rest of the inhabitants of early Celtic-speaking lands, did not originally use surnames in the strict meaning of that term, i.e. a name, distinct from their personal name, which passed unchanged from fathers to sons (and unmarried daughters) generation after generation. At one time, no doubt, the range of personal names was large enough to identify the individual in most cases. The first step toward surnames was to add the name of the father to the personal name in the formula 'A the son of B'. This is found on the memorial stones in both OGAM in GAELIC, and in roman letters in Latin, though it is impossible to be certain whether such a formula was in everyday use. Those who are named in chronicles or as witnesses to documents usually have only a single, personal name, though they may

also be given an adjectival addition, such as *Godred Crovan*, but additions of this kind are personal and do not develop into surnames in Manx.

The use of patronymics (father-names) is the basis of native Manx surnames, formed by disregarding the actual father's personal name, and substituting an ancestral one, as it were freezing the ancestor's name at a particular point in time so that it, rather than the name of any of his descendants, became the patronymic as far as all subsequent generations were concerned. To catch this process in the act of happening, and so date it, we would need a number of names, including the patronymic element, and preferably of varying social classes, for it has been observed elsewhere that surnames were a fashion and that such fashions are often found first at the top of the social scale, and gradually work their way down. Hence, we cannot use the evidence of the grant of the manor of Appyn in 1376, where the document names a father (*miles*, a knight) and his son with the same patronymic *McAs*kill, a true surname (later *Cais*tell ['kɛ:stəl] now apparently obsolete), as giving us the date by which the Manx population as a whole had adopted surnames. They certainly had done so, at least for official purposes, by the 16th century.

Despite this use of the name of an increasingly remote ancestor, Manx continued to use *mac* 'son' as a link. The Irish *ó*, genitive *uí* 'grandson, descendant' was probably used, but leaves only the faintest traces in Manx; as *mac* was reduced to [ək], and finally to [k], so the vocalic element of *ó*, *uí* disappeared, leaving *h*-prefixed to an initial vowel only. Therefore, while Irish has the English spelling *Hennessy* for *Ó hAonghusa*, Manx has *Kennish/Kinnish* from *(ma)c*. Manx shares with Scottish Gaelic the tendency to lenite (phonetically soften the initial consonants of) proper names in the genitive, and this is exemplified in many Manx surnames: *f* and *ph* disappear entirely, as *Kerruish* from *'c Fhearghuis* (son of Fergus), *Killip* from *'c Ilipp* (son of Phillip); *s* and *t* become *h*, and disappear, as *Quinney* from *'c Shuibhne*, *Corkill* from *'c Horkill* (based on the Norse name *Thorkell*); *d* and *g* fall together as [ɣ] non-palatal (a 'breathy' *g* sound), or [j] palatal (as in English *yes*), as *Cannell* from *'c Dhomhnaill* (son of Domhnall/Donald, Anglicized as the Manx surname *Donald*), Kermode from *'c Dhiarmada* (Anglicized as *Dermot*). As in some Irish dialects, *cn* became [kr] during the 17th century, so that *'c Néill* (*Niall*) was pronounced [kre:l] though written *Kneale*, whereas *Crellin* from *'c Nialláin* shows the change.

For some reason, *Far(a)gher*, from *Fearchar* occurs more frequently as a surname than the regularly formed *Karagher* (which now seems to be obsolete); a similar case is *Kennaugh* from *Coinneach*, clearly the nominative, since the genitive *Coinnigh/Coinnich* would have yielded **Kenney*. Very rarely, we find not the name but the occupation of the ancestor: *Gawne* from *'c a' ghobhann* 'son of the smith', *Taggart* from *'c an t-sagairt* 'son of the priest', *Teare* from *'c an t-saoir* 'son of the wright'.

Norse names were added to the repertory from the 10th century, but it is uncertain how long they remained current after Norse ceased to be spoken. The names which have come down to us are clearly formed in a Gaelic environment, using *mac*, and with the Norse name uninflected or perhaps given a Gaelic inflection. Examples are: *Casement* from *'c Ásmund*, *Cure* from *'c Ívar*, *Cottier* from *'c Oitir*, *Crennell(t)* from *'c Rögnvald* (Gaelic *Raghnall*, Scots *Ranald*, Latin *Reginaldus*); *Creetch* may well be *'c Grettir*.

With the beginning of the feudal period came names, often of Frankish origin, introduced through Norman French or Middle English, forming surnames again on the Gaelic pattern. Such are: *Cricyrt* from *Richard*, *Crebbin* from *Robert/Robin*, *Cubbon* from *Gibbon*, *Kin(d)ry* from *Henry*, *Garrett* probably from *Gerald*, *Qualtrough* from *Walter* (with genitive in *-ach*), and *Cotch* from the shortened form *Wat*.

In a few cases, the ancestor's name may have taken the form of *guilley* 'boy, youth' with an adjective or with a saint's name. When this is combined with *mac*, the result is *Myl(e)*, as *Mylrea*, *Mylroie*, with adjectives *riabhach*, *ruadh*, and *Mylechraine*, *Mylewoirrey*, *Mylchreest*, with *Ciarán*, *Muire*, *Críost* (for devotees of St Ciarán, Mary, Christ). The counterpart of male *gille* names is the small group of female forenames in *Caly-*, from *caile* 'servant', combined with Brigid, Christ, Mary, Patrick, and *Dombnach* 'the Church'.

Names from religious sources may have been introduced at any time from the 6th century onwards, and some of these also form surnames, e.g. *Kissack/Kissage* from *Isaac* (*Íság*), *Comish/Cammaish* from *Thomas/Tómás*, *Clucas/Cluggaish* from *Lúcás* (Luke), *Corkish* from *Marcus* and *Quark* from *Mark*, *Corteen* from

Martín, *Costain* from *Austin* (*Augustine*), *Quilleash* from *Felix* (*mc Felys* in 1540).

Daughters' names, which appear far less frequently in records, prefix *inney* (variously spelt) to the surname, an unaccented reduced form of *inneen* 'daughter' or its genitive. Since the surname usually contains the truncated form of *mac* already, the formula appears to be 'M daughter of the son of N', similar to the Scottish Gaelic *nic*, though not an exact parallel.

With the increasing use of English in the Isle of Man (Ellan Vannin) in the 18th and 19th centuries and the currency of English names, it may be that a preference grew up in some quarters for Anglicized versions of Gaelic names, such as those above paired with their Manx equivalents, but there is no evidence of any widespread change from *Kinry* to *Harrison* (which has a long history in Man), or *Kneale* to *Nelson*, or *Cringle* to *Nicholson*. The old pronunciations, however, are dying out, and spelling-pronunciations are taking their place.

In addition to these indigenous surnames, a large number of British and Irish names have come into the island as a result of migration at various times and for various reasons during the last seven centuries. Those from England have come from Lancashire and the North generally, a few from Wales (Cymru), and rather more from Scotland (Alba), in the earliest period as administrators and officials, subsequently for business reasons which still exert a strong pull, and from other economic motives.

Maponos (the divine son) was a pre-Christian Celtic god, whose cult is attested both in Gaul and in Roman military sites in north Britain. A crescent-shaped silver plaque inscribed DEO MAPONO 'to the god Maponus' was found at the fort of Vindolanda (Chesterholm) on Hadrian's Wall. A short distance south of the Wall, three dedications to Apollo Maponus (RIB nos. 1120–2; see INTERPRETATIO ROMANA), associated with objects interpreted as paraphernalia for the HEAD CULT (§3), were found at the fort of Corioritum (Corbridge). At the fort of Bremetenacum (Ribchester, Lancashire), Apollo Maponus is named on an altar or monument, datable to AD 238–44 or possibly later, on which there are figures of two goddesses (RIB no. 583). The place-name *locus Maponi* listed in the Ravenna Cosmography may correspond exactly to *Lochmaben*, meaning 'Lake of Mabon/Maponos', in Dumfriesshire, north of the western terminus of the Wall. The ancient place-name is also attested on an inscription from the nearby fort of Blatobulgium (Birrens): CISTUMUCI LO(CO) MAbOMI '(gift) of Cistumucus from Locus Maponi'. In the Gaulish inscription from Chamalières, *Mapon[os]* appears to refer to a god. However, *Maponus* could be a man's name on the inscription from Bourbon-les-Bains, Haut-Marne, France (CIL 13, no. 5924; Whatmough, *Dialects of Ancient Gaul* 990); even so, the fact that this inscription is from near the river Marne (Gaulish *Mātronā* 'the divine mother') is significant. *De Mabono fonte* (of the Maponos well) recorded in a medieval charter may recall an old cult site in Gaul. The name and perhaps elements of the myth of Maponos are continued in Welsh Mabon fab Modron. On the Gallo-Brittonic divine name suffix, *-onos*, fem. *-onā*, see Gwydion.

Maredudd ab Owain (†1265) was a Welsh prince. The son of Owain ap Gruffudd (†1235), Maredudd was heir to his father's portion of the lands of Rhys ap Gruffudd (Lord Rhys, †1197) partitioned in 1216, thereby holding an extensive estate in Ceredigion in Wales (Cymru). Maredudd participated in the conflict in Deheubarth in 1244–6 as an ally of Dafydd ap Llywelyn, prince of Gwynedd, and his stature in the province is reflected in King Henry III's efforts to win him over, appreciating that 'it is not easy to control the Welsh except through one of their own nation'. He adhered to Llywelyn ap Gruffudd upon his advance into Deheubarth in 1256, and proved to be a stable influence in the province

Mari Lwyd Sianco'r Castell, Llangynwyd, Glamorgan

throughout his lifetime. He was commemorated in Brut y Tywysogyon ('The Chronicle of the Princes') as 'defender of all Deheubarth and counsellor of all Wales', and was mourned by the poet Y Prydydd Bychan. His son Gruffudd and his daughter Efa were patrons of the translation of two prose works. He left three sons, Gruffudd, Cynan, and Owain, but Maredudd's grandson, Llywelyn ab Owain, was the only member of the lineage to survive the Anglo-Norman conquest in possession of a fragment of the patrimony.

Maredudd is a traditional Welsh masculine name. It occurs, for example, in the Old Welsh genealogies for a king of Dyfed whose death at the battle of Rhuddlan is noted in Annales Cambriae at 797. Old Welsh spellings of the name include *Margetiut* and *Morgetiud*. The final element of this compound name is the common Old Welsh *iud* 'chieftain, lord', probably from Latin *iūdex* 'judge'.

Mari Lwyd

St Augustine of Hippo (†430) decreed, *Si adhuc agnoscatis aliquos illam sordissimam turpitudinem de hinnicula vel cervula exercere, ita durissime castigate* 'if ever you hear of anyone observing that exceedingly corrupt custom of impersonating a horse or a stag, punish him most severely'. This prohibition interestingly suggests a possible basis in ancient pre-Christian popular practice for a custom common in 19th-century south Wales (Cymru)—particularly in Glamorgan (Morgannwg) and Monmouthshire (sir Fynwy)—during the Christmas season. It continues to this day in some Welsh districts, notably about Llangynwyd and Maesteg (in south Wales), and was resurrected for the millennium celebrations in other locations, such as the Aberystwyth area in mid-Wales.

Of all the wassail rituals (see canu gwasael), the Mari Lwyd was the most spectacular. Mari was a horse's skull affixed to a five-foot pole covered with a white sheet (or a multi-coloured shawl or cloak), decorated with silk handkerchiefs, ribbons, and rosettes. The jaw was operated by a spring and was snapped shut by a young man crouching under the sheet to operate the Mari. Wearing reins decorated with bells, Mari was led by the Ostler, whose work it was to conduct the party around the neighbourhood in as seemly a manner as possible, calling at each home in turn to distribute good luck and fertility for the coming year. Mari was accompanied by a cast of traditional characters, all played by men—a Sergeant, Corporal, Merryman (who sometimes played the fiddle), Punch, and Judy; their chief qualifications included the ability to rhyme, to provide entertaining company, and to swallow large quantities of beer.

Mari's journey (of many dark evenings) through the neighbourhood was publicized beforehand. Crowds filled the streets to catch a glimpse of the company, but the cast was met by silence at each house door. To gain admittance Mari had to win a rhyming contest by singing extempore verses outside the door, verses which the householders answered and trumped. Some-

times, the battle of wits lasted many hours, until the householders at last surrendered with good grace.

Inside the house, Mari would dance, neigh, nudge and bite the frightened women and children. Once Mari settled down, Judy would brush the hearth with her broom, banishing evil spirits who worked against the Company's efforts to promote fertility. Punch would appear, kissing the women and exciting Judy to jealousy and a frenzied chase with her broom. The revelry would end with beer and cakes for all, Mari removing her costume for the feast's duration. Before departing, the company would sing a song of thanks for the food and for the money collected, before moving on to the next household. But should one Mari step on another Mari's patch, recriminations were merciless. Company members were beaten and bones were often broken.

Many have attempted to explain this peculiar CALENDAR custom, but no theory has proved totally convincing. It is possibly related to pre-Christian rituals at the winter solstice. An ultimate shared source common to the Mari Lwyd tradition and the White Horses carved on chalk escarpments such as at UFFINGTON (Oxfordshire, England) is also a possibility. A further noteworthy instance of ritual activity in the CELTIC COUNTRIES involving horses is the killing of a white mare in the presence of the king-elect of Cenél Conaill in west Ulster (see further GIRALDUS CAMBRENSIS; KINGSHIP). We may note also the strong equine associations of the Gallo-Brittonic goddess EPONA, the Irish MACHA, and the Welsh RHIANNON. One common feature is that the horse is symbolic of fecundity in most or all of these examples. This comparative evidence falls short of revealing a detailed and integrated Celtic belief system relating to horses, but the similarities are striking and the possibility of random coincidence accordingly far-fetched. The hero seeking admittance to a barred feast with a prolonged and spirited bantering exchange is known as a theme in medieval Celtic literatures. Episodes particularly comparable to the Mari Lwyd customs occur in the two early ARTHURIAN texts: CULHWCH AC OLWEN (in which the stunningly attired equestrian Culhwch is denied entry to ARTHUR's court) and PA GUR YV Y PORTHAUR? (Who is the gatekeeper?) in LLYFR DU CAERFYRDDIN (in which it is Arthur and his company of 'the best men in the world' who are denied entry).

Similar traditions are attested in Cornwall (KERNOW) and Brittany (BREIZH).

Mars Rīgisamus is the deity, whose epithet or second name is Celtic (see INTERPRETATIO ROMANA), attested in two dedicatory INSCRIPTIONS—one from Britain (West Coker, Somerset; RIB no. 187) and the other from Gallia Lugdunensis (Avaricum Biturigum, now Bourges)—reading dative MARTI RIGISAMO. The incomplete inscription of Apt, RIS[.]AM[.]N[.], probably also belongs with this group. It would appear to show the intervocalic lenition (phonetic weakening) of *-g-*; note that the lenited *-g-* has completely disappeared in RIOCALAT[IS TO]UTATIS M[ARS] COCID[I]US (RIB no. 1017). *Rīgisamus* may be understood as 'most royal'; in the grammatical derivation the superlative ending, Celtic *-isamo-*, has been added to the word for 'king', Celtic *rīχs, rīgo-*, Old Irish *rí*; cf. RIGOTAMUS. An inscription at Petuaria (Malton, Yorkshire) is dedicated to MAR(TI) RIGAE 'King Mars' (RIB no. 711). Compare also the dedication from Nettleham, Lincolnshire, England, to *Mars Rīgonemetis* ('Mars king of the sacred grove' or 'exalted king'; see NEMETON).

Helmut Birkhan

Marwnad Cunedda (The elegy/death-song of CUNEDDA) is an early WELSH poem in the AWDL metre which survives in the 14th-century manuscript LLYFR TALIESIN (69.9–70.15). It appears in its contents and aspects of its archaic linguistic and metrical form to be a 5th-century court poem. Thus, if authentic, *Marwnad Cunedda* would be the oldest surviving Welsh poem by a century or more. It celebrates the martial

valour, leadership, and luxurious generosity of a north British chief of the early post-Roman period. Although Cunedda is best known in Welsh tradition as the founder of Gwynedd's first dynasty and the ancestor of many Welsh kings and saints, *Marwnad Cunedda* makes no mention at all of Wales (Cymru). It calls Cunedda leader of the 'men of Brynaich', a region in north Britain (Hen Ogledd) which came under Anglo-Saxon domination in the mid-6th century. The poem envisions a warlike conflagration upon two Roman fortified towns immediately south of Hadrian's Wall: *yg·Kaer Weir a·Chaer Liwelyð | ergrynawt/ kiuatawt/* (MS *kyfatwt*) *kyfergyr* 'in the fortified town on the river Vedra (Wear) and the fortified town of Luguvalium (Carlisle), combat will shake the *civitates*', i.e. the Romano-British tribal cantons (see civitas). The rulers of these enemy lands are called the descendants of Coel Hen.

Linguistic archaisms in the text take us behind the oldest layers of the Gododdin, for example, the old plural relative verb, proved by rhyme, in *Gwiscant veirð kywrein kanonhyð* 'They will invest the rightfully qualified bards who sing' (< Celtic **canonti-i̯o*: Old Irish *cétae*) and the verb *gweinaw* 'had known', Celtic **gegnāwe*: Sanskrit *jajñáu*. Cunedda's largesse to his followers include two items not common in Welsh praise poetry—*keith* 'slaves, captives' and *olew* '(olive) oil'—but known to have figured in the Romano-British and sub-Roman economy (see slavery). The generic rhyming pattern, involving repeated examples of the type archaic *-ag* : *-am* /*-aɣ* : *-aṷ*/, is remarkable and is best paralleled in medieval Irish metrics. The attribution to Taliesin in the first line of the extant text may be discarded, since the first word of the fourth line, *kyfrwng* 'in between', forms a *dúnad* (ring-style closing) with *Marwnad Cunedda*'s last word, *Coeling* 'descendants of Coel', revealing the beginning of the original.

Marwnad Cunedda has been a subject of controversy among modern scholars. Morris-Jones (*Cymmrodor* 28.204–6) accepted the attribution to Taliesin, and engaged in a series of farfetched emendations to make the poem an elegy to Cunedda's descendant Rhun ap Maelgwn, presumably because Rhun was Taliesin's contemporary. Ifor Williams thought *Marwnad Cunedda* a fraud and no older than the 9th or 10th century (*Canu Taliesin* xlii–xliii). Williams objected to the rhymes of the sort mentioned above, but Morris-Jones and subsequently Greene (SC 6.6) were clearly right to see them as archaisms. According to Jackson's view of the history of the Brythonic languages in *Language and History in Early Britain* (LHEB), massive syllable loss occurred over a narrow time-span after Cunedda's day in the 6th century, and the earliest Welsh poetry had rigidly regular syllable counts, thus making the survival of a 5th-century poem impossible. But neither of these linguistic propositions is regarded as a certainty today. Stimulated by the publication of a standard edition of *Marwnad Cunedda* by J. E. Caerwyn Williams, R. Geraint Gruffydd recently reopened the question of its authenticity (SC 24/25.11).

JTK

Marwnad Cynddylan (The elegy of Cynddylan) is an early Welsh poem in the awdl metre. In the form of a court poem celebrating battles in the post-Roman Dark Age, *Marwnad Cynddylan* falls by definition within the category of the Cynfeirdd poetry (in the stricter sense). Stylistically, it is closely comparable to the *gw(y)r a aeth Gatraeth* (men/man who went to Catraeth) series in the A text of the Gododdin. *Marwnad Cynddylan*'s nine *awdlau* (stanzas) are linked with eight occurrences each of the opening device *maureð gymineð* 'grandeur in swordplay' and variations on the ending refrain:

Ef cuiniw ini wyf i-m derwin fedd
o leas Cynddylan yn ei faureð

I shall lament until I lie in my oaken coffin
for the slaying of Cynddylan in his greatness.

The oldest surviving copy is NLW MS 4973 (*c.* 1630–40), which derives from a lost copy of the 13th century,

as shown by spelling features (Gruffydd, *Bardos* 10). The poem is unattributed in this manuscript, but it is placed alongside the prophecy *Dydd dyfydd, trengydd dewaint* (Day will come, slayer of darkness), also based on a 13th-century exemplar, and this second poem is attributed to Meugan, as is *Marwnad Cynddylan* itself in other copies. BRYTHONIC *Meugan*, var. *Mawgan*, was not an uncommon name in the early Middle Ages, but one likely candidate was a poet of the 7th or 8th centuries, whose metrical Latin prayers, *Orationes Moucani*, survive in an 8th-century manuscript from Worcester. One of the leading themes of these prayers is a plea by the poet as an abject sinner to God for salvation, which is comparable to the closing of *Marwnad Cynddylan*:

a chyn i-m dyccer i Dduw, i-r digfryn,
ni ddigones neb o bechawd cyhawal imi hun

And though I might be brought to God, to the summit of [His] wrath,
no one has sinned as I have.

The immediate historical context most probably belongs to events of AD 655/6 (see CYNDDYLAN; Wendy Davies, *Wales in the Early Middle Ages* 99–102; Rowland, *Early Welsh Saga Poetry* 120–41), in which case, *Marwnad Cynddylan* figures as the latest of the *Cynfeirdd* poems of this type.

Aspects of the poem's historical significance are discussed in other articles: the relationship of *Marwnad Cynddylan* to *Canu Heledd* and their common geographical setting are canvassed in CYNDDYLAN, and the article on CADELLING discusses the poem's political attitude of hostility to the dynasty. For references and attitude towards GWYNEDD, see CADAFAEL and CYNDDYLAN. On a possible allusion in the poem to the battle of Chester/CAER *c.* 615 and Augustine's prophecy, see AUGUSTINE, and on the possible reference to 'mighty Arthur', see ARTHUR, THE HISTORICAL EVIDENCE §4.

mass media in the Celtic languages [1] Irish

§1. TELEVISION

TG4, originally called Teilifís na Gaeilge, first began broadcasting in 1996, and caters mainly for an Irish-speaking audience. It broadcasts, on average, seven hours a day, five of which are in IRISH and include programmes on sport, drama, current affairs, and children's programmes.

RTÉ (Radió Telefís Éireann) is the national public service broadcaster of Ireland (ÉIRE). It has two television channels, RTÉ1 and Network 2, which between them broadcast approximately one hour of Irish-language programmes a week, mostly news and current affairs.

§2. RADIO

Raidió na Gaeltachta was established in 1972 to provide a comprehensive radio service for the people of the Irish-speaking GAELTACHT and for Irish speakers nationwide. It broadcasts entirely through the medium of Irish, 24 hours a day, with a schedule of news and current affairs, magazine programmes, music, sport, discussion, and entertainment.

Raidió na Life was founded in 1993, and provides an Irish-language radio service for Dublin (BAILE ÁTHA CLIATH) and its surrounding areas on an educational and community basis. Its wide range of programmes are also broadcast on the Internet.

The radio schedule of BBC Northern Ireland has daily Irish-language programmes in various formats, including music, discussion, sport, and the arts. These broadcasts are also available on the Internet. The BBC Northern television channel also broadcasts occasional Irish-language documentaries.

§3. NEWSPAPERS

LÁ is Ireland's only daily Irish-language newspaper. It was previously produced as a weekly broadsheet, but it changed to a national daily tabloid in April 2003. It is published in Belfast (Béal Feirste).

Mairi MacInnes presenting the Scottish Gaelic children's series 'Na Daoine Beaga' (The Little People), 2003

Foinse, first published in 1996, is a weekly Irish-language newspaper, printed every Saturday in the Gaeltacht and distributed nationwide. It has a full range of news coverage, local, national, and international.

Ireland has two bilingual newspapers—*Saol* (Life), a monthly which features events and local news, and *Glór Chonamara* (The voice of Conamara), also a monthly, which features local stories in Conamara. Other newspapers which have some Irish-language content are *The Irish Times*, *The Irish News* (Belfast) and *An Phoblacht* (The republic).

§4. magazines

Comhar is a monthly Irish-language magazine which covers current affairs, the arts, and literature. It encourages new Irish-language writers and publishes up to three Irish books a year.

Feasta was founded in 1948 by Conradh na Gaeilge as a forum for the discussion of literature, politics, and the arts through the medium of Irish. It also encourages both young and new writers. It is published monthly.

Éigse is the bilingual journal of Irish studies published quarterly by the National University of Ireland.

§5. irish-language publishers

The three main Irish-language publishers are: Cló Iar-Chonnachta, which publishes books in Irish and produces traditional Irish music, Cló Mhaigh Eo, which publishes Irish books for children and teenagers, and Cois Life.

Brian Ó Donnchadha

mass media in the Celtic languages [2] Scottish Gaelic

§1. journals, magazines, and newspapers

Publication in the Scottish Gaelic language has always been on a small scale, and there have been few long-running journals or magazines. As a result of the exclusion of Gaelic from the educational system (see education), the level of Gaelic literacy is low (approximately 60%) and there are relatively few habitual, practised Gaelic readers.

Various journals appeared during the 19th century, but these all proved short-lived. The first was *An Rosroine* (1803); among the more successful later publications were *An Teachdaire Gaelach* (The Gaelic messenger, 1829–31), *Cuairtear nan Gleann* (Visitor of the glens, 1840–3), and *An Gaidheal* (The Gael, 1871–7). A range of periodicals emerged in the early 20th century, notably the monthly *An Deò-Gréine* (The Sunbeam, later *An Gaidheal* The Gael, 1905–67) and the literary review *Guth na Bliadhna* (Voice of the year, 1904–25). Today, the only all-Gaelic magazine is the quarterly Gairm (Call, 1952–), now largely a literary journal, consisting principally of short stories, poetry, and reviews.

There has never been a daily Gaelic newspaper, and the only weekly newspaper ran between 1892 and 1904: *Mac Talla*, published in Antigonish, Nova Scotia (see CELTIC LANGUAGES IN NORTH AMERICA). Monthly newspapers have been produced at various stages, including *Sruth* (Stream, 1967–79; originally fortnightly) and, since 1997, *An Gàidheal Ùr* (The new Gael).

Weekly or twice-weekly Gaelic columns appear in a number of national and local newspapers, including *The Scotsman*, *The Press & Journal*, the *Inverness Courier*, the *Oban Times*, the *West Highland Free Press*, and the *Stornoway Gazette*.

§2. RADIO

Gaelic radio broadcasting began on the BBC in 1923, but was occasional and sporadic until after the Second World War. Programming became more regular and diverse in the 1950s and 1960s, though still only about two hours per week. The 1970s saw the beginnings of a genuine Gaelic radio service through Radio Highland and Radio nan Eilean (Radio of the islands), and a programme of consolidated development followed, leading to the introduction of a national service, BBC Radio nan Gaidheal, in 1985. Radio nan Gaidheal now broadcasts some 45 hours a week, and reaches the great majority of the Scottish population. Programming consists largely of news reports, current affairs, talk shows, and music and arts programmes, and the service commands strong audience loyalty among Gaelic speakers.

§3. TELEVISION

Gaelic television programming began in the 1960s but, as with radio, output was very limited and sporadic before the 1980s. Gaelic television expanded greatly as a result of the Broadcasting Act of 1990, which brought a major funding increase and established the Gaelic Television Committee (Comataidh Telebhisein Gàidhlig, now Gaelic Broadcasting Committee/Comataidh Craolaidh Gàidhlig). Government support for Gaelic television at present stands at £8.5 million per year, and some 350 hours of programming—mostly drama, current affairs and the arts—are broadcast annually on BBC and ITV channels. Gaelic television has reached a crossroads, however, for both political and technical reasons: annual budgets have not been increased to reflect inflation, while programmes have increasingly been shunted to unattractive time slots. An official task force has recently recommended the establishment of a dedicated Gaelic television channel, following the example of Wales (CYMRU) and Ireland (ÉIRE), and this appears to be the most promising avenue for the future.

mass media in the Celtic languages [3] Manx

The *Manx Mercury*, the first newspaper on the Isle of Man (ELLAN VANNIN), was established in 1792, but does not seem to have been published after 1801. MANX Gaelic only featured occasionally in it.

From the late 1960s, once-a-week news headlines in Manx have been broadcast by Manx Radio, and an hour-long weekly programme featuring Manx has been broadcast since the late 1970s. Manx Radio has also broadcast Manx courses. In 2002 there were 3¼ hours per week of broadcasting which included Manx, and a Manx phrase features in the station's hourly news introduction. The Gaelic Broadcasting Committee of the Communications Commission (see section 12 of the Broadcasting Act 1993) commissions features in and about Manx on Manx Radio.

mass media in the Celtic languages [4] Welsh

In mass-media terms, Wales (CYMRU) has always been—in a phrase coined by Lord Hill, Chairman of the Independent Television Authority from 1963 until 1967—'an awkward area'. The situation was summed up in the 1969–70 Annual Report of the BBC's Broadcasting Council for Wales:

> The major problem remains: that of serving a country with two languages. The problem continues to be not so much one of providing programmes

> in two languages but rather one of assessing the needs of Wales as a whole. There are varying views on the extent to which, for broadcasting purposes, Wales can be considered an entity. Some people, indeed, see Wales as an uneasy alliance of two cultures, two nations, with language as a divisive factor. (Lucas, *Voice of a Nation* 215)

Dr John Davies, historian of the BBC in Wales, has maintained that in Wales (perhaps more than any other country) broadcasting has played a central rôle, both positive and negative, in the development of the concept of a national community. He argues that 'the entire national debate in Wales, for fifty years and more after 1927, revolved around broadcasting . . .' and that 'the other concessions to Welsh nationality won in those years were consequent upon the victories in the field of broadcasting' (*Broadcasting and the BBC in Wales* 50).

It is important to note that since the early days of radio broadcasting, Wales has been 'fused' in many respects to the west of England—a situation which has caused frustration on both sides of the Bristol Channel. It was not until July 1937 that the BBC's Director General, Sir John Reith, announced during a visit to Cardiff (CAERDYDD), that a Welsh Region, separate from England, would be established. From that time onwards—and in particular during the period leading up to the publication of the Beveridge Report on Broadcasting in 1951—calls were made for a separate broadcasting corporation for Wales. Among those arguing such a case was Gwynfor EVANS, a leading figure in the nationalist movement in Wales (see NATIONALISM). In a speech to Undeb Cymru Fydd (The New Wales Union) in 1944, Evans argued that the only way to overcome the clash between the needs of Wales and the policies of the London-based BBC was to establish an independent Welsh broadcasting corporation. Nevertheless, when television came to Wales for the first time in 1952, the country, once again, formed part of the so-called 'Kingdom of ARTHUR' in the west of the British Isles. In 1958, when Independent Television came to Wales for the first time, the region established embraced 'the West' in addition to Wales. The decisions made in relation to 'regional' broadcasting would appear to have been driven by economic necessity rather than any cultural considerations.

The 1960s saw Wales gain a measure of 'independence' in broadcasting terms. In 1964 BBC Wales was established as a semi-autonomous, separate region, an entity in its own right, and in the same year, an Independent Television service for the whole of Wales was created through the merger of the failed Wales (West and North)/ Teledu Cymru company and Television Wales and the West (TWW). By 1967, the BBC had moved to spacious new accommodation in Llandaf, Cardiff, and the following year witnessed the demise of TWW as Harlech Television (later HTV) won the franchise to broadcast in Wales. By the end of the decade, ownership of television sets in Wales reached 92% (John Davies, *History of Wales* 635).

The language issue dominated debate on broadcasting during the 1970s, and opinion was polarized between those who complained of being deprived of national (i.e. 'British') network programmes because of WELSH-language broadcasts and those who argued that scant regard was paid to the need for increased Welsh-language broadcasting. The turning point came in 1974 with the publication of the Crawford Committee Report on Broadcasting, which recommended that the fourth channel should, in Wales, 'be allotted as soon as possible to a separate service in which Welsh language programmes should be given priority . . .' (*Report of the Committee on Broadcasting Coverage 1974* 42). This ultimately led to the establishment in 1982 of the Welsh Fourth Channel, S4C, under the terms of the 1980 Broadcasting Act. Since that time the channel has been at the forefront of Welsh-language developments, and over the years its efforts to preserve, promote and develop the indigenous language and culture of Wales has been praised. Its remit to cater for all shades of opinion and background in terms of the Welsh-language audience has provided a valuable forum for debate and reflection.

The maintenance of a coherent Welsh identity is still problematic because the mass media are 'servants of two tongues'. In structural and institutional terms, the commercial broadcaster, HTV, is part of a larger concern, Carlton, and this has led to fears of a loss of identity in terms of its relationship to Wales. Likewise, BBC Wales is still part of the larger British corporation. Also, in terms of the audience, there are still homes whose aerials are turned in order to

pick up English-based ITV companies and BBC regions, largely for historical reasons.

The infrastructure for a coherent print-based media has yet to be established. The so-called 'National newspaper of Wales', the *Western Mail*, has a solid readership base in south Wales, while the north Wales edition of the *Daily Post* circulates widely in the north. Plans are underway to launch the first ever daily Welsh-language newspaper, entitled *Y Byd* (The world), during 2005. The National Assembly for Wales (CYNULLIAD CENEDLAETHOL CYMRU) has no direct control over the Welsh broadcasters and all three major players, the BBC, HTV, and S4C, are ultimately answerable to the UK parliament in Westminster.

There is no doubt that the mass media in Wales have a rôle to play in the creation and maintenance of the sense of belonging. However, the Internet and other electronic methods of communication have been viewed as a threat to Welsh-language and Welsh-interest broadcasting by consolidating and strengthening a global hegemony of Anglo-American culture. Professor Kevin Williams has gone so far as to suggest that technological developments in the converging area of telecommunications may even 'kick away the chair of national identity' (*Planet* 115.29).

mass media in the Celtic languages [5] Breton

§1. JOURNALS

BRETON journals began to appear during the late 19th century, and three of the most important were *Feiz ha Breiz* (Faith and Brittany, 1865–84, 1900–44), the weekly *Kroaz ar Vretoned* (Cross of the Bretons, 1898–1920) and the slightly later *Dihunamb* (Let us awake, 1906–44). These journals were typical in that they were written in dialect and aimed at a predominantly rural religious population. With the appearance of *Gwalarn* (North-west) in 1925, the Breton press developed in a different direction, as this mainly literary journal was written in a standard form of the language and was designed to appeal to a more intellectual readership. Although the number of native speakers has fallen, the post-1945 period has witnessed an increase in the number of Breton journals, though the circulation figures, which were once in the thousands for journals such as *Feiz ha Breiz*, are now in the hundreds. Today, the main journals include *Al* LIAMM ('The link', literary, founded in 1946), *Al Lanv* ('High tide', general) and HOR YEZH ('Our language', linguistic, founded in the 1950s), while the most successful current affairs journal is the monthly BREMAÑ (Now). There has never been a daily newspaper in the Breton language, and the only weekly newspaper was *Arvor* (lit. 'Land by the sea', hence 'ARMORICA', 1942–4).

§2. RADIO

Breton was first heard on the air in 1940 on Radio Roazon-Breiz (1940–4) and was transmitted regularly throughout the German occupation. Following the upheaval of the Liberation, Breton-language broadcasting was re-established in 1946 with Radio-Kimerc'h. The service, which provided half an hour a week, was increased in 1964 when Radio Brest/Kimerc'h added a daily news bulletin to the Sunday magazine. This became twice daily in 1969.

Radio Armorique was broadcasting five and a half hours of Breton a week until 1982, but this had decreased to two hours by 1995. In 1982 a new station was added to the Radio-France network, transmitting from Quimper (Kemper), Radio Bretagne-Ouest/ BREIZH-IZEL. This provided 12 hours of Breton per week and 21 hours of bilingual programmes, making 33 hours in all, but this total had decreased to 14 hours by 1997.

However, with the advent of local private radio stations, the number of hours of Breton broadcasts is increasing, with stations such as Radio Kreiz Breizh (Heart of Brittany Radio) alone providing as many as 21 hours a week. In 1998, two new stations were added to the list—Radio Kerne and Arvorig FM—and these devote 80% of their air-time to Breton.

§3. TELEVISION

The Breton language was first televised in 1964, but the weekly air-time devoted to the language in

magazine programmes such as *Breiz o veva* ('Living Brittany', later *Chadenn ar vro* 'Chain of the region') and the daily news bulletins can be counted in minutes rather than hours. The most exciting development in this field was the launching of TV Breizh in September 2000. This is a privately funded cable/satellite television channel, and the first bilingual regional generalist channel in Europe. It aims to provide a wide range of programmes in both Breton and French and, although it is very aware of tradition and cultural heritage, the channel is also determined to portray Brittany (BREIZH) as modern and outward looking.

Gwenno Sven-Myer

mass media in the Celtic languages [6] Cornish

The mass media in Cornwall (KERNOW) are nearly exclusively controlled by English media institutions. The lack of official recognition and policy regarding CORNISH has resulted in almost no media provision for the Cornish language. Television relating to Cornwall is provided by the BBC in its BBC Southwest newscasts, which cover an area including Cornwall, the Isles of Scilly, western England, and the Channel Islands. Carlton Westcountry Television currently serves the south-west region of Britain, and sought to provide Cornish-language and culturally relevant programming. *Kernopalooza!* was a networked Cornish-language television programme, while their religious series *Illuminations* has also featured some Cornish-language items. Both Carlton and the BBC produce occasional Cornish-focused documentaries concerning culture, economy, and issues of devolution and NATIONALISM. Channel Four has made no commitment to producing Cornish specific programming. The expansion of digital programming may potentially allow for more television provision specifically relating to Cornwall and the Cornish language.

BBC Radio Cornwall and Pirate FM—which, although Cornish owned and operated, also serves Plymouth and west Devon—provides Cornwall's radio service. BBC Radio Cornwall is extremely popular and has the highest comparable listening figures in the whole of the UK. The Cornish language, however, is poorly represented on both stations. The only Cornish-language news programme on BBC Radio Cornwall—a short programme entitled *An Nowodhow* (The news)—is broadcast on Sundays. However, coverage of the Cornish language and Cornu-English is integrated into the programming on a regular basis.

Cornwall is served by one regional daily newspaper, *The Western Morning News*, which, though based in Plymouth, provides a Cornish edition. Weekly newspapers include *The Cornishman*, which serves west Cornwall, *West Briton*, which serves mid-Cornwall, and *Cornish Guardian*, which serves east Cornwall. Although these newspapers address Cornish-language issues, they do not provide any actual coverage in the language. As a result, the following independent magazines and periodicals continue to flourish: *An Baner Kernewek* (The Cornish banner), a literary and historical review; *Cornish Nation*, the magazine of Mebyon Kernow; *An Gannas*, one of the longest-running Cornish-language magazines, and *Bys Kernowyon* (Cornish world), a specific publication for the Cornish overseas. Cornish-language issues and news are also well represented on the World Wide Web, helping to produce a counterpoint to English-based media.

There is an emergent small-scale indigenous film industry in Cornwall, partially inspired by European support for minority language media and the CELTIC FILM and Television Festival, which provides a forum for Celtic-language minority programmes. There has been a significant increase in the production of Cornish-language 'shorts', one of which is *Splatt Dhe Wertha* (Plot for sale). Feature films set in Cornwall tend to be historical romance, but, more recently, commercial features such as *Blue Juice* and *Saving Grace* have begun to include contemporary Cornish settings and stories. The formation in 2001 of a Cornish Film Fund should encourage the further development of indigenous Cornish cinema.

Massalia Μασσαλία, called Massilia in Latin texts, now the French city of Marseille, was the site of a Greek colony founded *c.* 600 by Ionians from Phocaea on the Aegean coast of Asia Minor. Massalia was situated on the natural harbour of Lacydon (now Vieux-Port) on land acquired from a local tribe identified as Ligurians by Greek and Roman writers, but with the eminently Celtic name *Segobrigii* or *Segobriges* ('People of the mighty hill-fort' or simply 'Strong and exalted people'). The foundation legend of Massalia—which is comparable to the Celtic SOVEREIGNTY MYTH—was preserved by TROGUS POMPEIUS and ATHENAEUS (for the story, see ARISTOTLE; GREEK AND ROMAN ACCOUNTS §II; cf. LEGENDARY HISTORY §2).

Soon after its foundation, Massalia became a focal point of two-way interaction between the Celtic and Greek worlds. From north-west Europe, information flowed to the literate Mediterranean civilizations through Massalia. Thus, what is probably the first extant mention of the Κελτοί *Keltoi* is linked with Massalia in the fragments of HECATAEUS. The oldest written notice of ARMORICA, Britain, and Ireland probably goes back to the MASSALIOTE PERIPLUS (The coastal itinerary / sailing manual of Massalia) of the 6th century BC. A much altered Atlantic Europe was then encountered by PYTHEAS of Massalia on his voyage of *c.* 325 BC, accounts of which, including the oldest form of the name BRITAIN, are mediated to us by STRABO and other Greek writers. Massalia was repeatedly the vantage point of classical literature onto Celtic religion, as, for example, in Trogus' story of King CATUMANDUS' dream of a war-goddess resembling Athena and LUCAN's account of human SACRIFICE made to the gods ESUS, TARANIS, and TEUTATES in a grove near Massalia.

From Massalia, pushing up the broad river RHÔNE, whose delta is near the city, trade in Greek WINE stimulated an economic and cultural revolution in the western Celtic lands, already within the Hallstatt D period, roughly the 6th century BC (see HALLSTATT [2] §2). At this period, plentiful Massaliote wine amphorae appear at the MONT-LASSOIS hill-fort on the upper Rhône, and it is likely that Greek luxury items in western Hallstatt D royal burials, such as the massive bronze krater buried with the VIX 'princess' near Mont-Lassois, were trans-shipped through Massalia or, in some cases, actually made there. A Massaliote connection has also been seen in the Greek-inspired FORTIFICATION at the HEUNEBURG and, somewhat later, the stone architecture devoted to the HEAD CULT at ENTREMONT and ROQUEPERTUSE, both near Massalia. After 500 BC, the emergence of a succession of art styles of the LA TÈNE era reflect sustained Greek influence in GAUL and west-central Europe. Early Celtic silver COINAGE of southern Gaul was modelled on that of Massalia. Also in this region, the Greek alphabet of Massalia and the Greek-derived practice of dedicatory inscriptions became established for the GAULISH language in the later centuries BC at sites such as GLANON (see INSCRIPTIONS [1]; SCRIPTS §4). By Caesar's time, Greek letters were in wide use throughout Gaul for keeping accounts and were used by the HELVETII of the ALPINE region for census taking, and the Greek letters θ and χ spread even to Britain for Celtic sounds not represented in the Roman alphabet.

Massalia came to dominate a chain of secondary Greek colonies in the western Mediterranean, including *Emporion* Ἐμπόριον (near the IBERIANS)—also called *Emporiai*, now Ampurias, Spain—and Maenaca (near Tartessos and Gibraltar), though the latter was soon lost to Carthage. Owing to this rivalry, Massalia became an ally of the rising power of republican ROME, and, in 125 BC, the ongoing menace of the Ligurian or Celtic Salluvii north of Massalia brought an appeal for Roman intervention, leading to the creation of the *Provincia Romana* or *Narbonensis* in southern Gaul some seventy years before CAESAR extended Roman rule to the RHINE and the Atlantic seaboard. The reputation of the citizens of Massalia for Greek–Latin–Gaulish trilingualism (GREEK AND ROMAN ACCOUNTS §4) probably reflects the earlier Roman period.

JTK

Massaliote Periplus (The coastal itinerary / sailing manual of MASSALIA) is a lost Greek text considered to have been a source for the Latin poem *Ora Maritima*, written by Rufus Festus AVIENUS in the later 4th century AD. It is significant for CELTIC STUDIES because Avienus' *gens Hiernorum* 'the race of the Irish' (line 111) and *insula Albionum* 'the island of the British' (line 112) derive from the Greek forms Ἰερνοι and Ἀλβιονες or Ἀλβιωνες, the oldest recorded names for the inhabitants of Ireland and Britain, and both are Celtic (see ÉRIU; ALBION). The Periplus would thus reveal a situation earlier than that found by the expedition of PYTHEAS, who encountered a form of the name BRITAIN rather than *Albion* *c.* 325 BC. In view of the fact that Carthage dominated the Straits of Gibraltar from *c.* 550 BC, Tierney argued for an original Periplus belonging to the first half of the 6th century BC, and Powell also for a date considerably older than *c.* 530. On the other hand, Hawkes has proposed that this northern section was rehandled by EPHORUS in the mid-4th century BC, though he also thought that the names in question were most probably learned by the Greeks in the 6th century.

material culture [1] medieval clothing

Medieval clothing in Celtic cultures is known from a variety of sources. Archaeological finds of whole garments are rare; visual depictions (manuscripts, sculpture, metalwork) are plentiful, especially in Ireland (ÉRIU) in the early medieval period, but are often extremely stylized rather than representational. Later medieval representations typically portray the upper classes, who were more likely to wear 'international' fashions. Local vernacular ART (e.g. the Welsh Peniarth MS 28 illustrations) is valuable but rare. Vernacular written descriptions (e.g. literary tales, chronicles, laws) provide normative descriptions, but the specific nature of styles may be concealed by the persistence of garment names as the nature of the garment changes. Descriptions from outside the culture are often more detailed, but may overemphasize minor differences or be slanted for political purposes, for example, as a focus on economic rather than cultural differences.

Overall, styles followed general northern European trends and must be considered in this context. Moreover, to the extent that medieval Celtic clothing can be discussed as a whole, the internal similarities are not significantly greater than those with non-Celtic cultures. In the sub-Roman era we see two distinct styles: a loose, relatively unshaped, sleeved tunic, often worn in multiple layers, full-length for women and either long or short for men, with a mantle (usually an unshaped rectangle) worn over this, and usually some type of headdress for adult women. An alternative style (found primarily in Irish sources) involved close-fitting trousers and a short, close-fitting jacket. The loose tunic remained the primary style until roughly the 14th century when the close-fitting, buttoned garments worn elsewhere in Europe begin to be seen. Upper-class and urban styles similarly follow general European patterns in the 15th century, with the addition of a voluminous over-gown.

A wide variety of evidence for Irish clothing is covered in McClintock, *Old Irish and Highland Dress* and Dunlevy, *Dress in Ireland*. From the earliest sources we can identify two styles. The first was worn by both sexes and combines the *léine*, a loose, unshaped, long-sleeved tunic, often described or depicted as being brightly coloured and with ornamental borders, and the *brat*, an unshaped rectangular cloak, often with ornamented edges or fringes. The second style, associated with soldiers or men of lower status, combines a relatively close-fitting jacket called the *ionar* and close-fitting trews of variable length. These one-piece, joined trousers remained distinctive in Ireland through the high medieval period, contrasting with the more pan-European style of separate leg coverings that

Detail showing the shoulders and a fragment of the buttoned sleeve of an early woollen garment found at Moy, Co. Clare

evolved into a single, joined garment around the 15th century. In the later medieval period, the *léine* evolved into a more shirt-like item, worn under another garment, while the *brat* shifted to a more rounded shape, and was often described and depicted as 'shaggy'. (A surviving fragment has locks of wool woven into the cloth.) Trews continued in use throughout the medieval period, especially for active professions, and descriptions often contrast their one-piece construction with the separate hose popular elsewhere. The *ionar* presumably continued in use, despite less direct evidence, since it appears in 16th-century depictions, then worn over a voluminous *léine*. In addition to these continuing styles, there are also garments which parallel international developments, such as close-fitting, tailored garments, often fastened with a multitude of buttons. From around the 14th century a hooded shoulder-cape was introduced, and, in the 15th century, a loose over-gown belted into folds.

Works on the history of Scottish clothing tend to focus solely on the HIGHLANDS and cover very little medieval material. (The primary focus of Scottish clothing research—KILTS and clan TARTANS—postdate the medieval period.) The more reliable references include McClintock, *Old Irish and Highland Dress* and Dunbar, *History of Highland Dress*. Plentiful information on Scottish clothing only begins in the 16th century; prior to this, there are mostly anecdotal examples. Surviving garments include a hooded shoulder-cape from Orkney (Arcaibh), dating roughly to between the 3rd and the 7th centuries, and a relatively unshaped knee-length sleeved tunic known as the 'Rogart shirt' identified as medieval solely by style (Henshall, *Proc. Society of Antiquaries of Scotland* 86.1–29). The Norse saga of Magnus Barefoot (11th century) describes him as adopting a Scottish style of dress, consisting of a short tunic (leaving the legs bare) and an 'over garment' of unspecified nature. A 12th-century description of pilgrims to Compostela refers to Scottish garments being 'short, to the knees', and another non-Scottish writer of the same era mentions 'bare legs' and 'shaggy cloaks'. Early visual evidence comes from Pictish carved stones of the 8th–10th centuries (Ritchie, *Picts*). Although many details have been lost to erosion, they show tunic-like garments with close-fitting sleeves, mostly knee-length but some longer, sometimes combined with a short cloak of uncertain shape, which was sometimes hooded. Later medieval visual evidence tends to be associated with the southern nobility and to reflect international styles, e.g. 15th-century tomb effigies showing styles closely parallel to those of England and France (Scott, *Costume* 21.16–25).

No general studies have yet been published on the history of Welsh clothing. Visual sources are scarce, the best being the marginal illustrations in the Peniarth

MS 28 law-book (13th century) which show men wearing loose, long-sleeved, belted tunics ranging from knee to calf length, and women with similar full-length garments (Huws, *Peniarth 28*; see LAW TEXTS; HENGWRT). The text of the law-books, which reflect a collection of 10th- to 13th-century practices (Jenkins, *Law of Hywel Dda*), and the romances found in 13th- to 14th-century manuscripts (see MABINOGI) describe a variety of garments. The basic arrangement was an under-garment usually called a *crys*, typically of linen, covered by a woollen over-garment for which a variety of names are given, but most typically *pais* for men and the generic *gwisg* 'garment' for women. A rectangular *llen* is the older style of cloak, while borrowed names describe more shaped cloaks. In contrast, external descriptions of Welsh dress tend to focus on indications of poverty, such as a lack of woollen garments and a habit of going bare-legged, rather than focusing on distinctions of style (see GIRALDUS CAMBRENSIS; James, *Walter Map*). In the later medieval period, there is a shift to more international styles, particularly among the nobility as seen, for example, on tomb images (Lewis, *Welsh Monumental Brasses*).

There appear to be no specific studies of medieval Breton or Cornish clothing.

material culture [2] national costume

The development and adoption of a national costume was part of 19th-century NATIONALISM in most European countries. Often, versions of pre-industrial peasant dress, by then associated with an idealized countryside, were chosen by indigenous élites to serve as the basis for their ideas. Late 19th-century intellectuals such as John Ruskin assumed that a national costume would 'further cleanliness and neatness . . . [because] . . . it fosters and gratifies the wish to look well, without inducing the desire to look better than one's neighbours' (Cook & Wedderburn, *Works of John Ruskin* 428). Since a national costume is a very obvious symbol of national identity it comes as no surprise that the CELTIC COUNTRIES should have sought to utilize its power.

§1. Ireland

Unusually, the national costume of Ireland (ÉIRE) devised by members of the Celtic renaissance at the end of the 19th century was based on early Christian and medieval models described in publications such as Eugene O'CURRY's *On the Manners and Customs of the Ancient Irish* (1873). Promotion of the IRISH language and nationality went hand in hand with the furthering of the Irish textile industries and the invention of a national costume (Robbs, *Irish Dancing Costume*). For the men, tunics over which a loose cape (*brat*) was worn and trousers bound up to the knee dominated. Women wore loose, flowing, ankle-length robes modelled on 11th-century European fashion (derived from what O'Neill called the *léine*) and, perhaps, a *brat* over these. The clothes were embroidered with 'KELLS embroidery', Celtic zigzag patterns, spirals and curves (Allen, *Celtic Art in Pagan and Christian Times*), and accessorized with TARA-style brooches. 'Celtic dress' was advertised in CONRADH NA GAEILGE publications and worn for events such as the Oireachtas (see FEISEANNA), but it did not go unchallenged every time. One member of the revival noted that 'this getup was all right for the Abbey Theatre or Gaelic League dances, but once when myself and a friend . . . in a similar getup and a more striking colour scheme, walked together down a street where the fisherwomen were selling their fish, we were openly derided' (Bowe & Cumming, *Arts and Crafts Movements* 122). Although not generally adopted, 'Celtic dress' became the basis for the costume worn for Irish formal DANCES, recently popularized worldwide by the *Riverdance* company.

§2. SCOTLAND

Scotland's national costume is mainly associated with KILTS and TARTANS, which are said to denote CLAN membership. Both may have been in existence for a long time, though the kilt is not documented before early modern times. In its original form it was simply a large piece of cloth, pleated and fastened round the waist with a leather belt, and with a large brooch or pin on the left shoulder to hold both ends together. Known as the *breacan fèileadh* or *fèileadh mòr*, the 'big kilt', this garment was worn by Highlanders only and was regarded by the Lowlanders as a sign of backwardness and barbarism. Like other Highland customs and characteristics, it was banned in 1746 (see CULLODEN).

It is the *fèileadh beag*, the 'small kilt', that became the national costume for the whole of the country in the 19th century. Since 1785, stories have persisted that it was actually invented by an Englishman (Dunbar, *Costume of Scotland* 69–70; Trevor-Roper, *Invention of Tradition* 15–41). The small kilt is usually worn with a *sporran*, a leather purse worn on a leather belt.

Both kilts and tartans were popularized by Sir Walter SCOTT in connection with the state visit of George IV to Edinburgh (DÙN ÈIDEANN) in 1822. No corresponding costume for Scottish women was developed, though the wearing of tartan-patterned skirts, shawls and other accessories in Scottish textile was adopted for celebrations. The mighty influence that the kilt and tartan have exerted can be observed in repeated attempts to incorporate them into the national costumes of Wales (CYMRU), Ireland (ÉIRE), the Isle of Man (ELLAN VANNIN) and Cornwall (KERNOW).

§3. THE ISLE OF MAN

The concept of a Manx national costume developed through the early and mid-20th century with the evolution of a series of different types and styles of costume identified as 'a Manx national costume'. Sophia MORRISON, secretary of YN CHESHAGHT GHAILCKAGH, in a report presented several times between 1901 and 1907, advised that a costume should be 'modelled on the Irish costume of the 11th century . . . [as] a symbol of their nationality and their patriotism' (Morrison, *Manx Language Society Annual Meeting* 1901.8–11). Her efforts achieved only limited success. At the time, Manx nationalists focused on constitutional changes which would bring the island a greater degree of political independence. Another impetus came with the growing popularity of Manx 'folk' dance and the desire of the performance groups to wear both 'appropriate' and 'patriotic' costume. This led to the development of two distinct forms of costume: one based on historic Manx costume, the other on modern designs that 'symbolized' the island. The historic costume was based on late 18th- to late 19th-century rural working costume e.g. fishermen's *ganseys* (jumpers), homespun *loaghtan* (woollen trousers) for the men and a *kriss* (belt). The women's outfits often comprised woollen 'bed-jackets', red or striped petticoats, overskirts and aprons, and either long bonnets or small mob caps, reminiscent of those worn in Wales (CYMRU) and Brittany (BREIZH). In contrast, the ahistorical costume was designed from the beginning to be both practical and attractive, with the emphasis on its specifically Manx design of Celtic interlace and chain decoration and motifs. A variation on the ahistorical national costume developed with the creation of several Manx tartan designs from the 1950s, using colours considered symbolic of the island, such as blue for the sea, purple for the heather, and yellow for the gorse. Designed by Patricia McQuaid for Ellynyn ny Gael (Arts of the Gael), a cultural organization led by Mona DOUGLAS and Patricia McQuaid, they were popular with local woollen mills because they sold well as cultural site-specific souvenirs for the Manx tourist industry. Dolls wearing this 'national dress', i.e. a tartan kilt with a white blouse, are sold on the island. Variations of the Manx tartan costume have been worn by Miss Isle of Man contestants in beauty pageants and by Manx airlines cabin crew to represent the Isle of Man.

§4. WALES

The Welsh national dress was derived from regional Welsh peasant costumes by Lady Augusta HALL and publicized through her prize-winning essay on *The Advantages Resulting from the Preservation of the Welsh Language and National Costumes of Wales* (1834). Perhaps because of its association with her court at Llanofer, where servants and musicians were obliged to wear it, this costume soon became the dress worn by performers of traditional music. The more elaborate is the women's dress, consisting of a blouse worn under a corselet or close-fitting mantle, sometimes with petticoats and aprons in various patterns and colours (Etheridge, *Welsh Costume*). A (mostly red) shawl covered the often bare arms and a beaver HAT was worn over a close-fitting lace cap. The men's costume consisted of simple trousers or breeches and blazer, made from Welsh wool or corduroy. Under the influence of the Celtic renaissance in Ireland (ÉIRE), Mallt Robertson Williams attempted to devise a national costume for the Welsh gentry based on Irish models. This initiative, however, did not gain much support (Löffler, *Planet* 121.58–66). Nowadays, Augusta Hall's national costume is mainly worn by schoolchildren on Saint David's Day (see DEWI SANT) and by the performers of traditional music. Nevertheless, the red skirt, black shawl, and tall black hat with lace cap remain powerful symbols of Welsh identity and of Wales's radical tradition. During the protests against GM crops in spring 2001, for instance, a young man, dressed in the female national costume, walked the lanes around Mathry (sir Benfro) and held a vigil in front of the community hall, consciously emulating the Rebecca rioters of some 150 years earlier who had also dressed up in women's clothes (see LAND AGITATION). In Cardiff (CAERDYDD), Welsh kilts can

be ordered and are mainly worn for festive occasions such as weddings.

§5. BRITTANY

The Bretons are the only Celts who can boast a national costume which continues an unbroken tradition and one which, in its many regional variations, is still worn at Catholic pardons processions and various festivals held over the calendar year. Because of the variety of regional variations, it is difficult to describe the costume; indeed, some observers have even written of Breton national costumes. The core elements for women are petticoats and layers of aprons, with a bodice and corselet, often of black or blue brocade or velvet, adorned with intricate embroidery. A headdress of lace or muslin, the Breton lace *koef*, can be very simple—similar to the Welsh lace cap worn under the HAT—or much more elaborate and built-up, with intricate folds, wings and long ribbons flowing down the back. It developed many different local varieties in the 19th century, and has survived to the 21st century. R. Y. Creston cites 1200 variations, grouped within 66 main fashion types. In addition to denoting the parish or village of the wearer, the style of *koef* also identified her social class.

The male costume traditionally featured coarse, baggy trousers, taken together at the knee, though nowadays a velvet-trimmed suit seems to be the preferred option. Waistcoats and coats, often of dark velvet with silver buttons, are frequently embroidered, and a broad-rimmed straw hat or black velvet hat with a colourful ribbon is also worn. Silver buckles are a preferred adornment for men.

Gwenno Sven-Myer, MBL

§6. CORNWALL

As on the Isle of Man, Cornish national costumes were devised in the 20th century. A first costume, based on historic sources, is often worn by dance troupes and during displays at *troyls*. This costume is drawn from the 19th-century tin and copper mining heritage in Cornwall (KERNOW), with men wearing hobnailed boots, gaitered trousers, white shirts and waistcoats, topped off by early mining helmets (later, hard hats with battery-powered lights), which were made of lacquered felt and held a candle placed in putty or clay on the brim. The female costume is based on the image of the *bal-maiden* (Cornish *bal* 'mine'), who worked at the surface of mines and dressed tin and copper. The women are usually seen wearing boots, black long skirts with white aprons and white blouses. Traditionally, a white linen bonnet or *gook*, whose variations and styles reflect allegiance to particular parishes or mines, is worn, which may be compared with Brittany's lace *koef*. The historic costume is also seen in maritime towns and villages, though the traditional footwear there tended to be the clog, sometimes called the 'Newlyn clog'. The renewed interest in these clogs reflects the early 21st-century revival of clog-dancing, in particular in villages such as Mevagissey. Fishermen also traditionally wore the Cornish Guernsey or 'knit frock'. The stitching of the frock, like the gook, varied according to the area of origin. Fishwives' costumes were further characterized by huge beaver hats, *cawls* (baskets) carried on the back by means of a band passed over the head, and red cloaks.

The second national costume is connected with the Cornish revival. Henry JENNER, the leader of the CORNISH language revival, attempted to develop a costume for men 'consisting of a blue tunic and kilt, relieved by the yellow Cornish national flower, the broom plant, with sandals and cap copied from old metal examples in the British Museum'. Although images of him and other (male) members of the Cornish national movement show them wearing such attire (Löffler, *Book of Mad Celts*), it never became popular and does not seem to have been developed further. The blue tunic may have been the model for the current bardic costume at the Cornish GORSETH ceremony. After the Second World War, Ernest Morton NANCE designed the first Cornish national dress tartan, modelled on TARTANS elsewhere and based on the fact that the Cornish Light Infantry had traditionally worn a black kilt in combat. Nance's national dress tartan may now be seen incorporated

in a variety of garments. The colours are saffron yellow, black, white, pale blue and red, with a symbolic overlay. The black and white form a St PIRAN's cross, while the black and red symbolize the red beak and feathers of the national bird, the chough. For younger people, the black and gold striped shirt of the Cornish rugby team is as much a badge of identity as the tartan or mining costumes, but the latter are still very popular.

material culture [3] musical instruments

From the early HALLSTATT culture to the present age, the Celtic peoples have shared with other European cultures the same basic types of instruments. Some instruments developed distinctive features as they evolved in different cultures associated with certain performance practices. Technically improved or new instruments have displaced older ones, which became obsolete or survived as folk instruments. The status and survival of a particular instrument depends on the level of patronage, which is influenced by several factors, political, socio-economic, and religious, as well as changing musical style.

Evidence—archaeological, iconographic, literary, documentary, and anecdotal—must be approached with caution. Material finds may have been brought in by traders or settlers. Likewise, iconographic depictions may exhibit foreign influence rather than direct local knowledge, and complete accuracy of depiction is rare. The variety of instrumental terminology in medieval Latin and vernacular literature has caused problems of specific identification.

The earliest archaeological evidence from ancient Celtic Europe reveals a variety of wind instruments, as well as lyres and rattles and other sound makers similar in type to those used by a wide range of peoples across Europe for certain purposes: signalling, ceremonial, ritual, &c.

Material and iconographic evidence of horns and trumpets such as the vertically held CARNYX is contemporary with comments on their military rôle by classical writers (see GREEK AND ROMAN ACCOUNTS). Horns and trumpets are also generally associated with watchmen and heralds.

From at least the 1st century BC, as in other early societies, the Celtic BARDS accompanied themselves on the lyre. By AD 1000 the triangular-framed HARP, depicted on Pictish stone carvings from the 8th to the 10th centuries, replaced the lyre as the main instrument associated with strict-metre poetry. GIRALDUS CAMBRENSIS (*c.* 1188) describes the skill of Irish and Welsh harpers, a statement which also applies to the harpers of Scotland, who, according to Giraldus, like those of Ireland additionally used a *timpán* (probably a type of lyre) and those of Wales a *chorus* (CRWTH). The spread of the bow into western Europe in the 11th–12th centuries brought a new kind of sound and technique which was adapted to indigenous lyres, while the older technique probably coexisted for some time.

The high status and privileges accorded to harpers, *timpán* and *crwth* players associated with bardic performance under native rule, as evidenced in the LAW TEXTS and other literary and documentary sources, had to be constantly justified under English domination (especially from Henry VIII's reign). The Anglicization of the gentry, accelerated by various ACTS OF UNION and the devastating consequences of the anti-Gaelic laws, resulted in the ultimate demise of bardic performance as the traditional patrons either went into exile, some taking musicians with them, or increasingly embraced the current English musical fashions.

Traditional high-art music was governed by a disciplined oral system of education and represents a medieval art in which highly ornamented intricate compositional formulae and timbral subtlety were all important, complementing the similar qualities of strict-metre poetry. The knowledge of this art was fast being eroded in Wales (CYMRU) when Robert ap Huw compiled his manuscript of harp music (1613) using tablature. The tradition lasted longer in the Gaelic heartland: the last harper to use the old fingernail technique on wire strings was Denis Hempson (1695–1807). Bunting's transcription of a tuning prelude played by Hempson, then aged about 97, at the 1792 Belfast Harp Festival shows the inadequacies of modern staff notation to cope with pitch nuances and timbral and ornamental subtleties.

Earlier harpers may well have used oral mnemonics similar to the *canntaireachd* used to teach the *piobaireachd* of the Highland BAGPIPES, whose systematic variation technique resembles the harp music of Robert ap Huw, and may indicate a close affinity with medieval Scottish harp music. Musicians have always exchanged repertories, each instrument applying its own peculiarities within the conventional style. Surviving unaccompanied oral vocal traditions such as the Irish SEAN-NÓS are relevant to traditional instrumental style.

The piper's instrument (Giraldus's Welsh *tibia* and the Irish *cuisle ciuil*) in the early medieval period was probably a single or double reed pipe, possibly a hornpipe, types of which survived in Scotland (stock-and-horn) and Wales (*pibgorn*) as rustic instruments into the 18th century. The Breton duo of BINIOU (bagpipe) and bombard (reed pipe) represents an unbroken tradition from the Middle Ages. The *estives de Cornoaille* (probably Breton and, perhaps, Cornish bagpipes) are often mentioned in medieval French literature associated with popular entertainment.

However, in Ireland (ÉIRE) and Scotland (ALBA) by the 16th century they were also well established as military instruments. The hereditary pipers of Highland chieftains, who also provided ceremonial music, enjoyed high status and privileges.

Pipes and bowed instruments had long been associated with dancing at all levels of society. By the second half of the 16th century, the new Italian violin (replacing the rebec) became the favourite instrument for dancing at both the English and Scottish courts. However, the fashionable instruments of the courtly amateur were lutes, Renaissance viols and virginals. The harpers still retained by some of the gentry were often expected to provide tuition on these instruments. Those who did not have secure patronage became itinerant musicians, depending on payment at special social occasions and seasonal festivities. The violin gradually displaced the *crwth* and the older type of fiddle. While the harp's popularity waned in Scotland and Ireland, the violin rapidly gained ground, taking over some of its functions and, despite Nonconformist disapproval of dancing, retained its status along with the bagpipes (see DANCES). In Wales, however, Nonconformist revivals had dire consequences (see CHRISTIANITY). By the end of the 19th century, the fiddle and triple harp tradition was being kept alive largely by the famous Wood family of gypsies. The link between harp music and poetry, however, had never completely disappeared, and the importance of the harp in the EISTEDDFODau (albeit the modern pedal harp) ensured its survival.

From *c.* 1800 Irish traditional musicians have expanded their range of instruments to include a variety of fipple and rim-blown flutes, free-reed instruments and, since the 1950s, BODHRÁN and bones. Recent years have seen a revival of interest in the older instruments and performance practices of the Celtic countries.

Bethan Miles

Math fab Mathonwy is one of the characters in the Middle WELSH tale which is usually referred to by his name, alternatively known as the Fourth Branch of the MABINOGI.

In the Fourth Branch, Math is described as lord of GWYNEDD, the powerful medieval principality of north Wales (CYMRU). He is said to be the son of Mathonwy, though it is not entirely clear from the text whether we are to understand this as his father's name or his mother's (for discussion of the elements of this name see Bromwich, TYP 448; also Sullivan, THSC 1990.45–63; Koch, *Proc. Harvard Celtic Colloquium* 9.2–6). In the Mabinogi text, Math is introduced as having two specific characteristics: one of a seemingly positive nature, i.e. his ability to hear the slightest whisper spoken by men (like the mysterious Coraniaid in CYFRANC LLUDD A LLEFELYS). The other attribute seems more of an affliction: he must keep his feet on the lap of a virgin foot-holder, Goewin in the present text, during times of peace

(see Hughes, *150 Jahre "Mabinogion"* 58). Owing to this defect, Math is unable to embark on a circuit of his lands, and has to rely on the help of his two nephews, the sons of Dôn, Gwydion and Gilfaethwy. Math also possesses magical powers and even a magic wand, which at times he wields to mete out justice, for example, turning Gwydion and Gilfaethwy into a succession of different animals in the Mabinogi text. Later on in the story, Math uses his wand to create a wife, Blodeuwedd, out of flowers, for Lleu Llaw Gyffes. This aspect of Math as a magician is consistent with other medieval Welsh references to him in other sources, in particular the four references in Llyfr Taliesin ('The Book of Taliesin'; see Hughes, *Math Uab Mathonwy* ix–x) and the single reference to him in the triads (TYP no. 28). The poets of the 14th, 15th, and 16th centuries also seem to know of Math as lord of Gwynedd and as a powerful magician, for example, Dafydd ap Gwilym (see Bromwich, *Dafydd ap Gwilym* §12.35–42) and Lewys Môn (see Rowlands, *Gwaith Lewys Môn*, 347–9). Lewys Môn's allusion suggests that he knew the variant version of the tale *Math*, since he names Arianrhod, rather than Goewin, as Math's virgin foot-holder.

Math's name is to be found in various genealogies of the 15th and 16th centuries, where he is often named as the father of several of the characters of the Fourth Branch—Lleu Llaw Gyffes, Dylan Ail Ton, and Blodeuwedd (variant spelling: Blodeuedd), though he does not (obviously) figure as their father in the surviving version of the tale itself. In these pedigrees, Arianrhod or Aranrhod daughter of Dôn is named as their mother (see Bartrum, EWGT 90). It is possible that in this material Math has displaced Gwydion as the father of Lleu, Dylan, and Blodeuwedd in an earlier tradition.

The name *Math* is likely to be connected with two names which appear in early Irish material. In Lebar Gabála Érenn ('The Book of Invasions'), Math mac Úmóir is named as druid of the Tuath Dé (§§314, 349, 369). A figure called Mathgen or Matgen is said to be druid of the Tuath Dé in the text Cath Maige Tuired ('The [Second] Battle of Mag Tuired', §78 and §§128–9). Old Irish *Mathgen* derives regularly from the attested Old Celtic name *Matugenos* 'auspiciously born'. If Welsh *Math* has not been borrowed from Irish, its derivation is problematical.

Matholwch, king of Ireland (Ériu), marries Branwen daughter of Llŷr and sister of Bendigeidfran (Brân), king of Britain, in the Second Branch of the Mabinogi. It has been suggested that the name Matholwch derives from Irish Milscothach. However, the original form in Welsh seems to have been Mallolwch, as attested in the Peniarth 6 fragment of the tale (*c.* 1225), and in two instances in the Poetry of the Princes (see gogynfeirdd). He is remembered in the triads as 'Matholwch the Irishman' who struck one of the three harmful blows of the Island of Britain upon Branwen, his wife, a variant on the episode in the Mabinogi tale.

Mathrafal (< *ma* + *trafal* / *tryfal* 'plain [within a] triangle', the triangle being formed by the junction of two rivers) lies in the parish of Llangynyw, 10 km west of Welshpool (Y Trallwng), and is traditionally regarded as the chief court of the princes of Powys. In the 13th century, the poet Llygad Gŵr (*fl.* 1258–92/93) refers to Llywelyn ap Gruffudd as *Talheithawc Mathraual* (the diademed one of Mathrafal), and of Dinefwr and Aberffraw, thus claiming his superiority over the whole of Wales (Cymru). In the 12th century, Prydydd y Moch (Llywarch ap Llywelyn) refers to the burning of Mathrafal castle. A further castle was built there by Robert de Vieuxpont in the 13th century, but this, too, was also

burned, and there are references from the 13th century to a manor which pertained to the lords of Powys. However, Huw Pryce has shown that there is no evidence prior to the early 13th century to suggest that Mathrafal was the chief court of Powys. The earliest references seem to be propaganda in LAW TEXTS, which claimed that the court of the princes of GWYNEDD in Aberffraw was superior to the other two chief courts of Wales, namely Mathrafal in Powys and Dinefwr in DEHEUBARTH. Mathrafal was probably chosen because it was the site of an important 13th-century castle and also because of its close proximity to MEIFOD church, which was the traditional burial place of the kings of Powys.

Matronae (mother goddesses, sing. Matrona), the divine group, are sometimes also called simply *Mātres* (the mothers). A total of 84 instances of the GALLO-BRITTONIC divine name *Matronae* have been noted in dedications of the Roman period (Jufer & Luginbühl, *Les dieux gaulois* 51–2). With the probably Germanic byname *Aufaniae*, the Matronae were worshipped intensively in the Rhineland, in the vicinity of Bonn and Cologne. A cult of the *Matronae Vacallinehae* is also attested on Rome's RHINE frontier at Pesch. Although we have no contemporary evidence from Roman Britain for dedications to goddesses named specifically as *Matronae* or singular *Matrona*, the name gives rise to those of two figures in Welsh tradition: Modron and Madrun daughter of GWERTHEFYR, both of whom are indeed mythical mothers (both are covered in the article on MODRON). The former Welsh name results from the original Celtic form *Mātrona* and the latter from the Latinization *Matrōna*. A British cult of Matrona is also implicit in that of MAPONOS (the divine son), for which there is abundant evidence. *Mātrona* was the ancient name of the river Marne in north-east GAUL. On the divine name suffix, see DAMONA; EPONA; GWYDION. As with Irish BÓAND, we may understand Mātrona as simultaneously the name of the river and its divine female personification. The river itself has produced evidence of WATERY DEPOSITIONS from the Late Bronze Age, the Iron Age, and the Roman period. The Marne region had been especially influential in the formation of LA TÈNE style art and other distinctive aspects of the material culture of BRITAIN and other regions of the Continent. We might conclude, therefore, that the Marne country had been the epicentre of the cult of the mother goddess called *Mātrona*, that this cult had originally been linked to the depositional rituals in the river itself, and that it then spread from there—to Britain and the Rhine—with the dominant Marnian culture. It should be noted, in this connection, that the Parisi and the CATUVELLAUNI of Britain probably originated as branches of the tribes on the Marne who bore those names.

Although *Mātres* is not an exclusively Celtic word for 'mothers' and the cult is widely attested in the Roman Empire, the cult is especially strong in Celtic areas and there are specifically Celtic associations. Gaulish *Mātres* in dative pl. *Mātrebo* is found in dedications 'to the mother goddesses of Nîmes' and another 'to the mother goddesses' of Glanon (see GAULISH and GLANON for the texts of the inscriptions). The triple *Mātres Comedovae*, whose byname is probably Celtic, were worshipped at the thermal springs at Aix-les-Bains, where the spring god BORVO was also worshipped. The *Mātres Griselicae* worshipped at Gréoulx were also associated with a therapeutic spring. There are scores of dedications to the *Mātres* in Roman Britain, and the name is often paired with that of a homeland, for example, *Mātres Italae*, *Mātres Gallae*, *Mātres Germanae*, also *Matres Tramarinae* or *Transmarinae* (overseas mothers). There are three Romano-British dedications to *Mātres* with the Celtic byname *Ollototae*, probably meaning 'of all tribes, peoples'. *Matres Domesticae* (Mother goddesses of the home or homeland) were worshipped widely in Britain, and there are dedications at NOVIOMAGOS (Chichester) and in the northern military zone at the forts of Eburācon (York), Uxelodunum (Stanwix, Cumbria), and Aballava (Burgh-by-Sands, Cumbria).

Some writers have seen the south-Walian name for

the FAIRIES, *bendith y mamau* (blessing of the mothers), as survival in folk belief of the Celtic mother goddesses.

In the representations of the Romano-Celtic mother goddesses, they are frequently shown in groups of three, commonly with cornucopias and other emblems of harvest and abundance, often with babies and one breast bared, and usually dressed in long gowns. There are over 1100 images in total, including the images with these features but not inscribed as *Matronae* or *Matres*. On the iconography of mother-goddesses in connection with a Romano-Celtic cult of ancestor worship, see KOERICH.

The **Matter of Britain** (French *Matière de Bretagne*) is a term referring to subject matter deriving from Welsh or Breton (or possibly Cornish) literature, or claimed or assumed to be so, as reflected in medieval romance. The term was coined by Jean Bodel in his *Chanson des Saisnes* (late 12th to early 13th century) in his categorization of the literary material available to poets as the Matter of Rome (romances of antiquity, TROJAN LEGENDS, Roman material, ALEXANDER THE GREAT), of France (cycles of *chansons de geste*, Old French epics of Charlemagne), and of BRITAIN (romances and *lais*, mostly but not exclusively ARTHURIAN. 'The Matter of Britain' is a convenient label, but is nowadays over-simple in that there are other medieval poems which cannot be easily subsumed within any of these categories. A more serious shortcoming is that the romances and poems belonging to the Matter of Britain differ significantly in the extent to which they depend on Welsh or Breton sources, since in many cases the British context could lie merely in conventional localization or nomenclature used to create a setting for a story from a non-Celtic source. The two literary forms typical of the Matter of Britain are the *lais*, particularly of Marie de France (see BRETON LAYS), and Arthurian courtly romance. The *lais* (*c.* 1160s) are short narrative poems concerning love, fights, adventure, magic, and FAIRIES; they reflect motifs of popular folk literature (see FOLK-TALES). Marie says that her poems are based on *contes*, which she has heard, and *contes*, on which Breton storytellers have made *lais*. Whatever these may have been—perhaps narratives and songs—she is clearly indicating a direct debt to BRETON LITERATURE. Her *lais* have characters bearing Breton names, and some have BRETON titles and are set in Brittany (BREIZH), Cornwall (KERNOW), or 'Loengre' (Britain). One is a story of TRISTAN AND ISOLT, another (*Lanval*) is Arthurian.

The five Arthurian romances of CHRÉTIEN DE TROYES (*c.* 1170–81) are longer and more accomplished than the *lais*, and present the Matter of Britain in its most developed form. Chrétien's *Cligès* may simply use the external trappings of the Arthurian scene and context, but *Erec et Enide*, *Yvain*, *Lancelot*, *Le conte du Graal (Perceval)* not only utilize this context but also depend indirectly, either as narratives or in some of their episodes, on Welsh or Breton material (see also GERAINT; OWAIN; PEREDUR; ROMANCES; TAIR RHAMANT).

Chrétien's romances were followed by others in similar vein, with the result that the (Arthurian) Matter of Britain became a major component of medieval literature. How the Welsh and Breton material reached Chrétien and other writers of romance has been a matter of some controversy. There were several channels available, ranging from Norman-Welsh contacts in Wales (CYMRU), the possibly hybrid nature of Norman-Breton culture, bilingual storytellers and latimers (professional translators or interpreters, [see CYFARWYDD]) in Wales, Brittany, and France. Other, less formal associations, were also possibly at work, and it may well be that many of the extant examples of the Matter of Britain derive third-hand through now-lost literary intermediaries. In some instances, the parallels are closer to surviving IRISH tales than to anything known from Wales or Brittany, and this might mean either that the comparable BRYTHONIC material has been lost or that a direct channel between Irish and French literature had once existed. The 'Brythonic' element found in the romances must not be exaggerated. Its substance ranges from personal names to the use of specific episodes to more extended narratives; most important for CELTIC STUDIES are

those cases where both the proper names and the narrative of a particular episode can be paralleled in Welsh or Breton. Throughout, however, the creative and inventive genius of individual writers in the way they may have adapted their source material is a factor to be considered. Whether the fidelity to Brythonic sources was relatively great or slight, what remains remarkable is that medieval poets and their audiences remained so enamoured of the Matter of Britain and the figure of Arthur for so many centuries.

Brynley F. Roberts

Maunoir, Père Julien (1606–83) was an influential and energetic Catholic missionary and a pioneer in the use of the Breton language at the beginning of its modern period. He was born in the non-Breton-speaking Upper Brittany (Breizh-Uhel) at Sant-Jord-Restembaod (Saint-Georges-de-Reintembault), near Felger (Fougères).

§1. THE CATHOLIC MISSIONARY

As a young Jesuit, Maunoir was sent to the Breton-speaking town of Quimper (Kemper) from 1631 to 1633, before embarking on a mission to Canada. He returned to Quimper in 1640. His strong physique, a long life, and his diligence enabled him to undertake 439 missions, mainly in Lower Brittany (Breizh-Izel). His principal co-workers were Fathers Rigoleuc and Huby, who worked in the Vannetais district (Gwened), Father Bernard, the anonymous author of the *Canticoù spirituel*, and Father Guillaume Le Roux, Maunoir's successor.

Maunoir invented a style of intensive missionary activity characterized by pragmatic creativity. A mission would last for a month, which he would spend teaching at a particular place. He used all the pedagogic methods of the Jesuits—for example, taking advantage of the popular appeal of the theatre for an elaborate staging of the passion of Christ at the end of a mission—as well as new tools forged by the Counter-Reformation: canticles as a means of spreading the elementary beliefs of the religion (these were essentially simple slogans with pedagogic content set to popular tunes); confession, used both as a lesson and a redirection of a life's course; and the catechism, in which Maunoir used the comparatively new method of question and answer intended to be learned by heart. He also staged religious festivals in which he made use of local customs: processions and communions in honour of the dead, who in Lower Brittany were regarded as still very close to the living. Such events drew crowds at the climax of a mission. He was an innovator and quickly discarded failed methods, such as the *taolennoù* (portable religious paintings on sheep skins) of his predecessor Le Nobletz, which were unsuitable for large audiences. Maunoir organized a following of some 40 priests who spread his message to parishes. The novelty of his methods, the zeal which he directed against such deep-rooted local customs as dancing, and the new demands for religious instruction placed on local clergy met with resistance. There is some doubt as to the lasting effect of his missions, since the momentum was often not sustained by local clergy in the absence of Maunoir's personal dynamism. His spirituality—marked by an obsession with the devil—raised doubts even among his hagiographers.

In 1683 the Bishop of Kemper proclaimed Maunoir the 'Apostle of Brittany', and he was beatified in 1951. Retrospective misconceptions about Maunoir include the idea that he created the later form of the *taolennoù*, actually the work of his colleague and contemporary Vincent Huby. Maunoir's preaching during the revolt of the *bonnets rouges* in 1675 has led some political historians to view him simplistically as a counter-revolutionary agent of central authority.

§2. MAUNOIR AND THE BRETON LANGUAGE

According to legend, Maunoir learned Breton in one night. He was aware of Breton's importance in Lower Brittany, and that it was essential for the success of his missions. He produced Breton texts with diligence: his *Sacré Collège de Jésus*, including *Quenteliou christen*

(Christian lessons) with his ground-breaking dictionary and grammar, was published in 1659 and is conventionally viewed as the starting point of Modern Breton. The fact that his missions relied on the spoken Breton of his day—rather than the archaic medieval language which writers still cultivated at the beginning of the 17th century—was characteristic of his whole approach.

Alain Croix

Medb and Ailill mac Máta (also called Ailill mac Mágach) figure as queen and king of CONNACHT in the tales of the Ulster Cycle, often as chief antagonists of the ULAID and their high-hero Cú CHULAINN, especially in the central epic TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley'). Their principal court is at CRÚACHU. Their daughter is the beautiful Findabair, whose name is cognate with Welsh GWENHWYFAR and who is offered as an enticement to fight Cú Chulainn to a series of doomed Connacht champions in *Táin Bó Cuailnge*. In this, the daughter is effectively a puppet-like extension of her mother's personality as a Machiavellian *femme fatale*. In general, the most notable attribute of the couple is that Medb is usually dominant and prone to aggressive action, both military and sexual. Consequently, Medb has had particular appeal for modern readers and her personality has lent itself in recent times to feminist interpretations and semi-popular ideas about the liberated Celtic woman. The amount of attention afforded her in the tales indicates that she must also have been popular among medieval Irish audiences, though the moral spin, particularly in *Táin Bó Cuailnge*, is that her unconventional avarice brings disaster on her people, thus rationalizing the inevitable triumph of Cú Chulainn and Ulster against all odds.

The name *Medb* is Celtic and is clearly related to the word for 'mead', Old Irish *mid*, Welsh *medd*, Old Celtic *medu-*. The thematic function of mead in the Welsh GODODDIN, as at first the beguiling and luxurious enticement to aristocratic warriors, but ultimately bitter doom on the battlefield, suggests that Medb's complicated and dangerous character is a personification of this paradox of her namesake, mead. *Medb* can be understood as the feminine adjective **medu̯ā* 'intoxicating', which could imply that her character originated in the context of the SOVEREIGNTY MYTH in the episode in which the goddess or woman representing the sovereignty of the land chooses her spouse, bestowing a libation on the man destined to be king. In fact, Medb does precisely this, rather deceitfully, with each of the three contending heroes of FLED BRICRENN ('Bricriu's Feast'). She then sleeps with the confirmed superhero Cú Chulainn, but if this is a survival of some primeval function of Medb as giver of the draft of KINGSHIP, the archetype has survived only indirectly, since Cú Chulainn is not a king nor made king by receiving Medb's favours.

Medb Lethderg (Red-side), who within the extant Irish tradition is clearly a different character, has a succession of husbands, all kings of the most prestigious royal site at Tara (TEAMHAIR); these, again, appear to be the euhemerized attributes of an immortal sovereignty goddess. Had traditions of Medb of Connacht and of Tara been reconciled or were ultimately one, this could explain why the LAIGIN are so prominent in Medb's army in the *Táin* and why they attack Ulster from the south.

Ailill, gen. *Ailello*, later *Ailella*, is a fairly common early Irish man's name. It is possibly the cognate of Welsh *ellyll* 'spirit, phantom, ghost, fairy'; if so, it probably developed into a name as a description of a hero infused with supernatural ardour.

The main discussion of Medb and Ailill as literary characters may be found in the article on the ULSTER CYCLE. Specific aspects are treated in articles on tales in which they occur and characters with whom they are associated; these include (as well as those named above): FEDELM; FERGUS MAC RÓICH; MESCA ULAD.

Meddygon Myddfai or the Physicians of Myddfai (*fl.* from 1200–30) is the name given to a family of physicians who are reputed to have practised their art at Myddfai in Carmarthenshire (sir Gaerfyrddin) for five centuries. The evidence for their historical existence in the medieval period is sparse. A preface found at the beginning of a tract treating illness in head to foot order is included in many manuscripts from the late 14th century onwards. The preface, which is paralleled in other languages, had been adapted for the Welsh context, and records the learning of Rhiwallon the Physician and his three sons, Cadwgan, Gruffudd, and Einion. These were the physicians of Rhys Gryg (†1233), prince of Dinefwr. Rhys Gryg's succession, following the death of his father, Rhys ap Gruffudd (1132–97), to the territory of Ystrad Tywi was confirmed in 1216, when the division of the lands of Deheubarth was settled in a meeting in the presence of Llywelyn ab Iorwerth. Myddfai was one of the *maenorau breiniol* (privileged *maenor*) of Cantref Bychan, one of the *cantrefi* which made up Ystrad Tywi. By the end of the 13th century, Myddfai formed part of the Lordship of Llandovery (Llanymddyfri) and circumstantial evidence for the physicians is to be found in two of the Extents of the Lordship which inherited the regalia of the Welsh kingdom. These record that the Lord of Llandovery had the right to call on the services of a doctor from among the free tenants of Myddfai. A single couplet in a poem, spuriously attributed to Dafydd ap Gwilym by John Davies of Mallwyd (*c.* 1567–1644) in his *Dictionarium Duplex* (s.v. Myddfai) is the sole other piece of medieval evidence for the doctors.

There is evidence that medicine was practised at Myddfai by the descendants of Rhiwallon until the 18th century. Lewis Morris (1701–65), the antiquarian (see morrisiaid môn), refers to the last two, David Jones (†1719) and John Jones (†1739), whose gravestone is preserved in the parish church. Other doctors to the present day, practising elsewhere, have claimed to be Rhiwallon's descendants. Handing down a craft or profession through the members of one family is a well-known feature of Celtic society in Ireland (Éire) and Scotland (Alba), where families such as the Beatons practised their medicine for generations.

During more recent centuries the traditions of the Physicians of Myddfai are most famous for their association with the legend of Llyn y Fan Fach, the most popular of Welsh folk-tales, which claims the physicians to be descended from a lake fairy. Farm names, such as *Llwyn Maredudd Feddyg* and place names such as *Llidiard y Meddygon* testify to the local popularity of the legend. The tradition has captured the Welsh imagination and the Physicians have become the Hippocrates of Welsh history. Perhaps the most recent manifestation of its popularity was the opera, *The Physicians of Myddfai* by Peter Maxwell Davies, performed in 1996 by the Welsh National Opera Company.

The physicians' names are traditionally associated with medical writings preserved in Welsh manuscripts (see medical manuscripts). The earliest of these is preserved in BL Add. MS 14912, though the most published text is that included in the Red Book of Hergest (Llyfr Coch Hergest). These compilations consist of a combination of recipes, astrological medical tracts, uroscopies, and instructions for surgery. The contents are not indigenous to Wales (Cymru) and have their parallels in other languages, deriving ultimately from Latin texts. Some of the texts have a preface, which mentions Rhiwallon and his sons in words which echo the writings of Galen, and emphasizes their association with a tradition of recording medicine 'lest there be no one who knew these things as well as them after their time'. It has been argued that the settlement of the physicians at Myddfai is due to the rich flora found around Llyn y Fan Fach. This flora is not, however, the flora reflected in the medical texts.

medical manuscripts [1] Ireland and Scotland

The corpus of medical writing in Irish comprises more than one hundred manuscripts that are mainly medical in content, written between the beginning of the 15th and the end of the 17th century. Comprising in total just over 16,000 pages of text, these manuscripts are the most important source extant for the history of medicine and medical education in Ireland (Éire) and Gaelic Scotland (Alba) during the late medieval and early modern period.

The majority of Irish medical manuscripts are housed in Dublin (Baile Átha Cliath), the largest collections there being those of the Royal Irish Academy (Acadamh Ríoga na hÉireann: 33 medical manuscripts), Trinity College (28), and the National Library of Ireland (Leabharlann Náisiúnta na hÉireann: 10). The most important collection in Scotland is that of the National Library of Scotland, Edinburgh (22), while the British Library in London has nine medical manuscripts written in Irish.

From the 12th century onwards, medicine in Ireland was a hereditary profession, organized and practised by distinct physician-kindreds, the names of more than twenty of which are recorded in medical manuscripts, in annals, and in other historical sources. Particularly prominent in the profession were the families of Mac an Leagha (Mac Kinley), Mac Caisín (Cashin), Mac (or Ó) Duinnshléibhe (Mac Alea, Donleavy), Mac (or Ó) Maoil Tuile (Tully, Flood), Ó Bolgaidhe (Bolger), Ó Caiside (O'Cassidy), Ó Callanáin (Callinan), Ó Ceanndubháin (Canavan), Ó Conchubhair (O'Connor), Ó Fearghusa (Fergus), Ó hÍceadha (Hickey), Ó Leighin (Leyne), Ó Nialláin (Nealon), and Ó Siadhail (Shields).

Several of these kindreds maintained medical schools in which academic and practical training was provided for members of their own and other families. The institution about which most detail has survived is a school run by the Ó Conchubhair (O'Connor) family at Aghmacart, Co. Laois (Achadh Mhic Airt, Contae Laoise), a townland which in medieval times was part of the Mac Giolla Pádraig (Fitzpatrick) lordship of Upper Ossory. In the closing decades of the 16th century, the Aghmacart school was under the patronage of Fínghean Mac Giolla Pádraig (†1613), third Lord Baron of Upper Ossory. At that time, it was headed by Donnchadh Óg Ó Conchubhair (*fl.* 1581–1610), an entirely Irish-trained doctor, chief physician to Fínghean. In 1590 Risteard Ó Conchubhair (1561–1625), a student and kinsman of Donnchadh, referred to him in a manuscript which he was compiling under Donnchadh Óg's supervision, as 'the best of the physicians of Ireland in his own time' (Dublin, Royal Irish Academy 439). Risteard's book and several other manuscripts known to have originated in, or to have been associated with, the Aghmacart school, provide a unique insight into the nature and variety of literature that circulated in an early modern Irish medical institution.

Descended from a branch of the Mac an Leagha family which migrated to Scotland around the end of the 13th century, Scotland's principal medical family, the Beatons, has been studied in depth by the historian, John Bannerman. For the period 1300 to 1700 he has identified 76 practising physicians among the kindred, and notes furthermore that 'more medieval Gaelic manuscripts known to have been in their possession have survived than for any other professional kindred in Scotland'.

Irish medical manuscripts are essentially textbooks and works of reference written by students and doctors for their own professional use. The treatises they contain are, for the most part, translations or adaptations of Latin texts which expound the Graeco-Arabic learning taught in European medical schools between the 12th and the 17th centuries. Cosmopolitan in origin and wide-ranging in subject-matter, the texts deal with various aspects of medieval medicine such as pathology, anatomy and physiology, diagnosis and prognosis, diet and regimen, surgery, obstetrics and pharmacology. Works of international repute available in Irish include: an anonymous commentary on the *Practica super nono Almansoris* of the Montpellier physician Geraldus de Solo (†*c.* 1360), translated into Irish in 1400; an anonymous commentary on the *Aphorismi* of Hippocrates (*c.* 450–370 BC), translated in 1403; *De dosibus medicinarum* by Gaulterus Agilon (*fl. c.* 1250), translated by April 1459; John of Gaddesden's *Rosa Anglica* (*c.* 1314), translated by 1463; *Regimen santiatis* by Magninus Mediolanensis (*fl.* 1326–36), translated by 1470, and two works by Bernard of Gordon (*c.* 1258–

c. 1318): *De pronosticis* (1295), translated by 1469, and his *Lilium medicine* (1303–5), translated by 1483.

The occurrence in the manuscripts of several indigenous compilations, works that draw on Irish versions of Latin texts rather than on the Latin sources themselves, testifies to the complete assimilation by Irish physicians of contemporary European scholastic medicine.

The medical texts are invariably written in Early Modern Irish, a standard literary language used by the learned classes of Ireland and Gaelic Scotland throughout the late medieval period.

While full catalogue descriptions of the majority of Irish medical manuscripts exist, only a handful of texts has appeared in print.

medical manuscripts [2] Wales

The earliest testimony to medical works written in medieval manuscripts dates from the end of the 14th century. There are six manuscripts from the period before 1500 which consist almost entirely of medical material: London, BL Add. 14912; Cardiff, Havod 16; Oxford, Jesus College 22; Oxford, Bodleian Library, Rawlinson B 467; and Aberystwyth, NLW , Sotheby C 2. The most published text is the one included in the medieval miscellany of the Red Book of Hergest (Llyfr Coch Hergest). Another manuscript, NLW 3026 (Mostyn 88), dated to the 1480s, is an illustrated calendar manuscript of a type popular in England, which includes medical material. These manuscripts, which contain similar material, belong to different parts of Wales (Cymru) and point to a pan-Welsh tradition of medical writing in the late Middle Ages. Some of the manuscript copies attribute the writings found in them to the Physicians of Myddfai (Meddygon Myddfai). It is not known for whom or by whom most of the manuscripts were copied. NLW Sotheby C 2 was the book of a practising doctor, Bened Feddyg, and both the Red Book of Hergest and NLW Mostyn 88 were copied for cultured laymen. Slightly later manuscript copies, such as NLW Llanstephan 10, belonged to clergymen.

The contents of these collections are mixed. There are Latin–Welsh glossaries of the plants which formed part of diet and medicine, passages of medical theory, rules for hygiene, uroscopies, snippets of surgery and references to bloodletting, and three references to surgical procedures for craniotomy, ligation for haemorrhoids, lithotomy, and many recipes. These texts are paralleled in Latin and vernacular collections throughout Europe. Among the most popular texts of the collections were the translations of sections of the *Secreta Secretorum*, in the form of a letter written by Aristotle to Alexander the Great. Written down originally in Arabic in the 9th century, translated into Latin in the 12th, the work was influential in the medical school of Salerno. Three sections of the work were translated into Welsh: the *De Sanitate Tuenda*, giving instructions as to how to lead the healthy life; the *Physiognomia*, showing how analysis of a man's appearance can reveal his temperament and character; and the *De quattuor regibus* concerning kingship. The first two occur in many of the medical books.

The collections are concerned with the same fields as modern medicine, since they deal with hygiene, prognosis, diagnosis, treatment by drugs, diet, or surgery. The primary difference is that the scientific basis is Galenic anatomy and humoral theory, namely the belief that disease stemmed from imbalance in the humours which made up the human body. The inbalance, which caused disease, could be rectified by offering special diet and medicine of like or opposite quality. Much of the Welsh texts consists of long lists of plant and animal recipes aimed at the treatment of disease, sometimes in a head to foot order, together with long lists of the qualities of foodstuffs. Another instance of humoral theory is reflected in the uroscopies whereby the doctor examined the urine of a patient in order to discover the nature of a disease. The colour, translucence, and smell of the urine showed the nature of the humours which determined the state of the body and the mind.

Another pseudo-science reflected in the collections is that of astrology, and calendars are often included in the manuscripts. There are numerous astrological

texts. A good example is the series of detailed rules which determined the nature of the importance of the zodiac in a man's life. One of the beliefs was that all the signs of the zodiac had particular control over a special part of a man's body in head to foot order, with the first sign of the zodiac—Aries—controlling the head, the last—Pisces—the feet. The situation of the sun in the zodiac determined the time of treatments. In NLW Mostyn 88 a treatise expounding this theory is accompanied by a picture of the human body on which the zodiac signs are imposed.

These texts were copied well into the modern period. The *Welsh Leech Book*, in its present form, belongs to the 16th-century, though it derives from earlier material. Most later compilations, however, abandon the discussions of humoral theory and astrology, and preserve only the recipes of the medieval collections.

Mediolanon (*Mediolanum* and the variant *Meiolanum* in Latin sources), the present-day city of Milan, was the most important town of the tribal group known as the Insubres in CISALPINE GAUL. Its name translates as 'the middle of the plain', and the concept of central location probably had ideological as well as military and economic significance (cf. MIDE). In the works of the ancient authors it is often referred to as one of the earliest Celtic towns in the Padana (Po valley), as one of their urban centres dating back to the 4th century BC or even earlier (Tomaschitz, *Wanderungen der Kelten in der antiken literarischen Überlieferung*). According to TROGUS POMPEIUS, the Gauls entered northern ITALY to escape persistent internal strife north of the Alps and founded a group of cities as soon as they had crossed the Alps, among them Mediolanum (*Philippic Histories* 20, 5.7; 24, 4–5). LIVY (*Ab Urbe Condita* 5, 34–5), on the other hand, reports that, due to overpopulation north of the Alps, a group of Celts, led by BELOVESUS, the nephew of king Ambicatus, entered the Padana during the reign of Tarquinius Priscus in Rome, thus back in the 6th century BC, and, after defeating the Etruscans, founded Mediolanum (J. H. C. Williams, *Beyond the Rubicon*). The archaeology is much less impressive. Although recent excavations have provided some evidence for pre-Roman urbanized phases, the bulk of archaeological evidence for the importance of Mediolanum comes from layers which postdate the Roman conquest (Ceresa Mori, *Settlement and Economy in Italy 1500 BC–AD 1500* 465–76). However, the town is frequently referred to as the centre of the Insubres, and thus seems to have been of considerable importance in pre-Roman times. It figures in narratives about Roman military campaigns in the Padana, and when Claudius Marcellus defeated the Insubres in the battle of Clastidium in 222 BC, he won the *spolia optima* for killing the opposing commander in battle and capturing the town.

RK

Medrawd is the Welsh Arthurian character who corresponds to the Cornish Modred, usually called Mordred in the Continental and English romances. The earliest surviving mention of him is in an entry for 537 (or 539) in ANNALES CAMBRIAE: *Gueith Cam lann in qua Arthur et Medraut corruerunt* 'the battle of Camlan in which Arthur and Medrawd fell' (see ARTHUR, THE HISTORICAL EVIDENCE §6). It is not clear from the *Annales* entry whether Arthur and Medraut fought on opposite sides as in later accounts; nor is their relationship given. For the subsequent

Welsh literary treatments of Arthur, Medrawd, and their fateful conflict at this battle, see CAMLAN. Although medieval Welsh prose, like international ARTHURIAN literature, tends to present Medrawd as Arthur's nemesis—he is blamed for Camlan, for example, in the TRIADS (TYP no. 51 'The Three Dishonoured Men')—Welsh poetic allusions reflect a different tradition: Medrawd is depicted as a heroic paragon and implicitly on good terms with Arthur. The sinister Medrawd first appears in Welsh poetry with TUDUR ALED (*c.* 1465–*c.* 1525).

In HISTORIA REGUM BRITANNIAE ('History of the Kings of Britain') of *c.* 1139, Mordred is the son of Arthur's sister Anna. Placed in charge of Britain while his uncle campaigns against the Romans on the Continent, Mordred attempts to take Arthur's wife (see GWENHWYFAR) and usurps the throne. Eventually, Arthur returns and Mordred is killed at Camlan, which GEOFFREY OF MONMOUTH locates in Cornwall (KERNOW). So far as it goes in its fragmentary state, the newly-discovered Cornish Arthurian drama BEUNANS KE (summarized in the article) is similar to Geoffrey's account. It uses the Cornish form of the name *Modred*, which is in fact an old Cornish name: *Tedion Modredis sunu* is listed in the BODMIN MANUMISSIONS (8a).

In the 13th-century French Vulgate *Mort Artu*, Mordred is Arthur's own incestuously begotten son by his half-sister Morgause, and this version is continued in the influential 15th-century English *Mort Darthur* of Malory. There are various traditions, some attested in early sources, that Arthur killed his own son, who is called variously Amr (see ARTHURIAN SITES) or Llachau (see CAI), as well as Medrawd/Mordred. The underlying paradigm is that of the supreme hero who could only be exceeded by his own son who only he himself was mighty enough to kill, as seen in the analogue of the killing of Connla in AIDED ÉNFIR AÍFE (The violent death of Aífe's one man [i.e. son]; see CÚ CHULAINN for discussion and further parallels). The incestuous conception of Arthur's son could be a non-Celtic Continental literary innovation, but it might also have arisen through a mistakenly literal interpretation of the SOVEREIGNTY MYTH in which a lineage of kings is metaphorically espoused down the generations to the female personification of the kingdom, a theme which can be detected in the various accounts of Medrawd/Mordred's parallel abduction of Gwenhwyfar/Guenevere and the usurpation of Arthur's throne. There is also the intriguing possibility that the mythological origin of the character is reflected in the oldest form of the name, namely Cornish *Modred*, which can be derived from the Celtic stem **mātr-* 'mother' (see MATRONAE).

JTK

Meifod is the name of a parish which lies approximately 10 km north-west of Welshpool (Y Trallwng), close to MATHRAFAL, which is traditionally regarded as the chief court of the princes of POWYS. Meifod Church was the principal church of Powys in the 12th and 13th centuries, serving as a mother church over an extensive area. It was founded in the early medieval period, but there are no written references to it prior to the 12th century, and most of the present church building dates from the 14th and 15th centuries. However, a decorated cross-slab has survived from the earlier period, and this can be dated to the 10th century. In his 'Song to Tysilio', composed in the mid-12th century, CYNDDELW Brydydd Mawr refers to the church as *trefret y triseint* (the abode of the three saints), namely Gwyddfarch, TYSILIO and Mary (Mair), the latter consecration having been made in 1155. In the same poem Cynddelw refers to the church's cemetery as *gydua brenhined* (the burial ground of kings), and the Chronicles of the Princes (BRUT Y TYWYSOGYON) testify that Madog ap Maredudd, prince of Powys and Cynddelw's first patron, who died in 1160, was buried there.

Meilyr Brydydd (*fl.* ?1100–*post* 1137) was one of the earliest of the Poets of the Princes (GOGYNFEIRDD), a *pencerdd* (chief poet) and court poet to GRUFFUDD AP CYNAN.

The political and cultural resurgence of GWYNEDD during the reign of Gruffudd ap Cynan and his successors provided the context for a flowering of the BARDIC ORDER and its craft whose output makes this period one of the most important in the history of Welsh literature. The extant corpus of the Poets of the Princes is notable for its assured technical mastery: the evident confidence and verve of these poems appear to reflect the conviction of both poets and patrons that a new era had begun.

Together with his son, GWALCHMAI AP MEILYR, and grandsons, Meilyr and Einion ap Gwalchmai (and, quite possibly, ELIDIR SAIS), Meilyr Brydydd belonged to a line of hereditary poets whose names are associated with *gwelyau* (tracts of tribal land) in Anglesey (MÔN) and whose contribution to the literature of the period was considerable.

The HENDREGADREDD MANUSCRIPT preserves only three poems attributed to Meilyr Brydydd. Of these, a stately elegy to Gruffudd ap Cynan, and a *marwysgafn* (death-bed poem), in which Meilyr memorably seeks reconciliation with God and expresses his wish to be laid to rest in ENLLI (Bardsey Island), are authentic. A fragmentary poem in the *awdl-gywydd* metre, formerly considered to be a 'prophecy' of the battle of Mynydd Carn (1081), is, however, unlikely to be by Meilyr, and may have formed part of an elegy to Caradog ap Gruffudd of DEHEUBARTH. In their form and substance, Meilyr's poems indicate both tradition and innovation. The *cyhydedd naw ban* metre of his poem to Gruffudd ap Cynan, as well as aspects of his rhyming system and syntactical usage, point to an earlier poetic diction of which Meilyr may have been among the last proponents. The use in his *marwysgafn* of two metres—*cyhydedd naw ban* and *cyhydedd hir* (see AWDL)—are more typical of the metrical developments of the later Poets of the Princes. In their vividness and empathy, the extant poems of Meilyr Brydydd mark him out as an important and distinctive voice.

Melor, St (variants Méloir, Mélar) is a Breton saint whose cult was also known in Cornwall (KERNOW) and south-west England. His memory may well reflect a historical individual who lived during the early Middle Ages. According to the medieval HAGIOGRAPHY, Melor was the son of a Breton sub-king. Following the death of his father, he was first mutilated and then decapitated by his uncle Rivod. Miraculously, however, he survived. Finally, however, young Melor was assassinated by Rivod's serf, Kerialtan. The place at which Melor died subsequently became the site of a cult, where he was venerated as an innocent, a just soul, and a child of royal lineage doomed to martyrdom. As in many medieval saints' cults and Lives, we are told that Melor's cult site soon afterwards became the place of unexplained occurrences, which are suggestive of the special powers of the saint and his relics. Rather than acting as a wonder worker while still alive, the martyred Melor intervened miraculously on behalf of those who went to his posthumous holy place to pray to him and who showed true piety. As Celtic, especially Breton, hagiography has few martyrs, Melor became especially important in Breton Christian tradition, fulfilling the archetypal ideal of sanctity, expressed in the suffering of the saint and in the death of innocent children.

The story as epitomized above—if shorn of its supernatural details—contains several elements reminiscent of the historical affairs of ruling families in early medieval Brittany (Breizh). Brittany at this period was highly susceptible to intra-dynastic rivalries, which often culminated in murders within royal families in the struggle over competing hereditary claims to succession. There are several such accounts involving real events and people in 6th-century Brittany in the contemporary *Historia Francorum* of Gregory of Tours. And, for the broader Brythonic world of that era, one may compare the scathing accounts of bloody dynastic intrigues in west Britain in the *De Excidio Britanniae* of Gildas.

The Brythonic and Celtic roots of the legend are reflected in the names of the chief characters. Melor's name is Celtic, deriving from **Maglo-rīχs*, a compound of words meaning 'prince' and 'king'. St Maglorius or Magloire of Dol is treated in Breton tradition as a distinct character, though his name is identical in origin. Other figures in Melor's legend bear noteworthy Celtic names. Thus, *Rivod* also contains the Celtic word for 'king'. *Kerialtan* (variant *Kerieltau*) derives from the name *Corieltaui* or *Corieltani*, which had designated a tribe inhabiting east-central Britain, including what is now Lincoln and Leicester, during the Iron Age and in Roman times.

Melor's canonization was established in the Carolingian period. But the question of his identification remains complicated because, in addition to the like-named St Magloire of Dol, who had been a hermit on Sark (Channel Islands), there were possibly three or four distinct saints named Melor.

The seat of the cult of St Melor is in Lanmeur, in north-west Brittany, but on the eve of the French Revolution in 1789 Quimper (Kemper), in the south-west of the peninsula, also claimed to keep the saint's head.

The gripping story of Melor's mutilation and decapitation was popular and has many resonances elsewhere in medieval literature. This element of the biography of St Melor is of interest in Celtic studies as it is closely parallel to the miraculous severed heads of medieval Irish and Welsh stories, and also has similarities with cult practices in the pagan Celtic world (see head cult). For example, Melor's decapitation and the special powers believed to reside in his animate severed head are comparable to the Welsh account of the undying and talismanically protective head of king Brân (or Bendigeidfran) in the Mabinogi. In that legend, Brân's head was similarly carried a great distance to London (Welsh Llundain), where it henceforth functioned to protect Britain from foreign invaders and disasters. The possession of Melor's head was a claim to its magical power, as demonstrated by its connection with the supernatural springing up of wells and punishment of perjurers, the latter being a preoccupation of the legal systems of the Middle Ages.

Perhaps the most striking parallel between the Life of St Melor and Celtic mythological tales is that we find the young saintly prince equipped with a fully mobile prosthetic hand made of silver, received miraculously after his maiming by Rivod. A magic artificial arm of silver is also a feature of the Irish mythological figure Nuadu (see nōdons). The same mythological motif is also found in early Welsh Arthurian literature: in the tale Culhwch ac Olwen one of Arthur's vast retinue is named as *Lludd Llawereint* (Lludd 'of the silver hand'), a name and epithet cognate with the Irish *Nuadu Argatlám*.

It is likely that the decapitation episode in the legend of another canonized Breton prince, named Trémeur, was inspired by the Life of St Melor. Conversely, the historical assassination of young Prince Arthur of Brittany by King John (Lackland) of England in 1203 seems to have helped to spark a revival of the cult of Melor, the martyr of Lanmeur, as reflected by the composition of his second Life shortly afterwards. The long-lived popularity of Melor's *vita* is illustrated by the literary responses to the first *vita* (which dates to the end of the 11th century). Among the *légendiers* of the later Middle Ages who used the first *vita*, John of Tynemouth and Jean de Grandisson are most prominent; these two writers consulted the story and then added their own embellishments. The result was a biography for a cult of St Melor in Britain, at Amesbury (Wiltshire) and in Cornwall.

Menez-Dol (Mont-Dol) is a granitic massif which rises to a height of 65 m in the middle of the ancient coastal marshes of Dol, which today are drained and cultivated. These marshes constitute the eastern part of the bay of Mont-Saint-Michel in north-east Brittany (BREIZH). The summit of the mountain forms a large plateau, and an exceptional Palaeolithic deposit dated *c.* 125,000–100,000 BC was discovered at its foot in 1872.

The earliest reference to Mont-Dol probably occurs in the account given in HISTORIA BRITTONUM (§27) of the settlement of the BRETON MIGRATIONS in a region limited by *Cruc Ochideint*, *Cantguic*, and *mons Iovis*, though there have been various identifications for the three names. The first two place-names can be identified respectively with *Ménez-Hom* (or by other authors at *Pointe Saint-Mathieu*) and Nantes (NAONED), which was called *Condevicium* in Roman times (probably a compound of *condate* 'confluence' and *vicus* 'town'), for which Old Welsh *Cantguic* is a possible outcome. The western and southern borders of Brittany thus defined, *mons Iovis* must be looked for in the north-east of the peninsula. *Historia Brittonum* mentions a pond at the top of the mountain (*. . . stagno quod est supra verticem Montis Iovis*) and the Mont-Dol is the only hill of this region which fits this description. That the landmark traditionally marked a boundary is also suggested by its location between the ancient CIVITAS of the Coriosolites and that of the Rēdones (see ROAZHON) and medieval Normandy and Brittany.

The identification of Mont-Dol with *Mons Iovis* has recently been confirmed by a discovery made by Gwenaël Le Duc in the Life of St Turiau, bishop of Dol at the end of the 8th or the beginning of the 9th century. The version of the Life—first redacted in the second half of the 9th century and recopied in a monastery in Clermont-Ferrand in the 13th century—maintains that Turiau held a public sermon on mount *Leoteren*. Mont-Dol is the only suitable summit near Dol, and it has a pond rich in fish, as explicitly mentioned in the text. According to Joseph LOTH, this odd name of *Leoteren* is a scribal error, which Le Duc has interpreted as **Lec-Teren*, meaning the 'pool or sacred place of [the Celtic god] TARANIS', thus corresponding to Latinized *Locus Taranis*. Celtic Taranis as the god of thunder was sometimes equated with Jupiter by INTERPRETATIO ROMANA, which would explain the name *Mons Iovis* as another pagan survival, as Latin equivalent of Brythonic **Lec-Teren*.

There is further evidence for the significance of Mont-Dol at successive periods. In the parish church at the foot of the mountain, the base of a Roman column has been reused. It carries an engraved cross which can be dated by comparison with similar examples from Upper Brittany (BREIZH-UHEL) to the Merovingian period (6th to mid-8th century), i.e. the period of the Christianization of the region by Breton missionaries. Similar crosses are visible on the summit of the hill on a rock known as *le Rocher du Diable* (Devil's rock), which suggests the Christianization of an older pagan site as part of the Breton evangelization of the region.

Until 1802 there was a chapel, which had been abandoned during the 18th century, on the summit. Chateaubriand interpreted this ruined chapel as 'druidic' or 'Gallo-Roman ruins'. Its two stone altars, structurally attached to the end of the building, were in the form of perforated tables; this can be interpreted as the reuse of a temple of the late Roman Empire in which animal SACRIFICE, such as *taurobolium* (bull sacrifice) as practised in the cult of Mithraism, was popular with the Roman military. Legend associates Mont-Dol with Dol's 6th-century founder SAMSON. The chapel is first mentioned in 1158, when the Archbishop of Dol granted to the abbey of Mont-Saint-Michel *capella sancti Michaeli supra montem Doli*. This notice implies that the chapel on Mont-Dol was already consecrated to the Archangel Michael and is thus relevant to the early spread of that cult to Brittany and the Mont-Saint-Michel area.

Mercurius (Mercury) is usually taken to be the Roman interpretation of the Gaulish god of craftsmen, LUGUS, though this equation has recently been questioned by Maier (*Ériu* 47.127–35). According to

Caesar, he is 'the most highly revered of their gods. Of him the highest number of images exist, he is the inventor of all crafts and arts, he guides on ways and journeys, and they ascribe to him a great influence on financial matters and trade' (*De Bello Gallico* 5. 171). Caesar possibly mistook frequent depictions with 'Mickey Mouse ears' (cf. the pillar of Pfalzfeld) for barbarian images of the head of Mercury with a winged helmet, which explains his reference to the high number of depictions. During the provincial Roman period Mercury was also the tribal god of the Arverni. According to the inscriptions of the Gallo-Roman period, he was the most highly revered and most often depicted of the gods in Gaul. He appears with torcs and sometimes, as a sign of special power, sporting three penises. The inscriptions only mention 35 Gaulish epithets or bynames, in contrast to Mars with over 80, suggesting that the Roman Mercury was easier to identify with the corresponding native deities than Mars. Mercury's attested epithets are as follows, most plainly Celtic: *Abgatiacus, Adsmerius, Alaunus, Andescociuoucus, Arcecius, Artaius, Arvernorix* (King of the Arverni), *Arvernus* (Arvernian), *Atepomarus, Bigentius, Canetonnessis, Cimbrianus, Ciminacinus, Cis(s)onius (Matutinus), Clavariates, Cosumis, Dubnocaratiacus, Dumias, Esunertus, Excingiorigiatus, Friausius, Gebrinius, Harcecius, Iovantucarus, Leud[. . .]anus, M[. . .]ortiumnis, Magniacus Vellaunus, Matutinus, Moccus, Susurrius* (possibly Germanic), *Toutenus, Vassocaletes, Viducus, Visucius, Vosegus*. According to Tacitus (*Germania* 9.1), Mercury was also the most highly revered god of the Germanic tribes. It is tempting to believe that this refers to the god called Woden/Óðin in the early Germanic languages. Nowadays, some scholars are attempting to prove a closer genetic relationship between the Germanic god and Lugus.

Merfyn (Frych) ap Gwriad (Old Welsh Mermin map Guriat) was king of Gwynedd from 825 until his death in 844. His descendants continued to reign there—he was succeeded by his son, the powerful Rhodri Mawr (†878)—down to the end of Welsh independence in 1282.

Merfyn himself was not a direct male descendant of Cunedda, the patriarch of Gwynedd's first dynasty in the genealogies. His claim came through a distant descendant of Cunedda, namely Esyllt daughter of Cynan Dindaethwy (*Etthil merch Cinnan* in the Old Welsh genealogies of BL Harley 3859). However, the sources disagree as to whether Esyllt was Merfyn's wife or his mother. In a genealogical triad—in which Esyllt is Merfyn's wife—he figures as one of the three instances in which the kingship of Gwynedd had passed along the female line; the tradition is consistent on that point. A cryptogram using Greek letters and preserved in manuscripts from Bamberg and Brussels is to be transliterated as Latin *Mermin rex Conchen salutem* 'Merfyn the king greets Cyngen'. The accompanying notes in the Bamberg text refer to Merfyn as 'king of the Britons'. The other party is probably Cyngen ap Cadell (†855), the king of Powys who erected Eliseg's Pillar, and some sources have Cyngen's sister Nest, rather than Esyllt, as Merfyn's wife.

According to the prophetic poem known as the *Cyfoesi* of Myrddin, Merfyn Frych came from *tir Manaw*, and later tradition consistently claims that he had come from the Isle of Man (Ellan Vannin) rather than the north British country around Stirling, also called Manaw. A stone cross from Man inscribed CRUX GURIAT is thus likely to be his father's memorial. *Gwriad* is a Brythonic name, and that there was a Brythonic noble family in Man in the early 9th century capable of taking power in north Wales (Cymru) is a detail of considerable interest. According to the genealogies in *Historia* Gruffudd ap Cynan, Gwriad ab Elidir was a descendant of Coel Hen by way of the famous Llywarch Hen of the saga englynion. While this claim might be an unhistorical attempt to fill in Merfyn's shadowy male ancestry with suitably illustrious figures, it is not inherently impossible that a group of north Britons had been pushed offshore by Northumbrian expansion to survive in Man until 825. A second Mermin is found in the Harleian genealogies, who in later sources

is Merfyn Frych's ancestor, Merfyn Mawr. This is possibly also the Muirmin who was killed in 'Mano' in 682, according to the ANNALS of Ulster; these details have suggested to some scholars a long-established dynasty for Merfyn Frych's family in Man. In any event, the immediate background for Merfyn's accession was destructive infighting on the part of Gwynedd's male claimants and a high level of Viking-induced turmoil in the lands around the Irish Sea.

Some of the best texts of HISTORIA BRITTONUM contain a passage which implies that the text was written or redacted in the fourth year of Merfyn's reign, hence 829. A conscious awareness that the change of regime was a significant one—even at that early date—would help to explain why Merfyn's accession could have inspired literary activity, the assembling and recasting of miscellaneous historical materials.

ANNALES CAMBRIAE lists Merfyn's death together with the battle of Cetill at 844. It is not certain that Merfyn died in the battle, which is unlocated; *Cetill* probably contains the OW *cat* 'battle' and is thus not necessarily a place-name.

On the Celticity of the epithet *Brych* 'freckled' or 'pockmarked', see DOMNALL BRECC.

Merugud Uilixis meic Leirtis ('The Wandering of Ulysses son of Laertes') is a short medieval Irish saga based on the voyage of Ulysses: after leaving the island of the Cyclops, Ulysses reaches the realm of the 'Judge of Truth' who sells him three pieces of advice. This advice saves Ulysses from falling into the hands of marauders and, later on, from killing his own son whom he mistakes for his wife Penelope's lover. Sceptical at first, Penelope finally recognizes Ulysses when his old dog remembers him (see TROJAN LEGENDS).

'The Wandering of Ulysses' is not a translation, but rather an original composition which combines motifs from the *Odyssey* of HOMER with the international folk-tale of The Master's Good Counsels (Aarne-Thompson type 91 OB). The use of folk-tale material in a learned, Latinate context is intriguing, and so is the Homeric plot, since Homer was not available as a text in the Middle Ages. The saga author's knowledge of the classical myth is evidently second-hand; the Cyclops episode is based on VERGIL, and other Homeric motifs reached Ireland (ÉRIU) via ecclesiastical literature. Nevertheless, the Irish saga succeeds in capturing the spirit of the *Odyssey* and shows with what confidence medieval Irish writers handled classical material.

Mesca Ulad ('The Intoxication of the Ulstermen') is a major tale of the Irish ULSTER CYCLE and one of the better known for modern readers. It begins with an account—running closely parallel to that in DÉ GABÁIL IN T-SÍDA (Concerning the taking of the otherworld mound)—of the division of Ireland (ÉRIU) and its SÍD mounds between the sons of MÍL ESPÁINE and the TUATH DÉ. This leads to a description of the later division of ULAID, unusual in that CÚ CHULAINN and CONCHOBAR are portrayed as Ulster's rival kings, preparing rival FEASTS. Following several altercations, an agreement is struck in which the assembled nobles will drink first with Conchobar at EMAIN MACHAE, then with Cú Chulainn at his court in Dún Delgan (Dundalk). Departing from Emain at night, and leaving their women, youths, and weak behind, the drunken chariot warriors set off, take the wrong road, and arrive implausibly at the other end of Ireland at the Cú Roí's stronghold of Temair Lúachra in west MUMU. A feast is already

underway there to celebrate the month-old son of MEDB AND AILILL, who is to be in fosterage with Cú Roí. There is a prolonged colourful description of the approach of the Ulstermen, using the 'watchman device' (cf. Sims-Williams, SC 12/13.83–117), i.e. conveyed as dialogues involving the fort's comical sentinel druids and Medb. The Ulster warriors are received, but their hosts and servers slip out of the feasting hall, which is sealed tight with massive boards and iron, and then fire is stoked around it. This episode exemplifies the so-called 'iron-house motif', found also in a tangential digression in the tale BRANWEN which, MAC CANA argued, provided evidence for Irish influence on that Welsh tale. The hypersensitive BRICRIU is the first Ulsterman to realize what is happening. Then roused, they break out of the house and, with some difficulty, vanquish their enemies.

The destructiveness of the battle is used to explain why Temair Lúachra was no longer inhabited and why the Érainn of the south-west were no longer a strong people. The latter state of affairs is also explained—in different ways—by TOGAIL BRUIDNE DA DERGA ('The Destruction of Da Derga's Hostel') and the KINGS' CYCLES tales relating to Lugaid Mac Con. Evidently, the former importance of the Érainn was a known fact and required explanation in tales of Ireland's past, as did their name, which transparently meant 'the Irish people' (see ÉRIU) and thus hardly suited a minor and marginal group. The homonymous royal sites TEAMHAIR (Tara) and Temair Lúachra might also have some bearing on the contraction and displacement of the Érainn.

At the tale's end, the Ulstermen safely return, drink Cú Chulainn's feast for forty days, and the issue of Conchobar's supreme KINGSHIP is resolved. Ailill, who had not been the enemy at Temair Lúachra, joins them at the end and is honoured with gold and silver the width of his face, another parallel with *Branwen* (see HEAD CULT §2 on this practice).

Surviving pre-modern copies of *Mesca Ulad* are included in the famous manuscripts LEBOR NA HUIDRE and LEBOR LAIGNECH.

metrics, medieval Irish

§1. INTRODUCTION

In studying this subject one may take either or both of two possible approaches. On the one hand, one may base one's study on an analysis of the huge mass of verse composition which has survived from the Middle Ages in IRISH. On the other hand, one may study the learned tracts produced throughout the medieval period in Ireland (ÉRIU/ÉIRE) by the professional poets. For just as a series of tracts, focusing mainly on grammatical and also syntactical topics, survives from the Classical Modern Irish period (*c.* 1200–*c.* 1600), so there survives from the preceding Middle Irish period (*c.* 900–*c.* 1200) several treatises which focus on metrics. In the case of the tracts from the Classical Modern Irish period, the verse cited is always syllabic verse; in the case of the tracts from the preceding period, most of the verse cited is syllabic, but with examples of accentual verse. In both cases, illustrative citations are from contemporary or older poetry. Again, in both cases the tracts are normally anonymous. In the case of the Middle Irish metrical tracts with which this article deals, they are often copied in the codices alongside closely related material, whether grammatical or otherwise. Thus, in a section of the Book of Uí MAINE, a manuscript compiled at the very end of the 14th century, there are copies of two Middle Irish metrical tracts alongside the tract on SATIRE, *Cis lir fodla aíre* (How many are the divisions of satire), the very early grammatical text AURAICEPT NA NÉCES ('The Scholars' Primer'), the Middle Irish *Trefhocul* tract on metrical faults, and also some other related material. Rudolf THURNEYSEN published four tracts (with commentary) in 1891, which together—filling as they do just over 100 printed pages—constitute the bulk of the Middle Irish metrical material which has survived.

§2. CÓRUS BARD CONA BAIRDNI

The first of the four tracts printed by Thurneysen lists and exemplifies the metres of the seven grades—in descending order—of *soerbaird* (noble bards). (It appears obvious that this seven-grade scheme is based on the model of the seven grades of *filid*; see BARDIC ORDER [1].) In one of its manuscript copies it bears the title *Córus Bard cona Bairdni* (The hierarchy of the bards and the poetic composition of that hierarchy). This tract seems to be unique in that in the case of the illustrative examples for the four highest grades it has some commentary on the metrical structure of the examples, even if this is limited in scope, being confined usually to comments on the length of the lines in the stanzas and also comments on the cadence of the lines. The norm here, as in the other metrical tracts, is to use a single stanza in illustration of each metre cited. One can assume that these illustrative stanzas were taken from already existing and highly regarded poems, though the full poems from which they were excerpted have survived independently in only a few instances. Likewise, the composer of the illustrative stanzas is named in only a minority of cases. It can be said of this tract that it is one of the very small number of texts that treat the BARDS, as distinct from the *filid*, as a class in their own right. The original of the tract illustrated over 40 metrical types. These are all in rhyming syllabic metres, and almost all the examples cited are four-line stanzas. While being a textbook on *bairdne* (bardic composition), it seems to have been compiled by those who held highest the legal status among the poetic men of learning, the *filid*. The metres of the tract are characterized as 'new forms', and the text seems to ascribe the development of most of such rhyming syllabic metres in Irish to people other than the traditional *filid*. The tract as it has come down to us seems to date from the 10th century, though its origins are probably to be traced to the preceding century. Certainly, a great number of its illustrative stanzas seem to belong originally to the 9th century.

§3. CURRICULUM OF THE STUDENT-FILE

The second of the tracts published by Thurneysen is a text setting forth the curriculum of the student-*file*, originally arranged to cover seven years of study, corresponding to the seven grades of *filid*. The original was compiled in the early 10th century, though some of the illustrative material seems to be at least two centuries older. The tract as it has survived, however, is a much expanded form of this original. There were two major expansions in the history of the text. In the first of these the tract was extended to cover not seven but ten years of study, incorporating as the curriculum for its (new) seventh year a version of Thurneysen's first tract on 'bardic composition'. The second major expansion of this second tract extended the period of study of the student-*file* from ten to twelve years. The complete expanded text, as it has survived, may date from the 11th century. It is a metrical tract in that most of the illustrative material cited can be said to be almost exclusively metrical. It does, however, for each year of the course, catalogue in summary form at the beginning the other portions of his curriculum as it has to be studied by the student-*file*, with particular reference to his grammatical studies and to the number of tales to be learned by him each year. It should be noted that this tract illustrates not only rhyming syllabic metres, but also contains examples of alliterative accentual metre, *rosc*. *Rosc* measures were, according to the doctrine enunciated in these texts, the prerogative of the *filid*, but they were already going out of fashion—if indeed they had not already done so—when this text was originally compiled. Some of the examples of *rosc* in the tract may perhaps represent a late (and unsuccessful) attempt at revival.

§4. USUAL AND UNCOMMON METRES

Thurneysen's third tract is not as early as the first two, and seems to derive from a different school. Very many of the datable stanzas, which it uses in illustration, belong to the first half of the 11th century and the text would seem to have been compiled some time after the middle of that century. Unlike the two earlier tracts, this text makes no reference to a distinction between *file*- and *bard*-metres. Instead, it bases its classification on a distinction between 'usual metres', 'moderately usual', 'not well known' and 'uncommon'. It is particularly rich in examples and cites around two hundred in all.

§5. CELLACH ÚA RÚANADA'S POEM

Strictly speaking, Thurneysen's fourth text is not a tract but a rhyming syllabic poem of 14 stanzas in

which the author names and exemplifies the twelve most important metres of his day. Once again, no distinction is made between *file*- and *bard*-metres. Its author was the famous poet Cellach Úa Rúanada (†1079). With Cellach's poem, we are moving much closer to the later period of syllabic verse (*c.* 1200–*c.* 1600), in which highly-ornamented syllabic metres were referred to under the title *dán díreach* (lit. straight verse), characterized by a rigid observance of a canon of rules for the regular ornamentation of the verse, which contrasted with the much greater flexibility enjoyed by poets of the Old and Middle Irish periods. The poem confines itself to a relatively small number of metres. In this, it presumably reflects closely the everyday practice of its time. The prose form of the first three tracts allowed much more scope for the illustration of metrical experimentation, and this seems to have been particularly true of the third tract. It is noteworthy also that all the metres illustrated by Cellach are rhyming syllabic metres; there is no example of *rosc*. It should also be noted that Cellach's poem is the only text under discussion here of which there exists a critical edition and translation (into German)—by Thurneysen—even if it now needs updating in the light of new manuscript evidence.

§6. professional qualifications

These four tracts were not all produced together, but reflect developments in the poetic tradition over several centuries. It is therefore possible to draw certain conclusions from them, for instance, the popularity or otherwise over time of various metrical types and even of specific metres. It is also the case—and this is particularly true of the first tract published by Thurneysen—that they articulate the doctrine of the *filid*. The first tract is quite explicit in its claim that the *file* is a professional and possesses the required academic qualifications, while the bard is considered an amateur and not a scholar. Gerard Murphy argued that eulogy was originally the function of the bard, rather than of the *file*. Although the *file* may very well have always composed some eulogy, nevertheless the fact that so many of the illustrative examples of *bairdne* in the first tract are indeed taken from eulogies would seem to lend support to his thesis. Murphy argued further that the *filid* gradually and from an early period assumed what had originally been functions of the bard (especially that of eulogy), and also bardic metres. His contention with regard to metres would certainly seem to be borne out by the four tracts under discussion here.

§7. tracts on metrical faults

Reference has already been made to the Middle Irish *Trefhocul* tract on metrical (and other) faults. It may be that this tract was composed by Cinaed Úa Con Mind (†958), bishop of Lismore and Inis Chathaig, which would make this tract a rare example of a non-anonymous work of this kind. It also represents a point of contact with the following Classical Modern Irish period, since the latter period also produced a tract on metrical faults. Indeed, there is a strong similarity between the two tracts. One should also note that, whereas the earliest manuscript containing the Classical Modern Irish tract on metrical faults is of the mid-14th century, the very end of that same century saw (as already noted above) the copying into the Book of Uí Maine of the *Trefhocul* and other Middle Irish metrical tracts: very eloquent testimony, if such were needed, to the astounding continuity and also conservatism of the medieval Irish literary tradition.

Donncha Ó hAodha

Meyer, Kuno (1858–1919) was one of several distinguished German scholars who greatly stimulated Celtic studies at the end of the 19th and the beginning of the 20th centuries. He is justly famous not only for his publications in the fields of Old Irish and classical Irish poetry and prose, and Irish lexicology, but also for his gifted and lucid translations of Irish texts into both German and English. For his devotion to furthering the study and status of the Irish language in Ireland (Éire) he was honoured in his lifetime with the citizenship of the cities of Cork

(Corcaigh) and Dublin (Baile Átha Cliath).

Originally from Hamburg in northern Germany, Meyer travelled to Scotland (Alba), where he first encountered Scottish Gaelic, in 1874, before studying Germanic and Celtic Languages and Philology at Leipzig University from 1879. He was awarded his doctorate for *Eine irische Version der Alexandersage* (An Irish version of the Alexander-tale) in 1881. Appointed lecturer in Teutonic Languages and Literature at the new Liverpool University in 1884, he was promoted to Professor in 1895. At Liverpool he developed a keen interest in the Welsh language and its literature, along with a wide circle of Welsh friends, but his location also allowed him frequent travel to Ireland, where he continued his involvement in cultural politics. In 1911 he accepted the Chair of Celtic Studies in Berlin, a decision which was, arguably, at least partly responsible for his fall from grace at the outbreak of the First World War. His controversial propagandist activities on behalf of the German war effort cost him many friends in the Celtic countries. He died suddenly in Leipzig in October 1919.

In 1896 Meyer initiated the founding of Zeitschrift für celtische Philologie, of which he was co-editor until his death. He inspired, co-founded and acted as first director of the School of Irish Learning (1903–24), which was succeeded by the acclaimed Dublin School of Celtic Studies (established 1940) which is part of the Institiúid Ard-Léinn. Meyer also established the School's journal, Ériu, and was editor until 1914. It is through Meyer's help that the National University of Ireland purchased Heinrich Zimmer's library, a priceless collection now at University College Dublin.

Meyer's biographer rightly stresses 'the variety and extent of his contributions to Celtic learning' (Ó Lúing, *Kuno Meyer* 226), often hidden in his contributions to periodicals such as *Anecdota from Irish Manuscripts*, *Archiv für celtische Lexikologie* (Archive of Celtic lexicology), *Ériu*, Revue Celtique and the *Zeitschrift*.

MBL

Mhac an tSaoi, Máire (1922–) was born in Dublin (Baile Átha Cliath), but spent part of her childhood in Dún Chaoin, in the West Kerry Gaeltacht, where her maternal uncle, the scholar Monsignor Pádraig de Brún, had a house. She studied at University College Dublin, at the Sorbonne, and at the Dublin Institute for Advanced Studies (Institiúid Ard-Léinn), before joining the Department of External Affairs, where she was posted to Paris and Madrid. She was a member of the team who worked with Tomás de Bhaldraithe on the preparation of the *English–Irish Dictionary*. The author of four collections of poetry in Irish, and the recipient of the O'Shaughnessy Poetry Award of the Irish American Cultural Institute in 1988, she was conferred with an honorary D.Litt.Celt. by the National University of Ireland in 1992.

Máire Mhac an tSaoi's poetry is written in a language based on, but not confined to, the dialect of Corca Dhuibhne (West Kerry). Associated with Ó Ríordáin and Ó Direáin as one of the three major poets of Modern Irish, she represents the first significant female voice in contemporary Irish poetry (see irish literature). Her work, which includes some highly accomplished translations from French, Spanish and English, is characterized by a mastery of language and form. Love, both sexual and maternal, is the dominant theme in her early poetry. Many of her later poems were inspired by public events and individuals.

Mide (**Meath**) was regarded in mythology as the central province (CÓICED) of Ireland (ÉRIU), bordering the other four provinces: CONNACHT, LAIGIN, MUMU, and ULAID. Its focus was the archaeological complex of UISNECH (the Hill of Usnagh, Co. Westmeath/Contae na hIarmhí). In the early Middle Ages, Mide figured as a kingdom dominated by the southern Uí NÉILL dynasty. The name *Mide* is in origin synonymous with Old Irish *mide* 'middle, centre' (< Celtic **mediom*; cf. the Cisalpine Celtic place-name MEDIOLANON 'Centre of the plain', now Milan). In the medieval pseudo-historical text *Do Shuidigud Tellaich Themra* (The arrangement of the hearth of Tara), Uisnech is described as the *umbilicus* of Ireland and, like Tara (TEAMHAIR), was associated with pre-Christian KINGSHIP and ceremonies. According to LEBAR GABÁLA ÉRENN ('The Book of Invasions'), Mide was the creation of the DRUID Mide of the people of Nemed, and he is credited with lighting the first fire at Uisnech. Mide and Uisnech are also associated with the heroic proto-historical king Tuathal Techtmar, who is said to have created the fifth province to ensure that the high-king of Tara was independent of the other provinces. There are early accounts of St PATRICK visiting Uisnech, where he met Énda and Fiachu, sons of Uí Néill's legendary progenitor NIALL NOÍGIALLACH (Niall of the nine hostages). Patrick cursed Uisnech and both kings, though they relented and were baptized by the saint. Patrick cursed Fiachu a second time when he killed some of the saint's companions.

Mide was at the core of southern Uí Néill kingdoms and was the region from which their dynasties extended eastwards to conquer Brega. These dynasties included Cland Cholmáin, Síl nAedo Sláine (see AED SLÁINE), Cenél nÉndai, and Cenél Fiachach who fought a fierce struggle for supremacy of the midlands in the 6th and 7th centuries. In the following centuries, Mide was dominated by Cland Cholmáin, later to become the Uí Mael Sechnaill dynasty, whose capital was at Lough Ennell, Co. Westmeath. During the 11th and 12th centuries, the kingdom of 'Mide' also incorporated Brega, and the original kingdom became known as Iarthar Mide (modern Co. Westmeath).

Edel Bhreathnach

Midsummer's Day (24 June), the summer solstice, is important in folk tradition in the modern Celtic countries, though there is no evidence that it was celebrated by the ancient Celts. It is also St John the Baptist's Day, exactly six months from Christmas, just as Beltaine (1 May) and Samain (1 November) are six months apart. It is possible that the celebration of the date was originally borrowed from the English or Norse, where Midsummer celebrations are strong, but much of the folklore attached to the date shows significant parallels with the way Beltaine (Welsh *Calan Mai*) is celebrated, such as the belief in Brittany (Breizh) that the dead were abroad on the eve of All Saints' Day (1 November) and Midsummer's Eve. The most common form of celebration is a bonfire, but rituals of divination were also practised, for example, placing midsummer men (*sedum rosea*, a flower more commonly known as rose-root) in clay overnight to foretell one's health for the coming year. In Brittany it was an occasion for forming agricultural or domestic contracts. In Upper Brittany (Breizh-Uhel) the fire was always lit by a Jean (John) or Jeanne (Joan/Jane), and the embers were dropped into wells to make the water better. As it died down people would leap over the fire. In Ireland (Éire), the way in which people jumped over the fire was said to reveal whether they had committed certain crimes, and the ashes were scattered over the fields. Fergus Kelly tentatively identified *Féil na n-airemon* (the ploughmen's festival) with Midsummer's Day, though Máire MacNeill has suggested that it was held at Lugnasad. The date was also an important one for gathering medicinal herbs in all the Celtic countries.

Míl Espáine and the Milesians, the sons of Míl Espáine (*Miles Hispaniae* 'the soldier of Spain'), are credited with conquering Ireland (Ériu), subordinating her previous inhabitants, the *Tuath(a) Dé Donann*, according to Lebar Gabála Érenn ('The Book of Invasions'), the most important tract on Irish legendary history. As in the parallel accounts of De Gabáil in t-Sída (Concerning the taking of the otherworld mound) and the opening section of Mesca Ulad ('The Intoxication of the Ulstermen'), the Tuath Dé were banished below ground, while the land above ground was divided into two halves, north and south, each ruled by one of Míl's sons, Éremón mac Míled and Éber Find. The Latin character of the founder's name *Miles Hispaniae* (as he is called in Historia Brittonum §13) shows the legend to be a creation of the Christian literate period. An important cultural transfer with Spain occurred through the respected works of Spanish scholars, in particular those by the famous Archbishop Isidore of Seville (*c.* 560–636). It has been suggested that this link—highly valued by the early Irish literary classes—contributed to the formation of the migration legend of Míl Espáine. It is also relevant that classical geographers sometimes described Ireland as situated opposite Spain, creating the misleading impression that they were close enough for one place to be seen from the other, as did the Milesian Íth from Bregon's Tower in *Lebar Gabála* (§100). Contacts between prehistoric Spain and Ireland found in archaeological evidence—such as similar types of cauldrons and swords in the Late Bronze Age (*c.* 1200–*c.* 600 BC) and the typological similarity of the *castros* of Galicia and Irish ring-forts—are now more usually explained as a result of trade or gift exchange rather than mass migration. Both Celtiberian and Goidelic are Q-Celtic languages, but this is a linguistic group defined negatively by a failure to innovate—neither changed Proto-Celtic $k^w > p$—and thus need not imply a close relationship.

miraculous weapons [1] Ireland

Early Irish literature mentions several miraculous weapons, generally of Otherworld origin, which were unfailingly lethal and their owners

invincible. The most famous of these miraculous weapons is the Gae Bolga (var. Bulga), owned by the legendary hero Cú Chulainn of the Ulster Cycle. He had been taught the secret of how to use this special spear by the female warrior Scáthach (shadowy one; see Hamel, *Compert Con Culainn and Other Stories* 11–15) and used it to kill both his foster brother Fer Diad (O'Rahilly, *Early Irish History and Mythology* 71–100, 211–34) and his son Connla. Cú Chulainn's sword, Cruaidin Coiditchenn (hard-headed steeling), was not only renowned for its extraordinary sharpness and beauty, but also for shining brightly in the dark (Stokes, *Irische Texte* 3/1.199). Other examples of miraculous weapons include Corr Bolg, often understood as 'crane bag', though sometimes apparently the sword of Finn mac Cumaill, and Caladbolg, owned by Fergus mac Róich (or his doublet Fergus mac Léite). The Welsh equivalent of Caladbolg is Caledfwlch, which, via Geoffrey of Monmouth's Latinized version Caliburnus (in Historia Regum Britanniae), eventually becomes the Excalibur found in the Arthurian Romances. The exact meaning of the second part of the name of these weapons has been the focus of much discussion, including the alternatives 'lightning' and 'gap, cleft, cleaving' (see O'Rahilly, *Early Irish History and Mythology*; Carey, CMCS 16.77–83; Lewis, *Féil-sgríbhinn Eóin Mhic Néill*; see also entry on fir bolg).

miraculous weapons [2] Wales

In addition to Arthur's sword Caledfwlch (see caladbolg), medieval Welsh tradition refers to several magical weapons. Bedwyr is said to have possessed a spear whose head could leave its shaft, draw blood from the wind, and return (Bromwich & Evans, *Culhwch ac Olwen* ll. 799–801), and, in the same text, it is said that no physician could heal a wound from Cai's sword (ll. 386–7). In the tale of Math fab Mathonwy, Lleu could only be slain by a spear made during a year's worth of Sunday masses.

Modron and Madrun daughter of Gwerthefyr both derive in name, as well as in details of the tales associated with them, from the mother-goddess Matrona, whose cult is well attested in Roman Gaul, often as a divine triad Matronae, and which was no doubt linked to that of Maponos (the divine son). In the early Arthurian tale Culhwch ac Olwen, Modron figures, without epithet or ancestor's name, as the mother of the primeval prisoner Mabon (< Gallo-Brittonic *Maponos*) who was abducted when three nights old. W. J. Gruffydd argued that her story and identity had originally been one with that of the Mabinogi's Rhiannon (< **Rīgantona* 'the divine queen'), whose infant son Pryderi was likewise mysteriously abducted. These parallels find support in Hamp's etymology of *Mabinogi* as 'matter pertaining to Maponos/Mabon'. *Culhwch*'s Modron is no doubt the same as the 'Mydron' mother of Mabon in the closely related early Arthurian poem, Pa Gur yv y Porthaur. In the mythological poem *Kat Goδeu* (*Cad Goddau* 'The battle of the trees') in Llyfr Taliesin, Modron is connected with the characters and magical events of the tale Math fab Mathonwy, including Math himself, Gwydion, and Goronwy (i.e. Gronw Pebyr). The fact that Modron is not in the extant *Math* shows that the poet knew a different version. In *Cad Goddau*, she is paired with the name *Euron*, which appears to be a scribal error for (*G*)*wron* (older **Uuron*) < **Uironos* 'divine man, hero, husband', a name for the divine mother's spouse.

Modron, when called daughter of Afallach (see avalon), once again has the rôle of a supernatural mother. In the triads, she is the mother of Owain and Morfudd by Urien (TYP no. 70). This would appear to be the same story as that in Peniarth 147 (dated 1556) in which a mysterious unnamed woman encounters Urien at the ford of invisible barking dogs

(Rhyd y Gyfarthfa), has intercourse with him, then later gives birth to Owain and Morfudd and reveals herself to be the daughter of the king of Annwfn, which implies that Afallach is a name of the king of the Otherworld. In interpreting this story and probing its possible origins, it is important to remember that *Mātrona* had been the name of one of the most important rivers in Celtic Gaul, now the Marne. Therefore, it is likely that there were inherited myths recounting the deeds of a mother goddess with this name at a river.

Modron derives from Celtic *Mātrona*; *Madrun* is from Latinized *Matrōna* with different vowel quantities. In some versions of the genealogies of Welsh saints, Madrun is the daughter of Gwerthefyr's father Gwrtheyrn and the mother of St Ceidiaw. This may be due to confusion in transmitting the pedigrees, but the recurrence could also reflect her original status as a dynastic mother goddess, validating successive generations of kings in a recurrent conception myth. That Gwrtheyrn is otherwise infamous for fathering a daughter with his daughter (Historia Brittonum §39) might reflect this same confusion. There is a Carn Fadrun in Llŷn, north Wales, and a Garthmadrun in Brycheiniog, not far from lands associated with Gwerthefyr and Gwrtheyrn.

Mogons is an epithet of the Romano-Celtic god Vitiris in an inscription from the Romano-British fort of Castra Exploratorum (Netherby, north of the western end of Hadrian's Wall, RIB no. 971) and the name of an independent deity at Voreda (Old Penrith, Cumbria). The name is an Indo-European *nt*-stem equivalent to Sanskrit *mahānt*, Avestan *mazant* 'great' and has to be seen in connection with the names *Mogetius Mars*, *Mogonitus* (in Habitancum/Risingham, RIB no. 1225), *Mogontia* (CIL 13, no. 4313), *Mogontiones Matres* (Agonès; see matronae), *Mogounos*, *Moguntes*, *Mo(g)unes*. The name of a Gallo-Roman town and fortress on the Rhine, *Mogontiācum*, *Moguntiācon*, now Mainz, is the same name with a place-name suffix added. The alternative name of Patrick *Magonus*, var. *Mauonius*, *Maun* &c., as found in Muirchú's Life and other hagiography, might be related, though a derivative of Celtic *mogu-*, *magu-* 'slave, servant' is also possible.

Moliant Cadwallon (The praise of Cadwallon) is a praise poem in early Welsh in the awdl metre, of which 57 lines survive. The poem is of special interest because of its possible early date, for its independent historical information on poorly documented 7th-century political and military events, and as probably the earliest recorded instance of the name *Cymry* 'the Welsh people', also in the sense of the land Cymru 'Wales, land of the Britons'. *Moliant Cadwallon*'s references to *Cymry* are as follows: 'For the honour of Cymru, Cadwallon's land, he will come as the lord of Britain's hosts . . . He maintained the honour of the Cymry (Welsh people) by the protection of his shield . . . from Cymru, to kindle fire in the land of Elfed . . . though they would lack bright, bloodstained mailcoats, because of Cadwallon, defender of the Cymry . . . the dragon-like chief, defender of the Cymry, Cadwallon . . . pillar of the hosts of the Cymry, Cadwallon of Anglesey [Môn] . . . Cymru may be so sad for its tribulations . . .'

Moliant Cadwallon survives incomplete in a single 17th-century manuscript, with four additional lines supplied in a second. The honorand ruled Gwynedd *c.* 625–35. The excellent edition of R. Geraint Gruffydd (*Astudiaethau ar yr Hengerdd* 27–34) suggests that the attitude of the *awdl*—that of a contemporary court poem honouring a living ruler—suits the historical circumstances of *c.* 633, since Cadwallon ap Cadfan embarked on his invasion of Northumbria, which was to take the life of Northumbria's King Eadwine in

that year. It contains references to invading 'Elmet's land' (*tir* ELFED) and 'a mustering for the burning of York' (Efrawg). The language and style are very similar to those of the *awdlau* of the GODODDIN, with which it shares the verse-opening formula *caeawg cynhorawg* 'wearing a brooch in the front rank'. *Moliant Cadwallon* also mentions the central event of the *Gododdin*, namely a great and horrific battle at CATRAETH, which it interestingly describes as being caused by the late 6th-century ruler of Elfed, GWALLAWG.

Errors in *Moliant Cadwallon* implying an exemplar in Old Welsh spelling (that is, of the period *c.* 800–*c.* 1200) are numerous. A written text older than *c.* 750 is likely in view of two inverse spelling errors: *tyrrwy* for *twr(w)u* 'host' and *edhwyl* for *eðël* 'intention', where a copyist has wrongly expected, in the first instance, early *u* to stand for Middle and Modern Welsh *y* (schwa /ə/) and, then, for 7th-century *e* to correspond to Old Welsh *ui*, later *ŵy*. In line 10, Cadwallon is compared to *echel*, which probably does not refer to *Echel Forddwyd Twll* (Achilles of the pierced thigh), a relatively late conflation of the Greek hero and the MABINOGI figure BRÂN, but rather to the common noun meaning 'axle'. Thus, the line *kynneved echel aeth kywryd kamhawn* may be understood as 'with the special status [cf. NEMETON > *kyn-neved*] of an axle/pivot the valorous one [i.e. Cadwallon] went to feats'. In this line, note the old alliteration between 7th-century **achel* 'axle' and **acht* 'went', submerged in the later language of the manuscript. In a stray line preserved in the second manuscript, NLW 9094, Cadwallon's epithet *colofn cyrt* may preserve an old inflected genitive singular, thus meaning 'pillar of the host'.

Amongst the themes, we twice find the idea (which ALEXANDER THE GREAT had learned from the Celts of the ADRIATIC region) that the leader was invincible as long as heaven did not fall to earth. The poem is, nonetheless, overtly Christian and exhibits an interesting theology in saying 'when Christ created Cadwallon'. It is noteworthy that MAELGWN is represented as a reputable ancestor, though Welsh tradition, probably influenced by the denunciation of GILDAS, often portrays this 6th-century ruler as sinister. The opening line (at least in the surviving text), 'the tide rushes in, casting forth a host arrayed for battle', effectively establishes a tone of dynamic urgency, propelling the listener/reader forward through a panoramic list of far-flung military engagements and troop movements over land and sea, interspersed with praise of the leader with hyperbole of cosmic proportions.

Môn (Anglesey), officially since 1995 Ynys Môn or the Isle of Anglesey, but from 1284 to 1974 sir Fôn (the county or shire of Anglesey), is a large island off the north-west coast of Wales (CYMRU). It is separated from the mainland by the narrow and fordable Menai straits, now spanned by two bridges. It has been of long-standing historical importance as a gentle and habitable fertile landscape (cf. CELTIC COUNTRIES §2) cut off from easy overland access from the rest of BRITAIN by the rugged massif of Snowdonia (ERYRI). Thus, Anglesey has found itself more than once supplying, from its secure western position, resistance based in Wales's mountainous mainland against forces from Britain's eastern lowlands. Looking seaward, Anglesey has a central location in the Irish Sea region and has thus throughout its history—as still today as the terminus of the heavily travelled ferry service to Dublin (BAILE ÁTHA CLIATH)—acted as a crossroads between Wales, Ireland (ÉIRE), the Isle of Man (ELLAN VANNIN), and south-west Scotland (ALBA). During the protracted Roman conquest of Britain, Anglesey in AD 60 was the first part of north Wales to be attacked. TACITUS attributes the strategic value of this action to the potency of anti-Roman ideology of the druids, the priesthood, who enjoyed particular strength on the island. For his vivid description of the Romans' storming of Anglesey and the destruction of its groves of human SACRIFICE (*Annales* 14.30), see DRUIDS [1] §10. The rich WATERY DEPOSITIONS at LLYN CERRIG BACH have been seen as confirmation of the cult activities of the pre-Roman druid island sanctuary

and also as evidence for high-level contacts with Ireland, though both these ideas have been tempered in recent years.

In post-Roman times, Anglesey formed the fertile nucleus of the powerful kingdom of GWYNEDD, and the court at ABERFFRAW was one of the most important royal centres in Gwynedd from the 7th century to the 13th. Môn was accordingly often mentioned and praised in the court poetry of the CYNFEIRDD and GOGYNFEIRDD, and continued as a popular subject of literary praise in the works of the CYWYDDWYR and down to modern times. *Môn Mam Cymru* (Anglesey mother of Wales) remains proverbial. The English realized the importance of the island early on, and Eadwine (†632/3) of Northumbria exacted tribute as overlord over Anglesey and Man (BEDA, *Historia Ecclesiastica* 2.9). This arrangement was short lived, but contributed to centuries of enmity between Gwynedd and England, beginning with Eadwine's overthrow by King CADWALLON. Following the Edwardian conquest of Gwynedd in 1282, the Statute of RHUDDLAN (1284) separated Anglesey as a county, along with Merioneth (sir Feirionnydd) and Caernarfon. Holdings in Anglesey were an important source of wealth for the TUDUR family at the time Henry VII became king of England in 1485. Following the ACTS OF UNION (1536–43), Anglesey took its place as one of 13 shires, and remained, with Caernarfon and Merioneth, under the Justice of Snowdon in the circuit of the Courts of Great Sessions, a procedure which was wound up with the abolition of the Courts in 1830. A new county of Gwynedd, roughly the three old counties, was created in 1974, but then reduced when Anglesey separated from it in 1995. Anglesey's population in the 1801 Census was 33,155, in 1901 50,738, and in 2001 66,828. Out of 40 districts in the 2001 Census, Cyngar returned the highest proportion (84%) with one or more abilities in communicating in Welsh, a loss of 2% since 1991, and Biwmares had the lowest at 40%, an increase of 3% from 1991; the median of all districts stood between 56% and 58%.

The name *Môn* is recorded in ancient and medieval Latin as *Mona* (Greek Μονα). The names for Anglesey and the Isle of Man (Welsh *Manaw*, Old Irish *Mano*, gen. *Manann*, Latin *Manavia*, &c.) are probably related, and in early texts, both Latin and Welsh, confusion is common; for example, Môn and Manaw are possibly confused in the 10th-century ARMES PRYDEIN. For the Celtic etymology of the names, see ELLAN VANNIN §2 (also Rivet & Smith, *Place-Names of Roman Britain* 419–20). *Arfon* referring to the north-western mainland derives from the island's name, Celtic **Are-monā* 'in front of Anglesey'; cf. ARMORICA.

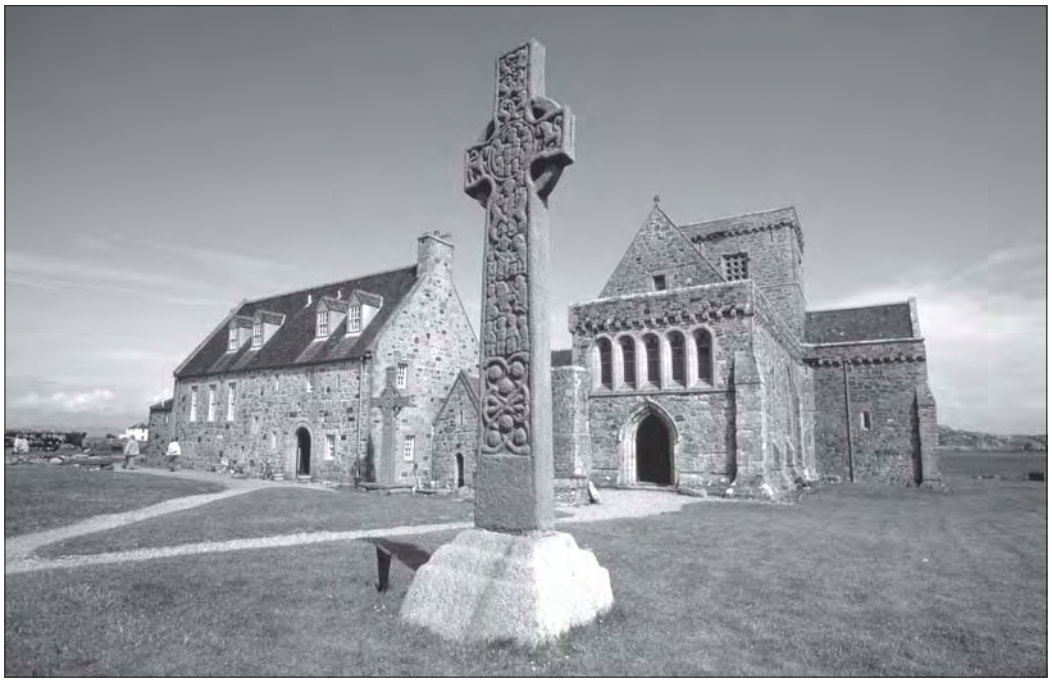
monasteries, early Irish

§1. MONASTERIES, SOCIETY, AND POLITICS

The monks of the earliest Irish monasteries, which date from the 5th or the 6th century, sought to know God through a life of solitary contemplation removed from secular society. As time passed, the monastic way of life became absorbed into the Gaelic social system until, by the 8th century, the local monastery was one of the central institutions in the life of the TUATH, usually with strong links to the secular élite. This change led to the development of larger monasteries, which acted as landlords, suppliers of social services—such as caring for the sick, hosting travellers, and teaching—and as patrons of the arts, as well as continuing with their religious functions. In addition, the scriptorium of a region's leading monastery often served as a literary champion and apologist for the ruling dynasty (e.g. Emly, Co. Tipperary [Imleach, Contae Thiobraid Árainn], for the ÉOGANACHT Chaisil, Armagh [ARD MHACHA] for the Uí NÉILL, and Killaloe, Co. Clare [Cill Dá Lua, Contae an Chláir], for the DÁL GCAIS). In this regard, the position of the highly influential monastery of Iona (EILEAN Ì) was complex. Founded *c.* 563 by COLUM CILLE, who was a member of the Northern Uí Néill, Iona's copious literary output favoured this dynasty and, though located geographically alongside or even within Scottish DÁL RIATA, it was as vital a part of Irish intellectual life as any foundation until the centre



Iona: the abbey and St Martin's Cross

of operations of the Columban Federation was forced by vulnerability to Viking raids to move to Kells (Ceanannas) in the early 9th century. Iona was also the chief ecclesiastical supporter of Oswald of Northumbria (†642) and the mother-church of Lindisfarne, but it also remained important to the Picts and Scots, and was the burial place of many of the kings of Alba.

The tradition of ascetic monasticism withdrawn from the secular world did not die out, however, but continued, particularly on the western seaboard, where Irish monks found their own form of *desertum* on the islands and rocky headlands of the Atlantic coast. Perhaps the best known—and extreme—example of this are the monastery and hermitage perched on the twin summits of Skellig Michael (Sceilg Mhichil) 15 km off the coast of Co. Kerry (Contae Chiarraí). Many of the larger monasteries also had hermitages attached to them (e.g. Armagh), a practice encouraged by the reforming *Céili Dé* (Fellows of God) movement established in the later 8th century.

§2. economy of the monasteries

Many of the larger monasteries were situated on important travel routes, both by land and water. For instance, while both Durrow (Dairmháigh, Darú) and Clonmacnoise (Cluain Mac Naoise), both in Co. Offaly (Contae Uíbh Fhailí), were situated on the main east–west route across central Ireland (*An tSlighe Mhór*), the latter monastery combined this with a position on the banks of the Shannon (Sionna), another route of great importance in early Ireland (Ériu). Such an ideal position must have played a significant rôle in establishing Clonmacnoise as one of the foremost monasteries in Ireland. The coastal position of other monasteries, such as Ardmore, Co. Waterford (Ard Mór, Contae Phort Láirge) and Bangor, Co. Down (Beann Char, An Dún), would have facilitated access by sea.

The economy of the monastery in early medieval Ireland was, like that of the country as a whole, based primarily on mixed farming (see agriculture). There were, however, other forms of income available to religious foundations. Grants and gifts were bestowed by the local aristocracy in the form of agricultural produce and occasionally in the form of precious metals. The ruling élite also sponsored the production of religious works of art such as high crosses, elaborately decorated shrines and illuminated manuscripts. Moreover, some monasteries benefited materially from pilgrims attending the shrine of a founding saint. The relics of such saints were often housed in prominent shrines within the monastery graveyard. An elaborate house-shaped shrine survives at Banagher, Co. Derry (Beannachar, Contae Dhoire), while shrines of gabled and four-post types can be found at Killabuonia (Cill Buaine) and Caherlehillian (Cathair Leithuilleann) in Co. Kerry, respectively.

§3. ARCHITECTURE AND THE PHYSICAL SITE

The range and scale of buildings and other structural features commonly found on Irish monastic foundations differ to a significant extent between the larger—and probably longer lived—monasteries exemplified by Glendalough, Co. Wicklow (GLEANN DÁ LOCH, Contae Chill Mhantáin), and Durrow on the one hand, and the smaller foundations known primarily from the western seaboard, such as Killdreelig (Cill Rialaig) and Gallarus (Gallaras), Co. Kerry. It should be noted, however, that sites of the latter, which are more physically modest in form, are believed to have been widely distributed elsewhere in Ireland but have not survived because they were built mainly of timber, unlike the dry-stone examples in the west. Possible examples of these smaller, timber-built foundations have been excavated at Killederdadrum (Cill Idir Dá Droim), Co. Tipperary, and Fennor, Co. Louth (Finnthobair, Contae Lú).

Irish monasteries were commonly surrounded by an enclosing wall known as a *vallum* or *valla* (from which the Mod. Ir. *balla* = wall). Most commonly, these tended to be built of earth or stone and to be circular in plan, with smaller examples often bearing a close resemblance to secular RING-FORTS. On larger monasteries the *vallum* was sometimes the outer of two or three concentric rings, with the innermost often defining the area of greatest sanctity, the church and graveyard lying within (e.g. Nendrum [Aon Droim], Co. Down). On smaller sites, where only one enclosing wall existed, the church and graveyard were sometimes divided from the rest of the site by an internal dividing wall, as at Reask (Riasc), Co. Kerry.

The focus of religious life in the monastery was, of course, the church and this is implied by its frequent physically central position as noted above. The scale and architecture of the church varied through time, as well as according to the prestige and location of the foundation. It is generally accepted that the earliest Irish churches were small oratories built of wood and wattle or of earthen sods. The foundations of such structures have been identified at Inishcaltra (Inis Cealtra), Co. Clare, and Illaunloughane (Oileán Locháin), Co. Kerry respectively. The evolution of stone-built churches in Ireland is still a matter of some debate, particularly with regard to the chronological position of the boat-shaped corbelled oratories of 'Gallarus type'. However, the peak of pre-Norman church building is clearly represented by structures in the Irish Romanesque style, examples of which are found at the monasteries of Clonfert, Co. Galway (Cluain Fhearta, Contae na Gaillimhe), and Kilmalkeadar (Cill Maolchéadair), Co. Kerry. Multiple churches cluster together at many of the larger foundations, such as Glendalough, Co. Wicklow (4 or 5 churches) and Clonmacnoise (8 churches).

The monastic graveyard is generally found in proximity to the church, and earth-cut, lintelled and stone-lined graves occur, sometimes accompanied by a cross-inscribed grave-slab. Large, decorated cross slabs (such as at Reask) and the succeeding high-crosses were also often erected in the graveyard, as were upstanding shrines of the type mentioned above. The cross slabs at the earlier sites were sometimes inscribed with OGAM, as at Maumanorig (Mám an Óraigh), Co. Kerry. In addition to features dating from their original period of use, the graveyards of many early medieval monasteries were reused in the post-medieval period, up until the mid-20th century, as a burial place for infants. Such a burial area for young babies is known by a variety of names, including killeen (*cillín*) and kalloonagh (*ceallúnach*). This practice has most often been explained as the covert deposition of infants who died before baptism in what the rural community remembered as ancient consecrated ground, since church rule forbade such burial in contemporary graveyards.

The function of all the characteristic features of early Irish monasteries are not well understood. The *leacht* (from Modern Irish, meaning grave or cairn) is a dry-stone built solid structure, generally rectangular in form, which has been variously suggested to have served as an outdoor altar or a form of tomb/shrine. It has even been doubted whether they are genuinely early medieval constructions, though recent excavations at Illaunlaughane show a *leacht* in a primary position beneath a stone oratory, thus demonstrating its antiquity. The best surviving collection of *leachta* is on Inismurray (Inis Mhuire), off the coast of Co. Sligo (Contae Shligigh). The bullaun stone (*bullán*) is a similarly enigmatic monument type associated with early monasteries. Bullaun stones vary considerably in size and shape, but are all linked in having one or several roughly hemispherical depressions cut or

ground into their surface. Suggested purposes for these hollows include the grinding of foodstuffs, ore, or pigment and use as makeshift baptismal fonts. The frequent association of bullaun stones with holy wells and holy trees may hint at a pre-Christian origin for their association with religious sites, since the former features are widely accepted as adopted by CHRISTIANITY from pre-existing native religious systems.

Another structure often positioned near the church was the now familiar and picturesque round tower. The remains of some 70 of these towers are still extant—two of which are in Scotland and one on the Isle of Man (ELLAN VANNIN)—and many more may once have existed. The tallest examples, such as those at Kilmacduagh (Cill Mac Duach), Co. Galway, and Fertagh, Co. Kilkenny (Fearta, Contae Chill Chainnigh), are over 30 m in height and even today are impressive architectural achievements, with their tapering form and conical roofs. The function of round towers has long been debated, but multi-function usage seems most likely. Their Irish name—*cloigtheach* (lit. 'bell-house')—suggests what was probably their main function, as an elevated position from which to ring the hours of the various monastic offices. Moreover, while they may have served as a short-term refuge for the monks in times of danger and as a storeroom for valuables, there can be no doubt they were at least partially conceived as a powerful physical symbol of church authority.

The domestic buildings of each foundation would have included kitchens and a refectory, as well as the quarters of the monks themselves. Some of the larger of the early Irish monasteries may have had communal dormitories, but on the smaller foundations the evidence usually points to small individual or shared cells, often of the corbelled stone 'bee-hive' type (e.g. Skellig Michael). Larger monasteries would also have had guest accommodation and an infirmary for the sick.

§4. ARTS AND CRAFTS

As a self-contained community, each foundation would have required an industrial area serving the practical technological and, in some cases, artistic requirements of the monastic *familia*. Iron-working evidence has been uncovered at Reask and Killederdadrum and bronze-working at Nendrum. Other crafts undertaken would have been milling, stone-carving, and leatherwork. The latter craft was, apart from the more mundane production of shoes, satchels and the like, related to the preparation of vellum for manuscripts. It is unknown how widespread the practice of producing fine manuscripts was and it may have been restricted to the larger foundations where specialized scriptoria could have existed, though these are not yet attested archaeologically.

SÓF

Monasticism originated in 4th-century Egypt and soon spread to other desert areas, e.g. Palestine. The 'flight from the world' proclaimed a more dedicated discipleship and a surer path to God through the renunciation of property, marriage, and self-will. It took two forms: eremitic (solitaries only gathering for liturgy) and coenobitic (life in a community)—both later found in Ireland (ÉRIU). This eastern, desert pattern was adapted to western Europe by Cassian in southern GAUL in the 5th century, and this 'desert period', read *via* Cassian, remained the monastic ideal propagated through its HAGIOGRAPHY: Athanasius, JEROME, and PALLADIUS. It can be seen in the ideal monasteries in the *Vita Columbae* (Life of COLUM CILLE) by ADOMNÁN or the NAVIGATIO SANCTI BRENDANI (The voyage of St Brendan), which brings to perfection the notion that the ideal monastic life anticipates heaven, and it inspired many later 'reforms', such as that of the Céili Dé. These echoes, which contrast markedly with later Benedictinism, have

led many to imagine elaborate connections between Ireland and 'the East'.

Monasticism is first mentioned in Ireland in the *Confessio* of PATRICK, but not until the later 6th century do we have evidence for actual MONASTERIES (e.g. BEANN CHAR [Bangor] or Clonard) and founders (e.g. Comgall or Finnian) gathering disciples in places which were becoming centres of economic activity, the religious administrative expression of particular dynasties, as well as places of learning/asceticism. By 600, in addition to many large monasteries in Ireland, there were several Irish monasteries abroad, e.g. Iona/EILEAN Ì (Colum Cille) and Bobbio (COLUMBANUS). This Irish pattern was little affected by the 9th-century standardization (Benedictinism), and it was only displaced with the arrival of the Cistercians in the 12th century (see CISTERCIAN ABBEYS IN IRELAND; CISTERCIAN ABBEYS IN WALES).

Thomas O'Loughlin

Mongán mac Fiachna (earlier also Fiachnai; †625) was king of an area of eastern ULAID. He is remarkable because—though a documented figure of the Christian, literate period—he became a subject of a group of tales in the KINGS' CYCLES, in which he figures as the son of the god MANANNÁN, is endowed with supernatural vision, and is a self-aware reincarnation of the legendary hero FINN MAC CUMAILL.

In *Compert Mongáin* (Birth of Mongán), Manannán assumes the guise of Mongán's father, Fiachnae mac Baetáin—while the latter is engaged in perilous combat against the Saxons in BRITAIN in support of AEDÁN MAC GABRÁIN—to father the supernatural child on Fiachnae's wife. (The title of a lost saga maintains that Fiachnae fought the English at Dún Guaire, i.e. Bamburgh in Bernicia [BRYNAICH]). The story is thus closely parallel to that of PWYLL and ARAWN in the MABINOGI or of Arthur's conception by UTHR BENDRAGON as related by GEOFFREY OF MONMOUTH. Byrne has suggested that Fiachnae be identified with the Féachno who succeeds DIARMAIT MAC CERBAILL as king of Tara (TEAMHAIR) in the list recited in *Baile Chuinn* (The ecstasy of CONN [CÉTCHATHACH]; see *Irish Kings and High-Kings* 112).

Manannán's prophecy of Mongán's birth in 'The Voyage of Bran' and Carney's ideas about the Christian inspiration for that story (and perhaps the supernatural Mongán tradition in general) are discussed in the article on IMMRAM BRAIN. For 'The Colloquy of COLUM CILLE and the Youth at Carn Eolairg' (Meyer & Nutt, ZCP 2.313–20), in which Mongán remembers past incarnations as animals, and 'The Story from which it is Inferred that Mongán was Finn mac Cumaill' (Meyer & Nutt, *Voyage of Bran* 1.45–52), see REINCARNATION §2. Mongán's recollection of Ireland's past and his own past lives enables him to expose the ignorance of the poets; cf. the anecdote at DINDSHENCHAS.

Texts of four tales of Mongán occur in a block in the important manuscript LEBOR NA HUIDRE: the birth tale (with its beginning missing), the story implying that Mongán was Finn, *Scél Mongáin* (The story of Mongán), and *Baile Mongáin* (The ecstasy of Mongán). These four are written in a concise style with minimal literary elaboration, probably all Old IRISH linguistically. 'Colum Cille and the Youth' is stylistically similar, but the youth is unnamed in the text and Mongán's presence is suggested only in the heading.

Mongán mac Fiachna died fighting the BRITONS of Strathclyde (YSTRAD CLUD). According to the ANNALS of Tigernach, he was struck by a stone by Artuir (i.e. Arthur), son of Bicor the Briton.

The name *Mongán* means 'little mane', hence 'shaggy one'. It is also the name of a sinister character in *Buile Shuibne*, on which see WILD MAN §8.

View of Mont-Lassois from the west

Mont-Lassois is the location of an important Late Hallstatt (6th-century BC) princely residence on the shores of the upper Seine (Sequana). The site consists a hill-fort on the left bank of the river near Chatillon-sur-Seine, Bourgogne, and has elaborate fortifications, with several large tumuli associated with it, including the famous burial of Vix (Berthelier-Ajot, *Celts* 116).

Situated on a rocky outcrop at the point where the Seine becomes navigable for small vessels, it is strategically placed to control traffic along the inland tin route from Britain to the Rhône valley and, thence, the Mediterranean. By the Late Hallstatt period, the same route—in the opposite direction—had become important in the trade of wine to Atlantic Gaul and the British Isles. The site played a central rôle in the trade of Greek goods from Massalia to central and north-western Europe, as exemplified by the finds of Attic cups and Massaliot wine amphorae from the late 6th and early 5th centuries BC.

In addition to tombs and a settlement, an early Celtic sanctuary (see fanum) was found at Mont-Lassois. This was excavated in the early 1990s, and comprises a rectangular ditch with an entrance oriented towards the hill-fort, in which the fragments of two stone statues were found, one on each side of the entrance (see viereckschanzen). Both statues are those of seated figures: one is an armed man, the other a woman (Chaume & Reinhard, *Das Rätsel der Kelten vom Glauberg* 221).

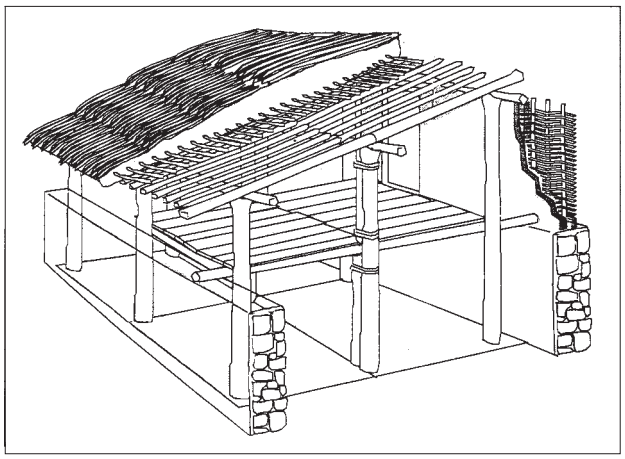
RK

Monte Bibele is an important pre-Roman Iron Age site from Cisalpine Gaul. The massif of Monte Bibele (600 m above sea level) is located in the foothills of the Apennines, between the valleys of the rivers Idice and Zena, around 30 km from Bologna (ancient Bononia) in northern Italy. Its strategic position, close to the Raticosa Pass, and the availability of spring water (significantly remembered in the name of the mountain, from Latin *bib-* 'to drink') made it a suitable site for occupation. Regular excavations since 1973 have revealed a settlement which was occupied from the end of the 5th century BC to the beginning of the 2nd century BC, when it was destroyed by a fire as the Romans conquered the area. Around 200 m from the site there is also a cemetery with over 160 graves and two votive areas (a deposit with small anthropomorphic bronze statues and miniature vessels, and a small sanctuary at the top of the mountain).

The settlement, which covers 7000 m² on the slope of the massif (gradient 10%–30%), was created according to a precise urban plan: the 50 or so dwellings, the storerooms and the cistern were built on artificial terraces—platforms of soil enclosed by



Sketch of the reconstruction of a two-storey house (building 14) from the Monte Bibele settlement

stone walls—and are divided into irregular blocks by cobbled streets which ascend or traverse the slope. A typical house (covering an area of 30/40 m²) consisted of a square room and was built on two floors: the ground floor, delimited by sandstone walls, and a second floor, built with wooden trellis-work covered with clay.

The earliest graves discovered in the burial date from the end of the 5th century BC; INSCRIPTIONS and artefacts identify the dead men as local people of Etruscan origin. A small group of interments and cremation graves are attributed to the first half of the 4th century BC. These burials have revealed LA TÈNE iron weaponry: SWORDS with scabbards (De Navarro type II), sword-chains, and spearheads, as well as objects of personal ornament, especially brooches of the early La Tène design, all of which can be closely paralleled in the core Continental Celtic area north of the ALPINE region. These graves can be interpreted as reflecting the arrival of Celtic warriors who came from transalpine areas into the village. In the second half of the 4th century BC the community enjoyed a period of prosperity. The presence of weapons of Celtic tradition is a clear sign that the warrior's rôle was predominant within the social structure. Numerous artefacts linked to the consumption of meat and WINE (*skyphoi* [a type of small wine decanter] from Volterra, colanders, knives, and *kyathoi* [cups for drawing wine from a large bowl]) frequently occur among the grave goods. These reveal receptivity towards the culture of the Etruscan world. Several graves provide evidence for a non-warrior component within the community, most probably related to an important class of craftsmen.

In the light of this archaeological evidence, the *castellum* of Monte Bibele has come to be regarded as an interesting example of cohabitation between two different ethnic entities: on one hand, warriors of the Celtic tribal group, the BOII (lit. cattle-owners), coming from transalpine Europe at the beginning of the 4th century BC, on the other, Etruscans and local north-Italian peoples interested in controlling the trade-routes along the valley of Idice. Marriage played an important rôle in the process of integration: the inscribed name PETNEI scratched on a *kylix* (an elegant Greek type of drinking vessel) from Tomb 14 corresponds to the family name of an Etruscan woman, and appears on some objects in the burial belongings owned by an armed man, possibly indicating socially prestigious and culturally significant gifts from a local woman to her husband, a warrior of Celtic origin.

Montefortino di Arcevia is a Celtic burial ground of the LA TÈNE period in the present-day province of Ancona (Marche) in ITALY. It lies in the ancient territory of the SENONES, a Cisalpine Gaulish tribe. The site was excavated during 1894–9, and revealed numerous items which demonstrated the process of the assimilation of Greek and Italian influences in the material culture of the Senones who had settled on the eastern slopes of the Central Appenines. The cemetery was in use in the 4th and 3rd centuries BC. At Montefortino, a sanctuary (FANUM), which was the focus of a cult of a healing-god, was also found. This sanctuary was used over several centuries; the votive offerings and its oldest finds date back to the 5th century BC, and the most recent from the Roman period down to the 2nd century AD.

Montroulez (**Morlaix**) is located on the border between LEON and TREGER in Brittany (BREIZH), the two regions being divided by the river Keffleut (Queffleuth), which flows beneath the city. Both Breton and French names derive regularly from Latin *montem relaxus* (deserted mountain), attested 1128. Henry VIII of England and Wales (CYMRU) invaded and burned Montroulez in 1522. The hagiographer Albert LE GRAND, the folklorist Émile Souvestre (1806–54), the poet Tristan Corbière (1845–75), and the Celtic scholar Léon FLEURIOT hailed from Montroulez. Several important publishers are located in Montroulez, including Ar Flaz, Éditions du Dossen, and Skol Vreizh.

Moore, Arthur William (1853–1909) has been described as a 'gifted polymath . . . an avid scholar . . . The leading figure in the late-nineteenth-century Manx "renaissance"' (Belchem, *New History of the Isle of Man* 5.3). Kinvig also identifies the significance of Moore's contribution: 'The definite revival of Manx national consciousness and spirit can be traced above all to the influence of the writings . . . of Arthur W. Moore' (*Isle of Man* 173). Contemporaries such as Sophia MORRISON regarded him as the chief authority on Manx antiquities and as a 'truly representative Manx gentleman' (*Celtic Review* 6.283).

Moore was born on 6 February 1853 at Cronkbourne, Douglas, into a family with long-established and respected connections, the Moores of Cronkbourne and the Christians of Milntown. His off-island education at Rugby prepared him for historical studies at Trinity College, Cambridge. On his return to Man, he moved from managing his family's sail-cloth firm to a career in politics. A member of the House of Keys (MHK) from 1881, he progressed to the position of Speaker (SHK) in 1898, a post he held until his death. Moore's passion, however, was the culture and history of the Isle of Man (ELLAN VANNIN). Inspired by the work of P. M. C. KERMODE, he joined the Isle of Man Natural History and Antiquarian Society, later becoming its President. His privileged education and financial security enabled him to publish material, and he was influential enough to persuade others to fund publication as well. Through his work he became a figure of authority, a figurehead to the cultural and national revival, both on the island and within the wider pan-Celtic movement (see PAN-CELTICISM).

Moore published over a dozen books on Manx topics, including most notably the two-volume *History of the Isle of Man* (1900), and his seminal journal, *The Manx Note Book*, which appeared between 1885 and 1887 in twelve volumes. Moore was instrumental in bringing together elements of previously obscure publications. Direct collection from oral sources appears to have been limited, his work relying upon material being brought to him, many of whom were his paid workers at Tromode: 'Thanks are due to the many kind friends who have contributed scraps of Folk-Lore …' (*Folklore of the Isle of Man* vii). His large collection of books relating to Manx studies was bequeathed to the Manx Museum on his death.

With regard to the Manx Gaelic language, Moore was a controversial figure. Named as one of the *Manninee dooie* (true Manx) in Cubbon's *Island Heritage*, he famously spoke out against the use of the spoken language. Nevertheless, he was elected the first president of Yn Cheshaght Ghailckagh in 1899 and was made official translator of the Acts of Tynwald into Manx Gaelic. Earlier collaborative work with John Rhŷs had seen the publishing of Bishop John Phillips's Book of Common Prayer in Manx Gaelic in 1893 (see MANX LITERATURE [2]).

Moore was able to turn his hand to a wide range of academic disciplines, from meteorology to music, publishing *Manx Ballads and Music* in 1896, for example. At the time of his death, a project examining the dialect of English spoken in the Isle of Man lay unfinished, but it was later published in a rather less-ambitious form as *A Vocabulary of the Anglo-Manx Dialect* (1924) by his colleagues and co-editors, Sophia Morrison and Edmund Goodwin.

On 24 February 1887 Moore married Elizabeth Wynn, daughter of Dr Joshua Hughes-Games, then Archdeacon of Man. In recognition of his life's work he was voted a member of Gorsedd Beirdd Ynys Prydain at the National Eisteddfod of Wales (Eisteddfod Genedlaethol Cymru) in Cardiff (Caerdydd) in 1899 and obtained the office of CVO in 1902.

Breesha Maddrell

Moore, Thomas (1779–1852) was an Irish poet and musician whose work has had a significant impact on Anglo-Irish writing (see ANGLO-IRISH LITERATURE). Perhaps his most influential work is *Irish Melodies* (1808–34), published in ten volumes, in which Moore put words to airs recorded by Edward Bunting (1773–1843), the Irish music collector. Moore used a romanticized adaptation of his sources to carry his veiled nationalistic message, though his lyrics betray an acute understanding of the rhythms of the Irish language and its music. Among his best-known songs are 'The Harp that Once through Tara's Halls' and ''Tis the Last Rose of Summer'. Although trained at law, the talented Moore became a favourite as a performer in the drawing rooms of polite London society, where he used his songs to convey obliquely his political views, which referred mainly to the plight of the Irish Catholic.

Among Moore's other works is *Lallah Rookh* (1817), a narrative poem which put Moore on a level footing with his friend Lord Byron and Sir Walter Scott. His *Letters and Journals of Lord Byron* (1830), a biography in which Moore made use of his personal recollections of the famous poet George Gordon Byron (1788–1824), is an early example of a 'source biography'.

In later works, such as *Travels of an Irish Gentleman in Search of Religion* (1833) published on the Continent, Moore became more explicit in the expression of his political opinions. Following his death, the work of this highly sensitive poet came to be misunderstood and was consequently marginalized.

SELECTION OF MAIN WORKS
Lallah Rookh (1817); *Letters and Journals of Lord Byron* (1830); *Travels of an Irish Gentleman in Search of Religion* (1833); *Irish Melodies* (1808–34); *Poetical Works of Thomas Moore* (1840–1).

PSH

Morgan ab Owain (†974) was king of Glywysing, including Gwent in the east and probably Gower (Gŵyr) in the west, in south Wales (Cymru). Also known as Morgan Hen (the old), he was the son of Owain ap Hywel of Gwent. According to the Anglo-Saxon Chronicle, his father submitted to the West Saxon king Æthelstan in 927. Morgan succeeded his father in 931, and attended Æthelstan's court in the same year. He continued to visit the West

Saxon courts up to the 950s. The name MORGANNWG, which began to be used for the older Glywysing *c.* 1000, was derived from his name.

PEB

Morgan, Mihangel (1955–) is a WELSH-language novelist, short-story writer, poet, and critic. Born in Aberdare, Glamorgan (Aberdâr, MORGANNWG), he was brought up in a bilingual home. After training as a calligrapher, he graduated in Welsh and later gained a doctorate for a thesis on the work of John Gwilym Jones (1904–88, see WELSH DRAMA). He now lectures on modern Welsh literature at the University of Wales, ABERYSTWYTH.

Mihangel Morgan is one of the most prolific of contemporary Welsh-language writers. His first novel, *Dirgel Ddyn* (Secret man, 1993), was awarded the National Eisteddfod Prose Medal (see EISTEDDFOD GENEDLAETHOL CYMRU) and aroused much interest for its portrayal of aspects of society hitherto left largely unexplored by the Welsh-language novel: it focuses mainly on eccentric and disturbed characters set against a cityscape. References to films are interwoven with the narrative. There is frequently a detective or neo-*noir* dimension to his fiction, which is used to explore issues of realism. This preoccupation is continued in his novel *Y Ddynes Ddirgel* (Secret woman, 2001), which forms a sequel to *Dirgel Ddyn*. Characters' sexuality can be ambiguous, as can their experience of reality. *Pan Oeddwn Fachgen* (When I was a boy, 2002) is a novel about a young boy in south-east Wales (CYMRU) trying to come to terms with his sexuality, and *Croniclau Pentre Simon* (The chronicles of Pentre Simon, 2003) portrays the lives of the inhabitants of an imaginary Victorian village, where life is not as it seems at first. His work—whether fiction, poetry or criticism—is subtle in its irony and humour, often with a satirical edge.

SELECTION OF MAIN WORKS

NOVELS. *Dirgel Ddyn* (1993); *Melog* (1997); *Dan Gadarn Goncrit* (1999); *Modrybedd Afradlon* (2000); *Y Ddynes Ddirgel* (2001); *Pan Oeddwn Fachgen* (2002); *Croniclau Pentre Simon* (2003).
POETRY. *Diflaniad Fy Fi* (1988); *Beth yw Rhif Ffôn Duw* (1991); *Creision Hud* (2001).

Sioned Puw Rowlands

Morgan, William (1545–1604) was the first translator of the complete BIBLE into WELSH and thus a founder of the early Modern Welsh prose tradition (see WELSH PROSE LITERATURE). He was the second son of John Morgan and his wife Lowri ferch Wiliam (the daughter of Wiliam), and was born at Tŷ-mawr, Wybrnant, in the parish of Penmachno, Caernarfonshire (sir Gaernarfon). His parents were of gentle birth and his upbringing, though not affluent, was comfortable. John and Lowri Morgan were subtenants of the Wynn family of Gwydir, Llanrwst, and William appears to have received some grammar schooling from the family chaplain at Gwydir, though he may have later (*c.* 1564) gone on to Westminster School in England to receive a final polish. In 1565 he matriculated from St John's College, Cambridge (Welsh Caer-grawnt), together with another promising student from Llanrwst, Edmwnd Prys. Morgan graduated BA in 1568, MA in 1571, BD in 1578 and DD in 1583, thereby acquiring a sound knowledge not only of the liberal arts but also of the biblical languages and theology. He became vicar of LLANBADARN FAWR in the diocese of St David's (Tyddewi) in 1572, but thereafter held livings in the diocese of St ASAPH (Llanelwy): vicar of Welshpool (Y Trallwng, 1575–8), sinecure rector of Denbigh (Dinbych, 1575–95), vicar of Llanrhaeadr-ym-Mochnant with Llanarmon

Mynydd Mawr (1575–95), rector of Llanfyllin (1579–92) and sinecure rector of Pennant Melangell (1588–95). It was at Llanrhaeadr that Morgan met and married Catherine ferch George from Oswestry (Welsh Croesoswallt), and where the great work of translating the Bible was completed, despite furious altercations with some of his parishioners.

In 1595 Morgan was made bishop of Llandaf, with his episcopal palace at Mathern near Chepstow in Monmouthshire (Cas-gwent, sir Fynwy). His office brought with it secular obligations since he had to serve as a justice of the peace, as a member of the Council in the Marches and as one of the Lords Spiritual. His main problem in Llandaf was Roman Catholic recusancy. In 1601 he was translated to St Asaph, and lived in the archdeacon's house at Dyserth rather than in the dilapidated episcopal palace; his secular obligations followed him north. Perhaps his chief preoccupation was to fend off acquisitive laymen from laying their hands on the Church's material resources. Morgan died on 10 July 1604 and was buried in his cathedral. His wife died at Oswestry in January 1606; there were no children.

During the 1580s, at Llanrhaeadr, Morgan revised the translation of the New Testament and Psalter published by William Salesbury and his colleagues in 1567 and translated anew the Old Testament (except the Psalms) and the Apocrypha. His basic aid was the great Antwerp Polyglot Bible of 1569–72 and he was also able to draw freely on the Latin versions of Tremellius, Estienne, and Münster, as well as on earlier English versions. His biblical scholarship was impeccable and his version as accurate as it could be made at the time. Even more important was the way in which he modernized Salesbury's archaisms and regularized the plethora of forms in which he indulged, chiefly on the basis of the linguistic practices of the Welsh professional poets, whom he patronized extensively. The result was an exemplary and stately masterpiece, which all later prose writers could emulate as they chose. The Bible and Psalter were published in 1588 and were followed by a revised Book of Common Prayer, which was almost as important, in 1599. Morgan's revised New Testament was unfortunately lost as a result of the great London plague of 1603.

R. Geraint Gruffydd

Morgannwg is the name of a medieval kingdom and pre-1974 county in south Wales (Cymru). The English equivalent Glamorgan (< Welsh Gwlad Morgan or Gwlad Forgan) is generally used for the county only. In the early post-Roman period, the small kingdoms of Ergyng, Gwent, and Glywysing (Old Welsh Ercing, Guent, Gliuising) emerged, all continuing, in name at least, Romano-British towns: Ariconium (now Weston-under-Penyard, Herefordshire), Venta (Caer-went), and Glēvēnses (the *territorium* and citizens of Gloucester). This pattern no doubt reflects the greater degree of Romanization in the fertile agricultural lands of the south-east as opposed to the rest of Wales. Of these three, Glywysing was the dominant and over-arching kingdom, and its name indicates that it resulted from a westward expansion or dislocation of its original range, perhaps after the battle of Dyrham in 577, which, according to the Anglo-Saxon Chronicle, had resulted in Gloucester, Cirencester, and Bath falling to the English. The kingship of Glywysing was dominated by the lineage of the 7th-century king Meurig ap Tewdrig (OW Mouric map Teudiric) for several centuries, though a number of minor kingships were held in tandem with them, and Ergyng was lost to the English in the 9th century. In the mid 10th century Meurig's descendant Morgan ab Owain (†974) became sole king and the region soon afterwards came to be called Morgannwg (OW Morcanhuc, also Gulat-Morcant 'Land of Morgan') after him.

Although Gower became part of the free Welsh kingdom of Deheubarth, most of Gwent and Morgannwg came under the control of the Norman FitzHamon in the late 11th century. With the Acts of Union in 1536–43, the county of Glamorgan was

Early south-east Wales and the making of Morgannwg: sites originating as Roman towns and forts are shown as squares, the 1536–1974 county of Glamorgan is shown with a thick grey outline

formed, which included Gower (Gŵyr) on the west, but Gwynllŵg in the Rhymni valley and what had been Gwent further east became Monmouthshire (sir Fynwy). The inventive and influential poet and antiquarian Edward Williams (1747–1826) gave prominence to Morgannwg, not only through his bardic name Iolo Morganwg, but also by expounding the doctrine of a continuous bardic tradition in the region, dating back to pre-Christian druids. With the Industrial Revolution, Glamorgan became the most industrialized and populous county in Wales. It contained most of the coalfield and iron-working areas, as well as the growing seaports of Cardiff (Caerdydd) and Swansea (Abertawe). Trade unionism and socialist politics have had a particularly strong impact on, and tenacity in, this part of Wales, inspiring internationalist ideals not always readily reconciled with Welsh-language culture. But Glamorgan is famous also for such 'iconically Welsh' cultural institutions as the Mari Lwyd, male-voice choirs (*corau meibion*), and rugby, as well as being the birthplace of such overtly Welsh international celebrities as Richard Burton, Tom Jones, Anthony Hopkins, Shirley Bassey, and Catherine Zeta Jones.

On the millennium of its founder's death, Glamorgan was broken up into three counties—South, West, and Mid Glamorgan—which were reorganized again into smaller electoral districts in 1995, of which only the Vale of Glamorgan/Bro Morgannwg preserves the old name. However, the pre-1974 county is still widely recognized as a meaningful region and recollected, for example, in the name of the cricket team and the University of Glamorgan (Prifysgol Morgannwg) 17 km north of Cardiff in Trefforest, Pontypridd.

Although Welsh declined sharply between the 1901 and 1991 censuses, most parts of Glamorgan still had a majority of Welsh speakers at the beginning of the 20th century. The dialect—known as *Gwenhwyseg*, since it was shared with Gwent—generally agrees with southern Welsh in such features as the vowels *u* and *i* having fallen together, *mas* 'out' and *(i) lan* 'up' for standard and northern *allan, (i) fyny*. More distinctive are the now old-fashioned third-person singular ending *-ws* for standard *-odd* in the past tense and the *caledfiad* or provection in which the consonants *b d g* are devoiced after the stress in polysyllables to *p t c*, hence *dicon* 'enough', standard *digon*. In east Glamorgan dialect are found the further distinctive features of loss of *h* (e.g. *nw* 'them' for *nhw*), *e* in unstressed final syllables pronounced *a* as in north-west Wales (e.g. *retag* 'to run' for *rhedeg*), and stressed long *â* pronounced [æ:] or [ɛ:] (approximately as in English *bad* or *bed*; thus [ar waˈæ:n] 'apart' *ar wahân* and the often-mocked local English pronunciation of *Cardiff*). This [æ:] is found also in the Welsh of northern Powys and was probably general to eastern areas before Welsh largely died out in Radnorshire (sir Faesyfed) in early modern times.

Morgenau (Old Welsh Morcenou) was bishop of St David's (Tyddewi) from 984 to 999 in a period when the kingdom of DEHEUBARTH was subject to several attacks by Vikings from Ireland (ÉRIU). GIRALDUS CAMBRENSIS relates that it was Morgenau who introduced meat into the FOODWAYS of the *clas* (monastic community) at St David's, which had been strictly vegetarian up to that point, following a rule traditionally said to have been established by the founder, DEWI SANT. Morgenau died during a Viking assault in 999. The Old Welsh male personal name *Morcenou* is attested elsewhere. For example, it is the name of a layman who witnessed a 7th-century charter preserved in the Book of LLANDAF. In origin, the name is a Celtic compound, deriving from a notional pre-form **Māro-canawū* 'great whelp' or possibly **Mori-canawū* 'sea whelp'.

PEB

Morrígan (also Morrígu, pl. *morrígnae*, from Old Irish *mor*, the same root as 'mare' as in 'nightmare' and German *Mahr* [see FOMOIRI], and *rígain*, *rígan* 'queen') was an early Irish war-goddess. She appears in IRISH LITERATURE in two rôles: first, as a minister and attendant of fate (Gwynn, *Journal of the Ivernian Society* 2.163–5), a function she frequently fulfils in the shape of a war-fury, predicting impending death (Mac Cana, *Celtic Mythology* 66), and attempting to influence the outcome of battle (Stokes, RC 3.175). Her second rôle associates her with fertility and wealth, and is illustrated by her identification with the mother of Gods, ANU or Ana. This function is seen, for example, in CATH MAIGE TUIRED ('The [Second] Battle of Mag Tuired'), where the Morrígan mates with the DAGDA, one of the leaders of the TUATH DÉ, just before the decisive battle. She then promises the Tuath Dé her assistance against the Fomoiri. Other examples are her bringing of treasures and cattle (O'Rahilly, *Táin Bó Cúalnge from the Book of Leinster* ll. 1992–3) or prompting the conception of a calf (Meyer, RC 10.222–3). The Morrígan performs these different functions in a variety of shapes, ranging from a hag (O'Rahilly, *Táin Bó Cúailnge, Recension I* l. 2040) or maiden (ll. 1845–73) to animals like a deer (ll. 1992–3) or a crow (30, l. 955).

Together with the BODB and MACHA, and sometimes NEMAIN, the Morrígan is part of a tripartite group of war-goddesses, contrasted in LEBAR GABÁLA ÉRENN ('The Book of Invasions'), an 11th-century text describing the legendary pre-history of Ireland, with the three land-goddesses ÉRIU, Fótla, and BANBA (Macalister, *Lebor Gabála Érenn* 41.130, 154). However, in other early Irish literary accounts 'Morrígan' and 'Bodb' are used to denote Irish war-goddesses in general, and both characters, along with Anann (= Anu) appear as sorceresses (*ban-tuathecha*) of the Túath Dé (Dobbs, RC 47.292). This conflicting evidence as regards Irish war-goddesses suggests that their distinction was to some extent arbitrary (Carey, *Éigse* 19.269).

PSH

Morris-Jones, Sir John (1864–1929) was a scholar, critic, and poet whose influence at the end of the 19th century was central to a revival in the fortunes of the WELSH language during a period when increased cultural awareness brought renewed dignity to the Welsh literary scene.

He was born at Trefor in the parish of Llandrygarn, Anglesey (Ynys Môn), on 17 October 1864. In 1876 he was admitted to Friars School at BANGOR (GWYNEDD), a famous grammar school where pupils received a solid grounding in mathematics. Having transferred to Christ College, Brecon (Aberhonddu), in 1879 in the company of other able pupils and his headmaster the Revd D. Lewis Lloyd, he contracted scarlet fever and was forced to return home for many months, a period which was extended as a result of his father's death on Christmas day of the same year. This unscheduled absence gave a new focus to his

reading as he developed an interest in Welsh literature and in Welsh poetry in particular. It was his carefully nurtured prowess in his chosen subject which secured him an Oxford scholarship in mathematics. (It was Morris-Jones's early studies as a mathematician that later led him to the Hamito-Semitic hypothesis, i.e. that the similarities between the syntax of Celtic and this non-Indo-European family of languages were too extensive to be a matter of coincidence as opposed to close contacts in the prehistoric period.) However, it was his providential absence from school which instilled in him a love of Welsh literature that was to determine the exact nature of his future career.

At Oxford (Welsh Rhydychen), under the personal guidance of Sir John Rhŷs, Professor of Celtic and subsequently Principal of Jesus College, and in the company of other committed émigré Welsh scholars responsible for founding the cultural society Cymdeithas Dafydd ap Gwilym, he became involved in setting a radical and ambitious agenda which addressed the indifferent literary standards of the period. His first practical contribution was as secretary to the committee responsible for publishing *Welsh Orthography* (1893), commissioned by the Society for the Utilisation of the Welsh Language. Subsequently, wider issues of language reform beckoned during his period as lecturer (1889) and professor (1894) at the University College of North Wales, Bangor. A diplomatic edition of Ellis Wynne's *Gweledigaetheu y Bardd Cwsc* ('Visions of the Sleeping Bard', 1896), apart from offering a sound model for future scholars, contains an introduction that draws attention to the 'barbaric style' of contemporary writers who had become ignorant of the Welsh classics. His adjudications of major competitions from the platform of the National Eisteddfod (Eisteddfod Genedlaethol Cymru) were strategically employed to legislate on language and metrics to a national audience and proved an appropriate extension to university lectures which were used to communicate the prime elements of his language reform programme to a new generation of students. College lectures, articles and adjudications, his editorship of *Y Beirniad* (The critic, 1911–19), together with research projects, were related activities within a co-ordinated plan, a plan which would ultimately call for the publication of standard works on various aspects of Welsh grammar and prosody. John Morris-Jones published *A Welsh Grammar, Historical and Comparative* in 1913, which, despite certain weaknesses, has comfortably withstood the test of time. It was the first substantial work to apply, with masterful clarity, the principles of Indo-European historical and comparative linguistics to a Brythonic language. Two further volumes followed: *An Elementary Welsh Grammar* (1921) and *Welsh Syntax* (1931), published posthumously. Other publications such as 'Taliesin' (*Y Cymmrodor* 28 [1918]), a study of early Welsh poetry (see cynfeirdd), and his articles disputing the antiquity of Gorsedd Beirdd Ynys Prydain (*Cymru*, 1896), were attempts to rectify the misguided conclusions of others. His apparent appetite for conflict could be favourably interpreted as a symptom of an aggressive commitment to those ideals and standards he sought to justify and promote.

Language reform alone would not lead to sounder literary standards. *Cerdd Dafod* (Tongue craft, 1925) provided a scholarly, definitive study of the mechanics of Welsh prosody, whereas his volume of poems *Caniadau* (Songs, 1907), which contained both polished translations and original work, offered new patterns and standards for aspiring poets disenchanted with the sermonizing of earlier philosopher-poets. He is remembered as a gifted teacher and communicator, as a critic and grammarian with a penchant for legislation, and as an unremitting campaigner for sounder literary and linguistic standards. His students included some of the finest Welsh scholars of the earlier 20th century, of which the greatest was Sir Ifor Williams.

Morrisiaid Môn

The Morris Brothers, or Morrisiaid Môn, were extraordinarily active and gifted correspondents, writers and antiquaries in mid-18th-century Wales (Cymru). Four brothers—Lewis, Richard, William and John—were raised by Morris Prichard (†1763) and Margaret Owen (†1752) at Pentre-eiriannell, Penrhosllugwy, Anglesey (Ynys Môn). The youngest of the brothers, John, became a sailor and died in 1740 during the unsuccessful attack on Cartagena, Spain. William Morris (1705–63), the mild-mannered stay-at-home of the family, was a scholar, a sage, an amateur physician and a horticulturist, who earned his living as Collector of Customs at Holyhead (Caergybi). Life on Anglesey is vividly portrayed in his letters, and his brothers greatly valued his judgement and wisdom. Richard Morris (1703–79) went to London (Welsh Llundain) at the age of eighteen, fell in love with the city, became a hectically busy and hardworking clerk at the Navy Office, and earned the gratitude of the London Welsh by founding the Honourable Society of Cymmrodorion in 1751. Generous to a fault, Richard Morris was a thoroughly likeable man who retained his interest in the traditional songs of his native Anglesey but who also contributed to the spiritual well-being of his countrymen by supervising the publication of new editions of the Welsh Bible and the Book of Common Prayer. The most gifted and interesting of the four was the eldest brother Lewis Morris (1701–65). He was not only a cartographer, a surveyor, a steward, and a Crown agent, but also a scholar, a poet, and a literary critic. He could make watches and harps, compose stanzas and set them to music, build boats and sail them. Like so many 18th-century polymaths, Lewis Morris had so many irons in the fire that he never managed to bring his major project, a dictionary of Welsh place-names entitled *Celtic Remains*, into the public domain. The manuscript remained unpublished until 1878. However, this patriotic 'proud hot Welshman' bolstered Welsh culture, both in London and in Wales, by forming a loose, informal group of articulate and talented savants, critics, poets, and scholars who became known as the Morris Circle. Lewis Morris used this Circle as a means of encouraging the creative writing and scholarly activity associated with the poet Goronwy Owen, the Celtic scholar Evan Evans ('Ieuan Fardd') and the schoolmaster Edward Richard, all of whom, to a greater or lesser degree, strove to enrich the Welsh vocabulary, strengthen the poetic tradition, and rescue the history of Wales from the patronizing sneers of English historians. The correspondence of this Circle, and especially of the Morris brothers themselves, is remarkable for its originality, freshness and literary merit. Around 1100 letters have survived and they provide a marvellously rich looking-glass into the cultural life of the period. Members of the Morris Circle clearly viewed letter-writing, both Welsh and English, as the continuation of conversation by other means, and by filling their 'epistles' with vivid gossip and mordant comments they provided much grist for the mill of the social and cultural historian. The Morris brothers believed themselves to be the authentic guardians of Welsh-language culture and their tireless labours during the Augustan age helped to compensate for the dilatoriness of Anglicized well-born gentry and the lethargy of the rank-and-file members of the Cymmrodorion Society.

Geraint H. Jenkins

Morrison, Sophia (1859–1917) was born in Peel, Isle of Man (Ellan Vannin), to a family of some local importance. Developing a keen interest in languages, she was responsible for the Peel Manx Gaelic classes, which provided an impetus for the formation of the Manx language society, Yn Cheshaght Ghailckagh. As secretary of the society from 1901 until her death, Morrison produced and edited its journal, *Mannin* (Mann), which appeared in nine volumes between 1913 and 1917. An active pan-

Celt (see PAN-CELTICISM), she was important as a published author and facilitator of others. In addition to her work collecting music, dialect, and folklore, she also campaigned to change attitudes towards Manx culture. According to P. W. Caine, writing at the time of her death: 'No heavier blow has ever befallen the cause of Manx nationality …' (*Mannin* 9.499).

Breesha Maddrell

Mšecké Žehrovice, Bohemia, Czech Republic, is a site that has been known for a long time in archaeological literature following the 1943 find of an IRON AGE stone sculpture of a male head showing typical features of LA TÈNE art. The famous sculpture, as yet unique, with its band of hair, almond eyes, curved moustache and eyebrows, stylized ears, and with a TORC around his neck, has become one of the most frequently photographed and published of the European antiquities recovered from ancient Celtic-speaking territory.

Stone head from Mšecké Žehrovice, Bohemia, Czech Republic

The head was found accidentally while digging for sand. Its four fragments (the missing fifth one has never been found) had been deposited in a pit outside a quadrangular enclosure, together with some La Tène period artefacts. In the same year, excavations took place in the immediate vicinity of the find-spot and in the enclosed area, and larger scale investigations as a part of the Mšecké Žehrovice project of the Institute of Archaeology, Prague, were carried out on the site during 1979–88.

Apart from the La Tène period, the site shows traces of earlier occupation from the Late Palaeolithic (later Old Stone Age) up to the Neolithic/Chalcolithic (New Stone Age/Copper Age) and in the Late HALLSTATT (roughly 6th century BC) and Roman periods (from the 1st century BC), and some activities also took place there in the Middle Ages.

The La Tène period settlement on the site shows a highly complex evolution. Its first phase, the 3rd to early 2nd century BC, was represented by a village which may rightly be called industrial: besides farming, cattle breeding and domestic activities, three branches of specialized production were carried out there: iron smelting, blacksmithing, and manufacture of sapropelite ornaments (sapropelite is a form of very hard workable coal). The village was part of a large La Tène industrial zone in central Bohemia which comprised many iron-producing and sapropelite-working sites located in the vicinity of mineral resources. A single contemporary cremation grave was found 250 m from the Mšecké Žehrovice settlement, the only burial so far unearthed on the site.

On the western edge of the industrial settlement, in the final phase of its use or immediately following, a rectangular wooden enclosure was built of unknown function, of which only small parts of a foundation trench for a fence are recorded. This was followed in the first half of the second century BC by another enclosure of a bank and outer ditch *c.* 190 × 90 m,

17,100 m^2 in area overall. This enclosed area was then divided by a bank and a ditch into two square parts. The south-west corner of the enclosure was destroyed when a sand pit was dug (where the stone head was found) in the 1940s. The earthen banks are now preserved up to 2 m in height, while the ditches, V-shaped in section, were up to 9.3 m wide and 2.1 m deep. The entrances into the northern as well as southern half of the enclosure are assumed to be on the eastern side; their exact position could not be determined by excavations since the places in question were either inaccessible or had already been destroyed by a modern trackway. The enclosure belongs to the rectangular features of the so-called VIERECKSCHANZE-type, which have long been interpreted as sanctuaries, though no shrines or votive offerings were found there.

Approximately 10% of the inner area of the enclosure was investigated in 1979–88. A large wooden house had been built, and rebuilt following a fire, in the north-western corner of the southern square half of the enclosure. This building was radiocarbon dated to the 1st half of the 2nd century BC. In the northern half of the enclosure, two sunken huts, a storage pit, and an open hearth were constructed adjacent to the northern bank around the middle of the 2nd century BC. At the same time, the nearby eastern bank was equipped with wattle and daub fencing on top of the bank. The finds point to the existence of a settlement unit within the enclosure with its residential, farming, and cattle breeding activities. Unusually large quantities of fine pottery, a rich assortment of metal tools and ornaments, as well as dice made from antler seem to favour the interpretation of the enclosure as the seat of local rural élite. While the huts apparently served dwelling/ domestic purposes, the function of the large house mentioned above is less apparent, and could have been a local chief's house or perhaps some sort of ceremonial site used for assembly purposes. With one exception, no other contemporary features were recognized in the excavated inner area, and the same is true for the space outside the enclosure.

The exception is the pit excavated in 1943, located some 40 m outside the south-west corner of the enclosure and containing the four fragments of the stone head accompanied by pottery sherds, a few pieces of sapropelite waste, iron fragments, whetstones, and animal bones. The pottery from the pit dates the deposition of the head to around 100 BC (the latest occupation phase of the enclosure), but it was probably old at the time, sculpted as early as the middle of the 3rd century BC. The whole contents of the pit do not show any marks of a ritual deposition of the (broken) head. Instead, it looks more like common settlement waste. The head, originally thought to represent a deity, has recently been viewed as an image of a heroic ancestor figure, a former member of the local community or of its élite. An attempt has even been made to recognize the position of the sculpted person within the structure of the society, based on one of its remarkable features—the coiffure. The hairstyle is shown clearly, with hair left only in a band at the front; the back of the head is shown as shaved. This corresponds to the earliest descriptions in Latin (see BEDA) and some Irish texts of the so-called Celtic tonsure of early Irish clerics, sometimes suggested to be a throwback to a 'druidic tonsure' of the pre-Christian period (see CHRISTIANITY, CELTIC §2). If the possibility is admitted that such a symbolic feature as a (ritual) hairstyle could persist for centuries and find continuation in different cultural and historical contexts, then the man from Mšecké Žehrovice, sculpted in Bohemia in the 3rd century BC, could have been a member of the local La Tène period élite, holding the position of a DRUID.

Rather than sanctuaries, the ENCLOSURES of the *Viereckschanze*-type in central Europe (of which Mšecké Žehrovice is one of the most prominent examples) are now more often interpreted as enclosed units functioning primarily as dwelling places, perhaps complemented by some ritual or ceremonial uses.

Mumu (**Munster**) was the most southerly province of early historic Ireland (ÉRIU). It is roughly equivalent to the modern province of Munster (Modern Irish An Mhumhain), which comprises six counties: Kerry (Ciarraí), Cork (CORCAIGH),

The contemporary province of Munster (Cúige Mumhan) showing its six counties and four major cities (all county towns); Gaeltacht areas are bordered with black dots

Limerick (Luimneach), Tipperary (Tiobraid Árainn), Waterford (Port Láirge), and Clare (An Clár).

§1. early division

In traditions relating to prehistoric times, Munster is often considered as two provinces: Eastern Munster, belonging to Eachaidh Abhrad-Ruadh, and Western Munster, under the control of Cú Roí mac Dáiri (e.g. Hogan, *Onomasticon Goedelicum* 552). In the reality of Irish 1st-millennium politics, this division is reproduced, with western Munster (Iar Mumu or Iarluachra) under Éoganacht Locha Léin acting as a self-ruling kingdom independent of Cashel (Caisel Muman) until about the 9th century.

§2. the distinctive identity of early munster

Byrne points to Munster as having many mythological and traditional associations that represent it as the opposite or mirror image of the rest of Ireland (*Irish Kings and High-Kings* 166–70, 194). This includes particular associations with the dead, with women and goddesses, and with *an Lucht Sídh* (the people of the síd mounds or fairies), among others. The separate identity of Munster apparently stretches back at least as far as the Iron Age when, according to patterns of artefact distribution, the province (along with southern Leinster [Laigin]) remained unpenetrated by the La Tène material culture found elsewhere in Ireland at this time. This fact may bear some relation to the noted concentration of late prehistoric hill-forts along the northern edge of the province (Warner, *Emania* 17.25–9; counter-argument Raftery, *Emania* 17.21–4). Topographical factors appear to have kept access to Munster relatively difficult in the early medieval period (Byrne, *Irish Kings and High-Kings* 169).

Historically, Munster was the province which consistently challenged Uí Néill overlordship of Ireland, first under the Éoganacht and later under the Dál gCais. It was, and remains, the most fertile of the provinces. The lush plains of the Golden Vale in Limerick, Tipperary, and north Cork are ideal for a cattle-based economy, and it is hardly a coincidence that these were the lands occupied by the Éoganacht septs of Caisel, Áine, Airthir Chliach and Glendamnach who effectively monopolized the kingship of Munster for several hundred years.

It has been claimed that Munster was exceptionally peaceful during the early medieval period. There is little hard evidence for this, but the Éoganacht foundation legend *De Bunad Imthechta Éoganachta* is at pains to contrast the relatively democratic rule of Cashel, its emphasis on mutual respect and good management, with that of the Uí Néill, who are said to rule only by the sword (Meyer, ZCP 8.312–14). Surprisingly, some support for this claim is to be found in the law tract *Frithfolaid Ríg Caisil fria Thuatha* (Return-benefits of the king of Cashel towards his tribes), which lays down in detail the intricate obligations and counter-obligations between the king of Munster and the kings of the *aithech thuatha* 'subject tribes' (Byrne, *Irish Kings and High-Kings* 196–9; see also law texts).

On pre-Norman Munster, see further the article Éoganacht and accompanying map.

West Munster coastal landscape, near Goleen (An Góilín), Co. Cork, which was a Gaeltacht area at the beginning of the 20th century

§3. ANGLO-NORMANS AND GAELIC SURVIVAL

Following the Norman incursions of the 12th century, most of Munster came under the control of the invaders, including the good land in the east and centre of the province. Thomond (Tuadhmumhan, north Munster) remained in the hands of the O'Briens (Ua Briain), while the MacCarthys (Mac Cárrthaig) retained control over the mountainous terrain of south Kerry and west Cork, having routed the Norman Fitzgeralds at the battle of Callan in 1261. The rapid Gaelicization of the Fitzgeralds meant that Munster remained essentially Irish culturally and socially throughout the late medieval period.

The Geraldine Wars of the late 16th century—a protracted and confusing pattern of battles, massacres, guerrilla warfare and famine stretching over two decades—eventually resulted in victory for the English. The aftermath of this, along with the final debacle at the battle of Kinsale (Cionn tSáile) in 1601, spelt the end of Gaelic society in Munster and left the province in a state of ruin from which it took a century to recover. Despite this, the art of Irish bardic poetry survived longer in Munster than in other areas (see IRISH LITERATURE). As late as the 18th century, the province could boast such masters of the craft as Aogán Ó RATHAILLE, Seán Clárach Mac Domhnaill (1691–1754) and Eóghan Ruadh Ó Súilleabháin (1748–1784), as well as poetry courts (see CÚIRT) and schools such as Cúirt Cois Máigh (the Maigueside court), Damhscoil na Blarnann (the bardic school of Blarney) and Cúirt na mBúrdúin (the court of the epigrams).

§4. MODERN MUNSTER

During the Great FAMINE of the 1840s official records indicate that western Munster was, along with CONNACHT, the most heavily afflicted part of the country (Aalen et al., *Atlas of the Irish Rural Landscape* fig. 47). This began a pattern of wholesale emigration from the west, the flow of which was only stemmed in the later 20th century.

During the War of Independence (1918–21) Munster was the most militarily active province (see IRISH INDEPENDENCE MOVEMENT). The shooting of two constables from the Royal Irish Constabulary by a small party of IRA volunteers at Soloheadbeg, Co. Tipperary, is often taken as the first action of the war. The south-west of the province was held under martial law, where a pattern of ambush and reprisal developed between the IRA 'Flying Columns' and the British Army (along with their notorious paramilitary units, the Black and Tans and Auxiliaries). Munster was strongly opposed to the terms of the Anglo-Irish Treaty in 1921 and was the heartland of Republican support in the ensuing Civil War, to such an extent that the 'Munster Republic' was briefly declared. Republican resistance continued in Kerry and Cork long after the conflict had petered out elsewhere (see NATIONALISM).

Of the three modern dialects of IRISH, that of

Munster is the smallest in terms of numbers of native speakers and is now the vernacular only in the west of Corca Dhuibhne, Co. Kerry, and in some small pockets in counties Cork and (marginally) Waterford.

SÓF

Münsingen-Rain is a LA TÈNE cemetery in the canton of Berne in the Aare valley, Switzerland. It was excavated in 1906 by J. Wiedmer-Stern. Since this excavation was particularly carefully recorded, the finds of Münsingen are important for our detailed understanding of the material culture and chronology of the La Tène period and were used, for example, in the pioneering work of Paul Jacobsthal (1880–1957).

The archaeological evidence shows that the cemetery first existed in a limited area in the north and gradually expanded over the course of time to reach its maximum extent, with a total of 219 graves. The dating of the graves was mainly based on artefacts, e.g. TORCS, rings, and glass bracelets. The most important factor in establishing a chronological sequence was the development of the forms of the artefact types (that is, the method of typological seriation), especially that of the so-called 'roof-bow' fibulae, made partly from bronze and partly from iron.

Myrddin

For aspects of the Myrddin legend, see WILD MAN. The following entry deals with manuscript background, early dissemination of the legend, the figure of Myrddin, early modern survivals, and the origin of his name.

§1. MANUSCRIPT BACKGROUND

The main sources are seven Middle Welsh Myrddin poems from 13th-, 14th-, and 15th-century manuscripts, and GEOFFREY OF MONMOUTH's *Vita Merlini*. All of the Myrddin poems except for the earlier *Ymddiddan Myrddin a Thaliesin* probably took shape during the Norman invasion of Wales (CYMRU). The Myrddin poems survive in the Black Book of Carmarthen (LLYFR DU CAERFYRDDIN, *c.* 1250): *Ymddiddan Myrddin a Thaliesin* (Colloquy of Myrddin and TALIESIN), *Bedwenni* (Birch-tree stanzas), *Afallennau* (Apple-tree stanzas) and *Hoianau* (Greetings); the Red Book of Hergest (LLYFR COCH HERGEST, *c.* 1400): *Cyfoesi Myrddin a Gwenddydd ei Chwaer* (Colloquy of Myrddin and Gwenddydd his sister), and *Gwasgargerdd Fyrddin yn ei Fedd* (Separation song of Myrddin in his grave); Peniarth 50 (15th century): *Peirian Faban* (Commanding youth), and four stanzas of *Afallennau*; Peniarth MS 12 (the earliest text of *Gwasgargerdd*); a fragment of the White Book of Rhydderch (LLYFR GWYN RHYDDERCH), formerly Hengwrt MS 202 (parts of *Gwasgargerdd*); the HENDREGADREDD MANUSCRIPT; and the *Myvyrian Archaiology of Wales*. JARMAN has treated the Myrddin legend in the Myrddin poems thoroughly, and JACKSON and Carney have scrutinized the topic closely. Seminal discussions of political PROPHECY in the Myrddin poetry include the work of Jarman (cf. introductions to *Ymddiddan Myrddin a Thaliesin* and *The Black Book of Carmarthen*) and of M. E. Griffiths.

Poems are spoken by Myrddin, and stanzas introduced or concluded by veiled, fragmentary allusions to his story before or after he utters political prophecies. Predictions refer to events of the Norman invasion and of an indistinct time in the future, to important occurrences and persons of earlier Welsh history and tradition, and often to the *Mab Darogan* or 'Son of Destiny'. Vaticination (enabling the poems to be roughly dated) combines with the older, legendary matter, which probably took root and developed in Wales, transferred there orally with other legends from north Britain (see HEN OGLEDD) as a saga-verse cycle. The poems crystallized by the 9th century and are verse detritus surviving from a fuller realization. It is unclear whether or not Myrddin's story was originally absent from the saga about the battle of ARFDERYDD. Jarman surmised that the oldest stratum of the tradition exists in three stanzas of *Afallennau*, the nucleus around which this poem grew.

Ymddiddan Myrddin a Thaliesin is the oldest of the Myrddin poems in its extant late-11th-century form, and is separated from the other, contiguous, Black Book of Carmarthen Myrddin poems (*Bedwenni*, *Afallennau*, *Hoianau*). Its political prophecies apply to an earlier period than those of the other poems, alternating quatrains of dialogue between Myrddin and Taliesin as a unity, the first half dealing with battles in Dyfed, and the second concerning Arfderydd. Other differences between *Ymddiddan Myrddin a Thaliesin* and the rest of the Myrddin poems (and Geoffrey's *Vita Merlini*) are the saga-material's pertaining wholly to Arfderydd, associated with Myrddin only in that it is he who relates it, and Myrddin's portrayal almost entirely as a prophet. The *Afallennau* and *Hoianau* probably attained their extant forms early in the 13th century. Among the evidence for this are references to the *Perchen Machreu* (owner of Machrau) and to a 'king who is not a king' (*brenin na vrenhin*) reigning after Henry II, the last of the historical kings named in the Myrddin poems. Many stanzas of the *Afallennau* were formed between the late 12th and early 13th centuries, with subsequent interpolations, so that the poems might apply to later events while preserving the ring of antiquity. Thus, the *Myvyrian Archaiology* gives 22 stanzas for the *Afallennau*, as opposed to the Black Book of Carmarthen's 10 and the 16 of Peniarth 3. The *Hoianau* were apparently partially modelled upon the *Afallennau*, their stanzas beginning with exclamations to the *parchellan* (little pig), just as the *Afallennau* stanzas commence with apostrophes to the *afallen* (apple-tree) and those of the *Bedwenni* stanzas to the *bedwen* (birch). In the Black Book of Carmarthen, the *Hoianau* immediately follow the *Afallennau*, which themselves contain two stanzas including the phrase *Oian a parchellan*. The *Bedwenni* stanzas precede both the *Afallennau* and the *Hoianau*, and contain little that is germane to the wild-man legend, save Myrddin addressing a tree while

prophesying about south Wales. A poem with commentary, in a later hand, immediately preceding the *Bedwenni*, mentions Myrddin, the birch and the pig, indicating that the *Bedwenni*, *Afallennau* and *Hoianau* were seen as a group. Saga material for the *Afallennau* and *Hoianau* is the most extensive and varied, and perhaps the oldest appearing in the Myrddin poems.

Cyfoesi Myrddin a Gwenddydd ei Chwaer is in a manuscript (Red Book of Hergest) later than the Black Book of Carmarthen, and likewise results from a process of accretion. It, too, refers to the un-king, with Henry II the last historical king named. *Cyfoesi* also occurs in Peniarth 3, on orthographical grounds allowing consideration (like the *Afallennau* and *Hoianau*) of a background in some earlier, 12th-century, manuscript. Jackson argued that the old verbal endings and use of 'Irish' rhyme in *Cyfoesi* make it 'older than the early twelfth-century poetry [in *Early Welsh Gnomic Poems*] . . . though later than . . . ninth-century ENGLYN poetry' of the Llywarch Hen Cycle, . . . 'probably eleventh or even tenth-century'. In this dialogue, alone of the Myrddin poems, Myrddin is on good terms with Gwenddydd, and both persons are indicated as seers. Myrddin imparts news of future kings of the Welsh to Gwenddydd, beginning after RHYDDERCH HAEL, and ending, after the *brenin na vrenhin*, with the messianic return of Owain, Beli, CADWALADR, and Cyndaf. Interspersed among his pronouncements and Gwenddydd's questions are snatches of the Myrddin legend, though these occur nowhere near as fully or as frequently as in the *Afallennau* and *Hoianau*. Finally, Myrddin alludes to a time when rulership will cease and to portents for the end of the world. Gwenddydd displays sorrow at this, and at Myrddin's suggestion that he himself is to die. After pleading, and following Myrddin's censure of corrupt monks, the two commend one another to heaven. *Cyfoesi* is remarkable for the similarity of the situation which it portrays to various episodes in *Vita Merlini*, and the similarity between Gwenddydd's relationship with Myrddin and that of Ganieda and Merlin in *Vita Merlini*. The language of both seers is extremely obscure, due to the prominence of vaticination in the context of dialogue.

Gwasgargerdd Fyrddin immediately follows *Cyfoesi* in the Red Book of Hergest, and appears to form a group with it, just as the *Bedwenni*, *Afallennau*, and *Hoianau* form a series in the Black Book of Carmarthen. Its legendary content is minimal, apart from its opening and closing stanzas. It depicts Myrddin lying in his grave, declaring his former greatness as a warrior, and uttering political prophecies. In the last stanzas he mentions being spoken to by 'wild-men of the mountain in Aber Caraf', and alludes cryptically to 'Gwassauc' and to Gwenddydd.

Peirian Faban, in the latest of all the Myrddin poem manuscripts, may represent a late or variant tradition connecting Myrddin with another northern battle of legendary proportions. This battle seems to have involved AEDÁN MAC GABRÁIN, and the land of Manaw is mentioned. It is difficult, therefore, to date the poem on vaticinatory grounds, although—as in the Myrddin poems generally—Myrddin makes prophetic statements while referring to his own story. *Peirian Faban* lacks any use of CYNGHANEDD, but this may be an anachronism. Myrddin begins each stanza of the poem with the words 'Peirian Faban', addressing the youth and bidding him to cease his lamenting (cf. the *Hoianau* and *Afallennau*). The 'commanding youth' is reminiscent of messianic figures such as Taliesin's 'Coronog Vaban'. The poem ends with an indication that it was supposed to have been sung by Myrddin from his grave.

§2. EARLY DISSEMINATION OF THE LEGEND

GEOFFREY OF MONMOUTH apparently had little knowledge of Myrddin when he wrote his HISTORIA

Regum Britanniae *c.* 1139, despite being aware of Myrddin's reputation as a political prophet, as witness the *Prophetia Merlini* in *Historia Regum Britanniae* (originally written as a separate work), which includes material much akin to that of the Myrddin poems. Most of Geoffrey's treatment of 'Merlin' (thus Latinized apparently to eschew association with Fr. *merde*) is invention. Offered as history, this fiction received instant acclaim, partly due to its justification of the Norman ruling class (via glorification of the Britons) at the Saxons' expense. *Historia Regum Britanniae* provides nearly all of Merlin's character as found in the works of Wace and of Robert de Boron from the mid-12th century to the early 13th century, in the prose French Romances of the 13th century, and in further Arthuriana. Some years later, Geoffrey discovered more about Myrddin, and in 1148–51 completed *Vita Merlini*, a poem devoted entirely to Myrddin. Aside from making political prophecies, many apparently derived from the earlier *Prophetia*, Merlin of *Vita Merlini* corresponds to Myrddin Wyllt of the Myrddin poems, rather than to *Historia Regum Britanniae*'s magician, and this led subsequent writers, following the lead of Giraldus Cambrensis, to distinguish between 'Merlinus Ambrosius' of *Historia Regum Britanniae*, and 'Merlinus Celidonius'/'Merlinus Silvester/Silvestris' of *Vita Merlini*. The Myrddin poems and *Vita Merlini* are independent manifestations of the Myrddin tradition, and although one should not discount addition after 1151 of stanzas to the Myrddin poems possibly influenced by Geoffrey's work, no positive evidence for this has been adduced: *Vita Merlini* was much less widely known than *Historia Regum Britanniae*.

§3. THE FIGURE OF MYRDDIN

References to Myrddin by the Gogynfeirdd, Dafydd ap Gwilym, other Cywyddwyr, and others are synopsized by Bromwich, though none of this necessarily confirms Myrddin's historicity. (He is present neither in the Memorandum of the Five Poets, nor in early genealogies.) A few further points are worth noting: the 'glass house' (*tŷ gwydr*) to which Myrddin is said to have brought the 'thirteen treasures of the Island of Britain' not only parallels early Welsh and Irish Otherworld traditions, but also bears comparison to the house built for Myrddin by Gwenddydd (cf. J. Gwenogvryn Evans, *Poetry in the Red Book of Hergest* 3 col. 581, ll. 3–4), and also, variously, the tomb, rock, cage, or tower in which Merlin of the Romances is imprisoned by his lover. As to Myrddin's reputation as a prophet, beyond the account of Merlin Silvester's madness-inducing vision (*Itinerarium Kambriae* 2.8), Giraldus Cambrensis makes further mentions of Merlin de Albania in the *Itinerarium* and in the *Descriptio Kambriae* 1.5, 16, 2.7, as well as in the *Expugnatio Hiberniae* preface to Book 3: the latter is the incomplete *Liber Vaticiniorum*, mentioning the vernacular prophecies Giraldus intended to publish; one may compare the *Itinerarium* 2.6 for a small book of such 'from Llŷn' that Giraldus had translated for him. Giraldus also compares three of Merlinus Celidonius's ten prophecies with those of 'Melingus Hibernicus' (St Moling), whom he mentions (*Expugnatio* 2.232) as one of the 'Four prophets of the Gael', a frequent appellation attested for Moling in Irish sources (e.g. the Gorman Martyrology). The 10th-century Armes Prydein alludes to Myrddin's prophetic gift, though there is no certitude that the phrase *Dysgogan Myrddin* ('Myrddin foretells') was original to, rather than a later interpolation within, this early poem. Similarly, the Gododdin reference to Myrddin's prophetic-poetic gift (*gwenwawt*) is present only for the later, 'A' text. In the *Descriptio Kambriae* (1.16), Giraldus includes Merlin as one of the 'muse-inspired seers [who are] . . . as though out of their mind[s]' (*awenithion . . . quasi mente ductos*).

§4. EARLY MODERN SURVIVALS

Myrddin's forest association with his sister became popular among later storytellers. In an 18th-century Anglesey (MÔN) tale, a lad comes to 'Myrddin ar Bawl' (here a 'Lord of the Animals', who draws a club behind him 'as if it were a tail') seeking judgement for choosing his bride. Myrddin's sister and housekeeper give the youth beer and milk to offer the wild man, who, drinking the milk, utters cryptic advice. The 16th-century Chronicle of Elis GRUFFYDD includes a similar story, with five beverages used to interpret Gwenddydd's five dreams; Gwenddydd ministers to Myrddin out-of-doors, is 'wise and learned', and 'wrote a great book of his utterances'. A modern folk-tale relates the Threefold Death of a youth, Twm Gelwydd Teg (Tom of the Fine Lies), in a way closely paralleling the threefold death predicted by Merlin for a youth in *Vita Merlini* (ll. 387–415). Gruffydd's Chronicle also includes a threefold death story, as well as Myrddin's incarceration by the 'lady of the lake'.

Traditions of Myrddin Wyllt came to France along with much of the MATTER OF BRITAIN, transferred there via the Breton *conteurs*. For example, Merlin appears as a Lord of the Animals in *L'Estoire de Merlin*; he is a wild man in *Le Livre d'Artus*; throughout the corpus he meets Viviane in Broceliande, a mysterious wood similar to the Coed Celyddon; the late 12th-century *Roman de Fergus* draws upon North-British traditions cognisant of the LAILOKEN legend's localization near Newcastleton and Annandale; the 13th-century *Roman de Silence* features wild Merlin; in *Les Prophécies de Merlin*, of *c.* 1272–9, Merlin makes prognostications from the grave; a lost Breton *lai* was entitled *Merlin le Sauvage* (see BRETON LAYS); and Pierre de Corbain refers in his *Thezaur* (*c.* 1250) to 'Merlin the Wild' who 'uttered obscurely prophecies about all the English kings'. These presentations of Merlin are indebted no more to *Vita Merlini* than they are to HISTORIA REGUM BRITANNIAE. Such stories, surrounding both the wild Myrddin and figures analogous to him, have persisted in Breton BALLADS and local lore practically until the present.

§5. ORIGIN OF THE NAME

To Jarman, the name is a misinterpretation of *Myrddin* (alternatively *Merddin*) < *Mori-dūnon* 'Sea-fort', seen as the eponymous founder of Carmarthen (CAERFYRDDIN), after the prefixing of *caer* once the meaning of the old place-name *Myrddin* had become obscure. This eponym of Carmarthen then attracted to himself the legend of the north British wild-man Llallogan (see LAILOKEN), perhaps through common association of both figures with prophecy: during the 7th or 8th century the legend 'took root in DYFED . . . the . . . name [of Myrddin] displaced [that of "Llallogan"], and . . . Myrddin acquired the whole of Llallogan's history, attributes, and geographical background'. This view is problematic, albeit the most plausible to date. It is unclear how 'Myrddin' compares with putatively similar shadowy figures, the only true parallel (a person arising from a place-name) being *Efrawg* of *Caer Efrawg* (*Efrawg* < **Ebuburācon*); *Historia Regum Britanniae*'s *Lleon* (from *Caerleon*) and other names are creative analogues or examples of wholly separate processes (e.g. *Caradog* of *Caer Garadog*, where *Caradog* was a man's name to begin with). Thus, assuming that such a 'Myrddin' completely took over the northern legend for no reason but common association with prophecy is difficult. Attributions of names beginning with *Mor-* (understood as 'Sea-') to relations or others associated with Myrddin (e.g. Mor-daf, Mor-fryn, Mor-genau, Mor-ien, Mor-ial in *Canu* ANEIRIN, *Peirian Faban*, *Cyfoesi*, *Gwasgargerdd*, &.) do, at any rate, show an awareness that *Myrddin* was a compound name. However, many in the series probably contain *Māro-* 'great', not 'sea', and are therefore not really related to *Myrddin*.

Jarman also cited the name *Clas Merdin* (one of the 'Names of the Island of Britain') as perhaps due to Myrddin's reputation as a founder-figure. However, *clas* (with senses of '[monastic] community' and 'enclosure, precinct', as well as 'castle') may owe more to the wild man's religious associations. He noted that

the Myrddin legend 'seems . . . to have one foot in Dyfed and the other in northern Britain'. The compositional backgrounds of *Ymddiddan Myrddin a Thaliesin*, the Black Book of Carmarthen (Llyfr Du Caerfyrddin) and Armes Prydein, the importance of Dyfed in *Vita Merlini* and Historia Regum Britanniae, and the Myrddin < Caerfyrddin derivation are strong evidences favouring a predominant Dyfed localization. However, that Giraldus Cambrensis attests additional north Welsh associations with possibly early origins also deserves consideration.

The forms *llallogan* and *llallawc* occur in early Welsh poetry other than *Cyfoesi*, in each case adjectivally. Their status as proper nouns in *Cyfoesi* is debatable. Further possible origins for the proposed proper noun are the (Gaelic) name Lulath or Lulach found in Scottish chronicles, glossed as 'ignomine fatuus', 'mimicus', and 'gesticulosus'; and Latin *lallo* (cf. Mod.E 'lulla-by') as a hypocoristic form.

There are alternatives to Jarman's theory of *Myrddin* derived from Carmarthen; for example, *mer* ('foolish', 'witless', cf. *merydd*, *meredic*) + *dyn* Proto-Celtic <**(g)donios* 'person'. Secondly, early Campbell genealogies and a lost Gaelic tale **Eachtra Smeirbhe Mhóir* mention in an Arthurian context a *Smerevie/Smeirbhe*, or *Merevie/Meirbhe*, 'fool of the forest', a 'wild, undaunted person', born to the south side of An Talla Dearg 'The Red Hall' (Dumbarton). Unhistorial *s-* has attached to initial *m-*, and medial *-bh-* and *-gh-* are possible substitutions for earlier Cumbric [-ð-]. Perhaps a Gaelic **[S]meirbhidh / *[S]meirghidh *([S]meirdhidh)*, back-formed from oblique **[S]meirbheann* or **[S]meirbhinn*, originated in Cumbric *Myrddin/ Merddin*. The hypothesis, of course, might allow for other possible Cumbric predecessors for this Gaelic name. Hamp's proposed doublet **Morijos/*Moriji:nos*, giving *Meryð/Merðin* 'One of the sea', like preceding possibilities, allows for confusion, vs. derivation, of Myrddin with respect to Caerfyrddin, and would also explain the *Mor*-names associated with Myrddin.

Mythological Cycle

§1. INTRODUCTION

Along with the Ulster Cycle, Fiannaíocht, and the Kings' Cycles, the Mythological Cycle is one of the four main classifications of early Irish narrative. It consists of a series of sagas, poems, and anecdotes about the Tuath Dé, also called Tuatha Dé Danann, a race of magical beings that invaded Ireland (Ériu) in the remote past. Although the name for this cycle has become conventional, it is nevertheless potentially misleading in that the narratives in question represent only a small part of extant Irish mythology. Indeed, 'mythic personages and themes' figure prominently in several other works (Ó Cathasaigh, *Folia Gadelica* 11). They appear, for instance, in sagas from the other cycles, and in the works of legendary history such as Lebar Gabála Érenn ('The Book of Invasions'), in the metrical and prose dindshenchas (traditional lore of prominent places), in reference works such as *Cóir Anmann* (The appropriateness of names), in later Irish romances, and even in bardic poetry. But the texts that fall under the rubric of the Mythological Cycle deal solely with the exploits of the mythical Tuath Dé and the races of the legendary past which they encounter: the Fir Bolg, the Fomoiri, and the Sons of Míl Espáine. Therefore, a better name for this cycle might be 'The Cycles of the Gods', as Ó Cathasaigh has suggested, or even the Tuath Dé Cycle. However, its current name is so well established that it is unlikely to be changed.

In comparison with the other major classifications, the Mythological Cycle contains by far the fewest texts, most of which date from the Middle Irish period (900–1200) or later. It is possible, if not likely, that some stories about the Tuath Dé were simply never recorded, and it is clear from the tale lists that a few texts belonging to this cycle have been lost. Perhaps the most important of these is *Cath Tailten* (The battle of Tailtiu), which recounted the defeat of the Tuath Dé at the hands of the Sons of Míl, the legendary ancestors of the Gaels of history (Mac Cana, *Learned*

Tales of Medieval Ireland 65). In instances like this where stories are known to have been lost, scholars can sometimes rely on works such as *Lebar Gabála* or the *dindsenchas* to provide clues about the missing material, but this is not always the case.

The individual texts that comprise the Mythological Cycle were all written at different times and in different places. At no time, past or present, have all these stories been gathered together into a single collection for the purpose of presenting a standard account of the material covered. Consequently, the Mythological Cycle contains many contradictions. For example, Bres mac Elathan, the oppressive king of the Tuath Dé, is not always depicted as a villain, nor is Lug mac Céin, the champion of the Tuath Dé at the Second Battle (see CATH MAIGE TUIRED), always depicted as a hero. In one source, it is said that the Fir Bolg were driven out of Ireland after the First Battle of Mag Tuired, but in another that they were simply relocated to Connacht. Inconsistencies such as these are commonplace in the tales, but far from being a source of distraction or even consternation, these discrepancies are part of the vitality of Irish myth, which never had an Irish Hesiod to suppress its variant traditions.

§2. THE MEDIEVAL TEXTS

The centrepiece of the Mythological Cycle is the saga *Cath Maige Tuired*, which recounts the triumph of the Tuath Dé over the Fomoiri at a site in Co. Sligo (Contae Shligigh). This story is generally known in English as 'The Second Battle of Mag Tuired' in order to distinguish it from *Cath Maige Tuired Cunga* (The first battle of Mag Tuired, or, more literally, The battle of Mag Tuired at Cong; ed. Fraser, *Ériu* 8.1–63). Two versions of the Second Battle survive: one of the later 9th or 10th century (ed. Gray) and the other in Modern Irish (ed. Ó Cuív). Although the texts are quite different, the earlier of the two has attracted more attention from scholars, in part because it contains elements of demonstrable antiquity. It has also come to be regarded as the standard treatment of the events it covers: the conception of Bres mac Elathan and his eventual accession to the KINGSHIP of Ireland, the coming of Lug mac Céin, the preparations for the Second Battle, the fight itself, and its aftermath. It is important to remember, however, that many of the events treated in this story are also related in other texts, often with substantial differences.

Equally important are the three early Irish sagas collectively known as Tochmarc Étaíne ('The Wooing of Étaín'; ed. Bergin & Best, *Ériu* 12.137–96). These narratives trace the wanderings of the title character from one incarnation to another until she is at last reunited with her first husband, Midir of Brí Léith. Étaín's transformations have invited comparisons with those of the other mythological figures, such as the Irish Tuán mac Cairill and the Welsh Taliesin. Scholars have also puzzled over the possible relationship between the transmigrations of these characters and a supposed druidic belief thought to be akin to Pythagorean metempsychosis (Meyer & Nutt, *Voyage of Bran* 2.285–301; see also REINCARNATION). The final saga in the Étaín series is of particular interest in that it relates the incestuous conception of the child, also named Étaín, who in time becomes the mother of the great and tragic king Conaire Mór, whose fate is related in the famous Irish saga Togail Bruidne Da Derga ('The Destruction of Da Derga's Hostel').

Transformations also play an important rôle in the short Old Irish saga *Aislinge Óenguso* ('The Dream of Óengus'; ed. Shaw). In this story, the title character succumbs to lovesickness after experiencing a vision of a beautiful woman about whom he knows nothing. Along with the Old Irish anecdote entitled *De Gabáil in t-Sída* (Concerning the taking of the OTHERWORLD mound; ed. Hull, ZCP 19.53–8), this is the only other story from the Mythological Cycle that is regarded as one of the *remscéla* or 'fore-tales' to the central tale of the Ulster Cycle, Táin Bó Cuailnge ('The Cattle Raid of Cooley'), though in both cases the connection to the epic is tenuous at best (Mac Cana, *Learned Tales of Medieval Ireland* 89).

§3. THE EARLY MODERN TEXTS

The earliest of the three Early Modern Irish tales included in the Mythological Cycle is the story called *Altromh Tige Dá Medar* (The nurturing of the house of two milk vessels; ed. Duncan, *Ériu* 11.184–225). Dating from perhaps the 13th or 14th century, this narrative traces the fortunes of Eithne ingean Dícon, the foster-daughter of Aenghus Óg mac in Daghdha (see OENGUS MAC IND ÓC; DAGDA), as she undergoes her

rite of passage from Otherworld woman to Christian saint. This tale is notable for its prominent religious themes and is open to various literal and metaphorical readings that have yet to be fully explored (McCone, *Pagan Past and Christian Present in Early Irish Literature* 149–50; Breatnach, *Éigse* 32.35–46).

Although the second tale in this category—*Oidheadh Chloinne Tuireann* ('The Violent Death of the Children of Tuireann')—is a product of the Early Modern period (ed. O'Curry, *Atlantis* 4.157–240; O'Duffy, *Oidhe Chloinne Tuireann*; Ua Ceallaigh, *Trí Truagha na Scéaluidheachta* 5–41), the substance of which it is composed dates back at least to the 11th century (Thurneysen, ZCP 12.239–50). Set before the Second Battle of Mag Tuired, the story relates the murder of Lug's father at the hands of the Sons of Tuireann and the terrible price they must pay in expiation of their crime. *Oidheadh Chloinne Tuireann* is of particular interest for its depiction of Tuath Dé society as troubled and unstable, and also for its portrayal of Lug as spiteful and vindictive, both of which are in marked contrast to the earlier tradition (Breatnach, *Éigse* 32.35–46).

The last of the Early Modern tales is *Oidheadh Chloinne Lir* ('The Violent Death of the Children of Lir'; ed. O'Curry, *Atlantis* 4.8–157; Ua Ceallaigh, *Trí Truagha na Scéaluidheachta* 5–41). Together with *Oidheadh Chloinne Tuireann* and *Oidheadh Chloinne Uisnigh* (The violent death of the children of Uisneach), it is regarded as one of *Trí Truagha na Sgéalaigheachta* (The three sorrows of storytelling), which are often grouped together in the 18th- and 19th-century manuscripts in which they survive. As in *Altromh Tige Dá Medar*, religious themes predominate in *Oidheadh Chloinne Lir*. In fact, recent research has shown that in many respects the tale is actually a meditation on the virtues of patient Christian suffering, which has much more in common with 'the religious literature popular in the latter half of the Early Modern Irish period' than it does with the other tales of the Mythological Cycle (Breatnach, *Ériu* 50.32). Nevertheless, it has traditionally been regarded as part of this cycle.

§4. ANECDOTA

In addition to the major sagas, there are several brief anecdotes about the Tuath Dé that survive from the Old Irish period onwards. Some of the better-known texts of this sort include 'Cairpre mac Edaine's Satire upon Bres mac Eladain' (ed. Hull, ZCP 18.63–9), 'The Four Jewels of the Tuatha Dé Danann' (ed. Hull, ZCP 18.73–88), and 'A Tuatha Dé Miscellany' (ed. Carey, BBCS 39.24–45). Although these narratives essentially replicate material found in other sources, they do not do so exactly. As a result, they constitute a valuable source of information on the variant traditions concerning the Tuath Dé.

Other anecdotes, however, comprise accounts of events not well attested in the larger sagas. For instance, the tract entitled 'How the Dagda got his Magic Staff' (ed. Bergin, *Medieval Studies* 399–406) recounts how the god obtains this staff and uses it to revivify his son Cermad Minbeoil, earlier Cermait Milbél, whom Lug slew. Apart from references to this killing in the poems of FLANN MAINISTREACH and Gofraidh Fionn Ó Dalaigh, this story is otherwise unknown (Bergin, *Medieval Studies* 399–402). While anecdotes like this one are of particular importance, further research is needed on all these texts in order to determine their precise textual and semantic relationships with the larger sagas and to assess their relative worth as evidence for variant traditions about the Tuath Dé.

Dan Wiley

N

Nance, Robert Morton (1873–1959) was a writer, an activist, an artist, and one of the most important scholars of the Cornish language in the 20th century. His parents belonged to the Cornish community in Cardiff (Caerdydd) and instilled in him an interest in Cornish culture. Nance trained as an artist in Cardiff, and later under Sir Hubert von Herkomer, and his drawings featured in many Cornish magazines, primarily the short-lived *Cornish Magazine* of Arthur Quiller Couch. Following his marriage to his second wife, Annie Maud Cawker, he settled in Nancledra and devoted his life to working for Cornwall (Kernow), frequently collaborating with Henry Jenner.

Most of the innovations and institutions of the Cornish revival can be attributed to Nance, including the Old Cornwall Societies, the Cornish Gorseth, and the revival of spoken Cornish. Nance's vision for Cornwall synthesized Cornish popular culture with antiquarianism. Although his model for the revival of the Cornish language and its Unified Cornish written form was ultimately based in a romantic reading of the medieval period, his project for the revival was a significant and practical early strategy of language planning (see language [revival]).

Nance's most important early achievement in the Cornish movement was the founding of the first Old Cornwall Society in St Ives (Porthia) in 1920. 'The Old Cornwall Movement', as it came to be known, effectively revitalized the already popular antiquarian societies throughout Cornwall by giving them a mandate for collecting, preserving, and promoting Cornish culture, rather than just undertaking a passive study. In this way Nance and the Old Cornwall Societies were embracing a European-style cultural nationalism which interpreted language and folk culture as the basis for nationhood. The Old Cornwall Movement served as a structural foundation for further revivalist institutions such as Cornish-language classes, publications, and the bardic ceremonial Gorseth.

In addition to his work as a cultural activist and language scholar, Nance was also a writer in Cornish, English, and Cornu-English (dialect). His 1932 play *An Balores* (The chough) was an allegory based on the death of the language (see cornish literature). He also completed, with A. S. D. Smith, new translations and Unified Cornish versions of the Ordinalia, as well as several dictionaries.

In the post-war period Nance remained inspirational to a younger generation of Cornish scholars and activists, among them E. G. Retallack Hooper, P. A. S. Pool, and Richard Jenkin. Nance commented that 'one generation has set Cornish on its feet. It is now for another to make it walk'. He is buried at Zennor, where an inscription on his grave reads *Oberow y vewnans yu y wyr govath* (His life's work is his true memorial).

Naoned (Nantes) is the historical capital of Brittany (Breizh), and its largest city. However, Nantes and its *département*, Loire-Atlantique (Liger-Atlantel), were removed from the administrative region of Brittany in 1941 by the occupied government of France, and this division was formalized in 1972. The city takes its name from the Namnetes, the Gaulish tribe

whose centre of government was located here in the Roman period. The Gallo-Roman name of the town was *Condevincum* or *Condevicium*, which possibly survives as Old Welsh *Cantguic* in the account of the foundation of Brittany in HISTORIA BRITTONUM (§27; see MENEZ-DOL). The 6th-century *Historia Francorum* of Gregory of Tours describes many incursions by Bretons into the territory of Nantes, and the numerous place-names in *Plou-* (parish, community) and other early Breton place-names south-east of the river Vilaine (Gwilen) indicate settlements in the old CIVITAS *Namnetum* (see BRETON MIGRATIONS and map; cf. BAZ-GWENRANN). The town of Nantes was also the centre for the Carolingian Breton March, which included the area around Rennes (ROAZHON) and Vannes (GWENED), as well as Nantes, and subsequently independent Brittany from the time of NOMINOË onwards. The Edict of Nantes (1598) granted Protestants and Catholics equal rights; it was revoked in 1685 by Louis XIV, causing an exodus of Protestants from France (see CHRISTIANITY [5]). In the early modern period Nantes was one of the chief centres of maritime trade and industry in France.

The **National Library of Scotland** is located in Edinburgh (DÙN ÈIDEANN) and funded by the SCOTTISH PARLIAMENT (1999–). It is the largest library in Scotland (ALBA) and is the leading repository for the printed and manuscript record of Scotland's history and culture. It was established by the National Library of Scotland Act 1925, but its origins are much older, being based on the historic collections of the Library of the Faculty of Advocates, which was founded in the 1680s and enjoyed the right to claim a copy of every book published in Great Britain following the Copyright Act of Queen Anne in 1710. During the 19th century the burden of maintaining such a library, which relied entirely on the resources of the Faculty, became too difficult for a private body to bear. The same period saw the growth of the sentiment that a nation with a history and culture as ancient and rich as that of Scotland should have a national library to safeguard its heritage. Unfortunately, however, successive governments were reluctant to assume the financial responsibility for a new national institution. The issue was happily resolved through the generosity of Sir Alexander Grant of Forres, who provided an endowment of £100,000 to allow the government to accept the Faculty's offer to present its library, with the exception of its legal books and manuscripts, to the nation to become the National Library of Scotland.

SCOTTISH GAELIC books and manuscripts have long been a significant component of the Library's collections, and the Library now holds the largest collection of surviving late medieval and early modern GAELIC manuscripts. A major acquisition of the 19th century was the bequest by John Francis CAMPBELL of Islay (Ìle) of his collection of FOLK-TALES and verse, which laid the foundations for the modern study of Gaelic oral tradition. More recent additions include the archive of the journal GAIRM and Gairm Publications, which played a major part in the revival of Gaelic literature (see Ruaraidh MACTHÒMAIS), and the papers of Sorley Mac Lean (Somhairle MACGILL-EAIN), the most distinguished Gaelic poet of the 20th century (see SCOTTISH GAELIC POETRY). The substantial holdings of Gaelic books that have been accumulated by the Library through legal deposit have also been enriched by the number of special collections that the Library has been fortunate to acquire. These were often assembled by individual scholars, such as Hew Morrison, Edinburgh's first City Librarian, and Professor Angus Matheson, first Professor of Celtic at the University of Glasgow (GLASCHU). Other notable collections donated to the Library include the Blair collection of Gaelic religious and literary work created at the end of the 19th century by the Hon. Lady Evelyn Stewart Murray, daughter of the 7th Duke of Atholl, and the Ossian (OISÍN) collection of J. Norman Methven of Perth.

Complementing the Library's books and manuscripts are large collections of maps and music, and the Library seeks increasingly to capture and preserve material in electronic form, including websites. The Library's own website has become one of the main means of providing access to information about the

collections and, as more materials are digitized and mounted on the web, to the collections themselves.

The **National Museums of Scotland** (ALBA) in their present form were created by an Act of (the British) Parliament in 1985. The terms of the National Heritage (Scotland) Act allowed for the amalgamation of the two national museums in Edinburgh (DÙN ÈIDEANN) with their own pedigrees and distinct identities: the National Museum of Antiquities of Scotland, created as the collections of the Society of Antiquaries of Scotland in 1781, and the Royal Scottish Museum founded in 1854 as the Industrial Museum of Scotland. The collections of these two museums reflected the different ages in which they were formed and the motives and interests of their creators. The ways in which they have evolved reflect changing tastes and fashions, as well as changing scholarly perceptions and perceptions of public needs.

Both museums drew on earlier collections made in Scotland in the form of natural history material and 'cabinets of curiosities' assembled in the late 17th century with the discovery of the natural world in the late RENAISSANCE period, when geographical exploration of the New World stimulated a 'spirit of enquiry' into society and the environment at home. Two important Scottish collections, those of Sir Andrew Balfour (1630–94) and Sir Robert Sibbald (1641–1722), had been bequeathed to the University of Edinburgh but had subsequently been dispersed, and it was partly as a response to this loss that the Society of Antiquaries of Scotland was formed in 1780. Sibbald's influence on his contemporaries as scientist, antiquarian and polymath was considerable; for example, he commissioned a man from the Isle of Skye (An t-Eilean Sgitheanach), Martin Martin (*c.* 1660–1719), to gather information and data in his native Hebrides (Innse Gall), and his *A Description of the Western Island of Scotland* (*c.* 1695) and *A Voyage to St Kilda* (1697) were the published results. That by Martin, one of the earliest detailed descriptions of GAELIC society, displayed extraordinary insights into material culture and the human condition.

The initiative to found the Society of Antiquaries came from the patriotic nobleman, David Stewart Erskine, 11th Earl of Buchan (1742–1829), in an invitation to like-minded SCOTS with the words: 'It has long been a subject of regret that no regular society for promoting antiquarian researches has subsisted in this part of Great Britain'. He wished to emulate the successful example of the Society of Antiquaries of London founded in 1707 and forming collections of antiquities and works of art as adjuncts to its library. Both societies belonged to the contemporary 17th- and 18th-century circles of enquiry in which a wide range of objects was acquired for discussion, research and preservation, and also for the application of principles of taxonomy for the classification of antiquities. Until the second half of the 20th century, prehistoric collections were their main concern and the museum, as created by and for a learned body, was dedicated principally to research. Initially, the antiquarian discourse was distracted by the discovery of the putative literary canon of the Gaelic bard Ossian (OISÍN), through which the attention of Romantic Europe was drawn to the HIGHLANDS of Scotland, and the Society published learned papers on the subject. The first objects recorded by the Society were 53 worked metal objects from a Late Bronze Age weapons hoard recovered from Duddingston Loch (material of *c.* 1000–*c.* 700 BC), near Edinburgh, in 1778. They survive still and are on display today in the National Museums, a remarkable vindication of Lord Buchan's hope for permanent preservation.

Early collecting drew on the nascent discipline of archaeology, and much of evident prehistoric origin was cast up from the ground in the process of the agricultural and industrial revolutions in Scotland, when deeper ploughing and railway construction disturbed ancient deposits. Many objects were acquired by donation or from increasingly systematic fieldwork, but the Society and its members also made significant

purchases such as the Lewis chess pieces and the Hunterston Brooch. Scholar-curators such as Daniel Wilson (1816–92) and Joseph Anderson (1832–1916) developed sound bases for Scottish archaeology and the definition of a distinctive material culture within the context of northern Europe, the 'three ages' chronological framework (Stone Age, Bronze Age, Iron Age) and a 'Celtic civilisation'. Anderson, in particular, undertook a patriotic rescue mission for Scottish history and culture, and, though labels such as 'Celtic' have been less relevant for the material culture record than for the language group, the investigation of prehistoric phenomena in Scotland such as the 'Picts' and the 'Celts' has greatly enhanced the potential of museum collections to inspire and educate. Many of the outstanding decorative pieces still considered as 'national treasures' came from the Gàidhealtachd (Scottish Gaelic-speaking regions) of the Highlands and Islands and a culture province shared with Ireland (Éire), for example, the Brecbennoch Cholm Cille or 'Monymusk Reliquary', the Bell and Bachall of St Fillan, the Kilmichael Glassary Bell Shrine, and the Queen Mary Clarsach (Gaelic harp).

The Museum of the Society of Antiquaries was rapidly endowed with prehistoric, Viking, and medieval antiquities, ethnographical artefacts, and natural history and botanical specimens, and groups of material soon began to be transferred to other collections, such as the Royal Society of Edinburgh and the National Library of Scotland. Problems of space and finance dogged the national collections, and the museum was conveyed from the stewardship of the unsubsidized Society to the Government in 1851. They suffered several moves in the 19th century, prompting repeated appeals for a proper home, arguably only satisfied at the end of the 20th century with the opening of the Museum of Scotland as a new 'museum of national history' and home for the national treasures.

Public interest in the 'arts and manufactures' was high following the Great Exhibition in 1851, and the concept of the museum as a source of inspiration for good design, education and social benefits led to the founding of the South Kensington Museum (Victoria and Albert) in London, and the subsequent wave of museum building included the Industrial Museum of Scotland constructed in stages in a spectacular Victorian Renaissance style between 1861 and 1888. Fitting its title, the Industrial Museum amassed collections to illustrate contemporary scientific and technological progress, and materials to demonstrate the widest possible range of products and manufacturing processes. This building in Chambers Street, Edinburgh, was chosen as the headquarters of the amalgamated national collections in 1985, and as the site of the Museum of Scotland.

The National Museums of Scotland are not as homogeneous as their name might suggest, and the stated aim to 'show Scotland to the World and the World to Scotland' infers wide-ranging as well as comprehensive collections built up over more than two centuries. They now occupy six major sites, including the Royal Museum in Chambers Street, Edinburgh, the Scottish United Services Museum in Edinburgh Castle, the Museum of Flight in East Lothian, the Shambellie House Museum of Costume at New Abbey, Dumfries, and the Granton Research Centre on the northern fringe of Edinburgh. They have continued to grow with the recent opening of the Museum of Piping at the National Piping Centre in Glasgow (Glaschu) in 1996, the Museum of Scotland on St Andrew's Day 1998, the National War Museum in Edinburgh Castle in 2000, and the Museum of Scottish Country Life at Wester Kittochside, East Kilbride, in 2001.

The collections of the National Museums of Scotland, conservatively estimated at about 4.5 million objects, are curated in four main departments: the Department of Geology and Zoology with its largely scientific research collections, the Department of Archaeology comprising Scottish material culture from the Mesolithic to ad 1100, the Department of History and Applied Art including world ethnographic as well as applied and decorative arts and social history collections from Scotland and Europe, and the Department of Social and Technological History including the history of science, armed forces history, technology, transport and aviation, and agriculture and working life. A major library of around 300,000 volumes supports the curatorial and research functions of the museums, and grows accordingly with 800 current periodical subscriptions and 250 periodical titles received by donation or exchange. The library's superiority in certain areas is widely recognized, for example, in the scholarly collec-

tions for northern European archaeology and a worldwide coverage in the decorative and applied arts.

Although language and literary culture have not been a principal concern, the National Museums of Scotland adopted a language policy and strategy for Scottish Gaelic and Scots (see LOWLANDS) in their displays in 1994. The linguistic map of Scotland has been complicated; it includes Gaelic, PICTISH, Early WELSH, also called CUMBRIC (in south Scotland, for example), Scots, English, Old Norse (predominantly in the Northern and Western Isles) and French, and language is inseparably a part of MATERIAL CULTURE. The Scottish collections reflect regional diversity of type and function in the objects themselves and the linguistic diversity of their names, and the processes of collection and analysis show that the name of an object is likely to be other than standard English. Awareness of language and dialect is accepted as a requirement for the study and proper interpretation of Scottish material culture and its context, which is a major focus of the National Museums of Scotland's collections and research.

nationalism in the Celtic countries [1] Ireland

Nationalism has provided the central theme in most Irish historical writing. To the perennial debate about when nationalism began, we might add the difficulty of deciding on what to focus. A criticism of a large number of Irish histories is that they have all too often adopted Charles Tilly's 'squinting retrospect', where 'the history of relations between Ireland and England looks like one long nationalist revolution'. Yet, even when one adopts as broad a scope as possible, one is left with D. G. Boyce's conclusion on Irish nationalism: 'it [arose] from the close and permanent relationship between Ireland and her neighbour. And Ireland's dominant political tradition, like most aspects of her life, bears the ineradicable influence of England' (*Nationalism in Ireland*).

§1. THE ORIGINS OF IRISH NATIONALISM

The basis of all identity—a subjective sense of difference—was founded in the Irish case on several perceived facets of GAELIC Irish existence, beginning with an origin myth of the Gael's descent from the Milesians (see MÍL ESPÁINE). Furthermore, there was the Gaelic IRISH language, and a burgeoning and cherished literature (see IRISH LITERATURE). In addition, there was a comprehensive law system different from that of their English neighbours, the Brehon code as opposed to common law (see LAW TEXTS). Its religion, though ostensibly shared, had its own history and independence (see CHRISTIANITY [1]). The island possessed a tradition of regional rule with provincial kings of well-established lineage, who, depending on their strength, asserted their right to be recognized as 'overking' (cf. KINGSHIP). And having endured and sustained the Viking onslaught, their presence and influence was assimilated into the Gaelic fabric. In the 13th century the Anglo-Norman invasion led to an asserted, yet largely nominal, overlordship by the English king over Ireland.

§2. THE TUDORS AND IRELAND

A tolerable status quo was maintained until the turn of the 15th century when the Tudor monarchs felt obliged to: 'Devise how Ireland may be reduced and restored to good order and obedience'. These words of Henry VIII to his Lord Deputy signal the beginning of the Tudor conquest (see TUDUR). This represents the military corollary of Poyning's Law (1495), which rendered all Irish legislation subject to the English parliament's approval. The perceived want of 'good order and obedience' was highlighted, if not instigated, by Henry's antipathy towards Rome, which put him at odds with almost the entire population of Ireland (ÉIRE), his putative subjects.

The long reign of Elizabeth I was notable for its largely successful attempt at remoulding the map of

Irish society. It brought into place a Church Settlement, the shape of which remained for four centuries. The Crown policy of active settlement of Scots and English in Ireland laid the basis for future religious and nationalist divisions. The lands necessary for settlement were obtained through Acts of Attaintment for disloyalty. The forfeiture of the Earl of Desmond's lands and similar occurrences caused widespread disquiet among Irish lords because of increasing lack of land security under 'the English heretics'. It is significant that it was around this time that Gaelic poetry became overtly political, being directed 'against the foreigner'. According to Canny, 'The Gaelic poets interpreted every political dislocation in England as a God-given opportunity to the Catholic Irish to redress their wrongs' (*Making Ireland British*). The most notable campaign to achieve this was the Nine Years War (1593–1603), led by Hugh O'Neill (Aodh Ó Néill). His defeat at the battle of Kinsale/Cionn tSáile (1601) is widely seen as the Rubicon of Gaelic demise in Ireland.

§3. the 17th & 18th centuries

With the accession of James I (1603), and the 'Flight of the Earls' in 1607, the physical, legal, and administrative conquest of Ireland intensified apace. Common law replaced Brehon law. The Pale, previously the only area of accepted English jurisdiction, was greatly extended. The process of the shiring of the countryside and the clearance of ancient woodlands was also begun in this time. A contemporary expression, 'shall now so beautify her desolation', aptly captures the spirit and thrust of the changes. The Old English, previously the bulwark of the English state in Ireland, became an epithet of exclusion. Gaelic natives and Old English were banded together as 'so many papists'. An example of the growing national consciousness can be seen in *Foras Feasa ar Éirinn*. Written by Geoffrey Keating (Seathrún Céitinn), it has been described as the 'first Irish history written toward the conscious bias of nationalism'.

The years 1641–52 mark a decade of rebellion. It began in revolt against Lord Deputy Wentworth, and ended with the country's utter subjugation under Oliver Cromwell. It led to massive plantation involving the dispossession of the landed Catholic element in all but one of the provinces. The revolt of 1641 was in the main a Catholic uprising. The rebels played their part in the English Civil Wars by professing loyalty to Charles I, and fought under the cry of '*Pro Deo, Pro Rege, Pro Patria Hibernia Unanimis*' (For God, king, and country). The other element of the revolt was an Old English agenda of land claims. Cromwell's defeat of the rebels left Ireland by 1652 a conquered colony, with the terms of his settlement classifying 'Irish' and 'Catholic' as synonymous. Except for a brief interlude in the 1680s under James II, the defeats at the battles of the Boyne and Aughrim confirmed the colonial system. The 'Glorious' Revolution resulted in a century of exclusion and silence, with the penal code impinging greatly in a predominantly Catholic country. Gaelic culture in 18th century Ireland was a largely peasant culture: popular, oral and Catholic.

Throughout this century, however, concern for the idea of a nation, or the stewardship of that nation, rested with a minority élite in an exclusively Protestant parliament. Among the names associated with the defence of the idea of Ireland as a distinct political entity, the most well known are Darcy, Molyneux, and Swift. All of these drew on the notion of Ireland as an ancient nation. Between 1778 and 1782 most of the penal legislation was repealed, and Poyning's Law was modified. This empowerment of the Ascendancy parliament led Henry Grattan to declare 'Ireland is now a nation, in that new character, I hail her . . . *esto perpetua*.'

At the same time, the American and French revolutions were widely reported and aroused a great deal of popular interest. The associated instability of this period, stemming from fears that Ireland might be used as a launch pad for invasion, led to the formation of volunteer militia groups. The drive towards parliamentary reform was powered mainly by Presbyterians, and they, too, were largely responsible for the formation of the United Irishmen. This movement, which sought the union of Irishmen of all creeds, upheld radical Continental ideology. It can fairly lay claim to being the first mass movement of Irish nationalism, and at one point its membership was in excess of 280,000. The United Irishmen Rising of 1798, a series of loosely linked insurrections in disparate locations, was quelled, but not before serious sectarian disturbances broke out, especially in Wexford (Loch Garman). The politicization of previously local sectarian groups such as the Defenders and 'Peep o' day boys' invested

the Rising with a fractious and sectarian element. The Rising led to a forced union between the United Kingdom and Ireland (1800; see ACT OF UNION). This removal of the Irish parliament destroyed the finely argued Protestant nation, and would undo the social ascendancy on which it was founded.

§4. THE 19TH CENTURY

The events of the first third of the 19th century revolved around the movement for Catholic emancipation. This was led by Daniel O'Connell, who was ultimately successful in achieving a limited democratic franchise for Catholic subjects. The longer-term political effect of O'Connell was the identification of the Irish nation with its overwhelmingly Catholic constituents. Yet, there was a plainly non-sectarian thrust to his politics, despite occasional utterances to the contrary. The success of Catholic agitation and mass meetings, and the popular subscription to what was known as the 'The Catholic Rent', led to a general feeling of popular government, of which a great number felt they were a part.

The success of the Repeal movement did not outlive O'Connell, and there was no similar momentum involving people and elected representatives until the Irish Parliamentary Party became involved with the LAND LEAGUE in the 1880s. O'Connell's movement is sometimes projected as the antithesis of what is known as physical force nationalism. Known variously as Fenians or Republicans, the Irish Republican Brotherhood (IRB) advocated armed insurrection in order to achieve independence. They were a clandestine organization of little electoral impact (yet, one of their members, O'Donovan Rossa, was elected MP for Tipperary [Tiobraid Árann] in 1869 while still imprisoned). Nonetheless, they would ultimately help to bring about independence (see IRISH INDEPENDENCE MOVEMENT).

The seismic event in 19th century Ireland was the Great FAMINE. It was a four-year long trauma that left a million dead and led to the migration of another million. It was the single worst social rupture of any country in 19th-century Europe. It shaped the future of Irish politics by fashioning a virulent anti-Englishness. It was a useful rhetorical tool in electioneering, and it suggested a standard to which Ireland must never allow herself to fall again. This, in turn, fed into the New Departure, an amalgamation of parliamentary and rural LAND AGITATION, which won some justice for Irish tenants, and helped place the Irish Parliamentary Party at the centre of Irish politics for 30 years.

The leader of this party, Charles Stewart PARNELL, enjoyed great success in converting English Liberals to Home Rule in the 1880s. Consequently, he created panic among the Irish who wished to remain part of the United Kingdom—Unionists. This led to an urgent revival of Orangeism, which, through a network of lodges and clubs, had cherished the Glorious Revolution and the Boyne and Aughrim battles. Having come into existence from 18th-century agrarian protest groups in rural Ulster (see ULAID), it gained a municipal focus after the migrations caused by the 1845–9 Famine. Although suppressed in 1835, it became politically effective when it was joined by the landed Unionist interest and English Conservative opinion in its resistance to the first Home Rule Act of 1886. To this day, in its pageantry and prerogatives, it represents the political pulse of Ulster Unionism.

§5. TOWARDS A DIVIDED IRELAND

The years between the first and third Home Rule Acts (1886–1914) have been described as the interlude between a verdict and a sentence, with the facts of Irish political reality forcing the subsequent 1916 Rising. It has been described most accurately as 'the last flowering of nineteenth century Romantic nationalism'. This obscures the essentially contingent character of the Rising, and the fact that the country seemed content with a programme of Home Rule, as opposed to the Republican separatism of the IRB. Sinn Féin ultimately reaped the rewards of the uprising in Dublin on Easter Monday 1916, when the execution of its leaders (and the subsequent imposition of conscription) led to its electoral landslide in 1918.

A putatively independent parliament was set up in 1919 (Dáil Éireann). During the subsequent War of Independence, the partition of Ireland according to the Unionist/Nationalist divide was enshrined, somewhat controversially, in the Government of Ireland Act (1920) and the Boundary Commission of 1925. Despite claims to the contrary in the constitution of 1937 (Bunreacht na hÉireann), both governments tacitly accepted the status quo of a divided Ireland.

A lull in extraordinary political events ended in

1968 when the civil rights movement protested at discrimination against Catholics by the Protestant regime in Northern Ireland. The resultant clashes led to the deployment of the British Army to maintain peace between the two communities. A branch of the Irish Republican Army (the Provisional IRA) laid claim to the nationalist aspiration of a united Ireland and complete separation from Britain. A civil war spanning three decades ensued, with assassinations and bombing campaigns frequently occurring on both islands. Following the Good Friday Agreement of 1998, and a referendum in the Republic altering its territorial claims to Northern Ireland, a tentative period of peace and self-government exists.

nationalism in the Celtic countries [2] Scotland

§1. 1707–1914

Scottish national identity following the Union with England in 1707 found new ways to express itself and adapt to the peculiarities of a stateless nation. Indeed, Scotland (Alba) experienced many of the same transitions of national identity and nationalism as those experienced by most other European countries. The difference in Scotland was that much of this bourgeois nationalism was able to accommodate itself within the parameters of the British state and empire. For example, Scottish soldiers, missionaries, administrators, and business leaders contributed to the development of the British Empire in the 19th century and were able to do so as Scots, taking great pride in their sense of Scottish identity. The popular term for the Union as an 'imperial' partnership emerged in the 19th century. One key point that must be made when discussing modern Scottish nationalism, however, is that it was only in the 20th century, with the emergence of a mass democracy, that it is possible to say with any conviction that nationalism was anything other than the thoughts of a middle-class élite. Although Scottish home rule appeared on the political agenda in the late 19th century, it was not motivated by nationalism as such, but was rather propelled as part of a wider radical tradition which was interested in social reform and extending democratic powers to the locality. Furthermore, before 1914, it was believed that home rule would provide greater stability to the British state. It was not a challenge to it.

§2. 1914–1946

The First World War shattered many of the previous notions concerning Scottish national identity. The idea of Scotland as an 'imperial partner' was less valid as the Dominion nations went their own way. Emigration, which was held up in the 19th century as evidence of the dynamism and entrepreneurism of the Scots, was now seen to be the desperate response of people to poor social and economic opportunities. The workshop of the Empire had become too dependent on heavy industry and suffered major dislocation, and finally, with politics dominated by class, bread and butter notions took the place of idealized visions of the nation. Yet, this crisis of identity afforded various intellectuals and writers the opportunity to recreate Scotland anew. The project of the Scottish renaissance was to redesign Scottish national identity and disassociate it from the kailyardism (involving a sentimental appeal to rural national imagery) of the Victorian period. Even though there may have been a broad cultural consensus among the renaissance luminaries, there was no political consensus since some supported socialism while others favoured nationalism. However, this literary revival was accompanied by the growth of political nationalism. Although the Labour Party, which had emerged as the largest party in Scotland after 1922, was committed to home rule, it abandoned the idea when it was realized that the economic dislocation experienced by Scottish society could not be rectified without calling on support from the greater resources of the British state. This volte-face precipitated the creation of the National Party of Scotland (NPS) in 1928, which emerged to champion the cause of Scottish self-government by contesting elections to secure a popular mandate for

its objectives. The NPS, however, had supporters who were committed to independence, and others who were satisfied with some form of devolution. Since the party did badly in elections, moderates claimed that it was the separatists who were driving away electoral support. An expulsion of 'fundamentalists' in the early 1930s paved the way for a union with the more devolutionist and right-leaning Scottish Party to create the Scottish National Party (SNP) in 1934.

The new party fared little better than its predecessor and was even more ideologically incoherent. The idea of standing as a separate political party was abandoned for something more akin to a pressure group. Furthermore, the SNP found that, apart from demanding greater self-government, it had no real message to tackle the endemic social and economic problems that plagued Scottish society as a result of the impact of the Great Depression. It had little appeal since few electors found any relevance in its message. Eventually, in 1942, discontented elements in the party ousted the moderate leadership and took the party back to contesting elections to secure a mandate for independence. Formally enshrined in a new constitution of 1946, the SNP has held to this strategy until the present day.

§3. 1946 onwards

The post-war period brought little comfort for Scottish nationalists. The creation of the Welfare State and the use of the command economy to deliver Scottish social and economic reconstruction guided the electorate's mind towards British politics since this was believed to guarantee their material well-being. The Scottish Convention of the late 1940s gathered some two million signatures in favour of a Scottish Parliament, but this was ignored by the Labour government, which informed the leaders of the Convention that if there was such support for a Scottish parliament, then the Convention should contest elections to secure a popular mandate. The Convention collapsed shortly afterwards, leaving the SNP as the sole standard bearer of the nationalist flag.

Just as economic prosperity was important in shoring up a sense of British political identity, in Scotland in the period from 1945 to the mid-1960s the flip side was that disillusionment with government policy after this period was often channelled into nationalism. In 1967 the SNP won a by-election in Hamilton at a time of mounting unemployment and fears surrounding the devaluation of sterling. The party did well in local elections the following year. The SNP was also helped by an influx of new members and nationalist youth. Its energy contrasted favourably with the organization of both the Labour and Tory parties, which had become ossified. The mounting economic crisis of the early 1970s, which coincided with the discovery of North Sea oil, helped the nationalists to capitalize on social and economic discontent. In the second general election of 1974 the SNP won almost a third of the total vote and returned 11 MPs. The growth of nationalism forced the Labour government to concede to the principle of devolution, though it encountered hostility from many members of its Scottish party. Devolution was conceived as a means to halt nationalism because it was believed that, while the Scots wanted more self-government, they were against independence. Opinion poll evidence from the time supports this and shows that only 12% of the population were in favour of breaking away from the United Kingdom. This also helps to reinforce the point that the SNP vote was buoyed up by economic discontent. In the devolution referendum of 1979, the divisions within Scottish society were exposed. Although rigged in the sense that it would require more than 40% of the total electorate to endorse it, the two thirds who did vote were almost exactly split down the middle in terms of those opposing and supporting it. The SNP vote evaporated in the 1979 general election.

Nationalism was brought to the fore again by the experience of the Thatcher and Major governments of the 1980s and early 1990s. In successive general elections, the Tory vote in Scotland collapsed, but it did not prevent the governments from imposing unpopular legislation on Scotland. This gave rise to the idea of the 'democratic deficit' and the belief that home rule would be a way of circumventing the imposition of unpopular legislation from London. In 1988, the Constitutional Convention was formed; this included the Liberal Democrats, Labour, the trade unions, the churches and local authorities, all of whom claimed to represent the wishes of the Scottish population. The SNP stood on the sidelines, hoping that frustration with Tory rule would crystallize into support for independence. In 1997 the advent of a Labour government, committed to the creation of a

Crowds and the Queen's ceremonial guards on the occasion of the opening of the Scottish Parliament, Edinburgh, 1999

Scottish parliament, set up a referendum in September. The result was overwhelmingly in favour. The Scottish Parliament was formally opened by the Queen on 1 July 1999, and moved into a purpose-built new building in November 2004.

nationalism in the Celtic countries [3] Isle of Man

Modern Manx nationalism has its basis in the formation of the Mec Vannin (Sons of Mann) in 1963. The embryonic organization had as its objective the pursuit of independence and, because of the constitutional situation between the United Kingdom and Isle of Man (ELLAN VANNIN) at the time of its formation, it saw itself as an anti-colonial movement (Minute-book of Mec Vannin, December 1963–August 1967). This organization has continued its campaign for independence since that time and is the sole political nationalist organization, though a small breakaway body (the Manx Nationalist Party—MNP) existed for several years in the late 1970s (Bridson, *For a Celtic Future* 296–307). Mec Vannin did not from the outset espouse republican ideals, but it had close connections with other Celtic nationalist movements which advanced such ideals (Clews, *To Dream of Freedom*). In the 1980s Mec Vannin formally embraced republican objectives.

Manx nationalism draws on the example of ILLIAM DHONE (William Christian), a 17th-century patriot who gained quasi-independence for a period during the English Civil Wars and was subsequently executed by the English Lord of Man following the Reformation. The modern nationalist movement was also more immediately motivated by those in Man, such as Sophia MORRISON, who were connected to the 'Celtic Renaissance', which occurred in Man and other CELTIC COUNTRIES at the turn of the 19th century. The work undertaken by these campaigners to promote and protect national identity and culture was continued in the early 1940s by the organization Ny Manninnee Dhooie (The true Manx). There is a tenuous but credible thread between their work and the modern movement (Moffat, *Celtic History Review* 1.2.18–20).

Mec Vannin has agitated on a broad range of social, cultural and environmental issues, in addition to its political programme. The Party has based its principles on concepts of culture and national identity common throughout the Celtic countries and has advanced this programme by non-violent means, though individual members were associated with campaigns of direct action which occurred in the 1970s and 1980s (Ellis, *Celtic Dawn*). Independence is the ultimate objective (Moffat, *Carn* 106.19–20).

nationalism in the Celtic countries [4] Wales

A sense of nationhood or national consciousness in Wales (Cymru) dates back at least to the late 6th or early 7th century when the term *Cymry* (deriving from the Brythonic **Combrogī* 'people of the same country') was first used (see gildas).

A distinct sense of Welsh nationalism is manifest in the poem Armes Prydein (The prophecy of Britain), composed in the earlier 10th century, in the native Welsh laws codified at the time of Hywel Dda (†950; see law texts [2]) and in the remarkable writings of Giraldus Cambrensis (Gerald of Wales, 1146–1223). A powerful national awareness also inspired the political activities of Prince Llywelyn ab Iorwerth (†1240) and his grandson Prince Llywelyn ap Gruffudd (†1282). A more widespread, general sense of Welsh patriotism fuelled the rebellion of Owain Glyndŵr at the beginning of the 15th century, and indeed provided the impetus for the cultural achievements of the 16th-century Welsh humanists.

Other factors caused a gradual long-term weakening of Welsh national consciousness, notably the Anglicization of the gentry, and the influence of the Anglican Church, an intrinsic part of its English counterpart. The substantial non-Welsh population introduced in the wake of the Industrial Revolution from the 1870s onwards could not be fully assimilated, while close economic and transport ties were forged between Wales and England. Wales had no monarchy, no unifying political structure, and no central administrative body. Even the highly prized Courts of Great Sessions were abolished in 1830, with but little protest.

However, some sense of Welsh national consciousness was encouraged by the dogged persistence of the Welsh language, by the antiquarian studies and the Romantic movement of the 18th century (see gorsedd beirdd ynys prydain; romanticism), and the rôle of the Gwyneddigion Society in publishing medieval Welsh poetry and prose. This was followed in the mid-19th century by the rediscovery of the eisteddfod, which fostered a uniquely Welsh musical and literary tradition, and the founding in 1846 of the Cambrian Archaeological Association to study the antiquities of Wales. The mordant comments of the infamous Blue Book Commissioners on the state of education in Wales in 1846–7 and the influence of Continental nationalism—brought home to Wales by the writings of Gwilym Hiraethog (William Rees, 1802–83) and Emrys ap Iwan (Robert Ambrose Jones, 1848–1906) and the activities of Michael D. Jones (1822–98; see patagonia)—created an image of Wales as 'a nation rightly struggling to be free'. The subsequent growth of a distinctive Welsh radicalism was fostered by the emergence of deep-rooted agrarian and religious grievances. From around 1880 onwards Welsh-language publishing flourished in an array of newspapers and journals, a Society for the Utilization of the Welsh Language was established in 1885, and local and national eisteddfodau and the Nonconformist chapels prospered (see christianity).

Nationalism became a significant force in Welsh life only during the second half of the 19th century. It was encouraged by developments in Ireland (Éire), which were closely observed in Wales, and by the inspirational writings and activities of Continental European nationalists such as the Italian patriot Giuseppe Mazzini (1805–72) and the Hungarian revolutionary Lajos Kossuth (1802–94). It was further stimulated by the gradual advance of democracy through electoral reforms in 1867, 1872, and 1884, the emergence of the disestablishment of the Welsh Church as the predominant national question, and the impact of the great land depression. Between 1886 and 1896 members of Cymru Fydd (Young Wales) actively sought a measure of Welsh self-government, though firmly staying within the context of Liberal politics. This patriotic ethos captured the hearts of prominent Welshmen such as Owen M. Edwards, Thomas Edward Ellis, John Morris-Jones, and John Edward Lloyd, and even the youthful David Lloyd George. It bore fruit in the establishment of a federal University of Wales in 1893, and a National Library (Llyfrgell Genedlaethol Cymru) and Museum in 1907 (see amgueddfeydd). A second, ultimately abortive, home-rule campaign was led by the Welsh Member of Parliament Edward Thomas John during the years immediately preceding the outbreak of the First World War.

Political nationalism proved to be a powerful element in 20th-century Wales, but not as dominant

a force as it was among the Irish and some of the nations of eastern Europe. The outbreak of the First World War, allegedly fought for the little 'five foot five' nations, and the rise of Lloyd George to the premiership, helped to heighten Welsh national consciousness, as did the emphasis on national self-determination embodied in the 1919 Versailles peace settlement. After the war, however, both the Liberal and Labour Parties paid at best lip-service to the national rights of Wales. The Welsh Church was finally disestablished and disendowed in 1920; in effect, this was an enormous anti-climax. The Welsh-speaking youth organization URDD GOBAITH CYMRU (The Welsh League of Youth) was formed in 1922, and the establishment of the Welsh Nationalist Party—Plaid Genedlaethol Cymru (later to become Plaid Cymru)—in 1925 heralded a strikingly novel dimension with its emphasis on safeguarding Welsh-speaking communities. Under the inspirational leadership of Saunders LEWIS, it soon won the avid support of many Welsh writers and intellectuals. However, it failed conspicuously to win popular support in Wales until after the Second World War when, led by Gwynfor EVANS, the party's president from 1945 until 1981, it began to win seats in local government elections in several areas. Evans himself entered Parliament following a by-election in Carmarthenshire (sir Gaerfyrddin) in 1966, and was joined by two further MPs in 1974.

This upsurge of nationalist sentiment in the 1960s gave rise to several new movements, among them CYMDEITHAS YR IAITH GYMRAEG, the Welsh Language Society, formed in 1962. Other bodies, such as the Welsh Arts Council, the Welsh National Opera, and the Welsh Development Agency were also established. Minor piecemeal constitutional concessions culminated in the appointment of a Secretary of State for Wales in 1964. Education through the medium of Welsh and the University of Wales expanded and prospered. The long-awaited report of the Commission on the Constitution (the Kilbrandon Commission) finally appeared in October 1973, and proved generally sympathetic to devolutionary proposals. The intensive campaign for a Welsh-language television channel reached a successful outcome in 1982 (see S4C). In a referendum for a Welsh Assembly held on 1 March 1979, however, some 80% of those who voted were against the proposal, a negative response which appeared to confirm that Welsh national sentiment was primarily cultural rather than political.

During the 1980s, the Welsh language appeared increasingly threatened by continuing inward migration, especially of retired people from England, to rural areas, many of which also contained a significant number of second or 'holiday' homes. This might have contributed to the return of devolution to the Welsh political agenda in the 1990s, which was mainly fuelled by widespread concern at the domination of the seemingly omnipotent quangos (literally, 'quasi-autonomous non-governmental organizations', i.e. unelected central government bodies) in Welsh life. A Welsh Language Board (BWRDD YR IAITH GYMRAEG) was set up in 1993 to safeguard the rights of Welsh speakers and the Welsh language. The Labour Party announced new proposals for devolution in May 1995 and, when it won the General Election of 1997, it kept its promise of holding a further referendum in the following September. A joint campaign with the Liberals and Plaid Cymru now yielded a positive outcome. In a turnout of 50.3%, 559,419 (50.3%) voted in favour, and 552,698 (49.7%) against devolution of political power to Wales. (The SCOTTISH PARLIAMENT was approved by a far wider margin in a referendum also held in 1997.) Intense wrangling over the conduct of the ballot and the precise venue of the new assembly persisted well into the following year. The first elections for the new 60-seat National Assembly, to be located at Cardiff Bay (Bae CAERDYDD), were held in March 1999. CYNULLIAD CENEDLAETHOL CYMRU (the National Assembly for Wales) was convened for the first time in May 1999, and a new chapter in Welsh political and constitutional history began.

nationalism in the Celtic countries, [5] Brittany

The beginnings of nationalism in Brittany (Breizh) consisted mainly of conservative tendencies. Kevredigez Broadus Breiz/Union régionaliste bretonne (URB), founded in 1898, and Unvaniez Arvor/Fédération régionaliste de Bretagne (FRB), founded in 1911, were both regionalist in tone, and, though anxious to preserve and promote the region's own unique identity, believed that Brittany's future lay within the political framework of France.

However, the most prominent nationalist movement of the first half of the 20th century was the political party commonly known as Breiz Atao (Brittany forever), after the name of its newspaper. Established as Strollad Broadel Breiz/Parti national de Bretagne in 1911, it became the Groupe régionaliste Breton in 1918. With the advent of younger and more radical members, it was, by 1920, calling itself Unvaniez Yaouankiz Vreiz/Union de jeunesse bretonne (cf. Cymru Fydd). Under the leadership of Olier Mordrel (Olivier Mordrelle, 1901–85) and Fañch Debauvais (François Debauvais, 1903–44), the movement's ideals quickly developed into a rejection of regionalism within France amid aspirations for political autonomy. The movement became an official political party in 1927, and called itself Strollad Emrenerien Vreiz/Parti autonomiste breton. Its disappointing performance in the 1930 election gave rise to splinter groups, and the following year the party restored its original name of Strollad Broadel Breiz/Parti national de Bretagne (PNB). In 1932, a secret society calling itself Gwenn-ha-Du (Black and white, from the colours of the Breton flag) claimed responsibility for destroying the statue in Rennes (Roazhon) that commemorated the union of Brittany with France (see acte d'union). This particular depiction of Brittany as a subservient maid, kneeling at the feet of a noblewoman representing France, had been a thorn in the side of Breton patriots since its unveiling in 1910. The resulting publicity, and the suppression of all Breton institutions, cultural and political alike, brought much sympathy for the Breton cause.

In the 1936 general election, the PNB fared much better, having followed the policy of indirect participation by supporting candidates affiliated with other parties who were favourable to moderate nationalist policies such as teaching Breton in school. Of those who received support in this way, 15 were elected.

With the resignation of Remon ar Porzh (Raymond Delaporte, 1907–90) as acting leader of the PNB in 1937, the party became more extremist and more anti-French. Members were found guilty of painting slogans on public buildings, participating in prohibited demonstrations, and openly praising Germany. Many were arrested, including Mordrel and Debauvais. In August 1939, when it was obvious that France would be involved in war with Germany, the two leaders fled over the border and the party was banned, along with its newspaper.

Not all Breton patriots supported the PNB during the interwar years. As well as the URB and FRB, Breiz Kevredel/La ligue fédéraliste de Bretagne was a left-wing regionalist movement, and *War Zao* (Standing) was the journal of left-wing supporters of an independent Brittany.

The German occupation (1940–4) seemed at first to present a golden opportunity for the leaders of the PNB, who expected that Brittany would have a bright future under the Third Reich. Their hopes were soon dashed when the peace treaty with the Vichy government was signed, and it became apparent how insignificant Brittany was within Hitler's plans for the new Europe. Initial support for Breton nationalism quickly waned as the possibility of an Allied victory seemed more likely, and the more moderate members of the PNB hastily toned down their usual anti-French and separatist stance as expressed in their newspaper now called *L'heure bretonne* (The Breton hour). Extremist members reacted to events by forming a separate political party (also called the Parti national de Bretagne) and some donned German uniforms and fought the Maquis (the anti-German Resistance) in the military unit called Bezenn Perrot under the leadership of Neven Henaff (Célestin Lainé, 1908–83). The regionalists tended to support the Vichy regime during this period, but there is evidence that some nationalists joined the Resistance, though it is only in the late 20th century that Bretons have begun to speak openly about sympathies during the Second World War. It now appears that the number of Bretons who actively collaborated with the Germans were few in number. Nonetheless, many were under suspicion and arrested; though most were released, some lost

their civil rights, and others were executed.

After 1945, nationalism in Brittany took on a cultural and economic character, since any political overtones would have been unacceptable in the general climate of this post-Liberation period. On the cultural front various new journals were launched, e.g. the literary *Al* LIAMM (The link), and folk festivals thrived as never before, coinciding with the growth of tourism. The economic interest was represented by CELIB (Le comité d'étude et de liaison des intérêts bretons), founded in 1950, whose members wished to see Brittany benefit from France's post-war reconstruction policies. They acted as a pressure group preparing reports and dossiers and presenting concrete propositions to the French administration.

In 1957 a tentative return to politics emerged with the establishment of MOB (Mouvement pour l'organisation de la Bretagne). By 1964, Brittany had a nationalist political party once more in the form of the UDB (Union démocratique bretonne). This is a left-wing party, which also identifies itself with ecologically sensitive issues. Since the 1970s it has been a member of the 'unified left', allying itself with other French left-wing parties in municipal elections, and thus has the support of dozens of mayors and locally elected councillors. This was reflected in the elections of March 2001, when it supported more candidates than ever before: 50 in the canton elections and nearly 190 in the municipal ones.

Right-wing tendencies re-emerged in 1968 with the creation of Jeune Bretagne, which, by 1972, had become Strollad ar Vro (Party of the region). Meanwhile MOB developed into POBL (Parti pour l'organisation d'une Bretagne libre), founded in 1982, an organization marginal in politics, but with a strong position within the cultural movement.

Breton nationalism still has its share of extremists. The radical FLB (Front de libération de la Bretagne) appeared in 1966 and was responsible for various attacks on public property, including the palace of Versailles, between 1966 and 1980. A more recent separatist movement is Emgann (Battle or struggle), founded in 1983, and which is heavily influenced by the Basque, Corsican, and Irish extreme nationalist movements (see IRISH REPUBLICAN ARMY).

nationalism in the Celtic countries [6] Cornwall

Although organized nationalist political parties did not emerge in Cornwall (KERNOW) until the latter half of the 20th century, the region has always maintained a unique political profile. A certain proto-nationalism by way of assertions of BRYTHONIC identity can be detected in the early wider alignments of the BRITONS of Cornwall, Wales (CYMRU), Brittany (BREIZH), and north BRITAIN against the ANGLO-SAXON 'CONQUEST' as chronicled by GEOFFREY OF MONMOUTH and other ARTHURIAN literature. However, modern nationalism in Cornwall —as in many other areas of Europe—has its roots in the developing cultural and ethnic politics of the late 19th century. In Cornwall, this has most often figured within the wider discourses of PAN-CELTICISM.

Early self-proclaimed nationalists such as L. C. Duncombe-Jewell (1866–1947) and Henry JENNER did not advocate separatism from the wider United Kingdom. Their version of nationalism only required recognition of Cornish cultural and linguistic distinctiveness. Although not explicitly nationalist parties, the earliest nationalist groups include COWETHAS KELTO-KERNUAK (The Celtic-Cornish Society) from the turn of the 19th century, followed in 1933 by Tyr ha Tavas (Land and language). Early activists in Cornwall had a hard time finding the balance between Welsh and Irish calls for 'home rule', while aligning themselves with other pan-Celtic nationalist movements.

Mebyon Kernow (Sons of Cornwall) was formed in 1951. Although it served initially as a pressure group, widening support ensured its eventual status as a political party. The earliest aims were to maintain the Celtic character of Cornwall and the right of self-government in domestic affairs. By 1970 Mebyon Kernow had over 20 branches and some 3000 members. Since then it has continued to be the most recognized

force in Cornish nationalist politics. However, it has never had much electoral success. Its heavy reliance on the cultural nationalist model used initially in Wales by Plaid Cymru/The Party of Wales, and overt connections with a revivalist agenda and the GORSETH has limited the party's appeal in Cornwall. Although reasonably successful at district and local level, the party has never returned an MP or MEP to the UK Parliament in Westminster or the European Parliament.

The frustration over Mebyon Kernow's lack of electoral success led to two splinter movements in the 1970s. The first was the reformation in 1974 of the Cornish STANNARY PARLIAMENT by a modern set of Stannators. This group believed that, in order to advance the nationalist agenda for Cornwall, the best plan would be to return to the legal and historical documentation which guaranteed Cornwall's constitutional independent status. The revived Stannary is best known today for its direct action campaign against English Heritage in Cornwall. In 1975 a second nationalist party, The Cornish Nationalist Party, was formed, led by a breakaway Mebyon Kernow member, James Whetter. The modernizing CNP was initially fairly successful, influencing the mid-Cornwall vote throughout the 1970s and 1980s, but in the 1990s it became a smaller and less active group.

Although Cornish nationalist political parties have not been overwhelmingly successful in elections, pro-Cornish sentiments certainly influence voting patterns across the board. As Tregidga has noted, Cornish nationalist and devolutionary agenda have often been incorporated into Liberal politics in Cornwall, and are particularly exemplified in anti-metropolitan sentiment (*Liberal Party in South-west Britain* 18–22). Individual politicians have often bridged the Liberal/Nationalist gap. The late Liberal MP for Truro, David Penhaligon (1944–86), and the MP for St Ives (Porthia), Andrew George, both championed Cornish ethnicity and devolution. Furthermore, at all levels of government, Cornwall returns a greater number of independents than anywhere in the south-west. Several of these hold pronounced nationalist sentiments.

Identity-based politics in Cornwall are certainly becoming more accepted and are having discernible effects on policy. Objective One status within the European Union (assigned areas of economic disadvantage within the EU), gained in 2000, has been based on, and argued for, in terms of regional and cultural distinctiveness. The late 20th-century closure of South Crofty, the sole surviving operational tin mine in Cornwall, was an important catalyst and generated a cross-party pressure group named Cornish Solidarity. Initially, the group sought regeneration and investment in Cornwall, but subsequently led numerous direct action protests. John Angarrack's polemic *Breaking the Chains*, supported by the Stannary Parliament, was a popular book which captured the public's imagination over issues of nationalism in Cornwall. On the eve of the 21st century, a group was formed to investigate the constitutional status of Cornwall within the United Kingdom, aiming for a devolved Senedh Kernow (Parliament of Cornwall).

Nativism is relevant in several ways to Celtic and Celtic diaspora culture. The term was first used in mid-19th century United States of America to describe an ideological movement founded in a desire to reinvent the new country as a utopian republic. It became increasingly isolationist, opposed to new immigration, and profoundly anti-Catholic (cf. CELTIC LANGUAGES IN NORTH AMERICA). This brought it into conflict in the 1840s and 1850s with Irish Catholic immigrants, sometimes leading to such sectarian violence as the Philadelphia riots of 1844. The movement faded as a political force as the struggle over SLAVERY became the dominant national issue, but prejudice against Catholics (Irish and otherwise) remained, and was revived as a serious social trend in the first quarter of the 20th century, most notoriously in the propaganda and terrorist activities of the Ku Klux Klan. As late as the 1960s, John F. Kennedy, the first Roman Catholic President of the United

States, found himself contending with nativist bigotry against Irish Catholics.

In the mid-20th century 'nativism' began to be used by anthropologists to describe an element of anti-colonial NATIONALISM which emphasized the revival of traditional cultures in opposition to the colonial culture imposed from the outside. The term may be applied retroactively to the cultural and nationalist movements which first appeared in the CELTIC COUNTRIES in the 18th century with the rise of romantic nationalism (see also ROMANTICISM). The late 19th-century Irish literary revival was a highly politicized nativist movement, as is the pro-Welsh cultural tradition which includes Iolo Morganwg (Edward WILLIAMS) and Saunders LEWIS. Nationalist nativism stresses the importance of the preservation and assertion of native culture (especially language) in the establishment of political independence and a unique identity on the world stage. The opposing point of view stresses the practical benefits of assimilating to the culture of the French or the English, given their high profiles politically and economically, and the importance of French and especially English as world languages.

In the academic disclipline of CELTIC STUDIES, the term 'nativism' has been used (first by Carney, *Studies in Irish Literature and History* 276) as a negative label for an approach to texts produced in medieval monasteries which sees these works only as the written reflections of a conservative oral tradition, and uses them as 'a window on the Iron Age' (in JACKSON's famous phrase, subtitle of his volume *The Oldest Irish Tradition*), for the purpose of reconstructing the culture of the pre-Christian Celts. Anti-nativists (most notably McCone in his *Pagan Past and Christian Present*) criticize this approach for failing to appreciate the texts themselves as cultural and literary products, and for demonstrating an inadequate understanding of the social and political realities which produced them, or of the processes of oral transmission. The issue is most usefully seen not as a conflict between two schools of thought, however, but as the natural development of an increasingly sophisticated and multi-layered approach to the corpus as it has become more accessible to scholarly analysis from a variety of disciplinary perspectives. The medieval written record is—apart from its own virtues and with an appropriate understanding of its limitations—a primary tool for any investigation of the pre-literate Celtic past, as McCone has shown in his work on pre-Christian Irish warrior culture (*Ériu* 35.1–30).

Nature poetry, Celtic, is a term which refers to early Irish and Welsh poetic compositions concerned with the description and interpretation of the natural world. No such medieval classification existed, and the category 'Celtic nature poetry' was introduced by 20th-century scholars.

§1. INTRODUCTION

Although W. Lewis-Jones and Eleanor Hull discussed 'poetry of Nature' in two works published in 1892 and 1906 (Lewis-Jones, THSC 1891/2.46–70; Hull, *Text Book of Irish Literature* 1.219–42), the first scholar to refer to a 'Medieval Celtic Nature Poetry' was Kuno MEYER in 1911 (*Selections from Ancient Irish Poetry* 12), followed two years later by J. Glyn Davies (THSC 1913.81–128) and Alfred Perceval Graves (*Trans. Royal Society of Literature* 8.81–105). In the 1930s, the term became popular among Celticists with the studies of influential philologists such as Gerard MURPHY (*Studies* 20.87–102) and in particular Kenneth JACKSON, who published his famous *Studies in Early Celtic Nature Poetry* in 1935. Recent studies (Sims-Williams, *Celticism* 97–124) have demonstrated that Meyer and Graves were in some way influenced by the works and ideas of Ernest Renan, Matthew Arnold, Eoin MACNEILL, and Douglas Hyde (Dubhghlas DE HÍDE), and that the context for the idea of a 'Celtic nature poetry' was the Romantic stereotype of the Celts confined in a remote environment, in contact with the natural world ('Celtic natural magic'), preserving a sort of primitive and uncorrupted way of living ('Celtic animism'). As a consequence of this ambiguous origin, studies on Irish and Welsh nature

poetry have been characterized, until recently, by a certain weakness and lack of precision. For example, contributions concerning the generic idea of a possible hermit origin for this kind of composition (as well as studies arguing against this theory) have been seen as more important than discussions of the style, the poetic technique, and the literary quality of texts.

§2. IRISH POETRY

The following is a list of the most representative poems (mostly composed in the 9th century) which are commonly considered as examples of Irish nature poetry. The poems are identified by their opening lines:

1. *Daith bech buide a úaim i n-úaim* (The yellow bee is swift from hollow to hollow): 4 lines describing the journey of a bee in a great plain;

2. *Int én gaires asin tsail* (The bird who calls out of the willow): 4 lines describing the voice of a blackbird in a wood;

3. *Ach, a luin, is buide duit* (Ah, blackbird, it is well for you): 4 lines describing the voice of a blackbird and suggesting a similarity between the life of birds and the life of hermits;

4. *Int én bec* (The little bird): 8 lines describing the voice of a blackbird, and using an association between colours and sounds in order to indicate the complex interaction between the different perceivable layers of the external world;

5. *Énlaith betha brig cen táir* (Birds of the world, force without shame): this poem, also known as 'The Calendar of the Birds', describes in 7 quatrains (4-line verses) the passing of time, beginning with the way in which birds' voices change during the year;

6. *Úar ind adaig i Móin Móir* (The night on the Great Moor is cold): 4 lines describing the cold of a winter night and suggesting a comparison between the sea and the forests;

7. *Fégaid úaib* (Look outward): this 8-line poem, also known as 'The Ocean', describes the life of the ocean: its vastness, its movements, and the creatures which live in it;

8. *Anbthine mór ar muig Lir* (A great storm on Ler's plain): in 10 stanzas of 5 lines, this poem describes a storm on the sea, beginning with the various movements caused by the different kinds of winds which cross it; comparisons between the waves and the warriors are frequent, together with a multifaceted perception of the continuously changing colours of the waters;

9. *Táinic gaimred co ngainni* (Winter has come with scarcity): 4 lines describing the lands invaded by the waters at the coming of winter;

10. *Scél lem dúib* (I have news for you): this 16-line poem, also known as 'Winter', describes in 4 quatrains the effects of the coming of winter on the landscape;

11. *Fúit co bráth!* (Cold until doom!): this 16-line poem describes, in 4 quatrains, the effects of cold weather on lakes, rivers, woods and the sea;

12. *Fuit, fuit* (Cold, cold): this 36-line poem describes, in 9 quatrains, the overflowing of waters on the land following a great storm;

13. *Dubaib ráithib rogeimred* (Black season of deep winter): 10 lines describing a winter landscape;

14. *Hed is annsam do rímaib* (This is the hardest of bad weathers): 4 lines contrasting the beauty of summer with the harshness of winter;

15. *Slíab cúa cúanach corrach dub* (Wolf-haunted, rugged, black Cua Mountain): 6 lines describing the landscape of Cua Mountain (Slieve Cua);

16. *Táinic sam slán sóer* (Healthy free summer has come): this 28-line poem describes, in 7 quatrains, how landscapes change with the coming of summer; particular attention is given to depicting the appearance of new colours and the growth of trees;

17. *Fó sín samrad síthaister* (Peaceful summer is a good season): 6 lines describing a wood in the summer;

18. *Glas úar errach aigide* (Green, cold icy spring): 9 lines describing the appearance of green after the cold season;

19. *Ráithe fó foiss fogamar* (Autumn is a good time for resting): 15 lines describing a landscape in the autumn, with particular attention to its colours and sounds;

20. *Dom-farcai fidbaide fál* (A hedge of a wood thicket looks down on me): 8 lines describing the different perceptions which occur inside a wood.

§3. WELSH POETRY

Welsh nature poetry is mainly represented by passages found in the early ENGLYNION which together make up what has conventionally taken the name of saga poetry and gnomic poetry (mostly composed in the 9th and 10th centuries). The following can be regarded as the most representative examples:

1. *Eiry mynyð, gwynn bob tu* (Mountain snow, every

surface is white): this poem of 36 3-line *englynion* describes the different effects caused in a landscape by the falling of the snow, interlaced with gnomes (statements of general, timeless truth) about honour, old age, and the life of warriors;

2. *Gorwyn blaen onn* (Delightful is the top of the ash-tree): 33 3-line *englynion* describing the colours and the shapes of different trees, interlaced with gnomes about friendship, love, and courage;

3. *Llym awel, llum brin* (Keen the wind, bare the hill): 105 lines of *englynion* describing different parts of a winter landscape, interlaced with gnomes about illness, death, and religion;

4. *Baglawc bybin, bagwy onn* (A spear-carrying host, a cluster of ash): 33 lines describing a mountain landscape on a rainy winter night, interlaced with gnomes and proverbs about human life;

5. *Gnawt gwynt o'r deheu* (Usual the wind from the south): 12 3- and 4-line *englynion* listing the normal things in a landscape, and connecting them with the things which usually occur in human life;

6. *Kalan gaeaf* (November 1): 27 lines describing a wintry landscape, interlaced with gnomes about youth and old age;

7. *Bit goch crib keilyawc* (Red is the cock's comb): 54 lines describing different parts of a landscape, with deliberations concerning the life of bards and warriors;

8. *Bit gogor gan iar* (There is cackling from the hen): 42 lines describing the colours and the shapes of lakes and the sea, interlaced with deliberations concerning different aspects of human life;

9. *Mis Ionawr, myglyd dyffryn* (The month of January, the valley is smoky): this poem, also known as 'The Verses of the Months', describes in 12 8-line stanzas how landscapes change at the coming of different seasons, with added deliberations about human life.

Although *englynion* are often quoted as the only examples of Welsh nature poetry, other texts could be included, for example, a few poems preserved in Llyfr Taliesin. The so-called 'List of Pleasant Things of Taliesin' (*Addwyn aeron amser cynhaeav*, 'Pleasant are fruits in the season of autumn') is a catalogue of natural elements and human matters. *Cad Goddau* (also known as 'The battle of the trees') is a poem of 250 lines, the central section of which tells the story of a battle fought against an army of Britons by a formation of 34 species of trees. It can be easily read as an example of a landscape epic (Benozzo, *Quaderni di semantica* 19.319–25). In other poems of *Llyfr Taliesin*, descriptions of different landscape elements (mountains, rivers, and exposed rock platforms at low tide) can also be found.

§4. interpretations

Irish nature poetry has for a long time been interpreted as an expression of ascetic anchoritism practised by monastic hermits (Flower, *Irish Tradition* 24–66; Jackson, *Studies in Celtic Nature Poetry* 93–109; Murphy, *Studies* 20.87–102), and sometimes as the remains of hymns to pre-Christian nature divinities (Cataldi, *Quaderni Medievali* 17.13–22, 19.53–63; Heaney, *Pre-occupations* 181–9). In more recent scholarship, these views have been strongly disputed (Ó Corráin, *Sages, Saints, and Storytellers* 251–67). New theories have been suggested, such as the possibility that nature poems, which are often preserved as later additions written on the margins of 'technical' manuscripts (treatises of metrics and grammars), were composed with more than the description of nature in mind. For example, *Dom-farcai fidbaide fál* has been interpreted as a sequence of lines with the main purpose of providing an example of a particular alliterative metric form (Ford, *Celtic Connections* 1.162–70). Nevertheless, these studies, which have the merit of seeking to read texts apart from critical preconceptions, do not explain why nature subjects were chosen rather than other subjects. In any interpretation, it is also important to consider the numerous poems describing nature which are found as integral parts of longer narrative works such as *Buile Suibhne* (Suibne's madness; see suibne geilt), the immrama, the metrical dindshenchas, or Lebar Gabála Érenn ('The Book of Invasions').

Another recent approach has concentrated on the concrete analysis of landscape elements (Muhr, *Celtica* 23.193–210) and the study of style, often in the light of comparative literature (Tymoczko, *Éire-Ireland* 18.4.17–39). Nature poetry is also considered as valuable and unique evidence for the way the natural environment was perceived in medieval Ireland (Benozzo, *Landscape Perception in Early Celtic Literature*).

Welsh nature poetry poses even more difficult problems, since nature descriptions are here interlaced with gnomic sentences, characteristic of wisdom literature. Different interpretations have been

suggested in an attempt to explain this. *Englynion* have been seen in several different ways: (1) as an assembly of two traditions, a meeting of a tradition of nature poetry with an originally distinct tradition of gnomic poetry (Jackson, *Studies in Early Celtic Nature Poetry* 176–92); (2) as memories of shamanic transmigratory spirit journeys (where knowledge and experience of nature are connected; see Ford, *Poetry of Llywarch Hen* 61); (3) as metaphoric-symbolic literary expressions (nature descriptions used as a corroboration for the gnomic statements; see Thomas, *Y Traddodiad Barddol* 93–6; Jarman, *Guide to Welsh Literature* 1.81–97; Rowland, *Early Welsh Saga Poetry* 206–16); (4) as deliberately intended by poets to create a sense of confusion in a medieval audience, conveying a vivid sense of paradox to invoke the wondrous complexity of the world (Tymoczko, *Proc. Harvard Celtic Colloquium* 3.5–19); (5) as texts pointing out the irresolvable but necessary relation between society and wilderness, the inside and the outside, the sacred and the secular, the meaningful and the meaningless (Higley, *Between Languages*).

Considering the gnomic character of these texts, one can say that by describing faraway landscapes and places, the poet is eager to demonstrate his own knowledge of the world, in order to give authority to his statements of universal truth. Thus, the landscape framework represents a type of visible and articulated context which connects the other apparently isolated observations about human life (Benozzo, *Poeti della marea* 23–30; *Quaderni di semantica* 21.133–49).

Nauportus

According to STRABO, in the 2nd century BC Nauportus (now Vrhnika, Slovenia) was one of the most important Celtic trading centres east of the Italian peninsula (for background on the Celts in the area, see ADRIATIC REGION with accompanying map). The significance of the trade route which passed over Ocra (now Mount Nanos, Slovenia) to Caput Adriae and along the course of the Ljubljanica river was also described by Apollonius Rhodius in his account of the voyage of the Argonauts. According to Apollonius, the Argonauts had sailed from the Black Sea up the DANUBE and Sava to Nauportus and then carried their legendary ship, the Argo, on their shoulders all the way to the eastern shore of the Adriatic. Thus, we can infer from these sources that, as a Celtic port and emporium, Nauportus was in existence as early as the 2nd century BC. This is supported indirectly by finds such as the discovery of a 30-metre-long cargo boat (*pontium*) found near Lipe, Slovenia, in the central part of the Ljubljana bog.

LA TÈNE finds of the type which might imply the presence of IRON AGE Celtic-speaking groups are scarce in Vrhnika itself, but from the nearby Ljubljanica river there is a large number of such finds, mainly metal items such as weapons and tools from the 2nd and 1st centuries BC. Among these finds there was a probable hoard containing an Augustan *gladius* 'sword' with a decorated silver head and a so-called Noric SWORD, together with some agricultural tools.

Early in the Roman period, at the beginning of the 1st century BC, Nauportus had been managed as a Roman *vicus* by merchants from Aquileia, now in Italy. *Nauportus* is a Latin name meaning 'ship port', and the earlier name of the place is not known. A trading site with large magazines surrounded by a circular wall has been identified on the right bank of the

Ljubljanica river; it was probably built in the second half of the 1st century BC. Within the settlement, there was a sanctuary devoted to a local goddess Equrna, whose name may be an archaic form of EPONA. Among the artefacts there is material typical for the Late La Tène TAURISCI, as well as some items imported from the Italian peninsula. Nauportus was completely destroyed during the unrest which followed the death of Augustus in AD 14.

With the formation of the Emona colony (later Ljubljana) in the 1st century AD, the importance of Nauportus declined rapidly but later resumed when the site was included in the imperial defence network during the late Roman period. On Saint Pavel hill, a pentagonal fort with a nearby military watchtower and a 10-kilometer defensive wall was built, which secured the passage from the Ljubljana bog to Longaticum (modern Logatec), as well as two main routes leading to Italy. In the course of the 5th century AD, with the reorientation of trade routes occasioned by the decline and fall of the Western Empire, Nauportus gradually faded away.

Navigatio Sancti Brendani (The voyage of St BRENDAN) is a Latin prose tale of around 12,500 words. It survives in over 120 manuscripts throughout Europe and is Ireland's most widely-read contribution to medieval literature. The tale, which contains a very detailed description of monastic life, concerns the seven-year voyage of the patron of Clonfert, Co. Galway (Cluain Fearta, Contae na Gaillimhe), via many islands to the *Terra Repromissionis Sanctorum* (Promised land of the saints). Recent scholarship places the writing of the *Navigatio* towards the end of the 8th century. The *Navigatio* appears to arise from a sub-genre of voyage episodes in 7th- and 8th-century Hiberno-Latin saints' *vitae* (HAGIOGRAPHY); the tale itself strongly influenced the development of the Irish genre of VOYAGE LITERATURE, Old Irish IMMRAMA.

Nechtanesmere is the place where, on 20 May 685, BRUIDE MAC BILI, ruler of Fortrinn in Pictland, crushed the invading Northumbrian army and killed their king. It is difficult to overestimate the historical significance of this battle. As was recognized by BEDA, who was writing 46 years later, the battle marked a decisive and permanent contraction of Northumbrian power; for a translation of the passage, see the article on the defeated king, ECGFRITH. Even a hundred years later, northern lands which had been under Northumbrian overlordship during the reigns of Ecgfrith, his father OSWYDD, and his uncle OSWALD continued to flourish in independence; these included the PICTS, Scottish DÁL RIATA, and the BRITONS of Alt Clut (Dumbarton, precursor of Viking-age YSTRAD CLUD and CUMBRIA). By the mid-9th century, Dál Riata and Pictland were coalescing as the Gaelic-dominated kingdom of ALBA, which increasingly came to act as the dominant partner with Strathclyde/Cumbria. With Alba's annexation of Anglian LOTHIAN in the period 973–1018, what had been Ecgfrith's Northumbria was itself dismembered, and the fortunes of an early united Scotland reached a high-water mark *vis-à-vis* those of England.

Nechtanesmere is an English name signifying the lake of someone with the Pictish name NECHTON. In the Irish ANNALS the battle site is called *Dún Nechtain* 'Nechton's fort'. HISTORIA BRITTONUM (§57) maintains that Ecgfrith had gone to seek tribute from the Picts and calls the engagement by the completely different Old Welsh name *gueith Linn Garan* 'the battle of the crane lake', which indicates a distinct tradition and, possibly, that speakers of BRYTHONIC were involved on the scene as well as affected by its consequences. Many modern writers have identified the site as Dunnichen in Angus (Dùn Eachainn, Aonghas), which raises the fascinating possibility that the nearby

monumental relief scene of a cavalry battle between Picts and Angles on the back of the Pictish cross slab at Aberlemno commemorates the great battle, even though the carving itself is about 100 years later. On the other hand, as Alex Woolf has recently pointed out, Beda's description of the site located in a constricted valley between mountains does not suit the Dunnichen area, but better describes another Dún Nechtain further north. If the battle site was in fact in or beyond north-east Scotland's great mountainous massif, this might imply that this is also where Fortrinn was located, as well as the 4th-century tribe the Verturiones (whose name Fortrinn continues) mentioned by the Roman historian Ammianus Marcellinus.

Nechton grandson of Uerb was a king of the PICTS *c.* 602–21. His name occurs as *Nectu nepos Uerb* in the early historical section of the PICTISH KING-LIST. He might be the same individual as the Nechtan mac Canonn whose death is noted in the ANNALS of Ulster in 621. Smyth has also suggested that Neithon son of Guiþno, king of the BRITONS of Dumbarton (see YSTRAD CLUD) at around this time, was the same man (*Warlords and Holy Men* 62–6). The name was not uncommon, either in Pictland or the GAELIC world. In the 'prehistoric' section (i.e. not paralleled in the Irish annals or other sources) of the Pictish king-list, notionally corresponding to the 4th and 5th centuries AD, there are two uncharacteristically informative notes concerning a king with a similar name and ancestral epithet. In the first, he is called *Necton Morbet filius Erip*, and we are told that in his reign the Irish Abbess Dairlugdach came from Kildare (Cill Dara) to found the church at Abernethy (Aburnethige) consecrated to God and St BRIGIT. Soon after in the king-list, we are told that *Nectonius magnus filius Wirp* was 'king of all the Pictish provinces' and that he gave 'Apurnethige' to God and St Brigit until Judgement Day. PICTISH *Morbet* probably means 'great-' (cf. Old Breton *mor*, Old Irish *mór* 'great'), and, therefore, the Latin epithet *magnus* looks like a straightforward translation. It is inherently more likely that Abernethy was founded as a daughter house of Kildare in the early 7th century, rather than the 4th or 5th. And this is where the Q-version of the king-list places the foundation. Therefore, the lengthy notes on Necton's foundation of Abernethy in the P-version of the list have probably been backdated erroneously, either as a simple scribal incorporation of marginal glosses into the wrong point of the main list, or as an intentional claiming of priority for Abernethy over the influential Scottish monastery of Iona (EILEAN Ì), the latter foundation being connected with King BRUIDE MAC MAELCON (†584).

On the name *Nechton*, see NECHTON SON OF DERELEI.

Nechton son of Derelei (r. 706–24) succeeded his brother Bredei as king of the PICTS. In a letter addressed to him around 710 by Ceolfrith, Anglo-Saxon abbot of Jarrow, he is called *excellentissimus et gloriosissumus rex Naitanus* 'most excellent and most glorious king Naitan'. BEDA calls him *Naiton rex Pictorum* in the *Historia Ecclesiastica* (completed in 731, when Nechton was still alive).

Nechton is a key figure for the church in Pictland and for political relations between the Picts, SCOTS, and Northern English, as well as for internal Pictish struggles, but we do not have a full account of his life and reign. The ANNALS of Ulster record a 'slaughter of the Picts' by the English (probably the Northumbrians) on the plain of Manaw (see GODODDIN) in 710. There, a young man, Finnguine son of 'Deile Roith', possibly another of Nechton's brothers, was slain. Around this time, perhaps as a result of Northumbrian military pressure, Nechton

wrote to Ceolfrith asking for advice on the question of the correct reckoning of the date of Easter (see EASTER CONTROVERSY). Ceolfrith's lengthy reply is preserved by Beda (*Historia Ecclesiastica* 21). Naiton then had his kingdom adopt the Roman system in use at that time in Northumbria and the south of Ireland (ÉRIU), which was a major departure from tradition. The Picts had been converted to CHRISTIANITY by St COLUM CILLE of Iona (EILEAN Ì) in the 6th century. The clergy of the Columban federation, including those in Pictland, remained staunch adherents of the alternative insular Easter until 716. Nechton sent a party of dissenting monks back to Iona. His friendship with CURETÁN of Rosemarkie (Ros Mairenidh), who belonged to the group adhering to the Roman Easter, must be seen in this light.

After Nechton was forced by a rival named DREST to retire to a monastery in 724, a dynastic war broke out, during which up to four princes contended for the kingship of the Picts. These were—besides Nechton—Drest, ELPIN, and the formidable ONUIST son of Uurguist. Nechton briefly regained power in 728 after defeating Elpin, but then lost in a final battle against Onuist. Nechton seems to have survived to retire a second time to his monastery, where he died in 732.

The name *Nechton* recurs for several individuals in the PICTISH KING-LIST. Equivalent forms occur also in Old Irish, as both *Nechton* and *Nechtan*. The Welsh cognate is *Neithon*, which sometimes appears also as *Nwython*; both spellings are found, for example, for a 6th-century king of Dumbarton (see YSTRAD CLUD). It is likely that the spellings in Beda, *Naiton* and *Naitan*, reflect the PICTISH pronunciation (perhaps /*naiton*/), which was closer linguistically to the Welsh treatment than to the Irish. The name is clearly Celtic and may be related to that of the Roman god of the waters, Neptūnus, a connection suggested by the fact that an Irish supernatural being named Nechtan figures as the spouse of BÓAND, the goddess and namesake of the river Boyne.

Nemain (also Nemon, Neamhan), BODB, and MACHA comprise the collective Irish war goddess known as the MORRÍGAN. The triad has been likened to the Greek Furies (as vengeful supernatural female beings). The Irish BANSHENCHAS (lore of women) groups Nemain with Bodb, Macha, Morrígan, and sometimes Ériu, BANBA, ANU, and Danu, as daughters of Ernmas (see also TUATH DÉ). Nemain, whose name means 'madness', 'panic', or 'frenzy', purportedly incited warriors to savagery. When she assumed the form of a *badb catha* (crow of battle), Nemain's shrieks created panic and frenzy among enemy troops, causing them to die of fright. Medieval Irish GLOSSARIES and narratives identify Nemain as a consort of an Irish god Nét, whose name means 'battle' (there are linguistic obstacles to the possible correspondence with the CELTIBERIAN divine name *Neton*). Although etymologies based on *neim* 'poison' and *nemet* 'sacred space' (see NEMETON) have been proposed, the derivation of the name Nemain remains uncertain. In Welsh tradition, there is a Nyfain (variant: Nefyn) who figures as the daughter of the semi-legendary Welsh king of Irish origin, BRYCHAN of BRYCHEINIOG. *Nyfain* is likely to be the same name as *Nemain*, given the Irish family connections, probably a borrowing from IRISH.

Paula Powers Coe

Nemeton is a term for natural space dedicated to pre-Christian Celtic religious activity. Non-structural spatial frames for ritual, *nemeta* utilized various natural sites, but were implicitly sacralized stands of trees, e.g. Irish *fidnemed* 'sacred wood', or clearings within groves such as the one near MASSALIA (Marseille) which LUCAN's *Pharsalia* describes. An inscription

from Vaison, France, commemorates a *nemeton* established to honour Belisama:

> CEƓOMAPOC | OƳIΛΛONEOC | TOOƳTIOƳC | NAMƳCATIC | EIPOƳBHΛH|CAMI|COCIN | NEMHTON
>
> Segomāros Uilloneos, tribesman of Nîmes, granted this Nemeton to [the goddess] Belesama.

In Galatia, *Drunemeton* 'sacred place of oaks' was the site for annual assemblies of the twelve tetrarchs and their 300-person council (see also galatian). Wherever Celts lived, *-nemet-* provided a component of tribal names (*Nemetes*), gods' names (*Nemed*, Nemetona, *Mars Rigonemetis*, and *Arnemetia*), and place-names (*Aquae Arnemetiae, Medionemeton, Nemetodurum, Nemetobriga, Nemetacum*, and *Vernemeton* [cf. the early Old Welsh man's name *Guornemet*]). The Celtic masculine name **Nemetios* ('man of privileged rank' or 'man belonging to a sacred place') occurs in an Etruscan graffito, *mi Nemetieś*, of the 5th century bc (see further proto-celtic). A cartulary from the abbey of Quimperlé (Kemperle), Brittany (Breizh), dated 1031, mentions woods called *Nemet*, and an 18th-century Belgian document refers to sacred woods called *Nimid* near Lobbes. In a Gaulish dedicatory inscription in Greek script from Villelaure, NEMETOC *nemetos* is a masculine singular noun referring to something 'sacred' offered to a god (see inscriptions [1] §3). In Old Irish, *nemed* is an important socio-legal term meaning 'privileged person, dignitary, professional, sacred place, land owned by a privileged person, sanctuary, privilege' (Kelly, *Guide to Early Irish Law* 318 & throughout). In Early Welsh, the cognate word *nyfed* occurs in the heroic elegies of the Gododdin in the phrase *molut niuet*, to be understood as 'the [poetic] praise of dignity, rightful privilege, privileged places, persons'.

Nemetona is a goddess whose name is based on the Celtic root *nemeto-* 'consecrated space, grove'. She possibly personified the concept of sacred space, likewise Romano-British Arnemetia (see nemeton). Almost certainly the eponymous deity of the Nemetes, a Germano-Celtic tribe, Nemetona is attested throughout their territory. She was honoured individually on a bronze inscribed NEMETON(AE) found at Klein-Winternheim, and is linked with Mars (MARTI ET NEMETONAE) at Altripp and at Trier (MAR(TI ET) NEM(ETONAE)), where she was depicted in terracotta. At Bath, England, her name is paired with that of Loucetios Mars (cf. interpretatio romana), LOVCETIO MARTI ET NEMETONA, on an altar dedicated by a man of the Treveri.

The Alphabet of Nemnivus in 'St Dunstan's Classbook' (Oxford, Bodleian Library, MS Auct. F.4.32, 9th century, fo. 20r)

Nemnivus, the Alphabet of, is an early 9th-century Old Welsh text which gives invented names for the letters of an alphabet based on Anglian runes (see scripts). It survives in a contemporary manuscript of *c.* 817. The text is primarily of interest in preserving items of Old Welsh vocabulary as letter names, as follows:

A *alar*, 'boredom, surfeit' (obsolete in Mod. Welsh)
B *braut*, Mod. *brawd* 'brother' or 'judgement'
C *cusil*, Mod. *cysul* 'counsel' < Latin *consilium*
D *dexu* ?
E *egui*[*n*], Mod. *ewin* '(finger/toe) nail' or *ewyn* 'foam'
F *fich* ?
G *guichr*, Mod. *gwychr*, *gwychyr* 'violent, fierce, bold'
H *huil*, Mod. *hwyl* 'sail', also 'joy'
I [*i*]*echuit*, possibly Mod. *iechyd* 'health' or *echwydd* 'fresh water'
K *kam*, Mod. *cam* 'step' or *cam* 'crooked, wrong'
L *louber*, Mod. *lleufer* 'light, illumination'
M *muin*, Mod. *mwyn* 'amiable, pleasant'
N *nihn* ?
O *or*, 'boundary, edge'

neo-druidism

Contemporary 'spiritual', 'esoteric' or 'religious' druidry is a complex phenomenon which encompasses varied groups and individuals including pagan, Christian, and New Age practitioners; self-styled Zen druids and Hassidic druids; Hermetic druids primarily

concerned with magic; and, via the Internet, Cyberdruids (e.g. Omniversal CyberDruids Grove).

Many modern groups trace their roots to the 18th-century druidic 'revival', particularly the Ancient Order of Druids which, in the 19th century, spread widely in America, Canada, Australia, and Europe. The late 19th-century Golden Dawn movement has also been influential in some branches of druidry. However, the latter half of the 20th century saw a great proliferation of new 'believing' druidic groups in Britain, Ireland (Éire), Europe, America, Australia, and New Zealand (see Carr-Gomm, *Druid Renaissance*), in parallel with the growth of Paganism, alternative spirituality, and religious Celticism (see Bowman, *Belief Beyond Boundaries* 55–101).

Many contemporary practitioners refer to Greek and Roman accounts for information about druidry, accepting from them the importance of learning and the ritual use of mistletoe, oak trees, and groves, although human sacrifice is more controversial. (Some modern druids reject accounts of human sacrifice as a slur by hostile outsiders, while others explain that for a willing victim acting for the good of the community it would have been a great honour.) The social and religious position of the druid in classical literature is often equated with that of the Brahman in Hinduism, a tradition with which druidry is frequently compared (see Robinson, DISKUS 6).

The contemporary druid's ritual year is shaped by the Celtic or 8-fold calendar (see Bowman, *Belief Beyond Boundaries* 55–101), with summer and winter solstices regarded as particularly important, a view reinforced by the 'archaeoastronomy' of writers such as Hawkins, Thom, and Hoyle.

The connection between druidry and Stonehenge, made by Aubrey in the 17th century and reinforced by Stukeley in the 18th century, continues to be articulated and acted upon by contemporary druids. In 2001 *c.* 14,500 people (assorted druids, pagans, and New Age practitioners) attended summer solstice celebrations at Stonehenge (see midsummer's day). Some druids believe that Stonehenge was built by, or more correctly for, druids. Others, accepting the archaeological evidence that its construction significantly pre-dates the arrival of 'historical' druids, nevertheless suggest that 'proto-druids' might have built it, or consider that, on account of its obvious sacredness and importance, it would have been used by druids as a ritual site. (One druid myth is that in the 1980s a hoard of golden sickles was uncovered at Stonehenge, 'proving' the connection between druidry and Stonehenge, but this was 'hushed up' by the authorities who opposed the rights of druids to have free access at festival times for ceremonial purposes.) While ancient sites such as Stonehenge and Avebury are used where possible, many stone circles have been, and continue to be, built for ritual purposes by druid groups in the British Isles, Europe, America, and Australia.

In some respects, modern druidry appears similar to the cultural bardism of the Welsh Gorsedd Beirdd Ynys Prydain or the Gorseth of Cornwall (Kernow): many groups meet in stone circles in 'the eye of the sun', wear long white 'druidic' robes of the type developed in the 18th and 19th centuries, and recite versions of the Gorsedd Prayer of Edward Williams (Iolo Morganwg; see Hale, *Cornish Studies* 2nd ser. 8.182–96). Several Gorseths have been established by contemporary druid groups, for example, the British Druid Order (BDO); these are frequently connected with sites perceived as sacred (e.g. Avebury, the Rollright Stones). However, people generally become bards at such Gorseths by self-selection, with no reference to Celtic language, by taking part in a ceremony during which the awen — 'the divine inspiration that flows, spirit to spirit, between the people, the land and the ancestors' (British Druid Order, *Awen*)—is conferred upon them.

Since some regard druidism as the native spirituality of the British Isles, the incorporation of elements from 'other' indigenous traditions seems logical; thus, didgeridoos are commonplace at druid rituals, there are druidic sweat lodges, and druid is commonly equated with Shaman (see Matthews, *Celtic Shaman*). Some druids in North America and Australia use druidry as a means of expressing their Celtic heritage and practising what they consider their ancestral religion; others strive to make creative links between druidry and the land, spirits, people, and religious practices of the places where they now reside.

Views as to whether druidry is a religion, a philosophy, a vocation, or a way of life vary between groups and individuals. The druids of École druidique des Gaules 'believe that, on the deep roots of druidry,

Emma Restall Orr 'Bobcat', head of the Druid network, and Philip Shalcrass 'Greywolf', head of the British Druid Order, at an Alban Hefin sunrise ritual at Stonehenge

Europe could be rebuilt, and that the spirituality of the Celts is the only one which represents the collective Indo-European heritage common to all Europe' (Shallcrass & Restall Orr, *Druid Directory* 80). The British Druid Order (formed in 1979) declares:

> Although we work with the long spiritual and cultural heritage of Britain, we are not bound by any one aspect of it. We are not seeking to recreate a Druidry that may have existed 5000, 2000, 200 or 50 years ago. Seeing Druidry as a process of constant change and renewal . . . the tradition is continually recreated to address the needs of each generation. (Shallcrass & Restall Orr, *Druid Directory* 52)

Very much in the spirit of Stukeley, who regarded druids as proto-Christians, there are Christian druids. Some, seeing druidry as both the precursor of and complementary to Celtic CHRISTIANITY, regard Celtic Christianity as a repository of druidic esoteric wisdom. Tim Sebastian of the Secular Order of Druids, for example, asserts: 'There was, it would appear, absolutely no conflict between the early Celtic Christian tradition and the pagan, or Druidic tradition' (Shallcrass & Restall Orr, *Druid Directory* 73). It is increasingly common to find druids involved in interfaith activity.

The Order of Bards, Ovates and Druids (OBOD), formed in 1964, claims: 'The Order is not a cult or religion—it simply represents a particular way of working with, and understanding the Self and the natural world.' Its aims are to 'help the individual develop his potential—spiritual, intellectual, emotional, physical and artistic' and to 'work with the natural world, to cherish and protect it, and to co-operate with it in every way—both esoterically and exoterically' (OBOD publicity leaflet). In 1988 OBOD established a correspondence course in druidry, enabling people to progress, through readings, tapes, and workbooks, through the different grades, from BARD to Ovate to Druid. Other groups and individuals also offer training and formal qualifications in druidry.

The extent to which contemporary druid belief and practice relate to the ancient religion of the Celts described by classical authors is a moot point. It is best seen as a highly eclectic, multiform, sometimes idiosyncratic, but undoubtedly flourishing phenomenon, symptomatic of the diversity, flexibility and creativity of contemporary spirituality.

Nerthus was a goddess known to have been worshipped during the later pre-Roman and peri-Roman IRON AGE in what is now Germany. It is likely that her worshippers were primarily speakers of Germanic, rather than Celtic. However, since her name is quite similar to an important Celtic word and term of honour, and because rituals documented

for her have their closest analogues in Celtic religion, Nerthus has entered into Celtic studies in discussions of pre-Roman Celtic beliefs and ritual (see RELIGIOUS BELIEFS). She was honoured by the Suebi, a loose confederacy of tribes who possibly originally contained a Celtic-speaking element, but by the time they had become a factor in the Migration Period of the 4th to 6th centuries AD the Suebi were clearly dominated by Germanic speakers. Before the tribes beyond Rome's frontier had seriously encroached on the Western Empire, the Suebi lived just east of the RHINE. The Roman historian TACITUS likened Nerthus to the Roman *Terra Mater* 'Mother earth' and distinguished the Suebi from other Germanic groups because they worshipped her. Her followers believed that Nerthus participated in human affairs, riding among them in a CHARIOT which was otherwise veiled in cloth and kept within a protected grove on an island in a lake (see NEMETON). Only her priest was allowed to touch the chariot, which he accompanied as cows pulled it around the countryside. A comparable cult of a living female divinity to be contacted by mortals only through the agency of special priestly intermediaries is the Bructerian prophetess VELEDA. At each place which Nerthus' chariot visited, festivals were held, and during that time people avoided warfare and concealed all iron objects. Upon returning to the sacred precinct, the chariot, vestments, and a statue or icon of the goddess were purified in the lake by slaves who were then drowned.

The name *Nerthus* probably means something similar to 'the strong one', and is cognate with Old Irish *nert*, Welsh *nerth*, Breton *nerzh*. However, there is a possibility that the deity name is not Celtic at all, but Germanic (Pokorny, IEW 765).

Paula Powers Coe

Ní Dhomhnaill, Nuala (1952–) was born in England to IRISH-speaking parents and spent part of her childhood with her mother's family in the West Kerry GAELTACHT. After graduating from University College Cork (see CORCAIGH), where she was a member of the INNTI group, she spent seven years in her husband's native Turkey 'in a freezing flat on the Anatolian plateau'. She returned to Ireland (ÉIRE) in 1979, having received a bursary for creative writing from the Irish Arts Council. She has received numerous awards for her poetry, including the O'Shaughnessy Award (1988) and the America Ireland Fund Literary Award (1991). In 1992 she became the first writer in residence at University College Cork. Having been Visiting Scholar in Irish Studies at the Burns Library, Boston College, and Heimhold Visiting Fellow at Villanova University in Philadelphia, she was appointed to the Ireland Chair of Poetry in 2001. She is a member of Aosdána (the Irish Literary Academy).

Although she writes in Irish, Ní Dhomhnaill's work is read primarily in translation, her translators including most of the major contemporary Irish poets. However, these translations are frequently inaccurate, and in many cases owe more to the translator than to the author.

Consciously autobiographical, Ní Dhomhnaill's best work is characterized by the poet's identification with various female personae from Irish folklore and from both Irish and Eastern mythology, which has resulted in a highly imaginative and original representation of the female psyche.

Ní Mhic Cailéin, Iseabail (*fl. c.* 1500) was a poet who worked within the Clan Campbell court circle, which also included Donnchadh Caimbeul of Glenorchy (Gleann Urchaidh). Two of her poems, both of them tender and accomplished poems of courtly love—composed in strict *dán díreach* conventions (see metrics)—are included in the Book of the Dean of Lismore. The identity of the poet is uncertain, since the name Iseabail was borne by daughters of both the first earl, Cailean (†1493), and the second earl, Gilleaspuig (†1513). The first earl was himself the author of a poem in a similar vein, preserved in the same manuscript, and he was married to an Iseabail. This ought to be Iseabail, countess of Argyll ('Contissa Ergadien Issobell'), author of a poem in praise of the penis of her household chaplain (Quiggin, *Poems from the Book of the Dean of Lismore* 78; Frater, 'Scottish Gaelic Women's Poetry up to 1750' 354), although Watson thought Iseabail Ní Mhic Cailéin was the same woman as the Countess, taking her patronymic as her 'married name' (*Scottish Verse from the Book of the Dean of Lismore* 307), and this has been accepted by many, including Thomson and Frater. This poem brings us more directly into the bawdy environment of the poetry of Donnchadh Caimbeul.

Thomas Owen Clancy

Niall Noígiallach mac Echach ('Niall of the Nine Hostages', †?427/8) is considered the ancestor of the Uí Néill, patrilineal lineages who, divided into two main branches, became the predominant dynasties in early medieval Ireland (Ériu), with their power concentrated particularly in western Ulster and the Midlands. From the time of Diarmait mac Cerbaill (r. 544–65) down to that of Brian Bóruma (†1014), the overking who had risen to pre-eminence from within the parallel branches of Niall's descendants usually monopolized the prestigious office of *rí Temro* (king of Tara/Teamhair), which evolved towards a notional, and eventually an actual, high-kingship of Ireland. Although we do not have contemporary annals or other written records for Niall, nonetheless, he is so well and consistently attested in genealogies, the tales of the Kings' Cycles, and other early medieval texts, that his historicity is not in doubt. In the genealogies, he is a descendant of the legendary king Cormac mac Airt, grandson of Conn Cétchathach, from whom the Connachta, the province of Connacht, and *Leth Cuinn* (meaning the northern half of Ireland) are named. Thus, the ancestors of Niall and the Uí Néill figure as the opponents of the Ulaid in the legendary struggle that forms the background of the Ulster Cycle. Niall's father was Eochaid or Eochu (great-great grandson of Cormac); some strands of evidence suggest that he was involved with Irish slave-taking which is attested in Roman sources as affecting Britain in the later 4th century: his obscure epithet *Muig-medón* can be interpreted as 'owner' or 'ruler of slaves', with the second element a loanword from Brythonic (the medieval glossators' 'moist-middle' explanation, referring to his alleged irritable bowel, is ignorant guesswork). In the saga of *c.* 1000 *Echtra Mac nEchach Muig-medóin* ('The Adventure of the Sons of Eochaid Muigmedón'), Niall is Eochaid's son by a British slave-woman Cairenn Casdub (her name is the Irish reflex of the common Romano-Celtic name *Carina*; the epithet means 'black-hair'). Niall's rivals were his four half-brothers, sons of the maliciously jealous queen Mongfhind (Fair-hair). For the allegorical episode in *Echtra Mac nEchach* in which Niall wins the kingship for himself and his progeny, see echtrai; sovereignty myth. Niall's epithet *noígiallach* ('of the nine hostages', from *noí* 'nine' and *giall* 'hostage') is sometimes explained as relating to nine tribes who owed him tribute, later known by the collective name Airgialla (lit. 'those who give hostages'); their territory was situated in central Ulster.

Hoard from Niederzier, Düren, Germany, including three torcs and Celtic coinage of the Vindelici and Ambiani

Nicander of Colophon (*c.* 200–130 BC) was a Greek writer who gives us our earliest reference to a Celtic belief in life after death, as preserved in the Christian apologist Tertullian (*De Anima* 57.10):

> It is often asserted that the dead appear to us in dreams at night. For Heraclides or Nymphodorus or Herodotus write that the Nasamones receive special visions by spending the night at the tombs of their ancestors. The Celts remain through the night at the graves of their famous men for the same reason, as Nicander affirms.

This account can be compared with several stories in the Celtic literatures and folklore in which mortals contact supernatural beings or dead heroes, specifically in special places which serve as points of contact with the Otherworld. For example, the Ulster Cycle tale *Faillsigud Tána Bó Cuailnge* (How Táin Bó Cuailnge was found) is similar in that the saga is recovered by raising the shade of one of the great heroes of the Ulaid, Fergus mac Róich, from his grave.

Niederzier is a village near Düren (Rhineland) where, during an emergency excavation caused by an encroaching opencast lignite mining site, a settlement of the Late La Tène period (*c.* 200–*c.* 50 BC) was found. The settlement, identified on a large site east of present-day Niederzier and excavated between 1978 and 1982, was surrounded by a double ditch 3–5 m deep and was roughly oval in shape, measuring 210 × 170 m (2.75–3 ha, *c.* 7 acres). In the western part was a pit containing a central RITUAL post. Nearby, a hoard of gold objects, concealed under two broken clay bowls dating to the 1st century BC (La Tène D), was found. This hoard consisted of three gold neckrings (see TORC), partly broken, and gold Celtic COINAGE. The objects were probably depositions of votive offerings to an unknown deity worshipped at the site and connected with the activities at the nearby pit and post. The neckrings show close parallels to the torcs found in Iron Age hoards in southeast Britain at Snettisham and Ipswich; since they were damaged, they were probably deposited after they had been used and discarded. Of the 46 coins, 26 are *regenbogenschüsselchen*, i.e. coins from the East La Tène area, specifically from the territory of the Vindelici. This source is suggested by the characteristic Vindelician pattern struck into the coins, which shows birds' heads and a so-called 'cross-star' (*Kreuzstern*). The decoration of the other 20 coins suggests an origin in the west, in the territory of the Ambiani (around the

modern town of Amiens), one of the tribes of the BELGAE in northern GAUL. The coins are dated to the 1st century BC and had probably originally been held in a small leather or cloth bag. Similar HOARDS in earthenware vessels have been found in Jersey in the Channel Islands.

PEB

Ninian, St, was the most important saint of the monastery, later cathedral, of WHITHORN in Galloway, Scotland (Gall Ghàidhil, ALBA). As Nynia or Nyniau he was remembered by historians of the Northumbrian church regime which took over south-western Scotland in the late 7th or early 8th century. They ascribed to him British origins, a Roman training, missionary work among the 'southern PICTS', and a host of miracles, mainly healing ones, at his tomb in the church. Our two main witnesses to these traditions are BEDA in his *Historia Ecclesiastica* (731) and an anonymous *Miracula Nynie Episcopi*. The miracles attributed to the saint are predominantly ones experienced by Northumbrians; reverence for the local saint clearly managed to cross 'ethnic' lines. In the 12th century both his church and bishopric, and his cult were revived in a climate of reorganization and reform. A revised Life was produced by the Cistercian Aelred of Rievaulx, who used the form Ninianus, the form we know today.

Most of the church dedications to Ninian would appear to date from the 12th century or later, when his cult was keenly patronized by Scottish kings (Watson, *History of the Celtic Place-Names of Scotland* 293–7; Clancy, *Local Saints and Local Churches* 397–421). Doubt has been cast through the years on various aspects of the traditions regarding Ninian (Chadwick, *Trans. Dumfriesshire and Galloway Natural History and Antiquarian Society* 27.9–53; Clancy, *Innes Review* 52.1–28). The chronology derived from Aelred, who has Ninian meet monks of St Martin of Tours bringing news of his death (397), has long been thought unlikely among scholars, and is unsupported by the 8th-century material, though it persists in popular writing. Alan Macquarrie has argued for a 6th-century floruit for the saint (*Records of the Scottish Church History Society* 23.1–25; *Saints of Scotland* 50–73); this would tie in with the archaeological evidence which has no clear sign of an ecclesiastical establishment prior to *c.* 500 (cf. Hill, *Whithorn and St Ninian*). His Pictish missionary efforts are effectively unsupported by other evidence for attaching early Christian remains north of the Forth to his name. The profile of Ninian in the 8th-century HAGIOGRAPHY is suspiciously redolent of Northumbrian reformist agenda (Chadwick, *Trans. Dumfriesshire and Galloway Natural History and Antiquarian Society* 27.9–53; Clancy, *Innes Review* 52.1–28; Fraser, *Innes Review* 53.40–59). Recently, the fact that there is little or no trace of an early cult in the vicinity of Whithorn has been noticed, and the possibility that there has been some confusion between a local and popular cult of St UINNIAU (a.k.a. Finnian of Moville) and an essentially created literary cult of Nyniau has been mooted (Clancy, *Innes Review* 52.1–28). None of this detracts from the early importance of the ecclesiastical centre at Whithorn, or the importance of Ninian's cult and pilgrimage site in the later Middle Ages (see Metcalfe, *Legends of the Saints* 2.327–45).

Thomas Owen Clancy

Nisien (Middle Welsh Nissyen) and his cruelly malicious brother EFNISIEN figure in the Second Branch of the MABINOGI as sons of Euroswydd by

Penarddun, daughter of Beli Mawr son of Mynogan; thus, they are maternal half-brothers of the protagonists Branwen and her brother Brân. For a summary of the story, see Branwen. Compared to Efnisien, whose misdeeds propel the narrative, Nisien's rôle is minimal, mostly as a stark contrast to his brother, as set out in the opening: 'he was a good youth; he used to make peace between two hosts, when they were most enraged'. Interestingly, this corresponds almost exactly to what is said of the druids and bards by Diodorus and Strabo, following the ethnographic tradition of Posidonius, in the passage translated at druids [1] §8. The parallel does not necessarily mean that a tradition of the pre-Christian Celtic priests has survived in the Welsh tale, rather more probably, that Celtic narrative retained this vivid stereotypic way of expressing great moral goodness. Nisien is said to have been present at *Branwen*'s climactic expedition to Ireland (Ériu), but he is not in the list of seven survivors and thus, we assume, he died in the great battle. The name is not common, but appears also, presumably as that of the founding saint, in Old Welsh *Lann Nissien*, now Llanishen, in Tryleg, Gwent. Llanisien near Cardiff (Caerdydd) was OW *Lann Yssan* and was therefore probably a different name, commemorating the 6th-century abbot Isan.

Nōdons/Nuadu/Nudd

§1. nōdons in roman-britain

Nōdons (also Nōdens, and Nūdent-) is the name of a Celtic god whose cult has been attested by several inscriptions from present-day England, one from Cockersand Moss in Lancashire and three from Lydney Park in Gloucestershire. On one of the (now lost) inscriptions to Nōdons from Lydney he is equated with Mars (see interpretatio romana). The archaeological context at Lydney suggests that Nōdons had an acquatic quality since many bronze plaques of fishermen, ichthyocentaurs (creatures with a human head and torso, the legs and body of a horse, and the tail of a fish or dolphin), and other sea-monsters have also been found at this site. Many images of dogs were also found at Lydney, which is also suggestive, given the later associations of the Welsh figure Gwyn ap Nudd with hunting (see below). The temple at Lydney is located on a hilltop in what had been a pre-Roman hill-fort (oppidum) overlooking the Severn estuary. This elaborate Romano-Celtic temple and bath complex clearly enjoyed influential patronage. It is remarkable in that it is dated to the later 4th century, at which time Christianity was the official religion of the Roman Empire and was well established among the prosperous Romanized classes of the Lydney region, which was part of the civil zone of Roman Britain, complete with wealthy villas and towns.

§2. nuadu

The Irish mythological figure equivalent to Nōdons, in name at least, was Nuadu, gen. Nuadat (attested in a late ogam inscription). In the early Middle Ages, Nuadu was also a fairly popular man's name in Ireland (Ériu). It was, incidentally, the name of the chief scribe of the Cambridge Juvencus manuscript, whose work (*c.* 900) was primarily in Latin and Old Welsh. His name suggests that he was an Irish scholar working in Wales (Cymru).

In early Irish literary tradition, Nuadu can be equated with Nechtan, in view of shared aquatic attributes and also the combination of the name and the epithet *Nuadu Necht*, found in the early Old Irish genealogical poem, from which an extract is quoted below.

> 3. Swift in ships, he traversed the sea as a warrior of the west: a red wind, which dyed sword-blades with a bloody cloud.
>
> 4. Fergus Fairrge, Nuadu Necht, strong and brave: a great champion who did not love punishment from a rightful lord.

In the later 9th- or 10th-century mythological tale Cath Maige Tuired ('The [Second] Battle of Mag Tuired'), Nuadu is a prominent member of the pre-Gaelic inhabitants of Ireland, the Tuath Dé. In this tale, his regular epithet is *Argatlám* 'silver hand'. The epithet is explained there with an account of how Nuadu, when king and war leader of the Tuath Dé, lost an arm while fighting the sinister Fir Bolg in the first battle of Mag Tuired. This physical imperfection then disqualified Nuadu from the kingship. He was

replaced by Bres of the oppressive and demonic Fomoiri. Dian Cécht, the physician of the Tuath Dé, made a completely functional arm of silver for Nuadu. The epithet 'silver hand' appears also in the genealogies and in the early poem *Énna Labraid*.

§3. gwyn ap nudd and lludd llaw ereint

Later forms of *Nōdons*, the masculine NVDI and NVDINTI (both formally Latin genitives), occur in early post-Roman inscriptions from Britain. The dark-age North British prince *Nuδ Hael mab Senyllt* 'Nudd the Generous, son of Senyllt' figures as one of the 'Three Generous Men of the Island of Britain' in the Welsh triads (TYP no. 2). *Nudd* also occurs as a personal name in other early Welsh texts.

In Irish genealogical doctrine, Nuadu is mentioned as the great-grandfather of Finn mac Cumaill. There is a parallel in the mythological figure Gwynn ap Nudd from Welsh legendary prose texts, since the Welsh name *Gwynn* is the cognate of early Irish *Find*, Modern Irish *Fionn* (see Bromwich & Evans, Culhwch ac Olwen 134–5; Brynley F. Roberts, *Lên Cymru* 13.283–9). In the Life of St Collen, a Welsh text surviving in a manuscript copy of 1536, the saint confronts Gwyn ap Nudd, king of Annwn (that is, the otherworld) at a wondrous castle situated near the monastery of Glastonbury.

Viewing the name with its epithet, the most exact equivalent to the Irish *Nuadu Argatlám* in Welsh mythology is *Lludd Llaw Ereint* (Lludd of the Silver Hand), who is mentioned twice in *Culhwch ac Olwen* (lines 367, 916). However, unlike the Irish sources, no story survives in Welsh to explain the epithet. That the Welsh equivalent of Irish Nuadu should appear sometimes as *Nudd* and sometimes as *Lludd* has probably come about through an irregular change in the initial sound of the name from *n-* > *ll-*, possibly as a noa or replacement name (that is, if there was a magical or religious reason not to say *Nudd*, a similar-sounding word might be substituted, as *heck* for *hell*). A likely reason for the development of *n-* > *ll-* is the attraction of the alliteration of the epithet that survives as *Llaw Ereint*. The name did clearly change at an early date in the lands north of the lower river Severn. There, the place-name *Lydney* is first recorded as Old English *Lideneg* in a source from *c.* 853. The meaning of the place-name is 'Lida's island', where the Anglicized personal name is to be explained as a borrowing from archaic Welsh */Lü:ð/* < British *Nōdons*. This borrowing probably occurred in the 7th century, when English speakers first came into the Lydney area. The same alternation is paralleled in Irish sources, where we can compare the place-names *Mag Nuadat/Mag Luadat* as well as the tribal names *Delbhnae Nodot/Delnae Lodot*.

In the Welsh tale Cyfranc Lludd a Llefelys, king Lludd of ancient Britain faces three supernatural oppressions or *gormesoedd*. The stricken and baffled Lludd is then assisted by his brother Llefelys. The latter, lacking an inheritance, lives in exile, having married the daughter of the king of France. In the first element of the name *Llefelys* we see the equivalent of the Celtic divine name which is attested elsewhere as Welsh Lleu, Old Irish Lug, Gaulish and Celtiberian Lugus. The plot of *Lludd a Llefelys* is broadly comparable to that of *Cath Maige Tuired* in that king Nuadu's people, the Tuath Dé (corresponding to Lludd's ancient British subjects) face supernatural enemies who are only routed by means of the ingenious leadership of the returned exile Lug (corresponding to the Welsh Llefelys). Thus, an argument can be made for *Cath Maige Tuired* and *Lludd a Llefelys* preserving cognate versions of an old Celtic myth of the stricken divine king Nōdons and his resourceful rescuer and returned exile Lugus.

§4. stair nuadat find femin

Stair Nuadat Find Femin ('The Story of Nuada Find Femin') is a 15th-century Early Modern Irish narrative. It survives in a single manuscript written by Uilliam Mac an Leagha, who was probably also the author of the text. *Stair Nuadat* describes the heroic biography of *Nuadu*, a character from the Tuatha Dé Danann of Irish legendary history, in terms of his initial expulsion as a result of his stepmother's machinations, and his final victorious return. His beardlessness is emphasized, as is that of Cú Chulainn in Táin Bó Cúailnge ('The Cattle Raid of Cooley'), but in the context of the (now incomplete) manuscript the explicit points of comparison for heroic conduct are Hercules, Guy of Warwick, and Bevis of Hampton (see ystorya bown de hamtwn), whose Irish biographies, probably also translated by Uilliam Mac an Leagha, are contained here. *Stair Nuadat* appears

to be intended as the native counterpart to *Stair Ercuil* ('The Story of Hercules'); Nuada and Hercules/Ercuil are pre-Christian heroes, while Guy and Bevis are popular Christian heroes of the recent past.

Nominoë/Nevenoe (*c.* 800–51; r. 831–51), the earliest well-documented ruler of an autonomous and united Brittany (BREIZH), holds an important place both in the history of Brittany and in the ideology of modern Bretons. Nominoë first appears in historical sources as count of Vannes (GWENED), though he himself is more likely to have come from the nobility of Poher (Old Breton Pou-Caer) in central Brittany and the diocese of KERNEV. He was a vassal of the Frankish ruler Louis the Pious (768–840; r. 814–40), who elevated Nominoë to the status of *missus imperatoris* (emperor's delegate) in 831. Nominoë is also sometimes called *dux* (leader, duke), as once in the Cartulary of REDON. He was instrumental in the foundation of the abbey of Redon, 832–4. Following the death of Louis, his three sons quarrelled over the way in which the Frankish Empire was to be divided. Charles the Bald (823–77; r. 843–77) was eventually granted dominion over the Western Empire by the Treaty of VERDUN in 843, but Nominoë was to rise in revolt against him. Historians disagree about the causes for this rebellion; one possibility is an attack on Vannes by the Count of Nantes (NAONED). Charles the Bald was defeated at the battle of Ballon in 845, and was forced to recognize the autonomy of Brittany in 846. Nominoë continued to expand the territories which he controlled, moving from Brittany into Maine and Anjou, but he died in 851 at the Vendôme.

Nominoë is described in later medieval sources as king of an independent Brittany; this is evidently in order to make him conform to the trope of the wicked king (cf. ARTHUR IN THE SAINTS' LIVES; CUNOMOR). Although historically suspect, the idea of Nominoë as king and liberator is an appealing one which has, at times, been promulgated by historians such as Arthur de la Borderie (1827–1901) and his followers. He has also been celebrated in literature, as in Jakez RIOU's play, *Nomenoe Oe!*

AM

Noricum was a Celtic kingdom in the eastern ALPINE region from around the 2nd century BC to *c.* 15 BC. It was a relatively stable confederation of at least twelve Alpine Celtic tribes, among them the TAURISCI, and also smaller tribes such as the Ambidravi 'those living by the river Drava' in Carinthia, the Ambisontes and the Ambilici. These tribal names are obviously Celtic, containing the compounding preposition *ambi* 'around, about'. They were all led by the Norici proper. The term *regnum* 'kingdom' for Noricum is somewhat misleading, since it was sometimes ruled by a single king, but at other times by a group of elders, probably the kings of their respective peoples (Dobesch, *Die Kelten in Österreich* 182–238). Its capital, Noreia, has not as yet been located. From the 2nd century BC to its peaceful annexation by the Romans, probably in 15 BC, it had strong economic links with ROME.

The main export product of Noricum was iron ore, which was noted for its high quality and was probably mined and processed in eastern Styria and the Burgenland (now Austria; see Meyer, *Archäologische Eisenforschung in Europa* 25–48). Its importance led to the creation of a Roman trading outpost on the MAGDALENSBERG in Carinthia in the early 1st century BC (Piccottini, *Aufstieg und Niedergang der römischen Welt* 2.6.263), later replaced by the Roman town of Virunum.

RK

Noviomagos, Modern Dutch Nijmegen, is a town on the southern bank of the RHINE near the eastern border of the Netherlands.

During the time of Julius CAESAR, the area around the later town of Noviomagos/Nijmegen was inhabited by tribes called the Tencteri and the Usipetes. Neither name is obviously Celtic, though *Tencteri* might be connected with the important Celtic socio-legal term reflected in Old Irish *téchtae*, Early Welsh *teithi* 'rightful entitlement(s)'. When the Roman commander Drusus made his attempt to conquer the tribes on the other side of the Rhine in 12 BC, the area was inhabited by the Batavi, and they had an OPPIDUM called *Batavoduron* at the spot where Noviomagos would later be situated. This name can be easily explained as a Celtic compound meaning 'fort of the Batavi'. The element *duron* 'fort, oppidum' is extremely common in and around the lands of the Continental and British BELGAE.

The Romans founded two *castra* (forts) at the site during the reign of Augustus (30 BC–AD 14). In AD 69–70 the Batavi unsuccessfully rebelled against the Romans under their leader Julius Civilis. The Romans then moved the old town of Batavoduron a couple of miles further west, nearer the river, and built a new fortress on the hill where Batavoduron used to stand. The tenth legion was stationed at these camps.

In AD 104 the legion was recalled by Emperor Trajan to fight on the DANUBE border (see also DACIANS). Trajan then probably gave market rights to the town; this renders the new (Celtic) name *Novio-magos*, lit. 'new field', more understandable. He also bestowed the right to use his own family name Ulpius, and the full new name came to be Ulpia Noviomagus Batavorum.

It is uncertain whether Celtic was the sole or main pre-Latin language of the inhabitants of Noviomagos/Nijmegen. As mentioned above, the names Batavoduron and Noviomagos are Celtic. However, the name *Batavi* itself has been explained as Germanic, containing the **bat-* element which is reflected in English *better* (Toorians, *Keltisch en Germaans in de Nederlanden* 85). It is not unlikely that place-names and place-name elements from Celtic, as an important native language of culturally dominant tribal groups in what were to become the north-western provinces of the Roman Empire, spread, rather like Latin itself, beyond the area where Celtic was the everyday language of the common people (see also LOW COUNTRIES).

Noviomagus was an extremely common ROMANO-CELTIC place-name. A total of 20 are attested (Holder, *Alt-celtischer Sprachschatz* 2.790), most of which were in GAUL. Modern reflexes of the name include *Nijon*, *Noyon*, and *Novion* in France, and *Neumagen* in Germany, as well as *Nijmegen* in Holland. There were two examples in Britain, in the Romanized south-east: the ancient names of Chichester, Sussex, and Crayford, Kent (Rivet & Smith, *Place-Names of Roman Britain* 427–8). It is clear from Old Irish *nuae*, Welsh *newydd*, Gaulish *nouiio* 'new' and Old Irish *mag* 'plain' what the basic sense of this recurring place-name must be. However, in practical application the Latinized *magus* generally refers to Romano-Celtic towns or specifically market towns, rather than plains. This transference of meaning and the great number of Roman towns called *Noviomagus* may reflect the Roman practice of relocating pacified populations and key socio-economic centres from fortified to new unfortified settlements. This theory is consistent with the fact that Noviomagos/Chichester was in the territory of the Regini, a tribal CIVITAS which was itself a Romanized innovation, originating with the client kingdom of the Roman ally, *rex magnus Britanniae* and *legatus Augusti* Claudius Tiberius COGIDUBNUS (*fl. c.* AD 50–*c.* 70).

CW, JTK

Novo Mesto is a site central to an ancient extended urban complex around the bend of the river Krka in what is today central Slovenia. It is significant

in the development of the Celtic cultures of the north-west Balkans and the eastern Alpine region. The Novo Mesto vicinity includes cemeteries dating from the Late Bronze Age (*c.* 1200–*c.* 800 BC) to the late Roman period (3rd–4th century AD). As a densely occupied multi-period site, the Novo Mesto area is one of Slovenia's most important archaeological sites.

The prehistoric settlement at Marof was fortified with trenches and situated on a small hill above the Krka river terrace. This settlement may also be traced as far as present-day Kapitelj in the bend of the river. As shown by a cremation cemetery in Bršljin, the earliest remains date from the 12th–9th century BC and show cremation rites of the Late Bronze Age Urnfield culture (Hallstatt A–B). The necropolis at Mestne njive represents a transition period between the Late Bronze and Early Iron Ages (Hallstatt B–C) in the 9th–8th century BC. The chronological sequence can be traced in over 300 graves with large urns and bronze jewellery along with cremated human remains.

With the beginning of Early Iron Age Hallstatt (C) culture, that is, from the end of the 8th to the beginning of the 7th century BC, and the appearance of tumuli at Kapiteljska njiva and Kandija, including some isolated tumuli at Bršljin, Potoval and Ragovo, essential changes in material culture become apparent, along with a new cult of the dead. There is a transition from cremation burial in small grave pits to inhumation inside familial tumuli which include an average of 20–40 burials. In the Early Iron Age distinctive social differences appear, as shown by the selection of luxury grave goods and sometimes also by the construction of the grave itself, which is defined by a central position with a wooden chamber inside a stone frame.

An Etruscan tripod, Greek armour, and various other items from the early 7th century BC demonstrate the importance of waterway commerce, passing from the northern Adriatic to the Podonavje region, the Balkans, and back via the rivers Sava and Krka. Typical items from the 6th–4th century BC, such as numerous ornamented situlae (bronze wine buckets), local and 'Illyrian' helmets, bronze and glass jewellery, typical grave pottery and everyday weapons—the spear and hatchet, sometimes also the short sword (Greek μάχαιρα *máchaira*)—identify Novo Mesto as one of the most important Hallstatt centres. Here, La Tène style imports from Celtic lands north of the Alps initially appear at the end of the 5th and into the 4th century BC.

Terracotta kantharos with human and animal masks from Grave 40 at Kandija, Novo Mesto, 3rd century BC

After 300 BC, a Celtic tribe traditionally identified as the Taurisci colonized the margins of the Eastern Alps, including the territory of Novo Mesto. The destroyed Kandija graveyard with its 63 graves and a large necropolis at Kapiteljska njiva with nearly 700 burials mostly represent the Middle La Tène in the Mokronog horizon and are connected with the Late Iron Age of the 3rd and 2nd centuries, and also, in part, the beginning of the first century BC. At Beletov vrt, a Late La Tène cemetery with 222 systematically excavated graves marks the horizon of the same name, dated to the first century BC. This Romano-Celtic cemetery with mainly Roman Age burials belongs to the 1st and 2nd centuries AD. The latest Roman finds from Bršljin and Regrča vas are dated to the 4th century AD.

La Tène period burials in Hallstatt tumuli and the continuation of unadorned Celtic graveyards with cremation burials nearby show the strong continuity of the settlement and its sacred precincts from the earlier (i.e. pre-La Tène) horizons. Cremated human bones were collected together with preserved parts of clothes and jewellery and placed at the bottom of a grave pit. Besides these remains, pottery and parts of animals can also usually be found. Ritually destroyed weapons were usually placed in warrior graves. Grave 71 from Kapiteljska njiva, and Grave 40 from Kandija

with its famous mask ornamented *kantharos* (a type of two-handled ceramic vessel) represent the oldest graves of this period.

Weapon graves belong to the oldest group of warrior graves, two of which also contain iron helmets. Items from the grave inventory of the Middle La Tène period, such as ribboned SHIELD bosses, chains with flattened knuckles used for fastening SWORDS, spears, large choppers, and iron fibulae, are characteristic for the 3rd and 2nd centuries BC. A *kantharos* with figurative ornamented handles and facial masks, as well as fibulae with enamel or pseudo-filigreed ornamentation, are among the assemblage of artefacts typically produced by eastern Celts.

Among the inventory of the La Tène Beletov vrt horizon, in addition to a grave containing typical weapons, bronze jewellery and a Novo Mesto type helmet, an iron belt clamp of the Laminci type and two handmade DACIAN cups with handles were discovered. The appearance of a belt plate and cups is connected with the participation of the Celtic Taurisci and BOII in a battle against the famous Dacian king Burebista which occurred around 50 BC.

In addition to two exceptional *kantharoi* from Kandija and Kapiteljska njiva, La Tène pottery is represented by biconical vessels and bowls. Goblet pots also appear in the Beletov vrt horizon. Celtic pottery was produced on a potter's wheel and ornamented with horizontal ribs or, exceptionally, with round seals. In the Kapiteljska njiva graveyard, the frequent appearance (in addition to Celtic grey pottery) of handmade vessels decorated with printed ropes and triangles can possibly be traced back to a Hallstatt tradition.

Some artefacts from Novo Mesto show the connection and mingling of Celtic tribes with the traditions of indigenous pre-La Tène cultures, which preserved craft traditions seen in such artefacts as shaft-hole axes and hand-crafted pottery. La Tène finds from the early phases belonged to Taurisci tribes; finds from the Late La Tène Beletov vrt horizon belonged to the successor tribal group known as the Latobici.

Mitja Guštin

Numantia was a CELTIBERIAN town north of Soria on the upper Duero river in eastern Castile and Leon, Spain. Its conquest in 133 BC by Scipio Africanus the Younger ended the Celtiberian wars and opened up the central IBERIAN PENINSULA to the Romans. The town was originally a fairly large *castro* 'fort' of around 32 ha, located on a 70 m high plateau overlooking the confluence of the Merdancho, Tera, and Duero rivers. It is a major archaeological site, and excavation work has been undertaken here for over two centuries. The Museo Numantino at Soria was established in 1919 to display the finds and control research.

The site has been occupied since the early Bronze Age (the end of the 3rd millennium BC) and the Celtiberian town was built on top of an IRON AGE *castro* (Wattenberg, *Excavaciones en Numancia* 14–15). The town was well planned, with a regular street system serving blocks of 10–20 houses. The houses were 12 m long and 3–6 m wide, and built on a standard 'shotgun' plan, one room wide, with three or four rooms extending in a line back from the street frontage to a yard and storage shed. They had wooden or wattle-and-daub walls over rubble foundations (Jimeno Martínez et al., *Numancia* 26–30). There was a city wall about 6 m in height, but there are no traces of public buildings or even of cisterns, an omission which was to have tragic consequences (see below). Unusually, no substantial cemetery has yet been found.

The story of Numantia has come down to us in the narrative of Appian of Alexandria (*c.* AD 90–*c.* 162), who must have had access to the now lost work of POLYBIUS. Polybius had been Scipio's tutor and may have been present at the siege described by Appian. According to this account, Numantia, ill-served by the Romans, had taken up arms in 143 BC. The war had dragged on inconclusively until 134 BC, when Scipio, who had destroyed Carthage in 146 BC, was named consul, and thus had the power to raise an army. On reaching Numantia he dug in for a siege, blocking all three rivers and creating a circle of seven camps. The camps were linked by a 9 km wall, 3 m high and 2.5 m wide, with fortified towers at intervals of 10–30 m. These fortifications can still be seen.

The Numantians had only 8000 fighting men against Scipio's 60,000, and their terms were refused. In the end, they were starved into submission. But, according to Appian:

> . . . such was the love of liberty and of valour which existed in this small barbarian town that many of the Numantians killed themselves. The rest went out on the third day . . . They appeared pitiable to their enemies, but at the same time there was something fearful in the expression of their eyes—an expression of anger, pain, weariness, and the consciousness of having eaten human flesh. (White, *Appian's Roman History* 6.15.97–8)

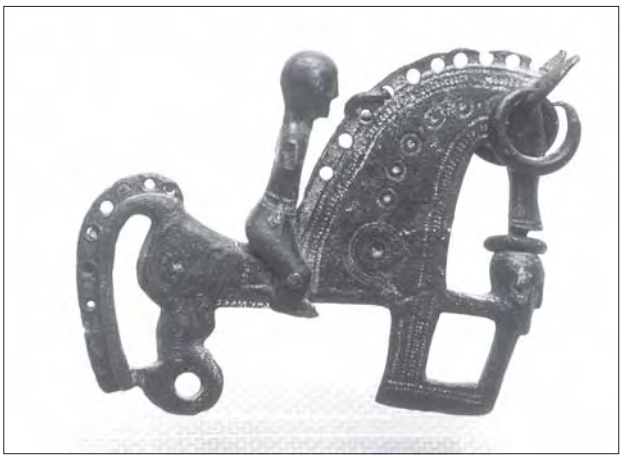
Scipio retained 50 men from his triumph and sold the rest into SLAVERY.

Life at Numantia resumed. The town had never been seriously attacked, but a layer of ash over the Celtiberian remains indicates that it was formally destroyed, at least to ground level. It must have been rapidly rebuilt, for the new town used the old street patterns and house blocks. The streets were straightened, widened and resurfaced, cisterns and drainage channels were built, but there were still no public buildings.

Numantia became a trading centre, as evidenced by finds of over 300 coins from the Celtiberian and Iberian cities of the Ebro valley to its east. The economy was still partly based upon stock raising and wool production, but an important ceramic industry also developed here, exploiting the local clays. Numantine pottery from the 1st century BC is typically unglazed terracotta with painted decorations of animals, lone or fighting warriors, and scenes of RITUAL life (Almagro-Gorbea, *Celts* 388, 396–8; Jimeno Martínez, *Celts* 407). Archaeologists have noted that some of these scenes seem to show vultures and have connected this with a much later statement by Silius Italicus (25–101):

> The Celts who have added to their name that of the Hiberi [IBERIANS] . . . consider it a crime to burn the body of a warrior; for they believe that the soul goes up to the gods in heaven, if the body is devoured on the field by the hungry vultures. (Duff, *Punica* 3.340–352)

That the Numantians remained 'Celtic' is supported not only by the ancient sources but also by the presence of Celtiberian names in the genitive, painted on to some of the ceramics; *luaniKoo Koorinan*, *areBaśiKom śa*, *nauTiKo*, *elaTunaKo*, and *noanTiKum* (Jimeno Martínez et al., *Numancia* 27). The interest in traditional forms is also evidenced in the several horse or horsemen fibulae created at this time (Almagro-Gorbea, *Celts* 401).



Bronze horseman fibula from the Celtiberian town of Numantia, 4th–2nd century BC

Numantia continued to prosper, for the east–west road from Caesaraugusta (modern Zaragoza) to Asturica (modern Astorga) crossed the Duero immediately below it. In the 1st century AD it became a *municipium*, a town whose inhabitants had the right to Roman citizenship. It remained a small town, however, with few large buildings and no sign of a muncipal bath, theatre, or forum. It was abandoned, like so many others, in the later 4th century.

Aedeen Cremin

O

O'Brien, Flann (Myles na gCopaleen, 1911–66), born Brian Ó Nualláin, was a novelist, columnist, and, chiefly, a satirist of contemporary Ireland (Éire), prominent in both Irish-language and Anglo-Irish literature, though he earned his living principally by working as a civil servant in Dublin (Baile Átha Cliath). Born in Co. Tyrone (Contae Thír Eoghain), O'Brien was raised in an Irish-speaking family in urban Gaeltacht areas, but when he was twelve the family moved to Dublin. Having gained a BA and an MA from University College Dublin, O'Brien secured a position with the Irish Civil Service in 1935, where he remained until his retirement on grounds of ill health in 1953. It was due to restrictions placed on civil servants that he adopted a variety of pen-names for his publications, the most widely recognized of which is Flann O'Brien. (Others include Myles na gCopaleen or Myles na Gopaleen, Melius na gCapaillín, Brian Nolan, and George Knowall.)

O'Brien's first novel, *At Swim-Two-Birds* (1939), was highly acclaimed by James Joyce, Graham Greene, and Dylan Thomas (see anglo-welsh literature), but it did not prove popular with the general public. He failed to find a publisher for his second novel, *The Third Policeman*. However, under the pen-name Myles na gCopaleen, his *Irish Times* column *Cruiskeen Lawn* (The little brimming jug), which appeared regularly from 1940, earned him a reputation as a writer of wit and satire. *An Béal Bocht* ('The Poor Mouth', 1941), O'Brien's parody of Tomás Ó Criomhthain's *An tOileánach* ('The Islandman'), of the Gaeltacht autobiography genre, was critically acclaimed. It sold out within six weeks, and has since been translated into several languages. *At Swim-Two-Birds* was republished in 1951, by which time O'Brien had achieved recognition as a sharp and talented wit. This was followed by the publication of a short novel, *The Hard Life* (1961), and *The Dalkey Archive* (1964). *The Third Policeman* (1967) was eventually published posthumously. O'Brien also wrote several plays and a selection of his *Cruiskeen Lawn* columns was published during his lifetime, as well as further selections after his death.

selection of main works

Caitríona Ó Torna

Ó Bruadair, Dáibhí/Dáibidh (*c.* 1625–97) was one of the last practitioners of the old learning cultivated within the Irish bardic schools since medieval times and one of the most prolific Gaelic poets of the 17th century (see irish literature; bardic order). At least 80 of his poems have been preserved in Irish manuscripts from the 17th to the 19th centuries and form the corpus of John C. Mac Erlean's three-volume edition (with English translations), *Duanaire Dháibhidh Uí Bhruadair*. The poems are an invaluable literary response to the tumultuous political events of the 17th century: the Catholic rebellion (1641), the Cromwellian conquest (1649–53), the partial recovery of lands following the Restoration of Charles II (1660), the defeat of the Irish Jacobite army at the Boyne (see bóand; jacobite rebellions),

Aughrim (Eachro), and finally, Limerick (Luimneach; 1691). Ó Bruadair responds bitterly to defeat, colonization, and the loss of IRISH language and culture; however, his writing also reveals the depth and vitality of the native tradition, various strands of which intersect in his work: the medieval and the modern, the oral and the literary, the older syllabic metres and the popular *amhráin* (sing. AMHRÁN 'song metre'). The condensed poetic diction includes archaic words from Irish GLOSSARIES (i.e. *sionn* mockery, DIL 239, 17) and a contemporary vocabulary apparently invented to describe the general chaos and lowbred speech of the times (see Harrison, *Éigse* 16.97–112). The old Gaelic order and the new colonial landscape come together in jarring juxtapositions of language, metaphor, and allusion.

The surviving biographical details are few and uncertain. Ó Bruadair was probably born around 1625 in East Cork, in the barony of Barrymore. (Irish scribes speak of him living in Knockraha and Castlelyons.) His early poems refer to prominent Irish and Anglo-Norman families of Cork (CORCAIGH), the Barrys and Mac Carthys, and literary connections with a school of poetry in Blarney (An Bhlarna) further associate him with the region. He married and had a son, William (†1728/9), who is honoured in an elegy by the poet/scribe Seán na Ráithíneach as *mac an scéaluidhe bhéal-bhinn Féinne* (son of the eloquent teller of FIANNAÍOCHT tales). Ó Bruadair moved to Co. Limerick (Contae Luimnigh) and settled in Claonghlais sometime before 1658, when references to Limerick topography begin to appear in his poems. As Breandán Ó Madagáin points out, Ó Bruadair was probably drawn to the climate of learning fostered by Cú Chonnacht Ó DÁLAIGH, who conducted a school of poetry at Tolcha (Tullaha), near the present village of Broadford. However, it is also possible that Ó Bruadair was pushed out of his native Barrymore to make way for newcomers, for the abrupt displacement of the native population had become commonplace. Interestingly, the poet's move from Barrymore coincides with the arrival of Old English families from the Munster ports, who were assigned lands in Barrymore and Muskerry (see Moody et al., *New History of Ireland* 3.365). Whether by choice or necessity, Ó Bruadair found generous patrons in Limerick and composed eulogies, elegies, and wedding poems for the Bourkes of Cathair Maothail (Cahirmoyle) and the Fitzgeralds, who resided at Gort na Tiobrad (Springfield). Springfield Castle, the home of Ó Bruadair's patrons, Sir Edmund Fitzgerald and his son Sir John, still stands.

The events of the century frame and, to some extent, shape Ó Bruadair's verse. He bitterly laments the destruction and cultural disintegration following Oliver Cromwell's campaign, and his response is typified by the poem *Créacht do dháil mé* (Mac Erlean, *Duanaire Dháibhidh Uí Bhruadair* 1.26–50). The nobles are 'dispersed and scattered' (*scáinte scartha*); Ireland (ÉIRE), once wedded to the Irish chieftains 'who first put a ring on the finger of her hand' (*do chéadchuir fáinne ar bárr a baise*), is now the *caomhthach cáirdis* (bedfellow) of lowbred foreigners. A mocking litany of new English names is juxtaposed with the honoured names of ancient Irish heroes who are now mourned by Ireland, their spouse. Ó Bruadair, like many of his contemporaries, interprets the defeat of the Irish as a punishment for their sins, political disunity, and neglect of religion.

The poet scorns the lowbred Cromwellian settler who occupies the lands of the Gaelic and Anglo-Norman families, and castigates an upstart Irish peasantry who ape the manners and language of the new colonists. Wealth, once bestowed generously upon the poet for well-wrought eulogies, becomes the attribute of a false, arrogant class that shuns the poets and their craft. The abandonment of learning, native language, and custom is a constant theme, most vividly expressed in a poem composed for the sons of Cú Chonnacht Ó Dálaigh, who have forgotten the masters of poetry and 'drinkers of wisdom':

> *D'aithle na bhfileadh n-uasal*
> *truaghsan timbeal an tsaoghail;*
> *clann na n-ollamh go n-eagna*
> *folamh gan freagra faobhair.*
>
> (De Brún et al., *Nua-dhuanaire* 1.55; translations of passages cited are by M. Griffin-Wilson.)
>
> After the noble poets, sad is the darkness of the world, the children of the poets with wisdom are empty without a keen-edged answer.

Disenchanted and bitter, Ó Bruadair composed a nonsensical 'mocking jingle' (*guagán gliog*) to suit the empty, insipid literary tastes of the new order (Mac Erlean,

Duanaire Dháibhidh Uí Bhruadair 1.78).

Later in the century, upon the coming to power of the Catholic monarch James II, there is a brief upsurge of patriotic fervour and renewed hopes of re-establishing the old order. Ó Bruadair, a staunch Royalist and Catholic, extols James II as the *cnú na cléire* (nut of poets) and the *fiadh agus féinnigh Eurapa* (stag and warrior of Europe) (Mac Erlean, *Duanaire Dháibhidh Uí Bhruadair* 3.79). He envisions a re-emergence of native language and custom: the recitation of *fiannaíocht* and performances of the native *damhsa an ghadaraigh* (dance of the withe) will resume; the Irish phrase *cia súd* will replace the English 'who's there'. This exultant mood was short-lived, however, and Ó Bruadair laments the crushing defeat of the Irish Jacobite army in the poem *An longbhriseadh* (The shipwreck), an image of overwhelming defeat which has become a metaphor for the 17th century (Mac Erlean, *Duanaire Dháibhidh Uí Bhruadair* 3.164–80).

Ó Bruadair's verse, though dark in tone, not only reveals the end of the old Gaelic order but also its depth, complexity, and tenacity. He turns to the earlier tradition, and reshapes and invigorates it. The sharp tongue of the Irish satirist is felt in the bitter invective hurled at a servant woman who refuses him a drink (see SATIRE). The vigour of Ó Bruadair's alliterative Irish malediction, translated literally here, has reached a wider audience through James Stephens's loose translation, 'A Glass of Beer', which conveys some of the force of the original:

Seirbhíseach seirgthe íogair srónach seasc
d'eitigh sinn is eibear íota im scornáin feacht,
beireadh síobhra d'eitill í gan lón tar lear,
an deilbhín gan derglí nár fhóir mo thart.
(De Brún et al., *Nua-dhuanaire* 1.54)

A shrivelled, peevish, arrogant, wizened servant-girl / refused me when a fierce thirst lodged in my throat; / may a ghost in flight bear her famished beyond the sea, / the pale miserable wretch who refused to relieve my thirst.

In a wedding poem composed for the daughter of his patron, Sean de Búrc of Cahermoyle, Ó Bruadair adopts the archaic mask of a CROSÁN (buffoon) and performs at the wedding feast. The shadowy figure from medieval texts merges with performances that persisted in the late, popular culture, such as the mock-priests at Irish wakes or the masked *buachaillí tuí* (strawboys) who arrived as uninvited but welcome guests at weddings:

Mise an crosán taibhseach tuisleach,
tadhlaim taisbhean,
bím ó bpóitghoil suas go sursainn,
cluas re caiseal.

I am a showy, stumbling *crosán*; I visit a tender maiden; I am [full] up to the belt with drinking; an ear against a stone wall.

Acting as both a *crosán* and priest, Ó Bruadair encourages the consummation of the marriage and a generous outpouring of drink from his patron's dwelling. The poem ends with a characteristically stubborn defiance as the poet challenges the new order with the old. He pronounces and 'sprinkles' a verse blessing on the newly married couple *geadh fuathmhar fothrom na bhfocalsa ag duibhfhine Gall* (although hateful the sound of the words to the black race of foreigners) (Mac Erlean, *Duanaire Dháibhidh Uí Bhruadair* 2.48–97).

A letter written by Ó Bruadair in 1682 to Justice John Keating, father of the historian Geoffrey Keating (Seathrún CÉITINN), whose work Ó Bruadair admired, offers an ironic self-portrait and conveys the dark, comic tone that characterizes much of Ó Bruadair's verse. He describes himself as a man dwelling 'in the proximity of a quiet company, the Dead, being banished from the society of the living, for want of means to rent as much as a house and a Garden amongst them. He lives like a sexton without salary in the Corner of a Churchyard in a Cottage . . . as well contented with his stock, which is only a little Dog, a Cat, and a Cock, as the prince of Parma with all his Principalities'. From this refuge he can 'smile or frown on things as well as any other fool' (Mac Erlean, *Duanaire Dháibhidh Uí Bhruadair* 2.286). At the end of his life, however, Ó Bruadair sinks deeply into poverty and despair. His hope for social standing and respect is extinguished, and he bitterly renounces his craft: *ós críoch di mo stríocadh go seanabhrógaibh / finis dom scribhinn ar fearaibh Fódla* (since the end of it is my being reduced to old shoes, *finis* to my writing for the men of Ireland) (Mac Erlean, *Duanaire Dháibhidh Uí Bhruadair* 3.180). We do not know where he died nor

where he was buried, and scribes give conflicting dates of his death (1697/1710). However, a Latin lament composed upon his death honours Ó Bruadair as the last master of poetry with a gift for shaping 'harmless jests with the work of art' (De Brún, *Éigse* 12.328.8).

Ó Bruadair's verse is the subject of a recently published volume of essays, *Dáibhí Ó Bruadair: His Historical and Literary Context* (ed. P. Riggs). Modern Irish writers have translated and adapted Ó Bruadair's poetry, most notably James Stephens and Michael Hartnett. Eavan Boland, drawing on Seán Ó'Faolain's imaginative portrait of Ó Bruadair composing verses en route to the feast, opens her verse collection, *The Lost Land*, with an image of the poet (unnamed) on the road to Cahirmoyle, arriving at a cold hearth, the feast over and the audience dispersed. Ó Bruadair indeed stands at the crossing of two worlds: a poet rooted in the old Gaelic order, stepping into modern Ireland.

Margo Griffin-Wilson

Ó Cadhain, Máirtín (1905–70) was born to Irish-speaking parents in the Conamara GAELTACHT. He was educated at the local national school at Spiddle (An Spidéal) and, from 1924 to 1926, he trained as a teacher at St Patrick's Training College, Dublin (BAILE ÁTHA CLIATH). He was dismissed from his teaching post in 1936 because of his involvement with the IRISH REPUBLICAN ARMY (IRA) and in 1939 he was arrested and interned, first at Arbour Hill Barracks, then at the Curragh. During his internment he conducted IRISH classes for his fellow internees and he read widely. Following his release in 1944, he worked for some time as a labourer, and then as a civil servant. He joined the translation team (Rannóg an Aistriúcháin) at Leinster House in 1949. He became a lecturer in Irish at Trinity College Dublin in 1956 and in 1969 was appointed Professor of Irish. He was a prominent member of the Gaeltacht Civil Rights Movement, and actively supported their candidate in the 1969 National Election. He died in October 1970 and is buried in Mount Jerome cemetery, Dublin.

Ó Cadhain was an unparalleled authority on all aspects of the Irish language. He was a prolific and highly innovative writer whose work includes two novels (one of which was published posthumously in 1995), six collections of short stories (one of which was published posthumously in 1977), numerous articles, pamphlets, and essays on literary matters and on polemical issues concerning the Irish language. Drawing on his extensive knowledge of the language, Ó Cadhain forged a unique literary medium based on, but not confined to, his own Cois Fharraige dialect. His early work, which is set in Conamara, is bleak in its social commentary. His later, more experimental work, which is set in Dublin—reflecting the pattern of his own life—is satirical and contains much black humour, though it is ultimately pessimistic. His first novel, *Cré na Cille* (Churchyard clay, 1949), probably his best-known work, consists entirely of dialogue between the corpses interred in a graveyard in Conamara. Although it is ostensibly about petty local issues, this novel is, in fact, a brilliant satire on many aspects of contemporary public life in Ireland (ÉIRE).

SELECTION OF MAIN WORKS
NOVELS. *Cré na Cille* (1949); *Athnuachan* (1995).

Pádraigín Riggs

Ó Céileachair, Donncha (1918–60), a native speaker of IRISH, was born in Cúil Aodha (Coolea) in the West Cork GAELTACHT, where the oral storytelling tradition was still alive. His father, Domhnall Bán, was a renowned *seanchaí* (traditional storyteller). Trained as a teacher, Donncha also worked with Tomás DE BHALDRAITHE on the preparation of his *English–Irish Dictionary* and for the Place Names Commission (see DICTIONARIES AND GRAMMARS). The co-author of a biography of the lexicographer Pádraig UA DUINNÍN (Dinneen), his most important achievement—a masterful merging of two distinct narrative forms, the traditional oral hero-tale and the modern literary short story—is contained in *Bullaí Mhártain* (1955), a collection of stories by Donncha and his sister Síle. A victim of polio, he died suddenly in 1960.

SELECTION OF MAIN WORKS
Dialann Oilithrigh (1953); (with Ní Chéileachair) *Bullaí Mhártain* (1955); (with Ó Conluain) *An Duinníneach* (1958).

FURTHER READING

Pádraigín Riggs

Ó Cíobháin, Pádraig (1952–) was born in Ballyferriter (Baile an Fheirtéaraigh) in the West Kerry GAELTACHT. He was educated locally, at St Brendan's in Killarney (Cill Airne) and at University College, Cork (CORCAIGH). A prolific writer, Ó Cíobháin published his first collection of short stories, *Le Gealaigh* (Crazy), in 1991. To date, he has produced three substantial collections of short stories and four novels. He has won numerous awards in the Oireachtas (see FEISEANNA) and Listowel literary competitions.

Ó Cíobháin writes of contemporary issues both in a Gaeltacht setting and in an urban environment, and the language he uses is based on his own Corca Dhuibhne dialect. His most successful work deals with sexual love, its awakening, flowering, and frustrations. Unfortunately, despite his rich linguistic resources and apparent narrative facility, Ó Cíobháin has not realized his full literary potential owing to stylistic experimentation.

MAIN WORKS
Le Gealaigh (1991); *An Gealas i Lár na Léithe* (1992); *An Grá faoi Cheilt* (1992); *Desiderius a Dó* (1995); *Ar Gach Maoilinn Tá Síocháin* (1998); *Tá Solas ná hÉagann Choíche* (1999); *Faightear Gach Laoch in Aisce* (2001).

FURTHER READING
CORCAIGH; FEISEANNA; GAELTACHT; Denvir, *Oghma* 7.17–32.

Pádraigín Riggs

Ó Cléirigh, Lughaidh (?1580–?1640) was a poet, historian, and chief of the Ó Cléirigh bardic family of Donegal, Ireland (Dún na nGall, ÉIRE) in the early 17th century. His brother Cú Choigríche was one of the Four Masters (see ANNALS §9).

Ó Cléirigh wrote *Beatha Aodha Ruaidh Uí Dhomhnaill*, a life of the famous military leader 'Red' Hugh O'Donnell, and was an instigator of Iomarbhágh na bhFileadh (the contention of the bards), a famous poetic dispute between poets of the north and south of Ireland concerning supremacy over the island. The dispute apparently began in 1616 (McKenna, *Iomarbhágh na bhFileadh* viii) and lasted for several years. Ó Cléirigh's four contributions (in response to the Thomond bard Tadhg mac Dáire Mac Bruaideadha) are: *A Thaidg Ná Tathaoir Torna* (O Tadhg, censure not Torna), *Ro Chuala a Thagrais a Thaidhg* (I have listened to your argument, O Tadhg), *Ná Brosd Mise a Mhic Dáire* (Provoke me not, O son of Dáire), and *An gCluine Mé a Mhic Dáire?* (Do you hear me, O son of Dáire?)

Despite cooperating with the English invaders of the time, he lost most of his land in the 1609 plantation of Donegal (see LAND AGITATION), and is not heard of as a landowner after 1615 (Clery, *Irish Book Lover* 29.124–8).

Brian Ó Broin

Ó Cléirigh, Micheál (1575–1643) was a Franciscan historian of Ireland (ÉIRE), chief of the Four Masters and scion of the powerful Ó Cléirigh bardic dynasty of Donegal (Dún na nGall).

Ó Cléirigh was sent by Fr. Aodh MAC AN BHAIRD

(Hugh Ward) from Louvain in 1626 to collect material for the *Acta Sanctorum Hiberniae* and, realizing the precarious state of Irish historiography, he also collected materials for a history of Ireland, which became the *Annála Ríoghachta Éireann*, now known as the ANNALS of the Four Masters, the work for which he is best known. He also compiled a royal genealogy for Ireland, *Réim Ríoghraidhe* (printed by the Louvain Franciscans in 1630; see GENEALOGIES), and made a reliable copy of LEBAR GABÁLA ÉRENN ('The Book of Invasions'). His Irish dictionary, the *Sanasán*, was printed in 1643 (see DICTIONARIES AND GRAMMARS). His original purpose for re-entering Ireland, the *Martyrologium Sanctorum Hiberniae*, now known as *The Martyrology of Donegal*, was printed in 1864.

MAIN WORKS

EDITION. Walsh, *Genealogiae Regum et Sanctorum Hiberniae*.
ED. & TRANS. Miller, RC 4.349–428, 5.1–69 (*Foclóir nó Sanasan Nua*); O'Donovan, *Annála Ríoghachta Éireann*; Todd & Reeves, *Martyrology of Donegal*.

Brian Ó Broin

Ó Conaire, Pádraic (1882–1928) was the most innovative fiction writer to emerge from the Irish Revival (see IRISH LITERATURE). Born in Galway city (GAILLIMH), he spent some of his childhood in Ros Muc (Rosmuck), in the Conamara GAELTACHT, with his paternal grandparents. Later, he attended Rockwell College and Blackrock College. Although he was not a native IRISH speaker, he was exposed to both Irish and English from his earliest years. He produced his best work between 1900 and 1915, while working as a clerk in the civil service in London. Very active as an Irish teacher in the London Gaelic League (CONRADH NA GAEILGE), he was closely associated with the leading figures in this organization, both in London and in Dublin (BAILE ÁTHA CLIATH), including Douglas Hyde (Dubhghlas DE HÍDE) and Patrick Pearse (Pádraig MAC PIARAIS). Primarily an exponent of the short story, he wrote only in Irish, and his ostensibly simple, accessible style masked a highly sophisticated treatment of psychological subjects. Most of his stories were initially published in *An* CLAIDHEAMH SOLUIS (The sword of light) and other newspapers. He also wrote plays and novels. His best works include the surreal novel, *Deoraidheacht* (Exile), the short story collections, *Nóra Mharcais Bhig agus Sgéalta Eile* (Nora, daughter of Little Marcus or Little Marcus's Nora and other stories), *An Chéad Chloch* (The first stone), and *Seacht mBuaidh an Éirghe-amach* (The seven triumphs of the [Easter] Rising). Ó Conaire spent the latter years of his life in Ireland (ÉIRE), homeless and drinking heavily, having attempted unsuccessfully to live solely from his writing. He died destitute in 1928.

SELECTION OF MAIN WORKS

COLLECTIONS OF SHORT STORIES. *Nóra Mharcais Bhig agus Sgéalta Eile* (1909); *An Sgoláire Bocht agus Sgéalta Eile* (1913); *An Chéad Chloch* (1914); *Seacht mBuaidh an Eirghe-amach* (1918); *Béal an Uaignis* (1921); *Síol Éabha* (1922); *Sgéalta Aniar* (1923); *Cubhar na dTonn* (1924); *Beagnach Fíor* (1927); *Fearfeasa Mac Feasa* (1930); *Scéalta an tSáirsint Rua* (1941); *Seoigheach an Ghleanna* (1941); *Mo Ghleann Fein agus Sleachta Eile* (1946); *M'Asal Beag Dubh* (repr. 1967).
EDITION. De Bhaldraithe, *Scothscéalta le Pádraic Ó Conaire* (1956).
ESSAYS. *An Crann Géagach* (1919).
NOVELS. *Deoraidheacht* (1910); *Tír na nIongantas* (1916); *Brian Óg* (1926).
PLAYS. Ó Siadhail, *Bairbre Rua agus Drámaí Eile* (1989).

Pádraigín Riggs

Ó Conghaile, Micheál (1962–) was born in the Conamara GAELTACHT. He published his first collection of short stories, *Mac an tSagairt* (The priest's son), in 1986, and during the same year he was awarded an MA by University College Galway (GAILLIMH). His second collection of stories, *An Fear a Phléasc* (The man who exploded), was published in 1997. Ó Conghaile has won numerous awards, including the Irish-American

Foundation's Butler Literary Prize, and he was admitted to Aosdána, the prestigious Irish association of creative artists, in 1998. His first novel, *Sna Fir* (Among the men), a gay *Bildungsroman*, set in Conamara, Dublin (Baile Átha Cliath), and London, appeared in 1999. Ó Conghaile's prose is stylistically accomplished and his use of his native Irish is assured and convincing, though his subject matter is somewhat limited. A publisher of Irish-language material and of Irish music (Cló Iar-Chonnachta), he lives in Inverin (Indreabhán) in Conamara.

SELECTION OF MAIN WORKS

COLLECTIONS OF SHORT STORIES. *Mac an tSagairt* (1986); *An Fear a Phléasc* (1997).

NOVELS. *Sna Fir* (1999); *Seachrán Jeaic Sheáin Johnny* (2002).

O'Connor, Frank (Michael O'Donovan, 1903–66) is one of Ireland's most prolific and famous modern writers. Born in Cork (Corcaigh) as the only child of a servant mother and a soldier father, O'Donovan began to work on the railways from an early age. However, guided by his old teacher Daniel Corkery (1878–1964), he developed an interest in the written word and in the Irish language and culture. O'Donovan joined the Irish Republican cause and began publishing his experiences using his pseudonym 'Frank O'Connor'. He worked as a librarian in both Cork and Dublin (Baile Átha Cliath) for many years, while producing short stories, plays, and two novels. He also worked on the translation of Irish literature into English. In his work, firm knowledge of native Irish tradition and culture is combined with a European outlook acquired through his wide-ranging literary interests. It is further characterized by a fine sense of style and a mastery of construction. A controversial figure, both in private and public life, O'Connor's outspokenness shocked the public both at home, where some of his works were banned, and in America, where he lived for several years, lecturing at various colleges. His commitment to literature and literary criticism not only resulted in several important publications, but also led to the establishment of a Chair in Anglo-Irish literature at University College Dublin.

SELECTION OF MAIN WORKS

AUTOBIOGRAPHY. *Only Child* (1961); *My Father's Son* (1968).

BIOGRAPHY. *Big Fellow* (1937).

CRITICISM. *Towards an Appreciation of Literature* (1945); *Art of the Theatre* (1947); *Road to Stratford* (1948; enlarged and reissued as *Shakespeare's Progress* [1960]); *Mirror in the Roadway* (1956); *Lonely Voice* (1962); *Backward Look* (1967; publ. in America as *Short History of Irish Literature*).

EDITIONS. *Classic Irish Short Stories* (1957); *Book of Ireland* (1959).

NOVELS. *Saint and Mary Kate* (1932); *Dutch Interior* (1940).

POETRY. *Three Old Brothers* (1936).

SHORT STORIES. *Guests of the Nation* (1931); *Bones of Contention and Other Stories* (1936); *Crab Apple Jelly* (1944); *Selected Stories* (1946); *Common Chord* (1947); *Traveller's Samples* (1951); *Stories of Frank O'Connor* (1952); *More Stories of Frank O'Connor* (1954); *Domestic Relations* (1957); *Collection Two* (1964); *Collection Three* (1969; publ. in America as *Set of Variations*); *Cornet Player Who Betrayed Ireland* (1981); *Collar* (1993).

TRANS. *Wild Bird's Nest* (1932); *Fountain of Magic* (1939); *Midnight Court* (1945); *Kings, Lords, & Commons* (1959); (with Greene), *Golden Treasury of Irish Poetry* (1967).

Ó Criomhthain, Tomás (1855–1937) was a native of An Blascaod Mór (the Great Blasket), the largest of the Blasket Islands off the Kerry coast, and earned his living primarily as a fisherman. On the eve of the 20th century the island was home to a vibrant Irish-speaking community and a popular destination for international scholars studying the native language and its traditions. These visitors, among them such eminent Celticists as Carl Marstrander (1883–1965) and Robin Flower (1881–1946), alerted the islanders to the wealth of their oral tradition and encouraged them to record their stories and songs. Brian Ó Ceallaigh, a school inspector and regular visitor from Killarney (Cill Airne), persuaded Ó Criomhthain to record the daily events of his life. This diary, detailing events between 1918 and 1923, was published by Pádraig Ó Siochfhradha ('An Seabhac') as *Allagar na hInise* (Island tale, 1928). An Seabhac also edited Ó Criomhthain's autobiography, *An tOileánach* ('The Islandman', 1929), which details the hardship, as well as the vivacity, of Blasket island life, albeit in a text edited by an outsider. This was the first of the Irish Gaeltacht autobiographies which were to flourish as a genre during the 20th century. Ó Criomhthain's oft-repeated phrase '*ní bheidh ár leithéid arís ann*' (there

will never be our likes again) recognizes the decline of native Blasket life.

SELECTION OF MAIN WORKS

Allagar na hInise (1928; trans. Enright, *Island Cross-talk* [1986]); *An tOileánach* (1929; trans. Flower, *Islandman* [1934]); *Dinnsheanchas na mBlascaodaí* (1935); *Seanchas ón Oileán Tiar* (ed. Ó Duilearga, 1956); *Bloghanna ón mBlascaod* (ed. Ó Conaire, 1997).

Caitríona Ó Torna

O'Curry, Eugene (Eoghan Ó Comhraí, ?1784/?1796–1862) was born in Dunaha, Carrigaholt, Co. Clare (Carraig an Chabhaltaigh, Contae an Chláir) and was a native IRISH speaker. He became Professor of Irish History and Archaeology at the Catholic University of Ireland (which was later to become University College Dublin). He is best known as the author of two comprehensive surveys on all aspects of early Irish culture. The first of these, *Lectures on the Manuscript Materials of Ancient Irish History*, published in 1861, was based on a lecture series O'Curry delivered during the year 1855–6. It represents the first systematic account of the corpus of ancient Irish manuscripts and their literary and historical contents. Traces of his work are still visible on many important manuscripts, since some, for example, the Book of Leinster (LEBOR LAIGNECH), still bear foliation in O'Curry's hand. The extensive appendices, which illustrate specific points and supply more detailed information, are a particularly appealing feature of the *Lectures*. At the end, Curry even supplied facsimile samples of each manuscript discussed, with transcripts and, usually, translations. In a second lecture series, published posthumously in 1873 as *On the Manners and Customs of the Ancient Irish*, O'Curry gave a similarly comprehensive account of early Irish society and culture.

O'Curry's pioneering work helped to open up a relatively unexplored area by providing an introduction to early Irish studies at a time when scholars were becoming increasingly interested in the Irish language and its culture. Although his two survey books have been superseded in many areas by more recent publications, they are still the most comprehensive works available and serve well as a general introduction to early Ireland (ÉRIU), while their clear layout and non-jargon approach makes them easily accessible even to non-experts.

SELECTION OF MAIN WORKS

Lectures on the Manuscript Materials of Ancient Irish History (1861); *On the Manners and Customs of the Ancient Irish* (1873).

ED. & TRANS. *Cath Mhuighe Léana* (1855); *Sick-bed of Cuchulainn and the Only Jealousy of Eimer* (1858); *Atlantis* 4.113–240 (*Trí Truaighé na Scéalaigheachta*, 1863).

TOPOGRAPHICAL WORKS. (with O'Donovan) *Antiquities of County Clare*; (with O'Donovan et al.) *Ordnance Survey Letters: Dublin*; (with O'Donovan et al.) *Ordnance Survey Letters: Wicklow*.

PSH

The **Ó Dálaigh family** was an eminent bardic dynasty in Ireland (ÉIRE) between the 12th and the 17th centuries. This dynasty is often traced back to the legendary Dálach, a student of Abbot COLMÁN MAC LÉNÉNI of Cloyne, or to the legendary 9th-century Dálach, a descendant of the 8th-century king Fergal mac Maíle Dúin mic Maíle Fithraig.

The first certain Ó Dálaigh poet is Cú Chonnacht *na Scoile* Ó Dálaigh, who died at the monastery of Clonard (Cluain Ard) in 1139. As with his 16th-century descendant Conchubhar *na Scoile* Ó Dálaigh, the sobriquet *na scoile*, meaning 'of the school', suggests that he was master of a bardic school, as were many other scions of the family. The family was already dispersing throughout Ireland in the decades following his death. Donnchadh Mór Ó Dálaigh (*c.* 1175–1244), popularly supposed to have been abbot at Boyle (Mainistir na Búille), is best known for his religious poems, and his contemporary Muireadhach Ó DÁLAIGH (?1180–1250) received the nickname 'Albanach' after being exiled to Scotland (ALBA) for 15 years for killing a tax collector. While in Scotland the latter supposedly founded the bardic family known as CLANN MACMHUIRICH (Bergin, *Irish Bardic Poetry* 88–112).

Tadhg Camchosach ('bandy-legged') Ó Dálaigh (*fl.* 1375) apparently went to the Continent to become a Franciscan. He wrote of his PEREGRINATIO in *Dá grádh do fhágbhas Éirinn* (For love [of Christ] I left Ireland; see Mhág Craith, *Dán na mBráthar Mionúr* 1.10).

A lively tradition surrounds the late 14th-century

Cearbhall Ó Dálaigh of Corcomroe, who supposedly eloped with Fearbhlaidh, the daughter of Séamas Mac Turcall, a Scottish king. The story, surviving in many recensions, was written in the late 15th or early 16th century and versions of it have become attached to other poets of that name, particularly an early 17th-century member of the bardic school at Pallis, Co. Wexford (Contae Loch Garman), to whom much love poetry of the 16th century and later has accrued. O'Rahilly (Ó Rathile) treats one love poem of his as genuine (*A Mhac-alla Dheas* [O lovely echo], O'Rahilly, *Dánta Grádha* 26–8). The elopement story developed in the 18th century, with Fearbhlaidh becoming Eleanor Kavanagh of Carlow (Ceatharlach), daughter of Sir Morgan (†1643), for whom Cearbhall supposedly composed the song 'Eleanor na Rún', which is still well-known among SEAN-NÓS singers. The song *Eibhlín A Rúin* has also become attached to the tradition.

Aonghus Ruadh na nAor 'of the satires' (†1617), a Cork head of the branch, was supposedly hired by Lord Mountjoy and Sir George Carew to write a SATIRE on the Gaelic noble families so as to foment discord. The poem is printed by John O'Donovan. Tradition has it that Aonghus Ruadh was assassinated. His near contemporaries Aongus Fionn ('the blond') Ó Dálaigh and Aonghus Mac Daighre Ó Dálaigh (of Meath [Mide] and Wicklow, respectively) are best known for two poems: the former for the religious poem *Grian na Maighdean Máthair Dé* (The sun of all virgins is the mother of God; see McKenna, *Dioghluim Dána*) and the latter, who was poet to the O'Byrnes (Ua Broin), for *Dia Libh a Laochradh Ghaoidheal* (God be with you, O Gaelic heroes; see Mac Airt, *Leabhar Branach* 142–4).

Brian Ó Broin

Ó Dálaigh, Muireadhach Albanach

(*fl.* 1200–30) was a scion of the Irish Ó DÁLAIGH FAMILY of poets, to whom may be credited much of the underpinning of classical Irish poetry (see IRISH LITERATURE [3]) in the 12th century. Muireadhach's chequered career in Ireland (ÉIRE), Scotland (ALBA), and abroad made him the subject of an evolving series of legends. This legendary aspect must qualify what we can reconstruct of his story, and may have influenced some of the poetry attributed to him (see Ó Cuív, PBA 49.233–62; but Gillies, *Scottish Gaelic Studies* 20.48–50). He would appear to have been chief poet to the Domhnall Mór Ó Domhnaill (1207–41), lord of Tyrconell, Co. Donegal (Tír Chonaill, Contae Dhún na nGall). Legend has it that in 1214 he stove in the head of Ó Domhnaill's steward with an axe when he came seeking Muireadhach's tithes. Exile appears to have followed, at least 15 years of it, judging from an apparently late poem asking forgiveness of Ó Domhnaill (Quiggin, PBA 5.130–3). His exile was primarily spent in Scotland, and we have two poems to patrons in the Lennox (Leamhnachd): one to the *mormaer* or earl of Lennox, perhaps written before his exile, and the other to the head of a collateral branch of the family (McKenna, *Aithdioghluim Dána*; Ó Cuív, *Celtic Studies* 92–8). In both poems Muireadhach plays on supposed Munster (MUMU) connections of the Lennox *mormaír*, and this is reflected in names such as Corc and Maine in the family of the latter. Muireadhach's own family appears to have settled in the Lennox, judging from the witness to a land-sale there in 1259, Kathil Macmurchy (see Thomson, *Trans. Gaelic Society of Inverness* 43.276–304). In Muireadhach's masterpiece, his lament for his wife Maol Mheadha (Bergin, *Irish Bardic Poetry* §22), he says she bore him eleven children.

A series of poems, either attributed to or inferred to be the work of both Muireadhach and a companion poet, Gille Brighde Albanach, indicate that they both joined the Fifth Crusade around 1217, perhaps as acts of personal penitence. It may be that Muireadhach's wife was dead by this point, but we cannot be certain. The poets were part of a group of four and, judging by references in the poems, they arrived in the Mediterranean after the collapse of the campaign at Acre in 1218; one poem describes sailing the Mediterranean through that winter's appalling weather (see Macquarrie, *Scotland and the Crusades* 35–46). A calling-card poem

from Muireadhach to an Irish lord shows him back from crusade, perhaps *c.* 1224 (Bergin, *Irish Bardic Poetry* §24). He was still in Scotland, however, in 1228. The relationship between him and Gille Brighde, who was clearly Scottish, is of interest.

Muireadhach's colourful career has an afterlife in an evolving narrative cycle concerning 'MacMhuirich' the poet. Although this generic trickster figure bears the name not of himself but of a descendant, aspects of the tradition certainly relate back to Muireadhach as its progenitor (see Gillies, *Scottish Gaelic Studies* 20.1–66).

Thomas Owen Clancy

Ó Direáin, Máirtín (1910–88) was born to native IRISH-speaking parents on Inishmore (Inis Mór), the largest of the Aran Islands (OILEÁIN ÁRANN). The eldest of four children, Máirtín was only seven when his father died in 1917. He attended the national school on the island until he was fourteen and hoped to become a teacher, but his application to the preparatory college was rejected. Having passed the civil service entrance examination, he left the island in 1928 to work as a post-office clerk in Galway city (GAILLIMH). In 1937 he was promoted and moved to Dublin (BAILE ÁTHA CLIATH), where he worked as a civil servant until his retirement in 1975. From 1948 to 1955 he was also Registrar of the National College of Art.

In 1967 Ó Direáin won the Irish-American Cultural Foundation Award for his sixth poetry collection, *Cloch Choirnéil* (Cornerstone). He was conferred with an honorary D.Litt. by the National University of Ireland in 1977, and was also awarded the Ossian-Preis by the Freiherr von Stein Foundation, Hamburg in the same year. He spent the academic year 1978–9 as guest lecturer at University College, Galway.

Ó Direáin's first two collections of poems, *Coinnle Geala* (Bright candles, 1942) and *Dánta Aniar* (Poems from the west, 1942), were published at his own expense. *Rogha Dánta* (Selected poems) followed in 1949. Nostalgia for his native island and the traditional life of the islanders is the dominant theme of Ó Direáin's work. The move from the island to the mainland and, in particular, to the capital city, had affected him deeply. He felt permanently uprooted after 1928. In the earlier poems, Aran is invoked as an idyllic place whose people are noble and virtuous as they go about their simple lives, struggling against the elements. This harsh but dignified life is contrasted with the fatuous, mercenary life of those who are forced to live in the city. In Ó Direáin's later work, nostalgia gives way to bitterness as the island becomes a symbol for Gaelic Ireland (ÉIRE), which the poet concedes to be no longer a reality, but merely a dream. The poet's innovative approach to both form and language is highly successful, though his treatment of his subject matter occasionally lacks depth.

Although mainly known for his poetry, Ó Direáin also published a collection of prose, *Feamainn Bhealtaine* (May seaweed, 1961).

SELECTION OF MAIN WORKS

Coinnle Geala (1942); *Dánta Aniar* (1942); *Rogha Dánta* (1949); *Ó Morna agus Dánta Eile* (1957); *Feamainn Bhealtaine* (1961); *Ár Ré Dhearóil agus Dánta Eile* (1962); *Cloch Choirnéil agus Dánta Eile* (1966); *Crainn is Cairde* (1970); *Ceacht an Éin* (1979); *Dánta 1939–1979* (1980); *Béasa an Túir* (1984); *Craobhóg Dán* (1986).

Pádraigín Riggs

Ó Doibhlin, Breandán (1931–) was born in Rooskey, Co. Tyrone (Contae Thír Eoghain), Northern Ireland. An academic and a writer, Ó Doiblhlin was the first person to apply modern literary criticism to IRISH-language works, and, by treating Irish as a modern language on a par with other European languages, he has contributed to a new consciousness

and awareness of writing in Irish. His two novels, *Néal Maidine agus Tine Oíche* (Morning cloud and night fire, 1964) and *An Branar gan Cur* (The untilled field, 1979) are important contributions to the Irish literary revival movement, while his *Gaoth an Fhocail* (lit. 'a word in the wind', 1998) is the first Irish-language thesaurus. Ó Doibhlin's varied publications also reflect his position as Professor of French and Modern Languages at the National University of Ireland, Maynooth (Maigh Nuad), and include translations from French literature into Irish.

SELECTION OF MAIN WORKS
DICTIONARIES. *Gaoth an Fhocail* (1998); *Sanasán Diagachta* (2001).

Ó Domhnaill, Maghnus (?–1563) was an Irish poet and hagiographer. He is best known for his biography of St Columba (COLUM CILLE), *Betha Colaim Chille* (1532). The work was translated into Latin in the 17th century by fellow hagiographer John Colgan (Seán MAC COLGÁIN, ?1592/1587–1658). Ó Domhnaill also composed poetry, mainly of the DÁNTA GRÁDHA type.

Ó Donnchadha, Tadhg ('Torna', 1874–1949), an Irish scholar, poet, translator, and teacher, was born in An Ghleann, Carraig na bhFear (Carrignavar), a few miles north of Cork city (CORCAIGH) when IRISH was still spoken in the locality. He acquired an early love of the language and became a great admirer of the oral poetry still to be heard in his native parish.

He moved to Dublin (BAILE ÁTHA CLIATH) in 1892 to train as a teacher at St Patrick's College, Drumcondra, and after working for some years as a schoolteacher in the city he was appointed Professor of Irish in his old college. An early member of the Gaelic League (CONRADH NA GAEILGE), and one of the founders of the Keating Branch, he played a leading rôle in Irish-language dramatic, literary, and musical events, and became a well-known figure among the capital's Irish speakers. Interested in earlier forms of Irish and the other CELTIC LANGUAGES, he participated in many courses offered by the School of Irish Learning and became friendly with several foreign Celtic scholars.

Such contact seems to have whetted his desire to learn more about other cultures and to convey something of their literature through numerous translations into Irish. Among these are his ground-breaking *Guth ón mBreatain 1: Llais o Gymru* (A voice from Wales, 1912), and his *Fíon Gearmanach* (German wine, 1930), both collections of poetry. He also published translations from Old and Middle Irish, SCOTTISH GAELIC, BRETON, French, and English, including works by Daudet and George Moore and *Rubáiiát Omár Caiiám ó Naíseapúr* (1920) based on FitzGerald's English version.

He was also a prolific poet in Irish, with a great fondness for the traditional metres (see METRICS), in which his study of earlier verse had made him something of an authority. Inspired very often by particular events rather than deep meditation, his poetry does not contain much of great literary value, but it retains a historical significance both because he is one of the very earliest modern Irish poets with a published volume to his name (*Leoithne Andeas,* 1905), and also because his work bears testimony to the activities and preoccupations of the Irish language movement at the turn of the century.

Torna was also a frequent contributor in the press and was editor of several publications, including *Banba, An t-Europach,* and, from 1902 until it ceased publication in 1909, of *Irisleabhar na Gaedhilge,* the journal of Conradh na Gaeilge, and he did much to familiarize readers of Irish with what was happening

in the other CELTIC COUNTRIES.

In 1916 University College Cork awarded him an honorary D.Litt. and appointed him Professor of Irish, a post which he held until his retirement in 1944. His most abiding scholarly interest was the 17th- and 18th-century Munster poets (see IRISH LITERATURE [4]; MUMU), but he also published valuable volumes on proverbs, GENEALOGIES, and Irish versification and prosody. A Festschrift in his honour, *Féilscríbhinn Torna*, includes a list of his many publications. He bequeathed his valuable collection of books and manuscripts to University College Cork, where it is known as the Torna Collection.

SELECTION OF MAIN WORKS

Dewi Wyn Evans

O'Donovan, John (Seán Ó Donnabháin, 1806–61) was a prolific and versatile Irish scholar, probably best known for his edition and translation of *Annála Ríoghachta Éireann* (ANNALS of the Four Masters). Born in Attateemore, Slieve Rue, Co. Kilkenny (Contae Chill Chainnigh), O'Donovan moved to Dublin (BAILE ÁTHA CLIATH) in 1823 to become a priest. However, he became involved with Gaelic scholarship and finally abandoned the idea of priesthood. After a few years at the record office, he was appointed Gaelic adviser to the Ordnance Survey in 1832. He worked with the famous Irish scholars Sir George PETRIE (1790–1866) and Eugene O'CURRY (1796–1862) on the extensive survey, which included a detailed description of the antiquities, onomastics, and local legends of each county (see DINDSHENCHAS). O'Donovan did much of the necessary fieldwork and has left us his extensive correspondence on the information gathered. O'Donovan was then employed by the Irish Archaeological Society (which later merged with the Celtic Society to become the Archaeological and Celtic Society), where he was involved in editing early Irish texts. Some of his most impressive works—including *The Banquet of Dun na n-Gedh* (1842), *Leabhar na gCeart* (1847) (see LEBOR NA CERT), and *The Tribes and Customs of Hy-Many* (1843), all of which were first published under the auspices of this society—date from this period. In 1845 O'Donovan published *A Grammar of the Irish Language*, which was well-received, even by important German linguists, such as Franz Bopp (1791–1867) and Jacob Grimm (1785–1863), and remains an impressive piece of scholarship pre-dating comparative philology (see DICTIONARIES AND GRAMMARS [1]).

O'Donovan was appointed to the Brehon Law Commission in 1852 and during his final years he worked alongside O'Curry once again, this time on a comprehensive edition of early Irish legal tracts. It appeared under the title *Ancient Laws of Ireland* (ed. Hancock et al., 1865–1901), after Robert Atkinson had taken over as general editor following the demise of both scholars. Although not always a reliable representation of the source material, this impressive work remains in many cases the only existing English translation of the LAW TEXTS.

Ó Duilearga, Séamas (James Hamilton Delargy, 1899–1980) was an Irish folklorist who was

born in Cushendall, Co. Antrim (Contae Aontroim). Having learned IRISH on the island of Rathlin (Reachlainn) between the north-eastern mainland of Ireland (ÉIRE) and south-west Scotland (ALBA), Ó Duilearga collected FOLK-TALES from 1920 onwards, first in Co. Antrim and then from 1923 until 1931 in Iveragh, Co. Kerry (Ibh Rathach, Contae Chiarraí). He was the founding member of the Folklore of Ireland Society, the Irish Folklore Institute, and of the Irish Folklore Commission, of which he became director in 1935. He later became Honorary Director, a position he held for the entire period of the Commission's existence. Ó Duilearga held the Professorship of Irish Folklore at University College Dublin (BAILE ÁTHA CLIATH) from 1946 until 1971. His main field of research was Irish storytelling. He collected tales from what proved in many instances to be the last generation of *seanchaithe* (traditional Irish-language storytellers).

PEB

O'Faolain, Sean (1900–91) is best known for his incisive short-story snapshots of NATIONALISM and Catholicism in rural Ireland (ÉIRE) and Cork (CORCAIGH). Born John Whelan in Cork city, O'Faolain was the son of a policeman. He took up the cause of nationalism at an early age, Gaelicizing his name and joining the IRISH REPUBLICAN ARMY (IRA) while he was an undergraduate at University College Cork. After fighting on the anti-treaty side during the Irish Civil War (1922–3), he won a Commonwealth scholarship to Harvard University in 1926. He married his long-time friend Eileen Gould in Boston in 1928. Their daughter Julia was born in London in 1932, where O'Faolain taught for several years. The family returned to Ireland in 1933.

Since much of his early work was proscribed in Ireland, O'Faolain published his well-received first collection of short stories, *Midsummer Night Madness and Other Stories* (1932), in London. His Chekhov-influenced second collection, *A Purse of Coppers* (1937), marks a new interest in dramatic and compressed prose. O'Faolain's short stories typically present a sympathetic central male character in conflict with the repressions of post-independence Ireland.

Disappointed by the putatively narrow and conservative Irish state that arose out of the Civil War of the early 1920s, O'Faolain declared the Gaelic ascendancy dead with his biography of Hugh O'Neill, *The Great O'Neill* (1942), and leaned towards the Anglo-liberal outlook of Daniel O'Connell in his biography *King of the Beggars* (1938). He also wrote biographies of Eamon DE VALERA (1933, 1939) and Constance Markiewicz (1934). He acknowledged the difficulties of post-FAMINE Irish identity in his American-Irish trilogy, *A Nest of Simple Folk* (1934), *Bird Alone* (1936), and *Come Back to Erin* (1940). O'Faolain also wrote travelogues and critical works, for example, *A Summer in Italy* (1949) and *The Short Story* (1948).

As founder and editor of the literary journal, *The Bell*, in the 1940s, O'Faolain created an outlet for liberal thinking in Ireland, promoting an outward-looking post-Catholic Ireland. His autobiography *Vive Moi!* was well-received in the more cosmopolitan Ireland of 1964 and rewritten for publication after the death of his wife in 1985.

Ó Fiannachta, Pádraig (1927–) was born in the Kerry GAELTACHT and educated in Maynooth, University College Cork, and All Hallows, Clonliffe, where he was ordained priest in 1953. After some years

in Wales (Cymru), he was appointed Professor of Early Irish in Maynooth in 1960 and Professor of Modern Irish in 1981. He contributed to the *Dictionary of the Irish Language* (DIL) and was one of the arrangers of fascicules L, C1, C2, and C3 (1966–75). He is the author of many books and articles and has published several collections of poetry. He edited *Léachtaí Cholm Cille* from 1971 to 1994, and also *An Bíobla Naofa* (The Holy Bible, 1981), translating large portions of the text himself. Retiring from Maynooth (Maigh Nuad) in 1992 Ó Fiannachta returned to Kerry (Ciarraí) as parish priest of Dingle (An Daingean). He was awarded an honorary doctorate by Maynooth in 1995.

Nicholas Williams

Ó Flaithearta, Liam (Liam O'Flaherty, 1896–1984) was born on Inishmore (Inis Mór), the largest of the Aran Islands (Oileáin Árann) to Irish-speaking parents. He was educated at the local school, and at Rockwell and Blackrock Colleges. He attended University College Dublin (Baile Átha Cliath) as a clerical student, but left the seminary in 1914. Formerly a member of Eoin MacNeill's Irish Volunteers (see IRISH INDEPENDENCE MOVEMENT), he joined the Irish Guards, part of the British Army, in 1915 and, after a training period at Caterham, was sent to France. He returned to Ireland (Éire) in 1917, suffering from shellshock and physical injuries. After recovering, he spent two years travelling around the world. On his return to Ireland, Ó Flaithearta founded the Communist Party of Ireland with Roddy Connolly and others in 1921, and he fought in the Civil War in Dublin in 1922. When his first novel, *Thy Neighbour's Wife*, was published in 1923, Edward Garnett, his literary mentor, advised Ó Flaithearta to return to the Aran Islands to write. He later moved to Dublin, and then to Co. Wicklow (Contae Chill Mhantáin), before resuming his travels. He lived in England, France, Russia, South America, and the United States, before returning to Dublin in the early 1950s. In 1974 he received an honorary D.Litt. from the National University of Ireland.

Ó Flaithearta is known mainly for his English-language writings, comprising three volumes of autobiography (all published by 1934), 15 novels, and 13 collections of short stories. His work in Irish consists of one collection of short stories, *Dúil* (Desire, 1953), most of which had originally appeared in literary periodicals during the 1920s and the late 1940s. Almost all of the stories in *Dúil* have also been published in English, but, in all but three cases, it is not possible to determine which version was the original. Nevertheless, the Irish collection has a clear sense of unity, all 18 stories dealing with animals or with humans whose simple lives are in harmony with the natural world they inhabit, a world whose ecology is primarily threatened by human avarice.

In contrast to his novels and his English short stories, many of which tend towards the melodramatic, Ó Flaithearta's Irish stories have a very simple plot and an understated style, characterized by the dominance of noun and adjective over verb. Despite their limited Irish vocabulary, these poetic stories are more accomplished than much of the author's English-language work, which is frequently verbose and bombastic.

SELECTION OF MAIN WORKS
AUTOBIOGRAPHICAL WORKS. *Two Years* (1930); *I Went to Russia* (1931); *Shame the Devil* (1934).

Pádraigín Riggs

O'Grady, Standish James (1846–1928) was an Irish novelist and historian whose versions of the

Irish mythical cycle earned him the sobriquet 'Father of the Irish Literary Renaissance' (see ANGLO-IRISH LITERATURE). The son of an Anglican rector, O'Grady grew up in Castletownbere, Co. Cork (Baile Chaisleáin Bhéarra, Conta Chorcaí), where he met his future wife, Margaret Fisher, the daughter of a neighbouring rector. He excelled at Trinity College Dublin (BAILE ÁTHA CLIATH), but abandoned a legal career after discovering Sylvester O'Halloran's *An Introduction to the Study of the History and Antiquities of Ireland* (1772). Self-published historical works were a failure, but his two-volume *History of Ireland* (1878, 1880), mostly concerning the ancient literature, was hugely popular and had a profound influence on W. B. YEATS, T. W. Rolleston (1865–1939), and particularly George Russell (alias A.E., 1867–1935). O'Grady's popularity with the Irish writers led to the London publication of literary histories in 1890 and 1893, and he proceeded to write influential works of historical fiction, such as *The Flight of the Eagle* (1897) set in Elizabethan Ireland.

O'Grady's fiction has been criticized for approving of Elizabethan and Cromwellian rule in Ireland, and his versions of early Irish tales have been faulted for bowdlerization, but he could also be critical of English and establishment rule in Ireland, notably in his influential essay 'The Great Enchantment' (Gregory, *Ideals in Ireland* 75–83), which reproached England for not living up to its responsibilities in the ACT OF UNION.

A journalist for most of his life, O'Grady tried to influence contemporary Irish politics and society. Principally a unionist and conservative, despite his passion for GAELIC culture, he suggested that landlords and tenants work together to revitalize the country in the pamphlet *Toryism and the Tory Democracy* (1886), which also recognized the impending doom of landlordism in Ireland and the growing issue of unemployment (cf. LAND AGITATION). Editor of a small newspaper, *The Kilkenny Moderator* (1898–1902), and founder-editor of the *All-Ireland Review* (1902–6), he became influential in intellectual circles, publishing articles by A. E., Arthur Griffith (Art Ó GRÍOFA), and W. B. Yeats, among others.

His health failing, O'Grady moved to England in 1918 and died in the Isle of Wight.

SELECTION OF MAIN WORKS

LEGENDARY HISTORIES. *History of Ireland 1: The Heroic Period* (1878); *History of Ireland 2: Cuculain and his Contemporaries* (1880).

HISTORICAL FICTION. *Finn and his Companions* (1892); *Bog of Stars and Other Sketches and Stories of Elizabethan Ireland* (1893); *Coming of Cuculain* (1894); *Flight of the Eagle* (1897); *In the Gates of the North* (1901); *Triumph and Passing of Cuculain* [1919].

POLITICAL WRITINGS. *Crisis in Ireland* (1882); *Toryism and the Tory Democracy* (1886); *Great Enchantment* (1901; Gregory, *Ideals in Ireland* 75–83).

Brian Ó Broin

Ó Grianna, Séamus ('Máire', 1889–1969) was born in the Donegal GAELTACHT. Having attended the local national school, he spent some years as a migrant worker in Scotland (ALBA). In 1910 he attended Coláiste Uladh (the preparatory college for Irish teachers) and two years later he entered St Patrick's Training College, Dublin (BAILE ÁTHA CLIATH), to train to become a teacher. He edited *Fáinne an Lae* from 1927 until 1929 (see CLAIDHEAMH SOLUIS; CONRADH NA GAEILGE). In 1930 he joined An Gúm (the Government Publication Office) as a translator. An acknowledged authority on his native dialect, he worked with both Tomás DE BHALDRAITHE and Niall Ó Dónaill on the preparation of their respective dictionaries.

A prolific writer, Ó Grianna published nine novels, thirteen collections of short stories, and three autobiographical accounts. His fiction is a rich source of the dialect and social history of his native Donegal Gaeltacht, where it is mainly set. Although his best work is insightful, much of his writing tends to be sentimental and repetitive.

SELECTION OF MAIN WORKS

AUTOBIOGRAPHICAL WRITINGS. *Nuair a Bhí mé Óg* (1942; trans. A. J. Hughes, *When I Was Young* [2001]); *Rann na Feirste* (1943); *Saoghal Corrach* (1945).

COLLECTIONS OF SHORT STORIES. *Cioth is Dealán* (1926); *Scéal Úr agus Sean-scéal* (1945); *An Teach nár Tógadh agus Scéalta Eile* (1948); *Fód a' Bháis agus Gearr-sgéalta Eile* (1955); *An Bhratach agus Gearr-sgéalta Eile* (1959); *Cúl le Muir agus Scéalta Eile* (1961); *Una Bhán agus Scéalta Eile* (1962); *Oidhche Shamhraidh agus Scéalta Eile* (1968); *Sea's Revenge and Other Stories* (2003).

NOVELS. *Mo Dhá Roisín* (1921); *Caisleáin Óir* (1924); *Feara Fáil* (1933); *Tarngaireacht Mhiseoige* (1958); *Ó Mhuir go Sliabh* (1961); *Bean Ruadh de Dhálach* (1966); *An Sean-Teach* (1968).

Pádraigín Riggs

Ó Gríofa, Art (Arthur Griffith, 1871–1922) is seen as the theoretician behind the Irish struggle for independence. His policy of political abstention—nationalist Irish MPs would refuse to take their seats in the British Parliament in order to form their own governing body—established a way between the earlier Parliamentarianism and outright armed insurrection. He founded Sinn Féin, whose elected MPs formed the first Dáil Éireann, and led the delegation which signed the Anglo-Irish Treaty of 6 December 1921. He was one of the original Teachtaí Dála (TD, Member of the Dáil) of the parliament of Saorstát na hÉireann (see IRISH INDEPENDENCE MOVEMENT).

Born in Dublin (BAILE ÁTHA CLIATH) on 31 March 1871, Griffith left school at the age of fifteen to become an apprentice printer, but continued his education informally through various literary societies. He spent two years working in the gold mines in South Africa between 1896 and 1898, and during this time he formed an Irish Society to show the connections between Boer aspirations and the Irish struggle for independence and to commemorate the 1798 rebellions (see ÉIRE; TONE). In September 1900 his first political organization, Cumann na nGaedheal (Society of the Gaels), advocated the establishment of an Irish republic and established political abstention as a weapon in the struggle for Irish independence, drawing on the experience of Hungary in its dealings with the Hapsburg Empire. Joining forces with his 'National Council', formed in 1903 to protest against King Edward VII's visit to Ireland, and the Irish Republican Brotherhood Dungannon Clubs, Sinn Féin was founded in 1905 and, in 1908, contested its first election. Conceptualized as an organization embracing the whole spectrum of nationalist opinion, it set about creating a governing body for Ireland by assembling a 'Council of Three Hundred' elected local government delegates. However, the passing of the Irish Home Rule Bill in 1912 robbed the organization of most of its supporters.

The failure of the Easter Rising and the indefinite postponement of Home Rule during the First World War enabled Sinn Féin to transform itself into a powerful, radical party, which, in December 1918, won an overwhelming victory in the first post-war election in Ireland. Implementing Griffith's policy of abstention, on 21 January 1919 the Sinn Féin MPs formed Dáil Éireann, in which Griffith became Minister for Home Affairs and Eamon DE VALERA Vice-President. While De Valera travelled the United States during the Irish War of Independence, Griffith had control of the Dáil and began building a system of Irish national institutions to replace the British ones. He was a member of both delegations negotiating the terms of Irish independence with London, but led the second, which signed the first Anglo-Irish Treaty on 6 December 1921. When De Valera resigned on 9 January 1922, following the Dáil's acceptance of the treaty, Griffith became leader of the house. Increasingly worried by the anti-treaty activities of the IRISH REPUBLICAN ARMY (IRA), he banned the Army Convention of March 1922 and urged Michael COLLINS to take the Four Courts, which initiated the Irish Civil War. He was able to enjoy the election victory for his pro-treaty party on 16 June 1922, but died, exhausted and weakened from a long illness, on 12 August 1922, his life's work unfinished.

Ó hAimhirgín, Osborn (Osborn Bergin, 1873–1950) was an important Celtic scholar whose work had a major impact on the study of early IRISH language and literature. Trained in Old Irish by the famous scholar Rudolf THURNEYSEN, Bergin went on to become the first Professor of Early and Medieval Irish at University College Dublin (BAILE ÁTHA

Cliath). His students included some of the most famous Irish scholars of the 20th century, including Daniel Binchy (1899–1989), Miles Dillon (1900–72), and Gerard Murphy (1900–59). In 1940 Bergin was appointed first director of a newly established research institute dedicated to Celtic studies, Institiúid Ard-Léinn Bhaile Átha Cliath (Dublin Institute for Advanced Studies), though he resigned less than a year later.

A prolific editor, Bergin produced scholarly editions of bardic poetry and other medieval Irish texts. With some of his former students he also published editions of the important manuscripts Lebor na hUidre ('The Book of Dun Cow') and Lebor Laignech ('The Book of Leinster'), and worked as general editor on the monumental *Dictionary of the Irish Language* (1983). With Binchy, Bergin also translated and revised his old teacher's *Handbuch des Altirischen* (1909), published as *A Grammar of Old Irish* (1946).

Ó hEódhasa, Eochaidh (?1560–1613 or ?1570–1617) was a member of a well-known Ulster (Ulaid) learned bardic family. He was appointed *ollamh* (learned poet) to the Mág Uidhir (Maguire) chieftains of Fermanagh (Fear Manach), who played a central rôle in the Flight of the Earls (1607). Much of Ó hEódhasa's extensive extant work centres around the fortunes of this family. His poems, which are fine examples of the skills of the professional Irish poet, illustrate the rôle of this class in medieval Ireland (Éire), as well as providing first-hand testimony of an unsettled period of Irish history.

Ó hUiginn, Tadhg Dall, was born *c.* 1550, probably in Leyney, Co. Sligo (Luighne, Contae Shligigh). He was descended from the Connacht branch of the Ó hUiginn family, members of which were celebrated poets and teachers of poetry since the 14th century, if not earlier. Tadhg Dall was fostered in Donegal (Tír Chonaill), but it is not known where he received his professional training. Despite his sobriquet *dall*, there is no evidence that he was blind. One of his earliest patrons was Domhnall, chief of the O'Conor Sligo family, but the patron with whom he was most closely identified was Riocard Mac Uilliam Búrc (Burke) of Mayo. Tadhg Dall also wrote for the O'Neills of Tyrone, the Maguires of Fermanagh, the O'Rourkes of Bréifne, the MacSweeneys of Fánad, and the O'Haras (Ó hEaghra) of Sligo. Nearly fifty of his poems survive, most of which are conventional panegyric, but these may represent only a fraction of his output.

His career was prosperous. At his death on 31 March 1591 he held nine quarters of land in the barony of Leyney. He is said to have been murdered by six of the O'Haras on account of a satire he wrote about them. His son Tadhg Óg was also a poet; he died sometime before 1641.

Máirín Ní Dhonnchadha

Ó Laoghaire, An tAthair Peadar (Fr. Peter O'Leary, 1839–1920) was one of the leading advocators

of the vernacular (*cainnt na ndaoine*) as a basis for a Modern Irish standard during the early years of the Irish language revival. Born in 1839 near Macroom, Co. Cork (Maigh Chromtha, Contae Chorcaí), and raised bilingually through Irish and English, he was ordained at Maynooth (Maigh Nuad) in 1867. A central member of Conradh na Gaeilge, though critical of it, and a literary pioneer, he published *Séadna* (the title is an Irish personal name and metrical term, 1904), one of the first pieces of Modern Irish creative prose. *Mo Sgéal Féin* (My own story, 1915) is an autobiographical work and he also published a wide range of Irish-language texts, including translations and adaptations.

Caitríona Ó Torna

Ó Muirthile, Liam (1950–) was born in Cork (Corcaigh). After graduating from University College Cork, where he was a member of the Innti group, he joined RTÉ (Raidió Teilifís Éireann), the national radio and television station, as a journalist (see MASS MEDIA). His first collection of poetry, *Tine Chnámh* (Bonfire, 1984), which won the Irish American Cultural Institute prize, was dramatized and produced in Dublin (Baile Átha Cliath) in 1993. His second collection, *Dialann Bóthair* (A traveller's journal), was published in 1992. A novel, *Ar Bhruach na Laoi* (On the banks of the Lee), appeared in 1995. Although he is not a native Irish speaker, Ó Muirthile has a masterful knowledge of the language. A superb stylist with a fine intellect, his most accomplished work is probably his weekly *Irish Times* column *An Peann Coitianta* (The constant pen), two selections of which have been published (1995, 1997). He is a member of Aosdána (the Irish Literary Academy).

SELECTION OF MAIN WORKS
Tine Chnámh (1984); *An Peann Coitianta* (1991); *Dialann Bóthair* (1992); *Ar Bhruach na Laoi* (1995); *An Peann Coitianta* (1995); *An Peann Coitianta 2* (1997).

Pádraigín Riggs

O'Rahilly, Cecile (1894–1980) was an important Celtic scholar, best known for her editions of the Táin Bó Cuailnge. She also wrote several comparative works, including *Ireland and Wales: Their Historical and Literary Relations*, but she concentrated mainly on editing Irish material. She was the sister of Thomas F. O'Rahilly (Ó Rathile). She studied under Osborn Bergin (Ó hAimhirgín) in Ireland (Éire) and Sir Ifor Williams in Wales (Cymru), and later worked as a scholar in the Dublin Institute for Advanced Studies (Institiúid Ard-Léinn), initially under the directorship of her brother.

Ó Rathaille, Aogán (?1670–?1729) was an Irish poet particularly associated with the genre known as

the political AISLING (vision poem). He is believed to have been born near Killarney, Co. Kerry (Cill Airne, Contae Chiarraí), but little is known about his life. His maternal ancestors had apparently been tenants of the old Irish aristocratic Mac Cárrthaig family (MacCarthys) and, as poets, had enjoyed their patronage. Aogán's own family were not tenants of the MacCarthys, however, but of the Browns, and when the latter were dispossessed, during the initial years of the 18th century, the poet found himself without support or status. The bitterness and grief which he felt as a result of this unwelcome change constitute a major theme in his poetry. His mindset, which regarded the poet as a member of a privileged élite, owes much to the bardic tradition, and his death is seen as the end of an era in Irish literary history (see BARDIC ORDER; IRISH LITERATURE). Approximately 40 poems are attributed to Ó Rathaille, most of which were written after 1700, and he also composed a prose SATIRE. He probably died in 1729, and is buried in Muckross Abbey, Killarney.

Ó Rathile, Tomás (Thomas F. O'Rahilly, 1883–1953) was born in Listowel, Co. Kerry (Lios Tuathail, Contae Chiarraí), the son of Thomas Francis Rahilly and Julia Curry. He wrote several standard works on the IRISH language, poetry, and literature, including *Irish Dialects Past and Present*, DÁNTA GRÁDHA, and the influential and ingenious *Early Irish History and Mythology*. He was Professor of Irish in Trinity College Dublin (BAILE ÁTHA CLIATH), and later Research Professor in University College Cork (CORCAIGH). He spent the remainder of his career as director of the School of Celtic Studies in the Dublin Institute for Advanced Studies (INSTITIÚID ARD-LÉINN).

AM

Ó Ríordáin, Seán (1916–77) was born in Ballyvourney (Baile Mhuirne), in the West Cork GAELTACHT. His father, who died in 1926, was a native IRISH speaker; his mother knew very little Irish. In 1932 the family moved to Inniscarra, near Cork (CORCAIGH), and Ó Ríordáin attended the North Monastery secondary school, where he was taught through the medium of Irish. In 1937 he commenced work at the Cork Corporation Motor Taxation office, but in 1938 he contracted tuberculosis and spent much of the next 13 years in Heatherside sanatorium, North Cork. Following the death of his mother in 1945, an experience which affected him profoundly, he wrote his seminal poem *Adhlacadh mo Mháthar* (My mother's burial).

His first collection of poetry, *Eireaball Spideoige* (A robin's tail, 1952), contains many pessimistic poems dealing with the fear of death and the loss of religious faith. His second collection, *Brosna* (Bundle of sticks, 1964), which is more technically assured and thematically less pessimistic than the first, depicts the world contained in the Irish language as a paradise lost. As a poet writing in Irish, Ó Ríordáin was very conscious of the importance of belonging to the Irish literary tradition, while at the same time dealing with contemporary issues. His style is characterized by the use of neologisms and by powerful imagery, many of his metaphors deriving from his experience in hospital and from his Catholic upbringing. One of the main themes of his work is the quest for order in the chaos of the post-Irish speaking, post-Christian world in which he lived.

Ó Riordáin kept a personal diary from 1940 until shortly before his death. This diary, now in the Archives of University College Dublin (BAILE ÁTHA CLIATH), records not only intimate details of the poet's own life, but also describes many of the public events and personalities of the time in a highly sophisticated and original prose style. This same style characterized

the weekly articles which Ó Ríordáin wrote for *The Irish Times* from 1968 to 1975.

In 1969 Ó Ríordáin was appointed by University College Cork to a post equivalent to that of today's 'Writer in Residence'. In 1976 he was conferred with an honorary D.Litt. by the National University of Ireland.

Ó Ríordáin suffered from the effects of tuberculosis throughout his adult life. In 1976 his health deteriorated seriously and he died in the former Cork sanatorium, Sarsfield Court, in February 1977. He is buried in St Gobnait's cemetery, Baile Mhuirne.

Ó Searcaigh, Cathal (1956–) is one of the best known and highly acclaimed modern IRISH-language poets. Born in Meenala, near Gortahork, Co. Donegal (Mín A'Leá, Gort a'Choirce, Contae Dhún na nGall), he studied European languages and also trained as a Celtic scholar. The modern and contemporary themes tackled in his poetry, including the openly homosexual, are offset by an awareness of traditional GAELIC culture, while also reflecting Ó Searcaigh's academic training and varied interests. Ó Searcaigh's later work is characterized by an increasingly sublime mode of expression, where his complex character becomes even more apparent.

Ó Súilleabháin, Amhlaoibh (Humphrey O'Sullivan, 1780?–1837) was born near Killarney (Cill Airne), but his family moved to Kilkenny (Cill Chainnigh), near Callan, in 1790. Like his father, Amhlaoibh became a schoolteacher. His diary, *Cín Lae Amhlaoibh Uí Shúileabháin*, which covers the period 1827–35, is important as a virtually unique contemporary account of local, national, and international events, as well as observations on a wide range of subjects, written in IRISH. Part of the diary, edited by Séamus Ua Casaide, was published in 1912, in the short-lived Irish journal, *Gadelica*. The complete diary, edited in four volumes by Michael McGrath, was finally published by the Irish Texts Society (CUMANN NA SCRÍBHEANN NGAEDHILGE) in 1936–7 and an abridged edition by Tomás DE BHALDRAITHE in 1970.

Ó Súilleabháin, Diarmaid (1932–85) was an important modern IRISH-language writer. Originally from the Bearra peninsula, West Cork (CORCAIGH), Ó Súilleabháin became a teacher in the south-east of Ireland (ÉIRE). In his novels Ó Súilleabháin deals with contemporary issues such as NATIONALISM, traditional values, and economic expansion, which he considers from a variety of angles. His writing reflects the struggle and the uncertainty of a whole generation of Irish people seeking to come to terms with a changing society without losing their identity.

PSH

Ó Súilleabháin, Muiris (1904–50) was born on the IRISH-speaking Great Blasket Island, Co. Kerry (An Blascaod Mór, Contae Chiarraí). His mother died when he was a year old and he spent the following six years in an orphanage in Dingle (An Daingean). When he returned to the island, at the age of seven, to live with his father and three of his older siblings, he could not speak Irish. He became very close to his paternal grandfather, Eoghan, who not only helped him to become fluent in the language but also taught him much about the traditions of the island. He attended school on the island until 1918. When his two sisters and one of his brothers emigrated to America he intended to follow them, but was dissuaded from doing so by his friend, George Thomson, a young classical scholar who had come to the island in 1923 to learn Irish. On the latter's advice, Ó Súilleabháin joined the Gardaí (Irish police force) in 1927. After his training period, he was posted to Conamara.

Ó Súilleabháin wanted to be a writer and with the encouragement and assistance of Thomson, who suggested that he take Tomás Ó CRIOMHTHAIN's *An tOileánach* ('The Islandman') as a model, he wrote his autobiography, *Fiche Blian ag Fás*, which was published in 1933. An English translation (*Twenty Years a-Growing*) by Moya Llewelyn Davies and George Thomson appeared in the same year. In 1934, following the success of this publication, he left the Gardaí, a post he disliked, in order to become a full-time writer. However, his plans did not succeed and he rejoined the Gardaí in February 1950. Four months later he drowned while swimming near Galway city (An Ghaillimh).

Ó Tuairisc, Eoghan (Eugene Rutherford Watters, 1919–82) was an important Irish writer who published widely in both English and IRISH. He was deeply interested in European literature and used his superior linguistic abilities and literary knowledge to produce highly innovative and original pieces of work across various genres. Among his best-known works are the novel *L'Attaque* (1962) and his drama version of *Cúirt an Mheán-Oíche* ('The Midnight Court') by Brian Merriman (MAC GIOLLA MEIDHRE), which won the Oireachtas (see FEISEANNA) in 1961. Ó Tuairisc was also editor of the Irish-language journal *Feasta* between 1963 and 1966. Although originally from Ballinasloe, Co. Galway (Béal Átha na Sluaighe, Contae na Gaillimhe), Ó Tuairisc spent much of his life in Dublin (BAILE ÁTHA CLIATH), where he worked as a teacher. He returned to the west of Ireland (ÉIRE) in his final years.

SELECTION OF MAIN WORKS

NOVELS. *L'Attaque* (1962); *Dé Luain* (1966); *An Lomnochtán* (1977).

Ó Tuama, An tOllamh Seán (1926–) is a scholar, literary critic, and creative writer who writes primarily in IRISH. He was born in Cork (CORCAIGH) and was educated at the local university, where he was awarded an MA in 1946 and a Ph.D. in 1959. He was Professor of Modern Irish Literature at University College Cork from 1967 until 1991. He has published several important works, including *An Grá in Ambráin na nDaoine*, a study of late medieval Irish love poetry (influenced, he believed, by the Provençal *amour courtois* 'COURTLY LOVE'), his edition of Eibhlín Dubh Ní Chonaill's CAOINEADH *Airt Uí Laoghaire* (Lament for Art O'Leary), and studies of the lives and writings of Aogán Ó RATHAILLE and Seán Ó RÍORDÁIN. He published further critical studies in a collection of essays—issued in both Irish and English. Between 1950 and 1991 he compiled three anthologies of Irish

poetry, the best-known of which is *An Duanaire/Poems of the Dispossessed* (in conjunction with Thomas KINSELLA, 1981). His creative writings include collections of poetry and several plays. He encouraged the INNTI school of poets.

SELECTION OF MAIN WORKS

ANTHOLOGIES. *Nuabhéarsaíocht, 1939–1949* (1950); (with Thomas Kinsella) *An Duanaire 1600–1900* (1981); (with Louis de Paor) *Coiscéim na hAoise Seo* (1991).

CRITICAL WORKS. *An Grá in Ambráin na nDaoine* (1960); *Caoineadh Airt Uí Laoghaire* (1961); *Filí faoi Sceimhle* 3–187, 193–202 (1978); *An Grá i bhFilíocht na nUaisle* (1988); *Cúirt, Tuath agus Bruachbhaile* (1990); *Repossessions* (1995).

PLAYS. *Ar Aghaidh Linn, a Longadáin* (1959); *Moloney* (1966); *Gunna Cam agus Slabhra Óir* (1967).

Nollaig Ó Muraíle

Ó Tuama, Seán (An Ghrinn 'of the jest', 1707/8–75) was one of the most famous of the *filí na Máighe* ('poets of the Maigue'), who invented the limerick. Probably a native of Croom, Co. Limerick (Cromadh, Contae Luimnigh), where he briefly conducted a hedge-school, he opened an inn in the village, but the enterprise suffered from his extravagant generosity, especially to his fellow-poets. In the mid-1730s he began convening a celebrated court (CÚIRT) of poetry in Croom, which was attended by such notable figures as Seán Clárach Mac Domhnaill (1691–1754). A fervent Jacobite, Ó Tuama composed several poems around the period of the 1745/6 Rising (see JACOBITE POETRY). More than 40 of his compositions survive, ranging from elegies to insults. He was clearly hurt when, in the mid-1740s, his old friend and fellow-poet Aindrias Mac Craith (1710–93) turned against him. Towards the end of his life he opened an inn at Mungret Gate in Limerick (Luimneach). He died there, but was buried in Croom. He was mourned by his fellow-poets, including Mac Craith, who composed a magnificent elegy for him.

Nollaig Ó Muraíle

Oengus Céile Dé (known as 'The Culdee' at least since the time of Reeves, *Culdees of the British Isles* [1864] 8) was Oengus mac Oengobann, grandson of Oiblén, who lived during the later 8th and early 9th centuries. Our only knowledge of him derives from internal evidence in his *Félire* (martyrology, calendar of saints' feasts), and from an IRISH poem honouring him (Kenney, *Sources for the Early History of Ireland* 471 no. 263). The details of his life were first assembled by John Colgan (Seán MAC COLGÁIN) in his *Acta Sanctorum Hiberniae* (1645) which records 11 March as Oengus's feast day, describes him as a 'hagiographer', and asserts, without adducing evidence, that he was a bishop. Colgan's assembly of the evidence is basically that of all later writers, and it is likewise followed here. As a young man, Oengus became a monk at Clúain-Édnach (Clonenagh, Co. Laois); he later became a desert-style solitary at Dísert-Oengusa (Dysartenos, Co. Laois), which was named after him, and was then attracted to Máel-Rúain, becoming his disciple, and the 'reform' at Tallaght (Tamhlacht). There he wrote his *Félire* and acquired a reputation for holiness. There are other traditions about his beginning this work elsewhere and completing it at Tallaght, and of him leaving Tallaght and spreading the 'reform' elsewhere, but there is no evidence to support such traditions.

The *Félire*, the first extant vernacular martyrology from Ireland (ÉRIU), was written in verse—one quatrain per day, and was intended as a devotional text rather than a technical martyrology for monastic use. That it was intended as a work for a wide audience outside the monastery is clear not only from its use of Irish rather than Latin, and its mnemonic style, but also from its selection of a few notable saints—with a high proportion from Ireland—for each day, rather than a register of all the saints associated with a particular day. From the latest entries in the *Félire* we know that it was written between 797 and 808, and that it followed a particular strand of the 'Hieronymian martyrology' found in insular circles; its basis was probably the *Martyrology of Tallaght*. However, in

addition to the lists of saints, the *Félire* has a prologue and epilogue with two unusual features: (1) a particular theology of saintly intercession on behalf of the whole people; and (2) an implicit critique of the struggles for power among kings in Ireland as being incompatible with the existence of the Irish as a Christian *gens* (nation, people). This careful criticism of the ruling groups within Ireland, along with its developed notion of how the saints of a *gens* intercede for that *gens*, may indicate that these ruling groups were its specific audience.

Thomas O'Loughlin

Oengus Mac ind Óc is a member of the TUATH DÉ, the supernatural or divine tribe of early IRISH LITERATURE. He is the son of the DAGDA and BÓAND, the female personification of the river Boyne. The stock properties of his character include youth and beauty. His name means 'Oengus the Young Son'. *Oengus* itself is a common name in GOIDELIC, Modern *Aonghas*, Anglicized *Angus*, but cognates are found also in Old Welsh *Unust* and the variants ONUIST and UNUIST in the PICTISH KING-LIST, reflecting PROTO-CELTIC **Oino-gustus* 'Chosen one'. Oengus is often called *In Mac Óc* or *Mac ind Óc*, as well as simply *Oengus*; one common Early Modern Irish form of his name is *Aonghus Óg*. The idea expressed by O'Rahilly (Ó RATHILE) that an earlier Old Irish **Maccan Oac* had been reinterpreted raises the possibility that Mac ind Óc originated from the same Proto-Celtic god as the GALLO-BRITTONIC MAPONOS and Welsh MABON (*Early Irish History and Mythology* 516–17). Oengus is closely associated with the great megalithic tomb of Newgrange (BRUG NA BÓINNE), which is often described as his residence (cf. also DUBHADH). He is mentioned in texts in the MYTHOLOGICAL CYCLE, LEGENDARY HISTORY, FIANNAÍOCHT, the ULSTER CYCLE, and DINDSHENCHAS.

Two recurrent themes in the various stories of Oengus are, first, a manipulation of time in which one day becomes a period of many days or even eternity, and, second, fateful entanglement between the affairs of the gods and those of mortal rulers, heroes, and noble women. In Oengus's birth tale, as told in the opening of TOCHMARC ÉTAÍNE ('The Wooing of Étaín'), he was conceived by the Dagda with Eithne after the Dagda had sent Eithne's husband Elcmar (a.k.a. Nechtan) away on an errand and casting a spell on him so that the following nine months seemed like only one day to him. As the story then develops, the young Oengus is frustrated in the wooing of the mortal woman, Étaín Echraide, who is then sought by another immortal as well as by a mortal suitor. The Old Irish tale *Aislinge Oengusa* ('The Dream of Oengus') is closely related to *Tochmarc Étaíne*. In it Oengus sees a beautiful girl in his dreams, night after night for a whole year, and falls into a love sickness. Bóand and the Dagda intervene and messengers are sent out to find the girl, who is discovered to be Caer Ibormeith residing in CONNACHT. Thus, the intercession of MEDB and Ailill is required, entailing a debt of gratitude, for which reason *Aislinge Oengusa* is listed as one of the *remscéla* (fore-tales) of TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley'). As the story of an overpowering dream vision of a destined bride, *Aislinge Oengusa* is thematically comparable to the Welsh *Breuddwyd* MACSEN, the conception episode of the Breton Latin Life of IUDIC-HAEL, and the Scottish Gaelic *Am Bròn Binn* (on which see ARTHURIAN LITERATURE [2]), as well as to the French prose romance *Artus de Bretaigne* (see ARTHURIAN LITERATURE [6] §1; cf. also AISLING). The story of how Oengus tricked his father into granting him Brug na Bóinne for '(a) day and (a) night', and thus by implication for all eternity, occurs in the Old Irish DE GABÁIL IN T-SÍDA (Concerning the taking of the otherworld mound) and is summarized in that article. In the tragic Early Modern Irish love story TÓRUIGHEACHT DHIARMADA AGUS GHRÁINNE ('The Pursuit of Diarmaid and Gráinne'), Aonghas Óg was the supernatural foster-father of the hero DIARMAID UA DUIBHNE and so protected the lovers from the wrathful FINN MAC CUMAILL. In the Early Modern Irish *Altromh Tige Dá Medar* (The nurturing of the house of two milk vessels; ed. Duncan, *Ériu* 11.184–225), Aenghus Óg's foster-daughter, Eithne, becomes a mortal Christian saint (see MYTHOLOGICAL CYCLE §3).

ogam inscriptions and Primitive Irish

The oldest surviving IRISH texts are a series of about 300 INSCRIPTIONS carved, apparently during the 5th and 6th centuries, on otherwise undecorated stone pillars. These short and formulaic texts have no literary content, but consist of a male personal name in the genitive case with patronymic and/or familial affiliation. There are minor variants on this basic theme, but beyond personal names vocabulary is more or less limited to a few terms for KINSHIP and other social rôles. As the only direct evidence for the state of the language in this early period, the inscriptions are of considerable importance to the linguist. Their value, however, is compromised by the extremely limited nature of the texts and certain orthographical shortcomings of the script in which they are carved (see SCRIPTS). Nonetheless, they provide important corroboration of the findings of comparative philology and historical reconstruction concerning the seemingly cataclysmic changes occurring in the language at the time (see Ziegler, *Die Sprache der altirischen Ogam-Inschriften*). It is difficult to identify the earliest date of these inscriptions, but the bulk of them come late in the Primitive Irish period. By definition, Primitive Irish is used for a state of the language that was then written, or can now be inferred and reconstructed, in which the original Old Celtic final syllables of polysyllables were preserved. Irish names and terms begin to be written without their Primitive Irish final syllables in some ogam inscriptions that probably date to the 6th century AD. In the ogam corpus as a whole, more inscriptions are written with the Old Celtic final syllables, hence in what we would call Primitive Irish. A smaller proportion are written showing forms that have lost the old finals but still preserve unstressed internal syllables, a linguistic stage sometimes called 'Archaic Irish'. Relatively few show both apocope (loss of final syllables) and syncope (loss of unstressed internal syllables), thus reflecting the linguistic stage of Early Old Irish, a language that was used in manuscripts as a medium for GLOSSES and continuous texts in the 7th century. For example, the Irish genitive (possessive) name forms that appear as ogamic Primitive Irish CATTUBUTTAS and LUGUDECCAS are also attested in the inscriptions as post-apocope 'Archaic Irish' [CAT]TABOTT and LUGUDEC, and then also in manuscript as Early Old Irish *Cathboth* and Old Irish *Luigdech*, with syncope and apocope (see McManus, *Guide to Ogam* 89). For a further discussion of the phonology of the Irish ogam inscriptions, see IRISH LANGUAGE §2. It is important to stress with such examples that we are seeing a succession of ways in which people had learned to write Irish, not necessarily a full, accurate, or timely reflection of how they spoke Irish in its various registers (levels of formality).

The inscriptions exhibit several remarkable features, but by far the most striking is the script in which they are written—not the Roman capitals of contemporary British and Continental inscriptions, but a uniquely Irish script known as ogam (Old Irish *ogam*; Modern Irish *ogham*). The origins of this script are obscure and much debated. Although clearly inspired by the Roman alphabet, ogam exhibits considerable visual and conceptual independence from it. Written from left to right along a continuous line, ogam letters consist of bundles of between one and five short parallel strokes adjoining the central stem (*druim*). Epigraphic ogams are usually inscribed vertically and read from bottom to top. The twenty original letters are arranged in a fixed order in four groups (*aicmí*):

below/to the right of the stem (b, l, w/f, s, n),

above/to the left (y/h, d, t, c, k^{w}/q)

obliquely across (m, g, gw/ng, st/z, r),

and on the stem (a, o, u, e, i).

Over time additional letters (*forfeda*) were added to this inventory in response to evolving Irish phonology (Sims-Williams, CMCS 23.29–75). Other late innovations enhanced legibility, e.g. use of spacing and gradient to further differentiate letters, marking of division between words, and the binding together of the component strokes of individual letters. (For a comprehensive discussion of all aspects of ogam script and its application, see McManus, *Guide to Ogam.*)

Internal evidence suggests the script is older than the earliest surviving examples of it, but the date and circumstances of its genesis remain obscure. There are several possible scenarios; Irish speakers might have been in contact with Latin in or before the 4th to 5th centuries AD, possibly through the Irish colonies in Wales (CYMRU) or through late Imperial Roman or early Christian trade in south-west Ireland (ÉRIU; see Harvey, CMCS 14.1–15; Stevenson, PRIA C 89.127–65).

Three main phases of ogam usage can be distinguished in the 1500 years since the invention of the script. Its heyday was during the two centuries before 600 when ogam is found in monumental use in all the Irish-speaking regions of the British Isles (Macalister, *Corpus Inscriptionum Insularum Celticarum*). The overwhelming majority of these 'orthodox' inscriptions are found in Munster (MUMU), with particular concentrations in Co. Kerry (Contae Chiarraí) and Co. Cork (Contae Chorcaí). There are a small number in Scotland (ALBA) and the Isle of Man (ELLAN VANNIN), and rather more numerous groups in Wales, Devon (Welsh Dyfnaint), and Cornwall (KERNOW). No ogam inscribed stones have been discovered in Brittany (BREIZH) or elsewhere on the European mainland. None of the ogam inscriptions claimed to have been found on stones from the New World have been accepted as authentic by Celtic scholars. Most of the ogam inscriptions in western Britain are accompanied by Roman alphabet (Latin) versions of the same text. These bilingual dual-script monuments played an important rôle in refining modern knowledge of the correct transliteration of ogam, which is otherwise reliant on late medieval manuscript keys (see Sims-Williams, *Trans. Philological Society* 91.133–80).

One of the seven ogam inscribed stones from the souterrain ('the Cave of Dunloe') at Coolmagort, Co. Kerry

Social change in the 7th century brought the tradition of erecting 'individual inscribed memorials' to an end (see INSCRIPTIONS), and with it the main body of evidence for early ogam dries up. A handful of chance survivals, including graffiti, informal inscriptions on domestic objects, and manuscript marginalia, suggest that ogam did in fact continue in limited use beyond the 7th century. That there are no earlier examples of non-monumental ogam may be a simple accident of archaeological survival. The limited number of references to ogam in early IRISH LITERATURE throw uncertain light on its use in society (McManus, *Guide to Ogam* 153–66). LAW TEXTS refer to ogam-inscribed stones as evidence of title to land and in the sagas descriptions of heroic burial mention the carving of the name of the deceased on a pillar above the grave. These matter-of-fact references tally well with the physical evidence. Less secure are the saga descriptions of the non-monumental use of ogam. There are several

instances in Táin Bó Cuailnge ('The Cattle Raid of Cooley') of ogam carved on a withe and hung on a pillar-stone as a challenge or warning. Archaeological evidence for these wooden ogams could scarcely be expected to survive, and there is no corroborating evidence for saga references to the use of ogam for divination, cryptography, and recording of memory. The popular perception of ogam as being secret, magical, or 'druidic' in origin is not supported by the evidence. There is nothing intrinsically cryptic or occult about ogam and it must be emphasized that its use in early Ireland was first and foremost as a practical day-to-day script.

The prestige of ogam had diminished by the 7th century, as reflected in its restriction thereafter to private secular and informal, even playful, ecclesiastic contexts. The relative standing of the ogam and Roman alphabets in this 'post-classical' phase echoes in certain respects the relationship between runes and Roman letters in Anglo-Saxon England. The term 'scholastic' usually applied to these later ogams is probably a misnomer because from its very inception ogam was a learned creation, and so had been 'scholastic' all along. Nonetheless, there is a definite change in the appearance of ogam at this point: gone is the three-dimensionality of the orthodox pillars, with letters on adjacent faces of the stone and the arris for a stem; in its place a drawn-in stem-line, written across the flat surface as if across a manuscript page. A clear parallel for the influence on epigraphy of a manuscript-derived aesthetic is the replacement of capitals by book-hand in contemporary British inscriptions. The changes in ogam were not, however, solely palaeographical, for there was a break with the old spelling system too. The ogam characters ceased to represent the sounds of Irish directly and became instead a cipher for Old Irish manuscript spelling. As a mere transliteration of roman letters, ogam could now, in theory, be applied to any language, and in fact there are examples of Latin written in ogam characters.

An important exception to the more marginal status of later ogam is the remarkable effloresence of the script in post-7th century Scotland (Forsyth, *Ogham Inscriptions of Scotland*). There its prestige was such that it ousted the Roman alphabet as the preferred monumental script. Ogam inscriptions on the richly decorated cross-slabs of 8th- and 9th-century Pictland provide important evidence for the development of the script in this otherwise poorly documented phase, and reflect a regional variant of what appears to have been a unified ogam tradition. The adaptation of the script to represent the sounds of Pictish is the only instance of the practical use of ogam for a language other than Irish. A scatter of late ogam inscriptions from Shetland (Sealtainn), the Isle of Man, and Ireland (including Viking Dublin [Baile Átha Cliath] and an ogam-runic bilingual monument from Killaloe, Co. Clare [Cill Dalua, Contae an Chláir]) suggest that there was a revival of interest in the script in Celto-Norse circles in the 10th and 11th centuries. These constitute the latest examples of ogam in practical use. Thereafter, there are texts *about* ogam, but no more texts *in* ogam.

The oldest surviving evidence of scholarly interest in ogam (illustrative examples in tracts on different alphabets) dates to the late 8th or early 9th centuries. Old Irish grammatical texts discussing the script, most notably Auraicept na nÉces ('The Scholars' Primer'), are preserved only in much later manuscripts. Ogam's place in the medieval bardic curriculum is reflected in *In Lebor Ogaim* (The book of ogam; see Calder, *Auraicept na nÉces* l.5465 ff.). Its catalogue of over 100 ogam 'alphabets', none of which are found in practical use, is an exercise in logical permutation; similarly, the proliferation of ogam-order alphabetic word-lists on various themes, which may have served as student aids to poetic composition. In the medieval bardic grammatical tracts the term *ogam* was used to mean written as opposed to spoken Irish. From the very beginning, the learning and transmission of the alphabet had been assisted by assigning each letter a meaningful name (McManus, *Ériu* 37.1–31). That all the letters were named for trees is a popular misconception; in fact, this acrostic system was more heterogeneous and fluid than later tradition implies. Ogam remained part of the training of a *file* 'poet' till the 17th century (see bardic order), the letter-names surviving thereafter as the names of ordinary Irish letters. The elaborate system of prophetic meanings attached to ogam characters is a recent creation unrelated to genuine ogam tradition or any magical use of ogam letters that may have occurred in the past.

Oghma was an annual IRISH journal established in 1989 by Seosamh Ó Murchú, Mícheál Ó Cearúil, and Antain Mag Shamhráin, who jointly edited all ten issues. It was intended to provide a platform for prose writers similar to that provided for poets by the periodical INNTI. According to the editors, the content would include original creative prose, literary criticism, and analytical articles on general subjects. Contributors include novelists and short-story writers: Seán Mac Mathúna, Micheál Ó CONGHAILE, Liam Mac Cóil, Pádraig Ó Siadhail, Séamas Mac Annaidh, Alan TITLEY, and Dara Ó Conaola. The final issue of *Oghma* was published in 1998. The title is the modern Irish spelling corresponding to earlier *Ogma* or *Ogmae*, the name of a figure from the MYTHOLOGICAL CYCLE discussed in the following entry (see OGMIOS).

Ogmios was a Gaulish god best known from a passage by the Greek writer Lucian of Samosata (*c.* AD 120–*post* 180) who, while in Gallia Narbonensis, had seen an image of the god, showing him with the usual classical attributes of Heracles as Psychopomp (ferrying souls to the OTHERWORLD). However, this Gaulish HERCULES was a bald and sunburnt old man, from whose tongue golden chains pulled his apparently happy followers. It has been suggested that this same scene is represented on a so-called 'Ogmios-type' of COINAGE. Ogmios is also attested in a dedicatory inscription from Reims (Durocotorum; CIL 13.11295) and on two inscribed lead curse tablets from Bregenz (Brigantium) on Lake Constance. One of these tablets (now lost) links Ogmios with DĪS PATER and Aeracura. The second, commissioned by a woman consumed with jealousy, commends her rival to *Ogmius*, the god of death and the Otherworld. The Irish Ogma *gríanainech* 'Ogma the sun-faced', *trénfher* or 'champion' (lit. 'strongman') of the TUATH DÉ, and inventor of the OGAM script (Old Irish *ogom*, *ogum*), has been identified with Ogmios by many modern writers, largely on the basis of the obviously similar names, but supported further by the attributes of heroic strength, special linguistic skill, and the correspondence of Ogma's epithet and Lucian's description. However, the phonetic correspondence of *Ogmios* to Irish *Ogma(e)* and Welsh *Eufydd* (one of the children of DÔN), Old Welsh *Oumid*, is not exact, though the inconsistencies could be partly explained by a syllable dropped from an earlier **Ogomios* or **Ogumios*, as in *Lugdūnum* < LUGUDŪNON.

Oileáin Árann (**Aran Islands**), Contae na Gaillimhe/Co. Galway, are three islands stretching across the entrance to Galway Bay—Inis Mór (Inishmore, 'Great Island'), Inis Meáin (Inishmaan, 'Middle Island'), and Inis Oirr (Inisheer, 'Eastern Island'). The landscape of the Aran Islands is dominated by large stone forts and stone churches. Some of the forts were originally constructed during the Late Bronze Age (*c.* 1200–*c.* 600 BC), but were reconstructed occasionally into the medieval period. The monumental DÚN AONGHASA on Inis Mór follows this archaeological profile and was constructed on a cliff-top, possibly for ceremonial purposes. The origin of Dún Aonghasa is explained in DINDSHENCHAS *Érenn* as the Fort of Aonghas, a king of the legendary
