prehistoric people, the Fir Bolg, who fled to the west to evade taxes imposed by the king of Tara (Teamhair). Other forts such as Dún Eoghanachta were the medieval residences of kings who controlled the Burren on the mainland and parts of the Atlantic seaboard. Early sources suggest that the Aran Islands were subject to the authority of the provincial king of Munster (Mumu) at Cashel (Caisel Muman). The islands were ruled by Dál gCais from the late 8th to the 11th century. This dynasty adopted the surname Uí Briain (O'Briens) after their illustrious king, Brian Bóruma (†1013). Later, the Connacht dynasty, Uí Flaithbertaig (O'Flahertys), competed with the Uí Briain for dominance of the strategic islands. Churches dedicated to many prominent saints (Colum Cille, Ciarán of Clonmacnoise/Cluan Mhic Nóis) dot the landscape. St Énda, the patron saint, was reputedly granted land to found a church by Oengus mac Natfraích, king of Munster. Under Énda's guidance Aran became a centre of learning in a manner similar to the midland monastery at Clonmacnoise, though little evidence for this learning exists. However, it is clear that Aran was associated with an ascetic way of life and that the reputation of its saints caused it to become an important centre of pilgrimage that probably survived to the late medieval period. A pilgrim route extended from the east coast through Clonmacnoise to the Aran Islands. The numerous crosses and inscribed slabs are a testament to the importance of pilgrimage in Ireland (Ériu). Similarly, medieval hagiographic literature suggests that the pilgrims were a lucrative source of income (see hagiography). A 14th-century poem on St Breacán describes him as making a circuit of Ireland collecting tribute for his church on Inis Mór, while a mid-17th-century list of churches compiled by Malachy O'Kelly, archbishop of Tuam, is an inventory of pilgrim sites on the three islands. The people and landscape of the Aran Islands attracted many antiquaries and artists in recent centuries. Some of Ireland's most important antiquaries, including George Petrie, John O'Donovan, William Wakeman, and T. J. Westropp, recorded and surveyed its monuments. Jack B. Yeats, William Orpen, and Charles Lamb painted pictures of the landscape and people. The language and customs inspired authors such as the Anglo-Irish author John Millington Synge. The themes and language of Synge's writings are deeply rooted in the Aran Islands. Irish continues to be spoken on the islands and the wealth of this language and its associated traditions has been used by native authors of the 20th century, including Liam O'Flaherty (Ó Flaithearta), Breandán Ó hEithir, and the poet Máirtín Ó Direáin.

Edel Bhreathnach

Oisín/Ossian is a figure of Irish and Scottish Gaelic legend. Belonging to the cycle known as Fiannaíocht, he is the son of its central hero Finn mac Cumaill. In accounts of his birth, Oisín's mother is portrayed as a supernatural figure who appeared to Finn in the form of a doe (see reincarnation). It is a common motif in Celtic adventures for the fateful meeting of a hero and a supernatural woman to be prefigured by a wondrous wild animal. However, in the case of Oisín's birth tale, there is a special thematic significance, since his name is the diminutive of Irish *os(s)* 'deer'.

In the Middle Irish tale Acallam na Senórach (Dialogue of the old men) there is an account of how Oisín and his nephew Caílte meet St Patrick. A complete version of this tale seems to have existed before 1175. Parts of two recensions have been transmitted in two manuscripts which are dated *c.* 1200 according to their linguistic form. Editions of the *Acallam* were published by Standish O'Grady in 1862 and Whitley Stokes in 1900.

The figure of Oisín, as well as other members of the Fían (Finn's war-band), was very popular throughout the Gaelic-speaking world; many place-names mentioned in the dindshenchas relate to Fiannaíocht. Oisín was known in the Scottish Highlands as Oisean, which was adapted by the Scottish author James Macpherson as Ossian for his *Works of Ossian*. Oisín's name, in the Anglicized spelling *Ossian*, gave rise to the terms 'Ossianic cycle' and 'Ossianic poetry' as alternative names for Fiannaíocht, Fenian cycle, Fenian poetry, especially with reference to Macpherson's controversial publications.

The long vitality of the tradition is illustrated by the fact that folk-tales about Oisín were collected from Irish and Scottish Gaelic speakers as recently as the 1960s. The 20th-century Welsh poet T. Gwynn Jones's dramatic poem *Tir na n-Óg* (first published in 1916) told of the doomed love of Osian for Nia, a woman of the Otherworld (see tír na n-óg); Jones's work was indebted to the 18th-century Irish poet Mícheál Coimín's *Laoi Oisín ar Thír na nÓg* (Oisín's lay on the Land of Youth).

Old Cornish Vocabulary

The 12th-century Cornish-language text known as the *Vocabularium Cornicum*, or the Old Cornish Vocabulary, is found in the larger text known as the Cottonian Vocabulary (part of the Cottonian Library founded by Sir Robert Cotton in the 17th century) in the British Museum, now housed in the British Library. The full Cottonian Vocabulary contains some 360 pages and, as Norris notes, also holds 'much legendary and religious matter, some treatises of Aleuin, epistles of popes, proceedings of synods, some historical notices, an account of Brecknock [Brycheiniog], and a calendar; nearly all this various lore relates to Celts and Celtic affairs' (Norris, *Ancient Cornish Drama* 311).

The Old Cornish Vocabulary is a comparatively short text, forming only seven pages, numbered on alternate sides, beginning on the first side of the seventh folio and ending on the tenth. It is effectively an Old Cornish–Latin thesaurus, possibly assembled by the Anglo-Saxon translator Ælfric of Eynsham *c.* 1100. As Murdoch notes, the Vocabulary was probably written 'to attach to a grammar based once again on Donatus' (the Latin grammarian of the 4th century AD; see Murdoch, *Cornish Literature* 11), though its actual place of composition is unknown. It is clear that the author or authors had knowledge of both Old Welsh and Old Cornish. This caused confusion among early scholars as to whether the text might have been Old Welsh, until a Mr Antis found the document in the Cottonian Library and brought it to Edward Lhuyd (*c.* 1660–1709) who reassessed the text and noted that it was in fact Old Cornish.

The Vocabulary records in considerable detail an early Brythonic Celtic lexical world, framed in a chronological order based loosely on Genesis:

God: *Duy*;
the angels: sing. *ail, archail* 'archangel';
heaven: *nef*;
the earth: *doer*;
human beings: *den* 'homo';

parts of the body, in great detail: e.g. *abrans* 'eyelid', *ascorn* 'bone', *auu* 'liver', *bar(e)f* 'beard', *bes/bis* 'finger', *biu en lagat* 'pupil of the eye', *brech* 'arm', &c.;

occupations: e.g. *bugel* 'herdsman', *caid* /*kaiθ*/ 'serf', *caites* 'female slave', *canores* 'female singer', *oferiat* 'priest';

relationships: e.g. *car* 'friend', *modereb* 'aunt', *noi* 'nephew', *noit* 'niece', *tat* 'father';

politics: e.g. *arluit* 'lord', *arluites* 'lady';

warfare: e.g. *cadwur* 'soldier';

music: e.g. *pib* 'pipe', *telein* 'stringed instrument';

poetry: *barth* 'mimic', *creft* 'art';

the church: *eglos*;

education: e.g. *scriuiniat* 'writer';

time: e.g. *goyf* 'winter', *mis* 'month', *prit* 'hour';

birds: e.g. *chelioc* 'cock', *guennol* 'swallow';

animals: e.g. *broch* 'badger', *buch* 'cow', *ki* 'dog';

fishes: e.g. *ehoc* 'salmon', *morhoch* 'dolphin', *mornader* 'eel', *pisc* 'fish';

trees: e.g. *kelli* 'wood', *colwiden* 'hazel tree', *guernen* 'alder tree', *guiden* 'tree', *onnen* 'ash tree';

herbs: e.g. *kenin euynoc* 'garlic';

cooking: e.g. *bara keirch* 'oat bread', *keghin* 'kitchen', *forn* 'oven';

architecture e.g. *pons* 'bridge'; *porth* 'gate'.

Thus, the Vocabulary offers a valuable insight into both the order of this world and the terms and concepts of importance. It is the Cornish text that brings us closest to the world of any historical ARTHUR. The vocabulary is of great etymological interest, not least for comparative purposes (see CELTIC LANGUAGES; BRYTHONIC), but also because it reveals the productive word-forming patterns by which Old Cornish generated intelligible new vocabulary; for example, the word for Viking (*ancredwur mor*) is literally 'sea-unbeliever'; the word for a trumpeter (*barth hirgorn*) is literally 'long horn bard'; that for grasshopper (*chelioc reden*) literally 'cock of the bracken'. There are numerous similar examples of the poetic genius of the Old Cornish idiom. An early alphabetical version of the vocabulary was completed by Edwin Norris, and a further comparative study with Old BRETON and Old Welsh was made by E. V. T. Graves. There is an edition of the text by Campanile, whose alphabetical list, with a linguistic commentary in Italian, is the best discussion of the Celtic and INDO-EUROPEAN connections of the words.

Onomāris 'Ονομαρις was an ancient Celtic woman leader mentioned in a brief account in an anonymous Greek collection known by the Latin title *Tractatus de Mulieribus Claris in Bello* (Tract on women who were famous in war). Most of the datable material in it belongs to the 5th and 6th centuries BC, but this story could be later.

> Onomāris is one of those held in honour by the Galatians. When her people were oppressed by famine, and sought to flee from their country, they offered themselves as subjects to anyone who was willing to lead them. When none of the men wished to do this, she placed all of their property in a common store, and led the settlers, of whom there were many, to . . . Crossing the DANUBE, and conquering the natives in battle, she ruled over that land as queen. (Koch & Carey, *Celtic Heroic Age* 42)

If this story is factual, which is possible, it reflects an important stage of otherwise poorly documented Celtic expansion from the Celtic heartland north of the Alps into the BALKANS. It also implies that ancient Celtic women could wield political leadership, as the historical accounts of BOUDĪCA, CARTIMANDUA, and VELEDA show.

The name *Onomāris* appears to be a Celtic compound, its second element being the very common word meaning 'great', GAULISH and BRITISH *māro-*, Old Irish *már, mór*. There is more than one possible interpretation for *Ono-*, as D. Ellis Evans has discussed.

Onuist son of Uurguist (Oengus mac Forguso in GAELIC sources) was a particularly powerful and fairly well-documented king of the PICTS. He was the first of two Pictish kings with this same name and patronym (see also UNUIST). Onuist I ruled between 729 and 761. Our main source for his activities are the ANNALS of Ulster. He came to power during an internal Pictish struggle which began at the end of the reign of NECHTON SON OF DERELEI. Onuist is first mentioned in 727, when he defeated DREST, a rival Pictish prince, three times. Another Pictish rival, ELPIN, was defeated by Onuist in 728 at the battle of Monid Croib (probably at Moncrieffe Hill, Perthshire). In 729 he seized power across Pictland, when he defeated Nechton and Drest. During his reign he led several campaigns against DÁL RIATA, including an incursion in 736, on which occasion he seized the Scottish stronghold of Dún At (Dunadd) and captured the Scottish chiefs Dúngal mac Selbaig and his brother. Another 'smiting of Dál Riata' by Onuist is recorded in the Annals of Ulster for the year 741. Onuist seems to have been overlord not only of the Picts but also of Dál Riata between 736 and 750. In 739 he drowned the Pictish tribal king, Talorgen son of Drustan. We may infer that Onuist's aggressive momentum began to stall from 750, when his brother, another Talorgen (see TALORGGAN MAC FORGUSSA), was defeated by the BRITONS of Dumbarton (see YSTRAD CLUD). Onuist reigned in Pictland until his death in 761.

The name *Onuist* corresponds to Old Welsh *Unust* and the very common Old Irish man's name *Oengus*, all reflecting a COMMON CELTIC **Oino-gustus* 'chosen one'. The loss of Celtic *-g-* in the PICTISH shows the particularly close similarity of the phonological development of Pictish to that of the BRYTHONIC languages. The father's name *Uurguist* corresponds to Old Breton *Uurgost*, Old Welsh *G(u)urgust*, and the Old Irish *Forggus*, often confused with the distinct, but more common, *Fergus*. The Common Celtic preform was **Wer-gustus* or **Wor-gustus* 'chosen over others, best'.

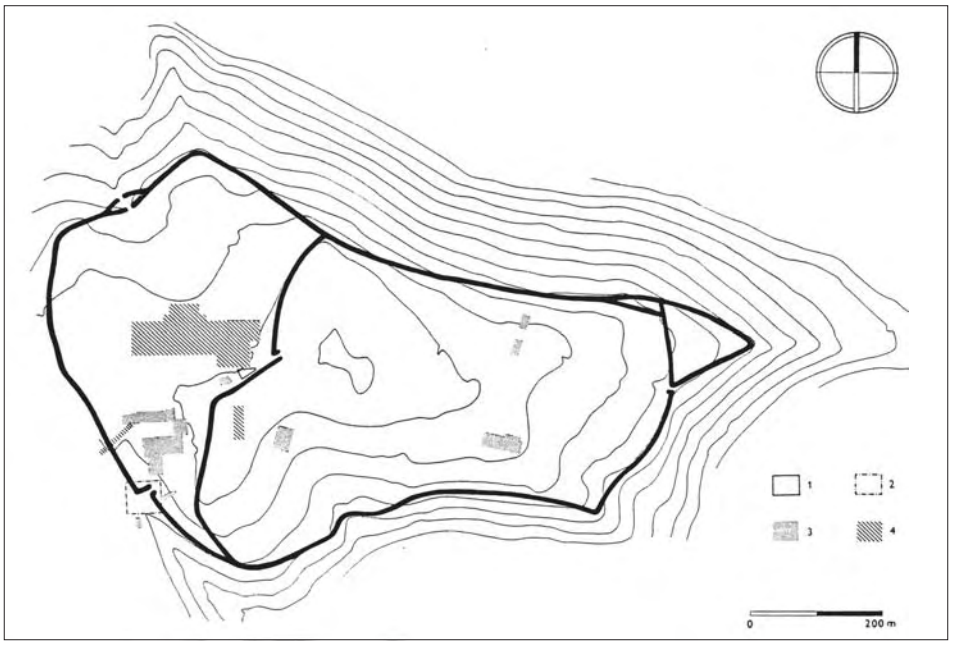
PEB, JTK

Oppidum (pl. oppida) is a Latin word which originally (i.e. as applied to Italy) meant a town central to a territory and its people. From CAESAR's time, *oppidum* came to be used for large proto-urban defended settlements functioning as tribal centres in areas of the Celtic-speaking world, including GAUL, central Europe, and south-east Britain (in the territory of the BELGAE). In describing Gaulish architecture, Caesar contrasted *oppidum* with the *aedificium* 'building, structure' and the *vicus* 'village, settlement', and in *De Bello Gallico* 7, he uses the term *urbs* 'town, city' in place of *oppidum*. In the records of Greek authors, the same sites are denoted as πόλις *polis* or φουριον *phourion*.

Today, *oppidum* is used in Celtic studies to denote the large, permanently fortified settlements which developed in the final LA TÈNE period (La Tène D) in a substantial part of Celtic Europe. Oppida in their archaeological definition belong as a sub-class to fortified prehistoric sites. One distinctive characteristic is that oppida were built alongside watercourses and used rivers, marshes &c. as part of their lines of defence, with man-made ditches and ramparts filling in gaps between these natural barriers. However, the ramparts of oppida were often extended to enclose the space of the whole agglomeration—so as to include the stream or wetland—as if the artificial boundary had a symbolic meaning as important as the defensive function. The enclosed surface areas are on average 10 times larger than in the preceding periods. Thus the oppida covered areas of between about 0.2 and 15 km². An exceptionally large example is CAMULODŪNON (Colchester, Essex, England), where the dyke system running between the river Colne and the river Roman defended an area of 31 km². The fortifications of oppida can incorporate several older ramparts from earlier hill-forts on the same site. Some also ascend and descend to include several hills. The rampart is generally made of wooden beams covered with earth with an outside stone facing. The type termed *Pfostenschlitzmauer* ('walls with inset posts'), often referred to by the type site 'KELHEIM', are most common to the east of the RHINE. In these, the rampart has an earthen ramp at the rear rather than an internal vertical wall face. There are horizontal beams in the core of the earthen rampart. These project forward and join vertical posts at the front, defining a steep outer face, contrasting with the slope at the back.



Plan of the Staré Hradisko oppidum in the Czech Republic, showing defensive fortifications and excavated areas

West of the Rhine is the *murus gallicus* 'Gaulish wall' described by Caesar (*De Bello Gallico* 7, 23). The wooden beams are embedded in horizontal beds, and the ends of the beams protrude from the stone facing on the exterior of the ramparts. Iron spikes 20–30 cm long are set into drilled holes where beams cross at right angles, giving rigidity to the wooden framework, a significant innovation in the history of FORTIFICATION. The entryways into the oppida—a strategic weak point in any fortification—are often set within a structure where the line of the rampart turns in. These gate structures are described by the term *Zangentor* (lit. 'pincer gates'). They have a monumental appearance. The defensive structures around them can be particularly elaborate, thus deterring forced entry during a siege. Comparable gate structures also occur in late IRON AGE hill-forts in southern Britain, such as MAIDEN CASTLE.

Inside the walls of the Gaulish oppida, buildings of all kinds squeeze together, often grouped in enclosures and linked by roads. At some sites the buildings in the oppida resemble those of farmsteads in the countryside, as in MANCHING (Bavaria) and STARÉ HRADISKO (Czech Republic). Elsewhere, a

View of western excavated area of Staré Hradisko, 1983

distinctively urban architecture emerged, as at Bibracte (Burgundy) and Besançon (Franche-Comté). In all cases, there is minimal urban planning and no apparent attempt to regularize the buildings. Each unit differs from its neighbour, in its plan as in its orientation, size, and building technique. The houses can be made of wood, mud brick, or stone, following the local tradition. Typically British round houses, for example, occur in British oppida. However, in eastern Gaul, the strong influence of Italian urban architecture is apparent. Sanctuaries are present in most of the oppida, though several of them are unidentified, probably because of the great variety of architectural types. The material culture of the oppida is generally very high, and is enriched in particular by the products of the numerous craftsmen's workshops which formed a regular part of the core of the settled area. Imports, particularly amphorae (ceramic wine vessels), are a characteristic element of the lifestyle in the oppida, and reflect the rôle of these centres in the ancient world economy. On both the Continent and in Britain, oppida were frequently the centres at which tribal coinage was minted.

These towns drew in all classes of the population, including prominently craftsmen and both local and foreign traders. The oppidum thus had an economic function comparable to that of a modern provincial town or regional centre. Socio-economic institutions of this sort had previously been unknown to the cultures of the European Iron Age. Thus, as a stage in social history, the oppida form a transition between prehistoric hill-forts (whose sites and ramparts they often reused in the construction of oppida) and the Roman and medieval towns, whose economic function they anticipate. We are dealing with an original urbanization, which developed in the years 150 BC to the beginning of the Christian era, from Brittany (Breizh) to Hungary and including south-east Britain. After Caesar's conquest of Gaul (58–50 BC), the oppidum disappears quickly; the Roman model imposes itself from the 30s BC onwards, gaining momentum in the age of Augustus (r. 27 BC–AD 14). In Britain, where the Roman conquest did not begin until AD 43, the replacement of oppida by Roman towns belongs to the mid-1st century. A general aspect of the Romanization of Celtic society was for the proto-urban site located on a height to be abandoned in favour of living places nearby on the plains. The oppida represent a true urbanization of the Celtic world, even though it is late in developing and ephemeral.

When known, the ancient names of the oppida are most often either Celtic or lacking a secure etymology. It is likely that, where the sites are located on earlier Iron Age and Late Bronze Age settlements and fortifications, as is frequently the case, they have also retained the old name. However, few local names beyond the Alps are recorded before the age of the oppida, and linguistic continuity is therefore only an unprovable likelihood.

Ordinalia is the conventional title of a Middle Cornish dramatic trilogy written sometime at the end of the 14th century and composed of the following three plays: *Ordinale de Origine Mundi* (*Origo Mundi*, the beginning of the world), *Passio Domini Nostri Jhesu Christi* (*Passio Christi*, Christ's Passion), and *Ordinale de Resurrexione Domini* (*Resurrexio Domini*, the Resurrection of the Lord). *Ordinalia* is the plural of the Latin *ordinale*, meaning prompt or service book. The language of the plays is Middle Cornish with around eight different metrical forms used. French, English, and Latin are also incorporated. The place-names of the plays, which combine a biblical landscape with a Cornish one, indicate probable authorship at Glasney College.

Like other Cornish plays, the *Ordinalia* seems to have been staged over three days in open-air amphitheatres, called in Cornish *plen-an-gwary*. Two extant examples are found: at Piran Round near Perranporth and at St Just in Penwith (Lanuste, Penwyth). Many such theatres across parishes in Cornwall (Kernow) indicate a prolific and popular theatrical continuum. Staging and production techniques are indicated by diagrams in the manuscript, which show circles with

the characters' names on their peripheries.

The *Ordinalia* is a highly unified work showing the fall and redemption of humanity. Many of its themes are derived from apocryphal sources, the most important of which is the Legend of the Holy Rood. It follows the history of the cross, and begins with three seeds from the tree of life being placed in the mouth of the dead Adam by Seth who is in search of the oil of mercy. The trilogy is highly comic in places with earthy humour.

Origo Mundi begins with the creation of the world, Adam and Eve, Cain and Abel, Seth, Noah, and Abraham and Isaac. These sections form individual set pieces, followed by Moses's discovery of the three rods, which will combine together to form the rood. After a love affair with Bathsheba, a remorseful King David writes his psalms and vows to place the rods in a temple. He dies before its completion, and the construction of the temple is finished by Solomon. Comically, the rood, now used as a beam, fits nowhere in the structure. The first play concludes with the prophet Maximilla; her clothing catches fire from the rood causing her to prophesy Jesus Christ, and she is duly executed.

Passio Christi opens with the temptation of Christ in the desert. This is followed by Palm Sunday, the Hebrew children, the miracles of Christ, and events leading to the Crucifixion. The Crucifixion is both brutal and comic, with the torturers delighting in their task. Meanwhile, local legend is incorporated into the Doctor's debate over Christ being both God and man. One of them remarks that the mermaid is both woman and fish. The link between Adam and Christ is made by the finding of the rood being used as a bridge at Cedron. Longeus (Longinus), the blind Roman soldier, Mary, Joseph of Arimathea, and Nicodemus conclude the second day.

Resurrexio Domini neatly follows on from the Passion, with the release from prison of Nicodemus and Joseph of Arimathea, the Resurrection of Christ and (disguised as a gardener) his encounter with his mother, the harrowing of hell, and the three Marys. Meanwhile, the protracted disbelief of Thomas contrasts with the faith of Mary Magdalene. A sub-plot to *Resurrexio Domini* is the death of Pilate, which provides the producers of the play with several opportunities for comedy and special effects, as Pilate's corpse is rejected by the earth and the river Tiber. Eventually, his body is carried off by the devils, while the play concludes with the Ascension.

Some observers have commented that, alongside textual evidence, the transition made between *Origo Mundi* and *Passio Christi* indicates a lost nativity work. Gwreans an Bys (The creation of the world) shows several similarities to *Origo Mundi*, while *Pascon Agan Arluth* (The Passion of our Lord) is a poetic mirror image to *Passio Christi*. The last major production of the *Ordinalia* was in 1969, though productions of the individual plays have occurred. A new English-language verse translation is in preparation to coincide with a new production of the full cycle.

Ordovices Ὀρδ(ο)ουικες were an ancient tribe of what is now northern and central Wales (Cymru), and their lands possibly extended beyond the modern border into Shropshire (swydd Amwythig) and northern Herefordshire (swydd Henffordd). In the opening decades of the Roman period in Britain they offered prolonged resistance, first in the period AD 45×51 as supporters of Caratācos, the displaced leader of the Catuvellauni (Tacitus, *Annales* 12). In the period AD 58/9 they fought Suetonius Paulinus prior to his conquest of Anglesey (Môn) in AD 60. Shortly before Agricola's arrival in AD 78, the Ordovices nearly annihilated an auxiliary cavalry unit stationed in their country. This was the first challenge of his governorship. Tacitus (*Agricola* 18) explains that the Ordovices kept to the highlands and would not engage the Romans on the plains—presumably taking strategic advantage of the terrain of Snowdonia (Eryri)—but Agricola did come to grips with their fighting force and destroyed it in 78/9, after which he had to retake Anglesey. Eventually, the tribe was pacified. Ptolemy lists two towns in their country: Mediolanon (which has the same name as the more

famous centre in CISALPINE GAUL, and was possibly the fort at Caersŵs, POWYS, or Whitchurch in Shropshire) and Branogenion. But it is doubtful whether their country ever became a Romanized CIVITAS, accepting settled urban life, as did most of the Romano-British tribes. The strongly fortified native-style hillfort of Tre'r Ceiri—built around a massive cairn of the Early Bronze Age and strategically viewing Llŷn, Anglesey, and Snowdonia—was occupied through most of the Roman period, showing an incomplete Romanization of this area. The accounts of CUNEDDA and his son CERETIC imply that Irish settlers occupied lands between the rivers Dee (Dyfrdwy) and Teifi in the late Roman and/or earliest post-Roman periods, a scenario which finds some support in a scattering of OGAM inscribed stones and Irish place-names in the region. However, we do not know whether these Irish groups were settled within a continuing Ordovician tribal structure—having perhaps supplied a new dynasty for the tribe, as had occurred in DYFED—or whether the Ordovices had already been supplanted by Irish groups before GWYNEDD and CEREDIGION were founded. There are, however, traces of Ordovician survival. The inscription from Penbryn, Ceredigion (reading CORBALENGI IACIT ORDOVS 'of Corbalengos, the Ordovix lies here') shows that the tribal name was still a meaningful identifier in the 5th century, in this case by a man whose name appears to be Irish (Macalister, *Corpus Inscriptionum Insularum Celticarum* no. 354 = Nash-Williams, *Early Christian Monuments of Wales* no. 126; see Jackson, LHEB 619). *Dinorwig*, north of Llanberis in Snowdonia, means 'hillfort of the Ordovices', and *Rhyd Orddwy* near Rhyl means 'ford of the Ordovix'. *Cantref Orddwyf* as an old alternative name for Meirionnydd suggests that the early medieval kingdoms of the Cuneddan foundation legend—such as Meirionnydd 'land of Meirion' < Latin *Mariānus*—never completely obliterated the stubborn IRON AGE tribe.

The name is Celtic and means 'sledge-hammer-fighters'; cf. Old Irish *ordd*, Breton *orz*, Welsh *(g)ordd* 'sledge-hammer', and for the second element, Old Irish *fichid* 'fights'.

Oswald, St (*c.* 604–5 August 642) was king of Northumbria from 634/5 until his death. His father, the pagan king ÆTHELFRITH of Bernicia (Brynaich), died fighting Rædwald of East Anglia, supporter of Æthelfrith's rival EADWINE, in the battle of the river Idle in 617. Afterwards, Oswald and his brother OSWYDD went into exile among the Gaels for eighteen years. Most of this time was spent either in Iona (EILEAN Ì) itself, beginning during the abbacy of UIRGNOU the Briton, or in one of the other MONASTERIES or the secular courts heavily under the intellectual and spiritual influence of Iona. When the princes at last returned to England they were devout Christians, fluent IRISH speakers, and devoted patrons of Iona.

The place where Oswald overthrew king CADWALLON of GWYNEDD—who had held Northumbria for about a year—was near HADRIAN'S WALL and was called *Cantscaul* or *Catscaul* in the Welsh Latin sources (HISTORIA BRITTONUM §64; ANNALES CAMBRIAE 631) and *Hefenfelth* (Heavenly field, *Caelestis campus*) by BEDA (*Historia Ecclesiastica* 2.2). ADOMNÁN, abbot of Iona, attributes the victory to the posthumous intercession of Iona's founder, COLUM CILLE, who had appeared to Oswald in a dream on the eve of the battle (*Vita Columbae* 1.1). It is likely that this story—the point of which was to show that Colum Cille's favour was the miraculous source of the power of Oswald and his successors—was not invented by Adomnán in the 690s but goes back nearer to Oswald's time, deriving from the lost sections of LIBER DE VIRTUTIBUS SANCTI COLUMBAE.

After his victory, Oswald affected Northumbria's second conversion—its Anglian areas had apostatized during Cadwallon's conquest—asking that Iona send a bishop. He received the Irish churchman Aedán (St Aidan †651), who founded LINDISFARNE near the royal stronghold at Bamburgh as Northumbria's spiritual centre in 635. Aedán could not speak English, and

Beda explains that Oswald personally undertook the simultaneous translation of his Irish sermons (*Historia Ecclesiastica* 3.3), a feat which demonstrates not only total linguistic competence in both languages, but also a profound familiarity with the Christian vocabulary and idiom of Irish and an ardent enthusiasm to create the same for Anglo-Saxon. The level of Iona's support for Oswald's kingship can be judged by the statement of its abbot Adomnán, writing the Life of Colum Cille in the 690s, that he was 'ordained by God emperor of all Britain' (*Vita Columbae* 1.1); this assertion is of a piece with the story of Oswald's dream and victory and is also likely to derive from the *Liber de virtutibus*. The only similar claims made in *Vita Columbae* for Irish rulers—and those in less lofty terms—are for the Southern Uí Néill kings of Tara (Teamhair), Diarmait mac Cerbaill and his son Aed Sláine (*Vita Columbae* 1.14). Writing some 35 years later, Beda builds on this doctrine of high-kingship, listing Oswald among the Anglo-Saxon *imperium*-wielders of Britain (*Historia Ecclesiastica* 2.5), later glossed as Old English *bretwalda*.

On the likelihood that Oswald besieged Edinburgh (Dùn Èideann) in 638 and annexed Lothian, see Brynaich (Jackson, *Anglo-Saxons* 35–42).

Oswald died in a battle known as *Cogwy* in Welsh and *Maserfelth* in Old English (*Historia Ecclesiastica* 3.9), fighting a coalition led by the pagan Penda of Mercia and including some Britons (see cynddylan). His body was taken by the enemy, dismembered, and hung up on the battlefield. The site is traditionally identified with the place now in Shropshire (swydd Amwythig) near the English–Welsh border known as *Oswestry* (Oswald's tree) or *Croesoswallt* (Oswald's cross). That there had once been traditions in Welsh concerning Oswald is shown also by his Old Welsh epithet *lamnguin* 'white-blade' (*Historia Brittonum* §64); not knowing its original context, this epithet might either indicate a hero's brilliant stroke or conversely a weapon never reddened by its unheroic owner.

Oswald was succeeded by his younger brother Oswydd (see next article).

Oswydd, Old English Oswiu (*c.* 613–70), became king of his native Brynaich following the death of his brother Oswald in 642. (For Oswydd's background and early life, see previous entry.) After recovering Oswald's dismembered corpse, Oswydd consolidated his grip on all Northumbria by allowing Oswine of the southern subkingdom of Deira (Dewr) to rule there between 644 and 651 and by marrying Eanflæd (626–*c.* 704), the daughter of the Deiran Eadwine (†633). It is not clear whether Oswydd's wife, Rhieinfellt of the Britons (Old Welsh *Rieinmelth*; see alchfrith), had died by this time, or whether she had been put aside for the more expedient marriage alliance, or whether Oswydd kept both wives, as the wording of Historia Brittonum §57 would allow.

The first half of his long reign saw much peril from Penda of Mercia and his Brythonic allies. Some time before Bishop Aedán's death in 651, Penda's forces came close enough to Lindisfarne and the nearby royal stronghold of Bamburgh to attempt to burn the latter down (Beda, *Historia Ecclesiastica* 3.16). According to *Historia Brittonum* (§§64–5), Penda and the allied kings of the Britons harried Oswydd to the extremes of his realm, where at Stirling he was forced to hand over the town's treasures, evidently a celebrated incident, given the Old Welsh gloss *atbret Iudeu* 'the restitution of Stirling'. But on 15 November 655 Oswydd and his son Alchfrith killed Penda, all his royal generals, and most of their men at the battle on the river Winwæd in Deira (Beda, *Historia Ecclesiastica* 3.24–7), *campus Gai* in the Welsh Latin sources (*Historia Brittonum* §64; Annales Cambriae 656; see also cynddylan). It was probably at this point that Oswydd was acknowledged by his contemporary Anglo-Saxon rulers as holding the *imperium* of Britain, for which the Old English title was *bretwalda*. On the likelihood that Oswydd's nephew ruled as his client king over some

or all of the Picts, see Talorcen son of Eanfrith.

Another pivotal historical event over which Oswydd presided was the decision in favour of the Roman reckoning of Easter, taken at the council of Streanæshalch/Whitby in 664, and the consequent diminution of the influence of the Irish clergy of Iona (Eilean Ì) in Northumbria (see easter controversy; alchfrith; liber de virtutibus sancti columbae). Like Oswald, Oswydd spoke Irish perfectly, and it was for this reason, according to Beda (*Historia Ecclesiastica* 3.25), that he had favoured the Insular Easter, an interesting personal sidelight on the cultural/linguistic undercurrents of the dispute.

Unlike his predecessors (Æthelfrith, Eadwine, and Oswald), Oswydd died of natural causes. He was succeeded by his son Ecgfrith (by Eanflæd), who was succeeded in 685 by the scholar Aldfrith/Flann Fína, also Oswydd's son, by the Irish princess Fín.

Oswydd is the Welsh form of his name, Old Welsh *Osguid*. It occurs either as an extended metaphor or as a common noun for the English enemy in the Gododdin and the Gogynfeirdd poetry. Ifor Williams proposed that *oswydd* was an old native word for 'enemy, foreigner': had it been part of Aneirin's original 6th-century composition it could hardly derive from the name of a 7th-century king. However, since *oswydd* occurs only in the *Gododdin*'s most innovative A-text (A13.114; A57.414), this argument is doubtful and probably unnecessary in view of Oswydd's fame, power, and momentous battles against the Welsh. *Euroswydd* (Gold-Oswydd) in the Mabinogi, the name of an implicitly foreign king, may be a derivative.

Otherworld

§1. introduction

The term 'Otherworld' may be defined negatively, as designating a realm different from that inhabited by normal humanity, or positively, as the dwelling place of the gods, the souls of the dead, or other supernatural beings. Although the term is frequently employed in discussions of the beliefs of the Celts, several considerations make this usage problematic. No word for 'Otherworld' can be confidently reconstructed for Proto-Celtic, though there was a common word in Gaulish and Brythonic (see §4 below). We must guard against imposing preconceptions on the evidence merely by our choice of terminology. Although legend and folklore furnish many accounts of individual supernatural places, indications of another 'world'—i.e., a single unified extended domain distinct from and contrasting with the world we know—are more difficult to find (this is especially true of the Gaelic sources). The identification of the otherworld(s) with concrete features of the landscape underscores the close relationship between so-called natural and supernatural worlds. At the same time, the descriptions and behaviour of otherworld beings (see also fairies) emphasize the 'otherness' of the otherworld.

While general practice, therefore, has made use of the word 'Otherworld' virtually unavoidable, it is most prudent to take it as a neutral tag, rather than as an adequate description of the phenomena to which it is applied. In the discussion which follows, 'Otherworld' is used loosely and agnostically to mean 'supernatural place(s)'—more specifically, those not directly borrowed from Christian tradition.

§2. classical evidence

The Roman poet Lucan states that the druidic (see druids) doctrine of immortality entailed a belief that the soul after death assumed a body 'in another sphere' or 'region' (*orbe alio*), but what kind of realm this was is not specified. Other sources may reflect an idea that the dead dwell in islands in the ocean. The 6th-century Byzantine historian Procopius describes fishermen ferrying souls by night to *Brittia* (= Britain?). Plutarch's account of an island in the seas beyond Britain, where the titan Kronos lies dreaming in a cave, suggestively recalls the persistent

Brythonic tradition of the Otherworldly slumbers of King ARTHUR (see §4 below), though the theme occurs in non-Celtic traditions as well.

Archaeological material is notoriously difficult to use as evidence of supernatural belief: this is especially the case when, as with the ancient Celts, the inscriptional evidence is fragmentary and obscure. But the numerous finds of offerings deposited in bodies of water (see WATERY DEPOSITIONS), or in votive shafts dug deep into the earth, suggest a pervasive idea that the gods were in some sense located underground or underwater. At least they could be contacted below the everyday surface world. This orientation harmonizes with the indications of medieval legend and modern folklore.

§3. GAELIC TRADITION

Early Irish sources refer to the 'Otherworld' in various ways. The most common and also the most ambiguous term employed is SÍD /ʃi:ð/ (pl. *síde*). This designates an elevation of land, whether natural or artificial, which is inhabited by supernatural beings, or else the subterranean dwelling itself—hence the term *aes síde* ('people of the *síd*') used generally of the immortal people. Scholars disagree as to whether the words *síd* 'Otherworld mound' and *síd* 'peace' are ultimately identical, or merely homonyms. In either case, there was evidently a semantic overlap between the habitations of the immortals and the beatific character of their existence. It is relevant that many artificial mounds in the landscape of Ireland (ÉIRE) and other areas of north-west Europe contain prehistoric burials.

Besides referring to an individual cave, *síd* may designate an extensive region to which access may be obtained in various ways. Thus a prince named Loegaire mac Crimthainn found a radiant country when he dived beneath a lake. Having triumphed in various adventures, he remained there 'in joint-kingship of the *síd*' (Jackson, *Speculum* 19.386–7). There are two ideas—of distinct spots located concretely underground and underwater, and of a single realm which could be reached via these spots or in some other manner. And these appear to interchange freely in the literature.

The kingdom conquered by Loegaire is called *Mag Mell* ('Plain of Sports' or 'Delightful Plain'). This name, which recurs in other sources, is not tied to any specific *síd*. The same is true of other names, whose biblical derivation reflects a partial identification of the native Otherworld with the Christian heaven: *Tír na mBeó* ('Land of the Living') and *Tír Tairngire* ('Land of Promise').

Besides localizations of the Otherworld within hills, under lakes, or beneath the sea, there are tales which describe supernatural regions beyond the ocean. As noted above, some classical sources point to a Celtic belief in 'island otherworlds'. Such Irish traditions as the belief that the dead migrate to *Tech Duinn* ('the House of Donn', an island off the Beara peninsula) seem likely to have indigenous roots (see LEGENDARY HISTORY).

Nevertheless, nearly all of the stories that locate Otherworld regions overseas contain explicitly monastic elements. It may be that the clergy attempted to discourage reverence for supernatural beings immanent in the landscape by promoting a view that the *aes síde* were remote beyond the horizon. Although there is an international theme of the dead going west over the horizon like the setting sun, on the evidence of contemporary folk belief this idea never prevailed at the popular level in Ireland.

Descriptions of the Otherworld focus upon its beauty, harmony, and abundance. It is perhaps the last of these which is accorded most attention. An account of the *síd* within the mound of BRUG NA BÓINNE (Newgrange, An Mhí/Co. Meath) concludes:

> That is a wondrous land. There are three trees there perpetually bearing fruit, and an everliving pig on the hoof and a cooked pig, and a vessel with excellent liquour; and all of this never grows less. (Koch & Carey, *Celtic Heroic Age* 145; Hull, ZCP 19.58)

When CONN CÉTCHATHACH visits the Otherworld in the tale *Baile in Scáil* (The phantom's ecstasy), he is served an ox-rib twenty-four feet long, and a boar-rib twelve feet long (Dillon, *Cycles of the Kings* 13; Thurneysen, ZCP 20.220).

The Otherworld is often described as a place where death and old age do not exist. More generally, time there moves differently from normal time. A short interval there may correspond to a long one here, or vice versa; or it may be summer in the *síd* when it is winter among mankind. Such stories as ECHTRAE Nerai ('The Adventure of Nera') and *Tochmarc Becfhola* ('The Wooing of Becfhola') take this temporal dis-

parity as a principal theme, and build their plots on the paradoxes which it can entail (Bhreathnach, *Ériu* 35.59–91; Meyer, RC 10.212–28).

Another trait of the Otherworld is its elusiveness or invisibility. It is only through chance or supernatural favour, or some prophetic gift, that it is usually accessible. An exception is the night of SAMAIN 'Hallowe'en' (see CALENDAR). Thus, the tale *Macgnímartha Finn* ('The Boyhood Deeds of Finn'; see FINN MAC CUMAILL) states that 'the *síde* of Ireland were always open at *Samain*, for at *Samain* no concealment was ever possible on the *síde*' (Meyer, *Ériu* 1.187; Meyer, RC 5.202). Many tales of supernatural contact open at dawn on BELTAINE (May Day), suggesting that this was another moment that bridged the worlds.

Besides serving as a venue for marvels and adventures, the Otherworld was seen as a source of authority. Conn's visit to an Otherworld hall legitimizes his own kingship and that of his successors. On a similar visit, his grandson CORMAC MAC AIRT obtains a talismanic cup which enables him to judge justly (Stokes, *Irische Texte* 3/1.197–8, 215–16). The poetic inspiration believed to exist in the waters of the Boyne (BÓAND) flowed from its hidden spring in the *síd* of Nechtan (Breatnach, *Ériu* 32.66–7; see also FLOOD LEGENDS).

As in all other areas of early IRISH LITERATURE, the reader must always be alert to evidence of external influences at work in the tradition. In accounts of the Otherworld these take many forms: as already noted, the Christian imagery of paradise and heaven could be applied to the *síde*, and in some voyage tales (see VOYAGE LITERATURE) the distinction between clerical and secular Otherworlds is indistinct or perhaps indeed non-existent. The marvels of travellers' tales may also have contributed to the descriptions.

The Otherworld might be identified with faraway places such as China or the southern hemisphere. In such tales as TOCHMARC EMIRE ('The Wooing of Emer'), and *Forfes Fer Fálchae* (The siege of the men of Fálchae), even Britain and the Isle of Man (ELLAN VANNIN) take on Otherworldly attributes (Hull, *Cuchullin Saga in Irish Literature* 55–84; Thurneysen, *Zu irischen Handschriften und Litteraturdenkmälern* 1.53–8; Hamel, *Compert Con Culainn* 16–68).

In modern Gaelic folklore, these strands of tradition have been polarized into two distinct 'Otherworlds': (1) the dwellings of the fairies, here and there beneath earth and water and concretely linked with the actual landscape; and (2) an array of vague faraway regions ('the Great World', 'the Eastern World', 'Land Under Wave') which serve as settings for the fantastic adventures of the wonder tales.

§4. BRYTHONIC TRADITION

The evidence for medieval Wales (CYMRU) is much more sparse than that for Ireland. By contrast with the Irish situation, however, we do have a Welsh term which seems to be straightforwardly translatable as 'Otherworld': this is Middle WELSH *Annwfn*, Modern Welsh ANNWN, variously interpreted by modern scholars to mean 'un-world', 'underworld', 'great world', and 'very deep'. Annwfn is often explicitly subterranean.

In the tale of PWYLL, Annwfn is portrayed as a kingdom with an unspecified spatial relationship to the mortal realm (Ford, *Mabinogi* 36–42; Ifor Williams, *Pedeir Keinc y Mabinogi* 1–8). Poems, however, refer to 'Annwfn beneath the earth'; and this subterranean localization has probably contributed to an identification of Annwfn with the Christian hell.

Other scattered references reflect concepts broadly similar to those attested in Ireland. The tale of BRANWEN describes a timeless feast on the offshore island Gwales, and a supernatural couple emerging from the waters of a lake (Ford, *Mabinogi* 63, 70–2; Ifor Williams, *Pedeir Keinc y Mabinogi* 35, 45–7). In the life of St COLLEN, Gwyn ap Nudd (see NŌDONS), the lord of Annwfn, holds court on GLASTONBURY Tor, only to vanish with all his retinue at the touch of holy water (Baring-Gould & Fisher, *Lives of the British Saints* 4.375; Parry-Williams, *Rhyddiaith Gymraeg* 1.36–40). GIRALDUS CAMBRENSIS tells of a boy who journeyed underground to a delightful region peopled by pygmies (Dimock, *Itinerarium Kambriae* 75–8; Thorpe, *Journey through Wales* 133–6). The persistent legends that King Arthur, and various other national heroes, have never died, portray them as sleeping in caves in readiness for their people's greatest need. GEOFFREY OF MONMOUTH gives an alternative account in his *Vita Merlini* ('Life of Merlin'; see MYRDDIN): nine sisters take Arthur to an 'island of apples' (see AVALON), to be healed of his wounds after his last battle. Welsh folklore depicts the *tylwyth teg* ('fair folk') or fairies as living beneath hills and lakes, and on magical islands off the coast.

§5. CONCLUSIONS

Such indications as Continental and Brythonic material afford seem in general to harmonize with the Irish picture. But it may be queried whether the resemblances constitute a distinctively Celtic complex of ideas as opposed to what can be found in other European traditions.

John Carey

Owain ab Urien was probably a historical north British chieftain of the CYNFERCHING dynasty (see also RHEGED; URIEN) who was active in the later 6th century, though he is not mentioned in any texts surviving in contemporary manuscripts of the Old Welsh period, such as ANNALES CAMBRIAE or the GENEALOGIES in BL Harley MS 3859. However, in HISTORIA BRITTONUM §63, unnamed sons of Urbgen (i.e. Urien) are mentioned as bravely fighting the Angles of BRYNAICH. One of the CYNFEIRDD poems in LLYFR TALIESIN is an elegy for him (ENAID OWAIN AB URIEN). Although the name (< Latin *Eugenius*) was common, the Owain said to be fighting alongside Urien in the AWDL *Gwaith Argoed Llwyfain* (The battle before the elm wood) in this same manuscript is almost surely Owain ab Urien; like the hero of *Enaid Owain*, his enemy was the Anglo-Saxon *Fflamddwyn* (Flame-bearer). Also in *Llyfr Taliesin*, the Owain of *Cychwedl a'm doddyw o Galchfynydd* (Tidings have come to me from Calchfynydd) is associated with Erechwydd, a country elsewhere repeatedly identified as Urien's land. In the saga ENGLYNION composed on Urien's death, someone named Dunawd (another common early Welsh name derived from Latin) is said to be planning an attack on Owain and Erechwydd. Owain ab Urien's grave is mentioned in *Englynion y Beddau* ('The Stanzas of the Graves') in the Black Book of Carmarthen (LLYFR DU CAERFYRDDIN). In Scottish HAGIOGRAPHY there are several statements that Euuen son of Ulien (and a variety of similar spellings) was the father of St KENTIGERN, whose mother was St Teneu; this is chronologically possible, though a father in the previous generation might fit better, since 'Conthigirn' died in 612, according to *Annales Cambriae*. The popularity of Owain ab Urien in medieval Welsh tradition is reflected in repeated references in the TRIADS: he was one of the 'Three Fair Princes' (TYP no. 3); his poet Dygynnelw was one of the 'Three Red-Speared Bards' (TYP no. 11); his horse Carn Aflawg 'Cloven hoof' was one of the 'Three Plundered Horses' (TYP no. 40); Owain and his twin sister Morfudd were one of the 'Three Fair Womb-Burdens' (TYP no. 70; see MODRON); his wife Penarwan ferch Culfanawyd Prydain was one of the 'Three Faithless Wives' (TYP no. 80). Against this background, it is not surprising that Owain ab Urien emerged as a major Arthurian hero, notably as the protagonist of *Owain neu Iarlles y Ffynnon* (Owain or the Lady of the Fountain). For discussions on this tale and its close relationship to the corresponding 12th-century French narrative poem *Yvain*, see TAIR RHAMANT; ROMANCES; WELSH LITERATURE AND

FRENCH, CONTACTS; CHRÉTIEN DE TROYES; and ARTHURIAN LITERATURE [1], [6]. Owain also has a central rôle in the Arthurian dream tale BREUDDWYD RHONABWY.

Owain ap Dyfnwal (Oan mac Domnaill), also known as Owen the Bald, was king of the BRITONS of Strathclyde (YSTRAD CLUD) *c.* 997–1018. He fought alongside MAEL COLUIM MAC CINAEDA (Malcolm II of Scotland) against the Bernicians in 1018 (see BRYNAICH). He is the last known BRYTHONIC king of Strathclyde; his crown went to DÚNCHAD MAC CRINÁIN (Duncan I of Scotland), the grandson of Mael Coluim mac Cinaeda.

The Welsh masculine personal name *Owain* is probably derived from the Latin *Eugenius*. It was known among the Britons of the North (see HEN OGLEDD) and was the name of the two famous kings: Owain son of URIEN of RHEGED and EUGEIN map Beli of Strathclyde. His father's name is usually Anglicized as Donald (like its Gaelic cognate *Domhnall*; see also DYFNWAL AB OWAIN).

AM, PEB

Owain ap Hywel Dda (†988) was king of DEHEUBARTH in present-day south Wales (CYMRU). His name appears as [*O*]*uen map Iguel* and [*O*]*uein map Elen merc Louarch* (Owain son of Elen daughter of Llywarch) at the head of the Old Welsh GENEALOGIES of GWYNEDD and DYFED, a text probably compiled early in his reign, thus emphasizing the dual focuses of his inheritance—comprising a kingdom approximating a united Wales—at the time of the death of his father HYWEL DDA in 950. After the battle of Carno, noted in ANNALES CAMBRIAE at the following year, Owain and his brothers Rhodri (†953) and Edwin (†954) lost Gwynedd in north Wales to IAGO AB IDWAL FOEL and Ieuaf ab Idwal. Owain embarked on a policy of consolidation in Deheubarth, focusing mainly on cultural issues such as the writing and collecting of genealogies and annals. His attack on MORGANNWG in 960 points to a changed direction of his expansionism from Gwynedd to south-eastern Wales. After a long reign, Owain seems to have given up prominence in leadership to his sons, Einion (†984) and then Maredudd (†999), who led military campaigns in 983 and 986, the latter marking Maredudd's effective reconquest of Gwynedd.

PEB

Owain Glyndŵr (Owain ap Gruffudd Fychan, Owen Glendower, *c.* 1354–*c.* 1416) was the last Welsh-recognized Welsh prince of Wales (CYMRU). He led the last major armed rebellion of the Welsh against the English and, viewed as a national redeemer even in his own time, has become a symbol of modern Welsh NATIONALISM.

On 16 September 1400 Glyndŵr was proclaimed Prince of Wales, a position to which he had reasonable claim by virtue of his descent on his father's side from the kings of POWYS and on his mother's side from the royal line of DEHEUBARTH in south Wales. He had trained at the Inns of Court in London (Llundain), fought in the Scottish wars, and then settled as a wealthy nobleman, enjoying the bounty of his estates at Carrog and Sycharth, which, as appropriate for Welsh nobility, served as a cultural centre for itinerant bards (notably depicted in a CYWYDD by IOLO GOCH). In 1400 Glyndŵr began a rebellion

that was precipitated by a conflict with his neighbour Reginald Grey, lord of Rhuthun, either over a land dispute or an undelivered royal summons, but whose causes went far deeper and beyond the personal situation. Social and economic unrest had been growing in Wales since the death of LLYWELYN AP GRUFFUDD in 1282 and the loss of independence to Edward I. The hardships of English rule, with its denial of Welsh rights and imposition of heavy taxes, were further aggravated by changes in the economic system and the plague. When Glyndŵr began his war by attacking Rhuthun and other English towns in north Wales, he was declared an outlaw and his lands made forfeit, but increasing numbers of the Welsh, including students and labourers who had returned from England, joined him in what was essentially guerrilla warfare, and the movement spread from north Wales to eventually envelop the whole of the country. By 1405, having withstood several expeditions by Henry IV's forces and won important victories, such as the battle at Bryn Glas where he captured Sir Edmund Mortimer, Glyndŵr not only controlled Wales, but had pushed into England, formed an alliance (the Tripartite Indenture) with Mortimer and the Percys of Northumberland, and set up diplomatic and military relations with France and Scotland (ALBA). Glyndŵr established a parliament, which first met in Machynlleth in 1404 and which—together with his plans for an independent Welsh church and a university system (laid out in the Pennal letters to the King of France in 1406)—seemed to augur both a new golden age and the creation of a modern state. However, in 1406 the balance shifted; by 1409 the war was lost and by 1415 it was over.

Events in the early part of the war were depicted by Shakespeare in *Henry IV, Part I.* For example, it contains a description in scene 1 of the battle at Bryn Glas or Glendower's statement that he had three times sent Henry 'booteless home and weather-beaten back' (Act 3, sc. 2, l. 66).

Glyndŵr was viewed in his own time as a national redeemer, the hero who will come (from afar or from a long sleep) to restore the nation to its former glories. Wales had a long history of awaiting redeemer heroes (including Cynan, CADWALADR, ARTHUR, and OWAIN LAWGOCH) who would rid the land of alien intruders and, after a time of chaos, establish a period of peace, prosperity, and justice. Glyndŵr came seventh in the line of eight major redeemer heroes. He himself used the prophecies, invoking them, for example, in letters to the king of Scotland and to the lords of Ireland (ÉIRE) where he reminded them of their prophesied aid in his task as the deliverer. When the rebellion failed, expectations were transferred to the future. Glyndŵr, who had withdrawn from public view, was perceived by some as never having died. A history compiled as early as 1422 reports Glyndŵr's disappearance in 1415 and notes that while 'very many say that he died, the seers maintain he did not' (NLW , Peniarth MS 135, p. 64). The view that he did not die but rather waits, sleeping in the hills, until the time is right, became the most significant part of his legendry. One legend, recorded first in 1548 and repeatedly told since, reports that Glyndŵr, while walking on the Berwyn mountain, met an abbot who told him he had risen too early. Another legend, shared with Arthur and Owain Lawgoch and attached to many different sites throughout Wales, appeared by the 19th century. It reports that a drover or shepherd discovered a cave containing both treasure and the sleeping warrior.

Other facets of Glyndŵr's character also appear in the legendry (reported in histories, antiquarian reports, and orally): his ability to escape from tight situations (both on the battlefield and from traps set to capture him) and to trick his enemies through the use of cunning and disguise (retaking ABERYSTWYTH castle through a verbal ruse, staying in the home of an enemy). Glyndŵr was noted for his destructiveness, burning places such as Abergavenny (Y Fenni) and Cardiff (CAERDYDD), except for the street on which his supporters lived, and the tradition became so strong that almost any burned ruin might be imputed to him. His destruction of Llanrwst was said to be so great that grass grew in the market place and deer grazed in the churchyard (Fenton, *Tours in Wales* 352). Legends about Glyndŵr's activities and the marks he left (foot and hoof prints, sword cuts, mounds) appear all over Wales, especially in the areas where he lived and fought, such as Corwen, Dolgellau, and Pumlumon. Caves figure prominently in his legendry, whether they were used as guerrilla bases, hiding places following a narrow escape, or the site of his long sleep of waiting.

In the 19th century, with the rise of Welsh nationalism, Glyndŵr—along with others—was rehabilitated

and his actions reinterpreted for contemporary needs. His fight against English oppression, his war that almost won for Wales its independence, and his three-fold plan for a Welsh parliament, an independent Welsh church, and a Welsh university, turned him into a primary symbol of Welsh nationalism in the 20th century. His name was invoked as a call to action in political speeches and protest songs and by groups such as Meibion Glyndŵr (Sons of Glyndŵr), who burned English-owned summer homes in Wales. In the 21st century and since the creation of the National Assembly for Wales (Cynulliad Cenedlaethol Cymru), he is invoked less as a rebel warrior and more as a model statesman whose three-fold plan and links to France presaged Wales as a modern state and a member of the European Union. The significance of Glyndŵr's rebellion carries on through the legendry, which keeps him alive as a hope and a promise for the future.

Owain Gwynedd or Owain ap Gruffudd (†1170) succeeded his father Gruffudd ap Cynan (†1137) as king of the powerful independent kingdom of Gwynedd in north Wales (Cymru) and ruled it for 33 years. His elder brother Cadwallon had been killed in battle in 1132 and Owain, along with his younger brother Cadwaladr, were prominently engaged in warfare during their father's last years. In Ceredigion they joined Gruffudd ap Rhys of the lineage of Deheubarth and his sons in a sustained assault on the Norman positions in a land that had long formed one of the Anglo-Norman marcher lordships held by the powerful Clare family (cf. de clare). Cadwaladr hoped to establish a lordship in Ceredigion that would augment the estate, probably consisting of Meirionnydd and other lands that he had secured within the kingdom of Gwynedd. His independent initiatives, indicated in his marriage with a daughter of the Clare lord of Ceredigion and his alliance with Ranulph, earl of Chester (Welsh Caer), caused concern to Owain who took action in 1144 to dispossess Cadwaladr of his estates in Gwynedd. Hywel ab Owain Gwynedd's intervention in Ceredigion, securing the northern portion while Cadwaladr held the southern portion, was probably undertaken at his father's behest, and his attack on the castle of Cynfael, Cadwaladr's stronghold in Meirionnydd, also reflects Owain's determination to deny his brother independent authority over any part of Gwynedd and to ensure his sole kingship over the historic kingdom in its entirety.

Despite the opportunity for armed intervention beyond his frontiers that civil war in England during the reign of Stephen might appear to have offered, Owain withheld from any incursion into Powys, a circumspection that indicates his respect for the firm authority exercised there by Madog ap Maredudd. In 1149, however, he wrested the commote of Iâl from Madog, an action related to new offensives on the Chester frontier designed to secure the cantref of Tegeingl, and he incurred a combined retaliation on the part of Madog and Earl Ranulph the next year. Renewed conflict caused Henry II to mount a campaign in 1157, and though Henry was sorely discomforted during the fighting, Owain was forced to withdraw and agree to terms by which he abandoned Tegeingl and allowed his brother, by then exiled, to regain his estate within the kingdom of Gwynedd. The death of Madog ap Maredudd in 1160, and the killing of his heir Llywelyn ap Madog in battle during the same year, enabled Owain to secure the districts of Penllyn and Edeirnion in north Wales. By 1165, with Rhys ap Gruffudd finally establishing his power over an extensive part of Deheubarth, Owain judged that it was an opportune time to launch a new offensive in north-east Wales. A major campaign by Henry II, first on the Chester frontier and then through Powys, came to grief, and thereupon Owain assumed leadership of an alliance of Welsh princes of unprecedented strength. In these last years of his life Owain, hitherto styled 'king of Gwynedd', assumed the title 'prince of the Welsh' (Latin *princeps Wallensium*), a title that indicated his desire to transform the military alliance into a new Welsh political entity. Owain's

bid to ensure that a new bishop elected to the see of Bangor (Gwynedd) would not be a nominee of the archbishop of Canterbury and in no wise amenable to the wishes of the king of England, and his diplomatic initiative in seeking an alliance with Louis VII of France, thereby securing the benefit of their mutual hostility to Henry II, affirm a wish to pursue a political programme designed to establish a political structure in which the lords of Wales would hold their lands as fiefs held of Owain as their supreme prince. These indications of an incipient Principality of Wales were, however, cut short by Owain's death and the dynastic conflict that left Gwynedd itself deeply divided for a generation.

The eulogies of several major poets, Gwalchmai ap Meilyr and Cynddelw Brydydd Mawr among them, provide impressive testimony to the contemporary estimation of Owain Gwynedd as a prince of great stature and nobility and one whose military prowess was valued, not for any heroic abandon, but as the means by which a resolute prince was able to sustain his authority as the guardian of a stable kingdom. The poetry (see gogynfeirdd) also provides a glimpse of the courts at which the prince's authority was represented—among them Aberffraw and Cemais (both in Anglesey/Môn)—royal residences that are more fully documented in later times. The reign of Owain Gwynedd probably saw the reform of some of the traditional *clas* churches of Gwynedd, notably Penmon and Bardsey (Enlli), as houses of Augustinian canons, as well as building at Bangor cathedral and, possibly in some number, at parish churches. The chronology of social and economic changes is difficult to establish, but developments in the tenurial structure of Gwynedd and the creation of proprietorial estates vested in lineages closely linked with the ruling prince may be associated with this period, a reign conspicuous for its stability under a prince commemorated in Brut y Tywysogyon (Chronicle of the princes) as 'a man of great renown and of infinite prudence and nobility, the bulwark and strength of Wales'.

Owain Lawgoch (Owain ap Thomas ap Rhodri, Yvain de Galles, *c.* 1330–78), a soldier and claimant as prince of Wales (Cymru), was the great-great-grandson of Llywelyn Fawr (the Great) (Llywelyn ab Iorwerth) and the great-nephew of Llywelyn ap Gruffudd (the last English-recognized Welsh prince of Wales), and the last of the male line and heir to the court of Aberffraw. After being raised in England, Owain went as a mercenary to the king of France. Twice he gathered forces to retake Wales: in 1369 his fleet was turned back by storms; in 1372 he reached Guernsey before being recalled by the French king. He was assassinated in 1378 by one John Lamb at the instigation of the English. In Wales, which was suffering under English rule, Owain took on the rôle of redeemer–hero and his return was awaited hopefully, as is reflected in the poetry of the period (see welsh poetry). He is called upon to come from across the sea (Lewis, *Cywyddau Iolo Goch ac Eraill* 92) and with his red spear 'to drive the Saxons like pigs in Cors Fochno' (NLW, Mostyn MS 133, 174b), and people, readied with horses and arms, await him at the shore (BL Add. MS 31057, 115b). According to Welsh legendry, Owain—like Arthur and Owain Glyndŵr—is sleeping in a cave until the time is right for him to return and help the nation. Other legends, playing on his epithet *Llawgoch* (red hand), depict him as a dangerous spirit.

Owen, Daniel (1836–95) was the foremost Welsh novelist of the 19th century. Born and raised in Mold, Flintshire (Yr Wyddgrug, sir y Fflint), his childhood years were marked by poverty. His mother had been widowed in 1837 in a pit accident which also claimed the lives of two of her sons. Daniel Owen received little formal education, but religious education received at Sunday school compensated for this, and his cultural horizons were widened during his apprenticeship as a tailor among erudite and widely read colleagues. His early literary efforts were in the realm of poetry, although his serialized translation of a popular temperance novel in 1859 was a harbinger of things to come.

During the following years he began to preach and he enrolled as a ministerial student before returning to work as a tailor in Mold, where he eventually established his own business. His literary career did not begin in earnest until 1876, when a serious illness meant that he had to retire to a great extent from his many and varied social commitments. His minister and mentor, the Revd Roger Edwards, urged Owen to use his changed circumstances to galvanize his literary gifts. Edwards was editor of the Calvinistic Methodists' monthly journal, *Y Drysorfa* (The treasury). Owen published a series of sermons in *Y Drysorfa* in 1877 before venturing on his first work of fiction, 'Cymeriadau Ymhlith ein Cynulleidfaoedd' (Characters in our congregations). With its storyline worked around the election of chapel deacons and its depiction of the tensions and hypocrisies of contemporary religious life, its status as a forerunner of Owen's major works is very clear.

Following a favourable critical response, Owen's career gathered pace. *Y Dreflan* (The town, 1881) was conceived of as a collection of character sketches, but evolved into a loose-structured novel. *Hunangofiant Rhys Lewis* (The autobiography of Rhys Lewis, 1885) used the autobiographical convention as a means of deploying Owen's own reminiscences, awakened no doubt by the recent deaths of his mother and brother, and to convey some of the religious and social tensions of his times. This was the novel that made its author a national hero, and many of its characters—Bob and Mary Lewis, Thomas Bartley and Wil Bryan, for instance—became icons within Welsh cultural life. The next novel, *Profedigaethau Enoc Huws* (The misfortunes of Enoc Huws, 1891), is arguably his crowning achievement. In it he used the local lead-mining scandals as a potent symbol of the hypocrisy and humbug which he believed had permeated every strand of respectable Victorian Wales. Although Owen's novels have been criticized for weaknesses of structure, the focused moral purpose and striking use of irony and idiolect more than compensate for these defects. While the reminiscential strain is evident in his earlier works, it is most prominent in the novel *Gwen Tomos* (1894) and *Straeon y Pentan* (Tales of the hearth, 1895), both of which earned popular success, if not the critical acclaim, of *Hunangofiant Rhys Lewis* and *Profedigaethau Enoc Huws*.

Owen's final years were marred by ill health and he died on 22 October 1895. New editions of his works appeared towards the end of the 20th century and there have been many adaptations of his works for stage and screen.

SELECTION OF MAIN WORKS

Y Dreflan (1881); *Hunangofiant Rhys Lewis* (1885); *Profedigaethau Enoc Huws* (1891); *Gwen Tomos* (1894); *Straeon y Pentan* (1895).

Robert Rhys

Owen, Gerallt Lloyd (1944–) is a leading strict-metre poet in WELSH. Brought up at Sarnau, Merioneth (Meirionnydd), he learnt CYNGHANEDD as a child and was immersed in the life of the countryside and in traditional Welsh culture. His early life is well documented in his autobiography *Fy Nghawl Fy Hun* (My own hotchpotch, 1999). He has been a teacher and a publisher, spending most of his adult life in the Caernarfon area. Few have surpassed him as a writer of classical elegies, which are suffused with a controlled intensity of feeling. They offer no Christian comfort, but are written in the context of the dreadful finality of death. He has also written poems both elegiac and satirical about Wales (CYMRU), often castigating his fellow-countrymen for

their apathy and servility. He has a strong visual sense, seen at its strongest in his AWDL *Afon* (River), which was awarded the chair at the National Eisteddfod in 1975 (see EISTEDDFOD GENEDLAETHOL CYMRU); he won his second chair in 1982 for the powerful poem *Cilmeri* (see LLYWELYN AP GRUFFUDD). Some of his poems are leavened by dry humour, a quality that has made him a popular presenter of the broadcast poetic contest *Talwrn y Beirdd* (The poets' cockpit). He has also produced storybooks and comics for children, often using his own illustrations.

SELECTION OF MAIN WORKS

COLLECTIONS OF POETRY. *Ugain Oed a'i Ganiadau* (1966); *Cerddi'r Cywilydd* (1972); *Cilmeri a Cherddi Eraill* (1991).
AUTOBIOGRAPHY. *Fy Nghawl Fy Hun* (1999).
EDITED WORKS. *Pigion Talwrn y Beirdd* (1981–); *Caneuon Talwrn y Beirdd* (1993).
CHILDREN'S LITERATURE. *Branwen Ferch Llŷr* (1972); *Y Gŵr o Golorado* (1969); *Cerwyn Corrach* (1991).
ENGLISH TRANSLATIONS OF HIS POEMS. Clancy, *Twentieth Century Welsh Poems* 234–5.

Branwen Jarvis

Owenson, Sydney ('Lady Morgan', *c.* 1783–1859) was an important Irish writer in the English language and is of interest in Celtic studies for her rôle in the formation of a distinctive Irish national literature and nationalist political sensibility in the early to mid-19th century. She was born to the stage-actor Robert Owenson and Jane Mill; her godfather was the poet and politician Edward Lysaght. She was tutored first by the prodigy and poet Thomas Dermody and was later sent to school in Clontarf (Cluan Tairbh) in Greater Dublin (BAILE ÁTHA CLIATH). In 1812 she married Sir T. Charles Morgan, a medical doctor and author, and became Lady Morgan. Between 1801 and her death she published extensively, and her works included poetry, novels, travelogues, biographies, political essays, reviews, and memoirs. Most of her volumes went through multiple editions in London. Many were also published in the United States and were translated and published across Europe. One of the most prolific and successful writers of her day, she was the first woman writer to receive a pension from the British government in recognition of her literary achievements.

Following the publication of her best-known novel, *The Wild Irish Girl*, Lady Morgan was widely identified with Irish national aspirations (see NATIONALISM). She also frequently dealt with the subject of contemporary international politics, as well as the status of women. She was sufficiently controversial on these subjects in the early 19th century to be lampooned in conservative British reviews, particularly the *Quarterly*, and was banned (along with her writings) in parts of Europe. Her influence has been traced in the writings of many 19th-century authors, including Thomas MOORE, Charles Robert Maturin, Sir Walter SCOTT, Byron, and the Shelleys, as well as in the works of several continental European writers.

SELECTION OF MAIN WORKS

NOVELS. *St Clair* (1803); *Novice of Saint Dominick* (1805); *Wild Irish Girl* (1806); *Woman* (1809); *Missionary* (1811); *O'Donnel* (1814); *Florence Macarthy* (1818); *O'Briens and the O'Flahertys* (1827); *Princess* (1835); *Luxima* (1859).
OTHER WRITINGS. *Twelve Original Hibernian Melodies* (1805); *Patriotic Sketches of Ireland* (1807); *Absenteeism* (1825); *Woman and Her Master* (1840); *Passages from my Autobiography* (1859).

P

P-Celtic is a term used for a subgroup of the Celtic languages in which the Proto-Celtic consonant /*kʷ*/ (< Indo-European /*kʷ*/ and /*kʼw*/) came to be pronounced [p]. Q-Celtic is the contrasting term for the subgroup in which this change did not occur. Thus, for example, the Gaulish word for 'fifth' is attested as *pinpetos* and the Old Welsh is *pimphet*, having developed as P-Celtic forms of Proto-Celtic **kʷinkʷetos*, contrasting with cóiced in Old Irish, a Q-Celtic language. There are articles in this Encyclopedia on each of the individual P-Celtic languages; these are, in order of attestation: Lepontic, Gaulish (which shows some Q-Celtic archaic forms or dialect pockets), British (which gave rise to the Brythonic family—Welsh, Breton, Cumbric, and Cornish), Galatian; Pictish was either simply another Brythonic language or closely aligned to that group.

In the 19th and earlier 20th centuries linguists tended to assume that the P-Celtic languages were especially closely related and were all descended from a common ancestor which had existed as a unified language sometime after the break-up of Common Celtic. In other words, P-Celtic was understood to mean much the same thing as Brythonic. Since the /*kʷ*/ > [p] change invariably occurred before written records, we cannot say for certain whether it happened in one time and one place, or independently more than once, in which case the various P-Celtic languages might not be especially close relatives, unless we were to find in them other shared diagnostic criteria. Although /*kʷ*/ > [p] may seem like an unusual and distinctive change to most readers—since the sounds are not easily confused in English—it is in fact not an uncommon sound change in the languages of the world; for example, there are also P- and Q- dialects of the Italic languages of ancient Italy. Furthermore, as Proto-Celtic had generally lost Indo-European *p*, it had a consonant system that was unlike that of most of its neighbours in ancient Europe and might therefore have been unstable and under some internal pressure to fill that gap. As a consonant that is a stop (full break in the breath flow) and voiceless (no accompanying vibration of the voicebox) and requires lip rounding, *kʷ* is in fact phonetically similar to *p*, though they may sound different to our ears. Nevertheless, the fact that the various P-Celtic languages *might* have undergone the change independently does not mean that this necessarily happened. The key point is that this single criterion cannot by itself be decisive in determining the filiation of the Celtic languages, but it remains useful as a descriptive term.

Pa Gur yv y Porthaur? (Modern Welsh *Pa ŵr yw'r porthor?* 'What man is the gatekeeper?') is an early Arthurian poem which survives in a copy of *c.* 1250 in the Black Book of Carmarthen (Llyfr Du Caerfyrddin), where the text breaks off after 89 lines. A. O. H. Jarman placed the original composition of *Pa Gur* in the 10th or 11th century (*Llên Cymru* 15.14). The basic structure is that of a contentious dialogue between the gatekeeper Gleuluid Gauaeluaur (Glewlwyd Gafaelfawr) and Arthur and his heroes. The situation is broadly similar to Lug's attempt to enter Tara (Teamhair) in the Old Irish Cath Maige Tuired ('The [Second] Battle of Mag Tuired'], and even more similar to Culhwch's con-

frontation with Glewlwyd towards the beginning of the prose tale CULHWCH AC OLWEN. In the latter, however, there is a significant reversal in that Arthur and his heroes are inside the court that is protected by Glewlwyd, rather than seeking entry as in the poem, where the situation, and even the contentious words at the door, are reminiscent of the formulaic encounters of the modern Welsh Christmas custom, the MARI LWYD.

The poem is of special interest as a unique early catalogue of Arthurian characters and, to a lesser extent, adventures, thus providing a shorter corpus of traditional allusions comparable to those of the TRIADS, *Culhwch*, and ENGLYNION *y Beddau*; see CAI for a translated extract. Heroes mentioned include Kei (Cai), Beduir (BEDWYR), MABON son of Mydron (MODRON), Mabon son of Melld (Mellt; perhaps the same person with his patronym), *Manawidan* (MANAWYDAN) son of LLŶR, and Uthir Pendragon (UTHR BENDRAGON). Adventures include a fight at Kelli—perhaps the same place as Arthur's CELLIWIG (see also ARTHURIAN SITES)—and a fight with the monstrous cat, Cath Paluc. Arthur's fight with *cinbin* 'dog-heads' in *Pa Gur* can be linked with the cognate *conchinn*, designating fantastic beings in several Irish texts. These references may ultimately form classical accounts of the cynocephali of India (e.g. PLINY, *Natural History* 7.2.23). *Minit Eidin*, the place of Arthur's fight with the dog-heads, is the Mount of Edinburgh (DÙN ÈIDEANN), capital of the old Brythonic kingdom of the GODODDIN. There is no trace of the tale of the wooing of the giant's daughter which forms the frame tale for the similar Arthurian exploits in *Culhwch*.

JTK

Palladius is best known from the notice in the Chronicle of Prosper of Aquitaine for the year AD 431: 'Having been ordained by Pope Celestine, Palladius was sent as the first bishop to the Irish (Gaels) who believed in Christ' (*Ad Scottos in Christo credentes ordinatus a papa Caelestino Palladius primus episcopus mittitur*). It remains unresolved whether these words mean that there was already a significant number of Irish Christians before 431. Another text by Prosper, *De gratia Dei et libero arbitrio contra Collatorem* (written in 434), tells how Celestine had made the 'barbarian island'—meaning Ireland (ÉRIU)—Christian (see further CHRISTIANITY, CELTIC [1] §2). It is very likely that the missionary of 431 is the same Palladius as the one mentioned in Prosper's Chronicle at 429; then a deacon, he successfully urged Celestine to send GERMANUS of Auxerre to BRITAIN to combat the heretical doctrines of PELAGIUS, which had been spread there by Agricola, son of the Pelagian bishop Severianus. The deacon of 429 and the bishop of 431 have the same name, are supported by the same pope, and are concerned with the same marginal corner of the Christian world. Dáibhí Ó Cróinín has recently drawn attention to a notice of a young Palladius who, as a promising student of law, came to Rome from Poitou (Pictonia) in western GAUL in the period 417×424; his father was Exuperantius, *dux tractus Armoricani* (a military command earlier held by Germanus), who had suppressed a rebellion in ARMORICA *c.* 417.

While the passage in *Contra Collatorem* is sufficient to assure us that the Palladian mission did not abortively fizzle out, we have no direct evidence on the Roman or the Irish side as to what he actually accomplished. It is ironic, therefore, that awareness of Palladius has had an incalculably substantial impact on the written history of Ireland and its church. From the 7th century to the present, Irish writers have been at pains to arrange the evidence so that Palladius would not impinge upon the claims for, and the traditions of, Ireland's other 'first bishop', namely St PATRICK,

while carefully avoiding outright refutation of papal authority as represented by Prosper. No universally acceptable solution to the problem of Ireland's two apostles has yet been found. One fundamental difficulty is that the writings of Patrick himself are apparently as ignorant of Palladius as Prosper was of Patrick. In the 7th-century and later HAGIOGRAPHY of Patrick, a few features pertinent to Palladius have been transferred to Patrick's biography, such as the association with St Germanus of Auxerre and Germanus's predecessor Bishop Amator, called *Amatorex* in Muirchú's 'Life of Patrick'. Thus, recognizing a general process whereby the growing Patrick legend has absorbed acts and associates of Palladius, several modern writers have attempted to reconstruct Palladian history from Patrician legend by transferring elements not mentioned in Patrick's own writings to the other bishop; for example, the associates—Auxilius, Benignus, Secundinus, and Iserninus—and the 'computus of Patricius' mentioned in the letter of CUMMÉNE FIND (see EASTER CONTROVERSY §§2, 4). While these possibilities are all worth considering, there is no evidence for a now-lost written 'dossier of Palladius' from which such details might have been taken over *en masse*. And it is hardly certain that Patrick, as a Briton with a Latin name, could not have had followers with Latin names, or, in the case of *Iserninus*, a Latinized Celtic name. As Armagh (ARD MHACHA) gained influence over other Irish churches from the 7th century onwards, it is likely that the Patrick story acquired the founding saints of those churches as junior associates; some of these missionaries may in fact have worked with Palladius, but some also with Patrick, others with neither. The 'Patrician problem' is discussed further in the article PATRICK.

JTK

Pan-Celticism encompasses the various movements based on the idea of CELTICISM. This concept may be understood as the premise or assumption that the affinity between the CELTIC LANGUAGES—first referred to by George Buchanan (*Rerum Scoticarum Historia*, 1582), Abbé Yves PEZRON (*L'antiquité de la nation et la langue des Celtes*, 1703) and Edward LHUYD (*Archaeologia Britannica*, 1707)—indicated common ethnic and historic origins between the Breton, Cornish, Irish, Manx, Scottish, and the Welsh, and might lead to a closer union between the modern peoples.

§1. INTRODUCTION

Modern Pan-Celticism is closely bound up with the revival of the term Celt and the rise of Celticism, Celtic ROMANTICISM, and *Celtomanie* ('CELTOMANIA') in the last quarter of the 18th century, although some authors maintain that co-operation between different groups on the grounds of shared Celtic ethnicity dates back to earlier times (Ellis, *Celtic History Review* 1.1.3–5 vs. McMahon, *Celtic History Review* 1.2.3–4).

Modern Pan-Celticism must be viewed in the context of 19th-century European romantic NATIONALISM, during which period, the Greek prefix 'Pan-' assumed the additional meaning:

> of, pertaining to, or comprising all (those indicated in the body of the word) . . . generally expressing the notion of or aspiration for the political union of all those indicated, especially in connection with national names and words formed in imitation of them. (OED)

The swift development of the new social sciences of archaeology and philology provided the basis for the re-interpretation of history along various (pan-) national lines (Tristram, *Celticism* 35–60) and smaller ethnic and national groups were quick to realize not only the dangers but also the possibilities of the new ideology of nationalism. Pan-Celticism, like other pan-national movements, flourished mainly before the First World War. However, continued 20th-century efforts in this direction were possibly symptomatic of the (post-)modern search for a shared pre-modern identity in a world in which individuals felt increasingly alienated owing to industrialization, urbanization, and the other aspects of modernity which undermined traditional community life.

§2. THE RISE OF PAN-CELTICISM

During the second decade of the 19th century antiquarian societies in Scotland (ALBA), Wales (CYMRU),

and France began to exchange correspondence. Notes pointing out similarities between the Irish, the Scottish Highlanders (see HIGHLANDS), and the Bretons began to appear in their journals. What might be considered the first Pan-Celtic campaign was conducted by the Welshman Thomas PRICE (known as Carnhuanawc), who collected money for Le Gonidec's Breton translation of the BIBLE in the early 1820s (see CHRISTIANITY [5]). Impressed by the Breton culture and language, he composed a prize-winning essay on the early connections and the contemporary relationship between Brittany (BREIZH) and Wales for the 1823 Powys EISTEDDFOD and, together with Lady Llanofer (see HALL), became one of the organizers of EISTEDDFODAU'R FENNI, a series of Welsh cultural festivals held in Abergavenny, Monmouthshire (Y Fenni, sir Fynwy) between 1834 and 1854. These early contacts culminated in 1838, when a Breton delegation led by Théodore Hersart de LA VILLEMARQUÉ (1815–95) received an enthusiastic welcome from the crowds (Thomas, *Afiaith yng Ngwent* 127–38). Carnhuanawc and the society Cymreigyddion y Fenni ('Cambrophiles' of Abergavenny, 1833–54) thus began the tradition of linking practical co-operation and support for other 'Celts' with the romantic paraphernalia and pageantry of the eisteddfod movement and GORSEDD BEIRDD YNYS PRYDAIN. This combination of the practical and the romantic was to remain the hallmark of Pan-Celticism until after the First World War.

In 1864 Charles de Gaulle published *Les Celtes au dix-neuvième siècle: appel aux représentants actuels de la race Celtique* (*The Celts of the Nineteenth Century: An Appeal to the Living Representatives of the Celtic Race* [1865]), an appeal which, for the first time, called for institutions such as a university, a museum, and a journal, on the basis of Pan-Celticism. On his initiative a first Pan-Celtic congress was held at St Brieuc (Sant-Brieg) in Brittany. Again, it only attracted representatives from Brittany and Wales (*Congrès Celtique International*, 1868) and it focused mainly on antiquarian matters.

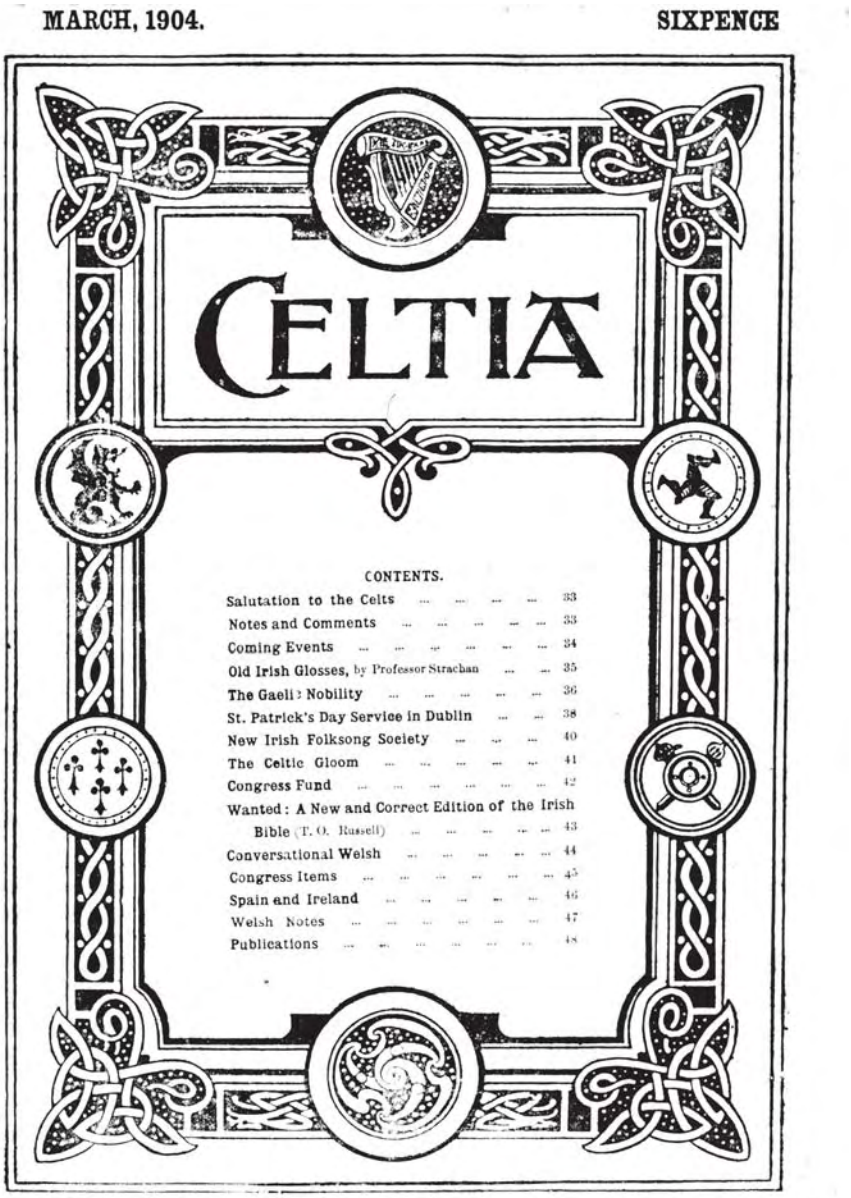
Attempts to establish a Pan-Celtic League of a more political character under the auspices of the Welsh radical Evan Pan Jones—an organization which was to unite the bodies undertaking LAND AGITATION in Ireland (ÉIRE), Scotland, and Wales—foundered in the 1880s. Although the 'Keltic League' was founded and several meetings were held in Wales in 1883, the movement did not flourish, possibly because of its radical political aims (Jones-Evans, WHR 4.143–59).

Pan-Celtic co-operation in the cultural sphere was pursued by small groups of enthusiasts throughout the 1880s. During this period the National Eisteddfod of Wales (EISTEDDFOD GENEDLAETHOL CYMRU), now firmly established as a national institution, became the model for similar annual celebrations in Ireland and the Highlands of Scotland. The Oireachtas (see FEISEANNA) was established by CONRADH NA GAEILGE (the Gaelic League) in 1893 and the Mòd was launched by AN COMUNN GAIDHEALACH (The Highland Association) in 1892. Newly founded societies for the preservation and revival of native Celtic languages and cultures began to exchange representatives at their respective festivals and to publish reports about what they had seen. The National Eisteddfod of Wales became an especially powerful attraction for cultural nationalists, poets, and 'Celtomaniacs' from all the CELTIC COUNTRIES and continental Europe in the latter half of the 1890s, so much so that the 1899 Eisteddfod at Cardiff (CAERDYDD) went down in history as the 'Pan-Celtic Eisteddfod'.

§3. THE PAN-CELTIC ASSOCIATION (1900–10)

The Pan-Celtic Association, conceived at the national eisteddfodau of 1898 (Blaenau Ffestiniog) and 1899 (Cardiff) and founded in October 1900 at St Stephen's Green in Dublin (BAILE ÁTHA CLIATH), constitutes the high point and final development of 19th-century romantic Pan-Celticism. For the first time, it united Celtic enthusiasts from all the Celtic countries, including members from *Yn* CHESHAGHT GHAILCKAGH (The Manx Society) and COWETHAS KELTO-KERNUAK (Celtic-Cornish Society), which represented the two smallest Celtic nations. The rather controversial figure of Baron Castletown of Upper Ossory was elected president and Edmund Edward Fournier d'Albe, a physicist by profession and a Celtophile *par excellence*, became secretary and first editor of the journal *Celtia*, the mouthpiece of the organization. The journal was published between 1901 and 1906 and again in 1908. The Pan-Celtic Association fizzled out around 1910, resisting A. P. Grave's plans of resurrection.

Despite its short life, the Association established a precedent for permanent Pan-Celtic co-operation in EDUCATION in the Celtic languages and publishing,



MARCH, 1904. SIXPENCE

CELTIA

CONTENTS.

Cover of the Celtia magazine, March 1904

and the maintenance or revival of indigenous music, dance, and customs. The practice of holding central congresses as focal points for enthusiasts in all the separate countries was adopted by all later organizations. It is not surprising that the Association is best remembered for these congresses: Dublin in 1901, Caernarfon in 1904, and Edinburgh (Dùn Èideann) in 1907, where academic sessions took turns with applied folklore, such as colourful processions of delegates wearing re-invented Celtic costumes and Celtic concerts. The displays attracted up to 10,000 visitors (Löffler, *'A Book of Mad Celts'*).

The organization's most important aspect, however, was its progressive and innovative attitude towards what are now called 'lesser-used languages'. It concerned itself not only with the fate of the Celtic languages, but also with other smaller and/or oppressed linguistic groups in Europe, such as the Poles of East Prussia. It even propagated the idea of an international league of minority languages and toyed with the possibility of using the man-made international language Esperanto as a lingua franca among the Celtic peoples.

The deteriorating international political climate in Europe towards the end of the first decade of the 20th century, as well as internal problems, contributed to the Pan-Celtic Association's early demise *c.* 1910. The congress tradition was upheld for some more years by a group of Belgians, who organized two more Pan-Celtic meetings in Brussels, and by exchange visits between Breton and Welsh representatives.

§4. THE CELTIC CONGRESS (1917–39)

Pan-Celtic co-operation was resumed in 1917. The Celtic Congress was called on the initiative of the Welsh MP Edward Thomas John in his rôle as president of Undeb Cenedlaethol y Cymdeithasau Cymraeg (The National Union of Welsh Societies) at the National Eisteddfod of Birkenhead (Welsh Penbedw) in September 1917. In tune with his efforts for Welsh Home Rule (see NATIONALISM), and supported by the Scottish MP Ruaraidh Erskine of Marr, John intended the new organization to adopt a more political rôle than its predecessors. However, following prolonged discussions, the 1918 conference at Neath (Castell-nedd) in south Wales concluded that:

> . . . efforts of propaganda on behalf of Language and Literature [should] be the main criteria, and that Societies of a political character be allowed representation and liberty to address the Congress only in virtue of their labours in furthering linguistic, literary, historical, and musical culture (Phillips, *Trans. Celtic Congress 1918* 108).

Thus, the Celtic Congress—at Edinburgh (1920), Douglas (Doolish, 1921), Quimper (Kemper, 1924), Dublin (1925), Penzance (Penzans, 1926), BANGOR (1927), Glasgow (GLASCHU, 1929), London (1930), Douglas (1931), Dinard (Dinarzh, 1933), Dublin (1934), Cardiff (1935), Edinburgh (1937), and Douglas (1938)—concentrated on matters relating to the Celtic languages in the social domains of administration and especially education, on efforts to preserve and revive folk traditions, as well as on the presentation of recent research in the field of Celtic studies. However, references to secret meetings, for example at the Dublin conferences of 1925 and 1934, as well as the title and contents of some of the papers delivered, indicate that political networking was an aspect of the Congress and that national self-determination was on the agenda of many of its members. Repeated attempts at uniting political groups with nationalist leanings within a Celtic union proved short-lived (Ellis, *Celtic Dawn* 82–6). Five published reports of Congresses held between 1917 and the Second World War survive.

§5. AFTER THE SECOND WORLD WAR

The Celtic Congress was resurrected in Dublin in 1947 with the following aims:

> . . . to perpetuate the culture, ideals and languages of the Celtic peoples, and to maintain an intellectual contact and close co-operation between the respective Celtic communities. (Belz, *Hor Yezh* 96.35)

On the basis of this brief, it has concentrated since then on cultural matters in the widest sense. Its annual general meeting visits each Celtic country every six years. Conferences and occasional published proceedings since 1947 have tended to focus on particular themes, such as tourism, bilingualism and the MASS MEDIA. The Celtic Congress conference for the year 2000, held in Bude, Cornwall (Bud, KERNOW), appropriately chose the theme 'Celtic Resurgence (towards the next Celtic Millennium)'.

§6. THE CELTIC LEAGUE (SINCE 1961)

The Celtic League, founded in 1961 under the presidency of the leader of Plaid Cymru (The Party of Wales) Gwynfor EVANS, aimed to:

> . . . foster co-operation between the national movements in the Celtic countries, particularly in efforts to obtain international recognition of our national rights [and] to share the experience of our national struggles and exchange constructive ideas. (Thomas, *Celtic Nations* 83)

The League is a political organization which believes that 'the solution of the cultural and economic problems of the Celtic countries requires first self-government' (Thompson, *Recent Developments in the Celtic Countries* 101). The League has a branch in each of the Celtic countries, as well as an international branch and branches in England, Nova Scotia (Canada), and the USA. It holds an annual meeting for all branches, usually on the Isle of Man (ELLAN VANNIN). Between 1963 and 1971 it published annual volumes in English on subjects such as *Self-Government for the Celtic Countries* (1964–5), *Celtic Advance in the Atomic Age* (1967), and *Maintaining a National Identity* (1968). Articles in the Celtic languages were included from 1969. In 1973 the quarterly *Carn: A Link between the Celtic Nations* replaced the annual volumes. Its issues feature articles from each national branch in its respective language with a summary in English or French, as well as articles in English. The League has increasingly paid attention to developments in the field of minority

and women's rights in Europe and worldwide. This has found expression in increasing numbers of resolutions and declarations made to the governments of member states of the European Union and to the Council of Europe. These are regularly published in *Carn*.

§7. OTHER EXPRESSIONS OF PAN-CELTICISM

The Pan-Celtic idea and current organizations have led to the emergence of a growing number of festivals and institutions, social and academic. The best known, the annual Inter-Celtic music festivals, founded in 1971 and held at Killarney (Cill Airne) and Lorient (An Oriant, see EMVOD ETREKELTIEK), and the annual peripatetic CELTIC FILM and Television Festival, founded in 1979, have proved helpful for practitioners as well as enormously attractive to visitors. The International Congress of Celtic Studies, held every four years since 1959, and institutions such as the School of Celtic Studies of the Dublin Institute for Advanced Studies (INSTITIÚID ARD-LÉINN Bhaile Átha Cliath, founded 1941) and the University of Wales Centre for Advanced Welsh and Celtic Studies (founded 1985) in ABERYSTWYTH can be seen as academic expressions of Pan-Celticism.

MBL

Pannonia, Celts in

§1. RECENT RESEARCH

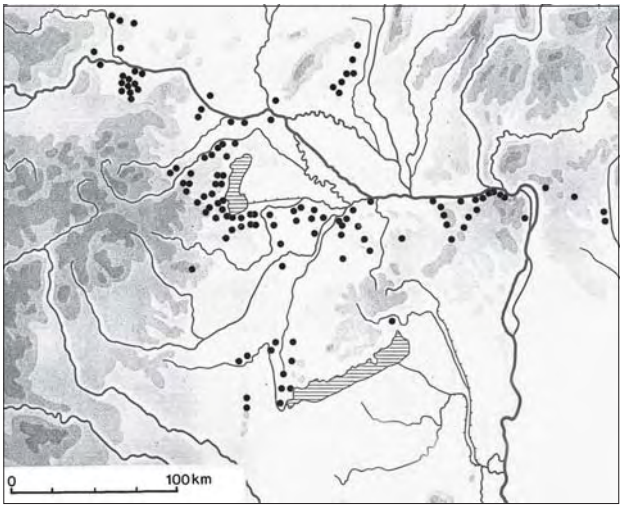
In the 1970s research into the transition between the Early and the Late IRON AGE in the 6th–5th centuries BC received a new impetus and resulted in the identification of the earliest LA TÈNE A assemblages in north-western Transdanubia and along the DANUBE. Many aspects of the Romanization of Pannonia were also clarified, as were problems of the survival of the native Celtic population into the Roman period. Research into Celtic settlement patterns gained new ground as a result of regional field surveys, large-scale excavations, and rescue excavations preceding motorway constructions. Earlier, settlement finds were known only from a few smaller sunken houses. Recent excavations in various parts of Hungary have brought to light extensive settlements, thereby enabling observations on the environment of villages and smaller hamlets or farmsteads.

The two volumes of a new series, the *Corpus of Celtic Finds* (ed. Hellebrandt; Horváth et al.) have made finds from hitherto unpublished cemeteries and settlements in Transdanubia and north-eastern Hungary accessible.

§2. THE CELTS IN EAST-CENTRAL EUROPE

According to written evidence, the Celts first appeared in the western part of the Carpathian Basin in the 4th century BC: in Justin's abridgement of the lost

Distribution of Earlier La Tène (LTA, LTB) finds in Transdanubia, present-day western Hungary



works of Trogus Pompeius, a historian of Celtic origin living in the later 1st century BC (see TROGUS POMPEIUS AND JUSTIN), it is stated that ITALY and Pannonia were occupied at roughly the same time; the main drive behind the Celtic expansion was no doubt overpopulation.

It seems likely that the Celts reached the north–south section of the Danube and crossed the river in the earlier 4th century BC, as is shown by several La Tène B cemeteries in the Danube Bend and northeastern Hungary. Transylvania, too, came under Celtic rule. The sudden and conspicuous increase in the number of sites in southern Transdanubia, northeastern Hungary, and the Great Hungarian Plain imply that these areas also came under Celtic control, when, in the late 4th–early 3rd century BC, tribes from the Middle RHINE region set out to conquer new territories in the south. Celtic graves appear in the cemeteries of the Iranian-speaking Scythians in the Great Hungarian Plain from the mid-3rd century BC, while settlements yielding distinctively Celtic finds can be dated roughly to the same time, which suggests that the Celtic expansion was relatively peaceful and did not meet with particularly strong resistance.

With its loose political and military organization, the Celtic population did not pose a serious obstacle to the Roman conquest. Although the Celtic population was organized into *civitates* (sing. CIVITAS) following the conquest of Pannonia, their tribal territories were left untouched, and even though Romanization affected their culture the Celts of Pannonia preserved their earlier lifeways, workshop traditions, religion, and names for many hundreds of years.

§3. CELTIC CEMETERIES AND BURIAL CUSTOMS

Several new cemeteries were established from the mid-6th century BC, and this was accompanied by the transformation of burial practices and the spread of inhumation. The first burials in the early cemeteries can be assigned to the later part of the HALLSTATT D period, the latest ones to the early La Tène B period, although some communities used the same burial ground down to the 2nd century BC. The number of graves in La Tène B cemeteries obviously varied; although several smaller burial grounds with a few graves only—probably used by a single family—are known from this period, the Pilismarót cemetery conclusively proves that larger ones with 50 to 60 burials also existed. Some cemeteries were established in the Early or Late La Tène B period and remained in use until the end of the La Tène C period. The 150–180 years spanned by these burial grounds contained the graves of several successive generations. Other cemeteries, used over a shorter period of time and containing 50 to 80 burials, were opened in the 3rd century BC and reflect the higher population density during the height of Celtic rule in the Carpathian Basin. Relatively few cemeteries are known from the decades immediately preceding the Roman conquest.

A comparison of the cemeteries excavated earlier (Sopron-Bécsidomb, Babót, Győr-Újszállás, Csabrendek) with the evidence from systematically and professionally investigated burial sites at Rezi, Ménfőcsanak, Sopron-Krautacker, Pilismarót, Kosd, Vác,

and Muhi, indicates that inhumation and burial were practised simultaneously in the earliest cemeteries. It seems likely that, concurrently with the appearance of flat cemeteries containing inhumation burials throughout Europe, the custom of inhumation also spread in northern Transdanubia, and that cremation burials reflect the survival of earlier traditions. Both inhumation and cremation burials were covered with stones or marked with a single stone; in some cases, a ditch was dug around the grave. The majority of the inhumation burials have the deceased laid to rest in an extended position, sometimes with an arm folded across the chest. A slightly contracted position is rare and usually occurs in graves without any grave goods.

The orientation of the burials varied, with a south to north or north to south orientation being more frequent than an east to west orientation. There are few observations concerning unusual or unique forms among the grave pits or on the use of coffins. Scattered cremation and urn burials occur until the very end of the La Tène period, often within the same cemetery.

§4. GRAVE GOODS AND COSTUME

Many male burials contained weapons. The SWORD and its fittings were always laid on the right side, and spears were found on both sides of the body, usually beside the head and, more rarely, by the feet. Early graves often lacked a sword. The burial of the deceased with one or more spears suggests a different type of armament. Helmets are extremely rare finds, which suggests that only warriors with outstanding prowess were deemed worthy to wear one, and it is likely that helmets also signalled status. More recent finds have also demonstrated that, in contrast to earlier assumptions, SHIELDS were used from the end of the La Tène A period. Belts and suspension rings, as well as sword chains, were also part of the male costume. A large fibula fastened the cloak at the shoulder, though smaller iron fibulae were also sometimes used for this purpose. There is also evidence of TORCS and armlets, worn on the left arm, or an arm-ring worn on the upper arm, as well as of anklets (ankle rings).

The finds from women's burials indicate that they wore two to three or more fibulae, as well as arm-rings and anklets. Other pieces of jewellery included neckrings, bead necklaces, rings, and belts. Pairs of fibulae linked by a chain, such as the ones from Sopron-Bécsidomb, Ménfőcsanak, and Litér, occur from the early La Tène period and have their counterparts among the finds from the Traisen valley, the Burgenland, and south-west Slovakia. These fibula pairs were used for fastening garments at the shoulder, while a third fibula was usually found on the chest. The right to wear a torc was apparently linked to social rank or status within the family. Sets of arm-rings and anklets, as well as belts, were the most characteristic pieces of jewellery worn by Celtic women. Grave goods from female burials also included simple tools and implements, especially spindle whorls (loom weights).

The custom of depositing food and beverage within the grave, and of animal SACRIFICE as part of the funerary rite, is indicated by the vessels and the animal bones, most of which came from pigs, sheep, and poultry. The carefully documented burials show that a pair of scissors or a knife lay beside the animal bones, implying that these implements were used for carving up the meat. The deposition of the vessels also followed a specific pattern since most were found either on the right side, or in a group by the head or feet. The usual combination was a so-called *Linsenflasche*, a flask with globular belly, two or three bowls, and cooking pots.

§5. SETTLEMENT HISTORY

The La Tène period settlements uncovered in adjacent regions and the field surveys and excavations conducted in Hungary all point to the fact that the Celts did not particularly like upland regions. This is understandable given that their economy was based on crop cultivation and animal husbandry, both of which called for settlement near water and arable land. This also explains why small farmsteads and hamlets, *vicus*-type settlements, occupied by a few families, occur beside villages. The largest open settlement known to date was investigated at Sopron-Krautacker, with smaller sites at Iván, Lébény, Keszthely-Úsztató, Regöly-Fûzfás, Acsa, as well as findings of rescue excavations preceding the construction of the M3 motorway (Polgár, Sajópetri). The sunken oblong houses, measuring 2–3 m by 4–6 m, had a pitched roof resting on timbers aligned along the shorter side of the house. Smaller huts were probably roofed with thatch or wattling; the postholes and the daub fragments with twig impressions suggest that the walls were of the

wattle and daub type. Benches, smaller pits, fireplaces, and the occasional oven made up the interior furnishings. Houses were ringed by external pits, some of which were used for the extraction of clay, while others functioned as storage bins or refuse pits.

Iron tools—ploughs, spades, sickles, scythes—made land cultivation more efficient than ever before. Cultivated species included wheat, barley, rye, and millet, as well as various vegetables and fruits. Rich animal bone samples collected at Celtic sites indicate a wide range of domestic animals as well as a sedentary lifeway. That animals were kept for their draught power and for their meat and milk is revealed by the high number of surviving cattle, sheep, goat, and pig bones. Food offerings placed into graves were usually from these animals.

The ratio of hunted animals—aurochs, red deer, roe deer, and BOAR—varied from site to site. Antler bone was used as raw material for tools and implements; pig, deer, dog, and horse played an important rôle in funerary and other cults.

§6. CELTIC CRAFTSMANSHIP

The occupants of the major settlements included various craftsmen, engaged in the production of iron, bronze, leather, wood, bone, and clay articles. Pottery manufacture was an exceptionally sophisticated craft among the Celts. Excavated pottery kilns at Sopron-Krautacker in the early La Tène period reveal that a workshop producing vessels with elaborate stamped ornaments was active in the region of Lake Fertő. With the exception of the most common types, the pottery from sites in the Great Hungarian Plain differs from the Transdanubian wares both in form and ornamentation, no doubt as a result of the survival of local traditions from the preceding Scythian period.

From the mid-2nd century BC, some of the population moved to the fortified hill-forts (Velem, Sopron-Várhely, Tihany-Óvár, Balatonföldvár, Nagyberki-Szalacska, Regöly, Százhalombatta, Budapest-Gellérthegy, Esztergom-Vár, Bükkszentlászló). The reason for this migration can be traced to the conflict and armed clashes between various tribes as well as to imminent external danger. The craft centres thus moved to the defended hill-forts. One of the results of the concentration of craftsmen within a few major settlements was the mass-production of wheel-thrown pottery and the appearance of bronze and iron industries. Celtic tribes living in Hungary can also be credited with the development of lasting iron tool sets, as well as with laying the foundation of urban civilizations and a road network linking distant areas which became permanent in the Roman period (see ROADS).

§7. RELIGION

Archaeological evidence shows that—besides the hill-forts—springs, bogs, mountain-tops, and caves were also used for RITUAL activities. Religion was an intrinsic part of everyday life, and we know that there were special sacred precincts for cult life in Celtic oppida (sing. OPPIDUM) or their immediate neighbourhood. The hoard found near the Regöly hill-fort was probably deposited as part of a votive gift in the bog between Szárazd and Regöly (see WATERY DEPOSITIONS). Animal depictions were usually associated with totemistic beliefs or some sort of fertility cult. The boar statuette from Báta and the Janus-head from Badacsony-Lábdi are outstanding creations of Celtic sculpture.

Paoul (Paule, Le Camp de Saint-Symphorien, Côtes-d'Armor) is an archaeological site in Brittany (BREIZH). Its unusual history reflects a series of social and economic developments over the course of the IRON AGE. In the 6th century BC a farm was built on the site (see AGRICULTURE), enclosed by a ditch and then by an earthen embankment (see ENCLOSURES). Within this primary earthwork, a residential building has been found, which was connected to several subterranean structures that served as cellars or annexes. The purpose of the site as an ordinary farming settlement then changed profoundly at the beginning of the 3rd century BC. Extensive FORTIFICATIONS consisting of ramparts and deep ditches were built to defend the main space, in which numerous storage structures were also found. This fortified enclosure opened onto a forecourt reminiscent of the plan of many medieval castles. Numerous elements point to the wealth of the inhabitants: imported amphorae (large ceramic wine vessels) were particularly common, and obvious traces of iron, bronze, and gold industries (moulds and crucibles of goldsmiths) have been unearthed. In the ditches and cellars four anthropomorphic stone statues have been discovered, dating from between the 2nd to the beginning of the 1st century BC. One of these represents a man holding a lyre in his hands and wearing a TORC around his neck, probably representing a BARD as described in GREEK AND ROMAN ACCOUNTS of the ancient Celts. In the middle of the 1st century BC, at roughly the time of CAESAR's conquest of GAUL, the ramparts were demolished and the site was abandoned. Paoul is a rare example of a farm which was later transformed into a powerfully defended aristocratic residence where both farming and craftsmanship were part of the local economy.

Parnell, Charles Stewart (1846–91), Member of Parliament and 'uncrowned king of Ireland', was born at Avondale, Co. Wicklow (Contae Chill Mhantáin), the son of an Anglican landowner of liberal sentiment and an American mother.

Parnell was elected Home Rule MP to the Parliament of the United Kingdom in Westminster for Meath (Contae na Mí) in April 1875, and shortly afterwards became a key figure in the 'new departure', a coalition of agrarian, parliamentary and revolutionary forces in Ireland (see LAND AGITATION). In October 1879 he became president of the Irish National LAND LEAGUE and on 17 May 1880 was elected leader of the Irish Parliamentary Party. Parnell's involvement in the Land League agitations following the Land Act of 1881 led to his imprisonment in Dublin (BAILE ÁTHA CLIATH) from 13 October 1881 to 2 May 1882. He was released under the terms of the 'Kilmainham Treaty' and subsequently abandoned agrarian agitation in favour of parliamentary politics. In October 1882 Parnell replaced the Land League with the Irish National League, an organization that had national self-government as its objective.

Parnell's greatest political achievement was to convert Prime Minister Gladstone and the British Liberal Party to the cause of Irish Home Rule (see NATIONALISM). On 8 April 1886 Gladstone introduced his Government of Ireland Bill (Home Rule Bill) in the House of Commons, but it was defeated on its second reading by 343 to 313 votes.

Soon afterwards, Parnell largely retired to a life of deeply-cherished domesticity with Katherine O'Shea, whom he had first met on 30 July 1880. She was the estranged wife of Captain W. H. O'Shea, a one-time member of the Irish Parliamentary Party. After mid-1886, Parnell's public appearances were rare, but notable. He emerged triumphant in February 1889, when the charges of complicity in the Phoenix Park murders of 1882, made against him by *The Times*, collapsed spectacularly. On 17 November 1890 Captain O'Shea was granted a decree nisi in divorce proceedings against his wife, having cited Parnell as co-respondent. As a result, some Nonconformist Protestants in the British Liberal Party refused to condone an alliance with an adulterer, a reaction that threatened Home Rule prospects and precipitated a political backlash against Parnell in Ireland (ÉIRE). The majority in the Irish Parliamentary Party, most of the nationalist electorate and people, and the influential Catholic Church opposed Parnell. During the remaining months of his life he undertook a punishing personal and political schedule, and his health finally gave way under the strain. Parnell died at Katherine's home in Brighton on 6 October 1891, and was buried in Glasnevin cemetery, Dublin.

Parnell is, perhaps, the most enigmatic figure in modern Irish history. Much of the analysis of his career and political philosophy is inferential and impressionistic. Nonetheless, his achievements are incontrovertible; Parnell was a political colossus. He was ambitious, courageous, and tenacious, and he pioneered a new form of militant constitutional nationalism. His statesmanship helped to bring to an end the first phase of the 'land war' on terms highly advantageous to the tenants, and to forge an alliance between Irish nationalists and British Liberals that came to fruition in the decades after his death.

Laurence M. Geary

Parry, Robert Williams (1884–1956) was, for many, the Welsh poet par excellence of the 20th century, though the sum of his poems is relatively small.

§1. LIFE AND CAREER

Williams Parry was born in Tal-y-sarn, Caernarfonshire (sir Gaernarfon), the son of Robert and Jane Parry. He had the same paternal grandfather as Sir T. H. PARRY-WILLIAMS and Sir Thomas PARRY. He was a pupil (1896–9) and 'pupil teacher' (1899–1902) at Caernarfon and Pen-y-groes county schools, and spent two years (1902–4) as a student at the University College of Wales, ABERYSTWYTH, where he failed Welsh at the end of his first year. He then taught at various schools until 1907, when he resumed his academic studies at the University College of North Wales, BANGOR, graduating BA as of Aberystwyth and Bangor in 1908. A stint as a schoolteacher in

Llanberis, Caernarfonshire, was followed by post-graduate studies at Bangor from 1910 to 1912, from which he graduated MA with a dissertation on the links between Welsh and Breton. Until 1916 he taught at Cefnddwysarn near Bala, and at schools in Barry, and Cardiff (Caerdydd), before serving two years in the British Army at Berkhamstead, Winchester, and Billericay. After the war he returned to teaching, but later joined the staff of the Welsh and Extra-mural departments at Bangor—'half and half', as he remarked wryly—where he remained until 1944. This half in, half out status eventually caused Parry much bitterness. It seemed to indicate that his eminence as a poet was not given just academic consideration and he came to dislike the University of Wales intensely. He died at his home at Coetmor, Bethesda, on 4 January 1956.

§2. POET AND LITERARY CRITIC

R. Williams Parry came to prominence in 1910 when he won the bardic chair at the National Eisteddfod (Eisteddfod Genedlaethol Cymru) at Colwyn Bay (Bae Colwyn) for his famous romantic awdl *Yr Haf* (The summer), for which he subsequently became known as *bardd yr haf* (the poet of summer). This poem revealed an exceptional mastery of cynghanedd and the Welsh metres. His first volume of poems, *Yr Haf a Cherddi Eraill* (The summer and other poems), was published in 1924 and contains some of his early romantic poems, as well as poems repudiating some of these, in which he turns his attention to the world and his day. Poems about the Great War, especially the great laments for its dead, and poems to people and to nature also feature in this volume. During the 1920s and 1930s he turned his attention to literary criticism and essay-writing, no doubt in order to fulfil the demands of his position as a lecturer. His prose contributions to various journals were collected in the volume *Rhyddiaith R. Williams Parry*, published in 1974. Today, many of his observations on literature are still seen as the perceptive critical comments of an expert practitioner and, like his poetry, they are viewed as an authentic and valuable contribution to academic studies. His second book of poems, *Cerddi'r Gaeaf* (Winter poems), did not appear until 1952. In this volume he meditates intensely on nature and the state of the world, the state of his nation and its university, on middle and old age, and on the finality of death. If there was an element of summer in his first book, the harsh winter of discontent, with nothing except human good fellowship to allay it, has a firm hold on the second. Of all lines, it is *Marwolaeth nid yw'n marw. Hyn sydd wae* (Death does not die. This is woe) which sums up the main preoccupation of this work. *Cerddi R. Williams Parry: Y Casgliad Cyflawn* (The poems of R. Williams Parry: the complete collection), which was brought out by Alan Llwyd in 1998, contains additional poems, most of them collected by T. Emrys Parry.

Gwyn Thomas

Parry, Sir Thomas (1904–85) was one of the leading figures in Welsh academic and public life during the second half of the 20th century. He was born into a slate quarrying family at Carmel, a small village in Caernarfonshire (Gwynedd), and was a cousin of both R. Williams Parry and Sir T. H. Parry-Williams. He studied at the University College of North Wales, Bangor (Gwynedd) under Sir Ifor Williams and, following a brief period as lecturer in Welsh and Latin at the University of Wales Cardiff (Caerdydd), he returned to his old department, first as lecturer in 1929 and from 1947 as Professor of Welsh. He was appointed Librarian of the National Library of Wales (Llyfrgell Genedlaethol Cymru) in 1953 and Principal of the University College of Wales, Aberystwyth in 1958, a post which he held until his retirement in 1969. He was knighted in 1978. Throughout these years Parry

acquired a reputation as an outstandingly gifted scholar, editor, and critic. A forthright man, his words carried authority. Much in demand as a lecturer, a reviewer, and an EISTEDDFOD adjudicator, he seldom minced his words on issues such as the quality of spoken and written Welsh, though in private he was extremely witty and convivial.

Thomas Parry published extensively on many aspects of WELSH literature; his early works included an edition of the medieval Welsh prose text *Saint Greal* (1933; see GRAIL) and an appreciation of 18th-century Welsh BALLADS (1935). His masterly volume on the history of Welsh literature, *Hanes Llenyddiaeth Gymraeg hyd 1900* (1944), was the first comprehensive study on the subject and was later translated into English by H. Idris Bell (1955). To complement this seminal work, Parry also published a valuable volume dealing with Welsh literature during the period from 1900 to 1945. His pioneering edition of the poems of DAFYDD AP GWILYM (1952) was a major landmark in Welsh textual scholarship, and he brought WELSH POETRY to a mass audience by editing *The Oxford Book of Welsh Verse* (1962). He also edited (with Merfyn Morgan) a bibliography of Welsh literature (1976) and was responsible for overseeing the linguistic integrity of the 1988 translation of the Welsh BIBLE.

Thomas Parry was also an accomplished poet and came close to winning the chair at the 1932 National Eisteddfod (EISTEDDFOD GENEDLAETHOL CYMRU) with his AWDL *Y Fam* (The mother). He published a masterly translation of T. S. Eliot's *Murder in the Cathedral* (1949) and also composed a metrical play, *Llywelyn Fawr* (1954), based on the life of LLYWELYN AB IORWERTH.

MBH

Parry-Williams, Sir Thomas Herbert

(1887–1975) was a poet, an essayist, and a scholar. He was the innovator of modernism in WELSH POETRY and adapted the WELSH language in order to express the broken and ambiguous experience of 20th-century people, many of whom were uncertain in their beliefs.

§1. LIFE AND CAREER

T. H. Parry-Williams was born and bred in the small village of Rhyd-ddu, at the foot of Snowdon (Yr Wyddfa), where his father was the schoolmaster. Some of the most eminent linguists of the day—among them Heinrich ZIMMER, Hermann Osthoff, and Rudolf THURNEYSEN, under whom Parry-Williams was later to study—spent some time with his father learning Welsh. Parry-Williams studied at the University College of Wales, ABERYSTWYTH, graduating in Welsh in 1908, and in Latin in 1909. This was followed by three further periods of study: at Oxford (Welsh Rhydychen), where he studied the English element in Welsh under the direction of Syr John RHŶS; at Freiburg, where he studied under Rudolf Thurneysen from 1911 to 1913 for his Ph.D. on 'Some Point of Similarity in the Phonology of Welsh and Breton', and finally at the Sorbonne in Paris, where he studied under Joseph LOTH and Joseph VENDRYÈS. His stay in Paris was curtailed when he was offered a lectureship in the Department of Welsh at Aberystwyth. It was during his time in Paris that he composed *Y Ddinas* (The city), one of the most exciting and significant poems of 20th-century Welsh literature. This *pryddest* won him the crown at the National Eisteddfod (EISTEDDFOD GENEDLAETHOL CYMRU) at BANGOR (GWYNEDD) in 1915. It was the first Welsh poem to explore the implications of modern life, and the first to depart from the poetic vocabulary used by Parry-Williams's contemporaries. He chose to use current speech and occasionally included colloquial phrases, which were unacceptable at the time to some of his

critics. This poem was a literary tour de force which opened the door to modernism in Welsh literature.

Parry-Williams returned to Aberystwyth in 1914, first as assistant lecturer, and then from 1920 as Professor of Welsh. He remained at Aberystwyth until his retirement in 1952, except for a short period in 1919–20 when he turned his back on Celtic studies and became a science student—an experience which he described in his essay *Y Flwyddyn Honno* (That year) in his volume *O'r Pedwar Gwynt* (From the four winds, 1944). His scholarly writings include three volumes on early free-metre Welsh verse—*Carolau Richard White* (The songs of Richard White, 1931), *Canu Rhydd Cynnar* (Early free-metre poetry, 1932), and *Hen Benillion* (Traditional folk verses, 1940)—as well as *Elfennau Barddoniaeth* (Elements of poetry, 1935), an essay on the nature of poetry.

§2. THE POET AND ESSAYIST

Parry-Williams's poetic talent came to prominence in 1912 and 1915 when he became the first person to win both the crown and the chair at the same National Eisteddfod. In 1928 he effectively introduced a new literary genre to the Welsh language with the publication of his collection of essays, entitled *Ysgrifau* (Essays), which are reminiscent of the essays of Montaigne. Between 1928 and 1966 he published seven volumes of contemplative essays on various topics, ranging from the mysterious complexities of a motorcycle engine to the mystery of the universe. The main themes of his essays are his family, friends, and acquaintances, his native area, his travels overseas, and his own individual reaction to them. His self-knowledge enriches his understanding of others. The individual becomes universal, with Rhyd-ddu representing the whole world. A collection of his essays, entitled *Casgliad o Ysgrifau*, was posthumously published in 1984.

The same themes recur in his *rhigymau* (rhyming couplets), with their simple, direct style and lack of decoration; the laconic simplicity of their descriptions is part of their appeal. His memorable sonnets exemplify his skills as a decorative versifier seeking to grapple with a complex vision of life. Many of these sonnets convey the idea of the absence of a perceived purpose for human life on this earth, and the belief that nothing lasts forever, except places (*man a lle*). In one of his most famous poems, *Dychwelyd* (Returning), he implies that human life is merely a ripple in time or the shadow of a scar on the stillness of the universe. The stimulus for many of his poems, both rhyming couplets and sonnets, is contemplation of death, which puts an end to life and leaves nothing behind except '*asgwrn ac asgwrn ac asgwrn mud*' (bone and bone and silent/mute bone).

Thomas Parry-Williams was not only a major 20th-century writer in Welsh but also a significant and popular figure in the public life of Wales (CYMRU). He was knighted in 1958.

Partholón (Modern Irish *Parthalán* or *Parthalón*) son of Sera son of Srú was, according to the Middle Irish LEBAR GABÁLA ÉRENN ('The Book of Invasions'), the leader of the second settlement of Ireland (ÉRIU) 300 years after Noah's Flood. There are also closely related traditions in texts predating *Lebar Gabála*: the 9th-century Welsh Latin HISTORIA BRITTONUM, where his people figure as Ireland's first settlers, and the Old Irish SCÉL TUÁIN MEIC CAIRILL ('The Tale of Tuáin son of Cairell'), where Partholón is called son of Agnoman son of Starn. In *Scél Tuáin*, Partholón is described as a Greek. The sources agree that the Partholonians (Partholón's followers) died out

completely in a plague. According to *Lebar Gabála*, the Partholonians had their main settlement at Mag nElta (Moynalty), the present site of the city of Dublin (Baile Átha Cliath). Later sources describe Partholón as the 'chief of every craft', which suggests identification with Lug Samildánach (the all-skilled), the main deity of the Tuath Dé. Partholón is said to have been buried at Tallaght (Tamhlacht Parthalóin), Co. Dublin, and his name and the names of members of his family are linked with several other locations in the metrical dindshenchas. The Partholonians—like the Fir Bolg and Tuath Dé—are sometimes represented as being harassed by the sinister Fomoiri. Unlike some of the subsequent invasions in *Lebar Gabála*, O'Rahilly did not view that of Partholón as recalling an actual prehistoric migration. His name is probably derived from the biblical Bartholomaeus, although a root in Parthia, the ancient name of northern Iran, has also been suggested. In any event, as an Irish name beginning with *P-*, it cannot be native, but rather an early medieval learned invention, elaborating descent from Noah.

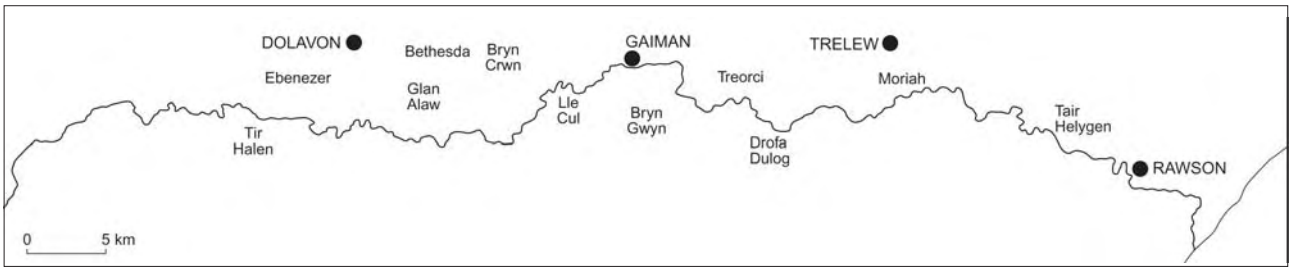
SÓF

Patagonia

Y Wladfa, the Welsh settlement in Chubut, Argentina, is unique. It is the only place where the Welsh language has greater currency than English. Contrary to the situation regarding the Welsh people who settled in the USA, Canada, and Australia, where the processes of assimilation were invariably swift and thorough (see CELTIC LANGUAGES IN AUSTRALIA; CELTIC LANGUAGES IN NORTH AMERICA), the Welsh language and culture in Patagonia have survived, against all odds, since 1865.

The idea of directing organized EMIGRATION from Wales (Cymru) to a specific location in order to establish a strong community that could withstand the pressures of acculturation was supported by Michael D. Jones (1822–98), later Principal of the Congregational Theological College at Bala, who had experienced rapid linguistic and cultural shift whilst serving as a pastor in Cincinnati, USA. The subsequent Welsh Colony Movement finally decided on Patagonia as the venue for their 'New Wales', mainly because of an abundance of land and the isolation of the region from the nearest European settlement in the province of Buenos Aires. Members of the Movement were also under the impression that they would evolve into an autonomous province within Argentina.

Following a sea journey which lasted three months, 153 Welsh people landed at New Bay on 28 July 1865. The first years were gruelling: crops failed and by 1867 the population had dwindled to 116. The Argentine government offered to resettle them in the provinces of Santa Fe, Rio Negro, and Buenos Aires, but their leaders persuaded them that they could not survive as an independent colony elsewhere. The idea of a Welsh-speaking colony was still central to the venture, and by the 1890s the colony had become a vibrant success in economic, cultural, linguistic, and sociological terms. The whole Chubut valley had been settled. Satellite communities had been established in Cwm Hyfryd and another was planned for Sarmiento. The Welsh had constructed an effective irrigation system for the Chubut valley and the Irrigation Company was worth an estimated £180,000, a phenomenal sum at the time. Out of desert and chaos the Welsh settlers created fields, gardens, and orchards. They built farms, towns, chapels, roads, and a railway system. They established their own financial and retail company —the co-op—and organized an effective local government system in which business was conducted entirely through the medium of Welsh. A Welsh-medium EDUCATION system was created and was overseen by a school board. In 1904 the Intermediate School of Gaiman was established. Welsh-speaking children in Patagonia were taught arithmetic, geometry, history, and geography through the medium of their mother tongue, whereas Wales had to wait another fifty years for a similar development. Lewis Jones (*Hanes y Wladva Gymreig* 184) maintained that the cultural life of the area was



comparable to that of a rural area in Wales.

Pressures on the communities to Hispanicize were introduced in 1896 when the Argentine government took over the schools, and a monolingual Spanish policy was rigorously implemented. By the 1930s and 1940s this policy was bearing fruit in so far as it fostered negative attitudes among the children towards all things Welsh. They were taught that Spanish was the 'national language' and the medium of economic, educational, and social success, whereas Welsh was an impediment to progress. Children whose home language was Welsh became more accustomed to using Spanish and their second language became the more 'normal' mode of communication. An intergenerational language shift from Welsh to Spanish subsequently occurred.

After 1912 immigration from Wales ceased and until 1965, the centenary year, contact with Wales and with Welsh culture virtually ceased, but the language persisted, mainly within the Welsh chapel circles. Increasing secularization, however, entailed Hispanicization. By the 1970s, most remaining Welsh speakers were over 40 years of age, and younger people denied any knowledge of the language. Furthermore, Welsh was becoming a restricted language, used only in a finite set of social situations. Since the 1980s, however, attitudes have progressively changed. Cymdeithas Cymru–Ariannin (The Wales–Argentina society) was instrumental in sending several pastors to minister in Welsh, and this led to a call for tutors to teach Welsh. These voluntary tutors helped rekindle a sense of Welsh identity among the younger generation.

In 1997 the Welsh Office instituted the Welsh Language Teaching Project and provided funding for three teachers of Welsh to work in the Chubut province for three years. At the end of this period, over 600 students had been registered on Welsh courses and several local tutors had been trained to help the three teachers from Wales. The project was extended for another three years. During 2002, 84 classes met weekly and benefited from a total of 152 teaching hours per week. The number of registered students was 662. The age stratification of students over the period became progressively younger. In 1997, 52% of all students were under 25 years of age. In 2002, this younger age group constituted 70% of all students. As a result, the ability to speak Welsh is no longer restricted to the older generation. In the 1970s

there was one Welsh radio programme per week; by 2002 a total of 11 programmes per week were transmitted. The National Assembly for Wales (Cynulliad Cenedlaethol Cymru) has extended the project until March 2006. The future of this revival in linguistic and cultural awareness will largely depend on guidance, training, and continued support from Wales.

Patrick, St, is currently the most internationally famous of the saints venerated in the Celtic countries. He has been known for many centuries as the patron saint and apostle of Ireland (Éire), where he is remembered by innumerable dedications and local traditions, as well as ongoing cult practices, such as the annual penitential pilgrimage held on the last Sunday of July (cf. lugnasad) on the mountain of Croagh Phádraig, Co. Mayo (Contae Mhaigh Eo). There are also significant old dedications and traditions of Patrick in the other Gaelic lands (Scotland/Alba and the Isle of Man/Ellan Vannin; cf. macutus; sodor) and early traditional connections in all the Celtic countries, and beyond in such Celtic-connected religious sites as Glastonbury. St Patrick and the day commemorating his death (17 March) have become icons of Irish identity in the post-Famine era of the great diaspora to industrial Britain and the New World, most especially the USA, where St Patrick and his festival now have mass secularized appeal along the lines of Santa Claus and the commercial Christmas holiday.

In the specialist field of Celtic studies, Patrick is also of manifold importance. He is acknowledged as at least one of the important founders of the Irish church in the 5th century and the starting-point of literature in Ireland (cf. literacy). He is the first self-proclaimed native speaker of one of the Celtic languages to have left a substantial body of writings and he has been seen by many modern Celtic linguists as being personally responsible for an identifiable layer of Christian vocabulary in Irish derived from Latin and, to a lesser extent, in Patrick's native Brythonic. Within the medieval Irish literary tradition, beginning in the later 7th century, Patrick is unsurprisingly prominent in hagiography in Latin and later also in Irish. But he also figures in virtually every branch and genre of Irish literature. He is pivotal to the dating scheme of the annals and, through his legendary confrontation with Loegaire mac Néill and his rôle in the foundation legend of Caisel Muman, he has become a chronological anchor for the early historical kings. He is presented as providing divine validation to a great corpus of native law texts in the 'Pseudo-Historical Prologue to the Senchas Már (The great tradition)', where he endorses all traditional Irish laws that are not specifically contrary to church teachings as 'the law of nature' and hence acceptable. Patrick was also drawn, with ingenious anachronism, into the two great cycles of pre-Christian heroes—into the Ulster Cycle by conjuring up the damned soul of Cú Chulainn in *Siabarcharpat Con Culainn* ('The Phantom Chariot of Cú Chulainn') and conversely validating Fiannaíocht and even diligently having the tales committed to writing as he met with the magically superannuated Oisín and Caílte in Acallam na Senórach (Dialogue of [or with] the old men). His traditional connections with the primatial see of Armagh (Ard Mhacha) ensured continued official support for his cult beyond the church reorganizations of the 11th and 12th centuries—which confirmed Armagh's supremacy (see ériu §10)—to modern times.

§1. patrick's writings and his life

Two short books in Latin, sometimes referred to as the *opuscula* (little works), have internal claims of authorship by 'Patricius' and are now generally regarded as his authentic works. The *Confessio* is autobiographical

and tells of his background as a third-generation (but not yet deeply believing) Christian in BRITAIN. His family possessed male and female slaves, and a house in the town of Bannaventa, and a residential farm (*villula*) nearby. Although well-to-do, Patrick's first language was explicitly not Latin, and this left him at a distinct disadvantage when his education was interrupted by his abduction by Irish slave raiders at the age of 16, along with the servants of his father's house and many thousands of others who were taken away at the same time. Six years of slavery in Ireland followed: whilst tending livestock in isolation, hardship, and nakedness, Patrick found faith. A voice directed him to escape, to travel a great distance for a ship to take him home. He was at last taken aboard, despite refusing to suck the nipples of crewmen in a barbarous rite of allegiance requested of him. They landed in a deserted area and were lost for several days, nearly starving until Patrick miraculously found food. He was eventually safely reunited with his family in Britain. There followed a gap of several years with virtually no detail; perhaps his intended readers were in the British church and knew of these events. Modern scholars continue to dispute whether he spent some time in GAUL during this period. In a key turning-point, Patrick had a vivid dream in which a man named Victoricius appeared, bearing innumerable letters. If this is a historical person, it might be Victricius, bishop of Rouen (Rotomagus), who visited Britain in the 390s. On one of the letters, Patrick could read 'the voice of the Irish'; he then saw the place where he had been and heard the Irish people calling to him as with one voice. Thus inspired, he returned to Ireland as a missionary bishop, travelling widely and converting many. When he wrote, he was an old man, resigned to continue his work, and never to leave Ireland for Britain or Gaul. There are two pervasive themes in the account of his mission. First, he was under some kind of suspicion, evidently financial, and he took great pains to explain that he financed the mission at heavy personal expense—including paying the sons of Irish kings as travelling companions to ensure safe passage through dangerous country—and that he would continue to do so. He refused all offerings from his Irish converts, even though this apparently offended them. The *Confessio* also shows a streak of apocalyptism: Patrick believed he was carrying the Word of God to the end of the world in the last days.

Patrick's second work (though it might predate the first) is his 'Letter to the Soldiers of Coroticus' (*Epistola ad milites Corotici*), which is a response to an immediate crisis in which the chieftain and his war-band had killed several of Patrick's recent Irish converts, abducted the Christian women, and sold them into slavery among the PICTS (SLAVERY thus figures as the tumultuous leitmotiv of his life). Patrick expresses his outrage and excommunicates the raiders, who were thus evidently (nominal) Christians. Since the women were still alive and since Patrick describes the practice of the Christians of Roman Gaul—sending holy men to pay generous coin ransoms to the pagan Franks to redeem captives—he appears to be suggesting a solution, an offer in good faith in the light of what he says in the *Confessio* about his ability and his willingness to meet the extravagant costs of his mission.

The Latin of the *opuscula* has been studied with varied conclusions, from highly skilled and learned (Howlett) to the not so learned, but showing Continental influence (Mohrmann). Most readers approaching the *opuscula* even in translation are struck by Patrick's moving personal sincerity.

On the possibly authentic Easter computus of Patrick, see EASTER CONTROVERSY §2.

§2. THE PROBLEM OF ST PATRICK

How we are to place Patrick's account of his life and times in its correct context in Irish and world history remains one of the great ongoing issues of Celtic studies. The annals, hagiography, and other branches of Irish literature from the 7th century onwards supply Patrick with dates, contemporaries, numerous foundations, and miraculous deeds. Until the mid-20th century, most scholars were content to synthesize a composite picture from what Patrick said with these later traditions. BINCHY's substantial article (*Studia Hibernica* 2.7–173) was the pivotal turning-point to a new approach since it brought the realization that most of what the later sources claimed served intelligible motives of ecclesiastical and secular politics of the eras of those later texts themselves. Beyond what they had taken from Patrick's own writings, the information supplied by the hagiographers was often at best fanciful fictions concealing ignorance, at worst the

wilful distortion of facts which might detract from the reputation of their hero. In the latter category, the great embarrassment was that, according to the papacy, Ireland's first bishop had been PALLADIUS in 431. Although the *opuscula* do not specifically claim that Patrick was the first bishop in Ireland or that there were no Christians there before his mission, one might naturally assume this from the *Confessio*, and that is certainly what propagandists of Patrick and of Armagh's supremacy did assume. The solution to 'who was the first bishop in Ireland?' embodied in Muirchú's late 7th-century *Vita Patricii* is to have Palladius martyred on arrival and Patrick to follow immediately as Palladius' *doppelgänger* and virtual first bishop of Ireland. That not all centres of learning in early Christian Ireland had opted for this transparently artificial scheme is indicated by the peculiarity that we have two sets of dates for Patrick in the annals. In one—compatible with Patrick shadowing Palladius—he dies about 462. In the other, he dies about 493. It is the earlier obit that looks like a secondary invention, being aware of itself as what 'other books say' or referring to its subject as *sen Phátric* (old Patrick), showing that it knew the Patrick of the later obit as requiring no special qualification. Today, most scholars find the later obit more credible. However, since there are no contemporary annals this early, we are probably comparing more and less far-fetched guesswork. There is a third solution, argued for by Esposito and more recently by Koch, that is, that Patrick preceded Palladius, but that the church in Rome was either unaware of his mission or did not regard him as a legitimate bishop. In favour of the early chronology is Patrick's very Romanized view of Britain, which he calls *Britanniae* 'the provinces of Britain', regarding its inhabitants as Roman citizens still. His father Calpornius was a decurion or councillor in a Roman CIVITAS. And there is the negative evidence that Patrick neither mentions nor implies that any of the great 5th-century events had occurred: the end of Roman Britain in 409/10, the ANGLO-SAXON 'CONQUEST', or the theological movement of PELAGIUS and its condemnation.

With no current consensus regarding Patrick's dates or his rôle in the foundation of the Irish church relative to Palladius, his status as a milestone in the history of the Celtic languages is now also disputed. Much of this recent debate has centred on *Cothraige*, an alternative name for Patrick in the hagiography, which scholars once agreed was an old borrowing of *Patricius* into the Primitive Irish at the stage reflected in the earlier OGAM inscriptions. But Harvey has argued that this is not certain: *Cothraige* might be a native Irish name or have been borrowed from an earlier Patricius (if the latter, it remains problematical how the later Irish then knew that this old borrowing referred to the same person as *Pátric*). This evidence is probably less decisive than supposed since *Coirthech*—the Old Irish form of *Coroticus*—also implies that Patrick's career belongs to the Primitive Irish linguistic stage.

§3. A FEW IMPORTANT TEXTS ABOUT PATRICK

The earlier and more important sources include Latin texts preserved in the early 9th-century manuscript, the Book of ARMAGH: Tírechán's *Collectanea* (Account of St Patrick's churches) of *c.* 670, Muirchú moccu Macthéni's *Vita Patricii* of *c.* 690, and *Liber Angeli* (The book of the angel). Muirchú's Life is noteworthy in that it introduces elements which became recurrent features of the Patrick story, but had no basis in Patrick's own writings: his four names (Patricius, Cothirche/Cothraige/Cothirthiacus, Succat, and Mauonius [cf. MOGONS]), his service in slavery to a druid named Miliucc, his sojourn in Gaul and his dealings there with GERMANUS and Amator(ex), his celebration of Easter near Tara (TEAMHAIR) and his confrontation with King Loegaire and the king's DRUIDS, and, most importantly, the founding of Armagh. The four subsequent Latin Lives published by Bieler date between the late 8th and late 11th centuries; of these, Dumville (*Celtic Florilegium* 1–7) has shown that the 'Third Life' has Old Brythonic glosses and was probably copied in Cornwall (KERNOW). The vernacular *Bethu Phátraic*, also known as 'The Tripartite Life of Patrick', was produced in Munster (MUMU), probably during the reign of Cenn Gégán, king-bishop of Cashel, in the period 895×901. As well as being in Irish, it is noteworthy for its interest in Munster, which had by that time accepted the primacy of Armagh and Patrick's pre-eminence among Ireland's saints; however, the story of Patrick baptizing the sons of Nie Froích at Cothraige's Rock at Cashel goes back to Tírechán (§51). *Bethu Phátraic* also identifies Patrick as being of the Britons of Ail

Cluaide (Dumbarton, see YSTRAD CLUD; cf. HAGIOGRAPHY [2] §5), an idea which probably developed from the identification—already found in the Book of Armagh and probably correct—of Coroticus with Ceretic Guletic of Dumbarton. On 'St Patrick's Purgatory', see VISION LITERATURE §6 (cf. PURDAN PADRIG). A Modern Irish verse Life of Patrick by Amhlaoibh Ó Súilleabháin († 1838) was recently published by Buttimer, who suggests that the poet adopted the Briton Patrick as a timely model for hoped-for improvement in relations between Britain and Ireland in the Napoleonic age.

Paul Aurelian, St, is the patron saint of the city of Kastell-Paol (Saint-Paul-de-Léon), which is named after him, and of the Enez-Vaz (Île-de-Batz; cf. BAZ-GWENRANN). In written sources he is sometimes known as Paulinus. Although primarily a local saint in LEON, Brittany (BREIZH), he is also venerated in other parts of Brittany and in Cornwall (KERNOW).

His Latin Life is one of the few early saints' Lives for which we have contextual detail. Its author, Uurmonoc, tells us that he wrote the Life in AD 884, basing it partly on an earlier Life of the saint and modelling it partly on the Life of St UUINUUALOE, written by his mentor, Abbot Wrdisten of LANDEVENNEG.

In the Life, St Paul is from 'Penn Ohen', (cf. Modern Breton *penn oc'hen*), correctly translated by the author as *Caput Boum* 'head of oxen'. Penychen is a CANTREF in eastern Glamorgan (MORGANNWG) in south Wales (CYMRU). A *Poul Penychen* is mentioned in the Life of St CADOC as one of the children of king Glywys although, in Uurmonoc's Life, Paul is the son of Perphirius or Porphirius. The first section of the Life discusses Paul's childhood and education with St ILLTUD in Wales, alongside saints David (DEWI SANT), GILDAS, and SAMSON. Most of the Life, however, deals with Paul in Brittany, from the island of Ossa (Breton *Enez-Eusa*, English *Ushant*, French *Ouessant*) to Saint-Paul-de-Léon. Paul Aurelian is one of the 'seven saints' of Brittany venerated on the *Tro Breizh* (Tour of Brittany), a pilgrimage undertaken to honour seven saints in seven of the Breton dioceses.

AM

Pedersen, Holger was a Danish Celticist and an INDO-EUROPEAN scholar; his extensive works on the comparative grammar of the CELTIC LANGUAGES remain standard handbooks at the beginning of the 21st century. Pedersen was born in Gelballe (Østerjylland, Denmark) in 1867. He studied linguistics in Copenhagen under the comparativist Vilhelm Thomsen, the Slavicist Karl Verner, the expert in runes Ludvig Vimmer, and the Semiticist Hermann Möller. Later he carried out field work in Lithuania, Albania, and on the Aran Islands (OILEÁIN ÁRANN) in the west of Ireland (ÉIRE). His language skills were outstanding: he could, for example, write and speak Armenian and Albanian fluently. He made important contributions to Slavic and Armenian studies, but his main research interests were the Celtic languages, as reflected in his three *magna opera*: *Aspirationen i Irsk*

(1897, Ph.D. thesis), *Vergleichende Grammatik der keltischen Sprachen* (1909–13), and *A Concise Comparative Celtic Grammar* (with Henry Lewis, 1937). Pedersen died in Copenhagen in 1953.

SELECTION OF MAIN WORKS

'Das indogermanische *š* im Slavischen', *Indogermanische Forschungen* 5.33–86 (1895); *Aspirationen i Irsk* (1897); *Les pronoms démonstratifs de l'ancien arménien* (1905); *Vergleichende Grammatik der keltischen Sprachen* (2 vols. 1909–13); (with Henry Lewis) *Concise Comparative Celtic Grammar* (1937).

Pelagius (*c.* AD 350–*c.* 425, active *c.* 400–418) was a theologian who became the central figure in a major controversy during the first decades of the 5th century. In 418 Pope Zosimus excommunicated Pelagius and condemned his teachings in detail in *Epistola Tractoria*, which survives fragmentarily, and on 30 April of that year the heretic and his chief followers were expelled from Rome by Emperor Honorius. However, Pelagianism continued openly in BRITAIN and parts of GAUL into the 430s at least, and the writings of Pelagius were copied and correctly attributed to him by Brythonic and Irish scholars in the 7th and 8th centuries. As gleaned from his own writings, and from those of his followers and his opponents, the essence of Pelagian theology was: that human beings had complete free will and no inherent predisposition to evil; that they had not inherited the sin of Adam; that death was part of human nature and not God's punishment; that infants had no original sin, and infant baptism was therefore pointless. Pelagius criticized the Arian Christians as denying Christ's full divinity and the Manichaeans as denying His full humanity. Pelagius' influential opponents included Pope Innocent I (predecessor of Zosimus), the historian Orosius, JEROME, and Augustine of Hippo (†430). Augustine's beliefs in original sin and the necessity of God's Grace for salvation—which the Pelagians saw as Manichaean—won out as orthodoxy.

Despite being lampooned by Jerome as being of Irish origin (*Commentary on Jeremiah 1* Prologue 3), most modern writers regard Pelagius as ROMANO-BRITISH; on the other hand, had Pelagius actually been Irish, or had his opponents believed so, this would explain why Pope Celestine thought there were Irish Christians who urgently required the anti-Pelagian PALLADIUS as their first bishop in 431 (cf. CHRISTIANITY IN THE CELTIC COUNTRIES [1] §1). According to Augustine, Pelagius had resided in Rome for many years before coming to prominence during the first decade of the 5th century, when his commentaries on the epistles of St Paul and his now lost treatise on the Trinity were written. With Alaric's Visigoths menacing Rome, Pelagius and his prominent follower Coelestius fled first to Sicily in 409 before moving on to Carthage and later Palestine in 411. Pelagius' sympathizers attacked Jerome's monastery in Bethlehem on 27 January 417. Innocent I then excommunicated Pelagius, who appealed for reconsideration with his pamphlet on Faith. Innocent died on 12 March that year. The new pope, Zosimus, at first took a more conciliatory approach, but Coelestius obstinately continued public debating in Rome. This incited riots and led to the condemnation of Pelagius and Pelagianism by Zosimus and Honorius. Almost simultaneously (1 May 418), 214 bishops condemned Pelagianism at the 16th Council of Carthage. Nonetheless, Julian of Eclanum and other bishops in Gaul—usually called Semi-Pelagians—refused to sign the *Epistola Tractoria* and continued to oppose Augustine until they were suppressed in 431. In 429/30 and again several years later, St GERMANUS of Auxerre travelled to Britain to combat Pelagianism (see also ALBAN; GWRTHEYRN; PALLADIUS).

From this point, the absence of historical sources for 5th-century Britain and Ireland leaves the aftermath of Germanus' efforts uncertain, but the evidence for Brythonic and Irish transmission of Pelagian texts suggests that these were not wholly successful. GILDAS, probably writing in the 6th century, quotes a Pelagian text, which had presumably survived in Britain. David Dumville (CMCS 10.39–52) has pointed to four personal names in the scribal colophon of two manuscripts of Pelagius' commentaries on Paul—*Merianus*, *Papiauus*, and kings *Heliseus* and *Salamon* (Modern Welsh *Meirion*, *Peibio*, *Elise*, *Selyf*)—as evidence for a 7th- or 8th-century Brythonic exemplar, probably from Wales (CYMRU). The Würzburg manuscript (Universitätbibliothek, MS M.p.th.f.12) of St Paul's Epistles—with copious 8th-century Old Irish GLOSSES—cites Pelagius many times in its Latin commentary, also in

Irish hands, which shows that his work was not merely known to Irish scholars, but that his name was revered by them. There are also references to Pelagius in the COLLECTIO CANONUM HIBERNENSIS and in the prologue to Paul's Epistles in the Book of ARMAGH.

In early modern times some Protestant writers used the Pelagian affair to build a case for a Celtic CHRISTIANITY that had never been fully Roman or Catholic. In the later 20th century John Morris and J. N. L. Myres saw the Pelagians as social revolutionaries, whose doctrine of free will contributed to the breaking away of Britain and ARMORICA from Roman rule in 409/10. Tying into such a 'liberation theology' interpretation are the works of an anonymous Pelagian writer, whom Morris called 'the Sicilian Briton', who passionately condemned the excessive riches of the Roman upper classes and the legal torture of the late Roman judicial system. But it is doubtful whether this writer was British, and we do not have such stirring ideology in any surviving Pelagian texts from Britain or Ireland. Michael Jones sees in Jerome's vivid ridicule of Pelagius a background of ingrained race hatred against the BRITONS.

Peñalba de Villastar is the find site of an inscription in stone, written in the CELTIBERIAN language, one of the earliest attested CELTIC LANGUAGES, spoken in later prehistory and Roman times in what is now central Spain. The inscription uses the Roman alphabet, and it names the pan-Celtic god LUGUS. This divine name corresponds linguistically to that of the Irish supernatural figure LUG and the Welsh LLEU of the MABINOGI.

Peñalba de Villastar is the name of a hill near the Spanish town Villastar, situated by the river Turia *c.* 10 km south of Teruel. Several INSCRIPTIONS have been found inscribed into the steep and rocky upper part of the hill, mostly written in Latin script, but partly in Iberian script and probably in the Iberian language.

The hill may have been a sacred site, where pilgrims left these writings, but to date there have been no excavations of the surrounding area to confirm this hypothesis. The texts in Roman script, including a Latin sentence quoted from the *Aeneid* of VERGIL, seem to date from the beginning of the Christian era. Among them are several very short texts in the Celtiberian language, consisting only of personal names, but also some longer ones, most importantly the 'great' rock inscription of Peñalba de Villastar (K.3.3), which, at seven lines, is the longest extant Celtiberian text in the Roman alphabet and one of the major documents of the Celtiberian language (see Untermann & Wodtko, *Monumenta Linguarum Hispanicarum* 4.618–21, 624–7).

The inscription is arranged in two paragraphs, perhaps two sentences, both of which begin with the word *eniorosei* (meaning unknown) and both of which contain what is probably to be understood as the Celtic divine name *Lugus* (first in the dative *luguei* 'to Lugus', then perhaps in the genitive *lugues* 'of Lugus', though the reading here may again be *luguei*). Inscription K.3.3 is therefore usually interpreted as a dedication to this divinity, and as illustrating not only his pan-Celtic character, but also the practice (scarcely attested elsewhere) of making dedications to the god in the singular (see Tovar, BBCS 29.591–9; Maier, *Ériu* 47.127–8). In other Continental dedications, the *Lugues* figure as a triune deity.

The text is difficult to read in some places and inaccurate readings have sometimes confused linguistic interpretation; see the photograph and drawing in Untermann & Wodtko, *Monumenta Linguarum Hispanicarum* 4.625. While most of the words cannot be assigned a meaning or even a particular grammatical part of speech with certainty, the text seems to contain at least one verbal form: *sistat*, probably meaning 'stands' or 'erects, places'. It also shows the unaccented or 'enclitic' conjunction *-que* 'and' (exactly

The Celtiberian rock inscription from Peñalba de Villastar

comparable to Latin *-que* 'and') and the word *uta*, which is attested in other Celtiberian texts.

The inscription has been discussed and translated by Ködderitzsch, Meid, and others, but interpretations differ widely (Untermann & Wodtko, *Monumenta Linguarum Hispanicarum* 4.626–7). Thus, for example, *eniorosei* has been interpreted as the name of a month (Tovar, *Ancient Languages of Spain* 82, 86), a personal name (Ködderitzsch), a place-name (Villar: 'in Orosis', where *Orosis* is the name of an unlocated Celtiberian town that minted the coins inscribed *orosið* A.86; see COINAGE), or, finally, as describing the god Lugus as 'on the mountain' (Meid).

This long Celtiberian inscription from Peñalba de Villastar and many of the smaller Celtiberian texts from the same site have been cut out of the rock and are now preserved in a museum in Barcelona.

Penda was the ruler of Mercia, 'the border kingdom', whose alliance with CADWALLON, king of GWYNEDD, during the latter's punitive campaign against Deira (DEWR), led to the death of the Northumbrian king EADWINE at the battle of Hatfield in 633. His own death came on 15 November 655 at the battle of the Winwæd in retreat from Bernicia (BRYNAICH) and in unsteady alliance with CADAFAEL, king of Gwynedd. According to the king-list of Mercia incorporated into the Anglo-Saxon Chronicle, Penda was said to be the son of Pypba and grandson of Creoda. All three bore names ultimately derived from BRYTHONIC, which in turn are reflected in an important group of place-names concentrated in the western Midlands of England (Graham Jones, *Nomina* 21.29–62). Together with the similarly derived names of Penda's sons, Peada and Merewalh, and his kinsman Penwalh (father of GUTHLAC), they suggest either that Mercia was ruled by a Germanic family heavily influenced by Brythonic culture and/or intermarrying with Brythonic kin-groups, or that the Mercian kingdom was essentially a Brythonic entity which adopted Germanic speech and Anglian identity. According to Bede (BEDA), Penda was not a Christian, but he treated those who were with respect. He allowed the baptism of Peada by Finán, Irish bishop of LINDISFARNE, and the introduction of Northumbrian priests, CEADDA, Adda, Betti, and Diuma, to work among the Middle Angles. The beginning of Penda's reign is uncertain. It depends on readings of the Anglo-Saxon Chronicle (A, B and C: 626, at the age of 50), Beda (634–56), or HISTORIA BRITTONUM (ten years after the death of Creoda). At first, he may have ruled jointly with his brother Eowa, who died in battle *c.* 628. The Anglo-Saxon Chronicle (A), for the year 628, reports that Penda fought the West Saxons Cynegils and Cwichhelm at Cirencester, forcing them to conclude a treaty with him. Bede described his attempt to burn Bamburgh some time prior to Bishop Aedán's death in 651 (*Historia Ecclesiastica* 3.16).

The name *Penda* is based on the Brythonic *pen(n)* 'head, chief'. Although there have been several explanations for the name as a whole, the most straightforward would be 'having good chieftains', hence 'lord of good lords'. The Old Welsh *Pantha* and later *Panna* probably

reflect reborrowings from Old English.

Pentreath, Dolly (1692–1777) is one of the most famous of the 'last' CORNISH speakers. Her reputation grew out of a visit made to Mousehole in 1768 by the English antiquary Daines Barrington, who had travelled to Cornwall (KERNOW) to see whether anyone still spoke the native language. In a report to the Society of Antiquaries in London in 1773 he stated that the fishmonger was 'poor and maintained partly by the parish, and partly by fortune telling, and gabbling Cornish'. Barrington's agenda may therefore be seen as an antiquarian ideological exercise to locate curiosities rather than a scientific study of the sociolinguistics of west Cornwall. It did, however, ensure Pentreath's legendary status, and she is often mistakenly referred to as the last speaker. Whether she spoke Cornish as her first language is still open to debate, as is her degree of bilingualism.

Numerous Cornish speakers have been recorded after Pentreath's death, including William Bodinar, a Truro engineer named Thompson, John Nancarrow (who travelled to Philadelphia in 1804), W. J. Rawlings, John Davey, Jane Barnicoat, Ann Wallis, John Tremethack, Mrs Kelynack, Betsey Matthews, and a St Ives policeman called Botheras. Traditional fragments and phrases of the language continued into the 20th century. Recently, many scholars have begun to view the centenary of Pentreath's death in 1877 as the initial impetus for the modern Cornish revival (see LANGUAGE [REVIVAL]).

Peredur fab Efrawg is a Welsh hero best known to modern readers as the naive or uncouth protagonist and namesake of one of the 12th- or 13th-century French-influenced Welsh Arthurian tales, known collectively as the Three Romances. This tale, and its relationship to the parallel Old French *Perceval* of CHRÉTIEN DE TROYES, is discussed in the entry TAIR RHAMANT; see also ROMANCES IN WELSH; ARTHURIAN LITERATURE [3]; CRITICAL AND THEORETICAL PERSPECTIVES; WELSH LITERATURE AND FRENCH, CONTACTS; WELSH PROSE LITERATURE [1]. For episodes of the *Peredur* tale, see GRAIL; AFANC; DRAGONS; cf. HEAD CULT.

In the romance GERAINT *fab Erbin*, 'Peredur uab Eurawc' figures once in a list of Geraint's retinue, most of whom are otherwise famous characters. Bartrum identifies the Peredur Paladr Hir (Peredur of the long spear-shaft) in a similar list near the end of BREUDDWYD RHONABWY (Rhonabwy's dream) as the same figure. But there is no Peredur in the lists of heroes in the earliest Arthurian tale, CULHWCH AC OLWEN; therefore, the origins of Peredur fab Efrawg are unclear. Goetinck discusses one north British hero named *Peredur* in *Y* GODODDIN and another (OW Peretur) who fell in battle at AD 580 in ANNALES CAMBRIAE (*Peredur* 26). However, the relevant section of *Y Gododdin* (AWDL A.31) is not archaic and includes names of several otherwise known northern heroes who were probably simply quarried from old texts, such as *Annales Cambriae*. The Peredur who died in 580 fell with his brother Gwrgi (OW Guurci). Both are known as among the victorious chieftains at the battle of ARFDERYDD (573). They are also named in the GENEALOGIES as sons of Eliffer (OW Eleuthur) of the Coeling dynasty (see COEL HEN), and were thus first cousins of URIEN. The problem with this possible identification is, of course, that the name of the father of this Peredur is different. On the other hand, *Efrawg* is better known in Welsh as the name of a place—York, ROMANO-BRITISH *Eburācum*—rather than as a man's name; it is therefore possible that the Coeling Peredur had a place-name epithet which was misunderstood as his father's name (a common error in the transmission of genealogies), occasioning a split between Peredur son of Eliffer and Peredur 'son' of Efrawg/York. As Peredur fab Efrawg does not appear in Arthurian literature before the Three Romances, it is likely that the name was adopted as the closest approximation within the existing stock of

traditional Welsh heroes to *Perceval* and/or *Perlesvaus*, the name of the figure in the French Arthurian romance which probably inspired the Welsh tale.

Peregrinatio in classical Latin means the state of living abroad or travelling in foreign parts. In Christian times, the word developed the sense 'pilgrimage' and later also 'crusade'. For Irish writers of Latin in early Christian and medieval times, *peregrinatio* meant leaving home as an act of faith, which was an important social institution from the later 6th to the 10th centuries. Charles-Edwards has shown that a *peregrinus* (one undertaking *peregrinatio*) might simply leave home yet remain in Ireland (ÉRIU) and follow a religious career; a preferred grade (*potior peregrinatio*, as it is called in Jonas' Life of COLUMBANUS) means self-imposed religious exile overseas. It is usually this higher grade that modern Celtic scholars mean when mentioning *peregrinatio* without further qualification. Old Irish terms for *peregrinus* include *ailithir* 'exile' and *deorad Dé* 'God's exile'. According to the Irish LAW TEXTS (e.g. *Bretha Crólige* [Judgements of sick maintenance]), the *deorad Dé* was of a status equal to a bishop, chief poet, or king of a TUATH—a level of esteem which helps to explain why *peregrinatio* became common, even though its practitioners effectively put themselves beyond the reach of its legal benefits. As to why Irish society so valued the practice, St PATRICK's example is probably relevant: a Briton, he describes himself emphatically in his *Confessio* as a lifelong exile for faith (*proselitus*) in Ireland.

Irish *peregrini* founded MONASTERIES on formerly uninhabited islands in the north Atlantic (cf. CORMAC UA LIATHÁIN), and as far as Iceland (which was occupied by Irish hermits before the Scandinavian settlers of the 9th century), as well as being responsible for foundations and missionary activity in BRITAIN and mainland Europe. We may see as fictionalized literary reflexes of the Atlantic *peregrinationes* the highly popular Latin tale NAVIGATIO SANCTI BRENDANI and the vernacular genre of VOYAGE LITERATURE, known as IMMRAMA. The ideal of ascetic exile also contributed to the literary theme of the WILD MAN.

The momentous activities of Irish clergy in Britain and its offshore islands include the foundation of Iona (EILEAN Ì) by COLUM CILLE *c.* 563 and his lifelong exile there, from which he evangelized the PICTS, and the foundation of LINDISFARNE as a daughter-house of Iona in 635 as the centrepiece of Northumbria's second conversion.

One of the earliest and most famous of the *peregrini* working on the Continent was St Columbanus (†615), founder of Luxeuil, Bobbio, and other monasteries. The career of ERIUGENA (†877) illustrates the continued influence of Irish churchmen on the Continent well into the Carolingian age. The *peregrinatio* phenomenon makes intelligible the facts that so many Hiberno-Latin texts survive in Continental manuscripts and that almost all the Old Irish that survives on contemporary media are GLOSSES in Continental manuscripts.

Churches in Brittany (BREIZH) were recognized by the Carolingian Franks as having distinctive Irish practices (see LANDEVENNEG), which are also reflected in the 'Celtic' or 'Insular' features of early Breton scribes and artists (see BRETON EARLY MEDIEVAL MANUSCRIPTS). Brittany was probably a final destination for some Irish *peregrini*, but for others, such as Columbanus, a staging point on the way to Frankia and beyond.

The often-emphasized contribution of Irish scholars to the civilization of western Europe in the post-Roman centuries was undoubtedly great, though impossible to quantify. The fact that Ireland had not itself been part of the Roman Empire meant that its society and educational system did not decline traumatically as did those of most of the Christian west. Of the formerly 'barbarian' lands, Ireland was converted early, allowing its churchmen to play a

leading rôle in the conversion of the Picts, Anglo-Saxons, and Germanic peoples beyond the RHINE, as well as revitalizing the church in GAUL and Italy.

Pergamon (Πέργαμον, Latinized Pergamum, modern Bergama), a city in Mysia, Asia Minor, now Turkey, was in 230 BC the site of a battle during which a Celtic group, the Galatae, were defeated by the Greeks (see GALATIA). The Celtic tribesmen had probably been hired as mercenaries by King Ziaelas of Bithynia, whom (according to TROGUS POMPEIUS) they killed at a FEAST. This defeat is often cited as the occasion for the creation of the famous statue of the 'Dying Gaul' (*Galata Morente*, now in the Museo Capitolino in Rome), a marble statue which is probably a copy of an original bronze created at Pergamon. Other works of plastic art depicting the Galatians were created by this Pergamene School, including the 'Suicidal Gaul' (*Galata Suicida* in the Museo Nazionale Romano) and the 'Head of Galatian' (Musei Vaticani). Pergamon was thus of far-reaching importance in the formation of the stereotypical images of the exotic Celtic warrior for the urban civilized world, both ancient Graeco-Roman and modern.

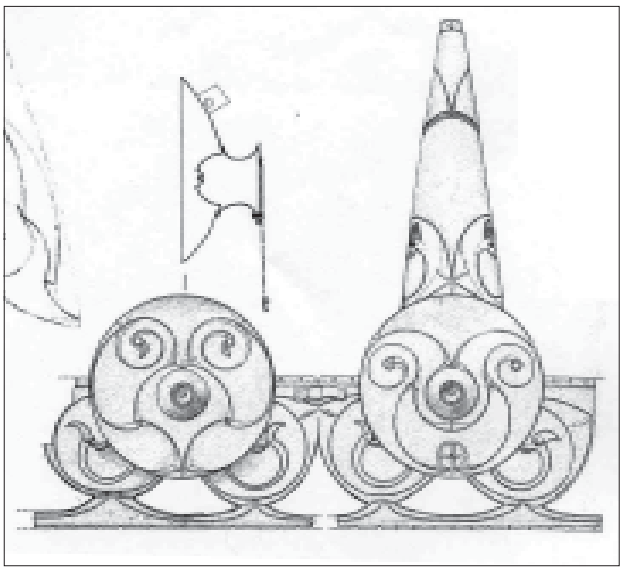
Petrie, Sir George (1789–1866) was an artist and antiquarian whose contributions in art, archaeology, and traditional IRISH MUSIC were vital to the Irish revival movement of the 19th century. Although not a native Irishman, Petrie spent his life in Dublin (BAILE ÁTHA CLIATH), where he worked actively to preserve and revive Irish culture. A graduate of the



Drawing of the 'Petrie crown', an unprovenanced masterpiece of Irish decorative bronze work of Iron Age date, once in the personal collection of George Petrie

Royal Dublin Society art school, many of the watercolours and sketches he made during his successful career as a painter represent meticulous recordings of important Irish monuments. His archaeological interests also led to the publication of two critically acclaimed books on the subject, *On the History and Antiquities of Tara Hill* (1839) and *The Ecclesiastical Architecture of Ireland* (1845). Between 1830 and 1841 Petrie worked with Eugene O'Curry (?1796–1862) and John O'Donovan (1806–61) in the topographical section of the Ordnance Survey. Petrie also produced an invaluable compilation of Irish music, collected by him personally throughout his life, and he provided songs to Edward Bunting and Thomas Moore.

Petroc, St, is not known from contemporary historical sources. However, earlier and later medieval Lives of Petroc do survive in Latin, the latter in both prose and metrical versions, and there is a list of his miracles. The *Vita II*, *Vita metrica*, and *Miracula* occur in the later 14th-century manuscript, Gotha, Forschungsbibl., Mm.I.81, but the dating of the original texts is uncertain. According to this HAGIOGRAPHY, Petroc was the son of a Welsh king and an uncle of St Cadoc. After studying in Ireland (Ériu), Petroc took a ship to the Camel estuary in north Cornwall (Kernow), where he founded a monastic centre, later to be called Petroc-stow (Padstow). He then made the pilgrimage, via Brittany (Breizh), to Rome and Jerusalem, and reputedly spent some time living as a hermit on an island in the Indian Ocean. On his return to Cornwall a new foundation was started at Nanceventon, near Padstow, later to be named after him as Little Petherick, and then later still, another at Bosvenegh (Bodmin). The monastic community at Padstow moved to Bodmin, taking the relics of their saint with them in an ivory shrine.

Petroc's *Vitae* are filled with miraculous good deeds. He healed the sick, removed a splinter from a dragon's eye, and saved a hunted stag, converting Constantine, king of Cornwall, and his huntsmen. Petroc's relics were safe until 1177 when they were stolen and taken to the Breton church of Saint-Méen (Sant-Neven). An appeal by the then overlord of France, Henry II, brought them back to Bodmin. The Bodmin Riding custom (recently revived) originally celebrated the return of the relics.

Petroc's portable bell has not survived, but it is mentioned in the slave-freeing formulae of the Bodmin Manumissions: 'This is the name of the woman Ælfgyth, whom Æthælflæd freed for her soul and for the soul of her lord Æthælwerd the Duke on the bell of S. Petroc in the town which is called Lyscerruyt [Liskeard]'.

Petroc is honoured widely in Cornwall, Wales (Cymru), and Brittany. A statue of Petroc and the stag is found at Lopéree in Breton Cornouaille (Kernev). His feast day is 4 June, although the present Riding festival takes place on the first Saturday in July. A play detailing Petroc's life, in the style of the Cornish mystery plays, was completed by D. R. Rawe (see CORNISH LITERATURE).

The name *Petroc* is based on the biblical name *Petrus* 'Peter, the rock' with the Brythonic suffix *-oc* < Celtic adjectival *-ācos*.

Pezron, Abbé Paul Yves (1639–1706) was a Breton cleric and a Celtic scholar. He was born in 1639 at Henbont, Morbihan, Brittany (BREIZH), and died at Chassy, LEON in 1706. Educated at a seminary at Rennes (ROAZHON), then at Paris, he became a Cistercian monk and rose to be the theologian of his order and abbot of La Charmoye near Rheims, though he retired shortly before his death to devote himself to scholarship.

Pezron first became known for his book *L'antiquité des temps rétablie* (Paris, 1687), the full title of which is *L'antiquité des temps rétablie et defenduë contre les juifs & les nouveaux chronologistes* (The antiquity of time re-established and defended against the Jews and the New Chronologists). The subject of this book is the debate between biblical chronology and other accounts of the origins of the world, and his study led him to take an interest in all early peoples, among them the Gauls (see GAUL). Pezron realized that the Gauls had been part of a widespread ancient nation called the Celts, and also that there was a correlation between the language of the Gauls and the languages of Brittany and Wales (CYMRU) of his own day. He was known to be compiling a Breton dictionary, which remained unpublished, but he is best remembered for his *L'antiquité de la nation et la langue des Celtes, autrement appellez Gaulois* (Paris, 1703), which was translated into English by David Jones as *The Antiquities of Nations, more particularly of the Celtae or Gauls, taken to be originally the same people as our ancient Britains: containing great variety of historical, chronological, and etymological discoveries, many of them unknown both to the Greeks and Romans* (London, 1706). The English translation became remarkably influential and was reprinted as late as 1809 and 1812. Many of Pezron's ideas on the identification of the Welsh as descendants of the Celts were made known to the Welsh public through the mediation of Welsh works like Theophilus Evans's *Drych y Prif Oesoedd* ('A Mirror of the First Ages'; Yr Amwythig, 1716). Pezron's theories were highly influenced by biblical accounts, especially the stories of Noah and the Tower of Babel (see LEGENDARY HISTORY).

The famous Welsh scholar Edward LHUYD had tried, unsuccessfully, to make contact with Pezron in the 1690s, because he believed that, despite his unreliable philology, Pezron's zeal for the Celts was admirable. Pezron's was the first fairly popular work to publicize the theory that BRETON and WELSH were remnants of the language of the ancient Celts. Unlike Lhuyd, Pezron did not include IRISH in his comparisons, though he did own a Latin–Irish dictionary. Pezron's work pointed to the great antiquity of Welsh and Breton and endowed them with considerable prestige, thereby encouraging Celtic studies in those countries in the 18th century. In Wales, 'Pezron's rule' that short particles represented the earliest roots of languages deeply influenced language study, word invention, and lexicography for several generations.

Pfalzfeld is a town in the Hunsrück mountains, about 32 km south of Koblenz (district of St Goar) in Germany. A sandstone stele—i.e. a pillar stone with an inscribed relief sculpture—from the Early LA TÈNE period is reported to have stood near its church. The present-day height of the stone is 1.48 m. Two accounts, one dating from 1608/9, the other from 1739, indicate that it must originally have been much higher. Having been moved several times, it was finally taken to the Rheinisches Landesmuseum in Bonn in 1938. The upper part of the stele, now lost, is described in a report from 1690 as follows:

Carved stone pillar from Pfalzfeld, Germany: each side bears a head with a half crown and triple pointed beard, late 5th century BC, Rheinisches Landesmuseum, Bonn

> *. . . diesem nach kann sie (die Säule) wohl noch von dem uralten Götzendienst herrühren, zumalen, da der alten Leute desselben Ortes Aussage nach vormals oben auf der 'Säule' ein Kopff in der Gestalt eines Menschen gestanden habe, der aber davon abgerissen worden.*
>
> . . . thus it is very likely that it (the pillar) dates back to periods of idolatry, because, according to the old people of the same town, a human head had been standing on top of the 'pillar' which was removed in later times.

If the upper part of the obelisk-shaped stele and the head were to be reconstructed, one would assume an original height of *c.* 2.80 m (or 3.50 m including the base). The head at the top of the pillar must have been similar to that of the stele from HEIDELBERG.

The Pfalzfeld pillar is covered with La Tène floral leaf and *s*-curve motives. The head, so-called 'lyre' pairs, and the border decoration resemble the Early La Tène DÜRRNBERG jug and the spoon handle from HIRSCHLANDEN. Each side carries a head, wearing a moustache and a palmette-shaped beard as well as a headband and another palmette on its forehead. The headgear are 'leaf crowns' similar to those represented on the GLAUBERG statue and the Heidelberg stele. The Pfalzfeld stele can be classified as belonging to the La Tène 'Early Style' of the 2nd half of the 5th century BC (La Tène A). The style shows an overlap of 'West Celtic' style characterized by floral patterns and 'East Celtic' bow and circle friezes. The various designs look as though they have been transferred from another medium, specifically from small ornamental metal jewellery to monumental stone carving.

Phylarchus Φύλαρχος of Athens was a Greek writer of the mid-3rd century BC, and the author of a History Ἱστορίαι in 28 books, which survives fragmentarily and is quoted by later authors. This work is cited in the *Deipnosophistae* (4.150d–f) of ATHENAEUS as the source of the description of the great FEAST of Ariamnes:

> . . . Ariamnes, a Galatian [or Gaul] of very great wealth, announced that he would give a year-long feast for all the Galatians [or Gauls], and this is how he accomplished it: He divided the country by marking out convenient distances on the roads. At these points he set up banqueting halls made out of poles, straw, and wicker-work, which each held four hundred men or more, depending on the size of nearby towns and communities. Inside he put huge cauldrons with every kind of meat. The cauldrons were made the year before the feast by artisans from other cities [tribes]. He then provided many oxen, pigs, sheep, and other kinds of animals every day, along with great jars of wine

and an abundance of grain. And not only did the Galatians dwelling in nearby towns and villages enjoy the feast, but even strangers passing by were invited in by servants, who urged them to enjoy the good things provided. (Koch & Carey, *Celtic Heroic Age* 8)

Phylip Brydydd (*fl. c.* 1210–33) is important as one of only three Poets of the Princes (see GOGYNFEIRDD) to hail from DEHEUBARTH. His patrons were Rhys Gryg (†1233) and Rhys Ieuanc ap Rhys ap Gruffudd (†1222), descendants of RHYS AP GRUFFUDD (the Lord Rhys). He is sometimes claimed to be the father of Y Prydydd Bychan (*fl.* 1222–68). Phylip Brydydd sang in both ENGLYN and AWDL metres. Although only six of his poems survive there are examples within this small corpus of four different types of poem: *mawl* (encomium, praise poem) to Rhys Gryg and Rhys Ieuanc, *marwnad* (elegy) for Rhys Gryg, *dadolwch* (reconciliation) with Rhys Gryg, and *awdlau ymryson* (contention poems; see YMRYSONAU) held before Rhys Ieuanc in his court at LLANBADARN FAWR. These poems reflect Phylip's awareness of Deheubarth politics. His *dadolwch* suggests that he was involved in the political developments of 1216, when LLYWELYN AB IORWERTH received fealty from the princes of Deheubarth; the *awdlau ymryson* suggest the events of 1221 when Llywelyn and Rhys Ieuanc appeared before the English king at Shrewsbury (Welsh Amwythig). The *ymryson* poems are especially valuable because they provide the only examples of this genre in *awdl* form dating from the period of the Poets of the Princes and because they reveal a knowledge of traditions regarding the famous bardic contests of the past. Throughout the *awdlau* the poet uses the legendary contest between TALIESIN, as the poet of Elffin of CEREDIGION, and the poets of MAELGWN Gwynedd as a leitmotiv.

Pictish king-list

The so-called 'Pictish king-list' is the only non-epigraphic text to survive from Pictland. Extant only in corrupt form in much later manuscripts (the earliest is 14th-century), it lists each king in chronological order, noting his father's name and the length of his reign. Despite its limited form it provides unique evidence for the nature of PICTISH historical writing in the 8th and 9th centuries. Some of the names in this Latin text are precious witnesses to Pictish language and orthography. The textual history of the list is complex, but the extant versions fall into two families: *Series Longior* (P-text), partially Gaelicized but reflecting Pictish orthography, and *Series Brevior* (Q-text) which is still more heavily Gaelicized. Both have been shown to derive from a common source datable as early as 724, and compiled possibly at the Pictish monastery of Abernethy (Obair Neithich, whose origin legend is recounted). Internal evidence suggests the list might have been begun as early as the 660s and it appears to have been maintained as a contemporary record until the reign of CUSANTÍN MAC CINAEDA (862–*c.* 876). Through the layers of scribal interference and corruption it is possible to detect several stages in the development of the text. Many of those listed are historical figures known from non-Pictish sources, such the ANNALS of Ulster, but others are legendary (e.g. Drust son of Erp 'who reigned a hundred years and fought a hundred battles') or perhaps mere names culled from a wide range of British, Irish, and possibly even Anglo-Saxon sources. The 'prehistoric' section listing the 'thirty Brudes' in the form 'Y; before Y, X' may reflect an oral genealogy. The list purports to give a straightforward account of a thousand years of Pictish succession, but the illusion of a unitary kingdom and an ancient line of kings is a political construct and, despite its apparent simplicity, the text is a strongly ideological statement.

Katherine Forsyth

Pictish language and documents

§1. THE PICTISH LANGUAGE

Heavy weather has been made of the question of the language of the PICTS (for a recent summary and bibliography, see Forsyth, *Pictish Panorama* 7–10). Kenneth H. JACKSON's theory of two Pictish languages, one GALLO-BRITTONIC, the other non-INDO-EUROPEAN, has been hugely influential (*Problem of the Picts* 129–66), but is open to serious criticism on several counts. As Nicolaisen has pointed out in several articles, the place-name evidence points overwhelmingly to Pictish being a BRYTHONIC language. Were it not for BEDA's statement that Pictish and BRITISH were separate languages, the use of elements such as *aber-* 'river mouth', *lanerc* 'grove' (Welsh *llannerch*), *pert* 'bush' (Welsh *perth*), and *tref* 'town' would suggest merely dialectal distinction north and south of the Forth (Foirthe). The lack of P-CELTIC place-names in the far north and west is immaterial, since the early names there have been lost under the subsequent blanket of Norse and Gaelic settlement. The (as yet) unetymologized names of certain Scottish islands may turn out to be pre-Celtic, or even pre-Indo-European (see PRE-CELTIC PEOPLES; HAMITO-SEMITIC), but against these poorly documented names must be set the positive classical evidence of the Celtic *Orcades* (Arcaibh) and *Dumna* (probably Leòdhas [Lewis]), based respectively on Celtic roots meaning 'young pig' and 'deep', hence 'world'. Nor should undue emphasis be placed on the survival of pre-Celtic river names in Scotland (ALBA) since these are to be found throughout Europe. More important is the 1st-century evidence for Celtic RIVER NAMES such as *Tava* (Tatha [Tay]) 'silent one', *Dēva* (Dè [Dee]) and *Dēvona* (Deathan [Don]), both meaning 'goddess'. Cognates in WELSH, CORNISH, and BRETON are found for the names of historically attested Picts, such as TARAN (Welsh *taran* 'thunder'), Onuist (OW *Unust*), Naiton (OW *Neithon*), Drosten (OW *Dristan*), Uurguist (OW *Gurgust*), Uoret (OW *Guoret*), and Alpin (Welsh *Elffin*). Their Roman-period ancestors have unmistakably Celtic names, e.g. Calgācus ('swordsman'), Vepogenus, and Argentocoxus ('silver leg', a name which recalls the epithet 'Silver-Hand' of the Irish mythological figure Nuadu Argatlám; see NŌDONS). Some of the 40-odd Pictish INSCRIPTIONS remain uninterpreted, but, given the technical difficulty of interpreting epigraphic evidence, it is premature to label these 'non-Indo-European', as if being (in part) undecipherable were positive evidence, and there is certainly no link with Basque. In the absence of any corroborative evidence a few unintelligible inscriptions are insufficient grounds for positing the survival of a non-Indo-European language into the early medieval period. On the other hand, several Pictish inscriptions may be understood as containing Brythonic forms: for example, the OGAM-inscribed slab from Burrian in Orkney reads, in part ... URRACT C[E]RROCCS 'X made the cross' (cf. Welsh *gwnaeth*, Breton *greaz* < British **wraχt(-)* 'he/she made'); the Cunningsburgh and Lunnasting ogam inscriptions from Shetland (Sealtainn) reading EHTECONMORS and [E]TTECUHETTS ... can be understood as early Brythonic ways of saying 'this is as great' and 'this is as far', appropriate messages for stones marking boundaries.

§2. APPARENT DISPARITIES DISTINGUISHING PICTISH AND BRYTHONIC

Jackson discussed the linguistic remains of the Picts and their relation to the other CELTIC LANGUAGES in *Problem of the Picts* 129–66. A brief general treatment by Koch was published in BBCS 30.214–20. A synopsis of the main points follows.

(1) There is a dearth of examples showing Pictish turning the voiceless geminate (long or double) stop consonants [*pp, tt, kk*] into simplex spirants [f, ϑ, χ] as in Welsh, Breton, and Cornish, but it seems to have treated them more or less as IRISH did; see Jackson, *Problem of the Picts* 160. Pictish apparently did not lenite (soften) voiced stops preceded by liquids (*r* and *l*), as in, e.g., the place-name element **carden* 'thicket' (*Problem of the Picts* 164). Several early attestations suggest that Pictish had the o-grade **abbor* 'river mouth' (<

**ad-bhor-*), perhaps alongside the *e-*, whereas British shows only the *e-* (OW , Bret. *aper* < **ad-bher-*): *Apur-nethige*, *Apur-feirc* (PICTISH KING-LIST, 'Poppleton' or A MS); *stagni Aporici*, *stagno Aporum* (*Vita Columbae* 83b, 67b), *Aporcrosan* (ANNALS of Ulster 672), *Abbordoboir* (Book of DEER f. 3a).

(2) Brit. *ō* (< *eu*, *ou*) became *ū* in the second half of the 3rd century (according to Jackson, LHEB §22.2, §25); in Pictish older *ou* remained *ō:* e.g. *mons Okhél* (Latin Life of St SERF), *sliab n-Ochel* (Book of Ballymote [LEABHAR BHAILE AN MHÓTA] 214b), *Strathochell* (1490 AD; Watson, *History of the Celtic Place-Names of Scotland* 209), *Cat-ochil* (1507 AD; *History of the Celtic Place-Names of Scotland* 209). These forms correspond to W *uchel*, MBret. *uhel*, OCorn. *huhel*, ROMANO-BRITISH *Uxel(l)la*, *Uxellon*, OIr. *úasal* < Celt. **oukselo-*.

(3) In Pictish, Celt. *oi* gave *o* which then turned to *u* by the first half of the 9th century; cf. *Onuist* in the king-list (A B C MSS), later *Unuist* (B C MSS) (on the classification of the MSS used by Marjorie O. Anderson, *Kings and Kingship in Early Scotland* 98ff.). The name corresponds to OIr. *Oengus*, OW *Unust* < Celt. **Oinogustus.* This feature could be purely orthographic, arising from the fact that Latin long *ō* had come to be pronounced [ü(:)] in the Brythonic lands.

(4) Celt. **(-)kon-* 'dog' as the second element in compounds was preserved as Pict. **(-)con-* (as in *Maelchon/Maelcon*, and *Venicones*); see Koch, BBCS 29.87–9. In the British dialect that gave Welsh, on the other hand, there was raising as in *Maglocune* (Lat. voc.) in GILDAS's *De Excidio Britanniae* (first half of the 6th century), OW *Mailcun* HISTORIA BRITTONUM §62. On the vocalism of the Celtic form and the derivation from Indo-European, see Joseph, *Celtic Language, Celtic Culture* 110–30. On the other hand, *Mailcon* is also attested in Old Welsh.

(5) Jackson regards Celtic initial *sn-*, *sm-* as having given Primitive Welsh, Primitive Cornish, and Primitive Breton fortis [N-], [M-] through a stage *hn-*, *hm-*, which arose 'as a consequence of and at the same time as initial—> *h-*' (LHEB §130) in the 'mid or later sixth century' (LHEB §115).

There is no positive evidence that Brythonic (as opposed to Pictish) ever had *s-*+ nasal. PTOLEMY's *Smertae* were situated inland, north of the Moray Firth (*Geography* 2.3; for their position, see Ordnance Survey, Map of Roman Britain, 4th ed. [Southampton, 1978] 15 and north sheet). The present-day *Carn Smeart* is more or less precisely in the centre of their territory; see Watson, *History of the Celtic Place-Names of Scotland* 17, 72. The Ravenna Cosmography's *Smetri* and *Smetriadum* (5.31) represent corrupt forms of the same name; see Rivet & Smith, *Place-Names of Roman Britain* 460–1.

(6) On the other hand, one comparatively late innovation is shared by Pictish and Brythonic. The toponymic element *monid* 'mountain', found in several early sources and borrowed as ScG *monadh*, is the cognate of OBret. *monid*, OW *minid*, Corn. *meneth*, Late British *monedo-*, &c., < British **monijo-*.

William J. Watson identified the river names *Spé* (Spey) and its diminutive *Spiathán* (Spean) as derived from Celtic **skwíj-at-* 'hawthorn', Ir. *scé* (*History of the Celtic Place-Names of Scotland* 474). The OW is *ispidat-*, Bret. *spezed*, Corn. *spethes* < Common Neo-Brythonic **sbiad*, but the Pictish evidently never developed the dental spirant /ð/. In the Pictish name *Idarnan*, we may have the equivalent of ROMANO-CELTIC *Isarnīnus* with /ð/ < /j/ < intervocal /s/.

§3. PICTISH LITERATURE?

A Pictish orthography was in use for recording proper names in Latin texts (see PICTISH KING-LIST) but if it was ever employed for extended texts in the vernacular these have not survived. Attempts to trawl Scottish literature for faint echoes of genuine Pictish tradition have ranged from the fancifully far-fetched to the plausible but inconclusive. In the latter category sit attempts to trace scattered folk traditions of malign water-creatures to Pictish mythology, Alan Bruford's suggestion that an Orcadian tale might have a Pictish origin (*Scottish Studies* 24.43–62); and William J. Watson's identification of the Gaelic Cuithach as a Pictish hero (*Celtic Review* 9.193–209). As the remnants of a once rich and vibrant culture these are slim pickings indeed. It has been suggested that Gaelic tales of untrustworthy Cruithnich (Picts; see CRUITHIN) keeping themselves to themselves on the fringes of Gaelic society might just reflect vague and distant memories of the last Pictish speakers, but the evidence is nebulous (MacInnes, *Trans. Gaelic Society of Inverness* 56.12). Picts feature in Modern Gaelic folk tradition, but the motifs, of diminutive red-haired people living underground, and the very form of the word used (*Piocaich*) betray the ultimately learned origin of such

stories. Figures from Pictland turn up in medieval Welsh and Irish literature (Caw the giant in traditions of the ancestry of St Gildas, Frigriu the craftsman, Llifiau son of Cian in the GODODDIN) and among the titles in surviving Irish TALE LISTS are some, such as *Braflang Scóine* and *Orgain Bene Cé* (Dobbs, *Scottish Gaelic Studies* 6.137–8), which take place in Pictland. More often, especially in Irish saga, 'Pictland' functions as an almost otherworldly arena for heroic action, a foreign interlude in tales otherwise centred in Ireland (see also OTHERWORLD).

§4. PICTISH SYMBOLS

The highly stereotyped curvilinear designs of the Pictish symbols are as unique as they are enigmatic. Their chronological and archaeological distribution throughout northern and eastern Scotland tallies with what is known about the extent of Pictish territory. The few outliers do not seriously challenge the impression that the symbol system was distinctively Pictish, though the modern view of the symbols as proto-nationalist emblems is surely anachronistic. Despite numerous attempts to 'crack the code', the meaning of the symbols remains obscure. On the probably inappropriate analogy of medieval heraldry, previous explanations have included tribal badges and emblems of status or occupation (Henderson, *Dark Ages in the Highlands* 53–67; Thomas, *Pictish Studies* 169–88). A radical new proposal is that they represent personal names (Samson, *Journal of the British Archaeological Association* 145.29–65). If the latter interpretation is correct and the symbols do have linguistic meaning, then they should be classed as a form of writing. Either way, the symbol stones reflect a strongly independent Pictish attitude to LITERACY (Forsyth, *Literacy in Medieval Celtic Societies* 39–61).

Over thirty individual symbols are known, predominantly geometric designs, with a few naturalistic animals. Among the former there are recognizable mirrors, combs, tongs, and perhaps weapons. The view that the remainder are further, more schematized, representations of everyday objects is widely held, but it is at least as likely that the designs are purely abstract. Symbols almost always occur in combination with one or more other symbols, such combinations apparently governed by a strict syntax. The symbol system is attested in use from as early as the 5th century AD until as late as the 9th century. The bulk of the more than two hundred extant symbol statements are carved on public stone monuments, including undressed pillars and richly carved cross-slabs, but they are also found, for instance, on deluxe metalwork and as cave graffiti. Their usage has many formal parallels with the contemporary use of ogam. The wide variety of contexts in which symbol statements appear suggests the system was of general application, its longevity implies its continued usefulness.

Katherine Forsyth

Picts

§1. ETHNOGRAPHY AND GROUP NAMES

The Picts were one of three Celtic-speaking peoples inhabiting Scotland (ALBA; see also ALBION) in the early medieval period. Descendants of TACITUS' 'Caledonian BRITONS', they occupied the country

north of a line running between the Forth (Foirthe) and the Clyde (Cluaidh) including Orkney (Arcaibh) and probably Shetland (Sealtainn) and the Western Isles (Na h-Eileanan an Iar). The WELSH and IRISH names for the Picts were *Prydyn* and CRUITHIN, respectively, both ultimately from **Pritenī* (cf. **Pritanī*, ROMANO-CELTIC *Britanni*, *Brittones* 'the Britons'; see Jackson, *Scottish Historical Review* 33.14–18). These names support the notion that the Picts were once perceived as part of a BRITISH or BRYTHONIC continuum which stretched from the English Channel to the Northern Isles. Whether through the intervention of the Romans in the 1st century or of the Angles in the 7th (or probably both), by the early 8th century the Forth had become an important ethnic boundary with, according to BEDA, Britons to the south, and Picts to the north. (For an introduction to Pictish studies and an extensive annotated bibliography, see Nicoll, *Pictish Panorama*.)

§2. THE CULTURE OF PICTLAND

The Christianization of the Picts was under way in the second half of the 6th century, and by the end of the 7th the church was well established. Recognizable traces of earlier Celtic pagan religion are found, for example, in reflexes of Celtic divine names, NEMETON place-names, votive deposition (e.g. of LA TÈNE-style metalwork; see HOARDS; WATERY DEPOSITIONS), and archaeological evidence of the HEAD CULT and of RITUAL activity at pools and confluences. The meagre evidence for Pictish KINSHIP indicates a typically Celtic agnatic system in which relationships with both parents were acknowledged. Modern belief in Pictish matriliny (inheritance through the female line) derives from a misreading of the contemporary sources, primarily Beda's *Historia Ecclesiastica*, where it is stated that Pictish succession was to be decided through the female line 'if there was doubt', i.e. doubt regarding succession through the male line (Beda, *Historia Ecclesiastica* 1.1).

§3. THE GAELICIZATION OF PICTLAND

From at least the 5th century, the Picts were under political and linguistic pressure from the Gaels of DÁL RIATA. The history of the following centuries reflects the complex ebb and flow of their relative dynastic fortunes. By the mid-9th century, however, the Gaels had succeeded in monopolizing Pictish kingship (see CINAED MAC AILPÍN). The violent political eclipse of the Picts was accompanied by mortal, cultural, and linguistic decline, already well under way in the 9th century and complete by the 12th. The paradox of the apparently sudden and total disappearance of a once mighty society has troubled scholars since the 12th century (Henry of Huntingdon, *Historia Anglorum*). Great emphasis was once placed on Pictish distinctiveness, almost to the extent that it became the explanation for their disappearance. Since the 1980s, however, advances in archaeological knowledge of the period have forced a major reassessment of the Picts (Alcock, *Picts* 80–92; Foster, *Picts, Gaels and Scots*). Notwithstanding the enduring enigma of the Pictish symbols, the 'mystery' of the Picts has evaporated, and modern scholars have now come to see the Picts as their contemporaries did—as a typical north-west European people (see Ritchie, *Perceptions of the Picts*).

§4. PICTISH SURVIVAL

We now know that the disappearance of the Picts was not as total as it once appeared. The medieval Gaelic kingdom of Alba is seen to be founded on the old political geography of Pictish power. A Pictish institutional legacy is also apparent in the post-9th-century kingdom, for instance in the development of the office of *mormaer* 'earl' (itself a term intelligible as Pictish, i.e. Brythonic, 'great-officer') and the comprehensive system of land management reflected in roughly 300 modern place-names commencing with the element *Pit(t)-* or *Pet(t)-* (cf. Welsh *peth* 'thing, some of'). The extent of the impact of the PICTISH language on Modern SCOTTISH GAELIC has yet to be fully explored, but is far from trivial. Vocabulary identified as borrowed from Pictish is almost exclusively toponymic in origin, e.g. the common nouns *dail* 'field', *monadh* 'mountain', *pòr* 'pasture', and *preas* 'bush'. Compare Welsh *dôl*, *mynydd*, *porfa*, and *prys*. Perhaps more significant is the influence of Pictish on GAELIC syntax. It has long been recognized that the verbal system of Scottish Gaelic, and certain aspects of its nominal system, represent the Old Irish inheritance brought almost completely in line with modern spoken Welsh (Greene, *Companion to Gaelic Scotland* 107–8). Although further investigation is required, there is a strong case for substratum P-CELTIC interference. In the past this P-Celtic influence has usually been

labelled as 'British', presumably to avoid the exotic associations formerly adhering to 'Pictish', but from our knowledge of Scottish history it is far more plausibly explained as the influence of large numbers of former Pictish speakers.

Recent historians have begun to recognize the politically necessary but untrue account of genocide for what it is: the entirely successful attempt of the Gaelic ascendancy to present their triumph as inevitable and divinely sanctioned, and the extermination of the Picts as just retribution for past wickedness (Hudson, *Scotia* 15.13–25; Wormald, *Scotland in Dark Age Britain* 131–60). Given their early political marginalization, probably deliberate cultural suppression, and the death of the language, it is perhaps not surprising that Pictish writings have not survived (*pace* Hughes, *Celtic Britain* 1–21). The sole surviving text, the PICTISH KING-LIST, was alone preserved because of its value to later Gaelic historians. The material culture of the Pictish church implies the existence of scriptural, liturgical, exegetical, and computistical manuscripts (i.e. those connected with determining the date for Easter), and this is confirmed by references to the use of such texts by Picts in contemporary Irish and Anglo-Saxon sources. The handful of Roman alphabet inscriptions from Pictland hint at the level of skill in Pictish scriptoria, though none of their manuscripts have survived. That OGAM was the preferred monumental script of the Picts reflects the unique prestige it enjoyed in 8th- and 9th-century Pictland. Whatever its meaning, the enduring use of the Pictish symbol system indicates a unique response to the challenge of Latin literacy (for a general discussion of literacy in Pictland, see Forsyth, *Literacy in Medieval Celtic Societies* 39–61).

A Pictish orthography was in use for recording proper names in Latin texts, but if it was ever employed for extended texts in the vernacular these have not survived. Perhaps the most remarkable aspect of the Pictish sculptural tradition is the wealth of the secular imagery featured on the cross-slabs alongside the more familiar scriptural themes. There are scenes that seem to echo episodes or motifs in other Celtic literatures, for example, what appears to be a 'cauldron of rebirth' (presumably employed on the cross-slab as a baptismal metaphor; see BRANWEN; CAULDRONS). Behind the clashing warriors, fearsome giants, dog- and bird-headed men, and the rest, there probably lie long-lost Pictish narratives. Whether these remained part of a purely oral tradition or were ever written down, we do not know. It has been suggested that the famous battle scene on the Aberlemno cross-slab commemorates the nearby Pictish victory over the Northumbrians at the battle of NECHTANESMERE in 685 (see also BRUIDE MAC BILI; ECGFRITH). An Irish quatrain on the victor survives, but any Pictish verses composed on the occasion have not.

Katherine Forsyth

Piran, St, is popularly regarded as the patron saint of Cornwall (KERNOW), though documented claims to this dignity have also been made on behalf of St Michael and St PETROC. Piran probably acquired his special status in Cornwall since he is the patron saint of tinners (and also of drunkards). His standard, which has been adopted as the Cornish flag, is a white vertical cross on a black background. This symbolism is explained as both white tin in black rock and also the light of Christianity shining through the darkness.

The traditional biography of Piran has stabilized over the years. Much of it is based on that of a 14th-century Life of the Irish St Ciarán of Saighir and

the observations of Nicholas Roscarrock. It is not impossible that *Ciarán* and *Piran* ultimately derive from the same name (see P-CELTIC; Q-CELTIC). Piran was reputedly born in Ireland (ÉRIU), where he performed many miraculous deeds. Jealous of his power, the Irish kings took him to a high cliff, chained him to a millstone, and threw him into the sea. However, Nicholas Orme has argued that Piran was in fact native to Cornwall and that the story of his travel from Ireland is a narrative device, comparable to the sea journeys which figure in the Lives of many saints.

According to hagiographical legend (see HAGIOGRAPHY), Piran landed on the beach at Perranporth on 5 March. He then built a small church in the sand dunes and preached, his first converts being a fox, a badger, and a bear. Piran discovered tin while he was cooking over an open fire and noticed a stream of white metal pouring out of the stone. Piran and St Chewidden were responsible for showing local people how to extract and process tin. Piran lived to be 206 years old, dying in a state of inebriation, with no signs of old age. Roscarrock reports that King ARTHUR made Piran archbishop of York.

During the medieval period, the shrine at Perranzabuloe, which contains the remains of Piran, his staff, and copper bell, was one of the great places of pilgrimage in Cornwall. Tinners celebrated 5 March until the 19th century. During the 20th century, St Piran was adopted as an icon of the Cornish ethnonationalist movement (see NATIONALISM). Parades and events celebrating Cornish culture are still held on 5 March.

Pisky is the general word applied to the *pobel vean* or 'small people' of Cornwall (KERNOW) and Devon, embodied in many Cornish FOLK-TALES and legends. Most tales involving these tiny, mischievous creatures were collected by the 19th-century folklorists Robert Hunt and William Bottrell. There are a core set of narratives in which piskies appear, most obviously 'The Pisky Threshers', 'The Fairy Revels', and all changeling stories.

Apart from tempting humans with treasure, another motif of the narratives is 'fairy ointment' which, when rubbed into the eye, allows the Cornish access to the fairy world. Two famous pisky stories are those of Cherry of Zennor and Anne Jefferies of St Teath, although there are numerous others. Piskies enjoy music and revelling, but they become shy when watched by humans. They are also very fond of milk-producing animals such as cows and goats.

Piskies are subdivided into other groups: spriggans, who are often found at prehistoric monuments—quoits and cromlechs—and can cause people to become confused or 'pisky-led'; knockers, who are found underground in tin mines and are usually described as being withered and thin, with long limbs and large eyes (the crust of pasties, tossed at them, are used to placate them); and buccas, leathery-skinned creatures who can be found at sea or around the coast and of whom there are two kinds: the evil *bucca due* (black bucca) and the benevolent *bucca gwidn* (white bucca). Another group commonly found are the browneys, household spirits who help in the pollination process. The widespread belief in creatures of

this kind has given rise to such Cornu-English expressions as 'laughing like a pisky'.

Plato Πλάτων (*c.* 429–347 BC) of Athens, the famous Greek philosopher, mentions the Celts (Κελτοί) in the dialogue known as the *Laws* (1.637d–e, *c.* 360 BC). In the context of making the point that extremes are bad and that moderation is to be preferred, Plato reveals that the Celts had a reputation among the Greeks in the 4th century BC as one of several nations who were both warlike and excessive drinkers:

> . . . I am not discussing the drinking of WINE nor drinking in general, but outright DRUNKENNESS, and whether we ought to follow the custom of the Scythians and Persians, and also the Carthaginians, Celts, Iberians, and Thracians, all very warlike peoples, or be like you Spartans, who, as you claim, abstain totally from drink. (Koch & Carey, *Celtic Heroic Age* 6)

Pliny 'the Elder', Gaius Plinius Secundus (AD 23/24–79), was the Latin author of several works, of which only one survives—the *Naturalis Historia* ('Natural History') in 37 books, which dates from *c.* 77 AD and makes numerous references of importance to the study of the ancient Celtic-speaking peoples (see GREEK AND ROMAN ACCOUNTS). Details from the *Naturalis Historia* are discussed in various articles in this Encyclopedia; they include a considerable collection of information on the DRUIDS of GAUL and Britain (24.103–4; 29.52; 30.13), including the probably correct idea that the word *druid* itself was connected with Greek *drús* δρύς 'oak' (16.24); a reference to the Gauls' sacking of ROME in the 4th century BC (3.57); a mention of ALBION as an already obsolete name for BRITAIN (4.16); the first mention of *Silva Calidonia* 'the forest of the CALIDONES' (4.102); the location in the BALKANS of the Celtic peoples, the TAURISCI and SCORDISCI (3.25.148); information on wool production and mining among the Celts in the IBERIAN PENINSULA (8.190–3; 33.66–78); the Primitive IRISH place-name *Andros*, probably corresponding to Old Irish ÉTAR, i.e. Howth, near Dublin (BAILE ÁTHA CLIATH). The *Naturalis Historia* was known in the Middle Ages and was, for example, one of the sources used by BEDA for his *De Natura Rerum* (*c.* 703).

Pliny died when overcome by fumes while observing the eruption of Vesuvius which destroyed Pompeii.

Plouhern-ar-Renk/Plouër-sur-Rance ('La Boisanne', Aodoù-an-Arvor/Côtes-d'Armor) is an important archaeological site which has provided a detailed record of the economic development of a small rural community in north-west GAUL through the pre-Roman IRON AGE. The site sits on a plateau, where a small farm was set up at the end of the 6th or the beginning of the 5th century BC, consisting initially of a residential ENCLOSURE made up of a ditch and an embankment, which opened out onto two small enclosures used either for cultivation or for cattle breeding. Nearby is a pond, which probably supplied water for the cattle. Approximately 110 m away from the settlement is another small enclosure containing the graves of the inhabitants. As the site developed, another enclosure was built, which sheltered a group of buildings and cellars. From the middle of the 2nd to the end of the 1st century BC, the

settlement continued to expand with the addition of several new buildings. The surrounding fields bordered by ROADS were by this time entirely enclosed. In this late period the material found in Plouhern allows more precise interpretation, and shows that cattle predominate in breeding and stock-rearing. The residential areas now seem to enjoy relative affluence marked by the importation of WINE amphorae and pieces of jewellery made of glass and lignite. At the end of the 1st century BC, a few decades after CAESAR's conquest of ARMORICA, the site was abandoned.

Plunkett, James (pseudonym of James Plunkett Kelly, 1920–2003) was a well-known Irish writer in English (see ANGLO-IRISH LITERATURE). Brought up in the inner city of Dublin (BAILE ÁTHA CLIATH), Plunkett's father was a veteran of two wars and a union man. Plunkett himself became actively involved in the Irish Transport and General Workers' Union, but was made to resign as secretary in 1955. He then began working for the budding Irish broadcasting media (see MASS MEDIA). His initial post was with Radio Éireann (Irish radio), where many of his plays were broadcast. When Irish television was launched in the early 1960s, Plunkett was appointed one of the first directors, and later worked as a television producer. His *Strumpet City* (1969), a novel on the life of the working classes of Dublin, was broadcast as a television drama in 1980 to high acclaim. Apart from the scripts he wrote for the media, Plunkett's work includes collections of short stories, as well as several novels. Much of his literary output was concerned with social justice and political events.

SELECTION OF MAIN WORKS
COLLECTIONS OF SHORT STORIES. *Eagles and the Trumpets and Other Stories* (1954); *Trusting and the Maimed* (1955); *Collected Short Stories* (1977).
NOVELS. *Strumpet City* (1969); *Farewell Companions* (1977); *Circus Animals* (1990).
PLAYS. *Big Jim* (1955); *Risen People* (1978).

Plutarch Πλούταρχος, L. Mestrius Plutarchus (*c.* AD 46–*c.* 120), was a Greek writer from Chaeronea in Boeotia. His extant works include 50 biographies ('The Lives of Noble Greeks and Romans') and some 78 miscellaneous works, now usually called the *Moralia* Ἠθική (Moral essays). These texts are of importance among the GREEK AND ROMAN ACCOUNTS of the ancient Celts, and details of Plutarch's testimony are discussed in various articles in this Encyclopedia; they include accounts of the Celts in ITALY and the invasion of ROME led by BRENNOS OF THE SENONES (Lives: *Camillus* 15–32, *Romulus* 17.5); the story of the tragic love triangle of the Galatian high priestess CAMMA and two tetrarchs of the Tolistobogii, Sinatus and Sinorix (*Moralia* 257–8 and again at 768); a description of an island OTHERWORLD beyond Britain.

Pokorny, Julius, was born on 12 June 1887 in Prague (then in the kingdom of Bohemia in the Austro-Hungarian Empire), and died on 8 April 1970 in a road accident in Zurich, Switzerland.

When he was a student of law (doctorate 1910) and comparative grammar (doctorate 1912) at Vienna University, Pokorny developed a special interest in Celtic, including the study of modern CELTIC LANGUAGES. His fields of specialization were Old IRISH language and IRISH LITERATURE, Celtic etymology, and the linguistic prehistory of Europe. His post-doctoral *habilitation* (the qualification for a professorship in the German-speaking countries) was in Celtic Studies in 1914, also in Vienna. Afterwards, he taught INDO-EUROPEAN and Celtic there (1914–18), and then English at the Vienna School of World Trade (1918–20). He was then appointed professor (1920), and later full professor (1928) of Celtic Philology at the University of Berlin. He lost his post in 1935 because of his partly Jewish ancestry and in 1943 had to flee

to Switzerland, where he subsequently taught at Bern (1944–8) and Zurich (1944–55), and then at Munich (1955–70), but never again held a regular professorship. He received honorary degrees from the National University of Ireland (1925), the University of Munich (1955), the University of Wales Swansea (1966), and the University of Edinburgh (1967).

Taking up the ideas of Sir John MORRIS-JONES (1864–1929), Pokorny developed the theory of a pre-Indo-European substratum, structurally close to the present-day Berber languages of North Africa, which would have strongly influenced the INSULAR CELTIC languages, most evidently in Irish syntax (1927–30) (see HAMITO-SEMITIC; PRE-CELTIC PEOPLES). The issue is still highly controversial and has its place among the classical theoretical problems of historical linguistics. Pokorny's brilliant and thought-provoking publications on the history and prehistory of the Irish language, Irish literature and culture earned him early fame (he is mentioned in James JOYCE's *Ulysses*, 1922). He was among the first Celticists to study both the older and modern stages of the Celtic languages on an equal footing, and to treat old texts as literary works of art. In Indo-European linguistics, he has the great merit of having incorporated the Celtic lexicon into the bulk of standard etymologies. His *Indogermanisches etymologisches Wörterbuch* (Etymological dictionary of Indo-European, 1959–69) is still an indispensable reference work, though outdated by its insufficiently worked out semantics and a notation that fails to take into account the series of Indo-European sounds known as 'laryngeals' (on which see INDO-EUROPEAN).

Stefan Zimmer

Polybius (*c.* 200–*c.* 118 BC) was a Greek historian who, in his *History*, recorded the earliest extensive accounts of Celtic life, especially WARFARE. He travelled widely to collect first-hand information and tells of the Celtic settlement, raids, and eventual defeat in northern ITALY (2.14–35), of the Gauls (see GAUL) who fought as Hannibal's allies in the Second Punic War (218–202 BC; 1.17–2.13, 3.34–114), and of the Galatians in Asia Minor (4.45–6, 22.21 &c., see GALATIA). It is Polybius, for example, who provides the valuable account of the naked Celtic Gaesatae (spearmen) who were defeated by the Romans at the battle of Telamon in Etruria in 225 BC.

> The Celts had stationed the Gaesatae from the Alps to face Aemilius on the rear, and behind them were the Insubres. On their front they placed the TAURISCI and the Cisalpine BOII to face the Romans. They placed their waggons and CHARIOTS on the edges of both wings, with the booty being on one of the hills near the road under guard. Thus the Celtic army was double-faced. Their way of arranging their forces was effective as well as designed to inspire fear in their enemies. The Insubres and Boii were clothed in pants and light cloaks, but the Gaesatae from conceit and daring threw their clothing off, and went out to the front of the army naked, having nothing but their weapons. They believed that since the ground was covered with brambles that might catch their clothing and hinder the use of their weapons, they would be more effective this way. (Koch & Carey, *Celtic Heroic Age* 8–9)

Posidonius Ποσειδώνιος (*c.* 135–*c.* 50 BC) was a noted Greek Stoic philosopher, ethnographer, and historian who travelled widely in the western Mediterranean at the beginning of the 1st century BC, collecting material on the people of the western Roman Empire, from the inhabitants of the north African provinces in the south to the Celts and

Germans in the north. After his travels he founded a highly respected school on Rhodes, attended by promising students such as Cicero. His ethnographic writings contain by far the most detailed information in antiquity on the Celts of GAUL, including descriptions of geography, WARFARE, FEASTing, head hunting, poets, and the DRUIDS. Unfortunately, his writings survive only in usage by later authors, including ATHENAEUS (*Deipnosophistae* 4.151–4; 6.246), DIODORUS SICULUS (*Historical Library* 5.25–32), STRABO (*Geography* 2.5.28; 4.1–4), and, to a disputed degree, CAESAR (*De Bello Gallico* 6.11–20), who—to whatever extent he did use Posidonius' writings—was in a position to augment this information with his own years of direct experience among the Gauls from 60–50 BC, as discussed by Nash.

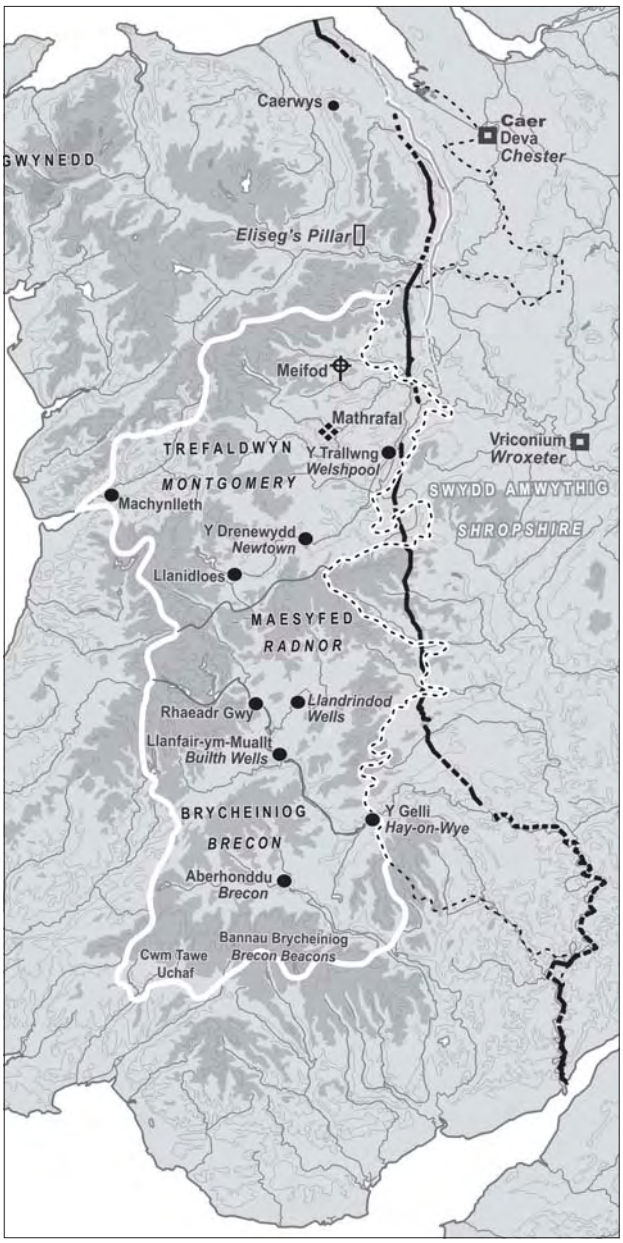
Powys emerged as an independent Welsh kingdom during the post-Roman period; it was dominated by GWYNEDD in the 13th century before the Anglo-Norman conquest of 1282, and then reappeared as a county in the 1974 reorganization with the amalgamation of three shires created at the time of the 1536 ACT OF UNION: Trefaldwyn (Montgomeryshire), Maesyfed (Radnorshire), and BRYCHEINIOG (Breconshire). The modern county thus extends further to the south than the historically attested kingdom.

The name *Powys* derives from Latin *pāgēnses* 'people of the rural districts' (Jackson, LHEB 443–4), suggesting formation in the Roman or early post-Roman period and also implying an original relationship with a town, such as Wroxeter (Vriconium Cornoviorum), which had a high status post-Roman occupation, or Chester (CAER), ROMANO-BRITISH Deva. The village name *Caerwys* in north-east Wales (CYMRU) appears to mean 'people of *Caer*' and may recall the old *territorium* of Chester with a formation in parallel contrast to that of *Powys*. The recent discovery that Wat's Dyke dates to the 5th century throws unexpected light on the sub-Roman political geography of the area (see CLAWDD OFFA). Although a Primitive Irish inscription in Roman letters survives from Wroxeter, there is little evidence for Irish settlement within the old kingdom of Powys, unlike Gwynedd, DYFED, and Brycheiniog. Early WELSH POETRY refers to two dynasties in Powys: the CADELLING, mentioned in TRAWSGANU CYNAN GARWYN, and descendants of Cyndrwyn, celebrated in MARWNAD CYNDDYLAN and *Canu* HELEDD. Powys is also mentioned in the saga ENGLYNION of Llywarch Hen. The Cyndrwynyn lands apparently extended to the river Tern in present-day Shropshire (swydd Amwythig). The Cadelling are traced back to GWRTHEYRN on ELISEG'S PILLAR and to the virtuous 5th-century commoner Cadell in HISTORIA BRITTONUM. King Selyf (Solomon) of the Cadelling fell in the battle of Chester *c.* 615, as noted in what is probably a contemporary record in ANNALES CAMBRIAE and several Irish ANNALS. With the building of Offa's Dyke (Clawdd Offa) during the later 8th century, Anglo-Saxon Mercia defined the eastern frontier of Powys. The kingdom is mentioned in several 9th-century Welsh texts—*Historia Brittonum*, Eliseg's Pillar, and *Annales Cambriae* (822, 854). Old Welsh spellings include *Pouois* and *Povis*. In 822 Powys was overrun by the Mercians, but regained independence later, as shown by the Eliseg inscription and the annal for 854, which reports that King Cyngen died at Rome, having fled the invasion of Powys by the kings of Gwynedd. In 942 Powys was conquered by HYWEL DDA, and frequently changed hands during the following centuries, being sometimes part of Gwynedd, sometimes of DEHEUBARTH, and sometimes independent or fragmented. It suffered Norman raids from the late 11th century. During the 12th century Powys again became independent under Madog ap Maredudd, whose court was the centre of a thriving cultural life. Many of the GOGYNFEIRDD of that period, including GWALCHMAI AP MEILYR and CYNDDELW Brydydd Mawr, were active at the court of Powys. The political centre of Powys at this period was MATHRAFAL and its religious centre was nearby at MEIFOD. The politics of 12th-century Powys provide the background of the Arthurian tale BREUDDWYD RHONABWY (Rhonabwy's dream). After Madog's death the country was ruled by his sons until it was conquered again by the princes of Gwynedd in the 13th century and became part of



The present-day county of Powys, outlined in white, with the three pre-1974 counties and places mentioned in the article. The English border is shown as a dashed black line, Offa's Dyke frontier as a heavy black line, and Wat's Dyke in grey.

the Principality of Wales (*Pura Wallia*) in 1282 following the death of Llywelyn ap Gruffudd.

Powys is geographically the largest electoral county of Wales, and a strong bastion for the Liberal Democrats in recent elections. It is mostly rural, with little heavy industry, and most heavily Welsh-speaking in the north (the old Montgomeryshire) and the Upper Swansea Valley (Cwm Tawe Uchaf) in the extreme south-west, thus comprising two distinct dialects. Major towns include: Brecon (Aberhonddu), the home of the annual jazz festival; Builth Wells (Llanfair-ym-Muallt), near the site of the annual Royal Welsh Show; Hay-on-Wye (Y Gelli Gandryll), the site of the annual literary festival; Llandrindod Wells; Llanidloes; Machynlleth; Newtown (Y Drenewydd), which is within easy reach of Gregynog, a residential conference centre managed by the University of Wales, formerly the home of art collectors Gwendoline and Margaret Davies, and well known for its fine printing press and annual music festival; Rhayader (Rhaeadr Gwy), and Welshpool (Y Trallwng). The picturesque heights of the Brecon Beacons National Park (Bannau Brycheiniog) lie in the south of the county.

PEB, JTK

pre-Celtic peoples, pre-Celtic substrata

Since 'Celtic' is primarily and most meaningfully a linguistic term, 'pre-Celtic' refers to the languages and speakers of those languages which preceded Celtic in the territories where Celtic languages are historically attested (see also celtic countries). Because the Celtic languages expanded in later prehistory, on the threshold of the historical period, they are generally the first language family known in the areas where they appear. There are a few exceptions, where groups speaking forms of Continental Celtic encroached upon the ancient civilized world around the Mediterranean, but even there Celtic most often appears alongside another anciently attested language rather than superimposed upon it. Thus,

Celtiberian in central Spain appears near Iberian to its east, but did not obliterate Iberian, and Cisalpine Gaulish and Lepontic appeared near Etruscan and the former may have gained ground at the expense of Etruscan, but never overcame Etruscan in Etruria itself. An important exception is Galatia in central Asia Minor where several Indo-European languages, including Greek, Phrygian, and Anatolian languages (such as Hittite) are well attested in what became the very core of Celtic Galatia before Celtic speakers had arrived in the 3rd century BC.

Insular Celtic words which lack any corresponding words in other Indo-European languages—and these make up a fairly high proportion of the attested vocabularies—may reflect ancient borrowings from the aboriginal pre-Celtic languages of Britain and Ireland and/or the pre-Celtic mainland.

Assuming the model of prehistoric establishment of Celtic speech in Britain and Ireland (Ériu) brought about by some level of influence from the outside less than wholesale population replacement, we must envision a lengthy process of bilingualism and language shift. We may think of British and Primitive Irish, as distinct from the parent Common Celtic, coming into being when pre-Celtic aboriginals learned the language of west-central Europe for purposes of trade and/or to enter the society of warlike overlords. Thus, the separate Insular Celtic dialects might have come into being more or less immediately with the arrival of Celtic speech in much the same way as the distinctive Hiberno-English or West Indian patois is distinguished by features which originated as substratum interference during the stage of bilingualism.

Various writers (Morris-Jones, Pokorny, Wagner, Gensler, Jongeling) have suggested that such striking typological features of the medieval and modern Goidelic and Brythonic languages as the following may represent the working out of pre-Celtic substratum effects: (1) phonetic lenition (consonant weakening), e.g. in the development of Proto-Celtic **esio tegos* 'his house' to Irish *a theach*, Welsh *ei dŷ*, the consonants have moved towards an articulation more like that of the flanking vowels, in some instances to the point of disappearing; (2) the powerful stress and consequent syllable losses (apocope and syncope), e.g., Proto-Celtic *Cunovalos* developed a strong stress on the first and third syllables, accounting for the dropping of the second and fourth to give Irish *Conall* and Welsh *Cynwal*; (3) strongly Verb–Subject–Object and Noun–Adjective word order. One may think of a native population learning the morphology and lexicon of a new dominant language while retaining syntactic and phonetic habits of their mother tongue, such phenomena being common in second-language acquisition. Celtic must have been spoken in the British Isles for a millennium prior to the leavening of putative substratum effects in Insular Neo-Celtic in the later 6th century AD, when lenition, syllable losses, and fixed word order patterns become observable. However, all these features are already visible, as incomplete tendencies, in the remains of Gaulish.

The apparent rapid emergence of very different and evolved forms of Celtic in Ireland and Britain in the early Middle Ages is somewhat problematical for the substratum hypothesis. Why would there be such a great time lag after the supposed date of replacement of the pre-Celtic substratum language(s) by Celtic? A possible explanation is that the replacement was at first led by a learned class of Continental Celtic origin. As a result of Romanization and Christianity, Latin replaced this old-fashioned form of Celtic as an educated standard language. Such an intellectual revolution might have allowed a more popular speech (which had existed among an indigenous peasantry for some time) to come forward only more recently as a literary standard. In other words, Christianity probably discredited any learned and old-fashioned form of Celtic as the language of paganism. When the literate Christians in the Celtic countries later wished to write in their native languages, the old pagan Celtic standard was gone and new ones had to be created out of the early medieval everyday languages, including any pre-Celtic substratum effects they had inherited.

As to what languages might have been spoken in Europe's Atlantic north-west before Celtic, it is likely that ancestors of Finnish and Basque and the languages of the Caucasus were more extensive before the spread of Indo-European. It is also possible that illiterate ancient Europe contained languages that have disappeared as have non-Indo-European Iberian, Etruscan, and Minoan from the literate zone. The strongest case so far—though not widely accepted—

has been that Celtic was preceded in Britain and Ireland by a language or languages akin to the Hamitic and Semitic languages (also called Afro-Asiatic languages) of north Africa and the Middle East (see HAMITO-SEMITIC HYPOTHESIS).

Preiddiau Annwfn (Spoils of the OTHERWORLD/Spoils of ANNWN) is an early Welsh Arthurian poem in the AWDL metre. The unique pre-modern copy survives in the 14th-century manuscript LLYFR TALIESIN (54.16–56.13), where it immediately precedes the main block of so-called 'historical' poems in praise of URIEN Rheged. The title is written as *Preiδeu Annwn* in a later hand in the margin and also occurs meaningfully as *preiδeu Annσfyn* in the first stanza. The poem's contents are recognized to be of significance as they include early references to several characters, episodes, and themes which find full expression later in medieval Welsh tales and ARTHURIAN LITERATURE. The recurrent central theme of *Preiddiau Annwfn* is a sea-borne raid on otherworldly strongholds—or perhaps one stronghold called by various evocative names, such as *Caer Sidi* (the SÍD fort)—by ARTHUR and his unnamed heroes on the ship Prydwen (*prytwen*). As in the tale BRANWEN, only seven returned, a detail repeated in *Preiddiau Annwfn*'s mournful refrain. Characteristic of early WELSH POETRY, we are not given narrative per se, but rather allusions to tales and adventures, presumably known in fuller detail and context to the poet and his audience. Thus, a mention of 'the tale of PWYLL and PRYDERI' in the context of an otherworldly imprisonment (cf. MABON) refers to a tradition closely akin to what survives in the MABINOGI. 'The chieftain of the Otherworld' (a figure who could be either Pwyll or ARAWN of the extant *Mabinogi*) is said to possess a wondrous pearl-rimmed cauldron, a treasure comparable to the CAULDRONS of the quests of CULHWCH AC OLWEN and *Branwen*; Loomis sought the origins of the GRAIL in this otherworld cauldron. The nine maidens whose breath warms *Preiddiau Annwfn*'s cauldron are reminiscent of the nine sorceresses or witches found in the Arthurian poem PA GUR YV Y PORTHAUR, the prose romance PEREDUR, and at AVALON in the *Vita Merlini* of GEOFFREY OF MONMOUTH, as well as in the early Breton Latin Life of SAMSON. A glass fort, whose sentinel was difficult to speak to, is found also in the Irish LEGENDARY HISTORY in HISTORIA BRITTONUM. In the last two stanzas, monks are ridiculed for their ignorance regarding natural science and particularly regarding the facts of the separation of day and night and the CALENDAR. The speaker of the poem therefore appears to be the TALIESIN persona vaunting his own special knowledge in these areas as superior to that of the adepts of Christian book learning. The composition of *Preiddiau Annwfn* is usually dated to the 9th or 10th century in the Old Welsh period. However, an earlier date should be considered in view of the three archaic third person plural deponent verbs discussed by John T. Koch (BBCS 31.87–92), inherited from PROTO-CELTIC, but otherwise obsolete in the surviving records of BRYTHONIC—*clywanaσr* (correctly *clywannor*) 'they hear', *gσiδanhor* 'they know', *gσiδyanhaσr* 'they will know'. The spelling error in the first example can also be explained on the assumption of a manuscript copy of the 8th century when the sound which became the Old Welsh diphthong *au* was still a simple vowel written *o*.

Price, Thomas (Carnhuanawc, 1787–1848) was a Welsh historian, an EISTEDDFOD promoter, and the initiator of connections between Welsh and Breton scholars. Born in Llanfihangel Brynpabuan, Breconshire (sir Frycheiniog, now part of POWYS), he was educated at Brecon (Aberhonddu), where he became a friend of the historian Theophilus Jones. In 1811 he was ordained a priest in the Church of England and a curate in several parishes. From 1815 he was the vicar of Llanfihangel Cwm Du, again in Breconshire, and although he lived in Crickhowell (Crucywel) for much of the time, he eventually built a residence for himself at Cwm Du in 1841.

From the early 1820s, Price became known for his numerous articles in Welsh periodicals and as an eisteddfod competitor, taking the bardic name of 'Carnhuanawc' (meaning 'sunny cairn'). He learnt BRETON in 1824–5 and also visited the other CELTIC COUNTRIES. He urged the British and Foreign Bible Society to publish a Breton BIBLE, initiated a campaign to collect money for this purpose, and assisted Le Gonidec with his translation, visiting him at Angoulême in 1829 (see CHRISTIANITY; PAN-CELTICISM). His published essays explore the connections between Brittany (BREIZH) and Wales (CYMRU) and attack contemporary views of the racial inferiority of the Celts, like those expressed by John Pinkerton (1758–1826). Price also serially published a history of medieval Wales, *Hanes Cymru*, from 1836 to 1842.

Price became a leading light of the Cymreigyddion (roughly 'Cambrophiles') of Breconshire and their eisteddfodau from 1823 onwards. Through his close friendship with Lady Augusta HALL, he became, in 1833, the mainstay of Cymreigyddion y Fenni (Abergavenny) and their famous eisteddfodau (see EISTEDDFODAU'R FENNI). Like Augusta Hall, he was a great promoter of the Welsh triple HARP and founded the Welsh Minstrelsy Society. He was also a friend of Taliesin ab Iolo, and after ab Iolo's death he completed the editing of the papers of Edward WILLIAMS (Iolo Morganwg) for the press, the so-called 'Iolo Manuscripts', even though he did not wholly approve of many of Iolo Morganwg's theories. He was a great believer in Welsh or bilingual education, and among his last acts was to lead the attack on the anti-Welsh views of the three government commissioners responsible for the 'Treachery of the Blue Books' of 1847. The first biography of Thomas Price was written at the request of Augusta Hall by the poet, historian, and Welsh education activist Jane Williams ('Ysgafell').

Prichard, Caradog (1904–80), a WELSH-language poet and novelist, was born in Bethesda, Caernarfonshire (sir Gaernarfon), the son of a quarryman who was killed in an accident when his son was only five months old. As a child, Caradog was made aware of his mother's unequal struggle against poverty and also of her growing mental illness. He left school at an early age and worked for Welsh-language newspapers, first at Caernarfon, then at Llanrwst. It was during this period that his mother was taken as a patient to what was then called the lunatic asylum at Denbigh (Dinbych), never to return. Despite the traumatic effect of this setback on his sensitive personality, his career in journalism brought him into contact with talented and colourful literary figures who ignited his ambition to be a writer. In 1927, at the remarkably young age of 23, he won his first crown at the National Eisteddfod (EISTEDDFOD GENEDLAETHOL CYMRU) and repeated the feat three years in succession. He moved to Cardiff (CAERDYDD) to work for the *Western Mail*, and then to London (Welsh Llundain), where he joined the staff of the *News Chronicle*. During the Second World War he served in the army for two years, and spent another two years in the Foreign Office in India, before resuming his journalistic career in London, ending up as sub-editor at the *Daily Telegraph*. In 1962 he won the National Eisteddfod chair with a long poem in the strict CYNGHANEDD metres, entitled *Llef Un yn Llefain* (The voice of one crying). Until then, he was known mainly as a lyric poet using the free metres.

Caradog Prichard's poetry was first published in three volumes, *Canu Cynnar* (Early poetry), *Tantalus*, and *Llef Un yn Llefain*, and a collected edition of his poems appeared in 1979, a year before his death. Much of his work is deeply psychological and autobiographical. His first crown poem, *Y Briodas* (The wedding), relates the story of his mother's oath of loyalty to her dead husband, and her gradual decline into insanity. The poem that won him his second crown was entitled *Penyd* (Penance), and is in effect a sequel to the previous one. After an unsuccessful suicide attempt, the widow is now in a lunatic asylum, and the hallucinatory state of her deteriorating mind is conveyed in a series of lyrics. The third crown poem, *Y Gân Ni Chanwyd* (The aborted song), is a departure from the theme of the others, but nevertheless expresses the futility of life. The poet competed for the crown once more in 1939, but the adjudicators withheld the prize on the grounds that his poem did not adhere to the set subject, *Terfysgoedd Daear* (Earthly turmoil). This cathartic poem relates his own unsuccessful attempt at suicide.

Prichard was also an accomplished prose writer, and his works include a war diary, *'Rwyf Innau'n Filwr Bychan* (And I am a little soldier), a novel *Un Nos Ola Leuad* (One moonlit night), a collection of short stories *Y Genod yn ein Bywyd* (The girls in our life), and a confessional autobiography *Afal Drwg Adda* (Adam's evil apple). His most well-known work is *Un Nos Ola Leuad*, which has been translated into several languages and has appeared in Penguin Twentieth-century Classics in Philip Mitchell's translation, *One Moonlit Night*, and also made into a film entitled *Full Moon*, and dramatized in both Welsh and English. This largely autobiographical work is a surrealistic portrayal of boyhood and adolescence ravaged by poverty and mental illness.

SELECTION OF MAIN WORKS

AUTOBIOGRAPHICAL WORKS. *'Rwyf Innau'n Filwr Bychan* (1943); *Afal Drwg Adda* (1973).
COLLECTION OF SHORT STORIES. *Y Genod yn Ein Bywyd* (1964).
NOVEL. *Un Nos Ola Leuad* (1961).
POETRY. *Canu Cynnar* (1937); *Terfysgoedd Daear* (1939); *Tantalus* (1957); *Llef Un yn Llefain* (1963); *Cerddi Caradog Prichard* (1979).
TRANS. *Full Moon* (1973); *One Moonlit Night* (1999).

John Rowlands

The **Principality of Wales** had its origins in the political processes by which LLYWELYN AB IORWERTH (†1240) endeavoured to bring the princes of Wales (CYMRU) under his authority in a *principatus* that he would hold as a dependency of the Crown of England. His proposals were never countenanced by the king, but his objectives were pursued by LLYWELYN AP GRUFFUDD (†1282) who brought the princes into his fealty and assumed the style 'prince of Wales'. By the treaty of Montgomery (1267) Henry III formally granted Llywelyn and his heirs the principality of Wales with the title 'prince of Wales', the key clause in the agreement being the grant to Llywelyn of the homage and fealty of the Welsh lords of Wales. Princedom and principality lapsed upon his death, but in 1301 Edward I granted his son Edward of Caernarfon the earldom of Chester (Welsh CAER) and the Crown lands in Wales and, though unmentioned in the charter, the principality of Wales and the title 'prince of Wales' were conferred upon the heir to the throne.

The royal lands in Wales continued to form the separate administrations of the principality of North Wales and the principality of West Wales (later South Wales), centred respectively on the exchequers at Caernarfon and Carmarthen (CAERFYRDDIN). The princedom was revived in 1343 for Edward the Black Prince, son of Edward III, with the grant of the principality, and the creation was marked by an investiture. Thereafter, the principality of Wales was conferred upon the king's eldest son by investiture. From the ACTS OF UNION of 1536–43, the term 'principality of Wales' described the twelve counties of Wales (Monmouthshire/sir Fynwy not being included), and until 1830 the Courts of Great Sessions established by the Union legislation gave the principality a jurisdiction separate from that of the Westminster courts.

printing, early history in the Celtic languages

§1. introduction

The longevity of the manuscript tradition in the Celtic countries is a reflex of the relatively late appearance of print. With the exception of Breton, printing in the Celtic languages, and in the Celtic countries, hardly occurs before the second half of the 16th century. Before the 18th century both oral and manuscript transmission were still of great importance to the Celtic languages, particularly with regard to their literary cultures, which in some ways benefited from the continuing vigour of the manuscript tradition into the period of antiquarian interest. Printing in the Celtic languages, however, was immensely important for linguistic survival through the establishment of standard written forms and orthography, the wider dissemination of texts, and the promotion of vernacular literacy.

During the print revolution of late 15th-century Europe, England was relatively poor economically and slow to adopt the new technology. But even relative to England the Celtic countries lacked the large centres of urban trade which supported printing in Germany, France, and Italy. By the 16th century Ireland (Éire), Wales (Cymru), and Scotland (Alba) were economically and politically part of the new empire of England, which sought to limit the new technology, through a series of royal privileges, patents, and monopolies, to approved centres of production, mainly in south-east England. Together with a continuing lack of economic power, this attempt at royal monopoly was sufficient to ensure that the Celtic countries retained their traditional methods of book production even after the first Celtic-language publications began to appear.

§2. brittany

The rise of printing in the second half of the 15th century was very rapid and some eight million books were printed throughout Europe before 1500. The only incunabula printed in a Celtic country, however, came from Brittany (Breizh), where *Le trépassment de la vierge* was published in 1485. Brittany was also the location for the first printing in a Celtic language, in a Breton edition of the Catholicon, a triple dictionary in Latin, French, and Breton, which was first printed in 1499. As well as books in French and Latin, a further five books containing Breton were printed in Brittany in the 16th century, with some twenty titles appearing before 1800, but there was no printed Breton Bible until the 19th century.

§3. welsh

Before 1695, when the Licensing Act which had confined most printing in Britain and Ireland to London finally lapsed, printing in the Celtic languages was not always synonymous with printing in the Celtic countries. The most substantial amount of early Celtic-language printing was in Welsh, though commercial printing in Wales did not begin until the early 18th century. Like most early Welsh printing, the first book in Welsh, *Yny lhyvyr hwnn* (In this book, 1546), was produced in London, where a group of Welsh humanist scholars including William Salesbury (*c.* 1520–74) produced about 30 Welsh books before 1600, including a Welsh–English dictionary, a Welsh grammar, editions of medieval texts, and a Welsh Bible. During the 17th century, more than 170 Welsh titles were printed and, with the spread of provincial printing, several presses were established in Wales after 1718. By the end of the hand-press era in the early 19th century, some 6000 titles had been printed in Welsh, substantially more than in all the other Celtic languages.

§4. cornish and manx

Vernacular printing has been an important agent of linguistic standardization throughout the world, and in most cases this has assisted linguistic maintenance. However, for some languages, the benefits of printing came rather late. There was no Cornish in print until the early 18th century and with the numbers of Cornish speakers critically small there was still no Cornish Bible a century later. By contrast, the Isle of Man (Ellan Vannin) still had a population of largely monoglot Manx speakers when *Coyrle Sodjeh or Principles and Duties of Christianity* was printed in London, in English and Manx, in 1707. Printing on the island was established in the 18th century in Douglas and

Ramsey, but many Manx books were still printed in England. *Yn Vible Casherick*, the Bible in Manx, was printed in Whitehaven, and completed in 1775.

§5. IRELAND

Printing in Ireland began in 1551 with the English *Boke of the Common Praier*, which was produced in Dublin (Baile Átha Cliath) by the London printer Humphrey Powell, with financial support from the English crown. An Irish alphabet and catechism appeared in 1571 while the publication of the Bible in Irish spanned most of the 17th century, beginning with *Tiomna Nuadh*, the New Testament, in 1602. The translation of the Bible into Irish, like other vernacular translations, was driven by the ideals of the Reformation, though in a country which remained largely Catholic the effect on vernacular literacy was small and it was mainly for the Gaelic speakers of Scotland that the single-volume, duodecimo Bible of 1690 was printed, in London, in roman type. Printing in Ireland, as in England, was controlled by the English monarchy, but in England the monopoly allowed several printers to operate, through the Stationers' Company. In Ireland, the King's Printer's patent was granted to only one printer in Dublin, which limited the range and amount of printing in Ireland until the 18th century.

§6. SCOTLAND

Scotland had strong early links with the book trade. Before 1500 there were universities founded at St Andrews, Glasgow (Glaschu), and Aberdeen (Obar Dheathain), and an established trade in bookbinding is attested in the early 15th century. The first press was set up in Edinburgh (Dùn Èideann) in 1508, and many of the first publications were ballads, including Chaucer's *Maying and Disporte* (1508). In 1567 *Foirm na n-Urrnuidheadh*, The Book of Common Order, was printed in Edinburgh in roman type, the first printed book in Gaelic (see carswell). In 1579 an English Bible was printed in Scotland and, significantly for the book trade, a paper mill was established in 1590, but nothing more was printed in Gaelic until the 17th century and the Scottish Gaelic Bible did not begin to appear until much later, with the *Tiomnadh Nuadh* (New Testament) in 1767 and no complete Bible until the 19th century. However, despite the relatively small number of early titles in Gaelic, Scotland has the most substantial early printing history of any of the Celtic countries, with over 300 titles before 1600 and some 4000 before 1700.

§7. IMPACT

Founded on the secular humanism of the Renaissance and driven by the proselytizing ideals of the Reformation, printing in Europe was a major agent of social, political, and linguistic change. Generally based in the larger centres of urban trade, printing did not develop quickly in many of the Celtic countries, though its long-term impact on linguistic and cultural survival was enormous. Often promoted by expansionist Tudor (Tudur) governments as an Anglicizing agent, vernacular printing often achieved the opposite of the outcome envisaged by the architects of the Acts of Union.

Proceedings of the Royal Irish Academy (originally published as 'Transactions' in 1787) are collections of papers read at the Royal Irish Academy (Acadamh Ríoga na hÉireann). The *Proceedings* are published annually in three sections: Section A, dedicated to mathematics, Section B, dedicated to biology and the environment, and Section C dedicated to Celtic studies, although the focus is on Irish history and archaeology. Each one of the volumes of Section C published to date consists of six fascicles, which are available separately.

PSH

Prophecy, like DIVINATION, is the foretelling of the future, but prophecy usually means a prediction formally expressed in words, oral or written, and does not necessarily require practices such as reading signs or portents or making a SACRIFICE. As a pervasive feature of all the traditional Celtic cultures and their literatures, prophecy figures in many entries in this Encyclopedia; the main related subjects appear as cross-references below. Prophecy is hardly unique to the CELTIC COUNTRIES; the main proof that specific features of prophecy were inherited from the PROTO-CELTIC period is shared vocabulary. In all the CELTIC LANGUAGES, forms of the word 'druid' designate a social figure whose functions prominently include prophecy. Similarly, *vātes* 'seers' of ancient GAUL—mentioned by STRABO (*Geography* 4.4.4.) citing POSIDONIUS—were prophets, and their name is cognate with Old Irish *fáth* 'prophecy', *fáith* 'prophet', and Welsh *gwawd*, which, in medieval times, meant 'inspired verse, song of praise' (see BARD [1]). The Early Irish compound verb *do-airchain* 'prophesies' corresponds to Welsh *darogan* < **to-are-wo-kan-* and more loosely to Early Welsh *dy-gogan*, Breton *diougan* < **dī-wo-kan-*, meaning the same, the root in all cases being Proto-Celtic **kan-* 'sing, recite poetry'. This points to a formal professional activity closely related to that of musicians and poets. The Irish SUIBNE GEILT and Welsh MYRDDIN (Merlin), both of whom figure as famous prophets, share the epithet *geilt*, *gwyllt* meaning 'wild' or 'mad', but this is more likely to be a borrowing between BRYTHONIC and GAELIC in the early Middle Ages than a Common Celtic inheritance (see WILD MAN).

§1. GAUL

There is consistent testimony from the classical authors that the DRUIDS were prophets, as explicitly stated by TACITUS, Dion Chrysostom (AD 40–*c.* 112; *Orations* 49), and Cicero (106–43 BC; see DĪVICIĀCOS OF THE AEDUI). Hippolytus writes that the druids prophesied by means of the science and mathematics identified with the teachings of the Greek Pythagoras (*Philosophumena* 1.25). There are several accounts of female druids uttering prophecies. Lampridius tells of a druidess calling out in GAULISH to Alexander Severus: 'Hurry forward, but do not hope for victory, nor put trust in your soldiers' (*Alexander Severus* 59.5). Vopiscus (*Numerianus* 14) records a story, learned from his grandfather, of how the young Diocletian who was staying in the territory of the Tungri in Gaul settled his account with a druidess who was an innkeeper. She said to him, 'Do not be stingy with your money, Diocletian', to which he replied, as a joke, 'I shall be more generous when I am emperor.' She responded cryptically and auspiciously, 'Don't joke, Diocletian, for you will be emperor when you have slain the boar.' The same author tells how Gaulish druidesses had accurately foretold the future glory and imperial rank of the descendants of Claudius (*Aurelianus* 63.4.5). While Tacitus does not call VELEDA a druidess, this living goddess of the Bructeri was revered as a political prophetess. Likewise, prophecy was among the supernatural powers attributed by Pomponius Mela (*De Chorographia* 3.6) to the nine priestesses of the island of Sena, probably off ARMORICA (see further AVALON). It is likely that the Gaulish word *uidlua* on the LARZAC inscription means 'seeress'.

§2. IRELAND AND THE GAELIC WORLD

The Latin list of rules for Christians called *Synodus I Sancti Patricii* (The first synod of St PATRICK, Bieler, *Irish Penitentials* 54–9) is one of very few Irish texts apparently early enough to be concerned with living pagan institutions: the prohibition there against swearing oaths in the pagan manner before a *haruspex* (soothsayer) is almost certainly an attempt to express 'druid' in Latin and shows that prophecy was an activity defining this group. In contrast, the druidism of Muirchú's late 7th-century *Vita Patricii* seems to be a fictionalized inversion of Christianity: the pagan king LOEGAIRE MAC NÉILL is described as having 'sages, druids (*magi*), soothsayers, enchanters, and inventors of every evil art', who make an elaborate and self-consciously benighted prophecy about the coming of Patrick and Christianity and the end of their pagan world order (Bieler, *Patrician Texts in the Book of Armagh* 74–7).

In the ULSTER CYCLE, CATHBAD makes several prophecies as druid of the ULAID, notably regarding auspicious times for undertakings, such as the conception of king CONCHOBAR, a practice comparable to the division of the Gaulish COLIGNY calendar into *mat[us]* 'auspicious' and *anm[atus]* 'inauspicious' time periods. The Ulster sagas are also comparable to Gaulish material in that prophecies, sometimes in

the elevated style called *rosc*, foretelling the outcome of battles are often made by female characters, such as Fedelm, the amazon druidess Scáthach, and the war goddess Morrígan (cf. Olmsted, *Emania* 10.5–17).

In the Kings' Cycles, prophecies set in the remote past were created to validate rulers of the writer's own time, and these could be updated in later editions to suit changing political circumstances. The late 7th-century list of kings of Tara (Teamhair) in *Baile Chuinn Chétchathaig* (The ecstatic vision of Conn Cétchathach) was updated *c.* 900 for *Baile in Scáil* (The phantom's ecstasy) with extant copies reflecting reworking through Mael Sechnaill mac Domnaill (†1022) and possible allusions to his immediate successors. *Echtra Mac nEchach Muig-medóin* ('The Adventure of the Sons of Eochaid Muigmedón'), a foundation legend of the Uí Néill, set during the 5th-century youth of the dynastic namesake Niall Noígiallach, also contains prophecies going down to Mael Sechnaill, apparently influenced by *Baile in Scáil*, as discussed by Downey.

The disruptions caused by the Viking age seem to have been a stimulus for elaborate apocalyptic prophecies—the main theme of which is a complete upheaval and inversion of the traditional social order, even including relations between parents and children, men and women—figuring climactically in texts composed at this period, but set in the remote past. The Morrígan's *rosc* at the end of Cath Maige Tuired ('The [Second] Battle of Mag Tuired') is in this category (see Carey, SC 24/5.53–69). *Immacallam in Dá Thuarad* ('The Colloquy of the Two Sages') is the story of the competition for the robe of the chief poet of king Conchobar in the Ulster Cycle: after a long riddling contest, the youthful Néde mac Adnai is finally overwhelmed by the long doom-laden prophecy of the aged Ferchertne mac Glais, which foresees the coming of the Vikings, the Antichrist, and the end of the world.

As discussed by Aedeen O'Leary, the blending of native and Christian apocryphal traditions in legends of the druid Mug Ruith (lit. 'slave of the wheel') produced a prophecy of imminent doom for Ireland and its people, which was widely believed and which caused serious alarm during the late 11th century. The starting-point of this fusion was the use in Celtic Latin literatures of *magus* as the usual word for 'druid'; hence, Simon Magus of the New Testament, who was viewed as the 'Father of Heresies' in early church writings, became Irish *Símón Druí*. As a druid, Simon implicated Ireland's pre-Christian religion directly in the first apostasy and perversion of church doctrine. In the tales, it was Simon who taught *druídecht* (magic, druidry) to the Irishman Mug Ruith. Thus drawn into the events of the New Testament by way of a highly sinister link, Mug Ruith's story included the killing of John the Baptist as Herod's hireling, a crime dooming the homeland of the Irish druid.

In hagiography true prophecies often figure as miracles validating sainthood. In Adomnán's *Vita Columbae* (Life of Colum Cille) and what little survives of the Liber de Virtutibus Columbae, Colum Cille's prophecies are often explicitly political and show how the deceased saint continued to influence the fortunes of the powerful rulers of the period during which these texts were written—the Uí Néill, the kings of Northumbria, and the descendants of Aedán mac Gabráin.

The Middle Irish verse prophecy of Berchán is noteworthy for its attention to the succession of the kings of Alba, which suggests that political prophecy was also a part of the literary culture of Gaelic Scotland.

In Early Modern Irish literature from about 1200 the royal patrons of bardic poets were often praised as the expected deliverers of Ireland—*an Tairngeartach* 'the prophesied one'. One such redeemer was Aodh Eanghach, first mentioned in *Baile in Scáil*, who was identified by the bardic poets with a series of contemporary leaders over centuries—particularly those who happened to be named Aodh—the last being Aodh Ó Domhnaill (†1704), known as *Ball Dearg* for his distinguishing 'red birthmark', which was also supposed to accord with the prophecy (see Ó Buachalla, *Sages, Saints and Storytellers* 200–32). A folk belief lived on that Ball Dearg had never died, but sleeps in soldier's dress awaiting the appointed hour of Ireland's rescue; he is the subject of folk-tales in which he is prematurely awakened. In the tradition of Aisling poetry, which continued into the 18th century, distressed Ireland is personified as a woman awaiting a messianic rescuer (see Ó Buachalla, *Folia Gadelica* 72–87). The modern Republican slogan *tiocfaidh ár lá* (our day will come) can be appreciated against the background of long-standing prophetic expectations of Gaelic resistance.

§3. WALES AND THE BRYTHONIC WORLD

As in the Gaelic world, most of the evidence for prophecy can be studied from a modern perspective as literary creations and/or political propaganda. Not until folk material was collected from common people in recent times can we begin to gauge the extent to which prophecies were actually believed or played a part in everyday life. An important exception is found in GIRALDUS CAMBRENSIS's chapter on soothsayers in the DESCRIPTIO KAMBRIAE ('The Description of Wales', §16), where he provides details concerning people of his own time, unique to Wales (CYMRU), called *awenithion* (Mod. W *awenyddion* 'people possessing AWEN, poetic inspiration'). He describes them as going into a trance in order to give oracular utterances in answer to problems put to them, and then needing violent shaking to return them to their senses. Giraldus explains their behaviour as demonic possession.

The two great figures of Welsh prophetic poetry, TALIESIN and Myrddin, are discussed in separate articles; on the latter, see also WILD MAN. On the 10th-century 'Great prophecy of Britain' in LLYFR TALIESIN, see ARMES PRYDEIN. Taliesin the prophet also appears in the 11th-century Breton Latin Life of IUDIC-HAEL. In 1155 JOHN OF CORNWALL translated the prophecies of Merlin from Brythonic into Latin verse. On the Welsh prophetic poems of the 14th and 15th centuries called *cywyddau brud*, see BARDIC ORDER [2] §9 (cf. CYWYDDWYR).

From as early as HISTORIA BRITTONUM, the central themes of Welsh LEGENDARY HISTORY have included the former unity of BRITAIN and the eventual triumph of the BRITONS, whose leader, after driving the English back to the sea, would rule the whole island, PRYDAIN. In *Historia Brittonum* itself, the boy AMBROSIUS prophesies that he would be the redeemer in the fantastic tale of the doomed castles of GWRTHEYRN and the dragons. In an important innovation, GEOFFREY OF MONMOUTH reconfigures the prophet in this story as a composite Merlin Ambrosius.

The theme of an immortal ARTHUR as the redeemer of Britain seems to have been widespread as a popular idea and sometimes surfaces in ARTHURIAN LITERATURE. A folk-tale of Arthur the sleeping redeemer—often armoured and in a cave or subterranean chamber (cf. the tales of Ball Dearg and OWAIN GLYNDŴR)—have been collected from many places around Britain in both English and Welsh. For the prophetic Middle Breton 'Dialogue of Arthur Guynglaff', see DIALOG ETRE ARZUR ROUE D'AN BRETOUNET; this same legendary Breton prophet appears as the source of *Diougan Gwenc'hlan* (The prophecy of Gwenc'hlan) of BARZAZ-BREIZ.

In the Welsh poetic tradition, *mab darogan* (lit. 'son of prophecy') is the term for the prophesied redeemer. In *Armes Prydein*, Cynan and CADWALADR are the expected returning leaders of a great anti-English alliance embracing all the Celtic countries and the Vikings. In later centuries OWAIN LAWGOCH and Owain Glyndŵr were viewed as fulfilling this rôle. In his diplomatic correspondence with potential allies in Scotland and Ireland, Glyndŵr refers to their prophesied successful alliance against England, showing that this political doctrine had remained remarkably stable and could still be taken seriously nearly 500 years after *Armes Prydein*. Glyndŵr disappeared around 1416; the uncertainty regarding when and where he died permitted the belief that he would return to restore Welsh rule to Britain. A folk-tale first recorded by Elis GRUFFYDD *c.* 1548, tells of an abbot who saw Glyndŵr, years after his disappearance, while he was out walking one morning. Glyndŵr greeted him with the words, 'You are awake early, father', to which the abbot replied, 'You too are awake early, a hundred years too early.' Glyndŵr then disappeared, presumably to sleep on until the appointed hour of the return of the *mab darogan*. As Henken has shown, belief in the prophetic rôle of Owain Glyndŵr persisted in Welsh political thinking into the 20th century: LLOYD GEORGE was sometimes seen fulfilling the prophecy as Britain's Welsh redeemer during the upheavals of the First World War. As Glanmor WILLIAMS has revealed, Welsh poets showed enthusiasm for Harri TUDUR—the future Henry VII (r. 1485–1509) and founder of the Tudor dynasty—as the *mab darogan* and saw in his success a Welshman enthroned in London as king of Britain in fulfilment of the prophecy. In this way, medieval Welsh political prophecy contributed one essential ingredient in forging the modern myth of an imperial Britain as England's successor on the world stage.

JTK

Proto-Celtic is the reconstructed intermediate linguistic stage between Proto-Indo-European and the oldest attested individual Celtic languages. In other words, Proto-Celtic is the theoretical common ancestor of the Celtic languages. An alternative name that is nearly synonymous is 'Common Celtic'. However, 'Common Celtic' emphasizes linguistic items which are common to all branches of Celtic. In a small number of cases, these common features may not go back to the Proto-Celtic ancestor, but are rather innovations that separate Celtic languages have shared between them. For example, **isarno-* is the Common Celtic word for 'iron', but Proto-Celtic possibly predates the opening of the Iron Age in north-west Europe *c.* 800/700 BC. Therefore, the word might have been exchanged between separate Celtic linguistic communities with the new material and its technology. Because of the emphasis on comparison between the attested Celtic languages in establishing Common Celtic, there is less emphasis placed on the idea that Common Celtic is the link between Proto-Indo-European and the attested Celtic languages. The concept of Proto-Celtic thus focuses more on Indo-European.

§1. PROTO-CELTIC IN SPACE AND TIME

The Proto-Celtic stage belongs to later prehistory and is therefore not directly attested as a written language. However, some circumstantial evidence supports the widespread view that some early form or forms of Celtic speech were in use among the dominant groups using Hallstatt-type material culture (Hallstatt A–B [or Urnfield culture], Late Bronze Age, *c.* 1200–*c.* 750 BC, Hallstatt C–D, Early Iron Age, *c.* 750–*c.* 470 BC). The location of the original homeland of Proto-Celtic remains unproven. West-central Europe about the Alps and the upper Rhine and Danube has been a longstanding assumption among many scholars. But Europe's Atlantic periphery (including some combination of Britain, Ireland, Brittany [Breizh], and north-west Spain) cannot be immediately ruled out. And the mechanism for the spread of Proto-Celtic from its original homeland (by commerce, diffusion, imperialism, and/or migration, or some combination of these) remains a matter of debate.

The oldest indirect attestations of Celtic, such as the proper name **Nemetios* (meaning 'man of privileged rank' or 'man belonging to a sacred place') in an Etruscan graffito, *mi Nemetieś*, for Genua, 1st half of the 5th century BC (see further De Simone, KZ 94.198–202), might be labelled Proto- or Common Celtic. But in the tiny corpus of Hallstatt-period names which has survived, it would be extraordinarily fortunate for dialect variation to appear even if it was well established by *c.* 500 BC. On the Atlantic fringe, a date possibly as early as the 6th century BC can be assigned to Albion and *Īveriū* (see ÉRIU), the earliest attested names for Britain and Ireland, both of which are Celtic. While neither of these terms show specifically post-Proto-Celtic innovations, *Albion* corresponds to the early Welsh word *elfydd* 'habitable surface of the world', and *Īveriū* to Old Irish *íriu* 'soil, ground'. Gaelic has no common noun ***alba* corresponding to *elfydd*, and British has no ***iwerydd* corresponding to *íriu*. In other words, we can understand the ancient name *Albion* as having been coined in the language that became Welsh and *Īveriū* the language that became Gaelic, but less probably the reverse. If so, Proto-Celtic was already in the mid-

1st millennium BC developing the regional variants well known to us from the period of fuller records.

§2. THE PHONOLOGICAL DEFINITION OF PROTO-CELTIC

Proto-Celtic is defined by several sound laws partly shared with (but in their specific combination distinguishing) Celtic from other Indo-European languages.

Consonants (1) The three distinct Proto-Indo-European sets of *k*-sounds (see INDO-EUROPEAN, §1) are reduced to just two, as Indo-European palatal *k´* and *g´* and velar *k* and *g* fall together as Proto-Celtic velar *k* and *g*; the same happened in the other branches of the *centum* subgroup of Indo-European languages.

(2) Indo-European g^w (as in the name Gwen) became Proto-Celtic *b*: e.g. IE $*g^wh_3i$-*uo*- 'alive' > Celtic **biwo-*, OIr. *béo*, W *byw*, Bret. *bew* vs. Latin *vīvus*, Sanskrit *jīvá-*, Greek βίος (as in *bio-logy* &c.), Lithuanian *gývas*, Gothic (an early Germanic language) *qius*.

(3) Proto-Indo-European had had a series of voiced aspirated consonants b^h, d^h, $g´^h$, g^h, and g^{wh} (similar to English *subhuman*, *adhere*, *pigheaded*, *loghouse*, *egg-white*). The aspiration, that is, the breathy *h*-like component, was lost in Proto-Celtic, so that the first four in the series fell together with IE *b*, *d*, g (palatals and velars also falling together; see above). g^{wh} became g^w (IE g^w had already become *b*; see above). For example, Proto-Indo-European $*b^hr̥g´^h$- 'high' > Celtic **brig-*, as in the British and Irish tribal name BRIGANTES, the common GAULISH and CELTIBERIAN place-name element *-brigā*, MW *bre* vs. Sanskrit $b^hr̥h$-, Germanic *burg*.

(4) Loss of Indo-European /*p*/. PIE *p* must have become something like a [φ] first (which is like an [f], but made with both lips, instead of lower lip and upper teeth). Afterwards, in the Indo-European consonant clusters *-pt-* and *-ps-*, this -φ- became Celtic -χ- (the sound in Scottish *loch*), as in Gaulish *seχtam-etos* 'seventh', OIr. *secht*, W *saith* 'seven' vs. Latin *septem*; Gaul *Ux(s)ello-dūnom* 'High-fort', OIr. *úasal*, W *uchel* 'high' vs. Greek ὑψηλός *hupsēlós*. However, in most positions, IE *p* was simply lost in Celtic: e.g. Celtiberian, OIr., and OBret. *ro-*, W *r(h)y-* vs. Latin *pro-*, Greek προ-, Sanskrit *pra-*; OIr. *fo-*, OW and OBret. *guo-* vs. Greek ὑπό- *hupó* 'under'. A special case is the assimilation of IE $*p$—k^w > Celtic $*k^w$—k^w as in IE $*penk^we$-*to*- 'fifth' to Gaul *pinpetos*, OIr. *cóiced*, OW *pimphet*, which may be a shared Italo-Celtic development, cf. Latin *quīnque* 'five'.

(5) Assimilation of Indo-European *-s* + nasal consonant (that is, *m* or *n*) to Celtic double nasal. For example, Gaulish ιμμι *imi*, OIr. *am* 'I am' from IE **es-mi*; Gaulish *onno*, OIr. *uinn-ius*, W *onn-en* 'ash tree' from IE **os-no-*, Latin *ornus*.

(6) Indo-European double dental consonants (*tt* and *dd*) and *st* > [t^s] or [^{s}t], the so-called 'tau gallicum', written mostly ϑ in Greek SCRIPT, Đ or ĐĐ, also ST, DS, TS, T, S in Roman script (Ir. and W *ss*, *s*): *Meϑϑillos*, *Medsillus*, *Messillus* 'Middle' (proper name); *Đirona*/SIRONA 'Goddess of stars' (cf. W *seren*).

Laryngeals. The term 'laryngeal' designates a series of breathy sounds (h_1, h_2, h_3) that existed in Proto-Indo-European. Although affecting the articulation of adjacent vowels in some of the Indo-European daughter languages (especially in Greek), the laryngeals themselves fell together as a single sound (here written *H*) and were then simply lost (sometimes with lengthening of preceding vowels) in most Indo-European languages, including Celtic. Special treatments of the Indo-European laryngeals in Celtic include the following cases: IE *HR̥C* (*C* standing here for 'any consonant' and *R* for any 'resonant' *l*, *r*, *m*, *n*) > Celtic *aRC*: e.g. IE $*h_2rg´$-*n̥t-o*- > Celtiberian *arKa(n)to-*, LEPONTIC *arkato-*, Gaulish *arganto-*, OIr. *argat*, OW *argant* 'silver, money' vs. Latin *argentum*, Sanskrit *rajata-*, Avestan *ərəzata-*. Indo-European *R̥HN* > Celtic *RāN*: e.g. IE $*plh_1$-*no*- > PCelt. **φlāno-* > OIr. *lán*, W *llawn*, Bret. *leun* 'full' vs. Sanskrit *pūrn̥á-*, Lithuanian *pìlnas*. Indo-European **CRHC* > Celtic **CRaC*, as in **wlHti-* > Celtic **wlati-* > OIr. *flaith* 'sovereignty', OW *gulat* 'land, realm'.

Resonants (*l*, *r*, *m*, *n*). In Proto-Indo-European, when these sounds were flanked by other consonants, they became syllables, much like in English *battle*, *didn't*, American English *batter*. These syllabic resonants are symbolized by writing a ring beneath the usual letter. The Indo-European syllabic nasals *m̥*, *n̥* > *an*, *am*. Indo-European *l̥*, *r̥* > Celtic *ri*, *li* before k^w, *t*, *k*, *k´*, g^w, *g*, *g´*, *b*, g^{wh}, g^h, $g´^h$, b^h (later than *HR̥C* > *aRC* above): e.g. IE $*pl̥th_2$-*u*-*i*(*e*)h_2- 'broad, flat' in Gaulish *Letavia* (Gaulish name for ARMORICA), OIr. *Letha*, W *Llydaw* 'Breizh (Brittany)', Sanskrit *pr̥thivī* 'the broad, flat one (= earth)', Greek Πλάταιαι *Plátaiai* (place-name); IE **pr̥-tu-* 'passage'

> PC **ritu-* in Gaulish and British *ritu-*, W *rhyd* vs. Avestan *pərətu-*, Latin *portus*, English *ford*.

Vowels. Indo-European *ē* > Celtic *ī*: e.g. IE **h₃rēg´-s* 'king, ruler' gave Celtiberian *-reiKis* (probably already [ī]), Gaulish *-rix* in personal names, British RIX, OIr., OW , OBret. *ri* 'king'. Indo-European *ō* (and also **oH*) became Celtic *ū* in final syllables and *ā* in non-final syllables: e.g. IE **dh₃-tōd* gave Celtiberian *TaTuz* 'he must give', IE **k´ʷō(n)* 'dog' became Celtic **kʷū* > OIr. *cú*, W *ci*, Bret. *ki*; IE **moh₁ro-* 'great' became Celtic **māro-* > Gaulish and British *-māros*, OIr. *már*, OW *maur*.

Proto-Celtic industries (technologies and techniques)

There are almost 425 words in the technology domain that can be reconstructed for PROTO-CELTIC, and this amounts to more than 10% of the reconstructed vocabulary.

§1. ARCHITECTURE

Proto-Celtic words in this category include words for buildings in general (building, dwelling, house **tegos*, home), specific structures (bakery, bell tower, fort **dūnom *dūnos-*, smithy **gobali-*, storeroom), parts of a structure (door **dworestu-*, floor **φlāro-*, hearth, pillar, roof), and other terms (bridge, fence, mortar).

Architectural features are very well known from archaeological records, even though, due to the nature of archaeological evidence, the upright structures are often no longer preserved, and the function of structures cannot often be identified. Although settlement architecture differed greatly throughout the area in which the CELTIC LANGUAGES were spoken, most of the terminology that can be reconstructed fits well with architectural elements that must have existed in buildings throughout the Celtic world: a house remains a house, whether it has been built according to a round or rectangular layout, and doors, floors, hearths, pillars, and roofs can be documented or safely assumed for any of these structures. Equally, many of the functional terms cannot be clearly associated with any particular type of building, as the purpose intended may be carried out by means of any house-like building, like storerooms. Even though only rarely attested, smithies, bakeries, and other purpose-specific buildings are known throughout most of the Celtic world (Audouze & Büchsenschütz, *Towns, Villages, and Countryside of Celtic Europe*).

Other architectural features in the landscape, such as fences and bridges, are also well attested in archaeological records, e.g. a whole series of bridges along the Swiss river Zihl, including the famous site of LA TÈNE (Audouze & Büchsenschütz, *Towns, Villages, and Countryside of Celtic Europe* 131–4, 160–2; Schwab, *Archéologie de la 2e correction des eaux du Jura* 1).

§2. AGRICULTURE

Words in this category include terms for implements (plough **aratrom*, sickle **krumbano-*, sieve **kreitro-*), actions associated with agriculture (milk **wo-trog-eje/o-*, plough **ar-je/o-*, sow **seg-*, winnow **niχto-*) and farm animals. Artefacts corresponding to most of these terms for implements are well documented in archaeological records, e.g. parts of ploughs (ardheads, see Raftery, *Trackway Excavations in the Mountdillon Bogs* 266–72). The practices associated with the agricultural vocabulary, even though not directly documented, are obvious from palaeobotanical and palaeozoological evidence. Many agricultural practices, e.g. co-ploughing practices evident from both IRISH and WELSH early medieval law (Irish *comar*, Welsh *cyfar*, Celtic **kom-arjeo*), seem to have their roots well within the European IRON AGE (Karl, *Altkeltische Sozialstrukturen anhand archäologischer, historischer und literarischer Quellen* 164–70).

§3. VESSELS, POTTERY, &C.

This category includes words for pot **kelφurno-*, basket, bag **bolgo-*, and CAULDRONS, sing. **kʷarjo-*. Many kinds of vessels, made from metal, ceramics, as well as organic material are well attested in archaeological records.

§4. FURNITURE

This category includes words for bed, seat, and table. Even though such items were usually made from organic materials and have therefore only rarely survived until today, a few examples made from metal, e.g. the bronze couch in the HOCHDORF princely tomb (Cunliffe, *Ancient Celts* 60–1), or rests of wooden furniture, e.g. a lathe-turned small table from Wederath-Belginum tomb 1311 (Cordie-Hackenberg, *Gräber, Spiegel des Lebens* 193–6), as well as depictions on HALLSTATT [2] situlae (bronze wine buckets), demonstrate a wide variety of furniture.

§5. METALLURGY AND JEWELLERY

This category includes words for materials (amber **webru-*, glass **glanjo-*) and types of jewellery (crown, necklace **monikja-*, ring). Metallurgy in copper, bronze **omjo-*, tin, iron **isarno-*, silver **arganto-*, gold, and lead is attested in archaeological records, as is glass production. Crafted from these materials, as well as amber, coral, and stone, were various kinds of jewellery, including the famous Celtic neck ring, the TORC, and also bracelets, anklets, finger rings, necklaces, crowns, brooches, and beads (Ruth Megaw & J. V. S. Megaw, *Celtic Art*).

§6. TOOLS

Words in this category include bill-hook **widu-bijo-*, awl **taratro-*, churn, comb, grinding stone/ quern **brawan-*, hook, key and lock, nail, peg, tongs, and whetstone. Many of these tools are also attested in archaeological records, made in bronze, iron or, like whetstones, from stone.

§7. TEXTILES

This category includes words for activities associated with textile production (card, spin **snije/o-*, weave **weg-je/o-*), general words for garments (clothes **wīska-*, dress), words for specific kinds of garments (belt, cloak **bratto-*, shirt, shoe **arkenno-*, trousers **braka-*), words for parts of garments (hood, sleeve **φlāmo-wets-*), and words for materials (fleece, hemp, leather, linen, wool **wlana-*).

Due to preservation conditions, textiles and leather products are recovered in rare circumstances. Considerable numbers of such finds have as yet only been recovered from the prehistoric SALT mines of the DÜRRNBERG bei Hallein and Hallstatt, where fragments of clothing and shoes have been found. Less frequently, remains of cloth have been recovered where metal corrosion has helped to preserve parts of the fabric. However, clothing of all kinds is relatively well known from figurative ART, as on the Hallstatt situlae, La Tène beaded jugs, as well as small and monumental plastic art, including fibulae crafted in the form of humans or shoes (Kurzynski, *'… und ihre Hosen nennen sie "bracas"'*; Ruth Megaw & J. V. S. Megaw, *Celtic Art*). Textile technology was already well developed in western Europe in the Iron Age. Fine thread spinning allowed the creation of semi-transparent cloth, and the horizontal loom the weaving of complex patterns in various kinds of binding (Kurzynski, *'… und ihre Hosen nennen sie "bracas"'*).

Proto-Celtic weapons

§1. NATIVE CELTIC VOCABULARY

Apart from the words for SWORD and SHIELD, there are several other words for different kinds of weapons that can be reconstructed for PROTO-CELTIC.

Spear is the most important weapon concept, as there are eight different Proto-Celtic words attested in the CELTIC LANGUAGES:

(1) Proto-Celtic **gaiso-* is attested in Old IRISH *gae* (m.), SCOTTISH GAELIC *gath* (m.) 'dart, sting', and GAULISH γαισον *gaison* = Gallo-Latin *gaesum* (neuter) 'heavy iron throwing spear'.

(2) Proto-Celtic **uφo-gaiso-* (lit. 'under-spear') is attested in MIr. *foga* (m.) 'small spear, javelin', Old BRETON plural *guu-goiuou*, Middle and Modern WELSH *gwaew* (mf) 'lance, spear, javelin', corresponding to MBret. *goaff*, Mod.Bret. *goao*. It could derive from the compound **uφo-gaiso-*, but derivation from the previous simplex formation cannot be

ruled out, or, possibly, the two—that is, 'spear' and 'under-spear'—became pronounced alike, and hence one word, in the Middle Ages. The final consonant [-w] of the BRYTHONIC forms requires an unusual derivation anyway.

(3) Proto-Celtic (or Proto-Brythonic) **sukko-uφo-gaiso-* is attested in MW *hychwayw* (f.) 'hunting-spear, swine-spear' and Old CORNISH *hochwuyu* 'hunting-spear, swine-spear'. There are two possible explanations for the first element, corresponding to Welsh *hwch* 'sow' or *swch* 'plough-share' (thus referring to an implement with a pig-snout-shaped point).

(4) Proto-Celtic **kali-* is implied by MIr. *cail*.

(5) Proto-Celtic **kestā-* is implied by MIr. *cess* (f.).

(6) Proto-Celtic **kwarho-* is attested in OIr. *carr* (f.) and MW and Mod.W *pâr* (mf).

(7) Proto-Celtic **lagīnā* will explain OIr. *laigen* 'broadheaded spear'. (The traditional explanation that the tribal group LAIGIN 'Leinstermen' take their name from this weapon is doubtful.) Early Welsh *llain* (fm) 'blade, spear', common in the GODODDIN, could not be the exact cognate of the Irish, nor could it be native Brythonic vocabulary at all, but it could reflect a borrowing from the Irish of, say, the 4th to 6th centuries AD. Gaulish λαγονον *lagonon* 'white hellebore plant' perhaps shows the same root.

(8) Proto-Celtic **s(φ?)ligā-* can be reconstructed to account for OIr. *sleg* (f.).

Knife is the next most important weapon concept in inherited Celtic vocabulary. There are three words:

(1) Proto-Celtic **skījeno-* 'knife' is attested in OIr. *scïan* (f.), ScG *sgian*, and MW and Mod.W *ysgien* 'knife, sword'.

(2) Proto-Celtic **gulbo-* 'knife, dagger' (< 'beak') is attested in OW *gylym*, MW *geleu*, *gelyf*, Mod.W *gylf* (m.), Gaulish *gulbia* 'gouge' (f.), and the ROMANO-BRITISH place-name *Re-gulbium* 'Reculver' (probably lit. 'great beak/point', referring to a headland).

(3) Proto-Celtic **φaltan-* 'razor' is attested in OIr. *altan* (f.), ScG *ealltuinn* (m.) 'razor', OW *elinn*, MW and Mod.W *ellyn* (mf), and OBret. *altin*, MBret. and Mod.Bret. *aotenn*.

Further weapon vocabulary

Proto-Celtic **sadī-* 'hilt' is attested in Mod.W *said* (mf) 'hilt; ?blade' and ScG *saidh*, *saith*, MANX *seiy* (f.).

Finally, there is a word for sling (Proto-Celtic **trok(ʷ)alo-*, attested in Ir. *trochal*), and possibly also a word for catapult (attested in MW and Mod.W *blif*; however, this could also be a loan from Late Latin *blīda*).

§2. EARLY ARCHAEOLOGICAL EVIDENCE

In archaeological records, spearheads make up the large majority of weapons found in late Bronze Age and IRON AGE burials, indicating their importance as the (cheap) weapon of choice during those periods. Within the group of spearheads, types vary from small, leaf-bladed heads in bronze (during the Bronze Age, down to about 750 BC) or iron (during the Iron Age and beyond), which could be used on both javelins and ordinary spears, to large, ornately fashioned iron spearheads of up to 50 cm in length, which were probably used either as lances or as decorative heads for battle standards (Rapin, *Celts*). Spear butts (metal terminals for the end opposite the head) are also a frequent find, especially from the Irish Iron Age, where they make up one of the most characteristic finds for that period (Raftery, *Pagan Celtic Ireland* 144–5; Mallory & McNeill, *Archaeology of Ulster* 168–9).

Knives are also a frequent find throughout the late Bronze and Iron Ages, even though it is unlikely that most of them were actually used as weapons since they are often rather short and much more suitable for use as tools than as weapons in armed conflicts. Even the rather large iron butchering knives that appear quite regularly in Continental Iron Age burials are almost exclusively found in combination with animal bones, which indicates that they were primarily used as cutlery. Similarly, razors, which also are known, are unsuitable for use as weapons. Daggers, known mainly from the Late Bronze Age (*c.* 1200–*c.* 750 BC) and the HALLSTATT D period (*c.* 600–*c.* 475 BC), may have been used as weapons, even though the latter at least might also have been status symbols (Burmeister, *Geschlecht*).

Hilts and scabbards, even though not actually weapons, are frequently characteristic features of either swords or daggers, as in the case of antennae-hilted swords and daggers, or the anthropoid hilts of some

La Tène swords. Decorated scabbards also provided one of the main surfaces for Iron Age art in metal, including scabbards decorated in situla style (a style of representational art of the Hallstatt Iron Age, named for its use on bronze wine buckets, *situlae*), for example, the scabbard from Hallstatt (Zeller, *Die Kelten in Mitteleuropa* 116–20; Ruth Megaw & J. V. S. Megaw, *Celtic Art*).

Slings, attested by the finds of numerous sling-stones, seem to have been used mainly in the British Isles, while on the Continent bows and javelins were preferred as long-range weapons. Large numbers of sling-stones have been found in British Iron Age hill-forts such as Danebury (Cunliffe, *Iron Age Britain* 92).

In the late Bronze and early Iron Ages the axe was used as the primary weapon for close combat in the east Hallstatt culture, in clear contrast to the more westerly preference for the sword or dagger. Such axes, made in bronze in the late Bronze Age and from bronze or iron in the early Iron Age, again come in several different shapes, including various forms of socketed, winged, and Scythian double axes (Stary, *Berichte der Römisch-Germanischen Kommission*).

The primary defensive weapons were shields, organic or metal armour, and organic or metal helmets, the latter also being one of the items that were often decorated with ornate designs and sometimes with figures on the helmet crest, for example, the helmet of Ciumeşti, Romania, with its raven crest with flexible wings (Zeller, *Die Kelten in Mitteleuropa* 127; Ruth Megaw & J. V. S. Megaw, *Celtic Art* 177). Among the various designs of organic armour, chain-mail suits make their first appearance in Iron Age contexts (Zeller, *Die Kelten in Mitteleuropa* 128–9).

Prydain from P-Celtic **Pritanī* 'people of the forms' is the Welsh name for Britain and is ultimately of common origin with the English name. For the replacement by **Pritanī* of the older names for Britain and its inhabitants, see Albion. For the etymology, variant and cognate forms, and the development of the ancient group names *Britannī* and *Brittones* (> Welsh *Brython*) from **Pritanī*, see Britons. On the byform *Prydyn* 'Picts, north Britain' (Old Welsh *Pritdin*), attested also in its archaic genitive plural form *Pryden*, see Cruithin. On the development from group name to singular place-name, see Britain. For the old singular form *Predan* (**Prydan*) 'Briton', not attested in Welsh, see Aedán mac Gabráin; Britons. For the medieval Welsh text *Enweu Ynys Brydein* (The names of the island of Britain) and the story included in it of Britain's conquest by the eponymous hero, Prydein son of Aedd Mawr, see legendary history §5. For the ideological claim of the medieval Welsh princes and poets to the sovereignty of all Britain and the song *Unbeiniaeth Prydain* (The sovereignty [or monarchy] of Britain), sung by the *bardd teulu* at special occasions in Welsh courts, see bardic order [2] §3 and Armes Prydein (The great prophecy of Britain). For the revival of the concept of *Ynys Prydain* in modern Welsh Romanticism and nationalism, see Gorsedd Beirdd Ynys Prydain; Edward Williams (Iolo Morganwg).

Pryderi fab Pwyll is best known from the Mabinogi and is noteworthy as the only character to appear in all Four Branches. Based on this fact, W. J. Gruffydd elaborated the interesting and influential theory that the surviving four tales had evolved from a heroic biography or saga of Pryderi, comprising a conception/birth tale, heroic exploits, abduction and restoration, and a death tale (see also critical and theoretical perspectives). Much of the First Branch is indeed devoted to the wondrous meeting and eventual marriage of Pryderi's parents, Pwyll and Rhiannon, followed by the birth of Pryderi, his mysterious abduction and marvellous discovery by

Teyrnon of Gwent Is-coed, his precocious boyhood as Gwri Wallt Eurin (Gwri Golden Hair), his restoration to his parents, and his renaming for the 'worrying' or 'angst' (*pryderi*) his absence had caused. (In the meantime Rhiannon had been unjustly punished for killing him.) The First Branch ends with the peaceful death of Pwyll and Pryderi's succession as king of DYFED. In the Second Branch, BRANWEN, Pryderi is merely listed as one of the seven survivors of BRÂN's calamitous expedition to Ireland (ÉRIU), so the Pryderi-saga theory requires that the exploits of the young king have greatly atrophied in the archetypal cycle's retelling. Pryderi is again prominent in the Third Branch, only slightly less so than MANAWYDAN, after whom this Branch is named; he spends the latter part of the tale as a fettered prisoner in the magic castle of Llwyd son of Cilcoed, though his disappearance is only explained at the end. In the Fourth Branch Pryderi is killed in single combat against GWYDION, the culmination of a war instigated by the latter in order to create a diversion during which his lovesick brother Gilfaethwy could rape MATH FAB MATHONWY's virgin footholder, Goewin. Pryderi is thus absent from the latter part of the Fourth Branch, which focuses instead on the biography, including the killing and resurrection, of LLEU. Pryderi is also mentioned twice in the so-called 'mythological' poems of LLYFR TALIESIN. One of these is PREIDDIAU ANNWFN (Spoils of the OTHERWORLD), which alludes to *ebostol Pwyll a Phryderi* (the tale of Pwyll and Pryderi) and the otherworldly imprisonment of Gweir, a name similar to some variant spellings of *Gwri*. This allusion thus implies that there had been a story at least closely akin to that in the *Mabinogi*, but centuries older than the text which survives. The fact that the tale bears Pryderi's name in *Preiddiau Annwfn* suggests that he had central prominence in this early tradition, thus supporting the Pryderi-saga theory.

As a name, Welsh *Pryderi* is unusual, but is meaningful in the context of the events of the *Mabinogi*, like that of his father *Pwyll* ('sense' or 'mind').

Psalter, the Old Irish Treatise on the, is the earliest known piece of exegesis in the IRISH language. It is transmitted incomplete in two manuscripts, both independent copies of a common source, which is an indirect copy of a quire (eight sheets folded in half to make sixteen pages) of the early 9th-century original. It contains a general introduction to the study of the psalms and parts of the analysis of Ps 1:1. It shares its exegetical approach with Latin-language Irish texts, especially with the slightly earlier 'Reference Bible', and is important evidence for the transfer of this learned tradition from Latin to the vernacular. It advocates a fourfold analysis of the text of the Psalter, with two levels of historical interpretation. This approach is peculiar to Irish schools, as is general insistence on the literary and historical meaning, attempting to place the books of the Bible within a broader system of universal knowledge. The treatise is the source of Airbertach mac Coisse's 10th-century poem on the Psalter.

Erich Poppe

Ptolemy, Claudius Ptolemaeus Πτολεμαῖος (*c.* AD 100–*c.* 178), a native of Upper Egypt with a Graeco-Roman name, was an astronomer, a mathematician, and a geographer who worked in Alexandria. His great astronomical work, usually called by its Arabicized title, *Almagest*, was highly influential during Late Antiquity and the Middle Ages. For Celtic studies, Ptolemy's most important work is Γεωγραφίας Ὑφήγησις *Geographia Huphegesis*, usually called the *Geography*. Using a variety of sources

and covering the known world of the time, Ptolemy's *Geography* contains the largest surviving collection of ancient Celtic place- and group names and is accordingly often cited in this Encyclopedia. It covers all areas of the ancient Celtic-speaking world: GAUL, northern ITALY, the IBERIAN PENINSULA, BRITAIN, Ireland, central Europe, the BALKANS, and GALATIA. Since early Ireland (ÉRIU) was never part of the Roman Empire, the evidence of Ptolemy is especially important as virtually our only source of written information for Ireland and the IRISH language before the OGAM inscriptions and early Christian times. The *Geography* figured centrally in pioneering work on Irish prehistory and LEGENDARY HISTORY by MACNEILL and O'Rahilly (Ó RATHILE). To cite a few examples, Ptolemy confirms the antiquity of the Irish names Boyne/BÓAND = Ptolemy's Β(ο)υουινδα *Buvinda*, Ulster/ULAID = Ουολουντιοι *Volu(n)tii*, and probably EMAIN MACHAE = Ισαμνιον *Isamnion*. Also beyond the Roman frontier, the *Geography* provides what is probably the north-easternmost attested Celtic place-name—Καρροδουνον *Carrodūnon* 'chariot-fort' or 'stone fort'—probably in what is now western Ukraine beyond the river Dnester. Since much of Ptolemy's Celtic material was apparently derived from Latin written sources, we cannot rely on his distinctions of η *ē* from ε *e* or ω *ō* from short *o*, and since his placement of Greek accents does not seem to reflect Celtic patterns they are ignored in the Encyclopedia. The *Geography* was probably written in the period AD 140×150, but the sources were often earlier; for example, Roman Britain is shown before the building of HADRIAN'S WALL in the 120s, but Thomas F. O'Rahilly's idea that Irish names go back to PYTHEAS *c.* 325 BC is now usually rejected. Ptolemy's maps are generated by lists of 8000 names and a system of latitude and longitude coordinates. There are several serious errors. The earth is reckoned to be about 72% of its actual size and Asia extends too far east, defects which conspired to mislead Columbus. Scotland (ALBA) points east, rather than north, and Scandinavia is an island. Places and tribes are often difficult to locate on a modern map as most of Ptolemy's locations were not fixed by astronomical observations, but various itineraries were synthesized, and distances were calculated from one place to the next.

Pwyll Pendefig Dyfed (Pwyll prince of DYFED) is the name commonly given to the First Branch of the MABINOGI. The opening section tells of Pwyll's encounter with ARAWN, king of Annwfn (ANNWN, the OTHERWORLD). They change places for a year and a day, during which time Pwyll kills Hafgan, Arawn's enemy. Because of this favour a friendship develops between them, and Pwyll is given the name Pwyll Head of Annwfn. In the second section, while seated on the mound near his court at ARBERTH in Dyfed, Pwyll sees a beautiful maiden, riding a magical white horse. She is RHIANNON, daughter of Hefeydd the Old, and she is in love with Pwyll. In the ensuing wedding feast, Gwawl son of Clud appears and claims Rhiannon for himself. At the end of a year and a day Pwyll succeeds in tricking Gwawl, and Pwyll and Rhiannon are married. The third and final section

relates how a son is born to the couple and disappears on the night of his birth. Rhiannon is falsely accused of murdering him and is punished by being forced to carry visitors to the court on her back. Teyrnon, lord of Gwent Is-coed, discovers the child under strange circumstances, and he is adopted by Teyrnon and his wife and given the name Gwri of the Golden Hair. Eventually he is restored to his father's court and renamed PRYDERI (meaning 'worry'), on account of his mother declaring, upon his return, that her 'cares' are now over. After Pwyll's death Pryderi rules Dyfed and marries Cigfa.

The tale contains resonances of Celtic mythology—it has been suggested, for example, that Rhiannon is cognate with EPONA, the Celtic horse goddess. Also, well-known international tales/motifs abound; for example, the calumniated wife, the rash promise, and the giant claw. Against this background of fantasy, the author explores moral issues such as the nature of insult and compensation, and friendship. Pwyll himself matures throughout from an impatient, impetuous young man to a wise and careful ruler, finally deserving his name (in the meaning 'discretion' or 'good sense').

Pytheas Πυθέας of MASSALIA/Marseille was a Greek explorer who made a voyage into the north Atlantic *c.* 325 BC and recorded detailed information regarding ARMORICA, BRITAIN, the Baltic, and an island to the north north-west of Britain called Thule Θούλη, possibly Iceland, though TACITUS (*Agricola* 10) uses the name for Shetland (Sealtainn). His own work 'On the Ocean' (Περὶ Ὠκεανοῦ) has not survived, but Pytheas is cited by 18 other ancient authors. STRABO and DIODORUS SICULUS treated Pytheas with scepticism, but PLINY made extensive use of his work and treated him as a sound authority, as do most modern writers.

Records traceable to Pytheas form an important milestone in establishing early place-names, many of them clearly Celtic and implying CELTIC LANGUAGES—in the case of Britain Πρετ(τ)ανική (cf. Welsh PRYDAIN) a specifically P-CELTIC language—in Atlantic Europe by his time. Names first recorded by Pytheas include the following: in Armorica, *Ostidaei* Ὀστιδαιοι, probably an early form of the tribal name Osismii found in the west of the peninsula in Roman times, a promontory *Cabaeon* Καβαιον (Pointe du Raz), and the western island of Ouxisamē Ουξισαμη (Ushant, Breton *Enez Euzañ*) which is clearly the Old Celtic superlative 'highest'; Britain is described as a triangle defined by three promontories—Belerion Βελεριον in the south-west, Cantion Καντιον (Kent) in the south-east, and Orcas Ὄρκας, facing the Orkney islands (Arcaibh) in the north. Of these three British names, the first may be related to the Celtic divine names BELENOS and BELISAMA. Although various interpretations have been offered for the meaning of the second, *cant-* is very common as a proper-name element in the early Celtic languages, as shown by D. Ellis Evans. The Orkneys preserve a PROTO-CELTIC word for 'pig' **orkom*, possibly an old tribal (totemic) name or, alternatively, based on the metaphor of the islands as the mainland's piglets. A place-name *Ictis* Ἴκτις preserved by Diodorus (*Historical Library* 5.22), probably from Pytheas, has been taken by modern writers to mean either St Michael's Mount in Cornwall (KERNOW) or the Isle of Wight. If the latter, the form is based on Celtic **Weχta* with normal Greek loss of *w*. Old Irish *Muir nIcht* for the English Channel points to the existence of a form without *w-*, but it could be a learned borrowing from ancient geographies.

Q

Q-Celtic

Indo-European *p* was, in most positions, simply lost in Proto-Celtic. As the dialects began to separate within the unattested prehistory of Old Celtic, a phonetic innovation arose within a central innovating dialect area, whereby Celtic /*kʷ*/ (< Indo-European /*kʷ*/ and /*kʼw*/) came to be pronounced [p]. The Celtic languages which underwent this change are termed P-Celtic and those which did not are called Q-Celtic. There are two thoroughly Q-Celtic languages—Celtiberian and Goidelic—and traces of conserving Q-Celtic dialects in the predominantly P-Celtic Gaulish. Thus, for example, the Indo-European enclitic conjunction **-kʷe* 'and' survives in Celtiberian written *-Cue*. In Goidelic (the language family which separated Irish, Scottish Gaelic, and Manx within the historical period), the word for 'son' is found first in ogam inscriptions as MAQQI (genitive sing.) and later as Old Irish *mac(c)*, modern *mac*, contrasting with *map* in Old Welsh and Old Breton, which were P-Celtic languages. In Gaulish, the horse goddess is named Epona, showing the usual P-Celtic treatment, but the month called 'horse' is EQVOS on the Coligny calendar. Sequana, the ancient name of the river Seine, is also often cited in this connection. In earlier Celtic scholarship, 'Q-Celtic' was sometimes used as though it meant simply the same as Goidelic or Gaelic, so as to imply that all the Celtic languages retaining *kʷ*—even the ancient Continental Celtic languages, Celtiberian and Gaulish—were closely related, had descended from a single Q-Celtic proto-language, and were probably linked by mass migrations in later prehistory. However, since the Q-Celtic languages are defined not by innovating, but by conserving—effectively a non-event—there is no reason (in the absence of further linguistic evidence for shared development) to suppose that any two Q-Celtic languages share a common ancestor between Common Celtic and the attested forms. Thus, there is no linguistic reason to suppose that Goidelic shares any close links with those regions of Gaul where the Q-Celtic forms are found or with ancient Celtic Spain, even though the appearance of a Q-Celtic language in Spain has understandably misled some modern writers to see a confirmation of the story of the migration of Míl Espáine from Spain to Ireland (Ériu) as told in medieval Irish legendary history. Another such negative commonality between ancient Ireland and Spain is that neither participated fully in La Tène art style, but this detail again only means that both areas were relatively isolated from the core area of Celtic west-central Europe and thus escaped innovations; it does not demand any close positive relationship between Ireland and Spain.

R

Rawlinson B 502 is one of three important pre-Norman Irish manuscripts—the others are Lebor na hUidre ('The Book of Dun Cow') and *Lebor na Nuachongbála* ('The Book of Noghoval', see lebor laignech)—which constitute our earliest sources of secular Irish texts.

The manuscript in its present state is essentially made up of two originally separate, unrelated codices. These two vellum manuscripts were part of the collection owned by the Irish antiquarian James Ware (1594–1666), who acquired a large number of manuscripts through the historian Dubhaltach Mac Fhirbhisigh (*c.* 1600–71). Ware had two of these manuscripts bound together prior to 1648 to make up what is now Rawlinson B 502. There is some indication that Ware wished the separate identities of the two codices to remain obvious, since he separated the two parts by several paper folios (fos. 13–18) containing Irish history written, mostly in Latin, by Ware himself.

The first of these two vellum codices (now fos. 1–12v of Rawlinson B 502) was written during the 11th century. The careful minuscule writing, which includes some decorative capitals, suggests the involvement of two professional scribes, with various glosses added in several other hands, among them glossator 'H' (fos. 1–9), notorious for his work on *Lebor na hUidre*, a manuscript associated with the monastery of Clonmacnoise (Cluain Mhic Nóis), near Athlone, Co. Offaly (Baile Átha Luain, Contae Uíbh Fhailí). Thus, this part of Rawlinson B 502, which contains a fragment of the Irish World Chronicle, may be linked to the same scriptorium as *Lebor na hUidre*.

The second part of Rawlinson B 502 (fos. 19–89) is made up of a mid-12th-century manuscript written by a single scribe. Its contents suggest a Leinster (Laigin) provenance and it may be the product of the monastery of Killeshin, Co. Laois (Byrne, *Thousand Years of Irish Script* 13). This second manuscript has suffered from rough treatment and several folios are missing. Nevertheless, the superior standard of the calligraphy, including varied decoration, and the fastidious preparation of the vellum make the second codex which constitutes Rawlinson B 502 'the most magnificent of the surviving manuscripts containing for the most part material in the Irish language' (Ó Cuív, *Catalogue of Irish Language Manuscripts in the Bodleian Library* 172). The first text contained in this codex is a beautifully executed version of *Saltair na Rann* (The verse psalter); this is followed by *Sex Aetates Mundi* (The six stages of the world), a copy of *Amrae Coluimb Chille* (Poem for Colum Cille), *Immacallam in Dá Thuarad* ('The Colloquy of the Two Sages'), some legal material, Leinster and other genealogies, historical material mainly relating to Leinster, and several *oircne* (destructions), among them the famous *Orgain Denna Ríg* ('The Destruction of Dind Ríg'), to name just a few of the texts included.

The final section of Rawlinson B 502 comprises further 17th-century paper folios (fos. 90–103), which contain additional historical notes and documents, some of which are in Latin.

Following Sir James Ware's death, his manuscripts passed to his son, who sold the collection in 1786 to the Earl of Clarendon. It then passed to the Duke of Chandos, some of whose manuscripts were later bought by Dr Richard Rawlinson (1690–1755), among them this particular manuscript. Rawlinson bequeathed his manuscripts to his Alma Mater, St John's College, Oxford, from where they were eventually transferred to the Bodleian Library.

The determination of the provenance of the second part of Rawlinson B 502 is linked to the issue of identifying its original name. In the early 17th century the name *Saltair na Rann* was used by John Colgan (Seán Mac Colgáin, ?1592/1587–1658) and Geoffrey

Keating (Seathrún Céitinn *c.* 1580–1644) when referring to this codex, a practice continued by Sir James Ware. The case for *Saltair na Rann* has recently been restated (Breatnach, *Celtica* 24.40–54, *Éigse* 30.109–32, Ó Cuív, *Catalogue of Irish Language Manuscripts in the Bodleian Library* 174–80). However, another name has also been suggested for this second part of Rawlinson B 502, namely *Leabhar Gleann Dá Locha* ('The Book of Glendalough'), also known as *Leabhar Mhuintir Duibhgheanainn* ('The Book of the O'Duigenans') and associated with Tirerrill, Co. Sligo (Tír Oililla, Contae Shligigh). The basis for this assertion was that certain textual correlations to other manuscripts were noted (Carney, *Poems of Blathmac, Son of Cú Brettan* xi; O'Curry, *Lectures on the Manuscript Materials of Ancient Irish History* 21–2), and when the issue was further investigated the case could be stated more strongly (Ó Riain, *Corpus Genealogiarum Sanctorum Hiberniae* xxvi–xxix, *Éigse* 18.161–76, ZCP 39.29–32, ZCP 51.130–47). To date, the matter regarding the original name of the manuscript constituting the second part of Rawlinson B 502 remains under debate.

PSH

The **Redon Cartulary** is a collection of 391 charters from south-east Brittany (Breizh). Most can be accurately dated, and they range from the late 8th century to the 11th century, with the densest concentration dating to the period from the foundation of the monastery of Redon (Old Breton *Roton*) in 832 to *c.* 880. Although there are also early modern transcripts, the principal manuscript is a late 11th-century copy now in the library of the Archbishopric of Rennes (Roazhon). The main language of the charters is Latin, but they are of considerable linguistic value for Celtic studies, containing (if we include repetitions and variations) over 1000 place-names and over 6000 personal names, most of which are Old Breton, with smaller proportions of Latin, Germanic/Frankish, and biblical names. The examples of proper names in Breton language §1 are from the Redon charters. While there has been some understandable orthographic modernization by the 11th-century scribes, they have mostly kept the names as they found them: for example, we can see initial *Uu-* gradually replaced by *Gu-* over the course of the 9th century. Charter no. 146 (3 February 821) includes the boundaries of a holding called Rann Riantcar; they are mostly in Old Breton and are very similar to the Old Welsh boundaries in the Book of Llandaf:

> fine[m] habens a fine *rann-Melan, do-n-roch, do-fos-Matuor, cohiton fos, do-Imhoir,* ultra *Imhoir,* p[er] lanna[m], *do-fois fin-ran, do-fhion, do-fin-ran Haelmorin, cohiton hi-fosan, do-rud-fos, cohiton rud-fos,* p[er] lanna[m] *do-fin-ran Loudinoc Pont Imhoir. Haeldetuuid* scripsit.
>
> . . . having a boundary from the end of Melan's holding, to the rock, to the ditch of Matuor, the full length of the ditch, to Imhoir, beyond Imhoir, through the enclosure, to the boundary ditch of the holding, to the rose bushes, to the boundary of the holding of Haelmorin, the full length of the little ditch, to the red ditch, the full length of the red ditch, through the enclosure to the end of Loudinoc's holding at Pont Imhoir. Haeldetuuid wrote [this].

As well as being by far the largest source of Old Breton proper names, the transactions recorded in the charters are of considerable historical interest since they demonstrate how early Breton society and economy functioned. For example, the charters tell us a great deal about parish churches and monasteries, the nature and extent of the community unit called *plebs* (still recollected in the many *Plou-* place-names

of western and central Brittany), the small holdings called *ran(n)* (piece, share), the types of matters dealt with at the places called *lis* (court), and the local magnates who presided there, whose title was *machtiern*. There are also numerous references to higher levels of authority, for example, the Breton rulers Nominoë, Erispoë, and Salomon, and their dealings with the Carolingian emperors. While providing very specific information for south-eastern Brittany in the 9th century, many conclusions to be drawn about language and social organization probably apply to the whole Breton-speaking area, and usefully suggest analogies for less well documented parts of the Celtic countries in early Christian times.

Reformation, literature of the [1] Ireland

When the Irish Parliament decreed in 1560 that ministers without English could continue to hold services in Latin, the exigencies of colonization seem to have taken precedence over evangelization. Given the Dublin authorities' hostility to the Irish language, it is little wonder that the first printed book in Irish was published in Edinburgh (Dùn Èideann) and not in Dublin (Baile Átha Cliath). John Carswell's *Foirm na n-Urrnuidheadh* (1567) is a translation of *The Book of Common Order* (Edinburgh, 1562), itself a revision of John Knox's *Form of Prayers* (Geneva, 1556). Writing in Classical Common Gaelic, a literary dialect understandable in Gaelic Ireland (Éire) as well as Gaelic Scotland (Alba), the author on several occasions specifically addresses his readers in both countries and, though a strong proponent of the Presbyterian form of the Reformation, makes various strategic concessions to pre-Reformation practice. Carswell's preface was dedicated to Archibald Campbell, fifth earl of Argyll, one of the most powerful noblemen in Britain. Not only capable of raising an army of 5000 men, he had close connections with the O'Donnells of Tyrconnell (Tír Chonaill), the O'Neill's of Tyrone (Tír Eoghain) and the MacDonalds of Antrim (Aontroim). Viewed from this perspective, Presbyterianism could have been a major threat to the development of the Elizabethan form of Anglicanism in Ireland (see Christianity [1]).

Elizabeth had already provided a sum of money for printing the New Testament in Irish but, when nothing had happened by the end of 1567, she threatened to withdraw her funds unless action was immediately taken. In 1571 Seán Ó Cearnaigh (?1542–?1587), treasurer of St Patrick's Cathedral in Dublin, published the first Gaelic book to be printed in Ireland, *Aibidil Gaoidheilge & Caiticiosma* (The Irish ABC and catechism, ed. Ó Cuiv). Although this is an Anglican work, Ó Cearnaigh was still prepared to cull some ideologically neutral prayers from Carswell. Of the 200 copies printed, only two survive, and the reference to Elizabeth as 'our pious and all-powerful prince' is a very early acknowledgement in the Irish language of the English monarch's jurisdiction in Ireland.

Despite the Queen's warning, progress on the New Testament was slow. A team project, two of the translators, including Ó Cearnaigh himself, had died by 1587. It was left to Uilliam Ó Domhnaill (*c.* 1570–1628), one of the first three students to enter Trinity College Dublin on its establishment in 1592, to bring the work to completion. In his translation, Ó Domhnaill made use of Erasmus' Greek version, the *Textus Receptus* published in 1516. He also used the Latin Vulgate and the English Geneva Bible (1560). Ó Domhnaill's willingness to work from the best available Greek text marks his translation of the New Testament as a work of evangelical humanism. Published in 1602, only 500 copies were printed. Demand does not seem to have been great, since copies were still available in 1628 when Sir William Usher bestowed twelve copies on Trinity College for the use of Gaelic-speaking students attending the university.

Under the inspiration of Sir Arthur Chicester, Lord Deputy since 1605, Ó Domhnaill undertook a translation of the Book of Common Prayer. *Leabhar na nVrnaightheadh gComhchoidchiond* appeared in 1608 and

is remarkable for its faithful transmission of Cranmer's dignified prose into a natural Gaelic style. Yet, it contains some notable omissions. The ceremonies for the ordination of priests and deacons and for the consecration of bishops are lacking. The omission of the psalter and the lessons from the Old Testament is due to the fact that the Old Testament had not yet appeared in Irish.

In 1627 the Englishman William Bedell (1571–1642) was appointed provost of Trinity College Dublin. His experience as chaplain to Sir Henry Wotton during the latter's term of office as James I's ambassador to Venice (1607–10) made him an attractive candidate to those concerned about the future of a minority church functioning in a hostile environment. Much more important, however, was Bedell's competence in Hebrew, a facility first developed during his undergraduate years at Emmanuel College, Cambridge, and honed to an even higher level as a result of his encounters in Venice with Rabbi Leone de Modena. Bedell also managed to purchase a Hebrew copy of the Old Testament from Rabbi Leone, a manuscript which he brought with him to Dublin, as well as a copy of Giovanni Diodati's annotated translation of the Bible into Italian.

Soon after his appointment, Bedell started learning Irish under the tutelage of Muircheartach Ó Cionga, a member of an Irish literary family from Co. Offaly (Contae Uíbh Fhailí). Appointed bishop of Kilmore and Ardagh (Ardach) in 1629, he immediately set upon the provision of catechetical material in both Irish and English for his flock. In 1631 he published a little book of 13 pages in both Irish and English: *Aibgitir .i. Theaguisg Cheudtosugheadh an Chriostaidhe, The A.B.C. or the Institution of a Christian.*

Much more ambitious was Bedell's plan to translate and publish the Old Testament in Irish, a project which lasted from 1632 to 1638. Bedell's translator was Muircheartach Ó Cionga, aided by another scholar, Séamas de Nógla. The translators were furnished with a copy of the King James's version of 1611. Each evening, Bedell would not only compare the Irish translation with the English version, but also the English with the original Hebrew (Rabbi Leone's manuscript), the Septuagint and Diodati's Italian translation. Whenever the English text was found wanting, the Irish was corrected in the light of the best reading. It bears noting that this procedure was essentially the same as that used in the production of the King James version of 1611. Bedell actually sent to Holland for stamps for printing the Old Testament and had the machinery installed in his episcopal residence. The outbreak of the 1641 rising and the bishop's untimely death from typhus in 1642 ensured that his plans did not come to fruition. One of the translating team, the Revd Donncha Ó Sioradáin, succeeded in saving some of Bedell's papers and books, including Rabbi Leone's Torah and the Irish translation of the Old Testament. Bedell's translation, minus the Apocrypha, was eventually published in London in 1685 under the patronage of the famous scientist, Robert Boyle (1627–91).

Reformation, literature of the [2] Scotland

The formal arrival of the Reformation in Scotland (ALBA) is generally dated to the meeting of the first Reformation Parliament in 1560. It took considerably longer for the Reformation, as a powerful tool for change both spiritual and social, to reach the furthest bounds of the HIGHLANDS and Islands. Even so, the enthusiasm of the Reformed Church and its commitment to securing the hearts and minds of the Gaelic people were greater than is often supposed. This is evident in the expeditious translation of the *Book of Common Order* into GAELIC in the 1560s, and its publication in 1567 by Robert Lekprevik, the Edinburgh printer to the General Assembly of the Reformed Church. The translator of the Gaelic version of the *Book of Common Order* (known as *Foirm na n-Urrnuidheadh*) was John CARSWELL (†*c.* 1572), Reformed Superintendent of Argyll and latterly Bishop of the Isles, and a close confidant of Archibald Campbell, the fifth earl of Argyll. Carswell was the product of two streams of formal education: the one Gaelic and essentially bardic, and the other Lowland and non-

Gaelic. He chose Classical Common Gaelic (with a Scottish flavour) as his medium of translation, and thus distanced the work from vernacular Gaelic and its speakers. His book was prefaced by a laudation of the Earl of Argyll, in which the figures of classical verse were adapted to prose and to the praise of the 'godly Gael' intent on promoting Reformation throughout his bounds and beyond. Carswell's book may not have enjoyed much immediate success, but it did secure a lasting place for the Gaelic language in the upper domains of language use, particularly within the Protestant Church, which became a long-term user of Gaelic in preaching and catechizing.

Carswell's book was followed in the 1630s by a small succession of translated catechisms produced by the Synod of Argyll (e.g. *Adtimchiol an Chreidimh* of *c.* 1631). Initial emphasis was thereby laid on doctrinal conformity. Gaelic catechisms (especially versions of the Westminster Shorter Catechism) continued to have prominence thereafter.

§1. GAELIC BIBLES

Although Carswell had envisaged a translation of the BIBLE into Gaelic as an immediate priority, the task was not undertaken until the 17th century, and was not completed until the early 19th century. In 1657 the Synod of Argyll, which was also engaged in a Gaelic version of the metrical Psalter (completed 1694), tried to expedite an existing plan to translate the Old Testament. The work was delayed by the struggle between Presbyterianism and Episcopacy, leading to the ejection of most of the translators from their parishes after 1660. Nevertheless, a complete Gaelic text of the Old Testament is said to have been available in manuscript by 1673, but it never reached print.

In the late 1680s Classical Gaelic Bibles were imported from Ireland (ÉIRE) as an interim solution, largely through the initiative of Episcopalians who had links with the (Episcopal) Church of Ireland. A translation of the New Testament had been made by Uilliam Ó Domhnaill (William O'Donnell; London, 1602–3) and William Bedell's translation of the Old Testament became available by 1686 (London, 1685–6). Ó Domhnaill's translation of the New Testament may have been in use in Argyll in the earlier 17th century. In 1688–90 the Revd Robert Kirk, Episcopal minister of Balquhidder and later of Aberfoyle, undertook to modify the Classical Gaelic versions for Scottish use, chiefly by expanding scribal contractions and suspensions and converting the earlier Gaelic font to Roman. He produced a pocket Bible, published in London in 1690.

The need for a specifically SCOTTISH GAELIC Bible was accepted only with reluctance by the Scottish Society for the Promotion of Christian Knowledge (SSPCK), who hoped that it would be instrumental in promoting literacy, first in Gaelic and subsequently in English. In the early 1750s the Society tried to reproduce Kirk's New Testament with Gaelic and English on facing pages, but, finding its way blocked, it commissioned its own translation of the New Testament. This was undertaken (from 1758) by the Revd James Stuart of Killin, with the help of the Revd James Fraser, Alness. It was printed (under the care of Dùghall BOCHANAN) in Edinburgh (DÙN ÈIDEANN) in 1767. Work on the Old Testament (in four volumes) continued thereafter. The first two volumes were translated under the supervision of Revd John STUART (1743–1821) of Luss, who also translated the third volume (completed at last in 1801). The fourth volume was translated by the Revd John Smith (1747–1807) of Campbeltown.

The translators of the Scottish Gaelic Bible used the most recent scholarship in their understanding of the original texts. This is particularly evident in their rendering of parts of the Old Testament. Smith made extensive use of the writings of Robert Lowth in his work on the Prophets, and his volume anticipates several of the readings of the English Revised Version of 1885. This was not appreciated at the time, and objections were raised to Smith's 'liberties', which became apparent when set alongside the King James Bible. Smith's volume was extensively revised by the Revd Alexander Stewart (1764–1821) for the 1807 edition. Several further revisions of the Gaelic Bible, mainly affecting style and orthography, were made throughout the 19th century. A modern orthographic revision was published by the Scottish Bible Society in 1992.

In its style, the Scottish Gaelic Bible resembles its Classical Gaelic predecessors, and is to some extent indebted to 'Kirk's Bible' of 1690. It was also influenced by the King James Bible (1611). Although morphology and syntax are generally in keeping with

Scottish Gaelic, the language of the Scottish Gaelic Bible is formal 'differentiated register', with words and idioms which are today regarded as 'Bible Gaelic', in contrast to everyday, spoken Gaelic. It is best described as a form of 'Classical Scottish Gaelic'. First editions included glossaries of the more technical vocabulary, with Gaelic synonyms and English equivalents.

The translation of the Bible into Scottish Gaelic had great significance for the language and its speakers. It signalled the full emergence of a new phase in the literary life of Gaelic Scotland, in which Scotland was shown to be, to a large degree, independent of Ireland. Further literary development, especially of religious prose, was stimulated. It also enhanced the status of Scottish Gaelic by providing a major text in 'upper register'. This, in turn, helped to stabilize the language, providing a standard for spelling and establishing a religious lingua franca. After some initial reservations and preferences for earlier versions, such as Kirk's, it came to be used throughout the Highlands.

The main translation of the Scottish Gaelic Bible was made by a Protestant society, and has been used pre-eminently in the Reformed churches of the Highlands. The Roman Catholic Church did, however, produce a translation of the New Testament in the 19th century (Aberdeen, 1875). This was evidently the work of the Revd Fr Ewen MacEachen (†1849) of Arisaig, and was based on the Vulgate. The style of this translation is noticeably closer to spoken Scottish Gaelic than that of the 1767–1807 Gaelic Bible.

§2. NON-BIBLICAL PROSE AND VERSE

Protestant interest in the Highlands in the 18th century established a strong tradition of printed Gaelic prose, but it was prose of a mainly non-indigenous kind. A very high proportion of Gaelic prose texts were, in fact, translations from English religious writings: 86 out of a total of 146 by 1800. Of the 86 texts, 68 were produced in the period 1751–1800, suggesting that Gaelic was more favourably regarded in literary circles after the JACOBITE REBELLION of 1745. Important translators included the Revd Alexander MacFarlane of Kilninver and Arrochar (translator of Richard Baxter's *Call to the Unconverted*; Edinburgh, 1750) and Patrick MacFarlane, a schoolmaster in Appin (translator of Bunyan's *Pilgrim's Progress*; Edinburgh, 1812). The Catholic Church also encouraged translation of key texts, though in much lesser quantity. A fine and refreshingly idiomatic translation, by the Revd Robert Menzies (*fl.* 1780), of Thomas á Kempis's *Imitatio Christi* was published in Edinburgh in 1785. Poetry, especially of a hortatory or didactic nature, was also stimulated, and is represented pre-eminently in the work of Dùgall Bochanan (Dugald Buchanan, 1716–68), SSPCK schoolmaster at Kinloch Rannoch, Perthshire (Peairt), whose slim volume of eight poems was published in 1767. Volumes of verse headed the list of original religious works appearing in Gaelic in 1741–99. Bochanan's verse was, however, deeply indebted to composers in English, notably Isaac Watts and Edward Young, and in some instances Bochanan translated directly from Watts, without acknowledgement. Gaelic spiritual verse continued to be a major product of the 19th century, flourishing in the context of frequent religious revivals (see SCOTTISH GAELIC POETRY [4]).

Imitation and translation of external models, mostly in English, tended to stifle the growth of a properly indigenous Gaelic spiritual literature, particularly in prose. By the 1790s the balance was being redressed to a certain extent by the gradual publication of printed sermons, composed and delivered by Gaelic-speaking ministers. Curiously, the first surviving printed Gaelic sermons (two homilies, accompanied by three prayers) were published in 1791 in Fayetteville, North Carolina, where many Gaelic-speaking people had settled from the late 1730s (see CELTIC LANGUAGES IN NORTH AMERICA). The author of these sermons was the Revd Dougal Crawford (†1821), who returned to Scotland and served latterly as minister of his native parish of Kilmorie in the island of Arran (Cille Mhoire, Arainn). It is remarkable that it should have taken so long to produce Gaelic sermons in printed format. Part of the reason for such 'delay' may be that sermons were regarded as essentially 'oral' in their inspiration and delivery, and that printing came about largely in response to changed circumstances, such as emigration, in which it was more difficult to have access to regular Gaelic ministry. It is also noteworthy that the printing of Gaelic sermons began at much the same time as the Scottish Gaelic Bible was edging its way slowly towards completion.

§3. JOURNALS AND SUPPLEMENTS

Following the completion of the Scottish Gaelic Bible, and the consequent extension of literacy in Gaelic, Gaelic literature as a whole was strengthened by the founding of two Gaelic journals (*An Teachdaire Gaelach* [The Gaelic messenger], 1829–31, and *Cuairtear nan Gleann* [Visitor of the glens], 1840–3) by the Revd Dr Norman MacLeod (1783–1862), a prominent minister of the Church of Scotland. These journals carried original sermons, stories and traditional tales, and laid the foundation of modern Gaelic literature, as we would recognize it today. Their overall aim was didactic, inculcating moral and spiritual values, but they also imparted knowledge about natural phenomena (e.g. volcanoes), foreign countries (with emigrants in mind), and technical achievements (e.g. the steamship). MacLeod's journals offered literary opportunities to other ministers, who went on to found or edit further Gaelic periodicals in the later 19th century. From the second half of the 19th century the main Protestant churches active in the Highlands have produced Gaelic Pages or Supplements, some of which continue to the present time. The Gaelic Supplement (established 1880) of *Life and Work*, the monthly magazine of the Church of Scotland, has made a particularly important contribution to Gaelic literature in the 20th century.

§4. OVERVIEW

Since the Reformation, Gaelic religious literature, prose and verse, has been produced in some profusion in Scotland, generally by writers and printing presses closely related to the various Protestant churches. Inevitably, much of the material has been doctrinal and didactic, aimed at the propagation of the Christian faith, but, with the gradual expansion of themes and registers, religious composers and publishers have made a vital contribution to the canon of Gaelic literature across the centuries.

Reformation, literature of the [3] Wales

Scriptural translation forms the basis of Welsh Reformation literature. Whereas pre-Reformation translations of the scriptures into Welsh took the form of loose paraphrase, usually centred on the Vulgate (the standard Latin Bible text of the Middle Ages; see JEROME), Reformation translation manifested a Protestant emphasis on lexical fidelity and a humanist emphasis on learning. Its highest achievement was undoubtedly the translation of the Bible into Welsh, brought about by parliamentary legislation under Elizabeth I in 1563 and undertaken by several translators, notably William Salesbury and Bishop William Morgan.

The work of these reforming Bible translators was underpinned by a strong belief that Protestantism constituted a restoration of the old religion of Wales (Cymru), proof of which still existed in Welsh proverbs and in Welsh biblical names, such as *Dewi* 'David', *Selyf* 'Solomon'. A humanist emphasis on dignity and diversity of style also manifests itself, with extensive use of archaic and Latinate forms, along with the creation of neologisms and the deliberate variation of orthography, vocabulary, and syntax.

William Morgan (1545–1604), at the time vicar of Llanrhaeadr-ym-Mochnant (Denbighsire/sir Ddinbych), undertook to edit and regularize Salesbury's New Testament and Psalms and himself to translate the Old. The complete translation of the Bible was finally published in 1588. Its clarity and dignity of diction and its rich idiomatic use of the Welsh language was greeted with much delight, and was welcomed by poets such as Siôn Tudur (*c.* 1522–1602) and Siôn Dafydd Rhys (1534–*c.* 1619). The 1588 Bible, subsequently edited by Bishop Richard Parry (1560–1623) of St Asaph and Dr John Davies (*c.* 1567–1644) of Mallwyd, and reissued in 1620, provided a firm basis for the development of a standard Welsh

language into the modern period. It inspired a 'golden age' of Welsh prose writing during the late 16th and throughout the 17th century, reaching its apogee in the genius of Puritan writers such as Morgan LLWYD (1619–59) and Charles Edwards (1628?–*post* 1690), as well as the Anglican Ellis WYNNE (1671–1734). In the field of poetry, Edmwnd Prys (1543/4–1623), archdeacon of Merioneth (Meirionnydd), was a learned poet and ardent humanist whose debate with fellow-poet Wiliam Cynwal (†1587/8) crystallizes the tension between Welsh humanists and poets at the time (see YMRYSONAU). Prys's outstanding contribution to Welsh Reformation literature was his metrical rendition of the complete Psalter in Welsh, which was published as an appendix to the Welsh Book of Common Prayer in 1621.

The publication of the Welsh Bible was greeted with enthusiasm by two other Welsh translators of Reformation literature. The first, Huw Lewys (1562–1634), was the author of *Perl Mewn Adfyd* (1595), a translation of Miles Coverdale's *A Spyrytuall and moost Precious Pearle*, itself adapted from an essay by Otto Werdmüller of Zürich. The second, Morris Kyffin (*c.* 1555–98), is primarily known for his translation of Bishop John Jewel's *Apologia Ecclesiae Anglicanae*; *Deffynniad Ffydd Eglwys Loegr* was published in 1595 and its limpid prose style reveals Kyffin's mastery over his medium. In his foreword to the translation he argued strongly in favour of publishing books in the Welsh language.

Protestantism, and its radical Puritan wing, also produced a large body of Welsh literature, mainly translations, as Welsh prose entered a period of stability and maturity. Notable among original works in Welsh is the short but luminous anti-witchcraft tract by Robert Holland (*c.* 1556–?1622), written in dialogue form, entitled *Ymddiddan Tudur a Gronw* (*c.* 1595). This unique example of its genre in Welsh was later printed in Stephen Hughes's *Canwyll y Cymry* in 1681. Oliver Thomas (*c.* 1598–1652) was a Puritan clergyman who wrote in an unaffected but competent prose style a treatise entitled *Car-wr y Cymry*. Published in 1631, its preface was dedicated to the sponsors of the portable Bible of 1630, primarily Thomas Myddelton and Rowland Heylin.

Translating the founding texts of Anglicanism into Welsh also produced a large body of illustrious and influential prose writing. Edward James (?1569–?1610) produced an excellent Welsh rendering of Cranmer and Jewel's Book of Homilies in 1606. Rowland Vaughan was a prolific translator, but he is particularly remembered for *Yr Ymarfer o Dduwioldeb* (1629), a translation of Lewis Bayly's *Practice of Piety*, an enormously popular handbook of devotion. But highest among these was John Davies of Mallwyd's *Llyfr y Resolusion* (1632), a translation of Edmund Bunny's Protestant version of Robert Parsons's *The First Book of the Christian Exercise appertayning to Resolution*. For his translation, Davies was later lauded by Saunders LEWIS for 'manifesting splendid rhetoric . . . with mastery of the power of the idiom and all the richness of Welsh vocabulary' and for producing the sole literary example of Welsh baroque style.

Reformation, literature of the [4] Brittany

In contrast to Scotland (ALBA) and Wales (CYMRU), the writers of Brittany (BREIZH)—especially Breton-speaking Lower Brittany (BREIZH-IZEL)—remained predominantly Catholic. Accordingly, the literature covered in this article is connected with the Catholic Counter-Reformation, rather than the Protestant Reformation; on the Protestant minority in Brittany and their impact, see CHRISTIANITY IN THE CELTIC COUNTRIES [5] §2.

Almost all Breton writing before the French Revolution has some connection with religion. This is especially true of mystery plays and theatrical plays transmitted in manuscript form in general. It is also the case with dictionaries, from the CATHOLICON which, at the end of the Middle Ages, enabled Breton-

speaking clerics to learn Latin and French, to the *Dictionnaire françois–celtique ou françois–breton composé à l'usage des ecclésiastiques désireux d'exercer leur ministère en langue breton* (French–Celtic or French–Breton dictionary composed for the use of ecclesiastics desirous of practising their ministry in Breton), a work of the Cappucin monk, Grégoire de Rostenen (1732).

Knowledge of BRETON was indispensable for confession or preaching in a population of a million Catholics, but this does not mean that the authors who used this language sought to create a cultural language from it. The effects of the later Catholic Counter-Reformation did not truly begin to be felt in the area until the middle of the 17th century, and it is from then on that the works become more numerous.

A first catechism, inspired by the Council of Trent (1545–63), appeared in the 16th century—that of Gilles de Keranpuil (1576), translated from Peter Canisius (1521–97). Other translations of Jesuit works followed, such as those of Tanguy Gueguen, *An mirouer a confession* (The mirror of confession, 1621) and *Doctrin an christenien* (Christians' doctrine, 1622), a Breton version of the catechism of Ledesma. The books of this period—those already cited and a few others, such as a *Confessional* of 1612 or a *Doctrinal an christenien* (The Christians' doctrinal) of 1646—are known only by one example, or even only by their title. This is doubtless because their audience quickly became disaffected with them, which can perhaps be linked to their orthography.

Writing in Breton was modernized on the initiative of the Jesuit Julian MAUNOIR, a native of Upper Brittany (BREIZH-UHEL) who had learned the language and who, in the 1640s, began a long career as a missionary. He himself published five works, notably the *Sacré Collège de Jésus* (Sacred College of Jesus, 1659), composed of a *dictionnaire* (dictionary), a *grammaire et syntaxe* (grammar and syntax) and of *quenteliou christen* (Christian lessons), a multi-layered catechism. He is also the author of *Canticou spirituel* (Spiritual canticles). Numerous authors, before and especially after Maunoir, used this genre of canticle, borrowed from the Protestants and well adapted to populations whose majority were illiterate. This is the case, for example, of *Cantiqueu spirituel ar deverieu ar christen* (Spiritual canticles on the duties of the Christian) of Pierre Barisy in the Vannetais dialect (Gwenedeg). Collections of canticles are also found dispersed in works of devotion such as those of Charles Le Bris (1660/1665–*c.* 1737). This priest from LEON wrote around 15 works, many of which are translations—sometimes expurgated—of successful European productions inspired by the Council of Trent, e.g. *Introduction d'ar vuez devot* (Introduction to the religious life, François de Sales), *Preparationou d'ar maro* (Preparations for death, Jean Crasset, Jesuit), *Ar stationou eus or Salver en e Passion* (The stations of Our Saviour in His Passion, i.e. the Stations of the Cross, Adrien Parvilliers, Jesuit), *An horoloch a Bassion Hor Salver* (The horologue of Passion of our Saviour, Alphonse de Liguori). Among his works, re-edited many times, the most celebrated remains the *Heuryou brezonec ha latin* (Breton and Latin hours), in their full form or abridged as the *Heuryou bihan* (Little hours). This collection of prayers, instructions, and canticles was still used for the mass in the first half of the 20th century.

Prior to 1866, there was no complete Breton translation of the BIBLE, but there was an early selection of passages in *Abrege eus an aviel gant meditationou* (Abridgement from the Gospel with meditations) by Claude-Guillaume de Marigo (1693–1759). This ecclesiastic is best known for his *Buez ar Sænt* (Lives of the saints, 1752), presented as a translation, which furnished, for each day of the year, a pious story followed by moral reflections. The meagre attention given to the Breton saints reflects Marigo's non-Breton sources and probably also his desire to give prominence to the blessed recognized by the Roman Church, as well as his lack of interest in the region. In the 19th and 20th centuries, other authors were to take up the *Buez ar Sænt*, incorporating more of the saints venerated in Brittany.

While the Breton speakers of KERNEV, Leon, and TREGER might have read the works of Le Bris and Marigo with difficulty, strong dialect differences barred those of GWENED. Fewer books were available in this dialect, though there were some translations, such as the one attributed to Pourchasse (1720–96), the *Imitation hun Salver Jesus-Christ* (Imitation of Our Saviour Jesus Christ), a classic which had previously been translated at least twice by priests from Kernev (Yves Ropars, 1689; Marigo, 1753).

Priests preaching to Breton congregations could use the printed works discussed above as models, but, unlike priests working in French, they did not have

published collections of sermons, and thus had to create their own texts, which they often made by translating from French. Among the manuscripts of Breton sermons which have survived the most original are the explanations of the graphic *taolennoù* used as visual aids during missions and retreats, images developed at Vannes (Gwened) and which were particularly effective among the Breton-speaking Catholics up until the mid-20th century.

The originality of the Breton sermons does not imply that they attained the status of great literature; they were rather a utilitarian device. The missionaries of the Counter-Reformation tended, like Le Bris, to see the Breton language as an *extrêmement ingrate et stérile* (extremely arid and sterile) language, merely a vehicle for religious teaching. As civil authorities, the Catholic clergy possessed a *de facto* monopoly on writing in Breton. Thus, over many generations, in the pulpit, in the catechism, in the confessional, and in books of piety, the discourse of the Catholic Counter-Reformation had a profound spiritual and linguistic impact on Breton-speaking Brittany.

reincarnation and shapeshifting

§1. CLASSICAL EVIDENCE

Greek and Roman authors speak with unanimous certainty about DRUIDS teaching a doctrine of the immortality of the soul. The details of this doctrine, however, are more difficult to recover. CAESAR says cryptically that souls 'pass after death from some to others' (*ab aliis post mortem transire ad alios*), a statement which could be taken to refer to birth in a new body. This is surely what DIODORUS SICULUS has in mind when he attributes to the druids the belief that the soul 'lives again after a certain number of years, the soul having entered another body'. According to the poet LUCAN, the druids denied that souls passed into a realm of the dead, claiming rather that 'the spirit governs limbs [i.e. inhabits a body] in another region [*orbe alio*, which may also be translated as OTHERWORLD]; if you [the druids] know whereof you sing, death is the middle of a long life'. Other writers compare the druids' teaching on the subject with that of the Pythagoreans, who held that souls might be reborn in animal as well as human bodies (a belief known as 'metempsychosis'). But it is hard to know whether anything more than a general resemblance to Pythagorean beliefs can be inferred from these laconic references (see GREEK AND ROMAN ACCOUNTS; RELIGIOUS BELIEFS).

Here, as elsewhere, the classical evidence is difficult to interpret, both because of its brevity, and because we do not know how accurate the knowledge of these writers really was. Fortunately, their testimony can to some extent be supplemented from the medieval literatures of Ireland (ÉRIU) and Wales (CYMRU).

§2. IRISH LEGEND

Of particular interest in this connection is a group of stories which can be designated 'rememberer tales', in which figures who have miraculously survived from the distant past hand on their knowledge to the learned men of the Christian period (see LEGENDARY HISTORY). In some of these accounts, the 'rememberer' has lived continuously through the ages, or has been revived from the dead; in others, we may be able to detect echoes of a doctrine of rebirth.

Thus, the late Old Irish story of Túan mac Cairill (SCÉL TUÁIN MEIC CAIRILL) describes how a man who came to Ireland as part of the first settlement after the biblical flood lived on through all the subsequent phases of its legendary history by passing through the shapes of a stag, a boar, a cormorant, and a salmon; with each metamorphosis, his youth was renewed. While in salmon form he was caught, cooked, and served to the queen of the ULAID; she conceived after eating him, and bore him as a human child with memory of all of his previous existences. A particularly interesting feature of this story is that it describes the technique used by Tuán in order to pass from one shape into another: he would retire to a cave, fast for a fixed period, fall into a sleep in which he remembered his earlier shapes, and then take on a new form (Carey, *Ériu* 35.93–111).

Fintan mac Bóchra was supposedly even older than

Tuán. He was said to have come to Ireland before the Flood, and to have been preserved by God as a witness to all Ireland's earliest history. Although the original version of his legend presents Fintan simply as an undying sage, a natural confusion with Tuán led to Fintan also sometimes being said to have become a salmon.

The 7th-century Ulster prince Mongán mac Fiachna was already a focus of legend in the generations immediately following his death; some of these tales relate directly to our present theme. In one early anecdote a mysterious youth whom the author tentatively identifies as Mongán tells Colum Cille that he remembers a time when there was a flourishing kingdom on the site of Loch Feabhail (Lough Foyle); subsequently, he has existed as a deer, a salmon, a seal, a wolf, and then as a man again (Meyer & Nutt, ZCP 11.313–20). Immram Brain (The voyage of Bran) also describes Mongán as passing through a series of forms (Mac Mathúna, *Immram Brain* 42, 55). In another story the warrior Caílte, returned from the dead, says that Mongán was formerly the great Fenian hero Finn mac Cumaill. Two points are particularly deserving of notice in this last account: what is in question here is reincarnation in the strict sense, not merely a continuous existence passing through many shapes. Mongán silences Caílte when the latter alludes to his former identity, forbidding him to speak of the matter further (Meyer & Nutt, *Voyage of Bran* 1.45–52).

The heroine of Tochmarc Étaíne ('The Wooing of Étaín') is a woman of the Tuath Dé who is changed into a pool of water by a jealous rival; the pool generates a fly which, after many centuries, is swallowed by a queen, and the queen subsequently gives birth to Étaín as a mortal child (Bergin & Best, *Ériu* 12.152–7). The main drama of the tale lies in its account of the stratagems employed by Midir, Étaín's husband in her former life, to win her back for himself. It is noteworthy that Étaín, unlike Tuán and Mongán, does not remember her previous existence.

Another female shapeshifter is Lí Ban ('beauty of women'), a survivor of the flood which created Loch nEathach (Lough Neagh). Lí Ban lives for a long time in a glass chamber beneath the lake, is then transformed into a mermaid, and at last, ages later, is netted and baptized (O'Grady, *Silva Gadelica* 1.234–7, 2.266–9). The importance of a flood in her legend recalls the connection between Mongán and Loch Feabhail; there may also be some link here with the curious episode of Étaín's transformation into a pool.

One of the 'fore-tales' of Táin Bó Cuailnge ('The Cattle Raid of Cooley') describes how a quarrel between two swineherds of the Tuath Dé led to their fighting against one another in a lengthy series of transformations. In what seems to be the earliest version of the story, these are listed as pairs of ravens, water monsters, stags, warriors, phantoms, and worms. The worms fall into water and are swallowed by cows, who conceive and bear two calves; these grow up to be the bulls on whose account the great war of the Táin is waged (Roider, *De Chophur in Dá Muccida*).

§3. WELSH LEGEND

In Wales, the principal figure to be considered in this context is Taliesin, a 6th-century poet to whom many later compositions were attributed. Several of these portray him as the possessor of supernatural knowledge, including knowledge of the distant past, and of his former existence in other shapes. Thus, the poem *Cad Goddau* (The battle of the trees) opens with the lines 'I was in many shapes before I was set free', and goes on to state that the speaker has been a sword, a shower of rain, starlight, a word, a book, a lantern, and so on; later, he says that 'the magician of magicians enchanted me before the world' (J. Gwenogvryn Evans, *Facsimile and Text of the Book of Taliesin* 2.23, 26; cf. Ford, *Mabinogi and Other Medieval Welsh Tales* 184–7).

How much of this cryptic diction is simply metaphorical? In the present state of our knowledge, no confident answer can be given. But several passages in this 'pseudo-Taliesinic' poetry seem to foreshadow a story, first attested only in early modern Welsh sources, of how Taliesin first obtained his remarkable gifts. Set to guard a cauldron of knowledge by the witch Ceridwen, he accidentally absorbed its benefit for himself. The furious Ceridwen pursued him through several transformations; at last, as a hen, she swallowed him in the form of a grain of wheat. Nine months later she bore him as a beautiful child, whom she placed in a sack and threw into the sea; eventually the sack was fished up by a prince named Elffin, and Taliesin became his poet (Ford, *Ystoria Taliesin*). The sequence of metamorphoses ending in being swallowed and reborn, and the theme of emergence from water, vividly recall the Irish tales cited above.

Taken in the context of the foregoing, other incidents in medieval Welsh narrative may also be interpreted as reflecting traditions of transformations and rebirth. In the tale of MATH FAB MATHONWY, GWYDION and his brother Gilfaethwy are condemned to become mating pairs of deer, swine, and wolves; later in the tale, the mortally wounded LLEU turns into an eagle, but is eventually restored to human form (Ford, *Mabinogi and Other Medieval Welsh Tales* 96–8, 106–7; Ifor Williams, *Pedeir Keinc y Mabinogi* 75–6, 88–90). In CULHWCH AC OLWEN, ARTHUR and his men interrogate a series of animals, each more ancient than the last, and finally learn the answer from a salmon which is the oldest creature in the world (Bromwich & Evans, *Culhwch ac Olwen* 31–3; Ford, *Mabinogi and Other Medieval Welsh Tales* 147–9). We may perhaps compare the story of Tuán, where knowledge of the distant past is also mediated by a series of creatures culminating in a salmon.

§4. CELTIC METEMPSYCHOSIS?

Modern scholarship has interpreted this evidence in differing ways. Henri d'Arbois de Jubainville saw the insular legends as providing clear corroboration of the ancient comparison between the doctrines of the druids and the Pythagoreans. More recently, the analogy of Hinduism has been invoked by Ulrike Roider, who ingeniously suggested that the cryptic word *cophur* in the title of the tale of the quarrelling swineherd is cognate with Sanskrit *samsarā,* a term applied to the chain of rebirths. As has been pointed out, however, *samsarā* only came to refer to reincarnation fairly late in its semantic development; therefore, there can be no serious question of its relevance to Celtic material.

Arbois' views were challenged by Alfred Nutt, who pointed out that the stories were concerned mainly with shapeshifting, not rebirth; further, they did not describe the fate of the soul in general, but only the exploits of a handful of demigods and magicians. Instead of 'pantheism', therefore, he proposed a notion of 'pan-wizardism': that certain adepts had gained the power to triumph over death.

If Arbois was too confident, Nutt was probably too dismissive. It would be strange indeed if the medieval literatures preserved unambiguous testimony to a doctrine of the afterlife which was in fundamental disagreement with Christian teaching. In the Pythagorean tradition also, the narrative focus is not on the general run of humanity, but on those exceptional individuals who are able to remember their prior lives. It is also worth stressing that, while many of the episodes in the tales involve metamorphosis rather than reincarnation per se, the theme of rebirth is seldom wholly absent. One striking piece of evidence seems to bridge the gap between ancient ethnography and medieval legend: the author of the theological treatise *De mirabilibus sacrae scripturae* ('On the miracles of holy scripture', written AD 655) speaks of 'the ridiculous fables of the druids, who say that their ancestors flew through the ages in the form of birds' (cf. Smyth, *Cultural Identity and Cultural Integration* 37). Here, shapeshifting and the soul's survival appear to be linked, in a contemporary account of druidic teaching in early Christian Ireland.

Two further points may be mentioned in conclusion. In most of the insular examples, memory of former existences is invoked to provide authority for accounts of the distant past: the doctrine's usefulness in legitimating historical tradition may well have helped it to survive, if only as a narrative motif, following the adoption of CHRISTIANITY.

It should also be stressed that there is evidence for several other ideas regarding the soul's fate after death: the Celts, like other peoples, are unlikely to have had a simple or consistent view of this mysterious, absorbing subject.

John Carey

Reinecke, Paul (1872–1958) was the German archaeologist chiefly responsible for the way in which we today refer to the cultures and chronological periods of the Celtic-speaking groups who lived on the European mainland in the pre-Roman Iron Age. He was born in Berlin-Charlottenburg, and studied medicine and later archaeology in Munich. In 1897 he gained a doctorate in anthropology for a thesis on racially marked skeletons in Africa, since prehistoric archaeology was not recognized at the time as a distinct discipline at the University of Munich. He was an assistant at the Römisch-Germanisches Zentralmuseum at Mainz during the years 1897–1908. As a result of his extended travel and studies of prehistoric material culture, he developed and published a chronology of the pre-Roman metal ages (*Chronologie der vorrömischen Metallzeiten* i.e. Copper Age, Bronze Age, Iron Age). With its fourfold scheme of Hallstatt A, B, C, and D and La Tène A, B, C and D, this still forms the basis for the chronology of the 'Celtic' period in most of central and eastern Europe, in contrast to the scheme developed by Joseph Déchelette (1862–1914), which became more widely used in francophone western Europe. Déchelette's scheme consisted of a 'First Iron Age' roughly equivalent to Reinecke's Hallstatt, and a 'Second Iron Age' roughly equivalent to Reinecke's La Tène. Reinecke's landmark publication was *Zur Kenntnis der La-Tène-Denkmäler der Zone nordwärts der Alpen* (On the La Tène monuments from the area north of the Alps, 1902).

Although Reinecke's typological/chronological system remains valid, it was based purely on central European evidence. His publications on Celtic archaeology are therefore of limited usefulness today because of his mistaken view that many of the skilful artefacts now known to have been of local manufacture were rather imports from the Greek colony of Massalia tailored to barbarian tastes. From 1908 Reinecke was Director (*Hauptkonservator*) at the newly founded *Generalkonservatorium der Kunstdenkmale und Altertümer Bayerns* (Institution for the Preservation of Bavarian Historical Monuments). Having refused a Chair in archaeology at the University of Munich, he was head of the Römisch-Germanisches Zentralmuseum from 1926 until his retirement in 1937.

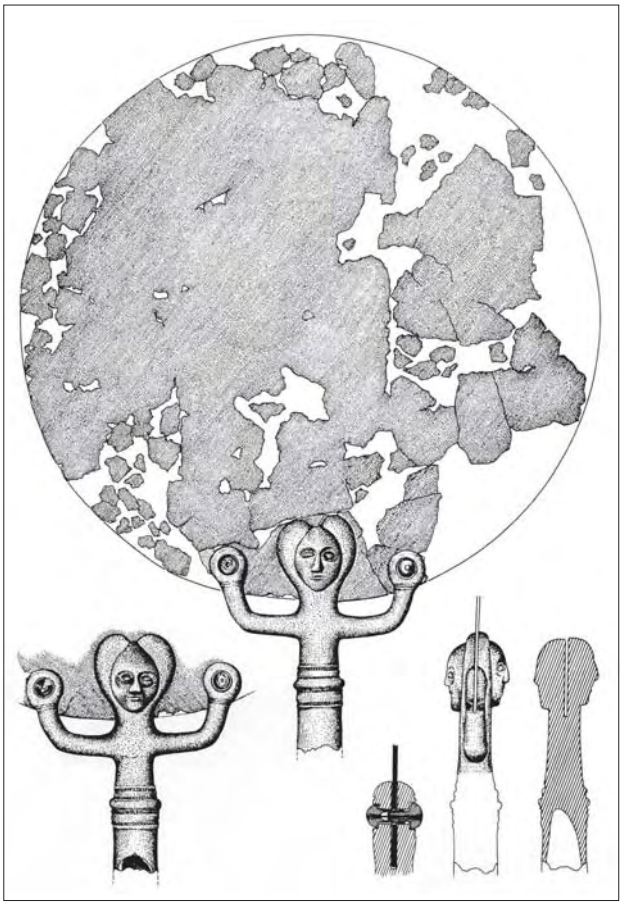
Reinheim is the site of an Early La Tène cemetery. It is located in Gersheim (Saarpfalz, Saarland), 19 km from Saarbrücken, on the French–German border. Some evidence of prehistoric burials was found in the Katzenbuckel hill in 1952, and the discovery of an elaborate bronze mirror there led to an excavation in 1954. During the excavation, led by the German archaeologists J. Keller and A. Kolling, three burial mounds and evidence of a fourth were discovered. Mound A contained exceptionally rich grave goods, including the bronze mirror and jewellery, assumed to be the property of a high-status female,

Drawing of a bronze mirror with anthropomorphic handle found in a burial at Reinheim



an Iron Age 'princess'. These consisted of a gold torc, two gold bracelets, a bracelet of black shale, a green glass bracelet, two gold rings, one bronze mask fibula, another bronze fibula and two gold fibulae, the remains of a belt chain; other paraphernalia discovered were interpreted as a jewellery box and a drinking set consisting of a jug and two bronze bowls with the remains of golden ornamental fittings. In the undisturbed mound remains of a wooden burial chamber were found which dated to *c.* 400 BC.

The tomb of the Reinheim 'princess' shows that rich burials were not restricted to men in the La Tène period. Indeed, the woman buried there must have been of considerable social significance, possibly a member of the tribal royalty. The grave goods have parallels with the extremely rich Late Hallstatt period (*c.* 480 BC) female burial at Vix, especially the torc with crowned heads and the gold bracelets. There is also a comparable rich female chariot burial of the Middle La Tène period from Waldalgesheim. The finger rings from Reinheim show Etruscan/Greek influence. The bronze jug has a parallel at the Dürrnberg in Austria, and the mask fibula implies dating to *c.* 400 BC (Early La Tène).

religious beliefs, ancient Celtic

The religious beliefs of the ancient Celts must be seen in the context of their vast settlement area, which led to pronounced differences in local practices. The period covered stretches from the late Hallstatt period to the coming of Christianity in the 3rd–6th centuries AD. During that time, Romanization gave rise to combining elements of Celtic and Graeco-Roman religion. In Britain, native Celtic religious practices enjoyed a revival towards the end of Roman rule *c.* AD 409/410, and remnants of the Celtic belief system survive in Celtic hagiography, in secular medieval literature, and in the folk traditions of Britain and Ireland. Of all aspects of Celtic culture, religion at present attracts special popular interest.

§1. sources

There are many hundreds of short texts in the form of inscriptions, mainly epitaphs and votive inscriptions. These are mostly in Greek or Latin with Celtic proper names, and more rarely in continuous Old Celtic. There are some important curse inscriptions (for example, the Latin Ogmios curse of Bregenz and the long Gaulish text of Larzac) and some official texts (such as the remains of a Gaulish calendar at Coligny), and possibly a series of restrictive building prohibitions in the precinct of a Celtiberian god at Botorrita. The interpretation of many of these texts is controversial; for some, no satisfactory reading has been found to date. The earliest Irish epitaphs in ogam script, found in Ireland (Ériu) and western Britain, are mostly personal names in the genitive, and thus do not yield much for the study of religious beliefs.

Texts by the classical authors have to be placed in context, for example, the famous passage on human sacrifice to the gods Teutates, Esus, and Taranis found in Lucan, on which the details given by the ancient scholiasts of Bern vary. It was common for classical authors to contrast the barbarity of Celtic religious beliefs with the sophistication of Roman rule, an agenda very evident in Caesar's *De Bello Gallico* (6.13f., 16–19).

Indigenous depictions go back to the Hallstatt period, especially in the form of the heroic dead or deified ancestors, found on the archaic statues on major burial mounds such as Hirschlanden or Glauberg. These might be interpreted as the resting places of the souls of the deceased. Many of the early images are shown wearing what is probably a ritual hair or head adornment which resembles Mickey Mouse ears and has erroneously been interpreted as mistletoe leaves. The tendency to depict severed heads —often with the facial expression of a dead person and probably connected to the ritual display of skulls—is also worth mentioning. It seems that they were intended to transfer the magical power of the skull. Thus, head hunting and the head cult, as testified by Posidonius and other authors up to the Middle Ages, surely had religious meaning.

Among the Graeco-Roman influenced sculptures, that of Euffigneix (Haute-Marne), which has not been fully interpreted to date, and the strongly Mediterranean influenced depiction of a deity at Bouray-sur-Juine (Seine-et-Oise) stand out. The latter god has stag hooved legs and is often seen as Cernunnos (see below). In many instances, it is the combination of a name and an unusual image that points towards a Celtic source, for instance, the votive pillar endowed by the Paris boatmen's guild in the period of the Emperor Tiberius (AD 14–37). It shows the God ESVS as a woodcutter, the god SMERT (perhaps the 'smeared, anointed' one; cf. ROSMERTA) as a muscular man killing a snake, Tarvos Trigaranus as a bull with three cranes, and a god with antlers, C]ERNUNNOS ('the horned one'). Another complex image which has not yet been fully understood is the votive pillar of Mavilly (Côte-d'Or). The 'Jupiter Giant' or 'Giant Rider' pillars of Belgica and Germania superior, endowments by private individuals, show a snake-legged god ridden by Jupiter on a pillar which rises from a stone with four Roman gods. The silver Gundestrup cauldron (Denmark) and its complex imagery is especially mysterious. In addition to an initiation rite and a depiction of Cernunnus complete with horned snake, it displays echoes of the Cybele and Romano-Iranian Mithras cult.

Other archaeological finds connected with settlements, graves, and sacrificial sites have supplied detailed material which is very important for the history of religion. However, since these finds are 'mute' (i.e. they have no written descriptions), interpretation of their religious meaning must remain speculative. The sensational finds in Picardie (Gournay-sur-Aronde and Ribemont-sur-Ancre) illustrate the sacrifice of weapons, animals, and humans, and allow detailed conclusions on ritual practice. However, they yield hardly any information on the war gods for whom they were intended, for example, whether those deities were of a tribal character or were associated with a special sacred vessel. The Galatian sacrificial site at Vindia (Gordion), near Ankara, discovered in 2002, is similarly mysterious. The ritually slain bog man from Lindow Moss raises questions of the relationship between law and religion. All such finds pose problems of theological interpretation. Archaeologists and Celtic scholars have attempted to solve them with the assistance of medieval written Celtic sources from Ireland and Wales, but their application has to be handled with care.

§2. interpretation

The tendency to identify Celtic deities with their Mediterranean counterparts (interpretatio romana) is inseparable from its logical reversal, *interpretatio Celtica* (i.e. the identification of Roman and Greek gods with their Celtic counterparts). A prime example is the worship of the god Mercurius, stressed by Caesar. It has usually been assumed that this refers to the Celtic god Lugus, who was worshipped widely, as the many place-names (e.g. Lugudūnon) indicate. However, the equation of Lugus with Mercurius is not completely certain. Another example is the god Belenos, who is often identified with Apollo. The Roman Minerva, also called Sulis (Sun) at Bath, seemed to have great similarity with Belisama, so that according to *interpretatio Celtica* she is identified with the latter.

Analysing the etymology of the names of Celtic deities is another tool used for interpretation. While it is generally agreed that Cernunnos is named after his 'horns' and *Iovantucarus Mars* is plausibly taken to be the one who 'loves youth', there is no satisfactory explanation of the name *Esus*, for instance.

Comparisons within the framework of Indo-European studies are often illuminating. Celtic practices have especially been compared with those in India, using a theoretical approach which assumed that archaic beliefs and practices, as well as archaic linguistic forms, which had elsewhere been replaced by innovations spreading out from the centre, survived in the eastern and western marginal areas of Indo-European settlement. This probably applies to the practice of sacrificing a white mare (to Macha?) following an implied sacred marriage (*hieros gamos*) including sex with the prince about to be initiated as king. According to Giraldus Cambrensis, the ritual is said to have survived in Donegal (Tír Chonaill) until the 12th century AD and may be compared to the horse sacrifice of the Old Indian *Aśvamedha*. Evidence for such initiation rites is corroborated by various Irish written traditions in which the king could only rule after having been empowered by his sacred marriage to the goddess of the land (e.g. Macha in

Ulster (Ulaid), Medb 'the intoxicating one' in Connacht, *Flaithius Érenn* 'sovereignty Ireland' in Teamhair; see further SOVEREIGNTY MYTH). Royal names often contained an element which referred to a horse (e.g. Old Irish *ech* in *Eochaid* or Welsh *march* in *Llywarch*, Old Welsh *Loumarch*).

Lebar Gabála Érenn ('The Book of Invasions') reports on the mythological migrations to Ireland and the battles of the Túath Dé with the demonic Fomoiri and the ancestors of the Irish led by Míl Espáine. Overwhelmed by the latter, they retreat to the megalithic tombs, where they live on as *aes síde* 'people of the síd', the FAIRIES of modern folk-tales. Sometimes, the literary tradition can be linked to archaeological finds, for example, the trackway surfaced with massive boards from Corlea, Co. Longford (Contae Longfoirt), in the 2nd century BC, which seems to confirm the legendary road building in the tale Tochmarc Étaíne ('The Wooing of Étaín').

The Celts on the British Isles celebrated four main holidays, remnants of which survive, having undergone Christian reinterpretation (see CALENDAR; BELTAINE; IMBOLC; LUGNASAD; SAMAIN).

Rituals involving masks are attested by images (such as the horse masks on the Aylesford bucket) and the early Christian decisions of synods in Gaul, in which, for instance, the wearing of stag masks (*cervulum facere*) is forbidden. In Wales, Mari Lwyd processions have continued to recent times in parts of Glamorgan (Morgannwg).

§3. DEITIES

While there was apparently no Celtic pantheon (unified system of deities), a range of typically Celtic divine figures is attested. They often occur as couples or trinities, another indication of their archaism. Many Celtic sculptures which have three faces may correspond to an Indo-European three-faced deity or trinity of deities (cf. Old Indian *trimūrti*). The mother goddesses (either one or three) are known as Matronae, whose cult as 'mothers' is linked to that of a divine son Maponos. They were also seen as goddesses of fertility and helpers in need. Many sacrificial goods in holes and trenches seem to have been given to the mother goddess as earth mother. One cult name of the mother goddess seems to have been *Rīganī*, simply 'the queen', cf. **Rīgantona* 'divine queen', the preform of Welsh Rhiannon. The name of a goddess could also correspond to a tribal name, as, for instance, Brigantia (Old Irish Brigit) to the Brigantes and Brigantii. Epona, the horse goddess, most often depicted on the back of a horse, has features in common with the mother goddesses. Closely related, too, are healing deities such as Sequana, goddess of the source of the river Seine, and the nymph-like Coventina from northern England. Since the 'tribal mothers' would protect their tribe in peace and in war, they could metamorphize into war goddesses; Brigit appears as the war goddess of Leinster (Laigin), for example.

The father of the tribe and god of the dead was the 'father god', likened by Caesar to Dīs Pater. Teutates (God of the tribe/people) was probably another name for him. Ogmios was a god of the dead, like Hercules and Psychopompos, leading the souls into the Otherworld. This was located very specifically on various, not too far away, islands in the west, e.g. Bardsey Island (Enlli), the Bull near the Bearra Peninsula, &c. Celtic visions of the Otherworld as a land of eternal spring, of plenty, of beautiful women, and of music, as described in the seafarer tales (IMMRAMA), but also nightmare visions of the other place, have exerted a lasting influence on the motifs of Western literature.

The goddess of war is attested as a naked rider on coins from western Gaul (the *Redones* of Rennes/Roazhon). In the Irish tradition (OIr. Morrígan, Bodb, Nemain), she is often an animal (a red-eared cow, a crow, an eel). In Bordeaux, the heroic British queen Boudīca (Tacitus, *Annales* 14; Cassius Dio, *Roman History* 2) later seems to have been revered not only as a heroine but also as a war goddess.

The god of thunder *Taranis, Taranus, Tanarus* (cf. Germanic **Þunaraz* > *Þórr, Thor, Donar*) was a male celestial god; his iconography is linked with the bull and the wheel. Sirona, the widely worshipped consort of the sun god can be counted among the male and female celestial deities. Since the druidic calendar was based on the lunar year, it may be assumed that the moon, like the sun, was worshipped, but little is known about lunar deities.

Gods of craft, as mythical smiths, cobblers, builders, or doctors, are of special importance. The most important male deity in this group is probably Lugus, and

the most important female deity is the goddess corresponding to the Roman Minerva, whose Irish equivalent is Brigit (closely related to St Brigit, also known as 'Mary of the Gael'), indicating the close connection between gods of craft and healing. The British god Nōdons and the etymologically identical crippled Old Irish sacred king Nuadu Argatlám (silver hand) also belong to this group; the latter's epithet refers to his prosthetic hand. A deity originally connected with the processing of ore and, therefore, close to the god of wealth (cf. Dīs Pater) is the Gallic mallet-wielding god Sucellus, often shown in the company of the goddess Nantosuelta.

Besides a range of local deities (Vosegus, god of the Vosges mountains; Rhēnus pater, god of the river Rhine), we find gods named from, or otherwise connected with, animals, for example, the 'bear-goddess' Artio(-). The god of good fortune, originally from the Scythian area in the east, takes the form of a ram-horned snake, as depicted on the coins of the Boii.

Remnants of shamanism are evident in the legendary flying prophets Suibne Geilt and *Merlinus silvester* (see myrddin). Traces of totemism survived in animal and plant names for tribes and individuals, for example, Gaulish *Bibrōci* 'Beaver-people', *Eburones* 'Yew-people', &c. In early Irish literature, human actions are often constrained by a taboo (geis) verbally imposed by another person. Magical force can also be exerted by ritual fasting (Old Irish *troscad*). Responsible for cult and ritual was the priestly caste of the druids (cf. Caesar, *De Bello Gallico* 6.13f., 16, 18). Besides the druids, several names for priests survive: for example, *gutuater* 'father of the voice' (?), *aegones* 'belonging to the oaks'. Nothing is known of the relationship between the druids and these other types of priests. The priestly caste of the ovates is the result of a misreading of *vātes*, which described an inspired seer. Borrowed from Celtic, the word was also used in Latin, meaning 'poet'.

Renaissance and the Celtic countries, overview

The European Renaissance may be defined narrowly as the recovery of ancient Greek and Roman texts and artefacts, which in turn gave an impetus to classicism in literature and the arts. While 19th-century scholars saw in the Renaissance a turning point in the history of the human spirit, the development of a new secular outlook entirely at odds with the religious mind of the Middle Ages, the view now widely accepted emphasizes widespread religious orthodoxy, alongside an emphasis on purity and accuracy of written Latin and authenticity in scholarship (humanism), and on education for public life. Beginning in 14th-century Italy, the effects of the new movement spread gradually north of the Alps, becoming generally influential only at the turn of the 16th century. The delayed northern Renaissance was marked by a special emphasis on humanist scholarship applied to Christian texts, aided by the invention and rapid spread of printing and soon complicated by the Protestant Reformation. Humanists all over Europe in the 16th century showed interest in the potential of the vernacular languages.

Renaissance and the Celtic countries [1] Ireland

In Ireland (Éire), the impact of Renaissance ideas was at its height in the 16th and early 17th centuries. Ireland's marginal position may have limited participation in the European movements, but in an age of sea transport, when western ports traded with France and Spain, there was intellectual as well as commercial traffic with Europe. Ariosto includes the Earls of Desmond (Deasmhumhain) and Kildare (Cill Dara) in his epic catalogue of Christian forces in the *Orlando Furioso* (10.87–8) and refers to *St* Patrick*'s Purgatory* a couple of stanzas later. Religious links with Rome and with the universities of Europe remained strong. The relative positions of Latin and the vernacular were special to Ireland, but we should beware of regarding the world of Gaelic learning as hermetically sealed. A revival of Gaelic scholarship in the 14th and 15th centuries had led to the redaction of earlier heroic, legal, and historical texts. Hereditary learned families continued to preserve and copy them, but also to copy and translate foreign works. Renaissance historiography, which characteristically struggled to reconcile legends of origin with newer standards of philological research, was, in Ireland, to merge with the learned tradition and produce the classics of Gaelic history writing, at their best in fluent vernacular or Latin prose.

§1. patronage

Patronage in Gaelic society replicated the rôle of aristocracies across Europe in sustaining culture and clerical scholarship. The record of the price—140 cows—paid by Aodh Dubh Ó Domhnaill, lord of Donegal, for a Gaelic manuscript, the Book of Ballymote (Leabhar Bhaile an Mhóta), in 1522 is consonant with the career of Aodh's son Maghnus Ó Domhnaill, who ruled from 1537 to 1563. His skill in love-poetry, Gaelic historical scholarship and diplomacy, and his patronage of Gaelic bards and foreign-educated scholars gave him the air of a Renaissance prince (Bradshaw, *Studies in Irish History* 15–36). In the English Pale, the library of the eighth Earl of Kildare is recorded in 1526 as containing a mixture of manuscript and printed works, including Vergil, Juvenal, Ovid, Josephus, Livy, Caesar, and Cato in Latin, French, and English, as well as such Renaissance texts as Petrarch's *Trionfi* (in a French version), Boccaccio (in English), Thomas More's *Utopia*, and works by Erasmus and Lorenzo Valla. A second list also mentions Irish manuscripts (Mac Niocaill, *Crown Surveys of Lands* 312–14). The Elizabethan conquest saw the Fitzgerald Earls of Kildare and Desmond losing the last vestiges of the almost royal power which they had enjoyed in Ireland in the late Middle Ages; the resistance, led by Aodh Ó Néill, earl of Tyrone (Tír Eoghain), was backed by the Catholic powers, Spain and the papacy. When Ariosto's Elizabethan translator, Sir John Harington, visited Tyrone during a truce in 1599, he presented his version to the tutors of the Earl's sons. One of these was Aodh Mac Aingil (1571–1626), later a prominent scholar in Louvain and a leader in the Catholic drive to create printed Gaelic texts of pious works for Irish Catholics at home (Ó Cléirigh, *Aodh Mac Aingil agus an Scoil Nua-Ghaeilge i Lobháin* 47).

§2. urban centres

Humanist ideas in Europe were especially influential among the political class in urban centres. English-speaking Dublin (Baile Átha Cliath) had, in the early 16th century, a tradition of political writing which may show humanist influence; the education received by the pupils—boys from Dublin, Kilkenny (Cill Chainnigh), and Waterford (Port Láirge)—at Peter White's school in Kilkenny in the 1550s and 1560s, showed a strong humanist influence (Bradshaw, *Irish Constitutional Revolution of the 16th Century* 48–55; Lennon, *Richard Stanihurst* 25). Richard Stanihurst (1547–1618), a historian, Catholic apologist and translator of Vergil into English hexameters, wrote a *History of Ireland*, which was incorporated into Holinshed's *Chronicles*. This *History* was based on an earlier history by the English Jesuit Edmund Campion, written when he was Stanihurst's guest during his flight from Oxford to the Continent. Stanihurst ended his career abroad because of his religious convictions. Elizabethan newcomers such as Lodowyck Bryskett

(Ludovico Bruschetto, 1545–*c.* 1612), who translated the *Tre dialoghi della vita civile* of Giraldi (1504–73) as *A Discourse of Civill Life*, with an introductory dialogue set in Dublin in 1582–5, and, famously, Edmund Spenser, developed the tradition, artfully using the characteristic Renaissance dialogue form, and owing much in the latter case to the greatest theorist of absolute government, Niccolo Machiavelli. Bryskett's introductory dialogue, like those of Italian predecessors such as Castiglione, introduced historical figures such as Sir Robert Dillon, Archbishop Long of Armagh (Ard Mhacha), and Spenser himself. His view of Ireland and, indeed, of the English language too is apologetic: 'This barbarous countrie of Ireland . . . where almost no trace of learning is to be seene' and 'although our English tongue have not that copiousnesse and sweetnes that both the Greek and the Latine have above all others' (Bryskett, *Literary Works* 3). Spenser abuses the 'fabulous and forged chronicles' of Irish *seanchas* (*View of the Present State of Ireland* 39). By contrast, Aodh Mac Aingil apologizes in 1618, in his first printed work, for his own Gaelic style and incapacity to rise to the heights of traditional learned prose (Ó Cléirigh, *Aodh Mac Aingil agus an Scoil Nua-Ghaeilge i Lobháin* 63–5), while Geoffrey Keating (Seathrún Céitinn) in the introduction to his history of Ireland, *Foras Feasa ar Éirinn*, in the 1630s responds to Spenser and other foreign traducers of Gaelic culture by stressing its antiquity and independence (1.38–40).

§3. the rôle of trinity college

The long-standing desire of the community of Dublin for a university of its own was finally answered with the foundation of Trinity College in 1592. Biblical and classical scholarship were to flourish there, strongly Protestant in tone. Early Trinity graduates such as James Ussher and James Ware also became experts on Irish antiquities. Ware published Campion's *History* and Spenser's *View of the Present State of Ireland* in 1633, and a *De Scriptoribus Hiberniae* in 1639. The two traditions could meet in scholarly cooperation (Ní Chuilleanáin, *Irish University Review* 243–51).

§4.the printing tradition

Printing came late to Ireland and was associated with Protestantism. The first book printed in Ireland was the Book of Common Prayer in 1551 in Dublin; the first printed book in the Irish language (apart from a Protestant prayer-book issued in Edinburgh in 1568) was a Protestant catechism in 1571. The New Testament was not issued until 1602 and the whole Bible not until 1690, though it had been completed in 1641 under the patronage of Bishop Bedell, who had originally come to Ireland as Provost of Trinity. Some use was made of a Hebrew text which Bedell had acquired in Venice, the great centre of polyglot scholarly publishing in the Renaissance (he had been chaplain to Sir Henry Wotton during his time as ambassador to the Republic). Apart from the pious works printed by the Franciscans of Louvain, the main Gaelic literary tradition continued to depend on scribal transmission until the late 19th century. Even a work designed for the press, such as the Annals of the Four Masters (*Annálacha Ríoghachta Éireann*), projected by the clerical scholars who moved between Ireland and Louvain, remained in manuscript until the 19th century.

§5. architecture, visual art, material culture

Of architecture, visual art, and material culture generally in this period, little has survived the wars of the 17th century and the demise of the Gaelic and Old English aristocracy. Accounts of the household goods of the Earl of Kildare suggest a magnificent lifestyle, as do the Gaelic poems of Tadhg Dall Ó hUiginn and Eochaidh Ó hEódhasa which describe the castles of Ó Domhnaill at Ballyshannon (Béal Átha Seanaidh) and Mág Uidhir at Enniskillen (Inis Ceithleann). The Earl of Ormond's 'Great House' at Carrick-on-Suir, Co. Tipperary (Carraig na Siúire, Contae Thiobraid Árainn) still conveys something of the splendour in which Thomas, the ninth earl, friend of Queen Elizabeth and patron of Gaelic poets, lived.

Renaissance and the Celtic countries [2] Scotland

Scotland (Alba) shared, if at times belatedly, most of the facets of Renaissance learning and fashion experienced elsewhere in northern Europe. A new confidence felt by vernacular literatures throughout Europe, seen in translations from Greek and Latin and the absorption of humanist influences in poetry, found expression in Scots and, to an extent, also in Scottish Gaelic. The *Eneados* (1513, printed in 1553) of Gavin Douglas (*c.* 1475–1522), the first full-length translation of Vergil's *Aeneid* in the British Isles, hailed Scots as a new literary medium, while verse romances, such as *Greysteil*, translated from French or other romance languages, became a feature in the 15th century of the cult of chivalry. In a similar vein, the miscellaneous anthology of the Book of the Dean of Lismore demonstrates both the catholicity of the taste of bards and their patrons and the series of interconnections between the Gaedhealtachd and the Lowlands of Scotland at the close of the Middle Ages. From the mid-15th century, Scots had steadily assumed position as the official language of government, but Latin, operated by the learned orders, remained the most important of the several bridges between it and Gaelic lordship and culture.

European influences were filtered through the new universities of St Andrews/Cill Rìmhinn (1411), Glasgow/Glaschu (1451), and Aberdeen/Obar Dheathain (1495), which typically sent their graduates to Cologne and Louvain in the second half of the 15th century and increasingly to Paris and Orléans by the first half of the 16th. John Mair (*c.* 1467–1550) and Hector Boece (*c.* 1465–1536) both held teaching posts in Paris before returning to become principals of the universities of Glasgow and Aberdeen respectively. Mair—philosopher, theologian and historian, and a colleague of Erasmus in Paris, where they lived in the same house—later returned to St Andrews, becoming the domineering tutor of John Knox. He was the central figure in a circle of clerical scholars, competent in the classical languages and familiar with the great classical texts, ranging from Plato and Aristotle to the Old and New Testaments, in their original versions. The sizeable impact of what may seem a small clique of university men can be measured in different ways. Almost all the libraries of both pre-Reformation bishops and religious houses contained the key works of Erasmus and other Christian humanists, and this period saw both the expansion of grammar schools and the construction of a virtual national curriculum for them, which survived the Reformation.

A second major channel for European cultural influences was the royal court. Burgundian court culture was predominant from the reign of James II (1437–60)—who married the Burgundian princess Mary of Gueldres, niece of Philip the Good, in 1449—until well into that of James IV (1488–1513), when French influences began to hold sway. Classical and vernacular languages (including Gaelic up until the reign of James IV) rubbed shoulders at the court. However, a patriotic agenda increasingly placed an emphasis on Middle Scots: James V (1513–42) commissioned the translation into Scots of Boece's Latin chronicle, *Scotorum Historiae* (Paris, 1527) in 1535. By the 1580s and the personal reign of James VI (1567–1625), the king—whose first published work, *Reulis and Cautelis* (1584), prescribed the conventions for vernacular poetry—had assembled around him a circle of court poets or makars who dubbed themselves the Castalian Band and specialized in performance art in Scots. A trickle-down court culture increasingly fed into the households of the landed classes, both old and new. The Black Douglases, accused of 'holding court' in the 1450s, had widespread imitators by a century later, as the courtyard castle gave way to what have been called the *châteaux* of the Scottish Renaissance—tower houses built for gracious living rather than defence, often decorated with viewing platforms and crenellation and surrounded by formal gardens. Although the Campbells, new agents of the Crown in the western Highlands, tried to pose as patrons of both Gaelic and Lowland cultures, the two increasingly edged apart. As early as *c.* 1450, *The Buke of the Howlat*, a long allegory by Sir Richard Holland celebrating the Douglases, written in the northern borderlands of Moray (Moireibh), had satirized Gaelic verse. A century and a quarter later, James VI, in frank imitation

of Edmund Spenser's views of Irish Gaeldom, notoriously denounced the western Highlands and Islands as utterly incapable of 'civilitie'.

A third strand of development—particularly fostered by the arrival of a domestic PRINTING press, first licensed by the Crown in 1507—lay in the emergence of a new, educated lay élite, able to read Latin texts for themselves. Educated at grammar school, graduates in arts but also at times students of law in France or Italy, such laymen would in the course of the 16th century swell the burgeoning ranks of the legal profession or become servants of the crown. Receptive both to humanism and, increasingly, to Protestant ideas, they were influenced by the Latin works of George Buchanan (1506–82), as well as by printed Bibles in English. Although usually supporters of the Reformation, their humanism was infected by a conservative desire to preserve the best of the cultural heritage of the Middle Ages. Cultural continuity, as a result, sat beside religious change. The best-selling works of the later 16th century were, on the one hand, the new *Rerum Scoticarum Historia* (1582) by Buchanan, a lengthy justification of the revolution of 1567 which deposed Mary, Queen of Scots and, on the other, printed versions of some of the iconic works of the Middle Ages, including John Barbour's *The Brus*, Blind Harry's *Wallace* and Robert Henryson's *Testament of Cresseid*. Neo-Latin and vernacular Scots culture co-existed, cutting across religious and political divisions, providing threads of continuity between pre- and post-Reformation Scotland, and underpinning the tension which developed between humanism and Calvinism and which gave the Scottish Renaissance its distinctive character.

Renaissance and the Celtic countries [3] Wales

Renaissance learning, inspired by a new understanding of the Greek and Latin classics, was a major force behind the writing of seminal studies of the language and history of Wales (CYMRU). Welsh humanists eagerly took advantage of the benefits of PRINTING in order to reach a wider national and international readership. Renaissance ideals, in harness with the forces of the Protestant REFORMATION, also resulted in the publication of masterly translations of the BIBLE into WELSH, the most important single factor in the survival of the Welsh language in the modern period.

§1. SOURCES OF RENAISSANCE CULTURE IN WALES

Wales was far removed from the Italian beginnings of the movement in learning and culture known as the Renaissance. Welsh literature, especially WELSH POETRY, of the 14th and 15th centuries was confident of its own traditions, a self-assurance that led Saunders LEWIS to term the hundred years 1435–1535 'the great century' of the masters of bardic craft. Yet, the victory at Bosworth (1485) of the part-Welshman Henry Tudor (Harri TUDUR) was to have repercussions which transformed 16th-century Welsh life in terms of politics (following the ACTS OF UNION of 1536 and 1543), religion (following the imposition of Protestantism), as well as culture. Humanism, i.e. the educational and literary aspects of the Renaissance, mediated to the Tudor world by no less a figure than the Dutch scholar Desiderius Erasmus (*c.* 1469–1536), played a vital rôle in that transformation. The universities of Oxford (Welsh Rhydychen) and Cambridge (Welsh Caer-grawnt), for all their official adherence to the medieval Trivium and Quadrivium, became seed-beds for the 'new learning' and its emphasis on mastery of the two classical languages and of Hebrew, on the principle of returning to original sources (*ad fontes*) for the foundations of scholarship, and on using the recently discovered resources of the printing press for disseminating the results of such scholarly and literary pursuits. It is estimated that, between 1540 and 1642, well over two thousand Welsh students were admitted to Oxford and Cambridge (Griffith, *Learning, Law and Religion* 34), and one or other university played a vital part in the emergence of Renaissance culture

in Wales. Several grammar schools were also established in Welsh towns and boroughs.

§2. EARLY DEVELOPMENTS IN WALES

Many educated Welshmen opted to make their way outside their native country, among them notable figures such as the lawyer William Aubrey (*c.* 1529–95), the Aristotelian scholar Griffith Powell (1561–1620), and the Latin epigrammatist John Owen (?1564–?1628). It was Wales's good fortune that others chose to combine their humanistic learning with a commitment to matters of Welsh scholarly and cultural concern. In 1547 William SALESBURY gave expression to his conviction in a call to his fellow-countrymen to insist on having learning, not in Latin or English, but in their own tongue: *mynuch ddysc yn ych iaith* 'demand learning in your language' (Hughes, *Rhagymadroddion* 11). The first tentative steps to this end were the publication of *Yny lhyvyr hwnn* (1546) by Sir John Prys (Prise), followed by Salesbury's *A Dictionary of Englyshe and Welshe* and *Oll Synnwyr pen Kembero ygyd* 'All the wisdom of a Welshman's mind brought together' (both 1547). These are short works, but they provide early indications of some of the concerns which were to dominate the work of Welsh Renaissance scholars for a hundred years, culminating in the vast endeavours of Dr John Davies (*c.* 1567–1644) of Mallwyd: matters of language (orthography, grammar, lexicography), the distillation of wisdom (collections of proverbs), and the translation of the Bible and other religious texts.

§3. THE RENAISSANCE AND THE WELSH LANGUAGE

Scholarly interest in the Welsh language was fuelled both by the humanists' study of the classical languages and by their awareness of the rich vernacular tradition of Wales in earlier centuries. At times they seemed at odds with the BARDS, who regarded their own learning as the esoteric preserve of a limited group of initiates. The ideological clash between old and new found eloquent expression in the poetic debate of the 1580s between Wiliam Cynwal and Edmwnd Prys (see YMRYSONAU). The grammar which the Roman Catholic exile, Dr Gruffydd Robert of Milan, began to publish in 1567 is the work of an engagingly attractive scholar and stylist who wished to free the Welsh language from some of the old restraints. In the main, however, the grammars written (in Latin, so that the glory of the Welsh language might be revealed 'to the whole of Europe in a language common to all') by Siôn Dafydd Rhys (1592), Henry Salesbury (1593), and especially John Davies (1621) were based on intimate knowledge of the Welsh poetic tradition as well as on careful study of other languages, ancient and modern. The application of Renaissance rhetorical theory to the work of the Welsh poets is evident in Henri Perri's *Eglvryn Phraethineb* (The exponent of wit, 1595), based on an earlier study by William Salesbury. Linguistic expertise is also demonstrated in works of lexicography, begun by William Salesbury and culminating in Thomas Wiliems's unpublished Latin–Welsh dictionary (Aberystwyth, NLW , Peniarth MS 228) and in John Davies's *Dictionarium Duplex* (1632). In the tradition of Erasmus, Thomas Wiliems and John Davies were also keen compilers of collections of Welsh adages.

§4. WELSH HISTORY

Renaissance interests in matters of Welsh history were largely dominated by attempts to counter attacks on the traditions associated with GEOFFREY OF MONMOUTH'S HISTORIA REGUM BRITANNIAE. Over many years, Sir John Prise (see §2 above) worked on a reasoned defence of the British history against the attacks made on it in Polydore Vergil's *Anglica Historia*. Prise's *Historiae Brytannicae Defensio*, one of the longest Latin works to emerge from the Renaissance in Wales, was posthumously published in 1573. The matter of British history also exercised two other major scholars: the chorographer Humphrey Lhwyd (*c.* 1527–68), 'the most famous Antiquarius of all our countrey' (as William Salesbury described him), and Dr David Powel (1552–98) of Rhiwabon, author of *Historie of Cambria* (1584) and editor of the works of GIRALDUS CAMBRENSIS (1585). In 1597 Siôn Dafydd Rhys also responded to attacks on the veracity of Geoffrey in an important and lucid Welsh treatise that remains in manuscript (Aberystwyth, NLW , Peniarth MS 118).

§5. THE BIBLE OF 1588

The humanists' work in the area of Welsh biblical translation is fully discussed in the article on the BIBLE IN THE CELTIC LANGUAGES. For scholars of Protestant convictions, the translation into Welsh of the Bible, and of related works such the Book of Common Prayer, was integrally part of their effort to apply

the new learning for the benefit of their fellow-countrymen. The work of William Salesbury, Bishop Richard Davies, Bishop William MORGAN, Bishop Richard Parry, and John Davies, based as it was both on intimate knowledge of Greek, Latin, and Hebrew, and on a detailed and imaginative exploration of the potential of the Welsh language, 'was a major triumph of humanism as well as of Protestantism in Wales' (Gruffydd, *Celts and the Renaissance* 32). The Welsh Bible also inspired a spate of important religious prose texts in Welsh, notable among them Maurice Kyffin's *Deffynniad Ffydd Eglwys Loegr* (A defence of the faith of the Church of England, 1594), a translation of Bishop Jewel's *Apologia*, and John Davies's *Llyfr y Resolusion* (1632), a rendering of Edmund Bunny's Protestant version of Parsons's *Booke of Christian Exercise*.

§6. ACHIEVEMENT OF THE WELSH RENAISSANCE

Many aspects of the Continental Renaissance seem to have passed Wales by, though its influence is evident in some of the artistic and architectural styles favoured by the nobility and gentry of the 16th and early 17th centuries. Even in the literary sphere, some common humanistic endeavours were not attempted, and translations of classical literature into Welsh (such as Gruffydd Robert's version of the beginning of Cicero's *De Senectute*) were few. Nevertheless, despite all limitations, Wales's learned humanists put Wales on the intellectual map of modern Europe. They recognized the potential of the printing revolution, not only for communicating with their fellow-countrymen, but also for making Wales and its language known to the wider community of scholars. Their efforts ensured for the Welsh language its place as one of Europe's languages of learning.

Renaissance and the Celtic countries [4] Brittany

In so far as the Renaissance affected Brittany (BREIZH), it was as a part of the broader French Renaissance. Duchess Anne de Bretagne (ANNA VREIZH, 1477–1514) was a noted patron of literature and the arts (see BRETON LITERATURE). Breton traditions influenced the works of the French author François Rabelais (*c.* 1494–1553), who drew upon Breton traditional narrative for the name and some of the attributes of Gargantua and other characters. The explorer Jacques Cartier (Jakez Karter, *c.* 1491–1557), who helped to establish France as a major power in the Americas, hailed from St Malo. Some of the intellectual movements present in the Renaissance had an effect on the production of the CATHOLICON and other Breton DICTIONARIES AND GRAMMARS. For the most part, however, humanist scholarship and a renewed interest in the Graeco-Roman classics through the medium of BRETON occurred much later in Brittany, as part of the LANGUAGE REVIVAL movement from the 19th century onwards.

Revestment, the, on the Isle of Man

The Act of Revestment, known to lawyers as the Isle of Man Purchase Act, was passed in May 1765. In March 1765 the Duke and Duchess of Atholl sold their sovereign rights to the Isle of Man (ELLAN VANNIN) to the English Crown for £70,000; on 20 April the Revestment Bill 'for carrying the contract into execution' was introduced, and duly received royal assent on 19 May 1765.

This bald description, however, hardly does justice to what many of the key players involved considered a 'revolution'. George III had not wanted to buy the Isle of Man since it was a feudal lordship with an annoyingly strong claim to independence. Lord Coke had recorded, over a hundred years earlier, that the Isle of Man was 'no part of the kingdom, but a distinct

territory of itself'. It was 'out of the power of the Chancery', a cautionary warning generally respected by ministers of the Crown. But legal scruples had had to give way to the demands of trade and Empire. Like George Grenville's disastrous Stamp Act (which, a month earlier, had imposed a tax on the American colonists while at the same time attempting to teach them a lesson in parliamentary sovereignty), the Act of Revestment was passed within a climate of threat and intimidation.

The island was a separate customs jurisdiction and, by the mid-18th century, had become a thriving entrepôt in the rapidly expanding transatlantic trading environment. The Lord, along with many of his tenants, was enjoying a brief period of unaccustomed prosperity, but so too were countless illegal smugglers ferrying goods from the island into England, Scotland (ALBA), and Ireland (ÉIRE). The Treasury, empowered by the Navigation Acts and frustrated by the lack of co-operation on the island, had the authority to negotiate for its purchase, though prospects of success seemed slim.

Following the death of the 2nd Duke of Atholl in January 1764, the Government determined to force the issue. In August 1764 an Order-in-Council allowed English cutters and cruisers to be stationed in the island's harbours for the purpose of policing its trade, and in January 1765 a bill was introduced 'for carrying into Execution the Contract made for the . . . Purchase and Surrender of the Isle of Man'. This bill tracked the 'Purchase Act' and received royal assent four days ahead of it, on 15 May, as 'An Act for more effectually preventing the mischiefs arising to the revenue and commerce of Gt Britain and Ireland from the illicit and clandestine trade to and from the Isle of Man'. Commonly known as 'The Mischief Act', it gave HM Customs and Excise Officers power to search and seize ships in Isle of Man bays and harbours, prohibited ships sailing from Britain or Ireland to Africa or North America from taking in goods or stores in the Isle of Man, and authorized the prosecution of offenders in Britain or Ireland, or island courts held in the king's name (see also SMUGGLING [2]). Two years later, the process of dismantling the island's principal means of wealth—its overseas trade—was completed with an Act of Parliament entitled, without any apparent irony, 'An Act for encouraging and regulating the trade and manufacture of the Isle of Man'.

Revue Celtique was the first journal to be dedicated exclusively to Celtic matters. Established in Paris in 1870 by the French scholar Henri Gaidoz (1842–1832), 51 volumes were published before the journal was replaced by ÉTUDES CELTIQUES in 1934. Gaidoz was followed as the main editor by other important Celtic scholars, including Henri-Marie d'Arbois de Jubainville (1827–1910) and Joseph LOTH. Many early contributions were in French, but a substantial number were also written in English. The articles dealt with a wide range of subjects relevant to CELTIC STUDIES. Although long defunct, *Revue Celtique* remains essential, since many Irish texts edited and translated in the journal have yet to be re-edited.

Rheged is mentioned in close connection with URIEN and his dynasty, the CYNFERCHING, in the AWDL-metre poems in LLYFR TALIESIN regarded as authentic 6th-century court poetry by Ifor WILLIAMS, John MORRIS-JONES, and other prominent Celtic scholars. Rheged is also found four times in the saga ENGLYNION. Although the various passages could be interpreted in more than one way, the most natural is that Rheged was a place of some importance. The clearest indication that it must have been a kingdom or, at any rate, a sizeable geographical/ political entity is a pair of *englynion*, beginning with the word ANOETH, which refer to *milet Reget* 'soldiers of Rheged' and then again *milet Regedwis* 'soldiers of the people of Rheged' with the *-wys* kingdom suffix < Latin *-ēnses*, as in *Gwenhwys* 'people of Gwent' < British Latin **Ventē(n)ses*. In *Llyfr Taliesin*, Urien is called *glyw Reget* 'lord of Rheged' in the *awdl* on the battle of Gwen Ystrad; *Vryen Reget* | *Reget ɓiffeidyat* 'Urien of Rheged, defender of Rheged' in the next poem; Rheged is said to be mustering in formation in the *awdl* on the battle of Argoed Llwyfain; the following poem begins

Arðwyre Reget rysseð rieu 'Arise, Rheged, great seat of kings' and there is another reference near the end of the poem to Rheged mustering; and Owain ab Urien is called *Rheged uð* 'lord/chief judge of Rheged' in the elegy Enaid Owain ab Urien. In the *englynion* on Urien's severed head, there is a description of 'the foaming blood of wounds on his mouth, woe to Rheged from today'. The stanzas now known as *Aelwyd Rheged* (The hearth of Rheged) describe the ruined court of Cynferching, lamenting nostalgically *gorbyfnassei Reget roði* 'Rheged was accustomed to giving'. A later poem attributed to Dafydd ap Gwilym compares a patron's generosity to *neuadd Reged | Bendith Taliesin* 'the hall of Rheged, blessing of Taliesin' (Parry, *Gwaith Dafydd ap Gwilym* 9.34–5).

As to the location of Rheged, our best evidence is the Gorhoffedd of Hywel ab Owain Gwynedd, which places Caerliwelydd, i.e. Carlisle in Cumbria, in Rheged. Assuming that Hywel is well informed, this nonetheless leaves the extent of Rheged open. So closely identified with Urien is Rheged, and so prominent among his lands, that some modern scholars have assumed that it must have been a large area, extending over the Pennine watershed to include Catraeth and/or westward to Aeron (probably Ayrshire in Scotland/Alba) and/or down into modern Lancashire, all of which is possible, but uncertain. Whether Rheged directly continued the old tribal lands of the Brigantes, the Carvetii, or another pre-Roman tribe and Romano-British civitas is also unclear.

The name is Celtic and is related to Welsh *rheg* 'gift', explaining the artful poetic theme of its rulers' renowned generosity.

Rhiannon daughter of Hefaidd Hen is, like her son Pryderi, a character who unifies the Mabinogi since she features in more than one Branch. In the First Branch (Pwyll) she appears as a mysterious, unsurpassable horsewoman, who eventually, when overtaken by Pwyll of Dyfed himself, announces her love for him. Their first wedding turns to disaster, when a disguised stranger appears at the feast and asks a favour, which Pwyll grants before asking the stranger what he seeks; he was, in fact, seeking the bride herself. The formerly silent Rhiannon rebukes Pwyll sharply for his blunder and provides detailed instructions how the suitor, identified as Gwawl fab Clud, can be overcome by entrapping him in a bag when he returns for her in a year's time. Once they are safely married things go well in Dyfed and, over three years later, Pwyll and Rhiannon have a son. He, however, is mysteriously abducted, and Rhiannon is falsely accused of killing the child, for which she is compelled to carry people on her back like a horse (though the story assures us that this rarely happened). A baby boy, Gwri, appears mysteriously in the place of a foal in the household of Teyrnon of Gwent. Gwri grows prodigiously and is eventually restored to Rhiannon and Pwyll as their lost son, renamed Pryderi, that is, 'care, angst'.

Rhiannon is not prominent in Branwen, the Second Branch, but Brân foretells that the enigmatic 'birds of Rhiannon' will sing above the seven survivors of the calamitous expedition to Ireland (Ériu) as they feast in strange oblivion for seven years at Harlech. In the Third Branch, the widowed, and by now centenarian, but still attractive, Rhiannon is given in marriage by Pryderi to the protagonist Manawydan. These three, together with Pryderi's wife Cigfa, are the only four people to escape the *hud ar Ddyfed* 'enchantment of Dyfed', in which all the crops, domestic animals, dwellings, and other inhabitants of the kingdom disappear after an uncanny fog lifts. While hunting, Pryderi vanishes into a mysterious stronghold (*caer*); Rhiannon rebukes Manawydan as a poor friend for his reluctance to follow, then goes in herself and promptly disappears. She is eventually restored, along with the rest of the losses, all of which is explained at the end of the tale as the work of Llwyd fab Cilcoed.

Despite her centrality in the *Mabinogi*, there is a dearth of references to Rhiannon, by that name at least, elsewhere in medieval Welsh literature. The popularity of the name from the mid-19th century onwards—and now even outside Wales (Cymru)—

was probably kindled by Charlotte Guest's *Mabinogion* (1838–46; 1849).

For Celtic studies, Rhiannon has a special importance as the figure in the *Mabinogi* whose antecedents in pre-Christian mythology have been seen as especially clear. Her name indisputably derives from Old Celtic **Rīgantona* 'divine queen' (cf. the Irish war-goddess Morrígan), and is thus an exact counterpart to *Teyrnon* < **Tegernonos* 'divine king', cf. also RICON[- 'divine king' on coins of Tasciovanos, father of Cunobelinos. She is compared with the horse goddess Epona for her several equine associations in *Pwyll* and, like Modron (whose name derives from that of the ancient Matronae 'mother-goddesses'), Rhiannon is a divine mother whose infant son is mysteriously abducted. A suggested connection with the goddess Rosmerta is strengthened by a Gaulish inscription on a pottery vessel: *E . . . ieuri Rigani Rosmerti-ac* '. . . granted to the queen [goddess] and Rosmerta'. These correspondences raise the question whether we have here various goddesses with overlapping attributes or rather one goddess with several names and/or descriptive epithets which came to be names—or would such a distinction even have been meaningful to the native practitioners of the Celtic mythological tradition? From the later 20th century onwards, Rhiannon has attracted the interest of feminist critics as a strong female character associated with the tradition of the Mother Goddess.

The **Rhine** (Gaulish *Rēnos*, Germanic *Rhīnaz*, Latin *Rhēnus*) is a river in central Europe whose 1320 km course embraces the formative area of the Iron Age Celtic-speaking groups of the Hallstatt and La Tène cultures. The two source rivers of the Rhine, the Vorderrhein and Hinterrhein, rise in the central Alpine area, in the Swiss canton of Graubünden. They form the Rhine near Tamins and Reichenau in Graubünden and flow, turning northwards, along the borders of Switzerland, Liechtenstein, and Austria, before joining Lake Constance near Bregenz. The river leaves Lake Constance at its western end, near Stein am Rhein, and subsequently forms the border between Switzerland and Germany. It then turns north again and forms the border between Germany and France as far as Lauterbourg. After this, it crosses the west of Germany, and forms the central waterway of the Rhineland up to Cleves, where it enters the Netherlands, forming a vast delta.

§1. CULTURAL SIGNIFICANCE

The Rhine is the busiest waterway in Europe, and provides access to the sea for Switzerland, east France, west Germany, and Luxembourg. In prehistoric times it seems to have been the eastern border of the Belgae, who are said by Caesar to have originally come from the east of the river (*De Bello Gallico* 2.4). Caesar consistently speaks of the Rhine as the boundary which separated the *Germani* from the *Galli* (Gauls) and the Helvetii. However, *Celtica* and *Germania* were not primarily linguistic terms for the classical authors, and it is not clear how significant the Rhine had been as a cultural and linguistic frontier before the north-west frontier of Rome became fixed. After the time of the Emperor Augustus (r. 30 BC–AD 14), the Romans came to view the Rhine as the 'natural' north-eastern border of the Empire. The Helvetii, the Raurici, the Triboci, the Nemetes, the Mediomatrici, the Vangiones, the Eburones, the Menapii, and the probably Germanic Batavi (see NOVIOMAGOS; VELEDA) lived along its banks. The existence of many Celtic place-names along its course and nearby prove its central rôle in the settlement patterns of the Celtic-speaking inhabitants of eastern Gaul; some of the most important of these place-names are: *Brisiācon* > *Breisach*, *Tarodūnon* > *Zarten*, *Argentorātum* (Strasbourg), *Noviomagos* (Speyer), *Borbetomagos* > *Worms*, *Mogontiācon* > *Mainz*, *Rigomagos* > *Remagen*, *Bonna* > *Bonn*, *Durnomagos* > *Dormagen*.

As an economic and cultural pathway, the Rhine was the most important waterway of the transalpine Celtic world beside the Danube. Many important archaeological finds have been made along its banks and along the banks of its tributaries, e.g. at Breisach, Pfalzfeld, Waldalgesheim, and Heidelberg, to name only a few.

§2. THE NAME

The name of the Rhine possibly predates the break-up of Proto-Western-Indo-European. The Germanic form, *Rhīnaz*, has a regular *ī* instead of a Celtic *ē*, both the regular outcome of Indo-European *ei*. An alternative explanation would be that the Celtic word was borrowed into Germanic at a very early stage; as is often the case, the earliest borrowings are often indistinguishable from common inheritances, since the diagnostic sound changes of the related languages had yet to take place. The river-name's etymology ultimately goes back to IE **h₃reiH-* 'to flow'; cf. Sanskrit *riṇati* 'it flows', Old English *rīð* 'stream, river', and Old Irish *rían* 'sea'. If the meaning seen in Old Irish had also developed in Gaulish (or even in Celtic generally), then it is possible that some information that the Greek and Roman writers have relayed to us about the 'Rhine' are in fact mistranslations, and we should consider that 'sea' is the actual meaning; for example, in a passage quoted at length in the entry on legendary history (§2), Ammianus Marcellinus (*c.* ad 330–95) quotes Timagenes (*fl. c.* 55–30 bc), saying that the druids claimed that part of the population of Gaul had 'poured in from remote islands and the regions across the Rhine, driven from their homes by continual wars and the inundation of the stormy sea'.

Rhodri Mawr ap Merfyn ('Rhodri the Great') was a powerful king of Gwynedd during the 9th century. He became ruler on the death of his father and predecessor Merfyn Frych (Old Welsh Mermin), the founder of Gwynedd's second dynasty. Merfyn's death is dated in the Annales Cambriae to the year corresponding to 844; he had come to power in 825 (see historia brittonum). According to the Irish annals, Rhodri defeated the Vikings in 856, apparently attracting international attention with a victory which had implications beyond Britain. His fame among the Irish is further proved by a Latin poem to Rhodri, as Roricus, written by the Irish monastic scholar Sedulius Scottus. Rhodri was a nephew of Cyngen, king of Powys, and seems to have established the rule of the court of Gwynedd over Powys during his reign. Having married Angharad, sister of king Gwgon ap Meurig of Ceredigion, he or his sons also gained control over Ceredigion. Because of the extent of the territory which he controlled, he is often called king of Wales (Cymru), the only figure besides Hywel Dda and Gruffudd ap Llywelyn (r. 1039–63) to earn this epithet in the pre-Norman period. In 877 he had to flee to Ireland (Ériu) before a Viking attack, and a year later he was killed, together with his son Gwriad, by 'Saxons', according to *Annales Cambriae*, probably meaning specifically the forces of the Mercian king Ceowulf II, for whom Rhodri represented a challenge.

The name *Rhodri*, Old Welsh *Rotri*, is Celtic and derives from the genitive form of an Old Celtic compound *Rāto-rīχs, -rīgos* 'king of a multitude' or 'of legal surety'. It remains common as a man's name in Wales.

PEB, JTK

Rhône, ancient *Rodanos*, Latin *Rhodanus*, German *Rotten*, appears to be a compound of Celtic *ro-* 'great, excessive' (< Indo-European **pro*) and the root *dan-*, also *dān-*, common in river names both in Celtic territory and elsewhere in Europe (cf. danube). The river is 812 km long and has its source at the Rhône glacier in the upper Wallis in Switzerland; it enters Lake Geneva near St Gingolphe, which is south-west of Montreux. The Rhône leaves the lake in Geneva (ancient *Genava* '[river] mouth') and flows south-westwards to Lyon (Lugudūnon), where it joins the Saône and turns southwards past Vienne (*Vienna*), Valence, Montelimar, Orange (*Arausio*), Arles (*Arelate*), finally forming a delta, the Camargue, north-

west of Marseille (Massalia), before entering the Mediterranean. Its broad lower valley separates the western Alps from the Massif Central. Ligurians are represented in Greek and Roman accounts as the pre-Celtic inhabitants of the lower Rhône area, but peoples and places with Celtic names were already prominent there in the sources relating to the founding of Massalia *c.* 600 BC. Ancient groups with Celtic names living near the Rhône include the Seduni, Segobriges, Allobroges, Segusiavi, Helvii, Vocontii, and Volcae Arecomici. As the principal trade route from the Mediterranean to east-central Gaul, the river was an avenue for wine imports, and for artistic and other Greek influences on the western Hallstatt zone and its La Tène successor. The Rhône valley up to Lake Geneva was annexed by the Roman Empire in the later 2nd century BC and formed part of the Provincia Narbonensis, also known as Provincia Romana.

Rhuddlan, Statute of, also known as the Statute of Wales, describes the ordinances given by Edward I of England and his council at Rhuddlan, Flintshire (sir y Fflint), in March 1284, following the conquest of Wales (Cymru). The preamble declares that the land of Wales, hitherto subject to the king by feudal right (*iure feodali*), had now come into the king's own dominion and had been united to the Crown of the realm of England as a member of the same body. The ordinances thereby defined a constitutional status that would stand until a further change was made by the Acts of Union of 1536–43. The ordinances were strictly concerned with the arrangements for the government of the Crown lands in the new counties of Anglesey (Môn), Caernarfon, and Merioneth (Meirionnydd), which formed the principality of North Wales, and the county of Flint, which was attached to the earldom of Chester (Welsh Caer). English criminal law was made obligatory. Welsh civil procedures were allowed to continue, and it was decreed that partible succession (that is, division of inheritance between eligible descendants) would remain the inheritance practice among the inhabitants of the Crown lands. But the procedures of English common law were made available in civil actions, and the Statute provided exemplars of the writs to be used to initiate proceedings in the royal courts, including a 'general writ' specifically designed to meet the needs of these courts. Much of the legal practice established in 1284 was extended to the other counties of Wales by the Union legislation of 1536–43, and remained in force until the abolition of the Courts of the Great Sessions in 1830.

Rhun ab Urien (Old Welsh Run map Urbgen), baptized Eadwine of Northumbria, according to Annales Cambriae (626), and was responsible both for this and a mass baptism of Northumbrians, according to Historia Brittonum (§63). These sources thus directly contradict Bede (Beda), who repeatedly states that the Britons never undertook missionary work among their Anglo-Saxon neighbours, credits the Roman bishop Paulinus with Northumbria's first conversion, and for whom the latter event corresponds to a description of Paulinus' mass baptism on the river Swale near Catterick in 627. For the relevant passages, see Eadwine §2; Catraeth §4. Reconciling these statements has presented a yet unresolved challenge to Celtic studies. Some have thought that the Brythonic sources falsely inserted the son of one of their great heroes, i.e. Urien of the Cynferching, in a leading rôle in the foundation of the English church. That Rhun was revered in some quarters as a major authority in the early church —and tended to draw false attributions to his name— is shown by the now lost Chartres manuscript of *Historia Brittonum*, where the work is attributed to 'the son of Urbacen'. On the other hand, Bede's overt antipathy towards the Britons and their church raises the possibility that he suppressed Rhun's story. *Historia Brittonum* (§57) states that Rhun's granddaughter

Rhieinfellt (Old Welsh Rieinmelth) had been a wife of King Oswydd of Northumbria, a highly relevant detail not mentioned by Bede but independently confirmed by the presence of *Rægnmæld* on a list of Northumbrian queens and abbesses in the Durham *Liber Vitae* (see further ALCHFRITH). Therefore, it would seem that early Northumbria owed more to the Cynferching than Bede admits. Some manuscripts of *Historia Brittonum* state that Rhun and Paulinus were the same person, but this solution is today generally held in scorn. The possibility that Rhun worked together with Paulinus would solve the problem, but there is no early evidence to confirm this. A warrior named Rhun is connected with Urien in the saga ENGLYNION, and it is likely that this is Rhun ab Urien. If we accept this identification together with the baptism story, it would appear that Rhun had lived as a warrior aristocrat before retiring to the church, a common career path at the time, which might have been forced on him by Eadwine's victories. A further complication is that the name *Rhun* was not uncommon; MAELGWN's son Rhun was prominent in the mid- to later 6th century.

Rhydderch Hael ap Tudwal, also known as Rhydderch Hen, was king of Dumbarton (Dùn Breatann; see YSTRAD CLUD) in the later 6th century and belonged to one of the lineages claiming descent from the 5th-century Cinuit map Ceretic Guletic (see CYNWYDION). He is one of the better attested rulers of the period. ADOMNÁN's *Vita Columbae* (Life of Columba, §1.8) calls him *Rodercus filius Tōthail*, ruler of *Petra Clōithe*, and tells how he sought advice from COLUM CILLE (†597), fearing that he would be killed by his enemies. The saint reassured him that this would never happen, but that he would die at home on his own pillow, a PROPHECY which came true, for the king died peacefully at home. This story is significant in showing that the north BRITONS were on good terms with Iona (EILEAN Ì) and also that Dumbarton and the Cynwydion were important enough when Adomnán wrote in the 690s to make this miracle worth including in the Life. Rhydderch's peaceful death also accords well with his earlier Welsh epithet *hen* 'old'. The GODODDIN line A.43.530 '*o·haebot en gelwit Rebyrch gwyr not*' probably means 'deservedly we were called Rhydderch's noteworthy men' with an old inflected genitive of the king's name, but a plural adjective meaning 'prominent' is also possible. According to HISTORIA BRITTONUM, Rhydderch was one of the kings led by URIEN in besieging the Angles on LINDISFARNE. According to the MYRDDIN poetry, as confirmed by GEOFFREY OF MONMOUTH's *Vita Merlini*, Rhydderch was one of the chieftains allied against Gwenddolau ap Ceidiaw at the celebrated battle of ARFDERYDD (573). Rhydderch (*Rederech*) figures as king of CUMBRIA in the Life of KENTIGERN of JOCELIN OF FURNESS, which provides the additional details of Rhydderch's wife Languoreth (a Brythonic name) and the presence at his court of the fool and seer LAILOKEN. In the Welsh LAW TEXTS in the Black Book of Chirk (LLYFR DU O'R WAUN), there is a story of an expedition of north Britons, including Rhydderch, against Rhun son of MAELGWN in Arfon in north Wales (CYMRU). Rhydderch is mentioned several times in the TRIADS and is one of the 'Three Generous Ones of Ynys PRYDAIN' (TYP no. 2).

Rhydderch was a common Cumbric and Welsh name of Celtic orgin < **ro-derkos* 'he who is seen', hence, 'prominent, outstanding'. Welsh *hen* is from Celtic *seno-* 'old', and *hael* 'generous' is probably cognate with Gaulish *sagilos*, common in personal names. His father's name *Tudwal*, Old Irish *Tōthal*, reflects Common Celtic **Toutawalos* 'ruler of the tribe' (see TUATH).

Rhygyfarch (Ricemarchus, 1056/7–99), a Welsh cleric and scholar, was the eldest son of Sulien, who twice served as bishop of St David's (Tyddewi). Along with his three brothers, Rhygyfarch was taught by his father at Llanbadarn Fawr in the same learned tradition as Sulien himself had studied in Wales (Cymru), Scotland (Alba), and Ireland (Ériu). The whole family was noted for its learning, but Rhygyfarch appears to have been especially well regarded. Brut y Tywysogyon ('The Chronicle of the Princes'), in recording his death, refers to him as 'Rhygyfarch the Wise . . . the most learned of the learned men of the Britons' (Thomas Jones, *Brut y Tywysogyon* 39). There are three surviving Latin poems by him: one on the psalter (*De Psalterio*, found in Dublin, Trinity College MS 50 [A 4.20]), one a lament (*Planctus Ricemarch*) on the hardships the Welsh suffered under the oppression of the Normans, and one on the unhappy harvest (*De Messe Infelici*) destroyed by rain and mice (the latter two poems are found in London, British Library MS Cotton Faustina C.1). Rhygyfarch is best known, however, as the author of *Vita Davidis*, the first Life of St David (Dewi Sant; see also hagiography). Written sometime in the last two decades of the 11th century, the *Vita* became an important tool in the struggle to establish the supremacy of St David's and fend off claims by the Norman-run church and Canterbury.

The Welsh name *Rhygyfarch* is Celtic. *Ricemarchus* is its Old Welsh spelling with a Latinized final syllable. *Cyfarch* is basically a compound verb (Celtic **com-arc-*) meaning 'to entreat' or 'to greet'. *Rhy-* is probably the preverbal particle, Celtic *ro-*, most often adding to the verb a sense of completed action, hence 'the greeted one', perhaps in the sense of 'expected' or 'honoured one'. Sometimes, *Ricemarch* is rendered in Modern Welsh as *Rhigyfarch*, as if the first element were *rhi-* < Celtic *rīχs*, *rīgo-* 'king'.

Elissa R. Henken

Rhys ap Gruffudd ('The Lord Rhys', *c.* 1132–28 April 1197) was prince of Deheubarth (south-west Wales). The son of Gruffudd ap Rhys (†1137) and Gwenllïan (†1136), daughter of Gruffudd ap Cynan of Gwynedd, Rhys succeeded his elder brothers to become sole ruler of Deheubarth in 1155, and the restoration and maintenance of this kingdom were his principal goals for the rest of his life. Although forced to submit to Henry II in 1158 and 1163, Rhys permanently recovered Ceredigion and Cantref Bychan ('The small hundred', between Brycheiniog and the river Tywi) from the Anglo-Norman marcher lords in 1164–5; together with Cantref Mawr ('The great hundred', to the north of the river Tywi) and its castle at Dinefwr, these territories constituted the core of his kingdom. Rhys also joined his uncle, Owain Gwynedd (†1170), at Corwen, Merioneth (Meirionnydd), to resist the king's failed campaign against the Welsh in the summer of 1165. The years 1171–2 were a turning-point in the prince's relation with Henry II, who not only confirmed Rhys's territorial gains in Deheubarth—which had been aided by the departure of marcher lords and knights to assist Diarmait Mac Murchada (see de clare; giraldus cambrensis) in Ireland (Ériu)—but also appointed Rhys 'justice in all south Wales'. Although subject to strains, especially in 1184 and 1186, the détente with Henry II lasted until the king's death in July 1189. Many of the prince's benefactions to religious houses in Deheubarth, notably Strata Florida (Ystrad-fflur) and Talyllychau (Talley), probably belong to this period, as does the festival of poetry and music, regarded as the first known eisteddfod, which he held at Cardigan castle (castell Aberteifi) in 1176. Following the accession of Richard I, however, Rhys renewed his attacks on royal and marcher castles and lands in south Wales, probably in order to satisfy the territorial ambitions of his adult sons, whose struggles with each other and their father are another key aspect of the prince's final years, eventually leading to the permanent fragmentation of Deheubarth after Rhys's death.

Huw Pryce

Rhŷs, Sir John (1840–1915) was a distinguished Celtic scholar. Born at Aberceiro Fach, Cwmrheidol, CEREDIGION, on 21 June 1840, he was the son of Hugh Rees, a farm worker and crofter, and his wife. Hugh Rees was a cultured local poet who ensured that his son received what education was available locally in private venture schools and then at the British Schools at the nearby villages of Ponterwyd and Pen-llwyn. John Rees (he adopted the spelling Rhys for his surname around 1860–61, and Rhŷs sometime later) entered Bangor Normal (teacher-training) College in 1860 and was appointed teacher of the village school at Rhos-y-bol, Anglesey (Ynys Môn), the following year. He began to learn French and German, Latin and Greek, and the CELTIC LANGUAGES in his spare time, and also embarked on a serious study of language. He published his first article in 1864, 'Ieithyddiaeth Gymreig' (Welsh philology) in *Y Dysgedydd* and the following year 'The passive verbs of the Latin and the Keltic Languages', in the *Transactions of the Philological Society*, a sound analysis which drew attention to the significance of the impersonal, as opposed to the passive, verb. Through the good offices of local clergy who brought him to the attention of the Principal of Jesus College, Oxford (Welsh Rhydychen), he was awarded an exhibition in 1865 and graduated with a first in Greats in 1869, becoming a fellow of Merton College for three years and spending his summer vacations attending courses in Paris, Heidelberg, Leipzig, and Göttingen. He returned to Wales (CYMRU) as an inspector of schools in 1871 and made full use of the travelling involved to copy inscriptions and to make notes on dialects and folklore. A series of articles appeared in REVUE CELTIQUE and *Archaeologia Cambrensis* between 1872 and 1876 discussing the Luxembourg GLOSSES, Welsh borrowings from Latin, INSCRIPTIONS, and comparative Celtic phonology. An invitation to give a series of lectures at the new college at ABERYSTWYTH in 1874 led to the publication of *Lectures on Welsh Philology* in 1877 (revised in 1879), a milestone in the history of Welsh linguistic scholarship. The book is essentially a history of WELSH and its development from its first attestations in the inscriptions and an account of the development of Welsh phonology (that is, the system of sounds) and the alphabet. It is a remarkable work in its range of data, the confidence of its descriptions and the maturity of its discussion, and it marks Rhŷs as the successor of Edward LHUYD, whom he regarded as 'the greatest philologist the Kymry [i.e. the Welsh people] can boast of.' In many respects it is Rhŷs's best work.

Rhŷs was the ideal choice as the first Professor of Celtic at Jesus College, Oxford, in 1877; he was a Fellow of Jesus, college bursar (1881), and Principal from 1895 until his death on 17 December 1915. He was knighted in 1907. His early 'thirst for learning' was not assuaged with the passing years. Rather, he had boundless mental energy and the ability to gather materials on all aspects of CELTIC STUDIES, and then to analyse and discuss these in a continuous stream of publications while at the same time serving on several government commissions, especially on higher education. Rhŷs probably published too much too quickly and he was prone to publish theories intended only as working hypotheses. Nevertheless, his work on Old Welsh and Old BRETON glosses, on Celtic (especially MANX) phonology, and on Welsh, OGAM, and Gaulish inscriptions represented valuable pioneering attempts to place Welsh linguistic studies on a sound 'scientific' basis, and Rhŷs became an important channel for German and Continental scholarship to flow into Wales. His work on Celtic mythology (*Celtic Heathendom*, the Hibbert lectures, 1888) and *Studies in the Arthurian Legend* (1891) are marred by his too ready acceptance of popular solar and other theories of mythology (as he himself later acknowledged), and his theorizing tendencies are seen at their most exuberant here. Rhŷs wrote a great deal on British ethnology and collected folklore all his life. His *Celtic Folklore: Welsh and Manx* (1901) remains a valuable collection of stories and other items, especially in view of the care with which he refers to

his sources and his verbatim quoting of oral tales. But, perhaps his most crucial contribution was to be the tutor and mentor of the first generation of Welshmen to study Welsh and Celtic at Oxford, among whom would be the first Professors of Welsh at the newly established university colleges in Wales, thereby ensuring that modern Welsh scholarship was from the outset securely grounded in the international scholarship of the day. The Sir John Rhŷs Memorial Lecture at the British Academy was established in 1925.

SELECTION OF MAIN WORKS

Lectures on Welsh Philology (1877); *Celtic Britain* (1882); *Lectures on the Origin and Growth of Religion as Illustrated by Celtic Heathendom* (1888); *Studies in the Arthurian Legend* (1891); *Outlines of the Phonology of Manx Gaelic* (1894); *Celtic Folklore: Welsh and Manx* (1901); 'The Origin of the Welsh Englyn and Kindred Metres', *Y Cymmrodor* 18.1–185 (1905); 'Celtae and Galli', PBA 2.71–134 (1905/6); 'The Celtic Inscriptions of France and Italy', PBA 2.273–373 (1905/6); 'The Coligny Calendar', PBA 4.207–318 (1909/10); 'The Celtic Inscriptions of Gaul: Additions and Corrections', PBA 5.261–360 (1911/12); 'The Celtic Inscriptions of Cisalpine Gaul', PBA 6.23–112 (1913/14); 'Gleanings in the Italian Field of Celtic Epigraphy', PBA 6.315–70 (1913/14).

EDITIONS. (with J. Gwenogvryn Evans) *Text of the Mabinogion and Other Welsh Tales from the Red Book of Hergest* (1887); *Text of the Bruts from the Red Book of Hergest* (1890); *Text of the Book of Llan Dâv* (1893); (with John Morris-Jones) *Elucidarium and Other Tracts in Welsh from Llyvyr Agkyr Llandewivrevi* (1894); (with Brynmor-Jones) *Welsh People* (1900).

Ribemont-sur-Ancre

This major GAULISH and GALLO-ROMAN sanctuary in the *département* of Somme, France, was excavated from 1966 until 1987 by J.-L. Cadoux, and from 1990 onwards under the guidance of J.-L. Brunaux. The artefacts recovered, which were first exhibited in 1982, provide evidence that it was the location of an important occupation during the Gaulish period.

The site is marked by a rectangular enclosure (see VIERECKSCHANZEN) measuring 40 × 50 m, with a ditch 2 m deep and 2–2.5 m wide on the north, east, and south sides. It was probably completed by an embankment on the west side.

Remains from the pre-Roman Gaulish period have been found both inside and outside the enclosure. These were mainly remains of human and animal bones (almost exclusively horse bones), and weapons. They can be dated to a short period which corresponds roughly to LA TÈNE C1 (*c.* 200 BC). Earlier elements (from the beginning of La Tène C1), as well as more recent items (La Tène C2 and D), are rare. After a long interval, new significant groups appear at the end of the Gaulish period (in the mid-1st century BC). Bones and metal implements were dispersed widely over the surface of the soil, some broken and others whole, and some regrouped as ossuaries (structures for keeping bones on display). The peculiar distribution of these remains led J.-L. Brunaux to suggest that a large building, in which partly dismembered human bodies had been kept, covered the ditch and its immediate surroundings.

The bone remains show a masculine population, several hundred strong, of which many bear traces of blows. Skulls and pieces of skulls are conspicuous by their absence, implying that these men had all been decapitated and their heads place elsewhere (see HEAD CULT). The presence of a large number of weapons associated with these human remains suggests that these were warriors killed in combat. Thus, the finds at Ribemont can be interpreted as reflecting an imposing monumental trophy made up of a SACRIFICE of war spoils: weapons and enemy warriors.

Following a period for which there is almost no evidence, the site experienced a resumption of activity not long before CAESAR's conquest of northern GAUL in the middle of the 1st century BC (particularly, a deposit of 573 iron implements). The place thus seems to be the sanctuary of a military population. The La Tène remains finally come to an end and the ditch was filled up at around 30 BC. These events mark the first phase of the Gallo-Roman sanctuary. Temples with a rectangular floor plan (FANUM) were followed by a vast building in the classical style in the 2nd century AD. The site was finally abandoned during the 4th century. This development is in keeping with the broader historical and cultural context of the period: CHRISTIANITY had become the official religion of the Empire in AD 313, by which time the provincial economy of Roman Gaul was in serious decline and many sites showed signs of contraction.

Thierry Lejars

Rigotamus/Riothamus is called 'king of the BRITONS' by the 6th-century writer Jordanes in his History of the Goths (*De Rebus Gothicis* §45), where the name is spelled *Riothimus*. In 469, at the request of the western emperor Anthemius, Rigotamus sailed with an army of 12,000 up the Loire (Liger) to the CIVITAS of the BITURĪGES (modern Bourges or Berry) to join Roman forces. While they were camped there, the aristocratic Gallo-Roman Sidonius Apollinaris, who was bishop of Clermont from *c.* 470, wrote deferentially to king 'Riothamus' on behalf of a local landowner, whose slaves were running away to the Britons. (This was roughly the period when Sidonius was corresponding with other literate Britons in GAUL, Faustus, abbot of the island monastery of Lérins, and a travelling scholar with the Celtic name Riocatus.) The Roman and British forces never joined, and Rigotamus' army was defeated by Euric's Visigoths near Bourges; the location of the battle is given as Déols in the *Historia Francorum* of Gregory of Tours (§2.18). One question which has occupied modern scholars is whether Rigotamus and his men came directly from BRITAIN or were already settled in ARMORICA (cf. BRETON MIGRATIONS). Another of Sidonius' letters (*Epistolae* §1.7) has a bearing on this dilemma: it states that the imperial prefect Arvandus had been accused by Anthemius of treason in 469 for inciting the Goths to attack 'the Britons situated beyond the Loire', which more probably means settled in Armorica rather than merely camped north of the Loire in central Gaul. In either case, the Rigotamus episode shows that sub-Roman Britons in Gaul were a major and organized factor in the events of the final years of the western Empire, and against this background it is hardly surprising that western Armorica has become *Britannia* in sources of the 6th century.

Rīgotamos is the principal Celtic word for 'king' (cf. Old Irish *rí*, genitive *ríg*) with the superlative suffix added, hence 'supreme king' (cf. GWERTHEFYR, GWRTHEYRN; KINGSHIP). A variation of this same formation is found in the Celtic epithet of the god MARS RĪGISAMUS. It is possible, therefore, that it was the king's title, rather than his name, a possibility which gave rise to Ashe's theory that Rigotamus was the historical ARTHUR (see AVALON; ARTHURIAN SITES). Whether it originated as a name or as a title, Old Breton *Riatham* appears in the genealogy in Ingomar's Life of IUDIC-HAEL and Welsh *Rhiadaf* occurs among the heroes in MARWNAD CYNDDYLAN (The elegy of CYNDDYLAN). *Riocatus*, the first element of which is the same, was no doubt the name of a Briton who was active at nearly the same time and place as king Rigotamus.

JTK

Ring-forts are a characteristically Irish type of early medieval monument, the upstanding remains of which survive in impressive numbers and are to be noted by all but the most unobservant traveller through the rural landscape of Ireland (ÉIRE). Over 45,000 ring-forts have been identified to date, but these probably represent only a portion of the original number. Estimates of rates of survival vary greatly, but it seems safe to propose that less than half the original total have survived. They are commonly referred to by their Irish names: *ráth* or *lios* (Hiberno-English 'liss') in the case of the more common ring-forts of earthen construction, and *caiseal* (Hib.E. 'cashel') or *cathair* (Hib.E. 'caher') in the case of the stone-built variant, which is mostly restricted to the western seaboard (see CASHEL). The existence and differing distributions of these two sub-types is due primarily to geographical and geological factors, more specifically to what constitutes plentiful and readily available building material in a given landscape (e.g. see Limbert, *Archaeological Journal* 153.257, illus. 9).

While site density may vary greatly, there is no significant part of the island where ring-forts could be considered rare. There are several areas in Ireland where ring-forts are particularly common (averaging over 1.2 per km²): Co. Sligo (Contae Shligigh) and parts of the surrounding counties, the eastern shores of Lough Neagh (Loch nEathach), the Burren limestone area in Co. Clare (Contae an Chláir), and eastern Co. Limerick (Contae Luimnigh). In large areas of the country—such as north-west Ulster (Ulaid) and much of northern and eastern Leinster (Laigin)—ring-forts are far less plentiful (averaging less than 0.4 per km²). However, undue weight should not be attached to the distribution of surviving monuments as a reliable indicator of original density. For instance, much of the land in eastern Leinster is of high agricultural potential and has been intensively farmed for centuries, with the result that the remains of many ring-forts have probably been completely obliterated.

The origins of the ring-fort have been the subject of archaeological debate for decades and remain quite poorly understood at the time of writing. The results of two excavations carried out in the mid-20th century have been used to support a late prehistoric origin for the examples in question (Ó Riordáin, PRIA C 45.139–45; Raftery, *Journal of the Royal Society of Antiquaries of Ireland* 74.23–52). However, these excavations were both reliant on stratigraphic dating unaided by radiocarbon and their results are not widely accepted today. On the other hand, Early Iron Age radiocarbon dates from huts within a more recently excavated ring-fort near Swinford, Co. Mayo (Contae Mhaigh Eo), support the case for prehistoric origins. As regards the main period of ring-fort use, however, there can be little doubt. Scientific dating of over 100 samples from 47 ring-forts and associated sites indicates, almost without exception, that their main period of occupation was during the second half of the 1st millennium AD, i.e. the early medieval period (see Stout, *Irish Ringfort* 24–8, Table 1, and 29, Fig. 2). There is some limited evidence for later medieval use and re-use, but most ring-forts appear to have been abandoned by the 12th century, if not before.

Morphologically, ring-forts are generally circular, or nearly so, in plan, with an internal diameter of between 20 m and 45 m. Most often, their defences consist of a single enclosing rampart accompanied by an external ditch, the upcast from which forms the substance of the bank. Occasionally, two or, very rarely, three banks encompass a site, but the internal area of these multivallate ring-forts usually remains of similar dimensions to that of univallate examples. There is evidence from several excavations, such as those at Lisleagh, Co. Cork (Contae Chorcaí), that palisades or fences of timber and wattle were sometimes erected atop the bank, thus increasing defensive potential. Entry to a ring-fort interior was via a causeway over the ditch and a corresponding gap in the rampart. Entrances most commonly faced somewhere in the arc from north-east through east to south-east, but could face any direction; e.g. the entrance of a small ring-fort might be directed towards that of a larger example nearby, as at Lisleagh (Monk, *Early Medieval Munster* 37). Early Irish law texts on status, particularly *Críth Gablach* (Branded purchase), make it clear that there was a specific relationship between the nature and scale of an individual's ring-fort and its ramparts on the one hand and the individual's social rank and standing on the other (see Stout, *Irish Ringfort* 110–14). There are different schools of thought as to what constituted the primary rationale behind the construction of the bank and ditch which formed the enclosing element of a ring-fort. Some authorities (e.g. Mallory & McNeill, *Archaeology of Ulster*) tend to emphasize considerations related to social status, while playing down the defensive rôle of such earthworks. Conversely, others (e.g. Stout, *Irish Ringfort*) see defence against cattle raiders and wild animals as paramount, with social considerations secondary.

Platform ring-forts are distinguished from the norm by the fact that their interior has been built up to raise the enclosed area above the surrounding terrain. Excavation of some sites, such as at Deer Park Farms, Co. Antrim/Contae Aontroma (Lynn, *Archaeology Ireland* 1.11–15), suggests that this was carried out primarily to elevate the habitation surface above the water level where ring-forts were constructed on waterlogged land, rather than for any defensive advantage which may have accrued. The elevation is seldom such that platform ring-forts could be confused with Anglo-Norman motte earthworks, but ring-forts can easily be confused with another type of Norman

earthen fortification, the ringwork. The two are so similar that excavation may often be the only clear means of deciding the issue, though, as a general rule, ringworks are normally situated in more naturally defensible topographic positions.

Where excavated, the interiors of ring-forts are usually found to have been host to a range of buildings. Both circular and rectangular foundations occur, with some indication that the latter are a later development. Interpretation of the buildings, along with the artefacts and environmental evidence recovered, has led to general agreement on ring-fort function: that they were the dispersed, defended settlements of single families—possibly with slaves and/or retainers—engaged in the type of mixed, but predominantly pastoral, farming widely practised in Irish early medieval society (see AGRICULTURE). There is some evidence which possibly suggests that ring-forts occasionally served only as cattle enclosures and in other cases may have been used as such when human habitation had, for whatever reason, ceased on the site (see Stout, *Irish Ringfort* 33–4).

On most excavated ring-forts the recovered evidence indicates that artefact manufacture was restricted to the basic domestic and agricultural requirements of the inhabitants; e.g. iron-working for farming tools such as plough-socks, axes and bill-hooks, stone-working to produce quern-stones, whetstones and spindle-whorls, and the weaving of wool (and possibly hemp fibre) for cloth production. There are, however, several ring-forts where some of the finds were of a different order from those recovered on a typical site. These finds indicate a high status for the inhabitants, along with a high level of artistic achievement on the part of the individuals who fashioned them. Evidence for prestige craftsmanship—decorative bronze- and silver-working including zoomorphic annular and penannular brooches, production of beads and bangles of glass and lignite, and small intricately wrought decorations in gold—has been recovered at Garryduff (O'Kelly, PRIA C 63.17–125) and Garranes (Ó Riordáin PRIA C 47.77–150), Co. Cork, Cahercommaun, Co. Clare (Hencken, *Cahercommaun*; Ó Floinn, *Discovery Programme Reports* 5.73–9), and Clogher, Co. Tyrone/An Clochár, Contae Thír Eoghain (Warner, *Power and Politics*). The exceptional nature of these sites must be stressed, a point further emphasized by the fact that the latter three have each been claimed to be the principal residences of early medieval ruling dynasties: the ÉOGANACHT Raithlind (Ó Riordáin PRIA C 47.77–150), the Uí Chormaic Fidgeinti or Ciarraige (Breathnach, *Discovery Programme Reports* 5.83–95), and the Uí Chrimthainn Airgiallai (Warner, *Power and Politics*), respectively.

SÓF

Riou, Jakez (1899–1937) was an important writer of fiction in the BRETON language. He was born in Lothey, Finistère, in Brittany (Lotey, Penn-ar-Bed, BREIZH), and in 1911 he went to be educated as a missionary in Spain, where he stayed until 1918. He survived the war, but his health had broken down. While convalescing, he debated whether to pursue an ecclesiastical career or devote himself to Breton. He taught for a time before becoming involved in journalism and publishing, working with Youenn Drezen.

Jakez Riou's *An ti satanezet* (The haunted house) appeared in book form in 1944. It captures the conviviality of rural Brittany with vivid portraits of a village's more colourful characters. *An ti satanazet* occupies a space in BRETON LITERATURE between tales of death and the occult, known as *marvailhoù*, and the modern short story. It was translated into WELSH as *Diawl yn y Tŷ* (A devil in the house) by J. E. Caerwyn WILLIAMS.

The short story was Riou's forte, and his collection of short stories, a slim volume entitled *Geotenn ar werc'hez* (literally, 'The virgin's grass', i.e. stitchwort),

is unrivalled in modern Breton. It probes a rural community with a modern perspective, and in it Riou illuminates the darker reaches of the Breton and human psyche.

The title story, *Geotenn ar werc'hez,* describes a young girl's slide into illness and her premature death, which subsequently haunts her father. In *Ur barrad avel* (A gust of wind), a man breaks his plough. To replace it he must sell his horse and, returning home from market, he decides to recount his money. A gust of wind carries the notes into the river. That evening, *Yann ar C'herneis a dennas un alanad hir, a leunias e skevent gant c'hwezoù an nevez amzer, hag en em stagas ouzh ar groug* ('Yann ar C'herneis drew a deep breath, filled his lungs with the fragrances of spring, and tied himself to the gallows', 24).

In *Prometheus ereet* (Prometheus bound), a young artist slips in and out of consciousness in a hospital bed. The staccato repetition of a short sentence suggests the tedium of the ward. In *Gouel ar Sakramant* (The festival of Corpus Christi), Hervé marks his return to health by carrying a heavy banner in the procession of Corpus Christi (a moveable feast which falls between 21 May and 24 June). The characters are tangible and human, and Rioù transports us into their universe in a few short pages, his sentences working like the brush-strokes of a master-painter.

Anna, the eponymous heroine of *Anna Tregidi,* refuses to see a doctor. As her condition worsens, her mother sets out for Kastellin (Châteaulin) in search of help. Anna takes her life in shame: *Hini ebet avat ne gredas rannañ komz diwar-benn he c'hleñved, gant aon da bec'hiñ dirak Doue.* ('No one dared utter a word of her illness for fear of sinning against God', 80). *Lan, embanner al ludu* (Lan, distributor of ashes) is a study of religion in Kerunken. The occasion is St John's Eve (see MIDSUMMER'S DAY), and each member of the community must bring wood for the fire according to his means. Lan brings nothing, paralleling his fall from grace, and finally repents.

Riou's prose works have been translated into several languages, including Esperanto, French, and Welsh. He also wrote several plays, and a volume of his poems, *Barzhonegoù,* was published in 1993.

SELECTION OF MAIN WORKS

PROSE WRITINGS. *An ti satanazet* (1944; trans. J. E. Caerwyn Williams, *Diawl yn y Tŷ* [1972]); *Geotenn ar werc'hez* (1934; trans. Drezen, *L'herbe de la vierge* [1991]; Le Magadure, *La herbe de la virgulino* [1993]).

PLAYS. *Gorsedd-digor* ([1928]); *Nomenoe oe* (1941); *Dogan* (1943).

POETRY. *Barzhonegoù* (1993).

Diarmuid Johnson

Ritual is patterned customary behaviour attached to situations and occasions of cultural importance or psychological weight. The word may be used of something as elaborate as a coronation ceremony, which must join together sovereign, deity, land, law, and people, or as simple as covering a fire each night before bedtime. Most rituals can be seen as points along a continuum—of a day, a year, or a human life—and it is at particularly vulnerable times, such as planting and harvest, or birth and death, that most need the reassurance that good fortune is being ensured and bad fortune averted. Theories of myth and ritual have sought to demonstrate that one precedes or post-dates the other, but both myth and ritual are more complex than such a linear model can explain.

Information about the rituals of ancient Celtic societies must be reconstructed from GREEK AND ROMAN ACCOUNTS, the archaeological record, or such clues as may be found in medieval Christian texts. ATHENAEUS, quoting the earlier ethnography of POSIDONIUS, described the ritualized fighting of Celts at FEASTS, and how a formalized fight could degenerate into genuine combat if someone sustained a minor wound and lost his temper (*Deipnosophistae* 4.40). Actual warfare, according to DIODORUS SICULUS (*Historical Library* 5.29), also involved such ritual behaviour as challenges and the recitation of ancestors' war deeds. Some religious rituals were said to include DIVINATION practices which required human SACRIFICE (CASSIUS DIO, *Roman History* 5.31), and both Diodorus (*Historical Library* 5.32) and CAESAR (*De Bello Gallico* 6.16)—both also probably following Posidonius here—claimed that giant pyres were made in which prisoners were burned as offerings to the gods. A human sacrifice found at LINDOW MOSS was found to have been struck in the head, strangled, and his throat cut (Cunliffe, *Ancient Celts* 192), perhaps reflecting the thematically INDO-EUROPEAN threefold

death, also a theme in medieval Irish tales.

Through medieval texts we get a glimpse of ritual behaviour which might have been associated with the important CALENDAR days of the pre-Christian period, such as the SAMAIN assembly in SERGLIGE CON CULAINN ('The Wasting Sickness of Cú Chulainn'). As the Christian church became a dominant force in the lives of the Celtic peoples, its own official rituals also became a part of Celtic life. The church calendar marked the saints' days and the history of the life of Jesus, while the older Celtic calendar followed the cycles of crops and livestock through the year. As best recorded for modern Irish folk life, the two traditions came together in various holidays, such as St BRIGIT's Day (1 February) or LUGNASAD (1 August), and these days all had their associated rituals, such as preparing the corn dolly on Brigit's Day. Carnival traditions surrounding New Year and Shrovetide might also include rituals, often serving to drive out the evil spirits associated with the dark of the year and providing a fresh start and good luck for the coming year. The processes of farming were often arranged according to the succession of saints' days, with planting proceeding according to established customs and divination rituals performed to gauge how successful all this labour would be. Not only farmers but other workers as well performed small rituals in connection with their daily labours. Fishermen ensured the efficacy of their bait by spitting on it or dipping it into crane-broth, and the rosary was recited by the fishermen if they were out at midnight. Housewives said a prayer each evening when they covered the fire for the night (Ó Súilleabháin, *Irish Folk Custom and Belief* 18, 27). The circle of life was attended by its own rituals of birth, coming of age, marriage, and death. Such rites of passage as marriage included not only the formalities of the wedding ceremony itself but also many peripheral rituals aimed at cementing community and ensuring good luck. In mid-20th century Dundee, Scotland (ALBA), brides would dress in rags and go about town with a girlfriend dressed as the groom, singing and collecting money (Bennett, *Scottish Customs from the Cradle to the Grave* 107). There were also many ad hoc rituals, consisting of small actions performed on the spur of the moment when encountering a situation which might cause a change in fortunes. The most familiar of these involved the evil eye, which could be averted by spitting. There were also good luck actions, such as the rhymes one might recite when coming across a magpie.

River names are the most conservative features in the linguistic landscape. Old river names are very frequently retained even after the population of a region has changed or when it has changed its language. In the regions where CELTIC LANGUAGES have formerly been spoken, river names can play an important rôle in revealing, defining, or possibly disproving a Celtic substrate in the area.

The general evidence seems to be that, in most of the regions where the Celts settled, there are several strata: sometimes, there is a pre-INDO-EUROPEAN stratum, a pre-Celtic Indo-European stratum, then a PROTO-CELTIC one, and then a stratum in the modern languages, whether Celtic or not. Nevertheless, this generalization probably conceals a far more complex pattern, in which a patchwork of unattested pre-Celtic languages has been overlain by varieties of Celtic arriving by means of different agencies at different historical periods. In this light, a careful and sensitive study of European river names holds great promise for future research into the continent's linguistic prehistory.

§1. CENTRAL AND WESTERN EUROPE

Most river names in central and western Europe are Indo-European (that is, they belong to the larger family of languages which includes Celtic). Names of major rivers such as the DANUBE or the RHINE, whose courses have probably always touched on lands of peoples who spoke more than one language or at least different dialects of a language, have different forms in different Indo-European languages (e.g. Proto-Iranian **Dānav(y)a-* and Proto-Celtic **Dānou̯io-*;

Celtic *Rēnos* and Germanic **Rīnaz*). Nonetheless, in these two examples, the two parallel forms can be traced back to a common Indo-European root. It is possible that these go back to Proto-Indo-European times and have evolved continuously, as Indo-Iranian, Celtic, and Germanic gradually diverged into different languages (see DANUBE for a detailed case study). But this is merely one hypothesis among several possibilities: very early loans between cognate languages are often hard to distinguish from shared inheritances from their common ancestor.

Many early European river names merely denote words for 'water' (e.g. **dh₂-nu-* in Danube), or 'flow' (**re(i)-* in Rhine, **teh₂-* in THAMES, Welsh *Tafwys* < British *Tamēsta*, Welsh *Taf*, Old Welsh *Tam* [see further CAERDYDD], *Teifi*, *Tywi*, *Tawe*).

In GAUL, the names of most major rivers are transparently Celtic (*Marne* < *Mātrona*, see MATRONAE; *Seine* < SEQUANA) or can be best explained through Celtic (RHÔNE < *Rodanos* < **(p)ro-dh₂-no-* 'great water', showing the characteristic Celtic loss of Indo-European *p*).

In Spain and Portugal, most river names seem to belong to a pre-Celtic stratum; the *Baetis* (now *Guadalquivir*), *Ebro* < *Iberus*, and *Tagus* (Portuguese *Tejo*, Spanish *Tajo*) bear non-Indo-European names, either Iberian or Tartessian, whereas the *Durius* (Portuguese *Douro*, Spanish *Duero*) might be related to GAULISH *Dubris* 'water'; cf. BRITISH *Dubrās* 'at the waters', modern *Dover*. The *Salia* in Iberia, probably reflecting a common Indo-European hydronym **sal-* 'to flow', is possibly Celtic, though it may be from another Indo-European branch.

§2. BRITAIN AND IRELAND

Many river names in England conform to the pattern found on the Continent. Most of the major rivers have pre-Anglo-Saxon names; many of them show the characteristic features of Old European hydronymy and thus possibly predate the advent of Celtic speech, for example, the above-mentioned *Thames*; British *Sabrina* (English *Severn*, Welsh *Hafren* < **sab-* 'juice'; cf. German *Saft*). Other river names can be explained as coinings within Celtic, for example, *Trent* < British *Trisantona* < **tri-* 'three' or 'through' + **sento-* 'path' + the GALLO-BRITTONIC feminine divine suffix *-onā*.

In the east of England, in the areas of the earliest Anglo-Saxon settlements, the names of most brooks, streams, and smaller rivers can be explained as derived from English, a Germanic language. On the other hand, in northern and western England, minor rivers are increasingly more likely to have pre-English names. In Cornwall (KERNOW), the hydronymy is hardly less Celtic than that of Wales (CYMRU). Using the pattern of the increasing density of Celtic river names as one moves north and west in England can thus provide an indication of the rate and relative strength with which the Old English language spread during the post-Roman centuries (see ANGLO-SAXON 'CONQUEST'; Jackson's river-name map, LHEB 220).

In Wales, most river names are Celtic, or conform to the 'Old European' hydronymy, that is, Indo-European names which may predate Celtic but have come down through Celtic without interruption. For example, we have the British *Dēva* 'goddess' (English *Dee*, Welsh *Dyfrdwy* < Old Welsh *Dubr Duiu*; see further CAER), *Tama* (Welsh *Taf*), &c.

Most major river names in Scotland (ALBA) can be explained through BRYTHONIC Celtic, for example, *Dēva* (English *Dee*, Scottish Gaelic *Deidh*), *Dēvona*, also 'goddess', (English *Don*, Gaelic *Deathan*). In fact, the historical linguistic testimony of Scottish river names strongly resembles the evidence in Wales. Other names are less obviously Celtic in etymology, for example, the *Nis* (English *Ness*).

Some of the river names in Ireland lack a Celtic etymology, for example, PTOLEMY's Οβοκα *Oboka* in Wicklow (Contae Chill Mhantáin). But some are clearly Celtic, for example, Old Irish BÓAND (English *Boyne*, Irish *Bóinn*), Ptolemy's Βυουινδα *Buvinda* 'having white cows', an etymology resonating with the early mythological literature about the Boyne and its divine personification, sometimes also called *Bé Fhind* 'the white woman'. In the south-west, Ptolemy's river-name Ιουερνη *Iverne*, shares a Celtic etymology with the ancient name of Ireland and its inhabitants (see ÉRIU).

PEB

§3. BRITTANY

Brittany (BREIZH) represents a special and potentially revealing case, which is given special attention here. As part of the Roman Empire, it had fairly well-attested ancient Celtic (Gaulish) place-names, into which a second Celtic language (Brythonic) entered by historically documented migrations. Accordingly, Breton

hydronyms can be divided into two categories: names with Continental analogues, and names of a Brythonic origin, probably introduced as a result of the Breton migrations. As might be expected, many major river names are either already attested from Gaulish and Gallo-Roman times, for example, Gallo-Roman *Liger*, Breton *Liger*, French *Loire* (though the Breton *Liger* itself is a learned borrowing from Latin). Since many of the Continental-type names appear to be Celtic, there are many uncertain examples in which a Breton water name could be either Continental Celtic and/or Brythonic in origin. French terms have had an impact in more recent history. In the names cited below, the official French forms are noted between square brackets [ ].

Names of the Continental type, of which the greater concentration are found in Upper Brittany (Breizh-Uhel):

The root **al-* 'nourish' is attested, as elsewhere in Europe, in the name of the *Aleron* [*Alleron*] (*fluvium Alarumni* in ancient times); in this sense the name is used for rivers 'abounding in fish'.

The root **el-* is contained in various river names, such as the *Eler* [*Lié*] (*Eler* in 1269), *Ele* [*Ellé*] (*Elegium, Eligium* before the 12th century but *Ele* thereafter); these hydronyms are close to those found in Wales, such as the *Eláu* and *Elwy*. A certain number of other roots seem to be very old, probably pre-Celtic: for example, *carn*, from **kar*, **kal*, whose sense of 'stone' is found in the hydronym *Karnon* [*Canut*] (*Carnun* in the ancient forms); the same root is found in various toponyms in Brittany, and even in the name of an old *pagus*: *Karnoed*.

The hydronym *Argenon* [*Arguenon*], listed as Αργενουα by Ptolemy, takes its name from its mouth, translating *ad ostium* 'by the mouth'. The name is formed on *are*, identical to Breton *ar* (cf. *ar-goad*, *ar-vor*; Gaulish Armorica) and *genoua-*, identical to Breton *genoù* 'mouth' (cf. the names of *Geneva* and *Genoa*).

Nanton [*Nanton, Nançon*] is a river name directly related to the term *nant* 'brook, valley', with a divine suffix, also identical to Old Breton *nanton* 'river-bed'. The river name *Ult*, which can be compared to the *Lot* (in the Pays d'Oc, south of France, where the proper form is *Olt*), occurs at the beginning of the 9th century and, with a suffix doubtlessly designating a theonym, in the *Oudon* [*Don*] (*Ulton* in 834). The name of the *Blavezh* [*Blavet*] gives us the ancient name for a swamp. *Gwilen* [*Vilaine*], the river which flows through Rennes (Roazhon), was *Vicinonia*, from *Vi(n)cinno*, a divine name also attested in Rennes as *Mars Vicinnus*. The name goes back to the root **vik-* 'combative, unruly' (cf. Old Breton *uuethenn*, Old Welsh *gueith*, Old Irish *fecht* 'battle'). An important number of hydronyms have retained the initial [s], particularly in Gwened, for example, *Sal, Saled, Saloù*, with the root **sal-* 'dirty, muddy water' or 'salt'. They have undoubted cognates in Insular Celtic, for example, the river Hayle in Cornwall. The river *Sar* [*Sarre*] can be linked to the root **ser-* 'flow'. Other hydronyms, such as *Sil* (the name of a pond at Malguénac) and *Silioù* (a brook near Vannes/Gwened) are doubtlessly to be attached to the root which has given *hili* 'brine', if not the name of the eel (*sili-enn*) itself. Other river names show the conservation of initial [s]: *Sule* [*Sulé*], *Suliern* [*Sulerne*], *Sulon*, which can possibly be linked to the element *sul*, also present in Old Breton personal names (*Sulbrit, Sulcomin, Sulhael, Sulon*, &c.), but it is not certain whether they are the same (in the names, *sul-* is identified as an old noun for sight, cf. Old Irish *súil* 'eye'; see sulis).

The *Oded* [*Odet*], which flows through Kemper, could show a root designating 'the source, the origin', a root which is also present in the old forms of rivers outside Brittany, for example, the *Eure* (*Odura* in 889). The name of the *Añv* [*Aff*] shows a form which is more Continental Celtic than Brythonic; this river name, near the border between Upper and Lower Brittany, is formed from the well-known Celtic root *ab* 'water', but *Añv/Aff* was already *Aua*, pronounced /*ava*/, in classical sources. The name of a rock cited in the life of Saint Paul Aurelian is also attached to the root *ab*: *amachdu* 'water monster', of which another derivative still exists in Modern Breton *avank* 'beaver' (cf. Welsh afanc 'beaver, water monster', Old Irish *abac* 'beaver' and 'dwarf').

Brythonic names are strongly concentrated in Lower Brittany (Breizh-Izel):

Goued [*Gouët*] and *Gouedig* [*Gouedic*] are two river names derived from Old Breton **uuoet*, **guoet* 'blood', which became **gwaed* and later *gwad*. *Goued* is translated *Sanguis* in the lives of St Brieuc (Brioc) and St Gwenole (Uuinuualoe).

Le Kefleud [*Queffleuth*] was Medieval *Coulut* (= *Covlut*), < Old Breton **Cob-lut*, from the older **com-louto-s*, comparable with Irish *comhlúath* 'so rapid, very rapid' or *comlúth* 'the fact of moving, movement'.

Leñv [*Leff*] probably comes from a root **lem* 'moan, cry, voice', Middle Breton *leff*, Old Breton *lem-*, *leb-* (cf. Welsh and Cornish *[l]lef* 'moan, voice, utterance, cry, entreaty').

The balance of river-names in Brittany, including most small and medium sized water courses, show an overwhelmingly Brythonic vocabulary, with many elements also comparable to Goidelic. At a deeper level, Breton hydronymy seems also to have been enriched by pre-Celtic and Continental Celtic terms; in some instances the latter may be cognate with Brythonic and thus not of clearly distinct origin.

Some Breton terms for watercourses, still waters, and valleys

aber 'river mouth' (cf. Welsh, Pictish, and Cornish *aber*, Old Irish *inber* 'river mouth') is well attested on the coast of Leon: *Aber-Benniged* [*Aber-Benoît*], *Aber-Ac'h* [*Aber-Wrach*], *Aber-Ildud* [*Aber-Ildut*]; see also aberffraw.

andon 'spring' is a development of Old Breton *nanton* 'watercourse' and, later, 'spring'. The root word is *nant* 'valley' cf. Welsh *nant* 'brook' and Cornish *nans*.

aven 'river' (*auoun*, *auon(n)* in Middle Breton) corresponds to Welsh *afon*, Cornish *avon*, Old Cornish *auon* (cf. the rivers called Avon in England). As a common noun, *aven* is no longer current in Breton, having been replaced by *stêr* and *rivier*. *Aven* is found in a few river names and in toponymic compounds e.g. *Pont-Aven*.

dol 'low and fertile place in the flood plain of a waterway; meadow' is identical to Welsh *dôl*, 'meadow', and there is also a composition *dolenn*, widespread along the coast of Leon.

dour, Middle Irish *dobur*, Welsh *dwfr* or *dŵr*, Cornish *dofer*, Old Breton *duur*, *dobr-* means water in all its senses. The river name *Douron* is a compound of *dour*, probably with a divine suffix, Celtic **Dubrona*.

fell 'mud, rut'. This element occurs in *Penfell*, the name of the river which waters Brest.

feunteun and its variants *fetan*, *fantan* 'fountain, managed spring' is a Latin borrowing known in all the Brythonic languages (Welsh *ffynnon*, Cornish *fenten*).

froud 'mountain stream', Old Breton *frut*, Welsh *ffrwd*, Old Irish *sruth* derive from the root **sru-tu*. The corresponding Gaulish form is seen in the Geography of Ptolemy with the river name Φρουδιος *Phroudios* in what is now Normandy.

genoù 'mouth (of a river)' has its equivalents in Welsh *genau* and Cornish *ganow*, in the Swiss city name *Geneva* (see helvetii) and Italian *Genoa*.

geun, *goen* in Old Breton, comparable with Old Welsh *guoun*, Welsh *gwaun* and Irish *fán*, designates a swamp and sometimes a valley.

glaz 'brook', which occurs in several composite toponyms corresponds to Welsh *glais* 'stream, rivulet' and Old Irish *glais*, *glaise*; cf. Glaschu (Glasgow), which alternatively may be from *glas* 'green, blue'. *Daoulaz*, from **du* + *glaz* 'black (dark) brook', is a fairly widespread name (cf. *Dulas*, *Dulais*, &c. in Wales, *Dúglas* in Ireland).

glenn is a pan-Celtic term: Welsh *glyn* 'glen, valley', Old Irish *glenn* 'valley, hollow'.

gouer, *gouver*, representing **wo-ber-o-*, is identical to Welsh *gofer*, Old Cornish *guuer*, and designates a 'more or less hidden stream'.

gwaremm designates a 'fish weir' and is a Germanic borrowing.

gwazh 'brook' and sometimes 'swamp', as well as its derivatives (e.g. *gwazheg* 'swampy', *gwazhell* 'boggy land', *gwazhenn* 'underground spring', *gwazhredenn* 'brook'), is one of the most widespread words in Brittany and may be linked to 'vein', as Welsh *gwyth*, Cornish *goth*.

gwern (Welsh *gwern*, Old Irish *fern*) could sometimes have the sense of 'swampy place', though the most common sense is 'alder' (a tree found in swamps).

kammfroud 'meandering watercourse' is a compound of *froud* and *kamm* 'curvy', attested in Old Welsh *camfrut* (Book of Llandaf 140), since Old Celtic had *Cambi-dobrense* 'the winding/curvy brook'; with *kamm* there is also *kampoull* (Welsh *cambwll*) 'dale, valley'.

kember means 'confluence', and gave its name to more than one settlement in Brittany (*Kemper-Kaourintin*, *Kemper-Gwezhenneg*, *Kemperven*). The corresponding

Welsh form is *cymer* (Old Welsh *cimer*), from *com-ber* = **com-bero* 'to flow together'.

komm and *pant* are pan-Brythonic terms which mean 'valley' (and 'brook' by extension); they are frequent, either alone or in compounds such as *kombant*.

kored designates a 'fishery (in a river or in the sea)'.

kouronk 'place for swimming' gave its name to more than one pond or stream, notably in central Brittany.

lagenn is a term which designated various stagnant waters, while *lenn*, related to Old Breton *lin* 'liquid', Old Welsh *linn*, Welsh *llyn*, Cornish *lyn*, which originally meant 'liquid' (cf. Gaulish pl. *Linda*), today refer to a 'pond' or 'lake'.

loc'h, which has the various meanings of 'pool, pond, swamp, lagoon, &c.' is also a pan-Celtic term, and is cognate with Welsh *llwch*, Old Irish *loch* (it is possible that this word is evidence of borrowing into Brythonic from Goidelic).

mammenn, a derivative of *mamm* 'mother', is one of the terms which designates 'spring'.

markez 'swamp, shoal' is a well-attested, inherited term from Continental Celtic (or even pre-Celtic) which does not have any apparent cognates in the other Celtic languages.

palud, borrowed from Latin, is a special term for a saltern, particularly on the coast of Gwened.

penn 'head' is often applied to a headwater (e.g. *Pennaon, Pennaven, Pengwaien, Pennyeodi, Pennleger, Pennyar*, &c., which designated the sources of the rivers whose names form the second elements of the compounds).

poull is also a pan-Celtic term: Old Irish *poll* 'hole, an opening in the earth' (probably borrowed from Brythonic), Welsh *pwll* 'pit', Old Breton *pull* 'pool, pond, pit, swamp, &c.'

richer is a term attested almost exclusively in Leon and designates the 'navigable part of a river', while *rivier*, a French borrowing, along with *stêr*, has supplanted the Celtic term *aven* 'river' since the Middle Breton period.

The name for a ford, in the forms *rodo, roudouz*, and *roudour*, designates a number of small shallow watercourses (cf. Old Welsh pl. *rotguidou*, Romano-British *Rutupiae*), Middle Welsh *rodwit* (Ifor Williams, *Canu Llywarch Hen* 28, for example), Cornish *redwith* (in a toponym), Old Breton *rodoed* [glossing Latin *vadum* 'shallow'], Middle Breton *roudoez*).

stank is close to Old French *estang* and Latin *stagnum* (the form *stank* is attested in the 13th century in Cornwall), and means 'pond, length of water, &c.'

stêr 'river', which is doubtfully derived from Latin *aestuarium* 'estuary', does not seem to be attested outside Brittany (note, however, the form *gwensteri*, which seems to be a plural compound, in *Canu* Taliesin, poem XI, as well as the Old Breton forms *ester* and *Bonester* in the Cartulary of Redon).

Old Breton *tnou, tonou* has given Modern Breton *traou* (largely in Treger), *traoñ* (in Kernev and Leon) and *tenaou* (in Gwened), cf. Welsh *tyno* from the same origin.

roads [1] pre-Roman

It has long been believed that roads were first seriously introduced in much of Europe by Roman road-building programmes. However, archaeological

Part of a trackway dated to 148 BC using tree-ring dating, uncovered in a bog at Corlea, Co. Longford

evidence has revealed that European pre-Roman roads date from as far as the Neolithic. Both in the archaeological record and in historical sources, several different kinds of roads are attested in Celtic Europe, and it is possible to distinguish at least three main classes of roads.

Main roads (possibly called Celtic **mantlā*, sing. **mantlom*) are mentioned, for instance, by Caesar (*De Bello Gallico* 1.6.1–3), and appear in the archaeological record as roads 5–10 m wide on average, quite often with surface metalling. Constructed surfaces of gravel, compressed or burnt chalk, compressed clay, sand, clay/gravel mixtures and, where wetland had to be crossed, wooden planking are all attested at various sites (Karl, *Überlegungen zum Verkehr* 100–1). Such main roads probably crossed rivers via bridges (for which an Old Celtic word was *briva*; see Karl, *Überlegungen zum Verkehr* 105), several of which are known in the Swiss archaeological record (Schwab, *Archéologie de la 2e correction des eaux du Jura 1*; Jud, *Fernkontakte in der Eisenzeit* 134–46). Roads of this class seem to be comparable to what would be expected of an Irish *slige* attested in the early medieval literature (Kelly, *Early Irish Farming* 538–9). A trackway of massive planks and deep-driven stakes crossing a bog at Corlea, Co. Longford (Contae Longfoirt), Ireland, represents a major undertaking closely datable to the mid 2nd century BC.

Ordinary roads (for which a Celtic word was *sentos*) are also attested in historical sources (e.g. *De Bello Gallico* 5.19.2), and are found in the archaeological record as roads 3–5 m wide on average, often as secondary roads in Iron Age fortified settlements such as Manching in Germany or Danebury in England (Karl, *Überlegungen zum Verkehr* 101–3). They also frequently display some form of surface metalling. Where such roads crossed rivers, either bridges or fords (attested as British and Gaulish *ritus*; see Karl, *Überlegungen zum Verkehr* 105) are the most likely possibilities. These roads seem to have been quite similar to what would have been expected of a *rót* (variants *rát* and disyllabic *rout*) in the early medieval Irish texts (Kelly, *Early Irish Farming* 538–9).

The third distinguishable class are minor roads (a Celtic word possibly designating this class was **kammanom*), again attested by Caesar (*De Bello Gallico* 7.19.1–2). While these are less frequently discovered in the archaeological record, probably mostly due to lack of surface treatment on dry land, they can frequently be detected in wetland contexts as trackways (OIr. *tóchar*) 1.5–3 m wide on average (Karl, *Überlegungen zum Verkehr* 90–3, 103). However, these kinds of roads must also have existed in large numbers on dry soil, linking settlements with their fields and connecting them to the network of main and ordinary roads. Roads of this class would have been roughly

similar to the minor roads described in early medieval IRISH LITERATURE (OIr. *lámraite*, *tógraite*; Kelly, *Early Irish Farming* 538–40).

Below these three classes of roads, all of which would have been suitable for CHARIOTS and wagons, there would probably have been numerous smaller paths, suitable for people walking to the next settlement or for driving cattle.

The construction of the main and ordinary roads, and, where they had to be built across wetlands, also that of minor roads, was probably undertaken by nobles and their clients, who may have acted independently to fulfil the immediate needs of their own communities, or on behalf of wider communities at the order of a tribal king (*rīx*) or supreme magistrate (*vergobretos*). The attested Gaulish title of *platiodannos* ('official for public places'; Lambert, *La langue gauloise* 31–2) may well have been responsible for the construction and, possibly, also the upkeep of a public road system (the element *platio-* is obviously a loan from Greek πλατεῖα *plateîa* or Latin *platea*, both 'road, path'). Keeping the road network in reasonable repair, where this was not the responsibility of such a public official, may well also have been a public duty (Karl, *Überlegungen zum Verkehr* 105–9).

Although it was probably not expressedly a legal requirement, where opposing traffic was possible, left-side driving was probably the most common practice in Celtic Europe (Karl, *Überlegungen zum Verkehr* 109–12). Where travellers had to stay overnight, they could probably rely on a common practice of hospitality, attested in various historical texts (e.g. DIODORUS SICULUS, *Historical Library* 5.28.2–5, 5.34.1; ATHENAEUS, *Deipnosophistae* 4.150, 152), and also by the numerous *tesserae hospitales* (hospitality tablets) known from the Celtiberian regions of Spain (e.g. Almagro-Gorbea, *Celts* 391). Along main trade routes and in major population centres (for example, the *oppida* of late LA TÈNE GAUL), where hospitality by individual wayside farmers could not cope with the number of travellers likely to be in need of accommodation, hostels not unlike those described in early medieval Irish literature (Mac Eoin, ZCP 49/50.489) may well have existed, like the ones (according to Athenaeus, *Deipnosophistae* 4.150d–f, quoting PHYLARCHUS) built by the rich Gaul or Galatian Ariamnes (Karl, *Überlegungen zum Verkehr* 117–24).

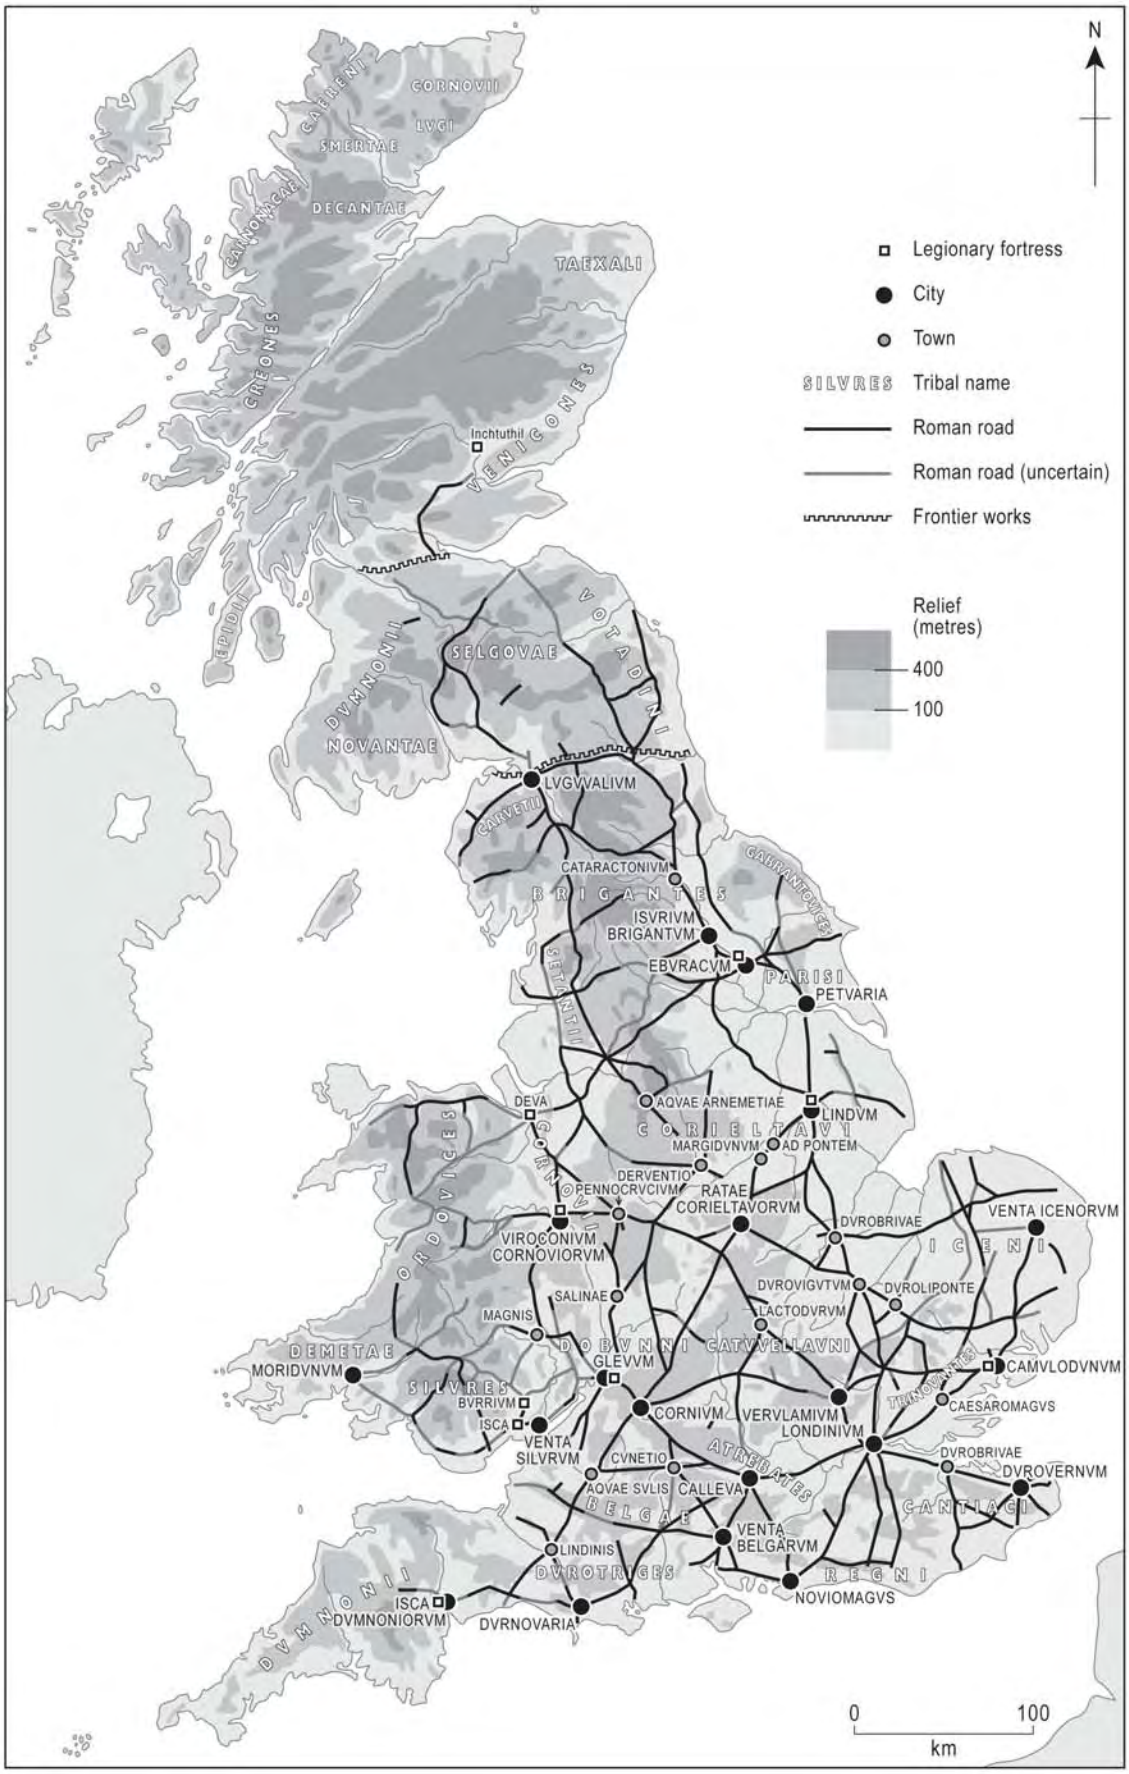
roads [2] Roman (*sarnau*)

One of the most impressive and enduring aspects of Roman civilization was a road system of legendary reputation. The construction of all-weather roads, and ancillary structures such as bridges, was an integral element of the scheme for the conquest of and the retention of control over the British tribal communities. Using surveying and engineering techniques hitherto entirely unfamiliar in Britain, strategic roads such as Ermine Street and Watling Street provided links between military bases, as well as springboards for further advance, facilitating the needs of military transport and supply—their primary function—and providing Britain with its first integrated communications infrastructure.

In Wales (CYMRU), as elsewhere in BRITAIN, the development of the road network was certainly progressive. A north–south Marches route linking the legionary fortresses at Wroxeter and Usk was in existence by the mid-50s of the first century AD, while a contemporary network of forts in south-east Wales was also probably linked by road. With the Flavian conquest (AD 74–7) the network was massively extended, until a minimum of 1025 km of road was in existence. The basic Welsh framework is a great quadrilateral with three north–south axes: between Chester/CAER (Deva) and CAERLLION (Isca), Caernarfon (SEGONTIUM) and Carmarthen/CAERFYRDDIN (Moridunum), known as Sarn Helen, and a mid-Wales route via Brecon Gaer and Caersws; four east–west axes, between Caernarfon and Chester, Carmarthen and Caerllion, and the valleys of the Severn (Hafren), the Usk (Wysg), and the Tywi; and, finally, several 'diagonal' transmontane routes such as



Map of Roman Britain showing the road network

that linking the auxiliary forts at Neath/Castell-nedd (Nidum) and Brecon Gaer. Some roads seemingly utilized prehistoric routes such as the trackway over the Carneddau, near Bwlch y Deufaen (Caernarfonshire), but the great majority were fresh, the product of Roman military surveyors (*mensores*) and probably military muscle putatively aided by compulsory, if not slave, labour. The earliest *terminus ante quem* for the road system is a milestone of AD 121 from Llanfairfechan (Caernarfonshire).

Ongoing research—particularly the technique of aerial reconnaissance—continues to reveal further unexpected road alignments such as the *c.* 50 km stretch west of Carmarthen, apparently aiming for St David's Head, or the dramatic route through wild upland heading south-east from the fort at Caer Gai (Merioneth/Meirionnydd), apparently aiming for a military post in either the Fyrnwy or Banwy valleys.

Wales experienced a large-scale military disengagement in the first half of the 2nd century AD; consequently, some of the upland routes may have experienced a relatively short life, or at least a major reduction in traffic. However, the Antonine Itinerary (a collection of some 225 routes, noting stopping places and mileages, probably made in the early 3rd century) shows that the roads of the Welsh Marches as well as the north and south coastal routes remained in use at least to the early 3rd century, a fact supported by the presence of 3rd- and 4th-century milestones, which also indicate the continued use of the Brecon Gaer–Carmarthen route at least to the middle of the 4th century.

In the post-Roman period many roads, such as Sarn Helen, seem to have become disused and eventually disappeared, while others, such as the Portway in Glamorgan (Morgannwg), survived to become the basis for turnpikes. However, the situation may have been more complex and the physical presence of a Roman road may have been instrumental in the siting of several early Christian epitaphs, such as that of Dervacus in Breconshire (sir Frycheiniog) or Catusus at Port Talbot—the latter re-using a Roman milestone.

Ireland (Ériu) and much of Scotland (Alba), remaining outside the Roman Empire, acquired no Roman road systems. On the Continent, a comprehensive Roman road network was to form an essential ingredient in the terminal Romanization of Celtic-speaking regions which were not to re-emerge as such in post-Roman times. Brittany (Breizh) is the exception, and there, the centrality within the Roman road network of such towns as Vannes (Gwened) and most especially Karaez was to be a key factor in the cultural and linguistic influence which these places exerted on Breton-speaking Breizh-Izel, defining zones of the Breton dialects, for example. In Breton ballads and written sources discussed by Constantine, Ahès as namesake of Karaez figures as a witch, queen, or giantess who built the roads of Brittany in a rôle closely comparable to that of the legendary Elen Luyddawg (Helen of the Hosts) and the *sarnau* of Wales.

Roazhon (Rennes) is the current capital and largest city of the région of Brittany (Breizh), with a population of 212,494 (1999 census). The seat of the Breton Parliament from 1561, the parliament building was destroyed by fire in 1994. Rennes is also home to two major universities, Université de Rennes I and II, each with over 20,000 students. The latter houses the department of Breton and Celtic. In the 4th century the name of the town is recorded as civitas *Redonum* 'the city and territory of the Rēdones tribe', whose own Celtic name comes from the Indo-European root **reidh-* ('travel, be in motion'), cognate with Middle Irish *réid*, Welsh *rhwydd* 'easy, free, swift', English *ride*. The Rēdones are mentioned in Caesar's *De Bello Gallico* (2.34, 7.75) as one of the tribes of Armorica. The town's earlier name was *Condate*, also Celtic, meaning 'confluence', which suits the location.

AM

Roberts, Kate (1891–1985) is widely acknowledged as one of the giants of 20th-century Welsh prose literature. The author of numerous novels, novellas, and collections of short stories, the 'queen of our literature' and 'mother of the short story' was also a prolific journalist, a dynamic printer-publisher, and an active supporter of Plaid Cymru (see nationalism) from its inception in 1925. It has by now become a critical commonplace to consider Kate Roberts's literary output in the context of two distinct periods: the earlier 'Arfon' period (1925–37), in which her work is seen as drawing largely upon the slate-quarrying communities of her childhood in north-west Wales; and the Denbigh period (1949–85), which is said to reflect the increasing urbanization of Wales (Cymru) and the emergence of a Welsh-speaking middle class. Novelist and critic Mihangel Morgan has radically disputed this literary geography: as he points out, Kate Roberts's career did not take her directly from rural Arfon in the north-west to urban Denbigh (Dinbych) in the north-east. Before her marriage to Morris Williams in 1928, Roberts spent over a decade as a newly qualified teacher in the valleys of south Wales.

It was while Kate Roberts was a teacher at Ystalyfera school in the south that she first embarked on her writing career. Working with a small female collective similar to the many groups of women who collaborated to produce suffragette plays across England at the time, she contributed to several sketches and plays performed by local amateur dramatic societies. Some of these were extremely successful, so much so that they were not only performed, but were also published. For example, *Y Canpunt* (The hundred pounds), first performed in 1916, was published in 1923. *Y Fam* (The mother, 1920) won the prestigious de Walden prize in 1919, and *Wel! Wel!* (Well! well!, 1926) attracted the commendation of Saunders Lewis, who described it in a letter to the author as 'a lively, funny, and true little slice of Welsh life'.

It seems that Kate Roberts's success with the collective in the years during, and immediately following, the First World War gave her the confidence to begin submitting her short stories to literary magazines such as *Cymru* and *Y Llenor*. While her career as a playwright never came to fruition—her next attempt, *Ffarwel i Addysg* (Farewell to education), the first play that she wrote alone, failed to win the National Eisteddfod (Eisteddfod Genedlaethol Cymru) competition in 1931, and was never published—all those who read her work in the small magazines were struck by her undeniable talent as a short-story writer. In 1925 her first collection, *O Gors y Bryniau* (From the marsh of the hills), was published to great acclaim, and she rapidly produced another three prose works: two books about children, *Deian a Loli* (Deian and Loli, 1927) and *Laura Jones* (1930), and the short-story collection *Rhigolau Bywyd* (Life's routines, 1929), which Saunders Lewis hailed as a classic, thereby sealing her reputation as a rising star in the Welsh literary firmament.

Kate Roberts was an ambitious writer who, despite her familiarity with developments in contemporary European literature, was committed to establishing a specifically Welsh form of the short story and the

novel, both of which were relatively young genres in Wales. Her political commitment to nationalism resulted in a wholesale rejection of the influence of English modernism: like many of her compatriots, she deliberately opted for realist narratives peopled by characters drawn from her childhood. One of her most formally conventional pieces of work, the highly politicized family saga *Traed Mewn Cyffion* ('Feet in Chains', 1936), which highlights the plight of minority cultures unwillingly involved in battles between large empires, remains one of her most popular works among Welsh readers. What is particularly interesting about Kate Roberts's life and work, nevertheless, is the constant tension between her political commitment to nationalism and her relatively anomalous position as a female writer in a profoundly patriarchal culture. Her focus on women's lives and emotional experiences is particularly marked in the stories in *Rhigolau Bywyd* and in the novel *Y Byw sy'n Cysgu* ('The Living Sleep', 1956), which examines the inexorable unravelling of the fabric of a woman's life following the breakdown of her marriage.

Kate Roberts's own marriage was struck by tragedy in 1946 when her husband died, allegedly of acute alcoholic poisoning. She was left with the task of running Gwasg Gee and the important Welsh-language newspaper, *Y Faner*, entirely alone for another ten years. Following the publication of *Ffair Gaeaf* (Winter fair) in 1937, she would not produce another book until 1956, apart from *Stryd y Glep* (Gossip row), a condensed, emotionally charged novella in the form of a diary written by a woman hedged in by small-town concerns, which appeared in 1949. It was Kate Roberts's journalism, which had always been a feature of her writing career, that would offer the most significant outlet for her creative and political impulses during this period. She had first contributed to the women's column of the Plaid Cymru newspaper, *Y Ddraig Goch*, in 1926, and continued to produce her own brand of politicized domestic journalism throughout her career, considering such topics as education and careers for women and producing a regular cookery column.

Her retirement from the press enabled Kate Roberts to focus once more on writing novels and short stories, and it was during the 1950s and 1960s that she produced her most arresting and masterfully written works, including *Te yn y Grug* ('Tea in the Heather', 1959), *Y Lôn Wen* (The white road, 1960)—her autobiography—and *Hyn o Fyd* (This world, 1964). *Tywyll Heno* (Dark tonight), a remarkable novella about a Nonconformist minister's wife who is hospitalized following a nervous breakdown, was published in 1962. The most striking aspect of novels such as *Tywyll Heno* and *Tegwch y Bore* (The fairness of morning, 1967) is the way in which they reflect upon the changing Wales that Kate Roberts inhabited—a world in which religious as well as political and linguistic certainties were fading—while focusing very closely and convincingly upon the emotional experiences of a disillusioned female protagonist.

Kate Roberts continued to write fiction into her old age, producing four more collections of stories before her death in 1985: *Prynu Dol* (Buying a doll, 1969), *Gobaith* (Hope, 1972), *Yr Wylan Deg* (The fair seagull, 1976) and *Haul a Drycin* ('Sun and Storm and Other Stories', 1981). Her stature in the context of Welsh-language literary culture is unquestioned: Kate Roberts's work is taught and revered in schools and colleges across the country. In a broader context, however, she still remains almost unknown, due to the difficulty of conveying her spare, rich Welsh prose in translation. Nevertheless, there are clear similarities between her life and work and those of other outstanding female contemporaries from other European cultures such as Virginia Woolf and Simone de Beauvoir. Each of these writers differed from many women of their generation in that they were well educated, financially independent, and had no children to care for. Talented, prolific, and the intellectual equals of their male peers, they lived out unusually enfranchised lives at a time when Western society was only just beginning to acknowledge women as anything other than wives and mothers. Times have moved on, in Wales as elsewhere. In that sense, there will never be another Kate Roberts, and the rich and compelling body of work that she left behind is testimony not only to a great literary talent, but also to an exciting era that saw an enormous shift in social perceptions of women.

SELECTION OF MAIN WORKS

COLLECTIONS OF SHORT STORIES. *O Gors y Bryniau* (1925); *Rhigolau Bywyd* (1929); *Ffair Gaeaf* (1937); *Te yn y Grug* (1959, trans. Griffith, *Tea in the Heather* [1968]); *Hyn o Fyd* (1964); *Prynu Dol* (1969); *Gobaith* (1972); *Yr Wylan Deg* (1976); *Haul a Drycin* (1981, trans. Watcyn, *Sun and Storm* [2000]).

NOVELS. *Deian a Loli* (1927); *Laura Jones* (1930); *Traed mewn*

Cyffion (1936, trans. Walters & Jones, *Feet in Chains* [1977]); *Stryd y Glep* (1949); *Y Byw sy'n Cysgu* (1956, trans. Griffith, *Living Sleep* [1976]); *Tywyll Heno* (1962); *Tegwch y Bore* (1967).
AUTOBIOGRAPHY. *Y Lôn Wen* (1960).
TRANS. *World of Kate Roberts: Selected Stories* 1925–81 (1991, trans. Clancy); *Summer Day and Other Stories* (1946, ed. Jameson).

Rodenbach is the site of an aristocratic grave from the 5th century BC. It is situated in the middle RHINE area, around 10 km north of Kaiserslautern, in the state of Rheinland-Pfalz, Germany, thus within the region of the HALLSTATT and LA TÈNE cultures of the European IRON AGE and the attested home of CELTIC LANGUAGES in the 1st millennium BC. The grave was discovered in 1874, and in the subsequent excavation a sword, a knife, three spearheads, and some bronze dishes of the Mediterranean type were found.

Gold arm ring from the princely grave at Rodenbach, Germany

The most significant item found was a bronze jug, often described as a 'pilgrim's flask' (*Pilgerfläschchen*). The gold bracelets and finger rings worn by the deceased are remarkable artworks and display an orientalizing early La Tène style. Similarly, a gold arm ring shows a developed animal style, with recumbent rams or ibexes, reminiscent of the jewellery from Thrace (roughly modern Bulgaria and European Turkey) and the Scythians of the steppes of present-day south Russia and Ukraine. The presence of this style in the Celtic west seems to indicate the intrusion of new elements of decoration from the lands around the Aegean and Black Seas, which appeared at the end of the Hallstatt period (*c.* 500–450 BC) in the middle Rhine region.

PEB

Roissy 'La Fosse Cotheret' is the site of important warrior-aristocratic VEHICLE BURIALS of the later pre-Roman IRON AGE. The distinctively rich grave goods found there illuminate the values of the Celtic tribes of north-east GAUL and their attitudes towards social status. The site is near Charles de Gaulle Airport (France, Val-d'Oise), and the cemetery, which was excavated in 1999, consists of around 10 graves which contain inhumations (i.e. with unburned bodies, not cremations). It is located near a dispersed settlement extending over 8 ha (20 acres), which has not yet been excavated. The bones are badly preserved owing to the acidity of the soil. The grave goods allow a dating to the end of LA TÈNE I and the beginning of the subsequent period (early 3rd century BC).

The cemetery contains two exceptional TOMBS, which are significant for their large dimensions (*c.* 2.5 m × 4 m) and the nature of the deposits. The first tomb is the grave of a warrior buried on a war CHARIOT. The second grave, with the most prestigious grave goods, also contains a man lying on a chariot. This chariot is not the type known to have been used in battle, but is another type of two-wheeled vehicle. Its rich bronze decoration (wheels, yoke, and harness)

suggests that it was for ceremonial use. The ensemble further contains two large vases of wheel-made pottery and a bronze ornamental fitting *c.* 20 cm in diameter, elaborately decorated in what is known as the 'Plastic Style' of the Middle La Tène period (see ART).

This small cemetery in the plains of the Île-de-France is not isolated. Several slightly larger cemeteries showing similar characteristics have been found in the neighbouring communities of Bouqueval and Plessis-Gassot. These cemeteries provide evidence of the ostentatious customs of the Celtic élite and the elaborate funerary honours which certain of their members were privileged to receive in the years shortly after 300 BC.

Romance languages, Celtic substratum

§1. INTRODUCTION

There was intense contact between speakers of the CELTIC LANGUAGES and speakers of Latin (and, later, the Romance languages descended from Latin) over a period which began no later than *c.* 390 BC (see BRENNOS OF THE SENONES) and which continued well into the post-Roman Middle Ages. In Brittany (BREIZH), this contact—between the BRETON language and the Romance language of French and its dialect *Galo*—has continued up to the present day. Evidence for widespread bilingualism in the Roman Empire can be seen in a mixture of Celtic and Latin in INSCRIPTIONS and early documents from eastern and central GAUL, for example, in the sentence addressed to the martyr St Synforianus by his mother (*nate, nate Synforiane, mentobeto to divo* 'O son, o son, Synforianus, keep your God in mind'). This statement can be dated to the 3rd century AD and survives in a manuscript of the 9th century. *Mente habeto* is a spoken Latin form, the source of Old French *mentevoir*, Provençal *mentaure*, Emilian *mentaveir*. *To divo* 'your God' is GAULISH; compare Welsh *dy Dduw*, Irish *do Dhia*.

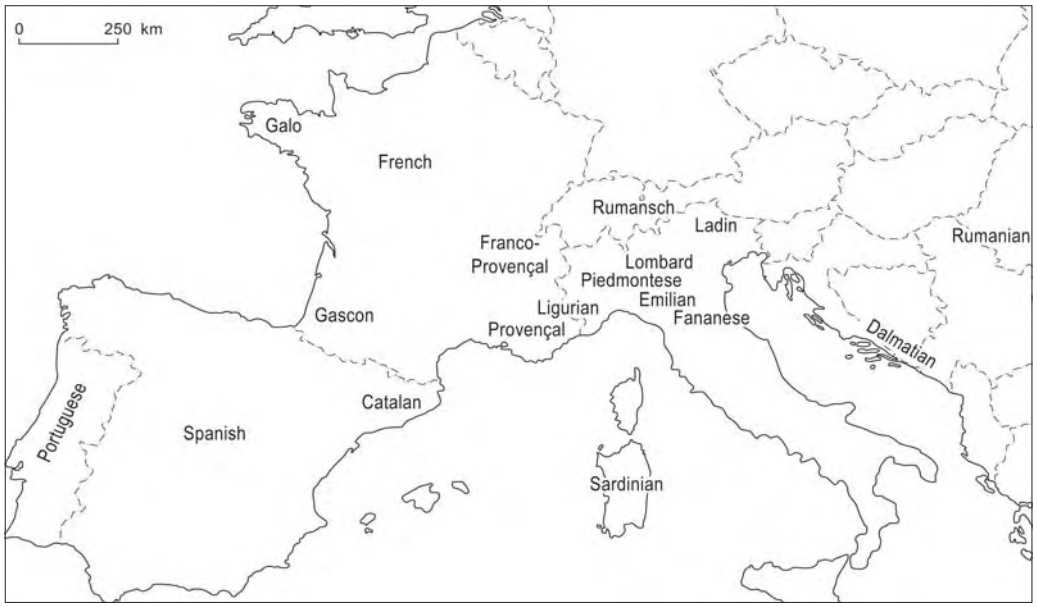
As well as being commonplace throughout Gaul, Celtic–Latin bilingualism was evident in vast areas of Europe, from BRITAIN in the north to Spain and Portugal in the south-west, from northern Italy in the central south to the lands around the DANUBE in the east. Celtic languages can be seen as substratum languages upon which Latin was superimposed. As a result, most of the Romance languages (Catalan, Dalmatian, Franco-Provençal, French, Gascon, Italian, Portuguese, Provençal, Rhaeto-Romance or Ladin, Rumanian, Sardinian, Spanish) contain numerous elements of a Celtic origin. Some areas of Romance speech, e.g. the south of Italy, do not overlay a Celtic substrate.

§2. HISTORICAL STAGES

Celtic-speaking territories were conquered by Rome piecemeal between the first Roman encroachments into Celtic northern Italy *c.* 282 BC and the conquest of lands across the lower Danube by the Emperor Trajan in the years 101–5 AD. A period of contact through trade, warfare, and diplomacy usually preceded the Roman conquest of a Celtic territory. There followed a period of Celtic–Latin bilingualism within the multicultural Roman Empire. Therefore, the contact between Celtic and Latin must be understood as a process of generations—usually stretching into centuries—in which Latin (and then Romance) gradually became the preferred medium in an increasing number of social settings in different regions. The decline of Breton, IRISH, SCOTTISH GAELIC, and WELSH in modern times is essentially the result of the same type of long-term socio-linguistic shift, advancing from one area to the next.

One important historical distinction can be made between the Celtic influence which occurred in the Republican period (before 31 BC) in northern Italy (what the Romans called *Gallia Cisalpina* 'Gaul this side of the Alps' [CISALPINE GAUL] i.e. on the Italian peninsula) and the later contact in *Gallia Transalpina* 'Gaul beyond the Alps' (TRANSALPINE GAUL). In the first case, over the last four centuries BC, Celtic words, sounds, and grammatical features were absorbed into what became classical Latin, the standard literary language of Cicero, Julius CAESAR, and VERGIL. Afterwards, Celtic linguistic influence, as embodied in Latin, spread with the Roman Empire to areas, such as Sardinia and Sicily, that had not previously been Celtic-speaking or had not even experienced transient Celtic incursions.

In this earlier period, Latin adopted many words of Celtic origin, including the following:



Homelands of the Romance languages in Europe

bracae 'long trousers' > French *braies*, Provençal *bragas*, Franco-Provençal *brag(i)as*, Catalan *bragias*, Italian *brache*, Spanish *bragas*, Portuguese *bragas*, Rumanian *brace*, Sardinian *brachie*. The Germanic languages also borrowed this word (English *breeches*), and it has been borrowed as far afield as Russian */brjuki/*. The native word survives as Breton *bragoù*.

carrum 'cart' (from Gaulish *carros*; cf. OIr. *carr*, MW *carr*, Bret. *karr*) > French *char*, Provençal *car*, Franco-Provençal *ca(i)r*, Catalan *car*, Italian *carro*, Spanish *carro*, Portugese *car(r)o*, Dalmatian *cairo*, Rumanian *car*, Sardinian *carru*. English *car* also comes from this word, through French.

alauda 'lark' > French *alouette* (Old French *aloe*), Provençal *alauza*, Franco-Provençal *alouza*, Catalan *alauza*, Italian *allodola*, Spanish *alondra* (Old Spanish *aloa*), Dalmatian *alodia*, Sardinian *alauda*.

sagum 'mantle' > French *saie*, Provençal *saigo*, Franco-Provençal *sagio*, Catalan *sago*, Italian *saio*, Spanish *saia*, Portugese *saia*, Dalmatian *sai(g)o*, Sardinian *sau*. The word was re-borrowed into Breton as *sae* 'dress'.

§3. celtic sounds in latin and romance

Celtic languages affected the pronunciation of Latin in Transalpine Gaul and in other parts of Europe. The following developments from Latin to one or more Romance languages can be attributed to Celtic:

Latin *ū* became [y], that is, the sound of French and Breton *u* or German *ü*; this development can be found in French and Rhaeto-Romance (cf. Lat. *lūna* 'moon' > French *lune* [lyn], Rhaeto-Romance [ly:na]). It also appears in a few parts of Portugal, in the region called Beira-Baixa and in the Alto Alentejo: [lya], [lyna], and in the so-called Gallo-Italian dialects (Ligurian [lyna], Piedmontese [lyna], Lombard [lynna]). Latin *ū* became [u] in Emilian, but [y] is a development well documented in all the dialects of the Apennine region, cf. [lynna] in the dialect of Fanano. The writing systems used by the ancient Celts were unable to represent a phoneme */y/*, but the evolution of Celtic *ū* > *y* > *i* in Brythonic (see below) demonstrates that the sound probably existed in one or more dialect of Continental Celtic. In the eastern area of Piedmont (in north-west Italy), Lat. *ū* moved through a stage *y* to an articulation even further to the front of the mouth [i], as in [lina]. This is precisely what happened to Celtic *ū* in Brythonic; thus, Celtic *dūnom* 'hill-fort, oppidum' becomes W *din* v. OIr. *dún*. It also occurs in the oldest Latin loanwords into Brythonic, such as Latin *cūpa* 'cup' > W *cib*; Latin *dūrus* 'hard' > W *dur* and Bret. *dir* 'steel'. Such examples were probably borrowed as trade words in Britain before the Roman conquest or very soon thereafter, thus in the 1st century BC or 1st century AD. Therefore, *ū* was probably developing to be pronounced */y/* in Britain at that time, and this would affect native Celtic words and Latin loans equally.

Latin *-ct-* > *-it-*; this development can be found in French, Provençal, Franco-Provençal, Portuguese, and in all the Gallo-Italian dialects; cf. Lat. *noctem* 'night' > French *nuit* (in which *-t* used to be pronounced), Provençal [nuitʃ], [nuetʃ], Portugese [noite], Piedmont-

ese [noit]. In Spanish, a modern form, such as *noche* [notʃe], represents the development of an older [noitʃe], well-documented in early Castilian texts. As the first step in such a development, evidence that Gaulish and British pronounced *-ct-* as [χt] is demonstrated by spellings which occur frequently in inscriptions and coin legends, for example, *Lucterios*, also written *Luχterios*, *Pictilos*, also *Piχtilos*, and many others. A similar development is documented in Insular Celtic; for example, Lat. *lactem* 'milk' corresponds to Ir. *lacht*, W *llaeth*, OBret. *laith*.

§4. morphology and syntax

It should also be noted that in the following phenomena it is not always clear whether we are dealing with Celtic influence shaping late Latin, spoken Latin influencing Celtic, or a tendency to convergence of related languages in contact. The parallelisms are seen to be shared most commonly between Brythonic and varieties of Western Romance, in other words, the descendants of the Celtic once spoken side-by-side with Latin in the Empire and vice versa.

Prefixes. *re-* is used in some Romance languages to intensify or complete the meaning of the verb, not, as in classical Latin, to indicate a repetition, restoration, or reformation. For example, French *remplir*, Provençal *re(i)mplir*, Italian *riempire* 'to fill' are derived from *re-* + Lat. *emp(l)ire*. This can be compared with the pre-modern Celtic languages, where *ro-* or *ry-* is used in various intensifying meanings, such as indicating a completed action, for example, OIr. *ro·cechain*, Early Welsh *ry·chant* 'he has sung'. *re-* as a byform of *ro-* is attested already in Gaulish and British.

Latin *inter-* is used to indicate reciprocity, for example, Old French *entraimer*, Old Provençal *entramar* 'to love each other' < spoken Lat. **se inter amare* < Lat. *inter se amare*. The same use is found with the corresponding Celtic preposition: for example, W *cyf-athr-ebu* 'to communicate'; OIr. *etir fid ocus mag ocus lénu* '(all) wood, field, and meadow'; Mod.Ir. *eadrainn féin* 'between just you and me'; MBret. *entromp* 'both of us', 'all of us' (similar to French *entre nous tous* 'both of us', 'all of us').

Diminutive forms. Latin *-iccus* is the source of a diminutive suffix found in French, Provençal, Franco-Provençal, Catalan, Italian, Spanish, and Portuguese. In Breton, *-ik* is overwhelmingly the most extensively used diminutive formation, as in *Yannik* 'Johnny'. Note also the names *Tindilicum, Counesicum, Gerganticum* in inscriptions from Celtic areas of the Roman Empire. The Celtic or Romano-Celtic variation of the suffixes (or forms of a suffix) *-īc-* and *-icc-* is common in variant spellings of names from Britain and Gaul, for example, Boudīca alongside *Boudicca*.

Feminine derivatives. In late Latin *-issa/-essa* gave French *-esse*, Italian *-essa*. Feminine derivatives in *-es* occur in all the Brythonic languages, for example, W *brenin, brenhines* 'king, queen'; *athro, athrawes* '[male] teacher, [female] teacher', OBret. *tiarnes* 'female ruler', Bret. *kazh, kazhez* 'tomcat, [female] cat'. Numerous Celtic feminine names in *-issa* are also found in ancient sources (*Aterissa, Carissa, Toutissa*). The priority of Celtic v. Latin is therefore not immediately clear.

The 'double' negative. A few Romance languages express negation of the verb by means of the inherited negative particle *ne* preceding the verb and an innovative accented negative word added following the verb: for example, French *je ne peux pas* 'I cannot' (instead of ***je ne peux*), Provençal *jo ne pueg mige* (instead of ***jo ne pueg*), Emilian *a'n pos miga* (instead of ***a'n pos*). The same use has arisen in the Brythonic languages (though it does not appear in the oldest stages of the languages): for example, W *ni allaf ddim* 'I cannot', replacing older *nid allaf*, Bret *n'eo ket gwir* 'it isn't true', MCorn. *ny clev banne* 'he does not hear'. Since this development belongs to the later Middle Ages, it should possibly be attributed to later contact between Brythonic and Romance (in the period of Anglo-Norman dominance, for example). But the effects of linguistic contact can manifest themselves (especially in syntax) later than the actual contact period, the initial influence having taken the form of a tendency in informal and uneducated speech which failed to appear in records. As a typological phenomenon of the languages of the world (dialect English, for example), the double negative is not uncommon, but the patterns in Brythonic and Romance are strikingly similar (and far less like English) and add support to the overall picture of parallelism.

Idioms. A few idioms attested in Old French, in rural parts of France, and in the Gallo-Italian dialects of

the Apennine mountains, can be seen as instances of probable Celtic influence.

Old French *quant à moi*, Fananese *quand e mé* can mean 'with me' (not just 'as far as I am concerned', as in modern standard French). It does not make sense as being derived from Latin, either from *quantum* 'how', 'as for' or *quando* 'when'. A Celtic *kanta, kanti* seems the more likely source, as in OBret. *centet* 'with you' (< Celt. **kanti-ti*), Bret. *ganit*, W *gennyt* 'with you', OBret *conten-i* 'with us'.

Facere 'to make, to do' is sometimes used as an auxiliary verb giving the sentence its person and tense, with the actual action of the sentence being expressed by an infinitive (similar in function to the so-called 'verbal noun' of Celtic). This construction is seen in examples such as Old French *convoitise fait son arc tendre* 'covetousness bends its bow', Fananese *e fag paser e punt* 'I cross the bridge'. The same use is widespread in Middle Welsh, in Breton, and in Cornish, as, for example, MW *myned a oruc*, MBret. *monet a geure*, MCorn. *ef a wruk mones* 'he went' (literally, 'going he did'). It survives in Breton (*mont a reas* 'he went') and more marginally in Welsh (*wnest ti fynd?* 'did you go?'). Within the Germanic languages, Modern English is unusual in possessing a similar construction in some tenses, for example, *I do go, I did go*. This 'periphrastic' use of 'do' now figures as a typological or areal feature shared between the languages of western Europe—Celtic, Romance, and English—due to their prolonged contact in geographical proximity.

§5. VOCABULARY

The following words are examples of Late Latin words borrowed from Celtic and surviving in the Romance languages:

anc(h)orāgō 'salmon?', cited as a Gaulish word by Cassiodorus > Old French *ancreu*, Provençal *ancraivo*, Piedmontese *ancrevio*;

arepennis 'surface measure of around 12 acres/5 hectares', cited as a Gaulish word by Columella (corresponding to OIr. *airchinn* 'narrow end of a field, headland') > French *arpent*, Old Spanish *arapende*, Piedmontese *arpent*;

badius 'bay' in the sense of 'the brown colour of horses', cited as a Gaulish word by Varro (cf. OIr. *buide* 'yellow, orange') > French *bai* (thus English *bay*), Provençal *bai*, Italian *baio*, Spanish *bayo*, Portuguese *baio*;

benna 'carriage', cited as Gaulish by Cassiodorus (cf. MW *benn*, Mod.W *men* 'cart') > French *banne*, Provençal *beno*, Piedmontese *benna*, Rhaeto-Romance *benna*;

betulla 'birch tree' (cf. the Celtic names *Betullus, Bitulla*, and Ir. *beithe*, W *bedw-en*, Cornish *bedew-en* 'birch tree') > Old French *beoule* > French *bouleau*, Franco-Provençal *biula*, Italian *betulla*;

birrus 'short mantle' (cf. Ir. *berr*, W *byr*, Cornish *byrr*, Bret. *berr* 'short') > Old French *beire*, Emilian *berra*;

bracis 'malt', cited as a Gaulish word by Pliny (W *brag*, Corn. *brag* 'malt', W *bragu* 'to brew') > Old French *brai*, French *brasser* 'to brew';

briso 'to crumble' (OIr. *brissim* 'I break') > French *briser*, Provençal *brisar*, Emilian *sbris(l)er*;

bulga 'small leather bag', 'stomach', cited as a Gaulish word by Varro (cf. Ir. *bulgaim* 'I swell', Ir. *bolg* 'small leather bag', W *bol(a)* 'belly') > Old French *boulge* (thus English *bulge*), French *bouge*, Provençal *burgio*, Piedmontese *bulega*;

cambiare 'to change, exchange' (cited as a Gaulish word by Cassiodorus) > French *changer* (thus English *change*), Spanish *cambiar*, Provençal *cambiar*, Catalan *cam(e)biar*, Italian *cambiare*;

damma 'deer', cited as a Gaulish word by Oratius (cf. OIr. *dam* 'ox', *dam allaid* 'deer', literally 'wild ox'; W *dafad* 'sheep' may also belong to this root) > French *daim*, Provençal *dam*, Franco-Provençal *da(i)m*, Catalan *daina*, Italian *daino*, Old Spanish *dayne*;

segūsius 'a kind of hunting dog', cited as a Gaulish word by Caesar (probably from the Celtic root *sego-* 'strong'; cf. the Gaulish ethnic name *Segusīni*) > Old French *seus*, Provençal *sabus*, Catalan *segu*, Italian *segugio*, Spanish *sabueso*, Portugese *sabujo*.

§6. PLACE-NAMES

It is in this area that the Gauls have left their most enduring mark. The following is a brief selection:

Bologna < Lat. Bononia < Celt. *bona* 'foundation' + suffix *-ōn-ia*; note also the French *Boulogne-sur-Mer* (Pas-de-Calais) and *Boulogne-sur-Seine* (Hauts-de-Seine). Of the same origin, note also German *Wien* 'Vienna', Latin *Vindobona* = Celtic *windo-* 'white' + *bonā* 'foundation';

Brianza (name of a northern Italian region) < Latin *Briantia* (similarly the French *Briançon* < Latin *Brigantione*) < Celt. **Brigantia*, based on the tribal name

Brigantes with the original meaning of 'people of the mountains' (see also brigit); cf. Celt. *brigā* 'hill-fort', W *bre*, Bret. *bre* 'mountain, hill';

Cadore (name of a northern Italian region) < Latin *Catubrium, Cadubrium* < Celt. **catu* + *brigom* 'the height of the battle' or 'hill-fort';

Milano < Latin *Mediolanum* < Celt *medio* + *lanom* 'middle of a plain' (see mediolanon); cf. also the French *Château-Meillant* (Cher) and *Miolan* (Rhône);

Osselle (Doubs) < Latin *Uxellus vicus* < Celt. **ouχsel(l)os* 'high'; cf. Ir. *úasal*, W *uchel*;

Rigomago < Latin *Rigomagus* < Celt. *rīgo-* + *magos* 'the king's field'; cf. Ir. *rí*, W *rhi*, and OIr. *mag*;

Rhin, Reno < Latin *Rhenus* 'Rhine' < Celt. **rēno-* 'major river, sea'; cf. OIr. *rían* 'river, sea'; and cf. Old Emilian *rino* 'river';

Vendeuil < Latin *Vindolium* < Celt. **windo-* + *iāliom* 'white field';

Verdun < Latin *Verdūnum* < Celt. **wer* + *dūnom* 'superior fortress'.

Francesco Benozzo

Romance lyric, Celtic substratum

A substratum in formerly Celtic-speaking areas of continental Europe can suggest explanations not only for non-Latin features of the romance languages but also in other cultural expressions, such as literature and folklore. The Romance literature of the Middle Ages was preceded by a situation of bilingualism/biculturalism of the long Gallo-Roman period. Therefore, some parallels between Romance and Celtic literatures need not be the result of Irish, Welsh, or Breton influence during the Middle Ages, but might rather have developed continuously from native pre-Roman cultures of the Continent.

Although other theories have been elaborated in order to explain the origins of the poetry of the Occitan troubadours (i.e. from medieval Arabic poetry, from Middle Latin court poetry, and even from the Old Greek tradition), many elements found in this tradition can be interpreted as signs of a Celtic origin. For example, in the poem *Ferai un vers de dreit nien* (I will compose a poem about nothing at all), Guillaume IX (1071–1126) described himself as returning, sleeping on a horse (1), from a world which was at the same time real and unreal (2), where he met a creature who existed and did not exist (3); he arrived there sleeping (4); he says that he has been mortally wounded by something/someone he did not know/remember, and who/which made him feel older and unwell (5). This tale illustrates the archetypal situation of courtly love (*amour courtois*), and the 'land of pure nothing' is the land of love where the lady loved by the poet lives. Similarly, many Irish and Welsh folktales tell the story of heroes crossing from this world to the Otherworld (2), often in a dream (4), on a horse (1), to reach a fairy being (3); when they return they are old and ill (5). In the mid-12th century poem *Quan lo rossinhols el folhos* (When the nightingale in the foliage), Jaufré Rudel depicts the land where the loved one lives as a *terra lonhdana* (faraway land); he is in love with the one who lives there, though he has never met her/it; this creature is never described, but the poet says that she/it can run faster than horses; birds are messengers of love from the faraway land; the only possibility for him to reach this land is to travel dressed as a beggar. In these details, this story follows the same pattern as that of the meeting between

Pwyll and Rhiannon in the Welsh Mabinogi. As the mysterious beloved who runs faster than horses, Rhiannon has been traced back to the myth of the horse goddess Epona, whose name is P-Celtic and whose cult is well attested in Gaul. Epona was especially popular among the Roman military in Gaul, including, but not limited to, cavalry units. Since the earliest troubadours were horsemen themselves, all from what had been Roman Gaul, and belonged to the military class of feudal society, it would not be surprising for them to inherit traditions of Gallo-Roman cavalrymen.

Further evidence which points to the possible indigenous origins of troubadour love poetry include several brief Gaulish or mixed Gaulish and Latin inscriptions addressed to young women on spindle whorls (loom weights) and other small objects from central and southern France. Although proposed meanings vary, many have been interpreted as coarsely amorous: for example, TAURINA UIMPI 'pretty bull-girl', MARCOSIOR MATERNIA 'I should like to ride the (?) maternal organs'. The metaphor of lovemaking as riding is a common topos in troubadour poetry, where the woman is often assimilated to a mare. The inscription on another Gaulish spindle-whorl describes the girl as a TIONOUIMPI MORUCIN 'divinely beautiful maiden', and another as BONA DONA 'good woman'; in the same way, troubadours often call the loved woman a *bona dompna*. Another inscribed spindle whorl from Autun addresses the girl as AMICA, DAGOMOTA ('friend' in Latin, then a Celtic compound 'good' + a less certain element for which a sexual meaning has been suggested); as in this mixed-language text, the troubadours' *dompna* is frequently called *amigua*.

Reminiscent of the fairy mistresses of Celtic folklore, the troubadours often call their woman a *fada* 'fairy', and describe her as being as white as snow. If the lover breaks his promise, he becomes ill, as is the case with the Irish geis (cf. also serglige con culainn).

Francesco Benozzo

Romances in Welsh is used here as a shorthand term for late medieval and early modern translations and adaptations from French. In native Middle Welsh terminology, there was no genre called 'romance' and the term Tair Rhamant ('The Three Romances') applied to the three prose tales of Owain *neu Iarlles y Ffynnon*, Peredur, and Geraint is a purely modern usage. Those three tales are never all grouped together in the surviving manuscript compendia. Nonetheless, all three are clearly related to three 12th-century French romances by Chrétien de Troyes: his *Yvain*, *Perceval*, and *Erec*, respectively. The exact relationship between them is difficult to establish, and is different for each of the Welsh texts. All three correspond to the broad outlines of Chrétien's romances, but, while some passages seem fairly close to the French text, narrative material apparently of Welsh origin has also been incorporated. Thus *Owain* includes an epilogue where the hero defeats the *Du Traws* (Black Oppressor), while *Peredur* contains a sequence of adventures not found in Chrétien (for further discussion, see TAIR RHAMANT). However, while the Welsh tales reflect little of the culture-specific mentality of the French romances, they reveal an interest in concepts of courtly life and behaviour which sets them apart from the earlier native tales and suggests the nature of their milieu and intended audience (see WELSH PROSE LITERATURE). Each Welsh tale has its own distinctive style and technique, while remaining within the traditions of Middle Welsh prose narrative, and represents a creative reworking of

material derived from more than one source and perhaps open to further revision, as the manuscript history of *Peredur* suggests.

Y Seint Greal or *Ystoryaeu Seint Greal*, however, is an avowed translation from the French, representing a late 14th-century Welsh version of two early 13th-century GRAIL romances, *La Queste del Saint Graal* and *Perlesvaus*. Although the earlier *Peredur* included what approximated to Chrétien's grail procession, the term 'grail' was never used and the vessel carried was not named; therefore, *Y Seint Greal* represents the first specific mention of the grail in Welsh. The redactor knew *Peredur*, and strove to forge links between such earlier stories and his Continental sources. He was also familiar with other French material, notably the prose *Lancelot*, which, together with other romances of the so-called Vulgate Cycle of French Arthurian romances (mostly of the 13th century) now became a quarry for compilers of other material (see ARTHURIAN LITERATURE). The redactor of the account of the birth of ARTHUR in the late 14th-century MS Llanstephan 1A, for example, drew on the French prose Merlin (see MYRDDIN) as well as GEOFFREY OF MONMOUTH, while the 15th-century compilation DAROGAN YR OLEW BENDIGAID (The prophecy of the blessed oil) combined material derived from Welsh, French, and Latin Arthurian sources, with a political prophecy concerning Thomas Becket, thereby revealing the ever-increasing overlap between the genres of story and history. Similarly, from at least the early 15th-century compilers of TRIADS, GENEALOGIES, and lists took advantage of the availability of a wider stock of material from outside Wales (CYMRU), whether borrowing from the original or Welsh versions.

While existing prose texts were often copied repeatedly in the later medieval and early modern periods, virtually no original tales appear. Translations or adaptations of foreign originals flourished. These were often based on French or Anglo-Norman sources (see WELSH LITERATURE AND FRENCH, CONTACTS), but also increasingly on English texts, especially as printed books became more common. The Welsh versions of the Travels of Sir John Mandeville and such religious works as *Dives a Phawper* ('Rich and Poor') and *Y Marchog Crwydrad* ('The Knight Errant') are all based on printed exemplars. Besides Welsh versions of books for entertainment or devotion, instructional texts on topics such as hunting, heraldry, and husbandry were produced.

The concept of the individual author was slow to develop within the Welsh prose tradition and much of the prose from this period is still anonymous. The Chronicle (*c.* 1548–52) of Elis GRUFFYDD, in this and other respects, reflects new developments. Elis Gruffydd of Flintshire (sir y Fflint), 'the soldier of Calais' (*c.* 1490–*c.* 1558) spent his adult life as a soldier and administrator in England and France, and during his last years in Calais he returned to earlier literary interests. Having translated from English into Welsh a series of medical treatises, he wrote a vast Chronicle of the Six Ages on the medieval model, taking his narrative from the Creation to 1552. He had access to a remarkable range of sources in English, French, Latin, and Welsh, both manuscripts and printed books, as well as stories from Welsh oral tradition, and eyewitness reports of recent and contemporary events. For his own day he also drew on his own experience and, together with his own idiosyncratic style and strong opinions, expressed in direct addresses to the reader, this makes his Chronicle a highly personal work. He had the nostalgia of an elderly exile, a deep interest in the literary and folk traditions of his homeland, and an emotional attachment to the WELSH language, but he became a Protestant convert and imbibed the excitement of the new learning. The tension between these two aspects is evident in the Chronicle, and sets him at the very point of transition from the medieval outlook and the new concerns of the RENAISSANCE.

Ceridwen Lloyd-Morgan

Romano-British is a term which refers in the historical sense to those parts of Britain which were ruled as provinces of the Roman Empire during the period AD 43–409/10. Individuals who lived in the Roman province, later provinces, of Britain (*Britannia*, the *Britanniae*) can be referred to as Roman Britons or Romano-Britons, irrespective of whether their first language was the Celtic British or Latin, or possibly something else; for example, St Patrick was a bilingual Romano-Briton before he acquired his third language in Ireland (Ériu). In the domains of archaeology and art, Romano-British can be used as a label for the material culture of Roman Britain. It is particularly meaningful in distinguishing architecture and portable objects which show an amalgam of features of Roman type and those inherited from the pre-Roman Celtic Iron Age or some other distinctively provincial quality, for example, the Romano-Celtic temples of Britain.

Romano-British is also used as a specialized linguistic term for British names as they occur in Latin texts and are written with Roman letters and spelling and inflected as Latin nouns. In this sense, Romano-British forms may date to the four centuries of Roman rule in Britain, for example, the names Brigantes or *Vellocatus* in Tacitus' Agricola, written in the 2nd century AD. However, the names of Britons, such as *Cassivellaunus* for British Cassivellaunos, as used by Caesar in *De Bello Gallico*—written some hundred years before the beginning of Roman rule in Britain—can also be called Romano-British. The writing system itself does not really differ from the Gallo-Roman used for Gaulish names in Latin texts. If we wish to stress the point that Romano-British and Gallo-Roman forms do not differ linguistically, the blanket term Romano-Celtic avoids the possible false implication of distinctive local varieties. Romano-British can also be applied to Brythonic names in post-Roman Latin contexts, as long as these names were still written according to the same rules and were not yet reflecting the linguistic changes which produced Old Welsh, Old Breton, and Old Cornish from the British proto-language. In particular, this is a matter of spelling the names with their old final syllables (British terminations rendered as Latin) and preserving unstressed vowels between elements of compounds. Thus, on the 7th-century inscription from Llangadwaladr in Anglesey (Môn), King Cadfan's name is given in the late Romano-British spelling CATAMANVS, but in texts almost as early St Cadoc, whose full name was the same as that of the king, he is called Old Welsh *Catmann*, in effect *Cat'mann'*, noting with apostrophes the loss of Old Celtic syllables. Thus, as a learned archaism, Romano-British spelling co-existed with early Neo-Brythonic in the post-Roman period. There is little evidence to suggest that literate Britons of the 7th century or later could correctly produce a new Romano-British spelling for a native name; rather they were necessarily drawing on an established written precedent of the 6th century or earlier. We do, however, continue to find Latinizations of Celtic names as used in Latin texts throughout the Middle Ages, but these can usually be distinguished from Old Romano-British spellings; for example, *Mailcunus* for Maelgwn (†547) in Historia Brittonum is a Latinization of Old Welsh *Mail'cun'*, whereas Gildas's *Maglocune* (Latin vocative) for the same man is a Late Romano-British form.

Romano-Celtic is a term used in Celtic studies, and in this Encyclopedia, with the basic sense of an amalgam of things Roman and Celtic, most usually linguistic items or other cultural attributes of Celtic origin and content placed in Roman form and context. Accordingly, we can also speak of the population and communities of the Roman provinces of Gaul, Britain, central Europe, northern Italy, and most of the Iberian Peninsula as 'Romano-Celtic'. The key historical horizon for this amalgam would be the period at which the Roman Empire expanded northward (beginning in the 2nd century BC in Cisalpine Gaul and reaching its greatest extent with the conquest of the Dacians and Celtic areas nearby by Trajan, emperor AD 98–117), absorbing large numbers of Celtic-speaking people and coming into contact with others beyond the imperial frontier. There

were still large numbers of Celtic speakers in the Western Empire when it fell in the 5th century, and Celtic remained predominant in the sub-Roman period of the 5th and 6th centuries, especially in Britain and Armorica. Linguistically ancient Celtic names or common words present in Latin texts and assimilated to Latin grammar can be cited as Romano-Celtic forms: thus, for example, Gildas's Latin vocative *Maglocune*, for Maelgwn, rendering a native Celtic name nominative **Maglokū*, genitive **Maglokunos*. At a more fundamental level, the orthographic system used to record ancient Celtic in Roman letters can be called Romano-Celtic spelling. Archaeologically, several types of sites and artefacts are characteristic of the Celtic regions of the Roman Empire, for example, the Romano-Celtic temples with their distinctive plan of concentric squares (see fanum).

As defined here and used in this Encyclopedia, the term 'Romano-Celtic' has a meaning which is very similar to those of Gallo-Roman and Romano-British, and can sometimes be used interchangeably with one or the other. However, 'Romano-Celtic' has some possible advantages which are worth mentioning. For example, Romano-Celtic temples of the same basic form occur in both Gaul and Britain, and to call them 'Gallo-Roman' or 'Romano-British' might obscure this fact. Similarly, many Celtic tribal names, such as *Paris(i)i* or *Tectosages*, and many place-names, such as Noviomagos, occur in more than one region of the Celtic world; this is also true of many personal names, such as *Cingetorīx* (encountered by Caesar in both eastern Gaul and Kent). In more instances, a Romanized Celtic name is found only in Roman Gaul or Britain, but usually there is nothing particular to the Gaulish or British language about it, and the term 'Romano-Celtic' avoids such an implication. The term is also useful when a Romanized Celtic name comes from a territory where the ancient language is not usually specified as Gaulish or British, for example, the ATTITO ATEVALI F[ILIVS] named on an inscription from Noricum (Hasenbach bei Taxenbach) and LOSSIO VEDA NEPOS VEPOGENI CALEDO 'Lossio Veda of the Calidones, descendant of Vepogenus' on an inscription from Colchester (Camulodūnon; RIB no. 191). In the latter, the name *Lossio* has in fact been used to argue that the Celtic language of the Caledonians was not British (Jackson, *Problem of the Picts* 129–66).

Once the system for writing Celtic names with Roman letters was devised in the later centuries BC, it changed very little over the next seven centuries, nor from one part of the provincial Roman world to the other; in fact, the system does not vary appreciably more than that used for Latin itself. It is important to recognize two possible implications of this fact: firstly, that the standardization of Romano-Celtic written forms is masking dialect variation and, secondly, that an educated Romano-Celtic standard might have affected the Celtic of the bilingual population in the Roman provinces, particularly the language of literate urbanites.

Romanticism, Celtic [1] Ireland

In Ireland (Éire), as elsewhere, 'Celtic' when tinged with romantic notions has been a nebulous term covering a myriad of meanings. In the 19th century it was often loosely employed to refer to an ancient (though historically vague) Ireland, commonly seen to be imaginative, exotic, spiritual, not infrequently melancholy, and almost always strikingly antithetical to the sober Victorian, materialistic present.

The first scientific attempt to argue that the Celtic languages were related is found in the work of Edward Lhuyd, whose interest in Irish antiquities garnered him the grateful praise of Irish poets. It was, however, James Macpherson's 'discovery' of the Ossianic poems (see oisín) that led to a more general awareness of how romantically the Celtic past could be viewed, and also to fervent claims that Ireland rather than Scotland (Alba) was the rightful home of Ossianic literature. In the translations of Charlotte Brooke (1740–93) and those of her contemporaries—people such as Sylvester O'Halloran (1728–1807), Charles Henry Wilson (1757–1808), Joseph Cooper Walker (1761–1810), Theophilus O'Flanagan

(1764–1814), and James Hardiman (1782–1855)—a by and large more honest, albeit not always much more satisfactory, attempt was made to bring to light a culture which had previously been largely despised by educated readers of English, even though the IRISH language itself was often within earshot. Such interest also led to the founding of several learned associations devoted to antiquarian research, among them the significantly titled Iberno-Celtic Society, the Celtic Society, and the Ossianic Society.

A somewhat analogous process of repossession occurred in the field of music with the work of Edward Bunting (1773–1843) who collected, transcribed, and published many traditional Irish airs (see IRISH MUSIC). Many of these were soon accompanied by the romantic nationalistic lyrics of Thomas MOORE (1779–1852). Another collector of Irish melodies was Sir George PETRIE (1789–1866), who was also an avid chronicler of Irish antiquities both pictorially and in his writings, and a successful advocate of the importance of studying the Irish past. As superintendent of the topographical section of the Ordnance Survey in Ireland, Petrie took a leading part in the pioneering collaboration of artists and scholars (including John O'DONOVAN [1806–61] and Eugene O'CURRY [1794–1862]), which painstakingly brought some of the richness of Ireland's heritage to public notice.

While many of those who advocated the study of native Irish traditions were ASCENDANCY Protestants, whose cultural sympathy sometimes lay uncomfortably with their unionist politics, the rediscovery and rehabilitation of Ireland's past was, unsurprisingly, ardently embraced by many nationalists, such as the United Irishmen (founded in 1791), and most notably the Young Ireland movement (founded in 1842), for whom language and culture played a central place in their concept of nationhood (see NATIONALISM). An example of how easily historical knowledge could be utilized for use on the political stage is shown by the wide currency of 'Fenianism' as a term for the republican underground movement, based as it was on a perceived similarity between contemporary revolutionaries and FINN MAC CUMAILL's warrior band in early Ireland.

Following the mid-19th-century potato FAMINE, which decimated poor, largely Irish-speaking Ireland, the society that remained became increasingly English in speech, and also more literate and politically ambitious. While the Irish language became associated in many minds with poverty and deprivation, the advances in historical and linguistic scholarship led to a growing realization that the Irish were heirs to a distinctive, heroic civilization. During the second half of the century romantic retellings of early myths and historical events in both prose and verse by such figures as Sir Samuel Ferguson (1810–86) and Standish James O'GRADY (1846–1928) found a receptive audience among the nationalistically inclined and increasingly confident Irish middle class. Such works inspired W. B. YEATS (1839–1922) to give a new literary expression to aspects of Irish mythology, and he, and his like-minded collaborator Lady Augusta GREGORY (1852–1932), were pivotal figures in the English-language literary renaissance, sometimes referred to as the Celtic Revival.

In tandem with the attraction of the remote Irish past there also grew a realization that Irish country-dwellers, especially those who remained Irish in speech, still possessed a rich legacy of oral legends and songs, and that superstitious beliefs coloured much of their lives. To Yeats, Lady Gregory, and others, this unwritten lore became a field of study and a source of creative inspiration, as exemplified by Yeats's collection *The* CELTIC TWILIGHT (1893, 1902). The harsh, stoic, and apparently timeless way of life still prevailing in the west of Ireland also appealed greatly to a romantic notion of primitivism, and had a major influence on many writers.

While most of the literary work connected with Celtic romanticism is in English, much of its momentum during the late 19th and early 20th centuries derived from the Gaelic League (CONRADH NA GAEILGE) founded in 1893 as a popular movement which sought the preservation and restoration of Irish. Its first president, Douglas Hyde (Dubhghlas DE HÍDE, 1860–1949), did much to promote GAELIC literature and the oral tradition, and another prominent member, Patrick Pearse (Pádraig MAC PIARAIS, 1879–1916), drew inspiration for both his politics and his writings from Irish mythology and folk life, and recognized a potent symbol in the tragic figure of CÚ CHULAINN. When Hyde argued famously for the 'De-Anglicizing' of Ireland, he was thinking primarily of linguistic restoration, but this was in fact only one

aspect of a more general desire in nationalist circles for a greater show of cultural distinctiveness between Ireland and England. The Gaelic League itself was an organizer of hugely popular social dances and gave great impetus both to Irish dancing (see DANCES) and traditional music. It also played an important part in the promotion of Irish games such as HURLING and Gaelic football, whose rules had been established by the GAELIC ATHLETIC ASSOCIATION (GAA), founded in 1884.

Interest in the past was also reflected visually in the popularity of interlaced Celtic ornament (see ART), and in the great vogue for emblems indicative of early Ireland, such as the HARP, the wolfhound, the HIGH CROSS, and the round tower. The imitation of ancient models was especially noticeable in jewellery, where copies of antique artefacts such as the TARA BROOCH were mass-produced and sold extremely well. This desire for distinctiveness even extended to dress, particularly in the case of formal wear: women sported dresses and capes, of Irish manufacture and in what were considered Irish colours, modelled upon what native noblewomen of an earlier era were imagined to have worn, while some brave men adopted a 'revived' Irish kilt.

Despite the popularity of things associated with a supposedly Celtic past, there was no widespread interest in strengthening collaboration between Ireland and the other modern Celtic nations, though numerous cultural and political concerns were held in common. The Pan-Celtic movement did meet with some success, but many Irish nationalists disliked the prominence of Ascendancy figures in its ranks, and the lack of stress placed in its proceedings on political emancipation (see PAN-CELTICISM).

The foundation of the Irish Free State (Saorstát na hÉireann) in 1922 and the subsequent Civil War can be seen to mark a point when romantic idealism finally yielded to a harsher modern reality, but many facets of what we associate with Celtic romanticism undoubtedly played a major rôle in the birth of modern Ireland, and its legacy includes many works of enduring value.

Romanticism, Celtic [2] Scotland

The Scottish manifestation of Celtic romanticism is characterized by an embattled quality and some apparent contradictions. These features derive basically from historical and political causes: firstly, Scotland's partly Celtic, partly non-Celtic cultural background, and, secondly, Scotland's constitutional and intellectual relationship with England. Scotland (ALBA) shares with other Celtic nations the awkwardess which flows from the exotic, Anglophone genesis of its Celtic romanticism, which only gradually and gingerly became internalized by SCOTTISH GAELIC culture.

A form of Celtic romanticism was undoubtedly present in Lowland SCOTS 'Highland Laddie' songs from the early 18th century, which celebrated a figure with an alluring combination of dangerousness and desirability. The flurry of romanticized treatments of the Young Pretender's 'adventure' which appeared immediately after the 1745 Rebellion provides further testimony to the strength and wide currency of such attitudes. In part, they had been nurtured by the gradual assimilation of the Highlanders (or their aristocracy at least) into Lowland society and Scottish collective experience during the course of the 17th century, punctuated periodically by the explosive intrusion of Highland violence into the national consciousness from Auldearn to Killiecrankie to Sheriffmuir to CULLODEN. But also, more subtly, the

romanticization of the Highlander was a by-product of Lowland Scottish identity crisis in the wake of the UNION of the Parliaments.

In the mid-18th century, as the country moved away from the last Jacobite military insurrection (see JACOBITE REBELLIONS), the following principal factors combined to stimulate and 'fix' the Scottish version of Celtic Romanticism. (1) Antiquarian interest in the 'native' past of all parts of BRITAIN was strong, and intensified by rival interpretations linked to political ideologies, particularly in relation to national and racial origins. (2) 'Internal' Scottish debates about the origins of and relationships between BRITONS and Caledonians (see CALIDONES), PICTS and Scots, Highlanders and Lowlanders were particularly pointed because of their entanglement with debate about the effects of the Union. (3) Ideas about heroic ages and natural man were current, and the HIGHLANDS and Islands of Scotland figured in discussion of these. (4) Interest in the Celtic traditions of the British Isles was reviving, both in the form of local (i.e. Welsh, Scottish, and Irish) investigation and collection, and at the level of a more generalized CELTICISM which was in part a function of the decline of the classicism of the 'Augustan' age in English letters.

This was the climate that witnessed (and indeed stimulated) the appearance of James 'Ossian' MACPHERSON's so-called translations of ancient Gaelic epic poetry in the early 1760s. Their timing was impeccable, and they became a literary *cause célèbre*, praised and celebrated throughout Europe. They strongly influenced Celticist poets and playwrights in English. They spawned imitators and at the same time greatly stimulated the collection of Gaelic poetry (see SCOTTISH GAELIC POETRY). Macpherson simultaneously provoked scepticism and hostility on several fronts. (1) Many critics were suspicious of Macpherson's unwillingness or inability to produce Gaelic originals for his English 'translations'. (2) The supposed *floruit* of Ossian (see OISÍN) being set in the 3rd century AD, it was deemed incredible either that manuscripts should have survived from that period or that poetry could have been transmitted orally from that time down to the 18th century. (3) Some critics with *parti pris* positions in the long-running controversy over the origins of the Scottish identity were infuriated by Macpherson's espousal of the view that the heroic ancient Caledonians were aboriginal Scottish Gaels. (4) A similar group of critics was unsettled by the generally pro-Gaelic tone of Macpherson's works and the celebration of an ancient Scotland whose heyday was set long before the Union.

Macpherson's Gaelic-speaking Highland readers were presented with something of a dilemma. Gaelic solidarity and chauvinism demanded that 'Ossian' be defended against 'North British' and Scottophobe detractors, even if they felt private reservations about the authenticity of the works. And, equally, they would have appeared ingrate and churlish if they rejected the attention and approbation of Macpherson's Lowland Scottish, English, and Continental admirers, given the bad press that Gaels were all too accustomed to receiving from those quarters. But there were positive side-effects: genuine Gaelic manuscripts were rescued and revered, Gaelic oral literature (including genuine heroic BALLADS) were collected, and Gaelic or Highland Societies were formed in the cities.

During the century following its initial appearance, the fame of the 'Ossianic' corpus impacted on 'genuine' Gaelic literature in several ways. (1) It stimulated further forgeries, including some provided with 'original' Gaelic, which Macpherson's texts effectively lacked during his lifetime. (2) It stimulated a literary reaction in the form of satirical verse targeted especially on the figure of Dr Johnson as arch-detractor of Macpherson and the Gaels. (3) Its 'romantic' mood percolated widely through into the literary tradition and the cultural consciousness of Gaels in both direct and less obvious ways, often combining with native themes and genres which offered ready-made points of contact. (4) 'Ossian' also impacted on Gaelic scholarship, which divided into those who vaunted the genuine heroic ballads over the bogus Ossianic product, and those who saw in the Ossianic poetry ideals of human behaviour which were, in their own way, a glory of the Gael and a model for contemporary aspiration.

Celtic romanticism has also manifested itself in several other ways in Scotland, none of which are wholly independent of 'Ossian'. These include the cult of the martial Highlander, observing 'old' standards of honour and resplendent in Highland dress (see KILTS) and weaponry, which was subscribed to equally by proponents of the Gaels and recruiters of Highland Regiments. Another potent image since at least

the later 19th century is that of the naturally devout, deeply religious Gael, heir to the age-old teachings of Celtic CHRISTIANITY (or sometimes of a not dissimilar Celtic paganism). Yet another is the community Gael, with his hospitality, homespun wisdom, and traditional songs and tales: the Gael of the *ceilidh* house, the shieling, and the peat fire flame. This last is first cousin to the racial stereotype of the melancholy, nostalgic, poetic Gael beloved of television directors. To some extent these romantic images are reactionary: they represent a 'soft primitivism' which has largely, though not wholly, supplanted the 'hard primitivism' of 19th-century Teutonic thinking, with its hopeless, racially inferior Gael whose removal from the Highlands could be contemplated with equanimity.

The unquiet Celtic (usually Gaelic) presence is a perennial theme in Scottish literature, whether written by Lowlanders or (ex-)Highlanders, from the Enlightenment to the Scottish Renaissance and down to the present day. Celticism manifests itself also in ART (including book illustration and calligraphy) and in music (from the Romantics to Francis George Scott and Ronald Stevenson). While most of this activity is 'highbrow' and originates outside the Gaelic world, the folk-song revival has enabled Celtic popular music to establish a more substantial two-way dialogue with the 'native' Gaelic tradition.

At the present time, examples of Celtic romanticism are still to be seen in bookstores, in film, and on television. Sometimes it is so ingrained as to be unconscious, at least in the minds of non-Gaels. Most writings by Gaels are conditioned by the presence of the alien force field, and contribute—sometimes in subtle and complex ways—to a species of post-colonialist dialogue.

William Gillies

Romanticism, Celtic [3] Wales

Celtic romanticism, in its all-embracing, rich and energizing diversity, witnessed its heyday in Wales (CYMRU) over the best part of two generations after 1770. It owed its success to a deliberate attempt by well-educated middle-class literati and more homespun but highly intelligent and versatile craftsmen and artisans to recover the abandoned or lost cultural traditions of Wales and create a more flattering and attractive image for its people. Even though Wales lacked national and academic institutions, the tide of print was flowing swiftly through the country by the latter half of the 18th century, bringing to the increasingly literate and articulate public a torrent of inventive material that captured their imagination. Authors, poets, painters, musicians, and myth-makers jostled with one another as they, in their capacity as self-styled 'ancient BRITONS' or 'valorous Celts', strove to rescue Wales from the condescension of the English, to rid it of its provincial 'non-historic' image, and to create a distinctive romantic and national identity. Celtic romantics in Wales lay great store by Mother Nature, primitivism, druidism (see DRUIDS), linguistic and musical traditions, as well as sheer fantasy, and these preoccupations surfaced in a variety of ways.

In literature, the most intriguing forerunner was Evan Evans (Ieuan Fardd, 1731–88), a penurious, dishevelled alcoholic clergyman whose *Some Specimens of the Antient Poetry of the Welsh Bards* (1764) was a critical landmark in the history of Welsh scholarship insofar as it revealed that the Welsh heroic tradition surpassed the misrepresented poems of Ossian (see OISÍN). In his melancholy stanzas *Englynion i Lys Ifor Hael* (Stanzas to the court of Ifor the Generous), composed at the ivy-clad ruins of Ifor ap Llywelyn at Bassaleg in 1779, and a vivid cameo of Romantic sensibility, he mourned the passing of the old shrines of patronage which had sustained the poets of yore (see BARDIC ORDER). The romantic yearnings of the new religious enthusiasts were different. The extraordinarily prolific hymn-writer William WILLIAMS Pantycelyn (1717–91) found himself in a rather different wilderness (see also HYMNS). This 'Sweet Singer' of the Calvinistic Methodist movement viewed life as a spiritual pilgrimage, a quest which he memorably recounted in *Bywyd a Marwolaeth Theomemphus*

(The life and death of Theomemphus, 1764) in a bid to convey the experiential nature of Welsh revivalism. Even the 'enlightened' romantic could believe that he was heir to a distinguished literary tradition (see WELSH POETRY). As an incipient rational Dissenter (though he also liked to project the image of a journeyman poet), Edward WILLIAMS (Iolo Morganwg, 1747–1826) not only seized the popular imagination by passing off invented love poetry as the work of DAFYDD AP GWILYM but also devised and conducted in 1792 a colourful druidic moot—GORSEDD BEIRDD YNYS PRYDAIN (The Gorsedd of the bards of the Island of Britain)—which he advertised and utilized as a means of projecting the cultural, religious, and political principles of the Welsh bardic tradition. From 1819 onwards its ceremonies were incorporated into the EISTEDDFOD.

These developments helped to create a huge interest in the condition and fate of WELSH, one of the oldest living literary languages in Europe. Although the magisterial scholarship of Edward LHUYD was highly prized, the spurious theories of Paul PEZRON were still widely canvassed and, since Theophilus Evans's rumbustious *Drych y Prif Oesoedd* ('A Mirror of the First Ages', 1716) continued to be the most popular Welsh history book of the day, there were many who believed that the native tongue had once been spoken by Gomer son of Japhet son of Noah. A blizzard of new Welsh words were invented during this period, though not all the energy displayed by lexicographers and grammarians was wisely used. One acerbic poet dubbed William Owen Pughe's mania for inventing Welsh words and devising an alternative orthography as '*anfeidrol ynfydrwydd*' (infinite madness). Pughe's outlandish quirks might have poisoned the waters of the Welsh literary tradition for many generations, but at least he and his colleagues succeeded in rekindling interest in the native tongue.

Thomas Gray's poem *The Bard* (1757) was a seminal influence on romantic sensibilities, not least in encouraging Welsh radical patriots to excoriate English monarchs like Edward I whose army had allegedly massacred the Welsh bards shortly after the death of LLYWELYN AP GRUFFUDD in 1282. This tale caught the imagination of artists such as Paul Sandby (bap. 1731–1809) and Thomas Jones Pencerrig (1742–1803), who depicted one of the last surviving harpist-bards about to leap to his doom into the 'foaming flood' of the river Conwy as the dastardly Norman troops closed in. This image of the Celtic BARD fixed in the public mind the notion that poets, priests and druids in the Celtic past had long white beards, flowing robes and melancholy songs to sing. The picturesque movement, spearheaded by William Gilpin in the 1770s, led to a more generous appreciation of the Welsh landscape and the bardic and antiquarian learning which had been supposedly retained in the mountain fastnesses.

Not surprisingly, therefore, the new romanticism encouraged musical activity and sartorial customs (see WELSH MUSIC). The most passionate advocate of the musical traditions of the Welsh tended to be of a conservative bent. Edward Jones (1752–1824), 'The King's Bard', was harpist to the Prince of Wales. Dubbed 'Humstrum' Jones by the Jacobin Iolo Morganwg, Jones nonetheless ensured that Welsh melodies were preserved in works like *Musical and Poetical Relicks of the Welsh Bards* (1784, 1794) and *The Bardic Museum* (1802), publications which enabled harpists, especially triple harpists (see HARP), to flourish as never before in the newly revived eisteddfodau which Anglican patrons and intellectuals adopted and tailored to their own needs and aspirations after the Napoleonic Wars. Not to be outdone, another redoubtable Anglican, Augusta Waddington HALL, Lady Llanofer (1802–96), promoted a new image of Welshness by devising a national folk costume, complete with cloak, bedgown and tall Welsh HAT, for the 'authentic' Welsh peasant woman which was displayed regularly at Llanofer Court in Monmouthshire for the titillation of Celtophiles (see MATERIAL CULTURE [2]).

In many ways, therefore, cultural patriots and mythmakers responded positively to the challenge of Romanticism by reviving or inventing institutions, publishing a rich and intriguing corpus of literature, and bringing them into the public domain in attractive and imaginative ways. By the 1830s, however, the proliferation of Nonconformist chapels and the emergence of thriving urban and industrial communities where romantic Celts were either deemed irrelevant or were held in contempt meant that images of native and exotic fantasies were no longer reckoned to be integral to the lives of a modernizing people, many of whom were convinced that English was the language of progress.

Romanticism, Celtic [4] Brittany

As elsewhere in the Celtic-speaking world, Romanticism in Brittany (BREIZH) is the expression of a dramatic reversal in perceptions of a previously despised culture. And, as elsewhere, that reversal comes about through a kind of collusion between writers and artists working outside the area and those on the inside: Brittany 'becomes' Romantic, as it were, from Paris, before adopting and internalizing a Romanticized image of itself. Moreover, as recent critical work has made increasingly clear, Brittany also played a significant rôle in the development of French Romanticism as a whole.

For several decades after the French Revolution of 1789 Brittany was considered an exceptionally primitive backwater of the new French Republic. Descriptions by writers such as Jacques Cambry and J. F. Brousmiche, who toured Finistère (Penn-ar-Bed) in the 1790s and 1830s, are (their antiquarian inclinations notwithstanding) scathing about most aspects of the country, from its food, roads, and climate to the 'superstitious' and insurgent nature of its peasants and the barbaric sound of their language (see BRETON). They and other commentators on the province adopted an essentially colonial stance, which sought to civilize a socially and culturally impoverished land.

France 'succumbed' to the complex of ideas and enthusiasms loosely termed Romanticism rather later than most of its European neighbours, but it follows a familiar pattern, particularly as regards the changing relationship between the capital and the regions. A potent blend of ideas derived from Jean-Jacques Rousseau and James MACPHERSON neatly reversed the polarities of the primitive, and Brittany's backwardness became desirable. Its geographical isolation and 'ancient' language were now felt to have preserved its inhabitants from the evils of modernity; its rugged coasts and changeable weather fitted new ideals of beauty and the sublime. By the turn of the century, the poet Chateaubriand (1768–1848), under the influence of *Ossian*, was conjuring up dramatic Breton landscapes in works such as *René* (1802) and *Les Martyrs* (1809).

A gentler Brittany emerges in the writings of Auguste Brizeux (1803–58), whose collection of poems, *Marie* (1831), aimed at a Parisian audience, evoked a remembered childhood idyll of rural simplicity (see CELTOMANIA). Brizeux's central character, the Breton peasant-girl Marie, can be seen as part of a growing feminization in the portrayal of the province as a whole, but she also indicates a new interest in the Breton 'folk'. From Herder onwards, the need to define and discover the true 'voice of the people' formed a central strand of European Romantic thought. In Brittany this need is perfectly represented in the work of Émile Souvestre (1806–54), whose writings (also for a Parisian audience) dwell on the 'exotic' folk customs, costumes and temperaments of the different dialect-areas of his native country: *Les derniers Bretons* (1835–7) and *Le foyer Breton* (1844) are colourful, witty, and often nostalgic accounts of a culture, unchanged for centuries, now felt to be on the verge of disappearing forever.

One of the most influential embodiments of Brittany's past was the BARZAZ-BREIZ*: chants populaires de la Bretagne* (1839), a collection of Breton-language songs and BALLADS 'edited' and translated by the young Viscount de LA VILLEMARQUÉ (1815–95), again with a Parisian audience in mind. The much-debated authenticity of La Villemarqué's texts is not the issue here: suffice to say that his process of selection, adaptation and translation produced a Celticized and Romanticized version of Breton history—a vivid pageant of ancient Celtic DRUIDS and medieval knights. The contemporary Brittany evoked by Souvestre, La Villemarqué, and others in their circle seems (at times literally) to be a living museum, a preserved fragment of the Middle Ages: 'the language of TALIESIN', claims La Villemarqué, 'is exactly the same as that spoken by the peasants of Lower Brittany' (BREIZH-IZEL). Although their idealization of the Breton peasantry now appears ideologically rather suspect, it is undeniable that these works all helped

to give a new status to the Breton language, and should be seen as key texts in the national/cultural revivals of the 19th and 20th centuries (see LANGUAGE [REVIVAL]; NATIONALISM).

Another important strand in Romantic representations of Brittany is religion, and here the work of Ernest Renan (1823–92) is fundamental. In an influential essay, *La poésie des races celtiques* (1854), Renan developed the notion of an innate Celtic SPIRITUALITY, reflected in the early literature and expressed in the deep religiosity and reserve of his fellow Bretons. This text, with its memorable description of the journey from Normandy into the melancholy Breton landscape, is a blend of typically Romantic preoccupations. Indeed, Renan's version of the Celtic soul (*l'âme celtique*) displays all the hallmarks of the Romantic hero, being highly responsive to the influence of weather and place, feminized, fixated on the past, and haunted by an inherent 'tristesse'. Renan's essay is the (largely unacknowledged) model for much of Matthew Arnold's *On the Study of Celtic Literature* (1867), and therefore indirectly influenced ideas about other 'Celts' well into the 20th century.

These literary representations of Romantic Brittany have their visual counterparts, since the same range of subjects preoccupied artists from both inside and outside the province. Souvestre's quasi-ethnographic accounts of regions and dialects are mirrored, for example, in extremely popular collections detailing picturesque regional costumes, such as the 'Galerie Armoricaine' (1844–6), by Hippolyte Lalaisse (1810–1884). Breton costume remained an attractive subject throughout the century (see MATERIAL CULTURE), but most attractive of all was the landscape, and the endless possibilities provided by the interplay of land and sea. Many artists (most particularly a 'realist' group centred on Douarnenez in the 1860s) succumbed to the perennial appeal of the little fishing village, or painted quiet vignettes of rural life reflecting the world of Brizeux's *Marie*: the works of Jules Breton (1827–1906), Jean-Marie Villard (1828–99), Camille Bernier (1823–1902), and the brothers Eugène and Augustin Feyen at Cancale can all be seen as reflections of a pastoral mode. But wilder 'romantic' scenes of storms and shipwrecks against craggy rocks also had their appeal, as the success of paintings by Théodore Gudin (1802–80) and Eugène Isabey (1803–86) testify. The vein of myth and legend opened by the *Barzaz-Breiz* became another powerful source of inspiration, allowing the development of a more narrative (and even grotesque) element within the landscape genre. Edouard Yan Dargent's famous painting, *Les lavandières de la nuit* (1861), is directly inspired by Souvestre's account of the ghostly washerwomen at the ford, whose appearance announces death. Other painters took up the spiritual, otherworldly qualities stressed by Renan: images of traditional Breton piety reached an extraordinary culmination in the work of Paul Gauguin, Paul Sérusier, and other artists of the colony at Pont-Aven. Here, in an intense period of creative exchange between 1888 and 1890, the Romantic Breton landscape was radically metamorphosed into the bold colours and symbolism of the modern Primitivists (see ART).

The Romantic version of Brittany, however, has proved an enduring one. Although the writer and journalist Yves Le Diberder, as early as 1912, was railing angrily against an exhausted literature based on 'phony Breton legends' (*'de fausse légendes bretonnes'*), the picturesque staples of landscape and legend have continued to inform images and ideas inside and outside the province, and play a crucial part in marketing Brittany for the purposes of modern tourism. Romanticism has left Brittany with a complex legacy: its idealization of a primitive 'Celtic' past arguably confused issues of identity, ethnicity, and history for most of the 20th century. Yet, without that initial life-breath of enthusiasm, that passion for the past, there may well have been no revival of interest in, and respect for, Breton language and culture at all.

Rome, Gaulish invasion of

The reports of the *pontifeces* (Roman high priests) on the subject of the Gaulish invasion of Rome are lost, both the archival documents (*Annales pontificium*)

and as edited in 80 books (*Annales Maximi*). The work of the earliest Roman annalists is also lost; only one abridged account from Polybius survives, together with reports in the work of Diodorus Siculus, Livy, and Plutarch, some occasional hints in various authors, and the fragments of Dionysius of Halicarnassus (*fl.* 30–*c.* 5 BC), Appianus of Alexandria (*fl. c.* AD 160), and Cassius Dio.

Ancient historiography on the subject is characterized by numerous versions and accounts which, in Mario Torelli's opinion, constitute 'the last great nucleus of legendary traditions of Roman history' (*I Galli e l'Italia* 226). However, beyond the contradictions, the inventions, and the peculiar narrative colouring which can be found in the ancient sources, there exists a nucleus of credible information which permits us to reconstruct the facts of one of the most traumatic episodes in the thousand-year history of ancient Rome.

The precise date of the invasion varies with the sources—the 'long' or 'vulgate' chronology has 390 BC, the 'medium' chronology has 386 BC, and the 'short' chronology has 381 BC (Càssola, *Scritti di storia antica* 2.322–7). Thus, it was *around* 390 BC that a mass of approximately 30,000 Gauls, predominantly the Senones (see BRENNOS OF THE SENONES), marched against the Etruscan city of Clusium (Chiusi) and besieged it. The terrified inhabitants asked Rome for help. According to Livy, Rome sent the three sons of Marcus Fabius Ambustus (the Fabii) as ambassadors, with the intention of contributing to the peaceful resolution of the dispute, rather than intervening militarily. The Fabii had evidently held posts in connection with earlier diplomacy between Rome and the Etruscans. But, on this occasion, the three Fabii were indignant at the Gaulish response. According to Livy, they behaved as impudent barbarians, arrogant, and bellicose, and disregarded those conventions which the civilized world (that is, town dwellers) recognized as the right of a people (*ius gentium*). The theme in Livy's account here is the common literary topos of the clash of cultures between Graeco-Roman civilization and the untamed barbarian north (see GREEK AND ROMAN ACCOUNTS). The Fabii intervened in battle on the side of the Etruscans. They killed the Celtic chief at Clusium, thereby provoking the Gauls' march on Rome. According to Livy and Plutarch, prince Brennos (Latin *Brennus*) led more than 70,000 Gauls (Diodorus states that the Senones added other troops from allied tribes) down the valley of the Tiber. There, where the river Allia meets the Tiber, 11 miles (*c.* 18 km) from Rome, they encountered the Roman army, headed by the three Fabii whose impetuousness at Clusium had been the *causus belli* 'cause of war'. (The Allia has been identified with today's *Fosso della Bettina* or *Fosso della Regina*, called *Fosso Maestro* or *Fosso della Marcigliana* in its lower section; cf. Mari, *Enciclopedia Virgiliana* 1.113.)

The Romans numbered at least 40,000, according to Plutarch, but according to Diodorus there were only 24,000 of them. They were routed by the Gauls shortly after the summer solstice, when the moon was full. To be precise, according to astronomical calculations, it was on 18 July 390 BC (commemorated as the *dies Alliensis*). This day became registered as a *dies nefastus* (a day of bad omen) in the imperial calendar. The Romans in retrospect blamed themselves, either for a tactical blunder (failing to entrench a defensive camp) or for negligence in religious practice (failing to consult the auspices and making sacrifices to the gods). The date was to coincide with the *dies Cremerensis*, 18 July 477 BC, on which another military disaster occurred, when the Fabii were annihilated near the river Cremera by the Etruscans of Veii (an ancient city near modern Isola, Abruzzi).

The defeat against the Gauls at the Allia was traditionally depicted as a stunning reversal and rout (*clades Gallica*). The action should have resulted in a ruinous flight of the Gauls from the Roman forces who were fighting on familiar ground. The Roman survivors on the left wing swam across the Tiber, reaching Veii; those on the right, facing the enemies' swords, fled back to Rome, and barricaded themselves inside the Capitoline fortress. After three days (or on the next day, according to Livy's version of events), Brennos arrived in Rome and conquered the city. That Rome suffered a humiliating defeat is a historical certainty, since this essential fact was known by several Greek authors who were writing a short time after the event in the 4th century BC (Aristotle, Heraclides Ponticus, Theopompus). However, beyond this kernel, the accounts of the event become elaborate and suspect as to their veracity. Subsequent classical authors enriched their accounts with colourful

anecdotes and legendary episodes, which possibly served to paper over some of the ignominious aspects of the event. In a fragment by the poet Ennius (239–169 BC), for example, the taking of the Capitoline hill by the Gauls is mentioned. He appears to be using information derived from Roman authors whose work has not survived (Vahlen, *Ennianae Poesis Reliquae* 164–5; Skutsch, *Annals of Quintus Ennius* 227–8, 405–8; Sordi, *I Santuari e la guerra nel mondo classico* 82–91; cf. Magno, *Quinto Ennio* 107–11).

In what has survived, we have an elaborate, almost unanimous story, but it is not altogether plausible. The accounts concur regarding the occupation of Rome, the sacking of the city, and the siege of the Capitoline hill (where all the youths fit for military service were barricaded, along with the most courageous senators, their wives, and their children). As to what actually happened, it is unlikely that the intentions of Brennos ever included the permanent occupation of Rome or its systematic destruction, as the accounts would indicate. (Regarding the lack of secure archaeological evidence for the sack of Rome in the Republican layers of the city, see Coarelli, *I Gallia e l'Italia* 229–30.)

There are conflicting details as to how the Romans later recovered the ransom gold. According to the majority of writers, this was accomplished by Marcus Furius Camillus, but, also alternatively, by the inhabitants of the city of Caere, 30 miles (48 km) north of Rome (Strabo 5.2.3). In Livy and Plutarch's versions, the dictator Camillus arrived in Rome during the weighing of the gold; he was intent on taking it back immediately, and therefore followed the fleeing Gauls. He overcame them in combat at the eighth mile of the Via Gabina, the old road, which later became the Via Praenestina, which led from Rome to the city of Gabii (Kahane & Ward Jenkins, *Papers of the British School at Rome* 40.91–126; Quilici, *La Via Prenestina* 2; Guaitoli, *Enciclopedia Virgiliana* 2.623–5). In Diodorus' account, Camillus attacked Brennos's troops and took the gold back near the city of Veascium, which was at the time besieged by the Gauls after they had withdrawn from Rome. *Veascium* is an unlocated place-name, tentatively identified with the Etruscan town of Volsinii. Yet again, according to a tradition encountered in Servius (*Commentarius in Vergilii Aeneidos* 6.825), the gold was recovered by Camillus in the territory of the Gaulish Senones themselves, near the future Roman colony of Pisaurum (modern-day Pesaro). In this account, the place received its name from the weight of the gold (Latin *aurum*) retrieved there (Braccesi, *Epigrafia e storiografia* 98–103; Braccesi, *Pesaro nell'antichità* 9–13). Regarding the retreat of the Gauls, Polybius suggests that they returned to their Po valley settlements in Cisalpine Gaul, which were threatened by the Veneti (who lived near Venice). This version involves a march to the north, which would explain the Romans following as far north as Volsinii or to Pisaurum. Alternatively, according to Diodorus and Justin (20.5.4–6), the Gauls, or some of them, would have gone south, where they enlisted as mercenaries to the Elder Dionysius, tyrant of Syracuse in Sicily (cf. Sordi, *I rapporti romano-ceriti e l'origine della civitas sine suffragio* 32–6, 62–3).

'L'Hermes': carved stone bifacial head from Roquepertuse sanctuary

Roquepertuse à Vellaux is a prehistoric site located north-west of Massalia (modern Marseille). Its ancient name is not known, but the site was in use from Neolithic times (i.e. roughly 5000–3000 BC) until the 2nd century BC, when it was destroyed by a fire and abandoned. It was at approximately this time that this area, southern Gaul, was annexed by Rome. In the later pre-Roman Iron Age, it would have been situated within Celtic-speaking territory or near the intersection of Celtic and Ligurian lands and the hinterland of Greek Massalia. The site's primary interest for Celtic scholars has been as a source of material evidence for the Celtic head cult described in the Greek and Roman accounts which were dependent on the Celtic ethnography of Posidonius, who had travelled in this part of Gaul during the 1st century BC.

Roquepertuse is located at the bottom of a steep cliff. In 1824 the existence of the lower part of a statue sitting tailor-fashion (i.e. in the so-called 'Buddha position') is mentioned in the *Statistique des Bouches-du-Rhône*. In iconography, figures in this posture have been identified as supernatural figures or gods from Celtic mythology (for example, as depicted on the silver Gundestrup cauldron). The site of Roquepertuse was examined and excavated in several campaigns between 1919 and 1924, and also in 1927; another survey was undertaken in 1960. The most significant find was that of the 'semicircle structure' which was embedded in the cliff. This platform, 50 m wide and 22 m long, was divided in the middle by a staircase. Stone walls to the left and to the right of the stairs formed a terrace, probably one of several which had originally belonged to the complex. Besides more statues of male figures sitting cross-legged, the most remarkable feature of this structure are several pillars with holes in which human stone masks, as well as human skulls, had been placed. These probably formed a gallery whose exact position on the terrace is still disputed, as is the exact reconstruction of the structure, probably a sanctuary.

Roquepertuse provides evidence for a cult of the severed head in the territory of the local pre-Roman tribal group known as the Salluvii, who are sometimes tentatively given the ethno-linguistic designation 'Celto-Ligurian'. The nearby site at Entremont has yielded similar relief sculpture of severed human and horse heads, as well as skull niches carved into pillars.

PEB

Ros, Uilleam (William Ross, 1762–?91) was the first of two great Scottish Gaelic love poets, the other being Somhairle MacGill-Eain (Sorley Maclean). Born in his father's country of Strath (Skye/Sgiathanach), Uilleam's parents moved to the Morayshire town of Forres (Farrais) to have him educated in the grammar school there, then to his mother's Gairloch (Geàrrloch). He joined his father, a travelling merchant, whenever he could, and was seldom at rest throughout his short life. He was as much at home in Lewis (Leòdhas) or Skye as in his native Gairloch, and a group of poems is set in Breadalbane, Perthshire (Bràghad Albainn, Peairt), and Edinburgh (Dùn Èideann), where Uilleam appears to have gone in 1782 in search of a cure for his asthma. His mother was a granddaughter of the poet Iain MacAoidh (Am Pìobaire Dall, 'The Blind Piper', 1656–1754); Uilleam inherited his great-grandfather's musical gifts—Iain Crichton Smith (see mac a' ghobhainn) has spoken of the 'infinite resonance' in his songs.

When still a teenager Uilleam developed an infatuation for a Stornoway beauty, Mór Ros (a distant relative), who married an English sea-captain in 1782. This infatuation appears to have been the central event in Uilleam's life, and folklore has adorned it with a tale of how his ghost knocks at her door in far-off Liverpool at the moment of his death; she comes downstairs bearing a candle, her night-dress catches fire and she is burned alive. It would be an exaggeration to claim that Uilleam's whole surviving body of work, which includes light pastorals, praise of nature, political commentaries, satires, bawdry, and drinking-songs, is shaped in some way by his unrequited passion for Mór; it would be truer to say that this is one element, others being obsession with social status, a capacity for profound introspection, and the acute perception of sight and sound often associated with chronic illness. All of these are present in *Feasgar Luain* (Monday evening) and the remarkable *Òran Eile* (Other song).

In 1786 Ross became parish schoolmaster of Gairloch, a post which he appears to have held until his death from consumption about five years later. He burned his poems, but many of them continued to be sung in Gairloch, and a corpus of over thirty was reassembled in two stages by the Stewart brothers (1804) and John Mackenzie (1830).

Rosmerta, a Celtic goddess, is commemorated in inscriptions throughout Europe, notably those from Aix, Gissey-le-Vieil, Alise-Sainte-Reine (Alesia), Épinal, Grand, Metz, and Eisenburg in France, Wasserbillig in Luxembourg, and Köln and Worms in Germany. She is also frequently depicted with her attribute, the tub or vat, in images found at sites in France, Belgium, Germany, and Britain. Scholars disagree about Rosmerta's function and also about the precise meaning of her name, which is a compound of two elements: *ro-* 'very, great' or a marker of completed verbal action, plus *-smert-*, perhaps meaning 'provisioning', 'foresight', 'brilliance', or 'anointed, smeared'. In connection with the sense of 'provisioning', note that the compound *darmerth* occurs in the Welsh Mabinogi for the fateful wedding feast which the otherworldly woman Rhiannon prepares for Pwyll *Pendefig Dyfed*. The same range of possible meanings has been suggested for the related North British tribal name Σμερται *Smertai* (Rivet & Smith, *Place-Names of Roman Britain* 460–1). Rosmerta is frequently paired with Mercurius, one of whose secondary Celtic names, *Smertrios*, similarly includes the element *-smert-*; in these instances, her presence preserves the identifying Celtic element of his name, though the indigenous god is subsumed under the Roman name (see interpretatio romana).

rugby

The game of rugby football is alleged to be lineally descended from its pre-industrial Celtic forerunners: Welsh *cnappan*, Irish *cad*, Cornish HURLING, and Breton *soule*. Chronologically closer, though equally fanciful, its Celtic origins may also be attributed to the Irish descent of William Webb Ellis who in 1823 'first took the ball in his arms and ran with it', as the commemorative plaque at Rugby School confidently asserts. In truth, whatever Ellis, a day-boy and therefore of inferior status, did in 1823, it beggars belief that he single-handedly invented a whole new ball game. The fact that the plaque was erected in 1900 is more significant than the event it purports to commemorate, since by then it was necessary to assert the amateur public-school origins of the game in the face of the growing professionalism among working-class players which had led in 1895 to the breakaway of clubs in the industrial north of England to form what would become known as the Rugby League.

There were regions in the CELTIC COUNTRIES where the game had acquired a strong working-class flavour by the end of the 19th century. Pre-eminent among these was south Wales (Cymru). The game had been formalized and codified with the foundation of the Rugby Union at a London restaurant in 1871, and its initial practitioners were pupils and old boys of the public schools and universities. In Wales, scholastic institutions such as Lampeter and Llandovery Colleges were among the first to take up the new game. Before long, former students of those schools were finding employment as teachers, solicitors, surveyors, and similar professional occupations in a dramatically expanding south Wales. The arrival of rugby football in Wales coincided with large-scale industrial development and the growth of towns. The population of Wales increased by a million between 1871 and 1911, by which time half of the country's 2.4 million lived in the two counties of Glamorgan (Morgannwg) and Monmouthshire (sir Fynwy, Gwent). Rugby offered a physical release to an industrial workforce, an opportunity for the assertion of collective endeavour, communal loyalties and, soon, national pride. It was also, in its ritual vigour and theatricality, enjoyable for players and spectators alike. While the coastal towns of Neath/Castell-nedd (1871), Llanelli (1872), Swansea/Abertawe (1874), Newport/Casnewydd (1874), and Cardiff/Caerdydd (1875) were among the first clubs, the early formation, too, of valley sides such as Treherbert (1874), Pontypridd (1876), and Pen-y-graig (1878) attested to a burgeoning club

infrastructure that mirrored the location and growth of the Welsh coal industry. The game was controlled by the Welsh Rugby Union (1881) which, from its inception sanctioned cup competitions and local leagues that were anathema to the middle-class diehards administering the game in England who would die very hard in defence of amateurism and social exclusivity. The strength of the Welsh game, by contrast, was its social inclusiveness as the WRU turned a blind eye to undercover payments within an ostensibly amateur game. From 1895, the Northern Union was always there for players who sought outright professionalism; it was a safety-valve that enabled rugby in Wales to preserve a veneer of official amateurism. In any case, early administrators such as Richard Mullock, Walter Rees, and Horace Lyne were anxious that Wales, at a time of burgeoning national self-consciousness, should test herself against the other home countries and beyond. Had rugby gone professional, the game would have become a regional speciality on northern lines, robust and popular, but without international status. The Welsh game, infused by the eager participation of immigrants from the rugby-playing western counties of England, was inventive, uninhibited by middle-class conventions, characterized by both the sheer exhibitionism of the antics of the diminutive James brothers of Swansea, and the wondrous skills of Arthur Gould of Newport, who were idolized by the large crowds who thronged to watch them. But such individualism was all the more appreciated for being expressed within a team effort. It was the Cardiff club that pioneered the four three-quarter system, to the success of which Somerset-born Frank Hancock, later to captain Wales, was central. It was eventually imitated by the other countries, but what heightened its effectiveness in Wales was that, thanks to the game's social mix, speedy and elusive backs (elusiveness being not a Celtic attribute but the prosaic realization that bigger opponents were better avoided than confronted) were able to profit from the surfeit of ball supplied them by the strength, sinew, and skill of those manual workers to their front, known collectively, if not always accurately, as 'Rhondda forwards' (for the stereotypically burly colliers of the double Rhondda valley at the heart of the south Wales coalfield). The success of this social mixing was conclusively demonstrated in 1893 when Wales, with four three-quarters—an innovation symbolic of the self-confident south Wales of the late 19th century—won its first Triple Crown of victories over the three other home countries (England, Scotland, and Ireland), and then proceeded to enjoy a 'golden era' of almost unbroken success between 1900 and 1911, a period which saw six more Triple Crowns, victories over Australia and emergent France, and, best of all, over the otherwise undefeated New Zealand touring side in 1905.

With England seriously weakened by the northern breakaway, Wales's most serious opponents in the early years of the 20th century were the Scots. Merchiston, Loretto, Glenalmond, George Watson's, and other notable academies were the nurseries of the game in Scotland (Alba) and their former pupils were the founders of the Scottish RU in 1873 and of the earliest clubs whose names betray their origins: Edinburgh Academicals (1857), Glasgow Academicals (1867), Royal High (1867), and Heriot's FP (1890). But Hawick (1873), Gala (1875), Langholm (1872), and Kelso (1876) were of a different cloth, manufactured by the woollen workers and hardy farmers of the Borders (i.e. southern Scotland, near England), whose fondness for cup and league competition distressed the pristine amateurs and social conservatives of the Edinburgh-based Scottish Rugby Union, founded in 1873. It took twenty years before the SRU deigned to award a Borders player an international cap, upon which it dawned on them that here was the Scottish equivalent of the Rhondda forward. In the first decade of the 20th century, whenever Wales failed to win the Triple Crown (in 1901, 1903, and 1907), Scotland did.

Pockets of industry in a predominantly rural setting, in this case tin-mining, were as much features of west Cornwall (Kernow) as of the Scottish Borders. Here, the population was too thin to sustain professional sport, and, in the absence of other comparable county-wide institutions, the Cornish Rugby Union (1884) came to fulfil an important symbolic rôle as a focus for Cornish sentiment. The success of clubs such as Redruth (1875) and Camborne/Kammbronn (1878) ensured that rugby soon superseded wrestling as the most popular Cornish sport. Cornwall, like Wales, was one of the few places where rugby was not manipulated for social exclusiveness, but became rather an expression of masculinity, patri-

archy, and regional identity. Rugby remains one of the ways in which people see themselves as belonging to an imagined Cornish community and, like the Welsh and Scots, subordinate partners in a greater whole, as a means of defining themselves in relation to England.

If a working-class element was a component of the game elsewhere, in Wales it was the fabric of its entire make-up. As a result, when it was torn by lock-outs, strikes, massive out-migration, and the long-term unemployment that marked the inter-war Depression, the very survival of the game in Wales, at least at its grass roots, was imperilled. Whereas once the coalfield and ports had pulled in people like giant magnets (even Gwyn Nicholls, Wales's captain against the New Zealand All Blacks in 1905, was born in Gloucestershire), now migration trends swung sharply in the opposite direction (see EMIGRATION). Where once collieries opened with the rapidity of chapels, and an expansive society expressed itself confidently on the fields of play, now pits, again like places of worship, closed. As the collieries became idle, the ports contracted and, in the two inter-war decades, nearly half a million people moved out. Welsh rugby, so closely identified with its society, was chilled to the marrow. As clubs were forced into bankruptcy and closure, and 900 hundred players joined the rugby league, international results became a catalogue of losses. A beleaguered WRU became increasingly unconfident in all its dealings. In its struggle to stay afloat, it completely lost sight of the Triple Crown, last won in 1911 and not to be regained until 1950. Meanwhile, secure in their middle-class affluence, the English and Scots between them had the Triple Crown sown up. Scotland won the mythical trophy three times in the inter-war period, when sometimes every member of the side was educated in exclusive public schools (i.e. what would be called 'private schools' in the US).

The Irish, meanwhile, were consistent in their inconsistency. The game had a middle-class complexion there, too, associated with the Anglo-Irish of Dublin (Baile Átha Cliath), though also enjoying a foothold in the Catholic public schools and the universities. In Ulster (see ULAID), it was socially just as exclusive, being the preserve of the Protestant academies and grammar schools; in the north, soccer was the game of the people. In the south it was Gaelic football (see GAELIC ATHLETIC ASSOCIATION), though rugby enjoyed a working-class following around Limerick (Luimneach), where some internationals were played before settling on the dual locations of Ravenhill (Belfast/Béal Feirste) and Lansdowne Road (Dublin). Although the Irish RFU (1874) is virtually unique in overseeing the affairs of a united Ireland (Éire), it is something of a myth that rugby in Ireland is above politics. In the early 1950s the southern members of the Irish team refused to play in the North when this obliged them to recognize the Union Jack and sing 'God Save the Queen', and the decision was taken that all future home internationals would be played in Dublin. Southern confidence was born of a period of economic and cultural transformation in the Republic; emerging relatively unscathed from the Second World War, in which it had remained neutral, Ireland won its first Triple Crown of the 20th century in 1948 (the two previous occasions had been in the 1890s) and capped it with a first-ever Grand Slam. The Irish won the Triple Crown again in 1949; their presiding genius was the outside-half Jack Kyle, an Ulsterman. Economic prosperity generated by the European Union would again underlie Irish success in the early years of the 21st century.

The social and cultural changes of the 1960s and 1970s impacted powerfully on the game in Wales. The enforced loosening of the shackles of an industrial past and the diversifying of a hide-bound political culture resulted in the emergence of a generation of stunningly talented players that made Gareth Edwards, Barry John, and Phil Bennett household names in Wales and well-known even outside it. They were celebrated in song, prose, and verse, on canvas and in metal, and the (several) Welsh speakers among them were inducted into the Gorsedd of Bards (Gorsedd Beirdd Ynys Prydain). The end of this second 'golden era' of six Triple Crowns and three Grand Slams (1969–79) coincided with the defeat of the first referendum for limited self-government in Wales and the beginning of two decades of right-wing Conservative government in the United Kingdom under Prime Ministers Thatcher and Major. In Wales, the 1980s and early 1990s ushered in a period of de-industrialization, severe unemployment and the unravelling of the entire social and economic fabric that for the best part of a hundred years had sustained

the viability and distinctiveness of Welsh rugby. A crippling loss of confidence, reminiscent of the 1920s, was once again reflected in a dizzying decline of Welsh fortunes at club and international level. A more confidently devolved Scotland and a politically and economically assured self-governing Ireland came to the fore, enjoying continuous international success against Wales unknown since the 1920s. The birth of the professional era in 1995 allowed England at last to exploit her greater size and resources, and the poor relations that were the Celtic countries were consigned and resigned to forming leagues and alliances among themselves as a massively endowed England moved far ahead of them financially, organizationally and technically. At the beginning of the 21st century, the Celtic countries were significantly adrift in contrast to the world leaders of the game: England, Australia, and New Zealand. Celtic passion, it seemed, availed little in the face of Anglo-Saxon pragmatism. Even in Wales, rugby's historic status as an integral and defining component of its popular culture was no longer guaranteed. What the history of rugby in all the Celtic countries demonstrates, nevertheless, is a clear relationship between sporting prowess and the assertion of national identity, of the persistence of difference.

Rungis (Val-de-Marne, France) is the site of a warrior inhumation which was discovered accidentally in 1967. It contained military equipment characteristic of the beginning of the Middle La Tène period, i.e. the second quarter of the 3rd century BC. The person buried was around 20 years old and had a large iron fibula with a 'free foot' and an iron armband, which was fitted to his right arm. The outfit was classical, and contained a SWORD with its scabbard, an iron spear head, and a SHIELD boss decorated with rounded *lamellae*. The whole length of the scabbard was decorated, with a motif of a zoomorphic lyre below the opening. An important detail which emerged from this find was the fact that the warrior was buried with his chain belt (of the so-called 'ladder' type) in its original position, which allows us to clarify for the first time how metal belts were worn in this period.

S4C (Sianel Pedwar Cymru/Channel Four Wales) is a public television service which offers programming through the medium of Welsh during peak evening viewing hours, from approximately 6.00 until 10.00 during weekdays and weekends. It also regularly broadcasts programmes for pre-school children at lunchtime and a late afternoon slot for schoolchildren, providing an average of 32 hours a week in Welsh in total. The remainder of its programming is taken from Channel 4 as seen elsewhere in the UK.

In addition to the main analogue channel, S4C is also responsible for broadcasting on its digital channels, S4C Digidol and S4C2. The former, launched in November 1998, runs on the Freeview platform on terrestrial television and on Sky Digital across the UK. It broadcasts for 80 hours a week in the Welsh language, simulcasting programmes with the analogue channel and providing additional programmes (such as extended coverage of national events), though S4C Digidol does not carry English Channel 4 programming. S4C2, launched in September 1999, provides detailed coverage of the proceedings of the National Assembly for Wales (see cynulliad cenedlaethol cymru).

The programme schedule provides a wide variety of popular television not unlike the genres found elsewhere in Anglo-American commercial and public television, including: drama, news and current affairs, light entertainment, music, sports, games and quizzes, soap operas, and coverage of special events, such as Eisteddfod Genedlaethol Cymru.

The main analogue channel is funded by a block grant from the UK Treasury (approximately £80 million per annum) and from advertising revenue, for which S4C takes responsibility in terms of selling air time. The channels' activities are overseen by the Welsh Fourth Channel Authority, headed by a Chair appointed by the UK Secretary of State for Culture, Media, and Sport. The Authority is responsible for the development and maintenance of the strategic policy of the broadcaster.

S4C is a commissioning broadcaster rather than a programme producer. Ten hours a week of programmes are provided from the licence fee by the BBC, but the remainder of the authority's Welsh language output is commissioned from independent producers. These are mostly based in Cardiff (Caerdydd) and the area of Caernarfon in the Welsh-speaking heartland in north-west Wales (Cymru). All the services are transmitted from S4C's headquarters in Cardiff.

The Welsh channel was established under the terms of the 1980 Broadcasting Act. Its formation needs to be seen as the climax to a lengthy, and often bitter, struggle to establish a separate broadcasting service for Wales which would provide Welsh speakers with the opportunity to see Welsh-language programmes at peak hours (see also mass media). The calls for such a channel became louder during the 1970s, and the idea of a separate channel for Wales was endorsed by the 1974 Crawford Committee on broadcasting. Although the Conservative Party committed themselves to the idea in their 1979 General Election manifesto, following their election victory the party announced that plans to establish the channel would not proceed. This led to angry reactions in Wales, including acts of civil disobedience such as witholding television licence fees, raids on transmitters and the threat of a hunger strike by the then leader of Plaid Cymru, Gwynfor Evans, unless the government adhered to its original promise of a separate channel

for Wales. Other leading Welsh figures and politicians, such as Lord Cledwyn of Penrhos, a Labour politician, put pressure on the Home Secretary to change his mind and, following one of the very few U-turns of the Thatcher government, S4C broadcast for the first time on 1 November 1982.

Sabhal Mòr Ostaig (Ostag's big barn), on the Isle of Skye (An t-Eilean Sgitheanach), has been transformed from a collection of disused farm buildings into an innovative, but highly functional, architectural complex. Harmonizing with its breathtaking landscape setting and housing a vigorous academic and cultural centre, it offers a wide range of courses, including four-year degree programmes taught entirely through the medium of SCOTTISH GAELIC. Established in 1974, the college's initial focus was on business studies, emphasizing the economic development of Gaelic-speaking communities, and diploma and certificate courses have been offered in these fields since 1984. During the last decade, the range of courses has expanded rapidly: different levels of Gaelic immersion courses have been highly successful and, since 1999, two degree courses (Gaelic Language and Culture, and Gaelic with North Atlantic Studies) have been offered. A new course in Gaelic and Media Studies commenced in 2002. The student population now exceeds 100, taking in both native speakers from island communities and learners of Gaelic from different parts of Scotland (ALBA) and other countries. The college campus has grown impressively, with the original Sabhal Mòr complex having been significantly expanded and a major new centre, Àrainn Chaluim Chille, opened in 1998; plans for further development are well under way. The college is also known by the descriptive subtitle Colaiste Ghàidhlig na h-Alba (The Gaelic college of Scotland) and is now one of 15 partner institutions of the University of the HIGHLANDS and Islands (UHI) Millennium Institute (Institiùd Oilthigh na Gaidhealtachd's nan Eilean nam Mìle Bliadhna). The college employs more than 50 people, thereby making a major contribution to economic and community regeneration in south Skye.

sacrifice, animal

Animal sacrifice was practised in a religious context until the advent of CHRISTIANITY. The practice may also have continued in a secular context in the Christian era: GIRALDUS CAMBRENSIS gives anecdotal evidence of a horse sacrifice, and the *tarbfheis* (Irish 'bull FEAST'; see FEIS) can also be understood as a form of animal sacrifice.

Animal sacrifice can fulfil many religious and social functions. These include the RITUAL disposal of important or significant animals, at species or individual level, or the sacrifice of a valuable object in honour of the gods (see WATERY DEPOSITIONS). Neither of these normally involves eating the sacrificed animal. On the other hand, rituals involving feeding or caring for the gods or ancestors, or invoking their presence at significant cultural events, probably involved eating the sacrificed animal. Contextual data for ancient Celts are scarce, but the function of animal sacrifice was probably broadly similar to that in the Graeco-Roman world, where any of the above concepts might apply.

Remains of animals discovered in pre-Christian sanctuaries provide evidence for both major categories of sacrifice.

(1) *Sacrifices in which the animals were eaten* were the most widespread. However, it is difficult to quantify how many animals were sacrificed at a time and also how many guests took part in the feast following the sacrifice. The fact that closely similar assemblages of animal bones have been found in several sanctuaries (e.g. RIBEMONT-SUR-ANCRE, Bennecourt, and FESQUES) provides evidence of a set of customary rules for determining the selection of the sacrificial

animal. A pig is the most frequently chosen animal (around 75% of the remains found), followed by sheep and cattle. Other animals were also sacrificed, including dogs, but they are uncommon. At none of these sites have horses been found among the sacrificial remains. All the hooves of the animals were missing, which probably reflected the way the carcasses were butchered for cooking.

(2) *Sacrificial animals which were not eaten*, primarily cattle and horses, form the second major category. Most of the evidence for this rite comes from Belgic GAUL (see BELGAE). These animals were probably never intended to be served as food; work animals were almost never eaten (see FOODWAYS). They were invariably adult animals which show traces of having been used as draught animals or mounts. They were put to death by a blow to the skull with a blunt object, and their carcasses often show evidence of having been left to decompose unburied. During this phase, the heads, notably those of the sacrificed cattle, appear to have been intentionally displayed (see HEAD CULT). The usual practice was to gather the fleshless bones of the decapitated bodies of the horses and cattle, and place them in ditches. The skulls were eventually placed separately in the same ditches. This type of practice survived and evolved into new forms in the Roman period (as, for example, at VERTAULT).

sacrifice, human

As with Celtic RITUAL and RELIGIOUS BELIEFS in general, evidence for human sacrifice is gleaned from classical authors, archaeological finds, and possible reflections in the INSULAR CELTIC literatures. All sources have to be treated with care: GREEK AND ROMAN ACCOUNTS of the ancient Celts are distorted by their authors' attitude towards an enemy viewed as primitive and, later, towards their defeated colonial descendants. The archaeological evidence for human sacrifice is rare and its interpretation difficult; the few references in Insular Celtic literature are centuries removed, filtered through Christian attitudes, and probably influenced by international folk-tale motifs. However, there is little doubt that human sacrifice was practised by Continental and Insular Celts alike, though the deposition of inanimate objects (see WATERY DEPOSITIONS; HOARDS) and animal sacrifice are better represented in the archaeological remains.

§1. CLASSICAL SOURCES

There are numerous references in Greek and Roman sources to the practice of human sacrifice. The classical authors often refer to the practice in connection with certain gods. For instance, CASSIUS DIO, in his *Roman History*, describes the sacrificial impaling of female Roman prisoners by the ICENI in a grove dedicated to the goddess ANDRASTE during BOUDĪCA's revolt (62.7.1–3). Most other authors, however, described the custom in connection with the DRUIDS and their holy groves (see NEMETON). Methods included shooting, impaling, hanging, stabbing, drowning, and burning (Green, *Exploring the World of the Druids* 71). There are several references to the practice of using human entrails and remains for DIVINATION and communicating with the gods.

The earliest references to human sacrifice practised by the druids go back to the lost work of the Greek philosopher POSIDONIUS, made available through the later writings of DIODORUS SICULUS and STRABO, and possibly also used by CAESAR. Diodorus describes the stabbing of a victim in the chest by the druids, who then divine the future 'from his fall and from the convulsions of his limbs, and, moreover, from the spurting of his blood' (*Historical Library* 5.31.3; Tierney, PRIA C 60.251). He also states that criminals were kept in prison for five years before being impaled 'in honour of the gods' (*Historical Library* 5.32.6; Tierney, PRIA C 60.252). According to Diodorus and other classical sources, prisoners of war were the preferred sacrificial victims. Strabo boasts that it was the Romans who 'put an end to' human sacrifice and that the Gauls 'used to strike a human being whom they had devoted to death, in the back with a dagger, and foretell the future from his convulsions . . . they used to shoot men down with arrows, and impale them in

their temples' (*Geography* 4.4.5; Tierney, PRIA C 60.269). Caesar claimed that 'those who are suffering from serious illness or are in the midst of the dangers of battle, either put to death human beings as sacrificial victims or take a vow to do so . . . Sacrifices of this kind are also offered for the needs of the state . . . They believe that the immortal gods delight more in the slaughter of those taken in theft or brigandage or some crime, but when the supply of that kind runs short they descend even to the sacrifice of the innocent' (*De Bello Gallico* 6.16.2–5; Tierney, PRIA C 60.272). In some instances, what is called sacrifice could amount to the religiously sanctioned execution of criminals. Caesar also wrote that 'it is only a short time since the slaves and clients . . . loved by the dead man were cremated along with him when the funeral was properly carried out' (*De Bello Gallico* 6.19.4–5; Tierney, PRIA C 60.273).

All three—Diodorus, Caesar, and Strabo—refer to the burning of criminals, prisoners, and the innocent in giant statues of straw and wood or wickerwork constructions, which may be shaped as animals or humans, as a kind of 'thanksgiving' sacrifice (Caesar, *De Bello Gallico* 6.16.4–5; Diodorus Siculus, *Historical Library* 5.32.6; Strabo, *Geography* 4.4.5), a theme which has fascinated modern writers and film makers alike (Green, *Exploring the World of the Druids* 39–51).

The later post-Posidonian writers were even more damning in their descriptions. Lucan refers to the Treveri and the Ligurians, 'who propitiate with horrid victims ruthless Teutates, and Esus whose savage shrine makes men shudder, and Taranis' (*Pharsalia* 1.444–6). A 9th-century commentary on his text, composed in Switzerland by a scholiast who might have had access to documents since lost, goes into greater detail and notes that Taranis was appeased by fire, sacrifices to Esus were stabbed and hanged from a tree until they bled to death, and those assigned to Teutates were drowned (Green, *Exploring the World of the Druids* 78). In his famous passage on the conquest of Anglesey (Môn), Tacitus refers to the destruction of 'places of savage superstition', whose altars were spread with 'the gore of captives' by the Roman governor Suetonius Paulinus, 'for it was their religion to drench their altars in the blood of prisoners and consult their gods by means of human entrails' (Tacitus, *Annales* 14.30–31).

§2. archaeological evidence

However graphic the classical descriptions, clear archaeological evidence for the sacrificing of humans as part of ritual activity is rare. More often than not, the finds allow for more than one explanation.

The most important sites for our understanding of ritual practices in Gaul are a group of sanctuaries in Picardie, France, which include Gournay-sur-Aronde, Ribemont-sur-Ancre and Saint-Maur-en-Chaussée. These are still in the process of excavation and, since more sites of the same character are being discovered in the area, more evidence may yet come to light (Brunaux, *Heiligtümer und Opferkulte der Kelten* 55–74). So far, all contain the remains of warriors or prisoners of war (together with substantial amounts of weapons) who had either fallen in battle or had been sacrificed—though not necessarily within the sanctuary—possibly to thank the gods for victory in battle. All skeletal remains were decapitated and seem to have been displayed individually or as a group within the sacred space (Haffner, *Heiligtümer und Opferkulte der Kelten* 30). At Gournay-sur-Aronde, human adult bones which had been cut off from the body with the help of a knife were discovered. In a different place within the enclosure, six skulls, which had been carefully prepared and showed signs of having been on display, were found (Brunaux, *Heiligtümer und Opferkulte der Kelten* 64; see also head cult). The most spectacular finds so far have come from the excavated parts of Ribemont-sur-Ancre. Within a space of 60 m² more than 10,000 human bones and hundreds of weapons were discovered in a position which seems to indicate that they had been kept upright for display, tightly woven into each other. Since no skulls were found in this part of the site, it is assumed that all had been decapitated before display. Once again, they may well have died in battle (in which case, their heads may have been cut off as trophies on the battlefield). However, they could equally have been victims of sacrifice (Brunaux, *Heiligtümer und Opferkulte der Kelten* 70). On two other sites within the sanctuary, fields of bones were discovered, with the longer bones piled crosswise and lengthwise to form a square, the inside of which was filled with pelvic bones arranged around a pit in which yet more bones had been burned (Brunaux, *Heiligtümer und Opferkulte der Kelten* 72–3).

Two other well-known sites in Europe which suggest human sacrifice are in Bohemia (see BOII). At the Libenice sanctuary, human and animal bones were found in pits, and, in the middle of the enclosure, there was a female body, who may have been a buried priestess or a sacrificed female (Green, *Exploring the World of the Druids* 57). In the gruesome Býčiskála cave the bodies of around forty people, most of them women, whose heads, hands or feet had been removed, were discovered. Human skulls were also found, but these were separate from the other remains (Green, *Exploring the World of the Druids* 84).

Among other archaeological finds which seem to testify to human sacrifice is the famous GUNDESTRUP CAULDRON, which (arguably) depicts a man being drowned in what has variously been described as a deep shaft, a well, or a vat, a way of sacrificing reminiscent of the passage by the Lucan commentator on the god Teutates and possibly echoed in early IRISH LITERATURE (see §3 below).

The so-called bog bodies—well-preserved human remains ranging from single bones and limbs to full bodies—recovered from peatbogs all over northern and western Europe constitute the best and most unequivocal archaeological evidence for human sacrifice. The body from LINDOW MOSS, the most famous of these, had suffered the threefold death known from Insular Celtic literature before being submerged in water, naked and with his body painted (Turner, *Bog Bodies* 10–18; Cunliffe, *Ancient Celts* 192). A second male victim, 'Worsley Man', discovered in 1958, only 20 km from Lindow Moss, and also radiocarbon dated to the pre-Roman IRON AGE 'had received injuries sufficient to fracture the top of the skull, had had a cord tied round his neck' and his 'head had been severed from the body at the second vertebra' (Garland, *Bog Bodies* 107). It is interesting to note that, like some of the bog bodies found on the Continent, he had a physical deformity—a second vestigial thumb (Green, *Exploring the World of the Druids* 80–1), which was perhaps viewed as sign of his special status and destiny. An important Irish find has been a late prehistoric adult male dressed only in a leather cloak at Gallagh, Co. Galway (Contae na Gaillimhe). The presence of a band of willow rods around his neck and two pointed wooden stakes at each side of the body may point to sacrificial activity (Ó Floinn, *Bog Bodies* 137–45). Although recent research has brought more of these bodies to light, their continued analysis has also raised questions as to whether they were victims of sacrifice (Briggs, *Bog Bodies* 104–7).

Human bones or fragments of bodies have been found at various settlement sites in the British Isles, but it is difficult to ascribe them to human sacrifice. The most likely contenders are the complete male skeletons found beneath hill-fort ramparts, such as the male found in a pit behind the rampart at SOUTH CADBURY CASTLE, whose position suggests that he was bound. He may have been placed there in order that his spirit may magically protect the hill-fort (Green, *Exploring the World of the Druids* 77). Two infant burials discovered at the foundations of Uley and MAIDEN CASTLE may have served the same purpose (Woodward, *Shrines and Sacrifice* 79).

At some burial sites, such as HOHMICHELE and Wetwang, the remains of several members of a family, or several inhumations, are present, of whom one or more may have been sacrificed to accompany the deceased into the afterlife, confirming the relevant passage in Caesar's description.

Perhaps the earliest evidence for human sacrifice comes from an early Bronze Age ritual timber circle dated 3500–1500 BC excavated at Sarn y Bryn Caled, near Welshpool (Y Trallwng), in mid-Wales (CYMRU) in 1990–1. A central pit contained the cremated bones of young adults, together with four high-quality flint arrowheads, which show signs of having been in the bodies when they were burned. This may indicate that the victims suffered death by shooting, either in war or as part of a ritual (Gibson, *Proc. Prehistoric Society* 60.143–223).

§3. REFERENCES IN THE INSULAR CELTIC LITERATURES

The account of the Teutates rite has been compared with the deaths by drowning in a vat of mead, beer, or wine ascribed to the two Irish kings DIARMAIT MAC CERBAILL and Muirchertach mac Erca. In the Irish tales, the king is wounded, the house in which he is trapped burns down around him, and he finally perishes in a vat of liquor while attempting to escape from the flames. According to Mac Cana, 'the fact that this elaborately contrived death takes place at Samhain . . . suggests that we have to do here with a recurrent mythological theme and, more specifically,

with a rite relating to the sacred kingship' (*Celtic Mythology* 27; see also SAMAIN).

In the fantastic story of GWRTHEYRN, the boy AMBROSIUS, and the DRAIG GOCH in HISTORIA BRITTONUM, the king's *magi* direct him to sacrifice a fatherless child and sprinkle his blood on a stronghold, to ensure that it can be built successfully. This story seems to be a survival of the belief which accounts for the infant burials under British hill-forts noted above.

Events in the saints' lives possibly preserve notions of human sacrifice, for example, St Oran volunteered to be buried under the foundations of Iona (EILEAN Ì) in order to hallow the soil (Nigel Davies, *Human Sacrifice in History and Today* 46).

Saint-Germain-Source-Seine (Côte-d'Or, France) is the site of a Gaulish sanctuary which marks the source of the river Seine (Gaulish SEQUANA). Between 1838 and 1842 the first excavations undertaken at the site unearthed ancient buildings, votive figures of stone and bronze, and a treasure of coins placed in a vase bearing the name of the goddess Sequana. During the following century the finds increased substantially in number. In 1933 two bronze statuettes were discovered here: one was of a goddess in a boat whose prow is shaped like the neck of a swan or duck. The other was a statue of a fawn. In 1963 hundreds of votive figures made of oak, and datable to the first half of the 1st century AD, were discovered. The sculptures, in LA TÈNE style, sometimes roughly designed but often showing vigorous and expressive craftsmanship, are displayed in the Musée archéologique at Dijon. They represent full-length figures dressed in Gaulish style, as well as torsos, heads, partly isolated, partly arranged in groups (see HEAD CULT), limbs (hands, arms, feet, and legs), anatomical representations, and animals (horses and cattle). Tablets with traces of bronze eyes attached to them were also found.

This rural sanctuary was first used at the beginning

of the 1st century AD and fell into disuse during the 3rd century AD. It consisted of canals at the foot of a cliff, pools, and stone buildings of moderate dimensions, comprising a FANUM and a courtyard surrounded by a peristyle (court of columns).

Saint-Maur-en-Chaussée is a village in the north of France (*département* of Oise) which has given its name to the remains of a nearby ROMANO-CELTIC sacred site or FANUM in the ancient territory of the Bellovaci, one of the tribal groups which made up the BELGAE. The sanctuary is aligned with the axis of a Roman road, which itself bends to avoid it. The *fanum*, which was enclosed by an oval gallery 70–80 m in length, was already known in the 19th century and has been investigated again from 1986 onwards. With the aid of aerial photography, a theatre was located on one side of the temple; on the opposite side, various foundations overlying one another have been explored, and it was concluded that these were the remains of a GALLO-ROMAN civilian settlement or *vicus*. The most important find from the site is a bronze statue of a Gaulish warrior from the 1st century BC/AD, which is kept in the Musée départemental de l'Oise at Beauvais.

PEB

Statue of a warrior in embossed sheet bronze with glass plates for eyes from Saint-Maur-en-Chaussée (Oise) 1st century BC/AD, height: 50 cm

Saint-Roman-de-Jalionas, near the fortified site of Larina (Isère, France) which overlooks the RHÔNE valley, is the site of a tomb which was excavated in 1987 by J.-P. Guillaumet. A cairn covered the luxurious inhumation burial of a man of *c.* 800 BC. He was adorned with a TORC, a bracelet, and a golden pin, and his bronze SWORD and iron dagger were placed to his right. Three bronze vessels, a goblet, a situla (WINE bucket), and a cup—forming a drinking set for banquets (see FEAST)—were accompanied by a knife placed on the remains of a young bovine. Some of these objects definitely came from central Europe, while others were from the Atlantic coast, thus providing evidence of a large trade network which covered long distances.

M. Lévery

Salesbury, William (*c.* 1520–*c.* 1599) was the translator of the New Testament into WELSH (see BIBLE), a RENAISSANCE humanist (in the Welsh context), and an early exploiter of the PRINTING press. He was the second son of the minor gentleman Foulk (Ffwg in Welsh spelling) Salesbury of Plas Isaf, Llanrwst, Denbighshire (sir Ddinbych). His mother was Catherine ferch William (daughter of William) of Cochwillan, Llanllechid, Caernarfonshire (sir

Gaernarfon). He married Catrin Llwyd, a daughter of the powerful churchman Robert ap Rhys of Ysbyty Ifan, Denbighshire, and they had at least three sons and one daughter; the marriage was not uniformly happy. William was educated at Oxford (Welsh Rhydychen) and the London law schools. He did not graduate, but amassed immense learning, particularly in languages, as his contemporaries testify. To supplement his rental income, he appears to have practised as a lawyer and, for a time, he served Sir Richard Rich, Lord Chancellor between 1547 and 1551.

The flow of publications produced by Salesbury in the following stages of his career must be understood in the context of new needs and opportunities created at the time by the rise of printing and the breaking away of England and Wales (Cymru) from the Roman Church during the reign of Henry VIII (see reformation). During the mid-1560s, Salesbury was much concerned with the translation of the Book of Common Prayer and New Testament into Welsh and with seeing the translations through the press in London. His wife probably died *c.* 1572–3, but he himself appears to have lived almost to the end of the century.

Salesbury's first publication (protected by a royal patent dated 13 December 1545) was *A Dictionary in Englyshe and Welshe* (1547), followed (probably in the same year) by a collection of proverbs *Oll Synnwyr Pen Kembero Ygyd* (All the wisdom of a Welshman's mind brought together). A handbook of Welsh phonology *A Briefe and a Playne Introduction*, a tract on priests' marriage *Ban Wedy i Dynny . . . Allan o Hen Gyfreith Howel da* (A tract drawn . . . from the old law of Hywel Dda), an attack on the Roman Catholic doctrine of the eucharistic sacrifice *The Baterie of the Popes Botereulx*, and a translation of an astronomical treatise by Proclus, *The Description of the Sphere . . . of the Worlde*, all bear the date 1550. The lectionary Kynniver llith a ban (1551) and a manuscript adaptation in Welsh of a manual of rhetoric by Petrus Mosellanus (1552) round off the first period. Following the interlude of the reign of the Catholic Queen Mary Tudor (1553–8, see tudur)—and the temporary withdrawal of royal support for vernacular versions of the Bible—and subsequently the passage in 1563 of an Act of Parliament enjoining the translation of the Bible and Book of Common Prayer into Welsh by 1567, Salesbury joined forces with Bishop Richard Davies of St David's (Tyddewi) and his precentor Thomas Huet, and together they were able to publish the Prayer Book and New Testament during 1567. The bulk of the work was done by Salesbury and displays highly competent biblical scholarship as well as a remarkable command of the Welsh language. Salesbury's humanistic foibles in matters of diction and orthography are essentially superficial. His last work was a manuscript herbal in Welsh based on the work of Leonhard Fuchs and William Turner (1578×1597).

Salomon, the nephew of Nominoë, usurped power in Brittany (Breizh) in 857 by murdering his cousin and foster-brother, Erispoë. Salomon was the son of Nominoë's sister, whose name has not been recorded, but the fact that Salomon was Nominoë's nephew and foster-son presumably gave him inheritance rights. The king of the Franks, Charles the Bald, granted Salomon a third of Brittany, though what this meant in practical terms is unclear. Although there was a short period of instability following the murder, Salomon quickly consolidated his power base. In the 860s he went on to lead Brittany to its greatest territorial expansion, which included the modern *département* of Manche in Normandy and part of Maine-et-Loire (Anjou). The acquisition of these territories was facilitated by the instability in the region between the Norman incursions and the struggle between Robert the Strong of Anjou (†866) and Charles the Bald. In the Redon charters Salomon is mentioned several times as king

of Brittany (*rex Brittaniae*). In 874 he was blinded and murdered by a group of his relatives, including his nephew Guigon, his son-in-law Pascwethen, and Erispoë's son-in-law Gurvant, with the latter two sharing the kingship between them. His name also occurs as *Salaguun* and derives from biblical 'Solomon', like the Welsh *Selyf* (see CAER).

Salt, the chemical compound NaCl, was an extremely valuable resource in the early Celtic world. It exists in watery solution as seawater or water from salt springs and also in mineral form in several large deposits in Europe. Salt production, both by evaporating water with a high content of salt in frying pans and by mining for mineral salt, occurred from at least the Late Bronze Age onwards (from *c.* 1400 × *c.* 1200 BC). The remains of salt frying pans, called briquetage, are known from various sites along the European marine coastlines, e.g. from Tregastell and Sene in Brittany (BREIZH; Giot et al., *Les premiers Bretons* 29). Salt springs were used as a source for salt, for example, in Bad Reichenhall in Germany (Penninger, *Die Kelten in Mitteleuropa* 187), as well as in other places in continental Europe. Prehistoric salt mines have as yet only been documented for the large mineral salt deposits of the eastern ALPINE area in HALLSTATT, Upper Austria, and on the DÜRRNBERG bei Hallein in Salzburg. The economic importance of salt can be demonstrated by the exceptional riches which were amassed by the prosperous communities in Hallstatt from the late Bronze Age onwards and on the Dürrnberg throughout most of the LA TÈNE period of the IRON AGE.

The place-names *Hallstatt* and *Hallein* are relevant since they contain a Celtic, rather than a Germanic, word for salt: compare Welsh *halen*, Breton *holenn*, Cornish *holen*, and Old Irish *salann*. In all these INSULAR CELTIC examples, BRYTHONIC *hal-* or GOIDELIC *sal-* represents the basic root 'salt', and the second syllable is a suffix. The Celtic sound change of INDO-EUROPEAN *s-* to *h-* can be seen in both place-names. In Brythonic, this change occurred in many words with inherited initial *s-*, for example, *hen* < Celtic **senos* 'old' (Old Irish *sen*). The change also occurred in Goidelic, but, in that language group, it is a 'mutation'; this means that the same word can begin either with an *s-* or an */h-/* sound, depending on its position in the phrase. It appears that in central Europe, as in Britain, the Celtic tendency to pronounce inherited *s* weakly as */h/* in some positions had similar results, in that the word for 'salt' came to be *hal-* in all positions. This development is probably linked to the fact that both central Europe south of the DANUBE and Britain became parts of the Roman Empire; their Celtic was thus heavily influenced by Latin, in which *s* and *h* were distinguished as sounds and letters, and could not be treated as a single phoneme with a range of articulations from [s] to [h]. There is also evidence that this change occurred on Rome's RHINE frontier (see LOW COUNTRIES). On the other hand, Ireland (ÉRIU) and what became Gaelic Scotland (ALBA) remained outside the Roman Empire, and IRISH and SCOTTISH GAELIC thus do not reflect the same degree of impact of old Latin–Celtic bilingualism, as that which resulted in the generalizing of the weak pronunciation *hal-* for 'salt' in parts of the ROMANO-CELTIC world.

Old Irish *salann* 'salt' is mentioned in the early LAW TEXTS; there, the term used is *murlúaith* 'sea-ash', for instance, in the text *Críth Gablach* (possibly literally 'Branched purchase'), where it is used for salting meat after it has been cut up. Since no references to Irish salt-mines or salt-pans are known, it has been argued that it was collected by burning seaweed and recovering salt from the ashes. A tax on salt, *salanngabál* (salt taking), on the Aran Islands (OILEÁIN ÁRANN) is known from an 8th-century text on the legendary dynastic founder Conall Corc (see ÉOGANACHT; CAISEL MUMAN) and the origins of the early medieval south-western tribal group, the Corco Luigde. It is also likely that salt was imported into Ireland; the 11th- or 12th-century grotesque gastronomic fantasy *Aislinge Meic Con Glinne* (The dream of Mac Con Glinne) mentions 'English salt', *salann Saxanach*. Legal commentaries of approximately the same time refer to ships with cargoes of salt (Kelly, *Early Irish Farming* 340–2).

Saltair Chaisil ('The Psalter of Cashel') was the name of a text and of an early medieval Irish manuscript which contained this text. However, the codex was lost by the mid-17th century. Its existence is known from the references made to it in other important early Irish manuscripts, among them LEBOR NA CERT ('The Book of Rights'), *Leabhar na Rátha*, LEABHAR BHAILE AN MHÓTA ('The Book of Ballymote'), and LEABHAR MÓR LEACÁIN ('The Book of Lecan'). The manuscript seems to have also been known by the name *Saltair Chormaic* (Cormac's psalter). This suggests that *Saltair Chaisil* may have belonged to, and was possibly even written by, CORMAC UA CUILENNÁIN (†908), king-bishop of Cashel (CAISEL MUMAN). Cormac's association with the Psalter is further indicated by the most important content of the manuscript, SANAS CHORMAIC ('Cormac's Glossary'), long associated with Cormac and probably dating from his time.

Saltair Chaisil seems to have been a chronicle, and contained GENEALOGIES of saints and secular figures, as well as synchronisms. Its importance is reflected in its frequent mentions in Irish manuscripts down to the mid-19th century.

According to legend, the origin of the Psalter goes back to St Benignus, a disciple of St PATRICK, who is said to have blessed the province of CONNACHT in preference to Munster (MUMU) and then tried to make amends by composing *Saltair Chaisil*. St Benignus' account is supposed to have described the acts, laws, prerogatives and succession of the monarchs of all Ireland (ÉRIU), and, further, to have included the rights of these Irish kings. There may be an association between the *Saltair Chaisil* and *Lebor na Cert*, and the latter text contains several references to the Psalter.

Geoffrey Keating (Seathrún CÉITINN) in his *Foras Feasa ar Éirinn* (Compendium of wisdom about Ireland, *c.* 1634) mentioned that *Saltair Chaisil* was the first and most important of the historical books extant at his time. He added that the manuscript was one of the chief books of Ireland, along with several famous early Irish manuscripts, including the Book of ARMAGH, *Saltair na Rann* (The verse psalter), the Book of Glendalough (see RAWLINSON B 502), *Lebor na Cert*, and LEBOR NA HUIDRE ('The Book of Dun Cow'). The manuscript is named by Keating as the source for his secular genealogies, a version of LEBAR GABÁLA ÉRENN ('The Book of Invasions'), *Lebor Bretnach* (the Middle Gaelic HISTORIA BRITTONUM), as well as a poem on the kings of Scotland (ALBA). However, the most precise list as to the contents of the Psalter is probably a list drawn up by Bishop David Rothe of Ossory (†1650). According to this list, *Saltair Chaisil* further contained a version of the DINDSHENCHAS and a list of St Patrick's coarbs (successors).

PSH

Samain is the Old Irish name (Modern Irish *Samhain*) for a festival celebrated on 31 October to 1 November in the standard western CALENDAR. In contemporary popular understanding, this date marks the beginning of the Celtic year, but, in fact, it is not at all clear when the year began or ended, or whether there was ever a consistent system throughout a single country, much less throughout all the CELTIC COUNTRIES. However, Samain, known as 'the calends of winter' in the BRYTHONIC tradition (Welsh *Calan Gaeaf*, Breton *Kalan Goañv*), was certainly an important date. It was the beginning of winter, and there is compelling evidence that it was the beginning of the new year. On the other hand, there is equally compelling evidence that BELTAINE, which is six months from Samain, was considered as the beginning of the year. There are also other possibilities, for instance, that, as in the COLIGNY calendar, the year was divided into two halves, or that the two dates represent the beginning of the year in two different types of calendars, e.g. agricultural, civil, or religious.

The date is important in both medieval literature and modern folklore. As a transitional period between years or, at the very least, between seasons, the eve of Samain was a liminal time in which boundaries between the mundane world and the Otherworld were more likely to be crossed. Magical events and supernatural beings were more likely to be encountered on Samain or one of the other quarter days; the dead, fairies, and witches were all abroad on Samain. The Welsh saying *pwca ar bob camfa* (a hobgoblin on every stile) refers to *Calan Gaeaf*. In Irish tradition, Púca went about spitting or urinating on wild fruits, making them inedible, just as he or the devil spat or urinated on blackberries on Michaelmas. Precautions were taken against the supernatural, including placing open Bibles near doors and windows, and birch brooms over doorways (Palmer, *Folklore of (Old) Monmouthshire* 266–7). In Brittany (Breizh), the faithful spent the night of 1 November (rather than 31 October) in the church; bells rang throughout the night, and there were fires, drinking, and games in the church, activites which were roundly condemned by the authorities (Croix & Roudaut, *Les Bretons* 63–4). It was also considered bad luck to sweep one's house after dark on 31 October in Brittany, for fear of injuring the Anaon, the souls of the dead.

The abundance of supernatural potential also made Samain a potent time for divination rituals. The examples cited below are of widespread practices which are documented throughout the Celtic countries and beyond. For example, in Radnorshire, Wales (sir Faesyfed, Cymru), a girl would count the spots on the back of a ladybug (ladybird) to know how many years would pass before she was to marry. In Ireland (Éire), molten lead was poured through a key into a pan of water, and the resulting shapes were used to divine the future. Many of the charms involved invoking an apparition, either of the dead or of one's future spouse, for example, the practice of sowing hempseed just before midnight while saying a charm, and then turning to see one's future spouse mowing the hemp.

It was also a time of games and social gatherings. There were bonfires in Scotland (Alba), and root vegetables such as turnips and rutabagas (swedes) were carved; nowadays, pumpkin carving is more usual. Bobbing or ducking for apples was a popular game. In Dublin (Baile Átha Cliath), 'guisers' wore masks and went from house to house, begging for treats and mock-threatening the occupants with mischief if their demands were not satisfied. The night was known as 'Mischief Night' in many places, and pranks, with or without reward, were played in rural areas throughout Ireland and the Americas. All the above beliefs and behaviours have played a rôle in the formation of the contemporary celebration of Hallowe'en.

In more practical terms, Samain was the time when a female calf, generally born sometime in May, increased in value from 2 to 3 scruples (*screpul*) in Old Irish law (see law texts). The distinction is maintained today; Kelly gives the example of South Uist (Uibhist mu Dheas), where a *laogh* 'young calf' becomes a *gamhain* 'older calf, winter calf' on Samain (*Early Irish Farming*). A heifer's value continued to increase biannually on Beltaine and Samain. The value of other livestock increased at the quarter days, including Lugnasad, and similar references can be found in medieval Welsh law. Like Beltaine, Samain was also a gale day, when annual or biannual rents were paid.

Irish saga literature pays great attention to the feasts held at Samain. In the medieval literature, Samain is the occasion for both opening tales, as in Mesca Ulad ('The Intoxication of the Ulstermen') and Serglige Con Culainn ('The Wasting Sickness of Cú Chulainn'), and for significant events within the stories themselves. It is the date of Cú Chulainn's vision and, in *Aislinge Oengusa* ('The Dream of Oengus'), Samain is the day on which Oengus Mac ind Óc's bride-to-be changes from bird to human form. It is also the day on which Oengus claims the kingship of Brug na Bóinne (Newgrange) in Tochmarc Étaíne ('The Wooing of Étaín'). Samain plays an even greater rôle in *Echtrae Nerai* ('The Adventure of Nera'), whose hero journeys in and out of the Otherworld on this day, and in Cath Maige Tuired ('The [Second] Battle of Mag Tuired'), in which the battle is fought on Samain. It is also associated with the deaths of Cú Roí and Conaire Mór (see togail bruidne da derga).

The holiday remains an important festival in contemporary popular culture. Some traditions of Guy Fawkes day may have been borrowed from Celtic tradition, and this is certainly true of Hallowe'en traditions. In addition, many neo-pagans, whether following Celtic tradition or not, mark the day as an

important part of their ritual calendar.

In the Celtic languages the name *Samain* is clearly related to that of 'summer', e.g. Modern Irish *samhradh*, Welsh *haf*. *Samoni*, the GAULISH word which corresponds exactly to *Samain* linguistically, occurs on the Coligny calendar as the name of a month. The Brythonic name for the month of June, Welsh *Mehefin*, Breton *Mezeven*, contains the same word, including the suffix, and etymologically means 'middle of summer', BRITISH **medio-samonī*, indicating an old system in which summer figured as the three months broadly corresponding to May, June, and July, as likewise implied by Irish *Meitheamh* 'June' < **medio-samo-* and Welsh *Gorffennaf* 'July', lit. 'end of summer'. Why a Celtic May–July summer should give its name to a festival of 31 October/1 November is an unresolved question. In *Echtrae Nerai*, summer fruits are brought back from the Otherworld at Samain, and, on this basis, Carey has suggested that the name might once have referred to summer in the realm of the immortals (*Ériu* 39.67–74). Another possibility is that the three-month summer—though embedded in COMMON CELTIC vocabulary—overlays an older two-season or two half-year system, in which Samain marks the edge between the light half/summer (from which it was named) and the dark half/winter (cf. the Coligny half years above).

Samson, St

The earliest written narrative from Brittany (BREIZH) is the influential First Latin Life of St Samson of Dol. Basing his dating on textual evidence, Flobert has suggested a date between AD 735 and 772 for the work; however, a once generally agreed early 7th-century dating still has its advocates (cf. HAGIOGRAPHY [4] §2). The Life was probably composed at Dol, the centre of Samson's cult in Brittany. There are dozens of churches, towns, and parishes associated with Samson in Brittany, Normandy, and the Channel Islands. Samson is also associated with Cornwall (KERNOW), including the Isles of Scilly (one of which is named after him). There are no secure dedications to him in Wales (CYMRU) though, according to tradition, he was born in Wales and studied there under St ILLTUD, and a version of his life is found in the Book of LLANDAF. His biblical name appears twice on a stone cross shaft from Llanilltud Fawr (*Early Christian Monuments of Wales* no. 222), but this is a king of later date.

Samson himself appears to be a historical figure. A man named Samson, quite possibly a bishop and potentially St Samson, was present at the Council of Paris in 562. He is often conflated with another Samson, bishop of York, about whom nothing else is known.

Samson is a DRAGON-slaying saint, with several accounts of his banishing a dragon or serpent. There are also several different accounts of his healing or preventing poisonings. In relation to CELTIC STUDIES, the most notable events in his Life are the specific parallels to later secular Welsh literature. His parents, unable to conceive a child, make an offering of a silver rod the size of Samson's mother Anna, and she becomes pregnant with Samson. This is comparable to the payment of a rod of gold made to MATHOLWCH in BRANWEN. Another episode is Samson's conflict with a *theomacha*, a magical or supernatural female, one of nine sisters who live in a wood—a group reminiscent of the nine Gaulish sorceresses of the island of Sena described by Pomponius Mela (see AVALON). Their combat is reminiscent of PEREDUR's combat with the nine witches (*naw widdon*) of Gloucester (Caerloyw) in the tale of Peredur.

Sanas Chormaic ('Cormac's Glossary') is an early Irish glossary. It is preserved in two versions in several important Irish manuscript collections: a shorter version in Oxford, Bodleian Library, LAUD 610 and in LEABHAR BREAC ('The Speckled Book'), and a longer version in LEABHAR BUIDHE LEACÁIN ('The Yellow Book of Lecan'). The difference in length is due to the addition of extra material at the end of many letter blocks. The shorter version may be associated with CORMAC UA CUILENNÁIN (†908), king and bishop of Cashel (CAISEL MUMAN), though it is far from clear precisely what his involvement may have been. Among other things, it does account for the bias towards Munster (MUMU) of some of its sources in its names and geographical references. The additional material which made up the longer version seems to be associated with other GLOSSARIES and to have been absorbed into Cormac's Glossary at a later stage.

The material is listed under headwords ordered by the first letter only (words are not alphabetized further). The content is extraordinarily varied, ranging from basic dictionary entries where one word is explained with another, through complex etymological analysis of words (a process which owes much to ISIDORE of Seville), to full-blown tales triggered by a headword. These words often form the key word of the narrative in the tale (Russell, CMCS 15.1–30). Its sources are similarly wide-ranging; not all have been traced, but so far it is clear that major use was made of extant glossary material which related to specific texts or types of texts. For example, it can be shown that sections of glossary material relating to particular LAW TEXTS were incorporated both from the SENCHAS MÁR tradition and also from what may be the more local Munster tradition of the BRETHA NEMED ('Judgements of privileged persons'; Russell, ZCP, 51.81–115). Not all the sources were native to Ireland (ÉRIU), and there is a section of entries which derive Irish words from Latin, Greek, and Hebrew (regarded as the *tres linguae sacrae* 'three sacred languages' by scholars in the early Middle Ages). These entries probably derive from Continental sources. Many of the Greek terms can be seen to derive from a Continental glossary (possibly the Graeco–Latin glossary preserved in Laon MS 444, associated with Martin Hibernensis; see Russell, *Peritia* 14.406–20). The Hebrew words may derive, directly or indirectly, from JEROME's work on Hebrew names.

Its purpose remains unclear. While glossaries related to specific texts can be seen as aids to reading, this glossary is textually independent. The term *sanas* (which is the cognate of Welsh *hanes* 'history, narrative') can also refer to the secret council of the king of Cashel in a Munster context, and it is possible that the glossary was regarded as a repository of arcane material within the royal circles of the kings of Cashel.

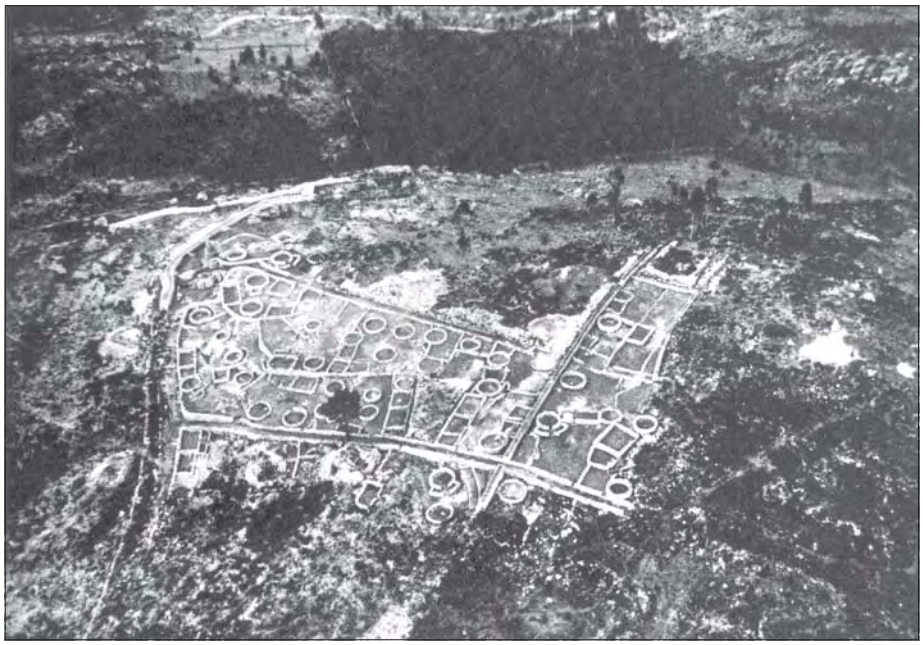
Sanfins (Pacos de Ferreira, Porto) is an important and well-excavated example of a hilltop which was fortified in the later pre-Roman IRON AGE and located in an area which was probably partly or largely Celtic speaking at the time (see CELTIBERIAN, GALICIA, IBERIAN PENINSULA). Sanfins is one of the larger fortified *castros* or *citânias* of north Portugal; it covered an area of 15 ha (38 acres), with 3.4 km of walls, at an altitude of 570 m. Excavations undertaken over 35 seasons between 1944 and 1983 have exposed the foundations of around 150 circular or quadrangular buildings, occupied between the 2nd century BC and the mid-1st century AD. Notable features are the carved stone door-jambs and lintels, and the stone-built 'sauna' steam bath, made up of two 2 m² cubicles, separated by a 1.65 metre-high gable-shaped slab (*pedra formosa*). A semicircular entrance aperture has been cut into the slab's base. Such baths seem to be peculiar to the Callaeci (ancient Galicians) of the Porto area, though STRABO notes their use among the LUSITANIANS (*Geography* 3.3.6; see Tranoy, *La Galice romaine* 345–6).

Fragments of a life-size granite statue of a warrior have been found at Sanfins: the head with a helmet



Aerial view of Citânia de Sanfins hill-fort, showing the regular stone foundations of round and rectangular architectural features

and open neck ring (see TORC), the torso, lower legs and a pair of feet still *in situ* at the entrance to the fort (Calo Lourido, *A plástica da cultura castrexa galego-portuguesa* 473–94). Also recovered from this site was a gold neck ring terminal (Raddatz, *Die Schatzfunde der Iberischen Halbinsel* 197). Outside the *castro* is a natural rock with an inscription which may be 'Celtic' (Tranoy, *La Galice romaine* 273; see INSCRIPTIONS).

Aedeen Cremin

satire and its socio-legal rôle

§1. INTRODUCTION

Of all the formidable weapons in the early Irish legal arsenal, none was more feared than the one whose barbs were in essence metaphorical. Laughter and public ridicule were among the most potent of social sanctions in medieval Irish society, which prized the maintenance of individual and familial honour above almost all else. So immediate and real were the effects of public derision believed to be that the sources frequently depict blisters of shame arising upon the face and cheeks of the person being mocked. Moreover, the blistering or reddening (*imdergad, grísad, enechrucce, ruidiud*) of the face or cheek was construed as more than just a physical blemish, since the Old Irish words for 'face' and 'honour' were exactly the same (*enech*). Persons whose 'face' had been marred—in other words, whose reputation had been impugned, or whose behaviour and deeds had been publicly called into question—could all too easily find themselves bereft both of honour and of the privileges and followers to which they would normally be entitled. 'Saving face' was a literal necessity.

Ridicule took many forms in early Ireland (ÉRIU), most of which fell under the general rubric of satire. The most common Old Irish terms for satire, *áer* or *rindad*, covered a wide variety of derisive behaviours, not all of which were verbal. Formal, versified satire was perhaps the most potent type of elocutionary aggression; however, the tales and law texts mention several other types of satirical reproach. Coining an uncomplimentary nickname, or mocking a person's appearance by word or gesture, was construed as satire, as was falsely accusing an individual of a crime, or taunting him, or laughing at him. It is unclear at what point derogatory gossip would have been conceived of as satire and penalized accordingly if untrue. Individuals who engaged in malicious rumour-mongering might find themselves penalized or restricted in their normal legal rights. Perhaps the most intriguing—and certainly the most exotic—species of satire was the mysterious *glám dícenn* (endless revilement), which, in its most extended form at least, seems to have had as much to do with black magic as with other forms of satire.

Early Irish sources on satire are relatively plentiful. Many of the tales deal directly or indirectly with its use and abuse: *Tochmarc Luaine ocus Aided Athairni* (The wooing of Luan and death of Athairne), *Imtheacht na Tromdáimhe* (*Tromdám Guaire*, Guaire's band of poets), *Echtra Fergusa maic Léiti* (The adventure of Fergus son of Léite), Cath Maige Tuired ('The [Second] Battle of Mag Tuired'), *Immacallam in Dá Thuarad* ('The Colloquy of the Two Sages'), *Aided Chon Culainn* (The violent death of Cú Chulainn), the tale of Néide and Caíer cited in Sanas Chormaic ('Cormac's Glossary'), and of course the Táin Bó Cúailnge ('The Cattle Raid of Cooley') itself, among many others. The Old Irish legal text Bretha Nemed *déidenach* (Judgements of privileged persons) provides an extensive (though rhetorical and difficult) discussion of the powers of satire and of the poets who composed it. *Cis lir fodla aíre?* (How many kinds of satire are there?, ed. Meroney, JCS 1.199–226, 2.59–130) provides what purports to be a comprehensive list of the many types of satire known in early Ireland. A particularly valuable aspect of this latter text is the fact that it includes within it examples of actual satirical verse; further examples are contained in the poetic collection known as the *Mittelirische Verslehren* (Middle Irish oetics) and in several commentaries on the law tract *Uraicecht Becc* (The small primer).

It is largely to *Cis lir fodla aíre?* that we owe our current understanding of the workings of formal satire. The text suggests three important distinctions between the types of satire known in early Ireland (Breatnach, *Léachtaí Cholm Cille* 18.12). Satire can be either public or private; it can be expressed in prose or in poetry; and it can convey varying amounts of information about the person being satirized. In some of the poems cited, for example, the (alleged) offender is referred to only in the vaguest of terms; in others, his or her exact name and residence is given. Some fall in between these extremes. A glimpse into the psychological subtleties of the genre is provided by poems which hint ominously at the possibility of further disclosure by providing some—but not (yet) enough—information to identify the individual in question. The poems exhibit many different techniques, from excessive and insincere praise, to faint (and hence insulting) praise, to outright satire. Some are funny, some merely sarcastic. All suggest considerable attention to the language in which the message is conveyed. Thus, a barb at a less than sterling scholar of Clonmacnoise (Cluain Mhic Nóis) begins with three obviously mangled Latin words, while a verse impugning the martial career of a lord uses rhyme and alliteration to make its point. There, the word 'prince' is linked both to the verb 'makes weary' and the name of the plain on which the prince in question has presumably refused to fight, while the word for 'fame' is joined to expressions meaning 'turn one's back on' and 'forever'.

One of the most interesting varieties of satire is one not mentioned in this text, but described in passages from Trinity College Dublin MS 1337 (H. 3. 18) and elsewhere. In this highly formal type, the poet takes a rod shaped like a cross, inscribes a cross on the first arm, the name of the perceived offence on the second, the name of the offender on the third, and praise for him on the fourth. He then sets this rod in the ground as part of a three-stage ritual designed to get the offending party to make compensation for what he has done. There then follows a period of time during which the offender is to make good; if the poet jumps the gun, and satirizes him or takes distraint from the offender before the expiration of this period, the poet must pay compensation. If, however, the offender has refused to come to terms by the end of the time allotted him, the poet may then satirize him formally without fear of retribution. Striking similarities exist between this procedure and distraint (Old Irish *athgabál*; see Breatnach, *Léachtaí Cholm Cille* 18.17–19). Equally interesting are the psychological aspects of the process; with the passing of each stage, tension mounts and the pressure on the offender increases. The sense of urgency is considerably heightened in the second stage by the poet's delivery of a *trefhocal*, a poem which dramatizes for the community the nature of the transition that is taking place. In this poem, praise and satire are mixed in much the same way they are on the poet's rod. The *trefhocal* thus quite literally mirrors the passage of the offender from his honourable and prosperous past to a future of shame and disgrace. Remarkably, one of these *trefhocal* compositions has survived, a poem threatening a group called the Fir Arddae with formal satire if the poet does not receive his proper due.

Many, and probably even most, satires were much

less formal than this. None of the satirical poems which actually survive from the early Irish period (assuming that at least some of them are complete in their extant form) seem nearly elegant enough to have been preceded by a composition of the sort represented by the poem on the Fir Arddae; they are, for the most part, short ditties begging (or complaining about) food or hospitality. That this should be so is not entirely surprising. The sources strongly suggest that many of the people engaged in the business of satire on a regular basis were a far cry from the literate, monastically educated poets called *filid* (see BARDIC ORDER) which scholars now tend to associate with the production of metrically sophisticated verse. Indeed, to judge from the plethora of (often sneering) references in the sources to lower-class BARDS or lampooners, satire may well have been a weapon that appealed particularly to outlaws, the disenfranchised, and those whose voices might normally not be heard in the traditional legal process.

§2. WOMEN AND SATIRE

Female satirists figure frequently in the literature. *Bretha im Fhuillema Gell* (The judgements about pledge-interests) allows a 'woman who satirizes' ([*ben*] *rindas*) to seek compensation for a lapsed pledge she has given on behalf of another by satirizing the offender's kindred leader. Similarly, satire offered the otherwise legally invisible bondmaid Dorn a manner in which to exact revenge for the king's mistreatment of her, though she paid a heavy price for her action. It is unclear whether either of the women referred to here would have been specifically trained in the poetic arts, though [*ben*] *rindas* is glossed in the texts with *.i. in banbhard*, 'that is, the female poet', and Dorn had been a noblewoman before entering into servitude and, therefore, possibly educated to some degree. However, the frequency with which references to female satirists occur and the large number of appellations for women who engage in what must be considered related activities (*birach briathar, ben rindas, bancháinte, canait scél, rindele*), suggest that satire, whether spontaneous or ritualized, formal or informal, was an important genre of female speech. In this context, it may be instructive to think about the links between satire and the type of GEIS (verbal injunction, taboo) by which women or other marginalized figures simultaneously invoke and threaten the honour of those above them in the social scale in order to get what they want. DERDRIU's demands of Noísiu in LONGAS MAC NUISLENN ('The Exile of the Sons of Uisliu'), Gráinne's demands of Diarmaid in TÓRUIGHEACHT DHIARMADA AGUS GHRÁINNE ('The Pursuit of Diarmaid and Gráinne'), or the dwarf's demands of Fergus son of Léite, may have more in common with satirical verse than is at first apparent.

§3. THE FILID AND SATIRE

One of the clearest indications of the popularity of satire among lower-class bards and otherwise marginalized individuals are the attempts made by monastically educated *filid* to suppress the participation of such persons in the genre. The *filid* clearly regarded satire as the prerogative of the monastically educated élite; even poets-in-training were not allowed to engage in full formal satire until they had completed their mandated course of studies. The poetic tract *Uraicecht na Ríar* (The primer of the stipulations) is quite adamant on this point, decrying the attempts of ill-educated *taman* and *drisiuc* poets to engage in public satirizing and implying that any efforts they made in this direction would not be effective. Other ecclesiastically educated writers of the period also portray low-class satirists, whom they refer to generically as *cáinti*, in a negative light. Indeed, the contrast between the socially useful and productive satirizing of learned Christian poets and the greedy and destructive wheedling of the *cáinti* is a major theme in *Cath Maige Tuired* and many other tales. Several texts link *cáinti* with brigandage and the outlaw bands known as *fíanna* (see FÍAN), and many go even further to allege the involvement of *cáinti* with paganism and druidry (see DRUIDS). This link with druidry is particularly important, since these same sources clearly consider the satirizing done by learned Christian *filid* and their clerical allies to be a specifically Christian endeavour. Close parallels were drawn between the satire by the *filid* and the maledictions of Christian saints, as Tomás Ó Cathasaigh has demonstrated (*Éigse* 21.10–15). At least two of the examples of satirical verse cited in *Cis lir fodla aíre?* are attributed to clerics, one an abbot of Fobar using the genre to comment negatively on the literacy of a clerical colleague at Clonmacnoise.

That the *filid* should be so intent on discouraging those not formally educated in the poetic arts from usurping what they regarded as their prerogative is a good indication of the importance of the genre. Satire, especially when expressed in verse, was obviously regarded as an exceptionally potent and authoritative form of public speech. Poetry and PROPHECY had long been linked in Irish tradition; poets were conceptualized as having special connections with the OTHERWORLD and are often depicted in the literature as conduits through which its insights could be made available to human society. Moreover, particularly rhetorical or obscure speech seems to have been interpreted as evidence of the power and Otherworldly connections of the speaker. Certainly, the admonition that poets should use the noblest metre they could master in composing and presenting a *trefhocal* poem implies a perceived link between the nature and complexity of the verse and the efficacy of the satire. Even in a society like that of medieval Ireland, in which public performance and ritual were integral parts of the legal and political order, versified speech was a weapon of particular power, and one that the *filid* were not anxious to share.

§4. THE PUBLIC ASPECT OF SATIRE

We know from the sources that satire could, and did, serve as a form of legal enforcement. Offenders who were satirized or threatened with satire and did not offer to come to law forfeited their honour. High-status poets were required to be knowledgeable in the law as well as in the composition of poetry, and poets are often mentioned as playing an active rôle in the enforcing of cross-border claims, levying compensation in places 'where the barbs of satire are answered and the barbs of weapons are not'. Indeed, so recognized a practice was this that the law tracts lay out precise rules regarding the nature and amount of hospitality to which poets on such missions were entitled from the rulers of the host tribe. The participation of poets in legal matters as judges or enforcers within the tribe is a prominent theme in *Bretha Nemed* and related tracts. And *Bretha Nemed déidenach* gives us a sense of how wide a purview was claimed by the *filid*: topics discussed in this text include wounding and slaying, women, neighbourhood law, animal law, FOSTERAGE, and the giving of gages.

The most common cause envisaged for satire in the sources is the failure by rulers or important churches to maintain decent standards of hospitality, and it is important to remember that this was also a matter of public, rather than merely individual, concern. The poet Cairpre mac Étoíne, described in *Cath Maige Tuired* as the 'poet (*file*) of the TUATH DÉ', ostensibly satirized Bres only for his niggardly hospitality towards him. However, his brief poem had significant public ramifications, for it was only after his satire had given public expression to the king's injustice that the Tuath Dé as a whole were able to rise up and throw off the burden of Bres's reign. Similar themes are visible also in *Cis lir fodla aíre?*, where ecclesiastical hospitality is in question, and in the anecdote from the long Fenian text ACALLAM NA SENÓRACH (Dialogue of [or with] the old men), discussed by Ó Cathasaigh, where the connection between the king's lack of generosity and the infertility of his reign is made clear (*Éigse* 21.10–15). Indeed, it is likely that a refusal by rulers to pay poets for their work in praising or satirizing rulers would also have been regarded in this manner. Poets played an important rôle in displaying and forcing rulers to live up to communal standards and expectations: dues to poets were public dues, and satires (or near satires) like those against the Fir Arddae were expressions of communal as well as individual disapprobation.

The participation of poets in the enforcement of communal standards raises the question of the patronage networks within which they would have worked. Praise poetry required (or hoped for) a patron, but satire was probably little different in this regard. Satirists might seek rewards from patrons by threatening them with satire were a gift not forthcoming; the abuse of hospitality by greedy poets is a common theme in the literature, and one of which the *filid* made deliberate use in disparaging their lesser-educated poetic rivals. Poets might also be appointed by persons in the community to act against others in pursuing a legal claim. They could also be chosen to act on behalf of their tribe, and it is evident from the emphasis placed on such arrangements in the *Bretha Nemed* texts that appointment to tribal office was a much sought after position among the poetic élite. Much of *Uraicecht na Ríar* is taken up with defining the prerogatives poets could expect to enjoy

when acting in a public capacity. The involvement of the tribe (TUATH) seems to have lessened by the Middle Irish period (*c.* 900–*c.* 1200): the evidence suggests that later poets tended to act on behalf of the king personally rather than the tribes which those kings led. The involvement of the church is particularly interesting: already by the Middle Irish period, if not earlier, major MONASTERIES were regularly appointing poets to act in their interests in composing praise poetry and, presumably, satire as well.

§5. THE RÔLE OF SATIRE IN LAW

It is difficult to judge how often poets might be called upon to act in law. Tracts originating in the *Bretha Nemed* school imply extensive involvement in such matters, but these texts tend to place much more stress on the rôle of poets in legal affairs than do any other writings of the period. In fact, the claims made in *Bretha Nemed déidenach* regarding poetic jurisdiction in legal matters are quite extreme, and one wonders whether they might have generated controversy even at the time. There, in a passage clearly modelled on the prologue to the SENCHAS MÁR (The great tradition), the *filid* are depicted as having worked with kings 'at the beginning of the world' to proclaim the *Cáin Enech* (law of honour), a law later sanctified and renewed by PATRICK after the coming of CHRISTIANITY. This 'law' is said in the text to include within its jurisdiction all disputes involving honour—a significant proportion of all offences, surely—and to apply in places not covered by treaty or by ordinary customary law. Not surprisingly, offences prosecuted under *Cáin Enech* are alleged to be enforceable only by poets. Especially revealing is the use of the word *cáin*. *Cánai* (the plural of *cáin*) were the closest thing Ireland had to national laws—intertribal ordinances declared and enforced jointly by clerics and kings for socially productive purposes. In using this word, *Bretha Nemed déidenach* is both projecting itself as a text into the moral position occupied by well-known *cánai* such as CÁIN ADOMNÁIN ('ADOMNÁN's law') and drawing parallels between the rôles of poets and clerics in public affairs.

There are signs that the *filid*'s claims to authority were regarded in at least some quarters with suspicion. The most dominant theme in legal writings on satire (especially those not emanating from the *Bretha Nemed* school) is the possibility that its power might be abused by immoral versifiers. Satire was, after all, a genre with potentially serious consequences for persons high up in the social order; it worked only against persons with honour to lose, and if wrongfully employed, could seriously destabilize the *status quo*. Again and again the tracts voice similar concerns: unjustified or unlawful satirizing, the spread of satire from one region of the country to another, ongoing vulnerability to satire, satirizing a person after death in a manner which affected subsequent generations, and satire which disguised itself as praise. As has already been remarked, the abuse of hospitality by greedy poets is a stock theme in the literature. In addition to articulating their anxieties about satire, the law tracts give details of remedies which might be employed to help those wrongfully attacked. The most usual of these remedies is the payment of honour-price to the innocent victim; another solution mentioned is the production of a praise poem 'cancelling out' the satire. Perhaps the heaviest penalty specified is that included in *Bretha Nemed déidenach*: an unjustified satire against a king is said there to merit death.

The suspicions expressed in the sources about satirists were aimed primarily at practitioners of the less-learned and low-status variety. References to female satirists are almost universally hostile, for example, and of course the *filid* who presumably authored *Bretha Nemed* and related texts were as keen on limiting the powers of the *cáinti* as they were on expanding their own. There are some indications, however, particularly in texts associated with the *Senchas Már* school, that concerns about the rôle of the poet in public affairs may not have been limited to the lower-order bard, or at least that the expansive claims of the *filid* as articulated in *Bretha Nemed* were not everywhere accepted. Most interesting in this respect is a paragraph from the 'Pseudo-historical Prologue to the *Senchas Már*' in which it is claimed that the authoritative rôle in judgement enjoyed by the *filid* before the coming of Christianity had been taken away from them because of the obscurity of the language in which they expressed their verdicts. The beneficiaries of the new regime are said to have been clerics, kings and (less poetically oriented) jurists. Hierarchies were clearly in flux in the period in which the law tracts were written: kings, clerics, jurists and poets

(learned and unlearned) sought to define and distinguish their relative spheres of jurisdiction. Given its authoritative nature, and the purposes for which it was used, satire may well have been one of the areas in which this jostling for position was played out.

§6. SATIRE AND MAGIC

Little has been said up to this point about magic, which is a common feature of the literary sources on satire, but many scholarly treatments of satire have made much of its relationship to magic. Although it might be possible to differentiate the two in principle, many of the Irish examples blur the line: the satires uttered by Néide against Caíar, for example, or by Cairpre against Bres, break down the distinction between satirical verse and magical spells (Elliott, *Power of Satire*). Seemingly magical also are some of the seven elements which, according to *Uraicecht na Ríar*, 'compose every satire', namely, 'magical wounding' and *corrguinecht* (crane-wounding), a ritual explained in O'Davoren's 'Glossary' to involve standing on one foot while chanting the *glám dícenn*. The *glám dícenn*, which is listed as a type of satire in *Cis lir fodla aíre?,* is the most unambiguously magical of the procedures associated with satire: in its fullest form, poets chant satirical verse in a ritual time and place while stabbing a clay effigy of their victim with thorns from a whitethorn bush (see Ross, *Pagan Celtic Britain*; Constantine, *Breton Ballads*).

It is difficult to know what to make of the *glám dícenn*, or of the relationship between magic and satire generally. Certainly, it is worth noting that *Uraicecht na Ríar* characterizes the satirical poem by which Caíar's fate was sealed as 'satire through a spell' (*aíre tri bricht*; see BRICTA). In other words, 'normal' satire (as opposed to *glám dícenn* or satire which explicitly involved the recitation of a magical spell) did not always have to be conceived of as inherently 'magical' or, as Breatnach argues, capable of causing death (*Léachtaí Cholm Cille* 18.14). Its sanction was social rather than supernatural.

It would doubtless be a mistake to try to distinguish magic and satire too thoroughly from one another; yet, the evidence suggests that they were not synonymous terms. *Glám dícenn* was a species of satire and ought not to stand for the genre as a whole. It may be significant that, though the magical element is present in the early sources, it seems not to be as prominent a theme in these texts as it later becomes. No mention is made of stabbing effigies with thorns in what one must presume to be an earlier version of the description of the *glám dícenn*, for example; perhaps this picturesque detail was added at a later date to a ritual that need not have involved magic at all. Annalistic references to people being 'rhymed to death' date from the 11th century and later, as do the references to 'rat rhyming' for which Ireland later became famous (that is, causing rats to die by reciting metrical verses, alluded to in Shakespeare's *As You Like It* iii.2). Perhaps, as the social context on which early satire had drawn for its sanctions changed over time and poets were thrown more and more back on their own devices in securing patronage and position, magic came more to the fore.

§7. THE CELTIC AND EUROPEAN CONTEXT

Praise poetry was known in other contemporary medieval cultures, as is evident from CÆDMON and the Anglo-Saxon *scop*. Curses and anathemas which, as we have seen, functioned at least in Ireland in a manner similar to satire, were also a European commonplace. However, the only really striking European parallels are to be found in Wales (CYMRU), where satire not only existed as a genre, but drew on beliefs about honour and poetry which closely resemble those we have examined for Ireland. The relationship between 'honour' and 'face' is reflected in the Old Breton *enepuuert* and the older Welsh word for 'honour-price', *wynebwerth* (literally 'face-worth', later replaced by *sarhaed*). As in Ireland, the Welsh poetical lexicon reflects a belief in poetry as a mantic endeavour, and stories told in Welsh about the acquisition of poetic insight closely parallel Irish tales on the subject. Satire (or at least certain varieties of it) was conceived of as having the potential to harm or even to kill: the poet Rhys Meigen was said to have been slain by a satire of DAFYDD AP GWILYM, and Culhwch (see CULHWCH AC OLWEN) threatened not only to dishonour ARTHUR but also to condemn the women of Arthur's court to miscarriage and future sterility. (Interestingly, satire seems distinct from magic in this passage: the threat to the women comes not from satire but from the 'three shouts' Culhwch proposes to raise at the door of the gate.) Military metaphors in which satirical assault is compared to its physical counterpart

are not as common in Welsh as they are in Irish, but they certainly exist. It has been suggested that satirical echoes are visible in the very formal curse found in *Canu* Heledd (Rowland, *Early Welsh Saga Poetry* 179–80; see also englynion)—a suggestion reminiscent of Ó Cathasaigh's observations about the similarities between curse and satire in Ireland.

A generation ago, parallels of this kind would simply have been presumed to derive from the Common Celtic cultural inheritance medieval Ireland and Wales were perceived to share. Diodorus Siculus has referred to the existence of bards singing praise and satire among the early Gauls; in previous scholarly treatments of satire, this was taken as evidence of the antiquity of the genre itself and of the class which produced it. In this instance, the traditional view is probably right: given the unusual self-consciousness and professionalism of the poetic classes in Ireland and Wales, and the links which existed in both nations between poetry and law (both unusual in Europe), this explanation is still the most natural.

At this point, however, we are more aware of the complexities inherent in the relationship between language and culture. To phrase the matter slightly differently, we are now as attuned to the differences between cultures as we are to their similarities. And there are significant differences, at least to judge from our extant sources. Satire seems to have been far less important in Wales than it was in Ireland, though we know it to have existed in both countries. No satirical verse remains extant from the earliest period, and very little from the period of the Poets of the Princes (*c.* 1100–1282; see gogynfeirdd). To judge from the poems which survive, Welsh poets would seem to have focused more on praising their patrons than on satirizing on their behalf. There is no evidence from Wales of the use of satire in legal enforcement, though ridicule (especially of the marginalized) was a potent weapon in the maintenance of order. An interesting parallel to the Irish *trefhocal* is to be found in the *bygwth* (warning) poems composed by the poet Prydydd y Moch (Llywarch ap Llywelyn) for two of his royal patrons. As J. E. Caerwyn Williams remarked, these poems constitute not satire *per se*, but formal threats of impending satire. However, there is no evidence that these ever formed part of a formal legal procedure. Indeed, their ambiguity is much more likely to reflect the dependency of the poet in question on the continuing goodwill of his patron than any Common Celtic inheritance.

As in Ireland, suspicions began to be voiced in Wales in the late Middle Ages about satire. However, these reservations seem to have arisen less from a fear of its power as a genre than from its distasteful association with lower-class poets. Denigrating satire was a way in which the élite of the bardic order could limit the participation of those less learned than themselves in the production of poetry at court. In this, there are clear similarities with the Irish *filid* and *cáinti*, but each existed within its own individual social and chronological context. Satire in both cultures was deeply embedded in the social and political framework within which the poets who produced it lived and worked. Like other such Common Celtic institutions, its nature and power can only be understood within the medieval society that gave it life.

Robin Chapman Stacey

Sayers, Peig (1873–1958) was an Irish storyteller whose autobiography is one of the celebrated accounts of life on the Great Blasket Island (An Blascaod Mór), written when scholars were flocking there to learn Irish or to improve their command of the language (see GAELTACHT AUTOBIOGRAPHIES). Born in Vicarstown, Dunquin, Co. Kerry (Baile Viocáire, Dún Chaoin, Contae Chiarraí), she was one of 13 children, of whom only four survived infancy. Having attended the local school, she left home early to work in Dingle (An Daingean) as a housemaid and farmhand, but returned in poor health four years later. Intending to go to America, she went back into service in order to earn enough money to pay the fare but, in the meantime, her brother made a 'match' for her with Pádraig/Peatsaí 'Flint' Ó Guithín from the island. They married in 1892, when she was nineteen and her husband thirty, and had ten children, six of whom survived infancy. One son, Tomás, died in a cliff fall in 1920. The remaining children emigrated to the United States, but one of them, Mícheál/Maidhc, returned. The family left the island in 1942 and settled on the mainland, near Peig's birthplace.

Peig Sayers's storytelling ability and clearly articulated Irish brought her to the attention of scholars such as Robin Flower (1881–1946), who described her as 'one of the finest speakers on the Island'. Persuaded by two visitors, Máire Ní Chinnéide and Léan Ní Chonalláin, to tell her life story, she dictated it to her son Mícheál Ó Guithín, whose own outlook is discernible in the work. Entitled *Peig, A Scéal Féin* (Peig, her story), it appeared in 1936 and was well received. Although it is an important social document, it lacks the literary power of the memoir written by her fellow-islander, Tomás Ó CRIOMHTHAIN. Peig Sayers's second book, *Machtnamh Seana-Mhná* (Reflections of an old woman, 1939), consists mainly of folklore and local history. *Scealta ón mBlascaod*, Kenneth JACKSON's collection of folk-tales from Peig Sayers, was first published in BÉALOIDEAS in 1938. Seosamh Ó Dálaigh of the Irish Folklore Commission recorded hundreds of items of folklore from her between 1942 and 1951. Over an hour of material was put on disc for Radio Éireann in 1947, and further recordings were made shortly before her death in 1958. Mícheál Ó Guithín published a biography of Peig Sayers in 1970.

Scél Tuáin meic Cairill (The tale of Tuáin son of Cairell) is a 9th-century Old Irish prose tale which relates the story of a supernatural figure named *Tuán* (which means 'the little mute one'). In the tale, Tuán has lived in a succession of animal and, finally, human forms through the entire history of Ireland (ÉRIU). As a hermit living in the 6th-century, Tuán entertains St Finnian of Moville. Recognizing that Tuán had in a former existence been one of the first settlers of Ireland, Finnian induces him to recount his experiences. Tuán tells how he came to Ireland with PARTHOLÓN following the Flood, then lived through all the island's subsequent history, thanks to periodic rejuvenation through assuming the shapes of different creatures.

Scéla Alaxandair ('Tidings of Alexander') is a Middle Irish retelling of the career of ALEXANDER THE GREAT (356–323 BC). The title of the Book of Ballymote (LEABHAR BHAILE AN MHÓTA) text, *Iomtusa Alexandair Mōir*, is a much later scribal addition. *Scéla Alaxandair* is a collation of three Alexander texts which were popular in the early Middle Ages (the term *scéla* might imply a collection of texts, as in 'stories of Alexander'). The outline of Alexander's reign and his death are taken from the *History* of Orosius Paulus (early 5th century AD); the translator inserted Alexander's letter to ARISTOTLE on the marvels of India, and his correspondence,

equally fictitious, with the brahman king, Dindemus. The compiler's ecclesiastical learning is attested by his use of JEROME, ISIDORE, and Priscian (*fl.* AD 491–518), among others. His interest is primarily historiographic; he has added a historical prologue on the six world empires of antiquity drawn from annalistic material (cf. IN CATH CATHARDA). Orosius' anti-pagan polemic is echoed in the account of Alexander's death, but elsewhere the HEROIC ETHOS seems endorsed, and battle scenes and single combats figure prominently, cast in the formulaic language of native saga, such as the tales of the ULSTER CYCLE. *Scéla Alaxandair maic Pilip* is mentioned in one of the early TALE LISTS, and it may have been composed as early as the 10th century.

Scéla Mucce Meic Dá Thó ('The Story of Mac Dá Thó's Pig') is today, after TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley'), one of the best known and liked of the early Irish sagas of the ULSTER CYCLE. Since a major reworking was produced in the 16th century, the tale's appeal has evidently been timeless. It shares several themes with FLED BRICRENN ('Bricriu's Feast'), with which it is often compared: the contest for the CHAMPION'S PORTION (though the word *curadmír* is not used in 'Mac Dá Thó's Pig'), the heroic contention at the great FEAST, and the taking of enemies' heads as trophies (see HEAD CULT). Like 'Bricriu's Feast', this tale is a frequent point of comparison between the HEROIC ETHOS as represented in early IRISH LITERATURE and that of the ancient Celts as seen in the tracts derived from POSIDONIUS. Much of the tale's charm and subtlety lies in how it differs from 'Bricriu's Feast'. For example, the *Fled Bricrenn* heroes are all Ulstermen, thus usually comrades; therefore, the unmotivated malice of BRICRIU is needed to incite them. On the other hand, the circumspect Mac Dá Thó (a name explained in another saga as 'son of two mutes') is the conscientious owner of a great hostel (BRUIDEN), who is unwillingly placed in a dilemma of hospitality when the ULAID and the rival CONNACHTA ask, at the same time, for his marvellous dog, Ailbe. He attempts to resolve the problem, and fails disastrously—creating sustained comic tension—by granting the hound to both sides and inviting the feuding élites to a great feast. Where the far longer 'Bricriu's Feast' struggles somewhat to remain entertaining through a great series of contests, all inevitably won by CÚ CHULAINN, there are dramatic reversals in 'Mac Dá Thó's Pig' which are made possible by Cú Chulainn's absence. The honour of carving the phenomenal pig seems at last to settle on the CONNACHT hero Cet mac Mágach, until CONALL CERNACH's sudden appearance reopens the contest, but not yet decisively until Conall surprisingly tosses the head of Cet's brother and Connacht's greatest hero, Anluan, into the midst of feast, leading to a general mêlée in which Ailbe the dog is killed.

THURNEYSEN listed six manuscript copies of the text and used three of them for his edition; the oldest copy is that in the Book of Leinster (LEBOR LAIGNECH). For further discussion of the tale, see ULSTER CYCLE.

Schwarzenbach is a key site where the transition from geometric HALLSTATT art to the more 'floral' or 'vegetal' LA TÈNE art can be traced. It is located near Idar-Oberstein (Rheinland-Pfalz, Germany), and was the find-spot of two aristocratic burials from the

5th/4th century BC, which were discovered in 1849. Jewellery, the remains of a golden bowl, and small masks made from gold leaf were among the grave goods. Other items from the graves, including a bronze beaker and some iron weapons, disappeared shortly after their discovery. The gold plate shows very early attestations for triskeles, i.e. three-armed whirligigs, one of the most characteristic motifs of La Tène decoration. In providing evidence for the Hallstatt to La Tène transition in the early 5th century BC Schwarzenbach is comparable with RODENBACH and other burials from the middle Rhine area. This region may in fact have been the epicentre of the new culture, an area which was almost surely Celtic-speaking by this date.

Scordisci

The permanent settlement of the Celts along the lower DANUBE in the northern BALKANS is dated to the first third of the 3rd century BC, thus forming the immediate background to the attack on Delphi by BRENNOS OF THE PRAUSI and the settlement of GALATIA. However, their presence in the area is attested as early as the end of the 4th century BC. Infiltration into the Balkans was mainly by eastern Celts from their previously established settlements in the Carpathian basin to the north (see DACIANS). The ancient writers Justin (see TROGUS POMPEIUS AND JUSTIN) and ATHENAEUS tell us that, at the confluence of the Sava and the Danube, warriors returning from the invasion of Greece founded the tribal community of the Scordisci. The new community was characterized by LA TÈNE culture, though it subsumed Thracians and Illyrians, as well as Celtic groups.

The relatively long peace from the second half of the 3rd century to the 2nd century BC was a period of military and economic power for the Scordisci. This was challenged, however, following the fall of the Macedonian kingdom in 168 BC and by the formation of the Roman province 20 years later. The reaction of the Balkan barbarians to the strongly expansionist policy of the Roman Republic was swift, and its ferocity was noted by the classical writers. These barbarians occasionally raided and plundered the rich provinces and towns of Macedonia and Greece from the 150s BC until the end of the following century. At this time, the Scordisci was the largest anti-Roman power in the eastern Danube region and the main instigator of the raids, which forced the Romans to send a consular army against them. The degree of their political organization is reflected in the fact that from the middle of the 2nd century BC they were producing COINAGE on a continuous basis. The Greek geographer STRABO said of the Scordisci that their lands extended as far as the Illyrian, Paeonian, and Thracian mountains, and that they lived around the Danube in two sections: the Greater (Megaloi) Scordisci to the west of the Morava and the Lesser (Microi) Scordisci to the east. The Lesser Scordisci lived intermingled with the Thracian Triballi and the Moesians. In the 3rd and 2nd centuries BC the archaeological material of the Scordisci had Celtic characteristics, and included jewellery, weapons, and pottery of the types generally found throughout the eastern

Bronze fibula from Gomolova, Serbia, an oppidum of the Scordisci

Celtic areas of central Europe.

The power of the Scordisci does not seem to have been immediately diminished by the invasion of the Germanic CIMBRI, who came down the Danube to the territory of the Scordisci in 114 BC. They continued with their incursions into Macedonia but, towards the end of the 2nd century, they experienced their first serious defeat against Roman legions led by Marcus Minucius Rufus. The defeat seems to have pacified the Scordisci since there is no mention of them for some time, though the attacks of the Thracian and Dardanian tribes continued in the area. Around 85 BC the barbarians succeeded in reaching Delphi, where they plundered and burned the sanctuary. The Roman commander Cornelius Scipio Asiagenus consequently sent his forces against the Scordisci in 84 BC and, for the first time, they were defeated on their own territory. Scipio nearly destroyed the Scordisci and forced their forces to withdraw to the Danube islands and the furthermost bank of the river. They were never to regain their former dominance in the region. For the Romans, this was a major step forward in their gradual conquest of the Balkans. However, the consequences for the Scordisci were primarily political and military, since archaeological evidence clearly shows that they continued to inhabit areas south of the rivers Sava and Danube. The advent of a new power in the lower Danube area—the Dacian kingdom under Burebista, who united Dacian and Getic tribes of the lower Danube in the 60s BC—contributed to the decline of the Scordisci. Strabo, our main source about these events, states that Burebista subjugated the Celts who lived intermingled with the Illyrians and the Thracians. He also mentions the Scordisci as the allies of the Dacians. They inhabited neighbouring territories for a long time, and by this stage there seems to have been mixture of the two populations. The Dacian component in the material culture of the Scordisci is also shown by the pottery discovered at many sites in eastern Srem. We may think of the Scordisci during the Dacian expansion as giving temporary recognition of authority and certain territorial concessions. The main area of Scordiscian losses from the second half of the 2nd century to the middle of the 1st century was the country of the Lesser Scordisci, downstream from the 'Iron Gates' of the middle Danube and in western Oltenia. Under Dacian pressure, they withdrew to the southern bank of the Danube downstream from Kladovo. This is reflected in the graves of this region, in which material typical of the Scordisci appears, continuing until the end of the 1st century BC, alongside Dacian types.

Following the death of Burebista *c.* 44 BC, his kingdom disintegrated. The Roman operations to conquer the Balkans in the east were continued by Marcus Crassus in 29–28 BC, and Tiberius finally took the region around Sava and the Danube around 10 BC. In the meantime, in alliance with the Dentheletae, the Scordisci had ravaged Macedonia for the last time in 16 BC.

With the conquest of Tiberius, the rôle of the Scordisci in events in the region came to an end. The last mention of this tribe is in connection with eastern Srem, where CIVITAS *Scordiscorum* is seen in INSCRIPTIONS from the end of the 1st and the beginning of

the 2nd centuries AD.

In the 3rd and 2nd centuries BC the Scordisci minted small-scale issues of authentic-looking silver imitations of Philip II's tetradrachma, and in the mid-2nd century BC coinage became more intensive and the so-called 'Srem type' emerged. These coins, distributed from eastern Slavonia to the Iron Gates, were issued until the early 1st century BC. The local coinage was gradually displaced by the silver drachmas of the Adriatic towns of Apollonia and Dyrrachium, and, from the middle of the 1st century BC, by the Roman republican *denarii*, which appeared before the Roman conquest. A widespread trade network is also attested by the presence of late republican and early imperial bronze vessels, ceramics (terra sigillata), and other goods from northern ITALY.

Fortified settlements of the Scordisci have also been discovered in Srem and eastern Slavonia. These are mostly located on the high river-banks of the Danube, the Sava, and the Bosut (at Gomolava, Gradina, Privlaka, Stari Slankamen). Of particular interest, too, is the fortification of Židovar in the Banat region, lying isolated and in the vicinity of the regions inhabited by the Dacians. The open settlements, discovered mainly in Srem, southern Bačka, and the Sava river valley, were built on slightly elevated positions, protruding from marshland. They frequently comprise small rectangular dwellings with partially dug-in floors and traces of posts.

The material culture of the Scordisci in the 1st century BC include various forms of jewellery, weapons and pottery which often had their origin in the Early IRON AGE of the Danube valley and the Balkans. There were probably artisan workshops in all the larger centres, particularly for the production of iron tools for AGRICULTURE, tree felling, wood-working, &c. The large quantities of pottery, a general characteristic of 1st-century settlements, and examples of double-sectioned kilns testify to highly diversified craftsmanship.

In the late La Tène period the dead were cremated and their remains placed in shallow graves together with the grave goods, sometimes in urns. The continuity of burial at the Karaburma and Rospi Cuprija cemeteries in Belgrade from the 3rd century BC to the 1st century AD shows that life in pre-Roman SINGIDŪNON lasted until the Roman occupation.

Scots/Scotti, both the English term and the Latin, have various meanings, depending on the context (cf. Latin *Britannia*, French *Bretagne*). With reference to modern times, the usual meaning is geographical and political, and refers to the inhabitants of Scotland or people who have come from there without reference to a specific linguistic or cultural group. *Scots* can also mean the traditional Anglian spoken and literary language of the LOWLANDS. Scots is the language of Robert Burns (1759–96) and many historical and legal documents of the early modern period; it is closely related to English, and there is no clear line today where one can say Scots ends and speaking English with a Scottish accent begins. There is also Ulster Scots as the result of Lowland Scottish settlement there in the 16th and 17th centuries (see ULAID). *Scots Gaelic* is an alternative designation for SCOTTISH GAELIC, Scotland's Celtic language. With reference to the past, the non-linguistic political and geographical sense is valid back to the mid-9th century, at which time ALBA, as a unified kingdom of Picts and Scots, came into being in the territory north of the Forth–Clyde isthmus. Gradually, in the 10th and 11th centuries, Alba expanded to include Strathclyde/CUMBRIA (see YSTRAD CLUD) in the south-west and LOTHIAN (annexed in the period 973–1018), which had been part of Anglian Bernicia (BRYNAICH), in the south-east. As well as Alba, the resulting multicultural, multilingual kingdom is called *Regnum Scottorum* and *Scotia* in medieval Latin sources. However, the Latin term is ambiguous: for example, ERIUGENA calls himself *Scottus*, meaning 'Irishman', in the mid- and later 9th century, BRIAN BÓRUMA (†1014) adopted the title *Imperator Scottorum*, meaning 'Emperor of the Irish', and in medieval texts *Scotia* can mean Ireland.

Prior to the formation of Alba, *Scotti* 'Scots' must refer to Gaels, Old Irish *Goídil*, early Welsh *Gŵyðyl*, speakers of GAELIC or GOIDELIC, who resided in the

earlier Middle Ages in Ireland (Ériu), Dál Riata, and the Isle of Man (Ellan Vannin), and who had less enduring presences in Dyfed and Brycheiniog, and also to Irish religious exiles (see peregrinatio).

The earliest surviving text to use the term *Scoti* is a list of the Roman provinces and their barbarian enemies, complied *c.* AD 312, known as *Nomina Provinciarum Omnium*, where they are grouped with the *Picti* (Picts) and the *Caledonii* (Calidones). Although there has been some disagreement between modern writers as to whether these Scotti were resident in Ireland or whether the name already referred to Gaels in Britain, the usage of *Nomina Provinciarum* replaces an older stock phrase of *Picti* and *Hiberni* (Irish people). Also, the 4th-/5th-century Latin poet Claudian twice connects *Scotti* and *Hiverne* (Ireland) in panegyrics praising the Emperor Honorius and the general Stilicho. Through the 4th and early 5th centuries there are numerous references by Roman writers to attacks by Scotti, usually grouped with Picti and sometimes the more mysterious Attacotti, on Roman Britain. The examples include references by the historian Ammianus Marcellinus to the great *barbarica conspiratio* of 367–9 (27.8.5), in which Picti, subdivided into *Dicalydones* and *Verturiones*, together with Attacotti and Scotti, laid waste to Britain. The post-Roman Briton Gildas seems to use *Scotti* exactly as the late Roman writers did in describing the 4th- and 5th-century raids. St Patrick calls the Irish both *Scotti* and *Hiberionaci* (cf. Modern Irish *Éireannaí*).

The origin of the name is not certain. The element *Scot-* does occur in some Old Celtic personal names, and there is a record of a tribe known as the *Scotraige* in Ireland. Old Irish *Scuit* 'Scotti, Gaels' could be borrowed from the Latin. In Lebar Gabála Érenn ('The Book of Invasions'), Scotta is the namesake of the Scotti (Irish); she is the daughter of Pharaoh and mother of Goídel Glas, namesake of the Gaels. They are the ancestors of Éber Scot, who led the Gaels of legendary history from Egypt to Scythia. The linking of the Gaels with Scythia was itself inspired by the similarity between the name *Scotti* and *Scythi*. One of the possible etymologies of *Scotti* is from the same Indo-European form as *Scythi*, both originally meaning 'shooters'.

Scott, Sir Walter (15 August 1771–21 September 1832) was born in Edinburgh (Dùn Èideann) and trained in the law. His family connections were with the Borders counties, but professional duties also took him as a young man into the Scottish Highlands. His first published works were translations of German narrative poetry, and in 1802–3 he published the *Minstrelsy of the Scottish Border*, a collection of traditional ballads. His own narrative poems, beginning with *The Lay of the Last Minstrel* in 1805, were hugely successful and made Scott famous, rich, and a partner in his publisher, John Ballantyne.

In 1814 he began writing novels, published (until 1827) anonymously as 'By the Author of Waverley', the first of their number, which would come to 27 titles in all. Many are set against episodes in Scottish history from the 15th to the late 18th centuries; later titles also explore a variety of European historical contexts. The financial crash of 1826 left Scott liable for the huge debts of the Ballantyne firm, debts which he worked for the rest of his life to pay off.

Scott's fiction is usually credited with the invention of the historical novel as a form, and of social realism more generally. Scott was, however, drawing on Irish precedents, especially Maria Edgeworth, but also Sydney Owenson, 'Lady Morgan'. Several of Scott's most important works concern the Highlands. The poems 'The Lady of the Lake' (1810) and 'The Lord of the Isles' (1815) have Highland settings, but *Waverley* (1814) and *Rob Roy* (1817) include detailed portrayals of the society from which the Jacobite rebellions (of 1745–6 and 1715 respectively) drew much of their support. Later works such as *The Highland Widow* and *The Two Drovers* (1827) return to the same issues of cultural difference and historical change, as well as showing some basic knowledge of Scottish Gaelic.

Scott's understanding of the difference between the Highlands and Lowlands is shaped by the stadial historiography of the Scottish enlightenment. The distinct social and political forms of Gaelic Scotland (Alba) are seen as the products of an outdated pastoral economic system once shared with the Lowlands but by then superseded there by more advanced agricultural and commercial modes. Thus, social and political difference is aligned with a difference of historical era, and the defeat and decline of the Highlands appears as an inevitable result of inexorable historical forces.

However, Scott also represents the values of Gaelic Scotland as admirable, and mourns their loss. Defeated in reality, those values could still be celebrated in poems and novels within the commercial society which brought about that defeat. In effect, this turns the 'Celtic' into an aesthetic rather than a linguistic or political category: Scott's works can thus be seen to continue the process, begun by James Macpherson and his Ossian poems (see Oisín), of commodifying Gaelic culture as a series of objects, gestures and motifs, for sale in the literary market-places of Edinburgh and London. But, since Scotland generally had lacked a significant political dimension since the Union of 1707, these objects and motifs were available for appropriation by urban Scotland as signifiers of its difference from England without threatening the political and economic unity of the British Empire in which Scottish society had become deeply implicated. The use of plaid and bagpipe as metonyms for Scottish nationality is prominent in the tartan-bedecked pageantry, stage-managed by Scott, of George IV's visit to Edinburgh in 1822. Scott's influence can thus be seen to extend to the categorization of Scotland as a Celtic nation. It was a categorization premised on the political, military, and economic subordination of the Gaels themselves.

SELECTION OF MAIN WORKS

EDITION. *Minstrelsy of the Scottish Border* (1802–3).
POETRY. *Lay of the Last Minstrel* (1805); *Lady of the Lake* (1810).
NOVELS. *Waverley* (1814); *Rob Roy* (1817); *Heart of Midlothian* (1818); *Bride of Lammermoor* (1819); *Legend of Montrose* (1819); *Ivanhoe* (1820); *Kenilworth* (1821); *Redgauntlet* (1824); *Highland Widow* (1827); *Fair Maid of Perth* (1828).
COLLECTIONS. *Chronicles of the Canongate 1* (*Highland Widow, Two Drovers, Surgeon's Daughter*, 1827); *Chronicles of the Canongate 2* (*Saint Valentine's Day or The Fair Maid of Perth*, 1828).
HISTORICAL WORKS. *Chronological Notes of Scottish Affairs from 1688 to 1701* (1822); *History of Scotland* (1829–30).
FOLKLORE. *Letters on Demonology and Witchcraft* (1831).
ARCHAEOLOGY. *Border Antiquities of England and Scotland* (1814–17); *Provincial Antiquities of Scotland* (1819–26).

Scottish Gaelic drama has a relatively short history; the first reputed staging of a play in Scottish Gaelic was in Edinburgh (Dùn Èideann) in 1902. Prior to this, some plays had been published in Gaelic periodicals such as *An Gaidheal* (The Gael) and *An Teachdaire Gaelach* (The Gaelic messenger). The early plays tended to portray traditional customs and to focus on periods of Scottish history when the Gael was under threat but somehow managed to struggle through. They praised the merits of a traditional Gaelic lifestyle while portraying the evils of the culture of the Lowlands. The plays were naturalistic and often littered with songs which had been adopted as anthems of 'the Gaelic cause'.

Although this early drama was originally created by Gaels living in urban areas, drama soon became popular in Gaelic communities in the Highlands and Islands. Gaelic drama has generally existed in an environment of festivals and competitions. The general rule for amateur competitive drama in Scotland (Alba) is that plays should be one act in length and should not last longer than half an hour; by far the most common type of play in Gaelic is this one-act half-hour production. A peculiarity of Gaelic drama groups is their reluctance to perform a play which has been seen before, thus providing an impetus for the writing of new plays. Out of a corpus of possibly 500 plays, professional productions are few. To date, there have been only two professional Gaelic theatre companies: *Fir Chlis* (Northern lights, 1977–81) and *Tosg* (1996–).

The style of Scottish Gaelic drama continued in a naturalistic and thematically limited vein until around the 1960s, at which point contemporary trends in

European drama began to appear in Gaelic. The drama of this era became less parochial, and the plays were no longer confined to subjects specifically related to the Gaelic way of life. Notable playwrights include Iain Mac a' Ghobhainn (1928–98), Iain Moireach (1938–), Fionnlagh MacLeòid (1937–), Tormod Calum Domhnallach (1927–98), and Donnaidh MacIlleathain (1936–2003). These playwrights were adamant that Gaelic drama should develop and be capable of making statements about Gaelic society, past and present. Their plays impacted greatly on audiences and the innovation shown within them can be compared to the Scottish Gaelic poetry renaissance of Sorley Maclean (Somhairle MacGill-Eain), George Campbell Hay (Deòrsa Mac Iain Dheòrsa), and others. Although illustrating innovation in theme and technique, these plays were firmly rooted in a Gaelic tradition.

The 1960s and 1970s were certainly the heyday for Gaelic drama, and it still enjoys popularity among participants and spectators, though the production of plays is not now as prolific. There has never been a strong history of publishing Gaelic plays. Some of the earlier plays were published by An Comunn Gaidhealach; otherwise, the text generally only exists in script form and is largely unavailable to the interested reader. An Comunn Gaidhealach have kept an archive of some plays, though this is not complete or easily accessible.

Scottish Gaelic language

§1. INTRODUCTION

Scottish Gaelic is a Q-Celtic language, and belongs to the Goidelic or Gaelic branch of the Celtic languages, along with Irish and Manx. According to the 2001 census (Scotland), Scottish Gaelic is spoken by 58,650 people, most of whom are native speakers of the language. There are also a small number of Scottish Gaelic speakers in Canada, particularly in Nova Scotia (see CELTIC LANGUAGES IN NORTH AMERICA).

In addition to its vibrant oral tradition, which has continued from the Middle Ages, Scottish Gaelic has also developed a rich and varied written literature, which has attracted national and international attention, and some of which has been translated into other European languages (see SCOTTISH GAELIC LITERATURE TO *c.* 1200; SCOTTISH GAELIC POETRY; SCOTTISH GAELIC PROSE). In the early sources, there was a great variety of spelling, in particular as regards the vowels in unstressed syllables. Despite the orthographical revision of the 1980s, the spelling of Scottish Gaelic is still to some extent based on 'pronunciation spelling', as can be seen in all but fairly recent publications. Previously, much of the published material was based on the spoken language and reflected the dialect of the author.

§2. HISTORICAL BACKGROUND

Following early Scottish and Irish written sources, the consensus among modern scholars has been that the Gaelic language was introduced into western Scotland (Alba) by Irish settlers sometime during the 5th or early 6th century (see DÁL RIATA; FERGUS MÓR). However, since archaeological evidence for a migration is slight, an earlier date is possible. The early geographical extent of the Gaels of Scottish Dál Riata can be seen in what is probably a 7th-century list in Senchus Fer n-Alban (Tradition of the men of Scotland). An indication of the settlement pattern of the speakers of Early Irish who had presumably come over from Irish Dál Riata in north Antrim can be gained from the distribution of particular placenames in Scotland, especially those with the elements *baile* 'homestead' and *achadh* 'field' (see SCOTTISH PLACE-NAMES). These distributions show that Gaelic spread at the expense of other Celtic languages once spoken in Scotland (i.e. Pictish and Brythonic) and was at some point spoken, at least by the ruling class of the kingdom of Alba, in all parts of Scotland.

It is unclear and controversial as to when the Gaelic language of Scotland had diverged sufficiently from that in Ireland (Éire) to justify classifying Scottish Gaelic as a distinctive national form of Gaelic. While

contact between Ireland and Scotland was maintained throughout the Middle Ages, as is illustrated by the prolific literature from this period, composed in a shared (and doubtlessly increasingly artificial) literary language (cf. IRISH LANGUAGE §5) used by professional poets on both sides of the Irish Sea, the everyday spoken languages of Scotland and Ireland must have increasingly differed from this learned standard language, and some evidence of this can be seen in writing, for example, in the Book of the DEAN OF LISMORE. One early sound change which distinguishes between Irish and Scottish Gaelic is that Irish generally abandons hiatus (two vowels with no intervening consonant sound as separate syllables) before 1200, but Scottish Gaelic retains it: for example, Old Irish *aue* 'grandson' (two syllables) became Middle Irish *úa* (one syllable), but Scottish Gaelic *ogha* (still two syllables). The modern Scottish Gaelic language unambiguously appears in written sources from the 17th century onwards, consistently displaying various features which mark its independence from Irish.

Scottish Gaelic has been influenced by the various languages with which it has come into contact, mainly affecting its vocabulary by borrowing from Latin, French (often through English), Norse and, of course, the English language. Prolonged language contact, particularly with English, has also led to changes in composition and idiom, with calquing (modelling new words and idioms on those of another language, English) now common in the spoken language as well as in all areas of the written language. From the 9th century to early modern times, there was a strong Scandinavian presence in western and northern Scotland, and the phonology of Scottish Gaelic may have been subject to Norse influence, as in the development of the characteristic pre-aspirated consonants (see below).

§3. DIALECTS AND CHARACTERISTICS

Experts frequently divide Scottish Gaelic into two dialect groups, though the terminology used to denote these varies confusingly. Some authorities have written of northern vs. southern Scottish Gaelic (O'Rahilly, *Irish Dialects Past and Present*), others of a western vs. eastern dialect (Robertson, *Celtic Review* 3–5). These views were eventually superseded by the proposal made by Kenneth H. JACKSON, who divided the language into a central and a peripheral dialect (*Celtic Studies* 65–71). However, it has since been shown that there is strong continuity between the dialect spoken in the southern parts of Scotland (Kintyre/Cinn Tìre), and that of northern Ireland (Rathlin Island/Reachlainn) (Ó Baoill, *Contributions to a Comparative Study of Ulster Irish and Scottish Gaelic*). Thus, a more inclusive dialectology, taking in the entire Gaelic world, might be more useful.

As in Ulster Irish, Scottish Gaelic has retained the initial stress of the older language and has shortened all unstressed vowels. Within a word, stress is generally placed on the first syllable, though loanwords or compounds may have the stress elsewhere. Within each sentence, there is at least one heavily stressed word.

Pre-aspiration is one of the most striking features of Scottish Gaelic and is found in most of its dialects. In most dialects, it means that, when the strong stops *p*, *t*, *k* are preceded by a short stressed vowel, an *h*-like or breathing sound is introduced. Hence, *mac* 'son' is pronounced [maχk] vs. Irish [mak] without pre-aspiration (χ is like the final sound in *loch*, as in Loch Ness). The level to which pre-aspiration is realized in the spoken language varies from area to area, and ranges from weaker [ʰp ʰt ʰk] to stronger [χp χt χk].

As in other Celtic languages, initial mutation is a salient feature of Scottish Gaelic. The most common initial mutation is lenition (also called aspiration), a weakening of articulation. There is also nasalization (also called eclipsis), where the same initial consonants as in lenition are changed. Nasalization in Scottish Gaelic is used in fewer grammatical environments than in Irish, and is not shown in standard spelling.

Basic word order in Scottish Gaelic is verb–subject–object, though a full range of complex structural changes and qualifying clauses is also used. In the absence of a verb indicating ownership or possession, the language uses prepositional sentences, for example, *Tha cat aig Iain* (lit. There is a cat at Ian) for 'Ian has a cat'.

Scottish Gaelic nouns fall into two categories, masculine and feminine, arranged in case paradigms with nominative, genitive, and accusative/dative forms, and some rudimentary vocative forms (used in address). While the masculine and feminine patterns are well developed, there is no distinction between the masculine and feminine plural forms. In spoken Scottish Gaelic, special genitive forms are sometimes

simplified or simply replaced by the nominative.

Scottish Gaelic preserves the Old Irish double system of syntactically conditioned verbal endings (absolute vs. conjunct) to a certain degree: for example, absolute *beiridh*: conjunct *gu'm beir* 'takes, will take' < Old Irish *beirid* : *-beir*. All dialects make the distinction between past, future, and conditional forms of the verb, though only the verb 'to be' (*bith*) retains both a distinct present and future form. A progressive aspect, to express ongoing action, is shown by using forms of the verb 'to be' in combination with the verbal noun: for example, *tha mi ag iarraidh* 'I am asking'.

As in Irish and the early Brythonic languages, there are two verbs 'to be' in Scottish Gaelic, originally called the substantive verb (forms of *bith*) and the copula (forms of *is*). The copula and substantive verb have different syntax: for example, *is clachair e sin* or *tha e 'na chlachair*, both meaning 'he is a mason'.

PSH

Scottish Gaelic literature (to *c.* 1200)

Little literature exists in GAELIC from early medieval Scotland (ALBA), though what there is may be fairly taken to represent a much larger lost corpus. Nearly all of what has survived, moreover, is preserved in manuscripts of Irish provenance, and frequently in more closely Irish textual contexts. The major poetry we have derives from the Columban monastic *familia*, and includes a variety of poems in praise of St COLUM CILLE, by poets such as DALLÁN FORGAILL and Beccán (or Bécán) mac Luigdech (Clancy & Márkus, *Iona*). There are many other poems both in praise of Colum Cille and also cast in his voice, but few of these can be argued to be of Scottish composition. On the other hand, a strand of anecdotes contained in the 10th-century *Betha Adamnáin* ('Life of ADOMNÁN') has been identified convincingly as deriving from Iona (EILEAN Ì; see Herbert, *Iona, Kells and Derry* 171–3; Carey, *Studies in Irish Hagiography* 49–62). From the same period come several poems attributed to Mugrón, abbot of Iona (Clancy, *Triumph Tree* 158–63; Meyer, ZCP 10.340; Murphy, *Early Irish Lyrics* 32–5; Plummer, *Irish Litanies* 78–85). Beyond this, we are dependent on stray verses contained in metrical treatises and ANNALS for the conclusion that secular panegyric was practised here as well. Some of these verses are in praise of Pictish kings, suggesting that their patronage extended beyond their own linguistic boundaries. One stray satirical verse on Earl David (the future David I, king of the SCOTS, 1124–53) suggests the presence of professional poets within the court circles of the kings of Alba into the 12th century (Clancy, *Scottish Gaelic Studies* 20.88–96).

Various lost prose works have been deduced, and

several Irish tales, for example, those relating to CORC OF CAISEL or the 10th-century *Scéla Cano meic Gartnáin* (The story of Cano mac Gartnáin), have Scottish backgrounds and heroes. The Gaelic translation of the HISTORIA BRITTONUM, the *Lebor Bretnach*, has recently been shown to have been composed in eastern Scotland in the 11th century, and its companion pieces in the dominant manuscript tradition are arguably also Scottish: a king list containing a foundation legend of Abernethy (see SCOTTISH KING-LISTS), and a Middle Gaelic adaptation of Book I of BEDA's *Historia Ecclesiastica* (Clancy, *Kings, Clerics and Chronicles in Scotland* 87–107). Perhaps dating to the 12th century, but possibly slightly later, is a version of a voyage tale composed on Iona, with newly added verses (Ó Máille, *Miscellany Presented to Kuno Meyer* 307–26; Clancy, *Otherworld Voyage in Early Irish Literature* 223–4). This is a slender haul, but, added to the evidence of medieval chronicles and HAGIOGRAPHY for the substance of Scottish traditions about characters like MAC BETHAD or traditions such as the Scottish and Pictish origin legends, some sense of what is missing is achievable (Hudson, *Studies in Scottish Literature* 26.141–55; Broun, *Irish Identity of the Kingdom of the Scots*).

Thomas Owen Clancy

Scottish Gaelic poetry [1] classical Gaelic

Classical Gaelic poetry in Scotland (ALBA) should be seen as essentially an offshoot of the greater classical Irish poetic tradition (see IRISH LITERATURE [3]). Indeed, most of the Scottish material is classical Irish in form, language and metre, and the Irish training, orientation, and, occasionally, origin of many of the poets who practised in Scotland is evident. The linkage may begin as early as Muireadhach Albanach Ó DÁLAIGH, a scion of the Ó DÁLAIGH FAMILY, and the first certain practitioner of classical verse in Scotland. His companion on crusade, Gille Brighde Albanach, was a Scottish poet working for Irish patrons, and this pattern may be seen later, as with the poems of Giolla Críost Brúilingeach (*fl.* 1440), who was probably from Gigha but wrote for patrons in CONNACHT (Watson, *Scottish Verse from the Book of the Dean of Lismore* 32–45, 46–59). Among the key learned families practising classical verse under the patronage of Scottish lords we may count the Ó Muirghesain family, originally of Donegal (Dún na nGall), who appear in the service of both the Clann Gill-Eathain (MacLeans) of Mull (Muile) and the Clann Leòid (Macleods); the MacEwen family, who served both the Clann Dubhgaill (MacDougalls) of Lorne and, later, the Campbell lords and earls of Argyll; and the Clann Mhuirich (see CLANN MACMHUIRICH), whose members continued to be capable of composing classical verse into the 18th century (Thomson, *Bards and Makars* 221–46). While some Scottish material is preserved in Irish manuscripts, for example, key poems of Muireadhach Albanach, the anonymous Irish poem (Bergin, *Irish Bardic Poetry* §45) in praise of Aonghas Mór MacDhomhnaill, Lord of the Isles (*c.* 1250), and the masterly lament for the Scottish Fearchar Ó Maoil Chiarán, composed by his father (Breatnach, *Éigse* 3.165–85), the bulk of the Scottish classical material is preserved in the Book of the DEAN OF LISMORE and the Book of CLANRANALD. From these collections, distinctively Scottish Gaelic elements in the classical language and its product can be descried, though this must be set against the possibility that these aspects derive from their context of preservation (see Gillies, *Celtica* 21.156–72).

Thomas Owen Clancy

Scottish Gaelic poetry [2] to *c.* 1745

§1. INTRODUCTION

The earliest recorded poems in vernacular SCOTTISH GAELIC date from the 16th century (see MACLEAN POETS; MACGREGOR POETRY), though it is clear from the style and quality of the poems that they are part of a well-established tradition which continued through the 18th century and beyond (Thomson, PBA 105.101–2). The Book of the DEAN OF LISMORE (mainly compiled between 1512 and 1526) contains a considerable amount of material of Scottish provenance, but much of this is in Classical Common GAELIC, i.e. the learned literary language shared by Ireland (ÉIRE) and Scotland (ALBA) from *c.* 1200, fading by the later 17th century. However, the popular vernacular tradition draws upon the same broad conventions as the poetry produced by the professional bards who used the classical language (see BARDIC ORDER; IRISH LITERATURE [3]). The distinction between poets working in the classical tradition and those composing in the vernacular language is not always absolute: some CLANN MACMHUIRICH poets who were active towards the end of the classical period produced work in both languages, e.g. Niall MacMhuirich (*c.* 1630–1716), whose *Marbhrann Mhic Mhic Ailein a Mharbhadh 'sa' Bhliadhna 1715* (Elegy for the son of Clanranald who was killed in the year 1715) is in the vernacular language and metre, but contains imagery shared by both traditions (Watson, *Bàrdachd Ghàidhlig* 141–4).

Some poetry is extant which may be described as 'semi-bardic' since it is vernacular in language, but shares other features with the classical tradition. The metre may be close to a classical metre, the themes and imagery used may be modelled more strongly on bardic imagery than usual, or the poet may use conventions of construction drawn from classical verse, e.g. the use of an ending to the poem which echoes the beginning by repeating the initial word, phrase, or line (called *dúnadh*, 'encircling, closure'). The practitioners of such verse were sometimes professional poets and sometimes amateurs, usually of some social standing (Thomson, *Introduction to Gaelic Poetry* 106–7; Thomson, *Scottish Gaelic Studies* 8.2). Semi-bardic features can be identified to a greater or lesser extent in many vernacular poems. One such example of bardic origin is *An Duanag Ullamh* (The polished little poem; Watson, *Bàrdachd Ghàidhlig* 259–62), dated variously to the first quarter or the middle of the 16th century (Thomson, *Introduction to Gaelic Poetry* 106; Watson, *Bàrdachd Ghàidhlig* 339–40). The addressee was an earl of Argyll (Earra-Ghaidheal), named as Archibald in the poem, and the poet appears to have been BARD to Maclean of Duart. A quatrain which contains imagery that was shared by the bardic and the vernacular context also illustrates the bardic features in the presence of alliteration and the quality of rhyme:

Abhall uasal farsaing frèimheach
Do'n cù'idh moladh;
Crann as ùire dh'fhàs troimh thalamh,
Làn de thoradh.

(Watson, *Bàrdachd Ghàidhlig* 260)

Noble generous deep-rooted appletree
To whom praise is fitting;
Most verdant tree that grew through earth
Full of fruit.

Where metres are shared between the classical and the vernacular tradition, the vernacular verse handles these much more freely and loosely; this is particularly well illustrated in the Gaelic BALLADS, which favour metres such as *deibhidhe*, *rannaigheachd beag*, and *rannaigheachd mhór*. Another very common metre in vernacular verse is the three-line *iorram* or strophic metre. The praise tradition inherited from the bardic context is further developed into an extensive and sophisticated code, the so-called panegyric code (MacInnes, *Trans. Gaelic Society of Inverness* 50.447–59; Black, *An Lasair* 525–7). Heroic achievement of the leader and warrior dominates in panegyric imagery (see HEROIC ETHOS), with some prominence given to the description of prestigious weapons of excellent craftsmanship and the competent handling of such items by their owner. Hunting, horsemanship, and skill in sailing a ship are also present as standard motifs. Often, the chief's

household and the musical and literary entertainment offered there are described in great detail, and closely connected is imagery telling of the chief's generosity to the needy and the deserving alike. The noble descent and prestigious connections of the chief within the HIGHLANDS and Islands and further afield take a prominent place, with some emphasis placed on the chief's ancestors and their achievements. Description of personal beauty is another favourite aspect of the panegyric code. Elegies add imagery pertaining to death, burial, and mourning to the catalogue. Reversal of praise motifs is found in dispraise or SATIRE. Imagery is also used freely in poetry which does not have an aristocratic subject, emphasizing the importance of the panegyric code in the poetry of the period and well beyond. In this context, originality and innovation are not highly prized attributes of poetry; on the other hand, elaboration of a common motif in fresh and vivid detail is what poets strove for and what audiences expected.

It is important to note that nearly all poetry belonging to this period was designed to be sung (MacGill-Eain, *Ris a' Bhruthaich* 120–1). In an oral environment, tunes and songs are naturally transmitted as a unit; many songs remained current in oral tradition and were recorded as late as the 20th century (Matheson, *Gaelic Bards and Minstrels*). Printed sources often note tunes for individual songs; this would seem to indicate that many poets were content to compose to existing tunes. In the 18th century it becomes obvious that LOWLAND tunes are increasingly being adopted for Gaelic songs. The céilidh was an important contributory factor in the survival of the songs, as was the waulking tradition, which preserved a substantial number of songs that go back to the 17th century or beyond. While much material by named authors is extant, there is also a considerable body of anonymous material (see examples in Ó Baoill & MacAulay, *Scottish Gaelic Vernacular Verse* 28–35).

Many poets considered themselves as spokesmen (and spokeswomen) of society. They commented on matters of significance for the community or censured inappropriate behaviour (see MACDHÒMHNAILL; MACAOIDH), and they expressed shared feelings of grief at the death of a leader.

§2. CLAN AND POLITICAL POETRY

CLAN poetry is a major genre associated with the 17th century and the first half of the 18th century. Important exponents of its different manifestations are Iain Lom MACDHÒMHNAILL, SÌLEAS NA CEAPAICH, MÀIRI NIGHEAN ALASDAIR RUAIDH, and some of the MACLEAN POETS (e.g. Eachann Bacach, Mairearad nighean Lachlainn). The panegyric code is particularly clearly represented in this type of poetry. It is concerned with the rôle of the chief in safeguarding the clan and its lands from external threat, thus guaranteeing the perpetuation of the traditional values and structures of society. However, strains caused by historical forces (e.g. civil war) and the growing association of the aristocracy and gentry with Lowland society and values through EDUCATION in English can also be seen in the poetry (see MACMHUIRICH; MACCODRUM). The pressure brought on clans such as the MacDonalds, the MacLeods, and the Macleans by Campbell expansionist strategies is also an important facet of clan poetry; anti-Campbell attitudes blend fairly seamlessly with Royalist and later Jacobite sentiments since the Campbells overwhelmingly supported the parliamentary and government sides. Contemporary politics often find expression in such poetry, e.g. in Iain Lom's *Òran an Aghaidh an Aonaidh* (A song against the Union; MacKenzie, *Òrain Iain Luim* 222–9), in which the poet criticizes several individuals who were prominent in the negotiations that led to the UNION of Parliaments in 1707. He expresses the commonly held view that Scotland had been sold through the machinations of some of the negotiators, and singles out the Duke of Hamilton and the Earl of Brahan among them:

Tha Diùc Atholl 's Diùc Gòrdon
Glé chlòiste 's iad dùinte,
Air an sgrìobhadh gu daingeann,
Ach tha Hamilton dùbailt:
Iarla Bhrathainn bhiodh mar ris,
Cha bhiodh mealladh 'sa' chùis ac',
Toirt a chrùin uainn le ceannach
An ceart fhradharc ar sùilean.

The Duke of Atholl and the Duke of Gordon
Are in full agreement and concealed concord,
Their names are firmly recorded,
But Hamilton is double-dealing:

When the Earl from Brahan was with him, as he so often was,
There would be no prevarication as to what they had in mind—
To trade away from us before our very eyes
Our crown and sovereign rights.

(MacKenzie, *Òrain Iain Luim* 226–7)

A natural development of political verse is the distinctive genre of JACOBITE POETRY in the late 17th and the 18th centuries (see also FERNAIG MANUSCRIPT, MAC MHAIGHSTIR ALASDAIR, JACOBITE REBELLIONS).

§3. EULOGY AND ELEGY

Closely connected with clan poetry are two genres of praise: of the living and of the dead. A mainstay of classical verse, these genres play an important rôle in the vernacular tradition, where verse can be addressed not only to a chief or patron but also to a friend, relative, or lover. Eulogy strives to present the most perfect and positive image possible of its subject, making full use of the tools of the panegyric code. Màiri nighean Alasdair Ruaidh includes a personal touch of endearment in a sequence of praise for generosity in *Fuaim an Taibh* (Ocean's sound; Ó Baoill, *Gàir nan Clàrsach* 138–45; Watson, *Gaelic Songs of Mary MacLeod* 44–9), a eulogy addressed to Norman MACLEOD of Bernera (Beàrnaraigh):

A thasgaidh 's a chiall,
'S e bu chleachdadh duit riamh
Teach farsaing 's e fial fàilteach.

Bhiodh teanal nan cliar
Rè tamaill is cian,
Dh'fhios a' bhaile am biodh triall chàirdean.

O treasure and dear,
It was ever your way
To keep a generous and ample household.

For months and from afar
A congregation of poet bands
Would move towards the place where friends gathered.

(Ó Baoill, *Gàir nan Clàrsach* 138)

A somewhat later example is *Beannachadh Bàird* by Iain MacAoidh from Gairloch, better known as 'Am Pìobaire Dall' (John MacKay, 'The Blind Piper', 1656–1754), which was composed on the occasion of the wedding of Alexander MacKenzie to Janet MacKenzie in 1730 (Black, *An Lasair* 423–4). The poet celebrates the bride's ancestry, her beauty, and her generosity in his welcome to her, and anticipates happiness and prosperity:

Gum beannaich Dia an teach 's an tùr
'S an tì a thàinig ùr 'nar ceann—
Geug shona sholta gheibh cliù,
Nì bhuannachd dùthcha 's nach call.

God bless the house and the tower
And the one who's come fresh at our head—
A happy well-balanced bough who'll get a good name,
Who'll bring gain to the land and no loss.

(Black, *An Lasair* 122–3)

Elegy, on the other hand, deals with the death of its subject and may possess a cathartic function. While there may be detailed reminiscence of the days when the subject was alive, there is the added dimension of imagery pertaining to death, decay, loss, and the process of grieving. Often, passages describing the closing of the coffin have particular poignancy, e.g. in *A' Chnò Shamhna* (The hallowe'en nut; Watson, *Bàrdachd Ghàidhlig* 205–9; Ó Baoill, *Eachann Bacach and Other Maclean Poets* 14–25) by Eachann Bacach, an elegy for Lachlan Maclean of Duart, who died in 1648:

Is mór pudhar and ràidh-se,
'S trom an dubhadh-sa dh'fhàs oirnn;
Gura cumhang leinn t'fhàrdach,
Leaba luighe nan clàraidh:
'S fhad' as cuimhne leinn càradh nam bòrd.

Great is the harm the present season has brought,
Heavy this gloom which has come upon us. Strait do we think your dwelling,
the bed of planks:
Long shall we remember the preparation of the boards.

(Ó Baoill, *Eachann Bacach* 14–15)

Sìleas na Ceapaich (*c.* 1660–*c.* 1729) expresses her own intimate grief for her daughter in her *Marbhrann*

(Lament; Ó Baoill, *Poems and Songs by Sìleas MacDonald* 64–9), an elegy of *c.* 1720 which laments the death of her husband, her daughter, and Sir James MacDonald of Sleat:

'S ann ri d' ghnùis a dh'eanainn faoilte—
Sùil chorrach ghorm, gruaidh mar chaorunn;
Thug mi cìoch is glùn is taobh dhuit:
Sud an gnìomh a b' fhiach mo shaothair.

I used to rejoice in your face—
Blue rolling eye, cheeks like the rowan;
I gave you breast, knee and companionship:
A doing which was well worth my effort.
(Ó Baoill, *Poems and Songs by Sìleas MacDonald* 64–5)

In poetry which is predominantly elegiac and eulogistic, there is occasionally a sense that a poem is perfunctory, a mere exercise in the name of duty. In many instances, however, praise imagery is developed in fresh and surprising ways.

§4. NATURE

Praise poetry generally contains motifs connected with various aspects of nature, e.g. the comparison of the subject of the poem with a tree bearing a large crop of fruit. Some poems deal with nature more extensively and not as a mere adjunct of praise. Poetry which celebrates nature for its own sake is prominent in the work of Alasdair Mac Mhaighstir Alasdair and Donnchadh Bàn MacIntyre (see MAC AN T-SAOIR), but their predecessors were active already in the 17th century. *Òran na Comhachaig* (The song of the owl; Watson, *Bàrdachd Ghàidhlig* 249–59; Rankin, *Trans. Gaelic Society of Glasgow* 5.122–71) by Dòmhnall mac Fhionnlaigh nan Dàn (Donald son of Finlay of the Songs, *fl.* 1600) includes in its themes praise of several individuals, the contemplation of old age, and a celebration of nature, which is its most memorable feature. The poet remembers the favourite haunts of his youth in vivid descriptions of both wildlife and landscape; the area covered ranges from Ben Nevis in the west to Badenoch in the east, though the area round Loch Tréig, where Dòmhnall was brought up and spent most of his life, is singled out for description with particular care, focusing repeatedly on Creag Guanach at the southern end of Loch Tréig. One of the passages relating to Creag Ganach sums up his love for the hunt as well as the place:

Mi 'm shuidhe air sìothbhrugh nam beann
Ag coimhead air ceann Loch Tréig,
Creag Guanach mu 'n iadh an t-sealg,
Grianan àrd am biodh na féidh.

I am sitting on the fairy-knoll of the mountains
Looking at the head of Loch Tréig,
Creag Guanach round which the hunt wheels,
The lofty sun-chamber where the deer dwelt.
(MacKechnie, *Owl of Strone* 12)

Later in the century, Am Pìobaire Dall composed *Cumha Choire an Easa* (Lament for Coire an Easa; Ó Baoill, *Gàir nan Clàrsach* 206–13), a song which begins as a lament for Colonel Robert MacKay who died in 1696. The song is structured as a dialogue between the Piper and the corrie, and half of the poem is dedicated to the praise of landscape and wildlife. A description of the vegetation gives an impression of abundance and lushness:

Do chìob, do bhorran, do mhileach,
Do leas, a Choire, gur lèanach,
Lùbach luibheach daite diamhair;
Gur fasgach do chuile is gur feurach.

With your deer-grass, moor-grass, sweet-grass,
Flourishing, O Corrie, is your garden,
Full of herbs and colours, winding, secret;
Your meadowy patch is sheltered, verdant.
(Ó Baoill, *Gàir nan Clàrsach* 210–11)

An Làir Dhonn (The brown mare; Watson, *Bàrdachd Ghàidhlig* 217–19), by Murchadh Mór mac Mhic Mhurchaidh (Big Murdoch son of the son of Murdoch, *fl.* 1650) follows a somewhat different approach. This song contrasts the poet's present situation, riding a somewhat recalcitrant horse, with his happy memories of the island of Lewis (Leòdhas), where he was the MacKenzie chief's factor (Watson, *Bàrdachd Ghàidhlig* 321–2). A passage describing a sailing ship contrasts the boat with the horse; unlike the animal, the boat does not require fodder, can transport more than one person, and always travels swiftly. The joy of movement on the sea is apparent in this stanza:

Reubadh mara gu dlùth
Fo bheul sgar agus sùdh,

Is i an déidh a barradh gu h-ùr o'n òrd.

(Watson, *Bàrdachd Ghàidhlig* 218)

Rending the sea closely
Underneath the seams and sutures,
And she newly riveted by the hammer.

Although this description in the poem shows the sea in a benign light and that seafaring skills are a staple part of the praise repertoire, there are many songs which reflect the fact that the sea also presented considerable danger. Many laments imagine, in startling images, the body of a drowned loved one in the sea (MacGill-Eain, *Ris a' Bhruthaich* 97–9). *Marbhrainn do Mhac Gille Chaluim Ratharsaidh* (Elegy for Iain Garbh MacLeod of Raasay; Ó Baoill, *Gàir nan Clàrsach* 156–61) is said to have been one of a sequence of laments composed by Iain Garbh's sister. The drowning happened in 1671 when Iain Garbh was returning from a visit to Lewis:

Nochd is mòr tha dhe t'iargain
Air Iarla Cheann Tàile,

Nach raibh 'n soirbheas ud rèidh dhuit
'S gur tu fhèin air a b'àirde.

Dìreadh muigh ris an rubha,
Fhuair sibh 'n sgiùrsadh nach b'àil leam;

Bha sibh salach le siaban
Tigh'nn o lèantanaibh bàite.

Tonight you are sore regretted
By the Earl of Kintail,

That fair wind was not constant
When you were running with it highest.

Climbing out by the headland
You got the mangling I hated;

You were sullied with spindrift
Coming from the drowned meadows.

(Ó Baoill, *Gàir nan Clàrsach* 158–9)

§5. RELIGIOUS VERSE

While religious poetry had always been present in Gaelic tradition, the REFORMATION added a new dimension. The first 50 of the Psalms were translated in 1659 under the auspices of the Synod of Argyll; a complete translation became available in 1694 (*An Ceud Chaogad do Shalmaibh, Dhaibhidh; Sailm Dhaibhidh a Meadar Dhàna Gaoidheilg*). These editions were intended for use both in churches and in family worship (see BIBLE). Another translation of the Psalms was prepared by Robert Kirk, minister of Balquhidder, which appeared in print in 1684 (Kirk, *Psalma Dhaibhidh a nMeadrachd*).

Still before the Reformation, Donnchadh MacRaoiridh (Duncan MacRyrie, *fl.* before *c.* 1630) composed *Beir Mise Leat* (Take me with you; Ó Baoill, *Gàir nan Clàrsach* 82–3; Watson, *Bàrdachd Ghàidhlig* 236; trans. Thomson, *Introduction to Gaelic Poetry* 111), according to tradition, on his deathbed. The poem, another example of vernacular verse which shares features with bardic poetry, takes the form of a simple prayer of penitence, with a wry note of recognition that the poet's sinning days are over:

M' ùrnaigh agus m' aithrigh' bhuan
Bhith agad gach uair 's gach tràth;
Nar peacaidh uile leig linn—
Tuilleadh cha dèan sinn gu bràth.

May my prayer and constant tears
Be with You now and always;
Forgive me my every sin—
None more can I ever commit.

(Ó Baoill, *Gàir nan Clàrsach* 82–3)

Daibhidh MacEalair (David MacKellar) was a composer of hymns who was active in the first half of the 18th century; it appears that a collection of his work was published in 1752, though no extant copies are known (Black, *An Lasair* 427–8). *Laoidh MhicEalair* (MacKellar's hymn; Black, *An Lasair* 134–43) achieved great popularity and was current orally. The hymn summarizes biblical teaching relating to the Creation and the Fall of Man, to Christ's Passion and Resurrection, and to Redemption at the Last Judgement.

The points of view of different denominations are well represented in the extant corpus of Scottish Gaelic religious verse, for example, Episcopalian in the Fernaig Manuscript, Roman Catholic in the work of Sìleas na Ceapaich, and Presbyterian in the poetry of Dugald Buchanan (see CHRISTIANITY IN THE CELTIC COUNTRIES [2c]).

Motifs connected to the Christian faith, piety, and adherence to religious precepts are also a significant part of the panegyric code.

§6. THE WOMEN'S TRADITION

Women are well represented both as composers and transmitters of poetry during the period (see MACGREGOR POETRY, MÀIRI NIGHEAN ALASDAIR RUAIDH, SÌLEAS NA CEAPAICH). Many anonymous songs, too, contain historical references or allusions which place their time of composition in the 17th century or earlier. Several of them can be shown to have been composed by women, and such songs were often transmitted through the women's tradition, for instance, as waulking songs or lullabies. Belonging to the early to mid-17th century, *Taladh Dhomhnaill Ghuirm* (Donald Gorm's lullaby; Watson, *Bàrdachd Ghàidhlig* 246–9; Ó Baoill, *Gàir nan Clàrsach* 66–9) is traditionally ascribed to Donald's nurse or foster-mother. The song is still present in oral tradition, for example, in a version sung by Cathy-Ann MacPhee (*Chì Mi'n Geamhradh* track 11). After several passages in which the subject's seafaring skills, the hospitality of his house, and his possessions are discussed, the poem ends with an invocation intended to ensure prosperity and protection:

Neart na cruinneadh leat, neart na grèineadh!
Neart na tuinneadh leat truime trèineadh!
Neart an tairbh dhuinn a bheir an sprèidh leat!
O, neart Oisein leat 's Osgair euchdaich!
'S gu robh a h-uile nì mar mi fhèin dhut:
Ach ma bhitheas cha bhuin beud dhut.

Might of the world with you, might of the sunshine!
Might of the waves with you of heaviest onrush!
Might of the brown bull that brings forth the cattle!
O, might of Oisean and valorous Oscar!
May everything be just as I am to you:
But if they are, no harm will touch you.
(Ó Baoill, *Gàir nan Clàrsach* 68–9)

The battle of Carinish in North Uist (Uibhist mu Thuath) in 1601 forms the background to *A Mhic Iain Mhic Sheumais* (O son of Iain son of James; Ó Baoill, *Gàir nan Clàrsach* 50–3). The addressee of the praise poem, Donald MacDonald of Eriskay, was the leader of the victorious party, but was himself wounded in the battle; tradition relates that his foster-mother composed the song as she was pulling out an arrow:

Latha Blàr na Fèitheadh
Bha do lèine na ballan.
Bha an t-saighead na spreòd
Throimh chorp seòlta na glaineadh.

Bha fuil do chuim chùbhraidh
A' drùdhadh throimh'n anart.

The day of the Battle of the Runnel
Your shirt was blotted.

The arrow stuck out of
The skilled body of whiteness.

The blood of your sweet bosom
Was soaking through the linen.
(Ó Baoill, *Gàir nan Clàrsach* 52–3)

Relationships between men and women are also a frequent subject of women's songs. Many are laments for dead lovers, though the dilemma of the unmarried girl who has been left pregnant by a faithless lover is also a frequent theme. An example of a successful relationship is dealt with by the anonymous *Bothan Àirigh am Bràigh Raithneach* (The Sheiling in Brae Rannoch; Watson, *Bàrdachd Ghàidhlig* 192–4). The poet begins with a section of praise for her lover, before listing the gifts that he will bring her. She is clearly anticipating marriage and a carefree existence; the light-hearted reference to the acquisition of livestock may refer to droving or to raiding:

Cuime am bìomaid gun eudail
Agus spréidh aig na Gallaibh?

Gheibh sinn crodh as a' Mhaorainn
Agus caoirich a Gallaibh.

Is ann a bhios sinn 'gan àrach
Air àirigh am Bràigh Raithneach.
(Watson, *Bàrdachd Ghàidhlig* 193)

Why should we be without cattle
While the Lowlanders have cows?

We'll get cattle from the Mearns
And sheep from Caithness.

And we'll rear them
In a sheiling on Brae Rannoch.

Again, this song remained current up to the present, for instance, in Cathy-Ann MacPhee's version as learned from William Matheson (MacPhee, *Chì Mi'n Geamhradh* track 9).

§7. SOURCES

The poetry under discussion was slow to find its way into print, and its collection largely occurred as a result of the Ossianic controversy (see MACPHERSON; OISÍN). Hence, 18th-century collectors began to take down texts from the oral tradition (Thomson, *Scottish Literary Journal* 18.2.11), for instance, the Revd James McLagan of Amulree, whose collecting activity spanned from *c.* 1750 to his death in 1805. His collection contains Gaelic ballads, versions of songs by most well-known poets of the 17th and 18th centuries, and anonymous material (Thomson, *Trans. Gaelic Society of Inverness* 58.406–24). Another collector with wide-ranging literary tastes was the Revd Ewen MacDiarmaid of Weem, whose collection, made *c.* 1770, concentrates on non-ballad texts, with a large selection of items that remained unpublished until recently (Thomson, *MacDiarmaid MS Anthology* 4–6, 10–16). Relatively little material from such manuscript collections was printed at an early stage, with two important exceptions. One is the Eigg Collection of 1776, which contains material ranging from the poetry of Mac Mhaighstir Alasdair to anonymous songs of the 17th century (MacDonald, *Comh-chruinneachidh Orannaigh Gaidhealach*). The other is the Gillies Collection of 1786, which contains both anonymous and attributed material, and is representative of the breadth of the tradition mostly in the mainland areas (Gillies, *Sean Dain, agus Orain Ghaidhealach*). In 1841 John MacKenzie edited the highly influential and much reprinted anthology *Sàr-Obair nam Bàrd Gaëlach or, the Beauties of Gaelic Poetry*; this emphasized prestigious material by named bards and includes short biographies. Both Archibald Sinclair's *An t-Òranaiche* (The Gaelic songster) and *The MacDonald Collection of Gaelic Poetry* include material from the period under discussion; *The MacDonald Collection* in particular provides background information which is, however, not always accurate. A strong bias towards prestigious material is present in William J. Watson's *Bàrdachd Ghàidhlig*, which was originally published in 1918 for use in schools and academic institutions. Material by individual poets was edited under the auspices of the Scottish Gaelic Texts Society and among recent publications *Gàir nan Clàrsach* (ed. Ó Baoill) gives a choice of 17th-century material, while *An Lasair* (ed. Black) is a substantial anthology of 18th-century texts.

Much of the material continued to flourish in an oral environment. Some examples of survival in the oral tradition are remarkable, for instance, John MACCODRUM's poetry in North Uist. Sorley Maclean (Somhairle MACGILL-EAIN) remembered versions of many well-known songs from his childhood in Raasay (*Ris a' Bhruthaich* 297, 302–12). The Sound Archive of the School of Scottish Studies in Edinburgh (DÙN ÈIDEANN) is an extensive repository of the widest range imaginable of material recorded from tradition bearers from all over the Gaelic-speaking regions.

Anja Gunderloch

Scottish Gaelic poetry [3] later 18th century

Liberated from the shackles of chiefly patronage, quickened by the fusion of learned and demotic elements, enervated by the passion of cataclysmic events (the JACOBITE rising of 1745 and the ferocious retaliation which ensued), and driven forcefully onwards by the imaginative power of six individuals of towering stature, Scottish Gaelic verse in the late 18th century represents one of the highest achievements of Celtic literature. The six poets were (arguably in order of importance): Alexander MacDonald (Alasdair MAC MHAIGHSTIR ALASDAIR, *c.* 1698–*c.* 1770), Duncan Macintyre (Donnchadh Bàn MAC AN T-SAOIR, 1724–1812), Robert MacKay (Rob Donn MACAOIDH, 1714–78), William Ross (Uilleam Ros, 1762–?91), Dugald Buchanan (Dùghall BOCHANAN, 1716–68), and John MACCODRUM (Iain Mac Fhearchair, †1779). Many others could be cited whose brilliance was less sustained, or whose work has not survived so well. The work which shaped our period was MacDonald's verse, most of which was published in 1751 in the pointedly-named *Ais-eiridh na Sean Chánoin Albannaich* (Resurrection of the ancient Scottish language). It was an illegal book, most of the contents being either subversive or obscene. It is believed that by that same year he was already working on his epic *Birlinn Chlann Raghnaill* ('Clanranald's Galley'), which drew different literary strands together to form an allegory of the '45 from the people's viewpoint, and which may be seen as the first socialist poem in SCOTTISH GAELIC. Adding to the ferment, all the poets of the day were addressing a topic on which they were united in anger, the so-called 'Disclothing Act' which banned Highland dress (see MATERIAL CULTURE [2] §2).

MacDonald was the acknowledged master, and throughout our period his teachings were being put into practice. MacDonald composed an epic; Macintyre's *Moladh Beinn Dóbhrain* (The praise of Ben Doran) is a multi-layered epic of the mountains, while James MACPHERSON's Ossianic epic in English belonged to the same era and enjoyed similar inspiration (see OISÍN). MacDonald imitated the structure of *pìobaireachd* to encourage variable metre: so, too, did Macintyre (*Moladh Beinn Dóbhrain*), Rob Donn (*Iseabail NicAoidh*) and others. 'Praise not men but things, or animals, or birds,' MacDonald taught (by example), 'or praise men with honesty.' Macintyre took the former road, Rob Donn the latter; for lesser poets, this became their choice, their challenge. Again, MacDonald composed songs on the seasons, and his successors vied with each other to do the same. Ross, the love poet, preferred summer; Buchanan, the religious poet, preferred winter. 'Utilize the latent dynamic in the panegyric code,' said MacDonald (though, again, not in so many words), 'and experiment.' This is what Buchanan did, as did Ross, who laid out his introspection in such a modern manner that, though he died around 1791, his influence skipped a century to fire the imagination of the famous modern Scottish Gaelic poet Somhairle MACGILL-EAIN (Sorley Maclean, 1911–96) in the 1930s.

MacDonald's example was also enthusiastically followed with regard to publication. Macintyre, Buchanan, and the underrated Kenneth MacKenzie (1758–*c.* 1837, perhaps the first Scottish Gaelic homosexual poet) all published their own work. MacDonald had promised an anthology; it was duly published by his son Ronald in 1776, and others followed, that of Lothian in 1780, Gillies in 1786, and Kennedy in 1786, with many more of immense importance early in the following century, when it became possible to publish Jacobite verse without fear of prosecution. Together with manuscript collections by Revd Donald MacNicol (1735–1802), James McLagan (1728–1805), and Hugh MacDiarmid (†1801), these form our earliest resource for the study of the Scottish Gaelic verse of the 16th to 18th centuries.

The century ended with a publication, *Orain Ghaidhealacha* (Gaelic songs), which encapsulated how the status of Gaelic poetry had changed since 1700, and foreshadowed what was to come. Until 1715 the leading poets, known by the title of *Aosdàna* (Men of art), enjoyed real political influence in Gaelic society as senior civil servants, inter-tribal diplomats and mediators between chief and kindred; *Orain Ghaidhealacha* of 1798 consists of poems by Ailean Dall (Blind Allan MacDougall, *c.* 1750–1828), a pauper who postured brilliantly as family bard to MacDonnell of Glengarry while selling charms to the superstitious, and Ewen MacLachlan (Eòghan MACLACHLAINN, 1773–1822), a shy young academic who became Librarian

of King's College, Aberdeen (Obair Dheathain), and the only Gaelic poet to praise all four seasons. The two strands which these men represent, the non-literate and the intellectual, were to co-exist uneasily in Gaelic literature for the next century and a half, producing an explosive mixture in the third quarter of the 20th century.

It was Ailean Dall, however, who composed the most important poem in the book, *Òran nan Cìobairean Gallda* (The song of the Lowland shepherds), a searing indictment of the CLEARANCES which had already begun.

Ronald Black

Scottish Gaelic poetry [4] 19th century

The 19th century in Scottish Gaelic verse is above all the period of the CLEARANCES. Vast numbers of people were displaced from the homes and communities in which they had lived, worked, told stories, and made songs from time immemorial. They faced an uncertain and often dangerous future, fishing or kelping on unknown coasts, toiling in factories in the LOWLANDS, or forging a new life for themselves and their families in distant lands across the sea. The result in terms of poetry is that the period has come, unfairly, to be perceived as a tedious trough between the twin peaks of the mid-18th and mid-20th centuries.

It has to be understood that between 1800 and 1900 the geography of Gaelic Scotland (ALBA) was changed. Fertile glens and straths were emptied, save for shepherds, sheep, and deer. In its various forms, verse stayed steadfastly central to the self-perception and way of life of GAELIC speakers; yet its political, social, and moral environment was now different. It was peripheral. In the surviving island and coastal communities of the west it remained a creative vehicle for local concerns and amusement, largely excluded from formal EDUCATION, but surviving in the ceilidh-house. In Lowland cities it was fodder for nostalgic gatherings after the day's—or week's—work was done, and for the popular printing-press in the form of books and periodicals. Across the sea, and especially in Cape Breton Island, Nova Scotia, both these scenarios existed to varying degrees, but nowhere, tragically, did Gaelic achieve sufficient legal or educational status to ensure its survival, even in the little colony of Prince Edward Island (Eilean a' Phrionnsa) where Gaelic was the majority language for a long period and could have entrenched itself in the legislative process had its speakers so desired (see CELTIC LANGUAGES IN NORTH AMERICA §2).

Loss of nerve can be found in the poetry itself. SCOTTISH GAELIC, unlike WELSH, was never a civic or even a national language, but tribal, heroic, and spiritual; 19th-century Gaelic verse remains infused with these ideals. JACOBITE heroes having been swept away to Valhalla, pride of place was given to evangelical Presbyterianism, Victorian morality, and the exploits of Gaelic-speaking soldiers in the service of the British Empire. This scenario drove 20th-century critics to memorable despair. Speaking of *Is Toigh Leam a' Ghàidhealtachd* (I love the HIGHLANDS) by a popular minor poet called John Campbell of Ledaig (1823–97), the famous Scottish Gaelic poet Somhairle MACGILL-EAIN (Sorley Maclean) exploded: 'Imperialist dope had badly muddled John Campbell.' The result has been a tendency to pay exceptions to the rule more attention than they intrinsically deserve—as, for example, when the Scottish scholar and Gaelic poet Derick Thomson (Ruaraidh MACTHÒMAIS) remarks of *Spiorad a' Charthannais* (The spirit of kindliness, 1874) by John Smith (Iain Mac a' Ghobhainn or Seonaidh Phàdraig, 1848–81) that 'an observer a century later may confess to a sense of relief that heart and mind combined to produce a great poem before the century was out' (*Introduction to Gaelic Poetry* 245).

It has thus become conventional to see 19th-century Gaelic poetry as having lost its way. Most telling of all is the fact that Gaelic literature did produce an innovator of towering stature, the Revd Dr Norman MACLEOD ('Caraid nan Gaidheal', Friend of the

Gaels, 1783–1862), but that he was a prose writer and quasi-dramatist, not a poet. As a body of verse it deserves to be assessed more in its own terms; nevertheless, it remains difficult to understand why an act of ethnic cleansing as ruthless as the clearances should have failed to produce a single poet to denounce them in some sustained *oeuvre* of controlled anger. It is even hard to find an eye-witness account of clearance (as opposed to the resulting desolation) in verse. The nearest perhaps is Donald Baillie's *Aoir air Pàdraig Sellar* (Satire on Patrick Sellar, 1816), and no other poem by Baillie is known to exist.

This sums up the difficulty. Assessing the 19th century is like playing football without goalposts. If it is sufficient to prove the existence of isolated works of genius by little-known poets, it was a successful era. If the presence of one or two works of genius in a largely mediocre corpus by a well-known poet is sufficient, it was a very successful era indeed: there are many examples of this, including John Maclean ('Bàrd Thighearna Cholla', 1787–1848; see MACLEAN POETS), John Morison (Iain Gobha na Hearadh, *c.* 1796–1852), Dr John MacLachlan of Rahoy (Iain MacLachlainn, 1804–74), Mrs Mary MacPherson (MÀIRI MHÒR nan Òran, 1821–98) and the aforementioned John Smith of Iarsiadar. If, however, what is required is a body of work by a well-known poet which is consistently distinguished and contains items of genius, the criterion is perhaps best fulfilled by such poets as Ailean Dall (Blind Allan MacDougall, *c.* 1750–1828), Ewen MacLachlan (Eòghan MACLACHLAINN, 1773–1822) or Revd Fr Allan McDonald (Mgr Ailein, 1859–1905) whose work bridges the centurial divide. Yet, compared to the 18th- and 20th-century giants, these are not premier-league figures.

There is also a lack of clarity, not to say chasing of shadows, and more work must be done to sharpen the picture. Much 19th-century verse is in newspapers, a resource not yet fully exploited. Donald Meek's two anthologies have highlighted many isolated works of genius, but two-thirds of his material is from the single county of Argyll (Earra-Ghaidheal); other districts may yet yield much of value. Somhairle MacGill-Eain has said: 'I fully believe that I have never heard or read as great a Gaelic prose as I have heard in the unrecorded sermons of Ewan MacQueen.' Research on this point may reveal that the most lyrical qualities of 19th-century literature were in the preaching of its divines. But innovation occurred: the first Gaelic poets to write free verse seem to have been William Livingstone (Uilleam MACDHUNLÈIBHE, 1808–70) and Donald Campbell MacPherson (Dòmhnall Mac a' Phearsain, 1838–80), the latter deriving it seamlessly from folklore.

Perhaps the frustrations of the period are best summed up by Dr John MacInnes, who tells us that (as with MacQueen's sermons) the lost verse of the sailor poet Iain Dubh MacLeòid (*fl.* 1880) was much better than the published verse of his merchant brother Niall (1843–1924). In his day, Niall was regarded as one of the greatest Gaelic poets who ever lived.

Scottish Gaelic poetry [5] 20th century

A marked feature of 20th century Gaelic literature has been the resilience of the community-based bardic tradition of (primarily) orally composed sung verse, performing the age-old functions of praise and SATIRE, lament, religious devotion, and topical comment. Its tendency towards proxility (in comparison with modern verse's valuing of brevity) and its high verbal dexterity have made it a difficult tradition to sustain, however, given the depletion in the traditional registers and vocabulary. Younger composers in the latter third of the century were much more likely to opt for the imported musical forms of country and western, folk, or soft rock, or to become writers of *nua-bhàrdachd* (modern poetry, non-sung, and usually in free metres). The richness of this bardic tradition throughout the Hebrides (Innse Gall) is still being discovered, though its major practitioners have long been recognized, with a strong representation from the Uists: Dòmhnall Ruadh MAC AN T-SAOIR, Dòmhnall Ruadh Dòmhnallach, and Dòmhnall Iain Dòmhnallach. Interestingly, though it is characterized

by an avoidance of the private voice not sanctioned by tradition and community, it is nevertheless this tradition which offers the first expression in GAELIC of personal, non-propagandistic 'war poetry', in the First World War songs of Dòmhnall Ruadh Dòmhnallach.

In sharp contrast to Wales (CYMRU) and Brittany (BREIZH), there has been a disappointing lack of adventurism and development in song writing in contemporary idioms—beyond the few pioneers of the 1960s and 1970s, such as Murchadh MacPhàrlain (1901–82) or the 'Runrig' MacDonald brothers—which raises disturbing questions about younger Gaels' relationship to the language, and their perceptions of language domains in cultural creativity. By contrast, the enthusiastic acceptance of new and imported forms in written poetry has been extraordinary, due in no small part to the example of innovatory giants such as Somhairle MACGILL-EAIN and Ruaraidh MACTHÒMAIS, as well, of course, as the preponderance of such forms in English literature, mediated through the education system.

The thematic concerns of the *nua-bhàrdachd* have frequently overlapped with those of the traditional bardic practitioners, though its stances in regard, say, to religion or to the poet's native culture or community, have tended to be much more questioning and exploratory, and the confessional voice has been given an importance frowned upon in the traditional sung tradition (MacGill-Eain being the foremost 'permission-giver' here, as well as the dominant societal values).

From 1950, the popular periodical GAIRM was the principal platform and testing-ground for poetry of all kinds (as even the community poets lost their natural audience and adapted to the new media of diffusion). The dominance and successful development of the *nua-bhàrdachd* in the last quarter of the century was in no small part due to the seminal anthology *Nua-bhàrdachd Ghàidhlig* (1976), which presented selections from the work of the most prominent five practitioners hitherto (Somhairle MacGill-Eain, George Campbell HAY, Ruaraidh MacThòmais, Iain MAC A' GHOBHAINN and Dòmhnall MACAMHLAIGH) with face-to-face translations into English. This last feature—which soon became the norm in new collections of Gaelic poetry—must account for the impact of the collection far beyond its natural limited constituency of literate, poetry-reading (as opposed to poetry-listening) Gaels. In reaching out to actual and prospective learners of the language and to the wider English-speaking poetry public, it has succeeded in making modern Gaelic poetry an unignorable part of the Scottish cultural landscape. However, the more disquieting aspects of the rise in status of authorial translations have recently given rise to a necessary and fascinating debate in cultural politics (see, for example, the exchanges in *Chapman* 89/90).

Two interesting features of the non-traditional poetry—though neither of them is surprising, in the wider social context—have been the important contribution of women and the rise of the non-native poet, evident in the bilingual anthology *An Aghaidh na Sìorraidheachd / In the Face of Eternity* (1991). Learners of the language have produced some of the most experimental work linguistically and conceptually, while their varied relationship to their working language or identification with its associated cultural referrents has inevitably raised questions about 'Gaelicness' and the rôle of 'essential' traditional qualities in the culture and its literature.

The astonishing vitality of Gaelic poetry in the 20th century can best be perceived in the recent monumental anthology *An Tuil*.

Scottish Gaelic prose, modern

Although Gaelic prose exists in manuscripts, with the earliest example dating from the 12th century in the Book of DEER, the first Gaelic prose text to appear in print was John CARSWELL's translation of the Book of Common Order (*Foirm na n-Urrnuidheadh*) in 1567. This was followed by a small number of other religious translations. On this religious prose of the early modern period, see BIBLE §2; REFORMATION [2]; RENAISSANCE [2]. It was only in the 19th century that

any significant amount of Scottish Gaelic prose began to be published.

The initial impetus for the expansion in published Gaelic prose stemmed from the expansion in education in the HIGHLANDS and the need to provide suitable reading material for the increasing number of Gaels with basic literacy skills. The overwhelming majority of this writing appeared in periodicals such as *An Teachdaire Gaelach* (The Gaelic messenger, 1829–31), *Cuairtear nan Gleann* (Visitor of the glens, 1840–3) and *An Gaidheal* (The Gael, 1871–7). Periodicals were to continue to provide an important outlet for prose writing during the 20th century, most notably with Roderick Erskine of Mar's *Guth na Bliadhna* (Voice of the year, 1904–25) and *An Sgeulaiche* (The storyteller, 1909–11), and later with GAIRM (1952–2003). The writing which appeared in the periodicals during the first half of the 19th century was dominated by the writings of the clergy, most notably those of the Revd Dr Norman MACLEOD, who was to lead the way both in terms of subject matter and style, using prose to deal with an array of subject matter, including history, science, technical innovations, the natural world and foreign lands, and to experiment with genre and style, most notably in his frequent use of the *còmhradh* (prose dialogue). Alongside these more innovative writings, spiritual and moral writings featured prominently.

The prose published in periodicals from the later decades of the century saw a shift in emphasis away from the spiritual towards the secular, reflecting the move away from the editorial control of the clergy. Original fiction was still rare, though traditional tales were appearing in print with more frequency, due to the work of folklore collectors such as John Francis CAMPBELL. One writer with a distinctive style who bridged the 19th and 20th centuries was Dòmhnall MACEACHARN, whose essays combine humorous tone and philosophical content. It was only from the 1890s onwards that any significant number of original stories came to be written for a Scottish Gaelic readership. Many of these writers, such as Iain MACCORMAIC, John MacFadyen (Iain MacPhaidein, 1850–1935) and Hector MacDougall (1889–1954), were Glasgow-based and came under the influence of Roderick Erskine (1869–1960) of Mar, a learner of Gaelic and a fervent nationalist, who perceived a need to raise Gaelic literary standards and to use Gaelic in areas other than literature. As the founder of *Guth na Bliadhna* and *An Sgeulaiche*, among other publications, he encouraged writers to follow his example in using Gaelic to discuss politics, and even in fiction he believed in experimentation with new genres. He wrote the first detective stories to be written in Gaelic, stories which were heavily influenced by Sherlock Holmes. It was under Mar's influence that the first Gaelic novel, Iain MacCormaic's *Dùn-Àluinn, no an t-Oighre 'na Dhìobarach* (Dùn-Àluinn, or the heir in exile) came to be published in 1912, an adventure story, showing the influence of traditional tales and set against a back-drop of CLEARANCE and emigration. This was to be swiftly followed by the second Gaelic novel the following year, *An t-Ogha Mòr* (The big grandson) by Aonghas MacDhonnchaidh (Angus Robertson). The appearance of Gaelic novels has, however, been somewhat fitful, with the most notable examples after the initial flurry being from the second part of the 20th century. *An t-Aonaran* (The hermit, 1976) and *Na Speuclairean Dubha* (The black glasses, 1989) by Iain MAC A' GHOBHAINN (Iain Crichton Smith) are introspective works which have shaken off all traces of the traditional tale. Their anti-heroes focus on issues of language and communication, of the relationship between individual and community, and of insanity. *Deireadh an Fhoghair* (The end of autumn, 1979) by Tormod Caimbeul (Norman Campbell), with its cast of three characters and their memories, is a powerful depiction of the dying days of a community. Other, more recent, novels include *Cùmhnantan* (Contracts, 1996) and *Keino* (1998) by Tormod MacGill-Eain (Norman MacLean), which deal with the Gaelic media and relationship problems, respectively, and Tormod Caimbeul's *Am Fear Meadhanach* (The middling man, 1992), which deals with a dying man's reconciliation with his family and community.

The short story has tended to be a more popular genre with writers, and most prominent among these are Iain Mac a' Ghobhainn (e.g. *Bùrn is Aran* [Water and bread], *An Dubh is an Gorm* [The black and the blue], *Na Guthan* [The voices]), Cailean T. MacCoinnich (e.g. *Oirthir Tìm* [Coast of time], *Mar Sgeul a dh'Innseas Neach* [As a tale that someone tells]), Iain Moireach (*An Aghaidh Choimheach* [The mask]), Eildh Watt (e.g. *A' Bhratach Dheàlrach* [The shining banner], *Gun Fhois*

[Without knowing]), Tormod Caimbeul (*Hostail* [Hostel], *An Naidheachd bhon Taigh* [News from home]) and Alasdair Caimbeul (*Lìontan Sgaoilte* [Cast nets]). A number of autobiographies appeared in the later decades of the 20th century, with Aonghas Caimbeul's *A' Suathadh ri Iomadh Rubha* (1973) standing out with its rich account of life in Lewis (Leòdhas), particularly in the first half of the century, and of the experiences of its author in the army including his period as a prisoner of war during the Second World War. Since 1968, when Comhairle nan Leabhraichean (The Gaelic Books Council) was established with the remit of promoting Gaelic books, and offering publication grants as part of this, a steady stream of Gaelic prose has appeared in print.

Scottish Gaelic Studies is a current Celtic journal issued by the Celtic Department at the University of Aberdeen (Obair Dheathain). Established in 1926, the original intention was to publish a volume in two parts each year. While the practice of publishing two parts for each volume was maintained until recent years, the journal is produced at irregular intervals. It is written in English. Articles are on all aspects of SCOTTISH GAELIC culture, language, and literature, including a number of archaeological and historical contributions.

Scottish king-lists survive in a large number of late medieval manuscripts and contain lists of kings, with reign lengths, from three conflated sources, representing the kingdoms of the PICTS, DÁL RIATA, and ALBA (i.e. the unified kingdom of Picts and Scots from the mid-9th century onwards).

The text of the PICTISH KING-LIST had probably been begun by the 660s and was then extended back in time to include about thirty kings before BRUIDE MAC MAELCON (†584), going back to the legendary eponymous group founder, Cruithne filius Cinge (see CRUITHIN). The P-text or *Series Longior* of the Pictish list has additional material at the beginning (see LEGENDARY HISTORY) and notes about St PATRICK, St COLUM CILLE, and the foundation of the monastery of Abernethy (Obair Neithich), indicating a mixed Pictish and Gaelic cultural background. On the other hand, the Q-text or *Series Breuior* is distinguished by having three additional kings at the end.

The Dál Riata king-list begins with the legendary FERGUS MÓR, and continues to *c.* 780. The 11th-century poem *Duan Albanach* (Scottish poets' book) and the later king-lists, added to the Alba list of 1165 × 1214, have different additional kings at the end. They could be additions, designed to fill the gap from *c.* 780 to CINAED MAC AILPÍN (r. 840–58), reckoned as the first king of Alba, i.e. the unified kingdom of the Picts and the Scots under Scottish rule. The Alba king-list was a contemporary record by the late 10th century. The group of manuscripts with both the Dál Riata and Alba lists also gives details of the kings' deaths and places of burial. The *Series Breuior* Pictish king-list was added between the Dál Riata and Alba king-lists by 1214×1249, perhaps at St Andrews, initially to appear to give the Scots an authoritative antiquity by portraying Dál Riata as contemporaries of the Picts, before Cinaed mac Ailpín 'destroyed' them to create the kingdom of Alba. The Dál Riata kings were subsequently

portrayed as ruling even before the Picts, with the result that the number of 'Scottish' kings was increased to over a hundred (113 in the 'Declaration of Arbroath', 1320) by the end of the 13th century. John of Fordun, or his pre-1285 source, shows knowledge of both views of Scottish history, but his main innovation was to alter the Pictish king-list by adding an extra king, Hurgust son of Forgso, in its early section, so that the foundation of St Andrews (and thus Scottish CHRISTIANITY) was placed hundreds of years before the conversion of the English.

Nicholas Evans

The **Scottish Parliament** originated in the 12th century as a constitutional innovation which had been imported from England. However, it was not until the 17th century that it began to function, in conjunction with the Kirk (see CHRISTIANITY), in a radical and authoritative manner. The removal of the royal court from Edinburgh (DÙN ÈIDEANN) to London in 1603 had led to an Anglicized, absentee, and—after 1625—an increasingly unsatisfactory form of governance over Scotland (ALBA). In this context, the Parliament was able to offer effective resistance to attempts by Charles I to impose a new prayer-book upon his unwilling Scottish subjects (see BIBLE). Against a background of civil war, between 1640 and 1651, the Parliament effectively nullified royal authority, pursued an independent legislative programme, and forged an effective framework of militias and regular troops with which to quell both incursions by English Royalist forces and home-grown insurrections in favour of Charles I. This experiment in self-government was brought to an end by military defeat and conquest at the hands of Oliver Cromwell, and the Parliament was officially abolished, in favour of a centralized British Parliament sitting at Westminster, in 1654. The whole machinery of a separate Scottish government was restored by Charles II in 1660, but in the following year the Parliament surrendered all those gains which it had previously won, and was thereafter—until the advent of the Glorious Revolution, i.e. the expulsion of James VII and II from England in 1688—subject to tight political control from London.

The biggest difference between the English and the Scottish Parliaments was that the latter comprised one single chamber, which contained both lords and commons. This arrangement could conceivably have ensured a far more egalitarian and democratic system; yet, it did not. The conjunction of rank and privilege, alongside a membership selected in a very private fashion—by no more than 2700 electors in the Scottish counties—ensured that the chamber was as remote as it was unloved. There was seldom opportunity for debate, since elections were often assured by pressure of KINSHIP, patronage, or even sheer intimidation, and business was conducted—after the opening ceremonies—by a nominated committee known as the Lords of the Articles. Individual members could only signify their assent to, or their rejection of, pre-prepared bills, with no chance of emendation or meaningful comment. Consequently, the Parliament—which sat infrequently—became a simple rubber-stamp for the King at Whitehall, and his Privy Council in Edinburgh. For this reason, it lacked any real public support and provided an easy target for abolition.

However, the fall of James VII and II saw the calling of a Convention Parliament in 1689, which could—for once—argue from a position of strength and attempt to re-assert its powers. As a result, Parliament was able to re-establish the Kirk in Scotland and gain a measure of control over its colonies and trading ventures. The geographical proximity of England to Scotland, the failure of the Darien scheme (the founding of a Scottish colony on the Isthmus of Panama in 1698, in which £200,000 and 2000 lives were lost soon thereafter), and the pull of English wealth coupled with crippling customs fees on Scottish trade all served to undermine the Parliament's political and economic independence. Seeking to break out of the cycles of relative poverty and unemployment, a

section of the Scottish nobility, under the 2nd Duke of Queensberry, were prepared to sacrifice an already limited sense of sovereignty for access to English trade and resources. Although driven to the negotiating table and forced to surrender their autonomy, in the pursuit of a political and economic union, the Scots were still able to fight a skilful rearguard action which effectively preserved both the Kirk and the independence of their judiciary. However, contemporary commentators were astounded by the breakneck speed at which negotiations were conducted. The English and Scottish Commissioners met on 16 April 1706 and within nine weeks had arrived at an agreement on the contents of a Treaty of Union. This was signed, on 22 July 1706, by 26 Scottish and 27 English commissioners, and duly committed the northern kingdom to the Hanoverian succession to the crown, the admission of English tax gatherers and excise men, and the abolition of the Scottish Parliament. The last session of the Parliament was adjourned on 25 March 1707, and preparations were immediately made to transfer its powers to Westminster. By the terms of the Act of UNION of 1 May 1707, the Scottish Parliament was abolished and a British unitary state established. For almost the next 300 years, Scotland was to experience direct rule from Westminster, though it was only from the mid-18th century that the Scots themselves began to feel any tangible economic benefit from their English connection.

However, this constitutional arrangement came under unprecedented strain in the 1980s, as a growing gulf between Westminster and the politics of Scotland manifested itself in terms of sweeping cuts in social services and the industrial base, and in the implementation of the Poll Tax. These developments sharpened and accelerated calls for greater democracy and appeals to nationhood (see NATIONALISM), and a cross-party Constitutional Convention was formed in the early 1990s. Devolution and constitution reform became major planks in the Labour Party manifesto of 1997, and a referendum held later that year produced a three-to-one majority for the re-establishment of a Scottish Parliament. Accordingly, the new Scottish Parliament was opened in 1999, with 129 members and the power to levy taxes. Although controversy was to dog the extravagant building commissioned to house it, the Parliament moved quickly to establish its authority and has since added a fresh dimension and a democratizing influence upon the politics of the British Isles.

Scottish place-names reflect the complex linguistic, cultural, and political history of Scotland (ALBA), with six languages contributing to the bulk of its place-names, following each other and interacting in different ways in different parts of the country. Of these six languages, three are Germanic and three are Celtic: CUMBRIC (also known as BRITISH or BRYTHONIC), PICTISH, and SCOTTISH GAELIC.

Cumbric, a P-CELTIC language most closely related to Old WELSH, was spoken in southern Scotland from around the 6th century, having evolved there *in situ* from the indigenous British speech of the Roman period and the pre-Roman IRON AGE. Cumbric was sufficiently close to Welsh for preforms which were identical to their Welsh equivalents to account for most Cumbric place-names, as in the examples below. The Cumbric language lasted longest in Strathclyde (YSTRAD CLUD), including Glasgow (GLASCHU) and much of south-west Scotland, as well as parts of what is now English CUMBRIA, probably until the 11th century, at which time these formerly independent kingdoms were incorporated into Alba. In what was to become south-east Scotland (LOTHIAN), Cumbric died out considerably earlier, being overlaid by Old Northumbrian or northern Old English, a process which probably began in the 7th century or even earlier. Typical Cumbric elements are *tref* 'homestead, farm', e.g. *Tranent*, East Lothian (= *tref* + Cumbric *nant* 'burn, valley'), *Terreagles*, Dumfriesshire (= *tref* + Cumbric *eglwys* 'church'); *pen(n)* 'end, hill' (literally 'head'), e.g. *Pentland*, Midlothian (*pen* + Cumbric **lann* 'enclosure, church'), *Penpont*, Dumfriesshire (*pen* + Cumbric *pont* 'bridge' < Latin *pont-em*). Many central places in this region are of Cumbric origin, such as *Bathgate*, *Glasgow*, *Lanark* (cf. Welsh *llannerch* 'glade'), and *Linlithgow*.

For Pictish, the language of the Pictish kingdom(s) north of the Firth of Forth, only proper-name and epigraphic evidence remains. At least from the former it is clear that it was a P-Celtic language, closely related to Cumbric and hence to early Welsh and the other Brythonic languages. Typical Pictish elements are *abor/aber* 'burn- or river-mouth' (cf. Welsh and Breton *aber*), e.g. *Arbroath*, Angus (< *Aberbrothoc*), *Abernethy*, Perthshire and Inverness-shire; **copor/*cuper* 'confluence' (cf. the Breton place-name *Kemper*), e.g. *Cupar*, Fife, *Coupar*, Angus, Perthshire; **mais* 'plain, open field' (cf. Welsh *maes*), e.g. *Rothiemay*, Banffshire, *Duniface*, Fife; and **pert* 'wood, grove' (cf. Welsh *perth* 'hedge'), e.g. *Perth*.

Both Cumbric and Pictish developed from a Brythonic language (or languages) spoken throughout much, if not all, of the area of present-day Scotland from before the time of the Roman occupation of southern Britain. This is shown by certain names which appear in the earliest writings mentioning northern Britain, which date from the 1st and 2nd centuries AD, names such as 'Ορκαδες *Orcades* (now the *Orkneys*), which contains an early Celtic **orc-* cognate with Latin 'pig', and *Epidii* (a people which occupied Kintyre, Argyll) 'people of the horse (god/ess)', which is indisputably an early P-Celtic form containing the root corresponding to Gaelic *each* 'horse' < Old Celtic EQVOS.

Gaelic, a Q-Celtic language derived from Primitive Irish (see OGAM), was spoken originally in Scottish Dál Riata, a division of the kingdom in north-east Ireland (Ériu) of the same name. The heartland of Scottish Dál Riata from an early period was also referred to as Argyll (Scottish Gaelic *Earra-Ghàidheal* from earlier *Airir Gáidel* 'Gaels' coastland'). By AD 900 a Gaelic-speaking dynasty and aristocracy was firmly in control in Pictland, and Gaelic dominated not only much of former Pictland and Dál Riata, but also spread south of the firths of Forth and Clyde into Strathclyde and Lothian. Under this dynasty the kingdom of Alba was formed. It is no coincidence that the bulk of the settlement names in its heartlands north of the Forth–Clyde line are in the dominant language of the new kingdom, Scottish Gaelic. As the kingdom was established, so was its chief language used to name new settlements, rename old settlements and topographic features, or to Gaelicize older names so as to adapt them to speakers of the language of the new rulers. This last process was probably common, since the replacing language, Scottish Gaelic, shared much vocabulary with the replaced language, Pictish. In what must have been, to a certain extent at least, a bilingual environment, the adaptation of Pictish place-names to Scottish Gaelic may have been more extensive than is generally recognized. However, the lack of early written records from this crucial period of transition from Pictish to Scottish Gaelic makes it impossible to admit certainty here. We do have some evidence for this phenomenon in an originally Cumbric-speaking area: *Kirkintilloch*, Dunbartonshire, recorded as *Caerpentaloch* in the 10th century, with Cumbric *pen*, appears as *Kirkentulach* by *c.* 1200 (with the Gaelic equivalent *ceann*). The place-name *Kincardine*, which occurs as a place-name seven times in eastern Scotland north of the Forth, may well be the result of a similar process, especially since the second (specific) element is a Pictish word, cognate with Welsh *cardden* (usually explained as meaning 'wood', but in fact the uses of this rare word in Middle Welsh texts suggest rather some such meaning as 'enclosure'). On the other hand, Pictish **carden* may have been borrowed into Scottish Gaelic for a time, though it is not attested in any surviving text. The originally Pictish element **pet(t)* 'land-holding', which has given rise to well over 500 *Pit-* or *Pet-*names in Scotland, such as *Pittenweem*, Fife, and *Petty*, Inverness-shire, was certainly borrowed into Scottish Gaelic, and remained productive long enough to be exported into Lothian as Alba expanded into that region in the 10th century. Other Pictish words were borrowed into Scottish Gaelic and remain in use to this day, for example, *dail*, from Pictish **dol*, 'water-meadow' (cf. Welsh *dol*). This element occurs in place-names north of the Forth both as *Dal-* (e.g. *Dalnacardoch*, Perthshire, *Dallas*, Moray) and *Dol-* or *Dul-*, e.g. *Dollar*, Clackmannanshire, and *Dull*, Perthshire, the latter two closer to Pictish rather than Scottish Gaelic in form. A more unambiguously Scottish Gaelic place-name element is *baile* 'farm, estate', which occurs in well over 1000 Scottish place-names, such as *Balfarg*, Fife and *Ballantrae*, Ayrshire (but not *Balmoral*, which contains Gaelic *both* 'hut, sheiling').

There is no convenient all-Scotland place-name reference work or series. Two general works stand out:

Watson, *History of the Celtic Place-Names of Scotland* and Nicolaisen, *Scottish Place-Names*. Scotland lags far behind almost every other northern European country in its systematic approach to the subject, and there is much primary collection and analysis still to be done.

Scríobh (Writing) was an IRISH-language periodical, edited by the film-maker Seán Ó Mórdha, of which six issues appeared between 1974 and 1984. Devoted entirely to literary matter, contents include poems, short stories, extracts from novels in progress, and critical articles by all major writers active during the ten years of the periodical's existence. Among the contributors were Máirtín Ó DIREÁIN, Seán Ó RÍORDÁIN, Seán Ó TUAMA, Breandán Ó hEithir, Máire MHAC AN tSAOI, Alan TITLEY, Liam Ó MUIRTHILE and Dòmhnall Mac Amhlaigh. Although no issue dealt exclusively with the work of one writer, certain issues focused on particular writers, for example, Máirtín Ó Direáin (no. 2), Seán Ó Ríordáin, Máirtín Ó CADHAIN (no. 3), and Daniel CORKERY (no. 4).

§1. INTRODUCTION

The earliest records of the CELTIC LANGUAGES—outside isolated proper names or glosses recorded by classical authors (see GREEK AND ROMAN ACCOUNTS)—are all attested as INSCRIPTIONS. The earliest of these are engraved in the indigenous scripts of the respective areas in which they are attested, or in adaptations of them. Hence, the Iberian script was employed to engrave Celtic inscriptions in the IBERIAN PENINSULA, the Lugano and Sondrio scripts, derived from the Etruscans, in CISALPINE GAUL and adjacent areas, and the Massaliote Hellenic script (Greek alphabet), which emanated from the Greek colony at MASSALIA (Marseilles), in TRANSALPINE GAUL. In the Iberian Peninsula and Transalpine Gaul, especially, where the Celtic epigraphic tradition continued after Roman colonization, Celtic inscriptions came to be engraved in various Roman scripts. This article will focus on the characteristics and conventions of the indigenous scripts.

§2. THE IBERIAN SCRIPT

Background. The large part of the CELTIBERIAN (also known as Hispano-Celtic) linguistic corpus is engraved in an adaptation of the Iberian script, which was employed, in various versions, to engrave inscriptions in a variety of non-INDO-EUROPEAN languages throughout the Iberian Peninsula. It was deciphered by Gómez-Moreno, largely on the basis of bilingual coin legends (*Revista de filologia española* 9.341–66). The origin of the script remains a subject of some debate (De Hoz, *Annali dell Dipartimento di Studi del Mondo Classico . . . di Napoli* 5.27–62); while it is clear that it was based on Phoenician and Greek characters, it is uncertain whether they were integrated simultaneously or that one original was remodelled with elements of the other. The direction of writing is attested principally from right to left, though a few inscriptions in left to right or serpentine are also known. The majority of inscriptions employ word dividers, but extra spacing is sometimes used and undivided writing (*scriptio continua*) is occasionally found.

Structure of the script. It is almost always said that the Iberian script, in its various versions and adaptations, was semi-alphabetical and semi-syllabic. This is imprecise and potentially misleading. While there are some scripts around the world which begin to approach syllabic status, no true syllabic script has ever been developed. The Iberian script can be more accurately

termed semi-segmental and semi-moraic (see Ratcliffe, *Written Language & Literacy* 4.1.1–14, for conceptual background). The segmental characters represent individual phonemes, i.e. the sounds that are significant and distinct within a given language, while the moraic characters represent the opening of a syllable, specifically one of the Celtiberian stop consonants /*t, k, kʷ, b, d, g* (, *gʷ*)/ plus the vowel which forms the nucleus of the syllable. As is made apparent below, the script does not fit the structure of the Celtiberian language well, and this necessitated the development of a variety of orthographic strategies to write it.

Characteristics and orthographic conventions. As with many epigraphic scripts, character shapes can vary. Table I sets out the character shapes of the Iberian script as engraved in the Botorrita I inscription (Untermann, *Monumenta Linguarum Hispanicarum* [= MLH] K.1.1), which can be said to represent the eastern school of Celtiberian epigraphy, and Table II sets out the character shapes, drawn from a variety of inscriptions, of the western school. Other variant shapes are set out by Untermann (MLH 1.133–5 and 4.441–3).

Table I. Character shapes of the eastern school of Celtiberian epigraphy

	a		m		n	
	e		l		ŕ	
	i		ś		s	
	o					
	u					
	Ca		Pa		Ta	
	Ce		Pe		Te	
	Ci		Pi		Ti	
	Co		Po		To	
	Cu		Pu		Tu	

Table II. Character shapes of the western school of Celtiberian epigraphy

	a		ḿ		ń	
	e		l		ŕ	
	i		ś		s	
	o					
	u					
	Ca		Pa		Ta	
	Ce		Pe		Te	
	Ci		Pi		Ti	
	Co		Po		To	
	Cu		Pu		Tu	

The segmental characters of the Celtic adaptation of the Iberian script (i.e. those which represent single phonemes) are the vowels *a e i o u*, the sonants *m n l ŕ*, and the sibilants (*s*-like sounds) *ś s*. The characters for the vowels do not distinguish length; hence *a*, for example, may represent /*a*/ or /*ā*/. The characters which represent the high vowels /*i u*/ are also used to represent the glides /j/ (as in English *yes*) and /w/ respectively. The digrapheme (double letter) *ei* is employed not only to write the inherited diphthong /*ej*/ but also /*e*/ < older unstressed /*i*/; cf. the prefix *aŕei-* (Untermann, MLH A.52.3) beside *aŕe-* (Untermann, MLH A.52.1) < **pr̥h*$_x$*i-*. It remains somewhat uncertain what the second token of the digrapheme represents in *TeiuoŕeiCiś* (Untermann, MLH K.6.1): /*ej*/, or /*ē*/ on the way to /*ī*/ or /*i*/ itself, as in Gaulish and British *rīx*.

The two nasals have alternative forms in the script of the western school; whereas = *m* and = *n* in the east, = ḿ and = *ń* in the west (Schmoll, KZ 76.280–95; Lejeune, *Annali dell Dipartimento di Studi del Mondo Classico . . . di Napoli* 5.11–26). Note the acute diacritic employed to distinguish the western character set.

The *r* or *r*-like character has traditionally been transcribed with *ŕ*, i.e. with an acute diacritic,

to distinguish it from 𐊓 = *r*, i.e. without an acute diacritic. However, since only 𐊕 is attested in the Celtic inscriptions of the Iberian Peninsula, some scholars have abandoned the use of the diacritic when transcribing Celtic epigraphic texts.

There is considerable controversy at present concerning the transcription of what have usually been termed the sibilant characters. Traditionally, 𐊼 has been transcribed as *ś* and 𐊽 as *s*. It had been presumed that both characters represented /*s*/ and its allophones (that is, variant pronunciations which were not phonemically significant within the grammatical system), though the variation between the characters in usage was difficult to explain. However, Villar has demonstrated that, while 𐊼 appears to continue Indo-European /*s*/ unchanged in most instances, 𐊽 continues it in voiced environments (that is, where pronounced as /*z*/), but also original /*d*/ in certain word-internal environments and in final position. This has led Villar to transcribe 𐊼 as *s* and 𐊽 as *z* (*New Interpretation of Celtiberian Grammar*). Untermann, however, beginning with the publication of the Celtiberian corpus of non-numismatic inscriptions in MLH 4.349–722 in 1997, has adopted a different system, whereby 𐊼 = *s* and 𐊽 = *ŧ*. Various scholars have now adopted either Villar's or Untermann's system, though others prefer to continue using the traditional system.

It is important to note that none of these systems has yet been demonstrated to be truly satisfactory. The traditional system, however, is the least controversial, since its use of a diacritic to distinguish the two sibilant characters does not necessarily impute any judgement about pronunciation, while the systems of Villar and Untermann suggest that 𐊽 = /*z*/ or /ð/, respectively (the latter phonemic transcription represents the *th* sound in English *breathe*). This is somewhat premature, for the jury is likely to be out for a considerable time on the matter. Already, Ballester has suggested that 𐊽 could represent [ʦ] and [ʣ], as well as /ð/ and /*z*/ (*Kalathos* 13/14.319–23). Evidence that the resolution to the question will not be straightforward is the fact that there are clear instances in which 𐊼 and 𐊽 are written in error for each other, as in genitive plural *śoiśum* (Untermann, MLH K.1.3 Ü) for expected **śoisum* and dative plural *TiCeŕsePos* (Untermann, MLH K.6.1) for expected **TiCeŕsePoś*. Since the shapes of the two characters are not similar enough to explain the errors as lapses by the respective engravers, and later attested inscriptions engraved in Roman characters always spell Indo-European /*s*/ in voiced environments (i.e. where the /*z*/ pronunciation would be expected) as s and medial and final inherited /*d*/ as d, the sound(s) represented by 𐊼 and 𐊽 must have been acoustically similar. Accordingly, an algebraic system, not presupposing how the two characters actually sounded, such as that used to write the 'laryngeals' reconstructed for proto-Indo-European (*/h_1 h_2 h_3/), would be prudent, namely 𐊼 = s_1 and 𐊽 = s_2, until more progress has been made towards the resolution of their phonemic value (that is, within the Celtiberian system of sounds) and proximate phonetic value (that is, how the sounds were actually articulated and sounded). However, since it is unlikely that any such s_1-s_2-system will be adopted, and that at least three transcription practices will remain in use, non-specialists should be particularly cautious when using multiple sources citing Celtiberian forms.

The moraic (or so-called '[semi-]syllabic') characters of the script comprise three series of five consonantal characters at the (*p*/)*b*, *t*/*d*, and *k*/*g* articulatory places. In each instance, the symbol has the value of the following vowel built in. It is normally assumed that these characters represent phonemic plosives (stop consonants) in their initial consonantal sound, as represented above, though it is likely that they could represent fricatives (for example, *Po* for /*fo*/) as well; cf. *Poloŕa* (Untermann, MLH K.1.3 iv 3) for Latin *Flōra*. These characters do not indicate voicing (that is, the contrast between /*t*/ and /*d*/, /*k*/ and /*g*/); hence, *Ta* can represent /*ta*(*:*)/ or /*da*(*:*)/, or even /*t*/ or /*d*/ (with no additional vowel). The latter pair are possible representations because the moraic quality of these characters are an ill fit for Celtiberian syllable structure, which permits various consonant clusters at the beginnings of syllables. The script, thus, forces the use of so-called 'dead' vowels, which, in transcription, are solely graphemic and without phonetic value. Such dead vowels anticipate the colour of the following actual vowel in the word, for example, *enTaŕa* (Untermann, MLH K.1.1 A6) pronounced /*entrā*/. While it remains somewhat uncertain as to the principle whereby the

colour of a final dead vowel is selected, it probably copies the colour of the preceding articulated vowel in the word (the matter has been studied by De Bernardo Stempel, *Die grösseren altkeltischen Sprachdenkmäler* 212–56). There are other orthographic strategies, too, for writing a stop or a fricative consonant followed by *l* or *r*: (a) the *l* or *r* and the following vowel may reverse their orthographic positions, for example, *ConTeŕPia* (Untermann, MLH A.75) = */kontrebiā/* (see BOTORRITA); (b) the *r* or *l* may be orthographically omitted, for example, *ConPouTo* (Untermann, MLH A.74) = */konblowto/*.

Finally, we may note that, no doubt owing to the influence of the segmental nature of the Roman script (that is, one letter for one phoneme), the moraic characters of Celtiberian came to be followed by a segmental character denoting the vowel already inherent in the moraic character, e.g. *móńiTuuCoóś* (Untermann, MLH K.14.1). This apparent doubling is not used to indicate vowel length; the script does not employ double characters to indicate either long vowels or consonants, for example, *Tiŕiś* (Untermann, MLH K.1.1 A6) = */trīs/* and *Camanom* (Untermann, MLH K.1.1 A6) = */kammanom/*.

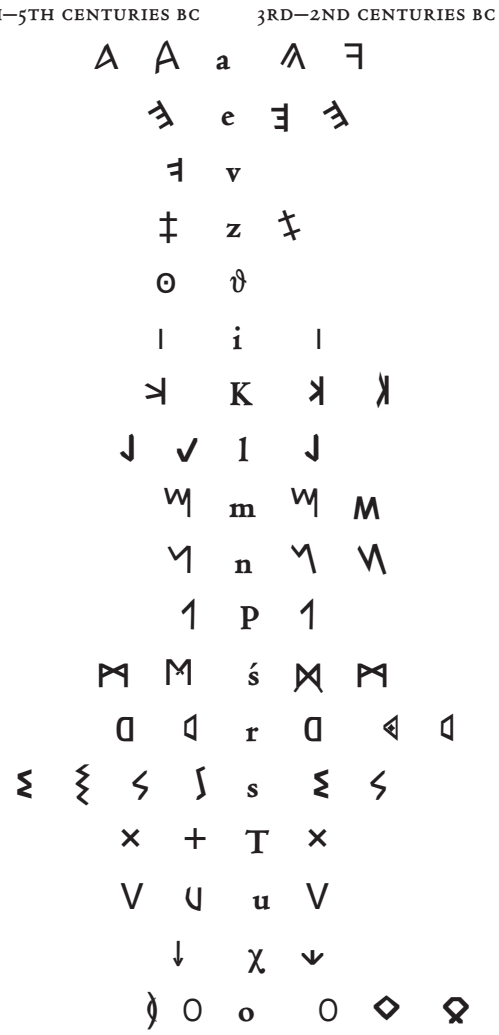
§3. THE ETRUSCOID SCRIPTS

Background. The entirety of the Cisalpine Celtic epigraphic corpus is engraved in varieties of scripts derived from northern Etruscan usage. Virtually all of it is in the Lugano script. The direction of writing is attested as both left to right and right to left, but serpentine is also attested; word dividers are routinely employed. The principal addition which all the Etruscoid scripts share is the addition of the character *o*, which was absent from Etruscan itself. This character, like most additions to the inherited character set, has its origin in Hellenic scripts (i.e. forms of the Greek alphabet). Table III sets out the character shapes of the Lugano script in their principal variants (after De Marinis, *Celts* 94).

Table III. The early and later character shapes of the Lugano script



Characteristics and orthographic conventions. The Lugano script is entirely segmental. Double characters are never used to write long vowels or consonants. The vowel characters *a e i o u* do not distinguish length; hence, *e* may represent */e/* or */ē/*. The characters *i u* are also employed to represent the glides */j/* (as in English *yes*) and */w/*, respectively.

The characters *K P T* represent phonemic stop consonants */k g/*, */p b/*, and */t d/*, respectively. They do not distinguish voicing; hence, they represent both the series */k p t/* and */b d g/*. Some inscriptions use

the supplemental characters ϑ χ. When these characters are employed, they appear to represent */d/* and */g/* respectively, though there are too few examples in unambiguous environments to be certain. There is one instance of χ used where it probably represents the breathy spirant [γ] (as Irish 'broad' *gh*) corresponding to the stop [g]: in the Latin-Cisalpine Gaulish inscription of Vercelli (RIG 2/1, *E–2 = S–140), *K* is used in the form *arKaToKo‹K›maTereKos*, Latinized as ARGANTOCOMATERECVS, to represent both */k/* and */g/*, while in the same inscription in *Teuoχ Toniọn / dēwo[γ]donion/*, χ was used for what was probably an allophone of */g/*. Another probable example of χ for phonetic [g], as a lenition of */g/* following a vowel, is *eriPoχios* (RIG 2/1, E–3 = S–112), which represents phonemic */eribogios/*, though it is uncertain whether χ is used here as a symbol for a distinctive phoneme, that is, for */g/*, or in recognition that this phoneme had a special pronunciation between vowels, in other words, phonetic [γ]. The fact that there is not another supplemental character at the bilabial place, i.e. for the series */p b/*, as found in other Etruscoid scripts, suggests that ϑ and χ were added to the inventory of characters when Indo-European */p/* had ceased to be a stop or had been altogether lost, but before the change which created a new P-Celtic */p/* from inherited Indo-European */kʷ/*. */kʷ/* > */p/* is only certainly attested in the Celtic of Cisalpine Gaul after 200 BC. An issue related to this matter is the phonemic/phonetic value of the character *v*, which in *uvamoKozis* (S–65) < *$h_x upm̥^m o$- appears to continue Indo-European *p*, perhaps as a fricative [φ] (like an English *f* articulated with lips touching; Eska, *Münchener Studien zur Sprachwissenschaft* 58.63–80); [wʰ] is another possibility. Other examples of this character occur in forms which have not been satisfactorily interpreted, are abbreviations, or are too fragmentary to be of use.

Two different characters are attested to convey the *tau Gallicum* phoneme (see CONTINENTAL CELTIC), namely, *ś* and *z*. The former is far more common. It is noteworthy that one early Lepontic inscription from Prestino (S–65) apparently employs both characters to write this sound.

The Sondrio script, which is mostly attested in the epigraphic corpus of the non-Celtic language Raetic, is employed in a single Cisalpine Celtic inscription from Voltino (Piemonte). Table IV sets out the character shapes employed in this inscription (see Meid, *Zur Lesung und Deutung gallischer Inschriften* 42 Abb. 6, for a good photograph):

Table IV. The character shapes of the Sondrio script in the inscription of Voltino

a		m	
e		n	
d		b	
i		ś	
k		t	
l		o	

Note the inverted orientation of the *m* and the voicing distinction between *t* and *d*, and implicitly in the system for *b* and its partner (i.e. *p*), as well.

The Oderzo inscription. A left-to-right funerary inscription discovered in Oderzo in Venetia, conventionally referred to as *Od 7, whose circumstances of discovery are unknown, was, at first, thought to be engraved in the extinct non-Celtic Indo-European language Venetic, though containing Celtic proper name elements, but has now been identified by Eska & Wallace as primarily Cisalpine Celtic in language (*Historische Sprachforschung* 112.122–36). It is engraved in Etruscoid characters, some of which are common to both the Lugano and the Atestine Venetic scripts, and others which belong exclusively to one or the other. Table V sets out the characters attested in this inscription.

Table V. The character set of the *Oderzo 7 inscription

a		p	
e		r	
d		s	
i		t	
k		u	
l		g	
m		o	

Note that a voicing distinction was introduced for *t d* and *k g*, at least. Of the characters attested in the inscription, 𐌋 = *l* and 𐌅 = *u* are clearly of Lugano-type orientation; the corresponding Venetic characters have the shapes 𐌕 and 𐌍, respectively. But 𐌖 = *g* is typical of the Venetic script; the corresponding Lugano character is 𐌢, which is also a variant in the Venetic script. Note that the shape of *d* is a variant previously unknown in both.

§4. THE GREEK SCRIPT OF MASSALIA

Background. Prior to, and for some period following, CAESAR's conquest of TRANSALPINE GAUL, the Massaliote Hellenic script, which was borrowed from the Greek colony at MASSALIA (Marseilles), was employed to engrave inscriptions in Transalpine Celtic. These are always engraved from left to right, normally without breaks between words, though a few inscriptions employ word-dividing interpuncts. There may be a few inscriptions which allow some blank space between words, but it is not certain whether this was the respective engravers' intent. The large majority of Celtic inscriptions engraved in Greek letters are from an area to the immediate north-west of Marseilles, though there are several outliers further to the north and west (see Lejeune, RIG 1.1–5). We should also bear in mind that Caesar informs us that the Celts with whom he came into contact commonly wrote in Greek characters for both public and private purposes (*De Bello Gallico* 6.14). Table VI sets out the principal character shapes employed to engrave inscriptions on stone and ceramic, respectively (after Lejeune, RIG 1.427–34, showing considerable variation in the attested character shapes).

Table VI. The character shapes of the Massiliote Hellenic script employed by the Transalpine Celts

STONE		CERAMIC	
𐌀 A	α	Α	Λ
B	β	B	ʁ
Γ	γ	Γ	⊦
Δ 𐌃	δ	Δ	⍙
Є E	ε	E	Є ʌ
H	η	H	Ν
θ	ϑ	θ	
I	ι	I	
K ƙ	κ	ƙ	K
Λ ʌ	λ	Λ	ʌ Λ
M 𐌌	μ	𐌌	ʍ
N Ν	ν	N	Ν
Ξ	ξ	Ξ	
Ο ʘ □	ο	Ο	◊ υ
π	π	π	Γ
Ρ ϙ ⊧	ρ	Ρ	⊧
C Ⴑ Σ	σ/ς	C	Ⴑ ᗧ
Τ ⅂	τ	Τ	⅂ + X
Υ ϒ ⊬ V	υ	⊬	ϒ V Y
	χ	X	
ω (((	ω	ω	ω

It is possible that the character 𐌘 = φ should be added to the inventory in Table VI; it may be attested in a single stone inscription from Cavaillon (RIG 1, *G–117), which today is so worn from erosion that the reading cannot be confirmed.

Characteristics and orthographic conventions. As expected, the Transalpine Celtic adaptation of the Greek script was alphabetic (segmental). Vowel length is not distinguished, even by the pairs ε η and ο ω; one finds ε ο employed to represent long vowels and η ω employed to represent short vowels, in addition to their Greek values. The vowels /*a*(:) *e*(:) *o*(:)/ are reliably spelled with the single letters α ε/η ο/ω, respectively; however, /*i*/ is occasionally spelled with the two letters ει, in addition to usual ι, and /*u*(:)/ is routinely spelled

with the two letters ου. The glides */j w/* are represented by ι and ου, respectively. Note, however, that there are rare examples in which */w/* is represented by ο or υ alone.

Most consonants have their expected phonemic values. Geminates (long or double consonants) are normally spelled as such. There are some conventions for the spelling of certain consonant groups: (a) */kt/* was pronounced phonetic [χt]; it is found spelled both as phonemic κτ and phonetic χτ; (b) the groups */ks/* and */gs/* were pronounced [χs]; it is usually represented by the single Greek letter ξ, though one example of γς is attested; (c) the Greek convention of spelling the groups */nk ng/* = [ŋk ŋg] with γκ γγ, respectively, appears to have been regularly adopted (though we have evidence only for the voiced member of the pair); νκ νγ, though rare, are also attested, however.

The notorious *tau Gallicum* phoneme (see CONTINENTAL CELTIC) is attested spelled with a variety of single and double-letter spellings: ϑ ϑϑ σ σσ τ ττ σϑ.

§5. SOME COMMENTS ON THE ROMAN SCRIPTS

Continental Celtic inscriptions engraved in Roman capitals or cursive are attested in the IBERIAN PENINSULA, TRANSALPINE GAUL, and the BALKANS. Two inscriptions which may be engraved in Old BRITISH (see BATH) may also be mentioned here. The characters of these scripts bear their conventional phonemic values in most cases. Vowel length is not noted; geminate consonants (with a distinctive unlenited, long, or double articulation) may or may not be written as such. A second, taller form of the letter *i*, the *i-longa*, is commonly attested, but it does not appear to be systematically differentiated in its distribution from standard *i*; modern scholars often transcribe it as *í*, but *j* is increasingly becoming standardized. The *tau Gallicum* phoneme is represented by an extensive range of single, double, and triple letters: *t tt tth d dd d̶ dd̶ ts ds s ss ss sc sd st*.

Sean-nós (old style) is an improvised solo *a cappella* singing style, usually in the IRISH language. It is highly ornamented, and mostly confined to the west coast of Ireland (ÉIRE).

Originating in the popular AMHRÁN and CAOINEADH of the 18th century, *sean-nós* songs can be passionate *amhráin mhóra* (big songs) which express great love or sorrow (e.g. *Úna Bhán*, Fair-haired Úna) and mark important events such as drownings (*Anach Cuain*) or lighter, more popular, songs (e.g. *Bean a' Leanna*, The woman of the alehouse).

Sean-nós songs were transmitted orally from generation to generation until very recently and, for this reason, villages and families may have their own preferred songs and styles. When performing publicly, singers are encouraged between verses by the audience and will often hold hands with a neighbour.

The ornamentation of *sean-nós* songs is melismatic or intervallic, that is, with certain main notes in a melody replaced by a group of adjacent auxiliary notes or having the interval between two main notes filled by a stepwise series of notes. Without accompaniment, singers achieve continuity by stretching phrases and by nasalization. Ó Canainn believes that some performers, for example, Seán 'Ac Dhonncha of Conamara, emulate traditional instruments such as the uilleann pipes (Ó Canainn, *Traditional Music in Ireland* 73–4; see also BAGPIPE). The Conamara style of Co. Galway (Contae na Gaillimhe) is probably the most ornate, while the Donegal style, influenced by Scottish singing, is very simple. The Munster style incorporates some ornamentation and is ballad-like.

The Irish traditional music revival of the 1970s brought *sean-nós* music along with it, and singers like Joe Heaney from Galway (GAILLIMH) popularized the form internationally.

Raidió na Gaeltachta (GAELTACHT radio) and the Conamara music publisher Cló Iar-Chonnachta have been very instrumental in the resurgence of the style. The Conamara style was preferred until the growth in popularity of the *sean-nós* competitions at the Oireachtas (see FEISEANNA) from the 1970s onwards, when singers from other Gaeltachtaí began to take honours. The Donegal singer Lillis Ó Laoire and the Cork singer Iarla Ó Lionáird have been particularly influential in this regard.

Sean-nós also refers to a solo step-dancing style prac-

tised mostly in Conamara, Co. Galway, and characterized by intricate improvised steps.

Brian Ó Broin

Sedulius Scottus was a Hiberno-Latin author, grammarian, literary critic, and poet, and also a scholar of Greek. From the 840s he lived in Liège, Belgium, where he seems to have been the head of a small Irish clerical colony (see PEREGRINATIO) under the patronage of Bishop Hartgar. Sedulius Scottus was one of the most influential thinkers in Lotharingia, one of the kingdoms into which the Frankish Empire had split. His career can be followed to 874 when he wrote a poem celebrating the reconciliation of Charles and Louis, grandsons of Charlemagne. His literary output indicates his Irish background. For example, his poetry seems to have been influenced by the Irish tradition of the *filid* and bards (see BARDIC ORDER [1]), since it shares some characteristics with them, for example, ironic addresses to his patrons. He composed a spoof elegy for a ram which he had expected as a gift from Hartgar. *Sedulius* is possibly a Latinization of Irish *Siadal*. *Scottus*, his surname or epithet, means 'Irishman' (see SCOTS; cf. ERIUGENA). It is not known where Sedulius came from, but one of his companions, Fergus, was from Clonard.

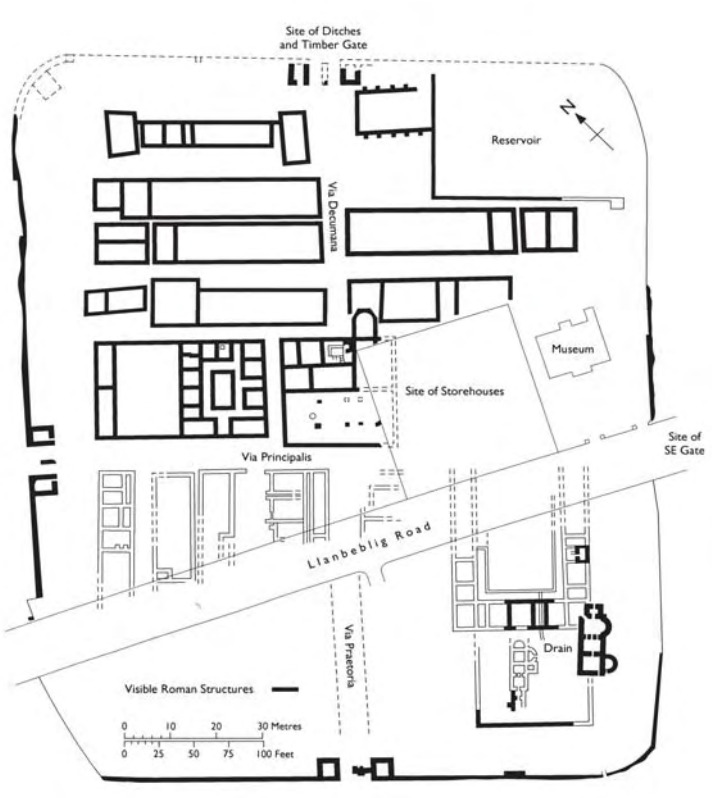
Segontium was a Roman fort in GWYNEDD, north-west Wales (CYMRU). It appears as *Cair Segeint* in the list of the *civitates* (sing. CIVITAS) of Britain in HISTORIA BRITTONUM, and as *Caer Seint* in the MABINOGI. It is also likely that this ancient fort was the place originally called *'y gaer yn Arfon'* (the fort in Arfon, the region facing MÔN), giving the modern place-name *Caernarfon*. Segontium was probably founded during or immediately following the Roman conquest of north Wales in the late 70s AD. It was one of the many auxiliary forts (35 of which have been discovered so far) built as defences against uprisings of the native population of what is now Wales. These forts were linked to the two central legionary forts of the Roman frontier in Wales—Chester (CAER) in the north, and Isca/CAERLLION in the south. Excavations at Segontium have shown evidence of a fairly typical Roman fort with a *vicus* (associated civilian village). Its main importance is that it became, in the Welsh tradition, closely associated with the legendary MACSEN WLEDIG, who corresponds to the contested emperor Magnus Maximus of history. Maximus is thought to have taken much of the remaining Roman military forces in Britain to GAUL to support his bid for the Western Empire in 383. This date roughly coincides with the end of the

Plan of Segontium



regular occupation of the Roman fort at Segontium. Occupation seems not to have ended completely, however, since the mother church of Caernarfon, Llanbeblig church (whose saint bore the Roman name *Publicus*), is located on the ruins of Segontium, indicating a continual or near-continual use of the site, with Christian worship there from possibly as early as the 5th century. The name *Segontium* is Romano-Celtic, based on the element *sego-* 'strong' (Welsh *hy[f]*), which is very common in place-names, tribal, and personal names; there were two places called *Segontia* in ancient Spain, and a British tribe, the *Segontiāci*, submitted to Caesar. Near Segontium, the river Saint preserves the name; a river goddess **Segontī* is possibly the source of the fort's name, but preservation of *S-* (not the usual Welsh *H-*) suggests that written *Segontium* has influenced the Welsh forms.

RK

Seisyll ap Clydog (Old Welsh Seisill map Clitauc) was king of Ceredigion in the early Middle Ages, probably the later 7th century to the earlier 8th century. He is the namesake of the medieval Welsh kingdom of Seisyllwg, which was formed by adding the three *cantrefi* (sing. cantref) of Ystrad Tywi, the core region of modern Carmarthenshire (sir Gaerfyrddin), to the four *cantrefi* of Ceredigion. In the genealogies (Old Welsh Harleian genealogies §26), Seisyll figures as the 7th-generation descendant of Ceredigion's traditional founder, Ceretic map Cuneda (in modern spelling, Ceredig ap Cunedda). In the 10th century Seisyllwg became the nucleus from which Deheubarth, which was to be the leading Welsh political entity of the south, developed under Hywel Dda. Seisyll's name derives from a notional Late Latin **Saxillus*, itself derived from the ethnonym *Saxō* (Saxon, Englishman, Welsh *Sais*). His father's name goes back to Celtic **clutācos* 'famous'. The name of the kingdom means 'land of Seisyll' (from a notional Romano-British **Saxillācum*) and is derived from its founder/namesake, as is Morgannwg from *Morgan* (Old Welsh *Morcant*), or *Rhufoniog* (< Romano-British *Rōmāniācum*) in north Wales (Cymru) from *Rhufon* (< Latin *Rōmānus*), son of Cunedda. In Gaul, Latin names in *-ācum*, Gaulish *-ācon*, are commonly employed for estates, with the suffix attached to the owner's name. Although the names Seisyll and Seisyllwg support the tradition that the kingdom was founded *c.* 700, we have no contemporary sources for this development, and Ceredigion (Old Welsh *Cereticiaun*) is still the name of the main political unit in sources of the 9th century. The first surviving explanation of the kingdom Seisyllwg and its components is to be found in the tale of Pwyll in the Mabinogi.

Seisyll Bryffwrch was one of the Welsh Gogynfeirdd, a term largely synonymous with *Beirdd y Tywysogion* (Poets of the Princes). He is thought to have flourished *c.* 1155–75. Nothing definite is known about his life. According to a tradition recorded in the Hendgregadredd Manuscript, he competed with Cynddelw for the position of *pencerdd* (chief of song) in the court of Madog ap Maredudd, prince of Powys (†1160), but the series of englyn*ion* which supposedly constitutes their contention (see ymrysonau) for that position seems too short, too simple, and too unfocused to have served this purpose. His distinctive and unattractive epithet, *pryffwrch*, apparently refers to his crotch, unless it is to some sort of forked implement, and identifies this as maggoty or verminous; it is not unlikely that the sobriquet arose as part of the barbed vituperations of an *ymryson*. On Seisyll's name, see seisyll ap clydog. The other extant poems attributed to Seisyll Bryffwrch are found in NLW MS 4973B, a 17th-century manuscript of *Gogynfeirdd* poems, including some whose medieval manuscript source is now lost. There are elegies for Owain Gwynedd (†1170) and

his son Iorwerth Drwyndwn (†*c.* 1174), and a eulogy for the Lord Rhys of Deheubarth (Rhys ap Gruffudd 1132–97), workmanlike poems in a variety of awdl metres and conventional *Gogynfardd* style.

Selbach mac Ferchair Foti was king of the Scots of Dál Riata, 700–23. He and his immediate kinsmen are named several times in the main source for events in north Britain at this period, the Annals of Ulster. If we follow these records—though such a procedure leaves various questions open—it is clear that Selbach was pivotal to a prolonged turbulent period in early Scottish dynastic history, which was characterized by a temporary shift of power to his family, foreign intrigues, and struggles both between rival Dál-Riatan dynasties and within Selbach's own immediate family. His father, Ferchar Fota (Ferchar the Tall), and brother Ainfchellach had been kings of Dál Riata before him. His family belonged to the Cenél Loairn dynasty rather than the Cenél nGabráin (see aedán mac gabráin), which had been the main branch up to this time and which later became dominant again. (The earliest surviving Cenél Loairn pedigree begins with Ainfchellach, and the earlier ancestry of these kings cannot therefore be traced.) Ferchar died in 697, and Ainfchellach was expelled from the kingship and taken as a captive to Ireland (Ériu) in 698. Although it is not clear who the enemy was, Ainfchellach's fall is probably connected with the burning of Dún Onlaig (Dunolly), a fort in Cenél Loairn territory, in 698 and with a further entry in the annals which states that the same stronghold was destroyed in 699. In 712 Selbach besieged 'Aberte', which is probably modern Dunaverty, thus a fort deep in Cenél nGabráin territory. Selbach (re-)built Dún Onlaig in 714, a deed which implies a period of stability and control. In 719 Ainfchellach re-emerged and was killed by Selbach (his brother) in the battle of Findglenn; some Airgialla from northern Ireland were involved and fell there. Although the annals do not tell us this, the facts that Ainfchellach lost the battle of Findglenn and that he had been taken to Ireland some twenty years before make it likely that the unlucky Airgialla were on his side. Also in 719, Selbach fought and lost a sea battle called Ard Nesbi against Dúnchad Bec of Cenél nGabráin; the death of several noble leaders (*comites*) there is noted. In 723 Selbach retired to a life as a cleric; in context, this religious calling was probably forced by political and military pressure, a common course for hard-pressed rulers in the Celtic countries in the early Middle Ages. In 727 Selbach was back on the battlefield, fighting 'the people of Eochaid the grandson of Domnall', i.e. once again, Cenél nGabráin. He does not seem to have succeeded in regaining the kingship, but he did survive to 730; the cause of death is not noted in the obit. It is a noteworthy negative detail that Selbach and his family are not found in battles with the Picts, another aspect in which this period in Scottish history is unusual.

Selbach is a well-attested early Gaelic man's name. As an ordinary adjective (derived from the noun *selb* 'possession'), *selbach* means 'having great possessions', as a noun, 'owner, land-holder'. The Proto-Celtic preform was **selwākos*.

Senchán Torpéist (later spelled Seanchán; *fl.* late 6th to early 7th century) succeeded Dallán Forgaill as chief of the Irish learned poets (*filid*). He is credited with advancing the rights to hospitality of the bardic order. Senchán is most famous for his legendary encounter with the spirit of poetry, which also contains an explanation of how he acquired his epithet. The earliest account of the episode is found in an entry in Sanas Chormaic ('Cormac's Glossary'; Stokes, *Trans. Philological Society* 13.181–5). It

tells how Senchán went to the Isle of Man (ELLAN VANNIN) with his retinue and invited a vile, monstrous creature (which turned out to be the spirit of poetry) to join them in the boat. His horrified crew consequently decided that Senchán should henceforth be called *torpéist*, for which the glossary gives the etymology 'to whom a monster has come' (*doropai peist*). Later accounts of the incident are found in the Middle Irish etymological list *Cóir Anmann* (The appropriateness of names; Stokes, *Irische Texte* 3/2.402–3) and the ULSTER CYCLE tale *Faillsigud Tána Bó Cuailnge* (How TÁIN BÓ CUAILNGE was found).

PSH

Senchas Már (The great tradition) is the best preserved collection of early Irish LAW TEXTS. These texts, which date from the 7th and 8th centuries, were probably organized as a unit around AD 800. They are mainly found in manuscripts of the 14th to 16th centuries and they are all anonymous. It is not known where or by whom the collection was put together, but most of the place-names and personal names cited in the texts relate to the northern Irish Midlands and southern Ulster (ULAID), and it is therefore likely that the material derived from this area. It may have been assembled in a monastic law-school, such as the one at Slane, Co. Meath (Baile Shláine, Contae na Mí).

Originally, the *Senchas Már* consisted of approximately 50 law texts, arranged in three groups. There seems to be no particular logic regarding the order of the collection, but some texts dealing with similar topics have been placed next to each other. For example, the text on the law relating to cats, *Catshlechta*, is followed by the text on dogs, *Conshlechta*. The First Third (*trian toísech*) of the collection starts with an introduction in which there is a general discussion of the legal topics which are covered, as well as an account of the rôle St PATRICK was believed to have played in the codification of Irish law. The second text, *Di Chetharshlicht Athgabála* (On the four divisions of distraint), deals at length with distraint (*athgabál*), i.e. the formal seizure of another person's property to enforce a legal claim against him. It is followed by three fragmentary texts: *Di Gnímaib Giall* (On the acts of hostages), *Cáin Íarraith* (The law of the FOSTERAGE-fee), and *Cáin Shóerraith* (The law of free fief). The last of these deals with the institution of free clientship, and is followed by the nearly complete *Cáin Aicillne* (The law of base clientship). The next text, *Cáin Lánamna* (The law of couples) has survived in its entirety, and is concerned mainly with marriage and divorce. The last text in the First Third, of which approximately half has survived, is entitled *Córus Bésgnai* (The arrangement of customary behaviour). It discusses the nature of Irish law, the maintenance of order in society and the relationship between the Church and the laity. It repeats material from the introduction on the dissolution of contracts, and on St Patrick's involvement with Irish law.

The Middle Third (*trian medónach*) is the best preserved of the three sections. It contains 16 texts, 13 of which have been preserved in their entirety: substantial portions of the remaining three texts have also survived. The first text of the Middle Third is entitled *Na Sechtae* (The heptads) and is of particular value to the student of early Irish law since it covers a wide range of subjects. The material is arranged in groups of seven; for example, the seven churches which may be destroyed with impunity, the seven kings who are not entitled to honour-price, the seven women who have sole responsibility for rearing their offspring, &c.

The next text, *Bretha Comaithchesa* (The judgements of neighbourhood), deals with trespass by domestic animals, fencing obligations, &c. Two specialized treatments of the law of neighbourhood also occur in the Middle Third. These are *Bechbretha* (Bee-judgements), which includes a discussion of trespass by honeybees, and *Coibnes Uisci Thairidne* (Kinship of conducted water), which provides rules for bringing water for a mill across a neighbour's land. BINCHY has suggested that both texts were the work of the same author, as *Bechbretha* is cited in *Coibnes Uisce Thairidne*. The final text in the Middle Third is the partially preserved *Bretha im Gata* (Judgements concerning thefts).

The Last Third (*trian déidenach*) is the least complete section, and there remains a good deal of uncertainty as to its original complement. In his recent study, Liam

Breatnach lists 23 texts in the Last Third, and it is probable that the original number exceeded this. For example, there is evidence that the text on trapping deer, *Osbretha*—of which only a few fragments accompanied by later commentary survive—belonged here. Likewise, the Last Third may have contained *Bretha Luchtaine* and *Bretha Goibnenn*, texts on the law relating to carpenters and blacksmiths respectively. No material which can be assigned to these texts has so far been identified, but Breatnach provides evidence that the associated *Bretha Creidine*, on the law relating to the coppersmith, belonged in this section. Only three of the texts belonging to the Last Third are complete: the short text on sick-maintenance (*othras*), and the longer medico-legal texts *Bretha Crólige* (Judgements of sick maintenance) and *Bretha Déin Chécht* (Judgements of Dían Cécht).

Breatnach has calculated that approximately one third of the material in Binchy's *Corpus Iuris Hibernici* consists of texts from the *Senchas Már* and their associated glosses and commentary. Another less clearly defined group of law texts has Munster (Mumu) associations, and includes Bretha Nemed *Toísech* (The first *Bretha Nemed*), *Bretha Nemed Déidenach* (The posterior *Bretha Nemed*), and *Cáin Fhuithirbe* (The law of Fuithirbe). The wisdom-text Audacht Morainn also belongs in this tradition since it has verbal correspondences with both Bretha Nemed texts. Many other law texts—such as the invaluable excursus on status, *Críth Gablach* (Branded purchase)—have no known connection with the *Senchas Már* or with *Bretha Nemed.*

Fergus Kelly

Senchus Fer n-Alban (*Míniugud Senchusa Fher n-Alban* [Explanation of the tradition of the men of Scotland]) has some claim to being the oldest administrative document from Scotland (Alba). It survives in four Irish manuscripts dating from between the early 12th and the mid-17th centuries. Although all authorities agree that a text composed between *c.* 650 and *c.* 750 lies at its core, all the surviving manuscripts ultimately derive from a lost exemplar of the late 10th century which had considerably reworked the original. The extant text consists principally of two parts, comprising a genealogical schema deriving several kindreds from Eochaid Munremar (thick-necked) followed by an assessment of the number of households pertaining to some of the lineages so derived. The title is not original since it contains genealogical claims that Eochaid was the ancestor of about 24 lineages, most of whom were in Ireland and only six and one portion of a seventh were said to dwell in Britain. The surviving recensions of the text, however, seem to preserve greater detail about the lineages which went on to have a significant history in the kingdom of Alba after the conquest of the Picts. In its original form it is quite likely that all 24 lineages were covered in as much detail and that much of the document dealt with the north of Ireland (Ériu), where 18 of the lineages were resident. The apical figure of the genealogies, Eochaid, would, on the basis of assigning about 30 years to each generation, have had a *floruit* some 200 years before the compilation of the original tract and may well have been intended to be a contemporary of St Patrick. It is unlikely that the upper generations of the pedigree are historically reliable.

The *Míniugud* is often described as an account of the descent of the Dál Riata, but this term, which is linguistically later than the composition of the prototype (*Riata* was, in the 7th century, *Réti*), occurs only once, in the second section, when it explicitly refers only to three of the 24 lineages, Cenél nGabráin, Cenél nOengusa, and Cenél Laoirnd Móir. In this second section several households are ascribed to the 'three thirds of Dál Riata'. There is also partial information regarding which kindreds dwelt where. Cenél nGabráin occupied 'Kintyre and the borders of Cowal (Comhghall)', Cenél nOengusa were divided between Ireland and Islay (Ìle), and Cenél Loairn have left their name in the modern region of Lorne in north Argyll (Latharna, Earra-Ghaidheal). The assessment of households yields figures of fighting men organized into crews of 'seven-bench' ships and it seems that this part of the document originated as a record of military responsibilities. What is not clear

is whether this levy record and the description of the descendants of Eochaid Munremar originally went together or not. It is possible that the preservation only of the levy records for the three thirds of Dál Riata is the result of a later Scottish redactor failing to copy the Irish equivalents or it may be that the levy record belongs to a time when Dál Riata had emerged as a significant kingdom comprising only the three thirds. It cannot be assumed that the other 21 kindreds were ever regarded as parts of Dál Riata, and the schema which links them to the three thirds through shared descent from Eochaid may reflect claims of overkingship over a considerable portion of the north of Ireland.

Alex Woolf

The **Senones** were a Gaulish tribe attested in central GAUL and northern ITALY, on the east coast, in the present-day region of the Marche, north-west of Ancona, between the rivers Utens (present-day Uso) and Aesis (Esino) (LIVY 5.35.3; POLYBIUS 2.17.7; PTOLEMY 3.1.19). According to classical historians, they migrated to Italy in the 5th or 4th century BC under the leadership of BELOVESUS and Segovesus (Livy 5.32) and took part in the Gaulish attack on ROME led by BRENNOS OF THE SENONES *c.* 387 BC (Livy 5.32; Gellius 17.21.21). As a tribe which settled in the ADRIATIC region, it is possible that they were among the Celts who met ALEXANDER THE GREAT in 335 BC. Their main cities (later Roman colonies) were Ariminium (Rimini), Sena Gallica (Senigallia), and Pisaurum (Pesaro). The territory of the Senones contained the important Celtic necropolises at MONTEFORTINO di Arcevia and at San Martino in Gattara along the Lamone, which lies above the Celtic settlement of Brisighella (an ancient **Brixia Gallia*), south-west of Ravenna.

The Senones in TRANSALPINE GAUL were located north-east of the Loire (ancient Ligerim) and south of the Seine (SEQUANA). Their centre was present-day Sens (GALLO-ROMAN Agendicum) at the Yonne; the town preserves their name. They became allies of the Romans in 57 BC (*De Bello Gallico* 2.2.3, 5.54.2), but later joined the coalition against CAESAR under VERCINGETORĪX in 52 BC (*De Bello Gallico* 7.4.6). Their territory was the core area for the Gallo-Roman province of Senonia/Lugdunensis Quarta, which was formed in the 4th century AD when the province of Gallia Lugdunensis was divided (see LUGUDŪNON).

The name *Senones* is Celtic and is based on the root *seno-* 'old' found, for example, in Old Irish *sen*, Old Welsh, Cornish, and Breton *hen*.

PEB

Sequana was the ancient name of the river Seine, which formed an important, though probably approximate, boundary between ARMORICA to the west and the tribes known as the BELGAE to the east. The ancient name is often cited as one of the few examples of forms of Q-CELTIC in GAULISH (see also CELTIC LANGUAGES). It is Celtic and probably related to the Old Irish verb *sechithir* 'follows', cognate with Latin *sequitur*, in the sense 'she who flows, rolls on' or even emphasizing the river's importance for travel and trade. The goddess Sequana had a cult site continuing from pre-Roman to Gallo-Roman times at the source of the river (SAINT-GERMAIN-SOURCE-SEINE), where eight INSCRIPTIONS have been found bearing her name, each time with a form of Latin *dea* 'goddess'. A bronze statuette from the sanctuary shows her as a draped figure with a diadem signifying high rank; she stands in a boat with a swan- or duck-shaped prow and is clearly a personification of the river. Objects in stone, wood, and silver shaped like organs and body parts indicate that Sequana's was a healing cult. Her supplicants are shown wearing heavy Gaulish woollen hooded cloaks. The Sequani tribe were located in historical times south and east of the source of the Seine in the high country between the AEDUI and HELVETII. They

are mentioned several times by CAESAR and joined the allies of VERCINGETORĪX at ALESIA. The Sequani probably took their name from the river; therefore, they might have moved from their original home, but it is also possible that the group named after the river had always been those controlling the high watershed between its source and that of the RHÔNE which conveyed the trade between central GAUL and the Mediterranean. In the Verona List of dioceses and provinces of the Roman Empire (*c.* AD 303–324), the province of Sequania is a large area extending from the north-western ALPINE region to east-central Gaul.

Serf, St, or Servanus is remembered in his 13th-century Life as a Scottish cleric and bishop and a contemporary of the far better attested ADOMNÁN, abbot of Iona (EILEAN Ì) 679–704. However, an earlier lifetime for Serf is implied by the mid-12th-century 'Herbertian' Life of KENTIGERN (†612), in which Servanus figures as Kentigern's teacher. Owing to these contradictory contemporaries, it is virtually impossible to reconstruct a historical career of St Serf, and his Life is full of fantastic and impossible details, including the following. He is said to have been the son of Obeth, a king of Canaan, and Alpia, an Arabic princess. He became patriarch of Jerusalem and was then elected pope (a confused identification with either Pope Severinus [†640] or Sergius I [†701] may account for this bizarre claim). Serf then moved northward, crossing the straits of Dover dry-shod, finally arriving at Culross (Cuillenros) in Fife (Fíobh), on the north bank of the Firth of Forth (Foirthe). Once in Scotland (ALBA), the action becomes less fantastic. Thus, with the permission of the Pictish king Bruide son of 'Dargart' (probably meaning the historical Bruide mac Derili [†706]), Serf founded a monastery in Culross. (The synchronism of St Servanus with king 'Brude fitz Dergert' appears also in versions of the PICTISH KING-LIST.) With the help of Adomnán, Serf founded another monastery in Loch Leven in Kilross, a foundation connected with the ascetic Céili Dé movement of the 8th and 9th centuries. The significance of the implausible earlier episodes of the Life is uncertain. The claim of Near-Eastern origins may be a garbled reflection of Adomnán's influential scholarship on the holy places of the Near East. It has been seen alternatively as a sort of allegory for the historical Serf's siding with the Roman reckoning during the EASTER CONTROVERSY of the 7th and earlier 8th centuries, though his successors may well have connected him retrospectively with famous holy places in order to impart a generalized air of sanctity as opposed to making specific claims of orthodoxy. In any event, comparable eastern origins are ascribed to a second early Scottish saint, namely CURETÁN. The associations with Adomnán and Bruide have encouraged some historians to see a historical figure of the turn of the 7th and 8th centuries behind the legend. Dedications to St Serf cluster in east-central Scotland, i.e. what had been southern Pictland, namely Fife, south-east Perthshire, and Clackmannan. The name *Servanus* is probably Latin, based on the verb *servō* 'I save, keep, preserve, serve'.

Serglige Con Culainn ('The Wasting Sickness of Cú Chulainn') is a complex ULSTER CYCLE narrative in mixed prose and verse. It is of interest as a supernatural adventure which offers points of comparison with FIANNAÍOCHT, the MABINOGI, and ARTHURIAN LITERATURE, and revealing ideas about the OTHERWORLD. The tale begins at SAMAIN. Mysterious birds appear, and Cú Chulainn tries to shoot a pair for his wife (who, in this section, is called Eithne Ingubai), but, inauspiciously, he fails, these being the first shots he has missed since first taking arms. Afterwards, he dreams of two strange women who beat him. When he awakes, he has lost the power

of speech and is unable to speak for a whole year. The following Samain a stranger comes to tell him that the otherworld woman, Fand, awaits him. Returning to the place where he had the dream, Cú Chulainn meets a second otherworld woman, Lí Ban (the beauty of women), who offers him Fand's love if he is willing to fight for one day as the champion of Lí Ban's husband at the place called *Mag Mell* (the plain of delights). The romance and battle eventually happen, but this is interrupted by a description of the DIVINATION ritual called *tarbfheis* (bull-feast; see FEIS) and the WISDOM LITERATURE text, *Bríatharthecosc Con Culainn* ('The Word-Teaching of Cú Chulainn'), in which Cú Chulainn instructs his foster-son Lugaid Réoderg, king of Tara (TEAMHAIR). Although this interlude seems disruptive, with texts awkwardly spliced together (see below), the intention was possibly to show revealed truth communicated back to this world by a visionary experiencing an otherworldly quest. When the story continues, Cú Chulainn's wife, now called Emer, becomes jealous and tries to kill Fand. Cú Chulainn returns to Emer, and Fand's immortal husband, MANANNÁN, returns for her. In the end, by means of druidic potions and Manannán shaking his cloak between the lovers, Cú Chulainn is made to forget Fand; again, events work in tandem in this world and the Otherworld. There are two scribal hands in the sole manuscript of *Serglige Con Culainn*, LEBOR NA HUIDRE. In his edition, DILLON drew attention to further linguistic evidence for a composite text combining work of late Old Irish and late Middle Irish dates. The story inspired the play *The Only Jealousy of Emer* by W. B. YEATS.

shield

The PROTO-CELTIC word for shield was **skeito-*, as attested in Old Irish *scíath* (m.), Scottish Gaelic *sgiath* (f.), Old Welsh *scuit*, Middle and Modern Welsh *ysgwyd* (f.), Old Breton *-scoet* (common in personal names), Middle Breton *scoet*, Modern Breton *sko(u)ed* (m.). Latin *scūtum* (< **skoitom*) is related, but the Celtic is not borrowed from Latin. It is possible that ancient Celtic **scēto-* < **skeito-* was never recorded in the GREEK AND ROMAN ACCOUNTS because it was too similar to the Latin to be considered a distinct word. Early Welsh *sgeth* in the GODODDIN can be explained as a borrowing from Early Old Irish **scēth*. The central projection in front of the hand grip, the shield boss, is called *tul, taul* in Old Irish, *tal* in Early Welsh < Proto-Celtic **talu-*.

The shield was probably the most widely used Celtic defensive weapon (see PROTO-CELTIC WEAPONS) and is one of the finds frequently associated with IRON AGE male burials, even though in most cases only the iron parts survive. The typical shield of the Continental Iron Age was an oblong oval, less often hexagonal or octagonal, flat wooden shield about 1 to 1.2 m high with a protruding midrib and a metal shield boss across the midrib to strengthen the shield at the handle. To further strengthen the stability of the shield, an iron rim was also attached. Whether the wooden planks which made up the body of the shield were additionally covered with hide is unknown, and even though it is likely that the shields were ornately painted, no example of such decoration survives. The shield boss, originally a relatively thin iron band, became much wider and more elaborately fashioned during the Iron Age, seemingly in order to increase its protective abilities, and it was finally developed to a round or square central boss about ten times larger than the early models (Rapin, *Celts* 321–31).

British shields seem to have been considerably smaller, being only 0.6 to 0.8 m in height, provided that the examples of decorated sheet metal shield covers, as known from the BATTERSEA and WITHAM SHIELDS, are representative. These two, and an ornate shield boss from LLYN CERRIG BACH, also give an impression of how shields were likely to have been decorated, and provide some of the most famous examples of early Celtic art (Megaw & Megaw, *Celtic Art*; see also ART, CELTIC).

Irish shields seem to have been similarly small, round or rectangular, and constructed from a wooden

body with a leather cover, without any metal parts. The only surviving example, from Littleton Bog, Co. Tipperary (Baile Dhaith, Contae Thiobraid Árainn), has a straight bar of oak functioning as the handle, and a domed wooden boss as the protective cover for the hand. It is fashioned from a single board of alder wood, covered with calf-hide on both sides, the outside even showing ancient cuts and incisions that doubtlessly were the result of it being used in battle (Raftery, *Pagan Celtic Ireland* 146).

Shields remained in use throughout the early and central medieval periods, even though the types in use were mostly on the wider contemporary European patterns. As such, the shields described in the Irish epic Táin Bó Cuailnge ('The Cattle Raid of Cooley') are typical of the general north-western European shield of the 7th to 10th centuries AD, and show no similarities to the shields used during earlier periods in Ireland (Ériu), which were relatively large round shields, also typical of those used by the Vikings (Mallory & McNeill, *Archaeology of Ulster* 168–9). The most usual Welsh word today and since the central Middle Ages is *tarian*, which is a borrowing from Old English *targe* (GPC s.v. tarian) and may reflect replacement of earlier La Tène and/or Roman types with a post-Roman Germanic type.

Statue of a Gaul carrying a shield of Celtic type from Mondragon, Vaucluse, France, late 1st century BC

Shinty (or its variants shindy, shinnie, shintie shindig) is known in Scottish Gaelic as *iomain* or *camanachd*, which mean, literally, 'driving'. A strictly amateur game, it shares a common sporting and literary heritage with the Irish game of HURLING, with both codes featuring extensively in myth, legend, and song. Some similar version of stick and ball games is attested widely throughout Britain and Ireland (Éire) and is of great antiquity. A game of this sort is described in *Macgnímrada Con Culainn* ('The Boyhood Deeds of Cú Chulainn') in the Ulster Cycle, looking back to the pagan past. In modern times, shinty has been played in most of the far-flung corners of the world to which Scots, and Gaels in particular, were exiled and in places where Scots fought in World Wars. It has also, on occasion, been banned by statute. There was a very active shinty scene in England in the 19th century, with games frequently played in—or by teams named after—cities such as Birmingham, Manchester Camanachd, Old Trafford, the Highland Camanachd Club of London, Cotton-opolis, Bolton, Nottingham Forest, and Stamford Bridge, to name only a few.

The origins of shinty are often linked to those of golf and ice hockey, given the nature of the sticks (sing. *caman*, pl. *camain*) used and the method of

scoring. In its modern organized form, which dates to the formation of the sport's ruling body, the Camanachd Association, in 1893, the game is played on a rectangular field which is not more than 170 yards (155 m) nor less than 140 yards (128 m) in length, and not more than 80 yards (73 m) nor less than 70 yards (64 m) in breadth, with minimal markings. In order to score the ball must be placed between two upright posts, equidistant from the corner flags and 4 yards (3.66 m) apart, joined by a horizontal crossbar 3.33 yards (3.05 m) from the ground. The goal has a net attached to the uprights and crossbar, as in association football. The ball is spherical, made of cork and worsted inside, and the outer cover of leather or some other approved material. It is not more than eight inches (20 cms) and not less than 7.5 inches (19 cms) in circumference. Traditionally, shinty was played at New Year, and particularly the Old New Year (Oidhche Challuinn, January 11–13) as part of local festivities. It is now played almost exclusively in the HIGHLANDS and some urban areas of Scotland (ALBA), with national leagues, a burgeoning women's game, and international shinty-hurling matches against Ireland, played to compromise rules.

Hugh Dan MacLennan

Síd, Modern Irish *sídh*, now *sí*, refers to hills or mounds (often in reality containing prehistoric burials) conceived of as hollow and the residence of supernatural beings, such as the TUATH DÉ of early Irish tradition and FAIRIES of modern folk belief; cf. Scottish Gaelic *sìth* 'fairy', Modern Irish *síóg* 'fairy', BEAN SÍ 'woman of the fairy mound, banshee'; there are many other related words. *Síd*, or a word with the same form, also means 'peace'; Modern *síocháin* is used for the 'Peace Process' of Northern Ireland, for example. The same double meaning is found also in the related BRYTHONIC words (which show a different inherited vowel grade): Welsh *gorsedd* (cf. the magical mound, Gorsedd ARBERTH) and *hedd*, *heddwch* 'peace'. If these all belong to the same root, the basic sense is 'seat', hence that which is established and settled or held. The supernatural stronghold *Kaer Sibi* or *Kaer Sidi* mentioned in PREIDDIAU ANNWFN (Spoils of the OTHERWORLD/Spoils of ANNWN) and again in a related poem in LLYFR TALIESIN ('The Book of TALIESIN') shows a borrowing of the Irish word. A cognate word possibly occurs in Old Celtic as the noun *siTeś*, for the thing whose granting is the subject of the LEPONTIC inscription from Prestino, and so might actually mean a pagan Celtic burial or memorial. For the concept of the *síd* in early IRISH LITERATURE, see OTHERWORLD §2.

Sìleas na Ceapaich (Sìleas Nighean Mhic Raghnaill, Sìleas NicDhòmhnaill, Cecily/Giles MacDonald, *c.* 1660–*c.* 1729) was a poet whose compositions in vernacular SCOTTISH GAELIC ranged from elegy to politics and religion. She belonged to the MacDonalds of Keppoch (Ceapach), but spent much of her life in Banffshire (Banbh) as the wife of Alexander Gordon of Camdell. Her political poetry springs from the events of the 1715 Jacobite Rising and shows her strong Jacobite sympathies; it deals with the popular expectation of the arrival of James Stuart the Old Pretender, the indecisive battle of Sheriffmuir, and the state of uneasy anticipation between the battle and the end of the Rising (see further JACOBITE POETRY; JACOBITE REBELLIONS). The religious poems reflect the Roman Catholic faith that Sìleas adhered to; of particular significance here are her reflections on death. This subject is also treated in her elegies, where religious thoughts mingle with praise of the subjects of the laments. In *Alasdair a Gleanna Garadh* ('Lament for Alasdair of Glengarry'), Sìleas uses conventional praise imagery while a more personal note is evident in the elegies for her

daughter and her husband and also in *Cumha Lachlainn Daill* ('Lament for Blind Lachlann') for the blind harper Lachlann MacKinnon (MacGill-Eain, *Ris a' Bhruthaich* 247–8). In several poems, Sìleas gives advice to young women, perhaps her own daughters, on the subject of courtship and particularly the dangers associated with premarital sex.

In her political and some other poems, Sìleas emphasizes the achievement of various branches of Clan Donald, thus indicating that she intended her poetry mainly for a MacDonald audience (Ó Baoill, *Poems and Songs* lx–lxii). Sìleas uses loose forms of syllabic metres as well as stressed metres in her poetry, and tunes are extant for several items (Ó Baoill, *Poems and Songs* 223–47).

Anja Gunderloch

Silva Litana (the broad forest) in northern ITALY was the site of a battle, fought in 216 BC, in which the Romans were heavily defeated by the Cisalpine Gauls, as described by LIVY (*Ab Urbe Condita* 23.24):

> L[ucius] Postumius, consul designate, was lost together with his host in [CISALPINE] GAUL. He was leading his army by way of a huge forest which the Gauls call Litana. The Gauls had cut the trees to the right and left of the road in such a way that they stood if not disturbed but fell if lightly pushed. Postumius had two Roman legions . . . that he led into the hostile country. The Gauls surrounded the wood, and when the [Roman] force entered the wood they pushed the outermost trees that had been cut. These trees fell one against the other, each one having been unstable and barely attached, and piled up from either side crushing the armament, men, and horses, so that scarcely ten men escaped . . . Postumius died fighting with all his strength trying to avoid capture. The spoils stripped from his corpse and the severed head of the commander were taken by the BOII to their holiest temple. Then, after they removed the flesh from the head, they adorned the skull with gold according to their custom. They used it as a sacred vessel to give libations on holy days, and their priests and the custodians of their temple used it as a goblet. (Koch & Carey, *Celtic Heroic Age* 36)

This passage is an important piece of evidence for the HEAD CULT among the ancient Celts. The practice of making ritual cups from the heads of powerful enemies was not, however, uniquely, or even primarily, Celtic, but was evidently a widespread attribute of the HEROIC ETHOS among Eurasian northern barbarian élites in the first millennium BC. It is described, for example, by HERODOTUS among the Iranian-speaking Scythian nomads of the Pontic Steppes in a passage which illuminates the ideology behind the custom:

> But for the heads themselves—though not of all, but of a man's deadliest enemies—each man [of the Scythians] saws off all the part beneath the eyebrows and cleans the rest. Then, if the man who does this is poor, he simply stretches a strip of raw oxhide over the outside and so uses it. But if he is rich, he gilds it on the inside and uses it in this for a drinking cup. They do this, too, in the case of kinsmen with whom they have had differences and whom they have finally conquered in combat in the king's presence. And when strangers of consequence come to visit, their host brings round these heads and tells, over each one, how they were his kinsfolk but waged war upon him, and how he himself conquered them; and they speak of this as the act of a hero. (Grene, *History / Herodotus* 304)

A skull cup figures as a great trophy among central Asian barbarians as a climax to a struggle in the period *c.* 209–*c.* 160 BC, as described in two Chinese accounts, the *Shiji* of Sima Qian (Ch. 123) and the *Qian Han Shu* of Ban Gu (Ch. 9mA). The peoples in question were the Yueji, who were probably INDO-EUROPEAN (Iranian or Tocharian speakers) and appear later in Indian and Persian sources as the Kushan dynasty, and the Xiongnu, who were probably Altaic speakers and have often been equated with the Huns who appeared in Europe some centuries later. According to Sima Qian, the Yueji were pastoral nomads, therefore they

had the same way of life as the Xiongnu. They had at first been strong and contemptuous of the Xiongnu. However, both sources tell that when Modun became ruler of the Xiongnu (*c.* 209 BC), he attacked and defeated the Yueji. Modun's son and successor, Laoshang (r. *c.* 174–160 BC), then killed the king of the Yueji and made a drinking vessel of his skull (Pulleybank, *Bulletin of the School of Oriental and African Studies* 33.154–60).

The place-name *Litana* is Celtic, cf. Old Welsh *litan*, Old Breton *litan*, Old Irish *lethan*, all meaning 'broad'.

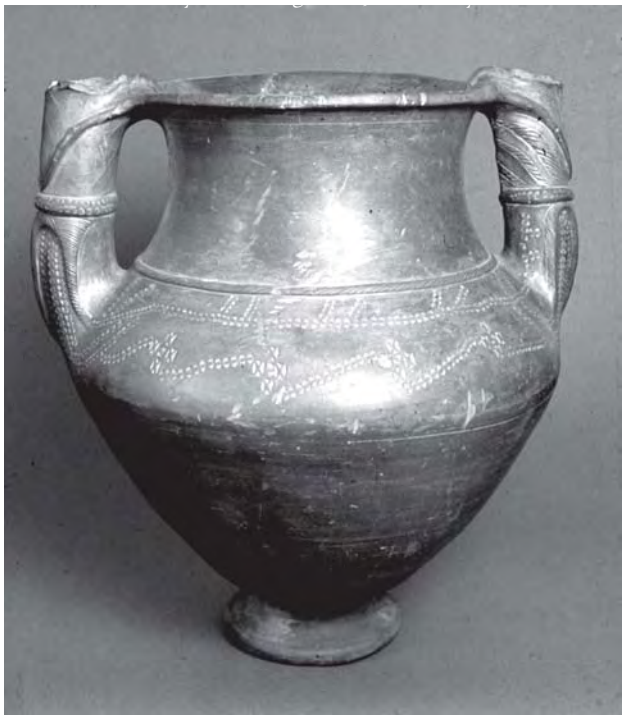
Singidūnon is the name of a major Celtic fortified settlement, now largely destroyed, but which must once have been located near what is now the centre of Belgrade, the capital of Serbia. The place-name is Celtic, as reflected in the second element of the compound, Gaulish *-dūnon*, cognate with GOIDELIC *dún*, BRYTHONIC *din* found in names referring to hill-forts or RING-FORTS (see FORTIFICATION; OPPIDUM). The most probable specific location of Singidūnon can be defined along the Zvezdara incline, reflected there in two prehistoric cemeteries separated by the valley of the river Mirijev: one on Rospa Čuprija, excavated between 1954 and 1963, and the other at Karaburma, excavated between 1958 and 1963.

Decorated kantharos from tomb 34 of the Karaburma



At Karaburma 96 graves were uncovered, of which 90 were cremation burials and the remainder inhumation burials. This necropolis dates from the 3rd to the end of the 1st century BC. On Rospa Čuprija, 24 inhumation and cremation burials dating to the Late pre-Roman IRON AGE (i.e. 2nd/1st century BC) were uncovered, as well as 22 cremation burials from the Early Bronze Age (i.e. within the period *c.* 2500×*c.* 1300 BC).

The oldest Iron Age burials belong to the Illyrian-Pannonian tradition (see also PANNONIA). Among the artefacts in grave 22, an early LA TÈNE grave, were found a bronze situla (wine bucket) and a cup of Greek origin; these artefacts point to a connection between the older burials and those of subsequent Celtic groups who presumably returned to the area after having invaded Greece in 279 BC and who later formed a local community of SCORDISCI (see also BRENNOS OF THE PRAUSI). In other words, we can see a continuity in this community of Celts in the BALKANS before, and then again following, the upheaval of the invasion of Greece.

The Middle La Tène graves (3rd and 2nd centuries BC) contained weapons classed as east Celtic. In the Late La Tène graves (2nd and 1st centuries BC), there were more distinctive forms mixed with Dacian, Illyrian, and Italian imports (see also DACIANS). During this period, the number of warriors armed solely with spears increased (see WARFARE), a fact which may reflect social as well as tactical changes (such as the impact of the Macedonian phalanx tactics). The most typical artefacts were astragal belts (made of parts shaped like the ankle-joint bones of cows and horses) and Italian metal utensils (Pescate-type ladles and Aylesford-type pans). At Karaburma, a horse burial with well-preserved bridles was also uncovered.

Grey wheel-thrown pottery with smoothed ornamentation typifies the ceramic artefacts, among which there were numerous pots, crockery, and smaller *kantharoi* (a type of two-handled ceramic vessel), all of which are characteristic of Scordiscian ware, though in one case a very exceptional *kantharos* with relief-ornamented handles was found. Painted pottery also appeared in the latest graves.

Mitja Guštin

Siôn Cent, a 15th-century Welsh poet about whom little is known, is referred to in the earliest manuscript attestations as John Kent or Siôn y Cent. Historical information about him was so heavily confused by later redactors with other similarly-named but unconnected religious and secular figures that Siôn became the subject of myth and legend. The name itself appears to be a sobriquet: the poet Rhys Goch Eryri calls him both Siôn and Ieuan; and while the element Cent is uncertain, the simplest explanation may be that it refers to the English county of Kent. Were this to be the case, it would indicate either that Siôn himself, or his ancestors, were of mixed English and Welsh stock, or that he had spent time there; alternatively, it may simply have been a nickname. It should also be noted that the surname 'Kent' does occur in Wales (CYMRU) at this period. Siôn's *floruit* remains the subject of debate (variously estimated *c.* 1400–1430/45), as does the authentic canon of his work. Some 170 poems and fragments are attributed to him in the sources, but of these the great majority are apocryphal. The standard edition of his work selects just 17 poems, all of which are in the CYWYDD metre; however, the authenticity of even some of these is in doubt and a new critical edition is now in preparation.

For all the uncertainties, even the comparatively small number of poems which may with confidence be attributed to Siôn Cent show him to be one of the most important of the CYWYDDWYR of his time, and probably the single most significant religious poet of the later Middle Ages in Wales. Later tradition associates him with the south and east of Wales and with the family of John Scudamore of Kentchurch, Herefordshire (Welsh swydd Henffordd), said to be the son-in-law of OWAIN GLYNDŴR. Here too, however, there is evidence of a cleric named John Kent, with whom the poet may have been conflated. A *cywydd* praising the people and land of BRYCHEINIOG is certainly authentic, though this need not imply that Siôn was himself native to those parts. References and allusions in his poetry suggest that Siôn may have received a wider education than most Welsh poets of the day, but neither a specific university background nor a connection with any religious order has as yet been identified, and Saunders LEWIS's assertion that the influence of Roger Bacon's *Scientia Experimentalis* and the Nominalism of William of Ockham may be detected in the work of Siôn Cent has not been universally accepted.

Of the innovative nature of his poetry, however, there can be no doubt. In his *ymryson* (contention, see YMRYSONAU) with Rhys Goch Eryri concerning the origin and purpose of the AWEN (poetic inspiration), Siôn Cent ruthlessly attacks the very basis of the bardic tradition of praise poetry and what he saw as its inherent falsehood. For Siôn, the world's transience and the inconstancy of human nature is mirrored in the terrifying image of death itself: an ever-present reminder of the inevitable encounter with divine justice, and one which is dwelt upon in great detail in several of his extant poems. The poet's primary responsibility, therefore, was to analyse human nature and mankind's response to God; to declare uncompromisingly the eschatological choice facing each individual; and to summon all to repentance. This he does by reference to biblical, liturgical, literary, and historical exempla, many of which are without precedent in Welsh religious verse. Although the majority of Siôn Cent's poems are undoubtedly didactic, reflecting the religious climate and themes of the time, another important aspect of his work concerns the condition of the Welsh people in the aftermath of the Glyndŵr revolt and the exploitation of the powerless by those who have usurped their property. Siôn draws on the historiography and vaticinal literature of the day to remind his people of their past dignity and hope for

the future; their unnamed oppressors, on the other hand, are castigated by the poet and confronted with the inevitable and eternal consequences of their injustice.

Any analysis of Siôn Cent's poetry is hampered by uncertainties surrounding the canon of his work and its confused textual transmission. Although the influence upon him of themes and metrical devices found in contemporary English, French, and Latin religious verse is clear, Siôn's trenchant observations, antitheses, SATIRE, and word-play reveal a distinctive and personal perspective which makes him unique among late medieval Welsh religious poets, and which inspired a substantial body of contemporary and later imitators. At its sombre best, the poetry of Siôn Cent is both profound and challenging; nor can it be denied that his influence on the development of Welsh religious verse was considerable.

Siôn Tudur (*c.* 1522–1602) was one of the last of the Poets of the Nobility (see CYWYDDWYR). He lived at Wicwair, near St Asaph (Llanelwy), in Flintshire (sir y Fflint), and was related to some of the leading families of north-east Wales (CYMRU), including the Trevors and the Mostyns. As a young man he entered the service of Prince Edward, later Edward VI, and served the royal family into the reign of Elizabeth I. Most of his extant poetry was composed after his return to Wales—he was a participant in the Caerwys EISTEDDFOD in 1567—but his work is also indebted to the popular and learned culture of Tudor London (see TUDUR).

Over 300 of his poems survive, and of these over a hundred are elegies and eulogies to members of north Wales families. Although his poems contain the usual elements expected in praise poetry, Siôn on occasion felt that the eulogies of some poets were prone to excessive hyperbole. He is best known for his satirical compositions, such as *Cywydd y Beirdd* (The CYWYDD of the poets), in which he rails against the practice of composing poems to individuals undeserving of the art:

Ninnau'r beirdd a wnawn, rai bas,
O'r arddwyr wŷr o urddas,
A rhoi achau rhy wychion,
A mawl i Siac mal i Siôn.
(Enid Roberts, *Gwaith Siôn Tudur* 1.606)

We poets, lowly ones, make / of the ploughmen men of degree, / and give splendid pedigrees / and praise to Jack as to John.

His poems on gamblers, usurers, and government officials paint a lively portrait of his age.

There was also a less worldly side to his character, and he is known to have translated twelve of the Psalms into Welsh, eleven of which are in the *cywydd* metre. However, it is for his lively evocation of life in late-Tudor Wales and London that Siôn Tudur is best remembered.

Sirona is the name of a Continental goddess who is attested with 29 INSCRIPTIONS and numerous statues. Her name was sometimes spelled *Đirona* with so-called *tau gallicum*, used to represent a GAULISH consonant not found in Latin, thus probably indicating a pronunciation [tsiːˈrona] or [θiːˈrona]. Most modern commentators see the name as related to Breton *sterenn*, Welsh *seren* 'star', with a different vowel grade. In favour of Sirona as goddess of the stars is the fact that she appears in six inscriptions—and that

statues of her appear—side by side with Apollo (Grannus). Another explanation of her name is that of the 'female calf' (cf. Damona); if so, *Sirona* may be compared with the Galatian dynastic name *Deiotaros* 'divine bull'. The objects depicted with Sirona—for example, at the shrine at Hochscheid dedicated to her cult—indicate that the goddess was believed to have healing powers. In this and other characteristics, she has been likened to the mother-goddesses (Matronae).

Slave chain found at Llyn Cerrig Bach, Anglesey, Wales, pre-Roman Iron Age

slavery and the Celtic countries, ancient and medieval

The institution of slavery has been found in many societies worldwide since earliest recorded times, and was widespread across ancient Europe, producing a thriving slave trade which extended from Ireland (Ériu) to the eastern limits of the Roman Empire. Caesar described the majority of common Gauls as little better than slaves (*De Bello Gallico* 6.13), and claimed that actual slaves were burned on their masters' funeral pyres (*De Bello Gallico* 6.19). What kind of slavery in fact existed among the tribal Celts is unknown, but it was probably roughly similar to that better documented among the Greeks and Romans, as well as the medieval Celtic peoples, with the slave population deriving mainly from war, slave raids, and penal and debt servitude. Such slavery became a hereditary condition, but manumission was possible through payment of the slave's worth. The Celts themselves could fall into slavery at the hands of foreign peoples, and Caesar's campaigns were claimed to have resulted in one million Gauls being enslaved, in addition to the some 300,000 Gaulish slaves already in Italy (Cunliffe, *Ancient Celts* 212, 215). The fact that Old Irish *cacht* and Welsh *caeth*, both meaning 'slave, captive' (cf. Breton *kaezh* 'unfortunate'), are most probably an old Celtic borrowing from Latin *captus* suggests that exchange of slaves was an early domain of contact between Latin and Celtic speakers. Slavery persisted into medieval Christian Europe, despite occasional efforts by the Church to moderate both slave trading and the treatment of slaves, though the Church was more concerned with the plight of Christian slaves than the institution of slavery itself. The use of the word *wealh* (foreigner, the etymon for 'Welsh') in the sense of 'slave' in late southern English sources hints that several of the native Brythonic population may have been enslaved by Æthelstan when he conquered the south-west of England (Pelteret, *Slavery in Early Medieval England* 70). In 1102 England outlawed the use of the English as slaves, but Irish and Norse traders continued to capture them until the Synod of Armagh in 1170 outlawed the use of English slaves in Ireland (Giraldus Cambrensis, *Expugnatio Hibernica* 1.18).

Slavery seems to have been especially prevalent in the Celtic societies (Wendy Davies, *Wales in the Early Middle Ages* 64). Irish laws warned that freeing slaves could bring on the failure of the master's crops and milk (Kelly, *Guide to Early Irish Law* 96). In the Domesday Survey of 1086, slaves were not common in eastern England, but were prominent in those parts

of Cornwall (Kernow) and Wales (Cymru) that were included. Slaves are prominent in Brittany (Breizh) at the earliest period of detailed documentation, i.e. the later 9th century, but largely absent from sources of the 12th and later centuries. For documentary evidence of the keeping and freeing of slaves in 10th-century Cornwall, see BODMIN MANUMISSIONS.

Both Irish and Welsh law codified slavery, specifying the responsibilities of slaves (and masters for their slaves) in matters ranging from crimes of violence to sexual relations. (In the latter case, the freeborn person was responsible for the rearing of any child born as a result of sex with a slave, but slaves otherwise had no rights or social protections [Kelly, *Guide to Early Irish Law* 96].) The Irish sources especially imply a hierarchical ranking of grades of servile dependants. From the LAW TEXTS and other early medieval documentary evidence, it appears that the status of slaves in the CELTIC COUNTRIES was generally better than that of the chattel slaves of ancient Rome, since they usually had households and families (though lacking the legal rights enjoyed by serfs in the later Middle Ages).

Although most slaves seem to have been tied to plots of land in serfdom, trade in slaves was common enough to result in the word *cumal* (female slave) being used as a unit of value in Ireland (Kelly, *Guide to Early Irish Law* 112), and Welsh *angell* (< Latin *ancilla* 'female slave') is sometimes similarly used as a unit of value. BRITAIN had been exporting slaves since ancient times, and continued to do so unwillingly during the late Roman period and early Middle Ages, due to slave-raids on the British coasts conducted by the Irish (with the future St PATRICK as its most famous victim) and later, during the 10th and 11th centuries, by the Norse, who also captured Irish slaves. Indeed, while the Irish raided mainly for their own labour supply, the Vikings traded their captives across Europe, bringing slaves from the Celtic countries to the Holy Land, as well as Moors to Ireland (Pelteret, *Slavery in Early Medieval England* 70).

Victoria Simmons

smuggling in the Celtic world [1] overview

Smuggling, or the illegal movement of goods across political boundaries in order to avoid customs, excise, and other government tariffs, played an important part in the economy of all the CELTIC COUNTRIES. A smuggling culture was facilitated by their proximity to the sea and the distance from central governments in London or Paris. Some areas, such as the Isles of Scilly in Cornwall (Kernow), were almost entirely dependent on the proceeds from smuggling. The lawlessness of the trade is often a function of laws imposed in the modern period; the trade routes themselves are the same ones used in medieval and ancient times, covering the Atlantic zone.

The exploits of smugglers were celebrated in traditional lore, which portrayed the triumph of the smuggler over the revenuers and Customs men as well as the natural hazards of storm and sea. By the mid-18th century—the golden age of Welsh smuggling—gangs were so well-organized and heavily armed that customs officials either turned a blind eye or cooperated with them. A rich and diverse folklore surrounds the subject of 'smuggling' and 'wrecking'. One SEAN-NÓS song from Co. Mayo (Contae Mhaigh Eo), *Caiptín Ó Máille* (Captain O'Malley), gives a good account of a successful smuggler's journey and his cargo:

> *Ag teachtain dúinn go hÉirinn, bhí fion is brandaí is tae linn,*
> *Tobac agus seiméice agus gach aon tsórt dá raibh ánn* (*sic*)
>
> Upon arriving in Ireland, we had wine and
> brandy and tea,
> Tobacco and Jamaica [rum] and every other good
> thing.

The phenomenon of smuggling is by no means unique to the Celtic countries, but the romanticization of the outlaw in the 19th century led popular imagination to focus on the 'exotic' smugglers of Cornwall and Man (ELLAN VANNIN) rather than on the smuggling trade in Dover and Kent, with the result that Cornwall, for instance, came to be stereotyped as especially prone to smuggling. Smuggling and even piracy were by-products of a thriving maritime trade network which continues to this day. The late survival of petty smuggling along the western seaboard is demonstrated in one local account from the Kerry

Gaeltacht, wherein the author refers to Breton and Spanish fishermen exchanging cases of brandy for local bread and potatoes in the 1930s, '*gan cur isteach ó fhear an chustaim*' (without interference from the Customs men).

smuggling in the Celtic world [2] the Manx running trade

For nearly a hundred years the Isle of Man (Ellan Vannin) acted as a warehouse for brandy, WINE, tea, East India cloths, silks, rum, and tobacco imported from Europe and the Americas. Because of the island's location it was possible to run these goods in small boats (wherries) on to the Irish Sea coasts, especially during the 'dark of the moon'. The running trade involved everyone on the island, from the merchant and his cooper to the mariner, who braved the seas for a few shillings.

Contraband rum reached Edinburgh (Dùn Èideann) by a somewhat complicated route. Slaving vessels from Liverpool called at Douglas for part of their cargoes, including East India cloths. These were bartered in Africa for slaves. The profits purchased rum in the West Indies. Once landed on the Isle of Man, this rum was put into casks, collected by wherries and run at the Troon Point in Ayrshire, Scotland (Alba). From there it was carried on heavily guarded horses to the customers.

Other contraband came from Europe. Manx merchants sent Scottish manufactures and Irish provisions to the Americas for fish, which in turn was exchanged for brandy, wine, and silks, another version of the triangular trade. Tea was imported directly from European East India companies. The goods came into the island legally, paying the Lord of Man's low duties. Once they were on the high seas again they became contraband, but now they were the responsibility of the customers, who took out insurance. Any debts owed for contraband were sued for in the Scottish, Irish, and Manx courts.

In 1765 the English crown purchased the fiscal rights to the island from the Duke of Atholl for £70,000. This was intended to end the running trade for all time, but it simply moved on to less convenient bases.

Snettisham

A field at Ken Hill, Snettisham, in north-west Norfolk, England, is remarkable for the discovery of a substantial number of gold, silver, and base metal TORCS (neck-rings) and many pre-Roman coins. The first hoards (A–C) were unearthed in 1948 during ploughing and their precise sites located in excavations by Norwich Castle Museum. The ploughman made further discoveries in 1950 (hoards D and E) and found isolated torcs in 1964, 1968, and 1973. Then in 1990 a metal detectorist found a large hoard (F) of fragments, mainly from torcs, which provoked the British Museum to organize a major exploratory project. Plough-soil was stripped over a vast area in conjunction with gradiometer and metal detector surveys. Six more hoards were found (G–L) and for the first time groups of gold torcs were excavated and recorded by archaeologists.

Some of the hoards had been damaged by ploughing, but three (G, H, and L) were intact: G and H

were similar, with complete torcs buried in two instalments and the most precious torc at the top of the lower deposit. Hoard L, the most impressive find, also had two successive deposits with the deeper group by far the richer. But other hoards did not follow this pattern. Instead of complete torcs hoards B, C, and F had fragments, along with coins; hoard M was a collection of substantial lumps of unworked metal, and hoard N was a scattered hoard of coins. Hoard P, sadly lost to clandestine metal detectorists, included coins and a silver bowl. At least 12, and perhaps 14, hoards had been buried at Snettisham with 75 more or less complete torcs and fragments of 100 others, over 100 ingot rings or bracelets, and 234 coins from the recorded hoards and perhaps as many as 6000 in hoard P. The total weight of metal is well over 40 kg and the 1990–1 excavations alone recovered 11 kg of gold and 16 kg of silver. No other IRON AGE site in Europe has produced such an impressive collection of precious metal.

The hoards had been buried towards the centre of a large hexagonal enclosure (8 ha/20 acres) defined by a ditch 3 m wide and 2 m deep. The ditch had been allowed to silt from the late 1st century AD and, though the precise date of its original cutting is unclear, it is probably contemporary with the hoards. Four of the hoards (B, E, F, and N) can be dated by Gallo-Belgic staters (COINAGE) to around 70 BC, and hoard C, with potin coins, could have been deposited about the same time. Definitely later, but perhaps only a generation later, was a collection of Norfolk 'wolf' staters scattered over the field but perhaps originally in a hoard. However, if the rumours of the contents of hoard P are to be believed, it was deposited towards the middle of the 1st century AD, thus not far off the date of the Roman invasion of AD 43 or the anti-Roman revolt of BOUDĪCA (whose tribe, the ICENI, belonged to the Norfolk area) in AD 60. The enclosure ditch does not seem to have been defensive, but it may have defined an area felt to have had powerful protectors in the OTHERWORLD. Certainly a large quantity of precious metal was successfully hidden from Iron Age and Roman eyes.

Ian M. Stead

Sodor and Man, the diocese of

Several bishops figure in the early Christian history of the Isle of Man (ELLAN VANNIN). Muirchú's Life of St PATRICK, written towards the end of the 7th century, describes the arrival on Man of one Macc Cuill (MACUTUS) from Ireland (ÉRIU) who is greeted by two bishops, Conindrus and Rumilus, who have apparently recently converted the island. The Chronicles of the Kings of Man and the Isles record several early bishops in Man starting with Roolwer in the mid-11th century and Wimund in the mid-12th century. At this date the records are confusing and often contradictory; bishops appear to have been itinerant and equally mobile in their political allegiances. There were no fixed diocesan areas and ecclesiastical and secular political considerations were paramount.

In 1154, following an intensive period of lobbying from Dublin (BAILE ÁTHA CLIATH), York, and Norway, the papacy established Nidoros (modern Trondheim) as the metropolitan see, with Sodor (the Latin is usually in the form *Sodorensis* 'of the southern islands', from the Norse *Sudreyjar*) as a dependent diocese. Its territory, including Man and both the Inner and Outer Hebrides (Innse Gall), appears to mirror precisely the contemporary political reality of the Kingdom of the Isles (see KINGDOM OF MAN), which was politically subject to Norway.

The creation of a new diocesan order became manifest in the early 13th century with the construction of a cathedral on St Patrick's Isle at Peel by Bishop Simon and dedicated to St German (see GERMANUS). Simon is described in the Chronicles as follows:

> The same year (i.e. 1247) Simon of blessed memory, bishop of Sodor, died on 28th February at the Church of St Michael the Archangel and was buried in St Patrick's Isle in St German's Church which he himself had begun to build.

The reference to the place of his death at Kirk Michael strongly suggests that an episcopal seat had already been established at Bishopscourt, where an impressive 13th-century tower still survives at the core of a house which was the home of the bishops until the late 20th century.

The Rushen Abbey foundation grant from Olaf I to Furness Abbey in 1134 also gave the English Cistercian house the right to elect the bishops of Sodor in

perpetuity. Although many of the 12th- and 13th-century bishops were Cistercians, several progressing from Abbot of Rushen to Bishop of Sodor, this arrangement with Furness was the source of many problems. Bishops could be elected and not consecrated, or consecrated and not accepted on Man. To add to these local difficulties and the inherent dangers of the voyage to Norway—one bishop was drowned on the return journey—successive archbishops of Nidaros in the late 12th century fell out with the Norwegian kings, thereby creating a virtual vacuum at metropolitan level.

Although the see was based on Man, other centres on the Isles remained important. As the Kingdom began to fragment from the time of Somerled (Somhairle Mac Gillbhrìde, †1164) onwards, sites such as Lismore, where a new diocese was created as early as 1189, and Snizort on Skye (Sniothasort, An t-Eilean Sgitheanach), became the focus for the creation of alternative sees.

Following the Treaty of Perth in 1266, by which Norway ceded the Kingdom of the Isles to Scotland (Alba), Scottish kings generally exercised the right to appoint bishops, many of whom were Galwegians. The final bishop to hold sway in both the Isles and Man between 1277 and the Great Schism of 1387, when the diocese was finally divided, was William Russell, who was apparently a Manxman by birth, and who had previously been Archdeacon of Down. From this time onwards, York appears to have functioned as metropolitan and the diocese of 'Sodor and Man', despite its title, has consisted solely of the Isle of Man.

Three synodal ordinances survive: one from the time of Simon *c.* 1230, one from Bishop Mark in 1292, and one from William Russell in 1351. These important documents give an intriguing insight not only into matters of diocesan organization but, uniquely for the period, also into the lives of the common people.

Somme-Bionne (Marne, France) is the site of a CHARIOT burial, published by Léon Morel in 1875, and consequently well known in the literature on Celtic archaeology. The burial was in the centre of a circular enclosure 18 m in diameter. The deceased lay on his back between the two wheels of a chariot, which were held upright by grooves cut into the ground. The shaft was buried in a small auxiliary ditch in front of the chariot. The corpse was accompanied by three brooches, an iron SWORD in a bronze sheath, an iron knife, a gold ring, and an *oinochoe* (WINE jug) of Mediterranean origin. The pottery found in this grave consisted of a Greek *kantharos* (wine cup) and a vase of local manufacture. The tomb, which is from the Early La Tène period, is dated to the 5th century BC.

Sopater Σώπατρος of Paphos (*fl.* 336×246 BC) was a Greek writer, an author of *phlyakes* (farces). His longest surviving fragment is from the farce Γαλάται (The Gauls). The following passage is preserved, quoted by ATHENAEUS (*Deipnosophistae* 15.160e); though obviously a joke, it shows that the Hellenistic Greeks believed that the Celts practised human SACRIFICE:

> Among them is the custom, whenever they win
> victory in battle, to sacrifice their prisoners
> To the gods. So I, imitating the Celts, have vowed
> To the divine powers to burn as an offering
> Three of those false dialecticians.
> (Koch & Carey, *Celtic Heroic Age* 7)

South Cadbury Castle is a hill-fort situated 18 km south-east of GLASTONBURY in the English county of Somerset. The site encloses .0728 km² (7.28 ha/18 acres) within multivallate defences, consisting of three and four sets of banks and ditches. There are two ancient gateways in the ramparts with a third, now blocked, still visible. The site was identified as King ARTHUR's Camelot (*Camallate*) by John Leland in 1542. Antiquarians and early archaeologists reported artefacts which suggested that substantial activity had taken place there during the Roman and post-Roman periods. The discoveries culminated in the 1950s with the identification of pottery which shared similarities with imported wares known at TINTAGEL and thought to date from between the 5th and 7th centuries. Reappraisal of the significance of the Cadbury data led to a programme of excavation between 1966 and 1970 under the direction of Leslie Alcock on behalf of the Camelot Research Committee. Badly degraded by post-medieval agricultural activity, excavation on the hilltop recovered archaeo-

logical evidence of almost continuous human occupation from the early Neolithic (then dated *c.* 3500 BC, now known to be roughly 1000 years earlier) down to the 11th century AD. Alcock completed an initial synthesis of the results by 1972, establishing a chronological framework, based largely on the sequence of superimposed ramparts, for the occupation of the hill. The site also figured prominently in his 1971 study *Arthur's Britain*. An excavation in 1973 was designed to refine the dating of the south-west gate. Alcock's interpretations emphasized, from at least the late IRON AGE, the 'Celtic' nature of the occupants. The site was evidently stormed by the Roman army in the mid-1st century AD, after which it declined and may have been abandoned. Evidently reoccupied during the late 3rd century, the site was abandoned at the beginning of the 5th century to be reoccupied towards the end of that century. With the remit of the Camelot Research Committee, Alcock's syntheses naturally tended to emphasize the post-Roman occupancy of the site and in particular the evidence for a so-called Arthurian-period feasting hall of the late 5th to 6th centuries. While at pains to stress that there was no evidence for the physical presence of Arthur at Cadbury, Alcock concluded that the size, strength, and facilities of the fortress at this time meant that it must have played a major rôle in Brythonic/Celtic resistance to the Anglo-Saxons (see ANGLO-SAXON 'CONQUEST'). The site was later refortified *c.* 1010 when, it was argued, in the face of Viking raiding in Wessex, it became an emergency *burh* (Anglo-Saxon fortified settlement and administrative centre) and mint, with a church that was never completed, for Ethelred II (the Unready).

The full synthesis of the excavation archive was finally completed in the 1990s by two separate projects. Alcock undertook the processing of the post-Roman data down to the 11th century, while the later prehistoric and early historic periods were covered by English Heritage. The latter programme refined Alcock's chronological framework while enhancing many of his original interpretations. The basic sequence of development remains unchanged, though some of his identifications were challenged. Alcock likewise refined his opinions without any major changes. The excavation archive, along with earlier finds, is now curated by Somerset County Museum Service at Taunton Museum. Alcock's excavations concentrated exclusively on the settlement atop the hill without appreciating the site in its wider landscape. This issue is now being explored by the South Cadbury Environs Project which identified, and is now excavating, several sites in the vicinity of the hill-fort.

sovereignty myth

One of the most well-known and often studied thematic elements of Celtic myth, the sovereignty goddess is sometimes explicitly a personification of the land or of the right to rule; these functions have been more or less persuasively theorized by modern interpreters. In the typical sovereignty narrative, the man fated to be king has some kind of real or implied sexual encounter with a mysterious woman who is later revealed to have represented the sovereignty of the place he will rule. Sometimes she is ugly until transformed into a beautiful woman by the meeting with the fated king, as in *Echtra Mac nEchach Muigmedóin* ('The Adventure of the Sons of Eochaid Muigmedón'), which modern writers have repeatedly adopted as the classic example of the sovereignty myth. This mythic trope is also folk-tale motif D732, the Loathly Lady, the best-known version of which is Chaucer's *Wife of Bath's Tale*. MEDB holding the vessel of intoxicating liquor as a token of sovereignty or pre-eminence has also been seen as the archetypal image of this goddess, in which the queen of CONNACHT does not reflect the political landscape of actual Iron Age Ireland (ÉRIU), but instead conveys literary and mythic functions.

Sovereignty has also been identified with equine figures such as EPONA, RHIANNON, and MACHA. In Georges Dumézil's tripartite theory of Indo-European social organization, the horse is seen as representing the ruling first function aspects of kingship and priesthood. Gerald of Wales (GIRALDUS CAMBRENSIS) describes a kingship ritual from Donegal (Tír Chonaill) in which a king is described as copulating

with a mare (or so the passage is usually read), which was then sacrificed, cut into pieces, and boiled in water, in which the new king then bathed (*History and Topography of Ireland* 3.102). A very similar ceremony from Vedic tradition, the *aśvamedha*, suggests that this RITUAL derives from the Indo-European heritage, and that horse divinities may indeed have been seen as validating first function powers. One such horse-woman, the Welsh Rhiannon, has been associated by Catherine McKenna not just with the prince PWYLL's right to rule, but with his development as a competent ruler. Medb, on the other hand, is seen by Patricia Kelly as specifically intended by the author of the TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley') to be a negative manifestation of sovereignty.

Elements of the sovereignty mythos have also been seen in other women of Celtic tradition, from Guenevere (GWENHWYFAR) to the CAILLEACH BHÉIRRE. Máire Bhreathnach and Máire Herbert have both interpreted the MORRÍGAN as another sovereignty goddess. In a narrative such as CATH MAIGE TUIRED ('The [Second] Battle of Mag Tuired') she bestows the land on the TÚATH DÉ by coupling with the DAGDA at the ford of a river, but elsewhere she—or a similar mysterious figure—may preside over the defeat or death of a hero or king. The GREEK AND ROMAN ACCOUNTS of historical Celtic women, such as CAMMA and CARTIMANDUA, suggest that identification of leading women with goddesses once played an important social function as well as being a narrative theme.

Although sovereignty has been persuasively argued as an element in the identity of all of these women, some scholars, such as Erica Sessle, have objected that analysing female characters from a monolithic perspective of the sovereignty archetype fails to give adequate attention to their function as literary characters. There may also be important divine women who are associated with male rulers and yet are not sovereignty goddesses; for example, Étaín, the heroine of the TOCHMARC ÉTAÍNE ('The Wooing of Étaín'), might be more usefully thought of as an inspirational figure, and what we might consider characteristic of sovereignty may also overlap with the activities of a consort, a fertility deity, a tutelary goddess, or the ancestress of the tribe. In the case of any given woman in traditional narrative, who may or may not be of divine origin at all, it may be best to think of sovereignty as one of the more important aspects of a figure which has a transfunctional nature.

spirituality, Celtic

The term 'Celtic spirituality' in contemporary parlance covers a huge variety of belief and praxis and involves a wide range of spiritual seekers—Christian, New Age, neo-pagan, and DRUID. It is used broadly to describe pre-Christian Celtic religion, the Celtic church (see CHRISTIANITY), and contemporary religiosity inspired by the 'Celtic spirit'. The concept of Celtic spirituality is largely predicated upon the image of the 'spiritual Celt', inherently spiritual and intuitive, in touch with nature and the hidden realms, epitomizing that which is lost but longed for in contemporary society (see CELTICISM, ROMANTICISM).

§1. CELTIC NEO-PAGANISM

While many neo-pagans regard Celtic spirituality as their ancestral, pre-Christian 'native' religion, Celtic neo-paganism is very varied, and includes assorted forms of NEO-DRUIDISM, some aspects of the western occult tradition and Wicca (contemporary witchcraft), some eco-protest groups, broadly 'pan-Celtic' neo-pagans, and groups and individuals with specific area or language focus (e.g. IRISH, WELSH, CORNISH).

Current Celtic neo-pagan spirituality is influenced by the belief that Celtic native religion was, and is, akin to that of contemporary indigenous or tribal groups. Thus, while Celtic myth, art, and literature are utilized to 'reconstruct' religion, some copy and

Celticize contemporary native peoples' practices, 'Celtic Shamanism' being one example of this trend (Matthews, *Celtic Shaman*). In what is regarded as the revival or continuance of ancient Celtic tradition, offerings are frequently left at archaeological sites and natural features such as springs and trees. Although some neo-pagans revere local Celtic gods and goddesses (such as SULIS in BATH), many see the ancient Celtic deities simply as aspects of the universal sacred female.

§2. THE CELTIC CALENDAR

Many contemporary Celtic spirituality practitioners observe the so-called 'Celtic' or '8-fold' CALENDAR of SAMAIN (Hallowe'en), IMBOLC (Candlemas), BELTAINE (May Day), LUGNASAD or *Lammas* (Harvest), summer and winter solstices, and spring and autumn equinoxes, and they believe the Celtic year started on 1 November (see Hutton, *Stations of the Sun* 410–11 for a discussion of this 'Celtic calendar'). Customs have been 'revived' or invented in relation to this calendar and rituals are frequently performed at what are regarded as Celtic sacred sites (such as STONEHENGE and Amesbury). Following this 'Wheel of the Year' is thought to foster awareness of nature and the seasons, and the cycle of life, death, and rebirth; REINCARNATION is widely regarded as a Celtic belief in neo-pagan, New Age, druidic, and even some Celtic Christian circles.

§3. CELTIC CHRISTIANITY

In contemporary Celtic spirituality, the Celtic church (however, whenever, and wherever envisaged) is characterized as gentle, tolerant, 'green', meditative, egalitarian, and holistic, an early 'pure' form of Christianity (whether Coptic, Orthodox, or essentially [proto]-Protestant) which came directly to the Celtic lands long before Roman Catholic missions.

Some view the transition from the 'old religion' to Celtic Christianity as essentially smooth and harmonious, believing that the allegedly unique nature of Celtic Christianity owed much to its preservation of a body of esoteric druidic wisdom unknown to other branches of Christianity.

Many mainstream Christian denominations currently aspire to or express 'CELTICISM' visually in Celtic knots and crosses, verbally in 'Celtic' prayers and blessings, and physically in pilgrimage to places like Iona (EILEAN Ì), LINDISFARNE, and Croagh Phádraig (see Meek, *Quest for Celtic Christianity* for a discussion of contemporary Celtic Christianity).

§4. CONCLUSION

Contemporary Celtic spirituality owes much to ROMANTICISM, primitivism, and CELTICISM, as well as to late 20th- and early 21st-century religious trends. Its stress is on 'Celticism' as a spiritual quality to be aspired to, rather than on archaeological, linguistic, geographical, or ethnic criteria. 'Celtic spirituality' in all its vibrant and varied forms is not, therefore, rooted in Celtic studies; it is, rather, the product of inspiration and imagination, elective affinity, and spiritual seeking.

Spring deities were among the many highly localized divinities which inhabited the world of the ancient Celts. While river deities such as BÓAND, the personification of the river Boyne, could be identified with the destructive forces of water, river sources and springs brought fresh water from netherworldly regions, and were associated with healing powers, as, for example, the goddess SEQUANA was worshipped at her cult site at the source of the Seine. Shrines and WATERY DEPOSITIONS of offerings found at such places as CHAMALIÈRES in France and the shrine of SULIS at BATH, Britain, mark the presence of spring deities, who were usually female. In Christian times these sites often remained popular as holy wells, linked to the legends of saints (usually male); for example, Menacuddle Well in Cornwall (KERNOW) was under the protection of St Austell. Sacred springs might also become foci for local FOLK-TALES and legends, such as the Scottish claim that a well-spring had actually changed location from one island to another because a woman had offended it by washing her hands in its water (Mackinlay, *Folklore of Scottish*

Lochs and Springs 21). Improperly cared for, a benign spring could become a catastrophic torrent (see Minard, *Studi Celtici* 1.113–56). Other springs were inhabited by frightening spirits, such as the Welsh *ceffyl dŵr*, or water-horse (see LEGENDARY ANIMALS), and some of these may reflect an ambivalent view of the power of springs.

Stair Bibuis ('The Story of Bevis [of Hampton]') is a 15th-century Early Modern Irish adaptation in prose of a version of the Middle English verse romance Beves of Hamtoun. It has come down to us in a single manuscript, incomplete, and without a title. The manuscript contains two further adaptations of Middle English sources, the Irish version of the romance of Guy of Warwick and *Stair Ercuil* 'The Story of HERCULES', as well as a native tale probably composed by Uilliam Mac an Leagha, *Stair Nuadat Find Femin* ('The Story of Nuada Find Femin'; see also NŌDONS). All three adaptations appear to have been translated by Uilliam Mac an Leagha since they share characteristic linguistic and stylistic features. The constant use of synonymous and alliterating phrases places the adaptation firmly within the late medieval Irish narrative tradition (see IRISH LITERATURE [1]). Irish legal and social concepts are introduced by the translator and play a veiled but important part in the process of the successful acculturation of the original story.

Stannary Parliament

The system of government, constitution, and jurisdiction relating to Cornwall (KERNOW) is one of the oldest extant in the world, and might usefully be compared to the TYNWALD on the Isle of Man (ELLAN VANNIN). The Stannary Parliament is a feature of the government of Cornwall that appears to be independent of, and hence older than, the introduction of English and Norman systems to the region. The term derives from Latin for 'tin' (*stannum*) and charters from 1150 have recognized the ancient customs and privileges of the stannaries of Cornwall, originally defined by four tin-mining areas covering the territory of the region: Foweymore, Blackmore, Tywarnhaile, and Penwith-and-Kerrier.

The Parliament was convened until 1752 by writ of the Duke of Cornwall, although the Charter of Pardon of 1508 required no such writ. It consisted of 24 Stannators and 24 Assistants, thus broadly comparable with such bicameral legislatures as the US Senate and the House of Representatives. The original Parliament had the right to veto any statutes of the UK Parliament at Westminster, should they be detrimental to Cornish interests, and this legislation has never been repealed. Applying Stannary Law was the system of Courts at both Stannary and national level, an interesting feature of which is that Law and Equity were applied in the same courts.

On 20 May 1974 the Cornish Stannary Parliament was recalled by the Court of Blackmore, which sought to reactivate the ancient political and legal rights of the Cornish people. Successfully reactivated, the Parliament came into conflict with Westminster in 1990 over the implementation of the Community Charge (Poll Tax), when a considerable number of Cornish people refused to pay the charge since they were exempt under Stannary Law. On-going test cases against organizations such as English Heritage and a movement to see the rights of the Cornish people recognized under European Law have heightened the profile of the Stannary system. Any future implementation of devolved political power in Cornwall will have the precedent of Stannary Law as an established model for functions of self-government in the region.

Staré Hradisko is an important and well-explored example of an OPPIDUM or fortified proto-urban settlement. As an example from Moravia, now in the eastern Czech Republic, Staré Hradisko belongs to the eastern zone of IRON AGE oppida.

§1. LOCATION AND SITE DESCRIPTION

Staré Hradisko is located at the eastern edge of the Drahany Hills in the Czech Republic and is officially within the community of Malé Hradisko, in the district of Prostéjov. It lies close to the fertile Haná plain which forms an ancient settlement area that has been inhabited since the Neolithic period (from *c.* 5000 BC). From the highest point of the oppidum, 540 m, there is a clear line of sight over the entire Haná plain and the middle valley of the river Morava, and to the other oppidum in the Moravian region at Hostýn.

The Staré Hradisko oppidum itself covers an area of 37 ha (89 acres). Its FORTIFICATION has a total length of 2800 m. The earthworks divide the site into three parts: a central area (22.5 ha/54 acres), a western area (13.5 ha/32.4 acres), and a small eastern section of 1 ha (2.4 acres). There are three gates: one in the south-western part of the oppidum, one in the middle of the central part, and a third one at the eastern part. Intensive domestic settlement can also be documented in an area immediately outside the walls of the fortress.

§2. DISCOVERY AND EXPLORATION

Due to numerous finds of unprocessed amber (fossilized tree resin, much valued for high-status jewellery in the Bronze and Iron Ages), the site had already been mentioned by the beginning of the 16th century. The best-known source is the map by J. A. Comenius dating from 1627, where it is called *Hradisco, ubi myrrha effoditur* (Hradisko, from which amber is dug).

Staré Hradisko was introduced to archaeological literature at the end of the 19th century, and during the years between 1907 and 1912 F. Lipka and K. Snétina were responsible for the first test excavations. They correctly dated Staré Hradisko to the LA TÈNE period and described it as an oppidum. The first systematic excavations were undertaken between 1934 and 1937 under the direction of J. Bohm and J. Skutil from the Archaeological Institute in Prague and the Moravian Museum in Brno. Further excavations were carried out by the Archaeological Institute in Brno during the years 1964–6, 1972–3 (J. Meduna), and 1983–93 (M. Čižmář).

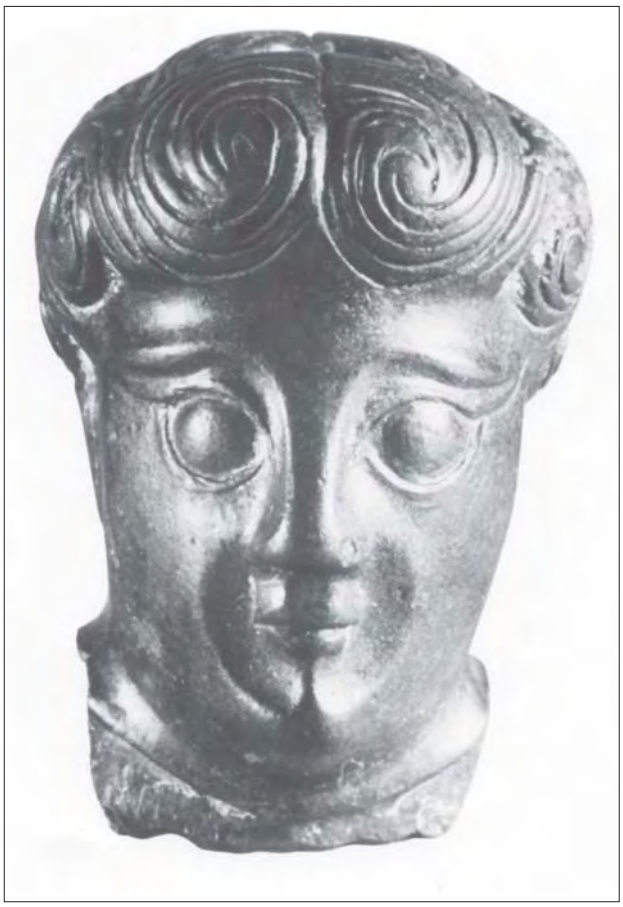
Sheet-bronze fitting with three human masks from the oppidum at Staré Hradisko

§3. INTERNAL OCCUPATION

The uncovering of wider areas revealed a very dense settlement, mostly of rural farmsteads. One of these farmsteads was excavated completely. It had the form of an irregular quadrangle (49 × 52 × 49 × 49 m), with entrances at the centre of each side, and it covered an overall space of 2700 m². Enclosed by a foundation ditch for a solid fence or palisade, and surrounded on all sides by *c.* 5-metre wide cobbled ROADS, rectangular sunken-floor huts were built alongside the inner side of the fence. In the more central areas, several pits, hearths, pottery ovens, cisterns, and numerous post-holes and foundation trenches were found, the latter being the only remains of what must have been large timber-framed houses, even though these cannot now be reconstructed with certainty.

§4. FORTIFICATIONS

Parts of the defensive walls were investigated during the 1930s with test trenches. More detailed results,



Miniature bronze head, fragment of late La Tène anthropomorphic sword hilt from the oppidum at Staré Hradisko

however, were only revealed by the excavations of recent years, during which larger parts of the walls and their surroundings were uncovered.

The removal of large strips of modern ground surface in the eastern part allowed the detection and examination of three ditches in front of the internal wall which separated the central area from the eastern part, documenting two chronological phases by the differences in the construction of their ends where they are interrupted by a road running across them at the internal gate. These outer defensive earthworks are interrupted to allow passage through the gate. While the path runs straight into the gate in the older phase, the ends of the ditches in the more recent phase pass one another, so that the cobbled road leading to the inner gate winds between them in an s-curve.

The construction of the wall itself was investigated on a large scale only in the western part of the oppidum, where two construction phases could be distinguished. There, the older fortification was a dry-stone wall (i.e. without mortar), roughly 2 m wide, with massive post-holes on the outer side, indicating that timber framing was used to strengthen the construction. To the inside an earthen rampart was added, while in front of the wall there was a steep ditch carved into the bedrock. The stone wall of this oldest fortification was removed in the later period, at which time the surface in the area of the line of defences was levelled out, and the ditches filled with a 2-metre layer of clay and gravel. This formed the horizontal foundation for a new fortification, the line of which was moved about 5 m outward from the older fortification. This new wall was *c.* 8 m wide and consisted of a 4-metre wide stone wall in a similar construction technique to that in which the older wall had been built. To the inside of this new wall an embankment consisting of clay and gravel contained within a structure of timber framing was added, thereby effectively doubling the strength of the wall.

In contrast, excavations of the ramparts in the eastern part of Staré Hradisko showed only a single phase of construction of a defensive wall, in timber-framed dry-stone technique similar to the others.

§5. CHRONOLOGY

The dating of the oppidum is well established. Staré Hradisko's dates are similar to the other Czech oppida. The beginning of the settlement is to be located in La Tène C2 (2nd century BC) and its end in the later phase of La Tène D1 (the latter half of the 1st century BC). This oppidum was thus in use for more than 100 years.

§6. FINDS

The finds not only shed light on the material culture of the inhabitants of the oppidum, but also demonstrate their links with several other countries. Besides the usual local pottery, pottery from Bohemia (the neighbouring region to the west) was found (see BOII). Other material, though less common, shows distinct affinity to goods then being produced to the north and west in what is now Germany. Imports of luxury goods reveal that they had contacts in the advanced economic zone of Northern ITALY. The presence of amber indicates a pattern of economic exchange leading to the Baltic coast, where amber is found in abundance.

§7. ECONOMY

The material recovered in excavations has thrown light on the economic life of the inhabitants of the oppidum. It is evident that the population of Staré Hradisko relied on farming the Haná plain for their subsistence. The finds in Staré Hradisko include remains of crops and domestic animals, with cattle bones making up almost 60% in the faunal record, followed by horses (about 27%), and pigs (about 10%). Game also figured in the diet, even though it seems to have been rather rare, making up a mere 0.5% of the animal bones recovered at Staré Hradisko.

We also are well informed with regard to the standards of craftsmanship achieved by the inhabitants. The pottery was mostly made at the site. There is indirect evidence for textile, leather, and wood-processing industries at Staré Hradisko. The main element in the economic activities of the oppidum, however, was an economic and industrial centre where specialized craftsmen produced goods to be distributed over a wide area. The craft best represented in the finds was wrought-iron work. There was also a bronze foundry, and glass and amber products were produced on the site. The production of gold and silver jewellery was also important, especially the production of earrings, which were found not only within the oppidum itself but also in the open settlement immediately to the west of the fortifications.

§8. THE SIGNIFICANCE OF STARÉ HRADISKO

The results of the excavations clearly demonstrate the character of the settlement. It was definitely an urban settlement, the inner area of which was structured in relatively self-contained farms. The inhabitants were mostly employed in specialized crafts, primarily in iron production. Staré Hradisko was undoubtedly the dominant supply centre of most of what is now Moravia. Beyond its local importance, the presence of luxury imports and the substantial amount of Baltic amber indicate that the oppidum also played a significant rôle in long-distance trade. On the one hand, it controlled the important north–south route from the Baltic Sea to Northern Italy, the so-called amber road, and, on the other, the south-eastern end of the connection between the Haná plain and Bohemian territory.

Stern, Ludwig Christian (1846–1911) was a well-known Celtic scholar who was born and educated at Hildesheim, Germany. He was a gifted linguist and studied oriental languages in Göttingen. Well-travelled, Stern eventually became the director of the manuscript department of the Königlichen Bibliothek (Royal Library) in Berlin. He became involved in CELTIC STUDIES during the last twenty years of his life, his interest sparked by the then current Ossianic debate (see OISÍN). His publications, among them several editions, reflect his remarkable linguistic abilities and include both IRISH and WELSH material. As co-editor, with Kuno MEYER, of the ZEITSCHRIFT FÜR CELTISCHE PHILOLOGIE, Stern was a major contributor to the journal until his untimely death.

PSH

Stivell, Alan, was born Alan Cochevelou in the Auvergnat town of Riom in 1945, the son of a Breton family living outside their home region. As a child, he learned to play the Breton HARP, an instrument that his father recreated from historical models. When he was 9 years old he joined the Bleimor pipe band, and became an expert on both the Breton bombard (see BINIOU AND BOMBARD) and the Scottish BAG-

pipe. By the age of 21, he was the band's pipe major, and he led Bleimor to the prestigious championship of Brittany (Breizh).

In the same year, Cochevelou changed his name to Stivell and sought a career as a folk-singer and musician. His success was rapid; by 1968 he was opening for the Moody Blues in London. His goal, to fuse Celtic folk music with rock, was realized by 1971, when his band included electric guitarist Dan Ar Braz, multi-instrumentalist and singer Gabriel Yacoub, and fiddler Rene Werneer. In 1972 a concert broadcast nationally from the Olympia Theatre in Paris made Stivell a household name in France. With Celtic rock, Stivell was able to shatter many people's stereotypes about the backwardness of Breton culture.

Since the 1970s Stivell has continued to innovate within the realm of Breton music, holding concerts and making recordings of everything from solo harp to acoustic ensembles to a 'Celtic Symphony', and on to rap and African-influenced World Music. Most of the bands on the Breton folk and fest-noz circuit were influenced by his early experiments. His music also remains an important part of the Breton and French pop culture in the 21st century; for example, the French rap group Manau has sampled one of his songs, becoming one of many groups to have drawn inspiration from him.

Stokes, Whitley (1830–1909) was one of the most important Celtic scholars of the foundational period of the discipline in the 19th century. Born in Dublin (Baile Átha Cliath), Stokes graduated with a BA degree at Trinity College Dublin, and then moved on to study law at the Inner Temple in London. He was called to the bar in 1855 and practised in London before moving to India (Madras and Calcutta) in 1862. He was employed in the civil service and was made secretary to the legislative department in 1865; between 1877 and 1882 he was law member of the council of the governor and did much work on Indian and Anglo-Indian law codes. He returned to London in 1882, where he remained mainly until his death in 1909.

Stokes's contribution to Celtic studies was in the form of a prodigious number of ground-breaking critical editions and translations of medieval texts: for example, the Old Irish glosses (collected and edited with John Strachan, as *Thesaurus Palaeohibernicus*, 1901–3), the Martyrology of Oengus Céile Dé (known as 'The Culdee'), Sanas Chormaic ('Cormac's Glossary'), *Saltair na Rann* (The verse psalter), Acallam na Senórach (Dialogue of [or with] the old men), the Annals of Tigernach, Irish saints' lives, the Middle Cornish Beunans Meriasek ('The Life of St Meriasek') and Gwreans an Bys ('The Creacion of the Worlde'), Old Breton glosses, and the *Middle-Breton Hours*. In a remarkable number of instances, Stokes's editions have yet to be decisively superseded in the intervening century. His work remains of vital utility to scholars working in Celtic studies today for reasons beyond the history of earlier modern scholarship. He also produced a considerable number of philological articles and studies of early Irish metrics in the Celtic studies journals of the period, such as *Revue Celtique*. He also compiled a dictionary of Proto-Celtic, the *Urkeltischer Sprachschatz*, which, though dated, has as yet no successor to take its place.

SELECTION OF MAIN WORKS

Aerial photograph of Stonehenge in snow-covered winter-morning landscape

Stonehenge near Amesbury, Wiltshire, England, is often alleged to be a pre-Celtic monument. More accurately, it dates from a period long before it can be inferred which languages were spoken in Britain. Nonetheless, popular beliefs associating the site with the Celtic period of British history are attested in literary sources as far back as the 12th century.

The site of Stonehenge was developed early, with an earthwork enclosure begun around 3000 BC, in the late Neolithic period (New Stone Age). The blue stones which make up the inner circle were brought from the Preseli mountains in Pembrokeshire (sir Benfro), south-west Wales (Cymru), well over 200 km from the site, around 2300 BC. The larger sarsen stones were brought from the Marlborough Downs in north Wiltshire, and the monument was essentially complete by around 1700 BC, in the Early Bronze Age.

As a stone circle of the later Neolithic to Early Bronze Age, Stonehenge has several parallels throughout Britain and Ireland (Ériu), and elsewhere in north-west Europe. It is remarkable but not unique in its large scale and the amount of labour required to build it. The comparable stone circle and earthworks at Avebury, for example, are larger and somewhat older. Whatever its exact social function, Stonehenge was certainly a ritual centre for large-scale assemblies. Its immediate neighbourhood is densely set with other ritual monuments of approximately the same period (which has been termed the 'Megalithic Age'), including other standing stones, various sorts of complex burials, ritual shafts with depositions (see hoards), and processional ways. Like many megalithic (large-stone) monuments of this period, Stonehenge has astronomical alignments, one focal point

in the arrangement of the stones being the summer solstice sunrise. The astronomical content of megalithic religion and science are subjects of widespread popular interest and ongoing archaeological research. The extent of astronomical knowledge in the megalithic period remains uncertain, for lack of an agreed-upon methodology for ruling out chance alignments.

Geoffrey of Monmouth, writing in the first third of the 12th century AD, recounts an aetiological legend for Stonehenge in his Historia Regum Britanniae ('The History of the Kings of Britain'). The ruler Aurelius Ambrosius wished to create a monument to commemorate the Britons who had been killed as a result of the treachery of the Saxon Hengist. Tremorinus, archbishop of Caerleon-on-Usk (Caerllion), suggested to Aurelius that he should hire Merlinus (Myrddin) to create a suitable memorial. Merlin proposed to bring the Chorea Gigantum (the giants' ring-dance) from Mount Killaraus in Ireland. In the Welsh adaptations of Geoffrey's *Historia*, Stonehenge is called *Côr y Cewri* or *Llam y Cewri*, which are probably attempts to translate the Latin (see brut y brenhinedd). Aurelius Ambrosius sent an army under his brother, Uther Pendragon (Uthr Bendragon), who fought the Irish and captured the stones by force, though Merlin's artifice was required to transport them back to Britain and set them up.

It has been suggested that the legend is the inverse of the building of the tower of Vortigern (Gwrtheyrn), told earlier in Geoffrey's narrative and derived from the 9th-century Historia Brittonum (Curley, *Geoffrey of Monmouth*). Both episodes illustrate a ruler's legitimacy or lack thereof through the edifice Merlin helped to build for him.

Geoffrey may have used a source from oral tradition. A similar 20th-century local legend from Wiltshire explains that the stones were magically transported from Ireland in a single night by the devil. Conversely, it is also possible that this legend entered oral tradition from Geoffrey's work; the specific association of Merlin and Ambrosius with Stonehenge almost certainly did.

Through Merlin, Geoffrey also alludes to other beliefs about the stones which may have been current in his time. Like most other megalithic monuments, their erection was supposed to be the work of giants, in this case from Africa (Spain in Brut Dingestow). The idea that stone circles and megalithic monuments are the products of gigantic activity, or the physical remains of giants, is also found in the folklore of the other Celtic countries.

Each stone was supposed to have medicinal properties. Baths were prepared at the foot of the stones, with water poured over the stones or mixed with herbs to heal wounds.

Other than Geoffrey's evidence, there is nothing to indicate that Stonehenge was of special significance in British tradition. The architect Inigo Jones (1573–*c.* 1652) is the first to mention druids in connection with Stonehenge. He rejected the association, indicating that he may have been reacting to popular beliefs already current in his day. The antiquary John Aubrey (1626–97) stated that the druids had definitely built Stonehenge, an idea that has remained current in popular literature.

Although Stonehenge was built at a date long before any certain evidence exists for Celtic-speaking people in Britain—or, for that matter, even the certainty that Celtic had yet emerged as a distinct Indo-European language—it has become an important focus for contemporary neo-pagan movements, including neo-druidism. Modern beliefs focusing on the monument tend to equate a system of knowledge reflected in its astronomical alignments and those of other ancient megalithic monuments with the doctrines of the druids of the pre-Roman Celtic world. Most Celtic scholars do not take such ideas seriously. However, it is not possible to disprove that there was some continuity of belief from the Early Bronze Age to the later Celtic Iron Age, the period of the historically attested druids, as described in Greek and Roman accounts. At least some discontinuity of belief between these periods is indicated by the fact that inhabitants of Britain ceased to build monuments of this type after about 1500 BC. On the other hand, the centre of assembly at Navan Fort (Emain Machae) in the north of Ireland, completed in 95 BC (and thus belonging to the Celtic horizon), fits the basic criteria of a large circular henge monument, with a massive enclosing bank and ditch. Throughout the Celtic countries—perhaps Ireland most especially—megalithic monuments have been the focus of elaborate beliefs from early literature down to modern folklore. Note, for example, the

complex of legends centred on the great Neolithic tombs at Newgrange (Brug na Bóinne) and Dowth (Dubhadh). The wealth of Celtic legends concerning megaliths is easier to account for, assuming a degree of unbroken tradition between the Megalithic Age and the Celtic horizon.

Strabo Στραβων (64/3 BC–AD 21 or later) was a Greek historian and geographer from Amasia in Pontus, north-eastern Asia Minor. His *History* does not survive, but 17 books of his *Geography* (Γεωγραφία) do. In this there are numerous references to the Celts, including *Geography* 2.5.28, 4.1–4, which contains material attributed to the lost work of Posidonius, a writer who had first-hand knowledge of pre-Roman Gaul. Strabo had known Posidonius personally, and several of his Posidonian passages are paralleled, and thereby confirmed, by Diodorus Siculus. Strabo's work thus figures among the most valuable and informative of the Greek and Roman accounts of the ancient Celts. Aspects of his testimony discussed in other entries in this Encyclopedia include: formal definitions of the learned orders of the Gauls—bard, *vātēs*, and druids (4.4.4); a mention of the chariot as used by the Continental Celts (4.2.3); an account of the recovery of the ransom in gold paid to the Gauls during their invasion of Rome (5.2.3); Ptolemy I Soter's account of the embassy of the Celts of the Adriatic area to Alexander the Great (7.3.8); mentions of the voyage to Britain of Pytheas of Massalia *c.* 325 BC (2.4.1, 2.5.8, &c.); a unique reckoning, according to which tribes as far west as the river Loire were counted as 'Belgi', i.e. Belgae, in which light should be weighed Strabo's further statement that they once had 300,000 men in arms (4.1–3); an account derived from Timagenes of the watery deposition at Toulouse of treasure seized by the forces of Brennos of the Prausi at Delphi (6.1.12–13; see also legendary history §2; brân); an account of destructive warfare by the Dacians against the central-European Celtic groups, the Boii and Taurisci (7.3.11); some general observations on the Celts of Galicia on the Iberian Peninsula (3.3.7); a sceptical interpretation of the name 'Celtiberians' (1.2.27; see celtiberia); mentions of Celtic Taurisci of the upper Balkans (4.6.9–10, 4.6.12, 5.1.6, 7.2.2, 7.3.2, 7.3.11, 7.5.2) including their important port at Nauportus.

Stuart, Revd John (1743–1821) was involved in the translation of much of the Old Testament into Scottish Gaelic (see bible). He was the son of the Revd James Stuart (1700–89) of Killin, who translated the New Testament into Gaelic (1767). John Stuart was first an assistant minister in Arrochar before receiving his own charge at Weem, Perthshire (Bail a' Chlachain, Peairt), and then at Luss, Dumbartonshire (Dun Breatunn). Stuart's involvement in the translation came at the request of the Society in Scotland for the Propagation of Christian Knowledge. The translation was published in parts as it became available; work on the first two parts was overseen by Stuart, who translated the third part himself, and the final section was undertaken by the Revd John Smith. The entire Old Testament became available in print in 1801. At the time of his death, Stuart—along with the Revd

Alexander Stuart—was involved in revising and preparing a one-volume edition of the entire Bible. The availability of the Bible in Scottish Gaelic for the first time was a major landmark for the language and also established a linguistic standard for generations of Gaelic writers to come.

Studi Celtici is an annual Italian CELTIC STUDIES journal, containing a wide range of articles on the history, language, literature, and culture of the CELTIC COUNTRIES, with an emphasis on cultural anthropology and comparative studies. Most of the articles are in English, but contributors are welcome to submit in any modern language. Each issue also contains an exhaustive bibliography of recent works in the field, including both books and articles. The first issue appeared in 2002.

Studia Celtica is an important journal for CELTIC STUDIES. Established in 1966, it is published annually (biennially 1973/4–1987/8) by the Board of Celtic Studies of the University of Wales. Its first editor was J. E. Caerwyn WILLIAMS, and since 1988 it has been edited by an editorial team, with D. Ellis Evans (1988–1996) and J. Beverley Smith (1996–) serving as chief editors. Although devoted mainly to philological and linguistic studies of the CELTIC LANGUAGES in its earlier volumes, following its amalgamation in 1994 with the BULLETIN OF THE BOARD OF CELTIC STUDIES, *Studia Celtica* currently includes contributions on all aspects of Celtic scholarship. It also contains a substantial review section, obituaries, and news of developments in the field of Celtic studies.

Studia Hibernica is a current Irish journal, established in Dublin (BAILE ÁTHA CLIATH) in 1961. It is published annually and includes articles in Irish and in English on all aspects of IRISH language, IRISH LITERATURE, history, and culture, including placenames and folklore. A significant part of the journal is taken up by scholarly reviews of publications in the same field. The journal is published by St Patrick's College (Coláiste Phádraig), Drumcondra.

Sucellus, whose name is Celtic, and means 'good striker', is sometimes called the 'mallet god' (see TARANIS). On several INSCRIPTIONS to DEO SVCELLO from Germany, France, and Switzerland, Sucellus is depicted with a mallet or hammer and a pot. These attributes allow numerous, otherwise unidentified, Celtic images depicting deities with mallets or hammers and pots to be identified as Sucellus. His attributes further serve to align him with Silvanus, with the DAGDA, the 'good god' and 'Allfather' of Irish mythology, whose attributes include an ever-full CAULDRON and a club which strikes death blows or revivifies, and hence with DĪS PATER, the god CAESAR called the Gaulish primogenitor. At Sarrebourg, Sucellus is partnered with Nantosuelta on an inscribed altar which includes a large raven; he accompanies Aericura and Nantosuelta in the Karlsruhe area. A silver ring from York, inscribed DEO SVCELO 'to the god Sucel(l)os' and TOT[ATIS] MARTIS 'to Mars Teutates', attests his recognition in Britain and links him to TEUTATES.

Suibne Geilt (Suibne the madman or WILD MAN) is a central figure in a group of Middle Irish texts. His madness is seen as a spiritually ecstatic state, an inspiration to poetry motivated by the outcast life of the *naomhgheilt* (saintly madman). As a prophet and poet, deranged by battle and living in the wild, Suibne is broadly similar to MYRDDIN/Merlin in Welsh and ARTHURIAN tradition and the Scottish (more accurately Strathclyde Cumbric) LAILOKEN. So closely parallel are the three figures, their attributes, stories, and their north British geographies, that it is widely thought by Celtic scholars that they go back to a common 6th- or 7th-century Strathclyde tradition of a wild man as mad prophet.

§1. THE EARLY SUIBNE TRADITION IN IRELAND
This Suibne is mentioned in two texts of Old Irish date. A 9th- to 10th-century legal triad (see TRIADS) in *Bretha Étgid* mentions Suibne's *geltacht* (madness, wildness) at the battle of MAG ROTH as giving benefit due to the resulting 'stories and poems'. A contemporary gloss in *Codex Sancti Pauli* attributes to Suibne the marginal, riddling verse description of a treetop perch in terms of a hermit's oratory. These allusions indicate that something very much like the story embodied in the Middle Irish saga *Buile Shuibne* (Suibne's madness) was already well known in the 9th century.

§2. GEILT
Suibne's rôle and stock epithet, meaning approximately 'wild man' or 'mad man', is most likely derived from the BRYTHONIC *gwyllt* < **gu̯ilt* (wild), which is the stock epithet of the related figure Myrddin. Thus, the term probably entered GAELIC with the associated legend from Strathclyde (YSTRAD CLUD). In Gaelic, *geilt* was treated as a noun rather than an adjective. It later changed declension, becoming a feminine *ā*-stem, thus SCOTTISH GAELIC *gealt* 'coward'. Near homonyms may also have played a part: Welsh *gwellt*, Irish *gelt* 'grazing'; like the biblical Nebuchadnezzar, the Celtic wild man is sometimes represented as living on grass. For example, GEOFFREY OF MONMOUTH's

Merlin boasts a fare of spring-water, apples, grasses, and acorns.

§3. BUILE SHUIBNE

The late 12th century saw the culmination of the original IRISH-language Suibne traditions. Only scattered references, derived from the earlier sources, exist after this point.

The immediate historical background of *Buile Shuibne* was the battle of Mag Roth, fought in 637 at what is now Moira, Co. Down. It is the horror of this battle that is supposed to have transformed Suibne into a *geilt*. The historical battle saw DOMNALL BRECC of Scottish DÁL RIATA, in league with Congal Cáech of ULAID, defeated by DOMNALL MAC AEDO maic Ainmirech, high-king of the Northern Uí NÉILL. In *Buile Shuibhne* (as also in *Fled Dúin na nGéd* [The feast of Dún na nGédh] and *Cath Maige Ratha* [The battle of Mag Roth]), Domnall mac Aedo and Congal (here with the epithet *Claen* 'crooked, squinting') dispute trivial gifts (birds' eggs) from otherworldly instigators. Ireland's saints curse Congal's ally, Suibne, for his theft of a tunic, the gift of truce. Suibne commits an escalating series of offences at Mag Roth and against St Rónán: the violation of truce, of persons, including holy persons, of bell, book, and sanctuary, murder by spear-point, and stripping (*lommrod*)—albeit inadvertent—of the proud raiment bestowed by Congal. In the course of the battle, Suibne is then driven mad by horror, grief, and an overwhelming sense of personal guilt. Part of his subsequent frenzied wanderings as a wild man take him to a forest north of Dumbarton (Dùn Breatann) on the Clyde, where he meets a figure named Alladhán/Ealadhán (wild man, whose name recalls Myrddin's Welsh epithet *llallawc*/*llallogan*, and the name Lailoken). Suibne eventually achieves a spiritual perfection through long suffering—exposure, lack of music, sleep, and food, loss of company. In both *Buile Shuibhne* and the related poetry presented as uttered by St Mo-Ling, Suibne dies and is buried at Mo-Ling's monastery, awaiting resurrection with him.

O'Keeffe saw *Buile Shuibhne* as being redacted before 1197, obit of the last descendant of Domnall mac Aedo maic Ainmirech (whom the text would supposedly flatter), despite accretion of later linguistic forms. It was brought together with the related saga texts *Cath Maige Ratha* and *Fled Dúin na nGéd c.* AD 1200×1500.

The early Irish TALE LISTS include neither *Buile Shuibhne* nor any tradition of Suibne in the category of *baili* (visions/frenzied or ecstatic prophecies). We must therefore assume that it was after the Tale Lists were put together, probably in the 10th century, that the writers who transmitted the legend saw Suibne's story to be a *baile*, as it had some of the earmarks, such as a terrifying curse placed on the protagonist and his wanderings through significant places in Ireland (ÉRIU) and Scotland (ALBA).

Hull and Hamilton have elucidated linguistic aspects of O'Keeffe's classic text of *Buile Shuibne* (based on Stowe B. iv. 1), which was reviewed by Dottin.

§4. OTHER EARLY TEXTS DEALING WITH SUIBNE

(1) Five of twenty-four 11th- to 12th-century 'Anecdota' poems attributed to St Mo-Ling (†697 according to the ANNALS of Ulster). These were edited and discussed or translated in part or (for Poem 3) in full by STOKES, JACKSON, Carney, and others. In the extant manuscript (Brussels, Bibliothèque Royale MS 5100–4, 50–67), these poems were penned between 1630 and 1634 by Mícheál Ó CLÉIRIGH.

(2) The 11th- to 12th-century Irish Life of St Mo-Ling, which survives in the 14th- to 15th-century compilation known as LIBER FLAVUS FERGUSIORUM (pt. 1, fos. 13a–15a), in another Ó Cléirigh manuscript (Brussels 4190–200, 1628–9, 43a–65b), and fragmentarily in Edinburgh Advocates' Library MS 5, fo. 11. Only an unnamed *geilt* is mentioned, though presumably Suibne.

(3) A single naturalistic poem attributed to Suibne and edited by MEYER.

§5. MODERN SCHOLARSHIP ON SUIBNE GEILT

Jackson and Carney carried out the seminal studies of the legend. Carney's hypothesis that the Mo-Ling poems Anecdota 1–5 are the Irish poet Mael Ísa Ua Brolcháin's work rests on Mael Ísa's supposed adoption of *geilt* as his *nom de plume* in the doubtfully attributed poem *Chrínóc*, and on the interspersing of three of that writer's works between 1–5 and the other Mo-Ling items in Anectoda.

Despite the views of Jackson and Carney, the Suibne legend's earliest developed saintly association was with Mo-Ling, and Rónán is a later addition.

(Jackson suggested that the original saintly double for the Irish wild man had in fact been Colum Cille.)

Further discussions relevant to Suibne and the *geilt* bear mention: Ó Riain's study of *gelta* and other wild persons in early Irish sources according the concept of liminality; Partridge's analysis of the *geilt*'s similarity to the *bean chaointe* (keaning woman) and related female characters (e.g. the *cailleach* 'nun, widow'); Nagy's focus on dialogic and marginal aspects; Beneš's quest for roots in shamanistic practice; and Cohen's apt view of Suibne's crimes and punishments through the ideas of Dumézil regarding Indo-European social structure. Other approaches include Chadwick's wide overview of the *geilt*, including borrowed Norse accounts, Fenian, and other wild ones in church calendars of feasts, eremitical verse, and sagas; Jackson's and Clancy's examinations of further debilitated, foolish, or wild analogues; McManus's collection of learned references to Suibne in the *Briatharogam*, in the commentary to the *Amrae Coluimb Chille* (Poem for Colum Cille), and in Cormac's Glossary (Sanas Chormaic); Carey's association of the *geilt* with antediluvian figures inspired by biblical apocrypha in mythographic legendary history; O'Neill's brief discussions of 9th-century adjectival '*geltig*' as a demonological, biblical gloss in notes for the school of Johannes Scotus Eriugena; and Frykenberg's opinions on topographical depictions and legendary elements common to the legends of Suibne and Lailoken. Further references (e.g. in DIL) for *geilt* and related terms in Early Modern Irish and Modern Irish texts reveal various uses in devotional, amorous, and popular poetry up into the 18th century (see irish literature). Accounts of wild persons corresponding to *gelta* in both behaviour and etiology strikingly close to that of Suibne are prefixed to *Memoirs of the Marquis of Clanricarde* (1722), and occur in similar, recent local lore concerning Gleann na nGealt (Glen of the madmen) in Co. Kerry, a place corresponding to the 'Glenn Bolcáin' mentioned by Suibne as his favourite haunt.

§6. modern versions of suibne legend

It is not possible to mention all of the contemporary discussions and treatments of Suibne. From a play by Macnas, a community arts and theatre company, to photographic renderings of the revised text of Heaney's full poetic translation, *Sweeney Astray*, Suibne Geilt has enjoyed a recent revival. Among the translators and poets who have worked with Suibne's character and verse are Jackson, Kinsella and Murphy. Devotees of Flann O'Brien are familiar with Suibne from *At Swim-Two-Birds*, and readers of Seamus Heaney meet the *geilt* often in his poetry.

Sulis was a British Celtic deity of healing and retribution who was venerated at the thermal waters

Life-size gilded bronze head of Minerva found at the temple of Aquae Sulis (Bath)

of Aquae Sulis (now Bath, England) during the Romano-British period. She was conflated at times with the Roman goddess Minerva in her healing rôle (see interpretatio romana). Offerings (see watery depositions) of Celtic coinage dated to the first century AD attest to the existence of the cult and probably the deity in pre-Roman times (Sellwood, *Temple of Sulis Minerva at Bath* 2.279). However, not until the development of the associated bath and temple complex in the Flavian era (AD 69–138) did the cult gain overt religious significance (Cunliffe, *Pagan Gods and Shrines of the Roman Empire* 1–2), as Roman and native inscriptions and *defixiones* (curse tablets) to the goddess testify (Collingwood & Wright, RIB 141, 143–50; Tomlin, *Temple of Sulis Minerva at Bath* 2.59–105). Interestingly, the native solar aspect of the cult remains despite increased Roman hybridization. Most notable is the male Medusa head on the temple pediment which is specifically Celtic in execution and variously interpreted as either a native water or solar deity (Ross, *Pagan Celtic Britain* 125–6). Additional solar associations at Bath are noted in dedications to Mars Loucetios (Collingwood & Wright, RIB 140), also known as a Gaulish god, whose epithet means 'like lightning, brilliant' (cf. Welsh *lluched* 'lightning'; see Green, *Gods of the Celts* 37), and the Sūleviae, whose name has a close etymological link with *Sūlis* (Collingwood & Wright, RIB 151). *Sūlis* and *Sūleviae* probably go back ultimately to the Indo-European word for 'sun', as reflected in the Welsh word *haul* (Old Welsh *houl*) and Breton *heol* < Celtic **sāwelios*, cf. Greek ἠέλιος *hēélios* (Jackson, LHEB 374; Green, *Dictionary of Celtic Myth and Legend* 200). The solar dimension of the cult of Sūlis is similar to other curative springs in the Romano-Celtic world in stressing the affiliation of water environs and the underworld with that of a sky/solar cult in a healing capacity (Green, *Gods of the Celts* 164). Alternatively, or as an additional set of associations, a close phonetic parallel within Celtic is provided by a derivative of this word for 'sun' **sūlis*, with the transferred meaning 'eye', Old Irish *súil* (Pokorny, IEW 881). It is likely that 'eye' is a relevant meaning here in connection with Sūlis's name and myth. In the early hagiography of St Brigit (possibly reflecting myths of the goddess of the same name), there is an episode in which she plucks out her eye and a spring miraculously bursts forth on the ground before her. Furthermore, in Old Welsh the word *licat* (Modern Welsh *llygad*) means both 'eye' and 'spring' and is used for a legendary marvellous spring in Historia Brittonum.

superstitions and magical beliefs

§1. INTRODUCTION

Superstitions and magical beliefs have often been especially associated with the Celtic countries, but such beliefs are found in all societies. Usually called superstitions when considered (by insiders or

outsiders) to have been discredited, so-called magical beliefs are held by societies on the basis of tradition rather than empirical examination. Nevertheless, they have usually developed rationally, springing from traditional standards of evidence, confidence in authorities regarded as credible, and interpretations of cause and effect relationships. The accuracy of traditional beliefs is felt to be proved on the grounds of personal experience and is founded on a worldview that has no reason to rule out the existence of magic or supernatural beings. In areas such as the cause and treatment of illnesses, the difference between ordinary traditional belief and magical belief often lies more in an ability to understand a process scientifically than in any distinction drawn by the tradition itself.

Superstitions and magical beliefs attach to all aspects of life, from the humblest details of the natural environment to the greatest community events and rites of passage. Some beliefs are held passively, while others find expression in practice, and many beliefs have associated customs, just as many customs are founded in particular beliefs. A belief can be expressed positively or negatively, and this can result in seemingly contradictory customs that in fact relate to the same core concepts. For example, green clothing was traditionally avoided in Ireland because of its associations with the FAIRIES, but in the United States of America there is a joking insistence that green clothing must be worn on St PATRICK's Day, with an equally traditional punishment of pinching for transgressors. Many beliefs described in the present tense may actually belong to the past, but some may continue to be expressed for a variety of reasons, including a sense of continuity with the past or a lingering half-belief in their veracity. Many beliefs serve useful social functions, from marking the passage of the CALENDAR year to reinforcing identity. Others may be harmful, serving as a basis for isolating or harassing particular members of the community. Finally, there are traditions in folk scepticism as well as folk belief, and many superstitions only half-believed by most people now were also only half-believed by at least some people in the past.

§2. IRELAND

Ireland (ÉIRE) has an especially well-recorded and well-known tradition of belief in the supernatural powers of the environment and their ability to aid or harm. Crops and livestock were particularly at risk from such agencies as fairies, and were protected with recourse to a vast array of precautions, such as building new houses where they would not block fairy paths and tying red ribbons to the tails of cows (Ó Súilleabháin, *Irish Folk Custom and Belief* 16, 21). Witches were another danger, whether they had the evil eye or could turn themselves into hares and suck milk from the cows (Ó Súilleabháin, *Irish Folk Custom and Belief* 24), and even a red-haired woman could bring misfortune if a fisherman on the way to his boat or a man taking livestock to market happened to meet her (Ó Súilleabháin, *Irish Folk Custom and Belief* 25, 32). The everyday world was rich with resources for charms and cures. Rowan branches hung over the door warded off bad luck, forge water eased rheumatism (Jane Francesca Wilde, *Ancient Cures, Charms, and Usages of Ireland* 57, 30), local standing stones and holy wells were available for other cures, and on the feast-days of St BRIGIT and St John, the livestock could be safeguarded by driving them between bonfires (Ó Súilleabháin, *Irish Folk Custom and Belief* 21). Prescriptions and proscriptions surrounded every major occasion of life, especially those surrounding death. Lively funeral wakes were among many customs which ensured that the dead would rest in peace and not disturb the living. The community also had the benefit of those with such gifts as second sight or healing. These powers were sometimes held to derive from the fairies, while others had them because they were born with a caul, because they were smiths or priests, or even because they had trod by chance on a special kind of lizard (Jane Francesca Wilde, *Ancient Cures, Charms, and Usages of Ireland* 16). Many traditional beliefs and practices have died out in Ireland, as they have elsewhere, and have been replaced by beliefs common to most of the world. This international belief complex, however, includes many features adapted from Irish tradition, from an interest in fairies to a faith in the good-luck properties of four-leafed shamrocks (Curtin, *Tales of the Fairies and of the Ghost World* 156).

§3. SCOTLAND

Scotland (ALBA) blends Celtic, Anglo-Saxon, and Norse traditions in its heritage of magical belief, but many beliefs cross regional boundaries. For instance, evil eye beliefs were found all over Scotland, and in England as well (Bennett, *Scottish Customs from the Cradle to the Grave* 17); equally widespread was the fear of a newborn child being taken by fairies. Gaelic Scotland shared many beliefs and practices with Ireland.

There was a large catalogue of supernatural creatures, an elaborate tradition of second sight, and an intense belief in ghosts. Witches were repelled in various ways, including nailing rowan above the door and tying red threads about cows and pregnant women (Ross, *Folklore of the Scottish Highlands* 64, 67). One use of witchcraft in cursing was to make a wax or clay effigy known as the *corp creadha* (clay body), which was then stuck with pins (Ross, *Folklore of the Scottish Highlands* 70–1). Many Highland beliefs surrounding death are familiar from Irish tradition, for instance the banshee (see BEAN SÍ) cry said to herald certain deaths (Ross, *Folklore of the Scottish Highlands* 109) and the wakes which accompanied the elaborate ceremonial of death. New Year observances were among the most important of the CALENDAR year, and especially popular throughout Scotland was first-footing, in which people considered lucky would travel from house to house, in order to be the first to cross the threshold. In Shetland (Sealtainn), the elaborate New Year festivities of Up-Helly-A' included casting invisible creatures from every home (Marwick, *Folklore of Orkney and Shetland* 106). As with the Western Isles, the folklore of Orkney (Arcaibh) and Shetland was centred on the sea, and there were several terrifying sea monsters, including the *brigdi* (a giant finned beast that could destroy boats), the *njuggle* (comparable to the water-kelpie of western Scotland), the fin folk, and the seal folk which were also known in the west (Marwick, *Folklore of Orkney and Shetland* 21–7). Orkney and Shetland were notorious for witches, who were sometimes identified as Finns or Norway Finns, an echo of the islands' Scandinavian heritage (Marwick, *Folklore of Orkney and Shetland* 48). The 'peerie folk', or fairies, were also a threat, and women concealed their pregnancies from them (Marwick, *Folklore of Orkney and Shetland* 82). Southern Scotland also had a belief in the fairy folk, usually in the person of brownies. Those attached to castles were often murderous, while the cottagers' brownies would gather about the hearth with the family. The evil eye could be warded off with spitting, as elsewhere in Scotland, but it was unlucky to use a new cradle or to buy anything for a baby before its birth (Bennett, *Scottish Customs from the Cradle to the Grave* 31, 47). At the other end of life, 'wauking the dead' was not an Irish-style wake, but a more conventional death-watch. There was a fear that the dead might come back to life during the watch, but touching the body would banish any dreams of death or ghostly apparitions (Bennett, *Scottish Customs from the Cradle to the Grave* 205).

§4. ISLE OF MAN

Most authorities who write on Manx superstitions and beliefs concentrate on those involving fairies and witchcraft. The *buitch* or witch could take the form of a hare, and consequently it was bad luck to see a hare cross the road. Some Manx refused to eat the hare because it might be a woman transformed. Witches could cause supernatural afflictions, but some, such as the evil eye, could also be triggered accidentally. In women who had just given birth, one cure for the evil eye cited by MOORE (*Folklore of the Isle of Man* 156) was to cut a square piece out of her clothes and burn it under her nose. Belief in the second sight, a traditional term for clairvoyance, was widespread. Any posthumous child, seventh son of a seventh son, or a child born on Hallowe'en (see SAMAIN) would have it, unless holy water were to touch his eye during baptism. Ordinary afflictions could also be cured supernaturally; birthmarks, for instance, were supposed to be cured by the touch of a dead man's hand. Beliefs involving ways to ensure a good harvest evolved into complex customs, for instance the Manx harvest festival, called *yn mheillea* or *yn meailley*. The queen of this procession carried the corn dolly (*baban ny mheillea*), a figure in the shape of a woman made from the last sheaf of corn. Afterwards this figure

was kept in the farmhouse until the next year's harvest.

Given the importance of fishing on the Isle of Man (Ellan Vannin), it is not surprising to find numerous signs and portents related to the industry. The *lhemeen y skeddan*, 'herring moth,' was a sign of a good herring harvest to come. Another insect superstition involved the *creg* or *carraig*, a small black beetle which, if killed, would bring rain. Gill records a deliberate sacrifice of the *creg* at a crossroads for this purpose (*Second Manx Scrapbook* 285).

§5. WALES

The passage from one stage of life to another is often accompanied by signs which foretell the future. In Wales (Cymru), rain on the morning of a wedding was a sign that the bride, rather than the groom, would be head of the household. The end of life also has its signs, and death does not come without warning. The *aderyn corff* (death bird), sometimes said to be a starling or an owl, but not usually identified, would come to the window of a dying person and tap on it with its beak. The *cannwyll gorff* (corpse candle) was a pale blue light like the will-o'-the-wisp which proceeded along the route of a funeral. Sometimes the entire phantom funeral or *toili* could be seen.

The last sheaf of grain, called the *caseg fedi* (harvest mare) or *y wrach* (the witch), was left uncut, as death would soon follow for anyone who cut it. Other events might presage death, but might merely indicate bad luck; for example, if a bird were to fly into a house or if someone were to place shoes on the table. Other unlucky things were hearing a cuckoo for the first time in a given year without money in your pocket and having a magpie cross the road in front of you. In the latter case, the only way to avoid bad luck was to come to a standstill, make a cross with the feet, and spit after saying the following:

Piogen wen, piogen ddu;
Lwc i mi—ptw.

White magpie, black magpie
Luck for me—[spit].

Another bird superstition was that destroying a swallow's nest in a cowshed would cause the cow's milk to turn red; this, in fact, has been rationalized as 'true' because swallows eat the flies which cause mastitis, a condition in cattle that can in turn cause blood to seep into the milk. The custom of hanging a horseshoe over the door of stables and cowsheds was once thought to prevent interference from witches or the devil, which could also be prevented by the presence of a rowan tree.

§6. BRITTANY

Many of the beliefs of Brittany (Breizh) relate to the milieu of subsistence farming and fishing. The success or failure of a crop had an enormous impact on the prosperity of the average Breton family and its livestock, and the numerous detailed superstitions relating to planting reflect the importance of a healthy harvest. On the coast of Treger, as well as in Upper Brittany (Breizh-Uhel), people did not sow clover at low tide, lest the cows that ate it died. In Lower Brittany (Breizh-Izel) it was good to sow when the moon was waning. In Upper Brittany though, cabbage sown in a waning moon would not grow, and oats would give straw but no grain. In Finistère (Penn-ar-Bed), turnips did well when transplanted on Christmas Eve. Giving *bara benniget* (consecrated bread) to the poultry could have disastrous consequences: in Finistère, roosters fed on this bread would attack children's eyes. Less consequential tasks such as doing the laundry also had their superstitions. A proverb admonishes:

Neb a verv lichou(r) d'ar gwener
Birviñ a ra goad hor Salver

No one does [lit. boils] the washing on Friday
It makes our Saviour's blood boil.

More dangerously, washing on Sunday caused the washerwoman to become a *kannerez-noz* (night washer) after death (see ANAON), and washing when someone in the house was ill could be fatal to the sick person. Sailors believed that whistling, often accompanied by prayers to St Clement or St Anthony, brought a wind, but caution should be exercised, since whistling could also turn a breeze into a gale. The domestic cat showed

which way the wind would blow by the way it behaved: cleaning its face with its paw was a sign of bad weather, but beginning to purr was a sign that the bad weather would soon clear. Boats, too, had to be baptized, or Satan would be able to lead them onto the rocks. Just as many people across Europe believed that animals speak at midnight at Christmas, fishermen in Saint-Brieuc (Sant-Brieg) believed that fish speak at Easter.

§7. CORNWALL

The dangers inherent in mining, the primary industry of Cornwall (KERNOW), gave rise to many superstitions. Not only were the mines peopled by knockers and other fairies, but it was lucky to see them. Whistling and the sign of the cross were very unwelcome underground, and if a miner were to see a snail upon going to the mines, he would drop a piece of tallow by its side (Hunt, *Popular Romances of the West of England* 349). Despite these precautions, if anyone was plagued by a run of bad luck or otherwise became the victim of black magic, he or she had recourse to a *peller*, the Cornish and Anglo-Cornish name for a sort of white witch. The peller removed bad luck, curses, charms, and other magical complaints. The name does not occur in any other Celtic language or dialect of English, but may derive from Latin *pellis*, 'skin' or 'hide'. Individuals who did not already have supernatural power could obtain it—any woman could become a witch by touching a logan stone (rocking stone) nine times at midnight, or by climbing on the Giant's Rock, a logan stone at Zennor, nine times without shaking it. Megalithic monuments and other unusual stones were also used in healing. To cure rickets or back pain a man had to crawl through *mên-an-tol* (CORNISH for 'the stone of the hole') nine times. Specific maladies would also be cured by turning to the appropriate saint. St Non's well at Altarnun had the virtue of curing the insane, who would be given a blow to the chest and thrown into the water. The magical properties of wells could also apply more generally: a child bathed in the well of St Ludgvan would never be hanged by a rope of hemp, although the water had no effect on ropes of silk. A more general way to ensure the child's welfare was to give a piece of bread and salt to the first person encountered on the way to church to baptize the child.

AM, Victoria Simmons

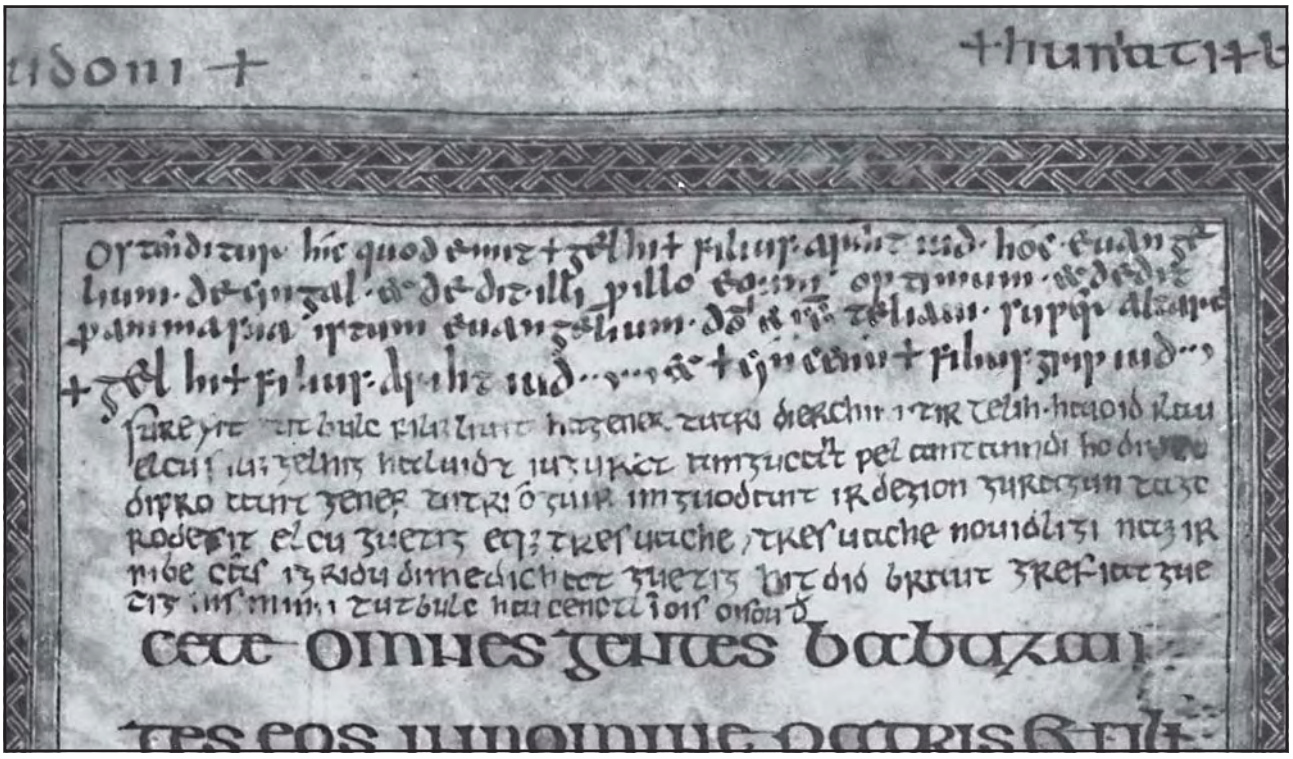
'Surexit' Memorandum, also known as Chad 2, is a brief text in Old Welsh with some Latin words. It has a special place in CELTIC STUDIES, and in particular in the study of the CELTIC LANGUAGES, since several important modern scholars have regarded it as one of the earliest Welsh texts, as well as surviving in a particularly early copy. Thus, the Memorandum is central to several important discussions on the beginnings of the WELSH language and LITERACY in Wales (CYMRU). Today, the 'Surexit' Memorandum remains a touchstone for scholarship on Old Welsh, even though recent discussions have tended to retreat from the claims once made for its unique and extreme antiquity.

§1. THE MANUSCRIPT

The text occurs written into the blank space at the top of page 141 of the 'Book of St Chad' (LICHFIELD GOSPELS), a Latin text of the gospels probably produced in the early 8th century, lettered and illuminated in the Insular style. The manuscript itself is likely to be of Welsh provenance, though an Anglo-Saxon or Irish origin is also possible. The witness list and sanction continue in the bottom margin. Also written into the top of page 141, above the 'Surexit' Memorandum, is another brief passage which is in Latin with Old Welsh proper names, namely Chad 1, also known as the *Ostenditur hic* entry. In addition to Chad 1 and 2, the Lichfield Gospels contain a further five memoranda. Of these, Chad 5 is entirely in Latin with Old Welsh proper names, the rest are mixed Old Welsh and Latin.

§2. EDITED TEXT AND TRANSLATION

Surexit Tutbulc *filius* Liuit ha· *gener* Tutri di· erchim



The 'Surexit' is the second of two Old Welsh and Latin memoranda inserted in the blank space at the top of page 141 in the Book of St Chad, Lichfield Gospels, a manuscript of the early 8th century AD

Tir Telih hai· oid i· lau Elcu *filius* Gelhig ha· luidt Iu[*d*]guret. Am· gucant pel amtanndi. Ho diued di· protant *gener* Tutri o guir. Im· guodant ir· degion, 'Guragun tagc!' Rodesit Elcu guetig *equs, tres uache, tres uache* nouidligi nam[—] ir ni be cas igridu di· medichat guetig hit Did Braut. Grefiat guetig ni-s minn Tutbulc ha-i cenetl i*n*· ois oisou ð.

+ Teliau t*ist*, Gurgint t*ist*, Cinhilinn t*ist*, *Spir*[*itus*] t*ist*, *tota familia* Teliau*i*; *de· laicis*—: Numin m*ap* Aidan t*ist*, Signou m*ap* Iacou t*ist*, Berthut*is* t*ist*, Cinda t*ist*.

Q[*u*]*ic*[*un*]*q*[*ue*] *custodierit benedict*[*us*] *er*[*it*], *q*[*u*]*ic*[*un*]*q*[*ue*] *frangerit maladict*[*us*] *er*[*it*].

Tudfwlch son of Llywydd and son-in-law of Tudri stood up to ask for Tir Telych which was in the possession of Elgu son of Gelly of the tribe of Iddored. They disputed for a long time about it. Finally, they judged against Tudri's son-in-law according to the law. The noblemen entreated one another, 'Let us make peace!' Afterwards, Elgu gave a horse, three cows, and three newly-calved cows, so that there would not be animosity between them for reason of [?]ownership afterwards until Judgement Day. No subsequent written document will be required by Tudfwlch and his kindred forever and ever.

+ Teilo witness, Gwryn witness, [?]Cú Chulainn witness, the Holy Spirit witness, all of Teilo's monastic community; of laymen—: Nefyn son of Aeddan witness, Sywno son of Iago witness, Berthut witness, Cyndda witness.
Whoever keeps [this judgement] will be blessed; whoever breaks it will be cursed.

[JTK]

§3. CONTENT AND CULTURAL SIGNIFICANCE

The subject of the text is the settlement of a dispute over *Tir Telych* ('the land of Telych' in Ystrad Tywi, south Wales) between Tudfwlch the son of Lliwydd or Llwyd (*Tutbulc filius Liuit*) and Elgu the son of Gelly (*Elcu filius Gelhig*). Thus, in its content, the Memorandum falls within the 'Celtic' CHARTER TRADITION. As a legal document it preserves archaic specialist terms unknown to the Welsh law-books of the 12th and 13th centuries: for example, in the sentence *diprotant gener Tutri o guir* 'they judged against Tudri's

son-in-law according to the law'. The Memorandum also offers unusual and precious evidence for Celtic oral legal culture, as is illustrated by the passage of quoted direct speech, a record of a public hearing: *imguodant ir degion, 'Guragun tagc!'* 'the noblemen entreated one another, "Let us make peace!"'.

§4. LANGUAGE

According to the Memorandum, Elgu made a payment in settlement of the dispute, and Tudfwlch gave up his claims to the land. The compensation is set out as *equs, tres uache, tres uache nouidligi* 'a horse, three cows, three newly-calved cows'. Although the spelling *uache* (as opposed to the expected Late Latin *vacc(a)e*) shows a characteristically Brythonic pronunciation (*ch* /χ/ for Latin *cc* /*kk*/), only one word of the above is in fact native Welsh vocabulary as opposed to Latin. This is not surprising, for mixing of vernacular and Latin was a common practice in all the Celtic written traditions in the early Middle Ages. We find elsewhere in the Memorandum the Latin words *surexit* 'arose', *filius* 'son' (twice), and *gener* 'son-in-law' (twice). However, *gener* is explained as a loanword into Welsh from Latin by Zimmer (ÉC 33.143–58), an explanation somewhat less likely in view of the fact that there is a native Old Welsh word *dauu* attested with this meaning. The otherwise unattested compound *nouidligi* is usually understood as 'newly-calved', cf. Modern Welsh *cyflo* 'with calf', and its linguistic peculiarities have been explained differently by various authors (Morris-Jones, *Y Cymmrodor* 28.272; Jenkins & Owen, CMCS 7.103; Schulze-Thulin, SC 28.179–80; Zimmer, ÉC 33.153). How exactly Old Welsh *nouidligi* corresponds to Middle Irish *nuidlech* 'a cow after calving, a milch-cow' remains one intricate linguistic point. Joseph LOTH was convinced that the Irish word is a loan from Welsh (RC 35.444–5; see also Zimmer ÉC 33.143–58). Alternatively, Joseph VENDRYÈS suggested that the word could be Irish; occasional Irish borrowings are found in other early medieval BRYTHONIC sources (e.g. LEIDEN LEECHBOOK, JUVENCUS MANUSCRIPT, &c.).

The record of the judgement is followed by a list of witnesses. Of those nine personal names, *Aidan*, though a fairly common name in early Welsh, is a loan from GAELIC (probably inspired by the famous figures AEDÁN MAC GABRÁIN and/or St Aedán of LINDISFARNE). *Cinhilinn* might represent an Old Welsh adaptation of the name of the great Irish hero CÚ CHULAINN, genitive *Con Culann*. These two names might thus add some indirect strength to the case for the Irish provenance of *nouidligi*. The list of witnesses notably also contains the name of St TEILO (OW Teliau).

§5. DATING AND POSSIBLE COPYING

W. M. Lindsay considered this text to be an early copy of a document of St Teilo's time, that is, the 6th century, but he refrained from giving exact dates. John MORRIS-JONES similarly argued that the Memorandum was a copy, and dated the original to the 6th century. The argument for this early date was based partly on the position of this text on the page (thought to imply that the blank space had been planned for the Memorandum from the beginning when the manuscript was designed) and allegedly archaic abbreviations, as well as the presence of Teilo in the witness list. However, as Kenneth H. JACKSON pointed out, we would expect the form **lom* for 'hand' instead of *lau*, as written in the Memorandum, if it were a faithful copy of a 6th-century original. The Memorandum was dated to the 8th century by Jackson (LHEB 42–6, providing the earlier bibliography) who considered it 'our oldest Old Welsh text'. According to Dafydd Jenkins and Morfydd E. Owen, however, this text was written in 830×850. Alternatively, several scholars have recently suggested an earlier date; see Patrick Sims-Williams (BBCS 38.32), where a possible dating earlier than *c.* 800 is noted. Daniel Huws proposed 'about 800' (*Five Ancient Books of Wales* 5 n.4). On the other hand, some palaeographical considerations suggest that the extant written text (whether a copy or the original) could be later, even 900 × 950. Jenkins and Owen remind us about the uncertainties of palaeographic dating of early Welsh records. Jackson allowed that the Memorandum might be a copy with partly modernized spelling of an older original. Such a possibility would be helpful in explaining how the peculiar and unparalleled preposition + pronoun *igridu* 'between them' could be a copying error for *itridu* (Jenkins & Owen, CMCS 7.104; Isaac, ÉC 30.231), the difficult *nouidligi* form, *Iuguret* for *Iudguoret*, and the possibly aberrant repetition of *tres uache*.

swords

§1. VOCABULARY

Five distinct native words for sword are attested in the CELTIC LANGUAGES and are thus possibly derived from PROTO-CELTIC.

Proto-Celtic **kolgo-, kalgo-* is first attested in the ROMANO-CELTIC personal name *Calgācus* 'swordsman', the leader of the north BRITISH forces defeated by the Roman general AGRICOLA at Mons Graupius in AD 84. The root is found in Old IRISH *colg, calg* (f.), SCOTTISH GAELIC *calg* 'awn, beard of corn', Old WELSH *colginn*, Middle Welsh *coly* and Modern Southern Welsh *cola*, Northern Welsh *col* 'awn, beard of corn', CORNISH *kolgh* 'point, spike', Middle Welsh *caly*, Modern Southern Welsh *cala*, Northern Welsh *cal* 'penis', Modern BRETON *kalc'h* 'penis'.

Proto-Celtic **kladios* lit. 'striking/digging implement' will account for Latin *gladius* 'short slashing sword' as an early loanword from Celtic (with initial consonant voicing as in Latin *Britanni* < Celtic *Pritan(n)ī*; see BRITONS). In BRYTHONIC, **kladi(i)os* regularly developed to **klaðiðəh*, which then became **klaðivəh* by a universal phonetic process known as dissimilation, whereby two like sounds are made unlike for ease of articulation. A Late British **klaðivəh* will account for all the subsequent forms: Middle and Modern Welsh *cleddyf*, Middle Cornish *kledha*, Middle Breton *clezeff*, Modern Breton *kleze(ñv)*. A borrowing from Brythonic **klaðivəh* into GOIDELIC in the late Roman period or very early Middle Ages will explain Old Irish *claideb* (m.) and Scottish Gaelic *claidheamh*. Cf. Pokorny, IEW 546.

Middle and Modern Welsh *cledd* (m.) is probably related to the previous item and implies a notional Proto-Celtic **kledo-*.

Proto-Celtic **slakk-* is implied by Middle Irish *slacc*.

Proto-Celtic **φugo-* is implied in Middle Irish *og* 'sword-point, weapon-edge' (m.).

§2. ARTEFACTS

It is immediately clear as to which of the range of attested weapons these five words refer. On etymological grounds Proto-Celtic **kalgo-/*kolgo-* seems to refer to a pointed stabbing weapon, and **kladios* to a striking edge-weapon. *Calg* and *colg* occur more frequently in older Irish texts and thus may refer to an earlier type of sword. The longer slashing LA TÈNE swords of *c.* 80 cm (see below) were unknown in north BRITAIN and Ireland (ÉRIU) in the IRON AGE, which is circumstantial evidence that *Calgācus'* name refers to a shorter type.

Swords are the offensive weapons most commonly associated with the Celts, even though their use is by no means universal for all the Celtic-speaking areas and periods, and seems to have been restricted to the upper tiers of society, even in those regions and periods where they are common. Nonetheless, they are a frequent find in archaeological contexts claimed to be 'Celtic'. The earliest swords that have been claimed as Celtic are late Bronze Age carp-tongue and antennae-hilted swords of the HALLSTATT B period, from about 1100/1000 BC. These Late Bronze Age swords have a distinctive leaf-shaped profile and are suitable as edge-weapons, thus differing from the very narrow-pointed rapiers of the Middle Bronze Age (*c.* 1500–*c.* 1300 BC). Even though the association of these weapons with the Celts is by no means universally accepted, their distribution is so broad within the area of ancient Europe that emerged as Celtic-speaking within the earliest GREEK AND ROMAN ACCOUNTS that it is hardly possible that Hallstatt B swords of a few centuries before never passed through the hands of Celtic speakers.

Much more commonly accepted is the fact that the Hallstatt C bronze and iron Gündlingen and Mindelheim type swords have been used by, among

Sword scabbard with repeated palmette and s-curve patterns, iron and bronze, with beaten decoration, length 63cm. La Tène period, 2nd quarter of the 4th Century BC, found in the necropolis of S. Paolina in Filottrano (Le Marche, Italy), Ancona, Museo Archeologico Nazionale

others, the earliest historically attested Celts. Swords of these types are widely distributed across western and central Europe, with examples having been found as far apart as, for instance, Llyn Fawr and Hallstatt.

During the Hallstatt D period (roughly the 6th century BC), daggers replaced the sword as the typical equipment in rich male burials on the Continent, and only during the early La Tène period was the sword reintroduced. The La Tène sword, usually carried in a scabbard on the right hip, developed from a relatively short slashing and stabbing sword with a blade approximately 60 cm in length into a long slashing sword with a blade exceeding 80 cm in length towards the end of the La Tène period, probably as a result of changes in warfare and battle tactics.

Exceptions to this are the Irish La Tène swords, which, in comparison with their late Continental and (southern) British counterparts, are more like toothpicks than swords; their blade lengths, which range from 37 to 46 cm in the 30 known examples, are considerably shorter than even the early La Tène swords on the Continent. However, both the elaborate scabbards and examples of anthropoid hilts clearly show the relationship between this localized tradition and the wider European La Tène zone.

In the first millennium AD, sword types of Roman, Anglo-Saxon, and then Viking inspiration came into use in Ireland and Celtic areas of Britain. The general trend in early Christian times was towards weapons shorter than the long late La Tène swords had been, with a longer, heavier weapon appearing in the Viking Age (roughly 9th–11th centuries). Literary evidence for the earlier Middle Ages must be used with caution, since many of the texts look back to a distant legendary past (as in the Ulster Cycle) and stock descriptive passages tend to develop a literary life of their own, and thus may or may not reflect the reality of any particular period. In the Welsh poetry of the Cynfeirdd, which seems to be contemporary court poetry celebrating events of the 6th and 7th centuries, swords (*kleðyfawr*) are often mentioned, but without much attention given to details of their form or use. The word *gwein* 'sheath, scabbard', a loan from Latin *vagina*, occurs in this corpus. References to *llafnawr* 'blades' < Latin *lamina* are also frequent, but are not necessarily only, nor even usually, the blades of swords.

Swords continued to be used until well after the end of the medieval period in the Celtic countries, and tended to follow the general western European pattern in armament. Notable exceptions were the late medieval Scottish broadsword and, of course, the famous claymore (Scottish Gaelic *claidheamh mòr* 'great sword'), a large double-handed late medieval and early modern sword.

T

Tacitus, Cornelius (*c.* AD 56–*c.* 115) was a Roman historian and the son-in-law of AGRICOLA, a Roman governor and general in BRITAIN. Tacitus provides much valuable primary information about ancient Celtic groups and individuals, especially, but not exclusively, in Britain. Perhaps the single most important piece of testimony provided by Tacitus for CELTIC STUDIES is his statement that the inhabitants of Britain and GAUL, as well as practising the same religion and rites, spoke languages which differed only a little from one another (*Agricola* 10–13). He is the source for extensive details of the military conquests of Agricola in west and north Britain in the period AD 78–84 (*Agricola* 18–38). As a preface to his description of Agricola's campaigns, Tacitus gives accounts of British history, geography, ethnography, CHARIOT warfare, and the revolt of BOUDĪCA (*Agricola* 10–16; *Annales* 14.35). His brief description of Ireland (HIBERNIA) notes geography, trade with Rome, and an exiled Irish king among Agricola's retinue (*Agricola* 24). Tacitus' *Agricola* is also the source of the widely quoted passages of speculative racial information that the inhabitants of Caledonia (north Britain) had come from Germania, as confirmed by their large limbs and red hair, and that the Silures (in what is now south Wales [CYMRU]) had originated in the IBERIAN PENINSULA, as confirmed by their dark curly hair. Elsewhere, Tacitus writes concerning the war of resistance of CARATĀCOS against the Romans (*Annales* 12.31–3), the storming of the sanctuary of the DRUIDS on Anglesey (MÔN) by the Romans in AD 60 (*Annales* 14.30), Queen CARTIMANDUA of the north British BRIGANTES (*Annales* 12.40), and VELEDA, prophetess of the Bructeri (*Historiae* 4.61, 66). The ethnographic details of Tacitus' *Germania* are also relevant to Celtic studies, partly because some of the tribes living east of the RHINE and thus considered *Germani* by the Romans were, in fact, Celtic speaking, and also because the Germanic tribes of the peri-Roman IRON AGE shared various common cultural features with the neighbouring Celts.

The writings of Tacitus do not seem to have been known to British or IRISH writers of the early Middle Ages. The Welsh man's name *Tegid* < *Tacitus* was in use in the Middle Ages, but *Tacitus* was not a rare Roman name, so the Welsh form need not imply any special link to the ancient author.

Taibhdhearc na Gaillimhe (the Galway theatre) is the IRISH-language theatre located in Middle Street, Galway, Ireland (GAILLIMH, ÉIRE). Popularly known simply as An Taibhdhearc and styling itself Amharclann Náisiúnta na Gaeilge (National Irish Language Theatre), it has continued to function since its establishment with government support in 1928. Its first production was *Diarmuid agus Gráinne* (Diarmaid and Gráinne; cf. TÓRUIGHEACHT DHIARMADA AGUS GHRÁINNE), Micheál MAC LIAMMÓIR's translation of his unstaged English script, on 27 August 1928. An Taibhdhearc's initial success has been credited to the presence of Mac Liammóir (1899–1978) as director. However, the involvement of academics and students from University College, Galway, and of soldiers from An Chéad Chath Gaelach, the Irish-speaking battalion in the Irish army, was of major

importance. An Taibhdhearc has enjoyed less success in attracting and retaining the support of the nearby Gaeltacht community, nor has it succeeded in establishing a professional company. Thus, while it has trained actors and directors over the years, many of these, such as Frank Dermody, Siobhán McKenna, Walter Macken, Mick Lally, and Maolíosa Stafford, moved on to careers in professional English-language theatre. In a history marked by occasional triumphs and long periods of stagnation, and with survival frequently equated with success, An Taibhdhearc remains a part-time theatre, staging, on average, six productions annually (see also irish drama).

Pádraig Ó Siadhail

Táin Bó Cuailnge ('The Cattle Raid of Cooley') is the longest and most famous of the tales of the Ulster Cycle of early Irish literature. Three principal recensions of this tale have come down to us, though none survive in manuscripts earlier than the 12th century. While the first recension may originally have been written as early as the 8th century, we have references to traditions associated with the *Táin* in material which may be yet earlier. References to other versions found in this recension and some inconsistencies therein suggest that it may represent a conflation of several versions which had grown and developed over several centuries. This version underwent substantial revision in the 12th century, the result of which was the longer and modernized recension found in the Book of Leinster (Lebor Laignech). A third recension, now found only in fragmentary form, also belongs to this century.

The second recension alone gives the reason for Queen Medb's incursion into Ulster (Ulaid) to steal the brown bull, the Donn Cuailnge. We are told that it grew out of a dispute between King Ailill and his wife Medb about their respective wealth. On seeing that Ailill has in his herd a special bull—the Findbennach (white-horned), for which Medb has no equivalent—she decides to resolve the predicament by acquiring a great brown bull which belongs to the Ulsterman Dáire mac Fiachnai. When her attempts to obtain the bull from him fail, she resolves to use force to capture it. Mustering her army at Samain, she marches north, guided by Fergus mac Róich and the other members of the Ulster exiles.

Samain, a period associated with the dead, is an auspicious time for her to attack Ulster. All adult Ulstermen are at this time struck by a debilitating illness, which is the result of their being cursed by Macha, the woman whose death they had brought about (see below). Marching northwards with a reluctant Fergus mac Róich in the van, they are harried by Ulster's greatest hero, the youthful Cú Chulainn, who ambushes them and kills several of their number. Not being originally from Ulster, he does not suffer their affliction. This causes Medb to query Fergus about Cú Chulainn, and he then relates *Macgnímrada Con Culainn* ('The Boyhood Deeds of Cú Chulainn') to her.

When they arrive in Ulster, Cú Chulainn stands on the ford over the river Níth defending the province, and engages various Connachtmen in single combat. This culminates in his encounter with his foster-brother, Fer Diad, who engages in a duel with him which lasts for three days, before falling to Cú Chulainn's powerful weapon, the *Gae Bolga* (see miraculous weapons; caladbolg).

Finally, the Ulstermen arise from their debility and rout the invading army. The two bulls, the Findbennach and the Donn Cuailnge, also lock horns in combat. Having killed the Findbennach, the Donn Cuailnge traverses much of Ireland (Ériu) with the remnants of his defeated adversary on its back before reaching Ulster, where it falls dead.

In earlier times, *Táin Bó Cuailnge* was viewed as a text of some importance. A 9th-century triad lists the three wonders concerning *Táin Bó Cuailnge*: 'that the *cuilmen* came to Ireland in its stead; the dead relating it to the living, viz. Fergus mac Róich reciting it to Ninníne the poet at the time of Cormac mac Faeláin; one year's protection to him to whom it is related'. The *cuilmen* mentioned is taken to refer to Isidore of Seville's *Etymologicae*, a work highly regarded at the time. The tradition concerning the loss and rediscovery of the *Táin* is related in *De Faillsigud Tána*

Bó Cuailnge (How the *Táin Bó Cuailnge* was found). This is considered one of the *remscéla* (fore-tales) of the *Táin*; these were a series of independent tales which serve to show how certain circumstances connected with the *Táin* came about. The number of the *remscéla* varies between ten and fourteen, but includes tales such as *Táin Bó Regamna* (The cattle raid of Regamain), *Táin Bó Regamain* (The cattle raid of Regamon), *Táin Bó Fraích* ('The Cattle Raid of Froech'), *Táin Bó Dartada* (The cattle raid of Dartaid), *Táin Bó Flidais* ('The Cattle Raid of Flidais'), *Echtrae Nerai* ('The Adventure of Nera'), *Aislinge Oengusa* ('The Dream of Oengus'), *Compert Con Culainn* ('The Conception of Cú Chulainn'), *De Chophur in Dá Mucado* (Of the *cophur* of the two swineherds), *Fochann Loingsi Fergusa meic Róig* (The cause of Fergus mac Róich's exile), Longas mac nUislenn ('The Exile of the Sons of Uisliu'), and *Tochmarc Ferbe* (The wooing of Ferb). The intrinsic relationship of some of these tales to the *Táin* is evident. *Longas mac nUislenn* outlines the circumstances through which Fergus and the other Ulster exiles found themselves in the Connacht army. A somewhat different version of this tradition would appear to have been related in *Fochann Loingsi Fergusa meic Róig* and, while only the opening section of the old tale now survives, it is possible that at least part of it has been incorporated in the modern version of *Táin Bó Flidais*, a composite tale which made use of older material. The connection of some other *remscéla* with the existing versions of the *Táin*, however, appears at best tangential. *Aislinge Oengusa* relates how Oengus Mac ind Óc son of the Dagda, with the help of Medb and Ailill, manages to find the otherworld woman Caer Ibormeith, who had appeared to him in a vision. In return for this assistance we are told that Oengus helped the royal couple in their expedition in *Táin Bó Cuailnge*. Oengus, however, plays no rôle in the *Táin*. *Táin Bó Fraích* is concerned with the adventures of the Connacht warrior Froech mac Idaith and, while Froech is killed by Cú Chulainn in the *Táin*, the tale is hardly needed to explain why a Connacht noble found himself in the army of Ailill and Medb. It is probable that some of the *remscéla* were stories originally independent of the *Táin* which were later drawn into its orbit.

On the other hand, the aeteological tale *Ces Ulad* (The debility of the Ulstermen) is not reckoned among the *remscéla*, even though it tells how Macha cursed the Ulaid for making her race against the king's horses when she was heavily pregnant with twins (*emain*). While this legend serves to etymologize the place-name Emain Machae, it also explains why all adult males of the Ulaid were bedridden at Samain, when Medb seized the opportunity to invade their province.

Ruairí Ó hUiginn

Y ***Tair Rhamant*** ('The Three Romances') is a term conventionally used for the three Middle Welsh prose tales Owain *neu Iarlles y Ffynnon* ('Owain or the Lady of the Fountain'), Peredur, and Geraint. These three are probably the earliest, but not the only, examples of the later medieval to early modern French-derived or -influenced romances in Welsh. The popularity of the Three Romances in later medieval Wales (Cymru) can be gauged by references to all three in the poems of Dafydd ap Gwilym, who flourished *c.* 1315–*c.* 1350 (Bromwich, *Ysgrifau Beirniadol* 12.61–2). Modern scholars have usually treated the three as a group, though they are not so clearly of common origin as, for example, the Four Branches of the Mabinogi (Brynley F. Roberts, *Studies on Middle Welsh Literature*). Defending the term 'romance/*rhamant*' for

this group, Roberts writes:

> The essence of the romance is not knight errantry, chivalry, the setting, but the significance of the quest . . . If we have to choose a general theme, it is that of self discovery, the discovery of the identity and the balancing of prowess, refinement and self-realization by trial, adventure and military skill. (*Studies on Middle Welsh Literature* 139–40)

§1. TEXTS, EDITIONS, TRANSLATIONS

Each of the Three Romances is found in part or wholly in the Red Book of Hergest (Llyfr Coch Hergest) and the White Book of Rhydderch (Llyfr Gwyn Rhydderch) and therefore in the diplomatic editions of J. Gwenogvryn Evans. In addition to the editions of the individual tales, R. M. (Bobi) Jones's orthographic modernization and regularization of all Three Romances based on the Red Book gives an accurate version of the text for non-specialist Welsh readers. The Three Romances are included in the translations of *The Mabinogion* by Gantz and by Gwyn Jones and Thomas Jones.

§2. DATE OF COMPOSITION

Rachel Bromwich places the writing of the Three Romances in the second half of the 12th or the beginning of the 13th century, citing the obvious influence of Historia Regum Britanniae ('The History of the Kings of Britain') of Geoffrey of Monmouth (*Y Traddodiad Rhyddiaith yn yr Oesau Canol* 154–5). Lloyd-Morgan likewise sees the comparison of the Welsh Romances and the parallel Old French poetic versions of Chrétien de Troyes (on which see below) as attesting literary contact between Wales and France around the late 12th or 13th century (*Actes du 14e Congrès International Arthurien* 2.397). Diverres proposes a narrower and later range of 1250 to 1284 (SC 16/17.144–62). Favouring an earlier scenario, Goetinck thinks that the orthography found in the manuscripts of *Peredur* reflect a 12th-century copy, which could predate Geoffrey of Monmouth (*Historia Peredur vab Efrawc* xxiii; *Peredur* 317; ÉC 25.231).

§3. THE THREE ROMANCES AND CHRÉTIEN DE TROYES

The central literary fact of the Three Romances is that they correspond closely to *Yvain ou le Chevalier au Lion*, *Perceval ou le conte du Graal*, and *Erec et Enide* (respectively) of Chrétien de Troyes. The basis of this close correspondence has long remained controversial; this is the so-called *Mabinogionfrage* (Mabinogion problem). Goetinck (*Peredur* 2 n.2) and Patricia Williams usefully review earlier scholarship on this problem, which has assigned priority variously to the Welsh Romances, to Chrétien, or to a lost common source.

The question of priority has been examined in the light of which version preserves an idea or motif in a form closer to what is arguably its original (Brynley F. Roberts, *Ysgrifau Beirniadol* 10.124–43). Thus, Goetinck and Patricia Williams show detailed similarities between the Three Romances and other Celtic narratives which manifest the theme of a hero and the woman who personifies the sovereignty of the land. This recurrent pattern of the sovereignty myth includes such features as the preliminary hunt of a magical beast (Goetinck, *Llên Cymru* 8.171). Goetinck also compares the description of the black crow feeding on the red blood of a duck spilt on white snow with a similar episode in the Early Irish Longas Mac nUislenn (the Derdriu story), and notes that this parallel is lacking in Chrétien. Lozac'hmeur (ÉC 15.573–5) proposes two archetypes of Celtic origin common to the French romances *Didot-Perceval* and *Perlesvaus* with *Peredur*: (1) vengeance, and (2) the quest for mysterious objects. Lozac'hmeur explains obscurities of Chrétien's version as due to the elimination of the vengeance archetype. He concludes that *Owain* and *Yvain* have come down separately from a common original because, on the one hand, *Owain* has misunderstood the description of a tree after a storm which Chrétien has handled correctly, while, on the other, *Owain* is closer to Celtic sources in its description of the frightful and gigantic *coydwr* (woodman) than is Chrétien. In this interpretation, the Celtic original approximates the *Fer Caille* (woodman) of the tragic and macabre Irish tale Togail Bruidne Da Derga ('The Destruction of Da Derga's Hostel').

In another study (*Bretagne et pays celtiques* 389–401), Lozac'hmeur reconstructs the following mythic archetype: a prophecy of a king's death by one of his descendants, after which his only daughter, though confined, nonetheless conceives a son. The suitor is killed by the king. The grandson is hidden and after coming of age learns his identity and avenges his father, thus fulfilling the prophecy. Lozac'hmeur

derives several Indo-European myths and legends from this archetype, including the heroic biographies of the Irish Lug and Finn mac Cumaill, the wooing frame tale of Culhwch ac Olwen, and Grail legends (including *Peredur*). These inherited themes are often nearer the surface in the Welsh Romances than in Chrétien; they are also clearer still in the comparable Irish stories than in Welsh. Nonetheless, Bromwich argues that they belonged to an inherited stock common to all Celtic groups, not necessarily borrowed by the Welsh from the Irish (*Legend of Arthur in the Middle Ages* 50–1; *Y Traddodiad Rhyddiaith yn yr Oesau Canol* 166). Thomson believes that *Owain* reflects the original tale upon which *Yvain* was based, seeing this as the simplest explanation and avoiding a theory of repeated back-and-forth borrowings between French and Welsh (*Owein* lxxxiii–lxxxiv). However, the Three Romances also show many obvious non-Celtic high medieval courtly themes and much French linguistic influence. Brynley F. Roberts sees in medieval Wales the development of the style of the literary cyfarwydd ([Welsh] storyteller) and thinks it possible that the Romances represent Welsh retellings of Chrétien in this style (*Oral Tradition* 3.1/2.61–87). Edel details what she sees as a formulaic style in *Peredur* contrasting with the Continental literary interlace of *Perceval*, concluding that Chrétien's poem was first translated orally into Welsh and that *Peredur* then came back as a written text from Welsh oral tradition (*Llên Cymru* 14.52–63). Based on these conclusions, Goetinck notes *Peredur*'s general lack of interest in the inner thoughts and feelings of characters and its concise and lively technique, contrasting with Chrétien's literary attitude and style (*Llên Cymru* 8.58–64). Diverres concludes that a 13th-century Welsh writer who was steeped in the Welsh tradition and its techniques produced *Owain* as an adaptation of Chrétien's *Yvain* for a Welsh patron in the border area; *Geraint* is similarly taken as a 13th-century reworking of *Erec et Enide*. Lloyd-Morgan's position is compatible, believing that the Three Romances are probably derived from Chrétien, though the translations and the storytelling technique is essentially Welsh. In her view, the *Mabinogionfrage* has received too much attention, and she sees the preoccupation with origins (particularly the approach of R. S. Loomis) as having obscured an appreciation of literature in its own right. Lloyd-Morgan is more interested in the circumstances, patronage, and techniques of medieval Welsh translation literature, and she sees a continuum over centuries with no sharp change in the pattern of French–Welsh literary interaction from the Three Romances down to such unquestionably translated works as *Y Seint Greal* (The Holy Grail; see *Actes du 14e Congrès International Arthurien* 2.397–405; *Medieval Translator* 2.45–63.). Lloyd-Morgan also believes that the French Arthurian romances were particularly well predisposed to Welsh reworkings because they possessed characters and episodes analogous to those of the native tradition (*Actes du 14e Congrès International Arthurien* 402–3). In Lloyd-Morgan's 'Narrative Structure in Peredur' (ZCP 38.187–231), her perspective leads to viewing the Romances as more coherent and accomplished works of literature in the forms in which they survive than in the assessments of critics concerned with mythological origins, such as Loomis and Goetinck. Lovecy approves of Lloyd-Morgan's synchronic viewpoint, but nonetheless regards *Peredur* as a poorly assembled muddle of diverse and partially duplicated elements (*Arthur of the Welsh* 171–82).

There have been attempts to synthesize the quest for origins with an appreciation of the extant texts on their own terms. Thus, for Patricia Williams, Arthur, by personifying both chivalry and sovereignty, allowed the archaic Celtic theme to be modernized in 12th-century fashion. In her study of *Peredur*, Goetinck argues in detail for a lost common original in French. Her theory depends partly on recognizing independent literary merits of the Romances (1–40), as well as her detailed comparison of the narrative details of *Perceval* and *Peredur*, concluding that to derive the latter from the former would involve an implausible degree of truncation and rearrangement (59–79). Turning to *Parzival* (the medieval German romance corresponding to *Peredur*), Goetinck concludes that its author, Wolfram von Eschenbach, worked from a source whose contents were closer to the Welsh than to Chrétien (80–102).

R. M. Jones distinguishes the study of the vertical and horizontal (roughly diachronic and synchronic) structure of the Romances (*Proc. 7th International Congress of Celtic Studies* 171–5). He is impressed by the density of local, south-eastern Welsh associations of the Romances and offers a three-layer theory of

the tales' prehistory, to account for the markedly Celtic content of the Romances: (1) mythological raw material (not necessarily localized); (2a) *Chwedl Frutaidd* (roughly 'Tale of legendary British history'), localized in the vicinity of Caerleon (Caerllion) from pre-Norman times, *c.* 1060–1170; (2b) *Rhamant* (Romance), again localized, which belonged to the period of Norman/Breton influence in the area of Monmouth (Mynwy), *c.* 1100–1200. He also discusses the significance of a Breton presence in the area as an essential catalyst in the formation of Welsh Arthurian literature of the Norman period.

Studying the names of the chief characters of the Romances is another potential avenue to their Celtic origins. Chrétien's Yvain son of Urien and the Welsh Owain ab Urien clearly derive from the historical 6th-century north British chieftain (Bromwich, *Legend of Arthur in the Middle Ages* 47). Sims-Williams discusses the several historical Gerontii and Geraints *à propos* the Geraint englynion (*Arthur of the Welsh* 46–7). The contrast of Continental and English vs. Welsh Arthurian names of the non-cognate *Perceval/Peredur*- or *Gawain/Gwalchmei*-type with those of the directly equivalent *Owein/Yvain*-type implies a complex interrelationship. Although her discussion of the Arthurian names and themes applies to the Continental romances generally, Bromwich's conclusions are relevant to the problem of Chrétien and the Three Romances: (1) the character-names in the French Arthurian romances which are of Celtic derivation are specifically of Brythonic (i.e. Welsh and/or Cornish and/or Breton) origin and are frequently identifiable in sources which are too early to be attributed to Geoffrey or other Anglo-Norman influence; (2) Arthur became the centre of the cycle during the native stage of development; (3) the character-names and Celtic themes entered French independently of one another; (4) Arthur's rise to fame in western literature is essentially a Welsh literary problem (*Legend of Arthur in the Middle Ages* 41–55). Bromwich also makes the key point that some of the French name forms have undergone garbling reflecting oral transmission. In the case of the Romances, we envision a complex reflux and renaturalization of Brythonic tradition which had passed through an intermediate French stage before re-entering Wales.

In the specific case of *Geraint*, Bromwich's studies of the character-names of Chrétien's *Erec* which correspond to the Welsh *Geraint* and the heroine's name *Enid* provide a breakthrough which allows a series of stages in the tale's prehistory to be traced (BBCS 17.181–2; ÉC 9.439–74; TYP 347–8; *Y Traddodiad Rhyddiaith yn yr Oesau Canol* 163–4). The pivotal point is that, since *Erec* (the hero's name in the French version) must reflect Old Breton Uueroc (the name of the historical 6th-century chieftain and founder of the kingdom of Bro-Uueroc), the name of his consort *Enid*, earlier *Enit*, must reflect *Uuenet*, the Old Breton name of Uueroc's country, Vannes (Gwened), from the Gaulish tribal name *Veneti*. The original kernel of both Chrétien's *Erec* and *Geraint* had therefore been a dynastic sovereignty legend from south-east Brittany (Breizh). In creating the Welsh version, the known hero Geraint replaced the unfamiliar Erec or Gueroc. Bromwich suggests that this transformation occurred in Cornwall (Kernow), where one or more Gerents were known as local heroes, before passing on to south-east Wales (cf. Goetinck, *Peredur* 29). Koch has shown that the account in *Geraint* of how Enid's father Niwl lost his land corresponds closely to Gregory of Tours' contemporary report of how Uueroc's father lost his realm (CMCS 14.42–4). Since there is no incident like this in Chrétien's *Erec et Enide*, *Geraint* clearly cannot have come from Chrétien, but must have come down independently from Bro-Uueroc's foundation legend. This point is more decisive than the weakness of the various Celtic sovereignty motifs in Chrétien, as we would expect these to have been renewed once the French romance was translated into a Celtic language. Bromwich shows how the *Geraint* storyteller quarried *Culhwch ac Olwen* for characters, and she compares the thematic and narrative structure of the tale to that of the native tale Pwyll (*Y Traddodiad Rhyddiaith yn yr Oesau Canol* 155).

Bollard's discussion of the detailed relationships of the four early manuscripts of *Peredur* is also noteworthy and tends to underscore the established view of an especially close connection between the White Book and the Red (BBCS 28.365–72; see also Goetinck, *Peredur* 304–17). Goetinck sees pervasive reflections of a Celtic concept of the Otherworld in *Peredur* and views the prototype of the Grail as a

Celtic talisman of sovereignty from the Otherworld, comparing the Early Irish allegory of sovereignty *Baile in Scáil* ('The phantom's frenzy', *Peredur* 275–303; see also CONN CÉTCHATHACH; LUG; TEAMHAIR). In this, Goetinck relies on the interpretations of Irish mythology of Thomas O'Rahilly (Tomás Ó RATHILE). Sterckx, in a comprehensive study of the Celtic HEAD CULT and related rites (SC 20/21.1–42), draws special attention to the pagan Celtic practice of using a severed head as a ritual skull cup, a fate which befell, for example, the Roman general Lucius Postumius after the battle of SILVA LITANA. Sterckx concludes that the mysterious severed head and vessel (*dyscyl*) witnessed by Peredur in the Stronghold of Wonders (*Caer yr Enryfeddodeu*) are ultimately one and the same. In the place of these items we have the Grail in the Continental romances. Although Goetinck accepts the pagan origins of the severed head, she sees in the *dyscyl* (which she translates as 'platter') the influence of the biblical story of John the Baptist (ÉC 25.229).

In line with the general trend in recent Celtic studies, which increasingly views medieval written literature as the product of monastic scriptoria, Goetinck suggests that the *Peredur* author may have been a monk. She adduces the negative portrayal of the military classes (similar to the heroic inversion of ARTHUR IN THE SAINTS' LIVES) and the hero's sexual abstinence (ÉC 25.221–32).

Tale lists, medieval Irish, also (inaccurately) called 'Lists of historic tales', consist of titles of tales intended to represent the repertoire of the medieval Irish *filid* (higher grade of poets), whose rôle included that of the professional learned storyteller (see BARDIC ORDER). These long lists of tales have been preserved in important medieval Irish manuscripts such as the Book of Leinster (LEBOR LAIGNECH) and London, British Library MS, Harley 5280 (see Mac Cana, *Learned Tales of Medieval Ireland* 33–4). With a few exceptions, the titles in the lists are grouped under native genre-headings, which include *togla* 'destructions', *tána bó* 'cattle raids', *tochmarca* 'wooings', *catha* 'battles', IMMRAMA 'sea-voyages', and *aideda* 'death tales'. This system contrasts with the modern arrangement of placing the tales into tale cycles such as the ULSTER CYCLE and the MYTHOLOGICAL CYCLE. It has been shown that there are two different versions of the medieval Irish tale lists, commonly called List A and List B, which both ultimately derive from an older, 10th-century, list. List A claims to be a list of 350 tales, consisting of 250 major and 100 minor tales, which are those a qualified poet would be able to tell to kings and chieftains, though the actual number of titles preserved by the various versions of List A in the manuscripts is much smaller. List B is part of the tale AIREC MENMAN URAIRD MAIC COISE (The stratagem of Urard mac Coise). Urard was a historical figure, a learned poet, whose death is generally recorded for the year AD 990. However, there is some debate concerning the exact date of *Airec Menman Uraird maic Coise* itself. The narrative begins with

Urard suffering great injustice at the hands of the Cenél nEogain mac Néill, and he goes to the king of Tara (Teamhair), Domnall mac Muirchertaig (†990), to complain. When the king asks him for *scéla*, playing on the word, which can mean both 'tidings' and 'stories', Urard finally mentions among the many tales known to him (i.e. the tale list) one called *Orgain Cathrach Mail Milscothaig* (The destruction of Mael Milscothach's fort), and the king chooses to hear this one. The tale actually refers to Urard's own misfortunes, and when this becomes clear the king promises full reparation for the damage suffered by the poet.

It is now generally accepted that neither of the two lists gives an accurate account of the literature of 10th-century Ireland (Ériu); both contain additions and modifications, and certain titles are only found in one of the lists. Nevertheless, they present some indication as to which tales were known and popular during that time. It is noteworthy that the majority of titles relate to tales now associated with the Ulster Cycle of Tales, with only very few titles relating to Finn mac Cumaill (see fiannaíocht).

Taliesin [1] the historical Taliesin

Throughout the medieval period, Taliesin was regarded as an actual court poet of the heroic age, roughly the 6th century AD. This idea was continued by the early modern antiquarians of the 16th to the 19th centuries and remains a cornerstone of standard doctrine for the study of Welsh literature today. The core of the case for the historical poet is twofold. First, 'Taliessin' is named as one of the five cynfeirdd in the 9th-century Welsh Latin Historia Brittonum, where these five are synchronized with the independently documented historical rulers Ida of Brynaich (r. 547–59) and Maelgwn of Gwynedd (†547); see further five poets.

The second pillar of the argument is provided by nine poems in the awdl-metre (perhaps to be expanded to twelve) within the diverse 60-odd surviving poems in the 14th-century manuscript known in modern times by the poet's name, Llyfr Taliesin. This subgroup has the attitude—or at least has been interpreted as having the attitude—of contemporary praise poems, both eulogy and elegy, composed for living or recently deceased patrons who can be identified with independently documented chieftains of the 6th century or *c.* 600. Sir Ifor Williams perceived the activities of the historical bard in twelve poems, which have consequently achieved canonical status in Williams's *Canu Taliesin* (1959), and later *The Poems of Taliesin* (1968). In two poems of this group, *Canu Taliesin* iv and viii, internal attributions to Taliesin occur. These poems are panegyrics addressed to Urien, ruler of Rheged, as are *Canu Taliesin* ii–ix, inclusively. Of those, poems ii, iii, iv, v, vi, viii, and ix close with the same signature quatrain:

Ac yny vallwyf (i) hen
y-m dygyn agheu aghen
ny bydif y-m·dirwen
na molwyf Vryen.

Until I perish in old age, | in death's dire compulsion, | I shall not be joyous, | unless I praise Urien.

There is an implication of common authorship for the poems sharing this verse, and Taliesin is named, together with the signature, in *Canu Taliesin* iv (*Eg gorffowys* 'In [my] rest', *Llyfr Taliesin* 58). Enaid Owain ab Urien (*Canu Taliesin* x), a *marwnad* or 'death-song' for Urien's son, shares information and wording with *Canu Taliesin* vi (*Gweith Argoet Llwyfein* 'The battle before the elm wood') and is therefore plausibly assigned to the same poet. Taliesin's claim to the two *awdlau* to Gwallawg (*Canu Taliesin* xi–xii) would be more conjectural, but not unreasonable given the facts that Gwallawg and Urien were contemporaries and kinsmen of the Coeling dynasty (see coel hen), according to the genealogies, and also that *Historia Brittonum* portrays them as allies at Lindisfarne at the time of Urien's death. It would be perfectly

intelligible, therefore, for Urien's court poet to have later moved on to Gwallawg's patronage. In places named and other elements of diction there is also considerable overlap between the Urien and Gwallawg *awdlau*. The circumstantial evidence linking Trawsganu Cynan Garwyn to the poems to Urien, Owain ab Urien, and Gwallawg is considerably less. Cynan was, at least approximately, a contemporary, but he was not related to the Coeling chiefs and he ruled in another part of Britain, which became Powys. The *Trawsganu* does not show any interest in the kingdoms and regions which are the subjects of the other eleven poems of *Canu Taliesin*. Furthermore, the style is different. The eleven poems have a generally Christian attitude, some very explicitly, and *Trawsganu Cynan* does not. Its pronounced higher frequency of retained old spelling features makes it likely that *Trawsganu Cynan* had not even formed part of the same original manuscript collection as the other eleven poems. Ifor Williams excluded Marwnad Cunedda from *Canu Taliesin*, but was probably mistaken in not regarding it as a poem from the Old North (Hen Ogledd); nonetheless, since Cunedda was a chieftain of the 5th or late 4th century, Urien's poet could not have been the author of an authentic elegy for Cunedda.

Beyond the corpus of Dark Age court poetry directly or indirectly ascribed to Taliesin there is the circumstantial case that the literary tradition consistently treats him as a 6th-century historical figure. Thus, in the so-called 'mythological poems' of *Llyfr Taliesin*, the poet is linked with Maelgwn and Cynan's father, Brochfael. Elis Gruffydd's *Ystoria Taliesin* is also largely set at Maelgwn's court (see Taliesin [2] §3).

There is also the matter of broader context. We know from the contemporary 6th-century record of Gildas's *De Excidio Britanniae* (On the destruction of Britain) that there were in fact praise poets at the court of Maelgwn (Gildas's Maglocunus). The 11th-century Breton Latin Life of Iudic-hael places its eloquent soothsayer *Taliösinus bardus filius Donis* in a completely historical late 6th-century context. Therefore, the Brythonic literary tradition was in no doubt about who Taliesin was or when he lived.

The linguistic arguments of Morris-Jones, Ifor Williams, and, most voluminously, Kenneth Jackson have shown that an early medieval Brythonic language similar enough to Welsh already existed in the 6th century for poems composed at that time to survive in copies of the Middle Welsh period without impossible linguistic barriers. As to the linguistic and textual archaism of the *Canu Taliesin* group itself, there are some variations (as already mentioned) and authorities differ: Morris-Jones, Williams, Jackson, and, more recently, Koch have seen them as suitably archaic, but Isaac has raised doubts, whereas Dumville has reservations about the historical content of some of the poems (though the archaeological evidence bearing on *Canu Taliesin*'s references to Catraeth is in fact consistent with authenticity). At this time, a thorough linguistic, literary, and historical re-examination of the *Canu Taliesin* corpus is overdue. While the case for Taliesin's historicity is stronger than those for Heledd, Llywarch Hen (see englynion), and Myrddin, it is likely that established ideas about the division between the historical and the legendary Taliesin will have to be revised.

Taliesin [2] the Taliesin tradition

§1. introduction

As explained above, there was probably a Brythonic poet of this name who was active in the mid- and/or late 6th century. The legendary poet Taliesin has attracted the attention of Celtic scholars, antiquarians,

and the wider public as a source of mythological and other supernatural elements, including PROPHECY and passages which describe REINCARNATION and shapeshifting. This Taliesin material has been compared with the fantastic exploits of poets in medieval Irish tales and, more especially, with ancient evidence for Celtic poets (see BARD) and DRUIDS in attempts to throw light on pre-Christian Celtic ideology and beliefs (Koch, *Mediaevalia* 19.41–73). Recent scholarship has focused attention on the Taliesin tradition as a European medieval literary phenomenon and its significance within its context in Welsh literature.

As a figure of legend, Taliesin occurs importantly in the Latin Life of IUDIC-HAEL, which was put together by Incomaris Grammaticus in Brittany (BREIZH) in the first half of the 11th century. In this text Taliesin is addressed as 'Taliesin the bard, son of DÔN, a prophet who had great foresight through the interpretation of portents; one who with wondrous eloquence, proclaimed in prophetic utterances the lucky and unlucky lives of lucky and unlucky men'. He then interprets the prophetic dream of Iudic-hael's father.

In Wales (CYMRU), the first firmly dated evidence for the existence of substantial traditions about a sage and seer, Taliesin, appears in GEOFFREY OF MONMOUTH's *Vita Merlini* (mid-12th century), but late CYNFEIRDD poems, notably from the Book of Taliesin, testify to a rich and developed body of material, part of which may predate Geoffrey. Taliesin's fame was well known throughout the medieval period, and since the 18th century his poetic skill, occult learning, and transcendent powers have been an inspiration to creative artists and thinkers.

§2. LLYFR TALIESIN (THE BOOK OF TALIESIN)

History. NLW MS Peniarth 2 is one of a group of five manuscripts produced in the first half of the 14th century by the same expert hand, possibly in one of the Cistercian monasteries of mid- or south-east Wales: two are Welsh law books of the Cyfnerth family (see LAW TEXTS), one is a copy of BRUT Y BRENHINEDD (the Welsh adaptation of Geoffrey of Monmouth's HISTORIA REGUM BRITANNIAE), and the fifth is a copy of GERAINT *fab Erbin*. A reference by the poet LEWYS GLYN COTHI suggests that the Book of Taliesin was in Radnorshire (sir Faesyfed) in the 15th century; in the 16th century it belonged to Hugh Myles of Evanjobb and the antiquary John LEWIS of Llynwene (Haycock, NLWJ 25.357–86). By the mid-17th century it was in Robert VAUGHAN's library at HENGWRT, Merioneth (sir Feirionnydd). It was bequeathed to W. W. E. Wynne of Peniarth in 1859, and purchased by Sir John WILLIAMS as part of the foundation collection of the National Library of Wales (LLYFRGELL GENEDLAETHOL CYMRU) in 1909. There is little evidence for either medieval copies or written variant versions of the poems in the Book of Taliesin, with the exception of the prophetic poem *Rydyrchafwy Duw ar blwyf Brython* (May God lift up the nation of the BRITONS), *Canu y Gwynt* (Song of the wind), *Armes Dydd Brawd* (Prophecy of Judgement Day), and a fragment of the latter part of *Prif gyfarch gelfydd* (which corresponds very closely to a portion of the full text in the Red Book of Hergest [LLYFR COCH HERGEST]). However, lexical and phrasal echoes in later Welsh prophetic poetry and in poems which came to be attached to the prose tale *Ystoria Taliesin* indicate that some parts of the poems in the Book of Taliesin, or some very similar, were in circulation.

Contents. The Book of Taliesin, now incomplete, contains *c.* 60 poems. The absence of the ENGLYN form is noteworthy, as is the partial attempt by the copyist (or, more likely, a predecessor) to order the material. This includes eight praise poems to URIEN of RHEGED and his family (found in one block, BT 56–65), two to GWALLAWG (one with the Urien poems, but another at BT 29–30), one to Cynan Garwyn, and one to the fort at Tenby, Pembrokeshire (Dinbych-y-pysgod, sir Benfro); a group of elegies for historical and legendary figures (BT 65–70), including OWAIN AB URIEN, CUNEDDA, and HERCULES; a group of six prophetic poems (BT 72–9), with a further fragment, *Darogan* CADWALADR (The prophecy of Cadwaladr), as well as the 10th-century ARMES PRYDEIN *Fawr* (The great prophecy of BRITAIN) and its small partner, placed apart (BT 80, 13–18, 70); 11 religious and scriptural poems, not grouped together; two pieces about ALEXANDER THE GREAT, and *Canu y Meirch* (Song of the horses). In the remaining poems, the figure of Taliesin is the explicit speaker, though it is likely that some of the aforementioned items were

tacitly attributed to him, and others included in the collection because they reflected aspects of his supposed areas of mastery, such as text-book learning and prophecy.

The Figure of Taliesin. Taliesin is presented as an impeccable poetic craftsman, and especially as a familiar of poetic and prophetic inspiration (AWEN), which flows from the cauldron of the hag Ceridwen or from an OTHERWORLD source. He claims to be endowed with the prophetic gifts of VERGIL, to have sung at the courts of Brochfael Powys, Urien Rheged, and MAELGWN Gwynedd (where Taliesin freed his patron, Elffin), and to have been with ARTHUR on a voyage to the otherworld fort of Caer Sid(d)i (Haycock, SC 18/19.52–78), just as he was with the protagonist of BRÂN, the Second Branch of the MABINOGI, in Ireland (ÉRIU) and in Ebyr Henfelen, tallying with the mention of him in that tale. He alludes to Cian and Talhaearn, two of the 'golden age' poets referred to in the Memorandum of the FIVE POETS, and several poems bring him into contact with GWYDION and ARIANRHOD, the euhemerized members of the family of Dôn, and the other protagonists of the Fourth Branch of the *Mabinogi*, possibly because Taliesin was conflated with the deity originally charged with the arts of speech and poetry (Ifor Williams, *Chwedl Taliesin*); indeed, the Breton Latin Life of Iudic-hael calls him *filius Donis* 'son of Dôn' (Fleuriot, ÉC 18.207–13). He was not born of mortals, but was created protoplasmically, as was BLODEUWEDD by MATH and Gwydion (Haycock, *Blodeugerdd Barddas o Ganu Crefyddol Cynnar* 50–2, 210); his otherness is also signalled by an alternative name, Gwiawn/Gwion, and by his myriad transformations, the most striking series occurring in *Angar Kyfyndawt* (BT 19–23). His professed knowledge—particularly in the areas of natural science, cosmology, biblical and text-book learning—is often displayed in question form, sometimes riddling; the medieval genre of erudite contests between monastic scholars, the so-called *Ioca Monachorum*, and related dialogues and encyclopedic traditions are likely sources in some cases (Haycock, *Essays and Poems Presented to Daniel Huws* 229–50; CMCS 30.19–79). The presence of witless, mute opponents, both ecclesiastics and lesser poets, lends drama to these poems of entertainment, composed either by churchmen or by lay poets (in secular or religious milieux). Many of the poems use the simple short line; others (such as PREIDDIAU ANNWFN [Spoils of the Otherworld]) show a higher degree of craftsmanship (see AWDL).

§3. OTHER MEDIEVAL SOURCES

The Black Book of Carmarthen (LLYFR DU CAERFYRDDIN) contains three relevant items: in *Ymddiddan Myrddin a Thaliesin* (Colloquy of MYRDDIN and Taliesin), the two figures reminisce about the great battles of the past and the prowess of Maelgwn and other heroes. In another dialogue, Taliesin, on his way to 'the fortress of LLEU and Gwydion', is accosted by Ugnach ap Mydno, who tries to lure him away to his fort flowing with mead and WINE. Taliesin, 'challenger in poetic contest', declines. A few lines in *Englynion y Beddau* ('The Stanzas of the Graves') indicate that the stanzas were interpreted as 'his' replies to questions about topographical lore posed in the presence of Elffin. A series of six 12th- or 13th-century prophecies in the Red Book of Hergest, commencing with *Anrheg Urien* (Urien's gift, R 1049–53), and containing echoes of the Urien praise poems and other Book of Taliesin poems, are attributed to him, as are many prophecies, TRIADS, and religious and didactic poems throughout the medieval period: more than 270 items are attached to his name in manuscript attributions (Gruffydd, 'Cerddi Taliesin Ben Beirdd y Gorllewin'). Taliesin was a figure well known to the GOGYNFEIRDD and the CYWYDDWYR, primarily as a prophet and sage, as Elffin's poet, pre-eminent in bardic contest at Maelgwn Gwynedd's court at Degannwy, but also as a praise-poet in Rheged (Bromwich, TYP). The earliest versions of the prose tale *Ystoria* (or *Hanes*) *Taliesin* appear in the 16th century, in Elis GRUFFYDD's Chronicle of the Six Ages, and Peniarth 111, copied by John Jones of Gellilyfdy. The poems embedded in the prose are all attested in earlier manuscripts (Gruffydd, 'Cerddi Taliesin Ben Beirdd y Gorllewin' xcii), and were clearly very popular with copyists. They (and others not included in the prose tale versions) share many features with the persona poems in the Book of Taliesin, and appear in places to recycle phrases and lines. The prose tale tells how the servant, Gwion Bach, gains inspiration from the cauldron of Ceridwen, undergoes transformations, and as a grain of wheat is eaten by her

and reborn. After being set adrift on the sea, he is found and renamed Taliesin by Elffin fab Gwyddno, and taken to Maelgwn's court at Degannwy where he confounds Heinin and the other court poets with his knowledge and eloquence and frees Elffin from prison.

Marged Haycock

Talorcen son of Eanfrith was king of the PICTS (653–7). His father Eanfrith (Enfret in the PICTISH KING-LIST) was the son of ÆTHELFRITH, a powerful and aggressive pagan Anglo-Saxon king of Bernicia (BRYNAICH) who was killed in the battle of the river Idle in 617, after which Æthelfrith's sons fled from his successful rival, EADWINE of Deira (DEWR). It is likely that Eanfrith sought refuge in Pictland and there married a Pictish princess, Talorcen being the product of this union; Eanfrith's brother OSWYDD (Oswiu) similarly sired Aldfrith/FLANN FÍNA by an Irish princess while in exile during this same period. Eanfrith returned to Brynaich and ruled as its king, but was killed in 633/4 during the invasion by CADWALLON of GWYNEDD. Talorcen's uncle, Oswydd, ruled Northumbria during the years 642–70, reaching the apex of his power following the battle of Winwæd in 655. According to BEDA, Oswydd held overlordship over most of the Picts; therefore, it is possible that Talorcen ruled as Oswydd's client king. Nonetheless, Talorcen did show some independence of action in his victory over DÁL RIATA in 654, killing its king DÚNCHATH MAC CONAING (grandson of AEDÁN MAC GABRÁIN) at the battle of Ráith Ethairt; at the time, Dál Riata was also supposedly under Oswydd's overlordship. Talorcen's death in 657 is recorded in the Irish ANNALS; he was succeeded by Gartnait son of Donuel. Talorcen is significant in that he displays the complex inter-ethnic dynastic politics of 7th-century north BRITAIN and has repeatedly entered into discussions of the possible matrilineal system of succession among the Pictish rulers.

Talorcan or *Talorgen* was a common name among the Pictish rulers. It shows a Celtic diminutive suffix added to the also common Pictish masculine name *Talorc*. The first element of the name is probably the Celtic *tal* 'brow, forehead', found also, for example, in Welsh TALIESIN. The final syllable is probably a

diminutive suffix corresponding to Brythonic *-an* and Old Irish *-án*. There is more than one possible Celtic explanation for the second element *org* or *orc*.

PEB, JTK

Talorgen son of Onuist (Talorgan mac Oenguso) was a Pictish king of the later 8th century. It is chronologically possible that he was the son of the well-documented and powerful Pictish ruler Onuist son of Uurguist (†761). Thus, Talorgen is sometimes discussed in connection with the controversial issue whether Pictish succession was reckoned from father to son or through the female line. Talorgen is possibly to be identified with Dub Tholarg, *rex Pictorum citra Monoth* (king of the Picts on this [southern] side of [the great massif of eastern Scotland/Alba] the Mounth), whose death is recorded in the Annals of Ulster for 782. However, forms of the name *Talorc* and its diminutive *Talorgan*, *-en* were very common among the Pictish rulers (see PICTISH KING-LIST) and Marjorie O. Anderson has proposed that Talorgen son of Onuist ruled *c.* 785 × *c.* 789.

On the name *Talorgen*, see Talorcen son of Eanfrith. Pictish *Onuist* is a Celtic name which corresponds to the very common Old Irish man's name *Oengus*; see further Onuist son of Uurguist.

Talorggan mac Forgussa is a key figure in the turbulent final century of the history of the Picts. He is mentioned in the Annals of Ulster as having died in the battle of Catohic between the Picts and the Britons of Dumbarton (see YSTRAD CLUD) in AD 750. This battle was recorded by the Britons as the battle of Mocetauc, which has been identified as Mugdock, near Glasgow (Glaschu). The annal also tells us that Talorggan was *frater Oengussa*. Thus, he was probably the brother of the formidable Pictish king Onuist son of Uurguist (r. 729–61), *Forggus* (genitive *Forggussa*) being the Old Irish name which corresponds to Pictish *Uurguist*. Other versions of the annals show that the Picts definitely lost the battle and that Onuist's power was waning at the time, quite probably as a result of this. The Scottish Dál Riata, who had been under heavy pressure from Onuist, were thus in a position to wrest independence. The event is also remarkable in that the Strathclyde Britons under Teudebur map Bili (r. 722–52) were not particularly strong in these years. In fact, according to the *Beadae Continuatio* (the continuation of Beda's *Historia Ecclesiastica*), Eadbert of Northumbria also annexed Kyle in present-day Ayrshire, probably from Strathclyde, in 750. On Onuist's death in 761, a third brother, Bredei son of 'Wirguist', became king of the Picts. *Talorggan* or *Talorgen* is a man's name which is common in the Pictish king-list, and thus consistent with the likelihood that he belonged to the Pictish royal lineage. On the Celtic affinities of the name, see Talorcen son of Eanfrith.

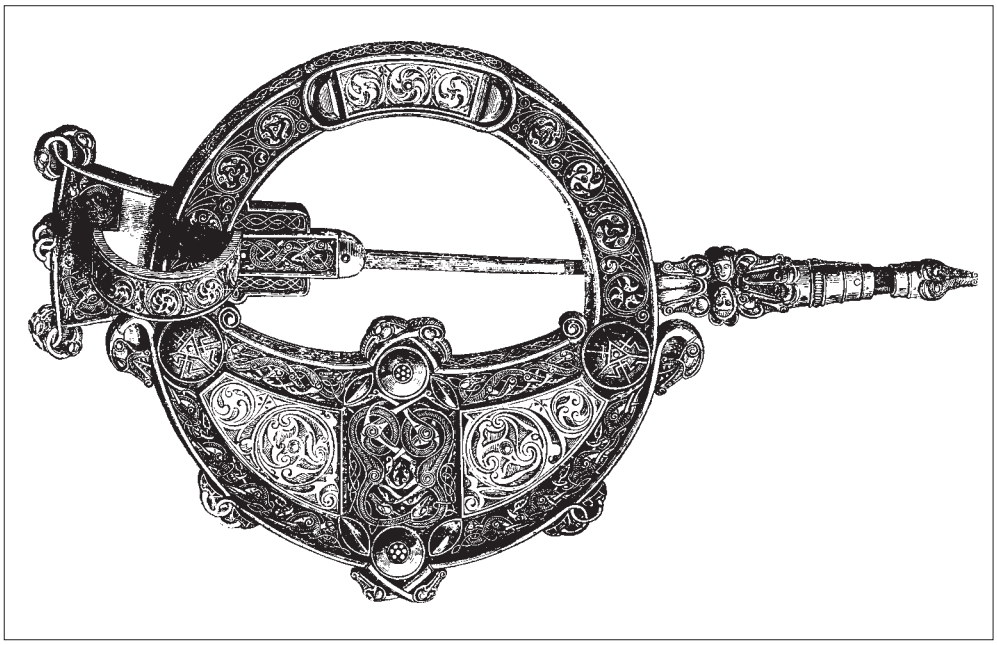
The **Tara brooch** is an early 8th-century silver-gilt pseudo-penannular brooch found on the seashore at Bettystown, Co. Meath (Contae na Mí), in 1850. (The term 'pseudo-penannular' means that the brooch is circular and has an apparent gap in the design of the ring, but the gap is decorative and not a true opening for the pin.) The diameter of its ring is 8.7 cm, and its pin is 32 cm long. It received its name from a firm of jewellers in the 19th century, possibly for romantic reasons, and, despite its being found many miles away from the actual site of Tara (Teamhair),



Tara brooch: drawing by Henry O'Neill in 'The Fine Arts and Civilisation of Ancient Ireland' 1863, showing the details on the reverse of the brooch

it remains the artefact most closely associated with Tara in the popular mind. The elaborately and finely wrought zoomorphic interlace and the spiralled triskeles which cover it, together with the cast glass and amber human and bird heads, are all demonstrative of the high degree of artisanship during the early Middle Ages in Ireland (Ériu). In modern times, the Tara brooch is comparable to the Irish harp as an icon of cultural identity, and counts among the most valued of Irish national treasures. It was acquired by the Royal Irish Academy (Acadamh Ríoga na hÉireann) in 1868 and now forms part of the antiquities collection of the National Museum of Ireland (Ard-Mhúsaem na hÉireann).

Taran son of Entifidich was a king of the Picts. In Celtic studies, he is probably of greatest interest for his name, which throws an interesting light on the Celticity of the Picts. Pictish *Taran* is almost surely the cognate of the name of the Gaulish god Taranis and the Celtic common noun found as Welsh *taran*, Old Irish *torann*, both meaning 'thunder'. As well as implying that the Pictish language was Celtic, the form of the name shows that Pictish, in some respects at least, resembles Brythonic more than Goidelic. A 'Tharain' also occurs as a king's name in the section of the Pictish king-list which precedes those kings' names that can be confirmed in the Irish annals and other early medieval sources, that is, the section of the king-list which is often called 'prehistoric'. It is likely that this *Tharain* is the same name as *Taran*, and that it refers either to a northern chieftain of the Roman period or to the Celtic god Taranis, incorporated into the king-list as a legendary king (see legendary history). In either case, it suggests that *Taran* was a traditional high-status name in Pictland rather than a 7th-century borrowing from another Celtic country.

Taran son of Entifidich came to power in 693 as the successor of Bruide mac Bili. According to the Annals of Ulster, a 'Tarachin' was expelled from the kingship in 697 and a 'Tarain' went to Ireland (Ériu) in 699; these notices probably refer to Taran of the Picts, since dynastic affairs in north Britain are prominent in these annals at this period. Taran was succeeded by Bridei son of Derelei (cf. Nechton son of Derelei). Taran's dynastic affiliations are unknown. His father (variants of the name are *Enfidaig*, *Amfredech*, *Amsedeth* in the Pictish king-list) may have been the Ainfthech mac Boendo whose killing in 693 is noted in the Annals of Ulster.

Taranis (also Taranus, Tanaris, Tanarus, Taranucus, Taranucnus, Taramus), TEUTATES, and ESUS comprise LUCAN's grim trinity of GAULISH gods who received bloody human SACRIFICE in a grove near MASSALIA in France (*Pharsalia* 1.444–6). Dedications to Taranis have been found across Europe, at sites which include Godramstein, Heilbronn, and Blockberg in Germany, Orgon and Nîmes in France, Piedmont in Italy, Garunna and Nedan in eastern Europe, and Chester (Welsh CAER) in BRITAIN. The name *Taranis* is based on the word which appears as Welsh *taran* and Old Irish *torann* 'thunderbolt'. Therefore, the widely distributed Celtic representations of thunderbolt-wielding deities may be images of Taranis. Taranis has several points in common with the Roman Iuppiter/Iovis (Jupiter), and Germanic Thunar, both of whom are associated with thunderclaps. Lead hammers recovered from thermal springs, miniature votive hammers, and altars depicting hammers throughout GAUL are variously attributed to Taranis, SUCELLUS, and Silvanus.

Tartans may be defined as woven patterns formed by regular repeated symmetrical stripes in both warp and weft. Similar patterns are found worldwide in many eras, but tartan has become popularly associated with Celtic cultures, and specifically with Scotland (ALBA). The earliest known Celtic examples are IRON AGE finds at HALLSTATT (Barber, *Prehistoric Textiles* 168ff.). In the 1st century BC, DIODORUS SICULUS described the Gauls as wearing 'striped coats . . . in which are set checks, close together and of varied hue' (*Historical Library* 5.30). The earliest surviving Scottish example is the 3rd-century 'Falkirk tartan' with the two-colour check pattern (Henshall, *Proc. Society*

The Scottish nationalist Theodore Napier in the costume of a Highland clan chief of the Montrose period at the Pan-Celtic Congress of Caernarfon, 1904

of Antiquaries of Scotland 86.1–29). Paintings of Scottish clothing from the late 16th century onwards regularly feature tartan, and formal portraits of the 17th century present it as a cultural icon (McClintock, *Old Irish and Highland Dress*). It gained the status of political icon when the Dress Act of 1746 banned the use of 'Tartan or partly-coloured plaid or stuff' for certain garments.

The association of particular weaving patterns with specific families or regions before that time is doubtful. The vast majority of standardized, named patterns arose as 'brand names' in the course of expanded industrial cloth production. Virtually no named patterns from the 19th-century pattern books can be matched with surviving pre-1745 fabrics or artwork (McClintock, *Old Irish and Highland Dress*). The topic of CLAN tartans was hopelessly muddied by romantic fictions such as the 1842 *Vestarium Scoticum* of the Sobieski-Stuarts (Dunbar, *History of Highland Dress*).

Victorian fondness for a romanticized Scotland helped to popularize tartan more generally, and today it is common for new patterns to be designed to commemorate groups or events. Tartan was used in other Celtic regions, but it never achieved the same iconic status there. Pre-modern Irish archaeological finds feature tartan fabric (Dunlevy, *Dress in Ireland*) and 19th-century depictions of Welsh clothing feature the tartan and stripe patterns which Lady Llanofer (Augusta HALL) encouraged as a national symbol (Etheridge, *Welsh Costume*).

Tarvos Trigaranus is the GAULISH name inscribed above the picture of a bull (*tarvos*) with three cranes (*garanus* sing. of *u*-stem; cf. Welsh *garan*, pl. *garanau*) on the votive pillar of the Paris boatmen's guild. A relief at Trier shows a deity (possibly ESUS) felling a tree. Above this, there is a bull's head with three water birds, which may be taken as shorthand for Tarvos Trigaranus. But which god is alluded to with the 'three-crane-bull' remains a mystery. The three cranes of the Irish god Midir of TOCHMARC ÉTAÍNE ('The Wooing of Étaíne) have been considered relevant, but this is simply replacing one unknown quantity with another. VENDRYÈS drew attention to the fragment of the comedy *Neaira* by Philemon (†262 BC) in which a character from the Asiatic Seleucid kingdom gives the Greeks a tiger and in return is to receive a 'thērîon trygéranon' θηρίον τρυγέρανον, since there were none in his country. It is difficult to dismiss this as mere coincidence, but this story again is open to interpretation. Another possible factor is the similarity between the words for 'crane' and for 'horn'.

Tattershall Ferry on the Humber estuary in Lincolnshire, England, has produced one of the rare extant examples of 'war trumpets' as depicted on the GUNDESTRUP CAULDRON. The find is a fragment of a tube about 1.2 metres in length with a curving upper end, where, presumably, the head of some sort of animal (probably that of a BOAR) similar to that from Deskford, Banff, Scotland (ALBA), was originally mounted (see CARNYX).

Tarvos Trigaranus on the votive pillar of the Paris boatmen's guild

Tattooing, the permanent marking of the body by inserting pigments under the skin, has been associated with the tribal Celts from the time of the ancient ethnographers down to post-modern neo-tribal enthusiasts. Familiar to European peoples since the late 4th millennium BC, among the Celts, as elsewhere in IRON AGE Europe, the custom seems to have indicated aristocratic or sacred status in some cases, and low status in others. The Greeks and Romans used tattoos (*stigmata*) to mark slaves and criminals, and otherwise regarded them as a sign of barbarian identity. Herodian, STRABO, and CAESAR were among the classical authors who described more elaborate tattooing among the insular Celts, with Caesar specifying that the ink used was a blue dye made from woad (*De Bello Gallico* 5.14). The custom of penal tattooing persisted throughout the Roman Empire and the later medieval world, even after Christian influence began to discourage the practice (Christopher P. Jones, *Written on the Body* 13), and even Christians sometimes tattooed themselves with marks of religious devotion. Indeed, medieval Celtic literature occasionally used tattooing as a trope for the transmission of Christian wisdom (MacQuarrie, *Written on the Body* 40). But the association with pagan barbarity remained, and MacQuarrie has suggested that the 'diabolical signs' which St BRIGIT removes from some would-be pursuers of a blood feud may be tattoos (*Written on the Body* 32). The MYTHOLOGICAL CYCLE of Irish tales fails to provide direct evidence of tattooing, but it is possible that such phenomena as the multi-coloured dots which appear on Ulster hero CÚ CHULAINN's face when he is in battle frenzy are an invocation of an earlier practice of warrior tattooing.

In the 19th century tattooing became well known again throughout the western world as a marker of the more marginalized elements of the lower classes, especially sailors and criminals. The punk and neo-tribal movements of the late 20th century brought tattooing back into mainstream fashion, however, and there are many 'Celtic' varieties of tattoos, some based on the designs of ancient Celtic metalwork, some on medieval Irish manuscript writing or illuminations, and some imaginatively recreating plausible Celtic tattoos (see ART).

The **Taurisci** were a powerful people, likely to have been partly or wholly Celtic speaking, who lived in the BALKANS at the time of the Roman expansion into the area. In connection with historical events from the 2nd century BC to the 1st century AD, several ancient historians mention people called the Taurisci. They are often found in association with otherwise known tribes of the ALPINE area, such as the Norici (see NORICUM), Carni, and Iapodi. STRABO (*c.* 63 BC–*c.* 19 AD) mentions the Taurisci in his *Geography* as being strictly Celtic (4.6.9–10, 4.6.12, 5.1.6, 7.2.2, 7.3.2, 7.3.11, 7.5.2); so, too, does LIVY, writing around 10 BC (*Ab Urbe Condita* 43.1.4–12, 43.5), as well as PLINY the Elder, who was writing in the mid-1st century AD (*Natural History* 3.20.133, 3.25.147–8). In the 2nd and 3rd centuries AD, both Appian (*Roman History* 3.16) and CASSIUS DIO (*Roman History* 49.34.2, 50.28.4) mention the Taurisci, who are said to be a warlike tribe that often plundered Roman territory in the hinterlands of Tergeste (modern Trieste).

In 171–170 BC the Taurisci are mentioned incidentally as allies of the Norici in connection with an account of the pillaging march of the Roman consul Gaius Longinus, whose route passed through their territory. Cincibulus, a brother of the Norican king, complained to the Roman senate about the devastation which this march cost the Taurisci and their neighbours, the Histri (Istri), Carni, and Iapodi. Accordingly, he received compensation for damages in the form of a licence to buy highly prized Venetian horses.

The invasion of Celtic Segestica (probably based on the Celtic root *seg-* 'strong', Roman Siscia, modern Sisak, south of Zagreb along the Culpa estuary of the Sava) by Cornelius Lentulus in 146–149 BC also encroached on the Taurisci. Then, about a decade later, around 140 BC, gold was discovered in the territory of the Taurisci. The influx of this new gold lowered its market value on the Italian peninsula and, when threatened with rapid depletion of this resource, the Taurisci banished Italian miners from their territory. As an upshot of this exclusionary tactic, in 129 BC the Roman consul Sempronius Tuditanus mounted a retaliatory march against the Taurisci and the adjacent Iapodi and Histri, and presumably also the Carni and Liburni. Then, in 115 BC, M. Aemilianus Scaurus succeeded in defeating the Carni, and probably the Taurisci as well. Some six years later, the Taurisci must have been further disrupted by encounters between intruding Germanic CIMBRI and the Roman army in Noricum (*c.* 109–100 BC).

In 56 BC, following the establishment of secure Roman forts in northern Fulfinum, the Taurisci, together with the Liburni (Illyrians) and Iapodi, were forced to pay tribute to Rome. Thereafter, the Taurisci united with the BOII under their commander Critasiros, who was defeated by Burebista, the DACIAN king, in approximately 41 (or possibly 50) BC. The eastern tribes of the Taurisci submitted to the future Emperor Augustus between 35 and 33 BC, while western tribes bordering on the Carni came under the dominion of the Norican kingdom, but the latter were subsequently also subdued by Rome at the hands of Drusus and Tiberius in 16–15 BC.

The territory in which the Taurisci settled is nowhere precisely defined in the surviving inscriptional records or historical commentaries. Nevertheless, Roman NAUPORTUS (Oberlaibach, modern Vrhnika) is mentioned as an important trading emporium for the Taurisci in which merchandise from Italy was transferred from cargo carriers to boats and then transported along the rivers Ljubljanica (the ancient Corcoras), Sava (the ancient Savus), and Krka. In a rather cryptic passage, Pliny the Elder (*Natural History* 3.25.148) states that the Taurisci were situated on the western side (*in tergo*) of *mons Claudius* (presumably modern Moslovačka gora), with the SCORDISCI on the eastern side (*in fronte*). Itineraries of contiguous tribes—the Carni, Norici, and Boii, as well as the Histri and Iapodi—enable us to locate the Taurisci of the 2nd and 1st centuries BC in an area which extended from Nauportus (Vrhnika) on the southern perimeter of the Ljubljana valley to the Culpa river on the south-east, and from the Drava valley in the north to *mons Claudius* in the east (see maps at entries ADRIATIC; ALPINE; BALKANS).

The material culture of the Taurisci is related to

that of other south-eastern Celtic groups. Archaeologically, the cluster of sites at Mokronog defines a Mokronog group divisible into three horizons: (1) characteristically Celtic Middle La Tène at Mokronog (La Tène C, 250–120 BC), (2) Late La Tène with distinctively regional characteristics at Beletov vrt (La Tène D1–2, *c.* 120–40 BC), and the Late Republican–Early Imperial period at Verdun (La Tène D2, *c.* 40 BC–*c.* AD 35). The following are among the most important sites that can be assigned to the Taurisci in Slovenia: Vrhnika/Nauportus, Stična, Mihovo, Verdun, Šmarjeta, Mokronog, Roje, Valična vas, Novo mesto, Metlika, Dobova, Brežice, Celje, Slatina v Rožni dolini, Formin, Ptuj, Ormož; Kuzelin near Zagreb, and Malunje, Sisak, and Zvonimirovo in western Croatia. Among these, there are coin hoard finds at Bevke, Celje, Lemberg, Dobrna-Retje, and Trbovlje in Slovenia, and at Djurdjevac, Križvljan, Narta-Čazma, Ribnjačka, and Samobor in Croatia.

Archaeological evidence confirms the presence of a Taurisci community in this area from around 300 BC onwards: uniform cremation burials and items of material culture—weapons, jewellery, pottery made on the wheel—which belong well within the sphere of Celtic development, but which also reflect distinctly eastern Celtic traits (helmets with fortified calottes, pseudo-filigreed ornamentation), as well as influences from the south-eastern Balkans, such as two-handled vessels and Dacian cups.

The Celts initially settled the river-bottoms and mountainous parts of central Slovenia in the Late La Tène period but, in time, with the extension of Roman power and control, and punitive Roman sorties, as well as numerous trade contacts as revealed in the importing of bronzes and jewellery (especially after the foundation of Aquileia in 181 BC), the Celts resettled abandoned hill-forts from the Early Bronze Age (*c.* 2500–1200 BC), which they refortified during the 1st century BC (see FORTIFICATION; OPPIDUM). This was also a period of regional developments in material culture within Taurisci territory and influences from neighbouring tribes, changes which prompted the formation of yet smaller tribal entities identifiable as the Latobici, Colapiani, Sereti, Serapili, Iasi and others.

Teamhair (**Tara**) is a prehistoric archaeological complex in Co. Meath (Contae na Mí) which is associated with an extraordinary KINGSHIP often identified as the high-kingship of Ireland (Ériu). The Hill of Tara is a topographically insignificant hill lying between the towns of Navan (An Uaimh) and Dunshaughlin (Dún Seachlainn). The archaeology of the hill is extremely complex and is not confined to the immediately visible monuments. Excavation and modern geophysical surveying techniques continue to reveal evidence of an enormous amount of human activity on the hill. The principal visible monuments consist of a Neolithic (New Stone Age) passage tomb, a linear earthwork, a hill-fort, a stone standing on the inauguration mound (reputed, though unlikely, to be the ritual stone called *Lia Fáil*, which was probably transferred at an early date to Tailtiu), numerous barrows and ENCLOSURES of uncertain date. Excavations were conducted in the 1950s on the Mound of the Hostages (a Neolithic passage tomb), the complex known as the Rath of the Synods, and on the ramparts of Ráith na Ríg. A further season of excavations on Ráith na Ríg, conducted in 1997, revealed evidence of Iron Age metalworking activity. The origin of the Old Irish name *Temair* (< Celtic **Temris*) has been explained as meaning 'a height with a view', 'the gates to the Otherworld' and 'a sacred place' (cf. Greek τέμενος *témenos*, Latin *templum* < **tem-lo-m*). The last seems to be the most acceptable explanation.

Tara has been regarded as the seat of the high-kings of Ireland (*ard ríg na hÉrenn*). A constant theme in early Irish literature is that of the exalted status of the kings of Tara and the all-island nature of their authority. While gods and goddesses such as Lug, Medb, and Eithne frequently appear in tales relating to Tara, it was not the sanctuary of the gods, but the home of human kings, who defended the hill against the supernatural. Yet, it was this realm which granted

Aerial view of Teamhair (Tara) from the south

legitimacy to the kings of Tara, often in their rôle as consorts, for example, of Medb Lethderg (Red-side), a goddess of land and sovereignty (see SOVEREIGNTY MYTH). This was a special kingship, the 'kingship of the world', governed by universal principles of kings ruling justly, peacefully, prosperously, and truthfully. This rule is represented by the phrase *fír flathemon* 'the justice of a ruler', typified by the actions of heroic kings such as Conaire Mór mac Etarscéla and CORMAC MAC AIRT (see also AUDACHT MORAINN). The king of Tara was bound by taboos (*geisi*, sing. GEIS), some of which were literary inventions while others were genuine maxims devised to safeguard the ideal of *fír flathemon*.

Although the kingship of Tara was a special kingship whose occupants had aspirations towards supremacy among the kings of Ireland, in political terms it is unlikely that any king had sufficient authority to dominate the whole island before the 9th century. This status as *primus inter pares* was represented by the title *rex Temro* or *rí Temro* 'king of Tara'. Control of this kingship was a matter of contention between the LAIGIN (Leinstermen), ULAID (Ulstermen), and the UÍ NÉILL until the 8th century, by which time the first two tribal groups had weakened and the contention was henceforth between the Uí Néill and the ÉOGANACHT dynasties of Munster (MUMU). From the 11th century onwards, control of Dublin (BAILE ÁTHA CLIATH), Limerick (Luimneach), and Waterford (Port Láirge) was more important to an aspirant high-king than control of Tara. Nevertheless, the old capital retained its significance in literature. One of the most popular tales linked to Tara is the dramatic account of St PATRICK lighting the paschal fire in the plain of Brega—traditionally on the Hill of Slane—and of his confrontation with LOEGAIRE MAC NÉILL, king of Tara, and his DRUIDS. The earliest versions of the tale are preserved in the 7th-century Patrician dossiers by bishop Tírechán and Muirchú moccu Machtheni. According to legend, Tara was abandoned when St Ruadán of Lorrha cursed its king DIARMAIT MAC CERBAILL († *c.* 565), the last king of Tara to celebrate the fertility rite, *Feis Temro*.

Teilo, St, was a supposed bishop and founder-abbot of Llandaf (Glamorgan/MORGANNWG), *fl. c.* 550. According to a Life composed *c.* 1100 as a sermon on his feast-day, 9 February, Teilo was born to a landowning family at *Eccluis Gunniau*, identified as Penally, near Tenby/Dinbych-y-pysgod (where his tomb was claimed to be, though relic shrines were

also maintained at Llandaf and Llandeilo Fawr). He was said to be a pupil of Dubricius (Dyfrig) and, later, a fellow pupil with David (Dewi Sant) of the master Paulinus, and that his career included a visit to Budic, an Armorican ruler married to his sister and the father of Teilo's pupil and successor, Oudoceus (Euddogwy). Memoranda of grants to Teilo emphasize statecraft: blessing the king of Gwent's forces in battle, keeping the peace at the court of Aircol Lauhir. An earlier form of his name, in the Lichfield Gospels, also known as Book of St Chad (see ceadda), is Eliau (prefixed with the honorific *to* 'thy', to become Teliau), interpreted by the Life as 'Elios' (Greek for 'sun', because 'his learning shone as the sun') 'corruptly pronounced' as *Eliud*. This last is the actual base name, a compound of Celtic **elu-* 'many' and probably Latin *iūd-* 'lord'; Old Welsh *Eliau* and *Teliau* are hypocoristic or pet forms of *Eliud*. The numbers and spread of churches under Teilo's patronage demonstrate the promotion of his cult by Llandaf in the same way as Menevia (St David's) promoted the cult of David. *Braint Teilo* (OW *Bryein Teliau* 'The privilege of Teilo') is a Late Old Welsh legal text preserved in the Book of Llandaf which enumerates the special perpetual exemptions that Teilo's churches had obtained from the kings of Morgannwg, supposedly centuries before (ed. & trans. by Wendy Davies, BBCS 26.123–37). The same concept is found in the saga englynion of Heledd, where the violated churches of Bassa are said to have lost their *braint*.

Teudebur map Bili (†752) was the son of Bile or Beli son of Elphin; all were kings of the Britons of Ail Cluaithe, modern Dumbarton (see ystrad clud). Teudebur or Tewdwr began his reign in 722 upon the death of his father. He defeated the Picts, led by Talorggan mac Forgussa, brother of the Pictish king Onuist son of Uurguist (r. 729–61), in ad 750 in the battle of Mocetauc, which has been identified with Mugdock, a few miles north of Glasgow (Glaschu). This battle is recorded as the battle of Catohic in the Annals of Ulster.

Teutates (also Toutatis, Tūtuates, Tūtatus, Toutorīx [see Tudur]), Taranis, and Esus form Lucan's trinity of Gaulish gods (*Pharsalia* 1.444–6) to which Gauls near Massalia sacrificed their prisoners of war. The name Teutates occurs alone or as a secondary theonym in combination with Mars, Cocidius, Apollo (see belenos), and Mercurius in texts and inscriptions, including those found at Seckau, Austria; Rome; Rooky Wood, Hertfordshire, England; Castor near Peterborough, England; Old Carlisle, England; York (Welsh [Caer] Efrog), England; Mainz, Germany; Nîmes, France; Vaison-la-Romaine, France; and Noricum. Since his name preserves a root which means 'tribe' or 'people' (compare Old Irish tuath 'tribe', Welsh and Breton *tud* 'people', Cisalpine Gaulish genitive *TouTas* on the inscription of Briona), Teutates may be an epithet which allows a better-known Roman god to incorporate a local, tutelary, tribal deity (see interpretatio romana). The Germanic word cognate with Gaulish *toutā*, or more probably an early loan from Celtic to Germanic, gives *Deutsch* 'German' and *Dutch*. The early Irish oath formula common in the Ulster Cycle: *tongu do dia tongas mo thuath*, roughly 'I swear by the god by whom my tribe swears', and variants, is possibly based on a comparable notion of the god of the *toutā*/*tuath*.

Logo of TG4

TG4 is the television channel on which the majority of IRISH-language programmes are broadcast. It was launched on 31 October 1996 (as Teilifís na Gaeilge) and is located in the GAELTACHT area of Conamara, 28 km west of Galway city (GAILLIMH), on the west coast of Ireland (ÉIRE). Its core service consists of seven hours of programming in Irish daily, which includes two hours of children's programmes, and this is supported by material in other languages. The station has an audience of almost 800,000 viewers each day. The channel's signal covers Ireland, and is receivable directly by aerial in the Republic, to satellite Sky Digital customers throughout Ireland, on cable and MMDS in the Republic, or worldwide via webcast. TG4 also transmits on analogue terrestrial from Divis for the Belfast (Béal Feirste) area. TG4 was established as a publisher/broadcaster, and operates under the statutory and corporate aegis of Radió Telefís Éireann (RTÉ), the national broadcaster for Ireland.

As a public-service broadcaster, TG4 provides programmes in Irish and English, including a news service (*Nuacht TG4*), drama, music, documentary, sports coverage, children's programming, and live coverage of Dáil Éireann, the national parliament. The station sources most of its programmes from independent production companies, and it also receives a provision of 365 hours of programming (valued at €7.5m) annually from RTÉ. Its regular soap opera *Ros na Rún* is the largest single independent commission in Ireland—at €1.6m annually. TG4 invests over €15m each year in original programming from the independent production sector, and this investment supports 350 jobs, not including the station's core staff of 75 people.

TG4 is acknowledged as one of the most efficient and cost-effective television stations in Europe. It provides 16 hours a day of television from an annual budget of €24m (2005); this means, however, that the budget for each production is far below the average in the rest of Europe.

TG4's strategy for the digital era was recently drafted. The Broadcasting Act 2001 allows for the establishment of TG4 as an independent statutory body, though no date for effecting this change of status is specified by the Act.

The Forum on Broadcasting, which reported to the Government in 2002, reaffirmed the central rôle of TG4 in the provision of public service broadcasting in Ireland.

London double-decker bus on Westminster Bridge crossing the Thames

Thames, river, has, throughout history and prehistory, been an important river, both as a route for traffic and trade, and also in the transmission of ideas and focus of beliefs. The great number of Late Bronze Age SWORDS—many of Continental types—recovered from the river shows that by 1000 BC it had become a centre for a widespread rite of WATERY DEPOSITIONS. The Thames has produced a considerable number of very prominent IRON AGE finds, such as the BATTERSEA and Wandsworth SHIELDS and the Waterloo Bridge helmet, as well as numerous examples of high quality swords and other metal objects. The fact that so many prestige objects, most likely associated with a social élite, were frequently deposited in the river indicates that it probably had some sort of religious significance. On the other hand, the Thames was an important entry point into BRITAIN, with many imports first appearing around the Thames estuary. It may at times also have acted as a natural boundary which was easily defended, and probably formed the southern boundary of the CATUVELLAUNI and the TRINOVANTES. CAESAR mentions such an attempt to defend the Thames against his advancing legions as one of the tactics employed by his adversary CASSIVELLAUNOS (*De Bello Gallico* 5.18). The relative dearth of pagan Anglo-Saxon material north of the lower Thames suggests that the post-Roman BRITONS still controlled the area well into the 6th century (cf. VERULAMION). The easternmost bridgeable crossing at London (ancient *Lōndinion*, Welsh *Llundain*) became the site of the largest town of Roman Britain, and there is literary and archaeological evidence for its continuous occupation throughout the Dark Ages, though systematic excavation is impossible due to dense urban build up. The name, ancient *Tamēsta*, Welsh *Tafwys*, is probably related to *Taf* in south Wales (CYMRU), *Tamar* between Devon and Cornwall (KERNOW), and many similar pre-English river names.

Theopompus Θεόπομπος (*c.* 376–*post*-323 BC) was a Greek historian form the Isle of Chios. He was a friend and admirer of Philip II of Macedonia and his son, ALEXANDER THE GREAT. Fragments of two major historical works by Theopompus survive: *Hellenica* Ἑλληνικαὶ ἱστορίαι and *Philippica* Φιλιππικαὶ ἱστορίαι. A passage from the latter, quoted by ATHENAEUS (*Deipnosophistae* 10.443b–c), shows a version of the theme, common in other narratives by or about Celtic peoples, of fatal treachery at a FEAST in which traditional enemies have been brought together. The historical context in this case is WARFARE during which central European Celts

encroached upon the Illyrians in the BALKANS:

> The Celts . . . announced to all the [Illyrian] soldiers that a wonderful banquet had been prepared for them in their tents. They put a certain medicinal herb in the food which attacked and purged their bowels. Then some were captured and slain by the Celts, while others, unable to stand the pain, threw themselves into the rivers. (Koch & Carey, *Celtic Heroic Age* 6)

Thurneysen, Rudolf, Indo-Europeanist, Celticist, and Romance philologist, was born in Basel, Switzerland, on 14 March 1847 and died in Bonn, Germany, on 9 August 1940. He is best known to Celtic scholars for his published work on the early Irish LAW TEXTS, the ULSTER CYCLE and other sagas, and the Old IRISH language. Many of his pioneering studies have yet to be superseded. As a literary scholar he was clearly in the 19th-century mould, setting his scholarship on comparative historical linguistic foundations and adhering to principles established in the study of Greek and Latin classics (see also CRITICAL AND THEORETICAL PERSPECTIVES).

Thurneysen began to study Romance philology (that is, Latin, its medieval and modern daughter languages, and the literatures in these languages) in Basel in 1875. Following his departure to the University of Leipzig in 1876, he began to focus increasingly on ancient INDO-EUROPEAN languages, including Old Irish, which was taught there by Ernst Windisch. Thurneysen spent the winter term of 1878–9 at the University of Berlin, where Heinrich ZIMMER was one of his teachers. In 1879 he was awarded a Ph.D. from the University of Leipzig for a thesis entitled '*Über Herkunft und Bildung der lateinischen Verba auf -io . . .*' (Concerning the origin and formation of Latin verbs in *-io . . .*). After graduation, he spent several months in Paris, where he continued his studies in Celtic with Henri Gaidoz. In 1881 he edited *Indices glossarum et uocabularum quae in Grammaticae Celticae editione altera explanantur* (Indices of glossaries and vocabularies that are explained in the second edition of the *Grammatica Celtica* of J. C. ZEUSS [1853]) with Bruno Güterbock. He won his habilitation (approbation as a professor) in Jena, Germany, in 1882 for Romance and Celtic philology. In 1887 he was given a Chair as Professor of Comparative Linguistics in Freiburg (Breisgau), which he held until his call to the University of Bonn in 1913.

He published his first articles on CELTIC STUDIES, which became the main focus of his scholarly research, in 1884. His *Handbuch des Alt-Irischen* first appeared in 1909 and was published in 1946 as an enlarged and revised English edition under the title *A Grammar of Old Irish*. This is still the standard work on the subject and has been reprinted many times. The translators, Daniel BINCHY and Osborn Bergin (Ó hAIMHIRGÍN), relied mostly on a translation done by Michael Duignan, which Thurneysen himself had partly revised. Thurneysen's *Die irische Helden- und Königsage bis zum siebzehnten Jahrhundert* (The Irish sagas of heroes and kings to the 17th century, 1921) as well as his research on Irish law (from 1923 onwards) still form milestones of research in Celtic studies.

He won many honorary degrees, including honorary doctorates at the University of Cambridge, Trinity College Dublin, the National University of Ireland, University of Berlin, and University College, Belfast.

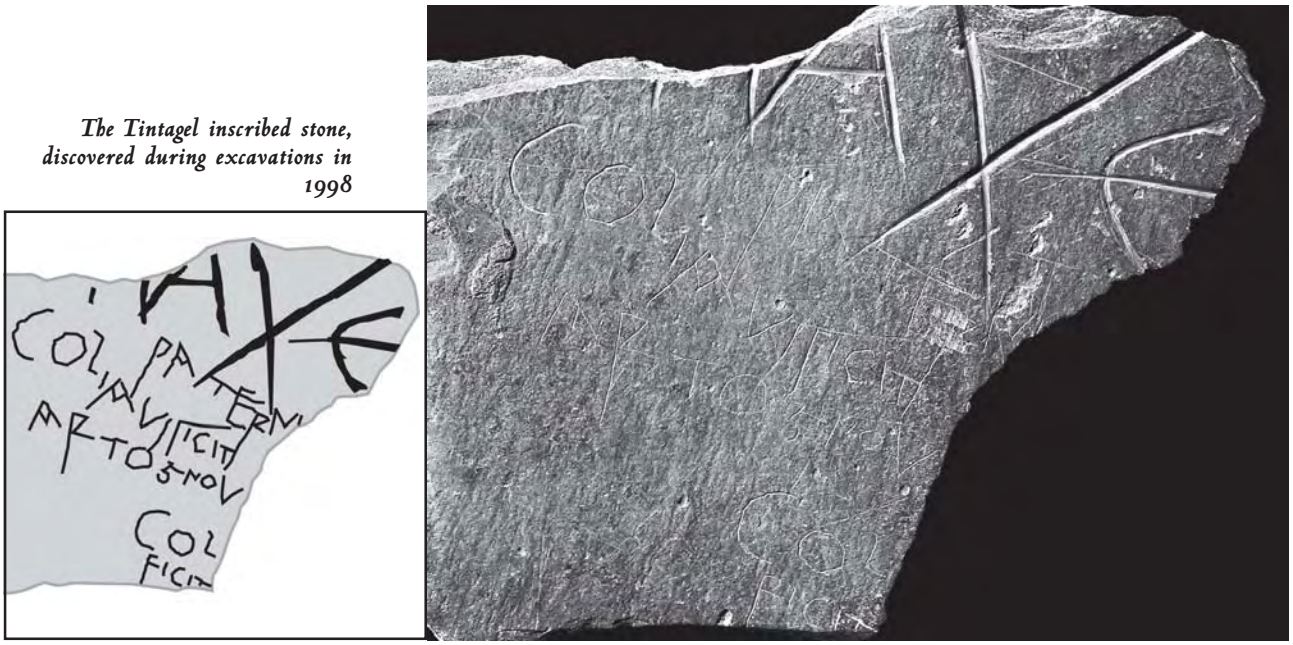
Tintagel

Tintagel is a village in north Cornwall (KERNOW) which has been linked to ARTHURIAN legend since the 12th century at the latest (see also ARTHURIAN



The Tintagel inscribed stone, discovered during excavations in 1998

sites). Although Tintagel now refers to an entire village, until the 19th century it referred only to the headland area on the coast. The etymology of the name is unclear, but it may be derived from *Din Tagel* (fort at a narrow entrance) and was possibly the place which the Romans recorded as *Durocornovium* (the fortress of the tribal group known as the Cornovii), situated west of Exeter according to the Ravenna Cosmography (see Rivet & Smith, *Place-Names of Roman Britain* 350). It was Geoffrey of Monmouth in his Historia Regum Britanniae ('The History of the Kings of Britain', *c.* 1139) who made the earliest surviving literary connection between Arthur and Tintagel, though he himself was quite possibly here—as definitely elsewhere—drawing on an earlier Brythonic tradition. According to Geoffrey, Arthur was conceived by magic at Tintagel castle. His father, Uthr Bendragon, was transformed by Merlin (Myrddin) into Gorlois, the duke of Cornwall, so that he could fulfil his desire for the duke's wife, Igraine. The liaison resulted in the conception of Arthur. This narrative has since been embellished and retold by various authors from the 12th and 13th centuries onwards, connecting King Arthur with the site. Many Tristan and Isolt narratives have King Mark ruling Cornwall from a seat at Tintagel.

A series of archaeological campaigns carried out at Tintagel in the 1950s and 1960s and again in 1976–81 recovered a remarkable quantity of imported pottery datable to the final Roman and mostly the early post-Roman periods (4th–7th centuries). There were far-flung links at this period with southern Gaul, the eastern Mediterranean, and North Africa. The wealth of these finds suggests that Dark Age Tintagel was then the hub of economic and political power. The Tintagel slate, a broken inscribed stone with three men's names, found on the eastern terrace of the site in 1998 also belongs to this period. The surviving fragment reads:

PATERN(.)[
COLIAVIFICIT [
ARTOGNOV[
COL[
FICIT[

. . . [inscribed stone] of Paternus [and] of Coliau, Artognou made . . . Col . . made . . .

The letters are lightly scratched, and the stone may represent a practice piece for a larger inscription. Portions of a more deeply cut A, X, and E remain visible at the top. *Coliau* and *Artognou* are Brythonic Celtic names, the latter corresponding to Old Breton *Arthnou* < Celtic **Artognāwos* 'knowing the bear'. Due to the literary associations of Tintagel, there has been natural eagerness to associate Artognou with Arthur, but the names are not the same and may not even be etymologically related.

Earlier interpretations which suggested that the site had been a monastery in the post-Roman period have

Aerial view of Tintagel

now been generally discarded in favour of a secular, chieftainly interpretation. Quite probably, the site then functioned as a stronghold for the kings of Dumnonia. By 1233 Arthur's legendary connection with the site inspired Richard, earl of Cornwall, to build a castle on Tintagel headland, some of which remains today. By the 1330s the castle had begun to decay and fall into ruin, becoming by the Tudor (Tudur) period a site of antiquarian interest for travellers. The idea of the site as a seat of native Cornish kings, however, continued in popular Cornish conscience, as seen in the drama Beunans Meriasek.

By the 19th century, visiting writers such as Alfred Tennyson, A. C. Swinburne, and Thomas Hardy, and the local Anglo-Cornish poet Robert Stephen Hawker had begun to romanticize the Arthurian connection, prompting a massive Arthurian revival in the 1920s. At the same time as the village of Trevena began to call itself Tintagel, the millionaire Frederick Thomas Glasscock founded the Order of the Fellowship of the Knights of the Round Table and built the Great Halls of Chivalry, housing a library, paintings by William Hatherell, and stained glass windows by Veronica Whall. During this period there was also a flowering of Arthurian themed drama which used Tintagel as a setting.

The visit in 1924 of the Austrian educational philosopher Rudolph Steiner had lasting effects and inspired the development of Tintagel as a site for alternative spiritual activity. Steiner argued that the 'sun-king' Arthur was the name of a priestly class and that Tintagel was a centre of learning for British spiritual regeneration. Tintagel has since become an esoteric centre similar to Glastonbury as a site for modern pagan and Celtic Christian pilgrimage.

Throughout the 20th century and into the 21st century, Tintagel has remained a focus for tourists. English Heritage, which manages and interprets the Tintagel Castle site for visitors, has been a site of protest by Cornish ethnonationalists (see nationalism) who wish to reassert a narrative of a native British and Celtic Arthur, rather than an English king, at Tintagel.

Tír na nÓg [1] Irish background

The term *Tír na nÓg* (Land of youth) is one of many used in early IRISH LITERATURE to denote the OTHERWORLD, a place quite distinct from the world of the dead. Instead, Tír na nÓg is a kind of earthly paradise, inhabited by supernatural beings, the *aes síde* (people of the SÍD), also known as TUATH DÉ, Tuatha Dé Donann, or simply as 'FAIRIES'. Other terms used include Tír fo Thuinn (Land below the wave), Mag Mell ('Plain of sports' or 'Delightful plain'), Tír na mBeó (Land of the living), Tír Tairngire (Land of promise), and Emain Ablach (Emain of apples; see ELLAN VANNIN [4]; AVALON). All these names essentially describe the same phenomenon: a land of eternal youth, beauty, abundance, and joy, and a visit to this supernatural realm is a recurrent theme throughout medieval Irish literature.

Access to the Otherworld could be gained by many means, for example, through fairy mounds, the *sídh*, or by going across or under water, which was considered one of the boundaries of the Otherworld.

The term Tír na nÓg probably appears for the first time in the *Laoithe Fiannaíochta* (Fenian lays), where we find FINN MAC CUMAILL's son OISÍN (or sometimes his companion Caoilte mac Rónáin) coming back from a visit to the Otherworld.

Tír na nÓg is nowadays the best-known term for the Irish Otherworld. This is due, at least in part, to the work of the Irish poet Mícheál Coimín (1688–1780), who produced an early modern version of *Laoi Oisín* (Oisín's lay), under the title *Laoi Oisín ar Thír na n-Óg* ('Oisín's Lay on the Land of Youth'), and also to the 'Ossianic debate' (see James MACPHERSON) of the late 18th century, which contributed to the general popularity of FIANNAÍOCHT.

Tír na nÓg [2] connection with Wales

While Wales (CYMRU) has its own 'Land of the Young' in Ynys Afallach or Afallon (the Isle of AVALON) and a concept of the OTHERWORLD with cross-Celtic affinities is designated by the Welsh name ANNWN, the Irish story of OISÍN's love for the otherworldly Niamh and his fatal return home from her Land of the Ever-young became well-known in Wales early in the 20th century, thus presenting an example of cultural cross-fertilization between CELTIC COUNTRIES and CELTIC LANGUAGES in modern times. Although not the first Welsh poet to derive inspiration from the legend, it was Thomas Gwynn JONES who brought it into popular notice in his dramatic Welsh-language poem *Tir na n-Óg*, first published in 1916 and later set to music. His account of Osian and Nia Ben Aur (Golden-haired Niamh) is a melancholy meditation on longing and loss, written with a subtle mastery of the strict metres, and the story became familiar to many who never read the poem itself. T. Gwynn Jones was an accomplished scholar of IRISH and, while he probably knew YEATS's 'Wandering of Oisin', his direct source was an oral Irish tale collected on Rathlin Island (Reachlainn), off Ireland's north-eastern coast. He also greatly admired the 18th-century poet Mícheál Coimín's *Laoi Oisín ar Thír na nÓg* ('Oisín's Lay on the Land of Youth') and later translated some stanzas from it in his volume of translations *Awen y Gwyddyl* (The muse of the Irish). The popularity of *Nia* as a woman's name in 20th-century and present-day Wales can be traced to the work of T. Gwynn Jones.

Le **Titelberg** (**Pétange**) is an OPPIDUM of the Treveri in present-day Luxembourg (see also BELGAE). The natural setting of the Titelberg is one of the numerous promontories moulded by the activity of the rivers in the iron-bearing mountains in the south

Detail of bronze boar from Le Titelberg

of Luxembourg. The spur, which covers an area of around 50 ha (*c.* 120 acres), towers approximately 130 m above the Chiers valley. During the IRON AGE, five successive fortifications defended the isthmus where the plateau could be accessed. In the last two, a *murus gallicus* 'Gaulish wall' (that is, a timber-framed earthen wall with a vertical dry-stone façade) and a FORTIFICATION of the Fécamp type (that is, a massive triangular earthen bank at least 6 m high, with a wide flat ditch in front of it) followed the line of the ridge and enclosed the site for 2700 m. Two entrances have been identified: the first, located in the rampart guarding the isthmus, gives access to the plateau of Differdange, and the second makes its way downwards into the Chiers valley. Two cemeteries adjoin the paths, one located in the glacis of the ramparts, the other on the slope near the site of LAMADELAINE.

Following excavations inside the ramparts, the outlines of the precise planning of the infrastructure of this GAULISH town are visible. All the structures of the Late LA TÈNE period (last two centuries BC) conform to a regular plan oriented to a road which linked the two gates of the oppidum. The excavation areas in the centre of the plateau have revealed a dense settlement consisting of spacious houses built of brick, each equipped with one or several hearths, provision canals, and often paved floors of great chalk plates. This quarter was inhabited by craftsmen working in bronze and iron; metalworking was clearly the basis of the wealth of this Treveran oppidum. However, its importance was based as much on the primary exploitation of raw metal ores as from its location, which allowed it to dominate trade in ingots and finished products. The Titelberg is situated at the point where an important north–south axis of communication from the valleys of the RHÔNE, the Saône, and the upper course of the Mosel river met the massif of the Ardennes (see ARDUINNA) and divided into several branches, one towards the Champagne, and the other towards the RHINE valley. These were the main assets responsible for the rapid economic expansion of this Gaulish town, which developed during the first half of the 1st century BC into one of the main centres of production and trade in north-east GAUL. The main mint of the Treveri was located in this oppidum, as is attested by thousands of coins (see COINAGE).

The function of the Titelberg as an important economic centre for a large region cannot be viewed in isolation from its function as a political and religious centre. A large and deep ditch which enclosed a space of approximately 10 ha (24 acres), was discovered by aerial and magnetic surveys. The ditch, which dates from the beginning of the Late La Tène period, was linked to the ramparts on the north and south sides; it probably belonged to the first phase of urbanization of the town, and divided off an area which had no settlement structures. Inside the enclosure, a sanctuary which shows continuity between La Tène D1 and well into the Gallo-Roman period (3rd century AD) has recently been excavated. We can see from this research an example of early town planning in Late La Tène Gaul, with the establishment of a public precinct incorporating a religious centre in the framework of a broader and varied urban plan which included industrial and residential areas.

The Gaulish War has left no traces in Titelberg. On the contrary, the site experienced a true Golden

Age in the third quarter of the 1st century BC. If it were not for the minting of coins carrying the name Aulus Hirtius, which implies Roman or pro-Roman politics during the first years following CAESAR's conquest, the archaeological record would not suggest changes in the everyday life of the inhabitants of the oppidum in the two decades following Caesar's conquest of the area in the 50s BC; in effect, the Late La Tène Gaulish horizon lingers on here for another generation.

It is only from 30 BC onwards that the material culture began to change in the territory of the Treveri. The quantity of Mediterranean imports increased rapidly; local production adopted forms influenced to a large extent by Italy and southern Gaul. These transformations went hand in hand with a reorganization of the settlement in the oppidum at the Titelberg. In the sectors thus far excavated the Gaulish huts with two aisles and supported by carrying posts were demolished in the late first century BC and replaced by houses in timber-frame construction technique. The large ditch of the enclosure was filled up. Excavation has brought to light objects which form part of the legionnaire and auxiliary equipment of the Roman army. By means of aerial photography and a geomagnetic survey, a Roman military camp covering approximately 10 ha (24 acres) has been located in the western part of the oppidum. This military settlement, as well as the changes in the material culture, reflects a tightening Roman grip on north-eastern Gaul (*Gallia Belgica*) by the Roman administration from the beginning of the reign of the first emperor Augustus onwards (i.e. from 31 BC). This consolidation of Roman power in these regions seems to have been a precondition for the development of the great road which linked LUGUDŪNON (Lyon) with the Lower Rhine area.

The rich tombs of Goeblange-Nospelt (see KOERICH) show an aristocracy, or rather a pro-Roman segment of the Treveran aristocracy, which knew how to take advantage of the situation to increase its power and wealth in the early days of the Empire. On the other hand, the conditions of the settlements of the oppidum of Titelberg and its rural setting seem to have become dramatically poorer at the beginning of the 1st century AD. The construction of new Roman ROADS changed the economic geography of this part of Gaul to a large extent. Titelberg lost its rank as a political and economical centre to the new capital of the Treveri, Augusta Treverorum (now Trier/Trèves), and the *vicus* (smaller Roman town) of Dalheim. However, the exploitation of iron ore and the quarrying of local limestone as building material ensured the survival of a settlement on the site of the ancient Gaulish town. A GALLO-ROMAN *vicus*, served by a bypass of the new Roman road from Metz to Tongern, succeeded the Treveran oppidum. This newer settlement, which concentrated mainly on the east side of the promontory, was destroyed during the Germanic invasions in the second half of the 3rd century AD. By then, Roman Gaul was in economic decline, and the reconstruction in the 4th century AD only affected a small part of the plateau. In the light of the evidence of the ending of the datable sequence of coins found on the site, the settlement of Titelberg was definitively destroyed or abandoned at the end of the 4th or the beginning of the 5th century AD.

Titley, Alan (1947–) was born in Cork city (CORCAIGH), where he was educated at Coláiste Críost Rí. Having trained as a teacher at St Patrick's College of Education, Drumcondra, Dublin (Druim Conrach, BAILE ÁTHA CLIATH), he spent some time teaching in West Africa, before returning to Dublin where he is head of the Irish Department at his old college.

His publications include novels, a play, substantial collections of short stories, as well as numerous critical articles, and a major study of the novel in Irish, based on his doctoral thesis. He has won various awards, including Oireachtas prizes (see FEISEANNA), the Irish-American Cultural Institute Award (1988), and the Ellis Dillon Award (2004) for *Amach* (Out), a novel for teenagers.

Titley's work is primarily characterized by his brilliantly subversive approach to language, involving

parody, wordplay, deliberate use of anachronisms, and intertextual references. As a result of his merging of medium and subject, much of Titley's fiction can be read as a commentary on the IRISH language as a literary medium.

Pádraigín Riggs

Tochmarc Emire ('The Wooing of Emer') is a tale of the ULSTER CYCLE. It tells how CÚ CHULAINN met and won his wife Emer, daughter of the LAIGIN hospitaller Forgall Monach. It also describes the super-hero's training in arms by Scáthach (whose name means 'shadowy'), a warrior woman of ALBA, his brief liaison with Scáthach's daughter Uathach ('frightful'), and his triumph over another warrior woman, Aífe, with whom he also fathers a son. In this last episode, *Tochmarc Emire* sets the essential background for the story of Cú Chulainn slaying his own son, AIDED ÉNFIR AÍFE. The saga also includes a long, allusive PROPHECY in the *rosc* style (rhythmical prose) concerning Cú Chulainn's heroic exploits and destiny. In some manuscripts this passage has the Latin–Old Irish title *Verba Scáthaige* and has been regarded by writers, including Carney and Olmsted, as having had an earlier independent existence. The medieval Irish TALE LISTS count *Tochmarc Emire* as one of the *remscéla* or 'fore-tales' of the central epic TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley').

The text survives in two versions, as recently reconsidered by Toner. The shorter version (edited by Meyer) survives only in a 15th-century manuscript (Oxford, Bodleian Library, Rawlinson B 512), where it is fragmentary, beginning at the end of the sexually suggestive riddling dialogue at the first meeting of Cú Chulainn and Emer. This version reflects an older text, perhaps written in the 8th century. The longer version seems to be a scrupulous Middle Irish expansion of the older version, leaving its Old Irish core in tact. The relationship of the version of *Tochmarc Emire* in LEBOR NA HUIDRE ('The Book of the Dun Cow') to the shorter and longer recensions is complicated, since it is incomplete in that manuscript and has been modified by the interpolator. The tale holds renewed interest for modern readers and feminist critics on account of its several strong female characters, especially the highly sexualized women warriors. For the study of mythology, it provides a particularly vivid example of Alba (Scotland or BRITAIN) able to function as a virtual OTHERWORLD in the early Irish literary imagination.

JTK

Tochmarc Étaíne ('The Wooing of Étaín') is an Irish saga in three diverse parts or a group of three related sagas which survives complete in a detached section of LEABHAR BUIDHE LEACÁIN ('The Yellow Book of Lecan') and fragmentarily (Part II complete) in LEBOR NA HUIDRE ('The Book of the Dun Cow'). According to Bergin and Best (*Ériu* 12.137–96), the text's language implies a 9th-century original with 11th-century reworking. An internal reference to the lost 8th-century manuscript CÍN DROMMA SNECHTAI ('The Book of Druim Snechta') suggests that there was also an early version of the tale or one of its parts in this collection. Elements of the intricate plot are summarized in the articles on REINCARNATION and MYTHOLOGICAL CYCLE.

Part I concerns the DAGDA's enchantment and deception of Elcmar to beget OENGUS MAC IND ÓC. Years later, Oengus acts on behalf of Midir to woo the beautiful Étaín Echraide (Étaín of the horses), daughter of a king Ailill of northern Ireland. After

Oengus performs great feats, including the clearing of plains, Midir obtains Étaín, but Midir's jealous sorceress wife Fuamnach inflicts a series of cruel enchantments on the girl in order to drive her from the world. Étaín is eventually reborn a thousand years later in Ulaid as the daughter of the wife of a man named Étar. In Part II, Étaín is the wife of Eochaid Airem, king of Tara (Teamhair). Eochaid's brother Ailill falls into love sickness for Étaín, prefiguring the reappearance of the otherworldly Midir. In Part III, Midir repeatedly plays the board game fidchell with Eochaid and eventually wins Étaín as the stakes. The lovers fly off as two swans to the síd. When Eochaid sends the men of Ireland (Ériu) to dig up Midir's mound at Brí Léith, the king is presented with fifty indistinguishable otherworld women and mistakenly chooses Étaín's daughter. The child of that union is another Étaín, who, as the wife of King Etarscél of Tara, gives birth to Conaire Mór, the doomed protagonist of Togail Bruidne Da Derga ('The Destruction of Da Derga's Hostel'). Because of this intertextual connection *Tochmarc Étaíne* is counted as a *remscél* or 'fore-tale' setting the stage for the latter saga and explaining the hostile otherworld forces which eventually close in on King Conaire. The opening of *Togail Bruidne Da Derga* contains an extended formulaic description of Étaín's incomparable beauty, which concludes, 'Shapely are all till [compared with] Étaín; dear are all till [compared with] Étaín'. The name *Étaín* is intelligible as a diminutive of Old Irish *ét* 'passion, jealousy'.

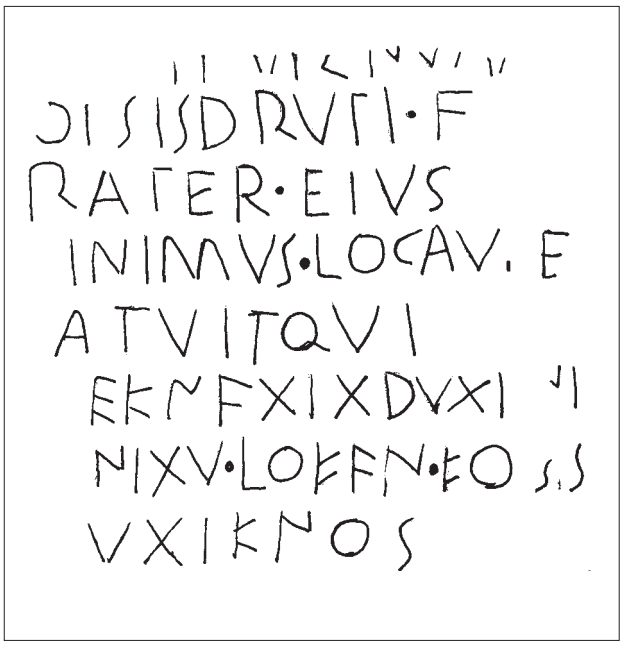
JTK

Todi refers to a bilingual Latin–Celtic inscription from Italy, incised on a travertine stone found in the countryside around Todi (Perugia, Umbria) in 1839, now at the Museo Gregoriano Etrusco in Vatican City. The stone is inscribed on both sides and bears a digraphic, bilingual Latin–Gaulish inscription on both faces. The two Cisalpine Celtic texts are engraved in the Lugano script, the same as that used in the so-called Lepontic inscriptions and in some other Celtic inscriptions from Piedmont and Lombardy (the most important of which are those from San Bernardino di Briona, Cureggio, and Gozzano [Novara]). This script, of Etruscan origin, shows no distinction between voiced and voiceless stops (i.e. both /*p*/ and /*b*/, /*k*/ and /*g*/, /*t*/ and /*d*/ are written with the same three characters). It has two major, phonetically distinctive, different forms of sibilant (*s*-like sounds), both with graphic variants and developments. This script shows several spelling conventions, such as the absence of the nasal (/*m, n, ŋ*/) before stops. Because of the lack of an archaeological context, the monument can only be dated very approximately between the mid-2nd century BC and the end of the Republic in 31 BC. Its presence in Umbria—further south than Cisalpine Gaul—is due to the migration of a Gaulish family group from the north, similar to that which introduced Celtic proper names such as *Katakina* and *Vercena* into Etruria.

The Todi stone is incomplete and lacks both upper and lower ends. On both faces the Latin text comes first and, consequently, has deteriorated. At least two lines are missing; these undoubtedly contained the onomastic formula referring to the deceased (see below) and, probably, the elements corresponding to the Gaulish words *lokan* and *artuaš*. The loss of the lower part had no consequence for the Gaulish texts, which are complete. The text taken from the edition by Lejeune (RIG 2/1, *E–5) follows below, though his rendering of the initial lines of the Latin text is omitted:

'Artuaš' face:
Latin: [first lines completely lost]
/ … … COI]SIS / DRVTEI F
FRATER / EIVS / MINIMVS LOCAV / IT ET STATVIT

Gaulish (Cisalpine Celtic):
ATEKNATI TRUT / IKNI KARNITU / ARTUAŠ KOISIS T / RUTIKNOS



'Lokan' face:

Latin: [traces of letters can be seen on the first lines]
/. . . C]OISIS DRVTI F / [F]RATER EIVS /
[M]INIMUS LOCAV[I]<T> /
[ST]ATVITQV<E>

Gaulish (Cisalpine Celtic):
[AT]EKNATI TRUTI[K]NI /
[KAR]NITU LOKAN KO[I]SIS /
[TR]UTIKNOS

This is a double epitaph commissioned by an individual called *Koisis*, son of *Drutos*, for his deceased brother *Ategnatos*. The brothers are both named by the onomastic formula 'personal name + patronymic'. The different coding of the latter reflects the different onomastic practices of the two languages: Latin has the name of the father in the genitive followed by the abbreviated form of *filius* 'son', while Gaulish shows an adjectival formation of the *-ikno-* type. In the Gaulish text the onomastic formula of the addressee of the monument is in the genitive case (*ateknati trutikni*) because it depends on *lokan* and *artuaš*, respectively. Given the loss of the upper part of the stone, it is impossible to know whether the Latin text had a genitive or a dative. The two corresponding texts, written in two different languages, do not overlap completely, a common feature of bilingual inscriptions in ancient times. The Latin version differs in the following additional elements: the specification that *Koisis* is the younger brother (within a group of at least three people), and the employment of two different verbal forms—*locavit* and *statuit*—to express what is expressed in the Gaulish version by a single form, *karnitu* (see below).

Despite the fact that the Latin text covers the first part of the stele, as in the Vercelli inscription, here, everything points to the Gaulish text as the starting-point of the inscription. The three individuals mentioned bear Celtic names: *Ategnatos*, which occurs several times in Latin epigraphs from Noricum (CIL 3, nos. 4732, 4764, 5698), is formed from the same elements as Gaulish *Ateboduus*, *Atecingos*, *Atepomaros*, &c., and *Cintugnatos*, *Ollognatos*, *Cassignatos*, &c. Ategnatos is probably the participle which corresponds to the Old Irish verb *aith·gainethar* 'to be reborn, regenerated'. *Koisis* can be easily compared with the form *Coisa* found on a coin from Noricum (Holder, *Alt-celtischer Sprachschatz* 1.1063–4), with Latinized personal names from Cisalpine Gaul, for example, *Coesus* (CIL 5, no. 5621), and, maybe, with the name *koiša* found in a Lepontic inscription from Giubiasco (Whatmough, *Prae-Italic Dialects of Italy* 2.266), though the reading *koma* is also possible. Finally, *Drutos* is the same name as that which occurs, also with different suffixes, in several Latin inscriptions from Gaul (for the occurrences, see D. Ellis Evans, *Gaulish Personal Names* 446).

The Todi inscription belongs to the well-known series of Gaulish funerary epigraphs where the verbal form *karnitu* occurs (or, alternatively, the plural *karnitus*, as in the Briona inscription [Whatmough, *Prae-Italic Dialects of Italy* 2.337; RIG 2/1, E–1] and in an unpublished inscription from Gozzano [Novara]); this is a weak dental preterite whose meaning cannot be exactly defined but which doubtlessly corresponds roughly to a meaning such as 'to make, to set up (the tomb)'. The original meaning was probably 'to pile up stones', as is suggested by the trustworthy comparison with Old Irish and Welsh *carn* 'barrow, heap of stones, mound, cairn'. Compare also the Breton place-name *Carnac*, probably reflecting an old Gaulish **Karnāko-*, pointing out the site as a place of many and great standing stone monuments. What is certain is that the semantic value of *karnitu*, clearly

belonging to the field of burial practices, must be rather broad, since in the Todi inscription this verb can take two different grammatical objects: *artuaš* (accusative plural) and *lokan* (accusative singular), two lexical items which, though still lacking a full interpretation, undoubtedly refer to different moments of the burying ritual. The loss of the upper part of the Latin text deprives us of the translation of the two Gaulish words: in one of the two missing lines in the '*lokan*' face it is maybe possible to recognize the trace of a final *-m*, apparently of an accusative singular. At any rate, such a loss does not have to be overestimated; the employment of two verbs in the Latin text, on one hand, becomes possible on account of the broad semantic range displayed by *karnitu*, but, on the other hand, it can also be explained as the consequence of the difficulties in translating this Gaulish verb with only one Latin verbal form. That is, the twofold character of the dedicatory object could have led (via the translating process) to the conception of a twofold action, consequently expressed by two different verbs which were repeated on both sides of the stone because the translators did not know precisely which verb fitted *lokan* and which verb fitted *artuaš*.

Traditionally, the etymology of *lokan* traces the origin of this form to the INDO-EUROPEAN root **legh-*, 'to lie', whereas *artuaš* has been compared to Old Irish *ard* 'high, tall', the uncommon Welsh *ardd* 'high', Gallo-Latin *Arduenna (silva)*, Latin *arduus*, 'high'. Consequently, the aim of the inscription seems to be to remind us that *Koisis* took care of making the *lokan* for his dead brother, as well as taking care of setting up the heap of stones (which would explain a plural form such as *artuaš*). Therefore, the translation of the Gaulish texts (following usual English phrase order) would be, respectively: '*Koisis* son of *Drutos* made the *lokan* (tomb?) of *Ategnatos* son of *Drutos*' and '*Koisis* son of *Drutos* made the *artuaš* (piled up the stones?) of *Ategnatos*, son of *Drutos*'.

Although a fully detailed interpretation of the lexical meanings of *lokan* and *artuaš* is still lacking, strong cultural parallels can certainly be seen with the Lepontic funerary inscription from Vergiate (Varese, Lombardy), which is made up of two paratactic clauses: *pelkui* (dative of addressee, which occurs in both clauses) *pruiam teu* (nominative of the speaker) *karite išos* (pronominal subject of the second clause, '*idem[que]') karite palam* (Whatmough, *Prae-Italic Dialects of Italy* 2.300). The verbal form *karite* (possibly to be compared, at least formally, with *karnitu*) occurs twice and is preceded or followed by its grammatical object: two words in the accusative, *pruiam* and *palam*, which seem to refer to different moments of the funerary ritual (one of which is the setting up of the *pala*, whose broad meaning is 'stone', if not 'inscribed stone, epitaph').

Such a clear parallel offers additional proof that in the Todi inscription the ritual is Celtic, since Celtic is the textual starting-point. The prominent character given to the Latin text within the physical structure of the inscription can be explained as due to the prestige of the Latin language and culture at that time, as well as an implicit acknowledgement of the process of Romanization which was undoubtedly affecting the family of *Drutos* (though, for the time being, they still retained Gaulish names).

Filippo Motta

Togail Bruidne Da Derga ('The Destruction of Da Derga's Hostel') is an early Irish tale. Its classification has been disputed, since it contains elements of the ULSTER CYCLE (for example, the hero CONALL CERNACH), the KINGS' CYCLES, and the MYTHOLOGICAL CYCLE. According to THURNEYSEN, it belongs to the oldest layer of Irish tales and is, with the exception of TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley'), the most complete Old Irish tale. Nominally, it is part of the Ulster Cycle, though the setting is in Leinster (LAIGIN), and the main character, Conaire Mór, the prehistoric king of Tara (TEAMHAIR), is an important figure in the legendary framework of the Irish GENEALOGIES. As such, he is also a central figure in an earlier saga, the

probably 9th-century *De Shíl Chonairi Móir* (Of the lineage of Conaire the Great, ed. & trans. Gwynn, *Ériu* 6.130–43). Within the scheme of Irish LEGENDARY HISTORY, the story of the downfall of Conaire Mór serves to explain why the tribal group known as the Érainn had fallen from a central to a marginal position within Irish dynastic politics before the horizon of reliable Irish history. On account of *Togail Bruidne Da Derga*'s many supernatural elements, a classification in the Mythological Cycle might also be justified. Since it contains an account of an ideal KINGSHIP and elements of the ideology of close interrelations between a king and the forces of the OTHERWORLD, the tale cannot be excluded from any overview of the Kings' Cycles. This uncertainty of classification might be explained by the different layers in the story. Its earliest complete version is preserved in the Yellow Book of Lecan (LEABHAR BUIDHE LEACÁIN) and in another manuscript from the 13th century (Dublin, Royal Irish Academy D. iv. 2, beginning at 79ra 1). A fragmentary version is found in the Book of the Dun Cow (LEBOR NA HUIDRE) and also in some later manuscripts. *Lebor na hUidre* mentions that the tale was part of the now lost 8th-century collection CÍN DROMMA SNECHTAI ('The Book of Druim Snechta'). The evidence of *De Shíl Chonairi Móir* suggests that at least the main elements of the story were already known in the 8th or 9th century.

The text tells the story of Conaire king of Tara, son of Mes Buachalla (a name meaning 'fosterling of the cowherd'), the wife of King Etarscél. However, Conaire's father is not Etarscél, but a mysterious otherworldly figure who, in the form of a bird, mates with Mes Buachalla. Following Etarscél's death, Conaire is appointed king of Ireland (ÉRIU) through the custom of *tarbfheis* 'bull-feast', in which a bull is sacrificed (see FEIS); a visionary consumes some of the bull's flesh, then sleeps under the skin of the bull and receives a dream-vision of the man destined to be king. In this case, the vision is of a young man, naked with a sling in his hand, a PROPHECY which is fulfilled through the intervention of Conaire's supernatural bird kin, who lure him into the water while hunting. At the beginning of his reign Conaire is a very successful king, and there is an elaborate and beautiful description of the abundance and harmony of his idealized reign, in which there is no want, no inclement weather, and even the natural predation wolves are constrained by the legal exchange of hostages. But, after a short period, Conaire's foster-brothers begin to plunder the country, as young noble warriors are wont to do (see FÍAN; HEROIC ETHOS). Since Conaire fails to punish them, he offends against the obligation of the king to follow the justice of the ruler (*fír fhlathemon*; see also AUDACHT MORAINN). Thus, his reign is doomed through his pronouncing a false judgement and soon slides towards disaster as a series of improbable apparent coincidences arise which compel him to break several of the taboos (*geisi*, sing. GEIS) by which he is uniquely constrained in his rôle as king of Tara. On the way back from a trip to settle a quarrel he finds the land in conflagration and rests at the hostel of Da Derga, an otherworldly figure whose name etymologically means 'the Red God' (in the other versions he is called *Ua Dergae* 'Grandson of the Red One'). In the meantime, Conaire's rapacious foster-brothers, whom he has injudiciously spared, have gone into exile in Britain, where they have joined forces with the demonic Ingcél Caech (Ingcél the One-eyed), who is a hideous giant with an eye like a wheel. In Britain, the raiding party kills Ingcél's family, and Conaire's foster-brothers are thus doomed to commit an equal outrage against their kin in Ireland. Conaire is attacked at Da Derga's hostel by his foster-brothers and Ingcél. After fierce resistance he is overthrown, thus meeting his fate for having broken his *geisi*. In his final moments, as the hostel burns around him, Conaire is overcome by an all-consuming thirst, but all liquid flees from him, even the river Dothra (Dodder, Co. Dublin). In one memorably horrific scene among many, the decapitated head of Conaire thanks his servant for pouring drink into his headless gullet. At the very end, the Ulster (ULAID) hero Conall Cernach, who has defended Conaire, is described as being grotesquely wounded with his sword arm hanging by a mere thread.

Togail na Tebe (The destruction of Thebes) is a Middle Irish prose translation of the Thebaid of Publius Papinius Statius (*c.* AD 45–*c.* 96). Statius' epic poem about the war between the sons of Oedipus for the kingship of Thebes remained popular in Europe throughout the Middle Ages. The Irish translator added an introduction to Theban history geared towards an Irish audience, and also wrapped up some of the loose ends of Statius' unfinished poem. The translator's comment that Thersander son of Polynices afterwards took part in the siege of Troy links *Togail na Tebe* to the other Irish classical adaptations, particularly TOGAIL TROÍ ('The Destruction of Troy'; see also TROJAN LEGENDS). The Thebaid's mythological digressions and allusions, not easily intelligible to a post-classical audience, are either cut or explained, frequently incorporating GLOSSES from learned Latin commentaries such as that of Lactantius Placidus. However, *Togail na Tebe* follows the Latin original more closely than other Irish classical adaptations, which may be the reason why the Irish translation is less successful as a narrative and has not received much critical attention.

Togail Troí ('The Destruction of Troy') is a Middle Irish adaptation of the late antique forgery attributed to the fictitious Dares Phrygius and purports to be an eye-witness account of the Trojan war (see TROJAN LEGENDS). The most popular and influential of all the classical tales in Ireland (ÉRIU), *Togail Troí* is the centrepiece of the classical corpus, with a correspondingly complex textual history. The text is mentioned in an early Irish TALE LIST and is the only one of the classical adaptations which survives in the important 12th-century manuscript LEBOR LAIGNECH ('The Book of Leinster'). Although it was first translated in the 10th century, the earliest surviving version dates to the 11th century (Mac Eoin, *Studia Hibernica* 1.19–50). *Togail Troí* is a free adaptation: the bald narrative of Dares is expanded and effectively retold in native saga style, thus similar to that of the tales of the ULSTER CYCLE. Mac Eoin distinguished three prose recensions (as well as, unusually, one verse recension). Breathnach offered a slightly different grouping ('Togail Troí'), but both scholars agreed that, while the version contained in Dublin, Trinity College MS 1319 (H. 2. 17) stands alone, the versions in all the other manuscripts belong to the Book of Leinster tradition, differing mainly in the extent to which the text was expanded. The longest recension (Mac Eoin Recension 3), for example, includes numerous lengthy additions from the *Thebaid* and the *Achilleid* of Publius Papinius Statius (*c.* AD 45–*c.* 96). It also adds a sequel, *In tres Troí* (The third Troy), concerning the rebuilding of Troy and its ultimate destruction. The publication of all recensions and their source-critical analysis is of the utmost importance for our understanding of the Irish reception of the classical tradition.

tombs in Iron Age Gaul

The funerary practices of west-central Europe during the Early Iron Age have their origins in the Late Bronze Age (9th century BC) and are evidenced by the rise in inhumations associated with the building of individual funerary monuments (*tumuli*). This practice became generalized during the 8th and 7th centuries BC. It accompanied a process of concentration of power, which, in the 6th century, led to a reduction in funerary monuments, which became confined to a stratum of burials for the privileged. These were characterized in some important areas by four-wheeled wagons and, soon after, by CHARIOTS, for example, in the Marne, the Middle Rhine, and Bohemia (see VEHICLE BURIALS). The Early La Tène period (5th and 4th centuries BC) saw the development of other forms of burials which have their origins in the peripheral tombs of the *tumuli* of the Hallstatt period. These are cemeteries which consist of flat graves containing bodies buried in small, probably family, groups. The differences between the burials essentially denote the distinction between the sexes. Presumably, major parts of the communities are not represented in the *necropoleis*, with children, and in particular infants, especially under-represented. There are signs of a major change in the 3rd century BC, when most of the sites were abandoned and new practices developed, particularly associated with cremation. These were the funerary customs which continued to characterize tombs in Gaul during, and after, Romanization.

Laurent Olivier

Tomos, Angharad (1958–) is one of the foremost activists within the Welsh language movement and is also a well-known and popular novelist for both children and adults. She was born in Llanwnda, Gwynedd, and educated in nearby Pen-y-groes, where she still lives, and at the University of Wales, Aberystwyth and Bangor (Gwynedd). Imprisoned on several occasions in the 1980s and 1990s for her participation in the campaigns of the Welsh Language Society (Cymdeithas yr Iaith Gymraeg), she has also served as the Society's secretary and chair. Her writing career began in the early 1980s when she won the Literature Medal at the National Eisteddfod of Urdd Gobaith Cymru two years in succession with her fictions *Rwy'n Gweld yr Haul* (I see the sun, 1981) and *Hen Fyd Hurt* (Stupid old world, 1982). Her next novel, *Yma o Hyd* (Still here, 1985), won an Arts Council of Wales and Welsh Academy prize, and two of her later fictions, *Si Hei Lwli* (Lullaby, 1991) and *Wele'n Gwawrio* (Behold the dawning, 1997), won the Literature Medal at the National Eisteddfod of Wales (Eisteddfod Genedlaethol Cymru). *Cyfres Rwdlan*, her series of books for children, includes twelve volumes, one of which, *Y Llipryn Llwyd* (The grey weakling, 1985), won the Tir na n-Og prize for the best children's book of the year; the Rwdlan stories, which are illustrated by their author, have also formed the basis of a very popular children's television series.

Angharad Tomos's fiction for adults is characterized by its use of a brash first person voice; all her narrators, except in *Titrwm* (1994), speak in dialect, and convey their immediate experience to the reader with an abrasive directness, which adds edge to the political thrust of her work. From the first, her experiences as a frequently imprisoned language campaigner (also detailed in her autobiography *Cnonyn Aflonydd* [Restless soul], 2001) formed the basis of many of her fictions, overtly motivated as most of them are by the desire to alert her readers to the threatened demise of the Welsh language, and to goad them into action in its defence. Sophisticated in their use of such diverse literary forms as magic realism (*Hen Fyd Hurt* and *Wele'n Gwawrio*), the prison diary (*Yma o Hyd*), the inclusion of myth and legend (*Titrwm*), and a plethora of literary allusions and quotations, her novels strive to awaken their audience to the richness of the culture it is in danger of losing. Both for her publications and her political activism, Angharad Tomos became known as the literary voice *par excellence* of the Welsh language movement in late 20th-century Wales (Cymru).

Tone, Theobald Wolfe (1763–98), the 'father of Irish republicanism', was a political radical and the leading founder member of the Society of United Irishmen, established in Belfast (Béal Feirste) and Dublin (BAILE ÁTHA CLIATH) in 1791.

Born in Dublin, Tone was educated at Trinity College and qualified as a barrister. Although he was a Protestant, and therefore a member of the ASCENDANCY, he argued in favour of the rights of the Catholic population and sought to unite Catholics and Protestants on the basis of their common political interests. Inspired, like many others, by the American and French revolutions, he co-founded the Society of United Irishmen, a non-sectarian organization which combined Protestant and Catholic leaders and acted as a political pressure group to demand a reduction in religious discrimination and the extension of democratic rights such as male suffrage. Under Tone's leadership, the aims were extended to include radical demands for an Irish republic and total separation from England. Tactics changed to include political conspiracy. Forced into American exile in 1795, Tone travelled to France in 1796 and persuaded leaders there to send a large military expedition to Ireland (ÉIRE) to aid them in their imminent revolution. This unsuccessful campaign was followed by the brutal oppression of the rural population by British troops, which, finally, led to the rebellion of May 1798. However, since most of its leadership had been arrested in March 1798, the national idea was lost, and over 30,000 people fell victim to the sectarian fighting which ensued. Tone's arrival with a small French army at Donegal (Dún na nGall) in October 1798 came too late. Captured and convicted of treason, he committed suicide rather than be hanged by the British. The idea of a non-sectarian Irish national movement including both Protestant and Catholic cultural identities died with him. His grave at Bodenstown, Co. Kildare (Contae Chill Dara), has become a place of pilgrimage.

Torc is the term used for the 'typically Celtic' ring worn around the neck. Derived from Latin *torques* (a word which emphasizes the fact that the metal has

Detail of gold torc (neckband) from the treasure of Erstfeld, Uri, Switzerland, late 5th–early 4th century BC

Detail of torc (alloy: 90% gold and 10% silver), Iron Age, c. 75 BC, from the hoard found near Ipswich, England, during construction work in 1968. It was made by twisting two rods of gold around each other. The hollow ends were each cast on to the twisted rods using the lost-wax technique. The La Tène-style decoration (made by cutting into the clay mould) stands up from the surface of the ends, which were then polished. The wearer's neck would have had to have been smaller than 18.7 cm circumference.

been twisted), the term used in the historical texts to refer to this ring is today used for a wide variety of quite different types of neck rings and necklaces. Torcs frequently figured in Celtic art and appear in considerable numbers in archaeological records in continental Europe and the British Isles.

Neck rings were a relatively common form of jewellery in most of Europe from the Bronze Age onwards, through the Iron Age and into the Roman period, when they seem to have gone out of fashion. Early examples are frequently simple bronze rings, though more elaborately decorated pieces, sometimes crafted in gold, are also known. Bronze Age neck rings, including crescent-shaped lunulae appearing in the Atlantic zone, have sometimes been called torcs, though they show little resemblance to Iron Age neck rings.

Most frequently associated with the term torc, however, are the elaborate bronze and gold rings from the Late Hallstatt and La Tène periods. Silver and iron examples are also known, but they are rare in comparison. Famous examples of torcs have been found at Glauberg (Germany), Broighter ([Northern] Ireland), Clonmacnoise (Ireland), Erstfeld (Switzerland), Filottrano (Italy), Gajič (Slovenia), Hochdorf (Germany), Paradela do Rio (Portugal), Reinheim (Germany), Snettisham (England), Vix (France), and Waldalgesheim (Germany).

Torcs also feature frequently in Celtic iconography. They are a common element on late Hallstatt and La Tène monumental sculpture, for example, on the statues from the Glauberg, Hirschlanden (Germany), Mšecké Žehrovice (Czech Republic), Bouray (France), and Euffigneix (France). They also appear in other figurative art, such as that on the Gundestrup cauldron (Denmark) and the Donnersberg (Germany) linchpin, as well as on La Tène coinage.

Besides being a common feature of Celtic art, torcs also became part of the classical topos for the depiction and description of Celts, as in the case of the 'dying Gaul' marble statue (see pergamon) and Cassius Dio's description of Queen Boudīca.

The high material and artistic value of many of the Iron Age torcs probably means that it was a piece of jewellery which only the upper strata of society could afford. Torcs were also worn on the chest as part of the regalia of some Roman military officers. There are numerous references to gold torcs (*eurdorchawr*) in the early Welsh heroic elegies known as the Gododdin. In the Llywarch Hen saga englynion, the hero Gwên fab Llywarch is once referred to as *eurdorchawc* 'wearing a gold torc'. However, since no post-Roman British examples of the artefact have been found, these descriptions are probably examples of a pre-Roman Celtic status symbol surviving as a post-Roman heroic epithet, though the Welsh references might refer to emblems of rank worn on the chest in the Roman manner. Since it is not certain what the pre-Roman Celtic word or words for torc

had been, it is possible that further literary references have escaped detection. For example, heroic descriptions in early Welsh poetry sometimes tell of an item called a *cae* worn by heroes; *cae* literally means 'closure' and is often translated as 'brooch', but could be a native word for torc, likewise the Old Irish word *mind*, often translated 'diadem'. Conversely, we do not know the word(s) for the massive silver chains found in early post-Roman contexts in what had been Gododdin territory and southern Pictland, and these may have been called 'torcs'.

Torrs

The bronze pony cap and horns from Torrs are among the finest pieces of early Celtic art in Britain, and show strong Continental influences. They were found in a peat bog at Torrs, Kirkcudbrightshire, Scotland (Cille Chuithbeirt, Alba), some time prior to 1829, when they entered the collection of Sir Walter Scott. They are now displayed in the National Museums of Scotland in Edinburgh (Dùn Èideann). Although usually illustrated as one item, this is a composite—the cap and horns were originally from separate objects. The pony cap (with holes for the ears) is decorated in a symmetrical swirling repoussé pattern (that is, with the sheet metal pushed out from the back), and originally had a central fitting, perhaps for a plume, now lost. The horns (with cast duck-head terminals) have incised decoration on one half only, and may have been yoke ends or horns from a helmet. The earliest drawings show the pieces joined, but this reconstruction post-dates its discovery. It has been argued that the horns were never attached to the cap in antiquity (Atkinson & Piggott, *Archaeologia* 96.197–235), but other authorities suggest that this was indeed an ancient modification, to make it more elaborate or to create a mask for ceremonies (Henig, *Britannia* 5.374–5; Jope, *From the Stone Age to the 'Forty-Five* 149–59). Its discovery in a peat bog suggests it was buried as a votive offering, raising the tantalizing possibility that we have only part of a larger hoard of horse equipment (see further watery depositions).

The style is early, close to the Continental traditions of Waldalgesheim and especially the La Tène 'sword style', though technical details show that this and related items—for example, shield bosses from Witham and Wandsworth, England, and the Loughnashade (Loch na Séad) horn, deposited near Navan Fort (Emain Machae) in Ireland (Ériu)—are of insular manufacture. Although the decoration appears abstract, birds' heads can be read into the cap designs; the surviving terminal is a duck's head, and the loops and swirls of the horns hide a tiny human face. Dating is tricky, but close Continental parallels suggest a 3rd century BC date (rather than the 2nd century date preferred by most commentators). The repairs show that it had a long life before burial. With so few examples of this style, it is unclear whether it was made locally or imported (eastern English or Irish craft workers have been suggested).

Pair of bronze horns from Torrs, Kirkcudbrightshire, Scotland, 3rd to 2nd century BC

Tóruigheacht Dhiarmada agus Ghráinne ('The Pursuit of Diarmaid and Gráinne') is an important tale of the Fenian Cycle (see FIANNAÍOCHT). It shows striking similarities to the internationally popular medieval love story of TRISTAN AND ISOLT (see also DRYSTAN AC ESYLLT). These similarities have prompted some scholars to see 'Diarmaid and Gráinne' as a version or even an adaptation of the Tristan story. But there is also a close analogue nearer at hand and at a plausible date. A thematically comparable love story within Irish tradition survives in an early recension, namely LONGAS MAC NUISLENN ('The Exile of the Sons of Uisliu'), that is, the DERDRIU story of the ULSTER CYCLE. A version of 'Diarmaid and Gráinne' was known in the Middle Irish period. In a 10th-century TALE LIST we find the title *Aithed Gráinne ingine Corbmaic re Diarmaid ua nDuibne* (The elopement of Gráinne daughter of Cormac with Diarmaid Ó Duibhne), but this tale itself does not survive. The earliest extant copy of *Tóruigheacht Dhiarmada agus Ghráinne* survives in a Royal Irish Academy MS written by Dáibhidh Ó Duibhgeannáin around the middle of the 17th century. The text embodied in Ó Duibhgeannáin's MS cannot possibly be earlier than the 14th century and, according to Murphy, may be not much older than the copy in which it has been preserved (*Ossianic Lore and Romantic Tales of Medieval Ireland* 14).

In the story, the young and beautiful Gráinne, daughter of CORMAC MAC AIRT, king of Tara (TEAMHAIR), is the chosen bride of the ageing hero Fionn mac Cumhaill (see FINN MAC CUMAILL). When Fionn and a retinue from his *fiana* (sing. FÍAN 'war band') come to Tara to woo her, she finds the Fenian heroes OISÍN and DIARMAID UA DUIBHNE (described as extraordinarily attractive to women) more appealing prospects. Gráinne serves a sleeping draught to Cormac, Fionn, and the other warriors, except Oisín and Diarmaid. Both heroes first refuse her advances, but she then imposes a GEIS (that is, an honour-threatening verbal injunction or taboo) on Diarmaid, requiring that he runs off with her against his better judgement. They elope, and a vengeful Fionn commences a pursuit which leads them through Ireland (ÉRIU). At more than one point, Fionn's men, Diarmaid's former comrades, warn the couple of their approach. Diarmaid's supernatural foster-father Aonghus (that is, OENGUS MAC IND ÓC of BRUG NA BÓINNE) also protects Diarmaid and Gráinne, working out a peace with Fionn and the *fiana* which lasts for sixteen years, during which Gráinne bears Diarmaid four children. However, Fionn remains jealous, and he arranges for Diarmaid to participate in the hunt of a supernatural BOAR, knowing that this will cause his death. In the pathetic death scene, Fionn sees Diarmaid after he has been grievously wounded by the boar and tells him, 'I am glad to see you so, and it is a pity that the women of Ireland cannot see you now, for you have exchanged beauty for ugliness'. Then, Fionn (whose cupped hands impart magical healing properties to water offered from them) thrice denies the healing drink to the dying Diarmaid.

Much of the enduring power of the tale is that the three primary characters are all—despite their flaws and the supernatural plot devices—sympathetic, and motivated by understandable human emotions, which lead directly to irreconcilable conflict and disastrous breaches of social obligations. The story contains much place-name lore (see DINDSHENCHAS) as well as motifs shared with other medieval European literatures. The story remained popular in Ireland and Gaelic Scotland (ALBA) until recent times, and numerous folk versions have been recorded. Many megalithic tombs and other conspicuous prehistoric landmarks are locally associated with episodes in the tale, some being known as 'beds of Diarmaid and Gráinne' where the doomed lovers are said to have spent the night as they were chased from place to place by the avenging Fionn and his men.

Transalpine Gaul, Latin *Gallia Transalpina* (Gaul beyond the Alps, from the Roman perspective) is a term which can be used for greater geographic precision when ancient CISALPINE GAUL (*Gallia Cisalpina*) is also under consideration. However, GAUL without further qualification most often leaves aside northern ITALY, referring to a region of ancient Europe bounded by the RHINE on the east, the Alps on the south-east, the Mediterranean on the south, the Pyrenees on the south-west, the Atlantic on the west, and the English Channel on the north-west.

Transitus Beatae Mariae (The assumption of Blessed Mary) is the title of Latin apocryphal texts and their Middle Welsh translations which deal with the life, death, and ascension of Mary, the mother of Christ. The Virgin Mary does not play a major rôle in the Bible, but became very important in CHRISTIANITY as practised in the Middle Ages throughout Christendom, including the CELTIC COUNTRIES. The Welsh *Transitus* thus provides evidence for the strength of the pan-European Mary cult in the vernacular culture of medieval Wales (CYMRU). It was Melito of Sardes' version of the Latin *Transitus* which attracted the greatest interest in Wales. Some of the translations bear the Welsh title *Y Modd ydd aeth Mair i nef* (How Mary went to heaven).

Trawsganu Cynan Garwyn mab Brochfael (Eulogy [?] for Cynan Garwyn son of Brochfael) is a Welsh praise poem, in 50 two-stress rhyming lines, which survives in the 14th-century manuscript LLYFR TALIESIN (lines 45.10–46.4). Its subject is King Cynan of the CADELLING dynasty, whose kingdom was known, at least by the 9th century and probably earlier, as POWYS. On the basis of his position in the GENEALOGIES and the death of his son and successor Selyf (Solomon) at the battle of Chester (CAER) *c.* 615, Cynan's period of activity was *c.* 575×*c.* 610. The poem's political stance is interesting in that Cynan's listed enemies are all in the Brythonic west—Gwent, MÔN, DYFED, BRYCHEINIOG, Cernyw (KERNOW)—implying a friendly or dependent relationship with the Anglo-Saxons to the east, in contrast to Selyf's fate. Sir Ifor WILLIAMS believed *Trawsganu Cynan* to be the work of the historical Taliesin and therefore included it in his *Canu Taliesin* and *Poems of Taliesin*. However, for reasons discussed in the entry TALIESIN [1], it is doubtful whether *Trawsganu Cynan* shares common authorship and history of transmission with the other eleven poems in Williams's selection. Although a 10th-century composition has been proposed by Isaac, the poem is noteworthy for archaisms in spelling, grammar, and vocabulary: for example, *nerthi athwlat* as a copy of archaic **nerthiat-u(u)lat* 'strengthener of the land'; *pympwnt* 'fifty' preserving *mp* (but already *pimmunt* in Old Welsh GLOSSES of the early 9th century); inherited *g(w)o* < Celtic **u̯o* occurs twice meaning 'under'—*katlan go d( )aran* 'a battle enclosure under thunder', *kylch byt gwo ‹c›huan* 'the circuit of the world under the sun', but the usual Welsh word *tan* is already found in the 8th- or 9th-century Tywyn inscription. That there should have been an early written text of this poem is consistent with the dynasty's close relationship with the great monastery of BANGOR IS-COED, and BEDA's account of the battle of Chester implies that the system of writing Early Medieval BRYTHONIC was in use at Bangor by 731 or even *c.* 615. That the surviving text of *Trawsganu Cynan* is complete is confirmed by the fact that it is built of 100 stressed phrases and uses *cant* '100' as a repeated line-linking *cymeriad*.

Tregear Homilies

John Tregear, writing *c.* 1558, who was possibly the priest of that name at Newlyn East (near Newquay, Cornwall/KERNOW), was one of the few priests known to have made translations of Catholic works for his CORNISH-speaking congregation. His translation of these Homilies (twelve of which originated with Edward Bonner, the Catholic bishop of London under Mary Tudor) remains the longest piece of prose writing from the Middle Cornish period. The themes of these Homilies are the Creation, the supremacy of the Church and its authority, charity, and transubstantiation. A final thirteenth homily is translated from an unidentified source and is twice as long as the others. In 1871 the Homilies, like much CORNISH LITERATURE, were thought to be WELSH, but the 130-page manuscript was rediscovered in 1949 by John Mackechnie, who found it among the papers of Sir Richard Puleston of Worthenbury in Flintshire, Wales (sir y Fflint, CYMRU), and is now in the British Library. Although Robert Morton NANCE was critical of Tregear's Cornish (constructing Unified Cornish on texts before the rediscovery of the Tregear Homilies), the manuscript has since been reappraised. N. J. A. Williams, in particular, has argued for the text's centrality in any reconstruction of Revived Cornish, commenting that because of its historical position, just after the Prayer Book Rebellion of 1549, had a Cornish Prayer Book been established, 'the universally accepted orthography for Cornish would now be essentially that of John Tregear' (*Cornish Today* 167).

Treger is the name of both a city (pop. 6599 [1999]) and one of the four BRETON-speaking regions of Lower Brittany (BREIZH-IZEL), situated in the north. In French the name of the city is spelled *Tréguier* and the region *Trégor*. The same name occurs in Cornwall (KERNOW) as *Tregear* and *Tregeare*. *Pagus Tricurius*, the name of a district in Cornwall, Trigg Hundred, which occurs in the First Life of St SAMSON, seems to be an early form of the same name, in which case it reflects an old Celtic group name *Tricorii̯ī* '(having) three war-bands'. The Breton region is defined by the boundaries of the bishopric of Treger, but has significance beyond the realm of religion. The four dioceses were areas of administration until the French Revolution, and correspond to the four divisions of the BRETON DIALECTS.

triads [1] Triads of Ireland

The arrangement of ideas in groups of three is common in the literatures of the Celtic-speaking peoples, cf. the Welsh triads (Trioedd Ynys Prydain). The largest Irish collection dates from around the 9th century and in some of the manuscripts is entitled *Trecheng Breth Féne* (A triad of judgements of the Irish). It consists of 214 triads, as well as a few nonads, tetrads, duads, and single items. Some of these triads may have come from oral tradition, but most seem to have been the work of a single author. He was probably a cleric, since the collection begins with a series dealing with the characteristics of different Irish MONASTERIES. He clearly had access to LAW TEXTS, since 44 of the triads are legal in content. As a collection of proverbial truths, the Triads of Ireland (ÉRIU) may be thought of as belonging to the more general category of gnomic or WISDOM LITERATURE (see also AUDACHT MORAINN).

The author's aim is clearly to describe various aspects of life as he saw it around him. Sometimes, his triads consist simply of observation of natural phenomena, as in Triad 145: 'Three cold things that bubble: a well, the sea, new ale'. Here, he is obviously

attracted by the paradox that these liquids are bubbling, though not at the boiling point. He may use his observation of nature to get across an ethical message, and expresses his disapproval of meanness in a rich man in Triad 147: 'Three wealths in barren places: a well in a mountain, fire out of a stone, wealth in the possession of a hard man'. In a lyric mood in Triad 75 he presents another paradox: 'Three slender things which best support the world: the slender stream of milk from the cow's udder to the pail, the slender blade of green corn above the ground, the slender thread over the hand of a skilled woman'. There is also a paradox in Triad 91: 'Three smiles which are worse than sorrow: the smile of the snow melting, the smile of your wife to you after being with another man, the grin of a hound ready to leap'. Here, he has imaginatively seen a common denominator between melting snow, an unfaithful wife, and a fierce hound.

The author uses the triad form to make various general statements about society, as in Triad 200: 'Three rocks to which lawful behaviour is bound: monastery, king, family'. He berates presumptuousness on the part of a dependant in Triad 221: 'Three things which are disrespectful for a person: driving his horse in front of his lord so that he soils his clothes, going to speak to him without a summons, staring at him while he is eating'. He comments on where wealth is to be found in early Irish society in Triad 255: 'Three coffers whose depth is not known: the coffer of a king, the coffer of the Church, the coffer of a great poet'.

triads [2] Trioedd Ynys Prydain

The form, function, and subject matter of Trioedd Ynys Prydain (Triads of the Island of Britain) typify the oldest native strata of records detailing the mythology and legendary peoples of insular Brythonic culture. Devised, developed, and arranged in threes as aids to memory, the names contained in these triads represent the largest and most diverse mnemonic record of epithets and onomastic lore in the Welsh language, the obscurity and mystery of which attracted the attention of many medieval Welsh poets and storytellers. Both the Cynfeirdd and Gogynfeirdd poets made use of names and narrative elements as triads, not only as epithets for praise and the inferred glory of their patrons, but also as poetic structures with which to make both sound and sense in cynghanedd. They served as an indispensable source of native lore and poetic training. In addition, the triads fell into the orbit of those native materials gravitating to the name of Arthur and subsequent tales associated with that name in Welsh tradition.

The title itself gives commemorative status to the Island of Britain (Prydain) as a whole and implies an ideal unity as well as a deeper sense of the disruption of that unity by successive waves of invaders. However, unlike the native tales, native poems such as the Gododdin, and the genealogies, many of the names and creatures remain obscure and allusive as to their context and meanings, for the traditions, histories, and even the landscapes which they describe and signify have long since passed from oral memory. Medieval audiences recognized and appreciated the presence of materials from the triads in the performance of tales and poems as both authoritative and esoteric, an extant fragment of a complete body of native knowledge. As a testament to their continuous value in Welsh culture, William Salesbury printed both Welsh proverbs and the triads in the mid-16th century as a fixed and learned foundation for native Welsh education.

The earliest grouping and order of Trioedd Ynys Prydain appear in manuscript in Aberystwyth, NLW MS, Peniarth 16 (late 13th–15th century), though they are smaller than the lists which appear later in the White Book of Rhydderch (Llyfr Gwyn Rhydderch, *c.* 1350) and other manuscripts, with the exception of an older stratum in Trioedd y Meirch (Triads of the horses) which appear in the Black Book of Carmarthen (Llyfr Du Caerfyrddin). Embodied in more than half a dozen medieval and early modern manuscripts, successive enumeration, cataloguing, and copying of the text reveal the process of sifting and moulding the memory with each successive generation over the ages. Even with an established core and order to the materials, the variants in the texts reflect the literary, sometimes ecclesiastical, and even political

interests and attitudes of particular scribes, compositors, and the scribal copies from which they recreated their works.

The triads served the native bardic schools as a skeleton and key to an immense body of narrative materials that young novice poets or storytellers would master as part of an oral apprenticeship (see BARDIC ORDER). Although successive technologies (specifically print) would diminish the value of such techniques of memory, the pattern of their immense memory skills survives in the extant lists of triads recorded later by scribes, antiquarians, and scholars.

Grouped according to theme rather than age or cycle, the three names in a triad produce a narrative trace of a longer tale or event. Some record enticing narrative details, but many leave only the critical elements, names of participants, and their virtues or faults. As a result, they function less as information about heroes, heroines, groups of peoples, creatures, and events, and more as eulogistic standards with which the listener (sometimes a patron) might find comparison or contrast to his or her own character and condition. At the level of the developed tale, they contribute to characterization such as is found in *Pedair Cainc y* MABINOGI ('The Four Branches of the Mabinogion'), and indeed the triads appear as a device within the Four Branches and many other extant Welsh medieval tales. One such tale, CYFRANC LLUDD A LLEFELYS (The adventure or encounter of Lludd and Llefelys), is the expansion of a single triad, structured around three supernatural oppressions (*gormesoedd*) of the Island of Britain and the overcoming of each.

The central contents of the triads list and describe an all-embracing group of native mythological and historical figures and events, some of which reflect contact with the Old North (HEN OGLEDD). The themes for the triads include tribal thrones and seats, the titles and occupations of men as warriors, chieftains, poets, and various other occupations from seafarers to wanderers, the good and bad qualities of men, the same expansion of titles and qualities of women, the peoples of Arthur's court, saintly peoples and lands, elder animals, the qualities and names of various warriors' horses, oxen, cows, as well as quests, battles, womb-loads, oppressions, marvels, and other memorable and critical events which affected the history and/or LEGENDARY HISTORY of the island as a whole.

Since most of the events alluded to in the triads do not actually survive as full narratives in extant texts, these lists provide a precious indication of what had been the original scope of a tradition which has come down to us only fragmentarily.

Silver neck ring with iron core from Trichtingen

Trichtingen is a village in the district of Rottweil (Baden-Württemberg, Germany), east of the Neckar, near which, in 1928, a silver neck ring was found. Its circumference is 25–29.4 cm, and at its ends are bull's heads, also with neck rings. The ring has a core of iron and weighs around 6.7 kg. Thus, it is not a simple TORC, but rather a votive gift or decoration for a cult figure. The origin and date of the ring are disputed; Celtic scholars have sought to place it in the 1st

century BC, but classical and oriental scholars have opted for an earlier dating. Vincent and Ruth Megaw suggest an eastern origin similar to that of the GUNDESTRUP CAULDRON.

PEB

The **Trinovantes** were a British tribe who inhabited present-day Essex in pre-Roman and Roman times. They were closely associated with the CATUVELLAUNI—sometimes their rivals, and sometimes sharing rulers and oppida (sing. OPPIDUM) with them—and both were among the BELGAE of BRITAIN considered by CAESAR to have been recent immigrants from GAUL. At the time of Caesar's expedition of 54 BC, Mandubracios of the Trinovantes had been driven from his territory by CASSIVELLAUNOS and was restored with Caesar's backing. According to PTOLEMY their capital was CAMULODŪNON (present-day Colchester); another possible centre seems to have been Caesaromagus (present-day Chelmsford). Rivet and Smith explain that the name is the same as that of the north British *Novantae* with an intensive prefix *tri-*, though this element could also mean 'three'. The tribal name might more probably be a compound of **trīn-* 'deal with, combat' (Welsh *trin*) and a plural participle of the verb *u̯ano-* 'slay' < Celtic **gʷono-* (Old Irish *gonaid* 'slays'), hence 'battle-slayers'.

Tristan and Isolt

The story of Tristan and Isolt is one of the finest and best-known pan-Celtic love stories, and has been retold in various guises throughout the centuries. The following features often recur in the various retellings. The Cornish knight Tristan and the Irish princess Isolt fall in love, often by a love potion, behind the back of King Mark of Cornwall (KERNOW), eventually escaping through the Cornish landscape. Realizing how destructive their love is, they agree to separate, and in various versions Tristan makes quests to Wales (CYMRU) and Brittany (BREIZH), eventually meeting a second Isolt of the White Hands. The love triangle is doomed from the outset, however, and the narrative ends in tragedy.

In most versions other important characters include the Irish champion Morholt, whom Tristan defeats, the dwarf Frocin, and Ogrin the hermit. Joseph LOTH and Henry JENNER have both argued for a Cornish origin of the narrative, maintaining that a Cornish author provided the basis for the oldest existing texts of Thomas d'Angleterre (*c.* 1170) and Béroul (*c.* 1190), both of which survive only as substantial fragments and are written in the Anglo-Norman dialect of Old French. Meanwhile, Gottfried von Strassburg (*c.* 1200) composed his German version based on Thomas, and this became the dominant European version, inspiring others such as the modern composer Richard Wagner, and the writers A. C. Swinburne and Matthew Arnold. In the high Middle Ages, the narrative was incorporated relatively late into the ARTHURIAN corpus, but has become a classic medieval love story with many mythic and psychological themes, the best overview of which is given in Grimbert.

The 6th-century 'Tristan' stone near Fowey in mid-Cornwall may provide a historical link to the narrative, since it reads DRVSTANVS HIC IACIT CVNOMORI FILIVS (Drustanus [i.e. Tristan?] lies here, son of Cunomorus). Cunomorus has been linked to Mark—the 9th-century Breton Latin Life of St PAUL AURELIAN mentions a King Marcus, also known as Quonomorius, thus, interestingly making this historical Tristan the son of Cunomorus, alias Mark. From contemporary Frankish sources, we know that King CUNOMOR ruled *c.* 560. Thomas Hardy retold the story in the form of a drama titled *The Famous Tragedy of the Queen of Cornwall at Tintagel in Lyonesse* (1923), while A. S. D. Smith's 8000-line poem in CORNISH, *Trystan hag Ysolt* (1951), is one of the most important 20th-century pieces of work in Revived Cornish (see CORNISH LITERATURE). The best modern telling remains Joseph Bédier's 1945 version.

Trogus Pompeius and Justin (Marcus Iunnianus Iustinus, *fl.* 3rd century AD) may be considered co-authors of the Latin Epitome of Trogus' universal history, known as *Historiae Philippicae* ('Philippic Histories'). Trogus' Hellenistic work survives only as a list of chapter headings and Justin's Latin summary. Trogus' literary sources included Theopompus and Timagenes of Alexandria (*fl.* 55 BC). However, Trogus was descended from the Celtic tribe of the Vocontii of Narbonensian Gaul, and was thus in a position to record Gaulish and Gallo-Roman information independent of previous Greek and Roman accounts. For example, Trogus/Justin is the unique source of the account of King Catumandus'

attack on Massalia and the dream vision of the war goddess, as well as the statement that the Celtic settlement of Pannonia occurred at the same time as their migration into Italy. The Philippic Histories also give important accounts of the Gauls' attack on Rome led by Brennos of the Senones and that on Delphi by Brennos of the Prausi, as well as a version of the founding of Massalia, which differs significantly from that of Aristotle. Justin's Epitome was well known in the Middle Ages and was used, directly or indirectly, by Geoffrey of Monmouth, for example. The name *Pompeius* recognizes that Trogus' grandfather received favour from the Roman general Pompey the Great (106–48 BC). The unusual *Trogus* might be Celtic. If *Trōgos*, this would mean 'unfortunate, unhappy' (cf. Old Irish *tróg, trúag*, Welsh *tru, truan*); inauspicious though this sounds, the word was used for the illustrious heroes of *Y* Gododdin and Llywarch Hen (see englynion).

Trojan legends in the Celtic countries

The stories of the Trojan war and of the wanderings of the heroes following the fall of Troy have relevance to the literary traditions of the Celtic-speaking peoples at every major historical stage—ancient, medieval, and modern. This importance is not unexpected, given the canonical centrality of Homer within classical literature, the continued fame of Troy by way of Vergil and other sources well known in the western Middle Ages, and, finally, the pivotal recovery of the Greek epics from the Renaissance onwards and the stimulus which this project provided for Romanticism, the quest for national epics in the Celtic countries, and in laying the philological foundations of modern Celtic studies. Many articles in this Encyclopedia have a bearing on the Celtic reception of the Trojan tradition. The present entry is an overview and contains cross-references to the most relevant articles.

The classical ethnographic tradition of the Celts based on Posidonius shows an awareness of the similarity of the warrior culture of the Gauls and that of Homeric heroes (see champion's portion), an attitude which contributed to the Graeco-Roman idealization of the Celtic barbarians—the 'soft primitivism' discussed by Piggott—and must now be borne in mind in assessing with caution the factual value of the Greek and Roman accounts of the ancient Celts. Citing Timagenes (*fl.* 55 BC), the Roman historian Ammianus Marcellinus (†AD 395) mentions a tradition of the Gauls that they were of Trojan origin; this was perhaps the source of the Trojan origin legend later adopted by the Franks (see legendary history §§1–2). Although Vergil is naturally regarded as an external source in Celtic studies, it is worth noting that the poet was a native of what had been Cisalpine Gaul and that his unusual name is susceptible to a Celtic interpretation.

There is no conclusive evidence that the Homeric epics were known directly in the medieval Celtic countries, but the resemblance of the Irish Ulster Cycle to the Iliad has struck many modern writers, including Carney, and was a central theme in Kenneth Jackson's influential essay *The Oldest Irish Tradition*; see also heroic ethos; nativism. Togail Troí (The destruction of Troy) is the Middle Irish adaptation of *De Excidio Troiae* ascribed to Dares Phrygius. The Middle Irish Merugud Uilixis meic Leirtis ('The Wandering of Ulysses son of Laertes') seems to be based on second-hand Latin sources, rather than directly on the *Odyssey*. On the innovative Middle Irish adaptation of Vergil's *Aeneid*, see Imtheachta Aeniasa (The wanderings of Aeneas).

Britain's legendary history—like that of Gaul, as noted above, and of Rome—looked back to Trojan origins. The Brythonic tradition of the Trojan refugee Brutus (also called Britto) as Britain's namesake and founder appears first in the 9th-century Historia Brittonum; it was greatly elaborated in the 12th century in the Historia Regum Britanniae of Geoffrey of Monmouth, which was rendered into

Welsh as Brut y Brenhinedd. The same story is alluded to in Brittany (Breizh) in the Life of St Uuohednou, which dates itself to 1019. Brutus' brother Albanus is already made the founder of Scotland (Alba) in the late 11th-century *Duan Albanach*. On the Middle Welsh version of the *De Excidio Troiae*, see Ystorya Dared. The Trojan framework of the Matter of Britain was still adhered to in *The History of Great Britain* of the Tudor-period antiquary John Lewis (†1616) and retained its grip on Breton historians to a similarly late date.

JTK

Tuath (Old Irish *túath*, genitive *túaithe*) was the term for the basic social unit of early Ireland (Ériu), of roughly 3000 people as estimated by Kelly, with approximately 150 such *tuatha* in the country at any given time in the early Middle Ages. It is often translated as 'tribe'. *Tuath* also refers to the territory in which the group lived and where its members' rights and social identities were recognized. The fixed and guarded boundary of the *tuath* was an especially strong concept, with most persons losing their status and legal competence outside its confines. Thus, in the literary genre of the echtrai (adventures), a journey beyond the governed and orderly tribal kingdom often brings the hero face to face with supernatural forces or into the Otherworld itself. The dual rôle of the warrior —as the man on the frontier—is a commonplace in the hero tales: he is the prestigious protector and recipient of the king's largesse within the *tuath*, but also the bestial marauder outside (see further heroic ethos §3). The importance of gatekeepers of tribal courts, such as the Arthurian Glewlwyd Gafaelfawr and Camall mac Rágail in the tale Cath Maige Tuired ('The [Second] Battle of Mag Tuired'), can be understood in this light. This territorial or land sense remained strong, and in contemporary Irish *faoin tuath* is the usual idiom for '(out) in the country'. The *oenach* or 'assembly', at which the dispersed rural population of one or more *tuath* came together—usually at regular intervals—for games and important public business, corresponds to Modern Irish *aonach* 'fair'.

The *tuath* was ruled by, and to a large extent was defined as what was ruled by, a king, for which the usual Irish term was *rí*. For the structure of *tuath* with relation to the office of the *rí*, see kingship. Throughout the historical period, we invariably find larger political units built up through subordinate kings submitting to overlords; in theory—as embodied in the Old Irish law texts—the overkings did not directly rule the tribesfolk of their subordinate's *tuatha*, but only indirectly in the king-to-king relationship. In Ptolemy's geography, Ireland (in perhaps the 1st century AD) is already shown occupied by 16 peoples, a structure which probably conceals numerous *tuatha* under overlordship. If the idealized social entity of the *tuath* ever had functioned as neatly as implied by the kings and peoples as described in the sagas and in the systematizations of the jurists, innovations came about under the catalysts of the incursions of the Vikings from the 9th century and of the Anglo-Normans from 1169 (cf. satire §4). Even before the Vikings and the rise of Dál gCais, the importance of *tuatha* and tribal kings (*ríg tuatha*) had eroded in the face of consolidation of power by such relatively stable dynastic entities as the Uí Néill and Éoganacht.

Like *rí* (Gaulish *rīχs*, Welsh *rhi*), *tuath* is a Common Celtic word traceable to Indo-European; thus, the element *touto-* is common in Gaulish proper names (cf. the divine name *Teutates*), *teuto-* in Celtiberian. A TOOƳTIOƳC NAMAƳCATIC *toutius Namausatis* 'tribesman/citizen of Nîmes' is commemorated on a Gaulish inscription from Vaison-la-Romaine (RIG no. G–153), and there were Galatian tribes called *Ambitouti* and *Toutobodiāci*. Gaulish Teutates (also known as *Toutorix*) can be understood as god of the tribe, a function perhaps

also reflected in the formulaic oath of the Ulster Cycle *tongu do dia toinges mo thuath* 'I swear to the god by whom my tribe swears' (or 'I swear to God that which my tribe swears').

Scottish Gaelic *tuath* 'people, tenantry' corresponds to Old Welsh *tut*, Modern *tud* 'people, tribe, nation, family; country, territory, district, region, kingdom', Cornish *tus* 'people', Old Breton *tut*. Modern Breton *tud* is the plural of *den* 'man, human being'; cf. also the Welsh personal names Tudur (< *Touto-rix*), *Tudwal, Tudfwlch,* &c. It is often inferred from this evidence that the social system visible in early Ireland must once have been current throughout the whole Celtic world. If so, by the time Caesar and the other Roman writers speak of tribal groups which they call *civitates* (sing. civitas) in Gaul and southern Britain—then organized them as 'tribal cantons' within Roman provinces—these units are bigger. We probably have to look back to the period before the oppidum—to the central and early pre-Roman Iron Age—for a period when tribal kingdoms on the scale of those of early Ireland prevailed. The hill-forts dotting southern England and Wales (Cymru) and the *castros* of Galicia might reflect this parallel stage. In post-Roman Wales, the cantref is roughly on the scale of the *tuath* and may represent a subordination of the native *tud* at the time when kingdoms became larger. In early medieval Brittany (Breizh), we find small kingdoms, such as Domnonia and Bro-Uueroc (*comitates* from the Frankish point of view), on the scale of the Romano-Celtic *civitas* and often continuing them, as well as a smaller social unit called a *ploib* (Latin *plebs*), whose chief secular potentate was the *machtiern* 'surety-lord'.

Tuath Dé

§1. THE NAME AND ITS MEANING

Tuath(a) Dé Donann is a designation frequently applied to the immortals of Irish legend in medieval texts; the variant *Tuatha Dé Danann* generally used by modern scholars is first attested in manuscripts of the later Middle Ages, and can best be explained as an instance of the sporadic shift *o* > *a* characteristic of the modern Gaelic languages.

The first clear evidence for the term occurs in the verse of Eochaid ua Flainn (†1004), an influential figure in the development of Irish pseudo-historical literature (see legendary history). Earlier sources speak of the *Fir Dé* (Men of the gods) or *Tuath(a) Dé* (Tribe(s) of the gods); *Tuatha Dé Donann* would seem to be an expansion of the latter, motivated by a desire to avoid the ambiguity entailed in the use of *Tuath Dé* both for the old divinities of the Irish and for the 'People of God', the Israelites. Eochaid ua Flainn is also the earliest source for the eponymous 'Donann, mother of the gods', and the implicit explanation of our term as meaning 'Tribes of the goddess Donann'. There are no other traditions regarding this figure, and the name does not behave grammatically like a normal Irish proper noun; specifically, it is indeclinable, based on the genitive, suggesting that Donann's existence is dependent on that of the group name *Tuatha Dé Donann* rather than vice versa. Proposals that the unattested nominative **Donu/*Danu* (together with the name of the Welsh ancestor figure Dôn), may be cognate with those of the Vedic demoness *Dānu*, and the river Danube (Dānuvius) are linguistically unworkable.

Noting the term's problematical character, L. C. Stern suggested that whoever added the third element did so by conflating the name of the *trí dé dáno* (three gods of skill), a mysterious group to which there are several allusions in the literature, with that of the land goddess Anu (genitive *Anann*), called 'mother of the Irish gods' by Cormac ua Cuilennáin (†908) and often identified with Donann in later sources (*Festschrift Whitley Stokes* 7–19). Stern's persuasive argument leaves only the *-o-* of the first syllable unaccounted for. As the present writer has tentatively proposed, the ethnonym *Domnann* (see domnonia; dumnonia; fir domnann) might have exercised

some influence here. Alternatively, there may really have been a goddess **Donu* of whom no other trace remains: Gerard Murphy observed that such a figure's name could derive from the Celtic stem **don-* ('earth'), which is also possible for the Welsh *Dôn* (*Duanaire Finn* 3.208–10; on this root, see also VERCELLI).

The name *Tuath(a) Dé (Donann)* is equivalent to the expressions *aes síde* (people of the SÍD), *fir síde* (men of the *síd*), and the rarer *sídaigi* (*síd*-folk) (see BEAN SÍ; OTHERWORLD). The only difference in usage is that it tends to be applied in contexts of legendary history or in tales such as CATH MAIGE TUIRED ('The [Second] Battle of Mag Tuired') and the opening section of TOCHMARC ÉTAÍNE ('The Wooing of Étaín'), which are set in the legendary period before the arrival of the Gaels in Ireland (ÉRIU). It is accordingly more compatible with a euhemeristic approach (see below) than are designations which highlight a connection with the *síde*. Their pagan associations rendered the Tuath Dé problematic for Christian authors: several attempts to find a category for them were made in the course of the Old Irish (*c.* 600–*c.* 900), Middle Irish (*c.* 900–*c.* 1200), and Modern Irish (*c.* 1200–) periods.

Some early sources speak simply of Irish gods; writing in the 7th century, Tírechán seems to equate 'men of the *síd*' with 'earthly gods' (Latin *dei terreni*; see Bieler, *Patrician Texts in the Book of Armagh* 142–3). In a more cryptic passage, one of the early dynastic poems of the LAIGIN appears to speak of the legendary king LABRAID LOINGSECH as 'one god among the gods' (*deeib dia oen*; see O'Brien, *Corpus Genealogiarum Hiberniae* 1).

A more orthodox interpretation held that the immortals were fallen angels or, indeed, simply devils. Intriguingly, explicit evidence for the latter view seems again not to be attested before the poetry of Eochaid ua Flainn. The 9th-century SCÉL TUÁIN MEIC CAIRILL (The tale of Túan, son of Cairell) speaks of the settlement of Ireland by the *Tuath Dé ocus Andé* (Tribe of gods and un-gods) 'whose origins the learned do not know; but they think it likely that they belong to the exiles who came from heaven' (Carey, *Ériu* 35.102, 106). This could be taken to mean that they are devils; however, it may well allude rather to the milder doctrine, found also in NAVIGATIO SANCTI BRENDANI (The voyage of St Brendan), that there was a group of 'neutral angels' who sided neither with God nor Lucifer and were punished only by being constrained to dwell upon the earth (Selmer, *Navigatio Sancti Brendani Abbatis* 24; Webb & Farmer, *Age of Bede* 220). This concept, of questionable orthodoxy as it is, testifies to the keen desire of the Irish literati to find a place for their old gods within the framework of a Christian world-view.

A similarly motivated departure from the Church's standard teaching is implied in *Tochmarc Étaíne*, where the otherworld figure Midir is made to say that 'it is the darkness of Adam's sin / which prevents our being counted' (Bergin & Best, *Ériu* 12.180–1), or in IMMRAM BRAIN *maic Febail* (The voyage of Bran son of Febal), where an otherworld woman attributes her people's immortality to the fact that 'the Fall has not touched us' (Mac Mathúna, *Immram Brain* 40, 53). James Carney plausibly took such passages to allude to an idea that the Tuath Dé belonged to an unfallen branch of humanity, still enjoying the beatitude of Eden; indeed, there is evidence elsewhere in the literature of speculations concerning such an unfallen group of people. This identification not only 'explains' the immortals in broadly Christian terms, but even legitimates a continuing belief in their superiority to normal humans (*Capuchin Annual* 1969.165).

Euhemerism, the idea that gods are only illustrious figures of the distant past who came to be worshipped by posterity, was first formulated by the rationalists of pagan Greece, but its usefulness as a Christian explanatory strategy led to its enthusiastic adoption throughout the patristic and medieval periods. In Ireland, the idea that the Tuath Dé were a race of mortals—descendants of Noah's son Japheth—who had gained a particular proficiency in magic, was a key element in the pseudo-historical scheme from at least the time of the poet Eochaid ua Flainn (see LEBAR GABÁLA ÉRENN).

It is important to note that none of these identifications ever achieved exclusive acceptance; texts of the later Middle Irish period still debate whether the Tuath Dé were men or devils (Macalister, *Lebor Gabála Érenn* 152–5), and whether the supernatural encounters of early times should be attributed to diabolical or angelic agency. Despite its theological respectability and endorsement by the pseudo-historians, the euhemeristic explanation seems never

to have carried conviction at the popular level: modern folklore, when it seeks to account for the 'people of the hills' at all, has recourse to the doctrine of the neutral angels.

§2. AN IRISH PANTHEON?

It is not clear whether the Tuath Dé do or do not in fact represent the gods of Irish paganism, but the hypothesis is strong. Besides the reference cited from Tírechán above, we have the assertion of 'Fiacc's Hymn' that the Irish 'adored the *síde*' before the coming of PATRICK. Cormac ua Cuilennáin not only identifies Anu as mother of the gods, as already noted, but also describes BRIGIT as a goddess worshipped by poets, and Nét as a god of war; the traditional etymology of DAGDA's name as meaning 'the good god' also seems to be the correct one. Together with all this, there is of course the name Tuath Dé itself, and the 'three gods of skill' already mentioned. That such beings as GOIBNIU the smith (cf. GOFANNON FAB DÔN), DIAN CÉCHT the physician, and Flidais the mistress of animals are invoked in incantations is further evidence that they were viewed as supernatural powers.

These considerations are corroborated by comparative evidence. Brigit, closely associated with that part of 'Ivernia' (Ireland) assigned by the Greek geographer PTOLEMY to the BRIGANTES, can scarcely be dissociated from the British tribal goddess Brigantia, nor Nuadu, husband of BÓAND (the river Boyne), from the NŌDONS whose temple in Roman times overlooked the Severn. Ogma, 'strong-man' of the Tuath Dé and inventor of the native alphabet OGAM, is clearly cognate with Gaulish OGMIOS, a god of eloquence portrayed with the attributes of the Greek HERCULES (see also GREEK AND ROMAN ACCOUNTS §13). Georges Dumézil has persuasively linked the Irish Nechtan, guardian of the spring of inspiration, with the water deities Apā̆m Nápāt in India, and Neptūnus in Italy (*Celtica* 6.50–61). The most striking example of all is the supremely accomplished LUG: the cult of a god LUGUS is reflected in dedications and toponyms throughout most of the rest of the Celtic world, for example, LUGUDŪNON.

Despite these indications of their status in pre-Christian Ireland, referring to the Tuath Dé of the medieval literature as 'gods' seems unsatisfactory. The authors of our sources were Christians, and indeed clerics. As we have seen, considerable ingenuity was expended in devising some other identity for these potent but anomalous traditional figures, and the various reinterpretations of their nature inevitably affected, to some extent at least, the ways in which they were imagined and portrayed. Nor is 'FAIRIES', a term whose associations tend to be limited by conceptions of the 'little people' current in folklore, a viable alternative in speaking of the medieval period. The Tuath Dé are *sui generis*: apart from the native terminology, a neutral label such as 'immortals' seems least inadequate.

§3. CHARACTERISTICS

The magical powers most frequently attributed to the Tuath Dé are control over the weather and the ability to transform appearances, including their own. On appropriate occasions, an immortal may, accordingly, assume a grotesque or horrific aspect; this is attested particularly frequently of supernatural beings associated with battle.

Normally, however, they are described in idealized terms: their bodies are beautiful and their apparel opulent, and they are immune to age or disease. Although the euhemeristic position insisted upon their mortality, this idea found few echoes outside the pseudo-historical literature: individuals whom *Lebar Gabála Érenn* portrays as having died in ancient times are still said to be active in the Christian period. As with the gods of Norse legend, however, their immortality does not place them beyond the reach of death by violence.

By definition, the 'people of the *síd*' are dwellers in the Otherworld, whether this is imagined to lie beyond the sea or to be immanent in the surrounding landscape. As such, they share in the Otherworld's invisibility and inaccessibility: they can usually be perceived only when they themselves wish it, and a stock phrase applied to their visits is that 'none knew whence (s)he had come, nor whither (s)he went'.

In concrete terms, the *síde* are hills and mounds, and supernatural regions were believed also to exist beneath bodies of water. The immortals were accordingly very much associated with specific places, in a manner recalling the profusion of dedications to local deities among the Continental Celts. In some sources they are explicitly said to control the fertility

of the land; thus, the brief tract De Gabáil in t-Sída (Concerning the taking of the otherworld mound) states that the first Gaels had to establish 'friendship' with the Tuath Dé before they could raise crops or herds (Hull, ZCP 19.53–8).

This intimate link with land and territory goes together with their associations with KINGSHIP. In several tales a king's right to the sovereignty is signalled or confirmed by an encounter, sometimes sexual, with a supernatural female (see SOVEREIGNTY MYTH). It has also been plausibly argued that the *feis Temro* (the feast of Tara/Teamhair) and other Irish inauguration ceremonies originally represented a ritual marriage with the local goddess. In other tales, a king receives an affirmation of his legitimacy from the Otherworld: Conn Cétchathach is said to have been offered a FEAST by Lug and the female embodiment of sovereignty. There, Conn was promised the kingship for his descendants until the end of the world (Thurneysen, ZCP 20.220; Dillon, *Cycles of the Kings* 12–14); his grandson, Cormac mac Airt, brought back from the Land of Promise a cup which enabled him to determine truth when sitting in judgement (Stokes, *Irische Texte* 3/1.193–8, 211–16). But if the immortals legitimate kingship, they are also prepared to destroy those who exercise it unrightfully. Thus, the legendary king Conaire Mór was 'banished by phantoms' (Knott, *Togail Bruidne Da Derga* 8; Stokes, RC 22.33; see TOGAIL BRUIDNE DA DERGA; Gantz, *Early Irish Myths and Sagas* 68). Other kings met their doom at the hands of magical women who seemed to represent the dark side of the empowering goddess.

A final trait to be emphasized in characterizing the Tuath Dé is their close connection with the arts. One tract says that among them 'the folk of skill were gods' (*déi int aes dána*), and the Dagda and his brothers are sometimes referred to as 'the children of Art' (*clann Eladan*). The 'three gods of skill' and many other immortal artisans are mentioned in the sources, and several of these—Dian Cécht the physician, Goibniu the smith, Creidne the brazier, Luchtaine the carpenter, Cairpre the poet—are the prototypical representatives of their crafts. Lug, the paragon of the Tuath Dé, is the *samildánach*, the one 'possessing many skills together'. This recalls the persuasive hypothesis that Caesar's description of a Gaulish Mercurius, 'inventor of all the arts', refers to the Continental Lugus.

John Carey

Tudur (Tudor) dynasty

Tudor was the name of a family from north Wales that gave five monarchs to England in the period between 1485 and 1603. The house was descended from Ednyfed Fychan (†1246), seneschal of Llywelyn ab Iorwerth, and Tudur ap Goronwy ap Tudur ap Goronwy ab Ednyfed Fychan (†1367), whose lands in Anglesey (Môn) and Caernarfonshire (sir Gaernarfon) included the celebrated seat of Penmynydd in Anglesey. Tudur's youngest son, Maredudd ap Tudur ap Goronwy, great-grandfather of King Henry VII, openly supported the Owain Glyndŵr rebellion, but disappeared in mysterious circumstances when his estates were confiscated. His son, Owen Tudor,

married Katherine of Valois, widow of King Henry V, in 1429 and the names of their three sons—Edmund, Jasper, and Owen—bore witness to the English, French, and Welsh connections of this influential family. Following Katherine's death in 1437 Owen Tudor was deprived of the custody of his children by Humphrey, duke of Gloucester, and although he found favour with Henry VI he was captured during the battle of Mortimer's Cross in 1461 and beheaded on the orders of Edward, earl of March. Two of his sons, Edmund Tudor (†1456), earl of Richmond, and Jasper (†1495), earl of Pembroke and duke of Bedford, were instrumental in the growth of Lancastrian influence in Wales (Cymru). Edmund married Margaret Beaufort in 1455 and their only child, Henry Tudor (†1509), known to the Welsh bards as the 'son of prophecy' (*mab darogan*), made a bold bid for the throne by sailing with a fleet of soldiers from Brittany (Breizh) to Wales, landing at Aberdaugleddyf (Milford Haven) on 7 August 1485. He recruited a sizeable army during a dramatic march through Wales and inflicted a humiliating defeat on Richard III, the last Yorkist king, at the battle of Bosworth on 22 August. Jasper Tudor had accompanied his young nephew, and his loyalty was rewarded with the dukedom of Bedford in 1485 and the lordship of Glamorgan (Morgannwg) a year later. On 30 October Henry Tudor was crowned in Westminster Abbey, the first of five Tudor monarchs whose dynasty would last for 118 years.

The name Tudor, Modern Welsh *Tudur*, is of Celtic derivation. It is attested in the spelling *Tutir* as the name of the witness to charter 143 of the Book of Llandaf, a charter whose original dated to *c.* ad 660. This compound name *Touto-rīx* is in fact attested, as a divine name, in Gaulish (see teutates; D. Ellis Evans, BBCS 24.420) and is made up of elements signifying 'tribe' and 'king' (see kingship); cf. Old Irish tuath and *rí*.

Geraint H. Jenkins

Tudur Aled (*c.* 1465–*c.* 1525) was a poet and arguably the foremost Welsh bard of his day. He is often linked to the parish of Llansannan, Denbighshire (sir Ddinbych), and in one poem states that his relative Dafydd ab Edmwnd had been his bardic teacher. He received the patronage of many families, most of whom came from north-east Wales (Cymru). The most prominent among them were the Salesburys, whose house of Lleweni was within easy reach of Tudur's home area. Indeed, most of his patrons could be found within 30 miles of Llansannan. His final days, however, were spent in south Wales, as the nine extant elegies composed to him prove. He seems to have travelled south in his old age to visit Sir Rhys ap Thomas of Dinefwr, one of the most important patrons in south Wales. Sir Rhys died in 1525, but Tudur seems not to have composed an elegy to him. Perhaps he was too old, or perhaps he was already dead, for his elegies show that Tudur died and was buried at the Franciscan friary of Carmarthen (Caerfyrddin).

Some 125 of Tudur Aled's cywydd*au* have survived, most of which are eulogies and elegies (see also cywyddwyr). His poems to request gifts such as animals or armour are well known for their vivid descriptions and lively metaphors. His mastery of cynghanedd was second to none, and few of the poets that followed him rivalled his technical proficiency. He was a key figure in the Caerwys eisteddfod of 1523, and his mastery of the traditional aspects of his craft has led most critics to identify him with the conservative impulses of his time. But Saunders Lewis saw in him a keen advocate of those *uchelwyr* (noblemen) who were eager to grasp the new opportunities that Tudor (Tudur) rule in London was creating. A reading of his poems, such as those to Robert ap Rhys of Dôl Gynwal, chaplain to Cardinal Wolsey, gives credence to both points of view. His couplet *[H]ysbys y dengys pob dyn / O ba radd y bo'i wreiddyn* (T. Gwynn Jones, *Gwaith Tudur Aled* 1.138) (Every man shows clearly / of what degree are his roots) is often quoted to this day.

The Turoe stone as seen from the east south-east

The **Turoe stone** is the finest of five non-representational carved stones that have been dated to the pre-Christian Iron Age in Ireland (Ériu). (The other stones which are broadly comparable are at Castlestrange, Co. Roscommon, Killycluggin, Co. Cavan, Mullaghmast, Co. Kildare, and Derrykeighan, Co. Antrim.) The Turoe stone now stands in Bullaun townland, near Loughrea, Co. Galway (Baile Locha Riach, Contae na Gaillimhe), having been moved from its original location in the 1850s to act as a lawn ornament for Turoe House. It originally stood in the vicinity of a small number of undecorated standing stones or boulders and a ring-fort known as the Rath of Feerwore. Unfortunately, the excavation of the ring-fort in the 1930s did not investigate the adjacent stones, and the original location of the Turoe stone remains unknown.

Consisting of a glacial erratic of fine-grained granite, the Turoe stone now stands 1.2 m above ground level, with a further 0.48 m below ground level. The stone is cylindrical in shape, and has a deliberately shaped domed top. The shape of the stone has prompted suggestions of phallic symbolism. However, other erratics of a similar shape and size occur naturally in the area.

The upper 0.68 m of the stone is decorated with finely executed La Tène ornament which runs continuously over the top of the stone and is delimited below by a band of relatively crude step pattern. The curvilinear La Tène motifs were carved on three different levels and organized on a quadripartite basis. A study by Michel Duignan in the 1970s identified the four compositions, two roughly triangular in shape, and the other two broadly D-shaped. Motifs employed include roundels, a bird's head, trumpet shapes, comma-shaped leaves, triskeles, and pelta shapes, generally quite similar to metalwork of the 1st century BC/AD from southern England and Wales (Cymru), though no such carved stones have been found in Britain.

Comparisons and origins for the Turoe stone have been sought on the Continent, particularly in north-western France, where decorated pillar stones are also found (e.g. the Kermaria stone from Finistère, Brittany/Penn-ar-Bed, Breizh). However, from the point of view of their inscribed design, these stones from Armorica are only vaguely similar, and it seems more likely that the Turoe stone represents an advanced stage of insular La Tène art.

Michelle Comber

Twrch Trwyth (originally Trwyd), the supernatural boar, is best known as the climactic anoeth (difficult task) set for Arthur and his heroes (including Mabon fab Modron) in 'Culhwch and Olwen', and the chase across south Wales (Cymru) and over the Severn estuary to Cernyw (Kernow) is used as a framework for inserting many accounts of remarkable localities and place-names; see Culhwch ac Olwen for a synopsis of the tale. The hunt of Yskithyrwyn Penn Beiδ ('White-tusk Chief Boar') can be understood as a narrative doublet, artfully building the mood for the mightier boar hunt to follow; see further boar. Twrch Trwyth itself has a band of seven lethal offspring: Banw (young pig), Bennwic, Grugyn

Gwrych Ereint (Grugyn silver bristles), Llwydawc Gouynnyat (Llwydawc the hewer), Twrch Llawin, Gwys, and one unnamed boar. As well as being remarkable for his size and destructiveness and carrying between his ears the comb, razor, and shears demanded by Ysbaddaden the giant, Twrch Trwyth is said to be the son of the king Tareð Wledic; according to Arthur, he was 'a king transformed by God into a hog (*hwch*) for his sins' (cf. REINCARNATION; MATH FAB MATHONWY). The fact that Trwyth is not killed in the story but driven back out to sea may mean that the storyteller and his audience knew of the boar's presence in subsequent adventures, now lost.

Like Arthur's wife GWENHWYFAR, corresponding to Irish *Findabair*, and his sword *Caledfwlch*, Irish CALADBOLG, Twrch Trwyth is equivalent to *orc tréith*, explained as 'a king's son' in SANAS CHORMAIC ('Cormac's Glossary'). Old Irish *orc* means 'young pig' and *tríath* (gen. *tréith*) can mean either 'king' or 'boar'. In the Middle Irish tract 'The TUATH DÉ Miscellany', edited by Carey (BBCS 39.24–45), we find *Triath rí torcraide* (Triath king of the boars). The Welsh spelling *trwyt* (Modern *trwyd*), which does occur, could be the exact cognate of *triath*, implying Common Celtic **trētos*. Therefore, although a common inheritance of loan from WELSH to IRISH is not easily disproved, the Irish *Torc Triath* is pivotal to the theory of a kernel of Irish material near the starting-point of the ARTHURIAN tradition.

Arthur's hunt of *Porcum Troit* and other places and episodes found in *Culhwch* are mentioned in south Walian contexts in the *mirabilia* (marvels) of the 9th-century HISTORIA BRITTONUM. Therefore, some version of this part of the story was already well known and localized that early. This evidence is consistent with Padel's theory of an originally unhistorical character who began as a figure in local folklore (cf. ARTHURIAN SITES). The allusion to *Trychdrwyt* (attacked in a river for his valuables) in *Gwarchan Cynfelyn* in LLYFR ANEIRIN, as well as other occurrences in poetry, show that the correct original name was *Trwyd*, *Trwyth* originating as a scribal error.

Tynged yr Iaith ('The Fate of the Language') was a radio lecture in WELSH by Saunders LEWIS which was broadcast on the BBC's Welsh service on 13 February 1962. It is now widely perceived as the catalyst for the inception of CYMDEITHAS YR IAITH GYMRAEG (The Welsh Language Society), though it was initially intended as a challenge to the branches of Plaid Cymru (The Party of Wales; see NATIONALISM) in the Welsh-speaking heartland to set aside their electoral ambitions in order to concentrate on the salvation of the native language. Lewis ominously warned his listeners on the eve of the publication of the latest decennial census figures that Welsh would 'end as a living language . . . about the beginning of the twenty-first century'. What followed was an intellectual critique by a skilful propagandist of the way in which successive governments, since the ACTS OF UNION (1536–43), had attempted to eradicate the Welsh language, and how the Welsh people had been conditioned to disavow their national tongue. Lewis advocated a campaign of civil disobedience that would make it impossible for local and central government to conduct their business without using Welsh. His address, with its rousing conclusion, was essentially a call to arms: 'It will be nothing less than a revolution to restore the Welsh language in Wales. Success is only possible through revolutionary methods.'

Tynwald

The High Court of Tynwald, more commonly known as 'Tynwald', is the parliament of the Isle of

Tynwald ceremony. The tiered mound is said to be made from soil taken from all seventeen parishes. New laws are proclaimed in both Manx and English at the open-air ceremony held on 5 July each year.

Man (Ellan Vannin), and comprises the Legislative Council and the House of Keys. The name Tynwald derives from the Scandinavian *thingvollr* which means assembly field, though it has been suggested that the assembly pre-dates Norse times.

Tynwald meets annually on 5 July in the form of an open-air assembly at Tynwald Hill, St John's, in the centre of the island. The hill itself, Cronk Keeill Eoin, is made up of four tiers, supposedly composed of earth from every parish on the island. New laws are promulgated and petitions of grievance are accepted from members of the public. The ceremony is preceded by a church service, following which Members of Tynwald proceed to the hill along the Processional Way, which is laid with rushes. This custom is said to relate to offerings to the sea-god Manannán. For the remainder of the year, Tynwald meets indoors at the Tynwald Chamber, part of the Legislative Buildings in the island's capital, Douglas.

The millennium of Tynwald was celebrated in 1979 and, although this date was brought into question, it was claimed to have marked a continuous tradition of at least one thousand years of Tynwald.

Breesha Maddrell

Tysilio, St, was, according to biographical and liturgical fragments, a son of Brochfael, a 6th-century king of Powys. Following self-imposed exile in Eifionydd (the commote of Gwynedd centred on Cricieth), he succeeded his teacher Gwyddfarch as abbot of Meifod (Montgomeryshire/sir Drefaldwyn), an important royal monastery at the 'May or summer residence'. Cynddelw, the 12th-century poet, described Meifod as *gydua brenhined* (the burial ground of kings), praising (anachronistically) its cloisters, spires, priests, and choir, and (perhaps from observation) Tysilio's gold-encrusted crosier. Following the battle of Chester (Caer, *c.* 615) Tysilio may have declined the kingship (his Life claims that his widowed sister-in-law planned to marry him and make him king) and appears to have gone into exile in Brittany (Breizh). There, it is said that he died at his new monastery on the river Rance/Renk (feast-day 8 November). In Brittany he was also known as *Sulien*, which is the more original form of the compound name (< **Sōlo-genos*). *Suliau* < **Suliaṷos* would be a hypocoristic or pet-name formed from this, to which was further added the honorific *to*, later *ty* 'thy'. His Breton site on the Rance is now Saint-Suliac < **Sūliācum* 'place of Suliau'. A church of Tysilio at Pengwern, mentioned by Cynddelw as 'chiefest in the land', may be St Julien's, Shrewsbury (Welsh Amwythig). Ten, possibly fourteen, places in Wales (Cymru) and several in Brittany have his patronage or are otherwise associated with him.

U

Ua Duinnín, Pádraig (Patrick S. Dinneen, 1860–1934) was an Irish lexicographer, author, and editor who is best known for his *Foclóir Gaedhilge agus Béarla/An Irish–English Dictionary*, published in 1904 by the Irish Texts Society (see CUMANN NA SCRÍBHEANN N-GAEDHILGE; DICTIONARIES AND GRAMMARS). He was born near Rathmore, Co. Kerry (An Ráth Mhór, Contae Chiarraí), to native IRISH-speaking parents. Having attended Mintogues school, he was given Latin lessons by the local priest and entered the Jesuit novitiate in 1880. In 1883 he enrolled at University College Dublin (BAILE ÁTHA CLIATH), where he studied Modern Literature and Mathematical Science. He was awarded a BA in 1885 and an MA in 1889. He was ordained in 1894 and, from 1895 to 1900, taught at the Jesuit colleges, Mungret and Clongowse. He left the Jesuit order in 1900.

It was the Irish scholar Fr. Mac Erlean, his teaching colleague, who stimulated his interest in Irish. After 1900 he was very active in the Gaelic League (CONRADH NA GAEILGE) and became president of Craobh an Chéitinnigh (the 'Keating Branch') of this organization. He published *Cormac Ua Conaill*, one of the first attempts at the modern novel in Irish, in 1901. He also wrote six short plays.

In addition to editing the *Irish–English Dictionary*, a new and enlarged edition of which was published in 1927, Ua Duinnín also edited the work of some of the major Irish poets of the 17th and 18th centuries, including Tadhg Gaelach Ó Súilleabháin, Piaras Feiritéir, Geoffrey Keating (Seathrún CÉITINN), Aogán Ó RATHAILLE, Eóghan Ruadh Ó Súilleabháin, Seán Clárach Mac Domhnaill, and Séafraidh Ó Donnchadha an Ghleanna (see IRISH LITERATURE [4]).

Pádraig Ua Duinnín died in Dublin in 1934 and is buried in Glasnevin cemetery.

Uffington, White Horse of

The only horse-like hill figure in Wessex, England, which has claim to antiquity is the White Horse of Uffington in Oxfordshire (Berkshire before 1974). The chalk figure was carved in the hill immediately below the prehistoric hill-fort of Uffington Castle. The beaked-headed hill drawing is about 110 m long. Archaeological research has shown that the horse is not the result of erosion, but has always been of its present shape. The dating of the horse is difficult, but its origin is usually given as around 50 BC. Barry Cunliffe suggests that the hill figure dates from a period earlier than the origin of the hill-fort itself, which had already been constructed in the 6th or 5th century BC (*Ancient Celts* 164).

The interpretations of the White Horse have been numerous. On the one hand, Miranda Green suggests that the hill drawing was a protector symbol of a local Celtic tribe, the Atrebates (*Dictionary of Celtic Myth and Legend* 217–18). Her conjecture is based on the fact that the abstract design of the horse may also be seen on Celtic COINAGE found in CALLEVA

Aerial view of the White Horse of Uffington

(Silchester), the tribal seat of the Atrebates. Since the Atrebatian horse coin types derive ultimately from Continental issues of the Belgae, T. G. E. Powell also regarded the creators of this sacred site as incomers from Belgic Gaul (*Celts* 282). The transfer of King Commios of the Continental Atrebates to Britain in 50 BC is a historical event documented by Caesar.

Horses were valued in early Celtic society, since both horseback riding and horse-drawn vehicles were associated with the higher social classes. Horses with supernatural associations figure in pagan Celtic iconography (for example, Epona 'divine horse') and in both Irish and Welsh mythological tales. Therefore, there is much comparative Celtic evidence for considering the possible significance of the White Horse of Uffington.

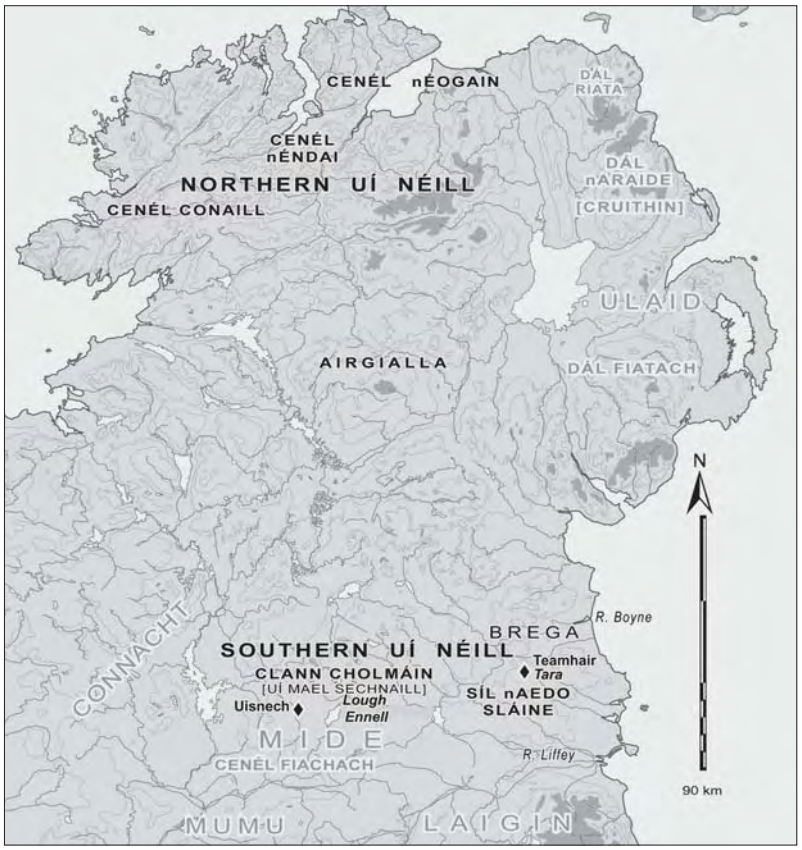
Uí Maine, Book of (*Leabhar Uí Maine*, Dublin, Royal Irish Academy, Stowe D. ii. 1) is one of the great medieval Irish vellum manuscripts. It is also known under the names 'The Book of Hy Many', *Leabhar Uí Cheallaigh* ('The Book of O'Kelly'), or even *Leabhar Uí Dhubhagáin* ('The Book of O'Dugan'). The manuscript was written some time in the late 14th century (probably between 1378 and 1394) for Muircheartach Ó Ceallaigh (O'Kelly, †1407), bishop of Clonfert, later of Tuam (1392–1407). He was a member of the Uí Maine tribe, whose territory extended from north-east Galway (see gaillimh) to south Roscommon (Ros Comáin). The manuscript remained almost exclusively in the possession of the Ó Ceallaigh family until at least 1757, and maybe as late as the early 19th century. Based on this, Edward O'Reilly (1765–1830) suggested both *Leabhar Uí Maine* and *Leabhar Uí Cheallaigh* as names for the manuscript (O'Reilly, *Chronological Account* cxxi–cxxii).

By the early 19th century, the Book of Uí Maine was held by Sir William Betham (1779–1853), who had Edward O'Reilly draw up a record of the contents, before the manuscript was sold to the Duke of Buckingham for a staggering £150. It remained in the Duke's library at Stowe until 1849, when the Earl of Ashburnham purchased the entire Stowe collection and then, unfortunately, refused any public access to his library. However, following the Earl's death in 1883, the British government bought his collection, and the Book of Uí Maine was subsequently deposited in the Royal Irish Academy (Acadamh Ríoga na h-Éireann).

The two main scribes were Faelan Mac a' Gaban na Scél (†1423) and Ádhamh Cúisín (Adam Cusin). Four other scribes seem to have been involved to a lesser extent. It has also been suggested that the famous historian Seaan Mór Úa Dubhagáin (†1372), *ollamh* of the Uí Maine, compiled the contents and maybe even contributed to the writing of the manuscript (Meyer, *Archiv für celtische Lexikographie* 2.138–9). The case for Seaan's involvement has recently been made more strongly and, as a result, *Leabhar*



Northern and central Ireland in the early Middle Ages: Uí Néill groups and districts are labelled in black (including the subordinate Airgialla), other groups and provinces are labelled in grey

Uí Dhubhagáin has been forwarded as the probable earlier name of the manuscript (Ó Muraíle, *Éigse* 23.192–3).

The Book of Uí Maine is a large codex and many of its initials are colourfully decorated. Several sources are mentioned, among them Saltair Chaisil ('The Psalter of Cashel'), from whence several Éoganacht genealogies were copied. However, less than half the original manuscript has been preserved and, of the 368 folios which it contained in the 15th century, only 157 folios have been preserved. However, four further folios, with mostly historical poems, have been located within British Library MS Egerton 90 (fos. 17–20). The earliest index of the contents was made in the 17th century and forms part of British Library MS Lansdowne 418, a manuscript originally owned by the antiquarian Sir James Ware (1594–1666). This seems to suggest that the said index may have been compiled for Sir James, and there is some indication that it was undertaken by the famous Irish historian Dubhaltach Mac Fhirbhisigh (*c.* 1600–71).

The contents bear witness to the miscellaneous character of early Irish manuscripts. Apart from historical and genealogical matter relating to the Uí Cheallaigh/Uí Maine, there is also religious material, as well as copies of Sanas Chormaic ('Cormac's Glossary), *Cóir Anmann* (The appropriateness of names) and Lebor na Cert ('The Book of Rights'). It also contains several literary texts, among them the dindshenchas (lore of high places) and banshenchas (lore of women).

PSH

The **Uí Néill** were an Irish dynasty which played a dominant rôle in Irish politics during the early

medieval period. The family traced its line back to Niall Noígiallach mac Echach (†?427/8), whose descendants came to dominate the midlands and the north-west of Ireland (Ériu). Although the standard doctrine of the king-lists was that the overking of the Southern and Northern Uí Néill had monopolized the office of *rí Temro* (king of Tara/Teamhair) from as early as the 6th century, other evidence suggests that Baetán mac Cairill (†581) of Ulaid, as well as Fiachnae mac Baetáin (†626) and Congal Caech (†637) of the Cruithin, also held this title. The Southern Uí Néill were divided into two collateral branches: Cland Cholmáin in Mide and Síl nAedo Sláine (descendants of Aed Sláine) in Brega, both claiming descent from the common ancestor, high-king Diarmait mac Cerbaill (†565), Niall's great-grandson. Although sometimes challenged by the Éoganacht of Munster (Mumu) during the 8th and 9th centuries and shaken by the Vikings in the 9th and 10th, it was Brian Bóruma of the Dál gCais (†1014) who decisively eclipsed Uí Néill power, replacing it with a strengthened high-kingship. The fortunes of the Uí Néill—and their legendary ancestors, including, prominently, Conn Cétchathach and his grandson Cormac mac Airt—are a central theme of the semi-historical early Irish texts now collectively known as the Kings' Cycles.

PSH

Uinniau (**Findbarr, Finnian**) was a famous monastic scholar and an important authority in the church in the early to mid-6th century. He is known from both Irish and Breton sources. While these sources are diverse and it is possible that one or more churchmen with the same or similar names were active at the same period, the evidence on balance favours a single eminent figure. There survives through Irish transmission a Latin list of penances for various sins, known as *Penitentialis Uinniani* (Finnian's penitential). In the development of the genre, this text seems to fall between the Penitential of Gildas of the earlier to mid-6th century and that of Columbanus of *c.* 600. Writing to Pope Gregory the Great *c.* 600, Columbanus mentions a *Uennianus auctor* (Uennian the author, writer) who had written to Gildas concerning matters of monastic discipline and received a most polished reply. In Adomnán's *Vita Columbae* (Life of Colum Cille, who founded Iona/Eilean Ì *c.* 563 and died in 597), there are several variant forms of the name of Columba's teacher: *Findbarrus*, *Uinniauus*, *Finnio*. This teacher is probably St Finnian of Clonard (†549), Meath (Mide), who, in the 9th-century Irish Calendar of Karlsruhe, is called *Uinniaui Cluano Irairdd* (genitive). There is a second Irish St Finnian (†579), of Moville, Co. Down (Contae an Dún). Pádraig Ó Riain has argued persuasively that these two were one historical figure remembered in two local cults, while Richard Sharpe suggests that Adomnán's variant spellings seek to reconcile these already divergent local traditions. In Angers 477, a Breton manuscript of AD 897, the death of Uinniau from the plague is dated at 549, implying identity with the Clonard Finnian/Uinniau. In the earliest Breton-Latin saint's life, that of Samson, there is an account of a *frater peritissimus* (most learned brother) named *Winniauus*, who greatly impressed Samson. Note also Clancy's persuasive suggestion that St Ninian or Nyniau of Whithorn derives from Finnian/Uinniau, with early insular forms of *u* and *n* being easily confused, as at the end of these names. In the context of the numerous dedications to Gaelic *Finnian*, Brythonic *Guinnian*, and their variants in south-west Scotland (Alba), Whithorn's region, *Ninian* could be a simple scribal error. In total, a fairly impressive composite case emerges for an illustrious monastic figure in the poorly documented generations preceding Colum Cille and Columbanus (†615). Most recent writers on the subject (Léon Fleuriot, Thomas Clancy, David Dumville, Richard Sharpe, and Wendy Davies) have favoured the probability that Uinniau was a Briton, since this form of the name is clearly a Brythonic pet-name derived from a compound in Celtic **windo-* 'white, blessed'. Irish *Finnio* is a Gaelicization of the Brythonic name, rather than a native Irish form. On the other hand, Ó Riain favours an

Irish origin, emphasizing the Irishness of *Findbarr*, the only attested form of the full compound name. Even this uncertainty underscores the close connections and the ease of mutual influence linking the churches of Ireland (Ériu), Brittany (Breizh), and Celtic Britain at this key formative period. The controversy takes on deeper interest because it is widely appreciated that at some stage between the time of St Patrick and that of the dynamic peregrinatio of Columba and his successors, the missionary initiative passed from the Britons to the Gaels; yet, within a gap of over a century, it is not known when or how this transition occurred.

Uirgnou, Old Irish Fergnae Brit, fourth abbot of Iona/Eilean Ì (r. 605–†623), is of general interest for Celtic studies as a 'Briton' (Irish Brit) who led one of the most important Irish and Scottish monasteries. His position demonstrates that intense high-level contacts continued between Brythonic and Gaelic Christians long after Ireland's conversion during the age of Patrick and his immediate successors in the 5th century. Such examples suggest possible channels through which words, names, and ideas flowed between the Celtic countries in early Christian times. Adomnán's Latin spelling of the name—dative *Uirgnouo*, genitive *Uirgnoui* (*Vita Columbae* 3.19)—indicate that it is Brythonic not Goidelic; cf. ARTOGNOV on the Tintagel slate. Uirgnou's nationality is confirmed indirectly by a reference in the Life of Baíthéne (Iona's third abbot, †605) that Uirgnou's brother Fidgen travelled to his relatives (or in-laws) in *Britannia* 'Britain'. There is also the negative evidence that the earliest genealogies for the abbots of Iona, probably collected in the 10th century and preserved in the Book of Lecan (Leabhar Mór Leacáin), do not have a pedigree for Uirgnou. Most of the early abbots were close kinsmen of the founder, St Colum Cille, and belonged to the Cenél Conaill branch of the Northern Uí Néill. Uirgnou's long reign, to his death, shows that he was not merely a caretaker awaiting the next suitable Uí Néill candidate. He had been a monk at Iona in Colum Cille's time. Adomnán mentions him as 'a young man of good ability' who received a heavenly vision of Colum Cille and ruled Iona 'by God's guidance'. In 617, during his abbacy, Oswald and Oswydd, the sons of Æthelfrith, went into exile among the Irish, probably specifically to Iona, as their subsequent loyalties indicate; Uirgnou's background in Britain is likely to have been a factor in this development. During his abbacy, a Columban church was also built on Tory Island (Toraigh) in or near Cenél Conaill territory in northwest Ireland (Ériu).

Uirgnou is a Celtic compound **Wiro-gnāwos* 'having knowledge of man', and Old Irish *Fergnae* is its equivalent.

Uisnech (later Uisneach; Usney or Usnagh Hill, Co. Westmeath/Contae na hIarmhí) is a hill of 184 m (602 feet) to the west of Mullingar; in medieval times it was apparently also known as Caendruim. On the western side of the hill excavations have revealed a hill-top enclosure surrounded by ramparts, as well as a large number of artefacts, animal and human remains, which confirm the importance accorded the hill in Irish literature.

Within the early traditional scheme of Irish geography, Uisnech was the centre, or 'navel' of Ireland (Ériu), while the area surrounding the hill was known as Mide ('Meath', etymologically 'middle'), with the other four divisions, called cóiced (lit. 'fifth', but

meaning 'province'), of Munster (Mumu), Leinster (Laigin), Connacht, and Ulster (Ulaid) conceived as joining at Uisnech. In later tradition, Uisnech is sometimes assigned to Connacht.

There is diverse evidence showing that central places were considered important, or even sacred, by the early Celtic-speaking peoples and were thus favoured for assemblies; cf. for example, Caesar's statement that the Gaulish druids annually assembled at a place considered to be Gaul's centre (*De Bello Gallico* 6.13). The *oenach* (assembly) at Uisnech seems to have played an important part in the cultural and ritualistic life of medieval Ireland. Although there is no reference to a feast at Uisnech in the Irish annals, the literature does mention *Mór-dháil Uisnigh* (The great assembly of Uisnech), held on the first of May. It is named as one of the three main assemblies in Ireland, the others being Feis *Teamrach* (Feast of Tara/ Teamhair) and *Aenach Tailltin* (*Oenach Tailten* 'Fair of Tailtiu'). According to an entry in the 12th-century dindshenchas (lore of high places), the name Uisnech is derived from *ós neoch* (above someone) as marking the place where a warrior named Mide (namesake of Meath) buried the tongues of the druids of Ireland and built a house on top (Stokes, *Irische Texte* 3/1.198). Mide is also credited with bringing the first fire to Ireland, and medieval tradition mentions ritual fire ceremonies at Uisnech. However, the extent to which Uisnech was used as a place of worship and assembly remains uncertain.

The most famous people associated with Uisnech are Noísiu and his brothers, who are known from a tale which has survived in two versions: the Middle Irish version of Longas Mac nUislenn ('The Exile of the Sons of Uisliu') and the early modern Irish tale *Oidheadh Chlainne hUisneach* (The violent death of the children of Uisniu). Modern writers often refer to the tale as 'the Deirdre story' (see derdriu). However, the connection of the hill with the unfortunate brothers is doubtful, since their original name Uisliu (gen. Uislenn) was probably confused and eventually replaced with the more familiar Uisneach. The site also features in several other early Irish texts, for example, *Echtrae Chonlai* (The adventure of Conlae).

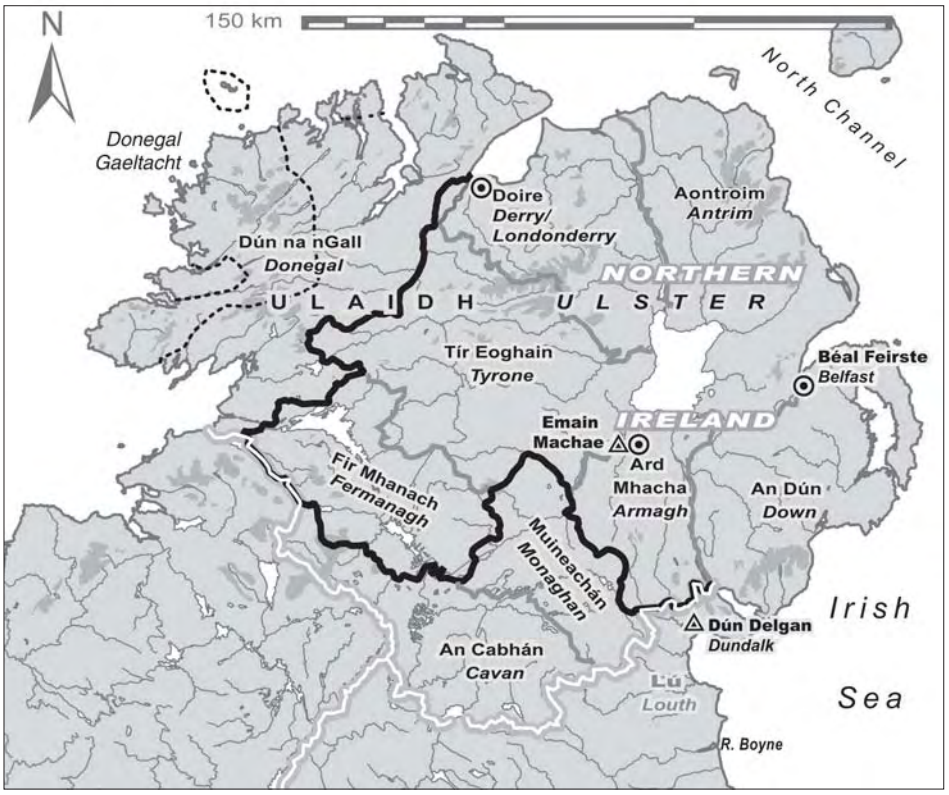
Ulaid, Modern Irish Ulaidh, English Ulster, means different things according to the period and context under consideration. Nowadays, used carefully with reference to modern times, Ulster means one of the four traditional provinces of Ireland (Éire; see cóiced), comprising the nine counties in the north-east: Cavan (an Cabhán), Donegal (Dún na nGall, also called Tír Chonaill, though this sometimes refers only to the Irish-speaking west of the county), Monaghan (Muineachán), Antrim (Aontroim), Armagh (Ard Mhacha), Derry/Londonderry (Doire), Down (an Dún), Fermanagh (Fear Manach), Tyrone (Tír Eoghain). Used more loosely with reference to recent politics and current events, Ulster can be a shorthand for Northern Ireland, one of the two governments created during Ireland's War of Independence by the UK Parliament's Government of Ireland Act of 1920 (see irish independence movement). As a result of increasing Unionist militancy in the north-east, this act formally separated the most heavily Protestant counties from the predominantly Catholic south and west, though leaving behind sizeable religious minorities—greater in the north—on both sides of the border. Originally envisioned as including Monaghan, it was only the last six counties in the list above that remained part of the United Kingdom with the founding of the Irish Free State (Saorstát na hÉireann) in 1922. The collapse of the Boundary Commission in 1925 was to confirm by default the 6-county: 24-county partition of Ireland, which has continued to the present day.

In ancient times, Ulster was the only traditional province already reflected in name in Ptolemy's *Geography*, where the Ουολουντιοι *Uoluntii* appear as a tribe in the north-east. This form can correspond exactly to OIr. *Ulaid* (genitive *Ulad*, archaic *Uloth*), if we assume an old variation *Uo-*, *U-* comparable to



The nine counties and the six: modern Ulster/ Ulaidh and contemporary Northern Ireland

the byforms *Uenelli, Unelli* in a Celtic tribal name in Armorica and, secondly, that the name had come through an intermediary who falsely restored *-nt-* to *U(o)luti*, aware that Goidelic was already losing *n* before *t* (for example, OIr. *carait* 'friends, kinsmen' = Old Welsh *carant* < Celtic **karantes*).

As discussed in the article on the Ulster Cycle (§3), these sagas reflect an Ulaid centred on the assembly site at Emain Machae and larger than the historically attested province at a period reckoned to be contemporary with the life of Christ. Thus, for example, Cú Chulainn's stronghold is at Dún Delgan—now Dundalk, Co. Louth (Contae Lú)—and it is sometimes implied that Ulster's frontier is in the valley of the Boyne (Bóand). This geography may be a precious reflection of prehistoric political reality. The extent of La Tène vs. non-La Tène zones in the Irish Iron Age would support such a possibility, but, on the other hand, the linear earthwork of the Dorsey in south Armagh suggests a smaller territory controlled by Emain at *c.* 95 bc. It is thus alternatively possible that the enlarged Ulster of the heroic age might reflect the country ruled by the Uí Néill in the earlier Middle Ages and the wish of writers to confirm the ancient and natural integrity of the north and the midlands.

In early historical times, the Northern Uí Néill rose to power in west Ulster, but claimed origin from the Connachta and never called themselves Ulaid. Their subordinates, the Airgialla, controlled the region around Emain Machae and Armagh, confining dynasties with Ulaid identity further east. The kings of Dál Fiatach in present-day Co. Down claimed Ulaid tribal ancestry, whereas the Dál nAraidi in what is now Antrim, though also called Ulaid, were considered Cruithin.

The Uí Néill monopoly on power in the north and midlands was broken with the rise of new dynasties, beginning with the Ua Briain (O'Briens, descendants of Brian Bóruma, †1014). However, in some cases, the subsequent political changes are more apparent than real, since new dynastic surnames replace older appellations. For example, Mac Lochlainn, the leading northern chiefdom of the 12th century developed from the Cenél nÉogain branch of the Northern Uí Néill. And, though one should avoid the common error of confusing the Ua Néill (O'Neills)—the great power of central Ulster in the later Middle Ages—with the earlier similarly named dynasty, the O'Neills did emerge from a northern Uí Néill milieu.

The end of the 'Gaelic order' under native aristocracy is often marked by the decisive defeat of

Aodh Ó Néill (Hugh O'Neill) and his sometimes ally Aodh Ruadh Ó Domhnaill (Red Hugh O'Donnell) of Tír Chonaill as they attacked the English forces blockading the Spanish fleet at Kinsale (Cionn tSáile) on Christmas Eve 1601. Although O'Neill retained his earldom and much of his land in the treaty of 1603, he, O'Donnell, and many followers fled to the Continent in 1607.

The resettlement of Ulster from Britain and the partial displacement of the native population—which has affected the linguistic, religious, and political character of Ulster to such a great extent—began in the 16th century with major migrations from Scotland (Alba) into Antrim and Down. Following the 'Flight of the Earls' in 1607, James I of England acquired O'Neill's lands and remaining tenants, providing the opportunity for an organized scheme of resettlement or 'plantation' from 1608 onwards by Scots, English, servitors (royal officials), and 'deserving' Irish. In 1610 Co. Coleraine came under a separate settlement scheme under a group of London companies and was renamed Co. Londonderry.

Although the Plantation succeeded in establishing the Ulster Scots language as an offshoot of the speech of the Scottish Lowlands and undoubtedly contributed to the decline of Irish speech in Ulster, it was never a clean sweep of Irish speakers or Catholics from any county. Areas of west Donegal have remained Irish speaking to the present, and most parts of the province retained native Irish-speaking communities late enough for a composite view of the Ulster Irish dialect to be possible. Some of its distinctive features show—not surprisingly, given its geographic location—affinities with Scottish Gaelic. For example, strong initial stress has been retained from Old Irish with a resulting shortening of unstressed vowels, as in *bradán* 'salmon' pronounced [ˈbradan], rather than [ˈbrədɑːn] as in Conamara or [brəˈdɑːn] in Munster (see mumu; gaeltacht). Singular nouns following a preposition and the definite article often show the consonant mutation known as lenition or aspiration (from Old Irish dative case marking) where the other Irish dialects show eclipsis/nasalization (from old accusative marking): e.g. Donegal *ag an bhean* 'at a woman', Conamara *ag an mbean*. There is also a stronger tendency to use independent pronouns rather than inflected verbal endings to express the subject of a sentence; thus, it is said that Ulster Irish (like Scottish Gaelic) is more 'analytic' and the other dialects more 'synthetic'.

The Northern Ireland conflict—a legacy of the 16th-/17th-century Plantation and the early 20th-century Partition—escalated into violence from the Catholic civil rights movement of the 1960s. It ended, in fact, with the IRA (Irish Republican Army) ceasefire of 1994 and formally with the Belfast Agreement or Good Friday Agreement of April 1998 (which included a repeal of the Government of Ireland Act of 1920), ratified by referenda in Northern Ireland and the Irish Republic on 22 May 1998.

The largest city in Ulster and the capital of Northern Ireland is Belfast (Béal Feirste). The 2001 UK census shows a population for the Belfast local government area estimated at 277,170, but this excludes many populous suburban areas. Belfast was the seat of the Northern Ireland parliament from its inception in 1921 (at the Stormont site from 1932), until it was suspended in favour of direct British rule during the conflict on 28 March 1972. Belfast is now the home of the devolved Northern Ireland Assembly (again at Stormont) under the Belfast Agreement.

Ulster Cycle of Tales

§1. INTRODUCTION

Modern scholarship normally makes a fourfold classification of the Irish saga literature which has come down to us from the early period. This system of classifying the material is determined primarily by *dramatis personae* and by chronology. Thus four 'cycles' can be distinguished: the Mythological Cycle, the Ulster Cycle, the Fenian Cycle (see

FIANNAÍOCHT), and the KINGS' CYCLES. As has long been pointed out, however, this modern system does not accord with the system used by native literati who used a thematic system for classifying the sagas and thus classified them according to their theme (e.g. battles, visions, elopements, &c.), usually inherent in the title.

§2. EXTENT AND HISTORY OF THE CYCLE

The Ulster Cycle is the most dominant corpus of Irish saga literature from the pre-Norman period. In his authoritative survey of this body of literature, THURNEYSEN listed some 80 items which belonged to the Cycle, ranging from the long epic TÁIN BÓ CUAILNGE ('The Cattle Raid of Cooley'), through other long tales, to poems and short passages of DINDSHENCHAS material in verse and in prose (*Die irische Helden- und Königsage*). The list comprises some of the best and most well-known literature of the period, tales such as FLED BRICRENN ('Bricriu's Feast'), LONGAS MAC NUISLENN ('The Exile of the Sons of Uisliu'), SCÉLA MUCCE MEIC DÁ THÓ ('The Story of Mac Dá Thó's Pig'), TOCHMARC EMIRE ('The Wooing of Emer'), MESCA ULAD ('The Intoxication of the Ulstermen'), *Ces Ulad* (The debility of the Ulstermen), *Táin Bó Flidais* ('The Cattle Raid of Flidais'), &c. Thurneysen's survey, however, extended only as far as the 17th century and did not include tales composed after that period. When these, and some other items not considered by Thurneysen, are included, the corpus of Ulster material becomes even more imposing, consisting of roughly 100 items extending over a period of some 1200 years.

While we have material from this cycle which may date from the 7th century (Thurneysen, ZCP 19.193–209; Carney, *Proc. 6th International Congress of Celtic Studies* 113–30), the earliest versions of some of the more celebrated tales appear to have been written in the 8th or 9th centuries, that is, the central and later Old IRISH linguistic periods. There are different versions of several of these tales, for instance, *Táin Bó Cuailnge*, *Compert Con Culainn* ('The Conception of Cú Chulainn'), *Tochmarc Emire* among others, a feature which can be attributed to a continuous process of rewriting and reworking the material over a long period of time. To this same process can be attributed the linguistic stratification evident in many other tales. The earliest extant version of *Táin Bó Cuailnge*, for instance, shows passages which were added at various times over a period of centuries. In the 12th century this text was subject to extensive revision and rewriting; the inconsistencies which mark the earlier version, and had accrued over the course of several centuries, were removed, and some new material added, giving a new recension of the tale.

Other tales may have undergone similar revision at this time. As it has been transmitted to us, the text of *Bruiden Da Choga* (Da Choga's hostel) most probably belongs to the 12th century, but it is possibly based on an earlier version no longer extant but appearing in the 10th-century TALE LISTS as *Togail Bruidne Da Choga* ('The Destruction of Da Choga's Hostel'). These lists also mention tales which evidently belonged to the Ulster Cycle but are no longer extant —at least not under the name given them in these sources. Such are *Echtrae Con Culainn* (Cú Chulainn's expedition/adventure) and *Compert Cheltchair meic Uithechair* (The conception of Celtchar mac Uithechair). On the other hand, there are other tales of this cycle that are not mentioned in the lists, for example, AIDED ÉNFIR AÍFE (The violent death of Aífe's one man [i.e. son]).

While older tales were revised and rewritten, the process of composition did not cease. The 12th century also saw the composition of some new material. To this period most probably belong tales such as *Cath Ruis na Ríg* (The battle of Ros na Rí), *Aided Guill mheic Carbada ocus Aided Gairb Glinne Rige* (The violent death of Goll mac Carbada and the violent death of Garb from Glenn Rige) and the description of Conchobar's household and warriors found in *Scéla Conchobair maic Nessa* (Tidings of Conchobar mac Nessa). Other tales such as *Cath Leitrech Ruide* (The battle of Leitir Ruidhe), *Cocad Fergusa ocus Conchobuir* (The war between Fergus and Conchobhar), *Cath Bóinde* (The battle of the Boyne) were written then or shortly afterwards. As in the case of other sagas, it is possible that some of these are based on earlier originals. In the case of *Cath Bóinde*, its alternative designation, *Ferchuitred Medba* (Medb's husband allowance) is mentioned in the 11th-century tale lists. The absence of such references to other tales suggests that they are later compositions.

While the Fenian Cycle, with the appearance of

Acallam na Senórach (Dialogue of [or with] the old men), was to establish itself by the 12th century, and to burgeon thereafter, the Ulster Cycle continued to have an important part in the affections of the literati. The process of rewriting continued. Between the 14th and the 16th centuries many older tales were revised. *Aided Énfir Aífe* was recast as *Oidheadh Chonnlaoich mheic Con Culainn* (The violent death of Connlaoch son of Cú Chulainn); Breislech Mór Maige Muirtheimni (The great rout of Mag Muirtheimne), while greatly modernized, appears under the same name or as *Oidheadh Chon Culainn* (The death of Cú Chulainn) and *Deargruathar Chonaill Chearnaig* (Conall Cernach's red [bloody] rout); *Longas mac nUislenn* is replaced by *Oidhe Chloinne Uisnigh* (The violent death of the children of Uisniu), though this latter tale differs in many respects from the earlier composition. *Scéla Muice Mheic Da Thó* appears under the same name or otherwise as *Easair Mhic Da Thó* (Mac Datho's slaughter) and a modernized version of the second recension of *Táin Bó Cuailnge* (The 'Stowe' version of *Táin Bó Cuailnge*) was also produced. Not only did these tales undergo extensive linguistic modernization, but in some cases they were altered significantly with sections of the older tale being omitted or new material being added. The celebrated romance *Oidhe Chloinne Uisnigh*, for instance, may originally have been part of a longer compilation based on elements from the older *Longas mac nUislenn*, the now incomplete *Fochann Loingsi Fergusa meic Róig* (The cause of Fergus mac Róich's exile), and *Táin Bó Flidais* ('The Cattle Raid of Flidais', see Breatnach, *Ériu* 45.99–112). Likewise, the later *Oileamhain/Foghlaim Con Culainn* (Cú Chulainn's education/training) and *Oidheadh Chonnlaoich mheic Con Culainn*, while also found as separate tales, may originally have been a longer tale based on *Aided Énfir Aife* and the second part of *Tochmarc Emire* (Ó hUiginn, *Emania* 19.43–52).

Many of these later tales appear to have been written in north Connacht, a thriving centre of scribal activity in the later Middle Ages. It is known that copies of the earlier tales on which they are based were present in manuscripts that were in this area at the time. The later *Táin Bó Flidais*, which, with *Oidhe Chloinne Uisnigh*, may once have been a single composite tale, was almost certainly written in this area, and shows strong Connacht affinities. A compendium of Ulster tales most probably written here at this time was to enjoy great popularity in the later manuscript tradition. This comprises *Oileamhain/Foghlaim Con Culainn*, *Oidheadh Chonnlaoich mheic Con Culainn*, *Breislech Mór Maige Muirtheimni*, *Deargruathar Chonaill Chearnaig*, and *Combrac Fir Diadh agus Con Culainn* (The encounter of Cú Chulainn and Fer Diad), a modernized version of an episode from *Táin Bó Cuailnge*. Most of these tales contain passages in verse and some of them inspired independent ballads. The arrival of Cú Chulainn's son, Connlaoch, in Ireland (Ériu) and his subsequent death at his father's hands is recounted in two poems which have been transmitted in over 50 manuscript copies, and several versions were also collected from oral tradition in Ireland and Scotland (Alba). Cú Chulainn's own death tale inspired a further poem, which likewise was to become quite popular.

Of no small importance in the later development of the Ulster Cycle was Keating's history of Ireland, *Foras Feasa ar Éirinn*, compiled in the 1630s (see céitinn). Several of the older death tales were recast and retold therein in Keating's lively and more modern prose style. Since this was a work which enjoyed considerable popularity and was widely read, we sometimes find Keating's versions of the tales incorporated in the later manuscript tradition.

The final creative phase of the Ulster Cycle belongs to the 17th and early 18th centuries. In the period 1670–1720 several new texts were composed in south-east Ulster and include *Tóruigheacht Gheanainn Ghruadhsholais* (The pursuit of bright-cheeked Geanann), *Tóruigheacht na hEilite le Coin Culainn* (Cú Chulainn's pursuit of the deer), and *Eachtra Chonaill Cheithearnaigh* (Conall Cernach's adventure). These later tales are written very much in the verbose style that was favoured in Irish romances of the 16th century onwards and, in favouring the quest as a central theme, are of a piece with them. While they show some deference to the earlier tradition in terms of personages, places, and events, they are at some remove from it in spirit and atmosphere. *Cathréim Congbail Chláiringnigh* (The martial career of Congal the flat-faced), while showing some similar traits, may have been written slightly earlier.

In the 18th century material belonging to this cycle was recorded from oral tradition in Scotland. At a later stage, similar material was gathered in Ireland.

Many of these oral ballads and tales can be associated with the 'Connacht Compendium' referred to above, and were most likely inspired by manuscript versions thereof. In other cases, such oral narratives may have derived from later printed versions of certain tales.

Several tales have survived in numerous recensions. The tradition of Cú Chulainn killing his only son is mentioned in the incomplete first recension of *Tochmarc Emire*, which dates from the 8th century (Toner, *Ériu* 49.71–88). In the Middle Irish *Aided Énfir Aífe*, it appears as an independent tale. It is recounted in the *dindshenchas* (place-name lore) in both poetry and prose. From the early Modern Irish period, *Oidheadh Chonnlaoich mheic Con Culainn* represents a modernized expanded telling of it, while yet another version is used in a law text of this time for discussion of the crime of *fingal* (slaying of a blood relative; O'Keeffe, *Ériu* 1.123–7). In 1490, or shortly thereafter, the poet Giolla Coluim mac an Ollaimh uses it as an apologue in a bardic poem on the death of Iain Óg Mac Domhnaill, son of the Lord of the Isles (Ross, *Heroic Poetry from the Book of the Dean of Lismore*; see also LORDSHIP OF THE ISLES). Yet another modern telling of it is found in Keating's *Foras Feasa ar Éirinn*. Both Giolla Coluim's bardic apologue and a lament uttered by Cú Chulainn over the body of his fallen son, which is based on *Oidheadh Chonnlaoich mheic Con Culainn*, appear as ballads in the manuscript tradition, sometimes as separate poems, sometimes conflated as a single lengthy ballad. The earliest published version of this is found in Charlotte BROOKE's *Reliques of Irish Poetry* (1789).

From the 18th century, versions of these poems collected from oral narration are found in Scotland and, from a later date, in Ireland (ÉIRE). These are sometimes embodied in oral versions of the tale, of which several tellings have been collected, mainly from the northern half of Ireland. This tradition later inspired W. B. YEATS's play *On Baile's Strand* (1904) and a play in Irish, *Aoinfhear Aoife Alban*, by Mícheál Ó Siochrú (1939; see Ó hUiginn, *(Re)Oralisierung* 223–46; *Éigse* 32.77–87; *Emania* 19.43–52).

§3. THE TALES AND THEIR HEROES

The Ulster Cycle is concerned with the exploits of the legendary ancient ULAID, a people once dominant in the northern part of the country and from whom the modern province of Ulster derives its name. Under their king, CONCHOBAR mac Nessa, they are based in the royal fort of EMAIN MACHAE (now Navan Fort, near Armagh City). Native tradition ordained that they were contemporaries of Christ, and the cycle, thus set four centuries before the arrival of St PATRICK, has a strongly pagan atmosphere. Although written in the 8th or 9th centuries, the tales contain references to pagan gods and DRUIDS, to items of material culture and to customs not known to have been practised in Ireland at the time of their writing. The reader is presented with a picture of an archaic prehistoric society, but it is a picture which displays anachronisms, inconsistencies, and features at variance with the historical and archaeological record (Mallory, *Studies in Early Ireland* 99–114; *Proc. 7th International Congress of Celtic Studies* 31–78; *Aspects of the Táin*). To take one example, Emain Machae is presented in these tales as a royal fortress, but archaeologists assert that it never had such a function, being a religious or ceremonial site.

On the other hand, other features of the tales may reflect genuine memories of an earlier age and way of life. The political geography of the Ulster Cycle shows the power of the Ulaid extending to most of the northern half of Ireland, a state of affairs that probably existed in the recent prehistoric past, but which had not been a reality since the 4th century. Accordingly, the warfare between Ulster and Connacht, a theme central to *Táin Bó Cuailnge*, for instance, is viewed by some as a memory of a struggle in the prehistoric period which saw the Ulaid losing most of the province to the rising Uí NÉILL dynasty.

The tales probably contain some genuinely old material which had been added to and embellished in the course of being written and rewritten over a long period of time. It is not always easy to determine what is genuinely old or what is due to the literary invention of archaizing writers.

The tales are heroic legends concerned with the martial exploits of the legendary Ulaid (see HEROIC ETHOS). The heroes are drawn from the upper echelons of society and are sometimes collectively referred to as the warriors of *Craebruad* (red branch), a name whose origin is not clear. Bravery and valour, nobility of spirit, honour, and generosity are the traits most valued in this society. Defeated enemies are usually

dealt with in barbarous fashion, suffering decapitation while their heads are kept as trophies by their victorious opponents (see HEAD CULT). In *Scéla Mucce Meic Dá Thó* the Ulster warrior Conall Cernach boasts that he never slept a single night without the head of a Connachtman under his knee, and to prove his point he takes the severed head of the Connacht champion Anluan from his pouch.

In the later *Deargruathar Chonaill Chearnaig* he beheads the warriors who slew Cú Chulainn and impales their heads on spikes. A ballad, *Laoidh na gCeann* (The lay of the heads), which commemorates Conall's deed, was popular in the manuscript tradition of the 18th and 19th centuries. The brain of a Leinster warrior, Mes Gegra, who was also slain by Conall, was removed and kept on display in a room at Emain.

It is acceptable for warriors to boast, provided boasts are carried out. To be respected as a warrior and remembered as such is the summit of ambition. When the druid CATHBAD was asked how auspicious it would be for a warrior to take arms for the first time on that day, he replied that such a warrior would gain fame and renown, but would have a short life. On hearing this, the young Cú Chulainn stated that he did not care whether he lived but for a day provided his deeds would remain on the lips of the men of Ireland. *Buaine bladh na saegul* 'fame outlives life' is the adage which he utters in the later *Oidheadh Chon Culainn* (The violent death of Cú Chulainn) as he goes relentlessly, but with honour intact, to his own death.

CÚ CHULAINN is the principal warrior of the Ulster Cycle. His heroic biography and rôle in individual texts is discussed in the article on him.

That Conall Cernach is the hero second only to Cú Chulainn in prowess is demonstrated repeatedly in the heroic contests which form the main action of the lengthy saga *Fled Bricrenn*. In *Scéla Mucce Meic Dá Thó*, from which Cú Chulainn is inexplicably absent, Conall Cernach appears climactically at the end to demonstrate that he by virtue of his prowess in combat has earned the right to carve the pig at the FEAST, over all the assembled contending Ulster and Connacht heroes present. Conall is the pre-eminent Ulster hero in tales such as *Táin Bó Fraích* ('The Cattle Raid of Froech') and *Talland Étair* (The siege of Howth), and is the only Ulster hero to play a rôle in TOGAIL BRUIDNE DA DERGA ('The Destruction of Da Derga's Hostel'), a tale which has at best tangential associations with the Ulster Cycle. *Deargruathar Chonaill Chearnaig* tells of the terrible revenge which he wreaked on the family of Calaitín following the death of Cú Chulainn. Such action is in accordance with the description of him in the late *Scéla Conchobair maic Nessa* (Tidings of Conchobar mac Nessa) where we read that he avenged the death of every Ulsterman on the men of Ireland, and never travelled without the head of a Connachtman. He appears as the hero of the late rambling and episodic romance *Eachtra Chonaill Cheithearnaigh agus an Fhir Dia, Lughaidh Mhac Nós, agus Chú Chuilin go hOileán an Ár a Rígheachta Rígh Innse Toirc* (The expedition of Conall Cernach, and Fer Dia, Lughaidh mac Nóis, Bricin and Cú Chulainn to the Island of Slaughter in the Kingdom of the King of Inis Toirc).

As might be expected, King Conchobar mac Nessa features prominently in the Ulster Cycle. Like Cú Chulainn, tradition makes him the fruit of multiple conception. A version of *Compert Conchobuir* (The conception of Conchobar) dating perhaps from the 8th century relates how he was conceived through a chance encounter between Nes and the druid Cathbad. In a somewhat later version, Cathbad forces himself on Nes, who then becomes his wife and is impregnated through swallowing worms which are contained in a beaker of water. Conchobar, who is born on the same day as Christ, gains the kingship of Ulster when the incumbent, FERGUS MAC RÓICH, is tricked into yielding this office to him through the guile of his mother Nes. The Middle Irish text *Scéla Conchobair maic Nessa* describes the household of Conchobar in detail, but rather tellingly remarks that Conchobar was never allowed to pronounce judgement lest he uttered a false verdict. As king of Ulster, he had the right to sleep with each woman of his province on her marriage-night, a right of which BRICRIU mischievously reminds him in *Tochmarc Emire*. This exercise of *ius primae noctis* brings about a potential conflict when Cú Chulainn marries Emer. This is averted by Cathbad and Fergus sleeping in the same bed as Emer and the king, thus preserving Cú Chulainn's honour.

The picture painted of Conchobar as the comely, brave king loved by his people is tarnished in *Longas mac nUislenn*, where he is presented as an envious and

treacherous old man. Although the young warrior Noísiu had eloped with the beautiful DERDRIU, the girl whom Conchobar desired and set aside for himself, this was done very much at Derdriu's behest and against Noísiu's will, a fact known to the Ulaid. Conchobar later accedes to the wish of the Ulaid that the young couple be allowed to return from Scotland, where they are in exile, and not suffer any harm. No sooner do the exiles arrive in Emain Machae than they are murdered through Conchobar's treachery. The enraged Fergus mac Róich, who, together with Conchobar's own son Cormac Cond Loinges and some of the other Ulster warriors, had acted as guarantors for their safety, wreaks destruction in Ulster before going into exile to Connacht.

Conchobar's physical beauty contributes eventually to his death. *Aided Conchobair* (The violent death of Conchobar) relates that the women of Connacht wished to view him on account of his great beauty. Granting them their wish, Conchobar is struck by a shot from a sling cast by Cet mac Mágach, a Connacht warrior who had hidden himself among the Connacht women. The ball that strikes the Ulster king consists of the brain of a slain Leinster warrior, Mes Gegra, which had been mixed with lime and hardened. A prophecy had foretold that Mes Gegra would avenge himself on Ulster after his death. Conchobar does not die immediately, however, but survives for seven years with the ball embedded in his head. On being informed that Christ was being crucified, he is struck by rage that such a fate be visited on an innocent man. This dislodges the ball and brings about his death. Thus, his birth and death coincide with the birth and death of Christ.

A figure who looms quite large in the Ulster Cycle is Fergus mac Róich (Ó hUiginn, *Emania* 11.31–40). We learn that he was king of Ulster prior to the accession of Conchobar, but desired the latter's mother, Nes. She agreed to yield to his advances on condition that her son be given the kingship for a year. So well did Conchobar's reign succeed that the Ulstermen refused to grant kingship to Fergus again, seeing as he had abandoned it for carnal pleasure.

After Conchobar had treacherously killed the sons of Uisliu, however, Fergus and some other of the Ulster nobles went into exile in Connacht, where they were received by MEDB and Ailill. He subsequently had a relationship with Medb which resulted in the birth of three sons: Ciar, Corcc, and Conmac. *Táin Bó Flidais* relates how he afterwards took Flidais, having killed her husband, Ailill Find of the Ciarraige Aí. This tale was to undergo substantial rewriting and modernization in the later Middle Ages, with the rôle of Fergus being cast in a highly negative light and that of the slain Ailill Find being enhanced. To Fergus fell the task of guiding the invading Connacht army northwards into Ulster in *Táin Bó Cuailnge*. Despite his hatred for Conchobar, the ties of blood and loyalty which he has with his native province put him in a quandry, and he unsuccessfully tries to delay the march of the Connacht army. The enmity beween Fergus and Conchobar is further developed in the late tale *Cocad Fergusa ocus Conchobuir* (The war between Fergus and Conchobhar). His death is finally brought about through the jealousy of Ailill mac Máta, who incites his blind brother Lugaid Dalléces to cast a spear at him as he and Medb swim entwined around Finnloch, as is told in *Aided Fergusa meic Róigh* (The violent death of Fergus mac Róich).

Loegaire Buadach and Celtchar mac Uithechair are warriors who play rôles of various importance in the cycle. They are both subjects of separate death tales: *Aided Loégaire Buadaig* (The violent death of Loegaire Buadach) and *Aided Celtchair maic Uthechair* (The violent death of Celtchar mac Uithechair). Together with Conall Cernach, Loegaire is one of the warriors vanquished by Cú Chulainn in striving to gain the CHAMPION'S PORTION at Bricriu's feast. In the later *Oileamhain / Foghlaim Con Culainn*, Conall and Loegaire accompany Cú Chulainn to Scáthach to learn martial arts, but are dismissed by her since they fail the first test set them.

To Cathbad the druid falls the function of divination. He interprets omens and advises the Ulstermen in times of crisis. Bricriu Nemthenga (poison-tongue) is an altogether more insidious personage in the tales. In accordance with his sobriquet, he incites strife and dissension among the Ulaid. On refusing an initial invitation to a feast which he had prepared, the Ulaid are informed that he would stir up enmity between the nobles of Ulster, between father and son, mother and daughter, and the two breasts of every woman, if they did not come. The strife he incites between Cú Chulainn, Conall Cernach, and Loegaire Buadach,

and their respective wives, Emer, Lendabair, and Fedelm Noícride, is the theme of *Fled Bricrenn*. Bricriu's ability to cause enmity and strife is again brought into sharp relief in the later version of *Táin Bó Flidais* where, under the name Bricne, he incites further strife between most of the main protagonists in the story.

While the Ulaid encounter many enemies in their adventures, their chief foe is Medb, the warrior queen of Connacht. A formidable character, manipulative and treacherous, she resides in the royal fort of Crúachu (or Cruachain, i.e. Rathcroghan, Co. Roscommon/Contae Ros Comáin) with her consort Ailill mac Máta. Ailill, originally of Leinster, is a much weaker character and is led by his wife. It is she who insists on marching to Ulster to capture the brown bull, Donn Cuailnge. She uses her wiles to get warriors to fight for her, offering them various inducements, not least of which is the openly sexual *cairdes sliasat* 'friendship of thighs'. This is a ploy she uses in *Táin Bó Cuailnge* to get Fer Diad to fight against his foster brother Cú Chulainn. Ailill has to suffer his wife's excesses as he does her relationship with the Ulsterman Fergus mac Róich and her bearing his children. *Táin Bó Cuailnge* tells us, however, that she had chosen him because he had the rare quality of being without envy. On the other hand, Medb appears in a more positive light in *Fled Bricrenn* where she and Ailill are called on to resolve the quarrel among the Ulster warriors.

§4. the themes of the tales

Thematically, the dominant group of tales within this cycle are the *Aideda* 'death tales', of which Thurneysen lists just under twenty in his discussion. The deaths of most of the prominent characters in the cycle are recorded. *Catha* 'battle tales' also feature prominently, e.g. *Cath Ruis na Ríg, Cath Bóinde, Cath Airtig, Cath Leitrech Ruide*. Yet another prominent genre are the *tána bó* 'cattle raids'. Among these can be reckoned *Táin Bó Regemain, Táin Bó Dartada, Táin Bó Fraích, Táin Bó Flidais* (of which there are two recensions), *Táin Bó Aingen* (another name for *Echtrae Nera* 'The adventure of Nera') and the longest and perhaps the most celebrated of all the Ulster tales, *Táin Bó Cuailnge*. So prominent is this tale that the unqualified term *Táin* is frequently used to refer to it, rather than to any of the other *Tána*. *Táin Bó Cuailnge* is discussed in a separate article in this Encyclopedia.

§5. supernatural and mythological aspects

Many of the characters in the Ulster Cycle are endowed with supernatural features. Cú Chulainn is described as having seven pupils in each eye and seven fingers on each hand. When incited to anger he would undergo a *riastrad*, a series of contortions whereby his sparking hair would stand upright, one of his eyes would open until it was bigger than the mouth of a drinking vessel, while the other would close until it were no bigger than the eye of a needle, and he would open his mouth so wide that his gullet was fully visible. A warrior's halo would shine over his head. A more radical metamorphosis is evidenced in the case of the two swineherds, Friuch and Rucht, who are transformed into various animals before becoming the two bulls of the *Táin*, the Donn Cuailnge and the Findbennach, as *De Chophur in Dá Mucado* (Of the *cophur* of the two swineherds) relates (see also REINCARNATION).

The characters in this cycle range from the clearly supernatural to the human. In between, there are many supernatural beings who are given human characteristics and humans endowed with supernatural attributes. Members of the *aes síde* (those who dwell in the SÍD/Otherworld), such as the two swineherds, are clearly supernatural and frequently undergo such metamorphoses. The beautiful Caer Iborméith, who comes to Oengus in a vision and entices him to her otherworld dwelling, appears in alternate years in the guise of a swan. Serglige Con Culainn ('The Wasting Sickness of Cú Chulainn') tells how Cú Chulainn, like Oengus, falls into a debilitating sickness having being seduced by an otherworld woman. In *Echtrae Nera*, the mortal Connacht warrior Nera finds himself caught fatefully in a time-distorted succession of raids between the court of Crúachu and the *síd*, and in the end he is trapped for all time with his otherworld wife and their child.

Encounters with some other supernatural visitors have more serious consequences. Death is frequently portended by the Badb (see BODB), the MORRÍGAN or by NEMAIN, otherworld creatures which may appear to those fated to die in the guise of scald-crows, or of hideous women.

Supernatural aspects of some characters are manifested in certain aspects of their behaviour. Medb, for instance, is the queen who takes many lovers and is marked by her promiscuity. She is willing to offer

her sexual favours to any man, provided she can gain some advantage thereby. At a deeper level, however, this accords with the native concept of sovereignty, which is usually conceived of as a feminine entity and thus can be personified (see SOVEREIGNTY MYTH). The man who mates with the sovereignty goddess, who sometimes appears as a hideous wizened woman, gains the KINGSHIP. Medb of Crúachu is but one realization of this myth and, indeed, it has been shown that other women named Medb carry out a similar function elsewhere in the tradition (Ó Máille, ZCP 17.129–46).

A similar interpretation can be seen in the case of her lover Fergus mac Róich, whose name can be translated as 'manly vigour, son of the great horse'. Physically a giant, his supernatural proportions and gargantuan appetite are described in *Scéla Conchobair maic Nessa*, where we are told that he required seven women to satisfy him if his wife, Flidais, was not with him. Given the meaning of his name and his attributes, Fergus can be seen as a god of virility. As with his partner Medb, several other figures in the tradition who bear this name may be alternative realizations of the same deity (Ó hUiginn, *Emania* 11.31–40).

The action in most of the tales is played out in the northern half of Ireland, although the Ulaid may sally forth to Connacht or to other parts of the country as they do in *Mesca Ulad* where they travel to Munster, or in *Aided Chon Roí* (The violent death of Cú Roí) where Cú Chulainn kills the Munster champion in his own fort. Some of the locations where supernatural events take place or where supernatural creatures are encountered can be seen as realizations of the Otherworld. The *bruidne* (hostels, see BRUIDEN) in which the events in *Scéla Mucce Meic Dá Thó*, *Togail Bruidne Da Derga*, and *Bruiden Da Choga* take place can be seen as such. The Otherworld may be entered through the cave at Crúachu, as happens to Nera who ultimately never returns, through lakes, or may be situated on distant islands.

In later tales, supernatural adversaries are frequently encountered in overseas lands or in some imaginary country. Overseas expeditions are not unknown in early texts, but are a marked feature in later compositions. *Oileamhain/Foghlaim Con Culainn* has the Ulster hero travelling to Greece and to Scythia to learn martial arts, as well as encountering and defeating several otherworldly beings. As in many romantic tales, events in compositions such as *Eachtra Chonaill Cheithernaigh* may take place in LOCHLANN or further afield in the eastern world. In many cases, the action is played out in an imaginary land such as *Críoch na Sorcha* (The land of brightness) or *Tír an Uaignis* (The land of loneliness).

§6. LITERARY INTERPRETATION

Stories from the Ulster Cycle can be interpreted at different levels. This is not surprising when one considers that it is not a body of literature composed by a single person at a certain time, but a collection of tales and traditions which grew and was developed over a period of several centuries by many different writers working in different places, and producing it for different people and patrons. Its written development extends over a period of at least a thousand years, and possibly for a considerable period before that in oral form. While there is much continuity to be observed in the Ulster Cycle, various tales may have been composed or rewritten to suit contemporary needs or audiences.

The poem attributed to Luccreth moccu Chéri which begins with the line *Conailla Medb míchura* (Medb enjoins bad contracts) is viewed by many as one of the earliest texts belonging to the Ulster Cycle. It may have been written in the 7th century or possibly shortly before that and it is composed in an archaic rhythmical style (Carney, *Proc. 6th International Congress of Celtic Studies* 113–30). This poem is found in the GENEALOGIES of the Ciarraige, an important population group in the west and south of Ireland in the early Christian era, and it is clear that the compiler of the genealogies wished to explain, by means of this poem, the reason why certain peoples outside Ulster claimed descent from the ancient Ulaid. This poem has not yet been edited in a satisfactory way and parts of it are obscure, but it is clear that the poet was making use of the tradition in which Medb had offspring through her liaison with the exiled former king of Ulster, Fergus. It was through this tradition that certain Munster and Connacht peoples were able to number the Ulsterman Fergus among their ancestors. This was a tradition that endured for some considerable time. Over a millennium later, we find the scribe and poet Aindrias Mac Cruitín of

Co. Clare (Contae an Chláir) compiling, in 1728, a manuscript of Ulster tales, poems, and genealogies for his patron Brian Ó Lochlainn of the Burren, the Ó Lochlainns being one of several Munster families who still claimed Ulster origins (Ó hUiginn, *Éigse* 32.77–87).

The relationship of Fergus and Medb is also prominent in the *Táin*, but the genealogy is not a central theme in this tale. Cú Chulainn, who is not mentioned at all in Luccreth moccu Chéri's poem, is the hero of the piece and his martial exploits are central to the tale. Some commentators have expressed the opinion that the *Táin* was used as a political allegory which refers to people who lived in the 9th century (Kelly, *Aspects of the Táin* 69–102; Ó Riain, *Ulidia* 31–8). The second recension of this tale has been viewed by others as referring to people and events in the 12th century, when it was redacted (Tristram, *Ulidia* 18–19).

Apart from possible political allegory, *Táin Bó Cuailnge* may also contain social comment on customs of the time. A negative representation of women frequently found in early IRISH LITERATURE may also underlie the portrayal of Medb. In his relationship with her, Fergus is the dependent party, subject to her leadership. He lost the kingship of Ulster *ar tóin mná* (for a woman's buttocks), a comment made more than once about him. This term also has legal significance, and can be used with reference to a man who is inferior in status of wealth to his wife and is therefore kept by her. In the case of Fergus, he comes off worse because of his relationship with Medb, and the Connacht army suffers the consequences of having given leadership to a woman (Kelly, *Aspects of the Táin* 69–102).

Many would regard *Scéla Mucce Meic Dá Thó* as one of the best told of the Ulster tales. It relates a verbal and physical battle between the Ulaid and the CONNACHTA to gain possession of the supernatural hound of the Leinster hospitaller Mac Dá Thó, and the strife is instigated by their attempts to choose the most preeminent of the warriors in their midst to divide the pig which Mac Dá Thó has provided for the feast. The ensuing riot results in many fatalities on both sides with Ailbe, the dog, also being killed. The heroes of Connacht and Ulster appear thus in a rather ridiculous light, and the tale might be read as a critical commentary on the heroic ethos in general.

This tale was rewritten in the 16th century. Apart from linguistic modernization, several east Ulster place-names, not found in the older version, were added to it. Since the places mentioned were of particular significance in the strife between Shane O'Neill and the MacDonnells of Antrim, which resulted in the death of the former in 1567, it has been suggested that this Ulster tale was rewritten because of its apposite nature for contemporary events and patrons (Breatnach, *Patronage, Politics and Prose* 22–9).

The allegorical use of material from the Ulster Cycle is well known from bardic poetry where poets normally allude to the fact they are introducing such an apologue. When the poet Maolsheachlainn na nUrscéal Ó hUiginn (15th century) fell out with his patron Brian Ó Conchubhair, he wrote a poem to assuage him, comparing Brian's anger with that of the battle frenzy of Cú Chulainn. When the Ulster hero returned to Emain Macha, having completed some of his *macgnímrada*, he had to be thrown into vats of cold water to quell his rage. Maolsheachlainn compares his poem to the vats of water, hoping that it will have the same effect on his patron.

The Scottish poet, Giolla Colaim mac an Ollaimh, makes effective use of a tale from the Ulster Cycle in his elegy on Angus Óg, son of Iain McDonald, Lord of the Isles, who was killed in 1490. He compares the sorrow felt by him with the sorrow felt by Cú Chulainn having killed his own son, Connla(och). The relevance of this apologue would not have been lost on a contemporary audience, since Angus had been at war with his father for some time prior to his murder, and his father may have been implicated in it.

The disturbing and powerful theme of this tale was probably responsible for its appearance in several different versions over a long period of time, as we have seen above.

As with Giolla Colaim's apologue, this tradition may have been put to special use in some of these versions. Its use in a law text to discuss the penalty for slaying a kinsman is an obvious case in point, as is its use in the *dindshenchas* where it serves the aetiological function of elucidating the place-name *Lecht Aínfir Aífe* (The tombstone of Aífe's only man). In other cases, it can be argued that it carried a strong social message, be that a critique of the heroic ethos or of certain types of polygamy practised by the Irish (Ó hUiginn, *Éigse* 32.77–87).

§7. PLACE-NAMES AND THE ULSTER CYCLE

As in other branches of Irish literature, *dindshenchas* plays an important part in the Ulster Cycle. A prominent example is the Fer Diad episode in *Táin Bó Cuailnge*, evidently a late addition to the tale which was most likely inspired by and created from the place-name Áth Fir Diad (Fer Diad's ford). Although none are as long as the Fer Diad episode, *Táin Bó Cuailnge* contains in excess of 50 such legends which purport to explain the origins of certain toponyms encountered in the tale. As with Fer Diad, the names of many characters occur in place-names and it is possible that the character has been 'extracted' from an already existing place-name. The Ulaid trace their genealogies back to a figure called Rudraige, as a result of which they are frequently referred to as Clanna Rudraige 'the families of Rudraige'. In origin, however, Rudraige appears to have been the name of an extinct population group which remained in certain place-names in Ulster, e.g. Loch Rudraige, the old name for the inner bay at Dundrum, Co. Down. Some other figures who can be associated with toponyms are Bricriu (Loughbrickland, Co. Down/Loch Bricrenn, Contae an Dúin), Muinremor mac Gerrgind (Lough Ramor, Co. Cavan/Loch Muinremoir, Contae an Chabháin), Fraoch mac Idaith (Carnfree, Co. Roscommon/Carn Fraoich, Contae Ros Comáin), Cathair Con Roí (Caherconree, Co. Kerry/Contae Chiarraí). In other cases, we find the name of a character assimilated to that of a toponym. Cú Chulainn appears in some later tales as Cú Chuailnge, or Cú Chuillinn, forms which appear to be inspired by the place-names Cuailnge (Cooley, Co. Louth/Contae Lú) and Sliabh gCuilinn (Slievegullion, Co. Armagh/Contae Ard Mhacha).

Ruairí Ó hUiginn

Union with Scotland (1707)

The Treaty of Union between England and Scotland (ALBA), which created the United Kingdom of Great Britain, was the product of negotiation between English and Scottish Commissioners between April and July 1706. Approved by both parliaments, it received the Royal Assent in England on 6 March, and came into effect on 1 May 1707. Under the terms of the Treaty, 45 Scottish MPs (Members of Parliament) would sit in the UK Parliament at Westminster, and 16 representative peers would sit in the House of Lords; the small number chosen made considerable patronage control possible. Scotland's population, at that time about one-fifth of that of England, was underrepresented.

The Union brought into permanent being a single flag (the red, white, and blue Union Jack) and uniformity of taxation, duties, and coinage throughout the United Kingdom, with various Scottish exemptions. A special compensation, the 'Equivalent' (Clause XV), was offered in recognition of Scotland's share of the National Debt and in defrayal of the costs of standardization of coinage, of excise, crown debts, and the debts of the Company of Scotland. In addition, £2000 a year was to be set aside from the 'Equivalent' to encourage manufactures. After Union, Scotland was to gain free trade with England and its overseas

colonies. Scotland was to keep her legal system, her burgh rights, and her Court of Exchequer, together with her heritable jurisdictions of barony and regality. 'England' is the term specifically used throughout the Union treaty, a term here subsuming the principality of Wales (CYMRU), joined in union with England under Henry VIII (see ACTS OF UNION). The Commissioners were forbidden to treat ecclesiastical matters, and no mention of these were made in the Union. Instead, the two parliaments passed separate acts, which preserved the establishment of the Presbyterian Church of Scotland (see CHRISTIANITY [2c]) and Scotland's universities.

The key motivation for the Union appeared in Article II, which dealt with the succession to the Crown. By the Act of Settlement of 1701, the English Parliament had excluded all Catholics from succession to the Crown, and settled it on Sophia, electoress of Hanover and her issue, as the nearest Protestant heirs. In doing so, they had excluded the exiled Scottish dynasty, the Stuarts, from the throne. The SCOTTISH PARLIAMENT had responded by passing the Act Anent Peace and War (1703), which reserved an independent foreign policy for Scotland, the Wine Act, which maintained Scoto-French links, and the Act of Security (1704), which reserved to Scotland the right to alter the Hanoverian succession. Although it made provision for the heir to be a Protestant (which might mean the Duke of Hamilton, as direct descendant of James II of the Stuart dynasty), it was widely seen as a threat to restore the Stuarts. There was unwillingness to have Queen Anne assent to the Act; the Scottish Parliament threatened to withhold supply (that is, the parliamentary subvention due the Crown), and in retaliation Westminster passed the Alien Act (1705), designed to rob Scots of the right to settle and trade in England. Scottish fury spilled over into the courts, where an English East India captain was condemned to death. It was against this background that pressure (including military pressure) was brought to bear for Union as the only solution to the impasse over the succession and Scottish national rights, and it was for this reason, among others, that the Stuarts in exile continued to vigorously oppose the Union, since one of the key reasons for it had been to secure their exclusion.

Union between Scotland and England had been mooted as far back as 1363, and proposals had been made in 1603–7, the 1640s and 1664–8, 1670, 1674, and 1702. The regime of Oliver Cromwell had imposed a brief incorporating union in December 1651, which was only formally recognized by the English Parliament in 1657–9. Some of the suggested solutions had been federal or confederal: in the 1660s and 70s in particular, a commercial confederal union had seemed to some the way out of Scotland's growing economic difficulties. Federalism remained popular with a significant body of the Scots élite in 1705–7, though it was never seriously entertained on the English side. The common people of Scotland were heavily to overwhelmingly against Union. Despite the expectation in Scotland that the Union would endure 'without any Alteration thereof . . . for ever' (Donaldson, *Scottish Historical Documents* 277), its legal position has always been ambivalent due to the English doctrine of illimitable parliamentary sovereignty: if no parliament can bind its successors, then the terms of the Union passed by Westminster in 1707 cannot be binding either, and a significant number of breaches of the terms of the Union have occurred. Its Scottish supporters saw and see it as a national partnership; for many in England, it was the preservation of some local peculiarities in return for control of the whole island from London. In recent years, the contemporary identification of it as a venal measure, gained by bribery and threat, has become mainstream Scottish opinion, but there are still those who argue for the economic benefits it brought. Free trade within the expanding British Empire was certainly the point at which Scottish and English pragmatic interests coincided, and it is perhaps equally no coincidence that the end of the British Empire has led to a reassessment of the Union in Scotland.

Unuist son of Uurguist/Oengus mac Forgusa was king of the PICTS and SCOTS during the years

820–34, and is not to be confused with the earlier Pictish ruler of the same name, Onuist son of Uurguist. This younger Unuist succeeded his brother Custantin (Constantine) to the Pictish kingship on the latter's death in 820, at which year his obit in the Annals of Ulster gives Custantin the title 'king of Fortrinn [in southern Pictland]'. Unuist was king of Dál Riata, having a claim by descent from the leading ruling dynasty, Cenél nGabráin (see aedán mac gabráin). Since the west of his realm was frequently attacked by Vikings, the centre of power shifted eastwards to Perth and Fife. Late legends of the founding of the church at St Andrews (Cennrígmonaid) name an Ungus son of Uurguist, but this could be the earlier Onuist son of Uurguist. In his death notice in the Annals of Ulster, Unuist is called, like his brother, *rex Fortrenn* 'king of Fortrinn'. On the names *Unuist* and *Uurguist*, see Onuist. Jackson suggested that *Unuist* may reflect a later linguistic form than *Onuist*, thus showing a Pictish sound change */ō/ > /ū/*. However, northern Brythonic spellings such as *Iodeo* for *Iudeu* the 'Firth of Forth' (in the Gododdin) suggest that *o* and *u* may have been a northern spelling variation for one sound */ü/*; note also that in the early medieval Latin of Britain a classical Latin long *ō* was often pronounced */ü/*, as in Latin *ōrdō*, Welsh *urdd* (cf. next entry).

Urdd Gobaith Cymru (The Welsh League of Youth)

is the largest children's and youth organization operating in Wales (Cymru). It caters for Welsh speakers and Welsh learners between the ages of 7 and 25.

§1. FOUNDATION, PRINCIPLES AND ORGANIZATION

The organization was founded as Urdd Gobaith Cymru Fach (The league of hope of [dear] little Wales) in 1922 by the cultural nationalist Ifan ab Owen Edwards (1895–1970) in reaction to the threat posed by the militaristic ideology and English-language culture of organizations such as the Boy Scouts and Girl Guides, which became increasingly popular in Wales from around 1910 onwards. Its headquarters was established in Aberystwyth and the children's magazine *Cymru'r Plant* (Children's Wales), edited by ab Owen Edwards, was used to publicize the movement. In the new appendix, *Cronicl yr Urdd*, monthly competitions, membership lists, and reports were published. New members signed a pledge that they would speak Welsh, buy and read Welsh books, sing Welsh songs, and play in Welsh, that they would never deny their nationality, treat every Welsh person, even if poor and in rags, as a friend, and wear the organizational badge as often as possible. In 1932 the organization underlined its pacifist and Christian ideology by adopting its current motto: *Byddaf ffyddlon i Gymru, i gyd-ddyn ac i Grist* (I will be faithful to Wales, to fellow-man, and to Christ). Members were organized in branches and regions, and competitions on local, regional, and national level were established. The rank of *dysgwr* (learner) was created in 1932 in order to enable children who were learning Welsh as a second language to join the organization. Membership rose rapidly. By 1930 it numbered 24,454 members; by 1940 it had reached its heyday with 57,548 members, organized in 670 branches. After 1945, with the onset of youth counter-culture, membership of youth organizations throughout Britain declined, but Urdd Gobaith Cymru, by working through its school branches, and also by embracing new trends and technologies, held its ground relatively well. In 1998 Urddaholics clubs were established for 16–25 year-olds. At present the organization has around 50,000 members and over 1400 branches, and employs more than 170 members of staff.

§2. ACTIVITIES

The Urdd's earliest efforts concentrated on sustaining Welsh cultural traditions within the younger generation. From 1925 one day of the National Eisteddfod of Wales (Eisteddfod Genedlaethol Cymru) was dedicated to competitions, rallies, and mass meetings for Urdd members. In 1929 the Urdd held its own first National Eisteddfod in Corwen. It has since grown into a weeklong event, and is considered the largest

Certificate of Urdd Gobaith Cymru member no. 190:

The Welsh League of Youth
to raise the old country once again

This is to signify that _____
is a member of the Welsh League of Youth, and has promised to keep the seven promises,

1. To speak Welsh with every Welsh child, especially with every one who is wearing the Urdd badge
2. To read and to buy Welsh books
3. To sing Welsh songs
4. Always to play in Welsh
5. Never to deny that we are Welsh, nor to betray our country under any circumstances
6. To look upon every Welshman and Welsh woman, even if they are poor and in rags, as friends, and to do our best for them
7. To wear the Urdd badge as often as we can.

For the sake of Wales, our dear little country

[signed] Ifan ab Owen Edwards
Editor. Cymru'r Plant

annual youth festival in Europe; *c.* 45,000 members compete and it is attended by over 100,000 people every year. The national event is preceded by local and regional competitions for which branches and regions prepare throughout the year.

From the outset, the Urdd did not restrict itself to sustaining Welsh culture, but aimed at extending the use of the language beyond chapel and traditional pursuits into domains connected with modern life and recreations. This attracted the criticism of conservative Welsh circles before the Second World War. In 1928 the organization began to hold annual summer camps for its members, which developed into the permanent camps at Llangrannog in CEREDIGION and Glan-llyn near Bala in north Wales. Both offer outdoor pursuits such as canoeing, climbing, rafting, riding, and roller-blading for Welsh-speaking children and young people and for Welsh learners.

The rules of RUGBY, soccer, and tennis were explained in the Welsh language for the first time in *Cymru'r Plant*. From 1931 the Urdd organized soccer matches between neighbouring branches and established a national soccer competition. National mass sports competitions and displays, known as *mabolgampau*, were held annually between 1932 and 1940 and proved extremely popular. In the second half of the 20th century sports competitions held several times a year have been given the name Gêmau OlympUrdd.

In order to keep members informed and provide Welsh-language reading material for young Welsh speakers and learners, the Urdd has published a diverse number of magazines since its inception. In 2004 the organization's magazines, *Cip* (Glance) and *Bore Da* (Good morning) for the 8–11 age group and *iaw!* (Yep!) for older members, sold over 93,000 copies.

MBL

Urien (fab Cynfarch) of Rheged is probably the best known and best documented of the BRITONS of the 'Old North' (HEN OGLEDD) who fought against the Anglo-Saxons in the 6th century. HISTORIA BRITTONUM anchors Urien historically by inserting his story into a list of the kings of Bernicia (BRYNAICH):

> Against them four kings fought: Urien, and RHYDDERCH the Old, and GWALLAWG, and Morgan. Theodoric used to fight bravely against that Urien with his sons, yet at that time sometimes the enemies, sometimes the citizens used to be vanquished. And he [Urien] shut them [the enemies] up for three days and three nights in the island of LINDISFARNE and, while he was on [this?] campaign, he was slain at the instigation of Morgan out of jealousy, because beyond all other kings he [Urien] had the greatest skill in renewing war. (trans. Sims-Williams, CMCS 32.33)

It is often maintained that Urien died while fighting Theodoric (r. 572–9), but Sims-Williams proposes that the synchronism could be as late as King Hussa (r. 585–92) or could even post-date the arrival of AUGUSTINE of Canterbury in 597. The wording of the passage intentionally echoes GILDAS's account of the great victory of BADONICUS MONS and *Historia Brittonum*'s own account of GWERTHEFYR's untimely death following his victories which swept the Saxons back to the sea in Kent.

Of the poetry, the ENGLYNION about Urien (which Rowland assigns to the 8th or 9th century) also concern his death, including the gripping verses on the hero's severed head and headless corpse (cf. HEAD CULT). In these, we see a similarity not only to Gwerthefyr (who was likewise dismembered according to the TRIADS), but also to BRÂN and the account of his decapitation following the climactic battle in the MABINOGI. The chillingly memorable line from the Urien *englynion*—*ac ar y vronn wenn vran du* 'and on his white breast a black crow' (*brân*)—may involve an intentional allusion to the beheaded hero Brân, brother of BRANWEN.

There are also eight panegyrics to Urien in the AWDL metres in the Book of Taliesin (LLYFR TALIESIN), which have been regarded by many Welsh and Celtic scholars, most notably Ifor WILLIAMS, as compositions of the historical TALIESIN. These *awdlau* refer to numerous battles, including detailed accounts —vivid in their journalistic immediacy—of battles fought at places called *Gwen Ystrad* (the white or blessed valley) and *Argoed Llwyfain* (before the elm wood). In the first he seems to be fighting Britons or PICTS, rather than Bernician Angles. In the second, the arrogant enemy leader is called *Fflamddwyn* 'Flame-bearer', which modern writers usually assume to be the nickname of one of the Bernician rulers. If the poem was composed after the event, during the period of Northumbrian supremacy, it is possible that the enemy's real name was intentionally suppressed.

In the GENEALOGIES, Urien belongs to the CYNFERCHING branch of the descendants of COEL HEN. As to his locality, he is repeatedly associated with several places—most frequently RHEGED, thought to include Carlisle (Caerliwelydd). He is called ruler of CATRAETH twice in the *awdlau*, the most certain geographical identification. Llwyfenydd—perhaps linked to *llwyfain* in the battle-name—has been identified with the river Lyvennet in CUMBRIA. *Erechwydd* means '[land] before the fresh, flowing water': possible identifications include the English Lake District and the Yorkshire Dales. Although uncertainties remain, the most plausible localizations for the hereditary lands of Urien and the other Coeling rulers are south of HADRIAN'S WALL.

According to the triads (TYP no. 70), Urien fathered OWAIN AB URIEN and his twin sister Morfudd on the otherworldly woman MODRON daughter of Afallach (cf. AVALON; MATRONAE). He is mentioned in several other triads, in which his name interestingly alternates in some manuscript versions with that of Gwallawg, his Coeling kinsman and sometime ally (TYP nos. 5, 25, 6). His is one of the 'Three Unfortunate Assassinations' (TYP no. 33). Urien (Urianus in HISTORIA REGUM BRITANNIAE) occurs repeatedly in ARTHURIAN literature, but he is usually

merely mentioned as a king subordinate to ARTHUR.

The name *Urien* occurs as Old Welsh *Urbgen* and trisyllabic *Urbagen*. The second element is clearly Celtic **geno-* 'to be born'. If the first element corresponds to Old Irish *orbae* 'legacy' < Celtic **orbi̯om*, then the form *Urien* rather than the expected *Yrien* (which is attested) has been affected by lip-rounding from the lost *-b-* and/or influenced by *U-* in the old spellings.

JTK

Uthr Bendragon (**Uther Pendragon**) is best known as the father of ARTHUR, as has been well established in ARTHURIAN literature since at least the publication of HISTORIA REGUM BRITANNIAE ('The History of the Kings of Britain', *c.* 1139), which includes the supernatural conception story, set at TINTAGEL, in which Uther assumes the guise of Gorlois, duke of Cornwall (KERNOW), to fulfil his passion for Gorlois' wife, Igraine. GEOFFREY OF MONMOUTH's Uther is the brother of Aurelius Ambrosius, who is clearly based on the historical 5th-century leader AMBROSIUS AURELIANUS praised by GILDAS. Uther's pre-Galfridian origins are harder to trace. In the TRIADS, the enchantment of Uthr Bendragon is one of the 'Three Great Enchantments' (TYP no. 28), a possible allusion to the shapeshifting of the conception story. Two manuscripts of HISTORIA BRITTONUM give *mab uter* ('awful son' or 'son of Uthr') as a BRYTHONIC gloss on *dux bellorum* 'leader of battles', Arthur's title in the battle list. The early Welsh Arthurian poem PA GUR YV Y PORTHAUR? (What man is the gatekeeper?) lists among Arthur's heroes *Mabon am Mydron* (MABON FAB MODRON) who is described as *guas Uthir Pendragon* 'servant of Uthr Bendragon', but this by no means proves that Uthr was considered Arthur's father at this point. Among the *marwnadau* (death songs, elegies) in the 14th-century Book of Taliesin (LLYFR TALIESIN), there is a weird elegy issuing from the mouth of the deceased titled *Marwnat Vthyr Pen*, with *mar. vthyr dragon* added in another hand at the margin. It contains the string of bloodthirsty boasts:

> It is I who broke a hundred fortified towns.
> It is I who killed a hundred mayors of strongholds.
> It is I who gave out a hundred cloaks.
> It is I who cut off a hundred heads.

He also claims that his 'champion's feats partook in a ninth part of Arthur's valour', again, not a claim of fatherhood, but an Arthurian connection. The poet/honorand also says that he is the one called *gorlassar*, possibly connected with Geoffrey's Duke 'Gorlois'.

As an adjective, Welsh *uthr* means 'awful' or 'awesome', originally something 'high, lofty'; cf. Old Irish *úachtar* 'height' < Celtic **ouχtro-*, Modern Irish meanings include 'cream' (note also *uachtarán* 'president'). One possibility is that the strange and strangely named *yspyδawt urδawl benn* (FEAST of the stately head) around BRÂN's living severed head in the MABINOGI represents a garbling of a more appropriate 'feast of the uncanny head' (*uthr benn*); the *marwnad* would make sense as the words of the living-dead Brân mourning himself. For Geoffrey, the epithet *Pendragon* is 'dragon's head', an explanation of a celestial wonder by Merlin (see MYRDDIN). This meaning is not impossible, but since Welsh *draig*, pl. *dragon* < Latin *dracō*, *dracones* could also mean 'chieftain, military leader, hero' (see DRAIG GOCH; DRAGONS), *Pendragon* could be 'chief of chieftains'.

Uueroc is one of the best documented leaders of the period of the BRETON MIGRATIONS and the foundation of the early kingdoms of Brittany (BREIZH) owing to the prominence which was given him in *Historia Francorum* (History of the Franks) by his contemporary Gregory of Tours (†594). His fame lived on: *Bro-Uueroc* (Land of Uueroc) was the alternative name of GWENED in south-eastern Brittany throughout the Middle Ages. A foundation legend of the kingdom is the basis of the Old French romance *Erec et Enide* of CHRÉTIEN DE TROYES and the corresponding Welsh GERAINT. In these tales, as Rachel BROMWICH has shown, the protagonist Erec/Geraint reflects the historical Uueroc and his bride Enid personifies the land of Gwened, and probably ultimately reflects the tribal goddess of the Veneti of pre-Roman ARMORICA. The turbulent events of the succession of Uueroc from his father Macliavus in the period 569×577 (*Historia Francorum* 5.16) correspond in detail to the sad story of Enid's father Earl Niwl in *Geraint* (see further TAIR RHAMANT; Koch, CMCS 14.43–4). The father's name, British **Magl̥iaṷos*, is probably found in the Old Breton community name *Ple-Meliau* in western Gwened. From the late 570s onwards there was a pattern of intermittent warfare, raiding, and broken truces between Uueroc and his son Canao against the Frankish kings Chilperic (†584) and Guntram (†593). The Bretons repeatedly invaded the country around Nantes (NAONED) and Rennes (ROAZHON), taking captives and treasure, and harvesting the Nantais vineyards, then bringing the grapes and WINE to the town of Gwened/Vannes, which came under Uueroc's control in 579 (*Historia Francorum* 5.26, 9.18, 10.9). These events inspired the song *Gwin ar C'hallaoued ha koroll ar c'hleze* (Frankish wine and the sword dance) in BARZAZ-BREIZ. Densely distributed Breton place-names extend into the country of Rennes and Nantes, but cease somewhat west of the towns themselves. Therefore, the 6th-century struggles show the establishment of the long-standing political and military frontier of the Breton March (*Brittanorum limes*, *Marca Britanniae*) at or near the eastern limit of Breton speech.

Uueroc, which Gregory Latinizes as *Warochus*, is clearly Celtic, as shown by the adjectival suffix *-oc* < Celtic *-ākos*. The root is probably *u̯er* 'super, over'.

Uuinuualoe, St (Modern Gwenole) is an important Breton saint who probably lived in the 6th century. The Life of Uuinuualoe was written *c.* 880 by Uurdisten, the abbot of LANDEVENNEG. According to Doble (*Saints of Cornwall* 2.61–62, 98–99), when the monks fled before the Vikings in AD 914, they took the body of Uuinuualoe, his relics, and two copies of his written Life, to Château-du-Loir, on the river Loir in Anjou, now in the *département* of Sarthe, Pays-de-la-Loire. One manuscript of his Life was preserved there, now Paris, Bibliothèque Nationale, Latin 5610a; the other is in the Cartulary of Landevenneg, now Quimper, Bibliothèque Municipale 16. The monks continued with Uuinuualoe's body to the abbey of Saint-Sauve in Montreuil-sur-Mer in Artois, now in the *département* of Pas-de-Calais, Nord-Pas-de-Calais, where it remained.

The Life contains many Old Breton proper names and several interesting episodes. One concerns Uuinuualoe's sister Chreirbia, whose eye was plucked out and swallowed by a gander (there was a similar tradition concerning GWALLAWG, cf. also BRIGIT). Uuinuualoe is later able to identify the offending bird, have it cut open, and recover and re-insert the eye, which functioned as well as before. The gander also recovers fully. Chreirbia's name is cognate with the Welsh *Creirwy*, based on the word *creir*, *crair* meaning 'relic, jewel, treasure'. Another episode concerns their mother, Alba Trimammis. This name translates as 'white three-breasts', and she is known by the same name in Old Breton, *Guenn Teirbron*, Modern *Gwenn Teirvronn*. She had an extra breast in order to be able to suckle all three of her sons, even though the Latin Life makes it clear that Gwenole's two brothers, Weithnocus and Iacobus (variants Guethenoc, Jacut; Modern Breton Gwezheneg and Jagu), were older.

In addition to founding the abbey of Landevenneg, Gwenole is closely associated with stories of King Gradlon or Grallon and the drowned city of Ys (see FLOOD LEGENDS). There is a tradition that St Uuinuualoe used his bell to attract fish from the sea, and his iconography often includes fish.

The name *Uuinuualoe* is composed of two elements, Old Breton *guinn* (Modern *gwenn*) 'white, fair, holy' and the common masculine name element *wal(oe)*, possibly meaning 'ruler'. The Cornish parish of Gunwalloe takes its name from him. The name is also recorded in a hypocoristic form, with *to-* 'thy' (Irish *tu-/to-*, Welsh *ty-*), and the diminutive *-oc*, in Landévennec in Brittany (BREIZH) and the parishes of Landewednack and Towednack in Cornwall (KERNOW), the two latter also exhibiting the late CORNISH development of *-nn-* > *-dn-*; cf. Landewennec in 1310. It is not certain whether Uuinuualoe was the same person as the zealously ascetic Breton priest Winnochus who tragically succumbed to alcoholic dementia *c.* 585, according to his contemporary, Gregory of Tours (*Historia Francorum* 8.34).

AM

Uuohednou/Goueznou, St, is best known for his *vita*, of which only the prologue survives in the manuscript copy of the historian Pierre Le Baud (†1505). Its author was a priest with the Germanic name Guillelm, and it is dedicated to Bishop Eudo, neither of whom have been definitely identified. In a passage (quoted in translation in CONAN MERIADOC §1), this prologue gives the foundation legends of BRITAIN and Brittany (BREIZH). The former is a version of the TROJAN LEGENDS in which Brutus and Corineus appear as the founders and namesakes of Britain and Cornwall (KERNOW). Conan Meriadoc is the key leader in Brittany's foundation. The Life dates itself to 1019, which has been accepted by most scholars, though disputed by some. If true, the account of the Goueznou prologue would predate GEOFFREY OF MONMOUTH's narrative of these events by more than a century. The prologue cites *Ystoria Britannica* as its source, which is apparently neither HISTORIA BRITTONUM nor Geoffrey's HISTORIA REGUM BRITANNIAE and would thus be a lost source of British and Breton LEGENDARY HISTORY. *Vita Uuohednouii* has attracted most attention for its mention of ARTHUR:

> . . . Vortigern [GWRTHEYRN], the usurping king, sought support for his unjust rule, inviting warlike men from Saxonia, and made them his allies. These men, as pagans, brought many ills upon the BRITONS. Their arrogance was later on repressed by Art[*h*]ur the Great, king of the Britons, who repelled them from the greater part of the island and constrained them to servitude. But this same Art[*h*]ur, after achieving numerous glorious victories in parts of both Britain and GAUL, was finally summoned from human endeavour, and the way then lay open for the return of the Saxons. (trans. Koch & Carey, *Celtic Heroic Age* 406)

Again depending crucially on the 1019 date, this passage would show that Arthur's traditional rôle as a central figure in British and Continental history had already developed as early as this, going back to the mysterious pre-Geoffrey *Ystoria Britannica*.

Uuohednou preserves an 8th- or 9th-century spelling of the name *Goueznou*, which survives as *Gwennou* and variants as a family name in modern Brittany. It is Celtic, the cognate of Welsh *Gwyddno*, Cornish *Guethnow* < Celtic **Wēdognāwos* '[having] knowledge of vision'.

Statue of the Gaulish warrior from Vachères

Vachères is a village situated in the *département* of Alpes-Maritimes in the south of France. A statue of a warrior dating from the Augustan period (27 BC–AD 14) was found at this village in 1875. The Vachères warrior is carrying a long SHIELD and wearing a cloak, a belted mail coat, and a TORC. Since the equipment does not correspond to the standard Roman issue of the period, this statue provides rare and important evidence for late Gaulish weaponry. It is displayed at the local museum of prehistory and archaeology.

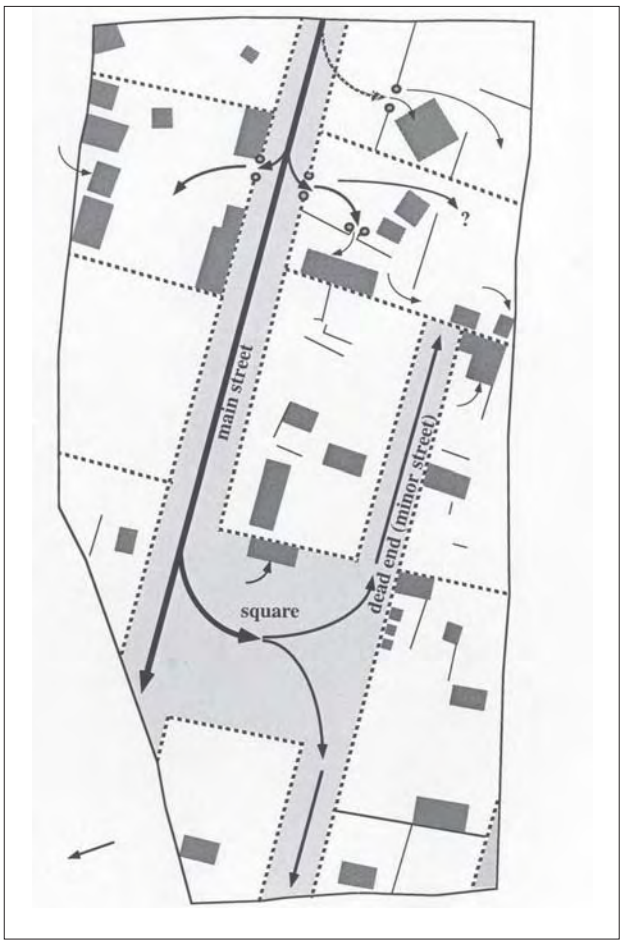
PEB

Vaison-la-Romaine is an archaelogical site in the south of France (Vaucluse) where an important GAULISH inscription in Greek script (see SCRIPTS) was found in 1840. It is carved into a 25 × 31 cm stone slab, which had been cut out of a larger block. The inscription (RIG I, G–153) reads as follows (with accompanying transcription of the intended sounds in phonemic representation).

ΣΕΓΟΜΑΡΟΣ	/segomāros/
ΟΥΙΛΛΟΝΕΟΣ	/willonios/
ΤΟΟΥΤΙΟΥΣ	/toutiūs/
ΝΑΜΑΥΣΑΤΙΣ	/namausatis/
ΕΙΩΡΟΥ ΒΗΛΗ-	/eiōru beli-/
ΣΑΜΙ ΣΟΣΙΝ	/-sami sosin/
ΝΕΜΗΤΟΝ	/nemeton/

Segomāros, son of Villonos, tribesman of Nîmes, has offered to [the goddess] Belisama this sacred grove.

Gallo-Greek inscription on a stone slab from Vaison-la-Romaine (Vaucluse), 2nd to 1st century BC



Plan of the excavated area within the oppidum of Variscourt, showing the regular plan of housing and streets in the first phase

The deity BELISAMA is attested in another inscription as Minerva Belisama (Saint-Lizier, Ariège; see INTERPRETATIO ROMANA) and the name seems to be contained in some French place-names, e.g. Bellême (in the *départements* of Orne and Ille-et-Vilaine), Balesmes (in Haute-Marne, Corrèze, and Indre-et-Loire), and Blesmes (in Aisne and Marne). The inscription is also noteworthy for including the Old Celtic ideological words 'tribesman, citizen' (see TUATH) and NEMETON 'sacred grove, place, thing', both used as common nouns, and as a clear example of a sentence in the typical subject + verb + indirect object + direct object order found in several Gaulish INSCRIPTIONS.

PEB

Variscourt is the site of an OPPIDUM situated in the *département* of Aisne in north-east France. It covers 170 ha (420 acres), of which approximately four have been excavated since the 1970s. The oppidum had a regular street system organized around two major 11-metre wide ROADS, on a north-west to south-east axis, joined by secondary roads. Storage structures have been located in the east sector and metal workshops in the west. Fibulae in several stages of fabrication, stone moulds for casting rings and bracelets, and debris from bronze flow provide evidence for the activities of bronze smiths. Evidence also exists for the presence of goldsmiths, and huge quantities of iron slag point to the activities of blacksmiths. The site appears to have been occupied for a relatively short period, probably during the first half of the 1st century BC, i.e. from the end of the LA TÈNE D1 period until CAESAR's conquest in the 50s BC.

Vaughan, Robert (*c.* 1592?–1667) of HENGWRT near Dolgellau in Merioneth (Meirionnydd) was one of the most renowned antiquaries of his day. He entered Oriel College, Oxford (Welsh Rhydychen), in 1612, but left without taking a degree. Following his return to Dolgellau, he developed his interest in the history, genealogy, law, literature, and culture of Wales (CYMRU) and early Britain, with an accompanying desire to collect books and manuscripts. He published only one work during his lifetime, the tract *British Antiquities Revived* in 1662, but other works by him remain in manuscript. These include The Survey of Merioneth (NLW MS 472), written between 1620 and 1624, and a substantial compilation of Welsh GENEALOGIES (Peniarth MS 287). In later life he corresponded with English antiquaries such as Sir Simonds D'Ewes and Sir William Dugdale, and James Ussher, archbishop of Armagh (ARD MHACHA). He is best remembered for his library at Hengwrt, which contained the foremost collection of medieval and RENAISSANCE Welsh manuscripts ever assembled by a single individual, including the Black Book of Carmarthen (LLYFR DU CAERFYRDDIN), the Book of

Reconstructed funerary wagon from the princely tomb of Hochdorf, wood cased in iron

Taliesin (Llyfr Taliesin), and the White Book of Rhydderch (Llyfr Gwyn Rhydderch). His collection also contained important manuscripts in other languages, among them a 12th-century copy of Beda's *Ecclesiastica Historia Gentis Anglorum* (Peniarth MS 381) and the earliest copy of Chaucer's *Canterbury Tales* (Peniarth MS 392). In 1909 the Hengwrt and Peniarth collection was transferred to the newly established National Library of Wales (Llyfrgell Genedlaethol Cymru) in Aberystwyth.

vehicle burials

A characteristic feature of rich TOMBS from the HALLSTATT period in Central Europe and the LA TÈNE period in several areas of Europe is the internment of a wagon or CHARIOT with the deceased as a funeral gift or death-bier.

§1. HALLSTATT TOMBS & FOUR-WHEELED WAGONS

Four-wheeled wagons frequently appear in aristocratic tombs of the Hallstatt IRON AGE (*c.* 750–*c.* 475 BC). Most often the body of the deceased lies directly on, under, or immediately next to the wagon. The wheels were usually removed from the axles and put alongside one of the walls of the burial chamber (Barth et al., *Vierrädrige Wagen der Hallstattzeit*; Egg, *Hallstattzeitliche Wagen*; Egg & Pare, *Das keltische Jahrtausend* 209–18; Pare, *Wagons and Wagon-Graves of the Early Iron Age in Central Europe*). Often, the wagon was also used as a surface on which to put feasting equipment (see FEAST), as, for instance, in the case of the HOCHDORF burial (*c.* 530 BC; Biel, *Der Keltenfürst von Hochdorf*). The presence of a four-wheeled wagon in a burial has been interpreted as one of the most significant markers of the high social status of the person buried in the grave and, likewise, of that of persons seeing to the burial of the deceased chieftain (Burmeister, *Geschlecht* 169–74).

§2. LA TÈNE TOMBS AND TWO-WHEELED CHARIOTS

Beginning in the later Hallstatt period, but most characteristic of the La Tène period (*c.* 475 BC to the Roman conquest), is the practice of burying persons with, or most often on, a two-wheeled chariot (Endert, *Die Wagenbestattungen der späten Hallstattzeit*). Most frequently found in Middle Germany (Mäder, 'Der keltische Streitwagen im Spiegel archäologischer und literarischer Quellen'), Belgium (Metzler, *Archäologisches Korrespondenzblatt* 16.161–77), the Champagne region of present-day north-east France (Endert, *Die Wagenbestattungen der späten Hallstattzeit*), and the ARRAS CULTURE of East Yorkshire in England (Stead, *Arras Culture*), such burials appear, even though only sparingly, across most

of Celtic Europe (Guštin & Pauli, *Keltski Voz*), with examples from as far in the south-east as Mezek in Bulgaria, ancient Thrace (Fol, *Celts* 384–5), and, only recently discovered, as far to the north-west as Edinburgh (Dùn Èideann). Since these burials often contain very rich grave goods in addition to the chariot, they tend to be interpreted as burials of chieftains. Famous examples include the early Continental La Tène burials (5th to early 4th century BC) of Somme-Bionne, Somme-Tourbe (see GORGE-MEILLET), and Basse-Yutz.

§3. LATE LA TÈNE FOUR-WHEELED WAGON BURIALS

It was only recently discovered that two exceptionally rich late La Tène tombs (broadly datable to the 2nd century BC)—one in Boé near Agen in France, and the other in Verna near Lyon (Lugudūnon)—contained four-wheeled wagons. This is rather surprising, since it was long thought that the use of four-wheeled vehicles as a feature in rich burials had ended at the end of the Hallstatt or the beginning of the La Tène period, thus around 450 BC (Schönfelder, *Archäologie in Deutschland* 4.30–2).

RK

Veleda (*fl.* AD 68–70) was a woman whose considerable spiritual and political authority was described by Tacitus (*Historiae* 4.61, 4.66; *Germania* 8; see also GREEK AND ROMAN ACCOUNTS). Veleda and the rebellious Romanized Batavian nobleman Civilis were arbiters of a treaty between the Romans and unruly tribes around the Middle Rhine. The question whether Veleda belonged primarily to the Celtic or the Germanic world is ambiguous. Her tribe, the Bructeri, and their allies, the Tencteri, lived east of the Rhine, and these tribal names are not obviously Celtic. On the other hand, the Bructeri were known to have been in close contact with neighbouring groups who were Celtic. The revolt in which she became involved included Celtic Gaulish tribes such as the Treveri and the Lingones. Celtic speech and cultural influence had been strong and long standing in Veleda's region of west-central Germania. For the Romans, 'Germany' was not a primarily linguistic concept as it has been in modern times. Furthermore, the name *Veleda* is most probably Celtic, meaning 'seeress' and thus refers to her social rôle and status; compare the Old Irish word *file*, genitive *filed*, meaning 'poet of the most learned grade' (see BARDIC ORDER), etymologically 'seer'; the latter form is attested in a Primitive Irish OGAM inscription as VELITAS (Macalister, *Corpus Inscriptionum Insularum Celticarum* no. 251) < Proto-Celtic **weletos*, based on the root **wel-* 'see'. It is not impossible that Tacitus mistook the Gaulish word for 'prophetess' to be her name, but such a name is not without parallels. The testimony of Tacitus is most interesting for its religious and cultural implications, the historical Veleda lending herself to comparison with Celtic literary figures such as the prophetess Fedelm in Táin Bó Cuailnge ('The Cattle Raid of Cooley'), whose name also means 'seeress' and who also foretold a military disaster:

> Veleda, a virgin of the tribe of the Bructeri, possessed vast power; for according to the long-standing tradition of the Germans, many of their women were regarded as having powers of prophecy. As the superstition grew, they might come to be deemed actual goddesses. At that time, Veleda's authority was at its height, because she had foretold the triumph of the Germans and the overthrow of the legion.
>
> . . . [The Roman colonists proposed to their enemies the Tencteri—] 'We will have as arbiters Civilis and Veleda, under whose sanction peace will be made.' . . . The ambassadors were not permitted to approach or address Veleda directly. In order to make them feel greater respect for her, they were restrained from seeing her. She herself dwelt in a high tower. One of her relatives, chosen for the purpose, went to consult with and to bring back

the answers, acting like the messenger of a god.
(Koch & Carey, *Celtic Heroic Age* 44–5)

Vendryès, Joseph (1875–1960) was a distinguished French Celtic scholar whose wide-ranging interests included Middle WELSH POETRY and medieval Celtic court poetry in general (see GOGYNFEIRDD), Old IRISH lexicography, Celtic comparative grammar, and pre-Christian Celtic religion and mythology. In 1936 he founded ÉTUDES CELTIQUES, which remains to this day one of the leading CELTIC STUDIES journals. Vendryès is remembered as the principal scholar responsible for the *Lexique étymologique de l'irlandais ancien* (Etymological lexicon of Old Irish), one of the most important reference works in the field of the historical etymology of the CELTIC LANGUAGES; fasciculi of this multipart dictionary continued to be published after the death of Vendryès, under the direction of E. Bachellery and P.-Y. Lambert.

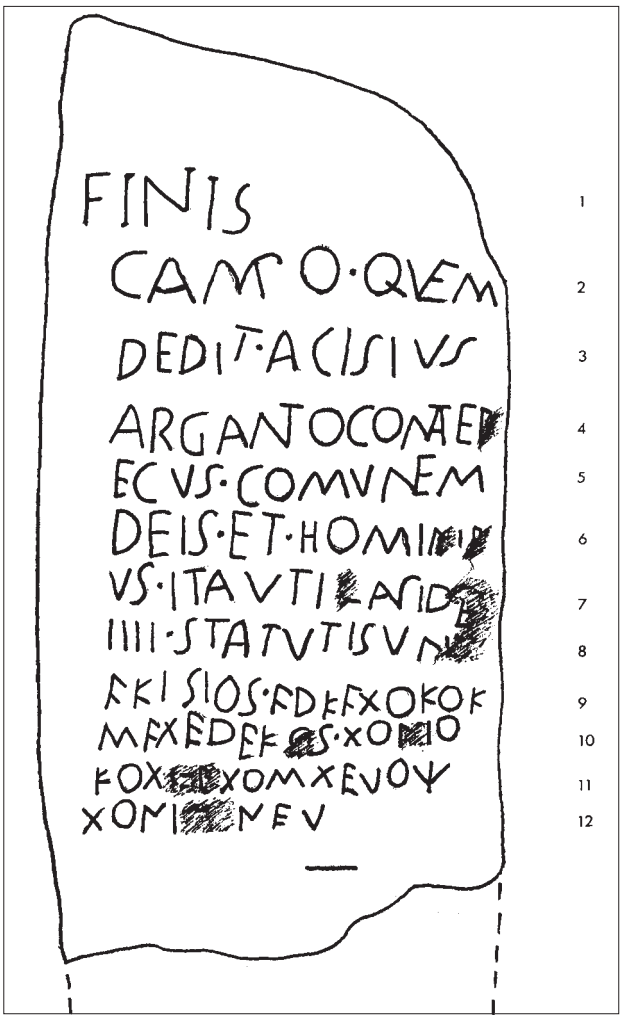
PEB

Vercelli

A bilingual Latin-Celtic inscription from Italy, incised on a schist stone found along the bank of the river Sesia in 1960, is now at the Museo Civico Leone in Vercelli. The stone bears a digraphic, bilingual Latin–Cisalpine GAULISH text. The Celtic text is engraved in the Lugano script (see SCRIPTS), the same script as in the LEPONTIC inscriptions, the inscription from TODI, and in some other Celtic INSCRIPTIONS



***Drawing of the inscribed stone from Vercelli after Lejeune,* Recueil des inscriptions gauloises 2/1.29**

from Piedmont and Lombardy (the most important of which are those from San Bernardino di Briona, Cureggio, and Gozzano [Novara]). This script, which is of Etruscan origin, shows no distinction between voiced and voiceless stops, and so /*p*/ and /*b*/ are both written as *p*. It has two major phonologically distinctive forms of sibilant (*s*-like sounds), both with graphic variants and developments; it shows several spelling conventions, such as the absence of the nasal (/*m, n, ŋ*/) before stops (so that /*nt*/ is spelled *t*). In this inscription the script runs from left to right. Because of the lack of an archaeological context, the monument can only be dated approximately (between the second half of the 2nd century BC and the end of the Roman Republic in 31 BC). The text taken from the edition by Lejeune (RIG 2/1, *E–2) follows:

Latin:

FINIS
CAMPO QVEM
DEDIT
ACISIVS
ARGANTOCOMATER
ECVS
COMVNEM
DEIS ET HOMINI
BVS ITA VTI LAPIDES
IIII STATVTI SVNT

The boundary of the field that Acisius Argantocomaterecus gave in common to gods and men, thus there are these four stones. (trans. Koch)

Gaulish (Cisalpine Celtic):

AKISIOS ARKATOKO‹K›
MATEREKOS TO[–]O
KOT[–A]TOM TEUOχ (or –A]TOŠ)
TONI[O]N EU.

Akisios Argantokomaterekos has given these boundaries of gods and men. (trans. Koch)

The reading *a]tom* is still doubtful; alternatively, it could be *a]toš*, which would give the translation 'borders'. Such a correction was tentatively proposed by Lejeune, on account of the occurrence of *-n* in the same inscription (*teuoχtonion*), but he admitted, nevertheless, that instances of fluctuation between *-m* and *-n* are attested in other Gaulish inscriptions (see RIG 2/1.37).

The text of the inscription is complete and refers to the delimitation made by someone called Akisios of a piece of land common to gods and men. This individual bears a non-Roman name that must be comparable to the well-known series of personal Celtic names such as *Acis-*, *Agis-* (see Holder, *Alt-celtischer Sprachschatz* 1.20, 59, 3.483, 521). His title or byname *arKaToKo‹K›maTereKos* (*argantokomaterekos*) is also undoubtedly Celtic, based, like the attested Gaulish social term or title *argantodannos* (found on Transalpine COINAGE), on the Gaulish word *arganto-* 'silver, money' (Old Welsh *argant*, Old Irish *argat*). The second element of the compound, *-komaterekos*, is an adjectival formation (with the prefix *kom-* and the suffix *-eko-*), that is possibly to be connected with the root 'measuring' (cf. Greek *metron*), though there are different interpretations, such as a connection with the word for 'mother', Gaulish *mātīr*, Old Irish *máthair*. These two forms receive the correct transliteration *acisius* and *argantocomaterecus* in the Latin text, but the Gaulish and Latin texts do not correspond exactly. In the Gaulish text the verbal form should be *to[-]kot[-]* (read *tošokote* by Eska, Koch, Meid, and Pisani), that shows a preterite ending and the same preverb as Early Old Irish *to-*. The grammatical object of the verb is the phrase *atom/atoš teuoχtonion*, the first element of which (in the accusative singular) can have the meaning 'field' or *finis* 'boundary' (cf. Sanskrit *ánta-*, 'border', 'limit'). At any rate, the Gaulish text refers only to the field or, alternatively, to its delimitation, whereas the Latin text explicitly refers to both. The second element of the phrase is the copulative compound (in the genitive plural) *teuoχtonion*, correctly interpreted by Pisani and Lejeune as **dēwo-* 'god' + **-gdonio-* (<**ghdonio-*, cf. Old Irish *duine*, 'man', Greek χθόνιος /*khthónios*/ 'earthling', 'mortal'). The meaning, *deorum-et-hominum* ('of gods and men') has its counterpart in the Latin text, in the sequence *communem deis et hominibus*. The last element of the Gaulish inscription, *eu*, has as yet no certain interpretation.

The Latin text explicitly mentions the four stones delimiting the piece of land, one of which bears the very inscription, whereas the Gaulish text does not. Such a discrepancy is the consequence of the two different functions of the Latin and the Gaulish texts respectively, and it is also the outcome of the inconsistency between the cultural character of the datum and the hierarchy of the two texts. A field 'in common to gods and men' is not a Latin institution at all, and it is very unlikely that someone with a Gaulish name and a Gaulish title could be directing a Roman ritual. On the other hand, hints of the Celtic character of the institution are numerous: Old Irish sagas often mention sacred places typically devoted to the meeting of gods and men, especially at FEAST times, like SAMAIN; moreover, the Celtiberian inscription of BOTORRITA establishes rules for the correct use of a piece of land that was employed for both religious and economic purposes.

The Celticity of such an institution is the very reason why Roman readers are the main addressees

of the inscription and, consequently, it offers the explanation to the prominent character given to the Latin text within the structure of the inscription. The Gauls, who had a more fundamentally oral culture, would not have needed an inscription, because they presumably could have acknowledged the special status of the place simply on the basis of a formal oral pronouncement made by Akisios and, subsequently, by the presence of four delimiting pillars, with no inscription on them. None of the rectangular fields of mixed sacred and economic function (see VIERECKSCHANZEN) found in Transalpine Celtic Europe have inscriptions; this is not part of the native institution. And there was no need for inscriptions where the Celts and their enclosures were not in regular intensive contact with the literate cultures of the Mediterranean world. Along the banks of the river Sesia, on the other hand, cultures were in contact and, consequently, there is a strong need to speak a foreign language, namely, the language of the Romans. This implies the necessity to provide the Romans with specific written information, containing explicit mention of the other three pillars (*ita uti IIII lapides . . .*), in order to let them know that they are facing a special place.

To sum up: while the institution is Celtic, the primary text is the Latin one. Such a pragmatic profile is considerably different from that of the bilingual inscription from Todi, where not only is the burial ritual Celtic, but the Gaulish text also clearly belongs to a very consistent series of Celtic epigraphic funerary documents and is, therefore, the starting-point of the inscription. Note that the prominent position of the Latin text in Todi has a different motivation. The parallel text at Vercelli, which shows a Celtic alphabet and a Celtic language, is superfluous as far as its referential function is concerned, and its existence on the stone surface can be explained as a declaration of ethnic membership: the important thing about the Celtic text is not what it says, but its very presence.

Filippo Motta

Vercingetorīx, prince of the ARVERNI, was leader of the Gaulish uprising against CAESAR in 52 BC and one of the most famous historical figures of the ancient Celts (see GAUL). He was born around 82 BC, the son of the Arvernian prince Celtillus. The uprising was not universally popular among the Arverni—at one point, Vercingetorīx had been banned for anti-Roman agitation by his uncle Gobannitio. He succeeded in uniting the Gaulish tribes, even the AEDUI and the Atrebates, who were traditional allies of the Romans. Once he became supreme commander of the Gaulish forces, he declared himself king. Following a defeat in Avaricum he withdrew to GERGOVIA, where he defeated the Roman army. He was finally defeated by Caesar in ALESIA, where he was captured. He lived for 6 years as a Roman prisoner until he was executed in Tullianum in 46 BC. The chief source for the career of Vercingetorīx is Book VII of Caesar's *De Bello Gallico*. The name *Vercingetorix* is Celtic—a three-element compound consisting of the roots *wer-* 'over, super' (cf. Irish *for-*, Welsh *gor-*), *cingeto-* 'hero' (cf. Old Irish *cing*, genitive *cinged* 'champion'), and *rīx* 'king' (Old Irish *rí*, Welsh *rhi*), hence 'Great leader of heroes' (see D. Ellis Evans, *Gaulish Personal Names* 121–2). The name appears on the king's COINAGE in several spellings, including VERCINGETORIχS, VERCINCETORIχS, and genitive VERCINGETORIχIS.

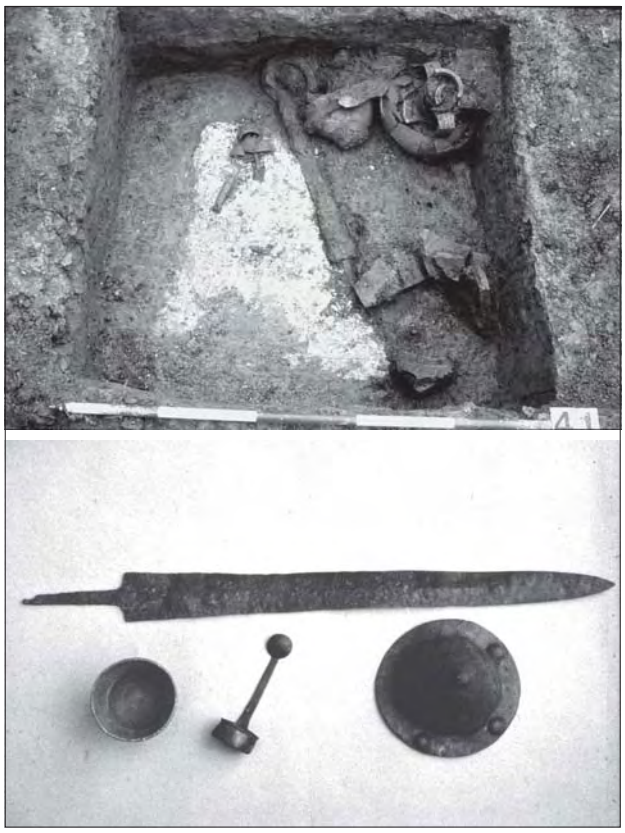
PEB

Verdun is the name given to a large open ROMANO-CELTIC necropolis containing 254 cremation burials. It dates from *c.* 50 BC to *c.* AD 300 and was discovered in central Slovenia, south of Novo MESTO in the so-called 'Verdun Fallow'. At Verdun, older rectangular-



Above: excavation of grave 41a at Verdun; below: Romano-Celtic weaponry (iron sword blade, hilt, and shield boss) and bowl from grave 41

shaped graves of a larger form were simply dug into the soil or rock; grave furnishings and cremated remains were placed, in no particular order, at the bottom of an internal grave pit. Later Roman graves of different forms were found: sarcophagi made from flagstones, in some cases also with compartment walls and roof blocks, graves with stone frames constructed in rectangular, oval, or circular shapes by dry and mortared techniques. Cremated remains were placed in ceramic or glass urns. Some of these graves had been robbed in antiquity.

Grave inventories from the oldest burials at this site belong to a Late La Tène horizon known as *Beletov vrt* (see NOVO MESTO) dating to the second half of the first century BC, while those from the Verdun horizon proper date from the Augusto-Tiberian period (30 BC–AD 37). The former typically contain inventories comprising red burnt biconical pots, cups, grave vessels with broomed ornamentation, and ritually destroyed armour (in addition to Celtic SWORDS, as well as five *gladii* [short Roman stabbing swords], two Roman helmets of the *Weisenau* type, and early Roman ceramic and metal vessels). These furnishings indicate that the population was Celtic, perhaps the Late La Tène group the Latobici (see BALKANS). These funerary inventories with their typical assemblages of fighting gear together with Italian imports are similar to those from cemeteries at Novo Mesto, Mihovo, and Strmec near Šmarjeta, and indicate that some of the warriors of Verdun were probably Roman auxiliaries. The territory of the Latobici is defined by ceramic cup vessels typical of central Slovenia during the 1st century BC and by characteristically house-shaped cinerary urns from the Roman period. The Roman name of the settlement, *Praetorium Latobicorum* (modern Trebnje), as well as the urban name, *municipium Flavium Latobicorum Neviodunum* (modern Drnovo pri Krškem), preserve the name of the Latobici. The final compound place-name of the second form reflects a Celtic *Nouiio-dūnon* 'new hill-fort'; both elements of this compound are very common in Celtic place-names and in the CELTIC LANGUAGES more generally.

Later burials contain grave goods which are typical of the Roman period. From the middle of the first century BC, however, weapons and traditional Celtic ceramic vessels are no longer invariably included as before, and the construction of the graves and their furnishings are instead typical of Dolenjska and central Slovenia.

Where prehistoric or Roman tumuli (grave mounds) have been preserved, then reflexes of Latin *tumulus*/Slovene *gomila* appear in the toponym. In Slovenia, the name *Verdun*, containing Celtic *-dūnon* 'hill-fort, OPPIDUM', appears only once. The Celticity of Verdun is also implied in pre-Roman Celtic toponyms in the area, for example, *Dunaj* from this same Celtic *dūnon* and the 'Carnian' Alps, possibly to be linked with the Celtic root *karno-* 'large pile of stones'. The area also contains several pre-Slavic RIVER NAMES, such as *Karavanke* (German *Karawanken*), and *Savus* (*Sava*), *Corcoras* (*Krka*) and *Dravus* (*Drava*), though the Celticity of this group is hardly certain.

Mitja Guštin

Vergil (Publius Vergilius Maro, 70–19 BC), the famous Roman poet, was born at Andēs in CISALPINE GAUL and educated at Cremona and Mediolānon (Milan) in the same region. The previously uncommon Roman name *Vergilius* is possibly of Celtic origin. He was the only pagan Latin poet never ousted from the Christian curriculum. Quotations from Vergil abound in the Latin and vernacular writings of Irish scholars from the 7th century onwards (Murphy, *Studi Medievali* 5.372–81). 'Vergil of the Latins' (*Fergil ó Laetnaib*) is listed as one of three 'poets of the world' in LEBOR LAIGNECH ('The Book of Leinster'). Early medieval IRISH scholars were engaged in the transmission of Vergil commentaries; the notebook of a 9th-century Irish *peregrinus* (exile or overseas traveller for religion; see PEREGRINATIO) preserved at St Paul, Kärnten, contains a Life of Vergil and scholia on the first book of the *Aeneid* alongside vernacular Irish poetry. Irish scholars were familiar with Vergil's *Eclogues*, *Georgics*, and especially the *Aeneid*, which was translated into Middle Irish (IMTHEACHTA AENIASA) and whose influence can be traced in vernacular voyage tales (*Immram Curaig Maíle Dúin* [The voyage of Mael Dúin's coracle, see IMMRAMA]; MERUGUD UILIXIS MEIC LEIRTIS ['The Wandering of Ulysses son of Laertes']). If GILDAS's Latin education is a fair guide to the quality of BRYTHONIC Latin in the early post-Roman period, as well as setting a standard for subsequent authors in Wales (CYMRU) and Brittany (BREIZH), Vergil's rhetoric was as influential among the BRITONS as among the Gaels. Furthermore, the TROJAN LEGENDS which form the basis of medieval Brythonic LEGENDARY HISTORY are heavily and directly indebted to the *Aeneid*. The Welsh word *fferyll* 'alchemist, magician' (hence Modern Welsh *fferyllydd* 'pharmacist'), derived from the poet's name, would indicate a popular awareness of the poet who, in the Middle Ages, was widely associated with necromancy. The magical books of Fferyll (i.e. Vergil) figure importantly in the 16th-century Welsh folk-tale *Ystoria* TALIESIN as preserved in the Chronicle of Elis GRUFFYDD.

Vertault (Côte d'Or, France) is the site of an animal necropolis dating from the beginning of the 1st century AD. About 100 graves have been discovered near this GALLO-ROMAN settlement, 90 of which contained the skeletons of dogs, all relatively young male animals with their heads turned westward. Many of these dogs had been fed the feet and heads of sheep

Drawing of horse burials from Vertault

before they died. Four graves contained the remains of fully-grown or old stallions, their heads turned southward. These animals had been killed with a hatchet blow on the forehead. The biggest grave, later covered by a Gallo-Roman FANUM, contained the remains of 30 horses, deposited successively, and arranged in groups of two or three, with the skeletons of the earlier ones being more or less dismembered at the time of later depositions. Another grave contained the skeletons of 10 horses. In these two comparatively large graves the horses had been left exposed to the open air for a while before being buried. The last two horses had been buried quickly in small graves. Altogether there were 200 dogs, 42 horses, 2 cows, and 7 year-old rams interred in an area with no boundary other than the rampart to the north and the edge of the plateau to the east.

Verulamion, also known as Verlamion, Latinized *Verulamium*, *Verolamium*, was an OPPIDUM and subsequently a ROMANO-BRITISH town in the territory of the CATUVELLAUNI, near what is now St Albans in Hertfordshire, England. (The name is probably Celtic, but the etymology is disputed; see Rivet & Smith, *Place-Names of Roman Britain* 498.) During the 1st century BC the Catuvellauni, the leading Celtic tribe of late pre-Roman Britain, established a royal settlement on the plateau and slopes south of the river Ver. Contemporary coins place this event at *c.* 20–15 BC, in the reign of King Tasciovanos. Verulamion was his principal mint, and appeared as VER and VERO on COINAGE; these are the earliest mint marks on British coins. Verulamion succeeded the oppidum of Wheathampstead and was the capital of the Catuvellauni until that was moved to CAMULODŪNON by CUNOBELINOS.

Verulamion retained its significance and evolved after AD 44 into a Roman town, which was destroyed by the ICENI under BOUDĪCA in AD 60/61. The town was later rebuilt and showed the regular features of Roman colonies: a forum containing a *curia* (city hall) and *basilica* (court house), a theatre, temples, a rectangular street pattern and an elaborate sewer system, and several hypocausts (under-floor heating systems). In AD 303 (but, according to more recent sources, in AD 259 or AD 209), St ALBAN was murdered here, thus becoming the first British Christian martyr. The walled enclosure contained a territory of about 700 × 400 m (28 ha). Verulamion remained inhabited up to the late 5th or early 6th century AD. Archaeological evidence has revealed in the area of the old forum a succession of constructions in the Roman style, but probably later than the close of Roman rule in Britain in AD 409/410. Structures from these post-Roman layers included a large storage building, drying ovens, and, at the very final stage, an underground water pipe, a significant indication that plumbing of the Roman type continued to be used in the town as late as *c.* 500. St GERMANUS of Auxerre visited Alban's shrine *c.* 430. The town later moved to an area north of the river Ver, around the martyr's grave and church, thus forming St Albans.

In his *De Excidio Britanniae* (§§10–1) of the 6th century, the Brythonic churchman GILDAS provides an early account of the heroic life, miracles, persecution, and martyrdom of *sanctus Albanus Verolamiensis*. In the 9th-century Welsh Latin HISTORIA BRITTONUM there is a list of the '28 cities of Britain' which includes a *Cair Mincip*, possibly the Old Welsh name of Verulamion, since the town had achieved the status of a *municipium* during the Roman period (the term originally meant a free town whose inhabitants were Roman citizens with voting rights). Notions of the BRYTHONIC origins of the town and background for the life of its martyr were preserved (or reinvented) by the English church in the Middle Ages, as reflected in the following curious anecdote in the *Lives of the Abbots of St Alban's* of the medieval monk and chronicler Matthew Paris (†1259), concerning the ninth abbot Eadmar in the later 10th century:

> . . . while the diggers of this Abbot were exploring the walls and secret places of the land, they dug up the foundations of a certain ancient great palace; and while they were wondering at the vestiges of so many buildings, they found in a hollow depository, with some smaller books and rolls, an unknown volume of a certain codex, which was but little destroyed by so long a delay of time; of which neither the letters nor the language was known by any one that was then found, on account of their

antiquity; yet it was of beautiful form, and of clear lettering; of which the inscriptions and titles were splendidly adorned with golden letters. The boards were of oak, and the bindings of silk, and these retained, in great part, their firmness and beauty. Concerning the knowledge of which book, after a search had been diligently made far and wide, they found at length a priest (now a decrepit old man) well skilled in learning, Unwonam by name, who, imbued with the languages and literature of many tongues, read distinctly and openly the writings of the forenamed book. Similarly he read without hesitation, and explained clearly, what things were in the codices which were found in the same aumbry and depository; for the letters were such as were wont to be written in the time when citizens inhabited Worlamcester [Verulamion], and the language was that of the ancient Britons, which they then used. Some things were in Latin, but of these there was no need (of an interpreter); but in the first book, namely the larger, he found a written History of St Alban, the protomartyr of the English . . . In other books, however, found everywhere, the aforesaid reader discovered invocations and rites of idolaters, citizens of Worlamcester, in which he found they invoked and worshipped especially Phoebus, the god of the sun, which may be supposed by the history of St Alban, if a diligent reader understands it; but in the second place Mercury ([Mercurius] called Woden in English), from whom the fourth day of the week is named,—the god, indeed, of merchants. (John Davies, *Archaeologia Cambrensis* 10.254–5)

Veteris, Vit(i)ris, Vetus, Hveteris, Hvitiris

was a god or group of gods whose name appears in several variant spellings in more than 50 INSCRIPTIONS in the north of present-day England, in the territory of the BRIGANTES. It occurs in the singular as well as in the plural and, as Latin dedications using the forms DEO or DIBUS suggest, it refers to a male deity. In two cases (Collingwood & Wright, RIB nos. 1047 and 1048) the dedications are to female deities. Cult centres included the fort at Carvoran (Magna) on HADRIAN'S WALL, as well as sites in Yorkshire and Co. Durham.

Veteris is invoked together with MOGONS at Netherby (Castra Exploratorum) north of the Wall; no INTERPRETATIO ROMANA can be associated with him. Associated iconography including a BOAR and a snake occurs on an altar at Carvoran.

His name could be a borrowing from Latin *vetus, veteris* 'old', though it is possibly based on a similar native word. The distribution could suggest a tribal god of the Brigantes; however, since the cult was concentrated in and around Roman forts, it may have been imported from another province, even a non-Celtic area.

PEB

Viereckschanzen (sing. *Viereckschanze*, lit. 'rectangular earthwork') are rectangular enclosures, usually approximately 100 m², surrounded by a wall and ditch. The ditch tends to encircle the entire enclosure, including the gates. They date from the late Middle La Tène period, i.e. between the turn of the 3rd to the 2nd centuries BC and the first half of the 1st century BC.

§1. LOCATIONS

Viereckschanzen are mainly found in the states of Baden-Württemberg and Bavaria in southern Germany, where some 350 had been discovered by the end of the 20th century. Others have been found in Bohemia (the western region of the Czech Republic; see BOII) and similar structures are to be found in France (see GAUL). Many *Viereckschanzen* were levelled at some time in the past and modern researchers have therefore had difficulty in recognizing them. With the aid of aerial surveying and photography, however, new sites have been discovered every year.

§2. INTERPRETATIONS

Archaeologists have been discussing the function of *Viereckschanzen* for the past 150 years. Johann Nepomuk von Raiser, in one of the first publications on the subject in 1830, took them to be Roman *castra* (forts) on account of their rectangular form (Raiser, *Der Ober-Donau-Kreis des Königreichs Bayern*). Then, in 1896, after the first archaeological explorations, the district inspector of the Imperial *Limes* (i.e. Roman frontier) Commission of Germany, Wilhelm Conrady, deleted the *Viereckschanze* near Gerichtstetten in Baden from the list of Roman *castra*. He had already considered several possible interpretations for this 'mysterious Germanic construction'. During the following years the survey of the enclosure was taken over by Karl Schumacher, the first archaeologist to place a *Viereckschanze* in its correct cultural and temporal context. He saw the enclosure of Gerichtstetten as a Late La Tène farmstead, but did not want to completely reject the interpretation of the enclosure as a *Herrenhaus* ('manor house') or a sanctuary. On the basis of the site's geological stratification (i.e. succession of layers), he interpreted the walled enclosure as a later reinforcement of an existing delineated space—a view confirmed during later excavations of other *Viereckschanzen*. More recently, scholars have seen the enclosures as sites of manor houses, sanctuaries, or military fortifications (using size and strategic position as arguments, even though most of the *Viereckschanzen* are not strategically sited).

§3. THE 'MANOR HOUSE' INTERPRETATION

The interpretation of *Viereckschanzen* as Late La Tène manor houses was one possibility discussed early on. One of its main proponents was Paul Reinecke. From 1922, he explained the enclosures as direct predecessors of rectangular walled-in provincial Roman dairy farms. The archaeologist Kurt Bittel supported Reinecke's interpretations asserting that the inhabitant of the *Viereckschanze* was the forerunner of the Roman farmer, in other words the proprietor of a provincial villa, or Roman agricultural estate.

§4. THE 'RITUAL ENCLOSURE' INTERPRETATION

This interpretation was presented by Friedrich Drexel in the essay 'Templum', published in *Germania* in 1931. For him the fact that the enclosing ditch and bank structure was a mere earthwork without architectural fortifications in wood or stone counted as important evidence for the enclosures' non-military RITUAL functions. He also considered formal similarities to later Gallo-Roman sanctuaries to be important evidence for the interpretation of *Viereckschanzen* as sacred sites (see FANUM; NEMETON).

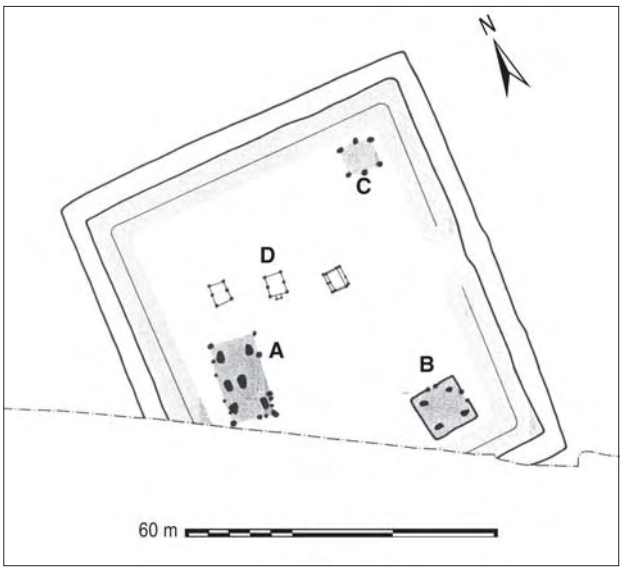
The case for a ritual function of *Viereckschanzen* was resumed by Peter Goessler in 1952. Having examined several enclosures from southern Württemberg, he believed that connections between *Viereckschanzen* and groups of older burial mounds provided sufficient evidence to indicate a function related to the cult of the dead. Kurt Bittel and Siegwalt Schieck supported his views. Crucial progress was made in the 1950s and 1960s, when Klaus Schwarz went about the systematic mapping of the Bavarian *Viereckschanzen*. His excavations at Holzhausen in Upper Bavaria revolutionized the field.

In the wake of Schwarz's work, the early interpretations had to be drastically modified. The three pits

(or shafts or wells) containing organic remains found in Holzhausen were seen as evidence for blood and animal SACRIFICE for underworld deities (see DĪS PATER; HOARDS; OTHERWORLD). The floor plan of two successive post constructions in the western corner of the enclosure, whose appearance resembled Gallo-Roman gallery temples, seemed to suggest a *temenos*, specifically, a Late La Tène ritual enclosure. Hartwig Zürn's excavations, conducted at the same time at Tomerdingen in Württemberg, revealed striking parallels with Holzhausen and seemed to confirm the interpretation of all *Viereckschanzen* as a type of Late La Tène sanctuary.

An important new aspect emerged during the course of excavations at Fellbach-Schmiden, near Stuttgart (1977–80), where Dieter Planck proved without doubt that the excavated pit was not a primarily sacrificial pit, but a wood-panelled well. This does not necessarily contradict a ritual use of the site or of individual buildings within it, because wooden animal figures were found in the well, most probably deposited there in a ritual context (see WATERY DEPOSITIONS).

During the 1990s several *Viereckschanzen* in Bavaria and Baden-Württemberg were examined, notably those near BOPFINGEN-Flochberg (Baden-Württemberg, 1989–92), Plattling-Pankofen (Bavaria, 1994), Riedlingen (Baden-Württemberg, 1991–7), Nordheim (Baden-Württemberg, 1995–7), Blaufelden (Schwäbisch Hall, since 1995), Pocking-Hartkirchen (Passau, 1996), and Mengen-Ennetach (Upper DANUBE, 1998). This survey not only recorded the wall and ditch constructions in detail, but examined the wider surroundings of the enclosures. On the basis of geological and botanical evidence, the pits discovered in some of the enclosures are now, almost without exception, interpreted as wells. The remains of buildings seem to indicate exceptionally massive post constructions, often located in the corners and opposite the entrance of the enclosures. The function of these buildings cannot be determined with certainty, but those *Viereckschanzen* which were excavated in their entirety give an impression of a well-arranged complex consisting of a main building opposite the entrance with smaller buildings in the corners, sunken pit houses and huts along the walls, and sometimes wells near the wall.



Plan of the Bopfingen-Flochberg Viereckschanze showing the layout of buildings and larger rectangular structures

§5. INTERPRETING THE FINDS

Objects recovered from *Viereckschanzen* do not differ markedly from those of other Late La Tène settlements. However, they do differ from those found at Gallo-Roman sanctuaries, as at GOURNAY for instance. Generally, the finds reflect the rural social context in which they were used. The usual finds include hand-made pottery, agricultural implements, some jewellery, and accessories for clothing. When compared and contrasted with the finds at large La Tène settlements, the typical *Viereckschanzen* assemblage shows that a differentiation into rural and urban culture had already occurred in this region of Celtic Europe. A concentration of specialized craftsmanship and trade as in the oppida (sing. OPPIDUM) was not noted in *Viereckschanzen*.

§6. THE ROMAN PERIOD

A question which has not been answered satisfactorily is the use made of *Viereckschanzen* during the Roman period. Almost every excavation in the enclosures yielded Roman finds. Most of the evidence suggests a lengthy gap between Late La Tène and Roman use, with Roman finds coming in, not with the initial extension of Roman power into central Europe between 59 and 15 BC, but at the end of the 1st century AD and mainly dating from the 2nd century AD onward. The levelling of the enclosures in Roman times as

well as building activities around the enclosures complicate the interpretation of these finds. The *Viereckschanzen* might have been used for secular purposes, perhaps in connection with a farmstead.

§7. LATEST CONCLUSIONS

The excavation at Bopfingen-Flochberg has shown that *Viereckschanzen* must be surveyed and analysed as part of the area in which they were built. Outside and around this particular enclosure were found traces of an Early and Middle La Tène settlement, which preceded the construction of the *Viereckschanze*, as well as traces of even older settlements. The connection between *Viereckschanzen* and rural settlements, confirmed by evidence from several other sites, might yet lead to further explanations of their functions as future detailed research is carried out. Only by placing the enclosures in their rural setting can the spatial and temporal dimensions of the *Viereckschanzen* be fully understood.

The present state of research indicates that the traditional interpretation of the enclosures as single-function ritual or meeting places cannot be upheld and will have to give way to a more complex approach. The sites may have to be interpreted as general centres of a rural settlement area, whose range of social and economic functions comprised many aspects, both secular and ritual. The groups of houses may have included buildings for ritual use, wells, residential buildings and storehouses, as well as sunken-floored houses used as workshops. It would thus appear quite similar to the *Herrenhof* ('manor house') type of settlement known from the HALLSTATT period. *Viereckschanzen* should be considered a characteristic part of Late La Tène rural settlement patterns in southern Germany.

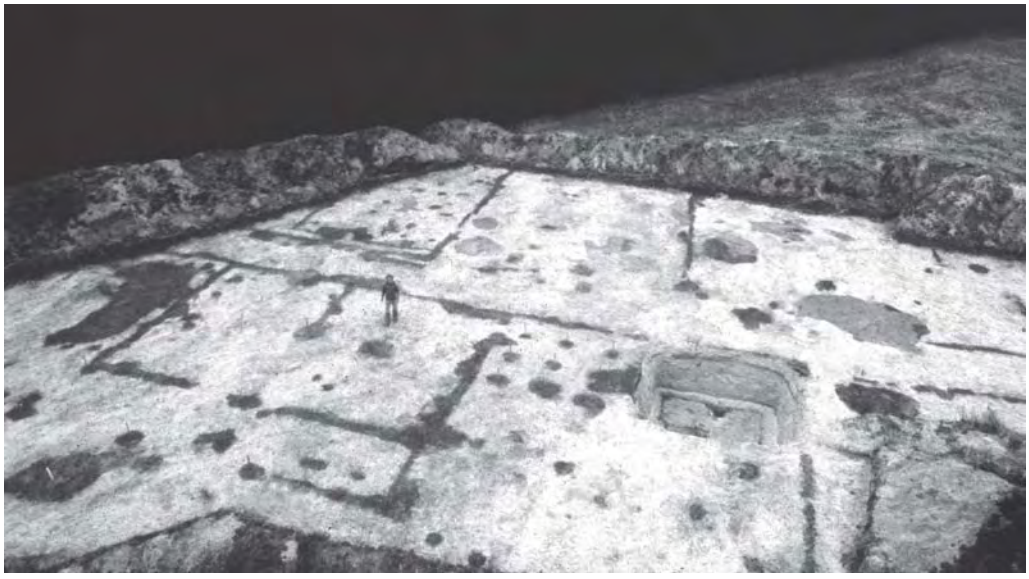
Villeneuve-Saint-Germain is an OPPIDUM situated in the *département* of Aisne in north-east France. This fortified settlement belongs to the period of transition from the final pre-Roman IRON AGE to the beginning of Roman occupation. The site lies on a



Aerial photograph of part of the excavated area of Villeneuve-Saint-Germain, revealing elements of the rectilinear town plan, building foundations, and post holes

river bend and is guarded by a rampart protecting an area of roughly 30 ha (75 acres). Villeneuve-Saint-Germain is characterized by a very unusual and innovative ground plan. Ditches 2 metres wide and 1.4 metres deep, each several hundred metres long, divide the oppidum into four unequal parts. Zones of specialized craftsmanship aligned along these axes: a mint for producing COINAGE, as shown by perforated moulds; a bronze workshop which has yielded remains of unfinished fibulae (brooches), sheet metal, and small fragments of bronze; a glass bead factory; and a forge, as reflected by a large concentration of iron slag. The presence of 401 stylistically datable fibulae has permitted the dating of this site to LA TÈNE D2, i.e. *c.* 50–*c.* 20 BC. Villeneuve-Saint-Germain seems to have been the capital of the Gaulish tribe, the Suessiones (see BELGAE), between the decline of the earlier oppidum of Pommiers and the foundation of the GALLO-ROMAN CIVITAS at Soissons (Augusta Suessionum).

vision literature, medieval Irish

Written accounts of existence after death, purportedly related by individuals who visited the afterworld in spirit before having their souls restored to their bodies, are known as vision literature.

§1. BACKGROUND

Vision narratives have a long history in the Judaeo-Christian literatures, and such heretical movements as Gnosticism also produced descriptions of the afterlife. The Irish had access to various of these texts, received through the same channels as those through which they obtained other apocryphal material. The influence of these sources on insular vision literature is unmistakable, and the genre as a whole is clearly of Continental inspiration. By far the most popular of the apocryphal visions was the Vision of St Paul; another important source was the text known as the 'Seven Heavens Apocryphon'.

The Vision of St Paul was originally written in Greek, perhaps as early as the 3rd century; many Latin versions exist, together with a multitude of vernacular translations. Taking as its starting-point Paul's own statement in 2 Corinthians 12 that he had been 'taken up into the third heaven', the text describes how he witnessed the judgement of souls, the beauties of paradise and the 'city of Christ', and the punishments of sinners: these last are, through God's special mercy, suspended on Sunday. The text ends with a brief, anticlimactic return to paradise (Gardiner, *Visions of Heaven and Hell before Dante* 13–46; Silverstein, *Visio Sancti Pauli*).

The 'Seven Heavens Apocryphon' has not survived, but has been plausibly postulated as the common source shared by various Irish texts, two Old English homilies, and a Latin fragment from Italy. An Irish background for the English and Italian documents is a distinct possibility, but cannot be proven. The works in question agree in describing the seven heavens as places of testing and punishment. The idea that sinful souls pass through the bodies of DRAGONS is also mentioned. These concepts, unfamiliar in the West, evidently reflect the influence of Egyptian Gnosticism.

§2. THE VISIONS OF FURSA

There are several accounts of the visions of the Irish saint Fursa or Furey (†*c.* 650): the earliest are the *Vita prima Fursaei* (?7th century) and a briefer notice in BEDA's *Historia Ecclesiastica* (731). In outline, Fursa's principal vision echoes the sequence of the Vision of St Paul: he is challenged by demons but defended by angels; he is carried aloft and looks down to see the world as a place of flames and darkness; he visits

heaven, where he hears the singing of the angels and is given exhortations to carry back to earth; and he sees the damned in the fires of hell. Other elements are innovative: Fursa meets two Irish saints in heaven, whose relics he subsequently takes with him to the Continent. Much attention is given to eschatology. Fursa is taught a liturgy by an angel, and when he regains consciousness he bears the mark of a burn his soul experienced in hell (Colgrave & Mynors, *Bede's Ecclesiastical History of the English People* 270–5; Heist, *Vitae Sanctorum Hiberniae* 38–48).

Fursa was important in the spread of Irish MONASTICISM: the French monastery of Péronne (Somme, Picardy), where he was buried, was a centre of Irish influence for more than two centuries after his death. The story of his visions is thus not only the earliest evidence of the influence of apocryphal visions in Ireland (ÉRIU), but also the earliest Irish vision to have an impact abroad. A version of the story in IRISH existed already in the 10th century, but this has not survived.

§3. THE VISION OF LAISRÉN

The earliest vernacular Irish vision still extant is preserved only as a fragment: its editor dated it to *c.* 900, but it may be significantly older. We are told how a cleric named Laisrén, following a prolonged fast, experienced his soul's departure from his body. He was denounced by demons, but protected by angels; he flew above dark regions in the north to a valley where the future sufferings of sinners were revealed; he saw hell as a 'sea of fire'. At this point the text breaks off (Meyer, *Otia Merseiana* 1.113–19).

Enough remains to show that this text was in the same general tradition as that of the Fursa visions. A new feature is the valley where the punishments of those who can still be saved are disclosed, a place called 'the porch of hell'. This is the first Irish account of an infernal region from which redemption is possible, as distinct from the place of the damned. This distinction is presented more sharply in Beda's account of the vision of the Northumbrian Dryhthelm, where regions of greater and lesser blessedness are also described (Colgrave & Mynors, *Bede's Ecclesiastical History of the English People* 488–99).

§4. FÍS ADOMNÁIN

This account of a vision supposedly seen by ADOMNÁN (†704) of Iona (EILEAN Ì) was written in the 10th or 11th century. Once again the basic framework recalls the Vision of St Paul: Adomnán visits a paradisial 'land of saints', sees God enthroned in his heavenly city, is taken to regions of punishment adjacent to the yet more terrible habitation of Satan, and briefly revisits paradise before returning to his body. Other influences are also conspicuous: a passage based on the 'Seven Heavens Apocryphon' separates the celestial and infernal sections of the vision. The author seems to have been familiar with AUGUSTINE's fourfold classification of souls as 'good', 'bad', 'not very good', and 'not very bad' (already adumbrated in Dryhthelm's vision; cf. §3), and a terrible bridge of souls derives from the *Dialogues* of Gregory the Great (*c.* 540–604). What most sets *Fís Adomnáin* apart from its predecessors is the extravagant vividness of its descriptions, and the author's evident wish to construct a coherent geography of the afterworld (Herbert & McNamara, *Irish Biblical Apocrypha* 137–48; Windisch, *Irische Texte* 1.165–96).

§5. VISIO TNUGDALI

Written in 12th-century Germany by a member of the Irish monastic community at Regensburg, this narrative enjoyed enormous popularity throughout medieval Europe. The young nobleman Tnugdalus (Irish Tnúthgal, often simplified to 'Tundal') explores an afterworld explicitly divided according to the fourfold scheme mentioned in §4 above. In hell he sees the ULAID heroes FERGUS MAC RÓICH and CONALL CERNACH (see further ULSTER CYCLE), and in paradise he meets various Irish notables, clerical and secular, with whom his monastery had had close ties (Picard, *Vision of Tnugdal/Brother Marcus*; Wagner, *Visio Tnugdali*).

Besides the sources already noted, the author drew heavily on later Continental vision tales. His allusions to the recently deceased can be referred to this background; the description of the half-beatified, half-punished king Cormac Mac Cárrthaig has particularly close Carolingian parallels.

§6. ST PATRICK'S PURGATORY

Perhaps already in the first half of the 12th century, and certainly by its end, there is evidence of the belief

that a cave leading to the afterworld was located on a small island in Loch Dearg, Co. Donegal (Contae Dhún na nGall). Access to the island was controlled by a community of Augustinian canons. Whoever survived a night in the cave was held to have expiated his sins in this world, and would not experience further punishments after death.

This 'Purgatory' became famous throughout Europe, and vigils continued to be held in the cave until it was closed by papal order in 1497 and subsequently destroyed. Several accounts of adventures encountered within it circulated during the Middle Ages. The most popular of these texts was also the oldest: the narrative, by a Cistercian known only as 'H' of Saltrey, of the experiences of a knight named 'Owein' said to have visited the Purgatory in the reign of Stephen of England (1135–54). Owein sees regions of torture from which souls will eventually be delivered, slips briefly into the mouth of hell, and crosses a supernatural bridge to the earthly paradise, where those not quite good enough for heaven await the ultimate beatitude. Again, the vision as a whole is dominated by a fourfold scheme: more attention than in earlier sources is given to the spiritual state of those in the intermediate regions of purgatory and paradise (Picard, *Saint Patrick's Purgatory*; Warnke, *Das Buch vom Espurgatoire S. Patrice der Marie de France und seine Quelle*).

§7. MISCELLANEOUS

Besides the works listed in §§2–6 above, there is ample further evidence of the importance of vision literature in medieval Ireland. There are several Irish translations of the Vision of St Paul, and its portrayals of hell and paradise are reflected in works as diverse as the biblical epic *Saltair na Rann* (The verse psalter; cf. IRISH LITERATURE [2] §3), the voyage tale *Immram Curaig Ua Corra* (The voyage of the Uí Chorra's coracle; cf. VOYAGE LITERATURE, IMMRAMA), and various Middle Irish homilies. An account of the seven heavens closely resembling that in *Fís Adomnáin* appears in a late version of the cosmological treatise *In Tenga Bithnua* (The ever-new tongue), and portions of the *Fís* itself were incorporated in some of the voyage tales. The later Middle Irish and early Modern Irish periods saw the appearance of further vision texts, also evidently based on Continental exemplars: instances are 'The Vision of Merlino' (possibly from a lost Italian original; Macalister, ZCP 4.394–455), and various descriptions of the soul's departure from the body (e.g. Atkinson, *Passions and Homilies from Leabhar Breac* 266–73, 507–14).

While certain of the texts discussed above played an important part in medieval Irish literature, and others enjoyed great popularity on the Continent, it is difficult to see anything distinctively 'Irish' in either development. As noted at the beginning of this article, Irish vision literature owed its existence to external stimuli; of its two most influential products, *Visio Tnugdali* was written on the Continent, and the story of Owein is the work of an Englishman. In this respect, as in others, Ireland seems to have been a notably favourable environment for concepts and images that originated, and continued to circulate and evolve, in the world beyond its boundaries.

Vitrified forts are a type of defended settlement of the Scottish Early IRON AGE. As an archaeological type they are difficult to define. They appear most commonly to be oblong or oval in plan with thick, heavy stone walls, often timber-laced, which occur both singly and in several concentric rings. They are essentially a Scottish sub-type of hill-fort.

The name 'vitrified' is linked to the fact that several of these forts appear to have had their walls fired, with the intense heat of the burning timber frame causing vitrification to a lesser or greater extent in the stone construction. It has been suggested that extremely high temperatures (in excess of 1000° C) would have been necessary to achieve this state. Experiment has shown this to be achievable by the firing of timber-laced stone walls of the *murus gallicus* or Gaulish wall type. It has been suggested that this practice was carried out deliberately by the occupiers (suggestions of strengthening the wall and also of symbolically 'killing' the fort at the end of occupation have been offered), though the burning of the rampart as the result of siege is perhaps more likely, since in many cases only a relatively small section of the rampart has been fired. Similarly, burnt fort ramparts also occur in France, and possible examples have been found at Banagher Glebe, Co. Derry (Contae Dhoire), in Ireland (Éire) and at Cronk Sumark on the Isle of Man (Ellan Vannin). Scottish vitrified forts are tentatively dated from about the 7th to the 3rd centuries BC, although later re-use can be envisaged for many examples (e.g. the possible Pictish royal sites at Clatchard Craig, Fife (Fìobh), and Craig Phadrig, Inverness (Creag Phàdraig, Inbhir Nis), are both examples of this).

It has been noted that the majority of vitrified forts lie in the area later to become Pictland (Lloyd Laing & Jennifer Laing, *Picts and the Scots* 75–6), but this seems to be an exaggeration, for many forts are present in the west and south of Scotland (Alba) also. Indeed, their distribution is very general throughout the Scottish mainland, avoiding only the rugged upland of the Mounth, the very north of Caithness (Gallaibh), the eastern Borders, Shetland (Sealtainn), and the Outer Hebrides (Na h-Eileanan a-Muigh). It is of considerable interest, however, that there is little overlap between the distributions of the vitrified forts and the roughly contemporary BROCHS.

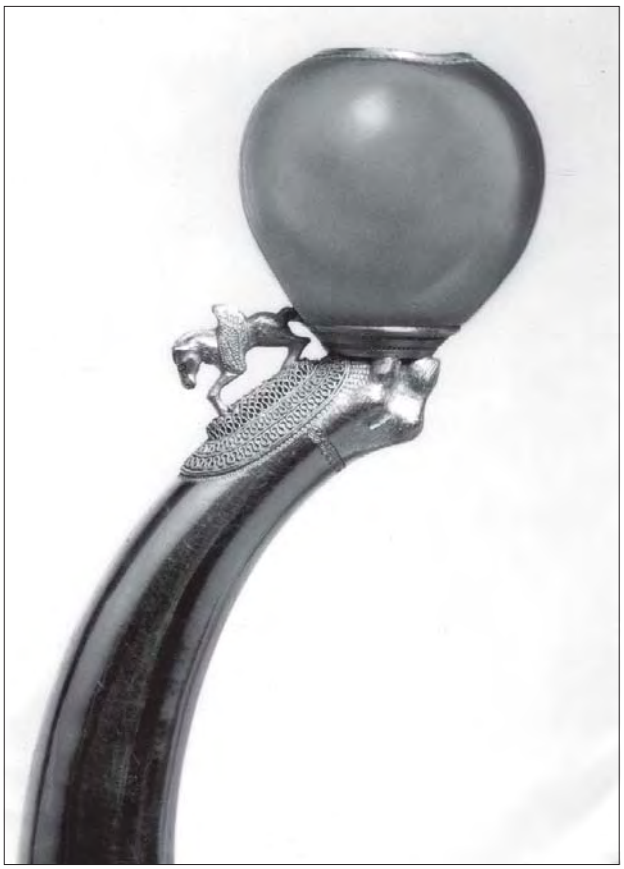
SÓF

Detail of terminal gold torc, showing lion's paw and winged horse, from the princely tomb at Vix (Côte d'Or), early 5th century BC



Vix is the name of a necropolis at the foot of Mont-Lassois in the *département* of Côte-d'Or, France. The discovery in 1953 of a very rich woman's TOMB at the foot of the hill made the site famous; she is often known as 'the princess of Vix'. The tomb consists of a cubic wooden chamber, roughly 3 m on each side, covered by a large cairn. It contained a large bronze *krater* (a vessel for mixing WINE and water). At 1.6 m high and weighing 280 kg and with a capacity over 1200 litres, it was the biggest ever found anywhere, doubtless the product of Greek bronze smiths of southern Italy, though assembled or reassembled near the site in Gaul. The tomb also contained a silver phial (a shallow bowl), two Attic cups (originally coming from Athens), one bronze *oinochoe* (wine jug), and three Etruscan basins. The corpse was laid out on the bed of a disassembled four-wheeled wagon (see CHARIOT; VEHICLE BURIALS), and was dressed with a bronze TORC, 6 lignite bracelets, a pair of ankle rings,

a pair of bronze bracelets, a pearl collar, and 8 fibulae (brooches) of local origin.

Close to the skull was a golden torc (more probably a neck ring than a diadem to be worn on the crown) of 480 g. The shape of the torc is that of an open oval, with pear-shaped terminals joined decoratively to the torc's arc with lion's paws and further decorated with a small winged horse. This piece of jewellery is exceptional and of unknown origin. It may have come from as far afield as the Black Sea (where it invites comparison with some of the elaborate gold funerary pieces of the Graeco-Scythian animal style) or the Iberian Peninsula. The tomb is dated to *c.* 480 BC, thus placing it very near the end of the Hallstatt Iron Age, and its contents can be seen in the museum of Châtillon-sur-Seine. It has assumed particular importance in discussions of (1) the potential for high status for women in early Celtic societies, (2) trade contacts between Hallstatt west-central Europe and the Greek colonies of the west, and (3) Celtic notions of the afterlife as a FEAST in the Otherworld.

M. Lévery

voyage literature

§1. introduction

A 'voyage tale', in the context of medieval Irish literature, may be defined as a story which describes a visit to an Otherworld region or regions, reached after a sea journey. It accordingly contrasts with stories in which a protagonist finds himself in the Otherworld after entering a SÍD, diving beneath a lake, losing his way in a fog, &c. To use terms employed in discussing the 'location' of the Irish Otherworld, it reflects an 'overseas' rather than an 'immanent' view, and a concomitant tendency to give an ecclesiastical colouring to the narrative. In most cases, voyage tales are referred to as IMMRAMA (voyages) in Irish-language sources, while other stories of Otherworld excursions are called simply ECHTRAI (adventures). While these terms are not employed with the taxonomic precision of modern genre categories, it is worth noting that there was already at least a tendency to distinguish between the two types of tale in the medieval period.

Besides the rôle played in them by sea travel, voyage tales differ from other Otherworld stories in their free use of imported elements: geographical writing, travel tales, homilies, and the apocrypha all appear to have contributed significantly to the genre, increasingly so as it evolved. In general, the voyage tale's distinctive features are best interpreted in terms of its ecclesiastical orientation and its use of foreign sources; suggestions that it may reflect an indigenous tradition analogous to the Egyptian Book of the Dead are unsubstantiated and probably unprovable.

§2. the first voyage tales

The earliest surviving voyage tale may be *Echtrae Chonlai* (The adventure of Conlae). The paradoxical ways in which it juxtaposes legendary and religious themes, and the minimal part played in the narrative by the voyage itself, leave room for the possibility that it served as an experimental prototype for the genre as a whole. Conlae, son of Conn Cétchathach, king of Tara (Teamhair), is lured away from his father and people by an immortal woman visible to him alone. She gives him an apple which never diminishes no matter how much of it is eaten, and at the end of the tale takes him to her *síd* in a glass boat. One of the story's most striking features is its use of Christian language and imagery: the woman speaks of her home in terms borrowed from descriptions of heaven and paradise, predicts the coming of St Patrick, and denounces druidism as service of the Devil (see DRUIDS). This use of the same vocabulary for the native Otherworld and the Christian paradise, and the theme of the sea journey, remained key elements in subsequent voyage literature (Oskamp, ÉC 14.207–28).

Immram Brain *maic Febail* (The voyage of Bran son of Febal) appears to draw upon legends concerning the eruption of Lough Foyle (see FLOOD LEGENDS) and the adventures of Nongan; it also exhibits striking resemblances to *Echtrae Chonlai*, and was probably to a great extent based upon it. Once again a beautiful woman, this time bearing a silver branch, induces the protagonist to join her beyond the sea; but here the voyage is the central feature of the tale, not merely an appendage. The most memorable

scene is perhaps that in which Bran in his ship encounters the immortal MANANNÁN driving his chariot across the sea, and the latter recites a poem describing the delights of the supernatural realm. The poem also refers to the fall of mankind and foretells the birth of Christ: as in *Echtrae Chonlai*, the inhabitants of the Otherworld are conversant with the mysteries of CHRISTIANITY (Mac Mathúna, *Immram Brain*).

An early voyage tale of a different type is *Forfes Fer Fálchae* (The siege of the men of Fálchae). It too begins with a marvellous token being brought across the sea, but the raiding expedition by CÚ CHULAINN which ensues has no discernible supernatural elements (Thurneysen, *Zu irischen Handschriften und Litteraturdenkmälern* 1.53–8). Subsequent versions of this tale became associated with the death of Cú Roí. A later story of Cú Chulainn's adventures on imaginary islands, *Longes Mac nDúil Dermait* (The exile of the sons of Dúl Dermait), exhibits interesting similarities to Gaelic wonder tales transmitted orally in modern times (Windisch, *Irische Texte* 2/1.164–217).

Other stories associating voyages with the acquisition of supernatural treasures occur in the lives of the saints. Patrick is said to have visited an island inhabited by an ageless couple, who offered him the staff which became his crosier (Mulchrone, *Bethu Phátraic* 18–19; Stokes, *Tripartite Life of Patrick* 1.28–31); Ailbe was taken away in a bronze ship, returning with a miraculous branch (Heist, *Vitae Sanctorum Hiberniae* 131).

§3. THE OTHERWORLD PILGRIMAGE

The full development of the voyage tale may be attributed to the impact on the Irish imagination of PEREGRINATIO (pilgrimage), the monastic practice of voluntary self-exile as a form of devotional austerity. The expansion of Irish monks across the face of Europe was a direct consequence of the zeal for *peregrinatio*; others recklessly sought a 'desert in the ocean' in the trackless North Atlantic, penetrating at least as far as Iceland.

It was inevitable that such dramatic expeditions should inspire literary embellishment. Already at the close of the 7th century, ADOMNÁN's description of the unsuccessful attempts of CORMAC UA LIATHÁIN to find a hermitage in the farthest north contains elements which foreshadow later *immrama*: his boat is attacked by monstrous creatures, and his ultimate failure is attributed to the presence of a superfluous crew member (Alan O. Anderson & Marjorie O. Anderson, *Adomnán's Life of Columba* 166–71).

The proliferation of such tales in the Old Irish period (*c.* AD 600–*c.* 900) is reflected in the text known as the 'Litany of Irish Pilgrim Saints', dating probably from the 8th century. Here there are allusions to the voyages of Patrick, Ailbe, and BRENDAN (see below); there is also a reference to the voyage of the Uí Chorra, the only surviving version of which is a text of the later Middle Irish period (see §4 below; Hughes, *Analecta Bollandiana* 77.323–4, 327–8).

The most celebrated of these pilgrim adventurers was St Brendan: accounts of his voyages in search of the Land of Promise figure prominently in his Latin and Irish lives, and the NAVIGATIO SANCTI BRENDANI (The voyage of St Brendan) enjoyed great popularity on the Continent throughout the Middle Ages. In the *Navigatio*, the Otherworld voyage becomes the vehicle for a sophisticated monastic allegory, with the circular wanderings of the pilgrims mirroring the round of the religious year. The author presented his tale's fantastic incidents in a vivid, matter-of-fact style, which has tempted many readers to look for some historical basis for the legend (Selmer, *Navigatio Sancti Brendani Abbatis*; Webb & Farmer, *Age of Bede* 211–45).

§4. THE LATER IMMRAMA

Subsequent voyage tales show clear indebtedness to the Brendan legend and to *Immram Brain*, while developing the genre in fresh directions.

Immram Curaig Maíle Dúin (The voyage of Mael Dúin's coracle) is the most flamboyant specimen to have come down to us. The author has undertaken to adapt the monastic voyage tale for a lay audience. The narrative's hybrid character is embodied in the figure of Mael Dúin himself, son of a king and a nun, and the range of its foreign sources is illustrated by the presence of quotations from both VERGIL and the Vulgate Latin Bible. Mael Dúin's multitudinous fantastic adventures are made to serve an edifying end. In the course of the voyage he relinquishes the secular ethic of blood vengeance, and by its end he is ready to greet his enemies in a spirit of Christian forgiveness (Hamel, *Immrama* 20–77; Oskamp, *Voyage of Máel Dúin*).

Immram Snédgusa 7 Maic Riagla (The voyage of Snedgus and Mac Riagla), a tale which exists in several versions, has as its protagonists monks of the Columban *familia* (see COLUM CILLE; EILEAN Ì). They arrive in a version of paradise, where Enoch and Elijah await the last days and a pious king presides over a palace full of priests and chapels. One of the tale's later versions interpolates an extended section of *Fís Adomnáin* ('The Vision of Adomnán'). This overlap of voyage and vision literature further illustrates the identification of native Otherworld with Christian afterworld (see VISION LITERATURE; Hamel, *Immrama* 79–92; Ó hAodha, *Dán Do Oide* 419–29; Ó Máille, *Miscellany Presented to Kuno Meyer* 307–26; Stokes, RC 9.14–25).

Although, as noted above, some version of *Immram Curaig Ua Corra* (The voyage of the Uí Chorra's coracle) already existed in the Old Irish period, the surviving text reflects the period of ecclesiastical reform in the 11th and 12th centuries. Like Mael Dúin, the Uí Chorra are members of the laity whose conversion to godliness is bound up with their adventures on the sea; indeed, the story explicitly alludes to Mael Dúin's earlier voyage (Hamel, *Immrama* 93–111; Stokes, RC 14.22–69).

§5. MODERN IRISH ADAPTATIONS

The only full-blown voyage tale to survive from the Early Modern Irish period is 'The Voyage of Tadhg mac Céin', an elaborate and so far little-studied narrative which takes its hero to a transoceanic wonderland ('the fourth paradise of the earth'). There, all the illustrious Irish dead dwell in a series of splendid fortresses. There are abundant references to the earlier literature: thus Conlae and his immortal mistress appear, the latter now identified as Veniusa daughter of Adam (O'Grady, *Silva Gadelica* 1.342–59, 2.385–401).

Fantastic voyages figure frequently in the romantic tales of the period, and in the related wonder tales of the oral tradition; for the most part, these have more in common with adventure stories like *Longes Mac nDúil Dermait* than with the *immrama* proper. Sometimes, however, direct influence by the latter can be detected: thus the romance *Eachtra Cloinne Ríogh na hIoruaidhe* ('Adventures of the Children of the King of Norway') draws material from Mael Dúin's voyage, and echoes of *Echtrae Chonlai* may be present in *Laoidh Oisín air Thír na nÓg* ('OISÍN's Lay on the Land of Youth [TÍR NA NÓG]'; Hyde, *Giolla an Fhiugha* 50–199; O'Looney, *Laoithe Fiannuigheachta* 227–80).

§6. A GENRE IN WALES?

It remains to ask whether tales of such adventurous voyages formed a traditional part of any of the other Celtic literatures. In Wales (CYMRU), the poem PREIDDIAU ANNWFN (Spoils of the Otherworld) in LLYFR TALIESIN ('The Book of Taliesin') describes an Otherworld voyage by ARTHUR to seize a magic cauldron; an assessment of this text is complicated both by the obscurity of its diction and by evidence of at least some Irish influence (Haycock, SC 18/19.60–3). Some of the overseas adventures of the poem have analogues in the early ARTHURIAN prose tale CULHWCH AC OLWEN. It has been suggested that a list of the 'Thirteen Treasures of the Island of Britain', dating from the later Middle Ages, may draw upon traditions of precious objects stolen from the Otherworld, but nothing in the text's extant wording gives any evidence of this.

W

Waldalgesheim

In 1869 one of the most important early La Tène burials was discovered by chance in Waldalgesheim in the district of Mainz-Bingen in Germany. Despite illegal digging, after five phases of regular excavation a virtually complete grave inventory has been preserved. The site has given its name to a phase of Iron Age art usually considered a subgroup of the La Tène style which was prominent in Celtic-speaking areas in the pre-Roman period.

The grave was that of a Celtic noblewoman or 'princess', who must originally have been buried under a single large tumulus. The corresponding settlement appears to have been located north of this site. In contrast with other excavated sites from the same period, this isolated location was chosen mainly for the surface lode of exploitable iron ore, but also for its suitable climatic and agricultural conditions. The noblewoman buried here probably had a rôle in the iron ore or manufactured iron trade, as is indicated by her grave goods. She possessed not only religious and social authority (as indicated by the presence of several socially significant items), but must have had extensive economic contacts.

She was buried in a two-wheeled chariot, a practice known in extensive areas of Celtic west-central Europe at that period (see vehicle burials). The grave was also equipped with a set of wine vessels, appropriate for her high rank, in the form of a spouted bronze flagon and a bronze situla (wine bucket). The provision of horse bits and a yoke is unusual for the northern upper Rhine area and indicates contacts with the Aisne-Marne culture (see gaul), where these objects are more common in La Tène chariot burials. Similarly, the non-local gold torc (neck ring) found in the burial must also have been made in what is now eastern France. Decorative elements of both the gold bracelets and the armlet reflect influence from western European as well as Mediterranean artefacts. Knobbed bronze anklets similar to the two found in the grave occur in the Rhine-Main area.

The torc, bracelets, and anklets are typical elements of the dress worn in the northern upper Rhine area, and indicate that the noblewoman was of native descent. Her social status is emphasized by the presence of ornamental metal discs and strap fittings, glass beads, amulets in the form of perforated Mediterranean snail shells, and a pearl. The Mediterranean shells, beads, coral, and the bronze situlae are not of local origin, and must have come into her possession through trade or as gifts.

Decorative bronze mount with coral studs, from the chariot yoke of the Waldalgesheim 'princess' burial

Gold torc, armlet, and pair of bracelets from the Waldalgesheim 'princess' burial (Rhineland), last third 4th century BC

Most of the grave goods were decorated in a relatively late form of what is known as the Waldalgesheim style. Triskels, spirals, and tendril motifs dominate. The flagon, dating to the 2nd or 3rd decade of the 4th century BC, is decorated in the older 'Early Style', as are the mask motifs on the gold bracelets. The water birds confronting one another on the disc mount of the yoke, as well as the lobe motif on the sheet metal fittings on the same object, are also based on older La Tène A patterns.

On the basis of the stylistic dating of the situla, the torc, and the anklets, the Waldalgesheim burial can be assigned to the transition from La Tène Bi to La Tène Bii, at the beginning of the last quarter of the 4th century BC (330–320 BC). This date is supported by the hypothesis that the gold rings were made from coins, not only from older staters of Darius II, emperor of Persia (424–405 BC), but also from later staters of Philip of Macedon (r. 359–336 BC), which were put into circulation from 345–342 BC onwards.

Hans-Eckart Joachim

Wallace, William (*c.* 1274–1305) was the second son of Malcolm Waleys, a minor Scottish 'laird'. Little is known of his life before he became a major contender in the struggle for Scottish independence in 1296, but his execution in 1305 made him a martyr to the Scottish cause and a national hero, celebrated in medieval epics, in folk-tales and in folk-songs. Wallace's international recognition and popularization have been greatly enhanced by the highly successful 1995 Hollywood film *Braveheart*, which coincided fortuitously with increasing Scottish nationalist sentiment in the run up to the referendum on the SCOTTISH PARLIAMENT in 1997.

The struggle for the Scottish Crown following the death of King Alexander III in 1286 and of his only surviving heir, Margaret, 'the maid of Norway', in 1290 was welcomed by the English Crown as an opportunity to bring Scotland (ALBA) under English rule. Several Scottish contenders acquiesced when John de Baliol (or John Balliol) was placed on the Scottish throne by Edward I, the English king. However, by 1292 de Baliol had been deposed for disobedience, Edward I had overrun Scotland with a force of, perhaps, 30,000, and John de Warenne, the earl of Sussex, was appointed governor.

William Wallace was the main force from 1296 onwards in rallying support for a military campaign against the English occupation. Under his leadership, the Scottish forces won a decisive victory at the battle of Stirling Bridge on 11 September 1297. In the same year Wallace was knighted and proclaimed Guardian

of Scotland. Messages sent to various royal courts in Europe declared Scottish independence. On 22 July 1298, however, the Scottish suffered defeat at the battle of Falkirk, and Edward I advanced through Scotland once more. Wallace left the country to seek assistance at the court of Philip IV of France, returning in 1301. When no French help had arrived by 1304, all the major Scottish leaders submitted to Edward's rule. Wallace was outlawed for his refusal to submit. Captured at Robroyston, near Glasgow (Glaschu), on 3 August 1305, he was transported to London, where he was tried for treason and executed by hanging on 24 August 1305. Still alive, he was cut down, drawn, quartered, and beheaded. His body parts were sent to Berwick, Stirling (Sruighlea), Perth (Peairt), and Newcastle as a warning against further rebellion; his head was impaled on a spike on London Bridge. This vivid brutality ensured Wallace's immortality as a martyr and contributed to Robert de Bruce's decision to take up the national struggle, leading to success at the battle of Bannockburn.

The surname *Wallace* indicates a background among the northern 'Welsh' of Strathclyde (Ystrad Clud) or Cumbria, though the Cumbric language had probably died out a century or more before William Wallace's period, having given ground both to Scottish Gaelic and the Anglian Scots language, the latter a close relative of English.

MBL

warfare, Proto-Celtic vocabulary

The warlike culture of the ancient Celtic-speaking peoples was one of the most pervasive themes of the Greek and Roman accounts, though we should bear in mind in weighing this testimony that the classical writers were self-consciously aware of the Celts, whom they had faced many times on the battlefield, as a people very different from themselves culturally. On the literary side, the picture can be extended and confirmed somewhat by the heroic ethos or code of the warrior aristocracy as evident in early medieval Celtic literature such as the Irish Ulster Cycle and the Welsh Gododdin. The pattern is also reconfirmed by archaeology. Settlements with massive military defences are characteristic throughout the Celtic world: hill-forts and oppida (sing. oppidum), the *castros* of the Iberian Peninsula, the brochs and vitrified forts of Scotland (Alba), the ring-forts of Ireland (Ériu), as well as many other types (see also fortification). The evidence for weapons (e.g. swords, shields) shows not only technical advances over the centuries, but also the high status and special cultural significance of weapons as indicated by the quality of the metalwork and the frequent inclusion of weapons in such ritual settings as burials and watery depositions. Another vantage onto the Celtic attitude to warfare—the subject of this article—is afforded by shared, inherited Celtic vocabulary, as can be established by a methodology of comparing cognate words within the attested Celtic languages and/or between a Celtic language and another of the Indo-European languages.

The most common word in this field is Proto-Celtic **katu-*, found in Galatian proper names as *Catu-* Κατου-, Gaulish *Catu-*, corresponding to Old and Middle Irish *cath* 'battle, war band', Scottish Gaelic *cath* 'battle', Old Welsh *cat* 'battle, war band', Old Breton *cat-* in proper names. There are several inherited compounds: Proto-Celtic **kom-katu-* > Early Irish *cocad* 'war', Middle Welsh *kyngat* 'battle, conflict'; **katu-u̯iro-* > Early Ir. *cather* 'battle-hero', Old Cornish *cadwur* glossed *miles .l. adletha* 'soldier or athlete'; **katu-u̯alo-* 'battle-?lord' reflected in the Common Celtic personal name Old Ir. *Cathal*, OW *Catgual*, MW *Cadwal*; **katāko-* > Early Ir. *cathach* 'warlike', corresponding to the proper names OW *Catauc*, OBret. *catoc*; Early Ir. *cath-mil* 'warrior' and MW *cadfiled* 'army, host, soldiery' are compounds with the same Latin loanword. One of St Patrick's traditional bynames, *Sucat* < **su-kati-*, MW *hygat* 'warlike; having a multitudinous host'.

Proto-Celtic **u̯ik-e/o-* is the source of Early Ir. *fichid* 'fights', related to the suffix *-vices* 'fighters' found on Gaulish and British tribal names (cf. ordovices), Early Ir. *fích* 'strife, fight', ScG *fioch* 'wrath', MW *gwic* 'strife, contention, battle' < **u̯ik-*; Proto-Celtic **u̯ik-tā* 'battle' is reflected as Gaulish

vecto-, vecti-, victo-, victi- in proper names, Early Ir. *fecht* 'raid, fight, course', ScG *feachd* 'army, host, expedition', OW *gueith* 'battle', MW *gweith*, also MW *gwyth* 'battle, fighting', Mod.W *gŵyth*; MW *amŵyn* 'fight with; take; defend, protect' probably corresponds to Mod.Bret. *amoug* 'resort, recourse' < **ambi-wik-e/o-*.

Proto-Celtic **korios* 'army' occurs in Gaulish tribal names as *-corii*, MW *corð* 'host, army', and in the compounds *gosgorð* 'bodyguard in the service of king, lord, &c., war band, band or retainers, retinue, suite, train, guard, escort, host, company', OCorn. *goscor, coscor* 'retinue, household', MBret. *coscor, koskor* < **wo-eχs-korio-*, *?*kom-eχs-korio-*.

Proto-Celtic **agro-, *agrā-* > Early Ir. *ár* 'slaughter', ScG *àr* 'battle, slaughter', Mod.W *aer* 'war, battle; slaughter; host', OCorn. *hair* glossed 'clades' 'slaughter', OBret. *airou* gl. 'strages' 'massacres'; cf. the compounds Gaulish *Ver-agri, Sy-agrius*; Proto-Celtic **agro-magos*, Early Ir. *ármag* 'battlefield', MW *aerfa* 'slaughter; battle, army', OBret. *arima* (error for *airma*) 'battlefield'; Proto-Celtic **agro-kū* > Early Ir. *ár-chu* 'battle hound', MW *aergi* 'warrior, battle hound'.

Proto-Celtic **gal-* is probably reflected in the Gaulish name element *-galos* 'power; strong', in the group names *Galatae, Galli*, Early Ir. *gal* 'bravery', ScG *gal* 'valour, war', and in the OBret. name element *Gal-, -gal*; the Early Ir. compound *cranngal* 'wood, spear' corresponds to MW *pren(n)yal* 'battle or fight (with spears)', implying Proto-Celtic **kʷrenno-gal-*.

Proto-Celtic **bāg-āko-* > Early Ir. *bágach* 'warlike', Welsh *(rhudd-)faog* 'ravaging, plundering, wealthy, red, bloody'; cf. the compound Proto-Celtic **kom-bāgo-* > Early Ir. *combág* 'battle, conflict', MW *kymwy* 'toil, stress, grief', probably related also to MW *kyma* 'battle, conflict'.

Proto-Celtic **neit-* is probably reflected in Celtiberian *neito*, Gaulish *Nētos* (an epithet of Mars, i.e. probably 'warrior, hero'), Early Ir. *nía* 'hero, warrior', Ogam Irish NET(T)A-, -NETAS.

MW *tres* 'battle, (military) raid, attack' may be a borrowing from Early Ir. *tress* 'battle' or a common inheritance from **treχsu-* (cf. Welsh *trais* 'violence, rape', MW *treis*).

Early Ir. *ágmar* 'warlike' is the cognate of the Gaulish name *Agomarus* < Proto-Celtic **āgo-māro-*.

CW, JTK

Watery depositions, also known as aqueous depositions, refer to objects which have been deposited in water, usually lakes, rivers, bogs, or wells, for RITUAL purposes. Depositions of this type were a common feature of Celtic ritual practice, and many examples have been discovered. Even La Tène, possibly the most famous site of the second Celtic Iron Age, has been interpreted as an aqueous deposit (Müller, *Der Massenfund von der Tiefenau bei Bern* 76–112).

§1. LOCATIONS, IMPORTANT SITES, AND DATING

Although all the sites in this category share the common defining feature of objects deposited in water, the type of location varies widely. Deposits in wells have been found at Duchcov in Bohemia (Kruta, *Celts* 295), at Agen in France (Boudet, *Archéologia* 306.36–43), and Fellbach-Schmiden in Germany (Wieland, *Heiligtümer und Opferkulte der Kelten* 92–4). The headwaters of the river Seine (Sequana) in France are an example of a site at the source of a river (Deyts, *Le sanctuaire des sources de la Seine*; Musée archéologique de Dijon, *Ex-voto de bois, de pierre et de bronze du sanctuaire des sources de la Seine*). River finds include the numerous items of prestige metalwork discovered in the river Thames, for example, the Battersea shield (Stead, *Battersea Shield*), in the river Thielle at Port Nidau (Müller, *Celts* 528), and the Rhine at Bern-Tiefenau, the latter two in Switzerland (Müller, *Der Massenfund von der Tiefenau bei Bern*). Lake deposits have been found at La Tène in Switzerland (Vouga, *La Tène*), Llyn Fawr in Glamorgan (Morgannwg; see Fox & Hyde, *Antiquaries Journal* 19.369–404), Llyn Cerrig Bach on Anglesey (Môn; see Fox, *Find of the Early Iron Age from Llyn Cerrig Bach, Anglesey*; Green, *Celts* 609), and in Loughnashade (Loch na Séad 'lake of the treasures') at the foot of the traditional assembly centre of Ulaid at Emain Machae, near Armagh (Ard Mhacha).

The most famous bog deposits stem from Lindow Moss in Cheshire (Stead et al., *Lindow Man*) and Dowris in Co. Offaly/Contae Uíbh Fhailí (Eogan, *Proc. Prehistoric Society* 30.268–351). Ritual depositions were made at the thermal springs at Bath, England, in the pre-Roman Iron Age and continued throughout the life of the Romano-British cult site. It is therefore reasonable to conclude that it was the connection with water, rather than a specific location, which was the determining factor for depositing items at these sites.

Many aqueous deposits date from the Bronze Age, for example, the Dowris hoard (*c.* 800–650 BC) and many others across Europe (Torbrügge, *Bericht der Römisch-Germanischen Kommission* 51/2.1–146). They are also found throughout the Iron Age: for example, the final Bronze/earliest Iron Age hoard in Llyn Fawr (*c.* 650 BC), the Middle Iron Age hoard of Duchcov, and Late Iron Age hoards such as those in Agen. Llyn Cerrig Bach was probably in use as late as the Roman conquest of Anglesey in AD 60, as described by Tacitus (Lynch et al., *Prehistoric Wales* 214).

§2. types of finds

Aqueous deposits usually yield a very specific selection of find types. Metal objects, especially weapons and other equipment of a 'military' nature such as horse harnesses, chariot parts, and trumpets (see carnyx), as at Loughnashade, as well as sheet metal vessels, make up the main group of finds from such deposits (Müller, *Der Massenfund von der Tiefenau bei Bern* 76–112; Flanagan, *Ancient Ireland* 134–5; Lynch et al., *Prehistoric Wales* 214). Another group of objects sometimes discovered in such deposits are ornamented items made of precious metals (Flanagan, *Ancient Ireland* 135–6). In the case of some of the Gaulish wells, the remains of food offerings were recovered, mainly contained in ceramic vessels, along with imported Italian amphorae, which might have originally held wine (Haffner, *Heiligtümer und Opferkulte der Kelten* 41). Less common in aqueous deposits in general, but also known from the source of the Seine, are votive goods depicting parts of the human body, similar to those used to this day (see saint-germain-source-seine; Deyts, *Le sanctuaire des sources de la Seine*; Musée archéologique de Dijon, *Ex-voto de bois, de pierre et de bronze du sanctuaire des sources de la Seine*).

Selection of Late Bronze Age artefacts from the hoard, of the 7th century BC, found in a bog at Dowris, Co. Offaly in the 1820s: bronze trumpet, cauldron, spearhead, socketed axe, gouge, harness rings, globular 'crotal'

§3. aqueous deposits and human sacrifice

Human remains are quite commonly recovered from aqueous deposits. The most famous find of this type is 'Lindow Man', but the La Tène lake site and various wells have yielded similar finds (Haffner, *Heiligtümer und Opferkulte der Kelten* 41). Such finds are often interpreted (probably correctly in most cases) as the remains of victims of human sacrifice. The body of Lindow Man was recovered from a peat bog in Cheshire in 1984. The victim was shown to have been subjected to a threefold death (Ross, *Lindow Man* 162–4) by garrotting, cutting of the throat, and drowning in a pool in the peat bog. (The threefold death appears as a literary theme in the early Irish tales; for example, Diarmait mac Cerbaill, king of Tara (Teamhair), is said to have died by drowning in an ale vat in a burning house and was then decapitated.) Evidence of similar practices has been found at other sites. Some of the skeletons recovered at La Tène, for instance, show marks from blows received on the skull (Dunning, *Celts* 367–8), and one of the completely

preserved skeletons from La Tène apparently still had a rope around its neck when it was discovered (Pauli, *Archäologie der Schweiz* 14.130). Human remains recovered from wells, sometimes partly burned and often only isolated human bones, have also been interpreted as remains of human sacrifices.

§4. HISTORICAL ATTESTATIONS

The practice of depositing offerings to the gods in water, specifically in lakes, is also attested historically. STRABO writes in his *Geography* (4.1.13) that the treasures found in Tolosa (now Toulouse, France)—allegedly the spoils of the sack of Delphi—added up to a total value of 15,000 talents, part of which had been recovered from sacred lakes where the Gauls had deposited them. He continues:

> . . . as that one [Posidonius] and others have reported, the land, being full of gold and belonging to men who were pious and not extravagant in their living, contained treasures in many places in Celtica. What provided safety more than anything, however, was the lakes into which they had thrown heavy weights of silver and gold. At any rate, the Romans, once they were in power over the area, sold the lakes at public auction, and many of the purchasers found millstones of hammered silver in them. (Koch & Carey, *Celtic Heroic Age* 16)

A similar version of this story is found in TROGUS POMPEIUS (*Philippic Histories* 32.3).

§5. INSULAR CELTIC REFERENCES

Insular Celtic beliefs in an underwater OTHERWORLD may be a reflection of the beliefs that led Iron Age Celts to deposit items in watery contexts. The conceptual boundaries between the Otherworld(s) and the world(s) of the dead were not clearly defined, and Celtic literature is full of references to the existence of a land beneath the water. In literature and folk tradition there are stories of magical objects or goods which come from under the water, for example, the goods acquired from marriages with otherworld beings (see FAIRIES) or the wondrous sword CALADBOLG/Excalibur. By way of Malory's *Morte Darthur*, the mysterious 'Lady of the Lake' as the source and final custodian of the ritualistically deposited Excalibur remains an established fixture of international Arthurian legend.

RK

Weiskirchen is a village in Saarland, Germany, where two IRON AGE aristocratic tombs were found in 1851 and 1866. As was typical for Celtic aristocratic burials in this area in this period, many of the grave goods were either imported from Greece or Italy, or were influenced by the style of such imports. They contain artwork which shows Mediterranean

Weiskirchen, Kr. Merzig-Wadern, barrow 1, bronze belt plaque with coral inlay, end of the 5th century BC, width 75mm, Rheinisches Landesmuseum, Trier

influence, for example, the late 5th-century BC bronze belt plaque with coral inlay from Barrow 1. A drinking set, containing a drinking horn with a thin gold-leaf ring which displays eastern Greek characteristics and an Etruscan stamnos (wide-mouthed jar), has also been found in Barrow 2. Many of the Weiskirchen grave goods can be related to the early WINE trade and lend themselves to the interpretation of the Celtic afterlife as a posthumous aristocratic FEAST. These objects have been dated to 450–400 BC, which confirms that the burials belong to the later 5th or 4th century BC.

PEB

Welsh drama

§1. MEDIEVAL AND 16TH CENTURY

The earliest surviving plays in WELSH are two medieval miracle plays, *Y Tri Brenin o Gwlen* (The three kings of Cologne) and *Y Dioddefaint a'r Atgyfodiad* (The Passion and the Resurrection), a Herod and a Passion play, respectively. They were probably performed by travelling players. The other surviving medieval text, *Ymddiddan y Corff a'r Enaid* (A dialogue between the body and the soul), is a morality play celebrating man's repentance of his sins and his spiritual victory over death. Alongside such text-based theatre there existed the theatricals associated with the folk festivals of *Calan Mai* (see BELTAINE), *gwyliau mabsant* (parish wakes), and wassail celebrations (see CANU GWASAEL). While the Elizabethan and Jacobean periods in England witnessed the golden age of theatre, the corresponding periods in Wales (CYMRU) were singularly lacking in dramatic output. The decline of the BARDIC ORDER, the absence of large towns and, crucially, the drift of the gentry to the Tudor (TUDUR) court all resulted in a decline in artistic endeavour and a dearth of enabling patronage. The only surviving text that bears witness to a possible interest in plays around 1600 is the Welsh-language verse tragedy *Troelus a Chresyd*, a dramatized adaptation by an anonymous author from Denbighshire (sir Ddinbych) or Flintshire (sir y Fflint) of Chaucer's *Troilus and Criseyde* (*c.* 1372–86) and Henryson's *Testament of Cresseid* (1532).

§2. 17TH–18TH CENTURY

When an indigenous Welsh theatrical tradition finally emerged in the 18th century it was in the form of the interlude (ANTERLIWT), a metrical play performed at fairs and markets. The most accomplished exponent of the interlude was Twm o'r Nant (Thomas Edwards, 1739–1810). He and his troupe of players provided entertainment that was a combination of ribaldry and seriousness, and its popular appeal lay in its robust condemnation of social injustices, its incisive SATIRE, sharp wit, colourful language, and the masterly use of tried and tested comic techniques. No robust indigenous English-language theatre emerged in 18th-century Wales. The semi-professional companies which had existed in the 16th century were superseded in the 17th by a few informal companies which performed at fairs, festivals, and local markets. By the 18th century the town halls in several Welsh market towns had become performance venues for travelling professional companies from Ireland (ÉIRE) and England, among which was the prestigious Kemble company who drew crowds in Monmouth (Trefynwy), Brecon (Aberhonddu), and Carmarthen (CAERFYRDDIN). These companies performed plays from their extensive English classical repertoire, and the fashionable audiences attending these were satirized by none other than Twm o'r Nant, whose players in turn were dubbed 'buffoons' by an Englishwoman who failed to appreciate their popular attraction. While their tenants were enjoying the Welsh-language interludes, staged in the open air on farm carts, the gentry were entertained in style by visiting English companies at their exquisite private theatres, such as Sir Watkin Williams Wynn's theatre at Wynnstay.

§3. 19TH TO MID-20TH CENTURY

The building of substantial theatres in large Welsh towns in the early 19th century drew Edmund Kean, Sheridan Knowles, Andrew Cherry, W. C. Macready, and Thomas Barry to south Wales, while in the second half of the century the audiences at the Theatre Royal, Cardiff (CAERDYDD) saw performances by T. W. Robertson and Sarah Bernhardt. Alongside the new playhouses, there existed in Wales the highly popular portable theatres. These colourful companies visited

seasonal fairs, engaging audiences with entertainments of local appeal, enlivened by songs and striking visual effects. From 1912 onwards, however, most of the owners of the portables settled in one place and purchased theatres which they promptly turned into profitable cinemas. By the 1930s most of the 34 portable theatres which had existed at the turn of the century had either been closed down or become venues for the 'moving pictures'. While the 19th century had witnessed considerable English-language theatre activity, that theatre had not entirely escaped the crippling effect of the Methodists' prejudice against plays and players, and between 1854 and 1870 English companies kept away from several of the county towns. But it was the Welsh-language theatre that suffered most from the frenetic Methodist objection to traditional folk entertainments and theatricals such as the interludes. Despite the fact that performance of interludes ceased altogether, some of their basic elements survived, ironically, in the form of the chapel-led *Ymddiddanion* (Colloquies) and *Dadleuon* (Debates). These dramatic dialogues, based on biblical tales and extolling the good and virtuous life, were in essence miniature plays. The verve of theatre manifested itself also in the declamatory style and fiery sermons of leading Methodist preachers. Despite the Methodist fatwah, a prize was awarded at the 1849 EISTEDDFOD at ABERFFRAW (MÔN) for a translation of one of the parts of Shakespeare's *Henry IV* into Welsh, and in 1870 a prize was awarded to Beriah Gwynfe Evans (1848–1927) at the 'National' Eisteddfod at Llanberis for a full-length play on OWAIN GLYNDŴR.

The first licensed Welsh-language company was Cwmni Trefriw, which toured to full houses with its stage adaptation of Daniel OWEN's novel, *Rhys Lewis*. It was the resurgence of interest in the theatre generated by companies such as Trefriw and Llanberis that led to the fierce denunciaton of play-acting during the Methodist session at Corwen in 1887. An attempt to re-establish drama as a serious art form was made in an address by O. M. EDWARDS at the 1894 National Eisteddfod (EISTEDDFOD GENEDLAETHOL CYMRU) at Caernarfon and again, by David LLOYD GEORGE, at the 1902 National Eisteddfod at BANGOR. By 1910 the Methodist objection to play-acting had been sufficiently eroded to allow the widespread performance of plays to raise money for good causes, including the upkeep of chapels. There followed a sharp increase in the number of amateur companies and the war years saw no decline in the popularity of theatre. Indeed, between 1914 and 1918 notable companies such as the Pontarddulais-based Dan Matthews company were established. The post-war period was to see the golden age of the amateur movement in Wales, and the widespread building of village memorial halls provided the companies with convenient stages and auditoria for drama competitions and festivals. It has been estimated that in 1931 there existed in Wales between 400 and 500 dramatic societies, and at least 300 published Welsh plays. Among the most popular were plays by W. J. Gruffydd (1881–1954), J. O. Francis (1882–1956), D. T. Davies (1876–1962), Idwal Jones (1895–1937), and J. Kitchener DAVIES (1902–52).

Amidst the growing popularity of the amateur movement at the outbreak of the First World War, Lord Howard de Walden (Evelyn Scott-Ellis) made a misguided attempt to establish a Welsh National Theatre Company. In 1914 he and other influential establishment figures met in Cardiff to form a professional touring company, but following the company's disastrous and thinly attended debut at Cardiff the project was abandoned. In 1933 de Walden made another attempt at establishing a 'national' company by funding a 'Welsh National Playhouse' at Plas Newydd, Llangollen. It had the dual aim of being a bilingual touring company and a resource and training facility. Its exclusivity and a series of unwise artistic decisions meant that it failed to attract Welsh audiences, and the outbreak of the Second World War saw the demise of the Plas Newydd venture. It also witnessed the collapse of a substantial number of the amateur companies, only a third of which reformed after the war. Some of the new companies that appeared post-war, such as Cwmni Ceredigion and Chwaraewyr Garthewin, attracted a more critical and 'choice' audience. The Garthewin Players in particular, at their remarkable 18th-century converted barn theatre on the estate of R. O. F. Wynne in Denbighshire, staged plays written specifically for the company by Saunders LEWIS, Wales's leading dramatist. Other small theatres soon followed Garthewin's example in forging a fruitful relationship between a particular dramatist

and a particular local community, such as that between the author/director F. George Fisher and Theatr Fach Llangefni, and between Theatr y Gegin, Cricieth, and the excellent dramatist William Samuel Jones (Wil Sam, 1920–).

§4. LATER 20TH CENTURY

In 1965 the important contribution made by the amateur movement to the cultural life of Wales was reflected in the formation of the Drama Association of Wales, a facilitating body serving the needs of amateur companies.

Despite, or possibly because of, the growing influence of television and its visible effects on the size of theatre audiences, the 1950s and 1960s in Wales saw increasing emphasis being placed on the need for greater professionalism. During this period the plays of Emlyn Williams (1905–87), Gwyn Thomas (1913–81), Alun Richards (1929–), and Alun Owen (1925–95) were staged in England, and talented Welsh actors such as Richard Burton, Rachel Roberts, Donald Houston, Stanley Baker, Siân Phillips, and Hugh Griffith were establishing themselves as international stars of stage and screen. In Welsh-language theatre, the plays of Huw Lloyd Edwards (1916–75), John Gwilym Jones (1904–88), and Gwenlyn Parry (1932–91) commanded loyal audiences. In 1962 the Welsh Arts Council (Cyngor Celfyddydau Cymru) funded a bilingual touring 'Welsh Theatre Company' under the directorship of Warren Jenkins. When it registered itself as a 'national' company it immediately engendered the wrath of the St David's Theatre Trust, established in 1959 to ensure a custom-built theatre building for a brand new National Company in Cardiff. An acrimonious battle ensued and the matter was finally resolved by an independent legal enquiry which found that the 'Welsh Theatre Company' had no right to the title 'national'. The St David's Theatre Trust faded from view and an enervated 'Welsh Theatre Company' ceased to perform in 1978.

The Welsh-language wing of the doomed 'Welsh Theatre Company' fared better. Formally launched in 1965, Cwmni Theatr Cymru appointed Wilbert Lloyd Roberts as its director in 1968. By 1973 it had become a wholly independent company which for the first time provided talented actors such as Gaynor Morgan Rees, John Ogwen, Lisabeth Miles, and Beryl Williams with the opportunity to pursue a professional career within the theatre in Wales. It also nurtured the talents of dramatists such as Meic Povey (1950–). Internal disagreements led in 1982 to the replacement of Wilbert Lloyd Roberts by Emily Davies, who created an ensemble of relatively young actors. The initial exclusion of experienced actors alienated the theatre sector and, despite some notable productions by guest directors such as Ceri Sherlock, the company was doomed to failure. Two years later, financial problems led to Cwmni Theatr Cymru's demise, and the idea of a flagship national theatre was temporarily abandoned. The existence of the mainstream companies, however, had not impeded the development in Wales of extraordinarily innovative ventures, such as the Cardiff Laboratory Theatre (now the Centre for Performance Research), established in 1974 by Richard Gough and Mike Pearson. These practitioners had been influenced by the work of Grotowski and Barba's Odin Teatret and, together with Geoff Moore of Moving Being, based then at the influential Chapter Arts Centre in Cardiff, they looked towards Europe for patterns of experimentation with style and form. In the works of these companies, and in the performances of related companies such as Magdalena, Man Act, and Pauper's Carnival, physical, visual, and mixed-media performances challenged the largely traditional, comfortable, middle-class productions of Wales's mainstream theatre. These new innovative companies also tended to avoid the concrete theatre buildings which had silently sprung up in towns or on university campuses during the early 1970s, and which acted as receiving venues for visiting companies. One such theatre, with its own producing company, was Theatr Clwyd, which provided its English-oriented audiences with productions of the classics and popular West End fare.

In Welsh-language theatre, too, alternative small-scale companies existed alongside the mainstream Cwmni Theatr Cymru. Theatr Ddieithr staged plays by Wil Sam and Meic Povey and Theatr O sought to provide new perspectives on classical plays. One company in particular, Theatr yr Ymylon, was established in 1972 by a group of actors specifically to create a new theatrical tradition in Wales. This it failed to achieve, but in the first year of its existence the company had performed more plays by promising

Welsh dramatists than the ubiquitous Welsh Theatre Company had done in ten years. In 1979 management problems brought the work of the company to an end. Perhaps the most innovative company to emerge in the 1970s was the Gwynedd-based Theatr Bara Caws which first came to prominence in 1977 with its challenging review satirizing the royal jubilee celebrations. This politically left-wing community theatre company, which continues to flourish, toured its devised shows to pubs, clubs, and village halls throughout north Wales with the specific aim of 'taking theatre to the people'. In south Wales, Whare Teg and Theatr Gorllewin Morgannwg served their immediate communities, with the latter developing its own distinct, highly theatrical productions, based on local concerns and on broader Welsh-language issues.

Since the early 1970s Wales has been richly served by Theatre in Education and Theatre for Young People companies. Some of the companies, notably Spectacle and Arad Goch, have an impressive international outreach, while Theatr na n'Og in industrial south Wales and Cwmni'r Frân Wen in rural Gwynedd have concentrated on developing a loyal local audience. Gwent Theatre, Theatr Iolo, and Theatr Powys have an equally firm base in their local communities and have nurtured creative links with dramatists such as Charles Way, Greg Cullen, and Dic Edwards. Theatr Clwyd and, in particular, Cardiff's Sherman Theatre also cater for young audiences.

Several of the companies which had considerable impact on the theatre scene in Wales during the last decades of the 20th century have now disappeared, among them Hwyl a Fflag, Dalier Sylw, Made in Wales, and Theatrig. Other companies, however, have survived and continue to develop and expand their repertoire. Volcano's physical and dynamic productions draw audiences at home and abroad, Hijinx tours Wales and England with performances for people with learning disabilities, while Y Cwmni, dramatist Ed Thomas's enterprising company, has widened its remit to include radio, film, and television. Theatr y Byd and Mappa Mundi present the occasional production, Mega's popular Christmas pantomime plays annually to full houses, Theatr Gwynedd and Theatr Clwyd have kept to their remit to stage the classics, and Sgript Cymru works bilingually with authors on script development and production. Despite the lure of journeyman scripting for media soaps, there has been a resurgence of interest in writing for the stage among a new wave of dramatists such as Ian Rowlands, Siân Evans, Christine Watkins, Richard Davies, Frank Vickery, Lucy Gough, Aled Jones Williams, Gary Owen, Sera Moore-Williams, and Mark Jenkins.

However, the talent-drain from Wales continues, and young actors such as Daniel Evans, Ioan Gruffudd, Rhys Ifans, and Matthew Rhys have become international names in theatre, film, and television. It is to be hoped that the Welsh-medium Theatr Genedlaethol Cymru, established in 2003 and directed by Cefin Roberts, and the proposed English-medium National Theatre Company will give Welsh audiences the opportunity to see these actors perform at home in large-scale productions. The two new 'national' companies, however, will need to proceed with care and be prepared to learn from the lessons of the past. The strength of Welsh theatre has traditionally been in the popularity of its vigorous amateur and small-scale professional companies. It remains to be seen whether the advent of the National Assembly for Wales (Cynulliad Cenedlaethol Cymru) with its own Minister for Culture will, in the new millennium, help to guarantee the success and survival of the designated 'national' theatre companies.

Hazel Walford Davies

The **Welsh language** (Cymraeg [see CYMRU §4]) is one of the four Celtic languages that have survived continuously from pre-modern times till today. By most measurements, it appears to be the healthiest of the living Celtic languages. The 2001 census counted 575,604 as Welsh speakers, 20.5% of

the population of Wales (Cymru), an increase from 508,098 in 1991. However, in making comparisons with the health of the other Celtic languages and assessing the full strength of Welsh itself, several other factors must be borne in mind. First, whereas Scottish Gaelic is also counted by similar methods in the UK census and its overall decline and relative weakness are apparent, there are no comparable statistics available for Breton at all, and the assessment in the Irish Republic (Éire) has focused attention on first-language speakers in officially designated Gaeltacht areas, with accordingly less emphasis on accomplished learners and native Irish speakers in cities. Even for Welsh, higher figures are implied by other criteria, such as consumers of Welsh mass media—print and broadcast. The census—which is orientated to assessing the need to provide services in Welsh—does not count Welsh speakers elsewhere in the UK, even though there is a small Welsh-speaking area on the border in Shropshire (swydd Amwythig), as well as sizeable communities in London (Llundain) and Liverpool (Lerpwl). There are also native Welsh speakers and learners in Patagonia and scattered more broadly throughout the New World and Europe (see emigration), all of which is of increasing relevance at present given the ease of travel, communication, and the possibility of electronic virtual communities. Immeasurable, or at least hitherto unmeasured, behaviour also contributes to the impression of the relative vitality of Welsh in comparison with other minority languages: for example, the tendency of bilingual Welsh–English social groups to adopt Welsh as their preferred medium spontaneously and the eagerness of Welsh speakers to form Welsh-speaking subgroups within larger mixed groups.

§1. historical stages

The basic scheme of Old Welsh, Middle Welsh, Modern Welsh is universally followed by Welsh and Celtic scholars, though, at the transitions, the dates assigned to the turning points and which texts are placed in each horizon vary somewhat among the experts, these ultimately being arbitrary conventions. The chief remaining issues will be treated below. For purposes of this Encyclopedia, *c.* 800–*c.* 1100 will be regarded as the Old Welsh period, *c.* 1100–*c.* 1500 as the Middle Welsh period, and *c.* 1500 onwards as the Modern period. For Welsh as used over the last century or several decades—showing the impact of mass media, the rise of Welsh-medium education, and gradual decline of the influence of the Bible and pulpit—'recent Welsh' is the term.

§2. when did british become welsh?

One obvious problem with the above scheme is that some surviving texts of early Welsh poetry are widely believed to date back to the 6th and 7th centuries, the pre-Old Welsh period. We may follow Kenneth Jackson in calling the period *c.* 550–800 'Primitive Welsh', but this does not solve the problem for Welsh literary history. Most of the extant poetry attributed to the Cynfeirdd (first poets) is—if authentic—court poetry of north Britain (Hen Ogledd), not what is now Wales; therefore, by Jackson's scheme, it was composed in Primitive Cumbric, not Primitive Welsh. Thus, this solution creates a second problem for literary history in that the earliest Welsh poetry is either not in fact Welsh or, if Welsh, not really so early.

The question of the authenticity of the *Cynfeirdd* poetry has long been bound up with that of when did British (the ancient Celtic language of Britain) become Welsh. The crux of the matter has been the question itself, which scholars unawares have tended to understand to mean two contradictory things. First, British becoming Welsh is understood as an ancient Celtic language becoming a medieval one, which is essentially a matter of a new syllable structure and sound pattern emerging. Thus, a British name written as Romano-British CVNOMORI (genitive, British nominative **Cunomāros*) comes to be written *Conmor*, pronounced */kʊnmɔr/*, with unaccented syllables at the end of polysyllabic elements dropped and consonants which had stood between vowels in ancient Celtic now softened (lenited). From the *Conmor* stage onwards, the syllable structure remains stable, and therefore there is no linguistic reason that a poem composed in this early medieval language could not have survived for centuries with its metre intact. Since Jackson thought that the syllable losses and lenition were complete by *c.* 550—and most experts either agree or propose earlier dates—it is not impossible for 6th-century poetry to survive as Welsh.

But 'British becoming Welsh' has also been understood as Welsh emerging as distinct from the three other 'Neo-Brythonic' languages—Breton, Cornish, and Cumbric, which creates the obstacle that it might be considered that the Gododdin cannot be authentic because it is Welsh, and Aneirin would have composed in another language, Cumbric. In fact, this is a non-issue. In the first place, a form like *Conmor* is indistinguishable on linguistic criteria as to whether it is Welsh, Cornish, Breton, or Cumbric, and this is generally true of the archaic forms which occur in the witness lists of the 7th- and 8th-century charters of Llancarfan and the Book of Llandaf, for example. Therefore, to speak of four separate languages —or even distinct dialects—is unwarranted on the basis of the written sources which we have for the pre-Old Welsh period. Furthermore, the fact that the ancient Celtic language which became Welsh, Breton, Cornish, and Cumbric underwent the sweeping syllable losses and lenitions in exactly the same way at exactly the same time confirms that they were still one language at the time, not four. Although we may wish to call the new form of Brythonic which appears in the later 6th century 'Welsh' to make the point that it looks and sounds much more like Welsh than the ancient language of the Iron Age and Roman period (the '**Cunomāros* stage'), there was throughout the 7th and 8th centuries still one common early medieval Brythonic spoken along a continuous arc from Dumbarton on the Clyde to southern Brittany (Breizh). In this way, British did not become Welsh—not directly, at least—and we might have poetic texts surviving through the medium of Welsh though composed before distinctively Welsh speech had emerged from early medieval Brythonic, and, therefore, possibly composed outside what is now Wales (Cymru).

In addition to the personal names in charters mentioned above and the more controversial old poetry, evidence for the pre-Old Welsh period includes Brythonic place-names in England borrowed during the Anglo-Saxon settlement period. That early medieval Brythonic was a written language—already using the orthographic system shared by Old Welsh, Old Breton, and Old Cornish—is also shown by a few names which Beda (writing *c.* 731) obtained from a Brythonic source which he used for the battle of Chester (Caer) *c.* 615—*Ca[i]r-Legion*, *Brocmail*, and *Bancor* (*Historia Ecclesiastica* 2.2). There are also inscriptions, which survive on contemporary media, but are difficult to date and often difficult to read. For example, the Tywyn inscription (Nash-Williams, *Early Christian Monuments of Wales* no. 287), which is in continuous Neo-Brythonic, was dated to *c.* 700 by Ifor Williams (Bromwich, *Beginnings of Welsh Poetry*) and Jackson, but is now placed in the earlier Old Welsh period by Sims-Williams, possibly later than the 'Surexit' Memorandum. However, if we accept as the most plausible reading *Cungen celen tricet ni tanam* 'Cynien's corpse rests under me [the stone]', a pre-Old Welsh date better suits the spelling, as it does other forms on the Tywyn stone—*Dubut*, *Marciau*, and *petuar* 'four', and also *mort*, if this corresponds to Modern *Mawrth* < Latin *Mārtis*.

§3. Old Welsh or 'lingua britannica'

Early medieval Brythonic as a single written language implies the existence of a coherent community of literate speakers. As discussed in the article on Offa's Dyke (Clawdd Offa), the Welsh border near its present course was first physically defined in the later 8th century as the western frontier of Anglo-Saxon Mercia. By the first decades of the following century, sea links between the Brythonic countries would have been much endangered by the maritime supremacy of the Vikings. Thus isolated geographically, Welsh linguistic innovations become evident in the written language, allowing Old Welsh to be distinguished from Old Breton and Old Cornish. There are three important innovations: (1) the definite article emerges as /ər/ written *ir*; (2) unaccented /ʊ/ and /ɪ/ fell together as /ə/ (the neutral vowel in English *cut*), written *i* and *e*; (3) under the word-final accent /ǫ/ (< Celtic *ā*) becomes the diphthong *au* (as in English *out*), thus *Merchion* (< Latin *Marciānus*) becomes *Merchiaun*, though remaining *Merchion* in Old Breton. This third change does not seem originally to have included the south-east, where, much as in Old Breton, *Merchion* first becomes *Merchiun* and *Conmor* becomes *Conmur*; the county < kingdom name Morgannwg and the saint's name *Cattwg* (as opposed to *Cadog*) also show this old hallmark of the 'Gwenhwyseg' dialect.

Although Old Welsh is identifiable on linguistic criteria by *c.* 800, we may ask whether it was different

enough to think of it as a separate language or, rather, more meaningfully appreciated as a dialect of a still unified Brythonic. Several details point towards the latter conclusion. It is still often difficult to determine which early Neo-Brythonic 'language' we should assign to short GLOSSES. Even for the more substantial texts—including DE RARIS FABULIS, the LEIDEN LEECHBOOK, and the glosses in the BRETON EARLY MEDIEVAL MANUSCRIPT Angers 477—the dialect is mixed or indeterminate and has required elaborate theories of scribes and/or manuscripts moving around the Brythonic world. Furthermore, as Léon FLEURIOT emphasized, Brythonic Latin texts of the period refer to one language *lingua Britannica* or adverbial *Britannice*, cf. the single word *Combrec* used for Brythonic in SANAS CHORMAIC ('Cormac's Glossary') and other Old Irish GLOSSARIES (likewise Beda's *lingua Brettonum* as one of the four languages of 8th-century BRITAIN). All of this points to the continued unity of the Brythonic literate class down to around the year 1000.

§4. MIDDLE WELSH

Between Old and Middle Welsh, the LAW TEXT *Braint Teilo* (Privilege of St TEILO) in the Book of Llandaf can be usefully considered as 'Late Old Welsh'. Rachel BROMWICH and D. Simon Evans have plausibly suggested the same for the ARTHURIAN tale CULHWCH AC OLWEN. However (excepting *Braint Teilo*'s newer second part), these texts survive only in copies later—though we do not know how much later—than their dates of composition, which are themselves uncertain; therefore, we do not know exactly when the Late Old Welsh period and transition to Middle Welsh occurred.

On account of their international popularity since the mid-19th century and their canonical centrality to the study of Welsh literature, the MABINOGI to a large extent define Middle Welsh, but this entails certain complexities. It is certain that the Four Branches are older than the 14th-century White Book of Rhydderch (LLYFR GWYN RHYDDERCH) and the 15th-century Red Book of Hergest (LLYFR COCH HERGEST), but how much older is disputed: several experts favour composition *c.* 1050 × *c.* 1120, but dates as late as *c.* 1200 × *c.* 1250 have been proposed. Thus, Middle Welsh in its most familiar form might be—in any particular feature—largely the result of authorial activity of *c.* 1100 or scribal/editorial activity nearer 1300. There is also the question of the oral form of the traditional narratives before they were first written and the possible ongoing influence of orality during the period of written transmission.

This Middle Welsh of the *Mabinogi* is for the educated Modern Welsh speaker much more readable than Old Welsh. The orthography and vocabulary are closer to present-day usage. However, whereas Modern Welsh is verb-initial, Middle Welsh narratives use the now obsolete 'abnormal order', in which the usual sentence consists of a noun phrase or adverbial topic, followed by an unaccented particle (sometimes with an infixed object pronoun), followed by the verb, and then the rest of the sentence: for example, *amser a ꝺoeth uꝺunt e uynet e gyscu, a y gyscu yꝺ aethant, ef a'r urenhines* 'time came for them to sleep, and they went to sleep [to sleep they went], he and the queen'. This pattern is strikingly similar to the syntax of Middle Cornish and Middle and Modern Breton.

Whereas the Middle Welsh prose of the highest literary importance is hard to date and mostly anonymous, most of the vast corpus of Welsh poetry of the period is credibly attributed and closely datable, falling into two broad periods: *Beirdd y Tywysogion* (Poets of the Princes) or the GOGYNFEIRDD, in the period *c.* 1100–1284, and *Beirdd yr Uchelwyr* (Poets of the Nobility), roughly synonymous with the CYWYDDWYR, in the 14th and 15th centuries. With the earlier group, though closely datable and with standard texts now available in *Cyfres Beirdd y Tywysogion* (ed. Gruffydd), there are reasons not to take this corpus as representing Middle Welsh in general. In particular, it forms a conservative unbroken tradition with the poetry of the preceding period—in vocabulary, the structure of the verb (absolute and conjunct endings, infixing pronouns within compound verbs, &c.), and word order in general. Comparison with the prose genres shows that court poetry—not surprisingly—must have differed greatly from everyday speech. But the poets, particularly the *Cywyddwyr*, do give us valuable insights into spoken Welsh. For example, French and English loanwords often make their first appearance in poetry. With regards to phonology, we know that Neo-Brythonic accented polysyllables had once been stressed on their finals, but today these words are stressed on the penult (second to last syllable). While it is not clear whether this change

had happened or not in Old Welsh, the metrical requirements of Middle Welsh poetry show that it had occurred by then. In Modern Welsh, the lenition of *p t c* are *b d g*, which are exactly the same sounds as unlenited *b d g*. However, in Old Welsh, the lenition of *p t c*, as well as being written *p t c*, generally alliterated with unlenited *p t c*, indicating that they were probably not yet the same sounds as radical *b d g*. The evidence from the *Gogynfeirdd* is mixed on this point, but the CYNGHANEDD of the *Cywyddwyr* requires the modern alignment of consonant phonemes.

§5. MODERN WELSH

The Bible of 1588—as a prestigious printed book—was very influential in defining a literary standard for Modern Welsh prose, though a number of features found there are now obsolete in all registers, for example, the abnormal order (*Duw a ddywedodd . . .* 'God said . . .'). The success of the Protestant REFORMATION and Nonconformist revivals in Wales ensured that most of the Welsh-speaking population was heavily influenced by the high-register language of the Bible and the pulpit until the decline of religion in the later 20th century (see CHRISTIANITY).

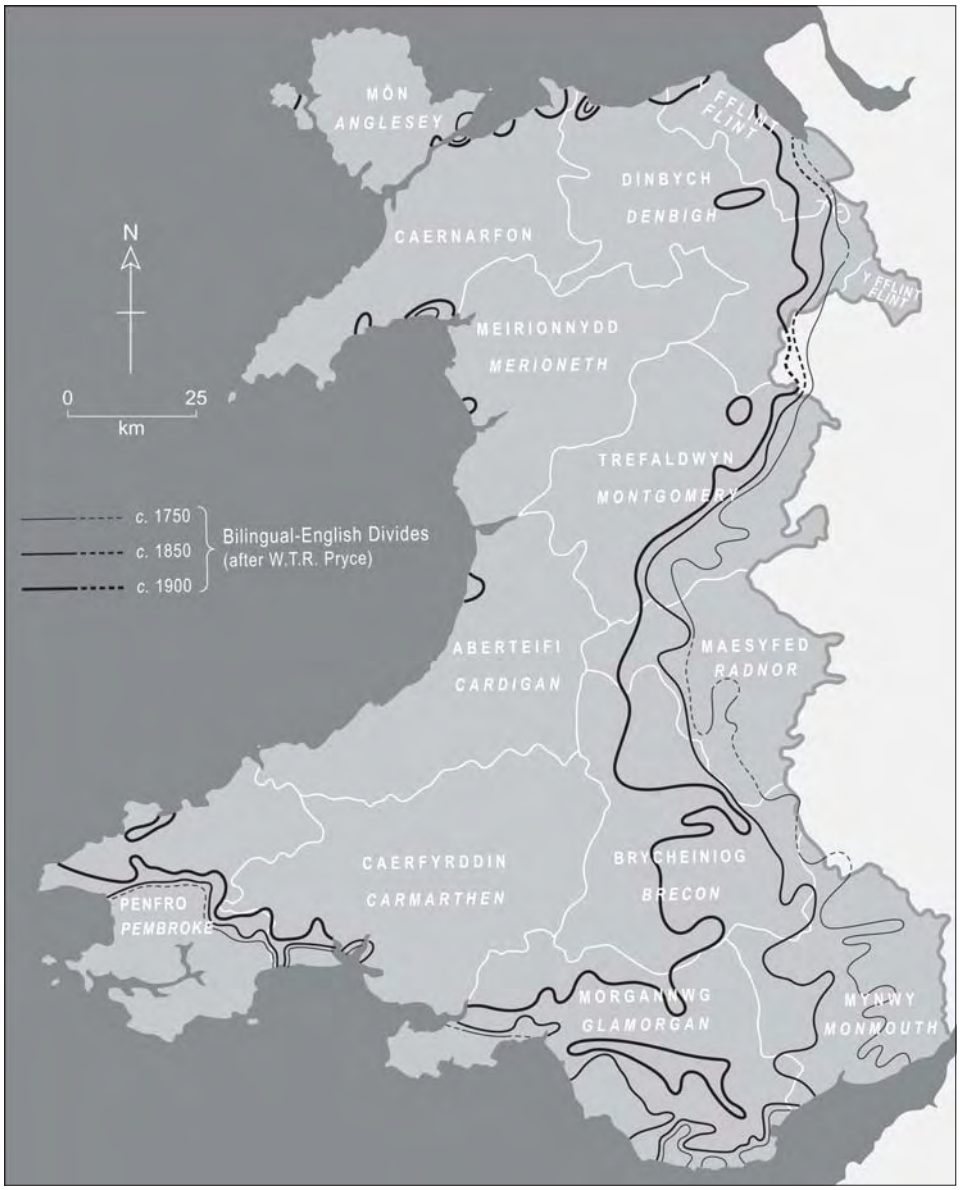
In poetry, the influence of the *Cywyddwyr* and particularly of DAFYDD AP GWILYM on Welsh has remained much greater than that of his younger contemporary Chaucer on Modern English. This is partly a matter of phonology. English has lost many syllables and has changed the pronunciation of all its long vowels since Chaucer's day, and the vocabulary has also changed a great deal; therefore, one cannot simply 'edit' a Middle English poem in order to render it readable and understandable as Modern English, though this can be done with Welsh. When poets such as Iolo Morganwg (Edward WILLIAMS) and his circle and, more recently, the Celtic scholar John MORRIS-JONES revitalized the bardic tradition, they were able to rely heavily on the Poets of the Nobility as their models. This was true not only for Morris-Jones's metrical handbook CERDD DAFOD (1925), but also his *Welsh Grammar* of 1913 (see DICTIONARIES AND GRAMMARS), and underpinned the reforms which he led in Welsh orthography, thereby refining the system which remains the standard today. Focusing on the representation of sounds as relevant for rhyme and *cynghanedd* resulted in one of the most truly phonemic and regular spelling systems in use in the world, so regular that it is difficult to determine whether anyone who has learned the system actually understands a text that he or she reads aloud. In general, then, the transition between Middle and Modern Welsh was not sharp, and the language at its more formal and literary levels has continued to feel the influence of an accepted canon of literary classics from earlier periods.

§6. DIALECTS

As mentioned above, there is considerable evidence that the language of the south-east did not initially participate in the change of /ǫ/(< Celtic *ā*) > *au* when under the stress, one of the primary sound changes which distinguish Welsh from Cornish and Breton. Down into Recent Welsh, one of the features which has continued to distinguish the *Gwenhwyseg* dialect has been the past-tense ending *-ws* where other dialects and the standard language have *-odd*. For Middle Welsh, it is likely that preference of *-ws*/*-wys* vs. *-awd* in texts indicates a southern vs. northern origin.

Modern Welsh, when compared with the other Celtic languages, is remarkable for the strength of its standard literary language—unlike Breton—and what might be termed the 'verticality' of its varieties, that is, numerous more and less formal, more and less old-fashioned styles belonging to special oral and written social domains, but not limited geographically. Unlike the Gaeltacht regions of contemporary IRISH, Welsh-speaking areas remain geographically contiguous. Until the later 20th century, the strength of the chapels and the appointment of ministers of religion outside their home region were unifying factors. In recent times, the growth of Welsh broadcast media and Welsh-medium education has further diminished dialect variation in the informal speech of the younger generation, in ways not dissimilar to processes in contemporary English.

Nonetheless, there are Welsh dialects. The big cleavage is north–south, most immediately obvious in pronunciation, there being nothing comparable in Welsh to a 'received pronunciation' or 'BBC English' taught everywhere. The retracted [ɨ(:)] for orthographic *u* and *y* (the latter when in final syllables of accented words) in the speech of north Wales is

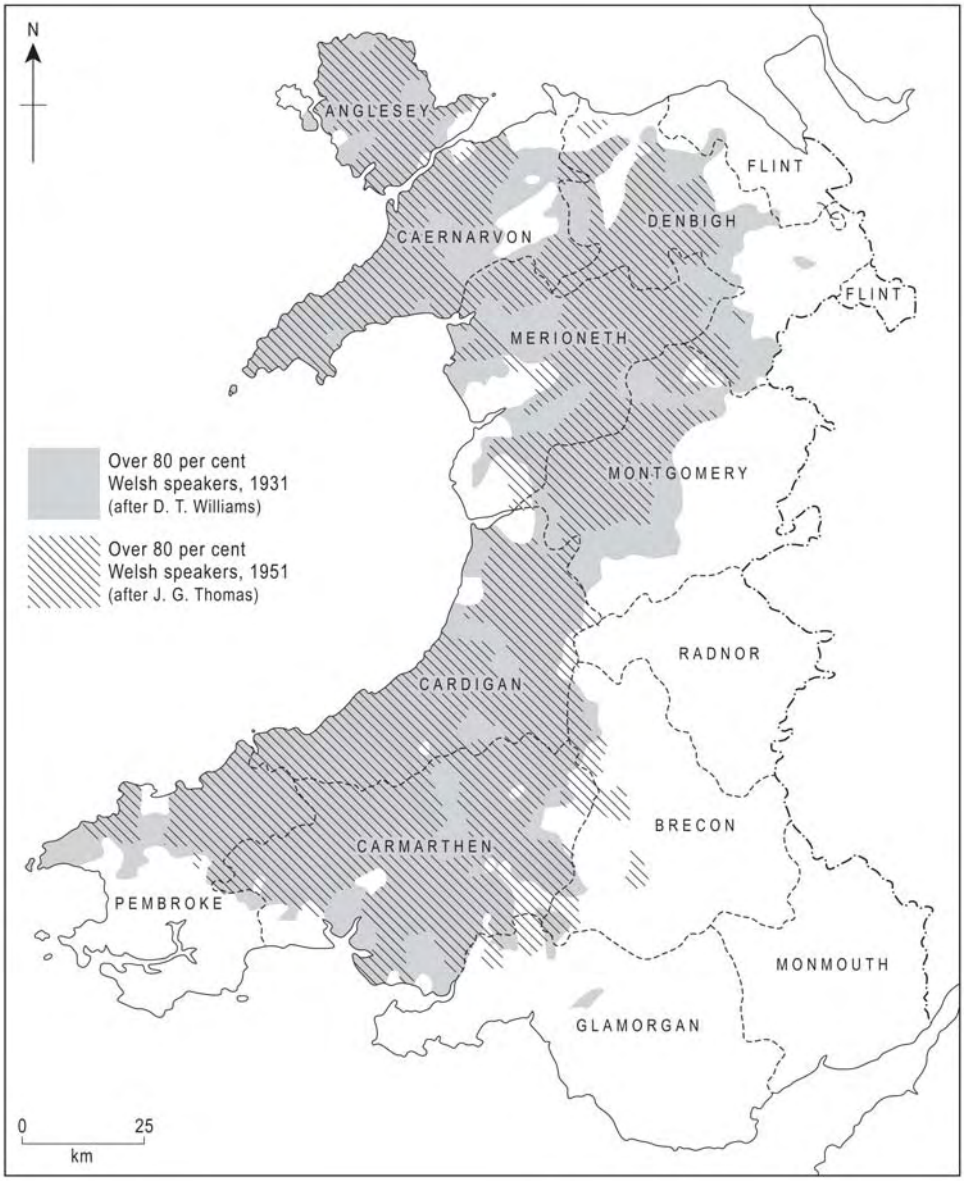


immediately obvious (the sound does not occur in English), where southerners have [i(ː)] (as in English *see*) for these sounds and also for orthographic *i* as well. This convergence of vowels—which can be seen already in some 15th-century manuscripts—is a major disadvantage for southerners for correct spelling. Some southern Welsh dialects, like KLT Breton, tend to have very long vowels in stressed penultimate syllables before certain consonants (historically single consonants): thus, southern [ˈdeːvɛd] 'sheep' vs. northern [ˈdɛvaid]. The dialect of Pembrokeshire (sir Benfro) is noted for its treatment of some diphthongs: thus, *oes* 'yes, there is' is [weːs] there, [oːs] elsewhere in the south, and [oːɨs] in the north.

Common vocabulary differences include literary *ef* 'he, him' as *fo*, *o* in the north, *fe*, *e* in the south. 'Milk' is *llefrith* in the north, standard and southern *llaeth*. Northern *(h)efo* 'with' is used in speech in place of standard and southern *gyda(g)*. Standard and northern *allan* 'out' and *(i) fyny* 'up' contrast with southern *mas* and *(i) lan*; northern *agoriad* 'key' against standard and southern *allwedd*. *Mai* introduces emphatic subordinate clauses in the north, *taw* in the south. The list could be greatly extended.

§7. social history

The Acts of Union (1536–43) effectively disenfranchized monoglot Welsh speakers within the domains of politics and law. The negative impact was soon offset by the elevation of Welsh as the language of public worship in 1563. Pre-industrial Wales remained overwhelmingly monoglot Welsh. By *c.* 1800



around 90% of the 687,000 people living in Wales were Welsh speakers—contrasting with 50% Irish speakers in Ireland—and around 80% of them were *monoglot* Welsh speakers.

Brad y Llyfrau Gleision (The treachery of the blue books) of 1847 is often viewed as an inflammatory turning point. The three volumes were the work of three English inspectors appointed by Parliament in Westminster to report on the state of education in Wales. Their conclusions that there were not enough schools, that many teachers were inadequately prepared, and that many children did not attend, were probably true. But they also reported that the Welsh people were dirty, lazy, dishonest, prone to drunkenness, and sexually immoral. They blamed the Welsh language and the Nonconformist chapels for this state of affairs. R. J. Derfel's 1854 play *Brad y Llyfrau Gleision* satirized the inspectors. This title plays on *brad y cyllyll hirion* (treachery of the long knives), an episode in Welsh LEGENDARY HISTORY in which the war band of the Anglo-Saxon Hengist murdered the elders of Britain after a FEAST. In the long run, the 'blue books' may have helped the Welsh language, stimulating the LANGUAGE REVIVAL movement and NATIONALISM among the offended Welsh. Mid- and later 19th-century Welsh-language publishing over a wide range of edifying subjects, as well as the Welsh temperance movement, took impetus from an urgent desire to prove the commissioners wrong. The 'blue books' remain a rallying issue for Plaid Cymru and

Cymdeithas yr Iaith Gymraeg long after critics of the Welsh language and its culture have forgotten the report. On the other hand, the Welsh-speaking class in the Victorian period believed that English was the language of progress and getting on in the world. Many of them thus considered Welsh to be a barley-bread tongue, fit only for the chapel, the fair, and the hearth.

The more substantial factor working against Welsh by the latter years of the 19th century was tumultuous change brought about by industrialization, particularly in the south. Nonetheless, owing to an overall increase in population, absolute numbers of Welsh speakers continued to rise while declining as a percentage. Thus, in 1891, there were nearly a million Welsh speakers, but by now they represented only half of the population of Wales. The figures declined in both absolute terms and as a percentage following the First World War, and continued to decline throughout the 20th century, though more gradually towards the end, before the upturn of 2001. The latest census figures were based on respondents reporting one or more of four skills in Welsh—reading, writing, speaking, comprehension of spoken Welsh—which probably does not eliminate completely responses based on group identity and politics rather than actual linguistic ability. The long-term future of the language cannot be foreseen, but some current trends are likely to continue in the next years in view of the career opportunities which now exist in the Welsh Assembly (Cynulliad Cenedlaethol Cymru), in Welsh-medium education, and in Welsh-language mass media: we can expect higher proportions of urban and educated Welsh speakers and of speakers for whom Welsh is a second language.

Welsh literature and French, contacts

Over the last hundred years, consideration of possible contacts between French and Welsh literature has tended to focus on the development of Arthurian traditions, perhaps at the expense of other types of text. In fact, Welsh awareness of Continental narrative traditions can be found in the earliest surviving literature, for example, some poems in the Book of Taliesin (Llyfr Taliesin) reveal familiarity which reflect the tales of Alexander and Hercules. By the 12th century, Welsh literature was perhaps closer to the culture of continental Europe than that of Ireland (Ériu).

There is ample historical evidence for general contact between Wales (Cymru) and France in the medieval period, especially after the gradual penetration of the Normans into the Borders and south-east Wales opened new channels of communication. This led to the establishment of Anglo-Norman as a written and spoken language in those areas in particular. Professional interpreters were employed, translating between Welsh, Anglo-Norman, and English. One of their number, Bledhericus Latemeri (*fl.* 1089–1133), has been tentatively identified as Bledri (Mod. Welsh Bleddri), the *famosus fabulator* mentioned by Giraldus Cambrensis and the Bleheris mentioned in the second continuation of the *Perceval* of Chrétien de Troyes, and therefore credited with a key rôle in the trans-

mission of Arthurian tradition. But contacts developed in many areas—ecclesiastical, mercantile, political, social, and educational—both directly and via England, creating the conditions for literary influence and even borrowing.

By the 14th century, documentary evidence exists of French manuscripts circulating in Wales, notably texts of *Roman de la Rose* and the *Prose Lancelot*. The influence of the former and of the French and Provençal love lyric on the poetry of DAFYDD AP GWILYM and his successors has been eloquently argued, though precise cases of borrowing, and the channels involved, are harder to establish than general areas of agreement between texts.

The nature and extent of French influence on prose is very difficult to quantify in the earlier period of Middle Welsh. It has been argued that oral storytellers from Brittany (BREIZH) could have been a channel for transmitting material from Welsh into French, but there is little documentary evidence for this process or indeed of direct literary borrowing in that direction. The *lais* of Marie de France appear to be more closely related to BRETON than Welsh tradition (see BRETON LAYS), while the setting for other early Continental Arthurian texts, notably the late 12th-century romances of Chrétien de Troyes, is more likely to derive from GEOFFREY OF MONMOUTH'S HISTORIA REGUM BRITANNIAE than from a putative Welsh source. Various motifs or episodes found in French ROMANCES of this period do have counterparts in surviving Welsh texts, and personal names or epithets often appear to be related, but it is highly unusual to find in French sources the same marriage between story and protagonist as in Welsh. The tale of the Welsh CARADOG FREICHFRAS (Caradoc great-arm), which reappears as that of Caradoc Briefbras (Caradoc short-arm) in the first continuation of Chrétien's *Perceval*, is a rare, if not the only, exception, and here the shift of meaning in the epithet, while retaining its approximate form, has caused some changes in the narrative.

Many of those French romances thought to derive from Celtic tradition may in fact have no extant counterpart in Middle Welsh. The story of DRYSTAN AC ESYLLT (see also TRISTAN AND ISOLT), for example, is only hinted at in medieval sources, and the lack of surviving parallels in such cases precludes firm conclusions. In general, it appears that French authors, if they did draw on Welsh traditions, did so at second or third hand, reordering unrelated names or motifs within a new, imaginative framework.

From the 13th century onwards, however, by which time French was almost rivalling Latin as an international language, there is concrete evidence of influence in the opposite direction, in adaptations or translations into Welsh of recognizable French texts, both epic and romance, complementing the contemporary rise in translation of Latin texts into the vernacular. YSTORYA BOWN DE HAMTWN, the Welsh version of the Anglo-Norman *Geste de Boun de Hamtone*, was perhaps translated in the mid-13th century, followed by *Cân Rolant* ('The Song of Roland'), *Rhamant Otuel* ('The Romance of Otuel'), and *Pererindod Siarlymaen* ('Charles's Pilgrimage'), all translated in the late 13th or early 14th century from French originals within the Roland-Charlemagne tradition. The related *Turpini Historia* appears to have been translated from a Latin original between 1265 and 1282. This is not the only case of a Welsh translation of a text circulating in France being based on a Latin exemplar; others include CHWEDLEU SEITH DOETHON RUFEIN ('Tales of the Seven Sages of Rome') and CYDYMDEITHAS AMLYN AC AMIG (The companionship of Amlyn and Amig), both probably translated in the second half of the 14th century, for they are first attested in the Red Book of Hergest (LLYFR COCH HERGEST). More sophisticated courtly literature was increasingly popular, for example, the Welsh translation of Richart de Fornival's *Bestiaire d'Amour* before 1400.

French Arthurian material, however, may have been the first to leave its mark on Welsh prose. The first cases of extended parallels between texts in the two languages are the tales of PEREDUR, OWAIN *neu Iarlles y Ffynnon* (Owain or the Lady of the Fountain), and GERAINT, probably dating in their present form to the early 13th century, and corresponding to the *Perceval*, *Yvain*, and *Erec* of Chrétien de Troyes (see TAIR RHAMANT). Parts of the narrative of each follow Chrétien's narrative closely, though there are also major divergences. The exact relationship between them is difficult to establish and has been the subject of heated controversy. But, at present, there is increasing consensus that, whatever their precise origins, these tales show considerable French influence

in their content while their narrative style and technique are firmly rooted in the Welsh tradition.

By the late 14th century, however, direct translation was the norm. One of the earliest Arthurian adaptations from French is an account of the birth of Arthur, drawing partly on the French *Prose Merlin* (see MYRDDIN). During the same period, two major French GRAIL romances of the early 13th century, *La Queste del Saint Graal* and *Perlesvaus*, had been translated into Welsh as a single compendium, known today as *Y Seint Greal* or *Ystoryaeu Seint Greal*, probably for Hopcyn ap Thomas, the important Glamorgan (MORGANNWG) patron for whom the Red Book of Hergest was compiled. By this time, Welsh redactors undoubtedly recognized in French romances a series of protagonists already familiar to them from their native traditions. The Continental texts provided a new stock of story material which could be easily integrated into a Welsh literary context, extending existing tales about particular characters. Where French names were unfamiliar, they could be assigned a name from native tradition or the French form simply adapted to Welsh phonology.

Although no other complete translations are known, French Arthurian romances, especially those of the early 13th-century Vulgate Cycle, remained a popular source with redactors. Non-narrative material, such as the TRIADS, and fictional GENEALOGIES drew on this material, either directly or via existing Welsh adaptations. Composite narrative texts, for example, the 15th-century DAROGAN YR OLEW BENDIGAID (The prophecy of the blessed oil), likewise combined elements from romances such as the *Prose Merlin* or the *Prose Lancelot* with others from Latin and, increasingly, from English texts. Whereas the earliest examples of French influence probably originated through oral transmission, by the 15th and 16th centuries written sources had become pre-eminent, and the storyteller was giving way to the antiquarian redactor-scribe, creating new, patchwork narratives.

Welsh music [I] medieval

The earliest extant manuscripts of music from Wales (CYMRU) date from the 14th century. They comprise a Bangor Pontifical with texts and a substantial body of plainchant, and the Penpont Antiphonal, which contains matins, lauds, and vespers for St David's Day (see DEWI SANT) in Latin with music in neume notation (a system of written music used for plainsong in the later Middle Ages). No other direct evidence has survived, but the poetry of the period, especially that of DAFYDD AP GWILYM, is full of terms relating to music of the Church. The Welsh LAW TEXTS contain references to musical instruments, including HARP, CRWTH, and pipes, but the earliest detailed account of musical styles is found in the late 12th-century writings of Gerald of Wales (GIRALDUS CAMBRENSIS) who refers to the music-making of ordinary people on a saint's day and describes the performance of a large company of untrained singers, as well as sophisticated instrumental music for an aristocratic audience. Following the conquest of Wales, music remained a potent force in the manors of the *uchelwyr* (nobility) and in the Church, both of which supported BARDS and musicians. But, with the advent of the Tudor (TUDUR) dynasty, the gentry became increasingly Anglicized. In an effort to maintain the craft and status of poets and musicians, an EISTEDDFOD was held at Caerwys, Flintshire (sir y Fflint), in 1523, and another in 1567,

with the aim of standardizing the BARDIC ORDER.

Just over a half century later, Robert ap Huw of Anglesey (MÔN) noted some examples of music of the bardic period in a manuscript which contained various pieces with names such as *gosteg* (series of airs on the harp), *caniad* (song, singing), and *profiad* (possibly 'experience, testing'), and also included 24 *cwlwm cytgerdd* (chord of accompaniment) attributed to Wiliam Penllyn, who graduated as *pencerdd* (master craftsman) at the Caerwys eisteddfod of 1567. The music is in tablature which substitutes the first seven letters of the alphabet for notes on the staff without key or time signatures, few rhythm signs, and no indication of the instrument to be used. By now, it is thought that the intended instrument was probably a Renaissance harp with about 30 strings. This music is based on a highly organized treatment of two chords called *cyweirdant* (key-string) and *tyniad* (plucking) which may be combined into 24 patterns called *mesurau* or 'measures'. The lower hand played the chords and the upper hand varied the melodic line in 17 different and now obsolete ways, such as the use of the back of the nail (*kefn ewin*) or thumb stops (*takiad y fawd*) or the four-finger plait (*plethiad y pedwarbys*). The measure became the basis for an extended treatment of the music involving short motifs, melodic variation, repetition of sections, and the occasional use of a refrain-like passage called *diwedd* (lit. 'end'). Further diversity was permitted by the possibility of using different tunings for the same piece. The date on Robert ap Huw's manuscript is 1613, but the music is clearly much older. Recent research has shown that some pieces in the manuscript are attributed to harpers who flourished in the 14th and 15th centuries and that at least one was both harper and bard, implying that poetry could have been declaimed to some of this music.

Welsh music [2] *caneuon gwerin*

The collecting of folk-songs in the WELSH language begins effectively with Edward WILLIAMS (Iolo Morganwg) at the end of the 18th century and John Jenkins (Ifor Ceri, 1770–1829) during the opening decades of the following century. Two printed collections appeared in 1844 and 1845, respectively, and occasional songs were published later in various popular journals. The main body of collecting, however, began with the establishment of Cymdeithas Alawon Gwerin Cymru (The Welsh Folk-Song Society) in 1906 and the appearance of the first part of its journal in 1909 under the editorship of John Lloyd Williams. Five volumes were published between 1909 and 1977, to be followed in 1978 by an annual publication, *Canu Gwerin (Folk Song)*.

With respect to variety of musical scales, the predominant ones are hepta (seven notes) in character, followed by hexa (six notes) and penta (five notes). Examples of tetra scales (four notes) are rare, with only one example, a lullaby, in a three-note scale. As to scale modality, the dominant one is the major or *doh* scale with the three forms of the *lah* scale next in frequency of occurrence. The *ray* scale is a relatively close third with the *soh* scale very far behind. Very infrequent is the *me* scale, whereas the *fah* scale is barely an echo in a couple of song sections. Determining voice compass to within a sequence of up to seven notes as narrow, from eight to nine notes as medium, and up to thirteen notes as wide, the great majority of Welsh tunes are in medium compass with what seems to be little to choose between percentages of narrow and wide compass ones. Generally there is little ornamentation in Welsh folk-songs.

CALENDAR-related songs are plentiful, some associated with semi-dramatic Christmas and New Year customs such as the MARI LWYD and *Hela'r Dryw* (Hunting the wren). Others are related to New Year good-luck visitations by children (*hel calennig*). The religious aspect of the season is sturdily reflected in the carol singing of the *plygain* services (early

morning services made up almost entirely of scriptural carols sung mainly on traditional tunes, held on Christmas day, or evening carol services held before or after Christmas), representing an unbroken singing tradition of close to three centuries. One Christmas carol and a vocal prayer for the soul of a friend in purgatory survive from medieval times. There are also songs that outlived religious household rituals and wassailing jollity associated with Candlemas rituals that ceased at the end of the 18th century (see CANU GWASAEL). In addition, May carols have a marked religious flavour. A couple of dance songs are known whose words reflect animal-guising practice. Love songs of varying kinds are numerous, most of them composed and sung by men. One of their interesting features is the literary convention of using birds as love-messengers, a common theme also in medieval Welsh love poetry (see WELSH POETRY). The most numerous category of work songs is that used in ploughing with a team of oxen, the call-tag at the end of verses forming their defining characteristic. Remnants of the BALLADS sung from the 17th to the 19th centuries are well attested. There are also songs which reflect an earlier period in the ongoing practice of *canu penillion*, a form of singing which is peculiar to Wales (CYMRU; see WELSH MUSIC [3] CERDD DANT).

Welsh music [3] *cerdd dant*

Cerdd dant translates as 'the art of the string' and arose initially from renditions by amateur musicians versed in the art of singing *penillion* (stanzas) to HARP accompaniment. Evidence found in medieval manuscripts suggests that the Welsh BARDS presented strict-metre poetry to musical accompaniment, possibly the harp; details, however, remain inconclusive. In modern times, strict-metre poetry, free-metre poetry, and more recently prose are sung to traditional and modern Welsh airs. This was brought about chiefly through the support of the EISTEDDFOD in holding *cerdd dant* competitions, also known as *canu gyda'r tannau* 'singing to the strings'. The Powys Eisteddfod of 1824 held such a competition, and an artist's drawing of the occasion shows the competitors, all men, standing in line listening to one soloist's performance. After drawing straws to determine the order of performance, the harper played the chosen air once, and the competitor then sang his verses, using an improvised counter-melody, on that air. The rules of *cerdd dant* insisted that the performer could not begin his recital concurrently with the harp, but at least one bar into the melody, and that he had to finish presenting his stanzas exactly in time with the closing of the last note of the air played on the harp. The next contestant then sang to the same air, presenting a different personal choice of stanzas in the same metre as that chosen by the first contestant, and so on until all the competitors had completed their performances. At the end of that first round, competitors who had not adhered to the rules, who had forgotten their words, or had presented badly construed improvisations were eliminated. A second round ensued, with the competitors singing in a different order, to a different air. The winner was the competitor who remained when all others had been eliminated. A single competition could run for the best part of a day. However, the popularity of these competitions had declined by the early 20th century, and Cymdeithas Cerdd Dant Cymru (The Cerdd Dant Society of Wales) was established in 1934 to revive the art. Gradually, it developed from being a purely amateur pastime to being all but taken over by professional teachers and musicians. Rules have been standardized and improvisation has largely disappeared. The advent of choral *cerdd dant* singing necessarily means that the competitors all sing the same set of words and that counter-melodies are premeditated and rehearsed. The National Eisteddfod of Wales (EISTEDDFOD GENEDLAETHOL CYMRU), the Eisteddfod of URDD GOBAITH CYMRU, various local eisteddfodau, as well as the national festival held by Cymdeithas Cerdd Dant Cymru every autumn, currently promote the art, and it is enjoyed on a regular basis by thousands of eisteddfod followers and viewers of the Welsh-language television channel S4C. *Cerdd dant* appears on the national curriculum of senior schools in Wales (CYMRU), and is also a feature of the ethnomusicology course established at the University of Wales, BANGOR, in 1981.

Rhiannon Ifans

Welsh music [4] contemporary

The period directly following the Second World War was one of great innovation and expansion in both ART and popular music. Developments in music were achieved largely through the establishment of major cultural organizations and institutions, bringing with them musical specializations and professionalisms which were effective in advancing commissions and performances of new music. The Welsh National Opera, the National Youth Orchestra of Wales, and the Guild for the Promotion of Welsh Music were all founded during the decade following 1945; the BBC Welsh Orchestra (later to become the National Orchestra of Wales) increased in size, and the Arts Council of Wales (Cyngor Celfyddydau Cymru) recognized the urgent need to patronize contemporary music. Alun Hoddinott (1929–) and William Mathias (1934–92) are two of Wales's most individual creative voices to have emerged during this time. They both thrived on the liberating cultural environment of the 1950s and 1960s, composing prolifically, and made significant advances on the instrumental, chamber, and vocal achievements of their predecessors Grace Williams (1906–77), Daniel Jones (1912–93), Arwel Hughes (1909–88), and David Wynne (1900–83). Whereas Mathias's incorporation of indigenous themes, such as Welsh history, mythology, folklore, and HAGIOGRAPHY, led to inevitable comparisons between his music and 'nationalist' traits, Hoddinott's style may more accurately be described as 'transnational', often making use of abstract processes such as twelve-note techniques and palindromic forms (in which the second half is a retrograde repetition of the first half). Both Hoddinott and Mathias lived and worked for the most part in Wales (CYMRU), indeed, from the late 1960s and early 1970s as university professors at Cardiff (CAERDYDD) and BANGOR (GWYNEDD), respectively.

A younger generation of composers was to emerge during the 1960s and 1970s, making use of newly available scholarships, bursaries, and awards to hone their creative skills abroad. Some, such as Lyn Davies and Jeffrey Lewis were to return to Wales following periods of study in eastern Europe. Others, such as Rhian Samuel, Hilary Tann, and John Cale, remained outside Wales for much of their creative lives. After studying music at Goldsmiths College, London, Cale moved to New York, initially as a performer with experimental American composer La Monte Young's Theatre of Eternal Music, then, as a member of the avant-garde pop group, the Velvet Underground. Indeed, Cale's progress is indicative of the post-modern shift in the late 20th century towards stylistic diversity and heterogeneity. This shift may also be seen in the fusion of pop sounds and high art found in the music of Karl Jenkins, who was a member of the jazz-rock band Soft Machine during the 1970s and early 1980s before gaining widespread success with his large-scale choral work *Adiemus* in 1996 and his 2001 mass for peace, *The Armed Man*.

The legacy of Wales's predominantly vocal musical tradition may also have been continued in the area of mainstream popular music, in which the achievements of singers and performers such as Tom Jones and Shirley Bassey during the 1960s outweighed any creative song-writing successes. But the media perspective from outside Wales changed during the 1990s when a plethora of rock groups converged onto the British pop scene. The Manic Street Preachers' fourth album, *Everything Must Go* (1996), arguably precipitated the collective impact of many Welsh rock bands in the UK singles and album charts during this time, including the Stereophonics, Catatonia, Super Furry Animals, and Gorky's Zygotic Mynci. The emphasis on writing original material had been—at least in the case of Catatonia and the Super Furry Animals—inherited through their exposure to WELSH-language pop music, which arguably reached its apex during the late 1970s and early 1980s. Emerging during the 1960s largely as a means of promoting and disseminating nationalist political views and language protest movement messages (see CYMDEITHAS YR IAITH GYMRAEG; NATIONALISM), its early song forms were direct and unadorned. Its most famous exponent was singer-songwriter Dafydd Iwan, who himself had inherited much of the vocal style of the *Noson Lawen*

(lit. 'a merry evening', an evening of informal entertainment) tradition found in the songs of Hogia Llandegai and Hogia'r Wyddfa from the 1950s onwards, but was also influenced by American folk-singer Pete Seeger and by Welsh folk music in general. Dafydd Iwan was also one of the founders of Sain (Sound), which has been the main recording company for recorded songs in the Welsh language since 1969.

Welsh-language pop ultimately had to wait until the mid-1970s (with the exception of Y Blew, lit. 'The Hair') before introducing a more contemporary, electric, pop sound. The rock group Edward H. Dafis was largely responsible for this transformation, which gave the Welsh language a new relevance and significance to a younger, more politically active generation growing up in the 1970s. Others, such as Geraint Jarman, brought in new musical styles (for example, reggae) and a new-found professionalism to the production and performance of his recordings, while Meic Stevens absorbed influences from American and British folk balladeers to develop distinctive guitar and vocal styles as effective vehicles for his own compositions over the course of a long career. Later on, during the 1980s, punk rock also appeared, rather belatedly, in the form of Yr Anhrefn (lit. 'Chaos'). All these performers helped to shape the success of Welsh pop-groups on the British chart scene at the end of the 20th century.

Pwyll ap Siôn

Welsh poetry [1] early and medieval

The period from the oldest surviving poetic texts in WELSH up to the 16th century is covered in this Encyclopedia by articles on poems and poets (as individuals and historical groups), native genres, metrical forms, individual manuscripts and the manuscript collection HENGWRT and Peniarth, and the BARDIC ORDER. The present article is intended as an annotated outline: the reader may follow the cross-references to the relevant entries.

The earliest poetry is that attributed to BARDS now usually called CYNFEIRDD (first or early poets; see also FIVE POETS). This material goes back to—or at any rate, is set in—the 6th to mid-7th centuries, in the case of MARWNAD CUNEDDA, possibly the 5th. While the early dating and authenticity of these poems remain controversial—for the various items and as a group—this position remains *de facto* standard doctrine and has thus far been impossible to disprove. There are articles on the individual *Cynfeirdd* ANEIRIN and TALIESIN, the manuscripts LLYFR ANEIRIN and LLYFR TALIESIN, the GODODDIN attributed to Aneirin, and poems attributed to Taliesin: ENAID OWAIN AB URIEN and TRAWSGANU CYNAN GARWYN (see also URIEN and GWALLAWG for the praise poems honouring those kings). There are articles on poems, surviving only in late manuscripts, praising 7th-century Welsh kings: MOLIANT CADWALLON and MARWNAD CYNDDYLAN. Most of the *Cynfeirdd* poetry is in AWDL metres (approximately 'long monorhyming stanzas'), used also in subsequent periods.

A sizeable body of poetry dates from the Old Welsh period (*c.* 800–*c.* 1100) with some probably dating from the 8th century. Most of these poems are either simply anonymous or have been put into the mouths of poetic personae thought to have lived in the 6th or 7th centuries (such as MYRDDIN), which are not credible attributions; thus, the large corpus of Welsh poetry 'probably composed during the Old Welsh period' is notoriously hard to date. The ENGLYN metre, in its earlier three-line form, was popular at this time. In addition to the *englynion* in the contemporary 9th- or 10th-century JUVENCUS manuscript, great ENGLYNION cycles survive from the Old Welsh period about Urien and uttered by the personae Llywarch Hen and HELEDD, as well as a series of *englynion* on the death in battle of GERAINT, on the battles of CADWALLON, and the great catalogue of heroes' graves *Englynion y Beddau*. The famous manuscripts LLYFR DU CAERFYRDDIN and LLYFR COCH HERGEST are important sources for saga *englynion* and other poetry of Old Welsh date. ARMES PRYDEIN is a datable 10th-century political PROPHECY in the *awdl* metre from *Llyfr Taliesin*, and this traditional genre continues

unbroken to the later Middle Ages. Also from this period are the early ARTHURIAN poems PREIDDIAU ANNWFN (also in *Llyfr Taliesin*) and PA GUR YV Y PORTHAUR? in *Llyfr Du Caerfyrddin*. There is a sizeable body of anonymous religious poetry of Old Welsh date, the earliest copy being the group of nine *englynion* in the Juvencus manuscript praising God and the creation. The religious material has tended to receive less attention from Celtic scholars than that concerned with the HEROIC ETHOS and the NATURE POETRY, but Haycock's *Blodeugerdd Barddas o Ganu Crefyddol Cynnar* has redressed the balance somewhat. Drawing most heavily from *Llyfr Taliesin*, *Llyfr Du Caerfyrddin*, *Llyfr Coch Hergest*, and *Llyfr Coch Talgarth* (Aberystwyth, NLW , Llanstephan 27) and arranging the poems according to their wide range of biblical and theological themes, her book moves beyond the earlier collection of Henry LEWIS.

The 12th and 13th centuries form the age of *Beirdd y Tywysogion* (the Poets of the Princes), also known as the GOGYNFEIRDD (rather early poets). Rather than marking a major innovative upheaval in metrical forms or poetic themes, a recognizably continuous conservative tradition now has the benefit of a corpus credibly attributed to poets and closely datable by means of the well-documented Welsh princes who were their patrons. There are Encyclopedia articles on the following individual *Gogynfeirdd*: MEILYR BRYDYDD (*fl.* ?1100–*post* 1137), two poets called LLYWELYN FARDD (*fl. c.* 1125–1200, *fl. c.* 1215–1280), GWALCHMAI AP MEILYR (*fl. c.* 1132–*c.* 1180), HYWEL AB OWAIN GWYNEDD (†1170), the most famous of the group CYNDDELW BRYDYDD MAWR (*fl. c.* 1155–*c.* 1195), LLYWARCH AP LLYWELYN 'PRYDYDD Y MOCH' (*fl.* 1174/5–1220), ELIDIR SAIS (*fl. c.* 1195–*c.* 1246), PHYLIP BRYDYDD (*fl. c.* 1210–33), DAFYDD BENFRAS (*fl.* 1220–58), BLEDDYN FARDD (*fl. c.* 1240–85), and GRUFFUDD AB YR YNAD COCH (*fl. c.* 1277–83). The most important source for texts of the poetry of the Poets of the Princes is the HENDREGADREDD MANUSCRIPT. There are extant examples of the genre of GORHOFFEDD (boastful exultation) by Gwalchmai ap Meilyr and Hywel ab Owain Gwynedd.

The downfall of LLYWELYN AP GRUFFUDD and the loss of Welsh independence in 1282/4 understandably marks a major transition. The innovative *Beirdd yr Uchelwyr* (Poets of the Nobility) unsurprisingly do not exhibit a strong recovery until the 14th century. This group is often treated as roughly synonymous with the CYWYDDWYR since the 7-syllable CYWYDD became a popular metrical form at this period, though forms of *awdl* and *englyn* continued. Although CASNODYN (*fl. c.* 1290–*c.* 1340) belongs to this era, he is sometimes counted among the *Gogynfeirdd* because we have no *cywyddau* by him. The grammarian EINION OFFEIRIAD (*fl. c.* 1320–*c.* 1349) is a similar case, relevant to both the preceding and following periods. CYNGHANEDD, the intensive use of vowel and consonant harmonies within a line, had been an integral feature of Welsh poetry from its beginning, and parallel patterns of verse ornamentation in BRETON and IRISH imply a very deep antiquity. But the complete regularization of *cynghanedd* in forms still used in the strict-metre competitions of the National Eisteddfod of Wales (EISTEDDFOD GENEDLAETHOL CYMRU) today is largely a by-product of the period of the Poets of the Nobility. Along with metrical innovations and an expanded vocabulary, new themes become prominent, including love poetry, erotic poetry, and SATIRE, though more traditional elegy and eulogy for noble patrons continues. There are Encyclopedia articles on the following *Cywyddwyr*: the most famous of the period and widely regarded as the greatest Welsh poet of all time DAFYDD AP GWILYM (*c.* 1315–*c.* 1350), IOLO GOCH (*fl.* 1345–97), SIÔN CENT (*fl. c.* 1400–30/45), GUTO'R GLYN (*c.* 1418–*c.* 1493), DAFYDD NANMOR (*fl.* 1445–90), LEWYS GLYN COTHI (*fl.* 1447–89), DAFYDD AB EDMWND (*fl.* 1450–97), GUTUN OWAIN (*fl.* 1450–98), the female poet GWERFUL MECHAIN (*c.* 1460–*post* 1502), TUDUR ALED (*c.* 1465–*c.* 1525), and SIÔN TUDUR (*c.* 1522–1602).

The 16th century and down to the Civil Wars (1642–8) is often viewed as a period of decline and transition (see BARDIC ORDER [2] §§13–15). The free metres emerge at this time. Although YMRYSONAU (bardic contentions) are also known from earlier and later periods, a famous extended *ymryson* occurred between Wiliam Cynwal (†1587/8) and Edmwnd Prys (1543/4–1623; cf. BARDIC ORDER [2] §13). *Ystoria Taliesin* and other texts included in the massive World Chronicle of humanist Elis GRUFFYDD (*c.* 1490–*c.* 1558) also include Welsh poetry.

Welsh poetry [2] 17th and 18th centuries

Post-medieval Wales (CYMRU) saw the gradual decline of the classical tradition of strict-metre poetry and the appearance of several kinds of verse composed in free metre. These new verse forms, while generally technically less demanding, encompassed a broader range of subject-matter and were accessible to a wider audience than the predominantly aristocratic tradition of strict-metre poetry. By the 18th century Welsh balladry was thriving, counterbalanced by the cultivation of a more learned literature and by the increasingly influential hymnology of the Methodist Revival (see CHRISTIANITY).

§1. THE 17TH CENTURY

Despite the gradual Anglicization of the Welsh gentry following the ACTS OF UNION under Henry VIII (see TUDUR), the traditional modes of eulogy, elegy, and request poetry in CYWYDD and AWDL metres lingered on well into the 17th century. A notable example is the Phylip family of Ardudwy; some 200 poems, mostly praise-poems, are ascribed to Siôn Phylip (*c.* 1543–1620). However, the vast majority of such poetry is highly conventional with an emphasis on versifying the lineage of wealthy patrons, and by the close of the century the era of the professional poet was well and truly at an end (see BARDIC ORDER).

Much of the so-called 'early free-metre poetry' which surfaces in manuscripts of the RENAISSANCE period is written in simpler versions of some of the 24 established metres of CERDD DAFOD, such as the *awdl-gywydd*, and the *cywydd deuair fyrion*. Richard Hughes (†1618) used the simplified *awdl-gywydd* metre:

O wir drymder canu yr **wy**',
Nid o n**wy**' na masw**edd**,
Ond un modd â'r alarch gw**yn**
Yn cwynfan c**yn** ei ddiw**edd**.

I sing out of true sadness,
not because of passion or wantonness
but like the white swan
lamenting before it expires.
(Cennard Davies, *Guide to Welsh Literature* 3.84–5)

The following is an example of the metre based on the *cywydd deuair fyrion*:

gwrandewch arn**a** / fy ffrind nes**a**
rydwy yn chwen**ych** / kwyno wrth**ych**.
(Parry-Williams, *Canu Rhydd Cynnar* 358)

Listen to me / my next friend
I desire / to bemoan to you.

Love-poetry and poems on moral and religious themes abound, but there is also a fair smattering of humour and SATIRE and (to a greater extent than the more formal strict-metre tradition) a reflection of contemporary events. As well as humble craftsmen and farmers, several acknowledged strict-metre poets also made use of the more popular forms, none more successfully than Edmwnd Prys (1543/4–1623), a prominent humanist who became archdeacon of Merioneth (Meirionnydd). His *Salmau Cân* of 1621, a

polished verse translation of the psalms, is among the century's most enduring literary achievements. Another cleric who used some of the popular verse forms to great effect was Rhys Prichard (1579–1644), vicar of Llandovery, Carmarthenshire (Llanymddyfri, sir Gaerfyrddin), whose didactic verses were published posthumously as *Canwyll y Cymry* (The candle of the Welsh). Their encapsulation of the basic tenets of Christianity in direct, often colloquial, Welsh was to ensure their popularity for generations to come.

As the century progressed, some of the familiar native metrical forms were rendered redundant by the growing popularity of a more accentual poetry in which the metrical structure was determined by contemporary (and largely English) song-tunes. This was to remain the most popular mode of composition throughout the 18th century. Poets such as Edward Morris (1607–89) and, especially, Huw Morys (1622–1709), both from Denbighshire (sir Ddinbych), brought an extraordinary degree of complexity to the free metres by creating complicated verse-patterns adorned with CYNGHANEDD in the form of alliteration and internal rhyme. Both composed popular carols and staunchly Royalist condemnations of Oliver Cromwell's Republic, but it is for their intricate love poetry that these poets are best known today.

The century is also characterized by an essentially oral tradition of folk poetry. The 'harp-stanzas' (*penillion telyn*), anonymous four-line stanzas sung to the accompaniment of a harp at social gatherings well into the 18th century (see WELSH MUSIC [3]), express the basic human emotions with great conciseness and proverbial wisdom, often by means of familiar rural and agricultural imagery. Since so many of the verses on the joys and sorrows of love express a feminine viewpoint, it is not unreasonable to suppose that some, at least, were composed by women. Wassail songs (see CANU GWASAEL) represent a cruder type of folk poetry, belonging to seasonal customs such as the MARI LWYD and the hunting of the wren, which are thought to derive ultimately from early fertility rites.

§2. THE 18TH CENTURY

As a result of increasing literacy and the rapid expansion of the PRINTING press, the popular literature of 18th-century Wales is well recorded. Among the many hundreds of printed BALLADS that survive, very few correspond to the international narrative type. Many serve a journalistic function by recounting tales of gruesome murders, natural wonders and disasters, or the wars of the British Empire; there are love-ballads; evergreen biblical stories and songs of moral and religious advice; and much satire of contemporary mores and fashion. Although their historical value outweighs their literary merit, one of their striking features is a metrical diversity which derives from a vast pool of popular melodies. Among the outstanding ballad-writers are Ellis Roberts ('Elis y Cowper' †1789), Huw Jones (?1700–82), and Thomas Edwards ('Twm o'r Nant', 1739–1810), all of whom were mainly active in north-east Wales where the closely related ballad and interlude traditions were deeply rooted. Twm o'r Nant, in particular, made the interlude (see ANTERLIWT) his own, and much of his finest poetry is contained within these popular plays.

Despite its often overtly moral tone, secular entertainment of this type was anathema to Welsh Methodists. It is in the writings of William WILLIAMS (1717–91) of Pantycelyn in Carmarthenshire (sir Gaerfyrddin) that the passionate spirituality of the Methodist Revival finds its most powerful expression. As well as several prose works, he composed two ambitious epic poems: *Golwg ar Deyrnas Crist* (A view of the kingdom of Christ, 1756), a history of Christ's universe since the dawn of Creation, and *Bywyd a Marwolaeth Theomemphus* (The life and death of Theomemphus, 1764), which describes the journey of a man's soul from sin to redemption. It is, however, Pantycelyn's HYMNS which had the most far-reaching effect. Between 1744 and 1787 he published eight collections of Welsh hymns, as well as two in English. Their central theme is the renunciation of worldly pleasure and the longing for spiritual union with Christ, expressed through resonant, often sensuous, imagery in a direct 'non-literary' language.

The Morris brothers of Anglesey (MÔN; see MORRISIAID MÔN) were equally disdainful of popular balladry, though mainly for artistic rather than moral reasons. Gathering around them a circle of like-minded writers and scholars, they strove to inspire a cultural revival by revealing the richness of their country's historical and literary heritage and by restoring a sense of pride to contemporary Welsh

letters. The eldest of the three brothers, Lewis Morris (1701–65), was himself an accomplished exponent of both strict- and free-metre forms, full of wit and an often bawdy humour influenced by English Restoration literature (which belonged to the period following the re-establishment of Charles II as king of England in 1660). The brothers' protégés included the poet and scholar Evan Evans (Ieuan Fardd, 1731–88), but their most significant discovery was Goronwy Owen (1723–69).

During a short but intense period of creativity in the 1750s Owen sought to instil a new seriousness into Welsh poetry through a knowledge of the classics and of the English Augustans (for example, Pope, Addison, and Swift, whose literary works were in a style considered refined and classical), allied to an admirable mastery of the metrical intricacies of his indigenous classical tradition. His themes include divine inspiration, a keen awareness of the transience of human life, and a longing for his native Anglesey and for a life of civilized contentment in sharp contrast to his actual circumstances as an unsettled curate across the border in England. However, his great ambition of producing a Christian epic poem, in keeping with his neo-classical ideals, was left to later generations since he emigrated to Virginia in 1757 to pursue dreams of a more material kind.

Towards the end of the century, poetry of a very different type was composed by Edward WILLIAMS (Iolo Morganwg, 1747–1826), self-styled DRUID and myth-maker. Before concentrating his attentions on the brilliant forgeries which he ascribed to real and imaginary poets of various periods, most notably DAFYDD AP GWILYM, as a young man he composed several sensuous *cywyddau* celebrating the joys of love and the natural world. These, like the later poems which express his radical political beliefs, have more in common with the nascent spirit of ROMANTICISM than with the neo-classicism of Goronwy Owen.

Huw M. Edwards

Welsh poetry [3] 19th century

Nineteenth-century Welsh poetry received much unfavourable comment by scholars and critics who have viewed the period as a kind of wasteland between the literary revivals of the 18th and 20th centuries. A vast amount of poetry was written—it is estimated that around a thousand collections of poems, ranging from mere pamphlets to weighty volumes, were published—and it is a fact that much of it is of inferior quality. There were good reasons for this. Far too many would-be poets were encouraged to versify by an all-embracing EISTEDDFOD culture and a Welsh press hungry for copy. For the better part of the century there was a sad want of an informed, contemporary criticism such as would have convinced the poets of the futility of chasing after a Welsh epic. A prevailing materialistic, utilitarian view of culture seriously undermined the poet's status in a society which had traditionally esteemed him. Particularly damaging to his rôle following the 'Treachery of the Blue Books' (*Brad y Llyfrau Gleision*) in 1847 and the coming of state EDUCATION in 1870 was that more and more of his countrymen came to see the WELSH language not only as inferior to English but as a costly hindrance to their advancement in life. Far too often, the poets of Victorian Wales (CYMRU) felt constrained to adopt a defensive stance towards the language, morals, and religion of their country, and consequently wrote in a didactic or overly patriotic vein which has not worn well. Generally speaking, they mostly wrote a kind of applied poetry calculated to make a people much concerned with their image feel better about themselves and, in their eagerness to hymn an idyllic Wales, they had little to say to industrial Wales. We can point to

no 'great' poet in Victorian Wales, which is not to say that the poetry produced is unimportant. There is no such thing as an unimportant literature.

At the heart of 19th-century poetry, a battle raged between the devotees of the strict metres and those of the free metres. A paucity of gifted poets—Robert Williams (Robert ap Gwilym Ddu, 1766–1850) is an exception in the eyes of modern critics—did not help the cause of the strict metres. The battle was particularly hard fought on the eisteddfod stage and the quest for the Welsh epic intensified it. For those who championed the strict metres, CYNGHANEDD was a *sine qua non* of Welsh poetry and the Chair, as the age-old symbol of bardic prowess, should only be awarded for an AWDL. For those who favoured the free metres, the Chair should be awarded for the best poem, irrespective of metre, and they pressed the claim of the *pryddest* (long poem in free metre). An uneasy peace was brokered at the Carmarthen (CAERFYRDDIN) National Eisteddfod of 1867 (see EISTEDDFOD GENEDLAETHOL CYMRU) when it was decided that the Chair would remain the preserve of the *awdl* while a new award, a Crown—equal in status to the Chair—would be established for the *pryddest*. This arrangement still holds good today.

The 'war of the metres' created a good deal of noise, but it was not a meaningless confrontation. Nothing matters more to a poet than the metres and forms available to his muse. The quest for the Welsh epic forced poets to recognize anew that the strict metres were too short to sustain a lengthy dramatic, narrative poem, with the result that the *pryddest* came more to the fore. Down to 1850, *awdlau* such as *Elusengarwch* (Charitableness, 1819) by David Owen (Dewi Wyn o Eifion, 1784–1841), *Dinystr Jerusalem* (Destruction of Jerusalem, 1824) by Ebenezer Thomas (Eben Fardd, 1802–63), and *Drylliad y Rothsay Castle* (The sinking of the Rothsay Castle, 1832) by William Williams (Caledfryn, 1801–69) were seen as highlights of Welsh poetry, but at the Rhuddlan eisteddfod of 1850 a *pryddest* on *Yr Adgyfodiad* (The resurrection) by Evan Evans (Ieuan Glan Geirionydd, 1795–1855), using an alexandrine, ousted an *awdl* by Caledfryn from the Chair. Another *pryddest* by Eben Fardd, also using an alexandrine, was placed third, but was seen by his admirers as the long-awaited Welsh epic. There was a great furore, but after 1850 the *pryddest* would not be sidelined. It would lead the charge into the epic's domains.

The BIBLE and Welsh history were ransacked for epic subject matter. In the 1860s the prodigal Lewis William Lewis (Llew Llwyfo, 1831–1901) threw off narrative extravaganzas in blank verse in a vain attempt to create a national epic and, in the following decades, poets better equipped than him for the task, for example, Howell Elvet Lewis (Elfed, 1860–1953), composed eisteddfodic epics which proved fruitless. It has long been generally agreed that the most powerful attempt at writing in epic mode was that by William Thomas (Islwyn, 1832–78), who composed two long poems entitled *Y Storm* (The storm), not for any eisteddfod prize, following the death of his sweetheart in 1853. It is a remarkable amalgam of grief, soul-searching, purpose-seeking, and God-communing which, for his contemporaries, set Islwyn apart and prompted Owen M. EDWARDS, who rated him highly, to edit and publish in 1897 a posthumous volume of his poetry totalling 864 pages.

The Victorian long poem dragged itself along for most of the time until John MORRIS-JONES and T. Gwynn JONES signalled the revival of the strict metres, and the *awdl* in particular, towards the end of the century. The metaphysical meanderings of the BARDD NEWYDD (New poet) in the 1890s would delay awhile a similar advance for the *pryddest*, but the BANGOR National Eisteddfod of 1902 would herald a new beginning. For it T. Gwynn Jones wrote an *awdl* on *Ymadawiad Arthur* (The passing of ARTHUR), superior to anything produced in the strict metres during the Victorian era, and W. J. Gruffydd (1881–1954) wrote a vigorous *pryddest* on *Trystan ac Esyllt* (TRISTAN AND ISOLT), which presaged a richer contribution in the free metres. Both poems can be seen as the first fruits of a critical spirit which made itself heard in the literary journals of the last quarter of the 19th century, a spirit prepared to challenge and condemn Welsh passivity and complacency.

O. M. Edwards saw no reason to lament the failure to produce a Welsh epic poem. On the contrary, he felt fully compensated for the deficiencies of the long poem by the delights he found in the *telynegion* (lyrics) which, as written by John Blackwell (Alun, 1797–1841), Ieuan Glan Geirionydd, Thomas Lloyd Jones (Gwenffrwd, 1810–34), Owen Wynne

Jones (Glasynys, 1828–70), John Jones (Talhaiarn, 1810–69), and John Ceiriog HUGHES were to prove very popular with the concert-loving public which came into its own after 1850.

Simple, euphonious lyrics, often laden with *hiraeth* (meaning approximately 'longing'), often musing on the joys and disappointments of love, often vigorously patriotic, often moralistic and pious, often pathetic in the contemplation of death, but too infrequently humorous or satirical and never bawdy, at least not in print, such was the poetry that fared well with the Victorian audience. Talhaiarn and Ceiriog were the predominant popular lyricists of the century, both of them making much of their ability to write winning words for traditional Welsh melodies and forming profitable alliances with musicians such as John Owen (Owain Alaw, 1821–83), Brinley Richards (1819–85), and John Thomas (Pencerdd Gwalia, 1826–1913). Ceiriog was undoubtedly the poet most enjoyed by the nation, and in O. M. Edwards's opinion he achieved more for the Welsh language than all the strict-metre poets of his time put together. He certainly wrote too many facile poems, but in his day he stood apart as the one poet who was seen by his people as a necessary figure, a poet of reassurance at a time when Welsh morale needed sustaining. He has weathered a battering by some 20th-century critics too caught up in the business of apportioning greatness, but his *Cân yr Arad Goch* (The song of the red plough), *Bugail Aberdyfi* (The shepherd of Aberdovey), *Aros Mae'r Mynyddau Mawr* (The great mountains remain), *Nant y Mynydd* (The mountain stream), *Pe Cawn i Hon* (If she were mine), *Tros y Garreg* (Over the stone), to name but a few, still resonate with readers of Welsh poetry.

For a country saturated with religion, surprisingly little religious poetry of note was written. Many HYMNS, cherished ever since, were written by such as Thomas Lewis (1759–1842), Edward Jones (1761–1836), Thomas William (1761–1844), David Charles, senior (1762–1834), Robert ap Gwilym Ddu, John Elias (1774–1841), Peter Jones (Pedr Fardd, 1775–1845), Ieuan Glan Geirionydd, William Rees (Gwilym Hiraethog, 1802–83), William Ambrose (Emrys, 1813–73), Evan Rees (Dyfed, 1850–1923), and Samuel Jonathan Griffith (Morswyn, 1850–93), but none produced a body of poetry to compare in spiritual intensity with the hymns of William WILLIAMS, Pantycelyn, and Ann GRIFFITHS in the 18th century. The Welsh Victorian muse did not deal much in honest doubt, let alone unbelief, and was not disposed to engage seriously with Darwinism and socialism. It had to be freed from an easy affirmation of national certitudes before it could face up to the challenges of 20th-century Wales.

Nothing better illustrates the neutering effect which the 'Treachery of the Blue Books' had on 19th-century poetry than the kind of love poem (*rhieingerdd*) and pastoral (*bugeilgerdd*) adopted by the National Eisteddfod for many years as perennial favourites following the remarkable popularity of Ceiriog's *Myfanwy Fychan* in 1858 and his *Alun Mabon* in 1861. Literally thousands of girls were named after his 'Myfanwy', who was seen as the prototype of 'innocent Welsh loveliness', with dire consequences for Welsh Victorian love poetry, which is nothing if not well buttoned. It needed a merciless satirist to unbutton so inhibited a literature, but, when he came in the person of Daniel OWEN, he came as a novelist, not as a poet.

Welsh poetry [4] 20th century

§1. EARLY 20TH-CENTURY POETRY

Much of the WELSH-language poetry which was popular during the first quarter of the 20th century was exactly what one might expect: a continuation of the themes, forms, and styles of the late 19th century. The best example is perhaps Eifion Wyn (Eliseus Williams, 1867–1926), who published *Telynegion Maes a Môr* (Lyrics of field and sea) in 1906. This volume, with its simple, memorable lyrics and easy romanticism, in many ways epitomizes the Victorian poetic values

enshrined by the likes of John Ceiriog Hughes.

However, the earlier years of the century also saw poetry moving in new directions. The establishment of institutions such as the University of Wales and the National Library of Wales (Llyfrgell Genedlaethol Cymru) provided the material basis for the professionalization of Welsh linguistic and literary studies, a development exemplified by the work of John Morris-Jones (1864–1929). During the last decade of the 19th century, the poetry of the Eisteddfod had been dominated by the 'Bardd Newydd' (New poet) school—Nonconformist ministers who wrote tortuously long-winded verse conveying often obtuse theological explorations. John Morris-Jones rejected the philosophizing of the 'Bardd Newydd' while also championing rigorous linguistic and metrical standards characterized by a classicism (in this context, classicism means a return to the formal standards of medieval Welsh poetry) and a purist rejection of the influences of English and dialect on literary Welsh.

In addition to publishing his own volume of poetry, *Caniadau* (Songs, 1907), John Morris-Jones used his classroom at the University of Wales, Bangor (Gwynedd), and his rôle as adjudicator on the very public stage of the National Eisteddfod to promote his educational agenda. While his essay 'Swydd y Bardd' (The poet's vocation), published in *Y Traethodydd* (The essayist, 1902), and numerous Eisteddfod adjudications had long-lasting effects on the direction of modern Welsh poetry, his most enduring contribution was Cerdd Dafod (Poetic art, 1925), an authoritative bardic grammar which set out the rules of the medieval strict metres and cynghanedd for a new generation of poets.

T. Gwynn Jones (1871–1949) won the Chair at the 1902 National Eisteddfod with his awdl *Ymadawiad Arthur* (The passing of Arthur), which provided the nation with a strict-metre poem that exemplified the new Morris-Jonesian ideal: formal discipline and linguistic 'purity' combined with a rejection of abstract sermonizing in favour of zesty narrative verse and romantic foraging in the remnants of the medieval past. Although he won the Chair again with a similar composition in 1909, T. Gwynn Jones went on to experiment formally, reworking some of the traditional strict metres as well as endowing free verse with the internal line ornamentations of *cynghanedd*. Towards the end of his career he also developed a bleak realism, which, set alongside his formal experimentation, allows him to be classified as one of the early Welsh modernists.

R. Williams Parry (1884–1956) won the Chair in the 1910 National Eisteddfod with his *awdl Yr Haf* (The summer), a highly wrought masterpiece in the mould of T. Gwynn Jones's eisteddfodic poetry. Like T. Gwynn Jones, he also moved on from this lush medievalism to more obviously modernist sensibilities and personal registers. This path was followed even further by his cousin T. H. Parry-Williams (1887–1975), who, having achieved national prominence by winning both the Chair and the Crown twice (in 1912 and 1915), turned his back on the *awdl* and *pryddest* completely, developing his own free-metre *rhigwm* (rhyme), a short and deceptively simple vehicle for meditations ranging from ironic self-mockery to social observation and philosophical enquiry. Both poets composed memorable sonnets, helping to solidify that 'foreign' metre's hitherto tenuous foothold on the continent of Welsh-language poetry. Unlike his cousin, R. Williams Parry never rejected the traditional strict metres completely; he composed some of the most popular *englynion* (sing. englyn) of the 20th century, bringing that traditional epigrammatic form to bear on topics such as the First World War.

W. J. Gruffydd (1881–1954) was another conspicuous member of this generation. He, however, concentrated increasingly on criticism and scholarship, and his own verse never developed in the modernist directions of some of his contemporaries. As editor of *Y Llenor* (The littérateur) from 1922 to 1951, Gruffydd provided the major critical forum of the time. One of the journal's key contributors was Saunders Lewis (1893–1985), who published some of his seminal articles on its pages. While he never produced a great deal of poetry, Saunders Lewis is one of the more memorable poetic voices of the century, combining an acute historical consciousness with a highly developed modernist aesthetic. In addition to casting his unique literary gaze on the condition of modern Wales (Cymru), he also treated religious topics with a challenging freshness; Bobi Jones famously stated that *Mair Fadlen* (Mary Magdalen) by Saunders Lewis is the best Welsh poem of the 20th century.

§2. MID-20TH CENTURY

While Saunders Lewis and others criticized the National Eisteddfod for pandering to popular tastes, the 1920s and 1930s Crown competitions produced some unique—and at times controversial—poetry, including Caradog PRICHARD's meditations on insanity and E. Prosser Rhys's poetic exploration of homosexual experience. One poet who avoided the eisteddfodic mainstream was Alun Llywelyn-Williams (1913–88). Both as poet and as editor of the journal *Tir Newydd* (New ground), Alun Llywelyn-Williams offered an urban counterbalance to the myth of the rural *gwerin* ('folk') which dominates so much of Welsh literature. Other new directions were offered by 'Cylch Cadwgan' (The Cadwgan circle) poets of the Rhondda valleys, who explored various Continental influences as a remedy for the lingering influence of Welsh Puritanism. Euros Bowen (1904–88) provided another important dissenting voice; his massive body of symbolist-imagist verse refuses easy interpretation and presents an overt challenge to the populist trends which have dominated many aspects of the poetic establishment in Wales. Bobi JONES (1929–), who began publishing poetry in the 1950s, is another uncompromising poet, following his own late modernist aesthetic irregardless of current trends and tastes.

Waldo WILLIAMS (1904–71) published only one volume of poetry, but his *Dail Pren* ('The Leaves of a Tree', 1956) is one of the century's literary milestones. The way in which he engaged spiritual questions can be set against a much more prolific contemporary, David Gwenallt JONES (1899–1968). Gwenallt churned out a huge amount of Christian verse which is marked by the heavy-handed zeal of the convert, and the more original turns of his poetry are often undermined by religious clichés. On the other hand, Waldo's very small output contains several poems—such as *Mewn Dau Gae* ('In Two Fields')—which are strikingly original in their presentation of spiritual—and indeed, mystical—experience.

§3. LATER 20TH CENTURY

One of the fresh new voices to emerge in the early 1960s was Gwyn Thomas (1936–). While he has used various styles over the years, Gwyn Thomas is perhaps best known for the gritty oral idiom which he has brought to bear upon a range of subjects, from the humorous to the darkly meditative. The end of the decade saw the emergence of Gerallt Lloyd OWEN (1944–), who wrote a series of protest poems focusing on the investiture of the Prince of Wales in 1969. One of these, the short cywydd *Fy Ngwlad* (My country), has become one of the most popular of all modern Welsh poems. Its combination of radical NATIONALISM and a masterful use of *cynghanedd* characterizes much of Gerallt Lloyd Owen's poetry, including the *awdl Cilmeri* which won the Chair at the 1982 National Eisteddfod.

Gerallt Lloyd Owen was one of the main figures in the strict-metre poetry 'renaissance' of the 1970s, along with Donald Evans (1940–), Dic Jones (1934–), and Alan LLWYD. While the traditional strict metres had always lived in the localized realm of the *bardd gwlad* ('country poet' or 'folk poet'), by 1976 it was clear that a new generation of young poets had mastered the formal complexities of the medieval tradition and were taking it to a (re)new(ed) level of popularity. The Chair competition of that year was of a very high standard, and the same Eisteddfod also saw the founding of Cymdeithas Cerdd Dafod (The poetry society), with its journal *Barddas* (Poetry) appearing later that same year. In addition to editing *Barddas*, Alan Llwyd is a central figure in this society, and an extremely prolific poet in his own right—in both free and strict metres.

Cymdeithas Cerdd Dafod soon assumed the status of a poetic establishment, taking its place alongside the Eisteddfod as one of the favourite targets of the iconoclasts of the 1970s and 1980s. The poetic counter culture of this period is perhaps best exemplified by the *Beirdd Answyddogol* (Unofficial poets) series of Y Lolfa press. While much of this poetry was essentially ephemeral in nature, the series did serve to introduce some young poets who went on to become major voices. One of these is Iwan Llwyd (1957–), who won the Crown in the 1990 National Eisteddfod with *Gwreichion* (Sparks), a complex series of poems which combines meditations on the state of contemporary Wales with an examination of the nature of artistic creation, demonstrating once again that the Eisteddfod can produce poetry which goes well beyond the simply popular and populist. Indeed, this followed on the heels of several other striking Crown compositions,

most notably those of T. James Jones (1934–): *Llwch* (Dust) in 1986 and *Ffin* (Border) in 1988.

While Dilys Cadwaladr (1902–79) won the Crown in 1953 (the first woman to win either of the main poetry competitions in the National Eisteddfod), women's poetry was largely absent from the literary establishments until recently. This has changed dramatically over the past years, with Mererid Hopwood becoming the first woman to win the Chair at the 2001 National Eisteddfod at Denbigh (Dinbych). In addition to editing volumes of poetry by women, such as *Hel Dail Gwyrdd* (Gathering green leaves, 1985) and *O'r Iawn Ryw* (Of the right sort [or sex], 1991), Menna Elfyn (1951–) has composed much original verse, some of an overtly feminist nature, which has in translation earned her a readership far beyond the borders of Wales. Although she has not attracted the critical attention she deserves, Nesta Wyn Jones (1946–) is an extremely engaging poet who brings her uncompromising verse to bear upon the difficult aspects of life (see also WELSH WOMEN WRITERS).

During the 1980s Menna Elfyn was also one of several poets who emphasized the performance of poetry, taking their work to audiences beyond the Eisteddfod pavilion and the lecture theatre. A new movement, the '*cywyddau cyhoeddus*' (public CYWYDD*au*), came into existence in the 1990s, with poets like Myrddin ap Dafydd (1956–), Twm Morys (1961–), and Ceri Wyn Jones giving that old medieval form a new popularity. The fact that performances by these poets are attracting huge audiences—with tickets often selling out in advance—at the start of the 21st century is testimony to the fact that Welsh-language poetry is still a vital part of modern society.

SELECTION OF TRANSLATED ANTHOLOGIES

Clancy, *Twentieth Century Welsh Poems*; Elfyn & Rowlands, *Bloodaxe Book of Modern Welsh Poetry*; Johnston, *Modern Poetry in Translation 7*; R. Gerallt Jones, *Poetry of Wales 1930–1970*; Lewis, *Selected Poems* (trans. Clancy).

Welsh prose literature [1] Middle Welsh

Although the extant corpus of Middle WELSH prose, both original and translated, is not extensive, there is considerable variety in its content, and the assured writing reflected in the majority of the texts suggests that prose was an established literary medium from early times. One of the earliest examples is *Braint Teilo* (Old Welsh *Bryein Teliau* 'The privilege of TEILO'; first part 950×1090, second part 1120×29), which sets out the rights and privileges of the church of St Teilo, i.e. Llandeilo Fawr, Carmarthenshire (sir Gaerfyrddin; see also Book of LLANDAF). Its conventional phraseology and well-balanced syntax probably derive from an underlying oral legal language, but their transference to a written document is particularly successful, and it is not difficult to be aware of attention being paid here to style and structure. Welsh LAW TEXTS begin to appear as comprehensive handbooks around the mid-13th century. They normally consist of an introductory section giving the myth of HYWEL DDA's rôle in making consonant with one another the customs and usages of the various parts of Wales (CYMRU) and a description of the laws of the royal court, its officials, and their rights and duties; short treatises on the law pertaining to various other topics follow, together with descriptions of legal procedures. These statements and descriptions consist of earlier (sometimes written) short 'tractates' on specific topics which have been brought together, and, as in the case of *Braint Teilo*, these characteristics of brevity, specificity, and an underlying oral model enabled the first writers to produce texts which are marked by their clarity and conciseness. The law books show many of the features of an oral style of presentation, e.g. alliteration, triadic groupings (see TRIADS), use of synonyms, proverbs, sententious sayings, but they also reflect a narrative style in the introductory section and remind us that native Welsh prose is never far removed from its oral origins.

The earliest extant narrative is the story of CULHWCH

AC OLWEN ('Culhwch and Olwen', probably later 11th century to early 12th century in the text's present form), based on a FOLK-TALE of 'the giant's daughter' type but greatly developed in its literary form. Its episodic structure allowed its redactor, either intentionally or by reflecting the existing styles of the materials which he used, to vary his writing—from extended narrative to sharp, short recitation of events, from formal rhetorical passages to cameos of scenes and people—so that *Culhwch ac Olwen* presents a panorama, all too brief and in a tale full of movement, of Welsh narrative techniques. The MABINOGI (probably composed *c.* 1050–1120), a single work structured in four 'branches', is a more thoughtful composition. Although his materials were traditional and mythological in origin, the author appears to have adapted them for his own purposes to make implicit comment on social issues and personal relationships. He writes in an economical style, which does not depend so much upon visual or verbal elements as traditional oral literature and, as far as can be judged, in both intent and structure, it is a unique work. The suggestions of a literary narrative style found in earlier texts comes to fruition in the 13th century in the Welsh ARTHURIAN 'ROMANCES' and in idiomatic, confident translations of French *chansons de geste* and romances, such as *Cân Rolant* ('The Song of Roland'), *Pererindod Siarlymaen* ('Charles's Pilgrimage'), *Rhamant Otuel* ('The Romance of Otuel'), YSTORYA BOWN DE HAMTWN, and a translation—*Ystoryaeu Seint Greal* (14th century; see GRAIL)—of *Queste del Saint Graal* and *Perlesvaus*. *Gereint ac Enid* (see GERAINT), OWAIN *neu Iarlles y Ffynnon* (Owain or the Lady of the Fountain), and *Ystoria* PEREDUR, whatever may be their relationship to the chivalric romances of CHRÉTIEN DE TROYES, are in the mainstream of Middle Welsh narrative as this literary medium developed from the conventions of the oral storyteller (see also WELSH LITERATURE AND FRENCH, CONTACTS). The delightful *Breuddwyd* MACSEN WLEDIG (The dream of Maxen), probably early 13th century, though politically motivated, is in the same tradition as is the later (mid-14th-century) CHWEDLEU SEITH DOETHON RUFEIN (Tales of the seven sages of Rome). The author of BREUDDWYD RHONABWY (Rhonabwy's dream; dates suggested range from the mid-12th century to the first half of the 13th century), however, stands outside his own tradition, creating a story and using both the content and stylistics of Welsh narrative to satirize it and to reveal the futility both of the Arthurian ethos and of the rhetorical conventions of oral narrative. *Breuddwyd Macsen* and the triadic CYFRANC LLUDD A LLEFELYS (The adventure or encounter of Lludd and Llefelys), both deriving from Welsh LEGENDARY HISTORY, are reminders that we cannot differentiate too sharply between story and history. *Cyfranc*, which first appears in a Welsh translation of HISTORIA REGUM BRITANNIAE, is the bridge between native historical tradition and new Latin histories. The Welsh *brutiau* (sing. *brut*; see BRUT Y BRENHINEDD; BRUT DINGESTOW) have echoes of the conventions of native compositions, but more characteristic are stylistic and syntactic features foreign to the native prose tradition. Although not as marked in BRUT Y TYWYSOGYON or the only native secular biography, *Ystorya* GRUFFUDD AP CYNAN (first half of the 13th century, Latin original, possibly lost, perhaps *c.* 1157), it is a style that has its own sonorous dignity which may be intentional.

Religious prose, virtually all translations, reflects for the most part popular Latin handbooks and instructional treatises, suggesting that these texts were intended for parish priests and laity. The most important are *Elucidarium* and the didactic dialogue, *Ystorya Adrian ac Ipotis*, the confessor's handbook *Penityas*, and, most interesting, YMBORTH YR ENAID (Sustenance of the soul), the third (and only) part of *Cysegrlan Fuchedd* (Holy living), a tract of spiritual instruction leading the reader along the path to full experience of God's love. The Welsh writer of the tract, for which no Latin source has been firmly established, uses many of the verbal and stylistic (especially rhetorical) conventions of native narrative prose, and is also able to compose ENGLYN*ion* in the contemporary bardic manner. There are a few translations from Scripture, usually as part of other texts, e.g. GWASSANAETH MEIR (The Service of Mary), *Y* GROGLITH *Dyw Sul y Blodeu* (Passion narrative, 'The reading of the Cross' from the lectionary), several apocryphal tales and visions and some hagiographical texts. The *vitae* of St David (DEWI SANT) and St BEUNO were translated from Latin to Welsh, and it is significant that these two Lives, both emanating from old Welsh ecclesiastical centres and representing the most powerful hagiographical figures in medieval

Wales, were the only lives of Welsh saints to be translated, though *vitae* of other Welsh saints had been produced in Anglo-Norman houses (see HAGIOGRAPHY). For medical texts and grammars see MEDDYGON Myddfai; GRAMADEGAU'R PENCEIRDDIAID.

Welsh prose literature [2] early Modern

Sixteenth-century Welsh manuscript culture preserved several aspects of the earlier tradition, with professional copyists such as Llywelyn Siôn (1540–?1615) copying medieval prose texts, partially modernizing the language and orthography. While the medieval BRUT Y BRENHINEDD, BRUT Y TYWYSOGYON and associated texts were widely copied during the 16th and 17th centuries, other more adventurous historiographical works were written. The most striking example is the Chronicle of Elis GRUFFYDD (*c.* 1490–*c.* 1558), a massive history of the world, which includes a good deal of contemporary history and personal commentary.

The Protestant REFORMATION, the Catholic Counter-Reformation, and the advent of humanism all had a profound effect upon the Welsh prose of the period. The first WELSH book, a short collection of religious texts known simply as *Yny lhyvyr hwnn* (In this book), was published by Sir John Prys (Prise) in 1546. Although a great deal of utilitarian religious prose of various sorts continued to circulate in manuscript, the primary thrust of Welsh Protestant humanist scholarship was aimed at producing a Welsh translation of the BIBLE. The first major fruit appeared in 1567 with the publication of the New Testament and the Book of Common Prayer, translated into Welsh by Richard Davies (?1501–81), bishop of St David's, and the most industrious of Welsh humanists, William SALESBURY (drawing also on the work of Thomas Huet). The merits of this translation were in part undermined by the strange orthography, stemming from Salesbury's desire to write Welsh according to (perceived) linguistic derivation rather than the way the language actually sounded.

In 1588 William MORGAN (1545–1604) published his Welsh translation of the entire Bible, an event widely viewed as the most important literary development in the post-medieval period. In addition to the religious ramifications of the 1588 Bible, the publication also presented writers with a new and powerful literary language. While partaking of the rich idioms of spoken Welsh, William Morgan also availed himself of the elevated language of medieval bardic poetry. He filled out the vocabulary by borrowing from Hebrew as well as other languages and, where needed, he used his acute linguistic abilities to create new—yet very Welsh-sounding—words. To this day the 1588 Bible is the most discernible single source for the modern literary language.

Catholic humanists contributed to the process of reworking literary Welsh as well, the most notable example being the grammar of Gruffydd Robert (*fl.* 1558–98) published in Milan in 1567. In addition to being an astute and scholarly analysis of the language, Gruffydd Robert's own Welsh prose is highly crafted, and the masterful Ciceronian dialogue which frames the grammar is in itself one of the high points of 16th-century Welsh literature.

A revised edition of the 1588 Bible was published in 1630; this was *Y Beibl Bach* (the little Bible), sold at a comparatively low price (also earning it the name *Y*

Beibl Coron 'the five-shilling Bible'), which meant that a much broader section of the population had access to the Word (and to the wealth of William Morgan's literary Welsh). This aided the spread of the Protestant reforming trend in Wales (CYMRU), a religious movement which reached its 17th-century literary high points in the works of Morgan LLWYD (1619–59) and Charles Edwards (?1628–*post* 1690). Llwyd published eight Welsh works; both *Llythur ir Cymru Cariadus* (A letter to the beloved Welsh) and the work known in short-hand as *Llyfr y Tri Aderyn* ('The Book of the Three Birds') were published in 1653; the former is a short, lively address which transforms the oral style and urgency of the Puritan preacher into a powerful and readily accessible literary written prose. The later is a longer work, consisting of an allegorical discussion between the Eagle, the Raven, and the Dove, who represent respectively the state (and possibly Cromwell), the established church associated with the state, and the Puritan. Llwyd's prose style points to no obvious literary influences, and is instead a truly personal idiom based on the natural spoken language of the period. Indeed, Morgan Llwyd has perhaps the most intensely personal voice of any early modern prose writer in Welsh. Charles Edwards first published *Y Ffydd Ddi-ffuant* (The unfeigned faith) in 1667, a work which began as a derivative piece but which Edwards expanded and modified in subsequent editions in a way which turned it into a unique prose work, treating the history and nature of what he saw as 'the true faith' using an engaging prose style spiced with frequent metaphorical turns.

Two extremely important prose texts appeared in the early 18th century: Ellis WYNNE (1671–1734) published *Gweledigaetheu y Bardd Cwsc* ('Visions of the Sleeping Bard') in 1703 and Theophilus Evans (1693–1767) first published *Drych y Prif Oesoedd* ('A Mirror of the First Ages') in 1716. While Wynne's text was based on two different English translations of Quevedo's *Los Sueños*, it is an arrestingly original work. Its critique of sin is obviously didactic, yet its lampooning often reaches darkly comic heights. Evans's text was a reworking of the traditional Welsh historiographical tradition combined with a defence of various Anglican practices. It is the style, rather than the content, of both works that was to have an enduring effect on the direction of Welsh prose. Evans wrote his history in a lively narrative register and, as subsequent reprints enthroned the *Drych* as a kind of Welsh national epic, the popularity of the text ensured that future generations of writers drew upon the hardy idiom of his Welsh. Ellis Wynne provided future authors with an example of truly unique literary prose, demonstrating that modern Welsh was a flexible language capable of reaching Rabelaisian comic extremes while also treating political and theological complexities.

Welsh prose literature [3] the novel

The novelty of the novel made it difficult for it to be assimilated into WELSH-language literature with its long history of idealistic praise poetry. It is true that there was plenty of fantasy in medieval Welsh prose, but the new realism of the novel seemed alien, especially in a society obsessed with religion following the spiritual turmoil of the Methodist Revival in the 18th century, which gave the supernatural precedence over the natural (see CHRISTIANITY). Therefore, when the first Welsh-language novels began to trickle from the presses at the beginning of the 19th century, they tended to protest their morally edifying qualities a little too loudly. Early novels in Welsh tended to be translations from the English (usually lagging about a century behind), or original historical romances, temperance novels, or simple love stories. One or two gifted writers turned their hand to writing prose fiction, including William Rees (Gwilym Hiraethog, 1802–83) and David Owen (Brutus, 1795–1866), but, despite the sparkle of their writing, their works are too loosely structured to be regarded as fully-blown novels.

Daniel OWEN is the true father of the Welsh novel. In his *Hunangofiant Rhys Lewis* (The autobiography of

Rhys Lewis, 1885) the eponymous hero states emphatically that his aim is to tell 'the truth, the whole truth, and nothing but the truth'. The trick Daniel Owen played on the reader was to pretend that he had unearthed this autobiography of a Nonconformist minister among his papers, and that it was written more or less involuntarily without any thought of publication. It was almost a parody of the 'official' minister's biography of the period and immediately broke any taboo which might have existed regarding the novel previously. Owen's four novels became immediately popular when they were first serialized. Despite weaknesses in the construction of plot, his characterization, his humour, and his soul-searching make him an unrivalled novelist in Welsh until this day.

Unfortunately, the novel did not proceed from where he left off, and the period from the end of the 19th century until the 1920s did not produce any major novelist, and the fiction landscape seemed rather bleak, though some minor classics were produced. Between the wars, some interesting single novels were published, but only a handful of writers chose the novel as their main form of expression. E. Tegla Davies's *Gŵr Pen y Bryn* (The master of Pen y Bryn, 1923) was highly serious in intent and polished in style, but was marred by the author's tendency to preach and, as Saunders Lewis said, to 'save' his main character. Saunders Lewis's own *Monica* (1930) raised many eyebrows by allowing the lustful anti-heroine to be unashamedly amoral. Lewis's second novel, *Merch Gwern Hywel* (The daughter of Gwern Hywel), which appeared much later in 1964, is a classically-controlled historical novel where romantic love is intertwined with ideals of history as a process against the backdrop of theological debates. D. J. Jones (Gwenallt) was foremost a poet, but he published two interesting rather than notable novels. *Plasau'r Brenin* (The king's mansions, 1934) was based on his imprisonment in Wormwood Scrubs and Dartmoor following his stand as a conscientious objector during the First World War, and his much later *Ffwrneisiau* (Furnaces, 1982) is a chronicle of life in one of the industrial valleys of south Wales (Cymru). Elena Puw Morgan (1900–73), who was first a children's writer, published three novels for adults between 1933 and 1943, and is now regarded as an author whose talent seems to have been aborted by critical neglect. Two of her novels (*Y Graith* [The scar] and *Y Wisg Sidan* [The silk dress]) have had a successful revival recently in the form of dramatic serialization on television.

Kate Roberts, a prolific short-story writer, raised the novel to a higher level of excellence with her *Traed Mewn Cyffion* ('Feet in Chains', 1936), a novel set in the harsh environment of a slate-quarrying area in north Wales at the end of the 19th century. But after the Second World War, and following a personal tragedy, this 'queen of Welsh literature' appeared in a different guise, with her meticulous psychological analysis of suffering women, in four remarkable novels published between 1956 and 1967. Although far too subtle to be a strident feminist writer, critics now see in Kate Roberts an embryonic feminist.

From 1943 to 1947 T. Rowland Hughes (1903–49) published a novel annually and was soon hailed as a 'second Daniel Owen'. He was far from being a modernist, and preferred to write accessible novels based mainly on his own reminiscences of life in a north Wales quarrying community. Although his fundamental themes are often tragic, he weaves a great deal of humour into his stories, and his characterization is strong. His main aim was to celebrate the courage with which the quarrymen and their families endured hardship.

A new note was struck by Islwyn Ffowc Elis, the most professional novelist of the second half of the 20th century. His style is sleek and his plots well wrought. His subject matter does not hark back nostalgically to the past, and his characters are in the main young and full of enthusiasm for the new. Between 1953 and 1971 he published nine novels, all eminently readable, but possibly not as challenging as they could have been. Elis was faced with the dilemma of writing in a minority language which was fighting for its survival, and although he touches on profound themes, the storyteller gets the upper hand in him. Yet, Gerwyn Wiliams has called him 'the father of the modern novel', and it is true that he inspired a new generation of younger writers to experiment with form and subject matter. The 1960s saw the emergence of a new breed of writers, mostly in their early twenties, who expressed the *Weltanschauung* of the times. Eigra Lewis Roberts (1939–), Jane Edwards (1938–), and John Rowlands (1938–) dealt with the confusions of young people in the so-called permissive society.

Side by side with them there were more cerebral and slightly older novelists such as Pennar Davies (1911–96), R. M. Jones, and R. Gerallt Jones (1934–99), though these were primarily poets. Harri Pritchard Jones (1933–) is another novelist who broke over traditional boundaries, with his novels set in the Republic of Ireland (Éire), Northern Ireland, and the docklands of Cardiff (Caerdydd).

Here mention must be made of singular novels which made a strong impression although their authors did not produce a large corpus of fiction. Caradog Prichard published only one novel of distinction, and yet his *Un Nos Ola Leuad* ('One Moonlit Night', 1961) has already achieved the status of a classic, and is the only Welsh-language novel to have appeared in the Penguin Twentieth-century Classics series. Set in the same background as T. Rowland Hughes's *Chwalfa* (Dispersal, 1946), it contrasts vividly with that novel in that it deals not with endurance but the lack of it, the disoriented world of madness, perversion, murder, and suicide. Another poet, T. Glynne Davies (1926–88), was the author of *Marged* (1974), possibly the longest novel in the language, a chronicle of life in the back streets of Llanrwst at the beginning of the 20th century. Dafydd Rowlands (1931–2001) published only one novel, *Mae Theomemphus yn Hen* (Theomemphus is old, 1977), but it is an experimental work with autobiographical undertones, written at the interface between prose and poetry. The playwright John Gwilym Jones (1904–88) published only two novels, but his second, *Tri Diwrnod ac Angladd* (Three days and a funeral, 1979), reverberates with symbolism.

The historical novel has been a strong genre in Welsh, though it is sometimes regarded as a form of escapism. R. T. Jenkins's short novel, *Orinda* (1943), is a gem. Another professional historian who published two historical novels was Ambrose Bebb (1894–1955). But it was in the 1960s and 1970s that the historical novel gathered momentum with the work of Rhiannon Davies Jones, Marion Eames (1921–), R. Cyril Hughes (1932–), and others. The tables were turned on the traditional historical novel by the young Wiliam Owen Roberts (1960–) with his *Y Pla* ('Pestilence', 1987), which is paradoxical in being written from a Marxist point of view and with the use of postmodernist techniques. It deals with the Black Death of the 14th century, and strides across the continent of Europe with great panache, and in doing so presents history as a process, and tramples on various romantic preconceptions. Wiliam Owen Roberts's *Paradwys* (Paradise, 2001) is even wider in scope, moving as it does between London and the West Indies in the 18th century, and delving into some fundamental themes of a historical, political, and social significance. *Gwaed Gwirion* (Innocent blood, 1965) by Emyr Jones (1914–) cannot strictly be called a historical novel, but it is a vivid and moving depiction of a soldier's experiences during the First World War. Rhydwen Williams (1916–97) wrote several novels during the 1970s and 1980s which chronicled life in the Rhondda valleys, but they were autobiographical rather than historical.

The last quarter of the 20th century saw a renaissance in the Welsh novel, to which Wiliam Owen Roberts made a not insignificant contribution. Aled Islwyn (1953–) explores such subjects as anorexia nervosa and sexual sensibility, the work of Meg Elis (1950–) has political overtones, Manon Rhys (1948–) deals with female sexuality from a feminist viewpoint, and Alun Jones (1946–) explores novel themes such as international terrorism and incest—albeit within a strong traditional framework. But the most significant recent fiction is that of Robin Llywelyn (1958–), Mihangel Morgan, and Angharad Tomos. Llywelyn's *Seren Wen ar Gefndir Gwyn* ('White Star', 1992) was the first of two fantasy novels whose use of magic realism bewildered many readers, but everyone acknowledges that he is a prose stylist of the first rank. Mihangel Morgan is a homosexual and blatantly anti-Christian writer who again bewilders his readers with his postmodernist techniques. His works are philosophically challenging but rewardingly entertaining at the same time. Angharad Tomos is a language activist whose first full-sized novel is blatantly political, but whose range of themes in subsequent novels makes her a writer of wide sympathies, and her story-telling techniques certainly break new ground.

John Rowlands

Welsh prose literature [4] the short story

The Welsh short story emerged as a modern literary form in the early decades of the 20th century. Although a continuous flow of short stories of a romantic, moralistic, or historical nature had appeared in the two 19th-century periodicals for women, *Y Gymraes* (The Welshwoman) and *Y Frythones* (The female Briton), they cannot be called short stories in the modern sense of the term. Similar stories had also appeared in *Cymru* (Wales), a popular periodical, whose prolific editor, O. M. EDWARDS, promoted a style of writing which reflected everyday life and speech. Other stories of a more oral nature appeared in *Cymru*, resembling *Straeon y Pentan* (Tales of the hearth, 1895), a volume of short stories by the famous Welsh novelist Daniel OWEN. The most famous writers of this kind of story in this early period were Winnie Parry (1870–1953) and T. Gwynn JONES, and their stories celebrate a character or event in the life of a community.

But it was in *Cymru* between 1910 and 1925 that the stories of three authors—Richard Hughes Williams (Dic Tryfan, 1878?–1919), Kate ROBERTS, and D. J. Williams (1885–1970)—who had the most marked influence on the early development of the Welsh short story appeared. Richard Hughes Williams was the pioneer of the modern Welsh short story and it is in his work that we first encounter the realism of the modern short story. Born into a north Wales quarrying community, he was doomed to become a quarry worker though he had set his heart on becoming a writer. Although he did escape from the perilous life of the quarry, he had to settle for earning his living as a journalist. His stories are deeply rooted in his slate-quarrying community in Arfon in north-west Wales, and his stark accounts of the tragic lives of individual quarrymen as they fight against their grim fate have a sense of hopelessness akin to that found in the work of the American short-story writer, Sherwood Anderson.

When the stories of Kate Roberts, often referred to as the 'queen of the short story', began to appear in *Cymru* they resembled those of Richard Hughes Williams, for they were not only based on the life of a similar quarrying community but they also had the same sense of disillusionment. Both had studied the European masters, Chekov and Maupassant, and their influence is reflected in the Welsh writers' approach to both style and subject.

The literary career of Kate Roberts is usually divided into two phases: the earlier 'Arfon' period (1925–37) and the later 'Denbigh' period (1949–85), with some intervening years of silence between them following a personal tragedy. Her main characters in her early period are almost without exception highly sensitive women who strive courageously against impossible circumstances, be that poverty or illness. Most of them are rooted in the slate-quarrying community, but her later stories include characters from outside her native community who belong to the educated middle class. Their struggle is of a more psychological nature.

But as early as 1927 some critics were concerned about what they called the English influence on the development of the Welsh story. They favoured the more traditional storytelling approach found in the work of R. Dewi Williams (1870–1955) and T. Gwynn Jones. It was D. J. Williams more than any other Welsh short-story writer who was able to extend traditional storytelling to serve a literary purpose. He started out by writing about common incidents in the rural life of his native Carmarthenshire, but his stories are fashioned in such a way as to convey the small ironies of life. In his first volume *Storïau'r Tir Glas* (Stories of the green land, 1936) he draws upon autobiographical material and celebrates the life of his childhood community. But as the titles of his later volumes suggest—*Storïau'r Tir Coch* (Stories of the red land, 1941) and *Storïau'r Tir Du* (Stories of the black land, 1949)—the degeneration had started and the genial tone of his first volume gives way to the eventual sardonic tone of his third volume. As R. M. JONES stated:

> Before 1936, the main concern of our short story writers was the disintegration of society. After that they focused more on the disintegration of the individual.

The disintegration of the individual is the poignant subject of the stories of John Gwilym Jones (1904–88). His only volume of short stories *Y Goeden Eirin* (The plum tree, 1946) struck a new chord as he adopted the 'stream of consciousness' method under the influence of English, American, and French

writers such as Virginia Woolf, Hemingway, Saroyan, and Proust. His characters are 'the *nouveau riche* of the educational system'. They are torn between their allegiance to their traditional upbringing and their urge to enjoy the greater freedom that higher education has brought them.

When Kate Roberts's popular volume, *Te yn y Grug* ('Tea in the Heather', 1959), which depicts the adventures of Begw, a young girl from the slate-mining area of Arfon, appeared, the influence of another contemporary English short-story writer, Katherine Mansfield, can be seen on both her technique and approach to material, and her focus had become psychological. Over the next decades a series of Welsh female writers were to publish volumes of short stories in the same vein: *Tyfu* (Growing up, 1973), by Jane Edwards (1938–), *Straeon Bob Lliw* (Stories of every colour, 1978) by Eleri Llewelyn Morris (1951–), *Cwtsho* (Snuggling, 1988) by Manon Rhys (1948–), and the more recently published *Gloÿnnod* (Butterflies, 1995) by Sonia Edwards.

The Welsh short story reached the heights of its popularity in the 1960s and 1970s. Two series of anthologies of short stories appeared during this period: *Storïau'r Dydd* (Stories of the day; 1968–74) and then *Storïau Awr Hamdden* (Leisure time stories; 1974–9). The full title of the first volume of the second series was called *Storïau Awr Hamdden: Kate Roberts ac Eraill*, which confirms Kate Roberts's unrivalled literary status in this period.

But throughout this period of development the more traditional model had survived in the hands of authors such as J. J. Williams (1869–1954), J. O. Williams (1892–1973), W. J. Griffith (1875–1931), and Islwyn Williams (1903–57). Humour is a vital element in this kind of story writing and Islwyn Williams's approach to the sufferings of the coalmining community can be compared to that of T. Rowland Hughes (1903–49), both of whom emphasized the courage with which these communities faced tragedy. This more oral style of writing continues to this day in the writings of storywriters such as W. S. Jones (Wil Sam; 1920–) and Harri Parri (1935–).

In the 1960s the Welsh short story was drawn into new directions by authors such as Harri Pritchard Jones (1933–), Pennar Davies (1911–97), and Bobi Jones. Harri Pritchard Jones's short stories deal with life outside Wales and also embrace city life. But his characters do have a sense of belonging, unlike the intellectual characters of Pennar Davies's stories. In the hands of Pennar Davies and Bobi Jones the Welsh short story broke loose and everyone and everywhere became the potential material of the Welsh short story.

During the 1980s the novel surpassed the short story in popularity, but in the 1990s the short story gained popularity once more. Young writers such as Martin Davis (1957–) and Meleri Wyn James developed the short story in new directions. In Martin Davis's volume *Llosgi'r Bont* (Burning the bridge; 1991) we have one of the earlier attempts at depicting the tensions experienced by immigrants into rural Wales. Meleri James's first volume of short stories *Stripio* (Stripping, 1994), like Eleri Llewelyn Morris's second volume of short stories *Genod Neis* (Nice girls, 1993), explores female rôles and social conditioning. But the two most dazzling contributors to the form in recent years have been Robin Llywelyn and Mihangel MORGAN. In their different ways, both have baffled the Welsh reader, one with his creation of fantasy stories and the other with his skilful use of post-modernist techniques.

Welsh women writers (1700–2000)

Because the bardic tradition which dominated Welsh literature before the 18th century was reluctant to admit women to its ranks, the development of Welsh women's writing was a comparatively late affair. With the BARD being required to travel from court to court to seek benefactors, his profession was deemed a

particularly unsuitable one for a female, and consequently women were debarred from the schools in which male poets were taught the rules of their craft (see BARDIC ORDER). Of the 4000 or so Welsh-language poets whose names are on record as having composed verse, largely in CYNGHANEDD, before the mid-19th century, only 60 were women (see WELSH POETRY). Many of their names are only known to us because their work was preserved in the manuscript collections of Marged Dafydd, or Margaret Davies (*c.* 1700–85?), of Coedcae-du, near Trawsfynydd in north Wales, who was herself a poet. But the successive waves of the Methodist Revival which changed the social and cultural face of Wales (CYMRU) during the 18th and 19th centuries, of course, had a profound effect on Welsh women as well as men; the early records of the movement indicate that women constituted its most numerous, and most enthusiastic, converts (see CHRISTIANITY).

The movement's emphasis on BIBLE reading, and the spread of the CIRCULATING SCHOOLS, increased female literacy. Ann GRIFFITHS, still pre-eminent among Welsh women poets, was by no means the only woman to have found a literary as well as spiritual voice as a direct result of the Methodist revolution. The first book to appear in Welsh under a woman's name seems to have been Jane Edward's *Ychydig Hymnau a Gyfansoddwyd ar Amrywiol Achosion* (A few hymns composed for various occasions), published in Bala in 1816, but, before that, women had published—under their own names and, no doubt, anonymously—pamphlets of verse associated with the Revival. From the evidence of their poems, as well as the history of the Methodist movement, it would appear that few of these women belonged to the higher social ranks; some of them, like Mary Owen, whose book *Hymnau ar Amryw Destunau* (Hymns on various subjects) appeared in 1839, published their work only in order to try to earn some money for themselves and their children following a husband's dereliction or death. Apart possibly from Margaret Thomas (born 1779) of Tal-y-bont Uchaf in Caernarfonshire (sir Gaernarfon), none of these writers come near Ann Griffiths's achievement in terms of aesthetic excellence and depth of spiritual understanding. She, like Ann Griffiths herself, of course, never published her poems, but wrote them down in the flysheets of her Bible and of *Geiriadur Charles*, the popular scriptural dictionary; it is to her that Thomas Levi attributed the well-known hymn *Dyma Feibl Annwyl Iesu* [This is Jesus' dear Bible]; see *Y Traethodydd* 59.338–43. Despite their shortcomings, the writings of these women demonstrate that Ann Griffiths was not some miraculous exception to a rule of female silence and passivity among Methodist converts.

At the same time, during the last decade of the 18th century and the first years of the 19th, another group of Welsh women were making a name for themselves in the very different arena of the English-language romantic novel. Anna Maria Bennett (*c.* 1750–1808), born in Merthyr Tudful in south Wales, but living in London (Welsh Llundain) as the mistress of an English nobleman when she began her writing career, became a best-seller during her time. Two of her multi-volumed fictions are located in Wales, as are two by Mary Robinson (1756–1800), wife of the illegitimate son of the brother of Howell Harris (one of the leaders of the Methodist Revival), and also, for a period, the mistress of the Prince of Wales, later King George IV of England. Ann Julia Hatton (1764–1838), or Ann of Swansea, who was Welsh by enforced adoption rather than by birth (having been commanded by a family shamed by her bigamous marriage to live at least a hundred miles away from London if she wished to receive an allowance), also located many of her poems and fictions in Wales. The notorious lives and sensationalist texts of these English-language writers may, in England at least, have added to the credibility of the notorious 1847 Report on the State of Education in Wales, which referred to female licentiousness as 'the giant sin of Wales'. In accordance with the sexual double standard of the day, the Commissioners of the Report did not attend to the fact that if women were heterosexually active before marriage then Welsh men cannot have been entirely uninvolved.

In order to refute the findings of the 1847 Report, outraged Welsh Nonconformity (the non-established Protestant denominations, including the Methodists) required of its womenfolk a cultural representation of their manifest purity. It was not enough that Welsh men should defend them; women's voices were needed to proclaim the innate purity of the Welsh female. One of the first defenders of the Welsh against the

so-called 'Treachery of the Blue Books' (*Brad y Llyfrau Gleision*) was a woman, Jane Williams (Ysgafell, 1806–85). Under the patronage of her friend Augusta Waddington HALL, Lady Llanofer (1808–96), herself one of the most effective benefactors of mid-19th-century Welsh culture, Jane Williams went on to become a historian of note. Lady Llanofer also gave her support to *Y Gymraes* (The Welshwoman), a periodical which was intended by its editor, Ieuan Gwynedd (Evan Jones, 1820–52), as a vehicle which would give Welsh women the opportunity to speak up for themselves, though few women in the event did contribute to the new magazine. But at least Ieuan Gwynedd could on its pages welcome the publication of *Telyn Egryn* (The harp of Egryn), the first secular Welsh-language volume to be published by a woman, El(l)in Evans of Llanegryn (1807–76). Also praised were two memoirs of women whose lives were considered to represent a suitable pattern for their sex to follow: a memoir by Thomas Jones (Glan Alun) to his sister Margaret Jones, *Fy Chwaer* (My sister), published in 1844, and Mary Anne Edmunds of Bangor's memoir, *Yr Athrawes o Ddifrif* (The serious female teacher, 1859). These devout Nonconformist women were presented to their Welsh sisters as better exemplars to follow than their more worldly English or Anglicized contemporaries.

Y Gymraes's successor, *Y Frythones* (The female Briton; see BRITONS), edited by the redoubtable Cranogwen, Sarah Jane Rees (1839–1916), between 1879 and 1889, showed that, three decades later, Welsh women were ready to demonstrate their capacities for public utterance in large numbers and at some length. Thirty pages or so of small print appeared regularly each month in *Y Frythones*; its contents, the majority of which were written by women, drew attention to the social commitment and public rôle of women like Cranogwen herself, who during her long career worked as a sailor, a schoolteacher, a poet, a preacher, a public lecturer, a temperance leader and essayist, as well as journal editor. The third Welsh-language periodical for women, a second *Cymraes* (1896–34), was the mouthpiece of the women's temperance associations; temperance, a markedly popular cause among late 19th-century Welsh women, empowered many, giving them the confidence to speak from public platforms and to try their hand at authorship.

In part because of the blow to Welsh self-esteem which the 1847 Report represented, educational improvement in general, and that of women in particular, had became one of the primary goals of the Welsh Liberal culture which emerged after the 1868 Election Reform Act. Educational success, and the early admission of women to the University of Wales (Prifysgol Cymru) in 1893, led to a renewed access of confidence among Welsh women of the period and to the literary achievements of women supporters of the Welsh Renaissance of the late 19th century, and the CYMRU FYDD movement. Women like Ellen Hughes (1862–1927) and Gwyneth Vaughan (Annie Harriet Hughes, 1852–1910) followed Cranogwen on to public platforms as lecturers and temperance reformers, as well as literary authors, while a new generation of younger writers—Eluned Morgan (1870–1938, the travel writer from PATAGONIA), Winnie Parry (1807–1953, author of *Sioned*), and Sarah Maria Saunders (1864–1939)—became household names through the publication of their articles and fictions in such popular monthly journals and weekly newspapers as *Y Brython* (The Briton) and Owen M. EDWARDS's *Cymru* (Wales). These women were the literary mothers of the by now better known female novelists of the first half of the 20th century such as Moelona (Elizabeth Mary Jones, 1878–1953, author of *Teulu Bach Nantoer* [The little family of Nantoer]), Elena Puw Morgan (1900–73, author of *Y Wisg Sidan* [The silk dress]), and, of course, Kate ROBERTS (1891–1985), still pre-eminent among Welsh-language fiction writers (see WELSH PROSE LITERATURE [3], [4]). In the English language too, writers such as the best-seller Allen Raine (Anne Adaliza Beynon Puddicombe, 1836–1900, author of *A Welsh Singer*) and Alis Mallt Williams (1867–1950) contributed to the new-found national confidence, which marked the closing decade of the 19th century in Wales, and became the literary predecessors of later 20th-century authors such as Dorothy Edwards (1903–34), Hilda Vaughan (1892–1985), and Margiad Evans (Peggy Eileen Whistler, 1909–58).

During the first half of the 20th century, the voice of Wales became identified with that of the worker in the heavy industries, the coalmines and iron and steel industries of south and north-east Wales, and the slate-quarry workers of north-west Wales. Women's exclusion from the paid workforce of the heavy

Mererid Hopwood winning the National Eisteddfod Chair at Denbigh, 2001

industries, and their marginality within the labour movement which fuelled much of the creative cultural activity of the period, made it difficult for them to participate in this culture. Those who did, like Kate Roberts from the north Wales slate-quarrying villages, or the English-language Swansea valley novelist Menna Gallie (1920–90), did so only after their escape out of their natal community through university education and marriage.

A series of developments which occurred during the second half of the century, some international and some unique to Wales, combined, however, to bring about significant changes in Welsh women's sense of identity and in their capacity to contribute with confidence to their culture. The revolutionary decade of the 1960s brought a new wave of women novelists to the fore within both the linguistic cultures of Wales; in Welsh, Jane Edwards (1938–) and Eigra Lewis Roberts (1939–) explored the dissatisfactions of post-war women, while, in English, Siân James (1932–) and Bernice Rubens (1928–), from Cardiff's Jewish community, also focused on the limitations of the traditional family from the female point of view. Post-1969, the 'second wave' of the feminist movement had, and of course still continues to have, profound effects on women's writing. One of its outcomes in Wales was the establishment in 1986 of the Welsh feminist press, Honno, which publishes new and out-of-print works by Welsh women writing in both Welsh and English. In the 1970s and 1980s, the peace movement, and green politics generally, as well as the feminist movement, were clearly of paramount concern to a new generation of women poets. Gillian Clarke (1937–), for example, a seminal contributor to contemporary English-language poetry in Wales, is characteristically a 'new nature' poet, focusing on pro-life issues from a feminist point of view. She shares many of her preoccupations with the equally influential Welsh-language poet, Menna Elfyn (1951–), while a concern for the fragility of the ecological balance of life on earth is also central to the work of English-language poets Ruth Bidgood (1922–), Christine Evans (1943–), and Sheenagh Pugh (1950–), and the Welsh-language poet Nesta Wyn Jones (1946–). Indeed, green concerns could be said to have been the single most characteristic feature of Welsh women's writing in the second half of the 20th century, uniting as it did such apparently diverse talents as those of Brenda Chamberlain (1912–71) in *Tide-race* (1962), her diary of the years which she spent living on Bardsey island (Enlli), and *Cyn Daw'r Gaeaf* (Before winter comes), the fictionalized Greenham Common peace-camp journal which won Meg Elis (1950–) the National Eisteddfod's Prose Medal in 1985 (see EISTEDDFOD GENEDLAETHOL CYMRU).

But the influence which first incited Meg Elis to write was not the green or feminist movements but the Welsh-language movement. Since its founding in 1962 Cymdeithas yr Iaith Gymraeg has inspired many a woman writer, none more so than Angharad

Tomos (1958–) who, when she chaired the society in the 1980s, seemed to spend more months in prison in England than she spent campaigning in Wales, and yet still managed to emerge in that decade as one of Wales's formative new novelists. Language issues also feature large in the work of another contributor of note to both the linguistic cultures of Wales, the bilingual poet Gwyneth Lewis (1959–), who has devoted one entire volume of verse, *Y Llofrudd Iaith* (The language murderer, 1999), to a witty, quasi-detective investigation into the state of the Welsh language's health.

As is evident from this necessarily brief account, the women writers of Wales today are concerned not merely with representing self-consciously feminine points of view, but with issues which are central to the lives of all Welsh people. The last of the old misogynistic shibboleths concerning the second sex's perceived incapacities as bards and literary creators was finally shown to be meaningless when a woman poet, Mererid Hopwood, succeeded in winning the Chair in the 2001 National Eisteddfod at Denbigh (Dinbych). Now that a woman has finally been judged pre-eminent over men even at the task of writing *cynghanedd*, from which she was for so long debarred, there is no glass ceiling left to prevent the recognition of her emergence as an equal, mainstream contributor to both the linguistic cultures of Wales.

Welwyn is an archaeological site situated near the ancient tribal capital and OPPIDUM of VERULAMION in present-day Hertfordshire. Two rich cremation burials were found at the site, and these have given their name to a type of aristocratic late pre-Roman burial in what is now south-eastern England, the ancient country of the CATUVELLAUNI and TRINOVANTES. Welwyn burials are distinctive in being very richly furnished, containing imported pottery, drink-

Small sculpture of a man's head in bronze from Welwyn, Hertfordshire, 1st century BC

ing vessels, and amphorae from GAUL or ITALY, indicative of access to the WINE trade. The two TOMBS consisted of burial chambers sunk beneath ground level. Both contained remnants of food grave gifts, which seems to suggest a belief in an OTHERWORLD banquet or FEAST. In one tomb at Welwyn twin firedogs (andirons) were found. In a grave from Welwyn Garden City a young male clad in bearskin had been placed, together with five wine jars, silver items, bronze vessels from Italy, and a set of glass-pieces, probably for games. Such finds are of interest for CELTIC STUDIES as they reflect aristocratic values similar to those found as literary themes in the stock descriptions of the legendary past in early Irish and Welsh tales.

Whithorn in Galloway, Scotland (Taigh Mhàrtainn, Gall Ghàidhil, ALBA) was, according to BEDA (writing in or before 731), with reference to his own time, one of four dioceses in Northumbria. It had been founded by Bishop NINIAN of the BRITONS 'long before' the time of St Columba (COLUM CILLE, *c.* 521/9–597). There, Ninian built a stone church, an architectural style unusual for the Britons. It was called the *Candida Casa* (White house). Ninian dedicated the church to St Martin of Tours [hence the Gaelic name], and he was buried there (*Historia Ecclesiastica* 3.4). Though Beda stressed Ninian's priority over Columba, he did not state that Ninian and Martin (†397) were contemporaries or that *Candida Casa* was built as early as this, but this interpretation—developed in Aelred of Rievaulx's Life of Ninian—became standard doctrine, which has only gradually been corrected in modern reassessments. Excavations in 1984–91 have provided more details to Beda's picture of the pre-English monastic site. Diverse activities showing numerous foreign connections and influences began in the later 5th or early 6th century. Evidence includes shards of imported WINE amphorae from the Mediterranean, late Roman bowls, Germanic glass-ware (claw beakers), haematite and quantities of iron slag, building debris including lumps of grey lime and non-local limestone, remains of an innovative type of plough incorporating a pebble of granite or quartz as a point, mill-stone fragments from a water mill, a wattle-fenced enclosure, small stake-built houses, and extended burials in log coffins of Early Christian type. Whithorn was also the find-spot of a well-executed memorial inscription, usually assigned to the 5th century, including the Latin name LATINVS and Celtic (genitive) BARROVADI; three typologically similar INSCRIPTIONS (one with a Christian chi-rho monogram) were found at Kirkmadrine, another isolated location in coastal Galloway and probably an Early Christian monastic site. All this evidence points to new people with new ideas and considerable resources coming into the area and founding a major working monastery around the year 500. The English name *Whithorn* (Old English *hwit ern*) is a translation. The Late Old Welsh legal text *Braint Teilo* refers to the church of LLANDAF as *Gundy Teliau* 'St TEILO's white house': thus, *Candida Casa* 'Whithorn' probably ultimately reflects a Celtic name. The recent excavations suggest that Whithorn had declined somewhat by the date of the Northumbrian takeover in the later 7th or early 8th century, but the Northumbrians—even the strongly anti-Brythonic Beda—clearly recognized the historical importance and status of the site. Whithorn was expanded and ambitiously rebuilt several times during the Middle Ages and remains an important focus for Scottish heritage and Christian history today.

wild man in Celtic legend

§1. INTRODUCTION

MYRDDIN Wyllt (Merlin, latinized Merlinus) of Wales (CYMRU), LAILOKEN of Scotland (ALBA), and the Irish SUIBNE GEILT represent a unitary, migra-

tory legend which probably originated in Cumbric Strathclyde (Ystrad Clud). Three characteristics coalesce to distinguish the 'Celtic wild man' from similar figures: (1) the man gone-mad from grief or horror due to his transgression affecting comrades or relations in a catastrophic battle (the wild man himself originally being a petty king and, probably, a poet or prophet); (2) his encounter and exchange of knowledge with an alter ego or alternatively a friendly or inimical consort; and (3) the penitent, now perfect, recluse's self-predicted demise or threefold death at the consort's behest. The second characteristic above corresponds to an eremitical (hermit) legend pattern which first appears in Christian guise as St Jerome's Life of Paul the first Hermit—the 'Legend of the Hairy Anchorite'—whereby, in the largely Western subtype, the recluse flees to the wild in penitence. A human who has become wild, the Celtic wild man, shares aspects with holy or unholy social exiles. Arising from a 6th–7th-century prototype, and thriving in derivative areas by the 9th century, his legend is the earliest developed medieval European literary attestation of the 'wild man of the woods'.

§2. CATASTROPHIC BATTLES AND MEN GONE MAD

Myrddin/Merlin. Myrddin, Lailoken, and Suibne go mad in the historical conflicts of Arfderydd (*c.* AD 573) and Mag Roth (AD 637). The Welsh TRIADS, Genealogy of the Men of the North (*Bonedd Gwŷr y Gogledd*), an early entry in Annales Cambriae (the Welsh annals), and further sources indicate the north British petty king Gwenddolau's defeat and slaying by Peredur and Gwrgi. In other versions, Gwenddolau's chief opponent is the historical 6th-century king Rhydderch Hael of Dumbarton. In Geoffrey of Monmouth's *Vita Merlini* (ed. Parry) the battle occurs somewhere in north Britain. Further elaborations of this 'epic of defeat' include Arfderydd's trivial causes (a lark's nest), formulaic length, and truce breaking. The battle site was near the present-day western English–Scottish border at Liddel Strength, in the parish of Arthuret (which preserves the old name), near Carwinely Burn (*Kar-Windelhov* 'Fort of Gwenddolau').

Early stages of the Myrddin legend detectable in the surviving Myrddin poems, in *Vita Merlini*, and in surviving accounts of Lailoken, evince the wild man's merging with the battle tradition in north-west Britain before the 11th-century demise of the Cumbric kingdom of Strathclyde. The legend was transferred considerably earlier to Wales, and also southwards to Brittonic language areas, at least to Brittany (Breizh).

There is no good argument for Myrddin's historicity as a poet or seer. In the Welsh Myrddin tradition, he begins as a petty king or lord serving Gwenddolau, then flees to Coed Celyddon (the Caledonian forest), where he mourns in guilt over loss of comrades or brothers, and for crimes which lost him favour from a woman, often seen as his 'sister'. He has thus conceivably destroyed his sister's son or daughter. Late in the 12th century Giraldus Cambrensis distinguishes 'Merlinus Celidonius' or 'Merlinus Silvester/tris' from the much altered 'Merlinus Ambrosius' of Geoffrey's Historia Regum Britanniae, claiming that the former went mad from seeing a 'most horrible portent' (Giraldus Cambrensis, *Itinerarium Kambriae* 2.8).

Lailoken goes insane in a 'well-known' battle 'between Lidel and Carwannok' (Carwan[n]olow) as a heaven-sent punishment for his responsibility in the slaughter of fellow combatants. Like the biblical Nebuchadnezzar (Daniel 3:28–34), he hears a voice from on high; he also sees threatening aerial hosts, and, like St Paul (Acts 9:3–4), a blinding light. Lailoken's penance (cf. Nebuchadnezzar) is insanity and a beast-like life out of doors. Giraldus possibly drew his similar account of Merlin's vision from immediate sources, or from the fruits of Anglo-Norman church reorganization in Scotland and Wales. Of extant Lailoken fragments, the arguably derivative 'Lailoken in King Meldred's court' shows awareness of Merlinus Silvester/tris.

Suibne. The historical battle of Mag Roth saw Domnall Brecc of Scottish Dál Riata's league with Congal Cáech of Ulaid defeated by Domnall mac Aedo maic Ainmirech, high-king of the Northern Uí Néill. The primary text linking the legendary Suibne to this conflict, *Buile Shuibne* (Suibne's madness), was probably redacted before AD 1197. It was brought together with the related saga texts *Cath Maighe Ratha* (The battle of Mag Roth) and *Fled Dúin na nGéd* (The feast of Dún na nGédh) *c.* AD 1200×1500.

In the later texts Suibne is filled with frenzy and fear due to three battle-cries from on high by assembled combatants. He looks up to the sky (*nem*) and anti-heroically flees battle like a bird. The *Cath Maighe Ratha* account has Suibne overcome by the terrible appearance of all the warriors and by shrieking, cursing aerial demons. In *Buile Shuibne*, *Fled Dúin na nGéd*, and *Cath Maighe Ratha*, Domnall mac Aedo and Congal (here with the epithet *Claen* 'crooked, squinting') dispute trivial gifts (birds' eggs) from otherworldly instigators. Ireland's saints curse Congal's ally, Suibne, for his theft of a tunic, the gift of truce. Further saga references, and Suibne's patronym 'mac Eachach' in the 11th/12th-century 'Anecdota' Poems of St Mo-Ling (†697 according to the Annals of Ulster) which deal with Suibne (where he is once called *an t-Albanach* 'the Scot'), point to the Suibne's being grafted onto the Irish annals and saga genealogies in a way which indicate his origins in north Britain—Scottish Dál Riata or Cumbric Strathclyde.

Suibne musters aid in Scotland, is 'offered . . . heaven and kingship' by St Colum Cille, and flies to a forest north of Dumbarton, where he meets Fear Caille (Man of the wood) or Alladhán/Ealadhán (Wild man, whose name recalls Myrddin's Welsh epithet *llallawc/llallogan*, and the name Lailoken)—a once-renowned warrior who, like Myrddin, wanders, mourning, and in fear of the king's household. The *geilt Bhreathnach* (Welsh madman) went mad in an internecine battle, having put a taboo (geis) on fellow combatants to don proud attire, ensuring their defeat, and earning him 'three cursing war shouts' which caused his insanity.

In *Buile Shuibne*, Suibne's escalating offences at Mag Roth and against St Rónán (mirroring the end of his story) are violation of truce, holy and other persons, bell, book and sanctuary, murder by spear-point, and his inadvertent stripping (*lommrad*) of proud attire (a gift from Congal) by his queen (see sovereignty myth). His offences in *Cath Maighe Ratha* are threefold—against kings, lords, and commons: he pierces an ecclesiastical novice (a liminal figure) above the consecrated spring over which the shrine of Communion had been placed (cf. spring deities).

§3. THE TERMS 'GWYLLT' AND 'GEILT'

'Wildness' was probably adapted, early in the Celtic wild man legend traditions, in terms of the victim's responsibility and horror for a crime or crimes, and to notions of a grazing or tree-dwelling penitential figure, but more importantly (in Cumbria) to grief for lord, comrades, or relatives fallen in slaughter, and (in Dál Riata and Ireland) to heaven-sent punishment through terror in battle. In the Irish version of the wild man theme, the curse, or 'sacerdotal intervention at a place of assembly', becomes pivotal as the prime motivator of battle-induced madness, as one of many kinds of liminal states or 'separation from wonted or due status' (Ó Riain, *Éigse* 14.184).

§4. THE PENITENT HAIRY ANCHORITE

In unravelling the early literary antecedent of the Celtic wild man figure, we find that the seed of the theme of the penitent hairy anchorite is a coalescence of the desert hermit with the 'beast-man'. Further interacting early and culturally widespread themes include the tension between king and hermit (see

Meyer, *King and Hermit*), and the attempted seduction and capture, or pursuit and destruction, of the recluse (e.g. the *Gilgamesh Epic* and 'Tale of Rishyasringa'). The motive for leaving the world is a single, grievous sin, often seduction by a woman or demon thus disguised, who may also constitute the recluse's temptation in the wilds. The sin became an entry point for *dementia* or demon-possession (proud Nebuchadnezzar being the example par excellence), as well as for the wild man's consort.

Thirteen elements constituting penitent hairy anchorite legend are discernible for the Myrddin, Suibne, and Lailoken legends, and hence for the hypothetical Celtic wild man legend 'prototype'.

(1) *The visitant's journey*. In 'Kentigern's encounter with Lailoken' and *Buile Shuibne* there is a meeting between a reclusive saint and a hairy, roaming counterpart: St Kentigern/Lailoken and St Mo-Ling/Suibne. Myrddin's sister Gwenddydd possesses prophetic powers and visits Myrddin before his death; so, too, Ganieda and Telgesinus (Gwenddydd, Taliesin) in *Vita Merlini* and *Cyfoesi Myrddin a Gwenddydd* (The conversation of Myrddin and Gwenddydd; see J. Gwenogvryn Evans, *Poetry in the Red Book of Hergest*, cf. Parry, *Vita Merlini*; Jarman, *Ymddiddan Myrddin a Thaliesin*).

(2) *The recluse's abode and life*. Lailoken arrives at Kentigern's monastery; both have wandered and undergone privations. Suibne is confused with Mo-Ling in the 9th-century *Codex Sancti Pauli* poem and the legendary associations of Mo-Ling's abode, Tech Mo-Ling. Suibne's asceticisms resemble those of Mo-Ling; like Tech Mo-Ling, and the oratory of the *Codex Sancti Pauli*, Suibne's favourite haunts are paradisal. Myrddin's *Afallen* (apple-tree) corresponds to Suibne's sanctuary. Like Suibne (with his apostrophes from a Middle Irish tree list), Myrddin addresses it endearingly as a place safe from pursuers, even without a wall (Jarman, *Llyfr Du Caerfyrddin* 16). In *Vita Merlini* Ganieda builds Merlin a woodland house with 70 windows, and Myrddin's asceticisms include sparse garments and exposure (Jarman, *Llyfr Du Caerfyrddin* 17).

(3) *Animal companions*. Lailoken lives 'among beasts'. In his Irish and Latin Lives, and in the Mo-Ling poetry, Mo-Ling has animal companions. Suibne likens himself, and is likened to, animals and birds, and associates with wolves and stags. The Merlin of *Vita Merlini* mentions a wolf companion, and wolves or hounds chase Myrddin. Merlin's 'boars' answer to Myrddin's companionable white pigling, and Myrddin, like Suibne, hearkens to belling stags.

(4) *A 'perfect' number of years/age*. Lailoken's years in the wilds are not told; however, Suibne has variously spent a 'full year' or seven years thus. Merlin compares his age to that of an ancient oak which he saw as a seedling. The *Afallennau*, *Hoianau*, and *Cyfoesi* mention Myrddin's white hair, and Myrddin has spent 50 years outdoors.

(5) *Ascetic life—temptations*. Lailoken wanders as one possessed, naked, with sparse vegetation his only fare. Suibne's temptations by demons or women parallel innuendos from Mo-Ling's rustic neighbour's wife. The *geilt*'s punishment becomes purposeful asceticism, and he acknowledges his sins to God. Myrddin suffers no overt temptations in the Myrddin poems, although his penitence is pronounced, and the poems contain traces of the wild man's seduction and of crimes alienating Myrddin from a woman. Myrddin prays that his hardships will earn him salvation.

(6) *Reasons for penance/life in the wilderness*. The 'cause of slaughter' for all the warriors slain in the great battle, Lailoken is seized by a *spiritus malignus* and cursed to living in the wilds until death, with the penance inflicted by God and announced by heavenly hosts brandishing weapons. A cause of battle, Suibne suffers a divinely inflicted penance communicated through St Rónán. Myrddin's history in the Myrddin poems traces his madness to wrongdoing at a great battle; apart from this and his entreaties to God, there is no sign of divine punishment.

(7) *Visitant sent by God/recognition*. Lailoken frequents Kentigern's church, prompted by prayers of the saint. When, after many absences, visits, and prophecies, he returns (recognizing Kentigern, who appears not to know him), he reminds the saint, before the disbelieving brethren, that he has been divinely sent. Suibne recognizes Mo-Ling, like Lailoken watching the saint at remove. Mo-Ling also recognizes Suibne, addresses him by name, and tells him that he was destined to come to Tech Mo-Ling for his death and burial. The journey undertaken by Gwenddydd (Ganieda) to find Myrddin (Merlin) in *Cyfoesi* and *Vita Merlini*, and her allusions to his death and burial possibly fulfil this function.

(8) *Perfection*. Although a wretch in need of communion, Lailoken is perfected for immediate translation to glory. Suibne is perfect through suffering by the end of *Buile Shuibne* and the Mo-Ling poetry. *Vita Merlini* and *Cyfoesi* exalt Merlin/Myrddin: Myrddin's hair 'like hoar-frost' reflects the white hair of the perfect anchorite, and he is 'blessed'.

(9) *Dialogue/instruction*. Kentigern meets with Lailoken, and Lailoken visits Kentigern's foundation often during religious services. The brethren debate giving Lailoken the Sacrament, but learn from his true prophecies, which they write down. Suibne visits Tech Mo-Ling each vespers, with Mo-Ling recording his history as the two marvel at one another's prophetic knowledge. Telgesinus joins Merlin at Merlin's house; a respectful competition in expounding encyclopedic or prophetic knowledge ensues, with a similar setting to that found in *Ymddiddan Myrddin a Thaliesin*: two prophets or poets, one with slight precedence over the other. The pupil Ganieda becomes another fellow prophet; Merlin applauds her and passes his authority on to her.

(10) *Death prediction*. Lailoken elaborately predicts his own threefold death, whereby his saintliness is proved. Both Suibne and Mo-Ling show foreknowledge of the madman's death, burial, and resurrection at Tech Mo-Ling, and Alladhán and Suibne likewise to one another. Merlin mentions his death at the end of *Vita Merlini*; similarly, Myrddin's death is predicted as he and Gwenddydd commend each other to God.

(11) *Miraculous meal/sacrament/last rites*. Lailoken washes himself, confesses his faith, and takes the sacrament. Suibne also acknowledges his past faults and receives the sacrament, though, unlike Lailoken, this action follows the madman's mortal wounding. In *Cyfoesi* Gwenddydd urges Myrddin to 'take communion before death'.

(12) *Death, burial, salvation*. Lailoken dies as he foretold, and, as a true prophet and purified communicant, presumably went to heaven. In both *Buile Shuibne* and the Mo-Ling poetry, Suibne dies and is buried at Mo-Ling's monastery, awaiting resurrection with him. This element is indirectly represented in the Welsh legend by references to Myrddin's burial, and his pleas to God.

(13) *Utterances for posterity* (see (9) above for the Scottish and Irish legends). Except for *Ymddiddan Myrddin a Thaliesin*, the Myrddin poems give no indication that Myrddin's utterances were recorded for posterity, though this may be implicit. *Vita Merlini*, however, suggests this element: Merlin has Ganieda provide him with 70 scribes to record his prophecies.

§5. POETRY AND PROPHECY, 'KING AND HERMIT'

The enviable life of the hermit vis-à-vis that of the king is a device occurring throughout the Celtic wild man legend which intimately involves: (1) elegy, nature lyric, and hermit poetry; and (2) PROPHECY (Irish *fáith*, Early Welsh *gwawt*). Aspects of these conceits appear only sparsely in the homiletic, or didactic—yet entertaining—Lailoken texts. However, Myrddin, Merlin, and Suibne are all variously portrayed as king, poet, and seer. The elegiac and naturalistic poetry of the Celtic wild man legend belongs to the wider body of Irish and Welsh saga-verse cycles.

Poetry and prophecy. 'Kentigern's encounter with Lailoken' and *Buile Shuibne* also attribute celebratory eremitical verse to both saint and wild man. Each delights in pure water, lush, yet simple, vegetarian fare, a secluded abode with only animals for companions, and bird- and deer-song for music. Suibne sees deer and trees as friends, along with notable landmarks (see DINDSHENCHAS). *Buile Shuibne* also mentions nature as a source of discomfort: exposure, lack of music, sleep or food, and loss of company. Suibne likens himself to a voyager embarking on monastic PEREGRINATIO. He winters, like Caoilte, the hero of *Fiannaíocht*, with only wolves as companions, and contrasts his sufferings with natural beauties. The Suibne corpus thus also resembles the Find Cycle (FIANNAÍOCHT), similarly concerning persons on the margins or the outside of society, the dubious or criminal life in the wilds. Suibne's Fenian affinities and connection with Mo-Ling survive as verse detritus in ACALLAM NA SENÓRACH (Dialogue of [or with] the old men) and the *Bórama*.

The *Bretha Étgid* triad and later saga elements attest Suibne's reputation as king, poet-prophet, and recluse. The *geilt* shares the divine gift of prophecy with St Rónán and with his counterpart Mo-Ling, predicting the hour in Rome and Mo-Ling's identity. However, prophecy in the Suibne legend is primarily the prerogative of Rónán (cursing Suibne) and of Mo-Ling (both politically and concerning the *geilt* and his slayer). Mo-Ling is known from Giraldus, the *Martyrology of Gorman*, and other sources as one of 'Four prophets of the Gael', and for remission of the *Bórama* tribute.

The Myrddin/Merlin corpus includes eremitical or celebratory strains in its elegiac, natural, and prophetic verse. Like Suibne, Myrddin hearkens to the foreboding cries of [sea-]birds, mentions harsh—if lush—vegetation and beautiful land, and enjoys a fruitful sanctuary. Myrddin never directly expresses eremitical ideals by means of celebratory nature poetry. Like Suibne, Myrddin complains of the direct pain which nature causes him, addressing animal companions and contrasting present wretchedness with former riches, high rank, and female company. He mourns his fallen lord and comrades, complains of sparse clothing, hunger, cold, snow, and wolves, fears capture, and calls on God to relieve him of his wretched life. Geoffrey of Monmouth's Merlin, who enjoyed exalted rank, is miserable in winter, and hunted through the forests. Yet, he boasts a fare of spring water, apples, grasses, and acorns, and his defiance of weather harks to more general European wild man traditions.

Myrddin's prophecies on behalf of Dyfed and Wales resemble Mo-Ling's political prophecy as seen in the Mo-Ling poetry, *The Birth and Life of Moling*, *Vitae Sanctorum Hiberniae*, and in the *Bórama*. Just as Suibne, Myrddin/Merlin, and Lailoken are inspired to predict their own deaths, though also (like Irish saints) the deaths of monarchs or others, so, too, their predictions carry didactic or even apocalyptic weight: Lailoken predicts Kentigern's death in 'Kentigern's encounter with Lailoken', and those of the 'bishop' (clearly Kentigern) and 'Rederech' in *Vita Kentigerni*. Both Ganieda/Gwenddydd and Telgesinus/Taliesin assume the rôles of inspired seers, expounding future events and natural lore.

Emphasis upon political prophecy in Myrddin's legend contributed to his exalted reputation as a seer, most pronouncedly in *Vita Merlini*. Although the *Afallennau*, the *Hoianau*, and *Ymddiddan Myrddin a Thaliesin* balance Myrddin's prophetic utterances with saga, already in *Ymddiddan Myrddin a Thaliesin* the wild man is portrayed as an inspired prophet, magnified beyond, or even conflated with, Taliesin. Myrddin's *gwenwawt* (blessed prophetic-poetic gift) is attested in the Gododdin 'A' text, and the authority of his prophecy is invoked in Armes Prydein (The great prophecy of Britain). Myrddin's exalted secular status thus contrasts with Suibne's saintly transformation, in keeping with the powerful influence of the Welsh tradition of political prophecy.

King and hermit. The tension implicit in the confrontation between these characters attached to it various attempts of the hermit's opponents to mar his reputation, capture, or kill him. By contrast, king, courtier, or regal courtesan might desire a simpler existence or forsake the court for the wilds.

In *Buile Shuibne* and the Mo-Ling poetry, Suibne resists capture and possible return to kingship, or betrayal to regal hunters by his wife Eorann (who once desires to join him) or other women, and by his kinsman Loingseachán. He contradictorily laments the loss of rulership or (when threatened with restoration to it) wishes to remain in the wilds.

Myrddin is destitute and presented as a prophet, in contrast to his regal opposites. Rhydderch's courtly life is compared not with natural glories, but with Myrddin's misery. In *Vita Merlini*, after his initial entry to the eremitical life, Merlin rejects bribes to return to court, prefers nature's whims to rulership, and spurns wealth and good food to enjoy beautiful woodlands and a diet of apples.

'Lailoken in King Meldred's court' and *Vita Kentigerni*

contrast hermit and courtly lifestyles overall in the context of the credibility of imputed prophetic gifts. *Vita Kentigerni* shows a close relationship between the saint and King 'Rederech' (Rhydderch). In that text, rather than being a wild man per se, Lailoken is a fool or prophet (*homo fatuus*) in Rederech's court whose veracity is ultimately vindicated. Lamenting Kentigern's death, 'Laloecen' also correctly predicts the demise of King Rederech, in the face of the court's disbelief. These tales show, parallel to texts for the cognate traditions, the penchant for death predictions which made threefold death integral to the north British wild man's prototype story.

Deaths of rulers and especially most threefold deaths of rulers in early IRISH LITERATURE are predicted by sacerdotal figures as a vindication of otherworldly power over the victim's false rule. The wild man's prediction of his own death is due primarily to his rôle as prophet.

§6. THE WILD MAN'S CONSORT

Widespread ancient traditions of the fertile wild man as a victim betrayed by a courtesan, through sexual enticement or food and drink, to capture or death at the hands of hunters merged early on with the theme of the penitent hairy anchorite, 'king and hermit', and 'catastrophic battles'. In the penitent hairy anchorite legend the wild man's consort theme provided a contrast between chastity and unchastity. Women always appear in one or other guise of the consort in the Celtic wild man legend. The Welsh texts uniquely merge a largely benign consort figure with that of the holy visitor (though not without tension). By contrast, Irish and Scottish sources (with the exception of a single meeting between Suibne and Eorann) consistently show a harsher asceticism, with the woman appearing as temptress and betrayer.

Suibne's queen, Eorann, who had symbolically stripped the *geilt* of kingship as he attacked St Rónán, invites him to cohabit with her—an inverse 'king and hermit' setting suggesting that his deprivation is preferable to worldly kingship. However, Suibne barely escapes from a hunting party led by Eorann's lover, the new king, and his opponent in this love triangle. Women attempt to lure Suibne from asceticism back to kingship and the world, or back to renewed madness, just as he is about to regain his sanity and rule. Thus, in several episodes Suibne perches in holy trees by holy wells and is approached by noble consorts.

Myrddin laments that the 'fair, wanton maiden' whose favour he courted under the apple tree no longer prizes or visits him. Gwenddydd is the only woman whom Myrddin names in the Myrddin poems, and (only) in *Cyfoesi* he calls her his 'sister' (*chwaer*; see GPC for senses including 'lover' and 'nun'). Elsewhere, Myrddin mourns that he has killed Gwenddydd's son and daughter (see §2 above), or that she neither loves nor greets him. Gwenddydd questions Myrddin 'tenderly', calls him her 'life', and says that she 'pines away' from parting with him. In *Vita Merlini* Ganieda primarily acts in concert with Merlin's wife, Guendolena. Both bewail Merlin's departure and, when the wife remarries on the death of Rodarchus (Rhydderch), Ganieda quits the palace to live as Merlin's disciple, supplying him with a dwelling and sustenance.

In this single consort theme, the woman is mostly a would-be visitor, with the wild man expecting or bewailing the absence of a queen, spouse, or former lover who is married to his regal pursuer or usurper and who forsakes the wild man or is forsaken by him. The relationship between wild man, paramour, and regal entourage is ambiguous, and duplication of the consort was perhaps present for earlier stages of the legend. The Welsh consort may have survived—adopted into French Romance through Breton *conteurs*—in the name Vivienne (Niniane), the confidant who uses Merlin's secrets to imprison and supersede him. The name may correspond to the cryptic informant *huimleian* or *chwibleian* of the Myrddin poems, in terms of *chwyf-* + *lleian*, as 'a wanderer of pallid countenance' or even as a wandering nun or sister (Welsh *lleian* 'nun' and *llai* 'grey, pale' perhaps indicating clothing or a veil; cf. Irish *caille[a]ch* 'nun' &c. < Old Irish *caille* 'veil' < Latin *pallium*).

§7. PURSUIT AND CAPTURE

The centre of the Celtic wild man's biography is the hunt: Suibne, Myrddin/Merlin, and Lailoken are pursued by kings, retainers, or rustics. These are aided by a friendly or inimical woman or relative (often related to the pursuer) who instigates the chase. The relative or king, whether enemy or friend, is consort to the chaste visitant or malevolent temptress—thus a 'love triangle' theme.

The Myrddin poems include these themes most prominently in the *Afallennau* (Apple tree stanzas) and the *Hoianau* (Greetings). Myrddin is chased by King Rhydderch, stewards, men, and hounds crowding about his apple tree. Suibne is pursued by Aonghus Remhar, by Domnall mac Aedo the high-king and victor of Mag Roth, or by a relative or his wife's hostile lover. These trap him in holy trees to no effect.

Buile Shuibne's pursuit and capture episodes are similar to those of *Vita Merlini*, and polarize the wild man's preference for, or rejection of, the world. Each text has two pursuit–capture–restoration–escape sequences, attributing three madnesses to the wild man. Once, the recluse is sought by a tracker sent from court by his relatives or former spouse; in *Buile Shuibne* the tracker himself is a relative. Urged to resume sovereignty and deceived by falsely sorrowful tidings, the wild man refuses to return. Suibne's foster-brother, Loingseachán (Exile), is chosen to find the *geilt*, discovers Suibne in a tree, and ineffectually bribes him with renewed regal privileges. Incapacitated by false news that his relatives (including his son and sister's son) have all died (cf. Myrddin bemoaning his son's death), Suibne falls to the ground, and his kinsman shackles him. The nobles flock to see him, imprisoned in a regal bedchamber, watched by Loingseachán's mother-in-law, the hag of the mill Lonnóg (Lusty). Suibne's kingship is manifest to him. The demonic *cailleach* represents both chaste deprivation and the world from which the saint must flee. Lonnóg 'baits' Suibne, jumping towards him with sexual, regal implications. In three saintly leaps parodying heroic and regal prowess, the *geilt* flies out of the skylight—hag at his heels—through all his kingdom until (recalling the death of Finn, further episodes of *Buile Shuibne*, and stories of Mo-Ling) he jumps over a cliff, and she falls into the sea, with the devils bearing her away.

This chase introduces *Buile Shuibne*'s longest poem, in which the hag's pursuit—flying, leaping, mounted on deer—blends with themes of the hunt and the wild man's impending death. Pursued by hunting packs, Suibne sympathizes with a stag, while (like Merlin of *Vita Merlini*) riding on a stag in the manner of the European wild man of the 'Wild Hunt' and the 'Wild Horde'. His frequent pleas to Christ and allusions to agony, going 'peak to peak' on points of branches and antlers or hilltops, evoke both the Crucifixion and his death variously by spear or antler. He regains sanity briefly again, only to be driven at Rónán's behest into lifelong madness by an apparition.

Ganieda's cither-strumming envoy coaxes Merlin to his first recovery, telling him of the grief of his 'wife'. Bound and brought to Rodarcus's court before the nobles, Merlin refuses to eat or to smile. Yet, he laughs on seeing a leaf caught in his sister's hair, and on promise of freedom explains that only recently she enjoyed her lover's favours in the garden. Laughing off the allegation, Ganieda asks the prophet on three occasions how a lad will die. Merlin's three apparently contradictory replies are taken to disprove his credibility, though he is released. Years later, the youth, now a man, dies as foretold, and the threefold death is epitomized in a rhyming couplet.

Later, Merlin appears as 'Lord of the Animals' (cf. OWAIN *neu Iarlles y Ffynnon* and further ARTHURIAN romance), wondering at woodland herds, or riding a stag and driving great woodland herds before him as a wedding present for his former wife. After this grotesque *charivari*, in which he kills the groom with an antler, the wild man is again captured. By another wager involving explanation of his enigmatic laugh, he once more gains release. The causes of laughter again are popular motifs (found in the Old Testament Apocrypha and eastern sources) placed in a courtly, even cosmopolitan, setting, which demonstrate the seer's preternatural knowledge.

The account of the threefold death in 'Lailoken in King Meldred's court' closely resembles that of Merlin's first wager in *Vita Merlini*, including the leaf, the enigmatic laugh, accusation of adultery, and threefold

death prediction and sequel, but the order of events is scrambled, the death predictions coming before any logical reason for their occurrence, and the petty king, Meldred, believing the lunatic rather than his wife. Further indication of familiarity with *Vita Merlini* during some point of the 'Lailoken in King Meldred's court' manuscript tradition is the reference to Merlin the wild man, his death and burial, and an awareness of Merlin as a political prophet.

Lailoken, like Suibne, predicts his own threefold death rather than that of a youth. Only 'Kentigern's encounter with Lailoken' and 'Lailoken in King Meldred's court' include a fatal chase of the wild man, though this theme is implicit in the Myrddin poems and in *Buile Shuibne*. Moreover, in 'Lailoken in King Meldred's court' Lailoken is killed by shepherds, whose association with Meldred in 'Kentigern's encounter with Lailoken' also carries an echo of regal hunting themes. In 'Kentigern's encounter with Lailoken', Lailoken is not brought to a court, and thus the text portrays the wild man's pursual uniquely. In 'Lailoken in King Meldred's court' the madman, like Merlin, gives riddling, jingling replies, and there is emphasis on the same 'jocose' elements which Geoffrey accentuates in *Vita Merlini*. Lailoken is killed by herdsmen set upon him by the queen, though the tale gives few details, and instead refers to its dependence upon the story of 'Kentigern's encounter with Lailoken', which it follows. Like *Vita Merlini*, 'Lailoken in King Meldred's court' rounds off the threefold death with a rhyming ditty.

§8. TEMPTATION, BETRAYAL, AND DEATH

The wild man's death in a saint's company fell together in two versions of the Celtic wild man legend with stories of the recluse's betrayal by a woman and his threefold death at the hands of rustics. Having predicted to St Kentigern's clerics different deaths for himself on three occasions, Lailoken is beaten and stoned by herdsmen, and falls onto a stake of a fishing weir in the Tweed, where he drowns. As seen, 'Lailoken in King Meldred's court' connects the madman's death with the machinations of a woman and accusation of adultery.

The Lailoken tales resemble accounts of Suibne's demise in the types of death suffered and in the female temptation and betrayal. Suibne's death underwent complex development, traceable to several early strands of tradition surrounding St Mo-Ling. A self-contained 9th-century Book of Leinster (LEBOR LAIGNECH) anecdote relates how the saint was tempted by Crón, the wife of the churl Grác (*Crón*, perhaps 'hell'), Crón's rape by robbers, Grác's false adultery and paternity accusation against Mo-Ling and punishment by beheading, and the hermit's derisive verse against the woman and her child. A story (cf. *Codex Sancti Pauli*) of how a magical artificer Gobbán (see GOIBNIU) built the walls of Mo-Ling's yew-thatched oratory and God the heavenly roof, already part of the Suibne legend by the 9th century, grew onto the Grác tradition so that in the 11th-century Irish Life of the saint Gobbán Saer's wife attempts to seduce Mo-Ling while receiving her husband's wages—a magically bountiful cow. When Grác (Raven croak) steals the cow, Mo-Ling punishes him with a threefold death: piercing while falling from a tree, burning, and drowning. He illogically taunts Grác's wife and child in a variant of the Book of Leinster poem, cursing her and Grác with damnation. Later, the Irish Life tells that the '*geilt*' was killed by an unnamed cowherd.

'Poems Ascribed to St Mo-Ling' 5—foreshadowed and introduced by the Poem 4 dialogue between Mo-Ling and the mortally wounded Suibne—preserves a third elaboration of the Grác verse, with two accounts of the ruffian's threefold death and one simple reference to his beheading (Stokes, *Anecdota from Irish Manuscripts* 2.25–8). Grác, here seen variously with his wife or eating a black pig, is punished for piercing Suibne to death by the hedge where the madman customarily received his pure meal of milk from Grác's wife: the woman had falsely accused Suibne of making advances. Mo-Ling curses Grác with hell, and his son with a short life. In *Buile Shuibne* the names of the herd and his wife (Mo-Ling's swineherd and cook) are changed to MONGÁN (Shaggy) and Muirghil (a mermaid's name, Muir*gheilt*), the adultery accusation

being made by Muirghil's sister. Mongán is cursed with a short life and hell, and Suibne—who had foretold his own death variously by spearpoint, falling, and drowning—is pierced by Mongán over the hollow containing his milk and superfluously falls onto an antler, the entire scene implying his complete threefold death.

Certain considerations favour seeing the manner of the threefold death in the Suibne legend as evidence for the legend's British origins. Despite parallelisms between crimes and punishments which fit the ethos of 'purgation of royal sin' (the primary focus of Irish threefold death accounts), the Suibne–Mo-Ling cycle largely stands apart from other Irish treatments of the motif. Grác, who like the lad in *Vita Merlini* tests the prophet by disguising himself (once as a religious initiate), is a ruffian and churl (*díbergach, bachlach*), not a king. Moreover, Grác's death shows signs of having once included only piercing, falling from wood, and drowning, a tell-tale fourth death coming into one variant. The entire threefold death motif seems to be intrusive in his story, occurring first in a text which is cognizant of Suibne's killing by a herdsman. Having no historical grounding as a king of Dál nAraidhe, Suibne is linked in extant sources to both Scottish Dál Riata and British Strathclyde. Although predictions of his death emphasize sacerdotal vindication, these become to an even greater extent a device accentuating the saint or wild prophet's 'powerful knowledge', a strong characteristic of non-Irish threefold deaths. In its full range of variants and thematic associations, Suibne's death, like those of Lailoken and the *Vita Merlini* youth, fits this context more comfortably than an Irish one.

Lastly, the Celtic wild man's penance as linked to his violent death was elaborated in Welsh legend by the 13th century, as is borne out through references in the GOGYNFEIRDD and CYWYDDWYR in contexts of *amour courtois* and political vaticination, to Myrddin's raving and inspired utterances, transfixed by a stake or deer's antlers. These traditions resemble not only the Middle Welsh/Modern Breton story of the penance of Ysgolan/Skolan, a clerical student who for his crimes (slaying a cow, desecrating a church, drowning a book, and rape) is transfixed on the stake of a fishing weir, whence he utters poetry, but also tales of other religious exiles, such as the *clam* (leper) persecuted in *Cath Almaine* ('The Battle of Allen'), and Myrddin's Breton alter ego Guenc'hlan—the penitent afflicted with a malaise which partly represents Christ's suffering.

Brian Frykenberg

Williams, Edward (Iolo Morganwg, 1747–1826), universally known by his bardic nom de plume, is arguably the most gifted, complex, and intriguing figure in the cultural history of Wales (CYMRU). In his day this penurious stonemason was the major authority in Wales on language, poetry, prose, history, music, architecture, agriculture, archaeology, and the folk traditions of the Welsh people. Many people believe that he was a fantasist who embroidered and distorted the past, and who did scholarship a disservice by reducing it to myth, legend, and fabrication. But it would be foolish to dismiss him as a rogue and a charlatan. He was a deeply serious scholar and almost certainly the best-read man of his time in Wales. Not only did he establish the Gorsedd of the Bards (1792), a druidic court which became the first modern national institution in Wales, but he also cam-

paigned vigorously on behalf of setting up a National Library, a National Academy, and a Welsh College in Wales.

Born in March 1747 in the tiny hamlet of Pennon in the parish of Llancarfan in the Vale of Glamorgan (Morgannwg), Williams was deeply influenced by his doting but demanding mother, who introduced him to the classics of English literature. An influential circle of poets, grammarians, and lexicographers also awakened his interest in the riches of the Welsh language and its culture. Having toyed with a variety of bardic pseudonyms, he eventually settled upon *Iolo Morganwg* (Edward of Glamorgan). Fuelled by copious supplies of laudanum, to which he became addicted from 1773 onwards, he endeavoured to combine a variety of business speculations with a literary career, a risky enterprise which led him to fall out with friends and enemies in equal measure. Only his skills as a stone and marble mason saved him and his family from utter destitution. But throughout his long and chequered life he never lost his devotion to *yr hen ddywenydd* (the old happiness), i.e. the study of the language, literature, and history of Wales.

There were a myriad Iolos, for he had a chameleon-like ability to reinvent himself according to his own needs at different stages in his life: he was a labouring poet, a romantic visionary, a devout Unitarian, a hard-headed political radical, an agricultural commentator, a compulsive letter-writer, and an inventor of Welsh traditions. His correspondence and manuscripts, housed in the National Library of Wales (Llyfrgell Genedlaethol Cymru), are one of the most remarkable treasure troves associated with Wales in the romantic period. His papers reveal an extraordinarily well-read man whose capacity for delusion and self-delusion was matched by his conviction that malevolent forces were working against him. He hoarded his manuscripts like a miser and the cluttered chaos of his tiny cottage in Flemingston, Glamorgan, became the stuff of legends. Since his life was a sorry tale of unfulfilled assignments and uncompleted projects, he seldom troubled printers and publishers. Yet his works are significant because they indicate his deep affection for the native culture and his passionate attachment to Glamorgan, a county which he believed to be the fountain-head of the bardic and druidic traditions in Wales. Gorsedd Beirdd Ynys Prydain (The Assembly of the Bards of Britain) was essentially the product of his fertile mind and imagination. It first met on Primrose Hill, London (Welsh Llundain), in June 1792, and from 1819 onwards it became an integral part of the National Eisteddfod of Wales (Eisteddfod Genedlaethol Cymru). Ever since, this colourful visual pageant has helped to sustain traditions associated with the language, literature, and history of Wales.

Iolo Morganwg was the presiding genius among the imaginative makers and inventors of the past in late 18th-century Wales. He hoodwinked the London-Welsh by persuading them that his poems were the authentic work of the 14th-century poet Dafydd ap Gwilym, and his fantasies regarding the existence of the Madogwys (the Welsh Native Americans) in America were widely read and believed. His inspired vision about the literary and historical past of Wales were aired in *Poems, Lyric and Pastoral* (2 vols., 1794) and *The Myvyrian Archaiology of Wales* (3 vols., 1801–7). But his most cherished project, *Cyfrinach Beirdd Ynys Prydain* (The Secret of the Bards of the Isle of Britain), remained unpublished until three years after his death in 1826. A fervent advocate of *liberté* and *égalité*, Iolo devised the Gorsedd of the Bards in 1792 as a means of projecting a new vision of history, of a nation reborn in radical liberty. Styling himself the 'Bard of Liberty', he campaigned against war, slavery, high taxes, and political repression, and his oft-quoted motto *Y Gwir yn erbyn y Byd* (Truth against the World) became a leitmotif of the Gorsedd of the Bards and the National Eisteddfod of Wales. He was one of the founder members of the Unitarian Christian Society of South Wales in 1802, and helped to promote its activities by organizing missionary tours and composing hundreds of hymns. To his dying day this prickly and cantankerous radical remained a scourge of the establishment. He believed that rousing people from their political slumbers was just as important as filling their minds with glorious images and narratives of their historical past.

When Iolo Morganwg died, infirm, impoverished, and misanthropic, in his eightieth year, a deeply compelling chapter in the cultural history of Wales came to an end. His massive corpus of historical lore and literary forgeries survived scrutiny for the best part of a century and it is only recently that scholars have

realized that the welding together of language, myth, and history demanded a deep understanding of authenticity debates in the literary world and a keen appreciation of the past. No one can deny the pivotal rôle played by this flawed genius in the cultural inheritance of the Welsh and in the development of Welsh national consciousness in the modern period.

Geraint H. Jenkins

Williams, Sir Glanmor (1920–2005) was one of Wales's most distinguished historians and certainly the most active and influential figure in the extraordinary upsurge of interest in the study and standing of the history of Wales (CYMRU) in the second half of the 20th century. This diminutive son of a collier was born in the multi-ethnic iron community of Dowlais (near Merthyr Tudful) in Glamorgan (MORGANNWG), where the democratic socialism of working-class people imprinted itself on his mind. He was educated at Cyfarthfa Castle School in Merthyr Tudful and the University College of Wales, ABERYSTWYTH, where his gifts as a historian swiftly began to blossom. He then spent the best part of 40 years teaching history at the University College of Wales, Swansea (ABERTAWE), where, as Professor and Head of Department, he assembled from the early 1960s a constellation of gifted young scholars whose subsequent work helped to transform the prospects of Welsh history. His first major study, *The Welsh Church from Conquest to Reformation* (1962), was a brilliant synthesis and the most important work on Welsh history to emerge since J. E. LLOYD's *History of Wales* in 1911. This trail-blazing volume prepared the way for a series of monographs and articles, which culminated in *Wales and the Reformation* (1997), the fruits of painstaking and innovative research over a period of 50 years. His broad spread of interests also enabled him to write a lively account of the life of OWAIN GLYNDŴR, a major study of Wales from *c.* 1415 to 1642, and volumes (in both WELSH and English) on the interplay between religion, nationality, and language. As the founder of the *Welsh History Review*, the general editor of the *Oxford History of Wales*, and the general editor of the *Glamorgan County History*, he was an inspiration in the intellectual development of the study of Welsh history. This humane and generous master historian was a great believer in the art of clarity and that style is as important as scholarship. A remarkably active and tireless public servant, Glanmor Williams was elected a Fellow of the British Academy in 1986 and was knighted in 1995 for his services to the history, culture, and heritage of Wales. His autobiography, modestly titled *A Life*, was published in 2002.

Geraint H. Jenkins

Williams, Griffith John (1892–1963) was a blacksmith's son from Cellan, CEREDIGION, who became the most learned authority of his generation on the literary tradition of Wales (CYMRU). Sir Thomas PARRY, who never passed judgement lightly, believed that he was the finest Welsh scholar of all time, and those who had the privilege of sitting at his feet readily concurred. Educated at the University College of Wales, ABERYSTWYTH, his Master's thesis was devoted to 'The Verbal Forms in the MABINOGI*on* and the Bruts', but he spent the best part of his academic life in the Department of Welsh, University College of Wales, Cardiff (CAERDYDD), investigating the life and works of the flawed genius Edward

Williams (Iolo Morganwg). His first volume, *Iolo Morganwg a Chywyddau'r Ychwanegiad* (1926) revealed how the stonemason and poet from Glamorgan (Morgannwg) had successfully hoodwinked leaders of the Gwyneddigion Society by passing off splendid forgeries of the poems of Dafydd ap Gwilym as his own. By any standards, Williams's masterly survey of the literary tradition of Glamorgan, *Traddodiad Llenyddol Morgannwg* (1948), is a gem, and it is a matter of great regret that death robbed him of the opportunity to complete a full biography of Iolo Morganwg. In the first volume, published in 1956, he depicted Iolo as a gifted romantic poet and visionary, and he never tired of insisting that his cherished hero was the most gifted of all Welshmen. Williams's extraordinary grasp of Welsh literature over the centuries enabled him to write with distinction, especially on leading Welsh scholars from the Renaissance period to Victorian times. An indefatigable researcher and an inspiring teacher, his collection of rare Welsh books was a thing of splendour. Williams founded the Welsh journal Llên Cymru in 1950 and edited it until his death in 1963. An annual prize is awarded by Yr Academi Gymreig in honour of its first President.

Geraint H. Jenkins

Williams, Gwyn Alfred (1925–95) was a self-styled people's remembrancer who figured among the

Gwyn Alf Williams (centre) on the set of 'The Dragon has Two Tongues' with producer-director Colin Thomas, 1985

most compelling Welsh historians of the 20th century. A native of Dowlais, near Merthyr Tudful, Glamorgan (Morgannwg), he began his academic career as lecturer in Welsh History at the University College of Wales, Aberystwyth, during which time (1954–63) his erudition and irreverence filled classrooms to the brim. As Reader and then Professor of History at the University of York (1963–74) he became a popular guru of the new socialist left, and when he was appointed to the Chair of History at the University College of Wales, Cardiff/Caerdydd (1974–83), he entered the most productive and controversial phase of his career.

Williams was a historian of extensive and catholic tastes, and wrote memorably about Italian communists, French sansculottes, London communards, American intellectuals, Spanish revolutionaries, and radical Welshmen. In exposition few historians have matched his combination of intellectual grasp and sheer passion for his craft. He made no secret of his commitment to Marxism (his special favourite was the cultural theorist Gramsci) and, in his view, the history of Wales (Cymru) was a heroic tale of aspiration and reversal, of near-extinction and unexpected renewal. He believed passionately in the capacity of the Welsh to create their own history, and his own writing was of necessity infused with contemporary political concerns. As a creative and entertaining television presenter, he did more to popularize the cause of Welsh history than any of his peers, and the power of his tongue (despite his stammer) was among his greatest assets. The range of his scholarship and the breadth of his imagination can be seen in works such as *Medieval London* (1963), *Artisans and Sans-Culottes* (1968), *Goya and the Impossible Revolution* (1976), *The Merthyr Rising* (1978), *Madoc: The Making of a Myth* (1979), and his splendid one-volume history of Wales, *When was Wales?* (1985), which has already become a classic. In many ways, the greatest contribution of this brilliantly gifted people's historian was to break down some of the barriers between academe and the lay public by making the study of Welsh history accessible and relevant to everyone.

SELECTION OF MAIN WORKS

Medieval London (1963); *Artisans and Sans-Culottes* (1968); *Goya and the Impossible Revolution* (1976); *Merthyr Rising* (1978); *Madoc* (1979); *Search for Beulah Land* (1980); *Welsh in their History* (1982); *When was Wales?* (1985).

Geraint H. Jenkins

Williams, Sir Ifor (1881–1965), university professor and scholar, was a quarryman's son from Tregarth, Caernarfonshire (sir Gaernarfon). He graduated at the University College of North Wales, Bangor, in Greek (1905) and Welsh (1906). He was appointed Assistant Lecturer in the Welsh Department at Bangor in 1907, awarded a personal Chair in 1920, and became Head of Department in 1929. Given the serious lack of suitable Welsh literary texts for students, he published *Breuddwyd Maxen* (1908) and *Cyfranc Lludd a Llevelys* (1910), edited in English; and in Welsh *Cywyddau Dafydd ap Gwilym a'i Gyfoeswyr* (1914; rev. ed. 1935), *Cywyddau Iolo Goch ac Eraill* (1925; rev. ed. 1937), both with collaborators, *Chwedlau Odo* (1926), and *Pedeir Keinc y Mabinogi* (1930). His lifelong study of the earliest Welsh poets, the Cynfeirdd, led to the publication of *Canu Llywarch Hen* (1935), *Canu Aneirin* (1938), and *Canu Taliesin* (1960), and several editions of individual early poems, all edited in Welsh, as well as articles on the background of early British linguistic history, many in English, collected in *The Beginnings of Welsh Poetry: Studies by Sir Ifor Williams*, ed. Rachel Bromwich (1972). As co-editor of the Bulletin *of the Board of Celtic Studies* 1921–56 he published numerous lexicographical notes of great value. Other important publications include *Enwau Lleoedd* (Place-names, 1945), his British Academy Sir John Rhŷs Memorial Lecture *The Poems of Llywarch Hen* (1932), and the Dublin lectures published as *Lectures on Early Welsh Poetry* (1944). He was a much-loved and inspiring teacher, lecturing not only to his students but to audiences all over Wales (Cymru), and broadcasting Welsh radio talks. Generations of his students filled academic chairs and lectureships in Wales and beyond. His scholarship set the highest standards of academic rigour; he gave a new status to Welsh as a modern language of scholarship and medium of academic teaching, which in Welsh schools and colleges had previously been in English. He was elected a Fellow of the British Academy in 1938 and knighted in 1947.

SELECTION OF MAIN WORKS

EDITIONS. *Breuddwyd Maxen* (1908); *Cyfranc Lludd a Llevelys* (1910); (with Thomas Roberts) *Cywyddau Dafydd ap Gwilym a'i Gyfoeswyr* (1914; rev. ed. 1935); (with Thomas Roberts) *Poetical Works of Dafydd Nanmor* (1923); (with Lewis & Roberts) *Cywyddau Iolo Goch ac Eraill* (1925; new ed. 1937); *Chwedlau Odo* (1926); *Pedeir Keinc y Mabinogi* (1930); *Canu Llywarch Hen* (1935); *Canu Aneirin* (1938); (with J. Llywelyn Williams) *Gwaith Guto'r Glyn* (1939); *Armes Prydein o Lyfr Taliesin* (1955; English version: *Armes Prydein: The Prophecy of Britain from the Book of Taliesin,* ed. Bromwich, 1972); *Canu Taliesin* (1960; English version: *Poems of Taliesin,* ed. J. E. Caerwyn Williams, 1968).

CRITICISM &C. 'The Poems of Llywarch Hen' PBA 18.269–302 (1932); *Lectures on Early Welsh Poetry* (1944); *Enwau Lleoedd* (1945); *Chwedl Taliesin* (1957); *Beginnings of Welsh Poetry* (ed. Bromwich, 1972).

Rachel Bromwich

Williams, Sir John (1840–1926), baronet, KCVO, GCVO, MD, was born in Bailey, Gwynfe, Carmarthenshire (sir Gaerfyrddin). He combined a distinguished career as a surgeon at University College, London, with the post of personal physician to Mary, duchess of York, later consort of King George V, and received a baronetcy after delivering the future King Edward VIII in 1894. He is important in the cultural life of Wales (CYMRU) as one of the principal movers for the establishment of the National Library of Wales (LLYFRGELL GENEDLAETHOL CYMRU) in ABERYSTWYTH, which received its royal charter in 1907, at which time he was elected its first president. He had energetically striven to secure for the Welsh nation books and manuscripts in Welsh or of Welsh interest, in particular the Peniarth Manuscripts (see HENGWRT) and the Shirburn Castle Manuscripts, which became the foundation collections of the National Library.

Graham C. G. Thomas

Williams, John Ellis Caerwyn (1912–99) was one of the most erudite, productive, and highly respected Celtic scholars of the 20th century, renowned for the breadth and high calibre of his scholarly research, the abundance of his inspiring publications, and his constant devotion to helping others. John Ellis Williams (he adopted the name Caerwyn when he registered as a student at BANGOR) was born on 17 January 1912, the eldest of three children, and died in ABERYSTWYTH on 12 June 1999. He was educated at Ystalyfera Intermediate County School in Glamorgan (MORGANNWG) and became a student at the University College of North Wales, Bangor, in 1930, where he graduated in 1934 after taking honours examinations in both Latin and WELSH. His initial postgraduate research for the University of Wales MA degree concentrated on medieval Welsh religious literature. Thereafter, he spent two particularly fruitful years studying in Dublin (BAILE ÁTHA CLIATH), during which deeper and firmer foundations were laid for the development of his scholarship on a broad Celtic front. He qualified for the University of Wales BD (Bachelor of Divinity) degree in 1944.

He was appointed to a lectureship in the Department of Welsh at Bangor in 1945 and to the professorship of Welsh there in 1953. In 1965 he was elected to the newly established Chair of Irish at Aberystwyth, and this resulted in further extension of his wide scope of teaching, research, and publication. In 1968–9 he spent a sabbatical year at the University of California at Los Angeles. From 1978 to 1985 he was also Director of the College Centre for Advanced Welsh and Celtic Studies at Aberystwyth, the precursor of the internationally renowned University of Wales Centre bearing the same name.

Caerwyn Williams was an expert on both linguistics and literary criticism, stylistics and literary theory, spanning the early, medieval, and modern periods. He published valuable work concentrating on syntax, morphology, and semantics. His most important contributions to scholarship were concerned with the literatures of the CELTIC COUNTRIES. This is reflected in monographs both large and small, in learned articles and reviews, and in greatly varied editorial work. Two of the finest achievements of his very productive scholarly career were his comprehensive monographs

on the literary tradition of Ireland (Éire; Ériu), and his major contribution to the editing and interpretation of the vast corpus of medieval Welsh verse composed by the so-called *Beirdd y Tywysogion* 'Poets of the Welsh Princes' (see GOGYNFEIRDD). Another particularly important feature of his career was his devotion from 1965 onwards to the editing of scholarly journals and of a renowned series of volumes concentrating on the publication of high calibre critical essays on Welsh literature. These are *Y Traethodydd* (The essayist), STUDIA CELTICA, and *Ysgrifau Beirniadol* (Critical writings). He was elected a Fellow of the British Academy in 1978 and an Honorary Member of the Royal Irish Academy in 1990. He was awarded an Honorary D.Litt. Celt. (Doctor of Celtic Letters) by the National University of Ireland in 1967 and an Honorary D.Litt. by the University of Wales in 1983. He was awarded the British Academy's Derek Allen Prize in 1985.

He was one of the most learned and versatile Welsh scholars of the 20th century, always concerned about the native language and culture of Wales (CYMRU), its Christian religious heritage and tradition, and Welsh national identity. He cared about nurturing and sustaining an awareness of the sense of community among scholars and was tireless in his support of students, not least his postgraduate researchers.

Williams, Maria Jane ('Llinos', 1795–1873) was a pioneering collector of Welsh folk music (see WELSH MUSIC). She was the daughter of Rees Williams of Aberpergwm, near Neath, Glamorgan (Castell-nedd, MORGANNWG), who was reputed to have been the last man in Wales (CYMRU) to retain a *bardd teulu* or household BARD. Having gathered various old airs and their accompanying Welsh lyrics from the oral memory of local peasantry, she not only performed them publicly, accompanying herself on the HARP or guitar, but, in 1844, edited and published them, under the title *Ancient National Airs of Gwent and Morganwg*, thus rescuing them from likely oblivion. This volume was based on her winning entry to a prize competition held by Eisteddfod Cymreigyddion y Fenni in 1837 (see EISTEDDFODAU'R FENNI), for the 'best collection of original unpublished Welsh airs, with the words as sung by the peasantry of Wales'. Augusta Waddington HALL, Lady Llanofer (1808–96), the prime mover of the Abergavenny EISTEDDFOD*au*, co-operated in the publication of Williams's collection and helped to ensure, through her persuasion and influence, that the words which accompanied the songs were as true to the originals as was at the time deemed acceptable for publication. Williams also assisted John Parry ('Bardd Alaw', 1776–1851) in the production of his collection *The Welsh Harper* (1848) and advised John Thomas ('Pencerdd Gwalia', 1826–1913) on his editions of Welsh airs.

Jane Aaron

Williams, Waldo (1904–71) was one of the most significant Welsh-language poets of the 20th century. Born in Haverfordwest (Hwlffordd), a majority English-speaking part of Pembrokeshire (sir Benfro), Waldo's family moved in 1911 to Mynachlog-ddu, in the north of that county, where he learned Welsh from his fellow school pupils. The cultural, intellectual,

and politically radical views of his parents, J. Edwal and Angharad Williams, and of his uncle, William Williams ('Gwilamus'), were important influences in Waldo's formative years, as was the chapel of his Baptist upbringing. Studies at the University College of Wales, ABERYSTWYTH (1923–6), fostered his continuing interest both in the English Romantic poets and in Welsh literature, while his collaboration with the humorist and playwright Idwal Jones (1895–1937) honed his talent for witty prose and occasional verse in both languages. After graduating in English, Waldo qualified as a teacher, holding a variety of posts until his retirement in 1969.

A poet of considerable ability in both CYNGHANEDD and free verse, in 1936 Waldo came second for the AWDL at the National Eisteddfod (EISTEDDFOD GENEDLAETHOL CYMRU), and published a volume of poems for children, *Cerddi'r Plant*, with E. Llwyd Williams (1906–60). Although his mature work reflects issues of personal concern, often linked to events in his own life and moments of formative insight, he also expressed the hope that his poetry would be of 'practical help' to the Welsh people. A boyhood experience of the profound interrelation and interdependence of creation and of all human beings informed his religious convictions and would lead him to write *Mewn Dau Gae* ('In Two Fields'), perhaps his finest poem, in 1956. Personal tragedy in the death of his wife Linda from tuberculosis in 1943, less than two years after their marriage, was followed by a period in which he left Wales (CYMRU) to teach in Huntingdonshire and Wiltshire. But it was during these years that he produced some of his most memorable poetry. The very real threat that the Ministry of Defence would annex and use over 16,000 acres of north Pembrokeshire for military purposes led to a powerful group of poems on the identity of Wales and the future of the WELSH language. A committed pacifist (he had been registered unconditionally as a conscientious objector in 1942), war and its preparations, together with the many other divisions and conflicts of humanity, were a source of continuing anguish to Waldo. For him, the primacy of *brawdoliaeth* (lit. 'brotherhood'), at once universal and lived out at the level of local communities, had moral precedence over the State's presumption of inalienable rights. Thus, the outbreak of the Korean war led to Waldo resigning his teaching post in order to withhold Income Tax in protest at the imposition of military conscription: a stand for which, between 1954 and 1959, his property was distrained and he was twice imprisoned. Taking his cue from Mohandas K. Gandhi, Waldo did not allow the publication of *Dail Pren* ('The Leaves of a Tree'), his major volume of verse, until 1956, when he was satisfied that his deeds had become congruent with his statements as a poet. He became a member of the Society of Friends (Quakers) in 1953, and stood as the first Plaid Cymru candidate in Pembrokeshire in 1959 (see NATIONALISM). In 1963 military conscription came to an end, and Waldo resumed payment of Income Tax. Following a stroke, he died in 1971.

An element in Waldo Williams's poetry which draws on biblical apocalyptic and prophetic imagery has been identified, but it may be that it was his underlying vision of the ultimate victory of goodness, of a realized eschatology expressed in memorable poetry, which assured his popularity and led to the almost prophetic status in which he was long held. Waldo's art, however, came at a price. His own complex life reveals extraordinary abilities but also great vulnerability, and his convictions led to periods of intense mental suffering. Not a few of his images indicate the darkness which he experienced. Known as a profoundly kind and unassuming man, Waldo was one for whom humanity's frequent inhumanities were ever incomprehensible, but whose hope, however fragile and tested, did not fail.

M. Paul Bryant-Quinn

Williams, William (of Pantycelyn, 1718–91), religious revivalist, hymnist, poet, and prose writer, came to prominence as one of the young leaders of the mid-18th-century Methodist movement (see CHRISTIANITY) which by early Victorian times had radically changed the religious character of Wales (CYMRU). Nominally Anglican, from 1738 onwards the Methodists organized themselves into private societies which demanded a deeper moral and social discipline than that displayed by ordinary churchmen. More importantly, these societies sought understanding and expression, in discourse and in song, of the conversion experiences which distinguished them from their co-communicants in the Church of England on the one hand, and, on the other, from the Dissenters, whose ranks they later swelled. Williams, as a prominent superintendent of the private societies of his native Carmarthenshire (sir Gaerfyrddin) and of Cardiganshire (CEREDIGION), was one of the movement's chief pastoral organizers; he was also, as hymnist, poet, and prose writer, the incomparable literary genius that gave Methodism its voice.

His first small collection of hymns was *Aleluia*, published in 1744. He added to them regularly and published a fuller *Aleluia* in 1749. This was followed by *Hosanna i Fab Dafydd* (Hosanna to the son of David, 1751–4) and by *Rhai Hymnau Newyddion* (Some new hymns, 1757). Although most of these early hymns do not have the imaginative range and verbal power of the hymns which he wrote later, they convey an individual sense of salvation and intimacy with Christ which no other contemporary Welsh poet matched. This is expressed in an idiom which fuses the classical WELSH of William MORGAN's BIBLE with Williams's pronounced north Carmarthenshire Welsh. His great collections are *Caniadau y Rhai sydd ar y Môr o Wydr* (The songs of those who are on the sea of glass, 1762), *Ffarwel Weledig, Groesaw Anweledig Bethau* (Farewell to the things that are seen, welcome to things not seen, 1763, 1766, 1769), and *Gloria in Excelsis* (1771–2), all of which contain individual lyric poems and sustained poetic sequences of the first rank. In them Williams expresses the pain and ecstasy of personal religious experience with the bravado of a poet who is conscious of his own originality but who at the same time revels in his adherence to scriptural imagery.

Williams became—and remains—famous for his HYMNS. But his other works are also important. Between 1762 (when the Welsh Revival gained a second wind) and 1779 he published a series of prose books, all in epistolary or dialogue form, depicting characters which are model Methodists with whom readers could identify or otherwise recognize (*Llythyr Martha Philopur*, Martha Philopur's letter, 1762, for instance), and analysing socio-religious situations and affairs. The most important of these is *Templum Experientiae Apertum* (1777), which discusses the essence, nature, and efficacy of the private society as a confessional and spiritual academy. Between 1762 and 1779 he also published a kind of encyclopedia called *Pantheologia*. His most ambitious works, and least successful works as poetry, are the two 'epic' poems which he published in 1756 and in 1764. The one, *Golwg ar Deyrnas Crist* (A view of the kingdom of Christ), belongs to the wider 18th-century debate about the nature of God and the meaning of Creation, and is an affirmation in the Age of Reason of Christ's suprascientific rôle as redeemer. The other, *Bywyd a Marwolaeth Theomemphus* (The life and death of Theomemphus), is the quintessential Methodist depiction of the life and death of an arch-sinner.

wine

Since wine grapes require extensive sun, dry autumns, minimal frosts, and an average temperature of around 10° C, they are difficult to grow in northern Europe, for example, in the CELTIC COUNTRIES. Even in the warmer period which preceded the 'Little Ice Age' of the 16th and 17th centuries, grapes were sparsely cultivated in the north of GAUL or in BRITAIN. Archaeological evidence indicates that Celtic-speaking regions did not produce wine, but rather imported it, as indicated by such finds as the

bronze krater of Vix ('La Vase de Vix', Musée Archéologique du Châtillonnais à Châtillon-sur-Seine). This vessel, used for mixing wine, stood 1.6 m high and had a capacity of over 1200 litres (the contents of over 30 wine amphorae).

The wild forerunner of the grapevine was present in France long before the Celts, but written and archaeological evidence suggests that the cultivated vine was introduced by the Greeks. Strabo discusses Burgundy as a centre of the wine trade, but claims it had no vineyards of its own. Many classical authors remarked on the Gauls' fondness for wine, from their habit of drinking it unmixed with water to the high prices which they were willing to pay for it and the quantities which they drank. Diodorus Siculus claims that one amphora (around 39 litres) was exchanged for one slave (see SLAVERY). Old Irish *fín* 'wine', Welsh, Cornish, and Breton *gwin* are early loanwords; similarly, Old Irish *sesrae* and Old Welsh *hestaur* come from a very early borrowing of Latin *sextārius*, the name of an ancient liquid measure used for wine, also reflecting the impact of the ancient wine trade on the Celtic world and the Celtic languages.

The recovery of vast quantities of 2nd- and 1st-century BC Roman wine amphorae from Gaul and southern Britain constitute an important archaeological indicator for late 1st-millennium BC trade in western Europe. This is especially important in the light of the apparent archaeological invisibility of most of the other goods traded, such as slaves, animals, hides, &c. The quantities of these amphorae recovered, in some cases, bordered on the industrial (e.g. an estimated 24,000 at Châlon-sur-Saône, France). The scale of this trade indicates the importance of wine to the Gauls and the Britons as a substance which possessed the key qualities of exoticism and expensiveness. It was thus suitable for the type of conspicuous consumption of wealth essential to the maintenance of the Celtic social system, where élite position was derived largely through an individual's ability to both acquire and distribute (or destroy) wealth.

In the early post-Roman period wine amphorae from the eastern Mediterranean and north Africa reappear on several sites accessible by the western seaways, thus evidently shipped through the straits of Gibraltar. Shards have been recovered most commonly in Dumnonia (Cornwall/Kernow and Devon), but also in lesser amounts from sites in Ireland (Ériu), Wales (Cymru), and Scotland (Alba). As might be expected, most come from sites interpreted as high-status or 'royal' settlements, for example, Tintagel (Cornwall) and South Cadbury Castle (Somerset), both often deemed Arthurian sites, Dunadd in Argyll (the fortified centre of Scottish Dál Riata), and Garranes (Co. Cork/Contae Chorcaí). However, 'B Ware' (as this subgroup of imported pottery is called) has also been recovered from several early ecclesiastical sites (e.g. Reask, Co. Kerry/Contae Chiarraí, and Whithorn in Galloway/ Gallghaidheil), a fact which suggests that the introduction of the Christian liturgy and its requirement for wine had broadened the social rôle of the drink in the islands to include a ritual purpose. The 6th century AD was also the period when Gregory of Tours recorded the repeated raiding by Ueroc and other Breton chieftains into the vineyards of the nearby region of Nantes (Naoned). The value attached to wine thus stimulated the early expansion of Brittany (Breizh) into Gallo-Roman territory, which reminds us of the accounts of the invasion of Greece by Brennos of the Prausi some eight centuries earlier.

Once Gaul had become an established wine-producing region and the general pattern of wine export was to the south rather than to the north, the amphora came to be replaced by the barrel. This had the advantage of being a much more practical and durable vessel for overland transport, and barrels could also be rolled instead of having to be carried. Unlike the amphora, the wine cask was not airtight, and wine could not be matured in barrels in the same way as in amphorae.

A thriving wine trade existed in the later medieval period between Spain and several ports in the Gaelic lordships of western Ireland (Éire), including Galway (Gaillimh) and Dingle (An Daingean), with wine being known figuratively (and lovingly) as *Iníon Rí na Spáinne* (the daughter of the King of Spain). Wine also constituted an important part of the cargoes of maritime smugglers in both Cornwall and the Isle of Man (Ellan Vannin) during the early modern period (see SMUGGLING).

SÓF, AM

wisdom literature, Irish

Wisdom-literature is well represented in the IRISH language, particularly from the early period. The oldest wisdom-text is AUDACHT MORAINN (The testament of Morann), which dates from around the 7th century and consists largely of advice to the young king Feradach Find Fechtnach. Another text containing instructions to a young king is *Bríatharthecosc Con Culainn* ('The Word-Teaching of CÚ CHULAINN'), which is addressed to Lugaid Réoderg and forms part of the tale SERGLIGE CON CULAINN ('The Wasting Sickness of Cú Chulainn'). *Bríatharthecosc Con Culainn* provides advice on proper behaviour which is of general application, and not solely of relevance to a king. For example, Lugaid is advised, 'be humble when instructed by the wise, be mindful of admonition from your elders'. Other precepts in this text are legal, e.g. 'let not prescriptive periods close upon a foundation of illegality'. The short wisdom-text *Tecosc Cuscraid* ('The Instruction of Cuscraid'), uttered by CONALL CERNACH to his foster son, the young king Cuscraid Mend, deals more specifically with royal duties and obligations, and advises the king to monitor his borders: 'let your assemblies be frequent concerning the right of borders'. He is also urged, 'to exalt the good is incumbent on you, to abase the oppressors, to destroy criminals'. *Tecosca Cormaic* ('The Instructions of CORMAC [MAC AIRT]') likewise devotes much attention to the behaviour of kings. This text, which dates from around the 9th century, is set in the form of questions posed to Cormac by his son Cairpre, to which he delivers a reply, often lengthy. As in *Audacht Morainn*, there is great emphasis on the beneficial effects of the king's justice, which causes the earth to be fruitful, the river-mouths to be full of fish, and the trees to be covered with fruit. He must exert his authority through keeping hostages in fetters, restraining the mighty, and slaying evildoers. He should keep a 'sword-smiting troop' for the protection of his kingdom and launch raids into adjoining territories. This text stresses the necessity for the king to be acquainted with law and other branches of learning. He should learn poetry and every craft, and should also buy works of art. A section of the text deals with the proper behaviour of a king and his guests at a FEAST, and advises that there should be liberality of dispensers, music in moderation, joyous countenance, storytelling, harmonious choruses, and lighted lamps. Having discussed the subject of KINGSHIP, the author of *Tecosca Cormaic* moves on to more general topics. Two long passages deal with the characteristics of different types of people. Much of this material consists of rather banal observations on human psychology, e.g. 'every ignorant person is shameless', 'every timorous person is apprehensive', 'every docile person is wise'. Taken as a whole, however, these observations are of value in indicating what was regarded as acceptable and unacceptable behaviour in early Irish society. Other observations in this section are less predictable. For example, the author observes that 'every ugly person is accustomed to act as a foster-parent'. This statement may be based on the supposition that an ugly person is unlikely to have children of his or her own. Another strange observation in this series is that 'every satiated person is fond of dogs'. This may refer to a person's willingness to feed his dogs only when he himself has a full stomach. There are also flashes of wit in this section, e.g. 'every lover likes a nice bed' (*solepthach cach suirgech*). In §14 the author lists 29 foolish activities, which include renouncing church, laughing at an old person, concealing ancient tradition, playing on a cliff, being haughty towards a king, much lending, having many friends, and buying judgements.

The most extraordinary section of *Tecosca Cormaic* (§16) consists of a ferocious diatribe against women. Cairpre poses the question, 'O grandson of Conn, O Cormac, how do you distinguish women?' Cormac replies, 'I distinguish them but I make no difference between them', and then proceeds to list 122 feminine faults, such as being bitter as constant companions, haughty when visited, greedy for gifts, steadfast in hate, forgetful of love, distainful of good people, sorrowful in an ale-house, tearful during music, sulky on a journey, troublesome bedfellows, and painstaking

about elegant head-dress. The author leads up to a resounding climax of condemnation: 'they are waves that drown you, they are fire that burns you, they are two-edged weapons that cut you . . . they are bad among the good, they are worse among the bad'. General criticism of women is commonplace in wisdom texts, but the venom of this passage is unique in early IRISH LITERATURE, and indeed in medieval literature generally. It does not seem to belong to the monastic anti-feminine tradition, in which women are regarded as forbidden fruit and a menace to celibacy. The attitudes expressed in *Tecosca Cormaic* seem rather to come from an environment sated with female company and contemptuous through familiarity. From the perspective of the author of this text, the most important matters in life are war, statecraft, law, and feasting. Since these are the typical concerns of a royal court, it is possible that *Tecosca Cormaic* is an early example of Irish court literature.

The text concludes with a series of miscellanea, including some nature gnomes, i.e. general statements about the natural world. For example, Cairpre asks Cormac, 'What is most lasting on earth?', to which the reply is 'Grass, copper, a yew tree'. An unusual section lists actions which are bad for the human body. These include sitting too long, lying too long, heavy liftings, exertions beyond one's strength, great leapings, frequent falls, sleeping with one foot over the bedrail, staring at embers, taking steps in the dark, biestings (the name for the first milk given by a cow after calving), dry food, bog water, rising early, eating too much, running up a slope, shouting into the wind, summer dew, winter dew, swimming on a full stomach, sleeping on one's back, heavy drinking, frenzy, and foolish romping. *Tecosca Cormaic* also contains some passages of weather lore. Such material would be expected to be of wide frequency in the popular wisdom of any farming or fishing community in the uncertain climates of western Europe, and may have been adapted by the author from current folklore. He includes the observations 'ice is the mother of corn, snow is the father of fat', with the implication that a cold winter benefits growth and fruitfulness in the following summer.

The collection known as the TRIADS of Ireland (*Trecheng Breth Féne*) comes from approximately the same period as *Tecosca Cormaic*, but seems to be an example of monastic rather than court literature. Like *Tecosca Cormaic*, it contains a good deal of legal material, mainly in Triads 149–86. Some of these triads have been taken directly from the LAW TEXTS, but most of them are likely to be original and display considerable legal knowledge on the part of the author. Versions of a few triads in this collection have been recorded from modern folk tradition. Thus, Triad 125 lists 'three agreements with after-sorrow: co-operative farming, vying in feats of strength, a marriage alliance'. This may be the origin (with minor changes) of a triad recorded from speech in a 19th-century manuscript: 'three things which are bright at first, speckled in the middle and black in the end: co-operative farming, a marriage alliance, living in the same house'. Likewise, Triad 93 in the Old Irish collection reads 'three fewnesses which are better than plenty: a fewness of fine words, a fewness of cows in grass, a fewness of friends in an ale-house'. Essentially the same triad is found in a Modern Irish metrical version: 'a little seed in a proper seed-bed, a few cows in good grass, and a few friends in an ale-house—the three best things in the world'.

Two wisdom texts contain a good deal of overlapping material: *Senbríathra Fíthail* (The ancient words of Fíthal) and *Bríathra Flainn Fhína* (The words of FLANN FÍNA). The former is attributed to the legendary judge Fíthal, and contains precepts and general observations on human behaviour. Some of this material is presented in the form of replies to questions posed by Fíthal's son. For example, Fíthal is asked in §10, 'What is the anvil (i.e. support) of husbandry?', to which he replies, 'A good wife', and proceeds to describe various physical types which should be avoided, such as the dun-coloured yellowish woman or the short skinny curly-haired woman. The ideal wife should be tall, fair, and slender, or else pale-complexioned with dark hair. In *Senbríathra Fíthail* much use is made of the formula 'X is better than Y', generally with alliteration, e.g. *ferr doairm diairm* 'better badly armed than unarmed', *ferr bec éra* 'better a little than a refusal'. Some of the material in this text was widely disseminated in the later language. Thus, *ferr teiched tairisem* 'better flight than resistance' is doubtless the source of the Modern Irish proverb *is fearr teicheadh maith ná drochsheasamh* 'better a good flight than a bad resistance'. *Bríathra Flainn Fhína* contains some material

which is absent from *Senbríathra Fíthail.* Thus, the series using the formula 'Y is a sign of X' is peculiar to *Bríathra Flainn Fhína,* e.g. *descaid seirce sírshilliud* 'long gazing is a sign of love'. Unlike Fíthal, Flann Fína was a historical person about whose career a certain amount is known. Flann Fína mac Ossu was the Irish name borne by the Northumbrian king Aldfrith son of Oswydd, who ruled from around 685 to 705. He is reputed to have had an Irish mother and to have been partly educated in Ireland. Although there is no doubt about his learning—he was a friend of Adomnán of Iona (Eilean Ì)—it is uncertain whether he ever actually compiled proverbial material in Irish. *Bríathra Flainn Fhína* contains no linguistic features which would date the text as early as the 7th century. A humorous text likewise attributed to Flann Fína lists the characteristics of various population groups, presented in a question-and-answer format, e.g. 'Who are the most timorous you have met? The Uí Liatháin and sheep. Who are the coarsest you have met? The Orbraige and gorse'.

The **Witham shield** is one of the most famous masterpieces of fine metalwork of the British pre-Roman Iron Age and is often compared with the shorter sheet bronze and red enamel parade shield cover recovered from the Thames at Battersea. It is named from the river Witham, which flows through east-central England near the ancient town of Lincoln (Romano-British *Lindum colonia*).

There was an associated Iron Age farmstead settlement, which the river passes in the north, at Washingborough in North Kesteven, around 3 km east of Lincoln. Here, a considerable amount of domestic refuse was found, half of which consisted of cattle bones, with the remaining faunal elements being mainly waterfowl, red deer, and horse (see FOODWAYS). Albeit at a considerable distance of time and space, Washingborough pottery recalls earlier Continental Urnfield pottery of the Late Bronze Age. The radiocarbon dating of the items from the site suggest a date around 303±70 BC.

In the river near Washingborough a gilt bronze scabbard-mount, probably a shield boss (not of the famous shield), was found in 1926. The scabbard is 13 cm long and around 5 cm wide, and is dated to the 2nd/1st century BC. Like the Torrs pony cap, it combines asymmetrical repoussé work with engraved decorations of partial lyre palmettes. These motifs originated in the Danube region and are rare in Britain.

The famous Witham shield was probably recovered during dredging in 1768 (or possibly in 1826). Of sheet bronze and originally with a wooden backing, it is 1.13 m long. It originally had the figure of a highly

One of the two end roundels of a bronze shield cover from the river Witham, Lincolnshire, 14 cm diameter, with decorative bull's head joining the central rib, 2nd century BC

elongated BOAR attached to it with rivets, the outline of which remains visible. The shield was remade in ancient times and the boar replaced by a decorated sheet-bronze ridge with three roundels, at both ends and in the centre, which had curvilinear decoration. The central roundel (over the hand grip) is convex and decorated with beads of coral and fields of red glass (enamel). The patterns between the outer roundels and the central rib can be seen as stylized bulls' heads. A date in the 2nd or 1st century BC would be consistent with the style. Intended for display, the shield and the other decorative Iron Age pieces from the river reflect a cult of WATERY DEPOSITION in the Witham. The Witham shield is now housed at the British Museum in London.

PEB, JTK

Wynne, Ellis (1671–1734) is recognized as one of the most important writers of WELSH PROSE LITERATURE. He was the son of Edward Wynne of Glyn Cywarch and the heiress of Y Lasynys, near Harlech, Merioneth (sir Feirionnydd). In 1692 he matriculated at Jesus College, Oxford (Welsh Rhydychen), where he gained a BA and may have taken an MA degree. In December 1705 he was made Deacon in the Church of England and took orders, and in the same year he became rector of Llandanwg and Llanbedr. In 1711 he relinquished these livings for the rectorship of Llanfair, which he held until his death. None of these churches is far from Harlech. In September 1698 he married Lowri Wynne of Moel-y-glo (†1702), and in 1704 he married Lowri Lloyd of Hafod Lwyfog (†1720). They had nine children, some of whom died young.

In 1701 he published *Rheol Buchedd Sanctaidd* ('The Rule of Holy Living'), a somewhat edited translation of Jeremy Taylor's *The Rule and Exercises of Holy Living.* In 1703 he published his most famous work, *Gweledigaetheu y Bardd Cwsc* ('Visions of the Sleeping Bard'), based loosely on classical and native visions of hell (see VISION LITERATURE), and more particularly on some sections of the English versions of the Spanish writer Quevedo's *Los Sueños,* one by Sir Roger L'Estrange (1667) and the other by John Stevens (1682). In 1710 Wynne's edition of the Welsh Book of Common Prayer was published, and in 1755 some short pieces by him were published in his son Edward's *Prif Addysc y Cristion* ('The Christian's Fundamental Instruction').

Wynne's *Gweledigaetheu* has long been acclaimed a prose classic, and the numerous editions of the work give some indication of its popularity and standing in Welsh literature. The book consists of three visions: a vision of the world set forth as a City of Destruction and ruled, for the most part, by four daughters of Lucifer—Pride, Pleasure, Profit, and Hypocrisy; a vision of Death's Lower Kingdom; and a vision of Hell. The 'Sleeping Bard', the first person of the narrative (based on an older figure of that name), is led by an angel in the first and third visions, and by Master Slumber in the second. The *Gweledigaetheu* belong to a genre of satirical visions common in England and France in the 17th century. Wynne's work shares many of the prejudices and attitudes of English Royalist and Anglican visions. The work's religious and moral basis is very similar to many other Welsh religious works, as are its rumbustiousness, satirical wit, and savage scurrility. The grand style of parts of the work has much in common with the style of Welsh religious prose translations, while the colloquial style of other parts is very different from them, vivid, colourful, and very lively. The range of its style makes the *Gweledigaetheu* different from all Welsh prose works which preceded it, and its quality has given it the status of a classic.

Yann ar Guen (1774–1849), the son of impoverished day-labourers from Trégor (Treger) in Brittany (Breizh), was born in Plougrescant (Plougouskant). He was the archetypal singer and vendor of ballads—poor, blind, and uneducated, and a vital presence at all the religious fairs and markets of Breizh-Izel. Crowds would gather around him to hear the latest news, delivered in rhymed Breton verses, which would be printed and sold as broadsides.

Ar Guen (standard Breton *Ar Gwenn*) obtained his material from various sources, including the French-language newspapers which were increasingly circulating in the bigger towns. A literate neighbour would translate or paraphrase stories from these newspapers for him and he would put them into rhyme. A series of braille-like notches carved into a willow wand helped him to remember the order of the stanzas.

Ar Guen's songs were mostly printed in Morlaix (Montroulez), by Alexandre Lédan or Victor Guimer. They were aimed at a popular audience, and had to be produced at the lowest possible cost, using poor quality paper. The songs were not illustrated and, since the texts were often composed hastily by typographers with little regard for rigorous orthographic rules, the spelling was anarchic.

Yann ar Guen dealt with the significant events of his own times, both local and national: the cholera epidemic of 1832, the hurricane which devastated Provence in 1835, the storms of 1836, a fire at Saint-Clet (Sant-Kleve), the famine of 1842, a shipwreck at Pleumeur-Bodou (Pleuveur-Bodoù) in 1844, a crime at Plougonver (Plougonveur) in 1846. He also celebrated the rulers of France in song, both King Louis-Philippe (r. 1830–48) and Napoleon's family.

He was frequently invited to compose songs for important social events, such as a marriage, or the muster of an army. He also composed a considerable number of 'disputes', a genre deriving from the medieval tradition of *jeux-partis*, a verbal poetic game between two contesting parties. Yann ar Guen performed his disputes with his wife, Marc'harid Petibon. They were highly formulaic, enacting contests between, for example, the personified figures of summer and winter, or water and fire or wind, or between a ropemaker and a shoemaker, or a paper merchant and a rag merchant.

These compositions were written in the 'mixed language' decried by purists such as Théodore Hersart de La Villemarqué, the author of the Barzaz-Breiz. The use of Breton heavily marked by French loanwords is typical of the bulk of the songs published on broadsheets in the 19th century; also common in many of the religious works published at the time, it is known as *brezhoneg beleg* 'priest's Breton'.

Yann ar Guen's songs were both moralizing and edifying, extending the teachings of the Church into the street and public squares. He reminded the richest citizens of the Christian obligations of charity, and never forgot, as he alleged in one song, that he was himself dependent on charity. He also exhorted his audience to pray for the salvation of the souls of criminals.

Disseminator of news throughout the countryside, chronicler of village annals, entertainer, and moralizer, *Dall* ('Blind') ar Guen was a key figure in traditional Breton society. He had numerous imitators in Trégor, a region rich in traditional singers. His songs still figure in the repertoires of *kan ha diskan* (call-and-response) singers at modern Breton *festòu-noz* (sing. fest-noz).

Yeats, William Butler (1865–1939), poet and playwright, was the foremost contributor to the Irish Literary Revival of the late 19th and early 20th centuries (see ANGLO-IRISH LITERATURE; IRISH LITERATURE). Born in Dublin (BAILE ÁTHA CLIATH) to the portrait-painter John Butler Yeats and Susan Pollexfen, daughter of a Sligo merchant, Yeats spent his childhood summers with his maternal grandparents in the west of Ireland (ÉIRE). The FOLK-TALES he heard in Sligo provided the inspiration for several early poems and some of the material for two collections of prose, *Fairy and Folk Tales of the Irish Peasantry* (1888) and the CELTIC TWILIGHT (1893; rev. & enlarged ed., 1902). The title of the latter collection came to denote the wistful poetic reveries that Yeats and like-minded contemporaries composed in the 1890s, the apotheosis of which is *The Wind Among the Reeds* (1899). With this volume, Yeats put a symbolist capstone on his experiments in narrative poetry, in *The Wanderings of Oisin* (1889; see also OISÍN), and drama and lyric poetry, in *The Countess Kathleen and Various Legends and Lyrics* (1892).

The folkloric and legendary Irish material in much of this early work is coupled to occult interests: Yeats joined the Theosophical Society and became a member of the Rosicrucian Order of the Golden Dawn in 1890. His preoccupations with spiritualism and magic informed his immersion in the writings of William Blake, the poetry of whom Yeats, with Edwin J. Ellis, edited in 1893, and can be discerned in some of his contemporaneous prose, including 'Rose Alchemica', from *The Secret Rose* (1897). Yeats vigorously promoted Irish literature in English in this period: *Representative Irish Tales* appeared in 1891, as did his stories, *John Sherman* and *Dhoya*.

Instrumental in the founding of the National Literary Society in 1892, Yeats was also active in the Irish Literary Society in London. His 1894 meeting with Lady Augusta GREGORY would culminate eventually in the founding of the Abbey Theatre; and a great deal of Yeats's energies at the turn of the century and thereafter was directed towards the creation of a national drama. Yeats's nationalist play *Cathleen Ní Houlihan* (having clear connections with the Early Modern Irish AISLING genre of poetry) was first performed in 1902, with Yeats's formative love, Maud Gonne, in the title rôle. His varied dramatic output includes plays in both verse and prose, the most innovative of which are those modelled after the highly stylized Japanese Noh, such as *At the Hawk's Well*, in *Four Plays for Dancers* (1921), one of several plays based on CÚ CHULAINN, the hero of the ULSTER CYCLE.

Yeats's poetry at the beginning of the 20th century has learned from his dramatic endeavours, sloughing off the introspection, wavering rhythms, and ornate diction of his *Celtic Twilight* verse. A tough declamatory voice begins to be heard, one which, by the time of *Responsibilities* (1914), *The Wild Swans at Coole* (1919), and *Michael Robartes and the Dancer* (1920), is increasingly concerned with public controversy and sifting the matter of historical events. These volumes include commentary and interventions into contemporary Irish history—'Easter, 1916', 'On a Political Prisoner'—and expositions of broader historical processes, as in the apocalyptic 'The Second Coming'. The latter poems are based on Yeats's spiritually inspired historiography, outlined in the poem 'The Phases on the Moon', which had its origins in his marriage in 1917 to Georgie Hyde Lees, whose aptitude as a medium was quickly demonstrated. Yeats would formulate his arcane knowledge of historical cycles and human personality imparted to him via his wife in several esoteric prose works: *Per Amica Silentia Lunae* (1918), and the two editions of *A Vision* (1925, 1937); and it became the very marrow of many of the poems collected in *The Tower* (1928) and *The Winding Stair and Other Poems* (1933). In these volumes, and in his last poems and plays, Yeats perceives his true lineage to be that of the Anglo-Irish ASCENDANCY, and proceeds to lambaste the cultural torpor of the Irish Free State (see ÉIRE). His nightmarish vision of historical process finds its final expression in the play *Purgatory* (1938), while his patrician disparagement of modernity is given its last articulation in the polemics of the posthumously published *On the Boiler* (1939).

Ymborth yr Enaid (Sustenance of the soul) is a Middle Welsh prose treatise on mysticism, being the third and sole surviving book of a larger work called *Cysegrlan Fuchedd* (Holy living). It was composed by an anonymous Dominican, probably around the middle of the 13th century, although the earliest text occurs in Jesus College MS 119 (1346). Divided into three logically progressive parts, it treats of the purgative, illuminative, and unitive aspects of the soul's journey towards God. Untypically, it is an original composition, echoing in places works by Hugo of St Victor, or his school, in particular. Its most striking feature is a lengthy, highly coloured and heavily rhetorical section in part three; this describes a brilliant vision that the author experienced of the 12-year old Jesus teaching in the temple and is intended as an aid to induce similar experiences in the reader. The standard and variety of the prose, certain neologisms, and passages of highly skilled verse, reveal the author as a master of the WELSH language, and doubtless a professional poet prior to his joining the Dominican Order. For several reasons, this work is unique both in Welsh and European literature (see WELSH PROSE LITERATURE) and is the only known example from the medieval period of an original mystical treatise in a Celtic language.

Ymrysonau (bardic contests or debates) are a common feature of early WELSH POETRY, with numerous references to them in the poems of the GOGYNFEIRDD. The Welsh LAW TEXTS refer to contests for the chair of *pencerdd* (chief poet) in the courts of the princes, but by the time of the CYWYDDWYR the *ymryson* was mainly used as a framework for a debate concerning the craft and purpose of poetry itself.

One of the earliest of these debates for which we have evidence was that between Gruffudd Gryg (*fl.* 1357–70), a defender of the native bardic tradition, and DAFYDD AP GWILYM, the innovator. Another famous debate, on the subject of the truthfulness of the praise poetry, occurred between SIÔN CENT and Rhys Goch Eryri (*c.* 1365–*c.* 1440). The best known of the medieval *ymrysonau* is a very lengthy poetic debate consisting of 54 CYWYDD*au* between Wiliam Cynwal (†1587/8) and Edmwnd Prys (1543/4–1623), which spanned the years 1581–7. Prys criticized Cynwal for the exaggeration in his praise poetry and advocated the new humanist learning, but Cynwal retorted that Prys was in no way qualified to judge on such matters since he was a cleric rather than a poet.

Nowadays, *Ymryson y Beirdd*, a light-hearted bardic competition between teams of poets from all parts of Wales (CYMRU), is a popular feature in the literary pavilion of the National Eisteddfod (EISTEDDFOD GENEDLAETHOL CYMRU) and a similar contest called *Talwrn y Beirdd* is also a successful radio series.

MBH

Ystorya Aðaf (The tale of Adam) is one of the many examples of WELSH PROSE LITERATURE of the Middle Ages based on Latin Christian apocryphal literature. It is one of a group of Welsh texts—together with *Y* GROGLITH (The crucifixion text) and *Inventio Sanctae Crucis* (The discovery of the Holy Cross)—which focuses on the Holy Rood. In Peniarth 5 (part of LLYFR GWYN RHYDDERCH), all three texts are joined as a continuous story in three successive parts. *Ystorya Aðaf* explains the origins of the Cross on which Christ was crucified and its path from Paradise to Mount Calvary. It is one of the few apocryphal texts based on Old Testament material. There is only one other text within the corpus of Welsh religious prose which is similar in this regard, the YSTORYA AÐAF AC EUA Y WREIC (The tale of Adam and his wife Eve), not to be confused with *Ystorya Aðaf*.

Ystorya Aɒaf ac Eua y Wreic (The tale of Adam and his wife Eve) is a Middle Welsh religious text based on Genesis and Latin apocryphal sources. The text gives an account of the first man and woman and their children. It is distinct from YSTORYA AÐAF (The tale of Adam), which rather gives an account of Christ's Cross from its origin to Calvary.

Ystorya Bilatus (The tale of Pilate) is a Middle Welsh text, a translation of the Latin Christian apocryphal text *Historia Pilati*, which, like many apocryphal texts popular throughout western Europe in the central and later Middle Ages, supplied additional details and background to the biblical accounts of the crucifixion of Jesus Christ. The *Ystorya Bilatus* explicitly depicts the life and gruesome end of Pontius Pilate. Translations from Latin apocryphal texts constitute a sizeable category in the WELSH PROSE LITERATURE of the Middle Ages.

Ystorya Bown de Hamtwn ('The Story of Bevis of Hampton') is a Middle Welsh prose adaptation of the Anglo-Norman romance *La geste de Boun de Hamtone*. The text probably dates from the middle of the 13th century, which would make it the earliest translation of a secular French narrative into WELSH (see also ARTHURIAN LITERATURE; WELSH LITERATURE AND FRENCH, CONTACTS). All surviving texts seem to depend on the text in the White Book of Rhydderch (LLYFR GWYN RHYDDERCH), which contains two different beginnings, the first of which is abandoned towards the middle of the second column of the first page, which is then left blank. In content and structure the Welsh version closely follows its source, but it exhibits a clearer emphasis on Christian attitudes than the known Anglo-Norman versions. In idiom and style it follows vernacular narrative norms. The language reveals some traces of influence from colloquial spoken Welsh.

Ystorya Dared (The story of Dares) is the title given to the medieval Welsh adaptation of the 6th-century account attributed to Dares Phrygius of the destruction of Troy, *Historia Daretis Phrygii de Excidio Troiae*. Its oldest version was translated some time at the beginning

of the 13th century, probably as a result of the vogue of the Welsh adaptation of Geoffrey of Monmouth's Historia Regum Britanniae ('The History of the Kings of Britain', *c.* 1139), to which it forms a chronological introduction. The Trojan legends of Brythonic origins can be traced back before Geoffrey to the account of the 9th-century Historia Brittonum (The history of the Britons).

In the manuscripts, *Ystorya Dared* is regularly grouped with Brut y Brenhinedd (the Welsh versions of Geoffrey of Monmouth's *Historia Regum Britanniae*) and Brut y Tywysogyon ('The Chronicle of the Princes'), and sometimes with the Bibyl Ynghymraec (the Bible in Welsh), which refers to the Trojan descent of the Welsh, to form a cycle that supplies a synopsis of history from the Creation to the Middle Ages. *Ystorya Dared* survives in 12 medieval and 29 post-medieval manuscripts. Four independent translations can be distinguished, plus an abridged version of the Red Book of Hergest (Llyfr Coch Hergest) text. The redactors worked faithfully and accurately; changes to the source are minor and mainly stylistic, designed to adapt the narrative to the taste of a medieval Welsh audience.

Ystorya de Carolo Magno (The story of Charlemagne) is a medieval Welsh cyclic compilation about the life and career of Charlemagne, based on four Latin and Old French texts, the Latin Pseudo-Turpin Chronicle, and the Old French *Chanson de Roland, Pèlerinage de Charlemagne*, and *Otinel*. The Welsh version of *Chanson de Roland, Cân Rolant*, is inserted into the Pseudo-Turpin Chronicle and covers events up to and including the beginning of the battle of Roncevaux. It is based on a lost Old French assonanced version, close to the texts of the *Chanson* transmitted in the Oxford and Venice 4 manuscripts, and also shows significant affinities with an Old Norse translation which forms part of a similar cyclic compilation, *Karlamagnús Saga*. The two published Welsh versions from Aberystwyth, NLW, Peniarth 10 and Oxford, Jesus College 111 (Red Book of Hergest/Llyfr Coch Hergest) often differ in actual wording. Peniarth 10 is probably closer to the original translation of an entire Anglo-Norman text of the *Chanson* and the Red Book of Hergest represents an abridgement. The original translation has been dated to the first half of the 13th century. The initial interest in the text has been tentatively associated with Reginald, king of Man (Ellan Vannin) and the Western Isles from 1188 to 1226, whose daughter was married to Rhodri ab Owain Gwynedd. Beyond its interest in the action, the text's emphasis is on the heavenly rewards of the Christian warrior and on his obligations towards his secular lord. The Pseudo-Turpin Chronicle was probably translated into Welsh for Gruffudd ap Maredudd sometime before 1282 by Madog ap Selyf, who was also responsible for the Welsh version of Transitus Beatae Mariae. The Welsh *Otinel* (Otuel) is a later, pre-1336 addition to the cycle, and included in only three of the ten extant manuscript versions of *Ystorya de Carolo Magno*. An English model has been suggested for this inclusion of *Otinel*, but the Welsh text is more similar to the French texts than to the English ones; the narrative about Otinel also forms part of *Karlamagnús Saga*.

Ystorya Titus Aspassianus (The story of Titus Aspassianus) is one of the many examples of Welsh

PROSE LITERATURE of the Middle Ages based on Latin Christian apocryphal texts. The source of *Ystorya Titus* is *Vindicta Salvatoris* (The avenging of the Saviour). The story, in which the Jews figure prominently as the chief culprits, elaborates upon the biblical account of Christ's crucifixion.

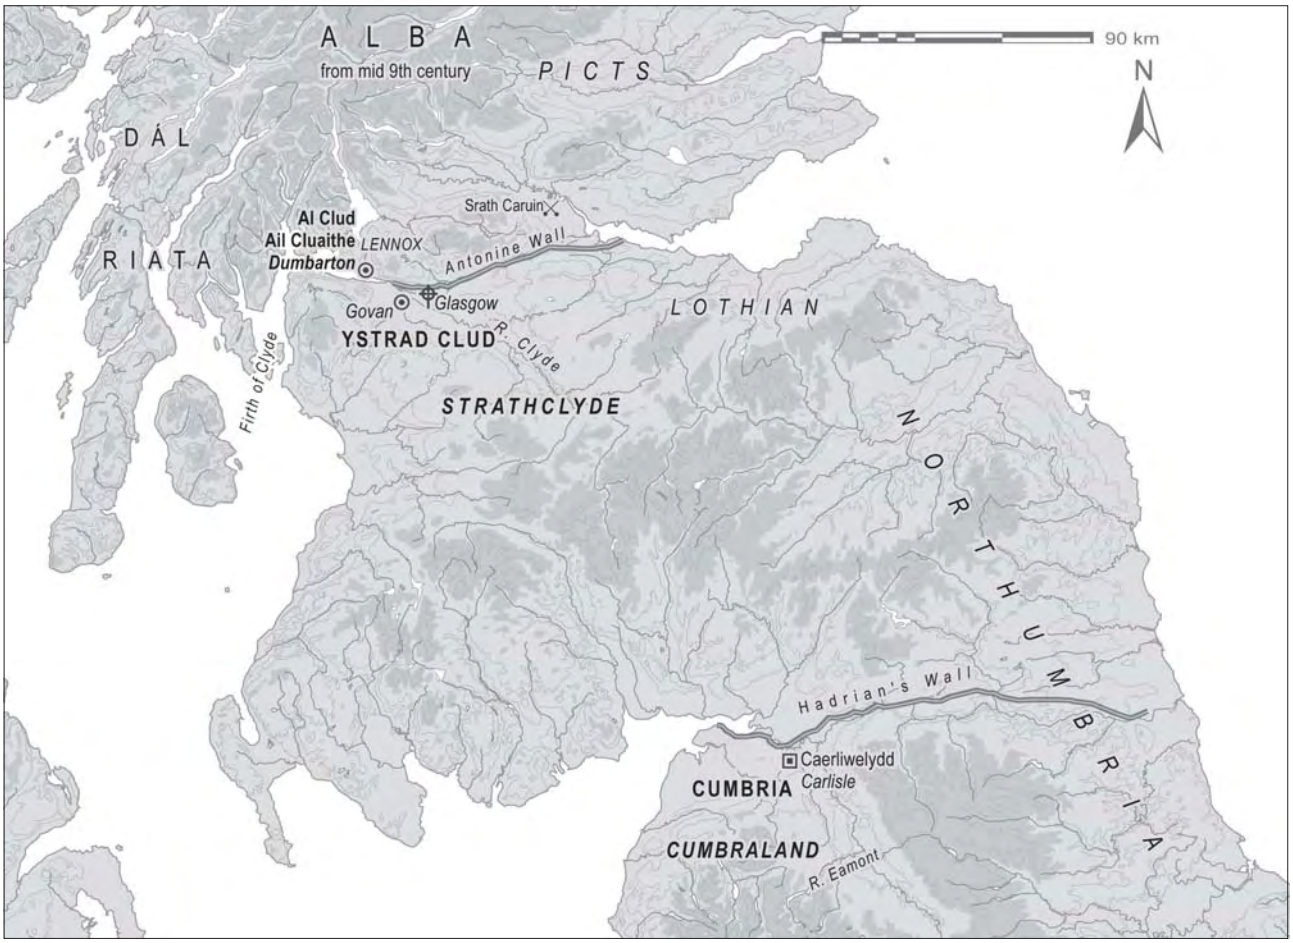
Ystrad Clud (Strathclyde) is the river valley (Welsh *ystrad*, Gaelic *srath*) of the Clyde, in south-central Scotland (ALBA). This was used as the name of a kingdom recorded from 872 (ANNALS of Ulster 872.5), a kingdom also known as CUMBRIA from the mid-10th century (Anglo-Saxon Chronicle 945, Cumbraland; cf. ANNALES CAMBRIAE 946, Strat Clut). *Cludwys* (people of the Clyde) occurs in the 10th-century political prophecy ARMES PRYDEIN. Strathclyde has often also been used by modern writers as a shorthand for the kingdom that preceded the destruction of the fortress of Al Clud (Dumbarton Rock) by Vikings in 870 (Annals of Ulster 870.6). That kingdom centred on the power base of Dumbarton Rock, whose kings were normally referred to in contemporary annals as kings of Al Clud (Gaelic Ail Cluaithe), or simply kings of the BRITONS. Although these earlier kings may well have controlled much, if not all, of Clydesdale, it may be well to revert to the distinction as observed by contemporary chroniclers in Ireland (ÉRIU) and in England, who saw the changes of 870 and the following years as marking the start of a new polity. If we take later medieval territorial jurisdictions as a guide, the kingdom based on Dumbarton Rock may have most easily controlled the Lennox (essentially modern Dumbartonshire) and the southern side of the Firth of Clyde (modern Renfrewshire), as well as Clydesdale itself (modern Lanarkshire), but there is little hard evidence on which to base such assumptions (for excavations on the Rock itself, and evidence of its duration, see Leslie Alcock & Elizabeth A. Alcock, *Proc. Society of Antiquaries of Scotland* 120.95–145). The term *Arecluta regio* met in the 9th-century Latin Life of St GILDAS, written by a monk of Ruys in Brittany (BREIZH), but here probably drawing on a much earlier record, may at its most basic refer to a kingdom 'on the Clyde' (Hugh Williams, *Two Lives of Gildas* 12–15).

The kingdom on the Clyde at Dumbarton was the most persistent of the northern British kingdoms in the early Middle Ages. The GENEALOGIES of two of its dynastic segments are preserved in British Library MS Harley 3859 (see Bartrum, EWGT 9; Miller, BBCS 26.255–80). Rhydderch Hen (also known as RHYDDERCH HAEL) is noted in this text, and he also appears in the 9th-century text HISTORIA BRITTONUM in the same manuscript, in an account set in the late 6th century, as one of the four kings allied against the power of Bernicia (BRYNAICH). Rhydderch can also be dated to this period by his appearance in an anecdote in *Vita Columbae* (Life of COLUM CILLE, †597), written *c.* 700 by ADOMNÁN. The other Harleian genealogy, that of Run, son of the Arthgal who was slain in 872, seems to record a dynastic segment which provided most of the kings of Dumbarton in the preceding period (Macquarrie, *Medieval Scotland* 1–19). We may note several distinct phases of Dumbarton's history. The mid-7th century victory at Srath Caruin (now Strathcarron), under EUGEIN map Beli (Annals of Ulster 642.1), appears to have freed parts of its kingdom from the dominance of DÁL RIATA, and a constant struggle on parts of its borders with Dál Riata may be envisaged, and is evident in battles in the late 7th and early 8th centuries. There are some question marks over the relationship between Northumbria and northern British kingdoms in the later 7th century; certainly the victory at NECHTANESMERE by Eugein's brother, the Pictish king BRUIDE MAC BILI in 685 appears to have freed the northern Britons also from Northumbrian tribute or overlordship. We must wonder about the precise relationship at this period between PICTS and Britons revealed by the fact that Eugein and Bridei were brothers (see Fraser, *Battle of Dunnichen* 21–3; Woolf, *Innes Review* 49.147–67). Dumbarton kings are again prominent in the first half of the 8th century, but in 756 the kings were forced



Dumbarton–Strathclyde–Cumbria: the longest surviving north Brythonic kingdom

to submit to the allied powers of the Pictish king Unuist son of Uurguist and the Northumbrian Ecgberht (Clancy, *Friends of Govan Old Parish Church: 8th Annual Report* 1998.8–13; Forsyth, *Kings, Clerics and Chronicles in Scotland* 19–34). That Unuist later seems to have turned on his English ally may not have helped Dumbarton much. Its kings disappear from record for nearly a century. Both Viking incursions and succession disputes weakened the Pictish kingdom in the 840s, allowing Dumbarton to emerge from its shadow, and its continuing power at home is given no stronger tribute than in the four-month siege of 870, the only such dedicated military campaign by the Vikings Ólafr and Ívarr on record.

The first references to the kingdom of Ystrad Clud occur in the aftermath of the siege and sacking of Dumbarton Rock, and it may be that this caused some displacement of power structures and perhaps of dynastic segments. The new usages that appear in the Annals of Ulster in 872 ('king of the Britons of Strathclyde' 872.5) and in the Anglo-Saxon Chronicle for 875 (Straeclead Wealas, &c., cf. Asser's *Strat-Clutenses* 'people of Strathclyde'), presumably reflect a shift in the kingdom's core, demonstrated also by the new prominence of up-river centres such as Govan which emerge in the period from *c.* 900 (Driscoll, *Innes Review* 49.95–114). These changes betray a growing success story, both in the richness of the sculptural tradition—not previously a feature of North British society—and in the expansion of the kingdom as far as the river Eamont by the mid-10th century (for the lower limit, see Woolf, *Northern History* 34.189–93). It is perhaps this expansion that necessitated the coining of the new people- and kingdom-names to describe a polity no longer limited to Ystrad Clud itself: Welsh *Cymry*, Latin *Cumbrenses* and *Cumbria*, Old English *Cumbras* and *Cumbraland*.

The circumstances of 870–875 (the sack of Dumbarton; the killing of Arthgal, king of the Britons, by the counsel of Cusantín mac Cinaeda, king of

the Picts; and the ravaging of Strathclyde by northern portions of the Great Army) have all suggested that the kingdom's success was founded on its clientship status in relation either to Alba or to the Viking kingdom of York. Certainly the kings of Cumbria engaged in alliances with both polities during the 10th century, and the sculptural traditions of the Govan school look both northward to the earlier sculptural traditions of eastern Scotland, and southward to the Anglo-Scandinavian genres such as the hogback stones (Ritchie, *Govan and its Early Medieval Sculpture*). This all suggests influence and alliance—whether it demands dominance by either northern or southern neighbours may be doubted. Hudson has shown that we must reject as a modern misreading of a core text the idea that members of the royal dynasty of Alba were imposed on Cumbria in the 920s (*Scottish Gaelic Studies* 15.145–9). Periodic references in the Anglo-Saxon Chronicle to outside control, as in 945 when we are told that Edmund harried Cumbraland and then leased it to Mael Coluim mac Domnaill, need to be read carefully, in the light of the 'party-line' of that Chronicle, and the ideology of submission to the kings of Wessex that it is keen to articulate and promote.

The kingdom certainly lasted until 1018, when its king Owain ap Dyfnwal (also known as Owain Foel, *rex Clutinensium*, king of the Clydesmen, *Historia Regum Anglorum*) died fighting alongside the king of Alba, Mael Coluim mac Cinaeda, but the description of Siward, earl of Northumbria, waging war on Mac Bethad mac Findlaich and trying to place on the throne of Alba one 'Malcolm, son of the king of the Cumbrians' in 1054/5 (Anglo-Saxon Chronicle MS D), reminds us that the kingship may have lasted somewhat longer—though Malcolm may have been Owain Foel's son. It has long been thought that this Malcolm was the future Mael Coluim (III) mac Donnchada, and that Donnchad was therefore 'king of the Cumbrians' before he became king of Alba, but this equation is now thought to be highly unsound (see Duncan, *Kingship of the Scots* 40–1). In 1069 Mael Coluim mac Donnchada did make conquest of Cumbria, and launched a vicious raid on Northumbria from it, but by this point the status of Cumbria as a kingdom is very unclear. Gospatric's Writ of the mid-11th century (see Phythian-Adams, *Land of the Cumbrians* 173–81) speaks of Allerdale as being 'land which was Cumbrian', yet David I could address the inhabitants of land around Carlisle as Cumbrenses, and speak of Ranulf le Meschin of Carlisle as holding power in 'his land of Cumberland'. David moreover describes himself in his Inquest into the properties of the cathedral of Glasgow (Glaschu) as *Cumbrensis regionis princeps*, and this Inquest initiated a reclamation by the Glasgow diocese of its Cumbrian and 'Welsh' identity in the face of pressure from York, which claimed Glasgow to be its subordinate. The diocese's identification of itself with the former kingdom of Cumbria preserved the memory of that kingdom long after its political existence was at an end. By this point, Ystrad Clud itself, Clydesdale, had been settled by land grants to many of David's trusted retainers, men largely from Flanders, Brittany, Normandy, and England, and thus the articulation of a Cumbrian identity for the region happened simultaneously with its permanent linguistic and cultural transformation (see Scott, *Trans. Dumfriesshire and Galloway Natural History and Antiquarian Society* 72.11–40).

The river and estuary name are recorded in Tacitus' *Agricola* as *Clota*, Ptolemy's Κλωτα *Clota*, possibly from earlier **Klouta*. Watson related this to a root meaning 'wash', but other apt senses are 'famed' (cf. Welsh *clod*, Old Irish *cloth* < **klutā*) or 'conveyance, carrier' (Welsh *clud* < **kloitā*).

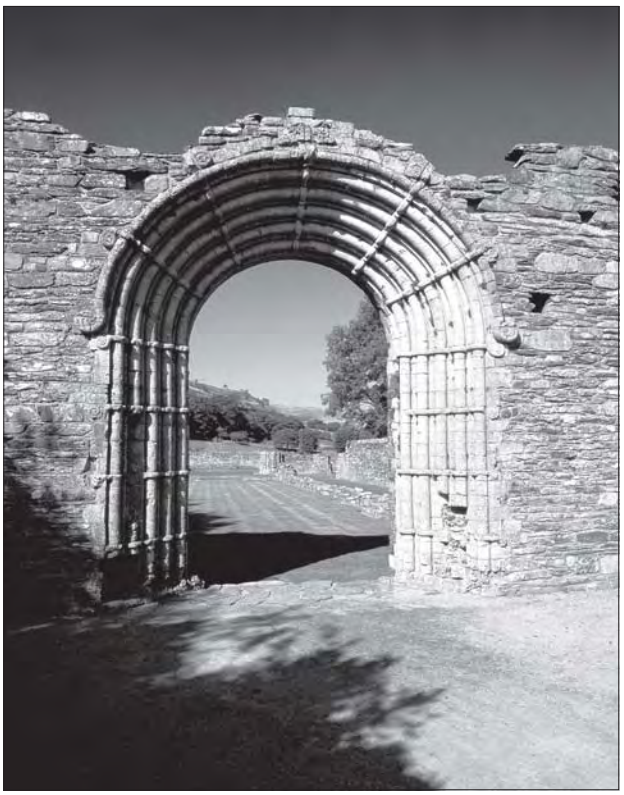
Thomas Owen Clancy

Ystrad-fflur (Strata Florida) was a Cistercian abbey in Ceredigion, Wales (see cistercian abbeys in wales; cymru), founded in 1164 by Robert Fitz Stephen, lord of Pennardd, but after that date given new impetus and patronage by the Lord Rhys (Rhys ap Gruffudd) of the independent Welsh kingdom of Deheubarth. The abbey became the mausoleum of the princely Deheubarth dynasty, some eight representatives of it being buried there. The convent became what has been called a 'significant custodian' of the native Welsh cultural tradition. It was here in the late 13th century that the now lost Latin work which formed the basis of Brut y Tywysogyon ('The Chronicle of the Princes') was composed. The poet Dafydd ap Gwilym is reputed to have been buried within the precincts in the late 14th century.

The original site of Fitz Stephen's foundation at Yr Hen Fynachlog (The old monastery) was discovered, during the 19th century, some 3 km from the present one. There was evidence of a stone-built church some 38.4 m long. Work on Strata Florida II, under the patronage of the Lord Rhys, was in hand by 1184, and certainly the chancel, crossing, and transepts of the church were substantially complete by 1201, when the community occupied it. It may, therefore, not have been until the early 13th century that the original foundation was finally abandoned. Work continued on the new church and cloister buildings until at least 1250.

It was no sooner completed than damaged—by fire in 1286, and during an occupation by the forces of Edward I during the revolt of 1294–5. Subsequent rebuilding and enrichment was interrupted again when the monastery became a strong point for the forces of Henry IV in 1407 during the rebellion of Owain Glyndŵr. Work on the abbey fabric, and especially the church, continued until the eve of the Reformation. The abbey was suppressed in 1539, during the reign of Henry VIII.



The west portal of the abbey church of Ystrad-fflur (Strata Florida)

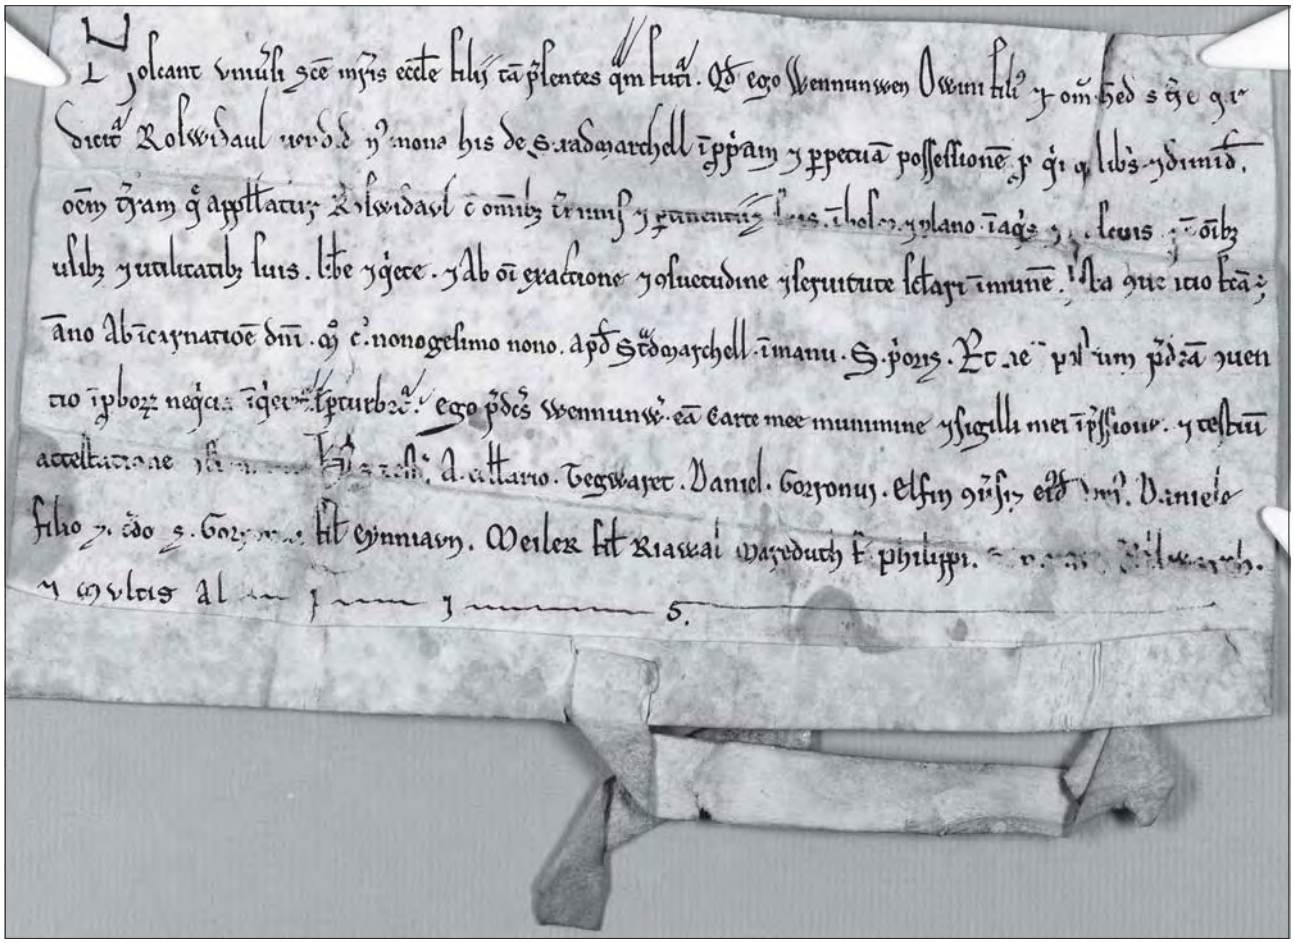
Ystrad Marchell (Strata Marcella) was an abbey of the Cistercian order (see cistercian abbeys in wales), founded in 1170 by Owain Cyfeiliog (see gogynfeirdd), prince of Powys, who was buried there in 1197. The abbey was colonized from Whitland (Hendy-gwyn) in south-west Wales (Cymru), and building began *c.* 1172 on the present site on the Severn



Charter no. 21 from Ystrad Marchell

plain, 3 km north of Welshpool (Y Trallwng).

Almost nothing now remains above ground of the abbey church and buildings. The church was excavated in 1890, and this revealed an ambitious plan. It was 62 m long, though whether it was ever completed is open to question. The excavations also revealed stone carving of great beauty dating from the early 13th century. One capital with stiff-leaf foliate carving can be seen at Buttington church nearby, where it serves as the font.

During the 15th and early 16th centuries the community declined, and by 1528 the buildings were in ruins. Abbot John ap Rhys (1527–36), in an attempt to arrest the decline, obtained the right to issue an Indulgence to those who visited the house for designated festivals, and the copies (two survive) are the earliest known printed documents relating to Wales. They are the work of Richard Pynson, a partner and successor of Wynkyn de Worde. The community, though supported by the princes of Powys, was already in financial trouble by the 14th century, when it was placed under the supervision of the community at Buildwas in Shropshire.

The abbey had been more powerful and flourishing in its early days. The Powys court poet Cynddelw Brydydd Mawr (*fl. c.* 1155–*c.* 1195) was threatened with excommunication by one abbot, and the abbey of Valle Crucis (Glyn-y-groes) was colonized from Ystrad Marchell in 1200. Ystrad Marchell also had oversight of the small Cistercian nunnery at Llanllugan (one of only two such houses in Wales), which was noted for its strict observance of the Rule even in the last years before the dissolution in the 16th century.

Zeitschrift für celtische Philologie (Periodical for Celtic studies) is the oldest current journal solely dedicated to subjects relating to Celtic studies. Founded in 1896 by the famous German Celtic scholars Kuno Meyer (1858–1919) and Ludwig Christian Stern (1846–1911), the journal, which originally appeared annually, has in more recent times been appearing irregularly every one to three years. In keeping with the interests of its founders, many of the articles relate to early Irish language and Irish literature, and to Continental Celtic. However, all aspects of Celtic philology and literature are included, and also, increasingly, articles relating to the modern languages. While many contributions, particularly in the earlier volumes, are written in German, articles in English and French, as well as Italian and Spanish, are also included. The journal remains central to researchers interested in Celtic studies, and the early volumes continue to provide a vital resource, containing yet to be superseded editions of early texts in the Celtic languages. Along with (the discontinued) Celtic journal Revue Celtique, the *Zeitschrift* bears witness to the development of Celtic studies as an academic discipline and its list of contributors includes most of the leading Celtic scholars of the past century.

The journal also has a subsidiary series, the *Buchreihe der Zeitschrift für celtische Philologie*, through which research relevant to Celtic studies is published.

Zeuss, Johann Kaspar (1806–56) is considered one of the founders of the modern study of the Celtic languages. Born at Vogtendorf near Kronau in Upper Franconia, present-day Bavaria, he studied history and linguistics at the University of Munich and was awarded an honorary Ph.D. following the publication of *Die Herkunft der Baiern von den Markomannen* (The origins of the Bavarians as the Marcomanni, 1837). Following a period at a lyceum (secondary school) at Speyer (present-day Rheinland-Pfalz), he accepted a professorship of history at Munich in 1847. His main work, the *Grammatica Celtica*—which established, in much fuller linguistic detail than previously, that the Celtic languages belong to the Indo-European family—was published in 1853 and is regarded as a major milestone which set Celtic philology on a firm scientific basis.

Zimmer, Heinrich (1851–1910) was a key figure in the institutional history of Celtic studies in Germany and an important 19th-century German Celtic scholar, whose extensive publications continued to be influential well into the 20th century. Zimmer was born at Kastellaun, Rheinland-Pfalz, and died at Hahnenklee near Goslar, Niedersachsen. He studied at Strasbourg, Tübingen, and Berlin, focusing on Germanic and Indic philology (see indo-european), and his first publications were in these fields. In 1881 he was appointed Professor of Sanskrit and Comparative Grammar in Greifswald. From then on he concentrated

mainly on the Celtic languages, and, in addition to numerous articles, he published his *Glossae Hibernicae* (Irish glosses) in 1881, and *Keltische Studien* (Celtic studies) in 2 volumes in 1881 and 1884. A Chair of Celtic Studies was especially created for him at the University of Berlin in 1901. Zimmer was badly shaken by a fire that destroyed most of his private library in 1903, and began to suffer from a nervous illness which possibly precipitated his death.

SELECTION OF MAIN WORKS

Altindisches Leben (1879); *Glossae Hibernicae* (1881); *Keltische Studien* (1881–4); *Nennius Vindicatus, über Entstehung, Geschichte und Quellen der Historia Brittonum* (1893); *Die romanischen Literaturen und Sprachen, mit Einschluss des Keltischen* 1–77 (1909).

BIBLIOGRAPHY. Best, ZCP 8.593–4; Lewis, *Journal of the Welsh Bibliographical Society* 1.48–55.

FURTHER READING

CELTIC LANGUAGES; CELTIC STUDIES; GLOSSES; INDO-EUROPEAN; D. Ellis Evans, ZCP 54.1–30.
