INTRODUCTION

This Encyclopedia is designed for the use of everyone interested in Celtic studies and also for those interested in many related and subsidiary fields, including the individual Celtic countries and their languages, literatures, archaeology, history, folklore, and mythology. In its chronological scope, the Encyclopedia covers subjects from the Hallstatt and La Tène periods of the later pre-Roman Iron Age to the beginning of the 21st century. Geographically, as well as including the Celtic civilizations of Ireland, Britain, and Brittany (Armorica) from ancient times to the present, it covers the ancient Continental Celts of Gaul, the Iberian Peninsula, and central and eastern Europe, together with the Galatians of present-day Turkey, and it also follows the Celtic diaspora into the Americas and Australia.

These volumes represent a major long-term undertaking which synthesizes fresh research in all areas with an authoritative presentation of standard information. The 1569 entries, ranging in length from 100 to over 10,000 words, cover the field in depth and are fully integrated with a clear system of internal cross-references and supported by a 10,000-item Bibliography in Volume V. The 338 contributors represent the leading edge of research currently being carried out at all centres of Celtic studies around the world. The name of the author appears at the end of each article, or section in the case of multi-author entries.

For several reasons a project of this scope was felt to be essential at this time. First of all, as a scholarly, but accessible, comprehensive overview of Celtic studies, this Encyclopedia is unique. There is no shortage of popular and semi-popular volumes with 'Celtic' or 'Celts' in their titles, but none has aimed to encompass the whole field with balance and scholarly reliability. At the same time, there exists a body of specialist publications which sets standards for the small corps of professional Celticists. In this narrow context, Celtic studies often means little more than the historical linguistics of the Celtic languages. The publications in this category are often neither accessible in the sense of being readable, nor dependably maintained in print or widely held in general library collections. Most of the handbooks and edited texts that constitute the core works of Celtic philology date from the mid-20th century or earlier, and have not been superseded. Even by their own rigorous and esoteric standards, the expert reference works are a generation or more out of date, a major pitfall requiring of Celtic scholars an almost superhuman 'keeping up with more recent advances' to remain current. To put it metaphorically, the glue holding Celtic studies together as an academic discipline has grown old and brittle.

The situation with regard to books in Celtic studies—in which a qualitative gap looms between specialist and more popular works—mirrors divisions between workers in the field. Small numbers of professional scholars, academic departments, and library collections devoted to Celticity contrast with a vast and growing international cohort of enthusiasts. This latter category includes both amateurs and experts in other fields—modern history, comparative literature, ancient and medieval studies, and many other disciplines—who are self-taught when it comes to Celtic studies, owing to the limited availability of formal instruction in the field. In the light of this background, this Encyclopedia recognizes a broad need for full and up-to-date information well beyond the limited institutional bounds of Celtic studies *per se*. My own experience, for example, of teaching Celtic studies to undergraduates in the United States during the years 1985–1998 was a revelation to me: it showed how little material was available, and how much was needed as essential background for newcomers to this fascinating and rewarding field of study, one so near, yet in many ways so unreachably far, from Anglo-American civilization.

Like all subjects in this time of exponentially expanding information, Celtic studies has tended to fragment into specialisms, and its experts have neither the resources nor the training to move easily between subfields—between languages and periods, for example. Once again, the unsatisfactory links that bind the field together are

either outdated and arcane or semi-popularized and intellectually suspect.

Another reason for embarking on a major synthesis at this time is that archaeological Celtic studies in Britain underwent a profound crisis of conscience in the late 20th century, and this has continued into the 21st. The validity of applying the term 'Celtic' to any group of people or culture of any period has been questioned—especially in connection with the cultural history of Ireland and Britain, to which the terms 'Celts' and 'Celtic' were evidently not applied until modern times. In the wake of this episode of 'Celtoscepticism', the relatedness and common origins of the Celtic family of languages remain unchallenged scientific facts, and the name 'Celtic' for this family—given that all such terms are ultimately arbitrary—is no more misleading or historically unjustified than such well-established and undisputed terms as, say, 'Germanic' or 'Semitic'. On the other hand, the idea that certain types of non-linguistic culture—such as artefacts in the La Tène style—can be meaningfully described as 'Celtic' now requires greater circumspection. There are few, if any, types of artwork, weapons, or ritual sites, for example, for which it is likely, or even reasonable, to expect that there would have been a one-to-one correspondence between those who used them and speakers of Celtic languages, or speakers of Celtic languages only, or, conversely, that all speakers of Celtic languages used them. While north-west and central Spain, Galatia in Asia Minor, and all of Ireland (including Munster) were eminently Celtic linguistically—at least by the Late La Tène period—La Tène objects of the recognized standard forms are thin on the ground in these areas. Thus, while this Encyclopedia is not exclusively nor even primarily about the Celtic languages, the defining criterion of 'peoples and countries that do, or once did, use Celtic languages' and also an index of connectedness to the Celtic languages have been borne in mind when branching out into other cultural domains, such as art, history, music, and so on, as well as literature produced in the Celtic countries in English, Latin, and French. For areas without full literary documentation, the presence of Celtic place- and group names has been a key consideration for determining parts that can be meaningfully considered Celtic. Owing to the importance of the study of names as diagnostic of Celticity, the reader will find numerous discussions of etymology in the entries. The policy of the Encyclopedia is also to give proper names in their forms in the relevant Celtic language, where this is practical. Unlike most countries, for the modern Celtic countries Anglicized forms of names prevail, or, in the case of Brittany, Frenchified forms. Merely to find out what is the Gaelic form of a Scottish place-name, or the Breton form of one in Brittany, is often difficult, and this in turn can become a major impediment for those moving on to research sources in the original languages since they cannot always be certain whether what they are encountering is the same place or person or not. The fact that we are used to seeing Anglicized (and Frenchified) forms of names on maps—and these only, unlike the place-names of more widely-spoken languages—is a major contributing factor to the invisibility of the Celtic languages, their apparent non-existence and seamless incorporation into the core Anglophone and Francophone areas. Another reason for supplying Celtic-language forms for names coined in the Celtic languages is that it is these forms which are most informative with regard to etymology, explaining topographical features, genealogical links, dedications to saints, &c.

Having thus defined the scope of our subject as the Celtic languages and cultures and the people who used them from the earliest historical records to the present, the content of the Encyclopedia has also inevitably been shaped by the history and predominant projects of Celtic studies as a field. Since its dual origins in literary Romanticism and the comparative historical linguistics of the Indo-European languages, the centre of gravity of Celtic studies has recognizably remained in the ancient and early medieval periods, the time of the earliest Celtic texts and history's opening horizon that forms the background to traditional heroes and saints of the Celtic countries. It is, of course, common origins in these early times that define the Celtic languages, and their speakers, as a family—once again, the glue holding the Celtic studies together as a discipline. Thus, the prominence given to early evidence and sources of tradition continues here. Also under the rubric of Celtic origins, we have given special attention to the Picts, Scots, and Britons of the north in the early Middle Ages, where Celtic studies contributes to our understanding of the emergence of Scotland. But Romanticism and historical linguistics have also focused attention on modern times and the future by defining present-day national identities

and aspirations and throwing into relief the special significance of the Irish, Scottish Gaelic, Manx, Welsh, Breton, and Cornish languages and their uncertain fates. Here Celtic studies is a vital ingredient in such modern political processes as the birth of the Irish Republic, for example, or the currently unfolding and as yet unresolved developments in devolution within the United Kingdom and the integration of states and regions within the European Union. In the middle, between archaic Celtic origins and modern Celtic identity politics, the current generation of Celtic scholars are now turning their attention increasingly to the long-neglected later medieval and early modern periods, including, for example, recent work on Classical Irish (or Gaelic) Poetry and the Welsh Poets of the Nobility, the fruits of both areas of research being fully reflected here. Recent Celtic studies has also shared with other humanistic disciplines a growing interest in contemporary literary theory (see CRITICAL AND THEORETICAL PERSPECTIVES); it is largely thanks to the influence of feminist theoretical perspectives, for example, that many entries on recently discovered or re-evaluated women writers will be found in the volumes.

How to use this Encyclopedia

This Encyclopedia is largely self-contained; in other words, it is not anticipated that a second work will be required to enable the reader to understand the information in the entries. To find relevant information shared between related articles, there is a system of cross-referencing. When it occurs in the text of an entry the title of a related article (or its first word or words) will be set in SMALL CAPITALS. These related entries then appear again, gathered among the references set in small type at the end of each entry or, in the case of some longer entries, at the end of each section.

To find a particular piece of information in the Encyclopedia, the reader can use the unified Table of Contents (which appears at the beginning of Volume I) or the Index (in Volume V). For broader categories, the list of Contents gives the titles of the 1569 entries in alphabetical order, together with page numbers. The Index provides a fuller list of subject items in alphabetical order and lists the Encyclopedia entries and entry sections relevant to each. The list of entries for each subject gives an indication of which entry is most relevant to a particular aspect of the subject: for example, under the subject 'Trinity College Dublin', one finds entries that include ASCENDANCY; KELLS, BOOK OF; Ó CADHAIN; and REFORMATION [1]. Within the Index, subjects that are themselves entry names are set in **bold type**.

In order to enable the reader to pursue subjects beyond the scope of the Encyclopedia, a 10,000-item Bibliography—an unparalleled resource for Celtic studies—is provided in Volume V. The relevant titles are also listed, in short form, in the smaller type at the bottom of each entry (or the ends of sections for some longer entries). The short titles following the entries are given in the format: surname of author (or editor, where relevant) followed by a short title. For articles within books and journals, the title of the complete volume or journal (with volume number) and the specific page numbers follow the author's surname, rather than the title of the article or chapter. In many instances, the reader will find the surname and short title adequate to locate an item on a shelf or in a catalogue. The full bibliographical details of each item are provided in the unified Bibliography in Volume V.

The references gathered at the end of entries recognize two principal sub-categories: (1) Primary Sources, meaning written materials that are themselves the object of study—manuscripts, published literary texts, and translations of literary texts; (2) Further Reading, that is, scholarly and critical discussions of the subject.

The Celticity Project and the Research Team

This Encyclopedia forms part of a major research project, entitled 'The Celtic Languages and Cultural Identity: A Multidisciplinary Synthesis', in progress since 1998 at the University of Wales Centre for Advanced Welsh and Celtic Studies (CAWCS), Aberystwyth, under the direction of Dr John T. Koch (JTK). It is one of four major forthcoming publications of the project, the others being: (1) Cesair: An English–Early Irish Interactive Database; (2) A Proto-Celtic Vocabulary and World View; (3) Maps for Celtic Studies.

The following members of the CAWCS staff participated in the Celticity project and the work of the Encyclopedia: CAWCS Director Professor Geraint H. Jenkins; Managing Editor Dr Marion Löffler (MBL); Research Fellows Dr Graham Jones, Dr Raimund Karl (RK), Dr Antone Minard (AM), Simon Ó Faoláin

(SÓF), and Caroline aan de Weil (CW); Research Editor Dr Peter E. Busse (PEB); Editors Marian Beech Hughes (MBH) and Glenys Howells; Bibliographer Anne Holley; Assistant Bibliographers William Slocombe and Heike Vieth; Illustration Editor Esther Elin Roberts. Dr Mary-Ann Constantine of CAWCS assisted with French and Breton references and Robert Lacey of the National Library of Wales with Irish and Scottish Gaelic. All the research staff of the other projects at CAWCS generously assisted; several contributed entries. Also working closely with the Team on the Encyclopedia were the Contributing Editor for Ireland and Scotland Dr Petra S. Hellmuth (PSH) and Contributing Editor for Scotland Professor Thomas Owen Clancy. Margaret Wallis Tilsley read the entries in page proof. The authors of entries most actively involved with the Research Team are identified by their initials at the end of entries.

The Celticity Project has also benefited greatly from the generous participation of members of its Advisory Panel: Professor Barry Cunliffe (Oxford), Professor Wendy Davies (London), Professor William Gillies (Edinburgh), Professor Gwenaël Le Duc (Rennes), Professor J. P. Mallory (Belfast), Professor Máirín Ní Dhonnchadha (Galway), Professor Pádraig Ó Riain (Cork), Professor Peter Schrijver (Munich), Professor Patrick Sims-Williams (Aberystwyth), Professor Robin Chapman Stacey (Seattle, Washington), Professor Claude Sterckx (Brussels), and Professor Stefan Zimmer (Bonn). For Cesair, the Proto-Celtic Vocabulary, and the Atlas, J. P. Mallory has worked with John Koch as co-director.

About the Editor

John T. Koch is Reader at the University of Wales Centre for Advanced Welsh and Celtic Studies and is the leader of the Centre's research project on the Celtic Languages and Cultural Identity. He previously taught Celtic Studies at Harvard University and Boston College. He received the degrees of A.M. (1983) and Ph.D. (1985) in Celtic Languages and Literatures from Harvard University and also studied at Jesus College, Oxford, and the University of Wales, Aberystwyth. He has published extensively on early Welsh and Irish language and literature, Continental Celtic, and the coming of Celtic speech to Ireland and Britain. His books include *The Gododdin of Aneirin* (University of Wales Press, 1997) and, with John Carey, *The Celtic Heroic Age* (Celtic Studies Publications, 1994, fourth edition 2003). He is currently working on a book on the historical Taliesin and a Grammar of Old Welsh. As well as this Encyclopedia, a collaborative Proto-Celtic Vocabulary and an Atlas (Maps for Celtic Studies) will appear as fruits of the Celtic Languages and Cultural Identity Project.

Acknowledgements

The University of Wales Centre for Advanced Welsh and Celtic Studies and the Editor wish to acknowledge the sustained support and generosity of ABC-Clio Publishers, who funded several members of the CAWCS Research Team working on the Encyclopedia. This partnership between a publisher and an academic research centre was a far-sighted decision which deserves high praise and emulation. The financial support of the University of Wales has also been invaluable. We gratefully acknowledge a British Academy small grant that partially funded the posts of Bibliographer and Illustration Editor. A three-year grant from the Arts and Humanities Research Council funded the research for the Celticity Project's Cesair Database, Proto-Celtic Vocabulary, and Atlas. Although this grant did not directly contribute to the Encyclopedia, the beneficial synergy afforded by researchers carrying out these collaborative projects simultaneously was immeasurable.

The Research Team is also deeply grateful for the administrative support received at CAWCS from Vera Bowen, Hawys Bowyer, and Nia Davies. As for the Publishers, staunch and encouraging support was forthcoming from Ron Boehm, Simon Mason, Ellen Rasmussen, Donald Schmidt, and Tony Sloggett.

A

The **Aberdeen Breviary** (1510), the first printed book in Scotland (Alba), was a calculated expression of Scottishness displayed through Scotland's local saints and the offices for their feast days. Bishop William Elphinstone was the guiding light behind it, and some signs of the research for it can be seen in the earlier calendar of saints, the Martyrology of Aberdeen (Macfarlane, *William Elphinstone and the Kingdom of Scotland 1431–1514* 235). It was a fully functioning service book, however, an adaptation of the Sarum Breviary, and contained a complete range of offices for universal saints, and for holy days. Its Scottish content, while of most interest to modern scholars, should not be allowed to overwhelm our understanding of its original function. Although the creation of the book is significant within its historical context, it also preserves a range of traditions about Scottish saints (see list in Macquarrie, *Saints of Scotland* 9), many unique, some contrasting with material preserved elsewhere. The saints covered are drawn from every corner of Scotland as it existed in 1510. For some saints (e.g. Gervadius, Boniface/Curetán, Constantine, and Donnán), the Lections in the Breviary are our only narrative witness to their legends (see hagiography). The earlier roots of some of these have been explored by Alan Macquarrie, for instance, the ultimately Iona (Eilean Ì) origins for the feasts of Adomnán and for Columba (Colum Cille), the Dunblane traditions for St Bláán, and the complex relationship between the Breviary and other hagiographic material for St Kentigern. We still lack complete certainty about the sources for the Breviary, and item-by-item research suggests that such sources were diverse and local.

Thomas Owen Clancy

Aberffraw was the royal site of the kings of Gwynedd from the 7th century (or perhaps earlier) until 1282. It is situated in the south-west of the island of Anglesey (Môn) on the estuary of the river Ffraw. *Aber* 'river-mouth' (< Celtic **ad-ber-*) is common in place-names in Brittany (Breizh) and Scotland (Alba)—in what used to be the country of the Picts—as well as elsewhere in Wales (Cymru). Today, the name (locally pronounced *Berffro*) designates a village, the bay onto which the estuary opens, and the bay's protected 'heritage coastline'. The population of the community of Aberffraw according to the 2001 Census was 1293, of which 876 inhabitants over the age of 3 could speak Welsh (69.2%).

§1. archaeology and history

Excavations carried out in 1973 and 1974 were interpreted as a Roman fort of the later 1st century, with refortification in the 5th or 6th century. Anglesey was first invaded by the Romans under Paulinus in AD 60, as described by Tacitus. However, it could not be immediately garrisoned, owing to the military disaster of the revolt of Boudīca. Therefore, the Roman fort probably dates to the subsequent activities of Agricola, who was Roman Britain's governor in the

Location of the early medieval royal site and cantref of Aberffraw

period *c.* AD 78–85. The post-Roman re-defence may reflect the arrival at the site of the court of Gwynedd's first dynasty, who claimed descent from the 5th-century hero CUNEDDA (Wledig) fab Edern. These early strata were heavily overlain by remains of medieval occupation attributable to the court of Gwynedd. That the site was already a royal centre in the 7th century is further indicated by the Latin commemorative inscription to king CADFAN (who died *c.* 625) at the nearby church at Llangadwaladr: CATAMANUS REX SAPIENTISIMUS OPINATISIMUS OMNIUM REGUM 'Cadfan wisest and most renowned of all kings'. The church itself bears the name of Cadfan's grandson CADWALADR († 664), who also succeeded as king of Gwynedd.

Aberffraw remained a principal seat or the principal seat for Gwynedd's 'second dynasty', which came to power with the accession of MERFYN Frych in 825. Under the patronage of King GRUFFUDD AP CYNAN (r. 1075–1137) or that of his son and successor OWAIN GWYNEDD (r. 1137–70), a stone church was built with Romanesque features similar to 12th-century churches on the pilgrimage route to Santiago de Compostela, Spain, and Clonmacnoise, Co. Offaly, Ireland. This church's chancel arch survives and is noteworthy as possessing the most elaborate stonework of any surviving example of its type from Wales, a reflection of the international importance of Aberffraw at the period. King LLYWELYN AB IORWERTH (Llywelyn the Great, r. 1194–1240) used *Tywysog Aberffraw ac Arglwydd* ERYRI 'Leader of Aberffraw and Lord of Snowdonia' as his official title.

Though there is evidence for Aberffraw as a centre of political power from the post-Roman Dark Age until 1282, Gwynedd's rulers are likely to have had more than one fortified residence, or to have moved their headquarters. For example, MAELGWN GWYNEDD († 547)—who figures in the genealogies as Cunedda's great-grandson—is associated not with Aberffraw, but with the strategic fortified hilltop at Degannwy overlooking the northern mainland of Wales from the Conwy estuary. Excavations in 1993 revealed the 13th-century court at Rhosyr, south of Aberffraw (Johnstone, SC 33.251–95).

By the time Edward I of England defeated LLYWELYN AP GRUFFUDD, the last native ruler of Gwynedd, in 1282, Aberffraw was the name and seat of one of three territorial divisions in Anglesey: the 'hundred' or CANTREF of Aberffraw, which comprised two subdivisions or *cymydau* (commotes), Llifon to the north and Malltraeth, containing the royal site, in the south. After the death of Llywelyn ap Gruffudd, the Aberffraw complex was systematically dismantled. In the time of Edward III (*c.* 1340–1), Aberffraw was recorded as a 'manor' held by the king's surgeon, Roger Hayton.

§2. LITERARY REFERENCES

Aberffraw is first mentioned in what appears to be a contemporary poem, mourning the death of the 7th-century military leader CYNDDYLAN. Surprisingly, as Cynddylan belonged to a dynasty of POWYS, this elegy is addressed to an unnamed king of Gwynedd. The poet describes his crossing of the Menai Straits to Anglesey as a remarkable feat and urges the lord of Aberffraw to exert control as the legitimate ruler of land of Dogfeiling in north-east Wales against a rival dynasty from Powys whose line of rulers claimed descent from Cadell (see CADELLING):

> . . . to think of going to Menai, though I cannot swim!
> I love the one from Aberffraw who welcomes me,
> foremost offspring of Dogfeiling and terror to the
> descendants of Cadell . . .

In the MABINOGI, Aberffraw figures as the court at

Detail of stonework from the surviving chancel arch of the 12th-century Romanesque church at Aberffraw

which the British princess Branwen marries Matholwch, king of Ireland.

There are numerous references to Aberffraw both as a place and as a byword of royal authority and legitimacy in the works of the 12th- and 13th-century court poets who praised the rulers of Gwynedd (see gogynfeirdd):

Yn llys Aberfraw, yr fa6 fodya6c,
Bum o du gwledic yn lleithiga6c.

In the court of Aberffraw, in return for the praise of a successful one, I was at the side of the sovereign, on a throne. (1137, from 'The Elegy of Gruffudd ap Cynan' by Meilyr Brydydd; J. E. Caerwyn Williams et al., *Gwaith Meilyr Brydydd* 3.75–6);

Dyn yn vy6 ny veid y dreissya6,
Du6 vry am vrenhin Aberfra6.

No living man shall dare to oppress him, God above [shall be] on the side of the king of Aberffraw. (1215–18, from 'A Poem in Praise of God and Llywelyn ab Iorwerth' by Dafydd Benfras; Costigan et al., *Gwaith Dafydd Benfras* 24.91–2);

Hil Gruffut waew rut, rotua6r eurlla6,
Hael uab Llywelyn, llyw Aberfra6.

From the line of Gruffudd of the bloody spear, with a generous, giving hand, generous son of Llywelyn, the ruler of Aberffraw. (*c.* 1277, 'Elegy of Owain Goch ap Gruffudd ap Llywelyn' by Bleddyn Fardd; Andrews et al., *Gwaith Bleddyn Fardd* 48.17–18);

Taleitha6c deifna6c dyfynyeith—Aberfra6,
Terrwyn anreithyaw, ruthyr anoleith.

The crowned man of Aberffraw, fit to rule and wise in speech, fierce in plundering, unstoppable in attack. (1258, from 'A Poem in Praise of Llywelyn ap Gruffudd' by Llygad Gŵr; Andrews et al., *Gwaith Bleddyn Fardd* 24.107–8).

JTK

Abertawe (**Swansea**) is a municipal, county and parliamentary borough and seaport located on the south coast of Wales (CYMRU).

The origins of Swansea as a centre of population can be traced back to a small settlement of Scandinavian seafarers at the Tawe estuary known variously as *Sweynessie*, *Sueinesea*, and *Sweinesei* 'Sweyn's island'. The Welsh name *Abertawe* refers to the mouth of the river Tawe. (On the place-name element *aber*, see ABERFFRAW.)

During the medieval period Swansea emerged as the commercial and administrative centre for the commote of Gŵyr (English Gower). The town was located in a strategically important location, and during that period the economic potential of the river continued to be exploited. At the same time, Swansea's commercial importance as a fair and market town for a wide area increased, and during the 12th century it was accorded the status of a borough. During the 14th century the growth of the town and port was sustained and the castle was modernized, although, in common with other towns, Swansea witnessed devastation during the OWAIN GLYNDŴR rebellion and its population declined as a result of plague.

Following the ACTS OF UNION (1536–43), Swansea became part of the county of Glamorgan (MORGANNWG). The town's economic development continued through the increased trade in the port and the town's continued importance as a centre for local commerce.

However, it was the development of industry during the 18th century that led to Swansea's most rapid period of economic expansion. The town was easily accessed from the Cornish peninsula and, because of the ample supply of coal both within the borough and in its immediate vicinity, the lower Swansea valley emerged as a copper-smelting centre of international importance. Other industrial activity, such as the zinc industry, also developed. Moreover, Swansea, especially the townships to the east of the borough, became the centre of the tinplate industry, producing mainly for the export market.

As a result of industrial expansion, especially the growth of copper smelting and the tinplate trade, the development of Swansea as an international port continued. Although port facilities continued to be inadequate during the 18th century, considerable improvements were made between 1820 and 1914 which led to the construction of the North Dock and the South Dock to the west of the river Tawe and, later, the Prince of Wales Dock, the King's Dock and the Queen's Dock on its eastern side.

During the late 19th century Swansea's development as a commercial centre also grew apace. The town emerged as a major retail centre, and its importance in the metallurgical industries was reflected in the establishment of the Swansea Metal Exchange in 1887. The cultural and social development of the town also continued at this time. Swansea Grammar School, originally established in 1682, was reopened in 1852. The Royal Institution of South Wales, founded in 1835, provided a new dimension to the city's intellectual life and, later, the Glynn Vivian Art Gallery, opened in 1909, gave the town a new centre for visual art. Developments in technical education led to the establishment of a separate technical college in 1910 and Swansea also boasted a teacher training college. In 1920 Swansea became the home of the fourth constituent college of the University of Wales, which moved to Singleton Park in 1923. Singleton was also to become the largest of a number of impressive parks maintained by the corporation.

In common with other industrial towns, Swansea witnessed the effects of the depression of the interwar years, especially in communities such as Morriston (Treforys), Llansamlet, Landore (Glandŵr) and St Thomas which were reliant on heavy industry, although there were pockets of considerable affluence in the west of the town, maintained largely by Swansea's importance as an administrative, educational and commercial centre for south-west Wales. At the same time, effective use was made of government assistance to initiate major slum clearance schemes which led to the removal of many overcrowded and insanitary dwellings close to the town centre and the construction of municipal estates such as those at Townhill and Mayhill.

Swansea suffered extensive damage as a result of German enemy action during the Second World War. A large part of the town centre was completely destroyed, with considerable loss of life. The lengthy task of reconstruction after the devastation was undertaken at a time of immense social and economic change. The decline of the traditional structure of heavy industry, notably the closure of many small and medium-sized tinplate works and collieries, meant that the focus of those industries was now beyond the borough's limits although Swansea remained an important manufacturing base.

During the same period the drift of population outside of the city centre continued. The Borough Council built large municipal housing estates in areas such as Penlan and Clase and there was also significant private development in areas such as Sketty, Killay, and the Mumbles.

As part of the reconstruction of the city, major changes were made to the layout of the town centre, largely made possible by the demolition of damaged properties and some notable landmarks such as the Victorian railway station at the sea front and also the Weaver Mill, an architecturally-significant building of reinforced concrete. Their place was taken by ambitious developments such as the Quadrant shopping centre, the Swansea Leisure Centre, the Maritime Quarter and a large retail park, which were seen as important engines of economic regeneration.

Swansea's boundaries extended significantly during the 20th century. As a result of local government reorganization in 1974 the Gower peninsula (Gŵyr)—a designated Area of Outstanding Natural Beauty—became absorbed within the new City of Swansea. In 1996 the boundaries were extended further to include a large part of the former Borough of Lliw Valley, an extremely controversial decision which brought about a significant change to Swansea's social, economic and linguistic profile.

Though predominantly English-speaking throughout the 19th and 20th centuries, Swansea's traditional position as the metropolis of the western industrial valleys of south Wales and areas of rural west Wales beyond has provided a linguistic network to support an established Welsh-speaking minority within neighbourhoods of the city itself. As a result, 'Swansea Welsh' is a recognizable dialect, characterized for example by the *cledia*d or 'provection' of *-b-, -d-, -g-* preceding the last syllables of some words, thus *creti* for standard *credu* 'to believe'. Swansea Welsh forms a continuum with other southern and western regional dialects such as those of Llanelli, Llandeilo, Cwm Aman, Cwm Tawe, and Cwm Nedd. In contrast, the Welsh community of Cardiff (Caerdydd) has not been the home of a distinctive Welsh dialect, nor does Cardiff Welsh form a continuum with local forms surviving within its market area in the Rhondda or Merthyr Tudful. In the 2001 Census, the percentage of Welsh speakers in Greater Swansea was 45%. Higher concentrations in the Swansea region were recorded at Gwauncaegurwen (68%), Cwmllynfell (68%), Lower Brynaman (68%) and Ystalyfera (54%).

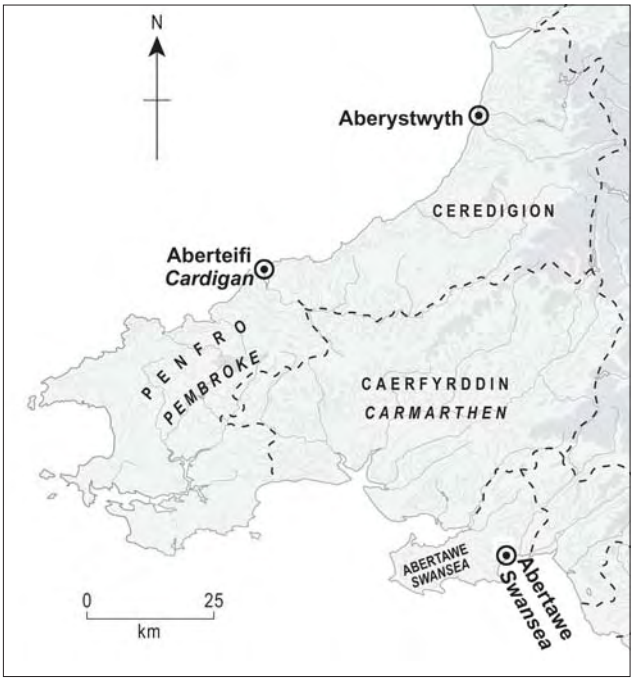
Aberteifi (**Cardigan**) is a market town at the mouth of the river Teifi in the county of Ceredigion in west Wales (Cymru). Prior to 1993 Cardigan belonged to the larger county of Dyfed and prior to 1974 it

South-west Wales, showing the locations of Abertawe/Swansea, Aberteifi/Cardigan, and Aberystwyth



was in Cardiganshire (sir Aberteifi), roughly the same territory as post-1993 Ceredigion. The 2001 Census reported 4203 inhabitants in the town of Cardigan, of whom 2410 or 59.5% were Welsh speakers.

The first Norman castle was built here in 1093. It suffered much destruction in the following century and changed ownership several times. After Lord Rhys ap Gruffudd of Deheubarth had finished the reconstruction of the castle in 1176 in order to set up his court there, the first recorded eisteddfod was held at the site. During the English Civil Wars (1642–9) the castle was destroyed. It was in the later Middle Ages, after the defeat of Llywelyn ap Gruffudd, the last native Prince of Wales in 1282, that the town began to develop into an important seaport. The navigable Teifi estuary was attractive to traders, especially those from Ireland (Ériu), but not until the Tudor (Tudur) and Stuart period did coastal and foreign traffic increase appreciably. By the early Victorian period shipbuilding prospered, and in 1835 there were 275 ships registered at Cardigan employing 1,030 men. Subsequently, however, trade declined and Cardigan lost its cherished reputation as 'the Gateway to Wales'. Yet it remains a popular and attractive tourist and shopping centre.

The name of the town means 'river mouth of [the river] Teifi'. (On the Welsh place-name element *aber*, see aberffraw.) The river name is first attested in the Old Welsh spelling *Tebi* in the Welsh genealogies, and is probably related to the common element found in *Taf*, Thames, *Tawe*, &c.

PEB

Aberystwyth is an economic hub and cultural centre in the county of Ceredigion in west Wales (Cymru). Prior to 1993 Aberystwyth belonged to the larger county of Dyfed and prior to 1974 to Cardiganshire (sir Aberteifi), roughly the same territory as post-1993 Ceredigion. The 2001 Census reported 11,607 inhabitants within Aberystwyth itself and a further 2899 in the adjacent community of Llanbadarn Fawr and 1442 in Llanfarian. Within this 'greater Aberystwyth', there were 6555 Welsh speakers, 43.8% of the population. The statistics are complicated by the transient student population and the area's popularity as a seaside holiday resort which contains numerous second homes.

Aberystwyth is the site of Llyfrgell Genedlaethol Cymru (The National Library of Wales) and the University of Wales, Aberystwyth. It is also the location of the headquarters of several national Welsh organizations such as Cymdeithas yr Iaith Gymraeg (Welsh Language Society), Urdd Gobaith Cymru, Merched y Wawr (the national movement for the women of Wales), Cyngor Llyfrau Cymru (Welsh Books Council) and its book distribution centre, as well as several government offices for the county of Ceredigion. Two non-teaching units of the federal University of Wales are also based at Aberystwyth: *Geiriadur Prifysgol Cymru* (The University of Wales Dictionary), which began publishing in 1950 (see dictionaries and grammars [4] welsh), and the Centre for Advanced Welsh and Celtic Studies (Canolfan Uwchefrydiau Cymreig a Cheltaidd), which was established in 1985.

The modern town is situated at the mouths of the rivers Ystwyth and Rheidol, and has been occupied since the Mesolithic period (*c.* 6000 BC). The oldest archaeological finds come from the foot of Pendinas hill on the coast between the Rheidol and the Ystwyth. A large hill-fort was built on Pendinas in five stages in the last centuries BC, with the few datable items found there originating from the 2nd century BC. The Welsh name *Pendinas* means 'hill or headland of the fortified settlement' (though the usual present-day sense of *dinas* is 'city'). Although this hill-fort was abandoned during the Roman period, a few coins from the 4th century AD found in the Aberystwyth area indicate that there was a settlement and at least some economic activity on the site during the Roman period.

The foundation of the monastery of Llanbadarn Fawr is traditionally put in the 6th century. Originally a *clas* (enclosed monastic community of the native type), it was later transformed into a Benedictine monastery. It is generally agreed that Pendinas and Llanbadarn Fawr were important regional centres in north Ceredigion in ancient and early medieval times.

In the course of the Anglo-Norman conquest of Wales, a motte and bailey castle was built at the mouth of the river Ystwyth, and the destruction of this castle

by Hywel ab Owain Gwynedd in 1143 is mentioned by Cynddelw Brydydd Mawr in *Canu Hywel ab Owain Gwynedd* (dated 1160–70). The present-day castle and town were officially founded in 1277 by Edmund, brother of Edward I of England, on a hill at the mouth of the Rheidol, and the old name of Llanbadarn Gaerog was replaced (*Caerog* signifies 'fortified', in contrast to the nearby monastery of Llanbadarn). In 1404 the castle was seized for a short period by Owain Glyndŵr, and in 1649 it was finally destroyed by Oliver Cromwell's troops during the English Civil Wars (1642–9).

In the early modern period, Aberystwyth was an important fishing port and shipping centre for the export of lead ores mined in the Ystwyth valley. In the 19th century it was connected to the railway and grew into such a significant seaside resort that it became known as the 'Biarritz of Wales'. In 1872, the first constituent college of the University of Wales was founded here and established in a large hotel building on the seafront, now known as *yr Hen Goleg* 'the Old College'. In 1931 the National Library of Wales (founded in 1907) opened on its current site on Penglais Hill, overlooking the town. Aberystwyth has since developed into a thriving academic centre, which also plays a significant rôle in the economy of mid-Wales. It is widely recognized as an intellectual and cultural centre for Wales as a whole, and an urban stronghold of the Welsh language. However, it has thus far not developed into a major centre for Welsh broadcast media or national government.

Aberystwyth takes its name from the river *Ystwyth*, mentioned in Ptolemy's *Geography* (2nd century AD) as Στουκκια */stukkia/*. The second -κ- is probably a scribal error for -τ- */t/*, and this consonant cluster would have been pronounced */χt/*. *Ystwyth* occurs in Welsh as a common adjective meaning 'supple, bendable'. The river name and its ancient form **stuχtiā* are probably ultimately this same word. (On the Welsh place-name element *aber*, see ABERFFRAW.)

Abnoba was the tutelary deity of the Black Forest in Germany, an area Roman legions identified as *Mons Abnoba*; from the eastern slopes of its mountains flow three streams that join to form the river Danube. A stone statue inscribed DEAE ABNOBA(E), found at Mühlburg, depicts the goddess dressed as the Graeco-Roman goddess Diana touching a tree beneath which are a hound and a hare, Diana's attributes. A relief found at the source of the river Brigach includes images thought to represent Abnoba, her hare, a stag, and a bird. (For the ritual association of Celtic goddess and hare, see Andraste.) Inscriptions from Muhlbach and Rothenburg also preserve her name. A bronze 'indigenous Diana' in the Museum at Köln may represent Abnoba or Arduinna, the eponymous goddess of the Ardenne Forest.

Acadamh Ríoga na hÉireann (**Royal Irish Academy**), founded in 1785 and incorporated by the Royal Charter of George II in 1786, promotes study in the sciences and humanities in Ireland (Éire).

Located in a mid-18th-century town house in Dawson Street, Dublin (Baile Átha Cliath), the Academy is home to a historic library that includes the world's single largest collection of Irish manuscripts. Among the treasures are the Cathach, the oldest existing manuscript in Irish script, and Lebor na hUidhre, which contains the earliest known versions of vernacular Irish sagas, including the Táin Bó Cuailnge. The Academy supports academic excellence by recognizing outstanding achievements in research and scholarship. Members are elected from among the academic community in Ireland, north and south, on the basis of the attainment of high academic distinction. The Academy administers a network of national committees and awards research grants and prizes annually. Research programmes are also directed in-house on aspects of Ireland and its heritage. Major national research projects include a historical dictionary of the Irish language from 1600 (see dictionaries and grammars [1] irish), a dictionary of medieval Latin from Celtic sources, a dictionary of Irish biography, an Irish historic towns atlas and a project on historical documents on Irish foreign policy.

Acallam na Senórach (Dialogue of [or with] the old men) is the title of a medieval Irish prosimetric (mixed prose and verse) text that amasses an extraordinary amount of Fiannaíocht, that is, Fenian or Ossianic story, poetry, and allusion. The premise of the *Acallam* is in effect a frame tale which includes exploits contemporaneous with the story as well as accounts of past adventures. It hinges on the remnants of Finn's fían (chiefly Finn's right-hand man Caílte mac Rónáin, but also including Oisín, the son of Finn) emerging from an extended period of seclusion in the Otherworld and encountering St Patrick as he is travelling through and converting Ireland (Ériu), well after the lifetimes of Finn and the other heroes of the *fían*, still keenly remembered by Caílte and company. After the ancient heroes are exorcized by the saint and accept baptism, they are welcomed as special guests into Patrick's retinue and accompany him on his journey. Patrick at first questions the propriety of his listening to the 'new' tales and poems about the old days that the Fenian heroes give in response to his questions about the details of the ever-shifting signification of the landscape. (The author(s) of the *Acallam* take(s) great interest in dindshenchas [place-name lore], which in general is associated with Fenian heroes and adventures in medieval Irish tradition; see Ó Coileáin, *Studia Hibernica* 27.45–60.) The saint, however, receives assurances from two angels sent by God that not only should he pay heed, but that steps should be taken to make sure that this treasure trove of memories is recorded in writing. And so the journey continues, punctuated by the questions about the past asked by Patrick and others met along the way, and by the answers Caílte and sometimes other characters give. Affording an occasional respite from the 'backward look' and enlivening the narrative are the Fenian heroes' excursions away from the company of Patrick, usually for the purpose of visiting the síd or in search of adventure.

The *Acallam* is represented (albeit always missing an ending) in various famous manuscripts, notably Laud 610 of the Bodleian Library, the Book of Lismore, and the *Duanaire Finn* manuscript (containing the famous Fenian poetic anthology produced on the Continent in the early 17th century). At least three recensions of the work have survived, the earliest datable in language and content to the late Middle Irish period (11th–12th century; edited in Stokes, *Irische Texte* 4/1; translated in Dooley & Roe, *Tales of the Elders of Ireland*). Among the highlights of the narrative contents of the *Acallam* are:

an account of Finn's defence of Tara (Teamhair) against the supernatural raider Aillén, which must have constituted the climactic episode of the boyhood deeds of Finn, missing from the incomplete Middle Irish text *Macgnímartha Finn* ('Boyhood Deeds of Finn');

a conspicuously sympathetic and heroicizing portrait of the otherworldly *airfitech* 'musician' Cas Corach, a seeker of Fenian story every bit as diligent as Patrick, and perhaps a beneficiary of a new literary estimation accorded entertainers of lower status in the fluctuating period of the 11th–12th centuries, when men of letters, under pressures of ecclesiastical reform, were moving out of the milieu of the church, seeking new audiences, allies, and patrons, and cultivating a taste for popular tradition;

the earliest references to the story of the battle of Ventry and other narratives that configure the Fenian heroes as defenders of the island against foreign invasion;

tales of gallantry on the part of the Fenian heroes that testify to the growing influence of imported literary notions of chivalry and romance on later medieval Irish literature (Ó Corráin, *Writer as Witness* 35–7).

The work is also notable for what it does not include, such as any reference to the tragic affair of Diarmaid and Gráinne (Tóruigheacht Dhiarmada agus Ghráinne), otherwise perhaps the best known story from the Fenian cycle. In general, the *Acallam*, with its sophisticated treatment of narrative time, its conceit of tracing written text back to oral performance and dialogue, and its remarkable ambition to canonize in a textual form a body of tradition that in its size and complexity defies any attempt to do so, offers a splendid example of both the conservative and innovative tendencies at work in medieval Irish literature (Nagy, *Sages, Saints and Storytellers* 149–58).

Joseph Falaky Nagy

Act of Union, Ireland (1800)

The Union between Great Britain and Ireland (Éire) was passed by the Irish parliament in 1800. This parliament was not a representative body, but was rather composed of the Protestant Church of Ireland élite.

As in the case of the Union with Scotland (1707), the union with Ireland took place shortly after the expression of considerable independence on the part of the Irish parliament. Henry Grattan's 1782 administration celebrated the achievement of legislative independence for Ireland, and while Shelburne and Lord North were uneasy about this and considered whether Union might not be a preferable solution, the younger William Pitt, who was Prime Minister for most of the period from 1783 to 1806, was more open-minded. However, the rejection of Pitt's proposed commercial agreement of 1784–5 and still more the Irish parliament's insistence on the autonomy of its decisions during the Regency crisis of 1789 raised concern in London. After the French Revolution (1789–99), renewed claims to Catholic equality, the threat of revolutionary measures among both Protestants and Catholics in Ireland (see CHRISTIANITY [1] IRELAND), and, most of all, the failure of the Irish parliament to secure the interests of the British Crown in the island in an orderly fashion, Union was increasingly seen to be necessary in London. Not only had Ireland's Protestant parliament alienated the very Catholics who might have helped Pitt oppose the anticlericalism of the French Revolution, but it had also failed to deal with the ensuing Irish rising and French invasion of 1798 (see further TONE).

In 1798–9 discussions on the terms of the Union took place between representatives of the British and Irish parliaments. Many Church of Ireland Protestants opposed Union because they feared the end of their authority, and the measure was at first narrowly defeated in 1799. Planned concessions to Catholics were withdrawn under pressure from Irish ministers. During 1799–1800 the Irish parliament got most of what they were seeking on the precise terms that would be acceptable in Dublin (Baile Átha Cliath) and London. There were reservations in some quarters in England that a union promoted with such a narrow group in Irish society as the Protestant Ascendancy (as they had begun to be called) might in the end lead to greater Irish alienation. Nonetheless, there was plenty of established Catholic support for the Union at the time.

Under the terms of the Union as finally agreed, there were to be 100 Irish MPs (Members of Parliament) at the UK's parliament in Westminster, with 28 lords temporal and four spiritual, and the Irish and British military establishments were to merge. The Church of England and that of Ireland were to formally unite as an 'essential and fundamental' condition of Union, in a move which formally consolidated Protestant privilege. Ireland was to gain some protection for domestic industry as the price of opening its markets: general benefit would reach the island's economy through the

promotion of a unified trade area and access for British capital. Irish laws would remain, but the UK parliament would henceforth legislate for Ireland without further protection for them (cf. Union with Scotland). Tithes would be abolished; the Ulster linen trade protected; weights and measures standardized. Ireland was to begin by paying only a proportion (2/17 of the UK total from 40% of the UK population) to the United Kingdom's imperial expenses; the remainder of the taxes raised in Ireland would be spent domestically. Twenty years were allowed for fiscal union. Due to the expenses of the French wars, even this proportional contribution had materially increased Ireland's debts by the time of full fiscal union in 1817.

The Union of 1800 was under attack almost as soon as it was passed. Its Achilles heel was the very thing which had brought it about: the relationship of the Irish administration to the Catholic majority. As Lord Cornwallis (who favoured Catholic emancipation) put it, 'We have united ourselves to a people whom we ought in policy to have destroyed' (Cornwallis, *Correspondence* 3.307). There was a clear unwillingness to make concessions, and King George III opposed Pitt's 1800–1 plans to introduce Catholic relief and state endowment of Catholicism and Presbyterianism into Ireland. When it finally came in 1829, Catholic emancipation undermined the confessional union of the Church of Ireland with that of England, while arriving too late for many Catholics to be reconciled to the Union. In addition, the underdevelopment of most of Ireland in 1800, at a time when the Industrial Revolution was taking off in Britain, in the long term undermined the equality of economic development implied by the terms of Union.

Acte d'Union, Brittany (1532)

Following the death of Anne, duchess of Brittany (see ANNA), in 1514, it was not entirely clear who would succeed her, or what would be the political status of the Duchy of Brittany (BREIZH). Anne and her husband, King Louis XII of France, had agreed that the succession would pass through their daughter Claude's second son (her elder son was to become king of France). Claude, however, changed the provisions that Anne had made, so that the duchy was given to her own husband, King François I of France, during Claude's lifetime. Once they had children, the terms were changed again, so that the dauphin (crown prince) of France was also to become duke of Brittany. When Claude died in 1524, ten years after Anne, the duchy was in theory inherited by the six-year-old François. However, the current French king, Claude's husband François I, continued to exert a strong influence over the affairs of Brittany.

François, the dauphin, was officially established as Duke François III of Brittany in 1532. As part of that occasion his father, King François I of France, published the *Édit d'Union* (Edict or Act of Union) on 13 August 1532 at Nantes (NAONED). A subsequent Act, the Edict of Plessis-Macé of September 1532, clarified some of Brittany's privileges in matters of law and finance, wherein it retained a good deal of autonomy until the French Revolution. Duke François died four years later, and his brother, the future Henri II of France, assumed the title of duke of Brittany (known to historians as Duke Henri I of Brittany). Under Henri's reign the governments of Brittany and France were permanently linked. Some important features of an independent Brittany continued until the French Revolution: the Breton parliament, for example, was reorganized in 1495, and again by Henri II in 1553, but continued largely unchanged from the medieval Breton state until 1790.

The Duchy of Brittany continued to be held by the French king until 1589, when the last king of the House of Valois, Henri III, was killed. The Breton succession went to Isabelle of Brittany, the daughter of Henri III's sister, Elizabeth of Valois, while the French crown was taken by Henri IV of the House of Bourbon, who married another of Henri III's sisters, Margaret of Valois.

Acts of Union, Wales (1536–43)

The 1536 Acts (27 Henry VIII cc. 5, 26) which 'united and annexed' Wales (Cymru) to England are collectively known as the Act of Union. While this Act laid down the broad outlines of the Union, a supplementary piece of legislation, passed in 1543, provided the details.

The Reformation brought disorder or the threat of disorder to many parts of Henry VIII's dominions. In Wales many governmental powers continued to rest with the Marcher lordships, which had arisen shortly after the Norman conquest of England to contain the free Welsh from bases along the Anglo-Welsh frontier, known as the Welsh Marches. Their power gradually extended into Wales itself and long outlived the death of the last independent Welsh prince, Llywelyn ap Gruffudd, in 1282. The baronial powers of the old Marcher lordships were supplemented and eventually replaced from 1534, when Rowland Lee, bishop of Coventry and Lichfield, was appointed President of the Council of Wales and the Marches.

The Act of 1536 formally brought an end to many of the rights of the Marcher lordships, and formally integrated Wales into England. The Marches became shire ground, that is, organized into counties along the lines of England, creating five Welsh counties: Dinbych (Denbigh), Trefaldwyn (Montgomery), Maesyfed (Radnor), Brycheiniog (Brecknock/Brecon), and Mynwy (Monmouth). Aberteifi (Cardigan), Caerfyrddin (Carmarthen), Morgannwg (Glamorgan), and Penfro (Pembroke) were all enlarged, as were the English border counties, which now included Welsh-speaking areas such as Oswestry (Welsh Croesoswallt). Wales was to send 24 representatives to the English Parliament from its 12 counties, balanced between borough and county representatives. Justices of the Peace were to be appointed and to conduct all administrative and legal business in English, and the Welsh shires were to be divided into hundreds on the English model (see cantref). Welsh laws and customs at variance with English law were abolished (see law texts [2] welsh), and Cymric (i.e. Welsh) land tenure by gavelkind (equal division between surviving sons, or, failing sons, daughters) was abolished in favour of primogeniture (inheritance to the surviving first-born son).

The 1536 statutes were part of a redefinition of England as an empire exercising territorial jurisdiction over other territories, found in the Act in Restraint of Appeals (1533) and the erection of Ireland (Éire) from a lordship to a kingdom in 1541.

In 1543 the Union Acts were followed by an Act for certain Ordinances in the King's Majesty's Dominion and Principality of Wales (34 and 35 Henry VIII c. 26), which established the status of the President and Council of Wales and the Marches (based at Ludlow, Shropshire, England) as the legal administration for the country. The Act also provided that courts of justice, the King's Great Sessions for Wales, should sit twice a year in all counties save Monmouth, now effectively to be an English shire. Four judicial circuits were created in Wales and Justices of the Peace appointed for each county, as well as sheriffs on the English model. Court proceedings were to be conducted in English alone, but in practice it was inevitable that monoglot Welsh people would give evidence orally in Welsh and this was translated for the benefit of judges.

The Union with Wales was the most successful of the three unions between England and the other countries of the British Isles, despite being the one most completely generated from London. The Welsh origins of Henry VIII's dynasty, the Tudors (see tudur), the long-standing orientation towards English politics of the Welsh gentry and aristocracy, and the absence of political alternatives are all possible causes. Besides this, Welsh language and cultural identity was especially compatible with emerging notions of Britain and Britishness, for the Welsh were the original Britons. The cult of Arthur, for example, was used to incorporate the patriotic sentiments of Welsh élites within a fundamentally English polity. In consequence, Welsh high culture was rarely politicized, and the language of most of the people of this hardly urbanized country remained Welsh, undisturbed by English in most contexts for generations. When this situation changed in the 19th century, a politicized Welsh consciousness began to develop (see nationalism).

Acy-Romance was a village and necropolis of the Late La Tène period located in the Ardennes, France (see ARDUINNA). It has provided important evidence for the hierarchical social structure of Celtic tribes in the later pre-Roman Iron Age. The village extended over about 20 ha (49 acres) and was founded at the beginning of the 2nd century BC. The settlement was arranged around a central public area and enclosed by a defensive palisade. This public area, which consisted of a hall for assemblies and banquets, was surrounded by a series of temples and an area of inhumation burials of about 20 individuals, who had been sacrificed and their remains mummified (see SACRIFICE).

The inhabited area was organized in large rows, which enclosed several open areas. In the centre of one of these open spaces, three individuals had been buried in sitting position, facing east. The buildings differ from one section to another, and show a distinctive floor plan, surface area and subsidiary structures. Some of the buildings clearly had an agricultural purpose and are connected with huge silos and large rubbish dumps, reflecting a high standard of living. The food remains in these dumps reveal great inequalities in the meat diet between different neighbourhoods in the village. Some of the more spacious homesteads were sites of cattle breeding. Others in the southern part of the site show traces of metal forging activities. In this metalworking precinct a cylindrical pit, 4 m in diameter, was discovered during excavations. It was filled with several hundred iron lance heads.

Eight cremation burial sites were located around the village. Each of these graveyards was enclosed by ditches, sometimes of considerable size, and there are buildings within these same enclosures. Compared with the size of the total population as implied by the number of dwellings in the settlement, the number of burials, about 130, shows that not all the inhabitants had the right to be buried in a tomb. In other words, the social pattern was that of dominance by a relatively small social élite, presumably the free landowners, whose status was defined by burial of their members and ancestors in the privileged locations on the grounds of the settlement.

Adomnán, St (Latin Adamnanus; 'Eunan' as patron of Raphoe diocese), *c.* 628–23 September 704, was a monk and scholar. He was from the same Donegal family as Colum Cille (i.e. the Cenél Conaill branch of the Northern Uí Néill) and became Iona's ninth abbot in 679. During the time of his abbacy, Adomnán brought new renown to Iona (Eilean Ì), not simply because of his scholarship but through his, now less well-known, diplomatic and legal work. His interest in mitigating the effects of war took him to Northumbria—a place he visited at least twice: he was a guest at the monastery of Wearmouth-Jarrow when Beda was an oblate, and he presented a copy of his *De locis sanctis* (On the holy places) to King Aldfrith/ Flann Fína (who had earlier stayed with Adomnán on Iona) on behalf of Irish captives. Moreover, he was the central figure at the Synod of Birr (697), which produced the Cáin Adomnáin ('Adomnán's law') for the protection of women, children, and other non-combatants. Adomnán is credited in a series of canonical manuscripts as the author of a short collection of *Canones* (church law) and there is no reason to doubt his authorship; he is also the most recent named authority in some recensions of the Collectio Canonum Hibernensis, and possibly had a rôle in its creation. He also took part—according to Beda—in the Easter controversy.

Adomnán is best remembered today for his *vita* of Colum Cille, which, despite hagiographical commonplaces—it claims to record his miracles, prophesies and visions—is a major source for the history of Iona and insular monasticism. Its account of royal anointing influenced the development of kingship in Europe, but it is little more than a fine specimen of the Latin genre of the period. His other book, *De locis sanctis*, deals with places mentioned in the Scriptures. Posing as the account of a pilgrim 'Gallic bishop, Arculf' (in addition to what Adomnán knew from books), it is a complex manual for solving exegetical problems using geographical knowledge. In fact, the work is almost wholly derived from the information available in Iona's relatively well-stocked library. Among the many attempts to reconcile such conflicting statements (Adomnán was particularly inspired by the hope that St Augustine of Hippo [†430] had placed in using geographical knowledge and who desired that someone should write a work on this), his is one of the most competent and original in method—on one occasion

seeking to improve on that of Augustine. The book was immediately recognized as a key resource, as the number of copies Europe-wide testify, while Beda recognized its potential as a textbook and wrote a summary (also called *De locis sanctis*) intended for students not yet ready for Adomnán's book—and Beda's was only the first of a series of classroom abbreviations. Adomnán's European medieval reputation—one of the few Irish writers who were labelled 'illustrious'—as a scholar rested on this work, and through *De locis sanctis* he is the only Irish writer who can be said to have played a rôle in the growth of the medieval propositional approach to Scripture. It was one of the first early Irish works in print.

Adomnán's fame in medieval Ireland (Ériu) seems related principally to his being the author of one of 'four laws (*cána*) of Ireland' and as a saintly abbot, for he is specially noted in the martyrologies and is the subject of a *vita* in Irish. However, his reputation as a scholar must also have continued (a Beda-inspired abbreviation of the *De locis* survives under his name in Irish), for he was made the worthy seer of a vision/tour of heaven and hell, the *Fís Adomnáin*: the most elaborate specimen of the genre extant in Irish (see vision literature).

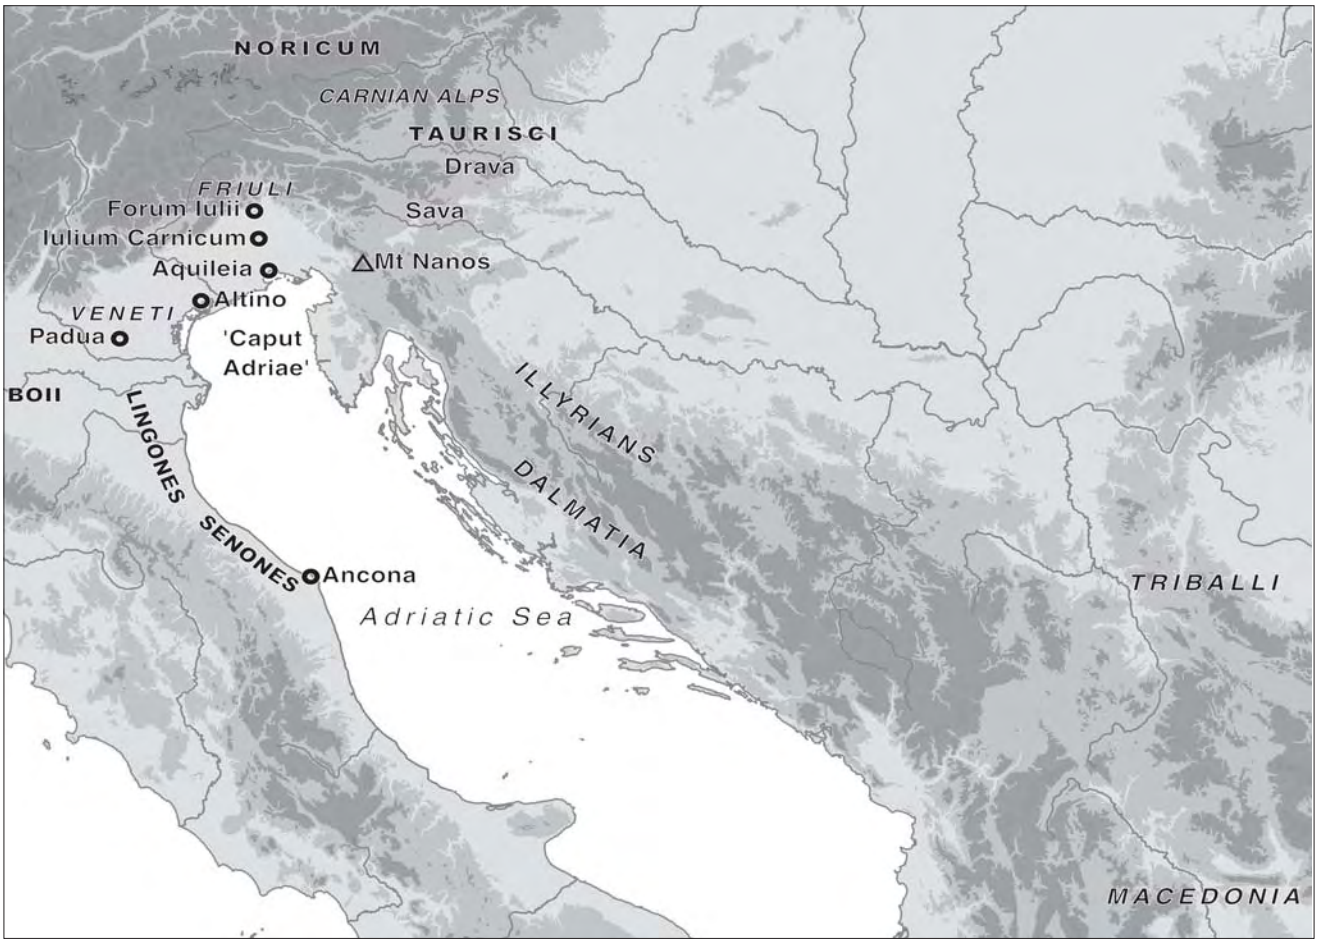
Adriatic region, Celts in the

The Celts of the Adriatic region are mentioned most often in connection with the famous rulers of Hellenistic Macedonia. Phillip II is said to have been murdered with a so-called μάχαρια *mácharia* or Celtic short sword in 336 BC (Arrianus Flavius, *Anabasis of Alexander* 1.4.6; Strabo, *Geography* 7.3.8). According to the history of Alexander the Great by Ptolemy I Soter (†283 BC), Alexander hosted a Celtic delegation from 'Adria' during his campaign against the Thracian Triballi (in the central Balkans) in 335 BC. Historians are now of the opinion that the Adria in question was not the Graeco-Etruscan emporium at Adria, where the Celtic Boii had settled, but rather territory along the Adriatic coast. This general location raises a further question, i.e. whether these Celts came from Dalmatia (in present-day Croatia) or from other areas along the eastern, or even western, shores of the Adriatic, or from its northern tip, the so-called Caput Adriae.

Since there are few written sources from this period about the Celts or their expansion on the Balkan peninsula or into adjacent parts of north-east Italy, it is difficult to determine the specific identity of the Celtic delegation, or the point of origin from which these 'Adriatic' Celts had departed. The term itself seemingly reflects the penetration of the Celts on the Italian peninsula and into the territory between the Caput Adriae and the eastern Alpine region towards the kingdom of Noricum. There is, however, no trace of Celtic penetration or settlement activity—as might be indicated by Celtic place-names and La Tène material culture—at this time along either the eastern or western coasts of the Adriatic.

Other groups who were linguistically Indo-European, but not Celtic-speaking, are known to have been established in the region. Illyrian tribes such as the Histri, Liburni, and Dalmatae settled on the eastern Adriatic coast, while the northern part of the Caput Adriae was occupied mainly by the Veneti, as well as other indigenous tribes already established in the region in the early Iron Age. Most of the Celtic groups of northern Italy settled inland, but the Senones in the vicinity of Ancona and the Lingones to their north towards the Veneti were along the north-western Adriatic coast.

The situation between the Venetic enclave about Padua and the eastern Alps provides some important clues as to the origin of the Celtic delegation that met Alexander. This is the territory nowadays known as Friuli (in north-easternmost Italy and western Slovenia, extending as far as Mount Nanos. This area apparently preserved a distinctive language until the Roman occupation in the first century BC, and numerous indigenous, putatively Veneto-Illyrian tribes have been identified there. In the last centuries BC, a confederation of Celtic tribes known collectively as the Taurisci were to be found on the borders of the Carnian Alps



Celts in the Adriatic region: names of Celtic groups and kingdoms are shown in bold capitals

and near the source of the Sava, a confederation that formed parts of the kingdom of Noricum.

In Altino, on the north-eastern side of the Venetian lagoon, some warrior graves have been uncovered containing material similar to that of Celtic-speaking areas. This linguistic identification was confirmed by the discovery of two INSCRIPTIONS. One of these uses Venetic script, though it is linguistically LEPONTIC, i.e. Cisalpine Celtic, and dates from the end of the 5th or the first half of the 4th century BC. The other contains the name *Kadriako* (probably as the second element of a compound *Belatukadriako*), immediately comparable with the Gaulish and British divine name *Belatu-cadros*, cf. perhaps Welsh *cadr* 'fine, lovely'. Gallo-Brittonic *Belatucadros* was sometimes equated with the Celtic Mars (see INTERPRETATIO ROMANA).

Celtic settlers came to the territories of the hinterland of the Caput Adriae about 300 BC when the south-eastern Alpine area was settled by the Taurisci, while Celts from the upper Drava valley occupied the southern slopes of the Carnian Alps.

With the establishment of Roman Aquileia in 181 BC, the territory about the upper Adriatic began a slow process of Romanization. In the first century BC, this area was inundated by Roman authority, and in the core of the Friuli CAESAR's fortresses were built at Iulium Carnicum and Forum Iulii, the latter giving its name to the modern region.

Aed Find (Aed the White or the Fair) mac Echach (son of Eochaid, †*c.* 733), son of another Eochaid (†*c.* 697), was king of the Scottish kingdom of Dál Riata *c.* 750–78. He was of the Cenél nGabráin dynasty—the lineage claiming descent from the father of the famous 6th-century ruler Aedán mac Gabráin. During his reign the Scots recovered from a period of political unrest and Pictish domination, and once again established the Cenél nGabráin as the ruling dynasty of Dál Riata. Aed regained Scottish sovereignty over Dál Riata from the powerful Pictish king Onuist son of Uurguist (Oengus mac Forgussa in Irish sources) in around 750, probably taking a decisive turn in that year with the defeat and death of Onuist's brother, Talorggan mac Forgussa, at the battle of Catohic.

In the year corresponding to 768, the Annals of Ulster record *bellum i Fortrinn iter Aedh 7 Cinaedh* 'battle in [the Pictish province of] Fortrinn between Aed and Cinaed', the latter probably being Cinioid son of Uuredec, king of the Picts. We do not know the outcome, but the location indicates that Aed was on the offensive. In the compiled chronicle of Pictish and early Scottish affairs found in the so-called 'Poppleton Manuscript' (Paris, Bibliothèque Nationale, Latin MS 4126, 14th century), we are told that during the reign of Domnall mac Ailpín (king of the Picts and Scots 858–62) 'the judgements and laws of Aed mac Echach' (*iura et leges regni Edi filii Ecdach*) were adopted by the Gaels. This note suggests that Aed's reign was remembered in early united Scotland (Alba) as a foundational period of sound government.

Aed was succeeded by his brother Fergus, who ruled until *c.* 780. On the etymology of the common Old Irish man's name *Aed*, see Aedui; cf. Aed Sláine, *Aedán*.

PEB, JTK

Aed Sláine mac Diarmato (†604) was the progenitor of one of the two major sub-dynasties of the Southern Uí Néill, Síl nAedo Sláine (descendants, lit. seed, of Aed Sláine), whose traditional area of control was centred in Brega in east central Ireland (Ériu). He is also a figure around whom early ideas of a Christian high-kingship over all Ireland developed.

Aed was the son of Diarmait mac Cerbaill, king of Tara (Teamhair) 544–65, according to the Irish annals, and thus great-great-grandson of Niall Noígiallach (Niall of the nine hostages), namesake and traditional founder of the Uí Néill. In Adomnán's *Vita Columbae* (Life of Colum Cille 1.14), the saint tells Aed that he was predestined by God to the prerogative of ruling the whole of Ireland (*tibi a deo totius Everniae regni praerogativiam monarchiae praedestinatam*), but that he was liable to receive only part of this patrimony if he were to commit kin slaying. The prophecy was borne out, for Aed killed Suibne, son of his brother Colman (in 600) and ruled only the core of his hereditary lands for a mere four years and three months. Clearly Adomnán and the Uí Néill intelligentsia of Iona (Eilean Ì) were looking retrospectively on Aed, about 90 years after his death, as a divinely sanctioned, but flawed, high-king of Ireland. The passage is remarkable in that Aed and his father are the only Irish kings described in such exalted terms by Adomnán, and the formulation is extremely similar to the way in which Adomnán says that Oswald of Northumbria had been ordained by God to rule the whole of Britain (*Vita Columbae* 1.1). Aed ruled as king of Tara jointly with the Northern Uí Néill high-king Colmán Rímid, who also died in 604. Aed was killed as part of a vendetta at the instigation of the kindred of Suibne mac Colmáin.

On the national stage, the Northern Uí Néill were more powerful than the Southern during most of the 7th century. Regionally, Aed's lineage was dominant amongst the Southern Uí Néill through the 7th century, but was eclipsed by the rival Cland Cholmáin (the children of Colmán [Már mac Diarmato, Aed's brother]), to the west in Mide (Meath), after the death of Aed's great-grandson Cinaed mac Írgalaig in 728.

On the name *Aed* and related Celtic names, see Aedui and Aedán mac Gabráin. His epithet, refers to Sláine (Slane), a place central to his territory in the valley of the Boyne (Bóand), and the place-name may be related to the Irish common adjective *slán* 'whole, well, healthy'.

JTK

Aedán mac Gabráin was king of Scottish DÁL RIATA (r. 574–*c.* 603, †17 April 608) and one of the most powerful and best documented leaders in BRITAIN or Ireland (ÉRIU) in this period. He is a key figure in connection with the early history of the Scottish dynasty, the Scottish church centred on Iona (EILEAN Ì), and the relations between the Gaels of Scotland (ALBA) and the Gaels of Ireland, on the one hand, and the other peoples of Britain on the other.

ADOMNÁN's *Vita Columbae* (Life of COLUM CILLE) of *c.* 692 shows that Aedán was a Christian who had undergone an inauguration ritual on Iona at the hands of Colum Cille himself (Enright, *Iona, Tara, and Soissons*). This episode would be an early example of the Church endorsing the notion of a Christian kingship in the CELTIC COUNTRIES. Also early in Aedán's reign, *Vita Columbae* shows him as instrumental in establishing an enduring framework of power-sharing between his own kingdom and the rulers dominating northern and central Ireland and the Church. At the royal convention at Druimm Cett in 575, Colum Cille and Aed mac Ainmerech (king of the Northern Uí NÉILL and the most powerful ruler in Ireland at the time) were present, as well as Aedán. The circumstances naturally imply that Colum Cille's monastery on Iona performed some important diplomatic rôle between the kingdoms. The surviving fragment of the LIBER DE VIRTUTIBUS SANCTI COLUMBAE of CUMMÉNE FIND, abbot of Iona (657–69), relates a prophecy that Colum Cille told to Aedán concerning future discord between Aedán's descendants and the Uí Néill dynasty of Ireland. Like other Irish sources, Cumméne viewed this 'Treaty of Druimm Cett' as having remained in effect (ensuring two generations of peace) until broken with the battle of MAG ROTH in 637 (Bannerman, *Studies in the History of Dalriada* 157–70).

Aedán's interest in, and emulation of, the kings of the other peoples of Britain is reflected in the unprecedented non-Gaelic names borne by several of his sons and grandsons: *Conaing* < OE *cyning* 'king'; *Artúr* (Latinized *Arturius*) < Early Welsh *Art(h)ur* < Latin *Artōrius* (see ARTHUR); *Rígullán* < Early Welsh *Riguallon* (Mod.W *Rhiwallon*, MBret. *Rivallen*); *Morgand* < OW *Morcant* (Mod.W *Morgan*); *Nechtan* (a common name amongst Pictish kings); *Predan* (which is a P-CELTIC word, meaning simply 'the Briton' or 'the Pict'; cf. Welsh PRYDAIN 'Britain').

According to the Irish ANNALS, Aedán attacked Arcaibh (the Orkneys, then under Pictish rule) *c.* 579. Then, *c.* 581, he was the victor of *bellum Manonn* 'the battle of Manu', which might mean either ELLAN VANNIN (Isle of Man) or the district known as *Manau Guotodin* (Mod.W *Manaw Gododdin*) in what is now east central Scotland.

In 603 ÆTHELFRITH, the formidable Bernician king, heavily defeated a large army led by Aedán at the unidentified place called Degsastan (on the implications of this battle, see ÆTHELFRITH).

The names of both Aedán and his father, Gabrán, are Old Irish and indisputably Celtic. The former is a diminutive derived from the Common OIr. man's name Aed (see AED FIND; AED SLÁINE); note also the Gaulish tribal name AEDUI. The father's name is a diminutive based on the Celtic word for 'goat', OIr. *gabor*, W *gafr*.

Aedán mac Gabráin figures in several early Irish tales, including *Scéla Cano meic Gartnáin* (Tales of Cano mac Gartnáin). In the story *Compert Mongáin* (Birth of MONGÁN), he figures as king of ALBA (Scotland) at the right period and is also realistically involved in warfare with the Anglo-Saxons.

There are several indications that Aedán made an impression on Welsh culture, probably by way of his BRYTHONIC neighbours in YSTRAD CLUD (Strathclyde). The death of *Aidan map Gabran* is recorded in ANNALES CAMBRIAE, the only Dál Riatan king mentioned there. Very few Gaelic names had any currency in Wales in the earlier Middle Ages, and OW *Aidan* is one. For example, *Aeþan* occurs as a proper name in the elegies of the GODODDIN, which could possibly be a reference to Aedán mac Gabráin himself. Amongst the roughly 800 personal names in the LLANDAF Charters there are men named *Aidan* witnessing charters datable to *c.* 605, *c.* 760–5, *c.* 935, and *c.* 1070–5. St Aedán of LINDISFARNE (bishop 635–51) was too late to be the namesake of the first of these. In *Peiryan Vaban* (Commanding boy), a prophetic poem connected to the cycle

of Myrddin, Aeddan son of Gafran appears as the enemy of a historical 6th-century King Rhydderch Hael of Ystrad Clud. In the Welsh Triads, the names of father and son are confused (*Gauran mab Aeδan*), where he figures in Triad no. 29 as leader of one of the 'Three Faithful War-Bands'. Several Welsh sources give Aedán the epithet *Bradawg* 'treacherous', and in Welsh tracts connected with the children of Brychan, the legendary founder of Brycheiniog in south-east Wales, we find an 'Aidan Bratauc' as the son of one of Brychan's daughters.

Aedui/Haedui is the name of a Gaulish tribe who lived in latter-day Burgundy (south-eastern France). Their territory was centred on the mountains of the Morvan, around present-day Autun (ancient Augustodūnum), and they were at one time among the most powerful tribes in Celtic Europe. Having been in diplomatic contact with the Romans since about 138 BC, they were to play a key rôle in Julius Caesar's campaigns in Gaul. They formed the centre of an extensive federation of tribes that reached from the Bellovaci (who gave their name to modern Beauvais, at the site of their old capital) in the north to the Segusiaves in the south, west of Lugudūnon. Their conflict with the Sequani in 58 BC triggered the Roman military intervention, which Caesar led and later described in his *De Bello Gallico* ('Gallic War'). The power of the Aedui was mainly derived from control of the main trade routes of the valleys of the river Liger (the Loire, flowing north-west to the Atlantic) and Saône (flowing south to the Mediterranean). In their capital, Bibracte, evidence for elaborate Iron Age craftsmanship (mainly metallurgy and enamel production) has been found.

The tribal name *Aedui* probably derives from the Celtic word **aidhu-* 'fire' (= OIr. *áed* 'fire, eye' [neuter *-u-/-i-* stem]), also the common Old Irish man's name *Aed*, genitive *Aedo* (see AED FIND; AED SLÁINE), diminutive Aedán, from the Indo-European root **h₂eidh-* 'to burn'.

Æthelfrith was king of Brynaich (Bernicia) 593–605 and was then the first ruler of a unified Northumbria (Brynaich and Dewr/Deira) 605–17. He was the dominant power in north Britain during his reign. His name is Old English, and members of his dynasty were considered to be ethnically Angles by the Anglo-Saxon historian Beda (Bede). He was son and grandson of the northern Anglian kings Æthelric and Ida. Æthelfrith was a lifelong pagan and a fierce enemy of the Christian Scots and Britons (Welsh). Beda tells us that in the earlier half of his kingship he expanded violently against the Britons, taking more land than any other English leader and exterminating or enslaving the natives. It was in response to this expansionism, we are told, that Aedán mac Gabráin of Scottish Dál Riata unsuccessfully attacked Æthelfrith at the unlocated battle of Degsastan in 603:

> *Unde motus eius profectibus Aedan rex Scottorum qui Brittaniam inhabitant, uenit contra [Aedilfrid] cum inmenso ac forti exercitu; sed cum paucis aufugit victus. Siquidem in loco celeberrimo qui dicitur Degsastan . . . omnis pene eius est caesus exercitus . . .*
>
> Moved by Æthelfrith's successes, then Aedán king of the Gaels who live in Britain [*rex Scottorum qui Brittaniam inhabitant*], resenting Æthelfrith's success, went against him with a huge army, but he escaped defeated with only a few. That is in the famous place called Degsastan, . . . where nearly all Aedán's army was slain. In that struggle Theobald, Æthelfrith's brother, was slain with all of the army that he led . . .

> And from that time forth, no king of the Gaels in Britain has been willing to make war against the English people (Beda, *Historia Ecclesiastica* 1.34). (For a fairly drastic reinterpretation of this battle, see Duncan, *Writing of History in the Middle Ages* 16–20.)

This implies that the spheres of influence of Dál Riata and Brynaich had by then come to overlap in southern or central Alba (Scotland). (In considering subsequent developments in the 7th century, it is instructive to remember in this light that Æthelfrith's sons and successors, Oswald [r. 634/5–642] and Oswydd [Oswiu], were, because of Degsastan, hereditary enemies of Aedán's grandson and successor, Domnall Brecc [†642].)

The idea that the battle commemorated in the Gododdin elegies was an attack by the Britons against Æthelfrith (*c.* 600) is very doubtful; his kingdom, Brynaich, is not even mentioned as the enemy in the older of three versions of the text, texts B1 and B2, where the enemy is Dewr. Similarly, the more innovative Text A refers once to *bedin Ododin a Breen[e]ych* 'the army of Gododdin and Brynaich', as though the two kingdoms had in fact been allies at the battle of Catraeth. On the other hand, Oswydd (r. 642–71) does seem to be mentioned as an enemy of Gododdin in the more innovative Text A.

In 604 Æthelfrith took over Dewr, driving out its prince, Eadwine (Edwin), and thus united what was to be henceforth the great northern English kingdom of Northumbria.

Æthelfrith was victorious over King Selyf of Powys and massacred the Welsh clergy of Bangor Is-coed at the battle of Chester (Caer) *c.* AD 615. In 616/17 Eadwine defeated and killed Æthelfrith together with Rædwald of East Anglia. Æthelfrith's sons, Oswald and Oswydd, then went into exile amongst the Gaels. Thus, Beda:

> *Siquidem tempore toto quo regnauit Aeduini, filii praefati regis Aedilfridi qui ante illum regnauerat, cum magna nobilium iuuentute apud Scottos siue Pictos exulabant, ibique ad doctrinam Scottorum catechizati et baptismatis sunt gratia recreati.*
>
> During the whole time that Eadwine ruled, the sons of the king who had ruled before him, Æthelfrith, together with a great number of noble youths, were in exile amongst the Gaels or Picts, and they were instructed in the church doctrine of the Gaels and received the grace of baptism. (Beda, *Historia Ecclesiastica* 3.1)

Eadwine succeeded as ruler of Northumbria and was baptized a Christian in 627.

In Historia Brittonum (§§57, 63) Æthelfrith is called *Aelfret* or *Eadfered* and given the dishonourable Old Welsh nickname *Flesaur* 'twister' < Latin *Flexārius*:

> [Æthelfrith] 'The Twister' ruled twelve years in Berneich [Brynaich] and another twelve in Deur [Dewr]; 24 years he ruled between the two realms, and he gave his wife Din-Gwaerwy; she who is called Bebbab, and from his wife's name it was named, i.e. Bebbanburh [the Bernician stronghold of Bamburgh].

JTK

Æthelstan was the name of several Saxon kings, including Æthelstan of Sussex (r. *c.* 714–*c.* 720), Æthelstan of East Anglia (r. 827–39) and Kent (r. 839–51). The most important, however, was Æthelstan of the royal lineage of Wessex, who reigned from 924 (crowned 925) to 940. A grandson of Alfred the Great, Æthelstan began his kingship ruling only Wessex and Mercia, but in 926 he was acknowledged as lord over Northumbria, and in 927 over Scotland (Alba) and Strathclyde (Ystrad Clud). By 930 he was receiving tribute from Welsh princes as well, and the river Wye (Gwy) was fixed as the border between England and Wales (Cymru) in Herefordshire, placing what had been the early Welsh kingdom of Ergyng within England. Æthelstan is reputed to have expelled the Britons from Exeter (Welsh Caerwysg), and the river Tamar was accepted as the boundary between English and British. This border was used for the new bishopric of Cornwall (Kernow), created by 931. Æthelstan claimed authority as king of the English but also ruler of all Britain. He was also godfather to Alan Varveg

of Brittany (Breizh), whom he supported in the reconquest of Brittany from its Viking invaders.

According to Sir Ifor Williams, Æthelstan figures prominently in the Welsh prophetic poem Armes Prydein, which was composed in the 10th century. Williams thought the poem was necessarily earlier than the battle of Brunanburh in 937/8 since the great alliance envisioned in the poem would have had no hope of overcoming the English overking; however, Dumville has more recently challenged the certainty of this historical milestone (ÉC 20.145–59). *Armes Prydein* itself does not refer to Æthelstan by name, but rather to the foreseen struggle of the allied Britons, Gaels, and Norse against the Saxons, and specifically against the tribute-gathering *meirion mechteyrn* (stewards of the great king, or . . . surety-taking king) of *Iwys*, the people of Wessex.

afanc

The Modern Welsh word *afanc* (Breton *avank*) means simply 'beaver', a creature which was found until the 13th century in the British Isles and until the 16th century in Brittany (Breizh). The word is ultimately derived from the root for river (Mod.W *afon*, Mod.Bret. *avon*, Mod.Ir. *abhainn*). In Welsh literature and oral tradition, however, the *afanc* is a sort of water monster. The earliest attestation of the word dates from the mid-9th century, under the Latinized Old Breton form *abacus*, glossed in Old Breton as *corr* 'dwarf, supernatural being'. The cognate Irish word *abbac* (OIr. *abacc*) also has the sense of 'dwarf, supernatural being', and it too is sometimes said to mean 'beaver' or even a type of dog, a small terrier used for ferrets. This dual usage of a word for both a small river mammal and a water monster is a natural outgrowth of a basic etymology meaning 'river dweller' and is paralleled elsewhere in Indo-European tradition. The English words 'water' and 'otter' are both related to Greek ὑδωρ *hydōr* 'water', ὕδρος *hydros* 'water-snake, small water animal', and ὕδρα *hydra* 'water-serpent, hydra'.

The word *afanc* and forms related to it are often combined with the adjective *-du* 'black', giving Old Breton *amachdu* (probably */avākðü/*) as the name of a riverside rock (*rupes*) in the life of St Paul Aurelian, and the word *afagddu* or *y fagddu* 'utter darkness, hell' in Modern Welsh. The word is also the name of a character in the story of Taliesin.

As related in *Ystoria Taliesin*, Afagddu is 'the ugliest man in the world' (cf. the story of Amairgen mac Aithirni). He is the son of the enchantress Ceridwen and Tegid Foel (Tacitus the Bald). Taliesin stole a potion that Ceridwen was making for Afagddu's benefit. The family also included a sister, Creirwy, and a brother, Morfran (sea-raven). In *Hanes Taliesin* (The story of Taliesin), Afagddu is a nickname of Morfran rather than a separate person. They lived beneath Llyn Tegid (Bala Lake), implying both supernatural and aquatic elements (see also otherworld). For an alternative derivation of Afagddu's name, see Ford, *Ystoria Taliesin*.

The variant form *addanc* occurs in the story of Peredur. When he visits the court of the sons of the king of suffering, it is at first peopled entirely by women. Then he sees a corpse ride in on a saddled horse, a knight who is killed daily by a lake *addanc*. The women take the corpse from its saddle and bathe it in a *kerwyn* (tub), usually understood as the cauldron of regeneration (see cauldrons). The corpse arises alive and well. After witnessing this, Peredur tracks the *addanc* to its cave and slays it.

Modern Welsh folklore has numerous examples of *afancod* in lakes and rivers. One story describes the *afanc* as a shape-shifter (see reincarnation), who appears as a handsome man and attempts to drag his victim to a watery death. A pool on the river Conwy is known as Llyn yr Afanc (the *afanc*'s lake or, if the name is old enough, beaver lake), and there is a place called Bedd yr Afanc (the *afanc*'s grave) near Brynberian, Pembrokeshire (sir Benfro).

Agricola, Gnaeus Julius (AD 40–93), a native of Roman Spain, was governor of the Roman province of Britain during the years *c.* AD 79–*c.* 85. During his governorship Roman military control of the

island of Britain reached a high-water mark, with deep penetration into the Highlands of what is now Scotland (Alba) up to the vicinity of Inverness (Inbhir Nis), the circumnavigation of Britain by Roman military scouts, and contemplation of an invasion of Ireland. Agricola's son-in-law, the Roman historian Tacitus (†*c.* 120), wrote a detailed biography of him (often strangely referred to as 'The Agricola'). This text has survived and is an important primary source for Celtic studies in providing Old Celtic names of individuals, groups, and places; observations on the military practices and other ethnographic details for the British tribes of the Late Iron Age, as well as information about the progress of cultural Romanization in its second generation in the pacified south-east of the island.

Tacitus's biography contains in its introductory matter a description of Britain and its peoples, including discussions of the reputed Spanish origins of the Silures of what is now south Wales (Cymru) and the German origins of the Calidones of north Britain. Tacitus's generic name for the inhabitants of all parts of the island was *Britanni* 'Britons', which probably reflects his father-in-law's and the native usage of the earlier Romano-British period.

There follows a synopsis of the history of Roman Britain up to Agricola's governorship, including the client kingship of Cogidubnus, the conquest of Mona (Anglesey/Môn) in ad 60, and Boudīca's revolt in the same year. One of the first acts of Agricola's governorship—probably commencing in ad 78/9—was to put down a serious revolt of the Ordovices of what is now north Wales. This effectively required a full-scale Roman reconquest of Mona. Next, we are told of his efforts to root out the causes of rebellion and bring the Britons peacefully to the Roman way of life: the tax burden was reduced and redistributed more fairly; temples, markets, and bath-houses were built as civilizing influences in remote and warlike areas. In his third year Agricola pushed north, campaigning as far as the river Tauus (Tay/Tatha), and built forts well situated to hold the country. The fourth year was devoted to securing the natural frontier at the narrow isthmus formed by the estuaries of the Clōta (Clyde/Cluaidh) and 'Bodotria' (Forth/Foirthe). In his fifth season, an expelled Irish chieftain came to Britain seeking support, and Agricola moved his forces to the part of Britain closest to Hibernia (Ireland/Ériu), considering the conquest of the island—which would require one legion only—and thereby stamp out the disquieting example of free tribes in the neighbourhood. In the sixth year, he pushed ahead to consolidate the Roman grip on tribes north of the Forth and met major armed resistance from the Calidones. The following year Agricola decisively defeated the Caledonian forces at a place in north Britain that Tacitus calls *mons Graupius*, probably more correctly *mons Craupius*. The native forces used chariot warfare in the battle, much as Caesar had encountered in south Britain 140 years earlier. Tacitus gives the word for the Caledonian war chariot as *covinnus*, probably to be compared with Welsh *cywain* 'convey'. The defeated commander of the native forces was named *Calgācus*, which means 'swordsman', cf. Old Irish *calg* '(stabbing) sword'. (This climactic battle was the subject of an epic poem in Scottish Gaelic composed by Uilleam MacDhun-lèibhe [†1870].)

Agricola's governorship ended soon after *mons Craupius* in ad 84/5 and his long-term ambitions for the incorporation of north Britain and Ireland into the Roman Empire were not fulfilled. It is likely that his purposeful military reconnaissance of these parts is the source for at least some of the ancient Celtic tribal names and place-names from beyond the Roman frontier that were preserved in the *Geography* of Ptolemy (†*c.* ad 178).

The Latin name *Agricola* means 'farmer'. It passed into Welsh as *Aergol*, where it occurs for a king in the early post-Roman dynasty of Dyfed. The place-name *Argol* (early medieval *plebs Arcol*) on the Crozon Peninsula of western Brittany (Breizh) also commemorates a man with a name derived from *Agricola*.

agriculture in Celtic lands

§1. GAUL

There is little evidence of rural settlements in GAUL for the period between the 6th and 3rd centuries BC. Sites such as Paule (PAOUL) or Plouër-sur-Rance (PLOUHERN-AR-RENK) in Brittany (BREIZH) are exceptions. Farms for this period can be inferred from the presence of barns, silos, or other storage buildings, pits and, in some cases, residential buildings. Such recoverable features show the ancient sites of small open hamlets in which cattle were bred and crops grown.

From the 2nd century BC onwards, the landscape of Gaul evolved rapidly, and the northern half of France came to be covered with many farms in far greater density and of more varied type than before, though this pattern developed directly from the previously established ancient models, with no radical break. The farms of this final pre-Roman IRON AGE are enclosed settlements, located in the centre of the territory that they exploit. The average farm consisted of a ditch surrounding farm buildings (houses, barns, silos) and sometimes a secondary enclosure, which surrounded the adjoining territory for agricultural activities. The social status of these sites varied considerably—from simple, almost self-sufficient family farms to aristocratic residences. The richest sites are distinguished partly by an ostentatious architecture (with impressive entryways, ramparts, &c.), but more distinctively by very elaborate furnishing—Mediterranean products, for example amphorae (large jars used for wine or olive oil), jewellery, COINAGE, arms and armour, and sets of iron tools. In such aristocratic rural residences we are no longer dealing with the basic social unit of the freeman farmer, but rather with the residence of a noble family, equipped with material attributes for displaying their rank installed on the grounds of the farm. The multiplication of isolated settlements, which precede and anticipate the GALLO-ROMAN villas (residential farming estates), coincides with other features of rising socio-economic complexity—the development of artisans' villages and finally with proto-urban oppida (see OPPIDUM; AULNAT). It is most likely that the rural and urban innovations of the last centuries BC are causally linked, in other words, that the emergence of urbanization evolved from a better organization and more intensive exploitation of the countryside, producing an economic surplus to support a growing population of town-dwellers no longer immediately dependent on farming for survival.

§2. IRELAND

Early Prehistory

Tenuous evidence of agriculture appears in the Irish archaeological record from the early 5th millennium BC at sites such as Ballynagilly, Co. Tyrone/Contae Thír Eoghain (ApSimon, *Journal of the Royal Society of Antiquaries of Ireland* 99.165–8). At the far end of the island, analysis of roughly contemporary pollen deposits at Cashelkeelty, Co. Kerry (Contae Chiarraí) has yielded evidence of wheat pollen (Monk, *Past Perceptions* 35–52). The evidence becomes stronger and more abundant from the 4th millennium BC and pollen analysis from this time indicates widespread tree clearance in some areas. The earliest Neolithic (New Stone Age) farming appears to have been mainly of the *landnam* or slash-and-burn type, with small areas of woodland cleared and subsequently abandoned once the soil became exhausted of nutrients. In the later Neolithic (*c.* 3200–2400 BC) farming became more sedentary, with the construction of more permanent dwellings.

While the recovery of cereal pollen demonstrates the introduction of arable farming, the increase in grass and plantain pollen at some locations, such as Scragh Bog, Co. Westmeath (Contae na hIarmhí), is likely to mark the earliest phases of pastoral agriculture (O'Connell, *Journal of Life Sciences* 2.45–9). Thus, it appears that in Ireland (ÉRIU), as elsewhere in north-west Europe, farming was from its inception a mixture of crop growing and stock rearing, with the latter perhaps the more important (Waddell, *Prehistoric Archaeology of Ireland* 29). Assemblages of faunal bone from 3rd millennium BC settlement contexts indicate cattle and pig as the main meat sources by this time (Ó Riordáin, PRIA C 56.297–459; Van Wijngaarden-Bakker, PRIA C 86.17–111).

Later Prehistory

This general pattern continues into the metal-using period. Bone evidence from Beaker period (*c.* 2400–

2000 BC) activity at Newgrange, Co. Meath (BRUG NA BÓINNE, Contae na Mí), shows that most of the cattle were killed at 3 to 4 years old. This suggests that meat was the main requirement and milk of secondary importance, if exploited at all. Sheep were apparently of little importance as a source of food, but the presence of spindle whorls on excavated sites of Bronze Age date shows that their wool was being exploited. Evidence from the Later Bronze Age (*c.* 1400–500 BC) is limited, but suggests that small-scale mixed farms of the type excavated at Ballyveelish and Curraghatoor, Co. Tipperary (Contae Thiobraid Árainn), remained the norm, with cattle and pig the main stock, and barley and wheat the primary crops (Doody, *Archaeological Excavations on the Cork–Dublin Gas Pipeline* 8–35; Doody, *Archaeological Excavations on the Cork–Dublin Gas Pipeline* 36–42). Several wooden yokes for harnessing oxen have been radiocarbon dated to the end of the Late Bronze Age, a further indicator of crop cultivation at this time (Stanley et al., *Archaeology Ireland* 64.6–8).

Evidence for agriculture, like other domestic activities, is poor in the Irish Early Iron Age (*c.* 500 BC–AD 400). Pollen diagrams from bogs in Co. Louth (Contae Lú) and Tipperary indicate that for most of this period, in these areas at least, agriculture was in decline, with scrub and woodland reclaiming much territory (Raftery, *Pagan Celtic Ireland* 121–2). While grain production appears to have continued, the quantities recovered on the handful of settlements excavated suggests a much lesser importance for arable farming at this time, although the wooden head of an ard-plough associated with the Corlea trackway, Co. Longford (Contae Longfoirt), testifies to the continuation of arable practices such as ploughing in the IRON AGE (Raftery, *Trackway Excavations in the Mountdillon Bogs* 266–7). The appearance of rotary querns, in the form of the beehive quern some time after *c.* 200 AD is a development of note in cereal processing, replacing the saddle quern which had been in use since the Neolithic. Nonetheless, the contrast between the 13 grains of barley and 19,000 animal bones recovered at DÚN AILINNE, Co. Kildare (Contae Chill Dara), speaks for itself and, although the ritual nature of much of the activity on this site urges caution in interpreting the food remains, it may well be an indication that the dominance of pastoral farming evident in the following Early Medieval period began at this time. As throughout prehistory, cattle and pig appear to be the main meat sources, while there is some debate as to whether the faunal remains are suggestive of any important rôle for dairying (Crabtree, *Emania* 7.22–5; McCormick, *Emania* 8.57–9). Field boundaries, such as those at the Céide Fields, Co. Mayo (Contae Mhaigh Eo), are known from the Neolithic onwards and several examples, such as those at Cush, Co. Limerick (Contae Luimnigh), have been suggested as being of Iron Age date, though without conclusive proof (Ó Riordáin, PRIA C 45.139–45).

Fabric adhering to bronze objects recovered from Iron Age contexts at Navan Fort (EMAIN MACHAE), Co. Armagh (Contae Ard Mhacha), and Carrowbeg, Co. Galway (Contae na Gaillimhe), is believed to be linen and this is the earliest archaeological evidence for flax growing, although pollen cores from Co. Louth dating from *c.* 2000 BC suggest its production at this early date (Weir, *Discovery Programme Reports* 2.77–126). The use of bee products in the Iron Age is implied by the fact that wax was required for the *cire perdue* (lost wax) casting method employed in producing the more elaborately decorated LA TÈNE-style objects. This does not necessarily imply beekeeping, as the source could have been from wild hives, but certainly the *Bechbretha* law tract of the following Early Medieval period depicts a craft long-practised and well understood (Charles-Edwards & Kelly, *Bechbretha*).

Early Medieval Period

Our knowledge regarding most aspects of farming in this era is vast in comparison with prehistory, mainly due to the survival of a body of highly detailed legal documents of the period. The majority of these LAW TEXTS were written in the 7th or 8th centuries AD and they illustrate a highly regulated and complex integration of agriculture within the early Irish social structure, of which it was the primary economic engine. The archaeological and documentary evidence is united in recognizing the central rôle of cattle in this structure (see Kelly, *Early Irish Farming* 27), and suggestions that this rôle may be exaggerated by the textual evidence (e.g. Cooney & Grogan, *Irish Prehistory* 195) are therefore difficult to accept. Dairying was clearly the prime purpose of cattle rearing at this time, a fact made clear in the literature, not least by the frequency with which milk is mentioned as a foodstuff and the wide variety

of different forms it takes (e.g. Meyer, *Aislinge Meic Conglinne/ Vision of MacConglinne* 101.8-11). There is strong evidence for transhumance, the practice of seasonal movement of the herds to the uplands in the warmer months. This practice continued in Ireland up until the 18th or 19th centuries and was known as 'booleying' (from Irish *buaile*, a cattle enclosure). Many of the dry-stone huts in the uplands of western Ireland may have been seasonally inhabited abodes connected with this practice. Haymaking was not practised in Ireland at this time and exceptionally harsh winters where snow lay on the ground for protracted periods caused heavy mortality amongst the herds.

The pig also has a high profile in the written texts, its flesh considered better food than that of a calf, bull or sheep (Kelly, *Early Irish Farming* 80). This, like the predominance of cattle, reflects a continuation of the preferences indicated by the prehistoric evidence. Sheep are important, primarily for their wool, and this importance is shown by the fact that they, like cattle, are used as a unit of currency in the law tracts. Other livestock mentioned in the latter are horses, oxen and goats. Fowl, cats, dogs and bees also feature.

Despite the emphasis on cattle, the importance of cereal production in the Early Medieval period is not to be underestimated. Kelly states that failure of the corn crop could result in hardship and famine, although none of the annalistic entries he cites demonstrate this point (Kelly, *Early Irish Farming* 2, 219). Wheat was the most highly prized cereal, though also the most difficult to grow in the Irish climate. Barley, rye and oats seem to have been the staple cereals of the majority, being better suited climatically, and are all well represented on excavated sites of this period (Monk, *Journal of Irish Archaeology* 3.31–6). The wide variety of foodstuffs prepared in Early Medieval Ireland using cereals is a further indication of their importance (see Sexton, *Early Medieval Munster* 76–86). Milling of grain became more efficient in this period with the advent of the water-powered mill (Rynne, *Early Medieval Munster* 87–101).

Land and stock ownership rested on the twin principles of KINSHIP and clientship. Inheritance was a complex legal issue on which generalization is difficult. In short, land was generally held from the extended kin group or *fine*. In most cases inheritance was restricted to the smallest division of the kin group, the *gelfine*, based on the male line of a common grandfather. The practice of sub-division of land, whereby the father's holding was divided amongst his sons, led to a constant diminishing in the size of the holding, with the inevitable result that it became economically unviable. This was one of the longer surviving of Irish social practices and was one of the contributory factors to the Great FAMINE a millennium later. Clientship was essentially a system whereby a landowner could receive a grant (Irish *rath*) from his chief, usually in the form of cattle, on which a set annual return was due to the grantee for a set length of time, generally seven years. This system supplied the client with capital through which he could, by careful husbandry, increase his holding while the chief gained not only interest, but also prestige and status based on the number of clients he could take on (for a detailed discussion of clientism see Mytum, *Origins of Early Christian Ireland* 114–29).

The heart and focus of the holding in early medieval Ireland was the *lios* (ring fort), a defended settlement of which many still survive in the rural landscape. The *lios* was not only a home to the family who dwelt in the internal building(s), but also a secure enclosure for the stock at night and other times of danger. Evidence from one excavated example, that at Deer Park Farms, Co. Antrim (Contae Aontroma), included the preserved remains of a range of species-specific parasites indicating that sheep, cattle, horses, goats and pigs had all been present within the enclosing bank (McCormick, *Emania* 13.34).

Anglo-Norman Influence and Beyond

Even before the Norman military conquest of Ireland began in 1169, the effects of the feudal system of agriculture were being experienced in a limited way through the presence of the Cistercian order, which had founded a monastery at Mellifont, Co. Louth, in 1142 under the patronage of Donnchad Ua Cearball, king of Airgialla. By 1153 eight daughter houses of Mellifont had been founded in Ireland (see CISTERCIAN ABBEYS IN IRELAND). The Normans introduced many agricultural innovations, including the practice of haymaking and more efficient ploughs with wheels and a mould-board. The new breeds of stock introduced by the Normans were generally larger and more productive, well suited to the fertile lowlands of the east and south-east where their settlement was concentrated. It is likely that these new breeds were ill suited to the western mountains and bogland to which the Gaelic

clans were increasingly confined. Manorial records indicate that sheep replaced cattle as the stock of most importance in Norman areas. The picture which emerges is that, although the Irish embraced some of the introduced innovations and the Norman settlers must have learned locally suitable methods from the native farmers, polarization of the two agrarian systems increased. For instance, extensive Norman cultivation of cereals in the rich sword-lands of the south-east seems to have been accompanied by a decrease in cereal production by the Irish and a drift towards semi-nomadic pastoralism (Kelly, *Early Irish Farming* 23). This situation continued for centuries, with much of the Gaelic west and north remaining an essentially cattle-based society up until the 17th century. Following the Geraldine and Nine Year Wars, these areas became integrated into the English feudal system, although some Irish practices lived on for a further century or so. One example of the latter is inheritance by sub-division (see above).

The Modern Period

The 18th century saw the transformation of the west of the country from a sparsely inhabited landscape into a thickly settled small-farming area. This process was enabled by two major factors. The first was the adoption of the Rundale system of semi-communal land management, with its infields and outfields arranged around a central settlement or clachan often occupied by a single extended family group (see Aalen et al., *Atlas of the Irish Rural Landscape* 79–89). The characteristic radial field boundaries of the Rundale system are still to be seen, particularly in the landscapes of Co. Donegal (Contae Dhún na nGall) and the barony of Erris, Co. Mayo (Contae Mhaigh Eo). The second factor was the mass cultivation of the potato, which was well adapted to the poor soil and damp climate of the west, required no processing as grain did, and was quite nutritious. The agrarian reforms which followed the devastation of the Great Famine of the 1840s placed emphasis on modernization and saw the end of the native Rundale and clachan system.

Further famine in 1859–64, and again in 1879–84, steeled British government resolve to push on with radical long-term land reorganization. Many improvements in farming techniques and land management were wrought, particularly in the west, under the supervision of the newly founded Congested Districts Board in the decades around the end of the turn of the century. Recognition of the serious injustice and backwardness of the Irish land ownership system, coupled with the agrarian agitation of the Land League, led successive British governments to reluctantly adopt a policy of purchasing land from landlords and reselling to tenants at a reduced rate. In conjunction with a series of Land Acts coercing landlords to sell land, this policy resulted in two thirds of Irish tenants owning their own land by 1914.

After partition in 1921, this trend continued in the Free State under the newly formed Land Commission. The effectiveness of the reforms was hampered, however, by the ideological outlook of the Fianna Fáil governments of the 1930s and 1940s who, in attempting to create a classless rural Gaelic society, limited farm sizes to between 8 and 12 hectares (between 20 and 30 acres), but such holdings quickly became economically unviable. With the exception of the booming demand during the Second World War, the rural economy went into decline, with increasing population movements to the towns and cities, as well as abroad.

Irish membership of the European Community from 1973 resulted in further evolution of the farming economy. Increased specialization, encouraged by ample grant funding, saw the previous pattern of ubiquitous 'mixed' farms transform into large zones dedicated almost exclusively to one specific activity. The Munster dairying area and east-central dry cattle area are examples of this. The European Community also encouraged the formation of large farms, and grants disproportionately favoured these over smaller holdings. This resulted in the benefits of European Community membership accruing to the larger farms, mostly situated on the better land, while failing to benefit the smallholders, largely located on the poorer land of the west.

§3. SCOTLAND

Early Prehistory

A date of about 4000 BC is suggested for the widespread adoption of farming in Scotland (ALBA), although evidence for farming remains quite poor before *c.* 3500 BC, particularly in the area north of Perthshire (Peairt) and Angus (Aonghas). As elsewhere throughout Britain and Ireland in prehistoric times, mixed farming was the norm, with barley the main cereal crop, especially in the harsher climate of the northern part of the country, but with emmer wheat and oats grown also and there is some limited evidence of flax cultivation. Cattle, sheep/goats and pigs were reared from the Neolithic onwards, as indicated by the bone assemblages from excavated sites such as Knap of Howar, Orkney (Arcaibh). However, it appears that gathering, hunting and fishing remained an integral part of the Scottish Neolithic (and indeed later periods) longer than elsewhere, and this was particularly true of the marine-oriented economies of the west and north coast and the island archipelagos. The evidence of farming identified on Bronze Age sites such as that at Myrehead, near Falkirk, differs little from that of the preceding period, with cattle, pig and sheep being reared (apparently all primarily for meat) and barley, wheat and rye cultivated. The technology of the economy is seen at sites such as Scord of Brewster, Shetland (Sealtainn) and Beaquoy, Orkney, where stone ard heads and saddle querns have been recovered.

Later Prehistory

For later prehistory, the picture suggested by Stuart Piggott—of cereal production predominating in the LOWLANDS, and the HIGHLANDS inhabited by nomadic herdsmen—now seems over-simplistic, but there can be little doubt that this trend existed to a certain extent. Pollen diagrams indicate a sudden rise in agricultural activity around 250 BC, which seems to have been accompanied by population expansion in the Lowlands. It has been suggested that the eastern Scottish ring-ditched houses, of which so many have now been identified through aerial photography, were over-wintering byres for livestock, a practice considered necessary in the northern climes. Cattle are generally considered the most important stock in the Scottish IRON AGE, as indicated by the evidence from many sites, though not all (sheep apparently predominant at Dun Mor Vaul, Tiree). Special status may have been attached to cattle ownership, as demonstrated by evidence for cattle rearing at Cnuip wheelhouse, Lewis, where the terrain was far more suitable for sheep and the bone assemblage indicates that the cattle raised here were stunted.

Early Medieval Period

As the Iron Age moves into the early medieval period there is little indication at sites such as Buckquoy, Orkney or Upper Scalloway, Shetland of any major change in farming practices: barley, wheat, rye, and oats are cultivated, while cattle are the most important stock, followed by pigs and sheep. In the north and west, the wheelhouses, DUNS, and BROCHS seem to have been the homesteads of single extended families engaged in mixed farming, eked out through the exploitation of marine resources. Later on, some of these settlements expand (e.g. Broch of Gurness) to form small nucleated villages, apparently indicating population growth and/or increased centralization. The content of the SENCHUS FER N-ALBAN indicates a social system where the individual household, along with its associated landholding, was recognized as the primary unit of agricultural production. The discovery of quantities of rotary querns (an Iron Age innovation) at the royal site of Dunadd has been tentatively suggested as evidence of centralized processing of grain for relatively large numbers of people. The discovery of many souterrains, probably dating to this period, in eastern Scotland is an interesting development and these have been suggested as grain stores since '4-poster' structures, believed to mark the position of grain silos further south, are absent here.

Later Medieval Period

In the later Middle Ages there was a move away from purely subsistence farming, with cattle and sheep being raised for export, although the farmers themselves lived

mainly on a diet of oats and bere (a form of barley), along with some dairy products and a little meat. Bone evidence from the manorial farm at Rattray, Moray (Moireibh), suggests that sheep and goats were the main source of milk, while cattle were raised primarily for meat. Other important crops were kale (for both humans and stock), and flax and hemp produced for fabric manufacture. Rural settlement was in the form of 'fermtouns', formed of small, nucleated groups of long-houses, or single dwellings of the 'Pitcarmick' type. The field layouts used—rig systems and lazy beds—were well suited to Scottish conditions. The establishment of granges, accompanying the influx of the regular monastic orders in the medieval period, introduced new agricultural technology and schemes of land organization, more particularly in the Lowlands.

Early Modern Times

By *c.* 1700 the Highlands and Islands and the Lowlands could be seen to share form and structure with regard to landholdings, land use and modes of cultivation. Settlements were characterized by multiple tenancies, which meant that fields and grazing rights were owned or leased by several families rather than individuals. A township—*baile* in GAELIC or *toun* in SCOTS—would typically farm 'infields' and 'outfields'. The infields with the most fertile soil (improved by the animal manure) would be permanently cropped, while the outfields were cropped until results fell off and then left for several years to recover. They might also be used for peat cutting to gain fuel and for winter grazing. For drainage, the fields would be ploughed into runrigs, ridges into which surplus water drained. Beyond the field systems lay the common grazing lands, by far the greater part of the land. In the summer, cattle and sheep would be driven up to the mountain pastures, known as *áiridh*, *shielings* or *setter*. Labour and resources would be pooled and land use rotated between families. Towards the end of the 17th century, the fact that families began to tend the same fields over generations, no longer rotating land use, pointed towards changes in the agricultural system which were ushering in a new age.

The agricultural revolution, which called for 'improvement of the land' in order to create a profit for its owners, came to the Lowlands in the 17th century. Larger and more profitable holdings were created, often robbing the majority of families in a *toun* of their land and leaving only one or two farmers to cultivate the whole holding. More modern farming methods, such as crop rotation, were developed and new breeds of animals and strains of crops introduced. The mechanization of agriculture set in with the development of winnowing machines in the early 18th century, turnip sowers and threshing machines in the late 18th century and the mechanical 'reaper' in the 1820s. In the course of the 19th century, the runrigs were replaced by subsoil drainage systems which made the draining of marshland possible. Previously common land was enclosed and planned villages erected so that the industrial revolution of the Lowlands could be fuelled, with the wool and linen arriving for the textile industries and the grain for brewing and distilling. A more mixed agriculture developed, with oats and barley the most common crops, though wheat was grown on the east coast.

Highland farming began to be 'improved' in the 18th century, as far as altitude and quality of the soil would permit. As in Ireland (ÉIRE), farmers and crofters began to favour cultivating potatoes instead of grain to feed the increasing population, the advantage of the potato being that it could be grown on lands unsuited for other crops. So-called *feannagan* or lazy-beds consisted of a strip of manure, mostly seaweed, on which the seed-potato would be placed before it was covered with soil from either side. The grazing and tilling rights of the farming communities, previously conferred for rendering military service and a share of the crop to the CLAN chief, often through a tacksman, now increasingly had to be purchased. Consequently, the relationship between clanspeople and clan chiefs changed into that of unprotected tenants and landlords. In the Highlands, 'improving' the lands in order to maximize profit largely meant creating pasture for sheep and deer grazing. Often, the resident population was resettled or evicted in a process known as the CLEARANCES. The potato blight of 1846, which hit Scotland as much as Ireland, resulted in further EMIGRATION from the Highlands. The empty heather landscape, inhabited mostly by sheep, deer and grouse with poor, marginal or coastal lands given over to crofts taken to be characteristic of the Highlands, is a product of 18th and 19th century 'improvement' (see also LAND AGITATION).

Later Modern Times

Twentieth-century Scottish agriculture has largely followed the ups and downs of the UK and world markets, on which it has increasingly depended, and other worldwide trends, such as the tendency toward mechanization. While the price of agricultural produce rose drastically during the two World Wars, the 1920s and 1930s were marked by deep depression. In the 1920s, as in Wales (Cymru), many great estates, hopelessly in debt, were broken up and sold, often to sitting tenants. It is estimated that in the 1920s nearly 40% of Scottish lands changed hands. Increased mechanization of work, symbolized most of all by the replacement of the horse by the tractor and the coming of the combine harvester after the Second World War, significantly reduced the number and percentage of the population employed in farming. In 1951, *c.* 88,000 people worked in Scottish farming full-time; by 1991, their number had fallen to no more than 25,000. The countryside was depopulated, with people migrating to industrial centres or leaving Scotland altogether. The introduction of an annual price review in 1947 and a series of Acts of Parliament to establish a system of support for farm prices and grants to farmers have attempted to stem this trend. The Crofting Reform Act of 1976, for instance, has made it easier for crofters to purchase their crofts. However, since most crofts are unable to provide a living for their tenants or owners through traditional farming, fish farming (especially salmon) and tourism have become lucrative alternatives.

SÓF, MBL

§4. ISLE OF MAN

Manx farming has been strongly influenced by Ireland (Éire), western Scotland (Alba), and Cumberland and Lancashire in north-west England, and this is reflected in the style of buildings, field patterns and divisions, and implement types found on the island (Radcliffe, *Manx Farming and Country Life*).

Farming was a dual occupation until the mid-19th century, with fishing being regarded as the main interest, bringing money into the family. The men went to sea between July and October, leaving the women to run the farms. In some districts mining and quarrying were to vie as an alternative occupation to farming (Killip, *Folk Life* 9.61–78).

The island's community was highly dispersed, with the main concentrations of housing found around the ports. The fields were mostly enclosed by the mid-18th century, but before that main boundaries were only fenced and fields with growing crops had temporary sod hedges to protect them. Grazing livestock animals were also restricted by 'lankets' made of 'suggane', straw rope, which were tied to their legs (B. Quayle, *General View of the Agriculture of the Isle of Man*).

Varieties of oats and barley suited to poor, exposed soils were grown. Rye, once in favour, had gradually declined by the 17th century and wheat, popular by the 18th century, thrived in the productive lowland areas of the northern plain and southern limestone districts. Root crops came late to the island, with turnips becoming established by the late 18th century and potatoes by *c.* 1706. 'Spuds and herring' thus became part of the diet alongside oats (Birch, *Isle of Man*).

Celtic farmers in Man (Ellan Vannin) relied upon their livestock, with breeds native to the island dominating until the 19th century. The cattle were similar to the Kerry, being small, hardy animals capable of producing good-quality milk (Curwen, *Proc. Workington Agricultural Society*). Their horses were again small, *c.* 13 hands high, and were used as farm and pack animals. The pigs, known as 'Purrs', were small, multicoloured animals, which became extinct by 1840. Sheep were bred for milk, wool and meat, and the native, brown-coloured 'Loghtan' breed has managed to survive to this day (Train, *Historical and Statistical Account of the Isle of Man*).

Cultivation using lazy-beds was extensive prior to the 17th century, when wooden ploughs similar to those

used in Scotland and Ireland became common. Most of the other implements, including harrows, were also constructed of wood. Transport by straw creels or by slide carr, in common with neighbouring Celtic countries, lasted until the end of the 18th century (T. Quayle, *General View of the Agriculture of the Isle of Man*).

Until 1765 many Manx farms produced small surpluses to satisfy local markets—the export and import of farm produce being confined to the larger farmers. After 1765 most farms gradually became more commercially-minded, and as a result many traditional practices were abandoned (Moore, *History of the Isle of Man*).

In the post-Napoleonic war period, agriculture found itself in the doldrums as farmers either abandoned their tenancies or emigrated to America (see EMIGRATION). A brighter note was sounded when the Isle of Man Agricultural Society was founded in 1840 and the island was fortunate to escape the depression which afflicted British agriculture in the 1870s. Demographic growth and a lively tourist trade created a regular demand for agricultural produce. During the inter-war years, however, arable land under cultivation fell by 25%, and although greater prosperity was enjoyed during the Second World War the recession of the 1950s forced the Manx government to bale out struggling farms in upland areas. By the last decade of the 20th century, however, agriculture and fishing on the island produced no more than 2% of the national income.

§5. WALES

The majority of people in medieval Wales (CYMRU) made their living from agriculture. Terrain, soil and climate were the principal determinants of their fate, and keeping body and soul together was never easy. On the whole, both cultivation and animal husbandry were practised in the valleys and uplands. Up to the Norman conquest there was a continuity of tradition that went back to the pre-Roman IRON AGE. The arrival and subsequent settlement of the Norman and Flemish population, which began in the late 11th century, considerably changed patterns of proprietorship and agricultural techniques. Subsequently, the so-called 'Welshry' of areas under Anglo-Norman lordship was largely confined to land above the 600-foot (about 180 m) contour line. These areas were characterized by a considerable survival of traditional tenurial customs and free population. The 'Englishry', located in the lowland and coastal areas, and strongly influenced by the new settlers, had both bond tenants and a manorial system.

According to the native legal sources three major types of land were to be found in medieval Wales (see LAW TEXTS). The normal tenure was hereditary land (*tir gwelyog*); the adjective qualifying the word for 'land' is a derivative of *gwely* (bed), but in a social context it denoted 'a limited group of relatives'. The rights to this land passed to descendants in equal shares and after a period of four generations the possession developed into legal proprietorship. The antiquity of this type of tenure is noted in the law books, in the observations of medieval writers, e.g. GIRALDUS CAMBRENSIS, and it finds certain parallels in early Irish institutions. Geldable or reckon land (*tir cyfrif*, also *tir cyllidus* 'revenue-yielding land') was the tenure appropriate to villeins, and this land was not heritable:

> For geldable land, however, there is no right to sharing among brothers, but it is right for *maer* [reeve] and *cynghellor* [chancellor] to divide it, and to give all in the townland as good as each other. And it is because of that that it is called reckon land. (Jenkins, *Law of Hywel Dda* 100)

The law codes also have a few references to other tenures, including 'nucleal land' (*tir corddlan* or *tir gorflan*); according to Glanville R. J. Jones (*Agrarian History of England and Wales* 1/2.340), it was also an ancient tenure and perhaps already obscure by the 13th century. Both freemen and bondmen had arable lands, although they were held in different ways. Unfortunately, the nomenclature of types of land in early medieval Wales that has survived is incomplete and thus cannot be fully compared with data from early Irish tradition.

Barley and oats were cultivated as spring cereals, while rye and wheat were cultivated as winter tilth. Some cereals were less common in some areas of Wales than others: rye was grown less generally than wheat in south Wales, barley was more prominent than rye in

Glamorgan (Morgannwg), while wheat and oats were the basic crops in the western and southern March (English counties on the Welsh border). Beans, peas, vetch, and flax were also cultivated.

Two kinds of plough (with wheels and without) were in use, both of them heavy. The joint plough team was not common in medieval Wales, where oxen were the only plough animals recognized by the law; the horse had no place in the plough team. The law texts clearly state that 'there is no right to put either horses or mares or cows to a plough; and if they are put, even though they be hurt and though they abort there will be no compensation' (Jenkins, *Agricultural Co-operation in Welsh Medieval Law* 15). According to the law texts, yokes of four different lengths were in use: four feet for two oxen, eight for four oxen, twelve for six oxen, and sixteen for eight oxen. Under the last three, the animals would be put abreast of one another. As Payne has suggested, 'the long yokes were horn yokes, i.e. the yokes were bound to the lower parts of the animal's horns' (*Studies in Folk Life* 241). Giraldus reports that four oxen abreast were the most common in his time and it has therefore been considered that the references to the longer types of yokes in the Welsh law tracts are anachronistic (see Glanville R. J. Jones, *Agrarian History of England and Wales* 1/2.367).

Various forms of agricultural co-operation were practised in ploughing, in planning crops, in opening or closing to grazing animals, in utilizing soil, &c. Co-tillage was spread among freemen, and *Llyfr Iorwerth* (the Gwynedd redaction of the Welsh law texts) envisaged the partnership of twelve men as ideal.

Horse breeding was generally an important part of the Welsh medieval economy and parts of Wales were famous for their horses. Giraldus reported that 'the horses which are sent out of Powys are greatly prized; they are extremely handsome and nature reproduces in them the same majestic proportion and incomparable speed'. Jenkins (*Horse in Celtic Culture* 78) has drawn attention to a passage found in George Rainsford's *Ritratto d'Ingilterra* (1556) which states that the best horses in 'England' were found in the vicinity of the Scottish border and in the eastern parts of Wales. Horses were used to draw a cart or harrow, and dung, the universal and most important fertilizer, was carried out in horse panniers (baskets on the horses' flanks).

The cattle of medieval Wales comprised a variety of breeds. Ironically, the best descriptions of the cattle are available not from learned tracts, but from Welsh poetry. Black cattle that gave rise to the famous Welsh Blacks of modern times became the prevalent breed by the 14th and 15th centuries. Red cattle with white faces, to which the modern Hereford breed is normally traced, were common in south-east Wales.

The rearing of sheep, greatly encouraged by the progressive Cistercians, was a major branch of agriculture in several parts of Wales. The quality of wool varied considerably. Wool produced in south-east Wales, like that of the March counties Herefordshire (Welsh swydd Henfforddd), and Shropshire (Welsh swydd Amwythig) was exceptionally good, but disparaging comments on the standard of wool exported from Carmarthen (Caerfyrddin) and Pembrokeshire (sir Benfro) were common.

The inclement weather and acidic soils meant that the bulk of the agrarian population of medieval Wales lived in tiny, scattered homesteads. At the end of the 13th century Archbishop Pecham reckoned that the best way of civilizing the Welsh was to move them to live in towns. Urban growth was certainly a stimulant to agriculture and the farmers who prospered best lived in the more fertile low-lying valleys and coastal plains where communal arable lands produced rye, barley, wheat, flax and hemp by the 14th century. In the more inhospitable upland communities, where hardy crops of oats were dominant, the practice of transhumance—moving cattle and sheep to upland pastures during the summer—established itself and eased the burden of pastoral farmers.

The demographic boom which took the population to an unprecedented total of *c.* 300,000 by 1300 was not sustained afterwards. The Black Death (1349) carried off a third of the population and led to vacant tenancies, land surpluses and considerable mobility of labour. Bondmen broke free of their shackles, the *gwely* system collapsed, and the main beneficiaries of the rebellion of Owain Glyndŵr were the upwardly-mobile *uchelwyr*, whose tenants derived their incomes from livestock farming and brisk trading opportunities.

Following the Acts of Union, greater stability enhanced the prospects of landowners and farmers, especially those who became tied to a commercial system in which London wielded a huge influence. Store cattle, wool and cloth became the most important exports from

Wales. Herds of hardy cattle, described in the early Stuart period as 'the Spanish fleet' of Wales, were driven overland by intrepid Welsh drovers to the major fairs and markets of south-east England and were subsequently fattened prior to slaughter. Economic growth was reflected in the rise of population: between the Acts of Union and the first population census of 1801 the population more than doubled to *c.* 600,000. Yet farms remained small (the norm was less than 50 acres) and most peasant farmers, lacking capital, remained suspicious of change. From the 1750s, however, the formation of progressive county agricultural societies introduced improvements in the quality of livestock and crop rotation.

Such progress, however, was severely curtailed by the French wars (1793–1815), which threw poor farmers and labourers into turmoil. Galloping inflation, high taxes, rents and tithes, and the enclosure of common land caused them enormous distress. In the post-war years an acute agricultural depression accentuated the gulf which had emerged between penurious, Nonconformist, Welsh-speaking farmers and the landless poor on the one hand, and the wealthy Anglican, non-Welsh-speaking landowners on the other. In their frustration, small farmers in south-west Wales launched a popular protest movement known as the Rebecca Riots (1839–44) which, by destroying the hated toll-gates established by turnpike trusts, drew public attention to the desperate plight of the farming community.

Economic conditions improved briefly from the mid-19th century and the coming of the railways not only provided farmers with direct access to markets but also brought about the demise of the drover. But, as agriculture fell into depression during the 1860s large numbers of farmers and labourers crossed the Atlantic in search of economic fortune and stability (see EMIGRATION). Those who stayed behind became increasingly bitter about the hardships and humiliations heaped on them by absentee landlords. Their bitterness acquired a political dimension as 'The Land Question' poisoned relations between landowners and tenants.

By 1914 the coal industry had overtaken agriculture as the largest employer of people in Wales. The numbers engaged in farming had declined from 33% in 1851 to 11% in 1911. The break-up of Welsh landed estates encouraged freehold farming and the coming of the Great War (1914–18) briefly stimulated demand for corn, livestock and milk. However, the calamitous years of depression in the inter-war period resulted in large-scale rural depopulation and a sharp decline in the number of agricultural labourers and craftsmen. In response, marketing boards were established, the most notable of which was the Milk Marketing Board (1933), and the boom of the Second World War ushered in a period of large-scale mechanization. Inevitably, the agricultural workforce declined in numbers, a trend which gravely weakened the rural economy and the socio-cultural fabric of rural Wales. By the 1990s Welsh farmers, as a result of the effects of harsh milk quotas, severe cuts in subsidies, the BSE and foot-and-mouth crises, the outward migration of young people and the inward migration of retired people, and the increasing demands upon them to develop resources and skills which would enable them to diversify, were poorly equipped to meet the challenges of the 21st century. In 2001 just over 56,300 persons were at work on agricultural holdings in Wales.

Agris is a town in the Charente region of France where, in 1981, material from the pre-Roman IRON AGE was discovered in the cave called La Grotte des Perrats. The site was excavated by J. Gomez de Soto and has delivered

A bronze-covered iron helmet found at Agris, Charente, France

important remains dating to the La Tène period, particularly a richly ornamented helmet that has to be counted among the most beautiful expressions of Celtic art.

The helmet was fragmentary: the skullcap, as well as the base of the visor, a chin protection, and some fragments of ornamental pieces fixed at the sides of the original were found. It was already broken at the time of its deposition or burial. The broken pieces of the rest of the helmet had been placed in the skullcap. It is a composite object consisting of about 100 pieces made from various materials. Iron constituted the basic core material, with other parts made from bronze, gold, silver, coral, wood, and leather. The decoration of the cap has been designed as a series of ascending ornamental bands, each with a different design. Its style shows most in common with the north Alpine traditions of the early La Tène period (late 5th to early 4th century BC). There are many motifs derived from Greek and Italian artwork, as is characteristic of the earliest La Tène pieces, before the Celtic abstraction of classical motifs had taken place. There are fewer parallels to the Vegetal Style, which is prominent, for example, in the aristocratic chariot burials of the 4th century BC from Waldalgesheim. This sumptuous helmet was ornamented using gold mined from the deposits of the Massif Central in south-central France. The object is closely paralleled only by a series of ceremonial helmets from the 4th century BC, which have been found on the fringes of the Celtic world at Amfreville (Normandy), Saint-Jean-Trolimon (Brittany [Breizh]), Montlaurès (Languedoc), and Canosa (Puglia, Italy). The careful placing of the helmet in a cave is consistent with ritual deposition (see hoards; watery depositions), well known in—but not limited to—the ancient Celtic-speaking lands.

Aided Énfir Aífe and ***Oidheadh Chonnlaoich mheic Con Culainn*** ('The violent death of Aífe's one man [i.e. son]' and 'The violent death of Connlaoch son of Cú Chulainn') are two versions of the Irish story of how the central hero of the Ulster Cycle killed his only son (Con[n]la or Connlaoch) whom he had begotten on the woman warrior Aífe in Alba. The story, its textual versions and thematic analogues, are discussed in the article on the Ulster Cycle. For an interpretation of the Celtic hero tragically bound to commit *fingal* 'kinslaying' for the sake of his own honour and that of his tribe, see also heroic ethos.

Ailpín mac Echach was the son of Eochaid, king of Dál Riata *c.* 839. His primary importance is as the father of the first Gaelic king of the united kingdom of Picts and Scots, Cinaed mac Ailpín, who came to power *c.* 843. Ailpín's historicity has been doubted: he occurs in the Scottish king-lists, but is not mentioned in the Annals of Ulster, the main contemporary source for the careers of Scottish and Pictish kings at this period. The name *Ailpín* is not of Goidelic origin and is unknown in early Ireland (Ériu); native Q-Celtic names do not include the sound *p*. On the other hand, Elpin occurs in the Pictish King-list, and *Elffin* (from earlier **Alpin*) occurs in royal pedigrees for both early Wales (Cymru) and the Britons of Strathclyde (Ystrad Clud). It is not impossible, therefore, that Ailpín was of Pictish or Brythonic background. Especially since Cinaed mac Ailpín came to be viewed as the founder of the Gaelic dynasty of Alba, his possible non-Gaelic background might have been intentionally obscured. Alternatively, as a Gaelic prince taking unprecedented control of Pictland, Cinaed may have assumed a Pictish patronym, Elpin, to enhance a shaky claim. However, *Eochaid*, genitive *Echach*, was a very common Gaelic man's name in Ireland and Scotland.

An ***Aimsir Óg*** (The new millennium), a literary journal in Irish, was established in 1999, to replace the discontinued Oghma. Published by Coiscéim (Dublin) and edited by Mícheál Ó Cearúil, one of the former joint editors of *Oghma*, *An Aimsir Óg* contains poetry, short stories and extracts from novels and plays, as well as literary criticism and analytical articles on art, current affairs, folklore and linguistic matters. The contributors include many of those whose work appeared in *Oghma*. This substantial journal provides an important forum for writers, critics and those working in cultural studies who wish to publish their work in the Irish language.

Ainm (Name) is the Bulletin of the Ulster Place-Name Society. Established in 1986, *Ainm* was originally dedicated solely to the study of Irish place-names and personal names. While this remains the main focus, the journal now also includes contributions on names from the other Celtic countries and onomastics in general, and regularly contains reviews of related publications. The articles are either in English or Irish and the contributors are mainly academics.

Airec Menman Uraird maic Coise (The stratagem of Urard mac Coise) is an Irish narrative which belongs to the so-called Kings' Cycle of tales and was possibly composed around the year 1000. Its main characters are Domnall mac Muirchertaig (†980), king of Teamhair, and the poet Urard mac Coise (†?990). The tale may be Urard's own work. Modern critical

interest has centred on its version of the medieval Irish tale list that Urard recites (THURNEYSEN's tale list B; see TALE LISTS) and on its vindication of the poets' privileges (see BARD; BARDIC ORDER). When asked by the king to tell him a story, Urard offers a list of titles to choose from; the last title is his own invention, and the king requests to hear the unfamiliar story. In the story within a story that follows, Urard narrates to the king his own unhappy experiences, including the plundering of his farmstead. This takes the guise of a tale about past events. Having heard the tale, Domnall offers Urard full reparation for his wrongs and thus indicates that he has understood the lesson of his tale. *Airec Menman* thus provides an important metatextual comment on the meaning of medieval Irish (pseudo-) historical tales (see LEGENDARY HISTORY); in other words, the tale underscores its own practical implications or moral. The narrative makes it clear that it is meant to be read as an example to inform actions related to the author's present.

Aisling (vision) is a type of IRISH-language poem, often allegorical and usually composed in the 18th century, frequently recounting the visit of a woman from the OTHERWORLD to the author or narrator in a dream. The literary historian Gerard Murphy described three principal types: the love-*aisling*, in which the author is bewitched by the woman's beauty and in which the woman may stand for a real love-object of the author; the prophecy-*aisling*, in which the dreamer predicts the future and in which beautiful women do not necessarily figure; and the allegorical *aisling*, in which the woman usually represents ÉIRE and comforts the distressed poet. Murphy allowed the possibility that this third form, which became common in the 18th century, was a fusion of the first two, but believed it more likely that its main inspiration was non-native, citing a French 13th-century dream vision which includes virtually all of the motifs found in the 18th-century form. He suggested that such poems existed as a sub-literary song genre for some time before the 18th century. The allegorical form is certainly the best known of the three and was popularized by folk poets nostalgic for past days and performing for an Irish-speaking population hostile to the English occupiers of Ireland in the 17th century and after.

Breandán Ó Buachalla favoured a fusion theory, noting distinctive elements of the love and prophecy *aislingí* (pl. of *aisling*) in the political/ allegorical *aislingí* (*Aisling Ghéar* 547–9).

The *aisling*'s five principal traits, according to Ó Buachalla, are: 1) a localization of the poem's action, usually in a bedroom or outside near a river, forest, or other type of place with mystical associations; 2) a formalized description of the woman; 3) a request for the woman's identity, in which she is usually compared to classical and Irish beauties; 4) a response, in which she rejects these comparisons and identifies herself as Éire; and 5) a message of hope for the Irish people, predicting the return of a Stuart king or Ireland's liberation by the Spanish or French.

The allegorical *aisling* was most common in the 18th century, and its undoubted master was the Munster poet Eóghan Ruadh Ó Súilleabháin (1748–84). The best-known *aisling*, however, is probably the despairing *Mac an Cheannaí* (The redeemer's son) of Aogán Ó RATHAILLE (*c.* 1670–*c.* 1726), in which the beauty collapses and dies in front of the poet.

Aithbhreac nighean Coirceadail (*fl.* 1460) was a Scottish poet, the author of a lament for her husband, Niall mac Néill of Gigha, preserved uniquely in the Book of the DEAN OF LISMORE. The poem, *A Phaidrín do Dhúisg mo Dhéar*, movingly combines both the intimate perspective of the spouse reflecting on her dead husband's rosary, and the stately rhetoric of classical Irish elegy. Aithbhreac (her name is from Africa) is perhaps the earliest in an impressive sequence of Scot-

tish Gaelic women poets whose work has been preserved from the 15th to the 19th century (see SCOTTISH GAELIC POETRY). Her husband was constable of Castle Sween in Knapdale (Watson, *Scottish Verse from the Book of the Dean of Lismore* 271; Steer & Bannerman, *Late Medieval Monumental Sculpture in the West Highlands* 147), and the poem thus is testimony to the practice of classical Irish poetry (see IRISH LITERATURE) among the middle ranks of the nobility within the LORDSHIP OF THE ISLES, and to the education of women in its arts.

Alan Varveg (Alan the Bearded, r. 937–52), reconquered Brittany (BREIZH) after 30 years of Viking rule and established the medieval feudal state of Brittany. He is known in French sources as Alain Barbetorte (Alan of the Twisted Beard). His father was Matbidoe, the count of Poher, and his mother was a daughter of Alan Meur/ Alain le Grand (Alan the Great, †907), who was recognized as king of the Bretons by the Carolingian king, Charles the Simple. Matbidoe fled with his family from the Viking incursions, and his son Alan was baptized in England, and had possibly been born there, with ÆTHELSTAN of Wessex as his foster-father or godfather. Alan participated in a Breton uprising in 931 against the Norse occupation, but was unsuccessful. In 936, at the behest of John, abbot of LANDEVENNEG, and with Æthelstan's backing, he returned. He began a vigorous campaign with victories at Dol and Saint-Brieuc (Sant-Brieg). His victory at Nantes (NAONED) in 937 drove the Vikings from the Loire, and it was at Nantes that Alan established his capital. He is usually referred to as a duke rather than a king because he paid homage to Louis IV Outremer in 942 and supported him in conflicts with other vassal states.

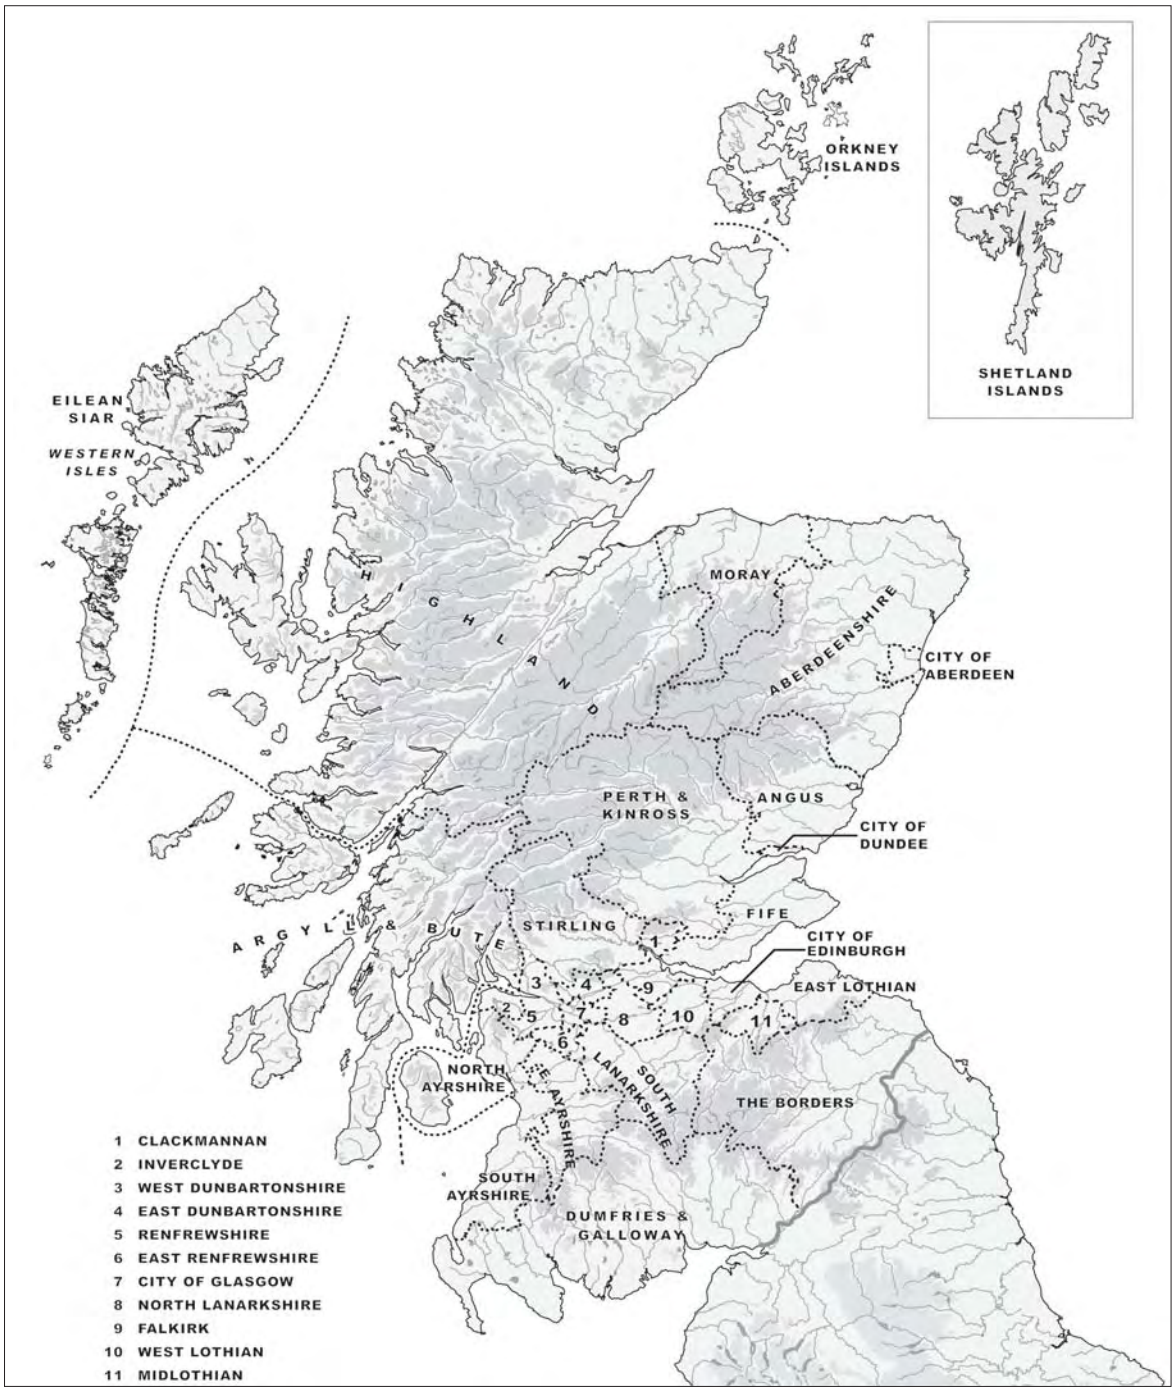
Alba (**Scotland**) is one of the six countries in which a Celtic language has been spoken in modern times (see ELLAN VANNIN; KERNOW) or is still spoken (see BREIZH; CYMRU; ÉIRE). In its political geography, it is the northernmost part of the United Kingdom, comprising the mainland and several island archipelagos. Its land mass covers 30,414 square miles (78,772 km²). At the time of the latest census (2001) Scotland had 5,062,011 residents, represented at the British Parliament in Westminster by 72 MPs. Traditionally, the country has been divided into the HIGHLANDS and the LOWLANDS, with the capital, Edinburgh (DÙN ÈIDEANN), situated in the Lowlands. It is presently divided into 32 council areas. Although Scotland has been part of the United Kingdom since 1707 (see UNION), it has preserved its own legal and educational systems, and, in the Presbyterian Church, its own established church (see CHRISTIANITY). With the (re-)establishment of a SCOTTISH PARLIAMENT in 1999 it has come a step closer to regaining its independence (see NATIONALISM).

Scotland's Celtic language, SCOTTISH GAELIC, is mainly spoken in parts of the Highlands and the Western Isles, with a small urban community of speakers in Glasgow (GLASCHU). At the 2001 Census 58,682 people were able to speak the language, a decrease of 11% from the 65,978 speakers counted in 1991 (Registrar General for Scotland, *Registrar General's 2001 Census Report* 17). The language is thus dangerously close to losing the critical mass necessary for its survival (see COMUNN GAIDHEALACH; EDUCATION; LANGUAGE [REVIVAL]; MASS MEDIA). In addition to the language and its literature (see BALLADS; BIBLE; SCOTTISH GAELIC DRAMA; SCOTTISH GAELIC POETRY; SCOTTISH GAELIC PROSE), the country boasts an array of national symbols such as KILTS and TARTANS, distinctive musical instruments such as the BAGPIPE (see also MATERIAL CULTURE), and national sports such as SHINTY (see also HIGHLAND GAMES).

A separate north BRITAIN, roughly the territory of what was to become Scotland, was physically demarcated by the Romans through HADRIAN'S WALL and the

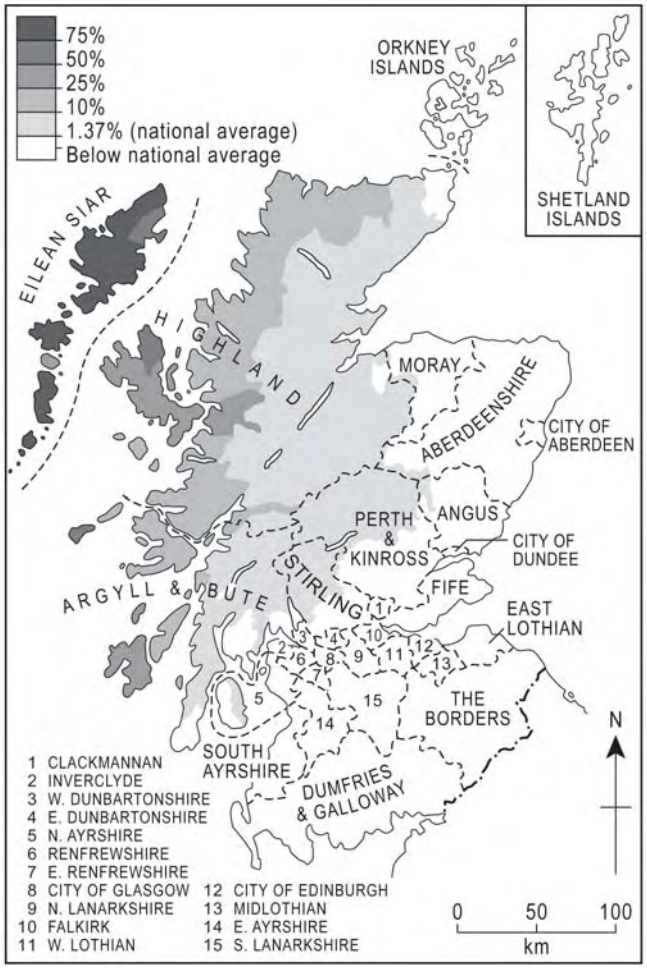
Scotland: post-1996 counties



Antonine Wall, both constructed in the 2nd century AD and running south and north of the present border, respectively. Although Scotland had been inhabited from the end of the last ice age over 10,000 years ago, the foundations of today's two indigenous linguistic communities—the Gaels and speakers of English/Scots—belong to the post-Roman Migration Period, beginning respectively with the Q-Celtic speaking Scots in the kingdom of Dál Riata (roughly present-day Argyllshire), who are traditionally reckoned to have arrived in the 5th century, and the Germanic Angles in Northumbria (see BRYNAICH), who had expanded into what is now the territory of Scotland by the mid-7th century. In the early Middle Ages, there were two further groups, both P-Celtic speaking, whose origins extend back prior to the period before the arrival of the Romans: the Picts in the north and the Britons in the south, the latter surviving longest in Strathclyde (Ystrad Clud). Scandinavians settled in the Northern and Western Isles from the 9th century, and a

Scandinavian language called Norn survived in Orkney (Arcaibh) and Shetland (Sealtainn) until modern times. Weakened by Viking raids, the northern Pictish kingdom came under the rule of the Scot Cinaed mac Ailpín (Kenneth I) in AD 843. This established the predominance of Goidelic speakers in Scotland. Gaelic became the language of the royal court. Anglicization, however, set in as early as 1070, when King Mael Coluim mac Donnchada (Malcolm Canmore) married the Anglo-Saxon princess, Margaret. While the south-west (Galloway/Gall-Ghàidheal) apparently remained Gaelic-speaking through the central Middle Ages, it was the Highlands that continued in modern times to retain the Scottish Gaelic language and its traditions, especially the clan system. Although the Anglo-Norman kings Edward I and Edward II attempted to gain supremacy over Scotland (as they did over Wales), the throne was successfully claimed by Robert de Bruce in 1307. Scotland's status as an independent kingdom was confirmed by the battle of Bannockburn in 1314, which helped to consolidate the royal line later known as the Stuarts. However, once the Tudor dynasty (see tudur) gained the throne of England and Wales (Cymru) in 1485, Scotland's existence as an independent kingdom was under threat once more. A peace treaty of 1503 crumbled after Henry VIII came to power in 1509. His victory over the Scottish army at the battle of Flodden in 1513 was a catastrophe from which Scotland never recovered. Like Anglicization, the Reformation spread from the Lowlands (see christianity; bible; reformation), and prepared the ground for the Union of the Crowns of England and Scotland in 1603. When Elizabeth I of England died, James VI of Scotland, her closest living relative, became James I of England, Scotland, and Wales. He chose to reign from London. The two kingdoms were formally united through the Act of Union in 1707 and the new state was named Great Britain. Repeated 18th-century attempts to regain independence by reinstalling the Stuart dynasty failed (see jacobite rebellions). In their wake, the clan system was destroyed, the Highlanders evicted from their land (see clearances) and an ancient way of living—romantically immortalized in the novels of Sir Walter Scott—was lost forever.

Gaelic speakers in Scotland: 1991 Census figures



The land gained through the 18th-century clearances was used for grazing sheep, which helped to create the wild, empty landscape now associated with the Highlands and Islands of Scotland (see agriculture). Its only industries worth mentioning are the manufacture of Harris Tweed and the distilling of Scotland's famous malt whisky. Arable land is found along the east coast, where barley and wheat are grown. Fishing has traditionally been an important contributor to the Scottish economy, producing more than two-thirds of the total fish and shellfish catch of the UK. In the late 20th century, the farming of salmon and trout in the numerous lochs was developed as an important source of income. Almost all the centres of industry are in the Lowlands. As in Wales, Scottish industrialization was fuelled by the coal-mining and iron industries, concentrated in the south of the country, and the shipbuilding that came in their wake. Since the 1970s rich oil fields off the coast of Scotland and their related service industries have contributed further to the national income. Also

important are the manufacture of high technology and consumer goods concentrated in the eastern central Lowlands, now often known as 'Silicon Glen'.

Alba, the name, derivation and usage

In the GAELIC languages, (north) BRITAIN is most usually called *Alba* (in early texts also *Albu*), genitive *Alban*. From at least the 9th century onward, *Fir Alban* was regularly used to mean 'Gaels of Scotland, Scots', and *rí Alban* came into use to mean the king of the united kingdom of SCOTS and PICTS. Similarly, the adjective *Albanach* means a Scottish Gael or Scotsman, and in more recent Irish also an Ulster Protestant. *Yr Alban*, which is now the normal Welsh name for 'Scotland', is a borrowing from Gaelic and first appears in the 14th century.

Alba is the regular outcome in IRISH and SCOTTISH GAELIC of the most ancient attested name for Britain, namely **Albiu̯ū* (see ALBION). Though modern translators often lose sight of the fact, when *Alba* occurs in Irish heroic tales looking back to pre-Christian times, the name most often refers to Britain as a whole. The alternative and narrower sense, Pictland (see PICTS), later Scotland, i.e. Britain north of the river Forth, is clearly a secondary development (Watson, *History of the Celtic Place-Names of Scotland* 10–13). The constriction of *Alba* to the country of the Picts and Scots reflects the expansion of the province of the newer group name, *Bret(t)ain* < *Brittones* to a zone coterminous with the Roman provinces, the *Britanniae*. The usual Old and Middle Irish word for the BRITONS or Welsh as a people is *Bret(t)ain*. It is doubtful whether 'north Britain' became the standard and primary meaning of *Alba* until the institution of a single kingship of Picts and Scots arose *c.* 847 (see CINAED MAC AILPÍN). The broader meaning simply recalls the earlier range of the place-name.

Variant forms. Albae occurs twice in the early 9th-century list of saints' days *Félire Óengusso* (see OENGUS CÉILE DÉ), where it is both times governed by the preposition *de* 'from, of', which takes the dative case. There may have been an Old Irish nominative *Albe* (also spelled *Alpe*), which could go back to a different formation, an old *i̯o*-stem **Albiu̯o-* (Watson, *History of the Celtic Place-Names of Scotland* 10–11), but the evidence is disputed (DIL s.v. Albu). Hamp (BBCS 36.109–10) proposes that *Albae* may belong to the same *n*-stem paradigm as nominative *Albu*, reflecting a so-called 'short dative' < Celtic **Albiu̯on* < older **Albiu̯oni*. The same sort of formation is seen in the Old Irish short dative *Ére* 'Ireland' < **Īweriu̯on* < **Īweriu̯oni* (see ÉRIU).

Alban, St (**Albanus Verolamiensis**) was a ROMANO-BRITISH martyr and is important to Celtic studies as evidence for the spread of CHRISTIANITY to BRITAIN by the 3rd century and the survival of a saint's cult flourishing in south-east Britain through the ANGLO-SAXON 'CONQUEST'. He is venerated both in England and in the Celtic west.

Alban is remembered as 'protomartyr of Britain' (the *Martyrology* OF BEDA, 22 June; but, curiously, this entry is found in only one Irish martyrology: that of Gorman). First mentioned in the late 5th-century *Vita Germani* by Constantius, the standard account of Alban is based on GILDAS, *De Excidio Britanniae* 10–11,

followed by Beda, *Historia Ecclesiastica* 1.7, which cites extensively the anonymous but extant *Passio Albani*.

The synthetic hagiograph reads thus: during the Emperor Diocletian's persecution, 302–5 (both Gildas [9.1] and Beda are explicit, but some have argued for that of Decius *c.* 250, or even earlier), the pagan Roman soldier Alban, stationed in Verulamium (modern St Albans, known to Beda as Old English Uerlamacaestir; see VERULAMION) encountered a Christian on the point of arrest who would not worship the pagan gods—Gildas uses the word *confessor*, which Beda interpreted as a cleric. Alban hid him and was converted, swapped clothes with him, and thus took his place for the arresting party (Gildas; Beda offers motives, explanatory detail, and generally makes the tale more pious). Between arrest and execution Gildas has Alban as a great wonder-worker, somewhat like Moses at the Nile (Exodus 14); Beda, by contrast, offers a classic of the *passio* genre, questions and retorts between judge and accused. At the execution, both have similar miracle tales about the one due to behead Alban being suddenly converted; and both note that Alban's burial-place became a place of cult. Gildas presents Alban's death as causing a revival of faith among the British, exactly in accordance with his theology of divine justice, while Beda simply remarks that his tomb is a place of healing miracles. This was the site visited by the Gallo-Roman bishops GERMANUS and Lupus after winning a public debate against the followers of PELAGIUS in AD 429, possibly the present abbey or cathedral site.

Albion, Albiones

Albion is the earliest attested name for the island of Britain. It is of Celtic derivation and was probably first learned by the Greeks *c.* 500 BC. According to PLINY's *Natural History* (4.16), written in the first century AD, *Albion* was already obsolete by that time. Britain is called *insula Albionum* (island of the Albiones) in the *Ora Maritima* of AVIENUS (112). The *Ora Maritima* is a relatively late Roman text, dating to the 4th century AD, but it is likely to be based on a Greek itinerary of the western seaways 'MASSALIOTE PERIPLUS' ('The coastal itinerary of MASSALIA', modern Marseille) of the 6th or 5th century BC.

Newer terms for Britain based on the stem *Prettan-/Brettan-* began to replace the older name *Albion* at an early date, probably by *c.* 325 BC, which is when PYTHEAS of Massalia is said to have sailed to and around Britain, according to the Greek historian STRABO (2.4.1, 2.5.8, &c.). Therefore, it has been concluded that Pytheas, during his voyage, heard the newer name that was to become Welsh PRYDAIN, Latin *Britannia*, and Modern English BRITAIN.

Albion survived as an archaic usage throughout classical literature (e.g. Pseudo-Aristotle, *De Mundo* 3). *Albion* is given as the former name of Britain in the *Historia Ecclesiastica* of BEDA (1.1), a text of AD 731. GEOFFREY OF MONMOUTH, in his HISTORIA REGUM BRITANNIAE (1.16) of *c.* 1139, tells how *Albion* came to be called *Britannia* after Brutus (namesake of the BRITONS) who conquered the island from a race of giants who had been its sole inhabitants previously. In the Welsh versions of Geoffrey, *Albion* is translated as *Gwen Ynys* 'white island' or 'fair island'. In the (probably 7th-century) Irish poem *Nuadu Necht* (see NŌDONS), the place-name *Alpiōn* reflects a learned borrowing of the form *Albion*, but more probably means the Alps, where it says of a legendary Irish king, 'he took hostages from the Gauls as far as the five high places of *Alpiōn*' (Ó Corráin, *History and Heroic Tale* 62; Meyer, *Über die älteste irische Dichtung* 1.49).

§1. DERIVATION

Albion corresponds to the Gaelic place-name ALBA and the Old Welsh common noun *elbid*, all from Celtic **Albiiū̆*. *Elbid* occurs in the Old Welsh ENGLYNION in the Cambridge JUVENCUS manuscript of *c.* 900. *Elbid*, Middle Welsh *elfyd*, has a general meaning 'world, earth, land, country, district'. (A second sense of 'element, substance' is likely to be an innovation suggested by *elfen* from Latin *elementum*.) The GAULISH divine epithet and GALATIAN personal name *Albio-rīx* would mean 'king of the world' (cf. Gaulish *Dumno-rīx* 'earth king' and BITURĪGES 'world kings') and proves **albiio-* to be common to the vocabulary of both Gaulish and BRYTHONIC. The Galatian name rules out the possibility that the name had first designated 'Britain' (per-

haps called the 'white place' for the Cliffs of Dover, as has been suggested). There is no corresponding common noun *albu, alba* in Gaelic, which suggests that the speech of Britain at this early period was of the Gallo-Brittonic variety rather than proto-Goidelic. Hamp (BBCS 36.109–10) plausibly proposes that Gaelic *fir Alban* 'men of Scotland, Scots' contains the genitive of the old ethnic plural (Celtic **Albiio̯nom*, nominative *Albiones*), though the genitive singular of the place-name **Albiio̯nos* is also possible.

The exact meaning of **albiiū* > Middle Welsh *elfyd* is revealed in early poetic diction as 'the habitable surface of the world': cf. *yn Annwfyn is eluyd, yn awyr uch eluyd* 'in the Un-world below *elfydd*, in the air above *elfydd*' (Llyfr Taliesin 20.8–9; see also annwn); *mal tonnawr tost eu gawr dros eluyd* 'their cry was loud like waves across *elfydd*' (Ifor Williams, *Poems of Taliesin* 2.10); *y dynyon eluyd* 'to the human beings of *elfydd*' (3.2); *tra barhao nef uch eluit lawr* 'so long as heaven may endure above the ground of *elfydd*' (in the 7th-century poem praising King Cadwallon of Gwynedd). The contrast with subterranean Annwfn helps to explain the derivation from Indo-European **albho-* 'white' (Pokorny, IEW 30f.).

In two Breton Latin texts datable to the early 11th century (The Life of St Uuohednou and the so-called Livre de faits d'Arthur), the Latinized Old Breton *Albidia* is used as an ancient name for Britain.

§2. implications for early celtic in britain

The currency of *Alba* in Gaelic and *Albidia* in Breton Latin is very hard to explain if **Albiiū* had not once been the name of Britain in Britain; in other words, it was not just what the Greeks and Continental Celts called Britain. Thus, a latest possible date for the arrival of Celtic speech is established by the simple fact that **Albiiū* is a Celtic name. Since it was probably recorded in the Massaliote Periplus, this would take us back to the 6th century bc.

Philip Freeman, JTK

Alchfrith/Alhfrith/Alcfrith (*c.* 635–post 666) was the son of Oswydd (Oswiu), who was king of the leading Anglo-Saxon kingdom Northumbria 642–70. Alchfrith ruled as under-king to his father in the southern region of Northumbria, Deira (Dewr), between 655 and at least 666. Alchfrith's importance to Celtic studies is twofold. First, with regards to his lineage and the dynastic politics behind it, his mother was probably either of Irish or Brythonic royal descent. King Oswydd married the Anglo-Saxon princess Eanflæd (626–*c.* 704), daughter of King Eadwine (†633) of Deira. However, since Alchfrith played a major rôle in the battle of Winwæd in November 655 (Beda, *Historia Ecclesiastica* 3.24), it is chronologically very unlikely that Eanflæd could have been his mother, especially as she most probably married Oswydd after he had succeeded his brother Oswald as king of Northumbria in August 642. This leaves two possibilities concerning Alchfrith's parentage. Either he was the son of Fín, daughter of Irish high-king Colmán Rímid (as was Flann Fína, also known as Aldfrith, Oswydd's son and king of Northumbria 685–706), or he was the son of the Brythonic princess Rhieinfellt, who is named in Historia Brittonum as one of Oswydd's wives and appears in the spelling Rægnmæld in the Lindisfarne *Liber Vitae*, listed, following Eanflæd, amongst the queens and abbesses of Northumbria.

Alchfrith is also important because he was the key royal patron of the Romanist party in the Easter controversy, which reached a crisis in Northumbria at the assembly at Whitby in 664 (Beda, *Historia Ecclesiastica* 3.25). As a staunch supporter of St Wilfrid and the Roman reckoning of Easter, Alchfrith was the prime mover in the expulsion of the Irish clergy of Northumbria and took a position against his own father, who was a believer in the Insular Easter, having received Christian instruction from the Irish, and a fluent Irish speaker. Beda tells of Alchfrith's turning against his father with few details (*Historia Ecclesiastica* 3.14); the occasion was possibly the debate at Whitby (Streanæs-

halch) itself in 664 or the friction consequent to the replacement of Northumbria's Irish bishop Colman with Oswydd's choice Chad (see CEADDA), rather than Wilfrid. At Winwæd in 655 Alchfrith had been the presumptive heir apparent.

Our last record of Alchfrith comes from Beda's Lives of the Abbots of Wearmouth and Jarrow (§2): Alchfrith wished to accompany St Benedict on a pilgrimage to Rome, which occurred *c.* 666, but Alchfrith's father, King Oswydd, refused to let him go. It is likely that this episode contributed to ECGFRITH passing his elder half-brother Alchfrith in the succession (cf. Wormald, *Anglo-Saxons* 93–4). We do not know what became of Alchfrith after this, but, given his interests, early retirement to a religious life is likely, if he outlived his father (†670).

Alchfrith's opposition to the Irish clergy, their teachings, and the beliefs of his Irish-speaking father leaves it relatively less likely that he was the son of the Irish Fín and thus more likely that he was the son of Rhieinfellt. It is also noteworthy that Oswydd's son by Fín, Flann Fína/Aldfrith, is well known in Irish sources, whereas Alchfrith is altogether unknown as an Irish historical figure. On the other hand, Alchfrith is named in the Welsh *Historia Brittonum*, which omits mention of his half-Irish (half-)brother Flann Fína/Aldfrith (see Kirby, *Trans. Cumberland and Westmorland Antiquarian and Archaeological Soc.* 62.81 n.16). In either event, Alchfrith's theology and ancestry should be taken into consideration in any assessment of the complex issues of the influence of Celtic-speaking groups in the formation of the hybrid culture of Northumbria's so-called early Christian 'Golden Age' in the 7th and 8th centuries.

Aldhelm was a West Saxon churchman and bishop of Sherburne in western Wessex (now south-west England) from 706 until his death in 709 or 710. He was a famous writer and poet in both Latin and Old English. His best-known work is a Christian tract on virginity, *De Virginitate*. In 705 he wrote a letter to the Brythonic King Gerontius (Welsh Geraint) of DUMNONIA in which he refers to heterodox British churchmen beyond the Severn, possibly meaning what is now south Wales. Owing to doctrinal disparities, especially with regard to the reckoning of Easter, the Welsh clerics were unwilling to take meals with Anglo-Saxon Christians or even to eat from the same vessels (see EASTER CONTROVERSY). The letter is mentioned by BEDA, *Historia Ecclesiastica* 5.19.

Alesia/Alisia was a Celtic OPPIDUM and capital of the Mandubii, a tribe allied with the AEDUI in present-day Burgundy, France, north-west of the modern city of Dijon. Alesia was the location of the last battle between the Gauls and the Romans in 52 BC, which is described in detail in Julius CAESAR's *De Bello Gallico* ('Gallic War'), 7.68–9. Caesar encircled the oppidum to which VERCINGETORIX's army had withdrawn. The Roman army constructed two palisaded walls, one to besiege the troops in Alesia and the other to prevent the Gaulish reserve troops from attacking from behind. After several vain attempts to break the siege, the Gaulish army was forced to surrender to Caesar. Vercingetorix was captured and later killed.

§1. THE SITE AND THE GAULISH INSCRIPTION

Alesia is located on the hilltop called Mont-Auxois. Today, there is a village on its slopes, preserving the ancient name as Alise-Sainte-Reine. The identification of the location of Alesia was confirmed with the discovery of a GAULISH inscription at the site in 1839:

MARTIALIS.DANNOTALI
IEVRV·VCVETE·SOSIN
CELICNON ⁊ ETIC
GOBEDBI·DVGIIONTIIO
⁊ VCVETIN
IN [. . . .]ALISIIA ⁊

Martialis son of Dannotalos has offered this structure to Ucuetis, and it is together with the smiths who honour Ucuetis in Alesia. (Koch, BBCS 32.1–37; Lambert, *La langue gauloise* 98–9.)

Remarkable features of this inscription include the Celtic word for 'smith' **gob-* (cf. Old Irish *gobae*, Welsh *gof*) and the relative verb in *-io*: *dugiiontiio* 'who honour' (cf. Old Irish *berte* '[they] who carry' < Celtic **beront[i]-io*).

§2. ARCHAEOLOGICAL INTERPRETATION

Alesia was first excavated under Napoleon III during the years 1861–5. It was, at that time, interpreted to match Caesar's account of the siege of Alesia. New excavations (1990–7) led to a re-interpretation of the 19th-century dig. As the site continued to be inhabited in Roman times, and the vast majority of features excavated there actually stem from this Gallo-Roman settlement rather than from the oppidum described by Caesar, current interpretations of the site place less emphasis on Caesar's account but view it in the context of other Gallo-Roman sites.

§3. THE CELTIC PLACE-NAME

The name is probably derived from Celtic **alisā* (f.) or **aliso-* (m.) 'alder tree'. This **aliso-/-ā-* is also probably attested in CELTIBERIAN, in the patronymic *Alisocum* (**aliso-ko-*), and it may be reflected in Spanish *aliso* 'alder' (which has heretofore been understood as a loan from Gothic **aliza-*). However, it was lost in BRITISH and GOIDELIC, probably because it was redundant alongside a second word for 'alder', namely Celtic **wernā-* (OIr. *fern*, W *gwern*, Gaulish *Verno-*, etc.). The word **alisā* is cognate with Old High German *elira/erila*, Lithuanian *alìksnis* and *alksnis*, Latin *alnus* and Greek ἄλιζα *áliza* 'white poplar' (itself possibly a loanword from an ancient language spoken in the Balkans, such as Thracian, Dacian, or Macedonian).

Alexander the Great, Alexander III of Macedonia (356–323 BC)

There are two accounts of the embassy of the Celts of the ADRIATIC region to Alexander, which took place in 335 BC: one in Arrianus Flavius's *Anabasis of Alexander* (1.4.6–5.2) of the 2nd century AD and an earlier account, attributed to Ptolemy I Soter (†283 BC), preserved by STRABO (7.3.8). According to the latter:

> Alexander received them warmly and while they were sharing a drink asked them what they feared the most, thinking they would say him. They answered that they feared nothing except that the sky might fall down on them, but that they honoured the friendship of a man like him more than anything.

For the classical authors, this surprising response was evidence of the Celts' renowned daredevil bravery. But if the Celts actually said such a thing, it can be better understood in the context of Celtic WISDOM LITERATURE and the tradition of elegy and eulogy of kings in the Celtic countries, in which we find the idea that a good king not only provides wise judgement and victory in battle, but also keeps the universe in balance to his people's benefit. It is a common topos in the death-songs of Welsh and Irish kings for the loss to be likened to the sea coming over the land and the cosmos generally falling apart (cf. Sayers, *Ériu* 37.99–117). Interestingly, this very topos is present in the early Welsh elegy of Alexander, discussed below, that opens: 'I wonder that the abode of heaven does not fall to the ground from the snuffing out of the man foremost in battle's uproar, Alexander the Great'.

A second way in which Alexander the Great has a

bearing on Celtic studies is that the gold COINAGE issued by Alexander and his father Philip (Philip II/Philip of Macedon) served as the most popular models for the Celtic issues over wide zones of central and western Europe, including ultimately derivatives amongst the BELGAE and, hence, in south-east Britain.

As a famous figure in late classical and early medieval literature, it is hardly surprising that Alexander was known in the medieval Celtic countries and is referred to in the Celtic literatures. Alexander is celebrated in two Welsh poems (probably both dating back to the 9th–11th centuries) in the Book of Taliesin (LLYFR TALIESIN; see Haycock, CMCS 13.7–38). One concerns his victories in places such as Persia, Babylon, Syria, and against mythological Amazons. The second poem, formally an elegy or *marwnad*, recounts legends of Alexander's expeditions under the sea and hoisted into the heavens by gryphons. In the 12th-century court poetry of CYNDDELW, Alexander figures as an emperor and as a paragon of martial prowess and valour (Nerys Ann Jones & Parry Owen, *Gwaith Cynddelw Brydydd Mawr* 2.166, 306).

Alfred the Great (r. 871–99) was king of the Anglo-Saxon kingdom of Wessex. He is a famous figure in English history for his lasting victory over the Danes at the battle of Edington in 878 and his promotion of learning, including the patronage of original texts and translations in Old English, to the effect that West Saxon is the best attested Anglo-Saxon dialect. For Celtic studies, Alfred is important for more than one reason. His leading scholarly adviser and biographer was the Welsh cleric ASSER, whose work incidentally provides many insights into Anglo-Welsh relations in the 9th century and several Old Welsh names for places in England. Alfred was also probably the patron of the Anglo-Saxon Chronicle, which is one of the primary sources for the turbulent relations between the English and Celtic peoples in the post-Roman centuries.

Alpine area, Celts in the

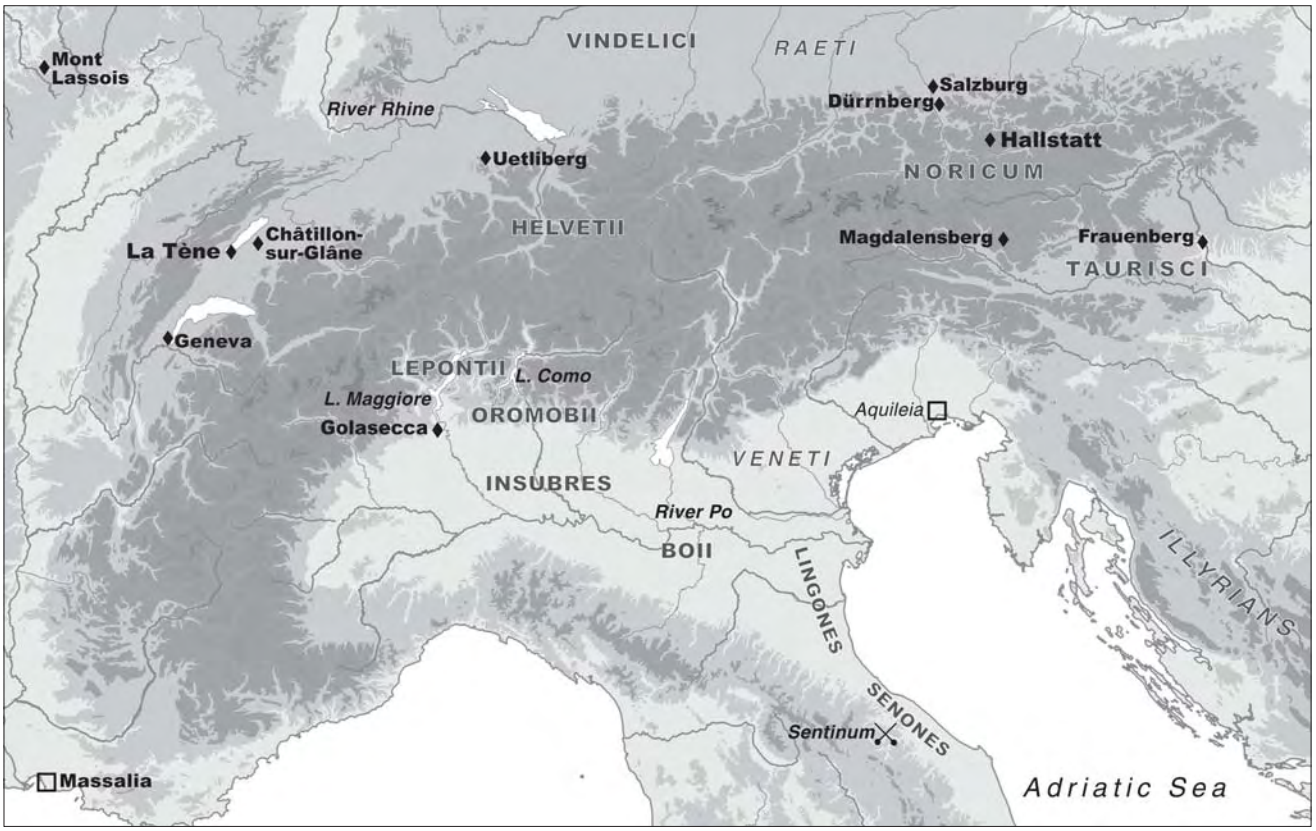
The area in and around the mountainous massif of the Alps is one of the early heartlands of Celtic Europe and supplies some of the earliest recorded evidence for the CELTIC LANGUAGES. HALLSTATT and LA TÈNE, the type sites which have given their names to the two archaeological cultures associated with Celts in Continental Europe, are in the Alpine area, and some of the better attested Continental Celtic groups, the HELVETII, the Lepontii, and the Norici (see NORICUM), had their homelands in the Alps.

§1. THE FIRST CELTS IN THE ALPINE AREA

When and how the first Celts came to the Alps is still an unsolved question. The possibilities range from the Alpine area being part of the formation zone of the Celtic languages in the Late Bronze Age (*c.* 1200–750 BC) to a mass migration during the 'first Celtic migration period' between the 6th and the 4th centuries BC. Up to the second half of the 20th century nearly all the changes in archaeological material culture have been interpreted as evidence for migrations (e.g. Pittioni, *Zum Herkunftsgebiet der Kelten*). Today, however, scenarios without massive movements of people are preferred by archaeologists in cases where there is no direct historical evidence for such movements (e.g. Renfrew, *Archaeology and Language*; Cunliffe, *Ancient Celts*). Whether the population groups moved or not, the archaeological record shows both local cultural continuity and external influences for most sites from at least the Late Bronze Age up to the Roman occupation of the Alpine area (*c.* 50–15 BC).

§2. HALLSTATT CULTURE IN THE WESTERN AND CENTRAL ALPS

The western parts of the Alps, as far east as the Hallstatt site in Upper Austria, are part of the West Hallstatt cultural province. This province has been



closely associated with the first historical records of Celts, for example, the references in Herodotus (Spindler, *Die frühen Kelten*). Important sites in the western Alps from this period include the famous finds from the aristocratic tomb at Grächwil (Jucker, *Antike Kunst* 9.41–62), and the aristocratic residences at Châtillon-sur-Glâne (near Posieux, Switzerland), and at Uetliberg (near Zürich, Switzerland). Two important trade routes probably crossed the Swiss Alps, one coming across the Great Saint Bernard pass via Châtillon and the Jura towards Mont-Lassois, and the great Rhône–Rhine route across the Swiss plateau.

Further to the east, in the Inn and Salzach valleys, on the important north–south trade route across the Brenner and other Alpine passes, several other important sites, at Bischofshofen for example, were located; these belonged to a local variant, the Inn-Salzach group, an intermediate group between the West and East Hallstatt provinces (Stöllner, *Die Osthallstattkultur* 471–96). In the latter phases of the Hallstatt period (*c.* 700–475 BC), the Frizens-Sanzeno group developed in the area of the inner Alpine Inn valley and the Etsch and Eisack valleys in northern Italy; this group has been identified with the non-Celtic people of the central Alps, the Raeti (Gleirscher, *Das keltische Jahrtausend* 23.232–6).

§3. hallstatt culture in the eastern alps

The parts of the Alps east of the Hallstatt site itself belong to the East Hallstatt cultural province. This province has been traditionally associated with the ancient non-Celtic-speaking people known as 'Illyrians' (see Modrijan, *Blätter für die Heimatkunde* 35.35–48), but this viewpoint is no longer accepted today (Birkhan, *Kelten* 45–6). Whether or not the East Hallstatt province can be considered to be linguistically Celtic is still an unresolved problem. The north-eastern Alpine area is part of the Kalenderberg culture of the East Hallstatt province, with its type site, the Kalenderberg, at the very north-eastern end of the Austrian Alps (Nebelsick, *Die Hallstattkultur im Osten Österreichs* 9–128). The south-eastern Alpine area shows strong connections with the north Balkans and is characterized by the rich aristocratic tombs in the Sulmtal in Styria, Austria (Egg, *Die Osthallstattkultur* 53–86), and the cemetery at Frög in Carinthia, Austria (Tomedi, *Festschrift zum 50 jährigen Bestehen des Instituts für Ur- und Frühgeschichte der Leopold-Franzens-Universität Innsbruck* 605–14; Tomedi, *Archäologie Österreichs* 8.2.60–70).

§4. the lepontii and the golasecca culture

Located at the southern end of the trade route across

the Saint Gotthard pass in south central Switzerland, the GOLASECCA CULTURE covers roughly the area between the pass, Lake Maggiore, Lake Como, and the Po valley in Italy. It is especially important because this is the area of the oldest INSCRIPTIONS in a Celtic language. The LEPONTIC inscriptions are written in the so-called alphabet of Lugano (see SCRIPTS). Strong Hallstatt influences in the area towards the end of the 7th century BC have led several scholars to assume Celtic migration into this area at that time, a hypothesis that would fit with the account given by LIVY of the first Gauls moving into the region of the Po valley in the time of the mythic king Tarquinius Priscus (*Ab Urbe Condita* 5.34). Other prehistorians have stressed the continuity in local traditions of material culture from the preceding archaeological horizon (Late Bronze Age) to discount the impact of such migrations. The area occupied by the Golasecca culture is roughly coterminous with the locations of the Celtic peoples called the Insubres, Oromobii, and Lepontii, as mentioned in classical literature (De Marinis, *Celts* 93–102).

§5. THE WESTERN ALPS IN THE LA TÈNE PERIOD

Material of LA TÈNE type arrived in the western Alps early in the La Tène period (5th century BC). In the earliest phases, old HALLSTATT and even Bronze Age burial mounds were used for secondary burials, as in Lausanne-Vernand-de-Blonay or in Pontarlier, France (Kaenel, *Celts* 177). Burial practice had already changed to flat cemeteries in La Tène A (*c.* 450–*c.* 325 BC), as in Andelfingen and MÜNSINGEN-Rain, the latter being very important for the chronology of the Early and Middle La Tène periods (*c.* 450–*c.* 150 BC; Kaenel & Müller, *Celts* 251–9; Hodson, *La Tène Cemetery at Münsingen-Rain*). The trade routes through the Alps continued to be used: major routes included that over the Great Saint Bernard pass towards MONT-LASSOIS; the route from the RHÔNE to the RHINE, the latter passing close by La Tène itself; and another route across the Saint Gotthard pass down into the Rhine valley, where the treasure of Erstfeld was deposited (Pauli, *Celts* 215–19). Several features detected along these routes reveal that they were well-built trade ways: on the water routes—where port facilities such as those in Geneva show the importance of water traffic (Bonnet, *Celts* 522)—and also the road system, as evident from finds of a surface-metalled road and several bridges along the Thielle and the Broye (Schwab, *Archéologie de la 2e correction des eaux du Jura 1*). Towards the end of the Middle La Tène period (*c.* 150 BC), the first oppida were created in the western Alps (see OPPIDUM), for example at Bern Engehalbinsel, Basel Münsterhügel or Geneva (Furger-Gunti, *Celts* 523; Müller, *Celts* 524–5). While burials become increasingly rare during the Middle La Tène period and are virtually absent in the Late La Tène period (*c.* 150–15 BC), votive deposits such as those at La Tène, Bern-Tiefenau, and Port Nidau become common in the Swiss region (Müller, *Celts* 526–7).

§6. THE CENTRAL ALPS IN THE LA TÈNE PERIOD

In the central Alps, innovative centres such as the DÜRRNBERG near Hallein adapted the new La Tène material culture quite early, while the surrounding countryside seems to have been more conservative and held on longer to late Hallstatt traditions (Pauli, *Die Kelten in Mitteleuropa* 189–93). Generally, the Dürrnberg, which may have started out as a subsidiary mine of Hallstatt, seems to have taken over the rôle as the main salt-mining centre at that time (Penninger, *Die Kelten in Mitteleuropa* 182–8), and the newly acquired riches of the Dürrnberg population seemingly attracted skilled artisans to the new salt centre (Pauli, *Die Kelten in Mitteleuropa*). The inner Alpine Fritzens-Sanzeno group, even though subject to strong La Tène influences, kept its own Raetian character throughout the La Tène period (Gleirscher, *Das keltische Jahrtausend* 232–6), while the rest of the central Alpine zone was already thoroughly assimilated to La Tène culture in the Late La Tène A period (mid-4th century BC). Following the central European pattern, burials become increasingly rare during the Middle La Tène period (*c.* 325–*c.* 150 BC) and are virtually absent in the Late La Tène period (*c.* 150–*c.* 15 BC); there is no evidence to show how bodies were disposed of. In the late Middle La Tène period, fortified hilltop settlements such as that on the Rainberg in Salzburg appear (Pauli, *Die Kelten in Mitteleuropa*).

§7. THE EASTERN ALPS IN THE LA TÈNE PERIOD

Innovative centres also existed in the north-eastern Alpine zone, for example, the Traisental in Lower Austria (Neugebauer, *Die Kelten im Osten Österreichs*), while the surrounding areas seem to have been somewhat more conservative. Large Early and Middle

La Tène cemeteries exist along the northern and eastern edge of the Alps, but almost no burials from the late La Tène period are known from this area (Neugebauer, *Die Kelten im Osten Österreichs*). At about the same time, hill-forts and other large defended settlements appear in addition to the farmsteads and small villages that were the characteristic settlement type in the Early and Middle La Tène periods (see FORTIFICATION; Karl, *Latènezeitliche Siedlungen in Niederösterreich*).

La Tène culture seems to have reached the south-eastern Alpine zone somewhat later, at the very end of the La Tène A or the earliest La Tène B period (i.e. late 4th century BC). Most of the south-eastern Alpine zone, forming the heartlands of the Celtic kingdom of NORICUM, was especially important as a centre of iron production (Meyer, *Archäologische Eisenforschung in Europa* 25–48). Especially characteristic for this zone is the Norican COINAGE, which appears in the Middle La Tène period (Göbl, *Typologie und Chronologie der keltischen Münzprägung in Noricum*). During the Late La Tène period, oppida were also constructed in this area, for example on Frauenberg near Leibnitz and in SCHWARZENBACH, Austria, with the most prominent one at the MAGDALENSBERG in Carinthia, where a permanent Roman trading post was already established at the beginning of the 1st century BC (Piccottini, *Aufstieg und Niedergang der römischen Welt* 2.6.263–5).

§8. ALPINE CELTS IN EARLY HISTORICAL SOURCES

Much is known about the Alpine Celts from various early historical sources. It is evident that they were not one united people, but consisted of several different groups, most of whom belonged to one of the main confederations within the Alpine zone: the Helvetii in the west, the Vindelici in present-day south Germany north of the Raeti, and the Norici in the east; also the various peoples in the Alpine areas of CISALPINE GAUL, such as the Lepontii. However, even the smaller groups, such as the Tigurini, one of the Helvetian *pagi* (cantons), or the TAURISCI, one of the subgroups of the Norici, often acted independently. Even the Gaesates, the special forces who fought naked in the battle of Telamon (225 BC), are said to have come from the Alpine area. The various Alpine people were, as we can see from the historical sources, skilled in diplomacy, as is evident from the dealings of ROME with the Norican rulers in the 2nd century BC (Dobesch, *Die Kelten in Österreich*). They were feared warriors who had, at times, even won battles against the Roman legions, for example, the Tigurini in 107 BC (Caesar, *De Bello Gallico* 1.7). They were important economic partners, as demonstrated by the renowned iron of the Norici, which led to the establishing of a Roman trading post in Alpine Celtic territory at MAGDALENSBERG (Piccottini, *Aufstieg und Niedergang der römischen Welt* 2.6.263–5). They were also generally very skilled in living in and travelling through their often harsh and dangerous environs, even guiding Hannibal's army through the mountains during his campaign against Italy in 218 BC (Pauli, *Celts* 215–19).

§9. THE END OF CELTIC INDEPENDENCE IN THE ALPINE AREA

The conquest of the Alpine Celts was accomplished in several stages. The Po valley and the Celtic peoples in the Italian Alps came under Roman dominion through a series of decisive battles: Clusium (295 BC), Sentinum (292 BC), Lake Vadimo (283 BC), and, generations later, Telamon (225 BC) and Clastidium (222 BC), followed by the renowned but unsuccessful Italian campaigns of Hannibal until 203 BC, which had been supported by the Cisalpine Gauls. At the end of the 2nd century BC the Celts in the south-western parts of the Alps lost their independence with the creation of the Roman Provincia Narbonensis in southern France. Following CAESAR's war against the Gauls from 58 to 51 BC, especially the defeat of the HELVETII in the year 58 BC, the western Alps were almost completely under Roman dominion. The end of Celtic independence in the central and eastern Alps came with the Alpine campaign of Tiberius and Drusus in 15 BC against the Raeti and the Vindelici, and the simultaneous peaceful annexation of the old political partner of the Romans, NORICUM, in the eastern Alps. Even under the political control of the Roman Empire, Celtic elements continued to linger on in the characteristic provincial cultures of the Alpine provinces, with Celtic personal names appearing on Roman grave monuments for several centuries after the conquest, for example, the Celtic personal names ATEVALI, ELVISSIONIS, and CONGINNA, which occur on a Roman gravestone from Hasenbach, Austria.

Amairgen mac Aithirni/Amairgen mac Eccit Salaig figures as a poet and warrior of the ULAID in the ULSTER CYCLE. His name (see AMAIRGEN MAC MÍLED) suggests that the rôle as poet is primary. He appears in a number of the tales, including FLED BRICRENN ('Bricriu's Feast') and a version of *Compert Chon Culainn* (The conception of CÚ CHULAINN), in which he is one of the superhero's foster-fathers. His wife Finnchoem was the daughter of the druid CATHBAD and sister of CONCHOBAR, king of Ulster. He himself was the father of the hero CONALL CERNACH. A brief and colourful story 'Athairne and Amairgen' in LEBOR LAIGNECH relates how he became the Ulstermen's poet. The son of the smith Eccet Salach, Amairgen began life as a monstrous, mute, and retarded child:

> His belly swelled until it was the size of a great house (?); and it was sinewy, grey and corpulent. Snot flowed from his nose into his mouth. His skin was black. His teeth were white. His face was livid. His calves and thighs were like the two spouts of a blacksmith's bellows. His feet had crooked toes. His ankles were huge. His cheeks were very long and high. His eyes were sunken and dark red. He had long eyebrows. His hair was rough and prickly. His back was knobby, bony, rough with scabs. It was not the semblance of a comely person. He had for so long neglected to clean himself after defecating that his own excrement rose up to his buttocks. (Trans. J. Carey)

One day, at the age of fourteen, Amairgen suddenly spoke, and ATHAIRNE, then chief poet of Ulaid, saw in this wonder the threat of an imminent rival in poetic inspiration and sought to kill the boy. But Athairne was thwarted by Eccet and subsequently compensated Eccet by adopting Amairgen, who then succeeded his foster father as senior poet. Ford has compared this legend of the sudden awakening of the poet, followed by the unsuccessful pursuit by a rival, to the Welsh tale of Gwion's transformation into the inspired TALIESIN.

Amairgen mac Míled, also known as Amairgen Glúngel (Amairgen bright-knee), figures in Irish LEGENDARY HISTORY as the poet, judge, sage, and magician (see DRUIDS) of the sons of MÍL ESPÁINE, the first Gaels to take Ireland (ÉRIU). A full and developed account of his rôle in the settlement is given in the Middle Irish LEBAR GABÁLA ÉRENN ('The Book of Invasions'). The verses attributed to Amairgen in this story have repeatedly been translated and quoted, and drawn into discussions of pre-Christian Celtic beliefs, especially those concerning REINCARNATION and shapeshifting; comparisons have often been drawn with the so-called mythological Welsh poetry of LLYFR TALIESIN. Following the story as given in the 11th-century first recension of *Lebar Gabála* (LGE1), in §§108–16, Amairgen set his right foot on Ireland, as the Milesians land, and

recited the following poem (which some modern writers have called 'Amairgen's Hymn'):

I am a wind in the sea (for depth).
I am a sea-wave upon the land (for heaviness).
I am the sound of the sea (for fearsomeness).
I am a stag of seven combats (for strength).
I am a hawk on a cliff (for agility).
I am a tear-drop of the sun (for purity).
I am fair (i.e. there is no plant fairer than I).
I am a boar for valour (for harshness).
I am a salmon in a pool (for swiftness).
I am a lake in a plain (for size).
I am the excellence of arts (for beauty).
I am a spear that wages
battle with plunder.
I am a god who forms
subjects for a ruler.
Who explains
the stones of the mountain?
Who invokes
the ages of the moon?
Where lies
the setting of the sun?

Over the next three days and nights the Milesians conquered their supernatural predecessors, the TUATH DÉ. The three kings of Tara (TEAMHAIR) then asked the Milesians to leave Ireland for three days to allow an exchange of hostages—but actually intending to use druidry to keep the Gaels out at sea—and agreed to submit to the Milesians' own judge, Amairgen, on this matter, though threatening to kill him if he made a false judgement. 'Let this island be left to them', Amairgen declared (the first judgement given in Ireland), but then further explained that the lawful way for the Gaels to occupy Ireland was to cross nine waves out from the land and then nine waves back, a course which ultimately proved effective and the Tuath Dé's counter-magic ineffective. Amairgen then recited another moving and memorable poem (also by now well known in Celtic studies) to placate Ireland's indwelling gods:

I invoke the land of Ireland:
surging is the mighty sea,
mighty is the upland full of meadows,
full of meadows is the rainy wood,
rainy is the river full of waterfalls,
full of waterfalls is the spreading lake,
spreading is the spring of multitudes,
a spring of peoples is the assembly,
the assembly of the king of Tara.
Tara is a tower of tribes,
the tribes of the sons of Míl,
warriors of ships, of vessels.
Ireland is a mighty vessel . . .

The name *Amairgen* is a compound of Old Irish *amar* 'wonder, song, singing' (cf. AMHRÁN) and the root *gen-* 'to be born', hence 'he who is born of (wondrous) song'. The name occurs also for the chief poet of the ULSTER CYCLE, AMAIRGEN MAC AITHIRNI. A 7th-century lay witness to a charter preserved in the Book of LLANDAF bore the corresponding BRYTHONIC name *Abrgen*.

Ambrosius Aurelianus (**Emrys Wledig**; *fl.* 5th century AD) was an important military leader in post-Roman BRITAIN who subsequently developed into a figure in Welsh LEGENDARY HISTORY and ARTHURIAN literature. The only historical evidence for him is the account of 5th-century history in the *De Excidio Britanniae* (On the destruction of Britain) of GILDAS, who lived at least a generation, but probably less than a century, after Ambrosius' heyday. In Gildas's undated sequence of events, the BRITONS were pressed by invading PICTS and SCOTS and appealed to 'Agitius thrice consul'. It is usually thought that this means the Roman general Aëtius, who was consul for the third time in AD 446–54 and whose fame was great after defeating Attila the Hun in 451. But the appeal was not answered, after which a British *superbus tyrannus* (proud tyrant,

see GWRTHEYRN) invited Saxon mercenaries to provide defence against the invaders. The Saxons numbers in Britain grew and their demands for provisions became insatiable, until they eventually revolted and laid waste disastrously the towns of Christian Britain as far as the western sea. Afterwards, the Britons rallied under the leadership of Ambrosius Aurelianus.

If Gildas's information about the appeal to Aëtius is correct and the subsequent complicated series of events accurately represented, Ambrosius would belong to the late 5th century or *c.* AD 500. Gildas calls Ambrosius the last of the Romans in Britain. For Gildas, his contemporary inhabitants of Britain were *Britanni*, not *Romani*, but it is not clear whether this distinction is primarily a matter of first language, birthplace, or politics. Gildas also claimed that Ambrosius' ancestors 'had worn the purple', implying that he was of imperial or similarly exalted Roman ancestry. The campaign against the Anglo-Saxons climaxed in the siege of BADONICUS MONS (Mount Baddon), where the Britons were victorious. Gildas does not name the commander at Baddon. His wording does not exclude the possibility that it was Ambrosius, but subsequent Welsh tradition—beginning with HISTORIA BRITTONUM and ANNALES CAMBRIAE—credits ARTHUR.

In the Welsh Latin *Historia Brittonum* (compiled AD 829/30), Ambrosius appears as a visionary youth who interprets the supernatural impediments which prevented the construction of a stronghold in Snowdonia (ERYRI) for the evil ruler Guorthigirn (Modern Welsh Gwrtheyrn). The ensuing vision involves the oldest literary appearance of the emblematic Red Dragon (DRAIG GOCH) of the Britons. In interpreting the wonder, Ambrosius explains that he rather than Gwrtheyrn is destined to rally the Britons against the Saxon invaders. Though first brought to the building site as a fatherless child to be sacrificed, Ambrosius identifies himself as 'son of one of the consuls of the Roman people' (*unus est pater meus de consulibus romanicae gentis*). The name is also glossed there in Old Welsh as *Embreis Guletic* (Modern *Emrys Wledig*), i.e. Ambrosius the great sovereign (cf. MACSEN WLEDIG). The story has been linked with the Welsh place-name DINAS EMRYS 'Stronghold of Ambrosius', a summit in Snowdonia on which there are early FORTIFICATIONS; an old man-made pool on its summit has been seen as inspiring the locale of the entombment of the dragons, though it is not certain that the pool is early enough. In another passage in *Historia Brittonum* (§31) it is stated: 'Gwrtheyrn ruled in Britain, and as he was ruling in Britain, he was constrained by fear of the Picts and Scots and of attack by the Romans, not to mention fear of Ambrosius'. In *Historia Brittonum* §48, Ambrosius is called 'king among [i.e. over] all the kings of the British people'. It is possible that the last reference explains the allusion in the early Welsh Arthurian poem in LLYFR DU CAERFYRDDIN, *PA GUR YV Y PORTHAUR?* (Who is the gatekeeper?):

> Before the kings of Emreis [?Ambrosius]
> I saw Kei hasten,
> leading plundered livestock,
> a hero long-standing in opposition.

In his HISTORIA REGUM BRITANNIAE (History of the kings of Britain, *c.* 1139), GEOFFREY OF MONMOUTH envisioned 'Aurelius Ambrosius' (which was in fact the name of the father of St Ambrose of Milan) as a major British leader and hero, the brother of King UTHR BENDRAGON and hence Arthur's maternal uncle. Like many of Geoffrey's heroes, Aurelius Ambrosius and his family are given strong Breton connections. In the Welsh adaptations, known as BRUT Y BRENHINEDD, the hero's Roman name is rendered *Emrys*, a Welsh name which does in fact derive from *Ambrosius*. *Emrys* (< Latin *Ambrosius*) was not a common name in early or medieval Wales (CYMRU), but has become popular in modern times. Geoffrey effectively split the character that he had found in Gildas and *Historia Brittonum*, calling the prophet of Vortigern's stronghold and the wonder of the dragons 'Merlinus', thus identifying him with MYRDDIN, the prophetic poet and WILD MAN of early Welsh tradition.

Amfreville-sous-les-Monts is a town in northern France (Eure, Normandy) and the find spot of a pre-Roman ceremonial helmet, of which only the skullcap is preserved. The helmet was discovered accidentally in 1841 in an old tributary of the Seine, where it had been lying under more than 3 m of water. It is a composite object consisting of parts made from different materials. Bronze is the basic material with iron, gold, enamel, and resin added. Conforming to the north Alpine tradition of LA TÈNE helmet types, the neck cover has been added as a separate piece. The decoration is organized in a succession of ascending bands or registers. Only the central part is covered by gold leaf. The bands above and below the gold work are distinguished by an iron net, parts of which are encrusted in red enamel. The style shows a combination of the La Tène 'first style' and the following Vegetal Style, as seen in metalwork from the aristocratic burials from WALDALGESHEIM (see further ART). Comparable decoration from datable sites imply that this helmet was made in the middle of the 4th century BC. Like the helmets of AGRIS, Saint-Jean-Trolimon and Canosa, the Amfreville helmet belongs to a small group of 'ceremonial' helmets which are often described as descending from 'Celto-Italic' models, that is, prototypes from northern Italy of the 5th century BC. The find spot in a river and extraordinarily rich quality suggests an object made specifically for ritual WATERY DEPOSITIONS, perhaps as an offering to a water deity.

Amgueddfeydd ac Orielau Cenedlaethol Cymru (National Museums and Galleries of Wales) form one of Wales's principal cultural and heritage institutions, whose mission is to safeguard much of the three-dimensional evidence of its history and traditional culture. Founded in 1907, with an informal brief exemplified in Lord Pontypridd's words of 1912 'to teach the world about Wales and to teach the Welsh people about the land of their fathers', today it is an institution with seven sites open to the public and some 4.7 million items in its collections.

Its main archaeology and art collections (together with biodiversity and geology) are housed in the National Museum and Gallery in Cardiff (CAERDYDD) city centre, a classical building designed in 1910 and partly opened to the public in 1922. Subsequent additions culminated in the opening of the Centre Court art galleries in 1996. Archaeological material ranges in date from the earliest-known human occupation of Wales (CYMRU) to the Middle Ages, including well-known Bronze and IRON AGE treasures such as the Caergwrle bowl, the Capel Garmon firedog (i.e. andiron) and the LLYN CERRIG BACH hoard. No non-Welsh material is displayed. Roman archaeology is also situated at the Roman Legionary Museum, Caerleon (CAERLLION), and at the SEGONTIUM Roman Museum in Caernarfon.

The art collections, however, are more balanced between material by Welsh artists or of Welsh subjects and international art. The bequest in the 1950s and 1960s by the Davies sisters, Margaret (1884–1963) and Gwendoline (1882–1951), well-known art collectors and benefactors of the arts in Wales, of some 260 Impressionist works considerably widened the range of the collection, but at the same time caused a perceived tension between collecting and encouraging Welsh and modern art on the one hand, and showing the best of international art to the people of Wales on the other.

The later history of Wales is displayed and interpreted at Amgueddfa Werin Cymru—the Museum of Welsh Life (formerly the Welsh Folk Museum) at St Fagans (Sain Ffagan) on the outskirts of Cardiff. Encompassing an Elizabethan manor house and its grounds, the site today is the largest attractor of heritage visits in Wales. The National Museum's long

interest in obtaining an open-air 'folk-park' was brought to fruition by the Director, Sir Cyril Fox, and especially the Keeper of Folk Life, Dr Iorwerth C. Peate, in 1948. Today, the site is over 100 acres in size and includes some 40 buildings of various periods from 1500 to the present day, re-erected and furnished accurately. Extremes to these date limits are represented by a recreated Iron Age settlement, and a 'House of the Future' designed through architectural competition. Equally significantly, the Museum has been a pioneer in the use of oral recording to amass audio, photographic and paper archives, including the definitive oral archive of the WELSH language and its dialects, and much material on folklore, customs, music, folk art and other aspects of traditional culture. The brief for industrial history is carried out at a number of sites, principally the Welsh Slate Museum at Llanberis, GWYNEDD, the former workshops of the Dinorwig Quarry; the Museum of the Welsh Woollen Industry at Dre-fach Felindre in Carmarthenshire (sir Gaerfyrddin), the former Cambrian Mills, and still home to a functioning mill; and 'Big Pit', the National Mining Museum of Wales, in Blaenafon. A new synoptic national museum, integrating the whole story of Welsh industry, is planned to open in Swansea (ABERTAWE) in 2005.

Eurwyn Wiliam

Amhrán (song) is a simple, accentual, and chiefly oral Irish poetic form first attested in manuscripts of the 17th century but probably in use for some centuries before that. The *amhrán* form rose with the decline of the BARDIC ORDER and *dán díreach* with its strict syllabic rules. Most *amhráin* (pl. of *amhrán*) were written by poets no longer writing to order (since their patrons had fled the country), and they may therefore have any theme. Most, however, involve the poet revealing his feelings, often identifying his loss with the passing of the old Gaelic system in which there had been native aristocratic patronage for poets, as Pádraigín Haicéad (1600–54) does in *Mo Náire Ghéar, Mo Léan, Mo Ghuais, Mo Chneadh* (My severe sorrow, my grief, my peril, my wound). Easily put to heart, the *amhráin* were clearly popular with an Irish-speaking populace who could identify with the themes of loss and changed order. The *amhrán* is occasionally found as a *ceangal* (verse conclusion) in late syllabic poetry.

The most popular form of the *amhrán* in the 17th century involved quatrains with lines of five feet (often trochees, and occasionally dactyls). While *dán díreach* used elaborate consonantal alliteration, the *amhrán* relied on assonance, involving vowel harmonies. Each line of the quatrain would be identical in terms of length and quality of stressed vowels in the feet. A popular and early example of the form is the lament *Óm Sceol ar Ardmhagh Fáil* (From my grief on Fál's proud plain) by Geoffrey Keating (Seathrún CÉITINN), who writes from the Continent of the despair he feels at fresh news of English victories in Ireland (ÉIRE):

Óm sceol ar ardmhagh Fáil ní chodlaim oíche
's do bhreoigh go bráth mé dála a pobail dílis;
gé rófhada atáid 'na bhfál ré broscar bíobha,
fá dheoidh gur fhás a lán den chogal tríothu.

From my grief on Fál's proud plain I sleep no night,
And till doom the plight of her native folk hath crushed me;
Though long they stand a fence against a rabble of foes,
At last there hath grown full much of the wild tare through them. (Trans. Patrick Pearse)

The metre is as follows:

[(˅) / ó ˅ / á ˅ / á ˅ / o ˅ / í ˅] × 4

Note that the form permitted an unstressed monosyllable at the beginning of the line.

The pentameter has led some to suggest that the form was inspired by the rise of pentameter in English poetry at the time, but the case has not yet been proved. It is very likely, however, that the form of poetry from south-west Ulster (ULAID) known as *Trí rainn agus amhrán* (three syllabic verses and verse in stressed metre) developed from the Shakespearian sonnet.

A later development of the *amhrán* was the addition of a *ceangal* at the poem's end: a quatrain in *amhrán* form but based on a different set of stressed vowels.

The late 17th century gave rise to the hugely popular

four-footed *ámhrán*-line, which may derive from the CAOINEADH (lament).

Anaon is the name of the community of the souls of the dead in Breton tradition. These souls are generally understood to be in purgatory, doing penance on Earth. Several types of lost souls are known in Breton tradition, including the *bugel-noz* 'night child', the *kannerez-loar* or *kannerez-noz* 'night washerwoman', and the *skrijerez-noz*, literally 'female night screecher' and also one of the common names for the owl (see also BEAN SÍ; BLODEUWEDD; FAIRIES). Interaction with these entities is usually fatal in Breton folk tradition; the *kannerezed-noz* 'night washerwomen' will invite passers-by to help, but any mortal giving assistance is caught up in the sheets and killed. Other activities, such as whistling or sleeping after dark, could also attract the wrath of the Anaon. The dead are cold, and seek out the warmth of the living, returning to their former homes after dark; hell itself is referred to as *an ifern yen* 'cold hell' in Breton tradition. The Anaon is understood to be quiescent by day but virtually omnipresent by night, with lonely places being especially dangerous.

The Middle Breton form is *Anaffoun*. It is the cognate of Old Irish *anmin* 'souls' < Celtic **anamones*, cognate to, probably not borrowed from, Latin *animus*.

Anarawd ap Rhodri Mawr was king of GWYNEDD 878–916 and the most powerful king in Wales (CYMRU) throughout his long reign. He was thus also the most powerful of king RHODRI MAWR's sons, who are said to have numbered six according to the contemporary source, ASSER's Life of ALFRED THE GREAT (§80), but this number may be a result of confusion in the textual transmission. According to Asser, Anarawd (for whom he uses the Old Welsh spelling *Anaraut*) had formed an alliance in the 880s with Northumbria, i.e. with Guthrith, the Viking king of York, against Alfred of Wessex. At that time, the kings of DEHEUBARTH were under strong military pressure to submit to the Gwynedd/Northumbria axis—Hyfaidd of DYFED (*Hemeid rex Demeticae regionis*), Hywel ap Rhys of Glywysing (*Houil filius Ris rex Gleguising*), Brochfael and Ffernfael of Gwent (*Brochmail atque Fernmail filii Mouric reges Guent*), and Elise ap Tewdwr of BRYCHEINIOG (*Helised filius Teudubr rex Brecheniauc*). Had such a development taken place, it would have effectively created a united Wales, under Gwynedd's leadership, hostile to Anglo-Saxon Wessex. But the southern Welsh kings succeeded against the designs of Anarawd and his brothers by joining an alliance with Alfred. By the early 890s—recognizing that his earlier strategy had failed—Anarawd broke his alliance with Guthrith and formally submitted to Alfred. This means that by the time Asser wrote in 893 most of Wales was under Alfred's overkingship.

According to BRUT Y TYWYSOGYON ('The Chronicle of the Princes') Anarawd, together with the English, ravaged the lands of CEREDIGION and Ystrad Tywi in 895; these regions were not named by Asser as being under Alfred's protection. In his death notice in *Brut y Tywysogyon*, Anarawd is called *Brenhin y Bryttanyeit* (king of the BRITONS) indicating his primacy within Wales. The great anti-Wessex alliance of Britons, Gaels, and Vikings envisioned in the 10th-century Welsh

political PROPHECY, ARMES PRYDEIN, shows that the political thinking of Anarawd's earlier alliance remained influential amongst his successors.

Anarawd was not uncommon as a name amongst men of the royal class in Wales in the earlier Middle Ages. It is possibly derived from the Latin *honōrātus* 'honoured man'. However, *Anaurot* was an Old Breton place-name for Kemperle, which indicates that there was also a native BRYTHONIC proper name similar to Old Welsh *Anaraut*. If the latter is the correct etymology, then the second element of the son's name is probably the same as the first element of his father's, in keeping with early Celtic naming practices; cf. Old Irish *ráth* 'surety, guarantor'.

Ancyra (modern Ankara, ancient Greek Ἄνκυρα, also known as Angora) was the ancient capital of GALATIA under the Celtic ruler Deiotaros Δηιοταρος ('the Great' †40 BC, an ally of Rome under Pompey and then CAESAR) and is the current capital of Turkey. Ancyra was a significant place within the Galatian territory of the Tectosages tribe during the Hellenistic and Roman periods. Originally a fortress, Ancyra was the site of a battle *c.* 240 BC in the War of the Brothers between Seleucus II of Syria (r. 247–226 BC) and a coalition of his brother Antiochus Hierax, Mithridates II of Pontus (a kingdom centred north of the Black Sea), and Galatian mercenaries. After the battle, Seleucus was defeated and the Galatians' position was strengthened to the point where they were recognized as a viable nation rather than merely mercenaries. The name means 'anchor' in Greek; if there was a distinct Galatian name for the site, it has not been preserved.

Andraste/Andrasta was a Celtic goddess worshipped in BRITAIN. According to CASSIUS DIO (*Roman History* 62), she was invoked by Queen BOUDĪCA of the ICENI tribe, for help during the uprising against the Romans in AD 61:

> After that [Boudīca] used a type of augury, releasing a hare from the folds of her garment. Because it ran off in what [the Britons] considered to be the auspicious direction, the whole horde roared its approval. Raising her hand to the sky, Boudīca said: 'I thank you, Andrasta, and call out to you as one woman to another . . . I implore and pray to you for victory and to maintain life and freedom against arrogant, unjust, insatiable, and profane men.'

Cassius Dio provides the only surviving record of Andraste. He writes that the goddess was worshipped in a grove (see NEMETON), where Roman women were sacrificed to her during Boudīca's uprising (see SACRIFICE; on the association with a hare, see also ABNOBA). Dio also explains that *Andraste* meant 'victory'. Linguistically, the form appears to be a feminine name derived from a verb with the Celtic negative prefix *an-*, hence perhaps meaning literally 'unconquered, inviolate'; possibly compare Middle Irish *dreisid* 'breaks'. Some scholars have equated Andraste with Andarte, a goddess worshipped by the southern Gaulish tribe of the Vocontii in present-day Provence. That name also resembles a feminine participle with a negative prefix, possibly with a variant form based on the same verbal root as in *An-dras-te*. A connection with the Celtic word for 'bear' **arto-s* (Welsh *arth*) has also been suggested for *Andarta*.

PEB, JTK

Aneirin fab Dwywai is one of the earliest Welsh-language poets (see CYNFEIRDD) to whom surviving texts are attributed, namely the heroic elegies known as the GODODDIN. He is generally regarded as a genu-

ine court poet of post-Roman north Britain (see HEN OGLEDD). As such, his period of activity would fall somewhere between the mid-6th century and the early 7th. However, owing to the lack of contemporary records—there are none of any sort apart from the *De Excidio Britanniae* of GILDAS, brief INSCRIPTIONS on stone, and the *Cynfeirdd* poetry itself—we have no indisputably contemporary or near contemporary evidence for Aneirin's existence, let alone confirmation of his authorship of any or all of the extant *Gododdin*.

§1. 'NEIRIN' AND HISTORIA BRITTONUM

The earliest surviving external record of the poet's existence—that is, external to the text of the *Gododdin* itself—is included in §62 of the Welsh Latin compilation HISTORIA BRITTONUM, redacted in AD 829/30, where the poet (whose name is listed there as Old Welsh *Neirin*) is said to have been a contemporary of MAELGWN GWYNEDD (†547) and Ida of Northumbria (r. 547–59). This notice in *Historia Brittonum* is the so-called 'Memorandum of the FIVE POETS'; the north British notices found with the Memorandum in *Historia Brittonum* §§57–65 suggest that it was not compiled later than *c.* 700, since the last of these concerns the death of St Cuthbert in 686. If we take the Memorandum as sufficient evidence that a historical poet Aneirin did exist—and most Celtic scholars have accepted this much—it does not mean that he actually penned a text of the *Gododdin* elegies at that date. He may well have been illiterate, a traditional oral court poet.

§2. ANEIRIN AND THE GODODDIN

Since we have no physical copy of the *Gododdin* anywhere near as old as the lifetime of the historical poet, there can be no question of Aneirin's autograph having survived, and the surviving late 13th-century manuscript does not say that it is a copy (or a copy of a copy) of a manuscript written by Aneirin himself. Despite the relatively late date of the manuscript, there is general agreement that the poetry within it goes back several centuries before the date of the oldest surviving copy, well into the early Middle Ages, with many Celtic scholars agreeing that much of the *Gododdin* was in fact composed in the 6th-/7th-century era of Aneirin himself.

In that extant copy, known as LLYFR ANEIRIN ('The Book of Aneirin'), Aneirin is mentioned—and the corpus of poems explicitly regarded as his work—four times. The first of these is semi-external, that is, it is not actually in the poetry, but rather in the opening prose rubric, in the hand of scribe A: *Hwn yw e gododin. aneirin ae cant* 'This is the *Gododdin*. Aneirin sang it'. The text of this rubric may, or may not, be older than the 13th-century *Llyfr Aneirin*.

Within the poetry itself, in the 45th stanza (AWDL) in the hand of scribe A (i.e. verse A.45), the poet calls himself 'Aneirin' (proved by rhyme) and goes on to say: *neu chein[t] e Ododin / kynn gwawr dyd dilin* 'I sang *Y Gododdin* before the dawn of the following day'. But this verse is unlike the heroic elegies of most of the corpus because of its mythological content and its use of the fictionalized persona of an incipient poet/hero Aneirin, and it cannot be dated on linguistic criteria any earlier than the 8th or 9th century. Therefore, *awdl* A.45 really only proves that Welsh tradition attributed the elegies to Aneirin, and called this corpus *Gododdin* or *Y Gododdin*, by *c.* 800.

Probably earlier is a pair of variants, in the hands of both scribes of *Llyfr Aneirin*, of a single introductory verse:

Gododin, go·mynnaf o-th blegyt —
yg gwyd cant en aryal en emwyt,
a guarchan mab Dwywei da wrhyt.
Poet gno, en vn tyno treissyt!
Er pan want maws mvr trin,
er pan aeth daear ar Aneirin,
nu neut ysgaras nat a·Gododin.

Gododdin man, I seek to entertain you—
here in the warband's presence, exuberantly in the court—
with the transmitted poetry from Dwywai's son, a man of high valour.
Let it be made known; and thereby, it will prevail!
Since the refined one, the rampart of battle, was slain,
since earth was pushed over Aneirin,
parted are muse and the Gododdin tribe.

Quoted above is the better preserved of the two versions of this 'reciter's prologue', that in the hand of scribe B, where it correctly precedes the series of elegies of the Gododdin heroes themselves, that is, the collection of verses that would seem to be *Y Gododdin* proper, attributed to Aneirin. If we take the

prologue literally, the killing of Aneirin and the end of Brythonic court poetry in the kingdom of Gododdin were simultaneous, which may mean that Aneirin himself was killed when that court fell, possibly in the *obsesio Etin* (siege of Edinburgh/Dùn Èideann) recorded in the Annals of Ulster for the year corresponding to 636. It is also significant that in B's text the prologue is itself preceded by a verse celebrating the victory of Eugein map Beli of Dumbarton (see ystrad clud) over Domnall Brecc of Scottish Dál Riata, a battle known to have taken place in December 642. The textual placement of this celebration of the battle of Srath Caruin might indicate that this Strathclyde victory was the specific occasion for collecting the *Gododdin* elegies, particularly if this well-known poet had died and his patron's court fallen in a siege waged in the recent past, six years before. Like the rubric mentioned above, this prologue is also a semi-external attribution in that it is explicitly the work of another poet, after Aneirin's death. But, unlike the rubric, it is formally an oral verse introduction to a body of verse declaimed in a court, not the written heading in a book of poems. This points to an early stage during which the *Gododdin* elegies were attributed posthumously to Aneirin and transmitted orally as court poetry, not necessarily yet recorded in writing.

In the most archaic text of the *Gododdin*, the verses in the hand of scribe B written in Old Welsh orthography, also called Text B2, Aneirin is not mentioned. But interesting negative evidence emerges from this archaic text, which may throw light on the original poet. The texts in the hand of scribe A and what B copied in Middle Welsh orthography (Text B1) have Christian references, some shared. B2 has none. This detail lends support to D. Simon Evans's idea that Aneirin was not a Christian or, at any rate, that he was not yet working in the Christianized poetic tradition known from other early Welsh poetry, even other *Cynfeirdd* poetry (*Ysgrifau Beirniadol* 10.35–44). Furthermore, there is no clear-cut reference to Aneirin's presence at the battle of Catraeth, the central event of the elegies, in either Texts B1 or B2; therefore this idea may not have been present in the *Gododdin* in its earliest state and it simply may not have been the historical case.

§3. aneirin in middle welsh sources

About 1230–40 Dafydd Benfras, a poet of the Gogynfeirdd, composed an *awdl* to Llywelyn ab Iorwerth of Gwynedd containing the reference: *i ganu moliant mal Aneirin gynt / dydd y cant 'Ododdin'* 'to sing praise like Aneirin of yore the day he sang *Y Gododdin*'. These lines, attributing the text to the poet, seem clearly to be an echo of A.45 (above), at a date roughly a generation before that of *Llyfr Aneirin*.

In the genealogies of the Welsh saints, a Dwywei is said to have been the daughter of a Lleennawc (probably the 6th-century ruler of the north British kingdom of Elfed of that name). This woman would have lived at approximately the right time to have been Aneirin's mother. If this is the same Dwywai, Aneirin would be the brother of St Deiniol. The uncommon name Dwywai always seems to be a woman's name; it is unusual that the poet is known by his metronym rather than his patronym.

Aneirin's killing figures in two of the Welsh Triads. In *Trioedd Ynys Prydein* (TYP) no. 33 he is called *Aneirin Gwawtryd Mechdeyrn Beird* (Aneirin of flowing inspired verse, high-king of poets). There, his slaying at the hand of Heidyn mab Enygan is listed as one of the 'Three Unfortunate Assassinations'. The same event is probably noted in TYP no. 34, 'The Three Unfortunate Axe-Blows', in which it is said that Aneirin received an axe-blow in the head from 'Eidyn'. It is unclear whether this Eidyn is the Heidyn of TYP no. 33 or from Aneirin's court at Edinburgh.

§4. etymology of the name

Neirin, without the initial vowel, is probably the correct Old Welsh form. One possible derivation is from Late Latin *Nigrinus* 'dark one'. An alternative Celtic etymology would involve a suffixed form of the Brythonic word corresponding to the Old Irish adjective *nár* 'modest, shy'. The 'mother's name' Dwywai is Celtic and clearly based on Old Welsh *Duiu* (Modern *Duw*) < Proto-Celtic **dēwo-* < **deiwo-* 'god'.

Anglo-Irish literature is a term employed by literary critics and historians to refer to literature in the English language by Irish men and women. Historically, much of that writing was produced by the English-speaking descendants of 17th-century English settlers and colonists in Ireland (Éire) who came to be known as the Anglo-Irish (otherwise known as the Protestant Ascendancy or simply the Ascendancy). Consequently, the term has sometimes been used to refer only to literature by members of that social class (figures such as Jonathan Swift, Oliver Goldsmith, in the 18th century, Maria Edgeworth, Charles Maturin in the 19th, W. B. Yeats in the 19th and 20th), though in the 20th century it gained general currency in relation to Irish writing in English, until it was superseded by the term Irish literature in English, or more problematically, Irish literature. Tellingly, the International Association for the Study of Anglo-Irish Literature (founded in 1970) in 1997 changed its name to the International Association for the Study of Irish Literatures, reflecting the complicated problem of acceptable names and definitions.

The term had its origin in late 19th- and early 20th-century debates and polemics on Irish culture and politics, which contributed to the ambiguity it has never completely escaped. The near hegemonic political power of the Protestant Ascendancy, in place since the victories of the forces of William of Orange of the 1690s, was in rapid decline in the last two decades of the 19th century, as land reform, increasing literacy and democratic advances in local government gave muscle to an Irish nationalism which had been gathering strength throughout a turbulent century. Power was passing to the Catholic majority of the island's population, which, although largely English speaking, included monoglot speakers of Irish (as Gaelic increasingly came to be called by nationalist ideologues and language revivalists) and a significant number of bilingual communities.

The waning Protestant Ascendancy caste found itself frequently referred to as the Anglo-Irish and began indeed to accept such usage as expressive of a divided political inheritance. Some polemicists, however, employed the term, in injuriously pejorative fashion, to highlight the non-Irish origins of the social group and to impugn the unionist politics it espoused. Concurrently, a movement gathered force that represented the view that the only truly *Irish* literature in Ireland was that composed over the centuries in Irish, i.e. Gaelic. In such Irish-Ireland polemics and propaganda Anglo-Irish literature was a term deployed to denationalize writings in English by Irish men and women as part of a political struggle whose aim was legislative independence for the country. By contrast, a small cohort of intellectuals drawn from the Protestant Ascendancy (chief of whom were the poet W. B. Yeats and the dramatist Lady Augusta Gregory) was at work seeking to persuade informed Irish opinion that a proper Irish national culture had found, as in the future it could find, expression in literature in the English language, thereby seeking to defend such writing from the charge that it was more English than Irish. Yeats himself as a young man in the 1880s and 1890s laboured assiduously to establish that a tradition of Irish writing in English did in fact exist (he anthologized and edited with great energy), a tradition he sought to extend in his own poetry. Lady Gregory, in her book *Cuchulain of Muirthemne* (1902), cast ancient Celtic saga material from the Ulster Cycle into a dialect version of the English spoken in Ireland to make such authentically Irish matter available in the language of the majority. It was the international reputation of Yeats as a poet and as co-founder of the National Theatre Company at the Abbey Theatre (where the repertoire was overwhelmingly in the English language) in Dublin (Baile Átha Cliath) which gave credibility in the early decades of the 20th century to the claim that an Irish literature in English, that expressed the life of the Irish people, had not only existed in the past but could be built on in the present to the future benefit of the country. The creation, therefore, of a modern literature in English was represented by Yeats and his

Anglo-Irish poet Seamus Heaney, left, receives the Nobel literature prize from Swedish King Carl XVI Gustaf, right, at the Concert Hall in Stockholm, Sweden, Sunday, 10 December 1995

confederates as a renaissance, or Irish Literary Revival.

Consequently, when literary histories and critical studies of the period (1880–1920) in which Yeats had been so active as a writer and cultural politician, began to appear, the term Anglo-Irish literature was taken by a majority of commentators to refer to a national body of writings, as in Thomas McDonagh's *Literature in Ireland: Studies in Irish and Anglo-Irish* (1916) and Hugh Alexander Law's *Anglo-Irish Literature* (1926). And when the government of the Irish Free State (Saorstát na hÉireann) at the end of the first decade of independence issued an Official State Handbook it included a chapter entitled 'Anglo-Irish Literature', which announced that the country possessed 'a great and distinctive national literature' in the English language, notwithstanding the fact that the year before Daniel Corkery, an influential critic and university professor of English, in his *Synge and Anglo-Irish Literature*, had argued that, Synge excepted, Anglo-Irish literature had ignored key aspects of Irish reality.

The literature around which this controversy had gathered was deemed to have had its origins in the 18th century, with Jonathan Swift (1667–1745) usually reckoned the first Anglo-Irish writer. Literature, certainly, had been composed in English in Ireland from well before Swift's birth (a 14th-century manuscript which includes the fantasy 'The Land of Cockayne' and a religious lyric known to be by a Friar Michael, is reckoned to be the earliest extant literary text in the English language in Ireland). There had been miracle plays in medieval Dublin and vernacular, often occasional, verse-making was not uncommon throughout the 17th century. Prose writing consisted of treatises on Irish conditions, of which Edmund Spenser's *A Vieue of the Present State of Ireland* (1596), composed in Co. Cork (Contae Chorcaí), is a famous example. It was during the late 17th and 18th centuries, however, as publishing and a book trade flourished and as fashionable Dublin enjoyed theatrical entertainments, that literature in English took deeper root in Irish soil, so that Swift, as writer of verse, treatises and a satirical masterpiece in *Gulliver's Travels* (1726), was not an isolated figure in a period when Ireland gave the world such luminaries as George Farquhar (?1677–1807),

Richard Brinsley Sheridan (1751–1816), Oliver Goldsmith (1728–74), George Berkeley (1685–1753), and Edmund Burke (1729–97).

The rise of English-language literature in Ireland occurred in a period of European cultural history that saw the construction of the idea of 'the Celt', to which the Ossian fervour of the late 18th century (see MACPHERSON; OISÍN) gave a powerful impetus. The Romantic Movement furthermore invested the peripheral, the defeated, the primitive, and the local, with the glamour or exoticism of difference. CELTICISM and ROMANTICISM often combined in fact to make Ireland, like Wales (CYMRU), Scotland (ALBA), and Brittany (BREIZH), the site of imagined otherness. Ireland in the immensely popular *Irish Melodies* of Thomas MOORE (1779–1852) became the home of poignant lost causes, in Maria Edgeworth's *Castle Rackrent* (1800) or William Carleton's *Traits and Stories of the Irish Peasantry*, 1830, 33) the object of amused or anthropological report. And by the end of the century in the work of W. B. Yeats (1865–1939) and other poets and dramatists of the Irish Literary Revival, the country was represented as a zone of Celtic spirituality, a territory of the imagination, scenic in the Romantic fashion: rural, primitive, wild and exotic. The Celticism of the Irish Literary Revival provided indeed further evidence for those who indicted Anglo-Irish literature as an alien impostor, since they believed such imaginings were the expression of a colonial condescension. This reaction to Revival Romanticism in part explains nationalist Ireland's vociferous objections to the dramatist J. M. Synge's major work, *The Playboy of the Western World*, which was greeted by a riot when it opened in the Abbey Theatre in 1907.

The 'Celtic' dimension of the Irish Literary Revival had its most searching critic in James JOYCE (1882–1941), who in his experimental fiction spared neither the rural idylls and romantic nostalgia of Anglo-Irish poetry (he did recognize Yeats's immense skill as a lyricist in the Celtic mode), nor the narrow nationalism of Irish Ireland. He assumed that his medium was the English spoken in Ireland (Hiberno-English in linguistic usage) and that his artistic destiny was to write in the European tradition of the novel, conscious that modernity presented itself in urban guise. His *Ulysses* (1922) and *Finnegans Wake* (1939) served notice that an Irish subject-matter could be the vehicle for unabashed, technically daring interrogations of contemporary reality and of the psychosexual, linguistic and mythic bases of consciousness. His successor in experimental ambition and achievement, Samuel Beckett (1906–89), likewise rejected 'Celticism'. Early in a career that would, in the play *Waiting for Godot* (1952) and the fictional trilogy comprising *Molloy* (1951), *Malone Dies* (1951), and *The Unnameable* (1953), offer dark-comic explorations of 20th-century desolation, he derided the Literary Revival's delivery of 'the Ossianic goods'.

Joyce's determination to write in a fully European tradition in part derived from his awareness that the Irish fictional and prose tradition in English remained decidedly threadbare when compared with the achievements of the French novel and with the stylistic variety of English writing (memorably exhibited in the brilliant pastiches of 'The Oxen of the Sun' episode in *Ulysses*). Fiction, it is true, had been composed in Ireland since the 18th century and in such figures as Maria Edgeworth (1744–1817), whose regional novel *Castle Rackrent* influenced Walter SCOTT, and Charles Maturin (1780–1824), whose *Melmoth the Wanderer* (1820) brought gothic imagining to new levels of intense complexity, Ireland had produced a few writers who could be measured on an international rather than a regional scale. However, the novel in 19th-century Ireland struggled to find a subject and a mode in an era when realism seemed triumphant in Britain. A society fractured by social and political division, enduring a traumatic linguistic shift, afflicted by the twin disasters of mass starvation and a haemorrhage of population was not one which could be easily represented in the steady glass of realism (see EMIGRATION; FAMINE). Indeed gothic fiction, as written by Maturin, Sheridan le Fanu (1914–73), author of *Uncle Silas* (1864), and Bram Stoker (1847–1911), author of *Dracula* (1897), had seemed to register the anxieties of the age more tellingly than those writers like William Carleton (1794–1869), who sought to represent their country in terms of a more conventional realism. Perhaps that the image of a great house in decline, a trope readily permitting gothic inflection, was realism's only contribution in the period to the imagination of disaster which Irish reality in the 19th century demanded. In the 20th century Yeats was to inherit that image of dynastic disintegration and make it a key element of a tragic vision which made his late

poetry a major entry in the world's literature of modern disinheritance.

Realism of limited scope did find its genre in 20th-century Ireland in the short-story form. George Moore (1852–1933) demonstrated in *The Untilled Field* (1903) that rural and provincial life could be the basis of short, episodic narratives and in the early decades of Irish independence, which was won in 1922, writers such as Seán O'Faolain (1900–91), Frank O'Connor (1903–66) and Liam O'Flaherty (Ó Flaithearta, 1896–1984) made the Irish short story—anecdotal, orally-based, lyrical in expression—a recognizable literary kind. Realism also affected the dramatic vision of Sean O'Casey (1880–1964), whose *Plough and the Stars* (1926) subjected the foundational event of the new Irish state to withering critique.

The emergence of an independent Ireland in the 20th century in time made debate about the national authenticity of Anglo-Irish literature less fraught. By the second half of the century, with Ireland as a committed member of the European Union, the ambiguities of national identity that the term inscribed seemed less urgent of resolution. Writing in the English language flourished in drama, poetry and the novel, while writing in Irish maintained a visible and distinctive presence in cultural life. Celticism was reckoned an enriching inheritance in an increasingly hybrid, multi-cultural society adapting to the global market-place (the phrase 'Celtic tiger' mixing economic hubris with tradition in an unsettling way). Only in Northern Ireland, the statelet created by British partition of Ireland in 1920, did the issue of national identity remain violently contentious. There, a remarkable body of writing in English responded to crisis and the violence it generated. For some, such as the poet Seamus Heaney (1939–), the concept of a 'Celtic' identity at the root of Irish experience remained as an interpretative possibility (though ironized and subtly interrogated), for others it no longer had real purchase on contemporary experience.

Terence Brown

Anglo-Saxon 'conquest'

§1. THE INVASION HYPOTHESIS AND THE ANGLICIZATION OF BRITAIN

In the traditional history of Britain, the process whereby the island, where Brythonic Celtic had once been spoken in most or all parts, became English-speaking in the south-east, i.e. became England, tends to be seen as a forceful armed invasion. Warlike Angles, Saxons, Jutes, and other Germanic tribes are said to have come across from southern Scandinavia and the northern European mainland, mostly in the first two centuries after Roman rule ended in Britain in AD 409/10. This view of Britain's Late Antiquity harmonizes well with an overview of British history as a series of invasions from the Continent, many of them well attested historically—the Roman conquest beginning in AD 43, the Viking invasions of the 9th and 10th centuries, the Norman conquest beginning in 1066. In other words, the idea of an Anglo-Saxon conquest is that language replacement in post-Roman Britain was achieved by population replacement and that warlike invasion and ethnic cleansing were the primary vehicles for population replacement.

§2. HISTORICAL EVIDENCE

As there are very few contemporary written records dealing with the subject of the Anglicization of post-Roman south-east Britain, it is not surprising that even fewer contemporary records can be found to confirm the idea of this sort of a Roman/Norman/Viking-

style Anglo-Saxon conquest. Two 5th-/6th-century historical witnesses give support to this picture.

First, the *Chronica Gallica ad annum CCCCLII* (Gallic chronicle to AD 452) states, at the year corresponding to 441: 'The British provinces having up to this time suffered various defeats and calamities were reduced to Saxon rule'. The Chronicle of 452 and its British entries have been the subject of intense controversy in recent scholarship. Miller (*Britannia* 9.315–18) thought that the British entries were Carolingian interpolations, ultimately dependent on BEDA's *Chronica Maiora* (Greater chronicle), whose date for the *adventus Saxonum* (coming of the Saxons) is itself based on (a probably mistaken reading of) GILDAS (see below). A similar line is taken by Bartholomew (*Britannia* 13.268–70). Muhlberger concludes that '[t]he Chronicler [of 452]'s date for the fall of Britain may well be approximate; nevertheless it is the approximation of a contemporary and not to be lightly dismissed' (*Britannia* 14.33). Michael Jones and Casey argue that 441 was not only contemporary dating, but precisely accurate (*Britannia* 19.367–98). Burgess countered that the fall of Britain to the Saxons in 441, though indeed a 5th-century entry and reflecting a real event, could be misplaced by some years and is likely to misinterpret the significance of what it is reporting, in other words, no large area of Britain had come permanently under Anglo-Saxon control so early (*Britannia* 21.185–95).

The second early source is the probably earlier 6th-century *De Excidio Britanniae* (On the destruction of Britain) of Gildas, §§23–4. There we are told that the *Saxones* were first recruited by the *superbus tyrannus* (proud tyrant) to defend Britain from the PICTS. They came at first in three *cyulae* (keels, ships) from Germany, but their numbers and demands for provisions soon grew unsustainable. They rose in revolt, destroying Britain's towns and killing its Christian citizens as far as the western sea, leading some BRITONS to give themselves up as slaves, others to seek refuge in rugged and remote places, or across the sea (presumably in ARMORICA). Later, the Britons rallied militarily under AMBROSIUS Aurelianus, culminating in the battle of BADONICUS MONS, but the Saxons still retained a sizeable part of Britain in Gildas's day. The *adventus Saxonum*, the Saxon revolt, and Ambrosius's rally all took place, as Gildas tells us, before his own birth. What he knew for a fact from his own life experience was only that Britain's Roman towns by then lay in ruins and that Anglo-Saxons had come into control of substantial areas of Britain. But his own generation had, as he tells us, known nothing but peace; foreign wars had ceased soon after Baddon. Since Gildas shows no trace of written records regarding the Anglo-Saxon conquest, his account must be based on oral tradition, probably augmented by imagination and moved by a powerful moral and religious sense of the meaning of history. He has thus constructed a stirring story of the past to account for Britain's 6th-century present and how different that was from the Roman period. Nonetheless, Gildas's non-contemporary account of the Anglo-Saxon conquest has served as the basis for those of BEDA and HISTORIA BRITTONUM and all subsequent accounts, and has only seriously been questioned by historians and archaeologists in the past 20 years or so.

§3. THE END OF ROMAN BRITAIN IN ARCHAEOLOGY

One of the primary impetuses for questioning the lurid Gildasian picture of the Saxon conquest of Britain is that the archaeological record for late Roman Britain, as it has become fuller and clearer over the 20th century, has offered very little confirmation for Gildas's description of smashed, burnt, and looted cities and massacred BRITISH civilians; rather, the usual picture for the Romano-British towns is of prosperity into the later 4th century, followed by gradual economic contraction, sometimes followed by abandonment and in other cases by continuity into the early Middle Ages and to the present day.

Archaeological evidence has been taken to suggest that by AD 410 there were already communities of Germanic-speaking settlers from across the North Sea—whose presence is revealed by a distinctive type of 'Romano-Saxon' pottery—established around the Roman towns of East Anglia and Lindsey (see Myres, *Anglo-Saxon Pottery and the Settlement of England*). If this late 4th- to early 5th-century material is correctly dated and forms a continuum with subsequent Anglo-Saxon occupation in the region, then the origins of England would go back well before the traditional date of AD 441×456 for the *adventus Saxonum*. The early Germanic material has lately alternatively been interpreted in a way more consistent with the sequence beginning at the traditional date in the mid-5th century (see Hines, *Britain 400–600* 17–36). But under neither interpretation are

we obliged to see masses of Germanic-speaking individuals born on the European mainland coming in sufficient numbers to swamp and replace the Romano-Britons. On the contrary, the clusters of pagan Anglo-Saxon cemeteries around the old Roman towns suggest an infiltration and continuity within the existing late Romano-British landscape.

§4. OLD ENGLISH AND BRYTHONIC

At the close of the ROMANO-BRITISH period in AD 407–10, BRYTHONIC was spoken from the Forth in the north to the English Channel in the south, and from the western seaboard of Britain to the east. (On the close affinities of the language of the PICTS north of the Forth and Brythonic, see PICTISH; SCOTTISH PLACE-NAMES.) It is not presently clear as to when exactly the Germanic speech of the ancestral English first began to erode the position of Brythonic in south-east Britain. Nor is it clear whether this erosion was propelled primarily by actual population replacement, with dislocation and genocide, or by a steady language shift in which the descendants of Romano-Britons came to raise their children as monoglot English speakers. Place-names of Celtic origin in eastern England indicate that a stage of bilingualism preceded the extinction of Brythonic speech (see Jackson, LHEB 242–61). A number of Brythonic names borne by prominent Anglo-Saxons are also consistent with a process of language shift: e.g. CERDIC, *Certic* (of Wessex, Anglo-Saxon Chronicle 495–534) = Old Welsh *Ceretic, Certic; Cædbæd* in the royal genealogy of the Anglo-Saxon kingdom of Lindsey (probably = Old Breton *Catuuodu);* CÆDMON (7th century) = OW *Catman(n);* CÆDWALLA (king of Wessex, later 7th century) = OW *Catguallaun*. PENDA and a number of other royal names from early Anglian Mercia have more obvious Brythonic than Germanic explanations, though they do not correspond to known Welsh names.

§5. ENGLISH POLITICAL EXPANSION IN THE EARLY MIDDLE AGES

Due to the establishment of Brythonic in ARMORICA by the mid-6th century (see BRETON MIGRATIONS), this same Celtic language had come to be spoken in a continuous arc from the river Forth to the Loire, including the present-day English counties of Durham and Northumberland (as part of the Brythonic kingdom of GODODDIN), the Pennines, CUMBRIA, Lancashire, Cheshire, the present West Midlands of England, the Cotswolds, and England's south-western peninsula including Somerset and Dorset.

From the mid-6th century onwards, the political expansion of the Anglo-Saxon kingdoms can be traced in the historical record. Though the English language generally followed, the assumption that Brythonic speakers were immediately and violently replaced by English speakers is not guaranteed. The fact that ASSER, writing in 893, was able to find Brythonic place-names for many localities that had been under Anglo-Saxon rule for centuries suggests that bilingualism was slow to recede, even in areas where Brythonic speech and identity were of limited utility in social advancement. According to the Anglo-Saxon Chronicle, Gloucester, Cirencester, and BATH were taken into English control in 577. Though this is possibly a retrospective entry, the date would be a broadly accurate one for the sundering of Brythonic political dominance over the overland route between Wales (CYMRU) and the Dumnonian peninsula (see DUMNONIA; cf. Sims-Williams, *Anglo-Saxon England* 12.33–4). EADWINE of Northumbria occupied the kingdom of ELFED in present-day West Yorkshire and expelled its native king CERTIC, probably *c.* 619 (*Historia Brittonum* §63). The kingdom of Gododdin (or at least the greater part of it) fell to the Northumbrians in the 7th century, perhaps specifically in 636 if this is the significance of *obsesio Etin* (the siege of Edinburgh) in the ANNALS of Ulster (see Jackson, *Anglo-Saxons* 35–42). The eastern portion of very early medieval POWYS, centred about the old Roman town of Wroxeter near Shrewsbury (Welsh Amwythig), probably came into English control in the third quarter of the 7th century (Wendy Davies, *Wales in the Early Middle Ages* 99–102; Rowland, *Early Welsh Saga Poetry* 120–41). Thus, by the later 8th century, lands north of the Bristol Channel under Brythonic rule were virtually limited to present-day Wales (with the modest extension of the kingdom of Erging in what is now south-west Herefordshire/swydd Henffordd) and Strathclyde (YSTRAD CLUD) in the north. For a valuable and influential discussion of the course of the Anglo-Saxon conquest as it relates to the contacts between Brythonic and Old English, see Jackson, LHEB 194–261.

Anglo-Welsh literature

§1. THE TERM AND ITS IMPLICATIONS

Although a substantial, distinctively Welsh, body of Anglophone writing emerged only in the 20th century, Welsh and English have coexisted in Wales (CYMRU) since the late Middle Ages and modern Welsh cultural history is the record of the (highly charged) interaction between the two languages. What has been at issue between them is evident in the continuing controversy over the most appropriate term for describing the English-language literature of Wales. 'Anglo-Welsh literature', a term commonly used for several decades following its adoption in 1922 to identify an Anglophone literature that recognized the seniority of 'WELSH' (i.e. Welsh-language literature), has for some time been more or less abandoned (apart from occasional uses of convenience) in favour of the more unwieldy 'Welsh writing in English'. This is following objections made by prominent writers who felt the older term implied a partial, incomplete and inferior 'Welshness'. These disagreements are not trivial: they are indicative of the cultural politics that surround and invisibly inflect this literature in a country where two languages live on terms of often tense and uneasy intimacy.

§2. THE BEGINNINGS OF ANGLO-WELSH LITERATURE

In 'A hymn to the Virgin' (*c.* 1470), Ieuan ap Hywel Swrdwal used Welsh spelling and native strict metre verse forms as a defiant demonstration of his competence in English. Post-colonial *avant la lettre*, this cultural hybrid acts as a fitting prologue to the cultural drama of subsequent centuries, during which several major Welsh-language writers were to try their hand at English for a variety of reasons, ranging from the religious conviction evident in the missionizing work of Morgan LLWYD (1619–59) and William WILLIAMS Pantycelyn (1717–91) to the cultural ecumenism practised by T. Gwynn JONES (1871–1949) and other 20th-century writers, which paved the way for the more convinced bilingualism and biculturalism of recent decades. It could even be argued that the English language was paradoxically instrumental in the 'recovery' of the very tradition (the bardic tradition; see BARDIC ORDER) upon which a modern, separatist, Welsh cultural nationalism came to be based: pioneering scholars and antiquarians of the late 18th century sought out and translated manuscript material furnishing evidence of ancient Wales's contribution to an increasingly imperial 'British' culture. Once it had thus been initiated, Welsh–English literary translation became a significant product and producer of significant interchange between Wales's two linguistic cultures and with the emergence, by the end of the 19th century, of a majority population that was monoglot English speaking (a significant percentage of which were incomers), translation from the Welsh became an increasingly important means of transfer of cultural 'capital' from a residual to an emergent society.

That for four centuries after Ieuan ap Hywel Swrdwal's time the English-language writing of Wales showed little awareness of the aboriginal language spoken by the overwhelming majority of the country's population is a reflection of the colonial character of Welsh Anglophone society, consisting as it did of Anglicized, or settler, groupings: the gentry, the Anglican clergy (see CHRISTIANITY), an embryonic professional

class, and a tiny urban bourgeoisie. The culture shift that had been initiated by the 1536 Act of Union of England and Wales (see ACTS OF UNION) was, however, reflected in the work of a self-styled 'Silurist' (after the Silures, the pre-Roman tribe of south-east Wales), the bilingual Henry Vaughan (1621–95), whose celebrated collection of metaphysical poetry, *Silex Scintillans* (Sparkling rock, 1650), betrays traces of his cultural situation in its vocabulary, its love of *dyfalu* (definition through conceits; see CYWYDDWYR), and its loving divinization of nature. And while almost all the English-language works produced in Wales down to the late 19th century were merely provincial imitations of fashionable English styles and genres (with Welsh travel writers such as Thomas Pennant even following English Romantic examples by removing all signs of aboriginal culture from their landscapes), Thomas Jeffrey Llewelyn Pritchard did choose to draw upon the recent folk memory of west Wales in his picaresque novel, *The Adventures of Twm Shôn Catti* (1828).

§3. THE EARLIER 20TH CENTURY

Modern Welsh writing in English was largely the product of the great migration of peoples, with resulting culture shift, that made possible the dramatic transformation of south Wales, during the second half of the 19th century, into a cosmopolitan centre of industrial civilization. This new literature came to public attention with the publication of Caradoc Evans's notorious short-story collection, *My People* (1915), in which the Welsh-speaking author savaged the Nonconformist society (see CHRISTIANITY) of his native Cardiganshire (CEREDIGION) by fashioning, through the literal translation of Welsh idiom, a form of speech that turned the rural characters into moral grotesques—lascivious, greedy and brutish. Regarded by Welsh-speaking Wales as a violent assault and a humiliating betrayal, and by emergent English-language culture as a gesture of affirmation and liberation, Evans's work set the tone for a *kulturkampf* (cultural struggle) between modern Wales's two linguistic communities that continued for much of the 20th century. Welsh literature most memorably, and controversially, countered through Saunders LEWIS's 1938 pamphlet, *Is There an Anglo-Welsh Literature?* The author doubted whether Welsh English (as contrasted with Hibernian English; see ANGLO-IRISH LITERATURE) was sufficiently different from standard English to sustain a linguistically and culturally distinctive literature. While recent cultural theory has moved away from the supposition that clear linguistic markers are necessary to distinguish non-English Anglophone literatures from the literature of England, issues relating to the ways in which the English of Welsh writers may, or may not, bear the linguistic and rhetorical traces of Welsh-language culture remain of great scholarly and cultural interest.

Caradoc Evans's fiction spoke most intimately to and for the first generation of Anglophone Welsh writers, many from Welsh-speaking backgrounds, who emerged between the two World Wars. These were eager to break free of a culture associated with backwardness, sexual repressiveness, and the perceived moral narrowness of a puritan religion. But even as Evans was setting the two cultures on a fateful collision course, other writers, such as Ernest Rhys (1859–1946), were capitalizing on the fashionable interest in the 'Celtic twilight' (and on the popularity of Lady Charlotte GUEST's *Mabinogion*) by adapting forms of WELSH POETRY, and legendary and historical materials from Welsh-language culture, to the taste of Anglophone readers.

The fiction writers of the new coalfield society (such as the trio of Joneses: Jack [1884–1970], Gwyn [1907–99] and Lewis [1879–1939]) embraced an international socialism whose lingua franca was English, and accordingly defined themselves against a Welsh-language literary culture then turning towards a Europhile nationalism. Their writings (particularly those of Rhys Davies [1901–78] and Gwyn Thomas [1913–81]) were also strongly marked by many of the features of the very society—Welsh Nonconformist Wales—from which they struggled to liberate themselves.

§4. DYLAN THOMAS

These tensions between the two cultures assumed a particularly vivid and creative life in the prose and poetry of Dylan Thomas (1914–53), whose upwardly mobile Welsh-speaking parents paradoxically ensured that their son would not be able to read (save in translation) the very work (the MABINOGI) from which they had plucked his name. This cultural schizophrenia found manifold expression in all Thomas's writings. A blend of fascination with and repulsion from his parents' rural Welsh-speaking Nonconformist west is at the root of

many of his most powerful works—from the surrealist stories of the thirties to many of the stories of *Portrait of the Artist as a Young Dog* (1940); and from 'After the Funeral' to 'Fern Hill' and *Under Milk Wood* (1954). And while the style of his poetry probably owes more to Gerard Manley Hopkins than directly to the Welsh CYNGHANEDD that Hopkins had absorbed, Thomas did display, from his early period as reporter for the *South Wales Daily Post*, a particular interest in pre-Nonconformist Welsh society, vaguely sensing that it could provide a modern Welsh writer with the raw materials of legend that had powered a cultural renaissance in other 'Celtic' countries such as Ireland (ÉIRE) and Scotland (ALBA).

Just as the Welsh language and its culture may be termed the dark matter of Anglophone Wales, invisibly bending its literary culture into strange forms and shapes and thus helping to give it its distinctive profile, so the English language and its cultures—Welsh and otherwise—may be termed the dark matter of Welsh-language Wales. Dylan Thomas offers a rare opportunity to see this latter process at work, since both the man and his work elicited such strong, open reactions (both positive and negative) from Welsh-language writers. His antics outraged influential members of a still largely puritan culture, his individualist stance was radically at odds with the collective, communitarian ethos of Welsh-language literature, and his notorious 'difficulty' was taken as an arrogant affront by those who prized the cultural cement of an accessible Welsh-language poetry. But Thomas's work also encouraged Welsh-language writers such as Euros Bowen (1904–88) to pursue their culturally transgressive symbolist interests and spoke profoundly to some of a 'typically Welsh' preoccupation with poetry as a sacramental act, a medium for expressing spiritual vision. The complex (and incomplete) history of Thomas's reception by Welsh-language culture is therefore a reminder that inter-cultural influences in modern Wales have not been a one-way traffic (Welsh to English). His case affords an insight into an important, yet still largely unresearched subject, namely the multivalent modes of correspondence between the two linguistic cultures of modern Wales.

§5. MID-20TH CENTURY

Thomas's passing interest in 'archaic' materials as a potential source of personal and cultural liberation from the grimly repressive world of Nonconformism was shared by other Anglophone writers of Thomas's period, such as the fiction writer Rhys Davies. A different interest in 'Celtic' sources is at work in the Christian Platonist poetry of Vernon Watkins (1906–67), who saw in the legendary figure of TALIESIN a symbol of the endlessly metamorphosing world of material and spiritual renewal, which, for a true poet, should be an eternal theme for visionary disclosure and celebration. It was, however, not an indigenous Welsh writer but the great London Welsh poet, David Jones (1895–1974), who was able to construct the most remarkable Christian modernist artefact out of a combination of English and Welsh/Celtic materials. From *In Parenthesis* (1937) to *The Sleeping Lord* (1974) his works are spectrographs, designed to demonstrate the internal richness of an authentic (as opposed to an Anglocentric) British culture.

Glyn Jones (1905–95) was the Anglophone Welsh writer of the 'first generation' who most creatively blended elements from Welsh and English to produce, both in poetry and in fiction, a distinctive Welsh modernist text—a reflection of the way in which he succeeded in reconciling in his own eirenic personality the psycho-cultural forces in conflict in his society at large. A Nonconformist, socialist aesthete, the Merthyr-born Jones so improved his residual Welsh during his formative period of development as a writer during the late 1920s and early 1930s that he became thoroughly inward with Welsh language and culture. Excited by his resulting discoveries, Jones used the metrics and rhetorical strategies of *barddas* (Welsh poetic art) to foreground the linguistic matter of his English texts, and (like his friend Dylan Thomas) used the fantasticating improvisatory rhetoric of oral story-telling (so evident for him in the endlessly branching stories of the MABINOGI) to produce remarkable 'magic realist' short stories and novels, one of which, *The Island of Apples* (1965), is loosely but suggestively based on the legend of Afallon (AVALON). In the process, Glyn Jones tended to invert the image of the rural west established in Caradoc Evans's writing—turning Evans's rural dystopia back into a pastoral utopia. Jones's interest in demonstrating creative continuities between the Welsh- and the English-speaking cultures of Wales was shared by his friend Idris Davies (1905–53), a native Welsh speaker from the Rhymney valley, whose long poetic

sequences (particularly *The Angry Summer* [1943]), choric compositions that capture the community drama of the Depression Years, reflect both the Welsh-language *gwerin* (folk) tradition of an intelligent, literate *volk* and the proletarian tradition of collective political action. In this respect, he echoed the practice of Glyn Jones, who found in the anonymous Welsh folk poetry he translated (*Hen Benillion*) the people's poetry that he yearned to reproduce to give voice to the mute experiences of the industrial proletariat.

With the coming of the Second World War, some Anglophone writers became aware of a dual threat—from Fascist Europe and from the Anglocentrism implicit in the militaristic, institutional and propaganda steps taken to build 'Britain' up to withstand the onslaught of the Axis powers. In protective reaction, they turned to the aboriginal sources of an 'alternative' Welsh culture (supposedly highlighted by scholarly anthropologists of the period) in a reversal of that 'primitive' and 'regressive' imaging of the rural Wales that characterized the followers of Caradoc Evans. Figures central to this movement were Brenda Chamberlain (1912–71) and Lynette Roberts (1909–75), but Alun Lewis (1915–44) also became briefly involved with them (before his departure for service in India). Although primarily committed to the socialist politics of his native coalfield society, Lewis was also attracted to the 'older' pre-industrial Wales, and it was as part of his tentative exploration (through translation) of the textual records of that culture that he participated in the project to produce a series of cheap broadsheets (each carrying text plus image) intended to reconnect the Welsh population with a 'lost' cultural background and thus to reorientate them in relation to present historical circumstances.

§6. THE POST-WAR PERIOD

Several of the Welsh writers of the future were to find that wartime experience sharpened their awareness of cultural distinctiveness and this helped eventually to alter the dynamics of inter-cultural relations in the post-war period. While something of the old mistrust of Welsh-language culture, finding particularly intolerant expression in comments by Gwyn Thomas, continued to linger in the minds of some Anglophone writers, others actively sought to identify with the 'senior' culture. If the 'sons of Caradoc' were prominent in the inter-war years, the 'sons of Saunders [Lewis]'—writers who adopted the cultural and political NATIONALISM of Welsh-language literature and actively campaigned for the social restoration of the language—were prominent among the new, emergent generation.

§7. R. S. THOMAS AND EMYR HUMPHREYS

Raised to speak only English, R. S. Thomas (1913–2000), who became the commanding poet of post-war Wales, was fascinated early by the Welsh-language culture he saw profiled, across Anglesey (Môn), in the craggy outlines of Snowdonia (Eryri). Learning Welsh as an adult, he nevertheless bitterly resented the fact that he remained insufficiently inward with the language to be able to write poetry in it, and attributed some of the tense power of his Anglophone writing to his consequent love–hate relationship with the English language. In some ways, he became equally embittered by his disappointed discovery that Welsh-language Wales was different—more cowed, obsequious, and complicit in its own decline, in his opinion—than he had idealistically imagined it to be. The presence of Welsh-language culture as a hidden dimension to his poetry—occasionally discernible in translations from the Welsh and open reference to Welsh history and culture, but also permeating his texts in other, far less evident ways—has recently been demonstrated most fully by Jason Walford Davies (*Welsh Writing in English* 1.75–127).

Gerwyn Wiliams has performed a like service for the work of Emyr Humphreys (1919–), the premier novelist and man of letters of R. S. Thomas's generation (*Planet* 71.30–6). Humphreys, too, learnt Welsh as a young adult, following his conversion to Saunders Lewis's version of nationalism in the light of the fires lit at Penyberth in 1936, when Lewis and two associates set fire to a British government bombing school in protest at its insensitive construction on a site of considerable historical importance for Welsh-language culture. Unlike his friend, R. S. Thomas, Humphreys was able not only to produce substantial creative work in Welsh but also to see his Anglophone work as a means of serving the same politico-cultural cause. In particular, he became fascinated by the continuities of Welsh history, from the time of the Gododdin to the present—a continuity he saw as maintained by the Taliesin tradition of *barddas*, and by the work of the

CYFARWYDD (the tribal storyteller and custodian of cultural memory), whose mantle he felt had now fallen on himself, as a fiction writer. Like R. S. Thomas, he followed Saunders Lewis in seeing Welsh history as pivoting around the disastrous ACTS OF UNION of 1536—after that date, the Welsh became obsessed with success on the terms defined, and seductively offered, by the Anglocentric 'British' state. Most of Humphreys's most ambitious and successful work—from *Outside the House of Baal* (1965) to the seven-novel fictional history of 20th-century Wales, *The Land of the Living* (1971–91)—constitutes an attempt to introduce the Welsh to their past and recent history in the ideological terms of the nationalist narrative that Humphreys himself has accepted. Unlike R. S. Thomas—and the majority of Anglophone Welsh writers—Humphreys is also a convinced believer in the achievements of Welsh Nonconformity, and his fiction includes some of the most sympathetic (yet not uncritical) representations of that remarkable religious culture. As a convinced Europhile, he has consistently sought to view Wales in the wider cultural context of European civilization. The inclusion in his *Collected Poems* of poems in Welsh, and of translations from the Welsh, clearly indicates that Humphreys regards his writing as an Anglophone expression of his total identification with Welsh-language culture, and his complete devotion to its restoration—like R. S. Thomas he regards Anglophone Wales as essentially a colonial aberration, and both writers have actively campaigned for official social recognition of Welsh and for the language's full political empowerment.

§8. POLITICAL DEVELOPMENTS FROM THE 1960S

The cultural politics inscribed in the writings of Thomas and Humphreys assumed greater sociopolitical significance during the 1960s, when a new generation of Anglophone writers—stirred to action by a series of events ranging from the drowning of a Welsh valley to provide Liverpool corporation with water to the politically orchestrated Investiture of Charles as Prince of Wales, and encouraged by the first parliamentary successes of Plaid Cymru (the Welsh nationalist party; see NATIONALISM)—became involved in campaigns on behalf of the Welsh language (see LANGUAGE [REVIVAL]) and sought a greater measure of political independence for their country.

§9. HARRI WEBB

One of the gurus of this generation was Harri Webb (1920–94), a sophisticated writer who, having learnt Welsh, dedicated himself to producing a populist poetry that would mobilize public opinion (not least in the Anglicized, industrial areas from which he himself hailed) on behalf of a radically egalitarian and republican model of Welsh nationalism. A graduate in French, Webb was well read in the early postcolonial theorizing of thinkers such as Frantz Fanon, and, like Saunders Lewis (from whose politically conservative version of nationalism he nevertheless strongly dissented), was able to see Wales in a European context—except that, unlike Lewis (who tended to associate Europe with the high civilization of its 'major' states), Webb was sensitive to the multiplicity of frequently disregarded 'minor' and subordinate languages and cultures of which Europe was in reality composed. Inclined to romanticize Welsh medieval history in some of his poems, Webb was at his most lively and effective when writing verses for popular performance—thus consciously acting as a kind of *bardd gwlad* (the memorializer in popular verse of the experiences of a locality) to an industrial proletariat he regarded as linguistically, and thus culturally, disempowered and disenfranchised. Always a strong believer in the Welsh language as the sole guarantor of a strongly distinctive Welsh culture, Webb, in his last years, lived out the extreme logic of his position—a position he shared with R. S. Thomas and Emyr Humphreys—by refusing to write any more poetry in English.

§10. CREATIVE TRANSLATORS

That this cultural rapprochement involved Anglophone writers other than those who had mastered Welsh was due not only to the changed political climate but also to other factors—including the availability of powerful creative translations of Welsh-language literature (particularly poetry) into English, thanks to the work first of Gwyn Williams (1904–90) from *The Rent That's Due to Love* (1950) to *Presenting Welsh Poetry* (1959) and then of Joseph Clancy (1928–) and Tony Conran (1931–), whose *Penguin Book of Welsh Verse* (1967) served as an introduction for many to the previously 'closed book' of Welsh *barddas*. Even writers such as John Ormond (1923–90), Leslie Norris (1921–) and Dannie Abse (1923–)—otherwise not noted for a sympathetic

interest in Welsh-language culture—showed signs, in their writings, of exposure to this literature in translation. As for Conran himself, his translations were only one instance of his lifelong interest in inscribing in texts, at the deepest level of form and syntax, those defining characteristics of what he termed Welsh 'civilization' that, he believed, were to be divined in the Welsh texts of the great 'classical' period of *barddas*. Conran's own substantial body of original poetry is consequently the most convincing and remarkable instance, in Anglophone writing, of a creative marriage between the two linguistic cultures of Wales. And in an attempt to focus attention on the frequently intangible ways in which Welsh-language culture has inflected Welsh Anglophone culture, he has developed such influential concepts as 'seepage' between the former and the latter, just as he has also argued for continuities of what Raymond Williams termed 'structures of feeling', evident for Conran in the multiplication by 'Anglo-Welsh' poets of praise-poems and portrait poems, long-standing features of Welsh-language poetic tradition.

§11. BILINGUAL LITERARY CULTURE

Conran is one in an important line of 'brokers' who have attempted to negotiate better terms between Wales's cultures. These include the editors of Anglophone Welsh journals from the *Welsh Outlook* (1914–33), through *The Welsh Review* (1939–48), and *The Anglo-Welsh Review* (1949–88) to *Planet* (1970–), and *The New Welsh Review* (1988–), all of whom have commissioned translations from the Welsh, essays in cross-cultural study, and other inter-cultural materials. Individuals of particular note who have sought to build bridges across the linguistic chasm include Aneirin Talfan Davies (1908–80) and Meic Stephens (1938–), whose work in this respect has helped transform relations between the two cultures ever since the late 1960s when, as founding director of the Literature Department of the newly established Welsh Arts Council (Cyngor y Celfyddydau, 1967–94), he set about creating an institutional infrastructure, with scholarly underpinnings and an ambitious programme of support for writers, that would adequately serve the needs of a bicultural national community.

§12. LATE 20TH CENTURY SOCIAL ENGAGEMENT

The writers who have emerged and flourished under this new cultural dispensation include Nigel Jenkins (1949–) and Mike Jenkins (1953–), both of them trenchant critics of cultural and economic imperialism in Wales and throughout the world, who have, in overlapping and contrasting ways, aligned their work as Anglophone writers with the interests of the Welsh-language culture to which they are both committed. And while, unlike these heirs of Harri Webb's 'liberationist' linguistic politics, many of the Anglophone authors of the 1970s through the 1990s have seemed culturally and politically disinterested, certainly compared with the frequently *engagé* writers of the 1960s, a few (such as Peter Finch [1947–] and Oliver Reynolds [1957–]) have shown a promising, resourceful interest in the way in which language itself becomes exhilaratingly defamiliarized and self-estranged in those zones where two linguistic cultures meet. And a highly mobile age's appreciation of the fluidity of personal and cultural identity is evident in the way in which the old, binary structure of Welsh Wales/Anglophone Wales, based upon what is nowadays termed an 'essentializing' model of culture, is giving way to a new national identity existing as, and through, an alternation, within the self and in wider, civic, society, between many possible cultural 'positions'. This version of multiculturalism finds its equivalent in the historical vision inscribed in a novel such as *Griffri* (1991), by Chris Meredith (1954–), an Anglophone writer who has become fluent in Welsh. The work deconstructs the romanticizing image of the 'BARD' as 'national' remembrancer, and in the process it dispels the last remnants of the glamour that had become attached to the Middle Ages in 'classical' Welsh national historiography, following the work of Saunders Lewis. *Griffri*'s medieval '*bardd*', living in a brutal, morally confused and confusing world (a society in violent transition, quite different from the stable hierarchical order imagined by pious medievalizers), is a lost soul, unable any longer, in an age of savage dis-membering, to remember who 'we' are.

§13. BILINGUAL IDENTITIES

The multiple pun in the word *Shifts* (the title of an important post-industrial novel [1988] by Chris Meredith) would seem to capture the spirit of an ideologically decentred, culturally eclectic age in which the relation between Wales's two linguistic cultures

appears to be changing rapidly and radically. This revolutionary transformation is the result, in part, of the twin, related phenomena of the decline of the traditional Welsh-speaking heartland communities of the rural west and north and the appearance, in the highly Anglicized regions of the south, of Welsh primary and secondary schools that are producing an unprecedented new generation of Welsh speakers from English-speaking backgrounds who will live their adult life in overwhelmingly English-speaking communities (see EDUCATION). It is too early, as yet, for a study of texts that graph the dynamics of this new kind of bilingual and bicultural society, lacking any specific grounding in geographical location or cultural institutions. But the new psycho-dynamics of bilingual identity which will surely find full, distinctive cultural and textual expression in due course, is hinted at in the work of a poet such as Gwyneth Lewis (1959–), equally at home (and equally unhoused) in two languages.

Ankou is the name for personified Death in Breton tradition. The figure itself is described in a similar fashion to the Grim Reaper: a tall, thin, white-haired figure dressed in black, or sometimes a skeleton in a shroud, carrying a scythe. His head, shadowed by a felt hat, can rotate 360 degrees, and he drives a carriage (*karrigell an Ankou*), which can be heard creaking in the night. In parts of Brittany (BREIZH), Ankou or his servant (*mevel an Ankou*) is understood to be the last person from the parish to have died in the previous year.

In BRETON, Ankou contrasts with the common noun *marv* 'death'. *Marv* is used to convey the abstract idea of 'death', as for example in the 16th-century Breton poem *Le Mirouer de la Mort* (Death's mirror). Although the poem itself is an adaptation of a Latin work, it does contain some insights into the contemporary Breton view of death, for example the conception of *an maru yen* 'cold death'. An Ankou figures in many other Breton literary works, from the early 16th-century Life of Saint Nonn to Abeozen's mid 20th-century book *Dremm an Ankou* (The face of death).

The word is cognate with Welsh *angau* and Old Irish *écae* 'death' < Proto-Celtic **ankowes*.

Anna Vreizh (Anne of Brittany; 1477–1514, r. 1488–1514) was the last ruler of a fully independent Brittany (BREIZH). Her father, Duke François II de Dreux (r. 1458–88) had waged a long campaign to ensure the existence of Brittany as an autonomous state, but his opponents were two very strong kings of France, Louis XI (r. 1461–83) and Charles VIII (r. 1483–98). Anna was only eleven years old when she acceded to the dukedom, and was under pressure both from the Breton nobility and external forces to assume a weak leadership rôle. However, she showed herself to be a strong and capable individual, very concerned for the welfare of Brittany. She was a noted patron of the arts and literature; her prayer book is preserved in the Pierpoint Morgan Library in New York, and her library

indicates that she was educated in a number of contemporary and classical languages. She made the Tro Breizh, a religious pilgrimage around the country, in 1504.

Her first marriage, to Archduke Maximilian of Austria who had been one of her father's allies against the French King Louis XI, took place by proxy in 1490. In 1491, the respective marriages of Charles VIII, king of France, and Anne were annulled, and they married each other. Charles died in 1498, and the following year Anne married his second cousin once removed, King Louis XII of France. They had no sons that survived childhood, but two daughters, Claude (1499–1524) and Renée (1510–76), did survive into adulthood. Claude married François d'Angoulême, who became King François I of France (r. 1515–47) and whose Édit d'Union made Brittany a part of France (see ACTE D'UNION). Anne's second daughter, Renée, married Ercole II d'Este, duke of Ferrara.

Annales Cambriae (The Welsh annals) are an important primary historical source for events in Wales (CYMRU) and north BRITAIN, with entries over a period corresponding to *c.* 450–*c.* 955. Like the Irish ANNALS, *Annales Cambriae* embody a list of noteworthy events such as battles, plagues, and the deaths of kings and saints, arranged by year, covering a span of several centuries. In some cases, Celtic annals bear a relationship to, and may have developed from, tables used to calculate the date of Easter over successive years. The language of *Annales Cambriae* is Latin with frequent Celtic proper names, most commonly Old WELSH.

It has long been known that the text of *Annales Cambriae* assumed its current form in the mid-10th century, at which point the entries stop. The text is certainly related to the various surviving versions of the Irish annals, sharing entries with these, especially early ones such as the death notices of Saints PATRICK, BRIGIT, and COLUM CILLE. Two entries in the first century covered by *Annales Cambriae* mention ARTHUR: the battle of BADONICUS MONS (Baddon) at a year corresponding to AD 516 or 518, and the battle of CAMLAN (at which Arthur fell) at 537 or 539. It is certain that many entries predate the 10th-century compilation of the surviving text. Many probably reflect records contemporary to the events commemorated, or compiled only a short time thereafter. However, it is unlikely that the entries as early as the death of Patrick or Arthur's battles could derive from contemporary annals, as there is no evidence that yearly records of this sort were being kept so early in Britain or Ireland (ÉRIU).

Kathleen Hughes identified three principal strata in *Annales Cambriae*. (1) A set of Irish annals served as the framework for the years 453 to 613. (2) The years from 613 to 777 had a nucleus of entries derived from a north British chronicle, perhaps kept in YSTRAD CLUD (Strathclyde) or WHITHORN. Special attention is paid in this section to events in Strathclyde and among the PICTS. (3) Finally, Welsh annals were kept at Mynyw, now Tyddewi (St David's), continued from the late 9th century till the mid-10th century (*Celtic Britain in the Early Middle Ages* 67–100). As some or all of the churches of Wales accepted the Roman calculation for the date of Easter in 768, it is possible that the north British annals were brought to Wales at about that time as part of a package of documents to be used for keeping the calendar (see EASTER CONTROVERSY). Hughes envisioned little or no overlap between these sections, in other words, no material was incorporated from the Chronicle of Ireland after 613, none from the notional 'North British Chronicle' before that date or after 777, and so on. One might account for such a state of affairs on the assumption that a scriptorium in Ystrad Clud began its own record *c.* 613 by adding to a set of Irish annals they had obtained from Iona (EILEAN Ì) and that a copy of these annals were then transferred to South Wales *c.* 777. On the other hand, Dumville has suggested that the Irish source was used beyond 613 and the North British beyond 777 (*Chronicles and Annals of Mediaeval Ireland and Wales* 211–24).

Though the entries begin in the 5th century, it is doubtful that any of the Welsh forms in *Annales Cambriae* could be linguistically older than the 8th century when the prototype of the text arrived in Wales as described above. If we extend the term 'Welsh' to include also the similar BRYTHONIC language of medieval north Britain, sometimes called CUMBRIC, then the northern stratum extending back to the early 7th

century would also count as Welsh.

JTK

Annales de Bretagne is the name of a French-language journal founded in 1886 by the *Faculté des Lettres* at what is now the Université de Haute Bretagne Rennes II (see ROAZHON). Its stated subject matter was 'the past of the Armorican region' (see ARMORICA). Joseph LOTH (1847–1934) was one of the chief early contributors, ensuring the journal's importance to Celtic studies. *Annales de Bretagne* contains articles on archaeology, culture, folklore, history, and language. In volume 81 (1974) the name was quietly amended to *Annales de Bretagne et des Pays de l'Ouest (Anjou, Maine, Touraine)*, transforming it from a specifically Breton journal to a regional journal of north-western France. The centenary volume in 1993 contains an index to the first 100 volumes.

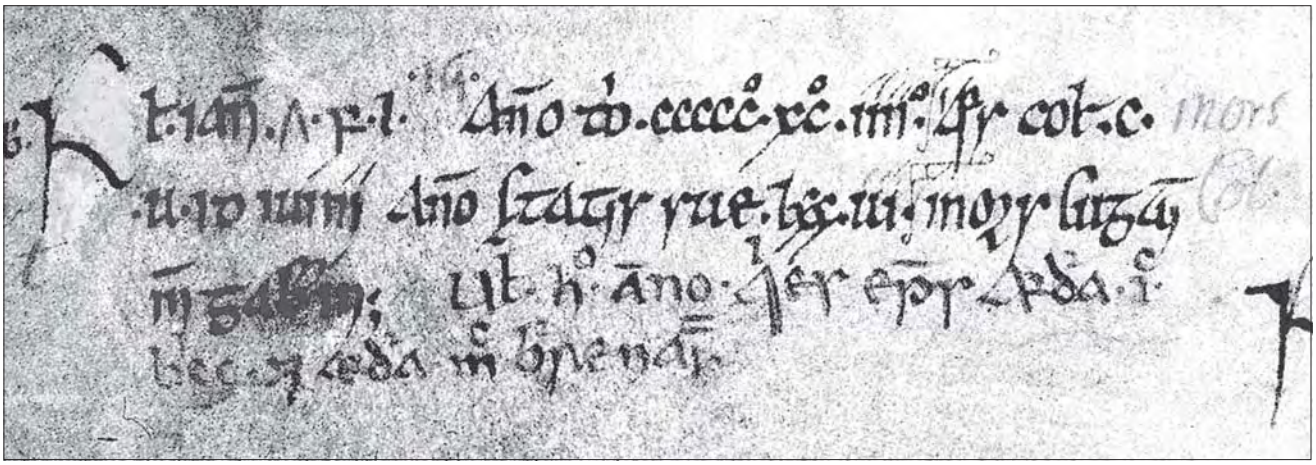
annals, Irish

§1. INTRODUCTION AND OVERVIEW

The Irish annals provide a contemporary record of Irish history for over a millennium, from the middle of the 6th to the early 17th century. In their genesis, they appear to owe little to the annal writing and chronicling of late antiquity, though, at a later stage, the compilers of the Irish annals borrowed from foreign reference works such as the Chronicle of Marcellinus, BEDA's *Chronica major*, and the *Liber pontificalis* (Pontifical Book).

The annals, as such, begin as a purely ecclesiastical artefact in the form of the casual recording of events thought worthy of remembrance in spaces in the *latercus* (the 84-year Easter table; cf. EASTER CONTROVERSY) in use in the early Irish churches (see CHRISTIANITY). Here, the entries served as mementos and also as markers that aided in the calculation of date ranges. The *latercus*, in turn, derives from Sulpicius Severus in early 5th-century GAUL. When such tables fell into disuse, the records were transferred to books of annals, and certain errors in that transfer betray their origins. For example, events are sometimes placed in the wrong 84-year period, especially when the compilers of the annals were trying to fill out the remoter past retrospectively. More evidence of the origin of the annals is found in their chronological system, best preserved (though with significant and trivial scribal corruptions that can both be corrected) in the Annals of Tigernach and *Chronicum Scottorum*, and, seriously disrupted, in the Annals of Ulster and the Annals of Inisfallen. The beginning of each new year is marked with *Kl* (the older form) or *K*, meaning Kalends of January, i.e. 1 January of each Julian year. Often the *feria* is given, i.e. the day of the week on which 1 January fell, counting Sunday as *f(eria) i*, Monday as *f(eria) ii* . . . Saturday as *f(eria) vii*. In addition, the epact (i.e. the age of the moon on 1 January, in the form *l(una) xi*, for example) is sometimes given as an additional datum. Unlikely as it may seem, the *Anno Domini* dating can readily be found from these data. This way of marking years derives directly from the *latercus* and it appears that this was the chronological system underlying the Iona Chronicle, the collection from which the early annals to *c.* AD 740 principally derive. But the Irish had also received Sulpicius's version of the Latin adaptation by Rufinus (*c.* AD 345–410) of the Greek chronicle of the early Christian historian, Eusebius (which was fitted out with kalends and *feriae*), and they drew on it heavily for biblical and Christian-imperial history down to *c.* AD 400 to fill out the disconcerting gaps in their own annals.

There is near consensus that the core of the early Irish annals is the Iona Chronicle, contemporary from the mid-6th century (or perhaps a little earlier), extending to *c.* AD 740, and compiled in the monastery of Iona (EILEAN Ì). The evidence is in the Chronicle's keen interest in Scottish and Northumbrian affairs,



An entry from the Annals of Ulster (Dublin, Trinity College MS 1282), the death of Colum Cille, founder of Iona: Kl Ian[air] 7 f, l. 15. Anno Domini .cccc.xc.iiii. Quies Col[uim] C[ille] .u. Id. Iuini anno ętatis sue .lxx.ui. Mors Eugain m. Gabrain . . . 'Kalends of January fifth feria, nineteenth of the moon, AD 594 [correctly 597]. Repose of Colum Cille on the fifth of the Ides of June in the 76th year of his age. Death of Éogan son of Gabrán . . .' To the right, in a faint later hand, the important event is noted again: mors Col[umbae] 'Columba's death'.

details about Iona with precise dates of accessions and deaths, and the use of phrases that show that the Chronicle was being written outside Ireland. The compilation may possibly have begun during the time of Columba (Colum Cille), and was in progress during the abbacy of Adomnán (679–704/5). Claims have been made for early annalistic recording at Bangor (Beann Char), but the evidence is scant and the most plausible entries are early dynastic back-filling in the interest of the rulers of Ulaid. Versions of the Iona Chronicle (sometimes drastically abbreviated) are preserved in the extant annals, but no surviving collection of Irish annals contains all of it: for example, original entries are absent in the Annals of Ulster and present in the Annals of Tigernach, and vice versa. The Iona Chronicle passed to Armagh (Ard Mhacha), and was continued there. This is clear from its details about Armagh, its clergy, and the local kingdoms in Ulster, and the retrospective insertion of material about St Patrick and Armagh. From the mid-8th to the mid-10th century detailed materials about Meath (Mide) and north Leinster (Laigin) were added from annals recorded at Clonard. The ensuing compilation, sometimes called the 'Chronicle of Ireland', passed in the very early 10th century to Clonmacnoise (Cluan Mhic Nóis) and, with varied additions and omissions, forms the basis of the Clonmacnoise annals down to 911, namely the Annals of Tigernach, *Chronicum Scottorum*, and the Annals of Clonmacnoise. After 911 the Annals of Ulster and the Clonmacnoise annals diverge. The common exemplar that lies behind the Clonmacnoise group also lies behind the Annals of Inisfallen (which, besides, has very many unique records) down to 1065, when the Clonmacnoise group and the Annals of Inisfallen become independent of each other.

§2. ANNALS OF ULSTER (ANNÁLA ULADH)

These important annals survive in two manuscripts:

(i) Dublin, Trinity College 1282, 2nd half of the 15th century/beginning of the 16th century. There are two main scribes: Ruaidhrí Ó Luinín (†1528), *ollam* to Maguire of Fermanagh, responsible for fos. 12–14, 16–129 = AD 81–387 and AD 431–1489); and Ruaidhrí Ó Caiside (†1541), archdeacon of Clogher, responsible for fos. 130r–143v = AD 1489–1504); and there are additional hands to 1504, 1510(?); the patron was Cathal Mac Maghnusa (†1498). The beginning of the MS is lost and there are lacunae for the years 1102–8, 1115.4–1162.3, and 1374–8. The first lacuna may be supplied from MS (ii); part of the second, viz. from 1115.5 to 1131.2 and from 1155 to 1162.3, may again be supplied from MS (ii); but for 1131.3 to late 1155 both MSS are incomplete.

(ii) Oxford, Bodleian Library, Rawlinson B 489, 1st

half of the 16th century; patron Ruaidhrí Mac Craith of Termonmagrath. There are two main scribes: Ruaidhrí Ó Caiside, archdeacon of Clogher (†1541), who wrote from the beginning to the entries for AD 952, and Ruaidhri Ó Luinín (†1528), who continued the work to AD 1507. A third scribe, whose name is not known, began with the annal for 1507 and continued, alternating from time to time with a fourth. Many hands appear in later folios, among them that of Matha Ó Luinín (†1588), grandson of Ruaidhri Ó Luinín.

It appears that MS (ii) is a fair copy of MS (i), but with supplementary entries, and it preserves some text lost by mutilation in MS (i), as detailed above. There are lacunae: 1131.3–1155, 1307–15. There are later manuscripts, English and Latin translations that derive from the historical work of Sir James Ware, and these are important for some post 12th-century additions and readings.

A remarkable aspect of the Annals of Ulster is the fidelity of the scribes in preserving Old-Irish forms, even archaisms. This lends the Annals of Ulster an authority greater than any other annals. This reliability does not, however, extend to its chronology, which has been seriously disrupted in the early period. The text is based on the Iona Chronicle (see EILEAN Ì) down to *c.* 740, and on annals compiled at Armagh (ARD MHACHA) and Clonard down to the mid-10th century, including retrospective filling out of the early part. From 1014, where the Annals of Loch Cé begin, they and the Annals of Ulster have a common core, most of which derives from Armagh. In the second half of the 12th century, this common core includes materials from a collection of annals made at Derry (DOIRE). From *c.* 1190 to 1220, the material common to the Annals of Ulster and the Annals of Loch Cé is effectively a Derry text. About 1225 they begin to diverge, though there is still a significant common core, which the Annals of Loch Cé expand with detailed and extensive narratives, especially of CONNACHT political and military affairs. Thereafter, the Annals of Ulster record is often very scant, but still the Annals of Ulster and the Annals of Loch Cé share their text (as, for example, in 1281–2, 1285, 1287, 1289, 1300–3, 1306) or elements of them. Entries become copious from the late 14th to the first half of the 16th century. The Annals of Ulster end at 1540 (apart from later additions). Much more research is needed to establish their later-medieval sources, recording centres, and relationships with other annals.

§3. ANNALS OF INISFALLEN (ANNÁLA INIS FAITHLEANN)

These annals occur in Oxford, Bodleian Library, Rawlinson B 503 (AD 1092 and later). From its beginning to the fifth entry for 1092, the MS is the work of a single hand, perhaps Diarmait Ua Flainn Chua, bishop and lector of Emly (Imleach) and abbot (r. 1092–1114), or Mael Ísa Ua hArrachtáin, abbot of Emly (†1092). The early part is a radically abbreviated version of the Iona Chronicle (see EILEAN Ì), in its Clonmacnoise recension. This same exemplar that lies behind the Clonmacnoise group also lies behind the Annals of Inisfallen down to 1065, when the Clonmacnoise group and the Annals of Inisfallen become independent of one another. Besides, the Annals of Inisfallen have much unique material. The first significant individual stratum was compiled at Emly in the 10th century, and some of it may derive from different local Munster monastic centres of recording, including Scattery. The annals may have been continued at Tomgraney (or in a house nearby), transcribed at Killaloe after the mid-11th century, and continued at Lismore from about the year 1119. The MS passed to a west-Munster monastery, almost certainly Inisfallen, in 1130×1159 (when there is a lengthy lacuna in Annals of Inisfallen). The annals were continued as a local record, sometimes in a very desultory manner, to the early 14th century by some 38 scribes (only six of whom made large contributions). There are lacunae for 1130–59, 1214–16, and 1285–95.

The so-called Dublin Annals of Inisfallen are an 18th-century compilation made in Paris for Dr John O'Brien, bishop of Cloyne (Cluain), and have nothing to do with the Annals of Inisfallen proper.

§4. ANNALS OF TIGERNACH (ANNÁLA THIGHEARNAIGH)

These annals survive in two manuscripts. Oxford, Bodleian Library, Rawlinson B 502, fos. 1–12 (2nd half of the 11th century to the 1st half of the 12th century), provenance Clonmacnoise, covers the period *c.* 807 BC–AD 160 and thus has no basis in contemporaneous Irish annal keeping. This is an imperfect copy, with the beginning also lost, of a chronicle of the ancient world, much indebted to the chronicles of Eusebius (*c.* AD 260–*c.* 340) and BEDA. Modern scholars sometimes refer to this compilation as the 'Irish World Chronicle'. It was probably put together in the 10th century at Clonmacnoise and no complete text of it survives.

The second copy of the Annals of Tigernach is Oxford, Bodleian Library, Rawlinson B 488, fos. 1–26 (2nd half of the 14th century), provenance Mac Fhirbhisigh school of history, Lackan, Co. Sligo. The Annals of Tigernach proper, which are in three fragments: (i) AD 489–766, (ii) 973–1003, (iii) 1018–1178, occur on fos. 7r–26v. A superior text of Tigernach, now lost, was available to the compilers of the Annals of the Four Masters. The name is a misnomer, too well established to be changed: Tigernach (†1088), superior of Clonmacnoise, had nothing to do with the compilation.

PRIMARY SOURCES

§5. CHRONICUM SCOTTORUM

These annals survive in a single manuscript: Dublin, Trinity College 1292 (*c.* 1640×1650); the scribe was Dubhaltach MAC FHIRBHISIGH, writing in a formal archaizing hand, and the patron Dr John Lynch, author of *Cambrensis eversus*. These are annals from AM (year of the world) 1599 to AD 1135. There is a lacuna, AD 723–804 (part of that year). Further annals, of unknown provenance, occupy the last four pages. These refer to the years 1141–50, and are in the ordinary hand of Mac Fhirbhisigh and his unidentified amanuensis. All later MSS of *Chronicum Scottorum* are modern copies of this manuscript, and have no independent value.

§6. ANNALS OF CLONMACNOISE

These annals are preserved, in whole or in part, in nine manuscripts. The earliest and most important version is by an unknown scribe (AD 1660), with marginalia and corrections by Roderick O'Flaherty (†1718), and now held at Armagh Public Library. The beginning and several sections of the manuscript are lost (fos. 36–8, 39–41, 104). It was owned by O'Flaherty (who supplied the chronology) and later by Walter Harris (†1761), the Irish antiquary.

Two other important copies are the one by Domhnall mac Thomáis Uí Shúilleabháin of Tralee (AD 1660), now held at the British Library, and the copy by Tadhg Ó Dálaigh (AD 1684) of the Armagh manuscript, made when its exemplar was complete, and containing a copy of the marginalia of O'Flaherty and of two others in the exemplar. All manuscripts derive from a translation of the lost original made by Conell Mageoghagan (Conall Mac Eochagáin), of Lismoyne, Co. Westmeath, and completed on 20 April 1627. It was made for Mageoghagan's kinsman, Toirdhealbhach Mág Cochláin, lord of Delvin.

Mageoghagan entirely omitted the traditional dating system and provided no other—a defect Roderick O'Flaherty tried unsuccessfully to mend. In their order of events, the Annals of Clonmacnoise are closer to the Annals of Tigernach than *Chronicum Scottorum*, and this suggests that its exemplar was close to the Annals of Tigernach. While the Annals of Tigernach break off at

1178 and *Chronicum Scottorum* proper ends at 1135, the Annals of Clonmacnoise deal with prehistory and the coming of Christianity (pp. 10–69 of the edition), have annals (with some lacunae) from the 5th to the 12th century, pedigrees (pp. 209–13), and detailed late medieval annals from 1200 to 1408. These later annals are very close to the Annals of Connacht, sometimes somewhat abbreviated, sometimes containing extensive entries absent in the Annals of Connacht.

§7. ANNALS OF LOCH CÉ

These annals survive in two manuscripts: Dublin, Trinity College 1293 (AD 1588) and London, BL Additional 4792 (2nd half of the 16th century). The scribes of the former MS were Philip Ballach [Ó Duibhgeannáin], Dubthach [Ó Duibhgeannáin], Conaire (son of Maurice) [Ó Duibhgeannáin] and others, and its patron was Brian Mac Diarmata (†1592) of Carraig Meic Diarmata on Loch Cé, near Boyle, lord of Mag Luirg, whose hand appears in some entries. This manuscript contains the annals from 1014 to 1571 (ends imperfect), with lacunae from 1138 to 1170, and from 1316 (end) to 1412. The second MS contains annals from 1568 to 1590 in the hand of Brian Mac Diarmata and others. After 1544 the Annals of Loch Cé are a contemporary record of events.

From the late 1230s, these annals have detailed narratives of CONNACHT high politics, including ecclesiastical details that point to Loch Cé as a place of recording: the grant of land to Trinity Island on Loch Cé by Lasairfhína, wife of O'Donnell and daughter of Cathal Crobhderg in 1239, the grant of the hospital of Sligo to the same church in 1242 (cf. Annals of Loch Cé 1245), and the quarrel over the election of the bishop of Elphin in which Clarus Mac Maílín (head of Holy Trinity was involved, †1251; cf. ALC 1251), a Latin narrative of which is inserted in ALC 1244–5. Materials derived from here and from the dynastic records of the Ó Mael Chonaire (Uí Mhaolchonaire) historians to the Uí Chonchobair of Connacht were compiled by an Ó Mael Chonaire in the mid-15th century, and the Annals of Loch Cé and the Annals of Connacht derive from that compilation. The Annals of Loch Cé (as the Annals of Connacht) were given their extant form by the Ó Duibhgeannáin school of history in the 16th century.

PRIMARY SOURCES
MSS. Dublin, Trinity College 1293, formerly H. 1. 19; London, BL Add. 4792.
ED. & TRANS. Hennessy, *Annals of Loch Cé* [with the lacuna from 1316 (end) to 1412 supplied from later transcripts of the Annals of Connacht].

§8. ANNALS OF CONNACHT (ANNÁLA CHONNACHTA)

The Annals of Connacht derive from a compilation made by a member of the learned family of Ó Mael Chonaire in the mid-15th century, and thus share an origin with the Annals of Loch Cé. From the beginning of the Annals of Connacht in 1224 to 1316 correspondence between them and the Annals of Loch Cé is very close—many years are identical apart from verbal differences and occasional additions. From 1462 to 1478 the Annals of Connacht are more copious than those of Loch Cé. From 1479 to 1544 close correspondence again sets in but the Annals of Connacht are generally fuller than the Annals of Loch Cé. The Annals of Connacht (as the Annals of Loch Cé) were given their extant form by the Ó Duibhgeannáin school of history in the 16th century.

They are preserved in Dublin, Royal Irish Academy MS 1219 (formerly Stowe C iii 1; xvi); scribes Páitín Ó Duibhgeannáin, Seán Riabhach Ó Duibhgeannáin, and an anonymous scribe, together with occasional additional hands. The manuscript contains annals from 1224 to 1544, with an entry for 1562 in a different hand; and with lacunae: 1378–84, 1393–8, 1427–32. Other MSS of the Annals of Connacht are copies of MS 1219 and have no independent value. These later MSS were used by Hennessy when he filled out the lacuna in the Annals of Loch Cé from the Annals of Connacht. For the greater part of the 16th century the Annals of Connacht are a contemporary record.

§9. ANNALS OF THE FOUR MASTERS (ANNÁLA RÍOGHACHTA ÉIREANN)

The Annals of the Four Masters represent the immense attempt of the Irish Franciscans and their fellow-workers, in the short space of three years, to gather together and then publish all the extant Irish annals they could find, as a record of Irish civilization. The work was left ready for press, with title-page and preface, but remained unpublished until the mid-19th century. The text runs from Noah's Flood to 1616. It contains a vast range of historical and historicist materials and is by far the most copious Irish annalistic collection. It contains a copy of the Annals of Ulster (that incidentally fills the 12th-century lacunae in the extant text), a copy of the Annals of Tigernach; perhaps the Annals of Loch Cé and/or the Annals of Connacht; at least one (and perhaps two) lost sets of early annals from Leinster (LAIGIN), some four lost books of late medieval annals; lost court annals with a distinctive Renaissance flavour from the O'Brien court in the 16th century; a remarkably detailed contemporary record of Irish history, 1589–1616; and much early historical verses. For large areas of Irish history, early and late, these annals are the only authority. The compilers discarded the old chronology in favour of the regnal years of Irish high-kings and an AM (*anno mundi*)/AD dating, and in doing so made many errors that can, however, be corrected. Less happily, they omitted many entries that reflected ill on the church and modernized the language, including many institutional terms. Regrettably, no serious attempt has been made to analyse the diverse sources of the compilation.

Manuscripts
(i) Dublin, Royal Irish Academy 1220, formerly Stowe C iii 3; 17th century; five hands, including Mícheál Ó CLÉIRIGH and Cú Choigcríche Ó Cléirigh; 522 folios. Annals from AM 2242 to AD 1171. Used by Dubhaltach MAC FHIRBHISIGH, who refers to it as belonging to Fearghal Ó Gadhra.
(ii) Dublin, University College, OFM, A 13; 17th century; an autograph copy but scribal signatures are absent in the body of the text. The hands resemble those of Mícheál Ó Cléirigh, but there are other hands, including marginal notes by John Colgan (Seán MAC COLGÁIN). Annals from AM 2242 to AD 1169.
(iii) Dublin, Royal Irish Academy 687 and 688, formerly 23 P 6 and 23 P 7; 17th century; the scribes are Mícheál Ó Cléirigh, Cú Choigcríche Ó Cléirigh, and Conaire Ó Cléirigh, and two others. Annals from 1170 to 1616.
(iv) Dublin, Trinity College 1301, formerly H. 2. 11; 17th century; the scribes are Conaire Ó Cléirigh and two other Ó Cléirigh scribes. Annals from 1334 [beginning lost] to 1605 in 466 folios.
(v) Dublin, Trinity College 1300, formerly H. 2. 9 and H. 2. 10; 1734–5, scribe Hugh O'Mulloy (Aodh Ó Maolmhuaidh); a transcript of MS (i) made for John O'Fergus.
(vi) Dublin, Royal Irish Academy 988 and 989, formerly 23 F 2 and 23 F 3; 18th century; scribe not named, but the text was transcribed in the house of Charles O'Conor of Belanagare, and apparently under his supervision. This is a transcript of MS (i).

The precise relationship between MSS (i)–(iv) is a matter of scholarly debate. Two views have been put forward, those of Walsh and Mooney (for bibliographical details, see below). According to Walsh, MSS (i) and (iv) are what remains of the set presented to the patron, Fearghal Ó Gadhra; MSS (ii) and (iii) are the copies forwarded to Louvain for possible printing. According to Mooney, MSS (i) and (iii) are the set presented to the patron, Fearghal Ó Gadhra; MSS (ii) and (iv) are what remains of the set forwarded to Louvain. It is more likely that Walsh's view is correct.

PRIMARY SOURCES
ED. & TRANS. Connellan, *Annals of Ireland, translated from the original Irish of the Four Masters*; Lizeray, *Le livre des quatre maîtres*; O'Conor, *Rerum Hibernicarum scriptores veteres iii* [O'Conor's edition, though based on MS (i), is seriously defective]; O'Donovan, *Annála Ríoghachta Éireann/Annals of the Kingdom of Ireland by the Four Masters* [volumes i–ii: pp. v–vi (dedicatory letter of the editor) + pp. vii–liv (introductory remarks, including original documents) + pp. lv–lxi (epistle dedicatory of Mícheál Ó Cléirigh) + pp. lxiii–lxxi (contemporary approbations of the work) + pp. 2–1187 (text and translation) + pp. 1189–93 (addenda and corrigenda); volumes iii–vi (pp. 2–2375 [text and translation] + pp. 2377–494 [a genealogical appendix, including original documents] + pp. 2494–8 [addenda

et corrigenda]); volume vii (pp. 405 [indexes]). There are three separate paginations: volumes i–ii, volumes iii–vi, and volume vii, each having separate pagination. The edition of volumes i–ii, AM 2242–AD 1171, is made from a corrected copy of Charles O'Conor's edition (Buckingham, 1826). This edition is based on MS (i), which was not available to O'Donovan. O'Donovan collated the text so derived with MS (v) and MS (vi), both 18th-century transcripts of MS (i). MS (ii) was not known to O'Conor or O'Donovan. The text of the remainder of the Annals (volumes iii–vi) is edited from MS (iii), collated with MS (iv)]. The transcription of the MSS is the work of Eugene O'Curry.

Donnchadh Ó Corráin

Annwn/Annwfn designates the OTHERWORLD or 'Un-world' in Welsh tradition. It is, for example, one of the central themes in the medieval Welsh tales known as the MABINOGI. In the First Branch of the Mabinogi (the tale also known as 'PWYLL, Prince of DYFED'), Pwyll encounters ARAWN, king of Annwfn, after losing his way, while hunting in the opening sequence. He then exchanges identities with Arawn for a year, leading to the long-term entanglement of Dyfed's royal house with the supernatural forces of Annwfn. Another important occurrence is in the early poem in the Book of TALIESIN (LLYFR TALIESIN), entitled PREIDDIAU ANNWFN (Spoils of Annwn). The title occurs marginally in the manuscript in a secondary hand using the later spelling *annwn*. This poem describes a series of mysterious adventures by ARTHUR and his heroes on otherworldly *caerau* or strongholds.

§1. DERIVATION

Annwfn has more than one possible etymology. As most recently canvassed by Sims-Williams (*Celtic Language, Celtic Culture* 62), the basic root is Welsh *dwfn* < Celtic **dumno-* < **dubno-*, meaning 'deep', from which at an early date it acquired the secondary sense 'world'. The prefix is either Celtic *ande-* 'in' or *an-* 'not, un-'. The former alternative, which goes back to Sir Ifor WILLIAMS (*Pedeir Keinc y Mabinogi* 99–101), is now endorsed by BROMWICH and Evans (*Culhwch and Olwen* 135).

§2. GAULISH 'ANDOUNNABO'

The word is probably also attested in GAULISH in the form ANΔOOϒNNABO *andounnabo* 'to the underworld spirits' on the Gallo-Greek inscription from Collias (RIG 1, G–183; De Bernardo Stempel, BBCS 36.102–5). The inscription was situated at a ritual site at a spring, which suits the interpretation. If De Bernardo Stempel's explanation is correct, the Gallo-Greek spelling should be understood as meaning [*anduwnavo*] < earlier *[*anduμn-*], in which the peculiar sequence OOϒ reflects an embarrassed attempt to represent a nasalized vowel [u], followed by a consonant [w], followed by an *n*.

The Gaulish spelling best suits the 'Un-world' etymology. If there is a spacial sense in this derivation, it is what is opposite to the world, its other side. The beings called *Andounnās* are possibly thought of as being in a state in which the depths and the habitable surface world are reversed and thus are accessible through a spring.

anoeth

This key word is fairly well attested in the early Welsh literature, but has not survived into Modern Welsh (as apparent from the citations in *Geiriadur Prifysgol Cymru*). *Anoeth* is crucial to two early ARTHURIAN texts. In CULHWCH AC OLWEN *anoeth* is the word used for the seemingly impossible tasks set by the giant Ysbaddaden Bencawr for his prospective son-in-law, Culhwch. In *Englynion y Beddau* ('Stanzas of the Graves'; see ENGLYNION), Arthur's grave is called *anoeth byd*, presumably meaning one of the mysteries (or the like) of this world (*byd*). As Sims-Williams suggests (*Arthur of the Welsh* 49), the line in the poem may in fact be an early allusion to *Culhwch*. The usual gloss is 'wonder, marvel, a thing difficult to find,' as in Bromwich and Evans (*Culhwch and Olwen* 186). According to *Geiriadur Prifysgol Cymru* the root element of the word is the same as in Welsh *cyf-oeth* 'wealth, power' (see further Bromwich, TYP 142–3). A derivation from Celtic

**anuχtā* 'what is not spoken', based on the Indo-European elements **n̥* 'not' + **uk^{w}-tó-* 'spoken', from the root **u̯ek^{w}-* 'utter', would suit the meaning well. Modern Welsh *annoeth* 'unwise' (the negation of *doeth* < Latin *doctus* 'wise') is not related, as the early spellings of *anoeth* all show single *-n-*, never *-nn-*.

Anois (Now) was a weekly newspaper in Irish, focusing mainly on issues related to the IRISH language and containing regular features on sport and entertainment as well as a children's page and a page for learners. Produced in Dublin (BAILE ÁTHA CLIATH) under the auspices of Gael Linn (a non-governmental organization established in 1953 for the promotion of the Irish language and heritage), *Anois* replaced the weekly INNIU and was published from September 1984 to June 1996.

Anterliwt, a Welsh term to be translated 'interlude', refers to a metrical comic play, punctuated by songs sung to the tunes of the day and performed mostly in the rural areas of north-east Wales (CYMRU) for popular entertainment. Initially performed in English playhouses sandwiched between two longer plays, the Welsh interludes, dating from the second half of the 17th century through to the beginning of the 19th, provided the whole evening's entertainment and were staged in fairs, in market squares, on village greens, or in the back yard of popular taverns. Welsh interlude writers include Elis Roberts (†1789), Edward Thomas, William Roberts, Huw Jones (†1782), Siôn Cadwaladr (*fl.* 1760), Lodwig Williams, and Jonathan Hughes (1721–1805), but most notably Thomas Edwards 'Twm o'r Nant' (1739–1810).

According to Thomas Edwards, an interlude pivoted on the sting of its social and moral criticism. Tyrannical land agents, corrupt solicitors and justiciary, ignorant curates and absentee incumbents, incompetent apothecaries, along with unjust tithe demands and the enclosure of common land, all fuelled the interlude's satire. Interludes by Thomas Edwards have a strong philosophical interest, while most plays are a combination of an admonitory sermon and lewd farce.

The Fool and Miser were two of the interlude's stock characters, others being personifications of Death, Love, Hypocrisy, and other human attributes. The Fool of the early interludes represented the phallic element of the play, symbolic of the generative power in nature; he was a frivolous dancer and performer of licentious actions, an opportunist, an assiduous teller of truth, and spirited in his successful attempts to bring the Miser to repentance for his callous life. Early interludes featured the Miser's wedding and its consummation on stage, called for his repentance, and finally acted out his death, taking good care to abuse the corpse. However the marriage and death scenes were later phased out.

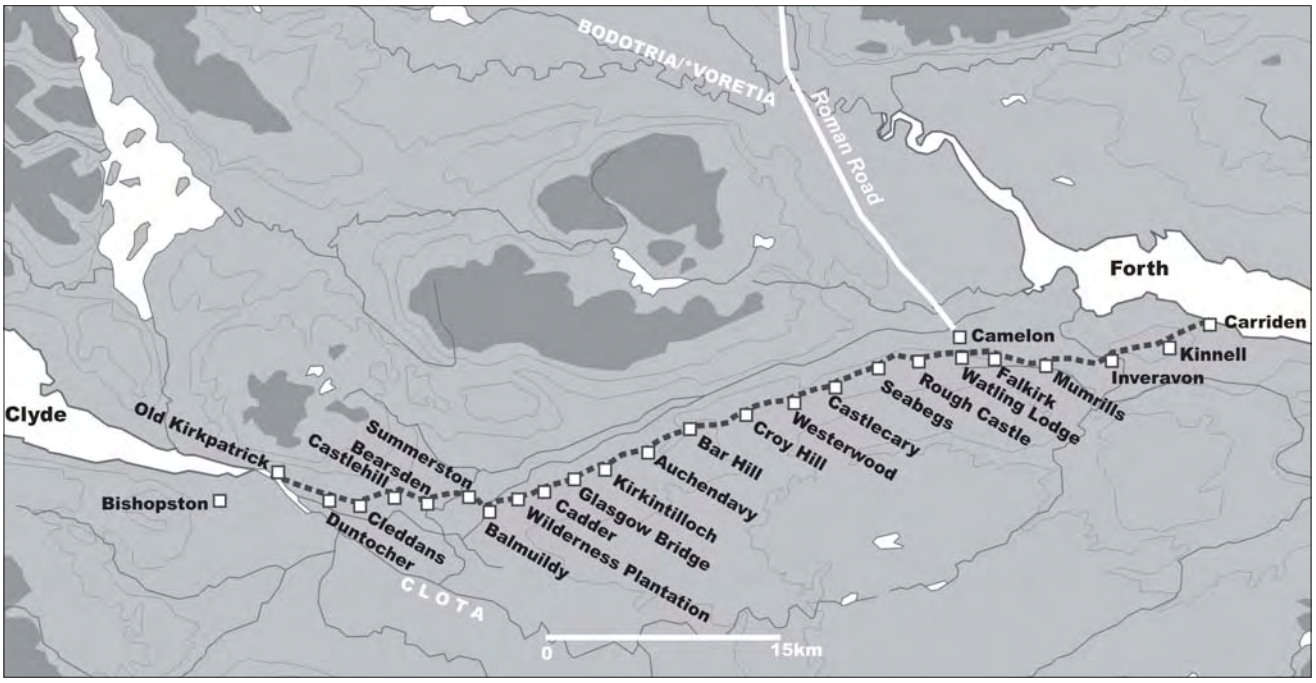
Rhiannon Ifans

The **Antonine Wall** is the northernmost of the two massive coast-to-coast linear defence systems constructed by the Romans to control the northern frontiers of the Empire's provinces in BRITAIN, the earlier and southernmost being HADRIAN'S WALL. The Antonine Wall is situated entirely in what is now Scotland (ALBA) and controlled traffic at the narrow isthmus formed by the estuaries of the Forth (Foirthe) and Clyde (Cluaidh) in Scotland's central LOWLANDS. The wall was constructed of turf and garrisoned with 24 small forts. Unlike the forts of Hadrian's Wall, whose ROMANO-BRITISH names are all attested, and a useful source of evidence for ancient BRYTHONIC, none of the ancient names of the Antonine forts is known with certainty. The wall is over 70 km long and runs from the fort at Carriden on the south shore of the Firth of Forth on the east to the fort at Old Kilpatrick on the north shore of the Firth of Clyde on the west.

The Antonine Wall was built for the Emperor Antoninus Pius (138–61), from whom it derives its modern name. Roman advances took place in the north in the



The line of the Antonine Wall and its Roman forts

period AD 140–2 and work on the wall began by 143. This advanced line was not held for long; by *c.* 163 the Antonine Wall forts had been evacuated and the Hadrianic line to the south restored as Roman Britain's chief linear defence. However, the Antonine frontier proved to be more significant culturally and linguistically than the great stone wall running across what is now northern England. In the post-Roman period, the cultural limit of the north BRITONS—and later the Angles of Bernicia (BRYNAICH) in the east—from the PICTS and Scots of DÁL RIATA ran close to the old line of the Antonine Wall at the Forth–Clyde isthmus. GILDAS mentions the northern turf wall in *De Excidio Britanniae* (On the destruction of Britain; §18), but he is completely ignorant of its true history and thus believes that it was built much later than it was, by the post-Roman Britons. BEDA (*Historia Ecclesiastica* 1.12) repeats Gildas's mistaken account, adding the interesting information that the name for the settlement at the eastern end of the wall was called *Pean-fahel* (lit. 'wall end') in PICTISH and *Penneltun* in Old English; the latter is a borrowing of the former with Old English *-tun* 'homestead' added. HISTORIA BRITTONUM (§23) correctly assigns the wall to the Roman period, though incorrectly to the Emperor Severus, and adds that its Brythonic name was *Guaul*. It is possible that the unusual name *Gwawl fab Clud* in the MABINOGI, which seems to mean literally 'Antonine Wall son of Clyde', derives from a written account, which, like some versions of *Historia Brittonum*, discusses the geography of the wall and Clyde in a passage using their Welsh names.

Anu was an Irish goddess who is attested in sources from the Christian period. In Cormac's Glossary (SANAS CHORMAIC, *c.* AD 900), Anu is called 'the mother of the Irish gods' (*mater deorum Hiberniensium*). According to the Middle Irish etymological list *Cóir Anmann* (The appropriateness of names), she was a goddess of bounty and blessing (*bandía in t-shónusa*), who was responsible for the prosperity of Ireland (ÉRIU), especially of the south-western province of Munster (MUMU). *Íath nAnann* 'land of Anu' occurs frequently as an epithet for Ireland in poetry. Two hills in Co. Kerry called *Dá chích nAnann* 'the two breasts of Anu', usually referred to as 'the paps of Anu' in English, underline her function as a fertility goddess and a personification of the land.

In versions of Lebar Gabála Érenn ('The Book of Invasions') Anu or Ana is identified with the war-goddess, the Morrígan. Danu, Danann, or Donann sometimes alternates with Anu as a variant form, but was probably originally a different mythological figure whose name has a distinctly separate origin.

The name *Anu* may be cognate with Old Irish *ainchess* 'a kind of basket' (if this means 'food/bread box' and is not a compound of *aín* 'reeds' and *cess* 'box' instead) and/or Greek (Dorian) πανία (πανία), πάνια (/*pánia*/) 'being filled, satiety (esp. with food)', Latin *pānis* 'bread', *penus* 'food', Lithuanian *penëti* 'to feed, to fatten up'.

PEB

Ar C'halan, Reun (René Galand) was born in 1923 in Kastell-Nevez-ar-Faou (Châteauneuf-du-Faou) in Brittany (Breizh). He studied at the University of Rennes (Skol-Veur Roazhon) and served in the Resistance during the Second World War. After the war he enrolled in a postgraduate programme at Yale University in the United States, where he was awarded a Ph.D. in 1952. He embarked on a teaching career and joined the faculty of the French Department at Wellesley College in Massachusetts, specializing in modern poetry. He is the author of several notable works on poets, poetry and other literary topics, including *Baudelaire: poétiques et poésie* (Baudelaire: poetics and poetry) and *L'âme celtique de Renan* (The Celtic soul of Renan) on the Breton author Ernest Renan (1823–92).

In Celtic studies, Reun ar C'halan is best known for his own poetry, written in Breton, for which he received the Xavier de Langlais Prize for Breton literature in 1980. His poems have been collected in three volumes: *Levr ar blanedenn* (The book of destiny), *Klemmgan Breizh* (Brittany's lament), and *Lorc'h ar rouaned* (The path of kings). His first book contains a variety of short poems and non-narrative prose. Several of these pieces are religious in character, while others are inspired by Breton history, world literature, and life in rural Brittany. Some of his poems are reminiscent of haikus, three-line epigrams describing a single moment, image or idea. The second book is a collection of short poems with titles such as *Trec'h Nomenoe* (Nominoë's victory), *An Douar Kollet* (The lost land), *Ar gerioù lozh* (The old words) and *Rod ar blanedenn* (The wheel of destiny). His third collection is inspired by the heroic literature of ancient Ireland (Ériu), and is divided into three sections: *Harlu mibien Uisnigh* (The exile of the sons of Uisnech; see longas mac n-uislenn); *Lazhadenn Fer Diad* (The killing of Fer Diad; see táin bó cuailnge); and *Follentez Suibhne* (The madness of Suibne; see suibne geilt). He generously donated his extensive collection of Breton books to the Department of Celtic Languages and Literatures of Harvard University at the time of his retirement from Wellesley in 1993.

Ar Skanv, Milig (known as Glenmor, birth registered as Émile Le Scanff) was an author, poet, and singer. He was born to a family of peasants in Maël-Carhaix (Mêl-Karaez), in Poher in west-central Brittany (Breizh), in 1931 and died in Quimperlé (Kemperle) in 1996. After studying philosophy, Ar Skanv became actively dedicated to the defence and preservation of the Breton language and its culture. His first concert was given in Paris in 1959. He presented himself as a rebel, regarding song as a political weapon, and expressed strong anti-clerical and anarchistic views. A powerful orator and striking figure with long hair and full beard, he became prominent in the dynamic Breton music scene and cultural revival of the 1970s (cf. Alan Stivell). Most of Ar Skanv's recordings and writings were under his pan-Celtic bardic name Glenmor, explained as conveying the sense 'land and sea': the Breton word *glenn* is an obscure word for 'earth', usually when contrasted with heaven, and Breton *mor* means 'sea'. In June 1979, Ar Skanv undertook a hunger strike in sympathy with a Breton militant arrested

for an attempted attack on the Palace of Versailles near Paris. In his last years, he gave up singing in public and devoted himself to writing.

SELECTION OF MAIN WORKS

Arawn is a king of the OTHERWORLD (*brenin Annwfn* or ANNWN) in the Middle Welsh prose wonder tales known as the Four Branches of the MABINOGI, specifically in the tale of PWYLL.

At war with Hafgan, Arawn strikes his enemy a mighty blow which would have proved fatal had he not struck a second blow that replenished Hafgan's strength. Arawn meets Pwyll Pendefig Dyfed (Pwyll, prince of DYFED) while out hunting when he discovers Pwyll's hounds feeding on a stag killed by his own hounds. To make amends, Pwyll, in the guise of Arawn, has to spend the next twelve months in Annwn, where he puts an end to the incessant fighting against King Hafgan, Arawn's enemy, by killing Hafgan with a single blow. Arawn, meanwhile, creates a new-style ideal kingdom of Dyfed characterized by amiability, kindness, and discernment of justice. There is an allusion to this story in the mysterious early Arthurian poem PREIDDIAU ANNWFN in LLYFR TALIESIN, which mentions Pwyll and his son and heir PRYDERI, but though *penn Annwfyn* 'the chief of the Otherworld' is mentioned, he remains nameless there. The theme of a switch of identities between a worldly and an otherworldly ruler, leading to the birth of a wondrous prince, is found elsewhere in Celtic tradition, for example, the Irish tale *Compert Mongáin* (Birth of MONGÁN). Because of his otherworld kingship, Arawn has sometimes been labelled as a Celtic god of the dead, but there is no clear-cut evidence to support this conclusion.

The figure of Arawn has been borrowed into the Icelandic *Egils saga ok Ásmundar* as *Arán /arawn/*.

The name *Arawn* may be derived from the Biblical name *Aaron* (that of Moses's brother), which is ultimately Hebrew (Jackson, LHEB 307). That the name *Aaron* had currency in Wales (CYMRU) as early as Roman times is shown by GILDAS, who wrote that Aaron and Iulianus were Christian martyrs at *urbs legionis* ('the city of the legion', probably CAERLLION-ar-Wysg [Caerleon]) in the time of the Emperor Diocletian (r. AD 284–305). A cleric with the Old Welsh name *Araun* witnessed two charters of *c.* 860 preserved in the Book of LLANDAF.

Rhiannon Ifans

Arberth, now Narberth in Pembrokeshire (sir Benfro), Wales (CYMRU), was a royal site of the old tribal kingdom of DYFED and the scene of much of the action in the Middle Welsh wonder tales PWYLL and MANAWYDAN, the First and Fourth Branches of the MABINOGI. Gorseð Arberth is described as a mound or hillock near the court where supernatural events are prone to happen. In *Pwyll*, Gorseð Arberth is where the mysterious horsewoman RHIANNON first appears. She cannot be overtaken, though her horse seems to proceed only at a walking pace. In *Manawydan*, the protagonist and his companions are on Gorseð Arberth when a mysterious mist descends and takes with it the remaining inhabitants of Dyfed, their habitations, crops, and livestock. In these episodes the mound at Arberth is closely similar to Irish *SÍD*-mounds (see Ó Cathasaigh, *Éigse* 17.137–55; Sims-Williams, *Celtic Language, Celtic Culture* 57–81) or 'fairy mounds' that figure as supernatural residences and portals into the OTHERWORLD in Gaelic tradition (see also ANNWN). The name *Arberth* is probably derived from Celtic **are-kwert-*, referring to 'what stands before a dyke' or 'hedge', that is, part of a constructed earthwork, though a connection with *aberth* 'sacrifice' is not impossible. Modern *Narberth* arises from a mis-segmentation of *yn Arberth* 'in Arberth'.

Ard Mhacha (**Armagh**), 'high place of Macha', Latin *Ardmachanus*, is traditionally known as the ecclesiastical capital of Ireland, the church founded by St Patrick. Though physical remains of Irish churches as early as the Conversion are extremely rare, there is archaeological evidence of a church foundation at Armagh from the 5th or 6th century, probably built upon an existing pre-Christian cult site as reflected in the animal sculptures and sword-bearing human form known as the 'Tanderagee Idol'. The ditch surrounding the Cathedral Hill at Armagh has given a radiocarbon date of *c.* AD 290, suggesting that the site was the successor of the nearby prehistoric monument at Emain Machae, the names of both sites being connected with the goddess and Ulster Cycle figure Macha.

However, there is no comparably early evidence to prove that the transition from pagan sanctuary to church was affected by the historical Patrick. That connection first appears when the wider cult of Patrick emerges in the later 7th century, as seen in Muirchú's *Vita Patricii* (Life of Patrick; 680s or 690s) and the *Liber Angeli* (Book of the Angel; 680s)—at a time when Armagh was a monastery ruled by a bishop-abbot. The *Liber Angeli* has Patrick directed to this spot by an angelic revelation that declares it to be the main church of the whole island, of archiepiscopal status and from whom the only appeal is to Rome. This propaganda, combined with the presentation of Patrick as 'apostle' of the whole island, was effective: in the guarantor list of the legal text Cáin Adomnáin (697) the bishop of Armagh comes first in the list of bishops; the abbot-bishop was the *comarba Pádraig* 'Patrick's heir'. Armagh grew in size (e.g. it had a skilled scriptorium [centre for producing manuscripts] in the early 9th century, as shown in the Book of Armagh) and later a network of streets lined with many craftsmen. By the 11th century its abbacy had become hereditary among the Clann Sínaigh, and through a member of that family, Cellach (made bishop in 1106), it began to be a centre of 'the 12th-century reform' of the Irish church. At the Synod of Ráith Bressail (1111), Armagh was given its modern boundary, while at the Synod of Kells (1152) it was made an archbishopric and given the primacy of Ireland (Ériu). This primacy was soon to be disputed by Dublin (Baile Átha Cliath), with the legal issue not resolved for many centuries, while the practical problem remained that Dublin was the dominant political and urban centre.

Its last Gaelic archbishop was Nicholas Mac Maol-íosa (1272–1303), after whom the archbishops lived outside Armagh; of these non-Gaelic archbishops, the most distinguished was Richard Fitzralph (1346–60), the theologian. The present city's form owes much to Archbishop Richard Robinson (1765–94), who rebuilt the cathedral, originally constructed for Archbishop Maolpadraig O'Scanlon (1261–70), while the present twin-towered Roman Catholic cathedral was built following Catholic emancipation (1829) between 1840 and 1873.

Ard-Mhúsaem na hÉireann (National Museum of Ireland)

§1. INTRODUCTION

The first part of the current National Museum of Ireland to open was the Museum of Natural History in Merrion Street, Dublin (Baile Átha Cliath), completed in 1857 to a neo-classical design by Frederick Clarendon. This was followed by the Museum of Science and Art in Kildare Street. Designed by Deane and Deane, this building was completed in 1888, opening two years later. Upon completion, the Royal Irish Academy (Acadamh Ríoga na hÉireann) bequeathed its large collection of antiquities on the state, the latter forming the core of the nascent national collection.

The National Museum presently consists of four sections, three of which are in Dublin City. The art and industrial material is now housed in Collins Barracks and the Kildare Street building is given over entirely to archaeology. The natural history collection remains in Merrion Street, while a Museum of Country Life has been established on the western side of the country, at Castlebar, Co. Mayo (Caisleán an Bharraigh, Contae Mhaigh Eo).

The National Museum of Ireland is a statutory body with designated functions, and legislation provides an operational framework for the museum's activities. The practice of both archaeology and conservation is

regulated, and licenses are required to excavate, alter (conserve), and export archaeological objects. The Irish Antiquities Division has a central rôle in the processing of licence applications, which enables the museum to regulate professional standards for archaeology and conservation, and to contribute to the formulation of policy in these areas.

Speakers of IRISH produced a great many of the objects in Irish museums, much of the traditional music (see IRISH MUSIC) and folklore, and many of the monuments and vernacular buildings that dot the countryside. The Irish language is therefore a window which provides crucial access to the cultural landscape in which these objects and structures originally resided. The National Museum of Ireland operates a bilingual policy that seeks to promote the use of the Irish language.

§2. COLLINS BARRACKS

Ireland's Museum of Decorative Arts and History is located at Collins Barracks. On display are a range of collections, including furniture, costumes, ceramics, silver and glassware, numismatics, and weaponry. The Collins Barracks site also houses the conservation laboratory, Administration Department, most of the Services Department, and the excavations store of the Irish Antiquities Division.

§3. KILDARE STREET

The Kildare Street Museum houses the collections, archives and displays of Irish archaeology and the Egyptian and classical collections. Some of the museum's most notable displays are its vast collection of Irish Bronze Age (*c.* 2000–*c.* 500 BC) gold-working and the numerous artefacts recovered from excavations on the Viking towns of Dublin and Waterford (Port Láirge). The Treasury Room contains a number of internationally renowned artistic masterpieces of IRON AGE (*c.* 400 BC–*c.* AD 500) and early medieval date. The former include the Broighter hoard, with its brilliantly executed gold collar TORC, while the latter includes many ecclesiastical pieces from Ireland's early Christian 'Golden Age' of the 8th and 9th centuries AD, such as the Ardagh and Derrynaflan hoards of altar plate, the shrine of St PATRICK's bell, the 'TARA' BROOCH and the Clonmacnoise crosier. On a more modern note, a separate gallery hosts a collection of material relating to the Easter Rising of 1916 and the following War of Independence (see IRISH INDEPENDENCE MOVEMENT).

§4. THE MUSEUM OF COUNTRY LIFE

The Museum of Country Life, Turlough Park House, Castlebar, Co. Mayo, opened in 2001 to exhibit the collections of the Irish Folklife Division of the National Museum of Ireland. The collection contains approximately 50,000 items, mainly rural in origin, as well as documentation of the skills that produced them. The exhibitions focus on ordinary Irish rural life by emphasizing the continuity of traditions and lifestyles that were established for several hundred years and lasted well into the 20th century.

Arduinna (also Arduenna, Ardoinna, Arduinne, Ardbinna) was the eponymous deity of the ancient Ardennes Forest that still covers portions of Luxembourg, Belgium, and France (Ardennes). CAESAR described *Silva Arduenna*, the most extensive forest in GAUL, as stretching from the RHINE and the borders of the Treveri to the territories of the Nervii and Rēmi (see BELGAE), an expanse of about 805 km. Derivations proposed for the name *Arduinna* include a divine name based on Celtic *ardu-* 'high'. Images of trees flank the dedication DEAE ARDBINNAE found near Düren, Germany. A bronze sculpture depicts Arduinna sitting on a BOAR, with a quiver on her back and a knife in her hand; at Rome, another female figure equipped with bow and quiver is inscribed ARDUINNE (compare ABNOBA, tutelary goddess of the Black Forest). A goddess depicted holding a staff surmounted by a boar, her attribute, may further represent Arduinna.

Paula Powers Coe

Arfderydd is named in several early Welsh and Welsh Latin sources as the site of a battle. This battle, like those of CAMLAN and CATRAETH in Welsh tradition and MAG ROTH in Irish, figures as a cataclysm in which a complex chain of events (a full account of which does not survive) draws diverse heroes and dynastic lineages together into a destructive conflict, which became the wellspring for epic literature. In the MYRDDIN poetry (*Ymddiddan Myrddin a Thaliesin*, *Afallennau*, *Hoianau*, *Cyfoesi*), Arfderydd is the event at which Myrddin, previously a young noble warrior and follower of the overlord Gwenddolau ap Ceidiaw, was transformed by battle terror and thus received the gift of PROPHECY (see also LLYFR DU CAERFYRDDIN).

The oldest notice of the battle is the bare *bellum Armterid* in ANNALES CAMBRIAE at AD 573. In a later expansion of the annal—confirmed in the Welsh TRIADS and the Myrddin poetry—Gwenddolau is said to have been defeated and killed at Arfderydd. The expanded annal names the sons of Eliffer, Gwrgi and PEREDUR as present at Armterid; the deaths of *Guurci et Peretur* are noted in a primary entry at *Annales Cambriae* 580. In the Myrddin poetry, RHYDDERCH HAEL of Dumbarton (see YSTRAD CLUD)—well attested as a friend and contemporary of St COLUM CILLE (*fl.* 563–97)—appears to be involved in the battle and its aftermath. Therefore, the era of Arfderydd can be verified from more than one source. Like Rhydderch, the historicity of *Gurci et Peretur mepion Eleuther cascord maur* (Gwrgi and Peredur sons of Eliffer of the great war-band) is confirmed by their presence in the Old Welsh GENEALOGIES in BL MS Harley 3859. They figure there as descendants of the northern patriarch, COEL HEN.

As shown by Skene in the 19th century, the battle-site was near the present-day western English–Scottish border at Liddel Strength, Arthuret parish (which preserves the old name), near Carwinley (*Kar-Windelhov* 'fort of Gwenddolau' in 1202). It is not impossible that the presence of someone important named Gwenddolau at the battle was inferred from the nearby place-name as the tradition developed in north BRITAIN. *Kar-Windelhov* could in fact mean 'fort of the fair dales' and have nothing to do with any historical figure. On the other hand, *Ceidiaw* is a regular early Brythonic man's name, a shortened pet-form derived from a compound beginning with the very common element *cad-* < Celtic **catu-* 'battle'. A hero called Ceidiaw of the right period is named in the GODODDIN. In the genealogies of *Bonedd Gwŷr y Gogledd* (Descent of the men of the north), there are some lines of descendants from Coel Hen that were not present in earlier Harleian pedigrees—and thus not necessarily historical—and one of these ends in a Gwendoleu son of Keidyaw. Though GEOFFREY OF MONMOUTH does not name the battle-site, his *Vita Merlini* (*c.* 1150) describes a war between the kings Guennolus (= Gwenddolau), Peredurus, and Rodarchus (= Rhydderch), in which Merlin lost three brothers and went mad.

Arfderydd (spelled Arderyð) is mentioned in four TRIADS: TYP no. 29 'Three Faithful War-bands' includes that of Guendoleu mab Keidav; TYP no. 31 W lists the retinue (*gosgorð*) of 'Dreon the Brave at the Dyke of Arfderydd' as one of the 'Three Noble Retinues'; TYP no. 44, the 'Three Horse-Burdens', tells that one horse carried Gwrgi, Peredur, Dunawd the Stout, and Cynfelyn Drwsgl to see the mist of Gwenddolau Arfderydd; TYP no. 84 counts Arfderydd as one of the 'Three

Futile Battles' because it was fought for 'the lark's nest'. Jackson (*Ysgrifau Beirniadol* 10.45–50) argued this last might allude to the Brythonic place-name *Caerlaverock* in south-west Scotland (ALBA), some 30 km from Arthuret.

We do not have enough sound early evidence to determine the political reasons for the battle of Arfderydd or its historical consequences. However, the fact that all the principals were BRITONS—fighting against each other rather than against SCOTS, PICTS, or Anglo-Saxons—and that the site was near the old ROMANO-BRITISH frontier at HADRIAN'S WALL, suggests that the formal division of Britain and its people in Roman times were still determining factors for conflicts in the later 6th century. Of the dynasties involved, only that of Rhydderch surely continued.

JTK

Arianrhod ferch Dôn (variant: Aranrhod) is one of the central characters in the Middle Welsh wonder tale MATH FAB MATHONWY, the Fourth Branch of the MABINOGI. Following the rape of King Math's virgin foot-holder Goewin, he seeks Arianrhod as her replacement. She asserts her virginity, but when she steps over Math's magic wand, she gives birth to two beings—Dylan the fish child and 'a little thing' that was nurtured by the magician GWYDION and subsequently reappears as LLEU, the tale's protagonist. Resisting her unwanted motherhood, Arianrhod places three supernatural prohibitions (cf. Irish GEIS) upon Lleu:

(1) *Mi a dynghaf dyghet ỽaw, na chaffo enw yny caffo y genhyf i* 'I swear a destiny on him, that he may not get a name until he gets it from me';

(2) *Minheu a dyghaf dyghet y'r mab hwnn, na chaffo arueu byth yny gwiscof i ymdanaw* 'I swear a destiny on this boy, that he may not take arms until I arm him';

(3) *Mi a dynghaf dynghet ỽaw . . . na chaffo wreic uyth, o'r genedyl yssyỽ ar y ỽayar honn yr awr honn* 'I swear a destiny on him, that he shall not get a wife ever from the race which is on the earth now.'

Effectively, these three injunctions deny the child's assuming an adult identity, or any identity at all, in society. They are negative versions of the stock 'rites of passage' that make up the *macgnímartha* (boyhood deeds) of the Irish hero CÚ CHULAINN in the ULSTER CYCLE. That the naming episode (1) has a wider Celtic currency is also shown by the Modern Irish folk version of Lugh(aidh)—the figure corresponding to the Welsh Lleu—and the prophesied death of his grandfather BALOR in which LUG's father, Cian, must trick Balor into giving the boy his name in much the same way as Gwydion must trick Arianrhod (Curtin, *Hero-tales of Ireland* 296–311; Mac Neill, *Festival of Lughnasa* 8–9.)

Arianrhod is mentioned in the mythological poem *Kadeir Kerrituen* (Ceridwen's chair) in LLYFR TALIESIN ('The Book of Taliesin'), along with other figures from the Fourth Branch: DÔN, Lleu, and Gwydion.

The name *Caer Arianrhod* refers to a rock visible at low tide near Dinas Dinlle (< *Dinlleu* 'Lleu's fort') in GWYNEDD.

In Middle Welsh, the name appears as *Aranrot* as well as *Aryanrot*. W. J. Gruffydd suggested that it was the cognate of GALLO-ROMAN *Argentorātum*, the ancient name of present-day Strasbourg, 'the silver *ráth* (ringfort)' (*Math vab Mathonwy* 189 & note). However, a number of medieval attestations of this name survive, and they are always spelled *-rot* (proved by rhyme in *Kadeir Kerrituen*), never *-rawt*; therefore, the second element must mean 'wheel' *rhod*. *Aryanrot* < Celtic **Argantorotā* would mean 'silver wheel', a name suggestive of an epithet of the moon, especially as applied to the character giving birth to Lleu, whose name means 'light'; cf. also Welsh *lleuad* 'moon' and the proverb *rhod heno, glaw 'fory* 'wheel tonight [i.e. ring of mist around the moon], rain tomorrow'.

Aristotle (384–322 BC), the famous Greek philosopher, studied at the Academy in Athens under PLATO, later became tutor of ALEXANDER THE GREAT, and provides some of the earliest GREEK AND ROMAN ACCOUNTS of the ancient Celts. He twice (*Nichomachean Ethics* 3.7.6–7; *Eudemian Ethics* 3.1.25) wrote that the Celts 'took up arms against the waves', in the first text using this as an example of 'excessive bravery' (i.e. exceeding the idealized 'Aristotelian' mean of moderation in all things) and in the second as an example of being 'carried away by passion'. In this way, Aristotle contributed to the construction of the literary theme of the Celts as being wildly fierce. In Aristotle's *Politics* (2.6.6), he wrote, '. . . the Celts and certain other groups . . . openly approve of sexual relations between men'.

ATHENAEUS (*fl. c.* AD 200) cites Aristotle as the source of an account of the foundation of the western Greek colony of MASSALIA (Marseille) in southern GAUL, which tells how Ionian merchants had arrived at the court of local king Nannos; a ritual feast was being held at the time, in which Nannos's daughter, Petta, was to offer a libation to the man she chose as her spouse. She chose the Greek Euxenos ('the good foreigner'), who then received the land for the colony as her dowry. The 'Foundation of Massalia' would be one of the first examples of SOVEREIGNTY or foundation legend in a Celtic context.

According to Diogenes Laertius (*fl.* earlier 3rd century AD?), Aristotle referred to the DRUIDS as follows:

> Some say that the study of philosophy first developed among the barbarians. For the Persians had their Magi, the Babylonians or Assyrians their Chaldeans, the Indians their Gymnosophists, while the Celts and Galatae had those called Druids and Semnotheoi, according to Aristotle in the *Magicus* and Sotion in the 23rd book of his *Successions*.

It is not certain whether this remark has been correctly attributed to Aristotle, but since Alexandrian Greek authors make similar reports this literary tradition must at least go back some centuries before Diogenes Laertius.

Armagh, Book of ('Canóin Phádraig', Dublin, Trinity College MS 52), is a manuscript which primarily contains a copy of the New Testament, made in Armagh (ARD MHACHA) *c.* 807 for Abbot Torbach (†808) by Ferdomnach (†846) and assistant scribes. Ferdomnach is described in his death notice in the ANNALS of Ulster as *sapiens 7 scriba optimus Airdd Machae* 'most learned man and best scribe of Armagh'. The book's contents show why it is so important to modern scholarship and also that it was intended as a prestige book containing valuable texts and explaining the origins and dignity of Armagh with materials relating to its founder, St PATRICK. It contains: (1) the entire Vulgate New Testament; (2) an impressive exegetical drawing which offers an interpretation of the heavenly city of Apocalypse 21–2; (3) elaborations of the 4th-century Christian scholar, Eusebius; (4) *Vita Martini* (Life of St Martin) by Sulpicius Severus; (5) the *Confessio* of St Patrick; (6) *Vita Patricii* by Muirchú; (7) the Patrician *Collectanea* by Tírechán; (8) *Liber Angeli* (Book of the Angel), which sets out claims for Armagh; (9) six other fragments relating to the cult of Patrick—see Lapidge & Sharpe, nos. 354–9—including the *Dicta Patricii* (Sayings of Patrick); (10) two liturgical fragments—see Lapidge & Sharpe, nos. 538–9; and finally (11) a note of a gift made to Armagh in 1002 by Irish high-king BRIAN BÓRUMA—see Lapidge & Sharpe, no. 616. The presence of the technical exegetical apparatus shows that it was intended originally as a functional, if elaborate, *vade mecum* for an individual's use, presumably the abbot; it is in fact modestly pocket

sized. But as it gained respect through age it became a relic whose rightful possessor was the *comarba Pádraig* (Patrick's successor)—as shown by its use as a suitable place to record Armagh's links with Brian Bóruma. The book remained with the hereditary stewards of Armagh until the 17th century, and subsequently passed through the hands of various owners before being transferred to Trinity College Dublin in the mid-19th century.

Armes Prydein or *Armes Prydein Vawr* (The great prophecy of Britain) is a 10th-century Welsh political PROPHECY in the form of a poem of 198 lines in the AWDL metre. The only significant manuscript is the 14th-century LLYFR TALIESIN ('The Book of Taliesin', 13.2–18.26). The poem envisions a great alliance, including *Kymry* 'Welsh' (and perhaps also north BRITONS); *gwyr Dulyn* 'men of Dublin', i.e. Vikings based in Ireland; *Gwyδyl Iwerδon, Mon, a Phrydyn* 'Gaels of Ireland, Anglesey (MÔN, or Mann/ELLAN VANNIN), and Pictland'; *Cornyw* 'Cornwall/KERNOW', *Cludwys* 'people of Strathclyde/YSTRAD CLUD'; *Gwyr Gogleδ* 'men of the north (HEN OGLEDD)'; and *Llydaw* 'Brittany/BREIZH'. The poem invokes the visionary authority of MYRDDIN and *derwyδon* 'DRUIDS'. The story of GWRTHEYRN, Hengist, and the ANGLO-SAXON 'CONQUEST' is summarized and the final bloody expulsion from BRITAIN of the English interlopers foreseen. The messianic leaders of the *Brython* (Britons) will be the revenant ancient heroes Kynan and Katwaladr (CADWALADR). The saintly patrons DEWI and Garmawn (GERMANUS) are prominent. According to Sir Ifor WILLIAMS, ÆTHELSTAN (king of Wessex 924–40) was the *mechteyrn*, 'great king' or 'surety-taking king', leading the enemies of the alliance: *Iwys* 'people of Wessex' are mentioned as enemies, and the defeated foe are predicted to flee to *Caer Wynt* i.e. Winchester, a major centre of Wessex. The poem's sweeping political vision for the victorious alliance is summarized in the following lines from the final long *awdl* (stanza):

Dy-s·gogan derwyδon meint a δeruyδ.
o Vynaw hyt Lydaw yn eu llaw yt vyδ.
o Đyuet hyt Danet wy bieiuyδ.
o Wawl hyt Weryt hyt eu hebyr.
llettawt eu pennaeth tros yr echwyδ.
Attor ar gynhon Saesson ny byδ.

The druids prophesy all that will be.
From Manaw (GODODDIN?) to Brittany they will possess it.
From DYFED to Thanet they will possess it.
From the Roman Wall to the Forth as far as its estuaries,
their supremacy will extend over the running waters.
There will be no returning for the English heathen.

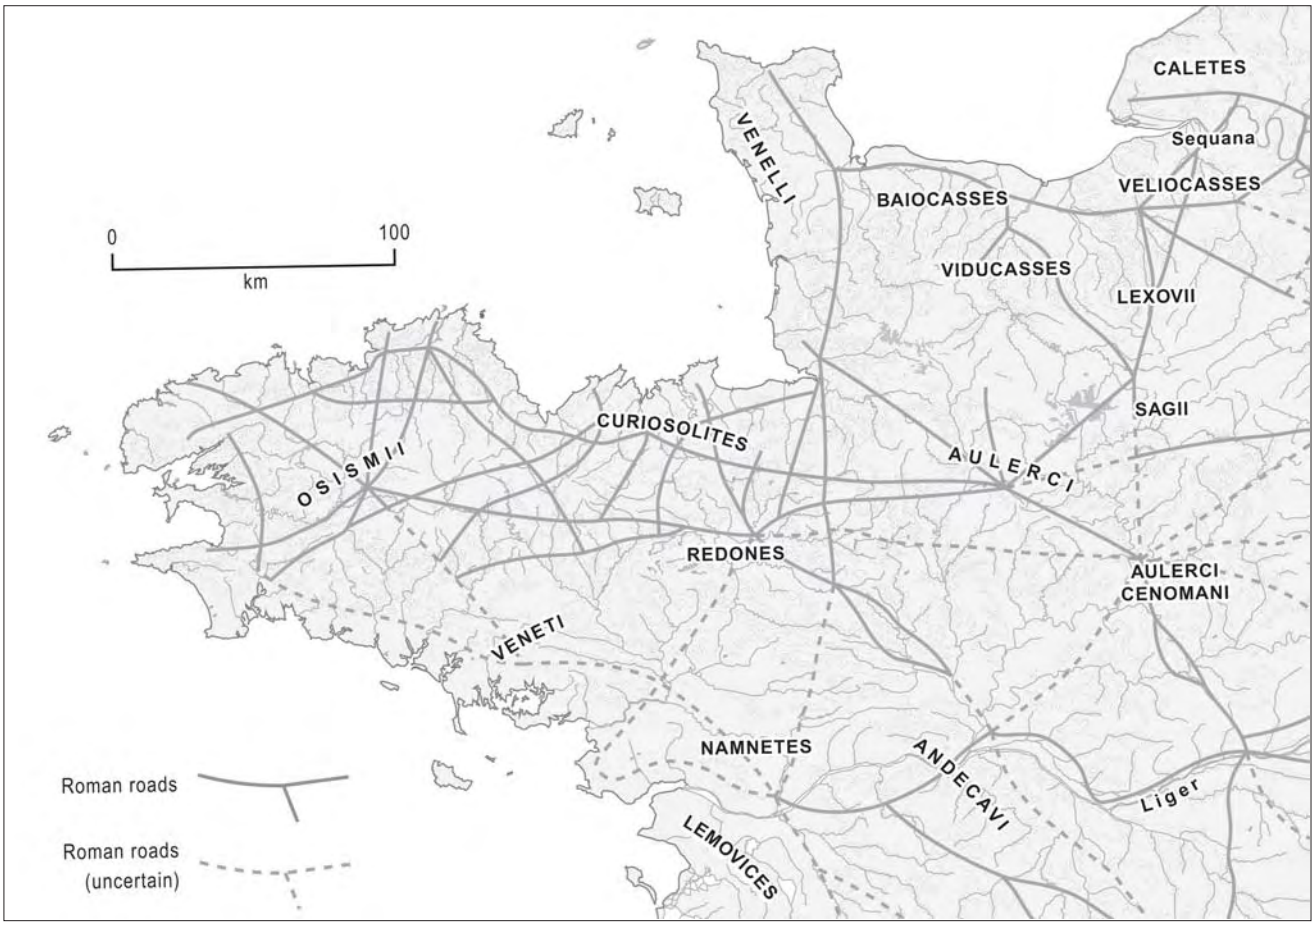
Armorica

In Roman times, the *Tractus Armoricanus* referred to the coastal region from roughly the mouth of the river Seine (SEQUANA) to the Loire (Liger), west of the lands of the BELGAE and north of those of the Aquitani, hence approximately coterminous with latter-day Normandy and Brittany combined. The earliest surviving examples of the name are two occurrences in CAESAR's *De Bello Gallico* (5.53, 7.75), both times used as an adjective in the phrase *civitates Armoricae* 'the Armorican tribes'. In the second instance, he explains the term to mean 'the tribal lands touching the ocean' and lists these as including the Curiosolites, Rēdones, Ambibariī, Caletes, Osismī, Venetī, Lemovīces, and Venellī. With the exception of the third CIVITAS, these can be located, showing that Caesar understood Armorican GAUL to extend from the north-eastern shore of the lower Seine to the southern shore of the Loire estuary. Elsewhere



The tribes of Armorica in the late Iron Age and Roman period, 1st century BC to 6th century AD

in *De Bello Gallico* (3.7–11, 16–18), Caesar discusses the strongest of the Armorican tribes, the Veneti, whose name survives in Modern Breton Gwened, French Vannes, a city and diocese in south central Brittany. The Veneti dominated the other coastal tribes, had an extensive maritime trading network, which included Britain, and sailed the ocean routes in high-prowed ships built of massive oaken planks and fitted with leather sails. When Caesar faced the Venetic forces in a great naval battle in 56 BC, these included their subject tribes in Gaul and auxiliaries called in from Britain, a point which helped to justify Caesar's campaigns across the Channel in the following two years.

Place-name and other fragmentary evidence implies that the Gaulish language survived in parts of Armorica through the Roman period and eventually contributed names, words, and possibly other linguistic features to Breton. The Plumergat stone (Wendy Davies et al., *Inscriptions of Early Medieval Brittany* M8) in south central Brittany shows an interesting microcosm of cultural change and continuity—a dressed stone of the pre-Roman Iron Age with an Old Breton name RIMOETE on one side and a late Gaulish inscription of *c.* AD 300 on the other: U[..]PQS RI[..]OUT ATEREBO ATEMINTOBO DURNBOGIAPO 'U. has granted [this] for the memories of the male ancestors by means of hand carvings'.

In the later Roman period, Armorica was more than once controlled by regional emperors, backed by the Romano-British garrison, whose authority was not recognized in Italy or the East—for example, Carausius and Allectus (287–96), Maximus (Macsen Wledig; 383–8), and Constantine III (407–9). Intermittently from the late 3rd century, Armorica slipped out of Roman control altogether, as a result of a series of uprisings by *bacaudae* (rebel bands made up of peasants and disaffected soldiers). The Byzantine historian Zosimus (6.5.2) relates concerning the events of AD 409:

> . . . the barbarians from beyond the Rhine overran everything at will and reduced the inhabitants of the British Island and some of the peoples in Gaul

> to the necessity of rebelling from the Roman Empire and of living by themselves, no longer obeying the Romans' laws. The Britons, therefore, taking up arms and fighting on their own behalf, freed the cities from the barbarians who were pressing upon them; and the whole of Armorica and other provinces of Gaul, imitating the Britons, freed themselves in the same way, expelling Roman officials and establishing a sovereign constitution on their own authority . . . (Trans. Thompson, *Britannia* 8.306).

A shaky Roman rule was re-established in 417 and lapsed more than once before the mid-5th century. By the 460s, we find a 'king of the Britons' with the Brythonic name or title Rigotamus 'supreme king' and 12,000 men on the Loire, and Gallo-Roman Armorica belongs to the past.

The name *Armorica* is Celtic, deriving from the preposition *are* < older *ari* 'before, in front of', *mori-* 'sea' and the feminine adjectival suffix in *-kā*, thus 'country facing the sea', specifically the north Atlantic. Compare Modern Breton *Arvor* 'regions by the sea', *Argoad* 'inland regions' (lit. 'before the wood'), and Welsh *arfor-dir* 'coast'. Middle Breton *Arvoric* is probably a learned adaptation from Latin. The more archaic spelling *Aremorica* is also attested in classical Latin, though it does not appear in the earlier Latin sources. Latin dictionaries sometimes mark the *-ē-* as long, but this is unhistorical. The loss of the unstressed short *e* had occurred in spoken Gaulish before Caesar's time and is an example of an early Celtic 'syncope' or loss of unaccented internal syllables of the sort that later became systematic in both Goidelic and Brythonic.

Armorica is sometimes used in modern writing as a place-name roughly synonymous with Brittany (Breizh), in particular with reference to the region in Roman and prehistoric times or referring to it physically and geographically without reference to a particular language or culture, hence 'the Armorican peninsula'. Beginning with the 6th-century *Historia Francorum* of Gregory of Tours, *Britannia* is the regular name for the peninsula in Latin sources. In present-day discourse, the region is more usually called Brittany with reference to medieval and modern times. In medieval Latin, *Armorica* was sometimes still used (as in Historia Brittonum) to make it clear that maritime northwest Gaul was meant, as opposed to *Britannia* 'Britain' or 'Wales'. Similarly, the French adjective *Armoricaine* is useful, as *Bretagne* means ambiguously both Britain and Brittany.

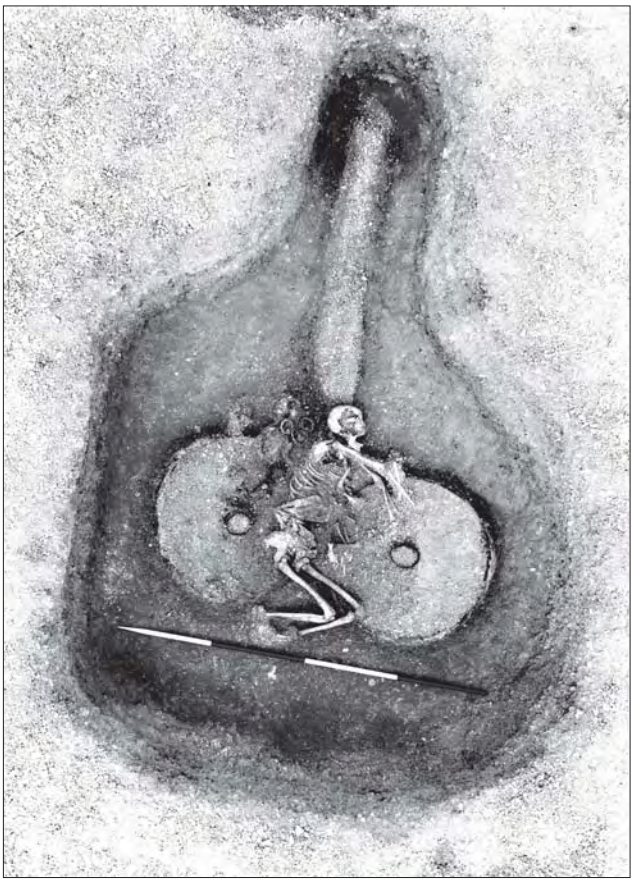
The **Arras culture** is one of several regional cultures that existed in Britain during the Iron Age. It is clearly distinguishable from most of its local contemporaries by uncommon burial rites, more reminis-

An Iron Age vehicle burial from Wetwang Slack, Yorkshire, England



Excavated cart and chariot burials of the Arras culture

cent of Continental European La Tène practices than those of Iron Age Britain. The custom of burying the deceased with their chariots (see CHARIOT; VEHICLE BURIALS) and of burying within square enclosures (or possibly square barrows with a surrounding ditch) is largely unknown in the rest of the British Iron Age. However, although there are general similarities with the Continental evidence in grave layout, the deceased of the Arras rite were buried as crouched—as opposed to extended—inhumations. This is uncommon in La Tène Iron Age burials anywhere else in Europe, and is a distinct local development. It is also noteworthy that the Arras vehicles are usually disassembled, which is less common in the Continental chariot burials. A further point of contrast is that the Arras culture is also relatively poor; bronze is in especially short supply, and items which are usually made of bronze elsewhere in the La Tène world are sometimes made of iron in the Arras burials.

These Arras burials are confined to a restricted area in east Yorkshire, on the North Sea coast of England between the river Humber to the south, the river Ouse to the west and the North Yorkshire Moors to the north. The recently discovered outlying chariot burial from Edinburgh (Dùn Èideann) appears to correspond more closely to the Continental rite. Chronologically, the Arras burials cover most of the second half of the first millennium BC up to the Roman conquest, which reached this area in the AD 70s. The relative poverty and long survival of Arras may be the key to understanding its divergences from the Marnian parallels.

Although the rite shows some contact with the Continental European La Tène cultures, the nature of this contact is uncertain. Otherwise, the material culture in the Arras area shows few significant connections with Continental La Tène, but is rather firmly set within a British context. It has close relations with southern England in regard to chariot parts and other objects, such as involuted and penannular brooches, swan neck pins, various kinds of bracelets and mirrors, and weapons. Pottery found in the burials seems to be mostly of local origin, belonging to a single simple form that is not especially distinctive. Nonetheless, there is a significant disparity between the Arras culture and its contemporaries in southern England: inhumation burials that are standard at Arras are rare elsewhere in the British Isles, and conversely, while Iron Age settlements are well documented in many other parts of Britain, they are hardly known from the area of the Arras culture. Those settlements that have been excavated fit well with the overall British settlement patterns observable in the Iron Age.

The mixed nature of possible Continental influences and local traditions, in conjunction with the reference in the *Geography* of PTOLEMY (2.3.10) to Parisi on the north bank of the Humber, makes it tempting to draw a connection with the ancient Parisii, the Gaulish tribe who gave their name to the capital of France. The name in both cases is Celtic, cognate with Welsh *paraf* 'I cause', *peri* 'to command, cause, have done', hence 'the commanders'; cf. Welsh *peryf* 'lord'. However, while the Arras burial rite links it to the early La Tène of the Marne region in general (see MATRONAE), we have as yet no more specific archaeological connection enabling us to prove that the British tribe was an offshoot of their namesake in GAUL.

art, Celtic [1] pre-Roman

§1. DEFINING TERMS

Art is always difficult to define and never more so than when we have no direct statement of what it meant to its creators and consumers. Modern interpretations of prehistoric art run the risk of telling us more about present-day uses and interpretations of art than about its significance to its original producers and audience. The definition used here is that it refers to symbolic elements of artefacts not strictly necessary for efficient function. The word Celtic is employed in this article in the conventional sense represented by the Greek Κελτοί *Keltoi* and Roman *Celtae* or *Celti*, that is, a name given to pre-literate peoples in regions of western and central Europe in the last five centuries BC and commonly associated with the La Tène phase of the European Iron Age. Such a definition of Celtic is broadly consistent with that based on the Celtic languages used throughout this Encyclopedia; it should be noted that the native languages of Britain and Ireland (Ériu) were eminently Celtic linguistically, though their speakers were not called *Keltoi*, or the like, in the Greek and Roman accounts. While Celts by either of these definitions should not be considered to be a single ethnic group, as will be seen, the art described here may indeed have been used as a common mark of identity linking otherwise distinct groups.

§2. JACOBSTHAL'S CLASSIFICATIONS

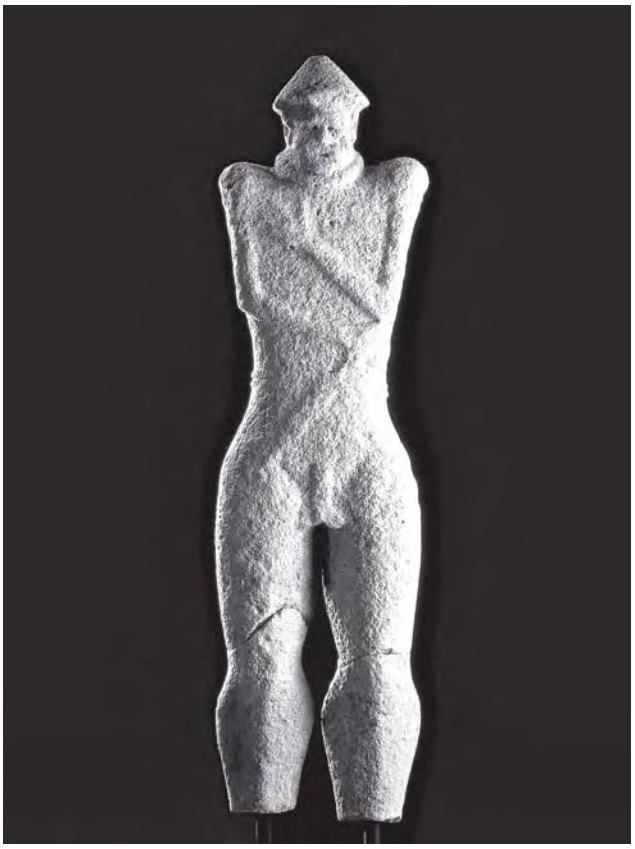
Until the turn of the 20th century products of the Iron Age were often seen as classical imports rather than indigenous creations. It was left to Paul Jacobsthal (1880–1957), a classical scholar and refugee from Nazi Germany working in Oxford, to establish, in his *Early Celtic Art*, a generally accepted stylistic evolution. Jacobsthal began with an Early Style largely associated with élite 5th- and 4th-century La Tène A burials. This borrowed extensively from contemporary Greek and Etruscan patterns. The following Waldalgesheim Style, named after a La Tène Bi chariot grave near Mainz (see chariot; vehicle burials), corresponds to the period of Celtic expansion and develops much more individual and free-moving vegetal forms. In the early 3rd century BC and after, La Tène Bii–C, Jacobsthal identified two overlapping sub-styles, the earlier Plastic and later Hungarian Sword Styles. Jacobsthal planned to follow this pioneering work with a volume devoted to the early Celtic art of the British Isles but this had to await completion by E. M. Jope.

Since Jacobsthal's death, work on early Celtic art has concentrated primarily on the identification of local groupings and discrete classes of material such as the possible origins of the Waldalgesheim or Vegetal Style, decorated pottery, or regional classes of sword scabbard production. In 1977 Paul-Marie Duval attempted a revision of Jacobsthal's styles; Duval saw an evolution from an early Strict Style, more or less equated with Jacobsthal's Early Style, through a Free Style to a Free Graphic Style and a Free Plastic Style, the last two corresponding to the Sword and Plastic Styles. It is, however, Jacobsthal's scheme that has remained the foundation for all subsequent work.

§3. CHARACTERISTIC OBJECTS AND MATERIALS

Generally small-scale, Celtic art is mostly to be found on objects of personal adornment such as fibulae (safety-pin brooches for fastening clothing), neck rings,

Ditzingen-Hirschlanden, Kr. Ludwigsburg, sandstone statue, height 1.5 m, c. 500 BC, Württembergisches Landesmuseum, Stuttgart



Basse-Yutz, Moselle: detail of the engraving on the mouth of flagon 1 with coral inlay

arm rings and finger rings for both men and women. It also appears on items of military use such as sword scabbards, knives, spearheads and shields, as well as objects used for holding WINE for feasting, such as flagons or drinking-horns. Sculpture in stone is infrequent, often crude and rarely representational, though probably symbolic, while few wooden carvings survive except as offerings in water from the Roman period. By modern definitions, such items are craft rather than art, since they are objects in daily use rather than rarefied items to be looked at, but, like all art, they expressed beliefs embedded in the society.

Gold and bronze were the favoured metals for personal ornaments, scabbards and drinking vessels. Much of the individuality of the art is due to the adoption, early in the La Tène period, of lost-wax casting rather than using a two-part mould as in the HALLSTATT period. (See next section for a description of the process.) Other methods of decoration were engraving sheet or cast objects, including those made of iron, with tools similar to those still used today. Colour was added in the form of coral or enamel (or vitreous paste), almost always red until late in the La Tène period, when blue and yellow were sometimes used.

§4. HALLSTATT AND LA TÈNE PERIODS

The Hallstatt phase of the European Iron Age, Hallstatt C–D (*c.* 700–500 BC), produced an art primarily geometric in nature, using straight lines incised or punched on metal and incorporating symbols such as stylized lunar and solar motifs and water birds. Much of the largely hand-made pottery was also painted, often with figural and even narrative elements. Stone sculpture is rare and wooden sculpture hardly ever survives, as is the case throughout the Iron Age except in the Mediterranean zone. An exception is the naked figure of a warrior, a displaced grave marker found at the perimeter of a burial mound at HIRSCHLANDEN (see article for illustration), Kr. Leonberg, in south-western Germany.

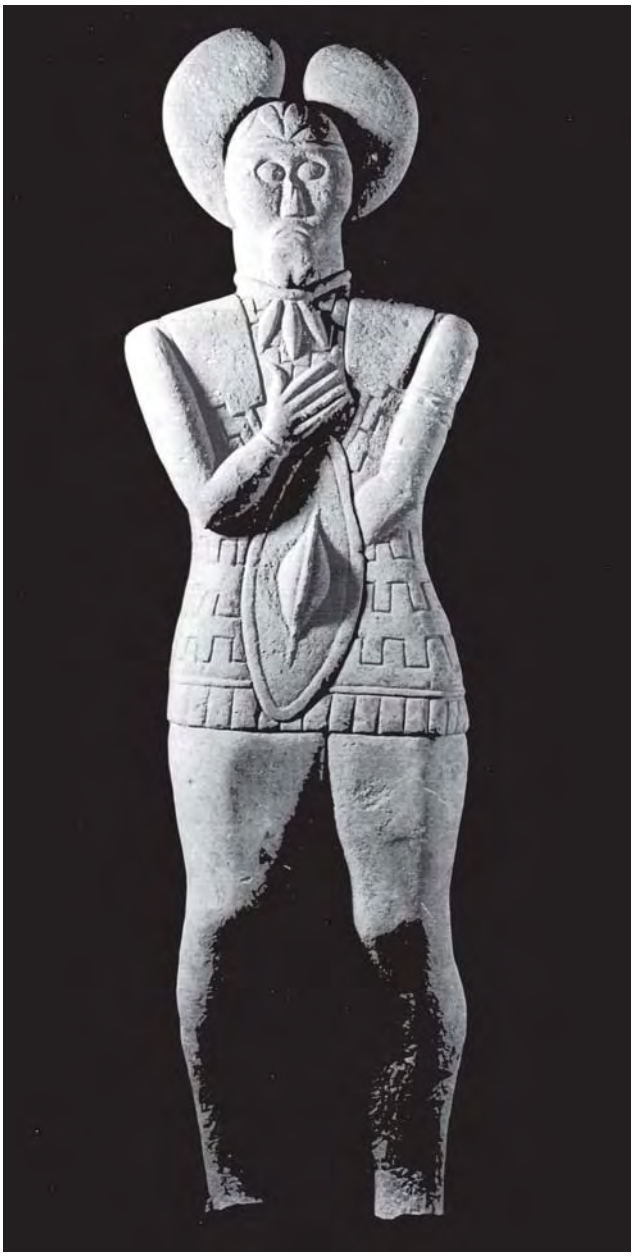
The second period is named after LA TÈNE, the lake in western Switzerland where a great deal of Middle La Tène material, mostly swords and scabbards, was found after the water level was lowered by man-made alterations in the 1850s. La Tène art is primarily curvilinear in character and is full of ambiguities. This shift is contemporary with the replacement of two-piece bronze casting moulds by lost-wax (*cire perdue*) casting. A model of the desired object was made in the round from wax. The model was then enclosed in clay, leaving a tiny escape hole, the wax was melted and poured out and molten metal poured in. Wax made detailed modelling possible, producing what became works of art rather than mass-produced objects from reused moulds. Since the mould had to be broken to extract the finished product, no two such castings are ever identical. Some observers have suggested that metal smiths may have used crystals as magnifying glasses to produce their miniature masterpieces. Even today, it is extremely difficult to see all the detail from every angle without some form of magnification and without handling the object in order to see how many different 'images' are contained within a piece of metal, perhaps only three centimetres long. Utilitarian objects such as agricultural and carpentry tools, swords, knives and other weapons were much more durable and effective when made of iron. Perhaps the flowering of La Tène art owed something to the redeployment of redundant

bronze smiths. It is primarily found on metalwork, especially of bronze, formed into personal ornaments such as safety-pin brooches (fibulae), neck rings, arm rings and ankle rings, and belt fastenings. Silver was rarely used, except in western Switzerland, possibly using silver from south of the Alps, and in eastern areas of Europe, where silver was more plentiful than in the West.

Incised decoration was also used, especially on sheet bronze or iron objects such as sword and knife scabbards, shield covers and spearheads. These are usually curvilinear, flowing designs, sometimes laid out with compasses. Rectilinear patterns, continuing earlier Hallstatt traditions, became increasingly rare and are commonest in the Early La Tène period, as on the mouth-covers of the Basse-Yutz flagons, excavated in 1927, together with two imported Etruscan stamnoi, by labourers in Lorraine, or the Vert-la-Gravelle scabbard from the Marne. Inlay was used in the form of coral, usually originally red, though often bleached by time. The use of Baltic amber, coral and cowrie shells in this period indicates long-range trade patterns, though whether direct or down-the-line is not clear. Amber, in contrast to coral, was mainly used as necklaces or bracelets rather than inlaid in metal. Coral was used mainly in the 5th and 4th centuries BC, but was gradually replaced by inlaid red 'enamel', perhaps because of disruption to trade patterns. Blue, green or yellow enamel was rarely used until the 1st century BC but glass beads used in necklaces, and the larger, cylindrical, so-called 'eye-beads' were made in multi-coloured glass on which features were applied in differing colours, with blue and yellow probably the most common. There is still debate as to whether eye-beads were imported or locally made, but their knowing, ambiguous faces are as elusive as those on La Tène metalwork.

Stone was also fashioned into full-length statues which, compared with the contemporary metalwork, are mostly fairly crude, the only major exception being some large and elegant stone statues, originally painted, found in the south of France. These show the influence of the nearby Phocaean Greek colony of Massalia (Marseille), founded around 600 BC. Further north, La Tène A statues most commonly depict humans, but are generally either rudimentary or so weathered that detail is indecipherable. Several stone heads sport headdresses or crowns not unlike modern Mickey Mouse ears, a feature shared by several small-scale representations. Complete figures are known mainly from western Germany, where one stone figure, complete except for its feet, was found buried with three other fragmentary stone 'knights' at a recently excavated site below the Glauberg, north-east of Frankfurt. The Glauberg figures are an exception to the general rule that statues are rarely found in an archaeologically stratified context. Most are almost impossible to date and similar statues have been made, for example, in Ireland, as late as the 20th century.

Glauberg bei Glauburg-Glauberg, Wetteraukreis, sandstone figure, height 1.86 m, 5th century BC, Hessisches Landesmuseum, Darmstadt



Rodenbach, Kr Kaiserslautern: gold finger ring, diameter 21 mm, later 5th century BC, Historisches Museum der Pfalz, Speyer

Another is the TORC-wearing male head excavated in fragments outside a rectangular ditched enclosure at MŠECKÉ ŽEHROVICE (see article for illustration), near Prague; despite the late dates normally quoted, this head could possibly belong to the Middle La Tène period or earlier. Few examples of woodcarving have survived, due to the fragility of wood, though the La Tène D human with stag supporters found in a well at Fellbach-Schmiden in southern Germany gives a glimpse of how much must have been lost. Until La Tène D, finds of non-utilitarian metalwork from settlements are scarce and fragmentary and, though there are a few large hoards, most surviving La Tène art comes from burial goods intended to accompany the dead to the next world.

§5. GEOGRAPHICAL EXTENT

The earliest currently known La Tène art dates to the 5th century BC or La Tène A period, and comes from three major areas. Spectacular material comes from the Hunsrück-Eifel, the high ground between the present eastern border of France and the RHINE, where rich barrow graves were first found in the 19th century. Rich burials at SCHWARZENBACH, WEISKIRCHEN, WALDALGESHEIM (see articles for illustrations), and RODENBACH are probably those of local élites, gaining wealth from the newly exploited iron deposits of the area, as well as its strategic position on a natural riverine route. Change was contemporary with, and presumably caused by, increasing contacts with the Mediterranean world, evidenced in particular by the adoption of the symposium, or FEAST, and its associated paraphernalia, such as sieves and flagons for serving wine. In the case of KLEINASPERGLE the process of transformation can be clearly seen in the Celtic bronze flagon whose handle attachment echoes faces on the imported stamnoi found in the same grave and others, but turns it into something more ambiguous and original. One of the most recent finds, at the end of a ceremonial way below the fortified hill-top settlement of the Glauberg where the stone 'knights' were discovered, contained three male burials, two of them within the same mound. On the rim of the beaked flagon from grave 1, burial mound 1, sits a small cross-legged warrior, similar to a pair of full-size stone figures at the sanctuary of ROQUEPERTUSE in southern France, a further hint of long-range contact. The gold neck ring from the same burial echoes that round the neck of the statues. Other characteristic grave finds from this period are neck rings, arm rings and fibulae such as those from the rich male graves of Kleinaspergle and Weiskirchen, or women's burials such as Reinheim and Waldalgesheim.

In north-eastern France, burial goods are mostly of bronze, rather than gold, sometimes inlaid with coral. The material is also less exuberant in style, though equally skilfully made. Flat-grave cemeteries, rather than individual burials, are the norm in this region, and also in Switzerland. Women were frequently buried wearing a bronze neck ring and one or more bronze arm rings, sometimes inlaid with coral: small fibulae were also common. Openwork bronze castings associated with harness and chariot fittings based on compass-derived abstract designs are, however, the most distinctive feature of this region. Similar flat-grave cemeteries are also characteristic of Switzerland in this period.

In central Europe, two further important early regional centres can be identified. One is the Traisenthal in eastern Austria, where rescue excavations ahead of motorway construction have revealed numerous flat-grave cemeteries. Much of the material from such cemeteries as Pottenbrunn-Ratzersdorf presents extraordinary mixed creatures such as the fibula formed of a bird-bodied creature with a helmeted human head with animal ears. Another major centre of the eastern Celtic zone is the rich salt-mining centre at the DÜRRNBERG, near the Austrian border with Bavaria. In this mountainous spot there seem to have been family burial places with successive generations buried on top of their predecessors, presumably to save valuable space. Here, too, there are many rich burials, including one of a handful of chariot burials, grave 554, which also contained a beaked flagon (see article for illustration), similar in general form to those from Basse-Yutz and even more like that from Glauberg barrow 1, grave 1. Whether such products were traded or craftsmen moved from centre to centre is still, however, unclear.

Pottery was mostly decorated with simple geometric patterns until the Late La Tène period, except in the Marne region in France. In some areas simple stamped geometric designs were used, notably in Brittany (BREIZH) and central Europe. In the eastern zone, pottery was frequently stamped, but a few figural designs can also be found, for example, the stamped and incised frieze of animal pairs on the body of a flask from Matzhausen, Germany, or the swans painted in red on the inside of a so-called 'Braubach' bowl from Radovesice in the Czech Republic.

St Jean-sur-Tourbe, Marne, north-east France: bronze harness mount, diameter 245 mm, mid- to late 5th century BC, Musée des Antiquités Nationales, Saint-Germain-en-Laye

§6. THE VEGETAL OR WALDALGESHEIM STYLE

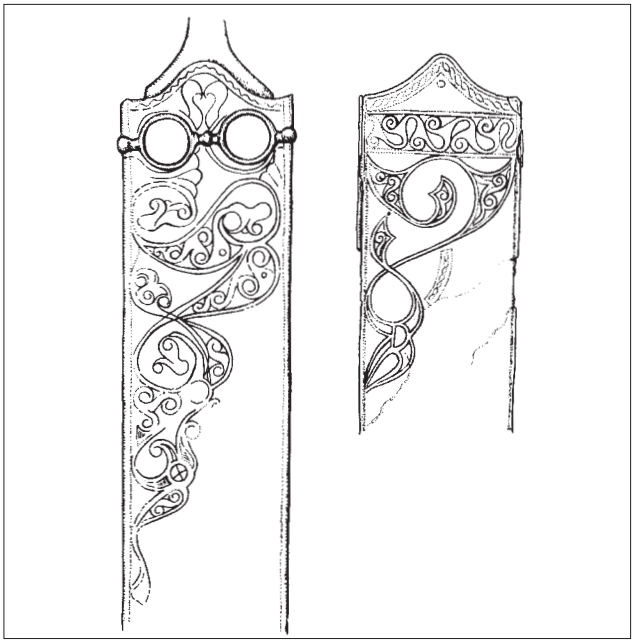
In the 4th to 3rd centuries BC, Celtic groups are recorded by classical authors as sacking ROME in 387 BC and subsequently settling in northern and central ITALY. In 279/8 BC, they were attempting to plunder the treasures of Apollo's shrine at Delphi and, when repulsed, settled along the DANUBE in the modern-day Czech Republic, Slovakia, Hungary, and Romania, while others regrouped to found GALATIA in Asia Minor (see BRENNOS OF THE PRAUSI). Art of this period is increasingly found on types of objects concerned with war: scabbards, spearheads, shields, as well as personal ornaments such as safety-pin brooches (fibulae), arm and neck rings, the latter in this period worn by women rather than men. Metalwork in this period became less representational, more abstract and fluid, with elusive faces hiding in writhing tendrils derived from classical art. This is the material of Jacobsthal's Waldalgesheim Style, named after a rich German site on the Middle Rhine. The art is also found on new types of brooches: the 'MÜNSINGEN' type inset with coral discs and the 'DUCHCOV' form with vase-shaped foot, though these are much less individually differentiated than those of La Tène A/I date. Among the most spectacular is the rich female chariot grave of Waldalgesheim on the Rhine. This grave included a spouted, swollen-bellied and intricately incised flagon, with twice the capacity of the earlier beaked flagons. The precision of the engraving relates it to a body of material suggestive of a highly specialized group of metal smiths. The Waldalgesheim flagon has strong similarities to that from the Glauberg barrow 1, grave 2, and to an earlier flagon from the princess's grave found at REINHEIM on the Mosel. It was at least a generation earlier than the other material in the grave, which also contained a bronze bucket imported from the south of Italy dating the burial to the late 4th-century BC. While the spouted flagons still have faces on the handle bases, like those on the beaked flagons, they differ in having standing figures on the lids and

Bad Dürrnberg bei Hallein, Ld. Salzburg, Austria, grave 28/2: gold finger ring with 'Vegetal Style' decoration, diameter 24 mm, later 4th century BC, Keltenmuseum, Hallein

patterns incised round the body of the flagon. The Waldalgesheim gold arm rings and ornaments exhibit a continuous writhing pattern, sometimes containing an ambiguous face in what Jacobsthal nicknamed the 'Cheshire (cat)' Style, or incorporating chains of triskels, or curved-sided triangles. Such new stylistic features are particularly obvious in the Marne region of France as well as in that region of Italy where Roman sources record settlement by the SENONES. Similar decoration is found both on sword scabbards and on items of personal adornment. In the Champagne area of France, from which groups such as the Senones apparently invaded Italy, pottery form changed from angular shape and decoration to pedestalled rounded forms, painted with a technique similar to red-figure Attic.

Discussion continues as to whether the Vegetal or Waldalgesheim Style first developed in Italy after the first Celtic settlements, in the Marne due to a reworking of Early Style motifs or, following the middle way suggested by Otto-Herman Frey, evolved north of the Alps making use of motifs introduced into the Celtic world by returning settlers. Whichever theory is correct, it is the Vegetal Style that allows one to plot the movement of peoples east across Europe into Hungary and the BALKANS.

Examples of the 'Hungarian' sword style, details of iron scabbards: left, Batina, Croatia (formerly Kiskőseg, Hungary), width 58 mm, Naturhistorisches Museum, Vienna; right, Tapolca-Szentkút 1 (formerly Haláphegy), Veszprém, width 60 mm, local history collection, Sáska



§7. MIDDLE AND LATE LA TÈNE

During the 3rd century BC even greater changes took place in the incised decoration of sword scabbards, in styles which display major geographical variation. Cemeteries in central and eastern areas along the Danube, in Austria, Hungary, Slovenia and Transylvania in north-western Romania produced elaborate, flowing, and often asymmetrical, tendril designs, developed out of the previous Vegetal Style. Further west, scabbards were adorned in the so-called, rather minimalist, Swiss Style, confined to a small area below the scabbard mouth. Confronted 'dragon-pairs' incised immediately below the scabbard mouth were also used across a very wide area of Europe for sufficient time to allow at least three major variations over time. From the set of surgical instruments with which it was found, one such sword scabbard discovered in a cemetery near Munich clearly belonged to a Celtic surgeon whose powers doubtless earned him the right to bear such a prestigious weapon.

One new fashion in women's adornment was the wearing of knobbed and hinged ankle rings, so large and heavy they could scarcely have been used for everyday wear. One pair comes from the Isthmus of Corinth and another from Antalya, off the south-west tip of Turkey; both indicate that women as well as men took part in the great migrations of the 3rd century.

Cast or repoussé bronze objects were less representational in this period than in Early La Tène, though a handful of characterful cast bronze objects of the so-called 'Disney' Style survive. In the same period, men as well as women once more began to wear neck rings. Another technique adopted from eastern European traditions for making women's brooches, neck and arm rings was the casting of pieces in 'false filigree', cast imitations of the complex technique of building up patterns with droplets of gold.

Another group of cast bronze objects, as varied in form as in distribution which extends from Denmark to Bulgaria and even Sardinia, is once more best seen in the context of the great 3rd century period of population movements. This style, subsumed by Jacobsthal in his Plastic Style, is marked by the highly reductive form of depicting natural forms, animals both domestic and fantastic as well as humans, in the manner of the modern cartoonist. Dubbed the (Walt) 'Disney' Style, its most spectacular finds come once more from burials, the most easterly being a chariot grave inserted into the entrance of an earlier Thracian tholos tomb at Maltepe in northern Bulgaria. A series of openwork mounts for a spouted jug were found in a cemetery outside Brno. The finest examples of this style, however, come from two chariot graves, one an old find assumed to have come from the region of Paris and, most recently, from the excavation of a chariot grave in advance of extensions to the airport of Roissy–Charles De Gaulle. Again, the question arises, where were these extraordinary and clearly stylistically closely related pieces made?

The manufacture of more standard accoutrements such as brooches, anklets, neck and arm rings must be attributed to a number of relatively local workshops, a case in point being the so-called disc torcs or *Scheibenhalsringe* dated to La Tène B–C, which detailed analysis shows to have been made mainly in the Upper Rhine region. By contrast, one can only presume that the 'Disney' Style was created in a single workshop, though not necessarily by a single individual. Where such a workshop was situated is a matter of guesswork; perhaps it may have been in central Europe, where several of the groups mentioned by classical sources originated.

In the later 2nd century and in the 1st century BC, Celtic society was under increasing pressure from the expansion of the DACIANS under Burebista in the east and the increasing power of the Romans in western Europe. Its response is seen in the growth of large enclosed and defended settlements known by the Roman term oppida (sing. OPPIDUM). These contained specialist manufacturing sectors for iron smithing, glass making, bronze casting, wood turning, and the production of wheel-thrown pottery. Coins were struck from late in La Tène C, at first not so much as a standard for exchange as to demonstrate local status and wealth. Iron Age COINAGE in all its variety from its beginnings in Dacia around the late 4th century BC to the 1st century AD really requires an entry in its own right (which see). A number of regional variations were clearly determined by regional tribal groups, with silver being used for high-value coins in eastern Europe and gold in the west.

As well as a range of standard wheel-turned pottery, rarely decorated with more than simple bands of colour, some spectacular examples of local styles are known. Late in La Tène II in the Massif Central tall jars were being decorated with the 'calligraphic' depictions of deer and horses set against a hatched background, looking for all the world as if they had been produced by a film animator (see AULNAT and photograph).

§8. INSULAR EARLY CELTIC ART

Apart from a scattering of imported brooches, Britain and Ireland have no undisputed La Tène A material and little La Tène Bi/Ib material. There is a small but significant number of pieces which closely reflect the Continental La Tène B or Vegetal Style. These are the vegetal tendrils on the antler handle for an iron rasp and the bronze fittings for a sword hilt from a riverside settlement site at Fiskerton in Lincolnshire, very close to the findspot of the famous WITHAM SHIELD (see article for illustration). The bronze scabbard mounts from Standlake near Oxford also incorporate a vegetal tendril. While this might indicate late 4th or early 2nd century Continental settlers there is no solid evidence for this and they could be later imports.

Sculpture of proven early date in the British Isles and Ireland hardly exists. Best known is the carved stone from TUROE, Co. Galway/Contae na Gaillimhe (see article for illustration), sometimes compared with a group of Breton carvings but stylistically at least as close to southern British material such as the mirrors

Lisnachroger 'crannog', Co. Antrim, Northern Ireland: detail of bronze scabbard no. 2, width 46 mm, 3rd to 2nd century BC, Ulster Museum, Belfast

discussed below. Indeed most of the Irish material lacks any datable context since very few burials or settlements have been found. The Clonmacnoise (more correctly Knock, Co. Roscommon/Contae Ros Comáin) buffer torc, made of sheet gold over an iron core, is clearly a La Tène Bii product from the Middle Rhine, but, as it was an isolated find, it is impossible to gauge when it was deposited or even imported. Eight bronze scabbards were found in or near the river Bann in northern Ireland, but, while the decoration has echoes of Continental scabbards, it covers the entire front-plate of six of the scabbards, is produced with the aid of compasses and uses hatching to produce interplay between plain and incised areas. All these factors are unknown on Continental sheaths, though there are one or two very minor details that can be found in Middle La Tène Continental sword styles, particularly those of western Hungary.

These Northern Irish scabbards resemble a group of scabbards from several graves in the East Riding of Yorkshire, some of which include dismantled chariots. Since their first discovery in the 19th century, the Yorkshire graves have been regarded as showing connections with or even settlement from the Marne (see ARRAS CULTURE). Neither the Northern Irish nor the Yorkshire material can be dated before the 3rd century BC.

Certainly, weapons are among the earliest La Tène items in Britain and Ireland. Many of the most spectacular, and possibly the earliest, are finds from rivers, presumably votive offerings and thus impossible to date precisely. These include a group of bronze dagger sheaths which have been regarded as copying late Hallstatt forms, two sword scabbards with Middle La Tène dragon-pairs, the repoussé bronze Battersea and Witham shield covers, and two later pieces—the bronze plates with 'mirror-style' decoration on an iron spearhead and a sword scabbard from Little Wittenham, all found in the Thames, and the bronze scabbard-mount and shield cover from the river Witham. With the exception of the daggers and dragon-pair scabbards, none of these objects have any close parallels on the European Continent. This 'Witham–Wandsworth' group suggests, however, that by the 3rd century BC a group of interrelated workshops in southern and eastern England were producing parade pieces, presumably for a high status élite. These objects are local re-interpretations of Continental Vegetal motifs and, with few exceptions, non-representational.

The first British coins were produced in the 1st century BC in the centre and south of England (see COINAGE). So too were the series of bronze mirrors whose backs are incised with looped lyre designs, frequently executed in hatched basketry, thus producing constant interplay between worked and smooth areas. With the possible exception of one mirror found with weapons in the Isles of Scilly, these compass-designed objects come from women's graves in southern England, the majority on a line from Cornwall (KERNOW) to the Midlands. Several have been found in recent years as the result of metal-detecting

activities. Variable in quality, at their superb best they often display that subtle deviation from the symmetrical which is a factor of so much early Celtic art, as on the mirror found below a hill-fort at Desborough in Northamptonshire or that from Holcombe in Devon. A few, possibly earlier, iron mirrors were found in Humberside and Yorkshire graves but the desire for mirrors must have been stimulated by growing contact with the Roman world.

A contemporary series of new types, found mostly in East Anglia and, once again, the south of England, are harness and chariot fittings, often decorated with enamel, though chariots were already obsolete on the Continent. As well as undatable isolated deposits, some were found in a storage pit on an Iron Age farm at Little Wittenham, Wiltshire, which contained a mass of castings, modelling tools and slag, suggesting that the production of such things was not necessarily based in chieftains' centres. From this same period around the first Roman contact with southern Britain, or a little earlier, is one of the richest finds of treasure, deliberately buried in several well-concealed hoards at SNETTISHAM, Norfolk. First discovered by deep ploughing in 1948, followed by systematic excavation in 1990, it includes 30 kg of gold, silver and bronze, including 175 torcs, mostly of twisted design. Other deposits of gold torcs, again none from burials or other datable contexts, come from elsewhere in East Anglia. It is presumed all would have been made during the 1st century BC for the ICENI, the tribe over which Queen BOUDĪCA ruled a century later; outliers have been found in the south-west and eastern Scotland (ALBA).

As already emphasized, the absence of datable contexts for burials or settlements with fine metalwork and of the presumed latest pre-Roman metalwork makes the dating of early Celtic art in the British Isles singularly difficult. In Ireland, material is similarly lacking in context and much of it, such as the cast bronze 'spoons' or scoops and the other surviving stones in Ireland carved with curvilinear designs, could as easily be given a 4th century AD date as a much earlier one. Similarly, examples of what has been called 'Ultimate La Tène', notably a Scottish group of massive bronze armlets with complex enamel inlay conventionally dated to the 1st century AD at the time of Roman penetration to establish the ANTONINE WALL, may also be no earlier than the 3rd or 4th century. But such material is better considered as a prelude to post-Roman Celtic art.

art, Celtic [2] post-Roman

If five centuries of pre-Roman Celtic art reveal certain continuities of style and content, the five centuries of development of post-Roman art from the 5th to the 10th centuries AD are dominated by new and intrusive elements which all but swamp what might in any sense be regarded as Celtic. What has also variously been termed 'Hiberno-Saxon' or—somewhat ambiguously—'insular art' exhibits two new and lasting external influences: that of Saxon or Germanic settlers from the north-west of Europe and, secondly, that of a new Mediterranean-based religion—CHRISTIANITY. There is increasing evidence that the new belief had reached the Roman province of Britannia as early as the first half of the 3rd century, and there is no doubt that some time between AD 400 and 600 the BRYTHONIC kingdoms of what is now Scotland (ALBA) had been converted to Christianity. Archaeology has shown that Mediterranean-influenced MONASTICISM was established in a number of coastal locations in the south-west of Britain in the course of the late 5th century, several of which contained imported Mediterranean table wares bearing the symbol of the equal-armed cross. While the arrival in Kent of St AUGUSTINE at the head of a papal mission in AD 597 established the rule of the Church in Saxon England, St Columba (COLUM CILLE) from Ireland (ÉRIU) founded a monastic settlement on the Isle of Iona (EILEAN Ì) in AD 563. However, before reviewing the art of the period between *c.* AD 400 and the Viking raids commencing in the late 8th century—raids which were to lead to settlement—an attempt must be made to examine what significant Celtic art remains from the four centuries of Roman occupation of England, Wales (CYMRU) and southern Scotland.

§1. ANTECEDENTS

As has already been noted when surveying pre-Roman Celtic art, the absence not just of material but datable contexts, particularly in Ireland, makes bridging the artistic gap between pre- and post-Roman art particularly difficult. Some forms—such as the 1st-century AD 'dragonesque' brooches, probably first developed among the garrison communities of north Britain and embellished with a provincial taste for enamel inlay—found their way to the Continent and as far east as Hungary. Berried rosettes and raised half moons which

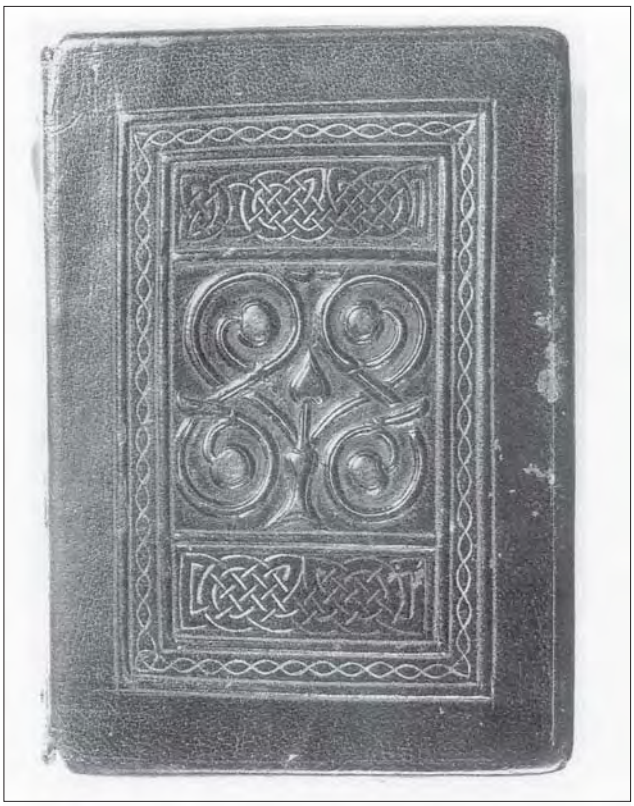
offset the basic lyre design of the plaque from Elmswell in Yorkshire also have enamel inlay, here in a typical Augustan vine scroll. But other classes of objects, found only isolated or as groups otherwise unassociated—the Scottish 'massive armlet' cast in bronze and, from Ireland, the dished bronze discs of the so-called 'Monasterevin' type—float in an uneasy chronological sea which places them anywhere between the 1st and 4th centuries AD. While it is true that the question as to how much insular IRON AGE art might have been handed on to the arts of the post-Roman world is still in debate, such elements as highly complex compass-based designs, broken-backed curves, the pelta or shield-shaped curved-sided triangle, tight 'watch-spring' coils and the so-called trumpet junctions and triskels or triple spirals—sometimes with bird or animal finials—have a life which spans the whole half millennium and more.

One may point to those curious masterpieces of the bronze smith's art, the so-called 'Petrie crowns' and the disc from Loughan Island in the river Bann. A common feature of this group is that the ends of spirals are in the form of crested water birds, and in recent years the tendency has been to date these pieces much earlier, perhaps in the 1st century AD. Similarly, the so-called latchets or dress fasteners conventionally dated to the 6th century are quite possibly earlier; the standing stone of Mullaghmast in Co. Kildare (Contae Chill Dara), dated anywhere between the 1st and 6th centuries AD, with a preference for the later date, bears on its side a double spiral within a pointed oval, closely comparable with an unprovenanced latchet, originally with red enamel inlay and incorporating a triple spiral with bird's-head terminals. This latchet is in fact a key piece in tracing a transition between pre- and post-Roman Celtic art. Both the Mullaghmast stone and the latchet would seem to fit best into a 5th-century context, and thus offer an artistic stepping-stone to some of the key motifs in the gospel books, notably the latter's bird terminals.

The Celtic trumpet spirals, broken-backed curves and peltas, possibly of the 1st-century AD, bone 'trial-' or 'motif-pieces' found with a fragment of a compass arm as later evidence of the use of a Neolithic megalithic tomb at Lough Crew, Co. Meath (Contae na Mí), are also predecessors of other 'motif pieces', made from an antler tine, discovered in a settlement site of

Mullaghmast, Co. Kildare: carved stone, height 910 mm, 1st–5th century AD, National Museum of Ireland, Dublin

Unprovenanced bronze dress-fastener or latchet, length 130 mm, 5th/6th century AD, National Museum of Ireland, Dublin



The St Cuthbert Gospel of St John ('The Stoneyhurst Gospels'), leather book cover, late 7th century AD, British Library, London

Sutton Hoo, Suffolk, England: enamelled bronze escutcheon from a hanging bowl, buried in the early 7th century AD, British Museum, London

5th–6th century AD date at Dooey, Co. Donegal (Contae Dhún na nGall); like other, less decorated examples, these are presumed to be models for metalwork as found in the early Christian period in Pictland. As Françoise Henry noted many years ago, the Lough Crew flakes show clearly the use of a grid and compasses to build up a design which looks back to 4th-century BC Continental Europe and forward to the gospel books of a millennium later. A bow-shaped brooch, from a crannog or artificial island settlement in Ardakillen Loch, Co. Roscommon (Contae Ros Comáin), shows these old motifs now intermingled with new Saxon interlace, and may date to the 6th century AD, while the ridged keel makes a reappearance on the contemporary red leather cover of St Cuthbert's gospel book—more accurately only the Gospel according to St John. This, the so-called 'Stoneyhurst Gospel', is a surviving relic of the saint's shrine originally established on LINDISFARNE after Cuthbert's death in AD 687.

§2. METALWORK

The debate over origins began in 1932 with Kendrick (*Antiquity* 6.161–84) arguing for an insular Celtic, and indeed a ROMANO-BRITISH, source for the style of decoration represented on the so-called 'hanging bowls', and it was in the course of this debate that he introduced for the first time the term 'Ultimate LA TÈNE'. The royal burial at Sutton Hoo, Suffolk, England, of *c.* AD 625 contains three hanging bowls with decorative escutcheons. These belong to a class of some 150 examples, mainly dating to the 6th and 7th centuries AD, but beginning perhaps as early as the late 4th, the vast majority coming from the south and west of England. The hemispherical bowls of very thin beaten or spun bronze, again probably developed from Roman prototypes and produced not only in Ireland but in a number of centres catering for Saxon as well as Celtic tastes. Since they have been found in several high-status Anglo-Saxon graves, it is not clear whether they were regarded as fine tableware or, just possibly, as having some rôle in Christian ritual. It has been suggested that their major production centre could have been in one of the Celtic kingdoms in the north or west of Britain, a point which is obviously important in our current search for pathways to the Celtic elements that can be perceived in the great Hiberno-Scottish gospel books. Certainly, at least some mounts must have been

made in Ireland, for example that from the river Bann at Mountsandel, Co. Derry (Contae Dhoire), obviously once enamelled, with its splendid birds' heads reflecting those on the largest and most splendid of the Sutton Hoo bowls. It was found immediately downstream from the site of Cambas Comghaill, a monastery which in the late 6th and early 7th centuries had close associations with Iona (EILEAN Ì). Other comparable, if slightly later, pieces from Ireland come from an artificial island settlement at Lagore Crannog, Co. Meath (Contae na Mí), This was possibly a royal seat occupied after the destruction of Tara (TEAMHAIR). A large disc brooch and a belt buckle both have fine triskels, while the buckle end with a backward-looking dog's head is very much in the new Germanic manner.

Among fine metalwork, the penannular dress brooch is the most common type (nearly circular with a break in the circuit for pulling the pin through), and certainly can be shown to have developed in the 4th century AD from a Romano-British form with animal-headed terminals and the subsequent addition of vitreous paste or enamel—particularly red as favoured in the pre-Roman period—or millefiore glass which becomes more and more complex in ornament. The earliest post-Roman examples seem to be found in south-west Britain and the spread of the type west to Ireland may possibly indicate early missionary activity. The most ornate are a splendid series of Irish brooches belonging to the 8th–9th century pinnacle of post-Roman Celtic art; the great silver-gilt 'TARA' BROOCH found on the shore at Bettystown, Co. Meath is one such (see article for illustration). The Bettystown brooch is strictly a pseudo-penannular type (the circuit is in fact unbroken, but the opening of the annular is recollected in the design), a form developed in the 7th century with the pin made as one with the terminal plates. Despite its small size, the brooch exhibits every skill the contemporary metal smith knew, applying novel Anglo-Saxon elements to a basically Celtic type common to Ireland and Scotland north of the Clyde–Forth isthmus. The two plates of silvered bronze on the back of the brooch incorporate the Celtic trumpet-spirals, broken-backed curves and peltas, while other similar brooches exhibit the Germanic-derived tendency to decorate every possible surface with complex animal interlace, a feature which, as will be seen, links this fine metalwork with the earliest of the gospel books.

Lagore Crannog, Co. Meath: bronze belt-buckle (originally gilt), length 158 mm, 7th/8th century AD, National Museum of Ireland, Dublin

Dunore, Co. Meath: door handle of tinned bronze with glass inlay, diameter of disc 135 mm, early 8th century AD, National Museum of Ireland, Dublin

Reerasta Rath, Ardagh, Co. Limerick: the 1868 hoard, gilt bronze, silver, gold, and glass, height of larger chalice 150 mm, 8th/9th century AD, National Museum of Ireland, Dublin

Derrynaflan monastic site, Co. Tipperary: the 1980 hoard, gilt bronze, silver, gold, and glass, 8th/9th century AD, with detail of rim of paten (below), National Museum of Ireland, Dublin

Closely related to the 'Tara' brooch is that from Hunterston, West Kilbride, in Ayrshire. Dated to the late 7th or early 8th century, it is either Irish or at least an Irish type of annular ring. Its gilded cast silver with filigree gold-work owes much to Saxon work, while the faceted scrollwork of the reverse is close in style to the contemporary 'Tara' brooch and, once more, hairspring spirals show a close relationship with elements in the Book of Lindisfarne. While an important group of ornate penannular brooches comes from the Pictish territory of north and east Scotland, the animal interlace—a Germanic introduction—of the 'Tara' and Hunterston brooches, may be compared with the hoard of nine bronzes found in 1984 at Dunore, Co. Meath. Mostly a series of handle assemblies, elements of their curvilinear decoration parallel that of the 'Tara' brooch and the buckle from Lagore Crannog with its resemblance to the Book of Durrow. The Dunore lion head door-handle has a particularly fine series of spiralling scrolls, each linked by trumpet junctures and each containing triskels. As a whole, the find shows the influence in early 8th-century eastern Ireland of that style seen also in the Lindisfarne Gospels—a fine example of the seemingly long-lasting Celtic tradition of compass-based ornamentation.

Possibly the high point of stylistic fusion by metal smiths of what has justly been termed the golden age of post-Roman Irish art can be seen in 8th-century church furniture, particular in two hoards which date to the period of Viking incursions. Best known is the great silver, gold and gilded bronze chalice found in an earthen ring-fort at Ardagh, Co. Limerick (Ardach, Contae Luimnigh) in 1868 with a second, plain chalice and four penannular brooches. Running round the communion cup are incised the names of the Twelve Apostles in a script similar to the Book of Lindisfarne suggestive of links with Northumbria, while the virtuoso use of techniques is reminiscent of other master works such as the 'Tara' brooch. Made probably in the later 8th century, the Ardagh chalice became an icon of the nascent Irish nationalist movement, several copies having been made shortly after its discovery. Even more important, though, was the discovery in 1980 of a second chalice, part of an even larger hoard, at the island monastic site of Derrynaflan, Co. Tipperary (Contae Thiobraid Árainn). The chalice, probably the latest object in the hoard and a poor thing when com-

pared with Ardagh, was associated with a paten (large, shallow communion vessel) whose decoration includes panels of filigree incorporating animals and kneeling men and animals. While these last may possibly point to an origin in antique Roman silver, filtered through Saxon plant scrolls, peltas and keeled running scrolls are still firmly in the Celtic tradition.

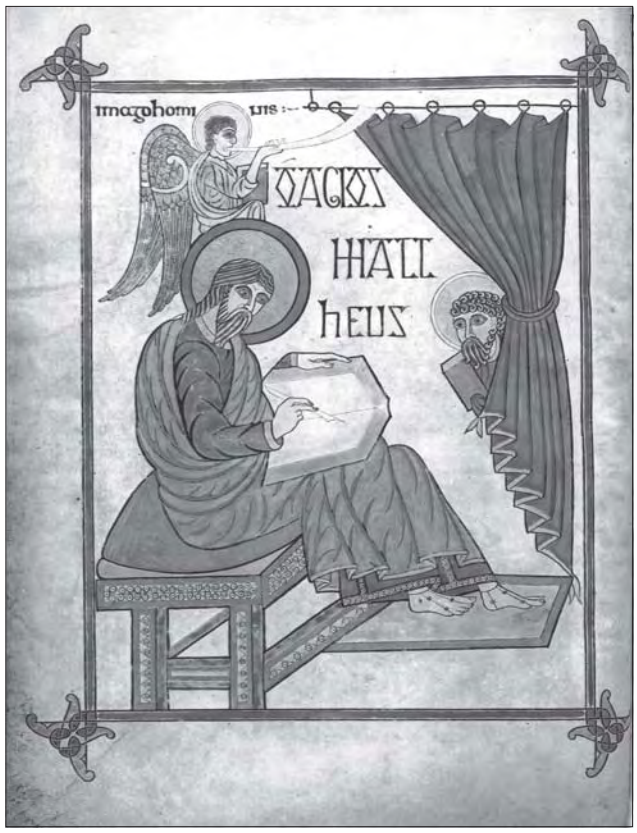
Human depictions remain rare in the golden age of post-Roman Celtic art. The once gilded 8th-century bronze openwork mount, possibly a book or shrine cover, from Rinnagan, Co. Westmeath (Contae na hIarmhí), shows what was to be the standard depiction of the Crucifixion in the Celtic west. While the general iconography—the cross with supporting angels and the two Roman soldiers, Stephaton and Longinus—is that found in the contemporary gospel books which owe much to Mediterranean models, the detailed patterning with its running scrolls, peltas and trumpet junctures follows a much older tradition. Christ is shown, not as an eastern semi-naked Messiah, but as a fully clothed Celt. His face, and those of the lesser beings, is full frontal and with stylized, ridged hair, and looks back even further to another golden age, that of the chieftainly art of the 5th century BC.

St John's, Rinnagan, Co. Westmeath: bronze (formerly gilt) bookcover or shrine mount, 8th century AD, National Museum of Ireland, Dublin

§3. MANUSCRIPTS

Manuscript production in the post-Roman Celtic world, almost exclusively associated with the Church, reflects not only its Mediterranean roots in the late antique period, but also that of its Germanic or Saxon neighbours while retaining elements of the Celtic visual vocabulary. Although there are seemingly insoluble problems in finding a close dating for much of the insular pre- or non-Roman art of the first five centuries AD, there are equally major difficulties when we move from the putative sources of Ultimate La Tène to the period of the earliest surviving Christian texts. While not the earliest Christian manuscript which has survived, there is an incomplete, possibly early 7th century, manuscript now in the Library of the Royal Irish Academy (ACADAMH RÍOGA NA HÉIREANN). Conventionally known as the 'CATHACH of Colum Cille' (the 'battler' of Columba), the volume consists of the text of the Psalms, written in the Vulgate, in a form of majuscule which is distinctively Irish (see article for illustration).

Initial letters of the *Cathach* show, in their 'Ultimate La Tène' conjoined or 'split' trumpets, strong affinities with the Book of DURROW. Indisputably an Irish product and also one with traditional links with St COLUM CILLE, Durrow is certainly the oldest of the great gospel books to exhibit a more or less standard layout of arcaded concordances of Mediterranean inspiration, 'carpet' pages whose broad ribbon interlace suggests Coptic models (see DURROW for illustration), perhaps as seen in manuscripts contained in Continental Irish foundations such as St Gall and Bobbio, and pages that also suggest familiarity with contemporary fine metalwork. Durrow also contains pages that depict the Evangelists, again in the Coptic manner, followed by the actual Gospel text, making use of the 'Vulgate' version of the text produced by St JEROME in the late 4th century. Such books would not have been for regular use, but retained for special occasions. Throughout, Durrow exhibits an exuberant display of design which



Lindisfarne Gospels: St Matthew with his symbol and (right) an onlooker, possibly Christ, f. 25v, page size 340 x 240 mm, British Library, London

is never static and is in stark contrast to later classical art, let alone the spare products of later pre-Roman Celtic art. But even when, as in the Evangelist pages, animals and human figures are introduced, it is pattern making rather than representation which is the dominant aim.

There are certainly elements of Durrow which link Germanic or Saxon and Ultimate La Tène motifs. On the one hand, on the Gospel openings, very La Tène-like spirals occur. In contrast to the Germanic animal interlace elements, perhaps transmitted through LINDISFARNE (founded from Iona by St Aedán in 635), is the chequer-board pattern of the garment worn by Matthew, frequently compared with the great gold shoulder-clasps set with millefiori glass and cut garnets from the 7th-century Anglo-Saxon ship burial at Sutton Hoo. The textual pages, however, look forward to the Book of KELLS, made at least a century later—Durrow is conventionally dated to the end of the 7th or early in the 8th century. While Durrow has long been associated with the Columban foundation of that name (Old Irish *Dairmag* 'Oak plain') in Co. Offaly, a Northumbrian origin has also been claimed for it. On balance, and in the light of comments added in a colophon, an association with the Columban monasteries would seem unassailable—indeed, it is far from impossible that Durrow could have been executed on Iona itself and brought to Ireland when the community left in AD 807 following three devastating Viking attacks.

It seems highly likely that, not only during the Roman occupation of Britain but thereafter, Celtic metalworking styles continued in southern Britain, and much material of that nature could have found its way into Saxon centres. Certainly, there can be no doubt as to the antecedents of many of the triskels, trumpet junctions and the like found in two other great North British manuscripts, the Lindisfarne Gospels, written by the Saxon Eadfrith, bishop of Lindisfarne from AD 698, some time between 716 and his death in 721. The Lindisfarne Gospels is simply the finest of several manuscripts produced around the beginning of the 8th century. It exhibits not only the carpet pages with their combination of complex Celtic scroll work and Germanic-derived interlace—to be seen in the opening to St Matthew—but the arcaded cannon tables or concordances, and the Evangelist portraits heading every Gospel. These portraits most clearly show the influence of Mediterranean models: St Matthew seated being based on the portrait of the prophet Ezra seated beside his scroll cupboard in the *Codex Amiatinus*, a Bible in the Mediterranean manner commissioned by Ceolfrith, abbot of the joint foundations of Jarrow and Monkwearmouth. The eclectic nature of styles visible in the Lindisfarne Gospels may represent an attempt to appeal to all the varying, and conflicting, aspects of contemporary Northumbrian culture.

Later in the 8th century is the date of the LICHFIELD GOSPELS, 'bought for the price of a good horse' before deposition in the early 9th century in the church of Llandeilo Fawr, Carmarthenshire (sir Gaerfyrddin). The word 'Quoniam' at the opening of Luke's Gospel shows a positively overflowing nest of crested Celtic waterbirds. Lichfield may lay claim to be the oldest liturgical manuscript in Europe still in use; today, most of its pages after the opening to St Luke's Gospel—and in contrast to either Durrow or Kells—are executed

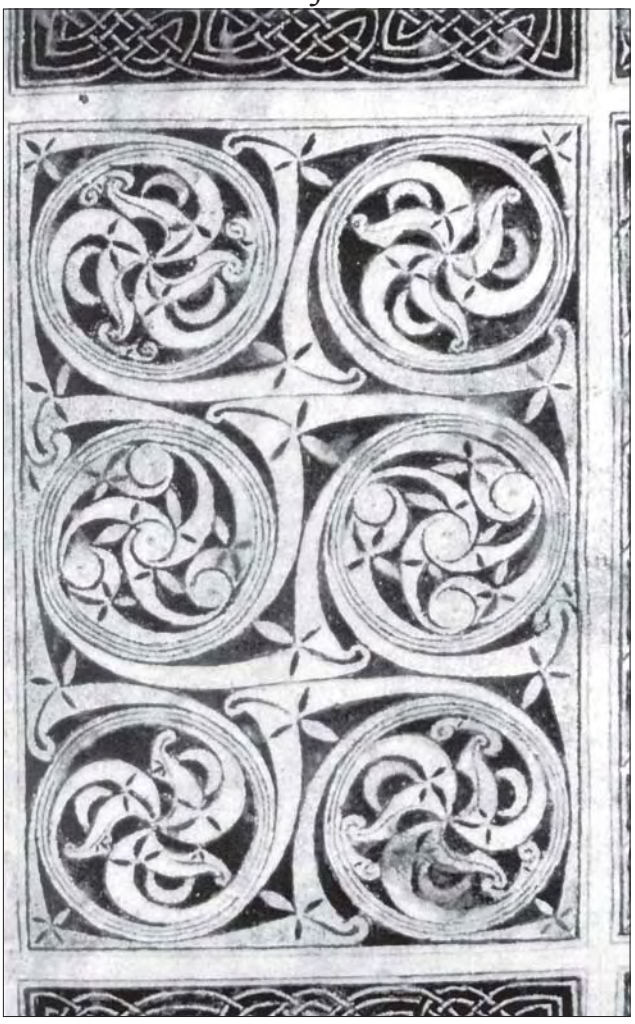
in an almost monochromatic palette. While details such as the great initial chi-rho (Christ's monogram in the Greek alphabet) clearly show the influence of Lindisfarne, the actual origin of Lichfield is disputed, with Northumbria being the most likely candidate.

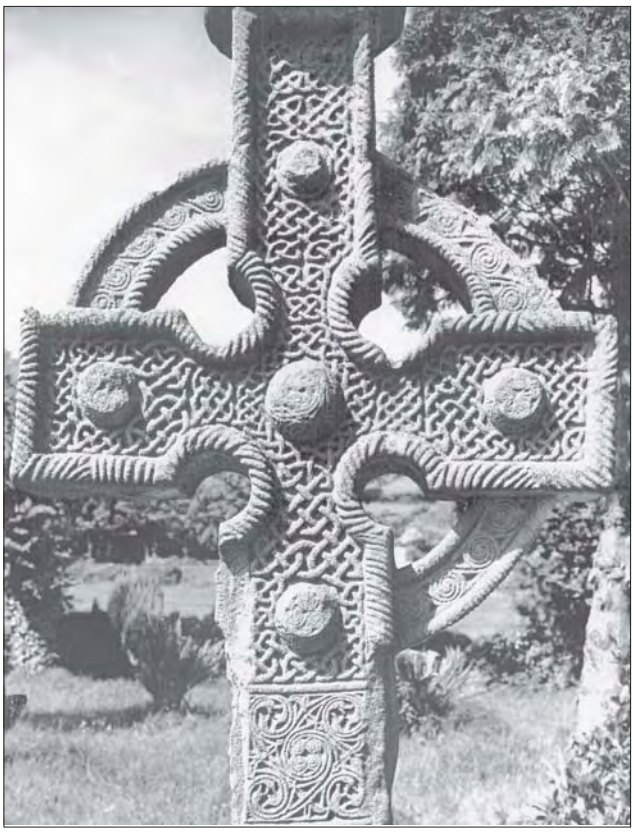
A feature of the hybrid art which emerged in both Northumbria and eastern Ireland, where there was ready adoption of the style exhibited by Lindisfarne, is to be found more and more in the incidental figures of birds, animals and humans, not just as minor parts of the great set-pieces of the fully decorated pages, but as incidentals added to the text. Nowhere is this more clearly illustrated than in the most ornate of all the great gospel books, the Book of Kells (see article for illustrations). This gospel book was probably brought to Kells in Co. Meath in AD 807 by monks from Iona fleeing the third of a series of savage Viking raids. One of the greatest monuments of European art, as it most certainly is, it has suffered burial, later interpolations and loss—including loss in the Library of Trinity College, Dublin (Baile Átha Cliath), where it has resided since the mid-17th century, and loss of the edges of some folios due to an over-zealous 19th-century bookbinder. Apart from the superb detailing of such pages as the great chi-rho at the beginning of Matthew or the opening of Mark, the full-page illuminations, such as the Temptation of Christ or His arrest, or the enthroned Virgin nursing a remarkably mature-looking Christ-child, exhibit the continued Celtic propensity for reducing natural forms to stylized pattern, while at the same time there are layers of meaning even in the seemingly least significant of details. Thus, the frequent depiction of peacocks is emblematic of the incorruptibility of Christ, while chalices no less than the vine scrolls refer to the Eucharist; indeed, it has been claimed that Eucharistic symbolism is basic to all the imagery of Kells. As is common with Celtic imagery down the centuries, it is possible to enjoy the details of Kells apart from their symbolism—the cats and mice of the chi-rho page, the warrior with his spear and targe, the tonsured monk on horseback, the many profile portraits and the gallery of lookers-on, which literally grow out of the texts. Aspects of Kells recall such fine metalwork as the Dunore handle assemblies—Dunore is close to Kells—and the Ardagh chalice. The much-debated question as to the location where Kells was produced seems best reconciled by suggesting that it was commenced on Iona around or shortly before 800. Brought to Ireland, it may have been further worked on at Kells, where it was to remain for many centuries. But it was never completed by the four separate hands which may be detected as having worked upon it.

§4. THE BEGINNING OF THE HIGH CROSS TRADITION

One area of post-Roman art which has not been reviewed is that of sculpture. Within the time-frame of this article one category, that of the high crosses, must suffice. The low relief Irish crosses of the 8th and 9th centuries are preceded by pillar-stones, usually decorated only with a simple cross, but sometimes with an inscription. More ornately decorated erratics, such

'St Chad' or Lichfield Gospels: detail of ornamental fill in initial Q, from the beginning of St Luke's Gospel, f. 121, complete page 308 x 235 mm, Lichfield Cathedral Library, Lichfield





Ahenny, Co. Tipperary: detail of the east face of the north cross, 8th/9th century AD

as that from Mullaghmast, Co. Kildare, mentioned above or Reask, Co. Kerry (Contae Chiarraí)—later 6th or early 7th century—which bears a cross and Ultimate La Tène spirals as well as a pair of peacocks, recall respectively post-Roman metalwork and elements from the *Cathach*. The basic form of the Irish crosses, with the equal-armed cross set within a wheel, goes back to late antique times and Coptic textiles of the early 6th century, but more immediately may have developed from wooden prototypes where the characteristic form was constructed from carefully morticed joints.

Some of the two hundred or so crosses known from Ireland—there is a small but important series from the west of Scotland—are decorated almost exclusively with interlace designs, again clearly reflecting contemporary metalwork, and those such as the North Cross at Ahenny, Co. Tipperary, have been considered as earlier than the figural examples, which usually depict scenes from both the Old and New Testaments. Such differences, however, are just as likely to be regional as temporal. Certainly, by the mid-8th century and into the early 10th century, one can observe a flowering of what can be regarded as a kind of 'poster art'—readily discernible to the populace at large, and with the Passion, the Eucharist, and the Last Judgement figuring prominently. Amongst the most impressive of the narrative crosses are those at Monasterboice, Co. Louth and the 'Cross of the Scriptures' at Clonmacnoise, Co. Offaly (Cluain Mhic Nóis, Contae Uíbh Ghailí).

Beyond Ireland, on Iona and at Kildalton on Islay, high crosses bear testimony to a local school and exhibit links, not only with Ireland, but also with contemporary Pictish and Northumbrian sculpture (see HIGH CROSSES). Equally and particularly in their boss and interlace ornament, they are again very close to the Book of Kells. What is not so obvious is what were the sources from which the high-cross tradition evolved. Although not easy to prove, it seems possible that some at least of the narrative elements were inspired by the imported manuscripts and other objects from both the Mediterranean and Carolingian Europe, combined with carving skills derived from a long—but again largely non-proven—carpentry and wood-carving tradition. As a visit to many cemeteries today will confirm, the tradition of the high crosses lives on.

art, Celtic-influenced [1] Ireland

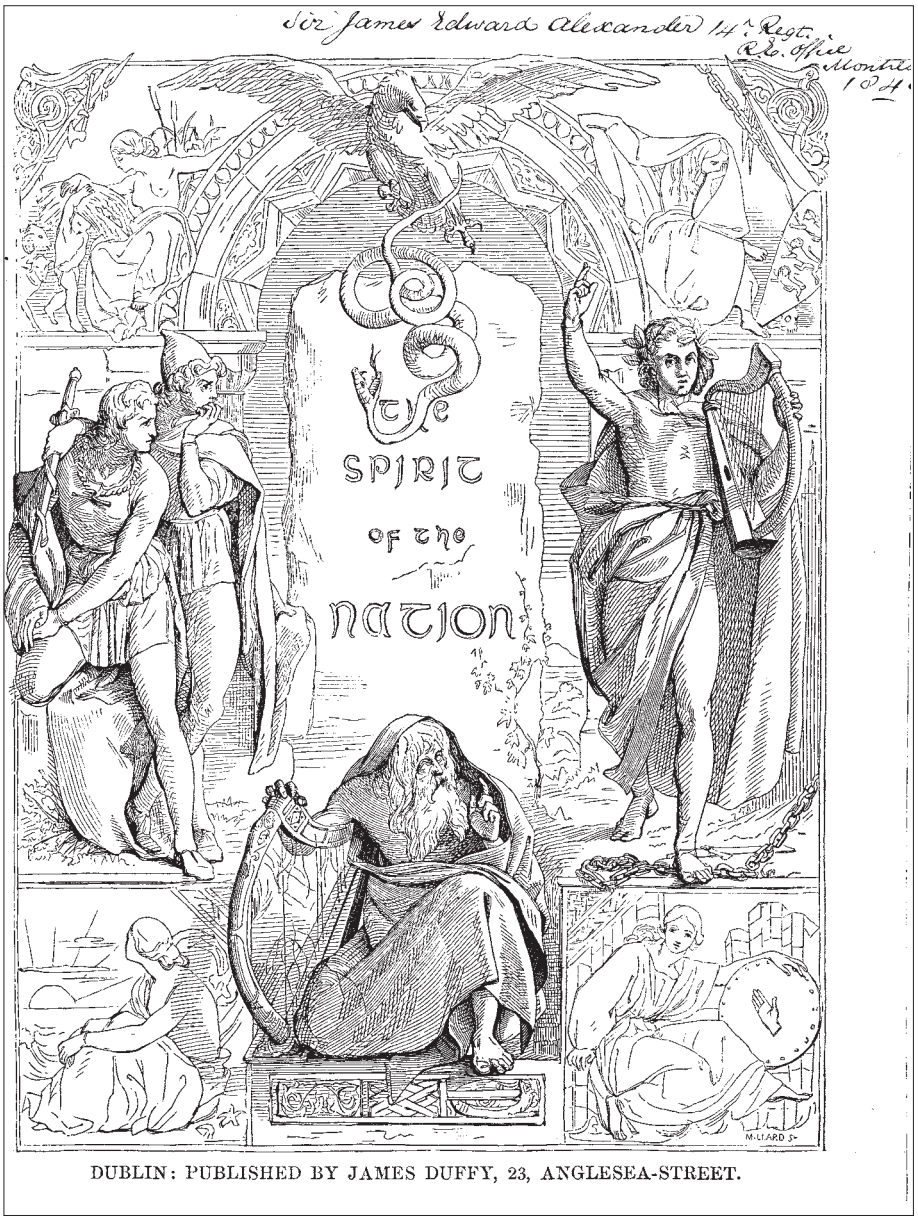
By the 1880s, the desire for political autonomy and cultural identity in Ireland (ÉIRE) had been so fuelled by antiquarian and literary research that a new visual imagery began to emerge. National zeal and demoralization at continuing emigraton and disappearing skills also contributed to this development. Like other

non-industrialized countries, Ireland sought an evocation of a real and mythical past on which to pin its hopes for future independence. In its Irish form, this romantic NATIONALISM was closely bound to the Celtic revival. This movement flourished between the 1880s and 1922, when self-government was achieved with the establishment of the Irish Free State (Saorstát na hÉireann; see IRISH INDEPENDENCE MOVEMENT). It was the culmination of national and cultural revivalist aspiration that had been gathering momentum since the late 18th century.

In 1785 the Royal Irish Academy (ACADAMH RÍOGA NA HÉIREANN), the premier learned institution of Ireland, was founded in Dublin (BAILE ÁTHA CLIATH) by the first Earl of Charlemont. It would become the repository of the priceless collection of Irish manuscripts and antiquities that provided the nucleus for antiquarian research, documentation and studied examination during the 19th century. Following the disappointment of the 1798 Volunteer Rebellion (see TONE), and the ACT OF UNION with BRITAIN in 1800, heroic striving for political autonomy was channelled first into the learned societies and nationalist periodicals. These new cultural developments flowered as a result of the seminal findings of antiquarians, notably Eugene O'CURRY (1796–1862), George PETRIE (1790–1866), Henry O'Neill (1798–1880), John O'DONOVAN (1809–61), and Sir Samuel Ferguson. Sheehy describes Petrie as 'the founder of systematic and scientific archaeology in Ireland' and, with O'Curry and O'Donovan, 'revolutionary in putting together evidence from ancient manuscripts and from investigations on the sites themselves' to dispel ignorance and prejudice. O'Curry's posthumous *On the Manners and Customs of the Ancient Irish* (1873) and his editing, translation and exquisite copyist illustrations of early Irish manuscripts were seminal texts for the political activities of the Young Ireland movement. Petrie's topographical volume, *On the Ecclesiastical Architecture of Ireland* (1845), and his *Collection of the Ancient Music of Ireland* (1855) were also influential, as were *Illustrations of the Most Interesting of the Sculptured Crosses of Ancient Ireland* (1857) by O'Neill, the pioneering *Grammar of the Irish Language* (1845) by O'Donovan, and his seven-volume translation of *The* ANNALS *of the Kingdom of Ireland by the Four Masters* (1848–51), and Ferguson's translations of old Gaelic poems and sagas (see IRISH LITERATURE). The primary field studies of O'Curry, Petrie, and O'Donovan for the historical department of the Ordnance Survey of Ireland revealed the wealth of Ireland's archaeological past, however ruined. This new vision of the past was emotively and accurately evoked in the paintings of Sir Frederick Burton (1816–1900), who accompanied Petrie on ethnographical trips to the west of Ireland and the Aran Islands (OILEÁIN ÁRANN), and Daniel Maclise (1806–70). Maclise's epic *Marriage of Strongbow and Aoife* (*c.* 1854) laments the end of Celtic civilization. Burton's strongest revivalist works are his stirring frontispiece for the Young Ireland anthology, *The Spirit of the Nation* (1845), and his glowingly detailed watercolour, *The Meeting on the Turret Stairs* (1864). *Turret Stairs* was meticulously transcribed from a tragic Danish ballad to suggest early medieval Ireland. It was formerly in the collection of the antiquarian Margaret Stokes (1832–1900).

In 1861, Stokes provided an early example of boldly coloured Celtic interlace in its revived form (reproduced as early as 1856 by Owen Jones in his *Grammar of Ornament*) in her assured illustrations to Ferguson's poem, 'The Cromlech of Howth'. These were based on her own coloured copies of original illuminated manuscripts and accompanied by Petrie's notes on Celtic ornamental art. Her woodcut illustrations for her popular editions of *Early Christian Architecture in Ireland* (1878) and *Early Christian Art in Ireland* (1887) were subsequently widely influential. By this time, images of certain early Christian treasures—the Ardagh chalice, the TARA BROOCH, the Books of KELLS and DURROW, the cross of Cong and the shrine of St PATRICK's bell—had become predominant. They were synthesized with earlier 19th-century emblems like the HARP, the round tower, the rising sun, the wolfhound, personified feminine HIBERNIA or Erin, the ruined abbey, the shamrock. These newer and older images became the iconic symbols of Irish nationalism, visually inspirational in architecture, sculpture, painting, graphic illustration and, in particular, the popular arts; they were frequently paraphrased, plagiarized and caricatured, and usually offset with Celtic interlaced, zoomorphic or Hiberno-Romanesque chevroned decoration.

In Dublin, goldsmiths, silversmiths, and jewellers such as Waterhouse & Co. (who first bought the 'Tara' brooch from its finder in 1850), West and Son (who exhibited their 'Celtic' brooches at the 1851 Crystal



Frontispiece by Frederic Burton for 'The Spirit of the Nation' (1845)

Palace) and the extensive Goggin firm, specializing in 'personal and table ornaments of artistic design' in genuine bog oak, were among the first to patent, exhibit, and market facsimiles and fancifully named adaptations. Soon there was a proliferation of methirs (ancient Irish drinking vessels), ceremonial drinking horns, bracelets and penannular brooches, converted to modern usage. The Belleek pottery followed suit in Co. Fermanagh with its fine porcelain pieces, as did the Pugh glasshouse in Dublin, furniture makers (some inlaying Irish views in native veneered woods), stone and wood carvers, embroiderers, stained glass firms and metalworkers. Edmond Johnson (†1900), master of the Dublin Company of Goldsmiths from 1883, was invited by the Royal Irish Academy to clean, restore, and make a detailed study of the craftsmanship of their 8th-century Ardagh chalice (acquired 1868). Johnson was able to make 182 Celtic facsimiles for display at the 1893 Chicago World Columbian Exposition. The unrivalled skill of his adaptations of 'ancient Irish art' was lauded at the first exhibition of the Arts and Crafts Society of Ireland in 1895, as was the bookbinding of Sir Edward Sullivan (1852–1928), whose seminal study of the *Book of Kells* was published in 1914.

For the next generation of nationalist and revivalist poets, writers, and cultural activists central to the Celtic revival emerging in the 1890s, the 'artistic enchantment' of the idealistic two-volume *History of Ireland—The Heroic Period I* (1878) and *Cuculain and his Contemporaries*

II (1880)—by the scholarly classicist Standish O'Grady (1846–1928) was to draw back 'many an ardent spirit to the romantic age of Ireland'. Although O'Grady, like many revivalists, could not read the Irish language—to whose rediscovery Douglas Hyde (Dubhghlas De hÍde) and his Gaelic League (Conradh na Gaeilge, established 1893) were devoted—he revealed what the visionary poet, writer and painter, George A. E. Russell would call 'the memory of race', 'the submerged river of national culture'. The poet W. B. Yeats avowed that 'every Irish imaginative writer owed a portion of his soul' to O'Grady. His most accessible book, *Finn and his Companions* (published in a popular children's edition in 1892), was to provide the doomed patriot Patrick Pearse (Pádraig Mac Piarais) with his love of Cú Chulainn, the warrior hero of the Ulster Cycle. Cú Chulainn's legendary adventures inspired Pearse's revolutionary educational venture, St Enda's. The heroic costumed plays, pageants, masques and tableaux written by O'Grady, W. B. Yeats, A. E. Russell, Alice Milligan, and others were inspired by the great Ulster and Ossianic cycles (see oisín) and the orally preserved tradition of bardic poetry. These were often performed outdoors, for example, at the feiseanna, assemblied fairs revived in 1898. Players of all classes and creeds converged with their Scots and Welsh Celtic colleagues in a range of imaginative attire: Elizabethan (the last period before the ancient Gaelic lords were vanquished by English domination), Norse, medievalized or romantically historicized. The Royal Irish Academy's 'gold room' offered a hoard of recently discovered treasures to enraptured visitors, until they were moved to the new National Museum of Ireland (Ard-Mhúsaem na hÉireann) in 1891. George Coffey (1857–1916), pioneering antiquarian, cultural revivalist, bookbinder and archaeologist, first Keeper of Antiquities at the museum, dressed up with fellow cultural revivalists in 'Celtic gold'. From 1893, Douglas Hyde encouraged ardent Gaelic League nationalists to wear costume of Irish inspiration and manufacture (see material culture [2] national costume).

The aspect of Irish art that came closest to the literary and language revivals (see language [revival]), and had most support from all the people involved, was applied art. In all its forms, imagined and reproduced, it answered 'the great need of modern Ireland . . . to be reunited with its past' through 'the general intellectual cultivation of the country' and the encouragement of 'the element of national individuality'. Thus, during the 1894–1925 period, the Arts and Crafts Movement flourished in Ireland. There were then continued attempts—focused around the Metropolitan School of Art in Dublin—to invest the arts with the spirit of Celtic design, but to avoid the 'slavish reversion to ancient forms', an all too common trap.

Those who eminently succeeded worked in stained glass, metals, graphics and textiles, building up individual skills and imaginative expression. Several initiatives were influenced by the Utopian Socialist and Fenian romantic nationalist ideals of W. B. Yeats—for example, An Túr Gloine, the stained glass co-operative workshop set up in 1903 by the Dublin painter Sarah Purser, and the Dun Emer Guild set up in Dublin in 1902 by the carpet designer Evelyn Gleeson with Elizabeth and Lily Yeats, who seceded in 1908 to form the Cuala Industries. Working as individuals, Harry Clarke (1889–1931), Beatrice Elvery (1883–1970), Wilhelmina Geddes (1887–1955), Oswald Reeves (1870–1967), William A. Scott (1871–1921), Oliver Sheppard (1865–1941), and Mia Cranwill (1880–1972) successfully evolved distinctive masterpieces of great skill, beauty, and originality, inspired by the Celtic past but in a modern idiom. Clarke's masterpiece, his eleven stained glass windows for the Hiberno-Romanesque gem, the Honan Chapel in University College, Cork (1915–17), make ample reference to ancient Celtic and early Christian legends. Elvery's painted, sculpted, and graphic personifications of Mother Ireland alternate with evocative early Christian imagery in plaster, silver, and wood. Geddes's monumental stained glass and graphic figures recall Irish Romanesque carving. Reeves's metalwork and enamels reflect the essential spirit of Celtic forms and symbolist imagery. The restrained severity of Scott's exemplary Hiberno-Romanesque revival architecture, with Celto-Byzantine fittings, included restored tower houses, a church, an oratory, public buildings, furniture and metalwork. Sheppard's sculpted images powerfully portray the heroes and heroines of ancient Gaelic legend. Cranwill's jewellery, monstrances, and caskets illustrate contemporary Irish verse using 9th-century iconographical forms. Their artistic achievement during the Celtic revival was unique.

Nicola Gordon Bowe

art, Celtic-influenced [2] Scotland

Since the late Victorian period Scottish artists have explored and reflected the forms and intelligence of indigenous Celtic culture in their work.

§1. INTRODUCTION

In the 1880s and 1890s the systematic recording of some five hundred major PICTISH and other Celtic standing stones by civil engineer and antiquarian John Romilly Allen (1847–1907) for *The Early Christian Monuments of Scotland* (1903) and *Celtic Art in Pagan and Christian Times* (1904) distilled the visual roots of the nation's culture. With Robert Brydall's *History of Art in Scotland* (1889), such research coincided with two collaborative paintings by Glasgow 'boys' Edward Atkinson Hornel (1864–1933) and George F. Henry (1858–1943). Unlike Alexander Runciman's 1770s neoclassical mural decorations illustrative of James MACPHERSON's Ossian (see OISÍN) at Penicuik House, these were the first in a modern idiom to reclaim a 'lost' Celtic past. In the large, square gold-decorated canvases of *The Druids: Bringing Home the Mistletoe* (1890, Glasgow Museums) and *The Star in the East* (1891, Glasgow Museums) they rejected the pastoral tradition, seeking instead to equalize pagan and Christian values and the decorative and fine arts (Macmillan, *Scottish Art* 280–2).

§2. PAST, PRESENT, AND FUTURE

National Museum curator Joseph Anderson's first Rhind lecture series, *Scotland in Early Christian Times* (published 1881), had demonstrated the existence of a distinct school of art within an international context, as a 'branch of the history of art in general'. Artefacts seen in such an international dimension shaped the new art and design movement. But oral traditions—poetry and storytelling, song and pipe music—also played a vital part in the formation and appreciation of the neo-Celtic sensibility. As Glasgow designer Ernest Archibald Taylor (1874–1951) was to comment in 1920, it was to Alexander Carmichael (1832–1912) 'that Scotland owes a special debt of gratitude for his lifelong chronicling of the beauty of the Celtic past'. Carmichael's CARMINA GADELICA, a core of legend and myth deemed central to the GAELIC imagination, was printed from 1900, with historiated initials drawn from authentic manuscripts in the Advocates' Library, Edinburgh (DÙN ÈIDEANN).

While metalworkers, book and graphic designers might copy design elements, other artists responded to Celtic ideas more intellectually. Subjects such as the paintings *St Bride* (National Gallery of Scotland; see BRIGIT) and *The Coming of Bride* (Glasgow Museums), *St Columba Bidding Farewell to the White Horse* (Carnegie Dunfermline Trust; see COLUM CILLE) or the drawing *Deirdre of the Sorrows* (National Gallery of Scotland; see DERDRIU) linked John Duncan (1866–1945), a leading artist of the Scottish Celtic revival, to a range of literary sources, including the *Carmina Gadelica*. Duncan worked with the botanist-turned-entrepreneur sociologist, Patrick Geddes (1854–1932) to counter the deadened, mechanical materialism of current art and design. Part of this ideal was to understand, absorb, and release the Celtic past into the modern idiom, not to replicate it. To make art a vital ingredient of everyday life in 1890s Edinburgh, Geddes employed Duncan, with Charles Hodge Mackie (1862–1920), to paint mural decorations in rooms at Ramsay Garden (Bowe & Cumming, *Arts and Crafts Movements in Dublin and Edinburgh* 27–9).

St Bride by John Duncan

Duncan also directed the Old Edinburgh School of Art for Geddes in the mid-1890s, where students engaged in arts and crafts practice, including the design of modern Celtic ornament for wide application in metalwork, wood, leather and plaster. Based in the heart of the Old Town of Edinburgh, the School expressed Celticism as the authentic inherited culture of Scotland (Alba), and one which complemented that of fellow European Celts. This was a view also presented in Patrick Geddes & Colleagues' seasonal journal, *The Evergreen* (1895–6), where contributing poet William Sharp ('Fiona Macleod') wrote of 'the re-birth of the Celtic genius in the brain of Anglo-Celtic poets and the brotherhood of dreamers'. Their many other publications included *Lyra Celtica* (1896), where the inclusion of Breton poetry (see BRETON LITERATURE) underlined Scotland's rôle within the internationalism of Celticism (see PAN-CELTICISM) and partnered interest in its art in Edinburgh: Mackie had painted in Brittany (Breizh) in the early 1890s, as, in the following decade, did other Scots, including future 'Colourists' Samuel John Peploe and John Duncan Fergusson (1874–1961).

Although Celticism was but one single intellectual facet of Scottish arts and crafts practice and romantic NATIONALISM around 1900, it was uniquely placed to integrate literary, philosophical and design ideals and to take the arts beyond the limits of the local vernacular. Glasgow designers, including Charles Rennie Mackintosh (1868–1928), Taylor and their associates, followed Hornel and Henry to apply the mental dynamics of the Celt to synthesize space, form and imagination

(as, for example, at Mackintosh's Hill House, Helensburgh, 1902–3), and, at times, the detailing of their buildings, interiors, objects and paintings. A more traditional integration of art with life was celebrated in artists' pageants mounted for charity in Glasgow (1905) and Edinburgh (1908) with costumes and props by Duncan, designer Jessie M. King (1875–1949, Mrs E. A. Taylor) and the Irish-born Edinburgh artist Phoebe Traquair (1852–1936) (Bowe & Cumming, *Arts and Crafts Movements in Dublin and Edinburgh* 35–7, 44).

In these, historicity was presented as a creative dialogue between romance and a more linear approach to the historical past.

§3. TIME AND PLACE

With the imagination and handcrafts now deemed equal tools, by the 1920s some artists were exploring philosophical concepts of time and place. The paintings of William Johnstone (1897–1981) presented a fluidity of negative and positive forms in his post-war iconization of Celtic thought, *A Point in Time* (1929–38, Scottish National Gallery of Modern Art). This linked the new, reductionist modernism with an abstract sense of the land (more specifically, the Scottish Borders countryside), and a personal awareness of inherited civilizations. Johnstone had studied at the Edinburgh College of Art with Duncan, whose *Evergreen* illustration *Anima Celtica* (1895), with Mackintosh's *Part Seen, Imagined Part* (1896, Glasgow Museums), had previously feminized the Celtic.

For Johnstone, who worked in a more spontaneous and less decorative fashion than Duncan, or even the Fauvist Fergusson, colour could express the spirit and power of the past. For Fergusson, colour, in contrast to the black of alien Calvinism (see CHRISTIANITY), was essential to true Celtic Gaeldom (Normand, *Modern Scot* 107). And if Fergusson idealized 'the heaven of the Gael' as 'a place where the sun always shines', he located it geographically in the west, 'where the sun goes, full of colour again' (Fergusson, *Modern Scottish Painting* 85). With its links to the early Christian church and its sheer beauty of natural colour, Iona (EILEAN Ì) became an inspiration for its pilgrim landscape artists. Duncan introduced song collector Marjory Kennedy-Fraser to Eriskay (Eirisgeigh) in 1905. Yet, although the geography of Celtic culture might be located, a fact acknowledged by curator-writers such as Ian Finlay, for many post-war artists, including Fergusson, identity by 1943 was also bound up in a racial ideal of Gaeldom (Normand, *Modern Scot* 107, 110).

As Duncan had matched intuitive working with the precision of decorative skill, the poet George Bruce (1909–) in 1946 underlined the Celt's general 'cultivation of intellect' and the interdependency of his arts (Halliday & Bruce, *Scottish Sculpture* 3), aspects reflected in post-war Scottish culture. The Celtic Congress in Glasgow (GLASCHU) in August 1953 acknowledged the resynthesized values of Celticism in a modern city where the arts were dominated by Fergusson's New Scottish Group, his partner Margaret Morris's Celtic Ballet and publisher William MacLellan. Fergusson's OGAM-alphabet-infused graphic illustrations to Hugh MacDiarmid's *In Memoriam James Joyce* (1955) symbolized this synthesis, as did many of his paintings of the decade, including DANU, *Mother of the Gods* (1952, Fergusson Art Gallery, Perth).

Remaining central to the arts throughout the period was the concept of time duration, from the ever-present Bergsonian life-enhancing dynamic, feminized as Fergusson's *Rhythm* in 1911 (University of Stirling) and subsequently his *Danu*, to the linear perpetuity of Celtic knotwork analysed in the books of George Bain (1881–1968). Bain's death coincided with the end of a century of conscious Celticism. Yet, since the 1960s artists in Scotland have continued to engage strongly with many of its philosophical values, particularly in the conceptual arts of installation and land art.

art, Celtic-influenced [3] Isle of Man

§1. THE ART OF CELTIC CHRISTIANITY

Celtic-influenced early and medieval art on the Isle of Man (ELLAN VANNIN) has not yet received the attention paid to Irish, Scottish, and Welsh developments in recent decades. It is expected that volumes 3 and 4, *The Medieval Period 1000–1405* and *The Derby and Atholl Periods 1405–1830*, of the *New History of the Isle of Man*, researched under the auspices of LAARE-STUDEYRYS MANNINAGH (the Centre for Manx Studies), Douglas (Doolish), and published by Liverpool University Press, will rectify this situation. The new study is, however, not expected to reveal the wealth of material that has, for instance, recently come to light in Wales (Lord, *Imaging the Nation*; Lord, *Medieval Vision*).

The most characteristic feature of pre-19th century Celtic-influenced art on the Isle of Man are over 200 cross-slab Celtic crosses, originally found across the island and now mainly kept in groups at the cemeteries of Kirk Maughold, Kirk Lonan, Old Kirk Braddon and Onchan Parish Church. Like the island's culture generally, they are a complex mix of Celtic and Scandinavian styles and traditions. These will be dealt with in the entry on Celtic HIGH CROSSES.

§2. ARCHIBALD KNOX

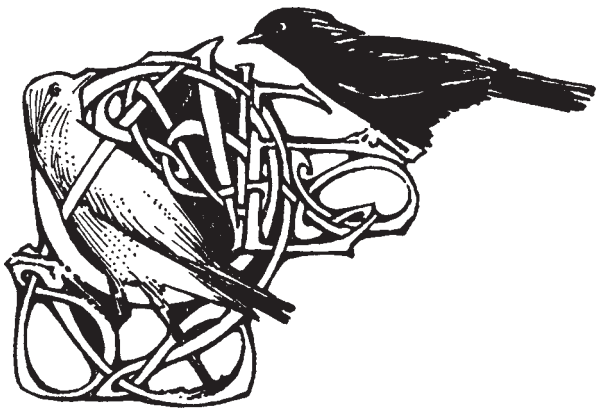
Archibald Knox (1864–1933), the prolific Manx artist, teacher and designer, is most widely known for the designs he produced for the 'Cymric' and 'Tudric' ware of Liberty and Co. between 1895 and 1906. These successfully answered the London store's search for fashionable 'modern' designs which, although largely machine-made, appeared to reflect the individuality and craft philosophy of the Arts and Craft Movement as well as contemporary interest in the Celtic revival. It has been suggested that Knox produced over 5000 designs for Liberty's store (Martin, *Archibald Knox* 43), and the wide range of very diverse products still prove, even now, to be very collectable. Knox's designs drew heavily throughout his life on his early fascination for, and study of, Celtic and Viking decoration and motifs which he encountered on artefacts, mainly ancient Christian crosses, found on his native Isle of Man. His redevelopment of these, particularly the interlacing, often formed a basis for his designs and was also combined with a form of medieval Celtic script, similar to that found in the Book of KELLS, to produce a unique form of writing. Although sometimes difficult to read, 'Knoxical' writing enhances each word by adding to its sound and meaning a stunning visual aesthetic.

Knox taught throughout his adult life, initially at the Douglas Art School, which he had attended as a pupil from the age of fourteen. During the periods he spent away from the Isle of Man in England (1897–1900 and 1904–12) he taught at the Redhill School of Art and Kingston-upon-Thames School of Art respectively. Although leaving the latter somewhat controversially, his loyal pupils founded the Knox Guild of Design and Craft which existed from 1912 to 1937 to continue his distinct philosophical approach to design and craft.

Knox's watercolour studies extracted the essential Isle of Man landscape. Never satisfied that they could not be further improved, Knox refused to sell them during his lifetime, which allowed experiment. The use of Manx colour systems and apparent simplicity of composition produced strong but subtle representations which hold a 'timelessness and understatement' on which subsequent Manx artists have been able to 'feed' (Sayle, interview by author 13 May 1998).

Knox's design and illustration centred on the Isle of Man, and steered Manx visual perception of itself away from the English paradigm by referring beautifully and proudly to Man's Celtic origins. His forms of

Illustrated lettering from 'Manx Fairy Tales' (1930)



lettering and reinterpretation of ancient interlacing design have been much copied and provide, at the beginning of the 21st century on the Isle of Man, accepted signifiers of 'Manxness'.

art, Celtic-influenced [4] Wales

While a sense of Welsh distinctness as the original BRITONS was expressed in literature from the early Middle Ages (see LEGENDARY HISTORY), comparable expression in visual culture was not possible until appropriate artistic genres developed during the RENAISSANCE. Tapestries illustrating subjects associated with ancient Britain are known to have hung at Raglan Castle, Monmouthshire (sir Fynwy) in the first half of the 17th century and may well be of an earlier date since the castle was the centre of Welsh Renaissance patronage from the middle of the 15th century. In painting, the earliest expressions of ancient British identity are found in representations of landscape that operate by resonance with literary narratives well known to the contemporary intellectual audience. An anonymous depiction of Dinefwr Castle from the south-west, painted *c.* 1670, would resonate strongly as the site of the prophecies of Merlin (MYRDDIN) with an audience for whom Spenser's *Faerie Queene* remained a familiar text. The use of landscape in this way persisted as a characteristic of Celticist tendencies in the visual art of Wales (CYMRU) into the 20th century. With the exception of late 15th-century depictions at St George's Chapel, Windsor, of the *Croes Naid*, a cross-shaped reliquary worn by LLYWELYN AP GRUFFUDD and appropriated by Edward I following the conquest in 1282, the modern imaging of artefacts or narratives of the pagan or Christian Celts followed the development of antiquarianism. Edward LHUYD, for instance, made drawings of inscriptions and objects such as the reliquary of St Winifred, but the publication of Henry Rowlands' illustrated *Mona Antiqua Restaurata* (Ancient Anglesey restored) in 1723 marked the practical beginning of the age in which visual artists drew on antiquarian investigation of the Celtic past as a basis for narrative painting and sculpture of a specifically Welsh nature.

Richard Wilson's *Solitude* (*c.* 1762) seems to be based on a descriptive passage in *Mona Antiqua Restaurata*, and its hooded contemplative figures demonstrate the way in which the development of the image of the DRUIDS depended on the conflation of a number of visual ideas, including that of the Christian hermit and the BARD (see also CHRISTIANITY). Gray's poem 'The Bard', published in 1757, resulted in the production of a sub-genre of Celticist imagery that projected the 13th-century subject matter back into the imagined world of the pagan Celts. The first large-scale painting of the poem was by Paul Sandby, but it has not survived, and it is therefore unclear to what degree it has influenced the picture painted in 1774 by Wilson's pupil, Thomas Jones. It must, therefore, now be regarded as the seminal image, drawing together mountain landscape, antiquities and a heroic, if ambiguous, narrative of the survival of the national soul. Of the many engraved interpretations of the subject the most influential was the one, after a design by Philippe de Loutherbourg, which adorned Edward Jones's *Musical and Poetical Relicks of the Welsh Bards* (1784). The 18th-century fashion for WELSH MUSIC was closely linked to visual imagery. The harper John Parry (see HARP) had inspired Gray, and Parry's son, William, painted a number of pictures of his father that were exhibited at the Royal Academy. Similarly, widely disseminated engraved images of harpers were almost always set in the context of the mountains of Snowdonia (ERYRI),

'The Last Bard' by Thomas Jones, Pencerrig (1774)

so that the landscape alone became an icon of Welsh Celticity for tourists.

Most of the English Romantics visited Wales to view 'Ancient Britain', which appeared to be alive and well in the symbiosis of landscape and inhabitants with their music and language (see WELSH). In his *Dolbadern Castle* (1800), J. M. W. Turner, like Thomas Jones, Pencerrig, before him, took a subject from medieval Welsh history and projected it backwards into a timeless Celtic mist. However, the interest of the English avant-garde in Welsh history declined rapidly thereafter, leaving indigenous artists to explore the subject with their own particular emphasis. As early as 1751, the Banner of the CYMMRODORION Society had symbolized Wales by the pairing of a druid and St David (DEWI SANT). Although the simple belief in the continuity of Welsh culture from the earliest times was important in establishing a moral superiority over the English as a counterbalance to political domination, it was the perceived primacy of Welsh Christianity that carried most weight in the increasing mood of national assertiveness. The conflation of pagan and Christian Celtic imagery was most potently exemplified by the brothers John Evan and William Meredith Thomas in their sculpture *The Death of Tewdrig* (1848). The dying Christian king points a crucifix accusingly at the pagan Saxon invaders, though he is nonetheless accompanied at death by his distinctly druidical bard. The work emanated from the intellectual circle of Lady Llanofer (see HALL), who was concurrently engaged on the creation of the national costume (see MATERIAL CULTURE [2] NATIONAL COSTUME; PAN-CELTICISM).

The national movement of the late 19th and early 20th centuries was characterized by an interest in the imagery of the Christian Celts, inspired by the painter T. H. Thomas. However, although the interlaced designs perceived to be characteristic of the Celts made their appearance in architectural detail and in graphics, particularly in the work of Kelt Edwards, they did not generate a craft movement comparable to that which emerged contemporaneously in Ireland (ÉIRE). On the other hand, Lady Charlotte GUEST's translation of *The Mabinogion* (1846; see MABINOGI) helped to stimulate rather more art imagery than that which emerged in

Ireland. Clarence Whaite painted *The Archdruid: A Throne in a Grove* in 1898 and Christopher Williams began his trilogy of Ceridwen (see TALIESIN), BRANWEN, and BLODEUWEDD in 1910. In sculpture, William Goscombe John (1860–1952) produced works of national sentiment which drew on Celtic subject matter, most notably in the form of medals and his contributions to the regalia of GORSEDD BEIRDD YNYS PRYDAIN, which accompanied pieces made by Hubert von Herkomer. The commanding presence of Hwfa Môn (Rowland Williams, 1823–1905), the archdruid for whose use the regalia was designed, made him a potent international focus for the Celtic revival expressed in painted and photographic images.

Celticist imagery declined in importance after the First World War, and neither the nationalist (see NATIONALISM) nor language movements of the 20th century (see LANGUAGE [REVIVAL]) were keen to identify themselves by its use. The most notable exceptions to this tendency were the paintings and calligraphy of David Jones (1895–1974), the superficial archaism of whose work veiled a fundamental desire to understand modern BRITISH identity.

'Arrival of the Saints in Brittany' by Jeanne Malivel (1920–2)

art, Celtic-influenced [5] Brittany

No other literary work had a greater impact in focusing the public's attention on Breton civilization and its Celtic heritage than the publication of Théodore Hersart de LA VILLEMARQUÉ's volume of traditional Breton BALLADS, BARZAZ-BREIZ: *Chants Populaires de la Bretagne* (1839). This renaissance of *bretonnité* or Breton cultural identity also served to nourish the creativity of many Breton visual artists, as manifested in *La Peste d'Elliant* (The plague of Elliant; 1848) by Louis Duveau (1818–67) and *Les Lavandières de la nuit* (Washes of the night; 1861) by Yan' Dargent (1824–99). However, it was not until 1884 that the immense canvas *La Fuite du roi Gradlon* (The flight of King Gradlon) by Evariste Luminais (1822–96)—a painting arguably inspired by a popular ballad recounting the legend of the submersion of the town of Ys (see FLOOD LEGENDS), collected by Villemarqué—was exhibited at the Salon de Paris.

§1. SENSIBILITY

Whilst Celtic Brittany (BREIZH), on the fringe of the industrial revolution, attracted artists from all over Europe to paint her untamed landscapes, peasant costumes and colourful religious ceremonies, her indigenous artists reacted against these superficial 'bretonneries' imposed from without. Within this

context the Fondation de l'Association littéraire et artistique de Bretagne, which was established in 1890, insisted that Brittany had its own creative and progressive style, language, and *mœurs*. On the political front, this was followed by the foundation of l'Union Régionaliste Bretonne in 1898. Regionalism evolved into NATIONALISM with the creation of the Parti Nationaliste Breton in 1911.

During the First World War three young Breton artists—Jeanne Malivel (1895–1926), René-Yves Creston (1898–1964), and Suzanne Creston (1899–1979)—met in Paris. With the commissioning of memorials to the Breton war dead by artists such as René Quillivic (1879–1969) and François Renaud (1887–1973), Malivel set about illustrating the volume *L'histoire de notre Bretagne* published in 1922, maintaining that she wished to contribute to her country's art. Later, at a religious festival in Folgoët (Folgoad), under the auspices of Ar Seiz Breur (The seven brothers) the three decided to call on Breton artists and craftsmen to revitalize the art and crafts tradition of their country. Architects, composers, poets and writers also joined. The movement exhibited at Ty Breiz (The house of Brittany) at L'Exposition internationale des Arts décoratifs et industriel de Paris in 1925. Building on this success, in 1928 the movement was enlarged and renamed Unvaniez ar Seiz Breur (Union of the seven brothers), and its manifesto *Vers un nouvel art breton* (Towards a new Breton art) was made public in the first issue of the publication *Kornog* (West). The tract maintained that Breton artists had a precise and clear task to accomplish, namely to recreate the art of Brittany. In 1937 the movement reached its zenith with the exhibition at the Breton Pavilion at L'Exposition Universelle de Paris. With the advent of the Second World War, Ar Seiz Breur lost its momentum and credibility due to the collaboration of a minority of Breton nationalists with the Nazis.

Arthur in the saints' lives

Arthur is mentioned in several BRYTHONIC Latin *vitae sanctorum*: those of CADOC, Carantoc, ILLTUD, Padarn (cf. LLANBADARN FAWR), Efflam, GILDAS (by CARADOG OF LLANCARFAN), and UUOHEDNOU. For the relationship of their episodes to those in the MABINOGI and Welsh ARTHURIAN literature, the two most important *vitae* are Lifris of Llancarfan's Life of Cadoc and Caradog of Llancarfan's Life of Gildas, each of which contains two developed Arthurian episodes. For Arthur's place early in the LEGENDARY HISTORY of Britain, the probably 11th-century Breton Latin Life of Uuohednou/Goueznou is important (see CONAN MERIADOC). The entire group shows content unaffected by GEOFFREY OF MONMOUTH, and all of them probably predate the publication of Geoffrey's HISTORIA REGUM BRITANNIAE (*c.* 1139) in absolute terms. Arthur is generally portrayed in this HAGIOGRAPHY as ruler of BRITAIN. With the exception of those of Illtud and Uuohednou, Arthur's rôle in these Lives is as a tyrannical, or at best morally ambivalent, foil to the saint. For the first four of the Lives listed above, the standard edition remains that of Wade-Evans.

Arthur, the historical evidence

§1. INTRODUCTION

Through the earlier and mid-20th century, most Celtic scholars and historians of the Middle Ages accepted the idea that Arthur had been a figure of some importance in the history of BRITAIN around AD 500. In the 1960s and 1970s, the case appeared to strengthen,

since the archaeological evidence returned from the Arthurian sites of South Cadbury Castle, Tintagel, and Glastonbury proved intensive high-status occupation in the 5th and 6th centuries (see Alcock, *Arthur's Britain*; Alcock, *By South Cadbury is that Camelot*; Ashe, *Quest for Arthur's Britain*). The time was ripe for international enthusiasm for an 'Arthurian fact' in the climate generated by the popularity of the stage and screen musical *Camelot* and the Arthurian aura that arose around the assassinated American President Kennedy and his family. John Morris's imposing *The Age of Arthur* (1973) then rankled many scholars, since it seemed to overstate, by means of questionable methodology, the case for Arthur's rôle in history. *The Age of Arthur* triggered a sceptical reaction (whose most influential proponent has been David Dumville) at a period when the sceptical ethos has generally gathered strength in the humanities. At the beginning of the 21st century the central question remains, did Arthur exist at all?

There are a small number of early Brythonic Latin and Welsh texts, immediately relevant to the historical Arthur, that will be considered in this article; these are, in chronological order: *De Excidio Britanniae* (On the destruction of Britain) of Gildas, the Gododdin, Marwnad Cynddylan (The death-song of Cynddylan), Historia Brittonum (History of the Britons), and Annales Cambriae (The Welsh annals).

§2. De excidio britanniae

Unlike the other sources listed above, Gildas does not name Arthur, but his 'Destruction of Britain' presents, for the first time, what were to become several of the leading themes of the legendary history of Britain, as found in the Historia Regum Britanniae (History of the kings of Britain; *c.* 1139) of Geoffrey of Monmouth and later texts: the removal of the Roman garrison by the usurper Maximus (see macsen wledig), the incursions of the Picts and Scots, the appeal to the Roman consul '*Agitius*', the Saxons invited to Britain by the *superbus tyrannus* (elsewhere called Vortigern/Gwrtheyrn), the Saxon revolt against the Britons, followed by the rally led by Ambrosius Aurelianus, and eventually the Britons' great victory at Badonicus mons (Welsh Baddon), which later sources were to attribute to Arthur. While Gildas does not state that it was Ambrosius who was the commander at Baddon, the passage certainly does not exclude this possibility. The same long and difficult passage seems to say that Gildas was born in the year of the battle; therefore, though he could not have been a participant himself, he would have had the benefit of the testimony of contemporaries to the great event. The date of the battle, therefore, depends on that of Gildas's age—in the same difficult passage he possibly says that he was forty-three—and the date at the time that he was writing (these questions are discussed in the articles on Gildas and Badonicus mons).

FURTHER READING
Lapidge & Dumville, *Gildas*.

§3. y gododdin

What is perhaps the earliest reference to Arthur occurs in the Welsh heroic elegies known collectively as the Gododdin, attributed to the 6th-century north British court poet, Aneirin. The dating and historicity of the *Gododdin* corpus and their validity are controversial issues in their own right (see also cynfeirdd; five poets). The allusion to Arthur occurs in the following lines, defined by end-rhyme as a distinct section within an elegy of a hero whose name is given as *Guaur*[*dur*] (probably a corrupt spelling for *Guordur*, possibly with Old Welsh *d* for *th*, from the old north British tribal name *Verturiones*):

> *Go·chore brein du ar uur*
> *caer—ceni bei ef Arthur—*
> *rug c[um n]erthi ig [cl]isur,*
> *ig kynnor guernor—Guaur(dur).*
>
> He used to bring black crows down in front of the wall
> of the fortified town—though he was not Arthur—
> amongst equals in might of feats,
> in the front of the barrier of alder wood [shields]—
> Guaurdur.

The idea here is that the hero 'Guaurdur' and his comrades fought a desperate battle before the wall of an old Romano-British fort or town, killing many enemies and thus enticing crows down to feed gruesomely on the battlefield. To say 'he was not Arthur' is

to say that Arthur was an even greater killer of enemies, probably the same group of enemies, elsewhere in the *Gododdin* said to be the men of *Lloegr*, i.e. south-east Britain, England. This is a very unusual sort of comparison for early Welsh praise poetry, in saying that the hero of the verse was a lesser hero than another. We must conclude that Arthur was already known to the poet and his audience as the unreachable apex of martial valour; only if this were the case could the poet say in this way that Guaurdur was Arthur-like, but not quite Arthur, without attaching shame to his own subject. The verse also implies that Arthur flourished at a period before that of the hero and battle commemorated in the AWDL. The question, then, is how old is the *awdl* and whether Arthur is really integral to it. Because *Arthur* rhymes and *-ur* is not one of the common end-rhymes in early WELSH POETRY, and is also uncommon as the final syllable of men's names, it is unlikely that *Arthur* has slipped in for another hero's name in textual transmission. As to the date, this *awdl* is in the hand of scribe B of LLYFR ANEIRIN ('The Book of Aneirin') in the second of his two texts of the *Gododdin*, in which he copies from a source in Old Welsh spelling. It is in this text B2 of the *Gododdin* that we find the densest concentration of linguistic archaisms which reflect usage earlier than any text of Old Welsh date (*c.* 750–*c.* 1100). The outlook of text B2 is also distinctive in that it shows no political interest in the area that became Wales (CYMRU), as opposed to north Britain, and no Christian ideas. Therefore, the 'Arthur *awdl*' is as likely as any in the *Gododdin* to have been composed before *c.* 750, before the Christianization of Brythonic court poetry, and in north Britain rather than in Wales. Even if we then conclude that Aneirin himself probably knew the tradition of Arthur as the supreme hero of the Britons, this would show that his fame was earlier and more widespread than we might otherwise assume. It is consistent with Arthur having existed, but is not the only possibility; he thus makes his first appearance not as a contemporary commander or ruler, but as a peerless legendary figure of the past.

§4. MARWNAD CYNDDYLAN

If there is a mention of Arthur in this elegy for a mid-7th-century chieftain from POWYS, the text must be emended to find it. The line in question refers to the lamented hero CYNDDYLAN and his ill-fated comrades as *canawon Art[u]r wras, dinas degyn* 'the whelps of great Arthur, the mighty citadel'. The manuscript reads *artir* 'district', which yields poor sense. The emendation has been supported by many scholars (Bromwich, SC 10/11.177; Gruffydd, *Bardos* 23; Bromwich et al., *Arthur of the Welsh* 5), but not all (e.g. Rowland, *Early Welsh Saga Poetry* 186). The case is in several respects analogous to the *Gododdin*. Both are in the *awdl* metre and commemorate warriors who fell in a disastrous battle against enemies from England. The later heroes are again compared to Arthur in a subordinate rôle, and yet this entails no shame.

§5. THE BATTLE LIST

The 9th-century Welsh Latin HISTORIA BRITTONUM made use of diverse materials; therefore, the historical value of its Arthurian passages must be assessed, in each instance, in the light of the probable sources of the information. The Arthurian *mirabilia* are overtly folkloric and non-historical in nature. This leaves the list of Arthur's twelve victorious battles. In *Historia Brittonum*'s broader structure the battle list forms a bridge between a synthetic account of 5th-century events (GWRTHEYRN, the inviting and then revolt of the Saxons, the battles against the Saxons by Gwrtheyrn's son GWERTHEFYR, St GERMANUS, Gwrtheyrn's castle and AMBROSIUS) and a series of Anglo-Saxon royal genealogies (down to the later 8th century) interspersed with memoranda of north British events of the period *c.* 547–687. Did the battle list come from one of the sources used for the account of the 5th century, or from a source used for the so-called 'Northern History', which follows, or neither? In favour of the first alternative is the broad similarity of the account of Gwrthefyr's battles and the Arthurian list, but this similarity is very probably

an effect of *Historia Brittonum*'s 9th-century compiler/author attempting to fashion a coherent account out of diverse sources, rather than these two lists of battles arising from a common source.

A common origin for the Arthurian battle list and the 'Northern History' is a more serious possibility. As discussed below, the list seems to derive from a poem in BRYTHONIC that resembles poems surviving in LLYFR TALIESIN ('The Book of Taliesin'), and the Northern History is the one section of *Historia Brittonum* that shows an interest in early WELSH POETRY in general, and TALIESIN in particular. Also, both the Arthurian list and the description of URIEN's siege of LINDISFARNE share the poetic theme of a battle that lasted three days and three nights.

In the description of Arthur's rôle that precedes the battle list, it is said that he fought along with the *reges Brittonum* (kings of the BRITONS) as their *dux bellorum* (battle leader). It was once thought that this might be a formal title and the survival of one of the late Roman military commands such as *Dux Britanniarum* (the commander of the British provinces). More recently, Charles-Edwards compared the rôle to the generalship of PENDA of Mercia vis-à-vis the *reges Brittonum* in their war against OSWYDD of BRYNAICH/Bernicia in 655 as described in *Historia Brittonum* §64 (*Arthur of the Welsh* 24).

Scholars today generally accept the Chadwicks' idea of an underlying poem of the sort which survives for the 6th-century chieftains Cynan Garwyn of POWYS (see TRAWSGANU CYNAN GARWYN), Urien of RHEGED, and Gwallog (*Growth of Literature* 1.154–5; Dumville, *Arthurian Literature* 6.13). As pointed out by Thomas Jones, the Old Welsh names of the battles probably preserve the rhyme scheme of the poem: battles 2–5 *Dubglas*, battle 6 *Bassas*, battle 7 *Cat Coit Celidon*, battle 8 *Castell Guinnion*, battle 9 *Cair Legion*, battle 11 *Bregion*, battle 12 *Badon*. This rhyme pattern shows that the battle of Baddon (BADONICUS MONS) was integral to the Old Welsh poem, not lifted from Gildas by the *Historia Brittonum* compiler/author and then falsely attributed for the first time to Arthur. This still does not ensure that Arthur's rôle at Baddon is a historical fact, but Welsh poetry said so before *Historia Brittonum*'s Latin translation did. That the immediate source for the list would necessarily have been a written Welsh poem rather than one that the Latin compiler/author had heard is implied by the likely confusion of Old Welsh *scuid* 'shoulder' and *scuit* 'shield' in the description of Arthur carrying the image of the Virgin Mary on his shoulders at the battle of *castellum Guinnion* (Bromwich, SC 10/11.163–81; Bedwyr Lewis Jones, *Arthur y Cymry/The Welsh Arthur* 32–3).

The historicity of the battle list is uncertain. Battle 9 at *urbs Legionis* (the city of the Legion) looks suspiciously like the famous battle of Chester (CAER) fought *c.* 615 and having nothing to do with Arthur, as though some ignoramus were just stringing together names of famous battles of long ago. On the other hand, the place-name *Linnuis*, a direct survival of Romano-British *Lindenses*, for Lindsey in eastern England, does say something important about how Welsh tradition in the 9th century could remember about places that had come under Anglo-Saxon domination in the 5th or 6th centuries. This certainly raises the possibility that the same oral tradition also correctly remembered that Arthur fought and won there, but a hotch-potch of remote and famous place-names from the past could have the same result.

The extant battle-listing *awdlau* noted above deal with figures who, like Arthur, belong to the 6th century. There is no doubt over the historicity of any of those other chieftains. Though it is nonetheless uncertain whether those battle lists in *Llyfr Taliesin* are in fact compositions contemporary with the battles and persons named, it is at least plain that the attitude of these poems is contemporary, their honorands are considered to be living. The same attitude in the original vernacular battle list could explain why the battle of CAMLAN in which Arthur fell (see next section) is not in the battle list. This detail is consistent with the possibility of very early composition for the poem behind the Arthurian list. However, since Arthur was already such a famous hero by the 9th century, the poets might have fashioned a poem resembling a contemporary court poem in the same way as they composed the early Welsh elegy for ALEXANDER THE GREAT in *Llyfr Taliesin*.

§6. ANNALES CAMBRIAE

There are two Arthurian annals. At the year corresponding to 516 (or 518) is noted *Bellum Badonis in quo Arthur portauit crucem Domini Nostri Iesu Christi tribus diebus et tribus noctibus in humeros suos et Brittones uictores fuerunt* (the battle of Baddon in which Arthur carried the cross

of our Lord Jesus Christ three days and three nights on his shoulders, and the Britons were victors). The second, at 537 (or 539), concerns *Gueith Cam lann in qua Arthur et Medraut corruerunt* (the battle of Camlan in which Arthur and Medrawd fell).

Alcock's idea (*Arthur's Britain* 45–55) that the Baddon and Camlan notices reflect contemporary annals, derived from a 6th-century Easter table, is unlikely. In light of the facts discussed in the entry for Annales Cambriae, the key points are that the Baddon and Camlan entries do not occur in any extant Irish annals; therefore, such a source can be excluded. This means that they could be either of north British or south Walian provenance. In either case, it seems more likely that these are retrospective insertions post-dating *c.* 613 (perhaps considerably), rather than contemporary entries from Brythonic annals kept in the first half of the 6th century. Furthermore, if Camlan has been correctly identified with the Roman fort of Camboglanna (also attested as Cammoglanna) on Hadrian's Wall—which is not an unlikely site for a 6th-century battle—the spelling *Cam lann* (not **Cam glann*) in the *Annales* belongs to the 10th or 11th centuries; it could be a scribal modernization of a 7th- or 8th-century entry, but it could also be the original spelling of a 10th-century insertion.

Any attempt to assess where such retrospective insertions might have come from must focus on the form of the Arthurian entries themselves. It is Arthur's carrying an icon, the image of the Virgin Mary or the cross, which seems most strongly to suggest a relationship between *Annales Cambriae*'s Baddon entry and *Historia Brittonum*'s battle list (Charles-Edwards, *Arthur of the Welsh* 27). If there is a confusion of written Old Welsh *scuit* 'shield' and *scuid* 'shoulder' in the battle list, we have the same confusion in the Baddon annal; that error in transmission is hardly likely to have come about independently twice. In other words, within the history shared between the two accounts the icon story has first been written down in Old Welsh and then mistranslated into Latin; the divergence is a subsequent third stage. The Baddon annal is more elaborate than any other entry in *Annales Cambriae*; therefore, as Thomas Jones suggested, it is possible that an original, more characteristically laconic *Bellum Badonis & Brittones uictores fuerunt* might have undergone subsequent expansion in the period 955×1100 under the influence of the battle list (*Nottingham Mediaeval Studies* 8.5–6). In other words, Arthur might not have been mentioned in the original annal at all. In all details, the Baddon annal is more easily understood as derived from the battle list, in which case it has possibly been placed with reference to a pre-existing Camlan annal in which Arthur's death *was* noted.

§7. THE NAME 'ARTHUR'

In both *Historia Brittonum* and *Annales Cambriae* the commander's name is Old Welsh *Arthur*, just as it is (proved by rhyme) in the Gododdin. It is generally agreed that the name derives from the rather uncommon Latin name *Artōrius* (cf. Bromwich et al., *Arthur of the Welsh* 5). It thus does not, as sometimes thought, derive from Celtic **Arto-rīxs* 'bear-king', which rather gives the rare Welsh name *Erthyr*. A Latin name is in keeping with a figure of the sub-Roman ruling class born in the early or mid-5th century. It is remarkable that the early Latin sources consistently use uninflected Welsh *Arthur* alongside the Latinized battle name *bellum Badonis*, and not **Gueith Badon* (Markale, *Le roi Arthur et la société celtique* 198–200). If *Historia Brittonum* and the *Annales* were drawing on contemporary or near-contemporary 6th-century Latin notices of the battle of Baddon, these evidently did not name Arthur as the commander, since these notices would have spelled the name *Artorius* or *Arturius*. The spelling *Arturius* does, however, occur in the late 7th-century Hiberno-Latin of Adomnán for Prince *Artúr* of Dál Riata, who died *c.* 580 (*Vita Columbae* 19a; Alan O. Anderson & Marjorie O. Anderson, *Adomnán's Life of Columba* 30–2). This Arturius was the son of Aedán mac Gabráin of Dál Riata. As Aedán also gave one son the royal Brythonic name *Rígullán* and called another *Conaing* (using the Anglo-Saxon word for king), we should probably conclude that Aedán knew *Arturius* as the name of a British ruler. The spelling ARTVRIVS also curiously appears in Camden's famous picture of the lost Glastonbury cross, and Ashe suggests that the cross might be authentic, or at least old, on this basis (*Discovery of King Arthur* 176). This is possible, but a narrower and safer conclusion is that the monks of Glastonbury had access to a wider range of written sources with forms of Arthur's name than now survive.

Since Irish monks were active at Glastonbury as at Adomnán's Iona (Eilean Ì), it is likely that the Latin spelling *Arturius* had been forgotten in Wales but preserved in Gaelic learned circles.

§8. CONCLUSION

The evidence reviewed above is broadly consistent with the proposition that the starting point of Arthurian tradition was among the early Brythonic poets and that his reputation was already highly exalted in that context by the very early Middle Ages, before literacy had much impact on the bardic tradition. Further support for this view is found in the Arthurian allusions in the early poems Pa gur yv y porthaur? and *Gereint fil. Erbin* (in which Arthur is called *ameraudur* 'emperor'; see Geraint) and *Englynion y Beddau* ('The Stanzas of the Graves'). From such beginnings the tradition forced its way—by the earlier 9th century, if not before—into an originally distinct tradition of British Christian Latin historical writing founded by Gildas. Such a conclusion does not rule out the likelihood that the figure famed among the vernacular poets had existed; however, there is no reason to suppose that the synthetic historians (such as Geoffrey of Monmouth and the author of Historia Brittonum) or the compiler of Annales Cambriae placed the Arthur of oral tradition correctly into the record of written history. The combined evidence of the *Gododdin* reference and Artúr mac Aedáin shows that the name *Arthur* was prestigious in north Britain at an early date.

Arthurian literature [1] Irish

Although Arthur is not a major figure in early Irish literature, the study of the Irish tales is relevant to the Arthurian legend and its roots, revealing Celtic concepts of the heroic ethos, kingship, and the Otherworld at a state of development earlier than that reflected in any extant Arthurian literature. In these aspects, the tales of the Ulster Cycle, Fiannaíocht and Kings' Cycles can provide illuminating comparisons with stories of Arthur and his heroes and can be, in this respect, a valuable indicator of just how Celtic the content of Arthurian literature remained, even as the tales left the Celtic countries and were reworked in French, English, German, &c. (see arthurian literature [6] texts in non-celtic medieval languages).

A Middle Irish translation of Historia Brittonum, known as *Lebor Breatnach* (The Brythonic book), was produced in the 11th century, which demonstrates that there was an interest in Ireland (Ériu) in the Brythonic scheme of legendary history, to which Arthur was becoming the central figure and also that this source was available for the writers, storytellers, and poets of Ireland to exploit. The earliest literary reflections of Arthur in native Irish literature belong to the 12th century. Thus, for example, in the well known Fenian tale Acallam na Senórach (Dialogue of [or with] the old men), an Artú(i)r figures as the son of Béinne Brit, king of the Britons. This need only mean that by *c.* 1200 Artúr was a suitable name for a British prince of long ago. More complete transfers of Arthurian stories occur later. In some cases, a character was for the most part borrowed from British or Continental Arthurian sources, but not the name. For example, *An tAmadán Mór* (The great fool) corresponds to Perceval/Peredur (Gillies, CMCS 2.51–3). The Early Modern Irish *Eachtra an Amadáin Mór* (Adventure of the great fool) is closer to Chrétien de Troyes's *Perceval* and its setting is more explicitly Arthurian than the later oral version in Scottish Gaelic (see next article). The Gaelic names and titles used for Arthurian characters point towards sources: for example, the forms *Cing Artúr* in *Lorgaireacht an tSoidhigh Naomhtha* (Quest for the Holy Grail) and *Eachtra an Amadáin Mór* (where he is also called *Rí Breatan* 'king of the Britons') and *Ceann Artair, Caoin Artúr* in the later folk material

clearly point towards an English source (Gillies, CMCS 2.49–51, 3.49). *Sir Ballbuaid* in *Lorgaireacht an tSoidhigh Naomhtha* and the Scottish folk *Sir Uallabh O' Còrn* go back to a (Scots) English preform < **Walway*. This interestingly resembles the Welsh *Gwalchmai* more than it does the *Gawain* used for this character in the corresponding French and English tales. *Caithréim Chonghail Chláiringnigh* (The martial exploits of Conghal Flat-nail) conflates Arthurian tradition with the native Ulster Cycle, including some direct borrowings from the Middle Irish Tale *Fled Dúin na nGéd* (The feast of Dún na nGéd; see SUIBNE GEILT). In it, Artúr Mór mac Iubhair (Arthur the Great son of Uther) is king of the Britons and faces a Saxon threat (Gillies, CMCS 3.46–7). The Early Modern Irish Arthurian romances have tended to assimilate a Gaelic cultural milieu, for example, king's *geasa* (taboos; see GEIS) and Gawain as Arthur's *dalta* (foster son) (CMCS 3.55). The recurrent theme of Arthur and his knights hunting follows the pattern of native *Fiannaíocht* in both Irish and Scottish Gaelic Arthurian tales.

Arthurian figures eventually became familiar within Gaelic tale telling, and thus came to float into stories that were originally not Arthurian. Thus, *Artúr* and *Úr* (< Uthr; see UTHR BENDRAGON) are peripheral figures in versions of tales concerning the heroes Iollann Airmdhearg and Conall Gulban (Gillies, CMCS 2.57–8).

The lyric poem *Laoidh an Bhruit* (The lay of mantle) is not an Arthurian but a Fenian tale; however, its theme, a chastity test, links it to the Arthurian *Le Mantel Mautaillié* and *Lai du Cor*, and further Celtic parallels for ordeals tests. It is attested as early as the early 16th-century Scottish Book of the DEAN OF LISMORE and the 17th-century Irish *Duanaire Finn* (Gillies, CMCS 2.64–5).

Arthurian literature [2] Scottish Gaelic

Arthurian literature is a tantalizing trace element in the Scottish Gaelic literary tradition. Sometimes, characters with recognizably Arthurian names crop up; sometimes, Arthurian scenes may be discerned in Gaelic FOLK TALES, BALLADS, and occasionally other genres (see SCOTTISH GAELIC POETRY; SCOTTISH GAELIC PROSE). The two clearest examples are the *Amadan Mòr* tale and ballad, in which the 'great fool' derives in some important respects from the figure of Perceval (see PEREDUR); and the ballad and waulking song known as *Am Bròn Binn* (The sweet sorrow), which seems to reflect an unknown Arthurian adventure undertaken by Gawain. Similar associations may be found for the tales *Sir Uallabh O Corn*, *Gaisgeach na Sgèithe Deirge* (Hero of the red shield), and *Am Maraiche Mairneal* (The mariner), and for the mock-heroic ballad *Laoidh an Bhruit* (see preceding article).

The subject of *Am Bròn Binn* is the fateful dream of a king in which he sees a beautiful girl, similar to the Old Irish 'Dream of OENGUS MAC IND ÓC', the Welsh *Breuddwyd* MACSEN WLEDIG, and the Breton Latin Life of IUDIC-HAEL. Although there are no early manuscript versions, the modern texts collected from performances show confusion of *f, s, r,* indicating a written original with Gaelic letter forms (similar for these three characters).

The distribution and textual state of this Arthurian element, taken together with the parallel and sometimes overlapping testimony of Irish folk literature, make it clear that we are dealing with vernacularized and oralized remnants of a literary corpus dating from the Early Modern period and associated with the work of the professional literati. The processes whereby these vernacular Gaelic texts have developed from Early Modern Arthurian literature (whether surviving or not) conform to the general conditions elaborated by Alan Bruford in his classic study of the development of late medieval romances into Gaelic folk tales (*Gaelic Folk-tales and Mediaeval Romances*). The oralization would have become final in the 18th century when the

aristocratic audience for 'high' Gaelic literature disappeared, but would doubtless have begun earlier, by the oral dissemination of romance texts read aloud.

How much earlier this process would have begun is harder to say, since the beginnings of Arthurian literature in Gaelic are not so easily determined. There is evidence to suggest that it may have had a heyday—perhaps as a novelty in the Gaelic world—in the later 16th century, when printed, modernized versions of the Old French Arthurian romances were relatively freely available (including English translations and adaptations), and native Gaelic literature and literary taste were sophisticated in a way that could respond to the irony and multi-layered discourse of the exotic texts.

However, there are also hints of a longer-standing Arthurian presence in Gaelic Scotland (ALBA), especially in connection with the claims of the Clan Campbell to an Arthurian descent. These hints perhaps bespeak the Arthur of the medieval chronicles and the influence of GEOFFREY OF MONMOUTH rather than that of CHRÉTIEN DE TROYES and his followers; for there is no surviving evidence that either the GRAIL Quest or more 'local' romances such as the *Fergus* made the crossover into the Highland literary consciousness. The numerous literary allusions contained in poems in the Book of the DEAN OF LISMORE, which include a good number of Early Modern romances in addition to early sagas (presumably known in modernized versions), are based on a strongly 'native' corpus of tales.

Centuries earlier, the personal name *Artúr* notoriously crops up here and there in the early medieval Gaelic record, and this has led some writers to suggest that one or other of these early figures is the prototype of 'King ARTHUR'. It is more likely that these names are either independent derivatives of Latin *Artorius*, or else derived from the name and fame of a British Arthur. Much later one finds references, in Campbell historical sources and bardic poetry, to an Arthur 'of the Red Hall', which was suggestively located at Dumbarton by Campbell tradition. It is possible that there was Arthurian literary input into whatever lost narratives lay behind these references. Yet this Arthur, too—who is consistently called 'Artúr son of Iobhar' in Gaelic sources—could equally well be a native Scottish Arthur who owed his name directly or indirectly to the Arthur of the BRITONS rather than via the mediation of Geoffrey of Monmouth and Continental Arthurian literature.

William Gillies

Arthurian literature [3] Welsh

ARTHUR appears in the earliest stratum of native narrative in Wales (CYMRU). In the 9th-century HISTORIA BRITTONUM (§56), he is given a historical context as the leader of the kings of the BRITISH in their resistance to the growing threat of English settlers, but his campaigns are described only as twelve victorious battles, and the account has the appearance of being more dependent on popular traditions than on documentary sources. The chapter is probably not a reliable basis for assessing the 'historical' Arthur's strategies or their geography—though many writers have attempted this—but, nevertheless, it suggests that he had gained a firm place in folk tradition as one who had fought twelve significant battles at specific sites (though there may well have been variations in their identification). Medieval WELSH POETRY has examples of celebrating and listing battle sites, and it is therefore possible that the list in the *Historia* may have a literary (written or oral) source. The *Historia* adds comments on two of these battles: that Arthur carried the image of the Virgin on his shoulders to great effect at the battle *in castello Guinnion* and that 960 men fell at his onrush at *mons Badonis*—presumably the same battle as the one called BADONICUS MONS by GILDAS.

With these comments may be compared the gloss in ANNALES CAMBRIAE on *Bellum Badonis* (AD 516 or 518) that Arthur carried on his shoulders the cross of our Lord three days and three nights, all suggesting a fluid tradition relating to Arthur's military successes. Popular elements are more easily recognized in the *mirabilia* (marvels) section of the *Historia* where two anecdotes (item 73) refer to Arthur; *Carn Cabal* in Builth (Buellt), mid-Wales, bears the imprint of his hound's 'footprint', made when the boar, *porcum Troit*, was being hunted by Arthur *miles* (the soldier), while in Ergyng, the south-east border country, is the tomb

of his son Amr, near the spring called Licat Amr (Amr's eye or, in this context, spring/well). Although these Arthurian associations may be secondary, since both topographical features are marked by common folklore motifs—the stone that always returns to its place on the cairn and the tomb which cannot be measured—they are evidence of Arthur's prominent place in popular folklore by the early 9th century, in that some of his own legendry as *miles* and hunter is being given an aetiological function (cf. the Irish DINDSHENCHAS tradition).

Arthur's heroic context is clear in a possibly 9th-century praise poem in the Black Book of Carmarthen (LLYFR DU CAERFYRDDIN) to the Dumnonian hero GERAINT, where Arthur is named (presumably as Geraint's ally) and his men are praised in the conventional rhetorical phrases of WELSH heroic poetry. *Englynion y Beddau*, also from the Black Book of Carmarthen, include a stanza which, unexpectedly given the purpose of the collection of 'grave' stanzas, claims that a grave for Arthur is, or perhaps 'would be', a wonder of the world, the significance being that there is no grave for this undying hero. In another, but unfortunately fragmentary, dialogue poem in the same manuscript (PA GUR YV Y PORTHAUR? 'Who is the gatekeeper?') a gatekeeper refuses Arthur entry until he has declared his men. He describes and lists their exploits in battles and fights with human and supernatural foes, witches and monsters, giving a prominent place to CAI and BEDWYR. The poem was no doubt a dramatic part of a lost tale, but it indicates the nature of the Arthurian world in Welsh literature of entertainment in the 9th–10th centuries. This world is more fully portrayed in the prose tale 'How Culhwch married Olwen' (CULHWCH AC OLWEN, *c.* 1100). The poem and the tale draw on similar material and the latter has a list of Arthurian heroes and their exploits (not all to be taken seriously). *Culhwch ac Olwen* uses an established folk-tale type (see FOLK-TALES), but the author has developed and elaborated what was probably an existing oral story to create a literary composition which is as remarkable for its rhetoric and stylistic variety as for its structure and exuberance.

PREIDDIAU ANNWFN, an 8th–10th century poem in the Book of Taliesin (LLYFR TALIESIN), is another indication of 'conventional' Arthurian adventures. It describes an expedition made by Arthur and 'three shiploads' of men on ANNWN to free a prisoner and win one of its treasures, but only seven of the attackers returned. The commentator appears to be the seer TALIESIN, who reports the expedition from his own experience and for his own purposes, but there is no doubt that the leader was Arthur, who was fulfilling an established rôle in the tale which underlies this part of the poem. The obverse of the praiseworthy hero Arthur who defends the borders and fights with monstrous threats (as in *Pa gur, Culhwch ac Olwen*) and who is motivated by the duty of his position to help the weak (expressed in *Culhwch ac Olwen*) is found in some saints' lives where he is an arrogant tyrant humbled by the saint's superior powers and rebuked by his closest followers for denying his own code of social behaviour (see HAGIOGRAPHY). The 12th-century life of Gildas (by CARADOG OF LLANCARFAN) contains not merely some conventional Arthurian adventures but two episodes that are corroborated in other sources—the enmity of Arthur and Huail, Gildas's brother, and the abduction of his wife GWENHWYFAR by Melwas. These were already part of Arthur's 'legend', but were utilized by the hagiographer for his own literary ends.

The portrayal of ARTHUR IN THE SAINTS' LIVES and in a didactic poem, 'The Dialogue of Arthur and the Eagle' (perhaps 12th century) is a negative image of that presented in the other Welsh texts. These are earlier than GEOFFREY OF MONMOUTH'S HISTORIA REGUM BRITANNIAE, which itself bears traces of the folkloric hero beneath the more dominant figure of the emperor and chivalric king whose court attracts petitioners and those who seek adventure, and who is presaged in, e.g. *Culhwch ac Olwen* and the life of St CADOC. This is the figure of Arthur which increasingly became characteristic of French romance. Welsh narrative was inevitably influenced by foreign models, indirectly in the case of the Welsh 'ROMANCES', OWAIN *neu Iarlles y Ffynnon*, GERAINT *fab Erbin*, PEREDUR *fab Efrawg*, and directly in the translations of French prose romances in *Ystorya Seint Greal* (see GRAIL), a version of *Conte du Graal* and of *Perlesvaux*. There were, however, developments in native narrative, and BREUDDWYD RHONABWY (Rhonabwy's dream), a well constructed tale planned to imitate the rambling, inconsequential nature of much contemporary romantic literary convention, shows how the heroic figure could be used to comment satirically on his own tradition and its medium (see

also WELSH PROSE LITERATURE).

Allusions in texts such as *Englynion y Beddau*, the TRIADS, fragments of other stories and poems, are evidence for lost tales and for the vitality of the native Arthurian tradition in Wales to the early modern period. Medieval Welsh Arthurian literature reveal Arthur as a well known hero whose name was potent enough to associate him with topographical features and to attract the names, and sometimes the stories, of other heroes; but he had also his own legend which included two or three close comrades, Cai, Bedwyr, Gwalchmai, as well as an established court at CELLIWIG in Cornwall (KERNOW) and which related some specific (and characteristic) adventures, e.g. the freeing of a notable prisoner, an attack on the OTHERWORLD, the abduction of Gwenhwyfar, the enmity of Huail, the final disastrous battle at CAMLAN, his mysterious end and prophesied return.

Arthurian literature [4] Breton

The Arthurian legend is written into the landscape of Brittany (BREIZH), but very little of it has survived as actual writing. Breton literary history in this area, as in many others, is a matter of fragments and reflections: Breton Arthurian material can be glimpsed in a wide variety of texts, from Latin saints' lives (HAGIOGRAPHY) to medieval French romance, but there are no vernacular sources to compare with Welsh prose texts such as CULHWCH AC OLWEN or the early medieval WELSH POETRY. This absence of a written literary tradition has been variously interpreted, and the importance accorded to Brittany in the development of the Arthurian legend in Europe varies in relation to the amount and nature of the material considered 'lost'. Explanations range from the literal loss of manuscripts (especially during Viking ravages of the 9th century; see BRETON EARLY MEDIEVAL MANUSCRIPTS), which might have preserved such material, to the strength of a vernacular oral tradition which never committed it to writing in the first place—the widespread reputation of Breton singers and *conteurs*, and the Breton names and settings in many French Arthurian works have been taken as strong indications of a flourishing Breton literary and/or storytelling tradition. Caution is necessary, however, in ascribing Breton sources to all such compositions: besides the perennial problem of distinguishing insular BRITONS and Bretons of ARMORICA (the French place-name *Bretagne* being especially ambiguous here), there is the question of genre and literary fashion. By the later Middle Ages poets may very well have been composing 'BRETON LAYS' in English or French and setting tales in Brittany, without any Celtic-language source, even distantly removed, lying behind them.

The surviving evidence for Arthurian material in Brittany pre-dating the influence of GEOFFREY OF MONMOUTH is fragmentary but intriguing. As in Cornwall (KERNOW), it seems that the legend of the leader's return already had a significant rôle at popular level: in a record of a journey through Cornwall in 1113, the canon Herman of Tournai noted an encounter with a local man at Bodmin who claimed that ARTHUR was not dead 'just as the Bretons are in the habit of arguing against the French on King Arthur's behalf'. Arthur also appears in his legendary-historical rôle as the victorious leader of the Britons (here, against GWRTHEYRN/ Vortigern and the Saxons) in the Prologue to the Latin Life of St Uuohednou (Goueznou), which, though the date is contested, says that it was written in 1019 (cf. CONAN MERIADOC). Further hints of his rôle in native British history prior to Geoffrey can be gleaned from what remains of the 10th-century LIVRE DES FAITS D'ARTHUR (Book of the deeds of Arthur), which survives fragmentarily in a 15th-century manuscript. From such sources, it can be argued that Arthur was already a key figure in conceptions of native Breton history before Geoffrey; certainly, the idea of

a returning Arthur as the 'Breton hope' remained strong, and between the late 12th century and the middle of the 15th century, three different Breton leaders would bear the name.

With Geoffrey of Monmouth's Historia Regum Britanniae (History of the kings of Britain; *c.* 1139) and the subsequent explosion of literary interest in the *matière de Bretagne* (Matter of Britain) Brittany's reputation as a locus of Arthurian legend spread through Europe. Various Brythonic personal names and place-names appear in the late 12th-century poems and romances of writers such as Marie de France and Chrétien de Troyes, and Marie in particular is keen to stress the 'Breton' source of some of her short narrative *lais*. Much of the story of Tristan and Isolt, which became attached to the Arthurian cycle, is also set in Brittany; indeed, it is perhaps locations, rather than written texts, that have provided Brittany's most evocative and enduring connection with Arthurian legend; for example, the forest of Brocéliande, which appears in the 12th-century works of Chrétien and the Anglo-Norman Wace. The exact nature and direction of transmission of these Celtic elements into Anglo-Norman and French is still a matter of debate, and the long-favoured solution of the 'wandering' multilingual Breton minstrel has undergone recent hard scrutiny, as has the assumption that Brittany was the necessary intermediary for the transmission of Celtic Arthurian material to the Continent. That it was perceived as an Arthurian location and a source of legend by writers all over medieval Europe is, however, undeniable, and if one accepts that Geoffrey of Monmouth himself was of Breton stock, or that he used a lost Breton *Historia Britannica* in his own 'History', then there are some grounds for arguing that Breton culture, albeit circuitously, helped to shape the most influential Arthurian text of them all.

It must, however, be stressed that all of these works provide only indirect reflections of a putative native tradition; because they are the creations of individuals written for literary audiences, it is very difficult to guess at the nature of any unrecorded Breton Arthurian material on which they might be drawing. When Arthur does finally appear in a Breton-language text, dated 1450, it is in a relatively colourless rôle. *An* Dialog etre Arzur Roue d'an Bretounet ha Guynglaff puts the king in conversation with a wild man, who prophesies various catastrophic events; Arthur's part is restricted to asking what will happen next. The figure of the prophet Guynglaff (or Gwenc'hlan) is rather more interesting, however, since there are various hints of his afterlife in more recent popular tradition, and the wild man character-type also evokes associations with the Myrddin/Lailoken legend.

Later Breton popular tradition has some Arthurian elements. In the folk play *Sainte Tryphine et le Roi Arthur*, Arthur is introduced as 'king of the Bretons', but his rôle is that of a stock husband figure, and the action of the play is firmly with his (Irish) bride Tryphina. The absence of Guenevere (Gwenhwyfar) and all other familiar faces from the milieu of Arthur's court suggest that this is a somewhat fortuitous Arthurian connection. Perhaps the most intriguing discovery of recent years has been a 19th-century version of a long oral ballad about Merlin (see ballads). The ballad tells the story of a young man who wins a king's daughter by capturing first Merlin's harp, then his ring, and finally Merlin himself. This lovely and unself-conscious piece is an exceptional case in the Breton ballad tradition, which, though rich and varied, is not a large repository for medieval and Arthurian themes (and thus differs from Scottish Gaelic, where narrative songs on such themes can be found). There are analogues to this song in a number of Breton folk tales, where the exact nature of Merlin (sometimes described as 'a Murlu' or 'a Merlik') is interestingly ambiguous, again evoking the fugitive bird-like character of the Suibne Geilt/Lailoken/Myrddin complex. The folk-tale tradition has also been considered as a source for Arthurian themes, but these are not always easily distinguished from international motifs, and much work still remains to be done.

Arthurian material naturally played its part in the 19th-century Breton revival (see language [revival]), as studies of linguistic Celtic kinship re-established and reinforced notions of a shared Brythonic culture. One of the key texts of that revival was Hersart de La Villemarqué's collection of supposedly popular ballads, the Barzaz-Breiz (1839), which includes the bloodthirsty *Bale Arthur* (The march of Arthur), an 'original' Breton source for Marie de France's *Laustic* (The nightingale) and two poems about Merlin (one of which, based on the text above, would ultimately be vindicated as an 'authentic' part of the tradition).

Arthurian themes have remained popular in modern Breton literature, with the Tristan legend in particular inspiring writers in Breton and French; it was reworked as a novel by Xavier de Langlais (Langleiz) in *Tristan hag Izold* (1958), and can be traced in dark undercurrents in the poems of Tristan Corbière. By the middle of the 19th century a revivalist appreciation of all things Arthurian adds, in effect, another layer of complexity to the already complex network of relations that have existed between Wales (Cymru), Cornwall, Brittany, France and England from the very beginnings of the Arthurian legend itself.

Arthurian literature [5] Cornish

Arthurian episodes, places, and characters are often localized in Cornwall (Kernow), and Arthuriana also figures as a continuing theme in Cornish literature. In the Welsh saga englynion 'Dialogue of Arthur and the Eagle' (*Ymddiddan Arthur a'r Eryr*) Arthur questions his dead nephew Eliudd or Eliwlad, who has assumed the form of an eagle, a situation reminiscent of that of the transformed Lleu in the Fourth Branch of the Mabinogi (see also reincarnation). The poem does not appear to be particularly early (possibly *c.* 1150), but is independent of the Arthurian traditions of Geoffrey of Monmouth. In this text, Arthur is explicitly identified with Cornwall, while in Culhwch ac Olwen (*c.* 1000×1100) Arthur and his men pursue the giant boar Twrch Trwyth to Celliwig in Cernyw, i.e. Cornwall. The ruined fortifications at Callington, Cornwall, is one of the possible identifications of Celliwig (Cornish Kyllywyk; see arthurian sites). In Geoffrey of Monmouth's Historia Regum Britanniae (*c.* 1139) there is an indication that some of his sources were possibly Cornish ones, while the observer Herman of Tournai noted in 1146 that a disturbance occurred in Bodmin after a Cornishman commented that Arthur was still alive.

Perhaps the most important early text, however, is John of Cornwall's *Prophecy of Merlin*. John (†*c.* 1199) was born in St Germans, Cornwall, and studied in Paris. His surviving Latin text calls upon the 'House of Arthur' to unite against incursions into the island of Britain, and in particular makes an appeal to Cornwall. John of Cornwall's notes and glosses reveal that his sources were in Old Cornish, including reference to Periron (an earlier name for Tintagel) and Brentigia (Bodmin Moor).

Arthur: A Short Sketch of his Life and History in English Verse by the Marquis of Bath (*c.* 1428) expands on the two core elements of the Cornish continuum: that Arthur died in Cornwall and was later taken to Glastonbury, and that the Cornish and Bretons believed Arthur would return. There followed considerable Cornish material in Thomas Malory's *Le Morte d'Arthur*, but by the Tudor period, Arthuriana had already begun to be satirized as being antiquated, for example, in Richard Carew's epic verse 'A Herring's Tail', detailing the snail Sir Lymazon's quest to reach the top of a steeple at Tintagel. In his Life of St Piran (*c.* 1620), Nicholas Roscarrock records how Arthur made St Piran the Archbishop of York. A very literary history of Arthurian activity in Cornwall was written by William Hals (1635–*c.* 1737), one of his sources being the now lost *Book of the Acts of Arthur* written by the medieval Cornish scholar, John Trevisa.

The finest 19th-century imagining of a Cornish Arthur, *The Quest of the Sangraal*, was written by the Anglo-Cornish poet Robert Stephen Hawker (1803–75), and this work later inspired revivalist writers to incorporate Arthuriana into early 20th-century poetry in Cornish and into the ceremony of the Cornish gorseth. The long-held belief that Arthur's spirit is embodied in the Cornish chough (a large black bird)

forms the basis of Robert Morton Nance's allegorical drama *An Balores* (The chough; 1932). The revival brought about a fashion for Arthurian-based drama in Cornwall, connecting with the popular theatrical tradition. Within the Cornish Arthurian corpus, the narrative of Tristan and Isolt forms a central strand, as do legends connecting Arthuriana with Lyonesse (see flood legends), and with Joseph of Arimathea, the boy Christ in Cornwall, and the Holy Grail. Renewed interest in the Cornish Arthurian connection emerged in 1998 when a 6th-century inscribed stone, the so-called 'Arthur Stone' was found on Tintagel Island, with its inscription PATERNIN COLIAVI FICIT ARTOGNOU containing three masculine names: Latin *Paterninus* and Celtic *Col(l)iauos* and *Artognouos*. However, the name *Artognou* 'bear-knowledge', which recurs as Old Breton *Arthnou*, cannot correspond exactly to *Arthur*, which most probably derives from Latin *Artōrius*, though the early identification of Arthur with unrelated native names containing the element 'bear' is in any event likely.

Of great value to Cornish Arthurian studies was the rediscovery in 2002 of a Middle Cornish play, probably written *c.* 1500 (see beunans ke). This text will inevitably lead scholars to re-examine the Cornish Arthurian connection in coming years.

Arthurian literature [6] texts in non-Celtic medieval languages

Connections between Arthurian literature and Celtic culture can be considered both in a diachronic way (the problem of the 'origins' of this literature) and in a synchronic way (the dissemination of Celtic motifs, themes, and concepts in Arthurian texts). There is very little documentary evidence of a relationship between English and Continental romances written from the 12th century onwards, on the one hand, and earlier texts written in one of the Celtic languages, on the other. As a consequence, any attempt to discover a possible affiliation can only be based by establishing which elements of Celtic Arthurian literature have a basis in Celtic culture, and comparing these Arthurian names, episodes, and themes with those in later Arthurian romances in non-Celtic languages.

Circulation of Celtic motifs in non-Celtic narrative should be understood first of all as a problem of reception, renovation, and stratification illustrating the multifaceted way of the growth and spread of medieval literature. For example, the Middle French romance *Tristan et Lancelot* (Tristan and Lancelot, composed by Pierre Sala around 1525) contains an episode where a beautiful lady has the power of running faster than horses; three knights try to reach her on their horses, as does Tristan himself, but they are unable to do so until Tristan pronounces the word *amour* (love). This adventure can be compared with the identical episode in the Welsh tale of Pwyll, but this parallel does not imply that the French writer knew the Welsh text or even a French translation of it. Rather, it shows that the motif existed in Celtic tradition and was later transferred into a narrative context different from its original one, passing from one character to another, and changing its original meaning. It is possible to interpret in the same way other Arthurian topoi (stock themes), such as magic lakes, magic fountains, quests for Otherworld creatures or animals, sword-bridges, transformations of humans into animals (see reincarnation), cauldrons of rebirth, and dismembered heads on stakes (see head cult); these have significant parallels in Welsh, Breton, Cornish, Manx, Scottish Gaelic, and Irish traditions. They are valuable indications of a Celtic mythological background, which was imperfectly understood by medieval authors, and

then began to be used as a stylistic-literary resolution in order to build an 'aesthetic of the marvellous'.

The question of how insular Celtic stories were brought to the Romance and Germanic writers is still controversial. The generally accepted hypothesis is that bilingual Welsh and Breton itinerant storytellers transmitted elements orally from their countries to France, though this has recently been intensely disputed. It is difficult to imagine that such an enormous and stratified literary corpus grew solely within a written tradition, and the most likely explanation is that oral and written transmissions influenced each other continuously. The alternative theories assume that a CONTINENTAL CELTIC substratum (mostly preserved in folklore) was still a decisive and influential factor in the intricate cultural landscape of the Middle Ages.

The following is not an exhaustive list of Arthurian texts composed in medieval Europe, but a concise summary concentrating only on the relationships between a few Arthurian works written in a non-Celtic language and themes that can be considered Celtic. Most of the following discussion concerns texts in French, which were translated and adapted into all the European languages. Many of the later medieval Arthurian texts—belonging to the 14th and 15th centuries— have been necessarily excluded as being of secondary importance within the present scope. Considerations of non-French literature include only those texts which contain possible allusions to a Celtic background not also found in French literature: for example, adaptations of the Vulgate Cycle in England, Germany, Italy and Spain are generally not discussed here, unless they contain material useful to the comparison.

§1. FRENCH LITERATURE

The most important French Arthurian writer is CHRÉTIEN DE TROYES. Apart from other works, he wrote five Arthurian romances: *Erec et Enide* (6598 lines, composed *c.* 1170) is the French version of the Welsh GERAINT; the story of *Cligès* (6784 lines, *c.* 1176) is patterned on the Tristan legend; *Yvain* (6818 lines, *c.* 1180) is the French version corresponding to the Welsh OWAIN *neu Iarlles y Ffynnon*, and *Lancelot* (7134 lines, *c.* 1180) is the earliest romance mentioning this hero. Although a few scholars associate him with the Celtic god LUG, this identification does not explain the main fact related to Lancelot's life: his love for Guenevere and his treachery towards King ARTHUR. He can more plausibly be a transformation of a mythological character similar to the Irish OENGUS MAC IND ÓC. This would be confirmed by several thematic correspondences: for example, both characters betray their kings by becoming the queen's lovers (*Lancelot–Guenevere–Arthur/Oengus–Étaín–Midir* [see TOCHMARC ÉTAÍNE]), both are connected with the water element (Lancelot grew up in a magic lake, Oengus is associated with the river BÓAND), and both are described as dominated by a mysterious propensity towards reveries and daydreams. It has recently been pointed out that the tripartite scheme found in the story of *Arthur–Guenevere–Lancelot*, which is the same as *Marc*–TRISTAN AND ISOLT, corresponds, on a narrative level, to the theory of the so-called 'Indo-European tripartite ideology'. The essence of this theory—associated most closely with the writings of Georges Dumézil—is that in early Indo-European societies people tended to perceive the world, and more particularly the social universe, as divided into three aspects (functions): the magical-religious function (kings, poets, rulers), the function of the warrior, and the function of producers—this latter associated with concepts of fertility and fecundity. Thus 12th- and 13th-century Arthurian tales would continue a way of seeing the world that was typical of ancient societies in Europe and western Asia.

The last romance written by Chrétien is *Perceval* (9234 lines, *c.* 1181), an unfinished work that contains the first reference to the GRAIL legend. It was adapted and completed by many authors. The *Elucidation* (484 lines, beginning of the 13th century) was written as a prologue to it, and tells the story of some maidens who lived in wells, serving food and drink to travellers, until a king named Amangon and his men raped them and stole their golden cups. As a consequence, the land became infertile and the court, which housed the Grail, was lost to those who sought it. Apart from the connection with the stories of fountain FAIRIES of Celtic folklore, this underlines the fact that the theme of the wasteland has significant parallels in Irish and Welsh texts (for example, in the tale of MANAWYDAN FAB LLŶR). A long section of the First Continuation (also known as the Pseudo Wauchier, 10,100 lines, *c.* 1200) is about a knight named Caradoc (of a Welsh origin) and his adventures in a realm where enchanted animals live. This character is also found in the

Arthurian sculpture of Modena cathedral (see §7 BELOW). Another character present in Pseudo Wauchier's Continuation (Bran de Lis) has often been associated with the Welsh BRÂN of the MABINOGI. In the Second Continuation (13,000 lines, *c.* 1200) there are references to a magic castle, an enchanted white stag, and a mysterious lighted tree; they can be compared with similar elements in Celtic folklore and medieval wonder tales. *Perlesvaus* (a prose romance composed between 1191 and 1212) is an important example of how Celtic motives were transformed within a Christian context: for example, magic fountains are here connected with magic cups symbolizing the Trinity.

The Vulgate Cycle (1215–30) is a group of five prose romances: the *Estoire del Saint Graal*, *Merlin*, *Lancelot*, the *Queste del Saint Graal*, and the *Mort Artu*. The first part of the vulgate *Lancelot* tells the story of Lancelot's childhood in a magic lake, after being stolen from his mother by the Dame du Lac (The lady of the lake); parallels with Celtic tales about children stolen by fairies and about magic realms under the waters are numerous. One can also see here a variant of the so-called 'Morganian' tale (a human enters the Otherworld following a supernatural creature, as in the tales about Morgain la Fée), as opposed to the 'Melusinian' tale (a supernatural creature enters human reality living beside her lover, as in the tales about Melusine); both archetypes are found in Arthurian literature. The narrative context of the vulgate *Mort Artu* is essentially based on the very well-known egalitarian Arthurian institution of the *table ronde* (first mentioned in the *Roman de Brut* by Wace, *c.* 1155, lines 9747–58), a circular dining table where the seats were without difference in rank. Since a circular table was an uncommon object in the medieval period, one can assume that it was imagined before the 12th century. Celtic traditions give good parallels: for example, there is the account of ancient dining customs by ATHENAEUS in which he says that Gaulish warriors used to sit down in a circle around the main hero to honour him (a comparable preoccupation with status as expressed in the seating of heroes is found in the Irish FLED BRICRENN). Other theories argue for a Christian origin (pointing out a link with the table of the twelve apostles of the Last Supper), the influence of Templars (who used to meet in round churches), or a symbolic conception of the table as a cosmic table governed by Arthur, seen as an archetypal *imperator mundi* (emperor of the world; this interpretation has in its favour the fact that, in all the French texts that mention it, *table ronde* rhymes almost exclusively with the word *monde*, world).

In the prose romance *Artus de Bretaigne* (1296–1312) a dream causes two young people to fall in love with each other without having met. Although there are similar tales in the Oriental tradition (for example, in the Hindustan Adventures of Kamrup, or the Sanskrit *Daçakumāra-Caritam*), this episode is particularly similar to the central theme of the Welsh *Breuddwyd Macsen* (The dream of Maxen, see MACSEN WLEDIG). In the same romance, the character named Maistre Estienne conjures up an army to advance upon a castle, and the castle disappears when all the enemies have fled. The same episode is found in the Welsh MATH FAB MATHONWY (Math the son of Mathonwy) when GWYDION conjures up a fleet to surround a castle, and makes it disappear when it has served his purpose. In Renaut de Beaujeu's *Le bel inconnu* (The fair unknown, 6266 lines, *c.* 1185–90) the hero is not recognized at Arthur's court, and only a fairy mistress reveals to the hero his name and identity. In the romance *Yder* (6769 lines, *c.* 1220) the hero rescues Queen Guenevere from a bear and she says that she would have preferred him to Arthur as a lover if she had been given the choice. One could see here a possible reference to the Celtic etymology of the name *Arthur* (which seems to contain the word for 'bear', Welsh *arth*), and recognize in this romance the reflection of an early stage of the legend. The name of this hero, well known in Irish and Welsh literature, is also found, in the Latin form *Isdernus*, in the Arthurian sculpture of Modena (see §7 BELOW). This is also perceptible with reference to the name *Durmart* (the main character of *Durmart le Galois*, 1220–50), which is recorded as *Durmaltus* in the Italian archivolt. A few episodes narrated in the *Chevalier du Papegau* (The knight of the parrot, 15th century) have parallels in Celtic folklore: for example, knights who live in the sea, and the battles with giants and magic animals. In *Tristan et Lancelot* by Pierre Sala, already mentioned, Tristan loses his way in a forest while trying to hunt a white stag, and following other adventures he meets Lancelot in a marvellous land inside a magic lake.

§2. GERMAN LITERATURE

Hartman von Aue's *Erec* (10,192 lines, 1170–85) is an adaptation of Chrétien de Troyes's *Erec et Enide*. It contains several allusions to the symbolism of *Enide*'s horses and her dominion over them: a tract that is absent in the French source, and that could derive from some independent tradition in which Enide had strong equine associations like those of the Gaulish EPONA, Irish MACHA, or Welsh RHIANNON. Hartman's *Erec* also contains the first reference to the character—of a Celtic origin—Morgain la Fée as an evil enchantress. Hartman also adapted Chrétien's *Yvein* (*Owein*): here, the episode of Guenevere's abduction seems to be older than other versions, and to reflect an archaic form of the theme of the marriage between a mortal and an Otherworld woman.

Lanzelet is a poem of over 9400 lines composed at the beginning of the 13th century by Ulrich von Zatzikhoven, and mainly based on Chretien's *Lancelot* and the vulgate *Lancelot*. It contains episodes and themes that can be seen as originating in the mythological period of the Arthurian legend, but did not survive in French texts: for example, the Land of the Maidens, where Lanzelet receives his education, reminds us of the Land of the Women of the Irish IMMRAM BRAIN, and the deathlike sleep of the captives in King Verlein's castle is similar to the one referred to in the Irish *Compert Con Culainn* (see CÚ CHULAINN).

Wolfram von Eschenbach's *Parzival* (24,810 lines, first decade of the 13th century) is an adaptation of Chrétien's *Perceval*; its importance for the studies of the origins of the GRAIL legend lies in the fact that here the Grail is not a dish or a chalice, as in the other traditions, but a stone that provides food and drink, and preserves from death those who see it. Although an Oriental esoteric origin has been proposed for this conception, one could note that references to similar powerful stones exist in Celtic folklore, particularly in Ireland (ÉRIU) and Cornwall (KERNOW).

Heinrich von dem Türlin's *Diu Crône* (The crown; 30,041 lines, *c.* 1240) contains the episode of Gawain being enchanted in a magic castle governed by a lady named Amurfina, which can be seen as a variant of a fairy mistress story. In Der Strickler's *Daniel von dem blühenden Tal* (Daniel of the blossoming valley, 1225) and Der Pleier's *Garel von dem blühenden Tal* (Garel of the blossoming valley, 1240–80), the heroes encounter monsters, magic fountains, creatures of the Otherworld, and submerged gardens, which can be seen as elaborations of themes well known to the Celtic narrative. The same thing can be said with regard to *Abor und das Meerweib*, a fragment composed at the beginning of the 14th century, in which a knight named Abor, found by a fairy creature (called *meerweib*) at a magic fountain, is nursed by her and receives the power of understanding animals (a comparable power is the one that belongs to Merlin in GEOFFREY OF MONMOUTH's *Vita Merlini*; see MYRDDIN).

The *Tristrant* by Eilhart von Oberg (1170–90) is considered a translation of a French source that has not survived. Eilhart was followed by Gottfried von Strassburg, who adapted Thomas's version of the legend in his *Tristan* (*c.* 1210); in this text, one can find references to a magic and 'joyful' (*vröudebære*) landscape, an image that belongs both to the rhetorical topos of *locus amoenus* (nature idyll) and to the Celtic conception of the OTHERWORLD. Other Tristan narratives include Ulrich von Türheim's *Tristan* (*c.* 1240), the anonymous *Tristan als Mönch* (*c.* 1250), and Heinrich von Freiberg's *Tristan* (*c.* 1285). In Wirnt von Grafenberg's *Wigalois* (second decade of the 13th century), one can find adaptations of themes that are typical of Celtic folklore, such as the magic belt that grants joy and wisdom and dispels sorrow, the loaf of bread that drives away hunger, and the lake that gives magical powers.

Bushey, *Tristan als Mönch*; Eilhart von Oberg, *Tristrant*; Gottfried von Strassburg, *Tristan*; Hartmann von Aue, *Erec*; Hartmann von Aue, *Iwein*; Heinrich von dem Türlin, *Diu Crône*; Heinrich von Freiberg, *Tristan*; Herles, *Garel von dem bluenden Tal von Dem Pleier*; Resler, *Daniel von dem blühenden Tal/Der Stricker*; Schröder, *Nachrichten der Gesellschaft der Wissenschaften zu Göttingen* 1925.161–5; Ulrich von Türheim, *Tristan*; Ulrich von Zatzikhoven, *Lanzelet*; Wirnt von Grafenberg, *Wigalois*; Wolfram von Eschenbach, *Parzival*.

§3. DUTCH LITERATURE

The *Historie van den Grale* (History of the Grail) and the *Boek van Merline* (Book of Merlin) by Jacob van Maerlant, written around 1261, form a unity of 10,100 lines; they are adaptations of the Old French *Joseph*

d'Arimathie by Robert de Boron (*c.* 1202) and the vulgate *Merlin*, but they contain different details; for example, an allusion to the episode of Arthur pulling the sword from the stone, which is absent in the French sources. Lodewijk van Velthem's *Merlijn* (26,000 lines, 1326) is a translation of the Old French and the vulgate *Merlin*, but he must have used another source for the episode—unknown to the other versions of the history of Merlin—of the young Arthur who, assisted by a magical power, subdues the rebellious noblemen in a sort of Otherworld. *Lantsloot van der Haghedochte* (Lancelot of the cave; *c.* 1260) is the oldest Middle Dutch translation of the Lancelot tale in prose. In this text the fairy who kidnaps Lancelot does not live in a lake, but in a cave which cannot be found unless she wishes it; one may compare this element with Celtic legends (mostly Irish) where FAIRIES live inside a mountain. In the short text *Lanceloet en het hert met de witte voet* (Lancelot and the stag with the white foot, 850 lines, *c.* 1289), a powerful queen announces at Arthur's court that she will marry the knight who will bring her the white foot of a stag that is guarded by lions; a similar scene can be read in the Old French *Lai de Tyolet* (end of the 12th century) and it is possible that both texts derive from an unpreserved source. Many episodes narrated in *Torec* (a text of 4000 lines which is probably a translation from a lost Old French text), and in *Walewein* (written around the middle of the 13th century by Penninc and Pieter Vostaert) can be compared with Celtic material: for example, the magical ship that takes the hero to a Castle of Wisdom, the battle against a creature of the Otherworld to save an abducted princess, and the fight with dragons. The fountain with healing powers described in *Walewein ende Keye* (Gauwain and Kay, 3700 lines, second half of the 13th century) can be compared with the numerous magic wells of Celtic folklore; this text also contains a variant of the story of the dragon-killer.

PRIMARY SOURCES
Besamusca & Postma, *Lanceloet 1*; Besamusca, *Lanceloet 2*; Brandsma, *Lanceloet 3*; Draak, *Lanceloet en het hert met de witte voet*; Gerritsen et al., *Lantsloot vander Haghedochte*; Hogenhout & Hogenhout, *Torec*; Maerlant, *Merlijn*; Penninc & Vostaert, *Roman van Walewein*; Rombauts et al., *Ferguut*.

§4. ENGLISH LITERATURE

Lybeaus Desconus (The fair unknown) is a romance that shows many analogies with Renaut de Beaujeu's *Li Biaus Descouneus*. Their differences, however, are striking, and include a fight against a marvellous hunting dog (a theme that is common in Celtic folklore) and the battle against a black giant in a magic forest (this latter episode could also find its origins in similar themes found in the Old French epic poems called *chansons de geste*). The three romances, *Sir Landevale*, *Sir Launfal*, and *Sir Lambewell* (1st half of the 14th century), are adaptations of Marie de France's *Lai of Lanval* (646 lines, 12th century). It develops the folk-tale theme of the young man helped by a magical being (a beautiful lady who demands that he does not speak to her), which is typical of Celtic narrative, and contains allusions to a beautiful enchanted territory (absent in Marie's *Lai*), situated in a fairy island, which is similar to many Celtic descriptions of the OTHERWORLD. *Sir Gawain and the Green Knight* (2530 lines, composed in alliterative stanzas around 1375) is considered the masterpiece of English medieval literature. Combining different sources, including French romances and Scandinavian tales, it tells the story of an unknown knight who arrives at Arthur's court during the New Year's feast and presents a challenge to the knights; he has his head cut off, but picks it up and rides away, telling Gawain to find him one year later at the Green Chapel to complete the deal.

The beheading game has several parallels in Celtic tales (two variants of this motif are to be found in the Irish FLED BRICRENN), and it should also be noted that Gawain's horse has the same name (*Gryngolet*) as Gwalchmai's horse in the Welsh MABINOGI. The Beheading Game, combined with that of the Giant's Daughter, is also the main subject of *The Carle* (500 lines, late 14th century), which tells of the adventures that occurred in the hall of a terrible giant, named the Carle of Carlisle. In *The Awntyrs off Arthure* (715 lines, composed in Scotland [ALBA] *c.* 1425) there are references to native folklore motifs such as the existence of a mysterious place in the wood where personal values are tested, and the presence of ghosts who interfere with humans, generating misfortunes. In *The Turke and Gowin* (a fragmentary romance [355 lines] composed in north-west England *c.* 1500) a magical realm is described, situated in an unknown island and inhabited

by giants and unnatural figures, which have been identified with characters of Manx folklore (see MANX LITERATURE). *The Marriage of Sir Gawain* (a ballad of 852 lines) and Chaucer's *Wife of Bath's Tale* (408 lines, late 15th century) develop the theme of the hero who has to kiss a supernatural woman in the shape of a loathsome hag, a theme that is common to the Italian *Carduino* (*c.* 1370) and has an analogue in the Irish *Echtra Mac nEchach Muig-medóin* (The adventure of the sons of Eochaid Mugmedón). The method of narrating the childhood of the hero in *Sir Percyvell of Gales* (2288 lines, 14th century) has correspondences with the Irish Cycle of FINN MAC CUMAILL and *Macgnímrada Con Culainn* ('The Boyhood Deeds of Cú Chulainn') that are not found in Chrétien's *Perceval*, for example, Perceval's ability to catch wild animals.

§5. OCCITAN LITERATURE

Jaufré (10,956 lines, early 13th century) contains an allusion to a Fada del Gibel who lives in a lake; although it is easy to identify this figure with Morgain la Fée, a few elements, such as the marvellous tent in which she lives and her second name (*Guilalmer*), suggest that the author of this romance, perhaps born in northern Catalonia, used sources different from the ones we know. In a poem composed before 1165, the troubadour Guiraut de Cabrera describes Gauvain as 'a man who, without companion, hunted so many a quarry'; these words recall the assertion in the Welsh CULHWCH AC OLWEN that Gwalchmai was 'the best of walkers and the best of riders'. Other references to King Arthur and to his knights found in the poems of troubadours of the 12th and 13th centuries (for example, *Arnaut-Guilhelm de Marsan, Bertran de Paris, Peire de Corbian*) may indicate the existence of an Arthurian tradition in the south of France which is now lost in its narrative form.

PRIMARY SOURCES

Brunel, *Jaufré*; Pirot, *Recherches sur les connaissances littéraires des troubadours occitans et catalans des XIIe et XIIIe siècles.*

§6. SPANISH AND PORTUGUESE LITERATURE

Generally, Arthurian texts written in the IBERIAN PENINSULA follow the French sources, and the new episodes inserted are not relevant in a Celtic context. A few exceptions can be cited: in a love poem included in his Galician-Portuguese *Cancioneiro de Lisboa*, and in other *Cantigas* (Songs), Alfonso X (1221–84) refers to an Arthurian tradition in Catalonia, which is now lost. The Spanish *Libro del Caballero Zifar* (The book of the knight Zifar, *c.* 1300) refers to Arthur's combat with the Cath Palug; more than a translation from the vulgate *Merlin*, this seems to be taken from the indigenous folktale (attested also by Pierre Sala in his collection of short stories *Prouesses de Plusieurs Rois*, Prowesses of several kings, *c.* 1515) about a monster who lived in the Lake of Lusanne. This text also describes adventures that take place under the water of a mysterious lake.

Alfonso X el Sabio, *Cantigas profanas*; Olsen, *Libro del cavallero Çifar*.

§7. ITALIAN LITERATURE

Arthurian references occur in a few poems of the 12th and 13th centuries (for example, in lyrics written by Arrigo da Settimello, Giacomo da Lentini, Guittone d'Arezzo, Boncompagno da Signa). In the *Inferno* (canto V), Dante Alighieri alludes to Tristan and Lancelot. A few scholars have connected the whole conception of the *Divina Commedia* with the tradition of Celtic journeys to the OTHERWORLD (particularly the Old Irish IMMRAMA). Several Arthurian allusions are found in Giovanni Boccaccio's works, together with references to themes that are typical of Celtic folklore: for example, a *novella cortese* (courtly novella) of his *Decameron* (1349–51) is concerned with nocturnal visions, and contains the images of the white hart, a fairy character that embodies the symbol of the psychopomp animal which drives the soul to the Otherworld. The white hart also appears in Celtic folklore in the form of a fairy animal with psychopomp characteristics, and the colour symbolizes its supernatural provenance. Adaptations of the French romances (for example, the *Tavola Ritonda*, the *Tristano Riccardiano*, the *Tristano Veneto*, and the *Cantari*) do not introduce significant elements for a possible Celtic connection, with the exception of the romance *Tristano e Lancillotto* by Niccolò degli Agostini (*c.* 1515), which

is probably based on a lost French version of the Tristan legend, and elaborates the theme of the submerged Otherworld.

An Arthurian scene is depicted in stone on an archivolt of Modena cathedral in northern Italy. In this sculpture, which can be dated between 1120 and 1130, King Arthur and five other knights approach a stronghold to rescue a woman named *Winlogee*. The personal names of this scene are very precious, because they are signals of Welsh and Breton stages in the development of the Arthurian legend on the Continent. For example, the name *Winlogee* preserves a Breton form, and one of the knights (named *Galvariun*), has been identified with *Gwalhafed,* the brother of *Gwalchmei* in the Welsh CULHWCH AC OLWEN.

Francesco Benozzo

Arthurian sites is a term which, in its most general sense, refers to places connected with the historical ARTHUR, ARTHURIAN literature, Arthurian folklore, and the LEGENDARY HISTORY of BRITAIN. Since the 1960s, the narrower and more important focus has been on a number of archaeological sites which have produced, on excavation, evidence for intensive and high-status occupation during the historical period assigned to Arthur, namely the 5th–6th centuries AD. After the Devil and Robin Hood, Arthur and Arthurian figures are associated with more natural features and prehistoric antiquities in the landscape of England than any other characters in folklore; therefore, the likelihood of finding an Arthurian association for any given picturesque archaeological site is fairly high. Important post-Roman sites with Arthurian associations include the massively refortified IRON AGE hillfort of SOUTH CADBURY CASTLE in Somerset, England, and the small, naturally defended, peninsula of TINTAGEL, Cornwall (KERNOW), where a vast quantity of post-Roman imported pottery has been uncovered, which suggests a place of great economic importance in the 'Arthurian period'. South Cadbury has been identified as King Arthur's Camelot only since the 16th century. The name *Camelot* itself does not appear in Arthurian literature until the late 12th century and is almost certainly derived from that of the pre-Roman Belgic OPPIDUM of CAMULODŪNON, later a Roman *colonia*, modern Colchester, Essex. GLASTONBURY, Somerset, has been identified with the Arthurian AVALON since the 12th century and was the site of both an aristocratic occupation and an early church in post-Roman pre-English times.

For the sites of Arthur's battles as listed in HISTORIA BRITTONUM §56, Jackson's discussion (*Modern Philology* 43.44–57) makes it clear that *Linnuis* is Lindsey, a large region around Lincoln town in present-day Lincolnshire, eastern England. *Urbs Legionis* 'the city of the Legion' most probably means Chester (CAER). *Cat Coit Celidon* 'the battle of the Caledonian forest' would have to be somewhere within a large region of what is now central Scotland (ALBA). Old Welsh *Breuoin*, if this is the correct reading, could continue the Old ROMANO-BRITISH name for a fort north of HADRIAN'S WALL, *Bremēnium* (Jackson, *Antiquity* 23.48–9). CAMLAN, for the battle site where Arthur is said to have fallen in 537/9, according to ANNALES CAMBRIAE, can be derived from the ancient Celtic name of a fort on Hadrian's Wall *Camboglanna*. Though sometimes

identified with the fort at Birdoswald, Romano-British *Camboglanna* has more recently been equated with Castlesteads (Cumbria) on the river Cam Beck, which possibly has a related name; Birdoswald was probably Romano-British *Banna* (Rivet & Smith, *Place-Names of Roman Britain* 261–2, 293–4).

In the case of the post-Roman fortifications at Dinas Emrys in Snowdonia (Eryri) in north Wales, the legendary link is not to Arthur himself, but rather to *Historia Brittonum*'s tale of Gwrtheyrn, Emrys or Ambrosius, and the white and red dragons (Draig Goch); later, the prophetic figure of Emrys came to be identified with the Arthurian wizard Merlin, the Welsh Myrddin. Similarly, the sites named in the tangentially Arthurian tales of the tragic lovers Tristan and Isolt (Drystan ac Esyllt) have been drawn into the study of the Arthurian sites. The 12th-century Anglo-Norman poet Béroul, for example, presented detailed Tristan geography in Cornwall, but recent research has now shown that Castle Dore (Béroul's Lantien) was in fact a pre-Roman Iron Age site and therefore could not possibly have been the stronghold of the historical 6th-century ruler Marc Cunomor, the prototype of Béroul's King Mark (Padel, *Arthur of the Welsh* 229–48).

The subject of Arthurian sites also includes places named in Arthurian sources that are probably real places, but whose identification remains uncertain: for example, the site of the famous battle of Badonicus mons and Arthur's court in the oldest Arthurian tale Culhwch ac Olwen at Celliwig in Cernyw (Kernow/Cornwall). The latter name appears to be a combination of *celli* 'wood' and *gwig*, probably meaning 'settlement' < Latin *vīcus*. There have been various attempts at identifying the place, including proposals for Calliwith near Bodmin, the hill-fort at Castle Killibury, the hill-fort near Domellick (Geoffrey of Monmouth's *Dimilioc*), a place in Cornwall called *Cællincg* and also *Cællwic* in Anglo-Saxon sources (possibly modern Callington). In 1302, two men were accused of murdering a Thomas de Kellewik in west Cornwall, but this is the only occurrence of this Cornish name that seems to correspond exactly to Welsh *Celli Wig*. In considering this unresolved question, it is important to remember that the region name Cernyw in *Culhwch*, and in early Welsh tradition in general, was more extensive than the modern county. It is also not impossible that early Welsh sources sometimes mean the old tribal lands of the Romano-British civitas of the Cornovii in what is now Shropshire (Welsh swydd Amwythig) and Powys, though a conclusive example of such a meaning for Cernyw has yet to be found. A suitably important sub-Roman place with a philologically workable name would be Calleva (Silchester), the fortified centre of the *civitas* of the Atrebates, which continued to be occupied and free of Anglo-Saxon settlement into the 5th century, but Silchester is nowhere near either Cornwall or the Cornovii. There has been no serious attempt to identify Arthurian Cernyw with Kernev/Cornouaille of Brittany (Breizh). However, Ashe (*Discovery of King Arthur*) has proposed that the 5th-century 'King of the Britons' Rigotamus who led 12,000 men against the Visigoths in Gaul was the historical basis for Arthur and has drawn attention, in this connection, to a place called *Avallon* in France.

On the other hand, the hunt for the supernatural boar Twrch Trwyth and other quests of the Arthurian host in *Culhwch ac Olwen* can be located and traced across the map of Wales (Cymru) in close detail. The 9th-century compiler/author of *Historia Brittonum* knew an earlier version of the story of Arthur's hunt of 'porcum Troit', and he includes three landscape marvels (*mirabilia*) with Arthurian connections. The Old Welsh marvel name *Carn Cabal* in the region of Buellt (now in southern Powys) seems to mean, on the face of it, 'horse's hoof', but it is explained as a cairn (Welsh *carn*) bearing the footprint of Arthur's dog Cafall, impressed into the rock during the great boar hunt. Another of the *mirabilia*, that of *Oper Linn Liuon* on the Severn estuary, though it does not name Arthur or the Twrch Trwyth, describes a climactic episode from the hunt in *Culhwch*: if an army gathers there as the tide comes in (as Arthur's band did in the tale), they will all drown if they face one direction, but be saved if they face another. *Historia Brittonum*'s wonder of *Licat Amr* is at a spring at the source of the river Gamber in the region of Ergyng, now Herefordshire (Welsh swydd Henffordd). This is said to be the site of the strangely size-changing grave of Arthur's son Amr, whom Arthur himself, *Historia Brittonum* tells us, killed. Amhar son of Arthur is mentioned in the Welsh Arthurian romance Geraint, but the story of his slaying by Arthur does not survive. On the other hand, the story

that Arthur killed his son named Medrawd/Mordred does become one of the central themes of international Arthurian romance in the High Middle Ages.

Geoffrey of Monmouth and Welsh material showing Geoffrey's influence, such as the 'Three Romances' (Tair Rhamant), place an important court of Arthur's at the site of the old Roman legionary fortress of Isca Silurum, now Caerllion-ar-Wysg in Gwent, a major ruin still impressively visible today. This idea does not seem to pre-date Geoffrey, and Caerllion has not produced evidence for itself as an important centre in the sub-Roman period.

JTK

The **Arverni** were a Gaulish tribe located in present-day Auvergne, France. Their territory was centred in the high plateau of the Limagne, east of Clermont-Ferrand, whose Gallo-Roman name had been *Augusto-nemeton* ('sacred grove of Augustus'; see NEMETON). This Roman town had succeeded the OPPIDUM of Gergovia, the pre-Roman capital of the Arverni. The tribe was one of the richest and most powerful in Central Gaul, their principal rivals being the Aedui. Its wealth was founded on skilled craftsmanship, mainly iron and bronze production, and pottery. Discoveries in the tribe's territory of vases from Campania in Italy demonstrate extensive trade relations. The Arverni, under their chief Vercingetorīx, led the coalition which resisted Caesar's conquest in the period 58–52 BC. One of the most important texts in Gaulish, the inscription of Chamalières, was discovered at a thermal spring in the territory of the Arverni, and this functioned as a major sanctuary in pre-Roman and Roman times. West of Chamalières on the top of the Puy-de-Dôme, a volcanic mountain (1465 m), a temple of Mercurius has been excavated; this has traditionally been interpreted as a sanctuary of the Celtic god Lugus (see also INTERPRETATIO ROMANA), dating back at least to Roman times, though pre-Roman use has not been established. Additional important Gaulish inscriptions were found in the territory of the Arverni at Lezoux and Vichy. These numerous finds underline the cultural significance of the Arverni, including their key rôle in the promotion of literacy in an ancient Celtic language.

The name *Arverni* appears to be Celtic and most probably derives from an old place-name consisting of *are-* 'in front of' + *u̯erna-* 'alder tree, alder marsh', in which *are-* has become *ar'-* as in *Ar'morica*, alongside *Aremorica* (see ARMORICA).

Asaph, St

There is little reliable evidence for the life of St Asaph in north-east Wales (Cymru). The belief is that he was the successor at Llanelwy, Flintshire (sir y Fflint), to St Kentigern, the patron saint of Glasgow (Glaschu), then in exile from Strathclyde (Ystrad Clud). According to Annales Cambriae, Conthigirn (Kentigern) died in 612. Putting such Dark Age dates together with the details of the late 12th-century Life of Kentigern by Jocelin of Furness gives a traditional chronology according to which Kentigern founded the church and monastery of Llanelwy in the later 6th century.

There is no documentary or archaeological evidence for the church thereafter until 1143, when Gilbert was consecrated as bishop by Archbishop Theobald of Canterbury and the Norman territorial diocese of St Asaph was formed. A small cathedral was certainly in existence by 1188 when Archbishop Baldwin of Canterbury celebrated mass there. Further work on the church was undertaken by Bishop Hugh (1235–40), and during the episcopate of Anian II (1268–93) the relics of St Asaph were translated from Llanasa and enshrined in the cathedral. This was something of an act of defiance to Edward I, who, in the same year (1281), expressed a wish that the see be removed from St Asaph to Rhuddlan, under the 'protection' there of the royal castle. When the cathedral was burned by the English in 1282, those responsible were excommunicated by Anian, and this set him further at odds with the king.

It was Archbishop Pecham of Canterbury who insisted that the see remain at St Asaph and the cathedral be rebuilt, work which went forward over the next century, and particularly during the episcopates of Anian II and his successor, Llywelyn of Bromfield. The fabric again suffered substantial damage during the rebellion of Owain Glyndŵr, but this was made good by Bishop Robert de Lancaster (1411–33).

The present appearance of the cathedral is largely the legacy of the thorough restoration undertaken between 1867 and 1875 by Sir George Gilbert Scott, and few of the medieval furnishings now remain, other than the late 15th-century prebendal stalls.

John Morgan-Guy

Ascendancy is the term generally used to denote the minority Anglo-Irish Protestant oligarchy which dominated life in Ireland (Éire) from the 17th to the early 20th century. Its members were different from the (mainly Catholic) native Irish population, but also from the 'Old English', i.e. the descendants of the Anglo-Normans who came to Ireland with Henry II in 1172.

The ground for the rise of an Anglo-Irish ruling caste was prepared in the 15th century, when the policy of 'Surrender and Regrant' ensured that all Irish lands were held under the English Crown and could thus be reallocated freely by it. Through the Elizabethan and Cromwellian plantations of English and Lowland Scottish Protestant settlers (see LOWLANDS), most of the land was forcibly reallocated to the new landlords and settlers. After William of Orange's victory in 1691, Protestant ownership of land was consolidated and expanded, and the Catholic population (Irish Gaelic and 'Old English') was deprived of any residual political power. Catholics could no longer inherit Protestant estates and Catholic estates were divided, unless the eldest son converted to Protestantism within a year of inheriting. By 1704 a series of Penal Laws ensured total political disempowerment of the Catholic population: they were forbidden to own arms or a horse worth more than £5, to run schools, to vote, to serve in the army, or to engage in commerce or practise law.

The Ascendancy was at its most powerful during the 18th century, when its members dominated life in Ireland to the total exclusion of the majority of the population. In 1801, however, the Irish Parliament was abolished and Ireland was fully incorporated into what was named the United Kingdom of Great Britain and Ireland (see ACT OF UNION). In 1829 the Catholics were emancipated. Both events ushered in an era that would see the slow decline of the Anglo-Irish Ascendancy through the loss of their landed estates (see LAND AGITATION; LAND LEAGUE), and the emergence of a powerful NATIONALISM. With the establishment of the Irish Free State in the south of Ireland in 1922, the

Ascendancy as a caste disappeared.

Whatever its shortcomings, the Ascendancy contributed greatly to Irish life and has left a lasting legacy. Ireland's most stunning mansions were built during the 18th century and Dublin (Baile Átha Cliath) was expanded to a grand scheme. Trinity College, Dublin (founded in 1593), has produced men such as Jonathan Swift; Thomas Moore and Theobald Wolfe Tone. The Royal Irish Academy (Acadamh Ríoga na hÉireann), founded in 1785, undertook most of the antiquarian research of the 19th century, and amassed a library of 30,000 volumes and over 2500 rare manuscripts (McConville, *Ascendancy to Oblivion* 152). Towards the end of the 19th and the beginning of the 20th century, members of the Ascendancy were at the centre of the 'Irish renaissance', sponsoring and producing (Anglo-) Irish art and literature which have become world-famous (see anglo-irish literature; irish drama; gregory; yeats).

MBL

Asser was a Welsh bishop and the biographer of the powerful Anglo-Saxon ruler, Alfred the Great of Wessex. He was the kinsman of Nobis, bishop of St David's/Tyddewi (*c.* 840–73/4), a foundation with which Asser maintained special connections, referring to it as *monasterium et parrochia sancti Degui* in the Life of Alfred. The unusual name *Asser* was borne by a clerical witness to a charter of *c.* 885 preserved in the Book of Llandaf, quite probably the same man. This was incidentally the first year that Asser served Alfred, agreeing to spend six months of any given year so employed from then on. Asser seems to have been trilingual, and, in addition to writing the Life of Alfred, was involved in the king's ambitious programme of translating Latin texts into Old English. Alfred's call to Asser was probably, at least in part, politically motivated. In the 880s Alfred's Wessex was menaced by a potential alliance by Anarawd of Gwynedd with the Mercian English and/or the Vikings of York. Asser's contacts with the southern Welsh rulers in Dyfed, Glywysing, Brycheiniog, and Gwent no doubt smoothed the acceptance of Alfred's overlordship in south Wales (Cymru), thus thwarting the hostile alliance. Surely with Alfred's backing, Asser became bishop of Sherborne in Wessex in the mid- or late 890s and held this office until his death. According to Annales Cambriae, he died in 908.

Asser's *De rebus gestis Ælfredi regis* is written in Latin, but is an important source for Old Welsh proper names: e.g. §9 *Ruim* (Isle of) Thanet; §30 *Tig-Guocobauc* lit. House of caves, Nottingham; §42 *Guilou* (Wiltshire river Wylye); §47 *Strat-Clutensis* people of Strathclyde/Ystrad Clud (with Latin suffix); §49 *Durngueir* Dorset; *Frauu* (river) Frome; *Cair-Uuisc* Exeter; *Uuisc* (river) Exe; §52 *Abon* (Wiltshire river) Avon; §55 *Coit Maur* 'sylva magna' Selwood forest; §57 *Cair-Ceri* Cirencester; §79 *Degui* Dewi Sant/St David; §80 *Hemeid*, the Welsh masculine name *Hyfaidd*; §80 *Rotri* Rhodri Mawr; *Hovil* Hywel; *Ris* Rhys; *Gleguising*, the kingdom of Glywysing in south-east Wales; *Brochmail* Brochfael; *Fernmail* Ffernfael; *Mouric* Meurig; *Guent* Gwent; *Helised* Elise; *Teudubr* Tewddor; *Brecheniauc* Brycheiniog; *Anaraut* Anarawd. The high proportion of these Old Welsh proper names that refer to places in England is intriguing and possibly illuminating. Certainly, Asser was writing—at least in part—for a Welsh audience, attempting to propagandize King Alfred to his new allies in south Wales. But this detail does not completely explain the names. There would have been little point including them unless Asser's readers in Wales already knew of these places in England by their Welsh names. Surely, part of the purpose was that the Welsh travellers were to feel welcome to travel in Alfred's kingdom, which raises the question whether they were likely to have met speakers of Brythonic when they did so. Asser's Welsh names are never Cambricizations of Old English; rather they have developed historically and regularly, just as native Welsh names continuously evolving from inherited Celtic vocabulary. This suggests the survival of a Brythonic-speaking subject population in England, who maintained links with the Welsh in Wales. In any event, the fact that the spellings are invariably in the standard Old Welsh spelling of contemporary texts of the 9th and 10th centuries confirms that the Life of Alfred is not a later forgery, as proposed by Galbraith and Smyth.

The name *Asser* is generally thought to derive from the Biblical name *Asher*.

Asterix is the creation of Albert Uderzo (1927–) and René Goscinny (1926–77). The cartoon character first appeared in an edition of the French journal *Pilote* in 1959, and the first book, *Asterix le Gaulois* (Asterix the Gaul) appeared in 1961. More than 30 other volumes have followed since then, chronicling the adventures of a Gaulish hero, Asterix, and his companion, Obelix. The premise is that in 50 BC a few Gaulish villages in ARMORICA still hold out against the Roman conquest, thanks in part to a magic druidical potion which gives them super strength (see DRUIDS). The common GAULISH personal-name element *-rīx*, 'king', as in VERCINGETORĪX, was the inspiration for Uderzo and Goscinny's ubiquitous *-ix*, used to denote Gaulish names. For example, the village chief is named Abraracourcix in French, a pun on *à bras raccourcis* 'with shortened arms'. In English, he is Vitalstatistix in Britain and Macroeconomix in the USA. In Scottish Gaelic, he is Uasalaix, from *uasal* 'noble'; in Breton, Anerzbrec'hiks, from *a-nerzh brec'h* 'with all one's might'; in Welsh, Einharweinix, from *ein harweinydd* 'our leader'.

Uderzo is the illustrator and, since Goscinny's death in 1977, he is also the author. The books have proved enormously popular, and have been translated into a number of languages, including BRETON, SCOTTISH GAELIC and WELSH. Asterix, though fictional, attempts to depict Gaulish life as realistically as possible within the story-lines, and the comics have been used for educational purposes, including the museum exhibition of cartoon panels alongside Gaulish art and artefacts at the Musée national des arts et traditions populaires in Paris (1996–7) and at the Musée des beaux-arts de Montréal (1997).

Athairne Ailgessach mac Ferchertni (var. Aithirni) is the name of a poet and satirist to King CONCHOBAR in the ULSTER CYCLE of Tales. In an anecdote contained in the Old Irish legal text BRETHA NEMED, Athairne first recites a poem from his moth-

er's womb, when he smells ale, as she fetches fire during the preparations for a FEAST:

> For the sake of ale,
> lantern of earth,
> the expanse of the sea
> soon encircles the land.
> A sea which ebbs,
> place of lightning:
> with bursting of the boundary,
> a woman of fire . . .

Athairne was renowned as a malevolent and miserly satirist (see SATIRE), who is the subject of a brief story in LEBOR LAIGNECH (edited by Thurneysen), telling how he 'fasted against' the mythological figure Midir of the supernatural mound, Brí Léith. For the story of how Athairne lost his place as chief poet of ULAID to his foster son, see AMAIRGEN MAC AITHIRNI.

Athenaeus Ἀθήναιος (*fl. c.* AD 200), a Greek from Naucratis in Egypt, was the author of *Deipnosophistae* (Men learned in the arts of the banquet), a text in 15 books taking the form of a conversation by 23 men over dinner, during which they describe dining customs throughout the ancient world. *Deipnosophistae* includes several anecdotes concerning the Celts, most significantly material attributed to the now lost history of POSIDONIUS. Some of these passages are among the most famous of the GREEK AND ROMAN ACCOUNTS of the ancient Celts. The interpretation of this material today is somewhat ambiguous since some modern writers have discussed it as though it were essentially sound anthropological data of actual practices, while others assume that we are dealing ultimately with hero tales, cross-fertilized to a greater or lesser degree with the existing themes of Greek literature.

Deipnosophistae (4.36) contains the following general account of Celtic aristocratic dining customs:

> [Posidonius] says that the Celts place dried grass on the ground when they eat their meals, using tables which are raised slightly off the ground. They eat only small amounts of bread, but large quantities of meat, either boiled, roasted, or cooked on spits. They dine on this meat in a clean but lion-like manner, holding up whole joints in both hands and biting the meat off the bone. If a piece of meat is too difficult to tear off, they cut it with a small knife which is conveniently at hand in its own sheath. Those who live near rivers, the Mediterranean, or Atlantic also eat fish baked with salt, vinegar, and cumin. They also use cumin in their wine. They do not use olive oil because of its scarcity and, due to its unfamiliarity, it has an unpleasant taste to them. When a number of them dine together, they sit in a circle with the most powerful man in the centre like a chorus leader, whether his power is due to martial skill, family nobility, or wealth. Beside him sit the remainder of the dinner guests in descending order of importance according to rank . . . The drink of choice among the wealthy is WINE brought from Italy or the region of MASSALIA. It is normally drunk unmixed with water, although sometimes water is added. Most of the rest of the population drinks a plain, honeyed beer, which is called *corma*. They use a common cup, sipping only a little at a time, but sipping frequently. The servant carries the cup around from the right to the left. In the same direction they honour their gods, turning to the right. (Koch & Carey, *Celtic Heroic Age* 10–11)

Athenaeus (4.37) also preserves a Posidonian account of the fabulously extravagant feast held by the potentate Lovernios. The final episode describes the lavish praise that a poet sang extemporaneously as he ran beside the chariot of Lovernios, who threw the poet a bag of gold as a reward (see translated passage at BARD).

Deipnosophistae (4.150d–f) quotes another account of a great Celtic feast, in this instance going back to PHYLARCHUS, a Greek writer of the 3rd century BC, who tells of the year-long feast and purpose-built feasting halls of the Celt Ariamnes. In this anecdote, the themes are reminiscent of the great year-long feast of the great hall of 'Mynyδawc', which is referred to repeatedly in the elegies of the Welsh GODODDIN.

In another of his Posidonian passages (4.40), Athenaeus gives what is now the central point of comparison between the classical authors and the Ulster Cycle with relation to the themes of contention at feasts, the champion's portion, and the head cult; the parallels are particularly striking for the Irish sagas Fled Bricrenn and Scéla Mucce Meic Dá Thó:

> . . . Posidonius says that the Celts sometimes engage in single combat during their feasts . . . Posidonius also says that in ancient times, the best warriors received the thigh portion during feasts. If another man were to challenge his right to the choicest portion, a duel was fought to the death. Others in former days would collect silver, gold, or a number of wine jars. . . . [Then] they would stretch themselves out across their shields on their backs and then someone standing near would cut their throats with a sword. (Koch & Carey, *Celtic Heroic Age* 11)

Deipnosophistae (13.576) is also the surviving source of Aristotle's version of the foundation legend of Massalia (Marseille), which shows several points of comparison with examples of the so-called sovereignty myth found in medieval Celtic and Celtic Latin literatures. Another anecdote taken from an author of the 4th century BC (and thus amongst the earliest Greek ethnography of the Celts) preserved uniquely by Athenaeus (10.443b–c) is the episode quoted from Theopompus describing how a group of Celts in the Balkans once treacherously invited a Greek host to a feast and intentionally poisoned their guests with a herb which produced incapacitating abdominal pain.

Audacht Morainn (The testament of Morann) is a 7th-century text in Old Irish which consists of advice by the legendary judge Morann to a young king, Feradach Find Fechtnach (Feradach the Fair, Feradach the Battler). According to the text's preamble, this advice is announced to the king by Morann's pupil, Neire Núallgnáth (Neire who is accustomed to proclaiming), on the restoration of the monarchy after the revolt of the vassal tribes.

The main concern of the text is to stress the importance of the king's justice (*fír flathemon*, literally 'true ruling') for the success of his reign. This justice not only guarantees peace and stability, but is also expected to bring about abundance of fruit, grain, fish, milk-yields, fertility of women, and protection from plagues, lightning and enemy attacks.

Morann stresses the interdependence of a king and his people, and advises: 'Let him care for his subjects (*túatha*), they will care for him; let him help his subjects, they will help him.' He urges the king to be cautious as well as just, and compares his task with that of a charioteer, who must constantly look to either side as well as in front and behind (see further chariot). The king is warned not to 'redden many forecourts', because bloodshed is a vain destruction of all rule. He should not let a concern for treasures or rich gifts blind him to the sufferings of the weaker members of society, and he should ensure that the old are accorded due respect. All types of merchandise must be correctly valued in his kingdom, and he should see to it that lords treat their clients fairly. Craftsmen should be properly paid for well-made manufactured articles.

The text concludes with a description of four types of king. The most admirable is the true ruler (*fírfhlaith*) who 'smiles on the truth when he hears it'. Next to him in worth is the wily ruler (*ciallfhlaith*) who does not have the full legitimacy of the true ruler, but yet has the military capacity to defend his borders and exact tribute. Less successful is the reign of the 'ruler of occupation with hosts from outside', since he has difficulty controlling his army. Finally, the reign of the violent and tyrannical bull-ruler (*tarbfhlaith*) is one of constant turbulence.

The text's central theme, that the king's justice brings about abundance of crops and fertility of livestock, is widespread in early Irish literature. Two main

recensions of the text survive, distinguished by modern scholars as A and B. Recension A was originally held by Rudolf Thurneysen to be earlier, and it formed the basis of his edition of 1917. However, Julius Pokorny argued that Recension B was in fact earlier—a conclusion subsequently accepted by Thurneysen. Recension B was edited by Fergus Kelly in 1976.

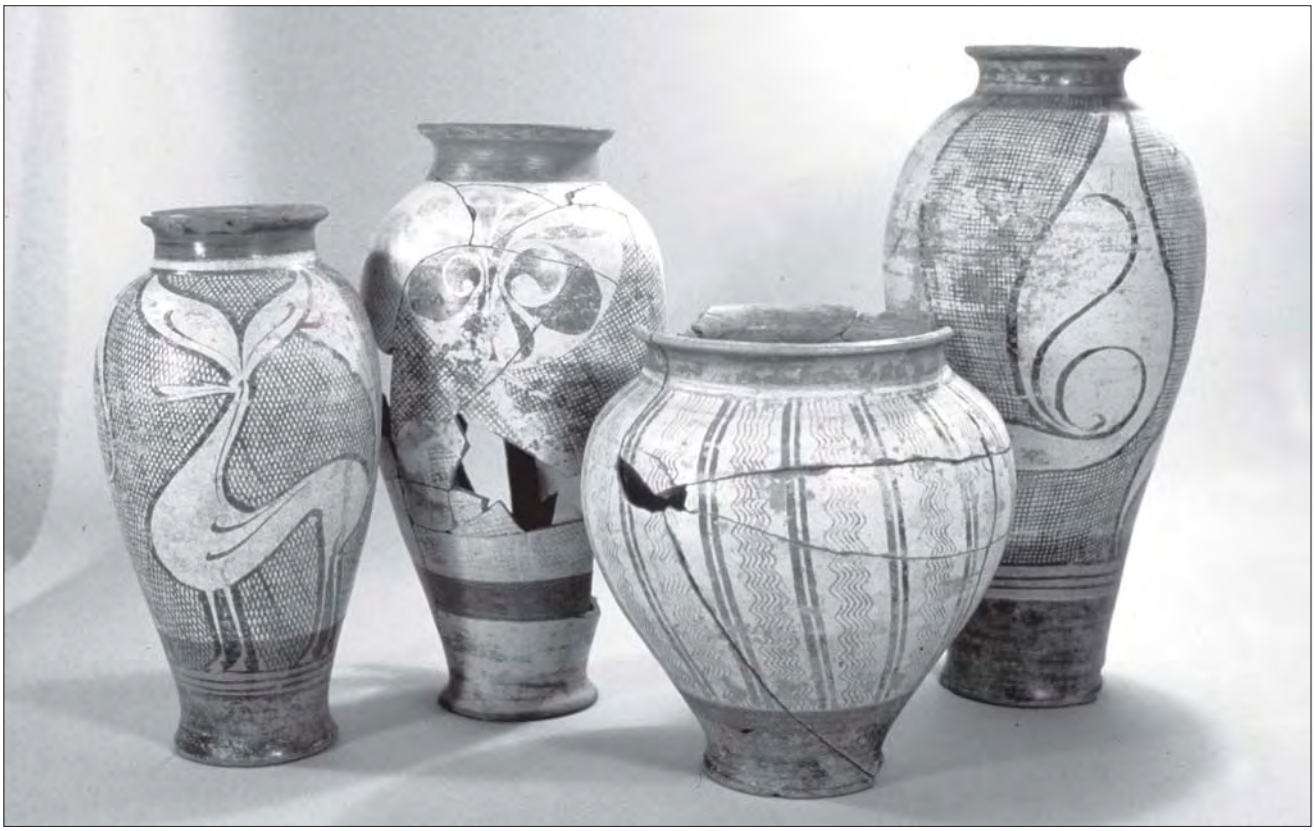
Augustine of Canterbury (archbishop 597–604/10) was an Italian monk chosen by Pope Gregory the Great to lead the mission to the 'English people' (*gens Anglorum*) in 596; at the time this was, in effect, limited to the kingdom of Kent, where Christianity already had a foothold at the court of King Æthelbert, whose queen, Bertha, was a Merovingian Frankish Christian. This Roman St Augustine is not to be confused with the St Augustine of Hippo (†430), the north African author of *Confessiones* and *Civitas Dei*.

For Celtic studies, the most significant aspect of Augustine's mission is that it failed, for whatever reasons, to establish a framework for co-operation between Roman foundations in England and the pre-existing churches of the Irish and Picts, and, most especially, the church of the Britons (see CHRISTIANITY). Instead, the mission led to a subsequent history of hostility and separateness between the institutions.

Our principal source for Augustine's career is the *Historia Ecclesiastica* (Ecclesiastical history) of Beda. In view of Beda's forceful ideology concerning the historical destiny of the English church and people, and the moral defects of the Britons and their church, *Historia Ecclesiastica*'s account of Augustine's interaction with the British church must be used cautiously. It should be understood as Beda's attempt to explain historically the relationships of Britain's peoples and their institutions, as he saw them, in his own day. According to Beda, Augustine and his Roman clergy first met a deputation of British churchmen in 603 at a place in western England called Augustines Āc, 'Augustine's oak'. There, the archbishop urged that they reckon Easter in the way sanctioned by Rome and join his mission to convert the English. This first meeting went well, but it was decided that a larger delegation of high-level Britons was needed before undertaking such momentous changes. This was arranged, with seven Brythonic bishops and many learned men led by Dunawd (< Latin *Dōnātus*; in Beda's spelling *Dinoot*), the bishop of Bangor Is-coed. At the second meeting the Welsh clergy rejected Augustine's demands. He is said then to have prophesied that the Britons would be slain by the Anglo-Saxons if they were not willing to preach Christianity to them. As to why Dunawd and his party refused Augustine's proposal, Beda relates that the Britons thought the archbishop arrogant and not a man of God because he did not rise to greet them (*Historia Ecclesiastica* 2.2). This information probably came from a Brythonic source and may be true: though expressed simplistically, Augustine's aloof behaviour at the meeting would have confirmed the Britons' suspicions that the proposed co-operation was to be a subordination of their numerous churches and monasteries to the weak upstart foundation still then confined to Kent. The fact that there was already a functioning church at Canterbury before Augustine's arrival, which was in use by Bertha and her Frankish *entourage*, and that Augustine had not gone on to make his base in London, as Pope Gregory had intended, reminds us that the Augustinian mission had made little headway, having thus far shown only the ability to take over existing churches, and lacked resources, despite royal and papal support. It is also likely that some of the leading Britons were simply passionately convinced of the correctness of their position on the Easter controversy and the other disputed doctrinal issues, as was the Irish missionary Columbanus when he wrote adamantly to Pope Gregory at about the same time.

Beda used the prophecy as the miraculous explanation for the victory of the pagan Angle Æthelfrith of Brynaich at Chester (Caer), where he massacred 1200 monks from Bangor Is-coed who had come out to pray on behalf of the Welsh forces. Augustine was dead by 610 and the battle took place *c.* 615: though he had been in heaven for some time, as Beda explains, the prophecy remained effective against the race of heretics, i.e. the Britons. For Beda's intended readers, the prophecy was meant to demonstrate



Decorated pottery from Aulnat, 2nd century BC, good example of 'Disney' Style at left

Augustine's supernatural powers and to reverse the obvious moral implications of the massacre by the ancestor of Beda's Northumbrian patrons. To modern readers, the ethic seems unacceptably bloodthirsty. However, in 603 Augustine might merely have been making the persuasive commonsensical point that the Britons could improve their own security through aiding Augustine's efforts to Christianize their English neighbours; the remark only later seemed ominously prescient after Chester.

It is likely that we have an allusion to Augustine and his prophecy in a source earlier than Beda, in the elegy of Cynddylan, a 7th-century prince of Powys, with its reference to a *pen esgob hunop* 'sleeping-eyed (i.e. deceased) archbishop' in connection with a massacre of 'book-holding monks' (see marwnad cynddylan).

Aulnat, located on the outskirts of Clermont-Ferrand (Puy-de-Dôme, France), is the archaeological site of a village of craftsmen. It is important as a major industrial site of the later pre-Roman Iron Age in a region of central Gaul which was of cultural and political importance and which was particularly pivotal in Caesar's conquest. Aulnat provides valuable insight into the economic and technological vitality of the Transalpine Celtic world during the century preceding its terminal collision with the military might of the Roman Empire. The development of the site can be traced through the 2nd century BC and into the early 1st century, coming to an end by or somewhat before Caesar's campaigns in the period 59–50 BC.

Remains of iron working are the most abundant;

these include iron ingots, crucibles, and furnaces. Other materials were also produced and worked on the site: for example, bronze manufacturing (reflected in remains of sheet bronze, crucibles, and slag), painted pottery, and glass production (as revealed by droplets of molten glass). There is also evidence of craftwork in bone, particularly the production of decorative bone discs. The discovery of amphorae (imported ceramic wine vessels) and of Campanian and Ampurian pottery from southern Italy and Spain shows that Aulnat and its products were able to command incoming luxury goods from Mediterranean centres. The presence of these imports, together with silver and gold COINAGE found in the final phases of the site and faunal remains (revealing a huge amount of pork consumed by the inhabitants), shows that the craftspeople of Aulnat enjoyed a remarkably high standard of living and social status. As a village of skilled smiths and artisans, sited on a plain and developing over the course of the 2nd century BC, Aulnat is representative of a significant class of Gaulish sites. These industrial villages came into being before the emergence of the fortified urban centres referred to by the Latin name oppida, whose rise reflects a major shift in the direction of urbanization and centralization of power—economic, as well as political—within the hands of tribal élites. In this region of central Gaul, the oppida were usually established on naturally defensible hilltops overlooking and dominating the plains. In the case of Aulnat, GERGOVIA was the local OPPIDUM to which the economic and industrial functions of the village tended to be transferred during roughly the last half century preceding the Roman conquest.

Auraicept na nÉces ('The Scholars' Primer') is the title of a medieval Irish tract on various linguistic topics, prominent among which are the origin of the IRISH language, key categories for its analysis, and nominal paradigms. There are probably three recensions, and the earliest manuscripts date from the 14th century. The text is structured in two directions: horizontally, as a series of books, and vertically, as a base, or canonical, text with glossed commentary. The latter principle is also found in the Hiberno-Latin exegetical grammars and in Irish or mixed Latin-Irish gloss commentary on religious, legal, and poetic texts. The canonical part of the *Auraicept*, that is, its original nucleus, has been dated to the late 7th century. It is attributed in the extant recensions to the 'learned' Cenn Faelad mac Ailello (†679), working at the monastery of Doire Luran (now Co. Tyrone) after losing his 'brain of forgetfulness' in the battle of MAG ROTH (637). Conceptual similarities and quotations shared between the *Auraicept* and the commentaries on Donatus by Murethach, Sedulius, and in the *Ars Laureshamensis*, point to the 9th century as the period of the text's further development. Doctrines discussed in the *Auraicept* are also found in LAW TEXTS and in the Old Irish St Gall glosses on Priscian's Grammar (see GLOSSES, OLD IRISH), and indicate the close interaction of these learned genres. A central concern of the compilers of the *Auraicept* was the demonstration of the qualities of the Irish language (Old Irish *Goídelg*; see GAELIC) and the vindication of a learned interest in it and its textual heritage. The doctrine that the Irish language was created by Fénius Farsaid after the confusion of tongues at Babel occurs already in the 'canonical' stratum of the *Auraicept* (see FÉNI). This episode became a central theme in Irish LEGENDARY HISTORY.

Aurelius Caninus (*fl.* earlier 6th century) was the second of five contemporary kings of the BRITONS castigated for adultery and kin-slaying in *De Excidio Britanniae* (On the destruction of BRITAIN) by the early post-Roman BRYTHONIC Latin writer, GILDAS. Since Gildas elsewhere uses puns on Brythonic names, it is likely that the strange Latin name *Caninus* 'Canine' is a pejorative adaptation of a typical Celtic honorific name

for a man, which incorporates the element 'hound'. This can be compared with Welsh *Cynan*, Breton *Conan*, Irish *Conán* < Common Celtic **Kunagnos* 'little hound, son of hound', which is how Geoffrey of Monmouth took the name. We do not know where 'Caninus' ruled, though if Gildas was denouncing his kings in geographical order—as seems to be the case with the other four—his domain was probably located somewhere in what is now southern England or south-east Wales (Cymru). The rather uncommon Latin name *Aurelius*, taken together with Gildas's remark that the progeny of Ambrosius Aurelianus had by his day much degenerated from their grandfather's character, raises the possibility that 'Caninus' was the grandson of Ambrosius.

Avalon (Ynys Afallach)

Insula Avallonis (the Isle of Avalon) is first mentioned by Geoffrey of Monmouth in his Historia Regum Britanniae (*c.* 1139) as the place where Arthur's sword Caliburnus (see caladbolg) was forged, and then as the place where Arthur was taken after the battle of Camlan for his wounds to be tended. In the Welsh versions of *Historia Regum Britanniae* (Brut y Brenhinedd), the place is called *Ynys Afallach*. In Geoffrey's *Vita Merlini* (Life of Merlin; see myrddin), *Insula Avallonis* is explained as *insula pomorum* 'island of apples' (cf. Welsh *afal* 'apple', *afall* 'apple trees'). *Ynys Afallach* thus corresponds closely to the poetic name that occurs in early Irish literature for the Isle of Man (Ellan Vannin), namely *Emain Ablach* 'Emain of the apples', a name applied to Man specifically as the blessed and otherworldly domain of the sea divinity Manannán mac Lir. *Vita Merlini*'s *Insula Avallonis* is located vaguely in the west and is inhabited by nine sorceresses, the chief of which is Morgan (Morgain La Fée of later Arthurian literature).

This sisterhood of nine has been interestingly compared to two earlier sources. Firstly, writing *c.* ad 43 in his Geography (known alternatively as *De Chorographia* and *De Situ Orbis*), Pomponius Mela described a cult of nine virgin priestesses living on the island of Sena (3.6), probably Île-de-Sein (Enez-Sun/Enez-Sizhun) off westernmost Brittany (Breizh). These priestesses are described as having the arts of healing, prophecy and power over the elements, and the ability to assume the form of animals (see reincarnation). Secondly, in Preiddiau Annwfn (Spoils of the Otherworld)—a Welsh Arthurian poem composed in the 8th to 10th century and preserved in Llyfr Taliesin—there is a mysterious description of a supernaturally powerful, pearl-encrusted *peir pen Annwfyn* (cauldron of the chieftain of the Otherworld) warmed by the breath of *naw morwyn* (nine maidens). These two references suggest that Geoffrey's *Insula Avallonis* may have been based on some very early traditions and/or literary sources; nonetheless, as often with Geoffrey, his creative synthetic method makes recovery of his sources difficult. In any event, neither of these old parallels uses a name such as *Avalon* or 'Island of the Apple Trees' for the realm of the nine magical virgins.

In medieval Welsh sources, the name Afallach occurs for an ancestor figure in the remote mythological past of the second dynasty of Gwynedd. Thus, in the Old Welsh genealogies in British Library MS 3859, we find *Aballac* son of *Amalech* son of the mythical progenitor Beli Mawr. The sound-alikes *Aballac*[*h*] and *Amalech* are probably doublets of a single name and figure. Hence, we lose this generation elsewhere in the same early pedigrees, where the illustrious northern lineages which claim descent from Coel Hen Godebog are traced back to *Aballach m*[*ap*] *Beli et Anna*. In the Welsh Triads (Bromwich, TYP no. 70 'Three Fair Womb-Burdens of the Island of Britain'), Owain and Morfudd are said to be the children of Urien fab Cynfarch and the supernatural Modron, daughter of Afallach. Since Urien was a descendant of Coel, this seems to mean that there were either two Afallachs, many generations apart or that he, like his daughter Modron, was an immortal. Scholars, including R. S. Loomis, have equated the Welsh Modron (< Celtic *Mātronā*, the 'divine mother'; see matronae) with Morgain La Fée, chief of the sorceresses of Avalon, though the names are not cognate. The suffix *-ach* in *Afallach* shows that the Welsh name is probably a borrowing from Irish. If the various Welsh occurrences represent multiple responses to the traditions of Emain

Ablach, referring to the Isle of Man as an overseas wonderland, that would account for the apparent uncertainty over whether the name meant the 'island of apple trees', or the domain of an otherworld being named Afallach. The latter interpretation seems to have been in favour from at least the 10th century (the date of compilation of the Old Welsh genealogies) until Geoffrey's *Insula Avallonis* = *insula pomorum* required the apple-tree explanation in the 12th century.

Avalon had come to be identified with Glastonbury by 1191, when the Glastonbury monks said that they had exhumed the bodies of Arthur and Guenevere (Gwenhwyfar). A small inscribed lead cross was produced at the time (but has since been lost) and said to have been found under the coffin. The readings vary; that on the drawing from Camden's *Britannia* (1607) is as follows: HIC IACETS | EPULTVS·INCL | ITVS·REX ARTV | RIVS· IN INSV | LA·A | VALO | NIA 'Here lies buried the famous King Arthur in the Isle of Avalon'. Apart from other improbabilities involved in taking this burial and inscription as authentic 6th-century evidence, *Avalonia* is impossible as a 6th-century spelling for a name associated with apples and the Old Irish *Emain Ablach*. As a Romano-Celtic name, *Avallonis/Avalonia* has parallels. For example, the Roman fort at Burgh-by-Sands, Cumbria, had the Romano-British name *Aballava* 'place of the apple trees'. In southern Gaul there was an *Aballone* (possibly named from an apple-tree goddess), now *Avallon*. In connection with the theory that Arthur and Rigotamus, the Armorican 'king of the Britons', were one and the same, Ashe has proposed that it was to this Continental Avallon that Arthur = Rigotamus actually retreated after his final battle (see further arthurian sites).

Writing a short time after the Glastonbury exhumation, Giraldus Cambrensis accepted its authenticity, giving two detailed accounts of it, in his *De principis instructione* (On the instruction of a prince) and *Speculum Ecclesiae* (Mirror of the church). In these, he explains that there were two Welsh names for Glastonbury: *Ynys Afallon*, referring to apples or apple trees, and *Ynys Gwydrin* 'Glass Island'. He took *Glaston-bury* to be an Anglo-Saxon adaptation of the latter. The actual explanation is more likely to be the reverse. Among the various supernatural strongholds that are named in the refrain of the Old Welsh Arthurian poem *Preiddiau Annwfn* is a *Caer Wydyr* (The glass stronghold). The similarity of *Caer Wydyr* and Giraldus's *Ynys Gwydrin* may be a coincidence, and thus a red herring for the identification of Glastonbury and the Arthurian Avalon (Lloyd-Morgan, *Archaeology and History of Glastonbury Abbey* 301–15). On the other hand, it is not impossible that the nexus of ideas that surface in the Latin of Geoffrey and Giraldus in the 12th century were already current in the vernacular some centuries earlier.

Avienus, Rufus Festus (variant: Avienius)

Celtic ethnic names for the ancient inhabitants of Britain and Ireland, which correspond to the place-names Alba (ancient Albion) and Ériu, occur in a Latin text of the 4th century AD, the *Ora Maritima* (Maritime itinerary) of Avienus, a native of Volsinii in Italy. These names are in the genitive plural in the phrases *gens Hiernorum* 'the race of the *I(v)erni* (i.e. the Irish)' (line 111) and *insula Albionum* 'island of the *Albiones* (i.e. the British)' (line 112). It is widely thought that this text ultimately derives from a lost Greek 'Massaliote Periplus' (Coastal itinerary of Massalia), possibly as old as the 6th century BC, in which the ethnonyms had presumably occurred as Ἰερνοι and Ἀλβιονες or Ἀλβιωνες.

Awdl is a type of Welsh poem, usually rendered in English by the rather misleading translation 'ode'. *Awdl* is in fact the same word as *odl* ('rhyme'), with a plural form *odlau* (although *awdlau* is the more normal plural form). The same word occurs as a 9th-century Old Breton gloss, where it is spelled *odl* /ǫ́l/, but its meaning is 'signification'. An *awdl* was originally a metrical composition of indeterminate length with a single end-rhyme throughout, which could form part of a longer work, as, for example, the verses of the GODODDIN, or stand alone as a discrete poem. The monorhyme *awdl* in a single metre was still treated as a poem in its own right by the Poets of the Princes in the 12th century (for instance in HYWEL AB OWAIN GWYNEDD's love lyrics; see further GOGYNFEIRDD), but, by that time, it was becoming more common for the complete poem to consist of a number of monorhyme sections in different metres, usually of between twenty and forty lines. Those sections are referred to in the HENDREGADREDD MANUSCRIPT as *awdlau*, using the term in its original sense, but in modern usage (found from the 14th century onwards) the *awdl* is the complete poem, and the monorhyme sections are generally referred to as *caniadau*. The separate sections were almost always linked by the device of *cyrch-gymeriad*, repeating either a whole word or a sound between the end of one and the beginning of the next, or by repeating the same word or phrase at the beginning of each section. Occasionally, the end of the *awdl* would be linked to its beginning by repetition of a word or phrase.

A new development in the *awdlau* of the 14th century, which has very few antecedents in the works of the Poets of the Princes, was the introduction of *englynion* as a structural feature, either at the beginning of the *awdl*, between sections, or at its end, or indeed sometimes in all three positions. *Englynion* soon became a standard feature of the *awdlau* composed by the Poets of the Nobility (see ENGLYN; CYWYDDWYR), and a greater variety of metres came to be used following the codification of the twenty-four strict metres in EINION OFFEIRIAD's Grammar. Full CYNGHANEDD also became obligatory during the 14th century.

By the 15th century the CYWYDD was by far the most popular metrical form, but the *awdl* continued to be used for more formal and ceremonial compositions, best seen in the work of LEWYS GLYN COTHI, whose surviving corpus of 238 poems contains 76 *awdlau*. The *awdl enghreifftiol* ('exemplary *awdl*'), a metrical tour de force containing all twenty-four metres, is actually quite rare, but there are examples by DAFYDD NANMOR and Gwilym Tew in the later 15th century, and DAFYDD AB EDMWND is notable for his use of some of the more recondite *awdl* metres.

In the 19th and 20th centuries the use of the *awdl* was almost entirely confined to EISTEDDFOD competitions, in which a chair was normally awarded for the winning *awdl* (see EISTEDDFOD GENEDLAETHOL CYMRU). Nevertheless, some outstanding modern poems have been produced by such competitions, most notably Gerallt Lloyd OWEN's 'Cilmeri' on the occasion of the seven-hundredth anniversary of the death of LLYWELYN AP GRUFFUDD in 1982, a poem resonant with echoes of medieval *awdlau*.

Awen is a Welsh word meaning 'poetic gift, genius or inspiration, the muse' (*Geiriadur Prifysgol Cymru* /University of Wales dictionary s.v.). Belonging to the same PROTO-CELTIC and INDO-EUROPEAN root as Old Irish *aí* (< **aui*) 'poetic art' and the Welsh *awel* 'breeze', it is also related to the English *wind*. Ultimately *awen* belongs to the same root as that of Welsh *gwawd*, Irish *fáth* 'prophecy', *fáith* 'prophet'. The etymological sense of *awen* is a 'breathing in' of a gift or genius bestowed by a supernatural source, for example, *pair Ceridwen* (Ceridwen's CAULDRON) in the TALIESIN legend. Thus, for example, in his poem to GRUFFUDD AP CYNAN, LLYWARCH AP LLYWELYN claims that he received inspiration from God, similar to that of the legendary cauldron:

Duw Ddofydd dy-m-rhydd rheiddun awen—bêr
Fal o bair Cyridfen.

> The Lord God gives to me the gift of sweet inspiration
> As from the cauldron of Cyridfen [Ceridwen].
> (Elin M. Jones, *Gwaith Llywarch ap Llywelyn* 99)

The Poets of the Princes (Gogynfeirdd) believed that it was the bestowal of the *awen* that set them apart from lesser poets or rhymesters.

What is probably the earliest extant reference to *awen* occurs in the 6th-century personal epithet *Talhaern Tat Aguen* (Modern *Talhaearn Tad Awen*, Talhaearn, the father of the muse) in the Memorandum of the Five Poets in the 9th-century Historia Brittonum.

B

Badonicus mons (Mount Baddon) was the site of a battle, first mentioned by Gildas in his *De Excidio Britanniae* (On the destruction of Britain; §26), at which the Britons decisively checked the Anglo-Saxon 'conquest'. Gildas does not name any individuals who participated in the battle.

§1. the early medieval welsh sources

In Annales Cambriae and the battle list in Historia Brittonum, Arthur is said to have been the victorious commander, and the battle is called *bellum Badonis* and *mons Badonis*, respectively. The fact that these two Welsh Latin sources use names that are Latinized Romano-British forms, yet different from Gildas's *Badonicus*, suggests that the early Latin literature on this battle had once been more extensive. As explained in the article Arthur, the historical evidence, the Welsh-language poets seem also to have known Arthur as the victor of Baddon at a date earlier than the compilation of *Historia Brittonum* in 829/830.

§2. dating

For Gildas, Baddon was an event of central importance, resulting in a period of cessation of foreign wars and security for the Britons for a generation or more, thus defining the moral tone of the age that he and his intended readers knew. Accordingly, Gildas attempts one of his very few dating passages to pinpoint Baddon; this occurs in a long and difficult passage making reference to the year of his own birth and the '44th year with one month now elapsed'. Beda, who likewise calls the battle *obsessio montis Badonici* and reveals no knowledge of the battle independent of *De Excidio*, understood the passage to mean that Baddon occurred about the 44th year after the coming of the Anglo-Saxons to Britain, and thus, by his own chronology, *c.* ad 493 (*Historia Ecclesiastica* 1.15–16). Most modern writers have taken it to mean 43 years before Gildas's time of writing; thus, Dumville's view that Gildas was writing *c.* 545 and that both his birth and Baddon were *c.* 500+ (*Gildas* 51–9, 76–83). On the other hand, Ian Wood interprets the passage to mean that there were 43 years between the early victory of Ambrosius against the Saxons and Baddon, and that Baddon was one month before Gildas's writing; this leads to a date range of 485×520 for the nearly simultaneous battle and *De Excidio* (*Gildas* 22–3), which accords with the Annales Cambriae date for the battle at 516/518. According to McCarthy and Ó Cróinín, the 44th year refers to an absolute system of dating, i.e. the 84-year Easter table in use at the time in Britain and Ireland (see easter controversy), in which case, ad 482 would be the intended date.

§3. location

Since Gildas calls Baddon an *obsessio* (siege), this probably means that the hill was fortified, but he does not say whether the Saxons were besieging the Britons there or vice versa. The site has not been identified with certainty (cf. arthurian sites), but there have been numerous proposals. The Modern Welsh name for Bath, *Caerfaddon*, and the identification of Bath with Baddon go back to the Historia Regum Britanniae (History of the kings of Britain) of Geoffrey of Monmouth, a source of *c.* 1139, and there is no evidence earlier than this for the idea that Baddon= Bath; however, the modern scholar E. T. Leeds has proved somewhat influential in his view that the battle site was in fact in the Bath area (*Antiquaries Journal* 13.233 & n.). Nonetheless, Bath can probably be safely disregarded, since Welsh *Baddon* only came to be applied to Bath because of the English word 'bath', which is

not likely to have been known by Gildas. Jackson argued that a Brythonic name *Badon* lay behind the five hills in England with old fortifications now called *Badbury*, Old English *Baddan-byrig* (JCS 2.152–5). Of those, the Badburys in Dorset, near Swindon in Wiltshire, and in Oxfordshire above the Vale of the White Horse (see uffington) have been thought likely for reasons of historical geography and the supposed course of the Anglo-Saxon 'conquest' (Wallace-Hadrill, *Bede's Ecclesiastical History* 265–6). Myres (*English Settlements*) argued for Liddington Castle in south central England, a hill-fort that was refortified in the post-Roman centuries and which lies near a place called *Bedwyn*, although this place-name is unlikely to be connected with *Badonicus*/*Baddon*. *Bellum Badonis secundo* (second battle of Baddon), noted in Annales Cambriae at 665, is also unlocated, but it is likely to have been fought at the same site, and for this period the *Annales* are mostly concerned with events in northern and western Britain, thus making unlikely any location in south-east England.

§4. the name

Gildas's *Badonicus* and *Badonis* in *Annales Cambriae* and *Historia Brittonum* seem to be early British, i.e. Celtic, names. Whether the identification with one of the places called Old English *Baddanbyrig* is correct or not, Old English *Baddan-* could be borrowed from this British *Badon-*. *Badon-* appears to have the Gallo-Brittonic divine suffix, as seen, for example, in the names of the goddesses Epona and Mātrona (see matronae). *Badonicus mons* might therefore refer to a fortified hill, named in the pagan period for a Celtic divinity. No Badonos or Badona is known from Britain or Gaul, but within a partly Celtic-speaking area of central Europe there is a possibly relevant dedication of the Roman period to a group of female divinities called the *Badones reginae* (queen Badones; Whatmough, *Dialects of Ancient Gaul* 1245).

JTK

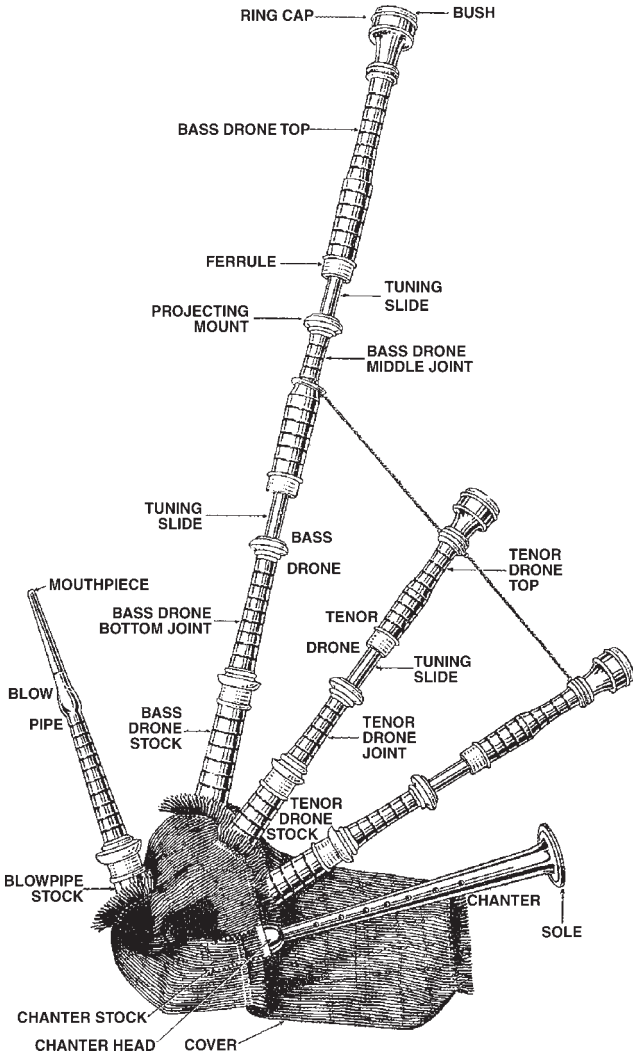
The **bagpipe** has often been perceived as the 'national instrument' of Scotland (Alba), familiar in the form of the Great Highland bagpipe, a powerful and successful wind instrument with unique qualities. But this is only one example of a wind instrument family which has a worldwide distribution and remote origins in a reed pipe blown in the mouth or with air fed from a bag of animal skin. Early identifiable forms are the prehistoric shawms and hornpipes of Near East civilizations, which evolved with bag and 'drones' in classical and early European history. It thrives still in 'Celtic Europe' and particularly in northern Spain, France (including Brittany/Breizh; see biniou; breton music), northern England, Ireland (Éire) and Scotland, and its reputation has arguably been enhanced by its performance of significant northern regional musical traditions.

The bagpipe has been identified strongly with 'Celtic' culture and is therefore often assumed to have a comparable, even synergistic, pedigree; but historically it is only recently and loosely associated with 'Celtic' culture and the Celtic languages. The *pìob mhòr* or Great Highland bagpipe may be only a recent development in bagpipe history, the Northumbrian small-pipe is not so much the last of the English bagpipes as a courtly chamber-music instrument created in northern Europe and France in the late 17th and 18th centuries, and the Irish uilleann pipes (*píob uilleann* 'elbow pipe'; see irish music) not an ancient folk instrument, but a highly sophisticated modern concert-hall and orchestral instrument perfected in city workshops in London, Edinburgh (Dùn Èideann), Dublin (Baile Átha Cliath), and Chicago. The bagpipe is in fact strongly rooted in the culture of the wider Europe, surviving strongly in some regions both west and east, where it is often regarded as a national folk instrument. Distinct regional types flourish (or have seen a revival) in Bosnia, Croatia, Bulgaria, Romania, Hungary, the Czech Republic, Slovakia, Poland, the Baltic States, north-west Russia, and Sweden. It has long traditions

in Mediterranean Italy and Sicily (e.g. in the impressive form of the *zampogna*) and in the Adriatic and Aegean regions (e.g. Macedonia, Greece and Crete).

The principal bagpipe element is the melody pipe or 'chanter', of wood, cane, bone, ivory, or metal, on which the music is played by the fingers covering and uncovering a series of finger-holes. Chanters have been broadly classified as having a cylindrical bore, tending to give a quieter, lower pitch sound, or a conical or tapered bore, giving a bright and sharper sound. A typical chanter has eight finger-holes and one thumb hole, achieving a melodic compass of only nine notes. The placing of the holes and their relative sizes have remained unchanged on most bagpipes, thus producing a traditional scale which has remained largely unchanged or modified for a long period, possibly over centuries. This has left significant differences between the scale and the sound of the bagpipe and the musical system of the equal-tempered scale that evolved in Europe in the late medieval and modern period. Some instruments, such as the Northumbrian and Irish pipes, responded to changing fashions by adding keys, particularly in the late 18th and 19th centuries, to increase the melodic compass. Another characteristic of the bagpipe is the playing style on the open and unstopped chanter with its continuous sound, the player separating and accentuating the melody notes by 'gracing' or the playing of rapid embellishments. This has evolved into an elaborate and highly disciplined system in the Scottish piping tradition, for instance, and may owe some of its origins to classical Gaelic bardic training and *clàrsach* playing styles (see harp). Supplementary pipes, as part of a typical bagpipe and tied into the bag, provide a continuous and fixed note 'drone' or 'drones', although the origins of this tonal sophistication remain undefined.

Seeking distant origins fails to explain this phenomenon, since what we have now is as much the product of a recent as a remote past, and instruments of conventional and fixed form, such as the Highland bagpipe, Irish uileann pipes or Northumbrian small-pipes, now mask the older diversity of form. This past reveals a sometimes bewildering variety of types of bagpipe and possible patterns of evolution and diffusion; influences may be detectable in long-term social and economic change, movement of people and ideas (e.g. professional entertainers and minstrels with their songs, music and dance), the growth of towns, the Crusades, and the so-called 'Twelfth-century Renaissance'. Pipes may have spread to Scotland and then into the *Gàidhealtachd* (Gaelic-speaking regions/Highlands and Islands) from France and the Low Countries and from England, ultimately to be adopted in a culturally up-beat Gaelic society and taking over the instrumental rôle of the *clàrsach* (harp). A medieval-style patronage of court and castle was emulated in the towns where the Lowland and burgh pipers have left a fainter, but nonetheless definite, tradition, most markedly in the 'great halls' of the clan chieftains. The erosion of burgh patronage and the breakdown of traditional Gaelic society left



Drawing of a modern Scottish bagpipe, first published in the 'Catalogue of Bagpipes' by Peter Henderson Ltd., Glasgow

Location of Baile Átha Cliath (Dublin) and its environs in east-central Ireland

the Highland bagpipe as the martial instrument of the armies of the Empire and new patrons of paternalist and philanthropic Highland Societies in the 19th century. The bagpipe in modern Scotland, therefore, is the product of recent interpretations of 'light' music for entertainment, dancing and marching, of more exclusive traditions of *piobaireachd* composition and performance, and of competition.

Baile Átha Cliath (Dublin) is the capital of the Irish Republic (ÉIRE). The Irish name means 'town of the ford of hurdles'. Its English name contains two elements which are also Irish in origin, *Dubh-linn* 'black pool', though the adjective-noun word order may result from Scandinavian influence. It is situated in the province of Leinster (LAIGIN), on the east coast, on the Irish Sea. The river Liffey, which rises in the Wicklow Mountains, cuts the city into two halves before flowing into Dublin Bay. Although today the most populous of Ireland's counties, County Dublin is geographically the second smallest, after Louth (Lú). In early modern times, this area was the core of what was known as 'The Pale', the part of Ireland most distinctly English in make-up and character.

Dublin was founded by the Vikings, who arrived in the mid-9th century to settle on the south bank of the river Liffey. Excavations in the Wood Quay/Fisheamble Street area from the 1970s to 1990s revealed numerous Viking-period timber buildings and other materials dating mostly from the 10th century. The Dublin Norse prospered and expanded their power-base to include Limerick (Luimneach) and Waterford (Port Láirge), while dominating the sea routes around Ireland. The expansion of Scandinavian power in Ireland was curbed by BRIAN BÓRUMA at the battle of Clontarf (1014). Following the Anglo-Norman invasion, Henry II (1133–89), the first Plantagenet king of England, made Dublin the centre of his government in Ireland, and thus laid the foundations of its later importance as capital city. Indeed, Dublin and the Pale remained the centre of the English enclave in Ireland for several centuries, and it was only after Dublin's surrender to Oliver Cromwell's army in 1649 that it experienced a period of decline. Dublin began to recover during the late 17th century, when it became the centre of emigration for Huguenot and Flemish weavers. The resulting boom in the textile trade led to economic prosperity and an expansion of the hitherto small medieval walled town. By the late 18th century Dublin had grown into a large city; many surviving buildings from that time display Georgian architecture, including its characteristic doors.

For a century, Dublin was considered the second city of the British Empire. However, the ACT OF UNION (1800) diminished the political importance of Dublin. The English ASCENDANCY left and Dublin's wealth and status declined rapidly, with the once

splendid Georgian houses turning into overcrowded slums. Gradually, a Roman Catholic middle class emerged and began to fill the gaps left in education, culture, and professional life; thus, while English remained the predominant language, a major cultural and political reorientation gained momentum after Emancipation in 1829, allowing Irish Catholics to sit in the UK parliament at Westminster. From the later 19th century, Dublin was the scene of many pivotal events connected with the cultural renaissance (see LANGUAGE [REVIVAL]) and the IRISH INDEPENDENCE MOVEMENT; for example, the Irish Republican Brotherhood was founded there in 1858.

Present-day Dublin is a major European city, and there are approximately 953,000 inhabitants in the larger Dublin area. It is the seat of the Irish government, the Dáil (the Irish parliament) and also represents the economic and cultural centre of the Irish Republic. The National Museum (ARD-MHÚSAEM NA HÉIREANN) preserves the national treasures, including high-status metalwork in bronze and gold from the Bronze Age, objects in the insular LA TÈNE style from the IRON AGE, and early Christian masterpieces of insular ART, such as the TARA BROOCH. The National Library (LEABHARLANN NÁISIÚNTA NA HÉIREANN) and the Royal Irish Academy (ACADAMH RÍOGA NA HÉIREANN) keep major collections of early Irish-language and Hiberno-Latin manuscripts. Dublin is also the home of the oldest university in Ireland, Trinity College (1592), whose library houses many famous Irish manuscripts, among them the famous 8th-/9th-century Book of KELLS. The School of Celtic Studies of the Dublin Institute of Advanced Studies (INSTITIÚID ARD-LÉINN) is a dedicated research centre and major publisher of texts and linguistic reference works for IRISH and the other CELTIC LANGUAGES. The National University of Ireland, Dublin (formerly University College Dublin) and Trinity College Dublin developed into major centres of higher education and research in CELTIC STUDIES during the 20th century. Dublin is the home of numerous governmental and non-governmental organizations involved with various aspects of promoting and/or studying the Irish language, including FORAS NA GAEILGE, Gael Linn, and the Ordnance Survey (with its important rôle for Irish place-names). Some famous Celtic and Irish scholars, including Douglas Hyde (DUBHGHLAS DE HÍDE), Kuno MEYER and Peadar Ó LAOGHAIRE have in the past been presented with the honour known as the freedom of the city.

PSH

Balkans, Celts in the

Groups that prehistorians have identified with speakers of the extinct non-Celtic, but INDO-EUROPEAN, Illyrian language settled in the Balkan area during the Bronze Age (*c.* 2500–*c.* 800 BC) and continued their development there in the IRON AGE (from *c.* 800 BC). In the following centuries, classical sources list the names of many of these groups (see GREEK AND ROMAN ACCOUNTS), for example, Triballi, Maezaei, Daesidiates, Autariatae, Iapodes, Liburni, Histri, and Delmatae, but it is doubtful whether any of these names were of Celtic origin. In the same period, on the eastern side of the Balkan peninsula towards the Black Sea, we are told of Scythi (i.e. the Iranian-speaking Scythians), Thraci (Thracians, who also spoke a non-Celtic, but Indo-European, language), and Daci (see DACIANS).

Among the native Illyrian and other central Balkan groups (i.e. Macedonians, Dardanians, and others) a horizon of rich aristocratic graves, very similar to those of the HALLSTATT and early LA TÈNE periods in western Celtic-speaking Europe, can be found *c.* 500 BC. Typically representative of the richness of local élites at the end of the 6th and the beginning of the 5th centuries BC are graves such as those from Trebenište (former Yugoslav Macedonia), which contain golden face-masks along with other more common grave goods, those from Novi Pazar and Atenica in southern Serbia with silver drinking vessels, ornamented golden

plates, jewellery, amber figurines, bronze and ceramic drinking sets and even four-wheeled wagons, and graves with Graeco-Illyrian helmets and silver jewellery from Pečka Banja in Kosovo.

Groups left the central European area known to have been inhabited by Celtic-speaking tribes in the earlier Iron Age and migrated, virtually simultaneously, in several directions, including into northern Italy and towards the Balkans. They brought obvious changes of material culture, and probably of language, to south-eastern Europe, particularly to the west and central Balkans. Towards the end of the 4th century BC, they reached the Danubian Iron Gates, in present-day Bulgaria, as well as Transylvania, in present-day Romania.

For the earliest elements of Celtic culture in the hinterlands of the eastern Adriatic coast, we must go back to the late 5th and early 4th centuries, when the earliest imported finds from Celtic-speaking west central Europe begin to appear in areas south of the Alpine area and in the western Balkans.

The interaction between the Hellenic world and Celtic migratory war bands and mercenaries are well described in historic sources. According to the Ptolemaic history of Alexander the Great, Alexander hosted a Celtic delegation from the Adriatic region during his expedition against the Triballi in 335 BC. It seems that, in the course of time, after having established diplomatic relations with Macedonia, the Celts resumed their march of conquest into the Balkans.

The so-called Danubian Celts appeared in Greece in larger numbers just after Alexander's death. In about 310 BC, Casandrus defeated them in the area around Haemus (Mount Balkan). After defeating the Macedonian king Ptolemy Keraunos, the Celtic army, led by Brennos of the Prausi, crossed Thessaly and was heading for Delphi. Rumours about the treasures kept in the temple at Delphi triggered an invasion of some 30,000 Celtic warriors and their families in 279 BC. They crossed the famous strategic pass at Thermopylae and defeated the Greeks at Marathon, the very spot where the Greeks had defeated the Persians. They reached Delphi that winter, but the Celtic advance was hampered by snowstorms. The Greeks then attacked and heavily defeated the Celts, the wounded Brennos committed suicide, and the remaining survivors of his host retreated northwards.

Further details about the winter of 279–278 BC are unknown, but, according to Strabo, some of the Celts, the Tectosages for example, collected a large amount of booty from Greece and subsequently settled around Tolosa (modern Toulouse, south-west France). Other tribes, the Tolistobogii and Trocmi and some of the Tectosages, who had already abandoned Brennos in Macedonia, crossed the Dardanelles and penetrated further into Asia Minor as the Galatae (see galatia).

In Vojvodina, a grave at Čurug with a Duchcov-type fibula and the golden torcs from Gajič reflect Celtic penetration further eastward into the southern Pannonian sector as well. The chariot from the grave at Mezek, near the Turkish border in Bulgaria, with its typical La Tène ornaments, may reflect a casualty of the triumph of Antigonus Gonatus over Celtic hordes in the canyons of Lysimacheia in Thessaly (northern Greece) *c.* 277–276 BC.

The earliest Celtic grave finds from the Balkans belong to the period after 300 BC, and it is impossible to speak of a large density of Celtic settlement before the first half of the 3rd century BC. The Celtic tribes migrated into the hinterlands of the eastern Adriatic coast in two major distinct waves. The Taurisci settled in hilly eastern Slovenia and north-eastern Croatia, while the greater and lesser branches of the Scordisci settled on the southern Pannonian plains between the Sava and the Danube. At the confluence of these two rivers they founded their centre, ancient Singidūnon (now Belgrade, Serbia). Other Celtic groups continued northward, and eventually mingled with Celts who had previously settled in Transylvania in present-day Romania.

On their march to the Balkans and Greece, the Celtic tribes did not occupy the Pontic coast north of the Black Sea, with its Greek cities, or the territories towards Mount Balkan. Their influence in Thrace (roughly modern Bulgaria and European Turkey) is very modest, with only occasional samples of armour and jewellery, but they established a kingdom known as Tylis (alternatively Tyle) on the Thracian coast of the Black Sea. This kingdom continued until the later 3rd century BC, when its last ruler, Kauaros (cf. Welsh *cawr* 'giant'), minted coins and imposed tribute on the nearby Greek city of Byzantion.

An association with the Celtic invasions of Macedonia and Greece can be seen in some graves in Serbia,

The Balkans in the last centuries BC: Celtic groups are shown in bold capitals.

at Beograd-Karaburma and Kostolac-Pečine, which contain Greek pottery and bronze vessels. Further indication of this period of contact is the production of Celtic two-handled ceramic vessels of the type known as *kantharoi*, typical for the Scordisci, whose forms copy Greek ceramics. The grave of a warrior from Ciumeşti, Romania, which contains a helmet decorated with a huge bird, can certainly be connected with these early Celts. Helmets with reinforced crests are typical for these eastern Celts; they can be seen spreading from a western margin on Taurisci territory at Mihovo, used by the Scordisci at Batina, throughout Transylvania (Apahida, Ciumeşti), to Pergamon in Asia Minor, where we find them depicted on the famous frieze showing the victory of the local Hellenistic kingdom over the Galatians. The Ciumeşti helmet and later numerous artefacts made partly or wholly of silver (fibulae, belt plates) clearly demonstrate the interaction between Thracian and Dacian schools of ornamental metalwork, indigenous to the Balkans, within the Celtic La Tène tradition. One feature of this Thracian-influenced Celtic style was the production of oversize ornamental objects, particularly apparent in some well-known pieces from western Europe, for example, at Trichtingen, where a silver torc weighing more than six kilos was found, and probably at Gundestrup, Denmark, where the famous giant silver cauldron, about 80 cm in diameter, decorated with motives and cult scenes paralleled elsewhere in Celtic contexts, was found (see cauldrons; gundestrup cauldron).

With the increasing influence of Rome in the 2nd

century BC, the significance of Celts on the extreme eastern edge of Europe began to decrease rapidly. Their independence was slowly lost in a series of battles with the Roman legions, and one of the last of these Celtic tribes to submit to the Roman yoke were the Scordisci.

ballads and narrative songs in the Celtic countries

§1. INTRODUCTION

In folkloristics and cultural anthropology, 'ballad' is simply any narrative song. Thus, 'Today, the various types of Western European ballads are generically defined as narrative folksongs', according to Coffin (*Ballad Image*). The term is often avoided because of its many and conflicting popular usages—'love song', whether narrative or not, in popular music; printed music and lyrics sold and distributed on broadsheets; romantic instrumental pieces. Folklorists and ethnomusicologists have not yet fully agreed upon a standard set of terms and definitions, and the use or avoidance of the term tends to vary by sub-field.

In Celtic studies, there are some additional complications with the term 'ballad'. The narrative folk-songs of the English-speaking world have been extensively studied as an international phenomenon (following the pioneering work of Child), in which characteristic metrical and musical forms, themes, and even multiforms of songs recur internationally, and these songs are often termed ballads. Ballads of this type have penetrated the CELTIC COUNTRIES and CELTIC LANGUAGES as influences, and even versions of specific songs. It is therefore sometimes useful to avoid the term ballad when referring to native genres of narrative songs in the Celtic countries which cannot be traced back to the ballad traditions of England and the Scottish LOWLANDS. Terminology thus varies somewhat within Celtic studies and in the study of song traditions within the individual Celtic countries.

§2. IRELAND

'Ballad' as a term originated in the south of France, where it meant a song performed by a soloist and chorus, to which people danced. Later, in Anglophone culture, it was redefined to refer to a narrative solo song, by turns tragic, adventurous and comic, a genre that flourished from the 14th century. It appears, however, that the term was unknown in Ireland (ÉIRE) until the English and Scottish plantations of the 17th century. Consequently, most ballads found in Ireland and fitting this close historical definition are of English or British origin.

Fenian lays. It has been speculated that such ballads did not flourish in Irish because of the existence of another kind of narrative poetry—FIANNAÍOCHT, telling of various exploits of Fionn mac Cumhaill (Middle Irish FINN MAC CUMAILL) and his band of warriors, the Fianna (singular FIAN 'war band'). These Fenian lays make up a genre of narrative poetry found in the three Modern GAELIC languages (IRISH, SCOTTISH GAELIC, and MANX). The early development of these *laoithe* (lays), sometimes translated as 'ballads', is best attested in Ireland, where they began to be composed around the 12th century and developed in various ways until the 18th century. Prosodically, they are composed in *óglachas*, relaxed forms of the strict syllabic metres, such as *rannaigheacht* and *deibhidhe*, favoured by the professional poets of the Middle Ages (see METRICS), and heroically recount various episodes of the lives of this mythical band of professional soldiers. They describe various hunting exploits, enchantments, encounters with fantastic monsters from the OTHERWORLD and invaders of Ireland, and are closely related to the genre of prose tales, which were the most popular entertainment in the Gaelic world in this period. Occasionally, they also dejectedly compare the joys of a vigorous former youth with the infirmities and indignities of present old age. Their framing as dialogues between survivors of the

Fianna, Oisín (the son of Fionn) and Caoilte, and St Patrick gives them a nostalgic note, evoking a glorious, heroic, pagan golden age, in a lacklustre and mundane Christian present.

Lays are also extant from the Isle of Man (Ellan Vannin) and have popularly survived most strongly in Gaelic Scotland (Alba), where some 30 examples have been recorded from oral tradition as sung pieces. Musical examples have also been recorded from Ireland, although, later, recitation seems to have predominated. It was upon such texts that James Macpherson based his 'epics', creating a literary sensation across Europe in the mid-18th century. A comprehensive manuscript collection of these lays, *Duanaire Finn*, was compiled in Ostend in the early 17th century.

Religious song is another Irish genre which replicates many features of the European ballad. *Caoineadh na Maighdine/na Páise/na dTrí Muire* (The lament of the Virgin/the Passion/the three Marys) combines the ballad characteristics of dialogue with unnamed speakers and third person narrative. This song was so popular that, unusually for a text in Irish, it was often published on broadsheets.

Child ballads. Only some four older songs in the Irish language have been explicitly linked to the canon of ballads established by the 19th-century Anglo-American folklorist and collector, Francis J. Child. Although other songs have clearly been influenced by the ballad, it is difficult to say in which ways this influence has worked. The four ballads that can recognizably be related to English antecedents are *Cá rabhais ar feadh an lae uaim* (Where have you been all day from me? corresponding to 'Lord Randal', Child 12), *Peigín is Peadar* (Peggy and Peter: 'Our Goodman', Child 274), *Hymn Dhomhnach Cásca* (The hymn of Easter Sunday: 'The Cherry Tree Carol', Child 54), and *A Bhean Udaí Thall* (O woman yonder: 'The Twa Sisters', Child 10). Even these have tended to absorb a seemingly Gaelic preference for narrative to take prose form and, in every case, they are accompanied by explanatory tales. Emphasis on a dialogue format is retained in the Irish versions, and it may be this feature that led to their adoption by Gaelic singers. Other songs which recall ballads are *Snaidhm an Ghrá* (The love knot), with echoes of the well-known 'Barbara Allen' (Child 84), *Táim Sínte ar do Thuama* (I am stretched on your grave), also called *Ceaití an Chúil Chraobhaigh* (Katy of the branching tresses), with similarities to 'The Unquiet Grave' (Child 78) and *Máire Ní Mhaoileoin*, which has been linked to the French *La Meurte de la Mie*. The motif of separated lovers who recognize each other by a ring they had exchanged is also common, especially in *An Droighneán Donn* (The brown thorn bush).

Broadsheet ballads comprise a different genre from the Old or Child Ballads. Originating in Britain, they were adopted enthusiastically by the Irish in the 19th century, who made them their own. They show a strong influence of the indigenous tradition of Gaelic song, particularly in the melodies and rhyming patterns.

Gaelic songs composed in the late 19th and early 20th centuries may bear the influence of the broadside traditions, in metres and narrative approach. Some ballads were, in fact, translated into Irish in this period. Examples include *A Athair Dhil* (Dear father), a translation of the nationalist ballad *Skibbereen*, *Ins an Ghlóir go raibh lóistín ag Slóite na bhFiann* (Glory o, glory o, to the bold Fenian men), *An Drúcht Gheal Cheo* (The foggy dew), and *Gleann Súilí* (Glenswilly), all stemming from the Donegal region in the north-west.

§3. SCOTTISH GAELIC

Scottish Gaelic heroic songs or 'ballads' developed from the classical bardic tradition of the Gaelic world. As a narrative verse genre, these heroic songs enjoyed great popularity in Gaelic Scotland (Alba), and many texts entered the vernacular oral environment, and were transmitted through it. The dominant theme of the ballads is heroic achievement. The protagonists belong mostly to the context of Fionn (Finn mac Cumaill; see also fiannaíocht), and many texts are put in the mouth of his son Oisean (Irish Oisín); a number of songs are set in a frame which consists of a dialogue

between Oisean, the lone survivor of Fionn's companions, and St Patrick, reflecting the setting of the Irish Acallam na Senórach. Oisean tells of past glories and heroic deeds, and sometimes engages in theological dispute with St Patrick, e.g. in *Innis dhuinn, a Phàdraig* (Tell us, O Patrick). A few texts deal with material relating to the Ulster Cycle and have Cú Chulainn as their protagonist, e.g. *Bàs Chonlaoich* (The death of Connla), which tells of the death of Cú Chulainn's son at the hands of his father; the song is very likely of Scottish composition, and forms an apologue to *Thánaig adhbhar mo thúirse* (There came the cause of my weariness) by Giolla Choluim mac an Ollaimh, a lament for the murder of Angus Òg MacDonald in 1490, in which his father, John II Lord of the Isles (see lordship of the isles), appears to have been implicated (Watson, *Scottish Verse from the Book of the Dean of Lismore* 277–87). A few ballads have an Arthurian connection, e.g. the adventure ballad *Am Bròn Binn* (The sweet sadness; see Gowans, *Am Bròn Binn* 1–5) and *The Girl with the Mantle*, in which the chastity of the wives of several heroes is tested, with embarrassing consequences; this ballad has undergone a change from the Arthurian environment to the context of Fionn (Gillies, CMCS 2.64–6).

Warrior elegies take a prominent place in the tradition. Three different songs deal with the death of Fionn's grandson, Oscar: *Mór a-nochd mo chumha féin* (Great, tonight, my own sorrow), *Innis dhuinn, a Fhearghuis* (Tell us, O Fergus), and a song only evidenced in Scotland and beginning variously with the lines *Chan abair mi mo thriath re m'cheòl* (In my song, I mentioned not my lord), *An cuala sibhse turus Finn* (Did you hear of Finn's journey?), or *Muladach mi an déidh Chaoilte* (I am sorrowful after Caoilte's passing); the setting for them is the continued enmity of Fionn with successive kings of Tara (Teamhair), in this case Cairbre Lifeachair. The death of Fionn's nephew Diarmaid is narrated in *Laoidh Dhiarmaid* (The lay of Diarmaid), a song with strong Scottish affinities that is localized in various districts in the Highlands (Meek, *Celtica* 21.343–8). *Laoidh Fhraoich* (The lay of Fraoch), a text with loose Ulster Cycle connections, tells of the demise of Fraoch in a fight with a lake-dwelling monster, following the machinations of queen Meadhbh (Medb) of Connacht; no Irish versions of this text survive although this ballad, too, is localized widely in the Highlands and Islands (Meek, CMCS 7.10–15). The repulsion of would-be invaders, often described as Norsemen, is another favourite subject, and is dealt with in *Cath mac Rìgh na Sorcha* (The battle of mac Rìgh na Sorcha) and its companion piece *An Ionmhuinn* (The beloved), *Dan an Deirg* (The poem of Deirg), *Mànus*, and *Teanntachd Mhór na Féinne* (The great distress of the Fianna). Some songs tell of expeditions by Fionn and his companions into enemy territory, e.g. *Duan na Ceàrdaich* (The song of the smithy). The Norse element in the Fionn tradition is anachronistic, considering that his supposed *floruit* was in the 3rd century AD (Christiansen, *Vikings and the Viking Wars in Irish and Gaelic Tradition* 77–8); these texts, however, are well-constructed narratives and enjoyed great popularity for that reason. Another common theme is the enmity between Fionn's comrades and a rival warrior group led by Goll mac Morna; this forms the backdrop to *Bàs Chairill* (The death of Cairill) and *Bàs Gharaidh* (The death of Garadh).

The narrative song tradition is shared with Ireland (Éire), although, once the Gaelic texts moved out of the original language of Classical Common Gaelic into the vernacular, the development of texts diverges. Changes that take place in the oral environment of Scottish Gaelic also affect the metres. Most songs of which versions from the bardic period are extant are composed in *óglachas*, loose forms of the strict syllabic metres, and the requirements of metre become attenuated in the processes of vernacularization and oral transmission. The number of syllables demanded by the original metre becomes variable, and poetic devices such as alliteration and assonance may disappear, although rhyming words generally possess a high degree of stability. The most common metres are *deibhidhe* and the *rannaigheacht* types, and other metres, such as *ae fhreisligbe* and *rionnaird*, make an occasional appearance.

The earliest extant texts of Scottish provenance are found in the Book of the Dean of Lismore; many of the texts there are paralleled by versions found in later tradition. The 18th century saw a flurry of collecting activity in the wake of James Macpherson's publication of his 'Ossian'. This included both the recording of texts from reciters and the collecting of old manuscripts. The collecting concentrated mainly on the Perthshire–Argyll area. Prominent collectors include the Revd Donald MacNicol and the Revd

James McLagan, whose collections have only been partially published. Some of McLagan's material filtered into the Gillies collection, an anthology of Gaelic poetry covering a wide range of highly regarded genres (Gillies, *Sean Dain, agus Orain Ghaidhealach/A Collection of Ancient and Modern Gaelic Poems and Songs*). Some collecting was conducted under the auspices of the Highland Society of Scotland in connection with their investigation into the authenticity of Macpherson's works (MacKenzie, *Report ... Appointed to Inquire into the Nature and Authenticity of the Poems of Ossian*, Appendix), e.g. the taking down of the repertoire of Archibald Fletcher (NLS Adv. MS 73.1.24). Occasionally, genuine ballad material was adapted to resemble Macpherson's style, for instance, by the Revd John Smith, who published his compositions under the title of *Sean-Dàna, le Oisian, Orran, Ullan, etc.* ... or by Duncan Kennedy, whose collection mixes texts from genuine oral tradition with his own identifiable adaptations and additions (NLS Adv. MS 72.3.9 and 72.3.10). Some texts of this kind have also found their way into the Gillies collection and the M'Callum collection (M'Callum, *Original Collection of the Poems of Ossian*).

In the 19th century, the focus of collecting switches to the Hebrides, and aims at recording texts that are beginning to lose ground in the oral tradition. The most prolific collectors are John Francis CAMPBELL, who published both manuscript material and texts collected from oral tradition in *Leabhar na Féinne* (The book of the Fianna), and Alexander Carmichael (see CARMINA GADELICA), most of whose collected ballad material in the Carmichael Watson Collection remains unpublished. Both collectors provide valuable information about the reciters who provided texts. Some narrative songs survived into 20th-century tradition, both in the islands and on the mainland, although some were preserved as texts without tunes (MacInnes, *Heroic Process* 104–8). The narrative songs were a genre that enjoyed both prestige and popularity among audiences and reciters, and this is reflected in the extent and quality of the surviving textual evidence.

§4. WELSH

Owing to the nature of the Welsh poetic tradition (see WELSH POETRY), with its emphasis on praise in the strict metres (see AWDL, CYWYDD, ENGLYN), and the important part played by the professional BARDIC ORDER, any poetry composed outside the courtly poetical tradition in medieval Wales (CYMRU) would probably have been discounted, and thus gone unrecorded by those learned poets with the means to preserve it. It is not until the 16th century that the first Welsh ballads appear. However, the suddenness with which the 'free-metre poetry', of which they are part, makes its appearance in contemporary manuscripts suggests that they represent the last generation of a long line of such orally transmitted narrative poems, now lost. The earliest example to survive, written in 1586, is a ballad that rejoices in the failure of the perpetrators of the Babington Plot to assassinate Queen Elizabeth I (see TUDUR). Soon after, other ballads celebrate the translation of the BIBLE into Welsh and the defeat of the Spanish Armada, both in 1588, while others severely condemn the anti-parliamentary Gunpowder Plot of 1605.

Although printed ballads in England can be traced to the early 16th century, all the Welsh examples mentioned above survive in manuscript alone. Because of the sparse and scattered nature of the Welsh population, their general poverty and illiteracy, and the restrictions on printing outside London, the advent of the printed ballad in Wales was delayed by almost two centuries. However, the gradual growth of printing

presses in Shrewsbury (Welsh Amwythig), near the Welsh border, opened the floodgates for the Welsh ballad-monger. The first press was set up there in 1695 by Thomas Jones (1648–1713), a native of Corwen in Merioneth (Meirionnydd), who had acquired his skills in London. Soon, printing presses would spring up in Wales itself, and, aided by the growth of literacy, greatly stimulated by the CIRCULATING SCHOOLS of the Revd Griffith Jones, would set out to satisfy the rapidly expanding demand for cheap and attractive reading material (see PRINTING).

Well in excess of 700 18th-century ballads have survived, though, due to their ephemeral nature, the number of those lost may be considerably higher. They were printed in pamphlet form, often of eight pages containing as many as three or four separate poems. The pages would be stitched together, and the title page would usually indicate the titles of the individual ballads, and the air to which they could be sung. It would also bear the printer's imprint and the publisher's name—sometimes the author, but, more usually, the seller or distributor. Decorative devices were the exception rather than the rule, and, although crudely executed and bearing little or no relevance to the ballad they sought to illustrate, they can sometimes help to identify a printer who has neglected to include his imprint. As to Welsh broadside ballads, only a few have survived, possibly because their large size made them more prone to destruction when carried around in a pocket or pinned to a wall.

The first hawkers of printed ballads were surely the authors themselves. By having a product to sell, they would no longer be wholly dependent on the few coins thrown at their feet as they sang in the market place, in the fairground, or wherever a group of people would assemble. Ballads were so avidly purchased that it was soon realized that a lucrative market existed for them, whether or not they were actually sung, and the printed ballad soon became a part of the pedlar's pack, thus creating a secondary group of distributors. The subject matter of the ballads encompassed all the circumstances and experiences of life. The vast majority were concerned with religious topics, often urging their listeners or readers to adopt a higher morality and to decry swearing, blaspheming, drunkenness, Sabbath-breaking, and miserliness towards the poor. All aspects of love and marriage are exhaustively covered. Current events, particularly disasters such as wars, plagues, and earthquakes, were recorded in verse, as were sensational events like murders and loss of life in accidents or shipwrecks.

The pattern of ballad production and distribution remained essentially the same in the 19th century, although all aspects of the activity were on a larger scale, and industrialized south Wales became an increasingly important market. Examples of well over 1,700 19th-century Welsh ballads have survived, but, as in the case of their 18th-century forerunners, these may well represent the tip of the iceberg only. At least 359 printers appended their imprint to ballads, and the hundreds of ballads which lack an imprint may conceal the identity of many more.

The basic subject matter of 19th-century ballads continued those of the preceding century, but their numerous authors constantly embraced new subjects and topics that reflected contemporary society. Industrial developments and innovations gave rise to ballads which rejoice in the coming of the railway, while one of the darker sides of industrialization was represented by the large body of ballads which recorded the frequent and heavy loss of life in mining and other industrial accidents. From about 1870 onwards, the history of the street ballad and broadside in Wales was one of steady decline. By that time, ballads and their sellers received the censure of the leaders of the Nonconformist Protestant denominations, by then dominant in Welsh religious and cultural life (see CHRISTIANITY), and the contempt of the fashionable poets of the day, who associated themselves with the increasingly popular and respectable EISTEDDFOD. New and more 'refined' forms of popular entertainments such as the public concert and penny readings (both of which had strong temperance overtones) gained ground, while the ballad-monger's traditional outlet, the fair, was increasingly frowned upon. The Welsh-language newspaper press, which developed rapidly from the 1850s onwards, dealt ballads a mortal blow by competing as a popular source for current events. Although some ballad-pamphlets were still being printed at the beginning of the 20th century, they represent the last vestiges of the tradition.

§5. BRETON

The Breton song tradition is one of the richest and most fascinating aspects of Breton culture. It can be roughly divided into two groups: the lyrical *sôn* (pl. *sonioù*) and the narrative *gwerz* (pl. *gwerzioù*) or ballad; it is the strength and diversity of this latter type that marks Breton folk-song as distinctively different from French. Thousands of songs have been recorded since serious collection began in the early decades of the 19th century, and the stories they recount offer unparalleled opportunities to explore the culture and history of a language-community whose experiences are so inadequately recorded in written form. This is because the *gwerz* tradition is itself profoundly concerned with remembering the past: a large proportion of the songs are based on local events, usually tragic, such as shipwrecks or murders, many of which are traceable back two or three hundred years. Studies of individual ballads have shown how surprising details may be preserved over a considerable length of time, and, more importantly, how closely the songs are bound up with real places and landmarks in the Breton landscape. The *gwerz* of a shipwreck at Penmarc'h recalls the route of a fated ship with pitiful accuracy; the ballad of *Iannik Kokard* seems to preserve the memory of a former leper colony. The *gwerzioù* can thus offer a very useful source for the historian of Breton culture. Like all creative works, however, especially those in an oral tradition, songs adapt historical fact to the conventions of genre. Perhaps the most stimulating aspect of research into the *gwerziou* lies in exploring the tension between what is preserved (names, places, the bare narrative) and what changes (portrayal of character, motives). There are no hard and fast rules, of course, and songs may be relocated from one region to another, or adapted from international motifs, but it is not misleading to see a large part of the *gwerz* tradition as a form of local history, a way of bearing witness.

There are also other kinds of narrative, which draw on very different sources. Saints' lives offer stories of the miraculous (again, always rooted in a specific locality, see HAGIOGRAPHY), and international ballad-types appear in Breton settings: the *gwerz* of *An Aotrou Nann* (Lord Nann) is the best known of these, being a version (some have argued, the source) of the fairy-mistress ballad familiar in Scandanavian traditions as *Elveskud* or *Sir Olaf*. A small number of songs have notably Celtic themes: the *gwerz* of *Santes Enori* (Saint Enori), which tells the story of a princess who saves her father by sacrificing her breast to a snake, contains elements of a narrative complex identifiable in a Latin saint's life, a Welsh triad (see TRIADS), a Scottish Gaelic folk tale (see FOLK TALES) and a medieval French romance. Another extraordinary piece, collected from a beggar-woman in the early 19th century, tells a romance-like tale about the capture of Merlin (see MYRDDIN). One of the best studied and most evocative of all Breton songs is the *gwerz* of *Iannik Skolan*, which recounts, in powerful dialogue, a meeting between a mother and her dead penitent son. This ballad, first collected in the 19th century and still sung widely in the 20th century, is the closest known analogue to an enigmatic medieval Welsh poem preserved in the 13th-century manuscript known as LLYFR DU CAERFYRDDIN ('The Black Book of Carmarthen'). The religious element is very strong in Breton ballads, and the supernatural appears, not in the shape of the elves and dragons of Anglo-Scandinavian balladry, but through saints and portents. The tradition deals in a metaphoric language steeped in the visual imagery and symbolic vocabulary of popular Catholicism (see CHRISTIANITY).

The *gwerzioù* are generally composed in rhymed couplets (occasionally triplets), and have the distinctively pared-down style common to many oral ballad traditions. Dialogue is fundamental, description and authorial comment minimal; in this they contrast with the BRETON BROADSIDES, which were also very popular, whose sensational 'news' style is rather more verbose. The language of the *gwerzioù* is vivid and compact:

Nin a vele merc'hed Goaien
e tont en aod vras gant licheriou moan

Kant intanvez deuz bae Goaien
a gasas ganto kant licher venn

Int a c'houlas an eil d'eben:
—Na peus ket gwelet korf ma den?

We saw the women of Audierne
coming to the great beach with fine sheets:

A hundred widows from Audierne Bay
bearing a hundred white sheets.

They asked each other:
Have you not seen my husband's body?

Linguistically, the songs tend to reflect the dialect and locality of the singers, although the stylized diction naturally contains a high proportion of archaisms.

Folk music in general has played a crucial part in the Breton cultural revivals of the 19th and 20th centuries (see BRETON MUSIC), and the songs remain a key marker of Breton identity. They continue to be sung traditionally, and are also adapted to new contexts and technologies, with performers such as Yann-Fanch Kemener forming a dynamic link between old and new. Collection remains important, and the Dastum Centre in Rennes (ROAZHON) houses a vast audio archive of songs and some useful catalogues. Until very recently, however, there was relatively little academic study of the Breton song tradition in or outside of Brittany (BREIZH). This is largely because the subject was clouded by the controversy over the authenticity of Hersart de LA VILLEMARQUÉ's BARZAZ-BREIZ (1839), which purported to be a collection of the 'popular songs of the people'. For more than a century, interest in the 'real' tradition was restricted to its potential use as ammunition in arguments either defending or demolishing La Villemarqué's methodology. Not until Donatien Laurent's rediscovery and partial publication of La Villemarqué's field notebooks in 1989 was it possible to get a more balanced view of how the raw materials of the tradition had been transformed. Laurent's work, which includes many articles on other aspects of the *gwerz* tradition, has been crucial in reviving academic interest in the songs themselves.

Mary-Ann Constantine

Balor is a mythological figure found in many early Irish sources. A key early and well-developed account is his battlefield confrontation with his grandson LUG and the TUATH DÉ in the 9th- or 10th-century CATH MAIGE TUIRED ('The [Second] Battle of Mag Tuired'), where he is a leader of the FOMOIRI (see MYTHOLOGICAL CYCLE). In the climax of this tale, Balor is described as having an eye whose lid is so heavy that it takes four men to lift it. Its basilisk stare paralyses the soldiers of the Tuath Dé so that they may be easily killed, but when Lug sends a slingshot stone through the eye, its fatal power is turned upon the Fomoiri. Balor is said to have acquired this evil-eye attribute when he witnessed the magic of his father's DRUIDS. In modern narratives, he becomes less a warrior-leader and more a folk-tale villain with monstrous characteristics. Balor has been interpreted as a solar deity, or as symbolizing the strife between the old year and the new. Associated in *Cath Maige Tuired* with the Hebrides (Innse Gall) and in modern folk-tales with Tory Island (Curtin, *Hero-tales of Ireland* 296–304), Balor's grotesque aspects suggest the chthonic (earth-spirit) power characteristic of mythological earlier inhabitants, beings associated with the sea, and shamanic figures. They also echo the single eye of CÚ CHULAINN in battle frenzy, and Lug's chanting a spell with one eye shut in *Cath Maige Tuired* itself. The theme of the malevolent giant with an eyelid so heavy that servants must lift it recurs in the character of Ysbaddaden in the Welsh ARTHURIAN tale, CULHWCH AC OLWEN.

Banba, in Irish LEGENDARY HISTORY, is one of three goddesses whose names signify Ireland. The medieval Irish BANSHENCHAS (The lore of women) and LEBAR GABÁLA ÉRENN ('The Book of Invasions') group Banba with Fótla and ÉRIU, calling them daughters of Fiachra or Ernmas. The same compilations refer to

Banba as the consort of Etar Mac Cuill, 'son of hazel' (alternatively, son of Goll 'one-eyed'), king of the Tuath Dé and grandson of the Dagda. Geoffrey Keating (Seathrún Céitinn), in his *Foras Feasa ar Éirinn* (1.141), recounting a story from the lost Old Irish manuscript Cín Dromma Snechtai, says that Banba and her two sisters, daughters of Cain, came to the island with fifty women and three men, all of whom died of a plague. *Ban* 'woman' plus *ba* 'death' or *ba(a)* 'advantage, benefit' or *ba* 'cow' offer possible etymologies for the name (compare Bóand 'the river Boyne', literally 'white as a cow'). Another possibility is a Brythonic place-name corresponding to Welsh *Banfa* < Celtic **Banno-magos* 'Plain of summits', borrowed into Irish and then transferred from some conspicuous landmark to the island as a whole, and one of its female personifications.

Bangor (**Gwynedd, Wales**) is a small, historical cathedral city, and also the home of a university, on the mainland of north-west Wales (Cymru). In the 2001 Census, the ward of Menai (Bangor) included approximately 2560 inhabitants, of whom 27% could speak Welsh, making it one of the least heavily Welsh-speaking areas of the district of Arfon or Gwynedd as a whole, contrasting, for example, with nearby Caernarfon, which had over 80% Welsh speakers. Both the presence of the university and older historical factors contribute to the present-day cosmopolitan and relatively Anglophone character of this Welsh city.

Bangor was originally a monastic foundation associated with the 6th-century St Deiniol, about whom little is known. There is no certain history of the church on this site until the 11th century, when in 1073 it was destroyed in a Viking raid. Archaeological investigation has revealed a stone-built cathedral, with apsidal presbytery and transepts, and an aisle-less nave. This building can be ascribed to Bishop David (1120–39)—only the second bishop in the succession at Bangor whose identity can be established with any certainty—and with the patronage and support of Gruffudd ap Cynan, prince of Gwynedd, who was buried within it by the high altar.

In 1210 Bangor was burnt by the forces of King John of England, and the cathedral may well have been severely damaged or destroyed at this date. The rebuilding, which included the quire, presbytery, and transepts, is associated with bishops Anian I (1267–1307) and Anian II (1309–28). It seems likely that the original crossing-tower was not replaced, and work on the nave may not have been completed until after 1386. The cathedral was again semi-ruinous during most of the 15th century, but reconstruction was carried out under Dean Richard Kyffin (*c.* 1480–1502) and by Bishop Thomas Skeffington (1509–33), who was responsible for the construction of the western bell tower. Extensive repairs were again undertaken in the early 19th century, and between 1868 and 1873 Sir George Gilbert Scott was responsible for a radical reconstruction, which included the rebuilding of the transepts and of the long-forgotten tower at the crossing. The cathedral's present appearance is largely the result of Scott's reconstruction.

Never a major pilgrimage church, nonetheless Bangor Cathedral possessed among its relics the reputed ear of Malchus. Today, its principal treasures include the Pontifical associated with either Bishop Anian I or Anian II, and the late 15th-century seated wooden statue of a Christ of Pity, the 'Mostyn Christ', which may have been housed originally in Maenan Abbey.

The university was founded as the University College of North Wales in 1884, and is now known as the University of Wales Bangor (Prifysgol Cymru Bangor), with approximately 8,000 students. It was established as a direct result of a campaign for better higher education in Wales, and the voluntary contributions made by local quarrymen from their weekly wages was an important element in the fundraising. Eminent Welsh and Celtic scholars, among them Sir John Morris-Jones, Sir Ifor Williams, Sir Thomas Parry, J. E. Caerwyn Williams, Bedwyr Lewis Jones, and Gwyn Thomas, have held the Chair of the Welsh Department at the university. It is an important centre for Celtic studies today, and the home of the Welsh place-name archive begun by Melville Richards.

During the heyday of the slate industry in Snowdonia (ERYRI) in the 19th century, Bangor was a major seaport for the export of roofing slate to all parts of the world.

The name *Bangor* occurs as Old Welsh *Bancor*. *Bangor Is-coed* in north-east Wales, *Bangor Teifi* in the south-west, *Bangor* (BEANN CHAR) in County Down, Ireland (Contae an Dúin, ÉIRE), and Bangor in Arfon all have a compound Celtic name, made up of the elements *ban* (= Irish *beann*) 'a high point' and *côr*, signifying a fence of plaited wickerwork. Like Bangor in Arfon, BANGOR IS-COED and Bangor (Ireland) were very important monastic centres from the 6th century (see MONASTICISM). The name, therefore, seems to refer to a distinctive settlement type, characteristic of major early monastic centres in the CELTIC COUNTRIES.

John Morgan-Guy

Bangor Is-coed (**Bangor-on-Dee**), in the old CANTREF of Maelor in north-east Wales (CYMRU), was the site of an important monastery (see CHRISTIANITY; MONASTICISM). According to BEDA, writing in his *Historia Ecclesiastica* which was completed in AD 731, with reference to events of 603–*c.* 615, this Bangor was the most illustrious of the monasteries of the BRITONS ('Brettonum . . . nobilissimum monasterium' *Historia Ecclesiastica* 2.2). He writes in connection with the battle of Chester (CAER) *c.* 615:

> . . . there was said to be so great a number of monks [at Bangor Is-coed] that, when it was divided into seven parts with superiors over each, no division had less than 300 men, all of whom were accustomed to live by the labour of their hands.

As Wendy Davies has suggested (*Wales in the Early Middle Ages* 150), the large and even numbers here are probably literary, rather than factual; therefore, it is interesting to see such figurative details in a source as early and hard-headed as Beda. A similar attitude and formal elaboration based on multiples of 100 and poetic numbers are found in the Welsh TRIADS, suggesting that Beda's account of the monastery was based on a BRYTHONIC source with the same mind-set; thus, *Trioedd Ynys Prydein* no. 90:

> Three Perpetual Harmonies of the Island of Britain: One was at Ynys Afallach [AVALON/ GLASTONBURY], and the second at Caer Garadawg, and the third at Bangor Fawr in Is-coed in Maelor. In each of these three places, there were 2,400 religious men; and of these 100 in turn continued each hour of the twenty-four hours of the day and night in prayer and service to God, ceaselessly and without rest for ever.

There are two pivotal events in the *Historia Ecclesiastica* to which Bangor Is-Coed is central: first, the unsuccessful conclave of AUGUSTINE of Canterbury with the leaders of the Brythonic church led by Dunawd (in Beda's spelling *Dinoot*), bishop of Bangor *c.* 603, and second, the battle of Chester, at which 1200 monks from Bangor were massacred by the pagan ÆTHELFRITH of BRYNAICH as they prayed for victory for the Welsh forces (see Chadwick, *Celt and Saxon* 167–85). These two accounts seem to be based on different sources, as shown by the spelling of the Brythonic proper names. *Dinoot* for *Dunawd* is neither a Brythonic nor Latin spelling—which would have been **Dunot* or *Donatus*, respectively—but must rather be based on a transcription of how Augustine's party heard the name. On the other hand, in connection with the battle of Chester, Beda's spellings are *Car-Legion* for Chester, *Bancor*, and *Brocmail* for one of the military leaders of the Britons. These three spellings are highly significant for the history of vernacular literacy in WELSH and the other CELTIC LANGUAGES. They confirm that Beda was using a Brythonic Latin source and that the author or authors of the source were using Neo-Brythonic, rather than ROMANO-BRITISH, spelling, and that they were doing so at some point between the date of the battle *c.* 615 and 731, thus at least 90 years, and probably about 200 years before the earliest surviving manuscripts containing words and names in Old Welsh, Old BRETON, or Old CORNISH.

The name *Bangor* occurs also for a monastery of great historical importance in northern Ireland

(Beann Char), and for the important church and city of Bangor (Gwynedd); for the etymology, see the latter. *Is-coed* means 'below the wood' and is a common type of place-name extension in which a recurring name is specified with reference to a prominent landscape feature.

Bannockburn, battle of, was the high point of the Scottish resistance to the English Crown at the end of the 13th and the beginning of the 14th century. It decided the fate of medieval Scotland (Alba) and its king, Robert I, i.e. Robert de Bruce.

The struggle for the Scottish Crown following the death of King Alexander III in 1286 and his only surviving heir Margaret, 'the maid of Norway', in 1290, was welcomed by Edward I of England as an opportunity to bring Scotland under English rule. The Bruces had a strong claim to the Scottish throne, but acquiesced when Edward I declared John de Baliol the rightful contender, and de Baliol paid homage to Edward I, thus recognizing his overlordship in 1292. However, after the defeat and death of William Wallace in 1305, Robert de Bruce organized a national military campaign, the climax and turning point of which came with the battle of Bannockburn.

On 23 and 24 June 1314, not more than 7000 or 8000 Scottish volunteer soldiers, led by Robert de Bruce, came face to face with an army of over 20,000 English soldiers, led by King Edward II of England. The site of the battle—the marshy gorge of Bannockburn, 6 km south of Stirling—was Bruce's choice. It enabled the Scottish force to neutralize the numerical strength and superior cavalry of their English enemy so successfully that English casualties by far outnumbered Scottish losses. Edward II, thoroughly beaten, had to retreat to England, although fighting continued, and a final truce was not agreed until 1323.

The campaign that led to the battle of Bannockburn, begun by William Wallace and completed by Robert de Bruce, has been interpreted as the first manifestation of Scottish nationalism. For the first time in Scottish history, allegiance to the idea of a nation superseded feudal interests and family ties (see scottish parliament). This Scottish victory had far-reaching historical consequences. It prepared the ground for the Declaration of Arbroath (1320) and the Treaty of Edinburgh (1328), and thus ensured Scotland's independence (see union).

The name *Bannockburn* signifies the stream (burn) that flows from the hilly country near Stirling, the old Brythonic name of which occurs as *Bannauc* 'Hilly land' in the Gododdin, where Bannauc figures as a frontier zone between the Britons of Gododdin and the country of the Picts (Jackson, *Gododdin* 5–6, 78–9).

The ***banshenchas*** (lore of women) is a 12th-century Middle Irish text that catalogues famous women, mainly Irish, their spouses and offspring up to the time of composition. It survives in both metrical and prose form that develop interdependently over a two-hundred-year period. The prose texts contain a short section on both biblical and classical references, but the metrical copies restrict themselves to the families of Adam and Eve, and Noah and his offspring. The material follows the synthetic chronologies beginning with the Mythological Cycle and Lebar Gabála Érenn, followed by the Ulster Cycle, Fenian (see fiannaíocht), and Kings' Cycles and finally, the longest section listing historical figures from both the pre-Christian and Christian periods. M. Dobbs produced an edition of both metrical and prose texts with an index of names (RC 47.283–339, 48.163–234, 49.437–89).

The first compiler of the *banshenchas* concentrated on a list of the mothers of the high-kings of Ireland (Ériu) and not the wives, who are the focus of the

text as it now survives (Connon, *Seanchas* 98–108). Therefore, there are a number of high-profile women absent from the texts as their editors did not always fill these lacunae. For this reason, earlier kings tend to have only one or two wives mentioned, although the ANNALS may contain further names. The later sections of the text, in particular those dating from the 11th and 12th centuries, give the names of many more wives, but they still omit women mentioned in the annals; from the extant evidence, these are women who were by and large childless.

There is no indication why the Irish author/compiler of the *banshenchas* should have embarked upon such a project, although there are some shorter texts that concentrate on female genealogy. However, the *banshenchas* seems to have been a genre that was well known in early Ireland, and the metrical DINDSHENCHAS contains a reference to it as one of the types of tales that could be told at the fair of Carmun (Gwynn, *Metrical Dindshenchas*, Part 3.20).

§1. THE PROSE BANSHENCHAS

The prose text appears to pre-date the metrical composition, but it is unlikely that the existing prose manuscripts represent this text. There has been extensive reworking of the prose material in individual manuscripts. The full text is found in six different manuscripts (see PRIMARY SOURCES), and there are also two much shorter *banshenchas* type texts—one in Uí Maine and the second one in H 3 17 that may be one of the sources for the longer text.

The Lecan copy adds names of the Uí Mhaeil Sechlaind family of Meath (Mide) and Uí Maine has a special interest in Leinster (Laigin) names, particularly those of the relatives of Diarmait Mac Murchada (see GIRALDUS CAMBRENSIS). Aífe, his daughter, is the last famous woman named by this text. Hundreds of historical women and their multiple marriages appear in the prose texts, many of whom are ignored by annals and GENEALOGIES. This presents a complex, comprehensive, albeit incomplete, picture of the marriage patterns contracted by the aristocracy of 11th- and 12th-century Ireland. Men and women both had up to six or seven different partners in some cases, each union resulting in children. The information is presented bluntly, for example:

> *Dirborgaill ingen Dondchaid meic Briain, máthair Murchada meic Diarmada meic Mail na mBó rí Laigen.*
>
> Derborgaill daughter of Dondchad son of Brian (Ború), mother of Murchad son of Diarmait son of Mael na mBó king of Leinster.

MSS. LEABHAR BHAILE AN MHÓTA; LEABHAR MÓR LEACÁIN; UÍ MAINE; Brussels, Bibliothèque Royale 2542; Dublin, Trinity College H. 3. 17; Edinburgh, National Library of Scotland, Kilbride vii.

§2. THE METRICAL BANSHENCHAS

The metrical text appears in four manuscripts: the Book of Lecan; the Book of Leinster (Lebor Laignech); G3 (National Library of Ireland) and the Book of Uí Maine. In all the copies, the text is internally dated to 1147, and the poet identified himself as Gilla Mo-Dutu Ua Caiside. He added that he came from Ard Brecáin in Co. Meath and that he was living on Daminis, an island on lower Lough Erne in Co. Fermanagh (Loch Éirne, Contae Fhear Manach). The metrical version is divided between pre-Christian and Christian period, with a short section on poetical composition placed at the midway point in the poem. It contains far fewer details than the prose version and concentrates primarily on the high-kings of Ireland, also listing those kings whose wives were unknown to him. The main body of the text makes special mention of Tigernán Ua Ruairc, king of Bréifne (Breffney), and his wife, Derborgaill daughter of Murchad Ua Maeil Sechlaind king of Meath (Mide).

bard [1] in classical accounts

In the GREEK AND ROMAN ACCOUNTS of ancient GAUL there are several references to, and meaningful anecdotes about, the professional praise poets who served Celtic chieftains. The principal classical authority on the ancient bard is the lost History of POSIDONIUS (*fl.* 1st century BC), which was based on first-hand experience in southern Gaul and is quoted in a number of extant texts. ATHENAEUS quotes or paraphrases a general description of the Celtic bard:

> Posidonius, in the twenty-third book of his *Histories*, says that the Celts have with them, even in war, companions whom they call parasites ['those who dine at another's table']. These poets recite their praises in large companies and crowds, and before each of the listeners according to rank. Their tales are recounted by those called bards (βάρδοι), poets who recite praises in song. (*Deipnosophistae* 6.49)

In more than one classical text, the bards are discussed together with the DRUIDS and the 'seers' as related learned professions with comparable social status. Thus, DIODORUS SICULUS, drawing on Posidonius:

> [The Gauls] have lyric poets called Bards, who, accompanied by instruments resembling lyres, sing both praise and satire. They have highly honoured philosophers and theologians [those who speak about the gods] called Druids. They also make use of seers, who are greatly respected. (*History* 31)

STRABO, also citing Posidonius, gives the name *vātes* to the 'seers':

> As a rule, among all the Gallic peoples three sets of men are honoured above all others: the Bards, the *Vātes*, and the Druids. The bards are singers and poets, the *Vātes* overseers of sacred rites and philosophers of nature, and the Druids, besides being natural philosophers, practice moral philosophy as well. (4.4.4.)

This triad is repeated by the late Roman historian Ammianus Marcellinus (*c.* AD 330–*c.* 395), although *Vātes* has apparently been garbled in textual transmission through Greek:

> Throughout these regions [in Gaul], as people gradually became more civilized, study of praiseworthy doctrines grew, introduced by the Bards, Euhages [*read* Vātes], and Druids. The Bards sang the praiseworthy deeds of famous men to the melodious strains of the lyre. (15.9.4)

Although the word *vātēs* is also found in Latin, referring to early Roman poets and prophets, it is probably of Celtic origin here. The same root appears in several INDO-EUROPEAN languages: Old English *wōþ* 'song', Old Norse *óðr* 'poetry', Old Irish *fáth* 'prophecy', *fáith* 'prophet' and Welsh *gwawd*, which now means 'SATIRE' but used to mean 'inspired verse, song, song of praise'.

The Celtic FEAST *par excellence* is the setting for the legendary spontaneous praise poetry in the account (again via Athenaeus) of the great banquet of Lovernios:

> Posidonius, describing the great wealth of Lovernios, . . . says that in order to gain the favour of the populace, he rode through the fields distributing gold and silver to the vast crowds of Celts which followed him. He also enclosed a square over two stadia in length on each side, into which he put vast amounts of food and expensive drink. For many days the feast was served continuously to all who would enter. Finally when the celebration had come to an end, a Celtic poet arrived too late for the feast. He composed a song for Lovernios praising his greatness and lamenting his own tardy arrival. Lovernios was so pleased with this poem that he called for a bag of gold and tossed it to the poet as he ran beside his chariot. The bard picked up the bag and sang a new song, proclaiming that even his chariot-tracks gave gold and benefits to his people. (*Deipnosophistae* 4.37)

According to Appian of Alexandria (*fl. c.* AD 160), the Celtic praise poet regularly fulfilled a diplomatic function, as illustrated by the story of the embassy sent to the Romans by the king of the Allobroges, Bituitos, son of the Lovernios mentioned above:

> A musician too was in the train who sang in barbarous fashion the praises of Bituitos, and then of the Allobroges, and then of the ambassador himself, celebrating his birth, his bravery, and his wealth, and it is for this reason chiefly that ambassadors of distinction take such persons along with them.

It is remarkable that the list of praiseworthy attributes of the patron—and, by implication, the relationship of poet and patron—are essentially the same as those found in the praise poetry of Ireland (Éire), Wales (Cymru), and the Scottish Highlands (see irish literature; scottish gaelic poetry; welsh poetry) in the Middle Ages and early modern times.

Although Caesar provides a great deal of detail on the druids, he curiously does not mention either the bards or the *vātes*. Though this is purely negative evidence, it is at least consistent with the argument that Caesar's Gaulish ethnography owes little to Posidonius, but rather has the value of an independent witness.

The Proto-Celtic word for a person in this social function was *bardos*, giving Goidelic *bard* and Welsh *bardd*; it was taken into Greek as βάρδος and into Latin as *bardus*. *Bardos* is derived from the Indo-European root **gʷer(ə)-*, which meant 'to raise the voice, to praise, to extol, to welcome'. The same root gave Avestan *(aibi-)ǰarətay-* 'laudator' and Sanskrit *jaritár-* 'singer, praiser'. Also apparently from the same root came the Latin *grātēs* 'thanks'. A Latin writer tells us that *bardus* was the Gaulish name for 'the singer who sings the praises of brave men', *bardus Gallice cantor appellatur qui virorum fortium laudes canit, i.e., cantor . . . qui . . . canit*, i.e. 'the singer . . . who sings'. The Latin *cano*, Irish *canaim*, Welsh *canaf* are cognates from the same Indo-European root. Usage in the Celtic languages implies that this is the verbal root applied to the essential function of the Celtic bard.

bard [2] comparison of the professional poet in early Wales and Ireland

§1. introduction

Discussion of the rôle of the bard in medieval Celtic societies requires a distinction between the use in medieval Celtic languages of the Celtic term bard to denote a poet and the development in medieval Celtic societies of the functions associated with the bard in antiquity. In general, it may be said that the term (Welsh *bardd*, Irish *bard*) survived in the medieval languages of both Ireland (Ériu) and Wales (Cymru), and that the praise (and censure/satire) of rulers continued to be central to the rôle of the professional poet in these societies. The terms were differently employed in the two languages, however, and the historical development of bardic praise poetry in the two societies seems to have been somewhat different as well (see irish literature; welsh poetry).

§2. wales

In Wales (Cymru), the great age of bardic eulogy was the 12th and 13th centuries, during which more than thirty Gogynfeirdd known by name produced nearly 13,000 lines of extant poetry, most of it eulogy and elegy of princes, noblemen, and, occasionally, of their daughters. Several of these poems make reference to the prince's need for the poet, as, for example, when Cynddelw tells Rhys ap Gruffudd that 'without me, no speech would be yours'; in other words, it is the poet who, in his verse, gives substance to the prince's deeds, and makes enduring fame possible. Such observations imply a keen awareness of the traditional rôle of the bard.

That the tradition of praise poetry in Wales and in Celtic Britain was already a very old one when the 12th-century flowering began is suggested by the scathing observation of Gildas (*c.* 547 ad) that Maelgwn Gwynedd (†547) preferred to listen to 'empty praises of [him]self from . . . mouths stuffed with lies and . . . foaming phlegm' than to the praise of God. The poetry attributed to Aneirin and Taliesin, which is generally believed to date from the same period—the 6th century—is eulogistic and elegiac, or in other words bardic, in nature. Several of the *Gogynfeirdd*, by imitation and allusion, situate themselves quite deliberately in the tradition of these earliest of Welsh poets. It is, therefore, reasonable to believe that the tradition of

bardic praise poetry in Wales is as old as the Welsh language, and that Welsh court poets were conscious of their craft as an ancient and important social institution. After the fall of Llywelyn ap Gruffudd, the last independent native prince, in 1282, Welsh poets continued to compose eulogy and elegy in honour of the gentry (see cywyddwyr), but, despite certain continuities of form and theme, this sense of the vital importance of the bard to the social fabric faded along with the political power of the poets' patrons.

There is, unsurprisingly, less evidence of a tradition of bardic satire in medieval Wales: censorious verse is less likely than eulogy to have been preserved in writing. However, a 14th-century tract on poetry insists that to 'malign and discredit and satirize' are appropriate to a lesser grade of entertainer, the *clerwr*, and not to the true poet; similarly, the poetic Triads assign satire to the *clerwr* and praise to the *prydydd*. These stipulations suggest that there may have been a tradition of poetic satire, which the late medieval compilers of the so-called 'bardic grammars' sought to legislate out of existence (see gramadegau'r penceirddiaid). There is no clear evidence of such a tradition in the earlier Middle Ages, but poems of the *Gogynfeirdd* known as *bygythion* (sing. *bygwth*), imply a power inherent in the poet to cause harm to a patron who treats him unjustly. Prydydd y Moch (Llywarch ap Llywelyn), for example, warns Gruffudd ap Cynan ab Owain Gwynedd that he will 'cause a blush to appear on his face to his disgrace'. These poems may point to the existence in 12th-century Wales of belief in the power of poetic satire.

In Welsh, *bardd* is to this day the most common term for any poet, and the *Gogynfeirdd* often use it when referring to themselves. They also call themselves *prydydd* (literally 'shaper'), but seem to make no distinction of function or value between that word and *bardd*. The term *pencerdd* (chief of song), employed in the 12th-century Welsh laws (see law texts), was at one time thought to refer to a higher grade of poet than the term *bardd teulu* (household bard), which also occurs in the laws of the court. Current scholarship, however, is inclined to consider *pencerdd* to have designated a poet of a certain status and prerogative within a more or less formalized bardic order, or guild of poets, while *bardd teulu* referred to the poet associated with a particular royal household.

§3. ireland

Medieval Irish treated the terminology of poets and poetry somewhat differently, calling the poet *file* (pl. *filid*) for the most part, as does Modern Irish, while reserving *bard* (pl. *baird*) for an inferior grade of poet. However, bardic poetry—eulogy, elegy, and, in all likelihood, satire—was as important an institution in Ireland as ever it was in Wales, and lasted longer. The records of Irish bardic poetry in this sense are most abundant from the 13th to the 17th centuries, although there are brief panegyric verses incorporated into annals, genealogies, and metrical tracts of earlier date which suggest that a tradition of praise poetry, for the most part exclusively oral and most likely composed by the bards proper, rather than the *filid*, stretched back at least as far as the 7th or 8th century. In Ireland, bardic poetry survived the demise of native kingship.

Poets in medieval Ireland appear to have had a considerable degree of professional organization, and seven grades of poet, parallel to the seven ecclesiastical grades, had been established by the 8th century (see bardic order). We know little about the education of Irish bardic poets in the earlier Middle Ages—except that it would have involved apprenticeship, often to one's father, and that much of the education of the *filid* took place within Christian monasteries (see also monasticism). By the 14th century, however, schools of poetry had been established, and these are referred to with affection in a number of the poems of the later Middle Ages. A substantial theoretical literature dealing with grammar, metrics, and the status of poets is another index of the professionalism associated with the institution of bardic poetry. Like their Welsh counterparts, the *Gogynfeirdd*, Irish bardic poets of the 13th to the 17th centuries composed in highly regulated and complex syllabic metres, in this case called *dán díreach*, and this practice also marked them as an élite fraternity (see metrics).

Like Welsh, Irish has preserved very little verse that can actually be described as satire, but there are a great many references, especially in narrative literature from the 8th century onwards, to the power of poets to cause great harm with censorious verse, and these references can be found well into the Early Modern period.

bard [3] Romantic perception

The poet, whose bardic function is to spotlight others, can himself come under the spotlight, his essential rôle in society causing him to develop his own mystique. As such, the figure of the poet appears variously in the native Celtic literatures, including explorations of the relationship between poets and church, poets and rulers, and poets as the possessors of supernatural powers. An important aspect of the Celtic poet's work was to commemorate the deeds of rulers and warriors. Unlike his heroes, who can die young and

glorious, the poet must survive to tell the tale. Time and loss can make him old and sad. When what has passed is a heroic age, the poet becomes testator to its virtues, and his poetry takes on an elegiac, nostalgic note. In different ways, the poetry ascribed to ANEIRIN, TALIESIN, MYRDDIN and Llywarch Hen, and SUIBNE GEILT, the Hag of Beare (CAILLEACH BHÉIRRE), and OISÍN draw from this well, and contribute to a home-grown literary image of the poet as a melancholy survivor which predates 'Ossian' and the Romantic movement.

When later 18th-century Britain was shaping up for a vastly expanded economic and imperial rôle, and moving away from the religious and constitutional crises of the previous century and a half, one of the key strands was the accommodation of the Celtic nations into the new Britain, both actual and imagined. Renewed interest in the past of the British Isles opened up a rôle for poetic-druidic figures as intermediaries with a heroic past (see DRUIDS). The CELTICISM that flourished in English literature in the post-Augustan period sought and duly found the Welsh, Scottish, and Irish manifestations of bardism, and encouraged contemporary intermediaries such as James MACPHERSON and Iolo Morganwg (Edward WILLIAMS) to take a hand in purveying the desired link with the past. In time, the native traditions themselves became influenced by the preconceptions and emphases of the external image in various ways, ranging from the revival of chiefly bards in the HIGHLANDS to the EISTEDDFOD of Wales (CYMRU). Indirectly, the resultant ferment became a stimulus to genuine antiquarian researches and (partly in reaction to what was seen as a travesty of the native literary tradition) the birth of modern CELTIC STUDIES.

The figure of the Celtic bard had certain recurrent characteristics which survived the transitions from Myrddin and Oisín to Merlin and Ossian, and passed through into English literature and European art. His age made him a figure of wisdom and knowledge, to which was added a visionary or mantic quality, sometimes involving magical or occult powers. He was a solitary who carried a burden of sorrow, sometimes verging on distraction, on account of the friends, relatives and patrons who had predeceased him. The obligation to meditate on and celebrate their qualities gave him his inescapable note of pleasurable sadness.

That basic image generated many reflexes. There was always a latent incompatibility between the reverential treatment of the bard and the earlier, more pragmatic view of him as a whipper-up of Celtic insurgency. A critical backlash against the deceptions of the Celtic literary forgers likewise triggered a fall from grace. The bard has been a subject of dispute between literary critics, who have either praised or demonized him for his conservatism and loyalty to an old order. Whereas he was treated with a degree of indulgence by such various writers as SCOTT and Peacock, his stock fell sharply in the age of Victorian Saxonism, which relegated anything Celtic from being part of 'us' to the world of 'them'.

Despite these perturbations, the visionary and 'druidic' traits of the Celtic bard have proved notably resilient, resurfacing as objects of interest and esteem in more recent manifestations of Celticism in the 19th and 20th centuries. They survive powerfully in the popular imagination today—both in overtly Celtic and in disguised forms—in modern fantasy writing and contemporary film.

William Gillies

Bàrd baile (village poet) is a term used to refer to a poet working within a defined Highland locale and composing poetry which is generally traditional in form, and which relates to that community. The verse of the *bàird bhaile*—who were generally men—was traditionally composed for the audience in the *taigh-cèilidh* (ceilidh-house), where news would be exchanged, tales told and songs sung. The *bàrd baile*'s songs had various practical functions, first and foremost among these being entertainment and social commentary, with the poet acting as an intermediary between the community and change. By its nature, this type of verse is oral and, in terms of subject-matter, ephemeral, and it is only in relatively recent times—from the end of the 19th century—that the work of such individuals has come to be published and to reach an audience beyond the confines of the district of composition.

Among those whose work has been published are Dòmhnall Ruadh Chorùna (Dòmhnall Dòmhnallach), Dòmhnall Ruadh Phàislig (Dòmhnall Mac an t-Saoir) and Dòmhnall Ailein Dhòmhnaill na Bainich (Donald Allan MacDonald). In the same way as the *taigh-cèilidh* vanished from the cultural landscape of the Highlands in the course of the 20th century, so too the *bàrd baile* has all but vanished, as his rôle as social commentator has been taken over by television and radio.

The subject-matter of the *bàrd baile*'s versification includes homeland, war, love, local and national events, new technology, religion, philosophy, humour, and songs relating to individual members of the community. Just as elegy, eulogy, satire, and *brosnachadh* (incitement) featured within the repertoire of the clan poets of earlier centuries (see scottish gaelic poetry), they also feature within the songs composed by 19th- and 20th-century local poets, who drew upon them all in fulfilling their rôle as social commentators. It is only with Thomas McKean's study of Skye bard Iain MacNeacail, and, subsequently, John Angus Macdonald's of South Uist bard Dòmhnall Ailein Dhòmhnaill na Bainich, that research on traditional Gaelic poets has moved towards examining the poet and his work within his social environment, and both studies have done much to further understanding of the traditional poets' rôle in Gaelic society.

The term *bàrd baile* is not one with which all Gaelic critics are comfortable, and this unease is best summed up by Ronald Black, who points out that the term implies 'that such a person is a laureate of a small community and therefore narrow in his (or her) view of the world. In practice, however, such poets have typically fought a war, sailed seven seas or otherwise sweated blood far and wide for a living' (Black, *An Tuil* lxi). Black suggests instead that, by referring to *bàrdachd baile* (village poetry), we can avoid categorizing the poets themselves, some of whom composed innovative as well as traditional verse.

Sheila Kidd

'Y **Bardd Newydd**' (**The new poet**)

is the name given to a school of Welsh poets who came into prominence during the last decade of the 19th century. Two of its leading members were Iolo Carnarvon (1840–1914) and Ben Davies (1864–1937), who both won the crown competition at the National Eisteddfod of Wales (Eisteddfod Genedlaethol Cymru). Their work was a reaction against what they regarded as the superficial lyrical nature poetry of Ceiriog (John Ceiriog Hughes) and his contemporaries. Most of these poets were Nonconformist preachers (that is, belonging to Protestant denominations dissenting from the established Anglican church), who felt that poetry should be concerned with the truth, and that the poet was above all a prophet, a seer, and a perceptive thinker. They produced highly abstract and lengthy compositions dealing with obscure metaphysical speculation, and paid little attention to poetic form. In due course, a reaction occurred against the poetry of these 'new' poets. Thus, at the beginning of the 20th century critics, including prominently John Morris-Jones, redefined the function of the ideal poet, establishing a self-conscious classical ethos, based on a new appreciation of the forms of the great figures of Welsh poetry in the later Middle Ages.

bardic order, the [1] in Ireland

In contemporary usage, the term 'bardic order' is used somewhat confusingly for a group which comprised both the ranks of the *file* (poet, pl. *filid*), and the ranks of the *bard* (bard, pl. *baird*). The first term goes back to Celtic **welet-s*, is attested as genitive VELITAS in a Primitive Irish ogam inscription, and etymologically means 'seer', cf. Welsh *gweled* 'to see'; the second term is attested in Old Celtic as *bardos*, pl. *bardī*. In the interest of clarity, Gaelic terms will be preferred here. From the earliest times, Irish sources evidence a tension between the *filid* and the *baird*, with the *filid* consistently marking themselves off from the

baird on the basis of their greater learning. The spread of LITERACY underlay the first reorganization of the ranks of the *filid* that is clearly discernible in Irish sources. The form that this reorganization took was inspired by the successful establishment of a seven-grade scheme for the ranking of the clergy, probably in the late 7th century. Attempts at imposing a seven-grade scheme on the various orders of lay society worked best in relation to the *filid*, and, by the 8th century, there was such a fixed hierarchy for the *filid*, found in various contemporary law-tracts (see LAW TEXTS), including BRETHA NEMED and *Uraicecht na Ríar* (The primer of the stipulations). The names of the seven grades were: *ollam, ánruth, clí, cano, dos, mac fhuirmid*, and (again) *cano*. These grades represent the successive stages through which a *file* might progress in the course of his career. The distinction between the grades was one of learning, not of office, except in the case of the *ollam*; his position was a matter of both office and grade of learning. (This is the term which, in present-day Irish *ollamh*, has come to mean primarily 'professor'.) Of course, the *fili* was expected to have an innate facility for poetry, and the ideal was that he should come from a family of poets who satisfied, in his generation, the minimum three-generation requirement for a hereditary profession.

In the law-tracts mentioned above, the *baird* are largely distinguished from the *filid* in not having a scholarly training: their reputation is said to rest on an innate talent for poetry. They are portrayed as belonging to a separate caste from that of the upwardly mobile *filid* on account of their lack of access to an incremental programme of learning. Of course, one must bear in mind that the remit of the *baird* (*bairdne*) ordinarily extended only to panegyric and lyric poetry, whereas that of the *filid* was far more diverse. For example, *Uraicecht na Ríar* states that a *file* of the highest grade (i.e. an *ollam*) will know 350 tales and be competent in all historical science (*coimgne*) and Irish jurisprudence (*brithemnacht fhénechais*). The *baird* were distinguished from each other in two ways: by the relative nature of their innate talent, and, when they held office or had a profession (poetry being an amateur occupation for many aristocratic *baird* in particular), by the characteristics of their main occupation.

Yet, even the schematic law-tracts do not maintain an absolutely rigid distinction between *baird* and *filid*. Passages in the 8th-century *Bretha Nemed* reveal traces of a system which apparently predates that of the seven grades of *filid*, in which *filid* and *baird* are not relegated to separate castes, and in which a poet might progress from the rank of *bard* to that of *file* on the basis of increased learning. *Uraicecht na Ríar* tellingly states that a poet 'who does not attend a course of study, and who has ability in poetry' is free to choose between having the honour-price (*díre*) of a *file* or of a *bard*.

The persistent efforts of the *filid* to enhance their own status at the expense of the *baird* eventually resulted in the primary meaning of *bard*, namely, 'panegyric/lyric poet', being expanded to accommodate the meanings 'illiterate poet' and 'oral-performance poet'. However, one must guard against assuming that a bard was illiterate simply because he did not have the scholarly education of a *file*. The 10th-century tract titled *Córus Bard cona Bairdni* (The hierarchy of *baird* and its craft; edited by THURNEYSEN under the title *Mittelirische Verslehren I*) is instructive here. This is the only medieval Irish tract which deals exclusively with the *baird*. It lists eight classes of *baird*, ascribes different metrical forms to them, and exemplifies these with quatrains and fragments of poems, most of which are panegyrical. In some cases, it names their authors.

The tract is written from a perspective favourable to the *filid*. It ascribes a higher status to them than to the *baird*, on the grounds that the latter are 'without learning' (*cen fhoglaim*). It also claims that the *baird*, whose poems are in 'innovative forms' (*núachrotha*), are not entitled to the same rewards (*dúasa*) for their compositions as the more conventional *filid*, but only to whatever the recipients wish to give in exchange for them. Nevertheless, there is much to suggest that the *baird* discussed in the tract operated in a literate context. Their *núachrotha* were soon established as the conventional forms of the literate poets. The fact that the tract ascribes each class of *baird* its own metres hints at an incremental programme of learning. Some of the *baird* named in it were highly respected by the school-trained poets: for example, the poetry of Rechtgal úa Síadail (*fl. c.* 800) is cited no less than seven times in learned compilations of the Middle Irish period (*c.* 900–*c.* 1200).

By the Early Modern period (*c.* 1200–*c.* 1600), the term *bard* is used more often of the lowest-ranking members of the professional poet's retinue than of

the gifted high-class amateur. This development is evidenced in both English-language and Irish-language sources. The rich detail found in Old and Middle Irish metrical and legal tracts on the individual grades of the *filid* and the *baird* is not replicated in Modern Irish sources. Some of the distinctions must have been obliterated in the sweeping changes that occurred in the wake of the 11th- and 12th-century church reforms and of the coming of the Normans. But the systems remained complex, and much detail on them can be found in the rather biased English-language accounts of Thomas Smyth (1561), John Derricke (1581), and Thomas O'Sullevane (1722). The fuller picture is yet to be gleaned, more painstakingly, from IRISH-language sources.

Máirín Ní Dhonnchadha

bardic order, the [2] in Wales

The bardic order in Wales (CYMRU) was a centuries-old professional guild (or corporation) that enjoyed a great degree of autonomy throughout its long history. It was remarkably resilient and, until its gradual decline and disintegration in the late 16th and early 17th centuries, impressively productive. For hundreds of years, bards who were attached to the courts of independent Welsh kings and princes sang eulogies and elegies in which they praised the firm, percipient leadership, the martial prowess, the unflinching courage, and the unstinting liberality of their regal patrons. In so doing, they were perpetuating a long tradition that extended back to the BRYTHONIC era and to the remote Celtic past. The authors of those poems were inspired by the firm conviction, one shared by most of their contemporaries, that honour, loyalty, discernment and generosity of spirit, combined with daring leadership and valour in battle, were indispensable attributes for any ruler if the society he governed was to retain its basic stability and flourish. The verses in which the bards profusely extolled those attributes made heroes of their royal patrons and ensured for them, it was hoped, everlasting fame.

§1. SOCIAL STATUS

It was natural, in view of the special nature of their profession and the responsible duties they regularly discharged, that the bards formed a distinct section of the native social structure and enjoyed their own rights and privileges, which they were constantly anxious to safeguard and preserve. In the Laws of HYWEL DDA, which for centuries formed the basis of organized life in Wales, poetry was listed, with clerkship (in its ecclesiastical connotation) and smithcraft (*fabrica ars*), as one of the three arts a villein's son was not entitled to acquire without the consent of his lord, for, as one text states, 'if the lord be passive until the clerk be tonsured, or until the smith enter his smithy, or until a BARD graduate, he can never withdraw them after that' (see LAW TEXTS). The bards were highly trained professional craftsmen, who had a function as clearly recognized as that of the physician, the smith, the cleric, or the man of law, and they were accorded a status and dignity commensurate with their responsibilities.

§2. THE PENCERDD

The duties and privileges of the bards, as well as the perquisites attached to their office, are defined in the Laws of Hywel Dda, which refer to three distinct classes of bards. Highest in status was the *pencerdd* ('chief of song' or 'master-poet'), who was the head of the bardic community within a recognized geographical area. He had his own chair, which he had won by competition and which conferred upon him the status of *pencerdd* and gave him the right to instruct young bardic novitiates. This chair, according to the Venedotian (GWYNEDD) version of the legal codes, was the eleventh in order of precedence in the royal hall, although other versions differ in noting the precise order. He sat next to the *edling* (heir-apparent) in the royal hall, according to the Latin texts, and he had the right to certain privileges and received various perquisites, which are specified in some detail. His duties are mentioned in both the Welsh and Latin texts. When

the king desired to hear a song in the royal hall, it was the duty of the *pencerdd* to sing first: he was to sing two songs in the upper section of the hall (*uwchgyntedd*), the first a song of God, and the second a song of kings. However, he was not assigned a place among the twenty-four officers of the court, although he was to receive the gift of a HARP from the king and to obtain his land free. The reference to the gift of a harp may imply that the *pencerdd* at one time sang (or declaimed) his compositions to his own musical accompaniment, although this is not explicitly stated. The same may also be true of the *bardd teulu* (see below). But, if that was the case, it is impossible to determine how old was this custom or how long it lasted. The *pencerdd* was also entitled to the marriage-fee (or maiden-fee) of the daughters of the poets who were subject to him, and he was to receive a nuptial gift (*cyfarws neithior*), namely twenty-four pieces of silver, when they married. He alone, according to the Venedotian version, had the privilege to solicit, although other versions of the LAW TEXTS agree that the bards who were subject to his authority could solicit after obtaining his authority to do so. He was entitled to receive two shares of the common profits gained by himself and his companions, who are described as his disciples in the Gwentian Code, which states that the *pencerdd* was to receive a third of the receipts.

§3. THE BARDD TEULU

The second class of poet mentioned in the law books is the *bardd teulu* (household bard, bard of the retinue, bard of the bodyguard). The Latin texts agree with the Dimetian (DYFED) and Gwentian Codes in assigning the *bardd teulu* the eleventh place among the twenty-four officers of the court, although the Venedotian version places him eighth in dignity. The various duties he was obliged to discharge are noted. For example, after the *pencerdd* had fulfilled the king's wish by singing two songs in the upper section of the hall, it was the duty of the *bardd teulu* to sing a third in the lower part (*isgyntedd*). If the queen should desire to hear songs in her chamber, he was to sing to her three songs of finished art, not noisily, but in a voice of moderate compass, lest the hall be disturbed. The discharge of this duty in the queen's chamber may explain why the term *bardd ystafell* (lit. room bard) is sometimes used as a variant of *bardd teulu*. And, in time of conflict, he was to sing *Unbeiniaeth Prydain* (The sovereignty [or monarchy] of BRITAIN) to the royal retinue before going into battle. It was also to be sung when the booty was being divided, which was probably a vestigial practice. This traditional song, which probably emphasized the Welsh claim to sovereignty over the whole island of Britain, was singularly appropriate when military campaigns were being conducted against the English, and it has been suggested, though there is no firm evidence to support the view, that the song referred to was the 10th-century polemical poem ARMES PRYDEIN (lit. The great prophecy of Britain), whose central theme is that the Welsh, in alliance with their Celtic cousins in Cornwall (KERNOW, Welsh *Cernyw*), Ireland (ÉRIU, Welsh *Iwerddon*), Brittany (BREIZH, Welsh *Llydaw*), and the Old North (YR HEN OGLEDD, the ancestral territories of the ancient BRITONS, which were appreciably greater than modern Wales) will together drive out the despised English from the island of Britain. Like the *pencerdd*, the *bardd teulu* enjoyed certain privileges and received various perquisites that were connected with his status. For example, upon taking office, he was entitled to a harp from the king and a ring from the queen. That ring, according to some of the Welsh texts, was to be of gold. His lodgings were said to be with the *penteulu* (head of the retinue, or bodyguard), next to whom he sat in the hall. He was entitled to his land free, to the gift of a horse, to his linen from the queen, and his cloth from the king. When he went on circuit with other bards, he was entitled to the portion of two men. If he had occasion to petition the king for anything, he was required to sing one song only. On the other hand, if he petitioned a nobleman, it was his duty to sing three songs. But if he went to petition a villein, he was obliged to sing until he became exhausted! Obviously, the rôle of *pencerdd* and that of *bardd teulu* could on occasion be assumed by the same person.

§4. THE CERDDORION

The third class of poets referred to in the law books comprised the *cerddorion* (minstrels, Latin *joculatores*), the French *jongleurs*. They provided a less refined type of entertainment, one that was possibly of a humorous or satirical nature, with the humour perhaps bordering at times on the indelicate or risqué, though it is impossible to be certain of this.

§5. BARD AND CYFARWYDD

It was probably not the sole function of the bards, however, to celebrate or entertain their patrons in verse, for there is some evidence to support the view that they could also be accomplished storytellers (*cyfarwyddiaid*, sing. CYFARWYDD), whose medium was either prose or a skilfully blended combination of prose and verse. Their repertoire included many complicated saga-cycles, in which prose was generally the medium of narrative and description, while verse, frequently of the ENGLYN type, was employed for monologue and dialogue (see ENGLYNION). Some tales, however, could be entirely in prose, and we are provided with some idea of the substantial corpus of material a bard could have at his disposal when we learn that it was part of the professional qualification of the Irish *ollamh*, who corresponds broadly to the Welsh *pencerdd* and who, like his Welsh counterpart, had a chair (*cathair ollamhan*) specially assigned to him in the court, to master 350 such tales. The tales were delivered orally, and they incorporated a rich and colourful variety of traditional material, which was sometimes derived from a remote and inaccessible past, but which had frequently been modified or transmuted during many centuries of oral transmission. There is some evidence, from the HISTORIA BRITTONUM (redacted 829/30) onwards, to corroborate the view that the Welsh bards and *cyfarwyddiaid* were inferior to none in the amplitude of material they had at their disposal. However, there is no evidence that suggests that the 12th-century court poets entertained their royal patrons by narrating various tales, and hence some scholars have argued that too much emphasis should not be placed on the equation between bard and *cyfarwydd*.

§6. LATER CLASSIFICATIONS

It would be unwise to accept uncritically the schematized classification of the legal codes as an accurate portrayal of actual practice in a given period, for it is difficult to determine when the three categories of bards mentioned in the law books first became established, although it is generally believed that they existed and flourished at least between the middle of the 10th century, when Hywel Dda (or Hywel ap Cadell, *c.* †950) is believed not so much to have promulgated a new corpus of legislation but to have codified and systematized an existing body of customary law and tribal practice, and the end of the 12th century. This triple classification reappears in later sources, although there is a change of nomenclature. In the 14th-century bardic grammar that has been associated with the names of EINION OFFEIRIAD and Dafydd Ddu of Hiraddug (see GRAMADEGAU'R PENCEIRDDIAID) the *pencerdd* is replaced by the *prydydd*, the *bardd teulu* by the *teuluwr*, and the *cerddor* by the *clerwr*. This new nomenclature is obviously based on the old classification found in the law texts and, in any case, it may only reflect the penchant, which manifests itself in other contexts, for triadic groupings or divisions (see TRIADS). It is beyond doubt, however, that there existed a class of artistic and highly skilled bards who addressed odes (*awdlau*, sing. AWDL) and, later, *cywyddau* (sing. CYWYDD) to their patrons, and that there were other, less accomplished poets whose compositions were directed to a social class that had markedly lower artistic standards. Nothing is known of the work of this latter group, for only the work of the highest class of bards has been preserved.

§7. CHANGING PRACTICE

It is difficult to determine how rigidly observed in the pre-Norman and immediate post-Norman periods were the demarcations between the various categories of poets and the functions that each class was required to discharge. But a detailed analysis of the substantial corpus of verse that has survived from the Age of the Princes (from the 11th century to the 13th) reveals that three significant developments had occurred by then in the history of the Welsh bardic order (see GOGYNFEIRDD). First, it has been argued that the earlier distinction between the *pencerdd* and the *bardd teulu* had begun to break down and that eventually the former could, on occasion, act as a *bardd teulu*. For example, it has been suggested that CYNDDELW Brydydd Mawr (*fl. c.* 1155–*c.* 1195), the leading and the most prolific court poet of the 12th century, was probably discharging the function of a *pencerdd* when he composed an elegiac ode to Madog ap Maredudd (†1160), prince of the poet's native POWYS, but assuming the rôle of a *bardd teulu* when he addressed a series of *englynion* to that prince's war band. This view, which is not universally accepted, obviously implies that *awdlau* and *englynion* were not only different metres but also that they were originally designed for different

audiences; that is, when Cynddelw composed *awdlau*, he acted as a *pencerdd*, but when he sang *englynion*, he assumed the rôle of a *bardd teulu*.

Second, Cynddelw's work shows convincingly that, by that period, a bard could be associated with more than one court, for although his career began as the court poet of Madog ap Maredudd, he turned after the latter's death to sing the praises of a number of the princes of Gwynedd, Powys, and DEHEUBARTH. As far as can now be ascertained, he is the earliest of the court poets to have taken the whole of Wales as his bardic domain.

Third, the bards began to address their encomiums to men of noble birth, and not only to persons of royal lineage. Cynddelw, for example, sang the praises of Rhirid Flaidd, a landed magnate, and his brother Arthen, who were both slain shortly after 1160. This latter class of *uchelwyr* played a fundamentally important part in buttressing the classic bardic tradition after Wales lost its independence with the death of Prince LLYWELYN AP GRUFFUDD in 1282, which effectively destroyed the native Welsh political structure, for they undertook the duties of bardic patronage that had formerly been discharged by the ruling Welsh princes, thus making bardic circuits a basic economic necessity for the professional poets.

§8. AFTER THE EDWARDIAN CONQUEST

By destroying the old political order with which bardism had been so long and so closely connected, the Edwardian conquest created an opportunity for changes in both the craft and practice of the poets. In the works composed by the poets of the post-Conquest period, a new metre emerged, the CYWYDD *deuair hirion*, which became the predominant medium for Welsh strict-metre verse for two and a half centuries. It consisted of rhyming couplets with full consonance throughout, each couplet containing lines of seven syllables that rhymed a stressed with an unstressed syllable. This was an artistically refined form of an older metre, the *traethodl*, that had formerly been restricted to the lower-grade *cerddorion*. The new *cywydd* metre was made artistically more refined by introducing the intricate system of consonantal alliteration and internal rhyme known in Welsh as CYNGHANEDD and by applying the aforementioned stipulation regarding the stress patterns of the rhymes.

§9. DEVELOPMENTS AFTER 1300

In general, two distinct types of bards can be detected from the 14th century onwards: the first was the professional bard who was heavily dependent on the patronage of the nobility, and the second consisted of those talented members of the *uchelwyr* (noblemen) who had acquired a mastery of the intricate bardic craft. Among those who belonged to this latter class were DAFYDD AP GWILYM (*c.* 1315–*c.* 1350), who skilfully introduced elements from the European concepts of courtly love into the native bardic tradition, and IOLO GOCH (*fl.* 1345–97), and, in a later period, DAFYDD AB EDMWND (*fl.* 1450–97), Dafydd Llwyd ap Llywelyn ap Gruffudd (*c.* 1395–*c.* 1486) of Mathafarn, Tudur Penllyn (*c.* 1420–*c.* 1485), TUDUR ALED (*c.* 1465–*c.* 1525), and Gruffudd ab Ieuan ap Llywelyn Fychan (*c.* 1485–1553). The bards who sang during this period composed panegyric and elegiac verses, poems to solicit gifts of various kinds and to express gratitude to the individual donors, love-songs, and flyting poems (see also CYWYDDWYR).

The 15th century witnessed the emergence of a new category of verse, the *cywydd brud*, or prophetic poem, foretelling the advent of a great national deliverer, by which the bards earnestly endeavoured to sustain the morale and to stiffen the resistance of their hard-pressed compatriots during the difficult period that followed the revolt of OWAIN GLYNDŴR. Many of these vaticinatory poems were composed not by inferior poetasters but by highly skilled bards of gentle birth, such as Tudur Penllyn, LEWYS GLYN COTHI (or Llywelyn y Glyn, *fl.* 1447–89), and, in particular, Dafydd Llwyd of Mathafarn. The authors of these poems frequently alluded to prominent contemporary figures by using the names of various animals, and these cryptic references undoubtedly present difficulties for the modern reader. Nevertheless, the climate of opinion these poems helped to engender during the Wars of the Roses contributed substantially to Henry Tudor's victory at Bosworth Field on 22 August 1485 (see TUDUR).

The emergence, during the 16th century, of heraldic bards was another particularly interesting development. Nevertheless, although the range of bardic poetry was unquestionably enlarged, the centuries-old bardic tradition proved to be extremely tenacious: eulogy and elegy for noble patrons still predominated, and both metre

and style continued to be subject to a strict discipline.

§10. INSTRUCTION OF THE BARD

Since the poet's calling was a full-time profession and his function was manifestly a social one, great emphasis was naturally placed on the art of poetry, which had to be studied and mastered. The process of mastering that art was both long and arduous. The foundation of the instruction imparted to young novitiates was the medieval *trivium* of grammar, rhetoric, and logic. Much emphasis was placed on mastering the *cynganeddion* (sing. CYNGHANEDD) and the prescribed strict metres, the old poetry, and archaic vocabulary, the contents of the bardic grammar (when such existed), the royal and aristocratic GENEALOGIES, the history of the nation, and its mythological lore and legends. Rhetoric also occupied an important place in the bardic training, part of which consisted in the composition of prose orations (*areithiau*), which tested the pupils' expertise in the coining and use of compound words and in the formation of rhetorical tropes. Instruction was imparted orally by recognized masters of the bardic craft. It seems that the full course of instruction lasted for nine years and, according to the *soi-disant* Statute of GRUFFUDD AP CYNAN, which is associated with the bardic EISTEDDFOD held at Caerwys, Flintshire (sir y Fflint), in 1523, though there is no real historical connection between it and the king of Gwynedd who bore that name and died in 1137, those disciples who aspired to attain to the highest rank passed through the following grades: licensed disciple without degree (*disgybl ysbas heb radd*), licensed disciple with degree (*disgybl ysbas graddol*), disciplined disciple (*disgybl disgyblaidd*), disciple of the degree of *pencerdd* (*disgybl pencerddaidd*), *pencerdd*, and teacher (*athro*). It is stated how much of the poetic art each grade had to master, and rules are laid down concerning the proper behaviour of poets when they visited their patrons. It is unlikely, however, that these latter regulations were generally observed: the Statute probably presented an ideal picture rather than an accurate description of day-to-day practice. Nevertheless, there can hardly be any doubt that a serious attempt was made in the early 16th century to subject the bardic fraternity to a strict regimentation. Nor can it be doubted that, in Wales and in Ireland, the strength and resilience of the bardic organization can be attributed very largely to the carefully planned system of instructing and training young novitiates. When a pupil was deemed to have reached the standard required to complete each of the specified grades, he would be awarded the appropriate degree and granted a licence, either at a wedding feast or, occasionally, at a bardic *eisteddfod*, which conferred on him the right to practise the art he had mastered, to embark on a circuit to the homes of the *uchelwyr*, and to solicit largesse for his compositions. The licence conferring on Gruffudd Hiraethog (†1564) the degree of *disgybl pencerddaidd* at a wedding feast in 1545/6 is still extant, as is the licence granted to Simwnt Fychan (*c.* 1530–1606), when he graduated as *pencerdd* in the second *eisteddfod* that was held at Caerwys, in 1567.

§11. UNCERTIFIED DATGEINIAID

The Statute of Gruffudd ap Cynan contains no specific reference to degrees being awarded to declaimers (*datgeiniaid*), probably because they merely sang or declaimed the work composed by others, and hence were considered to be of inferior status to the accredited bards and musicians. Unfortunately, little is known of the precise manner in which a poem written by one of the strict-metre bards was presented in the hall of a nobleman. The contents of the Statute suggest that playing the HARP or crowd (CRWTH) was recognized as an acquired skill in its own right, as well as being a pleasing accompaniment to poetry (see WELSH MUSIC). But it is far from certain that musical accompaniment was a *sine qua non* for declaiming a poem to a noble patron. There were undoubtedly some declaimers who lacked the skill to provide any accompaniment of this kind. Not surprisingly, these were considered to be of inferior status and were sometimes known as *datgeiniaid pen pastwn* (stick-end declaimers), for such a declaimer tapped his stick in the middle of the hall and sang the poem to the sequential order of the tapping. Obviously, the declamation of an ode or *cywydd* to musical accompaniment on harp or *crwth* was infinitely more satisfactory, and it seems that the highest type of declaimer could provide his own musical accompaniment or, alternatively, he could formally declaim a poem to the accompaniment of a recognized musician.

§12. BARDIC CIRCUITS

The bards usually went on circuit, wandering purposefully from the house of one favourably disposed noble-

man to another, during three well-established church festivals. The first of these was from Christmas (Nadolig) to Candlemas (Gŵyl Fair y Canhwyllau, 2 February); the second was from Easter (Pasg) to Ascension Day (Dydd Iau Dyrchafael, the fortieth day after Easter); and the third was from Whit Sunday (Sulgwyn) to 'Relic Sunday' (Sul y Creiriau), that is, the third Sunday after Midsummer's Day (24 June), or until Trinity Sunday (Sul y Drindod, the Sunday after the Pentecost).

§13. orality and literacy

Only a comparatively small part of the detailed oral instruction imparted to bardic pupils was committed to writing. The earliest extant example of this is the 14th-century bardic grammar whose authorship was attributed by Thomas Wiliems (1545/6–1622), of Trefriw, to Einion Offeiriad (*fl. c.* 1320–*c.* 1349) and Dafydd Ddu, of Hiraddug, who flourished during the second half of the 14th century. This work, which was an adaptation of the Latin grammars attributed to Donatus and Priscianus, discusses letters of the alphabet, syllables, parts of speech, syntax, prosody (but not the *cynganeddion*), the twenty-four strict metres, and the prohibited faults. Three of Einion's own compositions are included. Of special interest is the section that discusses 'how all things should be praised', for, drawing on classifications derived by medieval schoolmen from the work of Aristotle, it propounds the philosophical principles that lay at the root of the encomiums composed by the master-poets. Broadly similar in scope, though more detailed in treatment, is Simwnt Fychan's celebrated compendium, *Pum Llyfr Cerddwriaeth* (Five books of the art of poesy), which was written *c.* 1570, although parts of it may well have been the work of Gruffudd Hiraethog.

The professional poets kept the details of their esoteric art a secret from all, with the notable exception of those clerics and members of the nobility who had manifested a genuine desire to study and master the bardic craft, and they were extremely reluctant to use the printing press as an effective means of disseminating their compositions and teaching. This attitude was severely criticized by various 16th-century Welsh humanists. The latter also urged the bards to satirize as well as to praise, and to acquire from printed sources an enriching knowledge of the liberal arts and sciences, which, it was maintained, could profitably become the theme of their compositions. They also besought the bards to make skilful use of the classical art of rhetoric, to renounce the secretiveness for which the bardic order had been so long renowned, and to explain the mysteries of the bardic craft to all who wished to understand them. The extraordinarily long bardic contention (*ymryson farddol*) between Wiliam Cynwal (†1587/8) and Edmwnd Prys (1543/4–1623), lasting from 1580 to 1587/8 and comprising 54 compositions on the *cywydd* metre and approximately 5500 lines of verse in *cynghanedd*, effectively highlights the fundamental difference between the standpoint of the bards, with centuries of rich tradition behind them, and that of the humanists, who were deeply imbued with the stirring ideals of the Renaissance and the New Learning (see reformation; renaissance; ymrysonau). That the bardic order was not wholly unresponsive to the need for change is shown by the growth in popularity of the *cywydd* metre and by the important modifications that occurred in its structure between approximately the mid-14th century and the mid-16th, when the couplet became syntactically pre-eminent; this development led inevitably to the eradication of the involved parentheses or interpolations, frequently running on for a number of lines, that so strikingly characterized the odes of the court poets, whose work, it has reasonably been claimed, ranks 'among the most difficult bodies of poetry in Europe'. Moreover, some of the great master-poets, such as Guto'r Glyn (*c.* 1418–*c.* 1493) and Tudur Aled, also developed their own distinctive style of composition, a notable achievement when it is borne in mind that upon the syntactically constricting limits of each couplet in the *cywydd* metre the restrictions involved in the stringently regulated system of *cynghanedd* were further imposed. In general, however, the various suggestions made by the Welsh humanists evoked little constructive response, an attitude that was one of the major contributory factors that led eventually to the decline and demise of the bardic order.

§14. certification

Naturally, the professional poets were constantly anxious to safeguard their status and livelihood by preventing inferior, unskilled rhymesters from going in increasing numbers on bardic itineraries and thereby arousing the displeasure of patrons who would other-

wise be well-disposed and supportive. This was one of the primary concerns of the bardic *eisteddfodau*, which sought to regulate the activities of the poets by establishing strict metrical rules and by granting licences to those who had successfully completed the prescribed stages of their training, thus preventing, it was hoped, a disturbing and unwarranted proliferation of itinerancy. The most important of these bardic congresses of which we have any knowledge were those held in Cardigan Castle (see ABERTEIFI) in 1176, under the patronage of RHYS AP GRUFFUDD (Lord Rhys, 1132–97), in Carmarthen (Caerfyrddin) *c.* 1451, where Dafydd ab Edmwnd was responsible for the changes arranged there in the canonical twenty-four metres, which included two of quite exceptional complexity he himself had devised, and the two *eisteddfodau* held at Caerwys in 1523 and 1567, the second of which was convened under a commission granted by Queen Elizabeth I herself. The genuine anxiety of the professional poets is clearly reflected in the proclamation that was issued in connection with the first of the two bardic congresses held at Caerwys in the 16th century, which states that it was being convened 'to establish order and good governance for the craftsmen in poetry and for their art, . . . that is to say, to fortify and confirm the master-poets and such as have received a degree heretofore, and to award a degree to such as deserve it, and to give licence to others to learn and to study as conformably as may be to their conscience and to the old Statute of Prince Gruffudd ap Cynan'.

§15. DECLINE OF THE BARDIC ORDER

Not surprisingly, the petition submitted in 1594 for a commission to hold another bardic congress similar to those convened earlier in the century at Caerwys proved unsuccessful, for by that time the bardic order was in serious decline, and the need to safeguard the interests and privileges of its members, which had formerly been considered so urgently important, was rapidly diminishing. That decline can be attributed to the powerful interaction of a variety of factors: the generally stagnant conservatism of the strict-metre bards and the senility of the tradition they represented; the increasing Anglicization of the gentry, following the ACTS OF UNION of 1536 and 1543, and, as an inevitable corollary, the gradual loss of patronage; the dissolution of the monasteries, at which the professional poets had been generously patronized for centuries; the rise in popularity, from the mid-16th century onwards, of verse composed in the free accentual metres, which appealed to a wider circle of literati than did the strict-metre syllabic verse of the professional poets; the widespread effects of the unprecedented sharp inflation experienced in the late 16th and early 17th centuries in England and Wales alike, which grievously eroded the income of the gentry and, as a result, seriously undermined the custom of generous literary patronage; the fact that bona fide bards were sometimes confused with the unskilled rhymesters and hucksters who roamed the country in such disturbingly large numbers in the 16th century; and the whole intellectual and social ethos of the early modern period, with its emphasis on unbridled individualism and private enterprise, often to the detriment of the common weal, which ultimately proved to be distinctly inimical to the classical tradition of the Welsh strict-metre bards, whose work, by its very nature, laid great emphasis on the social function of poetry.

Nevertheless, powerful and inimical though the interaction of these various forces ultimately proved to be, the bardic tradition was still uncommonly tenacious and the end itself came only gradually, between approximately 1550 and 1650. A fairly large number of comparatively minor poets continued to address eulogies to members of the gentry down to the middle of the 17th century, or even a little later, and they sometimes received payment for their literary endeavours. But, to most of them, the composition of poetry was a diverting cultural hobby, not an essential means of earning a living. By the second half of the 17th century, the bardic order, unable to survive the ravages of the Civil Wars (1642–8) and the ensuing political upheavals, no longer functioned as a viable professional and social organization. The death of the last of the truly professional poets marked the end of a long, resplendent tradition and of a remarkably productive organization that made a contribution of fundamental importance to the standardization of literary Welsh and also gave powerful expression and continuity for hundreds of years to Welsh national identity.

Ceri W. Lewis

Barn (Opinion) is a monthly magazine devoted to current affairs in Wales (CYMRU). It contains articles on a wide range of subjects, including the arts, politics, mass media and education; poetry and short stories, and book reviews are also featured. Established in 1962 by Llyfrau'r Dryw, a Welsh publishing house based at Llandybïe, Carmarthenshire (sir Gaerfyrddin), it was probably at its most influential under the shrewd editorship of the eminent Welsh sociologist and writer on Celtic mythology, Alwyn D. Rees (1911–74), in the late 1960s and early 1970s. At the time it was a powerful voice for the Welsh nationalist movement (see NATIONALISM) and it also supported the newly formed Welsh Language Society (CYMDEITHAS YR IAITH GYMRAEG). It continues to be a lively forum for the Welsh issues of the day under its present editor, Simon Brooks, a founder member of Cymuned (Community), a pressure group formed in 2001 to defend Welsh-language communities.

Barzaz-Breiz

Hersart de LA VILLEMARQUÉ's *Barzaz-Breiz: Chants populaires de la Bretagne* appeared in 1839. The author, then studying at the École des Chartes in Paris, was a young aristocrat from Kemperle (Quimperlé) on the west coast of Brittany (BREIZH); like other Breton 'exiles' in Paris at the time, he was inspired by the idea of his country's Celtic past. In the absence of medieval manuscripts containing the 'lost' literature and history of the Bretons, La Villemarqué turned to oral tradition, and began collecting songs from the farm workers and itinerant beggars of his native region. This raw material was then worked up into 53 pieces, spanning several hundred years, and beginning with a 'fifth or sixth century' prophecy attributed to the BARD Gwenc'hlan. The second edition would push the timescale back into the era of the DRUIDS.

La Villemarqué worked on the *Barzaz-Breiz* for much of his life. In 1845 he published an expanded version with 33 new pieces; in 1867, he added three more. He revised the work endlessly, altering wording and spelling, and in the third and final edition relegated the BRETON text to a smaller font at the bottom of the page. The collection includes two sections of religious songs and *chansons de fête* (feast-day songs), but the main category in all three editions consists of the 'historical' narrative BALLADS. All the songs are translated into a heightened, rhythmical prose; early attempts at metrical translation are included as appendices to the earlier editions.

Tunes to the pieces also appear in an appendix, but these 'popular songs of Brittany' are overwhelming presented as erudite texts. A lengthy introduction to the work as a whole puts Breton oral tradition in the context of bardism, classical writings, early medieval history, and the literatures of the CELTIC LANGUAGES; supplementary notes (sometimes several pages long) also support the individual songs. From these it is clear how much La Villemarqué was marked by the work of the poet and antiquarian Edward WILLIAMS (Iolo Morganwg), whose inventive vision of a Welsh bardic past was still widely accepted at the time. La Villemarqué's claims for his own material were unequivocal: the Breton peasantry had not only preserved their language uncorrupted since the 'time of TALIESIN', but they were still singing ballads about ARTHUR, Merlin (MYRDDIN), and the saints and heroes of the early Breton past.

By the late 1860s, as other collectors began to publish their versions of the Breton ballads, such claims were

treated with increasing scepticism. Yet, the debate about the 'authenticity' of the *Barzaz-Breiz* remained a live issue (and indeed a bitter one) until the final decades of the 20th century. This was partly because La Villemarqué chose never to discuss his sources or his methods of editing them: it was not until Donatien Laurent retrieved and partially published the field notebooks in 1989 that any objective discussion of how he had transformed the actual tradition became possible. But the intensity of the debate was also due to the status of the book itself: the *Barzaz-Breiz* became so intimately bound up with the wider cause of restoring dignity to the Breton language and culture that to attack it was easily interpreted as an 'un-Breton' act. Though it now has little worth as a work of Celtic scholarship or as a true reflection of the Breton ballad tradition, the *Barzaz-Breiz* remains a fundamental milestone in any history of Breton cultural identity, as a book that inspired many generations of poets, scholars, and folklorists to discover and describe Brittany's past.

Mary-Ann Constantine

Basse-Yutz, Moselle, France

Around 4 pm on a day in November 1927, six railway labourers unearthed a pair of beaked bronze flagons, together with two mid- to early 5th-century Etruscan stamnoi. Unsubstantiated rumours at the time suggested that other objects, such as a TORC and a belt plate, had also been excavated and sold. Instead of reporting their find to their superiors, the two Venner brothers took them home, falsified their provenance and tried to find a buyer. The Musée de Metz, to which the find was offered, showed no interest in purchasing them, but did take photographs in its courtyard in February 1928. There were also claims that the flagons were either modern objects looted from northern Italy during the First World War by German troops, or that they were, at oldest, Romanesque. A local antiquarian, M. le Baron de la Chaise, purchased them, probably on 16 February 1928, through his secretary, Mme Blum, and attempted to give them a false provenance of Bouzonville. On 29 February one flagon was taken to the Musée du Louvre by a 'Russian lady', possibly Mme Blum, who attempted to sell them for 3000 francs, but was met with a refusal, though the Museum would have accepted them as a gift. At the Musée des Antiquités Nationales, the Conservateur-en-Chef, Salomon Reinach, is thought to have doubted the antiquity of the find. In spring 1928 the flagons were sold to a Parisian dealer, M. Stora, for 65,000 francs. Stora sold them for 125,000 francs to the London and New York firm of Durlacher, which offered them to the British Museum. There, Reginald Smith, who had become Keeper of British

Basse-Yutz, Moselle: detail of the face on the base of the handle of flagon 2, width of face 36 mm, British Museum, London

Basse-Yutz, Moselle: the 1927 find, maximum height of flagons c. 400 mm, British Museum, London

and Medieval Antiquities in December 1927, recognized their importance and raised money to purchase them in July 1928. They have never since been back to France.

The flagons are unique in pre-Roman La Tène art in being a matched pair. The majority of La Tène A flagons have been found singly, and the two recently found in different graves during excavations at the Glauberg, Hesse, are quite different from one another. Secondly, the Basse-Yutz pair are embellished with both coral and red enamel, while the similarly profiled Kleinaspergle, Borsch, Dürrnberg Grave 112 and Glauberg Barrow 1, Grave 1 wine jugs lack any inlay at all.

Each Basse-Yutz flagon handle is formed of a bitch or wolf standing on its hind legs, while two alert puppies lie in front, one on each side of the rim. On each flagon's raised beak swims a duck, while adorning the base of each handle is a mask-like, moustachioed human face. Edging the beak and mouth, below the throat and around the bottom of each jug are bronze lattices containing rectangular pieces of coral. More elaborate coral-filled lattices were attached to the flagons' throats and slipped on before each foot was attached by means of small rivets. Red enamel (more correctly opaque red glass) was used on the top of the stoppers and in the manes of the beasts. The stoppers were originally attached firmly to the jugs by means of a bayonet fitting, but, when this corroded, a chain was added to secure them to the lower jaw of the handle animal. Flagon 2 shows recent damage, repaired by roughly soldering a plate to the interior of shoulder and neck, the insertion around half the neck on the handle side of an interior support plate and the use of solder around most of the join of shoulder and neck. There is no record of this before the flagons were examined by Professor H.-J. Hundt of the Römisch-Germanisches Zentralmuseum, Mainz, and Peter Shorer of the British Museum in 1973, but it is likely that the flagon was damaged at the time of discovery and repaired in France before being offered for sale to the Louvre and later the British Museum.

The body and foot of both flagons were beaten up from a single sheet of a 90% copper–10% tin alloy, and then burnished. The same alloy was used for the frameworks between which the coral was held in place on top, foot and throat. Cast elements, such as the

animals, are all of a leaded tin-bronze, which contains similar amounts of trace elements in both flagons. Resin lines the interior of each flagon, holding on the base and almost filling the spout. Of ten samples of the residue in Flagon 2, two from the fill were mostly clay, while the rest, taken from the lining, show beeswax, pine resin, glucose, fructose and sucrose, suggesting that honey was used as a sweetener for WINE. Of three samples taken from Flagon 1, none showed sugars, though clay and beeswax were present. Wax and pollen were also found in the Glauberg flagons. Tests of tool marks used to drill the eyes of dogs and ducks show that the same complex three-part bit was employed on both Basse-Yutz flagons, as too were other tools used.

Imagery used on the Basse-Yutz flagons is much less menacing and grotesque than that on the similarly profiled bronze flagons from Glauberg Grave 1 or the Dürrnberg. The dogs are realistic and alert, but not immediately threatening. The unconcerned duck may be a male red-crested pochard or tufted duck, possibly depicted as an embryo with papillae rather than feathers. Similarities of the flagons' decoration with features of Glauberg Flagon 2 can be seen in the Hathor-wigged head at the foot of the handle with its palmette crown, in the shoulder and haunch spirals on its lid animal, and the dotted edging. This suggests a date related to those of the Glauberg flagons, which are currently estimated to be 5th century BC, with Flagon 1 earlier than Flagon 2, since beaked flagons are normally earlier than spouted, putting Basse-Yutz also in the 5th century BC. Stylistically and in the use of coral closest to the flagons is material from the first princely grave of Weiskirchen giving rise to the view that the flagons may have been made in the Hünsruck-Eifel region (see WEISKIRCHEN with illustration).

Bath

The Roman settlement at Bath in the west of England was known to the Romans as *Aquae Sulis* 'the waters of SŪLIS', a name reflecting the hot mineral springs of the locality presided over by the native deity, Sūlis. Bath is situated on a bend in the river Avon at a point where the river cuts deeply through the limestone of the Cotswold ridge. It lies at an important route node, as well as at a place renowned for three remarkable hot-water springs that break through the ground within 150 m of each other.

In all probability the springs were revered in the pre-Roman period, but later building work, from the Roman period to the present day, has obscured, and in places destroyed, all trace of earlier structures. Excavations in the King's Bath spring have, however, recovered a small number of Late IRON AGE coins, together with evidence of a rubble causeway built out through the marsh to the spring head, implying some level of activity at about the time of the Roman conquest (AD 43–*c.* 50) or a little before (see COINAGE; WATERY DEPOSITIONS). The strongest evidence for Iron Age use, however, is the native deity's name Sūlis, which persists throughout the Roman period, usually conflated with that of Minerva (see INTERPRETATIO ROMANA).

In the years immediately following the Roman conquest of AD 43 a system of ROADS was laid out which converged on the river crossing to the north of the springs. Somewhere in this vicinity, possibly at Bathwick to the east of the river, the army built a fort, one of many along the frontier road, the Fosse Way, which, at the time, marked the limit of the conquered south-east. Within a few years, however, the army had moved on and Bath was left to develop as a civil settlement. The road crossing became the focus of the urban development, while the springs to the south were to become the centre of a healing sanctuary dedicated to Sūlis Minerva.

The early religious complex, dating to the Flavian period (AD 69–138), comprised a classical tetrastyle temple in Corinthian style fronted by a paved court containing the sacrificial altar. Immediately to the south lay the sacred spring (later, the King's Bath), at this time open to the sky, with a suite of baths just beyond, dominated by a large swimming bath filled with a constant flow of hot mineral water. There is some evidence to suggest that a theatre may have occupied the site immediately to the north of the temple. The complex continued to develop throughout the Roman period, the most notable modifications being the extension of the temple, the enclosing of the spring in a

Head of a supernatural being, showing an amalgamation of Classical and Celtic iconography, from the pediment of the temple of Sūlis Minerva at Bath, England

massive vaulted chamber, and the building of a tholos (a circular temple) to the east of the main temple during the Hadrianic period (AD 117–38). The two other springs, to the south-west of the main spring, were also fitted out for use.

The most dramatic feature of the religious complex is the highly decorated pediment of the main temple, dominated by a moustached head in a roundel held aloft by two winged Victories, with attributes of Minerva, an owl and a Corinthian helmet, below. The head has similarities to depictions of river gods and to Oceanus, suggesting watery connotations which would be entirely appropriate in this context.

Many other sculptural fragments have been found which reflect the rich iconography of the temple precinct. The south side was dominated by a pediment depicting the sun god Sol, while the north side presented Luna, goddess of the night sky. The neatly balanced symbolism opposes the light, hot, male-dominated southern hemisphere with the dark, cold, female-dominated northern hemisphere, the two facing each other on either side of the axis on which the temple and the altar were built. It is a symbolism redolent of the power of the presiding deity.

The sacred spring was the place where suppliants could communicate with the deity. They did so by throwing offerings into the water some of which were recovered during excavations in 1979 and 1980. Most prolific were coins, but there were also libation vessels of pewter and silver, a range of other small offerings, and curses inscribed on sheets of pewter. Most of the personal names on these *defixiones* (curse tablets) are Roman, but there is also a significant proportion of Romanized Celtic names, for example, *Andogin, Alauna, Belcatus, Brigomalla, Britiuenda, Brituenda, Catinius, Catonius, Cunitius, Cunomolius, Deomiorix, Docca, Louernisca, Mattonius, Matutina, Moriuassus, Riouassus, Senouara, Ualaunecus, Ueloriga, Uelualis, Ueluinna, Uendibedis, Uindiorix*, and the probably Celtic *Belator, Cantisenna, Docimedis, Enica, Mallianus, Methianus, Petiacus, Uricalus*. Two of these texts inscribed in Roman cursive are not in Latin, and it has been suggested, but not proved, that they are in continuous BRITISH (Tomlin, BBCS 34.18–25). INSCRIPTIONS from the town show that pilgrims came to Bath from many parts of Europe. Inscriptions from Roman Bath attest other Celtic divine names, for example, LOUCETIOS (cf. Welsh *lluched* 'lightning') equated with the Roman Mars and NEMETONA, goddess of sacred privilege (see NEMETON).

In the Anglo-Saxon Chronicle, we are told that the Saxons of Wessex defeated and killed the BRYTHONIC kings Fernmæʒl, Coinmæʒl, and Condidan at Dyrham in 577 and, as a result, took the old Roman towns of Gloucester, Cirencester, and Bath. The usual conclusion

drawn from this notice is that the Bath area had been under the control of the dynasty of one of these Welsh kings until that date. However, the once common idea that the Britons of DUMNONIA were decisively cut off from those of Wales (CYMRU) with this battle is no longer widely believed. The Modern Welsh name for Bath, *Caer Faddon*, and the equation with the site of the battle of BADONICUS MONS (mentioned by GILDAS, BEDA, HISTORIA BRITTONUM, and ANNALES CAMBRIAE) are found first in the HISTORIA REGUM BRITANNIAE of GEOFFREY OF MONMOUTH and are likely to be his inventions. In sources from pre-Norman England, Bath is called Latin *civitas Aquamania, urbs Achumanensis*, Old English *Hat Bathu, æt Baðum* (referring to the Roman baths), and *Acemannes ceaster*. The Roman road called *Akeman Street* takes its name from the last.

The Battersea shield, recovered from the Thames, London

Battersea shield

This magnificent SHIELD-cover was found in 1857 in the river THAMES near Battersea, London (Green, *Celtic Art* 9). Its most likely date is the 1st century BC, and it was probably offered as a gift to the gods (see WATERY DEPOSITIONS), since it was surely not a weapon used for battle, but for ceremonies (Green, *Celtic Art* 104). The Battersea shield is made of bronze, and at one time covered a shield, 77.5 cm in height, made of organic material (Green, *Celtic Art* 9). It is decorated with the swastika motif—a symbol of good fortune, inlays of red enamel, and either animal heads or human faces between the three circles, which might also have been of symbolic significance (Green, *Celtic Art* 105).

Baz-Gwenrann (**Batz-sur-mer**) is significant as an area near the south-eastern limit of evidence for Breton settlement and BRETON speech in the early Middle Ages and, more recently, as the farthest outpost of the Breton language in the 20th century. The evidence from this area shows that Breton settlement extended eastward beyond what had been the old CIVITAS of the Veneti (the pre-Roman tribe which gave its

name to GWENED/Vannes) into the lands of their neighbours, the Namnetes (NAONED/Nantes), and proved culturally resistant there (see ARMORICA). The place-name is listed as *insula Baf* in three charters in the Cartulary of REDON: charter 60 dating to 853×64, charter 84 of 862 (where there is also the variant spelling *Uas*) and charter 98 of 866. Baz-Gwenrann itself is a quasi-island and in early times was effectively cut off from the mainland by wet lowland. The Breton community of *plebs Uenran* was situated on the mainland immediately to the east, and is named in charter no. 26, dating to 857.

The dialect was covered in Le Roux's *Atlas linguistique de la Basse Bretagne* (1924–63), where Bourg de Batz is the only Breton-speaking community recorded beyond the river Gwilen/Vilaine. The place does not appear in Le Dû's *Nouvel atlas linguistique de la Basse-Bretagne* (2001). The dialect was considered a fairly extreme and marginal form of Gwenedeg (Vannetais; see BRETON DIALECTS), revealing the linguistic impact of its isolated position and generations of close contact with monolingual French-speaking communities (Jackson, *Historical Phonology of Breton* 18–19).

The same place-name element occurs also in western Brittany (BREIZH) for the island of Enez Vaz/Île-de-Batz, which is recorded in a source of 884 as *Battha*. Thus, the name seems to signify an island and may or may not be related to Modern Breton *bazh* 'stick'. The second qualifying element of the Breton name *Baz-Gwenrann* thus distinguishes this place from the other island so named in the west.

Béaloideas (Oral tradition) is the Journal of the Folklore of Ireland Society (*Iris an Chumainn le Béaloideas Éireann*). Established in 1927, the journal is published annually and contains articles, both in IRISH and in English, on all aspects of Irish folklore. The journal has been selectively indexed by the Modern Language Association (MLA) in its international bibliography of books and articles on modern languages and literatures.

bean sí / banshee

Although in origin a patron goddess with a variety of contrasting attributes and functions, the banshee of folk tradition has become essentially a foreboder of death in certain families. Throughout Ireland (ÉIRE), she is popularly said to perform that function by crying and lamenting, though in the south-east her sound can also have frightening and threatening qualities (see LAIGIN). Belief in the manifestation of the banshee persists in contemporary Ireland, both urban and rural.

Her most common name is 'banshee', Irish *bean sí* (earlier *ben síde*), 'woman of the OTHERWORLD', although she is also sometimes known as *bean chaointe*, 'keening woman', which describes her behaviour, or *Bodh* in the south-east. Her cry, variously termed a wail, lament, or *olagón*, is said to be plaintive in the extreme, and to represent family and community grief.

In folk tradition, a variety of criteria (loudness, repetition, movement, the effect on hearers) serve to distinguish the cry from human or animal sounds. Its occurrence at transitional or liminal times, such as at twilight, midnight or dawn, and in liminal places, such as at the boundaries of the dying person's farm or townland (*baile fearainn*, a small-scale Irish territorial unit), or at nearby water sources such as wells, streams or lakes, tends to further strengthen its perceived supernormal character. It is most strongly associated with the old family or ancestral home and land, even when a family member dies abroad. The cry, linked predominantly to impending death, is said to be experienced by family members, and especially by the local community, rather than by the dying person. Death is considered inevitable once the cry is acknowledged.

Always depicted as a solitary being, the banshee is generally imagined as an old woman, small in stature, with long white hair—an image probably reflecting her perceived ancestral status in the family she 'follows' and her connection with death. In south-east Ireland, she can also be envisaged as a tall, beautiful young woman—a depiction reminiscent of Otherworld

women in medieval IRISH LITERATURE, or of the *sí-bhean* of 18th-century AISLING or 'vision' poetry (see VISION LITERATURE). Regarded as an outdoor being, most often dressed in a white cloak, she is also said to be bareheaded. In much of eastern Ireland, the banshee is imagined to comb her hair, a trait which has given rise to a popular legend about the loss and recovery of her comb. In Co. Galway (Contae na Gaillimhe) and border regions of neighbouring counties, she is said to be washing a garment in a stream, thus paralleling the washing activity of the death-foreboding *bean-nighe* in Gaelic Scotland (ALBA), the *kannerezed noz* in Brittany (BREIZH), and of Otherworld women in Irish literature. In a number of texts in the IRISH language, ranging from the Medieval to the Early Modern Irish periods, the *badhbh* forebodes violent death in battle by washing the blood-stained garments of those who are fated to die. That there is a connection between this and the later folklore of the banshee is especially indicated by accounts recorded from the 20th-century oral tradition of Co. Galway, which suggest that the banshee was encountered as a washerwoman beating clothes in a stream on the eve of the battle of Aughrim 1691 (Lysaght, *Banshee* 197–202; Lysaght, *Concept of the Goddess* 160–3).

Traits in the modern traditions of the banshee suggest an analogy with a goddess-figures in medieval Irish literature who conferred sovereignty on, and protected the rulers and inhabitants of, their particular areas (Lysaght, *Concept of the Goddess* 158–60; see also SOVEREIGNTY MYTH). Of central importance in this regard is her connection with families. Traces of the idea that she limits her attention to particular noble Irish families and to their chieftains or heads are still discernible. Her connection with land, patrimony, and identity is pronounced, thus echoing the powerful poetic evocation of this sort of connection with noble families in 17th-century Ireland when confiscations and plantations fundamentally changed land ownership and the ethnic profile of much of the country (see ASCENDANCY).

Piaras Feiritéir (*c.* 1610–53), in his elegy for a member of the Fitzgeralds, a noble Norman-Gaelic family, portrays Áine of Cnoc Áine (Knockainey) as proclaiming his death by crying, and the banshees of the various districts that belonged to the Fitzgeralds in Co. Kerry (Contae Chiarraí) lamenting him as well. He also chides the merchants of the area for imagining that banshees might cry for them. (Ua Duinnín, *Dánta Phiarais Feiritéir* 73–4). The connection between land, family, and banshee is very clear here. Áine, depicted as a weeping *bean sí* foreboding death, was regarded in the literary tradition as a territorial goddess of north Munster (MUMU), and the ancestress of the Fitzgeralds, according to poetic tradition. This sovereignty figure is here fulfilling the role of death-foreboder.

Five centuries earlier, at the battle of Clontarf in 1014, according to the traditions surrounding BRIAN BÓRUMA, high-king of Ireland, the sovereignty figure Aoibheall of Craglea, Co. Clare (Crag Liath, Contae an Chláir), patroness and protectress of the DÁL GCAIS sept (from whom Brian Ború and the O'Briens arose), foretold that he would be killed in that conflict, and who would succeed him as king (Todd, *Cogadh Gaedhel re Gaillaibh / The War of the Gaedhil with the Gaill* 200, Hennessy, *Annals of Loch Cé* 8).

Earlier still—in the 8th-century prose tale *Táin Bó Fraích* (see ULSTER CYCLE)—the impending death of the hero, Fraoch mac Idath, is foretold by the cries of Otherworld women, especially by his mother, the divine *Bé Find* 'the white woman', sister of *Bóinn*, eponymous goddess of the river Boyne (BÓAND; see Meid, *Táin Bó Fraích*).

Sovereignty goddesses are depicted in the literature as having a range of functions in relation to the rulers and inhabitants of their areas (Mac Cana, *Celtic Mythology*, 85–95), including protectors of the territory. Thus, the territorial goddess is also depicted as a war goddess, and is frequently called *Badb* (modern *Badhbh*; earlier BODB, designation of a war goddess) in early Irish literature. In south-east Ireland, the banshee is also known by various dialect forms of the word Badhbh, and her cry is sometimes recorded as *béic* (shout), *scréach* (screech), 'roar' or 'shriek'.

The sovereignty goddess is also depicted, like the goddess Mór Mumhan (Mac Cana, ÉC 7.79–90), or the *sí-bhean* of the allegorical *aisling* or 'vision' poems of the 18th century (De Bhaldraithe, *Measgra i gCuimhne Mhichíl Uí Chléirigh* 214–15), as appearing after death to mourn a dead leader, her mystical spouse. This rôle is only marginally and circumstantially reflected in the modern folk traditions of the banshee, which emphasize her announcement of impending death.

Beann Char (**Bangor**, Old Irish Benn Chor), Co. Down/Contae an Dúin, on Belfast Lough was the site of an important early monastery of which there is almost no trace today, except for some battered stone fragments and a sundial (see MONASTICISM). It was founded around 555–9 (according to the Annals of Ulster) by Comgall moccu Aridi of the Dál nAraidi (see CRUITHIN), the first of an unbroken line of abbots until the 12th century. Born in the 510s, his death is recorded as 10 May (*Martyrology of Tallaght*) 601–2 (Annals of Ulster). The monastery's fame spread widely because the great missionary saint COLUMBANUS lived there until *c.* 590 when he went to GAUL. In the 640s Jonas of Bobbio wrote of its virtues and of Comgall's influence and teaching. At the end of the 7th century ADOMNÁN wrote of COLUM CILLE's friendship with Comgall and, even if this cannot be verified, it shows how Adomnán's Iona (EILEAN Ì) regarded Bangor. Comgall's Rule (not extant) is praised in several places, and we probably see parts of it beneath Columbanus's *Regula Monachorum*; if so, it was a document portraying perfection (a 'mirror'-type rule) for its followers, rather than a set of regulations.

During the 7th century, Bangor was a centre of scholarly activity. Its third abbot, Sinlan moccu Mín, was remembered as being an expert on computistics (the calculation of the Christian calendar and the date of Easter, in particular; see EASTER CONTROVERSY), and he may have been influential in the development of Irish-style ANNALS from world chronicles. He, like Comgall, is praised in 7th-century Bangor hymns. From this period also many other hymns survive and, more importantly, the Antiphonary of Bangor, a key to understanding the liturgy in the Celtic lands.

Bangor had disappeared by the 10th century, having suffered from Viking raids, although there was still a *comarba* (heir of founder), and to this office Mael Maedóc (Malachy) succeeded in 1123. On its abandoned site, he established a community of Augustinian Canons. Having moved there himself in 1136, he dominated Irish church affairs from there, and it was through Bangor that he introduced the first Cistercians to Ireland (see CISTERCIAN ABBEYS IN IRELAND) after 1139.

On the place-name *Benn Chor*, see BANGOR (GWYNEDD).

Beatha Mhuire Eigiptacdha (The life of Mary of Egypt) is attested in Ireland (ÉIRE) in three recensions. Recension 1 is a 15th-century adaptation, probably by Uilliam Mac an Leagha, of an unknown English(?) source. It is transmitted in a single manuscript. Further religious texts in the same manuscript—*Beatha Labhráis* (Life of St Lawrence), *Beatha Ciricus agus Iúlite* (Life of Quiricus and [his mother] Iulita), *Beatha Iacopus Intercisus* (Life of Iacobus Intercisus), *Argainn Ifrinn* (Harrowing of hell)—exhibit very similar linguistic and stylistic features, and Mac an Leagha, one of the most prolific scribes of the 15th century, is therefore considered to be the translator of this group. His adaptations of secular texts (*Stair Ercuil* [see HERCULES], STAIR BIBUIS) share linguistic and stylistic characteristics with his religious adaptations. Recension 1 of *Beatha Mhuire Eigiptacdha* is written in a prose style which relies for effect, in descriptions and characterizations, on conscious and refined ornamentation, the main features of which are groups of (near-) synonyms and strings of alliterating modifiers. It is an exemplum on the necessity of repentance and reform, in monastic as well as in secular life. Recension 2 is based on the *Legenda Aurea* (The golden legend), a Latin hagiographic legendry composed by Jacobus de Voragine *c.* 1263–73. Recension 3 is a short (unpublished) exemplum in the context of texts concerned with the powers of the Virgin Mary. On the independent Middle Welsh version, *Buchedd Mair o'r Aifft* (Life of Mary of Egypt),

which survives in a 14th-century manuscript, see HAGIOGRAPHY.

Beda / Bede, the monk of Jarrow and Wearmouth in northern England, is Britain's most famous scholar of the early Middle Ages, and his influence on the intellectuals of the period can hardly be overestimated. His name is variously *Beda* or *Bæda* in contemporary sources, and *Bede* is modern English. Our knowledge of Beda's life is based on a chapter in his *Historia Ecclesiastica Gentis Anglorum* of 731 (5.24) and a letter by his pupil Cuthbert about his death (Colgrave & Mynors, *Bede's Ecclesiastical History of the English People, De obitu Baedae* 581–7). Oblated to the monastery of Wearmouth as a boy of seven, Beda spent his whole life there—researching, teaching, and writing. His intellectual horizon was exceptionally wide, and he excelled in almost every aspect of early medieval thought. His commentaries on the gospels according to Mark and Luke, as well as his other exegetical works, were handed down in a rich manuscript tradition. He was a well-known theologian and was often used throughout the Middle Ages, earning the respectful epithet of *venerabilis* 'venerable, worthy of respect' (Lehmann, *Historisches Jahrbuch* 49.222–6). On the basis of ISIDORE of Seville and PLINY, Beda wrote a cosmographical work (*De Natura Rerum, c.* 703). The observation of nature led him to another area, the reckoning of time, on which he seems to have read especially southern Irish treatises favouring the Roman reckoning (see EASTER CONTROVERSY; Wallis, *Bede, The Reckoning of Time* lxxii–lxxix). Because of the disputed dating of Easter, this was of special interest for the early medieval clergy. Beda's computistical *opus magnum, De Temporum Ratione* (725), set the standard for medieval chronology. From computistics, he finally reached historiography, in which he introduced the Christian Era as invented by Dionysius Exiguus (who, in AD 532, came up with the idea of dating years from the birth of Jesus). Beda began his career as a historian with a life of the famous Northumbrian Saint Cuthbert and a history of the abbots of Wearmouth. He finished the *Historia Ecclesiastica*—the most important source on early medieval BRITAIN and the first comprehensive work on the history of Britain after GILDAS—in 731. It includes important information on the peoples of Britain—divided, on linguistic basis (*Historia Ecclesiastica* 1.1), into PICTS (*Picti*), Scots (*Scotti* = Irish, Gaels), Anglo-Saxons (*Angli*), and BRITONS (*Brettones*)—and the history of the Anglo-Saxons' conversion to CHRISTIANITY.

Beda's perspective is influenced by his preoccupation with the Old Testament and his impetus to use history as a moral example (Mayr-Harting, *Historiographie im frühen Mittelalter* 367–74; McClure, *Ideal and Reality in Frankish and Anglo-Saxon Society* 76–98; Wallace-Hadrill, *Frühmittelalterliche Studien* 2.31–44; Wormald, *Bede and Anglo-Saxon England* 32–95). In this work the term *Angli* (that is, 'English'), as opposed to *Saxones*, is used for the first time for all the Germanic peoples in Britain, in spite of the fact that several of the Anglo-Saxon dynasties had Saxon, rather than Anglian, tribal origins. Beda cites the authority of Pope Gregory the Great for this generalized use of *Angli*. The best measure for the immense reception of Beda's concept is the fact that the term 'English' had been adopted by the 9th century (Cowdrey, *Journal of Religious History* 11.501–23; Richter, *Peritia* 3.99–114; Wormald, *Journal of Historical Sociology* 7.1–24). Beda's perspective, and the information he gives, has influenced modern ideas on the period to a high degree, as can be exemplified by the notorious *bretwalda* concept. From Beda's comment on the *imperium*-wielders of Britain (*Historia Ecclesiastica* 2.5), later glossed in Anglo-Saxon as *bretwalda*, translated as 'powerful ruler', modern historians have inferred a formal institution overlordship in early medieval Britain, possibly influenced by the Celtic ideas of a high-king or overking (Higham, WHR 16.145–59; Higham, *English Empire*). Among these possible Celtic forebears for an ideology of high-

kingship, Adomnán wrote in the 690s of Oswald of Northumbria (†642) as *imperator totius Britanniae a deo ordinatus* 'emperor of all Britain ordained by God' (*Vita Columbae* 1.1). Adomnán accorded a similar dignity to the Irish king, his kinsman, Diarmait mac Cerbaill (†565; *Vita Columbae* 1.14). Some writers have also seen such far-reaching authority—whether real or wished for—as implicit in the office, and perhaps the title, of Gwrtheyrn of Britain (the *superbus tyrannus* of Gildas), who is said to have settled Anglo-Saxon mercenary troops in areas of Britain that he did not rule directly. But, since Beda is the only source for this *bretwalda* concept on the Anglo-Saxon side, it has been treated with scepticism for its meagre basis (Keynes, *Voyage to the Other World* 103–23) and has been abandoned by some scholars. The *imperium* that Beda attributes to some early Anglo-Saxon rulers is now usually understood as an expression for a general hegemony that was not rooted in any particular title or idea of state (Fanning, *Speculum* 66.1–26; Wormald, *Ideal and Reality in Frankish and Anglo-Saxon Society* 99–129).

Beda's *Historia Ecclesiastica* has long had the reputation of being an exceptional work which almost accomplished the standards of modern objective historians and, for this reason, was highly esteemed in the 19th and early 20th centuries (see, for example, Levison, *Bede* 111–51). It has since been pointed out that Beda's purposes in writing the *Historia* were far more complex than the correct reproduction of historical events and that he arranged the facts accordingly (Goffart, *Narrators of Barbarian History*; Sims-Williams, *Anglo-Saxon England* 12.1–41). Nevertheless, with so few other comparably informative sources for the period, Beda's *Historia Ecclesiastica* remains the most important single source for Britain in the early Middle Ages, and attempts to write the history of early medieval Britain contrary to the Bedan evidence have failed to gain wide agreement (Higham, *English Empire*; Rollason, *History* 83.119–20).

Beda's relation to the Celtic peoples appears foremost in his historical works (Charles-Edwards, *Celtica* 15.42–52; Duncan, *Writing of History in the Middle Ages* 1–42; Pepperdene, *Celtica* 4.253–62; Thacker, *Beda Venerabilis* 31–59). Beda gives little information about the Picts, but seems rather well inclined towards them, since he blames the Northumbrian king Ecgfrith for the battle at Nechtanesmere (20 May 685) against his fellow Christian Picts and elaborates on the efforts of the Pictish king Nechton son of Derelei to submit to the correct Easter date.

Beda's attitude towards the Britons, i.e. the Welsh, is far more antagonistic. He adopted the negative characteristics he found in Gildas, and additionally reproached them for allegedly not trying to convert the Anglo-Saxons to Christianity. For this reason, the Britons in Beda's work play the rôle of the fallen people against whom the *Angli* are set as the new chosen people of God (Hanning, *Vision of History in Early Britain*), and no missionary efforts of the Britons are mentioned. Even his selection of the peculiar and substandard spelling *Brettones* for this people can be understood as motivated by Beda's desire to separate as much as possible the name of the island of Britain, *insula Britannia*, from that of its native inhabitants, who are usually called *Britanni* or *Brittones* in early medieval Latin sources. In other words, Beda would wish that his readers not infer that the Welsh Britons were British *par excellence*.

His attitude towards the Irish is ambiguous. On the one hand, he thinks very highly of them, their piety and their missionary efforts, especially those emanating from Iona (Eilean Ì) to Beda's native Northumbria. In this respect, his account on the Irish missionaries and holy men is an important addition to the information about Roman-influenced missions we get from other sources. On the other hand, there can be no doubt that Beda disagreed with the Irish clerics of Iona, especially on the question of the correct Easter date, and placed special emphasis on the Roman mission initiated by Pope Gregory the Great (Prinz, *Angli e Sassoni al di qua e al di là del mare* 701–34). For this reason, his *Historia Ecclesiastica* ends with the conversion of the monastery of Iona to Roman Easter (*Historia Ecclesiastica* 5.22), which signifies the merger of Irish and Roman traditions and the reunification of Christendom in Britain.

Bedwyr fab Pedrawg, together with CAI fab Cynyr, is one of the earliest Arthurian heroes. The two are closely associated in Welsh tradition, and both Bedwyr and Cai survive the translation into French, and thence English, ARTHURIAN literature as Sir Bedivere and Sir Kay. Bedwyr is mentioned in the poems PA GUR YV Y PORTHAUR? and *Englynion y Beddau* ('The Stanzas of the Graves'; see ENGLYNION), in the Welsh TRIADS, and in the early Welsh Arthurian prose narrative, CULHWCH AC OLWEN. Bedwyr is described as one of the three fairest men in Britain, along with ARTHUR and Drych ('mirror' or 'visage'). He has a spear whose head can leave the shaft, draw blood from the wind, and return to the shaft. He and Cai are involved in the rescue of MABON son of Modron and the killing of Dillus the Bearded. Both Cai and Bedwyr appear in the Life of Saint CADOC as Arthur's companions, where they witness King Gwynllyw's rape of the young woman Gwladus and restrain Arthur from taking her for himself. Later, they attempt to receive the red and white cattle demanded by Arthur, but find themselves in the middle of a ford, the cattle turned into handfuls of fern at their touch. In GEOFFREY OF MONMOUTH's HISTORIA REGUM BRITANNIAE ('The History of the Kings of Britain'), Arthur's *pincernus* (butler or cup-bearer), Beduer, is given Neustria (northern France) by Arthur as a reward; Key is given the neighbouring territory of Normandy.

Bedwyr's name is probably a derivative of *bedw* 'birch trees', thus implying a Celtic compound **Betwo-rīχs* 'birch-king'; his father's name may be Pedrawc (based on Latin *petrus* 'stone') or Pedrawt (based on Celtic **kwetru-* 'four'). Bedwyr's son, Amren (cf. Arthur's son Amr, mentioned in the marvels of HISTORIA BRITTONUM), and his daughter, Eneuawc, are mentioned in the Welsh ROMANCES, but nothing else is known about them.

Behan, Brendan (**Breandán Ó Beacháin**, 1923–64) was an Irish author who wrote both in the IRISH language and in English. Born in Dublin (BAILE ÁTHA CLIATH) into a republican family, he was already actively involved as a teenager in the republican movement (see NATIONALISM; IRISH REPUBLICAN ARMY). In the autobiographical *Borstal Boy* (1958), begun in 1941, Behan describes life in an English juvenile reformatory institution, where he spent three years due to his involvement in terrorist operations. While incarcerated at Mountjoy Prison, Dublin, where he spent five years for the attempted murder of a policeman, shortly after being extradited from England, Behan learnt Irish to a standard that enabled him to write literature in the language. His play *An Giall* ('The Hostage'; 1958) not only formed an important part in the Gaelic revival movement (see LANGUAGE [REVIVAL]) but, ironically, its English version established Behan's reputation as a writer of international acclaim. Behan also wrote other plays, but in later life he preferred anecdotal and witty biographical prose, taken down orally due to his failing health. Apart from his literary fame, Behan was known as a colourful character, notorious for alcoholic excesses, which contributed to his untimely death.

Belenos/Belinos is a Celtic deity whose name is often connected with the Graeco-Roman god Apollo (see INTERPRETATIO ROMANA), although the cult of Belenos seems to have preserved a degree of independence. The Romano-Celtic name *Belenus* or *Belinus* occurs in 51 INSCRIPTIONS dedicated to the god, most of them in Aquileia, the site of his main sanctuary. To this day part of the town is known as Beligna. At the siege of Aquileia by Maximinus (AD 238) the god was seen floating in the air, battling and defending his town (cf. Apollo's defence of Delphi against BRENNOS OF THE PRAUSI in 278 BC). Belenus was often identified with Apollo and seen as a typical Karnian oracle- and healthgiving deity. A votive inscription from Caesarean times by the poet Lucius Erax Bardus is found at Bardonnechia (Alpi Graie). The deity, according to Tertullian (*Apologeticum* 24.7) a typically Norican god, was also worshipped at Bayeux (cf. Ausonius, *Commemoratio Professorum Burdigalensium* 4.7). It can be assumed, therefore, that Belenos/Belinos was one of the Celtic gods whose tradition was primary and thus widespread.

The etymologically difficult name, often interpreted as 'the bright one', has also been connected with Gaulish *belenuntia*, Spanish *beleno*, the hallucinogenic henbane, whose stems and leaves are covered in fine white hair and whose Latin name is *Apollinaris*. Gallo-Roman *belisa* 'henbane' (> German *Bilsenkraut*) seems to appear in the personal name *Belisamarus* (CIL 13.11224) 'great in henbane'. It is not clear whether the very shallow stone dish of Saint-Chamas (Bouches-du-Rhône; RIG 1, G–28), dedicated to Βελεινο *Beleino*, was designed to hold hallucinogenic substances or was the receiving dish of a well (cf. the magic well Barenton < *Belenton*).

The name also appears in BRYTHONIC, for instance on the coins of the Welsh leader Belyn o Leyn (†AD 627) who was the inspiration for GEOFFREY OF MONMOUTH's Belinus, the mythical son of the 'culture hero' Dunwallo Molmutius (HISTORIA REGUM BRITANNIAE 2.17) and brother of Brennius (see BRENNOS OF THE SENONES), conqueror of ROME. Like his father, the mythical Belinus builds an exemplary and peaceful realm. He designs a network of roads and rebuilds the devastated towns. Billingsgate in London, legend has it, was built by and named after him (*Historia Regum Britanniae* 3.10). His reign ushered in an era of growing wealth and peaceful happiness. He built a tower high above the river THAMES, in whose belfry his ashes found a final resting place in a golden urn (cf. the medieval traditions about Caesar's internment). The name of this divine king has been preserved in the personal names CUNOBELINOS > Welsh *Cynfelyn* (the ultimate source of Shakespeare's *Cymbeline*) and **Catubelinos* > *Cadfelyn*, **Lugubelinos* > *Llywelyn* (cf. LLEFELYS).

The **Belgae** were a sub-group of the Gauls whose territory extended from the Seine (Gaulish SEQUANA) to the RHINE (Latin *Rhēnus*), in what is now Belgium, northern France, the Rhineland in Germany, Luxembourg, and the southern Netherlands. STRABO considered tribes as far west as the Liger (Loire), including the Veneti, to be *Belgi* (*Geography* 4.1–3). The Belgae were subdivided into the following tribes: Ambiani, Atrebates, Atuatuci, Bellovaci, Caeroesi, Caletes, CATUVELLAUNI, Condrusi, Eburones, Menapii, Morini, Nervii, Rēmi, Suessiones, Treveri, Veliocasses, Viromandui, and possibly the Parisii (for an explanation of these names, see below §4). Strabo wrote that in pre-Roman times the Belgae had once had about

300,000 arms-bearing men (*Geography* 4.4.3).

§1. BELGAE AND GERMANI

Around 50 BC, Julius CAESAR wrote:

> *. . . plerosque Belgos esse ortos a Germanis Rhenumque antiqitus traductos propter loci fertilitatem ibi consedisse Gallosque qui ea loca incolerent expulisse.* (*De Bello Gallico* 2.4.1)
>
> . . . and most of the Belgae descend from the Germani and had crossed the Rhine in ancient times because of the fertility of the soil and expelled the Gauls who had inhabited this place.

He claimed that many of the Belgic tribes were proud of their 'Germanic' origin, but it should be remembered that the significance of the term *Germani* in Caesar's time was not a linguistic one. Thus, it should not be assumed that peoples identified in Roman times as *Germani Cisrhēnani* (Germans west of the Rhine) were necessarily Germanic in the modern linguistic sense. More probably, the label 'Germanic' in these statements should be taken to mean that some tribal dynasties of Belgic GAUL claimed origins east of the Rhine.

Similarly, the 4th-century Roman historian Ammianus Marcellinus (15.9) quotes the lost work of Timagenes (*fl. c.* 55–30 BC) to the effect that the DRUIDS claimed that some of the population of Gaul was indigenous, but that other groups had been pushed from the east of the Rhine and from islands in the ocean, driven by floods (see FLOOD LEGENDS) and constant warfare.

Linguistically, the territory of these tribes seems to have been predominantly Celtic-speaking, even if some of the minor tribal names are possibly Germanic (*Sunuci, Cugerni*) or of obscure origins (*Segni, Tungri*). Most of the ancient place-names throughout Belgic Gaul are Celtic (e.g. names in *-ācon* 'settlement, estate', *-dūnon* 'fort', *-duron* 'OPPIDUM', *-magos* 'plain' or simply 'place', and *-bonā* 'settlement').

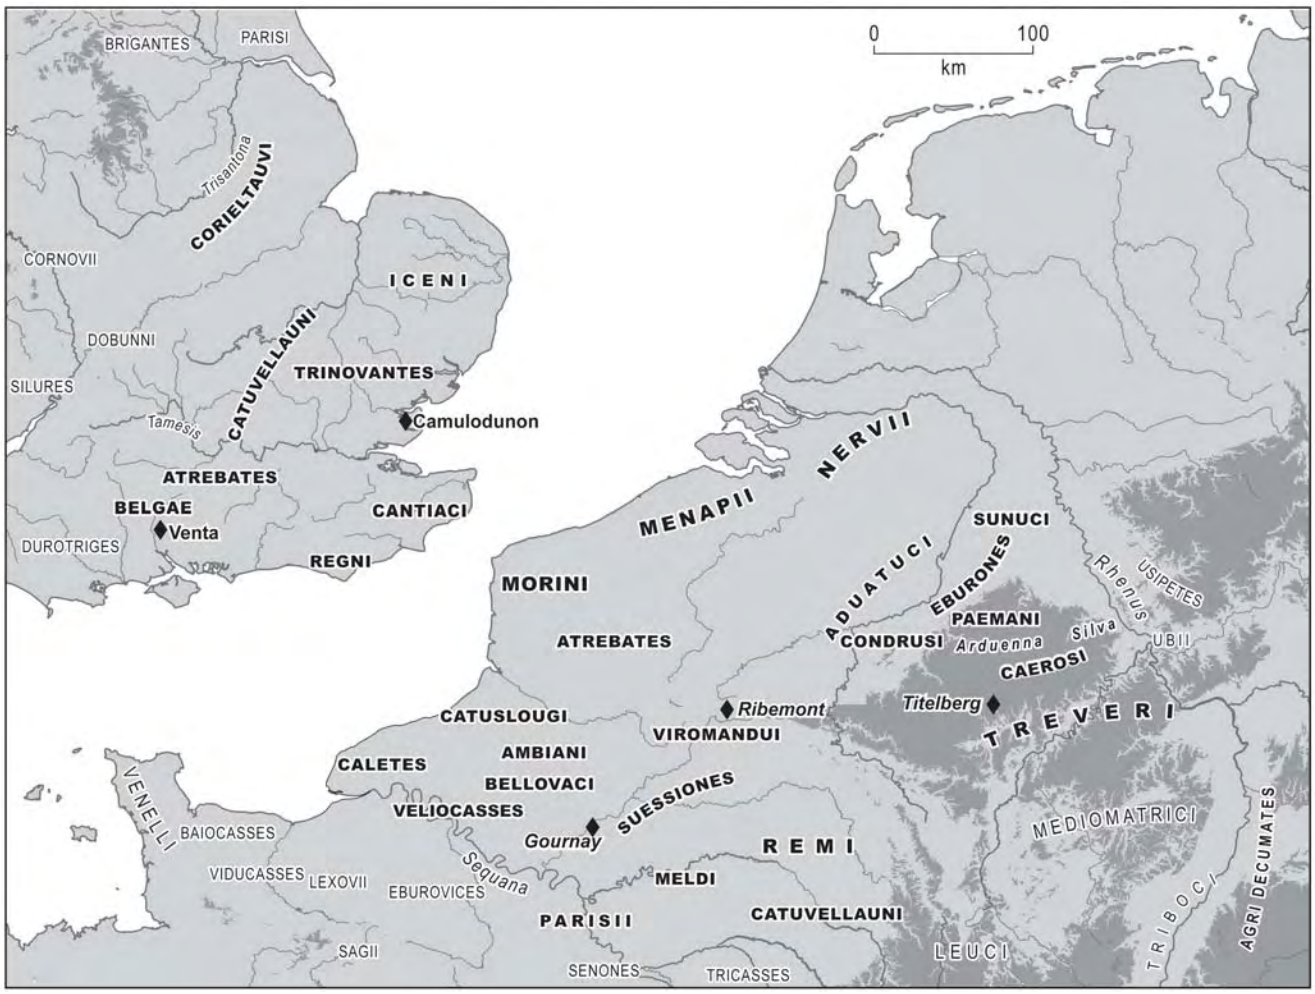
Traces of Celtic have also been identified in the modern languages spoken in the former territory of the Belgae: Walloon (French) and Flemish/Dutch. Walloon shares phonological characteristics with other *Langues d'Oïl* (Northern French), for example the palatalization of /*k*/ and /*g*/. That is, whenever the sounds /*k*/ or /*g*/ occurred before /*a*/ or /*ü*/, they became sounds like English *ch* and *j*, later changing to *ch* /*š*/and *j* /*z?*/ in French. For example, the Latin word *cantus* became *chant* /ᵗšant/ in medieval Norman French, and hence English, and *chant* /*šæ*/ in standard French; it is still *tchant* /ᵗšant/ in Walloon. These features are also found in Rhaeto-Romance dialects (see also ROMANCE LANGUAGES). East Walloon has a phonological feature which is also found in British—a secondary /*h*/ from /*s, š*/, like *prîhun* < *prisun, hoûter* < *chouter* < *écouter* (Remacle, *Le problème de l'ancien Wallon* 30). Coastal Dutch dialects preserve similar phonological features: some dialectal words have initial /*h-*/ instead of /*s-*/, as in *Helinium,* a place in the Netherlands, from Celtic **salēn-* < **sel-* 'salt' (Welsh *halen*). Generally, in Dutch /*u*/ > /*ü*/. Further, in Coastal Dutch a vowel is shortened before /*p*/, /*t*/, /*k*/, or [m], exactly as in the BRYTHONIC languages (Schrijver, *North-Western European Language Evolution* 35.3–47; Toorians, *Keltisch en Germaans in de Nederlanden* 99–100). This evidence suggests a particularly close link between the language of Belgic Gaul and BRITISH (the language that became BRETON and WELSH).

Some tribes may have been of heterogeneous origin, for example the Aduatuci, who were a remnant of the CIMBRI AND TEUTONES according to Caesar (*De Bello Gallico* 2.29). These tribes are usually regarded as Germanic, although the name *Teutones* is Celtic (see also TUATH; TEUTATES). (The similarity between *Cymru* 'Wales' and *Cimbri* is, however, coincidental.)

§2. ARCHAEOLOGY

Archaeological evidence shows that the Belgae of Caesar's time and the preceding century had a Late LA TÈNE culture. For example, the MATRONAE cult in the Rhineland and the La Tène objects of NIEDERZIER reflect intensive contacts between *Gallia Belgica* and the regions east of the Rhine on the one side, and with Britain and western Gaul on the other. The existence of *Zangentore* (a specific pincer-shaped form of gate found in La Tène *oppida*) in Závist, Bohemia, as well as in Belgic *oppida* (for example, Fécamp) further implies that the central European Celts and Belgae formed a single cultural region.

Recent archaeological research has provided important evidence about the trade relations, material culture, religion and political organization of the Belgae. Rēmi, Suessiones, and Treveri have proved particularly rich in luxury items acquired through trade contacts with



Tribes in the Belgic areas of Gaul and Britain are shown in bold type

the Mediterranean in late pre-Roman times. The principal trade route linked the Belgic tribes to the south by way of the Aedui and other tribes in the Rhône valley. Recently-excavated Belgic ritual sites, including Ribemont-sur-Ancre and Gournay-sur-Aronde, throw light on religious customs from the 2nd century BC down to Roman times. Classic examples of proto-urban fortified sites (*oppida*) in Belgic Gaul, which include Fécamp and Titelberg, indicate the elaborate social organization of the Belgic tribes.

On the eve of Caesar's conquest of Gaul, some key Belgic tribes (e.g. the Bellovaci of the Beauvais area) belonged to the confederation of the Aedui. During Caesar's campaign in Gaul the Belgic tribes joined several alliances with the Gaulish tribes who opposed the Romans (see arverni).

§3. the belgae in britain

The Belgae were a highly expansionist group in the last centuries BC. Concerning the Belgae of Britain, Caesar wrote:

> The interior parts of Britain are inhabited by tribes which by their own traditions are indigenous to the island, while on the coastal sections are tribes which had crossed over from the land of the Belgae [in Gaul] seeking booty. Nearly all these maritime tribes are called by the names of lands from which they immigrated when they came to Britain. After their arrival, they remained there and began to till the fields. (*De Bello Gallico* 5.12)

British tribes sharing names with Gaulish Belgae include the Catuvellauni and Atrebates, two of the

most powerful tribes of south-east Britain in the period from *c.* 100 BC to the Roman conquest (begun under the Emperor Claudius in AD 3). The Belgic migrations into Britain are our only instance of a historically-documented movement of a Celtic-speaking people from mainland Europe to the British Isles.

'Gallo-Belgic' gold coins begin to enter south-east Britain by about 150 BC (see COINAGE). By 100 BC Belgic tribes were striking the earliest coins to be minted in Britain itself. Other features of material culture which indicate Belgic presence or influence in south-east Britain include the high-quality pottery made on a fast-spinning potter's wheel, *oppida* (for example, CAMULODŪNON), wrought-iron firedogs (that is, andirons), late La Tène style ART, and cremation burials, some with elaborate grave goods, as at Swarling, Kent. The Belgic word for war-CHARIOT, *asseda* (Latinized *essedum*), differs from usages attested in north Britain, namely *carbanton* and *couinnos*, but *essedum* was used by Caesar to describe the chariots of the Belgic BRITONS commanded by CASSIVELLAUNOS (see Koch, ÉC 24.253–78).

For the final pre-Roman cultural horizon in Britain (*c.* 100 BC–AD 43) Cunliffe identifies three zones: a 'Belgicized' south-east, sharing many cultural characteristics with the Continent, an adjacent transitional zone stretching from present-day Dorset to Lincolnshire, and the north-west of the island which shows rare evidence for coinage and other artefacts derived from Continental Late La Tène types. In other words, archaeology allows us to see a pattern very reminiscent of Caesar's contrast between Belgic Britons in the coastal regions (that is, nearer to Gaul) and a more isolated indigenous culture further inland. On the other hand, recent interpretations of the archaeological remains have tended to favour patterns of trade and peaceful long-term infiltration linking Belgic Gaul and south-east Britain, rather than the warlike incursions described by Caesar.

Following the Claudian invasion of Britain, the Romans reduced the territory of the Atrebates and created a new tribal canton (CIVITAS) of the Belgae, with its chief town at Venta Belgarum, modern Winchester (Welsh Caer-wynt).

Some tribal names found in Belgic Gaul recur as far west as eastern Ireland (e.g *Menapii*; below §4).

§4. THE CELTICITY OF THE BELGAE

The name *Belgae* derives from Celtic **belgo-*. A variant occurs for the people called the *Builc* or FIR BOLG in Irish LEGENDARY HISTORY (see LEBAR GABÁLA ÉRENN). *Bolg* in Fir Bolg is a genitive plural (Celtic **Bolgom*). The Old Irish form *Builc* in HISTORIA BRITTONUM derives from the nominative plural **Bolgī*. These tribal names belong to the same root as the Celtic words OIr. *bolg* 'bag, sack; belly, stomach; bellows', MW *boly*, Mod.W *bol(a)* 'belly; swelling; bag (of leather)', Bret. *bolc'h* 'husk (of flax)' and Gallo-Latin *bulga* 'leather sack', all from Celtic **bolgo-* (Carey, CMCS 16.80).

The root contained in **Bolgī*, Indo-European **bhelgh-*, is also found in Germanic **balgiz* 'bag' (the source of Mod. English *belly*) and a verb **belg-e/o-* 'to swell with anger' (as in Old English *belgan* 'to be angry'). Thus, *Belgae* should be translated as 'the people who swell (particularly with anger/battle fury)'. This name reflects the common theme that strength is blown into a warrior so that he inflates, a theme which can also be found in Irish saga literature (Carey, CMCS 16.80–2).

The Celtic personal name *Bolgios*, also *Belgios*, is recorded as that of a commander who invaded Macedonia in 280 BC (see BRENNOS OF THE PRAUSI). It is likely that the hero bearing this name had been thought of as the legendary founder of the Belgae. This name is probably also the source of the early Welsh male personal name *Beli*, which occurs in the Old Welsh GENEALOGIES as that of an important legendary ancestor of great antiquity, BELI MAWR (Koch, CMCS 20.1–20). The French place-name *Bougey* (Loiret) (1080 *de Belgiaco*) is probably also a derivative of this same ancestor figure's name (Hamp, ZCP 44.67–8). The modern national name *Belgique* (Belgium) goes back only to 1831 when the southern Netherlands declared their independence and named the new political entity after the ancient *Gallia Belgica*.

An etymological survey of the other Belgic group names follows, including the modern city names that retain them.

Ambiani 'the people around [the two banks of the Somme]', cf. Ir. *imm*, W *am* < Celtic **ambi* 'around'—the name survives in modern *Amiens* (Somme, Picardy);

Atrebates 'the dwellers' or 'the settlers' < Celtic **ad-treb-a-t-*, cf. Early Ir. *attreb* 'dwelling-place, possession' and MW *athref* 'dwelling-place'—modern *Arras* (Pas-de-Calais, Artois) and *Artois*;

Caletes 'the hard (i.e. stubborn, tough) people', cf. OIr. *calad*, W *caled* 'hard'; modern *Calais* (Pas-de-Calais, Artois);

Catuvellauni (see below);

Eburones 'the yew people', cf. OIr. *ibar* 'yew', W *efwr* 'cow-parsnip, hogweed', from Celtic **eburo-* (Evans, *Gaulish Personal Names* 347); cf. the city of *York* (*Eburācon*) in England;

Menapii: this name has been preserved in the Irish tribal name *Fir Manach*, giving the modern county name *Fermanagh*; both may reflect Celtic **Menak^{w}ī*;

Morini 'the sea people', cf. OIr. *muir*, W, Corn., Bret. *mor* 'sea' < Celtic **mori* and Ar(e)morica. The Morini lived along the Channel coast in what is now northern France and southern Belgium;

Parisii (the name of a tribe on the south-western edge of Gallia Belgica) may mean 'the makers' or 'commanders' (Holder, *Alt-celtischer Sprachschatz* 2.932), cf. W *paraf: peri* 'to make, to produce, to command to be done', hence W *peryf* 'lord, commander' < **kwar-is-io-*. The city name *Paris* continues Gallo-Roman *Lutetia Parisiorum*;

Rēmi 'the first ones, chieftains' (cf. OIr. *rem-* 'in front of', also W *rhwyf* 'king, leader' < IE **prei-(s)mo-* = Lat. *prīmus* 'first, leader'—modern *Reims* (Marne, Champagne) (Welsh *rhwyf* 'oar, rudder', hence the honourable epithet 'helmsman', has been conflated with this originally distinct word);

Suessiones, cf. Gaulish *suexos* 'sixth' < Celtic **su̯eχs-o-*, Ir. *sé*, W *chwech* (Dauzat et al., *Dictionnaire étymologique des noms de rivières et de montagnes en France* 659); there is also a place-name Σουεστάσιον /swestasion/ (Ptolemy) and the tribal name *Suessetani* from Iberia. Modern *Soissons* (Aisne, Île-de-France);

Trēveri, cf. OIr. *tréóir* 'guidance, direction, course', with the Celtic preposition **trei-* 'through' (Ir. *tre*, *tré*, W *trwy*) (Lambert, *La langue gauloise* 36). The modern city of *Trier* (Rhineland Palatinate, Germany) is *Trèves* in French;

Veliocasses contains Celtic **weljo-* 'better' (cf. W *gwell* 'better') + *-casses*, an element common in Gaulish and British proper names (perhaps of more than one root), possibly *-casses* '(curly?) hair', cf. MIr. *cas* 'curly, winding' and Old English *heord* 'hair on the head'), alternatively OW *cas* 'hatred, passion'; the same two elements in reverse may be present in the British Belgic man's name Cassivellaunos;

Viromandui, 'pony stallions' or '[men] virile in owning ponies' or 'male ponies' < Celtic **viro-* 'man' < IE **wiHro-*, cf. OIr. *fer*, W *gŵr* + **mandu-* 'pony', MIr. *menn* 'kid, young animal' (masculine *o*-stem), MW *mynn* 'kid', Bret. *menn* 'young animal' < **mend-* (Evans, *Gaulish Personal Names* 222–3; Pokorny, IEW 729); modern *Vermandois* (a former county now in Picardy). The second element also occurs in Celtic names such as *Mandubracios*, Cartimandua, and Catumandus, Welsh Cadfan.

Belgic group names of possibly Celtic origin follow:

Caeroesi, which can be explained as either Celtic (cf. OIr *cáera* 'sheep' or *cáera* 'berry', with an as yet unexplained suffix) or Germanic (Proto-Germanic **haira-* 'worthy, exalted, *grey-haired', cf. Mod. High German *hehr* 'noble') (see Hoops, *Reallexikon der germanischen Altertumskunde* 4.309–10);

Atuatuci/Aduatuci: no etymology has been proposed;

Bellovaci, ?**bello-* possibly 'roar/speaking' (cf. Pokorny, IEW 123–4) + **u̯ako-* 'curved' (cf. IEW 1135); modern *Beauvais* (Oise, Picardy);

Condrusi (variants *Condroosos*, *Condruosos*, &c.): modern *pays de Condroz*, between Namur and Liège; cf. also the *Matronis Cantrusteihiae* in several inscriptions from the surrounding area, which seems to mean 'the mother goddesses of the Condrusi/Condroz'; *Cantrusteihiae* could be the Germanic form of a Celtic name *Condrusi* (with *o* > *a*, *d* > *t* and probably **ts* > *st*). This Celtic **kondrust-* seems to contain the preposition **kon-/kom-* 'with, together' (OIr. *con-*, *com-*, W *cyn-*, *cyf-*) and **drust-*. Whatever *drust-* means, such an element is found in a male personal name drvstanvs from a 6th-century inscription from Cornwall (Kernow) and in the common Pictish names *Drost*, *Drust*, and *Drostan* (see drest; drystan ac esyllt); perhaps related to Late Latin (from Celtic?) *trustis* 'treaty', whence English *trust*.

Caemanes (in Caesar) and (later) *Paemanes*, *Paemani* are tribal names from the Ardennes. A modern form may survive as modern *Famenne* (a region between the rivers Lesse and Ourthe in the Ardennes) (with *p-* > *f-* by the Germanic sound-shift). The variation between *p-* and *c-* can be explained as Celtic (see p-celtic; q-celtic). That Caesar wrote Q-Celtic *Caemanes*, with *C-* rather than expected *Qu-*, is easily explained either as a mishearing or as the result of learning the name from P-Celtic intermediaries who

had no *kw* in their own language. Alternatively, *Caemanes* has been taken as containing Germanic **haima-* 'home' (cf. Toorians, *Keltisch en Germaans in de Nederlanden* 73), but if this were so, we would expect the spelling ***Haemanes* or ***Chaemanes*, and the attested spelling *Paemanes* would be unexplained.

Nervii probably belongs to the Western Indo-European **ner-* 'man' (Pokorny, IEW 765), a root known in Celtic, for example, MW *ner* 'lord, chief'. The Latin name *Nerva* appears to show this root with the same suffix as in the tribal name. That the Belgic name *Nervii* is specifically Celtic, as opposed to Germanic, is possible but not certain.

Beli Mawr (Beli the Great) son of Manogan/Mynogan appears in early Welsh GENEALOGIES as a legendary ancestor, at or near the prehistoric opening of several royal pedigrees. His genealogical function must go back to the Old WELSH period at least, since 'Beli Magnus' occurs in the Old Welsh pedigrees of British Library MS Harley 3859. Beli also appears (without the epithet) in the Old Breton genealogy of St Gurthiern.

In CYFRANC LLUDD A LLEFELYS (The adventure of Lludd and LLEFELYS) Beli Mawr, or Beli Uawr, is said to have been the father Lludd (see NŌDONS), Nynniaw, and Caswallon. The last is a key figure in Welsh LEGENDARY HISTORY, corresponding to the historical King CASSIVELLAUNOS (*fl.* 54 BC), CAESAR's opponent. In the 9th-century Welsh Latin HISTORIA BRITTONUM (§19), the British king who fought against Caesar has a name and patronym unmistakably similar to Beli's—*Bellinus filius Minocanni*. The form in *Historia Brittonum* has been traced to the reference by Orosius, the 4th-century Latin Christian historian, to *Minocynobellinus Britannorum regis filius* (M. son of the king of the Britons), itself a mistake based on Suetonius's record of *Adminius Cynobellini Britannorum regis filius* (Adminios [or Amminios] son of CUNOBELINOS, king of the Britons). However, although this chain of copying errors accounts for the patronym *Mynogan/Minocannus*, the name *Beli* is too widespread in other contexts for all examples to be accounted for on the basis of this single scribal error.

In BRUT Y BRENHINEDD (the Welsh versions of the HISTORIA REGUM BRITANNIAE of GEOFFREY OF MONMOUTH), the legendary prehistoric British king called *Hely* by Geoffrey appears as *Beli*, and the conquerors of Rome whom Geoffrey called *Brennius* and *Belinus* have the Welsh names BRÂN and *Beli*. In historical times, *Beli* is attested as the name of a king and/or a king's father in early medieval Wales (CYMRU), Strathclyde (YSTRAD CLUD), and amongst the PICTS, where the variant *Bili* is more usual. *Bili*, the common Old Breton name and name element, is probably the same.

Beli may derive from the Old Celtic name, which is attested as both Βολγιος *Bolgios* and *Belgius*, and was borne by the chieftain who led the Gauls' invasion of Macedonia in 280–279 BC (see also BRENNOS OF THE PRAUSI; GALATIA). It is possible that this great leader *Bolgios/Belgios* came to be regarded as the namesake and ancestor of the powerful British and Gaulish tribal group of the final pre-Roman period known as the BELGAE; hence the doctrine that *Beli* < *Belgios* was the

ancestor of tribal dynasties in Britain.

Belisama is the indigenous name of a goddess equated with Roman Minerva during the GALLO-ROMAN period in GAUL and elsewhere (see BATH; INTERPRETATIO ROMANA). An inscription in the GAULISH language, written in Greek script, at VAISON, France, commemorates the establishment of a NEMETON (sacred grove, place) in her honour:

> ΣΕΓΟΜΑΡΟΣ ΟΥΙΛΛΟΝΕΟΣ ΤΟΟΥΤΙΟΥΣ ΝΑΜΑΑΥΣΑΤΙΣ ΕΙΩΡΟΥ ΒΗΛΗΣΑΜΙ ΣΟΣΙΝ ΝΕΜΗΤΟΝ *Segomāros Uilloneos ioru Belesami sosin nemeton*
>
> Segomāros son of Uillonos, tribesman of Nîmes, has offered this 'nemeton' to [the goddess] Belisama.

Another inscription, recovered at Saint-Liziers, France, honours MINERVA BELISAMAE. As a Celtic counterpart of Minerva, Belisama would have affinities with the Irish BRIGIT and Bríg and with Brigantia of the BRIGANTES of north Britain. Images thought to represent Belisama sometimes accompany BELENOS or Belinos, a Gaulish and British deity identified with Apollo. PTOLEMY's identification of a region at the mouth of the river Mersey as Βελεσαμα *Belesama* suggests that she may have been a tutelary goddess of the region. In form, the name is a superlative feminine adjective of the regular type as attested for Gaulish, BRITISH, and IRISH; 'most bright one' is a possible meaning.

Belovesus and Segovesus were nephews (sister's sons) of Ambicatus (variant Ambigatus), the legendary ruler of the Continental Celts. According to LIVY's aetiological account, Ambicatus, on the advice of oracles, sent Segovesus to settle the Hycernian forests (see HERCYNIA SILVA) of southern Germany, and Belovesus to establish new colonies in ITALY. Belovesus took with him the surplus populations of several Gaulish tribes—BITURĪGES, ARVERNI, SENONES, AEDUI, Ambarri, Carnutes, and Aulerci (see also TUATH). The vast host crossed through the rugged ALPINE passes into north-west Italy, where they defeated the Etruscans living near the Ticino river in the territory of the Insubres, and founded Mediolanum (Celtic MEDIO-LANON 'middle of the plain'), present-day Milan. If historical, perhaps these events took place in the 5th century BC. The root *bel-* occurs in several Celtic mythological names, including Gaulish BELISAMA and BELENOS, Irish *Bel* and BELTAINE. *Sego-* is a common Old Celtic name element and has a general meaning of 'strong'.

Beltaine or Bealtaine (1 May) and SAMAIN (Modern Irish *Samhain*) are the two most significant dates in

the Celtic CALENDAR. In the BRYTHONIC languages Beltaine is referred to as the Calends of May (Welsh *Calan Mai*, Breton *Kalan Mae*). The name has been associated with pagan deities since at least CORMAC UA CUILENNÁIN, who etymologized the word as the fire (*teine*) of Bel:

> *Belltaine .i. beil-tine .i. tene bil .i. dā tene sōinmech dognītis na drāithe co tincetlaib mōraib foraib 7 doberdis na cet[h]ra etarro ar tedmanduib cecha blīadna.*
>
> Beltaine, that is Bel's-fire, that is the fire of Bel, that is two auspicious fires the DRUIDS made with great spells and each year they brought the cattle between them against pestilence.

One of the editions of TOCHMARC EMIRE ('The Wooing of Emer') mentions cattle destined for Bel, explaining, *Do asselbthea dine cecha cethrae for se[i]lb Be[i]l. Bel-dine iarom .i. belltine* 'They assigned the young of all cattle as the property of Bel. Bel's-cattle then, that is, Beltaine'. Early modern scholars equated Bel with the biblical Baal, but scholars of the 20th and 21st centuries have instead equated the element with the *bel-* 'shining' in the divine names BELENOS and BELISAMA.

Fire continues to be an important aspect of May Day ritual. A. W. Moore says that bonfires were kindled on hilltops in the Isle of Man (ELLAN VANNIN), and that their smoke was considered beneficial for the health of cattle, crops, and people (*Folk-lore of the Isle of Man* 110–11).

Magical events associated with May Day in medieval Welsh literature include the colt of Teyrnon Twrf Liant in the tale of PWYLL, the cry of oppression in the tale of Lludd and LLEFELYS (see CYFRANC LLUDD A LLEFELYS), and the battle between Gwyn ap Nudd and Gwythyr in the tale of CULHWCH AC OLWEN. The date occurs less frequently than Samain in IRISH LITERATURE, but it is still a time of portentous events. For instance, Ailill is killed by CONALL CERNACH on Beltaine.

May Day was an important day for legal contracts. Agricultural and domestic workers would hire themselves out 'from May Day to May Day' (Old Irish 'o *bell*taini *co bell*taini', a phrase used in the Book of Aicill [Binchy, *Corpus Iuris Hibernici* 1.260.15]), and it was also a gale day, when biannual and annual rents were due. This practice has been documented into the 20th century, for example, in Radnorshire, Wales (sir Faesyfed, CYMRU). May Day was also the time when pastoralists moved from winter quarters to summer quarters (Welsh *hendre* to *hafod*). As with Samain, animals increased in value on May Day. For example, a 'wing-swarm', bees which swarm after August (see LUGNASAD), would not become an old colony and therefore increase in value until May Day, while their counterpart, the 'bull-swarm', would increase in value on Samain.

Until 1858 'muntlings' or May battles took place at Monmouth in Wales, a contest between the boys of two neighbourhoods reminiscent of Welsh *cnapan* and Irish HURLING games. Maypoles (Welsh *bedwen* 'birch tree') were erected in many villages, and were often decorated with silver plate as well as flowers. In Padstow, Cornwall (KERNOW), the Obby Oss (hobby horse) festival is celebrated on May Day (see also MARI LWYD).

May Day beliefs are associated with health, beauty, and protection. Young women drank dew at sunrise on May Day in the belief that it would clear away freckles or make them more beautiful. Irish cattle were bled on May Day, presumably for their health, but possibly for magical protection, as Fergus Kelly proposes (*Early Irish Farming* 54). FAIRIES and witches were particularly likely to be abroad on May Day (a child born on May Day could see fairies), but also the dead, and many beliefs and customs were aimed at preventing harm from supernatural sources. Dairy products were especially vulnerable to black magic on May Day.

Flowers, usually yellow ones, were gathered on May Day, and many regions celebrated by bringing home a May bough or May bush, which was then decorated, in a tradition shared over most of Europe. Different trees were believed to be unlucky for this purpose, varying by region. The maypole was also a part of celebrations throughout the British Isles, although such celebrations began to decline in the 19th century. Mummers' parades were held in parts of Ireland. In Edinburgh (DÙN ÈIDEANN), the tradition of climbing the prominent stony hill known as Arthur's Seat to greet the dawn was reputed to be beneficial to one's health.

The ultimate origin of the European celebration of the first of May is not known, though it is likely to be pre-Celtic. The celebration of May Day as a labour day is due to a historical coincidence, but has grown

in importance while traditional May Day celebrations have waned. The day also continues to be marked as a neo-pagan holiday.

Best, Richard Irvine (1872–1959) was a bibliographer, librarian, and IRISH scholar. Born to an English father, Henry, and Margaret Jean Irvine in Londonderry (DOIRE), Best initially worked as a bank clerk, but later moved to Paris. There, he became interested in CELTIC STUDIES and met a number of Irish scholars, among them Kuno MEYER, who taught him Old Irish; he also attended lectures by Henri-Marie d'Arbois de Jubainville. He returned to Ireland (ÉIRE) as Assistant Director of the National Library of Ireland (LEABHARLANN NÁISÚNTA NA HÉIREANN) in 1904, and was its director from 1924 to 1940. From 1940 to 1947 he was Senior Professor of Celtic Studies at the Dublin Institute for Advanced Studies (INSTITIÚID ÁRD-LÉINN). Best contributed to Celtic studies many scholarly editions of early Irish prose texts, as well as extensive bibliographical and palaeographical publications. He also filled the position of secretary to the School of Irish Learning for over 20 years, where he bore much of the organizational workload connected with the running of the School.

PSH

Beunans Ke (The Life of St Ke or Kea) is a saint's play in Middle CORNISH, probably originally written *c.* 1500. It was only in April 2002 that this play came to light, when a brief note about it was published in the *Journal of the National Library of Wales* (32.121–2) by its discoverer, Graham Thomas. He had identified the unbound manuscript in 2000 among the papers of J. E. Caerwyn WILLIAMS, which had been donated to the National Library of Wales (LLYFRGELL GENEDLAETHOL CYMRU) by his widow, Gwen. The manuscript has since been thoroughly repaired and rebound by the Library's conservators. Unfortunately, nothing is known of its provenance. Apparently written in the second half of the 16th century, it is an incomplete copy of a poor exemplar, with the beginning and end missing, as well as several internal folios. It was originally thought to include two separate plays, since it appears to include a life of the saint (pp. 1–8) and an ARTHURIAN section which does not mention the saint (pp. 9–20), and which is evidently closely related to GEOFFREY OF MONMOUTH's HISTORIA REGUM BRITANNIAE, but it is now generally thought to be a single play. The major evidence for St Ke's life is to be found in Albert LE GRAND's *La Vie, gestes, mort, et miracles des saincts de la Bretagne armorique*, which includes a French translation of the now lost, possibly 12th-century, Latin life, which similarly appends an Arthurian passage to the life, incorporating St Ke at points which would be absent from the extant text because of the missing folios referred to above.

The large parish of Kea in Cornwall (KERNOW) near Truro (and possibly once including Truro itself) is the setting for the Cornish part of the play. St Ke(a) is referred to as Ke in the Cornish of the manuscript and as Keladocus in the Latin, as reflected in the various references to the church and parish (parochia Sancte Kycladoce [1390], ecclesiarum . . . Kekaladoci [1437], Sancto Kekeladoco [1517]) listed by Orme, *Saints of Cornwall* 156, and the Breton Ke Colodoc. The parish

church held land in other parts of Cornwall, which Orme notes is an indication of early importance, and he also notes dedications to the saint at a number of places in Wales/Cymru (Llandygái), Brittany/Breizh (at least three places, possibly five), Devon (Landkey), and Somerset (a place originally called Lantokay, later identified with Street). Orme believes that Old Kea (the original site of the parish church at Ordnance Survey grid reference SW 8443 4171) 'remains worth considering as the starting-place of Kea's cult' (p. 157).

Oliver Padel (online text) has helpfully summarized the action, using Le Grand's translation to fill in the gaps in the story: [the first five folios are lost, presumably recounting Ke's early life and his promotion to the episcopacy]; Ke restores a shepherd to life and travels [from Brittany?] to Cornwall, where he is found by the tyrant Teudar's forester in Rosewa Forest (Roseland), taking him to Teudar at Goodern; Teudar and Ke have a theological dispute and Teudar orders Ke's imprisonment; after further dispute Teudar agrees to give Ke an estate near the forest, and plans to go hunting there; [damaged text: Ke shelters a stag from Teudar, and Teudar and his men steal Ke's oxen, breaking three of Ke's teeth when he demands their return]; Ke causes a holy well to issue and cures a leper who then gives him more land; stags plough Ke's land in place of the oxen; in recompense for Ke's broken teeth, Teudar and Ke agree that the latter shall have whatever land he can impark while Teudar takes a bath; Teudar asks Owbra to produce a potion which causes Teudar to get stuck in his bath, thus allowing Ke to impark a large part of Teudar's land; [two folios missing: Ke returns to Brittany]; Arthur receives Duke Cador and Augelus, squires, bishops, Beduer (= Bedwyr), Ke (not the saint, but 'Syr Kay'/Cai fab Cynyr), Hoel, Cador, seven kings, Modred (Medrawd), Gawain, and knights; Emperor Lucius in Rome hears that Arthur is refusing to pay tribute and sends twelve legates to him, who hail the Emperor and greet Arthur; [two folios lost]; Arthur refuses to pay tribute and the legates return to Lucius, who takes counsel and leaves for France; Arthur leaves Modred in charge and takes leave of Guenevere; the forces of Arthur and Lucius join battle in France; Lucius is killed and Arthur sends his head to Rome; Modred and Guenevere (Gwenhwyfar) together in Arthur's palace; Modred crowned by a bishop; news of this reaches Arthur, who takes counsel; Modred obtains the help of Cheldric (a Saxon); battle between the forces of Arthur and Modred; Guenevere in the palace is chastised by her handmaidens, who threaten to reveal her affair with Modred to Arthur; [the rest is missing: in the Life, Ke is sent as a mediator between Arthur and Modred but realizes the hopelessness of the situation and returns to Brittany via Winchester, where he visits Guenevere, persuading her to join a convent; Ke dies peacefully at Cleder.]

The play is written in good Middle Cornish, comparable with that of Beunans Meriasek, and is rather more idiomatic and dramatic in the first part than the rather stolid Arthurian section. It is similar in many respects to *Beunans Meriasek*, although the metrical arrangement in *Beunans Ke* is somewhat more elaborate, and almost certainly both plays share the same provenance, Glasney College at Penryn, which was dissolved in 1545. Teudar and his court at Goodern in Kea parish are referred to in that play (*Beunans Meriasek* 2289, *goddren*), and Glasney also held the great tithes of the parish. A round called Playing Place in a village of the same name (Ordnance Survey grid reference SW 8145 4190) still exists partially in the parish (see Lyon, *Cornwall's Playing Places* 13), and could be where the play was performed, probably over a period of two days, judging by the length of the play including the missing folios. (*Beunans Meriasek* was performed in the round over a two-day period, as demonstrated by the diagrams at the end of each day's performance: had such diagrams survived in this case, both would have been in two of the lost portions.) There is a considerable admixture of Anglo-Norman French, Middle English, and Latin in the text, especially in the Arthurian episode, with one stanza containing two lines each of Cornish, French, and English. Nearly all the stage directions are in Latin, but a few (possibly later additions in the original) are in English, together with several in Cornish, which represent some of the earliest surviving Cornish prose (see cornish literature).

The importance of this substantial recent discovery to both Cornish and Arthurian studies cannot be overemphasized.

Beunans Meriasek ('The Life of St Meriasek') is a miracle play in Middle CORNISH, written in 1504. The newly discovered BEUNANS KE and the Life of Meriasek are the only two surviving vernacular plays in Britain dealing with the lives of saints. The 4568 lines, in seven- and four-syllabled verses, of the Life of Meriasek form an exuberant weaving together of historical and legendary characters from different centuries, with strong undertones of contemporary Cornish politics. It was probably written at GLASNEY COLLEGE by 'Rad[olphus] Ton'. The work was performed over two days, in the round (with central performance area), offering the twin soteriological themes of conversion and healing through miracles involving Meriasek, Sylvester, and the Virgin Mary. According to tradition, St Meriasek lived in Brittany (BREIZH) in the 7th century and is one of the patron saints of Camborne (Kammbron).

The first day of the drama begins with Meriasek's education in Brittany, but his mind is soon set on rejecting worldly comforts; he travels as a Christ-like missionary to Cornwall (KERNOW), and comes into conflict with a pagan king, the tyrant Teudar (possibly a satirical interpretation of Henry VII in the aftermath of the rebellions of 1497; see TUDUR). Meriasek and Teudar debate the Virgin birth, and Teudar tries to tempt Meriasek. Meriasek hides in a rock (*carrek veryasek* 'Meriasek's rock') then returns to Brittany, where he becomes a hermit. Events shift on to St Sylvester who heals a leprosy-stricken Constantine while in Cornwall, where a duke of Cornwall reminiscent of King ARTHUR challenges Teudar.

The second day opens with Meriasek healing the blind Earl Globus and a demoniac. Meriasek is chosen to succeed as bishop, first resisting, but eventually agreeing to the task. In a developed sequence, a boy is imprisoned by a tyrant, and his mother prays before a statue of Mary, taking home the image of the infant Jesus when her supplications seem of no avail. Mary, with Jesus' blessing, frees the boy, and when he returns home, his mother restores the image of the baby to the statue. In grotesque counterpoint to this miracle is a comedic black mass. A second Sylvester sequence follows, when he is asked to dispose of a menacing dragon. The play then ends with Meriasek's death.

Some critics have argued that the play is too disparate, but in fact there is substantial coherence between all the plots. An excellent English language version of the drama was written by Combellack.

The figure of Breton LEGENDARY HISTORY, CONAN MERIADOC shares a name with St Meriasek, but their traditions have little in common, though Conan Meriadoc was revered as a Christian ruler. Unlike St Meriasek, Conan Meriadoc is represented as a contemporary of 4th- and 5th-century figures and events by GEOFFREY OF MONMOUTH and other medieval writers.

Beuno was a 6th-century Welsh saint. With foundations in GWYNEDD and POWYS, and his major *clas* (monastic foundation) at Clynnog Fawr in Caernarfonshire (sir Gaernarfon) he was the most noted of the saints of north Wales (CYMRU), and was thus comparable in stature to St David (DEWI SANT) in the

south. The only full account of his life is in *Hystoria o Uuchet Beuno* (History of Beuno's life), a Welsh translation of a presumed but non-extant Latin Life, recorded in a 14th-century manuscript (see HAGIOGRAPHY). This *Buchedd Beuno* is notable for two pieces of anti-English sentiment: an oak tree that kills Englishmen who pass beneath its branches but preserves Welshmen, and Beuno's abandonment of his home near the river Severn (Hafren) upon hearing English spoken and recognizing that the foreigner would overrun the territory. Beuno is credited in both his Life and that of St Gwenfrewi with having raised Gwenfrewi to life after she was beheaded. The cloak she made for him every year in gratitude gave Beuno his epithet *Cassulsych* (dry-cloak). Beuno's most persistent tradition, frequently noted in 15th-century poetry (see WELSH POETRY), is that he raised six from the dead and has raised or will raise a seventh. Two other motifs strongly presented in poetry depict Beuno as a generous provider of feasts and report that his staff sprouted into a tree. His well at Clynnog was a place of healing until at least as late as the 18th century.

The Welsh name *Beuno* is of Celtic derivation and goes back to Old Welsh **Bou(g)nou*, probably from a Celtic preform **bouo-gnāw-* 'knowing cattle'; compare Welsh *beudy* 'cattle house, byre' and the early BRYTHONIC names *Artognou* 'knowing bears' (on the TINTAGEL slate) and UIRGNOU 'knowing men' (†623, the name of an abbot of Iona [EILEAN Ì]). The Old Irish name *Béognae* is possibly a cognate, but its first element more probably means 'living'.

Bible, in the Celtic languages

Translating and publishing the scriptures in the early modern period was a momentous event in the history of many European languages. The history of the CELTIC LANGUAGES demonstrates that vernacular versions had to be accepted and disseminated by the Church if a print culture in the vernacular was to arise, a development achieved most fully in Wales (CYMRU). The majority of the populations of Ireland (ÉIRE) and Brittany (BREIZH) remained Catholic, and the Latin Bible predominated until recent times; Bible translations, where they existed, did not gain wide currency. Church and state in Scotland (ALBA) actively discouraged the use of SCOTTISH GAELIC Bibles in the HIGHLANDS. A complete MANX Bible was not published until 1775, too late to replace English as the accepted language of Anglican church services, and the Cornish had accepted English as the language of religion by the 17th century.

§1. IRELAND

Although PRINTING and the Protestant Reformation were introduced to Ireland (Éire) at the beginning of the 16th century, the Reformation did not succeed outside the Pale, the region in which the English-speaking population was dominant. The bulk of the native Irish population rejected Protestantism as the religion of the English conqueror. The relatively early Bible translation was thus never widely used. A short flowering of counter-reformation Catholic literature in the first half of the 17th century did not make a lasting impact. Until the 19th century, IRISH writing largely remained in manuscript and much traditional lore culture continued to rely on oral transmission.

From the beginning of her reign, Elizabeth I supported the translation of the New Testament into Irish and donated, in 1571, a set of Irish types for the printing of the Bible. The translation of the New Testament, overseen and completed by Uilliam Ó Domhnaill (William Daniell/William O'Donnell), Protestant archbishop of Tuam from 1595 and one of the few Irish-speaking churchmen, was completed in 1602. In the following year, 500 copies of *Tiomna Nuadha* (The New Testament) were printed (Mac Craith, *Celts and*

the Renaissance 72). In 1609, Ó Domhnaill published his translation of the Book of Common Prayer, *Leabhar na nUrnaightheadh gComhcoidchiond*. Both translations continued in use in Ireland and Scotland for a long time. When copies became increasingly rare, a new edition appeared in 1681, financed by Robert Boyle (1627–91), the son of the earl of Cork and a deeply religious man. His work was continued by William Bedell (1571–1642), Church of Ireland bishop of Kilmore, who succeeded, at the Church of Ireland Convocation of 1634, with his proposal to provide an Irish New Testament and Book of Common Prayer 'where all or the most part of the people are Irish' (McCaughey, *Dr. Bedell and Mr. King* 22). Bedell and his team of assistants completed their work around 1640, but 'Bedell's Bible' was not published until 1685. Although the text is considered inferior to Ó Domhnaill's translation, 'Bedell's Bible' was used in Ireland and Scotland down to the 1970s.

Other important Renaissance and Reformation efforts came, paradoxically, from the Catholic counter-reformation which radiated from the Franciscan college of St Anthony at Louvain. A printing press established there (using the types donated by Elizabeth I) soon issued catechisms such as *An Teagasg Críosdaidhe* (Christian doctrine) by the bard and Franciscan monk Giolla Brighde (Bonabhentura) Ó hEódhasa (?–1614), for the instruction of the common Irish people, rather than the learned class. J. E. Caerwyn Williams and Ford list other religious literary works of the 'Louvain School', which emphasize its achievements at the beginnings of post-classical modern Irish prose (*Irish Literary Tradition* 206–8; see irish literature), but Antwerp and Rome were also important centres of Irish learning. All in all, about 25 religious works were published before the end of the 17th century. However, with the renewed military aggression of the emerging English state, through the Cromwellian and the Williamite wars and the plantation of Ulster (see ascendancy), the scarce resources of the native Gaelic nobility went into military efforts, and the European centres of Irish learning declined.

Financed by Robert Boyle, both the Old and the New Testaments were published together, using Roman typeface, in 1690. The edition, known as *An Bíobla Naomhtha* (The Holy Bible), was seen through the press by the Reverend Robert Kirk (1644–92), minister of Balquhidder and Aberfoyle in Scotland (Alba), and was largely intended for use in Gaelic Scotland. Parts of the Bible were reprinted in 1754, 1799 and 1806. The revised editions of 'Bedell's Bible' of 1810 and 1817, printed for the British and Foreign Bible Society, were in use until the 1970s. A new translation of the Bible, underway since the end of the Second World War, was finally brought to a close with the publication of *An Bíobla Naofa* (The Holy Bible) in 1981.

§2. SCOTLAND

Foirm na n-Urrnuidheadh, a translation of the *Book of Common Order* by Seon Carsuel (John Carswell, ?1520/5–72), bishop of the Isles, published in Edinburgh (Dùn Èideann) in 1567, is considered the first book to be printed in Scottish Gaelic, although the linguistic standard used approximated to classical Irish. This promising early start, however, did not lead to a stable printing tradition, since the 'application of a fundamental principle of the Reformation—to provide Bibles in the languages commonly spoken by ordinary people—was obstructed primarily by the prejudice of central government against the Gaelic language' (Meek, *Bible in Scottish Life and Literature* 10). Only the Synod of Argyll attempted to produce a modest body of Protestant literature, and especially a Bible, in Scottish Gaelic, but its efforts were thwarted by the apathy of the clergy and the suspicion with which the Presbyterian Church viewed the largely Catholic and Episcopalian Highlands (J. E. Caerwyn Williams, *Gwarchod y Gair* 117). By 1673 the Revd Dugald Campbell of Knapdale (in the Presbytery of Inverary) had produced a translation of the Old Testament, but it was never published (*Gwarchod y Gair* 118). Scottish Gaelic literature remained essentially oral and manuscript, and only about 70 titles were published in Scottish Gaelic by 1800 (see scottish gaelic poetry; scottish gaelic prose).

Despite the continued efforts of the Revd James Kirkwood (1650–1709), a supporter of Gaelic-medium education who made several attempts to supply

Highland parishes with 'Bedell's Bible' (see above), first in the Irish script edition and later in the 1690 'Kirk's Bible' edition in Roman type, the hostility of the Presbyterian Church in the Lowlands and the indifference of many (though not all) priests and ministers in the Highlands, prevented the majority of those Bibles from reaching their destination (Durkacz, *Decline of the Celtic Languages* 15–23; Meek, *Bible in Scottish Life and Literature* 14–15). Progress on the project of translating the Bible into Scottish Gaelic was made only when the Scottish Society for the Promotion of Christian Knowledge (SSPCK) changed its strategy of civilizing the Highlands through the teaching of English and adopted a more pragmatic approach, which included the translation of the scriptures into Gaelic. The New Testament was translated by the Revd James Stuart of Killin, the Revd James Fraser of Alness and the Revd Dùghall Bochanan (Dugald Buchanan, 1716–68), a licensed preacher and outstanding poet. Ten thousand copies of *Tiomnadh Nuadh arn Tighearna* were printed in 1766 (Maclean, *Literature of the Scottish Gael* 14; J. E. Caerwyn Williams, *Gwarchod y Gair* 119). However, this was more an adaptation of the Irish Bible than a new translation into Scottish Gaelic. A second, revised edition by John Stuart of Luss (1743–1821, son of James Stuart) was published in 1796 with a print run of 21,500 copies (*Literature of the Scottish Gael* 14). The translation of the entire Bible, again under the auspices of the SSPCK, began in 1783, but was not completed until 1801, when it appeared under the title *Leabhraiche an t-Seann Tiomnaidh* with a total print run of 5000 copies (*Literature of the Scottish Gael* 15). The first three volumes of the Old Testament were translated by the Revd John Stuart and the fourth by the Revd John Smith (1743–1821) of Kilbrandon and Kilchattan. Rejected by the SSPCK as 'too free', Smith was replaced by the Revd Alexander Stewart of Dingwall, who revised the fourth part of the Old Testament, all of which appeared in 1807 with a print run of 20,000 copies (Meek, *Bible in Scottish Life and Literature* 16–18). In the same year the British and Foreign Bible Society published Smith's version of the Old Testament together with the New Testament as *Leabhraichan an t-Seann Tiomnaidh agus an Tiomnaidh Nuadh*, also with a print run of 20,000 copies (*Literature of the Scottish Gael* 15). This version was to exert considerable influence on the development of Scottish Gaelic literacy in the 19th century. In 1826 both the New and the Old Testaments were published in one volume for the first time. Between the beginning of the 19th century and the foundation of the National Bible Society of Scotland (NBSS) in 1861 various, slightly different, editions were in circulation. A revised New Testament, translated by Ewen MacEachen and published by the NBSS, proved slightly closer to contemporary speech than the earlier Gaelic versions (*Literature of the Scottish Gael* 20; Meek, *Bible in Scottish Life and Literature* 19–20). In 1911 the NBSS published the first Gaelic Pocket Bible, which became the basis of the most recent revised Scottish Gaelic Bible, published in 1988.

§4. WALES

The earliest extant translations of parts of the Bible into Welsh are the medieval texts *Y* Bibyl Ynghymraec and Gwassanaeth Meir, which survive in several manuscripts. But the drive to provide the overwhelmingly monoglot Welsh-speaking populace with the scriptures in their own tongue dates from the Protestant Reformation in the 16th century. When English Prayer Books replaced Latin as the language of public worship from 1549 onwards there were good reasons for believing that the campaign to win the hearts and minds of the Welsh to the Protestant cause would be conducted through the English language. Indeed, some believed that this would prove to be an effective means of compelling the Welsh to learn English. However, the presence of a strong Welsh lobby at the Elizabethan court and representations by leading Welsh humanists like Bishop Richard Davies, Humphrey Lhuyd and William Salesbury meant that the closest advisers of Elizabeth I were persuaded that

The title-page of the first complete Welsh Bible translated by William Morgan (1588)

if English was to be the vehicle for Protestantism the Welsh people would be an easy prey to resurgent Catholicism and a likely source of rebellion. As a result, in 1563 a momentous statute was passed which declared that the Bible and Prayer Book should be translated into Welsh and be used thereafter in public worship. This meant that Welsh became the language of religion in Wales (Cymru) and the Protestant religion became associated with the mother tongue.

The greatest part of *Y Testament Newydd* (The New Testament) was translated by William Salesbury, though he also received sturdy support from Bishop Richard Davies (1501?–81) and Thomas Huet (†1591), precentor of St David's (Tyddewi). Published in 1567, the New Testament fell short of expectations, largely because Salesbury insisted on inflicting on the unsuspecting Welsh his own peculiar brand of orthography. Poorly educated clergymen were hard put to make sense of his bizarre 'Latinisms', and it was left to William Morgan, vicar of Llanrhaeadr-ym-Mochnant, to produce a much more readable and popular version of the whole Bible in 1588. Morgan was an erudite man, well versed in the classics and in the Welsh bardic tradition, and his unsurpassed version of the Scriptures

enabled the clergy to conduct their services in an intelligible manner and generations of scholars to emulate the highest possible literary standard. In England, the year 1588 is associated with the Spanish Armada, but in Wales it is inescapably associated with William Morgan's literary classic. Had not this work been completed, it is unlikely that the Welsh language could have survived. Nor would Protestantism have been able to take root.

William Morgan's Welsh Bible was a bulky tome, designed to be used in the pulpit. So, too, was the revised edition prepared by Bishop Richard Parry (1560–1623) and his learned brother-in-law, Dr John Davies (*c.* 1567–1644) of Mallwyd, and published in 1620. This edition—the Welsh counterpart of the Authorized Version of the English Bible (1611)—became the basis for the standard literary language of the native tongue. Whereas Anglican humanists had pioneered the way, the task of providing user-friendly octavo Welsh bibles was left to Puritans and Dissenters in the 17th century. From 1630 onwards, thanks largely to the munificence of London-Welsh merchants and, subsequently, ministers associated with Cromwellian godliness and utilitarian societies like the Welsh Trust and the SPCK, efforts began to disseminate Welsh bibles among charity school pupils and literate middling sorts. These initiatives helped to give permanence to Welsh as a language of reading. However, the most remarkable progress in bible-reading in the vernacular occurred when the 18th-century evangelists Griffith Jones (1684–1761) of Llanddowror and Thomas Charles (1755–1814) of Bala founded hundreds of Welsh-medium CIRCULATING SCHOOLS and Sunday schools throughout the land in which humble and underprivileged children and adults made considerable sacrifices in order to learn to read the Scriptures. As a result of these initiatives, Welsh fared much better than Breton, Scottish Gaelic, Irish and Manx, and the combination of the availability of Welsh bibles and widespread literacy provided a robust foundation for the golden age of Welsh publishing in the 19th century. The demand for scriptural material was insatiable: between 1800 and 1900 around 370 editions of the Welsh Bible were published, and it was often claimed that chapel-goers were more familiar with the geography of Palestine than with that of Wales. In more recent times, the decline in religious observance has lessened interest in, and familiarity with, the supreme achievement of William Morgan. Nevertheless, the 400th anniversary of the translation of the Bible into Welsh was marked by a successful new translation—*Y Beibl Cymraeg Newydd*—which was published as a companion volume to the 1588 Bible.

§5. BRITTANY

There are historical references to plans and attempts to translate catechisms and the Bible into BRETON, but no published translation appeared before the 19th century (Dujardin, *La vie et les oeuvres de Jean-François-Marie-Maurice-Agathe Le Gonidec* 73–4). The population of Brittany (BREIZH) was largely Catholic; Protestantism never made much headway there, although the Protestant minority succeeded in producing several Breton Bibles in the 19th century (cf. CHRISTIANITY IN THE CELTIC COUNTRIES [5] §2). It is to the grammarian and lexicographer Jean-François-Marie-Maurice-Agathe Le Gonidec (1775–1838) and his Welsh supporter Thomas PRICE ('Carnhuanawc') that Brittany owes its Bible translation. Price's interest in Breton arose from his early contact with Breton prisoners of war in Abergavenny (Y Fenni) between 1805 and 1810 (Stephen J. Williams, THSC 1954.19–20). In 1819 he began to collect money for a Breton Bible and contacted the British and Foreign Bible Society (BFBS) in search of support. It is due to his efforts that the BFBS commissioned Le Gonidec to translate the New Testament, which appeared in 1827 as *Testament Nevez Hon Aotrou Jezuz-Krist* in an edition of 1000 copies (T. Gwynn Jones, *Welsh Outlook* 10.70; Stephen J. Williams, THSC 1954.20; Dujardin, *La vie et les oeuvres de Jean-François-Marie-Maurice-Agathe Le Gonidec* 73–82). The fact that more copies of this edition are said to have been sold in Wales than in Brittany indicates that the Catholic authorities did not view the undertaking

kindly (J. E. Caerwyn Williams, *Gwarchod y Gair* 111). Because of poor sales of the New Testament, the BFBS refused to sponsor an edition of the Old Testament or the whole Bible, with the result that the complete Bible was not published in Le Gonidec's lifetime, although he had continued working on the Old Testament and finished its translation by 1835. The full *Bibl Santel* did therefore not appear until 1866 (Dujardin, *La vie et les oeuvres de Jean-François-Marie-Maurice-Agathe Le Gonidec* 83–9). By then, a revised edition of Le Gonidec's New Testament by the Welsh missionary, John Jenkins (1807–72), aided by Guillaume Ricou (1778–1848), using simplified spelling and style, had been published (in 1847) and well received (J. E. Caerwyn Williams, *Gwarchod y Gair* 111). Other, less well-received Breton versions came with Guillaume Le Coat's New Testament in 1883 and Old Testament in 1889.

§6. CORNWALL

The Bible has to date not been fully translated into CORNISH. That Cornish, alongside the traditional Latin, was a language of religion in medieval and early modern Cornwall (KERNOW), is attested by the existence of the ORDINALIA trilogy, which was performed in open-air playing places such as Piran Round near Goonhavern. When Henry VIII introduced English as the language of religious services in 1549, the Cornish rose in what became known as the 'Prayer-Book Rebellion' (Kent, *Literature of Cornwall* 48). As a consequence, suggestions that the Book of Common Prayer and the Bible should be translated into Cornish were ignored, and only few attempts at translating religious works into Cornish are known (see TREGEAR HOMILIES). The Cornish protests against the imprisonment of Bishop Jonathan Trelawney by the Catholic King James II bear testimony to the fact that by 1688 the majority of the Cornish had embraced Protestantism. By then, however, English had been accepted as the language of the new faith.

MBL

Bibracte was a Gaulish OPPIDUM which, according to Julius CAESAR's *De Bello Gallico* ('Gallic War') 1.23, was the capital of the Gaulish tribe known as the AEDUI. It is located on Mont-Beuvray near Autun in Burgundy (south-east France). The oppidum covers 2 km² and extends over three summits which overlook the central part of the Morvan mountains. Its prominent position dominating its landscape must have been even more impressive in antiquity since the mountain top would have been bare and enclosed by massive ramparts.

Many of the gates of Bibracte were constructed primarily for processional purposes, in which function was subordinate to appearance. For example, the north-eastern gate, now called *porte du rebout* (gate of the limb), is the largest example of a gate in any Celtic oppidum yet excavated.

Bibracte was subdivided into several areas or quarters given over to specific activities and social classes. The quarters in the north-east and south-west were reserved for artisans and commerce respectively. The central residential quarter contained many elaborate houses partly imitating the Roman urban house-type with a central open area (*atrium*) and a garden enclosed by a small colonnade (*peristyle*; the so-called *parc aux chevaux*). Each quarter seems to have had a cult site or a temple (see map).

The artisans' quarters show evidence of elaborate metallurgy, including gold, bronze, and iron working, as well as enamel production. The internal street-plan was comparatively regular in so far as the lay of the land allowed. It was dominated by a south-to-west axis, centred on a convex basin, whose orientation towards the summer and winter solstice implies a cult significance (see CALENDAR).

The ritual precincts were located in the south (*la terrasse*, the terrace), the north-west (*le teureau de la roche*, hill of the rock) and the north-east (*le teureau de la wivre*, hill of the serpent; these are dialect words: *teureau*, as *theurot*, from Gaulish **turra* 'hill', and *wivre*, as *vouivre*, from Latin *vipera*, Old French *vuivre* 'serpent', cf. Welsh *gwiber*). In these locations the ritual areas

have been sited by prominent rocks, which seem to have played a part in the cult. At the site of the *terasse* a small chapel was built in the Middle Ages.

Three wells were located within the fortified perimeter of Bibracte, and there is evidence for ritual depositions in them, which implies the presence of the commonly occurring Celtic cult of spring deities (see WATERY DEPOSITIONS).

Pre-Roman COINAGE was found inside the walls. Bibracte was a mint, and a coin mould for casting 25 blanks was found on the site (Allen, *Coins of the Ancient Celts* 34). The name DUMNORIX, which is mentioned in Caesar's *De Bello Gallico*, and possibly his portrait, has been found on one of the coins from Bibracte.

In Roman times, the population of Bibracte relocated to the newly founded town of Augustodūnum, present-day Autun.

The name *Bibracte* has been explained as a Celtic collective in *-aχtā* based on the root *bibr-* 'beaver', hence 'place of beavers' (Lambert, *La langue gauloise* 59, 188–9). Modern Mont-Beuvray continues the ancient name.

Y Bibyl Ynghymraec is a Middle Welsh religious prose text, translated from Latin. Although the title means 'the Bible in Welsh', this is somewhat misleading. It is a translation of part of a 'Paupers' Bible', the *Promptuarium Bibliae* of Petrus Pictaviensis—which comprises mainly a summary of names, GENEALOGIES, and episodes from the Old Testament. The Welsh text's frequent co-occurrence in manuscripts with YSTORYA DARED, BRUT Y BRENHINEDD (Chronicle of the kings), and BRUT Y TYWYSOGYON ('The Chronicle of the Princes') shows that *Y Bibyl Ynghymraec* was of more interest as a source of LEGENDARY HISTORY than as a religious text. A link to Britain's foundation legend was produced by adding to the biblical genealogies of the Latin source a section tracing the descent of the Trojan hero Eneas Ysgwydwyn (Aeneas White-shield, legendary founder of Rome and progenitor of Brutus, legendary founder of Britain; see TROJAN LEGENDS) from Japheth, son of Noah. The best manuscript of *Y Bibyl Ynghymraec* is Peniarth 20 (*c.* 1330) in the National Library of Wales (LLYFRGELL GENEDLAETHOL CYMRU). The beginning of the text there is now missing, but a once more complete version of the manuscript seems to have been copied in the 16th century by Thomas Wiliems of Trefriw, whose longer *Bibyl Ynghymraec* begins with a Welsh translation of Genesis.

Ingo Mittendorf, JTK

Binchy, Daniel Anthony (1899–1989) was a prolific Irish scholar whose publications cover many areas in CELTIC STUDIES. His most important contribution was the edition of major early Irish LAW TEXTS, of which the most imposing was the complete collection of early Irish secular legal texts, the six-volume *Corpus Iuris Hibernici* (1978). Binchy's family background was of the legal profession. After studying in Germany and France, he was appointed in 1929 as professor of Jurisprudence and Roman Law at University College, Dublin (BAILE ÁTHA CLIATH). He later entered the Irish diplomatic service and was posted to Germany, where he became interested in Celtic studies. Following his return to Ireland (ÉIRE), Binchy was involved in the foundation of the Dublin Institute for Advanced Studies (INSTITIÚID ARD-LÉINN), where he was the first chairman of the governing board at the School of Celtic Studies. Having learned Old IRISH with Rudolf THURNEYSEN during his time in Germany, Binchy, together with Osborn Bergin (Ó HAIMHIRGÍN), translated and revised Thurneysen's epochal *Handbuch des Altirischen* (1909) published as *A Grammar of Old Irish* (1946), which remains the standard handbook.

Biniou* and *bombard (French *bombarde*) are wind instruments traditionally played together in Breton dance music (see BRETON MUSIC; DANCES). The style of playing is very much like *kan ha diskan* (call and response singing), with the biniou sounding continually and the bombard playing every other line or in a three lines on, one line off rotation.

The bombard is essentially a shawm or oboe: a pipe with a conical bore, a double reed and finger-holes for changing pitch. Traditional Breton *bombardoù* are probably very close to the original progenitor of the oboe family, which has a wide distribution in Europe, Asia, and north Africa. More recently, bombard makers have added keys to the instrument, similar to those on

The celebrated duo Tanguy and Le Gourriérec from Melrand in 1936. The bombard player is on the left and the biniou (-koz) on the right.

an oboe or clarinet, and these facilitate playing in a wider range of keys. The bombard is played in duets with the biniou in pipe bands, in folk revival bands of all types, and also in Breton classical music as an accompaniment to the organ.

The biniou—also known as *biniou-koz* or *biniou-bihan* (old bagpipe, small bagpipe) to distinguish it from the more recently introduced Scottish-type *biniou-braz* (great bagpipe)—is the most common Breton BAGPIPE. It is made up of a bag (usually of leather or sheepskin), a drone of cylindrical bore bearing a single reed, and a chanter of conical bore bearing a double reed and finger-holes for playing the melody. The biniou seems to be descended from the common European medieval bagpipe, but the chanter is very small and produces an extremely high pitch. Iconographic studies suggest that in the 18th or 19th century the biniou was rapidly adapted to its current high-pitched form, probably so that the biniou and bombard could be played together. The biniou is also played in many FEST-NOZ and by folk revival groups.

Biturīges was the name of a Gaulish tribe in present-day Berry in the basin of the river Cher in central France. The tribe was subdivided into two groups: one south of the central Loire (the Biturīges Cubi) and the other around present-day Bordeaux, ancient Burdigala (the Biturīges Vivisci). Their capital was Avaricum Bitúrīgum, present-day Bourges. The Modern French city names Berry and Bourges are from differently accented */biturī́g-/* and */bitúrīg-/* respectively.

§1. HISTORY

According to the historian LIVY (*Ab Urbe Condita*, 5.34), the Biturīges were the most powerful tribe in GAUL in the 6th century BC, and were supposed to have triggered off the Gaulish invasion of Italy under their king Ambigatus (probably more correctly Gaulish *Ambicatus*; see below).

In the 1st century BC the Biturīges Cubi belonged to the confederation headed by the tribe named the AEDUI, but seemed to have changed sides in supporting the ARVERNI in their fight against Julius CAESAR, suffering great losses in the siege of their capital Avaricum, and taking part in the defence of the OPPIDUM of ALESIA. Even after the defeat of VERCINGETORĪX, the supreme commander of the Gaulish forces, the Romans were forced to repel an uprising in the territory of the Biturīges.

Their territory seems to have been intensively cultivated in pre-Roman, as well as in Roman, times. Caesar describes it as being extremely fertile. The villas of the Roman period show a remarkable continuity in settlement from the pre-Roman IRON AGE.

§2. THE CELTICITY OF THE BITURĪGES

The name *Biturīges* is a two-element Celtic compound, comprising *bitu-* 'world' (cf. W *byd*, OIr. *bith*) and *rīges*

'kings' (cf. OIr. *rí*, plural *ríg*), hence 'kings of the world'. The name of the semi-legendary king *Ambigatus* is also Celtic. The first element *ambi-* means 'about, for', cf. W *am*, OIr. *imb*. The identity of the second element is less certain, but it might be a variant of *catus* 'battle, army', an element very common in Celtic names. Gaulish names that entered Latin through Etruscan often show this confusion, since Etruscan did not distinguish the sound *k* from *g*. For example, Latin *gladius* 'stabbing sword' is a borrowing of Gaulish **kladi̯os* 'sword' (corresponding to W *cleddyf*). If so, *Ambigatus* is likely to be the same name as the 5th-century Brythonic name AMMECATI (genitive) found on an inscription from the Isle of Man (Ellan Vannin) < Celtic *Ambicatus* (Macalister, *Corpus Inscriptionem Insularum Celticarum* no. 500). Coin legends of the Biturīges are generally susceptible to interpretation as Celtic; for example, IVRC on a silver coin of the Biturīges Cubi (Nash, *Settlement and Coinage* 494) probably represents a personal name containing the word surviving as W *iwrch* 'roebuck' and attested in Greek sources as ιορκος */jorkos/* 'deer'.

Blathmac son of Cú Brettan son of Congus of the Men of Ross was an 8th-century Irish monk who is famous for two poems, preserved in a single 17th-century manuscript, which have been described as the 'finest product of a golden age of Irish spirituality' (Good, *Irish Ecclesiastical Record* 104.7). Based on genealogical dating, Blathmac probably flourished during the mid-8th century since his father's death is recorded in the Annals of Ulster for 740, while his brother apparently died during the battle of Emain Machae (759).

Both poems were probably originally 150 stanzas long, although only 149 stanzas of the first poem have been preserved, and only 109 stanzas of the second poem can be read. This second poem follows on thematically from the first poem, and both mostly consist of biblical narrative and are addressed to the Virgin Mary, reflecting Blathmac's deeply felt religious convictions. There are also references to contemporary apocryphal tradition, demonstrating the early interest of Irish monks in this subject. The poems also represent an early example of CAOINEADH 'keen, lament', a typically Irish ritual expression of grief. As well as shedding unique light on early Irish theological thought, Blathmac's poems provide a rare example of natural and idiomatic Old Irish, providing a variety of forms, words, and expressions. In this, the poems differ from the Old Irish GLOSSES, which tend to be more restricted in content, length, and idiom. Furthermore, the poems are unusual and especially valuable for having a named and genealogically placed author, and they might therefore serve as a standard by which to date approximately other early Irish texts which reveal comparable linguistic, formal poetic, and thematic states of development.

Bleddyn Fardd (*fl. c.* 1240–85) was a Welsh poet, one of the Gogynfeirdd or *Beirdd y Tywysogion* (Poets of the Princes). He is thought to have been a pupil of Dafydd Benfras (*fl.* 1220–58), for whom he composed an elegy. Like his mentor, he was closely associated with the court of Gwynedd and, like him, composed a collective elegy for three princes. In the case of Dafydd Benfras, these princes were Llywelyn ab Iorwerth and his two sons; in that of Bleddyn Fardd, they were the sons of Gruffudd ap Llywelyn: Llywelyn ap Gruffudd, Dafydd ap Gruffudd, and Owain Goch. He also composed two individual elegies, an AWDL, and a chain of *englynion* (see ENGLYN), for each of these last scions of the dynasty of Gwynedd, and lamented the death of Goronwy ab Ednyfed, Llywelyn's *distain* (steward). Twelve elegies attributed to Bleddyn

Fardd are preserved in the early 14th-century Hendregadredd manuscript. There is only one eulogy addressed to a living prince, the southern lord Rhys ap Maredudd ap Rhys Gryg; Bleddyn Fardd appears to have served as Llywelyn ap Gruffudd's emissary to Rhys in 1275 or 1276, and the poem probably dates from that occasion. A religious lyric titled *marwysgafn* completes the inventory of his work; this 'deathbed poem' recalls similarly titled poems by Meilyr Brydydd and Cynddelw, and is an instance of his conscious use of the tradition of court poetry. At the same time, it gives voice to a somewhat apocalyptic religious sensibility that is often also evident in his elegies. Half of his poems are chains of *englynion unodl union*, and half are *awdlau* in the measure known as *gwawdodyn*, in which couplets of nine-syllable *cyhydedd naw ban* alternate with *toddaid* couplets (distinguished by a metrical break in an opening long line). The poems are all of moderate length, ranging from 20 to 24 lines, and consistently ornamented with *cymeriad* (linking by repetition of line openings), alliteration, and internal rhyme. It should be noted that the elegy by the 12th-century poet Cynddelw for someone by the name of Bleddyn Fardd cannot have been composed for this poet.

Blodeuwedd (also Blodeuedd) is one of the central characters in the Middle Welsh wonder tale, Math fab Mathonwy, also known as the Fourth Branch of the Mabinogi. In the tale, Blodeu(w)edd is created by the magicians Gwydion and Math out of various flowers—the flowers of the oak, the flowers of the broom, and the flowers of the meadowsweet (*blodeu y deri, a blodeu y banadyl, a blodeu yr erwein*). Blodeuwedd was conjured up in this way in order to overcome the third destiny (*tynged*) imposed by Arianrhod on her son Lleu Llaw Gyffes, 'that he shall never have a wife of the race that is now on this earth' (Gwyn Jones & Thomas Jones, *Mabinogion* 68). This destiny was sworn on him by his mother, presumably to prevent him having any heirs, and like her other injunctions—denying him a name and taking of arms—the prohibition against marriage effectively prevents her son from taking a place in society. Blodeu(w)edd's name means either 'flowers' (*blodeu-edd*) or 'flower-features' (*blodeu+wedd*) and occurs in the extant text in the two variant spellings: *Blodeueb* and *Blodeuweb* (see Hughes, *Math uab Mathonwy* xxxiv–xxxv). In the Mabinogi text, Blodeu(w)edd deceives her husband Lleu into telling her how he might be killed. She passes this information on to her paramour, Gronw(y) Pebr, who in turn succeeds in killing Lleu. Blodeu(w)edd is eventually turned into an owl by Gwydion as punishment for her part in the slaying of Lleu.

The name Blodeu(w)edd is not found in the early Welsh poetry, although there is a reference to Gwydion and Math creating a person from flowers and trees in the poem *Cad Goddau* (The battle of the trees), one of the mythological poems of Llyfr Taliesin (36.3–7). However, the name is mentioned in a poem entitled *Tydi, dylluan tudwyll* ('You owl, a land's apparition') which is attributed by some scholars to Dafydd ap Gwilym (see H. Idris Bell & David Bell, *Fifty Poems*

282–4: 17–32) and by others to an anonymous poet (see Parry, *Gwaith Dafydd ap Gwilym* clxxxiv, n.121; Fulton, *Selections from the Dafydd ap Gwilym Apocrypha* 33.17–32). In the poem the poet is speaking to an owl who says that she was once the daughter of a lord of Môn (Anglesey), but that she was changed into an owl by Gwydion because of her affair with Gronw(y) from Penllyn. Although there is no mention of Lleu here, it can be assumed that deceiving him is the cause of her punishment. Blodeuwedd is said to have been turned into an owl on the banks of the river Conwy. It should be noted that the source of the river Conwy is only a few miles from Llyn y Morynion (Lake of the maidens), which features in the events of the Fourth Branch (see Hughes, *Math uab Mathonwy* 73, n.55). Another reference to the owl character in this poem is to be found in two further written sources, one of the late 15th century and the other of the early 17th century, where we are told that Gwydion's son Huan ('Sun', presumably another name for Lleu, which can mean 'light' as a common noun) is killed by his wife (who is not actually named in these two texts). When Gwydion discovers this, he turns the deceitful wife into an owl, *t(w)yllhuan* 'the deceit of Huan'. The owl (*tylluan* in Modern Welsh) is destined to come out only at night because she has deceived Huan, 'the Sun' (Gwyn Jones & Thomas Jones, *Mabinogion* 73–4).

The story of Blodeuwedd's creation by conjuring, treachery, and punishment has captured the imagination of many writers and artists since the rediscovery of the *Mabinogi* in the 19th century; Saunders Lewis's Welsh-language play *Blodeuwedd* is one important example of the reworking of the theme in recent times.

Bóand/Bóinn/Boyne is the name of a goddess and of the river that flows in an arc from the northern part of Co. Kildare (Contae Chill Dara) into the Irish Sea east of Drogheda, Co. Meath (Droichead Átha, Contae na Mí). Both the goddess and the river have many mythological attributes reflected in early Irish literature. The river-name Βουουινδα *Buvinda* is listed in the *Geography* of Ptolemy of Alexandria (*c.* AD 150, incorporating older information) and is a Celtic compound that originally meant 'she who has white cow(s)' or 'as white as a cow'. This meaning seems to have been reinterpreted as 'white cow' by medieval literary times.

The source of the river Boyne in the grounds of Newbury Hall, close to Carbury Hill, Co. Kildare, is of archaeological and mythological importance. Three burial sites on the summit of Carbury Hill yielded cremations and inhumations along with a scatter of grave goods probably dating from the Iron Age (*c.* 600 BC to *c.* AD 400) and late Romano-British period (4th century AD). Carbury Hill appears in mythology as Síd Nechtain, the otherworldly residence of Nechtan, Bóand's consort. The source of the river Boyne was known as the Well of Segais, also the name of the source of the river Shannon (Sionna). The well was renowned as a font of supernatural knowledge that could be acquired by eating magical salmon from the pond or the wisdom-filled nuts of the nine hazel trees that surrounded the well. According to one belief, any mortal who was fortunate enough to eat either the hazelnuts or the salmon obtained the gifts of prophecy and of poetry. One version of the onomastic (dindshenchas) tale explaining the origins of the river Boyne and its association with the goddess describes how Segais could be approached only by Nechtan and his three cupbearers. Despite this taboo (geis), Bóand approached the well. Three waves burst from it and disfigured her foot, her eye, and her hand. She fled towards the sea to escape mutilation, but was followed by the white waters of Segais and drowned.

The course of the waters from Segais to the sea created the course of the river Boyne. Inber Colpdai, the mouth of the Boyne, east of Drogheda, was one of the most important harbours and entry points in medieval Ireland (Ériu). In the heroic tale Togail Bruidne Da Derga ('The Destruction of Da Derga's Hostel'), signs of prosperity in the early stages of the

reign of Conaire Mór included the anchoring of seven ships in Inber Colpdai every June and plenty of fish during that season in the rivers Boyne and Bush (Co. Antrim/Contae Aontroma). Notes in the 9th-century Book of Armagh relating to St Patrick suggest that the Boyne was navigable to Áth Truimm (Trim, Co. Meath).

The other great landmark on the Boyne was Brug na Bóinne, the archaeological complex which includes the megalithic tombs of Newgrange, Knowth, and Dowth (Dubhadh). This was the otherworldly residence of Bóand, the great god Dagda and, most importantly, of his son Oengus Mac ind Óc 'the boy-god'. The latter was born as a result of a liaison between Bóand and Dagda that occurred when Dagda sent Nechtan away. To hide their infidelity, they asked Elcmar—possibly an alter ego for Nechtan and for Nuadu Argatlám (Nuadu of the silver hand), both of whom may reflect aspects of the god Nōdons—to become Oengus's foster-father.

The river Boyne was a significant feature in a highly fertile region of the Irish landscape, particularly in relation to political control of the vital east midland kingdom of Brega. The kingdom was divided into sub-kingdoms by the Boyne and its tributary, the Black-water. The kingdom of north Brega reached as far as an area south of the river, while the kingdom of south Brega extended to the river Liffey (An Life). An early Old Irish poem, which proclaims *Mairg d'Ultaib mad ol Bóinn beid* 'woe to the Ulaid if they be beyond the Boyne', suggests that the Boyne also figured as the southern limit of the power of Ulster until the 7th century.

Boar-hunting scene on a Celtiberian bronze wagon from Mérida, Spain, 1st century BC

boar

The Eurasian wild boar, *sus scrofa* (Gaulish *turc-*, Old Irish *cullach, ner, torc, tríath*, Welsh *baedd, twrch*), is the species from which pigs were domesticated. With the exception of the most northerly regions, wild boars existed throughout Europe, Asia, and northern Africa, and were an important part of the diet and social system of the Celts. The native population of wild boars was hunted to extinction in Britain towards the end of the 13th century, and somewhat later in Ireland (Éire), although the animals were frequently reintroduced, and a 17th-century date of extinction is given in many sources (Rowlett, *Proc. Harvard Celtic Colloquium* 14.195–210).

Many artistic representations of boars have been found in Celtic archaeological contexts, for example the boar-hunting scene depicted on a Celtiberian bronze wagon from Mérida, Spain. Boars also feature prominently in Celtic literature, as food animals for a feast, as tokens of heroic status, and as objects of a quest. In Fled Bricrenn ('Bricriu's Feast'), Bricriu describes a boar as part of the champion's portion of his feast:

> *Atá torc .uii. mbliadna and o ro léorc becc ní dechaid inna beólu acht littiu lemnacta 7 menadach i n-erroch 7 fírcroith 7 fírlemnacht i ssamrud. Eitne cnó 7 fírchruithnecht hi fogomur | 7 feóil 7 en bruthe hi [n]gemrud.*

> I have a seven-year-old boar that since it was a piglet has eaten nothing but gruel and meal and fresh milk in spring, curds and sweet milk in summer, nuts and wheat in autumn and meat and broth in winter. (Trans. Gantz, *Early Irish Myths and Sagas* 223)

Boar hunts feature as key episodes in the Irish Fenian tale Tóruigheacht Dhiarmada agus Ghráinne ('The Pursuit of Diarmaid and Gráinne') and the Welsh Arthurian tale Culhwch ac Olwen. The name *Culhwch* is itself derived in the story from *hwch* 'sow' (Ford, *Celtic Language, Celtic Culture* 292–304; Hamp, ZCP 41.257–8). The greatest adventure in the tale is the hunting of Twrch Trwyth, a boar with a comb and scissors (the magical objects of a quest) between his ears. *Trwyth* is probably a scribal corruption of *Trwyd*, cognate with the Irish *Torc Tríath* (cf. the expression *tríath torc* in Sanas Chormaic). The Irish word *tríath* has several meanings, including 'lord, chief, king; boar; sea, wave', and Twrch Trwyth is, indeed, a highly noble boar and sea-crossing swimmer. The phrase may refer to a specific mythological concept. Twrch Trwyth is identified as the son of Tare6 Wledic (Taredd the great king or sovereign) and is explained himself as having been a king transformed into a swine for his sins by God. Another of the tasks set for Culhwch and Arthur's heroes is to acquire the tusk of Ysgithrwyn ('white-tusk'), chief boar (*yskithyr Yskithyrwyn Penn Beid*). This preliminary boar hunt in the tale provides an effective reduplication which anticipates the climax with Twrch Trwyth and his spawn.

It is not always easy to separate references to wild boar from those to domesticated pigs (Irish *muca*, Welsh *moch*), which also have important social and narrative functions. Thus, the Gaulish god Moccus, affiliated with Mercurius (see interpretatio romana), may be linked to either a pig or a boar. Under the Middle Welsh name *hob*, domestic pigs are ascribed an origin in Annwn (the Otherworld) in the tale of Math fab Mathonwy (the Fourth Branch of the Mabinogi) and, later in the tale, a sow acts as a supernatural guide leading Gwydion to the slain Lleu transformed into an eagle. Swineherds figure as having important and shapeshifting rôles in the *remscél* (foretale) to the Táin Bó Cuailnge, which centres on the shapeshifting struggle of two otherworldly (síd) pig keepers.

Bochanan, Dùghall (**Dugald Buchanan**, 1716–68), the most influential of the Scottish Gaelic evangelical poets, was a miller's son from Ardoch, Strathyre, south Perthshire, Scotland (Alba). Bochanan suffered much in early manhood from the powerful combination of a hyperactive imagination, an excessively religious upbringing, a good education, and an extroverted personality. His extraordinary (English) diary survived and is published, but he burned his (Gaelic) secular verse. From 1751, as schoolmaster (from 1755, also catechist) in Rannoch, he was the sole bringer of the gospel to the most notoriously lawless part of the Highlands. Thanks to his poetic gift, his success as an evangelist was astonishing. He enshrined Christianity in theological order (God to man) in eight remarkable hymns, published in 1767 and reprinted about 40 times, which set the Christian message firmly in his hearers' environment: *Mórachd Dhé* ('The greatness of God'); *Fulangas Chrìost* ('The Passion of Christ'); *Latha a' Bhreitheanais* ('The Day of Judgement', whose descriptive passages are arguably his outstanding achievement); *Am Bruadar* ('The dream', noted for its lyricism); *An Gaisgeach* ('The hero', which substitutes Christian values for those of the warrior society); *An Claigeann* ('The skull', a captivating sermon full of social detail); *An Geamhradh* ('Winter', which takes advantage of the fashion for seasonal verse); and *Ùrnaigh* ('Prayer', which returns to God as the fountain of life). He also helped to oversee the publication of the Gaelic New Testament in 1767 (see bible).

Bodb (later Badb, pl. Badba), 'scald-crow', was a designation for a supernatural female being associated with battle and slaughter in early IRISH LITERATURE. There are references to the Bodb or the Badb, a *badb* and several *badba*, therefore the designation may be both a proper name and a generic term for a supernatural battle creature. The Badb is sometimes identified with other supernatural women from early Irish narratives—the MORRÍGAN, (the) NEMAIN, Bé Néit (Woman of battle), or MACHA. At other times she is mentioned together with one or more of them as separate personalities. The battle association is explicit in the stock phrase in *bodb/badb catha*, 'the Badb of battle' (see e.g. TOCHMARC EMIRE §50; IN CATH CATHARDA lines 902, 5955).

The Badb appears in different forms in the tales: for instance, as a voice from the corpses on the battlefield (TÁIN BÓ CÚAILNGE, Recension 1, line 498), as a red woman, an eel, a she-wolf, a heifer, and a black bird (*Táin Bó Regamna*, see §7 in the LEABHAR BUIDHE LEACÁIN version), as a red woman washing a chariot in a ford, and as a dark, lame, one-eyed woman (*Bruiden Da Choca* Recension B in TCD MS H.1.17), as a pale, fair woman (*Tochmarc Ferbe* in BL MS Egerton 1782). The figure of the Badb may be marked by asymmetry, the colours associated with her being red and pallor. The battle creatures called *badba* are likewise often described as being pale and their mouths as red. They are said to be hovering above a battlefield, where their shouts either incite or terrify the warriors. Bleeding *badba* with ropes around their necks are described in TOGAIL BRUIDNE DA DERGA (in the version in LEBOR NA HUIDRE). The Badb often functions as a harbinger of death by battle; thus she may appear as a so-called 'washer at the ford' or as an ominous visitor to a BRUIDEN (hostel), where she prophesies evil (*Bruiden Da Choga*; in *Togail Bruidne Da Derga* one of the names of the ominous visitor Cailb is Badb). She may incite people to fight or terrify them, in her appearance as a single woman, in the company of her 'sisters' Bé Néit and Nemain, and as a group (*badba*) together with similar battle creatures. The incitement is done in two ways: either by non-verbal cries or by a verbal message. When the aim is to inspire fear, non-verbal shrieks are uttered. The Badb (equated with the Morrígan) announces the victory in battle and prophesies the end of the world (CATH MAIGE TUIRED §§166–7). The Furies and Bellona in the Latin source texts of TOGAIL NA TEBE (The destruction of Thebes) and *In Cath Catharda* (The civil war) have been adapted to the Irish context: their names have been 'translated' as Badb (*Badb catha* 'Badb of battle'). In general, the appearance of the Badb is an evil omen.

Bodb is also the name of a male supernatural being: Bodb Derg from Síd ar Femin, king of the *síde* of Munster (MUMU), who is famous for his knowledge (*Aislinge Oengusa*). His name is also mentioned in relationship to his swineherds, who cause battle and bloodshed (see *De Chophur in Dá Mucado*; and Nár Túathcháech in *Togail Bruidne Da Derga*). Bodb Derg is, moreover, a supernatural protector of Ireland (ÉRIU), together with the Morrígan, Midir, and OENGUS MAC IND ÓC (*Airne Fíngein* §9).

In BRYTHONIC, there are numerous examples of the cognate word, Welsh *boddw* < Celtic **bodwo-*, as a high-status name element. The earliest occurs on COINAGE of the British IRON AGE with the legend BODVOC[- (Van Arsdell, *Celtic Coinage of Britain* nos. 1052–1, 1057–1, *c.* 15–10 BC) < Celtic **Boduākos* (cf. D. Ellis Evans, *Gaulish Personal Names* 151). Early medieval examples include Archaic Welsh *Boduan* in the 7th- or early 8th-century charters appended to the Life of St CADOC, corresponding to Old Breton *Boduuan/Bodguan* in the Cartulary of REDON (cf. also the uncommon Old Irish man's name *Bodbán*); Old Welsh *Gurbodu* in charter 229b (*c.* 878) in the Book of LLANDAF; *Elbodgu* and *Artbodgu map Bodgu* in the Old Welsh GENEALOGIES of BL MS Harley 3859, and St *Elbodug* (ELFODDW) mentioned in ANNALES CAMBRIAE at years 768 and 809. Note that Bran/BRÂN 'crow' also occurs as a man's name in mythological tales in both Irish and Welsh. Such names probably imply Brythonic traditions not merely of naming men after the crow, but rather wider supernatural associations along the lines of those better attested in Irish literature as canvassed above.

Brenda Sutton playing the bodhrán

Bodhrán, an IRISH word, designates a light frame-drum averaging about 60 cm (two feet) in diameter and constructed of a wooden rim over which a cured and scraped goatskin has been stretched. In former times it was commonly used as a winnowing pan, a sieve (the skin being perforated), or a tray for holding loose household items. It also served in music-making as a hand-drum. For this purpose specialized forms were sometimes fitted with metal jingles or bells, and a wooden stick frequently used in playing. In the south and west of Ireland (ÉIRE) the playing of the *bodhrán* was particularly associated with the house-to-house visitations of the 'wren-boys' on St Stephen's day (an association that recalls the use of dried animal skins for percussion in similar Christmas and hogmanay regeneration rituals practised in the Scottish HIGHLANDS and Western Isles). The *bodhrán* was especially popular as an accompaniment to traditional dance music in the north CONNACHT counties of Sligo, Roscommon, and Leitrim (Sligeach, Ros Comáin, Liatroim). Largely due to its utilization by Seán Ó Riada and his influential ensemble Ceoltóirí Chualann (1959–69), the *bodhrán* was adopted as the pre-eminent percussion instrument of the traditional music revival of the 1960s and 1970s (see DANCES; IRISH MUSIC). In early Irish texts, it is possible that *timpán* (a loanword from Latin *tympanum*, cf. Welsh *tympan*) sometimes refers to a framed drum like the modern *bodhrán*, but in some contexts a *timpán* seems to be a stringed instrument.

Bodmin Manumissions

It was the custom in many countries to record legal transactions on the blank pages of sacred texts. During the late 10th and early 11th centuries landowners in

eastern Cornwall (KERNOW) recorded transactions in a 141-leaved manuscript known now as the Bodmin Manumissions (*c.* 960). These manumissions were certificates of freedom from serfdom, drawn up when landowning aristocrats sometimes freed serfs as an act of piety. In this text, originally written in a mixture of Anglo-Saxon and Latin, most of the lords have Saxon names, though a minority have Old CORNISH names, for example *Marh, Custentin*. Most of the clerical witnesses have Old Cornish names, such as *Leucum* the cleric, *Mermen* the priest, *Grifiud* the priest, *Loumarch* the priest (cf. Welsh *Llywarch*), *Riol* the deacon, and *Comoere* the bishop; as do most of the freed serfs, for example, *Tancwoystel* 'peace-hostage', *Arganteilin* 'silver-browed', *Wurci* 'man-hound'. In total, 122 slaves are freed, 98 of whom have Cornish names, twelve Anglo-Saxon, and a further twelve biblical or Latin names, such as *Deui, David, Agustinus*. The Old Cornish personal names are generally closely similar to the names known from Old Breton and Old Welsh sources, and point to a common stock of BRYTHONIC names and name elements in use over a wide area in the early Middle Ages.

The slaves are freed on the bell or altar of St PETROC. The New Testament gospel on which the manumissions are recorded was originally from the monastery of St Petroc at Padstow, which, after its sacking in AD 981, was moved to Bodmin. The volume is regarded by many scholars as the earliest surviving manuscript from Cornwall. Its Old Cornish may be usefully compared with that found in the OLD CORNISH VOCABULARY. The manumissions form part of a wider tapestry of Old Cornish phrases found in other Latin manuscripts, including three 10th-century glosses on the Book of Tobit and nineteen 9th-century glosses, originally thought to be Breton on Smaragdus' Commentary on Donatus.

Boii and the Celts in Bohemia

Bohemia, in the present-day Czech Republic, takes its name from the Boii, one of the most important peoples in the eastern Celtic area. The Boii are attested in numerous historical sources. The main territory occupied by the north-eastern Boii consisted not only of Bohemia, but also of much of modern Moravia, north-eastern Austria, western Slovakia and western Hungary. Other Celtic groups, also called Boii, are attested in northern ITALY and GAUL (e.g. CAESAR, *De Bello Gallico* 1.28–9). It is possible, but not certain, that all these groups originated as branches of the north-eastern people who gave their name to Bohemia.

§1. LATE HALLSTATT AND EARLIEST LA TÈNE PERIOD

Between the 8th and 5th centuries BC, Bohemia was part of the wider zone defined by common features of material culture and named after finds from the graves at HALLSTATT, Austria. Modern archaeologists have proposed more than one geographical subdivision of the Hallstatt culture: accordingly, Bohemia might belong either to the 'west Hallstatt' zone—roughly encompassing central France, Switzerland, Bohemia, and Middle Germany—or as part of the central zone—roughly encompassing south-eastern Germany, north-western Austria, and Bohemia (Müller-Scheeßel, *Die Hallstattkultur und ihre räumliche Differenzierung* 52–6). Evidence of characteristic burial practices such as wagon graves are found in Bohemia, for example, Hradenín with nine wagon burials, Manětin-Hrádek (Soudská, *Celts* 182–3), Praha-Bubeneč and Vikletice (Vosteen, *Urgeschichtliche Wagen in Mitteleuropa*), as well as other typical finds such as boat fibulae and other jewellery (Müller-Scheeßel, *Die Hallstattkultur und ihre räumliche Differenzierung* 56). This indicates a considerable amount of cultural exchange as early as the 7th–6th centuries BC with those areas to the west that are often considered by archaeologists to be Celtic.

Since these societies were preliterate, it is impossible to state beyond doubt whether the inhabitants of Late Hallstatt Bohemia actually spoke a Celtic language. However, the strong cultural links that can be documented in the archaeological record at least make it reasonable to see them as parts of a wider cultural continuum, in which ideas and concepts were exchanged quite freely, and where Celtic speech was documented

in succeeding centuries.

A growing connection with the south-west is also identifiable in the late Hallstatt settlement in Bohemia. Around the middle of the 6th century BC, a hill-fort was constructed at Závist, at the southern rim of the Prague basin. Although at first not fortified, it contained an enclosure, which has been interpreted by the excavators as a sanctuary with various temple structures and a later added (during the earliest La Tène period) second enclosure containing a ritual structure of the type termed *temenos* (Motyková et al., *Celts* 180–1). Finds of valuable objects within these structures, some of which indicate increasing long-distance contacts with west-central Europe and beyond, have been interpreted as offerings at the temple. But Závist might alternatively have been an élite settlement. Similar ENCLOSURES with comparable high-status objects, have been found at Krašovice (Soudská, *Pamatky Archeologické* 57.535–95), dating to the Late Hallstatt period, and in Dolní Břežani, just 3.5 kilometres from the site of Závist (Motyková et al., *Celts* 180–1), and Droužkovice (Smrž, *Celts* 185), dating to the earliest phases of the La Tène period. Like the later VIERECKSCHANZEN-type rectangular enclosures, these sites have been interpreted as settlement sites of the social élite (Wieland, *Keltische Viereckschanzen*). The whole settlement on the Závist was enclosed by an earthen bank and a timber-laced rampart at the end of the 6th century BC, replaced by a masonry wall in the earliest La Tène phases in the 5th century BC, indicating that the site held an important position in the settlement hierarchy of central Bohemia. Whether Závist originally functioned primarily as a sanctuary or as an élite settlement in late Hallstatt and early La Tène Bohemia, it was probably the central focus around which a Celtic group that later became known as the Boii developed. Thus, the early wide-ranging contacts of the site might explain the important rôle that the Boii played in the Celticization of northern Italy and the Hungarian plains.

Within Bohemia, the Hallstatt–La Tène transition seems to have been a period of few changes outside the field of decorative ART. Settlement and burial patterns were mostly unaffected by this change in art style, with the same sites being used continuously across this transition well into the La Tène A period, up to about the end of the 5th century BC. It has been argued that this indicates an adoption of the new art style as a 'fashion', rather than as the result of any invasion or immigration of Celtic groups into Bohemia (Sankot, *Celts* 184; Waldhauser, *Die hallstatt-und latènezeitliche Siedlung mit Gräberfeld bei Radovesice in Böhmen* 404–7).

§2. LATER EARLY LA TÈNE PERIOD

Significant changes in both settlement and burial patterns are clearly evident during the La Tène A–B transition. In the region on the middle Bílina river, for instance, about 30% of the old settlements were abandoned, about 20% of the settlements were new foundations, while only about 50% remain in the same location (Waldhauser, *Die hallstatt-und latènezeitliche Siedlung mit Gräberfeld bei Radovesice in Böhmen* 405). Generally, cemeteries such as Královice and Manětin-Hrádek, where tumuli had been characteristic, were discontinued at the end of the La Tène A period and replaced by flat inhumations from La Tène B onwards. The hill-fort at Závist was abandoned (Sankot, *Celts* 270). These sudden and radical changes, all roughly dating to *c.* 400–*c.* 350 BC, have frequently been seen as the result of an invasion by 'Celtic' war-bands into Bohemia as part of a 'Celtic migration period' that culminated in the sack of ROME *c.* 387 BC (Sankot, *Celts* 270; Waldhauser, *Die hallstatt-und latènezeitliche Siedlung mit Gräberfeld bei Radovesice in Böhmen* 405–6). However, such a massive migration of large numbers of 'Celtic' invaders from central and western Switzerland and from the Baden-Württemberg area (Sankot, *Celts* 270), seems no more likely than other possible models, since there were numerous continuing traditions (Waldhauser, *Die hallstatt-und latènezeitliche Siedlung mit Gräberfeld bei Radovesice in Böhmen* 405–6). A more detailed examination of the evidence suggests a complex pattern of cultural change and continuity. Significant changes were indeed taking place in early 4th-century BC Bohemia, but these could have been due to people moving out of Bohemia during the latest stages of La Tène A and the early years of La Tène B, to be replaced some years later by immigrants in small groups, with an intermixture of these two traditions in the following decades (Waldhauser, *Die hallstatt-und latènezeitliche Siedlung mit Gräberfeld bei Radovesice in Böhmen* 405–6). Either model for the La Tène A–B transition—mass migration or an accumulation of small-

scale movements—can be reconciled in various ways with the historical records of the Boii, for example, their appearance in northern Italy *c.* 400 BC.

Similar changes occur to the east of Bohemia during this phase. In the first half of the 4th century BC, flat inhumation burials, similar to those in Bohemia, commonly appear in Moravia and south-western Slovakia. Settlements structurally similar to those of Bohemia appear in these areas as well as in north-eastern Austria, and there are considerable parallels in the types of small finds (Sankot, *Celts* 270–2; Čižmář, *Celts* 273–6; Bujna & Szabó, *Celts* 277–86). Once again, these developments might be explained either on the basis of a large-scale 'Celtic' migration from west-central Europe or an eastward expansion of the territory of the Boii or, possibly, some less dramatic mechanism of cultural influence.

§3. LATER EARLY AND MIDDLE LA TÈNE PERIOD

In this period the Boii become more visible archaeologically and also in various historical sources which place them in northern Italy. In contrast to the preceding stage, material culture in much of the eastern La Tène area has now become more uniform. Local groupings are almost impossible to identify, and similar forms of material culture stretch from Bohemia over north-eastern Austria, Moravia and south-west Slovakia into the Hungarian plains south-west and north of the DANUBE (Neugebauer, *Die Kelten im Osten Österreichs* 12; Horváth et al., *Corpus of Celtic Finds in Hungary 1*; Hellebrandt, *Corpus of Celtic Finds in Hungary 3*). Strong connections in the material culture also link this area and that of the historically attested Boii of northern Italy (J. H. C. Williams, *Beyond the Rubicon* 211–13). Although it is again not certain whether the people inhabiting all these areas were actually identifying themselves as Boii at this period, a zone of strongly similar material cultures had developed in central Europe by the time the Boii had become prominent in the history of the region.

During the late phases of the middle La Tène period the emergence of a Greek-derived COINAGE and other material changes began to affect the east Celtic area. 'Boian' coinage appears in the 2nd century BC. Its main series were gold. At first images from Greek coinage predominated, for example, the goddesses Athena and Nike, but these were soon replaced by more abstract designs (Ziegaus, *Das keltische Jahrtausend* 220–7).

Also in the 2nd century BC, new centralized enclosed or fortified settlements appear. These are commonly constructed on hilltops, such as those on the Braunsberg bei Hainburg an der Donau (Urban, *Die Kelten in den Alpen und an der Donau*), Hrazany (Jansová, *Hrazany* 314–15) and Stradonice in Bohemia (Bren, *Celts* 541), and STARÉ HRADISKO in Moravia (Meduna, *Celts* 546–7), but sometimes also on the plains (as in Roseldorf an der Schmida; see Holzer, *Archäologie Österreichs* 1.38–45). These new fortified settlements indicate shifting settlement patterns and/or an increase in population density. The hill-fort at Závist was also reoccupied during this period, this time with massive timber-laced ramparts (Motykova et al., *Celts* 542–3). At the same time burials disappear almost completely from the archaeological record, something that is also mirrored by developments in CISALPINE GAUL. This evidence has been taken together with a report by STRABO (*Geography* 5.1.6) to suggest that the north Italian Boii returned around 190 BC to the homelands of their ancestors in central Europe, settling along the Danube in east Austria, south-west Slovakia and west Hungary, after their defeat at the hand of the Romans (Urban, *Die Kelten im Osten Österreichs* 127). Such models, however, remain questionable (Dobesch, *Tyche* 8.1–27; J. H. C. Williams, *Beyond the Rubicon* 211–13).

§4. THE LATE LA TÈNE BOII AND THE GERMANS

The first historical records of Boii in Bohemia (and perhaps neighbouring Moravia) come from the late La Tène period. Quoted in Strabo (*Geography* 7.2.2) is a report from POSIDONIUS that the CIMBRI, before they fought the battle of Noreia in 113 BC (see ALPINE region), had been turned away by the Boii living in the Hercynian forest (HERCYNIA SILVA), a term which usually refers to the general area east of the Rhine and north of the Danube, including Bohemia. However, the same source indicates that the Boii had once lived in the Hercynian forest, implying that when Posidonius wrote (*c.* 80/70 BC), they no longer did (Urban, *Die Kelten in den Alpen und an der Donau* 371–2). Whether this notice is accurate or not, the archaeological evidence indicates a continuous presence of people using La Tène material culture in Bohemia up to the final quarter of the 1st century BC. The Bohemian *oppida*—Hrazany (Jansová, *Hrazany*), Stradonice

(Bren, *Celts* 541), Závist (Motykova et al., *Celts* 542–3) and Třísov (Bren, *Celts* 544)—all remain functional until the period *c.* 25–10 BC. However, large hoards, for example the Kolín tool hoard, may indicate a destabilization of the power of the local élites, either due to internal factors such as the population moving off to the south, or to external factors such as increasing pressure from Germanic populations from the north (Motyková & Rybová, *Celts* 545). That Boii, most likely from Bohemia, were moving towards the west at this time is confirmed by written evidence. A shard of a late La Tène vessel bearing the inscription BOIOS 'a Boian', dating to the 1st century BC, has been found in the OPPIDUM of MANCHING in Bavaria (Krämer, *Das keltische Jahrtausend* 250). Settlement of the Boii a short distance east from Manching along the Danube is attested through the place-name *Boioduron* 'fortified settlement of the Boii', modern Passau, at the confluence of the Inn and Danube (Urban, *Die Kelten in den Alpen und an der Donau* 372). Boii who joined the Helvetian migration to Gaul in 58 BC are mentioned repeatedly by Caesar (e.g. *De Bello Gallico* 1.5.4, 1.29.2). These Boii seem to have finally settled in the territory of the AEDUI following their defeat by Caesar (*De Bello Gallico* 1.28.5). Such migrations might have been the result of the loss of territory in Bohemia to encroaching Germanic groups, particularly the Suebi, (Motykova et al., *Celts* 542–3). Alternatively, it is possible that local élites and populations gradually adopted more northerly fashions, thus becoming 'Germanicized' without mass migration. However this Germanicization came about, when the Romans annexed the Celtic kingdom of NORICUM in 15 BC, thus relocating the northern border of the growing Roman Empire to the Danube, they faced populations called Suebi, not Boii.

§5. THE DACIAN WARS AND THE DESERTA BOIORUM

The Boii established a presence in the east Austrian, south-west Slovakian and west Hungarian plains in the 2nd quarter of the 1st century BC. Later Boian coinage appears in the east, with a mint established at Bratislava, Slovakia, datable by numismatic criteria to *c.* 64/63 BC (Göbl, *Die Hexadrachmenprägung der Groß-Boier*) and operating for approximately a decade. These Boii east of the Alps came into conflict with the growing power of the DACIANS under their king Burebista, and were heavily defeated sometime between 50 and 40 BC. The *oppidum* at Bratislava ended at about 50 BC (Zachar, *Celts* 548–9). PLINY (*Natural History* 3.147) records the Hungarian plains south-west of the Danube as the *deserta Boiorum* (the Boian waste), a region depopulated after the defeat of the Boii at the hands of the Dacians. This desertion coincides with the discontinuation of a type of Hungarian Celtic coinage, the 'Velem'-type, in the area that became the *deserta Boiorum* (Urban, *Die Kelten in den Alpen und an der Donau* 373). When the Romans annexed Noricum in 15 BC, its population was not called Boii, and in AD 6 Velleius Paterculus (*Historia Romana* 2.109) refers to Carnuntum, located about half-way between modern Vienna and Bratislava, as belonging to Noricum, not the Boii.

§6. THE NAME

Boios, pl. *Boii*, probably derives from PROTO-CELTIC **bou̯os*, **bou̯ī* 'a man who possesses cows'. Hence, in a pre-currency Celtic economy in which wealth was often reckoned in livestock, cattle in particular, a **bou̯os* was a legally competent freeman. Compare the Old Irish legal term *ambue* 'outsider, one not legally competent', etymologically the negative of the same term, Proto-Celtic **ambou̯os* 'not a cattle-owner' (cf. McCone, CMCS 12.11). It is therefore likely that the name originally signified an élite class rather than a tribe or people and that the significance changed as a result of migration and/or cultural expansion. An ancient form of *Bohemia* is Tacitus's *Boihaemum* 'the home of the Boii' (*Germania* 28.2).

Bononia/Bologna

Literary sources that mention the early north Italian town of Bononia in the later pre-Roman period, when Celtic-speaking groups predominated, are limited to a few lines from Livy (33.37.4, 37.57.7, 39.2.5–6), Velleius Paterculus (1.15.2), and Servius (*Ad Aeneid* 10.198.5). The name of the settlement during the period of the supremacy of the Celtic tribal group, the Boii, was *Felsina*. *Bononia* became the Roman name of the colony after its conquest. The latter is possibly a Celtic name, related, for example, to the second element of *Vindobonā*, the ancient name of Vienna.

From an archaeological point of view, almost nothing is known about the settlement area during the 4th and 3rd centuries BC (which would be the main Celtic period in this part of northern Italy)—either regarding the materials used or structures. Therefore, the importance of the town at this time can only be assumed from its illustrious past in the preceding Etruscan period. Worth mentioning is the discovery of a bronze helmet (the 'Pallotti' helmet, dating from the beginning of the 3rd century BC), perhaps connected to a site of worship. The object bears an inscription in the Italic Umbrian language concerning a personage who came originally from Spoleto. It refers to the

person who dedicated the offering, i.e., the person who was vanquished, if the helmet was war booty. Some recent excavation work at the Roman theatre shows that there was already contact with the Roman Republic by the second or third quarter of the 3rd century BC. This pre-colonial presence, also found in other Etruscan settlements of the Po valley (Mutina), is thus not unparalleled.

The urban archaeology of Bononia during the Celtic period is limited to funerary artefacts. All Bononia's Celtic TOMBS were uncovered during the 1800s in the western part of the city, where the different names given to the sites are those of the modern owners of the excavated lands (Benacci, Benacci-Caprara, de Luca, Arnoaldi), a practice which can give the misleading impression that there were distinct burial grounds. In fact, it is a single necropolis, of which the full original size is unknown, composed of several different centres. The excavation work was directed by A. Zannoni, who wrote of 190 Gaulish graves, although a review of the funerary evidence completed in 1992 has shown that the number of graves in Bononia datable to the period of the dominance of the Boii was 77. These contained belongings of varying importance, and at least a further 40 inhumation tombs were without surviving artefacts and therefore not easily dated or assigned to a particular culture. The richest burial assemblages were published by E. Brizio in 1887.

Inhumation is the most common type of burial in the Boian period. Cremation is an uncommon alternative and does not appear before the end of the 4th century BC. Sporadic material (for example, pre-DUCHCOV brooches) was found in the Arnoaldi burial ground. Late HALLSTATT and Early LA TÈNE material, dating from the 5th century BC, was found in three excavated areas of the Certosa necropolis and in two Arnoaldi tombs. This material includes several iron short swords with antenna-type hilts of the typical western Hallstatt C type of the end of the 7th century BC (see SWORD). These finds indicate contacts with the transalpine world in the era preceding the historically attested migrations of Gauls into northern Italy in the 4th century BC (see TRANSALPINE GAUL). The tombs with antenna-type swords indicate the presence of transalpine warriors in the 7th–6th centuries BC at Felsina. In the 4th and 3rd centuries, of the 77 tombs assigned to the period, 14 are identifiable as those of warriors on the basis of iron swords of La Tène type. Several particularly rich sets of burial goods, including bronze helmets and gold crowns, indicate the presence of a military élite, strongly influenced by the high-status ethos, as displayed in such Greek-influenced traditions as drinking symposia and care for the body, typical of the Hellenistic period. The ratio of warrior tombs in comparison with the rest of the necropolis is 1:7, contrasting, for example, with the MONTE BIBELE necropolis of the same period, where the presence of warriors is far greater—1:2. The Felsina/Bologna burials include tombs of both male and female natives of Etruscan-Italic origin: an inscription scratched on a vase from tomb 968 gives us the name of the personage (TITLE), who died at the beginning of the 3rd century BC. At Felsina a dual ethnicity, made up of Etruscans and Celts, is apparent. Attempts at reconstructing a horizontal stratigraphy of the burial ground illustrate the presence of distinct groups of tombs, each bearing different rituals (La Tène type contrasting with Etruscan-Italic). In the northern part of the Benacci-Caprara area a large ossuary with incinerated bones belonging to a large number of individuals has been unearthed. This site may have been a place of worship connected to the burial ground.

On the whole, the burial grounds of the Gaulish period do not give the impression of an extensive urban settlement by the Boii, as we might have expected from the importance of this group as reflected in historical sources; for example, according to Cato (234–149 BC), it comprised 112 tribes. However, the importance of the Boii was not dependent on a Mediterranean-type social organization centred on cities, but rather on a settlement spread across the countryside and the interior of the Apennine area. Excavations at Casteldebole, Arcoveggio, Casalecchio/zona A and Ceretolo, Marzabotto, Monte Bibele, and Monterenzio Vecchio indicate the existence of a territory structured around agricultural or commercially orientated centres and of power based on control of routes. This hybrid Boian-Etruscan territorial system also thrived on commerce in places such as Spina, Mantua, and Adria and Etruscan sites in Tuscany, in particular Volterra and Arezzo. It is hardly surprising, therefore, if we find culturally mixed communities, where materials implying the presence of co-existing linguistically distinct Etruscans,

Ligurians, Umbrians, and Celts occur together.

Bopfingen is an archaeological site, dating to the later pre-Roman IRON AGE, in a part of Germany known to have been inhabited by Celtic-speaking groups. It includes a settlement and a four-sided enclosure of a type possibly connected with ritual activity, namely the VIERECKSCHANZEN.

§1. THE TERRAIN

Bopfingen is located in the Eger valley, Baden-Württemberg, south-west Germany. The wide and shallow river valley between Bopfingen and Trochtelfingen is prone to frequent flooding, and substantial prehistoric sites are therefore quite unusual in this area. The settlement was erected on a flattened alluvial fan of limestone gravel, built up by the Heidmühl river which descends from the slopes of the Alb mountains. The alluvial surface provided ideal conditions for a settlement. Unlike the floor of the valley, it was secure from flooding and surrounded by fertile meadow loam. In post-Roman times, the alluvial fan was covered through sedimentation of additional loam, with the result that it is invisible today. The prehistoric topography also shows two river-beds that cut through the alluvial fan.

§2. THE SITE

The pre-Roman settlement extended over the entire alluvial fan to within 150 m of the *Viereckschanze*, an area of 330 × 140 m. By the Iron Age, the older river bed was already silted up and pits belonging to the settlement and the *Viereckschanze* had been cut into it. The younger river-bed was clearly integrated into the structure of the settlement. At the north-west side, a small ditch with a fence ran along the river-bed, crossing it at least once. A further important indicator for the simultaneity of the ditch and younger river is the moat of the *Viereckschanze*, which had been dug parallel to the river-bed. It was even possible to flood the moat through a small canal, so that water supply to the settlement was guaranteed.

During excavations between 1989 and 1992, several thousand individual architectural features were uncovered. These features were mostly small ditches and post-holes of decayed wooden buildings scattered in small groups over the excavation area. Thus, about 120 floor plans of houses from several phases of settlement could be reconstructed. The range of the floor plans varies—from simple four- and six-post buildings, which might have been used for storage, to square buildings with a central post, and long halls with surface areas of 100 m² and more and a post supporting the roof ridge.

The oldest traces of Iron Age buildings were found in connection with an oval enclosure of 120 × 150 m, surrounded by a 460 m long fence. On the basis of the remaining post-holes, it was established that this enclosure contained a loose arrangement of major buildings around which several smaller buildings, probably storage sheds and workshops, were grouped. Among these subsidiary buildings were three houses with sunken floors, which contained many items from the end of the Early LA TÈNE period (La Tène B, datable to roughly 300 BC). In the south-east, the fence of the village was later extended by about 30 m, thus enlarging the enclosed settlement area.

§3. THE FOUR-SIDED ENCLOSURE

Other excavations of *Viereckschanzen* (see HOLZHAUSEN) had yielded rows of posts, which were interpreted as the remains of even earlier structures. At Bopfingen, the structure preceding the wall and moat construction of the *Viereckschanze* was not located at the same site, but a little further east, where an earlier fenced enclosure of 50 × 50 m with regular post rows was discovered. This square enclosure (dating to the Middle La Tène period, i.e., 3rd to early 2nd century BC) had been erected on the remains of large buildings that must have belonged to the earliest phase of settlement. Within the enclosure, several small timber buildings were discovered and interpreted as homesteads with

Plan of the densely-occupied Bopfingen: the 2nd-century BC Viereckschanze (83 m x 73 m) is at the bottom, a 9.5 x 10 m building lies inside the Viereckschanze to the lower left, and two other buildings are visible as large post holes at opposite corners of the great four-sided enclosure.

workshops and storage sheds. This square, fenced enclosure of 2500 m² can be interpreted as a farmstead. There is evidence that the area around this Middle La Tène farmstead was also settled.

The *Viereckschanze* of Bopfingen was built not long after the square farmstead at the end of the Middle La Tène period (La Tène C2, 2nd century BC). The construction, which runs almost exactly from north to south, measured 83 m on the outside of the wall; the shorter east–west side measured 73 m.

The buildings of the two phases show similar orientation, and the internal area of the *Viereckschanze* doubles that of the farmstead, i.e. 5000 m² (excluding 7–8 m of wall foundations). However, the character of the buildings inside the *Viereckschanze* was fundamentally different from that of the former farmstead. The *Viereckschanze* was dominated by two large buildings in the north-eastern and south-eastern corners, together with a large rectangular hall on the west side. The site was entered over a wooden bridge from the east.

These three large buildings stand out, not only for their remarkable floor plans, but also because of their large post-holes, which have been preserved to a depth of 1 m. The almost square building in the south-east, with its entrenched wall foundations (9.5 × 10 m) and two entrances, has enlivened academic discussion, since this type of corner buildings are usually interpreted as predecessors of Gallo-Roman ambulatory temples (see FANUM), thus possibly indicating a pre-Christian ritual site. Other, more prosaic interpretations, however, for example, as storage buildings, are entirely possible, since there is no archaeological evidence of associated smaller objects with a cult-oriented character. Bopfingen is quite unusual in that a similar floor plan featuring two entrances was discovered **outside** the ditch at the eastern side in front of the entrance. Whether this was also a temple or whether the floor plan will have to be interpreted differently is not clear at present. Noticeably, no deep vertical shaft or pit with depositions—normally a characteristic element for a *Viereckschanze* and usually interpreted as a place for offerings, or wells—could be found. However, it is possible that a shaft may be located at the south-eastern corner of the site, which is beneath a modern road and could not be excavated. One must not forget that water was supplied to the site from a river, so that no wells had to be dug for that purpose.

The *Viereckschanze* of Bopfingen was no remote and isolated cult site, but was rather built in the middle of a rather densely populated area. It is assumed to have

been the centre of one or several local communities. It was built during the heyday of a lengthy period of continuous settlement that began with the Early La Tène period and lasted over 200 years.

Archaeological evidence supports the assumption that the Bopfingen *Viereckschanze*, in its most recent phase of development, was a rectangular farmstead. Such a farmstead could also have fulfilled several political and religious functions as the seat of 'local government'. It may then also be assumed that temple buildings were part of such sites. The excavations at the Bopfingen have thus yielded new information on rural La Tène settlements and the significance of *Viereckschanzen* in general. As a result, the usual interpretation of ENCLOSURES of this type as sanctuaries and cult sites might have to be corrected and supplemented with alternative explanations.

Borrow, George (1803–81) was a traveller and writer with a remarkable gift for languages. 'To imagine any man more Celtic than Borrow is impossible', wrote Theodore Watts-Dunton of this talented wordsmith who dabbled in more than a hundred languages and dialects. The son of a Cornish recruiting sergeant, he was born in East Dereham, Norfolk. As a young man he acquired Latin, Greek, French, German, Hebrew, Armenian, and Romany (the language of the gypsies), and due largely to his interest in languages he abandoned his work as an apprentice solicitor in order to develop his gifts as a writer in London (Welsh Llundain). However, he soon tired of life in the metropolis and his wanderlust took him to Portugal, Spain, Russia, and even the frontiers of China. A strikingly unconventional man, well over six feet tall and with a white Merlin-like mane and a rough tongue, he became celebrated for the prodigious lengths of his journeys. He began consorting with mysterious gypsies, and his *The Zincali: or an Account of the Gypsies in Spain* (1841) proved much more successful than his final publication, *Romano Lavo-Lil, Word-Book of the Romany* (1874). His lively bestseller *The Bible in Spain* (1843) brought him international fame, and works like *Lavengro* (1851)—a spiritual autobiography, which he described as 'a dream of study and adventure'—and *Romany Rye* (1857) not only celebrated the gypsy way of life but also extolled the merits of open-air living, boxing, and traditional ale. Notwithstanding his reputation as a champion of vulgar taste, Borrow was a devotee of the work of Edward LHUYD and was well versed in the origins of the Celtic and Scandinavian languages. Wales (CYMRU) was one of his special interests and his tour in 1854 gave rise to *Wild Wales* (1862), a work that has retained a curious vitality to this day, especially among Borrovian enthusiasts. It provides a lively depiction of the landscape and its people through the eyes of an eccentric, crotchety, bookish man who enjoyed 'discoursing with gypsies, under hedgerows, or with sober bards—in hedge alehouses'. Borrow also published a translation of Ellis WYNNE's *Gweledigaetheu* under the title *The Sleeping Bard . . . from the Cambrian-British* (1860) and, in the following year, a substantial article on 'The Welsh and their Literature' appeared in the *Quarterly Review*.

Borvo/Bormo/Bormanus is the name of a spring deity who was worshipped over an area extending from Haute-Marne, Champagne (see MATRONAE), in north-central France, to GALICIA in the IBERIAN PENINSULA in the west and Provence in the south-east (see SPRING DEITIES). The name survives in many French place-names, for example, Bourbonne-les-Bains (Haute-Marne) and Bourbon-Lancy (Saône-et-Loire, Burgundy). Inscribed written evidence for his cult was found at the places mentioned and in Entrains (Nievre, Nivernais) and Aix-les-bains in Savoy. In Entrains, an image of the god shows him holding a goblet, a moneybag, and a plate of fruit, thus probably indicating a deity of fertility and wealth. Another picture from Vichy shows the god sitting naked on a rock, holding a cup with liquid bubbling over from it.

Borvo was often identified with the Graeco-Roman god Apollo (see BELENOS; INTERPRETATIO ROMANA), but at Aix-en-Provence he seems to have been equated

with HERCULES instead. Here again inscriptions bearing his name have been found, mainly on destroyed statues thrown into the springs.

He was frequently worshipped together with a female equivalent, sometimes named Bormana, as at Die (Drôme, Dauphiné) or DAMONA (at Bourbonne-les-bains). Damona was also worshipped with the Gallo-Roman deity Apollo Moritasgus in ALESIA. (*Mori-tazgos* is a Celtic animal name, literally signifying 'sea-badger', possibly referring to a species of seal or sea otter.) Bormana was also worshipped on her own, as at Saint-Vulbas (Ain, Burgundy).

The name *Borvo*, &c., derives from a Celtic root which means 'to boil, bubble', and thus describes the distinctive nature of the spring itself. Compare Middle Irish *berbaid* 'boils, bubbles', Welsh *berwi*, Breton *birviñ* < Indo-European **bheru̯-* 'to bubble, boil', ultimately related to Mod. English *broth*. The *-m-* in *Bormo* and *Bormanus* could be due to lenition, to a difference in suffixes, or to dissimilation (D. Ellis Evans, *Gaulish Personal Names* 155). *Borvo* probably reflects a Celtic **Boru̯ū(n)* (*n*-stem), *Borbanus*, *-a* reflects Celtic **Boru̯āno-* < pre-Celt. **B(h)oru̯ōn-o-*.

Bosse-Griffiths, Kate (1910–98) was the first German to publish original literature in the WELSH language. Born and brought up in Lutherstadt Wittenberg, she studied archaeology and Egyptology in Berlin, Bonn, and Munich. In 1935 the University of Munich awarded her a doctorate for her dissertation on the human figure in late Egyptian sculpture, but a year later she was forced to flee Germany to escape Nazi persecution. After working in Edinburgh, London, and Oxford, she married the Welsh Egyptologist and author J. Gwyn Griffiths. The couple eventually settled in Wales (CYMRU). In 1971 she was appointed curator of the new Wellcome Collection of Egyptian Artefacts at the University of Wales Swansea (ABERTAWE), and held the position of honorary curator until shortly before her death.

Her first Welsh short stories were published in the periodical *Heddiw* (Today) in 1940, a year after she arrived in Wales. They were followed by her first novel, *Anesmwyth Hoen* (Uneasy joy), winner of the first prize in a competition organized by the publishers Llyfrau'r Dryw (Books of the wren). Her first collection of short stories appeared in 1944 under the title *Fy Chwaer Efa* (My sister Efa) and her second novel, *Mae'r Galon wrth y Llyw* (The heart is at the helm) was published 13 years later. Her second and last short-story collection, *Cariadau* (Kinds of love), appeared towards the end of her life. Her works, like those of other members of the literary circle Cylch Cadwgan, sought to introduce modern European trends into Welsh literature and created quite a furore when they first appeared. Her different educational and cultural background allowed her to address topics such as female sexuality, hitherto taboo in Welsh literature, much more openly than her contemporaries. In her short stories in particular, she endeavoured to communicate to the reader an alternative, matriarchal reading of religiosity and the secrets of human life. Their ideological basis remains revolutionary at the beginning of the 21st century. Her two novels give a radical picture of the suffering and dangers faced by women in their pursuit of happiness and fulfilment.

Besides her literary *œuvre*, she published a range of factual books. In *Bwlch yn y Llen Haearn* (A breach in the Iron Curtain) and *Trem ar Rwsia a Berlin* (A look at Russia and Berlin) she introduced the Welsh reader to aspects of German and eastern European society, and in *Byd y Dyn Hysbys* (The world of the soothsayer) she shares with her audience her fascination with mystical experiences and practices. She regularly contributed articles on a wide range of subjects to Welsh periodicals such as BARN (Opinion), and continued to publish (in English, German, and Welsh) until shortly before her death.

She was the mother of Welsh-language publisher and author Robat Gruffudd (Lolfa Press) and Welsh-language educator and writer Heini Gruffudd.

Botorrita is significant as the site where the longest texts in any ancient Celtic language were discovered. The INSCRIPTIONS, on bronze tablets, are accordingly known as Botorrita I, II, and III. Botorrita I and III are in the CELTIBERIAN language, also known as Hispano-Celtic, and the Iberian script. Botorrita II is written in Latin and uses the Roman alphabet. On Botorrita IV, see INSCRIPTIONS [1].

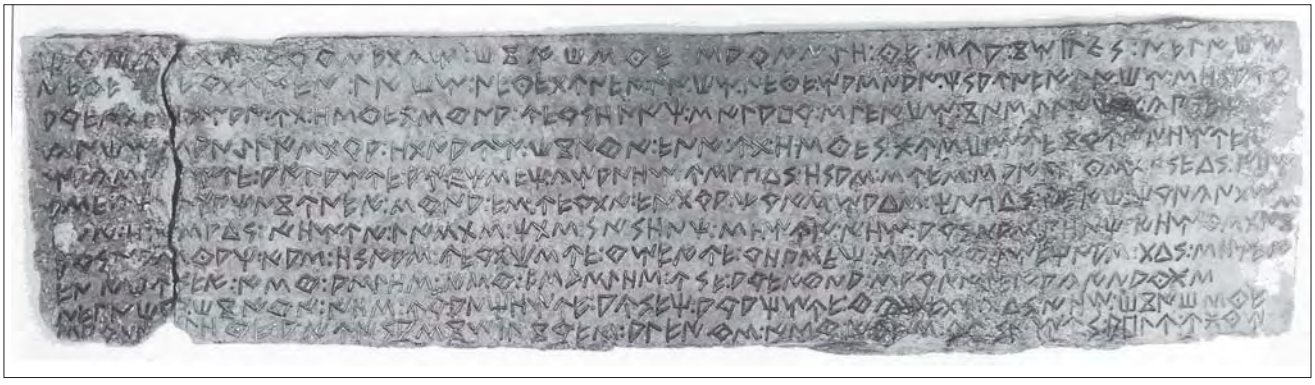
The present-day town of Botorrita is situated on the river Huerva, around 20 km south-west of the city of Zaragoza, in northern Spain. In Roman times there was a Celtiberian town, called Contrebia Belaisca, on the hill now called Cabezo de las Minas, close to the modern Botorrita. Coins with legends in the Iberian script reading *PelaisKom* /*belaiskom*/ and *KonTePaKom Pel* /*kontrebakom bel*/ were minted there (see Untermann & Wodtko, *Monumenta Linguarum Hispanicarum* 4.563). Systematic archaeological excavation was begun in 1970 and soon produced some interesting material, including the two longest and most important inscriptions in the Celtiberian language to be found up to the present date.

§1. BOTORRITA I

This inscription is in the Celtiberian language, diligently written in the Iberian semi-syllabary (see SCRIPTS) on both sides of a bronze tablet (*c.* 40 x 10 cm), now broken into two parts. The parts were discovered separately, but not far from each other, in the spring of 1970, during excavations close to a river and a house from the Roman period and its associated agricultural buildings. On first examination, the text was regarded as being written in the non-Celtic Iberian language, but it soon turned out to be Celtiberian, and is by now considered the most important document of that language.

The text on the side labelled A fills eleven lines and has attracted a great amount of linguistic comment (Untermann & Wodtko, *Monumenta Linguarum Hispanicarum* 4.564). In nine lines, side B contains a list of 14 men designated by the repeated title, or perhaps description, *Pintis* (possibly 'binder'), who may be guarantors for the agreement or the official proceedings recorded on side A, acting as officials or witnesses. (The previous view that the two sides of the bronze tablet constitute two separate documents has now been justifiably abandoned.) The text of side A is generally thought to be legal in character, but interpretations still differ considerably with regard to many individual points. For example, *ToKoiT-* and *sarniKio-*, key words that appear in the first line, have been understood as divine names (e.g. Meid, *Die erste Botorrita-Inschrift*), but also as words denoting a locality (which is more likely, since they also appear in the locative; Untermann & Wodtko, *Monumenta Linguarum Hispanicarum* 4.569, 573).

Face A of the Botorrita I inscribed bronze



Early attempts at linguistic interpretation were handicapped by problems of establishing the correct reading, since the corrosion encrusting the bronze rendered most of side B and some parts of A illegible.

Among the early publications, the edition by de Hoz and Michelena deserves mention for its thorough and cautious approach. Beltrán and Tovar's 1982 re-edition represented a fundamental step forward, and included photographs of the bronze after cleaning and a summary of the linguistic suggestions to that date. Botorrita I has subsequently been discussed in two book-length studies (Eska, *Towards an Interpretation of the Hispano-Celtic Inscription of Botorrita*; Meid, *Die erste Botorrita-Inschrift*) and a number of smaller articles (see Untermann & Wodtko, *Monumenta Linguarum Hispanicarum* 4.564–74, which also contains the standard edition of the text to date).

There is no secure dating for Botorrita I, but some time early in the 1st century BC would seem likely in view of the secure dating established for Botorrita II (see below). The early or mid-1st century BC is also consistent with the fact the Contrebia Belaisca was destroyed about the middle of that century.

§2. BOTORRITA II

This Latin inscription on a bronze tablet was discovered in the course of illegal prospecting at the site of Contrebia Belaisca. It came into the hands of its editor Fatás in December 1979. The bronze (*c.* 44 × 20 cm; 20 lines), also known as Tabula Contrebiensis, is assumed to have been found in the upper part of the ancient city. Since its script and language are Latin, it is entirely intelligible. It explains how the senate of Contrebia Belaisca was called upon by neighbouring Iberian towns for a decision concerning the right of the town of Salluia (modern Zaragoza) to build a canal through the land of the Sosinestani, to which the neighbouring Allauonenses seem to have objected. In addition to the indigenous names of the Celtiberian magistrates and the Iberian representatives, the inscription contains the names of Roman officials by which it can be securely dated to mid-May, 87 BC. Contrebia itself is called Balaisca in this text, but the more correct spelling seems to have been Belaisca, as seen from the evidence of the coins mentioned above.

PRIMARY SOURCE
EDITION. Fatás, *Contrebia Belaisca II.*

FURTHER READING
Fatás, *Antiquity* 57.12–18; Richardson, *Journal of Roman Studies* 73.33–41; Untermann, *Monumenta Linguarum Hispanicarum* 1.

§3. BOTORRITA III

This inscription is the longest extant inscription in the Celtiberian language, or any other ancient Celtic language, known to date. Discovered in October 1992, it has been edited and discussed fully by Beltrán, de Hoz, and Untermann (*El tercer bronce de Botorrita*; see also Untermann & Wodtko, *Monumenta Linguarum Hispanicarum* 4.576–606). The inscription is written in the Iberian script on one side of a bronze tablet (*c.* 73 × 52 cm). Several pieces of the tablet have broken off, although fortunately not in an area with lettering. Due to encrustation by oxidized bronze, the greater part of the text can now only be read with the help of X-rays. This bronze tablet, together with X-ray pictures, is on display in the museum in Zaragoza.

Botorrita III has two 'headlines' set apart in larger writing, under which a long list of personal names is arranged in four columns. The 4th column is not complete, with 40 lines as opposed to the 60 lines in the first three columns. Space was left on the bronze for two further columns. Characters are engraved by small pecked dots rather than strokes, which reflects the great care taken in making this document.

The title lines, which unfortunately have not yet been interpreted, probably explain the purpose of the long list of names, which remains unclear at present. The list itself gives the names of men and women, predominantly in Celtiberian name formulae, that is, they most often consist of an individual name and a family name, sometimes followed by the father's or mother's name. Some persons, however, have Roman, Greek, or Iberian names, which, like the names of Botorrita II, point to the mixed population of Contrebia Belaisca in Roman times. This mixture of languages is not surprising, since the town was situated near the border of Iberian-speaking territory. For a

full study of the names, see Untermann & Wodtko, *Monumenta Linguarum Hispanicarum* 4.109–80. The list also uses the kinship terms *Kentis*, pronounced */gentis/* 'son', or perhaps 'child', and *TuaTer-*, probably pronounced */duater/* 'daughter'.

Botorrita III has confirmed and complemented our understanding of some features of the Celtiberian language which had been hypothesized from earlier discoveries. For example, we find verbal endings that derive from the Indo-European 'middle' or 'mediopassive' voice; in these forms the sense had originally been that the subject underwent the action of the verb, rather than performing the action on an external object. One such form from Botorrita III is the third person plural past tense ending in *auzanto.* What is apparently the same verb occurs with its third person singular *active* present tense ending as *auzeti* in Botorrita I. The relative pronoun 'that, which, who' (*io-, ia-*), known from Botorrita I, also occurs in Botorrita III. From the word order, the pronoun appears to have carried a stress accent, whereas the relative pronoun *io* in GAULISH and the prehistoric forms of IRISH and BRYTHONIC seem to have been an enclitic, that is, an unstressed word that had to follow a stressed word.

PRIMARY SOURCES

EDITIONS. Beltrán et al., *El tercer bronce de Botorrita*; Untermann & Wodtko, *Monumenta Linguarum Hispanicarum* 4.576–606.

§4. OTHER INSCRIPTIONS

A number of short to very short inscriptions have also been found at Botorrita/Contrebia Belaisca, some in the Celtiberian language, and some in the non-Celtic Iberian language (see Untermann & Wodtko, *Monumenta Linguarum Hispanicarum* 4.574–76, 606–16).

The fact that Contrebia Belaisca has produced three major inscriptions does not necessarily mean that the town was of particular importance, for example, the capital of a Roman CIVITAS (city; tribal region) or of some other high municipal status. Rather, the discoveries are probably the result of luck of preservation and the special archaeological attention given to this site.

Dagmar Wodtko

Boudīca, variant Boudicca († AD 60/61), was queen of the tribe of BRITONS known as the ICENI, whose territory was on the eastern seaboard in what is now East Anglia, England. She succeeded her husband Prāstotagos (variant Prasutagos) and led a highly destructive, but ultimately unsuccessful, war of resistance against the Roman occupation. Prāstotagos had been a Roman client ruler. The legend of one of his coins calls him SVBRE[GVLVS] PRASTO[TAGOS] (Van Arsdell, *Celtic Coinage of Britain* nos. 780–1), which emphasizes his legal status as an 'under-king' to the Emperor.

Although we lack confirmation on this point, the Iceni had presumably taken the Roman side at the time of the Roman invasion undertaken by Emperor Claudius in AD 43 and the guerrilla resistance of CARATĀCOS over the next several years. Often, such Roman client kingdoms were transitional arrangements, leading to full integration of the tribal CIVITAS into the Empire. Thus, when Prāstotagos died during the reign of Claudius's successor Nero, there was a crisis in succession. This was exacerbated by the fact that the Roman governors in Britain had mistreated philo-Roman British tribes with heavy taxation and confiscation of land; for example, land had been taken from the traditional territory of the TRINOVANTES and given to Roman veterans settled at the new *colonia* of CAMULODŪNON (Latin Camulodūnum, now Colchester, England).

At the time, the Roman army in Britain was vulnerable since it was mostly deployed under the governor Suetonius Paulinus on the other side of Britain, across very rugged country from the Iceni and their allies, and was storming the druid sanctuary on Anglesey (MÔN). Since the DRUIDS had prestige and authority beyond the immediate tribal territory in the west, Suetonius's conquest would have served as further provocation to revolt, and a cause that could draw rival British tribes together. After the Iceni had destroyed Colchester (wiping out its colonists) and the towns of London and VERULAMION near St Albans, with great slaughters of the Romano-British civilian population, Suetonius's forces regrouped and—making good use of Roman tactics, material, and discipline—devastated Boudīca's numerically superior army in a single battle. Boudīca died soon after, but sources disagree whether it was suicide or illness. Reinforcements were sent in

from Roman Germany, and a harsh punitive campaign directed at both rebel and neutral tribes resulted in famine.

The Roman documentary evidence for Boudīca is relatively plentiful. The most valuable author on the subject is TACITUS, who, writing about two generations later, epitomized the revolt as follows:

> . . . the whole island rose up under the leadership of Boudīca, a woman of aristocratic descent (the Britons do not discriminate by gender in selecting war leaders). They hunted down the Roman troops in their widely scattered outposts, captured the forts, and attacked the [Roman] colony itself, which they regarded as the stronghold of their enslavement. The enraged victors did not hold back from any kind of cruelty. Indeed, if [the governor] Paulinus had not speedily sought aid upon hearing of the uprising, Britain would have been lost. As it was, he re-established its previous subjugation in a single successful military engagement. (*Agricola* 16)

This is probably accurate information, derived from Tacitus's father-in-law AGRICOLA, who had been governor of Britain in the period AD 78–85, which makes the remark about women war leaders credible as well as interesting. The activities of Queen CARTIMANDUA of the BRIGANTES lends further support to the statement. The figure of the Amazonian barbarian queen, fearsome yet vulnerable, captured the Roman imagination. Their accounts of Boudīca are some of the most vivid ancient descriptions of women from the Celtic world, or of any Celts, to survive and provide valuable insight into Graeco-Roman attitudes towards the exotic Celts and how these ideas were expressed and constructed in literature. CASSIUS DIO (*Roman History* 62) wrote dramatically of her:

> . . . a British woman of royal lineage and an uncommonly intelligent woman was the person who was most instrumental in inciting the natives and convincing them to fight the Romans, who was thought fit to be their commander, and who directed the campaigns of the entire war. This very woman brought together her martial forces, approximately 120,000 in number, then she climbed up onto a raised platform . . .
>
> She was huge of body, with a horrific expression and a harsh voice. A huge mass of bright red hair descended to the swell of her hips; she wore a large TORC of twisted gold, and a tunic of many colours over which there was a thick cape fastened by a brooch. Then she grasped a spear to strike fear into all who watched her.
>
> . . . After that, she used a type of augury, releasing a hare from the folds of her garment. Because it ran off in what [the Britons] considered to be the auspicious direction, the whole horde roared its approval. Raising her hand to the sky, Boudīca said: 'I thank you, Andrasta [see ANDRASTE], and call out to you as one woman to another . . . I implore and pray to you for victory and to maintain life and freedom against arrogant, unjust, insatiable, and profane men.

Although it is unclear how this information could be derived from an eyewitness, the ethnographic detail of the torc, at least, is abundantly paralleled by the numerous and rich finds from in and around the territory of the Iceni at sites such as Ipswich and SNETTISHAM.

The description of Boudīca in Tacitus's *Annales* (14.35) shows a highly coloured legendary quality already coming into the story within living memory and in the work of an author having access to first-hand material:

> In a chariot with her daughters in front of her, Boudīca went to tribe after tribe, arguing that it was in truth proper for the Britons to fight under the command of women. 'But now,' she said, 'it is not as a woman of aristocratic descent, but as one of the folk that I take vengeance for lost freedom, my lashed body, the violated virginity of my daughters. Roman appetite has gone so far that not even our persons, not even age or virginity, are left inviolate. But heaven is on the side of just revenge; a legion that was so bold as to fight has been extinguished; the rest are hiding themselves in their camp, or are nervously considering escape. They will not bear even the clamour and cry of as many thousands [as we are], much less our onrush and our blows. If you consider fully the power of the hosts and the grounds for the war, you will see that in this battle you must prevail or die. This is a woman's determination. As for the men, they may live and be slaves.'

The post-Roman writer GILDAS was aware of Boudīca's revolt, which he views negatively, but characteristically does not use her name, calling her only 'the lioness' (*leaena*; *De Excidio Britanniae* §6). She is not mentioned in HISTORIA BRITTONUM, the works of BEDA, or those of GEOFFREY OF MONMOUTH. She has become a feature of the history of Britain as taught in schools in the UK, and since the 19th-century she has been popularly identified in England as English, on a geographic basis, and her Celticity has often been overlooked.

The name *Boudīca* is Celtic and means 'victorious woman'. There is no early authority or philological basis for the common modern variant spelling *Boadicea*. *Boudīca* corresponds to the Welsh name *Buddug*, the Middle Welsh adjective *buδic* and Old Irish *buadach* 'triumphant'; the latter also occurs as a man's epithet. The corresponding Old Breton man's name *Budic* occurs eight times in the witness lists of the 9th- and 10th-century charters of REDON. *Budic* occurs also as an Old Cornish personal name in the BODMIN MANUMISSIONS.

Brân fab Llŷr/Bendigeidfran (Brân the Blessed) is the central character of the Second Branch of the MABINOGI, which traditionally bears the name of his sister, BRANWEN ferch Lŷr.

§1. BENDIGEIDFRAN IN THE MABINOGI

In the tale (see the summary in the article on BRANWEN), Brân is a giant and king of BRITAIN, holding the crown of London (Welsh Llundain) in the remote mythological past. Paradoxically, Brân's behaviour throughout *Branwen* is on the one hand consistently honourable and heroic, but invariably reactive. His actions, though exemplary, nonetheless fail to avert disaster for all involved. At the beginning, Brân is approached unexpectedly by MATHOLWCH, king of Ireland (ÉRIU), who seeks an alliance through marrying Branwen, to which Brân agrees. It is Brân who then must redress his half-brother EFNISIEN's horrific insult to Matholwch. When Branwen is subsequently mistreated by her husband's people, it is Brân who reacts by mustering the hosts of Britain for an expedition to Ireland. Interestingly, referring back to the primeval setting of the tale, we are told that the Irish Sea was not yet a sea; rather, there were only two rivers, called Lli and Archan, and the giant king of the BRITONS waded across. Alerted to Brân's approach, the Irish muster, take counsel, and urge Matholwch to retreat across the river 'Llinon' (Shannon or Liffey), destroying the bridge behind them. Brân responds to the predicament by lying across the river, allowing his host to cross over his own gigantic body; this is the context for his articulating the proverb of leadership: *a uo penn, bit pont* 'he who would be a chief must be a bridge'. Unable to retreat further, the Irish build a huge feasting hall for Brân—who had never before had one big enough to hold him—and the assembled Britons and Irish. Peace is again at hand, but is once more unexpectedly shattered by the malevolent Efnisien. In the ensuing cataclysmic battle, Brân succeeds in annihilating the Irish and rescuing (for the time being) his sister. In the midst of this action, there is an obscure traditional utterance in which Brân is called, with reference to his fatal wound, *Morddwyd Tyllion* (pierced thighs). He tells his surviving followers how to deal with the situation by decapitating him.

> 'And take the head,' he said, 'and bring it as far as the White Mound (*Gwynfryn*) in London, and bury it with its face towards France. And you will be a long while on the way. In Harlech you will be seven years engaged in feasting, with the birds of RHIANNON singing above.'

The following 87-year otherworldly FEAST is referred to in the tale by the peculiar traditional name *yspyδawt urδawl benn* (hospitality of the noble head), during which Brân's head remains alive, uncorrupted, and as good a companion as ever. Then, one of Brân's retinue of seven survivors, forgetting an injunction, opens the door facing south, towards Cernyw (Cornwall) and Aber

Henfelen. The head begins to decay and must be buried. At the opening of the Third Branch (Manawydan), Brân's head is interred as a talisman precluding the incursion of a foreign *gormes* (oppressor, invader, plague).

§2. brân and taliesin

In *Branwen*, Taliesin is named as one of the seven who returned from Ireland with Brân's head. Among the mythological poetry in Llyfr Taliesin, in the poem *Kadeir Talyessin* (Taliesin's [bardic] chair), there are allusions to two episodes in Brân's story which interestingly use unusual key words found also in the prose tale. Thus, the poem and *Branwen* are clearly very closely related texts, confirming the old and traditional status of elements of the Mabinogi text, even some of its wording.

Keint yn yspyδavt uch gviravt aflawen.
Keint rac meibon Llyr yn Ebyr Henuelen.

I sang in the *ysbyddawd* over the grim liquor.
I sang before the sons of Llŷr in Aber Henfelen.

Bum y gan Vran yn Iwerδon.
Gweleis pan laδvyt ymorδvyt tyllon.

I was with Brân in Ireland.
I saw when *Morddwyd Tyllion* was slain.

§3. bendigeidfran in the triads

Trioedd Ynys Prydein (TYP) no. 37, *Tri Matkuδ Ynys Prydein* (Three auspicious concealments of the Island of Britain), refers to the burial of Brân's head. The following translation is based on the version in Llyfr Coch Hergest:

> The head of Bendigeidfran son of Llŷr, which was concealed in the White Hill in London, with its face towards France; and so long as it remained as it was laid there, no Saxon oppression (*gormes*) would ever come to this island. (Bromwich, TYP 88–98)

This triad brackets Brân's interment with the similar account (which occurs in Historia Brittonum §44) of the talismanic burial of the 5th-century military leader Gwerthefyr, whose coastal burial had the power of preventing the return of the Saxons whom he had succeeded in driving, back over the sea, from Britain.

When we compare the actual defence of ancient Britain from Saxon invaders with these legendary burials of heroes, the northernmost fort of the late Roman strategic command, known as the *litus Saxonicus* (Saxon shore), was the 3rd-century stronghold of Brancaster on the coast of Norfolk, England, whose ancient name, as recorded in the *Notitia Dignitatum*, was Romano-British *Branodūnum*, meaning 'the fort of Brân' (Celtic *Branos*; see Rivet & Smith, *Place-Names of Roman Britain* 274–5). It is hardly likely that it is a coincidence that a hero credited with supernatural defence of Britain against the Saxons in ancient times and an ancient fort built for that purpose should have the same name. But, whether an early tradition of the protective burial of a giant named Brân inspired the fort name, or *vice versa*, remains an open question.

§4. other associations

The name *Brân* is found a number of times elsewhere in Welsh and Celtic tradition, and it is not always clear to what extent these characters had once been one and the same, or are even related at all. For example, Bran mac Febail, the protagonist of the Old Irish tale Immram Brain, has a number of similarities with the Welsh Brân that may betoken a common source—for example, the two are closely connected to the similarly named figures Manawydan fab Llŷr, and Manannán mac Lir, but the surviving stories of Bran and Brân are quite different. As Loomis and Newstead have shown, the Brân commemorated in the place-name Castell Dinas Brân in north-east Wales (Cymru) and the Arthurian traditions surrounding that picturesque ruin seem to be connected to Brân of the Mabinogi. In the Triads, Brân Galed o'r Gogledd (Brân the niggard from the north) is clearly understood as a character different from Bendigeidfran. The Bran Hen map Dumngual Moilmut of the Old Welsh genealogies belongs to the northern Coeling dynasties of the early historical period (Bartrum, EWGT 10).

In his Historia Regum Britanniae (3.1–10), Geoffrey of Monmouth conflated the historical Brennos of the Senones, conqueror of Rome, with Brân Hen of the genealogies to create an ancient British king, Brennius son of Dumwallus Molmutius. In the Welsh versions of Geoffrey (Brut y Brenhinedd), *Brennius* is duly Cambricized as *Brân* (for example, Lewis, *Brut Dingestow* 33–9).

The historical ancient Celt whose story is more similar to that of Brân is rather Brennos of the Prausi, who, as well as having a similar name: (1) led a massive foreign invasion (into Greece) in which almost all of his followers were killed; (2) was wounded in a climactic battle there, and then (according to Diodorus Siculus 22.9) asked his men to kill him; and (3) was believed to be the source of a talismanic deposition that protected Tolosa (Toulouse) in south-west Gaul from foreign invaders (Strabo 5.1.12–13, citing Timagenes; see Koch, CMCS 20.1–20).

§5. the name

Welsh *brân*, like Goidelic and Breton *bran*, means 'crow', deriving from Proto-Celtic **branos* (see Vendryès, *Léxique étymologique d'irlandais ancien* s.v. bran). Crows have numerous poetic and supernatural associations throughout the Celtic traditions. For example, the crow is frequently found in descriptions of battle-field carnage, and is so familiar in this context that the mention of crows is enough to imply fallen warriors without any explanation; secondly, and no doubt linked to the first, the Irish war-goddess Bodb often appears as a crow. That a similar goddess once existed in Brythonic tradition might explain how *brân* as a common noun became feminine in Welsh. As Ford has discussed, *Branwen*, Brân's sister's name, can, like *Bendigeidfran*, be understood as 'Brân the Blessed' and the two might have arisen from one character.

JTK

Bran mac Febail is a mythological figure in early Irish literature. According to the earliest material, which consists of two short verse dialogues, he was king of Mag Febail (the plain of Febal) before the inundation of the plain that formed Lough Foyle (Loch Feabhail). The dialogues in question are *Immacallam Choluim Chille ocus ind Óclaig oc Carn/Carric Éolairc* (The conversation of Colum Cille and the young man at Carn/Carric Éolairg) and *Immacallam in druad Brain ocus inna Banfhátho Febuil óas Loch Febuil* (The conversation of Bran's druid and Febal's prophetess above Lough Foyle). Both texts record that Lough Foyle was formerly a pleasant flowering plain that abounded in horses and treasures. Manannán's sea-kingdom in Immram Brain is apparently the same plain. *Immacallam in druad Brain* may reflect a lost tale *Echtrae Brain* (Adventure of Bran) in which Bran was incited to seize the treasures of the Otherworld women referred to in the dialogue; as revenge, his kingdom was inundated with water. *Immram Brain* would have drawn on such a tradition and would be another variant of Bran's voyage to the Land of (the) Women (Carney, *Latin Script and Letters AD 400–900*).

Febal's father, Lotan, has the epithet or patronymic *mac lir*, which links him closely with Manannán mac Lir, the sea-god, who has close associations with the Lough Foyle area and the stretch of water between Ireland (Éire) and Scotland (Alba), including Man (Ellan Vannin), for which he is the namesake. The Goidelic Manannán mac Lir corresponds to Manawydan fab Llŷr of the Welsh Mabinogi; Manawydan's brother Bendigeidfran (lit. blessed Brân) has a name that coincides with Bran of Irish tradition, both names being a Common Celtic word for 'crow' or 'raven'. Bran and Manannán/Manawydan may originally have been variants of one and the same raven god of water and wisdom.

The personal name Febal, eponym of Lough Foyle, probably derives from the place-name. It is equivalent to Welsh *gwefl* (lip), an appropriate name for an estuary. Similarly, Bran seems to derive from the place-name, Srúb Brain (Stroove Head, lit. raven's beak), on the west bank of Lough Foyle on the Innishowen peninsula (Inis Eoghain).

The Iron Age deposition from the strand of Lough Foyle at Broighter near Limavady (Léim an Mhadaidh) —which included a miniature golden ship with mast

and oars, and a gold TORC decorated with curvilinear patterns which suggest seahorses or dolphins to Warner—indicates that a cult of the sea was practised in the area in the 1st century BC/AD.

Branwen ferch Lŷr (Branwen daughter of Llŷr) is the name commonly given to the second branch of the MABINOGI. The title can be traced back to Lady Charlotte GUEST's 19th-century translation, where she named the branch after the main female character. Previous to Guest's translation, the tale was known by its incipit—Bendigeidfran fab Llŷr. The giant Bendigeidfran (or BRÂN) is king of the 'Island of the Mighty' (BRITAIN); he has a brother, MANAWYDAN, and a sister, Branwen (a corruption, perhaps, of Bronwen, 'fair or white breast', influenced by the name of her brother Brân); NISIEN and EFNISIEN are their two half-brothers. When Efnisien hears that Branwen has married MATHOLWCH, king of Ireland (ÉRIU), without his permission, he mutilates the Irishman's horses. Brân pacifies Matholwch with gifts, including a cauldron of restoration (when dead men are placed in the cauldron they will rise the following day, but will not have the power of speech; see CAULDRONS). Following the birth of a son, Gwern, Branwen is punished by the Irish because of her brother Efnisien's insult to Matholwch—she is forced to cook in the kitchen and to accept a blow to her ears from the butcher each day. She befriends a starling, and sends it with a letter to her brother Bendigeidfran, who wades to Ireland to her rescue. In the ensuing battle between the hosts of Ireland and Britain, the boy Gwern is thrown into the fire by Efnisien and all are destroyed, apart from Branwen and seven of her compatriots. Brân is mortally wounded. Following his instructions, his men cut off his head and take it back to Britain; they feast in Harlech for seven years, and on the island of Gwales (Grassholm) for 80 years before burying the head in London. On the journey, Branwen breaks her heart and is buried beside the river Alaw in Anglesey (MÔN).

There is evidence of an Irish influence on this branch. It has also been suggested that the tale may represent a version of a raid on the OTHERWORLD (see also ANNWN), comparable to that described in the poem PREIDDIAU ANNWFN (The spoils of Annwfn) in the Book of Taliesin (LLYFR TALIESIN), or ARTHUR's expedition to Ireland to seek the cauldron of Diwrnach in CULHWCH AC OLWEN. The nature of insult and compensation is a central theme, and we are shown how revenge leads to destruction. The tragic heroine Branwen is presented as a pawn in a political game—two islands are devastated as the men in her life refuse to be reconciled.

Breisach is a town in Baden-Württemberg, Germany, with its oldest section, Münsterberg, situated on a hill that overlooks the RHINE. The oldest finds from the area prove that Breisach was settled as early as the Neolithic period (*c.* 4000 BC). In the IRON AGE, during the transition period from HALLSTATT to LA TÈNE around 500 BC, it was an aristocratic seat. At this time, from the evidence of the cultural remains found on the site, the occupants probably were speakers of a Celtic language. In this period the two summits of the hill were levelled out to form a large plateau that meas-

ured 530 × 200 m. Its name, *Mons Brisiacus*, is first mentioned in a document by Emperor Valentinian I dating from AD 369 and appears to preserve the Celtic adjectival suffix *-āko-/-ākā-*. Since the Rhine has changed its course several times over the centuries, the hill was an island for part of its history before the 19th century. The burials associated with the settlement at Münsterberg are 6 km away, located where they would be protected from flooding. An important grave was excavated in 1993 where an Etruscan beaked jug and an imperial Achaemenid dynasty (559–331 BC) Persian glass bowl from the 5th or 4th century BC were found.

South of the hill, in Breisach-Hochstetten, an important trading settlement was excavated, where finds of wine amphorae prove extended trading relations in luxury goods between this high-status site and the Mediterranean world.

Breislech Mór Maige Muirtheimni* and *Oidheadh Chon Culainn ('The great rout of Mag Muirtheimne' and 'The death of Cú CHULAINN') are versions of a Middle Irish saga concerning the breaking of *gessa* (sing. GEIS) and the consequent doom of the chief hero of the Ulster Cycle. The story is filled with foreboding throughout, including Cú Chulainn's confrontations with the war-goddess, the MORRÍGAN, and with three witches, blind in their left eyes, who are roasting a dog (Cú Chulainn's namesake) and who compel him to take a joint of it. There is a series of inauspicious encounters with satirists, interspersed with martial contests in which Cú Chulainn is victorious, but grievously wounded. As a climactic battle builds, Cú Chulainn makes a compact with his comrade CONALL CERNACH that whichever of them is killed in the ensuing battle with the Men of Ireland (*Fir Érenn*), the survivor will avenge him that day. Cú Chulainn is eventually killed and decapitated by a champion named Lugaid from Munster (MUMU), who is himself slain and decapitated by Conall after a prolonged combat scene. For further discussion of the story and the relationship of the two versions, see ULSTER CYCLE.

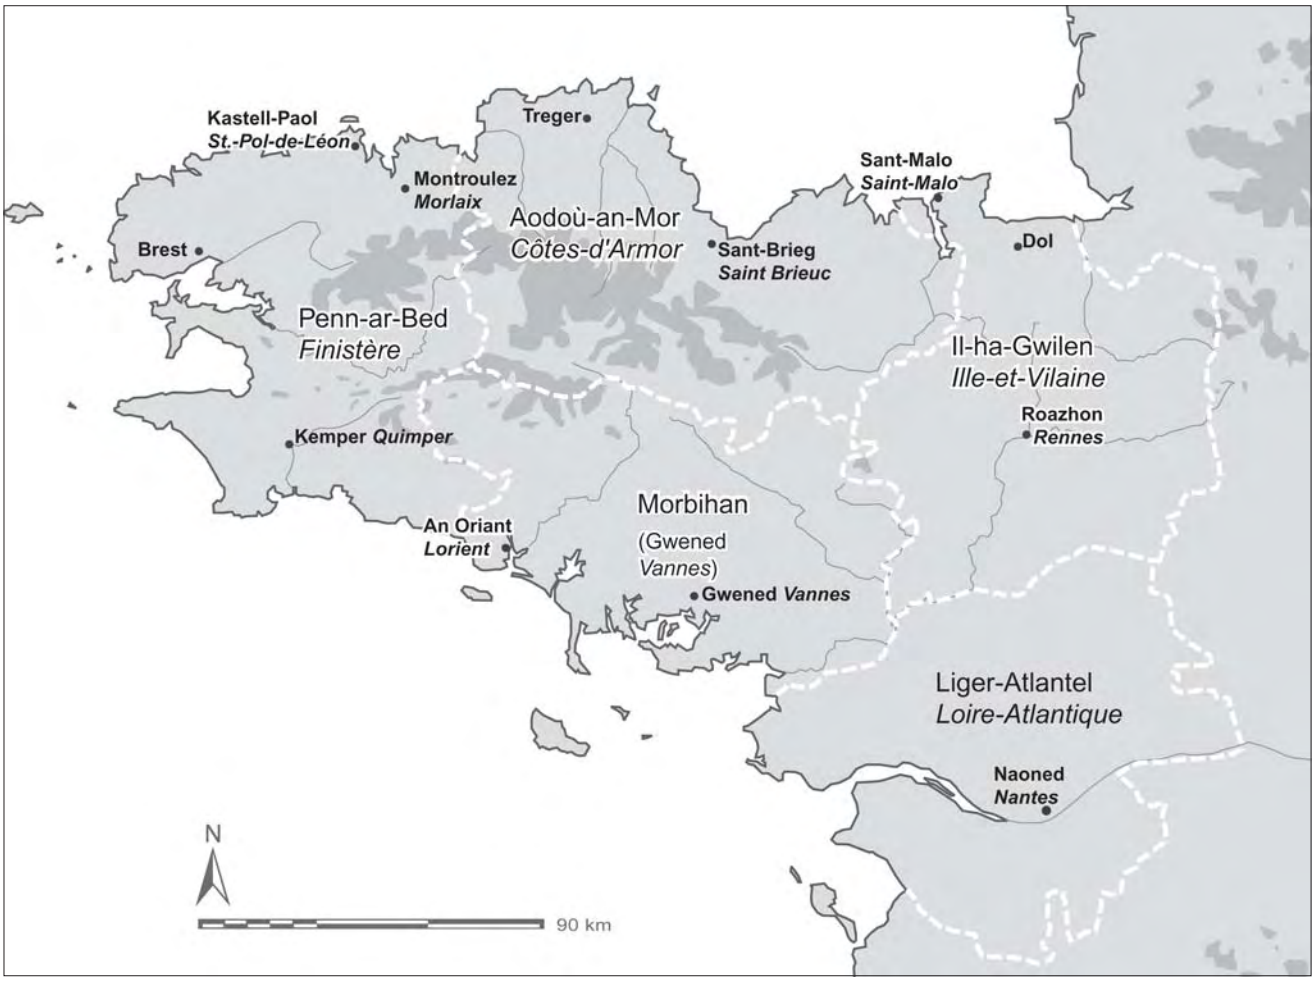
Breizh (English Brittany, French Bretagne, Welsh Llydaw, Galo Bertaèyn) is a Celtic country within the present-day nation state of France. Its area is 34,140 km², slightly larger than Maryland, and its population in March 1999 was 4,040,463 (2,906,197 in the *région* of Brittany). There are no official statistics regarding the BRETON-speaking population in Brittany. Just before the First World War, approximately 1,300,000 people used Breton regularly, while an estimate for 1974 gave a figure of 685,250. A 1993 survey of the *région* of Brittany (the historic province minus the *département* of Liger-Atlantel/Loire-Atlantique) listed 689,000 people who understood Breton, of whom 543,000 understood it well; 518,000 could speak the language, with 369,000 describing their ability as good; 237,000 could read Breton, but only 101,000 read it well. A general figure of 250,000 habitual users of Breton is widely accepted.

The historical province of Brittany is divided into five modern *départements*. Four of these: Aodoù-an-Arvor (Côtes-d'Armor), Il-ha-Gwilen (Ille-et-Vilaine), Morbihan, and Penn-ar-Bed (Finistère), form the modern *région* of Bretagne; the fifth, Liger-Atlantel, is in the *région* of Pays-de-la-Loire. The eleven medieval dioceses of Brittany also remain significant. The five

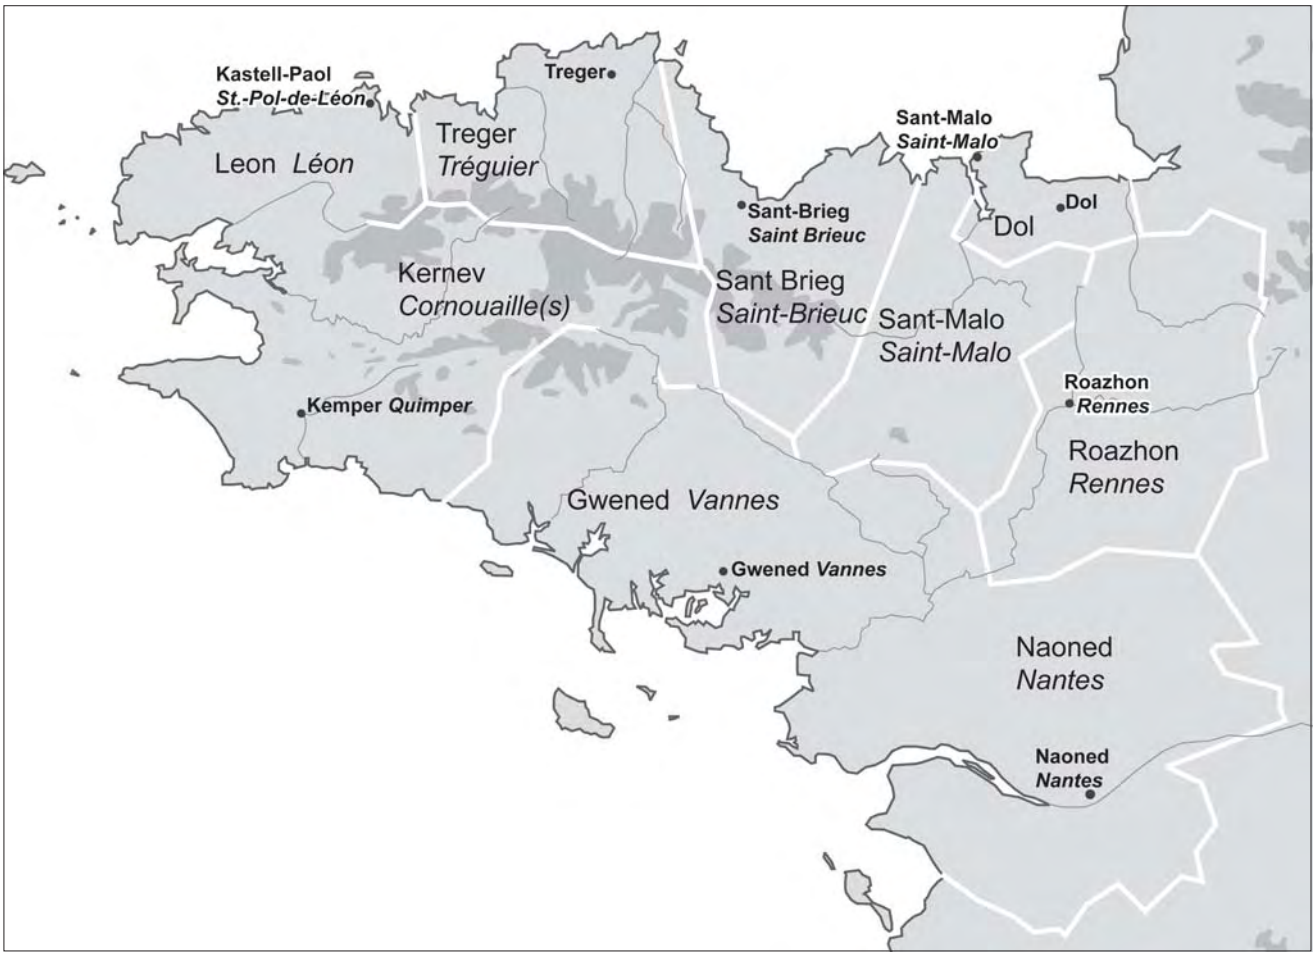


Départements and principal towns of present-day Brittany

French-speaking dioceses are Naoned (Pays de Nantes), Roazhon (Pays de Rennes), Sant-Brieg (Pays de Saint-Brieuc), Sant Malo (Pays de Saint-Malo), and Dol (Pays de Dol). Some Breton is also spoken in Sant-Brieg/ Saint-Brieuc. The four Breton-speaking dioceses are Kernev or Kerne (Cornouaille), Gwened (Vannes), Leon (Léon), and Treger (French Trégor, English Tregor). The Breton-speaking area in the west is known as Breizh-Izel (French Basse-Bretagne, English Lower Brittany), and the Galo-speaking area in the east is called Breizh-Uhel (French Haute-Bretagne, English Upper Brittany).

Although the whole of France outside the Basque country overlays a Gaulish substrate and was therefore at one time a Celtic country, the distinct Celtic character of Brittany originated on the island of Britain. Distinctive features of the language and culture of Brittany (part of the region of Armorica in the Iron Age and Roman times) were brought across the channel in the early Middle Ages (see breton migrations), and the peninsula has retained a distinct culture. The preservation of a Celtic language and culture was facilitated by the region's geographic location on a peninsula at the western extremity of Continental Europe, and by the political independence or autonomy it enjoyed from the 840s, when Nominoë broke away from the Frankish Empire, until the French Revolution in 1789. Although Nominoë is sometimes styled 'king' by historians, Brittany's statehood was not formalized at this stage. His immediate heirs were certainly regarded as kings (*reges*), but after Salomon the leaders of Brittany were styled dukes, and Brittany remained a duchy until the dissolution of the French monarchy. Leaders of important sub-regions of Brittany such as Poher and Rohan were styled counts.

In 1341 a civil war broke out between the heirs of Duke John III (r. 1312–41): John had named Jeanne, the daughter of his full brother Guy de Penthièvre, as



The traditional dioceses of Brittany and their approximate boundaries

his successor, but his half-brother, Jean de Montfort, claimed the title for himself. The War of the Breton Succession became a part of the larger Hundred Years' War between England and France, with England taking the part of Jean de Montfort and France on the side of Jeanne de Penthièvre and her husband Charles de Blois. The war caused enormous destruction throughout Brittany for over twenty years. Charles de Blois was killed at the battle of Auray in 1364, and Jeanne was forced to yield her claim to her uncle, Jean de Montfort, in the treaty of Guérande in 1365. The last ruler of an independent Brittany was Anna Vreizh (r. 1488–1514).

Throughout its independence, Brittany was variously subject to Anglo-Norman or French overlords, but it was not formally incorporated into another state until the treaty of union with France in 1536. Even then, a distinct Breton ducal succession and parliament remained in operation for several centuries (see acte d'union).

Brittany has historically been an important centre of fishing. Nantes was the centre of the French maritime empire, and Bretons made up a substantial proportion of French sailors. Consequently, Bretons have been prominent among the explorers and settlers of French colonies in Africa, Asia, and the Americas. The Kerguelen Islands in the Indian Ocean still bear the name of the Breton explorer, Yves de Kerguelen-Trémarec (1734–97), who also named the Crozet Islands. Brittany is also an important dairy region, famous for its butter since the Middle Ages.

In the modern period, Brittany has a reputation as a deeply religious region, more so than the rest of France (see christianity). Although this is popularly understood to be an inherent part of Breton culture, the distinctively religious character of Brittany is in fact largely a result of French Enlightenment and revolutionary politics—priests were moved between the centre of France and its periphery mainly on the basis of their own ideals, and the priests who were sent to

the periphery tended to be more conservative than those in the centre. This exacerbated the contrast between the urban culture of Paris and the centre of France and the more conservative culture of Brittany.

The coming of the railroads and modern transportation decreased Brittany's relative isolation, which ultimately had a negative effect on the language and culture of Lower Brittany. With increased communication, it was easier for the authorities to enforce laws against the use of Breton, which was seen as dangerous and potentially seditious. The use of the language was suppressed by forcing children caught speaking Breton to wear a block of wood or wooden shoe around their necks (known as '*la vache*' [the cow] or '*la symbole*' [the symbol]), similar to the Welsh Not (see EDUCATION), which they could only get rid of by catching another child speaking Breton and passing the block on. Breton soldiers died in disproportionate numbers in the First World War and, until recently, it was believed that Bretons collaborated disproportionately with the Nazi occupiers in the Second World War. This belief, based on the mistaken assumption that Breton separatists and autonomists were willing to use any means to secure an independent Brittany, is unfounded.

Contemporary Brittany is experiencing a revival of its culture and language, although the negative attitudes displayed towards them in the 20th century also persist strongly (see LANGUAGE [REVIVAL]; BRETON MUSIC). Tourism plays an important part in the economy, both with regard to the natural scenery and the distinctive aspects of Breton culture. A number of important 19th-century artists, including Paul Gaugin and Pierre-Auguste Renoir, came to Pont-Aven in order to take advantage of both natural and cultural features in their work.

The name *Brittany*, French *Bretagne*, Welsh, Galo *Bertaèyn* is derived from Romano-British *Brit(t)annia* (see BRITAIN) and was extended from Britain to Armorica as a result of the Breton migrations. *Britannia* is already regularly applied to Brittany as early as the *Historia Francorum* (History of the Franks) written by Gregory of Tours in the later 6th century. Breton *Breizh* is a different formation based on the same name. An early form of it, Βριττια *Brittia*, was used by the Byzantine historian Procopius (*fl.* 527–62); though he applies the name to Britain, the passage deals with Armorica (*History of the Gothic Wars* 8.20.45–9), which was the probable source of his information. On Welsh *Llydaw*, Middle Irish *Letha*, Medieval Latin *Letavia*, see LITAVIS.

Breizh-Izel (French Basse-Bretagne, English Lower Brittany) is the name of the western half of Brittany (BREIZH), the area that was largely BRETON-speaking until the rapid decline of the use of Breton in the 20th century. It is also known in French as Bretagne Bretonnante (Breton-speaking Brittany). Cultural, as well as linguistic, differences separated this region from BREIZH-UHEL, and it was only with the coming of mass transit and compulsory EDUCATION at the behest of the French state in the late 19th century that the dominant national culture became a force in Lower Brittany.

AM

Breizh-Uhel (French Haute-Bretagne, English Upper Brittany) is the name of the eastern half of Brittany (BREIZH), including the important cities of Nantes (NAONED) and Rennes (ROAZHON), where the language of the inhabitants is Galo or Gallo, a dialect of northern French with some influence from Breton. The distinction between Upper and Lower Brittany was known in the 15th century (*Britannia gallicana* 'Gallic' [Upper] Brittany and *Britannia britonizans* 'Bretagne bretonnant' or Lower Brittany). Although not a specific focus of study for Celticists, the two halves of Brittany have close political and cultural ties, and have often been taken as a unit. Both historically and in the modern period, the cities of Upper Brittany have attracted communities of BRETON speakers, and have housed institutions that support the language and culture of Lower Brittany (BREIZH-IZEL).

Brendan, St (Old Irish Brénann) is the name of two recorded early Irish saints, of whom it has recently been suggested that this is a case of the 'doublet' phenomenon whereby a secondary cult-centre produced an assumption that there were originally two distinct individuals. The two 'identities' are these:

1. Brendan of Cluain Ferta (Clonfert, Co. Galway/Contae na Gaillimhe), memorial: 16 May, a monk of Munster (MUMU) ancestry who, towards the middle of the 6th century, was active as a monastic founder in eastern CONNACHT. There is a sequence of *coarbai* (monastic leaders in succession to the founder) in Clonfert beginning with him. Through his cult, he later became associated with other parts of Ireland (ÉRIU), for example, the Dingle peninsula in the south-west. Later in the 8th century he became the eponymous traveller in the monastic allegory, the NAVIGATIO SANCTI BRENDANI and, from this, he has remained in memory as 'Brendan the navigator' (see also VOYAGE LITERATURE).

2. Brendan of Birr (Co. Offaly/Contae Uíbh Fhailí), memorial: 29 November, was a monk and founder of the monastery of Birr, probably prior to

the end of the 6th century (certainly before the mid-7th century).

While hagiographical 'doublets' do occur, in favour of two separate figures here—and of each we have but meagre details—are: first, each is distinguished by a *dies natalis* in several martyrologies (e.g. *Félire Óengusso*; cf. OENGUS CÉILE DÉ); secondly, they have a separate *locus resurrectionis* (i.e., place of burial): these two elements are the usual firm basis for a saint's existence, since the rest of the trappings of the cult depend on them; and third, already by the later 7th century it was a common assumption that they were distinct: ADOMNÁN refers to both in his *Vita Columbae*. Similarities in later *vitae* do not counter these arguments, for such duplication is a characteristic of the hagiographical genre (see HAGIOGRAPHY).

Thomas O'Loughlin

Brennos (of the Prausi or Tolistobogii), together with Akichorios, led an army of Gauls against Macedonia and Greece in 280–279 BC. Some sources report that he was the leader of the Tolistobogii, a tribe which later crossed over into Asia Minor (see GALATIA), but according to STRABO he belonged to the tribe of Prausi. Brennos's rôle at the beginning of the invasion was to move against Paionia, in modern-day (former Yugoslav) Macedonia. The Balkan offensives of two other bands of Celts occurred simultaneously. That led by Kerethrios was directed in the east against the territory of the Triballi and Thrace. That of Bolgios/Belgios (see BELGAE) burst out into Illyria in the west and Macedonia (Pausanias 10.19.5–12). At the beginning of 279 BC Bolgios's army annihilated the detachment of the young Macedonian ruler Ptolemy Keraunos (r. 281–279 BC), opening the way into Greece for Brennos. According to Pausanias, the army Brennos had assembled to invade Greece comprised 152,000 infantry and 20,400 cavalry. In Dardania (north-west of Paionia), 20,000 men defected under the leadership of the *reguli* (young kings, princes) Lonnorios and Lutarios (LIVY). Brennos continued the march south. In the autumn of 279 BC he reached and passed the strategic defile at Thermopylae, overcoming the defensive stand of a coalition from central Greece—Boeotians, Phocians, and Aetolians. With 65,000 chosen men, Brennos attacked Delphi (Justin, *Epitome of the Philippic Histories* 24.7.9; see TROGUS POMPEIUS AND JUSTIN). According to classical sources, the Delphic sanctuary was saved by a miraculous snowstorm sent by Apollo, then honoured as the saviour of his own sanctuary in the Σωτηρικά *Sōtērika* festival, begun in 278 BC. Discounting the fantastic details, there are some tenable hypotheses: for instance, that the winter forced the Gauls to retreat, or that the populations of central Greece organized themselves in order to face the invaders in unity. Brennos, gravely wounded, retreated to the north, where he rejoined Akichorios's forces but, unable to stand the pain of his wounds, he took his own life by stabbing himself.

Monica Chiabà

Mythological aspects of the accounts of Brennos. The episode of Brennos's death has been compared with the voluntary beheading of the wounded BRÂN after the great invasion of Ireland (ÉRIU) in the MABINOGI (Koch, CMCS 20.1–20); especially similar is the version of DIODORUS SICULUS (22.9) in which the wounded Brennos commands his surviving followers to kill him. According to Timagenes (as quoted by Strabo 1.12–13), part of the treasure taken from Delphi by Brennos's Gauls was deposited, as an offering to their god, in the sacred pools of the Volcae Tectosages at Tolosa (Toulouse) in south-west GAUL. The treasure was then raised out of the ritual pools by the Roman general Caepio when the area was conquered in 106 BC, and is thus comparable with the talismanic deposition of Brân's severed head which protected BRITAIN from foreign conquest. On the name *Brennos*, see BRENNOS (OF THE SENONES).

Brennos (of the Senones) was a Gaulish leader who marched at the head of assembled Celtic warbands *c.* 390 BC (according to the 'long' or 'vulgate' chronology), first against the Etruscan city of Clusium (modern Chiusi), then against ROME. Brennos was known as the *regulus* (young king, prince) of the Gaulish tribe the SENONES, the last Celtic tribe to arrive in what is now ITALY. He routed the Roman army eleven miles from Rome, near the confluence of the river Allia and the Tiber, and occupied the city. After a long siege which lasted around seven months, the Romans and the Gauls, exhausted by hunger, reached an agreement. In a meeting with the military tribune Quintus Sulpicius the leader of the Gauls set a thousand pounds of gold (two thousand, according to Varro) as the humiliating ransom that the Romans were obliged to pay in order to free the city of its occupiers. The Romans collected the agreed-upon sum, thanks to the sacrifice of the women, who contributed their jewellery. When the gold was weighed, further outrage was added to the shame and the humiliation of the Romans: to the protestations of the tribune Quintus Sulpicius, who accused the Gauls of weighing the gold with counterfeit weights, Brennos, with a disdainful gesture, threw his own sword on the scale together with the 'rigged' weights, declaiming the now proverbial phrase, *vae victis* 'woe to the vanquished'. The circumstances of the recovery of the gold— immediately or soon afterwards—are somewhat hazy in the classical sources.

Regarding the name Brennos, an early hypothesis held that it was a title in the Celtic languages which signified simply 'leader'; another was that the name *Brennos* had been attributed to the victor over the Romans by ancient historians in imitation of the BRENNOS OF THE PRAUSI (or Tolistobogii) who led the expedition in Greece in 279 BC. The former hypothesis is still discussed today, though as far as the latter is concerned, Gaetano de Sanctis noted that it was without foundation (*Storia dei Romani* 2.156). In medieval Welsh LEGENDARY HISTORY, GEOFFREY OF MONMOUTH makes the conqueror of Rome a Briton named *Brennius*. In the Welsh versions of Geoffrey's Latin HISTORIA REGUM BRITANNIAE ('The History of the Kings of Britain') the name is BRÂN. Welsh *Brân* could be related to Gaulish *Brennos*, but not its exact equivalent.

Bresal/Bressual Beolïach (Bresal Bélach) figures in IRISH LITERATURE as a king of the LAIGIN (Leinstermen) in the pre-Christian period. He is important in Irish LEGENDARY HISTORY both as shared ancestor of the Uí Dúnlainge and the Uí Cheinnselaig—the two most powerful Leinster dynasties in the pre-Norman period—and as victor over Dál Cuinn (descendants of CONN CÉTCHATHACH) in the renowned battle of Cnámros, where the three sons of the legendary king of TEAMHAIR and Irish high-king Cairpre Lifechar (son of high-king CORMAC MAC AIRT) were slain. The battle of Cnámros and Bresal's two sons are already celebrated in the early (probably 7th-century) dynastic poetry of Leinster; one poem, which compares him with the sun and speaks of him as a world conqueror, gives Bresal's name the archaic spelling *Bresual* (O'Brien, *Corpus Genealogiarum Hiberniae* 9.71–3). The story of Cnámros was subsequently incorporated in accounts of the Bórama (a 'cattle tribute'

imposed on Leinster, which figures as a central bone of contention in saga). In the Bórama tradition, credit for the victory was given to Finn mac Cumaill (Best et al., *Book of Leinster* 1.160). The annals record the death of a 'Bresal king of the Laigin' around the year 435 (e.g. Mac Airt & Mac Niocaill, *Annals of Ulster*): if this is Bresal Bélach, then the historical context to which he and his immediate descendants belonged is very different from that suggested by the traditions summarized above; the associations of the Bresal of legend, as plotted against the Irish annals and genealogies are much earlier, and thus imply a career in the 2nd or 3rd century.

Brest is a city of 230,000 people in the district of Leon, Lower Brittany (Breizh-Izel). An important centre of the French navy and of shipping and industry, with an excellent natural harbour, the city was for the most part destroyed by Allied bombing in the Second World War. The modern city is therefore largely a creation of the immediate post-war period. Historically Breton-speaking, Brest is home to the Université de Bretagne Occidentale, which has courses in Breton and Celtic studies. The University also has a presence in Kemper (Quimper) and Montroulez (Morlaix).

The name Brest is attested in earlier sources as *Bresta*, of insecure etymology, but possibly related to *bre* 'hill'. In Breton Latin sources of the early Middle Ages, Brest is referred to as *urbs Ocismorum* (using the old name of the tribe of the Osismii of western Armorica) and *urbs Legionum* (Latin 'legion' being the source of the province name *Leon*), as well as *Bresta super Caprellam*.

Bretha Nemed (Judgements of privileged persons) is an 8th-century Irish collection of law texts from Munster (Mumu). In Sanas Chormaic (Cormac's Glossary) quotations were taken from two named legal sources: the Senchas Már and the *Bretha Nemed*. Since the *Senchas Már* was a wide-ranging law-book, comprising numerous tracts on individual legal topics, the citations in Cormac's Glossary raise the question whether the *Bretha Nemed* collection was a law-book comparable in scale to the *Senchas Már*. Several of these quotations have been traced to two sources: the first is a text entitled in the manuscript (London, BL, Cotton Nero A. 7) *Corus Breatha Neimead*, but in medieval glosses *Bretha Nemed Toísech* (The first *Bretha Nemed*). The second is contained in a manuscript written by Dubhaltach Mac Fhirbhisigh (Dublin, Trinity College 1317, formerly H 2. 15B); this text was known to medieval glossators as *Bretha Nemed Déidenach* (The posterior *Bretha Nemed*). Yet, if these two texts formed the entirety of the *Bretha Nemed*, the latter would have been on a far smaller scale than the *Senchas Már*.

The issue has not been entirely resolved. The crucial difficulty is to establish whether textual associations between texts indicate that they belonged to a single law-book or merely to the same legal tradition. The problem is illustrated by Binchy's argument seeking to establish, on the basis of these two texts, the characteristics of the *Bretha Nemed*, in terms of style, choice of subject matter and use of technical terms. The main such characteristics were a high proportion of non-syllabic verse (*roscad*) and of rhetorical prose, a preoccupation with the status and function of the *filid* 'learned poets' but literally 'seers' (see bardic order), and a use of the term *nemed* 'privileged person' to embrace not only the king, bishop and chief poet and their equals, but all freemen. On this basis, he was inclined to argue that the latter portions of two medico-legal tracts, *Bretha Crólige* (Judgements of sick maintenance) and *Bretha Déin Chécht* (Judgements of Dian Cécht), derived from the *Bretha Nemed*—not that either exhibited all the defining characteristics, but they

were composed in high arcane style. Yet, strong reasons have subsequently been given for including both these tracts in the *Senchas Már*. On the other hand, Binchy also wished to include within the *Bretha Nemed* collection a tract on status, *Uraicecht Becc* (The small primer). Although it did not contain verse or rhetorical prose, it was unusually concerned with the *filid* and other 'men of art' (*aes dáno*), and it did use the term *nemed* in the wider sense found in *Bretha Nemed Toísech* and *Bretha Nemed Déidenach*. Moreover, it also exhibited close textual links with the opening section of *Bretha Nemed Toísech*. The ascription of *Uraicecht Becc* to the *Bretha Nemed* collection was a result of the highest importance. Up to that point, the status of the *Bretha Nemed* was unclear: *Bretha Nemed Toísech* and *Bretha Nemed Déidenach* touch on a wide range of legal topics, but, apart from the *filid*, they lack the more systematic treatments characteristic of many tracts in the *Senchas Már*. *Uraicecht Becc*, however, was a tract comparable to any of the tracts of the other collection. It also has a further importance in that it is almost certainly of Munster origin. This is not shown simply by the claim that the king of Munster is supreme above other kings, but by references to the important Munster MONASTERIES of Emly (Imleach) and Cork (CORCAIGH). Liam Breatnach has advanced evidence indicating that *Bretha Nemed Toísech* was compiled in Munster between 721 and 742 by three kinsmen—three descendants of Buirechán—Forannán, a bishop, Mael Tuile, a poet, and Baethgalach, a lawyer. The evidence is too late to amount to proof, but a reasonable presumption has been established that the text belongs to Munster and is of the first half of the 8th century. An earliest possible date of *c.* 725 is given by quotations from the COLLECTIO CANONUM HIBERNENSIS.

The *Bretha Nemed* collection thus appeared to be a Munster law-book comparable to the *Senchas Már*, namely to a law-book compiled in the part of Ireland (ÉRIU) ruled by the UÍ NÉILL and their allies, the CONNACHTA and the Airgialla. It would, however, be premature to claim that the *Bretha Nemed* are simply the Munster counterpart of the *Senchas Már*. Although further texts have been ascribed to the *Bretha Nemed*, notably *Cóic Conara Fugill* and *Cáin Fhuithirbe*, the evidence so far advanced is slender. There is nothing corresponding to the Introduction to the *Senchas Már* to show that there was a compilation of a law-book rather than an accumulation of texts belonging to the same tradition and perhaps the same legal school. Glosses to the *Senchas Már* have been used to show which tracts, both surviving and lost texts, belonged to the law-book; but nothing similar is available for the *Bretha Nemed*. It is unlikely that the *Bretha Nemed* ever attained the same width of coverage as the *Senchas Már*. On the contrary, much of what survives suggests that there were considerable differences between the two collections.

Regarding the text's name, the second element *nemed* (gen. pl.) is the same as the Celtic word NEMETON which is found in Old Celtic place-names in BRITAIN and on the Continent for pre-Christian ritual sites, these having been places of special status and privilege.

Breton broadsides

The BRETON-language folk-song tradition first appeared in print in the 17th century. Before that, folk-songs were exclusively a part of oral tradition, but as knowledge of reading and writing became sufficiently widespread, and with the technological advance of the printing press, the mode of their transmission changed. In Lower Brittany (BREIZH-IZEL), as elsewhere in Europe, songs began to be printed on broadside sheets—unfolded and unbound pieces of paper roughly the size of a modern sheet of typing paper. These printed songs were then sold to the public by travelling merchants. However, the composition and transmission of songs by illiterate or semi-literate performers continued alongside the printed tradition.

§1. BROADSIDES TO *c.* 1700

For a small country on the Atlantic edge of Europe, PRINTING had arrived remarkably early in Brittany

(Breizh) with the publication of the Catholicon in 1499. Printing of texts in the Breton language continued sporadically throughout the 16th century, becoming a more common feature of Breton culture by about 1620. During this period, the economy was flourishing. Intensive maritime activity reached a climax in the second half of the 17th century, and fairs and markets became venues at which people came together and goods and ideas were exchanged. These economic developments also facilitated the production and distribution of food surpluses, thus permitting larger sections of the population to pursue careers in the arts. This was an environment that favoured the rise of professional singers circulating between regional economic centres in Brittany.

In the 17th century, Brittany also experienced an extraordinary religious revival in the context of the general western European phenomena of the Reformation and Counter-Reformation (see CHRISTIANITY). A long period of evangelism was initiated by Dom Michel Nobletz (1577–1652) and continued by his Jesuit disciple, Father Julien Maunoir (1606–83). Religious fairs, pilgrimages, and processions increased. During these holidays, when religious zeal was intense, participants learned to sing religious canticles set to folk tunes, and these 'hymns' became a popular form of entertainment. It was during this period that the practice of selling printed canticles on broadside sheets began.

§2. BROADSIDES IN THE 18TH AND 19TH CENTURIES

In the course of these two centuries, Brittany benefited from advances in print technology, and newspapers began to have an impact on urban Bretons, which provided new sources of inspiration for Breton broadsheet songs. News items from nearby locales, from the rest of France, and even from abroad, opened new horizons to a population that had previously been relatively isolated. Nonetheless, these printed media remained inaccessible to the majority of the Breton peasants. Illiteracy was still widespread, and the papers were mostly in French at a time when most of the rural population of Breizh-Izel spoke only Breton. The composers of broadsides thus seized the opportunity to translate French newspaper stories that would be of interest to Breton audiences, and then turning them into rhyming verse. The resulting songs were printed and sold across Breizh-Izel as broadsheets.

Many of these popular composers were the children of poor peasants. Several were illiterate and worked with literate collaborators. Others had some formal education. An important subgroup were men who had begun to train as priests, but were never ordained. A key factor in the impact of the broadside on cultural life in Breizh-Izel was the continued support, over successive generations, of families of printers such as the Lédan family in Montroulez (Morlaix), Blot in Kemper (Quimper), and Kerangal in Brest. Their presses produced a steady flow of songs printed on broadsheets for four sous, the equivalent of a few pennies.

In the 18th and 19th centuries, the function of singer-songwriters for the people of the countryside was in many ways comparable with that of modern journalists. The subjects of their songs included 'true-crime' stories, shipwrecks, storms, floods, and calamities of all kinds, and material that would now be classed as 'urban legends'. The singer-songwriter commemorated events of the village, such as weddings, the departure of conscripts to military service, and rivalries between businessmen. The singer could serve as the moral spokesman of the community, denouncing the vices of individuals (see also SATIRE). The singer sometimes also played the part of a lay preacher, turning into rhyme canticles and saints' lives (see BRETON LITERATURE).

§3. REFLECTIONS OF SOCIAL CHANGE IN THE 20TH CENTURY

The development of popular printed songs in Lower Brittany from about 1620 to the Second World War closely parallels the main processes in the social history of the rural communities over the same period. At the turn of the 20th century, government censors ceased to take a keen interest in these modest flyers, written in a language that lacked any official status. Thus, a medium that had previously been a mouthpiece for socially conservative forces in the community became a means of denouncing social inequalities. Several composers adopted anti-establishment causes and took part in electoral campaigns. The nobility became a target of satire, and the socialists expressed their ideas in the broadsides with thinly disguised metaphors. Others spoke out in defence of the Breton language,

which they perceived to be menaced both by the official policies of the French Republic and economic forces.

During the 20th century, the rise of literacy in the rural areas, growing access to newspapers, radio, and the internet gradually made the traditional functions of the folk composer (as news broadcaster, community historian, or as a militant propagandist) superfluous. But the songs have in many cases survived, to be collected by folklorists and repopularized by revivalists.

Breton dialects

§1. BRETON DIALECTS OR BRETON LANGUAGES?

One of the distinctive features of the BRETON language has been a fairly extreme differentiation into dialects. Within the Breton-speaking zone of Lower Brittany (BREIZH-IZEL), the dialects are not broken up geographically into detached pockets, as is now the case with the IRISH language. No major linguistic frontier can be identified at the lexical level; that is, Breton usually uses the same words from one area to another. Nor is there any major break in morphosyntactical matters—how the tenses and persons of the verb are expressed, how nouns form their plurals, and the basic order of words within a phrase or sentence. According to one criterion favoured by many linguists, Breton in its dialectal diversity is therefore to be counted as a single unified language rather than two or more distinct languages.

In contrast, the dialectal variety is most prominent on the phonological level, in other words, how the regional varieties of the language sound, what non-specialists commonly refer to as the accent. In the case of the Breton dialects, it is literally and linguistically accurate to speak of accent. The dialects of the northern and western parts of Lower Brittany usually stress the second-to-last syllable of words of more than one syllable (as does the WELSH language), whereas the dialect of the south-east usually stresses the final syllable. It is difficult for untrained speakers from KERNEV, LEON, and TREGER in the north-west (KLT for short) to understand those of GWENED (Vannes) in the south-east. This is due largely to differences in the sound systems and stress patterns, which result in strikingly different pronunciations for most words.

§2. LINGUISTIC GEOGRAPHY: DIALECT BOUNDARIES AND CONTINUA

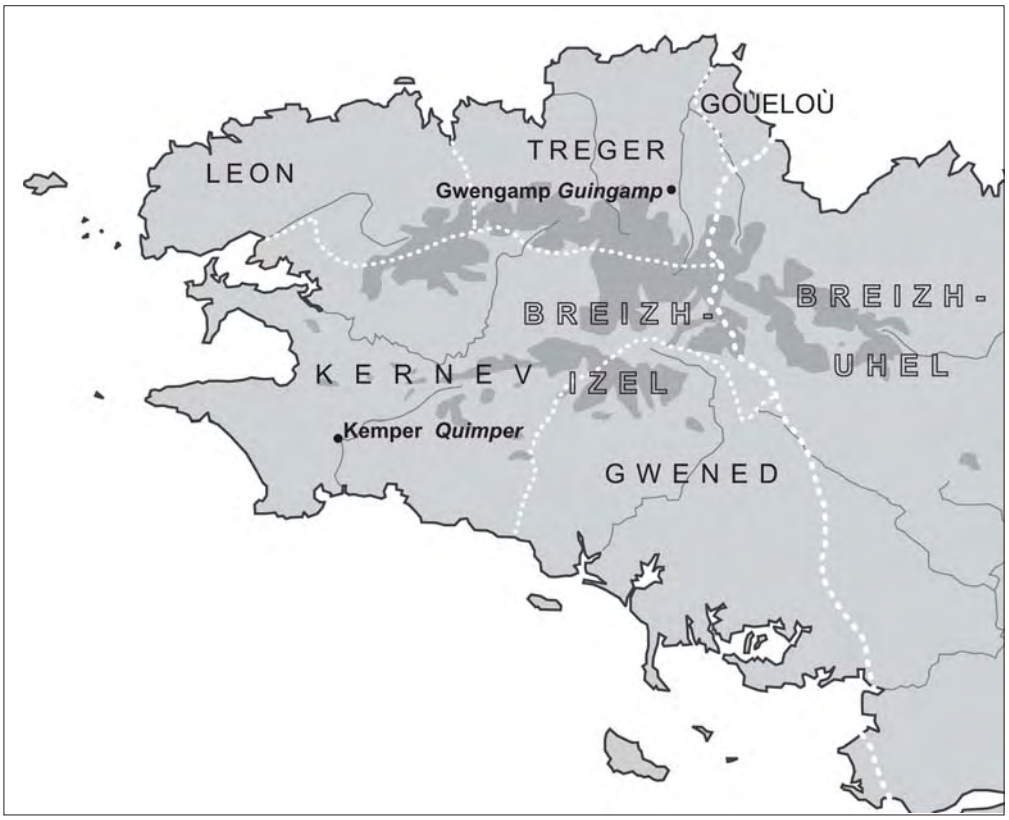
The borders of the ancient bishoprics are traditionally considered to be the dialectal boundaries. Though the linguistic reality is more complicated, the four Breton-speaking bishoprics still represent the four main recognizable dialects.

Taking all the evidence for dialect variation within Breton together, we can see two archaizing poles. In other words, at opposite ends of Brittany, the language has remained markedly old-fashioned, albeit in different ways. These conservative extremes are found in Leon in the north-west and eastern Bro-Wened (the Upper Vannetais) in the east. In contrast, in the central dialect corridor from Kemper (Quimper) to Gwengamp (Guingamp), spoken Breton has undergone sequences of innovations leading to an accelerated evolution overall. For example, sounds or whole syllables have been weakened and lost, and there has been simplification of the grammar (morphological markers).

§3. THE IMPACT OF FRENCH LOANWORDS

Although the vocabulary (lexicon) does not differ greatly from one dialect to the other, it is convenient to remember that the four traditional dialects of the north-west differ by the way one asks 'when?': *peur* in Leon, *pegoulz* in Treger, *pevare* and its variants in Kernev (Cornouaille), and *pedamzer* in the sub-dialect of Goueloù (Goëlo, east of Treger in the north). Statistical study of the vocabulary, according to the *Atlas linguistique de la Basse-Bretagne* by Pierre Le Roux, shows that the changes in the vocabulary are gradual, forming a continuum throughout the Breton-speaking area.

Breton is a language whose vocabulary is mainly of Celtic origin, but which has also borrowed words on a large scale. From about AD 1200 onwards, Breton borrowed mainly from French, mostly from Galo (Gallo), the French dialect of Upper Brittany (BREIZH-UHEL). This neighbouring everyday language was the most common source for informal and technical vocabulary. The



The chief Breton dialect areas and their boundaries, the eastern limit of Breton speech, and the Kemper–Gwengamp Corridor

more formal and Parisian French of the court of the Duke of Brittany and church administration was the source of more abstract and learned vocabulary. Once borrowed by the minority of Breton speakers who were in contact with French, these Romance borrowings spread through all Breton dialects in a very uniform manner. In other words, the dialects do not appear to differ according to degree of lexical 'purity' as measured by French influence.

§4. A SHARED GRAMMAR WITH VARIATIONS IN PRONUNCIATION

In many instances, what appear on the surface to be grammatical differences are essentially differences in pronunciation. For example, the 1st and 3rd person plural of the present tense of the verb are *~amp* and *~ant* in Gwenedeg (Vannetais), but *~omp* and *~ont* elsewhere: therefore, *skrivomp/~amp*, *skrivont/~ant* 'we, they write'. The archaic conditional (subjunctive) in *~h~* is maintained in Gwenedeg, but has come to be pronounced *~f~* elsewhere: therefore, *vefe/vehe* 'she/he would be'. The 3rd person plural of the so-called conjugated prepositions (prepositions with pronoun objects incorporated) ends in *~o* in the west and *~e* in the east (*ganto/gante* 'with them'). *Ma* 'my' occurs with its first consonant weakened or 'mutated' in Leon, and is therefore pronounced *va*; in Gwenedeg, the vowel is weakened to *me(n)* (where the *e* represents the schwa /ə/ in the *~ence* of English *correspondence*).

§5. PERSONAL PRONOUNS

The loss of the 2nd person singular occurs in a south-central area that comprises of Kernev and Gwened. (This is the same change as has taken place in most dialects of English, where *thou*, *thee*, and *thy* have been replaced by the old plural *you* and *your*.) This is not a mere change in pronunciation, but constitutes a morphological singularity, that is, a real simplification of the grammar. In the other dialects, the opposition *te* (2nd sing. 'thou, thee') vs. *c'hwi* (2nd pl. 'you (all), ye') remains intact.

§6. THE VERB 'TO BE'

Similarly, the complicated paradigm of the verb 'to be' differs fundamentally between dialects. For example, the so-called 'locative' form *emañ* 'she/he is in a place' in the present tense is used in the other persons in the west of Lower Brittany: *pelec'h emaon?* 'where am I?', *pelec'h emaout?* 'where are you (singular)?', *pelec'h emañ?* 'where is she/he?' The dialects of the east only employ it in

the 3rd sing. *emañ* and plural *emaont* (thus comparable with Welsh 3rd sing. *y mae*, pl. *y maent*). In this region, another form of the verb 'to be' supplies the other persons in statements of being in a place or situation (*on, out, emañ* rather than *emaon, emaout, emañ*). In the imperfect tense (used for statements of habitual states or actions in the past, like English 'used to be'), special place forms of 'be' occur only in Leon: *e gêr edon* 'I was/used to be at home', *e gêr edos* 'you were at home', *e gêr edo* 'she/he was at home'. There is also another form of the present of the place form of 'be' *edi*. This has survived from Middle Breton and only in a single dialect, that of Île de Sein (Enez-Sun).

A simplification has taken place in the central area, affecting the inherited 'substantive' form of 'be' *ez eus*, which is used to express existence and thus is to be translated 'there is'. It survives in Leon and central Gwened. Where *ez eus* has been lost, another form of 'be' (*zo*) has taken its place: *bez ez eus tud / bez' zo tud* 'there is somebody there'. In its older function—still shared by all dialects—*zo* follows the subject and precedes a predicate adjective; it does not focus special attention on the existence of the subject in a particular place or situation: for example, *an oabl a zo glas* 'the sky is blue'. In this example, attention is focused on the subject. To focus on the predicate, a different form of 'be' is used, thus *glas eo an oabl* (compare Welsh *glas yw'r wybren*).

§7. SYNTAX AND THE MUTATION OF CONSONANTS

One of the characteristic features of Breton syntax is that the affirmative sentence may be reworded so as to begin with any of the principal elements—subject, object, adverb, prepositional phrase, or the verb, as in the above examples or *hiziv eo glas an oabl* 'today the sky is blue', *bez' eo glas an oabl hiziv* 'the sky is blue today'. Similarly, the same information may be conveyed as either *hi a gousk war an deiz* 'she sleeps during the day' or *war an deiz e kousk* 'he/she sleeps during the day'. The syntactic function of the first element of the sentence determines the choice of the 'particle' preceding the verb, *a* or *e* (appearing as *az/ez* or *ac'h/ec'h* before verbs beginning with vowels) and the treatment of the initial consonant of the following verb. (In Middle Welsh, essentially the same system existed with the particles *a* and *y, yd* before vowels.) The sense of 'particle' here is a small, unaccented word, closely linked to another, stressed word, in these cases, the verb. Therefore, with a sentence that begins with the subject *hi* 'she', the particle is *a*, and the verb *kousk* 'sleeps' is mutated to *gousk*. When the sentence commences with an adverb or a phrase with an adverbial meaning, the particle is *e*, and *kousk* remains *kousk*. This was the system everywhere in Early Modern Breton (mid-17th and 18th centuries). Subsequently, in the central belt (Kernev and Treger), *a* with soft mutation has tended to replace *e*. Since *a* causes the mutation of the initial of the verb by softening (lenition), that is *kousk* > *a gousk*, the spread of this particle leads to an increased frequency of this mutation in the language. The general tendency is indeed the replacement of other types of mutation by lenition, with Leon and Gwened preserving the older system. For example, lenition of the initial consonant of the verb is now also a feature of *ma* 'if' in Kernev and Treger: thus, *ma gousk* 'if he sleeps', *ma zeu* 'if she comes' (the unmutated form is *deu*), *ma kousk, ma teu* elsewhere. A similar dialect variation is found in consonant mutations following the numbers 3, 4 and *tri gi / tri c'hi* '3 dogs' (Welsh *tri chi*).

§8. PERSONAL PRONOUNS AS DIRECT OBJECTS OF THE VERB

In Early Modern Breton, the pronoun object was expressed in all dialects by placing the possessive pronoun before the verb: for example, *me ho kuel* 'I see you'. A newer way of expressing the object pronoun is to use the personal or 'conjugated' forms of the preposition *a* 'of' after the verb: *me a wel ac'hanoc'h* (lit.) 'I see of you'. The older construction has been preserved in literary Breton, as well as in the archaizing peripheries, particularly in Bro-Wened.

§9. DIALECT VARIATION IN THE BRETON VOWELS

The accent. The position of the accent separates two well-differentiated areas. The dominant accent is the penultimate stress (second to last syllable) in KLT Breton. Eastern Bro-Wened (the Upper Vannetais) has an ultimate stress (final syllables). An intermediate zone mixes these two methods of accentuation. The fact that the accent has been maintained on the final syllable in the Vannes dialect explains the preservation of sounds at the end of the word in this region, which elsewhere have been lost or are articulated more weakly.

Here, the plural of nouns is in /*~où*/ (written *~eu* in literary Gwenedeg) as elsewhere, but pronounced with a diphthong [ow] as in American English *know* or [œɥ] articulated further forward in the mouth: for example, these diphthongs occur in Gwenedeg in the final syllable of *tadoù* 'fathers'. Another highly common plural ending *~ion* (often used for words denoting groups of people) has not evolved in this dialect into *~ien* as elsewhere: therefore, Gwenedeg *kanerion* 'singers'. In some examples, Gwenedeg has preserved a diphthong in a final syllable where KLT has a simple short vowel: for example, Gwenedeg *kadoer*, KLT *kador* 'chair', Gwenedeg *inean*, KLT *ene* 'soul'.

Vowel quality. The closer one gets to the city of Gwened (Vannes), the more one finds a tendency to pronounce sounds in a more narrowly closed position than in the same words in KLT Breton: therefore, Gwenedeg *bouid*, KLT *boued* 'food', Gwenedeg *alhui*, KLT *alc'hwez* 'key', Gwenedeg *koed*, KLT *koad* 'wood'. Welsh *bwyd* 'food' and *coed* 'wood' similarly show an older close pronunciation. The semivowel [w], pronounced in the back elsewhere, is brought to front in Gwened: *biù* [bɪɥ], KLT *bev* [bɛw] 'living' (Welsh *byw*). The back vowels also offer a closed pronunciation: Gwened *zou*, KLT *zo* 'is', Bro-Wened *vou*, KLT *vo* 'will be', Gwened *hou pou*, KLT *ho po* 'you will have'.

This tendency to pronounce 'o' with the mouth more narrowly closed is also found before *m*'s and *n*'s in the marginal dialect of Leon: *Brezhouneg*, as opposed to Kernev/Treger *Brezhoneg* 'Breton language', *dourn* vs. *dorn* 'hand' (Welsh *dwrn* 'fist'), *hounnezh* vs. *honnezh* 'this one here (fem.)', *choum* vs. *chom* 'remain; reside'.

Diphthongs. The reduction of diphthongs to simple vowels is a characteristic of the central dialects (Kernev and Treger). Middle Breton *ae* is preserved as [ea] in Leon: *leaz* 'milk', elsewhere pronounced as the open simple vowel [ɛ] (similar to English *says* [sɛːz]), thus *laezh* [lɛːz], Leon *er meaz* vs. *ar maez* [ar mɛːz] 'outside'. In these words, Bro-Wened has a closed [ia]: *liah, er miaz.* Elsewhere, this group is reduced to [ɛ].

The diphthong spelled *ao* is in the same way a full diphthong to [aw] (as in English *cow*) in Leon and [ow] in Gwened, as found in the words *taol* 'table', *kaol* 'cabbage', *paotr* 'boy'. The dominant pronunciation of this group elsewhere is [ɔ] (similar to British English *law*), although the diphthong is retained in the final position in monosyllables: *glav* [glaw] 'rain' (Welsh *glaw*).

'Neutralization' and loss of vowels. In all regional varieties of Breton, unaccented vowels are often neutralized, turned into the less distinct vowel [ə], which is articulated in the centre of the mouth. In Kernev and Treger, the final vowel of polysyllabic words tend to have [ə]: *pesked* 'fishes' (pl.), *labourer* 'worker'. In Gwened, which has ultimate stress, the vowels in non-final syllables move towards the central position: KLT *siminal*, Gwenedeg *cheminal* 'chimney' [ʧəmɪnâl].

Neutralization also affects unaccented monosyllables such as the possessive pronouns *ma* 'my', *da* 'your' (sing.), the conjunction *pa* 'when', and the affirmative verbal particle *a* (in Gwenedeg). The central dialects even lose the vowel completely in verbal particles and prepositions: the particle *a* is not audible, but is still followed by mutation of the verb, *e~keit* becomes *'keit* 'during', *a~raok* becomes *'raok* 'before'. The contraction of common prepositions and adverbs also occurs regularly in these regions: *e~barzh* becomes *ba* 'in', *abalamour* becomes *blam* 'because of'.

§10. DIALECT VARIATION IN THE BRETON CONSONANTS

In the consonant systems of the Breton dialects, we can see a fundamental split in the results of the Old Breton dental fricatives [θ] (as in English *breath*) and [ð] (as in English *breathe*). The unvoiced sound [θ] has resulted in two competing developments. In the KLT region, this form is transformed to a [z] (though not quite the same as the English or French sound). In Gwenedeg, Old Breton [θ] has developed into an [h] (different from and rather stronger than the English sound). The spelling *zh* is used for a unified orthography: thus, in *kazh* 'cat' and *seizh* 'seven', these spellings indicate that the words have [z] in KLT and [h] in Gwenedeg. It is never pronounced *zh* [ʒ] like the *s* in *measure*. This system of spelling is termed *zedachek*, which is the adjectival form of 'ZH'.

The development of Old Breton [ð] defines another dialect area, this time in the north-west. Only in Leon and adjacent parts do we encounter a systematic survival of a sound that comes from Old Breton [ð], preserved as [z]: *menez* 'mountain' (Welsh *mynydd*), *deiz* 'day' (Welsh *dydd*). In the other dialect areas, with the exception of the initial consonant mutation of *d~* to softened *z~* and a few fossil forms, ancient [ð] has disappeared: thus, *mene* (compare Welsh *i fyny* 'up' < *y fynyð*, Pembrokeshire Welsh *newy* 'new').

Old and Middle Breton [w] have also developed in several different ways. In the west of the Breton-speaking area this phoneme has been turned into a full consonant, that is, into [v] in initial position (as the mutation of *gw-*) or between vowels, where it precedes a close vowel: *da win* 'your wine' [də vi:n], *avel* [a:vəl] 'wind'. The dialects of Treger and Gwened have kept [w] (the latter using its front variant [ɥ]): thus *awel, auél* /awe:l/.

Palatalization of consonants is another feature that makes the dialects sound strikingly different. In the north-western area, west of a line from Kemper to Gwengamp, consonants are very rarely palatalized, but in the south-east it constitutes a relevant feature, particularly in central Bro-Wened. This phenomenon affects [k] and [g], which evolve before close vowels to [ʧ] (as in English *church*) and [ʤ] (as English George). Spelling, even that intended to represent Gwenedeg, does not reflect this tendency: *ki* [ʧi:] 'dog', *kement* [ʧɛmɛnt] 'as much', *ger* [ʤe:r] 'word', *gwenn* [ʤwɛn] 'white'.

In Bro-Wened, *s* is replaced by a [ʃ] (as in English *shade*) when it precedes a group of consonants. This feature is also not apparent in the spelling of Gwenedeg: *mestr* [mɛʃtr] 'master', *stad* [ʃta:d] 'state'.

The characteristic that Jackson called 'new lenition' affects the fricative sounds /s, ʃ, f/, changing them to /z, ʒ, v/ (*Historical Phonology of Breton*). These were sounds that did not mutate in Old and Middle Breton, but by analogy they have come to show variation in the same syntactic positions where the other consonants undergo softening (lenition): for example, *sac'h, ar zac'h* 'bag', 'the bag', *chadenn* /ʃa:dən/, *da jadenn* /də ʒa:dən/ 'chain, your chain', *fest, ur vest* 'party, a party'. New lenition has its origin in Treger, where the original consonant has been weakened to the point of virtually disappearing. The phenomenon is found only in the westernmost parts of Bro-Wened. Some authors who seek to write a a standard, non-dialectal form of Breton avoid representing new lenition, even though they would have these mutations in their speech: thus, *ar sac'h, da chadenn, ur fest*. Other consonants may lenite in spoken Breton, but this mutation is rarely or never written.

§II. SPELLING

Owing to the divergence of pronunciation, Breton has had difficulty establishing a unified orthography after that of Middle Breton was abandoned in the mid-17th century, following the publication of the grammar of Père MAUNOIR in 1659. Consequently, two primary written standards have coexisted—one based on the Leon dialect, the other based on Gwenedeg.

Breton early medieval manuscripts

§I. HISTORICAL BACKGROUND

The history of the BRETON manuscripts from the early Middle Ages is related to the situation of the Armorican peninsula as a crossroads between the insular and Continental worlds (see ARMORICA). The BRITONS who migrated across the English Channel between the 4th and 7th centuries seem to have given a new impetus to the Celtic language which was quite possibly still spoken in the western part of the peninsula (see BRETON MIGRATIONS; GAULISH). Up to the Carolingian period (8th and 9th centuries), the proximity of the Franks only occasionally posed a threat to Breton culture and self-rule. In 818 Louis the Pious had come to Brittany (BREIZH) to put down Morvan's revolt. There, he met Matmonoc, the abbot of LANDEVENNEG, and urged him to abandon the 'Scottish manners'—the customs associated with the Irish church and Irish churchmen in France—in favour of the Benedictine rule. Later in the 9th century Brittany emerged as a unified Breton kingdom (*regnum*), which lasted throughout the period 845–908. Afterwards, the Scandinavian (Norman) invasions caused the flight of the Breton monks, who took relics and manuscripts with them. After 939 and the victories of ALAN VARVEG (Alain Barbetorte), monastic life slowly returned to Brittany, but cultural life did not regain the dynamism of the 9th century.

§2. THE MANUSCRIPTS

No Breton manuscript older than the 8th century is known, and the influence of insular book hand is evident only in roughly 30 inscribed stones, such as the *gallmau* in Lanrivoaré (Lañriware, Penn-ar-Bed), for example, the *g* (written ɡ) and the *m* (written in three vertical strokes barred by a horizontal stroke ┼┼┼), letterforms which are found again in the gospels of Saint-Gatien (Paris, Bibliothèque Nationale, New Latin 1587). This manuscript shows the greatest Irish influence on any extant Breton manuscript, and its ornamental style recalls the style of the manuscript attributed to the Irish scribe Mac Regol (Oxford, Bodleian Library, Auctarium D. 2.19). It displays four remarkable folios: fo. IV, a decorative page opens/inaugurates the gospel of Matthew. It is composed of a central panel of intertwining lines bordered on both sides by pictures of two birds with long entangled beaks. Above and below are two long-necked horses confronting each other. The four corners feature panels of interlaced lines. There is a strong resemblance between the horses on this page and those ornamenting the 8th-century Anglo-Saxon illuminated manuscript, the *Codex Aureus* of Canterbury. Particularly similar is the use of interlaced and dotted lines. Instead of ornamenting the single *I* of *Initium* (opening the Gospel of Mark) and *In principio* (Gospel of John), for instance, the width of the page is filled by enlarging and decorating the first two letters *IN-*. Another Breton manuscript reflects the same school of illumination: London, British Library, Egerton 609 (beginning of the 9th century). Saint-Gatien's Bible text is a mixture of the *vetus latina* (Old Latin) and the later Vulgate, that is, St JEROME's translation of the late 4th century. The scribes use the letterform usually called 'insular half uncial', types of which are found also in Irish, Anglo-Saxon, and Welsh manuscripts of the 8th and 9th centuries. The abbreviations for *autem*, *enim*, *est*, *per*, *quia*, &c. are all of insular type.

From the same period, a fragment of *Arator* and a *Carmen paschale* by Sedulius are known, the latter having some Old Breton glosses. A bilingual medical text is also to be dated to this period: Leiden, Codex Voss. Latin 96A (see LEIDEN LEECHBOOK). Of the 190 words of the text, 70 are in Old Breton or Old CORNISH. The writing is in a half uncial, closely resembling Irish and Welsh examples, with a mixture of Continental and insular abbreviations.

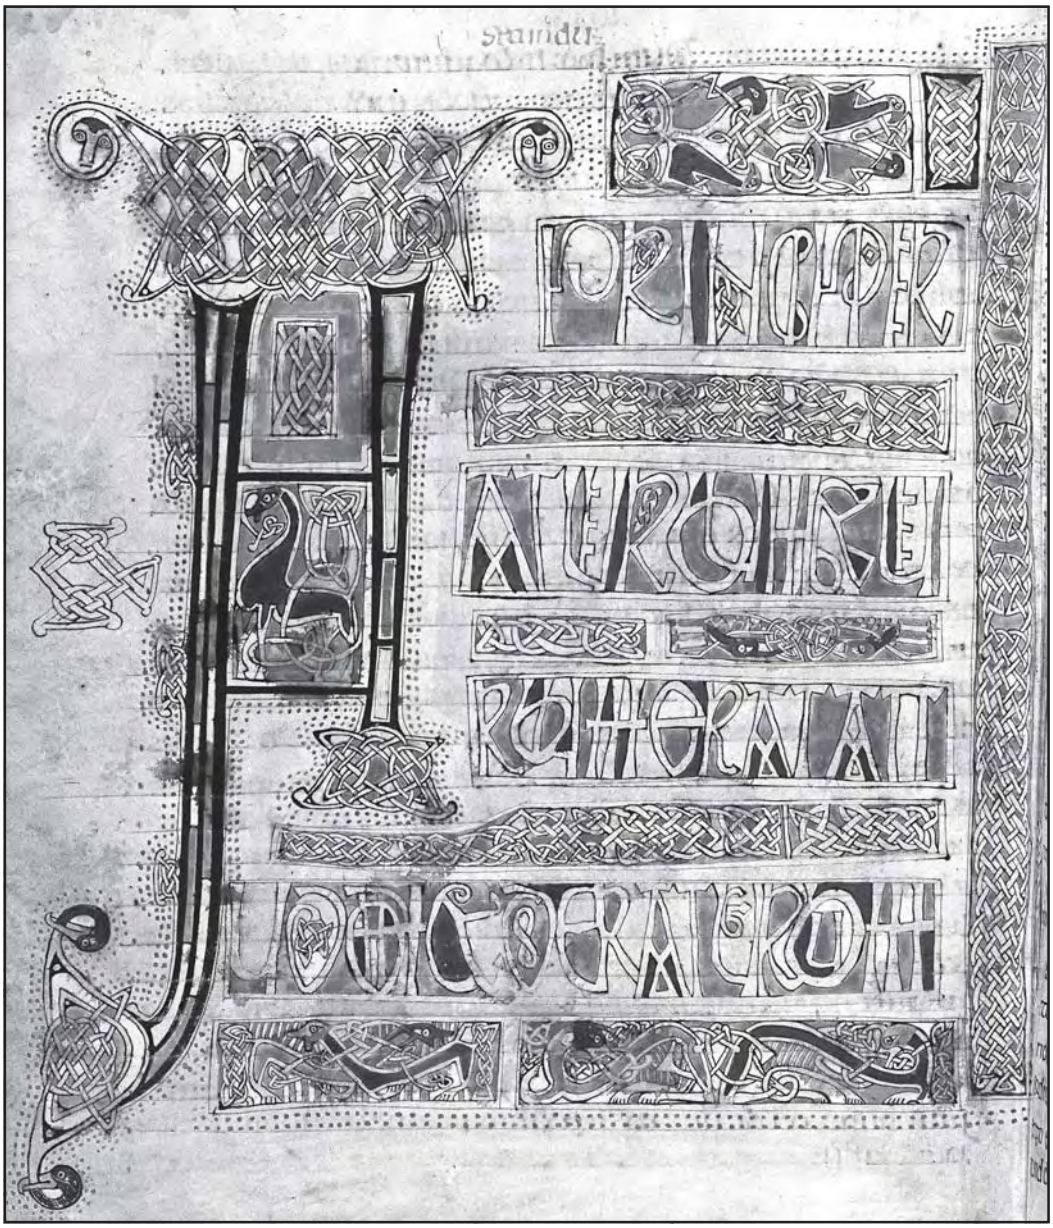
Manuscript 221 from Orléans (*Collections Canoniques*) shows evidence of the transition from an insular to a Continental Carolingian-style script. It was copied by several scribes, one of whom, probably rather aged, uses insular script and abbreviations. His hesitant, clumsy handwriting does not always follow the lines ruled on the parchment. Chapter headings are written in a gradually diminishing style. He often misspells, doubling consonants (for example, *assinus* for *asinus*). This 'old scribe' uses insular abbreviations, for example, *est* is represented by a horizontal stroke with one dot above and one below. He is sometimes replaced by another scribe who uses a very pure Carolingian uncial. This manuscript is to be dated to the middle of the 9th century. It was copied in a scriptorium (centre for copying manuscripts), where scribes writing in the ancient manner and younger ones, educated in the new style of writing, worked side by side.

The 9th century and the beginning of the 10th century represent the peak of the Breton scriptoria; around 100 manuscripts date from this period. During this time the Breton kingdom experienced a period of calm and, since relations with the British Isles continued, Brittany profited from the contributions of the second generation of the Carolingian Renaissance.

§3. THE DISPERSAL OF BRETON MANUSCRIPTS

It is a remarkable fact that none of the manuscripts discussed here are in Brittany today. They are dispersed in the libraries of France and the rest of Europe: five are in Angers, three in Bern, two in Cambridge, eight in London, six in Oxford, nineteen in Paris, four in the Vatican, &c.

This dispersal is not arbitrary. It is known, for example, that the abbey of Fleury and the Loire valley in general had relations with Breton monasteries: Mabbon, the old bishop of Saint-Pol-de-Léon (Kastell-Paol) in the 10th century, wished to finish his days near the relics of Saint Benedict. As a payment for the relics that he wanted, he offered, besides the relics of Saint PAUL AURELIAN, a *vita* of this saint which is preserved in Orléans (MS 261), as well as a work of Saint Ambrosius: *Hunc codicem Mabbo epoiscopus dedit sancto Benedicto* (Bern 277). Moreover, if one knows the tribulations of the rich library of Saint-Benoît-sur-Loire, one can reconstruct the itinerary followed



The Gospel of Saint-Gatien, fo. 85v.

by numerous manuscripts during the Renaissance and later centuries. In the 16th century, the humanist P. Daniel became the owner of some of the manuscripts. When he died, J. Bongarz and P. Petau inherited these. The books of the latter were bought by Queen Christina of Sweden who, having converted to Catholicism, donated them to the Vatican. The manuscript owned by Bongarz became the property of Gravisset, Palatine Elector from Strasbourg, who passed on his library to the Bürgerbibliothek in Bern (Switzerland). Finally, Vossius, a Dutch humanist, bought many items from Fleury. If one adds some manuscripts kept today in Paris, there are then a total of about 20 Breton examples ultimately deriving from the library at Leon.

Even though the dispersal of manuscripts cannot be ascribed directly to the Scandinavian invasions, they do partly explain it. Around 913 the clergy in Brittany had to flee to France, returning to the monasteries with which they had already been in regular contact. The monks of Landevenneg, for example, found refuge in Montreuil-sur-Mer; the two places probably had prior connections since the *vita* of Saint Judoc shows that this particular hermit saint was active in both areas four centuries earlier.

Many churches and chapels in the south of England have a Breton saint as their patron. For a long time, it was assumed that these dedications went back to the early post-Roman centuries, before the cults had travelled from Britain to Brittany. In fact, it seems more likely today that it was the Breton refugees fleeing from

the Scandinavians in the 10th century who established several of these English parishes. Among these refugees, Matbidoe, count of Poher, stayed at King Æthelstan's court with his son Alan (Alain), future victor over the Normans. The presence of the clergy amongst these refugees explains how many manuscripts came to southern England. Thus London, BL, MS Royal 1 A.xviii (Aethelstan's gospels) was given to Saint Augustine's church in Canterbury by the king. The Harkness Gospels (New York, Public Library, Ricci 115) and their twin, Oxford, Bodleian Library, Auctarium D. 2.16, both have their origin in Landevenneg; they record three festivals of Saint Uuinuualoe.

The question whether or not the Bodmin Gospels are Breton has not yet been solved. In any case, the Breton affinities of their decoration deserve attention. The Gospel of John is preceded by a frontispiece which is very similar to the one that can be seen on fo. 13v of the Harkness Gospels; it has a border of interlaced lines and characteristic intertwined loops, which can also be found in Egerton 609. Oxford, Bodleian Library, Hatton 42 was also brought to Britain; it is a canonical collection, in which the *Liber Sancti Dunstani* (The book of St Dunstan) is mentioned. This book was in Glastonbury during its peak period. It should also be noted that Breton manuscripts have sometimes served as prototypes for English manuscripts. The most astonishing example is provided by the *Liber officialis* redacted by Amalarius *c.* 930. The Anglo-Saxons knew this tract through a manuscript similar to the surviving Paris, Bibliothèque Nationale, New Latin MS 1983 (Landevenneg, 9th century). As the monks from Landevenneg returned to their abbey, they recopied the *Liber officialis* but, by 'pleasant irony' (to use Dumville's phrase), after an English model. This is another example of the two-way traffic in manuscripts across the Channel in the 10th century.

§4. CONTENTS OF EARLY BRETON MANUSCRIPTS

Firstly, the four gospels have to be mentioned. Even though the place of origin of some of these texts may be disputed, it is generally accepted that around 30 codices have survived. This is a considerable number; for the same period P. B. Fisher lists fourteen Irish manuscripts, four Welsh, one Scottish, and fifteen English manuscripts. This high number suggests that certain scriptoria worked to fulfil orders; in effect, they were early medieval 'publishing houses'. We have some proof of this for Landevenneg; in the gospels of Troyes we find a subscription note which gives the names of the laymen who had commissioned this book to be copied for the church of Rospez (Treger).

Another category of text found in early Breton manuscripts is liturgical literature. The works of early Christian authors were also copied, for example, Augustine of Hippo, Ambrosius, and Eucher. We have six surviving early Breton manuscripts of this type, including a collection of canon law. It must be noted that the Collectio Canonum Hibernensis, a collection of Irish origin, is only known from four Breton manuscripts. Other collections of Breton origin are the *Libri Romanorum et Francorum* (The books of the Romans and Franks, also known as *Kanones Wallici*, i.e., Welsh canon laws), and possibly the Penitential of Uinniau. *Liber ex lege Moysi*, only known from four Breton manuscripts, consists of extracts of the Pentateuch.

The study of the early Breton Latin saints' lives shows that the redactors had a profound knowledge of the classical Latin authors. Their favourite seems to have been Vergil, who had come back into favour in the course of the Carolingian Renaissance. The beautiful Manuscript 167 from Bern shows considerable familiarity with Vergil's *Aeneid*.

Among the religious authors, the early Christian historian Orosius often drew the attention of the Breton monks. Orosius's *Historiae adversum paganos* were known in Brittany as *Ormesta mundi*, which can be translated as 'The end of the world' or 'Prophecy (of the end) of the world'. It should be noted that the Old Breton word *ormest, wormest* appears for the first time in an Irish manuscript (Milan, Sup. D. 23), which was written in Bobbio, Italy, in the 7th century. The Vatican Regina 296 of *Ormesta mundi* occupies an important place in the stemma. This manuscript contains about 25 glosses in Old Breton; some of these appear in many other manuscripts written in the 11th, 12th, and 13th centuries outside Brittany, which some scribes continued to copy without understanding them. The Etymologies of Isidore, an essential work for every scriptorium and every school, is represented by six manuscripts glossed in Old Breton.

The Carolingian period was not very productive; it is mainly important for the transmission of classical literature and the spread of the knowledge of Latin.

Alcuin, Nonnius Marcellus, and Smaragdus were read and annotated. The best text of the commentary on Donatus written by Smaragdus, which has served as a base for the modern edition, is the Paris, Bibliothèthque Nationale, Latin MS 13209. A paleographical remark is also required: the work of Smaragdus was very well known all over Brittany. The Paris manuscript, dated in the second half of the 9th century, contains about 20 glosses in Old Breton, but not a single insular abbreviation, which one would expect in a manuscript made in a Breton scriptorium; thus, we are quite probably dealing with a manuscript copied by a scribe from the Paris area from a Breton original. On the other hand, two grammars that are similarly glossed in Old Breton show characteristically Irish features. These are copies of the *Institutiones* of Priscian and the beginning of the *Ars de verbo* of Eutyches, authors who were introduced on the Continent by the Irish. The first was written in the abbey of Echternach, Luxemburg, where it probably had been copied and glossed in Old Breton. In this connection, it should be noted that the concept of the 'Breton scriptorium' must not be taken strictly geographically; Bretons frequented the great cultural centres of the period—Fleury, already mentioned, and also Corbie, Bobbio, Saint-Bertin, Tours, and Regensburg. As to the Priscian manuscript from Paris, the comparison between this grammar and MS 904 from Sankt Gallen displays remarkable similarities. The Breton manuscript, although written in Carolingian minuscule script characteristic of Frankish scriptoria, preserves several insular abbreviations, and the Celtic and Latin glosses are often identical. The two texts show numerous 'construe' marks inspired by an Irish method of studying texts. The 8th-century Irish type of construe marks consists of colons, horizontal double periods or semicolons, which, placed on the several elements of the Latin sentence, bring together verb and subject, adjective and noun, &c., to make reading easier. Another method consists of writing letters above the different words of the sentence, beginning with the verb (a), then the subject (b), and then the preposition (c), &c., which gives the word order in the native spoken language of the learner. About ten Breton manuscripts show these symbols and/or letters.

Another important item in the early medieval Breton libraries was the *Hisperica Famina*, curious poetic texts written in an obscure Latin where neologisms (invented words) stand side by side with Latin adaptations (calques) from Greek and Hebrew. Some scholars suggest that these texts are of Irish origin and redacted at a very early date. Whether this is so or not, it should be noted that 'Hisperic' literature is known to us only through Breton manuscripts (Paris, Bibliothèque Nationale, Latin 11411 [9th cent.], Echternach, Luxemburg 89 [9th cent.], Echternach, *Hymne alphabétique de Staint-Omer* 666 [9th cent.], Saint-Berthin).

§5. WHAT ARE THE BRETON FEATURES IN EARLY MEDIEVAL MANUSCRIPTS?

Is it possible to reconstruct the contents of an early medieval Breton library? Are there 'Armorican symptoms', as there are 'insular symptoms', to guide us? Only in rare cases did a scribe give us the name of the monastery where he worked. This is the case with Amalarius of Cambridge, Corpus Christi College 192, which was copied in 952 for Landevenneg. The gospels of New York and Oxford (Bodleian Library, Auctarium D. 2.16) give the three feasts of Saint Gwenolé, also implying a Landevenneg provenance. The Copenhagen Calendar gives 913 for the year of the destruction of Landevenneg. A donation document edited in identical terms to those employed in the *Cartulaire de Landevennec* permits us to assign to this abbey the gospels of Troyes 960, written in 909. Several scribes are known to us by name: Luieguethen and Lioscar (Douai 13). The old scribe of Orléans 221 calls himself Junobr(us), the name Liosmonoc appears at the beginning of Paris, Bibliothèque Nationale, Latin MS 13386 and in the colophon of Vatican Regina 296. Arbedoc wrote Paris, Bibliothèque Nationale, Latin MS 12021, Iunhoiarn wrote Cambrai 625. Altogether roughly ten scribes are known by name.

Another Armorican feature, the abbreviations, mixes the insular and Continental system. Some disappeared at a relatively early date, by *c.* 900 (as *per, inter, secundum*), others remained in use until the end of the 10th century: *autem, enim, quia*, &c. The Bretons used a special sign for *contra*: a double *cc*, of which the first is reversed; the symbol looks like ↄc. This Breton contraction appears in about a dozen manuscripts.

The presence of Breton glosses constitutes strong evidence for the Breton origin of a manuscript; however, as in the case of Orosius, these were sometimes copied together with the rest of the text from a Breton

original by a non-Breton scribe. This is also the case for the *Sortilegia per litteras* from Munich for the canonical collection Cambridge, Corpus Christi College 279, copied in the region of Tours.

Other particularities are colophons. The Breton scribes have a preference for rare words, as in the Hisperic style. For example, 'in hell' is *in pyri flagae barathro*, 'in paradise' is *in bapho*, a phrase used by Junobrus (Orléans 221) and by Holcundus (Gospels of Saint-Gatien). The four gospels are designated in Breton under the name *hagio grapa*; *in nomine dei summi* becomes *in honomate summi tonantis*. The scribe is called *pictor* and 'to read' is *scrutari*. One group of gospels prefers *nunc oditur* to the simple *nunc incipit* 'now begins' (Saint Galen; Angers 24; London, BL, Royal 1 A.xviii).

Another criterion is the presence of neumes (a musical sign in plainchant notation written on top of each syllable). It is known that, before the musical notation of Guido of Arezzo, the memory of the singers was aided by a system of signs: *punctus, pes, torculus,* &c., that indicated the melody. Brittany had developed its own system of notation, which was in use from the end of the 9th to the 12th century. This is first attested in Chartres 47. Geographically speaking, the distribution of manuscripts with Breton neumes corresponds to a large extent to the regions where Breton monks took refuge in the 10th century: north of the Loire and in southern England. Several Frankish manuscripts show the Breton notation. This is consistent with the hypothesis of a long presence of permanent Breton colonies in the great cultural centres in Gaul, before, during, and after the Norman incursions.

Iconography may also show a peculiarly Breton character. For example, in six manuscripts (New York, Ricci 115; Oxford, Auctarium D. 2.16; London, BL, Egerton 609; Troyes 960, as well as Boulogne 8 and Bern 85), the evangelists Mark, Luke, and John are represented, bearing the head of an emblematic animal, respectively lion, ox and eagle. It is quite certain that three of these manuscripts—New York, Oxford, and Troyes—come from Landevenneg; for the other three a provenance from this scriptorium has still to be proved.

Considering the illumination of manuscripts, the fundamental work of J. J. G. Alexander must be mentioned; he has proved the close iconographic relationship between six manuscripts: Vatican, Archivio San Pietro D. 154; Baltimore, W. I. Walters Art Gallery; Alençon 84; Oxford, Laud 26; Paris, Bibliothèque Sainte-Geneviève 19, and Tongeren, cathedral treasury. Matthew is represented in profile and writes to the right. Mark, Luke, and John hold up the pen frontally. These manuscripts probably came from the same scriptorium. The colophon at Tongeren tells us that this codex, which belongs to the end of the 10th century, has been donated by a certain Gleuhitr to the church of Saint Pern in the diocese of Saint-Malo, giving us a probable localization for all six manuscripts.

Any one of these so-called 'Breton' features taken on its own does not give an undeniable proof of the Breton origin of a manuscript. It is more often the accumulation of several criteria which permits the identification of a manuscript as having been copied at an Armorican scriptorium.

Breton language

Brittany (Breizh) has been home to a distinctive Celtic language from the earlier Middle Ages to the present day. The successively more ancient ancestors of Breton are discussed in the entries on Brythonic, Celtic languages, and Indo-European. For the

historical events leading to the transplanting of a Brythonic language to mainland Europe, see BRETON MIGRATIONS and ARMORICA.

§1. OLD BRETON

It becomes possible to distinguish Breton and CORNISH from WELSH in the course of the 8th century, when innovations arise in Welsh to differentiate it from the other two languages. For example, the Old Breton name *Conoc* (< Celtic **Kunākos* 'hound-like') is identical in spelling to the same name as used in Wales in the 7th and 8th centuries, pronounced /*konǫg*/ in both places. But, by *c.* 800, the unstressed vowel in the first syllable had become schwa, an unrounded neutral vowel /*ə*/, in Welsh (spelled *i* in Old Welsh, now spelled *y*) and the stressed /*ǫ*/ had become the diphthong *au*. Thus, a distinctively Old Welsh spelling *Cinauc*, pronounced /*kənaug*/ (cf. Modern Welsh *Cynog*), had come into use. From this time onwards, it becomes useful to distinguish Old Welsh from Old Breton and Old Cornish. A sizeable corpus of Breton glosses (see BRETON LITERATURE §1) and proper names survives from the Old Breton period (end of the 8th century to *c.* 1100).

Onomastics. Sources for proper names are mainly saints' lives, 28 inscriptions of the period *c.* AD 300–1100, and names of subscribers to charters (see CHARTER TRADITION). In saints' lives, forms are often mis-transcribed or modernized. On the other hand, some spellings were probably taken from written texts of the 5th or 6th century. Thus, for example, *Maglus Conomagli filius* in the 9th-century Life of St PAUL AURELIAN does not show the contemporary Old Breton name forms (which were by then *Mael* and *Conmael*), but rather ROMANO-CELTIC spellings that had been current three centuries before. Similarly, *Arecluta regio* in the Breton Life of St GILDAS is the oldest form we possess of the name of the kingdom of YSTRAD CLUD (Strathclyde).

Our main sources for Old Breton proper names are collections of charters. The largest of these is the Cartulary of REDON, in which there are 11th-century transcriptions of charters, the bulk of which date to the 9th century (see Lapidge & Sharpe, *Bibliography of Celtic-Latin Literature 400–1200* no. 998; Jackson, *Historical Phonology of Breton* xxxi.). Here, too, the spellings have frequently been modernized, and some of the documents are forgeries. The Cartulary of LANDEVENNEG (Landévennec) dates from the 11th century, and transcribes older documents, some of them probably written in the margins of earlier manuscripts. Most of the charters in the Landevenneg collection are reputed to be forgeries, but the issue has not been resolved.

As seen from the charters, personal names then in use in Brittany included some Biblical names, for example, *Abraham*, *Daniel/Deniel*, *Dauid*, *Iacu/Iacob*, *Iohan*, *Ioseph*, *Isaac*, *Solom/Solomon*; some Frankish (Germanic) names, for example, *Adalfred/Ethelfrit*, *Bernahart*, *Uuilhelmo*; some of Latin origin, for example, *Arthur* < *Artorius*, *Custentin* < *Constantinus*, *Notolic* < *Natalicius*, *Uuithur* < *Victor-*; most, however, are Celtic and can be directly compared with Welsh, Cornish, and also Gaulish and sometimes Gaelic forms. For example, *Bran* [cf. BRÂN], *Budic* [cf. BOUDĪCA], *Caduualart* [cf. Welsh CADWALADR], *Catuuallon* [cf. Welsh CADWALLON], *Comaltcar* [cf. Welsh *cyfeillgar* 'friendly'], *Conoit* [cf. Welsh *Cynwyd*], *Cunuual* [cf. Welsh *Cynwal*, Irish *Conall*], *Mapon* [cf. Welsh MABON, Gallo-Latin *Maponus*], *Uuethenoc* [cf. Welsh *gweithenog*, Old Irish *fechtnach* 'bellicose'], and many others. Some Old Breton names survive as modern family names (which appear as such in the course of the 13th century). Old Breton IUDIC-HAEL survives as the surname spelled variously *Yezekel*, *Gicquel* (the source of English *Jekyll*), &c. and UUOHEDNOU (corresponding to Welsh *Gwyddno*) survives as *Gwennou*.

The study of place-names is of particular interest since these provide evidence for the settlement of Britons in ARMORICA and their interaction with speakers of Gallo-Romance, and perhaps late GAULISH. For example, the numerous Breton place-names in *Plou-* (derived from Latin *plēb-em*; cf. Welsh *plwyf* 'parish') seem to signify early Christian communities founded by incoming Britons. Names in *Tre-* signifying 'village, homestead' may also date from the early history of Brittany. In the Cartulary of Redon, small farmsteads most often bear names with the first element *Ran(n)*, meaning literally a 'part' or 'share'.

§2. MIDDLE BRETON

The Old Breton period is usually regarded as ending *c.* 1100, and this therefore also denotes the beginning of Middle Breton. For the period 1100–1400, the evidence is limited to isolated proper names. Literary Middle Breton is distinct from Old Breton in having sustained substantial influence from French in vocabulary, spelling, and the sound system.

A standardized language, together with the norms for learned or professional verse-making, appears fragmentarily in the 14th and 15th centuries, and then more completely in the 16th (see BRETON LITERATURE §2). The existence of such standard forms implies the existence of some form of teaching and traditional transmission, for which we have no historical evidence. Spelling uniformity would be unexpected for a language that had appeared suddenly without the support of an established educational system. Therefore, it is likely that there had been more literature available in the early Middle Breton period, but that this, for various reasons, has not survived.

The language from the mid-17th century to the present is regarded as Modern Breton. The end of Middle Breton can be precisely dated to 1659, at which date the new early Modern Breton spelling system comes into use in printed books. However, late reprints of Middle Breton books did occasionally and irregularly retain the earlier spelling, and medieval spelling habits are quite frequent in popular manuscripts as late as the 19th century. It is only in the modern orthographic systems that dialect variation is revealed, enabling us to describe the BRETON DIALECTS as they first appear.

The fact that a number of books in Middle Breton were printed in the 16th and earlier 17th centuries shows that, even though this educated norm was probably distant from the everyday speech of any particular region of Brittany (BREIZH), it was nevertheless accepted and understood by a fairly significant literate minority. This standardized Middle Breton has been regarded as clerics' slang or jargon, but it is no more a stilted jargon than what was written at the same period in other languages in the same church-dominated genres (for example, moral didactics and miracle plays), all of which are usually characterized by a specialist vocabulary. Furthermore, the faint glimpses that surviving fragments provide of popular practice (songs, church inscriptions, a play, incidental writing) show that this learned standardized language was understood and esteemed by all literate Bretons, and even probably by illiterates whose songs were transcribed by others. This picture of a medieval standard language with a broad-based currency is corroborated by the survival of texts with internal rhymes, as in the metres of the formal genres, in popular songs down into the 20th century.

Linguistic Features of Literary Middle Breton. Initial mutations, which had been an essential grammatical feature of all the Celtic languages from at least as early as the 6th century and had existed as a phonetic feature even earlier, were not revealed in Middle Breton spelling. The radical or unmutated consonant (as would occur when a word was spoken in isolation or at the beginning of a phrase) was written, even where a mutated pronunciation was regular in normal speech. The final nasal labial spirant (pronounced like strongly nasal /ṽ/), as in Old Breton *cintam*, Modern *kentañ* 'first' (cf. Welsh *cyntaf*) was spelled *-ff*, so Middle Breton *quentaff*. Four symbols were used for distinct sibilants (*s*-like sounds). Thus, the distinct sounds now written as *ch* for /ʃ/ (French *ch*, English *sh*) and *c'h* for /χ/ were both written *ch* ambiguously. The affricate spirant /t͡ʃ/ (standard English *ch*) was written *cz*, being distinguished in this way from the sounds /s/ and /z/.

Verse regularly shows internal rhymes in schemes comparable to the *llusg* subtype of Welsh CYNGHANEDD. These features always occur together and must reflect the system of learning writing and poetic composition in Breton at the time.

§3. EARLY MODERN BRETON

The 17th century is a period of transition. In the first half, the Middle Breton literary standard was still in use. From its rapid disappearance and replacement, we can assume that it was already quite archaic and had become artificial. The second half of the century is a new era. As a linguistic feature, the initial lenition or soft mutation (*t* > *d*, for example) comes to be written. We can reasonably assume relative continuity in the everyday spoken language and the slowness of any change at this level, but we are tethered by evidence mainly derived from printed texts, which give us the apparent change overnight from one historical stage of the language to another. Formerly medieval and standardized, it had become dialectal, and written according to general principles rather than detailed rules. Parallel to this change in the written norm and probably closely connected to it, the social position of Breton was beginning to shift. No longer used in an official or administrative capacity, its continued use was restricted primarily to the community level.

§4. MODERN BRETON

For details of regional varieties of spoken Breton in recent times, see BRETON DIALECTS.

The literature of the (recent) modern period, from the 19th to the 21st centuries, dwarfs the entire Old and Middle Breton corpus. This is despite the fact that the use of Breton was often strongly discouraged, and Breton-speaking children, even those who spoke no other language, were often punished for using Breton in schools (see EDUCATION). This situation was ameliorated in 1951 with the publication of the Deixonne law, which articulated a degree of support for France's minority languages, but the social stigma attached to Breton persists. Even today, Breton is alone among the living Celtic languages in that it has no official status.

The declining social status of the language and the lack of a Breton-medium educational system led Breton scholars and activists to call for a new writing system. To date, four main systems have been proposed, all broadly similar, and all of which are in use today to one degree or another. KLT, which stands for Kernev-Leon-Treger (1908), was the first of these. The idea was to provide a system that would represent these three dialects, leaving out the more divergent Gwenedeg (Vannetais). A Gwenedeg writer, Xavier de Langlais, proposed some emendations in 1936 to include Gwenedeg in the KLT system, most notably the digraph <zh>, which represented the *z* /*z*/ sound in KLT and the *h* /*h*/ sound in Gwenedeg. A few years later, the *Peurunvan* or 'Unified' system was introduced (1941), which adopted the <zh> character. This system came to be known as 'Zedachek', the adjectival form of <zh>, i.e. '*zh*-ish'. A distinction was created between the homophonous nouns and adjectives, where the voiced consonants would be used for nouns, and the unvoiced for adjectives. Thus, *mad*, '(the) good' (n.) vs. *mat* 'good' (adj.). Both would be pronounced /*mat*/ alone, and /*mad*/ before a following vowel within a phrase.

In 1955, the KLT system was modified again to the *Orthographe Universitaire* 'University Orthography'. An *etrerannyezel* 'interdialectal' system was also proposed, but a separate system continues to be used for Gwenedeg.

Although the French census does not ask questions about language use, various surveys have estimated that there are between 300,000 and 1,000,000 speakers of Breton, with about 250,000 habitual speakers, all, or nearly all, of whom are bilingual in French (see BREIZH). The median age of Breton speakers is relatively high; fewer people are learning the language as children now than in previous generations, though efforts are being made to reinvigorate the language (see LANGUAGE [REVIVAL]).

Breton lays

The word 'lay' (French and Old French *lai*) has come to be virtually synonymous with ballad (see BALLADS), but in the context of medieval literature it refers to a short verse narrative, a literary creation with strong roots in oral tradition. The verses are usually octosyllabic lines in rhyming couplets. The word itself is presumed to be of BRETON origin, although no such Breton word is attested; compare Old Irish *laíd*, f., 'poem, lay, metrical composition, song'.

The best-known composer of these *lais* is Marie de France, a 12th-century Anglo-Norman writer. Little is known about Marie other than the facts that she herself gives: her name is Marie, and she comes from 'France', usually taken to mean the province of Île-de-France. Her language, including the use of English words, and the comments of a contemporary, Denis Piramus, indicate that her audience was the Anglo-Norman nobility of England. She states that her sources were Breton and that she merely translated and rhymed them. Whether or not Marie herself spoke Breton, her debt to Breton sources is clear. One lay, *Laustic*, takes its name from the French definite article *l'* 'the' plus the Breton *eostig* 'nightingale', which Marie herself translates as *russignol* (Modern French *rossignol* 'nightingale') and *nihtegale*. Marie also translated a collection of fables from French to English, and *L'Espurgatoire Seint Patriz* (St PATRICK's purgatory; cf. the Welsh *Purdan Padrig*) from Latin to French.

The lays themselves survive in several manuscripts, the earliest and most complete of which is London, BL MS Harley 978, which dates from the 13th century. The subjects of the lays are a mixture of themes dealing with courtly love, folk-tales, and ARTHURIAN romance. Marie's work does not show any influence from her near-contemporary CHRÉTIEN DE TROYES, though both wrote popular narrative verse with a debt to Celtic oral tradition. Marie wrote one Arthurian lay, *Lanval*, in which a knight spurns the love of ARTHUR's queen, who is angered by his refusal. Goading him with accusations of homosexuality, she taunts Lanval into admitting that he has a fairy mistress whom he cannot reveal. King Arthur threatens Lanval with banishment if he does not produce this woman, and she comes to save him. Ultimately, Lanval leaves Arthur's court and follows the woman to *Avalun* 'AVALON'. The motifs recall the story of MACHA in Irish tradition; her husband breaks his promise to remain silent about her existence, and is held hostage by the king until Macha appears to race against his horses.

Marie also wrote *Chevrefoil* (Honeysuckle), in which Tristram and the wife of King Mark of Cornwall (KERNOW) arrange a tryst (see TRISTAN AND ISOLT). Many other lays have motifs and themes which have close parallels in early Irish or Welsh literature; compare, for example, the chess game in *Eliduc* with the FIDCHELL games in IRISH LITERATURE and the *gwyddbwyll* games in Welsh (see WELSH PROSE LITERATURE).

A number of other lays of uncertain authorship survive from the 12th and 13th centuries. Many of these have at times been attributed to Marie de France, though these attributions have since been discredited. The anonymous *lai* of *Graelent*, though not explicitly Arthurian, treats a similar subject to Marie de France's *Lanval*, and is explicitly stated to be *lai en firent li Breton* 'a lay composed by the Bretons' (Weingartner, *Graelent* l. 756).

Breton literature [1] beginnings to *c.* 1900

The term Breton literature means primarily literature in the BRETON language, the Celtic language of Brittany (BREIZH), which remains a living language at the beginning of the 21st century, with perhaps approximately 250,000 speakers who use Breton regularly. However, within the historical period, Brittany has been home to a total of four languages, each of which has left written texts and is essential to understanding the historical and cultural contexts of Breton literature. (1) GAULISH, the earliest attested language of the Armorican peninsula, is known from proper names, a few INSCRIPTIONS, and coin legends. It was spoken from the pre-Roman IRON AGE and became extinct in the early Middle Ages, leaving some traces in the other languages of the region. (2) Latin was introduced with the conquest of ARMORICA by the Romans under Julius CAESAR in the 50s BC, and was possibly known earlier as a language of trade and diplomacy. It continued as a highly productive literary language of both Breton- and Romance-speaking parts of the peninsula throughout the Middle Ages. (3) Spoken Latin evolved into

Gallo-Romance, which was never ousted from the eastern area of the peninsula (Breizh-Uhel 'Upper Brittany'). It eventually became the French dialect named *Galo* (Standard French: *Gallo*), which is still productive, although Standard French is now the majority language in all the regions of France. French-language Breton literature is sometimes viewed as having a special character derived from the unique culture of Brittany and contacts with the Breton language. (4) Breton, see article on Breton language.

A large amount of medieval Arthurian literature in Latin, French, Breton, and other western European languages, is set in Brittany. Therefore, Brittany probably played an important rôle in the formation and early transmission of legends of Arthur and the Arthurian heroes Myrddin (Merlin) and Drystan ac Esyllt (Tristan and Isolt). However, owing to the poor survival of the earliest tradition, which was probably largely confined to oral tradition, the precise nature of Brittany's connections with extant Arthurian literature remains uncertain (see also breton lays).

§1. OLD BRETON LITERATURE

A Lost Literature? Old Breton literature is lost, in the sense that no prose tales or poetry survive from the Old Breton period, *c.* 800–*c.* 1100. Nevertheless, the form and content of the tradition and specialist learning of early medieval Brittany are accessible through Latin translations. In particular, Latin saints' lives produced in Brittany during the Old Breton period still bear the imprint of Breton oral tradition and/or written literature in the Old Breton language that has not survived. The Breton character of this material may be gauged from features not usually found in saints' lives elsewhere on the Continent or under Irish influence and not derived directly from the Bible. Close correspondences can also be seen between the Breton Latin saints' lives and literary texts that survive in the other Celtic literatures. The links are particularly close with early Irish and Welsh literature, as well as with folk material collected in modern times in the various Celtic-speaking countries. For example, the story of the severing of the arm and head of St Melor closely resembles the Irish story of Nuadu (see nōdons) and his silver arm, and also that of the story of the marvellous severed head of Brân in the Mabinogi.

Until *c.* 800 (perhaps even until *c.* 1100), barring relatively minor differences in regional speech habits, there was essentially one Brythonic language, shared between Britain and Armorica. In this sense, concerning the early Middle Ages before *c.* 1100, we may reasonably think of dialects of a single early medieval Brythonic language (called *lingua Britannica* in medieval Latin sources) possessing a single literature. It would be artificial and anachronistic to view the three traditions (Breton, Welsh, and Cornish) as having completely separate identities at this stage, merely on the basis of their later history, although Old Breton and Old Welsh can be distinguished by a handful of dialect features.

Thus, we can assume that Brittany had genres of military praise (known in Wales in vernacular form, for example, in the Gododdin), prophecy, court poetry, genealogies, biography, tales of visions of the Otherworld, dreams, voyage literature, metamorphoses (see reincarnation), heroic poetry, nature poetry, topographical legends (see dindshenchas), and probably some form of Arthurian lore and literature. For example, the 11th-century Breton Latin Life of Iudic-hael contains a legend of the conception of a hero comparable to that of the Irish *Echtra Mac nEchach Mug-medóin* ('The Adventures of the Sons of Eochaid Mug-medón'), the Welsh Pwyll, and Geoffrey of Monmouth's account of the conception of Arthur. The same Life also contains poetic praise for the martial prowess of its subject, sharing many themes with the heroic elegies of the Welsh *Gododdin*. What is less certain is whether such traditions existed only in oral form and/or Latin translation in early medieval Brittany or had also been recorded in manuscripts in the native language, as had been the case before 1100 extensively in Ireland (Ériu) and to a certain extent, at least, in Wales (Cymru).

As regards form, we can infer very little about prose of the Old Breton period apart from the fact that a heroic biography would begin with a conception tale. The form of the poetry, however, is partly accessible to us when poems, usually praise poems, were translated or adapted into Latin. From this, and with the help of comparison, we can deduce that poetry was

based on schemes of approximately regular numbers of syllables per line bound to a precise number of stresses, that final and internal rhyme was known but not systematic, and that alliteration between initial consonants was common.

Onomastics. Over 1000 Old Breton personal names are known, mainly from charters (see CHARTER TRADITION). In these, we see a repetition of favourite heroic words, titles, and themes in the pattern of coining compound Breton personal names. Frequently recurring elements include, for example, *arth* 'bear', *cat* 'battle, war-band', *cun/con* 'hound', *hoiarn* 'iron', *iud* 'lord', *marchoc* 'horseman, cavalryman', *ri* 'king', *uuethen* 'combat', *uuin/uuen* 'white, fair, blessed'. Not only is this pattern essentially identical with that seen in other early Celtic lands, but it also echoes that of early Welsh and Irish epic poetry. It thus reflects a shared code of heroic values articulated in a common vocabulary, elements of which are creatively recombined in a form of verbal artistry. Patterns indicative of a poetic sensibility are seen in the way in which names of members of one family play on one another in both meaning and sound. For example, in a 6th- or 7th-century inscription from Plourin (Penn-ar-Bed) *]nomaili filius Uenomaili*, the element *mail* 'prince' links father and son; in a 7th- or 8th-century inscription from Crac'h (Morbihan) *Herannuen fil(ia) Hera[n]al, heran(n)* (probably 'iron') links father and daughter. In a 9th- to 11th-century inscription from Plourin *([N et] Adiuni f(ra)t(r)i hi(c) una fili(i) Iusti* 'This is [the grave of X and] Adiun, brothers together, sons of Iustus') the son's name *Adiun* is Brythonic, and the father's *Iustus* is Latin, but the sound *-iu-* alliterates. Whoever composed the text was evidently aware of this pattern: the unusual Latin word *una* 'as one' rhymes with the son's name and partly echoes its sense. The word *(i)unaw* [Modern Welsh *uno*] can mean 'join, unify' in Welsh.

Glosses written marginally or between lines to elucidate a main text in Latin text are a common feature of medieval manuscripts. We have some 2000 glosses in Old Breton. Most are one or two words, but there are some 50 short sentences or phrases. Their interest is more linguistic than literary. They show that there existed a native vocabulary for grammar, astronomy, and medicine (see LEIDEN LEECHBOOK). It is significant that two of the main manuscript sources for Old Breton glosses also contain glosses in Old Welsh, namely the early 9th-century Priscian's Latin Grammar (Paris, Bibliothèque Nationale, Latin 10290), which contains *c.* 300 Brythonic glosses. Angers MS 477, a collection of scientific works from AD 897, shows a linguistic mixture of glosses in Old Breton and Old Welsh (see Lambert, ÉC 20.119–43, 21.185–206). Both manuscripts also show indications that the glosses, as well as the main texts, were copies of older originals. In other words, we have evidence of a rich learned culture in which manuscripts and/or scholars moved between centres from one Celtic country to another, and in which learning was disseminated in both Latin and more than one regional Celtic idiom.

MANUSCRIPTS CONTAINING COLLECTIONS OF OLD BRETON GLOSSES. Angers 477 (formerly 461), *c.* AD 897–10th century, *c.* 500 glosses; Luxemburg, Ducal Library 89 (*Hisperica Famina*), later 9th century, 94 glosses; Orléans 221 (formerly 193) (*Collatio Canonum*), mid-9th century, *c.* 332 glosses; Oxford, Bodleian Library Auctarium F. 4.32 (Grammar of Eutychius), later 9th century, 58 glosses; Paris, Bibliothèque Nationale, Latin 10290, early 11th century, *c.* 300 Brittonic glosses.

Inscriptions. From the 28 early medieval inscriptions known from Brittany, the following personal names are Celtic, and probably Old Breton or the Dark Age Brythonic that became Old Breton (Latinized case endings are shown separated with a hyphen): *Budnouen-us, Gallmau, Adiun-i,]nomail-i, Uenomail-i, Bodognou-s, Uormuin-i, Maeldoi, Herannuen, Hera[n]al, Brit[. .], Drilego, Conb[ri]t-i, Harenbili, Heranhal, Prostlon, Rimoet-e, Rioc-us, Maonirn*. Herannuen, Drilego, and Prostlon were women, the rest probably or certainly men. One inscription also contains a Brythonic place-name *Ran Hubrit*, meaning the 'lovely share [of land]'. The inscriptions are difficult to date, but some clearly belong to the 7th century, and thus extend our knowledge of Breton onomastics back more than a century before the earliest surviving charters.

§2. EARLY BRETON LITERATURE IN LATIN

Saints' lives. Around 40 texts survive, and these contain the lives of some 60 saints (see HAGIOGRAPHY). These texts were composed between the 7th century (The Life of St SAMSON, though this is a controversial date) and the 14th century. Some are known only from 17th- or 18th-century copies. Some now exist only as French translations of Latin originals, now lost. Many texts have been rewritten or revised several times. However, we do not have medieval lives for most of the saints of Brittany; some saints are known only from their names and from folklore collected in the 19th century.

Earlier generations of scholars viewed the Breton saints' lives as historical documents, providing our sole record of Brittany in the 4th to 7th centuries. Nowadays, researchers' attention focuses not on the lives' elusive historical basis, but rather on their literary qualities and the light that they shed on the political interests of courts and churches during the later periods in which they were composed and revised. Badly needed new editions are being undertaken, and Le Centre de Recherche et de Documentation sur le Monachisme Celtique (Abbaye de Landévennec) publishes a handlist of new publications on the saints of Brittany twice a year.

Charters can be broadly subdivided into three types. (1) There is an older layer of Celtic charters in a form of legal document apparently developed in, and imported from, Britain. Most examples in this group are mere notices, and the type includes several probable forgeries. (2) A Carolingian layer begins somewhat later. These occasionally imitate the form of Type 1, but most emulate the standard forms used in Frankish officialdom. (3) Later, charters were drafted according to common medieval standards, reflecting the rise of feudal institutions and their spread to Brittany.

The language of all three types is Latin. The vernacular surfaces in onomastics (place-names, witnesses' names); common nouns or phrases are extremely rare. Later, from the 11th century onwards, charter practices as then current in France came to predominate, and the resulting texts are of local historical interest, but no longer show close similarities to patterns maintained in Wales. At all periods, forgeries are known. The purpose of these inauthentic documents was to support dubious claims to lands with bogus ancient titles, incorporating as principals and witnesses well-known legendary or long-deceased persons.

Legal texts. A collection of laws, sometimes called the *Kanones Wallici* (Welsh canon laws), but in the manuscript itself *Libri Romanorum et Francorum* (The books of the Romans and Franks), was once ascribed to Wales, but has now been acknowledged to be of Armorican origin. These constitute one of the earliest textual sources of information that survives from any Celtic country regarding law. The text was possibly compiled as early as the 6th century, but it survives in a 9th-century edition. Breton origin is also likely or possible for four penitentials (codes of monastic conduct with punishments for transgressions) once ascribed to Ireland. Additional incidental information concerning early Breton legal culture can be gleaned from episodes in the saints' lives and charters.

The Scandinavian invasions, which culminated in the foundation of an aggressive and dominant neighbour in Normandy, swept away Brittany's distinctively insular legal culture. Later Breton laws differ little from feudal laws as known elsewhere in western Europe in the central Middle Ages, at least as regards the legal documents that the post-Viking regime left behind. In the 13th century, the customs of Brittany were drafted, and this code is primarily indebted to western customs and usages, as opposed to Brittany's Celtic heritage. This medieval law was valid in Brittany until the French Revolution. In the 21st century, the redaction of the

local usages still shows the occasional survival of probably archaic legal practices.

Other Literature from Early Medieval Brittany. A Breton grammarian named Israel was renowned in the 9th century, but his works are lost and are known through allusions only. In spite of a deep interest in mathematics, grammar, astronomy, glossaries, none of those known in Brittany seems to be an original work. For example, the scientific works of the 8th-century Anglo-Saxon writer BEDA were well known in Brittany and are a central part of the contents of the late 9th-century Breton manuscript Angers 477, heavily glossed in Old Breton with an Old Welsh element (see above).

A case can be made for the *Hisperica Famina* being of Breton origin. All extant manuscripts are of Breton origin, and the only known author of a poem in the Hisperic style bears the unmistakably Breton name of Liosmonoc.

Verse in Latin was practised, at least in the west (St-Pol, LANDEVENNEG), but all that survives of these poems are passages in saints' lives (PAUL AURELIAN and UUINUUALOE). See further LEGENDARY HISTORY §1.

Breton Latin Literature in the Later Middle Ages. Due to the Viking invasions, which emptied monasteries and libraries, most Breton Latin writers of the period were educated in Northern France (in Angers, Chartres, Orléans, and Paris). Consequently, there were Bretons writing outside Brittany and foreigners writing in Brittany. Prominent among the second group are Baudry of Bourgueil (Baldricus Burgalensis), bishop of DOL (1047–1130) (Migne, *Patrologia Latina 166*; Abrahams, *Les oeuvres poétiques de Baudri de Bourgueil*), and Marbode of Rennes (1035–1123) (Migne, *Patrologia Latina 171*; Delaborde, *Étude sur la chronique en prose de Guillaume le Breton*). Marbode is remembered for his *Liber de Gemmis* (A book on gems) because of its documentary and literary value. Bretons working in medieval France include Pierre Abelard (1079–1142), whose name is clearly a Breton patronymic, 'son of Elard'. He is famous both for his philosophy and teaching, and also for his affair with Héloïse. Guillaume Le Breton left Brittany when he was 12, and became the chaplain, historian, and biographer (in verse) of King Philip II (1165–1223; r. 1180–1223).

§3. MEDIEVAL LITERATURE IN BRETON

An extensive literary record in the Breton language survives, beginning in the final stage of the medieval period, from *c.* 1500. From the end of the Old Breton period *c.* 1100, the literary record seems to break down for three centuries. It reappears in marginalia copied *c.* 1350, with fragments of songs transcribed (though probably not composed) by Ivonet Omnes and copied by a scribe ignorant of Breton. Other fragments of marginalia are known which date to the 14th and 15th centuries (Guyonvarc'h, *Le Catholicon de Jehan Legadeuc* xxix–xxxv). We can see from these sources that features of Modern Breton already existed at this time. However, their existence is revealed only in occasional slips and scribal blunders. The educated standard language of the time strove for uniformity. When Middle Breton becomes more apparent from the more extensive records of the 16th century, we see a language that differs very little from the fragments that have survived from the preceding two centuries.

Nearly all Middle Breton texts known today are from copies preserved outside Brittany. The destruction of all books in Breton that did not deal with religion was an avowed policy of missionaries in the 17th century, and therefore our knowledge of the language and literature depends on the resulting distorted and incomplete picture. The language we find is standardized rather than dialectal, with accepted and universal spelling practices, even for proper names.

Our knowledge of dialects is therefore quite imperfect, relying on occasional errors and names or words caught by foreigners (Guyonvarc'h, *Aux origines du Breton*).

FURTHER READING
Guyonvarc'h, *Aux origines du Breton*.

Middle Breton Literary Genres. Texts belonging to four main categories survive: didactic works (instructive texts), popular lore, religious literature, and drama:

(1) *Didactic works*. The oldest and most important work is the CATHOLICON of 1499, a Breton–Latin–French dictionary. The *Donoet* of *c.* 1500 is a manuscript translation in Breton of Donatus's Latin grammatical work *Ars Minor*, to which is affixed a set of glosses. The so-called colloquies are phrase books for the use of learners of Breton, French, or Latin, but often with a wider readership. There are 73 editions known, many of them made outside Brittany; they date to 1626 and 1656. In these various editions the text is shortened, expanded, and adapted to a new spelling or a dialect. Older editions also contain elements of grammar, pronunciation, and prayers. The first one was compiled by Quiquer in Rosko (Roscoff) and printed in MONTROULEZ (Morlaix) in 1626 (Breton–French), and much expanded and reprinted in 1632 (Breton–French–Latin). From the same printer came the *Nomenclator Omnium Rerum* (1634), a thick compendium of Latin words with Breton and French translations, thematically arranged. There is no modern edition of these, with scholars having to rely on the originals or photocopies.

PRIMARY SOURCES
ED. & TRANS. Le Duc, ÉC 14.525–65, 16.237–59 (*Le Donoet*); Le Duc, ÉC 17.229–55 (Glosses).

(2) *Popular lore*. Only fragments of songs scribbled in margins and popular songs included in plays have survived from the Middle Breton period. All of these remains are short, often trite, and sometimes bawdy. The prophetic verse DIALOG ETRE ARZUR ROUE D'AN BRETOUNET HA GUYNGLAFF (The dialogue between Arthur king of the Bretons, and Guynglaff) is probably the most important piece of literature in this group.

The Christmas carols (*Nouelou ancien ha deuot*) published in 1650 are not listed among religious texts here, although they are religious in character, since they were songs intended to be sung before (and not during) mass. They are marching songs and were not explicitly approved by the Church. Some are composed to French tunes and hence include a high variety of verse-forms. However, they retain features of traditional Breton verse structure, such as internal rhymes. Other carols are known in the Gwenedeg (Vannetais) dialect of south-east Brittany, but only from a late manuscript (see BRETON DIALECTS; GWENED). This last group occasionally retains internal rhymes characteristic of formal Middle Breton verse, and show that this traditional style of verse-making did have a popular audience.

PRIMARY SOURCES
EDITION. Hemon, *Christmas Hymns in the Vannes Dialect of Breton*.
ED. & TRANS. Pennaod, *An novelov ancien ha devot / Les noèls anciens et devots*.

(3) *Religious works*. The earliest work in this category is *Le mirouer de la mort*, printed in Montroulez (Morlaix) in 1575. It is a long poem (3600 lines) about death and the four possible Christian afterlives facing humanity—a lengthy methodical reflection about Death, Judgement, Paradise, and Hell. It has been suggested that the poem is a Breton adaptation based on a French original, but this has never been proven. The text was still popular in the 17th century.

Three Middle Breton religious poems were published together with, and bound following, a longer religious text (the *Passion*, on which see below). The three are the *Fifteen Joys of Mary*, the *Death of the Virgin Mary*, and the *Life of Man*. The first is incomplete and unoriginal. The second contains some verse, an adaptation of a Latin text (in which the chronological progression has been reversed by rearranging the stanzas). The third is a small sermon and, though not original, is often quoted for its literary qualities.

Many other works have no aesthetic ambition and are often direct translations or adaptations of works in Latin, French, or Italian. The oldest of this type is the *Heuryou Brezonec*, a book for private devotion. This is followed by the *Vie de sainte Catherine*, printed in 1576. Often, but wrongly, referred to as a play, the *Vie de sainte Catherine* is a translation of the *Legenda Aurea* ('The Golden Legend') by Jacobus Voraginae. The sole prose text we have for the period is the *Donoet* (see above). The *Miroir de Confession* (1620) was originally written in Italian, translated to French for confessors, and much shortened and adapted for the private use of Breton lay people, together with an adaptation of the same for the use of children in a more idiomatic

language. Other Middle Breton religious texts include the *Confessionnal* (1612, 1646), Ledesme's *Doctrine chrétienne* (1620, 1622), Bellarmin's *Catechisme* (1825), and *A Life of St Yves* (1623). Jean Cadec's *Tragedie sacrée* (1651), more original, is a description of the mass with the symbolic significance of every episode and gesture, followed by canticles. It is the last poetic work published that contains verse with the traditional Middle Breton internal rhymes. Canticles published in 1642 already lack them. The title is in French, which suggests a French original or a need to be identified by French speakers. If there was a French original, this source has not yet been found.

The *Sacré college de Jésus* by Père Julien MAUNOIR, published in 1659, is a handbook for Jesuits intending to preach in Brittany without prior knowledge of the language. Such works for various languages around the world are characteristic of the pragmatic missionary principles of the Society of Jesus. Maunoir proposed a new spelling, based on French principles. After this, any material printed in Breton was strictly observed by the Jesuits, and the new spelling enforced. This is the end of Middle Breton spelling, at least in print. Some canticles have traditionally been ascribed to the same author, but critics have not regarded these as being equal in their literary merit to the canticles in Middle Breton.

(4) *Drama*. These texts have considerable aesthetic value, but have been studied mostly as specimens of the medieval Breton language. Within the Celtic world, the Middle Breton religious dramas are most closely comparable to the Middle Cornish miracle plays, and direct cultural influence between the two traditions is very likely (see CORNISH LITERATURE). Some of the Breton dramas are now lost, and are known only from the excerpts quoted by Dom Le Pelletier, a lexicographer working in the abbey of Landevenneg.

The oldest text is the *Vie de sainte Nonne* (2100 lines), known from a *c.* 1500 manuscript. Its subject is primarily the life of St Dewy (see DEWI SANT), Nonn's son.

Probably from the same period, the *Destruction of Jerusalem* is lost, but known through quotations in Le Pelletier's manuscript dictionary. Fragments totalling about 600 lines survive.

The *Passion and the Resurrection* is known from three printings (Paris 1530, Sant-Maloù [Saint-Malo] 1536, Montroulez 1609). The play was rewritten as a tragedy towards the end of the 17th century, and was played and read up to the 19th century. It was 'revived' in the late 20th century as *Ar Basion Vras*, which contains around 4700 lines. Contrary to the view of some commentators, it is not translated from French.

The *Life of St Gwennolé Abbot* has 1278 lines (though the surviving text might be incomplete). Le Pelletier copied it from two manuscripts dated 1580 and 1608. Its source might be the 9th-century Latin life, but it is in the Middle Breton play that the legendary town of Ys (see FLOOD LEGENDS) appears for the first time.

The *Life of St Barbe* (*c.* 5000 lines) was printed in Paris (1557), and reprinted in Montroulez (1647). A French antecedent is plausible, but has never been found, though there are several French dramatic lives of this saint.

The *Life of Genevieve of Brabant*, composed *c.* 1640, probably by a Jesuit father, contains some 3500 lines, which have to be reconstructed from three later copies (1775, 1800, 1819) in which the text was modernized and expanded. This baroque play was translated into French by another Jesuit, and hence acquired such fame that it remained a best-seller of popular editions. This was later shortened and translated afresh into Breton several times (there are five other versions of the tale). The melodrama is intended to convey a spiritual and even a mystical doctrine, while remaining accessible to the general public.

The play, *The Love of an Old Man Aged 80 for a 16-year-old Girl*, was printed in Montroulez in 1647. It is now lost, but the play is known through Le Pelletier's quotations, retaining only what he could not understand. Some of the 300 lines thus preserved contain risqué or obscene material.

More Middle Breton plays certainly existed. Some verse preserved in the margins of other texts probably comes from plays, and passages with internal rhymes written down only in 19th-century plays certainly derive from lost Middle Breton texts.

The sharp division between Middle Breton and Pre-

Modern Breton drama is only an illusion, due to the lack of manuscripts from the intervening period. The preservation of subjects, lines, and even whole scenes with internal rhymes in the Middle Breton manner is evidence for continuity.

(5) *Poetry*. This is a particularly interesting feature of Middle Breton literature, which shows affinity with other Celtic literatures, and the permanence of a tradition and a specialized teaching which has left no other trace. Priests used this verse, and it was also used for a range of dramas—some of them highly religious, others ribald. The metrical patterns remain constant down to 1651 (Cadec). The exclusive use of this verse to this date, and its complete disappearance afterwards (except in late reproductions, where it is always preserved imperfectly), has not yet been satisfactorily explained. The practitioners of Middle Breton verse-forms required an excellent knowledge of the language and years of practice. The texts also display an intimate knowledge of French and Latin. Although no type of formal teaching or guild with professional standards is documented, these are the obvious implications of Middle Breton poetry.

As to line length, Middle Breton poetry had five, eight, ten, or twelve syllables most frequently, but any number up to 23 syllables is known. There is documentary evidence that the poems were set to music, but transcripts of the tunes have not survived.

Each line has a compulsory final rhyme and a compulsory internal rhyme between the last syllable of the first half-line and the penultimate syllable of the line as a whole. The structure varies with the number of syllables to the line. Often, metrical ornamentation in the form of non-compulsory internal rhymes occurs in addition to the compulsory rhymes. Consonantal alliteration can occur, and is especially common in the first half-line. These additional devices beyond the compulsory rhymes are especially common with the longer line types. Another common feature is linking (by rhyme or assonance) between lines.

The basis of the rhyme is the vowel, and the following consonant is not always taken into account. Vowel length, nasality, and stress seem not to matter, and rhymes are possible between similar sounds: for example, *n/m*; *o/u*; *eu/y*. Thus, *oar an bugalez* contains three rhymes (*. . . ar an . . . al*), *ardant/carantez* contains five. Other features (which are not proper rhymes) may contribute to the general harmony of the line, for example *retiertiter/tre . . . retileti*.

Many composers turned to clichés (also known as chevilles) as stock gap-fillers to fulfil the metrical requirements. As in any tradition of strict metres, the result is often lines with weak sense. The quality of the ornate metrical devices is impossible to convey in translation when literal accuracy is the goal.

Some anonymous Middle Breton poets skilfully expressed the intended meaning within the confines of the verse form and never resorted to clichés, except to twist and subvert them. They played on allusions, the presence or absence of sounds, punning and understatement. The more complex poetry is mostly to be found in the plays (especially in *Genevieve of Brabant*), but some of the religious verse also shows great artistry:

An traou m**an** h**an**u**et** so tremen**et** sed*er*
Drez trem**en** dr**e'n** pas***aig*** an p***aig*** p**en** mess***ag****er*
Pe evel lestr dr**e'n** m**or**, ag**or** na e**or***er*
Ha na gall*er* caff**out** h*e* *r***out** ne gouz**out** sc*ier*.

These things [I've] named have quietly passed (away)
By passing through the passage of the page or the messenger, [i.e., following his steps]
Or like boats over the sea, in a fleet, unanchored
And no one can find their route or know it clearly.

In order to assimilate both meaning and sound. these lines should be read slowly and aloud. The final rhyme (*-er*), and a rhyme between the 6th and 11th syllables (here *et* | *age* | *or* | *out* |) are compulsory, and an intermediary rhyme (relay rhyme) between these is optional. Furthermore, there are internal rhymes in other places and consonantal assonance, here 1 *an*, 2 *re, en*, 3 *el, er*, 4 *el, er*, noting that *(e)r, (e)l, (e)n* can rhyme together. As for alliteration, note *tr(aou), tr(emenet)* | *dr(e) dr(emen) dr(en)* | *p(asage) p(age) p(en)*.

Lines are linked by the final rhyme, but also by elements from the preceding line, for example, 1–2 *tr(aou) tre(menet), (s)eder* | *dre dre(men) dren* | *(les)tr e(n)*.

The density of words rhyming together or echoing

one another is high, which proclaims the mastery of the poet/craftsman. This high density of features is essential to the force and quality of the verse, but it also serves as a mnemonic (memory aid), preserving the original wording; any imperfectly remembered paraphrase would fail to achieve the same intensity of metrical ornamentation.

The aesthetic quality of a work of Middle Breton verse can be judged in the relationship between the meaning and sound correspondences, and how these two combine to enhance expressiveness. Since words contain both sound and meaning, and are linked together on both levels, a new set of relationships is created between the words, eventually modifying the meaning of words within the specialized discourse of the poetic language. In the example, *tremenet* means 'passed' but also 'passed away': the concept of death is not directly evoked, but alluded to. The word (and the concept) is announced by *traou* /*trau*/ 'things', relayed in the internal rhyme by *seder* /*sɛdɛr*/ (which contains the same sounds, but in a different order). This is carried over to the next line (*dre dremen dren*), while slightly changing the form (*tre/der/dre*). It is then relayed by *passage* (another word; not the same sounds, but the same meaning). The word's literal meaning is 'passage', but because of the words linked to it by internal rhymes, it assumes a secondary sense of 'death', although this is objectively absent if we read the lines as prose. This extended sense is thus moved forward by way of sound—*passage, page, mesager*. The initial *p-* provides a further linking device. Consequently 'page' and 'messenger' are connected with death. Other rhymes are present (e.g., *-ec, -et, -ep* | *ar, -al, an*), and these further intensify the effect. The result cannot be translated explicitly, or imitated in another language, which might explain why it has received so little attention.

§4. EARLY MODERN BRETON

In the first half of the 17th century there is a substantial body of literature, but in the second half we have translations or adaptations, which have not yet excited any editor's enthusiasm. It is likely that this early Modern Breton material conceals oral or lost written texts, which we can only infer from what comes to the surface in the 18th and 19th centuries.

Therefore, what existed before *c.* 1700 must be deduced. Besides *Genevieve of Brabant* (a masterpiece known through three 18th- and 19th-century manuscripts), a comical play, several other plays such as the *Passion* were certainly redacted or revised in the period. Although mentioned in 1630, the oldest extant manuscript of the *Life of St Emeransienne, Mother of St Anne* is dated 1733.

It is apparent that there is a gap between the evidence available through printed texts, which were closely supervised, checked, and produced by the Church, and the spoken language. At the time, there was only one printer per diocese, and that printer was heavily dependent on the Church for patronage. Some early Modern Breton texts took shape purely through oral transmission, and are now available only in 19th-century versions. Sources in early Modern Breton are also probable for materials (tales, plays, ballads, legends, proverbs) that were collected orally from informants in the 19th century.

§5. WERE THERE BARDIC ORDERS IN BRITTANY?

This is a difficult question. We have evidence for teaching and transmission of an ancient way of verse-making, but no direct historical evidence for bardic schools or teaching. As indirect evidence for such an occupation there is the word *barz* < Old Breton *bard* < Common Celtic *bardos*. For example, TALIESIN is referred to as *bardus* in the 11th-century Latin Life of St IUDIC-HAEL. This occupational name is also attested in place-names such as Keràmbarz (the poet's homestead) and personal names, such as Le Barz, Le Barh. In the 18th century, *barz* referred to some sort of clown or singer. Its popular use (meaning 'singer') in the 19th century is known, but it is only later that it is adopted and revived by the literary language (under the influence of Welsh *bardd* and Gaulish *bardos*) to mean 'poet'.

As regards bardic lore and doctrine, what we can identify from popular tradition has been reduced to tale-motifs. Some new bardic doctrines have been invented, based on the inventions of Iolo Morganwg (Edward WILLIAMS) concerning GORSEDD BEIRDD YNYS PRYDAIN, the BARZAZ-BREIZ, or even more recent creative activity, but while these have sociological, psychological or political interests, they do not shed light on the distant past.

Gwenaël Le Duc

Breton literature [2] 20th century

Despite large-scale language change and a dramatic upheaval in traditional Breton culture, the corpus of Breton literature written in the 20th century outweighs the combined corpus of previous centuries. In this section, priority is given to writers who owe their prominence to works published in the BRETON language, as opposed to writers who wrote both in French and in Breton. The field is further narrowed to those whose work is outstanding in its immediate context in the Armorican peninsula, and noteworthy in the wider context of 20th-century literature as a whole. The three most influential writers, Añjela DUVAL, and Per-Jakez HÉLIAS, and Jakez RIOU, are covered under separate articles.

The First World War was a turning point in the history of Brittany (BREIZH). Prior to this, traditional Breton civilization had not undergone any drastic cultural shifts since the medieval period. The war decimated the young male population, and soon afterwards a move towards French culture commenced. Two creative literary figures worthy of mention in the pre-war period are Yann-Ber Kalloc'h (also known as Yan Ber Calloc'h) and Tangi Malmanche (Tanguy in French orthography).

The poet Yann-Ber Kalloc'h (1888–1917) was born on the island of Groix off the coast of southern Brittany. As a youth, his ambition was to become a priest. However, ill health led him to leave the seminary at Vannes (GWENED) in 1907. He subsequently became a teacher, but met his death near St Quentin while fighting in the war. His major work is *Ar en deulin* (On our knees). He used his pen-name 'Bleimor' for poems such as *Dihunamb* (Let us awake), a long politico-cultural appeal. Some of his simple, but compelling, lines were set to music, and are among the most widely quoted of the century: *Me zo ganet é kreiz er mor* 'I was born in the middle of the sea' (*Ar en deulin* 1960). Shorter, poignant pieces describe the horror and futility of war: 'How long, my God, will this cruel war continue to sever the roots in the woods, the homesteads, everywhere?' Kalloc'h is a lyric poet, religious and patriotic. Like Jakez Riou, he died very young, leaving his potential largely untapped.

Tangi Malmanche (1875–1953) spent his childhood near Brest and his adulthood near Paris, where he worked as a blacksmith. Proximity to Parisian libraries enabled him to become acquainted with Breton literature. In the early years of the century he produced an important body of theatrical work in Breton. These include *Marvaill ann ene naounek* (The tale of the hungry soul), *An intanvez Arzhur* (Arthur the widower), *An Antekrist* (The Antichrist), and *Gurvan ar marc'heg estranjour* (Gurvan, the foreign knight). His works entered their widest public arena during the early 1940s when they were broadcast on Radio Roazhon–Breizh (see MASS MEDIA). Malmanche dramatized themes and motifs from medieval Celtic and Breton literature, providing a bridge between traditional and revived Breton Celtic traditions.

Gwalarn (North-west) was a literary review, published in 1925–44, which housed the most influential school of thought in 20th-century Breton literature. The father figure of this *Gwalarn* movement was Roparz HEMON. In 1925 he wrote: 'If each of the Celtic peoples were asked: what have you contributed to the treasure-chest of Celtic literature? we could not answer like our brothers in Wales and Ireland. Our only answer might be: some theatrical pieces—precious little else indeed' (reprinted in *Eur Breizad oc'h adkavout Breiz* 'A Breton Rediscovering Brittany' 138).

Hemon and the creators of 20th-century Breton literature now sought to rectify this state of affairs. They pursued a twofold objective: to devise and

promote a standard literary language and to produce a sophisticated corpus of literature—a matter of both form and content. The literary standard proved difficult to promote. Although Breton boasted a million speakers during the first third of the 20th century, Breton was excluded from educational curricula; therefore, the population was largely illiterate. The promoters of standard Breton had no recourse to the bureaucratic channels. Thus, standard Breton remained the language of specialized journals and the tiny group of people who wrote and read them. The Gwalarnists did not make an effort to include women; other than Añjela Duval, few women's voices are recognized in 20th-century Breton literature.

While standardizing the Breton language, the Gwalarnists stressed its Celticity (see PAN-CELTICISM). The idea of Breton as a Celtic language had emerged following the development of comparative linguistics in the 18th and 19th centuries. In the 20th century this idea became fundamental to Breton writing. Not since a thousand years ago, when the BRYTHONIC languages were still mutually intelligible, had Breton been as oriented towards other CELTIC COUNTRIES.

An important figure among the early Gwalarnists was Fañch Eliès (1896–1963), who wrote under the name Abeozen. His *Istor lennegezh vrezhonek an amzer-vremañ* (The history of contemporary Breton literature; 1957) is the most detailed and well-informed account of Breton literature in that period. Foremost of Abeozen's creative works is the short story collection *Pirc'hirin kala-goañv* (All Saints' Day pilgrim). The stories are set before and during the Second World War. *Rom an Aotroù Person* (The parson's rum) tells of hoarding food during the German occupation. *Un Danvez Den* (An aspiring man) is the story of a boy growing up.

Many 20th-century prose works are autobiographical to varying degrees. One example is *E skeud tour bras Sant Jermen* (In the shadow of Saint Germain's great tower) by Yeun ar Gow (1897–1966). Ar Gow writes flowing, readable Breton. His sentence structure echoes the rhythms of the spoken language, and his lexicon reflects popular speech. His book is a valuable social document which avoids nostalgia. Ar Gow remarks on the reading of Breton about 1910: *Ar paperioù brezhonek a gave neuze lennerien, n'eo ket evel bremañ* 'The Breton-language papers had a readership then, unlike now.'

Charles Joseph Marie Tremel (1885–1965) took his pen name, Jarl Priel, from the Breton spelling of Charles and from his home town, Priel (Plouguiel). His *Va zammig buhez* (A small part of my life) is another important autobiographical work in which Priel describes life in Russia. His travels also moved him to write *An teirgwern 'Pembroke'* (The three-master *Pembroke*), a novel.

As if conscious of the weight of the autobiographical tradition, Roperzh ar Mason (Abherri) informs the reader that his *Evit ket ha netra* (For nothing at all) is 'a novel about love'. It begins with the author's childhood and continues in a reminiscent vein. A series of letters account for much of the book. *Evit ket ha netra* marks a search for new structures. The tone of the work suggests that the fact of writing in Breton was as important a consideration for Abherri as was his creative endeavour. This simultaneity of concern is common in the work of 20th-century Breton writers.

Youenn Drezen (1899–1972) achieved a synthesis of these concerns. His friendship with Jakez Riou in the 1930s was conducive to the development of the work of both men. *An dour en-dro d'an inizi* (The water around the islands; 1931) is a racy novelette which spills sensuously off the page as Herri Maheo, an artist, and Anna Bodri, daughter of a successful Douarnenez entrepreneur, flirt with romance. A pragmatic arranged marriage forces them apart, leaving Maheo devastated. The work is a summary, avoiding dialogue and sophisticated characterization, but remains the tour de force of a modern, outward-looking native Breton speaker. *Sailhañ 'reas warnon ur c'hoant direizh da sankañ va dent e kroc'hen flour ha gwenn he c'houg, dindan he skouarn vihan, da hopal dezhi va c'harantez mantret*, he writes (I was overcome by a wanton desire to sink my teeth into the soft, white skin of her neck, under her little ear, to proclaim my broken-hearted love to her, 58), words of unusual immediacy in Breton prose.

The poet Maodez Glanndour (Loeiz ar Floc'h, 1909–1986) was born in Pontrev (Pontrieux) in northern Brittany. He was admitted to the priesthood in 1932 and received a doctorate in theology and philosophy in Paris in 1935. He taught for a time before becoming curate of a Guingamp parish in 1940, where he spent many years.

Maodez Glanndour's poetry is primarily concerned with the search for, as well as the definition and affirmation of, divinity in man's environment. Politics

and the day-to-day human community bring little to bear on his literary output: *Dilez an trouz, dilez ar storlok, monedonea, klakennerezh an dud, ha sav, a va ene! Betek an uhelan, betek ar pellan* (Leave the noise behind and leave the clatter, the comings and goings, the chattering people, and rise, my soul! To the greatest of heights and the greatest of distances, 61). His *Komzoù bev* (Lively conversations), published in 1985, is one of Breton literature's most important publications. This is a compilation of poems written at different periods of his life. Rhythmic, polished pieces are presented in cycles, a reflection of the structured nature of the poet's mind. The tone is philosophical: *Setu ar bodoù terilodennet: danvez, buhez, meiz* (Beings are of three parts: substance, vitality, thought); also, *N'eo ket ar gonid abeg an traoù. Ar gened eo abeg a-walc'h d'an traoù kaer* (Gain is no reason for being. Beauty is reason enough for fine things to exist). He creates moments of lyric beauty: *N'eo ket elerc'h . . . an erc'h a zo kouezhet askellek en enezeg. N'eus en aber met rec'hier a huñvre kuñv dindan o fluñv* (Not swans . . . winged snow is falling on the island, and at the river mouth there are only rocks dreaming softly beneath their feathers, 78).

Dour (Water), the first cycle in *Komzoù bev,* establishes a poetic idiom. This is Glanndour's major achievement. Of the water he says: *Danvez hor gwad ez out-te* (You are the stuff of our blood, 19). He sees divine ubiquity: *Galvet gant Doue eus teñvalijenn an nannvoud e respont peb tra dezhañ gant levenez* (Summoned by God from the darkness of non-being, all things answer him with joy, 37). The lines *Me a fell din adskeudenniñ koadeier meur ar c'hribennoù ha nij herrus ar wennili o treiñ ha distreiñ froudennus* (I wish to reflect great hilltop forests and the dizzy flight of swallows recklessly turning over and back, 30) are his manifesto.

Imram, an Old Irish word for 'voyage' (see IMMRAMA), is an epic poem, a rhetorical work to which the notion of a Celtic paradise is fundamental. The wartime imagery is apocalyptic: *Dislonkañ 'ran va c'halon dirak ar gwad linus hag ar c'hig brein debret gant ar c'helion hag ar c'hontron, rag ar c'helanoù gwer o vreinañ er poulloù, kelanoù du 'zo bet tud badezet* (I vomit my heart out at the sight of the stinking blood and the rotten flesh eaten by flies and maggots, at the sight of the greening bodies decomposing in pits, the blackened corpses of christened men). From this the poet wishes to flee: *Klevet em eus ez eus er mor, un enezenn c'houdoret e lec'h nen eus 'met karantez, levenez dibaouez* (I have heard that in the sea there is a sheltered island which knows only love and perpetual happiness).

Glanndour's poetry is based on his Christian doctrine. It is this that defines the lines and curves of the poet's thought: *Ne vo ket da rouantelezh evito, ar rouantelezh ha n'en deus ket gwelet lagad an den na klevet e skouarn hag a virez d'az tibabidi* (Your kingdom shall not be theirs; neither human eye has seen nor ear heard of the kingdom that you are saving for your chosen ones). Used not as a tool to question, but as a stamp of authority, the pristine idiom risks becoming banal: *E don va ene, ur goulou war enaou a vev. O sklaerder diabarzh, te ken tost d'ar peurbad* (Deep in my soul lives a burning light. O internal clarity, you are so close to eternity, 62). All in all, Glanndour's legacy is that of a true writer and thinker, and this sets him apart from others for whom writing was not a primary activity.

Youenn GWERNIG (1925–) is one of many Bretons who spent time in New York. The emigrants established themselves there in the mid-20th century, working in the catering industry and forming a Breton-speaking community (see EMIGRATION). Gwernig was part of this community for twelve years. He wrote of life in New York in the 1960s, as an emigrant coming to terms with a new environment while pining for the familiarity and simplicity of his distant homeland. Two of his volumes are *An diri dir* (The steel stairs), a trilingual work which embraces French and English, and *An toull en nor* (The hole in the door, i.e., The keyhole). He has also achieved moderate fame as a musician (see BRETON MUSIC).

Reading modern Breton literature demonstrates that regionalism is strong in the work of those writers who were native speakers of Breton. Drezen and Riou, for example, were from KERNEV and wrote of life around Douarnenez, Castell Lin, and Castell Nevez ar Faou. Fañch Peru, a native of the northern region of TREGER, chose the Lannion area (thinly disguised as Lan Leger) as the locus for his stories in the collection *Teñzor Run ar Gov* (The treasure of Smith's hill). Non-native speakers writing in Breton in the 20th century tended to prefer the greater area of Brittany as their locus. Hemon's *An Aotrou Bimbochet e Breizh* (Mr Bimbochet in Brittany) exemplifies this.

The two World Wars dominated Breton literature of the early and middle of the 20th century. In the latter decades of the century, industrialization and rural

depopulation provided the context. A flame of revival burned in the 1970s, but Breton literature in the 5th French Republic (1959–) is a literature in crisis.

However, traditional work did continue to appear. The years between the First and Second World Wars had witnessed the Herculean translation into Breton of much medieval Irish prose (see IRISH LITERATURE). These translations appeared in *Gwalarn*. Thus, complementing their primary objective of producing sophisticated modern literature, the Gwalarnists had laboured to invent an extensive medieval heritage. *Romant ar Roue Arzhur* (The romance of King Arthur, 1975) by Xavier Langleiz (de Langlais), is an offshoot of this branch of literature. A neo-medieval romance, it draws on both the ARTHURIAN cycle and CHRISTIANITY.

Mikael Madeg (1950–) has emerged as a prolific and confident writer. Collections of his short stories are *Ar seiz posubl* (Level best, 1987), and *Nozvez ar hig-ha-fars* (Night of the crêpe [*kig-ha-farz* is a buckwheat crêpe with meat and vegetables], 1988). Two of his novels are *Tra ma vo mor* (While there is a sea, 1989) and *Gweltaz an inizi* (Gildas of the islands, 1990). Madeg is firmly rooted in the north-western region of LEON, but his work transcends local boundaries; for example, in *Pemp troad ar maout* (The five-legged ram, 1987), a further collection of short stories, the reader finds himself in Paris.

Treger writer Yann Gerven (1946–) has published several novels. His *Bouklet ha minellet* (Tethered and muzzled, 1990) is a reaction to an increasingly consumerist lifestyle.

Goulc'han Kervella (1951–) is an important dramatist who has also directed spectacular and successful productions by the Strollad Bro Bagan company. Yann-Ber Pirioù (1937–) has published two collections of poetry: *Défense de cracher par terre et de parler breton: poèmes de combat (1950–1970): anthologie bilingue* (No spitting on the ground or speaking Breton: combat poetry [1950–1970]: a bilingual anthology; 1971), and *Ar mallozhioù ruz: komzoù plaen* (The red curses; 1974). His work is that of a thinker. Books by Per DENEZ (1921–), a teacher and activist, include *Hiroc'h an amzer eget ar vuhez* (Time is longer than life; 1981) and *Evit an eil gwech* (For the second time; 1982). Alan Botrel (1954–) in his *Barzhonegoù* (Poems; 1983) combines elements of Middle Breton verse, strict Welsh metre, and the modern literary standard to produce a highly individual neo-classical idiom.

A complete inventory of Breton writers in the 20th century would run to hundreds of names (see Favereau, *Breton Literature and Writers Since 1945*), but they are still largely unknown outside of Brittany.

Breton migrations

Despite their location on the European continent, the BRETON language and associated culture owe their distinctive shape to origins on the Island of BRITAIN, with especially close affinities to the pre-English groups of Cornwall (KERNOW) and south-west Britain generally. For this reason, Breton is classed as an INSULAR CELTIC language, despite its location. Settlers brought BRYTHONIC speech and culture to Brittany (BREIZH) in a series of migrations from the 3rd to 9th centuries AD, most heavily *c.* 450–*c.* 600, moving into an area of GAUL that had previously been known by the Gaulish name ARMORICA. The well-documented presence of a leader with the Brythonic name or title RIGOTAMUS and known to the Gallo-Romans as 'king of the BRITONS' with 12,000 men on the river Loire

(Liger) *c.* 470 represents an advanced stage in a process which had by then become well organized and included an important military component (cf. also LE YAUDET).

We do not have abundant evidence to show to what extent GAULISH was still a spoken language in Armorica when the Britons moved in. Clearly, there was some Latin spoken there, as throughout the Western Empire. However, to judge from extant Gallo-Roman remains, Armorica was not one of the most Romanized regions of Gaul. Repeatedly, for spans of several years at a time over the 4th and earlier 5th centuries, Armorica slipped out of imperial control and into the hands of armed peasant rebels, known as *Bacaudae*. The word itself is not Latin but Gaulish, and is probably related to the Breton and Welsh *bagad* 'a band of men'. It seems inherently unlikely that the *Bacaudae*—from the most underprivileged and anti-Roman classes of the most remote region of Gaul—were all monoglot Latin speakers. We may note also a late Gaulish inscription from Plumergat (on which see ARMORICA), indicating that a learned Gaulish was still in use for prestigious occasions in the old territory of the Veneti *c.* AD 300 or possibly later. One may also point to a number of pre-Breton place-names which are clearly Gaulish, rather than Gallo-Roman, in character, for example, the name of the great megalithic site Carnac < Gaulish **Carnācon* 'Place of stone monuments'. It is likely, therefore, that Gaulish did survive, at least in some areas, to contribute names and words to the incoming Brythonic and possibly even influence its phonetics, morphology, and syntax. Some scholars, notably François FALC'HUN, went as far as to argue that Gaulish was still a living language at the time of these migrations, and that Breton (particularly the Vannetais dialect in the old CIVITAS of the Veneti, see GWENED) shows substantial influence from Gaulish, if it is not a direct descendant. However, any such argument flies in the face of the fact that the earliest WELSH, CORNISH, and Breton are similar to the point of being often indistinguishable on linguistic grounds. It seems, therefore, that whatever Gaulish might have survived when the Britons arrived, it was the similar but distinct speech of the dominant incomers that was to become the standard variety of spoken Celtic in the peninsula.

Two 6th-century historians, the Byzantine Procopius and the Gallo-Roman Gregory of Tours, both demonstrate that Brythonic Brittany was an accomplished fact. The latter gives a detailed account of a peninsula ruled by chieftains with Brythonic names, whom the Merovingian Franks insisted on calling *comites* (counts), but who were effectively independent sovereigns. By the 570s Brythonic speakers were already dominant in an even further colony in north-west Spain called BRITONIA. However, we have only one near contemporary source that describes the migrations themselves, namely the *De Excidio Britanniae* of GILDAS. Writing the better part of a century after the event, Gildas gives a luridly melodramatic account of an ANGLO-SAXON 'CONQUEST' from which the Britons had to flee, either to the west, i.e., Wales (CYMRU) and Cornwall, or overseas to Brittany. Gildas, however, tells us that no British historical records had survived; he was therefore producing a stark and moralistic historical explanation of the distribution of Brythonic, Old English, and Gallo-Latin in his own day, and working from an admitted position of ignorance.

The spread of languages with the decline and collapse of the Western Empire—primarily the early Germanic languages such as Old English—has tended to be understood within the framework of *Völkerwanderung* (migration of peoples), i.e., a great post-Roman migration period. Applying this idea to Gildas's testimony, the Breton migrations have been seen as a 'knock-on' or 'billiard-ball' effect, with Celtic migrants set in motion by an earlier Anglo-Saxon movement. However, a number of factors other than mass migration can influence the change from one language to another, including political or religious authority and social or economic pressure. The Armorican peninsula had close and bidirectional relations with Britain throughout prehistory and the ancient and medieval periods; therefore, the real processes behind cultural and linguistic Bretonization must have been a story of many complex increments. For example, is the Bacaudic prelude to the migrations to be viewed primarily as the story of a local power vacuum or an anti-Roman, philo-Celtic movement, or both?

Early Christian communities were clearly a factor in the Breton migrations. Le Duc has recently proposed that Romano-British Christians moved into Armorica as early as the 3rd century AD, when Christianity was still actively persecuted in Roman Britain (*Celtic Connections* 1.133–51). In a letter written between 509 and 521, the bishops of Tours, Angers, and Rennes (ROAZHON)

Early medieval Brittany: the Dark Age kingdoms. The approximate limit of Breton political power in the 6th century is shown as a dashed line;* P =** ***place-names in* Plou-** **(< plēb-em)** ***attested before 1200; the white lines represent the Roman road network.

threatened to excommunicate, for their alien and unorthodox practices, two priests in Armorica with the Brythonic names Louocatus and Catihernus; thus we see the faltering grip of the Gallo-Roman hierarchy on a nascent Brittany with its own distinctive Christian practices. Traditional history has long held that the saints were leaders in the journey to Brittany. Breton Latin saints' lives support this, both in their descriptions of actual migrations and in the connections between insular Britons and Bretons (see HAGIOGRAPHY). Britonia in Spain probably had a similar origin. The study of Breton place-names suggests a detailed picture of settlement by British early Christians in the peninsula, especially the numerous archaic names (often still those of parishes and towns and villages of local importance) that comprise the element *Plou-* (< Latin *plēb-em*) + the name of an early Brythonic saint or an obscure element popularly understood as a saint's name. In many instances, the same saints' names are found in parish names in Wales and Cornwall.

From the standpoint of social history, the model of colonization—though without the word's modern political overtones—is probably appropriate for the Breton migrations, in that the movements seem to have been largely voluntary, and conducted on the scale of family groups and small religious communities, rather than mass conquest by a hostile invading force. The prior inhabitants of Armorica—whose initial resistance to Rome had been fierce and whose position within later Gallo-Roman society had been increasingly marginal and precarious—were probably gradually incorporated into the new society rather than being driven out, destroyed, or having suffered some depopulating catastrophe, as previous theories have proposed.

Whatever the circumstances of the original impulse to settle Brittany from Britain, it is certain that the

connections between Brittany, Cornwall, and Wales were maintained for centuries, facilitated by a common language, trade networks and other economic factors, and the relative ease of travel by sea. Subsequent settlement from Brittany to Britain and vice versa occurred throughout the Middle Ages, both in the context of the Norman invasion of Britain and independently. The family of GEOFFREY OF MONMOUTH is believed to have been of Breton origin.

Breton music

Brittany (BREIZH) has one of the strongest regional musical cultures in Europe. Modern Bretons are involved in making music across the stylistic map, and a healthy regional recording industry produces and markets it far beyond the borders of Brittany. Meanwhile, a very well organized folk-music collecting agency, Dastum, sends fieldworkers all over the province to ensure a regional archive with both breadth and depth. That archive has inspired younger generations to sing, play, and collect Breton folk music themselves. This article will consider those musical styles most directly influenced by Breton folk culture, as well as the ways in which folk culture interacts with jazz, rock, rap, and other genres.

§1. VOCAL MUSIC

The traditional folk-songs of Breton-speaking Brittany are divided by many Breton scholars (and by singers themselves) into the categories of *gwerz* (tragic and epic ballad; see BALLADS) and *sôn* (lyric song). In addition, there exists in Breton a vibrant tradition of hymns, referred to as *kantikoù*. The traditional style of singing for all these categories of song is solo and unaccompanied, and there are singers, old and young, who continue this vocal tradition. In the areas where Gallo (the French dialect of Upper Brittany/BREIZH-UHEL) is spoken, folk-songs that are common all over France exist in Gallo versions, once again sung alone and unaccompanied. In more recent times, singers have learned to accompany themselves on guitars, diatonic accordions, and other instruments and, of course, have joined bands, which will be discussed below.

The most characteristically Breton style of singing is *kan ha diskan* (roughly translatable as call-and-response singing). This is a traditionally unaccompanied vocal style in which the constant interplay between two singers provides the lively continuity necessary for dancing. The first singer begins with the opening line of the song. A few notes before he finishes it, the second singer joins in, in unison. When the first singer reaches the end of the line, he pauses while the second singer repeats the line. Once again, the first singer chimes in for the last few notes before beginning the second line. The two singers continue this way for the entire song, and indeed sometimes string two or three songs together to keep dances going for ten to twelve minutes and more. The result of the overlapping lines is a regular dynamic oscillation between solo and duet, between call and response. This is unlike most western European folk-singing, which is generally solo, in unison or, occasionally, in harmony. However, the Finnish Karelian tradition, from which the *Kalevala* is derived, is remarkably similar. *Kan ha diskan* singing is one of the most popular forms of music for Breton dancing (see DANCES).

The tradition of the *chanteur engagé* (politically engaged singer) emerged as a force in the Brittany of the 1950s and 1960s. In that period, Brittany was still largely disrespected in the other areas of France. BRETON language and culture had been rejected by the Republic as a throw-back to an earlier, backward age, and many French people looked down on Bretons. In this climate, recognizing the inherent value in Breton language and culture led many to oppose the French government, and even to argue for secession. Some of these people used song, in both French and Breton, to argue their case. Singers such as Glenmor (Milig AR SKANV) and Gilles Servat pioneered a style that owed as much musically to French cabaret music as it did to Breton folklore, but which argued uncompromisingly for the right of Bretons to speak their own language and sing their own songs.

The coastlines of Brittany have always been home to seafaring people, and another strong tradition in the region is that of sea shanties and other nautical songs. These are sung mostly in French, though Breton-language nautical ballads are not uncommon. Although the traditional contexts for these songs have mostly disappeared, the repertoire lives on in the hands of enthusiasts and revivalists. Singing groups such as Cabestan, L'Echo and Taillevent have been formed to keep this tradition alive.

§2. INSTRUMENTAL MUSIC

The instrumental folk music of Brittany is mostly functional music, played for dancing or for processions at weddings, funerals, and other community events. One of the older styles still in use for both dance music and ritual music is *sonner par couple* (piping in pairs), in which a BINIOU (bagpipe) player and a *bombard* (shawm) player perform together. The dance music they produce is very similar in its overall structure to *kan ha diskan* singing. The *biniou* is an extremely high-pitched bagpipe, and the *bombard* a piercingly sharp woodwind, which gives this music a distinctive ring. There is also another BAGPIPE native to Brittany, the *veuze*, essentially similar to the western European medieval bagpipe. Though there are not many players of the *veuze* left, the instrument has been undergoing a revival in recent years.

Another bagpipe was imported to Brittany in the 1920s, and is now one of the most popular instruments there: the Scottish highland pipes. This instrument is played mostly in the context of *bagadoù*, or pipe bands. The idea for the pipe band occurred to Breton musicians who visited Scotland (ALBA) during the First and Second World Wars; soon, they had imported the Scottish bagpipe to Brittany and teamed it up with the *bombard*. By adding drums, dressing in uniforms, and marching while playing, they created the *bagad* on the model of the Scottish pipe band. The *bagad*, as it was initially conceived, was not merely a musical phenomenon. It was intended to be a sort of Breton Scout movement, aimed at fashioning Bretons out of the boys of Brittany. Because of this, many Breton youngsters in the last three quarters of a century have been members of a *bagad*, and encountered their early musical training there.

The other most prominent instruments for traditional music in Brittany include the clarinet, violin, diatonic accordion, and hurdy-gurdy, all of which have been popular instruments in the folk tradition. The clarinet, called *treujenn-gaol* (cabbage-stalk) in Breton, is played mostly in central Brittany. In this tradition, two clarinets are played together, very much like a pair of *kan ha diskan* singers or a *biniou–bombard* couple. In the rural tradition they would frequently be accompanied by a drum. To a certain extent, the introduction of the durable and relatively cheap accordion in the 19th century led to a decline in the hurdy-gurdy tradition. As a result, the hurdy-gurdy, like the *veuze*, was close to extinction by the 1960s, but some musicians have been taking it up in recent years. The violin (see FIDDLE) and accordion gained popularity amongst the younger generation as a result of the influence of IRISH MUSIC, which became very popular in Brittany (as

Alan Stivell in concert

elsewhere in Europe) during the 1960s and 1970s.

The most dramatic revival of a Breton musical instrument also owed a great deal to Irish music. This was the recreation of the Breton HARP. Although harps had been common in Brittany during the Middle Ages (Richard the Lion Heart imported Breton harpers for his coronation), the instrument had died out by the 19th century. In the 1940s a group of cultural activists set out to revive it, creating a new-style Celtic harp on the model of Irish harps. The instrument made its debut in 1952, when a nine-year old boy named Alan Cochevelou played a recital. In 2002, using his stage name of Alan STIVELL, Cochevelou released a CD celebrating the 50th anniversary of that historic concert. In those 50 years, many musicians have taken up this new 'Breton' harp.

§3. MUSICAL GROUPS

Since the 1950s the influence of other musical styles has contributed to Breton folk music, creating various kinds of musical groups. Alan Stivell has combined acoustic Breton music with Irish and Scottish styles, and also with rock, rap, and world music; Stivell's musical partner, Dan Ar Braz, performed similar experiments with the group L'heritage des Celtes. Acoustic folk groups such as Kornog, Gwerz, and Barzaz have blended vocal and instrumental traditions with influences from Irish and Scottish folk music. Instrumental bands such as Ar Re Youank and Skolvan have been formed specifically to play at a type of dance called a FEST-NOZ, the most common type of event for folk music in Brittany. Outside the 'Celtic' realm, other types of music have also had their influence. Tri Yann, which bills itself as the longest-running rock group in France, was put together 30 years ago by Breton cultural activists from Nantes (NAONED), and has always included traditional Breton music, as well as medieval music and modern rock, in its repertoire. Exotic sounds such as those of the Japanese shakuhachi flute and the Moroccan *oud* and *tablas* have been incorporated into Breton musical groups for over a decade.

At the same time, Breton folk music has influenced other styles played in Brittany. One of the more prominent classical styles in the region teams up the organ with the *bombard*, while jazz bands featuring chromatic accordions have often incorporated Breton dances such as the gavotte into their repertoire. Recently, hard rock and rap acts have also used Breton traditional music as a starting point; the group Armens mixes electric power chords and Breton melodies, while popular rap act Manau has gone so far as to sample Alan Stivell in one of its hits. Clearly, Brittany's musical traditions remain strongly rooted in the past as they move into the 21st century.

Stephen D. Winick

Breuddwyd Rhonabwy (Rhonabwy's dream) is a medieval Welsh prose-tale. The traditional hero OWAIN AB URIEN appears as ARTHUR's antagonist in a central dream episode set in the heroic past. A fantastic game of GWYDDBWYLL (a board game) between Arthur and Owain figures as a sustained surreal image within the dream's irrational events. The frame tale, that is, the story within which the main story (i.e., the dream) takes place, is set in the reign of Madog son of Maredudd of POWYS (1130–60). Therefore, the story's composition most probably dates, in absolute terms, later than the publication of GEOFFREY OF MONMOUTH's HISTORIA REGUM BRITANNIAE *c.* 1139, and could be considerably later, though not as late as The Red Book of Hergest (LLYFR COCH HERGEST, *c.* 1400), the single manuscript in which the tale survives. On the other hand, Geoffrey's influence is not very pervasive, nor is Norman French influence (see WELSH LITERATURE AND FRENCH; ROMANCES). There are roughly a dozen words of French origin in *Rhonabwy* (Ifor Williams, *Pedeir Keinc y Mabinogi* xxxiii–xxxiv).

A literary tale which is often cited as similar (i.e., a topical SATIRE whose centrepiece is a fantastic dream vision) is the Middle Irish *Aislinge Meic Con Glinne* (The dream of Mac Con Glinne) (Dafydd Glyn Jones, *Y Traddodiad Rhyddiaith yn yr Oesau Canol* 189–90). Celtic affinities have been recognized in a pivotal episode in which Rhonabwy sleeps on an animal skin as a prelude to gaining otherworldly wisdom (see Carson, *Philological*

Quarterly 53.289–303). On the other hand, medieval English and French dream poems, particularly *Roman de la Rose*, are also comparable in this regard (Lloyd-Morgan, *Arthur of the Welsh* 190).

In recent scholarship, the unusual literary qualities of *Rhonabwy* have attracted attention. Dafydd Glyn Jones is struck by how *Rhonabwy* fails to take its storytelling seriously (*Y Traddodiad Rhyddiaith yn yr Oesau Canol* 194–5). Mac Cana calls the text 'a prolonged parody of native genres and styles' (*Mabinogi* 83). Bollard likewise draws attention to the tale's self-consciously literary qualities and its overt intention of confusing readers with excess detail and description. He concludes that the author was satirizing in particular the classical rhetorical devices of *amplificatio* and *digressio*, which lend themselves to bombastic verbosity (*Llên Cymru* 13.3–4, 155–63). Slotkin similarly sees in these features of *Rhonabwy* a satire by a skilled literary man who distrusts his own craft (CMCS 18.89–111). In its untraditional handling of the Arthurian themes, he infers a commentary on the ill effects of heroic ideal upon Powys and Wales (Cymru) in general. The Arthurian conflict in the dream is taken as a comment upon the conflict between the 12th-century brothers Iorwerth and Madog in the frame tale. Slotkin also observes that the traditional Arthurian biography is retrograde in *Rhonabwy*, with the battle of Camlan preceding that of Baddon (cf. Brynley F. Roberts, *Guide to Welsh Literature* 1.233). According to Roberts:

> There now seems to be general agreement that these faults [*Rhonabwy*'s lack of progression, its descriptive passages, and inconsequentiality of its episodes] are intentional and that the story (an *ystoria* read from a book) is a pastiche of traditional episodes composed as a parody of interlacing and of the episodic style of a *roman d'aventure*. (*Craft of Fiction* 225)

Similarly, Lloyd-Morgan emphasizes the authorial and innovative qualities of the tale as a parody of a highly developed Arthurian tradition well known to both the author and his intended audience (*Arthur of the Welsh* 190–3). The most sweeping assessment of *Rhonabwy*'s radical literary qualities is that of Mac Cana:

> The fact is that The Dream of Rhonabwy is not a story in the sense that the other texts in the Mabinogi are stories . . . It does not tell a tale, but rather creates a situation comprising several sustained images. It uses some of the technical and stylistical devices of oral narrative, but it has no 'plot' worth mentioning, no real progression of incident and none but the most inconclusive of endings. (*Mabinogi* 86–7)

The editor's proposed date for the writing of the text was *c.* 1220 (Richards, *Breudwyt Ronabwy* xxxix). Charles-Edwards (THSC 1970.263–98) and Hamp (THSC 1972/3.95–103) propose a composition during Madog's reign (1130–60), because the satire of the puny stature of the men of Powys in his day, as opposed to the great physical stature of the Arthurian heroes of the dream, would be pointless otherwise. This point is weakened (though not wholly disproved) by the analogue of the Late Middle Irish Acallam na Senórach (Dialogue of [or with] the old men) in which St Patrick and his followers also appear absurdly puny in contrast to the surviving Fenian heroes, even though the story is set some seven centuries before the date of composition (Mac Cana, *Mabinogi* 85). Thomas Parry advanced almost the reverse of Charles-Edwards's argument, proposing that Madog would necessarily have been dead nearly a century before the satire would have been possible (*Hanes Llenyddiaeth Gymraeg* 66). Brynley F. Roberts believes that *Rhonabwy* may be later than the 'Three Romances' (Tair Rhamant), which he places near the beginning of the 13th century (*Craft of Fiction* 214). Giffin argues on the basis of descriptions of horses and arms for a date of 1293–1309, and suggests that the author is stating that the rulers of Powys *c.* 1300 have restored the glory of Arthur's day, which had been in eclipse during Madog's time (THSC 1958.33–40). Carson argues that internal evidence shows that the tale was composed no earlier than the late 14th century (*Philological Quarterly* 53.289–303). She sees a complex tripartite structure of opponents and their messengers as a comment on the political situation in Wales at that time. As well as adducing heraldic evidence for this date, her chief support rests on equating the house of Heilyn-Goch ap Cadwgawn ab Iddon in Dilystwn in the frame tale's setting with historical Heilyn son of Cadifor of Dudleston who would have flourished *c.* 1385. However, the name Heilyn is not rare in medieval Welsh sources. Such an extreme date is at least slightly too late to accommodate the allusion to 'Rhonabwy's Dream' by the poet Madog Dwygraig (*fl.* 1370–80).

Breuɒwyt Pawl Ebostol (The dream of St Paul the Apostle) is a Middle Welsh text which describes the Christian afterlife. It is based on the Latin *Visio Sancti Pauli* (Vision of St Paul; cf. VISION LITERATURE), a text that decisively influenced the medieval image of Hell. The equation of Latin 'vision' with the vernacular Welsh genre of the *breuddwyd* or 'dream' is noteworthy.

Ingo Mittendorf

Brian Bóruma/Brian Ború (941–1014) was overking of Munster (MUMU) and high-king of Ireland (ÉRIU), his career having major import for the development of Irish high-kingship while turning Munster into a unified and powerful state. He belonged to DÁL GCAIS, a dynasty which had attained prominence in northern Munster (see CÓICED) by the 10th century. His father Cennétig (†951) married several times, and Brian had eleven siblings, including Mathgamain and Marcán. In turn, Brian contracted four marriages, and his five sons included Murchad and Donnchad. He was killed at the battle of Clontarf near Dublin (BAILE ÁTHA CLIATH).

Brian's achievement is magnified by the 12th-century propaganda tract *Cogadh Gaedhel re Gallaibh* (War of the Irish with the foreigners), which alleges that Dál gCais reversed a Viking repression of Ireland. This is not supported by contemporary sources which, as Kelleher argued (*North Munster Studies* 230–41), show how Dál gCais manipulated divisions among the native ÉOGANACHT dynasties of Munster, and exploited Norse settlements on the lower Shannon—culminating in the sack of Limerick (Luimneach) by Brian and Mathgamain in 967. Later, as king, Brian allied with a Hebridean–Norse dynasty in 984, before moving against Dublin—implying that he valued Irish Sea links. However, revolts in Munster delayed such plans. Already in conflict with Mael Sechnaill II, the king of Tara (TEAMHAIR) of the previously pre-eminent UÍ NÉILL dynasty, Brian probably resented the latter's subjugation of Dublin in 989. Warfare between Brian and Mael Sechnaill escalated, forcing a partition of Ireland by agreement at Clonfert (Co. Galway/Contae na Gaillimhe) in 997. Following a revolt against his overlordship in 999, Brian crushed LAIGIN and Norse forces at Glenn Máma, thereby gaining tighter control of Dublin; this perhaps gave him the confidence—and resources—to pursue Mael Sechnaill and finally secure his submission in 1002.

The regnal lists accord Brian a twelve-year reign (1002–14) as high-king—viewed by later eulogists as a 'golden age', when the greatest of overlords bestowed justice, political stability and a revival of learning upon Ireland. In reality, altruism was overshadowed by dynastic advantage as Dál gCais clerics—headed by Brian's brother Marcán (†1010)—were installed at Emly/Imleach, Terryglass/Tír Dhá Ghlas, Inis Celtra, and Killaloe/Cill Dalua. Brian certainly advanced his claims of high-kingship by visiting Armagh/ARD MHACHA in 1005, and even securing hostages from the northern Uí Néill in 1007 and 1011. However, the

political order that he had established unravelled from 1013 onwards. Later tradition credited his ex-wife Gormfhlaith with having incited her Leinster and Norse connections to rebel against Munster over-lordship. In any event, the conflict culminated in the battle of Clontarf which, since John Ryan's contributions (*Journal of the Royal Society of Antiquaries of Ireland* 68.1–50; *North Munster Studies* 355–74), has been viewed as a struggle to establish a more concrete high-kingship rather than a Viking effort to conquer Ireland. Dál gCais were victors at the battle of Clontarf, but at great cost—Brian and his son Murchad being among the casualties. Brian's successors included his son Donnchad and grandson Tairdelbach—ancestor of the Ua Briain kings (the O'Briens). Modern assessments of Brian, including that of Ó Corráin (*Ireland before the Normans* 120–31), stress the personal character of his high-kingship—which, far from providing the foundation for a national monarchy, evaporated with his death. However, he did break the Uí Néill supremacy, and shaped the course of Irish history for two centuries by creating a precedent whereby any powerful and ambitious dynasty could aspire to a high-kingship of Ireland.

Bricriu mac Carbaid, sometimes with the epithet Nemthenga (Poison-tongue), is a figure in the medieval Irish Ulster Cycle, in which he is presented consistently as an inveterate troublemaker. For his character and central rôle in Fled Bricrenn ('Bricriu's Feast') and briefer, but pivotal, appearances in Tochmarc Emire ('The Wooing of Emer') and the later version of *Táin Bó Flidais* (The cattle raid of Flidas), see Ulster Cycle §3. Though he appears only once in Scéla Mucce Meic Dá Thó ('The Story of Mac Dá Tho's Pig'), he is instrumental in advancing the action there, inciting the assembled heroes to compete for the Champion's portion, exactly as in *Fled Bricrenn*. In *Echtrae Nera* ('The Adventure of Nera'), Bricriu likens the singing voice of the exiled Ulster hero Fergus mac Róich to a calf's bleat, for which Fergus smashes a fistful of gaming pieces into Bricriu's head. In Mesca Ulad ('The Intoxication of the Ulstermen'), Bricriu's calculated disparaging remarks provoke great deeds from Cú Chulainn. He also announces in that tale:

> For as a whisper is more evident to me than a shout to anyone else, it seems to me that we are being burned from below and from above, and the house is closed in on us . . .

and is thus the first to detect that the Ulstermen's enemies have sealed them into an iron house to be burned to death. The author insightfully understands that it is Bricriu's own hyper-sensitivity that enables him to manipulate so deftly the vanities and vaunting ambitions of the quick-tempered Ulster heroes and their ladies. For a comparable troublemaker in the Welsh Mabinogi, see Efnisien. The byform of *Bricriu*, *Bricne* is a Middle Irish common noun meaning 'freckling, variety'; *Bricriu* may derive from the same root. For a place-name meaning 'Bricriu's lake', see Ulster Cycle §7.

Bricta */briχta/* 'magical spell(s)' is an element of Common Celtic magical or religious vocabulary, attested in various case forms on the Gaulish lead tablet from Chamalières (earlier 1st century AD) and three times on the Gaulish lead tablet from Larzac (late 1st century AD). It is a rare and significant example in which we can see that specialized vocabulary associated with actual pagan Celtic cult practices has survived in the same meaning within the literature of early Christian Ireland (Ériu). Probably the most important of the four occurrences is the phrase *se-bnanom*

bricto[*m* 'the magical spell of these women' from Larzac; a collocation of the same words is found in Old Irish in the magico-religious charm known as the 'Lorica (breastplate) of St Patrick', which invokes protection against *brichtu ban* 'women's magical spells' (accusative plural) (*Thesaurus Palaeohibernicus* 2.357.8) and again in the saga text *Echtrae Chonlai* (The adventure of Conlae), spelled *brectu ban* (Lebor na hUidre l. 10015). It is this comparison that puts beyond doubt the meaning of the Gaulish word, the central concern of the Larzac text with women's magic, and the Common Celtic status of the terms and concepts involved.

The other occurrences of *bricta* can be interpreted as follows: *brictom uidluias* from Larzac means 'of the seeress's spells', with the second word being the genitive of **uidlua* 'seeress' < Proto-Celtic **widlmā*, thus corresponding exactly to the Old Irish feminine proper name Fedelm, which significantly is the name of the prophetess who foretells doom to Queen Medb before the main action of Táin Bó Cuailnge. Also from Larzac, *andernados brictom* means 'the magical spell of an underworld band', probably in the sense of 'a band of practitioners of underworld magic', in which the Gaulish stem *andern-* corresponds to Latin *infernus*. The same two words are also found at Chamalières, with different syntax, as *brixtia anderon* 'by the magic of underworld beings'.

Brigantes (Βριγαντες) was the name of Celtic tribes attested in the later Iron Age and Roman period in south-east Ireland (Ériu) and north Britain. Settlements with the Romano-Celtic name *Brigantium* in the extreme north-west of Spain (Galicia) and in the Alpine region (modern Bregenz) indicate that there had been tribal groups known as *Brigantes* or *Brigantii* in those areas as well. That the Irish and British Brigantes have a cultural link more significant than the shared name is implied by the presence of a shared cult of a sacred female, namely St Brigit, whose early cult was rooted in Leinster/Laigin (and presumably the goddess of the same name before her, the name of both deriving from Celtic **Brigantī*) and the *Dea Brigantia* (the interpretatio romana of **Brigantī*) whose cult was strong in northern Roman Britain.

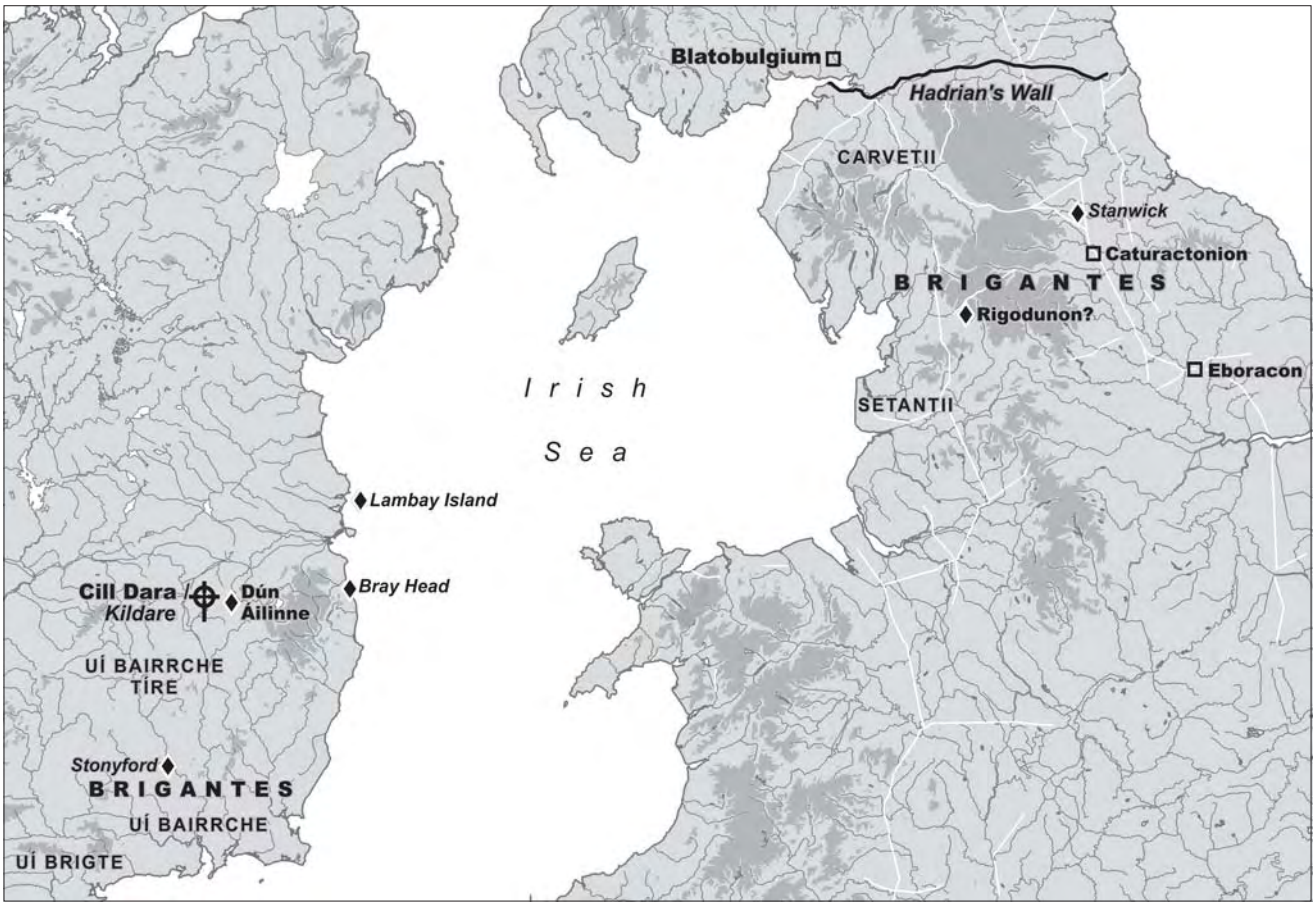
§1. LOCATION AND EXTENT OF THE BRIGANTES

The 2nd-century Greek geographer Ptolemy places the Brigantes in the extreme south-east of Ireland (Grogan, *Capuchin Annual* 1974.128–42; Mac an Bhaird, *Ainm* 5.1–20; Pokorny, ZCP 24.94–120). However, if the geographical range of the early cult of St Brigit is relevant here, we might consider a wider area that includes Kildare (Cill Dara) and Leinster generally. The names of the early medieval Irish septs—the south-central Uí Brigte (Descendants of Brigit) and, less plausibly, the south-eastern Uí Bairrche—have also been seen as possible survivals of the Brigantes (O'Rahilly, *Early Irish History and Mythology* 37–9; Byrne, *Irish Kings and High-Kings* 155).

According to Ptolemy, the territory of the British Brigantes stretched from sea to sea, i.e., the North Sea to the Irish Sea. They thus constituted the most extensive tribal civitas in Britain. Their territory included numerous Romano-British towns and forts, including Κατουραχτονιον Caturactonion (Catterick/Catraeth) and the great legionary fortress at Εβορακον Eborācon (York). Dedications to the goddess Brigantia are thick in the region of Hadrian's Wall and one from the fort at Blātobulgium (Birrens, Dumfries and Galloway) implies that the tribal territory had extended somewhat north of the Wall into present-day south-west Scotland (Strang, *Britannia* 28.1–30). The presence of several smaller and infrequently mentioned tribes within this same large region—Carvetii, Corionototae, Lopocares, Setantii, Texтoverdi—has contributed to the idea that the British Brigantes were a confederacy or overlordship which incorporated several tribes.

§2. ARCHAEOLOGY

The region of Ptolemy's Irish Brigantes, like the south of Ireland generally, has an Iron Age characterized negatively by the absence of material in the La Tène style. The territory indicated by Ptolemy probably included the major late Iron Age hill-fort at Freestone Hill, Co. Kilkenny (Contae Chill Chainnigh), which produced some Roman finds. Also in the far south-



The Brigantes in Ireland and Britain. Roman roads are shown in white.

east was the interesting burial at Stonyford (Co. Kilkenny). Set within an earthwork and protected by stones, this burial contained a glass cremation urn, a glass phial (probably for cosmetics), and a small bronze mirror. It was of a typically Roman type and probably dates to the 1st century AD. As a Roman or Romano-British burial in Leinster, the Stonyford find has analogues at Bray Head and Lambay Island. Certainly, these burials raise the possibility of direct and substantial contact between the *civitas Brigantum* of early Roman Britain and the group with the same name in Ireland (Raftery, *Pagan Celtic Ireland* 200–10). The major pre-Christian assembly site at DÚN AILINNE (Co. Kildare/Contae Chill Dara) belongs to the same general quarter of Ireland.

The Brigantes of Britain fall outside the zone that participated in British late prehistoric culture termed by Hawkes 'Iron Age C', characterized by the Gallicized Late La Tène metalwork and pottery, COINAGE, and the OPPIDUM, and associated with south-eastern tribal groups known as BELGAE. Conversely, they thus may be thought of as included within the inland BRITONS, described by CAESAR as animal-skin-wearing pastoralists and indigenous, contrasting with the culturally more sophisticated groups newly arrived from Gaul who had settled in the 'maritime regions' of the south-east (*De Bello Gallico* 5.12). In line with this picture, many archaeologists have written of British Brigantia as an area of cultural continuity from the Bronze Age. Hill-forts are less numerous and less densely sited in Brigantian territory than in south-central and south-west England or Wales and the Marches. Important exceptions include Ingelborough (possibly the *Rigodūnon* Ῥιγοδουνον listed by Ptolemy, a 'royal fort', at least in name), in which 6 hectares (15 acres) and 19 hut circles were enclosed within a stone wall, and the immense Stanwick, where complex earthworks following the contours of a hilltop enclosed an inner precinct of 7 hectares (17 acres) and a total area of about 300 hectares (750 acres). At Stanwick, Roman roofing tiles and tableware of the mid-1st century AD were found, suggesting that this site is likely to have been the capital

of the philo-Roman Queen Cartimandua. Stanwick was also the find-spot of the famous pair of miniature sheet-bronze horse heads, as part of a hoard of decorative metal chariot trappings. Pre-Roman Brigantian territory was poor in pottery, with only rough, undecorated, non-professional vessels; on the other hand, a well-made wooden dish was found as Stanwick. The dearth of grain-storage pits at Stanwick and the siting of several Iron Age settlements on steep slopes between highland and lowland pastures in British Brigantia had once suggested to archaeologists an economic dependence on stock rearing rather than cereal cultivation, but research from the late 1970s onwards has revealed cereal pollen (Turner, *Journal of Archaeological Science* 6.285–90), crop remains, field systems, and numerous 'beehive' querns, all proving that areas of Brigantia had developed arable agriculture (Cunliffe, *Iron Age Communities in Britain* 189–93).

§3. history and continuity

Apart from Ptolemy, we have no documentary evidence for the Brigantes of Ireland. The only reasons to suppose that they might have had an enduring cultural impact are the possible links to the historical Uí Brigte noted above and the case for the pre-Christian roots of the cult of Brigit in Leinster, as canvassed in this Encyclopedia in the articles on the saint and goddess of that name.

In Britain, the Brigantes are quite well documented for the period covered by Tacitus, i.e., from the period of the Claudian invasion to the end of the governorship of Agricola, ad 43–85. The primary focus of Tacitus's attention is the turbulent reign of Queen Cartimandua and the civil war between her first husband, Venutius, and her second, Vellocatus. The fact that the Brigantes were ruled by a woman is noteworthy, but they were not unique amongst the Britons in this, as shown by the example of Cartimandua's contemporary, Boudīca (†ad 60). After the 1st century, Roman histories tend to deal with Brigantia only as part of Roman Britain in general. What had been the lands of the Brigantes contained most of the northern military frontier and its garrison, including York, Hadrian's Wall, and the numerous forts either side of it. This was one of the most important and heavily militarized frontier zones within the Empire and repeatedly came into play in internal struggles for imperial power, as well as the protection of the north-west frontier. It is unclear how the *civitas Brigantum* related to this northern military zone or even to what extent civilian provincial government functioned there. Nonetheless, there is a Roman inscription in which an individual is named as a *Brigans* (sing. of *Brigantes*) by nationality and a dedication to a *deus Bregans*, as well as seven dedications to *dea Brigantia*, all of which point to the vigorous survival of tribal identity with Roman sanction.

For the post-Roman period, the question of the survival of the tribe is complicated. One problem is that a territorial name **Brigantī* or *Brigantia* would give Early Welsh *Breint*, which is identical in form to the etymologically linked common noun meaning 'exalted privilege, legal exemption', as, for example, in the Old Welsh legal tract *Bryein Teliau*, concerning 'The sacred privilege of (the churches of) St Teilo'. We have an occurrence of *breint* in the Gododdin that could thus mean either 'privilege' or 'land of the Brigantes'. There are also a number of rivers with this name, probably all once regarded as goddesses. A second problem is that the name of the early medieval northern kingdom of Brynaich seems to have a different etymology, deriving from Celtic **Bernaccī/Bernaccia* 'people/ land of the gap(s)' (Jackson, LHEB 701–5), but some of the early spellings, for example, *Breennych* (also in *Y Gododdin*), point to a preform **Brigantaccī*, as though the two tribal/place-names had been confused or merged. A further complication is the fact that we do not know precisely where the most important post-Roman north British kingdom of Rheged was located and therefore cannot assess to what extent it was the successor of the *civitas Brigantum*. Another general suggestion of cultural survival is Binchy's theory (*Celtic and Anglo-Saxon Kingship*) that Welsh *brenin* had originally meant the mortal consort of Brigantī. The preform **Brigantignos* 'son of Brigantī' would also work linguistically and carry much the same implication for the survival of specifically Brigantian notions of kingship in Wales (Cymru).

§4. the name

The literal meaning is 'the elevated ones' < Indo-European **bʰr̥g ʹbʰn̥tes*, and though this could be purely metaphorical or ideologically bound up with the tribal goddess *Brigantī* (Brigit), all the tribes so named did

have spectacular heights within their territories—the Wicklow Mountains in Ireland, the Cumbrian massif and Pennines in Britain, the steep Galician headlands, and the central Alps. The same root is found in the very common Continental Celtic place-name element *-brigā*, which means 'hill' or 'hill-fort' (cf. Welsh *bre* 'hill'). See further the following article.

Brigit (goddess)

The Irish goddess Brigit was honoured as the goddess of poetry and prophecy, the patron deity of the *filid* (see BARDIC ORDER). Her name, meaning 'the exalted one' (< COMMON CELTIC **Brigantī*), has related forms across the INDO-EUROPEAN linguistic territory, and has cognates in the Sanskrit feminine divine epithet *bṛhatī* and tribal names such as the Celtic BRIGANTES (in north Britain and south-east Ireland), the Brigantii of pre-Roman GALICIA, and the Germanic Burgundians, who gave their name to Burgundy (see also the previous article). The name may have been more of a title than a personal name, as exemplified in the SANAS CHORMAIC ('Cormac's Glossary') attributed to CORMAC UA CUILEANNÁIN (†908), bishop and king of Cashel (CAISEL). Here, she is identified as the daughter of the DAGDA and she had two sisters, also named Brigit, who were respectively the patron of smiths and the patron of healers; from these, according to the text, all goddesses in Ireland (ÉRIU) are called Brigit. In the mythological tale, CATH MAIGE TUIRED ('The [Second] Battle of Mag Tuired'), which tells of the conflict between the TUATH DÉ and the demonic FOMOIRI for control of Ireland, Brigit or Bríg of the Tuath Dé appears as the wife of the Fomorian king, Bres. Their son Ruadán is killed when he tries to murder the divine smith, GOIBNIU. Bríg's lament over her dead son is reported to be the first keening heard in Ireland.

Brigit is also an equivalent to the Romano-Celtic Brigantia (see INTERPRETATIO ROMANA), the tribal goddess of the Brigantes of Britain, whose most famous queen, CARTIMANDUA, is described by TACITUS and whose social and political function is likely, at least in part, to derive from any identification with her tribe's goddess and namesake. Dedications to Brigantia are numerous near HADRIAN'S WALL, in or near what had been the tribal territory of the Brigantes. Julius CAESAR equated a native Gaulish deity with the Roman goddess Minerva, also a patron of crafts, who was identified with Brigantia (see BATH; INTERPRETATIO ROMANA). The image of the goddess Brigantia at the Roman military site of Birrens in Dumfriesshire (Dùn Fris) depicts her with the same symbols as those of Minerva. She is connected to rivers and streams, and gives her name to the Brent in England, the Braint in Wales and the Brighid in Ireland. In the fragmentary early Welsh poem *Gofara Braint*, the river Braint in Anglesey (MÔN) overflows in response to the death of King CADWALLON, here reflecting the old idea of the goddess of the land as the ruler's consort (see SOVEREIGNTY MYTH). In Welsh, *braint* as a common noun signifies 'special privilege or exemption'. In the Late Old Welsh legal document *Braint Teilo* (OW *Bryein Teliau*) St TEILO's churches are granted a sacred exemption from all manner of secular intrusions (see also LLANDAF). D. A. Binchy (*Celtic and Anglo-Saxon Kingship*) argued that the Welsh word *brenin*, Early Welsh *breenhin* < Celtic **Brigantīnos*, had originally meant specifically the king as consort of the tribal goddess Brigantī. This proposal is consistent with the CELTIBERIAN royal name or title found on COINAGE spelled as *BiriKanTin /brigantīn-/*. The festival of IMBOLC, 1 February, which celebrates the lactation of the ewes and the lambing season, is associated with Brigit in her rôle as a goddess of fertility. She has also been linked to a fire cult.

Brigit was the tutelary goddess of the LAIGIN (Leinstermen), and Leinster is significantly the region

of Ireland in which the *Geography* of PTOLEMY placed the tribe of the Βριγαντες *Brigantes*. The goddess Brigit has been linked to the Christian Saint BRIGIT, the patron saint of Leinster (Laigin), who appears to have acquired several of the goddess's attributes: they share the same name, the same feast-day, and many of the same functions. Both are celebrated as patrons of poets, smiths, and healers. Both are connected with aspects of fertility and agriculture (St Brigit is a protector of livestock and her cows give vast quantities of milk), and images of fire. But there is relatively little information about the goddess and her cult. The folk traditions of the saint, most prominently in the celebration of her feast-day, point to a syncreticism of pre-Christian and Christian traditions (Ó Catháin, *Festival of Brigit*). However, while the arguments for a direct borrowing remain inconclusive, the image of the Christian saint was very likely influenced by vestigial memories of the goddess.

Dorothy Bray

Brigit, St, flourished in the late 5th to early 6th centuries AD. Her death is set variously in 525, 526, or 528, according to the traditional chronology (ANNALS of Ulster), a date probably too early to derive from a contemporary record. She is considered, with PATRICK and COLUM CILLE (Columba), one of the three pre-eminent saints of Ireland (ÉRIU). Kildare (Cill Dara) in the 7th century rivalled Armagh (ARD MHACHA) for supremacy of the church in Ireland. Her Latin Life by Cogitosus, a monk of Kildare, composed in the mid-7th century, and another near-contemporary Life, the anonymous *Vita Prima* (first life), are considered to be the earliest examples of Irish HAGIOGRAPHY. There is also a 9th-century Life, known as *Bethu Brigte*, written mostly in the Old Irish vernacular. None of the Lives of St Brigit contain much reliable historical information, but consist mostly of miracle stories. Cogitosus relates that she was born of Christian parents and, along with her bishop, Conlaed, founded Kildare, a monastery with separate houses for men and women. In a narrative which seems to draw from folklore, the *Vita Prima* relates that she was the daughter of a wealthy man, Dubthach, and his slavewoman, Broicsech, whom Dubthach sold at his wife's insistence. She was eventually bought by a druid and set to work in the dairy; Brigit had been born on the threshold of the dairy at dawn and washed in milk. As a child, she rejected the druid's food, accepting only the milk of a pure white cow; later, she spurned her family's attempts to arrange a marriage for her and took the veil instead. In versions of a story that recurs in the *Bethu Brigte* (§15) and the *Vita Prima* (§19) she puts off a suitor when she plucks out one of her eyes or it spontaneously liquefies in her head. In the *Bethu Brigte* version this disfigurement is miraculously followed by a spring bursting forth before her. The saint is often though of as one-eyed in modern Irish folklore.

Several of the miracle stories point to Brigit's great charity and hospitality: she turned water into ale, distributed great amounts of butter which did not diminish, and gave away valuables which were miraculously replaced. She was able to entertain a group of visiting bishops by milking her cows three times in one day. Her connection with cattle continued in later iconography, in which she is often depicted with a cow. Brigit tamed wild animals, and once hung her wet cloak on a sunbeam which she had mistaken for a branch. She became the patron of women in childbirth, and a late legend from the Hebrides (Innse Gall) makes her the midwife to the Virgin Mary and second mother to Christ, supporting her reputation as 'the Mary of the Gael' (see below).

St Brigit's feast-day is 1 February, coinciding with the pagan celebration of IMBOLC, at which date folk customs dedicated to the saint continued to modern times (see CALENDAR). This association of her feast with a pre-Christian festival, as well as the fact that she bears the same name, has associated her with the pagan Celtic goddess, Brigit (see BRIGIT, GODDESS), and, like the goddess, St Brigit was the patron of poets,

smiths, and physicians. Giraldus Cambrensis described a perpetual fire in the saint's shrine, tended by twenty nuns and surrounded by a hedge which no man was allowed to cross, further suggesting a connection with a pagan cult; however, the arguments for a direct borrowing remain inconclusive. In Ireland, she was hailed as the 'Mary of the Gael' after an account that she appeared in a vision to bishop Ibor in the form of Mary. Another anecdote tells that, at her ordination, the presiding bishop read the orders of a bishop over her by mistake, leading some to conclude that she was actually a bishop as well as an abbess. While this cannot be proven, the office of abbess of Kildare held considerable prominence until the 12th century.

The cult of St Brigit became widespread in England, Scotland (Alba), and Wales (Cymru), where she appears as St Bride and Welsh Sanffraid (< Old Welsh Sant Brigit) or Santes Ffraid, and spread to Continental Europe. St Bride's Day continues to be celebrated in Ireland and Scotland. In Modern Irish, 'St Brigit' is *Naomh Brighid*, in contemporary spelling *Bríd*. (On the etymology of the name, see brigit, goddess.)

Britain is at present the usual everyday term for the island of Great Britain, comprising the mainlands of the countries of England, Scotland (Alba), and Wales (Cymru). Britain also refers to the political state (the United Kingdom) created by the Union with Scotland of England and Wales in 1707. It is important to stress in this connection that, although England is sometimes referred to poetically and loosely as an island, the term England, strictly speaking, does not now, and never did, refer to the whole island, since Scotland and Wales were never incorporated into the territory of the larger partner in the Union. For the period after the Act of Union of Britain and Ireland (Éire) in 1800, the term Britain is sometimes employed, somewhat confusingly, for the resulting United Kingdom of Great Britain and Ireland, and still today for its successor, the United Kingdom of Great Britain and Northern Ireland.

Aspects of the derivation of the name Britain and of its specialist usage in the field of Celtic studies are discussed in the articles on Breizh; British; Britons; and Brythonic. The English proper name *Britain* is easily traced back through written records to Latin *Brit(t)annia*, which was used in ancient times to refer to the whole island or, after the Roman invasion of AD 43, the Roman province of Britannia, later divided into two, later four and then five provinces, the *Brit(t)anniae*. There is little doubt that the ultimate source is Celtic and a group name, **Pritanī* 'the Britons', literally 'people of the forms', rather than the place-name, which has been secondarily derived from that of the people. The Welsh reflex of **Pritanī*, Prydain, does now mean 'Britain' rather than 'Britons', but this is a secondary development, plausibly connected with the rise of a newer derivative variant form *Brittones*, whence Welsh *Brython*, to mean the inhabitants of the Roman province(s), not those of the entire island. *Brittones* > *Brython* thus excludes the unconquered Calidones, later called Picts, in the north. In Old Irish texts, the old term *Alba* is sometimes used generally for the whole island of Britain, but by the mid-9th century *Alba* has the more restricted and specific meaning of the territory of the united kingdom of Picts and Scots in the north, Scotland.

British

In common parlance, 'British' can, as an adjective, refer to the island of Britain in a matter-of-fact and unambiguous way. As a geographic term, 'British' pertains to England, Scotland (Alba), and/or Wales (Cymru). As a political and cultural term, 'British' is

less straightforward and has changed its possible meanings over the course of modern history. The present British state, the United Kingdom, did not exist before the Act of Union of England and Scotland in 1707. Prior to the ascension of James Stewart (King James VI) of Scotland to the throne as King James I of England in 1607, the sense of 'British' did not regularly subsume 'English' and 'Scottish' as it can now. An older sense of 'British' was then current, referring to the inhabitants of Britain before the settlements of the Anglo-Saxons (see ANGLO-SAXON 'CONQUEST') and Gaelic Scots; in other words, 'British' designated the ancient Brythonic population of pre-Roman Britain and their descendants—the Welsh, Cornish, and Bretons. As such, 'British' was an alternative name for the Welsh, Cornish, and Breton languages. This usage recalls an old understanding that England and English were not the first country and language in Britain, and that 'Britain', as a name as well as an inhabited place, predated England. This older sense of a pre-English, non-English Britain became increasingly confusing and incongruous as the newer sense 'of the island of Britain' (regardless of language or ethnicity) took hold. The latter sense was fostered by the growth and development of the British state and Empire centred on London, England. 'British' had generally ceased to be a possible synonym for 'Welsh' by the mid-19th century. The imperial and post-imperial sense of 'British' thus articulates a popular revisionism in which Britain's Brythonic past has tended to be forgotten as incompatible with the dominant ideology of the United Kingdom and the British Empire. The usage of 'British' varies according to historical and social context in its application to the Irish of Ireland (of Northern Ireland since 1922), the Manx of the Isle of Man (Ellan Vannin), and other parts of the former British Empire, British Overseas Territories, or British Crown Dependencies.

During the 19th and 20th centuries the term 'ancient Britons', rather than simply 'Britons', was often used to distinguish Britain's pre-Roman, pre-Anglo-Saxon inhabitants from 'Britons' in the modern imperial sense.

In Celtic studies and historical linguistics, 'British' retains part of the range of its older sense, meaning the oldest attested stage of the Celtic speech of Britain. 'British' is used in this sense in this Encyclopedia. Some contemporary writers also use 'British' to mean the language group that is called Brythonic here, i.e., the group to which Breton and Welsh belong. Historians sometimes refer to Brythonic-speaking groups of the early Middle Ages as 'British' in counter-distinction to the English or Anglo-Saxons, Picts, and the Gaels of Ireland and Scotland. However, to contrast English and British groups in this way can be confusing, owing to the everyday meaning of 'British' described above.

In the narrow specialist sense as the ancient Celtic language of Britain, a sizeable body of proper names in British survives from the time of Caesar's expeditions (55 and 54 BC) onwards. The language of this period agreed quite closely with the contemporary speech of Ireland (so far as the nature of the latter can be reconstructed), termed Primitive Irish, but in a number of ways rather more closely with the Celtic languages found in Transalpine Gaul, Cisalpine Gaul, and Galatia. Many of the first attested tribal and personal names in British—known from legends on coinage and Graeco-Roman writers—occur on both sides of the Channel. Therefore, the term Gallo-Brittonic is sometimes useful for elements of a common written language shared by Gaulish and British. Relative to Gaulish and British, Celtiberian and Lepontic show features that are more conservative (see also P-CELTIC).

In *Language and History in Early Britain* (1953), Jackson assigned the term 'Late British' to the final stage of British speech in which polysyllabic words still retained their inherited Indo-European final syllables, even though these syllables had by then become weakened and indistinct. In real time, Jackson assigned this transition Late British period to the interval between the mid-5th and mid-6th centuries. For example, British Cunobelinos would become Late British **Cunobelinəh* by *c.* 450, then Early Welsh *Cun'belin'* (Welsh *Cynfelyn*) by *c.* 550. In the years since Jackson wrote, this idea of a century-long Late British phase has not been adopted with enthusiasm by many linguists. A model more consistent with the development of well-known languages would involve a very gradual weakening and loss of final syllables in popular speech. These long-term linguistic changes then seemed to appear suddenly because the educational system underwent rapid change owing to the collapse of the Western Roman Empire and the rise of the new educational institution with

the early Church. In other words, the Roman spelling *Cunobelinus* continued as long as the Roman educational system continued, even though British speakers had probably tended to pronounce the same name as */kunvelɪn/* for a long time. Major changes took place in the composition and training of the literate classes in Britain during the 5th and 6th centuries, which caused the abandonment of the old ROMANO-CELTIC spellings for those more consistent with current spoken forms (see Martinet, *Language* 28.192–217).

Britonia is a name used for an extensive region in what is now GALICIA in north-west Spain that was settled by Christian BRITONS (or less probably, Britons who subsequently became Christians) in the post-Roman period. In the contemporary records of the synod of the churches in the kingdom of the Suevi that was held in Braga in 572, one of the dioceses is called *Britonensis ecclesia* 'the British church' and its episcopal see *sedes Britonorum* 'see of the Britons', probably to be identified with the monastery of Santa Maria de Bretoña near Mondoñedo. In 572 its bishop bore a BRYTHONIC name, which was recorded in a standard early Neo-Brythonic spelling, *Mailoc* < Celtic **Maglākos*. The see appears again as *Britaniensis ecclesia* in a source of the 7th century. The parish churches designated as being *intro Britones* extended over a large territory from near the town of Mondoñedo northward to the sea and east across the river Eo into Asturia. This probably reflected a substantial movement of people who had come either directly from BRITAIN or by way of Brittany (BREIZH).

Britons

§1. DEFINITIONS

(i) In non-specialist English with reference to the period since the UNION of England and Wales (CYMRU) with Scotland (ALBA) in 1707, 'Briton' most usually means an inhabitant of the island of Great Britain. With reference to native-born inhabitants of Ireland (ÉIRE), the term 'Briton' or 'West Briton' has sometimes been used since the late 18th century, and is mostly limited to self-consciously Unionist discourse (see ACT OF UNION).

(ii) A fairly widespread usage, though not common amongst non-specialists in the United States, is for Britons to refer to the ancient and early medieval, pre-Anglo-Saxon inhabitants of Britain, including those who migrated to Brittany (BREIZH) during the 4th to 7th centuries AD. The corresponding Welsh term, *Brython* (singular and plural), does not usually have the first meaning, but only the second, and is sometimes used in an ethno-linguistic sense for the Welsh, Breton, and Cornish peoples of more recent times. For 'Briton' in the first sense, Modern Welsh generally uses *Prydeiniwr*, a relatively recent coining derived from the ancient name of the island of BRITAIN, Welsh (*Ynys*) PRYDAIN. The Early Irish ethnonym *Brit*, plural *Bretain*, also has the second sense, or can be simply translated as 'Welsh(man/-men)' in many contexts.

The meanings in use in CELTIC STUDIES and related disciplines are all based on the second definition. For such specialist purposes, 'Briton' may be defined as 'a native speaker of BRYTHONIC (the P-CELTIC language of Britain and, later, Brittany), during the period from the first evidence of such speech in the pre-Roman IRON AGE until the central Middle Ages'. Referring to the period after the Norman conquest of England (1066), it is more usual to speak of the P-Celtic Welsh, Bretons, Cornish, and Cumbrians separately, since these groups have traceable separate political histories from then on. For the earlier Middle Ages, one finds a mixed

usage among historians: 'Britons' and 'British', as well as the more geographically specific terms. In the contemporary Latin sources of the pre-Norman period, it is more common not to distinguish on a geographical basis; instead, the terms *Brittones, Britanni, Brettones* occur, to be translated 'Britons' in the second meaning. The corresponding Old English word was *Bryttas* or *Brettas,* and Old English *Wealas* 'Welsh' has the same meaning—'Brythonic P-Celts'—not limited to the people of the territory that is now Wales.

§2. DERIVATION

Phonologically, the modern forms English 'Briton' and French *Breton* require a preform with an old double *-tt-*. Welsh *Brython* and Irish *Bretain* likewise imply an Old Celtic *Brittones*. The modern English spelling with a single *t* has probably been influenced by the Latin spelling *Britones,* common in the Middle Ages, but less correct. *Brittones* appears in Latin texts from the 1st century AD onwards. There is some doubt as to whether the vowel *-o-* is long or short in Latin *Brittones*. In Celtic, it must originally have been short. Within the Roman period, if not earlier, Brythonic Celtic developed a strong stress on the second-to-last syllable of most polysyllables; hence *Brittónes*. As in contemporary spoken Late Latin, a stressed originally short vowel followed by a single consonant tended to be pronounced long in Late BRITISH, hence [brɪttóònəh]; thus, the name could have been borrowed by Latin from Brythonic with either a short or a long vowel. Greek Βρίττωνες *Bríttōnes* only appears in Byzantine sources (for example, Procopius † *c.* 570 AD) and is probably a transliteration of the Latin.

The alternative Latin form *Britannus,* plural *Britanni,* was in use throughout the Roman period and the Middle Ages. It is attested earlier than *Brittones*—for example, in the writings of CAESAR in the mid-1st century BC. As seen in TACITUS's AGRICOLA (early 2nd century AD), *Britanni* once referred to the inhabitants of the entire island, including the Caledonians of the far north. The corresponding Greek form occurs in numerous variants—including nominative plural Βρετ(τ)αν(ν)οί *Bre(t)tan(n)oí,* Πρετ-(τ)αν(ν)οί *Pret(t)an(n)oí*. The primary form seems to have been Πρεταvοί *Pretanoí,* with *P-,* one *t,* and one *n*. It thus corresponds exactly to P-Celtic **Pritanī* 'Britons', the preform that became Welsh *Prydain* 'Britain'. The group name **Pritanī* was probably encountered by the Greeks when PYTHEAS of MASSALIA made his voyage along Europe's Atlantic coast *c.* 325 BC. The development of the forms with *B-* from an original *P-* has an analogue in Latin *gladius* 'sword' from the Old Celtic **kladios* that has become Welsh *cleddyf*. Similarly, the ancient battle with the Latin name *mons Graupius,* probably refers to a place in north Britain with the Celtic name **Kraupios*. In these cases, an *-r-* or *-l-* is causing a preceding voiceless consonant to be heard as the corresponding voiced consonant. If this is the explanation, *Brittones* then reflects a borrowing back into British from Latin. Whether that is the source of *Brittones* or not, it replaced **Pritanī* as the name of the people, leaving it only as the name of their island, Welsh *Prydain*. One trace of *Prydain* used in its older sense as a group name rather than a place-name is the personal name *Predan* 'the Briton' or perhaps 'the Pict', borne by a prince of Scottish DÁL RIATA of the late 6th century to the early 7th century, son of AEDÁN MAC GABRÁIN.

**Pritanī* means 'people of the forms'; compare Old Irish *cruth* and Welsh *pryd* 'form', from COMMON CELTIC **kʷritu-*. Some writers have seen in this etymology a connection to the possibly Latin ethnonym *Picti* 'PICTS', sometimes thought to have originated as a Latin slang term, 'painted people'. However, the Welsh *prydydd,* literally 'maker of forms', was the highest grade of poet in the pre-Conquest period (see BARDIC ORDER). (In Irish, the cognate of *prydydd* occurs twice as OGAM QRITI.) Therefore, **Pritanī* 'Britons' < 'people of the forms' could originally have referred to people sharing particular linguistic forms and verbal traditions in addition to, or as opposed to, material culture.

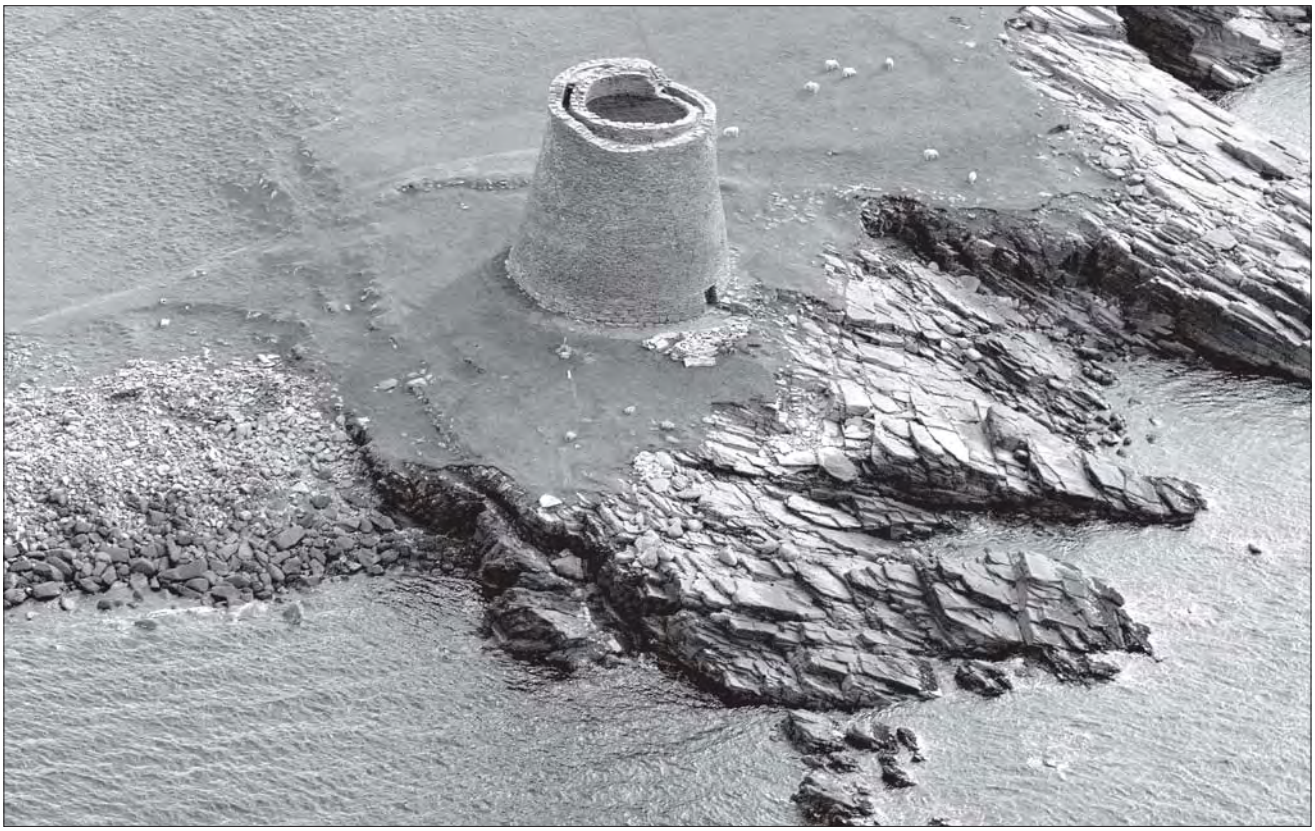
Brochs are the product of a Scottish tradition of monumental dwelling construction during the IRON AGE. The distribution of these dry-stone built circu-

lar tower-houses is primarily northern. The vast majority lie in Caithness (Gallaibh) and on the Orkney (Arcaibh) and Shetland (Sealtainn) archipelagos, with lesser concentrations to the west on Skye (An t-Eilean Sgitheanach) and the Outer Hebrides (Innse Gall). These impressive constructions form a strong visual presence in the landscape of the HIGHLANDS and Islands, where many of them still survive almost to their original height (the Broch of Mousa on Shetland is generally cited as the best preserved example, standing some 13 m high). Dating of brochs is still problematic, but they appear to span the last century or two BC and the first two or three centuries AD.

The intricate layout of brochs, with their two concentric layers of walling, inter-mural galleries and rows of 'voids', has long been a puzzle. Recent architectural examination has suggested that the primary reason for these features is related to keeping the living space of the interior dry and warm. Brochs have sometimes been regarded, on the basis of their size and defensive walls, as mainly defensive and only occupied sporadically, but current archaeological consensus views them very much as functioning farmsteads and, rather than architectural oddities, as a complex variation on the round house. Up to three floors of living space may have been utilized, although the uneven inner walls and ground surface noted at some brochs (e.g. Dun Carloway, Lewis/ Leòdhas) suggest that the lowest level was probably not inhabited, and may have served as a storage space. However, de-

A cutaway drawing showing life in the broch tower of Dun Carloway, Lewis. The ground floor is used for animal shelter and storage, while domestic activity is concentrated on the upper floors.



Aerial view of the broch at Mousa, Shetland

fensive functions must continue to be viewed as an important factor, especially as some brochs also possess external defences; that at Dun Telve, Lochailsh, featured three surrounding lines of bank-and-ditch ramparts.

When the essentially northern distribution of these monuments is taken into account, the once frequently suggested association between brochs and the tribes from which the PICTS emerged *c.* AD 300 is questionable, only a handful of brochs being present in what was later to become Pictland proper. However, it is fair to say that the broch-builders may have formed a significant element of the ancestral background of the Picts.

SÓF

Bromwich, Rachel, née Amos, was born in Brighton in 1915, and spent part of her early childhood in Egypt, and then in Cumbria, north-west England. She was educated at the Mount School, York, and Newnham College, Cambridge, where she read English in Part One of the Tripos, and Anglo-Saxon, Norse and Celtic—the innovative interdisciplinary course pioneered by H. M. CHADWICK—in Part Two, graduating in 1938. Subsequent study was with Sir Ifor WILLIAMS at the University College of North Wales, BANGOR (GWYNEDD), and Michael O'Brien at Queen's University, Belfast (Béal Feirste). In 1945, she was appointed lecturer at the University of Cambridge, and Reader in Celtic Languages and Literatures in 1973. On her retirement in 1976, she settled in Bethesda near Bangor, moving to ABERYSTWYTH in 1984. *Trioedd Ynys Prydein*, which was published in 1961, became an indispensable source of information on the characters and events listed in the Welsh TRIADS, detailing the extent to which they were known to poets and prose writers, as well as outlining the purpose and evolution of the triadic corpus. The work was informed by a wide knowledge of Latin, Irish, and Continental sources, and a similar breadth of approach is evident in articles on the CYNFEIRDD, the edition (with D. Simon Evans) of CULHWCH AC OLWEN, and in her important stud-

ies of Dafydd ap Gwilym and the literary milieu of the Aeron valley. The scholarship of Ifor Williams has been an abiding inspiration: she produced a collection of his essays, *The Beginnings of Welsh Poetry*, and an English edition of Armes Prydein, as well as editing (with R. Brinley Jones) the pioneering *Astudiaethau ar yr Hengerdd: Studies in Old Welsh Poetry*, published in 1978.

Brooke, Charlotte (1740–93) was an important early modern collector and translator of poetry in the Irish language. Born in Co. Cavan (Contae an Chabháin), she was one of the youngest of 22 children of the author Henry Brooke. Devoting most of her adult life to the care of her elderly father, she did not begin publishing until after his death in 1783, and shortly before her own death in 1793.

Her most influential work remains *Reliques of Irish Poetry* (1789), a collection of translations of Irish verse intermixed with Brooke's scholarly essays on Irish-language poetry up to Carolan (Toirdhealbhach Ó Cearbhalláin †1738). In order to forestall questions about the poems' authenticity in the wake of the Ossian controversy (see MACPHERSON; OISÍN), she included transcriptions of the Irish-language originals in the volume. The *Reliques* concludes with her poem, 'Maön: an Irish Tale', written in the bardic style. The *Reliques* influenced a generation of Irish poets, from Thomas Moore to Lady Morgan (see OWENSON), and formed an important and early part in a revival of Irish-language literature in the late 18th century that continued through the next century from James Hardiman to the Young Irelanders and later the Celtic renaissance.

During her very short career in print, she also produced further translations that were posthumously published in the *Gaelic Magazine*, an edition of her father's drama and poetry that included her 'Life of Henry Brooke', and a popular children's volume, *The School for Christians*. She also tried her hand at drama, but her tragedy *Belisarius* was never published.

SELECTION OF MAIN WORKS
Reliques of Irish Poetry (1789); *School for Christians, in Dialogues, for the Use of Children* (1791); *Poetical Works of Henry Brooke* (1792); *Bolg an Tsolair, or, Gælic Magazine* (1795).

Bruce, Robert de (1274–1329), also 'The Bruce' or 'Brus', was Earl of Carrick, Lord of Annandale and, from 1306, King Robert I of Scotland (Alba). Born and brought up at Turnberry Castle (Carrick), he married Elizabeth de Burgh (1302) with whom he had a daughter, Marjorie, and a son and successor, David Bruce. Robert de Bruce was a strong man, an excellent soldier, and an inspiring leader; he was a devout Christian and a native speaker of Gaelic. It is no surprise that stories about him, and his romantic and ultimately successful struggle for Scottish independence, abound.

The career of Robert de Bruce resolved the drawn-out struggle for the Scottish Crown and ultimately the fate of Scotland, following the untimely deaths of King Alexander III in 1286 and his only surviving heir in 1290. He continued the military campaign against English occupation begun by William Wallace and gave it a truly national character. In 1306, he was crowned King Robert I of Scotland in defiance of Edward I, and led a ten-year campaign of guerrilla warfare against the English troops that occupied Scotland. He was victorious at the battle of Bannockburn, triumphing over King Edward II. In 1324, he was formally recognized as king of Scotland by Pope John XXII; with the 1328 'Treaty of Edinburgh', he won formal recognition of Scottish sovereignty from Edward III. The latter, especially, had

far-reaching historical consequences (see SCOTTISH PARLIAMENT; NATIONALISM).

Robert de Bruce outlived and triumphed over three generations of English kings. Having achieved his life's work and secured Scottish independence, he died in 1329 at his manor of Cardross (Càrdainn Ros) on the river Clyde. His body lies at Dunfermline (Dún Phàrlain) Abbey; his heart is buried at Melrose Abbey.

Orthostats R21 & R20 inside the tomb at Newgrange, showing Neolithic rock art

Brug na Bóinne (the hostel of the Boyne, Newgrange), alternatively known as Brug maic ind Óic (the residence of Oengus son of the DAGDA), and SÍD in Broga, is usually identified with the important archaeological complex on the bend of the river Boyne (BÓAND), most importantly the great passage tombs of Newgrange, County Meath (Contae na Mí) and possibly also including the tombs of Knowth and Dowth (DUBHADH). The Brug is the otherwordly residence of Bóand, the Dagda, and most importantly their son OENGUS MAC IND ÓC. It is also reputed to be the burial-place of the god LUG. Brug na Bóinne provides the setting for one of the finest early Irish tales, *Aislinge Oengusa* ('The Dream of Oengus'), which is usually studied as a facet of the MYTHOLOGICAL CYCLE. Oengus falls ill while pining for a mysterious, beautiful woman who comes to him in a dream. (The theme is comparable to that of the Welsh 'Dream of MACSEN WLEDIG'.) Oengus spends a year searching for the woman and, with the assistance of Bodb Derg, identifies her as Caer, daughter of Ethal Anbúail. When the lovers finally meet, they fly to Brug na Bóinne as swans whose music is so magical that anyone who hears it cannot sleep for three days and nights. The archaeological complex to which Brug na Bóinne belongs is one of the most important in Ireland (ÉRIU). The megalithic passage tombs were built by Neolithic farming communities between 3260 and 3080 BC. The main 4th-millennium burial passage incorporates a remarkable solar alignment, by which a slender ray of light illuminates the back wall of the central burial chamber at the sunrise of the winter solstice and for a few mornings before and after. The larger tombs are surrounded by a cluster of smaller satellite tombs and also by Late Neolithic, Beaker Copper Age (*c.* 2500–*c.* 2000 BC), and Early Bronze (*c.* 2000–*c.* 1500 BC) enclosures constructed over the following millennium from stone, timber, and earth. It is clear that this landscape was the focus of intense ritual activities, probably including seasonal communal assemblies and inauguration ceremonies. While this activity waned considerably in the later Bronze Age (*c.* 1200–*c.* 600 BC), it would seem that Newgrange in particular became the focus of Romano-British/Celtic cultic activity during the 3rd and 4th centuries AD. In AD 863, the Vikings entered the tombs of Knowth and Dowth, probably reflecting a tradition of ancient pre-Christian

treasure current at the time.

Edel Bhreathnach

Bruide mac Bili/Bredei son of Bili, probably a son of the king of Dumbarton (see YSTRAD CLUD) and grandson of a Pictish king, ruled among the PICTS from 671 to 692 (see PICTISH KING-LIST; SCOTTISH KING-LISTS). Perhaps initially a client-king of Northumbria in Fortrinn in southern Pictland or a northern Pictish ruler, Bruide attacked the Orkneys (681), and ended Northumbrian dominance in Pictland by killing King ECGFRITH, his kinsman, at NECHTANESMERE (685).

On the name *Bruide/Bredei*, see BRUIDE MAC MAELCON. For *Bili*, see BELI MAWR.

Nicholas Evans

Bruide mac Maelcon/Bridei son of Mailcon was a powerful king of the PICTS who ruled from 555/6 to 585/6, perhaps only in northern Pictland. In ADOMNÁN's Life of St Columba (COLUM CILLE) the saint won Bruide's friendship through miracles at the pagan king's stronghold near Loch Ness. However, in BEDA (*Historia Ecclesiastica* 3.4) Bruide gave Iona (EILEAN Ì) to Columba, and in the PICTISH KING-LIST Columba converted Bruide, reflecting Pictish traditions of Bruide's rôle in the Pictish conversion.

The PICTISH name *Bridei* or *Bredei*, *Bruide* in GAELIC sources, was common amongst the kings of the Picts. It has no obvious cognate in any of the other CELTIC LANGUAGES. However, it is possibly based on the Celtic verbal root *brud-* 'reject, repel' found in Old Irish *frithbruth* 'expulsion, rejection' (Vendryès, *Lexique étymologique de l'irlandais ancien* s.v. brud-): therefore, possibly *Bridei* < Celtic **brudios* 'opponent'. *Maelcon*, spelled *Meilochon* by Beda, is Celtic, corresponding to Welsh *Maelgwn* < BRITISH *Maglocunos* 'princely hound'. It has been suggested that Bruide was the son of the powerful King MAELGWN GWYNEDD (†547), which is not impossible, but unprovable.

Nicholas Evans

Bruiden (pl. *bruidnea*) was the term normally applied to a hostel or large banqueting hall in early Ireland (ÉRIU), but might also simply mean a (large) house or mansion. *Bruiden* was also used to denote the festive hall of eternal feasting in the OTHERWORLD. Indeed, certain supernatural characteristics were associated with the *briugu*, the hospitaller, who ran the *bruiden* (O'Rahilly, *Early Irish History and Mythology* 121–9). A *briugu* was legally obliged to provide free and limitless hospitality, as illustrated by the 10th-century tale *Esnada Tige Buchet* ('The Melodies of the House of Buchet'), which describes how the hospitaller Buchet is almost ruined through the perpetual visits of 32 princes, each of course arriving with a large retinue. Being a hospitaller was a highly respected profession and, according to the early Irish LAW TEXTS, a chief hospitaller would be of equal status to a chief poet or the lowest grade of king.

The importance of hostels within early Irish society is reflected in the literature, and there are several tales set in a *bruiden*, the most famous of which is TOGAIL BRUIDNE DA DERGA ('The Destruction of Da Derga's Hostel'). It describes the fate of the legendary high-king Conaire Mór (C. the Great), who takes shelter with his men in Da Derga's hostel where he finally

meets his death. According to Scéla Mucce Meic Dá Thó ('The Story of Mac Dá Thó's Pig') there were five hostels in Ireland, belonging to Mac Da Réo, Da Derga, Da Thó, Da Choca, and Forgal Manach, with a sixth hostel (Bruiden Blaí Briugad) mentioned in the tale of Da Choca's hostel. The literary descriptions illustrate the abundant hospitality provided by such hostels: seven doors would lead into the premises, seven ways would go through it, while seven hearths would maintain seven cauldrons, each containing a whole ox with a flitch of bacon.

Brut Dingestow is the modern name given to a 13th-century Welsh translation of Historia Regum Britanniae ('History of the Kings of Britain'), i.e., the *brut* (chronicle) found in a manuscript which was once part (MS 6) of the Dingestow Court collection (now National Library of Wales MS 5266; see LLYFRGELL GENEDLAETHOL CYMRU). The text, representing one of the three earliest Welsh translations of the *Historia*, has been edited by Henry Lewis.

Brynley F. Roberts

Brut y Brenhinedd (*Brut*, roughly 'British chronicle', of the kings) is the name given to Welsh translations of Geoffrey of Monmouth's Historia Regum Britanniae. The *Historia*, carrying the implicit authority of a Latin text and the explicit claim of being based on a 'British' book, was accepted wholeheartedly in Wales (Cymru) by both the native and Latinate learned classes as an authentic account of British/Welsh history. It reflected some features of the traditional LEGENDARY HISTORY in its Trojan origins for the Britons (see TROJAN LEGENDS) with its emphasis on a single British crown and its claim to British hegemony which, though lost to the English, would be restored, as the prophecies foretold, in the fullness of time. Whatever criticisms the *Historia* contained of some former British kings—foolish, sinful, feuding or merely ineffective—the book not only provided the first continuous narrative of Welsh history and of the necessary national hero, Arthur, but also gave a basis for a sense of national pride in a glowing past and a hope for the future, both essential elements at times of civil upheaval and national trauma. The predilection to embrace such a glorious history was strengthened in that there was much here which appeared to confirm its authenticity. Many of the personal names were recognizably Welsh, and certain of the episodes and references could be identified in the accepted traditional history of Wales, as noted in the section on the *Historia* below. Manuscripts of the Latin work, and separate copies of Merlin's PROPHECY (see MYRDDIN), circulated in Wales and were studied and annotated.

The *Historia* quickly became canonical and was absorbed into native *cyfarwyddyd* ('oral storytelling, vernacular tradition'; see CYFARWYDD) by means of a number of translations which began to appear in the 13th century and which were extensively copied. The first two translations may have been produced contemporaneously at the same monastic centre, perhaps the Cistercian Valle Crucis abbey (Glyn-y-groes), near Llangollen, Denbighshire (sir Ddinbych). The two earliest manuscripts of these versions, NLW Llanstephan MS 1 and NLW Peniarth MS 44, mid-13th century (Peniarth 44 may be marginally the earlier), are in the same hand and some quires of the former were inadvertently bound in the other at an early date. The translations were, however, made from different Latin texts of the *Historia* and the translators worked to different methods, Peniarth 44 progressively abbreviating as he went along, Llanstephan 1 continuing

to render the Latin verbatim to the end. Nevertheless, this is the translation that first introduces a major episode, CYFRANC LLUDD A LLEFELYS, from *cyfarwyddyd* into the Welsh text at the appropriate point in the narrative, an insertion which is found in all later versions. A third (slightly later) 13th-century version is BRUT DINGESTOW, apparently a GWYNEDD text, which borrows in part from Llanstephan 1 and which is a close, but not a slavish, translation of the *Historia*. Unlike the Peniarth 44 version, both the Llanstephan 1 and the Dingestow translations were copied assiduously, and sometimes revised, in a number of other manuscripts. At a later stage, probably in south Wales in the 14th century, these two versions were brought together to produce the 'edition' found in LLYFR COCH HERGEST ('The Red Book of Hergest') and numerous other manuscripts where the text up to Merlin's prophecy follows the Llanstephan 1 version, but follows the Dingestow version after the prophecy; the prophecy seems to be an independent version. More remarkably, all the manuscripts of the Red Book 'edition' use *Brut y Brenhinedd* as the central portion of an extended history of Wales, ranging from the Trojan war, represented by a translation of Dares Phrygius's *De Excidio Troiae* (see YSTORYA DARED) as a prologue, to *Brut y Brenhinedd*; this is followed by BRUT Y TYWYSOGYON, as was the original motivation of the compiler of that chronicle, which brings the story almost to the 'contemporary' period (for the compiler).

Two other translations of the *Historia* were made in the 14th century, one a close rendering, perhaps from Gwynedd, in NLW Peniarth MS 23 and other manuscripts, the other a more racy version which inserts a number of elements from other literary texts, including Wace's French Arthurian Chronicle based on Geoffrey, *Roman de Brut* (or a text derived from Wace) and some material taken from a Latin chronology. This, too, is preceded by a translation of 'Dares Phrygius' and followed by *Brenhinedd y Saesson* ('Kings of the English'). The two primary manuscripts of this version—BL Cotton Cleopatra B.v and NLW MS 7006 (Black Book of Basingwerk; see DINAS BASING)—derive from north-east Wales, and the version seems to have circulated in that area. It was used in a compilation of Welsh history attributed to the 15th-century poet GUTUN OWAIN and was the main source of the so-called *Brut Tysilio*. The mangled version of Geoffrey's closing reference to Walter's ancient British book found in *Brut Tysilio* led to its being taken as Geoffrey's source (the ancient British book itself) and gave it unwarranted, and misleading, authority. All these versions follow the *Historia* quite closely and the translators and scribes felt little need to change or to comment on the text, a sign of the distance, generally, between the *Historia* and the native *cyfarwyddyd*. The only major omission is that the translator (or perhaps the scribe) of Peniarth 44 does not include Merlin's prophecy 'since people find them difficult to believe'. Other translators sometimes make a comment, e.g., that Arthur's slayer is not named, or that the 'book' is ambiguous about Arthur's end (both in *Brut Dingestow*), and there are a few glosses. The translators add traditional epithets to personal names where possible, and an occasional reference to a Welsh source, e.g., a triad (see TRIADS), a proverb or *vita sancti*, or an attempt to iron out an inconsistency, provide other links with native history.

The production of so many separate translations and 'editions' from the 13th to the 15th centuries and the continued copying of these texts or of amalgams of them down to the 18th century testify to the importance of the *Brut*, or of the *Historia*, for Welsh historians and readers from its first appearance and for long after it had lost its authority among English antiquaries and historians (cf. RENAISSANCE).

Brut y Tywysogyon ('The Chronicle of the Princes') is the name which, by the 17th century, came to be used to describe the medieval chronicle of the history of Wales (CYMRU) under its kings and princes. It ex-

ists in two main versions, the NLW Peniarth MS 20 version (see HENGWRT) and the Red Book of Hergest (LLYFR COCH HERGEST) version, two independent translations of a lost Latin text. The translations were probably made between the last years of the 13th century and *c.* 1330, and the composition of the Latin chronicle on which they were based can probably be attributed, in the form reflected in the translations, to the years following the death of LLYWELYN AP GRUFFUDD in 1282.

The chronicle begins in 682 with the death of CADWALADR Fendigaid (the Blessed), the point at which the HISTORIA REGUM BRITANNIAE by GEOFFREY OF MONMOUTH comes to an end, and it is likely that the Latin original of the *Brut* was conceived as a continuation of the *Historia* and designed to extend from the demise of the last of the kings of the BRITONS to the death of the last of the princes of Wales, thereby describing a distinctive epoch in the history of the Welsh nation. This text was based upon annals kept first at ecclesiastic centres, notably at St David's (Tyddewi, see DEWI SANT) and LLANBADARN FAWR, and then, from the beginning of the 13th century at the Cistercian abbey of Strata Florida (YSTRAD-FFLUR) and possibly other houses of the Order (see CISTERCIAN ABBEYS IN WALES). These are represented by three important extant texts: BL Harley MS 3859, PRO, E 164/1 (The Breviate of Domesday), and BL Cotton Domitian MS A.i. The annals are characteristically brief and terse, but many of the entries in the *Brut* in the period *c.* 1100–75, such as those that describe the attack on ABERYSTWYTH castle in 1116 or the death of Rhun ab OWAIN GWYNEDD in 1146, are greatly elaborated in a rhetorical style, but contain no factual material additional to what is contained in the original annal. From the late 12th century onwards the entries in the *Brut* become more extended by virtue of their fuller factual content, and this reflects the more substantial record that was by then a feature of the Latin original. This is evident from the survival in the *Cronica de Wallia* of extended entries for most of the years 1190–1266, and in the Breviate of Domesday text of the annals for the years 1255–63. It is thus clear that a substantial Latin text was being written during the century preceding the death of Llywelyn ap Gruffudd. Then a chronicler, probably working at Strata Florida, composed a text, extending from the death of Cadwaladr Fendigaid, in which he elaborated the brief entries of the late 11th and 12th centuries to match the more extended record of the later period that he had in the text before him. One of the Welsh translations (the text from which the Red Book of Hergest version is derived) was probably completed at Strata Florida, the other possibly at Valle Crucis (Glyn-y-groes), near Llangollen, Denbighshire (sir Ddinbych), where the Peniarth 20 manuscript was written and where a continuation of the *Brut* from 1282 to 1330 was composed.

Brenhinedd y Saesson ('Kings of the English') is another version of *Brut y Tywysogyon*, also derived from an original Latin text, in which material from English chronicle sources is combined with that from the original text of the *Brut* to give a composite chronicle of the history of Wales and England extending, in the BL Cotton Cleopatra B.v manuscript, from 682 to 1188, with a composition in WELSH in the Black Book of Basingwerk (see DINAS BASING) extending the narrative to 1461. Between them, *Brut y Tywysogyon* and *Brenhinedd y Saesson* provide a historical source in which factual record is blended with a sympathetic account of the endeavours and tribulations of the princes who, under God's benign protection, bore responsibility for the destiny of a nation with a deep sense of antiquity and honour.

Brychan Brycheiniog was a Welsh saint and king of Brecheniauc, Modern BRYCHEINIOG (Breconshire). His career is usually reckoned as belonging to the 5th

century AD. Brychan is a legendary figure, and most facts about him are doubtful. However, Old Welsh *Brecheniauc* means the lands of a man called *Brychan* or *Brachan*; therefore, the kingdom has been named from the ruler-founder of this name, rather than the man taking his name from the place. (A similar argument can be made for the districts of north Wales said to have been founded and named by the descendants of CUNEDDA.) One piece of early evidence for the existence of such a kingdom is the courtly praise poem TRAWSGANU CYNAN GARWYN (probably *c.* 600), in which the honorand, King Cynan of the CADELLING dynasty, is said to have hostile relations with *Gwlat Brachan*, 'the land of Brychan', an alternative name for Brycheiniog.

Brychan seems to have been of Irish descent, and a possibly cognate Old Irish man's name *Broccán* is known, a diminutive of *brocc* 'badger'. The name is attested as both an OGAM Irish and Late ROMANO-BRITISH genitive BROCAGNI. The reality of Irish settlements in Brycheiniog (now southern POWYS) in the upper Usk (Wysg) and Neath (Nedd) valleys is demonstrated by the presence of six ogam inscribed stones in the area, dating roughly from the 5th and 6th centuries. A long-lived Irish dynasty took hold in DYFED in south-west Wales at about this time or somewhat earlier. There were also Irish settlements at the head of the Neath valley in Ystradfellte.

Brychan is said to have been the son of Marchell (a name derived from Latin *Marcella*), daughter of Tewdrig (the name is a Welsh adaptation of Germanic *Theodoric*), king of Garthmadrun, who went to ÉRIU (Ireland) and married the Irish prince, Anlach. After they returned to Garthmadrun, Brychan became king and the name of the kingdom was changed to Brycheiniog. According to another tradition, Brychan fathered a number of children who became saints. The tradition appears to have grown over time, and more than 70 different children are eventually attributed to him in Breton, Cornish, Irish, and Welsh sources, including Saints Cynon, Dyfrig, Dwynwen, Eluned, Gwen, and Mabon. He is also affiliated with the secular noble families of Cunedda and Caw (the legendary PICTISH father of GILDAS). According to the evidence of places named after Brychan, there seems to have been a missionary movement in the 5th and 6th centuries along a Roman road in Brycheiniog.

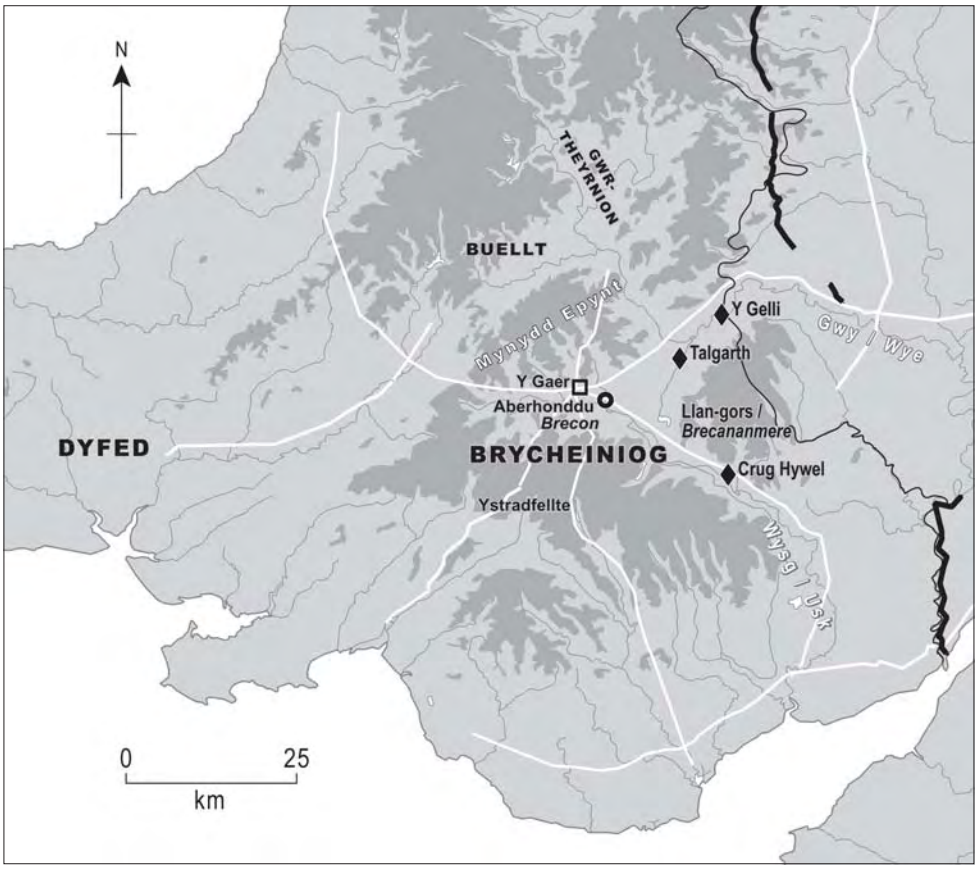
PEB, JTK

Brycheiniog was the name of an early medieval kingdom in what became the southern part of the historic county of Breconshire, Wales (CYMRU). The northern part probably corresponds to a separate kingdom named from its *caput* Buellt (Builth): the compiler of the HISTORIA BRITTONUM identified its then ruler as Ffernfael, who perhaps shared the kingship with his father Teudubir (Modern Welsh Tewdwr), and the origins of Buellt as emerging within a kingdom once ruled by GWRTHEYRN (Vortigern). Brycheiniog is represented by that area of later Breconshire south of Mynydd Epynt and chiefly drained by the river Usk (though with a stretch of its north-eastern boundary defined by the river Wye). The district had been crossed by east–west and north–south Roman ROADS focused on a fort at modern Y Gaer, not far west of Brecon (Aberhonddu). Several mid 8th-century kings of *Brecheiniauc* are mentioned in the Book of LLANDAF. Like a number of other Welsh kingdoms, Brycheiniog takes its name from its supposed founder. The Life of BRYCHAN claims that he descended from an Irish dynasty ruling in DYFED and that he fathered a large saintly progeny. The implication is that Brycheiniog was settled, or ruled, by a group from the Irish colony in Dyfed. Certainly, in the 8th century there was a coincidence of ruling names in the kingdoms of Dyfed and Brycheiniog over three generations.

In the following century, the Welshman ASSER reported that King Elise of Brycheiniog, in company with other southern kings, had been under threat from the kingdom of GWYNEDD and asked for protection from ALFRED the Great of Wessex. It is likely that it was this dependency which led, in 916, to an attack by Alfred's daughter Aethelflaed, lady of the Mercians, on the royal centre at *Brecananmere* (probably the excavated island crannog on Llan-gors lake) and capturing Brycheiniog's queen. Brycheiniog survived this attack, for in 925 the food-rent of its bishop was stolen by its king, Tewdwr son of Elise, who in due course was



Brycheiniog: the early medieval kingdom and pre-1974 county (Breconshire). Old county boundaries are shown as dashed lines, the modern English border as a thin black line, the surviving course of Offa's Dyke/Clawdd Offa as a heavy black line, and Roman roads as white lines.

obliged to come to an agreed judgement at Llan-gors. The compensation awarded to the bishop was subsequently commuted to a land grant. Tewdwr was described in charter witness lists as *subregulus*, presumably in subordination to Wessex, and kings of Brycheiniog were still attending the court of England in 934. The last king of Brycheiniog mentioned in the genealogies was the grandson of Elise. Thereafter Brycheiniog appears to have been subsumed into Deheubarth, the southern kingdom of Wales. As the Norman conquest of England rolled forward into Wales, Bernard of Neufmarché had gained a foothold at Brecon by 1088 and was established there by 1093 when the king of Deheubarth, Rhys ap Tewdwr, was killed, and a priory was established on the outskirts of the town. In the following century Giraldus Cambrensis, archdeacon of Brecon, included in his writings a description of the annual 'new year' ceremonies at Slwch, just east of the town, in honour of a local saint Eiliwedd. Other main settlements in the district in the medieval period included Talgarth, Crickhowell (Crucywel < Crug Hywel), and Hay-on-Wye (Y Gelli), all fortified with castles following the Norman occupation.

Brynaich (**Bernicia**), Old Welsh Bernech, Old English Beornice, was the name, in the early Middle Ages, of a region in north-east Britain, which was a dominant and expansionist kingdom in the 7th and 8th centuries. Although Brynaich was ruled by an Anglian dynasty for most of its recorded history, it is important to Celtic studies for several reasons:

(1) Its name is Celtic, i.e., **Bernacci/Bernaccia* 'people/land of the gap(s)' (brigantes; Jackson, LHEB 701–5).

(2) It is likely that Brynaich had been ruled, before the time of the Angles, by Britons in the 5th and early 6th centuries; this view is confirmed by a reference

to the 5th-century north Brythonic chieftain CUNEDDA 'leading men of Brynaich' in MARWNAD CUNEDDA and by a reference to *bedin Ododin a Breen[e]ych* 'the army of GODODDIN and Brynaich' in the *Gododdin*, as though the two kingdoms had been allies or even united at the time of the battle of CATRAETH. (Brynaich is not mentioned in the older of three versions of the text of the *Gododdin*, texts B1 and B2, where the enemy is Dewr/Deira [Dumville, *Early Welsh Poetry* 2–3; Dumville, *Origins of Anglo-Saxon Kingdoms* 215–19].) The fact that several of the great secular and religious sites of post-Roman Brynaich had Celtic names—for example Yeavering, Dunbar, Doon Hill, and Melrose—also suggests this interpretation, as does the archaeological evidence for the pre-Anglian origins of most of these sites (Alcock, *Economy, Society and Warfare among the Britons and Saxons* 221, 255–66; Hope-Taylor, *Yeavering*).

(3) King CADWALLON (†634) of GWYNEDD had a claim on the kingship of Brynaich (probably on the basis of descent from Cunedda), which is articulated in the panegyric MOLIANT CADWALLON. Cadwallon conquered and ruled Brynaich and its southern partner Deira (DEWR) for a year prior to being killed by Oswald.

(4) King Oswald (†642) and his brother and successor OSWYDD (†671) spent 18 years of their early lives (617–34) in exile amongst the Irish; they were, as described by BEDA, fluent and perfect speakers of Irish and ardent devotees of the Irish churches founded by COLUM CILLE of Iona (EILEAN Ì) and his successors (cf. LIBER DE VIRTUTIBUS SANCTI COLUMBAE). Writing in the 690s as ninth abbot of Iona, ADOMNÁN calls Oswald *totius Brittanniae imperator a Deo ordinatus* (Emperor of all Britain ordained by God). In other words, we have the clearly articulated notion of a divinely sanctioned high-kingship of Britain, placed in the hands of Iona's greatest secular patrons.

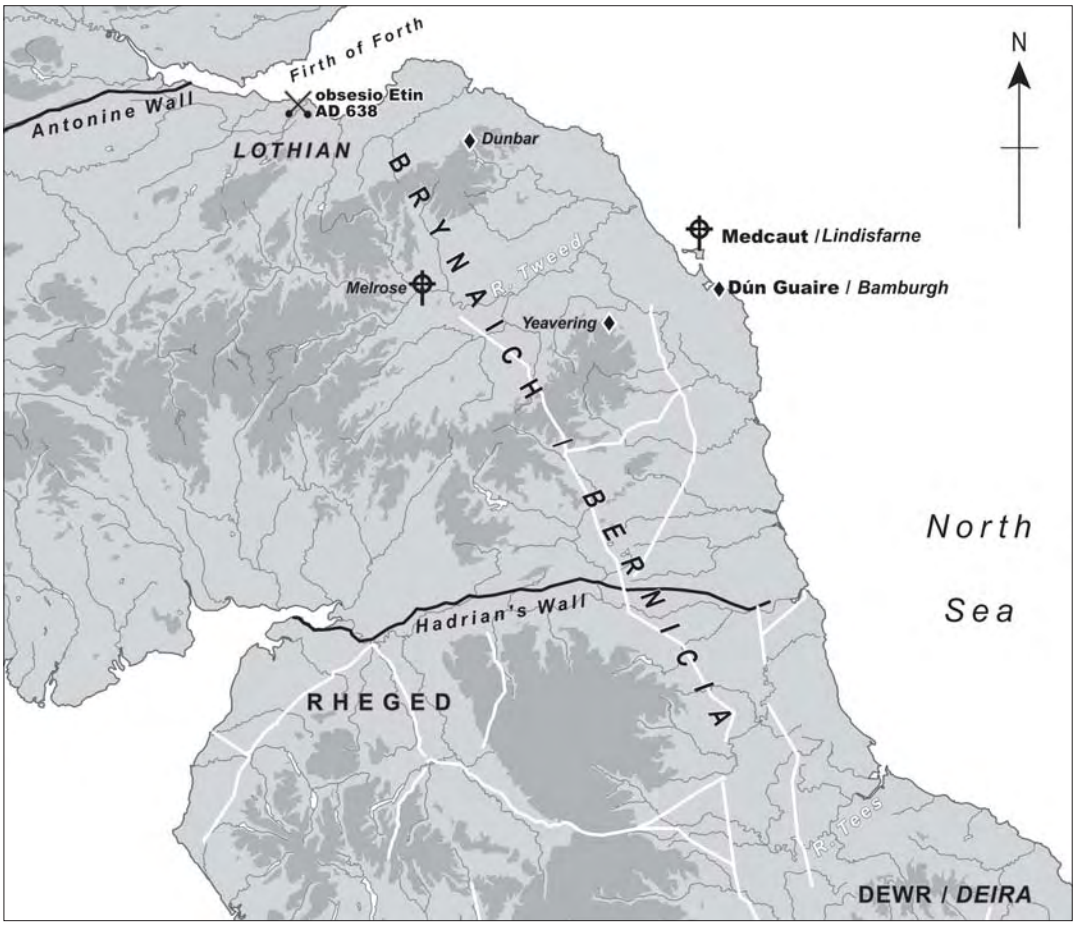
(5) Oswydd apparently had an Irish wife, Princess Fín, and a Brythonic one, Princess Rhieinfellt (Old Welsh Rieinmelth [HISTORIA BRITTONUM §57]), before marrying the Anglo-Saxon Eanfled. These earlier unions produced, respectively, Aldfrith/FLANN FÍNA, king of Northumbria 685–705, and Alchfrith, sub-king of Dewr/Deira. Aldfrith ascended the throne when he was around 50 years old, having spent most of his life as an Irish monastic scholar, and is regarded in Irish sources as *sapiens* or a scholar of great learning.

(6) Brynaich's second conversion under Oswald in 635 was undertaken by Irish clergy from Iona, and their influence remained strong for several decades, particularly at the Columban island monastery of LINDISFARNE, two miles from Brynaich's secular stronghold at Bamburgh.

(7) The Pictish king TALORCEN SON OF EANFRITH was the son of a short-lived Bernician king, who was himself the grandson of ÆTHELFRITH.

(8) Northumbria's so-called 'Golden Age' is understood largely as a vigorous fusion of Celtic (most particularly Irish) traditions and learning with the Anglo-Saxon, the fruit of which can be seen in the intricately illuminated Lindisfarne Gospels of the late 7th century (see ART, CELTIC [2]) and the extensive learning of the scientific and historical works of Beda with their evident debt to Adomnán and other Irish authors.

(9) English Brynaich is also relevant to Celtic studies as the enemy of its Celtic neighbours; thus, for example, URIEN of RHEGED fought successfully against the Bernician Angles, driving them off the mainland to Lindisfarne (*insula Medcaut*), according to *Historia Brittonum* (§63). King Æthelfrith (†617), the pagan father of Oswald and Oswydd, decisively defeated the Scots of DÁL RIATA, led by AEDÁN MAC GABRÁIN, at a place called Old English *Degsastān* in 605 (BEDA, *Historia Ecclesiastica* 1.34), and defeated and killed King Selyf of the CADELLING of POWYS at the battle of Chester (CAER) *c.* 615 (Chadwick, *Celt and Saxon* 167–85). That Æthelfrith was well known and remembered by his Brythonic enemies is shown by his Old Welsh nickname *Flesaur* (Twister) in *Historia Brittonum*. An attack by the Irish king of ULAID on Brynaich in the period after Æthelfrith's fall is noted in the ANNALS of Ulster at 622 (= 623): *expugnatio Rātho Guali la Fiachna mac Bāetāin* 'the storming of Ráith Guali [Bamburgh] by Fiachnae son of Baetán'. This event was apparently celebrated in a lost Irish saga, the name of which occurs in the medieval tale lists as *Sluagad Fiachna maic Baitáin co Dún nGuaire i Saxanaib* (The hosting of Fiachna son of Báetán to Dún Guaire in England) (Byrne, *Irish Kings and High-Kings* 112; Mac Cana, *Learned Tales of Medieval Ireland* 48, 59). Æthelfrith's grandson, King ECGFRITH, was killed and his army nearly annihilated by the PICTS at NECHTANESMERE in 685.



Brynaich / Bernicia, an early English kingdom and some of its Celtic connections. Roman roads are shown in white.

(10) After Brynaich had ceased to exist as a kingdom, the name continued to be used as a general term for English enemies in the Welsh court poetry of the Gogynfeirdd.

Brynaich's boundaries no doubt fluctuated, but in Anglo-Saxon times, as the northern sub-kingdom of Northumbria, its southern border was the river Tees (Blair, *Archaeologia Aeliana*, 4th series 27.46–59). If such a territorial division already existed in later Roman Britain, it is questionable whether it could have straddled Hadrian's Wall in this way. Brynaich probably extended its northern frontier to the Forth (Foirthe) under King Oswald by conquest in 638, at the time of the *obsesio Etin* (siege of Edinburgh/Dùn Èideann), noted in the Annals of Ulster at 638 (Jackson, *Anglo-Saxons* 35–42). Then, or at about this time, with the annexation of Lothian in the present-day Lowlands of Scotland (Alba), Brynaich had become more or less coterminous with the old Brythonic kingdom of Gododdin.

According to a rather vague formulation in *Historia Brittonum*, King Ida of Brynaich (r. 547–59) succeeded in uniting, for the first time, his kingdom with Dewr to form Northumbria, but the union appears only as an effective reality from *c.* 605, during the reign of Æthelfrith.

Modern Scotland now includes the lands between the Tweed and Forth that had once been part of Brynaich and (in concert with the Scottish sub-kingdom of Strathclyde/Ystrad Clud) entertained designs on the whole of it in the Middle Ages. An important episode in Scottish expansionism into late Anglo-Saxon Bernicia occurred during the reign of Mael Coluim mac Cinaeda (Malcolm II) in the period 1006–32.

Brythonic, as a specialist linguistic term, refers to a closely related subfamily, within the larger, more diffuse family of the CELTIC LANGUAGES. The two Brythonic languages that have survived continuously to the present day are BRETON and WELSH. CORNISH, which also belongs to this group, died out towards the late 18th century or early 19th century, but was soon after revived and is now spoken by several hundred or perhaps 1000 people. CUMBRIC refers to one or more Brythonic dialects spoken in early medieval north BRITAIN; these died out, and were replaced by SCOTTISH GAELIC and English in the central Middle Ages, perhaps not long after Strathclyde (YSTRAD CLUD) and Cumbria were subsumed in the kingdom of Scotland (ALBA).

Following the four peoples and four languages scheme of BEDA (*linguae Anglorum, Scottorum, Brettonum et Pictorum*) and the influential treatment by Kenneth JACKSON in *The Problem of the Picts*, the PICTISH language is treated by many writers in CELTIC STUDIES as distinct from Brythonic. However, the actual surviving linguistic evidence for Pictish overwhelmingly supports its categorization within the Brythonic group (see also SCOTTISH PLACE-NAMES).

In contemporary Celtic studies, 'Brittonic' and 'Brythonic' are interchangeable terms with precisely the same meaning. 'Brythonic' has been adopted in this Encyclopedia, since it has the advantage of resembling the Welsh terms from which it is derived, namely *Brython* 'BRITONS' and *Brythoneg* 'Brythonic', thus reminding the generalist reader of the languages to which it refers, and avoiding potential confusion owing to the similarity of 'Brittonic' and the name of the modern nation state of Britain (i.e., the UK) and of the British Empire, whose chief language is the non-Brythonic (and non-Celtic) English. In Jackson's highly regarded scheme as set out in *Language and History in Early Britain*, 'Brittonic' is used in the same sense as 'Brythonic' here. In THURNEYSEN's *Grammar of Old Irish*, 'Britannic' is used with this meaning, but this term did not win favour with subsequent writers.

Before Jackson's time, in the 19th and earlier 20th centuries, writers often used the term Brythonic to refer to what we call the Brythonic languages and to some ancient CONTINENTAL CELTIC languages that, like Brythonic, show the change of PROTO-CELTIC /*kʷ*/ (from INDO-EUROPEAN /*kʷ*/ and /*kʷ́*/) to /*p*/. Thus, in this obsolete usage, 'Brythonic' is a wider grouping, including the languages that are here called GAULISH, LEPONTIC, and GALATIAN. For this larger group, this Encyclopedia uses the terms P-CELTIC (emphasizing the linguistic innovation just mentioned) or GALLO-BRITTONIC (emphasizing a wider range of linguistic affinities between Gaulish and Brythonic).

Some writers in Celtic studies use the term BRITISH in the sense used for 'Brythonic' here; therefore, in that usage 'British' can include medieval and modern Breton, Cornish, and Welsh. This meaning of 'British' is found, for example, in the *Concise Comparative Celtic Grammar* of LEWIS and PEDERSEN, which remains one of the standard handbooks. However, this Encyclopedia follows Jackson's usage in *Language and History in Early Britain*, using 'British' only for the ancient form of Brythonic as found in documentary evidence from the IRON AGE and the Roman period in Britain. In linguistic terms, 'British' therefore refers to Brythonic as long as it retained its Proto-Celtic (and ultimately Indo-European) syllable structure; for example, the Brythonic name written in ancient sources as British CUNOBELINOS is written in the early Middle Ages as an archaic Neo-Brythonic (or early Old Welsh) *Cunbelin*, revealing the loss of two unaccented Proto-Celtic syllables. Using 'British' to refer only to the ancient form of Brythonic (the '*Cunobelinos* stage') has the advantage of using 'British' only for a period at which this language was actually the most widely spoken language of Britain; this avoids the confusions discussed above with reference to later periods when English had become the predominant language of Britain and then the British Empire, for which periods 'British' might be misunderstood as shorthand for 'British English' in contrast to 'American' or 'Indian English', &c. Place-name evidence, taken together with

the testimony of Beda on the limited ecclesiastical use of Latin in the early Middle Ages, strongly suggests that spoken Latin never became the everyday language of any region of Britain. Therefore, 'British' is not potentially misleading as the name of the Brythonic spoken in Roman times and later prehistory.

In early Welsh Latin texts such as HISTORIA BRITTONUM and ASSER's Life of Alfred, *lingua Britannica* and *sermo Britannicus* are used for 'the Welsh/Brythonic language' and *Britannice* for 'in Welsh/Brythonic'; cf. Beda's *lingua Brettonum* (*Historia Ecclesiastica* 1.4.). At this period, these terms apply equally well to Cornish and Breton (see Fleuriot, ÉC 20.101). This usage points to an Old Welsh/Old Cornish/Old Breton **Brythonec*, the source of Middle Breton *Brezonec* 'Breton' < British and British Latin **Brittonica*. However, the Welsh word *Brythoneg* 'Brythonic, Welsh language' does not appear until early Modern Welsh (see GPC s.v.).

Beyond the strictly linguistic sense, 'Brythonic' (or 'Brittonic') is used for the cultures, peoples, and countries that are Brythonic-speaking, either at the time in question or historically. Brittany (BREIZH), Cornwall (KERNOW), and Wales (CYMRU), are thus 'the Brythonic countries', as well as being—along with Ireland (ÉIRE), Scotland (ALBA), and the Isle of Man (ELLAN VANNIN)—CELTIC COUNTRIES. ARTHUR—celebrated in the literature and folklore of Wales, Brittany, and Cornwall—can meaningfully be called 'a Brythonic hero'. The political alliance envisioned in the 10th-century prophetic poem ARMES PRYDEIN—including Wales, Cornwall, Brittany, and Strathclyde, as well as the Vikings and Irish—can be concisely encapsulated as a 'Brythonic-Gaelic-Norse coalition'.

JTK

Bucy-le-Long, located in the Aisne valley in France, is the site of two burial grounds, one from the Early LA TÈNE period, and the other from the Middle to Late La Tène period.

At La Heronnière, the first necropolis, 201 tombs have been excavated, of which 198 are inhumations (that is, burial without burning of the corpse). La Heronnière was used in three phases within the period 450–325 BC. During the middle phase, CHARIOT burials set within circular ditches contain bronze and gold objects decorated with glass, coral, and amber. Further offerings included foodstuffs, with what has survived being mainly the remains of cattle. The amount of metal among the grave goods, mainly bronze items, found in the graves increases over time. The final phase at this site included a monumental cremation burial. Animal offerings, mainly pigs and sheep, are present in the majority of the tombs of this period.

'La Fond du Petit Marais', the second necropolis, has three phases within the span *c.* 250–120/110 BC and contains 68 burials, of which half are cremations (mainly from the third phase). Fifteen enclosures marked off by ditches near the necropolis contained quadrangular structures on posts, but these are sometimes not connected to the tombs. The animal offerings, pigs and birds, decline over time. The number of deposited objects, mainly made of bronze, increases (see HOARDS). TORCS (29) and bracelets (76), which were dominant in the first cemetery, tend to disappear in the second cemetery, giving way to an increase of fibulae (brooches).

Children's graves have been found in all the phases.

The ***Bulletin of the Board of Celtic Studies / Bwletin y Bwrdd Gwybodau Celtaidd*** (1922–94) figured among the major journals in CELTIC STUDIES. Produced by the University of Wales Press and overseen by the Board of Celtic Studies of the University of Wales, its main focus was on material relating to Welsh studies, although contributions from other areas of Celtic studies also appeared. It was established in 1922, and published contributions in three broad areas or disciplines: Language and Literature (Iaith a Llên), History and Law (Hanes a Chyfraith), and Archaeology and Art (Archaeoleg a Chelfyddyd). Contributors came from many countries and tended to be professional academics or research students. The articles were written in English or WELSH with some contributions in French and German. In 1994 the *Bulletin* merged with STUDIA CELTICA, another of the learned journals of the University of Wales Press, at which date the combined journal appeared as number 28 of *Studia Celtica: Bwletin y Bwrdd Gwybodau Celtaidd / Bulletin of the Board of Celtic Studies. Studia Celtica* began publishing in 1966 under the general editorship of J. E. Caerwyn WILLIAMS, who retired from the editorship in 1992 before the journals merged.

PSH

Bwrdd yr Iaith Gymraeg (**The Welsh Language Board**) was established to promote and facilitate the use of WELSH; it seeks to encourage the increasing numbers of Welsh speakers to use the language in their everyday lives.

§1. HISTORICAL BACKGROUND

The need for the Board is set against a substantial decline in the percentage of Welsh speakers between the end of the 19th century and the third quarter of the 20th century. Although the Welsh Courts Act 1942 and the Welsh Language Act 1967 made some provision for use of the language in the courts and the public sector more generally, and despite the existence of an increasingly popular Welsh-medium EDUCATION system, the 1980s saw increasing political pressure for further measures to safeguard the Welsh language.

In 1985, specific proposals for legislation to promote the language were submitted to the Welsh Office by a working party chaired by Lord Gwilym Prys-Davies and, separately, legislative proposals were presented to the House of Commons as a 10-minute rule Bill by Dafydd Wigley, MP. Although the Government of the day rejected these proposals, it recognized a general desire to safeguard the future of Welsh. As a result, Peter Walker, the then Secretary of State for Wales, established an advisory group under the chairmanship of Wyn Roberts, Minister of State at the Welsh Office, to advise what action, if any, was required. Its main recommendation was that a non-statutory, advisory Welsh Language Board be created, to begin the task of promoting the use of Welsh.

This proposal was accepted, and in July 1988 the advisory Welsh Language Board was established, with John Elfed Jones as its chairman and John Walter Jones as its director. A further four members of staff were seconded to the Board from the Welsh Office. The Board's duties included advising the Government on matters that required administrative or legislative action and promoting the use of Welsh in the public sector, in the private sector and amongst voluntary sector bodies. In 1989 the Board also published *The Welsh Language: a Strategy for the Future*, which, for the first time ever, set out detailed proposals for the promotion and increased use of Welsh. This was followed by the publication of two sets of voluntary guidelines for the use of Welsh in the private and public sectors in Wales.

At all times, the advisory Board sought to keep sight of that which was practicable and achievable. It saw real purpose in recommending measures that had a reasonable prospect of becoming law and of making a real and substantial contribution towards the protection of the language and of enhancing its use. To this end, the advisory Board convened numerous working groups, including a legislation working group. It was the work of this group, chaired by Winston Roddick, Queen's Counsel, that led the Board to recommend, in 1991, that the Government introduce a new Welsh Language Act that would enshrine the principle that Welsh and English were equally valid—and that individuals had a right to services in the public sector in Welsh and English.

The Government eventually accepted the argument for legislation and introduced a Welsh Language Act, which came into force in December 1993. The Act created a statutory Welsh Language Board. Lord Elis-Thomas of Nant Conwy was appointed as its first Chair, and John Walter Jones as its chief executive. The Board's current Chair is Meri Huws, appointed in 2004.

§2. THE WORK OF THE BOARD

The Board has statutory powers to require public bodies to prepare language schemes, detailing how they will treat the Welsh and English languages on a basis of equality in providing services to the public. To this end, guidelines entitled *Welsh Language Schemes: their preparation and approval in accordance with the Welsh Language Act* were prepared by the Board and approved by the British Parliament in Westminster. By January 2002, 169 statutory schemes had received the Board's approval, and 74 were in preparation. The Board also has the power to request that local education authorities prepare Welsh Language Education Schemes, which set out how Welsh-medium education will be provided within their areas. Every authority in Wales has agreed such a scheme with the Board.

The Board promotes a practical partnership approach to its work, seeking to encourage a desire to use Welsh. *As Good as Our Words*, guidelines for the use of Welsh in the voluntary sector, published jointly by the Board and the Wales Council for Voluntary Action and *The Use of Welsh in Business* are but two examples to date of the Board's approach to providing creative information to potential partners. Thirty-five language schemes in the voluntary sector and 21 in the private sector have been agreed with the Board on a voluntary basis—both sectors being outside the scope of the Welsh Language Act 1993.

The Board also established a unique and pioneering pilot project in 1999 to educate new parents about the advantages of bringing up their children to be bilingual—and its Language Transmission Project is being viewed with much interest and admiration by many language planners throughout Europe and beyond.

The Board also has responsibility for distributing grant aid. In the financial year 2001–2002, £2.8 million was allocated, under its main grants scheme, to a range of activities, which reflected the main themes of the Board's Vision and Mission document. All the Board's activities are funded by the National Assembly for Wales (see CYNULLIAD CENEDLAETHOL CYMRU).

§3. DUTY TO PROMOTE THE USE OF WELSH

Apart from its specific statutory function, the Board has a general duty to promote the use of Welsh. This led to the publication of *A Strategy for the Welsh Language* in 1996, which set an agenda for holistic language planning, whilst building on the Board's partnership approach. The Strategy reflects the fact that not all challenges facing a language are linguistic. Language is influenced by political, economic, social, and psychological elements, among others. Linguistic responsibility, therefore, must be cross-functional—and other organizations, whose main remit extends beyond the promotion of the language, must also take responsibility for its future.

The Strategy sets out four main challenges in terms of language promotion: (1) Increasing the number of people who are able to speak Welsh; (2) Providing opportunities to use the language; (3) Changing the habits of language use, and encouraging people to take advantage of the opportunities provided; (4) Strengthening Welsh as a community language.

§4. HOLISTIC APPROACH

The cross-cutting theme of holistic language planning has been emphasized in all the Board's activities, as has the need to include the Welsh language in the equal opportunities agenda. In addition, one of the Board's main objectives has been to depoliticize the language, and to encourage mature debate about its promotion. Its strategies and activities have received cross-party support, and the approval of an independent Assembly-commissioned review of its activities in 2001.

C

PART 1
Cadafael ap Cynfedw–Celticism

Cadafael ap Cynfedw (r. *c.* 634?–*post* 15 November 655) was a king of Gwynedd whose reign marks an episode of dynastic and cultural discontinuity. A prudent survivor, he remained in power through a period of decisive military disaster for the Britons and their allies at the end of the first great age of Welsh vernacular literature, the heroic court poetry of the Cynfeirdd. Like the ill-fated Gwrtheyrn (Vortigern), it is not surprising that Cadafael has a bad reputation in Welsh tradition and that subsequent rulers have avoided claiming him as an ancestor.

In the 9th-century Welsh Latin Historia Brittonum (§§64–5), we are told:

> . . . and then Pantha [Penda of Mercia] was killed in the field of Gai, and that was the Battle of the Field of Gai [called in Old English Winwæd], and the kings of the Britons were slain who had gone out with King Pantha on an expedition as far as the city called Iudeu [Stirling] . . . except for Catgabail [Cadafael], king of Gwynedd, and his army, who escaped the night before the battle, for which he is called Catgabail Catguommed (Battle-gripper, Battle-avoider).

There is a pun here: *Cadafael* is probably actually Old Welsh *Catamail* 'Battle-prince' (< Celtic **Catu-maglos*) not the sound-alike 'Battle-gripper' (Jackson, JCS 1.69–79), but *Catgabail* made more pointed satire. From Beda, we know that the crushing defeat of the Mercian–Welsh axis at Winwæd (probably on the river now called *Went* in Yorkshire) occurred on 15 November 655.

Cadafael does not figure in the Welsh genealogies, and the Welsh Triads list him as one of the three *Meibion Eillion* of the Island of Britain (Bromwich, TYP no. 68). This term is usually translated as 'Villeins', in keeping with medieval legal terminology, but the etymological sense of *mab eillt* (< Proto-Celtic **altios*) is 'foster son' (see fosterage), and the triad may simply have originated as a learned explanation, perhaps speculation, as to why Cadafael was not in the pedigree of Gwynedd's first dynasty. However, the names of his predecessors, Cadfan (†625) and Cadwallon son of Cadfan (†634), and his successor, Cadwaladr son of Cadwallon (†682), suggest that Cadafael may in fact have belonged to this same family with their characteristic *Cad*-names and that he was simply omitted from the list as a disreputable figure. Furthermore, the gap between the deaths of Cadwallon and Cadwaladr is long enough to accommodate a skipped generation.

The Welsh elegy Marwnad Cynddylan, attributed to the *cynfardd* Meugan, is addressed to a king of Gwynedd ruling at Aberffraw immediately following the calamitous defeat of many Welsh kings who had heeded Penda's call to arms, thus almost surely the battle of Winwæd; the unnamed king of Gwynedd was therefore most probably Winwæd's infamous survivor, Cadafael. Significantly, this is the last of the 6th- and 7th-century court poems of the earlier *Cynfeirdd* to survive. Given the political circumstances of the immediate post-655 period, it is clear why Cadafael was not the subject of heroic verse celebrating his exploits against the Anglo-Saxons. He was in no position to continue patronage for the provocative poetic propaganda that had praised the aggressive policies of his

View of Cadair Idris from the north-east at sunset

predecessors in Gwynedd, Gododdin, Rheged, and Strathclyde (Ystrad Clud). Northumbrian supremacy was beyond challenge until 685 and, thus silenced against an invincible enemy, the poets naturally turned on the impotent Cadafael in satire.

Cadair Idris (British Ordnance Survey grid reference: SH 7113) is a mountain in Gwynedd. It is 892 m (2928 feet) high and bounded by Tal-y-llyn lake in the south and the market town of Dolgellau in the north. Sometimes spelled *Cader Idris*, reflecting the local pronunciation, it is a popular site for walkers, and affords exceptional views of unspoiled landscape.

In literature and folk tradition it has supernatural and romantic associations, being the abode of giants, the most celebrated of whom was Idris, a man's name not uncommon in Wales (Cymru). According to legend, Idris was the chief of giants in that region; the others were Yscydion, Offrwm, and Ysbryn. Tales of giants associated with mountains in Wales are commonplace, but at Cadair Idris the occupant is remarkable because he is said to have been an astronomer who gazed at the stars from his chair (*cadair* or seat) which today is a large enclosed volcanic lake (Llyn Cau).

Alternatively, one source suggests that Idris ap Gwyddno or Gweiddno, a 7th-century Meirionnydd prince, fought the Irish on this mountain and gave it his name. This Idris is likely to be the same historical figure as the Iudris (the Old Welsh form of the name) slain in the battle of the Severn in 632, as noted in Annales Cambriae. The identification with Prince Idris and the giant were not necessarily originally separate traditions since some of the medieval genealogies of Meirionnydd call this prince *Idris gawr* ('Idris the giant'; Bartrum, EWGT 108). While *Cadair* would most obviously now be understood as the Welsh common noun *cadair* 'chair' (from Latin *cathedra*), it is not impossible that the element here originally corresponded to the Irish *cathair* 'city, stronghold'.

According to one widely reported folk tradition, should someone remain alone on the summit of Cadair Idris for one night, that person would become a philosopher, or a poet, or turn mad. A similar tradition is applied to Gorsedd Arberth in the tale of Pwyll Pendefig Dyfed in the Mabinogi. Various versions of this tale suggest the same theme: that the mountain holds a supernatural power. This is echoed in the story of Morgan Rhys, resident of Cadair Idris. Tylwythion Teg Cadair Idris ('the fairies of Cadair Idris') visited Rhys and gave him a magical harp.

Cadair Idris was the subject of an important painting by Richard Wilson (1713–82), which was greatly admired by the well-known 18th-century naturalist and antiquary Thomas Pennant in his *Tours in Wales*, and which became an influential prototype for the popular Welsh landscape style of the Romantic period (see art, celtic-influenced [4]).

Paul Joyner

Cadelling (descendants of Cadell) was the name of an important dynasty in the early Middle Ages in what is now north-east Wales (Cymru). They are mentioned three times in the early Welsh praise poetry of the 6th and 7th centuries known as the poetry of the Cynfeirdd. In Trawsganu Cynan Garwyn the honorand, King Cynan Garwyn (*fl. c.* 575×610), is said to belong to the 'Cadelling lineage'. This information accords with the royal pedigree of Powys given in the Old Welsh genealogies (§22) in British Library MS Harley 3859:

Catel Durnlu‹r›c
|
Cattegirn
|
Pascent
|
Maucan*n*
|
Cincen
|
Brocmayl
|
Cinan [= Cynan Garwyn]
|
Selim [†613×616]

Selim (Modern Selyf) died at the battle of Chester (Caer) fighting Æthelfrith of Northumbria.

By 829/30, the date of the redaction of Historia Brittonum, the Cadelling, i.e., the notional descendants of Catell Durnluc, are localized in Pouis (Powys; *Historia Brittonum* §§32–5). His epithet (Old Welsh *Durnluc*, Modern *Dwrnllwg*) probably means 'bright [sword-]hilt'. In the story of Catell in *Historia Brittonum*, effectively the origin legend of the Cadelling, the dynastic progenitor is described as a virtuous commoner who came to the throne to replace the wicked tyrant Benlli (*rex iniquus atque tyrannus valde Benli*), through the agency of St Germanus and heaven-sent fire. This legend belongs to a block of material connected with St Germanus, and we are told of a *Liber beati Germani* as a source in *Historia Brittonum* §47. Therefore, it is likely that the origin legend of the Cadelling goes back to an otherwise lost piece of Welsh Latin hagiography older than *Historia Brittonum* by some indeterminate span. A somewhat different doctrine is found on the late 8th-/early 9th-century inscription on Eliseg's Pillar near Llangollen, according to which the lineage appears to go back to GUARTHI[GIRN] (i.e., Gwrtheyrn) and SE[V]IRA, daughter of Maximus (i.e., Macsen Wledig, 'emperor' 383–8). Dumville regards the claim of descent of Powys's kings from Cadell as relatively late. He sees the pillar as stating the older genealogy and that this is mutually exclusive with the scheme in *Historia Brittonum* and the Old Welsh genealogies. The newer 'Cadelling doctrine' must therefore have emerged in the narrow date range between that of the pillar and 829/30, since Gwrtheyrn (Vortigern) had in the meantime become a disreputable ancestor (*History* 62.186 n.65; *Early Welsh Poetry* 12 n.33). But Dumville's interpretation does not seem unavoidable, since both Gwrtheyrn and Maximus had been highly disreputable figures since the publication of Gildas's *De Excidio Britanniae* in the 6th century. More probably, more than one genealogical doctrine and more than one view of the history co-existed over a lengthy period (Gruffydd, *Bardos* 17; Rowland, *Early Welsh Saga Poetry* 183; Koch, *Gododdin of Aneirin* lxxxvii n.2). Unfortunately, the precise pedigree of Eliseg's Pillar is uncertain, since the inscription is now illegible and was already badly damaged when seen by Edward Lhuyd.

The Cadelling as presented in *Trawsganu Cynan Garwyn* had enemies throughout Wales and in Anglesey (Môn) in particular. It is therefore not surprising that a second early Welsh poem, Marwnad Cynddylan, which is addressed to the king of Gwynedd, said to be holding court in Môn, shows a hostile attitude towards them. The poet—Meugan, according to some sources—takes pains to call the king of Gwynedd 'lord of Dogfeiling' in north-east Wales, impinging on Cadelling lands, and even more pointedly, honours him as *Cadelling trais* 'violator of the Cadelling' and then as *Cadelling ffraw* 'terror of the Cadelling'. The poem primarily honours Cynddylan of the rival Cyndrwynyn dynasty of Powys. This traditional antagonism is essential background to the saga englynion of Heledd, a cycle which probably developed in the 9th–10th centuries.

Cadfan ab Iago (†625) was king of GWYNEDD. He belonged to its first or 'Maelgyning' dynasty (see MAELGWN) and appears as *Catman map Iacob* in Gwynedd's Old Welsh GENEALOGIES in British Library MS Harley 3859. We have more documentary evidence for his son CADWALLON (†634), the conqueror of Northumbria. Cadfan is, however, the subject of a remarkably grandiloquent and ambitious Latin funerary inscription from Llangadwaladr (named after Cadfan's descendant, King CADWALADR [†682]) near the royal site at ABERFFRAW in Anglesey (MÔN):

CATAMANVS
REXSAPIENTISI
MUSOPINATISIM
US OMNIUMREG
UM

King Cadfan, wisest [*or* most learned], most renowned of all kings. (Nash-Williams, *Early Christian Monuments of Wales* no. 13)

The inscription itself is, of course, important evidence for the strength of Latin learning, as well as its aggressive deployment for propaganda, in 7th-century Gwynedd. This monument is probably contemporary with the king's death in the earlier 7th century, but it has also been suggested that it was sponsored by Cadwaladr, on the assumption that the inscription and the founding and naming of Llangadwaladr should all have been contemporary occurrences some 50 years after Cadfan died.

The name *Cadfan*, Late ROMANO-BRITISH *Catamanus*, occurs also for CATUMANDUS, a Gaulish king of the 4th century BC. It is Celtic and probably means 'battle-pony'. It was a common name in the BRYTHONIC world in the post-Roman period, occurring, for example, in the Old Welsh form *Catmann*, as the original and fuller name of the famous saint usually called CADOC. The 7th-century Anglo-Saxon poet CÆDMON, a younger contemporary of Cadfan of Gwynedd, also bore this Brythonic name. Cadfan's father's name Iacob is from the Old Testament and is evidence for an ideology of Christian kingship amongst this dynasty.

Cadoc

The churches whose foundations are attributed to the 5th-century Welsh saint Cadoc (Catwg) were mainly in south-east Wales (CYMRU). Its major *clas* (monastic foundation) was at Llancarfan (originally called Nantcarfan) in the Vale of Glamorgan (Bro MORGANNWG). Dedications to him are found also in Anglesey (MÔN), Cornwall (KERNOW), Brittany (BREIZH), and Scotland (ALBA). *Vita Cadoci*, the longest of the Lives of Welsh saints, was written by Lifris *c.* 1100, revised by CARADOG OF LLANCARFAN in the first half of the 12th century, and compiled into the British Library MS Cotton Vespasian A.xiv text in the late 12th century. In the struggle between the Welsh and Norman-controlled churches for primacy, waged in part through the propagandistic saints' Lives, Cadoc and St David (DEWI SANT) were positioned as rivals. Thus scribes at Llancarfan, apparently in response to RHYGYFARCH's *Vita Davidis*, added passages to *Vita Cadoci* explaining, for example, that Cadoc was away in Jerusalem when David became chief of the saints at the Synod at (Llanddewi)Brefi. Cadoc's Life further establishes the saint's power and the rights and privileges of his church through significant encounters with kings ARTHUR and MAELGWN Gwynedd. Arthur also appears notably at the beginning of the *Vita* when he helps Cadoc's father Gwynllyw to carry off the saint's mother Gwladus. A late triad names Cadoc as one of the 'Three Just Knights of Arthur's Court', where he is dedicated to preserve justice through the law of the church (Bromwich, TYP 251–3; see also TRIADS).

The name *Cadoc*, Modern Welsh *Cadog*, derives from

Old Celtic **Catācos*, meaning roughly 'battler'. The variant *Catwg* reflects a local pronunciation in the dialect of south-east Wales (*Gwenhwyseg*) and shows two features characteristic of that dialect: *calediad* or 'hardening' of *d* to *(t)t* following the stress accent and *~wg* [-ug] in place of Old Welsh *~auc*, Modern *~og*, as the outcome of Old Celtic *~āc~*. The Lives also refer to the saint by a second name, Old Welsh *Catmann*, Modern *Cadfan*, the reflex of Old Celtic Catumandus. Therefore, it is likely that *Catmann* or *Catumandus* was Cadoc's original name and *Cadoc* a hypocoristic or pet-form based on its first element.

Cadwaladr ap Cadwallon (Old Welsh Catgualart map Catgollaun) was king of Gwynedd and a member of its first dynasty. In Annales Cambriae he is said to have died during a great plague in 682. However, according to Historia Brittonum §64, he died in a plague that occurred during the reign of Oswydd of Brynaich (r. 642–70), probably the great plague of 664, and therefore his actual dates and historical context are uncertain. It is likely that Cadwaladr founded the church at Llangadwaladr, near Gwynedd's principal court at Aberffraw, where an inscription commemorating his grandfather, King Catamanus (Cadfan †625), was found. In the 10th-century Welsh political prophecy Armes Prydein, Cadwaladr figures, along with a prince named Cynan, as one of two messianic leaders who were expected to restore the Britons to the sovereignty of Britain with the expulsion of the Anglo-Saxons (cf. also arthur; owain glyndŵr; owain lawgoch; urien). It is not clear how he achieved this reputation, but one possibility is that, during his own lifetime, Cadwaladr was expected to avenge the death of his father Cadwallon against the Northumbrians and thus restore Gwynedd's short-lived hegemony over the leading English kingdom (then Northumbria). In the Welsh Triads (Bromwich, TYP nos. 17, 53), Cadwaladr is given the epithet *Bendigeit* (Blessed), also attributed to Brân and Gwerthefyr, all of whom have rôles as national saviours repelling the Anglo-Saxons from Britain. The second of these triads notes that a poet named Golydan struck a famous, but unexplained, harmful blow against Cadwaladr. This is reminiscent of the satire inflicted on Cadafael, another king of Gwynedd in the mid-7th century.

The name *Cadwaladr* is Celtic < British **Catuwalatros* 'battle-leader'. Several early prominent Welshmen of this name appear in the genealogies.

JTK

Cadwallon ap Cadfan, king of Gwynedd (625–34/5) and Northumbria (633–34/5), was the last Brythonic-speaking ruler to hold sway over much of eastern Britain until Henry VII (Harri Tudur) secured the throne of England 800 years later. He was a member of Gwynedd's first dynasty (Maelgyning) who claimed direct descent from Cunedda through Maelgwn Gwynedd. Cadwallon is also an important milestone in Welsh literary culture since a panegyric in his honour (Moliant Cadwallon) seems to be the first surviving poem from Gwynedd, a source of much Welsh court poetry of the 12th and 13th centuries (see gogynfeirdd). He is also the subject of a Welsh battle-listing poem in the englyn metre usually dated to the 9th or 10th century (both poems are edited by Gruffydd, *Astudiaethau ar yr Hengerdd* 25–43). Several early medieval Latin sources mention Cadwallon; of these, the most informative is Beda's *Historia Ecclesiastica*. However, Beda's extremely hostile picture requires caution: the demonization of Cadwallon was essential to Beda's moral message, justifying the Anglo-Saxon domination of Britain and its churches despite

the priority of Britons. As Charles-Edwards argues (*Celtica* 15.42–52), Beda constructed Cadwallon's wicked tyranny as a foil to the beneficial Christian *imperium* of his English predecessor and successor, Eadwine and Oswald, essentially an inversion of the same idea.

As to the motives for Cadwallon's conquest of Northumbria, Beda (*Historia Ecclesiastica* 2.9) claims that Eadwine had subjected Anglesey/Môn (the core of Cadwallon's Gwynedd), a conquest likely to be connected with an entry in Annales Cambriae for 629 which describes the besieging of Cadwallon on *insula Glannauc*, a small island off south-east Anglesey. A tradition in the Welsh Triads that Cadwallon was for a time in exile in Ireland (Ériu) might, if factual, refer to the consequences of Eadwine's conquest of Anglesey (Bromwich, TYP no. 29), and *Moliant Cadwallon* portrays Cadwallon as returning from overseas. This poem also shows interest in the Brythonic Elmet/Elfed in the southern Pennines and the military prowess of its 6th-century ruler Gwallawg. Eadwine had annexed Elmet and expelled its Brythonic ruler Certic (*Historia Brittonum* §63), who was probably Gwallawg's son; therefore this recent discord could have been another rallying point for Cadwallon's invasion. *Moliant Cadwallon* also calls Eadwine a 'father of great deceipt' (*tad twyllfras*) as ruler of the northern kingdom of Bernicia (Brynaich), drawing attention to the fact that he was not a member of the dynasty of Bernicia, but had come from the southern sub-kingdom of Deira (Dewr) and had killed or expelled all the members of the Bernician royal house. As a descendant of Cunedda, Cadwallon and his poets may have believed that he had a legitimate claim to Brynaich's kingship.

According to Beda, Cadwallon defeated and killed Eadwine at the battle of Hatfield (Old English Haethfelth) on 12 October 633 (*Historia Ecclesiastica* 2.20). In *Annales Cambriae* (631), Cadwallon is said to have overthrown Eadwine in *Gueith Meicen* (possibly the same event as *bellum Cathloen regis Britonum* noted in the Annals of Ulster at 631 [= 632]). In this campaign, Cadwallon was supported by the pagan Anglo-Saxon king, Penda of Mercia. We therefore cannot take literally Beda's portrayal of Cadwallon's objectives as genocidal:

> . . . and indeed Cædualla (Cadwallon), though professing Christianity in name, but he was so barbaric in his spirit and character that spared neither the female sex nor the innocent young age of small children, but he killed everyone in cruel torment in his ferocious outrages. He spent a long time laying waste to all [Northumbria's] provinces, and he intended that he himself might wipe out the whole race of the English within the confines of Britain. (*Historia Ecclesiastica* 2.20)

A further cause for scepticism about Beda's account is the fact that Cædualla of Wessex (†689) was born and given his unusual name, adapted from Brythonic *Cadwallon*, a generation after Cadwallon ap Cadfan's death; this could hardly have happened if Beda's thoughts on Cadwallon had been shared by the Saxons of Wessex. Since Beda was a scrupulous historian and apparently had access to some Welsh written sources, it is possible that, rather than merely inventing his outrageous charge, he knew of hyperbolic prophecies—like those extant in Historia Brittonum §42 and Armes Prydein—in which the Britons are foreseen ejecting the Saxons from Britain militarily.

After a year or two spent mainly in continued fighting to consolidate his power, Cadwallon fell in 634 or 635 against the Bernician prince Oswald, who had lived in exile among the Irish since his father Æthelfrith had been defeated and killed by Eadwine in 617. This battle occurred at a place called *Cantscaul* or *Catscaul* in the Welsh Latin sources (*Historia Brittonum* §64; *Annales Cambriae* 631) and *Hefenfelth* (Heavenly field, *Caelestis campus*) by Beda (*Historia Ecclesiastica* 2.2). The place was eight miles north-east of Hexham, near Hadrian's Wall. Writing in the 690s, Adomnán (*Vita Columbae* 1.1) ascribes Oswald's victory against *Catlōn Brittonum rex fortissimus* (Cadwallon strongest king of the Britons) to the miraculous posthumous intercession of St Colum Cille of Iona (Eilean Ì), who appeared to Oswald in a dream on the eve of the battle.

The name *Cadwallon*, Old Welsh *Catguollaun*, is Celtic and is the singular form corresponding to the plural found as the British and Gaulish tribal name Catuvellauni, which means something like 'excelling in battle'. There was an earlier Catgolaun Lau-hir (C. long-hand) of Gwynedd, Maelgwn's father, in the Old Welsh genealogies in British Library MS Harley 3859, and there was also a Catguallaun Liu (C. the leader) among one of the Coeling dynasties of north

Britain in pedigree §19, a near contemporary of Cadwallon ap Cadfan. The name is attested also as Old Breton *Catuuallon* and *Catguallon* in the witness lists of the charters of REDON and LANDEVENNEG.

Cædmon (†680), the Anglo-Saxon Christian poet, is of interest to Celtic studies because he had a Celtic, specifically BRYTHONIC, name (cf. CADFAN, CATUMANDUS). BEDA gives Cædmon's remarkable story in considerable detail (*Historia Ecclesiastica* 4.24). Originally a servile herdsman at the abbey of Whitby in Bernicia (BRYNAICH), he felt himself so lacking in any musical talent that he would go off to the cowshed at night to avoid being handed the lyre and asked to sing in the hall. One evening, a stranger appeared to him there and asked him to sing the story of the Creation, which Cædmon then composed in the Old English vernacular in his sleep. He performed the result for Abbess Hild; she recognized his gift, and he spent the rest of his life rendering biblical stories in Anglo-Saxon verse. One nine-line poem of his seems to survive in several manuscripts (Scragg, *Cambridge Companion to Old English Literature* 55–70). As a prodigious innovator in versecraft, who rose from a lowly station, and bore a Celtic name, Cædmon's story throws a precious sidelight on the possible hybrid sources of cultural dynamism in Northumbria in its early Christian 'Golden Age'.

Cædualla (born *c.* 659), king of Wessex 685–9, is of interest to Celtic studies as a prominent Anglo-Saxon who bore a Celtic name (cf. CATUVELLAUNI). This is probably a reflection either of the BRYTHONIC origins of his dynasty (cf. CERDIC, founder of Wessex and Cædualla's ancestor) and/or his family's favourable attitude towards the formidable warrior king CADWALLON of GWYNEDD (†634/5). As an effective war leader, Cædualla consolidated a divided Wessex and conquered the pagan Anglo-Saxons of the Isle of Wight. BEDA's accusation that Cædualla's aim was to exterminate the people of the Isle of Wight should be viewed with caution, as the similar charge against Cadwallon. Cædualla was originally a pagan himself, but came under the influence of St Wilfrid of Northumbria (see EASTER CONTROVERSY). He renounced the kingship and died in Rome seven days after he had received baptism—and the baptismal name Peter—from Pope Sergius on the Saturday before Easter in 689. GEOFFREY OF MONMOUTH's account of CADWALADR's pilgrimage to Rome (HISTORIA REGUM BRITANNIAE 12.17) may be due to confusion with Cædualla of Wessex (Bromwich, TYP 292–3).

JTK

Caer (Chester), battle of (*c.* 613×616), pitted the Anglo-Saxon dynasty of Bernicia (BRYNAICH) against the principal dynasty of early POWYS, the CADELLING. The BRITONS were crushingly defeated and a major atrocity was perpetrated by the pagan English king, ÆTHELFRITH, against the monks of BANGOR IS-COED. This battle has long been understood as a decisive event in British history, and more particularly the history of the Celts in BRITAIN, but the standard interpretation has changed since the mid-20th century. It used to be thought that this battle marked the permanent arrival of the Anglo-Saxons at the Irish Sea in the vicinity of the estuaries of the rivers Mersey

and Dee (Dyfrdwy), thus cutting off the Britons of the north (see HEN OGLEDD) from those of the west and geographically defining Wales (CYMRU) as a distinct cultural area, as well as marking the separation of the WELSH and CUMBRIC languages. It is by now generally understood that Æthelfrith was in no position to consolidate his victory; he was killed in battle a few years later, and his dynasty altogether eclipsed until 635. There is almost no archaeological evidence for Anglo-Saxon settlement within the pagan period in Cheshire or Lancashire (i.e., the region between Chester and the Pennine range) and, furthermore, the main lines of communication between north Britain and Wales had probably been across the Irish Sea rather than over the Roman road network via Chester (see ROADS). Nonetheless, the circumstances of the battle do illuminate the reasons why the Britons and the Anglo-Saxons tended to polarize into antithetical identities rather than coalesce into a single hybrid people and church establishment. From the standpoint of the history of Welsh language and literature, we can see at Chester the fusion of the interests of the dynastic war leaders and the church of the Britons in such a way as to make intelligible how, from this period onwards, the study and transmission of vernacular heroic verse was a suitable activity for monastic scholars.

§1. THE SITE

The Old Welsh name for the place was *Cair Legion* 'city of the legion', medieval Latin *urbs Legionis*; it had been a place of pivotal military importance in Roman Britain, a strategic point in the road network and the base of *Legio XX Valeria Victrix* until the late 4th century (the legion had acquired the title *victrix* 'victorious' for its rôle in suppressing BOUDĪCA's revolt). The ROMANO-BRITISH place-name had been Celtic *Dēva* 'goddess', a transference of the ancient name of the nearby river Dee (Rivet & Smith, *Place-Names of Roman Britain* 336–7). The Roman fortified site was still occupied and of importance for the post-Roman Christian Britons in the 7th century, as is shown by the entry in ANNALES CAMBRIAE noting the 'synod of the city of the legion' held in AD 601 or 603, probably the meeting at which a delegation of senior Brythonic churchmen were selected under the leadership of Bishop Dunawd of Bangor Is-Coed to meet AUGUSTINE of Canterbury.

§2. THE DATE OF THE BATTLE OF CHESTER

The Anglo-Saxon Chronicle (Parker Chronicle) places the engagement in 607, several years earlier than all the Celtic annals (see below). Æthelfrith was himself killed by Rædwald of East Anglia in 616/17, and this, therefore, fixes the lower terminus for the battle. Following Sir John LLOYD (*History of Wales* 1.179–81), Sir Ifor WILLIAMS proposed that the battle's date was *c.* 615 (*Canu Taliesin* xviii; *Poems of Taliesin* xxx). P. Hunter Blair (*Introduction to Anglo-Saxon England* 36, 47) proposes *c.* 613.

§3. EARLY RECORDS OF THE BATTLE

The entry in *Annales Cambriae* for the year corresponding to 613 or 615 AD records *Gueith Cair Legion* (battle of the city of the legion [i.e., Chester]) 'in which *Selim filii Cinan* [Selyf son of Cynan (see TRAWSGANU CYNAN GARWYN)] fell'. At AD 612 (= 613) the ANNALS of Ulster record '*Bellum Caire Legion* in which holy men were slain and Solo[*m*] [i.e., Selyf] son of Conaen [i.e., Cynan], king of the Britons, fell'. *Selyf*, Old Welsh *Selim*, and Old Irish *Solom* derive from the biblical Latin *Salomō* 'Solomon'. Under the year which corresponds to 611 or 616, the Annals of Tigernach have a slightly longer entry: '*Cath Caire Legion* in which holy men were slain and Solon m[ac] Conain [Solomon son of Cynan] and King Cetula fell; Etalfraidh [Æthelfrith] was the victor, and he died shortly thereafter'. Cetula is otherwise unknown. However, it may be a variant of the Old Welsh name *Catell*, which occurs repeatedly in Selyf's dynasty, the Cadelling. At the year corresponding to 614, the Annals of Inisfallen record: '*Cath Legeoin*, in which a vast number of holy men fell in Britain, between the Anglo-Saxons and the Britons.'

In BEDA's longer account, some details have been suppressed and there has been a radical reinterpretation:

> . . . that very powerful king of the English, Æthelfrith . . . collected a great army against the city of the legions which is called *Legacæstir* by the English and . . . *Carlegion* by the Britons, and made a great slaughter of that nation of heretics. When he was about to give battle and saw their priests, who had assembled to pray to God on behalf of the soldiers taking part in the fight, standing apart in a safer place, he asked who they were and for what purpose

> they had gathered there. Most of them were from the monastery of Bancor [Bangor Is-coed]. . . After a three days' fast, most of these had come to the battle in order to pray with the others. They had a guard named Brocmail, whose duty it was to protect them against the barbarians' swords while they were praying. When Æthelfrith heard why they had come he said, 'If they are praying to their God against us, then, even if they do not bear arms, they are fighting against us, assailing us as they do with prayers for our defeat.' So he ordered them to be attacked first and then he destroyed the remainder of their wicked host, though not without heavy losses. It is said that in this battle about twelve hundred men were slain who had come to pray and only fifty escaped by flight. Brocmail and his men at the first enemy attack turned their backs on those whom they should have defended, leaving them unarmed and helpless before the swords of their foes. (*Historia Ecclesiastica* 2.2; trans. Colgrave & Mynors, *Bede's Ecclesiastical History of the English People* 141; cf. Blair, *World of Bede* 81f.)

§4. BEDA'S SOURCES, SOLOMON VS. SAUL

Beda's spellings of the names *Carlegion*, *Bancor*, and *Brocmail* in this passage show standard Brythonic orthography of the 7th or 8th centuries (cf. Sims-Williams, BBCS 38.25). In contrast, elsewhere he uses the Old English *Bancornaburg* for the monastery (*Historia Ecclesiastica* 2.2; see Jackson, LHEB 295). Therefore, he had a Brythonic Latin written source for the battle. Yet, he seems also to have had access to information that had come down to him through the dynasty of Brynaich; Beda's patron FLANN FÍNA/Aldfrith (r. 685–705) was Æthelfrith's grandson.

Since Beda was well informed about the battle, it is remarkable that he omits mention of Æthelfrith's most important enemy, Selyf. As the name occurs in several of the brief accounts reviewed above, the erudite Beda had probably seen it, which is confirmed indirectly by his bizarre likening of Selyf's killer, the pagan Æthelfrith, to the biblical King Saul, differing only in the detail that the English king did not believe in the true God (*Historia Ecclesiastica* 1.34). The allegory of Æthelfrith as Saul is intelligible if we understand that both Beda and his intended readers knew that the loser at Chester was 'King Solomon', a name carrying Old Testament associations of anointed, God-guided kingship, as well as proverbial wisdom. Saul was likewise an anointed (by Samuel) warrior king of Israel (I Samuel 10). To call Æthelfrith 'Saul' thus challenged what Beda probably saw as the presumptuous name of the Britons' king.

Caerdydd (**Cardiff**), situated at the mouth of the river Taf (Taff) in south-east Wales (CYMRU), is the country's capital city. In 2001 there were 294,208 inhabitants (aged 3 and over), of whom 32,510 (or 11.05%) were Welsh speakers. The city is home to the National Assembly for Wales (CYNULLIAD CENEDLAETHOL CYMRU), the National Museum and Gallery (see AMGUEDDFEYDD), the headquarters of the federal University of Wales, the Welsh National Opera, and the Millennium Stadium, and serves as an important administrative and commercial centre, especially for the broadcasting and film industries. The headquarters of BBC Cymru Wales, the Welsh television channel S4C, the independent broadcaster HTV Wales, Radio Cymru, Radio Wales (see MASS MEDIA), and many independent television production companies, are located in Cardiff.

§1. THE NAME

The first surviving record of the name *Caerdydd* is as *Cair Teim* in some versions of the lists of the cities of Britain in HISTORIA BRITTONUM (§66). The name means '[Roman] fortified settlement of the [river] Taf'

The Pier Head Building and Cardiff Bay at night

(the Old Welsh spelling of *Taf* being *Tam*). As *Cair Teim* contains an old genitive form of *Tam* (< notional British **Quadra Tami*), the coining of the town name must predate the Old Welsh period (which began *c.* 800) by two or more centuries. The same river name occurs elsewhere in Wales and is related to many similar river names throughout Britain, including Thames (Welsh Tafwys). *Caerdydd* is mentioned as *Cayrdyf* in the Welsh Arthurian romance of Geraint *fab Erbin*, where it figures as an important ancient town and the location of a ruined hall. The usual Middle Welsh spelling is *Caerdyf*, which in Welsh developed into *Caerdydd*, whereas in English the older form is reflected in *Cardiff*. The well-known and often satirized local English pronunciation /kɛ:dif/ preserves in its first syllable the distinctive long open front vowel of the moribund south Glamorgan (Morgannwg) dialect of Welsh.

§2. history

About ad 75 the Romans built a fort at a ford across the river Taf, which had long been settled. Within the Roman network of military strong points, it was subsidiary to the legionary fortress at Isca, now Caerleon (Caerllion), but nevertheless survived as one of their major strongholds in Wales.

The nearby church at Llandaf (one of the four bishoprics of Wales) clearly existed by *c.* 1000. *Braint Teilo* (The privilege of St Teilo), a legal document in Late Old Welsh, probably dating to the 11th century, claims Llandaf to have been the ancient seat of a bishop going back to the 6th-century St Teilo (Old Welsh Teliau). Other documents in the 12th-century manuscript, the Book of Llandaf, claim connections with the 6th-century St Dyfrig (Dubricius) and the 7th-century Euddogwy (Oudoce).

At the end of the 11th century the Marcher Lord Robert Fitz Hamon, earl of Gloucester, had a castle erected in the remains of the Roman fort at Cardiff, which was fortified in stone during the following century. In the possession of various Marcher Lords (see rhuddlan) and attacked by, among others, Owain Glyndŵr, Cardiff Castle as it appears today is the result of extensive and imaginative refurbishing

commissioned by Richard Beauchamp, the earl of Warwick, from 1425, and the first Marquess of Bute from 1796.

The modern city of Cardiff developed south of the Roman fort. Like other Welsh towns, it did not grow much beyond its medieval boundaries until the onset of the Industrial Revolution, and it owes its expansion largely to the Butes, a dynasty of adventurous industrialists who built Cardiff Docks (opened 1839) and thus laid the foundations for the development of the port at a time when its hinterland became one of the world's greatest iron and later coal producers. With the opening of the Taff Vale Railway in 1841, which connected Cardiff Docks with the industrial areas of the Taf, Rhondda, Rhymni, and Cynon river valleys, the town began to grow rapidly. By 1881 it was the largest town in the country, and by 1901 it had 128,000 inhabitants. In its heyday, its port exported up to 10.5 million tonnes of coal annually to all corners of the world, 'Welsh steam coal' being considered ideal for steam engines.

With the decline of the coal industry after the First World War, however, the importance of Cardiff as a port began to wane. The city retained its rôle as a major rail junction, linking the English cities of London, Birmingham, Bristol, and Manchester to the south Wales valleys, Swansea (Abertawe) and west Wales, and the ferries to Ireland (Éire).

From the late 19th century Cardiff was keen to develop its standing as the main administrative and national centre of Wales by attracting emerging national institutions, such as the University of Wales and the National Museum of Wales. The largest town in Wales at that time, it was awarded city status in 1905, and its position was confirmed in 1955 when one of the first governmental measures delegating administrative powers to Wales decreed that it should become its official capital (see NATIONALISM). More decentralized bodies, such as the Welsh Office (Y Swyddfa Gymreig) followed, with the result that it seemed to many that Cardiff was the appropriate home for the National Assembly for Wales following the successful outcome of the 1997 referendum on devolution.

Caerfyrddin (Carmarthen) is often referred to as the oldest town in Wales (Cymru), which is essentially correct. Roman occupation at the site, called Moridūnon 'sea-fort' in classical sources, probably started as a result of the campaign of conquest under the governor Julius Frontinus (AD 74–8). It became a typical Roman town with an associated auxiliary fort, a network of ROADS connecting it with other sites along the southern coast of Wales, a temple (at which were found large amounts of mass-produced Gallo-Roman Samian pottery dating to AD 90–110), and an amphitheatre. It probably functioned as the urban centre (*caput*) of the Romano-British CIVITAS of the Demetae (see DYFED). The town seems to have been at least partially abandoned and considerably remodelled during the 2nd century AD, and fully reoccupied in the early 3rd century AD, at which time it seems to have been fortified. Occupation probably continued into the early 5th century AD, and onwards, possibly as an early cult centre of Teilo, into the post-Roman period.

In the medieval and modern name, Welsh *caer* 'fortified town' has been prefixed redundantly to *Myrddin*, the medieval outcome of the ancient 'sea-fort'. The etymologically-bogus association with the legendary prophet Merlin (Myrddin) may predate Geoffrey of Monmouth, and Jarman argued that the name of the town was actually the source of that of the bard (see WILD MAN). The idea that Carmarthen is 'Merlin's town' remains popular and is commonly used in local advertising. Another popular local tradition surrounds the town's famous oak tree, which stood for centuries in Priory Street. According to Merlin's prophecy, Carmarthen would drown were the oak tree to fall. It was removed in the 1970s, but pieces have been preserved in St Peter's Civic Hall and in the local museum.

Strategically located overlooking a fordable point on the river Tywi, Carmarthen was an early centre of Anglo-Norman power. Henry I built a castle there in 1109. An Augustinian priory was founded at Car-

marthen before 1135, and this is where the unique 13th-century Welsh poetic collection known as the Black Book of Carmarthen (Llyfr Du Caerfyrddin) was kept in the later Middle Ages, and probably where it was produced. Carmarthen grew as the administrative centre of south Wales during the Middle Ages and was captured by Owain Glyndŵr in 1403 and 1405. During the mid-15th century the castle was the site of a famous eisteddfod of the Poets of the Nobility (see cywyddwyr), where Dafydd ab Edmwnd won a miniature silver chair.

Carmarthen has been the county town of Carmarthenshire (sir Gaerfyrddin, popularly 'shir Gâr') since the 16th century and between 1974 and 1993 it was the administrative centre of the UK's geographically largest county, the short-lived Dyfed, which has since reverted to its former three-county configuration.

In modern times, Carmarthen became an important centre of the Welsh printing and publishing industries. In 1840 William Spurrell founded a press which became celebrated for its Welsh dictionary (see dictionaries and grammars [4]). Trinity College (Coleg y Drindod) Carmarthen was founded in 1848 to train teachers for Anglican church schools. It is now an affiliated institution of the University of Wales (Prifysgol Cymru) and offers both first degrees and MAs through the medium of Welsh and English in subjects including education, drama, and media studies.

According to the 2001 Census, 5461 or 42.97% of the 12,710 inhabitants [aged 3 and over] of this market town are Welsh speakers. Its dialect is often perceived as 'standard southern Welsh', sharing many features with adjacent parts, such as southern Ceredigion (e.g., *dou* for *dau* 'two'), but lacking the striking marginal earmarks of Pembrokeshire (sir Benfro) to the west (such as *wês* for *oes* 'yes, there is') or the distinctive *caledïad* of the south Wales valleys to the east (see abertawe).

Caerllion (Caerleon), the site of major Romano-British fortifications in south-east Wales (Cymru), came to figure prominently as Arthur's royal seat in high medieval Arthurian literature, including Historia Regum Britanniae by Geoffrey of

The northern main entrance to the Roman amphitheatre at Caerleon

Monmouth and the Welsh 'Three Romances' (Tair Rhamant). As Isca in the Roman period, taking its name from the adjacent river, now Welsh Wysg, English Usk, the site was one of the two main legionary forts built by the Romans to control the British tribes in what is now Wales, the other being Chester (Caer). Isca was not the first Roman fortification in Wales, Clyro and Usk having been built around ad 60, but it was probably the most prestigious. The construction of Isca began around ad 75 as part of the campaign to subdue finally the rebellious British tribes in Wales, particularly the Silures of the south, who had played an important part in the resistance of Caratācos. The fortress itself covers an area of about 20 ha (50 acres) and could accommodate up to 6000 legionaries. An ovoid amphitheatre, suitable for the entire garrison, was built just outside the walls of the fort and survives to an impressive height today. A settlement developed around Isca by ad 100, with its port on the Usk. Together with Venta Silurum (modern Caer-went) and Moridūnon (modern Carmarthen/Caerfyrddin), the fortress and town of Isca formed one of the main Roman centres in southern Wales. There was early Christian activity at Isca that was remembered into the post-Roman period: calling the place *legionum urbs* 'city of the legions', Gildas writes in his *De Excidio Britanniae* §10 that two of its citizens, Aaron and Julian, were martyred during the Roman period. Isca was abandoned about 200 years after its foundation, but is named as Old Welsh *Cair Legion guar Uisc* (fortified town of the legion on the [river] Usk) in the list of Britain's 28 *civitates* (sing. civitas) in the 9th-century Welsh Latin Historia Brittonum (§66a). Caerleon's still impressive ruins—no doubt all the more impressive in the 12th century—easily seized the imagination of the medieval Arthurian authors at work in south-east Wales.

Caesar, Gaius Julius (100–44 bc) was conqueror of Transalpine Gaul and the author of *De Bello Gallico* ('Gallic War'), an essential work on the ancient Celts. He began his campaign in Gaul in 58 bc and spent the next nine years waging brutal wars, including two brief forays into Britain which eventually brought the Celtic lands from the Pyrenees to the Rhine under Roman control. He fought the Nervii and the Belgae in north-east Gaul in 57 bc, and in 56 bc he defeated the Veneti of Armorica in a decisive naval battle in the Atlantic. His British expeditions, opposing the British war leader Cassivellaunos, occurred in the summers of 55 and 54 bc. In 52 bc he faced a major uprising by a coalition of tribes in central Gaul led by Vercingetorīx. In 51 bc Caesar's former ally, King Commios of the Atrebates of Belgic Gaul, revolted and then sailed across the English Channel to security as the ruler of the British branch of the tribe. Caesar's descriptions of Gaulish geography, tribal organization, and religion (including the druids) provide crucial and detailed information on ancient Gaul and its people (*De Bello Gallico* 6.11–20). Posidonius was probably an influence on Caesar's writings on Celtic life, but Caesar's own first-hand knowledge of Gaul provides much important supplementary information. Through the course of the 20th century, scholars have become increasingly aware of Caesar's agenda as an author who also ambitiously aimed to become Rome's supreme leader and to justify his self-enriching conquests as being of benefit to Gaul and more especially to Rome.

Cai fab Cynyr is one of the core figures of early Welsh Arthurian literature and continued to be a stock character in the international Arthurian chronicles and romances of the central and later Middle Ages. The usual Middle Welsh spelling is *Kei*, with recurrent epithets *(g)wyn* 'fair' and *hir* 'tall', and other forms are *Kaius* (used in the Historia Regum

Britanniae of Geoffrey of Monmouth), *Che* (as seen in the early 12th-century Arthurian frieze on the tympanum of the Romanesque cathedral of Modena in northern Italy), and Sir *Kay* (in the 15th-century English poem *Le Morte Darthur* by Sir Thomas Malory). Like a mere handful of Arthurian figures—Cai's comrade Bedwyr, Arthur's wife Gwenhwyfar (Guenevere), and his rival Medrawd—Cai survives more or less intact from the first to the last retelling of the tales. In this respect we may contrast such figures as Myrddin/Merlin, Owain ab Urien, Peredur, Cynon fab Clydno, and Geraint fab Erbin, who originated in other early Welsh traditions, but were later drawn in by the powerful gravitational pull of the Arthurian setting as a backdrop for heroic exploits.

Cai fab Cynyr is not mentioned in the early historical sources (i.e., Historia Brittonum or Annales Cambriae) nor in the court poetry assigned to the Cynfeirdd (see also welsh poetry); thus, his claims to historicity are not immediately obvious. He first appears in two highly fantastic pieces of extended pre-Galfridian Arthurian wondertale—the poem Pa Gur yv y Porthaur? (Who is the gatekeeper?) and the closely related earliest Arthurian prose tale Culhwch ac Olwen. Sims-Williams notes as an important parallelism with a datable text the similar rôles of Bedwyr and Kei as Arthur's chief companions in *Culhwch*, the poem *Pa Gur*, and the Latin *Vita Cadoci* of Lifris of Llancarfan of *c.* 1100 (*Arthur of the Welsh* 39).

In the Arthurian adventures listed in the 89 lines extant of the fragmentary *Pa Gur*, Kei is as prominent as Arthur and far more active:

> [Arthur:] 'Who is the gatekeeper?'
> [Glewlwyd:] 'Glewlwyd Mighty-grasp.
>
> Who is asking?'
> [Arthur:] 'Arthur and Fair Cai.'
> [Glewlwyd:] 'Who goes with you?'
> [Arthur:] 'The best heroes in the world.'
> . . .
> When Celli was lost,
> there was fury.
> Cai would be entreating them
> as he continued to hew them down.
> Though Arthur laughed,
> the blood flowed.
> In Awarnach's hall,
> he fought with a hag,
> he slew Pen-Palach
> in the settlements of Dissethach.
> In the Mount of Eidyn [Edinburgh]
> he fought with dog-heads.
> Every group of a hundred would fall.
> There fell every group of a hundred.
> . . .
> A host was useless
> against Cai in battle.
> He used to grip a sword.
> Hostage-exchange was rejected from his hand.
> He was constant in seniority
> over the army to the realm's benefit.
> . . .
> I had men in service.
> It was better while they lived.
> Before the kings of Emrys
> I saw Cai hasten,
> leading plundered livestock,
> a hero long-standing in opposition.
> His revenge was heavy.
> His vengeance was pain.
> When he drank from the ox horn,
> he drank them by fours.
> When he went to battle,
> he would slay them by hundreds.
> Unless it were God who worked it,
> Cai's death could not be achieved.
> Fair Cai and Llachev,
> they made battles
> preceding the suffering of blue lances.
> On the summit of Ysta-Wyngun,
> Fair Cai slew nine witches.
> Fair Cai went to Anglesey
> to destroy lions.
> His shield was polished
> against Cath Palug
> When people ask
> who slew Cath Palug
> (180 bright hounds
> would fall for its food;
> 180 centurions . . .)

Pa Gur's Cai is by and large an extreme exaggeration of the idealized mortal warrior, and like the Irish Cú

Chulainn his superlative nature extends the category of hero to supernatural limits with the slaying of witches and monsters and the claim that he could not be killed without God's intervention. The reference to Llacheu is possibly an oblique echo, otherwise reflected in scattered references, to a story of the killing of Arthur's son (Lacheu, Loholt, Amr, or Medrawd) by Cai or by Arthur himself. The nine witches slain by Cai in *Pa Gur* recall the Nine Witches of Gloucester (Welsh Caerloyw) in *Peredur*, the nine witches in the 7th- or 8th-century Breton Latin Life of St Samson, and the nine otherworldly maidens of the Arthurian poem Preiddiau Annwfn (see Sims-Williams, *Arthur of the Welsh* 41–5).

In *Culhwch ac Olwen*, Cai is named first amongst the worthies of Arthur's court, he takes an active part in a number of the subsequent adventures, and his supernatural attributes are described in a way which has led many modern scholars to view him as a mythological figure or even a debased solar deity:

> Cai had ardour: nine nights and nine days his breath lasted under water; he would be nine days and nine nights without sleep; no physician could heal Kei's sword stroke; he could be as tall as the tallest tree in the forest when he wished. Another property that he had: when the rain was strongest, a fist's breadth above his hand and another below it would be dry because of his ardour . . .

In the Welsh Triads, Cai figures as one of the *Tri Thaleithyavc Cat* ('Three Battle-Diademed Men', TYP no. 21) and his horse is one of the 'Three Lively Steeds' (TYP no. 42).

In the Life of St Cadog (see cadoc), Arthur intervenes, with Cai and Bedwyr, in the attempted abduction of Gwladus daughter of Brychan Brycheiniog by Gwynllyw, the eponym of the district of Gwynllŵg in south-east Wales (Cymru).

In the French Arthurian romances from Chrétien de Troyes onwards, Ké figures as Arthur's steward. He sometimes shows a surly or churlish character in these later sources, which is often viewed as an innovation, having taken place outside Wales. However, already in *Culhwch*, Cai's first act is to advise Arthur against breaking the laws of the court by admitting Arthur's ostentatiously noble kinsman Culhwch into the court. On Cai's Cornish counterpart, see beunans ke.

Many modern scholars derive the name *Cai* from Latin *Caius*, which would suggest a possible historical basis in a 5th-century sub-Roman figure, from a period when Roman names were still very common amongst the Britons. However, a native Celtic **cagios* 'man with a closure', Welsh *cae* (i.e., 'brooch', 'torc', or 'fortified court') is another possibility. The patronym *Cynyr* is doubtlessly Celtic; cvnorix appears, for example, on a 5th-century Irish inscription from Wroxeter in western England.

Cailleach Bhéirre (The old woman of Beare), one of the finest examples of early Irish verse, probably dates from the late 9th century and consists of 34 quatrains, plus one interpolated quatrain (§27 of the editions), in which an old woman contrasts the loneliness and privations of her old age with the joy and pleasures of her youth. It is not known who composed this elegy—whether it was by a woman or by a professional poet, and thus almost surely a man—but its female poetic persona gives the poem immense depth and resonance within the Irish tradition.

The best manuscript copy of the elegy is preceded by a prose introduction, in origin presumably extraneous to the poem, which summarizes the tradition surrounding the Old Woman of Beare and explains that the *Cailleach Bhéirre* was one of the revenants of Irish tradition who enjoyed extraordinary longevity: 'She passed into seven periods of youth, so that every husband used to pass from her to death of old age, so that her grandchildren and great-grandchildren were peoples and races.' Nonetheless, the poet indicates that even the Old Woman of Beare has at last become an

ordinary mortal who cannot postpone death. Like all great poetry, the poem—whatever its author's predominant intention—invites, and has been subjected to, many different interpretations, of which just a few are mentioned.

B. K. Martin regarded the theme of *contemptus mundi* (contempt for the world) as being the dominant one in the poem. Though this is questionable, Martin was probably right to claim that *Caillech Bhéirre* was influenced by Latin poetry. According to Proinsias Mac Cana, 'the real subject of this poem . . . is the deep incompatibility between Christianity and the world of pagan belief and the inevitable outcome of their conflict is the conquest and impoverishment of the latter' (*Celtic Mythology* 95). John Carey maintains: 'The Old Woman is Christian here, not pagan; she looks toward death, not rebirth; and she sees the cycles of nature, whether on land or sea, as phenomena contrasting with and alien to her own condition as a specifically human being' (*Celtica* 23.35). It is true that the poet lays heavy stress on the contrast between the human condition, subject to ageing and decay, and the continuous renewal evident in nature, whether in the form of the sea flooding always after ebb, or the land reproducing a crop each year. The poem uses the term *brat* 'mantle, cloak' in a few metaphorical senses, including—in reference to vegetation—in the lines 'Delightful is the cloak of green which my King has spread over Drumain' (§21 ab). It is instructive, however, to contrast the following passage from the biblical Epistle to the Hebrews 1: 10–12 (which in turn echoes closely Psalm 102: 25–7): 'Lord, thou hast laid the foundations of the earth at its beginning, and the heavens are the work of thy hands. They will perish, but thou wilt remain; they will all be like a cloak that grows threadbare (*et omnes ut vestimentum veterascent*), and thou wilt lay them aside, like a garment, and exchange them for new; but thou art he who never changes, thy years will not come to an end.' Even though this doctrine is not directly contradicted in the poem, it might nevertheless be argued that the poet fails to articulate a rounded Christian view of the poem's central contrastive theme of impermanence and renewal.

Donncha Ó hAodha

Caimbeul, Donnchadh (Sir Duncan Campbell of Glenorchy, *?c.* 1443–1513), poet and 2nd lord of Glenorchy (Gleann Urchaidh) was an influential figure in both literary and political developments in mainland Highland Scotland (Alba). A series of Gaelic poems in the Book of the Dean of Lismore shows him to be a poet of diverse and often deviant subject matter, and his links with other poets preserved in that collection, as well as with its scribes, crystallize a sense of a cultural 'court circle' centred on Donnchadh, his family, and their clients and allies. The links of this 'courtly' (and often ribald) literature with wider European trends are paralleled by Donnchadh's epithet (*an Ridire Math* 'the Good Knight') and his father, Sir Cailean Caimbeul's career: according to the family's 16th-century historian, he was knighted in Rhodes, thrice visitor to Rome (Innes, *Black Book of Taymouth* ii–iii). The poems are also significant for linguistic reasons: it has been noted that 'they provide the earliest evidence for many of the phenomena which differentiate the modern Scottish Gaelic dialects, and Scottish Gaelic itself, from the Modern Irish dialects and from the common ancestor of both' (Gillies, *Scottish Gaelic Studies* 13.1.18). Locally, while the poetry is a cultural testimony to the ties between the Campbells of Glenorchy and other Perthshire families, especially the Clann Griogair (MacGregors), it mirrors the political alliances that aided Donnchadh, and his father before him, in their expansion into east-central Perthshire (Peairt). Donnchadh Caimbeul died at the battle of Flodden, alongside many of the Scottish nobility.

Cáin Adomnáin ('Adomnán's Law'), referred to in Latin as the *Lex Innocentium* (The law of the innocents), is an explicitly Christian legal text in Old IRISH which declares that women, children, and non-combatants such as clergy are immune in warfare. It was promulgated in the formal manner of the *acta* of an ecclesiastical synod held in Birr, Co. Offaly (Biorra, Contae Uíbh Fhailí) in 697. It is the work of ADOMNÁN of Iona (EILEAN Ì) and was signed by 91 guarantors—bishops, kings, and important clerics. In addition to the familiar penalty structure of fines for those who violate this *Cáin*, there is an ecclesiastical censure of malediction.

Caisel Muman (Cashel, Co. Tipperary) was a centre of secular power in Early Christian Ireland (ÉRIU), seat of the ÉOGANACHT dynasties of Munster (MUMU, Modern An Mhumhain), second in significance as an early medieval royal site only to Tara (TEAMHAIR), dominated by the Uí NÉILL dynasties of northern and east-central Ireland. During the course of the early Middle Ages, Caisel developed a dual rôle, becoming also the seat of a bishop. In the early 12th century Caisel became an archdiocese, second in its status in the church in Ireland only to Armagh (ARD MHACHA), centre of the cult of St PATRICK.

§1. DERIVATION

As a term, word, and name, 'Cashel' (Irish *Caiseal*) will be encountered in more than one meaning in Celtic studies. First, CASHEL is used by Irish archaeologists to designate a stone-built ring-fort, of which many thousand dot the Irish landscape; this generic type of FORTIFICATION is discussed in a separate article. The Old Irish word *caisel* 'fort, castle, fortified settlement' reflects a borrowing from Latin *castellum*. The change of Latin *st* to Irish *s* marks out *caisel* as an early loan (*c.* AD 500 or earlier). The word is thus suggestive regarding contacts between the early Irish and the Romans or Romanized BRITONS, probably specifically—given the meaning of the word—contacts in the military sphere.

§2. CAISEL AND THE ÉOGANACHT KINGS

Caisel Muman (Cashel of Munster) is the name of an important early secular centre of power founded on a geological outcropping, 'the Rock of Cashel', which naturally dominates the local landscape, the surrounding plain known in early sources as Mag Femin. Caisel was the traditional seat of the overkingship of Munster of Early Christian times dominated by the Éoganacht dynasty. According to LEGENDARY HISTORY, Caisel was not founded or ruled by the dynasty's namesake ancestor Éogan Már, but was rather revealed to and bestowed upon his fourth-generation descendant, Conall Corc (see CORC OF CAISEL). By counting back from his dated descendants through the GENEALOGIES, we see that Conall Corc, if historical, would have lived in the 4th or early 5th century. In 9th-/10th-century foundation legend *Senchas Fagbála Caisil* ('The Tradition of the Finding of Cashel'), we are told that the site was discovered by, or appeared to, two swineherds who had fallen into an enchanted three days' slumber. They saw Corc mac Luigdech (i.e. Conall Corc), and an angel prophetically recited to them the list of the future kings of Caisel down to Dub Lachtna (†895), which probably supplies the approximate date of the original composition of 'The Finding of Cashel'. It is an interesting and somewhat atypical origin legend in that the supernatural elements are overtly Christian; the TUATH DÉ and typical Irish OTHERWORLD figures are absent.

According to the later 7th-century account of Tírechan (§51), St Patrick baptized the sons of Nie Froích at Petra Coithrigi ('Patrick's Rock') in Cashel; this name probably refers to the Rock of Cashel itself. These sons of Nie Froích would include the Éoganacht king of Cashel known in the genealogies as Oengus mac Nad Froích (†490/2), grandson of Conall Corc.

Generally speaking, the kings of Caisel were seldom strong enough to challenge the powerful Uí Néill dynasties. A few successively aggressive exceptions are noteworthy: Cathal mac Finguine (r. 723–42), Feidlimid mac Crimthainn (r. 820–42), and the king/bishop CORMAC UA CUILENNÁIN (r. 902–8).

§3. THE CHURCH AT CAISEL

Although Cashel was clearly already an important Christian site by Cormac's time, a 10th-century round tower is all that remains architecturally of the church of the Éoganacht period. A unique stone sarcophagus from Caisel, showing animal ornamentation in the Scandinavian Urnes style, dates from the 11th or 12th century.

In 1101 the high-king of Ireland, Muirchertach Ua Briain, gave the Rock of Cashel to the church. As the great-grandson of Brian Bóruma and thus a member of the O'Brien dynasty, Muirchertach set himself the dual political aim of continuing the generous O'Brien patronage of the church and simultaneously depriving the O'Briens' hereditary rivals for the Munster kingship of their traditional royal centre. In 1111 the Synod of Ráith Bressail determined that Caisel was to be the seat of an archbishop second to Armagh in its ranking amongst the Irish archdioceses. In 1152 a papal legate brought *pallia* from Rome for four Irish archbishoprics—Armagh, Tuam, Dublin (Baile Átha Cliath) and Caisel. Earlier in the 12th century an important Benedictine monastery was founded at Cashel (see MONASTERIES), and the king of Munster, Cormac Mac Cárrthaig (†1138), sponsored the building of a Romanesque church (Cormac's Chapel) for the monastery; construction began in 1127 and the church was dedicated in 1134. This small, but highly ornamented, church remains well-preserved. Its elaborate stonework implies intense international contacts a generation before the first Anglo-Norman incursion of 1169 led by Strongbow (De Clare). Cormac's Chapel shows similarities to Romanesque churches in western Germany, France, and western Britain, including what survives of the church of the kings of Gwynedd in Aberffraw. Cormac's Chapel is often counted as the beginning of the western European Romanesque style in Ireland.

In the winter of 1171–2 a national synod, summoned to Caisel by King Henry II of England, was designed to forward his claim as overlord of Ireland. The ruined cathedral on St Patrick's Rock was constructed mostly in the period 1224–89. The site was destroyed and desecrated by forces loyal to the English parliamentary leader Oliver Cromwell in 1647. The cathedral was repaired and used by Protestants in the period 1686–1749 before it was again abandoned. The ruins came under state care as a national monument in 1874. Since Irish Catholic emancipation (1829), the cathedral town of the archdiocese of Caiseal and Emly (Imleach) has been at Thurles, Co. Tipperary (Durlas, Contae Thiobraid Árainn), 20 km north of Caiseal, which today is a small market town, and the architectural remains on the rock a major tourist attraction.

Caladbolg/Caledfwlch/Excalibur

The early Irish Ulster Cycle shares this name for a marvellous sword with Welsh and international Arthurian literature.

§1. FERGUS'S SWORD

Towards the end of Táin Bó Cuailnge, King Ailill of Connacht returns the sword of the exiled Ulster hero Fergus mac Róich, which Ailill has hidden through most of the action. Fergus chants an obscure formal verse (*rosc*) over the sword, calling it *Caladbolg* according to the Lebor Laignech text or, in the later manuscripts, *Caladcholg* 'hard sword'. He then wields it with both hands in order to cut a gap (*berna*) of a hundred men through the host of Ulaid. As he is about to strike the Ulster king, Conchobar, he is deterred from committing an act that would create immense and enduring enmity and vents his fury instead by striking the top off three hills, thus creating the three bald hills of Meath (*teóra maele Midi*; see MIDE). The plural form *caladbuilg* is used for swords in general in one other medieval Irish text, the Middle Irish Trojan saga Togail Troí, which probably took the name from the *Táin*.

§2. ARTHUR'S SWORD

Early in the action of the prose tale CULHWCH AC OLWEN, Culhwch arrives at his kinsman ARTHUR's court in CELLIWIG, seeking assistance in wooing the giant's daughter, Olwen. Arthur's speech to Culhwch includes a list of precious items that the young man may not request, presumably because they are essential to the king's status and identity:

> . . . you shall have what your head and tongue may seek, as long as the wind dries, the rain wets, the sun moves, as far as land and sea encompass, except my ship and my mantle, Caledfwlch my sword, Rhongomiant my spear, Wyneb-Gwrthucher my shield, Carnwennan my knife, and GWENHWYFAR my wife . . . you shall have it gladly. Seek what you would seek.

Arthur does not actually use the sword in *Culhwch*, but one of his heroes, Llenlleawc Wyddel (Llenlleawc the Irishman), uses it to slay Diwrnach Wyddel (probably also to be understood as an Irishman) and his host.

In the HISTORIA REGUM BRITANNIAE of GEOFFREY OF MONMOUTH, Arthur's sword is named *Caliburnus*, a Latinization probably influenced by *chalybs* 'steel'. The names *Calibor(e)* and *Escalibor(e)* occur for Arthur's sword—appearing, for example, as the Sword in the Stone—in medieval French sources, and these probably derive from Geoffrey's Latin name. In BRUT Y BRENHINEDD (Welsh versions of *Historia Regum Britanniae*), Arthur's sword is *Caledfwlch*. In the Cornish play BEUNANS KE, the corresponding Cornish *Calesvol* is used.

§3. DERIVATION

That Irish *Caladbolg* and Welsh *Caledfwlch* correspond is apparent: Irish *calad* 'hard' and *bolg* 'gap' are cognate with Welsh *caled* and *bwlch*, and have the same meanings. The compound would thus mean 'hard cleft' or 'cleaving what is hard' or 'cleaving through the hardship [of battle]'; the latter two senses would suit the sword's action in the *Táin*. However, it is less clear whether we are dealing with a COMMON CELTIC inheritance or a borrowing between CELTIC LANGUAGES. If borrowed, was it from GOIDELIC to BRYTHONIC or vice versa? Nor is it immediately clear whether *Calesvol* was adapted from Welsh or an independent witness to the tradition. The problem cannot be decisively tackled in isolation from that of the origins of other key figures in *Culhwch* with Irish analogues, for example Arthur's wife Gwenhwyfar, whose name is cognate with *Findabair* (MEDB and Ailill's daughter) in the Ulster Cycle, and Irish *Torc Triath* corresponding to the monstrous BOAR, TWRCH TRWYTH. It is possible, therefore, that we have here the early transfer of a block of traditional material (cf. Sims-Williams, BBCS 29.600–20). But once again, in which direction? The fact that Caledfwlch only comes into the action in *Culhwch* in connection with characters called *Gwyddel* may point to a source still recognized as Irish by the author and his audience. On the other hand, the names *Kleðyf Kyuwlch* 'perfect sword' and *Cleðyf Diuwlch* 'sword with no gap' elsewhere in *Culhwch* suggest that the element *bwlch* was productively applied to swords specifically in Welsh. A Welsh origin is also consistent with the place-name *Caledfwlch* in south-west Wales (CYMRU). A parallel independent development in Irish and Welsh has also been suggested (Bromwich & Evans, *Culhwch and Olwen* 64–5), but this is not the way in which strikingly similar forms with the same usage in two closely related languages usually arise. One complication is that *bolg* and *bwlch* do not correspond perfectly phonologically and the Celtic preform is therefore uncertain. It is likely that the final consonant of *bolg* 'gap' has been influenced by the originally distinct *bolg* 'bag', since both have overlapping meanings in the range of 'cavity'. T. F. O'Rahilly's ideas on *Caladbolg* were based on his now largely abandoned theory that CÚ CHULAINN's horrific *Gae Bolga* had originally meant 'lightning spear', rather than having anything to do with *bolg* 'gap', Welsh *bwlch*. A connection with the name of the legendary Irish people FIR BOLG (see BELGAE) should probably be ruled out since this *Bolg* does not correspond to the Welsh *bwlch*. It is possible that an obscure old and/or borrowed name has been popularly rationalized in one or both languages; popular etymology was clearly at work in the formation of Middle Irish *Caladcholg* and Geoffrey's *Caliburnus*. The early Welsh man's name *Tudfwlch* might be relevant, implying possible obsolete senses of *bwlch* in old proper names.

JTK

calendar, Celtic

Although distinctive festivals and seasonal traditions are found in the folklore and literature of the CELTIC COUNTRIES (see BELTAINE; IMBOLC; LUGNASAD; SAMAIN), it would be misleading to suppose that a pre-Christian Celtic calendar had survived and remained in use in medieval or modern times. On the other hand, although there is no single tradition of marking time that can be reconstructed for all Celtic peoples, we do have detailed information for pre-Christian Celtic systems of timekeeping, most notably the lunar Calendar of COLIGNY. What calendars there are, including the Gaulish, reveal a debt to the classical traditions of marking time, and the terminology of contemporary Welsh and Breton systems are more conservative in this regard than even the modern Romance language systems.

§1. THE DAY

The division of the day into 24 hours was common throughout the ancient world, and there is no reason to suppose that Celtic cultures did not also have this system. For practical purposes, however, the most important division of the day was into day and night, and within that into the same divisions that are used today, such as morning, afternoon, and evening. The Roman day began at midnight, as it does in the modern Celtic countries, but there is some evidence that the Celtic day formerly began and ended at dusk or sunset, as did the Athenian, Hebrew, and other ancient calendars. The GAULISH word *trinox*[B] 'three night[s], three-night [festival]', attested on the Calendar of Coligny, probably refers to a three-day period rather than merely three successive evenings, and the modern Welsh expressions *wythnos* 'week' and *pythefnos* 'fortnight' are literally 'eight nights' and 'fifteen nights', respectively. For a discussion of the numbers eight and fifteen in this context, see §2 below.

The INDO-EUROPEAN words for 'day' and 'night' are preserved in all the Celtic languages: 'day' is Old Irish *dia* in compounds, Welsh *dydd*, Breton *deiz*; 'night' is Old Irish *nocht* in compounds, Welsh *nos*, Breton *noz*. The Old Irish words *lá* 'day' and *adaig* 'night' are both ultimately related to words meaning to spend or pass time (Pokorny, IEW).

Welsh is unusual among Indo-European languages in that it has a specific word for the day before yesterday, *echdoe*, and for the day after tomorrow, *trennydd*, and two days after tomorrow, *tradwy*. The previous evening is *neithiwr*, and the night before that is *echnos*.

§2. THE WEEK

The seven-day week, though common among ancient cultures, was evidently borrowed into Celtic cultures through contact with the Roman world. The evidence for this comes largely from the names of the days of the week, which are all either borrowings from Latin or based on the medieval Christian calendar. The modern BRYTHONIC languages are unique in preserving all the Latin names for the days of the week. The modern Romance languages show varying degrees of innovation in the names of the weekdays, from renaming Saturday and Sunday to reforming the entire system, as in Portuguese. Latin *dies Sōlis* 'the day of the sun, Sunday' became Welsh *dydd Sul*, Breton *ar sul*. In Breton, the adverbial form replaces the definite article *ar* with the prefix *di-*, therefore *ar sul* 'Sunday' becomes *disul* 'on Sunday'. The borrowing probably occurred after the phonemicization of the sound change in Brythonic from /*s*/ to /*h*/ as in the word for sun, Welsh *haul*, Breton *heol*, but before the replacement of Latin *dies Sōlis* by *dies Dominica* early in the Christian era.

The names of the other days are: Latin *dies Lūnae* 'Monday' > Welsh *dydd Llun*, Breton *al lun/dilun* (cf. Welsh *lleuad/lloer* 'moon', Breton *loar* 'moon'); Latin *dies Mārtis* > Welsh *dydd Mawrth*, Breton *ar Meurzh/dimeurzh*; Latin *dies Mercurii* 'Wednesday' > Welsh *dydd Mercher*, Breton *ar merc'her/dimerc'her*; Latin *dies Iouis* 'Thursday' > Welsh *dydd Iau*, Breton *ar yaou/diryaou*; Latin *dies Veneris* 'Friday' > Welsh *dydd Gwener*, Breton *ar gwener/digwener*; Latin *dies Saturni* 'Saturday' > Welsh *dydd Sadwrn*, Breton *ar sadorn/disadorn*. The Cornish system closely parallels the Breton.

The Brythonic words for week also preserve an older system of inclusive counting. The Welsh *wythnos*, lit. 'eight nights', and the Breton *eizhteiz*, lit. 'eight days', refer to a seven-day week. (For details see Richards,

Mapping Time 81.) The Old Irish for 'week,' *sechtmain*, is derived from the Late Latin *septimāna* or *septimōnia* 'week'; cf. also Breton *seizhun*.

Some of the GOIDELIC names for the days of the week are based on the Roman system, but several describe the weekly fasts that were important in the medieval church. The Latin-derived days are Monday (Old Irish *Lúan*, Modern Irish *Luan*, Scottish Gaelic *Diluain*, Manx *Jelune*), Tuesday (Old Irish *Māirt*, Irish *Márt*, Scottish Gaelic *Dimàirt*, Manx *Jemayrt*) and Saturday (Old and Modern Irish *Satharn*, Scottish Gaelic *Disathairne* or *Disathurna*, Manx *Jesarn*). Sunday, as in the modern Romance languages, comes from Late Latin *dies Dominica* 'the Lord's day' (Old Irish *Domnach*, Irish *Domhnach*, Scottish Gaelic *Didòmhnaich*, Manx *Jedoonee*). The Old Irish word for fast is *aín*, also spelled *oín*, which forms the basis of the words for Wednesday through Friday. The Old Irish for Wednesday is *cétaín* 'first fast', which gives Irish *An Chéadaoin*, Scottish Gaelic *Diciadain*, and Manx *Jecrean* (Irish, like Breton, replaces the definite article *an* with the prefix *dé* plus the genitive case in adverbial use: *Dé Céadaoin*). Thursday is *dardoín*, from **etar dá oín*, 'between two fasts', giving Modern Irish *Déardaoin*, Scottish Gaelic *Diardaoin*, Manx *Jerdein*. Old Irish *aín* or *aín diden* 'Friday', lit. 'fast' or 'last fast [of the week]', gives Irish *An Aoine /Dé hAoine*, Scottish Gaelic *Dihaoine*, Manx *Jeheiney*. Dáibhí Ó Cróinín has identified another set of names for the days of the week (*Ériu* 32.95–114).

§3. THE MONTH

Although the Julian and Gregorian calendars have been used throughout the Celtic countries, there is some evidence that at least some of the month words found in Old Irish were applied to periods at variance with the ordinary calendar by nearly a fortnight. In Scottish Gaelic, *Faoilleach* 'January' and *Iuchar* 'July' can either refer to the calendar months or the periods from a fortnight before to a fortnight after 1 February and 1 August, respectively, and DIL quotes Peter O'Connell's *Irish–English Dictionary* (British Library MS Egerton 83) in identifying *faílech* as 'the old name of the Calends of February and of 15 days after'. Contemporary use conforms to the standard Gregorian calendar, and the Celtic months are primarily of interest for their names.

Unlike the days of the week, the Celtic months of the year show variation even within languages. The Roman calendar has had a significant influence on the names. 'March' is universally a Latin borrowing, and in the Brythonic languages the words for January through May are taken from Latin. Manx names for the months are based on the seasons, with the prefixes *Toshiaght* 'beginning', *Mean* 'middle', and *Jerrey* 'end' distinguishing the months. These conform to the traditional agricultural notion of the seasons, so that *Toshaightsouree* 'the beginning of summer' is May, also known as *Boaldyn* (see BELTAINE). This notion is preserved in other languages, so that in early Modern Welsh *Cyntefin* 'May', *Mehefin* 'June', and *Gorffennaf* 'July', are built on the root of *haf* 'summer'. Old Irish *céitemain* 'May' and *mithem* 'June' are exactly parallel, preserved in Scottish Gaelic *Cèitean* and Irish *Meitheamh*. In Breton, the month of July is *gouere* 'under, i.e. before, *here*', which in turn means both 'the sowing season' and 'October'. The Welsh cognate, *Hydref*, means both 'October' and 'autumn'. The word itself is of disputed etymology, but may contain the word for 'deer', corroborated by Scottish Gaelic *Dàmhair* 'October', from *damh* 'deer'. The Welsh *Medi* 'September' means 'harvest', and Breton *gwengolo* 'September' may come from *gwenn* 'white' *kolo* 'straw', referring to ripened crops. The Breton words for November and December are *du* and *kerzu*, 'black' and 'very black'; the Welsh are *Tachwedd* 'slaughter' (cf. Anglo-Saxon *Blotmonath* 'blood-month', November) and *Rhagfyr* 'foreshortened', presumably referring to the shortened amount of daylight. The Cornish names of the months are exactly parallel to the Breton.

The Scottish Gaelic name for January, *am Faoilleach*, is related to the Irish *faoillidh* 'festival, carnival', from Old Irish *faíleach*, the first 15 days in February. The Irish term is sometimes used for the month of February as a whole, and the word may ultimately derive from *fáilid*, 'joyful', which is related to the familiar Irish/Scottish Gaelic word *fáilte/fàilte*, 'welcome', or it may be related to *fáel* 'wolf' (cf. Anglo-Saxon *wulf-monath*, 'January', lit. 'wolf-month'). The Scottish Gaelic for February, *Gearran*, is related to *gearr* 'short'; cf. Welsh *y mis bach* 'February', lit. 'the little month'. The month of *Abril*, Old Irish *Apréil*, has become modern Irish *Aibreán*, influenced by the Irish word for 'second drop' (Old Irish *athbráen*). Scottish Gaelic *Giblean* may be the same with a non-etymological initial [g]. The names for August and November are derived from Old Irish Lugnasad and Samain respectively. December is also

based on its main holiday, Christmas (Latin *Natalicus*): Irish *Nollag*, Manx *Mee na Nollick*. Scottish Gaelic *Dùbhlachd* is, like Breton, based on the word for black.

The Scottish Gaelic name for June, *Òg-mhios*, lit. 'young-month', may be a calque on Latin *Junius* 'June'. Both Old Irish *bóidmís* 'July' and Scottish Gaelic *Sultainn* 'September' probably derive from words for 'pleasing, pleasant, fat', Old Irish *báid* and *sult*. The Scottish Gaelic word for July, *Iuchar*, is of unclear etymology, although it is probably a derivitive of the lenited form of the root found in Old Irish *fichid*, Scottish Gaelic *fiuch* 'to boil, seethe' (cf. Dwelly, *Illustrated Gaelic–English Dictionary*, *fiuchadh* 'heat') possibly influenced by the form *Iúil*.

§4. THE SEASONS

The most notable distinction between the Celtic seasons and the conventional understanding of their function is the time at which they occur. Meteorologists understand spring as beginning at the equinox, while the agricultural calendar of the British Isles considered it to be the midpoint of spring. Likewise, Midsummer's Day falls near the beginning of summer meteorologically, but was the midpoint of summer in the traditional calendar. Though Midsummer's Day celebrations are common in the modern Celtic countries, there is no evidence that the ancient Celts celebrated either the solstices or the equinoctes.

§5. QUARTER DAYS AND FESTIVALS

The year is traditionally divided not only into four seasons, but also four quarters, which do not necessarily coincide with the seasons as they are now marked. In England, these quarter days are Lady Day (25 March), Midsummer's Day (24 June), Michaelmas (29 September), and Christmas (25 December). Lady Day, also known as the Feast of the Annunciation, was also officially New Year's Day until 1752 in England and the territories it administered.

In Scotland (Alba), the quarter days are Candlemas (2 February), Whitsuntide (15 May), Lammas (1 August), and Martinmas (11 November). In Ireland (Éire), they are Lá Fhéile Bríde (St Brigit's Day, 1 February), a continuation of Old Irish Imbolc; Lá Bealtaine (May Day, 1 May), a continuation of Old Irish Beltaine; Lá Lúnasa (Lammas, 1 August), a continuation of Old Irish Lugnasad; and Lá Samhain (All Saints' Day, 1 November), a continuation of Old Irish Samain.

Care must be taken with fixed dates. The Gregorian calendar used today was proposed as a replacement for the Julian calendar in 1582, but adoption occurred at different times and with different levels of success in the Celtic countries. France, including Brittany (Breizh), adopted the reform in the 1580s, Scotland in 1600, England (and thence Cornwall [Kernow], Ireland, and Wales [Cymru]) in 1752, and the Isle of Man (Ellan Vannin) in 1753. This meant there was a ten-day discrepancy between England and Scotland for 100 years, and eleven after that time. Many festivals are still celebrated according to the 'old calendar', so that, for example, Samain customs sometimes take place on 1 November, but these may have become Martinmas customs. Calendar customs can also shift between nearby holidays, so that many New Year's customs have become associated with Christmas, and newer festivals such as Guy Fawkes Day may have incorporated some customs previously associated with Samain/Calan Gaeaf.

Many individual dates were celebrated or otherwise marked, notably saints' days. Martyrologies (a catalogue of martyrs and saints arranged by date) such as *Félire Óengusso Céli Dé* (The martyrology of Oengus Céile Dé) and issues such as the Easter controversy show an acute awareness of the calendar.

AM

The **Calidones** (variants Calidonii, Caledonii, Καληδονιοι) were a major tribe in ancient north Britain, beyond the Roman frontier. The name was clearly in use by the 1st century AD and is thus earlier than *Picti*, *Pecti* 'Picts', which has an overlapping geographical range. The corresponding place-name *Calidonia* or *Caledonia* occurs in the Agricola of Tacitus (in the latter spelling) and other sources, and is used in modern times as a poetic name for Scotland (Alba). The singular is found in the Romano-British

inscription from Colchester (CAMULODŪNON): LOSSIO VEDA . . . NEPOS VEPOGENI CALEDO 'Lossio Veda, the descendant of Vepogenos the Caledonian', where *Caledo* may be understood as a Latinization of Celtic *Calidū*; the latter spelling occurs on the COINAGE of the Caletes and ARVERNI of GAUL. It is nonetheless uncertain whether the name *Calidones* is related to *Caletes* or PROTO-CELTIC *kalet-* 'hard'. The Celticity of *Calidones* has been doubted, but in the context of the questionable idea that Picts spoke a non-INDO-EUROPEAN language.

The *Geography* of PTOLEMY (2nd century AD) places the Καληδονιοι in the vicinity of the Great Glen and Loch Ness. The group name survives in three GAELIC place-names from Perthshire, central Scotland: *Dùn Chaillean*/Dunkeld 'Fort of the Calidones' (*princeps Dúin Chaillden* ANNALS of Ulster 873, *Dún Callden* Book of DEER), *Ro-hallion* 'Rath of the Calidones' near Dunkeld, and *Sìdh Chaillean*/Schiehallion 'SÍD of the Calidones'.

Silva Calidonia 'the Caledonian forest' is mentioned by PLINY (*Natural History* 4.102) and *Calidonia silva* by Martianus Capella (6.666); Ptolemy likewise notes a Καληδονιος δρυμὸς. Old Welsh *cat Coit Celidon* 'battle of the forest of the Calidones', glossed 'silva Celidonis', occurs in the 9th-century Welsh Latin HISTORIA BRITTONUM (§56) as ARTHUR's seventh battle. In the early WELSH POETRY connected with the WILD MAN and prophet MYRDDIN, Coed Celyddon is the place to which Myrddin flees for refuge and isolation after the battle of ARFDERYDD. Since the battle site (*Armterid* ANNALES CAMBRIAE 573, now *Arthuret*) is only six miles north of HADRIAN'S WALL, it is sometimes assumed that the Welsh *Coed Celyddon* must be further south than the ancient Calidones. But this is not certain since the Myrddin legend includes fantastic elements; therefore the long-range flight of the battle-deranged bard is not unthinkable, and the Welsh understanding of the relative position of these northern places may have been vague. In CULHWCH AC OLWEN, *Kylebon* or *Kelybon Wledic* are apparently variant spellings of the same character's name, which might originally have meant 'sovereign of Caledonia' or something similar.

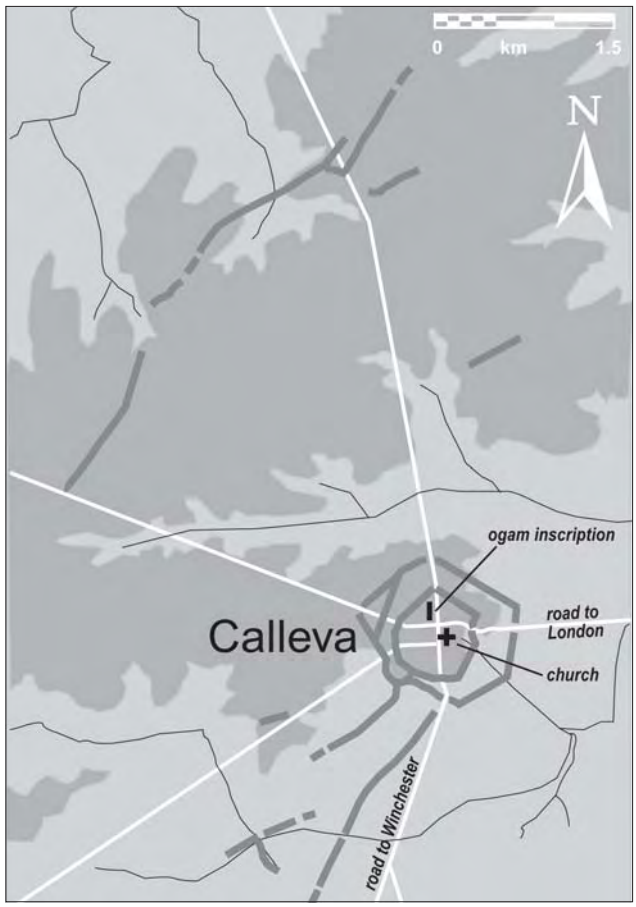
Calleva (**Silchester**) in present-day Hampshire, England, was the capital of the CIVITAS of the Atrebates (see BELGAE) in Roman BRITAIN. The site is particularly valuable archaeologically, and unusual in that a medieval and modern town did not develop on top of it, impeding excavation. For CELTIC STUDIES, Calleva is significant because it has produced evidence for continued urban occupation in the post-Roman period and was thus probably the centre of an early medieval Brythonic enclave, more or less surrounded by pagan English settlements. A series of earthworks was thrown up in the 5th or early 6th century marking out a defended *territorium*, beyond Calleva's late Roman walls, and in particular blocking the overland routes to the area of intensive 5th-century Saxon settlements at Dorchester on Thames to the north. Conversely, the Silchester area has no early Anglo-Saxon material. Along with finds of worn late 4th-century Roman coins, very late Roman glass, brooches with post-Roman Celtic affinities, and sub-Roman military buckles produced at the site of the old basilica in the town centre, Silchester also produced a 5th-century OGAM inscription in Primitive Irish: EBICATO[S MAQ]I MUC[O 'of Imchad' or 'of Éochad son of . . .' This is the easternmost of the ogam stones and one of the earliest; it interestingly suggests an inverse relationship between Irish and Anglo-Saxon presence in post-Roman Britain. An apsidal building 13 × 10 m near the forum appears to have been a 4th-century church, thus indicating a Christian community from that date at Silchester. The town had probably been abandoned by the earlier 7th century; otherwise, we might expect the site to have been reused during the Christianization of Wessex.

A similar case—as an abandoned Romano-British *civitas* capital yielding ambitious architectural sub-Roman remains—is that of Vriconium/Wroxeter (Old Welsh *Cair Guricon*) in Shropshire. St Albans also produced evidence for post-Roman urban survival (see VERULAMION). The evidence of these three towns and



The walled Romano-British town of Calleva/Silchester, its road system, and sub-Roman linear defences

negative evidence for the destruction of the towns of Roman Britain in the Migration Period are cause for some re-evaluation of the picture drawn by GILDAS of an abrupt and violent end of urban life in 5th-century Britain as a result of the ANGLO-SAXON 'CONQUEST'. It is possible that continued occupation of Romano-British towns in the 5th and 6th centuries was more common than we know, the evidence having been destroyed or simply covered up by later building in most instances. The name *Calleva* is probably related to Welsh *celli*, Irish *caille* 'wood, grove'.

Cambrian Medieval Celtic Studies is a current Celtic journal, established as *Cambridge Medieval Celtic Studies* in 1981 by Patrick Sims-Williams. The journal changed its name and relocated to ABERYSTWYTH with Vol. 26 (Winter 1993). It contains scholarly articles on all aspects of medieval CELTIC STUDIES, including the relationship of the CELTIC COUNTRIES with England and the Continent. Articles are written in English and for the most part are on historical, palaeographical, and literary topics. It appears twice a year.

PSH

Camlan is the name of the battle in which Arthur and MEDRAWD fell. The historicity of the battle and early written sources are discussed in the article ARTHUR, THE HISTORICAL EVIDENCE (see also ANNALES CAMBRIAE; ARTHURIAN SITES).

There is more than one possible location. The BRYTHONIC place-name could mean either 'Crooked glen' *Camboglanna* or 'Crooked enclosure' **Cambolanda*. The Roman fort of Camboglanna (now Castlesteads, CUMBRIA) is one possible site. There was, in fact, a major re-use of the Hadrianic frontier, including Castlesteads specifically, and many other Romano-British forts and fortified towns in the north in the 5th and 6th centuries, suggesting the possible revival of late Roman military command (see HADRIAN'S WALL).

Camlan is mentioned in several legendary or fictional medieval Welsh sources. In ENGLYNION *y Beddau* ('The Stanzas of the Graves'), it is named as the place of the grave of an otherwise unknown 'Osfran's son'. Camlan figures twice in the great catalogue of ARTHURIAN heroes in the early Welsh prose tale CULHWCH AC OLWEN. The farcical triad in which three men, including Morfran son of Tegid and Sandde Angel-face, are said to have escaped from Camlan—one because he was so ugly and the other because he was so beautiful—shows that the battle, like CATRAETH, became famous as one from which very few escaped. *Gwynn Hyuar maer Kernyw a Dyfneint* 'Gwynn the ready to anger, overseer of Cornwall and DUMNONIA' is

noted as one of the nine men who 'wove' or plotted the battle of Camlan. Though we lack the details, this allusion suggests that there had been a tradition of a complicated background to the conflict, with numerous characters interacting to weave the doom of Arthur. It also links Camlan with Cornwall (Kernow), but does not explicitly locate it there, as Geoffrey of Monmouth later did (see below). Camlan is of more central importance in the prolonged and confusing dream sequence of the later Welsh Arthurian tale Breuddwyd Rhonabwy, and the battle is there blamed on a troublemaker (as perhaps implicitly in *Culhwch*), in this instance a character named Iddawg 'Churn of Britain', who stirred up enmity between Arthur and Medrawd.

Camlan is named in five of the Welsh Triads. In TYP no. 30 ('The Three Faithless War-Bands'), we are told that Alan Fyrgan's war-band 'turned away from him by night, and let him go with his servants to Camlan. And there he was slain'. TYP no. 51 ('The Three Dishonoured Men') names Medrawd as the guilty party at Camlan; it follows closely Geoffrey's account in Historia Regum Britanniae and apparently derives from it: while Arthur was campaigning against the Romans on the Continent, Medrawd instigated the rebellion, which Arthur returned to face at Camlan; he killed Medrawd, but was taken mortally wounded to Ynys Afallach (see avalon). TYP no. 53 ('The Three Harmful Blows') says that the battle was caused by the blow struck by Gwenhwyfach against her sister, Arthur's wife, Gwenhwyfar. TYP no. 59 ('The Three Unfortunate Counsels') includes the counsel that Arthur and Medrawd divide their forces three times at Camlan. TYP no. 84 ('The Three Futile Battles') reiterates that Camlan was caused by a quarrel between Gwenhwyfar and Gwenhwyfach. The directive in the Welsh law texts that 'a song of Camlan' be sung on occasion to the queen also implies that Gwenhwyfar's rôle in causing Camlan had come to be widely perceived as a cautionary tale to royal wives. These allusions do not add up to a coherent story, but obviously there was an elaborate one known to poets and storytellers, including many details not derived from Geoffrey.

According to Geoffrey, Arthur's nephew 'Modred' treacherously married Arthur's wife 'Guanhumara' while Arthur was in Gaul. The battle was then fought on the river Camblana or Cambla (i.e., the Camel) in Cornwall. Although Geoffrey's locations are often untraditional, his spelling of the name suggests that he used a written source in which the first element was still written as Romano-British *Camb(o)-*, rather than Old Welsh *Cam(m)-*. Geoffrey's account was then the basis for the battle as described in subsequent Continental and English versions of the Arthurian biography.

JTK

Camma Κάμμα (*fl.* 2nd century BC) was a Galatian high priestess of the goddess identified with Artemis (see interpretatio romana; Mitchell, *Anatolia*). There are two versions of her story in the *Moralia* of Plutarch ('On the Bravery of Women' 257; 'The Dialogue on Love' 768). Another version is provided by Polyaenus (*History* 8.39). The following excerpts are from the first with some additional information inserted:

> Sinātos and Sinorīx [of the Tolistobogii] . . . were the most powerful of the tetrarchs [i.e., one of four rulers of one of the three tribes] of Galatia [*Moralia* 768 calls Sinorīx the most powerful]. Sinātos had a young wife named Camma, much admired for her youth and beauty, but still more remarkable for her virtues . . . not only modest and affectionate, but also shrewd and courageous, and fervently beloved by her servants on account of her compassion and her kindness. She was further distinguished by her office as [hereditary (*Moralia* 768)] priestess of Artemis, the goddess whom the Galatae most revere, and was always to be seen at the solemn processions and sacrifices, magnificently attired.
>
> Sinorīx fell in love with her. Unable to possess her either by persuasion or by force while her husband lived . . . he killed Sinātos treacherously. Not long thereafter he proposed to Camma, who was now living in the temple. [Many kings and

potentates came to woo her, yet she received no one (*Moralia* 768)]. She was biding her time, and bore Sinorīx's crime not with pathetic weakness but with a keen and foreseeing spirit . . .

At last she yielded, and sent for him so that the compact and the vows might be made in the presence of the goddess . . . She led him to the altar, poured a libation from a drinking-bowl [a golden cup (Polyaenus)], drank some herself, and told him to drink the rest. It was a drink of milk and honey [*melikraton*], with poison in it. When she saw that he had drunk, she cried aloud and fell down before the goddess. 'I bear witness to you, most glorious spirit,' she said, 'that it is for the sake of this day that I have lived since Sinātos's murder . . . As for you, most impious of men, your relatives can prepare your tomb, instead of your wedding and bridal chamber.'

As a Celtic social reality, the story is reminiscent of Queen CARTIMANDUA, but the Celtic names of the three characters suggest that the details took shape as a Galatian legend. Thus, *Camma* apparently means 'evil woman' and thus underscores the central ironic theme of an exceptionally good woman as the source of calamity. *Sinātos* Σινατος is probably for **Sugnātos* 'well suited' for the rightful husband and *Sinorīx* Σινοριξ for **Seno-rīχs* 'old king' for his unappealing powerful rival.

As a tragic love triangle, the Camma story has parallels in Celtic materials, for example, ARTHURIAN literature, TRISTAN AND ISOLT, and two early Irish stories—the triangle of DERDRIU, Noísiu, and the royal suitor CONCHOBAR in LONGAS MAC NUISLENN ('The Exile of the Sons of Uisliu') in the ULSTER CYCLE, and in FIANNAÍOCHT, Gráinne (daughter of CORMAC MAC AIRT), DIARMAID UA DUIBHNE, and the suitor FINN MAC CUMAILL (TÓRUIGHEACHT DHIARMADA AGUS GHRÁINNE). The last of these (like the Camma story) hinges on a poisoned drink given treacherously by the unwilling bride to the powerful would-be groom in the wedding ritual. The Camma story is also the subject of a large baroque painting by Eustache Le Sueur (1616–55), *Camma Offers the Poisoned Wedding Cup to Synorix in the Temple of Diana, c.* 1644, now in the Museum of Fine Arts, Boston, and of a play by Alfred Lord Tennyson, *The Cup* (1884).

Campbell, John Francis (1821–85) was a GAELIC scholar and collector of oral material, mostly from Hebridean tradition. Known in Gaelic as Iain Òg Ìle (Young John of Islay), Campbell spent much of his childhood on the island of Islay (Ìle), which was owned by his father until 1847. He acquired Gaelic as a child from John Campbell, a piper who was put in charge of young John Francis. At this time, Campbell also came into contact with the rich oral tradition of Islay, an interest that was strengthened when he encountered the work of the Grimm brothers on German folk-tales and a translation of Norwegian tales by his friend G. W. Dasent.

Campbell's main collecting activity falls between the late 1850s and the early 1870s; his aristocratic background proved no obstacle in establishing a relationship of trust with his informants in order to induce them to communicate their repertoire to him. Apart from collecting material from oral sources himself, Campbell also enlisted the help of several collaborators, notably John Dewar in Argyll (Earra-Ghaidheal), Hector MacLean in Islay, and Alexander Carmichael, who went on to collect material independently and is best known for his published collection CARMINA GADELICA. D. C. MacPherson copied texts for Campbell from manuscripts in the then Advocates' Library in Edinburgh (DÙN ÈIDEANN).

Campbell's main interest lay in the narrative tradition and extended to both FOLK-TALES and Gaelic BALLADS. International tales (*Märchen*) and long hero tales or tales from the romantic tradition are well represented in his corpus of material, as is material relating to the exploits of Fionn mac Cumhaill (FINN MAC CUMAILL). Fionn material is also present in the large corpus of ballad texts which Campbell collected both from contemporary oral sources and from a variety of manuscripts. Selections from his prose material with some ballads appeared between 1860 and 1862 under the title

Popular Tales of the West Highlands, and two more volumes appeared posthumously in 1940 and 1960 under the title *More West Highland Tales*. Campbell was less interested in CLAN tales, but encouraged John Dewar to collect such material; selections from this corpus only appeared in print in 1963 (*Dewar Manuscripts*, ed. J. MacKechnie). Gaelic ballad material appeared in 1872 under the title *Leabhar na Féinne*; much of this was drawn from pre-19th-century manuscript sources and had never been published before, although a few contemporary texts are included as well. Campbell had also planned a companion volume of ballads taken from 19th-century oral tradition; however, the disappointing uptake of *Leabhar na Féinne* convinced him that there was no market for this kind of publication.

Campbell's collecting methodology stands up to modern criteria: he consistently emphasized the need to take down the texts precisely as the reciters gave them (no mean achievement in the days before tape recorders), and he was careful to note details of the reciters themselves, with information of how and where they acquired their material. Some of Campbell's views on the origin of the folk-tales are indebted to mid-19th-century theories and therefore inevitably dated, although his observations on contemporary Gaelic tradition are still valuable for their detail and incisiveness. Campbell's example led to a flurry of collecting activity in the latter half of the 19th century, which resulted in the series *Waifs and Strays of Celtic Tradition*. Campbell's own manuscripts and the material furnished by his collaborators are now housed in the NATIONAL LIBRARY OF SCOTLAND; these volumes contain much that is still unpublished.

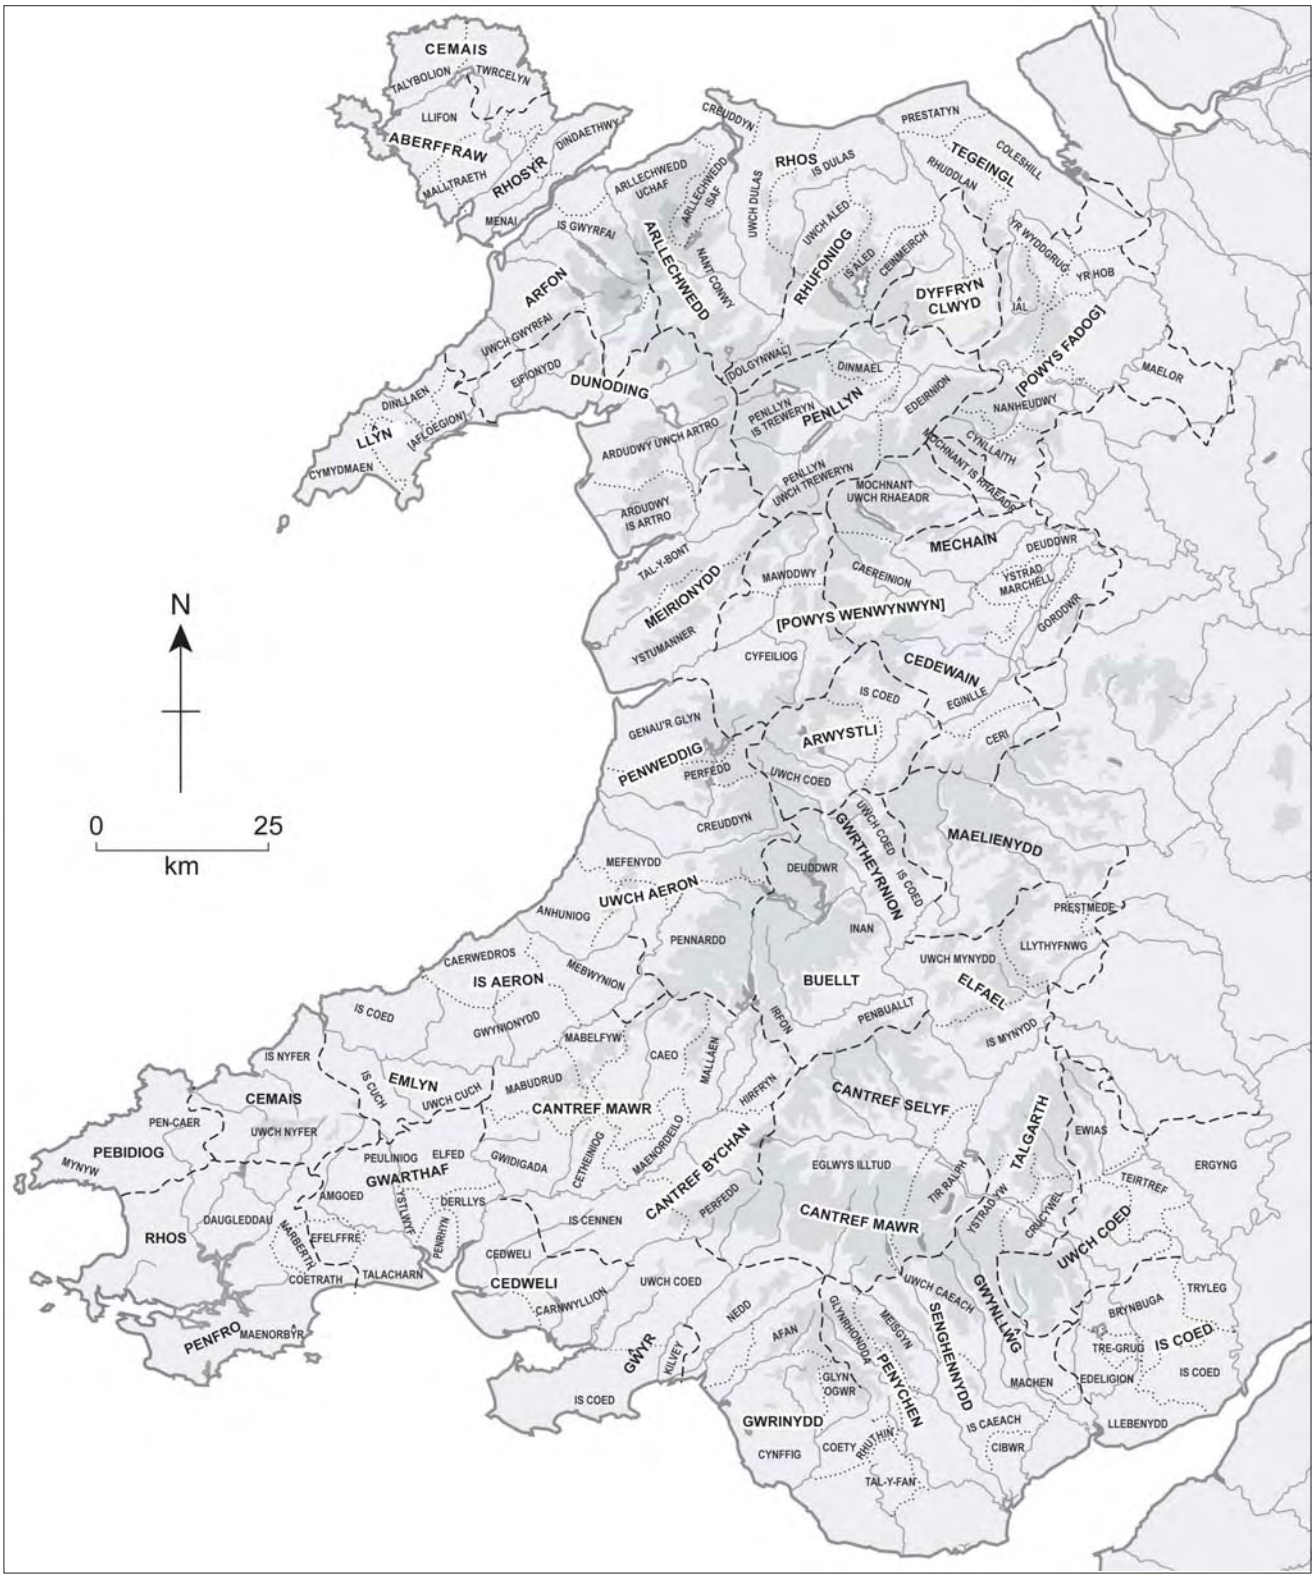
Camulodūnon (present-day Colchester, Essex, England) was a large OPPIDUM in the later pre-Roman IRON AGE. It probably began as the chief seat, and later the Romano-British CIVITAS of the TRINOVANTES. The original site was at Gosbeck's Farm, just south of modern Colchester. Around the year AD 5 Camulodūnon was conquered by CUNOBELINOS, head of the British CATUVELLAUNI, who built a new capital covering a vast territory which was only partly settled, at Sheepen Farm, north of the old centre. A complex system of dykes running in straight lines between the rivers Colne and Roman carve out a territory of 31 km², by far the largest oppidum in Britain and probably anywhere in the Celtic world. Camulodūnon became the chief centre for the minting of Cunobelinos' copious and varied COINAGE, on which the abbreviated place-name appears variously as CAM, CAMV, CAMVL, and CAMVL|ODVN (Allen, *Britannia* 6.1–19).

After the Roman invasion under the Emperor Claudius in AD 43, this tribal settlement became the administrative centre of the Roman province of Britannia, which initially comprised only south-eastern Britain. After AD 49 a new *colonia* (a town and surrounding *territorium* in which honourably discharged Roman veterans were given land) was founded at Romano-British Camulodūnum. The city was extended and a new temple was built, dedicated to the cult of the divinized Emperor Claudius (r. AD 41–54). The building of this temple, as well as the confiscation of land for the colonists, were probably key reasons for the destruction of this colony and massacre of its inhabitants during the revolt of BOUDĪCA in AD 60/1. Camulodūnon recovered from the destruction very slowly, and subsequently London became the new capital of the province.

The first element of the name Camulodūnon is the name of the Celtic god Camulos who is known extensively from the Continent, from Iberia (see also GALICIA) to GALATIA, in INSCRIPTIONS as well as in compound place-names. There was a second Camulodūnum in Roman Britain, and PTOLEMY assigns it to the extensive northern tribe, the BRIGANTES. The place has been identified as the Roman fort at Slack in Yorkshire (Rivet & Smith, *Place-Names of Roman Britain* 295).

The name *Camulodūnon* is most probably the source of Camelot, which figures prominently in Continental and English ARTHURIAN literature from the 13th



The traditional **cantrefi** *and* **cymydau** *(commotes) of Wales, as known from later medieval sources*

century onwards. The first attested mention of Camelot is in the late 12th century in the Old French poem *Lancelot* of Chrétien de Troyes. The political and cultural history of the Colchester area in the 5th and 6th centuries is not altogether clear. The area is not, for example, part of the core area of post-Roman Anglo-Saxon settlement (see anglo-saxon 'conquest'). Therefore, some connection between post-Roman Camulodūnum and a historical Arthur would not be impossible. On the other hand, it is likely that Chrétien or one of his sources simply came across the name as an important ancient town in Britain and used it in *Lancelot*.

Cantref is composed of *can(t)* 'a hundred' + *tref* 'holding' (rather than in its modern sense, 'town') and means literally a hundred holdings. The largest administrative unit in medieval Wales (Cymru) and generally consisting of two or three *cymydau* (commotes; sing. *cwmwd*), the *cantref* was, according to J. E. Lloyd (*History of Wales* 1.302), the successor of the old *tud* (often translated 'people' or 'tribe', cf. Old Irish tuath). It has been suggested that the word was influenced by that of the English 'hundred', but since a cognate term *cét treb* was used by the Celtic peoples of Scotland (Alba) at a very early date this is unlikely.

The earliest usage in Wales is to be found in the Book of Llandaf (*Liber Landavensis*) 134. No complete list of the *cantrefi* exists from a date prior to the 15th century. The Four Branches of the Mabinogi refer to the seven *cantrefi* of Dyfed and the seven of Morgannwg, the four *cantrefi* of Ceredigion, and the three *cantrefi* of Ystrad Tywi. The prologue of the Cyfnerth texts of the Welsh laws refer to the 64 *cantrefi* of Deheubarth and 18 *cantrefi* of Gwynedd (see law texts). There are no such convenient numerical groupings for the rest of Wales and it is difficult to know how much credence to place on these existing groupings. It is unclear what the exact pattern of *cantrefi* was in some areas, such as Brycheiniog. However, by using early sources as well as the later lists, J. E. Lloyd succeeded in recreating a map of the *cantrefi* in his discussion of 'The Tribal Divisions of Wales', which remains unsurpassed (*History of Wales* 1.229–82).

The *cantrefi* were divided into a number of *trefi*, not necessarily a hundred in number, which were economic units providing renders for the king. The royal court—where the *llys*, a collection of buildings which constituted the king's palace, his *maenol*, where his cattle were pastured, and his *maerdref*, where the Welsh bondmen lived—formed its centre.

The *cantref* also functioned as a judicial unit and had its own court, which was an assembly of the *uchelwyr* (noblemen) of the *cantref*. It is difficult to distinguish between the function of the courts of the *cwmwd* and the *cantref* in the administration of criminal and civil law. One specific area which seems to have been restricted to the *cantref* court was that of boundary disputes between *cantrefi*. These courts would have been presided over by professional judges in north Wales, but by local landowners in the south.

Canu gwasael is the Welsh term corresponding to 'Wassail (Old English *wes hál*) songs'. Meaning 'be in good health' or 'be fortunate', *Wassail* was used as a salutation when drinking healths from a wassail-bowl (or loving-cup), the reply being *drink-hail*. Wassailing celebrations were associated with seasonal change, and in Wales (Cymru) they occurred on at least seven occasions: at Christmas, New Year, while accompanying the Mari Lwyd, the Wren Hunt on Twelfth Night, at Candlemas, on May Day (*Calan Mai*), and as a marriage

custom. An early 19th-century account describes wassailing as follows:

> An old custom among the Welsh on Twelfth Night was the making of the wassail, namely, cakes and apples baked and set in rows on top of each other, with sugar between, in a kind of beautiful bowl which had been made for the purpose and which had twelve handles. Then warm beer, mixed with hot spices from India, was put in the wassail, and the friends sat around in a circle near the fire and passed the wassail bowl from hand to hand, each drinking in turn. Lastly the wassail (namely the cakes and apples after the beer covering them had been drunk) was shared among the whole company. [See also FOODWAYS.]
>
> On Twelfth Night the wassail was taken to the house of a husband and wife who had recently married or a family which had moved from one house to another. Several lads and lasses from the neighbourhood would bring the wassail to the door of the said house and begin to sing outside the closed door. (Quoted in Owen, *Welsh Folk Customs* 58)

The procession was accompanied by a *perllan* 'orchard', a small rectangular board with an apple fixed at each corner, and a tree in the centre with a miniature bird housed in it, possibly a wren.

Wassailers followed a planned route of their locality which included each home. Since farms in rural areas were virtually inaccessible, revellers were provided with the perfect excuse for gaining admittance and being given food and drink. Admittance was strictly on completion of a rhyming match between the wassailers and the householders, who stood on either side of a locked door. The wassailers' songs focused on their potential benefactor's generosity: his beer, food, fire, and women. They were countered by the householder's taunts: since the supplicants were nowhere to be seen at harvest-time or peat-cutting time why should they be pampered at Christmas?

Eventually the wassailers were admitted. They drank the health of the householders, promoting their longevity and fertility, the fertility of their lands, abundant harvests, and the prosperity of their stock—a threefold communal blessing. The wassail-cup was replenished, and the revellers moved on. Early wassail rhymes were pure competitive banter, but later poems exhibited a serious moral aspect: later authors attributed all prosperity to the Lord God and prayed for spiritual blessing.

Wassailers celebrated the Wren Hunt, first recorded in Wales by Edward LHUYD (?1660–1709) in his *Parochialia*. Lhuyd states that it was customary 'in Pembrokeshire, etc.' for two or three men, singing carols, to carry a wren in a bier decorated with ribbons on Twelfth Night as a gift from a young man to his sweetheart. Carols in question and answer form, describing the desire of named men to go hunting the wren, and a different type of carol describing the capture of the wren, have survived. Predominantly celebrated in Welsh coastland areas, the wren-cult rites may derive from other Celtic countries, or possibly from Scandinavia.

The Wren Hunt consisted of catching a wren and imprisoning it in a wren house, a small ornamented box with a square of glass at both ends. Two or even four men would carry it in procession from door to door, distributing a wren's feather or limb at each home as a symbol of luck for the coming year. Pronounced king of the birds, the wren had supernatural powers and the death of this 'king' signified increased fertility. It may have a bearing on the origin of this custom that the usual Welsh word for wren is *dryw*, which is homophonous with an old word meaning 'druid', corresponding to Old Irish *druí*, both from Celtic **dru-wid-s* (see DRUIDS).

Wassailing at Candlemas (2 February) was popular in north Wales. Many poets referred to the feast as *Gŵyl Fair Forwyn ddechre gwanwyn* 'The Feast of the Virgin Mary at the beginning of spring', and saw the increased hours of daylight and the new life of spring as a particularly suitable time for revelry. (A noteworthy comparison from Ireland [ÉIRE] is the Feast of St BRIGIT—called the 'Mary of the Gael' from at least the early Middle Ages—which occurs at the celebration of IMBOLC on 29 January/1 February; see CALENDAR.) Candlemas in Wales was popularly called *Gŵyl Fair y Canhwyllau* 'Mary's Festival of the Candles', during which candles were blessed and distributed among parishioners. Religious Candlemas carols abound, but it is the secular carols which possibly reflect the pagan origins of wassailing. Examples have survived of *pwnco*, the free-metre rhyming rally on either side of a locked door, *dychmygion* 'puzzle-songs', riddles, and cumulative songs.

Once inside the house, a virgin was seated on a chair

in the centre of the room; in some areas she held a baby boy in her lap to represent the Virgin and Child. Extant texts suggest that the girl drank from the wassail-bowl, an action matched by the wassailers. Other texts suggest that the girl gave the baby boy a drink and then drank herself, before passing the bowl to the revellers. Wassailers both honoured the virgin and promoted her fertility by drinking her health, a far from easy task since the wassail-bowl had numerous looped handles holding lighted candles. After the feasting, the kissing of the virgin and her subsequent departure, the blessing of the inhabitants, and the singing of the leave-taking carol, the procedure was repeated at a different location.

May carols sung from door to door, sometimes to fiddle or HARP accompaniment, can be viewed as a survival of the celebration of the start of the second half of the Celtic year (see CALENDAR). Carols dwell on the theme that God led the participants out of a period of scarcity into one of luxuriant abundance. The natural world teems with prosperity, and sexual vigour is rampant. A word of warning is given: young women should abstain from sexual entanglements for fear of unwanted pregnancies and young men should examine the heart, as well as the face, of a young woman before falling in love with her.

Rhiannon Ifans

Caoineadh (lament) is a four-footed metrical style that came into fashion in Ireland (ÉIRE) in the early 17th century as the BARDIC ORDER collapsed and the older syllabic poetry lost ground to accentual formats. The name indicates that the metre was particularly favoured for laments; it may well be based on older oral forms, and possibly gave rise to the four-footed AMHRÁN. Ó Máille suggests that the *caoineadh* may be based on the classical metre known as *rannaíocht bheag* (*Éigse* 9.55).

The *caoineadh* requires that the two middle vowels of the four stresses in the line be identical. Although the two centre vowels may change from line to line, the final stressed vowel must always be the same, and must always be followed by an unstressed vowel, calling to mind a sigh. The line's first stressed vowel may have any value. The most famous *caoineadh* is certainly *Do Chuala Scéal do Chéas gach Ló Mé* (I heard a story that tortured me every day), a lament for the pre-Cromwellian Gaelic order usually ascribed to Piaras Feiritéir (1600–53):

Do chuala scéal do chéas gach ló mé
s' do chuir san oíche i ndaoirse bhróin mé,
do lag mo chreat gan neart mná seolta,
gan bhrí gan mheabhair gan ghreann gan fhónamh.

I heard a story that tortured me every day,
and at night put me in straits of sadness;
that rendered my frame without the energy of a woman in childbirth,
without vigour, without sensation, without humour, without value.

Its first verse follows exactly the rules of the form:

ˇ/xˇ/éˇ/éˇ/óˇ
ˇ/xˇ/íˇ/íˇ/óˇ
ˇ/xˇ/aˇ/aˇ/óˇ
ˇ/xˇ/auˇ/auˇ/óˇ

By the 18th century *caoineadh* began to signify any lament. The most famous *caoineadh* of this period is ascribed to Eibhlín Dhubh Ní Chonaill (*c.* 1743–*c.* 1783) for her husband Art Ó Laoghaire, who was killed by the high sheriff's bodyguard in Carriginima, Co. Cork, in 1773. It is actually in *rosc* metre, which became preferred for laments.

The practice of performing lament-songs over the dead remained common in the west of Ireland until the 20th century, with designated women (*mná caointe*, keening women) extemporizing their praise for the deceased. Such laments had three steps: the salutation, in which the deceased was addressed; the verse, or dirge, in which the singer composed verses extempore on the deceased's aptitudes and abilities; and the 'Cry' in which all who were present joined (Ó Madagáin, *Celtic Consciousness* 312–13).

Brian Ó Broin

Caradog Freichfras ap Llŷr Marini is a legendary Welsh hero with a common name (see CARATĀCOS) and a unique epithet, meaning 'great-' or 'mighty-arm'. He occurs in both HAGIOGRAPHY and ARTHURIAN literature, and his ultimate historicity is doubtful. In the Life of St Padarn §22 a *Caradauc cognomento Brecbras* figures as the powerful king of Britannia and Letavia (Wade-Evans, *Vitae Sanctorum Britanniae et Genealogiae* 260), the latter place-name probably meaning Brittany (BREIZH). In *Buchedd Collen*, St COLLEN is said to have been a descendant of Caradog Freichfras. In the GENEALOGIES, he occurs in the tract *Bonedd y Saint* (Ancestry of the saints, §§29, 51) as the father of Saints Cadfarch, Tangwn, Maethlu, and Cawrdaf (Bartrum, EWGT 59, 62).

Caradog Freichfras figures in three TRIADS and has important Arthurian credentials in two of these: in TYP no. 1, he is *pen hynaf* (chief elder) of CELLIWIG, and in one version of TYP no. 18, he is one of the 'Three Favourites of Arthur's Court' of whom ARTHUR sang an ENGLYN calling Caradog 'pillar of the Welsh (*Cymry*)'. In the Arthurian tale BREUDDWYD RHONABWY, Caradog Freichfras ap Llŷr Mari[n]i appears as Arthur's chief counsellor and first cousin. In the romance of GERAINT fab Erbin, Caradog figures as one of three brothers who stand surety for the hero's opponent, Edern ap Nudd. From CHRÉTIEN DE TROYES onwards, Karadués Briebras repeatedly figures among the list of Arthurian heroes in the French romances. The epithet is translated/re-interpreted as 'short-' or 'broken-arm', as though it was the second element that meant 'arm'.

Although BRÂN and MANAWYDAN fab Llŷr of the MABINOGI do not seem to be understood as having the same father as Caradog, his patronym, Llŷr, is the same as theirs, thus corresponding to that of the Irish mythological figure MANANNÁN mac Lir. In SANAS CHORMAIC of CORMAC UA CUILENNÁIN (†908), it is said that Manannán was called *mac lir*, i.e., *filius maris* 'son of the sea' by both the Gaels and the BRITONS. It seems likely, therefore, that the epithet *Marini* likewise arose as a Latin gloss on *llŷr*, understood to mean 'of the sea'.

Caradog of Llancarfan

According to a Latin couplet (*Nancarbanensis dictamina sunt Caratoci: / qui legat, emendet: placet illi compositori* 'these are the words of Caradog of Llancarfan: he who reads, may he correct; that is the will of the author') at the end of both *Vita Cadoci* (Life of St CADOC, Gotha MS 1, fo. 81) and *Vita Gildae* (Life of St GILDAS, Cambridge, Corpus Christi College MS 139, fo. 24), the 12th-century Welsh hagiographer Caradog of Llancarfan wrote both Lives (see also HAGIOGRAPHY). In the case of *Vita Cadoci*, he appears to have been revising the work of Lifris, perhaps toning it down in order to honour Cadoc without competing with the efforts of the Llancarfan monastic family to establish the supremacy of the church of Llandaf and its saints. Both Caradog's Lives include narratives involving ARTHUR that go beyond simple demonstration of saintly over secular authority. In Cadoc's Life, Arthur helps the future saint's father carry off his future mother. The Life of Gildas, written in support of the monastery at GLASTONBURY (in present-day Somerset, England), contains the earliest reference to conflict between Arthur and Gildas's brother Hueil and also the earliest abduction tale involving Arthur's wife GWENHWYFAR. (Gildas negotiates between Arthur and Melwas who is holding the queen in Glastonbury.) Caradog may also have written Lives for saints Cyngar and ILLTUD and, according to Brooke, possibly even assembled the Book of LLANDAF (*Liber Landavensis*), the collection of charters of varying dates and degrees of authenticity combined with highly inventive Lives designed to further the claims of Llandaf (Brooke, *Studies in the Early British Church* 229–33). In the 16th century David Powel ascribed BRUT Y TYWYSOGYON to Caradog, an idea probably suggested by GEOFFREY OF MONMOUTH in an *explicit* at the end of HISTORIA REGUM BRITANNIAE (*c.* 1139), where he leaves to his contemporary (*contemporaneo meo*) Caradog of Llancarfan the task of chronicling the kings who came after the last detailed by Geoffrey, i.e., CADWALADR (†682). Scholars

are still debating the relationship of the two men and with what degree of mockery Geoffrey makes the suggestion (was Geoffrey comparing Caradog's inventive skills to his own?), but the passage at least establishes Caradog as a known writer of the time.

The common Welsh man's name Caradog is derived from the attested Old Celtic CARATĀCOS. Caradog's usual epithet Llancarfan is the name of a monastery, situated in the Vale of Glamorgan (Bro MORGANNWG) in south Wales (CYMRU). The earlier name of the monastery was Nantcarfan, a Welsh compound name in which the first element means 'stream' and the second is probably used in the obsolete sense of 'CHARIOT' or 'wheeled vehicle', as in the cognate Old Irish *carpat*, Old Celtic *karbantom*.

Caratācos, son of CUNOBELINOS, the king of the CATUVELLAUNI and the TRINOVANTES, was a British prince and a key figure in the fight of the British tribes against the Roman invasion in the period AD 43–51. In the aftermath of the death of Cunobelinos *c.* AD 41, and after the flight of his brother Adminios (or Amminios) to the Romans, Caratācos took advantage of the disunity of the British rulers to reconsolidate his father's extensive hegemony in south-east BRITAIN. His main adversary as he became the spearhead of resistance to the invasion of Britain sponsored by the Emperor Claudius was the Roman governor Publius Ostorius Scapula. The British forces lost control of Caratācos's native south-east early in the war, but he escaped with a core of followers to stir up anti-Roman action among the free tribes of what is now Wales (CYMRU) and northern England, including the Silures and ORDOVICES. During the following years the conflict expanded all over Britain. It is likely that the British DRUIDS, operating from their centre at Anglesey (MÔN), played an important rôle in offering moral support and elements of a common cultural identity to the disparate tribes struggling against the Romans. Queen CARTIMANDUA of the BRIGANTES became a client ruler of the Romans on the northern edge of the fledgling province. In AD 51 she took Caratācos into custody and handed him over to the Romans. He was taken in chains to Rome where, in a celebrated speech, he chastised the Emperor Claudius for the oppressive greed of his kinsmen.

The site of the final battle between Caratācos and the Romans is in dispute. It was possibly in Wales, in the vicinity of Caersws and Newtown (Y Drenewydd) in POWYS, thus within the old tribal territory of the Cornovii.

The name *Caratācos* (the common *Caractacus* is a late corruption) is Celtic, an adjectival formation based on the Celtic verbal root *kara-* 'love' (cf. Welsh *câr* 'loves', Old Irish *caraid*). The name is repeatedly attested in the early Middle Ages as Old Welsh *Carataue* and Old Breton *Caratoc*. The common Old Irish man's name *Carthach* is also cognate. The genealogy of Caratācos was preserved in Wales in the early Middle Ages: thus Old Welsh *Carataue map Cinbelin map Teuhant* recollects the historical Caratācos (†AD 58) son of Cunobelinos (†*c.* AD 41) son of Tasciovanos (†*c.* AD 10) (Bartrum, EWGT 11, 127).

The ***Carmina Gadelica*** (*Ortha nan Gaidheal*) is a six-volume collection of texts pertaining mostly to custom and belief in Gaelic Scotland (ALBA). The material was gathered by Alexander Carmichael (1832–1912) from oral sources throughout the Western Isles (see HIGHLANDS) in the second half of the 19th century. The bulk of the *Carmina* texts consists of prayers,

charms, and invocations. Saints such as Bride (Brigit), Columba (Colum Cille), Peter, Paul, and Michael are invoked, alongside Christ and the Trinity, indicating a pre-Reformation origin for some texts (*Carmina Gadelica* 1.2–123). Although Carmichael recovered most texts from Roman Catholic communities, they were also still current to a lesser extent among the Protestant population (*Carmina Gadelica* 1.xxxiv). Protection from illness and disaster is a major theme of the texts, and many are concerned with healing, particularly with avoiding or curing the effects of the evil eye (*Carmina Gadelica* 2.43–77). Much lore about the curative or protective properties of plants is also embedded in the texts (*Carmina Gadelica* 2.84–119). The desire to protect extends from members of the household to economically important animals. Indeed, there are even some charms intended to provide protection for the home and for household implements. Seasonal work and the daily round are also reflected in the *Carmina*, as are the festivals and the cycle of human life.

Carmichael recorded an oral tradition that was increasingly subject to the disapproval of authority figures such as teachers and clergy of all denominations, who considered charms and incantations as superstition. Fear of ridicule or censure, as well as the sensitive nature of the subject matter, made many informants self-conscious about their material, although Carmichael was able to overcome this obstacle by his careful and respectful approach. His high regard for both the material he collected and the informants who were the repositories of these texts is clearly evident in his writings (*Carmina Gadelica* 1.xxi–xxxv). Following the example of his one-time mentor, John Francis Campbell, Carmichael recorded his informants' names and any background information they gave. His editorial methodology, however, has been criticized because of his habit of amending material for publication, rather than including a fragment or a version he considered inferior (Robertson, *Scottish Gaelic Studies* 12.220–41). This was not, however, contrary to the custom of his time, and Carmichael's underlying motivation to present the literature of the Gaels in a favourable light to a reading public entirely ignorant about Gaelic literature should be regarded as essentially well-intentioned (Campbell, *Scottish Gaelic Studies* 13.1–3).

Carmichael's papers are housed in Edinburgh (Dùn Èideann) University Library and contain a wealth of hitherto unpublished material.

Carnyx is a term applied to an animal-headed trumpet once common across Celtic-speaking and adjacent parts of Transalpine Europe in the period *c.* 300 BC–*c.* AD 300. On the GUNDESTRUP CAULDRON we see the carnyx in use—a long segmented metal tube, held vertically, with an animal-head terminal. There are only five surviving examples, and much of the evidence comes from depictions on Celtic and classical COINAGE, statues, and bronzes. The term itself has been taken by scholars from later Greek sources as κάρνυξ *karnyx* and κάρνον (accusative singular), but it could originally have been GALATIAN. Although often seen as a Celtic instrument, it is clear that the carnyx was also used outside the Celtic world among DACIANS and Germans. In classical iconography it is invariably shown among captured barbarian weaponry (for instance, in Julius CAESAR's coinage after the conquest of GAUL), but while the carnyx is most well known as a martial instrument it is likely it had a far wider range of uses.

The finest surviving fragment is the boar's head from Deskford, north-east Scotland (ALBA), in sheet bronze and brass. This is a late example, dating from *c.* AD 80–200×300, and was buried as a votive offering in a peat bog (see WATERY DEPOSITIONS). Although part of a pan-European tradition, the style is typical of local north British metalworkers. This is seen also in other examples—for instance, a fragment from Săliştea, Romania, is in silver rather than bronze, since this was preferred in the local east Balkan tradition. A reconstruction of the Deskford example has shown both the versatility and the complexity of the instrument.

Carswell, John (†*c.* 1572) translated into GAELIC John Knox's Book of Common Order which, when it was published in 1567, became the first printed book in either SCOTTISH GAELIC or IRISH. Carswell's family, who may have originally come from Corsewall, Wigtownshire, seem likely to have settled in Argyll (Earra-Ghaidheal) by the early 16th century through their association with the Clan Campbell. John Carswell himself first appears on record in 1540 when he matriculated at St Salvator's College, St Andrews, from where he graduated as MA in 1544. Subsequently, he held the office of notary public in the diocese of the Isles (see HIGHLANDS) and, by 1550, that of Treasurer of Lismore in the parish of Argyll. By 1553 he occupied the parsonage of Kilmartin, adjacent to the Campbell stronghold of Carnasserie (Càrn Asaraidh). His developing relationship with the Earls of Argyll is evidenced in the later years of the decade since he received various grants of land, some very substantial, from the 5th Earl, including custody of Carnasserie Castle in 1559. Carswell, like his patron, adopted the Reformed Church at the time of the Reformation and, in 1560, was appointed Superintendent of Argyll, a new office created by the Reformed Church (see CHRISTIANITY). In 1565 he received the bishopric of the Isles from Queen Mary.

His undertaking of the translation of the Book of Common Order, with its dedicatory epistle to the Earl of Argyll, was intended to meet the needs of the Reformed Church in Gaelic-speaking areas by providing ministers with guidance on the conduct of worship. Carswell translated Knox's book into Classical Common Gaelic, the standard literary language of Gaelic Scotland (ALBA) and Ireland (ÉIRE), indicating that he may have received some training in a bardic school. Carswell did not simply translate, but in places adapted the text to suit the needs of Gaelic-speaking areas, omitting sections of the original and including sections which he himself had written explaining basic principles of the reformed religion (see also BIBLE).

Cartimandua (r. pre AD 43–*c.* 75) was queen of the BRIGANTES of north BRITAIN. Detailed information about her turbulent reign is preserved in the writings of the Roman historian TACITUS. His account throws valuable light on the politics of the native Celtic

tribes as an integral part of the foundation of Roman Britain, particularly the consolidation of imperial control over the marginal areas of the province in what is now Wales (Cymru) and northern England. Cartimandua's story is also essential evidence for the rôle of women in political leadership among (at least some) ancient Celtic groups; thus, as Tacitus wrote (with reference to Boudīca): 'The Britons do not discriminate by gender in selecting war leaders' (*Agricola* 16). In this way, Cartimandua comes into the question of whether fictionalized saga characters, such as Queen Medb, have a factual ethnographic basis.

Under Cartimandua, the extensive Brigantian territory was a Roman client kingdom beyond the frontier of the province of Britannia. A similar status was enjoyed at this period by the kingdom of King Cogidubnus in southern Britain and by Prātsutagos, the husband of Boudīca, in what is now East Anglia. Such divide-and-conquer arrangements were vital to the early phases of Roman expansion in Britain, since the military resistance among several tribes had effectively united under the leadership of Caratācos son of Cunobelinos of the Catuvellauni, stretching Roman manpower to the limit. In ad 51, Caratācos fell into Cartimandua's hands, and she handed him over to the Romans. At this point, the account of Tacitus can be followed in two parallel versions:

> These discords and ongoing rumours of civil war put spirit into the Britons, who were under the leadership of Venutius, a man who was naturally fierce, hated the name of Rome, and was also driven on by his own personal hatred of Queen Cartimandua. Cartimandua, because she was of most noble descent, ruled the Brigantes. She had increased her power, when, due to her underhanded capture of King Caratācus, she came to be viewed as having secured the most important component of the Emperor Claudius' triumph [the conquest of Britain]. After this, there came the luxury and indolence of victory. Casting aside her husband Venutius, she took Vellocatus, his armour-bearer, in marriage and to share in governing the realm [*c.* ad 69]. This huge scandal rocked her household to its foundation. The tribe's sentiments favoured her rightful husband [Venutius]. Favouring the illegitimate husband were the queen's libido and her ferocious temper. So then, Venutius mustered some war-bands and was helped at that same time by an uprising amongst this tribe, the Brigantes. He succeeded in putting Cartimandua into an extremely desperate position. She requested Roman forces. Some of our infantry and cavalry auxiliary units, after fighting for a time with mixed results, rescued the queen from this dangerous crisis. [But] Venutius' power was not finished, and we were [thus] left with a war. (*Historiae* 3.45)
>
> After the capture of Caratācus, the Brigantian tribesman Venutius . . . was pre-eminent [in the British resistance] in military expertise. He had long been faithful to Rome and had been defended by its arms, so long as he remained married to Queen Cartimandua. Later, dissension broke out between them, leading immediately to war. Later on, he took a hostile attitude towards us [the Romans] as well. But at first, [the Brigantes] fought only amongst themselves. Using wily deceits, Cartimandua captured Venutius' brother and other relatives. The anti-Roman party was infuriated at that and further stirred up as they looked ahead to submitting in dishonour to the overlordship of a woman. The best of their youths were picked out for war, and they invaded her kingdom. We had anticipated this, and some auxiliary cohorts were sent to her aid. A keen struggle followed. The outcome was in doubt as it began, but it ended successfully. (*Annales* 12.40, 2–7)

The name *Cartimandua* is Celtic. The second element of the compound probably means 'pony' or 'small horse' (cf. catumandus; *Mandubracios*). The meaning of the first element is uncertain. The variant spelling *Cartismandua* is probably a scribal corruption, although the assimilation of *sm-* to *m-* at the beginning of the second element of compounds in spoken British may have been a factor in the creation of this byform.

The cashel of Cahercommaun: a site plan with the pre-modern walls in white

Cashel is a term that refers to the stone version of an Irish earthen ring-fort or 'rath'. Several thousand of these have been identified in the Irish landscape. 'Cashel' is derived from the Irish word *caiseal* which, having a similar meaning to Irish *cathair*, is found in place-names and Irish written sources that refer to monuments of this type. Note, for example, that the site called Cashel (Caisel Muman) was a stony fortification before it became an ecclesiastical site.

Cashels are generally found in rocky landscapes that provided a plentiful supply of building material. Therefore, they occur most often in the west of Ireland (Éire), where thin-soiled stony terrain is prevalent. They consist of a stone wall or rampart enclosing what is most usually a roughly circular area averaging 15–25 m in diameter, relatively small when compared to the 25–35 m average diameter of an earthen ring-fort. Most enclosing elements were formed of a single dry-stone wall, more rarely accompanied by an external, rock-cut fosse, while multivallated cashels (that is, cashels with multiple concentric ramparts) are rare. Cahercommaun, Co. Clare (Cathair Chommáin, Contae an Chláir) provides an excellent example of the latter, a trivallate (three-ramparted) cashel perched on the top of an inland cliff. It should be noted, however, that not all ring-forts can be conveniently identified as earth- or stone-built, since they exploit both building materials.

Occasionally visible in cashel walls are vertical seams which may reflect the work of different labour teams or phases of construction. Along their internal faces, ramparts are often divided into horizontal sections by one or more terraces, each accessed by at least one flight of internal stone steps. The highest terrace formed a wall-walk. Mural chambers are also known—small rooms and/or passages built within the thickness of the rampart. Souterrains (underground chambers) are also found within cashels, and at Leacanabuaile, Co. Kerry (Contae Chiarraí), the souterrain was accessed via a hole in the floor of a mural chamber.

A number of structures usually existed within the walls of a cashel, and these functioned as dwellings, workshops, and agricultural buildings. These may, in some cases, have been of timber; however, many were built of stone, again reflecting the exploitation of the locally available raw material. Stone huts or clocháns were unmortared and at least partially corbelled, either fully stone-roofed or thatched. Although the huts were most often circular, some rectangular buildings are also known. At Leacanabuaile, a rectangular stone structure was attached to an earlier circular example.

Where the local landscape permitted, cashels were situated adjacent to viable agricultural land, often in a prominent position that provided good views of the surrounding countryside. Some may also have controlled important routeways and any associated trade. Excava-

tion, however, suggests that cashels functioned primarily as enclosed farmsteads.

The term 'cashel' is generally applied to stone enclosures associated with the early historic period, the pre-Norman Middle Ages (5th–12th century AD). However, some stone enclosures date to earlier periods, e.g., structures J, K, and L on the Knockadoon peninsula, Lough Gur (Co. Limerick/Contae Luimnigh). Prehistoric native enclosures such as these and others on Aughinish Island (Co. Clare/Contae an Chláir) and at Carrigillihy (Co. Cork/Contae Chorcaí) may reveal the origins of the cashel of early Christian times. A small number of cashels saw continued use into the later medieval and even the modern period, and Cahermacnaghten in the Burren (Co. Clare) was used as a law school by the O'Davorens in the 17th century.

Casnodyn (*fl. c.* 1290–*c.* 1340) was one of the first and most important of the later GOGYNFEIRDD, who continued the tradition of the Poets of the Princes following the loss of Welsh independence in 1282/4 (see LLYWELYN AP GRUFFUDD; RHUDDLAN). He is also the first poet known to be from south-east Wales (CYMRU) whose work has been preserved. His true name is unknown, *Casnodyn* being a nickname (perhaps meaning 'nasty little man'). Hailing from Cilfái, near Swansea (ABERTAWE), he sang in Glamorgan (MORGANNWG), CEREDIGION, and west GWYNEDD, although he appears to have received his bardic education mainly in the last two places (see BARDIC ORDER).

His extant work comprises twelve poems, which vary in content—eulogistic, elegiac, amatory, satirical, and religious. These reveal him as a man of deeply conservative bent, and his celebrated jibe, in his ode to Ieuan Llwyd of Glyn Aeron, at 'the worthless language of the low bards of Caeo' could refer to the newly emerging school of popular lyric poets, the CYWYDDWYR. His outstanding ode to the Blessed Trinity is a pinnacle of artistic virtuosity in the service of profound devotion, at times sublime. Together with his ode to God and two series of *englynion* to the Blessed Virgin Mary, it also strongly suggests that Casnodyn underwent a deep religious experience sometime during his career which led to his joining one of the religious—possibly mendicant—orders. Conservative as he was, in his three love poems, addressed to women from Anglesey (MÔN) and Carmarthenshire (sir Gaerfyrddin), certain new elements appear, especially the woodland tryst motif, which foreshadow the love poetry of the early *Cywyddwyr*. Conspicuous, too, are his rigorous, well-planned craftsmanship, complex, compressed style, his highly developed and frequent use of the CYNGHANEDD *sain* and his wide secular and religious learning.

Although in some ways a key transitional figure between the *Gogynfeirdd* and the *Cywyddwyr*, Casnodyn was also a superlative craftsman whose skills, more often than not, served meaningful poetic expression.

Cassius Dio Cocceianus (*c.* AD 155–234) was an ancient historian who was born in Nicaea in Bithynia, now Izmir, Turkey. His name is sometimes given in the Greek order Dio Cassius. He travelled widely in his career as an official of the Roman government in Italy, Africa, and eastern parts of the Roman Empire, but there is no evidence that he ever visited GAUL or BRITAIN.

His major work was the history of Rome in Greek from the landing of Aeneas to AD 29. Of an original 80 volumes, only 29 have survived, some fragmentarily. His vivid account of the British warrior queen BOUDĪCA leading the revolt against the Romans in AD 60 (Book 62) describes a ritual in which she releases a hare to invoke the goddess ANDRASTE for victory.

Cassius Dio relies heavily on generic classical rhetorical devices, and his works are often derivative—his account of the conquest of Gaul, for instance, is based on that of CAESAR. On the other hand, he was widely read in ancient sources, many now lost. The following anecdote about the Empress Julia Domna, known as

Julia Augusta, wife of the emperor Septimius Severus (r. AD 193–211), is valuable in including the name of a Caledonian named *Argentocoxus* (Silver-leg), important as evidence that the inhabitants of ancient north Britain spoke a Celtic language (see PICTISH; CALIDONES), as well as an entertaining sidelight on the classical idealization of the barbarous sexual morals attributed to the Celtic world (see GREEK AND ROMAN ACCOUNTS):

> . . . a very witty remark is reported to have been made by the wife of Argentocoxus, a Caledonian, to Julia Augusta. When the empress was jesting with her, after the treaty [between Septimius Severus and the Caledonians], about the free intercourse of her sex with men in Britain, she replied: 'We fulfil the demands of nature in a much better way than do you Roman women; for we consort openly with the best men, whereas you let yourselves be debauched in secret by the vilest.' Such was the retort of the British woman.

AM, PEB

Cassivellaunos/Caswallon was the war leader chosen by the assembled British tribes to oppose CAESAR during his second expedition to BRITAIN in the summer of 54 BC. Perhaps because Cassivellaunos was explicitly an inter-tribal leader (*De Bello Gallico* 5.11), Caesar does not tell us to which tribe he belonged; however, it is probably safe to infer that it was the CATUVELLAUNI, for the following reasons. First, they are shown to have been—according to both Roman historians and the distribution of their COINAGE—the expansionist and dominant group in the century preceding and including the Claudian invasion of AD 43. Second, Caesar says that Cassivellaunos's own lands were separated from those of the coastal tribes in Kent (*Cantium*) by the river THAMES (*flumen Tamesis*), which is an accurate description of Catuvellaunian territory. Third, the TRINOVANTES (roughly of modern Essex) were the hereditary enemies of Cassivellaunos (*De Bello Gallico* 5.20); this was true of the Catuvellauni of later generations, and the fact that Cassivellaunos was therefore not himself a Trinovans excludes the only other major tribe just over the Thames from Kent. It is also possibly significant that his name shares an element of the tribal name.

Cassivellaunos engaged in strategic warfare against the Romans with tactics that included ambushes from concealed locations, rapid mobility relying on a core force of 4000 chariots (*esseda*, see CHARIOT), tactical retreat over difficult country unknown to the Romans, and the driving off of livestock and civilian population to deny the enemy food and reconnaissance. Caesar admits to having some difficulty in finding and coming to grips with the BRITONS, while at the same time supplying his troops and protecting his naval base. He countered with a destruction of the Britons' crops. After some minor tribes (never heard of again—Cenimagni, Segontiāci, Ancalites, and Bibrōci) went over to Caesar's side, they revealed the location of Cassivellaunos's OPPIDUM, concealed in woodland and marsh. The site was possibly Wheathampstead, about 8 kilometres from the later tribal centre at VERULAMION. As Caesar closed in on the stronghold, Cassivellaunos sent forces loyal to him in Kent against the naval base, but this attack was repelled and a noble British commander named Lugotorīx was captured, forcing Cassivellaunos to negotiate. Caesar used Commios, king of the Atrebates, as his emissary, which incidentally shows that the Gauls and Britons—or at least the Belgic Gauls and Belgic Britons—had a common language. The terms of peace included an agreement to allow the unmolested return of the exiled Trinovantian prince, Mandubracios, and a yearly ransom paid to Rome. But there is no evidence that the tribute was ever paid and, a generation later, the Catuvellauni had encroached into Trinovantian territory and were minting coins at the oppidum of CAMULODŪNON. It was another century before the Claudian invasion broke the anti-Roman power of the Catuvellauni and Roman Britain began in earnest.

CASSIUS DIO (*Roman History* 40), Orosius (*Historiae Adversus Paganos* 6.9.8), and BEDA (*Historia Ecclesiastica* 2) give accounts of the war of 54 BC based on that of Caesar. In medieval Welsh and Welsh Latin literature (HISTORIA BRITTONUM, HISTORIA REGUM BRITAN-

NIAE, BRUT Y BRENHINEDD), the story is colourfully woven into LEGENDARY HISTORY: Cassibellaunus, Welsh Caswallon, is portrayed as a national hero. For this group of sources, some information independent of Caesar seems to have been available. For example, in *Historia Regum Britanniae* and *Brut y Brenhinedd* a large British force mustered to face Caesar at a stronghold in Kent before the Romans advanced to cross the Thames. This actually happened (*De Bello Gallico* 5.9–11), and archaeology indicates that the place was the late IRON AGE fort Bigbury above the Stour, whose ancient name was probably *Durovernon* 'stronghold of alder', which was later transferred to the Roman town of Canterbury below (Frere, *Britannia* 49–50; Rivet & Smith, *Place-Names of Roman Britain* 353–4). However, Caesar does not give this name and may not have known it, but the Welsh sources do: *oppidum Dorobellum* in *Historia Regum Britanniae*, *Kastell Dorabel* in *Brut y Brenhinedd.* Such details point to the existence of a parallel account of Caesar and Cassivellaunos known in Roman Britain, which supplied medieval Welsh writers with the ancient name of Bigbury—*Durovernon*.

Caswallon son of BELI MAWR is also a figure of mythologized Welsh legend. As such, he is the only known historical figure in the Four Branches of the MABINOGI. He appears there as a sinister magician who usurps the crown of London by donning a cloak of invisibility and surprising his enemies by cutting them down with a sword. In MANAWYDAN fab Llŷr, Caswallon's taking of power is a prelude to the episode in which the flocks, people, and habitations of Dyfed mysteriously disappear (*hud ar Ddyfed*). In other words, there seems to be a wonder-tale echo of some of the most memorable events of the war of 54 BC (see Koch, CMCS 14.17–52). Several mentions of Caswallon in the TRIADS suggest that he had once been the subject of extensive and complicated narratives (cf. also CYFRANC LLUDD A LLEFELYS). In TYP no. 71 he is one of the 'Three Lovers' (*tri serchawc*) and his beloved is named Fflur. In TYP no. 67 he was one of the 'Three Golden Shoemakers' (*tri eur gryð*) 'when he went to Rome to seek Fflur', the other two being Manawydan and LLEU, whose shoemaking episodes survive in the *Mabinogi*. Caswallon, in TYP no. 35, is said to have led an army, who never returned, to the Continent in pursuit of Caesar's men. Caswallon's horse Meinlas (slender grey) is mentioned in TYP nos. 38, 59.

The name *Cassivellaunos* is a Celtic compound and may be compared, probably in both elements, with the Continental Belgic tribal name *Véliocasses* (see BELGAE). Vercassivellaunos was a general of the ARVERNI and involved at Caesar's siege of ALESIA in 52 BC (*De Bello Gallico* 7.76); the name is the same with the Celtic prefix *wer-* 'super'.

Cath Maige Tuired ('The [Second] Battle of Mag Tuired') is regarded by modern scholars as the central work in the Irish MYTHOLOGICAL CYCLE and is discussed at length in that article. The story survives in two versions: the better known Late Old Irish/Early Middle Irish saga and the 16th-century *Cath Muighe Tuireadh*. The tale is an important source of traditional information on the prehistoric supernatural race known as the TUATH DÉ and leading figures among them, including LUG (also known as Samildánach 'having many arts'), DAGDA, OENGUS MAC IND ÓC, Nuadu Argatlám (see NŌDONS), Badb (BODB), DIAN CÉCHT the physician, GOIBNIU the smith, Bríg (also known as BRIGIT), MACHA, and Ogma (see OGMIOS). The central theme of the tale is the conflict between the Tuath Dé and the demonic overseas race known as the FOMOIRI, whose *dramatis personae* include prominently Bres mac Elathan (who becomes the oppressive ruler of the Tuath Dé) and the monstrous one-eyed champion BALOR. The story of Lug as an omnicompetent hero, who returns to his people from afar, is at first not recognized, but eventually leads his people to victory against their oppressors, has its closest Welsh analogue in the rôle of LLEFELYS (who is probably likewise derived from the Celtic LUGUS) in the tale CYFRANC LLUDD A LLEFELYS.

An ***Cathach*** (Dublin, Royal Irish Academy MS 12 R 33), also called the Psalter of St Columba, is a medieval vellum Irish manuscript and the earliest extant manuscript example of the insular half-uncial script. Its name is generally understood as 'the battler' from the Irish adjective *cathach* 'bellicose, militant', though it is possibly an obsolete word for its book shrine; cf. Welsh *cadw* 'to hold'. *An Cathach* contains on 58 folios Psalms 32(?) to 106 of the 4th-century Vulgate text of the Bible of St Jerome, although the manuscript,

which has suffered much through age and rebinding, seems to have originally been around 110 leaves long, hence containing more than half the psalter. The manuscript also has some decorated initials, which represent early examples of the La Tène-derived curvilinear pattern ornaments found in the Lindisfarne Gospels (716×721), the Book of Durrow (2nd half of the 7th century), and the Book of Kells (*c.* 800).

The *Cathach* was penned not later than 650, which makes it the only extant relic associated with St Columba (Colum Cille, 521–97) that dates from near the saint's lifetime. It might also mean that the following account from *Betha Coluimb Chille* (The life of St Columba), which alleges that St Columba was the actual scribe of the codex, reflects historical reality. According to this text, St Columba visited St Finnen (see uinniau) and secretly copied his host's psalter. When St Finnen found out, he demanded that the illicit copy be handed over, but St Columba refused. The matter was taken to High-king Diarmait mac Cerbaill, who decided: 'To every cow (belongs) its calf and to every book (belongs) its transcript' and ordered the copy to be surrendered. However, St Columba still did not cooperate, and the dispute is said to have finally led to battle and to have contributed to St Columba's departure from Ireland (Ériu) to Scotland (Alba).

Traditionally, the *Cathach* was owned by the O'Donnells of Tír Conaill, with the MacRobartaighs of Tory Island serving as hereditary custodians. In the late 11th century the codex, already part of the relic cult of Columba, was placed into a highly ornamented shrine at Kells. This shrine, the work of several periods, is one of the six extant early Irish book shrines. The name *Cathach* is used for both the ornamented shrine and the manuscript which it contains, and the relic was carried into battle as a talisman to ensure victory for its owners, the earliest mention of the name dating from the 13th century. In the 14th century the shrine was permanently closed to seal off the codex inside. The *Cathach*, while still in the hands of the O'Donnell family, was taken to France after the Treaty of Limerick in 1691, where in 1723 a partial silver casing was made for added protection. The relic remained in a French monastery after the death of its holder, until it was returned to Ireland in 1802 into the hands of Sir Neal O'Donel of Newport, Co. Mayo (Contae Mhaigh Eo). In 1813 the shrine was opened and the disintegrating manuscript inside unceremoniously rebound, causing no small amount of damage as the old bindings were cut away. Finally, in 1843, both the shrine and its valuable contents were deposited in the Library of the Royal Irish Academy (Acadamh Ríoga na hÉireann).

Cathbad is the name of a prominent character in the early Irish Ulster Cycle of tales, and his function among the *dramatis personae* of those stories is discussed in that article. His social function is generally designated as *druí* (druid), which has made Cathbad a particularly important piece of evidence in the question of the value of the literature of early Christian Ireland (Ériu) as a window onto the society and religion of pre-Christian times, as particularly in the influential essay of Jackson (*Oldest Irish Tradition*). In the 'Boyhood Deeds of Cú Chulainn', contained in Táin Bó Cuailnge, it is Cathbad who inspires the hero's taking of arms at an extremely early age by saying that that was the auspicious day to do so. In Longas mac nUislenn, Cathbad foretells Derdriu's birth and the impending tragedy that she will bring. Cathbad is also present in Mesca Ulad and Fled Bricrenn, where he is noteworthy as the father of humorously envious noblewoman Findchoem, wife of the contending hero Conall Cernach. In a version of the conception tale of King Conchobar (*Compert Conchobuir*), Cathbad is described as a *fénnid* (tribeless warrior; see fían), as well as a druid, and is of more central im-

portance to this story, forcing Nes, who is to be the mother of the future king, into marriage. Although this tale allows that Nes was actually impregnated by another lover or, alternatively, by ingesting a worm, Cathbad's status as a druid and soothsayer are pivotal, since it is he that determines that Nes should give birth on the day that coincides with the birth of Jesus (which he also foresees), and thus ensures the infant's destiny to be king of all Ulaid. The Old Irish name *Cathbad*, genitive *Cathbaid*, is clearly Celtic—a compound whose first element is the very common Proto-Celtic **katu-* 'battle'; the ogam CATTUBUTTAS is inflected differently and probably has a different second element.

The ***Catholicon*** is a Breton–Latin–French dictionary of the Middle Breton period. It is based on Latin words that appear as examples in common Latin grammars. The *Catholicon* is of a high linguistic value, since it is often in this volume that a particular word in the Breton language is first attested. The headwords are Breton, followed by the gloss in French (marked *g.* for *gallice*), and then Latin (marked *l.* for *latine*).

EXAMPLES
Anauon an Iffernn, g. ames denfer [âmes d'enfer], l. *manes* [Breton anaon 'souls of the dead'; cf. Welsh *enaid* soul]
Aual, g. *pomme*, l. *pomum* [Bret. *aval* 'apple'; cf. Scottish Gaelic *ubhall*, W *afal*]
Benaff, g. *couper*, l. *scindere* ['to cut'; cf. Old Irish *benaid*, Modern Ir. *bain*]
Bran, g. *cornille* [*corneille*], l. *cornix*, *coruus* [Bret. *bran* 'crow'; cf. Ir. *bran*, W *brân*]
Caru, g. *cerff* [*cerf*], l. *ceruus* [Bret. *karv* 'stag', W *carw*]
Dall, g. *aueugle* [*aveugle*], l. *cecus* [*caecus*] [Bret. *dall* 'blind', Ir. *dall*, W *dall*]
Deruenn, g. *chesne* [*chêne*], l. *quercus* [Bret. *drevenn* 'oak', Ir. *dair*, W *derwen*]
Eboc, g. *saumon*, l. *salmo* [Bret. *eog* 'salmon', W *eog*, Gaulish *esox*]
Erch, g. *nege* [*neige*], l. *nix* [Bret. *erc'h* 'snow', W *eira*]
Glau, g. *pluie*, l. *pluuia* [Bret. *glav* 'rain', W *glaw*]
Haff, g. *este* [*été*], l. *estas* [Bret. *hañv* 'summer', Ir. *samhradh*, W *haf*, cf. Gaulish month name *samoni*]
Hanu, g. *nom*, l. *nomen* [Bret. *anv* 'name', Ir. *ainm*, W *enw*, OW *anu*, Gaulish pl. *anuana*]
Loar, g. *lune*, l. *luna*. [Bret. *loar* 'moon', W *lloer*]
Maes, g. *champ*, l. *campus* [Bret. *maez* 'field or plain', OIr. *mag*, Mod.Ir. *má*, W *maes*]
Map, g. *filz* [*fils*], l. *filius* [Bret. *mab* 'son', Ir. *mac*, W *mab*]
Moal, g. *chauue* [*chauve*], l. *caluus* [Bret. *moal* 'bald', Ir. *maol*, W *moel*]
Ober, g. *faire*, l. *facere* [Bret. *ober* 'to make or to do', Ir. *obair* 'work']
Rann, g. *partie*, l. *pars* [Bret. *rann* 'part', W *rhan*]
Ruz, g. *rouge*, l. *ruber* [Bret. *ruz* 'red', ScG *ruadh*, W *rhudd*, also Ir. *rua* 'red-haired']
Tan, g. *feu*, l. *ignis*, [Bret. *tan* 'fire', Ir. *tine*, W *tân*]
Ty, g. *maison*, l. *casa* [Bret. *ti* 'house', Ir. *teach*, W *tŷ*]
Yach, g. *sain*, l. *sanus* [Bret. *yac'h* 'healthy'; W *iach*]

Because of its relatively early date and extensive contents, the *Catholicon* figures as an important block of primary evidence in the historical and comparative study of the Celtic languages. It is also one of the earliest books to be printed in one of the Celtic countries which deals with, and is mainly written in, one of the Celtic languages. Three early editions were published (Tréguier 1499, Paris *c.* 1500, Paris 1521), based on a manuscript of 1464.

Gwenaël Le Duc

Catraeth, identified with modern Catterick, Yorkshire, England, was the site of military action celebrated in the heroic poetry attributed to the earliest Welsh poets or Cynfeirdd (for the case against identifying Catraeth with Richmond in Yorkshire, see Clarkson, CMCS 26.15–20). There is no mention of a 6th-century battle at Catraeth elsewhere in any of the sources for the period, e.g., Annales Cambriae, Historia Brittonum, the Irish

ANNALS, the Anglo-Saxon Chronicle, or BEDA's *Historia Ecclesiastica* (2.14). It is, however, clear from the last source that Catterick (*vicus Cataracta*) was a place of central importance for 7th-century Northumbria and its fledgling church. Archaeological evidence—though not showing evidence for a battle—does show that the important Roman fortified town of Cataracta (PTOLEMY's Κατουραχτονιον *Caturactonion*, presumably so named from the nearby cataracts on the river Swale), situated at a hub in the north–south Roman road network, continued to be occupied by a sub-Roman/Brythonic population in the 5th century, who survived and co-existed with incoming Germanic groups by the later 6th century (Wilson et al., *Medieval Archaeology* 60.1–61; for Romano-British forms of the name, see Rivet & Smith, *Place-Names of Roman Britain* 302–4). The early post-Roman occupation can be seen as part of a larger pattern of extensive re-use of the Romano-British forts and fortified towns of the northern frontier zone in the 5th and 6th centuries (see HADRIAN'S WALL).

§1. CATRAETH AND THE GODODDIN

A battle fought at Catraeth is repeatedly mentioned in the heroic elegies known collectively as the GODODDIN, where the name of the battle site is given 23 times. As discussed in the article on LLYFR ANEIRIN, there are three major obvious divisions within the surviving manuscript, constituting three texts—the most archaic Text B2, the most innovative Text A, and the moderately innovative Text B1. These three texts agree insofar as the attackers at Catraeth were a mounted force (Rowland, CMCS 30.13–40; see also Alcock, *Economy, Society and Warfare among the Britons and Saxons* 255–66; Cessford, *Northern History* 29.185–7; Hooper, *Northern History* 29.188–96). The host gathered at Din Eidyn (Edinburgh/DÙN ÈIDEANN) and included heroes from various regions, including Gododdin itself and the country of the PICTS north of the Forth (Merin Iddew). The most celebrated hero in all three texts is Cynon, said to be from Aeron (probably modern Ayrshire in south-west Scotland), who belonged to the CYNWYDION of the dynasty of Dumbarton (see YSTRAD CLUD).

The texts are not consistent, however, in that B1 and A have Christian references and the most archaic B2 does not. Text A refers to the enemies of the Gododdin as men of Bernicia (BRYNAICH); B1 and B2 do not (Dumville, *Early Welsh Poetry* 2–3). One or two rather secondary-looking verses in A state that the poet witnessed the battle. B1 and B2 speak only of hearsay about Catraeth. The idea that the Gododdin forces lost and were annihilated, or nearly so, at Catraeth is present in A and B1, but not in the most archaic B2.

A note in the hand of scribe A illustrates how ideas about the details of the battle and the text of *Y Gododdin* developed in tandem among the poets of medieval Wales (CYMRU):

> Here ends *Gwarchan Cynfelyn*. The singing of one song is the value of each *awdl* of *Y Gododdin* because of its status in poetic competition. 363 poems is the value of each one of the *gwarchanau* ('lays'). The reason for this is for the commemoration of the reckoning of the men who went to Catraeth. No more than a man ought to go to combat without arms should a poet go to a competition without this poem.

§2. CATRAETH AND URIEN RHEGED

In the panegyric *awdlau* addressed to the 6th-century Brythonic military leader URIEN of RHEGED, Catraeth is mentioned twice. In a poem celebrating the victory of *Gweith Gwen Ystrat* (The battle of the white/blessed valley), Urien is portrayed as mustering *gwyr Katraeth* (men of Catraeth) at dawn and leading them against mounted attackers, probably described as *Prydyn* 'Picts', at a ford. The battle is prolonged and bloody. There is a truce in the middle and a regrouping. A final decisive charge by Urien is anticipated at the end of the poem. These details are broadly consistent with what can be gleaned of the battle of Catraeth from the *Gododdin*, assuming that we are now looking at things from the side of the defenders. There is also a political correspondence in that Text A of the *Gododdin* once refers to the enemy at Catraeth as *meibyon Godebawc*, i.e., the Coeling, progeny of COEL HEN Godebog, and Urien's dynasty:

> It is concerning Catraeth's variegated and
> ruddy [land] that it is told —
> the followers fell; long were the lamentations for them,
> the immortalized men; [but] it was not as
> immortals that they fought for territory

against the descendants of Godebog [i.e. the Coeling], the rightful faction.

In *Gwen Ystrat*, there is a reference to Urien as *rwyf Bedyd* (supreme leader of Christendom, lit. baptism) and a description of the exhausted mounted warriors being washed in the ford while their hands were on the cross. It seems that there must be an allegorical allusion in these details to the mass baptism held in a river near Catterick in 627, the idea being that the heroism of Rheged's 6th-century Christian rulers somehow prepared the way for Northumbria's first conversion in the same place a generation later.

In the poem *Yspeil Taliessin, Kanu Vryen* (Taliesin's spoils, Urien poetry), the reference to Urien at Catraeth occurs in the following lines:

On Easter, I saw the great light and the abundant fruits.
I saw the leaves that shone brightly, sprouting forth.
I saw the branches, all together in flower.
And I have seen the ruler whose decrees are most generous:
I saw Catraeth's leader over the plains.

The praise of an early martial hero in connection with a lyrical celebration of Easter is remarkable. The poet is clearly expressing the Christian concept of the cosmic Easter, the day on which light triumphs over darkness and all life triumphs over death. Thus Urien and Taliesin are manifestly celebrating Easter at the right time. Once again, the strange reference is intelligible as an allegory in the context of 7th-century Christian Northumbria, in which the Easter controversy was the central theological dispute and Catterick had special claims as a high-status site connected with England's Christian origins (see below).

§3. catraeth, gwallawg, and moliant cadwallon

A reference to 'the great mortality of Catraeth' occurs in the following lines of Moliant Cadwallon (Praise of Cadwallon); the *Gododdin* A text uses this same word *eilywet*, proved by rhyme to describe the disaster of Catraeth:

There will come to us Britain's lord of hosts;
(as) fierce Gwallawg wrought the great and renowned mortality at Catraeth —
foreigners from overseas and followers [of the Britons] and rightful noblemen
eager for the sharing out of cattle as the plentiful takings of battle.

Urien and Gwallawg were collateral kinsmen within the Coeling dynasty, as shown in the Old Welsh Harleian genealogies §§8–9. And according to *Historia Brittonum* §63, the two kings were allies at the time of Urien's death at the siege of Lindisfarne. It would thus not be surprising if Urien and Gwallawg were fighting on the same side at the battle of Catraeth. According to an early awdl in Llyfr Taliesin in praise of Gwallawg, *a·eninat yn ygnat ar Eluet* 'he is anointed ruler/judge over Elfed'; thus, his realm was not far from Catraeth (Gruffydd, SC 28.69–75). In the two Gwallawg praise poems, this chieftain's enumerated enemies correspond closely to the places and peoples who contributed forces to the Gododdin host that attacked Catraeth: *Poems of Taliesin XI*—Pryd[y]n (the Picts ll. 7, 41), Eidin (Edinburgh l. 8), Aeron (ll. 21, 22), Peithwyr (?the Picts l. 37); *Poems of Taliesin XII*—Rhun (l. 4), Nudd (l. 4), Nwython (l. 4), Caer Glud (Dumbarton l. 48). Therefore, Gwallawg's presence at Catraeth amongst the Coeling enemies of the Gododdin forces is intelligible.

§4. vicus cataracta and northumbria's conversion

The Anglo-Saxon material begins in the Catterick area in the later 5th century or, more probably, the 6th century. The material shows both intrusive Germanic features and a continuation of local features from the Roman period. Post-Roman cist burials at Catterick are possibly Christian.

The baptism of thousands conducted by Paulinus in the river Swale in 627 is explained by Beda:

In the province of the Deirans, where [Paulinus] used to stay very often with King [Eadwine], he baptized in the river Swale which flows by the town of Catterick; because they were not yet able to build oratories and baptistries in the infancy of the church.

Historia Brittonum §63 tells us that it was Rhun (Run) son of Urien (Urbgen) who directed the mass baptism of Eadwine's Deirans. Similarly, in Annales Cambriae at 626: *Etguin baptizatus est, et Run filius Urbgen*

baptizauit eum. In the period when most of Anglian Northumbria relapsed into paganism following Cadwallon's overthrow of Eadwine *c.* 633, one survivor of the mission of Paulinus, James the Deacon (*Iacobus diaconus*), continued baptizing Deirans (see DEWR), and most of the time he lived at a village near Catterick. Catterick remained a Northumbrian royal residence 'suitable for large ceremonial occasions', such as royal weddings, until the late 8th century.

JTK

Catroe/Cadroe (*c.* 900–71) was a Scottish monk and pilgrim. Some sources claim that he was of Pictish origin, others that he was born in Co. Antrim, Ireland (Contae Aontroma, ÉRIU), into an aristocratic family. According to his *vita*, he was raised by foster-parents and prepared for a clerical career at a Scottish monastery which had close ties with Iona (EILEAN Ì). He was educated at Armagh (ARD MHACHA) IN Ireland, and set out on a pilgrimage which was assisted by the Scottish king Constantine II (CUSANTÍN MAC CINAEDA) and the Cumbrian king Doneuald son of Aed. During this pilgrimage he went to York, Leeds, and Canterbury, and then on to Burgundy. He became a Benedictine monk in Fleury, France, and subsequently the prior of the monastery of Wassor (Waulsort, province of Namur, Belgium). In later life, he was the abbot of St Felix in Metz, France, where he most probably died in 971; other sources give 976 as the year of his death. His *vita* was written by a contemporary Frankish monk, Reimann or Ousmann, who included detailed descriptions of the saint's early life in Scotland (ALBA). It is recorded in the 11th-century St Hubert MS, which is edited in the *Acta Sanctorum* of Colgan (MAC COLGÁIN). The name *Catroe* is probably Celtic, and incorporates a common element in proper names which appears as Old Celtic *catu-*, Welsh *cad-*, and Old Irish *cath-*, all meaning both 'battle' and 'war-band'.

PEB

Catumandus was a chieftain and inter-tribal war leader in the hinterland of the Greek colony of MASSALIA (Marseille) in southern GAUL. He was active in an episode of 390×386 BC referred to in Justin's *Epitome of the Philippic Histories* of TROGUS POMPEIUS. This account provides an interesting pre-Christian Continental analogue to beliefs comparable to those found in association with the figure of the Irish war-goddesses such as BODB and the MORRÍGAN, as described in the Old and Middle Irish tales. This passage from Justin also provides interesting evidence for the interaction and mutual assimilation between Celtic and Graeco-Roman polytheistic systems:

> . . . when Massalia was at the zenith of its renown, for the fame of its deeds as well as for the abundance of its wealth and its reputation for might, the neighbouring tribes unexpectedly conspired to lay waste to Massalia utterly, so as to wipe out its very name, as if to quench a conflagration that threatened to consume them all. Catumandus, one of their minor tribal kings, was chosen by unanimous consensus to lead them in war. As he was besieging the city with a vast force of chosen warriors, he was terrified in his sleep with the dream of a woman with a fiercesome expression. She told him that she was a goddess. He immediately sued for peace with the Massaliots. He then asked permission to enter the city in order to worship their gods. He went to the temple of Minerva [Athena], and in the portico he saw the image of the goddess that he had seen in

his sleep. He suddenly blurted out that it was she who had come to him in the night and she who had demanded that he break off the siege. With congratulations to the Massaliots (for he knew that they were favoured by the immortal gods), he offered a golden TORC to the goddess and thus concluded a permanent treaty of friendship with the Greeks of Massalia.

On the Celtic name *Catumandus*, see CADFAN; cf. CADOC, CÆDMON.

Catuvellauni was the name of two Belgic tribes of the later pre-Roman IRON AGE. In the light of the remarks of Julius CAESAR concerning the Continental origins of the BELGAE of BRITAIN, it is likely that the British Catuvellauni began as a migratory offshoot of the Gaulish tribe.

In historical times, the Catuvellauni on the European Continent were a minor tribe, located in the valley of the river Mātrona (modern Marne; see MATRONAE) and overshadowed by their more powerful neighbours, the Lingones and the Rēmi. The tribal name survives in the name of the modern town of Châlons-sur-Marne (Latin Catalaunum). It is also recollected in the name of the famous battle of the *Campus Catalaunicus* 'Catalaunian plain', where Attila the Hun was decisively checked by Roman and allied forces under the command of Aëtius in AD 451.

The British Catuvellauni held a territory north of the THAMES that included what are now the English counties of Hertfordshire and parts of Northamptonshire, Oxfordshire, Buckinghamshire, and Cambridgeshire, and also Essex and Suffolk, where they had encroached upon the TRINOVANTES by the mid-1st century BC. The supreme war leader of the British tribes who opposed Julius Caesar's incursions in 55 and 54 BC was CASSIVELLAUNOS, generally assumed to have been king of the Catuvellauni, even though Caesar does not name his tribe. By about 20 BC, a new Catuvellaunian king, Tasciovanos, appears on the tribe's COINAGE, although he is unknown to Graeco-Roman historians. Tasciovanos's son CUNOBELINOS (r. *c.* AD 10–42) was the most powerful ruler of the British Catuvellauni. The Roman historian Suetonius refers to him by the title *Britannorum rex* 'king of the BRITONS'. Cunobelinos struck abundant coinage from his two principal *oppida*—CAMULODŪNON (now Colchester, Essex) and VERULAMION (near St Albans, Hertfordshire) (see Allen, *Britannia* 6.1–19). He was subsequently prominent in the LEGENDARY HISTORY of Britain, for example, in the HISTORIA REGUM BRITANNIAE of GEOFFREY OF MONMOUTH.

Following Rome's invasion under the Emperor Claudius in AD 43, Cunobelinos' sons, Togodumnos and CARATĀCOS, led the resistance of several allied tribes. Togodumnos died early in the war, but Caratācos continued an intense guerilla action in what is now Wales (CYMRU) and northern England until he was captured and handed over to the Romans by Queen CARTIMANDUA of the BRIGANTES in AD 51. The dynasty is mentioned in the Old Welsh GENEALOGIES, where we find the sequence *Caratauc map Cinbelin map Teuhuant* 'Caratācos son of Cunobelinos son of Tasciovanos' (Bartrum, EWGT II, 127n.).

Archaeologically, the British Catuvellauni are not distinguishable from the Trinovantes. Both tribes belonged to the Aylesford-Swarling culture, characterized by Belgic coinage, *oppida*, cremation burials, graceful wheel-thrown pottery of a fine light fabric, and metalwork with Late LA TÈNE style ornamentation. The Aylesford-Swarling culture of the Catuvellauni has striking parallels on the Continent, mainly in northern France, in the general region of the Continental Catuvellauni.

Their central OPPIDUM seems originally to have been Wheathampstead, Hertfordshire, which was probably the place where Cassivellaunos made his last stand against Caesar. After Wheathampstead was abandoned, activity begins in Verulamion (about 8 km to the southwest), where a mint and a large amount of imported artefacts from the Roman world show the significance of the place. During the reign of Cunobelinos, the Catuvellauni moved their principal capital and mint to the oppidum of Camulodūnon, in what had been Trinovantian territory. Following the Roman conquest,

Verulamion and Camulodūnon continued as the sites and names of important Romano-British towns, Latinized as Verulamium and Camulodunum. Both were destroyed during the revolt of Boudīca in ad 60/61, but were later rebuilt. In Roman Britain, the Catuvellauni formed a civitas or tribal canton, probably centred on Verulamium. That the tribal identity was maintained is shown by a funerary inscription from the 2nd century ad from near Hadrian's Wall for a REGINA CATVALLAVNA LIBERTA 'Catuvellaunian freedwoman [named] Regina' (Collingwood & Wright, RIB no. 1065). In the post-Roman period, the old tribal name continues as a man's name, thus Catgolaun Lauhir (Modern Welsh Cadwallon Lawhir) was a ruler of Gwynedd *c.* ad 500. His great-grandson Cadwallon ap Cadfan (r. *c.* 625–634/5) was briefly the chief overlord of Britain. The corresponding Old Breton name *Catuuallon* appears 13 times in the 9th-century charters of the Cartulary of Redon.

The name *Catuvellauni* is Celtic, a compound of *catu-* 'battle, army', corresponding to OIr. *cath*, OW *cat* + *u̯er-lo* 'choice, better', as seen in W *gwell* 'better', Ir. *fearr* (see Thurneysen, *Grammar of Old Irish* 238: Celtic *u̯er* < Indo-European **uper*); *-auno-* may be an old verbal noun ending, thus, 'excelling in battle'.

cauldrons

Judging from the surviving archaeological and textual evidence, metal cauldrons were widely used for cooking, storing and serving food, as well as for ceremonial and ritual purposes, in Continental and insular Celtic society from the Late Bronze Age to early medieval times. Archaeological finds indicate, and literary references confirm, that the cauldron was a status symbol whose possession and use was probably restricted to the more privileged members of society and, perhaps, formal festive occasions at which it was used for cooking meat (Waddell, *Prehistoric Archaeology of Ireland* 230–3). As a symbol of plenty and, perhaps, power, the cauldron was important enough to be depicted on Celtic coinage, as examples found in Armorica show.

The numerous archaeological sites at which cauldrons have been found stretch from Norway in the north to Bosnia-Herzegovina and southern Italy in the south, and from Ireland (Ériu) in the west to Rumania in the east. Clusters of finds are obvious in Ireland, eastern England, Denmark, northern and central Germany, north-east Hungary and along the Swiss–French border. Based on age and form, and following the classification devised by Leech in 1930, they are often subdivided into the older type A 'Atlantic cauldron', and the younger type B cauldron, which both show further subdivisions (Waddell, *Prehistoric Archaeology of Ireland* 230–3). Cauldrons were found among the grave goods at many burial sites of the western Hallstatt

The distribution of Late Bronze Age (c. 1000–c. 500 BC) cauldrons in Ireland and Britain

area, for example, at Hohmichele and Hochdorf—the richest treasure from the Hallstatt period (Frey, *Celts* 75–92). At numerous other later prehistoric sites, such as Dowris, Co. Offaly, Llyn Fawr and Llyn Cerrig Bach in Wales (Cymru), at Blackburn Mill (Berwickshire) and Carlingwark (Kirkudbright) in Scotland (Alba), and the Thames near Battersea, London, they were deposited as votive gifts, sometimes filled with other metalware—as, for example, at Dowris and Duchcov (see also watery depositions). This latter group also includes the famous Gundestrup cauldron.

In Irish and Welsh literature cauldrons are highly treasured possessions whose gain or loss is worth mentioning. A Middle Welsh tract, 'The Thirteen Treasures of the Island of Britain', includes Dyrnwch the Giant's cauldron, which is probably equivalent to the cauldron of Diwrnach the Irishman, gaining possession of which is one of the heroic tasks demanded by the giant in Culhwch ac Olwen. For Cú Chulainn, magic cauldrons were important enough to be brought back from Alba twice. The numerous literary references highlight the cauldron's importance in Celtic culture, especially as a symbol of inexhaustible plenty. This may have its roots in the connections that prehistoric Europeans saw between smelting and food production, iron and grain (Aldhouse-Green & Webster, *Artefacts and Archaeology* 8–19). Mighty rulers of the Otherworld, as in the early Welsh Arthurian poem Preiddiau Annwfn, and the Dagda, senior deity of the Tuath Dé, owned marvellous cauldrons. The cauldron welded by the Irish smith-god Goibniu provided all the food at Otherworld feasts. A connected symbolism is that of resurrection of the dead, as in the tale of Branwen in the Mabinogi, where Irish warriors are revived by being thrown into the *peir dadeni* (cauldron of rebirth). Cauldrons were also connected with wisdom, prophecy and truth. In *Chwedl Taliesin* (The tale of Taliesin) Gwion gains the supernatural knowledge which helps him become Taliesin when he tastes three drops from the magic potion boiling in Ceridwen's cauldron (see also llyfr taliesin). Dyrnwch's cauldron could distin-

guish between the coward and the brave, as could that in *Preiddiau Annwfn,* and the cauldron of Manannán mac Lir in *Echtra Cormaic i Tár Tairngiri ocus Ceart Claidib Cormaic* (The adventure of Cormac in Tár Tairngiri and the truth of Cormac's sword) could tell a lie from the truth, both by the speed with which the meat in the cauldron cooked. A further interesting mention of cauldrons comes from the Fiannaíocht (Find Cycle) story *Creach na Teamhrach* (The raid on Tara/Teamhair), where Cormac mac Airt, the king of Ireland, is forced by Faelán mac Finn to go *fo ghabhail an choire* (under the fork of a cauldron [i.e., the wooden fork from which cauldrons were suspended]), apparently as a sign of obeisance or subordination. This may reflect a recognized symbolic practice in early Ireland.

In the Celtic languages, there are several words for cauldrons and similar large vessels for food and drink. The most widespread inherited form is Proto-Celtic **kᵘar-i̯o-*, the common source of Irish and Scottish Gaelic *coire,* Middle Welsh *peir,* Old Cornish *per* glossed 'lebes' (kettle), Breton *per*.

MBL

Ceadda (Chad), St (†2 March 673) was an important churchman in Anglo-Saxon Northumbria and Mercia. His career illustrates the not untroubled, but influential, rôle of Celtic cultures in the formation of the church in England. His name probably derives from the common Brythonic element *cad* 'battle, warband' < Celtic *catu-*, and his family background was therefore probably among the Britons. Like his brother Cedd, Ceadda was educated by St Aedán (†651), an Irish cleric who came with a following of Irish clergy from Iona (Eilean Ì) to found the dominant island monastery at Lindisfarne in 635. There were two further brothers, Cynebill and Cælin, and, as Beda wrote, all four were 'famous priests of the Lord' (*Historia Ecclesiastica* 3.23). Ceadda and Cedd founded the monastery of Lastingham (Læstingæ) in Deira (Dewr) (*Historia Ecclesiastica* Preface). In 664, shortly after the Synod of Whitby, Ceadda became abbot of Lastingham on the death of his brother Cedd in the plague of that year. In the same year King Oswydd arranged for Ceadda to be consecrated bishop of York by Wine, bishop of Wessex, and two Brythonic bishops who kept the insular reckoning of Easter (*Historia Ecclesiastica* 3.28; see also easter controversy). This arrangement suggests that the Britons of the southwest were on good terms with Wessex at the time. In 669 Ceadda was forced to retire to Lastingham in favour of Wilfrid, a staunch proponent of the Roman Easter of aristocratic Anglo-Saxon background. In 670 Ceadda became the third bishop of Mercia in the present-day English Midlands (*Historia Ecclesiastica* 3.24). Beda preserves an account, suggestive of a culture clash within the insular church, that the practice of the ascetic Ceadda was to carry out his bishop's duties traversing Mercia on foot, but Theodore of Tarsus, archbishop of Canterbury, insisted that he ride in keeping with his high station. Ceadda founded his diocesan seat at Lichfield (the old Romano-British town of Lētocētum, Welsh Caerlwytgoed), where he died and is buried (*Historia Ecclesiastica* 4.3). On the 7th- or 8th-century illuminated manuscript known as the 'Book of St Chad' and its Old Welsh marginalia, see Lichfield Gospels.

Céitinn, Seathrún (Geoffrey Keating, *c.* 1580–1644)

was an Irish Catholic priest and historian. He is best remembered for his Irish-language history of Ireland (Ériu), *Foras feasa ar Éirinn* (Compendium of wisdom about Ireland, *c.* 1634), which told the story of Ireland from the creation of the world to the coming of the Normans in the 12th century. It defended the reputation of the kingdom of Ireland against the hostile comments of other writers, notably Giraldus Cambrensis, Edmund Spenser, and Richard Stanihurst. Céitinn's stylish use of the Irish language helped to ensure the lasting popularity of his history. It circulated widely in manuscript in Irish, English, and Latin in the 17th century, and was first issued in print in English in 1723.

Céitinn's own ancestry was Anglo-Norman. His precise family circumstances are uncertain, although he was born in south Co. Tipperary (Contae Thiobraid Árainn) and may well have been one of the Keating family that lived at Moorestown Castle. Following his education in the bardic school of the learned family of Mac Craith at Burgess in Co. Tipperary, Céitinn pursued his theological education in Continental Europe. He gained a doctorate in divinity from the University of Rheims, and was later attached to the Irish college at Bordeaux. Céitinn had returned to work in Ireland by 1610 and became a renowned preacher in the diocese of Lismore (Lios Mór). In addition to his historical work and some bardic poetry, he wrote two theological tracts in Irish, one on the Mass (*Eochar-sgiath an Aifrinn*, 'An Explanatory Defence of Mass') and one on sin and death (*Trí bior-ghaoithe an bháis*, 'The Three Shafts of Death').

A carved stone commemorative plaque, erected in 1644 over the entrance door of a chapel dedicated to St Ciaran at Tubbrid, in Co. Tipperary, is one of the few tangible reminders of one of Ireland's most influential writers.

Celje

Artefacts from the end of the Stone Age and the Bronze Age have been found in the region around Celje, Slovenia. A hill-fort from the early Iron Age was discovered on the top of Miklavški Hrib, and cremation graves on its slope. Middle and Late La Tène pottery was present in settlement layers on the terrace under the Miklavški Hrib, and in the Savinja river a hoard of a few thousand Celtic silver coins (see COINAGE) was found. Middle La Tène graveyards are known from a wide belt around Spodnji Lanoš, Drešinja Vas, Gotovlje and Slatina.

In the Roman period, a very rich city developed here, known in Latin as *Municipium Claudium Celeia* (modern Celje), which, even in the Middle Ages, was called 'Little Troy' by its inhabitants due to the numerous remains of Roman architecture. The existence of the Roman city is confirmed by milestones, inscriptions, mosaics, remains of the temple of Heracles on Miklavški Hrib, and the exceptionally well-preserved TOMBS of wealthy citizens in Šempeter. Remains of the late Roman encircling walls preserved the city until the 6th century AD. The name *Celeia* could be Celtic, possibly related to the Old Irish *celid* 'hides', and a connection with the name Κελτοι *Keltoi*, i.e. 'Celts', is not impossible. The name evolved through the medieval name *Cillia*, or *Cilli*, to modern *Celje*.

Following engineering work on the Savinja river in 1958, thousands of Celtic silver coins came to light from the river-bed, together with Roman republican (pre-30 BC) and imperial coinage, silver ingots for small coins, and pieces of Roman ornamental metalwork. The real nature of these finds is still uncertain, although the presence of ingots suggests that this was perhaps a mint for large silver coins of the Celtic type produced in the area, particularly coins showing Apollo's head and a horse on the obverse, but blank on the reverse. Coins attributed to the Taurisci (technically known as the east Norican type) differ from Norican (see NORICUM) coins proper (the west Norican type) that display the motif of Apollo with a diadem and a horseman identified with the name of a prince for whom the coins were minted on the reverse. The circulation of the coins of the Taurisci was limited to the territory south of the Karawanken mountains, that is, modern-day Slovenia, but, in the light of some finds

of coin hoards, this native type of coinage must have been kept in circulation until the time of the Emperor Tiberius (r. 14–36 AD).

Cellach, St

1. Cellach (sometimes Celsus; Celestinus in *Visio Tnugdali*) Uí Sinaich became *comarba* of PATRICK and bishop of Armagh (ARD MHACHA) on 23 September 1105 and died on 1 April 1129. Revered as a saint since shortly after his death, 1 April is his feast.

Cellach was related to a line of lay leaders of the Armagh church, succeeding his grand-uncle Domnall; yet, he must have already recognized that Europe-wide changes towards a more clerical system in church organization (labelled by supporters 'the Gregorian reform') were also affecting Ireland (ÉRIU). Therefore, unlike his familial predecessors, he was in orders from the outset. He furthered this 'reform' as one of the major actors at the Synod of Ráith Bressail (1111), which divided Ireland into two provinces (archbishoprics): Armagh (Cellach became archbishop) and Cashel/CAISEL MUMAN, each with twelve dioceses (bishoprics). We know that he was in Munster (MUMU) in 1120, seeking changes in church structures, and a year later he took possession of the see of Dublin (BAILE ÁTHA CLIATH) as its first native Irish bishop, an action which provoked a protest from some clergy to Canterbury. Again in Munster in 1129, he died at Ard-Pádraig and was buried at Lismore (Lios Mór). He clearly had a wide reputation since in the *Visio Tnugdali* §24 he is one of four 'reforming' Irish saints seated in heaven.

2. Cellach is also the name of a little-known saint mentioned in various martyrologies, whose feast-day is 7 October. *The Litany of the Irish Saints I* calls him a 'Saxon and archdeacon', while the annotations to the *Martyrology of Tallaght* says that he was a priest who although 'not an Englishman came to Ireland from England'. The annotator to the *Félire Oengusso* (see OENGUS CÉILE DÉ) says that he was a deacon, 'the Saxon of Glendalough', who lived in Dísert Cellaig (south-east of Glendalough/GLEANN DÁ LOCH).

3. St Cellach of Cell-Alaid (Killala), known only in a late romance in IRISH, is claimed as a 'martyred' saint of Killala in the long distant past. In the unhistorical tale setting, Cellach begins as a student in Clonmacnoise (Cluan Mhic Nóis), and is later killed by his disciples, since he is a rogue: 'that such a person as [this] Cellach ever existed is very doubtful' (Kenney, *Sources for the Early History of Ireland* 457).

Thomas O'Loughlin

Celliwig in Cernyw (i.e., KERNOW/Cornwall), usually written as two words, *Kelli Wic*, in medieval sources, is the site of ARTHUR's court in the oldest ARTHURIAN tale CULHWCH AC OLWEN, in which it is mentioned five times. In the Welsh TRIADS, Kelli Wic is one of the *Lleithiclvyth* ('Tribal Thrones') of BRITAIN (TYP no. 1) and was the site where MEDRAWD struck Arthur's wife GWENHWYFAR in the Triad of the *Trywyr Gvarth* ('Three Dishonoured Men', TYP no. 51). The Kelli where Kei (CAI fab Cynyr) is said to have fought in the early Arthurian poem PA GUR YV Y PORTHAUR? (Who is the gatekeeper?) is possibly the same. The place-name and possible locations of Celliwig are discussed in the article on ARTHURIAN SITES. In HISTORIA REGUM BRITANNIAE and Welsh literature influenced by GEOFFREY OF MONMOUTH, the site of the old Roman city and legionary fortress CAERLLION-AR-WYSG figures as Arthur's chief court. Following CHRÉTIEN DE TROYES, the French and English Arthurian tales focus on Camelot, whose location and possible historical basis remain uncertain (see SOUTH CADBURY CASTLE; CAMULODŪNON).

The form *Kyllywyk* occurs in the recently discovered Cornish medieval play BEUNANS KE.

JTK

Celtiberia refers to the region in east-central Spain during the Roman period and immediately preceding it. Although usage varies, Celtiberia proper refers to the upper Ebro valley and the eastern Meseta, roughly the modern provinces of Soria, Zaragoza, Guadalajara, and Cuenca. The name is an obvious compound of '*Celt-*' and 'Iberia'. Some classical authors claimed that the Celtiberians were a mixture of early Celtic immigrants from GAUL and native IBERIANS (DIODORUS SICULUS, *Historical Library* 5.33), and even created myths to support this notion. Others derided this usage: STRABO (*Geography* 1.2.27) mentions the 'Celtiberians' and 'Celtoscythians' in one sentence, as terms coined in ignorance of the facts. Despite Strabo, modern scholars generally accept the hypothesis of a syncretic origin from both Celtic tribes and the non-Indo-European-speaking Iberians.

The Celtiberians, famous for their martial ability, fought a long and bitter war against Rome known as the Celtiberian war (*Bellum Celtibericum*, 153–133 BC), and were involved in other conflicts with Rome throughout the 2nd century BC. Rome eventually conquered and absorbed Celtiberia and the Celtiberians, though assimilation was gradual.

Catullus (*c.* 84–54 BC), addressing a Celtiberian named Egnatius in a humorous poem, wrote:

> . . . In Celtiberia it is the custom to use what one has urinated on a sponge To scrub one's teeth and red gums, So that the more polished your teeth are, This, he will tell you, is to have drunk more urine. (39.17–21)

Egnatius is addressed similarly in another poem:

> Egnatius, son of rabbity Celtibēria, Whom a dark beard makes good, And [who has] teeth scrubbed with Iberian urine. (37.18–20)

This habit of brushing teeth and washing with stale urine was widely remarked upon by classical commentators (Strabo, *Geography* 3.4.16; Diodorus Siculus, *Historical Library* 5.33). Urine is sterile, and stale urine

decomposes into ammonia, which was used for dyeing and washing clothes from Roman times well into the modern period; therefore, this process is neither as implausible nor as unsanitary as it sounds. Diodorus Siculus mentions other cultural traits, including the habit of dressing in black and drinking imported wine mixed with local honey (see WINE; FOODWAYS).

The Roman poet Martial (AD 38–103) was a Celtiberian from Bilbilis (now Catalayud, Zaragoza, Spain). He mentions his Celtiberian origins 'born from Celts and Iberians' several times (*Epigrams*, 4.55, 7.52, 10.65), and contrasts his physical qualities as a Celtiberian with a Roman from further east in the Empire: stubborn rather than curly hair; hairy rather than shaven legs and cheeks; a loud rather than a 'feeble and lisping' voice.

The CELTIBERIAN language was probably spoken into the 2nd century AD, and several important INSCRIPTIONS have survived in it.

Celtiberian language

§1. INTRODUCTION

Celtiberian is the CONTINENTAL CELTIC dialect for which we have written evidence from eastern central Spain *c.* 179–50 BC. (It is called Hispano-Celtic by Eska & Evans, *Celtic Languages*; for the nomenclature see Untermann, *Monumenta Linguarum Hispanicarum* [= MLH] 351–2.) It is attested in a few major INSCRIPTIONS (for example, BOTORRITA, Luzaga, and PEÑALBA DE VILLASTAR) and in numerous legends on COINAGE. The SCRIPTS used are the Iberian semi-syllabary and, in the later inscriptions, the Latin alphabet. The Iberian script causes difficulties of interpretation since many characters represent a consonant followed by a vowel; therefore, clusters of consonants must often be written as though they were a series of syllables. Celtiberian script does not differentiate between voiced and unvoiced stops, with the same character used for the sound pairs */b, p/ /d, t/ /g, k/*, even though the sounds themselves were distinct for Celtiberian speakers. In modern transcription, the sounds are represented by a capital letter *P, T,* and *K*. For example, the name written *PeliKios* is to be pronounced */beligios/*. The nasals */m, n, ŋ/* at the end of a syllable are not always indicated. *TiŕTanos* is to be read */tridanos/* (Eska & Evans, *Celtic Languages* 32).

§2. AFFILIATION

Scholars have been unable to agree how to group Celtiberian into the family of the CELTIC LANGUAGES. Schmidt has grouped it together with LEPONTIC and GALLO-BRITTONIC as opposed to GOIDELIC, mainly on the basis of the following sound changes: IE syllabic nasals *m̥, n̥ > am, an,* as opposed to *em, en,* and IE **k^w* and *k´w > kw/k* rather than *p* (Schmidt, *Proc. 7th International Congress of Celtic Studies* 199–221). On the other hand, McCone has grouped the Celtic languages differently, seeing a primary division into CONTINENTAL CELTIC vs. INSULAR CELTIC (McCone, *Rekonstruktion und relative Chronologie* 22ff.), discounting the shared innovation **k^w > p* in Lepontic, GAULISH and BRITISH as 'trivial' and, more positively, having shown that *m̥, n̥ > am, an* in PROTO-CELTIC. However, McCone's ideas concerning the differences between the Continental and Insular Celtic verbal systems depend entirely on his own unique views concerning the history of the double system of verbal endings in Old IRISH (usually called 'absolute' and 'conjunct' forms) according to the position of the verb in the sentence (*Rekonstruktion und relative Chronologie* 36 ff.).

§3. MORPHOLOGY AND SYNTAX

Although Celtiberian is a 'fragmentarily attested language' (see Untermann, *Trümmersprachen zwischen Grammatik und Geschichte*), its longer inscriptions tell the linguist much about Old Celtic phonology, morphology and syntax (Eska & Evans, *Celtic Languages* 33–5; Schmidt, *Proc. 7th International Congress of Celtic Studies*; Schmidt, *Word* 28.51–62; Untermann, MLH 386–419). Case forms have been preserved which are not known from Gaulish or Insular Celtic evidence, for example, the locative case in *-ei*: *KoŕTonei* 'at Cortonos' and the dative plural in *-Poś /-bos/* instead of an expected **-Piś /-bis/* based on the Old Irish dative plural *-(a)ib* (Eska & Evans, *Celtic Languages* 33). The vocabulary, where understood, differs somewhat from the other Celtic

languages and, in part, shows more similarities with other old INDO-EUROPEAN languages (e.g., Sanskrit or Hittite: Celtiberian *uTa/VTA /uta/*, Sanskrit *utá* 'and', see Untermann, MLH 533–4); the Celtiberian preverbal particle *To*, Old Hittite *ta-*, but Old Irish *do-* (Untermann, MLH 528). It also shows contact with neighbouring Indo-European and non-Indo-European languages, e.g., *silabur* Botorrita K.1.1 for 'silver (?)' (Untermann, MLH 521, 573) vs. **arganto-*: Gaulish *arganto-*, OIr. *airget*, W *arian*, PICTISH *Argentocoxos*, &c.; but Celtiberian has also *arkatobeðom/arganto-/* K.0.7 'one digging for silver' (?) (Untermann, MLH 547–9).

The Indo-European pronouns **so-* (the demonstrative pronoun 'this', 'that') and **io-* (the relative pronoun 'who', 'which', 'that') have fully inflected forms (*so, soð, somui, somei, soisum*; similarly *ios, iomui*, &c., Untermann, MLH 406), whereas in Insular Celtic these are to be found only as enclitics (that is, unstressed words depending on the preceding fully accented word).

Within the attested Celtic languages, Celtiberian syntax shows the most archaic features. An example is SOV (subject–object–verb) order in the unmarked sentence (Schmidt, *Proc. 7th International Congress of Celtic Studies* 239–9, Untermann, MLH 361). Another feature is the repetition of enclitic *-kue* 'and' (< Proto-Indo-European **k*^{w}*e* 'and'), e.g., Botorrita K.1.1 *ToKoiTosKue. sarniKioKue* 'of Tokoitom and Sarnikios' (place-names in the genitive singular case; see Untermann, MLH 528–9, 569). All of this is evidence that Celtiberian was by far the most archaic Celtic language known to us. However, this also means that the few, partly fragmentary, texts are very difficult to decipher, and many of the longer texts still await a satisfactory translation (cf. the different attempts to interpret the Botorrita K.1.1 and Peñalba de Villastar K.3.3 inscriptions; see Untermann, MLH 564 and 624).

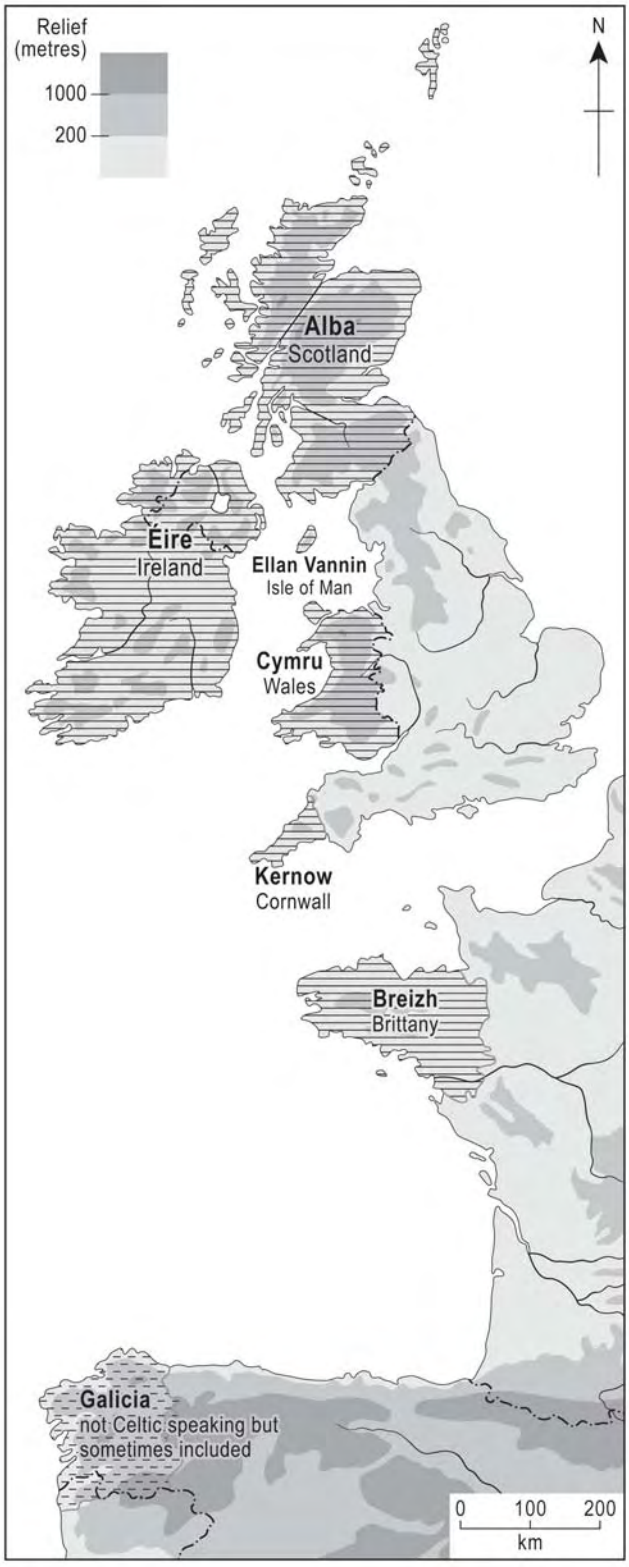
Celtic countries and characteristics of the Celtic territories

§1. DEFINITION

As a conventional term, 'the Celtic countries' means Ireland (ÉIRE), Scotland (ALBA), Wales (CYMRU), Brittany (BREIZH), the Isle of Man (ELLAN VANNIN), and Cornwall (KERNOW). The first four of these have an unofficial primary status, largely due to their historical importance as politically and culturally distinct areas, and also as possessing CELTIC LANGUAGES which have survived continuously to the present. The Isle of Man's cultural, linguistic, and political history is closely allied with that of Scotland. This factor, along with the relative paucity of specifically MANX LITERATURE and the small size of the island, have made it less of a focus for some Celticists. Cornwall, too, is thoroughly recognized within CELTIC STUDIES since it is a territory that was home to a Celtic language into modern times and generated a sizeable body of literature (see CORNISH LITERATURE). Indeed, literature continues to be produced in both MANX and CORNISH. GALICIA is often considered a Celtic country, particularly with regard to its music, although no Celtic language has been spoken there since the very early Middle Ages (see BRITONIA).

The idea of Celtic countries is a modern one, growing out of the development of philological science from the RENAISSANCE onwards, leading to the recognition of the six languages as forming a closely related family. The term *Celtic* was first applied to non-English languages in BRITAIN and Ireland by George Buchanan (1506–82). The language family was later defined systematically, with extensive collections of supporting linguistic evidence, by Edward LHUYD (1660–1709). The extension of the term into non-linguistic matters of culture, such as costume, music, and national identity, gained impetus through PAN-



Celticism and related intellectual movements in the 19th and 20th centuries. For the study of the history and literary texts belonging to these six lands, 'Celtic countries' remains a useful concept, in part justifiable by the fact that the geographic limits of Celtic-speaking territory remained remarkably stable between the mid-7th century AD and early modern times. Furthermore, all the territories that were Celtic speaking within the historical period had been Celtic speaking for a millennium or more prior to that. Thus, in a historical linguistic sense at least, these six places are very Celtic indeed.

In light of the above, in the present article as in conventional usage, 'Celtic territories' or 'countries' will not mean England and western Europe—areas where Celtic languages were undoubtedly spoken in late prehistory, in the Roman period, and here and there in the early Middle Ages—especially, in the latter case, in Cumbria, Devon, and northern Spain. Also omitted are those parts of the world, such as the Americas and Australasia, where Celtic languages have been spoken and literature written in recent centuries (see CELTIC LANGUAGES IN AUSTRALIA; CELTIC LANGUAGES IN NORTH AMERICA; EMIGRATION).

§2. ESSENTIAL GEOGRAPHY

The climate throughout western and northern Celtic areas is prevailingly moist, with levels of rainfall often too high for successful cereal cultivation; eastern Brittany, east Wales, eastern Ireland, and eastern Scotland, by contrast, are more favoured. The mean annual temperature in south-east Brittany is 5 or 6° C warmer than that in northern Scotland, and Brittany as a whole is warmer than other Celtic areas—winters are mild and snow unusual (the latter also tending to be the case in most of Ireland). In addition to these east/west and north/south variations across Celtic parts, there were also climatic changes across time. The slightly colder and wetter weather of the immediate post-Roman centuries was followed by the 'Medieval Warm Period' from the 10th century to the 12th, cooling again in the later Middle Ages, with a greater annual temperature range in the early Middle Ages than in the late 20th century. Such variations are not mere geography statistics: they make a difference to the places people can make a reasonable living and the things that they can grow. Even a 1–2° C variation in mean annual temperature, if sustained, affects the length of the growing season and can allow or disallow

cultivation at higher altitudes.

The Celtic territories themselves have a variety of geographical characteristics. Much of Scotland and a significant part of north-west Wales are mountainous. Much of Wales, some of Cornwall, and most of western Brittany are exposed plateaux. Parts of central and north-west Ireland have extensive peat bogs. While this does not have to mean that those areas were totally deserted, they certainly did not lend themselves to settlement and AGRICULTURE. Since life was not easy to support, people on the whole lived elsewhere. Population distribution was therefore noticeably coastal in western Scotland, Wales, Cornwall and Brittany; and was much denser in Fife (Fìobha) and eastern Scotland, in Anglesey (MÔN), the extreme south-west and the south-east of Wales, and in eastern Brittany. In Ireland, by contrast, like the Isle of Man, settlement was much more widely distributed, and population density was probably higher there in the Middle Ages than in other parts of the Celtic world.

On the upland, vegetation was much more mixed in earlier times than what we see in the modern world: deciduous woodland (oak, alder, birch) up to 610 m (2,000 ft); broom, furze (gorse), and bracken (fern) on the southern plateaux. 'Dense forest', a recurrent image of the literature, was not extensive, except in Scotland; light woodland, on the other hand, was common. Extensive hedge planting was a development of the late Middle Ages and the early modern period.

Given the terrain, communications were slow in many parts. Wales and Scotland were difficult to cross except through a few narrow corridors; even today one cannot travel quickly across country north to south from BANGOR (GWYNEDD) to Cardiff (CAERDYDD), Wales, or from Wick to WHITHORN, or even to Edinburgh (DÙN ÈIDEANN), Scotland. While coastal traffic has always been common in Brittany, as in Scotland, inland Brittany was served by a group of Roman arterial roads from the 1st century, which survived through much of the Middle Ages and, in some cases, even beyond (see ROADS). Ireland, by contrast, was well served by its inland waterways.

Political geography was also significant for medieval development. There are major differences between Celtic areas which arose because some parts had a background of belonging to the Roman Empire and its provincial administrative and fiscal system—whatever the levels of acculturation (Brittany, Cornwall, Wales, and for a period the Scottish LOWLANDS); some parts had a background of being on the edge of the Roman provinces (southern Scotland especially), and some parts a background of being outside them (Isle of Man, Ireland and central/northern Scotland).

§3. MIGRATION AND POPULATIONS

Migratory movements of the early Middle Ages had a particular significance for Celtic cultures: they changed the relationship between Britain and Ireland and that between INSULAR CELTIC peoples and the world beyond. In the late and immediate post-Roman period Germanic groups (Angles, Saxons, Frisians and others; see ANGLO-SAXON 'CONQUEST') came from northern Germany and southern Scandinavia to settle in the eastern half of Britain, thereby introducing the English language, which ultimately became the normal vernacular of more than half the island (Jackson, LHEB). They also introduced an alien aristocracy, wiping out many recently established British kingdoms, especially in the course of the late 6th and 7th centuries (Dark, *Civitas to Kingdom*). The political upheaval left its mark on Brythonic literature, with heroic defeat a major theme of the early poetry (see GODODDIN; ENGLYNION).

There were also Irish raids on western Britain in the late and immediate post-Roman period. These were associated with some settlement too, although it seems to have been on a much smaller scale than the English settlement, nevertheless affecting Cornwall, western and mid-Wales, the Isle of Man and south-west Scotland (including DÁL RIATA). At least in the Isle of Man and Galloway some movement continued into the very late 6th century, bringing new raids and new political leaders.

These movements are reflected in the literature in different ways. Consequent to the raids there was an enforced Christian mission to Ireland, mostly by British Christians such as St PATRICK, and there is a trail of British Christians through early IRISH LITERATURE. On the other hand, the political movement reinforced and extended the use of GAELIC in the Scottish islands and west coast, ultimately to spread to much of Scotland.

It is firmly lodged in the historiography of the 5th century AD that the arrival of the English pushed the BRITONS westwards (cf. GILDAS, *De Excidio Britanniae* §25). While it is quite reasonable to suggest that some aristocrats moved west, the full extent of Brythonic movement is debatable, and it is perfectly clear from place-name and incidental evidence that some of the British (that is, the Celtic Britons) remained living in eastern England. What is also certain is that a proportion of the British migrated south, to the Continent. By the mid-5th century there were British groups in the middle Loire area, and by the late 6th century the name of the north-western peninsula of GAUL (modern France) had changed to *Britannia Minor*, 'Little Britain', roughly equivalent to the former French province of Brittany (the current administrative region *Bretagne* 'Brittany' plus the *département* of Loire-Atlantique). The toponymy and language of western Brittany suggest that at least some of the immigrants came from south-west Britain, but there is no reason to suppose that this was exclusively so (see BRETON MIGRATIONS). This movement features prominently in early texts from Brittany, in hagiographic material in particular, and slightly in Cornish and southern Welsh tradition.

A few centuries later came Viking raids, beginning with Scotland and Ireland in the very late 8th century and lasting (in various forms) into the 12th century in Ireland and the Scottish Isles. Raiding touched Cornwall in the early 9th century, Brittany from the early 9th to early 10th centuries, and Wales intermittently from mid-9th to late 11th century. The Isle of Man became a major Scandinavian political base during the 10th century (and the island of Anglesey a lesser base in the late 10th). In many of these areas, raiding gave way to settlement: this was dense in the Northern and Western Isles, and notable in Caithness (McNeill & Nicholson, *Historical Atlas of Scotland c. 400–c. 1600*) and the Isle of Man, and there were important strong points in Ireland (notably at Dublin [BAILE ÁTHA CLIATH]). Apart from Anglesey, there were possibly a few strongholds in west Wales. There may also have been a Viking focus in Nantes (NAONED), but it is difficult to identify any long-term Viking impact on Brittany. Scandinavian raiding features in the contemporary records of Wales and Brittany, and constitutes a major theme in the political tradition of both, as also of Scotland—the idea of the Viking leader feeds into story material in Ireland and, to a lesser extent, in Scotland. Scandinavian settlement occasioned major linguistic change in northern Scotland and the Isles, and had a significant linguistic influence in the Isle of Man.

§4. FOOD AND FARMING

There must have been regional differences in the balance of production (for example, already in the 6th century there were vineyards in south-eastern

Brittany), but it is impossible to quantify agricultural products before a very late date. We cannot therefore comment on the (inevitably varying) relative proportions of arable and pastoral farming. On the other hand, the prominence of cattle in early Irish material, the use of a cattle standard as a unit of account, the likelihood that cattle were given to clients by their lords (see LAW TEXTS), the theme of cattle raiding in the sagas (see ULSTER CYCLE), and the enormous numbers of cattle bones from excavated sites such as Lagore and Carraig Aille make it abundantly clear that cattle were an important aspect of aristocratic life. Cattle may well have been a more significant aspect of Irish economies than of others, but even these had a major arable element too (Patterson, *Cattle-lords and Clansmen*; see also AGRICULTURE; FOODWAYS).

As for technology, there seems to have been more machinery and more animal power in Celtic areas, even in the early Middle Ages, than there is in many parts of the world in the 20th century. Ploughshares are sometimes found and ploughs commonly cited, usually drawn by oxen. (Horses were used more for transport, especially of people). Harrows and sickles, threshing flails, corn-drying kilns were common all over. Mills were very unusual in most Celtic areas before the Norman Conquest, the grinding of grain being essentially a domestic task. Ireland was an exception, with horizontal water mills introduced early in the Middle Ages; elaborate rules survive for channelling water across neighbours' lands.

§5. PEASANT PROPRIETORS AND LORDLY ESTATES

In all Celtic territories, some proportion of the total agricultural exploitation in the post-Roman period was by means of estates: in other words, the estate owner, who may or may not have laboured himself, took rent in one form or other. Not all land was part of an estate, however, and in some areas there is good evidence of free peasant proprietors, that is, of peasants who worked their own private smallholdings, their own households taking the profits of their labour. The free peasant proprietor is best evidenced in early medieval Brittany, although—by implication—the lowest grades of non-noble freemen in Ireland were free proprietors; and, perhaps, the owners of 1-*modius* farms (about 40 acres or 16 ha) in south Wales were too. There is no reason to believe that Scotland was devoid of free peasants, but it is difficult to identify early evidence of them.

Estates could be large or small, from the few accumulated holdings of the richer free peasants in Brittany to some of the vast (several thousand acre) tracts under ecclesiastical ownership there and in all other Celtic areas. Large estates might be discrete or scattered plots of land—both are found, and might be managed as a single agricultural unit or several. High aristocrats, whose number included bishops and the abbots of major monasteries as well as ruling families, could well have several large estates and thereby be in control of very substantial surplus.

In the Breton case, farm work was done both by serfs or slaves and by free tenants. Tenants are found all over the Celtic world, but whereas rents were paid in goods and money in Brittany, elsewhere the monetary element was rare. Rents did not normally include labour service before the Norman Conquest, as they increasingly came to do on estates in England and the Continent. Irish arrangements for 'base clientship' taken on by freemen, however, have some points of comparison with classic European labour service. These arrangements could include some agricultural service such as harvesting, as well as rampart building or digging the patron's gravemound (in addition to the annual return; see Kelly, *Guide to Early Irish Law* 30). What was different here from European labour service was the fact that these duties were irregular and were not nearly as onerous as the weekly, general labour obligations.

If labour service was not characteristic in Celtic lands, the continuing prevalence of SLAVERY certainly was, being much more common than in Germanic and Latin Europe.

The so-called 'multiple estate' has occasioned much discussion in recent years: a large estate comprising several constituent settlements with their surrounding land, paying rent to the owner, each single estate having a religious centre, court and place of refuge, to be found all over the insular and Celtic world (G. R. Jones, *Medieval Settlement* 15–40). The detail of this hypothesis derives from a late medieval Welsh fiscal model, which it is scarcely appropriate to apply to every kind of proprietorship; the model is also much too schematized for the early Middle Ages and its assumption that patterns of proprietorship went unchanged for centuries

is hard to credit. On the other hand, at a certain level of generality the idea is applicable to any estate.

§6. SPECIALIZATION AND EXCHANGE

Production in the early Middle Ages was overwhelmingly agricultural, by value and volume. While specialization was rare, it did occur, and was sometimes primarily intended for distribution. SALT is a notable example of this, but there were also commodities like pottery, particularly from the 10th century onwards. If this kind of production for distribution was rare, there was nevertheless some division of labour, even if many of those with specialized occupations did not entirely depend upon those occupations for their survival. There were craft workers; Irish texts are especially detailed in this respect, distinguishing those of high and low status (goldsmiths and fine metalworkers as against cart makers, for example). Elsewhere, the variety of those concerned with food provision (cooks, bakers, butchers), for example, in monasteries is more often noted, but there were always some clergy, as also the servants and agents of aristocrats.

Some of the specialized production was clearly exchanged: WINE and salt in 9th-century Brittany, and there are incidental references to other types of commercial transaction, such as the purchase of weapons. In Wales, there is far less evidence of commercial exchange—goods were moved about by mechanisms other than the market; texts emphasize the idea of reciprocity. However, there were some commercial transactions, and even slaves could purchase their freedom in the 9th century. Nevertheless, all the available evidence suggests that the volume of commercial exchange in pre-Conquest Wales was very low. While evidence for commercial exchange in Ireland is thin before the 9th century, from then onwards economic relationships were clearly changing. The establishment of Viking enclaves included the settlement of people with blatantly commercial interests, and commercial activity increased in the later 10th and 11th centuries.

At this period in European history it is normal to find plentiful evidence of merchants and markets. Such evidence can be found in Brittany, but before the 9th century it is difficult to find evidence of either in Wales and Ireland. However, during the 10th century, Irish evidence of markets and market activity increases. On the other hand, there are no such references in Wales, a remarkable comparison with English and other European developments of the period.

Not surprisingly, given the above, Celtic areas were under-urbanized by comparison with England and the Continent. There were a few towns in east Brittany throughout the early Middle Ages, but not much development until new foundations were made in the 11th century. In Wales, there is no good evidence for any town or pre-urban nucleus in the pre-Conquest period; the strong evidence is all post-Conquest. In Ireland, despite reference to MONASTERIES as *civitates* (see CIVITAS), there was no urban development in the pre-Viking period; however, Viking Dublin clearly became urban in the course of the 10th century, as did other Viking strong points at Cork (Corcaigh), Limerick (Luimneach), and so on. In Scotland, there was rapid establishment of urban centres in the 12th century, associated particularly with the enterprise of the kings of Scotland.

Eastern Brittany was much more economically complex than other Celtic territories. There is much evidence to suggest that economic development in Ireland, particularly over the 9th, 10th, and 11th centuries, was considerably more rapid than elsewhere. Why? To begin with, Ireland seems to have had more people and a more evenly spread population. Its large and powerful monasteries stimulated production by the 8th and 9th centuries—production of many kinds—and stimulated major changes in the way surplus was used. Viking settlement and interests then intensified the rate of this change. Here, again, Ireland was markedly different from other Celtic parts.

The **Celtic Film and Television Festival** was established in 1980 as a forum for the promotion of the cultures and languages of the CELTIC COUNTRIES in the areas of film, television, radio, and new media. The festival is a peripatetic one, and is arranged in a different Celtic country on an annual basis. The first festival was held in the Western Isles of Scotland (ALBA) and past venues include ABERYSTWYTH, Wexford (Loch Garman), Glasgow (GLASCHU), Lorient (An Oriant), and Truro.

The festival is organized by a central organization based in Glasgow, but operates on a partnership basis with local committees which are established within the locality of the festival in a particular year. The management group consists of the central secretariat together with representatives from Scotland, Ireland (ÉIRE), Wales (CYMRU), Cornwall (KERNOW), and Brittany (BREIZH).

The festival, which is held over a four-day period, is a celebration of excellence in broadcasting and film in the Celtic countries (see MASS MEDIA). It is a showcase for talent new and old, and provides an opportunity for everyone with an interest in the Celtic creative industries to attend workshops, screenings, lectures and seminars on a host of topics. The highlight of the festival is the gala dinner during which the Frank Copplestone Award (first-time director), the Jury Award, and the Spirit of the Festival Award (for a film in a Celtic language) are presented. Other awards presented during the festival cover all aspects of film and broadcasting, including radio, music, animation, documentary, education, news, and current affairs.

Perhaps the true ethos of the festival was summed up by its first chairman, the Revd Rodderick MacLeod, who claimed that 'the festival of Celtic Film is the first international film festival to bring together film, television and associated media from the Celtic nations, and to attempt to discuss the problems and possibilities of working within these countries'.

The **Celtic languages** form a subgroup of the INDO-EUROPEAN family which can be defined by a special combination of changes that affected the inherited sound system. Although arguments have been advanced for an Italo-Celtic proto-language intermediate between Indo-European and Celtic, the only intermediate stage between Proto-Indo-European and the Celtic languages for which there is general consensus is PROTO-CELTIC. The linguistic developments leading to the various Celtic languages are to be found under the respective language names. This article discusses general problems of terminology and the internal structure of the group.

§1. ANCIENT NAMES FOR CELTIC-SPEAKING PEOPLES ON THE CONTINENT

Celti (Κελτοί, Κέλτοι), *Galatae* (Γαλάται), *Celtae*, and *Galli* are names used by Greek and Latin authors for the Celtic-speaking tribes in northern ITALY and west-central Europe, north of the Alps, and later also in Anatolia (present-day Turkey). The name *Celtiberi* (Greek Κελτίβηρες) was used for those in central Spain (see CELTIBERIA; CELTIBERIAN; GREEK AND ROMAN ACCOUNTS). No generally agreed etymology exists for these names. Possible roots include IE **k´el-* 'to hide' (also in Old Irish *celid*), IE **k´el-* 'to heat' or **kel-* 'to impel' for **Kelt-*, and probably IE **gelh$_2$-* 'power' (also in OIr. and Welsh *gâl* 'a warlike blow') for *Galatae*, Γαλάται, and maybe also *Galli*.

§2. RECOGNIZING THE CELTIC LANGUAGES AS A UNITY

CAESAR states that the BELGAE, Aquitani, and Galli had different languages, but gives no details. He remarked that the language of the BRITONS was very simi-

lar to the language of GAUL. The use of 'Celtic' for the whole family of languages is modern, going back to George Buchanan in 1587 (see Collis, *Celtic Connections* 1.91–107). The first scientific description of the Celtic group, based on extensive fieldwork, is Edward LHUYD's *Archaeologia Britannica*, 1707 (see Brynley F. Roberts, *Proc. 7th International Congress of Celtic Studies* 1–9). Franz Bopp (1839) proved that the Celtic family was a branch of Indo-European, and *Grammatica Celtica* (1853) by J. K. ZEUSS was the first comprehensive comparative grammar.

§3. CONTINENTAL CELTIC AND INSULAR CELTIC

There is no general consensus about how the family tree of the Celtic languages is to be drawn, in particular, whether the BRITISH or BRYTHONIC group, to which BRETON and WELSH belong (cf. §6 below), are more closely aligned with GAULISH or with the GOIDELIC group, to which IRISH and SCOTTISH GAELIC belong (Koch, *Bretagne et pays celtiques* 471–95). Nor is there consensus as to how Celtic languages became established on the islands of Britain and Ireland (Koch, *Emania* 9.17–27). In view of this uncertainty, the dichotomy of Continental vs. Insular Celtic is intended here as descriptive of the geographical situation.

§4. CONTINENTAL CELTIC

All the CONTINENTAL CELTIC languages, that is, all of the languages attested in antiquity on the European mainland, have died out, replaced by spoken Latin, Greek, or Germanic, probably also Slavic, mostly before the middle of the 1st millennium AD.

INSCRIPTIONS discovered in Spain (BOTORRITA I, III), Italy (e.g., VERCELLI) and France (e.g., LARZAC, CHAMALIÈRES, and Châteaubleau) in the later 20th century have yielded evidence which suggests that COMMON CELTIC must have been developed into at least two, maybe three, distinct languages by the time of Roman invasions into Hispania and Gallia.

The following terms are used to designate distinct varieties of Continental Celtic:

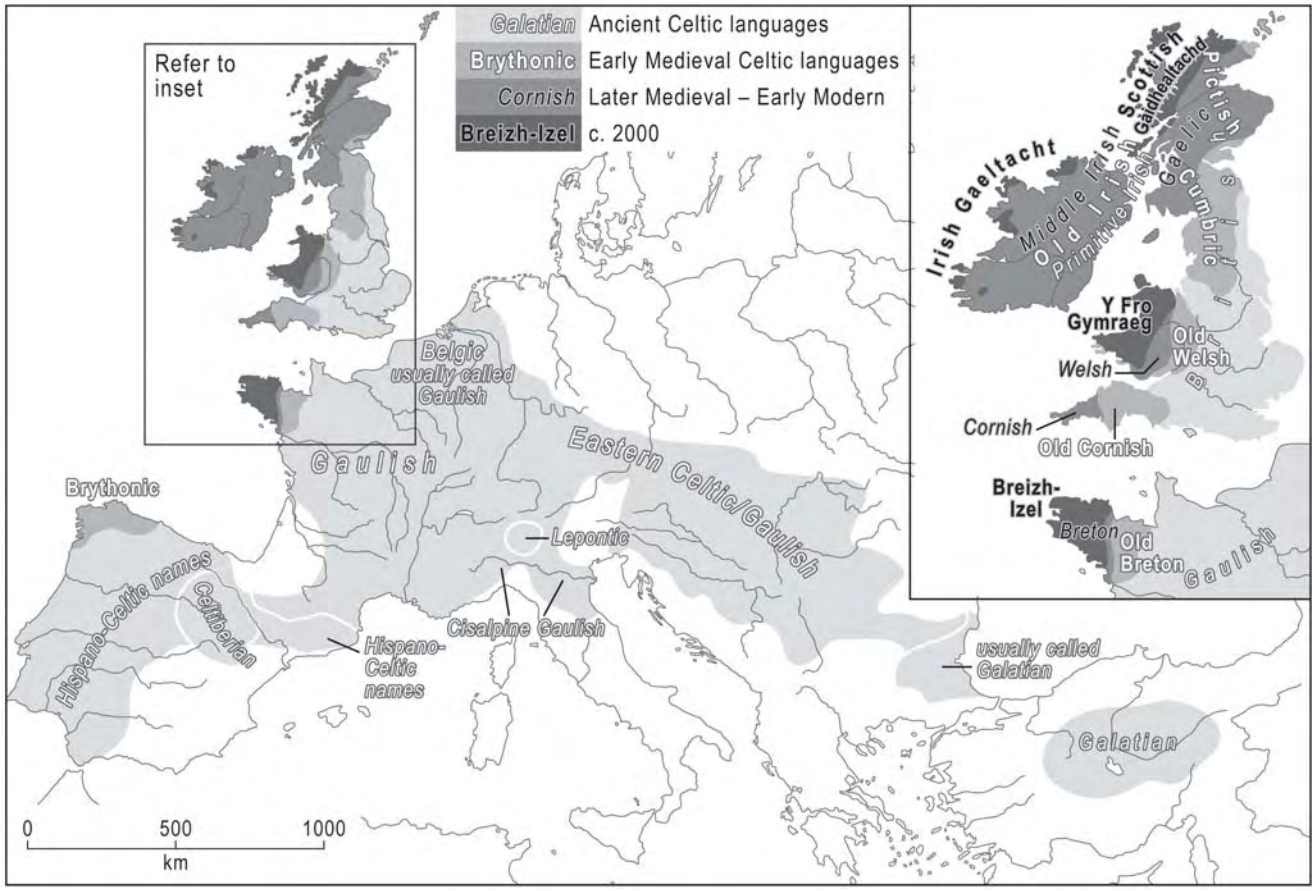
LEPONTIC is attested in approximately 140 short inscriptions around Lugano in northern Italy, using variants of the Etruscan alphabet (see SCRIPTS), dated 6th to 1st century BC. Some linguists believe that Lepontic is an early and perhaps conservative dialect of Cisalpine Gaulish, that is the Gaulish spoken south of the Alps (see McCone, *Towards a Relative Chronology of Ancient and Medieval Celtic Sound Change* 37–65; Eska, *Proc. Berkeley Linguistics Society* 24.2–11).

CELTIBERIAN differs markedly from Gaulish in its handling of the Proto-Celtic sound system and its syntax. Two major and several minor inscriptions in a variant of the Iberian script, and a few in the Latin alphabet, dated 3rd to 1st century BC, are only partially understood (see Untermann & Wodtko, *Monumenta Linguarum Hispanicarum 5*).

GAULISH is known from roughly 600 inscriptions, mostly in the Greek and Latin alphabets, with Etruscan alphabets used in the Gaulish inscriptions from Italy (also called Cisalpine Celtic). There are also thousands of Gaulish proper names and occasional words in Greek and Roman texts, dating from the 3rd century BC until the 4th AD. Two inscriptions from northern Italy are bilingual (Latin and Gaulish; see TODI; Vercelli). Nothing, except a few glosses in Greek authors and roughly a hundred proper names (persons, tribes, and places), is known about the GALATIAN language. St JEROME states: *Galatas excepto sermone Graeco, quo omnis Oriens loquitur, propriam linguam paene eandem habere quam Treveros* 'The Galatians, except for the Greek tongue, which the whole East speaks, have their own language very similar to the Treveri' (Migne, *Patrologia Latina* 26.357; trans. Freeman, *Galatian Language*).

§5. P-CELTIC AND Q-CELTIC ON THE CONTINENT

CONTINENTAL CELTIC is divided linguistically according to 'isoglosses', that is, specific mappable dialect differences, including the well-known *p*/*q*-isogloss. This dual treatment reflects the fate of PROTO-CELTIC k^w (< PIE k^w and $k'u̯$). The Q-CELTIC languages preserved k^w (Goidelic later simplified it to *k*, see below). P-CELTIC has changed k^w into a new *p* (the old PIE $*p$ being lost) before the earliest attestations. Celtiberian is Q-Celtic throughout its history, and Gaulish has a few Q-forms (SEQUANA 'Seine', the tribal name *Sequani*, *Equos* 'Horse', used as the name of a month, but cf. the name of the goddess EPONA). These examples show that the change Proto-Celtic $*k^w$ > Gaulish $*p$ had not yet operated in all parts of Gaul at the time of the Roman conquest. On the other hand, Lepontic (which is attested several centuries earlier) has only *p*. The change IE $*k^w$ > *p* is not confined to the Celtic languages; for example, it is also known from the Sabellic



languages in Italy such as Oscan and Umbrian. It is possible that this change was shared between Italic and Celtic at a period when they were related dialects in contact, affecting a central area that included Italy, Gaul, and Britain, but never reaching Spain or Ireland (see below) on the westernmost edge of Europe. But if this sound law did indeed affect the central area of the Italo-Celtic group, then it is very strange that Latin, which is central in Italy, does not participate in the change. Therefore, it is far more likely that this sound change occurred independently in both language groups.

For classifying the Continental Celtic languages, the *p*/*q*-isogloss is now viewed as less important than earlier generations of Celtic historical linguists once assumed.

§6. the insular celtic languages

Insular Celtic has two main divisions: Brythonic (also called British or Brittonic) attested on the island of Britain and, through emigration and long-term contact, in Brittany (see breton migrations); and Goidelic (more commonly called Gaelic) in Ireland and, by ancient migration and/or intensive contact, also Scotland and the Isle of Man.

Arguments have been advanced for Pictish being a non-Indo-European language, owing to the negative evidence of a number of inscriptions and proper names from early north Britain that resisted attempts at interpretation (Jackson, *Problem of the Picts* 129–66). In recent reassessments, more of the material has been analysed as fitting known Celtic patterns (Forsyth, *Language in Pictland*). In particular, the place-names of what is now northern Scotland that are neither Gaelic nor Norse in origin are almost all types known from the Brythonic areas further south: e.g., Pictish *monid* 'mountain', W *mynydd*; Pictish *aber* 'river-mouth', W and Breton *aber*; Pictish *lanerc* 'glade', W *llannerch*; Pictish *pert* 'hedge', W *perth*.

The oldest forms of Gaelic or Goidelic, the ogam inscriptions in 'Primitive Irish' still have a *q* (as in MAQQI 'of the son') distinct from *c* /*k*/. In the earliest loanwords into Gaelic from Latin, *q* has been substituted for *p*, for example, Ogam Irish QRIMITIR 'priest' (OIr. *cruimther*) is a borrowing from British Latin *premiter* < Latin *presbyter*. Borrowings between the Celtic dialects in this early period would automatically have *q* sub-

stituted for *p* (or vice versa) and are therefore indistinguishable on linguistic grounds from inherited Proto-Celtic vocabulary: for example Irish *Cruithin*, Welsh *Prydyn* 'the Picts' could, on linguistic grounds, at least, have originated as a Q-Celtic form or P-Celtic form or before the split. By the Old Irish period (*c.* 600–*c.* 900), *q* is generally no longer used. Inherited Proto-Celtic k^w and *k* have fallen together in *c* /*k*/. The sound of both origins is now written *c* in its strong articulation or *ch* when undergoing the phonological change known as lenition or aspiration (Irish *séimhiú*).

Celtiberian, in its treatment of Indo-European sounds and aspects of its grammar and word orders, appears to be both different and more conservative, that is, more old-fashioned, than the other Celtic languages. These attributes can be explained on the assumption that the speakers of Celtiberian lost regular contact with the rest of the Celtic world at an early date. For example, an extension of Celtic speech across the formidable barrier of the Pyrenees in the Late Bronze Age (*c.* 1200–*c.* 700 BC) would provide a suitable scenario to account for the dialect position of Celtiberian.

§7. THE DIALECT POSITION OF BRYTHONIC

The view that Brythonic and Gaulish form a separate branch or subfamily, opposed to Goidelic, Celtiberian, and Galatian, was standard doctrine in the mid-20th century. One fact that supports this theory is that we have a sizeable body of Celtic coin legends and names of tribes and rulers that were known to have been in use on both sides of the English Channel in the 1st century BC (see BELGAE; COINAGE). Linguistically, these names and terms are completely regular as Gaulish or Gallo-Belgic on the one hand, and as the Brythonic that became Welsh and Breton on the other. For example, the name Catuvellauni, which is attested for a tribe on the Marne in Gaul and another (or more probably a branch of the same) on the Thames in Britain, later appears as the Old Breton man's name *Catuuallon* and as Welsh Cadwallon. In this light, the Gallo-Brittonic proto-language is more than a theoretical possibility.

Nonetheless, some Celtic scholars favour the alternative hypothesis of an Insular Celtic proto-language, excluding Gaulish (e.g., McCone, *Towards a Relative Chronology of Ancient and Medieval Celtic Sound Change*). This idea has generally not been borne out by the discovery of new inscriptions from Gaul, though the analysis of this material is not yet advanced. On the other hand, the identical names on the Continent and in Britain could be explained by saying that Gaulish and British had not yet differentiated sufficiently from their common ancestor to be able to make a distinction between them. A hybrid model conceives of the Celtic languages as a dialect continuum, in which Brythonic naturally shares some features with Goidelic (its neighbour on the west), and others with Gaulish (its neighbour on the south and east). Such a theory allows for an originally fairly uniform Celtic to have been affected by various linguistic innovations, starting from different points at different times. Such linguistic innovations can take place as internal developments, that is to say, without any outside influence from another language. Other local innovations are likely to have arisen through contacts with neighbouring non-Celtic languages or the adoption of Celtic by previously non-Celtic-speaking populations (see HAMITO-SEMITIC; PRE-CELTIC PEOPLES; Gensler, 'Typological Evaluation of Celtic/Hamito-Semitic Syntactic Parallels').

The discovery of additional inscriptions or other types of ancient and early medieval texts from Gaul, Britain, and Ireland might shed more light on the prehistory of the extant Celtic languages and permit the reconstruction of intermediate stages between Proto-Celtic on the one side, and Proto-Goidelic and Proto-Brythonic on the other.

Celtic languages in Australia

The CELTIC LANGUAGES were among the earliest settlement languages in colonial Australia, following the establishment of a British colony in New Wales (now New South Wales) in 1788. IRISH, SCOTTISH GAELIC, and WELSH are the best-attested Celtic languages in the colonial period, prior to Federation in 1901, reflecting the large number of settlers from Ireland (ÉIRE), Scotland (ALBA), and Wales (CYMRU). A number of items of CORNISH vocabulary are recorded in areas associated with migration from Cornwall (KERNOW) in the early 19th century, particularly in the mining areas of South Australia, although Cornish was by then no longer a birth language in Cornwall. There is very little evidence of MANX, reflecting the small population of Manx speakers, and almost no record of BRETON, whose speakers tended to move within the territories controlled by France.

People from Ireland, Scotland, and Wales settled in Australia in significant numbers during the 19th century, many arriving as monolingual speakers of a Celtic language. The evidence for their linguistic identities includes letters, diaries, records of societies and churches, printed documents, and place-names. The number, and particularly the proportion, of speakers of Irish, Scottish Gaelic, and Welsh in Australia declined in the early 20th century and became insignificant in the period following the Second World War, when Australia was transformed by large numbers of non-English-speaking migrants from Continental Europe. However, the encouragement of multilingualism through the promotion of 'multiculturalism', first by the Whitlam government (1972–5) and then the Hawke and Keating governments (1983–96), gave a new sense of identity and linguistic pride to Celtic-language speaking communities.

§1. COLONIAL AUSTRALIA

The records on 19th-century New South Wales, the location of the earliest European colonies after 1788, do not contain any official attempts to record the diversity of languages spoken. Evidence from several sources, however, shows that Celtic languages were widely spoken in Australia prior to Federation in 1901. A large proportion, perhaps a majority, of European settlers during that time were from families which originated in Ireland, Scotland or Wales, with the largest number coming from Ireland and the smallest from Wales. The number of surviving letters and diaries in Irish and Scottish Gaelic is small, with many more surviving in Welsh, which reflects the relative strength of the languages as written media in the 19th century. Equally telling are the survivals in print, which reflect the large amount of 19th-century Welsh-language printing in Wales relative to Irish and Scottish Gaelic printing in Ireland and Scotland. The small number of Australian printings in Celtic languages also suggests a more general failure to establish an institutional presence for the Celtic languages in Australia. This is perhaps unsurprising, given the tendency towards linguistic assimilation which was characteristic of 19th-century English colonies.

The earliest Scottish Gaelic publication in Australia was the monthly *An Teachdaire Gaidhealach* (The Gaelic messenger), whose title was borrowed from an earlier Glasgow publication, and which was produced on the press of Charles Wallace Hall's *Daily Advertiser* in Hobart during 1857. It was aimed at the estimated 20,000 Highlanders who were living outside Scotland (see HIGHLANDS), but copies were also sent to Glasgow (GLASCHU) and Edinburgh (DÙN ÈIDEANN). Sydney's short-lived *Irish-Australian* appeared in 1895, but only one Gaelic poem appeared before the paper turned into the largely English-language *Catholic Press*. In Melbourne, Dr Nicholas O'Donnell's 'Gaelic Column' in the *Advocate* contained short extracts of journals from Dublin (BAILE ÁTHA CLIATH), Belfast (Béal Feirste) and elsewhere, with notes and sometimes a translation by Dr O'Donnell. The only original item by O'Donnell to appear in the *Advocate* was a 20-line poem beginning *Tá fosgailt an dorais fá dheireadh anocht* (The door opens tonight at last) to celebrate the opening of the Shamrock Club in Melbourne on 26 June 1902.

In contrast with the Gaelic periodicals, the monthly publication of the Victorian-based Welsh periodicals *Yr Australydd* (The Australian) and its successor *Yr Ymwelydd* (The visitor) continued for ten years from

1866. They contain evidence of the widespread use of Welsh in items that recorded Welsh-language community events and religious meetings, in advertisements for new consignments of Welsh-language books received by Melbourne booksellers, and in an 1875 advertisement for 'a young Boy, able to read Welsh, willing to be bound as an apprentice to learn the craft of printing'.

§2. FROM FEDERATION TO MULTICULTURALISM

The 20th century saw the development of large numbers of expatriate community organizations, particularly those representing Ireland and Scotland, which included less and less evidence of non-English activity. The Gaelic League (CONRADH NA GAEILGE), however, was active throughout the century, and some church organizations, particularly in Melbourne and Sydney, organized regular services in Irish, Scottish Gaelic, and Welsh for several denominational congregations, sometimes supporting full-time ministers and priests because of their linguistic ability. One of the most visible cultural legacies of Celtic-language settlement in the secular world is the survival of the local EISTEDDFOD in areas of Welsh settlement, some of which have been annual events since the 19th century. In most cases there is little Welsh-language content today, although some, such as those in the Newcastle district of New South Wales, retain Welsh-language singing competitions. The term *eisteddfod* has also been retained to describe the dozens of *eisteddfodau* which are still held in secondary schools throughout Australia.

However, it was from the success of the language movements in Ireland, and particularly in Wales, that younger Australians found a renewed interest in the Celtic languages in the final decades of the 20th century. While well-established cultural organizations remained largely English speaking, the new 'multiculturalism' helped to make language the focus of cultural identity, and the language movements of Ireland and Wales made a political imperative of learning or retaining a language (see LANGUAGE [REVIVAL]). In the 1980s and 1990s there was further institutional support for this view through the establishment of weekly national radio programmes in Irish, Scottish Gaelic, and Welsh on the government-funded Special Broadcasting Service (SBS) and through the establishment of degree programmes in Celtic studies at the University of Sydney.

At the beginning of the 21st century, there is less evidence of Celtic-language activity in Australia than during the final decades of the 20th century. This partly reflects the lack of support from successive conservative governments for multilingualism and cultural plurality in Australia. There is also a growing sense, in an increasingly mobile world, that the linguistic heart of the worldwide communities of Celtic-language speakers is in the CELTIC COUNTRIES and that, in the digital age, the isolated linguistic diaspora is an outdated paradigm.

Celtic languages in North America

§1. IRISH

Evidence for the presence of the IRISH in North America can be shown to date from the earliest days of Spanish and English colonization. Irishmen, for instance, formed part of the Spanish colony in Florida in the mid-1560s. Natives of Ireland (ÉIRE) could also be found in early English colonies, such as those on the Amazon, in Newfoundland, and in Virginia. At least some of these early Irish adventurers were Irish speakers. One of them was Francis Maguire, who accompanied the English on an expedition to Virginia. Maguire may have been acting as a spy: on his return to Europe he proceeded to Spain, where he visited his countryman Florence Conroy, the archbishop of Tuam. Conroy later wrote that Maguire narrated to him in his native language an account of his travels with the English along the coast of Virginia. Conroy wrote out the five-page narrative in Spanish and sent it to the Spanish authorities. The original is still to be found in Salamanca, along with other documents relating to early English and Spanish colonization intrigues.

During the mid-17th century thousands of Irish were forcibly transported under Cromwellian rule to the islands of the West Indies. Many of these were Irish speakers. One of those shipped to Barbados was a woman known as Goody Glover, who ended her days in Boston. In the late 1680s the fear of witchcraft swept through the English colonies of Boston and Salem, Massachusetts. Goody Glover was one of those accused of being in league with the devil. At her trial, we are told, 'the court could have no answers from her, but in the Irish; which was her native language, although she understood English very well.' This poor Irish-speaking woman was found guilty and hanged as a witch in Boston in 1688.

Wherever the British went in North America, some Irish were to be found accompanying them. In the 18th century one of the most popular destinations for the Irish of the counties of Cork, Waterford, Tipperary, and Kilkenny was Newfoundland, known in Irish as Talamh an Éisc (Land of the fish). Bishop James Louis O Donel of Newfoundland, sometimes referred to as the first Anglophone bishop of the areas that now comprise Canada, was a native Irish speaker from Knocklofty, Clonmel, Tipperary (Cluain Meala, Contae Thiobraid Árainn). Letters referring to the Catholic Church in Newfoundland point out repeatedly the need for priests to have a knowledge of Irish. Although there is considerable evidence for the presence of Irish in Newfoundland from the mid-1700s to the mid-1800s, including the macaronic poem 'As I was walking one evening fair/*Is mé go déanach i mBaile Sheáin*' by Donnchadh Ruadh Mac Con Mara (1715–1810), the language seems to have died out as a spoken language there around the turn of the 19th/20th century.

In colonial America, many of the indentured servants were Irish speakers, a fact that is mentioned specifically in several advertisements for runaway servants. In the early United States, there are references to the Irish language, including the fact that it was in use among a considerable number of George Washington's troops. There were also Irish speakers fighting for the British, for example, Colonel Timothy Hierlihy from West Cork and Admiral Moriarty, a native of Dingle (An Daingean). States in the new republic with concentrations of Irish speakers included Maryland, Pennsylvania, New York and, to a lesser extent, Massachusetts. The first Catholic prelate in New York City was Father Charles Whelan (1740–1806), an Irish Capuchin who was said to be more fluent in Gaelic and French than in English.

Large numbers of Irish immigrants, among them many Irish speakers, arrived in the United States at the beginning of the 19th century. These included prominent individuals such as Dr William MacNeven in New York, Bishop John England (1786–1842) in Charleston, South Carolina, and Matthias O'Conway (1766–1842), who spent many years in Philadelphia working on an Irish dictionary (see DICTIONARIES AND GRAMMARS [1] IRISH). But the majority of Irish speakers were poor, illiterate labourers who could be found on building sites in the new national capital in Washington, D.C., on the Erie Canal (1817–26), and in the 1820s, in the 'Paddy Camps' of Lowell, Massachusetts, where Father Patrick Byrne ministered to them in the Irish language. Patrick Condon, the only pre-Famine Irish poet in the United States whose work is known to us, emigrated to Utica, New York in 1826, following in the footsteps of relatives who had been working on the Erie Canal. Also in the 1820s, large numbers of Irish were emigrating to Nova Scotia, New Brunswick, Quebec, and Ontario. Many Irish speakers settled in the Miramichi in New Brunswick, and other concentrations of Irish speakers could be found throughout eastern Canada, for example, the community of Chelsea, Quebec, which was described in the 1830s as having '*une centaine de familles catholiques, irlandaises pour la plupart et ne parlant guère que leur langue*' (some hundred Irish Catholic families who for the most part speak nothing but their language).

In the state of Maine in the 1830s there were monoglot Irish speakers working in the mill-dams near Augusta, as we learn from Nathaniel Hawthorne, who heard them speaking the 'wild Irish' and believed that was the only language they could speak.

During the years of the Great Irish Famine the rate of EMIGRATION skyrocketed. Some of the best evidence for Irish-language use comes, ironically, from Protestant organizations that strove to convert Irish immigrants to their religion. The American Protestant Society and its successor, the American and Foreign Christian Union, hired Irish-speaking converts as Bible readers and colporteurs. The monthly reports of these colporteurs in New York, Boston, and Philadelphia indicate how widely Irish was spoken among Irish

immigrants in the 1840s and 1850s. One of these reports estimates that 5/8 of the Irish-born population of New York was Irish-speaking. Some sailing vessels arriving in North America at that time were reported to have had virtually all Irish-speaking passengers. Such a vessel was the *Brig Saint John*, which set sail from Galway (Gaillimh) in 1849 and was shipwrecked off the coast of Cohassett, Massachusetts, with the loss of 99 lives. In the 1850s in Pennsylvania, there were so many Irish speakers that the Czech-born bishop of Philadelphia, John Neumann, learned Irish so that he could hear the confessions of his parishioners. Estimates suggest that between 1851 and 1855 over 200,000 Irish speakers came to the USA and between 20,000 and 30,000 Irish speakers entered Canada.

Following the failed 1848 Rising, a number of Young Irelanders made their way to the United States. Among these were a fair number of Irish speakers such as Michael Doheny (1805–63) and John O'Mahony (1819–77). Shortly after his arrival in Brooklyn in 1853, O'Mahony gathered together a number of manuscripts of Keating's *Foras Feasa ar Éirinn* (see céitinn) and in 1856 published in New York his English translation of the work. O'Mahony was responsible in 1857 for initiating a Gaelic column in the New York weekly *Irish-American*. This marked the first appearance of Irish in print in North America, and the column continued sporadically until the newspaper ceased publication in 1915.

Also in the 1850s the first attempts were made at forming Irish-language societies in the USA. Probably the very first of these was established in the Wilkes-Barre region of Pennsylvania in 1853. In the late 1850s and early 1860s an Irish class was established in New York City under the auspices of the New York branch of the Ossianic Society. The teacher of these classes was David O'Keefe, who at this time also penned in New York an Irish manuscript which is now Ferriter MS 33 in the library of University College, Dublin (Baile Átha Cliath). These early efforts to establish Irish-language societies in the USA were soon allowed to fade as the nation, and many leaders of the Irish-American community, turned their attention to the American Civil War.

In the early 1870s Philo-Celtic societies with classes in Irish were established in Brooklyn and Boston. In 1878 an organization was formed in New York City and for the next few years Irish-language societies came into existence in various cities and towns throughout the north-eastern United States. In 1881 Michael Logan started publication in Brooklyn of a bilingual monthly *An Gaodhal* (The Gael), one year before the Dublin-based *Gaelic Journal* was founded. In the 1880s and 1890s Boston published a bilingual *Irish Echo*, and in the 1880s Irish-language columns also appeared in O'Donovan Rossa's *United Irishman* (New York), the *Chicago Citizen* and the *San Francisco Monitor*.

However, the majority of immigrating Irish speakers had little contact with such organizations. In the years 1891–1900 it is estimated that *c.* 24% of emigrants from Ireland were Irish speakers, which suggests that over 100,000 speakers of the language came to the United States, and 2500 came to Canada in those years.

Gaeltacht immigration to parts of North America continued throughout much of the 20th century except for the years of the Depression and the Two World Wars. Major cities such as New York, Philadelphia, Boston, Chicago, San Francisco, and Montreal had relatively large numbers of Irish speakers. People from certain regions settled in specific areas. Thus Achill islanders went to Cleveland, Donegal Irish speakers emigrated to Brooklyn, New Jersey, and Pennsylvania, and West Kerry Irish speakers could be found in Springfield, Massachusetts, and Hartford, Connecticut. Portland, Maine, may have been unique in the 20th century, in that the majority of its Irish-born inhabitants were natives of the west Galway Gaeltacht areas of Conamara, Cois Fharraige, and Corr na Móna, and Irish continued to be the working language of many of the city's longshoremen well into the 1950s. In recent decades, the greater Boston area has probably been the region with the most noticeable concentrations of Irish speakers. In certain Boston pubs and dancehalls and on work sites such as that of the Big Dig one may hear Irish spoken by young Conamara people.

Today, Irish is taught at a number of universities across North America, from Saint Francis Xavier University in Antigonish, Nova Scotia to Berkeley in California. A new language organization, Daltaí na Gaeilge (Students of Irish), has had unprecedented success in helping North Americans attain fluency in Irish by conducting classes and language immersion programs throughout the continent. Numerous websites, including live and archived broadcasts of Radio na

Gaeltachta (see MASS MEDIA), enable North Americans to keep in daily contact with the language.

§2. SCOTTISH GAELIC

Although the name Nova Scotia dates back to the early 1620s when James I (James VI of Scotland) granted a charter to the region to Sir William Alexander, that early attempt at Scottish colonization had met with failure by 1629 and the territory was ceded to France by Charles I in 1632. The first major wave of Highland EMIGRATION to North America occurred in the late 1640s and early 1650s when Highland soldiers of the defeated Scottish forces were sent as prisoners to the West Indies, Virginia, and New England by the victorious Cromwellians. Saugus, Massachusetts, for instance, received 'in 1651 about 35 Scottish prisoners of war [who] were brought to New England to work at the ironworks rather than being placed in English prisons.' A major attempt at Scottish colonization in Darien (Panama) took place in the late 1690s and included a number of Highlanders (see HIGHLANDS). This initiative, however, ended in complete failure.

In the 1730s James Oglethorpe, a Lowlander (see LOWLANDS), brought Highlanders, all GAELIC speakers, to Georgia to act as a buffer to the Spanish colony to the south in Florida and named the settlement Darien after the failed Panama endeavour. By 1735 the colony had acquired the services of a Gaelic-speaking minister.

Also in the 1730s the Islayman Lachlan Campbell brought out families from his native isle to New York. They eventually settled in what is now Washington County, where their colony was seen as an impediment to 'French encroachments' from Quebec.

From this time also dates the tale of *Soitheach nan Daoine* (The ship of the people), which was purportedly carrying a cargo of abducted Hebrideans who were to be sold into slavery in America.

Some Highlanders had settled in North Carolina as early as the 1720s, but it was in 1739 and thereafter that they started to arrive in large numbers. Thousands of Gaelic speakers settled in the upper Cape Fear region and smaller groups moved further south across the border into South Carolina. Several songs composed by John MacRae of Kintail (*fl.* mid-18th century) during his years in North Carolina have been preserved in oral tradition in Scotland (ALBA) and Nova Scotia. By the time of the American Revolution there may have been as many as 20,000 Highlanders in North Carolina, most of whom took the British side in the conflict. After the war, some of them left for Canada. However, Highlanders continued to arrive in the state until the first decade of the 19th century, and Gaelic continued to be spoken and used in church services at least until the Civil War (1861–5). The first item printed in Gaelic in North America is a sermon by Revd Dugald Crawford published in Fayetteville, North Carolina in 1791.

The aftermath of the battle of CULLODEN (April 1746) resulted in many Highlanders moving to North America. Some of these were prisoners, for example, the 87 Lochaber MacDonalds who were seized and sent to North Carolina in 1746 and the 96 'Scottish prisoners' taken at the battle of Culloden who were brought to Oxford, Maryland, in 1747 aboard the ship *Johnson*.

Military service during the Seven Years' War (1756–63) gave many a Highlander a first-hand acquaintance with North America and as a result many settled there. In 1763 Sir William Johnson, a native of Ireland with extensive holdings in the Mohawk Valley of New York, welcomed 20 families of Highland veterans to the region. These were followed in later years by others, including 600 Glengarry Catholics in 1773.

The forced expulsion of the French Acadian population, known in French as '*le grand dérangement*', was initiated by the British in 1755 in Nova Scotia. In 1758, following the defeat of the French stronghold of Louisbourg in Cape Breton by a force under General Wolfe, which included a substantial number of Highlanders, the British continued the policy of deportations in Ile Saint Jean (later Prince Edward Island). Thus, by the early 1760s, there were fewer than 300 Acadians in Prince Edward Island and only small

numbers in Nova Scotia. Soon after, these regions would be open to large-scale immigration from Britain, including the Highlands. In fact, there would be major Highland emigration to British North America (Canada after 1867) in every decade from the 1770s to the 1920s.

As early as 1770, ships were bringing Highlanders to Prince Edward Island. In 1772 the ship *Alexander* brought several hundred Catholic settlers from areas such as South Uist (Uibhist a Deas) and Moidart (Mùideart). In 1773 the ship *Hector* landed on the mainland of Nova Scotia at Pictou with several hundred Protestant immigrants, mostly from Ross-shire (Siorrachd Rois) and Sutherland (Cataibh). In the 1780s, after the American Revolution, the Highlanders who had settled in the Mohawk Valley of New York moved north to Ontario where they established the community of Glengarry. They were soon followed by other immigrants from Skye, Eigg, Glenelg, and Glen Arkaig. In 1803, one of the largest groups of Highlanders, nearly 800, mainly from Skye and some from South Uist, arrived in Prince Edward Island under the sponsorship of Lord Selkirk.

Much of the 18th-century emigration was led by tacksmen—lower-ranking Highland nobility who were being squeezed out by changing economic conditions in the Highlands. J. M. Bumsted has dubbed this early period of the Highland CLEARANCES 'The People's Clearance'. Towards the later part of the century and into the 19th century, however, many of the clearances were due to forced evictions carried out by the agents of landlords who wanted their estates cleared of tenants in order to introduce large-scale sheep farming. In 1801 such a clearance in Strathglass caused hundreds of tenants to make the voyage to Nova Scotia where they settled in Antigonish County and where their descendants, many of them Chisholms and Frasers, can still be found today. There were also numerous emigration agents whose overly favourable descriptions of life in North America tempted many Highlanders to make the voyage. The bard John MacLean (see MACLEAN POETS), who emigrated to Pictou County, Nova Scotia in 1819, speaks bitterly of these 'deceitful drovers' in his famous poem *A' Choille Ghruamach* (The gloomy forest):

Nuair thèid na dròbhairean sin gur n-iarraidh
'S ann leis na briagan a ni iad feum,
Gun fhacal firinn a bhith 'ga innse
'S an cridhe a' dìteadh na their am beul;
Ri cur am fiachaibh gu bheil 'san tìr seo
Gach ni as prìseile tha fon ghréin.
Nuair thig sibh innte gur beag a chi sibh
Ach coille dhìreach toirt dhìbh an speur.

When those 'drovers' come to talk to you
They make use of lies
Telling not a word of truth
And their hearts condemning what their mouths say;
Giving to understand that this land has
All that is most valuable under the sun.
But when you come here it is little that you will see
But the erect forest blocking the sky from you.

Gaelic publishing in British North America began in 1832 with Donald Matheson's *Laoidhean Spioradail* (Spiritual hymns) in Pictou, Nova Scotia and a Gaelic translation of William Dyer's 'Christ's Famous Titles' (*Ainmeanna Cliuiteach Chriosd*) in Charlottetown, PEI. Various Gaelic items would be published during the course of the 19th century at locations such as Toronto, Montreal, Kingston, Antigonish, Halifax and, towards the end of the century, in Cape Breton.

Large-scale Highland immigration to Cape Breton had begun around 1800. Inverness County, Cape Breton, was settled largely by people from Lochaber, Moidart, Morar, Eigg, Canna, South Uist, and some from Skye, Harris, and Lewis. The North Shore area of Victoria County received settlers from Lewis and Harris. Barra people took up holdings around the shores of Bras D'Or Lakes. North Uist settlers went to Richmond County and Cape Breton County. Immigration to Cape Breton continued into the 1840s when it came to a virtual halt, due in part to the potato blight on the island and also due to the fact that by that time the best land had been taken. In fact, some Cape Breton Gaels from Inverness County crossed over to Newfoundland where they settled in the Codroy Valley and where Gaelic continued to be spoken well into the second half of the 20th century. It is estimated that between 30,000 and 50,000 Highlanders emigrated to Cape Breton in the first half of the 19th century. It became the most thoroughly Gaelic region outside of Scotland and the language and culture continued intact until well into the 20th century. In 1931 the Canadian census listed 24,000 Gaelic speakers in Nova Scotia, most of whom were in Cape Breton. Today, several

hundred Gaelic speakers are left in the island, many of whom have a wealth of Gaelic folk material.

Throughout the 19th century there were various Gaelic settlements in Canada—many as a result of forced evictions. In 1829 the Duke of Hamilton paid for the passage of twelve families to Megantic, Quebec, from the Isle of Arran (Arainn), so that he could establish a large sheep farm on the land formerly occupied by the tenants. Later in the century, over 2500 Lewis people were evicted and settled in the Eastern Townships region of Quebec, right on the border of the United States. In the 1830s the Marquis of Breadalbane evicted tenants from his lands at Loch Tay. These tenants emigrated to Canada and formed a new settlement at North Easthope, Perth County, Ontario. Throughout the 1830s and 1840s immigrants from Argyll, Inverness, Ross-shire and Sutherland established communities in various parts of Ontario, for example, the hundreds of natives of South Uist, North Uist and Benbecula who arrived in the township of West Williams in Middlesex County in the years 1848–50. By the 1880s there were Gaelic settlements further west at Wapella and Killarney in Manitoba.

From the late 19th century and well into the 20th century the Canadian government sought immigrants to settle the vast prairies of western Canada. In the early 1900s, it published *Machraichean Móra Chanada* (The great prairies of Canada), an immigrant's guide to the region. The last major Gaelic settlements in North America at Red Deer, Alberta (1924) and Clandonald, Alberta (1926) met with mixed success.

Many of the Gaelic communities in Canada were to lose a substantial part of their population to emigration to the cities of North America. From the 1880s to the 1950s waves of Gaelic speakers from Nova Scotia and PEI streamed to the 'Boston States'. After the First World War, the availability of employment in the automobile factories of Detroit lured many Gaelic speakers, both natives of Canada and of Scotland. Since the Second World War substantial numbers of Gaels from the Western Isles can be found in the major cities of Canada, especially Toronto and Vancouver.

Today, Scottish Gaelic is taught at a number of North American universities and, at Saint Francis Xavier University in Antigonish, Nova Scotia, Gaelic is not only the major focus of the Celtic Studies department, but is also the working language of the department. Students at Saint Francis Xavier have a weekly Gaelic radio programme during the academic year, which can also be heard on the Internet. Several organizations throughout the continent are working for the promotion of Gaelic and, especially in Nova Scotia, serious efforts are being made to ensure the survival of the language (see LANGUAGE [REVIVAL]).

§3. SCOTTISH GAELIC POETRY IN THE USA

Every 18th- and 19th-century Gaelic-speaking community produced masses of poetry, but very little of what was composed in the United States has survived. There are several reasons for this: most poetry was composed to be performed for the community orally and to comment on local events, and it was thus ephemeral by nature; very few Gaelic speakers were literate in their native tongue; and there do not appear to have been antiquarians interested in preserving the literary remains of Gaelic communities in the United States. Only a small number of items have been 'recovered' in the United States: the majority that have survived were preserved in printed and manuscript materials in Scotland (Alba) and Canada, often due to their migration to Gaelic communities outside the United States.

One of the few immigrant poets whose works, and name, survive is Iain mac Mhurchaidh (known in English as John MacRae). He was a gentleman employed by the Lord of Seaforth in Kintail (Ceann an t-Sàil) who became disgruntled with worsening conditions at home and decided to emigrate to North Carolina in 1774. He quickly became involved in the American Revolution as a Loyalist and was, according to tradition, taken prisoner at the battle of Moore's

Creek, 27 February 1776. Songs attributed to him cover a wide span of time from early life in Kintail to imprisonment in America, although these were recorded in late 19th-century Kintail and appear to have left no trace in North Carolina. The common attribution of the lullaby *Dèan Cadalan Sàmhach* (Sleep peacefully) to him (or his wife) is almost certainly incorrect, and the attribution of a few others must also remain in doubt.

There are several songs composed to Highland regiments on their departure to military engagements in the (modern-day) United States, and some surviving verse that describes battles. Highlanders remained to a large degree loyal to Britain during the American Revolution, and there is ample Loyalist poetry. Although there is some verse that sympathizes with the American revolutionaries, there must have been more that was forgotten, along with Gaelic in American communities, and left unrecorded in Scotland.

There is also poetry recording the experience of immigration and settlement in the unfamiliar lands of the United States. These draw on the topoi of exile established in Gaelic literature by the late 18th century, as well as on the much earlier stereotypes of Lowland neighbours (see LOWLANDS). Immigrant poems comment on the alien customs and values of American society, express a lack of empathy for other ethnic groups, and yearn for the Gaelic homeland and kin.

There are several references to Native Americans, but these are as much indications of the self-perceptions of the Gaels vis-à-vis the English-speaking world as they are perceptions of Native Americans per se. The contexts and the social status of the authors influenced the representations of identities, but there are signs of empathy with native groups as a dispossessed people before solidarity with the so-called 'Caucasian' races became a more compelling argument in the late 19th century.

The name 'America' entered Gaelic before the formation of the United States, and refers to North America as a whole. By the late 18th century, North America was known by such arboreal kennings as *Dùthaich nan Craobh* (The land of trees), and forest imagery is often present in poetry from the United States.

§4. WELSH BOOK PUBLICATION IN THE USA

The publication of Welsh books in the United States dates back to the earlier part of the 18th century with Ellis Pugh's *Annerch i'r Cymry* (Salutation to the Welsh) which appeared in 1721 and, incidentally, about seven years before the first of the country's German books, *Das Büchlein vom Sabbath*. It was to reach its most flourishing period towards the end of the 19th century. Given the centrality of the churches and chapels to Welsh social life at the period (as it was then to many immigrant communities), it is not surprising that much of what was published was of a religious nature. While some of the texts were translations (most often from English) into Welsh or re-publications of what was previously available in Wales (CYMRU), most were the original work of immigrants. Some of these original publications from the latter part of the 19th century were specifically aimed at a younger readership, and examples include *Y Cartref a'r Eglwys* (The home and the church), written and printed in Pennsylvania, and *Yr Emanuel*, published in Utica, New York (which was a major centre of Welsh-language culture in the 19th and earlier 20th century), but originating from a Welsh community in southern Ohio. *Yr Emanuel* was later republished in Wales for use as a Sunday-school text. As in Wales, the biographies of renowned preachers were popular among the 19th-century American Welsh. About 40 such volumes were published in the USA.

Overall, and taking the shorter pamphlets into account, the number of titles of Welsh works published in the USA runs to something over three hundred. Despite the religious emphasis, a relatively wide range of material found its way into print. The non-spiritual needs of Welsh-speaking settlers were addressed by practical works, such as the 352-page *Meddyg Teuluaidd* (Family doctor) written by a graduate of Syracuse University in New York State, not far from Utica. An interest among Welsh immigrants in the obligations of informed citizenship was reflected in works such as a 32-page booklet published in Pottsville, Pennsylvania in 1862, entitled *Cyfansoddiad Talaethau Unedig America* (The Constitution of the United States of America).

Reflecting the poetic tradition so prevalent in Wales itself, about 30 volumes of verse appeared from US presses. One collection of verse, published in Chicago in 1877 and called *Blodau'r Gorllewin* (Flowers of the West), contained a detailed treatise on the traditional Welsh system of metrical ornamentation (known as CYNGHANEDD) found in verse in the strict metres (see AWDL, CYWYDD, ENGLYN). As well as being remarkable as a Welsh metrical treatise from America, *Blodau'r Gorllewin* is of literary importance in predating and anticipating the still unsuperseded standard work on the subject, *Cerdd Dafod* (Tongue craft; 1925) of Sir John MORRIS-JONES. Another volume, *Gweddillion y Gorlifiad* (Remnants of the flood), recalls in its title the great flood of Johnstown, Pennsylvania. The manuscript of the collection was fortuitously discovered among the rubble of Johnstown a full month after the disaster; it was then dried out, titled, and published.

Though less popular, other literary forms are represented in the Welsh American corpus, including at least one published novel and several plays. *Hanes y Gwrthryfel Mawr* (The history of the great rebellion), published in 1866, would naturally have been of general topical interest. Dealing with the American Civil War (1861–5), the book contains complete chapters devoted to particular campaigns, such as '*Rhyfelgyrch Shenandoah*' (The Shenandoah campaign). Indeed, *Hanes y Gwrthryfel Mawr* is one of the most comprehensive accounts of any war in the Welsh language.

Newspapers and journals, including denominational journals such as *Y Cenhadwr Americanaidd* and *Y Cyfaill o'r Hen Wlad*, were also established in the 19th century, but few of them survived for a substantial period of time. One notable exception was *Y Drych*, the North-American paper founded in 1851 in New York, and which was still in production until the last quarter of the 20th century, although its contents were by then written in English. It was replaced by *Ninnau* in 1975.

By 1908, when a Revd R. H. Evans was honoured with a biography of the popular type noted above, his sermons had to be given in English translation. Despite containing the Revd Evans's lively and amusing memoir, the Welsh content of this book, published in Missouri, is largely overwhelmed by the English, reflecting the reality of a dwindling Welsh-speaking population in the USA by the opening of the 20th century. Language shift, by which descendants of Welsh speakers were absorbed into the monoglot English-speaking mainstream of 20th-century America, heralded an inevitable end to a 200-year tradition for publication in one of the major Celtic languages in the New World.

§5. BRETON

There is evidence to indicate that Bretons were familiar with the fishing grounds off the eastern Canadian coast from as early as 1500. Over the next two centuries ships sailing from Breton ports were heavily involved in the cod fishery around Newfoundland. Although the greatest number of these departed from the non-Breton-speaking area of St Malo, other ships set out from ports such as Saint-Brieuc, Paimpol, Pornic, Le Croisic, Lannion and Ploemeur, areas that were largely BRETON-speaking. Very few of these fishermen remained in Canada, however, and thus the number of Breton speakers in the early Acadian and Québecois populations was certainly less than 1%.

Modern immigration of Breton speakers to North America apparently dates from the last two decades of the 19th century. The beginning of the exodus from central Brittany (BREIZH) to the United States is generally attributed to the tailor Nicolas Le Grand who, along with two companions, travelled from the port of Morlaix (MONTROULEZ) to Canada in the early 1880s. In Canada, Le Grand and his companions briefly worked as lumberjacks and gradually made their way south to the United States. After working in the USA for several years, Le Grand returned home to Roudouallec with enough money to buy a café. His tales of the money to be made in North America caused some of his compatriots to persuade him to lead them to the United States, so that they too might make their fortune. Le Grand made his second trip to the USA in the 1890s, and this time returned with sufficient funds to buy a house, several fields and a dry goods shop. Soon, mass migration from the Roudouallec-Gourin region was under way. In 1901 the French tyre company Michelin opened a factory in Milltown, New Jersey,

which employed 500 workers, many of whom were Bretons who had previously worked in the company's factory in Clermont-Ferrand, France. By 1911 Milltown had a colony of approximately 3000 Bretons, mostly Breton-speaking from the Gourin region. The Michelin factory in Milltown continued operating until 1930, when the Great Depression forced its closure. During those years, parts of Milltown were largely Breton speaking. Breton was spoken on the job, in the streets and in the houses. Children born there had Breton as their first language. Bretons also migrated to other towns in New Jersey such as Lodi and Paterson, where they were employed in silk factories. Before the First World War Pittsburgh too had a Breton colony of 300 families.

Another destination for Breton emigrants was Canada. This migration, which started in the early years of the 20th century, was due to economic, as well as religious, reasons. From 1902 to 1905 the French government acted to bring about the separation of church and state. This had major repercussions for many spheres of French life, including the education system. Some clergy reacted to these measures by organizing the EMIGRATION of members of their flock to Canada. At the same time, Canada was actively seeking immigrants to populate its prairie provinces of Manitoba, Saskatchewan, and Alberta. The most notable of these migrations occurred in 1904, when several hundred Bretons, many of them Breton speakers, from Côtes d'Armor, Ille et Vilaine, Finistère, Loire Atlantique, and Morbihan left St Malo under the direction of Father Paul Le Floc'h. They settled in Saskatchewan and named their settlement Saint Brieux after Saint Brieuc (Sant Brieg) in Brittany. Also between 1904 and 1908, 110 Bretons, mainly from north Finistère, settled in Saint Laurent at Lac Manitoba under the leadership of the Oblate Father Abbé Péran, himself a native of Plounévez-Lochrist.

A smaller group of Bretons from Gourin travelled to Canada in 1913 and established the community of Gourin-City in the parish of Plamondan in Alberta, 150 miles north-east of Edmonton.

After the Second World War, large numbers of Breton speakers emigrated to New York City and Montreal, and many of these became established in the restaurant trade. In the 1960s–1980s Breton speakers could be found in New York's French restaurants as busboys, waiters, waitresses, *maîtres d'hôtel*, barmen, and owners. New York's Brittany du Soir, the Café Brittany, and Café des Sports had principally Breton-speaking staff and owners, mostly natives of the Gourin-Roudouallec-Langonned region. Some Breton speakers have claimed that they learned French while working in New York's French restaurants. Youenn GWERNIG's novel *La Grande Tribu* depicts New York's Breton community of the 1960s. It is estimated that there were more than 20,000 Breton speakers in the greater New York area during the last decades of the 20th century. In spite of the large number of Breton speakers in New York, Breton organizations in recent decades have focused more on sporting events than on language issues, and Breton-language classes do not form part of the curriculum of any school or university in the New York area. Breton is taught occasionally at Harvard University and at Berkeley in California. At least two major Breton writers live in the USA—René Galand (Reun AR C'HALAN), for many years a professor of French at Wellesley College, and Paol Keineg, currently a professor of French at Duke University in North Carolina. The American branch of the International Committee for the Defence of the Breton Language has done much to inform Americans about the Breton language.

In Montreal, as in New York, many Bretons entered the restaurant trade, and in the 1960s–1980s many of Montreal's crêperies were Breton-owned and staffed. It is estimated that there are over 10,000 Bretons in Montreal. They support L'Union des Bretons, an organization which publishes a newsletter in French entitled *An Amzer* (The time) and sponsors a number of cultural events, such as La Fête Saint Yves. Breton courses have been offered occasionally at l'Université de Montréal and also at the University of Ottawa.

Kenneth E. Nilsen

Celtic studies, early history of the field, is one pervasive theme of this Encyclopedia. This article is an introductory overview. The reader may

pursue various aspects of the subject in more depth through the cross-references below, which will in turn allow further branching out into related entries, too numerous to be usefully listed in a single article.

§1. BEGINNINGS TO THE MID-19TH CENTURY

As an interdisciplinary field, Celtic studies include linguistics, the study of literature, history, archaeology, and art history. Although the study of people called Κελτοί *Keltoi*, i.e., Celts, began in classical antiquity, perhaps as early as the 6th century BC (see HECATAEUS), the modern field has its origins in the 16th and 17th centuries. This period saw the rediscovery, publication, and translation of Greek and Latin texts, some of which contained tantalizing accounts of certain Celtic peoples (see GREEK AND ROMAN ACCOUNTS), for example, the writings of the Greek historian DIODORUS SICULUS, the Roman general and statesman Julius CAESAR, and STRABO, the Greek geographer and historian. Despite their biases and occasional inaccuracies, the classical accounts of the Celts have formed the foundation of the modern discipline since the 1500s (Rankin, *Celts and the Classical World*; Freeman, *Ireland and the Classical World*).

As the study of these classical texts continued into the 18th century, linguists began to make progress in the study of the CELTIC LANGUAGES. The first major milestone came in 1707 with the publication of Edward LHUYD's *Archaeologia Britannica*, which established the existence of a Celtic language family consisting of BRITISH, GAULISH, and IRISH (Brynley F. Roberts, *Proc. 7th International Congress of Celtic Studies*). The next advancement came almost 80 years later when another Welshman, Sir William Jones, first proposed what is now termed 'the INDO-EUROPEAN hypothesis', that is, the theory that Sanskrit, Greek, and Latin, and many other languages of western Asia and Europe, including 'the Celtic', descended from a common parent language 'which . . . no longer exists'. This revolutionary idea inspired a flurry of linguistic activity centred on the painstaking reconstruction of this proto-language, a study which continues to the present day. Although the analysis of the known Celtic languages formed part of this activity, little real progress was made until 1856 when Johann Kaspar ZEUSS published his *Grammatica Celtica*. Since Zeuss based his research on the earliest extant sources, he produced a sound, if imperfect, comparative grammar that, for the first time, put the study of Celtic languages on a firm foundation. Since then, the study of these languages, both comparatively and individually, has proceeded apace with the creation of specialized DICTIONARIES AND GRAMMARS, the editing and translating of surviving texts, and the recognition of additional Celtic languages such as LEPONTIC and PICTISH (Russell, *Introduction to the Celtic Languages;* McCone, *Towards a Relative Chronology of Ancient and Medieval Celtic Sound Change* 3–35; Forsyth, *Language in Pictland*).

§2. CELTOMANIA IN THE 18TH AND 19TH CENTURIES

Alongside the scientific achievements in the Celtic languages of scholars such as Lhuyd and Zeuss, the 18th and 19th centuries also saw the rise of NATIONALISM in the CELTIC COUNTRIES and 'CELTOMANIA', as well as a pseudo-scholarship fostered by these trends (Cunliffe, *Ancient Celts* 11–16; Piggott, *Druids* 123–82). Three of the more influential propagators of imaginative romantic views of the Celts were William Stukeley (1687–1765), James MACPHERSON, and Iolo Morganwg (Edward WILLIAMS). Regardless of these men's intentions, many Celtic scholars now agree that their work was 'to poison the wells of genuine scholarship . . . for generations to come' (Piggott, *Druids* 162).

By calling a physician and then a clergyman, Stukeley published two volumes of a projected four on the history of the ancient Celts: *Stonehenge, a Temple restor'd to the British Druids* (1740) and *Abury, a Temple of the British Druids, with Some Others, Described* (1743). In these works, he promoted the now widely discredited idea that these ancient megaliths ('large-stone' monuments) were temples of British DRUIDS. However, since the scientific study of the Stone Age was in its infancy at the time and since Stukeley's advocacy of his beliefs was so emphatic, the druidic origins of these megaliths soon became widely accepted as a fact. By the time scholars understood that the megaliths predated documentary evidence for the Celts and druids by over 1000 years, Stukeley's notions were too firmly entrenched in the public mind to be expunged completely. Today's experts are certainly right in correcting the popular notion of an established link between STONEHENGE and the ancient druids, but an aspect of Stukeley's inverse legacy is that the experts' sometimes dogmatic

debunking obscures the fact that we simply do not know where and when druidism's roots lie and whether the belief systems of the megalith builders survived or died out in later prehistoric western Europe.

Unlike Stukeley, James Macpherson had his work called into question almost immediately upon its publication. Known collectively as the *Poems of Ossian*, his three works, *Fragments of Ancient Poetry* (1760), *Fingal* (1762), and *Temora* (1763), were presented as a translation of a genuine GAELIC epic, though they were largely his own creation. Despite being denounced as forgeries, *Poems of Ossian* found a wide readership, including European nationalists who were anxious to recover their countries' Celtic heritage (Cunliffe, *Ancient Celts* 12–13), but Macpherson also indirectly stimulated sound Scottish Gaelic scholarship for generations.

A more successful creative re-inventor of ancient traditions was Edward Williams, a Welsh stonemason who preferred to use his bardic name Iolo Morganwg. Iolo came to promote the novel notion that the bards of MORGANNWG/Glamorgan, himself included, 'had preserved, virtually intact, a continuous tradition of lore and wisdom going back to the original prehistoric Druids' (Piggott, *Druids* 160). In addition to his more narrowly literary activities, in 1792 Iolo began publicizing a bardic ceremony called *Maen Gorsedd*, an institution which he successfully yoked to the Welsh EISTEDDFOD in 1819, thus contributing to the national institutions of WELSH POETRY down to the present (see also GORSEDD BEIRDD YNYS PRYDAIN).

One major project of subsequent Celtic studies has been to purge the field of what scholars came to see as the fantasies, fabrications, and forgeries of men such as Stukeley, Macpherson, and Iolo. Despite the adamant rejection of the academics—or perhaps partly because of it—the legacy of literary ROMANTICISM has proved persistent, especially in popular books and television documentaries about the ancient Celts. Consequently, it has been difficult for Celtic scholarship to move past the attitude of zealous demythologizing of the field's post-romantic adolescence.

§3. THE MID-19TH TO THE MID-20TH CENTURY

As the intellectual fashion of 'CELTOMANIA' gathered momentum during the 19th century, archaeologists were beginning to make their first significant contributions to Celtic studies. During the 1840s, they began to correlate the material remains of IRON AGE sites and the places in Europe where classical sources located Celts (Κελτοί *Keltoi*, &c.). A major breakthrough came in 1846 when Johann Ramsauer began his 17-year investigation of the prehistoric cemetery at HALLSTATT, Austria. Because the inhumations and cremations he unearthed dated to roughly the time when Celts are mentioned near the DANUBE by HERODOTUS, Ramsauer concluded that the graves were Celtic, a fundamentally better-informed deduction than Stukeley's linking of druids and megaliths (Cunliffe, *Ancient Celts* 28). The Hallstatt finds became the subject of much study, and today are divided into a number of separate chronological phases: a Late Bronze Age Hallstatt A and B (*c.* 1200–*c.* 750 BC) and Early Iron Age Hallstatt C and D (*c.* 750–*c.* 475 BC); owing to proximity to the historical horizon, archaeologists speak with somewhat more confidence of the latter as 'Celtic' (Cunliffe, *Ancient Celts* 51ff.).

Less than a decade later, archaeologists made another major discovery—this time of a massive collection of artefacts at LA TÈNE on the northern shores of Lake Neuchâtel in Switzerland. Dating from the mid-5th century BC onwards, these artefacts were later than the Hallstatt materials and characterized by a distinctive form of curvilinear ornamentation. Artefacts of this distinctive 'La Tène style' were found elsewhere in Europe, particularly in places where people called Celts were known to have lived and early CELTIC LANGUAGES are attested. As a result, these items quickly became associated with the Celts, so much so that by the 1870s scholars began to regard finds of the La Tène as 'the archaeological expression of the Celts' (Cunliffe, *Ancient Celts* 32–7). Although this notion has never been definitively invalidated, scholars are today more wary of making simplistic equations between linguistic groups and material culture; thus, some areas known to have had early Celtic languages have revealed little or no La Tène material (such as south-west Ireland [ÉIRE] or GALATIA), and it is hardly reasonable to presume that only speakers of Celtic could ever have used La Tène style objects. Despite such reservations, the terms 'Celtic archaeology' and 'Celtic art' are by now well established and can be retained since they are not drastically out of step with the linguistic and historical uses of the term 'Celtic' (cf. Sims-Williams, CMCS 36.1–35).

As archaeologists were making their discoveries at Hallstatt and La Tène, Sir Augustus Wollaston Franks (1826–97), keeper of antiquities at the British Museum, and Sir Arthur Evans (1851–1911), the eminent British archaeologist (excavator of Knossos), began to take a close look at the origins and characteristics of Celtic ART. The field of Celtic art history began in earnest with the publication of Paul Jacobsthal's *Early Celtic Art* in 1944. His work did for art historians what Zeuss's *Grammatica Celtica* did for philologists, and his classification of Celtic art based on stylistic criteria provided a secure, if imperfect, foundation for future research in the field, for example Vincent Megaw and Ruth Megaw's *Celtic Art* (1989).

The ***Celtic Twilight*** (1893; 2nd enlarged ed., 1902) by W. B. YEATS is a collection of Irish folklore and supernatural stories (see FOLK-TALES). The origins of the volume lie in Yeats's boyhood colloquies with the inhabitants of Co. Sligo (Contae Shligigh) in the west of Ireland (ÉIRE), where the poet spent many summers, supplemented by intensive fieldwork and research in the 1890s. The stories also contain reflections on friends and relations of Yeats, including George Russell ('A Visionary'). The second edition added material gathered by Yeats, with the assistance of Lady Augusta GREGORY, in County Galway (Contae na Gaillimhe). The stories communicate, in an unadorned, matter-of-fact fashion, Yeats's acceptance of a supernatural realm, or the world of the *sídh* (Early Irish SÍD). The material in the book supplements Yeats's theoretical essay of 1898, 'The Celtic Element in Literature', which constitutes a rebuttal of the sentimental CELTICISM of Matthew Arnold and Ernest Renan, and argues for the centrality of Celtic tradition to European history and culture. The title *Celtic Twilight* came to stand for much of the literature produced by Yeats and others during the Irish literary revival of the late 19th century (see IRISH LITERATURE).

Celtica is one of the major Celtic journals, with a primary focus on early IRISH language and literature, although articles pertaining to the other CELTIC LANGUAGES and items of significance to INDO-EUROPEAN studies have also appeared. Established in 1946, the journal is published by the Dublin Institute for Advanced Studies (INSTITIÚID ÁRD-LÉINN). Most contributions are written by professional academics, and English is the usual language, although a number of articles are in Irish, and contributions in German and French have also been included.

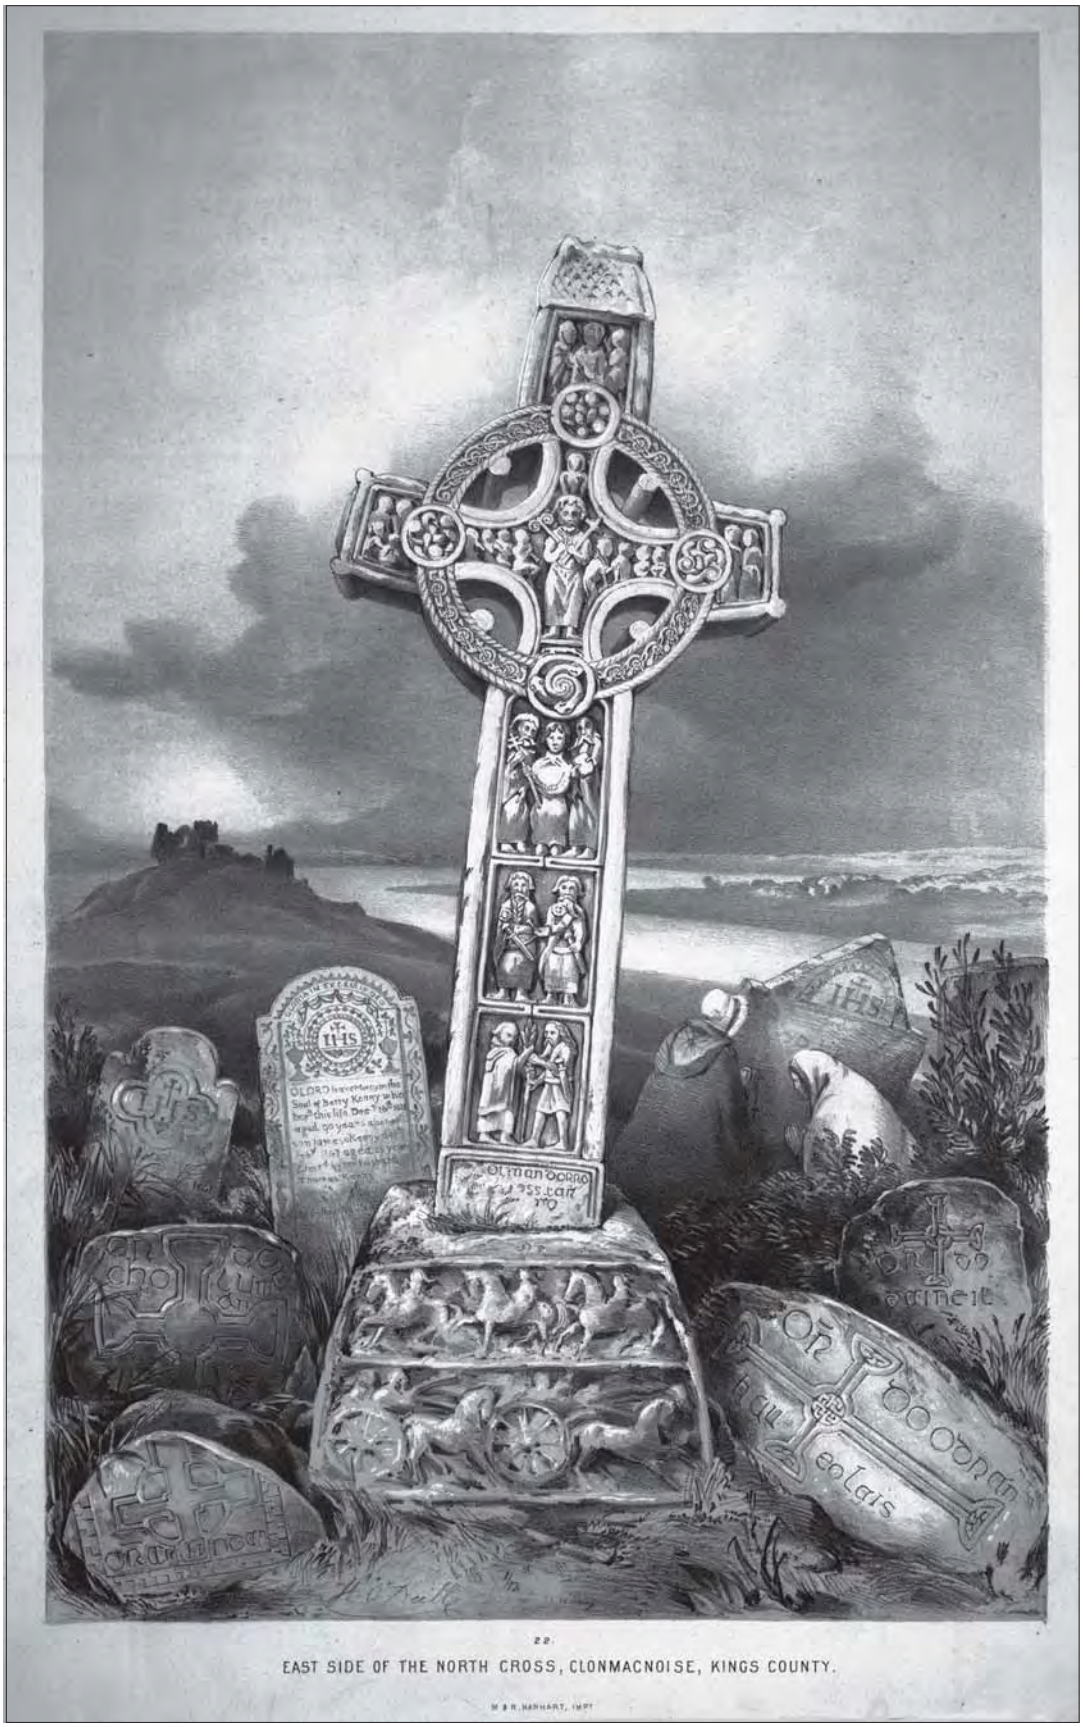
Celticism is the study of the 'reputation of [the Celts] and of the meanings and connotations ascribed to the term "Celtic"' (Leerssen, *Celticism* 3). In origin, development, and its place in intellectual history, Celticism can be compared with orientalism (Said, *Orientalism*). Celticism is not to be confused with the term Celticity, which refers, not to an intellectual movement, but rather to the 'quality of being Celtic', whereas Celticism refers to interests and activities stimulated by an awareness of, or belief in, Celticity.



East side of the North Cross, Clonmacnoise, Kings County. M. N. Hanhart, Lithograph after Henry O'Neill, 'Illustrations of the Most Interesting of the Sculptured Crosses of Ancient Ireland' (1853/7?).

Celticity is least controversial with reference to the Celtic languages, as defined by shared linguistic origin. From language, the concept can be cautiously extended to other cultural features of Celtic-speaking groups. But we can also speak of Celticity without necessarily endorsing its reality—referring to influential, but dubious, ideas such as supposed ethnic, and even psychological and physiological, similarities of the ancient Celts to the latter-day inhabitants of Ireland (Éire), Scotland (Alba), the Isle of Man (Ellan Vannin), Wales (Cymru), Brittany (Breizh), and Cornwall (Kernow).

The concept of a group of related Celtic languages and peoples was voiced from the early 18th century by writers such as Paul-Yves Pezron and Edward Lhuyd. With the emergence of the new social sciences of philology and archaeology and the rise of the Romantic Movement, Celticism gained increasing currency. Drawing on expressions of Celtic romanticism such as Macpherson's Ossian cycle (see oisín), Iolo Morganwg's inventions (see Edward williams; gorsedd beirdd ynys prydain) and Sir Walter Scott's novels, characteristics such as closeness to nature, femininity, musicality, primitivism, and sentimentality were ascribed to the Celts. Publications such as *On the Study of Celtic Literature* (1867) by Matthew Arnold, Oxford Professor of Poetry from 1858, greatly influenced the development of the argument. The 'Celts' were contrasted with what was assumed to be the more masculine and utilitarian nature of the 'Anglo-Saxon peoples'. Like orientalism, Celticism thus became a tool used to explain the necessity of the conquest and subjugation of the Celts.

However, Celticism was also employed by 19th-century academics and nationalists in the Celtic countries to bolster Celtic claims to nationhood (see nationalism). Celtic themes were chosen for the development of a national art and literature, as well as national dress (see material culture). The Celtic languages were elevated to symbols of national unity (see language [revival]). From the second half of the 19th century, Celticism also became the base of the Pan-Celtic movement which sought to strengthen the bonds between the modern Celtic countries and went as far as demanding the creation of a political unit based on Celticity. The movement experienced its heyday in the early 20th century, but lives on in organizations such as the Celtic League (see pan-celticism).

In the last quarter of the 20th century, the notion of Celticity with all its associations came under increasing scrutiny, especially from British archaeologists, some of whom denied the very existence of the phenomenon (Chapman, *Celts*; James, *Atlantic Celts*). Having failed to find a sound alternative, the majority of linguists and archaeologists continue to find the concept of Celticity useful. For the modern Celtic countries, it provides an attractive point of identification and a focus for national aspirations. In a recent volume dedicated to Celticism (as the study of all things Celtic) it was described as a 'multi-genre, multinational phenomenon', an interdisciplinary project of high importance in the history of European thought (Leerssen, *Celticism* 20).

PART 2
Celtomania–Cywyddwyr

Celtomania

Enthusiasm and admiration for Celtic civilizations and languages reached new heights in 19th-century France. We may trace the beginnings of the modern discipline of CELTIC STUDIES, and indeed the origins of the cultural movements and devolved administrations of today's Celtic regions, to this time of extraordinary activity. Commonly referred to as the Celtic revival, this activity is inseparable from the fashion for all things Celtic that swept through Europe with ROMANTICISM. Against a backdrop of Chateaubriand's druidic adventures in *Les Martyrs* (1809), and Walter SCOTT's Romantic Celtophilia, not to mention the pan-European Ossianic cult (see OISÍN), diffused and remodulated by Goethe's *Werther* (1774), linguists and historians were investigating the history and development of Celtic literature, language and civilization in unprecedented detail. The work of historians such as Comte de Boulainvilliers, Guizot, the Thierry brothers, Henri Martin, and Michelet did much to popularize the idea that the Gauls were the true ancestors of the French (see GAUL), whereas the Franks were the ancestors of the aristocracy overthrown in the Revolution of 1789. During Romanticism attention turned from 'Gaulois' to 'Celtic', and thus to Brittany (BREIZH), thanks to the popular equation of the modern Breton with the ancient Celt.

'Celtomanie' was a retrospective and pejorative label, and its coining around 1838 shows to what extent this fashion and enthusiasm had also given rise to a certain Celtoscepticism or Celtophobia. Evidence of this is clear in the short history of the Académie celtique, which was formed under Napoleon with the purpose of elevating the study of France's own distant past to the position of a new classics. Founded by Éloi Johanneau, Jacques Cambry, and Michel-Ange de Mangourit, the Académie held its inaugural séance on 30 March 1805, only to be completely revamped and given the rather safer title Societé royale des Antiquaires de France in 1814. The preface to the *Mémoires* of the new society explains that it wished to be more scientific than its predecessor, and claims that much of the recent glorification of the Celts, and the Bretons, had been misguided, if not blindly pro-Celtic wishful thinking. Keen to distance itself from claims such as that by La Tour d'Auvergne that Celtic was the original human language (1792), and that of Johanneau, the Académie's most outspoken member, that nearly all the peoples were descendants of the Celts (1807), the new society is extra cautious, going as far as to suggest that 'bas-breton' might not even be the language of the Celts. Later on Raynouard even declared BRETON to be a dialect born in the 15th century.

The climate of suspicion that followed, but also overlapped with the fashion for Celtic themes, explains why both positive and negative clichés of Brittany are found at the same date in 19th-century French culture: for instance, Balzac's overwhelmingly negative portrayal in *Les Chouans* (1828, 1834), and Brizeux's idyllic Brittany in *Marie* (1831). This climate also explains why the portraits of Brittany that were most successful in their day are insipid, since 'difference' was only tolerated by mainstream French culture if it was unthreatening, apolitical, and preferably restricted to the level of the picturesque. The main reason for this intolerance was

the political threat posed by the counter-Revolutionary forces of *chouannerie*, but accompanied by a generous helping of French nationalist pride. Many would argue that the same is true today, and that Celtoscepticism, as well as Celtomania, is alive and well.

Cerdd dafod (literally 'tongue craft') is the Welsh term for the composing of poetry in strict metres. When poetry is studied as a cross-cultural and international phenomenon, this traditional system of poetic ornamentation in the WELSH language is remarkable for its use of intensive phonetic correspondences; there are comparable features in early Irish and Classical Modern Irish systems of versification (see IRISH LITERATURE; METRICS), which gives warrant to the idea that this is associated with the outgrowth of a Celtic cultural inheritance. Within the corpus of attested WELSH POETRY, the principles of *cerdd dafod* can be traced back to the poetry of ANEIRIN and TALIESIN, the 6th-century poets (see also CYNFEIRDD), and presumably behind that to a preliterate, non-extant oral tradition with Celtic antecedents, having absorbed a debated degree of Latin influence.

The basic discipline of *cerdd dafod* is the mastery of CYNGHANEDD, which consists of a strict and skilful alliterative system of consonants echoing within a line of poetry and internal rhyming. The two methods—consonant repetition and internal rhyme—can be used together within a line.

EINION OFFEIRIAD (*fl. c.* 1320–*c.* 1349) is credited with the authorship of the earliest book on the topic to survive; it lists twenty-four canonical metres, used for the composition of poems in *cerdd dafod*. In the EISTEDDFOD held at Carmarthen (CAERFYRDDIN) *c.* 1450, DAFYDD AB EDMWND replaced two of these metres with two highly complicated ones which he himself had devised, and these were subsequently accepted as the traditional twenty-four metres. Some of these metres were not often used by the poets, and the schematic figure of 'two dozen' may have been filled out with metres intended mainly for didactic purposes.

At the beginning of the 20th century, the Celtic linguist, poet, and literary critic Sir John MORRIS-JONES classified the *cynganeddion* ('patterns of *cynghanedd*'), studied the traditional strict metres, and published his findings in a book, *Cerdd Dafod* (1925), which he wrote in Welsh and which remains the definitive work on the subject. This volume takes a strongly historical view of the subject and is thus largely responsible for the powerful vision of a seamless tradition persisting from the era of the Cynfeirdd, through the medieval Poets of the Princes (partly synonymous with the GOGYNFEIRDD) and Poets of the Nobility (roughly corresponding to the CYWYDDWYR), to the strict-metre competitions of the *eisteddfodau* of today (see EISTEDDFOD GENEDLAETHOL CYMRU).

At the end of the 20th century a renaissance occurred in *cerdd dafod*, especially in the verse form known as the ENGLYN, one of the few of the twenty-four metres still in common use. Alan LLWYD, poet and critic, was the main inspiration behind this trend.

Dafydd Islwyn

Cerdic of Wessex (†534) figures as the founder of the powerful Anglo-Saxon kingdom and their dynasty, the Cerdicingas. The fact that his name is BRYTHONIC (cf. Old Welsh CERETIC and CERTIC < **Caratīcos* and/or ROMANO-BRITISH *Coroticus*) raises important questions for the poorly understood process of the post-Roman Anglicization of south-eastern Britain, often termed, possibly misleadingly, the ANGLO-SAXON 'CONQUEST'. In the Anglo-Saxon Chronicle, Cerdic is the key figure in seven entries (paraphrased as follows):

495 Cerdic and his son Cynric came to BRITAIN with five ships, landed at 'Cerdic's shore', and fought the

Welsh; 508 Cerdic and Cynric killed a British king Natanleod and 5000 of his men, conquering the land up 'Cerdic's ford' (Charford); 514 the West Saxons Stuf and Wihtgar landed at 'Cerdic's ford' and put the BRITONS to flight; 519 Cerdic and Cynric succeeded to the kingdom of the West Saxons and fought the Britons at 'Cerdic's ford'; 527 Cerdic and Cynric fought the Britons at 'Cerdic's wood'; 530 Cerdic and Cynric conquered the Isle of Wight and killed a few men at 'Wihtgar's stronghold'; 534 Cerdic died and was succeeded by Cynric who gave the Isle of Wight to Stuf and Wihtgar.

One possibility would be that Cerdic arose from a sub-Roman dynasty which eventually adopted the language and culture of their Saxon *foederati* (barbarian mercenaries), a theory consistent with the fact that Cerdic's successors, Ceawlin (†593) and CÆDUALLA (†689), also had Brythonic names. Two features of the Anglo-Saxon Chronicle entries suggest that the landings and battles are not necessarily historical: (1) the structure provided by the explanation of place-names and (2) repetitions, in which Wessex and Wight are each founded twice and battles of the same description are fought at 'Cerdic's ford'. As to the names, the first element of *Wiht-gar* is the old Celtic name of Wight (**Wiχtā*) and therefore unlikely to have been the name of a Saxon chieftain at all, which raises the possibility that the Brythonic man's name Cerdic, which occurs in a number of place-names in south-east Wessex, was similarly used as the kernel of a foundation legend. Furthermore, Wight and the parts of Hampshire to which the Cerdic entries relate seem to have been settled by Jutes rather than Saxons; the entries may thus be an attempt retrospectively to rewrite history following the takeover by the West Saxons. This possibility raises the question whether the historical Cerdic was a sub-Roman magnate in the area of Portsmouth and Winchester or had in fact been connected with the earlier Saxon communities on the upper Thames.

St PATRICK's Coroticus and Ceredig son of CUNEDDA would both have been approximate contemporaries of Cerdic of Wessex, as would Ceredig (Old Welsh Ceretic), GWRTHEYRN's interpreter in HISTORIA BRITTONUM, but the name is common and the identity of any two of these figures is accordingly doubtful.

JTK

Ceredigion is a county in Wales (CYMRU) with about 74,941 inhabitants, 61.2% of whom are WELSH speakers according to the 2001 Census. It is located between the estuaries of the Dyfi in the north and the Teifi in the south. Between 1974 and 1993, what is now Ceredigion was part of the larger county of DYFED. Before 1974, a county broadly coterminous with post-1993 Ceredigion was called Sir ABERTEIFI in Welsh and Cardiganshire in English. Ceredigion is still sometimes called Cardiganshire in English, although officially it is Ceredigion in both languages.

Ceredigion continues the name of a post-Roman Welsh kingdom (Old Welsh *Cereticiaun* 'the lands of Ceredig'), said to have been founded in the 6th century and named after CERETIC son of CUNEDDA, the semi-legendary founder of GWYNEDD. The foundation of this kingdom on part of what had been the territory of the pre-Roman tribe of the ORDOVICES forms part of the story of the migration of Cunedda from GODODDIN to Wales, and the expulsion of Irish settlers from north and west Wales, whose historical presence is manifested by bilingual inscribed stones with Latinized BRYTHONIC versions of personal names alongside GOIDELIC versions in the OGAM script. Versions of the story of the migration of Cunedda occur in HISTORIA BRITTONUM and the Old Welsh GENEALOGIES.

Ceredigion contains several important early Christian sites, which show the county's significance in the religious conversion (or perhaps reconversion) of the 6th century (see CHRISTIANITY). Such early foundations include Llanddewi-brefi and LLANBADARN FAWR, near ABERYSTWYTH. The transformation of the *clas* (enclosed monastic site of a distinctively 'Celtic' type) of Llanbadarn Fawr into a Benedictine monastery in the 10th/11th centuries, the foundation of the

Cistercian monastery of Strata Florida (Ystrad-fflur; see also cistercian abbeys in wales), as well as the foundation of the castles and towns of Aberystwyth and Cardigan in the 12th/13th centuries, were milestones in the development of the medieval kingdom and the county. Ceredigion changed its ruling dynasty frequently from the 10th to the 13th centuries until it finally became part of the Principality of Wales, established after the defeat of Llywelyn ap Gruffudd by Edward I in 1282. Ystrad-fflur is often cited as an important centre for the composition and copying of medieval Welsh literature, and Ceredigion was also the birthplace of Dafydd ap Gwilym (*c.* 1315–*c.* 1350), widely regarded as the greatest of all Welsh-language poets.

From the early modern period onwards, farming, fishing, and the rearing and selling of sheep and cattle became the mainstay of the economy (see agriculture), though the lead mines also proved profitable ventures until the 1870s and a host of shipyards sprang up in tiny coastal towns. The coming of the railways in the mid-Victorian period injected new life into attractive tourist resorts such as Aberystwyth and Cardigan, and both greater wealth and a thirst for improvement led to the foundation of major educational and national institutions. Two universities—at Lampeter (Llanbedr Pont Steffan) and Aberystwyth—were established in 1827 and 1872 respectively, and by Royal Charter in 1907 the National Library of Wales (Llyfrgell Genedlaethol Cymru), a superb neoclassical building which overlooks Aberystwyth, was founded. These major institutions became critically important components of the socio-economic life of Ceredigion and continue to contribute richly to the cultural well-being of Wales.

Ceretic/Ceredig ap Cunedda (*fl.* ?5th–early 6th century) figures in Welsh tradition as the namesake and founder of Ceredigion (Old Welsh *Cereticiaun*). He is first named as such in the Old Welsh genealogies in BL MS Harley 3859, though unnamed sons of 'Cuneda(g)' reconquering wide tracts of north and west Wales (Cymru) figure importantly in Historia Brittonum (see cunedda). As to historical identification, there is a Ceretic known from contemporary 5th-century records to have fought successfully against the Irish, namely the Coroticus excommunicated by St Patrick. But the Irish scholars who assembled the Book of Armagh in the first decade of the 9th century identified Coroticus with another 5th-century Ceretic, king of Dumbarton (i.e., *Coirthech rex Aloo*; see ystrad clud). In light of the story of the migration from north Britain of Cunedda and his sons, it is not inconceivable that the ruler of Dumbarton and founder of Ceredigion were one and the same (as proposed by Tolstoy), despite their treatment as distinct in the genealogies, whose reliability is doubtful this far back; however, the name *Ceredig* was common

in the early post-Roman period (cf. CERDIC; CERTIC).

In the Old Welsh genealogies, Ceredig ap Cunedda figures as the ancestor of the historical dynasty of early medieval Ceredigion; this dynasty also included SEISYLL AP CLYDOG, Seisyll's son Arthien (Old Welsh Arthgen, ANNALES CAMBRIAE †807) and great-great-grandson Gwgon (Guocaun, *Annales Cambriae* †871). *Progenies Keredic* (The descendants of Ceredig) is a genealogical tract, probably dating from the 11th century or earlier; in it, Ceredig figures as the grandfather of DEWI SANT, of Gwynllyw (founder of the kingdom of Gwynllŵg), and of St Dogmael. There, he is also the father of a SAMSON, though not explicitly the saint of that name. In the genealogies of saints compiled in the Middle Welsh period, Ceredig is prominent, and a number of these tracts mention his wife, Meleri ferch BRYCHAN. It is possible that two originally separate Old Celtic names, **Caratīcos* 'beloved' and *Corotīcus*, have converged as *Ceredig* (see Parsons, CMCS 33.1–8), but it also may be that the Welsh name derives exclusively from *Corotīcus* or even from **Caratīcos* (in other words, Patrick's *Coroticus* could be an attempt to spell the name after the vowels of its first two syllables had become the central round vowels /ə/ or /ö/).

JTK

Cerne Abbas is a parish just north of Dorchester, in Dorset, England, where a human figure has been cut into the chalk hillside. The figure, generally referred to as a giant, is the outline of an ithyphallic man carrying a club in his right hand. Parallel lines are drawn at the ribs, and there is a line at the waist. Castleden, 'using a resistivity meter to locate filled and grassed-over trenches', reconstructed a corrected outline with minor modifications (including a navel and a shorter phallus) and 'lost' features, including a cloak and severed head on the giant's left side (Darvill et al., *Cerne Giant* 44; see also HEAD CULT).

A local legend relates that the figure is an outline drawn around the body of an actual giant after he was killed. The figure is associated with fertility beliefs; for example, a woman who sleeps on the giant will bear many children, and sexual intercourse on the giant (or specifically on the giant's phallus) is believed to cure infertility. There is no documentation of these beliefs before the Victorian era, though, of course, they may be older.

Antiquarian interest in the giant has focused on his identification with a Saxon deity whose various names all begin with *Hel-*. Gotselin's Life of Saint AUGUSTINE, written *c.* 1091, mentions Helia. Walter of Coventry (*fl.* 1290) wrote of the worship of the god Helith, and

The Cerne Abbas Giant

William Camden referred to the Saxon god Heil or Hegle in his *Britannia* (1637). An editor of Camden's text in 1789 linked this figure with the Cerne giant. The antiquarian William Stukeley (1687–1765) stated that the figure was called Helis locally, and he was also the first to identify the figure as the Roman HERCULES, an explanation still favoured by some scholars. Whatever the Old English name of the figure, it is unlikely to be Saxon in origin.

John Sydenham suggested that the figure was Celtic in 1842, identifying it as Baal, his spelling of Bel/ Belinus (see BELENOS; BELTAINE), although there is no iconographic support for his argument. Stuart Piggott linked the forms Heil/ Helith/Helis with Hercules, often depicted naked and with a club. The rediscovered features bolster the identification, although it remains unclear whether the giant is meant to be the Roman Hercules or a deity that the local Celtic people, the Durotriges, identified with him (see INTERPRETATIO ROMANA). Castleden notes that belted, naked warriors occur in other Iron Age ART throughout Europe, usually identified by the Romans with Mars. These iconographic considerations would date the figure to the period of the Roman occupation of BRITAIN. The earliest published account of the giant, however, was not printed until 1763, in the *Royal Magazine*, with another account and illustration printed in *The Gentleman's Magazine* in 1764, both anonymously; the lack of medieval references to the figure has made many scholars inclined to believe that the figure is not much older than the 18th century.

Detail of the Gundestrup cauldron

Cernunnos was a Gaulish god whose distinctive representative features are thought to include antlers or horns on his head, multiple TORCS (neck-rings), accompanying stags and sometimes ram-horned snakes. These patterns of representations, which recur fairly consistently and are easily recognized, have been understood by modern writers as reflecting 'the lord of the animals'. Although in general use today for a complex of related artistic motifs, the name *Cernunnos* occurs only once, and some modern scholars have misleadingly implied that this name was in wide currency amongst the ancient Celts. In addition to the abovementioned attributes, the distinctive iconography of 'Cernunnos' depicts the god sitting cross-legged. The most famous example of this is on the GUNDESTRUP CAULDRON, which has been interpreted variously as a 'Buddha position' (Maier), i.e. the lotus position, and even 'levitating on one toe', although both terms are inaccurate and unfortunately imply a connection with south and east Asian iconographic traditions and religious practices. The most important representation of the god is on the monument of the Nautae Parisiaci ('the sailors of the Parisi' [a Gaulish tribe]). The accompanying inscription is the single instance where Cernunnos is named as such. Other important images of gods with a similar iconography are the rock carving of Val Camonica and the Gundestrup cauldron. There are antlered goddesses at Clermont-Ferrand and Besançon, and the antlered god is also known from Britain on the relief from the ROMANO-BRITISH town of Corinium (modern Cirencester) and appears on one coin from Petersfield, Hampshire (see COINAGE).

The etymology is usually traced to INDO-EUROPEAN **k´er-n-* 'horn', although disputed by Maier (*Dictionary of Celtic Religion and Culture* 69). The epithet *cernach* (angular; victorious; bearing a prominent growth) of CONALL CERNACH of the Irish ULSTER CYCLE may derive from the same root, and it has been suggested that Conall Cernach and Cernunnos are ultimately the same figure.

PEB

Certic/Ceredig ap Gwallawg was the last ruler of the northern Brythonic kingdom of Elmet/Elfed, the district east of the southern Pennines around the modern English city of Leeds and west of York (Welsh Caerefrog). The expulsion of Certic *rex Elmet* by the Anglo-Saxon king Eadwine of Northumbria is noted in Historia Brittonum (§63). As to the date of Certic's 'expulsion', Eadwine ruled from 617 to 633/4, and this might be the same event as, or immediately preceded, the death of 'Ceretic' noted in Annales Cambriae in 616. This Certic is probably the same *rex Brettonum Cerdic* who was involved in murderous Northumbrian political intrigues 614×620, according to Beda (*Historia Ecclesiastica* 4.23). A 'Keredic ap Gvallavc' occurs in one version of the Welsh Triad of the Lovers' Horses (Bromwich, TYP no. 41; see further TYP 308; Rowland, *Early Welsh Saga Poetry* 100–1; Gruffydd, SC 28.69–75). Brythonic *Certic* in its more usual unsyncopated form *Ceretic* was a common name. Not so his father's name, Gwallawg; there is only one in Bartrum, *Early Welsh Genealogical Tracts*, although the variant *Gualluc* does occur in the Llandaf charters. It is thus likely that the Gvallavc of the triads is one and the same as the descendant of Coel Hen of this name, who ruled Elmet (according to a poem in Llyfr Taliesin) and is known from *Historia Brittonum* §63 and the Old Welsh genealogies of BL MS Harley 3859. This identification is made more likely by the fact that the triad's Gvallavc had a son with the same name as the man who succeeded Gwallawg as ruler of Elmet. In fact, Gwallawg and Certic are the only two rulers of Elmet known to us. Gwallawg is mentioned in Moliant Cadwallon in connection with past and anticipated fighting at the Yorkshire places—*tir Elued* (Elmet's land), Catraeth, and Caerefrog. It therefore seems that Eadwine's conquest of Elmet and expulsion of Certic son of Gwallawg had figured as key provocations leading to Cadwallon's invasion of Northumbria and overthrow of Eadwine in 633–5. On the name Certic see Ceretic; Cerdic.

Chadwick, H. M. and Nora K. were pioneers of interdisciplinary study. Both were educated at Cambridge, where Hector Munroe Chadwick (1870–1947) read the Classical Tripos, became a Fellow of Clare College and, in 1912, Elrington and Bosworth Professor of Anglo-Saxon, a post he held until his retirement in 1941. Nora Kershaw Chadwick (1891–1972), whom he married in 1922, read the Medieval and Modern Languages Tripos, held various Associate Fellowships and Lectureships at Cambridge, and was awarded numerous honorary doctorates from universities in the Celtic countries.

H. M. Chadwick combined his expertise in Anglo-Saxon studies with that in other European cultures, crossing boundaries of both cultures and disciplines. The work of Nora K. Chadwick, who had been one of his students, is likewise based on those principles. Their magnum opus, *The Growth of Literature*, is one of the masterpieces of 20th-century comparative study and provided one of the most compelling models for the study of the early Celtic literatures for scholars working in the mid-20th century.

Their contribution, especially that of Nora Chadwick, to our knowledge about the Celtic world near the horizon of history, at what can be described as the 'dark ages' or the 'heroic age', is imposing. Best known for her popular and repeatedly reprinted volumes *The Celts* and *The Druids*, her many other works on Celtic culture and literature and the early Celtic church are also still relevant to modern scholars. Her method included comparing archaeology and literature, allowing both types of evidence to inform each other and add to our knowledge of the period under review, a synthesis integral to the classics, but exceptional in Celtic studies. She also published widely on Slavonic, especially Russian, topics.

The idea of a cross-cultural literary stage of development under the heading of the heroic age (see heroic ethos) loomed large in *The Growth of Literature* and other works of the Chadwicks. This provided a framework in which another great Cambridge Celticist, Kenneth Jackson, and his generation regularly applied insights derived from the Homeric epics or the Anglo-Saxon *Beowulf* to early Welsh poetry or the Ulster Cycle. Although subsequent Celtic scholarship has naturally tended to move on to other approaches and interests, the Chadwickian vision remains a powerful

influence, often serving as a required starting point for current discussions. The concept of the 'early cultures of north-west Europe'—still strongly associated with the Department of Anglo-Saxon, Norse and Celtic at Cambridge—is widely viewed as the intellectual legacy of the Chadwicks and remains a touchstone in Celtic studies at the beginning of the 21st century.

Chamalières [1] sanctuary

In 1968 construction works in the department of Puy-de-Dôme led to the discovery of the most important series of wooden votive figures (see RITUAL) known up to the present day in France (1500 sculptures, 8500 fragments). Most of the objects can be dated to the second half century of the Roman occupation of GAUL, that is, *c.* AD 1–*c.* 50. Doubtlessly originally placed around pools from which water sprang (see WATERY DEPOSITIONS), they lay crammed together and tangled in a layer of peat which was up to 50 cm wide. These sculptures represent parts of the body (arms, legs, &c.), often roughly designed, and also busts and entire bodies (full-length figures, male and female, dressed) and stylized horses. The style is more of a GALLO-ROMAN type than that of the votive figures found in the springs of the Seine (SAINT-GERMAIN-SOURCE-SEINE). They are displayed in the Musée Bargoin at Clermont-Ferrand.

Also discovered at the site were remains of pitchers and cups, some Roman coins, numerous small knobs, and a leaden tablet engraved with a magical inscription written in GAULISH (see CHAMALIÈRES [2]; INSCRIPTIONS). No elaborate architectural setting for the site has been discovered, except for a stone enclosure of the principal basin. In the middle of the 1st century AD the site, which was probably situated within the tribal CIVITAS of the ARVERNI, was abandoned after only a few decades of use.

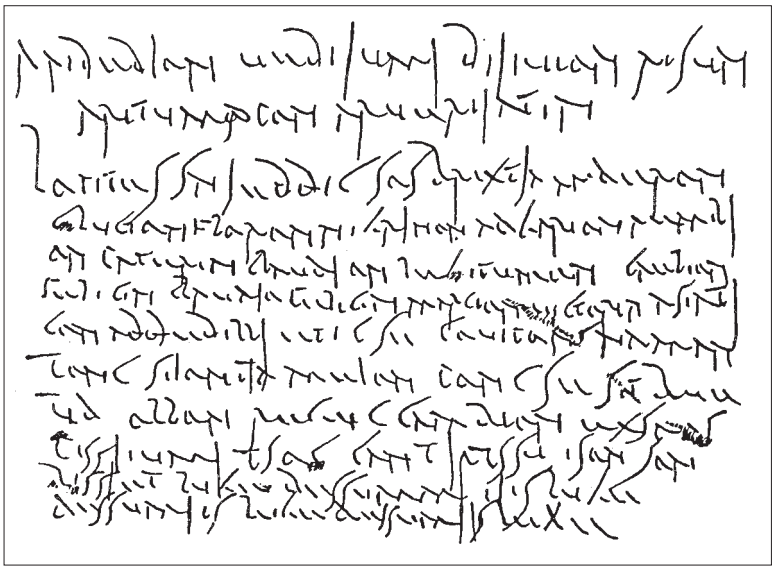
Chamalières [2] inscription

Discovered in 1971 at the major GALLO-ROMAN sanctuary described in the preceding article, this inscription in the GAULISH language is written in Roman cursive script, similar to that of many of the ROMANO-BRITISH curse tablets from BATH, on a small lead tablet, roughly 6 × 4 cm. Like the thousands of wooden sculptures from the same sanctuary, the Chamalières inscription probably dates from the first half of the 1st century AD.

Although there is by now increasing agreement among the experts as to the reading and what many words, phrases, and even whole sentences must mean, several interpretations of the function and overall meaning of the text have been advanced (see INSCRIPTIONS IN THE CELTIC WORLD [1] §3). The text is of special importance for several reasons. Along with those from LARZAC and Chateaubleau, it is one of the longest surviving Gaulish texts. It contains much Gaulish religious vocabulary and provides invaluable insight into pagan Celtic ideas about magic and religion. It illuminates the history of the CELTIC LANGUAGES, with numerous points of comparison in its vocabulary, grammar, and syntax to the better attested medieval and modern INSULAR CELTIC languages.

The verb of the first sentence is *uediiu-mi* 'I beseech, pray'; cf. Old Irish *guidiu*, Welsh *gweddïaf*. It then



Gaulish inscribed text in ancient Roman cursive script from the lead tablet found at Chamalières, earlier 1st century AD. An edited transcription of the text follows.

Andedion uediiu-mi diiiuion risu n-aritu Mapon Aruernatin: lotites sni eθθic sos brictia Anderon: C. Lucion, Floron Nigrinon adgarion, Aemilion Paterin, Claudion Legitumon, Caelion Pelign[on], Claudion Pelign[on], Marcion Uictorin Asiaticon Aθθedilli. Eti-c Segoui toncnaman toncsiiont-io: meion, pon-c sesit, bue-t-id ollon; regu-c cambion (;) exsops (;) pissiiu-mi iso-c canti rissu ison son bissiet. Luge dessu-m-mi -iis; Luge dessu-mi-is; Luge dessu-mi-is Luχe.

invokes *Mapon Aruerniiatin*, probably meaning '[the god] Maponos of the Arverni tribe'. The third line includes the phrase *briχtia anderon* 'by a magical spell of underworld beings' (see bricta). There follows a list of men's names, one of whom is called *adgarion* 'invoker', presumably the individual charged with communicating with the supernatural. Between lines 7 and 8 is the phrase *toncnaman tonsciiontio*, which has been compared with the formulaic oaths, Old Irish *tongu do dia toinges mo thuath* 'I swear to the god by whom my tribe swears' (common with several variations in the Ulster Cycle) and Welsh *tyghaf tyghet* 'I swear a destiny' (Culhwch ac Olwen 50; see Koch, ÉC 29.249–61). In lines 9 and 10, we find the short sentences *regu-c cambion* 'and I straighten what is crooked' (cf. Old Irish *camm* 'crooked' = Old Welsh and Old Cornish *cam*) and *eχsops pissiiumi* '[though] blind I shall see' (cf. Old Irish *ad·cíu* 'I see'); these could be either entreaties for medical miracles from the gods or religious allegories. The text culminates with the repeated formula: *Luge dessu-mmi-iis; Luge dessu-mi-is; Luge dessu-mi-is; Luχe*, probably invoking the chief god Lugus, 'By Lugus I prepare them (set them right), by Lugus I prepare them; by Lugus I prepare them, by Lugus' (Schmidt, BBCS 29.262–3; Koch, BBCS 32.37).

JTK

Champion's portion is a term that refers to a practice found in heroic societies in which a great, or the greatest, hero receives a choice portion (usually a cut of meat) at a public feast as a token of his honour. In early Irish literature the display and competitive determining of hierarchical status are widespread themes, and the champion's portion figures as a frequently occurring sub-type. In the first recension of Táin Bó Cuailnge ('The Cattle Raid of Cooley') and Fled Bricrenn ('Bricriu's Feast'), the term for the champion's portion is *curadmír* (specifically localized in the chief assembly site of Ulaid as *curathmír Emna Macha* 'the champion's portion of Emain Machae'). In other Irish texts the variant *mír curad* occurs, *mír* meaning 'portion' and *curad* being the genitive of *caur, cor* 'hero' (although the latter resembles Welsh *cawr* 'giant' and the Galatian king's name Καουαρος *Cavaros*, the etymological connection is uncertain).

The concept is by no means confined to Celtic cultures, as was already recognized in the Greek and Roman accounts of the ancient Gauls; thus, Diodorus Siculus, working from the lost history of Posidonius, wrote (*Historical Library* §28):

> While dining [the Gauls] are served by adolescents, both male and female. Nearby are blazing hearths and cauldrons with spits of meat. They honour

> the brave warriors with the choicest portion, just as Homer says that the chieftains honoured Ajax when he returned having defeated Hector in single combat [*Iliad* 7.320–1].

In a passage quoted in the article on ATHENAEUS (another Greek author who drew on the Celtic ethnography of Posidonius), he wrote that in former times two Gaulish heroes might claim the honour of the choicest piece of meat at a feast and that they would then and there engage in a duel to the death to decide the matter.

The conjunction of these two themes—violent contention at feasts and the champion's portion—is similarly the pivot for the narrative of two of the best-known sagas of the early Irish ULSTER CYCLE of tales, *Fled Bricrenn* and SCÉLA MUCCE MEIC DÁ THÓ. In 'Bricriu's Feast', the supreme hero CÚ CHULAINN repeatedly proves himself worthy of the *curadmír*. In the 'Story of Mac Dá Thó's Pig', although the term *curad-mír* is curiously not used, CONALL CERNACH triumphs at the climax, earning the right to carve a wonderful pig at the centre of the feasting hall, Cú Chulainn being absent from that tale.

Some modern scholars have written as though the champion's portion and associated descriptions of heroic contention at feasts belonged to the reality of early Celtic life. However, the Posidonian evidence, alongside that of the Irish sagas and HOMER, raises the question whether we are dealing essentially with a literary theme which has little or no basis in fact or an actual social practice that once existed in warrior-aristocratic societies. Although Posidonius represents the champion's portion as a reality, it is clear from the account of Athenaeus that Posidonius did not claim to have witnessed the practice nor even that it was still current in his day, but rather that he relied on oral accounts of what had been done in ancient times. Therefore, we seem to have traditions of the deeds of legendary heroes—possibly reflecting actual social institutions, but possibly not—in all instances, and the comparison with Ajax suggests that the Greeks understood this.

In Welsh tradition the theme of a special cut of meat for the greatest hero does not survive prominently, but the more general idea of conferring and displaying status at feasts is well developed. For example, in the saga ENGLYNION the idea that luxurious drink was the privilege accorded the leader is found in the proverbial *penn gwr pan gwin a ỽyly* 'it is the chief of men who deserves a cup of wine' (Ifor Williams, *Canu Llywarch Hen* 1.48c). In the GODODDIN, in the line *aryant am-y·ueỽ, eur dylyi* '[there was] silver around his mead, it was gold that he deserved' (A64.798), the theme is extended to imply a ranking of precious-metal vessels given to ranked heroes. This is similarly developed explicitly in *Fled Bricrenn* (§§60–2) in an extended episode in which Loegaire Buadach, then Conall Cernach, then Cú Chulainn are offered draughts of WINE within an ascending scale of precious-metal vessels as tokens of their heroism. As in the Posidonian accounts and the Irish sagas, a seat of honour is given to the most important man. Thus, a variant of the proverb above occurs in a stray ENGLYN in the *Gododdin*, *penn gwyr tal being a ỽyly* 'it is the chief of men who deserves the end of the bench' (A44.537).

chariot and wagon

The chariot, or more generally the high-status wheeled vehicle, is considered to be one of the characteristic features of Celtic aristocratic display. First appearing as a four-wheeled wagon in HALLSTATT aristocratic tombs, it is largely replaced by the two-wheeled chariot at the beginning of the LA TÈNE period.

§1. ARCHAEOLOGICAL SOURCES

The earliest wheeled vehicles that can be more or less certainly assigned to ancient peoples known to have spoken CELTIC LANGUAGES are the four-wheeled examples found in Hallstatt period burials in central

Europe (for example, HOCHDORF; see VEHICLE BURIALS), often interpreted as ceremonial and funeral procession vehicles (see RITUAL). They are replaced at the end of the Hallstatt period or at the very beginning of the La Tène period by lighter, faster and more versatile two-wheeled chariots. In fact, the transition from the four-wheeled wagon to the two-wheeled chariot may be viewed as an important diagnostic or corollary of the Hallstatt–La Tène transition. Another important change that occurred at roughly this time was a technological improvement in the production of the iron-tyred wheels, from an earlier nailed-on cold iron rim to the more efficient and secure shrinking of a hot iron rim onto the single felloe of the wooden wheel.

Early chariots appeared in great numbers in burials in central Germany, Belgium, and the Champagne region of France from about 500/450 BC onwards, and later also in East Yorkshire, England, in the area of the ARRAS CULTURE. More isolated finds, both from burials and from other contexts such as WATERY DEPOSITIONS (for example, LLYN CERRIG BACH) are known across Celtic Europe. These chariots have often been interpreted as battle-chariots (Furger-Gunti, *Zeitschrift für schweizerische Archäologie und Kunstgeschichte* 50.213–22; see also WARFARE). Their greatest technological advantage was the flexible spring suspension on which the chariot platform was mounted. The chariots were approximately 4–4.5 m in length, had an overall width of around 1.6–2.0 m, and an average wheel-gauge of around 1.35–1.45 m. The spoked wheels had iron tyres with an average diameter of approximately 0.95 m. They were usually drawn by two yoked horses (Karl & Stifter, *Pferd und Wagen in der Eisenzeit* 152–76).

§2. ICONOGRAPHIC SOURCES

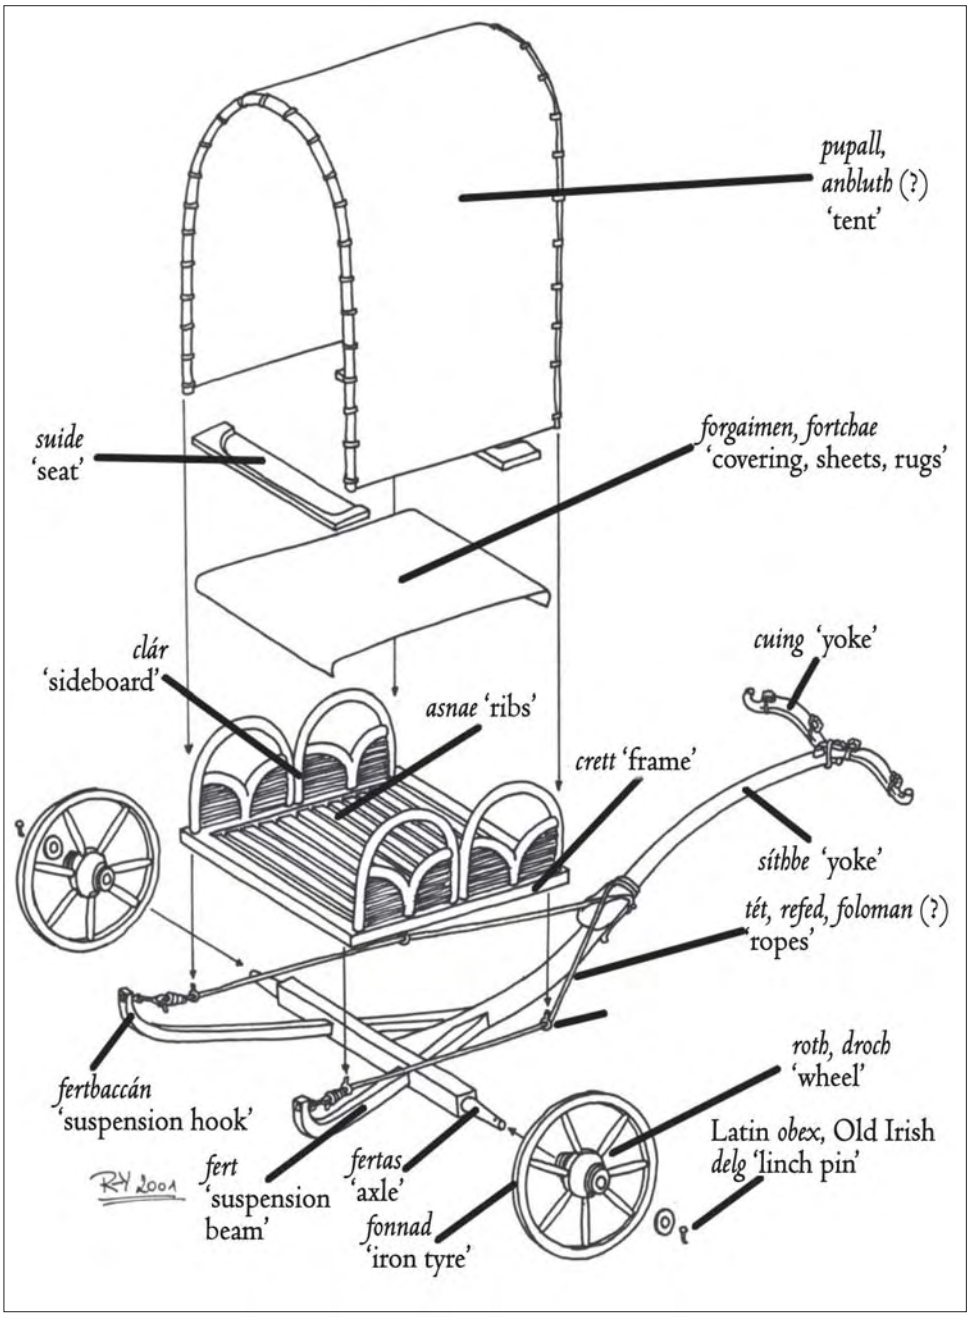
Soon after their first appearance in burial contexts, wagons and chariots also appear in the iconographic record. In the early period, four-wheeled wagons and some two-wheeled chariots appeared on decorated sheet metal, especially on situlae (wine buckets), and also, for example, on the bronze κλινη *klīnē* (couch) in the Hochdorf burial. In the La Tène period from the mid-3rd century BC, chariots frequently appear on COINAGE and on burial monuments from CISALPINE GAUL (Frey, *Die Situla von Kuffarn*). The inscribed stone from Briona in northern Italy combined a Gaulish text in the alphabet of Lugano (see SCRIPTS) with a relief sculpture of four spoked wheels. Finally, chariots appear on HIGH CROSSES, such as one at Ahenny, Co. Tipperary, Ireland (Contae Thiobraid Árainn, ÉIRE; see Harbison, *High Crosses of Ireland* II).

§3. HISTORICAL SOURCES

Chariots are also mentioned in the historical sources, and records for the use of chariots by Continental Celts can be found in many places, for example, Appian (*Roman History* 4.12), ATHENAEUS (*Deipnosophistae* 4.37), LIVY (*Ab Urbe Condita* 10.28.9) and STRABO (*Geography* 4.2.3). The most concise summary of chariot use by the ancient Gauls is given by DIODORUS SICULUS who wrote: 'In both journeys and battles the Gauls use two-horse chariots which carry both the warrior and charioteer' (*Historical Library* 5.29.1; trans. Koch & Carey, *Celtic Heroic Age* 12). CAESAR records the use of chariots in Britain (*De Bello Gallico* 4.33.1–3), as well as the existence of ROADS on which they are driven (*De Bello Gallico* 5.19.2). Chariots are also mentioned in various types of sources from early medieval Ireland (ÉRIU), for example, in the ANNALS of Ulster for the year AD 811, in the Life of COLUM CILLE (*Vita Columbae* 2.43), and in legal material such as *Bretha Crólige* (Laws of sick maintenance).

§4. LINGUISTIC SOURCES

Terms for chariots and their parts in the ancient Celtic languages are known mainly from Celtic loanwords in Latin and from place-names. Those for wheeled vehicles of probably Celtic origin known from classical sources are *benna* (cf. Welsh *ben/men*), *carpentum* (cf. Old Irish *carpat*), *carruca, carrus, cisium, colisatum, couinnus* (cf. Welsh *cywain* 'convey'), *epir(h)edium* (cf. Welsh *ebrwydd* 'swift, speedy'), *essedum, petorritum, pilentum, raeda* (Billy, *Thesaurus Linguae Gallicae* 184). *Carrus* survives in French *char* 'chariot', Spanish *carro* 'cart' ('car' in American Spanish), and English *car*. *Carbantia, Carbantorāte, Karbantorigon* (cf. Welsh *Nantcarfan*) *Carrodūnum, Manduessedum* or *Rotomagus* can be found in the place-name record. The most important terms in classical sources seem to have been *carpentum* for the Gaulish chariot and *essedum* (variant *asseda*) for the Belgic and southern British chariot (see BELGAE). Much more about chariot terminology can be learned from the various early medieval Irish sources, especially in TÁIN BÓ CUAILNGE, in which numerous terms can



The chariot (carpat) and its parts as described in early Irish literature

be found. If this Irish textual evidence is put together with archaeological material almost entirely from outside Ireland, it allows fairly precise reconstructions of Celtic chariots (see illustration; Karl & Stifter, *Pferd und Wagen in der Eisenzeit* 152–76).

§5. FUNCTIONS

The wheeled vehicles discussed above were used for multiple purposes, with the possible exception of the early four-wheeled Hallstatt wagons, which were perhaps limited to funerary contexts. The lightweight, fast, and easily manoeuvrable two-wheeled chariots of Iron Age Celtic Europe and early medieval Ireland were primarily used as vehicles for personal transport or for going to war. In war, however, the warrior stepped off the platform to fight on foot in close combat. Chariots were also used as sport vehicles and as death biers and, in some parts of the Celtic world, even as funerary gifts.

Chariots are one of the few things that seem to be relatively characteristic for Celtic peoples from very early in Celtic history to as late as the early medieval period in Ireland. They were relatively similar in function and technology for most of this time, from

the latest Hallstatt period, during their widespread use in the La Tène period, to well after the Christianization of Ireland, and thus allow valuable insights into an aspect of cultural continuity over a very long time and across a large area.

RK

charter tradition, medieval Celtic

The charter-writing tradition of Celtic areas in the early Middle Ages is overwhelmingly a Latin tradition, although a few translations and equivalents exist in the vernacular languages (see CELTIC COUNTRIES). The charters deal, for the most part, with the transfer of property rights, including the manumission or freeing of slaves (see SLAVERY; BODMIN MANUMISSIONS), in western BRITAIN, Wales (CYMRU), Scotland (ALBA), Ireland (ÉRIU), and Brittany (BREIZH); they relate to transactions which took place, or were supposed to have taken place, between the 6th and the 12th centuries. The form of charter used in these areas is distinctive, and is almost the only charter-form to have been used there before the Norman Conquest; most of the exceptions were from eastern Brittany (on which see BRETON LITERATURE). In addition to the surviving complete or fragmentary charters, there are many echoes of the language of this charter tradition in narrative and other texts from Celtic areas. The existence of these echoes emphasizes that a distinctive mode of writing was employed when recording the transfer of property rights, revealed in the characteristic words and phrases used in writing about these transactions.

§1. SUBSTANCE

The Latin charter form from Celtic areas characteristically includes disposition, witness list, and sanction, and invariably uses the third person and past historic tenses. While many charters also include preambles, narrations, and boundary clauses, they lack formal protocol, i.e., initial invocation, formal title and address, and final dating clause and subscriptions. This distinguishes them from the western European charter tradition of a comparable date, as manifest in England and on the European continent, as does the use of retrospective tenses rather than first person present. These texts were intended to be narrative records of the occasions at which transactions were performed.

Here is an example, written into the 'LICHFIELD GOSPELS' when they were at Llandeilo Fawr (south Wales) in the 9th century, concerning a local transaction (J. Gwenogvryn Evans & Rhŷs, *Book of Llan Dâv* xlvi, with a slightly emended reading):

> Notification: *Necesse est scribere literas quod*
>
> Disposition: *quatuor filii Bledri . . . dederunt libertatem Bleidiud filio Sulgen et semini suo in sempiternum pro pretio atque hoc est confirmatio quod dedit pro libertate eius quatuor libras et octo uncias.*
>
> Witness list: *Coram idoneis his testibus, de laicis Riguollaun filius Coffro, Guen . . . Guoluic filius . . . Merchguinn filius Salus, Arthan filius Cimulch, Iudri filius Iudnerth. De clericis vero Nobis episcopus Teiliau, Saturnguid sacerdos Teiliau, Dubrino et Cubelin filii episcopi, Saturnbiu cam ibiau, et Sulgen scholasticus qui hec fideliter scripsit.*
>
> Sanction: *Qui custodierit hoc decretum libertatis Bleidiud et prolis eius sit benedictus; qui autem non custodierit sit maledictus a deo et a Teiliau in cuius evangelio scriptum est et dicat omnis populus fiat fiat.*

And, for comparison, a second example, from the 'Cartulary of LANDEVENNEG', written at Landevenneg

(Landévennec) in western Brittany in the 11th century, concerning an early 11th-century transaction (La Borderie, *Cartulaire de l'Abbaye de Landévennec* no. 46):

> Notification: *Haec cartula custodit quod*
>
> Disposition: *Budic, nobilis comes, tradidit sancto Uuingualoeo de sua propria hereditate vicarium unum, Edern nomine, pro sui redemptione suorumque omnium utrorumque sexuum, in sepulturam suam, totum omnino, sicut ipso vivente tenuerat.*
>
> Sanction: *Sic affirmavit dicens: Quisquis hoc custodiendo servaverit Dominus custodiat eum ab omni malo; custodiat animam tuam Dominus. Amen. Si quis vero temere frangere aut minuere voluerit, de libro viventium et cum justis non scribatur. Sit pars ejus cum Dathan et Abiron, quos terra deglutivit, nec non cum Juda et Pilato, qui Dominum crucifixerunt.*
>
> Witness list: *Hujus donationis testes sunt plures: Alan dux Britanniae, qui obitui ejus affuit, testis; Benedictus episcopus, filius istius Budic, testis; Cadnou abba Sancti Uuingualoei, testis; Euharn vicecomes, testis; Saluten, testis; Riuuelen, testis; Blinliuguet, testis; Catguallon, testis; Moruuethen, testis.*

By identifying complete charter texts we can see that characteristic formulae were often used, for example, gifts made *sine censu* 'without property' or *usque in diem iudicii* 'till Judgement Day'; none of these formulae were exclusive to Celtic areas, although they were relatively more common there than elsewhere. Characteristic words are more distinctive, and tend to be found within, but not across, all Celtic areas; these include, for example, use of the verb *immolare* for 'to give' (ordinarily 'to offer, to sacrifice'), the noun *graphium* for 'charter', and the pattern *custodire . . . benedicere, frangere . . . maledicere* ('to keep . . . to be blessed, to break . . . to be cursed') in sanctions. Most of the small number of vernacular examples come from Ireland and Scotland, although there are a few passages in Welsh. The Gaelic examples occur late in the period (in 11th- and 12th-century texts) and include formulae which are clearly translations of the Latin tradition, e.g., Middle Irish *co bráth/go bràd* and Old Welsh *bit/hit braut* 'until Judgement (Day)' for *usque in diem iudicii* and the Middle Irish nouns *bennacht . . . mallacht* 'blessing . . . curse' for *benedicetur . . . maledicetur* 'will be blessed . . . will be cursed'. For further examples, see §3 below.

The corpus of charters consists of over 200 complete texts, at least 100 incomplete texts and a handful of formulae inscribed on stone (Broun, *Charters of Gaelic Scotland and Ireland in the Early and Central Middle Ages*; Wendy Davies, *Francia* 17.69–90; Wendy Davies, *Ireland in Early Mediaeval Europe* 258–80; Wendy Davies, *Landévennec et le monachisme breton dans le haut Moyen Âge* 85–95; La Borderie, *Bulletin de la Société archéologique du Finistère* 24.96–113; Lemoine, *Chronique de Landévennec* 1995.58–62); Mac Niocaill, *Book of Kells*; Poppe, *Celtica* 18.35–52; Pryce, CMCS 25.25.15–34). Many are written into gospel or liturgical books; some are written into cartularies (and were sometimes edited in the process); a few are recorded in formal extents and surveys; and a few are appended to saints' *Vitae*. The complete examples include 25 from Brittany, 14 from south-west England (including some in Old English), 169 from Wales (of which three include some Old Welsh), two from Scotland (one in Middle Irish) and six from Ireland (all in Middle Irish). Three of the stones are from Wales, and another comes from Ireland; the reference to the *cirografum* on a slab in the floor of a north Devon church, probably from the late 12th century, may well be a reference to another (Thomas, *And Shall These Mute Stones Speak?* 177; Wendy Davies, *Literacy in Medieval Celtic Societies* 104). The fragments come from the same areas, although there are far fewer from Wales and rather more from Ireland (both in Latin and Old Irish). Recognizable charter language in narrative and other texts adds at least 40 further examples, from Wales, Ireland, Brittany, Scotland, and south-west England, in order of frequency.

§2. CONTEXT

The earliest of the indisputable and uncontroversial material is Irish, and belongs to the 8th century; the earliest indisputably Welsh material is of the 9th century, although a very good case can be made for the production of 7th- and 8th-century exemplars, and possibly some of the later 6th. Material from central and western Brittany is notable in the late 9th century: from Vannes (Gwened), Saint-Malo (Sant-Maloù), Saint-Pol-de-Léon (Kastell-Paol), and Landevenneg.

The bulk of the material is of a 9th- to 10th-century date, as befits a period of growing concern with the security of ecclesiastical property. The latest known

south-western English examples are from the years 1042–66, Breton 1085–1112, Welsh 1132–51, Irish from 1133, and Scottish from the later 12th century, after 1131/2. This recording tradition originated in a variety of ways. The detailed record of witness names has parallels in late Roman and very early medieval contexts elsewhere in Europe, where insistence on the formal registration of transactions occasioned the development of elaborate public procedures. Witnesses were subsequently subject to recall in cases of disputed ownership. Registration procedures of this kind were clearly known in the Celtic West in the early Middle Ages since, for example, the early 8th-century collection of Irish canons reiterates earlier patristic and synodal prescriptions that a sale should be confirmed by witnesses, writing, and sureties. The language of imperial rescripts (replies from the emperor to his subjects) and Continental formularies is echoed in charter formulae from southern Wales and Brittany. The context of this Celtic material is exclusively ecclesiastical: all the transactions recorded involved the Christian church in some way. Precise parallels for the charter tradition's characteristic language tend to come from explicitly religious contexts such as papal letters. The common features in the Irish and British material indicate the 5th–7th centuries as the period of origin, when British missionaries were working in Ireland before the ecclesiastical traditions of the areas diverged.

The practice of making this kind of record is likely to have developed in episcopal circles in the 5th century in Britain when the bishops met in synods and drew upon the language of the early Church Fathers for their texts. We must imagine the bishops of the late Roman period securing endowments and registering them with their city councils, as required by the state; the language and form of the resulting records continued to influence ways of recording transactions in the Celtic West. The tradition is therefore the fossilized practice of the increasingly isolated bishops of western Britain in the mid-5th century, a practice which was carried to Brittany with the migrants (see BRETON MIGRATIONS), and to Ireland with the early missions. Thereafter, the form tended to be retained while the formulae varied—perhaps reinforced in Ireland by knowledge of the work of the papal scriptorium (manuscript-production centre) in the 6th and early 7th centuries.

§3. USES

There can be no doubt that some people in Celtic areas considered a written record to be valid proof of ownership, and we have evidence that records were occasionally used in cases of dispute. There is an Irish heptad (meaningful group of seven items) of *c.* 700, in which 'old writing' (in fact, 'godly old writing') is listed alongside valid witnesses, immovable stones, *rath*-sureties (a way in which third parties could guarantee a contract), and a bequest, as viable proofs of ownership (Stacey, *Lawyers and Laymen* 221). From Saint-Pol-de-Léon in Brittany come references, in the later 9th century, to the belief that people should be notified of transactions in writing. In Welsh material of the 9th–11th centuries a stock phrase occurs that invokes the same respect for the written record: *in sempiterno graphio* (this transaction is recorded 'in an eternal writing'). By implication, writing the record made the recorded action permanent: writing was a way of making things last.

It is of considerable interest that a special word for writing about property, in effect for 'charter-writing', seems to have been used in BRYTHONIC areas in the early Middle Ages. The medieval Latin word (*chiro*)*graphum* 'deed; charter-party' was borrowed into the Welsh language by the 10th century in the word *grefiat*; it occurs in Latin on a stone monument from Merthyr Mawr (*in grefium in proprium usq*[*ue*] *in diem iudici*[*i*] '[this was done] in writing into ownership until Judgement Day', perhaps meaning something like 'permanent ownership was registered') and on the Devon stone noted above (Nash-Williams, *Early Christian Monuments of Wales* no. 240). In early 10th-century charters from the bishopric of Vannes, the word became the Latin verb *graffiare*, 'to register a change of ownership' (Cartulary of REDON nos. 275, 276, 278). We have here a distinctive usage in Brythonic areas in the 9th–11th centuries which underlines the importance of the idea of writing as permanent 'proof': it was a type of guarantee, to add to the personal sureties (third-party guarantees) that were those societies' main enforcing mechanisms. Writing as proof of ownership could occur in other media, as on the stones already cited. The Irish heptad mentioned above refers to immovable stones (see also OGAM), symbols of permanence. At Blair Athol in Perthshire, Scotland, there is a stone called *Clach na h-Ìobairt* 'the stone of the offering', where *ìobairt* 'offering' is the Gaelic

equivalent of Latin *immolavit* 'he *or* she sacrificed' (Watson, *History of the Celtic Place-Names of Scotland* 254, 310). The 8th-century Kilnasaggart stone in Co. Armagh (Ard Mhacha) also records a grant of the place (*in loc*) to the Apostle Peter, as 7th-/9th- and 11th-century Welsh stones found at Llanllŷr (Ceredigion) and Ogmore, Glamorgan (Ogwr, Morgannwg) also record grants (Wendy Davies, *Ireland in Early Mediaeval Europe* 259, 261; Nash-Williams, *Early Christian Monuments of Wales* nos. 124, 255; Thomas, *And Shall These Mute Stones Speak?* 100). Since people perceived writing as a mechanism for achieving permanence of possession, charters were also written into gospel books and hagiographic texts (Wendy Davies, *Ireland in Early Mediaeval Europe* 271–4; Jenkins, *Vom mittelalterlichen Recht zur neuzeitlichen Rechtswissenschaft* 79–86).

By the 9th century ecclesiastical charter writing was an aspect of property management: it helped the owner to know what rights he had in landed property and from whom he might expect income. This concern was certainly evident early on in Wales and Brittany, and in Scotland at least by the 12th century (Broun, *Charters of Gaelic Scotland and Ireland in the Early and Central Middle Ages* 34–5).

Ecclesiastical charter writing could also make claims to establish proprietary rights. Records could be massaged to support an existing position, or claim a new one, by endorsements on the original or expansion when recopying. This happened all over Celtic areas, and beyond. The first twenty or so charters of the Landevenneg Cartulary were put together in the mid- to late 10th century to demonstrate the absorption of small monasteries and churches by the larger monastic community of Landevenneg. At this level, charter writing was about securing public recognition of property rights, whether legitimately or not.

In Ireland, by contrast, charter writing does not seem to have been a major protective technique used in the 9th to 11th centuries. The notion that the written record had value as proof of ownership was obviously influential in the Armagh sphere by the late 7th century, and it may be evident in material collected at 8th-century Lorrha (Ó Riain, *Éigse* 23.117 n.50). The influence of charter writing can be seen in other traditions, especially those of central southern Ireland, in Latin hagiographic material from Kinnitty (Ceann Ettaig), Lismore (Liosmór) and Clonfertmulloe (Cluain Fearte Molua) (Plummer, *Vitae Sanctorum Hiberniae* 1.195, 196, 2.66, 89, 92, 222), and in texts such as the 7th-/8th-century *Cáin Éimíne* from Monasterevin, Co. Offaly, whose 'legal core' is in essence a vernacular derivation from a Latin charter model (Poppe, *Celtica* 18.42–4; Poppe, *Celtica* 21.592). It is therefore likely that some charter writing took place at some centres in Ireland through the 9th–11th centuries, and that the charter tradition influenced the formulation of written property claims both in Latin and the vernacular. However, charter writing was clearly not taken up in Ireland in the way that it was in other Celtic areas and there are alternative influences on some of the 11th-century Middle Irish charters (Herbert, *Book of Kells*). The Irish habit of citing the names of guarantors rather than of witnesses indicates a significantly different approach to the transfer of property rights as well as a substantial variation in the form of the record (Poppe, *Celtica* 21.588–92; Ní Dhonnchadha, *Peritia* 1.178–215).

There is much to suggest that Scottish practice reflected the Irish: the distinctive 'Celtic' charter language occurs in the Abernethy material in Paris, Bibliothèque Nationale, Latin MS 4126, clearly implying a knowledge of the Latin tradition in Scotland before the 11th century (Anderson, *Kings and Kingship in Early Scotland* 247). The survival of 10th- and 11th-century charters in 12th-century copies indicates the use of charter writing before the impact of the new wave of religious foundations in the 12th century (Broun, *Charters of Gaelic Scotland and Ireland in the Early and Central Middle Ages* 26). Charters I–V from Deer, in particular, although preserved in Gaelic, are strongly reminiscent of 'Celtic' charter language; those from Loch Leven much less so (Jackson, *Gaelic Notes in the 'Book of Deer'* 30–2; cf. Lawrie, *Early Scottish Charters prior to AD 1153* no. 14).

Charter writing was about property rights—and was one of the techniques used by churches in the central Middle Ages to maintain and extend them. The language chosen for these records was often decidedly archaic: old formulations could be repeated for centuries.

Yn **Cheshaght Ghailckagh** (**The Manx Society**) was founded in 1899 in Douglas (Doolish), the capital of the Isle of Man (ELLAN VANNIN), 'for the preservation of MANX as a living language' and for the study and publication of existing Manx Gaelic literature and the cultivation of a modern literature (see MANX LITERATURE). The Society members were not native Manx speakers, but were concerned about the decline of the language from 12,350 recorded speakers in 1871 to 2382 in 1911. They were well-known and respected figures; the first President was Arthur William MOORE, MHK (Member of the House of Keys), Speaker of the House of Keys, and members included Deemster Gill, Canon Savage, Dr J. Clague, and J. C. Crellin, MHK. Dedicated scholars Sophia MORRISON, Edmund Goodwin, and William Cubbon were members of its first committee.

From the foundation of the Society there were members who favoured a literary approach, and the publication of books remained one of the cornerstones of the Society's work throughout the 20th century. Many of these works were designed to help teachers and students, from Goodwin's *Lessoonyn ayns Chengey ny Mayrey Ellan Vannin* (1901) to *Learn Manx* on CD-ROM (2001) (see DICTIONARIES AND GRAMMARS).

The Society has provided many fine teachers of the language, from J. J. Kneen's short-lived venture teaching Manx to children in Ballamodha School, with permission from the Malew Board of Education in 1905, and paid by Yn Cheshaght Ghailckagh, to the creation of posts by the Isle of Man Department of Education in 1992 for a Manx Language Officer, Dr T. B. Stowell, and two peripatetic teachers of Manx. The first Manx-medium school unit was formed in 2001 (see EDUCATION). Many members of Yn Cheshaght Ghailckagh, some of whom learned Manx from the last of the native speakers, have also willingly given their time and talents to teach adults and children on a voluntary basis.

Some members of the Society believed that the best way of preserving the language was by collecting examples of speech and song (others were interested too in music and dance) from those native speakers whom they knew (see MANX MUSIC). As he visited his patients, Dr Clague also collected folklore, sayings, and tunes (see FOLK-TALES). Sir John RHŶS from Oxford encouraged Sophia Morrison to collect, particularly from the west of the island. In 1905 Yn Cheshaght Ghailckagh bought an 'Edison' phonograph and the first recordings of the language were made 'in order that the accent and pronunciation of the words in the Manx may be fully preserved for future generations'. During the early 1950s the Society, following the Irish Folklore Commission's recordings of Manx in 1948 and earlier recordings by Professor Marstrander of Oslo University in the 1930s, made a series of recordings of the last native speakers.

For many years the Society had no home, until in 1986 Thie ny Gaelgey (House of the Manx language), formerly St Jude's School, was opened by Mona DOUGLAS. Now, Yn Cheshaght Ghailckagh works with the Isle of Man Government to promote the Manx language. From a nadir of two native speakers and a handful of learners in 1961, the future of the language looks much brighter with 2.2% of the population in 2001 claiming to speak Manx, thanks to recent educational initiatives (see also LANGUAGE [REVIVAL]).

Chrétien de Troyes, the most influential author of French romances, was a court poet, active between about 1170 and 1190, but little is now known about his life. The term *roman* (romance) had first been applied to the *romans d'antiquité*, French adaptations of classical stories, but it was Chrétien's works which firmly established the new genre and helped to develop ARTHURIAN traditions on the Continent. Although he was undoubtedly influenced by classical and scholastic texts, it has sometimes been argued that his Arthurian romances were influenced by tales originally in WELSH or other CELTIC LANGUAGES, though GEOFFREY OF MONMOUTH's HISTORIA REGUM BRITANNIAE, translated into Norman French by Wace in 1155, seems to be a more likely source for much of the raw material. The relationship between three of his romances and their Middle Welsh counterparts, the Three Romances, has been the subject of heated debate since the 19th century, the so-called *Mabinogion-frage*. Today many Welsh scholars tend to agree that *Yvain* or *Le Chevalier au Lion*, *Erec et Enide* and *Le Conte du Graal* or *Le Roman de Perceval*, predate the three corresponding Welsh romances—OWAIN *neu Iarlles y Ffynnon*, GERAINT *fab Erbin* and PEREDUR *fab Efrawg*, and that the latter have been, to a greater or lesser extent, influenced by Chrétien's romances, or possibly by different French versions of the same stories (see TAIR RHAMANT for further discussion of the relationship). Chrétien's other verse romances, written in octosyllabic rhyming couplets, comprise *Lancelot* or *Le Chevalier de la Charrette*, which explores the theme of the eponymous knight's adulterous love for Guenevere, and *Cligès*, which combines Arthurian and classical elements and owes not a little to the TRISTAN AND ISOLT legend which was circulating in French by the mid-12th century. Another romance, *Guillaume d'Angleterre*, is attributed to him by some scholars. He also left two lyric poems and a French adaptation of the tale of Philomena from Ovid's *Metamorphoses*, now only surviving in a 13th-century version.

The narrative base (*matière*) of Chrétien's romances provides a vehicle for debating ideas and problems of courtly and chivalric behaviour, that *sen*, as he called it, which gives his work a strong intellectual dimension. The fanciful Arthurian context also provided a usefully distanced context in which to provide subtle commentary on contemporary life and politics, without the poet risking the displeasure of his patrons, Marie de Champagne and Philippe d'Alsace, count of Flanders. His romances, which were initially probably read aloud to an audience, seem to have met with immediate success. After Chrétien's death, perhaps *c.* 1190, other writers provided *Continuations* of his *Perceval*, which he had left unfinished, and his influence and popularity continued unabated. Later French GRAIL romances, now composed in the newly fashionable medium of prose, assume familiarity with his work, whilst in other western European countries not only *Perceval* but also his *Erec*, *Yvain* and *Lancelot* were adapted into other languages or provided the ultimate source for new texts about these knights.

There are many editions of the romances of Chrétien de Troyes, based on different texts, methodologies, &c., and countless critical works. Those selected below are recent. The bibliography by Douglas Kelly (1st ed. 1976, Supplement 1, 2002) is indispensable.

Christianity in the Celtic countries [1] Ireland

§1. ORIGINS

According to legend, the arrival of Christianity in Ireland (ÉRIU) was sudden, decisive, and dramatic: PATRICK the Bishop returned to Ireland at Easter 432 and baptized the nation (*gens*), transforming it from being a pagan people into a Christian one. This picture, essentially the dramatic creation of Muirchú's *Vita Patricii* (late 7th century), for all its theological sophistication in presenting an analysis of conversion and its subtle message of the ideal of Christian unity/harmony for an island riven by warfare between petty

kings, is valueless as history. When Christians first reached Ireland is unknown, but there were Christian communities in BRITAIN by the late 2nd century; therefore any time after that is possible. The first Irish contacts were most likely through traders, and later through slaves brought from Britain (see SLAVERY). From this early period we have one enigmatic piece of evidence: the question of the original home of PELAGIUS (*c.* 350–*c.* 425), who in Rome became a famous spiritual guide and subsequently a heretic. Pelagius is usually said to have come from Roman Britain. However, JEROME, a contemporary who is unusually precise with geographical information, held he belonged to the Irish people (*Scotticae gentis*). If so, then Pelagius is our evidence for a vibrant church in the 4th century.

§2. THE 5TH CENTURY

We know that by the 430s there were sizeable communities of Christians in Ireland. It is quite likely that these were composed mainly of slaves captured from Britain, or their descendants. From elsewhere in the Roman world we know that communities of Christians continued to concern themselves with the spiritual welfare of their brethren who had been taken into slavery, for example, by supplying them with clergy and, most probably, the British church continued to care about Christians in Ireland. These Christian communities in Ireland were sufficiently numerous for there to be a need for a bishop to minister to them and, indeed, for this need to be given a hearing in far-off Rome. Prosper of Aquitaine (*c.* 390–*c.* 463) records that in 431 Pope Celestine sent them (those in Ireland 'who believed in Christ') a bishop named PALLADIUS. This Palladius is not mentioned in any other insular source until the late 7th century when Muirchú found it necessary to 'write him out' of the history of the conversion of Ireland in order for Patrick to become the sole patron and evangelist. In all probability he spent the rest of his life in Ireland working among slaves, traders, and whatever few Irish he was able to convert. We have only one other piece of information about Irish Christians from this time, and again Prosper is the source. In his *De gratia Dei et libero arbitrio contra Collatorem* (written in 434), he tells us that Celestine had sent a bishop to the British Church to free it from 'Pelagianism'—Prosper's pet-hate—and that he had ordained a bishop for the Irish so that 'the barbarian island might be made Christian'. These passages, taken with other references to missionary work beyond the imperial frontiers, point to a Roman mission to Ireland which was still working there 20 years later in the 450s when Leo the Great was concerned with the state of the Christians in Ireland.

Our most important sources for the 5th century are the two documents written by Patrick. His *Confessio* justifies his mission as a bishop in Ireland—he came from Britain—against Christian critics either in Ireland or Britain; while his 'Letter to the Soldiers of Coroticus' is a sentence of excommunication of Christians (he calls them 'apostates') involved in the slave trade who were taking Irish converts to Christianity into slavery. Patrick's dates are uncertain (the traditional dates are simply a later accommodation to Prosper's Chronicle), but a period down to the later 5th century would fit the situation he describes in GAUL where Romans were ransoming Christians from the still pagan Franks. There are no contemporary references to Patrick's mission, and Patrick makes no mention of anyone working in Ireland before him. But, equally, Patrick does not present himself as the sole missionary, merely as the one who has travelled where no one has already preached Christianity. Patrick's own perception is that he is the harbinger of Christ's Second Coming, rather than that he is the 'apostle of the Irish', and we must assume that he was but one among many bishops and missionaries working in Ireland in the 5th century. Quite probably, Patrick was an erratic among that group because of his apocalypticism, a feature of his ministry that would explain both why he was criticized by other bishops (presumably working nearby) and the shape taken by his *Confessio*.

§3. THE EARLY CHRISTIAN PERIOD

The assumption that there were many missionaries working in Ireland over a long period—the whole of the 5th century—receives support from the fact that by the mid-6th century, when the silence of our sources begins to end, we find a well-organized Christianity with important monastic foundations, well-known teachers such as Comgall at BEANN CHAR (Bangor), a church that is able to see itself as equal to those on the Continent and which is at one with the learning of Latin Christianity at the time as demonstrated by

Columbanus, and with the confidence to examine new approaches to pressing western problems in pastoral praxis, as witness the penitentials.

From the 7th century we have much better evidence, and through contemporary annals we have accurate dates. Monasteries grew to become the great centres of learning and economic life, and we see Christianity emerging as the intellectual form of the society. For, while the Church took over several native features into its law, its canon law was taken over into secular law and became its pattern as a written corpus (see law texts). We also see Ireland emerging as one more region within Latin Christendom, with travel in both directions by monks, teachers, and administrators. By the later 7th century Ireland had a vibrant theological community whose works were having an impact on the rest of the Latin Church. The best examples are in the area of law: e.g., Cáin Adomnáin (697), an attempt to limit the effects of warfare, shows the Church seeking to influence society. Likewise, the first systematic canonical collection (Collectio Canonum Hibernensis) was compiled in Ireland and was soon copied and imitated abroad—its new directions affected all subsequent western canon law. It is against this background that we should view the Irish clerics active in Charlemagne's kingdoms, and later writers such as Eriugena.

§4. issues of perception

In historical writing about Irish Christianity in the early medieval period there has been a tendency for several centuries to note as many discrepancies as possible between Ireland and the Latin West, and then to assert that this was a distinctive 'Celtic Christianity' or a 'Celtic Church'. This approach, while it may suit particular modern religious agenda, is flawed as a way of understanding the past on three counts. First, it assumes that there were monolithic institutions in the past: one 'Roman', the other 'Celtic', whereas we should note that there was a spectrum of rites, practices, and favoured approaches across western Europe and that these patterns were continually shifting. Thus, we can observe two very different monastic ideals, both well-rooted in Ireland, in conflict at the end of the 8th century: one championed by the ascetic reform movement, the Céili Dé (Fellows of God), the other by the author of the Navigatio Sancti Brendani; but, rather than a clash between a 'Celtic monasticism' and some imagined 'normative' monasticism, we have two *Irish* local theologies, both relating closely with contemporary monastic disputes elsewhere in the Latin West. Interest in the notion of 'Celtic idiosyncrasies' easily occludes serious comparisons with Britain and the Continent. Second, at no point did Irish Christians perceive themselves as religiously separate *as Christians* from others in the West. At the beginning of the 7th century Columbanus had a notion of Europe as a Christian unity reaching right out to the Ocean, while at the end of that century Adomnán imagined the cult of Colum Cille reaching from the Ocean right across Europe to Rome. And while it is clear that they recognized their cultural separation from Christians elsewhere in that they prepared lists of 'their saints', meaning those born in Ireland, they were equally conscious that they expressed that cultural distinctiveness in Latin which was the bond of their Christian solidarity as one *gens christiana* among those nations which made up the *gens sancta Dei*—Muirchú's *Vita Patricii* is the classic extant expression of this complex sense of being one as Christians, yet distinct as a culture. This sense of being one ethnic group within the unity of Latin Christianity is seen in the number of *peregrini* (see peregrinatio) who went to the Continent and settled there as monks or teachers; while fully seen as being from a part of the Latin Church, they distinguished themselves with the appellation *Scottus*. Third, in what survives of early Irish learning (liturgy would be an even better indicator, but only fragmentary evidence has survived) we find a Latin culture that drew from, and contributed to, the wider Latin culture of the Western Church.

It is this issue of difference within a mosaic, in contrast to a monolith, that has fired the debate about the 'miracle' or 'myth' of a flowering of Christian culture in Ireland in this period. Thus, there were those who saw only a golden age of 'an island of saints and scholars', while others see disorganization and erratic items being built into a myth. This debate rages on between those who claim that there are a great many distinctive Irish writings in Latin, and those who, because they cannot find such distinctiveness, claim that there are almost none. In all these cases, the debate rages since its foundation relies on a false opposition of 'Christian Ireland' vs. 'Christian elsewhere'; we can

only appreciate Irish Christian culture—both what is distinctive and what is not—when we locate the early Christian period in Ireland within a pattern of such different Christian cultures at the period, especially that mosaic that forms the 'Latin West' at the time.

If one feature of the study of Christianity in Ireland has been a desire to see a religion radically different from Christianity elsewhere, another long-standing desire—going back at least to John Toland's *History of the Druids* (1726)—has been to find 'pagan' elements mixed with Christianity either 'persisting in spite of Christian attempts at suppressing them' or 'contaminating the purity of Christianity' (depending on the perspective of the author). While it is undoubtedly the case that a religion takes on a different appearance with every new cultural situation it encounters, and such is true of Christianity in Ireland, the perspective of those who can easily uncover 'the pagan elements' in early Irish Christianity is distorted by two religious assumptions whose origins lie in the theological disputes of the late-medieval/Reformation period. The first is the illusion that historically there was a 'pure' or 'genuine' Christianity—as opposed to the confessional belief that one's version of Christianity is the true one—or that one can identify 'the Christian' from every other cultural/religious element in society; and conversely that every society's 'Christianity' which does not conform to this pure Christian essence is a syncretism. The second assumption is that, prior to the 16th century, proponents of Christianity saw themselves in relationship to other religions in an absolutist manner, i.e., if Christianity is the true religion, then everything else is false, and anything that belongs to such a system of falsehood must be kept radically separate from Christianity. In this view there is no basis for any truck between 'Christians' and 'pagans' (assuming both to be well-defined systems) and any failure to maintain strict segregation results in a syncretism whereby Christianity is traduced, with the implication that later Christians have to jettison contaminations, while later supporters of 'paganism' imagine they have simply to pick those elements they judge not to be Christian property.

In the first millennium Christianity showed itself remarkably flexible in adapting to various environments and taking on local colour (acculturation), and in this it was far more successful than its parent Judaism in that it abandoned notions of ethnic distinctiveness linked to dietary laws or circumcision, and equally it avoided being presented as exotic where other expanding religions of the period (e.g., Mithraism) failed. Therefore, any attempt to isolate a 'pure' Christian essence as distinct from the various Christian cultures—i.e., societies in which Christianity has established itself—is doomed to failure except as a confessional undertaking. Thus, when Christianity came to Ireland it came in its late antique Latin dress, and it was this that took on new local hues as it encountered a society that was non-urban, did not have a Roman imperial background nor legal system, and where Latin was not the prestige language. Once there, the agenda of the proponents of Christianity would have been to see how the native religion could be used as a 'preparation for the gospel' in the manner in which this is found in Acts 17. However, Christianity also showed from its outset a concern that it would not import elements from other religious systems which it considered 'superstitious', although what constituted 'SUPERSTITIONS' varied with time and place, and therefore there was an on-going fear of assimilation. Remembering that assimilation is not the same as acculturation means that any attempt to identify any particular aspect of their Christian system or practice is a very delicate matter. This theoretical difficulty is further compounded in the case of Ireland in that (1) we have no record of resistance to Christianity which would show us directly the nature of the other religion's content; (2) by Muirchú's time there was no longer any living memory of what the pre-Christian Irish believed—while the *Vita Patricii* is regularly ransacked by those seeking information of 'DRUIDS', what they find is Muirchú's use of Daniel 1–4 for his pagan *magi* in lieu of memory; (3) there is a frequently met use of the term *lex naturae* (law of nature) to indicate the acceptability of some Irish custom, but by this stage it is indistinguishable from Christian custom; and (4) using Continental parallels—usually from much earlier—carries with it many difficulties of method. The result is that, far from being easily uncovered, reconstructing the pre-Christian religion of Ireland is a most difficult but important academic task, and the absence of such understanding is our single greatest limitation in understanding early Irish Christianity.

§5. THE 12TH CENTURY

Between the 9th and later 11th century Christianity in Ireland seemed to be in a period without major developments. The monasteries continued to be great religious centres (even if they lamented the depredations of the Vikings), and there was still a literary and artistic culture, along with the occasional significant writer. However, developments on the Continent seemed to bypass Ireland, especially the new, more codified, monasticism that can be traced to Benedict of Aniane (*c.* 750–821)—this resulted in Benedictinism and led to later monastic 'reforms' such as those of Cluny and, later still, the Cistercians. Later, developments of new models of church/secular relations linked to the name of Pope Gregory VII (*c.* 1021–85), 'the Gregorian reforms', seemed to leave Ireland lagging behind. However, in the 12th century in Ireland we see a situation where a key running theme in church activities was the desire for 'reforms' so that the Irish Church had the same structures as those elsewhere. This is best seen in the various synods, most importantly Ráith Bressail (1111) and Kells (Ceanannas Mór, 1152), which established dioceses and provinces in Ireland and sought to give the same shape to Irish structures as those found elsewhere. Linked to this process are the names of the powerful bishops of the period such as Cellach, Mael Maedóc, and Lorcan Ua Tuathail (St Laurence O'Toole). This period also saw the introduction of several new orders which brought contemporary ideals of religious life from the Continent and which left its mark in many ways in religious writings produced in Irish from the 12th century until the Reformation. The two most important groups were the Cistercians, who arrived in the mid-12th century (see CISTERCIAN ABBEYS IN IRELAND), and the Franciscans, who arrived in the 13th century. However, the vision of an Irish Church, which closely resembled the Church on the Continent that inspired the 'reformers', did not come about because of the arrival of the Anglo-Normans (ostensibly, according to the papal bull *Laudabiliter*, as agents of church reform). This resulted in the growth of two distinct churches: one in the Norman controlled areas, the other in the Gaelic areas, and this situation continued until the 17th century.

§6. THE PERIOD OF REFORMATION AND COUNTER-REFORMATION

The 16th-century revolution within Latin Christianity affected the two churches in Ireland (Éire) differently. The English Reformation directly altered the organization of the *ecclesia inter Anglos* while hardly touching that *inter Hibernos*. However, by 1612—with the execution in Dublin (Baile Átha Cliath) of Bishop Conor O'Devaney, who had been with the last of the Gaelic rulers defeated less than a decade earlier, yet was mourned by Dubliners—it was clear that religious and political divisions would not simply follow the old medieval divisions, and that from then on there would be an increasingly close identification of non-English with Catholic. This resulted in the last great flowering of religious writing in Latin, and more importantly in Irish, in Ireland. On the one hand, there was a desire to translate materials into Irish to advance the Protestant cause, e.g., William Bedell (1571–1642) insisted that clerical graduates of Trinity College Dublin should be able to minister to Irish people in their native language, and oversaw the translation of the Old Testament into Irish (see BIBLE). On the other hand, there was also a desire to provide material which would introduce Counter-Reformation Catholicism into Ireland and equally to provide it with material to rebut the Protestant advance. This resulted not only in many catechisms and religious manuals being translated into Irish, but also in many new devotional works being written in Irish. In this process the rôle of the Irish Franciscans has a unique place, for it was their desire to preserve the Catholicism of Ireland and to strengthen it by new works in Irish that placed them at the forefront of the attempts in the 17th century to preserve as much as possible of the inheritance of early Irish history, e.g., the work of the Franciscan John Colgan (Seán Mac Colgáin, 1592–1658) on Irish HAGIOGRAPHY.

Thomas O'Loughlin

Christianity in the Celtic countries [2a] Scotland before 1100

Early medieval Scotland (ALBA) was home to a range of distinct peoples, only some of whom were Celtic-speaking. The Christianization of the BRYTHONIC peoples living in close proximity and contact with northern Roman BRITAIN seems to have begun shortly before the end of direct Roman rule in Britain in AD 409/410 (perhaps somewhat earlier in the north). This process has attracted little comment from scholars, as has the Christianization of the Gaels of the Atlantic seaboard, but the Christianization of the PICTS has been the subject of lively ongoing debate. A traditional focus upon proselytizing saints such as NINIAN or COLUM CILLE has given way recently to the growing realization that such individuals did not play the key rôles formerly ascribed to them, and that the Christianization of northern Britain was a longer-drawn-out and more complex process than such saint-focused models have allowed.

Historical, place-name, and archaeological evidence come together to suggest that Christianity was already firmly established among the GAELIC and Pictish peoples by the time that Colum Cille came into contact with them (563–97). His monastery on Iona (EILEAN Ì) was the most influential force in northern ecclesiastical culture until the 8th century, when key kingdoms such as Gaelic DÁL RIATA and Pictish Fortrinn came into their own as thoroughly Christianized societies. Colum Cille himself seems to have been influential in the politics of Dál Riata and Brythonic Alt Clut (Dumbarton; see YSTRAD CLUD), as well as a monastic founder and influence among the Picts. Ionan daughter houses were the dominant ecclesiastical and Christianizing influence in northern England until 664 (see EASTER CONTROVERSY), and the monastery retained a degree of influence in Northumbria thereafter. Surviving sources from this period from Iona are uncharacteristically plentiful, and scholars have probably not exercised enough caution in assessing their understandably Iona-centred perspectives. The monastery's influence in 7th-century Pictland has probably been exaggerated as a result, but it is significant that by the end of the century it was possible for the Columban *familia* to credit itself with the Christianization of the northern Pictish zone and the founder as the father of Pictish monasticism.

Even with its formal interests in Pictland curtailed by royal decree in 717, Iona remained prominent, its influence with regard to monastic practices, ecclesiastical sculpture and art, historiography, theology, and law transcending even the insular Celtic zone, before repeated attacks on the community by Scandinavian raiders forced a reorganization of the Columban *familia* in the 9th century. Surviving contemporary evidence allows few insights, however, into the range of devotional behaviour that took place at other centres in Celtic-speaking northern Britain or in the areas affiliated with them. Scholars have long turned to the evidence of names and the retrospective writings of later periods in the hope of filling in some of these gaps, but such methods remain controversial. It is therefore difficult to move much beyond listing a few important clerics and ecclesiastical centres of northern Britain during what might be called the 'Age of Iona'. The extent to which the problematic concepts of a 'Celtic Church' or 'Celtic Christianity' may be employed to shed light upon such things as ecclesiastical organization and devotional activities among the different Celtic-speaking peoples of northern Britain is not clear. The monumental ecclesiastical sculpture of the Picts is perhaps the main body of evidence for devotional activity in northern Britain during this period, and more work is needed in this regard.

In those regions of Scotland that became occupied by Scandinavians in the Viking Age, it is difficult to ascertain the extent to which Christianity had been established beforehand or, where it had done so, the extent to which the religion endured thereafter. Meanwhile, the Gaelicization of the Pictish peoples during the course of the 9th and subsequent centuries seems to have included an ecclesiastical element. Some kind

of formal realignment from Pictish to Gaelic practices took place early in the 10th century, but the details of this adjustment are quite obscure. Certainly, the severe form of Gaelic MONASTICISM practised by the Céili Dé took firm root in the Gaelicized kingdom of Alba, and prominent Pictish ecclesiastical centres such as Meigle, Portmahomack, and Abernethy seem to have declined as others such as Dunkeld (Dùn Chailleann) and, particularly, St Andrews (Cennrimonad) grew to greater prominence. The impression of moral turpitude and decline in canonicity in the Church of 10th- and 11th-century Alba created by 12th-century reformist commentators is exaggerated, but few scholars would argue that it was entirely without foundation.

James E. Fraser

Christianity in the Celtic countries [2b] Scotland *c.* 1100–*c.* 1560

Traditionally, the 12th century has been regarded as a period of change for the Scottish church. The realm was certainly brought more fully into the mainstream of western Christendom: new monastic orders made an appearance in Scotland (see MONASTICISM), with the Tironensians being introduced to Selkirk (Sailcirc) as early as 1113, from where they later moved to Kelso; a system of territorial dioceses was established, with archdeaconries, deaneries of Christianity, parishes, and cathedral chapters evolving across much of Scotland; closer links with the papacy were forged. These developments were paralleled in the secular sphere, and owe much to the influx of settlers of English or northern French origin under the encouragement of King David I (1124–53) and his successors. However, the changes must not be exaggerated. There is evidence that the diocesan system was based on ancient provinces dating from Pictish times (see PICTS), although in eastern Scotland territorial coherence was compromised by the necessity to preserve distant property rights attached to ancient churches such as Dunkeld (Dùn Chailleann); bishops with Celtic names in David I's reign point to a line of native prelates, and the diocese of Caithness (Gallaibh) was probably the only new foundation by David. Irish MONASTERIES, including houses of the ascetic reform movement, the Céili Dé, were almost certainly less decadent and secularized than the reformers suggested: some ancient foundations, as at Brechin (Breichinn), became cathedral chapters; others, like Inchaffray and Monymusk, slowly evolved into houses of Augustinian canons; Iona (not without resistance) became a Benedictine abbey (see EILEAN Ì). The changes were essentially organizational rather than spiritual.

Little is known about religious observance in medieval Scotland (ALBA); as elsewhere, there was doubtless an attachment to ancient holy sites and semi-mythical saints (see HAGIOGRAPHY), and SUPERSTITIONS, some drawing on a pagan past. Most parish churches were small, and priests usually ill-educated; there was no university in Scotland until 1410, and only the privileged few could afford to study abroad. In the 12th and 13th centuries papal legates endeavoured to standardize canonical practice to make it like that elsewhere in Europe, but there are few indications of serious deviations from orthodox doctrine, even in the 15th century when Lollard ideas were circulating in England. Some 13th-century statutes, made in the wake of the Fourth Lateran Council, survive, but evidence from the later Middle Ages suggests that many beneficed clerics were not ordained to the priesthood, and ignored the requirement for celibacy; in GAELIC-

speaking areas clerical dynasties can be traced, with churches passing from father to son. These irregularities probably had little effect on pastoral work; more freely criticized were exactions of mortuaries and offerings on the part of underpaid pensionary vicars who struggled to survive on increasingly inadequate stipends due to the annexation of most parochial revenues to cathedrals, monasteries, and colleges.

The Scottish bishops, except the Bishop of WHITHORN, were freed from the metropolitan jurisdiction of York by the papal bull *Cum universi* towards the end of the 12th century. Papal involvement in Scotland, however, became increasingly important, although the initiative almost always originated locally: grants and agreements were confirmed, dispensations granted, taxes imposed, lawsuits determined by judges delegate or at the papal curia, benefices throughout the realm filled by papal provision.

The Reformation came late to Scotland. King James V (1513–42) perceived the material benefits of remaining loyal to Rome, and enacted legislation against Lutheran heresies. There was little desire for the dissolution of monasteries, since kings and magnates could use papal provisions to bestow religious houses on their children and connections, often at a young age. The reckless sale of indulgences found in parts of Europe was not paralleled in Scotland. Although there had been a growing interest in the cult of native saints such as NINIAN at Whithorn and Duthac at Tain (Baile Dubhthaich), marked by the publication of the ABERDEEN BREVIARY shortly after 1500, evidence for widespread religious change is elusive until the late 1550s, and even then it was connected with fears that the marriage of Queen Mary (1542–67) to the French dauphin might involve Scotland in undesirable Continental entanglements. Even after the formal breach with Rome in 1560, much of rural Scotland remained doctrinally conservative, and the reformers struggled to find sufficient ministers or adequate endowment for the new Protestant Church.

Andrew D. M. Barrell

Christianity in the Celtic countries [2c] Scotland after 1560

In contrast to Wales (CYMRU), the Reformation in Scotland and subsequent developments affecting the Christian churches there have taken place at a period when the majority of the population and the main cultural institutions were already English and/or Scots speaking.

The Reformation in Scotland (ALBA) began as a rebellion against the state and it struck an anti-Erastian note (i.e. opposing the subordination of the church to secular authority) that has resonated to the present. From its origin in 1560, the reformed Church of Scotland was conciliar in government and hostile to state control, unlike the Church of England. Through the influence of John Knox (1505–72), who had had personal experience of John Calvin's Geneva, the Church of Scotland was Calvinistic, but its presbyterian structure was not fully established until 1592 (Burleigh, *Church History of Scotland* 142ff.). It was later undermined by King James VI (James I of England) who, in 1612, managed to secure parliamentary sanction for a mixed Episcopalian-cum-Presbyterian system. Presbyterian resentment was hard to overcome, however, and under Charles I growing discontent led in 1637 to a revolt against a new Anglican-style Prayer Book. A year later, the National Covenant against the King's policies was signed in Edinburgh (DÙN ÈIDEANN), and shortly after the Covenanters seized power and swept away not only the bishops but also royal control of parliament. Reform of the state as well as the church

was essential to the movement (Stevenson, *Covenanters*). The political theories of George Buchanan, the great 16th-century humanist and associate of Knox, strongly influenced the Presbyterians, who rejected the claims of divine right kingship (McFarlane, *Buchanan* 392–415).

In 1641 Charles I was forced to accept the new Scottish constitution in church and state, but a year after the outbreak of the Civil War in England the Covenanters, fearful of a royal victory, allied with the Parliamentarians under the Solemn League and Covenant. This gave rise to the Westminster Assembly of 1643, which produced its famous Confession of Faith and Catechisms. These were markedly Calvinist, and in later opinion hyper-Calvinist. They were accepted by the Church of Scotland and have been retained to this day, though now much criticized (*Westminster Confession of Faith*; Heron, *Westminster Confession in the Church Today*). The breach between the Covenanters and the English Independents came at the end of the First Civil War over the execution of Charles I in 1649, and this quarrel led ultimately to the Cromwellian conquest of Scotland and its incorporation into the Commonwealth.

After the Restoration of the Monarchy in 1660, however, Episcopacy was restored in Scotland, the Westminster standards were dropped, and jettisoned also were the constitutional reforms that had been accepted by the Crown in 1641. But the repressive Restoration regime failed to overcome Presbyterian resentment and this became apparent at the Revolution of 1688. The Scottish Revolution Settlement under William and Mary rejected the Episcopalian regime in 1689, and a year later Presbyterianism and Westminster Standards were reinstated, but without reference to the Covenants.

At the Union of England and Scotland in 1707 Presbyterian Church government in Scotland was guaranteed; but in 1712 the seeds of future strife were sown by the Act of Parliament restoring lay patronage in Scotland, an Act designed to cause trouble and notably successful in doing so until its repeal in 1874. Successive schisms arose over lay patronage, for example, the First Secession headed by the Revd Ebenezer Erskine in 1733, which later repeatedly split (MacEwen, *Erskines*). Then, in 1761, disputes over presentations led to the founding of the Relief Church. All the dissenting Presbyterian Churches, however, clung to the standards of the Church of Scotland and its Reformation principles, and some (Cameronians and Seceders) to the Covenants. They were, however, opposed not only to lay patronage but also to the attitudes of the Moderate Party, which from 1752 controlled the General Assemblies of the established Church. The Moderates struck a *modus vivendi* with the state, equated enthusiasm in religion with fanaticism, and contributed to the Enlightenment (Clark, *Scotland in the Age of Improvement* 200–24). But, to their evangelical opponents, they seemed to preach enlightened philosophy rather than the gospel. The problem for the Moderates came to be that the evangelical tradition in the Church of Scotland itself, let alone among the Presbyterian dissenters, did not die out but was reinvigorated by the 'Awakening' of the late 18th century.

In 1834, after years of struggle, the Evangelical Party gained control of the General Assembly of the Church of Scotland and passed the Veto Act which empowered congregations to reject unwelcome presentations made by patrons. The resulting bitter 'Ten Years' Conflict' ended with the intervention of the civil courts and the defeat of the non-intrusionists led by the Revd Thomas Chalmers (Brown, *Thomas Chalmers and the Godly Commonwealth in Scotland* 282–349). This crisis brought on the Disruption in 1843 and the setting up of the Free Church of Scotland, a serious blow to the established church (Henderson, *Heritage*). The Disruption was the last and greatest rift in Scottish Presbyterianism and from then on the trend was towards reunion (McCrie, *Church of Scoltand*). Thus, in 1847, the United Secession Church and the Relief Church joined to form the United Presbyterian Church.

Then, towards the end of the 19th century, the churches were alarmed by the onward march of science and its ally, rationalism (Ferguson, *Scottish Christianity in the Modern World* 53–89). In 1882, for example, a noted Presbyterian Church historian, John Cunningham, lamented the spread of atheism in Scotland (Cunningham, *Church History of Scotland* 2.549). The rise of theological liberalism, which refuted the literal acceptance of Scripture, was opposed by traditional Calvinists (Cheyne, *Transforming of the Kirk*). On this issue, in 1893, the rigidly Calvinist Free Presbyterians broke away from the Free Church. But, overall, reunion was still the prevailing trend, and in 1900 the United Presbyterian Church merged with the Free Church to form the United Free Church, a majority of which, in

1929, rejoined the Church of Scotland whose spiritual independence was fully recognized in Acts of Parliament of 1921 and 1925 (Burleigh, *Church History of Scotland* Part 4, Chapter 6; Sjölinder, *Presbyterian Reunion in Scotland 1907–1921*). Evidently, the stance of the dissenters had not been in vain. Remnants of the old dissenting denominations, however, refused to unite and have continued as separate, though now dwindling, churches, chiefly the Free Presbyterians (1893), the Free Church (1900), and the United Free Church (1929). It should be noted, however, that in spite of its divisive history Scottish Presbyterianism has long had links with other reformed churches, not only in the British Isles and Europe but also in the USA, Canada, Australia, New Zealand, South Africa, and Malawi (Cowan, *Influence of the Scottish Church in Christendom*; Moffat, *Presbyterian Churches*).

Other denominations exist in present-day Scotland, two of which have had chequered histories since the Reformation. Roman Catholicism survived, but was steadily worn down. By the mid-18th century the old faith was mainly confined to a few areas in the HIGHLANDS and Western Isles. Here, all the competing churches found difficulties owing to remoteness, rugged terrain, and not least a culture clash. With inadequate resources, they all needed to provide a GAELIC-speaking ministry and were hampered by the absence of Christian literature in SCOTTISH GAELIC. The lack of a Gaelic BIBLE long troubled the Protestants and, in spite of prolonged efforts, little was achieved until 1690 when Robert Kirk, minister of Aberfoyle, published his rendering of the Irish Bible into Gaelic and in Roman type. This led, in the course of the 18th century, to the triumph of Presbyterianism in the Highlands (MacInnes, *Evangelical Movement in the Highlands of Scotland 1688 to 1800*).

How weak the Roman Catholic Church had become in 18th-century Scotland plainly emerges from the Revd Alexander Webster's work on the population of Scotland in 1755. Based on the returns made to him by his fellow Church of Scotland ministers most shires recorded very low numbers of Roman Catholics, and some Lowland shires made nil returns (Kyd, *Scottish Population Statistics*). Support for the Jacobite cause had worsened the situation of the Roman Catholics since 1688 (see JACOBITE REBELLIONS). In the institutional sense, the Roman Catholic Church in Scotland scarcely existed, being little more than an impoverished mission feebly directed from Rome. Catholic Emancipation in 1829 improved the position, while immigration from Ireland (ÉIRE), particularly after the catastrophic FAMINE Years of 1845–50, greatly increased the number of Roman Catholics in Scotland. This was especially the case in the industrializing Lowland counties where there was a demand for labour (see LOWLANDS). The Roman Catholic Episcopal hierarchy was restored in 1878 in spite of some opposition, and since then the Roman Catholic Church's adherents have flourished and now constitute the second largest Christian denomination in Scotland (Anson, *Underground Catholicism in Scotland 1622–1878*).

The third largest communion in Scotland today, the Episcopalians, actually derive from the 17th century when bishops governed the Church of Scotland from 1610 to 1638 and again from 1661 to 1689. After the reintroduction of Presbyterian government in 1690 many people in Scotland still adhered to Episcopacy, but their support for the exiled Stewarts in the rebellions of 1715 and 1745 led to persecution, and their numbers steadily diminished. From the early 19th century, however, when their loyalty was no longer in question, the Episcopal Church in Scotland, formed in 1804 by a union of nonjurors (who refused to recognize the Revolution Settlement) and the Qualified Episcopalians (who did), has prospered. It is in full communion with the Church of England, but is autonomous with its own constitution headed by a Primus and with its own Prayer Book (Goldie, *Short History of the Episcopal Church in Scotland*).

Baptists and Congregationalists appeared in Scotland in the second half of the 18th century, but like the Methodists their main institutional development came in the 19th century. More recently Pentecostal Churches, Brethren, and Salvation Army, with some Mormons, are also represented.

The outstanding fact, however, is that the main Christian influence in Scotland from the Reformation to the present has been Presbyterian, and this has had a marked impact on education and general culture. But, today, Christianity in Scotland is no longer the potent force that it was. Secular trends have led to falling church attendances and to church closures, and in varying degrees these developments have affected all denominations (Highet, *Scottish Churches*). A more

recent writer on the subject strikes a sharper note and concludes that 'organized religion appears at present to be on the path towards the margins of social significance' (Brown, *Social History of Religion in Scotland since 1730* 256). But the ways of providence are proverbially inscrutable, and it may be that the present perceived threat to Christianity will do more for Christian unity than decades of ecumenical talks have done.

Christianity in the Celtic countries [3] Isle of Man

§1. OVERVIEW

The date at which the Isle of Man (ELLAN VANNIN) became Christian and the origin of the missionaries who arrived on the island are both uncertain. While the dominant tradition is of conversion by a Patrician mission from Ireland (ÉRIU)—there are four quite standard OGAM inscriptions—other strands of linguistic evidence link the earliest church on the island with Wales (CYMRU), north-west England, and Galloway (Gall Ghàidhil). It is possible that Christianity arrived from Britain during the Roman period and that the later medieval interpretations of this earliest phase merely reflect the dominant tradition that emerged from a complex of Irish, Welsh, and Northumbrian influences. The multiple dedications of churches to PATRICK, Columba (COLUM CILLE), Cuthbert, and NINIAN seem to reflect this diversity of influence—the island has no patron saint.

Despite the problem of absolute chronology, the wealth of cross slabs, INSCRIPTIONS, and chapel sites that date on typological grounds from between AD 600 and 800 suggests a strong and vigorous religious life during this period. One major monastery at Maughold, another at Peel and possibly a third, dedicated to Leoc, near modern Ballasalla provided literate, educated foci that were in regular contact with religious communities around the Irish Sea.

The arrival and eventual acquisition of the island by the Vikings may have brought a brief period of paganism, but the persistence of the local population—evidenced by personal names in runic inscriptions—suggests that Christianity probably survived in some form throughout the Viking Age. The Vikings used existing cemeteries, such as the one at Balladoole, from the start and within a generation were burying their dead in Manx-style coffins and marking their graves with Christianized forms of contemporary Scandinavian art styles.

With the creation of the Norse KINGDOM OF MAN and the Isles, Peel Castle became the focal point for both secular and religious authority on the island. An 11th-century church and Irish round tower, which now dominate St Patrick's Isle off the town of Peel, appear to have been preceded by a structure close in form to a 9th-century Irish cathedral, suggesting that the existing monastic community was used as a major seat of an early 'itinerant' bishop.

The 12th century saw a raft of reforms, many of them introduced by Ólafr I, who, having been educated in the court of Henry II in England, returned to the island to reign for 40 years. The King brought in the Savignacs from Furness to found Rushen Abbey in 1134. At the time of his death in 1153 the Pope was in the process of reorganizing the northern European dioceses on 'modern' lines, leading to the creation of a diocese usually dubbed *sodorensis*—of the southern isles, that is, the Scottish Western Isles and Man (see SODOR; HIGHLANDS)—within the province of Nidaros (modern Trondheim). The new diocesesan organization directly reflected the power politics of the region at the time.

The other major reform was the creation of parishes, originally 16 in all. The earliest Synodal Ordinances (*c.* 1230) show that these were already in place, but that adequate provision still had to be made to accommodate resident parish priests.

In the early 13th century a new cathedral was built by Bishop Simon on St Patrick's Isle, and the bishop became a significant landowner and secular baron of the island. With the sale of the Isle of Man and the Western Isles to the Scots by the Treaty of Perth in 1266 Scottish kings appointed the bishops until 1374, by which time English control of the island had become more secure. The diocese became divided and Man on its own came within the province of York. In addition to the bishop, the Abbot of Rushen and Prioress of Douglas were significant landowners and barons in their own right and, together with the bishop, in a period of political instability, provided a major source of civil and well as religious authority. In the late 14th century the Order of Friars Minor were invited to establish a house on the island, with land provided at Bymaken in Arbory.

At the Dissolution, Edward, sixth earl of Derby and 'king' of Man, dissolved the monasteries on the island and eventually paid the proceeds to Henry VIII's exchequer in London. During the latter part of the 16th century the Reformation came to Man, and the Manx exchanged services in one foreign language, Latin, for another, English. There is no evidence of any recusancy, as occurred in the Earl's Lancashire estates. In 1611 Bishop Phillips began the process of rectifying this situation with a Manx translation of the Prayer Book—the earliest document to survive in the language (see MANX LITERATURE [2]). Although parts of the New Testament were translated later in the century, not until the late 18th century was the whole Bible made available in MANX.

The English Civil Wars came to Man and forced a short break in ecclesiastical authority, although the Church courts seem to have operated more or less normally throughout the period. During the latter part of the 17th century there is evidence for a degree of persecution of the Quakers who had established themselves on the island, especially in the north-eastern parish of Maughold. By the end of the century, however, presentation at the Church courts, the principal means of controlling religious deviancy, had ceased. In other words, the Manx were content to allow the Quakers to worship according to their own beliefs.

The 18th century is dominated by the work of two Anglican bishops—Wilson (r. 1698–1755) and Hildesley (r. 1755–72), and by the arrival of Methodism in 1758—John Wesley himself visiting in 1777 and 1781. The bishops did much for the Manx people. In addition to completing the translation of the Bible in 1775, they interested themselves in educational reform, poor relief and the development of an educated clergy. Bishop Wilson, who displayed great personal generosity, was a man of saintly life, and is still greatly revered today.

Methodism was very successful on the island. It seems to have appealed to the many independent small farmers who had received virtual freehold of their farms as early as the 1500s. In a Methodist context they could become readers and preachers, and enjoy a significant rôle in religious life denied them by the more formal and 'educated' Anglican establishment. Although Methodism coexisted with the established church for a number of decades, with many individuals attending both 'churches', by the middle of the 19th century they had become major competitors for the souls and minds of the Manx.

Small numbers of Roman Catholics arrived in the island during the 18th and 19th centuries, and with emancipation became firmly established there.

Christianity is still a major influence in Manx life. Church attendance has declined less than in neighbouring Britain, and relations between the major traditions are good. Despite a still active 'High-Church' presence deriving from the Oxford Movement, the Anglican church is mainly 'Low Church' and Protestant values still extend far beyond the walls of the churches, evidenced by the size and longevity of Manx temperance movements, for example. Even today there is a strongly dissenting tone (i.e. in opposition to the Anglican Church) to many of the debates in the House of Keys. The bishop, the one surviving medieval baron, still retains a seat and a vote in the Legislative Council, the upper house of the Manx parliament, TYNWALD. The churches themselves, often working ecumenically, remain significant players in education, welfare and social life.

§2. HIGH MEDIEVAL MONASTICISM

By the middle of the 13th century, with the consecration of St German's Cathedral in Peel, the Norse kings of Man (ELLAN VANNIN) had brought the island into the mainstream of contemporary western Christianity (Broderick, *Cronica Regum Mannie et Insularum / Chronicles of the Kings of Man and the Isles*). The bishop of SODOR and Man ceased to be peripatetic and had a permanent seat on St Patrick's Isle, Peel (Harrison, *Account of the Diocese of Sodor and Man and St German's Cathedral*). The present parish structure had been created, together with resident priests and an elaborate tithe system, all based on coherent episcopal policy and authority. An essential element in these developments was the introduction of the reformed orders into the Island.

In 1134 Ólafr I (1113–53) donated land 'in Russin' for the foundation of a daughter house to the Savignac Abbey of Furness. In 1176 Ólafr's son Godred II (1153–87) was married to Fionnula, a daughter to Mac Lochlann, son of Muircheartach, king of Ireland (ÉRIU), by Sylvanus, abbot of Rievaulx, to whom he granted land in the north of the island at Myroscough to build a monastery. By the end of the 13th century the whole estate had been taken over by Rushen Abbey (Broderick, *Cronica Regum Mannie et Insularum / Chronicles of the Kings of Man and the Isles* fo. 40r).

At some point during his reign, Godred's son Reginald I (1187–1228) founded a Cistercian nunnery at Douglas.

The Norse kings' interest in the expansion of monastic influence was not restricted to the endowment of monasteries located on the island. Grants of Manx lands and vicarages were made to a number of houses, of different orders, which were located at sites around the northern Irish Sea. St Bees (Benedictine—Cumbria; Wilson, *Register of the Priory of St Bees*), WHITHORN (Premonstratensian—Galloway; Talbot, *Priory of Whithern*), BEANN CHAR (Ireland) and Sabal (Augustinian—Co. Down; Broderick, *Bulletin of the Ulster Place-name Society* 2nd series 4.24–6), and Furness itself were all endowed to a greater or lesser extent. St Bees was also given favourable trading rights. Thus, by the mid-13th century the monastic orders owned a significant proportion of Manx farmland, and tithe income from at least half of the parishes. Other neighbouring abbeys such as Holm Cultram (Cistercian—Cumbria; Granger & Collingwood, *Register and Records of Holm Cultram*) and the important Benedictine abbey of St Werburghs, Chester (CAER; Tait, *Chartulary or Register of the Abbey of St Werburgh, Chester*) were given economic advantages on the island and in its waters (Davey, *New History of the Isle of Man* 3).

The other major landholder on the island, apart from the Lord himself, was the Bishop of the Isles who, because the power of election had been given to the monks of Furness, was often a Cistercian himself or a man with strong monastic affiliations.

The history of medieval MONASTICISM on Man is completed by the foundation of the Friary of Bemaken (Ballabeg; Barratt, *Journal of the Manx Museum* 6.80.209–13) for the Dublin-based order of Friars Minor by William de Montacute in 1367. Although the dissolution of Rushen Abbey, Douglas Priory, and Bemaken Friary took place in June 1540, their lands continued to be administered as separate entities until 1911.

The influence of the monasteries, especially Rushen, on the development of Manx social, economic, and cultural life was profound. Not only did the Abbey bring from the Continent new agricultural and industrial ideas to Man, but also, during periods of marginalization and uncertainty, especially following the Treaty of Perth in 1266, maintained its links with Furness and represented a vital element of stability and political continuity.

Christianity in the Celtic countries [4] Wales

Christianity first came to what is now Wales (Cymru) during the Roman occupation. The Christian martyrs Aaron and Julian of Caerllion, mentioned by Gildas, probably died in the persecution of Emperor Diocletian (AD 303–5). Having survived the collapse of Roman rule in Britain (AD 409/10), Christianity underwent a period of consolidation and expansion during the late 5th and 6th centuries, at which point it becomes meaningful to refer to the Welsh language and nation first emerging into history as distinct entities, and there began what has become known as the 'Age of the Saints'. This was a period during which men such as Cybi and Deiniol in the north, and Teilo and David (Dewi Sant) in the south, prepared a foundation upon which the Church would develop into the future. Under their guidance Welsh Christianity developed apace and was strong enough to safeguard its autonomy even after the arrival of the Roman mission of Augustine of Canterbury in Britain in 597. It was not until 768 that it came into conformity with the practices of Augustine's successors in England by accepting the Roman calculation of the date for Easter (see EASTER CONTROVERSY), but the influence of the Welsh saints had by then left an indelible mark on the Welsh mind and culture, as evidenced by the innumerable *llannau* (churches, churchyards) which bear their names.

Following the Norman Conquest, the Welsh Church, which even after the 8th century had still enjoyed a considerable measure of independence, was deprived of its status as a 'national' Church, a development which caused considerable resentment among native Christians, both lay and clerical. The Normans believed that a centralized Church would help strengthen their hold on the land, and therefore sought to subject the Church throughout Britain to the rule of the Archbishop of Canterbury. In their desire to remain self-governing, the Welsh held out until 1108 when Urban, the first Norman bishop of Llandaf, swore allegiance to the English see. By the mid-12th century, the other Welsh bishops had also capitulated, and where previously the Welsh had looked directly to Rome, they now came under the authority of Canterbury and thus, indirectly, the authority of the English Crown.

Uniformity now became the order of the day and, as territorial parishes were established, the traditional *clas* of the old Welsh church disappeared. Continental monastic orders were introduced and, although the Benedictines proved unpopular since they were too closely associated with the conquerors, the Cistercians were regarded with greater favour and able, as a result, to erect houses away from towns and garrisons at locations such as Strata Florida (Ystrad-fflur), Aberconwy, Margam, Neath, and Whitland (see CISTERCIAN ABBEYS IN WALES; MONASTICISM).

The subjugation of Wales by outside influences and authorities continued. By 1283, Edward I of England had finally secured a military conquest, while the Pope, by intervening in ecclesiastical appointments, ensured that the number of native Welshmen appointed to Welsh livings and offices after 1323 declined. As bubonic plague spread throughout Europe in 1347–8, and between 30% and 40% of the population succumbed, the Roman Catholic Church, though having by now become a major power in European politics, could do little to comfort the people. At the same time, the standard of discipline, learning, and even morality among the clergy was rapidly deteriorating.

The frustration and resentment that these factors caused did not find expression in Wales until 1400, when a revolt occurred under the leadership of Owain Glyndŵr. He insisted that the Welsh people had a right not only to political self-determination but also to ecclesiastical autonomy, and that a specifically Welsh archbishop should be enthroned at St David's (Tyddewi). By 1413, however, the rebellion was over and the vision but a memory. The church limped on and, although a partial spiritual renewal occurred during the second half of the 15th century, this was not sufficient to counter the effects of years of decline, or to generate men of suitable calibre to secure the radical reformation that was by then needed.

As in England, it was politics rather than theology which first instituted change as Henry VIII attempted to secure for himself a male heir. Wales's loyalty to him as a descendant of a Welsh dynasty (see TUDUR), coupled with the widespread spiritual lethargy and the disillusionment that was so characteristic of the period, ensured that there was little opposition to his reorganization of the Church and his abolition of the monastic orders. By 1540, all 47 of the Welsh religious

houses had been dissolved. However, the political imperatives which had initially provided the motivation for change were soon replaced by the renewing forces of Protestant theology, and it was not long before the emphases found on the Continent were also to be seen in Wales: a new vitality, a deeper spirituality, a recognition of the need for evangelization and an acceptance of the Scriptures as the ultimate authority in both faith and conduct were all in evidence among leading churchmen. It was they who, eager to ensure that the Welsh accepted the principles of the Reformation, gained the authorities' permission to translate both the Book of Common Prayer and the Bible into Welsh. The New Testament and the Prayer Book, both translated mainly by William Salesbury and Richard Davies, bishop of St David's, were published in 1567, followed in 1588 by William Morgan's monumental translation of the whole of the Bible, an achievement which has been rightly described by many as one of the most momentous events in Welsh history.

The 1567 New Testament was presented to the nation with a preface, written by Bishop Richard Davies, in which he sought to promote the new Anglican way by describing it as a return to the practices and beliefs of the native Celtic Church (see christianity, celtic). He claimed that the gospel had been brought to Wales by the preaching of Joseph of Arimathea, and that the Celtic Church had preserved an early and pure tradition of Christian witness and preaching until the arrival of Augustine at Canterbury in 597. It was Augustine who had corrupted this Church with the errors of Rome and, according to Bishop Davies, the Reformation had now purged the Celtic Church and returned it to its former purity.

Although some had hoped that Mary's accession in 1553 would restore Roman Catholicism to Wales, the same general lukewarmness that had greeted her father's changes now blighted her attempts to reverse the reforming process. Protestantism had not yet established itself in the minds of the common people as the only valid expression of the Christian faith, and for that reason they showed little reaction to Mary's policies and to the return to the 'old faith'. In fact, there were only three Protestant martyrs in Wales during Mary's reign: Robert Ferrar, the former bishop of St David's, William Nichol of Haverfordwest (Hwlffordd), and Rawlins White, a fisherman from Cardiff (Caerdydd).

Among the positive repercussions of William Morgan's translation of the Bible were the preservation of the Welsh language and the Welsh way of life. Morgan's feat contributed towards a rediscovery of a national and religious identity, and this was reinforced by Welsh Puritans who not only believed that the religious settlement of Elizabeth I had been insufficiently radical, but also that more should have been done to enlighten the people as to the true meaning of the gospel. These were the pioneers of the dissenting and nonconforming congregations which were soon to appear, and among them was John Penry (1563–93), a young Welshman who bemoaned the apparent lack of concern among the bishops over the spiritual condition of his compatriots. His protests, together with his association with a group of clandestine and illegal nonconformists, branded Penry a traitor, and he was executed at London during the spring of 1593, aged 29.

It was towards the middle of the 17th century that nonconformist churches were established in Wales. Under the leadership of William Wroth, William Erbury, Walter Cradock, Vavasor Powell, Morgan Llwyd, and John Miles, Puritanism achieved a tenuous foothold that allowed the gathering of Congregationalist, Baptist, Presbyterian, and Quaker congregations. Although some emigration occurred, especially among the Quakers, following the restoration of 1660, many of the other Churches succeeded in maintaining their witness despite sometimes savage persecution. When religious tolerance was partly achieved through the 1689 Toleration Act, the Dissenters entered a period of inertia as they enjoyed the peace that had eluded them for so long, and this was to last well into the 18th century.

The Methodist Revival began in Wales during the spring of 1735, when Howell Harris (1714–73), a young Anglican from Breconshire (sir Frycheiniog), underwent a conversion experience. Though much was done to prepare the way for an awakening by the circulating schools of Griffith Jones (1684–1761), the educationalist from Llanddowror, it was the preaching of men like Harris, Daniel Rowland (1713–90) of Llangeitho and Howell Davies of Pembrokeshire (sir Benfro) that ignited the spirits of the converts. The hymns, poetry and prose of William Williams of Pantycelyn then provided them with a means of expressing their newly-found faith. The revival gained its following among ordinary Welsh people by means

of the *seiat* or 'society meeting' in which converts met regularly to pray and to learn about the new life into which they had been reborn. These were organized in every part of the country. In 1742, the leaders, doctrinally all Calvinists, formed an Association, which assumed control of the Calvinistic Methodist movement throughout Wales. They remained loyal to the Anglican Church, though conscious of its shortcomings, and it was not until 1811, long after the first generation had died, that the movement seceded to form the Calvinistic Methodist Connexion, later the Presbyterian Church of Wales. Despite their departure, there still remained a large group of evangelicals within the established Church, which demonstrated the strength, extent and influence of the revival.

Although the Dissenters had initially failed to assimilate the spirit of Methodism, long before the end of the 18th century they had not only been strongly influenced by it, but they had also gained hugely from it. As their numbers grew, and as the Calvinistic and by then Wesleyan Methodists seceded and joined their ranks, under the leadership of men such as Thomas Charles (1755–1814) of Bala, Thomas Jones (1756–1820) of Denbigh (Dinbych), John Elias (1774–1841), Christmas Evans (1776–1838) and William Williams (1781–1840) of Wern, a large and multifarious body of Nonconformists had emerged which by 1851 had exceeded the number of Welsh Anglicans. This led not only to a new vitality in Welsh culture, but also to a desire to see the Church of England disestablished. Following a prolonged campaign, this was finally achieved in 1920.

The religious history of Wales during the 19th and early 20th centuries was characterized by sporadic revivals. These were varied in the extent of their influence and in their duration, some being short and local and others national and lasting for several months. Among the better known are the revivals of 1859 and 1904–5, both of which secured thousands of new members for the Nonconformist Churches. However, the 1904–5 Revival was the last revival to take place on a national scale, and since that time Welsh Christianity has been in decline. Changes in working practices, the rise of the Labour Movement with its often quasi-religious message of social improvement, greater leisure opportunities and a wide range of other factors, all contributed towards the working-class rejection of traditional religious forms. Two World Wars also affected attitudes: soldiers returning from the trenches of the Great War had little time for a religion which had seemingly given its wholesale support to the conflict, while the dawn of the atomic age at Hiroshima and Nagasaki horrified a later generation. Against this background, the rise of liberal theology, with its belief in the fundamental goodness and unity of creation and the inevitable progress of history towards perfection, appeared inconsistent with the experiences of many. The claims of Christianity suddenly rang hollow. Having been relegated to the shadows of public life in Wales for generations, the Roman Catholic Church re-emerged during the 20th century to take its place alongside the other Christian traditions. The Anglican tradition also flourished briefly during the 1950s and 1960s as Nonconformity continued to decline. In an attempt to turn the tide, an ecumenical movement appeared among the Nonconformist denominations, and called on the various strands of the dissenting tradition to merge into a single national Church. A process of consultation was embarked upon in the 1990s and a draft plan submitted to the churches. This was rejected by the Congregationalists (Annibynwyr) in 2001. With many new non-denominational, charismatic and Pentecostal churches thriving, mainly as English-language communities, the traditional denominations continue to decline, but are now seeking new ways of co-operating as Welsh Christianity faces an uncertain future.

The elevation of a Welsh-speaking Welshman Rowan Williams as Augustine's successor as Archbishop of Canterbury in 2002 was accompanied by an immediate swell of national pride in Wales as well as controversy in the British press over the popular perceptions of pre-Christian associations of the modern DRUIDS of Gorsedd Beirdd Ynys Prydain, of which Dr Williams is one. However, it is as yet too early to judge whether this historically evocative milestone will prove a turning point for Christianity in Wales in the 21st century.

Christianity in the Celtic countries [5] Brittany

§1. late antiquity and the middle ages

Introduction

The migration of people to Brittany (Breizh) in late antiquity and the early Middle Ages is the defining event in the early history of the country. Our view of the date, nature, and motivation of this event has changed greatly in recent years, and is still a matter of debate; it is clear, however, that the rôle played by Christianity in this migration is of central importance. The subsequent development of the Breton churches, under the Normans and Angevins in particular, shows that Brittany was increasingly drawn, politically and ecclesiastically, into a wider European world, although some features, such as its abundance of saints, gave the Breton Church a noticeably 'Celtic' appearance (see christianity, celtic).

Roman Armorica and the coming of Christianity

In the Roman period, the portion of Armorica which was roughly equivalent to the later extent of Brittany came under the jurisdiction of the Roman province of Lugdunensis III, presided over by the metropolitan of Tours. By the 5th century Christianity must have been relatively well established there, as it was in other peripheral regions of Gaul. Two reputedly 3rd-century Nantes martyrs, St Donatien and St Rogatien, are attested in 5th- and 6th-century sources. Other areas of Brittany show fragmentary and isolated evidence of Christianity prior to the 6th century, in particular the regional centres of Rennes (Roazhon), Vannes (Gwened), Alet, Quimper (Kemper), and Carhaix (Karaez). The diocesan structure is more difficult to identify, but Breton bishops attended provincial councils in the 5th century. Nantes (Naoned), Rennes, and Vannes (itself the site of a council *c.* 463) are the diocesan seats mentioned by name (Clercq, *Concilia Galliae A. 511–A. 695* 13), but other sees are implied. The council of Tours of 567 (Clercq, *Concilia Galliae A. 511–A. 695* 179) asserted the authority of Tours over the 'Romans' and 'Bretons'; since Rennes, Nantes, and Vannes already acknowledged the authority of Tours, this decree may be assumed to refer to Christians further afield.

The Breton migrations

One of the most vexed questions, however, is the extent to which the Christianity of the Brythonic emigrants of the 4th to the 7th centuries might have set them apart (either self-consciously or not) from the Armoricans, and the effect this may or may not have had on the development of Brittany as a distinctive social and political entity (see breton migrations). At the very least, the migration included significant numbers of clergy, and coincided with an increasing, especially rural, Christianization of Armorica/Brittany.

Notwithstanding the reasonable objections to the unexamined use of the term 'Celtic' with respect to medieval Christianity, it is fair to say that in many ways early medieval Christianity in Brittany seems to have resembled that of other Celtic regions. The promulgations of the 5th-century Council of Vannes (Munier, *Concilia Galliae A. 314–A. 505* 150–6) seem to describe monastic practices similar to those found in other Celtic regions (see Fleuriot, *Les origines de la Bretagne* 232–3). An early 6th-century letter (Duchesne, *Revue de Bretagne et de Vendée* 57.5–21) from several bishops, among them the bishop of Rennes and the metropolitan of Tours, to the peripatetic Breton priests Louocatus and Catihernus identifies what could be seen as distinctively 'Celtic' practices—the moving from house to house and the distribution of the sacrament in two kinds, with women (*conhospitae*) administering the chalice to the congregation while the priests administered the host themselves. Wrdisten, the 9th-century author of a Life of St Guénolé (Old Breton Uuinuualoe), the founder of the abbey of Landevenneg, includes a diploma from the Carolingian emperor Louis the Pious which criticizes the monks' customs and tonsure as 'Irish' (2.12–13, see Smedt, *Analecta Bollandiana* 7.226–7). The diploma can be seen as evidence of Louis's attempt to regularize the diverse customs which occurred not just in Brittany or even

other Celtic regions, but throughout western Europe—though the description of the monks' habits as 'Irish' is not necessarily to be taken literally.

Another way in which the Christianity of medieval Brittany is visibly similar to that of other 'Celtic' regions is in the cults of its saints. Brittany is very well provided with saints, some common to other Brythonic or even Celtic areas, many common to Cornwall (KERNOW) and Brittany alone, and many unique to Brittany. Some of these saints are the subjects of written Lives (see HAGIOGRAPHY); many more are known chiefly or only from church dedications and place-names.

Saints and place-names

The toponymy of the Celtic regions, including Brittany, shows a notably higher proportion of place-names (especially, but not solely, those of parishes), which are religious in origin than is found in non-Celtic regions. This, Oliver Padel has argued, must show a drastic impact of Christianity on settlement habits in a number of ways particular to the Celtic regions (*Local Saints and Local Churches in the Early Medieval West* 304–6). The majority of these place-names consist of an ecclesiastical place-name element together with a personal name, the latter often obscure. These personal names are understood to be those of 'saints', some of whom, as noted above, are provided with Lives and other markers of hagiographical respectability (for example, mentions in martyrologies).

In particular, the Breton place-name evidence shows a close relationship with that of Cornwall. This similarity of the place-name elements is mainly due to a shared language, with terms being used in a similar way on both sides of the Channel (Wales [CYMRU], as the other BRYTHONIC-language area, shows many similarities as well). The saints known from place-names (as indeed those known from Lives and other sources) also show the same pattern of connection: a few are common to Wales, Cornwall and Brittany, many more are common to Cornwall and Brittany, and many are unique to one area.

Brittany, however, has a particularly distinctive toponymic usage, which is directly relevant to the question of the nature of early Breton Christianity and the significance of the migration from Britain at its formative period. This is the place-name element *plou,* which has no real equivalent in Cornwall or in other Brythonic (or GOIDELIC, for that matter) speaking areas. The element is derived from the Latin *plēbs* (accusative *plēb-em*), and is cognate with the Welsh word *plwyf* and the Cornish word *plu;* its broad meaning is 'parish'. Our earliest detailed documentary evidence, in the form of the 9th-century Cartulary of REDON, shows the term *plebs* indicating a distinctive civil and social community and its territory, with what seems to be a deliberately organized provision of pastoral care. Although this evidence is confined to the area around Redon, we can broadly assume that this was generally the significance of the *plebs,* and that the place-name element *plou* denotes a similar unit. By the 15th century, the French word for 'parish' was borrowed into Breton, presumably because the *plebs*-derivatives had acquired this entirely separate meaning. This situation is distinctly Breton—although it has been suggested that a precocious development of a parochial structure might be a distinctly Celtic trait, the civil function of such a body is unique to Brittany. (There is a map of the distribution of place-names in *plou-* attested before 1200 with the article BRETON MIGRATIONS.)

Medieval and modern historiography treats the names associated with the place-name element *plou* as those of 'saints'—itself a notably elastic concept, especially in an age long before official canonization. It is reasonable to suggest that the place-names and traditions of sainthood both reflect local commemoration, which is perhaps not easily classifiable as religious or secular. The involvement, official or otherwise, of ecclesiastical institutions rather than individuals, and the amount of deliberate organization involved, are very much topics of debate. The difficulty remains, as Wendy Davies has noted, that the apparent coincidence between the migration of Bretons from Britain, the installation of Christianity, and the development of communities with place-names in *plou* has perhaps created a misleading causal relationship between these events (ÉC 20.177–97; Astill & Davies, *Breton Landscape* 111, 114–15).

Lives of saints, especially those written a relatively long time after the events they narrate, are very difficult to use as historical sources. These Lives notoriously rely on *topoi,* which give an impression of uniformity. Apart from the Life of St SAMSON of Dol (discussed below), none of the Lives of the Breton saints show significant

knowledge of their subjects. Several Lives date from the 9th century, many more from the 11th century, and the rest were composed in the 12th century or later, culminating in a flurry of 'scholarly' activity in the 17th century which saw the invention of several more Lives. The Lives of the Breton saints overwhelmingly describe a period of conversion and foundation of churches from around the 5th to the 7th century. Many show their subjects travelling between one or more of the Celtic regions and meeting other Breton, Brythonic, or Celtic saints. Some show particular affinities with other Lives of Celtic saints in the formulaic events (*topoi*) that they employ, which strongly suggests that the Lives of saints from other Celtic regions were a significant source of hagiographic models.

The first Life of St Samson of Dol, the earliest Life of a Brythonic saint, tells of a saint and his companions coming to Brittany, in this case from south Wales via Cornwall. The Life is long and detailed, and seems to be full of useful information about the religious (including pre-Christian), social, and political life of the 6th century, when its subject almost certainly lived. St Samson is thought to be the signatory to the council of Paris of *c.* 562 (Clercq, *Concilia Galliae A. 511–A. 695* 2–10). His Life seems to have been written in Brittany, by a monk of the house the saint founded at Dol. It claims to have oral and written information (both derived from sources, some named, close to the saint himself) about the saint's activities on both sides of the Channel, as well as personal experience of the sites it discusses. The truth of these claims is highly debated, as is the date of the Life—it was written sometime between the early 7th century and the mid-9th century—but opinion is divided as to when exactly between these points. The portion of the Life concerned with the saint's life in Wales and Cornwall, by far the longest portion of the text, shows the saint as a reluctant participant in coenobitic MONASTICISM, and in pursuit of an increasingly eremitical life. The Breton section presents the saint much less as a monastic founder and much more as a diplomat: it describes the founding of two religious houses, Dol and Pental, but climaxes with an account of the saint's intervention with a Frankish emperor on behalf of two princes of DOMNONIA. The Frankish emperor seems to be a conflation of several historical figures, and the almost complete obscurity of Domnonia's early history renders the two princes unverifiable.

The 9th century and the Carolingian Renaissance

By the 9th century Brittany was well within the Frankish orbit, although direct political control was more theoretical than real, especially in the west of the peninsula. The Carolingian emperor, Louis the Pious, singled out NOMINOE as his representative, *missus imperatoris,* in Brittany. As we have seen above, the Emperor attempted, with some success, to regularize some ecclesiastical practices. In religious affairs, Nominoe is most notably associated with the attempt to establish a Breton archbishopric, independent of the metropolitan seat of Tours. The defining event of this struggle was the so-called 'synod' of *Coitlouh* (identification uncertain) of 849, at which Nominoe deposed the five existing Breton bishops under obscure circumstances (see Hartmann, *Monumenta Germaniae Historica, Concilia* 3.185–93), effectively putting the Breton dioceses outside Carolingian (and papal) control. One of Nominoe's successors, SALOMON, presided over an attempt to persuade Pope Nicholas I that St Samson of Dol had founded a Breton archbishopric not historically subject to Tours. The quest for archiepiscopal status for Dol was to continue until the 12th century: in 1076 Gregory VII sent the *pallium* to Dol, but in 1199 the matter was decisively settled by Innocent III in favour of Tours.

The 9th century was a period of visible activity in Breton churches. Lives of saints (with the exception of that of St Samson of Dol, discussed above), as well as manuscripts, date from this period onwards. While learned culture clearly looked to the Continent, the influence of other Celtic regions is clearly visible, in particular in the evidence of manuscripts: British and Irish texts were copied in Brittany, in a mainly insular version of the Carolingian script, and glossed at times in several CELTIC LANGUAGES. Hagiography, as noted above, also shows the Bretons looking more across the Channel than to the rest of the Continent for literary borrowings.

The 9th century also saw the beginning of Viking raids which were to devastate Brittany's political and ecclesiastical structures. Breton historiography represents the Viking raids as initiating what looks like the migration in reverse: political and ecclesiastical rulers fled with their treasures and relics to Britain and to France, leaving Brittany empty and devastated. This, it is clear, is overly dramatic. Nevertheless, some political rulers and clerics (carrying relics) clearly did take

refuge elsewhere: to ÆTHELSTAN's involvement in the plight of these rulers and clerics, for example, we owe renewed interest in Breton saints shown by churches in the south-west of England. The literary and political Breton renaissance of the 11th century is also clearly part of a larger recovery from the effects of the Vikings on the part of local political and religious leaders. Moreover, as part of the larger European monastic revival, religious houses were founded or refounded, including many that attracted both men and women (sometimes, as in the case of Robert of Arbrissel, to considerable scandal). New orders, such as the Cistercians, gained in popularity, at times under specifically Norman aegis, and Breton monasticism came to resemble, and to be in contact with, that of the larger European world in both spiritual and economic terms.

Angevin Brittany

In Brittany, as elsewhere in his dominions, the Angevin King Henry II was effective in centralizing, rationalizing, and establishing control over the Church. Henry took an active interest in Breton ecclesiastical politics (for example, he supported Dol against Tours in the struggle for the *pallium,* with some success, albeit temporary). His efforts hastened and strengthened the adoption of the Gregorian reforms throughout Brittany. Dynastic control of bishoprics waned, although that by priests seems to have continued. With the death of Richard I, the Breton duchy (as it was by then constituted) became a direct fief of the Capetian crown and, ultimately, was absorbed politically into France.

§2. PROTESTANTISM IN BRITTANY

Protestantism has never been the religion of the majority in Brittany (BREIZH), and it is unlikely that there were more than about 5000 adherents at any given time during the 17th to the 19th century. The vast majority of the population remained Roman Catholic. Nonetheless, Breton Protestants have had a cultural significance, particularly in the shaping of Modern BRETON LITERATURE and standard literary forms of the BRETON language in the 19th and 20th centuries.

The Breton Huguenots

From the 1530s Protestantism gained ground among élite social groups in Brittany: cultivated craftsmen, printers, magistrates, mariners and soldiers. Protestant Breton seamen may have influenced John Knox, one of the founders of Scottish Calvinist Presbyterianism, when he was a galley slave at the Breton port city of Nantes (NAONED). The great families of the Breton nobility were attracted by Calvinism and at the denomination's peak in Brittany (1565) about a quarter of the upper class were followers. Particularly prominent were the leading aristocratic families, including Rohan, Rieux, Laval, Montjean, Maure, Goulaine, La Chapelle, Gouyon, and Montbourcher. However, there is little evidence that they attempted to impose their religion on their vassals or serfs, who remained firmly Catholic throughout this period. For more than a century, this first wave of Breton Protestantism was tolerated because of the social status of its adherents. It remained confined to cities and castles, mainly in

Breizh-Uhel (that is, French-speaking eastern Brittany), for example, Vitré, Nantes, Rennes (Roazhon), Blain, and Sion, while the Breton-speaking countryside in the west remained untouched. The early Protestants evangelized in French and most of the population of Breizh-Izel (western Brittany) understood only Breton. Attempts to preach in Breton in Morlaix (Montroulez) and Pontivy (Pontivi) were crushed by persecution during the St Bartholomew's Day Massacre, which began on 24 August 1572 and continued into the autumn. Nonetheless, the Huguenots (French Protestants) represented an important part of the scientific and literary achievements of the French-speaking élite, among them writer and magistrate Noël du Fail (*c.* 1520–91), mathematician François Viète (1540–1603), and Roch Le Baillif (doctor, astrologer, alchemist, and advisor to King Henri IV of France). Henri IV had granted freedom of worship and some civil rights to Protestants with the Edict of Nantes in 1598, and most of these noblemen remained professed Protestants until the Edict was revoked by Louis XIV in 1685. This first phase of Protestantism came to an end with this revocation of religious freedom, and many Protestants fled to Britain, Ireland (Éire), and the Netherlands. Protestantism was not to flourish again until after 1815, when a second wave of activity was launched, this time focused on the Breton-speaking rural west.

From tolerance to recovery (1787–1850)

When Napoleon Bonaparte pronounced freedom of worship in 1802, Protestantism was largely confined to foreigners living in France. In Brittany, this meant chiefly businessmen from Switzerland, Germany, and Britain, who lived in Nantes. Congregations were established in a few other large towns such as Brest, Rennes, and Lorient (An Oriant). The presence of English fishermen, businessmen, and tourists led to the building of Anglican churches on the Breton coastal 'Riviera', in Dinard (Dinarzh), Saint-Servan, and Dinan. Chaplains accompanied the numerous Scottish technicians in Saint-Nazaire (Sant-Nazer) and Landerneau (Landerne).

Nineteenth-century Breton Protestantism expanded most rapidly in the west of Brittany. In Brest, the British consul, Anthony Perrier, a member of the Anglo-Irish Ascendancy and a figure of the Enlightenment, gathered around him a small congregation in the 1820s. These comprised largely the British wives of those French officers who had been prisoners of war in Britain during the Napoleonic wars. The Protestant minister Achille Le Fourdrey established himself in Brest in spring 1832, and the community of Protestants there was officially recognized by the French government in 1833.

The arrival of Welsh missionaries marked a major new direction in Protestant proselytizing in Brittany. With communications re-established after the end of the Napoleonic wars, the Protestant churches of Wales were able to begin a project which was of concern to them: to spread their reformed creed among the Bretons, whom modern comparative linguistics had recently rediscovered as their 'cousins' (see pan-celticism). In 1818 the Welsh periodical *Goleuad Gwynedd* (The light of Gwynedd) published a contribution lamenting the 900,000 Breton speakers in France who languished under the 'iron yoke of Catholicism'. In April 1819 the Anglican minister and linguist Thomas Price (also known as 'Carnhuanawc') noted the fact that the Bretons did not possess a complete translation of the Bible, and brought it to the attention of the Committee of the British and Foreign Bible Society. Price then began to collect money in order to finance the work of translating the Bible into Breton. His collaborator, the Revd David Jones, met Jean-François Le Gonidec, one of the founding members of L'Academie Celtique in Paris, who had already published an authoritative Breton dictionary and grammar (see dictionaries and grammar [5]). Le Gonidec finished the translation of the Bible in 1835, although only the New Testament was published. His highly literary use of language represents a major milestone in the revival of a high-culture written style in Modern Breton. In 1835, the Revd John Jenkins settled in Morlaix, with funding from the Baptist missionary society and at the suggestion of the minister of Brest. Seven years later, the Methodist James Williams came to south Finistère (Penn-ar-Bed) and took charge of the Protestants of Quimper and Lorient. Together, they revised Le Gonidec's translation of the Bible and published multiple small works in Breton. Using colloquial Breton speech, they succeeded in reaching the rural population, mainly with the aid of itinerant pedlars. Literacy in Breton was key to their efforts, and thus the first book written in Breton by John Jenkins (1807–72) was a primer, *An A B K* ('A B C' in the Breton alphabet).

After 1870: a strong Protestant proselytism

The foundation of the Third Republic in 1870, during the Franco-Prussian War, opened a new era in Breton Protestantism, which was by then more readily accepted. The half-century between 1875 and 1925 marked the peak of Protestant missionary activity. The Methodist charity in Quimper, restarted by the minister William Jenkyn Jones with the aid of his brother Evan and the Breton evangelist Le Groignec, created lasting congregations in Douarnenez and in the ports of the Bro-Vigoudenn (Bigouden country) in south-west Brittany, at Pont-L'Abbé (Pont-'n-Abad), Lesconil (Leskonil), Léchiagat, and Pennmarc'h. The impact on the population of fishermen of the region was remarkable. The Baptist mission in Morlaix multiplied its daughter foundations on the north coast, in Plougasnou (Plouganoù)/Roscoff (Rosko), and diffused into the inland region of Argoad. A school was built at Guilly in Poullaouen as well as chapels in Lannéanou, at Kerelcun in La Feuillée (Ar Fouilhez) and at Huelgoat (An Uhelgoad). The successor and son of John Jenkins, Alfred-Llywelyn Jenkins, carried out this work, together with the missionaries Collobert and David. The Baptist mission in Trémel (Tremael) also became a major centre; its influence peaked around 1900, owing much to the personality of its charismatic minister G. Le Coat, who was assisted by his nephew, Georges Somerville.

A new wave of Protestant evangelism in the early 20th century multiplied the number of places of worship on this part of the north coast of Brittany. The Quaker Charles Terell founded a meeting house at Paimpol (Pempoull) in 1906, which was later taken over by the Welsh Baptist minister Caradoc Jones.

In 1905, with the approval of the Reformed Church in Rennes, the Protestants of Saint Brieuc (Sant-Brieg) employed a Methodist minister, Jean Scarabin. Scarabin organized a major missionary drive in the *département* of Côtes-d'Armor (formerly Côtes du Nord, Aodoù-an-Arvor), and particularly on the coast in the region of Perros-Guirec (Perroz-Gireg). By the 1920s the Methodist mission of Côtes-d'Armor employed three ministers and evangelists, who had noteworthy results in Lannion (Lannuon) and Perros-Guirec.

The Calvinist churches of the major towns received the support of a major French Protestant organization, the 'Mission Populaire' in Paris, which financed the installation of meeting places in the workers' quarters of the cities of Nantes, Rennes, Brest, Lorient, and Saint-Nazaire (Sant-Nazer).

The Protestants denounced the cultural backwardness of the province, starting with the weak local production of newspapers and writings in Breton. They considered this void to be an indictment of Catholicism for having failed in its rôle as a cultural and educational institution.

In the course of the 19th century the general progress of EDUCATION permitted a growing output of Protestant works in the Breton language. From 1830 to 1930 several million pamphlets, *gwerzioù* (BALLADS) and gospels, more than 100,000 New Testaments and as many issues of the *Almanach mad ar Vretoned* (The Bretons' good almanack), 20,000 Bibles and numerous polemical works came off the presses. The most productive centre for Protestant publications in Breton at this period was Trémel. The Baptist minister Le Coat and his brother-in-law François Le Quéré were admirably equipped to express Protestant ideas in their native TREGER dialect (see BRETON DIALECTS), adapting the message to rural Breton sensibilities. Their poems and songs on broadsides mocked the Catholic clergy and became bestsellers (see BRETON BROADSIDES). In Breizh-Izel, broadside pedlars were the spearhead of Protestant proselytism. From the middle of the 19th century there were ten or more of them continuously travelling the Breton countryside, going from market to market selling their popular publications. Those who were not singers themselves worked together with singers, and their evangelical *gwerzioù* sometimes inspired spontaneous gatherings in market places.

The written controversy between Catholics and Protestants, which mainly occurred between 1830 and 1920, shows a great variety, ranging from theological dispute to songs. The debate found expression in books, magazines, newspapers, and broadside sheets. After 1914, Protestant publications in Breton declined steeply. The Breton Bible, a legacy of 19th-century Protestantism, was adopted by the Catholic Church in the later 20th century and endures as the one great monument of Protestant literary activity in Brittany.

The second characteristic of Protestant strategy in Brittany between 1832 and 1914 was its constant association with anticlerical, republican, reputedly Freemason, and socialist movements. Under the Second Empire (1852–70) in particular, the Protestants formed

a lasting alliance with the *Bleus* ('Blues', supporters of a republican constitution for France) who, as secularists, were also viewed with hostility by the Catholic clergy. Tradition and family solidarity weighed so heavily that it was virtually impossible to achieve conversions in social settings where the parish priest was a presence. The ministers thus focused their efforts primarily on places that were physically remote from Catholic churches. Almost all of the rural and coastal Protestant foundations in Breizh-Izel belong to an 'anti-establishment diagonal' running from Trégor in the north via Poher to the Bro-Vigoudenn in the south. Failing in their goal to convert entire parishes, ministers enjoyed their main success in villages distant from parish churches, i.e., rural communities at the edge of the forest in Guilly or in the clearance of the heath in Kerelcun, and recent settlements of fishermen at Léchiagat, Guilvinec (Gelveneg), Diben, and Plougasnou. These isolated communities tended naturally to form a sense of solidarity, in which the Catholic superintendent, as an outsider, came to be distrusted.

Christianity in the Celtic countries [6] Cornwall

Christianity may have reached Cornwall (KERNOW) during the ROMANO-BRITISH period, and was probably a significant force by the 5th century when Christian Latin INSCRIPTIONS begin to survive on tall 'pillar' stones commemorating local aristocracy. The author of the earliest Life of St SAMSON, written in Brittany (BREIZH) between the early 7th and mid 9th centuries, believed that this Welsh saint crossed Cornwall in the mid 6th century—calling at a monastery at Docco (St Kew), confirming the baptisms of local people, and founding another monastery at an unspecified site. ALDHELM, the Anglo-Saxon bishop of Sherborne, visited Cornwall in about 700 and wrote a letter to Gerontius (Gerent), the king of the region, urging him and his clergy to adopt the Roman CALENDAR (see EASTER CONTROVERSY; GERAINT FAB ERBIN). During the 9th century, Cornwall and its Church came under the control of the kings of Wessex. King Ecgberht of Wessex (†839) granted estates to the bishops of Sherborne, and a Cornish bishop named Kenstec, based at Dinuurrin (possibly Bodmin), acknowledged the authority of the Archbishop of Canterbury.

By the time that Cornwall became a county of England in the 10th century, the early monasteries had evolved into minsters staffed by canons, priests, or clerks. Fifteen minsters are recorded in the Domesday Survey of 1086, all of which were also parish churches. There were many smaller religious sites by the 10th century that had acquired or would acquire graveyards, church buildings, and parishes. These eventually numbered about 155, giving a total of about 170 parishes in the county by 1291. Cornish churches were usually named after Brythonic men or women, who came to be regarded as saints and patrons of the churches. Over 100 churches had a unique saint, while another 62 commemorated saints from other Brythonic lands, chiefly from Brittany with a few from Wales (CYMRU). Some other churches eventually adopted international and English patron saints. A series of bishops based at Bodmin and St Germans ruled Cornwall until 1050, when the diocese was merged into that of Exeter in Devon.

During the 12th century, following the Norman Conquest, the minsters declined in number. New religious houses were founded, and there was a great rebuilding of parish churches, often on cruciform plans. MONASTICISM did not make great gains in Cornwall, however, although much property there was granted to monasteries outside the county. Inside it, three minsters were converted into Augustinian priories at Bodmin, St Germans and Launceston, and some small Benedictine, Cluniac, and Augustinian cells were established, dependent on larger houses elsewhere. Two communities of friars settled at Bodmin and Truro in the 13th century, but other major religious orders never entered Cornwall and there were no nuns. Medieval Christianity flourished chiefly in the parish churches and in the collegiate church of Glasney at Penryn, founded in 1265 as a kind of surrogate cathedral (see GLASNEY COLLEGE). Many parish churches were rebuilt in the 15th and early 16th centuries, housing numerous

cults of international saints supported by groups of parishioners. Hundreds of additional chapels were founded in gentry houses and outlying communities, or to promote saint cults, and pilgrimage took place, notably to St Michael's Mount. Religious drama became popular, and plays on Biblical and hagiographical topics survive in the CORNISH language, linked with Camborne, Kea, and possibly Glasney (see BEUNANS KE; BEUNANS MERIASEK; CORNISH LITERATURE; ORDINALIA).

The Reformation of the 1530s and 1540s closed the religious houses, abolished images and pilgrimage, and replaced Latin worship by English. This caused discontent, culminating in the so-called Prayer-Book Rebellion of 1549, during which protesters from Cornwall and Devon besieged Exeter, before being routed by royal troops. Under Queen Elizabeth I (1558–1603), Cornwall became nominally Protestant, although the contemporary Cornish writers Richard Carew and Nicholas Roscarrock state that saints' days continued to be celebrated and holy wells visited for cures or divination. In the 17th century there was strong political support in Cornwall for Charles I, and consequently for the Church of England or 'Anglican Church'. Protestant nonconformists (such as Baptists and Presbyterians) had little impact in the county during this period.

The Anglican dominance was challenged by the rise of Methodism at the end of the 18th century. This began as an evangelical movement within the Church of England and then, from the 1780s, seceded to form not one but several different Methodist denominations. At the national English census of attendance at worship in 1851, Methodists and other nonconformists in Cornwall greatly outnumbered Anglicans. Later, there was also a modest growth of Roman Catholicism. The Church of England revived in the second half of the 19th century. Religious movements (High-Church 'Tractarianism' and Low-Church evangelicalism) instilled fresh vigour into clergy and their congregations, there was much church building and restoration, and a bishop and diocese were re-established in 1877, centred at Truro. The building of Truro Cathedral (1880–1910) gave Anglicans a major building and powerful symbol.

Cornwall's economy declined in the 20th century due to the extinction of mining, the principal industry, leaving the county poor by British standards. This was partly offset by tourism and by immigration (especially of retired people). A parallel decline took place in the Christian churches in terms of church attendance, economic resources, and vocations to be clergy, while interest in 'new age' ideas led to a growth of spirituality that was not necessarily Christian. The decline was most spectacular among the Methodists, despite the reunion of nearly all their denominations in 1932. They lost their superiority of numbers, and a great many of their chapels were closed. The Church of England, while also suffering losses, benefited from the immigration and managed to maintain virtually all its ancient places of worship, while the Catholic Church made further moderate gains of churches and worshippers. All the Christian churches experienced positive developments in terms of new liturgies, ecumenical links between the denominations, and the opening of church government and ministry to wider categories of people. Collectively, they remain a strong force in EDUCATION, charity and welfare, and in social life (especially in the countryside).

Christianity, Celtic

'Celtic Christianity' is a phrase used, with varying degrees of specificity, to designate a complex of features held to have been common to the Celtic-speaking countries in the early Middle Ages. Doubts concerning the term's usefulness have repeatedly been expressed, however, and the majority of scholars consider it to be problematic. There are three ways in which 'Celtic Christianity' has been conceived: (1) as a separate institution or denomination within Chris-

tianity, a 'Celtic Church' which can be contrasted with the Roman Church or the Orthodox Churches of the East; (2) as a body of distinctive beliefs and practices; and (3) as a more impalpable assemblage of attitudes and values. The article concludes with a brief look at some of the motivations that have lain behind the positing of 'Celtic Christianity' as a distinct phenomenon.

§1. 'THE CELTIC CHURCH'

The view that at one time there existed a 'Celtic Church', uniting the Celtic-speaking peoples with one another and dividing them from the rest of Christendom, has often been asserted, even by scholars as eminent as Heinrich ZIMMER (*Celtic Church in Britain and Ireland*), but it no longer has a place within serious scholarly discourse. There is no persuasive evidence which can be advanced in support of such a model. Thus, when COLUMBANUS, in a letter to a synod in Merovingian Frankia in the late 6th century, defends his own usage as being that of 'all the churches of the entire West' (*omnes . . . ecclesiae totius Occidentis*), he is speaking not of a monolithic institution but of a multitude of communities (Walker, *Sancti Columbani Opera* 16–17). Again, it is misleading to portray the debate concerning the date of Easter at Whitby in 664 as one which pitted 'Celts' against 'Romans' (see EASTER CONTROVERSY). Those on the losing side were arguing not on behalf of a 'Celtic Church', but specifically of the traditions of the monastery of Iona (EILEAN Ì), whose foundation of LINDISFARNE exercised a dominant rôle in the spread of Christianity in northern England. All the councils and ecclesiastical enactments of the early period were more or less local—even the sweeping adoption in 697 of the CÁIN ADOMNÁIN ('ADOMNÁN's Law'), a law protecting non-combatants, did not extend beyond the Gaelic and Pictish spheres.

To these considerations should be added the frequent assertions of harmony with Rome in early sources: Columbanus's indignant denial that any of the Irish has ever been a schismatic (Walker, *Sancti Columbani Opera* 38–9). The early *Vita prima Brigitae* relates St BRIGIT's insistence that the *ordo et universa regula* ('order and universal rule') of Rome, without any modification, be instituted at Kildare (Cill Dara) (Colgan, *Trias Thaumaturga* 539). The deference of the see of Armagh (ARD MHACHA) to Rome was prescribed in the (evidently 7th-century) *Liber Angeli* (Bieler, *Patrician Texts* 188–91). In 6th-century BRITAIN, GILDAS wrote of clerics 'sailing across seas and traversing wide lands' in search of ordination (Winterbottom, *Gildas* 54, 120). *Kanones Wallici*, a collection of early Breton Latin laws, sometimes regarded as canon law, cite the authority of the 'books of the Romans' (Bieler, *Irish Penitentials* 136–7; see BRETON LITERATURE §2).

§2. 'CELTIC' PRACTICES AND BELIEFS

Even given all of the above, it can certainly be maintained that the churches of the Celtic-speaking countries had much in common with one another. There are good historical reasons for this. Ireland (ÉRIU) derived its Christian faith primarily from Britain (see PATRICK; UINNIAU), and its churches remained under strong British influence during the 6th century. Ireland in turn was responsible for the evangelization of much of Scotland (ALBA). Brittany (BREIZH) was settled from Cornwall (KERNOW) and Wales (CYMRU), and retained a vivid sense of the British background of its early saints; at a later date, Irish manuscripts found their way to Breton monasteries. As a result of such connections, the same or similar usages can be found in various parts of the medieval Celtic world, but it should be stressed that such correspondences have nothing to do with 'Celticity' as such. Resemblances that are as close, or closer, can be found in non-Celtic lands which were subject to Gaelic influence (notably in Northumbria, see BRYNAICH). Furthermore, few or none of these 'Celtic' features can be shown to have been present at any given time throughout the Celtic area.

From the 6th century onward, a divergent Easter reckoning has been the 'Celtic' trait which has attracted the most attention (see EASTER CONTROVERSY). While various systems prevailed elsewhere, among which the 19-year cycle of Victorius of Aquitaine came to predominate, the 84-year cycle attributed to Anatolius was favoured by the Britons, Gaels, and PICTS. The correct date for the celebration of one of the most important Christian feasts, in which the cosmos is attuned to the Christian theme of the triumph of light

and life over darkness, and the rival claims of unity of observance versus cherished tradition, were clearly issues of real importance, but they need to be placed in context. There is no question of the 84-year cycle being a 'Celtic' invention: it seems to have been introduced into Britain and Ireland as part of the spread of the cult of St Martin of Tours. Different regions went over to mainstream usage at different times, spanning the interval from *c.* 630 (southern Ireland) to 768 (north Wales). Certainly in Ireland, and probably elsewhere, other systems were known, although they seem to have been little practised. The attempt by adherents of the Victorian cycle to give the controversy a doctrinal dimension, by claiming that their opponents subscribed to the Quartodeciman heresy (whereby Easter was to be celebrated on the 14th day of the moon), rested on a misunderstanding.

The claim that Irish and British clerics used an irregular tonsure is rendered more colourful by the fact that some of its critics associated this tonsure with the wizard Simon Magus: there may be some connection here with traditions that the DRUIDS as well had a tonsure of their own. Here too, however, practice within the Celtic areas (and indeed beyond) was by no means uniform: thus the early (6th-century?) Irish tract *Synodus episcoporum* (The synod of the bishops) penalizes clerics who do not cut their hair 'after the Roman custom' (*more Romano*; Bieler, *Irish Penitentials* 54–5), and criticism of the British tonsure is attributed to Gildas (Wasserschleben, *Die irische Kanonensammlung* 242).

While there is considerable evidence for divergent Irish and (to an even greater degree) British practice in matters of liturgy, baptism, and ecclesiastical administration, the usages in question seem only to have characterized specific regions, and not necessarily to have been uniformly present there. Only the Britons were accused of practising a heterodox baptism; traces of an archaic liturgy in Wales find no counterpart in the eclectic, but largely Gallican, worship attested from Ireland; and the superiority of abbots to bishops appears to have been limited to some parts of the Gaelic sphere of influence. Those whose worship contrasted with Roman norms in Ireland were called simply 'Irish' (*Hibernenses*; see also COLLECTIO CANONUM HIBERNENSIS): there was no sense that they felt an allegiance to anything broader than local custom. Other practices which became current, such as marriage on the part of the higher clergy and hereditary proprietorship of churches, were characteristic of unreformed usage throughout Christendom. The only peculiarly 'Celtic' thing about them is that the reform movement championed by Pope Gregory VII reached the CELTIC COUNTRIES later than it did other parts of Europe. With respect to theological doctrine, none of the various imputations of heresy directed at groups in medieval Ireland or Britain appear to have had any substance.

Seen against this background, features which were genuinely common to Brythonic and Gaelic Christians can be investigated and appreciated, without being seen as a pretext for painting an excessively homogeneous picture of the religious culture of the islands. There is much here which is worthy of consideration: the pervasive influence of Britain on Ireland in matters of religious vocabulary, monastic life, and scribal and penitential practice; the extension of the cults of saints from one Celtic area to another; and comparable approaches to Biblical scholarship and pastoral care. Again, however, it must be borne in mind that several of these features have parallels in contemporary England.

§3. 'CELTIC' ATTITUDES AND VALUES

These are the most difficult aspects of 'Celtic Christianity' to define—perhaps designedly so, since it could be argued that they have arisen largely in an attempt to salvage some valid application for the label in the wake of damaging scholarly criticism of the conceptions discussed above. If the term 'Celtic Christianity' is used to designate something as diffuse as a type of spiritual flavour, assessments of its presence, absence and character will almost inevitably be subjective. Such subjective assessments abound, and are primarily indicative of modern preoccupations and desires: a point which is taken up again in the concluding section. In the paragraphs which follow, there is an assessment of a few of the elements which have most frequently been held to characterize a 'Celtic Christian' mentality.

If there is more to 'Celtic Christianity' than the important—but by no means exclusively Celtic—common features mentioned at the end of the preceding section, then what could be its basis? Unless we succumb to racial stereotypes, there would seem to be only one possible answer to this question: that the pre-Christian cultures which the new religion encountered in the various Celtic countries resembled one another in significant ways, reflecting a shared inheritance; and that this substratum had a formative influence on the nascent churches. Such a view has led Oliver Davies, for example, to speak of 'spiritual forms which are more generally common to the Celtic peoples as a whole and whose origins lie in the interaction of original Celtic primal or tribal religion with the young Christianity' (*Celtic Christianity in Early Medieval Wales* 5).

This scenario is not without its appeal, but cannot readily be supported by the evidence. Thus there seems to have been no uniformly 'Celtic' attitude towards the old religion. In Ireland, clerical condemnation of paganism existed side by side with a keen curiosity concerning the native past, and with attempts to accommodate aspects of non-Christian belief within a Christian framework. But there are no persuasive indications of a corresponding mentality in Wales, where monastic scriptoria (centres for producing manuscripts) do not seem to have thrown themselves into the task of copying vernacular sagas, and where much of the earliest surviving evidence for native legend (allusively present in the 'mythological' poems in LLYFR TALIESIN) occurs in a context which is outspokenly anti-clerical.

One of the features most frequently claimed for a 'Celtic Christian' mentality is a sense of the natural world as God's handiwork, leading to a spirituality which contemplates and celebrates the creation. It is indeed the case that such an attitude is reflected in much Irish devotional poetry (see NATURE POETRY), and also in the cosmological interest evident in some theological writings; and it is certainly striking that some early WELSH POETRY (notably the longer of the two sequences of ENGLYNION in the JUVENCUS manuscript) is closely comparable to what we find in Ireland. Such correspondences are worthy of further study, but they cannot be used to characterize 'Celtic Christianity' as a whole; other, and more disparaging, attitudes to the material world can, for instance, also be found in Irish writings. Nor is a 'Celtic' enthusiasm for nature necessarily to be seen as a relic of paganism: the terms in which it is expressed are clearly indebted to such patristic writers as St Augustine of Hippo (†430), and there is no reason not to see much of its inspiration as deriving from the same source.

§4. MOTIVATIONS FOR POSITING 'CELTIC CHRISTIANITY'

A forerunner of the modern idea of a 'Celtic Church' can be found as far back as the 13th century, when the claim that Joseph of Arimathaea founded the church of Glastonbury seemed to give British Christianity an antiquity greater than that of Rome; in his *Discourse on the Religion Anciently Professed by the Irish and the British* (1623), James Ussher (1581–1656) postulated such a church as a predecessor for the Protestant Church of Ireland. A whole series of subsequent writings arguing for the existence of a 'Celtic Church' have had the same sectarian agenda. During the 19th century such a concept of a 'Celtic Church' gained widespread support, for it fitted the 'diverse branches' theory favoured by Anglican 'High Churchmen', and could account for variations in practice, found in many texts, from what was seen as a monolithic 'Roman system'.

A vision of 'Celtic Christianity' which was not so determined by denominational politics was promulgated by the Breton scholar Ernest Renan (see PAN-CELTICISM), in an essay published in 1854. Renan, estranged from his Roman Catholic roots, held that 'to the Celts . . . Christianity did not come from Rome; they had their native clergy, their own peculiar usages, their faith at first hand.' Furthermore,

> The Church did not feel herself bound to be hard on the caprices of religious imagination, but gave fair scope to the instincts of the people, and from this liberty there resulted a cult perhaps the most mythological and the most analogous to the mysteries of antiquity to be found in the annals of Christianity.

Allowing for the nuances of individual expression, Renan's conception has survived virtually unmodified down to the present day, and doubtless has a long future still before it: the progress of scholarship has, however,

rendered it increasingly unacceptable to most specialists. For others, such a conception of 'Celtic Christianity' offers an alternative to aspects of actual Christian practice and belief with which they have become disenchanted, and draws added strength from deeply entrenched romantic ideas concerning the 'Celtic character' more generally.

Chronicle of the Kings of Alba survives in the Poppleton Manuscript, written 1357×1364. Compiled from contemporary eastern Scottish annals (perhaps from Dunkeld/Dùn Chailleann), king-lists and other, possibly later, material by 1202×1214, it covers the period from 843 to 971×995, giving evidence regarding the supposed demise of the PICTS (see LEGENDARY HISTORY; SCOTTISH KING-LISTS), Scandinavian attacks and the emergence of the kingdom of ALBA.

Yn **Chruinnaght** (**Inter-Celtic Festival**) is held annually in Ramsey (Rumsaa), in the Isle of Man (ELLAN VANNIN). The title Yn Chruinnaght means 'the gathering' in MANX Gaelic. Based on a Manx arts festival established in the 1920s, it was revived by folklorist and folk-song and folk-dance collector Mona DOUGLAS (1898–1987) in 1978 and continues to the present day. The original Cruinnaght Vanninagh Ashoonagh (Manx national gathering), a one-day event first held in 1924, provided the blueprint for the revival 53 years later. It was organized by the Manx Society (Yn CHESHAGHT GHAILCKAGH) and the World Manx Association, and was inspired by the life and work of the Manx poet, the Revd T. E. Brown (1830–97). Based on competitions, it thrived until the outbreak of the Second World War when it fell into abeyance. The 1970s saw a cultural resurgence in the Isle of Man, and in 1977 Mona Douglas and a team of co-workers decided to revive the festival. They organized a three-day event called Feailley Vanninagh Rhumsaa (Ramsey Manx festival), which featured a re-enactment of a traditional Manx wedding, complete with dancing and music. This was the precursor of the five-day event held the following year called Yn Chruinnaght.

The new Yn Chruinnaght was to place Manx culture on an equal footing with its Celtic counterparts and today it is officially recognized as the Manx national festival, comparable to the National Eisteddfod of Wales (EISTEDDFOD GENEDLAETHOL CYMRU), the Mòd (see COMUNN GAIDHEALACH) in Scotland (ALBA), and the Oireachtas (FEISEANNA) of Ireland (ÉIRE). In the foreword to the 1978 programme, Mona Douglas noted the difference between the new festival and the old: '. . . it places far greater emphasis upon the Manx Gaelic language and the traditional arts as pursued today in both education and public events. [This] has been made possible . . . through the almost incredible interest in the Manx language and culture.'

In recent years, Yn Chruinnaght has spanned a fortnight, beginning with a week of Manx dance, MANX MUSIC and MANX LITERATURE competitions, and an arts and crafts exhibition. The second week is an inter-Celtic event, with visitors from Scotland, Ireland, Wales (CYMRU), Cornwall (KERNOW), and Brittany (BREIZH) taking part. It comprises concerts and céilidhs, a parade, outdoor displays, music sessions and workshops, all in a variety of venues.

As it continues to evolve, Yn Chruinnaght provides a platform for up-and-coming talent in the fields of music and dance, and also serves as an indicator of the status of traditional Manx culture in the modern world.

Chloë Woolley

Chwedlau Odo (Odo's stories) is the name given to a Middle Welsh translation of parts of the Latin *Narraciones* (or *Parabole*) *Sancti Odonis* by the English churchman Odo of Cheriton (†1247). The earliest and best text is found in Llanstephan MS 4, *c.* 1400. Odo's internationally popular work comprised over a hundred moralizing tales illustrating various virtues and vices of both clerics and the laity. They are acted out generally by animals and derive from a number of sources, especially Aesop's Fables, the *Roman de Renart*, and various bestiaries, although there may be an original element as well. Twenty-four of Odo's tales were selected, somewhat haphazardly, but were well rendered by the anonymous translator.

Chwedleu Seith Doethon Rufein ('Tales of the Seven Sages of Rome') is a Middle Welsh independent retelling by Llywelyn Offeiriad (Llywelyn the Priest) of the international popular tale 'The Seven Sages of Rome'. The earliest extant text occurs in Jesus College MS III (LLYFR COCH HERGEST), *c.* 1400, but the date of composition could be considerably earlier. The story has been traced to eastern prototypes, beginning with Indian versions over 2000 years old, followed by Persian and Arabic versions of the 8th century AD. A western Latin version set in Rome survives from the later 12th century, *Dolopathos, sive De rege et septem sapientibus* (Dolopathos, or concerning the king and the seven sages). The story is structured as a series of brief narratives told by the Emperor of Rome's wife, which she uses in an attempt to convince her husband to kill his son, her stepson. The seven sages wish to save the young man and ultimately succeed, as it becomes clear that the Emperor's wife is maliciously conniving for her stepson's inheritance. Llywelyn's retelling is masterly and, interestingly, shows the influence in parts of some of the native Welsh tales, particularly those which share such key themes with *Chwedlau Saith Ddoethion Rhufain* (the Modern Welsh spelling of the title), such as the malicious and grasping stepmother in CULHWCH AC OLWEN and the majesty of the Roman Empire in *Breuddwyd* MACSEN WLEDIG.

Chysauster, around 5 km (3 miles) north of Penzance, is one of the typical late IRON AGE and Roman period settlements in Cornwall (KERNOW). It has produced the best-preserved examples of the characteristic type of building found in the westernmost regions of Cornwall—the courtyard house, which has a number of relatively small rooms or cells partially set into the thickness of the outer wall, located around a central open area. The site was probably occupied as early as the 1st century BC, but witnessed its greatest activity during the ROMANO-BRITISH period, in the 2nd and 3rd centuries AD. The site also has a fogou (an underground passage), a common feature in contemporary settlements in Cornwall.

Cimbri and Teutones were tribes of the later European Iron Age. Located in the North Sea area, east of the Rhine, they were Germanic in a geographical sense and were often assumed to be Germanic linguistically as well, but this is less certain. The name *Teutones* is most probably Celtic (see also TUATH; TEUTATES). They are also significant in Celtic studies because their movements disrupted core Celtic-speaking areas in central and western Europe, and catalyzed early contacts between the Romans and Celtic groups in and beyond the Alps. Furthermore, the story of the Cimbri and Teutones may help to explain several striking parallels between the Celtic world and ancient Denmark, including the presence of La Tène style artefacts, for example, the Gundestrup Cauldron, in Denmark.

Together with a tribe called the Ambrones, the Cimbri and the Teutones migrated in the 2nd century BC from present-day Himmerland (which preserves the name of the Cimbri) and Thy, in present-day Denmark, by way of the river Elbe, arriving in Noricum in 120 BC, where they defeated a Roman army. In 114 BC the Cimbri and Teutones were driven by the powerful Celtic group known as the Boii from what is now Hungary. They moved south into the Balkans, where they came into conflict with the Celtic groups the Scordisci and the Taurisci. They then advanced westward to enter the territory of the Helvetii in the Alpine region. Around 110 BC they entered the valley of the Rhône, where they defeated the Roman general M. Iunius Silanus. In 105 BC, they moved south and won a major victory at Arausio, now Orange, France. They next moved on to Spain, but were repelled by the Celtiberians (see CELTIBERIA). The Teutones were then decimated in the battle of Aquae Sextiae, now Aix-en-Provence, in 103 BC against the Romans under Gaius Marius. Passing on into northern Italy across the Brenner pass, the Cimbri met a similar fate in the battle of Vercelli in 102 BC, fighting the Romans led by Q. Lutatius Catulus and Lucius Cornelius Sulla. An inscription from Miltenberg on the Main indicates that a group called *Toutones*, the same name in a clearly Celtic spelling, lived there in Roman times (Dessau, *Inscriptiones Latinae Selectae* 9377).

Some early modern writers incorrectly identified the name *Cimbri* with *Cymry*, the Welsh name for the Welsh people (see CYMRU), but the preform for *Cymry* is ancient Celtic **Combrogī*.

Cín Dromma Snechtai ('The Book of Druim Snechta') is a famous early Irish manuscript, now lost. Since the word *cín* is explained in the ancient glossaries as a 'stave of five sheets of vellum', this was probably smaller than other similar Irish manuscripts. Druim Snechta (Drumsnaght, Co. Monaghan/Contae Mhuineacháin) was probably the site of a monastery. The *Cín Dromma Snechtai* is cited as a source by some of the most important extant Irish manuscripts from the 11th and 12th centuries, among them Lebor na hUidre ('The Book of the Dun Cow'), Lebor Laignech ('The Book of Leinster'), Leabhar Bhaile an Mhóta ('The Book of Ballymote'), Leabhar Mór Leacáin ('The Great Book of Lecan'), and Egerton 88. However, the codex was probably lost before the 17th century since Geoffrey Keating (Seathrún Céitinn), who used many other manuscripts to collect material for his work on the (partially legendary) history of Ireland, *Foras Feasa ar Éirinn* (1633/4), does not seem to have had access to it.

On the basis of the scribal annotations in other manuscripts mentioned above, the approximate contents of the lost manuscript have been determined. The codex seems to have mainly contained tales on supernatural characters, along with some of the earliest references to Fiannaíocht, as well as genealogies and legendary history. The comparative compactness of the manuscript suggested by its name is also reflected by these texts, both prose and poetry, which tend to be concisely worded and often short, with a large proportion of texts with prominent verse speeches, among them Immram Brain ('The Voyage of Bran'), *Echtra Conlai* (Conla's adventure), Togail Bruidne Da Derga ('The Destruction of Da Derga's Hostel'), Tochmarc Étaíne ('The Wooing of Étaín'), *Verba*

Scáthaige (The words of Scáthach), and *Forfes Fer Fálchae* (The siege of the men of Fálchae).

Those texts for which is has been possible to demonstrate that they were copied from the *Cín Dromma Snechtai* stand out in the manuscripts in which they are preserved, since linguistically they tend to be significantly more archaic than other texts found in these manuscripts; in other words, they generally belong to the Old Irish rather than the Middle Irish linguistic horizon. The exact date of the writing of the *Cín Dromma Snechtai* is the subject of ongoing debate, however. Initially, scholars proposed the 8th century as the likely date of writing (Thurneysen, *Die irische Helden- und Königsage bis zum siebzehnten Jahrhundert* 15–18; Pokorny ZCP 9.185), although the first half of the 9th century has also been suggested (Thurneysen ZCP 20.218). More recently, a late 9th- or even 10th-century date was put forward (Mac Mathuna, *Immram Brain* 421–69), but this has been disputed by other scholars (Breatnach, *Celtica* 20.191 and Carey, *Ériu* 46.72).

PSH

Cinaed mac Ailpín, also known as Kenneth I of Scotland (Alba), was king of the Scots (840–58) and also of the Picts (*rex Pictorum*, 847–58). He was not the first king in Scotland to rule both, but he did succeed in founding a dynasty that established lasting Gaelic influence over the Picts and gave Scotland its line of medieval kings.

His father, Ailpín mac Echach, is not well documented, and his family may have belonged to a remote branch of the nobility of Dál Riata. Cinaed mac Ailpín began his rise to power with the assistance of Norse allies in AD 836. The marriage of his daughter to King Ólafr the White of Dublin (Baile Átha Cliath) established ties with the Scandinavians, and he took advantage of a Viking massacre of Dál Riata in 839 to seize their kingship in 840. Only after having overcome the last Pictish king Drust in 847 did he become ruler of both Picts and Scots. At the same time he managed to take possession of part of the relics of St Colum cille. Cinaed died in Fothar Tabaicht, i.e. Forteviot, in modern Perthshire, in 858 and was buried in Iona (Eilean Ì). The name *Cinaed*, common amongst the early kings of Scotland, is probably Celtic. It is the source for the English name, *Kenneth*. The second element reflects the Celtic word **aidhu-* 'fire' (= OIr. *áed* 'fire, eye' [neuter *-u-/-i-*stem], also the common Old Irish man's name *Áed* (see aed find; aed sláine), genitive *Áedo*, diminutive Aedán, and the Gaulish tribal name Aedui, all from the Indo-European root **h2eidh-* 'to burn'). The father's name *Ailpín* occurred also among the Picts, and is probably the cognate of the Early Welsh man's name *Elphin* or *Elffin*, attested in both Cumbric and Welsh.

PEB

Cinaed mac Duib, known as Kenneth III, was king of Scotland (*rí Alban*) during the period 997–1005. He seems to have reigned together with his son Giric and was slain by Mael Coluim mac Cinaeda (Malcolm II) in 1005 at Monzievaird, Perthshire. This murder triggered a feud that led to the assassination of Mael Coluim's grandson Dúnchad mac Crináin (Duncan I) by Mac Bethad (Macbeth) in 1040.

On the Celticity of the name *Cinaed*, see Cinaed mac Ailpín. The father's name is probably in origin the same word as Old Irish *dub*, Welsh and Breton *du* 'black, dark'.

PEB

Cinaed mac Mael Choluim, known as Kenneth II, king of Scotland (*rí Alban*), ruled during the years 971–95. He was the son of MAEL COLUIM MAC DOMNAILL (Malcolm I of Scotland). At the beginning of his reign, he plundered the north of England and in 973 he was recognized as overlord of Strathclyde (YSTRAD CLUD), CUMBRIA, and LOTHIAN, thus validating a significant territorial advance for the kingdom of Scotland (ALBA) beyond its core territories in what had been DÁL RIATA and the lands of the PICTS. Cinaed changed the system of succession in the Scottish dynasty of CINAED MAC AILPÍN in order to secure the throne for his son MAEL COLUIM (Malcolm II). This effort to dominate the succession sparked a conflict with his brother DUB and the descendants of Illulb (Indulf). In 977 Cinaed mac Mael Choluim slew his direct rival Amlaíb mac Illuilb (Ólafr son of Indulf). Cinaed's long reign ended in 995 when CUSANTÍN MAC CUILÉN (the future Constantine III, king of Scotland) successfully conspired against him, and slew him at Fettercairn, in modern Kincardineshire. Cinaed is buried at Iona (EILEAN Ì).

On the Celticity of the name *Cinaed*, see CINAED MAC AILPÍN. On his father's name, see MAEL COLUIM MAC DOMNAILL.

circulating schools and Sunday schools, Welsh

The system of circulating schools which existed in Wales (CYMRU) between 1731 and 1779 has been called 'perhaps the most remarkable experiment in mass-religious education undertaken anywhere in Britain or its colonial possessions in the 18th century' (Glanmor Williams et al., *Pioneers of Welsh Education* 11). Its work was continued by the Welsh Sunday schools from the end of the 18th century (see also BIBLE). Both were essential for the successful development of Welsh-medium EDUCATION in the second half of the 20th century.

As in Scotland (ALBA), the Society for the Promotion of Christian Knowledge (SPCK) had attempted to establish charity schools in a number of towns in Wales from the end of the 17th century. Since most of them used English as the medium of instruction, they enjoyed only limited success. The situation was transformed when Griffith Jones (1684–1761), rector of Llanddowror, founded schools 'to teach all the ignorant People . . . to read the Word of God in their Mother Tongue' (Griffith Jones, *Welch Piety* 20). Unlike the SPCK, Jones concentrated his efforts on rural areas, and recommended using WELSH as a medium of instruction. His teachers would work in a community for three to six months, teaching children and adults alike, and move on when the reading habit in the Welsh language had been achieved. Jones's annual reports, published under the title *The Welch Piety*, show that 3750 circulating schools, attended by at least 167,853 people, were held between 1737 and 1761 (Griffith Jones, *Welch Piety* 45). After his death, Madam Bevan (1698–1779) continued his work, and under her auspices a further 3,325 schools with 153,835 pupils were held (Jenkins, *Foundations of Modern Wales, 1642–1780* 377).

When the system of circulating schools finally disintegrated, Thomas Charles of Bala (1755–1814), the famous Methodist preacher, introduced a different pattern. His Welsh Sunday schools developed into all-encompassing, powerful educational institutions. Unlike their English counterparts, developed by Robert Raikes from 1785, they did not restrict themselves to imparting basic religious knowledge to children. They provided a system of 'further education' in the Welsh language for children and adults alike. While the former learnt to read Welsh and acquired a basic religious education, the latter would read and analyse complex religious texts and hold formal discussions on secular issues. At a time when what little secular education was available was strictly in English, the 18th-century Welsh circulating schools and the 19th- and 20th-century Welsh Sunday schools ensured that Welsh children (and adults) learnt to read their native language and were

enabled to discuss not only scriptural matters but also complex topics in their native language. There is no doubt that this contributed greatly to the strength of the Welsh language and its literature in the 20th century.

MBL

Cisalpine Gaul, Latin *Gallia Cisalpina*, literally 'Gaul on this side of the Alps', was the term the Romans used for the area that is roughly northern Italy today, stretching from the ALPINE passes in the north and west to the Apennines in the south-west, including the fertile plains along the river Po to the shores of the Adriatic Sea in the east, with the lands of the Raeti and Veneti to the north-east. Having been dominated by the Etruscans before the rise of the Gauls, it became the primary zone of contact between Romans and Celts for much of the 4th, 3rd and 2nd centuries BC, and the first Celtic area in Europe to come under Roman control.

§1. THE ARRIVAL OF CELTS IN ITALY

How, and especially when, Celts arrived in northern Italy is far from clear, and it was probably a complex and prolonged process consisting of several different factors. For the evidence of the Greek and Roman authors, see the entry on the Celts in ITALY. INSCRIPTIONS in the LEPONTIC language, written in the northern Italic alphabet of 'Lugano', have been found in the area of the GOLASECCA CULTURE, with the earliest dating from the 6th century BC. Identified as one of the CELTIC LANGUAGES, Lepontic thus proves the presence of significant numbers of speakers of Celtic in parts of the Cisalpina. However, the region occupied by the Golasecca culture is limited to a very restricted area around lake Como, a territory later occupied by the Insubres (coinciding with LIVY's account that the first Celtic settlers under their leader BELOVESUS settled in the Insubres territory). Therefore, the situation in this region may not apply to the other areas of the Cisalpina, where large-scale transalpine influences only seem to appear in the Early LA TÈNE period, roughly in the late 5th and 4th centuries BC. Strong HALLSTATT influences on the Golasecca culture, on the other hand, are evident from the 7th century BC, which might indicate an even earlier Celtic presence in northern Italy than at the date given in Livy's account (*I Leponti: Symposium Locarno 2000*; De Marinis, *Celts* 93–102). As such, a single massive Celtic migration into the Cisalpina is far from likely; rather, numerous small migrations and continuous acculturation processes, most of them in the area north of the river Po, throughout at least the 6th and 5th centuries BC seem to have played a rôle in the Celticization of northern Italy, perhaps finalized by a larger migration in the early 4th century BC, which brought most of the former Etruscan areas south of the Po under Celtic control (J. H. C. Williams, *Beyond the Rubicon*).

§2. EXPANSION AND CONSOLIDATION

Whether there was a Celtic mass migration into northern Italy or not, by the end of the 5th century BC most of the Gallia Cisalpina north of the Po was subject to significant 'Celtic' influences. La Tène material culture first appears in this period, mostly in form of decorated belt-hooks which also appear in numbers north of the Alps, with their highest concentration in north-eastern France and the Rhineland (Frey, *Celti ed Etruschi nell'Italia centro-settentrionale da V Secolo a.C. alla Romanizzazione* 9–22; Frey, *Celts* 144–6; De Marinis, *Italia, omnium Terrarum Alumna* 159–259). It is only during and towards the end of the first half of the 4th century BC that large amounts of La Tène material culture appear in cemeteries south of the river Po, in the territories associated with the BOII and SENONES (Grassi, *I Celti in Italia* 65–101). Even though these areas, especially around the Etruscan town of Felsina, had previously had considerable contacts with areas north and north-east of the Alps during much of the 6th and 5th centuries BC, it is only around this time that significant numbers of flat inhumation burials containing typical La Tène metalwork and weaponry appear in cemeteries such as those near Marzabotto and Bologna, the Etruscan town Felsina being renamed/replaced by Celtic BONONIA, the

Cisalpine Gaul

central location of the Cisalpine Boii (J. H. C. Williams, *Beyond the Rubicon*).

For the capture of Rome by the Celts *c.* 387 BC, see the entries on BRENNOS OF THE SENONES and ROME.

By the middle of the 4th century BC most of the Cisalpina seems to have become 'Gaulish', with strong La Tène influences obvious in the material culture, and a historical source considered generally to be of late 4th-century BC date, the *Periplous* of Pseudo-Scylax (Müller 1855: 15–96; Peretti 1979: 198–218), also mentioning Κελτοί *Keltoi* as inhabitants of the shores of the northern Adriatic. Although fortunes in military conflicts with the growing Roman power were shifting, odds seem to have remained roughly even between the Cisalpine Gauls and the Romans throughout much of the second half of the 4th century BC. Settlement patterns during this period became considerably more dispersed, which might fit in with the reference by Cato (*Origines* 2, 13) to the 112 *tribus* (communities) that made up the Boii in northern Italy, or the *vici* (villages) of the Cenomani mentioned by Livy (*Ab Urbe Condita* 32.30.6), which centred around local élites, and which, in turn, formed larger communities of kinship or clientship, or were allied with one another (J. H. C. Williams, *Beyond the Rubicon*).

§3. THE GAULISH CISALPINA IN DECLINE

During the 3rd century BC the Gaulish Cisalpina slowly declined. In the early 3rd century BC considerable numbers of imported Italian goods are found in Celtic burials in the Cisalpina; this has been interpreted as archaeological evidence for the alliances between

Italian peoples and the Celts against the Romans that led to the participation of the Senones in the battle of Sentinum in 295 BC, and the Boian–Etruscan cooperation in the years around 280 BC (Vitali, *Atti e Memorie della Deputazione di Storia Patria per le Provincie di Romagna* 35.30–5). However, fewer settlements than before can be identified, and the amount of prestige material goods in the archaeological record slowly declined. This has been interpreted as evidence for an economic crisis either due to, or leading to, a reduction of north–south long-distance trade, although other reasons have also been considered (J. H. C. Williams, *Beyond the Rubicon*). During this period, the growing military power of Rome also led to a series of military setbacks and losses of territory. Following the battle of Sentinum, the Senones were quickly subjected under Roman rule, with two colonies founded—Sena Gallica in 280 BC and Arriminum in 268 BC—in the territory of the Senones. The Boii also were subject to Roman attacks in the years around 280 BC, but no permanent Roman presence was established at that time. Otherwise, however, Cisalpina seems to have changed little in this period, although there is some evidence for the beginning of urbanization in MEDIOLANON and Brixia (Ceresa Mori, *Settlement and Economy in Italy 1500 BC–AD 1500* 465–76; Arslan, *Archeologia e storia a Milano e nella Lombardia Orientale* 59–73), which may as much have been a response to growing Roman pressure as a local process.

§4. THE ROMAN CONQUEST OF THE CISALPINA

The Roman conquest of the Po valley itself began when Roman armies crossed the Apennines into the territory of the Boii in 225 BC, following the defeat of a Celtic force, probably consisting of Celtic groups from both sides of the Alps, at Telamon earlier the same year. In a swift series of campaigns against the Cisalpine Gauls, culminating in the defeat of the Insubres at the battle of Clastidium in 222 BC and the capturing of Mediolanon. By 220 BC the Romans had reached the Alps for the first time; they moved onwards into Illyria in 219, and by 218 had founded, close to one another, two colonies in the central Po valley—at Cremona, north of the river, and at Placentia to the south. What seemed to be a firm grip, however, slipped in the following years, when Hannibal crossed the Alps during the Second Punic War (218–201 BC), and successfully recruited Celts for his armies. As a result, Roman armies were again facing the Cisalpine Gauls all over Italy, and these may have made up almost half of Hannibal's army in the battle of Cannae (J. H. C. Williams, *Beyond the Rubicon*). As such, it is hardly surprising that Rome again turned against the Cisalpine Gauls immediately following the defeat of Hannibal, campaigning every year between 201 and 190 BC in Cisalpina to gain control over the area.

§5. ROMAN CELTS

In the years following the conquest, the Romans proceeded with a massive colonization programme. Roads (most notably the Via Aemilia and the Via Flamina) were built, colonies founded, in 189 BC at Bononia, in 183 BC at Parma and Mutina, and in 181 BC at Aquilea; in 173 BC unoccupied land in Cisalpina and Liguria was allotted to Roman citizens and Latins. Further colonizing programmes, although less concentrated, continued throughout most of the 2nd century BC. It is during this period that La Tène material slowly disappeared. This may as much be the result of a change in burial practices as anything else, with evidence of burials also disappearing during the 2nd century BC in much of the area north of the Alps, from Switzerland to Hungary (an area that had close stylistic and cultural connections with the Cisalpina in the late 4th and 3rd centuries BC). It is likely that a substantial Celtic population continued to occupy much of the Cisalpina in the same dispersed pattern in this period as had characterized the previous two centuries, with Roman settlers taking up previously unoccupied land, thereby quickly integrating the local population into their own communities. It was only in 89 BC that the inhabitants of the Cisalpina south of the Po became Roman citizens, whether of Celtic or other origin, although even the descendants of former Celtic communities seem to have been so thoroughly Latinized by that time as to be no longer distinguishable, at least as a group. In contrast, the Cenomani and Insubres in the northern half of the Padana are still mentioned by historians at that time. It was only in 42 BC that the inhabitants north of the Po were given Roman citizenship, and the province integrated into Italy (J. H. C. Williams, *Beyond the Rubicon*).

Cistercian abbeys in Ireland

By the time of the death of St Bernard of Clairvaux (1090–1153), who initiated the movement within Benedictinism for a more austere monastic life which became 'the Cistercians', there were already ten such MONASTERIES in Ireland (ÉRIU). While his movement spread rapidly throughout the western church, one of its most spectacular areas of growth was in Ireland, where 36 monasteries (not counting cells and small settlements) were founded before 1272 and where they became a major force in society, religiously and economically. Although no new monastery was founded after 1272 (until Mount Melleray, 1832), they remained an important force in both English (until 1540) and Gaelic Ireland (until its disappearance).

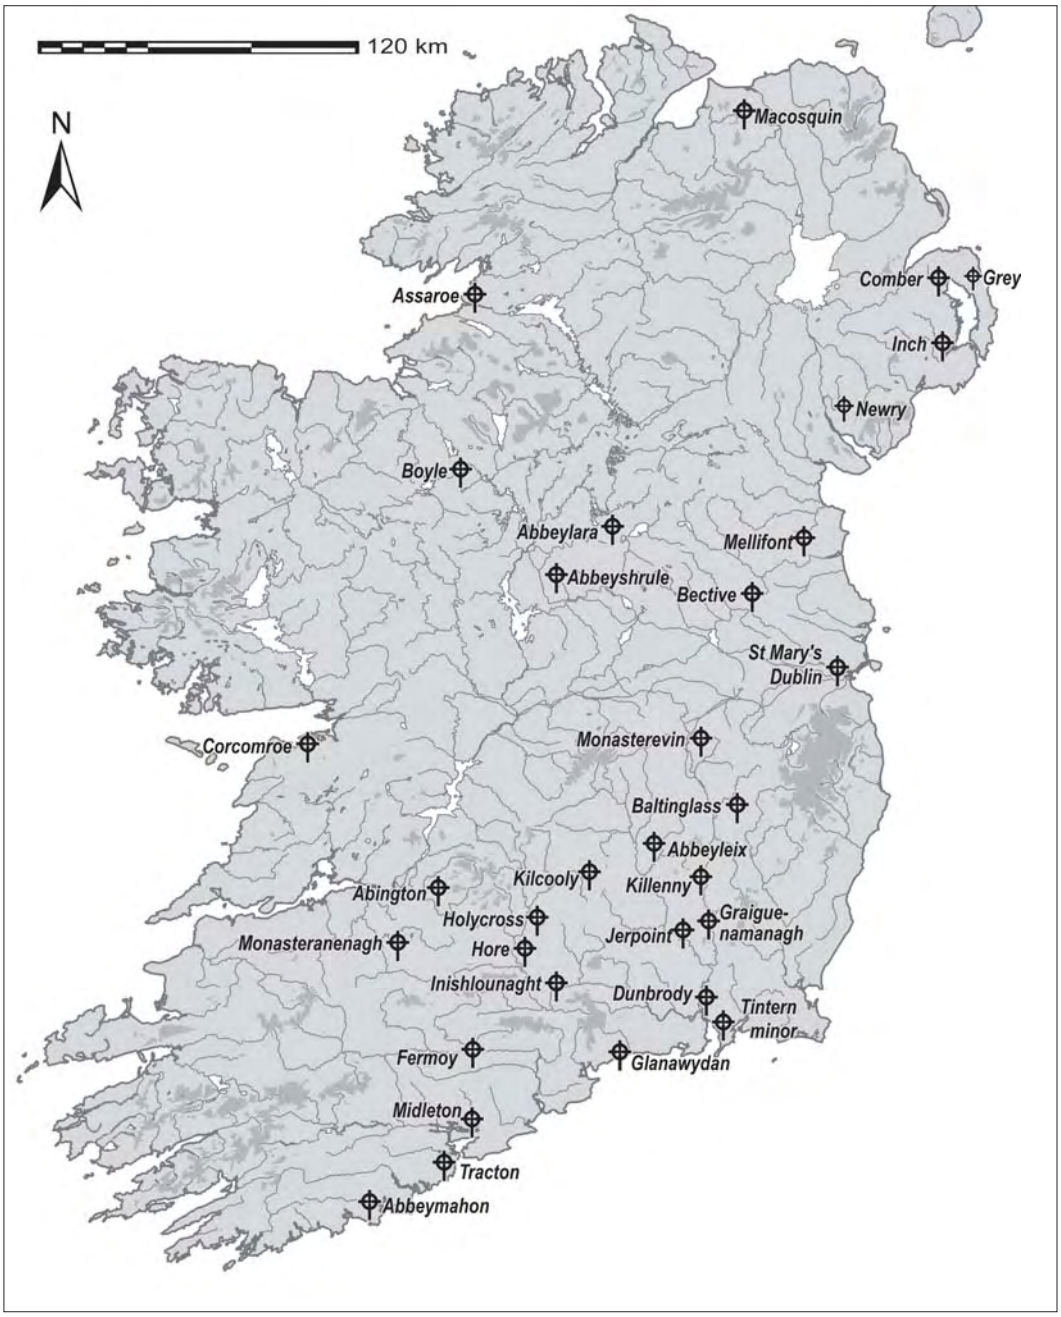
While there had been a foundation from Savigny at Erenagh in 1127 (suppressed in 1177), the arrival of the Cistercians is usually dated to the journey of Mael Maedóc (Malachy) to visit Innocent II in 1139, when he stayed with Bernard while travelling in both directions. He was so impressed that he left four of his party to train in Clairvaux and later sent others to join them. Then, in 1142, these Irish Cistercians, along with others, arrived to found Mellifont (Co. Louth/Contae Lú), which would become the mother-house of 23 other monasteries. It was the abbot of one of these houses (Congan of Inislounaght, founded 1148) who requested Bernard to write the *vita* of Mael Maedóc, who had died in Clairvaux, 2 November 1148.

By 1169 there were twelve monasteries, and the arrival of the Anglo-Normans brought a new pattern of foundations in the territories they acquired. For instance, John de Courcy and his wife founded Inch

Mellifont Abbey, Co. Louth

(1180) and Grey (1193), while William Marshal founded Tintern *minor* (1200) and Graiguenmanagh (1204). These Anglo-Norman sponsored monasteries, ten in total, brought monks from English or Welsh houses (see CISTERCIAN ABBEYS IN WALES), and there was a clear racial divide with the Irish houses, which looked to Mellifont. The clash between the groupings amounted to a monastic civil war, and it was only in 1228 that some order was brought to the situation; yet the divide (which is seen in every aspect of church life: the *ecclesia inter Anglos; inter Hibernos*) continued until the Reformation.

A combination of reasons can be suggested to explain the amazing popularity of Cistercianism in Ireland. The most significant factor is the absence of Benedictinism there. Since none of the new religious movements arising from the 9th century onwards had touched Ireland directly, the Cistercians marked a new way of life which was quite unlike anything found in Ireland, but which was in tune with the spirituality and theology of the Latin church at the time. Second, they arrived as part of the 12th-century revolution within the Irish church and were seen as a spearhead of that movement which was clearing out the dead wood of the past (see CHRISTIANITY)—nowhere else could they proclaim so loudly the rhetoric of 'reform' and 'renewal'. In a Church undergoing major organizational change, their claim to be the *novi milites Christi* (new



soldiers of Christ) has an obvious attraction. This can be seen in the fact that by 1170 it had 100 monks, 300 lay brothers, and yet had founded six other houses in the previous 28 years. Third, Cistercian spirituality was spread by Irish monks to Irish monks; it was not perceived as an import, and its interest in a strict asceticism allowed it to present itself as the authentic successor to the Irish MONASTICISM of an earlier 'golden age'. And, fourth, given the rural nature of 12th-century Ireland where there was little deforestation and much land that could be reclaimed, there was plenty of economic scope for their monasteries to expand.

The Cistercians brought with them a new spirituality which became embedded in Irish spirituality in the later Middle Ages, but they also brought a new scale of architecture and, as elsewhere, a revolution in agricultural methods and organization. Their production methods affected the supply of cattle, horses and wool, while their arrangement of lands into farms ('granges'), each with its own buildings to house the lay brothers who worked there, had a lasting effect on the Irish landscape (see AGRICULTURE).

In this list of monasteries, the mother-house is Mellifont (either directly or indirectly, e.g., Mellifont

founded Baltinglass, which founded Jerpoint, which founded Kilcooly) unless stated otherwise; houses founded by the Anglo-Normans from England and Wales are marked *:

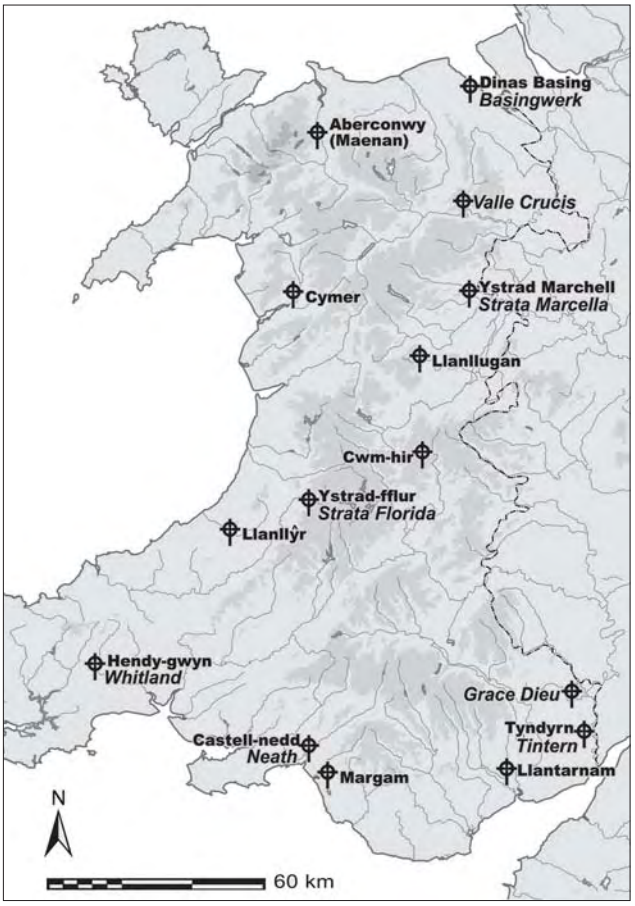
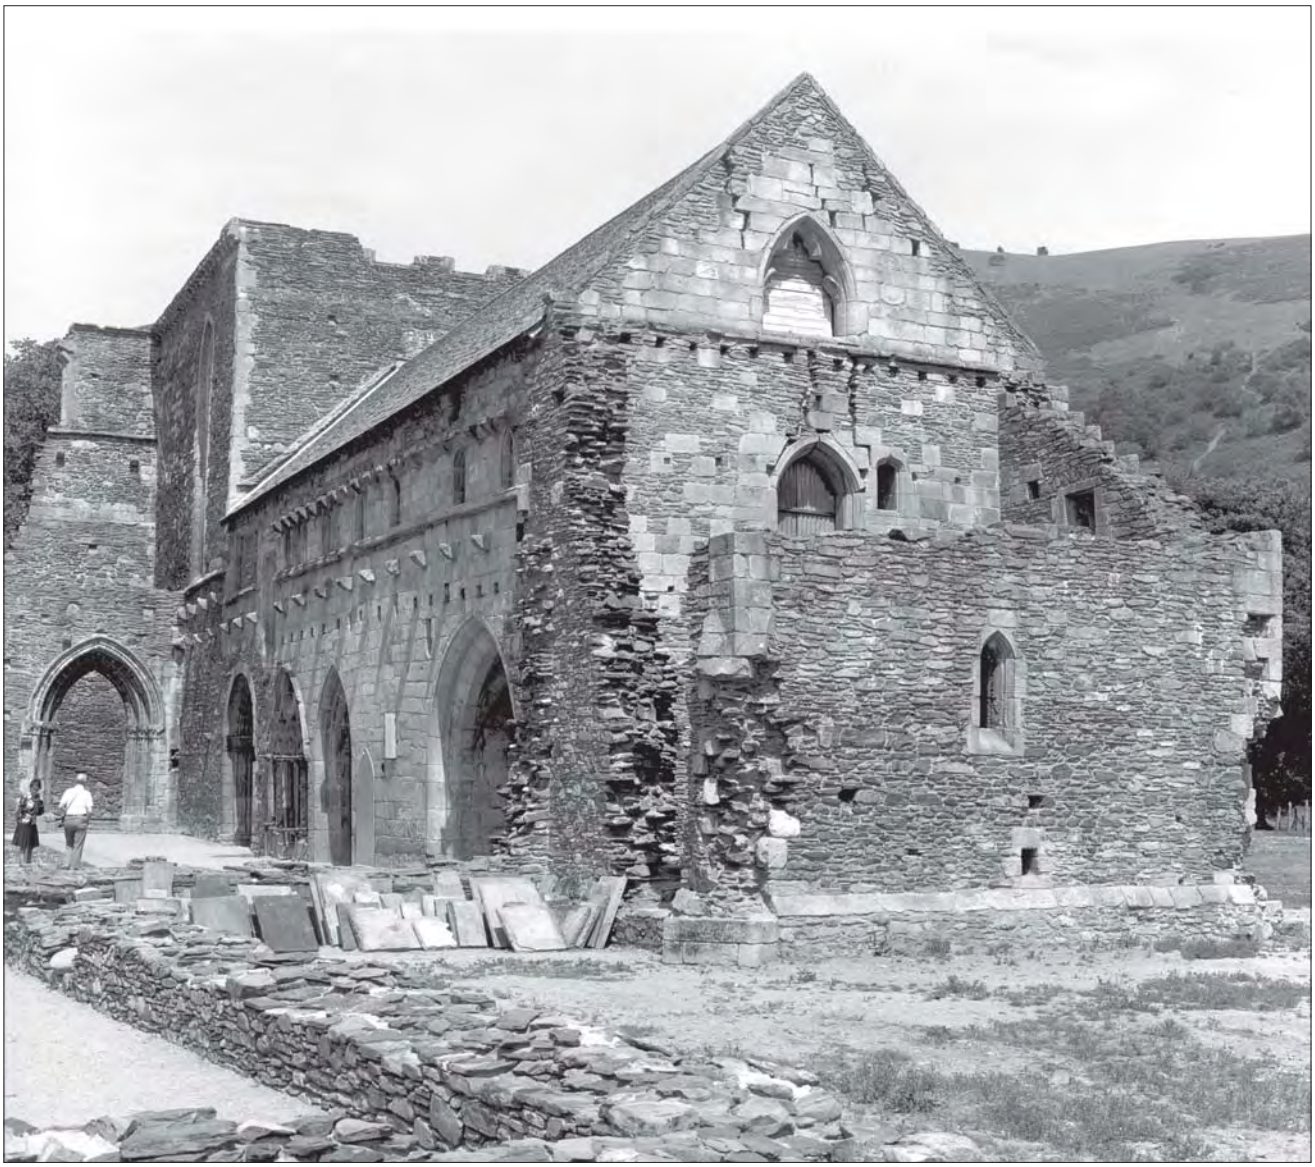
Thomas O'Loughlin

Cistercian abbeys in Wales

The foundation in 1098 of the abbey of Citeaux marked the beginning of a monastic order, following strictly the Rule of St Benedict, which was to have a profound impact upon the cultural, religious, economic, and architectural history of western Europe and beyond. The order traces its origins to Robert of Molesme (†1110) who, dissatisfied with the established conventual life of his day, left his abbey with a group of like-minded brothers and settled at Citeaux near Dijon, France. Although it is unlikely that Robert's original vision had encompassed the foundation of a new order, the increasing number of those who sought to join the community led to rapid expansion and the establishment of daughter-houses colonized initially from Citeaux. This was especially true under the order's 'second founder', the Englishman St Stephen Harding, and the towering figure of St Bernard of Clairvaux.





Valle Crucis Abbey, Denbighshire. South transept/ Charter House from the south

By the time of Bernard's death in 1153 there were well over 300 Cistercian abbeys in Europe and the pace of expansion scarcely slackened for at least another century.

The Cistercian order was characterized by its centralized authority, coupled with a conventual contemplative life noted for its austerity. In general, Cistercian abbeys were sited away from centres of population, their buildings—at least initially—plain and simple. Wales (Cymru), with its rugged, rural landscape, proved particularly attractive to the Cistercians, and their way of life, in its turn, attractive to those among the Welsh who recalled the rigorous, eremetic (hermit) tradition of the pre-Norman Church.

The first English Cistercian house was Waverley in Surrey, colonized from L'Aumone, a daughter of Citeaux, in 1128. It was the same abbey of L'Aumone which three years later established the first of the Welsh Cistercian houses at Tintern (Tyndyrn). Over the next century no fewer than eleven Cistercian abbeys were founded in Wales, a number which rises to thirteen when the two Savignac houses at Neath (Castell-nedd) and Basingwerk (Dinas Basing, incorporated into the Cistercian order in 1147) are included, and fifteen when the two nunneries at Llanllŷr (Ceredigion) and Llanllugan (Powys) are counted.

Cistercian monasticism appealed particularly to the native princes of north and west Wales, and the majority of the abbeys were established in these regions.

From Clairveaux came the 'family' of Whitland (Hendygwyn; colonized 1140), which included Abbey Cwm-hir (original foundation 1143), Strata Florida (Ystrad-fflur, 1164) and Strata Marcella (Ystrad Marchell, 1170). These in their turn established colonies, Cymer (1198, from Cwm-hir), Llantarnam alias Caerleon (1179), and Aberconwy (1186), both from Strata Florida, and Valle Crucis (1201, from Strata Marcella). The two nunneries can also be included in this 'family'; Llanllugan was founded *c.* 1200 by Maredudd ap Rhotpert, lord of Cydewain, and came under the supervision of Strata Marcella, and Llanllŷr (*c.* 1180) was founded by the Lord Rhys (Rhys ap Gruffudd), and supervised by Strata Florida.

The Cistercian abbeys of the Whitland 'family' were notably sympathetic to the aspirations of the Welsh princes, and closely identified themselves with the language, literature, and culture of Wales, and seem to have figured importantly in the production and copying of manuscripts in the Welsh language. The lists of known abbots of these communities include names which are overwhelmingly Welsh, in marked contrast to the traceable succession in those houses founded on the initiative of Anglo-Norman patrons.

The second 'family' of Welsh Cistercian abbeys is much smaller and more loosely defined. It comprises Tintern (1131), founded from L'Aumone, Margam (1147, from Clairveaux), and Grace Dieu (1226, from Dore), as well as the two Savignac houses of Neath (1130) and Basingwerk (1131). Significantly, none of these houses themselves established colonies in Wales. Tintern's two 'daughters' were in England (Kingswood, 1139) and Ireland (Tintern Minor, 1200), and only Basingwerk in Flintshire (sir y Fflint), after a stuttering start, was to be closely identified with Welsh traditions. These distinct familial relationships were closely paralleled in Ireland (Éire), but nonetheless they should not be overemphasized. The Cistercian order was international, but subject to a central control from Citeaux: 'The system of affiliation and visitation between all houses transcended political and national boundaries. They all belonged to an international order of immense strength' (Robinson, *Cistercians in Europe* 5, 10).

It was this affiliation, combined with the Cistercian emphasis upon austere simplicity, which can today be appreciated in the surviving buildings of the Welsh abbeys. Decline in the strength and economy of the communities before the dissolution of the monasteries in the 1530s, combined with neglect and depredation of the ruins thereafter until a reawakening of interest in them in the 18th and 19th centuries, has taken a heavy toll. Nothing, for example, remains above ground of Strata Marcella (whose church, if completed, would have rivalled St David's cathedral for length; see dewi sant), Grace Dieu, or the nunnery at Llanllŷr. The original Aberconwy abbey is now the parish church and little, if anything, remains above ground of its successor at Maenan. Llanllugan nunnery also survives as a parish church, and Llantarnam is represented by a house built on the site, though this is now once again (since 1946) home to a religious community. Whitland, the mother-house of the Welsh 'family' is little more than foundations, and Abbey Cwm-hir a few shattered walls. Only the substantial remains at Margam, Valle Crucis, Cymer, Strata Florida, Neath, Basingwerk and, supremely, Tintern now stand as reminders of the great contribution the Cistercians made to the life of Wales.

The Cistercians and their patrons aspired to build on a grand scale, but it is still an open question as to how many of the churches of their Welsh abbeys were ever completed as envisaged. Certainly Cymer does not seem to have advanced beyond the nave, and it is more than likely that Abbey Cwm-hir and Strata Marcella, both extremely ambitious undertakings, were never finished. In compensation, the 12th-century nave of Margam Abbey, still in use as a parish church, and the notable ruins at Tintern are among the finest Cistercian survivals in northern Europe. The Cistercian abbeys were also the burial place of many significant figures in Welsh religious and political history. The Deheubarth dynasty of the Lord Rhys was buried at Strata Florida, the princes of Powys at Valle Crucis, and Llywelyn ap Gruffudd, prince of Wales (†1282), at Abbey Cwm-hir.

Iron helmet from Ciumeşti with bronze crest representing a bird of prey with flexible wings

Ciumeşti

Between 1962 and 1965 a flat cemetery of the La Tène culture of the Iron Age was excavated at Ciumeşti in north-west Romania (see DACIANS). The graves lie on a sand-dune and were disturbed by modern buildings. Thirty-four graves were excavated, among which there were 21 simple cremations in pits, seven inhumations and six cremations buried in urns. Where this could be determined, the shape of the funerary pits was rectangular in the case of the inhumation graves and oval for the cremation graves; their depth varied from 0.60 to 2.20 m below the ground surface. The number and type of finds in the graves differed from one to another: the grave inventories were determined, in part at least, by the sex and the social position of the deceased.

Among the grave goods were bronze and iron objects: personal ornaments including bracelets, anklets, fibulae (brooches), girdle chains, belt hooks, buckles, and buttons; weapons comprising SWORDS, sword chains, spearheads, daggers, and a shield boss; and also tools and utensils including knives, razors, bones, and a dipper for pouring hot metal. The pottery is mainly wheel-made, of the type found in Celtic-speaking La Tène zones further west, but there were also local handmade vessels. The burials were often accompanied by animal SACRIFICE, especially of pigs, whose bones were also found in the graves. The burials at the Ciumeşti cemetery began at the end of the 4th century BC, and it remained in use for about two centuries. Many similar cemeteries were also excavated in the Transylvania region of Romania, the most important being those in Piscolt (Satu Mare county) and Fântânele (Bistrita-Nasaud county), both with more than 100 graves.

A spectacular warrior chieftain grave, probably a cremation burial, was found accidentally in the perimeter of the Ciumeşti cemetery in 1961. This grave contained, in a more or less delicate state of preservation, an iron helmet with a bronze crest, a pair of griffins made of bronze, a spearhead, and a chain-mail shirt on which there was fixed a bronze rosette with a coat ornament. The helmet, on top of which is fixed a bird of prey with outstretched wings made of sheet bronze, is especially important since, for the time being, it is a unique item among Celtic finds, and one of the best known and most often reproduced pieces of Celtic ART. One of the scenes displayed on the inside of the GUNDESTRUP CAULDRON provides a good parallel to the Ciumeşti bird helmet. The early literatures of Wales (CYMRU) and Ireland (ÉRIU) also provide evidence for the significance of the bird of prey as the constant figure of heroic carnage on the battlefield, for example, in the GODODDIN, or as a manifestation of the war-goddess, as in TÁIN BÓ CUAILNGE and other tales of the ULSTER CYCLE. The date of manufacture of the Ciumeşti helmet has been established as the 4th century BC, but its deposition in its last owner's grave happened some generations later, in the 3rd century BC. The griffins found in the grave might come from a Hellenistic Greek source, perhaps as loot taken during the foray made by the Celts into the BALKANS in 279–8 BC (see BRENNOS OF THE PRAUSI).

A Celtic settlement was identified about 500 m to the south-west of the Ciumeşti cemetery, where eight sunken floor rectangular dwellings have been excavated. The roofs of these buildings, which had two slopes, were made of reed, and the fireplaces were placed in the centre of the main room. In these dwellings were found jewellery, tools, and fragments of Celtic wheel-made pottery, as well as local handmade pottery.

Civitalba is the site of an important group of Etrusco-Roman terracotta sculptural adornments for a temple. They include depictions of Celtic warriors, and were most probably part of a sanctuary commemorating the Roman conquest of CISALPINE GAUL. For CELTIC STUDIES, the Civitalba sculptures are important both as direct evidence for the appearance of Celts and Celtic accoutrements in the later pre-Roman IRON AGE and also as evidence for establishing an ethnographic stereotype of the Celt in the artistic canon of the rival civilization of Rome. In particular, Civitalba shows early Roman artists adapting images and themes of WARFARE between Hellenistic Greeks and the eastern Celts to reflect events in ITALY, viewed with a conscious parallelism.

The Civitalba group was discovered in 1896 on high ground 6 km north-east of the ancient *municipium* at Sentinum (Sassoferrato, in the province of Ancona), close to a pottery oven. No further evidence of religious architecture has been found on the site. However, the form of the terracotta pieces shows that they must have once decorated a small temple built at the beginning of the 2nd century BC, at the time of the victories of the Roman Republic over the Celts and its occupation of the Po valley.

The closed pediment includes figures from classical mythology about 65 cm in height, almost completely in the round. The statues are part of a Dionysian procession made up of Maenads, Satyrs, Amours, and Winds, arranged around two central figures which are now lost. This group most probably represents the marriage of Dionysus and Arianna.

The frieze, much of which is also missing, is made up of several terracotta slabs (about 45 cm in height), hewn before baking and fixed together afterwards with predetermined joints. The scene shows the sacking of a temple interrupted by the intervention of female deities (Artemis firing her arrows and Latona hurling a torch can be identified). The destruction is being carried out by the Gauls, easily recognized by their

Terracotta frieze from Civitalba depicting Gaulish/Galatian plunderers in flight

weaponry (elongated SHIELDS with a central boss and wide belts for their SWORDS), LA TÈNE style TORCS, full moustaches, and stiff tufted hairstyles as described in the ethnographic tradition of POSIDONIUS. The Celts are depicted in flight and laden with their booty (mostly votive offerings to the sanctuary). One group of figures consists of a Gaulish chief in a two-wheeled CHARIOT drawn by horses and flanked by two fleeing Gauls on foot. Another group depicts a Gaul supporting the body of his dead comrade and standing alongside Artemis and another Gaul dressed in a *sagos* (tunic) made of animal skin and carrying a stolen vase.

The iconography of the frieze, the *Galatomachia* (battle of the Gauls/Galatians), is found widely in Greece and Asia Minor (see GALATIA) and is generally associated with the historical event of the sacking of the sanctuary at Delphi by the Galatians in 279/278 BC. At Civitalba, however, the theme has probably been adapted for local significance, alluding to the raids that were carried out by the Cisalpine Celtic SENONES in the region during the 4th and the 3rd centuries BC (see also BRENNOS OF SENONES). Stylistically, the drapery clothing the strong tension of the figures reflects the influence of scenes of Galatian warriors at PERGAMON and was subsequently widely copied in Italy, for example, on urns from Chiusi, Volterra, and Perugia.

Luca Tori

Civitas (*cīvitās*, pl. *cīvitātes*) is a Latin word and governmental term with several meanings: 'the condition of (Roman) citizenship, the community of Roman citizens, the state, a city state'. It is the source of English *city* and is often translated as 'city'. When applied to the Celtic world in ancient Latin literature, 'city' is hardly ever a good translation. For example, when CAESAR refers to the AEDUI of GAUL or the TRINOVANTES of BRITAIN as *civitates*, he did not mean a Mediterranean-style city state or a proto-urban stronghold that functioned as their centre of assembly and chief seat of their rulers; for the latter his term was OPPIDUM. It is likely that the native word corresponding to Caesar's *civitas* was Gallo-Brittonic **toutā*; cf. Old Irish TUATH. 'Tribe' would not be a perfect translation, but is less misleading than 'state', 'city', or 'nation'.

Following the Roman conquests of Celtic peoples on the Continent and in Britain, most communities were organized as *civitates* at a sub-provincial level. These units now resembled the cities of Italy and Greece in that they generally had a Romanized market town as their *caput* (capital, centre) at the hub of the local network of Roman ROADS. For the most part, these ROMANO-CELTIC *civitates* continued the old pre-Roman tribes, for example, the ARVERNI, Atrebates (in Gaul and Britain), Bellovaci, Rēmi, BRIGANTES, CATUVELLAUNI, Demetae, and many others. In a few cases, new *civitates* seem to have been created by the Romans to reward allies with territory, for example, the Rēgni or Rēgnēnses created for the philo-Roman British ruler COGIDUBNUS, or perhaps sometimes to break up unwieldy or anti-Roman tribes, as may have led to the creation of a new *civitas* given the generic name BELGAE in south central Britain. By the later Roman period each of the *civitates* had a 'town council' (*curia* or *ordo*), made up of roughly 100 *decuriones*, well-to-do local Roman citizens; St PATRICK's father, Calpurnius, had been a ROMANO-BRITISH *decurio*. Most of Britain's *civitas* capitals received imposing defensive walls in the 3rd or 4th century. After the Roman period, individual *civitates*—themselves continuing pre-Roman tribes—sometimes survived to become independent kingdoms within roughly the same boundaries, for example, DYFED from the old *civitas Demetorum*, DUMNONIA in what is now south-west England, the Anglo-Saxon kingdom of Kent, and in ARMORICA the early medieval kingdom known alternatively as Bro-Ueroc or GWENED continued the *civitas Venetorum*. The transition process from Romanized *civitas* to Dark Age kingdom is murky, but we should consider the account of Zosimus, the 5th-century Byzantine historian, of the end of Roman rule in AD 409:

> . . . the barbarians from beyond the RHINE overran everything at will and reduced the inhabitants of

> the British Island and of the peoples in Gaul to the necessity of rebelling from the Roman Empire and of living by themselves, no longer obeying the Romans' laws. The Britons, therefore, taking up arms and fighting on their own behalf, freed the cities from the barbarians . . . and the whole of Armorica and other provinces of Gaul, imitating the Britons, freed themselves in the same way, expelling Roman officials and establishing a sovereign constitution on their own authority. (Zosimus 6.5.2f.; trans. Thompson, *Britannia* 8.306)

The revolt in Britain may have involved *bacaudae* or peasant rebels as was the case in Armorica, but this is not certain. In AD 410, the Emperor Honorius wrote to Britain's *civitates* telling them to see to their own defence. They were probably the highest level of Romanized structure still functioning following the expulsion of the governors. Historians have often seen the letter of Honorius as the formal end of Roman Britain. In Gildas's account of this period and the Anglo-Saxon 'conquest' of the 5th century, *civitates* is used to mean the fortified Roman towns—according to him there were 28 (*De Excidio Britanniae* §3)—and also the chief institutional centres of the Christian British *cives* 'citizens'. Somewhat inconsistently, he portrays these towns as undergoing both abandonment and horrific destruction at the hands of barbarian invaders (*De Excidio Britanniae* §§19, 26). Historia Brittonum (§66) supplies the list of 28 *civitates*, each of which has a name beginning with Old Welsh *Cair* (*caer* 'fortified town').

In Welsh, Latin *civitas* survives as *ciwed*, which can mean 'rabble', but there are traces of the older meaning. The Gododdin (A.23.261) refers once to the enemy as *Lloegrwys giwet*, 'the *civitas* of Lowland Britain, England'. The reference may be specifically to the fortified Roman town of Catraeth. In Marwnad Cunedda, there appears to be a Welsh word derived from *civitates* which refers to two Roman fortified towns immediately south of Hadrian's Wall that were facing destruction from the north. Le Yaudet, the name of a Roman and early medieval fortified town in northern Brittany (Breizh), derives from *civitat-em*, the Latin oblique form of *civitas*.

An ***Claidheamh Soluis*** (The sword of light) was a bilingual newspaper established by Conradh na Gaeilge (The Gaelic League) as its official organ in March 1899. Its first editor was Eoin MacNeill (1867–1945). In August 1900 the League assumed control of the weekly bilingual paper *Fáinne an Lae* (Daybreak), when its publisher, Brian Ó Dubhghaill (Bernard Doyle), became bankrupt, and the two papers were merged as *An Claidheamh Soluis agus Fáinne an Lae*. The main medium for Gaelic League propaganda, the paper also made an important contribution to the revival of Irish literature, particularly during the editorship of Pádraig Mac Piarais, from 1903 to 1909, when it published original literary works, reviews, literary criticism and instructive articles. It is a major source for the study of developing Irish cultural and political nationalism in the early 20th century. In its later history the paper appeared under various names: *Fáinne an Lae agus an Claidheamh Soluis* (1918), *Misneach* (Courage; November 1919–July 1922), then again *Fáinne an Lae agus an Claidheamh Soluis*, and finally *An Claidheamh Soluis agus Fáinne an Lae* (July 1926–May 1932), after which it was discontinued.

clan

As a form of social organization, clans were, and are, found in many parts of the world. The English word 'clan', by now a common term in the field of social anthropology, is a loan from GAELIC (see below), and this social institution thus has a particular association with the Celtic cultures that flourished in north-west Europe during the medieval period, most especially in the Scottish HIGHLANDS and Islands. Although popularly linked to kin-based societies, the Highland clans of Scotland (ALBA) were an institution that came into being as kin-based societies were breaking down. The extended kin-groups, or lineages, which lay at the heart of such kin-based societies (e.g., the Welsh *gwely* or Irish *fine*) had a tendency to grow from shallow or minimal lineages, extended across three or four generations, to deep maximal lineages that extended across as many as ten generations or more. Clans developed out of the latter. They differed from maximal lineages in that whereas maximal lineages were still bonded by kinship (e.g., the *cenedl* of Wales/CYMRU or the *gens* of early Ireland/ÉRIU), clans were as much about assumed or putative kin-ties as about real ones. All clans were named after an ancestor-founder. Over time, as the family of this ancestor-founder expanded, it divided into branches or septs (called *sliochd* in the Scottish Highlands), each ranked according to when it became distinguished from the main stem of the family. The genealogical ties that bound the various branches together provided clans with their functioning ties of kin. As long as these real, albeit extended, ties were the only ties involved, then the various branches are more accurately seen as constituting a maximal lineage. Once a maximal lineage absorbed non-kin as members, it became a clan. This absorption of non-kin usually occurred when a deep lineage controlled more land than it could occupy using men from within its own ranks. Their absorption of non-kindred groups was either by formal alliance, such as with the bonds of friendship used in the Scottish Highlands, or by individuals simply adopting the name of a clan. All clans had a chief (a *ceann-cinnidh* in the Scottish Highlands) who was usually a senior member of the family around which the clan had grown, but not necessarily the living person who was genealogically closest to the ancestor-founder of the clan. In large clans, a lesser chief would have led each of the various branches.

Clans in this sense were widely developed in the Highlands and Islands of Scotland and in parts of Ireland, but were not a prominent feature of native Welsh society. They emerged under specific conditions, usually in politically volatile or unstable areas that lay beyond the bounds of early state systems. In the Scottish Highlands, for instance, clans emerged during the 13th and 14th centuries in those parts, invariably the more rugged parts, which the Scottish Crown regularly threatened but could not subdue. Energized by chiefly ambition, clans provided an eruptive form of socio-political order that filled the resultant vacuum, but the endemic rivalry amongst them meant that they were never a stable form of socio-political order. Chiefs competed with one another in a number of ways. Many maintained bloody feuds with other clans that lasted for decades—feuds that were usually focused on who should occupy land around the edge of a clan's territory. Chiefs also strove to establish the most favourable marriage alliances. Like a successful feud, a marriage was an occasion for an extravagant and hugely symbolic FEAST that could last for days, its extravagance of consumption making a powerful statement in a society in which most people lived on the edge of subsistence. Supporting these different forms of display was the chiefly control of land. In practice, chiefs held all clan land, with the leading cadet branches of the clan controlling different districts on behalf of the chief and being identified through those districts (e.g., Macdonalds of Glencoe).

Among clans in both the Scottish Highlands and Ireland, there was a persistent tradition that chiefs only held the *duthchas* of clan land, that is, they held it in trust for the clan. This may have been how they first asserted their individual control over clan land at the expense of the lineage, but by the time clans become visible in early documentary sources, clan chiefs had asserted their absolute control over clan land, with many obtaining a Crown charter for it.

The term 'clan' is borrowed from SCOTTISH GAELIC and IRISH *clann*, Old Irish *cland*. This GOIDELIC word's original and more primary meaning is 'children' or 'descendants'. Old Irish *cland* reflects Primitive Irish **qlanda*, a borrowing from BRYTHONIC or British Latin *planta*, meaning 'children' (as does Welsh *plant* still),

showing a special insular semantic development of Classical Latin *planta* 'sprout, shoot' (see also P-CELTIC; Q-CELTIC).

Robert A. Dodgshon

Clann MacMhuirich, the MacMhuirich family of hereditary BARDS and other learned professionals, maintained a prominent rôle in GAELIC learning, and especially Classical Gaelic poetry, in Scotland (ALBA) from the time of their progenitor, Muireadhach Albanach Ó DÁLAIGH (*fl.* 1200–30), down to the 18th century. Part of the prominence of the Clann MacMhuirich undoubtedly derived from their relationship with the Clann Domhnaill Lords of the Isles (see LORDSHIP OF THE ISLES), to whom they seem frequently to have been court poets, as well as occasional lawyers and physicians. The prominence of this relationship is especially clear in the 15th century. Lachlann Mór MacMhuirich seems to have composed the battle-incitement poem before the battle of Harlaw in 1411 (Thomson, *Celtic Studies* 147–69), and one *Lacclannus mcmuredhaich archipoeta*, possibly a descendant, witnessed a charter of Aonghas of Islay, son of the last Clann Domhnaill Lord of the Isles. Poems on the murder of Aonghas composed by one or possibly two MacMhuirich poets are preserved in the Book of the DEAN OF LISMORE (Watson, *Scottish Verse from the Book of the Dean of Lismore* 82–9, 96–9). Following the downfall of the Lordship, patronage of the family seems to have shifted to the Clann Raghnaill (Clanranald), and the earliest of their poets was probably Niall Mór MacMhuirich (*c.* 1550–*c.* 1613), author of the superb and intimately enticing love lyric, *Soraidh slán don oidhch' a-reir* (Farewell forever to last night; O'Rahilly, *Dánta Grádha* 51–2). It is a MacMhuirich *seanchaidh* (tradition-bearer/genealogist) who gave the Clann Domhnaill their most coherent Gaelic narrative history, in the Books of CLANRANALD. Cathal MacMhuirich (*fl.* 1625) and Niall MacMhuirich (*c.* 1637–1726) continued the tradition into the period of the JACOBITE REBELLIONS, by which time the family appear to be firmly linked to the Clanranald family (Thomson, *Bards and Makars*). The last Scottish practitioner of Classical Gaelic poetry, Domhnall MacMhuirich, was a tenant on Clanranald lands in South Uist in the 18th century, and his descendants were both book-learned and tradition-bearers.

Thomas Owen Clancy

Clanranald, the Books of, are two paper manuscripts of the late 17th/early 18th century. They are best known on account of the GAELIC history of the MacDonalds, whose text they both contain. The so-called Red Book was written by Niall MacMhuirich of South Uist (Uibhist mu Dheas), hereditary poet-historian to Clanranald (see CLANN MACMHUIRICH). Niall was the author of the History in its present form, and the Red Book also contains related historical and poetical materials collected by him, as well as a few items in a later hand than his. The manuscript may have been one of those removed by James MACPHERSON to London at the time of the Ossianic controversy. The so-called Black Book is a more miscellaneous compilation, containing a mass of historical, literary and other material with a clear Antrim provenance. Its version of the MacDonald history was written by one of the Beaton learned family, who would seem to have been attached to the family of the Earls of Antrim. His version of Niall's History shows adaptation of various sorts, including the insertion of details likely to be of interest to an Antrim audience.

The Clanranald History is a valuable document, both as a source with a Highland perspective on High-

land history and as an example of a Scottish family history written in Scottish Gaelic. Its account begins in the 'dream time' of the coming of the Sons of Míl Espáine to Ireland (Ériu), in order to establish the credentials of the Clan Donald within the framework of the pan-Gaelic literary legendary history. This account is based closely on the doctrines of the professional poets. The next section deals with the rise of the House of Somerled and the Lordship of the Isles, and draws on a lost chronicle source or sources, including one with an Iona (Eilean Ì) orientation. Following the forfeiture of the Lordship of the Isles in 1493, the narrative focuses on the doings of the Clanranald branch, although the affairs of the Southern Clan Donald are still dealt with when they have bearing on the fortunes of Clanranald. The quality of the History changes dramatically when the 1640s are reached: it becomes increasingly detailed as it describes the Highland campaigns of Montrose and Alasdair Mac Colla Ciotaich, using eye-witnesses as sources for details of battles, but also drawing on the literary genre of the *caithréim* or 'martial exploits'. The narrative reverts to chronicle mode and a Hebridean focus for its last section, which includes the period up to the death of Charles II in 1689 (*sic*).

In addition to its historical value, the Clanranald History is interesting because of its experimental quality. It was completed at a time when the traditional world-view and historical conventions of the Gaelic poets and historians were being challenged by post-Renaissance historiographical ideals and by external interpretations of Highland history. MacMhuirich's account shows signs of an awareness of these tensions, and of the desire to counter the anti-Highland bias that he found in Lowland writers. The History is also notable in literary terms, not least for the way in which MacMhuirich wove bardic elegies for MacDonald chiefs into his narrative framework.

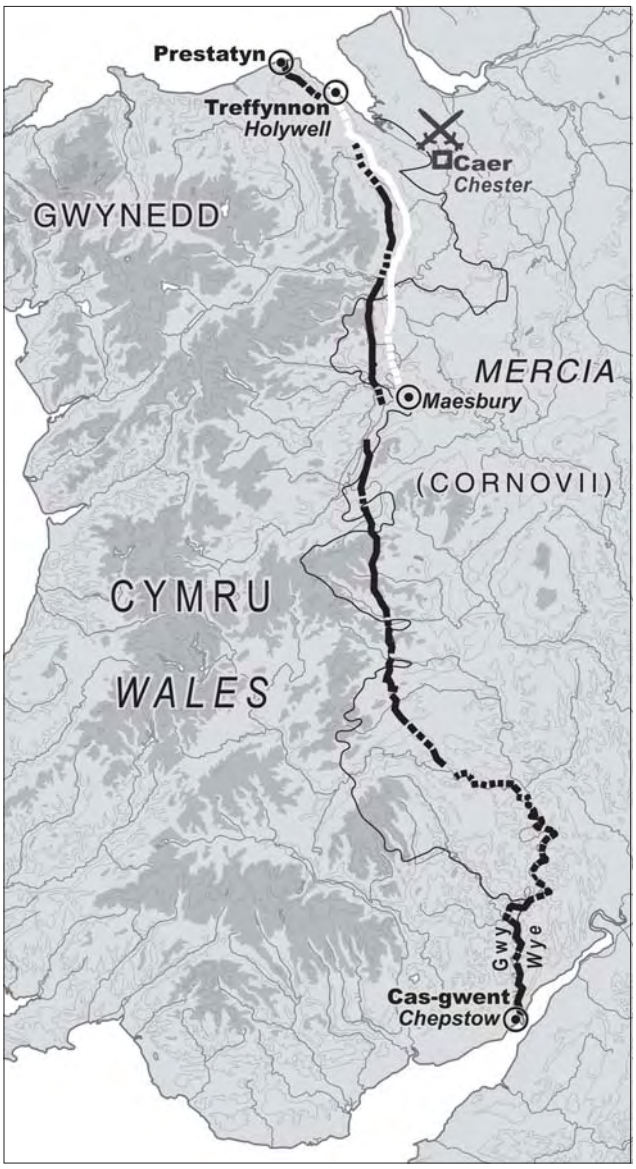
Clawdd Offa (**Offa's Dyke**) is a linear earthwork built in the late 8th century at the direction of the Anglo-Saxon king Offa of Mercia (r. 757–96) to separate his territory from that of independent Welsh rulers to the west. Asser wrote about a century later in his Life of Alfred the Great of 'the king called Offa who ordered the great wall between Wales (*Britannia*) and Mercia from sea to sea'. Running near the line of the present border of England and Wales (Cymru), it remains visible over many long stretches as a bank with a defensive ditch on its west, sometimes still quite steep. Its original course has been projected to fill gaps between a northern terminus near Prestatyn and a southern one west of the lower Wye (afon Gwy) near Chepstow (Cas-gwent). Thus spanning a distance of some 190 km or 120 miles 'as the crow flies', it is the longest linear defence in Britain and on a scale comparable to that of Hadrian's Wall.

Earlier modern writers on British history have tended to emphasize the battles of Dyrham (Anglo-Saxon Chronicle 577) and Chester (Caer *c.* 615) as the military events that defined Wales as a compact and isolated cultural and linguistic territory, cutting it off first from Dumnonia and then from the Britons of the north (see hen ogledd). However, neither of these events is likely to have resulted in permanent occupation up to the western seas or the advance of more than a fluid and porous Anglo-Saxon cultural and linguistic frontier. In the period *c.* 630–55, Cadwallon and Cadafael of Gwynedd and other 'kings of the Britons' (Historia Brittonum §65) are known to have had a close military alliance with Offa's ancestor, Penda. But the situation had clearly changed by the later 8th century, and we find four battles between Mercia and Welsh kingdoms in Annales Cambriae in the period 760–96. The fact that a Welsh language, showing linguistic features distinct from the cognate Old Breton and Old Cornish, does not emerge until *c.* ad 800, also means that the building of the Dyke is a useful milestone at which point it becomes unproblematical to speak of Wales, the Welsh people, and the Welsh language meaning much what they do today.

The Middle English *Offa dich* occurs as the name of portions of the earthwork. The Welsh *Clawdd Offa* is first attested in earlier Middle Welsh. Today, the phrase *tu hwnt i Glawdd Offa* 'beyond Offa's Dyke', meaning 'England', is very common in everyday speech as well as in literature.



Offa's Dyke (in black) and Wat's Dyke (in white) and the modern border of England and Wales (thin black line), projected courses of the dykes are shown as broken lines

A similar ditch-and-bank structure, also defending the east from the west, known as Clawdd Wad or Wat's Dyke runs parallel to Offa's Dyke a few miles to the east between the river Morda near Maesbury in Shropshire (swydd Amwythig) and Holywell (Treffynnon) on the Dee estuary, thus about 55 km or 35 miles. It had been thought that Wat's Dyke was an earlier Mercian frontier work, perhaps built specifically by Offa's predecessor Æthelbald (r. 716–57). But radiocarbon dates centring on AD 446 obtained in the 1990s showed that Wat's Dyke was probably built to define the sub-Roman polity continuing the ROMANO-BRITISH *territorium* of the legionary fortress of Dēva (modern Chester) and/or the CIVITAS of the Cornovii against the lands dominated by Gwynedd in the west. The long east–west linear earthwork in south-west England known as the Wansdyke also appears to be a work of 5th- or 6th-century Britons. These dates for Wat's Dyke imply that Offa's project was in fact a revival of the frontier policies and strategic ideas of his sub-Roman predecessors. In this instance, the ANGLO-SAXON 'CONQUEST' is intelligible as the English take-over of a 'going concern' rather than the destruction and replacement of existing patterns.

'**Clearances**' are generally understood to be the eviction, often forced, of parts of the population of the HIGHLANDS and Islands of Scotland (ALBA) between the 1780s and the 1850s to make way for sheep and, later, deer runs (although similar events are also known from the 18th-century LOWLANDS). The wholesale eviction of communities contributed greatly to the destruction of the ancient CLAN system and the decline of the SCOTTISH GAELIC language. The subject has been called 'one of the sorest, most painful themes in Scottish history' (Richards, *Highland Clearances* 3).

From about 1760 landowners began to introduce sheep to their estates in order to maximize income derived from the land and thus 'improve' it. For winter grazing the glens and straths were required, and this is where, typically, the Highland settlements and fields were located. The communities that lived there were driven out and scattered—either to be resettled on marginal land or forced to emigrate in order to survive. Resettlement was most often on poor coastal crofts, where fishing and kelping (collecting seaweed which would be processed to make fertilizer) became the main means of making a living. Most of those evicted, however, were forced to emigrate. It is estimated that

between 1762 and 1886, the first and the last clearances, about 100,000 Highlanders emigrated to Scottish towns, to Canada, the USA, and Australia.

It is now acknowledged that, as in Éire, agriculture in the Highlands might not have been capable of supporting the growing population throughout the 19th century (see famine), and therefore the emigration of a proportion of the population was unavoidable. However, the brutality and harshness with which many Highland clearances were conducted have left bitter memories to this day. Often, people were hardly given time to gather their belongings before they were forced to leave. During the Sutherland clearings, conducted by estate manager James Loch between 1807 and 1821, almost half the population of Sutherland (Caitibh) was driven out: their homes were scorched immediately so that they could not return, with at least one aged inhabitant dying inside. The surrounding hill-grazing was burnt so that the cattle would be denied food. The soldiers used during evictions in Ross-shire severely beat helpless women and children. Although the atrocities committed were reported in newspapers and recorded in poems, letters, and in the evidence given to the Royal Commission on the Crofters and Cottars of Scotland in 1883 (see land agitation), the perpetrators were seldom brought to justice.

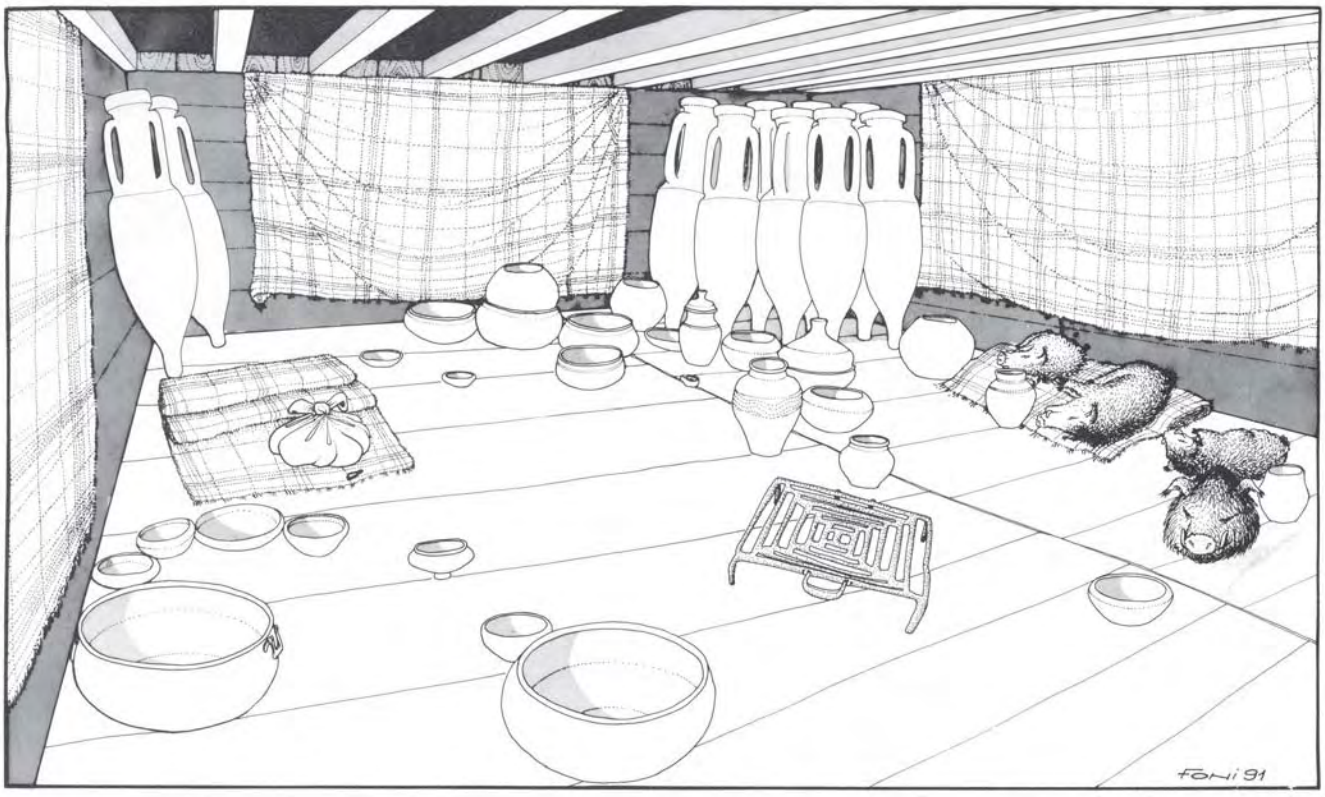
Clemency is a district of Luxembourg and the site of an important aristocratic burial attributable to the Celtic Belgae of the region during the final generation or so of the pre-Roman Iron Age. The tomb of

Drawing of the plank-lined chamber and contents of the aristocratic burial at Clemency



Clemency was discovered in 1987, 5 km north of the OPPIDUM of TITELBERG. It was built around 70 BC, in an isolated location on a plateau overlooking the Chiers valley. The enormous burial chamber, which had oaken timbers, was located in a ditch measuring 4.30 m × 4.20 m. The panels of the chamber walls, made of double planks, had been cut to size at the site and then lowered into the burial pit. The remains of a male cremation, probably wrapped in a shroud covered by a bear's skin, had been deposited on a floor made of large beams.

In spite of the intrusion of grave robbers even within the pre-Roman Gaulish period, the deposits and offerings bear testimony to the wealth and the important position of the deceased in the local social hierarchy. At least ten WINE amphorae (large ceramic vessels) had been deposited in the tomb. Other objects recovered included a bronze basin produced in an Italian workshop, an iron grill, a Campanian clay lamp, and over 30 Gaulish vases from the workshops of the Titelberg. Four piglets had been deposited, whole or butchered, in the southern part of the chamber; only the teeth have been preserved in the acidic soil conditions.

Through the ceiling of the burial chamber is the chimney of an iron furnace, emphasizing the connection between the deceased and the exploitation of iron ore in the region. The tomb was covered by a mound set within a deepened enclosure of 37 m per side (see also VIERECKSCHANZEN). The information gained from the environment of the tomb of Clemency is of particular interest for our knowledge of the complex burial rites of the Gaulish aristocracy. After death, the mortal remains were probably exposed on a wooden structure, as the five post-holes discovered north of the funeral enclosure seem to suggest. For the subsequent interment, the human remains were put on a pyre of oak wood. The cremation of the corpse was accompanied by a great banquet, in which one would presume the relatives of the deceased nobleman took part. In Clemency, the contents of at least 20 wine amphorae—containing more than 400 litres of wine from Falerno—played a rôle either in the FEAST or in the ceremonies around the pyre. Before the extinction of the flames, the amphorae and other pottery were broken by the audience and thrown into the embers. Then, the remains of the last meal shared with the dead man were intentionally broken into very small fragments. After the burial chamber had been closed, a mound was erected—a landmark in memory of the illustrious dead.

In the immediate neighbourhood of the tomb of Clemency excavations have revealed 29 small circular pits and a relatively important pyre. These pits contained the remains of cremated horses, cows, and pigs. The evidence of these bone fragments proves that rites of SACRIFICE were repeated over a long period on the site of the burial.

Clì, the Gaelic development organization, was founded in 1984. The name is at once meaningful in itself (*clì* is Gaelic for 'vigour') and an acronym for Comann an Luchd-Ionnsachaidh (The learners' society). The organization originally focused on providing resources and support for GAELIC learners of different kinds, especially adults; more recently it has broadened its perspective to address the needs of 'non-traditional speakers', including those who learned Gaelic to fluency as adults or as a result of Gaelic-medium EDUCATION. This change of focus (which involved dropping the name Comann an Luchd-Ionnsachaidh, so that Clì no longer 'stands for' any particular meaning) has proved somewhat controversial. From its headquarters in Inverness (Inbhir Nis), Clì compiles databases and provides information on Gaelic learning opportunities and resources, organizes weekend courses throughout Scotland (ALBA), and promotes the learning and awareness of Gaelic at a national level among both decision-makers and the wider public. Since 1994 it has published the quarterly bilingual journal *Cothrom*, which includes a broad range of material at different linguistic levels, including columns, poetry, political analysis and book and music reviews.

Cocidius was a Celtic deity worshipped in the northern part of Roman Britain, most notably by Roman soldiers near Hadrian's Wall. Of about 20 inscriptions dedicated to him, five equate him with Mars, one (RIB no. 1578) and possibly a second (RIB no. 1207) with Silvanus, the Roman god of the woods (see interpretatio romana), one with the Celtic deity Toutatis (see teutates), where he is also given the Celtic epithet *Riocalatis* 'of hard kings' (RIB no. 1017), and one with the otherwise unknown Celtic deity, Vernostonus. Cocidius in his function as a woodland deity is expressed on an altar (RIB no. 1207), where he is depicted as a hunter accompanied by a dog and a stag. His function as a war god is documented on two silver votive plaques where he is depicted as a warrior carrying a spear and a shield. The name is not certainly Celtic; however, the ending *-idius* possibly represents an ancient form of the adjectival suffix which appears as Old Irish *-de* and Welsh *-aidd*, in which case the name could correspond to the Modern Welsh adjective *cochaidd* 'reddish, ruddy', alternatively *cochedd* 'redness'; cf. *Da Derga* in early Irish tradition, generally explained by scholars as 'red god' (see togail bruidne da derga).

Coel Hen Godebog (Old Welsh Coil Hen Guotepauc) figures in Welsh genealogies as the ancestor of many of the early medieval north British rulers known collectively as *Gwŷr y Gogledd* (Men of the North; see hen ogledd). These include Urien and his dynasty—the Cynferching, Gwallawg of Elfed, and the brothers Guurci and Peretur whose deaths are noted at 580 in Annales Cambriae. Coel's great-grandson Dunawd (Old Welsh Dunaut) may be the namesake of the *regio Dunutinga* mentioned by Eddius Stephanus in his Life of Wilfrid, but Dunawd is not a rare name. These dynasties are known collectively as the Coeling (descendants of Coel). Coel generally occurs in the pedigrees four to five generations prior to descendants who are known from historical events in the later 6th century, placing him notionally in the earlier 5th century and his birth in the later 4th. But, since he and his sons and grandsons are otherwise unknown, we cannot confirm that early portions of the Coeling genealogies have a sound historical basis. In Historia Brittonum §63, an alliance of four kings, including the Coeling Urien and Gwallawg, and the possibly Coeling Morgan (Old Welsh Morcant), is said to have besieged the Angles at Lindisfarne. Therefore, the Coeling genealogical doctrine—whatever its factual basis—was in line with the political realities of the later 6th century. In the Middle Welsh pedigrees known as *Bonedd Gwŷr y Gogledd* (Lineage of the Men of the North), we find additional branches of Coeling, not present in the Old Welsh genealogies, accounting for the famous heroes Llywarch Hen, Clydno Eidyn, and Gwenddolau, which suggests that the process of growth and elaboration continued within the literary period.

In awdl A.15 of the Gododdin, the Coeling are presented as the enemies of the Gododdin heroes:
