Nowhere is this more evident than in D. W. Griffith's celebrated last-minute rescues, perfected during his tenure at Biograph (which more or less coincides with the period under examination here, 1908–1913). In numerous films during the transitional period, crosscutting clarified spatial relationships between two physically separated locales while incorporating temporal pressure into the representation of space. Such an approach generates suspense, because of its constant reliance on delay in showing the outcome of one line of action while switching to another. Suspense works to involve the viewer in the narrative, in much the same way other stylistic strategies developed during this period pull the viewer into the narrative world on view: changing approaches to set decoration and arrangement of actors enhance the depth and volume of the spaces depicted; performance style moves toward greater restraint, with fewer grand gestures and a more internalized approach to expressing emotion; shifts in performance style are reinforced by moving the camera closer to the actors, making their faces more legible. Many of these changes make the fictional world on display both more believable and more engaging, placing the characters and their motivations at the center of the drama. For this reason, flashbacks, dreams, visions, and cut-ins to inserts (especially those revealing extracts from letters) become much more prevalent during this period, helping to convey characters' internal states. Overall, the individual elements of style become subordinated to a narrational program that fosters interdependency and integration, as when editing allows for shifts in shot scale, which in turn helps to register changes in performance style.

CINEMA AS AN INSTITUTION

The significant changes occurring to film form during this period operated in concert with other forces of transformation so that by 1915, numerous developments pointed toward the institutionalization of cinema. By 1915, the MPPC had been dissolved by court order. The move toward increased consolidation inaugurated by the struggle between the Independents and the MPPC (the latter dissolved by court order in 1915) continued apace: corporate entities that would become pivotal in the studio era, such as Universal and Paramount, were founded during this period. The move of the American film industry to Hollywood was already underway, as was the establishment of a star system, with figures such as Mary Pickford (1892–1979) and Charlie Chaplin (1889–1977) acquiring the substantial fame and the power that came with it. Feature-length films had begun to dislodge the primacy of the single reeler, while large-scale picture palaces usurped the role of nickelodeons within the exhibition landscape. Movies had moved noticeably closer to the status of mass entertainment, and the increased social responsibility that attends such a shift produced a new phase in the medium's development, a clear departure from the hallmarks of the period that we label retrospectively the era of early cinema.

EDITING

Editing is a postproduction phase of filmmaking that begins following the completion of principal cinematography. An editor (and his or her team of assistant editors) works in close collaboration with the film's director and producer. This means that, as with all areas of filmmaking, editing is a collaborative enterprise, even though, in practice, the film editor is typically responsible for the overall ordering and design of the shots in sequence.

Many editing decisions, however, may originate from the film's director or producer. The famous and unconventional series of dissolves in *Taxi Driver* (1976) that join shots of Robert DeNiro walking down the same street originated from director Martin Scorsese (b. 1942) rather than editor Tom Rolf (b. 1931). The editing design that opens *The Wild Bunch* (1969), first establishing the band of outlaws riding into town and then cutting to close-ups of a pair of scorpions struggling in a nest of fire ants, was the idea of producer Phil Feldman (1922–1991). Anne V. Coates (b. 1925) was hired to edit *Lawrence of Arabia* (1962) after first cutting a trial sequence, prompting director David Lean (1908–1991) to proclaim that for the first time in his career he'd found an editor who cut a sequence exactly the way he would have. Many directors, in fact, are known for having excellent editing skills, including Akira Kurosawa (1910–1998) (*Shichinin no samurai* [*Seven Samurai*, 1954]), Nicolas Roeg (b. 1928) (*Don't Look Now* [1973]), Frederick Wiseman (b. 1930) (*Hospital* [1970]), and Sam Peckinpah (1925–1984) (*The Wild Bunch*). Even many of these directors, though, employ first-rate editors on their productions.

THE WORK OF EDITING

What is true about editing, therefore, is common to all phases of film production—the creative decisions involved typically have numerous authors. What, then, as a key collaborator on the production, does the editor do? The film editor reviews all of the footage shot on a production, selects the best takes of individual shots, and then orders these to produce an edited sequence that will convey the narrative action and emotion of the film's scenes. To accomplish this, editors must continually view and re-view the footage, trying different combinations of shots and gradually shaping the correct ones. Doing so moves their edit from a rough cut to a fine cut of the material. To maximize their ability to see all of the creative possibilities for combining the shots, most editors will not go on location while the film is being shot or watch the director at work. Seeing the actual layout of a set or other physical locale will tend to inhibit their perceptions about the ways that the shots may be joined, causing them to think in terms of the physical realities of place rather than the spatial realities they can create through editing.

Indeed, in earlier decades throughout most of the medium's history, editors worked on celluloid, physically cutting and splicing film using large bulky machines that ran footage in a linear and sequential fashion, from the beginning of a take to its end. The Moviola was an upright editor with a single screen that was used throughout much of Hollywood's history. Of European derivation, the Steenbeck, or KEM, was a horizontal, flatbed machine equipped with two screens and two soundtracks. It, too, was a linear editor because the footage could advance only in a sequential fashion, from head to tail

Complex editing appears in* Don't Look Now *(1973) by director-editor Nicolas Roeg. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

of a clip or vice versa. Since the 1990s editors have been working on digital, nonlinear machines, such as Avid or Lightworks. These machines do not work on celluloid film; they provide computerized access to footage on digital video and enable an editor to go instantly to any point in this footage without having to scroll manually through every frame, the way a Moviola or Steenbeck requires. Rather than physically cutting and splicing film, the editor using a nonlinear system works at a keyboard, manipulating via computer the footage that has been digitized as video. Once the fine cut is finished, the camera negative is conformed to the final cut. Nonlinear editing has become the industry norm today, and it has had some important consequences for the stylistics of editing in contemporary film.

The foregoing description of editing makes it seem to be a very straightforward and relatively simple process. It is not. Many editors have a background in music or have musical affinities, and they speak of *feeling* where the cut needs to go, of responding kinesthetically to the emerging rhythms of the sequence. Edit points, therefore, often owe more to an editor's intuitive response to the emerging flow of the sequence than to coolly intellectual decisions. Indeed, there is no single right way to cut a sequence. There are many possible cuts, all of which will inflect the material in different ways. As this suggests, while editing plays a variety of narrative functions, presenting basic story information that advances the story, it also helps set the emotional tone and coloration of a sequence, the rhythm and pace of scenes; helps create performances by the actors; and solves the innumerable continuity problems that arise when trying to connect the footage shot during production.

These are very powerful interventions into the material of the film, and they suggest why so many directors have found editing to be a supremely decisive phase of filmmaking. It is commonly said that a director makes his or her film three times—first, as the screenplay is written; second, as the screenplay is altered at the point of filming; and third, as the material that has been directed and photographed is changed again in the editing process. For this reason, directors frequently partner with a favorite editor across many film productions, finding that this collaboration is a key means of achieving the results they want. Martin Scorsese regularly teamed with editor Thelma Schoonmaker (b. 1940) (*Raging Bull* [1980],

GoodFellas [1990], *Gangs of New York* [2002]). Susan E. Morse has edited most of the films that Woody Allen (b. 1935) has directed (*Manhattan* [1979], *Crimes and Misdemeanors* [1989], *Celebrity* [1998]). Clint Eastwood (b. 1930) likes to work with Joel Cox (*Every Which Way But Loose* [1978], *Unforgiven* [1992], *Mystic River* [2003]). Blake Edwards (b. 1922) used Ralph E. Winters (1909–2004) (*The Pink Panther* [1964], *10* [1979], *Victor/Victoria* [1982]).

THE DEVELOPMENT OF EDITING

Although the earliest films in cinema were done in one shot without any editing, cutting is so fundamental to the medium that it began to emerge relatively quickly. There was a basic disparity between the amount of film that a camera's magazine could hold and the evolving desire of filmmakers and audiences for longer and more elaborate story films. Only by editing shots together could longer narrative forms be achieved. *A Trip to the Moon* (1914), directed by Georges Méliès (1861–1938), for example, creates a narrative by assembling a series of scenes, with each scene filmed in a single shot. The edit points occur between the scenes, in order to link them together.

Life of an American Fireman (1903), directed by Edwin S. Porter (1870–1941), presents the same narrative events—a fireman rescuing a woman from a burning building—as seen first from inside the building and then from camera setups outside the building, repeating the same narrative action. From the standpoint of continuity as it would develop in cinema, this duplication of event was a deviant use of editing, although other early films feature this kind of overlapping action. It demonstrated, however, the manner in which cutting could impose its own laws of time and space on narrative.

Porter's *The Great Train Robbery* (1903) follows a band of Western outlaws robbing a train and interrupts the chronology of the action with a cutaway showing the rescue of a telegraph operator whom the outlaws earlier had tied up. Following the cutaway, Porter introduces a second line of action, showing the roundup of a posse and the pursuit of the outlaws. Film historians commonly cite this as an early example of parallel editing, showing two lines of narrative action happening at the same time, although Porter's use of this device here is ambiguous. It is not clear that he means for the parallel editing to establish that the two lines of action are in fact happening simultaneously. In other respects, editing in *The Great Train Robbery* remains very primitive, with cuts used only to join scenes and with no intercutting inside a scene.

In contrast with Porter, D. W. Griffith (1875–1948) freed the camera from the conventions of stage perspective by breaking the action of scenes into many different shots and editing these according to the emotional and narrative rhythms of the action. Griffith explored the capabilities of editing in the films he made at Biograph studio from 1908 to 1913, primarily the use of continuity matches to link shots smoothly and according to their dramatic and kinesthetic properties. Cutting from full-figure shots to a close-up accentuated the drama, and matching the action on a cut as a character walks from an exterior into a doorway and, in the next shot, enters an interior set enabled Griffith to join filming locations that were physically separated but adjacent in terms of the time and place of the story.

Griffith became famous for his use of crosscutting in the many "rides to the rescue" that climax his films. In *The Girl and Her Trust* (1912), for example, Griffith cuts back and forth from a pair of robbers, who have abducted the heroine and are escaping on a railroad pump car, to the hero, who is attempting to overtake them by train. By intercutting these lines of action, Griffith creates suspense, and by shortening the lengths of the shots, he accelerates the pace. Crosscutting furnished a foundation for narrative in cinema, and there is little structural difference between what Griffith did here and what a later filmmaker such as Steven Spielberg (b. 1946) does in *Jaws* (1975). Griffith extended his fluid use of continuity editing and crosscutting in his epics *The Birth of a Nation* (1915) and *Intolerance* (1916). The latter film is a supreme example of crosscutting, which is here used to tell four stories set in different time periods in simultaneous fashion.

The Soviet filmmaker Sergei Eisenstein (1898–1948) wrote that Griffith's crosscutting embodied the essential class disparity of a capitalist society. He meant that the lines of action in Griffith's editing remained separated, like the classes under capitalism. Inspired by the October Revolution, Eisenstein and other Soviet filmmakers developed in the 1910s and 1920s a more radical approach to editing than Griffith had countenanced. Griffith had championed facial expression and used close-ups to showcase it, but Lev Kuleshov (1899–1970), teaching at the Moscow Film School, proclaimed that editing itself could essentially create facial expression and the impression of an acting performance. The "Kuleshov effect" has become part of the basic folklore of cinema. Kuleshov allegedly took a strip of film showing an actor's emotionless face and intercut it with shots of other objects—a bowl of soup, a woman grieving at a gravestone, a child playing with a toy—and the edited sequence (according to Kuleshov) led audiences to remark on the skill of the actor, who looked hungry when he saw the soup, sad at the sight of the woman, and happy when he saw the child. Because the face remained unchanged, Kuleshov announced that his

SERGEI EISENSTEIN

b. Riga, Russian Empire (now Latvia), 23 January 1898, d. 11 February 1948

Sergei Eisenstein is a wholly unique figure in cinema history. He was a filmmaker *and* a theoretician of cinema who made films and wrote voluminously about their structure and the nature of cinema. Both his filmmaking and his writing (which fills several volumes) have been tremendously influential.

Frustrated by the creative limitations of his work in the theater, Eisenstein turned to cinema and in 1925 completed his first feature, *Stachka* (*Strike*), which depicted the plight of oppressed workers. Eisenstein's next two films are the ones by which he remains best known, *Bronenosets Potyomkin* (*Battleship Potemkin*, 1925) and *Oktyabr* (*Ten Days That Shook the World* and *October*, 1927), each depicting political rebellion against czarist rule.

Eisenstein believed that editing was the foundation of film art. For Eisenstein, meaning in cinema lay not in the individual shot but only in the relationships among shots established by editing. Translating a Marxist political perspective into the language of cinema, Eisenstein referred to his editing as "dialectical montage" because it aimed to expose the essential contradictions of existence and the political order. Because conflict was essential to the political praxis of Marxism, the idea of conflict furnished the logic of Eisenstein's shot changes, which gives his silent films a rough, jagged quality. His shots do not combine smoothly, as in the continuity editing of D. W. Griffith and Hollywood cinema, but clash and bang together. Thus, his montages were eminently suited to depictions of violence, as in *Strike*, *Potemkin*, and *Ten Days*. In his essays Eisenstein enumerated the numerous types of conflict that he found essential to cinema. These included conflicts among graphic elements in a composition and between shots, and conflict of time and space created in the editing process and by filming with different camera speeds.

As a political filmmaker, Eisenstein was interested in guiding the viewer's emotions and thought processes. Thus, his metric and rhythmic montages were supplemented with what he called "tonal" and "intellectual" montage, in which he aimed for subtle emotional effects and to convey more abstract ideas. *Ten Days* represents Eisenstein's most extensive explorations of intellectual montage, as he creates a series of visual metaphors to characterize the political figures involved in the October Revolution, such as shots that compare Alexander Kerensky with a peacock.

Stalin's consolidation of power in the 1930s accompanied cultural and artistic repression, which forced Eisenstein, now criticized as a formalist, to recant the radical montage style of his silent films. Thus his last films, *Aleksandr Nevskiy* (*Alexander Nevsky*, 1938) and *Ivan Groznyy I* and *II* (*Ivan the Terrible Part One* [1944] and *Two* [1958]) lack the aggressive, visionary editing of his work in the silent period. Although he completed only seven features, these contain some of the most famous sequences ever committed to film, such as the massacre on the Odessa steps in *Potemkin*. Together, Eisenstein's films and essays represent the supreme expression of the capabilities and power of montage in the cinema.

experiment proved that editing had created the meanings viewers attributed to the sequence.

While it is extremely doubtful that Kuleshov's experiment worked exactly as he claimed (for one thing, it is likely that the actor's face actually contained an ambiguous expression since Kuleshov had taken the footage from an existing film), the Soviet filmmakers of the 1920s followed Kuleshov's lead in fashioning a much more aggressive method of editing than what they had found in the films of Griffith. Eisenstein believed that editing or montage was the essence of cinema, and beginning with his first film, *Stachka* (*Strike*, 1925), and continuing most famously with *Bronenosets Potyomkin* (*Battleship Potemkin*, 1925), he created an editing style that he called "dialectical montage" that was abrupt and jagged and did not aim for the smooth continuity of Griffith-style cutting. The massacre of townspeople on the Odessa Steps in *Potemkin* exemplifies the principles of dialectical montage and is possibly the most famous montage in the history of cinema. The jaggedness of Eisenstein's editing in this sequence captures the emotional and physical violence of the massacre, but he also aimed to use editing to suggest ideas, a style he termed "intellectual montage." The massacre sequence concludes with three shots of statues of stone lions edited to look like a single lion rising up and roaring, embodying the idea of the wrath of the people and the voice of the revolution.

Although Eisenstein's sound films, *Aleksandr Nevskiy* (*Alexander Nevsky*, 1938) and *Ivan Groznyy I* and *II* (*Ivan the Terrible Part One* [1944] and *Two* [1958]), do not exhibit the radical editing of his silent films, Eisenstein's approach to montage—the extreme way he would fracture the action into tiny, brief shots—proved to be tremendously influential. The gun battles in Peckinpah's *The Wild Bunch*, edited by Lou Lombardo (1932–2002), was quite consciously based on Eisenstein, and the hyperactive editing of much contemporary film, with edit points only a few frames apart, is part of Eisenstein's legacy.

The dominant style of editing practiced during the classical Hollywood period, from the 1930s to the 1950s, was quite different from Soviet-style montage. It is sometimes called "invisible editing" because the edit points are so recessive and so determined by the imperative of seamless continuity. Hollywood-style editing carefully matches inserts and close-ups to the physical relations of characters and objects as seen in a scene's master shot, and follows the 180-degree rule (keeping camera setups on one side of the line of action) so that the right–left coordinates of screen geography remain consistent across shot changes. Cut points typically follow the flow of dialogue, and shot–reverse shot editing uses the eyeline match to connect characters who are otherwise shown separately in close-ups. This style of editing assured the utmost clarity about the geography of the screen world and the communication of essential story information. For these reasons, it is sometimes called "point-of-view" editing or "continuity editing." That it became the standard editing style of the Hollywood system is evident in the fact that it can be found in films across genres, directors, and studios.

In the late 1950s and early 1960s, films of the French New Wave introduced a more aggressive editing style than was typical of the Hollywood studios. *À bout de souffle* (*Breathless*, 1960), directed by Jean-Luc Godard (b. 1930), used jump cuts that left out parts of the action to produce discontinuities between shots, and American directors a decade later assimilated this approach in pictures such as *Bonnie and Clyde* (1967) and *Easy Rider* (1969). As a result, by the 1970s the highly regulated point-of-view editing used in classical Hollywood began to break down as an industry standard, and the cutting style of American films became more eclectic, exhibiting a mixture of classical continuity and more abrupt, collage-like editing styles.

A forceful style of montage characterizes Sergei Eisenstein's* Battleship Potemkin *(1925). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

NONLINEAR EDITING

Along with the breakdown of classical continuity as the industry's sole standard cutting style, the other major stylistic development in recent films has been due to the switch from linear to nonlinear editing systems. This changeover has helped produce an increase in the cutting rate of contemporary film and a bias in favor of close-ups. Edit points occur more rapidly than in films of previous decades, with a much greater profusion of shot changes. *Moulin Rouge* (2001) exemplifies the hyperactive editing style found in many films today.

Several features of nonlinear systems have motivated this shift. For one, they give editors much greater control over the available footage, with greatly increased abilities to access individual shots and manipulate them more easily in complex editing constructions. But there is a paradox. Editor Walter Murch (b. 1943) (*Apocalypse Now* [1979], *The English Patient* [1996]) points out that an editor working on a linear system may actually come to know the footage better as a result of having to search it sequentially looking for a particular piece of film. Editors on nonlinear systems are more dependent on their notes about the footage and may overlook valuable material because their notes have excluded it.

In addition, the image as viewed on the editor's monitor tends to be of relatively low resolution because of the necessary trade-off between resolution and the computer storage space needed for the digitized video of the film footage. The higher the resolution, the greater the storage space that is needed. The low-res image will tend to bias editors toward close-ups rather than long shots and toward frequent shot changes as a means of maintaining visual interest. As a result, many contemporary films have come to look more and more like television, with quick editing and a tendency to play the story as a montage of close-ups.

What this approach loses is not so much the aesthetic tradition in cinema that developed in opposition to montage, such as the long shot–long take style celebrated by French critic André Bazin and found in such films as *La Grande illusion* (*The Grand Illusion*, Jean Renoir, 1937), *Csillagosok, katonák* (*The Red and the White*,

Miklós Jancsó, 1967), *Playtime* (Jacques Tati, 1967), and *Citizen Kane* (Orson Welles, 1941). This style never had much presence in American cinema. Rather, what is vanishing from American film are all of the ways that an individual shot can function as a unit of meaning, through composition, production design, lighting, and the actor's performance as it unfolds in the real time of a shot that is held. An essential component of editing is knowing when not to edit, when to hold the shot. Films of earlier decades routinely exhibit this quality. Many contemporary films do not, and in this respect it can be said that their hyperactive editing style is cannibalizing other essential elements of cinema. When every shot is only a few frames long, the art of the cinematographer, of the production designer, and of the actor necessarily suffers. Sergei Eisenstein always maintained that the point of montage was to overcome the characteristics of the single shot taken in isolation. Ironically, his objective is being realized in the montage style that has emerged with the advent of nonlinear editing.

THE EXPRESSIVE FUNCTIONS OF EDITING

Editors join shots using a variety of optical transitions. These serve narrative, dramatic, and emotionally expressive functions. The most common transitions are the cut (which creates an instantaneous change from one shot to the next), the fade (during which one shot fades completely to black before the next shot fades in from black), and the dissolve (which overlaps the outgoing and incoming shots). Cuts are the most frequent transitions, and typically indicate an uninterrupted flow of narrative information, with no breaks of time or space. Dissolves and fades, on the other hand, may be used to indicate transitions in time and space.

Other optical transitions are available but are used infrequently, and some have become archaic in that they were more common in earlier periods of cinema. The iris was used throughout silent cinema, and the wipe in early sound film. George Lucas (b. 1944) regularly uses irises and wipes in his *Star Wars* films in order to evoke the visual qualities of early cinema (one source for the films being the old cliff-hanging serials that moviegoers saw in the first half of the twentieth century). Editors may also create split screen effects, putting several shots on screen at once by splitting the image into small windows. This technique enjoyed a brief vogue in the late 1960s and 1970s (*The Thomas Crown Affair* [1968], *Junior Bonner* [1973], *Twilight's Last Gleaming* [1977]). It has been revived in recent years (*Timecode* [2000]) and can be found in the films of Brian De Palma (b. 1940).

As noted, parallel editing and crosscutting are building blocks of narrative, and they enable editors to control time and space. Indeed, this control of time and space is one of the key functions of editing. Editors may use continuity cutting to create a stable and reliable spatial geography onscreen, or they may break continuity to undermine spatial coherence, as in films such as *Straw Dogs* (1971) and *Gladiator* (2000).

With respect to time (i.e., the duration of an event onscreen), editors may expand it by using devices such as slow motion, or by increasing the number of cutaways from a main line of action or increasing the number of shots that are used to cover the action. In either case, the screen time of the event stretches out. During the Odessa massacre scene in *Potemkin* a mother with a baby carriage is shot in the stomach, and Eisenstein prolongs the moment of her agony by covering the action with numerous shots and then editing among them. The result is that it takes her a very long time to collapse to the ground, and this duration is a function of editing rather than the actor's performance. Conversely, editors may shrink or contract time by leaving out portions of the action. Jump cuts are an obvious and aestheticized way of doing this. The more common method, however, is to employ a "cheat." In *Vertigo* (1958), James Stewart has to walk down a very long chapel corridor in order to reach the bell tower, where an important scene will occur. It would be tedious to show him walking the length of the corridor. A judicious cut telescopes the action in a way that is imperceptible to the viewer.

Editors employ cheats all the time, and they routinely do many other things that viewers never notice. They may flip shots to get a proper eyeline match or screen direction, make the action move backwards (when Jack Palance mounts his horse in *Shane* [1953], it's the dismount shot played in reverse), or solve problems in the continuity or blocking of a scene's action by using cutaways to move things around.

Editors also help shape the actors' performances, and in doing so they help create the dramatic focus of a scene. An editor's decision to play a line of dialogue with the camera on the speaker will inflect the scene in one direction, whereas the decision to use a reaction shot of another character while the line is spoken will give the moment a different tone and emphasis. Film viewers are typically quite unaware of the extent to which editing intersects with film acting. Viewers may attribute to the actor much that results, in fact, from editing. If the editor elects to respect the performance, he or she may work with the master shot, allowing the performances to unfold in the relatively unbroken time of unedited shots. On the other hand, if the editor goes to coverage, building a scene with cutaways, inserts, and switches in camera position, then the editing is subtly reworking the performance. Examples include trimming the ends of shots to tighten an actor's apparent psychological reflex or to

LOU LOMBARDO

b. 15 February 1932, d. 8 May 2002

Lou Lombardo's seminal contribution to the history of editing is his work on *The Wild Bunch* (1969), directed by Sam Peckinpah. The complex montages of violence that Lombardo created for that film influenced generations of filmmakers and established the modern cinematic textbook for editing violent gun battles. Lombardo didn't originate the essentials of this design. Dede Allen's editing of *Bonnie and Clyde* (1967) furnished an immediate inspiration, and Allen's work in turn was modeled on Akira Kurosawa's *Seven Samurai* (1954) and Sergei Eisenstein's general approach to montage. But it was Lombardo, working under Peckinpah's guidance, who created the most elaborate and extended design and set the style for other filmmakers.

Peckinpah shot the film's violent gun battles using multiple cameras, and Lombardo took this footage and wove it into complex collages of action, meshing multiple lines of action by intercutting them and mixing normal speed action with varying degrees of slow motion. The editing is audacious and visionary, as the montages bend space and elongate time in a manner whose scope and ferocity was unprecedented in American cinema. Working without benefit of today's nonlinear editing systems that facilitate the control of huge amounts of footage, Lombardo created a final cut that contained more edit points than any American film in history to that time. Making this achievement more impressive yet is the fact that *The Wild Bunch* was Lombardo's first substantive feature film. Prior to this he had worked on television (editing *Felony Squad*, where he tried integrating slow-motion and normal-speed footage) and had edited the feature *The Name of the Game Is Kill* (1968).

Lombardo continued his partnership with Peckinpah on *The Ballad of Cable Hogue* (1970), where they experimented less successfully with edits combining normal speed and accelerated action. Peckinpah wanted to use Lombardo again on *Straw Dogs* (1971), but Lombardo was by then busy editing Robert Altman's *McCabe and Mrs. Miller* (1971), one of five Altman pictures that he cut (the others were *Brewster McCloud* [1970], *The Long Goodbye* [1973], *Thieves Like Us* [1974], and *California Split*, 1974). Though his work for Altman was less trendsetting than that for Peckinpah, the partnership with Altman lasted much longer, and Lombardo found the perfect visual rhythms for Altman's wandering and diffuse audio style.

Lombardo was also a very effective editor of comedy (*Uncle Buck* [1989], *Other People's Money* [1991]), with *Moonstruck* (1987) being a particular standout. The superb comic timing of that film is due to Lombardo's editing as much as to the fine direction by Norman Jewison and the sparkling performances.

Lombardo's career was cut short by a stroke in 1991, and he spent the last decade of his life in a coma. But he had left an indelible mark on modern cinema with *The Wild Bunch*.

make him or her seem to jump on another character's line, or dropping inserts into the action to draw out the length of an actor's pause.

More extreme examples include using close-ups that have been lifted from other action but that seem to work best in the new context. In *One Flew Over the Cuckoo's Nest* (1975), editor Sheldon Kahn (b. 1940) took some footage of actress Louise Fletcher (b. 1934) in conversation with the film's director, Milos Forman (b. 1932), lifted a piece of her expression from this footage, and used it in a scene where her character looks archly at the film's hero (Jack Nicholson). It worked in the scene but, in reality, it was not a moment in which the actress was acting. The surrounding material of the scene, organized by the editing, effectively recontextualized her expression. George Lucas used editing to completely

rework his actors' performances in the recent *Star Wars* film, *Attack of the Clones* (2002), to the point of cutting and pasting eye blinks and lip movements from one scene to the next.

These considerations suggest that the term "invisible editing," as critics have selectively used it to describe the cutting style of classical Hollywood cinema, is a naïve description. In fact, nearly *all* editing is invisible editing because the vast bulk of what the editor does, the myriad ways that editing transforms the raw footage of a shoot, remains subliminal and imperceptible to viewers. Some films call attention to their editing style by virtue of aggressive montage or jagged, discontinuous cut points (*Easy Rider*, *Don't Look Now*, *Moulin Rouge*), and it is this kind of filmmaking that scholars and critics commonly posit as the alternative to the "invisible" style of classical Hollywood. But such a dichotomy of Hollywood and anti-Hollywood editing styles is too simplistic. It minimizes the numerous ways that editors on every production work "below the radar," creating effects, emphasis, and continuity in ways that do not advertise themselves as editing.

Shooting on digital video now makes it possible to create a feature film in one shot, without any traditional editing (as in *Russian Ark* [2003]). Alfred Hitchcock (1899–1980) once tried to do without editing by making *Rope* (1948) as if there were no edits between shots. But these superlatively designed films are aberrations from cinema's essential nature, which is, and has always been, an edited construction transforming the realities of what has existed before the cameras.

EGYPT

The history of Egyptian cinema is long and varied. From modest beginnings with the projection of Lumière shorts in the Tousson Pasha hall of Alexandria and the Hammam Schneider baths of Cairo in 1896, film was transformed from an exclusively foreign import for the foreign elite into a national industry by the 1940s. This "Hollywood on the Nile," established in its initial phase in the mid-1930s by nationalist financier Talaat Harb, was equipped with studios, a star system, the production of syncretic genres, and mastery of the three-tiered system of production, distribution, and exhibition. Its subsequent domination over the cinema of other Arab and North African countries was uniquely binding at the cultural level, working in conjunction with the radio (established in 1926) and music recording industries. Together these media familiarized the inhabitants of other countries with the Egyptian dialect and culture; drew upon the preexisting cultural diversity of Egypt to further the aims and sense of pan-Arabism and Arab nationalism, from the cosmopolitanism of Alexandria to the work of Lebanese and Syrian artists in Cairo's theater and recording industries; entertained the masses through generic forms copied from Hollywood but customized to fit the cultural context and issues specific to Egyptian culture; and proved that while the technology of cinema was a Western invention, it could be used to serve the needs and contexts of the non-Western world—in this case, cultures that were predominantly Islamic in religion but tolerant and culturally diverse.

ECONOMICS AND POLITICS

The evolution of Egyptian film history reflects the economic and political changes that have swept the country since the beginnings of a national film industry. These changes have been distinguished by widely divergent economic directions and opaque ideological systems that became more pronounced following the 1952 Free Officer's Coup—a revolution led by a group of young military officers. This group effectively unseated from power the former British mandate puppet, King Farouk, descendent of the Ottoman Turkish dynasty, in a bloodless coup that served as a model revolution to other Arab countries seeking independence from colonial European rule. The subsequent rise of Gamal Abdel Nasser (1918–1970) to power in 1954 extended to his leadership of the Pan-Arab movement, which forged ties between Egypt, Syria, and Iraq after Egypt's successful resolution of the 1956 Suez crisis, when French and British air forces were overpowered by the Egyptians after Nasser announced the nationalization of the Suez Canal.

Nasser's social reforms included nationalizing the cinema in the 1960s, and this had a great and negative impact on the film industry. Soon after the establishment of the General Organization of Egyptian Cinema in 1961 and the nationalization of the theatres in 1963, directors, producers, and talent fled to Lebanon, where they worked in the Lebanese film industry until the outbreak of civil war in 1975. In spite of these problems, Egypt's nationalized cinema organization made most of the films of the 1960s. One positive contribution from this period was the opening of the Higher Institute of Cinema in 1959, by the Ministry of Culture, where students received training in different aspects of production. Since then, this institute has produced much of Egypt's film and television talent. After Egypt's demoralizing 1967 defeat in the Six-Day War with Israel, Nasser's

death in 1970, and the rise of Anwar Sadat (1918–1981), who promoted normalization of economic ties with Israel and the United States, the country underwent a general shift back to privatization. Nationalization was over by 1972, but relations with neighboring Arab countries were strained by Egypt's open-door policy with Israel, and the country's economic and political ties with Syria were broken.

As soon as Nasser nationalized the radio and television industries in the early 1960s, attendance at movie theatres dropped drastically. In the period from 1955 to 1975, the number of film theatres declined from 350 to fewer than 250. Meanwhile, imported foreign films continued to flood the Egyptian market. Tickets to films were heavily taxed, and the state film organization lost about 7 million Egyptian pounds, slowly bringing state film production to a halt by the early 1970s. The pendulum effect in funding between private and public sectors was also damaged by the increasingly predominant investment from the oil-rich Gulf countries, which financed films for television in the 1980s and later for satellite distribution in the 1990s. In addition to their more stringent censorship requirements of the usual subjects (sex, politics, and religion), the Gulf producers generally lacked awareness of the aesthetics of cinema. After the 1981 assassination of Sadat by a member of the Islamic Brotherhood, Hosni Mubarek's (b. 1928) regime was installed and with it emergency law, eventually diffusing the student movement that had erupted in the 1970s in reaction to Sadat's economic and political moves.

The Gulf petrodollars of the 1980s caused an outpouring of funded television shows, which led to further decline in the film industry. By 1994, Egyptian cinema was considered to be in a state of crisis: the annual production of films had fallen to single digits, a far cry from the annual output of fifty narrative features in 1944. More recently, independent directors have concentrated their efforts on serial television shows for Ramadan, the holy month in which Muslims fast during the day, then relax in the evening, creating large popular audiences. Meanwhile, the reconstruction of post-war Beirut was fueling the media explosion of the second half of the 1990s, which led to such satellite channels as Rotana and Good Day from Beirut and the Gulf states, which now produce many films for the Egyptian market.

Another challenge to independent Egyptian film is the power of censors to stifle artistic work and freedom of expression at the slightest hint of perceived criticism of religion or of taboo subjects presented in anything other than a denunciatory way. Between 1971 and 1973, during Sadat's early years, any films that dealt with the 1967 defeat were banned, including *Il Usfur* (*The Sparrow,* Youssef Chahine, 1973), but since the early 1990s, censorship has been more acutely attentive to religious issues.

FROM SILENT CINEMA TO GOLDEN AGE

In the early years of the twentieth century, only foreign studios (German, Italian, and French) operated in Egypt, most of them in Alexandria because of its optimal lighting conditions. It was not until the 1920s that Egyptians made their own films. The first long feature to be financed by Egyptian money was *Leila* (1927), produced by a woman, Aziza Amir (1901–1952), who also acted in the film, and directed by Estephan Rosti (1891–1964; not a native Egyptian). Mohamad Bayoumi (1894–1963) and Mohamad Karim (first Egyptian film actor), who studied filmmaking in Germany, were early pioneers. Bayoumi was the first Egyptian to produce and shoot a newsreel, *Amun*, about the return of nationalist Saad Zaghloul Pasha from exile in 1923, and the first Egyptian to shoot and direct a short fiction film, *al-Bashkateb* (*The Head Clerk* [1924]). Mohamad Karim, who claimed to have learned filmmaking at "the university of *Metropolis*," where he spent a year assisting and observing in the production of Fritz Lang's 1927 expressionist classic on the sets of Ufa (Universum Film Aktiengesellschaft), directed his first film, *Zaynab*, based on the novel by Mohamad Husayn Haykal, in 1930. In 1932, he directed the first Egyptian talking film *Awlad al-dhawat* (*The Children of the Aristocrats*), starring theater actors Yussef Wahbi and Amina Rizq; in 1933, he directed his first musical, *al-Warda al-bayda'* (*The White Rose*), which showcased the talents of musician and composer Mohamad Abdel Wahab (1901–1991). This was also the first film to solve the problem of compressing long classical Arabic songs (usually 15 to 20 minutes in duration) into six-minute sequences. From then on, Karim was known as Mohamad Abdel Wahab's director, and they made several other films together.

Talaat Harb, the savvy businessman and nationalist financier, founded Bank Misr in the 1920s as well as Studio Misr in 1935, which produced its first talking feature in 1936, *Widad*, directed by Fritz Kramp after a dispute broke out between original Egyptian director Ahmed Badrakhan and the studio manager, Ahmed Salem. After this, Studio Misr dominated productions in the film industry for the next thirty years. To ensure technical and aesthetic quality, Talaat Harb sent young filmmakers abroad to acquire professional training and recruited European technicians as consultants in Cairo. With the preexisting industries of radio and music recording and with Cairo's position since the nineteenth century as a refuge for artists and musicians fleeing the more constraining conditions of Greater Syria, this unique confluence of talent and technology led to the

YOUSSEF CHAHINE

b. Alexandria, Egypt, 25 January 1926

Born in 1926 to a middle-class Catholic family of Lebanese and Greek origins, Youssef Chahine's formative years were spent in the cultural melting pot of Alexandria, living under British occupation. There he was exposed to a polyphonic culture of Eastern and Western flavors, surrounded by English, Italian, French, Greek, and Arabic languages, and living in a religiously tolerant environment where Muslim, Christian, and Jew coexisted. These elements, along with Egypt's changing politics since 1950, have strongly influenced his body of work.

Adept at mixing genres and styles, Chahine has made films for over fifty years, during which time he has revealed a commitment to social and political critique. His early tendency toward social realism is hallmarked by *Bab al Hadid* (*Cairo Station*, 1958) and *Al Ard* (*The Land*, 1969). In the former, he played a disturbed and crippled newspaper vendor in the Cairo train station who murders a voluptuous drink vendor out of unrequited desire; in the latter, based on a novel by Marxist Abdel Rahman Sharkawi, he shows the bonds of kinship and rivalry that destroy the solidarity of the peasants under the new land reforms of the Nasser period. His historical epic, *Nasr Salah el Din* (*Saladin*, 1963), depicts the twelfth-century uniter of the Arabs, Salah el Din, as a merciful and religiously tolerant leader who is an obvious allegory for Gamal Abdel Nasser, Egypt's leader from 1954 to 1971. In his 1973 film *Il Usfur* (*The Sparrow*), he attempts to reconcile the ideals of Nasserism with the disappointing results of Egypt's 1967 defeat in its war with Israel and the aftermath. His 1997 *Le Destin* (*Destiny*) about the twelfth-century Andalusian philosopher Averroes (Ibn Sinna), is an allegory for the contemporary struggles in Arab countries between Islamic fundamentalism and political despots, on the one hand, and free thinkers, on the other, mirroring his own battles with censorship on religious grounds in his film *Al Muhajir* (*The Immigrant*, 1994), banned for representing a character who is somewhat similar to the Biblical and Quranic Joseph. His autobiographical films were the first in the Arab world to treat non-normative sexuality as something human, seen in his quartet *Alexandria . . . Why?* (1978), *Egyptian Story* (1982), *Alexandria, Again and Forever* (1989,) and *Alexandria . . . New York* (2004).

Chahine has offered a new model for the Arab filmmaker as an independent auteur of a personal cinema. While his films attempt to cater to popular Egyptian tastes with their musical numbers and well-known film stars, the majority of Egyptians relate best to his realist films, finding the others too obscure. Those he has mentored include established film auteurs Yousry Nasrallah and Atef Hetata, who face similar problems of censorship and lack of local markets for their films.

hegemony of Egyptian cinema over the Arab and North African region.

Once the talking feature had been established in 1936, films were made in the genres of farce, melodrama, and the musical. These were collaborations by established musicians, star singers, and actors, including Yussef Wahbi (1897–1982, actor and theatre director), comedian Naguib Al Rihani (1891–1949), and musicians Umm Kulthoum (1904–1975), Mohamed Abdel Wahab, Farid al Attrach (1915–1974), Layla Murad (1918–1995), and Mohamed Abdel Wahhab. The period from the early 1940s until the early 1950s is considered the golden age of Egyptian cinema, with annual output averaging forty-eight films a year between 1945 and

Youssef Chahine. © ATTAR MAHER/CORBIS SYGMA.

1952. In the immediate post–World War II years, the film industry was more profitable than the textile industry, and by 1948, there were seven operating film studios, and 345 feature films had been produced. But the dominance of Western cinema in the market impeded national film production, even during the post-independence period after 1952, when Egyptian productions did not exceed 20 percent of all distributed films.

REALISM

Realism has been a tendency in Egyptian cinema since the 1939 classic, *Determination* (Kamal Selim, al-Azma), but this tendency became particularly strong in the 1950s when serious realist writers like Naguib Mahfouz (b. 1911) and Abdel Rahman Sharkawi (1920–1987) involved themselves in the cinema, penning screenplays or lending their novels to filmic adaptations. Of all the directors, Salah Abu Seif (1915–1996) is hailed as the father of Egyptian film realism, especially after his 1951 film *Lak yawm ya Zalim* (*Your Day Will Come*), adapted from Zola's novel *Therese Raquin* by Naguib Mahfouz. Seif's adaptation of the Mahfouz novel into *al futuwa* (*The Tough Guy* [1957]) is joined by Tawfik Saleh's (b. 1927) notable 1955 adaptation from Mahfouz's novel *Darb al mahabil* (*Street of Fools*). Abu Seif made twenty-four features between 1946 and 1966; between 1963 and 1965, he was head of the General Organization of Egyptian Cinema. Many of his films are social melodramas about the city of Cairo, its neighborhoods and working-class inhabitants. Due to the problems related to the nationalized cinema, he had difficulties making films during the late 1960s and 1970s; his only film of the 1980s was his feature *Al-Qadisiya* (1981), made in Iraq. Saleh, a younger director, also had difficulties and made only four films in Egypt, including *Al Mutamarridun* (*The Rebels* [1966]), before leaving for Syria, where he directed his best-known film, *al Makhdu'un* (*The Duped* [1972]), based on the novel *Men under the Sun* by Palestinian writer Ghassan Khanafani. Saleh later moved to Iraq to become head of the film institute in Baghdad.

Among Saleh's peers, each of whom suffered from the decline in state funding, Shadi Abdel Salam (d. 1986), originally a set and costume designer on numerous Egyptian films, heralded a new kind of art cinema with his sole feature, *Al Mumiya* (*Night of the Counting Years* [1969]). This film was hailed as a "renaissance" in Egyptian cinema, but Salam has since left Egypt because he was unable to secure funding for other projects; he died in1986. The demands of the market have dominated the type and level of artistry in Egyptian cinema, with few exceptions, one of whom is Youssef Chahine (b. 1926). The most prolific independent film director of the post-war period, a master of different genres, and the instigator of an auteurist and critical cinema in the Arab world, Chahine is probably the best known Egyptian figure abroad. This is due to his cultural blend of East and West, idiosyncratic style, international acclaim at Cannes and major film institutes, and critical feelings about the West, which are evident in his films. Notable among his films are *Bab al hadid* (*Cairo Station* [1958]), *Al Ard* (*The Land* [1969]), *il Usfur* (*The Sparrow* [1973]), *Alexandria . . . Why?* (1978), and *Le Destin* (*Destiny* [1997]).

The New Realist directors of the 1980s are arguably the most interesting development in recent Egyptian cinema. Belonging to the post-1967 generation, they participated in the student movement that questioned the corruption of new businessmen and the economic policies of Anwar Sadat. While taking advantage of funding from the Gulf states, they have played with conventions of realism and melodrama and addressed serious social issues. Significant directors from this movement include Atef El Tayeb (d. 1995), *Sawwaq al-utubis* (*Busdriver* [1982]), Mohamed Khan (b. 1942), *Zauga ragil muhim* (*Wife of an Important Man* [1987]); Khairy

Beshara (b. 1947), *Yawm hulw, yaum murr* (*Bitter Day, Sweet Day* [1988]), and Daoud Abd El-Sayyed (b. 1946), *KitKat* (1991).

EPIC FILMS

Like "musical," "comedy," "war film," and "Western," "epic" is a term used by Hollywood and its publicists, by reviewers, and by academic writers to identify a particular type of film. It was first used extensively in the 1910s and the 1920s: *Variety*'s review of *Ben-Hur* (1925) noted that "the word epic has been applied to pictures time and again" (6 January 1926: 38). It was particularly prevalent in the 1950s and 1960s, when epics of all kinds were produced to counter a decline in cinema attendance. And it has been recently revived with films such as *Gladiator* (2000), *Troy* (2004), and *The Alamo* (2004). As a term, "epic" is associated with historical films of all kinds, particularly those dealing with events of national or global import or scale. As a genre it thus encompasses a number of war films and westerns as well as films set in earlier periods. But because of its links with ancient classical literature, it is associated above all with films set in biblical times or the ancient world. However, the term "epic" has also been used to identify—and to sell—films of all types that have used expensive technologies, high production values, and special modes of distribution and exhibition to differentiate themselves from routine productions and from rival forms of contemporary entertainment. There are therefore at least two aspects to epics, two sets of distinguishing characteristics: those associated with historical, biblical, and ancient-world films and those associated with large-scale, high-cost productions.

These aspects have often coincided, as is true not only of films such as *The Ten Commandments* (1923 and 1956), *El Cid* (1961), *55 Days at Peking* (1963), *How the West Was Won* (1962), and *Troy*, but of films with more recent historical settings such as *The Big Parade* (1925), *Exodus* (1960), *The Longest Day* (1962), *Schindler's List* (1993), and *Pearl Harbor* (2001). However, the production of large-scale, high-cost comedies, musicals, and dramas such as *It's a Mad, Mad, Mad, Mad World* (1963), *The Sound of Music* (1965), and *Gone with the Wind* (1939)—some of them with historical settings, some without—and the production of more routinely scaled historical and biblical films such as *Salome* (1953), *Hannibal* (1960), and, indeed, most war films, Westerns, and swashbucklers tend to make hard-and-fast definitions more difficult. Generalizations can be made about the scale of the films and the events they depict, the prominence of visual and aural spectacle, and a recurrent preoccupation with political, military, divine, or religious power, but, as is often the case with Hollywood's genres, anomalies and exceptions of one kind or another can nearly always be found. It is easier to be more precise about specific periods, cycles, and trends.

THE SILENT ERA

The generic and industrial traditions of the epic film date back to the 1890s, when several Passion plays (plays representing the life of Christ) were filmed and exhibited in unusually lengthy, multi-reel formats. In the period between 1905 and 1914, a number of relatively large-scale, high-cost historical, biblical, and ancient-world films—among them *La vie du Christ* (1906), *The Fall of Troy* (1910), *La siège de Calais* (1911), *Quo Vadis?* (1913), and *Cabiria* (1914)—were made in Italy, France, and elsewhere in Europe and helped to establish the multi-reel feature. Multi-reel films of a similar kind were produced in the United States as well. But at a time when production, distribution, and exhibition in the United

States were geared to the rapid turnover of programs of single-reel films, films like this were often distributed on a "road show" basis. Road show films were shown at movie theaters as well as alternative local settings such as town halls for as long as they were financially viable.

Many of these films drew on nineteenth-century traditions of historical and religious representation, particularly paintings and engravings, toga plays, Passion plays, pageants, and popular novels such *The Last Days of Pompeii* and *Ben-Hur* and their subsequent theatrical adaptations. They also drew on nineteenth- and early twentieth-century preoccupations with Imperial Rome and early Christianity, and on an association between religious and historical representation and nationhood and empire. These traditions and preoccupations were particularly prominent among the middle and upper classes, to whom many of the earliest multi-reel films and features were directed and to whom the aura of respectability associated with religious and historical topics and the legitimate theater was important. Augmented by films such as *The Coming of Columbus* (1912) and *The Birth of a Nation* (1915), which dealt with aspects of US history, productions like this helped found a tradition of large-scale, high-cost spectacles, "superspecial" productions that would be road shown not just in legitimate theaters but in the large-scale picture palaces that were being built in increasing numbers in major cities. Ticket prices were high. The films were shown, usually twice a day, at fixed times and with at least one intermission. They were usually accompanied by an orchestra playing a specially commissioned score. Only after a lengthy run in venues like this, a practice essential to the recouping of costs and the making of profits, would superspecials be shown in more ordinary cinemas at regular prices.

The production of road shown superspecials reached a peak in the United States in the 1920s with films like *Orphans of the Storm* (1922), *Robin Hood* (1922), *The Covered Wagon* (1923), *The Ten Commandments* (1923), *The Thief of Bagdad* (1924), *The Big Parade* (1925), *The Iron Horse* (1924), *Ben-Hur* (1925), *Wings* (1927), *The King of Kings* (1927), and *Noah's Ark* (1928). Although these films are diverse in setting and type (*Robin Hood* is a swashbuckler, *The Thief of Bagdad* an exotic costume adventure film, *The Ten Commandments* a biblical epic, *The Iron Horse* a western, and *Wings* a World War I film), there are aesthetic, structural, and thematic links among them. Like the epics and spectacles of the 1910s, they exhibit what Vivian Sobchack has called "historical eventfulness" (p. 32)—that is to say, they mark themselves and the events they depict as historically significant. In addition, nearly all these films narrate stories that interweave the destinies of individual characters with the destinies of nations, empires, dynasties, religions, political regimes, and ethnic groups. While some focus on powerful characters (generals, pharaohs, princes, and leaders), many focus on more ordinary characters who either become caught up in events over which they have little control (as in *The Big Parade*, *Wings*, and *Orphans of the Storm*) or are unsung agents of significant historical or epochal change (as in *The Iron Horse*). *Robin Hood* and *The Thief of Bagdad* are variants in which, as vehicles for star and producer Douglas Fairbanks (1883–1939), the power of the central character to effect change is, however fancifully, bound up with his physical prowess.

Following the precedent established by *Intolerance* (1916), the contemporary relevance of the events depicted in *The Ten Commandments*, *The King of Kings*, and *Noah's Ark* is underscored by including story lines and scenes from the present as well as the past. However, it is the story lines and scenes from the past that provide the most obvious occasions for spectacle. Difficult to define, spectacle is clearly not restricted to epics and to spectacle films as such; however, films of this kind played an important role in exploring, organizing, and legitimizing cinema's spectacular appeal and potential, in maintaining the involvement of contemporary audiences in much longer films than they had initially been used to, in mediating between competing contemporary demands for realism and spectacle, narrative and display. This was evident not just in their expansive battle scenes, crowd scenes, and settings, their expensive costumes and sets, or their use of new technologies. Epic films were regularly used to showcase new special effects, new camera techniques, and new color processes such as two-color Technicolor. It was evident, too, in their capacity to encompass incidental details, intimate scenes, and individualized story lines and to make sequences of spectacle such as the exodus from Egypt and the parting of the Red Sea in *The Ten Commandments* clearly serve dramatic and narrative ends.

FROM THE DEPRESSION TO THE POSTWAR ERA

With the advent of the Great Depression in 1929, Hollywood companies cut back on expensive productions and road shows. These practices were revived in the early 1930s, establishing a cross-generic trend toward what Tino Balio calls "prestige pictures" (pp. 179–211). However, although many prestige pictures were top-of-the-range costume films of one kind or another (adaptations of classic literature, biopics, swashbucklers, and the like), very few were made and road shown on the scale of the silent superspecial. Fewer still were biblical films and films with ancient-world settings. Cecil B. DeMille (1881–1959), who had produced and directed *The Ten Commandments* and *The King of Kings* in the silent era,

CECIL B. DeMILLE

b. Cecil Blount de Mille, Ashfield, Massachussetts, 12 August 1881, d. 21 January 1959

Cecil Blount DeMille was a major figure in Hollywood from the mid-1910s to the late 1950s. Remembered now mainly as a showman and as the producer/director of a number of biblical epics, he was in fact a versatile innovator who made important films of all kinds throughout his career.

DeMille's parents were involved in the theater. When his father died, he worked as actor and general manager for his mother's theatrical company and also produced and wrote plays with his brother, William. In 1913, he left the theater to work in motion pictures as cofounder of the Jesse L. Lasky Feature Play Company. In 1914, he coproduced, cowrote, and codirected its first film, *The Squaw Man*, a six-reel adaptation of Edwin Royle's play, which was a success. When the Lasky company became part of Paramount later that year, DeMille supervised its production program. He also wrote, produced, directed, and edited many of its films.

By the mid-1920s, DeMille had been at the forefront of a number of key developments: the use of plays as a template for feature-length films; the production of feature-length westerns; the dramatic use of low-key lighting effects, most notably in *The Cheat* (1915) and *The Heart of Nora Flynn* (1916); the production of Jazz Age marital comedies such as *Don't Change Your Husband* (1919) and *Why Change Your Wife?* (1920) (both of them written, as many of DeMille's films were, by or with Jeannie Macpherson); and the production of "superspecials" such as *The Ten Commandments* (1923).

The Ten Commandments, a Paramount film, was the first of DeMille's biblical epics. His second, *The King of Kings* (1927), was released through Producers Distributing Corporation, a company for whom he began making films in 1925. Following a period with MGM, DeMille returned to Paramount to make *The Sign of the Cross* in 1932. He remained with Paramount for the remainder of his career, making social problem dramas, westerns, and spectacles like *Samson and Delilah* (1949), *The Greatest Show on Earth* (1952), and the 1956 remake of *The Ten Commandments*. From 1936 to 1945, he also hosted and directed adaptations of Hollywood films and Broadway plays for Lux Radio Theater.

DeMille's films are usually said to be marked by a formula in which seductive presentations of sin are countered by verbal appeals to a Christian ethic inherent in scenes of redemption and in the providential outcome of events. However, it is worth stressing the extent to which, as the actions of characters like Moses, Samson, and John Trimble (in *The Whispering Chorus*) all illustrate, acts of virtue as well of sin in these films entail unusually perverse or destructive behavior.

RECOMMENDED VIEWING

The Cheat (1915), *The Whispering Chorus* (1918), *Why Change Your Wife?* (1922), *The Ten Commandments* (1923 and 1956), *This Day and Age* (1933), *Union Pacific* (1939)

produced and directed *The Sign of the Cross* (1932) and *Cleopatra* (1934). But along with *The Last Days of Pompeii* (1935), which was produced by Merian C. Cooper (1893–1973) and directed by Ernest B. Schoedsack (1893–1979), these productions were the only biblical and ancient-world productions made between 1928 and 1949. All three may be interpreted as films that engage the Depression and its moral implications in various ways. Toward the end of the 1930s, David O. Selznick (1902–1965) explicitly appealed to the traditions of the silent road shown superspecial when producing and planning the distribution of *Gone with the Wind*. He went on to produce *Since You Went Away* (1944), an epic home-front drama, and *Duel in the Sun* (1946), an epic western. DeMille, meanwhile, sought to revive the biblical epic by re-releasing *The Sign of the*

Cross in 1944 and producing and directing *Samson and Delilah* in 1949.

By 1949, Hollywood was undergoing a long-term process of change. Audiences, ticket sales, and profits were in decline; the ownership of theater chains by major studios was declared illegal; competition from television, domestic leisure pursuits, and other forms of entertainment were on the rise; and at a time when income from overseas markets was more important to Hollywood companies, a number of European countries were taking steps to protect their domestic economies, to stimulate domestic film production, and hence to limit the earnings Hollywood companies could take out of these countries each year. At the same time, the Cold War, nationalist and anti-imperial struggles, the superpower status of the United States, the marked increase in church-going, and the prevalence of religious discourse in the US itself provided a set of contexts and reference points for many of the films, in particular the big-budget road shown epics Hollywood was to produce, co-fund, or distribute during the course of the next two decades.

The postwar growth in epic production was the result of a decision to spend more money on enhancing the cinema's capacity for spectacle through the use of stereophonic sound and new widescreen, large-screen, and large-gauge technologies and on an increasing number of what were beginning to be called "blockbuster" productions—productions that, in road show form in particular, could be used to justify higher prices and generate high profits in a shrinking market. MGM led the way in road showing remakes of silent spectacles and in using income held abroad to fund the use of overseas facilities, locations, and production personnel with *Quo Vadis* in 1951. Two years later, Twentieth Century Fox pioneered the use of CinemaScope and stereophonic sound with its adaptation of Lloyd C. Douglas's best-selling novel *The Robe*. In 1956, DeMille released a four-hour remake of *The Ten Commandments*, which used Paramount's new VistaVision process, was shot in Egypt, Sinai, and Hollywood, and cost over $13 million. The film made more than $30 million on its initial release in the US and Canada alone. The following year, Columbia released *The Bridge on the River Kwai*, one of the first in a series of road shown epic war films. And in 1960, the road show release of *Cimarron* and *The Alamo*, the latter filmed in Todd-AO, helped cement a trend toward epic Westerns.

The Bridge on the River Kwai was produced by Sam Spiegel (1901–1985), an internationally based independent producer. Along with *Lawrence of Arabia* (1962), it was one of a series of epics he made with British director David Lean (1908–1991). *The Bridge on the River Kwai* was filmed in Ceylon using a mix of British, American, Japanese, and Ceylonese actors, stars, and production personnel. Ceylon was a British colony, and *The Bridge on the River Kwai* was registered as a British film in order to take advantage of British subsidies. Although credited to the French writer Pierre Boulle (who wrote the novel on which it was based), its script actually was written by Carl Foreman and extensively revised by Michael Wilson, both of them blacklisted US Communists.

The national identity of a film like *The Bridge on the River Kwai* is thus hard to pin down. This was an era of increasing independent production, in which funding for films was increasingly obtained on a one-off basis from a variety of international sources and international settings, locations, and casts were becoming the norm for big-budget productions. Blacklisted writers, whether officially credited or not, were hired to write or co-write scripts for epic productions such as *Exodus*, *Spartacus* (1960), *El Cid*, *The Guns of Navarone* (1961), *Lawrence of Arabia*, *Sodom and Gomorrah* (1962), *55 Days at Peking*, and *The Fall of the Roman Empire* (1964), and cut-price Italian "peplums" (toga films) such as *Hercules* (1958) and *Hercules Unchained*

Charlton Heston as Moses in Cecil B. DeMille's remake of his own* The Ten Commandments *(1956). **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

(1959) proved popular at the box office in the US as well as in Europe.

Hence the ideological characteristics of postwar epics are difficult to categorize. While the prologue to *The Ten Commandments* explicitly declares its anti-Communist agenda, *Quo Vadis*, *The Robe*, *Spartacus*, and *The Fall of the Roman Empire* are anti-fascist. Most of the remainder, even some of the westerns, are hostile to imperialism and to the brutal, cynical, and dictatorial exercise of political and military power. But they are often compromised by their focus on white ethnic characters. And their displays of male heroism, sometimes in stark contradiction to an apparent concern with the ethics of war, add a further layer of ideological complication. Only in films like *The Egyptian* (1954), *King of Kings* (1961), and *The Greatest Story Ever Told* (1965) are male heroism, male ambition, and the options of political and military engagement explicitly qualified, eschewed, or rejected.

THE NEW HOLLYWOOD ERA

Although epic war films and big-budget musicals continued to be made in the 1970s and early 1980s, the road shown superspecial and the prestige epic were increasingly displaced by what has come to be known as the New Hollywood blockbuster. As exemplified by *Jaws* (1975), *Star Wars* (1977), *Superman* (1978), and *Raiders of the Lost Ark* (1981), New Hollywood blockbusters drew their inspiration from the B film, the serial, comic books, and action-adventure pulps rather than from the culturally prestigious traditions of the Hollywood epic. Wide-released rather than road shown, they were designed to appeal to teenagers and families with young children and to garner profits as rapidly as

possible. However, productions in the prestige epic tradition such as *Dances with Wolves* (1990), *The English Patient* (1996), and *Schindler's List* were still occasionally made. Some of them received a relatively exclusive "platform" release. And the New Hollywood blockbuster, like the old Hollywood epic, functioned as a special vehicle for spectacle, large-scale stories and new technologies. Indeed, the advent of CGI (computer-generated imagery) seems to have been a major factor in the recent revival of the epic not just in its traditional forms, as exemplified by *Gladiator*, *Troy*, *King Arthur* (2004), and *Alexander*, but in the guise of the *Lord of the Rings* trilogy as well. In all these films the themes of heroism, justice and the uses and abuses of power, representational prowess, large-scale spectacle, and large-scale stories and settings remain among the epic's principal ingredients.

EXHIBITION

Exhibition is the retail branch of the film industry. It involves not the production or the distribution of motion pictures, but their public screening, usually for paying customers in a site devoted to such screenings, the movie theater. What the exhibitor sells is the experience of a film (and, frequently, concessions like soft drinks and popcorn). Because exhibitors to some extent control how films are programmed, promoted, and presented to the public, they have considerable influence over the box-office success and, more importantly, the reception of films.

Though films have always been shown in nontheatrical as well as theatrical venues, the business of film exhibition primarily entails the ownership, management, and operation of theaters. Historically, film exhibitors have been faced with a number of situations common to other sectors of the commercial entertainment industry: shifting market conditions, strong competition, efforts to achieve monopolization of the field, government regulatory actions, and costly investment in new technologies.

FILM EXHIBITION AND THEATER OWNERSHIP

The first moving picture exhibitors were itinerant showmen who exploited the novelty of projected moving pictures by using the same film program for a series of brief engagements in different locations. They typically purchased outright the short films they screened at theaters, churches, and public halls. As early as 1903, film exchanges that owned and rented moving pictures emerged in Boston, Chicago, and New York City, creating a separation between exhibition and distribution and helping to standardize the emerging film industry. Exhibitors rented films by the reel from an exchange, allowing for more frequently changed programs at one specific location and therefore the establishment of nickelodeons, which were inexpensive storefront movie theaters.

One important early variant of the exchange system was the "states rights" model, in which the distribution rights for a film were sold by territory, often by individual state. Exhibitors then contracted with the rights owner. Within the constraints of price and print availability, the early exhibitor had considerable latitude in booking films of special interest to the local audience.

With the advent of the multi-reel feature film in the early 1910s, certain high profile films, like *The Birth of a Nation* (1915), were circulated through the country as "road shows." Much like touring stage productions, road show films were promoted as special events that were booked into individual venues (often legitimate theaters or small-town "opera houses") for multi-day runs. This strategy remained in place through the 1920s, then reemerged in the 1950s and 1960s, when the most expensive, spectacular, star-laden productions (usually in color and widescreen) like *Ben-Hur* (1959) were first exhibited on a road show basis with patrons paying notably higher admission prices for reserved seats at these heavily promoted motion picture events.

Somewhat akin to the road show was a practice called "four-walling," where a theater was rented for a special screening that in some fashion was quite distinct from standard motion picture fare. Four-walling was used, for instance, during the 1930s to present foreign-language

films to immigrant audiences in the United States. But it was most commonly employed from the 1920s through the 1950s as an exhibition strategy for sensationalistic "exploitation" films about childbirth, drug addiction, prostitution, and sexually transmitted diseases. At the other end of the spectrum, Sun Classic Pictures and other firms specializing in family-oriented product had considerable success during the 1970s with four-wall exhibition of films like *The Life and Times of Grizzly Adams* (1974).

As lucrative as road shows and four-walling proved to be in the selling of individual films, the crux of the film exhibition business has remained the ownership and daily operation of movie theaters, which requires a steady stream of product booked through film distributors. Given the low start-up costs, the first theaters dedicated to offering moving pictures as their primary, regular drawing card were usually independently owned and operated. From early on, however, exhibitors realized that it made economic sense to adopt a strategy then used for vaudeville theaters and penny arcades and operate more than one theater under the auspices of a single amusement company. Thus a key exhibition strategy that emerged during the nickelodeon era was the theater chain. A chain (or circuit of theaters) might encompass more than 100 venues or might be as small as a string of picture shows in adjacent neighborhoods or towns. Regional theater chains became especially prominent in the 1910s. The Stanley Company based in Philadelphia, for example, had by the mid-1920s grown to 250 theaters across the entire East Coast. Regional chains based in, among other places, Milwaukee (the Saxe Brothers), Detroit (John Kunsky), and St. Louis (the Skouras Brothers) became dominant forces in the industry even before these companies combined in 1917 to form the First National Exhibitors' Circuit. First National was one of several attempts in the 1920s to create a national network of theaters, including Publix Theaters, the exhibition branch of Paramount studios. For its national chain, Publix borrowed managerial strategies based on the principles of successful grocery and department store chains.

Perhaps most successful among this first generation of exhibition entrepreneurs who would later shape the Hollywood studio system was Marcus Loew (1870–1927), who began his career running arcades and nickelodeons in New York City. To guarantee the regular supply of films for his theaters, Loew acquired production and distribution companies and in 1924 formed Metro-Goldwyn-Mayer (MGM), a vertically integrated company that produced and distributed films as well as owning and operating a chain of first-run theaters in major metropolitan areas. Controlling a significant part of the exhibition market was an essential strategy not only for MGM, but for all of the major Hollywood studios. Paramount, for example, followed a similar logic when it merged with the Balaban & Katz chain of theaters (based in Chicago), and so did Warner Bros. when it acquired the Stanley theaters in the same period.

While weekly attendance in the United States reached 22 million by 1922 and rose to approximately 80 million by the end of the decade, the construction of opulent picture palaces during the 1920s further solidified the prominence of the major studio-owned theater chains, most of which expanded by acquiring more theaters as the industry completed its transformation to sound during the late 1920s. Independent exhibitors had few options: sell out to a chain, invest in the costly equipment required for sound films, or close. The Great Depression exacerbated the dilemma of the independent exhibitor, as movie attendance dropped precipitously after the novelty of sound had worn off, dropping off to 50 million per week. New theater construction stopped almost completely, and even the largest chains felt the strain: Paramount-Publix went into receivership, as did Fox; Loew's reduced its holdings to 150 big-city theaters; and Warner Bros. sold 300 of its 700 theaters.

EXHIBITION AND THE CLASSIC HOLLYWOOD SYSTEM

One reason that the major studios could attain virtually monopolistic control over the film industry is that they developed several business strategies during the 1910s and 1920s that all in some way constrained the independent exhibitor's freedom in booking films. These strategies continued to play a central role in film exhibition until the end of the 1940s. Perhaps most important was the run-zone-clearance system, which enabled the "Big Five" major studios (MGM, Paramount, RKO, Warner Bros., and Twentieth Century Fox) to control the distribution of the films they produced. This system was designed to guarantee that films were circulated so as to ensure broad exhibition and to bring in maximum profits to the parent company. The national exhibition market (especially the urban market) in the United States was divided into geographical zones. In each zone, films moved consecutively from first-run through several intermediate steps (second-run, third-run, and so on) to final-run venues. Ticket prices tended to drop with each run. There was, in addition, a "clearance" time between runs, which meant that moviegoers could expect to wait months or up to a year after a film premiered at a downtown picture palace before it reached a neighborhood theater or a small-town venue. By privileging their own theaters and organizing distribution according to the run-zone-clearance system, the Big Five assured their dominance of the American motion picture industry.

MARCUS LOEW

b. New York, New York, 7 May 1870, d. 5 September 1927

Marcus Loew, the creator of MGM and one of the most successful figures in the motion picture industry during the silent era, was, first and foremost, an exhibitor. "I don't sell tickets to movies," he is said to have declared, "I sell tickets to theaters."

Born to immigrant parents on New York's Lower East Side, Loew moved into commercial entertainment after working in the garment industry. In 1904, he co-founded the People's Vaudeville Company, which soon expanded its holdings to include several penny arcades in New York City and one in Cincinnati, Ohio, where he built a 110-seat theater on the second floor to screen motion pictures.

Loew ran nickelodeons, but he made his mark with what was called "small-time vaudeville," a show that combined live vaudeville performance with motion pictures—all for a relatively inexpensive ticket price. In the first of many acquisitions, in 1908 he purchased and refurbished the Royal Theater in Brooklyn. His chain of New York theaters grew to forty small-time vaudeville venues, including impressive new theaters, like the 2,400-seat Loew's National. By the end of the 1910s, Loew owned or leased more than fifty large theaters from Canada to New Orleans, with an especially prominent presence in the major Northeast cities.

Like other moguls, Loew became committed to developing a vertically integrated motion picture company, which controlled production and distribution as well as exhibition. He formed Loew's, Incorporated in 1919, purchased the Metro film studio and then Goldwyn Pictures. Loew's theater holdings increased to more than 100 first-class venues, topped by the 3,500-seat Loew's State Theater in Times Square. In 1924, Loew acquired Louis B. Mayer's Los Angeles studio and Metro-Goldwyn-Mayer was formed, with Loew's Inc. as its parent company. Until his death in 1927, Marcus Loew served as president of Loew's/MGM, continuing to expand his theater holdings, including newly built picture palaces.

Loew's legacy lasted long after his death, beyond the success of MGM in the 1930s. Following the Paramount decision in 1948, which ordered studios to divest themselves of their theater holdings, Loew's became by the late 1950s a separate entity from MGM, with fewer than 100 theaters. Over the next twenty years, Loew's diversified its holdings but maintained a relatively small number of theaters. However, through ensuing expansion and corporate mergers, Loew's by the 1990s had become an 885-screen chain owned by Sony Pictures Entertainment. Merged with Cineplex Odeon, Loew's Cineplex Entertainment eventually controlled almost 3,000 screens in 450 North American and European locations. With much hoopla, Loew's Cineplex in 2004 celebrated its 100 years of being in the exhibition business.

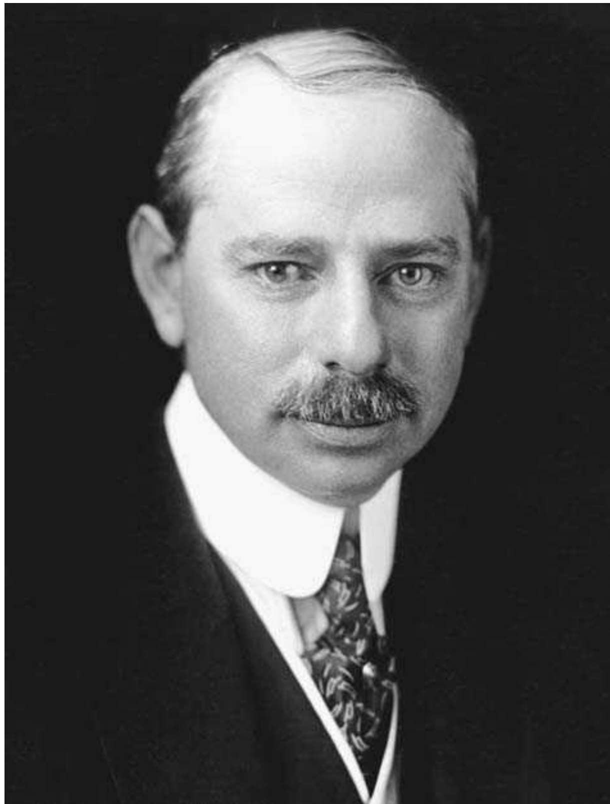
Exhibition at independently owned and operated theaters was also constrained by procedures that governed how major studio films were booked by exhibitors. "Blind booking" meant that exhibitors had to schedule the films for the coming season based only on descriptions provided by the studio, with no actual preview prints available. Furthermore, exhibitors had little choice but to agree to "block booking," which required that they take a full season or at least a significant number of films (shorts as well as features) from the same studio. Exhibitors were thus less able than in the past to pick and choose titles and thus tailor their programming, week-by-week, to a particular clientele.

Exhibitors had always been constrained in other ways as well. For instance, from the nickelodeon era onward, they had faced considerable pressure from religious and reform groups and actual policing from municipal and state authorities, especially in the form of building and safety codes, Sunday closing laws, and license fees. However, exhibitors stood to benefit from government intervention when the Federal Trade



Marcus Loew. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

Commission in 1921 accused Paramount of unfair business practices and illegal restraint of trade, beginning a legal process that continued on and off for more than twenty years. In 1938, the Justice Department initiated anti-trust proceedings against the major Hollywood studios, leading to a temporary consent decree in 1940 that prohibited blind booking and limited block booking to groups of no more than five films. Finally, in 1948, the United States Supreme Court delivered its decision in what was called the "Paramount case," a sweeping ruling that eliminated block booking, challenged monopolistic practices, and significantly altered the relationship between film distribution and exhibition.

The major decision in *United States v. Paramount, et al.* was to restrict Hollywood studios from owning and operating movie theaters. This divestiture took place over the next six years and to some degree it opened up the American market for independent theaters and newly formed theater chains. The 1948 court ruling also prohibited block booking, meaning that films were henceforth to be rented to a theater not as a package or a season, but individually. In addition, the ruling put an end to the frequently long clearance time between when a film was shown at a first-run theater and when it reached subsequent run theaters. In sum, the Paramount case dramatically opened up the marketplace and altered how exhibitors selected and scheduled movies. But since the production companies were by the 1950s no longer directly in the film exhibition business, they did not have their previous incentive to deliver many new films year round. Furthermore, blind booking was not explicitly banned as part of the Paramount decision, and this practice re-emerged, especially in the 1970s, as production costs rose and wider distribution patterns became the norm for first-run films.

FILM EXHIBITION AFTER TELEVISION

The World War II years, with a fully employed workforce, marked a high point in the film exhibition business in the United States. Weekly attendance topped 80 million annually from 1943 to 1946. Exhibitors not only sold a record number of tickets, but reinforced their civic role through public service gestures: selling government war bonds and staging drives to collect rubber, scrap metal, and other material needed for the war effort. Yet between 1946 and 1953, ticket sales in the United States dropped by almost 50 percent. By 1960, weekly attendance at the movies was only 30 million, dipping further, to 18 million, by 1970.

If the Paramount case seemed to assure greater latitude for theater owners, Hollywood's mid-1950s commitment to color and wide-screen processes (like Cinemascope) meant that exhibitors were strongly encouraged to invest in another costly technological upgrading of projectors, screens, and sound equipment. At the same time, the film audience through the 1950s and 1960s became progressively younger and more male than had previously been the case. Drive-ins came to form a key part of the larger exhibition market, even as the industry suffered continuing effects from the rise of commercial television as a readily available source of entertainment in the home.

Television, however, quickly became another outlet, or exhibition window, for Hollywood films, as studio film libraries were sold or rented to TV stations, with RKO leading the way in 1954. By the mid-1960s it was commonplace for new films to move relatively quickly to prime time television after they had completed their theatrical runs. Even with poor quality sound, panned-and-scanned images (that is, wide-screen films cropped to fit the dimensions of the TV screen), and commercial interruptions, movies drew large audiences on American network television. By the end of the 1960s the precedent had been firmly set for later developments of the television set as "home [movie] theater." With the emergence and widespread diffusion of cable and satellite

networks, videocassettes, and DVDs, watching movies no longer necessarily meant going to the movies. One result was that the second- and third-run theaters that had been so important during the first half of the twentieth century disappeared, leaving the theatrical exhibition business overwhelmingly dependent on first-run venues.

As theatrical exhibition shrank, the movie theater changed as well, partly in response to the Paramount decision. Multiplex cinemas, first situated in shopping centers, then in shopping malls, became the core of the business by the 1970s. New theater chains emerged, like General Cinema, which began with a handful of drive-ins and ultimately grew to more than 200 venues, mostly shopping mall multiplexes. American Multi-Cinema, which pioneered the multiplex concept in Kansas City in 1963, refined this particular exhibition model as the company opened increasingly larger multiplexes. By 1980 American Multi-Cinema's 130 theaters across the United States contained some 700 screens. That year attendance stood at 20 million weekly. (It would rise to 25 million by 1995 and to 30 million by 2002.) The spread of the multiplex meant that film exhibition increasingly became a matter of scheduling nationally advertised, widely available, first-run films with little regard for the particularities of locality or audience.

The exhibition business went through another round of significant changes during the mid-1980s, when the Reagan administration encouraged a return to the pre-1948 era by allowing a much greater corporate consolidation of production, distribution, and exhibition. Entertainment companies quickly sought to create vertical monopolies that included the ownership of theaters, as well as new exhibition windows like satellite television. At the same time, corporate mergers and takeovers meant that fewer companies came to control a greater number of screens, with much investment in free-standing megaplex theaters, not only in suburbs but also in metropolitan areas.

From the late 1970s on, exhibition also changed because wider release patterns for first-run films—called "saturation booking"—increasingly became the norm after the success of films like *Jaws* (1975). This move was prompted by the high cost of film production, the drop in the number of major studio releases, the need for distributors to pre-sell as-yet-uncompleted films to exhibitors (a form of blind booking), and the reliance on television as the prime advertising medium for new films. Not only did distributors aim toward saturating the market by making new films simultaneously available on a thousand or more screens, but they also insisted that new releases be given extended theatrical runs, moving from larger to smaller auditoria inside the same multi-screen theater. Thus while newly designed, high-quality theater complexes with eight or more screens held out the possibility that moviegoers might choose among a more diverse array of films, this was, in practice, rarely the case.

THE FILM PROGRAM

What the exhibitor delivers to paying customers is more than a film, it is the experience of a film program, which has varied significantly since the first public screening of moving pictures in 1896. Three key variables are involved here: (1) the exhibitor's degree of control over the program; (2) the range of films available; and (3) the actual composition of the program, including the variety of screened material (slides as well as motion pictures) and the role, if any, of live performance.

The exhibitors who introduced moving pictures in 1896–1898 had considerable creative control over the programs they offered to a curious public. While they very rarely shot the footage they screened, these traveling exhibitors did acquire and arrange a series of short films, which meant that they could juxtapose *actualités* (such as the Lumière films of everyday life that were shot outdoors on location) with filmed vaudeville acts or staged scenes. Depending on the venue and the intended audience, the array of short films was, in turn, combined in different ways with a wide range of other entertainment options: magic lantern slides or phonograph recordings, vocal or instrumental performances, novelty acts or educational lectures. In such cases, the program was typically designed to offer a variety of distinct attractions, though it soon became possible for exhibitors to create more unified shows in which the screened material and the live performances were arranged around a particular theme, such as the Spanish American War.

By 1900, moving pictures had become a regular feature on certain vaudeville circuits, where they served as one self-enclosed part of a program that might include six or more separate attractions, each occupying the stage for ten to twenty minutes. In this type of program, film was merely another interchangeable component, comparable to an acrobatic act or an ethnic comedy routine. In a similar fashion, moving pictures also served as novelty entertainment screened between the acts of touring melodramas and as part of the midway attractions offered by traveling carnivals and circuses.

When permanent movie theaters emerged during the nickelodeon era, the program changed significantly. Nickelodeons typically ran a continuous show in which a forty-five- or sixty-minute program was repeated throughout the day, then changed daily or at least several times each week. Using films rented from film exchanges, the nickelodeon operator offered several split or full reel films, each running from approximately five to fifteen

minutes, combined in almost all cases with live entertainment: musical accompaniment for the screenings (on piano or some sort of mechanical musical device) as well as illustrated songs. Illustrated songs featured a singer whose vocal rendition of a popular song accompanied the projection of a series of colorful slides indicating the lyrics and, more ingeniously, "illustrating" the song with staged tableaux and sometimes extraordinary visual effects. Other slides offered information about the show or instructions on movie-theater etiquette (for example, "Don't Spit on the Floor").

Within the standard programming format of short films and illustrated songs, the nickelodeon operator in fact had a great deal of latitude in tailoring the show for a specific audience. Exhibitors might hire performers to add sound effects to the silent films or even have off-stage actors voice the on-screen dialogue. A speaker, called a "lecturer," sometimes provided a continuous spoken plot synopsis and description, especially for films based on Biblical, literary, or high cultural sources. Magicians, vocal trios, and other vaudeville-style acts might appear on the same bill as moving pictures.

With the consolidation of the American film industry in the 1910s and the growing prominence of the serial and the multi-reel "feature" film, one common programming strategy was the "balanced" program offering a full evening's worth of entertainment. Until the end of the silent film era in the late 1920s, the feature film was usually accompanied, if not always preceded, by two or more shorts: a one or two-reel comedy or western, newsreel installment, serial episode, "scenic" (a travelogue or other nonfiction short), or animated cartoon. Advertising slides, too, continued to figure as part of the program—pitching nationally available products, local stores and services, and coming attractions.

As larger and more grandiose picture palaces began to appear, as well as more modest neighborhood and small-town theaters, programming could be quite varied, not only in terms of the quality and length of the feature film, but also in the number of shorts and, more importantly,

Crowds outside the Strand Theater in New York City. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

in the live components of the program. For instance, in 1918, a major big-city theater, like the Strand in New York City, presented its program four times daily, beginning with an overture from the house orchestra, followed by a newsreel and scenic, two numbers from a female singer, a feature film, two numbers from a male singer, a comic short, and an organ solo. Organists like Paul Ash and Jesse Crawford became major drawing cards in their own right. During the 1920s, picture palaces added even more spectacular live performances to the show, including elaborate Broadway-styled production numbers, which sometimes took the form of a "prologue" that was connected thematically to that day's featured film.

Smaller venues continued to provide some form of musical performance, if only by a pianist or a mechanical music machine. But such theaters might also add, on occasion, a special attraction: a pared-down prologue, a band performing Hawaiian music, or, by the mid-1920s, jazz; traveling musical comedy troupes, minstrel shows, and magic acts; or participants in a local talent contest. Indeed, film exhibitors' widespread reliance on all manner of live music meant that by the end of the silent era, more musicians worked in movie theaters than in concert halls, hotels, and nightclubs combined.

The coming of sound fundamentally altered the film program, at least in terms of its live component. Short sound films of vaudeville acts and famous orchestras were intended to replace certain live performers on the bill. More significantly, Hollywood's rapid transformation to sound put countless musicians and theater organists out of work, leading the Musicians Union to undertake a futile public relations campaign against "canned" music. Live performance did, however, remain a special attraction for a great many movie theaters well into the 1940s, which booked touring variety shows, radio performers, amateur contests, magicians and midnight "spook" shows, and, by the late 1930s, the film industry's own singing cowboys, like Gene Autry (1907–1998).

Newsreels, cartoons, serial episodes, and a range of other shorts continued to accompany the feature film in programming during the 1930s (and, indeed, into the 1960s). But the Depression also saw the widespread use of another exhibition strategy, the double feature, which paired selected shorts with two feature films, sometimes each of less than an hour in length. This popular programming strategy went hand-in-hand with the increased production of low-budget, sixty-minute, series films (frequently westerns) and other B movies, which were designed to fit the requirements of the double feature. About 300 different films were needed annually by a theater that offered three changes of double-feature programs each week. For the independent theater owner, the demand for more feature films allowed for somewhat more control over the program. Highly vocal opposition to the double feature came especially from concerned parents and teachers, who worried about the effect on children. Yet by the end of the 1930s, more than half of the theaters in the United States were regularly offering double features, with some even resorting to triple features or to continuous programs of low-budget "action" films. The double feature also allowed for a regularly scheduled intermission, which boosted concession sales.

The double (or triple) feature with intermission breaks also became the standard program at drive-in theaters during the 1950s, while some form of the balanced program (combining shorts with a feature film) survived well into the 1960s. Overall, from 1950 on, there was increased attention given to coming attraction trailers as part of the show and less to comic and dramatic short films. But even as the industry focused increasingly during the 1980s on the high-budget blockbuster designed to be the sole drawing card in a multiplex or megaplex cinema, the program continued to involve more than simply or solely a feature film. Trivia games, innocuous recorded music, advertising slides, filmed commercials, public service announcements, instructions on correct audience behavior, and, most notably, flashy trailers for coming attractions—all these elements served as components of the film program in the late twentieth century, though there was little opportunity for the individual theater to customize its offerings.

SPECIALIZED PROGRAMMING

While the exhibition business has always depended on attracting a core of regular or habitual moviegoers, exhibitors have also been quick to exploit specialized screening and programming occasions, often directed toward a more niche audience. For example, Saturday matinee screenings specifically designed to attract children were initially promoted by progressive civic organizations in the 1910s, but soon evolved into a profitable staple for many film exhibitors. The 1930s saw an increased interest in the Saturday matinee, which favored cartoons, comic shorts, and serial episodes, sometimes coupled with live performances, giveaway contests, and talent shows.

Independent exhibitors in the pre-television era also took advantage of other specialized programming possibilities by scheduling commercially sponsored shows designed to display new appliances and other consumer goods to female audiences. Especially in areas where there were no theaters catering specifically to an African American clientele, exhibitors might also offer special "colored" screenings, usually late in the evening. Sometimes called "midnight rambles," these shows reinforced prevailing

Publicity outside a movie theater screening* Show Boat *(James Whale, 1936). **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

codes of racial segregation, while also suggesting that even a small-town theater owner could profit by attracting a number of different audiences.

As early as the 1920s but especially in the 1950s and 1960s, art house cinemas in major urban areas and college towns offered a self-consciously high cultural alternative to mainstream moviegoing. Specializing principally in non-American films and independent productions, these venues promised a more intimate, adult, and "refined" experience both in terms of their programming and also their ambience and décor, which often included an art gallery and low-key concession area. In many cases, the art house eventually was transformed into the repertory theater, which thrived until the late 1980s, offering an array of feature films (sometimes programmed into mini-festivals centering on a particular director or genre): foreign art cinema, revivals of Hollywood classics, cult movies, rockumentaries, and new independent films.

Among the most notable features of the repertory theater was the midnight movie. Midnight screenings, which were once principally "colored" shows or special premiere screenings, took on a much different flavor from the late 1960s through the mid-1980s. The midnight movie in these years was likely to be *The Rocky Horror Picture Show* (1975) or some other cult film, screened to a highly participatory audience of teenagers and college students. From its origins in New York City, the midnight movie spread nationwide, becoming a lucrative programming option, even for multiplexes housed in shopping malls.

PROMOTION

Early promotional efforts included colorful posters and banners that added to the already striking effect of what by the mid-1910s had become a standard feature of the movie theater, the electrically illuminated marquee, which announced the current show. To complement newspaper advertising, exhibitors relied on a range of "ballyhoo," all designed to attract attention to the program and, more generally, to the theater itself: trucks with promotional displays, billboards, signs on streetcars, poster displays in store windows, sidewalk stunts,

and—perhaps most memorable—extraordinarily elaborate facades constructed to match the film then being screened. In such instances, the front of the theater might be decorated to promote a jungle adventure one day and a prison melodrama the next.

In addition to the promotion of individual films, exhibitors were frequently engaged in the ongoing promotion of their theaters, which often meant establishing and maintaining strong ties both to other local businesses and, more generally, to the home community. Thus a theater might put appliances and other products on display in the lobby, arrange tie-ins with local merchants involving free movie tickets or product giveaways, or even offer free screenings sponsored by the Chamber of Commerce or the retail merchants' association. From the 1910s through the 1940s theaters also developed community relations by opening their doors for benefits, public interest programming, school events, patriotic drives, amateur shows, and even church services. Handbooks like Harold B. Franklin's *Motion Picture Theater Management* (1928) provided practical guidance about promotion and a range of other topics of concern to the theater manager.

In an attempt to counter falling attendance during the early 1930s, exhibitors relied not only on advertising, but also on sometimes elaborate promotional contests designed to lure customers. These included the giving away of free "premiums," like glassware, fans, and cooking utensils, and contests that encouraged audience participation. Bingo-styled games like SCREEN-O games were common, as were "Bank Nights," perhaps the most widespread of these contests. Bank Night featured a drawing for a cash prize, which required that entrants register at the theater and that the winner be present at (though not necessarily inside) the theater when the winner was announced.

Increasingly after the 1940s, theatrical promotion became less spectacular and more restricted to on-site posters and displays, which were part of national marketing campaigns for individual films. By the 1970s, given the prominence of theater chains and the role of media advertising (eventually including the Internet as well as television and radio), there was no longer neither the incentive nor the need for individual exhibitors to come up with unique promotional schemes.

NON-THEATRICAL EXHIBITION

From the late nineteenth century's traveling moving picture shows to the late twentieth century's home theaters, films have been screened outside of movie theaters in a host of non-theatrical sites. Highly visible traveling exhibitors like Lyman H. Howe (1856–1923) had great success in this market between 1900 and 1915, offering ambitious film programs that involved elaborate sound effects. (In Europe, traveling moving picture shows were extremely common at fairgrounds.) As automobiles and expanded highway systems allowed for greater mobility, a host of other itinerant exhibitors brought moving pictures to rural audiences throughout the silent period and well into the 1940s. Traveling exhibition thrived in the Depression and World War II years, especially with the increased availability of highly portable 16mm sound projection equipment. At the same time, the non-theatrical market also included individuals and companies (including government agencies like the United States Department of Agriculture) that sought to tap the vast interest in regularly exhibiting motion pictures at schools, churches, military bases, YMCAs, and retail stores. These non-theatrical exhibitors offered a variety of programs, some very similar to what was being screened in contemporary theaters, others highly idiosyncratic and tailored to a particular audience.

One other form of non-theatrical exhibition that has figured prominently in film history, particularly in terms of the creation of what might be called a cinema culture, is the non-profit film society. The film society, very much dedicated to promoting an appreciation of cinema, typically sold tickets by subscription and featured precisely the sort of films that were not likely to be screened in mainstream commercial theaters: innovative alternative cinema, foreign-language film, and older classics. (There was some significant overlap in this regard between the non-commercial film society and the commercial repertory cinema.) One model for the more than 250 film societies that had emerged by 1960 was Amos Vogel's Cinema 16, which began in New York City in 1947 screening a mix of experimental cinema, socially conscious documentaries, and international films. Film societies were often affiliated with a university, college, museum, or community arts center, where their actual screenings were held.

The most significant development in non-theatrical film exhibition has been the shift to home viewing made possible by a host of different technologies: satellite and cable television, videocassettes, DVDs, and projection and sound equipment specifically designed for the domestic consumer. The home exhibition of film has been a viable option since the introduction of portable 16mm equipment in the 1920s. However, it was not until the late 1980s that the home became the major site for film exhibition in the United States, a trend that was only reinforced by the subsequent introduction of digital cinema, available on DVD and the Internet. Given the ease and relatively low cost of watching movies at home, perhaps the most surprising fact about film exhibition in the 1990s is that theatrical attendance in the United States increased by one-third from 1985 to 2002, even

as the total number of movie screens grew from a little over 20,000 in 1985 to more than 37,000 in 2000.

EXPERIMENTAL FILM

Experimental films are very different from feature-length Hollywood fiction films. In *Mothlight* (1963), Stan Brakhage (1933–2003) completely avoids ''normal'' filmmaking (he doesn't even use a camera) by sprinkling seeds, grass, dead moths, and bee parts directly onto the film stock; the result is a three-minute rhythmic ''dance'' between nature and the projector mechanism.

There are many types of experimental film, but despite their diversity, it is possible to pin down tendencies that help make experimental film a discrete genre. Edward Small identifies eight traits of experimental films and in the process defines important differences between the avant-garde and Hollywood.

Most obviously, production is a collaborative enterprise, but most experimental filmmakers conceive, shoot, and edit their films alone or with a minimal crew. Often they even assume the responsibility for the distribution of the finished film. It follows that experimental films are made outside of industry economics, with the filmmakers themselves often paying for production (sometimes with money from small grants or the rentals on previous films). This low-budget approach buys independence: Maya Deren (1917–1961) bought an inexpensive 16mm Bolex camera with money she inherited after her father's death, and used this camera to make all of her films, forging a career completely apart from the Hollywood mode of production.

Unlike mainstream feature films, experimental works are usually short, often under thirty minutes in length. This is in part because of their small budgets, though most filmmakers make short films for aesthetic reasons too: to capture a fleeting moment, perhaps, or to create new visuals with the camera. *Ten Second Film* (Bruce Conner, 1965) was originally shown at the 1965 New York Film Festival, and all ten seconds were reproduced in their entirety, as strips of film, on the festival's poster. Experimental filmmakers are usually the first to try out new ways of making movies, after which these technologies are adopted by Hollywood. Scott Bartlett's (1943–1990) films, such as *OFFON* (1967, with Tom DeWitt), were the first to mix computer and film imagery, and influenced Douglas Trumbull's (b. 1942) light show in *2001: A Space Odyssey* (1968). The reverse is also true: avant-garde filmmakers continue to use formats such as Pixelvision or 8mm long after the height of their popularity. Also like *OFFON*, experimental production often focuses on abstract imagery. The quintessential example is Stan Brakhage's notion of ''closed-eye vision,'' the attempt to duplicate on film the shimmers of light we see on our eyelids when our eyes are closed.

As Brakhage's films suggest, most experimental films avoid verbal communication, giving primacy to the visual. Unlike ''talkie'' Hollywood movies, experimental films are typically silent, or use sound in nonnaturalistic ways. As well, experimental films typically ignore, subvert, or fragment the storytelling rules of Hollywood cinema. Some films—such as Harry Smith's (1923–1991) *Early Abstractions* (1939–1956)—abandon narrative altogether and focus instead on creating a colorful, ever-changing picture plane. When experimental films do settle down into a story, it's often one that shocks or disturbs conventional sensibilities. Sometimes their subject is themselves and the medium of cinema.

Many experimental films violate one or more of the above traits. Andy Warhol's (1928–1987) *Empire* (1964) is over eight hours long, and Peter Hutton's

MAYA DEREN

b. Eleanora Derenkowsky, Kiev, Russia, 29 April 1917, d. 13 October 1961

One of the most important women in American experimental cinema, Maya Deren emigrated with her parents in 1922 to the United States, where Eleanora developed a keen interest in the arts that launched her into a varied early career, including a stint touring with Katherine Dunham's dance company. In 1941, while with the company in Los Angeles, she met and married filmmaker Alexander Hammid. In 1943 Deren adopted the first name *Maya* (Hindu for "illusion") and made *Meshes of the Afternoon*, a psychodrama rife with symbolic, fascinating repetition that rejuvenated the American avant-garde.

Deren's love of dance manifests itself in the films following *Meshes*. *At Land* (1944) is a dream of female empowerment that foregrounds Deren's own graceful movements, while *A Study in Choreography for Camera* (1945) is a portrait of dancer Talley Beatty as he moves from repose to a vigorous, ballet-like jump. *Meshes*, *At Land*, and *A Study* are unified by Deren's signature editing strategy: flowing motions that bridge abrupt cuts between different locales. In *A Study*, for instance, Beatty's single leap travels through a room, an art museum, against a backdrop of sky, and then ends in the woods, as he falls into a crouch and stops moving.

The combination of real-life incident and artistic manipulation is, for Deren, the essence of cinema. In her essay "Cinematography: The Creative Use of Reality" she argues that photography and cinema is the art of the "controlled accident," the "delicate balance" between spontaneity and deliberate design in art. Deren further extends the notion of the controlled accident to include those formal properties—slow-motion, negative images, disjunctive editing—that shape and alter the images of real life provided by the film camera.

Deren's other films are the *Meshes*-like *Ritual in Transfigured Time* (1946), the dance film *Meditation on Violence* (1948), and *The Very Eye of Night* (1958). In 1946 Deren divorced Alexander Hammid. In the late 1940s she became passionately interested in Haitian religion and dance, and traveled three times to Haiti to do research that resulted in the book *Divine Horsemen: The Voodoo Gods of Haiti* (1953) and hours of footage of Haitian rituals (some of which was edited into the video release *Divine Horsemen*). Deren became a legend in New York City's Greenwich Village, both for her practice of voodoo and for the assistance she provided to younger experimental filmmakers. The Creative Film Foundation (CFF) was founded by Deren to provide financial help to struggling filmmakers; Stan Brakhage, Stan Vanderbeek, Robert Breer, Shirley Clarke, and Carmen D'Avino received CFF grants.

movies photograph nature in objective terms, avoiding the avant-garde tendency toward subjective psychology. The traits, though, provide a rough guide to the ways that experimental films differ from feature-length narratives, and provide an entrance into the history of the avant-garde.

EARLY HISTORY

Many of the seminal texts of US experimental film history, such as P. Adams Sitney's *Visionary Film*, begin with a discussion of the production of Maya Deren's *Meshes of the Afternoon* (1943). More recent scholarly work, however, has unearthed a vibrant post–World

Maya Deren. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

War I avant-garde American film movement with roots in European art and culture. American artists such as Man Ray (1890–1976) and Dudley Murphy (1897–1968) lived in France and took inspiration from dadaism and surrealism in the 1920s; Ray made his first film, *Le Retour à la raison* (*Return to Reason*, 1923), for a famous dada soirée, and Murphy collaborated with Fernand Léger (1881–1955) on the surrealist *Ballet mécanique* (Mechanical ballet, 1924). Technological innovation, specifically Kodak's 1924 introduction of 16mm film and the user-friendly Cine-Kodak 16mm camera, helped to jump-start the 1920s avant-garde (*Lovers of Cinema*, p. 18).

The creators in this first wave of experimental film-making came from different careers and interests. Elia Kazan (1909–2003), Orson Welles (1915–1985), and Gregg Toland (1904–1948) dabbled in the avant-garde, but achieved true success in mainstream film. Douglass

Crockwell was a magazine illustrator of the Norman Rockwell school, but his *Glens Falls Sequence* (1934–1946) is an abstract dance of mutating shapes. Several film teachers and scholars (Theodore Huff, Lewis Jacobs, Jay Leyda) made avant-garde films too. Yet, despite these different backgrounds and motivations, most experimental film practitioners thought of themselves as amateurs rather than professional filmmakers, but the term "amateur" was praise rather than a pejorative, implying a commitment to art over commerce. The types of films by these "amateur" avant-gardists fall into distinct genres. Many made offbeat stories inspired by literary sources and cutting-edge art movements. James Sibley Watson, Jr. (1894–1982) and Melville Webber (1871–1947) invoke such sources as Edgar Allan Poe, German expressionism, and Old Testament narratives in *The Fall of the House of Usher* (1928) and *Lot in Sodom* (1933). Other films told stories that parodied film genres, such as Theodore Huff's first movie, *Hearts of the West* (1931), which features an all-children cast in a spoof of silent westerns. Filmmaker and artist Joseph Cornell (1903–1972) made collage films that turned Hollywood narratives into studies in surrealism. In *Rose Hobart* (1936), Cornell took footage from a Universal B movie that featured the contract player Rose Hobart, scored all of Hobart's actions to an old samba record, and projected the reedited footage through red-tinted lenses.

Other filmmakers abandoned narrative. Paul Strand (1890–1976) and Charles Sheeler's (1883–1965) *Manhatta* (1921), the first avant-garde film produced in the United States, was the first "city symphony" film, a genre of associative documentaries that celebrate urban life and the machines of modernity. Other American examples of the genre include *A Bronx Morning* (Jay Leyda, 1931) and *The Pursuit of Happiness* (Rudy Burkhardt, 1940), but the most famous city symphony of all, *The Man with the Movie Camera* (Dziga Vertov, 1929), was made in Soviet Russia. Another common type of nonnarrative documentary was the dance film; *Hands* (Stella Simon, 1926) and *Introspection* (Sara Arledge, 1941–1946) use innovative form to capture bodies reacting to music, and are clear inspirations for Maya Deren's work. Rhythms are at the center of both dance films and abstract films, those works that focus on unfamiliar objects and patterns. *H2O* (1929) by Ralph Steiner catalogs how water reflects light in raindrops and rivers; the films of Oskar Fischinger (1900–1967), Mary Ann Bute, and Dwinell Grant are paintings in motion, dances of colors and shapes instead of the human body.

There were four venues for the exhibition of early experimental film. In the United States, for example, the "little cinemas," the art theaters that emerged during the 1920s and 1930s to program repertory classics and European fare, sometimes showed experimental shorts before their features. *The Life and Death of 9413—A Hollywood Extra* (1928) was paired with a German/Indian coproduction, *Light of Asia* (1926), at the Philadelphia Motion Picture Guild, and Roman Freulich's *Prisoners* (1934) was followed by *Sweden, Land of the Vikings* (1934) at the Little Theatre in Baltimore (*Lovers of Cinema*, p. 24). On occasion, avant-garde shorts were even on the same program as Hollywood features. Art galleries were another venue for experimental films, as were the screenings of the Workers Film and Photo League, a branch of the Communist Party that regularly exhibited nonmainstream films of all types. The most important exhibition space for the avant-garde during this period was provided by the Amateur Cinema League (ACL), founded in New York City in 1926. The ACL nationally distributed key avant-garde films, organized "ten best" contests for amateur filmmakers, and published extravagant praise for experimental work in the ACL magazine, *Amateur Movie Makers*. As Patricia Zimmerman points out, the activities of the ACL were just a small part of the amateur film phenomenon: "The *New York Times* speculated that that there were over one hundred thousand home moviemakers in 1937 and five hundred services for rental of films for home viewing" (Zimmerman in Horak, p. 143). No wonder experimental filmmakers from this period embraced the "amateur" label so readily. However, most of these activities vanished as the Depression ground on. Though several important experimental filmmakers—Arledge, Burkhardt, Cornell—began to make work in the second half of the 1930s, it would be another ten years before a new avant-garde generation would build systems of production, distribution, and exhibition that rivaled those of the amateur film movement.

POSTWAR POETICS

In the immediate postwar period, the most important exhibition space for experimental films were the ciné clubs, organizations of film fans who would rent and discuss offbeat films. The first flowering of ciné clubs occurred in France in the 1920s, as venues for the impressionist work of such avant-gardists as Germaine Dulac (1882–1942) and Jean Epstein (1897–1953). Luis Buñuel made *Un Chien Andalou* (1929) in collaboration with the painter Salvador Dali. Hans Richter, Viking Eggeling, Oskar Fischinger, Jon Jost, and Jean Cocteau are among the many other avant-garde filmmakers to work in Europe.

In the United States, the first such club, Art in Cinema, whose screenings were helmed by Frank Stauffacher at the San Francisco Museum of Art, was established in 1947. Stauffacher helped Amos and Marcia Vogel start a club, Cinema 16, in New York City, and for sixteen years (1947–1963) the Vogels sponsored programs that included experimental shorts such as Kenneth

Gay iconography in Kenneth Anger's* Fireworks *(1947).
FANTOMA FILMS/THE KOBAL COLLECTION.

Anger's (b. 1927) *Fireworks* (1947) and Bruce Conner's *A Movie* (1957) with documentaries, educational shorts, art films, and special events featuring speakers such as playwright Arthur Miller and Alfred Hitchcock. In 1950 the Vogels also began to distribute experimental films around the country (primarily to colleges and other ciné clubs) through Cinema 16. Although financial troubles forced the Vogels to shut down Cinema 16 in 1963, its effect was lasting and profound.

Other exhibition spaces besides ciné clubs included college classes, art galleries and museums, and bars. Occasionally, an entrepreneurial filmmaker might even screen in a mainstream theater. Between 1946 and 1949, for instance, Maya Deren rented the two-hundred-seat Provincetown Playhouse eight times for programs of her films. As opportunities for the exhibition of avant-garde films grew, trends began to form. Following Deren's example, several filmmakers in the immediate postwar period made surrealist, dream-inflected narratives. Sidney Peterson (1905–2000) and James Broughton (1913–1999) collaborated on *The Potted Psalm* (1946), a loose-limbed tale featuring gravestones, mannequins, and other irrational symbols. Peterson's subsequent films, such as *The Cage* (1947) and *The Lead Shoes* (1948), combine disturbing images with recursive narratives and compulsive repetition. Broughton made his first film, *Mother's Day*, in 1948, and across four decades of film-making his works shifted in emphasis from offbeat, erotic comedy to an unabashed celebration of gay sexuality. Willard Maas (1911–1971) was another practitioner of the postwar experimental narrative; his *Geography of the Body* (1946) turns close-ups of human anatomy into a travelogue of a surreal continent. For his first film, Stan Brakhage made *Interim* (1952), a romantic Derenesque narrative, but afterwards he quickly took off in new directions.

Animation was also a vibrant part of the postwar avant-garde. The most prolific avant-garde animator was Robert Breer (b. 1926), who between 1952 and 1970 produced at least one film a year. James (1921–1982) and John Whitney (1917–1995) pioneered computer-generated films, and their success gave them the opportunity to make cartoons for the mainstream UPA studio and to produce animated effects for Alfred Hitchcock's *Vertigo* (1958). Australian artist Len Lye (1901–1980) painted directly on the surface of the film strip in such films as *A Colour Box* (1935) and *Free Radicals* (1958). And Jordan Belson's (b. 1926) San Francisco light shows evolved into symmetrically patterned, Buddhist-influenced films such as *Mandala* (1953) and *Allures* (1961).

Several postwar filmmakers explored film form in ways different from animation. Bruce Conner began his career in the arts as a sculptor, but became famous as the conceptualizer-editor of a series of "found footage" films that edited previously shot footage into new and bizarre combinations. In *A Movie*, Conner subverts our cause-effect expectations (and makes us laugh) by juxtaposing, for example, a shot of a German soldier staring into a periscope with a picture of a girl wearing a bikini and staring into the camera. Other Conner films subject newly shot footage to unorthodox cutting: in *Vivian* (1963), Conner filmed his friend Vivian Kurz in various environments—in an art gallery, in her bedroom—and then edited the rolls into a kinetic flow of images that comments on the nature of photographic representation. *Vivian* has a pop music soundtrack—as do other Conner films, such as *Cosmic Ray* (1961) and *Mongoloid* (1978)—and Conner's synchronization of editing and musical rhythm is the origin of the music video.

Marie Menken (1909–1970) used time-lapse photography as the formal center of many of her films. A team player in the New York Underground—she worked on films by Warhol, Deren, and her husband, Willard Maas—Menken also crafted miniature movies that condense time. *Moonplay* (1962) is a collection of full moons photographed over the course of several years,

ANDY WARHOL

b. Andrew Warhola, Forest City, Pennsylvania, 6 August 1928, d. 22 February 1987

Probably the best-known American artist of the twentieth century, Andy Warhol studied commercial art at Carnegie Mellon University. In 1949 he moved to New York City and carved out a career as an advertising artist. In the early 1960s Warhol became a pioneer of pop art by creating paintings that showcased the most ubiquitous icons of American popular culture: Campbell's Soup cans, Brillo boxes, celebrities such as Elvis Presley and Marilyn Monroe. With his paintings and silkscreens in high demand, Warhol established the Factory, a workshop and hangout where he supervised "art workers" in the making of Warhol "originals." The subjects of his art were the mass media and mass production, and the art was created on the Factory's improvisational assembly line.

A neglected aspect of Warhol's 1960s artistic production was his work in experimental film. Just as his graphic art used simplicity to challenge notions of "art," Warhol's avant-garde films embraced the realist aesthetic strategies of the putative fathers of cinema, Louis and Auguste Lumière. Warhol returned to cinema's zero point by setting up a 16mm camera and encouraging the artsy types who inhabited the Factory to perform for the lens. Sometimes Warhol commissioned writers (most notably off-off-Broadway playwright Ronald Tavel) to provide screenplays, but usually the Factory crew filmed with just a central conceit—open to extended improvisation—as a rough guide. In *Kiss* (1963), Warhol showcased various couples (hetero- and homosexual) kissing, each for the three-minute length of the camera magazine; *Sleep* (1963) uses a few camera angles to photograph poet John Giorno's body as he slumbers. Warhol's films had a profound effect on avant-garde film practice of the 1960s, especially the decade's structural filmmakers.

Warhol's movies of the mid-1960s built on the simple structures of his earlier work. *Inner and Outer Space* (1965) juxtaposes ghostly video images of Warhol "superstar" Edie Sedgwick with film footage of her commenting on her own video reflection, while *Chelsea Girls* (1966), which played commercially in New York City, uses two screens to depict the inhabitants of the Chelsea Hotel in Manhattan. Warhol's epic was perhaps **** (*Four Stars*, 1966–1967), a twenty-five-hour explosion of superimpositions (two projectors fired footage simultaneously on the same screen) that was shown only once and then disassembled.

After Warhol was shot and almost killed by Valerie Solanas in June 1968, he stopped making films. Instead, he farmed out the Factory's filmmaking activities to his protégé, Paul Morrissey, who went on to direct several Warhol-influenced but more mainstream features, including *Flesh* (1968), *Trash* (1970), *Heat* (1972), *Flesh for Frankenstein* (1973), and *Blood for Dracula* (1974).

while Menken herself described *Go! Go! Go!* (1962–1964) as "a time-lapse record of a day in the life of a city."

Radical content as well as form was common in the postwar avant-garde, particularly films that addressed homosexual desire. Probably the most famous "queer" experimental filmmaker of this period is Kenneth Anger, who made the trailblazing *Fireworks* at the age of seventeen. *Fireworks* is a mélange of same-sex flirtation, sadomasochism, and sailors; the film's finale features a sailor lighting a Roman candle (firework) in his crotch. (*Fireworks* was shown several times at Cinema 16, often as part of a "Forbidden Films" program, and Amos

Vogel also distributed Anger's work.) Anger's epic *Scorpio Rising* (1963) connects gay desire and satanism—for Anger (as for Jean Genet), being gay means repudiating traditional norms and embracing the subversive and decadent—and the film juxtaposes a chronicle of California biker culture with a pop-rock soundtrack in ways that, like Conner's works, anticipate music videos. Anger's films treat homosexuality as inherently transgressive; in contrast, many of Gregory Markopoulos's (1928–1992) works place same-sex desire in a classical context. *The Iliac Passion* (1967), for example, features several members of the 1960s New York gay demimonde—Andy Warhol, Jack Smith, Taylor Mead—cast as mythic characters such as Poseidon and Orpheus. Markopoulos also pioneered a single-frame, scattershot approach to editing that made his films tightly wound, dense fabrics of allusions, classical and otherwise.

As Markopoulos explored the deep connections between sexuality and myth, Jack Smith turned popular culture into his own queer playground. Soon after meeting experimental filmmakers Ken Jacobs (b. 1933) and Bob Fleischner in a film class at the City College of New York in 1956, Smith collaborated with Jacobs on a series of films—including *Star Spangled to Death* (1958/2004) and *Little Stabs at Happiness* (1959)—that ditch plot and instead allow Smith to improvise personas for the camera. Both the charm and narcissism of this approach finds its perfect expression in Jacobs, Fleischner, and Smith's *Blonde Cobra* (1963), where Smith delivers a monologue to his image in a mirror. After a falling out with Jacobs, Smith directed several films himself, the most notorious being *Flaming Creatures* (1963), a mad chronicle of a pansexual orgy, complete with simulated rape and *faux*-earthquake, that was declared obscene in New York Criminal Court. Even while Smith worked on such films as the unfinished *Normal Love* (begun 1964) and *No President* (1968), he increasingly shifted his energies to performance art, letting his love of Z-grade Hollywood stars (especially the beloved Maria Montez) and radical politics run rampant in theater pieces, slide shows, and "expanded cinema" experiences such as *I Was a Male Yvonne de Carlo for the Lucky Landlord Underground* (1982).

THE 1960s

The 1960s deserves its own subsection primarily because of Andy Warhol, who began making 16mm long-take, quotidian extravaganzas in 1963, and whose popularity throughout the decade brought visibility to experimental films as a whole. In addition, the rise of a leftist counterculture during the decade and the increased distribution of nonmainstream movies led to an exponential increase in the number of artists who made avant-garde films during this time. Among the most important filmmakers of the era were Bruce Baillie (b. 1931), Ken Jacobs, the Kuchar brothers (George, b. 1942, and Mike, b. 1942), Robert Nelson, Stan Vanderbeek (1927–1984), Michael Snow (b. 1929), and Joyce Wieland (1931–1998). However, much of the credit for the explosion of creativity in the 1960s in the United States belongs to Jonas Mekas (b. 1922).

Born in Lithuania, Mekas published several books of poetry and literary sketches—and spent time in forced-labor and displaced-persons camps during World War II—before he and his brother Adolfas emigrated to the United States in 1949. He quickly became a fixture at Cinema 16, where he shot footage that would later appear in his diary film *Lost Lost Lost* (1975). In January 1955 he began *Film Culture*, "America's Independent Motion Picture Magazine," whose early topics included classical Hollywood filmmaking (the journal published Andrew Sarris's first articles on auteurism), the international art cinema, and Mekas's own criticism. Within a few years, *Film Culture*'s focus zeroed in on the avant-garde and Mekas became experimental film's hardest working promoter.

Viva and Taylor Mead in Andy Warhol's* Lonesome Cowboys *(1969). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

In the 1960s his weekly "Movie Journal" column in the *Village Voice* publicized experimental filmmakers and the events where their films could be seen, and Mekas himself was one of these filmmakers: his feature *Guns of the Trees* (codirected by Adolfas) was released in 1961, his film document of the play *The Brig* in 1964, and his first ambitious diaristic film, *Walden*, in 1969. In 1964 he organized the Film-Makers' Cinematheque, a venue for US avant-garde film that provocatively overlapped with vanguard artists in other fields as well. With Shirley Clarke (1919–1997) and Lionel Rogosin (1924–2000), Mekas started the Film-Makers' Distribution Center, a distribution exchange that he hoped would supply an ever-expanding circuit of theaters with experimental work. Although both the Cinematheque and Distribution Center failed, Mekas established Anthology Film Archives in 1970, a museum/theater/preservation complex devoted to experimental films. Although various controversies have erupted throughout its history—most notably, perhaps, around its attempt to establish a list of canonical "essential" films that would be in permanent repertory—Anthology endures to this day, a tribute to Mekas's commitment to the avant-garde.

Perhaps Mekas's most unusual contribution to experimental film exhibition was the midnight movie. Mekas's midnight screenings at Manhattan's Charles Theatre between 1961 and 1963 followed an open-mic structure: audience members either paid admission or brought a reel of film to show, and Mekas supplemented these submissions with works by Markopoulos, Menken, Jacobs, and others. Later in the decade, entrepreneur Mike Getz resurrected the midnight movie model when he used family connections to begin Underground Cinema 12. Getz's uncle, Louis Sher, was the owner of a chain of Midwest art cinemas, and Getz persuaded Sher to exhibit midnight programs of avant-garde shorts at many of these theaters. Underground Cinema 12 brought experimental film out of its centers in New York City and San Francisco and gave it exposure elsewhere in the country. In 1967, for instance, in the college town of Champaign, Illinois, viewers had the opportunity to see Conner's *A Movie*, Vanderbeek's *Breathdeath* (1964), *Peyote Queen* (Storm De Hirsch, 1965), and *Sins of the Fleshapoids* (Mike Kuchar, 1965) at Sher's local art theater. Mekas's Charles screenings and Getz's

Underground Cinema 12 were important precursors to the 1970s midnight movie experience as it coalesced around cult films such as *The Rocky Horror Picture Show* (1975) and *Eraserhead* (1977).

Mekas's nurturing of the avant-garde led to an explosion of experimental auteurs. In such works as *Mass for the Dakota Sioux* (1963–1964) and *Quick Billy* (1967–1970), Bruce Baillie welds his love for the West with a poetic, Brakhage-inspired spontaneity. In his best-known film, *Castro Street* (1966), Baillie, who also cofounded in 1961 Canyon Cinema, an exhibition program that evolved into the biggest distributor of experimental films in the United States, uses multiple superimpositions to celebrate his beloved San Francisco neighborhood; *All My Life* (1966) consists of a single three-minute shot (a track along a picket fence that ends with a pan up to the sky) that captures the ravishing light in a California backyard. After collaborating with Jack Smith, Ken Jacobs made a number of avant-garde films, including *Tom, Tom, the Piper's Son* (1969). Subsequently, Jacobs began researching optical effects and illusions, which resulted in his "Nervous System" performances, improvisations where Jacobs "plays" two projectors in ways that display how various properties of the film medium (flicker, lenses, projection) can mold and alter images. The Kuchar brothers, George and Mike, grew up in the Bronx, and as teenagers used an 8mm camera to shoot their own tawdry versions of Hollywood melodramas. They then showed tiny epics such as *I Was a Teenage Rumpot* (1960) and *Pussy on a Hot Tin Roof* (1961) at open screenings for amateur filmmakers, where they garnered attention from the avant-garde. Later films jumped up to 16mm, but their movies remained campy, unprofessional, rude, and thoroughly hypnotic, implicit subversions of Hollywood standards of "quality." After the mid-1960s the brothers worked separately, and Mike has made few films since. George has remained astonishingly prolific, producing films and videotapes at the rate of at least two a year.

The profane jokester of the 1960s avant-garde explosion, Robert Nelson first courted controversy with *Oh Dem Watermelons* (1965), his second film, a chaotic mix of gags and images involving melons accompanied in part by a racist Stephen Foster soundtrack. Nelson's tour de force, *Bleu Shut* (1970), functions as both a ruthless parody of structural film and a perfect example of Nelson's tendency to pack his films with crazed digressions and absurd asides. Best known as a performance artist, Carolee Schneemann (b. 1939) made several influential autobiographical avant-garde movies, including *Fuses* (1967), a portrait of Schneemann's sex life with composer James Tenney, for which Brakhage inspired Schneemann to paint and scratch directly on the footage to capture the joy and energy of lovemaking. While studying filmmaking at New York University, Warren Sonbert (1947–1995) shot a number of short diary films—including *Where Did Our Love Go?* (1966), *Hall of Mirrors* (1966), and *The Bad and the Beautiful* (1967)—that combine pop music soundtracks with candid footage of such 1960s Manhattan scenemakers as René Ricard and Gerald Malanga. With *The Carriage Trade* (1971), Sonbert shifted into a more rigorous type of filmmaking based on silence, extremely brief shots, and graphic contrasts. Sonbert's later films, such as *Divided Loyalties* (1978) and *Honor and Obey* (1988), use this rigorous form to create portraits of a world full of alienation and sorrow. Sonbert died of AIDS in 1995. Stan Vanderbeek pioneered the use of computer imagery, collage animation, and compilation filmmaking. Terry Gilliam's cutout animation for *Monty Python's Flying Circus* was inspired by Vanderbeek's *Science Friction* (1959), and many of Vanderbeek's earliest films were political satires in collage form. In the late 1960s Vanderbeek collaborated with Kenneth Knowlton of Bell Telephone Laboratories to make some of the first computer-generated films, and built an avant-garde movie theater, the Movie Drome of Stony Point, New York, that was equipped to properly present his own multiprojector works.

In Canada, painter Joyce Wieland (1931–1998) also made films with a dry wit that anticipates many structural films. *Rat Life and Diet in North America* (1968) juxtaposes footage of mice with a narrated soundtrack that defines the rodents as heroes of a narrative about political oppression and liberation. After making two avant-garde films—*La Raison avant la passion* (*Reason Over Passion*, 1968–1969) and *Pierre Vallières* (1972)—devoted to Canadian issues, Wieland reached out to a larger audience with her narrative feminist feature *The Far Shore* (1976).

During this period, many challenging experimental films were made outside the United States. From the 1930s to the 1980s, Norman McLaren (1914–1987) produced playful animated and live-action shorts for Canada's National Film Board. French philosopher Guy Debord made several films—including *Sur le passage de quelques personnes à travers une assez courte unité de temps* (*On the Passage of a Few People through a Rather Brief Period in Time*, 1959) and *Critique de la séparation* (*Critique of Separation*, 1961)—designed to vex conventional audience expectation and dissect mass media manipulation. In Japan, Takahito Iimura (b. 1937) began a series of scandalous shorts with *Ai* (*Love*, 1962).

THREE TYPES OF EXPERIMENTAL FILM

In the late 1960s experimental film headed in a new aesthetic direction. In an article published in *Film*

Culture in 1969, critic P. Adams Sitney defined the structuralist film as a "tight nexus of content, a shape designed to explore the facets of the material" (*Film Culture Reader*, p. 327), which becomes clear when these films are compared with previous avant-garde traditions. In the films of lyricists such as Brakhage and Baillie, rhythm is dependent on what is being photographed, or on the associations possible through manipulations of form. In *Window Water Baby Moving* (1962), for example, Brakhage's quick cuts fragment time and connect his wife Jane's pregnant stomach to the birth of their daughter. In contrast, structuralist films don't have "rhythms" as much as they do systems that, in Sitney's words, render content "minimal and subsidiary to the outline" (*Film Culture Reader*, p. 327). Watching a structuralist film, then, is a little like watching a chain of dominoes: after the first domino tumbles, our attention is on how the overall organization plays out rather than on the individual dominoes. Sitney considers such Andy Warhol Factory films as *Sleep* (1963) and *Eat* (1963) to be important precursors of structural film, particularly because of their reliance on improvisatory performance and fixed camera positions. Later in the decade, other avant-garde filmmakers turned to structural film. Michael Snow's influential *Wavelength* (1967) is organized around a forty-five-minute zoom that moves from a wide shot of a New York loft to a close-up of a picture of ocean waves on the loft's farthest wall. Snow continued to explore reframing with *Back and Forth* (1969), a shot of a classroom photographed by a camera that pans with ever-increasing speed, and *La Région centrale* (The Central Region, 1971), a portrait of a northern Quebec landscape photographed by a machine that runs through a series of automated circular pans.

Critic David James has isolated the origin of structural film in the "radical film reductions" of the 1960s Fluxus art movement: works such as Nam June Paik's (1932–2006) *Zen for Film* (1964)—a projection of nothing but a bright, empty surface, occasionally punctuated by scratches and dirt—points to a cinema preoccupied with its own formal properties. Fluxus films, and the structuralist movies they spawned, explore the material nature of film as a medium and the various phases of the production process. For example, Peter Kubelka's (b. 1934) *Arnulf Rainer* (1958–1960) and Tony Conrad's *The Flicker* (1966) consist solely of alternating black-and-white frames of various lengths to explore the optical effects of flicker. Paul Sharits's (1943–1993) *Ray Gun Virus* (1966) and *S:TREAM:S:S:ECTION:S:ECTION:S:S:ECTIONED* (1968–1971) add color, emulsion scratches, and even portraits of faces to rapid-fire flicker. The distortion of space through changes in lens focal length is the subject of Ernie Gehr's (b. 1943) *Serene Velocity* (1970), which juxtaposes long shots of an empty corridor with shots of the same hallway while the camera zooms in. Larry Gottheim's *Barn Rushes* (1971) explores the nature of filmic representation and duplication by photographing a landscape under different light conditions and with different film stocks. J. J. Murphy's *Print Generation* (1973–1974) subjects a one-minute piece of film to fifty duplications, and the process renders the footage abstract and unintelligible. (Murphy also distorts sound, and one twist of *Print Generation* is that as the image distorts, the sound becomes clearer, and vice versa.) In Britain, Malcolm le Grice and Peter Gidal, and in Germany Wilhelm and Birgit Hein, also worked in this mode.

The graininess and dirtiness of the film image is considered in *Film in Which There Appear Edge Lettering, Sprocket Holes, Dirt Particles, Etc.* (Owen Land, 1966), which offers a starring role to one of cinema's most ignored performers: the "Chinagirl" that lab workers would use to check the quality of a print. Ken Jacobs's *Tom, Tom, the Piper's Son* (1969) analyzes a 1905 short of the same name by speeding up and rewinding the original footage, and by zooming in on portions of the *mise-en-scène* to such a magnified degree that details become grainy abstractions and blobs of light. The nature of projection itself is the subject of *Line Describing a Cone* (Anthony McCall, 1973), which requires an audience to stand in a gallery space and watch a projector throw a light beam that gradually (over a half-hour) changes shape into a cone.

The most important structuralist filmmaker is Hollis Frampton (1936–1984), who began his career with a series of films that explore minimalist elements. *Manual of Arms* (1966) organizes portraits of New York artists into a rigid grid structure, and *Lemon* (1969) subjects the fruit to a series of ever-shifting lighting designs. Frampton's vision expanded and deepened with *Zorns Lemma* (1970), which was strongly influenced by the animal locomotion studies of proto-filmmaker Eadweard Muybridge. The seven-film series *Hapax Legomena* (1971–1972) is Frampton's *Ulysses*, a compendium of formal innovations that, at its most accomplished—as in part 1, *Nostalgia* (1971)—is both intellectually and emotionally moving. Frampton died in 1984 at age forty-eight, having spent the last decade of his life on the unfinished epic *Magellan* (1972–1980), fragments of which (particularly *Gloria!* [1979]) function as stand-alone films.

Structuralist film was influential enough to spread to many different countries. Filmmakers such as Malcolm Le Grice and Peter Gidal congregated at the London Film Makers' Cooperative to screen their structuralist works and debate the future of the avant-garde, while in France, Rose Lowder began a series of 16mm loops

STAN BRAKHAGE

b. Kansas City, Missouri, 14 January 1933, d. 9 March 2003

The most prolific and influential experimental filmmaker in US film history, Stan Brakhage also wrote insightfully about his own films and the work of other filmmakers. The most oft-quoted passage in experimental film criticism is the opening of Brakhage's text *Metaphors on Vision* (1963): "Imagine an eye unruled by man-made laws of perspective, an eye unprejudiced by compositional logic, an eye which does not respond to the name of everything but which must know each object encountered in life through an adventure of perception." This passage explicates the major aesthetic strain in Brakhage's films: abstraction. From the beginning of his career, Brakhage combined the photographic image with marks and paint applied directly onto the filmstrip, and many of his films of the 1980s and 1990s are completely abstract, partly for financial reasons and partly because he believed in the liberating power of nonlinear, nonnarrative aesthetic experiences. Some of Brakhage's abstract "adventures in perception" are *Eye Myth* (1967), *The Text of Light* (1974), *The Dante Quartet* (1987), and *Black Ice* (1994).

Brakhage briefly attended Dartmouth College on a scholarship, but he found academia so uncongenial that he had a nervous breakdown, left school, and spent four years traveling and living in San Francisco and New York. During this period Brakhage made his earliest films, including psychodramas such as *Interim* (1952) and *Desistfilm* (1954).

While making *Anticipation of the Night* (1958), which he intended to end with footage of his suicide, he fell in love with and married Jane Collom. Stan and Jane remained married for twenty-nine years, and a major subgenre of Brakhage's work chronicles the rise and fall of this marriage, from domestic quarrels (*Wedlock House: An Intercourse*, 1959) and the birth of children (*Window Water Baby Moving*, 1959) to Brakhage's increasing estrangement from Jane and his teenage children (*Tortured Dust*, 1984). Many critics consider Brakhage's singular achievement to be *Dog Star Man* (1962–1964), a four-part epic that uses multiple superimpositions to connect the activities of his family (then living a back-to-the-land existence in rural Colorado) to myth and the rhythms of nature.

In 1996 Brakhage was diagnosed with cancer, which might have been caused by the dyes he had used to paint on film. His last works include the live-action self-portrait *Stan's Window* (2003), and *Chinese Series* (2003), a film Brakhage made on his deathbed by using his fingernail to etch dancing white marks into black film emulsion.

that explored frame-by-frame transitions and their effects on audiences.

Yet the structural film movement was essentially over by the mid-1970s. Structuralist films were triumphs of formal design, but a new generation of leftist experimental artists criticized the apolitical nature of films such as *Wavelength* and *Tom, Tom, the Piper's Son*, and began to make movies with ideological content that tackled social issues such as feminism and colonialism. Yet, reverberations of structuralist film continue into later avant-garde film. *Sink or Swim* (Su Friedrich, 1990) follows a *Zorns Lemma*–like alphabetical structure, while *Teatro Amazonas* (Sharon Lockhart, 1999) is a witty commentary on cultural colonialism and a stylish update of Standish Lawder's structuralist *Necrology* (1971), a one-shot film of people on an escalator projected backwards.

Stan Brakhage. © ZEITGEIST FILMS/COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.

But structuralist filmmakers realized that cinema's formal properties could do more than just tell stories, and made artworks that revealed to us that sometimes a zoom can be more than just a zoom, that it can embody nothing less than a way of seeing.

Another important wave in 1970s experimental film, roughly concurrent with structuralist film, was the rise of the "new talkies," feature-length works influenced by critical theory and the politicized art films of Jean-Luc Godard (b. 1930), Jean-Marie Straub (b. 1933), and Daniele Huillet (b. 1936). Although most experimental films are short, the feature-length experimental film has a long pedigree. During the 1950s and 1960s, as Deren and Brakhage were making their influential short films, other avant-gardists dabbled in longer, more narrative forms. Ron Rice's (1935–1964) Beat-saturated *The Flower Thief* (1960) and *The Queen of Sheba Meets the Atom Man* (1963) are feature-length showcases for actor Taylor Mead's inspired improvisations, while Warhol's 1960s films were often longer than most Hollywood films. Some, such as *Chelsea Girls* (1966), ran in first-run mainstream movie theaters.

The feature-length new talkies that emerged in the 1970s were a more specific type of avant-garde genre. The new talkies are typified by an engagement with critical theory and a return to storytelling, albeit to deconstruct storytelling as a signifying practice. (Many new talkies are simultaneously narratives and essays on narrative.) These traits are clear in the quintessential new talkie, Laura Mulvey (b. 1941) and Peter Wollen's (b. 1938) *Riddles of the Sphinx* (1977), which tells the story of Louise, a woman who talks with coworkers about childcare and decides to move from a house to an apartment. *Sphinx*'s form owes much to Godard, but its narrative is something new: an attempt to capture the life of a woman without recourse to genre, "erotica," or the male gaze.

Other key new talkie auteurs are Yvonne Rainer (b. 1934) and Trinh T. Minh-ha (b. 1953). Rainer began her career in dance, bringing aesthetic and political radicalism to the performances she orchestrated as part of the Judson Dance Theater. Her movies such as *Film About a Woman Who ...* (1974) and *Privilege* (1990) form a kind of spiritual autobiography, tackling various subjects as Rainer herself goes through a lifetime of experiences and observations. Shot through all these films is Rainer's belief in everyday life as a site of political struggle, showing how the personal is always political.

Trinh T. Minh-ha's own multicultural background—she has lived in France, the United States, and West Africa—informs *Reassemblage* (1982), *Naked Spaces—Living Is Round* (1985), and *Surname Viet Given Name Nam* (1989). These films renounce traditional narrative and documentary forms, and search for avant-garde ways of representing people of different societies (including Senegal, Mauritania, Burkino Faso, and Vietnam) to First World audiences. But Minh-ha's recent career reveals the difficulty of sustaining new talkie practices in today's film culture. In his seminal essay "The Two Avant-Gardes," Peter Wollen argues that the politicized Godardian art film and the formalist experimental film were the twin poles of 1960s cinematic radicalism, and that the new talkies can be understood as an attempt to bring these poles together (*Readings and Writings*, pp. 92–104). Yet, since the 1960s, art cinema has shifted decisively away from radical politics, while experimental cinema has exploded into a multiplicity of approaches, some formal in emphasis and some not.

One mutation in experimental film occurred in the late 1970s and early 1980s, when a group of New York artists made films that emulated the do-it-yourself aesthetics and catchy nihilism of early punk rock. Made in 8mm on miniscule budgets, these films rejected both Hollywood norms and the pretensions of the more formalist tendency in experimental film. Although this movement went by various names ("new cinema," "no wave cinema"), "cinema of transgression" is the most common because of its defining use in Nick Zedd's infamous "The Cinema of Transgression Manifesto" (1985), which begins with a denunciation of the "laziness known as structuralism" and the work of "profoundly undeserving non-talents like Brakhage, Snow, Frampton, Gehr, Breer, etc." and a celebration of films that directly attack "every value system known to man" (p. 40). Like most manifestoes, Zedd's "Transgression" slays the father and claims a complete break with an outmoded past. But many of the cinema of transgression films were, in essence, exhibitions of scandalous behavior, and are logical descendants of an experimental film tradition that includes Kurt Kren's (1929–1998) material action shorts of the 1960s and Vito Acconci's (b. 1940) early 1970s 8mm performance documentaries (which record Acconci plastering up his anus and crushing cockroaches on his body). One significant difference between these precursors and the cinema of transgression is venue: Kren's and Acconci's works were screened in film societies and art galleries, while the transgression films were shown mostly in New York City punk bars.

Although Zedd's manifesto was clearly an act of publicity-seeking hyperbole, the cinema of transgression delivered, throughout the 1980s, a robust wave of avant-garde filmmakers and films. In several works made between 1978 and 1981 (*Guérillère Talks* [1978], *Beauty Becomes the Beast* [1979], and *Liberty's Booty* [1980]), Vivienne Dick combined documentary interviews, melodramatic narratives, and a jittery camera style perfectly suited to low-fi 8mm. Beth and Scott B.'s *Black Box* (1978) is a stroboscopic aural assault that treats its spectators like tortured prisoners. Other important transgressors include Richard Kern, Alyce Wittenstein, Cassandra Stark, Eric Mitchell, Kembra Pfahler, James Nares, and Zedd himself, whose affinity for over-the-top parody is present in his films from *Geek Maggot Bingo* (1983), a send-up of cheesy B-movie horror, to the video spoof *The Lord of the Cockrings* (2002). Several factors, including the steady gentrification of New York City's Lower East Side and the spread of AIDS, ended the cinema of transgression. Yet the films of many contemporary avant-gardists, including Peggy Ahwesh, Jon Moritsugu, Luther Price, and Martha Colburn, bear the influence of the transgression example.

THE CONTEMPORARY SCENE

According to many critics, the experimental film world went through a period of flagging energy and diminished creativity during the 1980s. Among the reasons, according to Paul Arthur, were the skyrocketing costs of 16mm processing, cutbacks in government and private-foundation funding, and the economic and aesthetic challenges posed by video. By the 1990s, however, it was clear that the movement had undergone a resurgence. Older figures such as Brakhage, Mekas, and Jacobs remained active, and a new generation of artists, aesthetic trends, and exhibition strategies emerged.

One such trend in contemporary experimental production is the use of "outdated" formats. Sadie Benning (b. 1973), the daughter of filmmaker James Benning (b. 1942), shot ghostly autobiographical movies like *If Every Girl Had a Diary* (1990) and *It Wasn't Love* (1992) with the Pixelvision–2000, a black-and-white toy video camera that records small, blurry images on audio cassette tape. The Pixelvision camera was only available from 1987 to 1989, but the work of Sadie Benning and other filmmakers (Joe Gibbons, Michael Almereyda, Peggy Ahwesh, Eric Saks) have kept Pixelvision alive. Many avant-gardists have continued to use both regular 8mm and super-8mm, and are passionate about the aesthetic qualities of small-gauge filmmaking. Perhaps the ultimate validation of human-scale small-gauge filmmaking was the exhibition "Big as Life: An American History of 8mm Films," which exhibited small-gauge works by Conner, Brakhage, Wieland, and many others at both New York's Museum of Modern Art and the San Francisco Cinematheque from 1998 to 1999.

Museum retrospectives such as the "Big as Life" program are an important part of experimental film distribution, but the real screening innovation of the last decade were microcinemas—small theaters run by dedicated filmmakers and fans as showcases for non-mainstream work. Total Mobile Home Microcinema, the first contemporary microcinema, was established in 1993 by Rebecca Barton and David Sherman in the basement of their San Francisco apartment building, and by the late 1990s, at least a hundred had sprung up in various cities around the United States. Some of the highest-profile microcinemas include Greenwich Village's Robert Beck Memorial Cinema, begun by filmmakers Bradley Eros and Brian Frye; San Francisco's Other Cinema, curated by master collagist Craig Baldwin; and the Aurora Picture Show, Andrea Grover's microcinema, housed in a converted church in Houston. Perhaps the microcinema with the most ambitious programming was Blinding Light (1998–2003), a one-hundred-seat, six-night-a-week theater in Vancouver.

The New York Film Festival's "Views from the Avant-Garde," founded by critic Mark McEllhatten and *Film Comment* editor Gavin Smith in 1997, is an annual cross-section of the experimental film world. The continued activity of established venues such as Anthology Film Archives, Chicago Filmmakers, and the San Francisco Cinematheque, coupled with the rise of microcinemas and touring programs such as John Columbus's Black Maria Film and Video Festival and the MadCatFilm Festival, have made it somewhat easier to see experimental films, a trend pushed even further by the more recent ability to download films from Internet sites such as www.hi-beam.net.

EXPLOITATION FILMS

Exploitation movies have been a part of the motion picture industry since its earliest days. The term "exploitation movie" initially referred to any film that required exploitation or ballyhoo over and above the usual posters, trailers, and newspaper advertising. Originally this included films on risqué topics, documentaries, and even religious films. But by the 1930s it referred specifically to low-budget movies that emphasized sex, violence, or some other form of spectacle in favor over coherent narrative.

Exploitation films grew out of a series of sex hygiene films that were made prior to and during World War I in an effort to stave the scourge of venereal diseases. Using movies as a modern educational tool to convey the dangers of the diseases and their potential treatments, movies like *Damaged Goods* (1914) drove home a moralistic message about remaining clean for family and country. Following the war several films commissioned by the government for use in training camps were released to the general public. *Fit to Win* (1919) and *The End of the Road* (1918) did not have the same level of moralizing of pre-war films, but they did include graphic clinical footage in many situations. These elements left the films open to severe cuts or outright bans by state and municipal censorship boards. In 1921 a meeting of top motion picture directors adopted a self-regulatory code, The Thirteen Points and Standards, that condemned the production of movies that were susceptible to censorship. Sex hygiene, white slavery, drug use, vice, and nudity led the list of disapproved topics. The same topics were among the list of forbidden subjects of the MPPDA's "Don'ts and Be Carefuls" when it was approved in 1927 and the Production Code when it was written in 1930. With a collection of salacious topics off-limits to mainstream moviemakers, low-budget entrepreneurs quickly moved in to fill the gap and reap the profits. Just as the bizarre sights of the sideshow had been segregated from the big top in the circus, the subjects of exploitation films were shunted aside by the mainstream movie industry.

CLASSICAL EXPLOITATION MOVIES

From the late teens through the late 1950s classical exploitation films operated in the shadow of the classical Hollywood cinema. The men that made and distributed exploitation films were sometimes called "the Forty Thieves," and several came from carnival backgrounds. Some companies were fly-by-night outfits that produced a film or two and then disappeared. However, many individuals and companies were around for years: Samuel Cummins (1895–1967) operated as Public Welfare Pictures and Jewel Productions; Dwain Esper (1892–1982) used the Road Show Attractions name; J. D. Kendis (1886–1957) made films under the Continental and Jay Dee Kay banners; Willis Kent's (1878–1966) companies included Real Life Dramas and True Life Photoplays; and Louis Sonney's Sonney Amusement Enterprises dominated West Coast distribution.

Exploitation movies were invariably low budget—usually made for far less than the average B movie. Most exploitation films were made for under $25,000 and some for as little as $5,000. Shooting schedules were less than a week, with some films being shot in as little as two or three days. (Unlike B movies, which were used to fill out the bottom half of a double feature, exploitation films were often expected to stand on their own.) Their

low budgets and accelerated shooting schedules meant that exploitation films featured stilted performances, poor photography, confusing plots, and startling gaps in continuity. On almost every level they were bad films. Many of these movies have a delirious quality, shifting between long passages of expository dialogue and confusing action. But what they lacked in narrative coherence they made up for by offering audiences moments of spectacle that could not be found in mainstream movies. That spectacle might come in the shape of scenes in a nudist camp, footage of childbirth or the effects of venereal diseases, prostitutes lounging around in their underwear, or women performing striptease dances. These scenes of spectacle often brought the creaky narrative to a grinding halt, allowing the viewers to drink in the forbidden sights. As a result of such scenes exploitation movies were always advertised for "adults only."

In addition to the forbidden sights on the screen, exhibitors were often provided with elaborate, garish lobby displays. Sex hygiene films could be accompanied by wax casts showing the process of gestation and birth or the effects of VD. Drug movies came with displays of drug paraphernalia. In many instances the films were accompanied by lectures, which were little more than excuses to pitch books on the subject of the film. For a dollar or two the audience could buy booklets with titles like "The Digest of Hygiene for Mother and Daughter." Pitchbooks provided an additional source of income to the distributor.

A small core of urban skid row grindhouses played exploitation films constantly. But the best market for these films consisted of regular theaters, in cities or small towns, that periodically took a break from Hollywood product to play a racy—and profitable—exploitation movie. The movies cloaked their suggestive stories and images in the mantle of education. Almost all exploitation films began with a square-up—a brief prefatory statement that explained the necessity of showing a particular evil in order to educate the public about it. Given the difficulty of getting information on such issues as childbirth and birth control, some of the movies did have a legitimate educational component. But they were produced primarily to make a buck. Exploitation movies were often available in "hot" and "cold" versions to accommodate local censorship or taste, and to extend the potential of pocketing that buck. And if audiences did not get the spectacle that they had been led to believe they would see from the lurid advertising, a roadshowman could always throw on a "square-up reel" of nudist camp footage or a striptease dance to sate the crowd.

Because only a handful of prints of any film circulated around the country at any one time, many classical exploitation films were in release for decades. It was a common practice to re-title a film to extend its life on the road; some movies were known by as many as five or six titles over time. Among the perennial hits on the exploitation circuit were sex hygiene movies such as *The Road to Ruin* (1934) and *Damaged Goods* (1937); drug movies like *Marihuana* (1936), *The Pace That Kills* (1935), and *She Shoulda Said No* (1949); vice films such as *Gambling with Souls* (1936) and *Slaves in Bondage* (1937); nudist movies like *Elysia, the Valley of the Nude* (1933) and *The Unashamed* (1938); and exotic movies (often featuring nearly naked natives) such as *Virgins of Bali* (1932) or *Jaws of the Jungle* (1936).

The most successful exploitation film of the classical era was *Mom and Dad* (1944). Producer Kroger Babb (1906–1980) had toured with earlier sex hygiene films and in 1944 decided to make a more up-to-date film. The story of a high school girl who discovers that she is "in trouble," *Mom and Dad* included films within it that showed childbirth, a Caesarian operation, and venereal diseases and their treatment. Babb sold the film aggressively and at one point after World War II he had more than twenty units on the road with the film, each with its own "Elliott Forbes," an "eminent hygiene commentator" who provided the lecture and book pitch. Millions of men, women, and teenagers saw *Mom and Dad* and it soon had competition from several direct imitations: *The Story of Bob and Sally* (1948), *Because of Eve* (1948), and *Street Corner* (1948). Eventually the owners of the four films joined together in a consortium to distribute the movies in a way that minimized direct conflict. *Mom and Dad* was still playing drive-in dates into the 1970s and some estimates have placed its total gross over the years at $100 million. But as the 1950s progressed, the Production Code was relaxed and many of the old topics that had been grist for exploitation movies—drug use, unwed motherhood—were folded back into the list of acceptable subjects for Hollywood films.

THE EXPLOITATION EXPLOSION

The post–World War II years saw the continued production and rerelease of classical exploitation films. But other types of exploitation movies were on the horizon. Following on the heels of the Supreme Court's *Paramount* decision (1948) and declining output from the majors, American theaters were forced into bitter competition for product during the 1950s. Hungry theater owners had to look beyond the majors for movies to light up their screens. James H. Nicholson (1916–1972) and Samuel Z. Arkoff (1918–2001) founded American Releasing Corporation in 1954, soon changed to American International Pictures (AIP). AIP specialized in making cheap genre pictures geared toward the growing youth market and often developed a colorful title and

ROGER CORMAN

b. Roger William Corman, Detroit, Michigan, 5 April 1926

Roger Corman has been a major force in exploitation filmmaking for half a century. His career spans an era from the earliest days of American International Pictures (AIP) in the mid-1950s through the exploitation golden age to the rise of home video.

While in his teens Corman moved with his family to Los Angeles, where he developed an interest in the motion picture industry. Following a stint in the Navy, he completed his engineering degree at Stanford, then broke into the film business by selling a script. He soon signed a three-picture deal with the newly formed AIP. Producing and directing all his films, Corman worked in a variety of genres, although his science fiction films are the most fondly remembered. Some of those films, such as *Attack of Crab Monsters* (1957), *Not of This Earth* (1957), and *X: The Man with X-Ray Eyes* (1963), feature genuinely chilling moments despite their low budgets. *The Little Shop of Horrors* (1960), a horror-comedy about a ravenous plant, developed a cult following because of its quirky humor and legendary status as a film shot in just two days. During that same year Corman and AIP initiated a series of bigger-budget, widescreen, color adaptations of the works of Edgar Allan Poe, many featuring Vincent Price. *House of Usher* (1960), *The Pit and the Pendulum* (1961), and *The Masque of the Red Death* (1964) established him as a director of considerable style. Some critics have ascribed an apocalyptic vision to Corman, and many of his films he directed begin or end with some sort of cataclysmic event.

Corman continued to look to hot-button issues to exploit, including integration in the South with *The Intruder* (1962), one of his few financial failures. For *The Wild Angels* (1966) he worked with members of The Hell's Angels, and prior to his film about the drug culture, *The Trip* (1967), Corman experimented with LSD. Both films initiated long-lived exploitation cycles.

In 1970 Corman broke with AIP to form New World Pictures. Its first effort, *The Student Nurses* (1970), established the company formula: R-rated nudity and sex, action, some laughs, and a slightly left-of-center political stance. New World's brand of exploitation films became drive-in staples for more than a decade, during which Corman discovered, or gave a major boost to, a number of filmmakers such as James Cameron, Joe Dante, Jonathan Demme, Ron Howard, Gale Ann Hurd, and Martin Scorsese. In an effort to diversify, New World also distributed several European art films, including works by Federico Fellini and Ingmar Bergman.

Corman sold New World in 1983 and formed Concorde-New Horizons. As theaters increasingly booked big-budget blockbusters, Corman has concentrated on making exploitation movies—many remakes of his earlier hits—for cable television and the direct-to-video market.

eye-catching advertising for a film long before a script was written. AIP offered favorable terms to exhibitors, and many theater owners found that the prepackaged AIP double bills brought in more money than major studio releases. Working with producers like Roger Corman (b. 1926) and Herman Cohen (1925–2002), AIP released dozens of low-budget films with titles like *Day the World Ended* (1956), *I Was a Teenage Werewolf* (1957), *Dragstrip Girl* (1957), *Reform School Girl* (1957), and *High School Hell Cats* (1958). The term exploitation

film was expanded to encompass these "teenpics" and virtually any ultra-low-budget movie. Throughout the 1960s AIP was always on the cutting edge of exploitation: *The Wild Angels* (1966) initiated a long string of nihilistic biker films and movies such as *Riot on Sunset Strip* (1967), *The Trip* (1967), and *Psych-Out* (1968) that explored the blossoming counterculture.

Budget and content were not the only markers of what constituted an exploitation movie. In the late 1950s former B-movie director William Castle (1914–1977) produced a series of fairly conventional chillers that graduated to exploitation status through their use of elaborate exploitation gimmicks to secure an audience. *Macabre* (1958) promised to insure the lives of all ticket buyers for $1,000 against death by fright. *The House on Haunted Hill* (1959) featured "Emergo" (a plastic skeleton that swung out over the audience at an appointed time during the film). And in what was perhaps Castle's most audacious gimmick, *The Tingler* (1959) was presented in "Percepto," with some seats in theaters wired to give select audience members a mild electric shock.

Other theaters hungry for product turned to art films—foreign films sold as a highbrow alternative to Hollywood fare. But many of these films also approached sex and nudity in a franker fashion than mainstream movies. The term "art film" became synonymous with nudity for a large segment of American audiences. One film was most responsible for cementing this equivalence in the minds of the public—*Et Dieu . . . créa la femme* (*And God Created Woman*, 1956) by Roger Vadim (1928–2000). The film, with its nude shots of French sex kitten Brigitte Bardot (b. 1934), played in both art houses and the existing exploitation theaters. Films imported by Radley Metzger's (b. 1929) Audubon in the early 1960s, such as *Les Collégiennes* (*The Twilight Girls*, 1957) and *Nuit la plus longue* (*Sexus*, 1964),

capitalized on a similar dual market. While they had a patina of art films as a result of their foreign—usually French—origin, they also included racy inserts, filmed by Metzger in New York, that made them marketable as sex exploitation, or sexploitation as it came to be known, as well.

American-made films capitalized on this hunger for racy fare by continuing a tradition of adults-only movies. With the first generation of exploitation producers retiring or dying, new filmmakers moved in to take their place with movies that approached sex in a more direct fashion and without pretense to education. In 1959 cheesecake photographer Russ Meyer (1922–2004) made *The Immoral Mr. Teas*. The film, about a deliveryman who can see through women's clothes, spawned dozens of so-called nudie-cuties—a filmic equivalent to *Playboy* magazine. Although the nudity in the films was only above the waist and from the rear, films such as *The Adventures of Lucky Pierre* (1961), *Mr. Peter's Pets* (1962), and *Tonight for Sure* (1962)—directed by a young Francis Ford Coppola (b. 1939)—were extremely popular with their predominantly male clientele.

Sexploitation films were soon pushing into new territory with a series of black-and-white psychosexual dramas. Some, such as *The Defilers* (1965), were similar to the lurid paperbacks that crowded the shelves of bus stations. Others, like *Sin in the Suburbs* (1964), directed by the prolific Joe Sarno (b. 1921), made a more sincere effort to blend drama with sex. Hundreds of sexploitation movies were made or imported over the ensuing decade with companies such as AFD (American Film Distributing Corp.), International, Cambist, Distribpix, and Mitam releasing dozens of films. Several distinct subgenres developed. Among the most popular were those about bored housewives and sexually frustrated commuters, and exposés about changing morals and sexual practices, including *The Sexploiters* (1965), *Moonlighting Wives* (1966), and *The Commuter Game* (1969). Some films featured heavy doses of sadomasochism, like the series about the sadistic Olga, initiated with *White Slaves of Chinatown* (1964). Other movies operated as thrillers about the dangers of the urban environment such as *Aroused* (1966) and *To Turn a Trick* (1967). Rural or hillbilly movies such as *Country Cuzzins* (1970), *Sassy Sue* (1972), and *The Pigkeeper's Daughter* (1972) were popular, as were films set on college campuses like *Campus Swingers* (1972). By the late 1960s some exploitation movies, notably Meyer's *Vixen* (1968) and several of Metzger's films, were achieving play dates in showcase cinemas in major cities.

In 1963, successful nudie producer David F. Friedman (b. 1923) and director Herschell Gordon Lewis (b. 1926) cast about for a genre in which they would have less competition. They settled on gore. *Blood Feast* (1963) was a grand guignol farce about a cannibalistic caterer in Florida who disembowels his victims and lops off their limbs. The Eastmancolor effects seemed remarkably realistic at the time and moviegoers challenged themselves and their stomachs to sit through the film. Although gore had occasionally been a form of spectacle in classical exploitation films, the unblinking violence of *Blood Feast* elevated the gore film to a whole new subgenre of exploitation, populated by machete-wielding maniacs, bloodthirsty butchers, and flesh-eating zombies. Around the same time the Italian-produced *Mondo Cane* (1962) was released. The "shockumentary" combined real and staged footage of bizarre, violent, and erotic behavior in the human and animal worlds. It was followed by a parade of other "mondo movies" that blurred the line between authenticity and fakery.

In the climate of auteurism of the 1960s and early 1970s several sexploitation filmmakers were singled out for their distinctive styles. Topping the list was Meyer, whose sharp cinematography and rapid-fire editing made his tales of amply proportioned yet sexually frustrated women and their square-jawed, dimwitted men instantly recognizable. Metzger's films were slick, languid exercises in European eroticism, exemplified by *Carmen, Baby* (1967) and *Camille 2000* (1969). Companies often developed distinct niches. Friedman's Entertainment Ventures turned out amusingly leering genre send-ups: *Space Thing* (1968) lampooned science fiction, *Thar She Blows* (1969) played with sea story conventions, *Trader Hornee* (1970) roasted the jungle adventure. Robert Cresse's (1936–1998) Olympic International was known for making and distributing films that focused on sadism such as *Love Camp 7* (1968) and *Hot Spur* (1968). More recently other filmmakers have received attention, including Michael and Roberta Findlay, who made a series of grim, gritty films that fetishized torture and degradation. Andy Milligan's (1929–1991) movies, such as *Vapors* (1965), *The Degenerates* (1967), and *Fleshpot on 42nd Street* (1972), became an outlet for his personal demons. And Doris Wishman (1920–2002) is recognized for her films like *Bad Girls Go to Hell* (1965) and *Double Agent 73* (1974), which feature her quirky *mise-en-scène* that concentrates as much on set décor, shoes, and pigeons strutting in the park as it does on characters.

Although sexploitation films saw some decline in business as hard-core pornographic features began to achieve public exhibition in 1970, other types of exploitation movies continued to thrive. In 1970 Corman formed New World Pictures, which produced and distributed a variety of exploitation films, often featuring the adventures, sexual and otherwise, of assertive career women, such as *Private Duty Nurses* (1971), *The Student Teachers* (1973), and *Cover Girl Models* (1975). Women in prison

Roger Corman's* The Trip *(1967) exploited the period's drug culture. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

films became another staple at New World with *The Big Doll House* (1971), *The Big Bird Cage* (1972), and *Caged Heat* (1974), directed by Jonathan Demme (b. 1944). Crown International, Dimension, Group 1, Hemisphere Pictures, Independent International, Monarch, and a long list of other companies cranked out similar films that combined nudity, sexual situations, violence, and some laughs for drive-ins around the country.

Among the theaters most consistently in need of product were inner-city movie houses. In 1971 *Sweet Sweetback's Baad Asssss Song* by Melvin Van Peebles (b. 1932) launched the "blaxploitation" cycle. Most of the films featured black characters, usually in an urban environment, battling for independence, against injustices, or for a good score—and always with a hefty dose of violence and skin. Although the major studios contributed films like *Shaft* (1971) and *Superfly* (1972), it was AIP, New World, and other exploitation companies that milked the cycle with *Slaughter* (1972), *Blacula* (1972), *The Mack* (1973), *Hell Up in Harlem* (1973), and *Black Mama, White Mama* (1972), among others. Among the most popular films were those staring the beautiful but tough Pam Grier, including *Coffy* (1973), *Foxy Brown* (1974), and *Friday Foster* (1975).

EXPLOITATION IN THE VIDEO ERA

Exploitation films had always found success in the aisles of struggling theaters. By the 1980s the marginal exhibition sites that had sustained exploitation movies were disappearing. Crumbling inner-city movie palaces gave way to urban renewal projects. Neighborhood theaters were bulldozed for parking lots and acres of suburban drive-ins were converted to shopping malls as the number of drive-ins in the US dropped from more than 3,000 in 1980 to fewer than 1,000 in 1990. Exploitation movies were less desirable in a new era of saturation bookings, national advertising campaigns, and blockbuster films. However, they have not entirely disappeared.

Lloyd Kaufman and Michael Herz's Troma, Fred Olen Ray's American Independent Productions, and Corman's Corcorde-New Horizons initially concentrated on theatrical releases. But by the late 1980s video and cable television proved to be greener pastures and theatrical releases became token efforts. Full Moon Entertainment, Tempe Entertainment, Seduction Cinema, and other companies were formed specifically to make films for the direct-to-video market. Most of these companies depended on the loyalty of the fans of low-budget genre films, whether horror, science fiction, splatter, or erotic thrillers. Fans have gotten into the act as well, picking up cameras and making their own films, hawked in the pages of fanzines, at conventions, and on the Internet. Other entrepreneurs, who scour old film depots and vaults, have released hundreds of old exploitation movies to new generations on videotape and DVD. It would appear that as long as audiences will search for a cheap thrill, there will be exploitation movies available to satisfy their demand.

EXPRESSIONISM

The term *expressionism* has been abused by previous generations of film scholars to such a point that the word has become virtually meaningless. Expressionism in its most narrowly defined meaning has referred to a specific group of six or seven modernist art films produced in Weimar Germany between 1920 and 1924, while in its broadest sense it has been utilized as a catchall term to define any film or style in the history of cinema opposed to realism or attempting to convey strong emotions. Between these extremes, expressionism has connoted all of German cinema in the 1920s, and has been invoked in connection with American horror films produced by Universal Studios in the 1930s and American film noir in the 1940s. Most problematically, its usage has often failed to specify whether its referent is a film movement, an ideology, a film style, or a film design (strictly speaking, art direction). Both the legitimate and some of the less credible usages of the term and their origins are examined here.

GERMAN EXPRESSIONISM

According to Rudolf Kurtz (1884–1960), one of the earliest historical commentators on the movement called expressionism, the semantic instability of *Expressionismus* was already inherent in its first usage by a group of visual artists in imperial Germany prior to World War I. Those painters, associated with the German modern art groups Der blaue Reiter ("the Blue Rider," Munich) and Die Brücke ("the Bridge," Berlin/Dresden), coined the term in opposition to French impressionism, rejecting the notion of the artist as a receptacle for impressions of the moment. The Bridge (1905–1913) included painters such as Emil Nolde (1867–1956), Ernst Kirchner (1880–1938), and Erich Heckel (1883–1944), while the Blue Rider (1911–1914) was associated with Alexei von Jawlensky (1864–1941), Wassily Kandinsky (1866–1944), Gabrielle Münter (1877–1962), Franz Marc (1880–1916), and Paul Klee (1879–1940). They favored the concept of the artist as an active creator through will power, as a producer of visual images reflecting interior states rather than surface reality. In contrast to the pale pastels of impressionism, the expressionists favored broad brush strokes and rich, dense hues, which were applied without regard to the natural look of the object depicted. Thus, the reproduction of a photographic impression of reality was rejected, supplanted by the artist's subjective vision of the world. Kurtz allied German art expressionism with both the cubism of Pablo Picasso (1881–1973) and the Russian constructivist art of Aleksandr Archipenko (1887–1964) and Kasimir Malevich (1878–1935), while seeing the wildly saturated portraits of Vincent van Gogh (1853–1890) and the South Sea paintings of Paul Gauguin (1848–1903) as precursors. With the painter George Grosz (1893–1959), expressionism also took on an overt political, even revolutionary tone, attacking postwar social conditions and calculated to shock bourgeois sensibilities mired in "archaic" forms of realism. In other words, expressionism began more as an attitude and ideology than as a style, since strong vibrant color and an interest in painting as an artistic medium rather than as a window onto the world was perhaps the only common denominator of these artists.

This fact becomes clear when looking at German expressionist literature, where the term became a revolutionary cry for poets and dramatists such as Georg Kaiser (1878–1945), Ernst Toller (1893–1939), Georg Trakl

EMIL JANNINGS

b. Theodor Friedrich Emil Janenz, Rorschach, Switzerland, 23 July 1884, d. 2 January 1950

One of the most famous German film actors, Emil Jannings is the one most closely associated with German expressionist acting, although he was never connected to expressionist theater. He became a household name in Hollywood in the late 1920s, and was a key figure in the Nazi cinema.

Jannings's breakthrough role was in Ernst Lubitsch's *Madame Dubarry* (1919), in which he played Pola Negri's doomed lover, Louis XV. Overweight and hardly an image of beauty, Jannings nevertheless conveyed a strong sexuality and *joie de vivre*, making him an international star when the film became a hit in the United States as *Passion* in 1920. In the following years Jannings appeared in such classics as *Anna Boleyn* (1920), *Danton* (1921), *Peter der Grosse* (*Peter the Great*, 1922), and Paul Leni's *Das Wachsfigurenkabinett* (*Waxworks*, 1923). In these and other films he was typecast in the role of a despotic ruler, his large girth and coarse features underlining his usually horrific actions. With a strong tendency to chew up the scenery, Jannings finest hour probably was as Mephisto in F. W. Murnau's *Faust* (1926), which, along with his signature role as the demoted hotel doorman in Murnau's *Der Letzte Mann* (*The Last Laugh*, 1924), solidified his reputation as an actor forever associated with German expressionism. And while his performances in these films displayed the expressionist tendency toward stylized gesture and facial expressions, his role as the jealous acrobat in *Varieté* (*Variety*, 1925) was much more realistic. As in *Last Laugh*, Jannings here made himself a sympathetic character verging on the tragic.

Jannings subsequently accepted an invitation by Paramount to go to Hollywood, where he played similarly tragic characters in *The Way of All Flesh* (1927) and *The Last Command* (1928), winning the first Oscar® for best actor in both roles. Jannings then returned to Berlin, where he starred in *Der Blaue Engel* (*The Blue Angel*, 1930), but Marlene Dietrich stole the show, sending his career into eclipse.

He made his comeback in the Nazified German film industry after 1933 with the role of Wilhelm the Elector (Frederick the Great's father) in *Alte und der junge König* (*The Making of a King*, 1935). Thereafter, he regularly played great men as paradigmatic *führer* figures in a series of biopics with strong propagandistic content: *Der Herrscher* (The Ruler, 1937), *Robert Koch* (1939), *Ohm Krüger* (1941), and especially as Bismark in *Die Entlassung* (*The Dismissal,* 1942). He also repeated a role he had performed countless times onstage, that of the village judge in *Der zerbrochene Krug* (*The Broken Jug*, 1937). His last film remained uncompleted in January 1945.

(1887–1914), and Gottfried Benn (1886–1956). Produced as a reaction to the insanity of World War I and the realist aesthetic of nineteenth-century naturalism, the poetry of August Stramm (1874–1915), for example, was considered by traditionalists to be the stammering of an insane person, while Kaiser's dramas were perceived to be part and parcel to a generational revolt against the old order. Kasimir Edschmid may have best summarized the attitude of the expressionist artist when he wrote: "He doesn't see, he looks. He doesn't describe, he experiences. He doesn't reproduce, he shapes. He doesn't take, he searches. No more chains of facts: factories, houses, illnesses, whores, screaming and hunger. Now we have visions of those things" (quoted in Kurtz, p. 17).

German expressionist writers and painters found common ground in the theater, creating dramatic spaces through abstract set designs that attempted neither to reproduce the real world nor to function as mirrors of psychological states; the plays themselves were filled with angry young men and vitriolic attacks on middle-class sensibilities. It was not, as some have argued, German theatrical impresario Max Reinhardt (1873–1943) who

Emil Jannings in* The Patriot *(Ernst Lubitsch, 1928).

led the way, but rather theatre director Karlheinz Martin (1886–1948) at Die Tribüne, whose stagings of Ernst Toller's "Transfiguration" (1919) and Walter Hasenclever's "The Decision" (1919) scandalized and revolutionized Weimar theater. Not only were abstract sets utilized, created out of painted murals and light, but also the acting was highly stylized, with actors' bodies contorted to complement the wild diagonals of the stage and their voices eschewing normal patterns of speech. These stagings were also a product of material shortages due to the war and its aftermath, and audiences experienced color, light, and sound in new ways that mirrored the alienation of the postwar generation. Bertolt Brecht's (1898–1956) early play *Baal* (1918), whose *Sturm and Drang* hero is fiercely antibourgeois, is typical of how Weimar theater mirrored the political chaos in the streets of Berlin, where revolutions and counterrevolutions passed with amazing rapidity.

Das Kabinett des Dr. Caligari (*The Cabinet of Dr. Caligari*, 1920) remains the signature work of German film expressionism. Produced at the Decla Studios in Berlin by Erich Pommer (1889–1966) (who soon after became production head at Universum Film Aktiengesellschaft [Ufa], Germany's largest film combine), *Caligari* featured painted sets by Hermann Warm and Walter Röhrig that opposed the general trend toward film realism by highlighting their artificiality, becoming visual equivalents of the twisted and tortured interior states of the mad Dr. Caligari (Emil Jannings) and his puppet, the somnambulist Cesare (Conrad Veidt). While lighting is a key formal element in most definitions of expressionism, *Caligari*, like subsequent expressionist films, relied on flat lighting to capture the highlights and shadows *painted* directly on the sets. Carl Mayer (1894–1944) and Hans Janowitz (1890–1954), the film's scriptwriters, later claimed that the film's revolutionary message was diluted by the film's producers, who decided to present the frame story in a realistic set, thus transforming the narrative vision of a society in chaos to the solitary ranting of a madman. In fact, though, the film's use of expressionist elements is consistent, down to the intertitles and even the advertising campaign, while the film's production history remains as convoluted as the various participants taking credit for its success. In any case, the film was an immediate box-office hit, both in Germany, where it opened in February 1920, and internationally. The French even coined the term *caligarisme* to denote expressionism, while American filmmakers and critics who saw the film after it opened in the United States in March 1921 enthusiastically embraced the notion that cinema could indeed be a high art and not just a base form of entertainment for the masses.

While no one associated with German expressionist art or theater had been directly involved in the making of *Caligari,* the artists who produced another film, *Von morgens bis Mitternacht* (*From Morn to Midnight*, 1920), were conscious of bringing an expressionist aesthetic to the cinema. The film's director, Karl Heinz Martin (1886–1948), the set designer, Robert Neppach (b. 1890), and the writer, Georg Kaiser, whose play was adapted, all had worked at Die Tribüne, and many critics consider their film to be the most consistently expressionist of the films of the period. In the film, a lowly bank teller embezzles funds after seeing a beautiful woman, his flight from bourgeois existence ending in suicide. But *Von morgens bis Mitternacht* apparently never opened in Germany, despite the efforts of a distributor to sell it through trade advertisements; it only became widely known after a print was discovered in Tokyo in the 1960s. Like *Caligari,* Martin's film featured highly stylized, hand-painted sets that seemingly collapsed space; light painted on the props and costumes; and expressionistic acting that bordered on the seemingly catatonic.

Meanwhile, Pommer, Carl Mayer, and Robert Wiene followed up *Caligari* with another film in the expressionist style, *Genuine* (1920), featuring fancifully painted sets and outrageous costumes by the well-known

Das Kabinett des Dr. Caligari (The Cabinet of Dr. Caligari*, 1920) is the signature work of German expressionism.*
EVERETT COLLECTION. REPRODUCED BY PERMISSION.

expressionist artist Cesar Klein (1876–1954). While *Caligari*'s narrative was relatively linear, *Genuine* focused on the machinations of a man-eating, blood-drinking vamp (Fern Andra) who is held captive by a mysterious lord. While Andra's hysterical acting style mirrored the impenetrable narrative, the film's emotional core was the depiction of unbridled sexual desire.

Karl Heinz Martin also directed *Das Haus zum Mond* (The House at the Moon, 1921), with a script by the expressionist writer Rudolf Leonhardt (1889–1953) and sets by Neppach. Unfortunately, the film is now lost, making any visual analysis impossible. *Brandherd* (*Torgus*, 1921) also featured sets by Neppach and a script by Carl Mayer, but the visual design involved three-dimensional sets that only featured expressionist highlights. With its moralistic, melodramatic narrative, Robert Wiene's (1873–1938) adaptation of *Crime and Punishment*, *Raskolnikow* (1923), on the other hand, was as much a product of its all Russian-exile crew as it was a manifestation of expressionism. White Russians also financed *Das Wachsfigurenkabinett* (*Waxworks*, 1924) by Paul Leni (1885–1929), which employed stylized three-dimensional sets, and could be identified as expressionist through its acting style, some of its set pieces, and its lighting. The sets themselves hark back to *Der Golem* (*The Golem*, 1915) and other German Gothic films. In any case, except for *Caligari* and *Waxworks*, none of these films entered the canon of German expressionist cinema, and hardly influenced German national cinema in the 1920s. Expressionism became conflated with what are now considered the classics of German silent cinema largely through the writings of two seminal historians, Lotte Eisner and Siegfried Kracauer.

EXPRESSIONISM AND FILM HISTORY

As early as 1930 Paul Rotha was conflating expressionist cinema with German national cinema, but the responsibility

FRITZ LANG

b. Vienna, Austria, 5 December 1890, d. 2 August 1976

Considered one of the greatest directors of the classical German and Hollywood cinemas, Fritz Lang was equally at home in large-scale studio epics and dark, brooding melodramas. Throughout his career he was known for his intense visual style, which wed expressionist lighting techniques with highly geometric compositions to articulate a fatalistic, entrapping world.

After beginning as a scriptwriter in 1917, Lang attained a huge commercial success directing *Die Spinnen* (*The Spiders*) in 1920. That same year he married Thea von Harbou, his scriptwriter on all his subsequent German films, including *Der Müde Tod* (*Between Worlds*, 1921), *Dr. Mabuse, der Spieler* (*Dr. Mabuse, the Gambler*, 1923), *Die Nibelungen* (1924), and *Metropolis* (1927). Created at the giant Neubabelsberg Studios of Universum Film Aktiengesellschaft (Ufa), these films are characterized by German mysticism, monumental sets and costumes, and stylized compositions. With *M* (1931), Lang immediately set new standards for the sound film, in particular through his montages of sound and image. That film starred Peter Lorre as a "sympathetic" child murderer, introducing darker themes that would become more prevalent in his American work.

Lang was forced into exile by the Nazis, ending up in Hollywood in June 1934. His first American film was *Fury* (1936), which featured Spencer Tracy as a man falsely accused of murder and almost lynched by a mob. Equally downbeat, *You Only Live Once* (1937) was a reworking of the Bonnie and Clyde story. Without a studio contract, Lang worked only occasionally in the next years. With four anti-Nazi films, including *Hangmen Also Die!* (1943) and *Ministry of Fear* (1944), Lang attempted to educate the public about fascism. Both films are suffused with a film noir atmosphere, as are *Woman in the Window* (1944) and *Scarlet Street* (1945). Lang was soon forced to take on a variety of low-budget projects, and was temporarily blacklisted during the McCarthy era due to his association with writer Bertolt Brecht, a known Communist sympathizer. In 1957 Lang returned to Germany to direct the two-part *Das indische Grabmal* (*Indian Tomb*, 1958), and *Die tausend Augen des Dr. Mabuse* (*The Thousand Eyes of Dr. Mabuse*, 1960). In 1963 he appeared as a disenchanted Hollywood film director in Jean-Luc Godard's *Le Mépris* (*Contempt*, 1963).

While for decades critics considered Lang to have gone into decline after his great German films, auteurist and more recent feminist readings have recuperated his American work. Reevaluating his contributions to both the anti-Nazi film cycle and to film noir, critics see Lang's Hollywood films in terms of his dark vision of the American bourgeoisie: Edward G. Robinson's characters in *Window* and *Scarlet Street*, for example, are middle-class citizens who commit or cover up murder for a femme fatale. Stylistically, Lang's films wed German expressionism to American genre cinema, finding film noir a congenial form for the expression of his dark, determinist vision.

for the semantic expansion of the term rests primarily with the influential German film historians Kracauer and Eisner. Both writers discuss only a handful of films while ignoring the thousands of comedies and other genre films produced in Berlin in the 1920s. Ironically, what for Kurtz had still been a revolutionary and liberating aesthetic form is inverted in their histories, turning expressionism into a prescient manifestation of German fascism and romantic doom—visual evidence for the German predilection toward Nazism and mass murder.

Fritz Lang during production of* Metropolis *(1927).

Kracauer, a former film critic in Weimar Germany, wrote his book *From Caligari to Hitler* (1947) while in exile in New York during and immediately after World War II, primarily to explain to Americans why the German nation sank into barbarism. Kracauer almost completely ignores German expressionism's stylistic features, focusing instead on narrative threads and typologies that buttress his case that the cinema of the Weimar Republic gave evidence of the deluge to come by visualizing German psychology, specifically a supposed national character trait that embraced authoritarian figures. Critics have noted that Kracauer's analyses are highly selective and teleological, and the book leaves the impression that the expressionism of *Caligari* was inherent in all subsequent German cinema.

Eisner's *The Haunted Screen*, first published in France in 1952, was likewise the work of a German Jewish film critic in exile, although, unlike Kracauer, Eisner's purpose was less ideological than art historical. Attempting to analyze the stylistic uniqueness of German art cinema in the 1920s while acknowledging its precedents in German romanticism, Eisner discusses two essentially unrelated phenomena: the influence of theater impresario Max Reinhardt and film expressionism. In fact, Reinhardt's utilization of chiaroscuro (interplay of light and shadow) and *Kammerspiel* (an intimate stage, involving only a few characters and sparse sets) *mise-en-scène* had little to do with German expressionism, as Eisner herself admitted in a series of articles published in the wake of her book's reception. Yet her description of formal lighting techniques and *mise-en-scène* in the films of Fritz Lang (1890–1976) and F. W. Murnau (1888–1931) have been associated with German expressionism ever since, as have the stylized acting common to much German silent cinema.

By the dawn of Anglo-American film studies, then, expressionism and German Weimar cinema had become so conceptually intertwined that the terms were virtually interchangeable. Lang's *Der Müde Tod* (*Between Worlds*, 1921) and *Metropolis* (1927), G.W. Pabst's (1885–1967) *Die Freudlose Gasse* (*The Joyless Street*, 1925) and *Die 3groschenoper* (*The Threepenny Opera*, 1931), Ernst Lubitsch's (1892–1947) *Die Bergkatze* (*The Wildcat*, 1921), E.A. Dupont's (1891–1956) *Varieté* (*Variety*, 1925), and numerous other German films were subsumed under the term *German expressionist cinema*, which itself became a stylistic signpost in the film historical canon, situated somewhere between D.W. Griffith's American cinema of the 1910s and Soviet revolutionary cinema of the 1920s. If expressionism did enter into idiom of silent German art cinema, it was probably the highly stylized, somewhat static acting style of German expressionist thespians. This is particularly obvious in a film such as *Hintertreppe* (*Backstairs*, Leopold Jessner, 1921), which is a Kammerspiel without any expressionist trappings in its visual design, but features pure expressionist performances by Fritz Kortner (1892–1970), William Dieterle (1893–1972), and the usually nonexpressionist actress Henny Porten (1890–1960). Expressionist actors, including Werner Krauss (1884–1959), Conrad Veidt (1893–1943), Reinhold Schünzel (1886–1954), and Kortner, became among the most sought-after in German films of that period.

In the past, traditional and formalist film critics differentiated films, filmmakers, and epochs through a series of binary oppositions whereby "realism" signified all attempts at depicting the world in terms of the conventions of a unified space and time, as had been passed down from the Renaissance (according to André Bazin), while expressionism defined attempts to visualize the universe from the strictly subjective point of view of the artist. According to this view, the push and pull of film forms began with the Lumière brothers (realism) and Georges Méliès (expressionism) at the very dawn of cinema. However, more recent early cinema studies have demonstrated that no such polarity existed at the time. Furthermore, film semiotics and postmodern theory have taken the field well beyond such simple, binary oppositions so that it is questionable whether

Fritz Lang's costly **Metropolis** *(1927) was one of the last silent German expressionist films.* EVERETT COLLECTION. REPRODUCED BY PERMISSION.

the continued use of the term *expressionism* in its broadest sense remains useful.

What, then, should *expressionism* mean? Given its origins in modernist art, expressionism should be seen as a particular form of film design that privileges the subjective over the objective, the fantastic and the uncanny over the mundane and everyday, packaging both trivial and high art into film works that address cinema audiences within the context of commercial film culture. Contrary to Edschmid's pronouncements, subjectivity in expressionist film is not seen merely as the "expression" of an individual artist, but rather as a subjectivity shared by an audience willing to enter into an alien world in order to partake of the visual pleasures such a design affords. Unlike classical Hollywood narrative, expressionist cinema tends toward self-reflexivity, toward making audiences aware of the image's artifice and their own subject position as consumers of images, whether through the undisguised use of painted sets, through the nonnaturalistic use of color film stock and lenses, or by distancing the audience from the actors' performances through stylized poses. In any case, it seems clear that such a definition no longer carries with it any specific ideological connotations, other than a style in opposition to classical Hollywood narrative.

Expressionism, properly speaking, refers exclusively to the artistic movement in the specific historical period in Germany in the early 1920s. The term also refers to German art films in the 1920s that were strongly influenced by expressionism. These films include such stylistic qualities as high key lighting, canted camera angles, subjective camera movement, stylized sets, nonnaturalistic acting, nonlinear narratives, a tendency toward dreamlike images, and Gothic content that often privileges narratives of sexual excess, like *Genuine*. More broadly defined, expressionism may refer to Universal's horror

films of the 1930s and films noir (many made by exiled German filmmakers) of the 1940s and 1950s, as well as contemporary films that quote German expressionist cinema, such as the films of Guy Maddin (b. 1956).

FANS AND FANDOM

Film fans and film fandom do not amount to quite the same thing: one can be a fan of a particular film, genre, actor, or director, but still not participate in the social organizations, interactions, and gatherings of "fandom." Being a fan is, at least in the first instance, a matter of appreciating particular films, and being affectively or emotionally invested in them. Fans are often individuals who are not in contact with other people sharing their emotional attachments to specific films or stars. Although being a "lone" fan of specific films or genres may not necessarily involve actual face-to-face communication with other fans, film buffs frequently imagine themselves as part of an extended fan community, along with absent but like-minded fans. Commercially published magazines help with this process of community building, enabling individual fans to sustain their sense of being part of a group even when they are not directly in touch with other fans.

FANDOM AS A SOCIAL ACTIVITY

Unlike the individual fan, whose peer group or colleagues may coincidentally include like-minded film lovers, organized fandom involves fans specifically seeking out those who share their tastes, thereby becoming involved in a range of social, cultural, and media activities that take this shared fandom as their starting point. Film fandom can involve participating in online discussion and posting to sites such as the Internet Movie Database (imdb.com), joining film clubs or groups, or producing one's own fan magazine or "fanzine." Being part of organized fandom—whether for a certain film or star—is, first and foremost, linked to values of participation and production. Henry Jenkins stresses that fandom's participatory culture "is always shaped through input from other fans and motivated, at least partially, by a desire for further interaction with a larger social and cultural community" (Jenkins, 1992, p. 76). Those participating in socially organized fandom often watch their favored films in fan groups, wanting to share the experience with others who they know similarly appreciate them. And fans also tend to wait together in long lines in order to see the first showings of blockbuster releases, again knowing that the audience will be full of fans like themselves with whom they will share an emotional experience and pleasure.

These highly communal experiences, responses, and interpretations of fandom also translate into activities beyond simply viewing a highly anticipated and appreciated film. Film fans approach watching a film as just one stage within a wider process of consumption and production, with secondary texts such as promotional materials and reviews leading up to the moment of viewing, fanzine reviews and commentaries following the initial filmic encounter, and repeated viewings and the collecting of DVDs with their special features. Film fandom is never about just "going to see a movie."

Seeking to highlight the distinctiveness of fandom and its cultural practices, John Fiske has distinguished between different types of productivity, which he labels "semiotic," "enunciative," and "textual" production (Fiske, pp. 37–39). The first, semiotic, concerns producing meaning from a film text—something that all audiences necessarily do as they cognitively process and make sense of a film. "Enunciative productivity" means talking about a film. Again, this is something that most film audiences do, but that fans tend to carry out distinctively, within the community of fandom. Fiske's third type,

"textual productivity," is most specific to fan cultures, since it is very rarely the case that those outside fandom are motivated to write reviews, critiques, or analyses of favorite films (unless perhaps this forms a part of their professional identity as a film critic or academic). According to David Sanjek, fanzines are the clearest example of fandom's textual productivity, being "amateur publications, which by form and content distinguish themselves from 'prozines': the commercial, mainstream magazines" (p. 316). Although there is some truth to his distinction, Sanjek presents a somewhat exaggerated contrast between fanzines and professionally published "prozines," suggesting that amateur fanzine editors have far greater freedom to write what they want, as they are not directly beholden to the movie industry and to patronage; while "prozine" editors are concerned almost exclusively with commercial cinema, amateur fanzines have little interest in "the slavish devotion to accepted formulae and conventions of the mainstream Hollywood product (p. 317). If an excessively neat and tidy opposition, it does acknowledge an important aspect of film fandom: its communities often set themselves apart from what they view as "mere" film "consumers" lacking in genre, textual, and production-history knowledge.

"RESISTANT" AND CONSUMERIST FANDOM

Fandom is, in part, about acquiring and displaying forms of expertise. Rather like scholarly "readings" of films, fandom's favored mode of interpretation involves very close examination wherein films and their surrounding secondary texts are scrutinized for every detail and nuance. This interpretive practice is very much opposed to "casual" film viewing, which is assumed by fans to constitute a less knowledgeable and less discriminating type of viewing characteristic of those who operate outside of fandom.

Sanjek's depiction of fanzines also stresses the anticommercial nature of film fandom, and the manner in which it can be opposed to mechanisms of promotion and publicity. This resonates both with the "underground" and anticommercial/antimainstream value systems of many fan cultures, and with other scholarly work on film fandom that has viewed fans as "resistant" to capitalism and consumerism. For Greg Taylor, "fans are not true cultists unless they pose their fandom as a resistant activity," a position that keeps fan-cultists "one step ahead of those forces which would try to market their resistant taste back to them" in what seems to amount to an ongoing struggle between fandom and the forces of film commerce (p. 161).

However, given this confluence of fan and academic values—where both groups may seek to keep their distance from "the commercial"—it is possible that fandom's "resistant" qualities may be overstated. Many film fans are in fact dedicated fans of blockbuster films, and may fully embrace the commerciality of Hollywood "product" even while reading texts closely and analyzing them in a community of like-minded spectators. It cannot be assumed that fans are necessarily "outside" mechanisms of film promotion, publicity, and commerce, nor that their distinctive fan practices are inherently transgressive or resistant to film commerce. Indeed, fans are of great value to media conglomerates as "reliable consumers" for their product lines, and that subcultures do indeed have a place within capitalism (Meehan, pp. 85–89). This means taking a more complex approach than that of contrasting fan "culture" and the "commerce" of media conglomerates. While Sanjek is certainly right to argue that mainstream magazines are dependent on good will and supplies of material from the film industry, it does not follow that fandom is wholly "independent" of commercial forces, pressures, and interests.

If much work in film and cultural studies from Henry Jenkins's *Textual Poachers* (1992) onwards has tended to take an overly celebratory stance on the participatory and productive cultures of film fandom, some writers have been excessively negative and dismissive of fandom. For example, Barbara Klinger has suggested that a crucial part of how contemporary films work as commodities, and so are sold to audiences, is their "fragmentation into a series of specialized or 'starred' elements" (p. 126), referring to the way films are promoted by focusing on elements extracted from their overall narrative, production, and *mise-en-scène.* Publicity texts can then focus on specific saleable items such as the star, the director, state-of-the-art special effects, or controversial issues or themes raised in the narrative. This means that any given film can be sold to different audiences by stressing different elements, whether matters of romance, special effects, or directorial "art." Klinger argues that fans' expertise is therefore not at all independent of promotional and publicity mechanisms, since their behind-the-scenes knowledge, far from testifying to fans' autonomy, instead frequently indicates "the achieved strategies" of commercial, publicity material (p. 132).

However, just as the argument that film fans are wholly opposed to, or outside of, capitalist forces seems strained, so too does the alternative viewpoint representing fans wholly as the dupes or slaves of the Hollywood dream factory. This debate over the "resistant" or commercially "incorporated" nature of fandom has underpinned an entire paradigm of study, but recent approaches to fandom have begun to pose new questions. Film historian Janet Staiger has pointed out that many studies of fandom have emphasized the positive social aspects of fans' community-building activities, arguing

for approaches to fandom that do not singularly celebrate or decry it (2000, p. 54).

Indeed, it also may be difficult to "balance" representations of fans as "good" (resistant) and "bad" (incorporated into the industry). Matt Hills argues that any such balanced or "multiperspectival" approach to fandom is fraught with problems insofar as it seeks to resolve what may be inherent contradictions within fandom and audience identities. Against such attempts to resolve fandoms into clearly definable binaries, a more general, dialectical model of fandom is called for, one capable of dealing with actual contradictions within cultural phenomena (see Hills, pp. 27–45). Fans may be simultaneously inside and outside market forces, resisting economic pressures in some ways and behaving as "reliable consumers" in others. In defense of media studies' work seeking to ascertain fans' resistance to commercial forces, it could be argued that such resistance can still be clearly identified, whether it is resistance to the commodification of film culture via a kind of "underground" film appreciation, or whether it is a reaction against specific types of film such as the blockbuster. But this assertion relies on a zero-sum view of power as something that fans either do or do not possess, as well as assuming that resistance can be critically isolated by scholars. Such an academic approach returns us to a type of fan studies premised on identifying "good" and "bad" objects, thereby claiming the moral authority to label fan practices as either "progressive" or "reactionary" (see *Fan Cultures*).

STEREOTYPING FANS AND FANDOM

Fans and fandom have been subjected to moral surveillance, and a powerfully moralizing gaze, throughout film history. In common-sense terms, the fan audience (whether socially organized into fandom or not) has typically been represented as a bit weird, excessively emotional in relation to favored stars, too interested in the trivia of films' production and the miniscule details of close reading, or too obsessed with the world of film to live successfully in the real world. Film fans sometimes have to defend themselves against accusations that they are losers or maladjusted geeks. Even the notion that film is an art with its own visionary auteurs has not been enough to dispel the image of the pathological movie fan, and neither has the term *cinephilia*, with its high-cultural overtones. For example, the US documentary *Cinemania* (2002) portrays a group of self-professed cinephiles as variously dysfunctional: unable to hold down jobs or have sex lives, instead they obsessively devote their time to attending art-house cinemas in New York. Movie fandom is an object of ridicule in such media portrayals, however affectionate or highbrow they are. It is against this background of negative stereotyping of fans as losers and geeks that much scholarly work on fans and fandom has sought to positively reevaluate fandom as instead indicating participation in a like-minded community and involving healthy audience creativity.

The importance of stardom within film culture also has led to fans being morally devalued and stereotypically represented as hysterical obsessives. Analyzing the beginnings of movie fan culture from the 1910s onward, as regional variations in film exhibition were supplanted by a national popular culture through a wide range of films, books, plays, and popular songs from the early twentieth century, movie fans were depicted as celebrity-obsessed female daydreamers, the archetypal image of the fan being that of a hysterical, starstruck teenage girl (see Fuller, p. 116). This feminizing of film fans—including males—was powerfully reinforced by the film industry in the wake of the development of the star system. Once the star system began to take hold, and stars' names were promoted and publicized, it then became possible for fans to be represented as feminized, celebrity-obsessed consumers.

Academic work on movie fans has sometimes assumed that their fandom can be equated with being a fan of a specific celebrity. Jackie Stacey offers a sensitive study of female fans that challenges negative stereotypes surrounding the subject and argues that fans do not simply "identify" with film stars (that is, perceive stars as sharing qualities with themselves, or wish to "be like them") or desire them as idealized fantasy figures. Instead, the ways in which fans—and organized fandoms—relate to film stars are far more complicated, involving a range of cinematic and extracinematic practices. Again, fans and fandom are linked to activities that go beyond just watching a star's movies. Stacey analyzes fans' feelings of devotion, worship, and even transcendence: appreciating a particular film star allows them to tune out everyday worries, disappointments, and stresses (p. 145). Stacey highlights a range of fan practices that occur outside the moment of film viewing, such as self-consciously pretending to be a favorite star or otherwise imitating and copying them. These imitations do not mean that such fans have "lost touch with reality," nor that they really want to be someone else; instead, their fandom is merely expressed and displayed through specific cultural activities (p. 171).

Other work on star–fan relationships has stressed the role of organized fandom in communally shaping audiences' reactions to, and appreciations of, movie stars. For example, Richard Dyer observes how Judy Garland became an icon for gay audiences, who interpreted her career and personal struggles as "representing the situation and experience of being gay in a homophobic society" (p. 153). It can be argued that Garland's star text

CONRAD VEIDT

b. Potsdam, Germany, 22 January 1893, d. 3 April 1943

Conrad Veidt appeared in such classic German expressionist films as *Das Kabinett des Dr. Caligari* (*The Cabinet of Dr. Caligari*, 1920), in which he played somnambulist Cesare; *Orlacs Hände* (*The Hands of Orlac*, 1924); and *Der Student von Prag* (*The Student of Prague*, 1926). In *Caligari*, Veidt's androgynous sleepwalker elicits fear and dread from everyone else in the film while being both the instrument and victim of Dr. Caligari (Emil Jannings). Some have seen Veidt as a forerunner of later movie monsters that elicit some degree of sympathy, such as Boris Karloff's creature in *Frankenstein* (1933).

A star of silent film who was strongly linked to the German expressionist movement in the initial phases of his career, Veidt went on to play evil Nazi characters in later sound films such as *Escape* (1940). He was typecast in sinister, creepy, or just plain monstrous roles, often representing the "bad German" partly as a result of the historical and cultural context in which he was working, and partly because of his own looks and acting style. The role of Major Strasser in the classic cult film *Casablanca* (1942) was one of Veidt's final Hollywood roles, coming after he had taken a break from working in the United States to act in Britain from 1932 to 1940. Veidt's performances were frequently highly stylized, in line with the calculated distortions typical of German expressionism.

Being an unusual star, and given his appearances in classic and cult films such as *Casablanca* and *Caligari*, Veidt himself has been embraced as a cult icon, particularly by cinephiles who have an awareness of film history. The Conrad Veidt Society was formed in 1990 by James Rathlesberger, and its members commemorated the fiftieth anniversary of Veidt's death (and the one hundredth anniversary of his birth) in 1993. According to its Internet homepage, the society is dedicated to promoting "classic" films, working to place "Veidt in the context of his times—Germany during the fame of the Expressionist film, England after the rise of Hitler, and America gearing up to fight WWII." Its members particularly value Veidt for his anti-Nazi humanism and his career-long fight against intolerance and prejudice. Onscreen, though, Veidt ended his career playing a Nazi in the escapist *Above Suspicion* (1943), his last film.

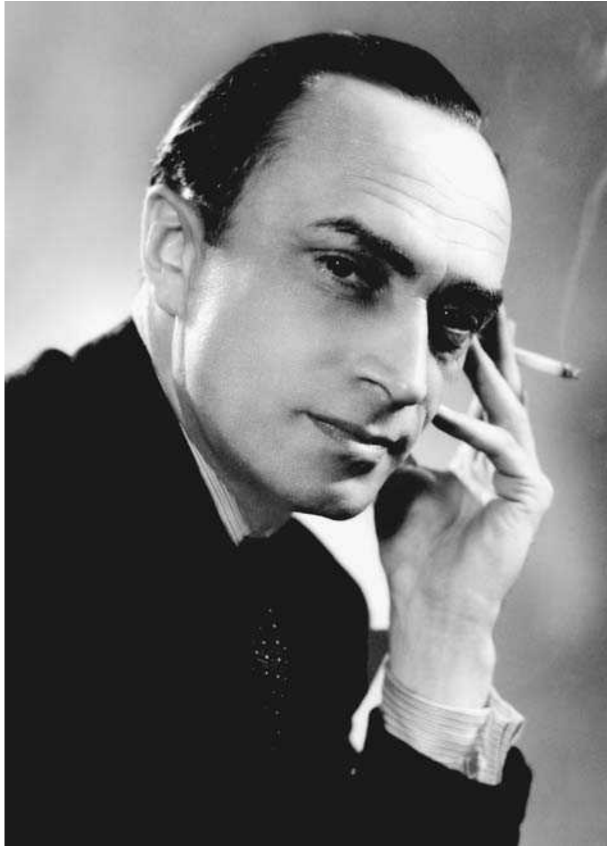
still is widely perceived as the special province of a gay male fandom. Other types of subcultural fandom may also be linked to the revaluation of particular stars. For example, fans of classic horror may especially appreciate movie stars from the silent era, such as Conrad Veidt (1893–1943), whose appearances in films such as *Das Kabinett des Dr. Caligari* (*The Cabinet of Dr. Caligari*, 1920) and *Orlacs Hände* (*The Hands of Orlac*, 1924) linked him to stylized acting performances and representations of the sinister. Far from being a mainstream "leading man," Veidt nevertheless has become a focal point for a specific horror fan and cinephile community who can interpret his "monstrous" and marginal characters in relation to the antimainstream difference of their own fan culture. Rather than suggesting that particular types of fandom may be especially linked to certain stars, the case of gay male fandom shows that mainstream male stars such as Keanu Reeves can also be revalued or reinterpreted, especially stars whose publicity images represent their sexuality in an ambiguous manner.



Conrad Veidt. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

Organized fandom can thus sustain different readings of ubiquitous star images as well as especially valuing certain stars as a badge of distinction and marker of distance from "the mainstream."

"FILM ART" AND FANDOM

In comparison with the early twentieth-century creation of movie fandom, the figure of the movie fan is perhaps less clearly gendered as feminine/feminized today, but this is because of a much changed cultural context, wherein both men and women are frequently targeted and imaged as consumers. In addition to the star system, with its "picture personalities," directors and those involved in the technical craft of filmmaking are now also increasingly publicized celebrities in their own right. This shift means that film fans can align themselves more clearly with notions of film as art—and partly avoid negative stereotypes of celebrity obsession—by indicating their fandom of film directors.

This aspect of fandom moves closer to the scholarly appreciation of film, since treating film as art and dignifying certain directors with "authorial" or *auteurist* status is a strategy that has historically characterized film studies, and that still retains more than a foothold today. So-called "auteur theory" was initially employed solely by intellectuals and cinephiles seeking to value film as a medium, and although it carried cultural cachet, it was also accessible enough for nonacademic audiences to appreciate (Taylor, p. 87). Moving from being an exclusive/elitist view of film held by French cinéastes, auteurism entered the US scene and became popularized to the extent that Hollywood incorporated its discourse into its own publicity. Auteurism is no longer just a critical approach, but also a commercial strategy for organizing how audiences may respond to film texts. Uniting filmmakers, scholars, publicists, and fans, the notion that certain privileged directors are artists has tended to create and sustain aesthetic personality cults around them. This type of "personality cult" also has been significant to certain organized fandoms, such as those surrounding offbeat, sleeper, quirky, and classical Hollywood films labeled "cult movies." These organized fandoms have tended to use auteur theory as a means of claiming to find artistic value within the terrain of independent film.

One of the most significant cultural activities undertaken by film fans, then, is the way in which they seek to invest the work of their preferred performers and directors with cultural capital, setting their tastes against what they perceive and construct as mainstream cinema. However, such an apparent detachment from "the commercial" is itself commercial, since these fans are still placed within a specific market. Though this is related to the debate over fandom's resistant capability, it can also be viewed as a matter of film fans' cultural practices. Cult-film fans seek to defend and value their favored texts, but by doing so they also hope to reflect their own aesthetic taste, for they can see "true" artistic worth where general audiences cannot. Such fan audiences' bids for distinction are especially clear in relation to genres that are frequently devalued in "dominant" film criticism, such as "trash" and exploitation cinema. Mark Kermode argues that horror fans actively perceive the genre's aesthetic value, whereas nonfans passively consume horror as if its representations are actual rather than aestheticized images of gore; he offers a convincing opposition between "active" fans who read horror films in relation to surreal genre precedents and "passive" nonfans who are characterized as reading horror films more naively.

In Kermode's account, horror fans are, crucially, "genre literate." Like fans of other genres or specific movie stars, they are expert consumers, able to trace generic histories and interpret new films in relation to countless preceding examples. This type of movie fan has a keen sense of intertextuality; thus, boundaries around "the text itself" tend to be partly dissolved by fans who,

Conrad Veidt and Annabella in* Under the Red Robe *(Victor Seastrom, 1937). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

even while they carry out close readings of certain films, relate texts to others, either by generic category, in auteurist terms, or by focusing on a favored star. Organized fandoms, like those for cult movies or the horror genre, therefore challenge the idea that any film's meaning and significance are inherent. Rather, it is by reading films in relation to, and through, other texts that fans can convert "the film" into those meanings and values that characterize their fandom as a kind of interpretive community. Fans read films not only through official publicity texts such as DVD extras, but also in relation to fan-produced texts (fan fiction). Henry Jenkins proffers the example of one fan who wrote an alternative ending to the film *Thelma and Louise* (1991) in which these female characters transform themselves into bats (Jenkins, 2000, p. 177). Recontextualizing the film as a lesbian vampire tale, this creative fan interpretation (and production) of meaning indicates how generic identities and textual boundaries can be reinscribed by film fans, sometimes working against what producers, and other audiences, may view as the obvious categories, boundaries, and identities of a film. Thus, whether it is the interpretive activities of individual fans, or the socially organized, communal practices of fandom, fans and fandom have been as important to film studies as to the film industry. They demonstrate how loyal audiences can be a part of film commerce and also set themselves apart from commercial processes.

FANTASY FILMS

Arguably, any film relying on fictional situations and characters might be considered fantasy. Indeed Hollywood's "dream factory" prides itself on transporting its audience to myriad fictional settings. In practice, however, fantasy is a term reserved for a specific subset of films featuring characters, events, or settings that are improbable or impossible in the world as we know it. This loose definition yields a staggering array of films that vary widely in subject matter, tone, and intended audience. The children's film *Willy Wonka and the Chocolate Factory* (1971), for example, would seem to have little in common with *Conan the Barbarian* (1982), yet both are considered fantasy because of their fantastical characters and events. While some films feature isolated moments of fantasy in otherwise realistic or dramatic contexts, the designation fantasy is usually reserved for movies whose imaginary elements pervade the entire story. For example, despite the miraculous rain of toads occurring near its end, the gut-wrenching drama *Magnolia* (1999) is not considered fantasy.

In addition to the wide variety of films that fall within the fantasy classification, confusion often arises about science fiction and horror. Although many consider these to be separate genres, their relation to fantasy cannot be overlooked since all three revolve around elaborate fantasy scenarios. Defining fantasy film as a discrete genre is problematic due to the large number of story types it encompasses, and therefore it may be more useful to consider fantasy as a "mode" rather than as a genre. Seen in this light, science fiction and horror are genres that express distinct aspects of the fantasy mode, while other story types might be considered as additional subgenres of the mode.

QUESTIONS OF GENRE

The term "speculative fiction" is sometimes used to avoid making a distinction between various strands of fantasy, science fiction, and horror or to account for the considerable overlap among the three. While both science fiction and horror films are certainly types of fantasy, many would agree that each is distinct in its purview and that each operates differently in terms of themes, conflicts, and iconography.

Whereas science fiction relies on scientific paradigms, technologies, facts, and paraphernalia to create hypothetical but scientifically credible scenarios, fantasy is subject to no such restrictions. Fantasy does not need to convince the audience that its story is realistic—rather, it invites the audience to temporarily *expand* its credulity—hence the phrase so often associated with this genre, "the willing suspension of disbelief." Rather than appeal to science, fantasy favors magical or mystical explanations. Fantasy films are usually logically consistent, but their internal logic belongs to an imagined rather than a scientific world. Although the iconography of science fiction includes spaceships, computers, and ray-guns, a fantasy film is more likely to feature flying horses, crystal balls, or magic wands. In practice, however, many films are hybrids. For example, the science fiction film *The Empire Strikes Back* (1980) invokes no scientific premise to explain Yoda's mystical powers or Luke's mastery of the "the Force," a skill that defies logic and must be accessed through a kind of intuition. Likewise, *E.T. the Extraterrestrial* (1982) features an adorable alien whose ability to heal wounds seems more miraculous than medical.

While some science fiction films are dramatic or upbeat, many attempt to frighten the audience, thus blurring the line between science fiction and horror. Typically, the divide between pure horror and science fiction depends on the presence of scientific elements. Another distinguishing factor concerns the nature and the source of the horror: science fiction is more likely to be concerned with an external threat on a grand scale (for example, aliens attacking the Earth in *War of the Worlds* [1953]), whereas horror is more likely to stem from internal, human evil on a more personal scale (for example, evil ghosts threatening a family in *Poltergeist* [1982]). While some fantasies invoke horror and some horror films are clearly fantasies, films of terror that would *not* be considered fantasy include slasher films such as *Friday the 13th* (1980) or thrillers such as *Dial M for Murder* (1954), since in each case the source of fear is rooted in a (hypothetically) realistic threat. A science fiction film such as *The Andromeda Strain* (1971) may also provoke fear, thus overlapping with horror, but it too would be excluded from a pure fantasy classification because its horrific scenario is grounded in the logical conclusions to scientific hypotheses.

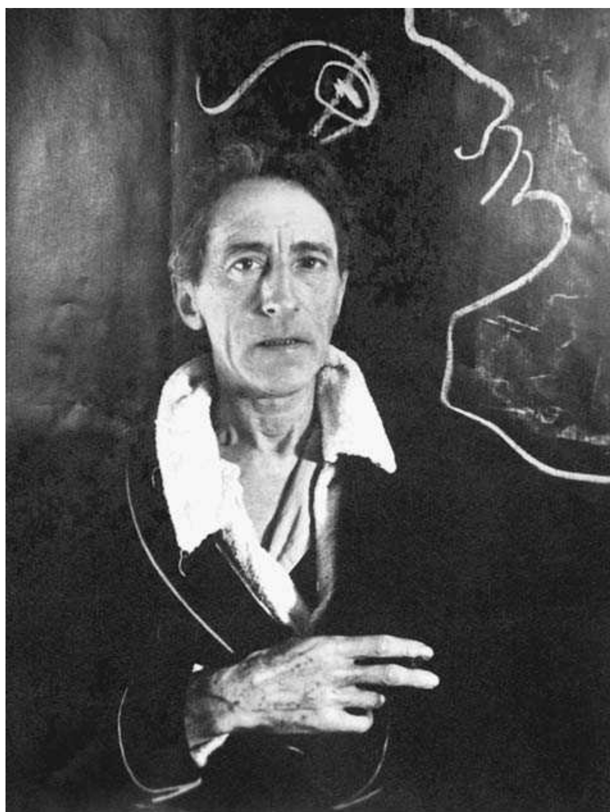
Horror films most often overlap with fantasy when they feature monsters or creatures with no clear scientific explanation (the frightening but misunderstood ape in the classic 1933 film, *King Kong*), or when they enter the supernatural realm (ghosts, vampires, unexplained phenomena). What distinguishes supernatural horror from pure fantasy is the pervasive presence of a horrific and threatening scenario. Ghosts in films like *A Guy Named Joe* (1943) or *Beetlejuice* (1988) function very differently from ghosts in horror films like *The Haunting* (1963); the tone of the films differ accordingly.

Even though science fiction and horror blend with fantasy in many movies, many fantasy films fit neither of those categories and instead find their roots in fairy tales, myths and legends, comic strips, and children's stories. Excluding pure science fiction and horror, the major strands of fantasy might be grouped into the following general subcategories: sword and sorcery/medieval fantasy: *Dragonslayer* (1981), *Willow* (1988), *The Lord of the Rings* trilogy (2001–2003); children's stories: *Peter Pan* (1953), *James and the Giant Peach* (1996), the *Harry Potter* series (beginning in 2001); fairy tales and myths: *La belle et la bête* (*Beauty and the Beast*, 1946), *Jason and the Argonauts* (1963); creatures and monsters: *King Kong* (1933), *Monsters, Inc.* (2001); supernatural: *Here Comes Mr. Jordan* (1941), *Bedazzled* (1967), *Ghost* (1990); magic or miracles: *Big* (1988), *The Santa Clause* (1994); comic book or superheroes: *Dick Tracy* (1990), *Spider-Man* (2002); romantic fantasy: *Splash* (1984), *Groundhog Day* (1993); comic fantasy: *Beetlejuice* (1988), *Ghostbusters* (1984); dream fantasy: *The Wizard of Oz* (1939); action fantasy: *Raiders of the Lost Ark* (1981); martial arts fantasy: *The Matrix* (1999), *Wo hu cang long* (*Crouching Tiger, Hidden Dragon*, 2000); musical fantasy: *Brigadoon* (1954), *The Lion King* (1994); utopian fantasy: *Lost Horizon* (1937); dystopian fantasy: *Brazil* (1985); time travel: *Time Bandits* (1981), *Bill and Ted's Excellent Adventure* (1989); self-referential: *8½* (1963), *Purple Rose of Cairo* (1985), *Pleasantville* (1998); avant-garde or surreal: *Le Sang d'un poète* (*The Blood of a Poet*, 1930).

These subcategories account for some of the major strands of fantasy, but they are by no means exhaustive, nor do they include such films as the delightfully warped *Being John Malkovich* (1999). Moreover, no matter how many highly particular categories are devised for fantasy films, many films nonetheless fit into a number of categories. *The Princess Bride* (1987), for example, is a romantic comedy but also a fairy tale; *The Wizard of Oz* (1939) is a musical but also a dream fantasy with a fairy-tale bent. A further distinction might be made between fantasies that are live-action (*Edward Scissorhands*, 1990), animated (*Peter Pan*), puppet-based (*The Dark Crystal*, 1982), or entirely computer-generated (*Toy Story*, 1995). Here again, many films combine categories—for example, *Mary Poppins* (1964), which employs interludes of animation within a live-action setting, or the live-action/animated film, *Who Framed Roger Rabbit?* (1988), widely acclaimed for its innovative special effects.

HISTORY

One of the first filmmakers associated with fantasy film was the French filmmaker Georges Méliès (1861–1938), who used trick photography and elaborate sets to create fantastic stories such as *Le voyage dans la lune* (*A Trip to the Moon*, 1902). As longer feature films developed in the silent era, a smattering of science fiction and fantasy narratives appeared such as *Twenty Thousand Leagues Under The Sea* (1916), and *The Thief of Bagdad* (1924), which starred the silent film idol Douglas Fairbanks (1883–1939). In Germany, directors such as Robert Wiene (1873–1938), Fritz Lang (1890–1976), and F. W. Murnau (1888–1931) set the stage for a darker type of fantasy associated with German Expressionism. Highly influential to the horror genre, these disturbing tales of evil and supernatural forces included such classics as *Das Kabinett des Doktor Caligari* (*The Cabinet of Dr. Caligari*, 1920), *Metropolis* (1927), and the vampire movie *Nosferatu* (1922), known for its chilling visuals and trick photography. Hans Richter (b. 1919) took a more experimental approach to special effects, using stop-motion animation in *Vormittagsspuk* (*Ghosts before Breakfast*, 1928), a short avant-garde film that featured flying bowler hats and other inanimate objects brought to life.



Jean Cocteau. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

The advent of sound film in 1927 was accompanied by innovations in special effects, creating new possibilities for cinematic fantasy. Though not as dark or gruesome as the German silent films, Hollywood's spate of monster and horror films in the 1930s, such as *Dracula* (1931) and *Frankenstein* (1931), used a similar bag of special effects tricks, including miniatures and stop-motion photography to create fantastical creatures such as the ape in *King Kong*, created by special-effects pioneer Willis O'Brien (1886–1962). On a lighter note, the 1940 remake of *The Thief of Bagdad* delighted audiences with its vibrant colors and fantastic scenarios. Fantasy also benefited hugely from the special effects wizardry of O'Brien's protégé Ray Harryhausen (b. 1920) and from George Pal (1908–1980), who produced and directed *Tom Thumb* (1958), *The 7th Voyage of Sinbad* (1958), and *Jason and the Argonauts* (1963).

By the 1950s, science fiction had emerged as a major genre in its own right. Playing on fears of nuclear holocaust and anxiety associated with space travel, most science fiction films used special effects to create frightening aliens from outer space or monsters created by atomic radiation. During the same period, Hollywood audiences were treated to *The Thing From Another World* (1951), *The Blob* (1958), and a host of alien invasions. Japanese filmmakers introduced their own infamous monster in *Gojira* (*Godzilla, King of the Monsters*, 1954).

The confluence of sound, special effects and Technicolor could also yield a more light-hearted type of fantasy, as evidenced by the perennially popular musical, *The Wizard of Oz* (1939). Combining song and dance within a fairy-tale narrative, the film drew on the conventions and sensibilities of the musical, a genre known for creating its own particular versions of utopian and romantic fantasy. Musical fantasy also became a common element in many Indian films, such as *Awaara* (*The Vagabond*, 1951) by Raj Kapoor.

The combination of music and fantasy has long been a hallmark of Disney films. Perhaps best known for its work in animation, Disney has specialized in fantasy stories since its inception, with a heavy emphasis on musicals and children's fare. Classics such as *Pinocchio* (1940) and *Snow White and the Seven Dwarfs* (1937), hailed as the first full-length animated film, were precursors to the recent trend in animated musicals like *The Little Mermaid* (1989). While many fantasy films are intended for youthful audiences and are derived directly or indirectly from children's books or fairy tales, some successfully operate on the adult level as well. The term "family film" often denotes films like *Shrek* (2001) that appeal to all ages by combining fantasy worlds with clever animation and more sophisticated humor.

Children's stories, fairy tales, and myths have influenced many American fantasy films, yet other cinematic strands of fantasy could be found in the "art" films of Europe, which often featured innovative, complex, and sometimes disturbing fantasies. Eschewing narrative coherence, the Surrealists used vivid set pieces, special effects, and montage to explore the possibilities of cinema as an expression of subversive and subconscious impulses. In France, the Spanish-born Salvador Dali (1904–1989) and Luis Buñuel (1900–1983) collaborated to produce *Un chien Andalou* (*An Andalusian Dog*, 1929), a short experimental piece that has retained its ability to shock and disorient film viewers. In 1930, the two applied their artistic sensibility to the politically explosive feature *L'age d'or* (*The Golden Age*).

Avant-garde and experimental filmmakers pushed the boundaries of cinematic expression, but fantasy also continued to flourish in more traditional forms. Drawing on his earlier explorations of surreal effects, Jean Cocteau (1889–1963) applied his imaginative skills to the creation of a classic fairy tale, *La belle et la bête* (*Beauty and the Beast*, 1946). Current audiences are familiar with Disney's animated version of the story, but for many,

JEAN COCTEAU

b. Maurice Eugène Clément Cocteau, Maisons-Lafitte, France, 5 July 1889, d. 11 October 1963

Jean Cocteau is perhaps best known for his classic fantasy film, *La belle et la bête* (*Beauty and the Beast*, 1946), based on the fairy tale by Madame Leprince de Beaumont. The multi-talented Cocteau was a painter, poet, and dramatist who is also remembered for his experiments in surrealist and avant-garde techniques.

Founded in the early 1920s, the Surrealist movement concerned itself with the connection between reality and fantasy, rationality and the unconscious. By harnessing and combining these opposing spheres, the Surrealists attempted to create a kind of "super-reality" characterized by disturbing, irrational, and dream-like images. While many employed shocking images in order to critique the status quo, Cocteau devoted himself to the aesthetic ramifications of the movement. In *Le Sang d'un poète* (*The Blood of a Poet*, 1932), Cocteau used special effects to create a disjointed, expressionistic commentary on the angst of the artist. Inspired by the myth of Orpheus, this short experimental film used dream-like images to suggest the sacrifices that the artist makes in the service of art.

In *Beauty and the Beast*, Cocteau created a more traditional, full-length narrative. Starring Jean Marais and Josette Day, this beautiful black-and-white film tells the story of a young woman who finds herself a prisoner of a strange man/beast in atonement for her father's theft of a rose from the Beast's garden. Beauty is frightened by the growling Beast and by the enchanted manor he inhabits. Bodiless human hands usher Beauty into the castle and magically serve her dinner, while lifeless statues periodically awaken to observe her actions. Cocteau used simple but clever mechanical effects to create these and other celebrated moments of cinematic fantasy. Ultimately, Beauty and the Beast come to love one another, and when the Beast is killed at the end of the film, he turns into a prince as he and Beauty fly into the sky in a romantic embrace. Jean Marais plays three characters here: the Beast, the Prince, and Beauty's original suitor (Avenant), who simultaneously changes into the Beast just as the Beast is transformed into the Prince.

In *Orphée* (*Orpheus*, 1950), Cocteau returned to the mythological theme of his first film, updating the story and creating a full-length narrative with a surreal bent. Set in modern-day France and once again starring Jean Marais, the film tells the story of Orpheus and his lover Eurydice as he follows her into the underworld following her death. Here and in other films, Cocteau employed a mirror motif to connote either a window into a distant place or a portal into another world. Continuing his obsession with the role of the artist, Cocteau rounded out his trilogy of Orpheus films in 1960 with *Le Testament d' Orphée* (*The Testament of Orpheus*), in which he appeared as himself.

Beauty and the Beast earned Cocteau the Prix Louis Delluc as well as a number of prizes at the Cannes Film Festival. Cocteau was elected to the French Academy in 1955.

Cocteau's black-and-white, live-action fantasy remains the quintessential version.

Elsewhere, Sweden's Ingmar Bergman (b. 1918) was responsible for a number of surreal films, such as *Det sjunde inseglet* (*The Seventh Seal*, 1957), in which a knight returns from the Crusades and challenges Death to a chess game. In Italy, Federico Fellini (1920–1993) broke from the neorealist movement to produce his disjointed, dreamlike classics *8½* (1963) and *Giulietta degli spiriti* (*Juliet of the Spirits*, 1965). And in Japan, Kenji Mizoguchi (1898–1956) produced the ghostly *Ugetsu monogatari* (1953).

Jean Cocteau creates a charming fantasy world with minimal means in* La belle et la bête *(*Beauty and the Beast*, 1946). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

Beginning in the late 1970s, Hollywood experienced a renewed interest in science fiction and fantasy, stoked in part by the films of George Lucas (b. 1944) and Steven Spielberg (b. 1946). *Star Wars* (1977) and *E. T.: the Extraterrestrial* (1982) were among the many popular films to whet movie-goers' appetites for a more upbeat type of science fiction than had been popular in the 1950s and 1960s. *Star Wars* drew inspiration from *Kakushi-toride no san-akunin* (*The Hidden Fortress*, 1958), directed by the well-known Japanese filmmaker Akira Kurosawa. The 1980s also saw a spate of medieval sword and sorcery films, spurred by the popularity of the role-playing game Dungeons and Dragons. While films such as *Dragonslayer* (1981) and *Ladyhawke* (1985) were not widely popular, they paved the way for the hugely successful *Lord of the Rings* trilogy, the first of which premiered in 2001. That same year, the runaway success of the Harry Potter children's books spawned the franchise for another film series about magic and heroism with *Harry Potter and the Sorcerer's Stone* (2001).

In the 1990s, *Ghost* (1990) emerged as the most popular among a series of supernatural melodramas that eschewed horror for comic or dramatic stories. Even *The Sixth Sense* (1999), which initially presented itself as horror/suspense, eventually revealed itself to be more of a melodrama in the tradition of *Ghost* (1990), *Always* (1989), and *Truly Madly Deeply* (1991). Many supernatural melodramas drew inspiration from earlier films. *City of Angels* (1998) was a mainstream remake of the art film *Der Himmel über Berlin* (*Wings of Desire*, 1987), directed by the German filmmaker Wim Wenders (b. 1945). *The Preacher's Wife* (1996), *Michael* (1996), and *Meet Joe Black* (1998) provided variations on a type of non-horror, supernatural film that had experienced popularity in the 1930s and 1940s—for example, *The Bishop's Wife* (1947), *Here Comes Mr. Jordan* (1941), and *Death Takes a Holiday* (1934).

In the United States and elsewhere, it was computer-generated imagery (CGI) that most affected the look and feel of cinematic fantasy in the 1980s and 1990s. The technology didn't truly come of age until the underwater fantasy *The Abyss* (1989) and later *Toy Story* (1995), an "animated" film made completely with computer imagery. Also notable for their reliance on CGI were the highly successful *Jurassic Park* (1993), *Terminator 2: Judgment Day* (1991), *Forrest Gump* (1994), and *The Mask* (1994). *The Matrix* (1999) introduced a striking new approach to the choreography of action and fight sequences. *The Matrix* was heavily influenced by martial arts specialists in Hong Kong and China, including John Woo (b. 1946) and the Vietnamese-born Tsui Hark (b. 1950), whose popular action/fantasies such as *Suk san: Sun Suk san geen hap* (*Zu: Warriors from the Magic Mountain*, 1983) have earned him comparison to Spielberg. *The Matrix* also drew inspiration from Japanese anime films such as Mamoru Oshii's (b. 1951) *Kô kaku kidôtai* (*Ghost in the Shell*, 1995). One of the first anime films to make an impact on Hollywood was Katsushiro Otomo's (b. 1954) violent techno-fantasy, *Akira* (1988). And although Hayao Miyazaki's (b. 1941) *Mononoke-hime* (*Princess Mononoke*, 1997) and *Sen to chihiro no kamikakushi* (*Spirited Away*, 2001) have not been widely viewed in the United States, their box-office success in Japan has helped make anime fantasy a major movement in international cinema.

THEORY AND IDEOLOGY

Much that has been written about fantasy focuses on it as a literary genre, but it can be equally applied to cinema. Although it is common to classify fantasy texts by themes and motifs or by the extent to which story-worlds and events deviate from realistic representations, Tzvetan Todorov concentrates on the *response* generated by the "fantastic" events in the story. In this light, fantasy must be considered not just *one* "mode," but *three*, since it creates a continuum stretching from "the marvelous" to

"the uncanny," depending on the extent to which the characters and/or the reader experience feelings of awe and hesitation provoked by strange, improbable events. If the narrative's impossibility can be explained rationally or psychologically (as a dream, hallucinations), then the term "uncanny" is applied. The purely "fantastic" comes into play only during the hesitation and uncertainty experienced by the characters and/or the reader/viewer when faced with an impossible occurrence. By contrast, the term "marvelous" is applied to self-contained story worlds such as those of *The Lord of the Rings* or *The Dark Crystal* (1982), which do not ask the reader or viewer to question the reality of the story. (J. R. R. Tolkien called this "subcreation," also referred to as "High Fantasy.")

The Wizard of Oz demonstrates all three modes operating within a single fantasy. Unlike films that propose an alternate, imaginary universe as the setting for the entire tale, *The Wizard of Oz* frames its fantasy world with the real world of Kansas, suggesting that Oz is only a fantasy of the imagination. In light of Todorov's definitions, we can see that upon first encountering Oz, both Dorothy and the audience are operating in a "fantastic" capacity. But wonder and disbelief eventually give way to "marvelous" acceptance, and Dorothy and the audience participate in the quest to find the wizard and ultimately kill the wicked witch. While Dorothy and the audience may continue to "marvel" at the strangeness of creatures and events in Oz, it is never suggested that Oz is not actually "real" until the end, when the dream explanation shifts our understanding of the events into the "uncanny" mode. Our prior willing suspension of disbelief only adds to the impact of the final scene, when the audience shares Dorothy's consternation at being told it was all "only" a dream.

As a psychological phenomenon, the term "fantasy" refers to our unconscious desires (dreams, daydreams, wishes). For this reason, Rosemary Jackson notes that fantasy stories are perhaps the type of fiction most amenable to psychoanalytic interpretations. Although Jackson applies her analysis only to fantasy literature, it can be easily extrapolated to film. Drawing on Todorov's definition, Jackson argues that the fantastic is inherently subversive. By raising questions about reality and by revealing repressed dreams or wishes, fantasy makes explicit what society rejects or refuses to acknowledge. Indeed, to the extent that it includes the surreal and experimental, fantasy is often *explicitly* subversive. The original surrealists thought art should be shocking and politically progressive, and they intentionally disrupted those cinematic conventions that help create coherence and meaning for the viewer. But most mainstream fantasy films take care to adhere to the conventions of classical cinematic storytelling while constructing coherent space, time, and narrative causality. Nevertheless, horror differs from fantasy in this respect: it is a form of mainstream fantasy whose formulaic content is often examined for its subversive potential and for symptoms of a culture's repressed desires.

While horror has received much critical attention, other types of fantasy are often rejected as being merely "escapist"—a term generally associated with works of art that one is not supposed to take seriously. Most fantasy films are considered escapist because they temporarily transport viewers to impossible worlds and provide unrealistic solutions to problems. Even Jackson concedes that most fantasy is "marvelous" instead of truly "fantastic," more a matter of wish fulfillment than of challenge. Indeed, referring to *The Lord of the Rings* trilogy from which the films were adapted, Jackson describes Tolkien's fantasy as inherently conservative and nostalgic. With its magic, fantastical beings and clear-cut delineations of good and evil, *The Lord of the Rings* presents a compelling fantasy mirrored to some extent in the *Harry Potter* films. Many would argue that *Harry Potter*, like *The Lord of the Rings*, uses imagination to uphold rather than to transcend traditional values. Both tend to reinforce a hierarchical world based in traditional notions of morality, gender, and heroism. Both rely on a sense of mystical destiny and grace that, while not explicitly religious in nature, exhibits the strong influence of a traditional Western and Christian perspective. Both series feature a reluctant and somewhat unlikely young hero, and both offer the audience an escape into a different world where difficult problems are solved through magic as well as old-fashioned courage and integrity. The *Harry Potter* films differ from *The Lord of the Rings* trilogy, however, in pitting the viewer's own sense of "reality" against the magical world of wizards and witches.

A psychoanalytic approach to fantasy must take into account not just the psychological underpinnings of the characters but the pleasure and appeal of the story for the viewer. The most successful fantasy films provide viewers with vicarious experiences that resonate with emotional, if not physical, reality. Both *Harry Potter* and *The Lord of the Rings* demonstrate the appeal of fantasy as a vehicle for wish fulfillment through their glorification of magical (hence unrealistic) solutions to serious problems. The viewer lives vicariously through the characters of Frodo and Harry, who strive to overcome the forces of evil. The psychological appeal of fantasy helps to explain the frequency of the Oedipal scenario in these types of narratives. For example, *Star Wars* features a classic Oedipal struggle between Luke and his father. Superhero movies also construct appealing fantasy scenarios, often starring unlikely or reluctant male heroes reminiscent of Frodo and Harry. *Superman* (1978), *Batman* (1989), and *Spider-Man* (2002) were popular movies that featured "ordinary" protagonists whose unremarkable talents presumably resonate on some

level with most viewers. This ordinary-ness is revealed as a mere facade, however, masking the true superhuman powers of the character—another attractive problem-solving solution for consumers of fantasy.

Similarly, many recent supernatural/ghost movies also deny the reality of death by magically bringing back beloved characters as ghosts, as in *Ghost* and *Truly Madly Deeply*. A psychoanalytic interpretation of such fantasies, however, yields a more subtle interpretation. Whether or not such films are wish-fulfillment fantasies matters less than whether or not wish-fulfillment fantasies are inherently conservative. There is certainly nothing subversive about a story in which a male character wishes to become more macho (as in *Spider-Man*), for such fantasies merely reinforce traditional Western ideas about masculinity, echoed in many of the fantasy films discussed here. But just because some fantasies are conservative does not necessarily mean that escapism is a worthless denial of reality and therefore of no cultural value. For example, recent melodramatic and comedy ghost films share a tendency to challenge traditional gender roles by creating passive and "emasculated" male characters (*Ghost*, *Truly Madly Deeply*, *The Sixth Sense*) who contrast sharply with the active male protagonists found in most Hollywood movies.

Regardless of whether or not these and other fantasy films are truly subversive or politically liberating, many fantasy movies provide an interlude in which viewers are invited to entertain forbidden desires and other heretofore unimagined possibilities. Thus, to draw on Jean Laplanche and Jean-Bertrand Pontalis's definition of fantasy as a psychological phenomenon, a fantasy film is thus literally the "*mise-en-scène* of desire," the setting whereby impossible desires may play out to their logical conclusions.

FASHION

Fashion's relationship to film is characterized by two factors: how film has influenced fashion and how fashion and the work of specific fashion designers have been used in film. These are not mutually exclusive but parallel trajectories. The extrovert couturier Elsa Schiaparelli (1890–1973) once remarked that what Hollywood did today, fashion would do tomorrow, but it could be said equally that what fashion did today, cinema would do tomorrow. Hollywood, for example, instantly dropped its hemlines following the vogue for longer fashions set by Jean Patou (1887–1936) in 1929. More commonly, a monolithic institution like Hollywood has not always been swift to change; once it has found a fashion it likes, it tends to stick with it, as was the case with Patou's long, bias-cut style, which prevailed with few exceptions throughout its films of the 1930s.

CINEMA'S FASHIONABILITY

Fashion—or rather the fashionability of film, particularly Hollywood's—has always been an important element of cinema's appeal. There are many individual examples of garments having had a direct impact on off-screen fashions and sales. For example, one of the designer Adrian's (1903–1959) robes for Joan Crawford in *Letty Lynton* in 1932, the year Crawford was first named "The Most Imitated Woman of the Year," was widely copied, as was Edith Head's (1897–1981) white party dress for Elizabeth Taylor in *A Place in the Sun* (1951). Head herself once declared that she had seen more than thirty copies of the dress at a single party. Other elements of a movie star's look were mimicked by an adoring film-going public: Veronica Lake, for example, was reputedly asked to change her peek-a-boo hairstyle because as worn by her many female fans, it was causing accidents in the wartime factories of the 1940s. Later, one could point to the notable effect films such as *Bonnie and Clyde* (1967) and *Annie Hall* (1977) had on contemporary fashions. Faye Dunaway's thirties wardrobe in *Bonnie and Clyde* has been credited with re-launching the beret and the cardigan, while Diane Keaton's androgynous ensembles as Annie Hall—created by the American fashion designer Ralph Lauren (b. 1939)—were swiftly copied in both the exclusive pages of *Vogue* and on the High Street, where the wearing of masculine trousers, shirts, and waistcoats by women became the epitome of chic. Through the influence of film on fashion, one can see the true democratization of the movies and movies' relationship with spectatorship: the fans might not be able to become their favorite stars, but they can mimic and emulate them.

Similarly, in contemporary cinema one can see the same pattern of mimicry when it comes to both clothes and accessories—a crucial difference being that it is now more often the male stars who have become fashion icons, in keeping with a heightened awareness of male fashion that has been evident since the early 1990s. Retro aviator shades made a comeback after Tom Cruise wore them in *Top Gun* (1987); after the success of Quentin Tarantino's second movie, *Pulp Fiction* (1994), the black suits and monochrome outfits of French designer Agnès (b. 1941) (along with Uma Thurman's Chanel "Rouge Noir" nail varnish) became synonymous with masculinity and cool. In this millennium, one could point to the innate fashionability of *The Matrix* (1999): Keanu Reeves's long swishing coat, his mobile phone, and his glasses.

However, fashion's relationship to film extends beyond the domain of film's fashionability. In the 1920s,

Joan Crawford wearing one of Adrian's gowns for **Letty Lynton** ***(Clarence Brown, 1932).*** EVERETT COLLECTION. REPRODUCED BY PERMISSION.

1930s, and 1940s, few fashion designers did much work for films, the notable exception being Chanel (1883–1971), who in 1931 went to MGM. Her Hollywood film work was not deemed a success; Chanel was too meticulous and precise (insisting at one point on making several copies of the same dress, one for each individual scene), and she soon elected to return to Paris, later designing costumes for such films as Louis Malle's *Les Amants* (1958) and Alain Resnais's *L'année dernière à Marienbad* (*Last Year in Marienbad*, 1961). The most important fashion designers have not always been those who have become involved in film and film costume design. While the influence of Christian Dior's "New Look," launched in 1947, endured within Hollywood far longer than it did outside it (so much so that the much more fashionable *Funny Face* [1957] looked slightly anachronistic alongside mid-1950s contemporaries, such as *Rear Window* [1954] and *All That Heaven Allows* [1955]). Dior himself lent his designs to a relatively small and eclectic series of films, including René Clair's *Le silence est d'or* (*Man About Town*, 1947), Jean-Pierre Melville's *Les enfants terribles* (1950), and Alfred Hitchcock's *Stage Fright* (1950).

Although historically significant overlaps have existed between the two, fashion and costume design remain separate arts. Whereas the costume designer, more often than not, serves the dominant purposes of character and narrative, the fashion designer, when used in a film, frequently is brought in to achieve virtually the opposite result (an exception here would be cinema's use of classic designers, such as the Italian Giorgio Armani [b. 1934]). In rare instances, individuals have had dual careers as fashion and costume designers, the most notable example being Jean Louis (1907–1997), who was born in Paris and trained at the Paris couture house of Drecol before going to New York to work for Hattie Carnegie. Louis then made the switch to Hollywood and became head designer at Columbia Pictures from 1944 to 1958, when he moved to Universal. Simultaneously, Louis ran his own couture business, often supplying clothes for his favorite female stars (Doris Day, for instance) for their appearances both on and off the screen. In the same vein, Edith Head (1897–1981) was fond of recounting how Grace Kelly was so enamored of her designs for *To Catch a Thief* (1955) that she wore one of her costumes on a date with future husband Prince Rainier; later Kelly commissioned MGM designer Helen Rose (1904–1985) to design her wedding dress and Head to design her going-away outfit.

FASHION DESIGNERS AND FILM

It was Hubert de Givenchy's (b. 1927) collaboration with Audrey Hepburn that fundamentally changed the relationship between film and fashion. In *Sabrina* (1954), as in *Funny Face*, the distinction between the costume designer and the *couturier* co-opted into costume design is signaled ironically within the films' Cinderella narratives. In both, Edith Head, the films' costume designer, produced the drab, ordinary clothes that Hepburn wore as the still-immature chauffeur's daughter or bookshop assistant. In both films, Head's role as designer was usurped by Givenchy who designed the show-stopping evening gowns that Hepburn wore after her character had metamorphosed into a sophisticated, glamorous woman. The joke in *Funny Face*—in which Hepburn's character models clothes on a Paris catwalk—is ultimately that, for all the appeal of high fashion, Hepburn is happiest (and most iconic) when dressing down in black leggings, polo neck, and flats.

Following these films, *couturiers* it became far more commonplace to use couturiers alongside costume

GIORGIO ARMANI

b. Piacenza, Italy, 11 July 1934

The Italian designer Giorgio Armani, known for his classic designs, neutral tones, and unstructured suits, has made a significant intervention into film history. Armani is arguably best known for the Hollywood stars he has dressed for the Academy Awards® (for example, Jodie Foster and Michelle Pfeiffer). However, his costumes for Richard Gere's character Julian in *American Gigolo* (1980) helped to alter the way in which mainstream cinema perceived and represented masculinity. The most cited scene in the movie shows Julian choosing an outfit to wear for an evening appointment. He lays out on his bed a selection of Armani jackets, then matches them with some shirts and finally adds an array of possible ties. While choosing what to wear, Julian shimmies sensuously to music, dressed only in his boxer shorts. Then he gets dressed and checks his appearance in the mirror. Julian's overt narcissism, coupled with his love of Armani's expensive clothes, ushered in a radical recodification of heterosexual masculinity on screen.

Since *American Gigolo*, Armani has costumed many films, particularly in Hollywood. Sometimes he has provided only items for the stars' wardrobes: for Eddie Murphy in *48 Hours* (1982), Mel Gibson and Rene Russo in *Ransom* (1996), and Samuel L. Jackson in the remake of *Shaft* (2000). By 2000, Armani's name itself had gained enough narrative significance for Shaft to be able to warn another character possessively not to touch his Armani. Dressing male characters has set Armani apart, and he has been particularly effective at dressing groups of men. He uses costumes to denote camaraderie, support, and affection between the protagonists of *The Untouchables* (1987) and characters in the remake of *The Italian Job* (2003), deftly dressing them in the Armani capsule wardrobe of the time. In both films, the group's leader (Kevin Costner and Donald Sutherland, respectively) wears a paternal, safe, and suavely unstructured wool coat, while the young turks (Andy Garcia and Mark Wahlberg, respectively) wear slightly spiffier leather jackets and casuals. This form of typage through costume is quintessential Armani.

Armani has made himself synonymous with effortless elegance. This equation was not automatic, because his suits were used in the TV series *Miami Vice* and in *Cadillac Man* (1990) to suggest shallow tackiness. The crucial component in his innate class has been his Italianness. Most enduring has been his friendship and collaboration with Martin Scorsese. The two worked together on *Made in Milan* (1990), a twenty-minute short Scorsese directed about Armani that was notable for its extravagant and stylized filming of a catwalk show. Armani later acted as executive producer for Scorsese's reverential history of Italian cinema, *Il mio viaggio in Italia* (1999), thus cementing his integration into cinema history.

designers on movies, and certain couturiers were given virtual license to use the films on which they worked as showcases for their own fashion designs. There is little sense here of costume's traditional subservience to character and narrative. Hardy Amies (1909–2003) (the British Queen's favorite fashion designer) designed the wardrobe for films such as *The Grass Is Greener* (1960) and *2001: A Space Odyssey* (1968). His designs for the latter, though muted compared to much of the 1960s "space age" fashion, were very much of their time and quintessentially Hardy Amies: classic, refined, but never too daring. This incorporation of classic as opposed to outrageous fashion designers into film increasingly predominated, particularly in Hollywood. In European cinema, one can point to the example of Yves Saint Laurent (b. 1936), whose muse was the French actress Catherine Deneuve. Saint Laurent's designs for Deneuve as Severine in Luis Bunuel's *Belle de Jour* (1967) epitomized his approach: her clothes are straight and muted, notable for their unsexy elegance (ironic considering Severine's day job as a prostitute), much like Saint Laurent's own classic-with-a-twist late-1960s lines. Severine is enigmatic

Giorgio Armani. **PHOTO BY GREGORIO BINUYA/EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

and unobtainable; her wearing of an Yves Saint Laurent capsule wardrobe in *Belle de jour* (1967) confirms the use of fashion as a means of maintaining this distance and representing her exclusivity, her wealth, and her class.

Within Hollywood, the most prolific *couturier* costume designer is Giorgio Armani, whose costumes work to define character and narrative. Other designers whose work is used in films in a similar way have been Nino Cerruti (b. 1930), with whom Armani trained, Ralph Lauren (b. 1939), Donna Karan (b. 1948), and Calvin Klein (b. 1942), all quintessentially classic designers. Lauren's most important film as costume designer is *The Great Gatsby* (1974), soon followed by *Annie Hall*. These two films together defined the retrogressive and romantic trends in US fashions that would begin to predominate off as well as on the screen in the 1970s. The significance of fashion designers' contributions to film should perhaps be judged by their ability to manufacture a pervasive image and to evoke a lifestyle. Lauren achieved this with his films of the 1970s (the class aspirations encapsulated by *The Great Gatsby,* the feminist aspirations represented by Keaton's androgynous look in *Annie Hall*), although recently he is probably better known for having dressed Gwyneth Paltrow in pink for her Academy Award® Best Actress acceptance speech. Cerruti's costumes for Richard Gere in *Pretty Woman* (1990) or Karan's for Gwyneth Paltrow in Alfonso Cuaròn's modern-day *Great Expectations* (1998), like those of Lauren and Cerruti, remain stylish but unobtrusive, conjuring a look that connotes a certain class, breeding, and refinement. Cinema's most popular *couturier* costume designers, it seems, are those who follow the underpinning conventions of costume design and produce safe, middle of the road designs rather than more spectacular, outrageous costumes.

Fashion is more often considered a craft than an art, and self-consciously artistic, spectacular fashions have been reserved for self-consciously spectacular, art-house movies. Jean-Paul Gaultier (b. 1952) has been the most prolific of these designers, doing costumes for various nonmainstream films, including *The Cook, the Thief, His Wife, and Her Lover* (1989), *Kika* (1993), and *La cité des enfants perdus* (*The City of Lost Children*, 1995), as well as producing all the costumes for Luc Besson's more mainstream sci-fi extravaganza, *The Fifth Element* (1997). In all of these, Gaultier's designs are exaggerated versions of his signature fashion styles, in the way they make underwear into outerwear, juxtapose asymmetrical cutting with classic tailoring. In *Kika*, the smooth surface of classicism—exemplified by Victoria Abril's black, bias-cut dress—is ruptured by radical flourishes, such as the prosthetic breasts bursting out of the dress. Gaultier, unlike many other fashion designers turned costume designers, immerses himself in his films, designing costumes for all the characters, not just the protagonists, and reputedly checking all costumes before they go on set. Just as his designs are fantastical rather than wearable (his designs for *The Fifth Element* include Gary Oldman's asymmetrical suits and Milla Jovovich's minimal bondage gear), so Gaultier's personality is important. Unlike Armani or Lauren, who have taken their involvement in film extremely seriously, Gaultier has not been averse to sending himself—and by implication, the fashion world—up. Gaultier's personality has demystified high fashion; he has appeared as himself in Robert Altman's parody of the Paris fashion scene *Prêt-a-porter* (1994), mixing white and red wine together to make rosé, and from 1993 to 1997 he fronted the TV show *Eurotrash*, a broadcast that, as its title suggests, sought out and edited together examples of trashy, gross, and comic European television.

The accessibility of fashion in film has become a hugely significant factor in its appeal reminiscent of the prewar era of *Letty Lynton*, when women bought patterns of their favorite movie dresses to sew them for themselves. Quentin Tarantino's *Reservoir Dogs* (1992), which inspired the design of London department store windows and led to an increase in the wearing of dark suits and

shades among younger men, is just such an example of film's democratization of fashion. The costume designer Betsy Heimann bought the suits seen in *Reservoir Dogs* cheaply. When the film became successful, so did the clean-silhouetted French gangster look, which Tarantino readily admitted to having borrowed from a look created by French director Jean-Pierre Melville (1917–1973) for his movie gangsters. *Reservoir Dogs* offered style on the cheap because it offered a look rather than an exclusive range of garments.

Audiences respond positively to being able to buy and emulate what they see on the screen—for example, Nicole Kidman's half-fitted, half-loose teddy in *Eyes Wide Shut* (1999). Once women found out what the garment was, it was sold out everywhere. What has emerged is a fluid, flexible interaction between fashion and film—sometimes fashion borrows from film, often the exchange is reversed.

FEMINISM

The emergence of the women's liberation movements in the late 1960s and early 1970s had a profound impact on scholarship as well as on society. Betty Friedan's *The Feminine Mystique* (1963) set the stage for liberation movements by detailing middle-class women's isolation, even oppression, within the suburban household. Women's roles in the antinuclear movements, such as the Aldermaston marches in the United Kingdom or SANE (Students Against Nuclear Energy) in the United States, further served as catalysts in the mid-1960s within diverse social sectors. For example, women within the male-dominated Students for a Democratic Society (SDS) began to resist their relegation to food preparation and child care, and to argue for women's rights to be included in the SDS agenda. In NUC (the New University Community), a faculty wing of SDS, pressure increased in regard to addressing women's issues, such as discriminatory employment practices, unfair divorce laws, and attention to medical and biological issues specific to women. Independent Marxist-feminist groups emerged along with so-called radical feminists, often linked to lesbian-centered groups. Protests and demonstrations on behalf of women's rights regarding sexual choice, day care, and equality in the workplace pushed women's liberation into the public spotlight. Gradually public awareness and involvement in debates about feminist issues increased. Meanwhile, female perspectives, long neglected in mainstream academic research, began to gain the attention of historians and literary and film scholars. Indeed, these two faces of feminism can hardly be separated: Academic women were often actively involved in working for social change on a range of women's issues, while activist women often enjoyed the support of universities in furthering their ends.

Women film scholars were among the first to reject the traditional male-centered perspectives in academia and, with Copernican force, to reverse the position from which texts were approached to engage a female-centered one. With *Sexual Politics* (1970), a forceful critique of misogyny in the male modern novel and of Freud's male-centered psychoanalytic theories, Kate Millett burst on the literary scene and was soon followed by other (less vitriolic) feminist literary critics. Women film scholars, too, eagerly took up the baton. Meanwhile, male film theory (especially in England) introduced structuralist approaches in the wake of research by scholars such as Louis Althusser, Roland Barthes, and Jacques Lacan. In this context, some feminist film theory also turned to neo-Marxism, structuralism, and psychoanalysis in ways not so common at the time in feminist literary analyses. Feminist critics began to look at the ways in which women were represented on film as well as to expose the utter neglect of female directors in male scholarship; in the wake of these initiatives, film scholarship was never again the same. Three main strands (in practice, often mixed) emerged early on in feminist film theory: "archival" and historical approaches, sociological role-focused approaches, and what has been called cine-psychoanalysis. A certain coherence within the limited frame of 1970s and 1980s feminist film research can be demonstrated, built around the concept of the gendered gaze of the camera; but in the 1990s, as a result of changing political, social, and intellectual contexts, including the waning of feminism as a widespread activist movement, several alternate perspectives

developed. There was the flood of research by minority and women of the Third World (itself a problematic and much-debated term). Masculine studies, inspired by feminist theory, emerged, as well as queer studies, which severely challenged some of the concepts basic to feminist film theories. Finally, the introduction of new interdisciplinary fields like visual studies and digital media, related to film studies, had the effect of broadening the somewhat narrow gaze-related theories to consider historical, technological, and institutional contexts given short shift in cine-psychoanalysis. Second-wave feminist theorists have further revised gaze theories.

FROM ARCHIVAL RESEARCH TO CINE-PSYCHOANALYSIS

In tandem with ongoing scholarship in history and literature, women film scholars have long endeavored to identify forgotten filmmakers—forgotten because most male film critics and scholars writing before the 1960s were not interested in women directors. Because their films were in distribution, Dorothy Arzner (1897–1979) and Ida Lupino (1914–1995) were the first women directors in the sound era to be studied. Foreign directors, like Mai Zetterling (1925–1994), also gained attention at this time. Later, feminists took a great deal of interest in women directors and producers from the silent era, like Lois Weber (1881–1939) and Mary Pickford (1892–1979). Since the 1990s, the Women Film Pioneers Project has been engaged in intensive international study of early women in cinema in their many roles.

Sociological analysis of women in film soon followed. Three books on women and film emerged at nearly the same time in the early 1970s, mainly using a sociological and role-focused analysis: Molly Haskell's *From Reverence to Rape* (1973), Marjorie Rosen's *Popcorn Venus* (1972), and Joan Mellen's *Women and Their Sexuality in the New Film* (1974). Although perhaps insufficiently appreciated by academic feminists in its historical moment, Haskell's book has had the longest-lasting impact. Feminist film theorists of the time, frustrated by sociological and role analyses, were seeking to move beyond Haskell's approach. Drawing on a vast knowledge of Hollywood as an institution and of movies themselves, Haskell took a penetrating look at the shabby treatment of women on- and offscreen. She had a strong feminist understanding of how threatened American men felt by women, as well as an intense appreciation of actresses and their performances. Haskell points out the irony that both the Production Code and the Depression "brought women out of the bedroom and into the office" (p. 30). She argues that actresses of the 1930s and 1940s (such as Rosalind Russell, Katharine Hepburn, and Joan Crawford) offered images of intelligence, forcefulness, and personal power, far surpassing roles of actresses in later films. Male directors who "integrate women into the flow of life" enjoyed the spunky, smart woman capable of challenging the hero. Haskell defines herself as a film critic first and a feminist second, hoping to address "the wholeness and complexity of film history" (p. 38).

A new generation of women film scholars turned to the melded disciplines of metaphysics, semiotics, and psychoanalysis, a shift prompted by what they saw as the limits of studies focusing on individual actresses and women's roles in cinema. To compare images of women in film with women's lived reality seemed simply to critique the current gendered organization of society or to expand it by, for instance, insisting on more male involvement in domestic matters. The new scholars hoped instead to discover the root cause of women's secondary status in Hollywood and society in the first place. Laura Mulvey's groundbreaking essay, "Visual Pleasure and Narrative Cinema" (1975), partly inspired by reaction to American sociological film analyses, seemed to fulfill the need for a new kind of analysis, and her ideas rapidly took hold. Mulvey's polemical contribution was to isolate three related "looks" in Hollywood cinema, and to argue that these were all male: the look of the camera (mainly operated by men) in the pro-filmic studio site; the look of the spectator, which of necessity followed the camera's masculine gaze; and the dominating look of male characters within the filmic narrative, depriving women of agency and subjectivity. Theorizing the cinematic gaze from a psychoanalytic perspective, Mulvey argued that in film viewing the screen paralleled Jacques Lacan's mirror phase in which the child misrecognized his perfect self. Cinema was set up so that men could identify with the idealized male hero within the symbolic order as presented by the narrative, while women were left to identify with figures relegated to inferior status and silenced. Mulvey was one of the first to appropriate psychoanalysis as a political weapon to demonstrate how the patriarchal unconscious has structured film form. The essay's significance derived in part from her vivid language: "Woman's desire is subjugated to her image as bearer of the bleeding wound: she can exist only in relation to castration and cannot transcend it." Man, she argued, can live out his fantasies by "imposing them on the silent image of woman still tied to her place as bearer, not maker, of meaning" (*Visual and Other Pleasures*, p. 14).

In the wake of Mulvey's deliberately polemical essays, certain tropes and conventions began to develop in relation to a "male" gaze and the three "looks" that Mulvey outlined. In addition, British and American television studies had an impact on psychoanalytic feminist

DOROTHY ARZNER

b. San Francisco, California, 3 January 1897, d. 1 October 1979

Dorothy Arzner and Ida Lupino were the only female directors in the classical Hollywood era (roughly 1930 to 1960). Both received scant attention until scholars began to study film from a feminist perspective. After serving her apprenticeship in Hollywood, first as typist and then as screenwriter and successful film editor, Arzner directed films for Paramount from 1927 to 1933, when she left to make films independently. She retired from filmmaking in 1943 for reasons that remain unclear but perhaps have to do with her health or the exhaustion of working in a male-dominated establishment. Despite Arzner's short Hollywood career, she made several important films, including *Christopher Strong* (1933), *Craig's Wife* (1936), and *Dance, Girl, Dance* (1940), that now belong to a canon of what have been called "resisting" Hollywood melodramas.

Although many of her films appear to conform to Hollywood's patriarchal ideology—something Arzner no doubt was careful to do to keep her job—there is often a critical undertow to her narratives. In *Christopher Strong* Katharine Hepburn plays an independent, pioneering female pilot, Lady Cynthia Darrington (loosely modeled on Amelia Earhart). In love with a married man by whom she has become pregnant, she apparently commits suicide when attempting to break an aviation record. Arzner clearly intends the viewer to identify with the courageous female aviation pioneer, and to see in her suicide her sense of responsibility both toward Strong's wife and her unborn child. *Craig's Wife* offers a contrasting type of heroine and demands other kinds of identification from the viewer. Harriet Craig (Rosalind Russell) dominates her daughter, intervenes in her love life, and tries to prevent her from marrying the man she adores. Although it is hard to identify with Harriet, Arzner manages to show how the entire upper-middle-class family system produces women like her.

Dance, Girl, Dance offers an interesting insight into the often degrading lives of female performers. The film's perhaps dated binary opposition between "high" and "low" female performance art—presented as an opposition between a ballerina (Maureen O'Hara) and a sexy dancer (Lucille Ball)—nevertheless allows her to critique the male gaze and to reveal the crudity of male voyeurism. Women, the film suggests, are split apart because of what men want from them. Thus, in her films Arzner is able to render "strange" the patriarchal ideology pervasive in classical Hollywood cinema.

film theory, for the medium of TV necessitated different theories of the spectator–screen relationship. These theories were seen to have some application to film, expanding the rather restricted notion that there was just one "male" gaze.

Mulvey's essay was often misread as a depressing description of woman's fate rather than as a call to action. Mulvey in fact believed that psychoanalytic theory could advance our understanding of the position of women and thereby enable women to move forward. Her effort to challenge the pleasures of Hollywood cinema arose from Hollywood's reliance on voyeurism—the male gaze at the woman deprived of agency. Her polemical call "to free the look of the camera into its materiality in time and space and the look of the audience into dialectics and passionate detachment" (p. 26) clearly related to her own practice (together with Peter Wollen) as an avant-garde filmmaker.

Mulvey's article prompted a good deal of research, as well as intelligent critiques of her theories. Early on, E. Ann Kaplan's *Women and Film* (1983) tried to straddle some of the debates about feminist film theory ongoing in the 1970s. Asking why some women were so strongly drawn to psychoanalysis and poststructuralism, she

Dorothy Arzner in the 1930s. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

argued that pointing to social oppression per se could not account for women's second-class status. Attention to language and the unconscious seemed to offer some hope of understanding what increasingly seemed a mystery that biology—namely, that women gave birth and were needed to care for children and that this very function limited what they could achieve—could not explain. Too many exceptions showed that women could overcome or deal with their biological roles; there had to be something deeper, something much harder to change than social policies or cultural norms.

Like other work in the field at the time, Kaplan's conception of the feminine, given its generally heterosexual and Eurocentric focus and orientation, was apparently a monolithic "woman" who was really a white, Western woman, neglecting the specificity of minority and other marginalized women. A bit later, David Rodowick pointed out that Mulvey did not attend to Freud's complex remarks about the contradictoriness of desire that calls into question strict gender binaries such as male/female and activity/passivity. Mary Ann Doane extended Mulvey's research, pursuing avenues that Mulvey only touched on. For example, Doane introduced the concept of the female body in its relation to the psyche, as against the prior focus on image and psyche. She contrasted representation of the female body in Hollywood and in avant-garde cinema, influencing later research. Doane also contrasted male and female distance from the image, arguing that for the male the distance between film and spectator must be maintained, whereas the female overidentifies with the image, obliterating the space between viewer and screen, thereby producing a degree of narcissism. Turning to Joan Riviere's concept of the female masquerade, Doane explores what it might mean to "masquerade" as a spectator. She concludes that there are three possible positions for the female spectator: the masochism of overidentification with the image, the narcissism involved in becoming one's own object of desire, and the possibility of cross-gender identification, as women choose to identify with the male hero. Doane objects to theories of repression because they lack feminine power, instead taking the position that women need to develop a theory of spectatorship apart from those that male culture has constructed for them.

Gaylyn Studlar has suggested that a focus on pre-Oedipality makes more sense than the conventional attention to Oedipal scenarios for explaining how films construct gendered spectators. Substituting Gilles Deleuze's study of Sacher-Masoch's novels for Mulvey's Freudian/Lacanian framework, she argues that masochism can also ground narrative. Studlar replaces Oedipal sadism with pre-Oedipal pleasure, viewing masochism as a "subversive" desire that affirms the compelling power of the pre-Oedipal mother.

BEYOND CINE-PSYCHOANALYSIS

As these debates show, there was never any uniformity within cine-psychoanalysis about the gaze, or about what kind of psychoanalysis was most appropriate to cinematic modes. But with its binarisms, psychoanalytic film theories fitted the Cold War era in that they looked back to nineteenth-century Europe and reflected a world fixed on a framework in which communism versus capitalism was a subtext. Freud's theories enabled an understanding of the neuroses produced in the nineteenth-century bourgeois family—itself the anchoring institution for the Industrial Revolution. In this light, using psychoanalysis in a critique of capitalist ideology made sense. In the years since 1983, US culture and society have changed dramatically, as have international relations. It took the collapse of the Soviet Union to open space for rethinking imperialism and it took the increased flows of peoples across borders and into the academy to encourage new perspectives, such as postmodernism and its related postcolonialism.

Dorothy Arzner's* Dance, Girl, Dance *(1940) examines male voyeurism. **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

As cine-psychoanalytic theories began to seem rather formulaic—despite the efforts of Doane and other scholars to underscore the complexities and penetrating questions that such theory involved, and despite Mulvey's own continuing "corrections" to her polemical 1975 essay—more resistance to gaze theories arose. In the 1980s B. Ruby Rich, Gayle Arbuthnot, Sue-Ellen Case, and other gay women offered strong critiques emerging from their alternate perspectives (even if these were not so explicitly marked as "lesbian" as in later work). It was primarily the dominance of French structuralism—Lacanian theories, Saussurian semiotics, and Althusserian Marxism—in gaze theories that troubled critics, along with the obvious heterosexual foundation on which the theories were based. It was this foundation that Teresa De Lauretis so profoundly interrogated. Working with Freud's and Luce Irigaray's theories among others, De Lauretis notes the intimate relationship of sexual and social indifference in Western culture for centuries—a link that served to bolster colonial conquest and racist violence—before turning to examine lesbian representation through diverse attempts of lesbian writers and artists to deploy their struggles in ways that engage the body as linked to language and meaning. Meanwhile, the so-called *Stella Dallas* debate, referring to the 1937 film in which Barbara Stanwyck portrays a woman who gives up her beloved daughter in hopes of giving her a better life among more "respectable" people, dramatized differences emerging in feminist film theory. Kaplan argued that filmic identification with the figure of Stella invited audiences to accept as proper her giving up her daughter and therefore forgoing motherhood through her internalization of patriarchal familial norms. By contrast, Linda Williams argued that the film invited audiences to share multiple points of view, and that Stella's actions could be seen as showing strength and agency. Responses published in *Cinema Journal* between 1984 and 1985 opened for debate and critique some of the

LAURA MULVEY
b. Oxford, England, 15 August 1941

Laura Mulvey could not have anticipated the widespread impact of her short polemical essay, "Visual Pleasure and Narrative Cinema," published in 1975 in the British journal *Screen*. The essay's psychoanalytic formulation of a "male gaze," and its condemnation of classical Hollywood cinema's patriarchal bias, immediately provoked interest, debate, and in some quarters dismay. Those who appreciated Mulvey's theories went on, as did Mulvey herself in her extensive writings, to deepen, adjust, and further her insights; those who responded negatively to the essay were challenged to articulate why, and in so doing to develop other theories. Much of the criticism of the essay called into question its strong psychoanalytic stance, shortchanging its political argument. Since the essay's publication, debates within film theory about the utility of psychoanalytic theories have continued.

In a subsequent essay published in 1981, "Afterthoughts on 'Visual Pleasure and Narrative Cinema' inspired by King Vidor's *Duel in the Sun*," Mulvey addressed persistent questions about her lack of attention to the material female spectator in her "Visual Pleasure" essay. She noted that she was less interested in the female spectator who resists the "masculinization" that Hollywood cinema demands than the one who secretly enjoys the freedom of action and agency that identifying with the male protagonist offers. Using Freudian theories about female sexuality as well as Vladimir Propp's analysis of narrative structure in folk tales, Mulvey examined the difficulty of sexual difference in the western *Duel in the Sun* (1946).

Mulvey is also a filmmaker and has made several with Peter Wollen, including *Penthesilea* (1974), *Riddles of the Sphinx* (1977), and *Amy!* (1979). These films reflect Mulvey's theoretical views of Hollywood cinema, exploring the difficulty of representing the feminine in a patriarchal world. In each film the struggles of women in patriarchy are transformed by placing them within the discourses of psychoanalysis and history. Some of the films make reference to Hollywood cinema—*Amy!*, for example, refers specifically to Dorothy Arzner's *Christopher Strong*—in order to examine the ideological bases of that film.

assumptions in feminist film theory of the time and introduced research on images of the mother in cinema.

Objections to cine-psychoanalysis included: 1) objection to psychoanalytic film criticism's obvious heterosexism; 2) its apparent exclusion of the body; 3) its equally apparent pessimism about social change because of investment in linguistic theories; 4) its incipient "whiteness"; and 5) its a- or even antihistorical bias. Scholars critiquing psychoanalytic theories refused the inherently Cartesian mind–body split; denied that language was totally determining; attended to cinematic practices and representations of minority, Third World, and gay women; and, finally, corrected the lack of basic historical information by seeking to find out what women had actually accomplished in Hollywood from its earliest days. If earlier gay and lesbian critiques anticipated the explosion in gay and lesbian approaches to film, as well as the related "queering" of gender images and psychoanalysis, later work was inspired by Judith Butler's theory of gender as performative rather than biological. Black and Latino studies were instituted as more minority students attended college, and debates about US and international racism raged. Inspired work in feminist film and cultural studies began to develop, led by African American critics and filmmakers, such as bell hooks, Michele Wallace, Jacqueline Bobo, and Julie Dash. In *Black Looks: Race and Representation*, for example, hooks justly criticized feminist theorists for their lack

of attention to the specificity of race in film. Building on white feminists' gaze theories, hooks coined the term "the oppositional gaze" as she shifted the point of view in a series of readings to the gaze of the hitherto oppressed black subject, whose look at white culture was for so long forbidden. Carol Clover moved gaze theories forward, and feminism backward perhaps, in her groundbreaking 1992 study of the horror film, the genre in which emerges, she argues, a gender crossing that is liberating for males. Heroines in slasher films, she says, are "transformed males," and what looks like male-on-female violence stands in for male-on-male sex. Clover goes on to show, however, that this gender game, once observed, applies in other kinds of film in which, perhaps in response to feminist agendas and analyses, males appropriate the female form for their own ends and desires, a process that challenges gender-specific theories of identification.

The directions in which the field grew and changed, through its destabilization by questions raised by minority, gay, and Third World women, eroded older, seemingly secure binaries of feminist film theory. Psychoanalytic theories of the gaze no longer were central to feminist analysis. However, these ideas then informed "masculinity" studies of Steve Neale, Krin Gabbard, and Peter Lehman, which followed feminist film theory and which were part of the shift from feminist film theory to gender studies in film. Within feminist scholarship, approaches broadened to combine historical, sociological, psychological, and genre aspects in research by Miriam Hansen, Lucy Fischer, Annette Kuhn, and Janice Welsch, among others. Hansen's study of gender in early American cinema brought feminist theory to silent cinema studies, while Kuhn's cultural studies approach includes an ethnographic study of cinema viewing practices through interviews with elderly London residents.

A solid body of feminist research, including feminist film theory, has provided the foundation for much cultural work by third-wave feminists, whose interest in cross-identification, transvestism, and transgender images is taking feminist work in new directions. Psychoanalysis may not be the central focus of many studies, but, like gaze theory, it is now being revised to fit new family paradigms, digital media, and phenomena of late global capitalism. Although the pioneers of feminist film theory have moved on to new topics, feminist theory continues to be relevant to film scholarship. A great deal has been written about feminist film theory and its vicissitudes, including many edited anthologies. Significantly, in 2004 the prestigious journal *Signs* devoted an entire issue to reevaluating feminist film theory. Almost from its origins, feminist film theory has been defined by lively debates; but important also are the strong links between the feminist movement and feminist scholarship, which have persisted as feminisms have arisen and waned and then reemerged in different environments.

FESTIVALS

A film festival is an event designed to exhibit, celebrate, and promote a selection of motion pictures chosen according to the particular aims and ambitions of the event's organizers and sponsors. Although the exact origin of the term "film festival" is difficult to determine, its near-universal use probably stems more from its alliterative lilt than from its precision as a descriptive tool. Most film festivals do have characteristics that can be described as festive, such as gala opening ceremonies and guest appearances by directors and celebrities. Still, the events are generally taken quite seriously by the movie buffs, film-industry insiders, and journalists who attend them. Many find festivals to be occasions for prolonged and intensive activity including long hours of screenings, press conferences, question-and-answer sessions, and networking with like-minded professionals and fans.

Beyond these aspects it is hard to generalize about film festivals, which vary widely in their purposes and goals. Some are regional, focusing on productions with limited budgets and ambitions and appealing primarily to local audiences. Others are national or international, drawing attendees from near and far by showcasing a diverse array of movies from many countries. Some have expansive programs with hundreds of titles, whereas others limit their slates to a modest number of rigorously selected entries. Some are eclectic and all-embracing in scope; others have specific interests with regard to genre or format, specializing in such areas as animation, documentary, short films, gay and lesbian films, and films for children. Some give prizes to films, filmmakers, and performers; others deliberately avoid this practice. Few rules for film-festival organizing exist beyond knowing what might currently attract cinema enthusiasts.

HISTORY OF FILM FESTIVALS

The origin of film festivals can be traced to the rise of film societies and cine-clubs, which sprang up in various countries during the 1920s, often as a reaction to what many regarded as the dominance of the newly powerful Hollywood film industry over the cinemas of less well-endowed nations and over noncommercial movements devoted to such causes as documentary and avant-garde film. Such clubs and societies flourished in countries as different as France, where they fostered the emergence of the historically important impressionist and surrealist cinemas, and Brazil, where they provided the only consistent outlet for domestically produced movies. Although most film clubs and societies were in Western Europe, some were established in Latin America and the United States as well. As such groups grew and spread, they started to arrange international conclaves where their members—many of whom were practicing or aspiring filmmakers—could share ideas and inspirations without regard to national borders. Activities like these were the predecessors and prototypes of film festivals per se.

The first true film festival came into being as a direct result of Italian dictator Benito Mussolini's (1883–1945) enthusiasm for motion pictures as a tool for political public relations and propaganda. Eager to spur the development of state-run Italian cinema in the face of competition from Hollywood and elsewhere, he spent lavishly to build up the native film industry while imposing heavy taxation on the dubbing of foreign-language movies, thus hampering their distribution and exhibition. Among the cultural projects he chose to support through his Ministry of Information was the already existing Venice Biennial Exhibition of Italian Art, which gave birth to the

International Exhibition of Cinematographic Art in August 1932 as part of an effort to make the Biennial more varied and multidisciplinary in content. The first cinema program commenced with the premiere of the horror classic *Dr. Jekyll and Mr. Hyde* (Rouben Mamoulian, 1931) and included twenty-four other entries from seven countries. The declared purpose of the exhibition was to allow "the light of art to shine over the world of commerce," but it soon became clear that power politics were a major subtext of the event. In 1935, its first year as an annually scheduled festival, it marked the ongoing rise of European fascism by instituting official prizes in place of the popularity poll and "participation diploma" of the 1932 program. This paved the way not only for a yearly Best Italian Film award but also for productions of Nazi Germany, an Italian ally at that time, to win the Best Foreign Film laurel four times between 1936 and 1942. The arrangement also allowed Leni Riefenstahl's (1902–2003) two-part *Olympia* (1938), a paean to Aryan supremacy in the 1936 Olympic Games, to share the highest prize (the Mussolini Cup) in 1938 with an Italian drama about a fascist soldier in the Ethiopian campaign. It seemed hardly coincidental that Mussolini's oldest son, Vittorio, appeared in the credits as "supervisor" of the latter film. American and British members of the festival jury resigned as soon as these awards were made public.

French participants in the festival also walked out, protesting the Mussolini Cup decisions and expressing belated anger over the 1937 veto by festival authorities of a top prize for Jean Renoir's great war drama *La grande illusion* (*The Grand Illusion*, 1937), the much-admired French entry. This proved to be an unofficial first step toward the establishment of a French film festival designed to outdo and overshadow its Italian counterpart, which was now politically and morally tainted in the eyes of much of the cultural world. The cinema authority Robert Favre le Bret and the historian Philippe Erlanger, who was chief of an organization called Action Artistique Français, headed the committee charged with creating such a festival, and pioneering filmmaker Louis Lumière (1864–1948) served as the group's president. Overcoming fears that such a move would provoke Mussolini's anger, the French government declared its willingness to provide necessary funding, and a few months later the Riviera city of Cannes—having staved off competition from sundry French, Belgian, and Swiss cities—started planning a state-of-the-art Palais des Festivals to house the new event.

Other, smaller festivals had sprung up in the wake of Venice's early success, but it was the advent of Cannes that established the film festival as a staple of the modern cultural scene. Formally dubbed the Cannes International Film Festival, it debuted in September 1939, a time of year selected so as to extend the traditional tourist season by a couple of weeks. The program included *The Wizard of Oz* (1939) and *Only Angels Have Wings*. Gary Cooper, Mae West, Douglas Fairbanks, Norma Shearer, and Tyrone Power were on the "steamship of stars" dispatched to Cannes by Hollywood's mighty MGM studio. A cardboard model of the Cathedral de Nôtre-Dame was erected on the beach, heralding William Dieterle's (1893–1972) version of *The Hunchback of Notre Dame* (1939) as the festival's opening-night attraction. In a shocking twist, however, the opening film was the only film to be screened: Germany's invasion of Poland on the same day (1 September) led the festival's leaders to close its doors only hours after they had opened. The doors would not reopen until September 1946. (Ironically, the Venice festival also reopened in 1946 after three years of suspension due to the chaos of World War II.) Despite technical problems—projection glitches interrupted the opening-night screening, and reels of Alfred Hitchcock's (1899–1980) thriller *Notorious* (1946) were shown out of order—the Cannes program of 1946 was a great success. Still, the 1947 edition was diminished by the absence of such major countries as England and the Soviet Union, and the 1948 program was canceled. Not until 1951 did Cannes become a dependable yearly event, changing its dates to the spring, when more major movies are available. Since then it has reigned as the world's most prestigious and influential film festival, attracting thousands of journalists to its daylong press screenings and armies of industry professionals to both the festival and the Film Market held concurrently in the Palais and theaters scattered throughout the city.

Festivals proliferated at a growing rate in Europe and elsewhere during the 1950s, affirming the ongoing artistic (and commercial) importance of film at a time when global warfare was becoming a memory and world culture was energetically entering the second half of the twentieth century. Politics played a far smaller role in this phase of festival history than when the Venice and Cannes festivals were founded, but political considerations did not entirely vanish from the scene. The large and ambitious Berlin International Film Festival, for example, was established in 1951, presenting itself as a geographical and artistic meeting ground between East and West as the Cold War climbed into high gear. This was not an easy position to assume, given that socialist nations of the Eastern bloc did not participate officially until 1975, although individual films did represent such countries in the program from time to time.

The most important new festival to emerge in the 1960s was the New York Film Festival, founded in 1963 at Lincoln Center, one of the city's leading cultural venues. Modeled to some extent after the London Film Festival, the New York festival took advantage of Lincoln Center's enormous prestige in the artistic community—

as home to such various institutions as the Metropolitan Opera and the New York Philharmonic, among others—to underwrite the aesthetic pedigree of the art films, avant-garde works, and documentaries that dominated its programs. Such cinema found an enthusiastic (if limited) audience at a time when sophisticated spectators were unusually receptive to innovative foreign movies (from Europe and Japan especially) presented in their original languages with subtitles. Unlike the heavily programmed festivals at Cannes and Berlin, the New York festival showed a limited quantity of films—about two dozen features and a similar number of shorts, chosen by a five-member selection committee—and it declined to give prizes, asserting that its highly selective nature made every work shown there a "winner."

Two key events in film-festival history took place in the 1970s. The first was the 1976 debut of the Toronto International Film Festival, originally known as the Festival of Festivals, a name that underscored its commitment to importing major attractions from other festivals for Canadian audiences. Its first year was marred by the withdrawal of expected contributions from some Hollywood studios, apparently because its Toronto audience base was considered too parochial. Still, in subsequent years it has grown into one of the most all-embracing festivals in the world, with an annual slate ranging from domestic productions to international art films and (ironically) more Hollywood products than are likely to be found at any comparable event. Canada also hosts two other major festivals, the Montreal World Film Festival and the Vancouver International Film Festival.

The other major development of the 1970s was the founding of the United States Film Festival in Salt Lake City in 1978, devised by the Utah Film Commission as a means of spotlighting the state's assets as a site for film production. After concentrating its energies on retrospectives and discussion-centered events for three years, during which it also sponsored a nationwide competition for new independent films, the event moved to the smaller community of Park City in 1981 and began to seek a higher profile. It was acquired in 1985 by actor Robert Redford (b. 1936) and the four-year-old Sundance Institute, which Redford had established to foster the growth of "indie" filmmaking outside the Hollywood system. Renamed the Sundance Film Festival in 1989, it has become an eagerly covered media event as well as a wide-ranging showcase for both independent and international productions.

Alongside the attention-getting world-class festivals, over a thousand more modest events have cropped up. Some have tried to establish uniqueness by using a word other than "festival" in their names, such as the French-American Film Workshop held in New York and Avignon, France, and the Lake Placid Film Forum in upstate New York, which emphasizes relationships between cinema and the written word. Major festivals also exist outside the United States and Europe, such as the Ouagadougou Festival in the African nation of Burkina Faso and the Shanghai and Tokyo festivals in Asia.

LEADING FESTIVALS: NEW YORK, CANNES, TORONTO

Festivals vary in how they choose their films and what types they show, in the degree of geographical diversity they seek, in their willingness to give prizes, and in many other respects. The New York Film Festival presents films chosen by a five-member selection committee—two permanent members who are full-time employees of the Film Society of Lincoln Center and three rotating members (film critics or scholars) who serve terms of three to five years. The event has broadened its scope over the years, adding more special screenings and sidebar programs, including an annual weekend of avant-garde cinema that is unique among major festivals. It remains noncompetitive, however, and considers itself a "public festival" where the intended audience consists primarily of movie buffs, in contrast to the large contingents of film professionals who attend larger-scale North American and European festivals.

By common consensus, Cannes is the single most important film festival in the world. This is partly because of its age, partly because of its size, and partly because success tends to breed success—in other words, the festival traditionally thought of as the most influential is indeed the most influential for that very reason. The Cannes program is chosen by the festival director with the advice of assistant programmers assigned to specialized fields (documentary, Asian cinema, short films, and so on). Robert Favre le Bret, Gilles Jacob, and most recently Thierry Frémaux have had final say over the selection since 1972, when the festival eliminated its policy of allowing each participating country to choose its own presentations. Cannes divides its programs into several categories. The most highly visible is the Competition, usually comprising two features for each day of the twelve-day event, many of them directed by established auteurs of world cinema. Films directed by favored newcomers, including actors with Cannes credentials like Johnny Depp (*The Brave*, 1997) and Vincent Gallo (*The Brown Bunny*, 2003), also make their way into the Competition from time to time, although in the eyes of most critics the results in these two cases were disastrous. The main sidebar program, Un Certain Regard ("A Certain Look"), focuses on movies by newer

ROBERT REDFORD

b. Charles Robert Redford Jr., Santa Monica, California, 18 August 1937

Robert Redford is an internationally known actor, producer, and director who has become an influential festival impresario via the Sundance Film Festival, until 1991 known as the United States Film Festival. Redford acquired the seven-year-old festival in 1985 as an adjunct to the Sundance Institute, which he founded in 1981 to encourage filmmaking outside Hollywood by supporting new directors and screenwriters, and by facilitating the exhibition of independently made fiction and documentary features. The institute now sponsors film-development workshops, a film-music program, and theater projects as well as the festival and the television outlet (the Sundance Channel) for which it is most widely recognized. It has also established the Sundance Collection at the University of California at Los Angeles, an archive that acquires and preserves independent films.

Screening movies is still the institute's most prominent activity: in 2005 the Sundance festival showed more than 200 films for almost 47,000 spectators, three times the attendance of a decade earlier. It also serves as an important marketplace for American and international cinema, attracting distributors and exhibitors on the lookout for fresh, offbeat work. Its reputation for such fare was sparked largely by the 1989 premiere of Steven Soderbergh's debut film *sex, lies, and videotape*. The festival's openness to a wide range of fiction, nonfiction, and international movies has also helped Sundance programmers retain a commitment to "indie" filmmaking while sidestepping issues related to the increasingly blurred boundaries between mainstream (i.e., Hollywood) and independent styles and modes of production.

As a youth Redford studied painting in Europe and attended New York's prestigious American Academy of Dramatic Arts to hone his acting skills. He is also a longtime environmental activist. Such activities signal an artistic ambition and social awareness that run against the grain of Redford's commercially driven Hollywood career, perhaps explaining his decision to put so much money and muscle into organizations dedicated to independent cinema. His performance in the hugely popular western *Butch Cassidy and the Sundance Kid* (1969) made him a top-ranking celebrity. He also starred in such box-office hits as *Barefoot in the Park* (1967), *The Sting* (1973), *The Natural* (1984), and *Indecent Proposal* (1993). The more thoughtful side of his creative personality has surfaced in films such as *All the President's Men* (1976), in which he played one of the *Washington Post* reporters who exposed the Watergate political scandal, and *Ordinary People* (1980) and *Quiz Show* (1994), which he directed.

RECOMMENDED VIEWING

As Actor: *Butch Cassidy and the Sundance Kid* (1969), *The Sting* (1973), *The Way We Were* (1973), *Three Days of the Condor* (1975), *All the President's Men* (1976); As Actor and Director: *The Horse Whisperer* (1998); As Director: *Ordinary People* (1980), *The Milagro Beanfield War* (1988), *A River Runs Through It* (1992), *Quiz Show* (1994), *The Legend of Bagger Vance* (2000)

David Sterritt

or less-known talents whom the festival considers worthy of attention and support.

Two other series operate outside the formal boundaries of the festival: the International Critics Week, where selections are chosen by a panel of film critics, and the Directors' Fortnight, founded in 1969 as a competitor to the official festival, which was interrupted in the politically charged year of 1968 by disruptive protests involving such major directors as François Truffaut (1932–1984) and Jean-Luc Godard (b. 1930), leading figures in France's revolutionary New Wave filmmaking movement. All of these programs coexist peacefully with the festival and with the concurrent Film Market, established in 1960 as a place where producers, distributors, exhibitors, and

Robert Redford in* All the President's Men *(1976). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

others involved in the circulation of new movies can meet, network, and do business with one another. Features shown in the festival may have additional exposure in the market's eighteen screening rooms, although priority for entry to these showings is given to film-industry professionals who purchase market credentials in advance. The market's program for 2004 included approximately fifteen hundred screenings of more than nine hundred films, more than five hundred of them world premieres and the great majority not included in the festival itself. The market also sponsors a Short Film Corner that typically screens hundreds of shorts. In all, these programs attracted more than eight thousand participants in 2004, representing seventy-four countries. The market is thus considered a key interchange for international acquisition and distribution of movies made around the world.

Overall attendance at Cannes is skewed heavily toward film professionals, including film journalists and critics, who see the major entries in regularly scheduled press screenings beginning at 8:30 every morning and proceeding until late evening. The prizes at Cannes are awarded by a jury with a different membership of notable film-world personalities (directors, producers, performers, screenwriters, etc.) each year. At times jury decisions diverge greatly from the impression made by a given film on festival-goers in general, as when Bruno Dumont's ambitious French production *L'Humanité* (1999) won the Grand Prize of the Jury as well as best actress (shared) and best actor awards after being jeered at during its press screening. The prizes given at Cannes vary a bit from one year to another, but always include the top Palme d'Or (Golden Palm) award as well as a Grand Prize, a Jury Prize given to a technician, and prizes for best actress, actor, screenplay, and director. In addition, honors are given by a separate jury to three short films; the Cinéfondation of France bestows three awards; and the Caméra d'Or prize is given to the best Competition or Certain Regard film directed by a first-time filmmaker. The highest prizes at Cannes, especially the Golden Palm, are considered the most prestigious of all motion-picture honors with the possible exception of the Academy Awards®.

The Toronto festival awards several prizes, but the practice has a lower profile than at Cannes. The People's Choice Award is determined by audience ballots after

each public screening; the Discovery Award is voted on by members of the press, representing several hundred international media outlets; and juries select the recipients of awards for best Canadian feature, best Canadian feature by a first-time director, and best Canadian short film. In addition, an independent jury administered by the International Federation of Film Critics gives an award for the best feature by an emerging filmmaker. (More commonly known by its European acronym, FIPRESCI, this organization establishes prize-giving juries, composed of film critics, at many festivals around the world.) Toronto is generally seen as the most important North American festival and a close second to Cannes in terms of global influence. Its wide-ranging program is divided into numerous categories including Galas and Special Presentations for high-profile features, Masters for works by recognized auteurs, Director's Spotlight for works by especially adventurous or under-recognized filmmakers, National Cinema for features from a particular country selected for attention that year, Wavelengths and Visions for experimental and avant-garde works, and until 2004, Perspective Canada for domestic productions. As at Cannes, film professionals make up much of the audience, but many local moviegoers can be found in the public screenings (as opposed to the press screenings) as well.

LESSER-KNOWN FESTIVALS

Festivals with lower profiles, from the interestingly specialized to the obscure, abound. One film critic has estimated that New York City alone has no fewer than thirty. Iowa has the Hardacre Film Festival, North Carolina the Hi Mom Film Festival. Other festivals signal their specialties via their unusual names. Examples include the Rendezvous with Madness Film and Video Festival in Canada, organized around works about mental illness and addiction; the Madcat Women's International Film Festival in California, featuring independent and experimental work by women; and the Tacoma Tortured Artists International Film Festival in Washington, devoted to independent filmmakers.

One of the most respected specialized festivals is Pordenone-Le Giornate del Cinema Muto, established in 1982 by the Cinemazero Film Club and La Cineteca del Friuli, a film archive. Focusing entirely on silent cinema, this event in the north of Italy draws an international audience of archivists, scholars, critics, and adventurous movie fans to a wide range of programming that has included everything from Krazy Kat cartoons and Cecil B. DeMille melodramas to century-old kinetoscopes and comedies with forgotten American entertainers. Also highly regarded is the Locarno International Film Festival, launched by its Swiss founders in 1946 and celebrated for its attention to films by first- and second-time directors, and for its screenings of underrated movies chosen by currently well-known filmmakers. The hugely ambitious Rotterdam International Film Festival in the Netherlands has earned high marks for its commitment to avant-garde cinema as well as children's films, new features by innovative directors, and an Exploding Cinema sidebar devoted to multimedia projects. This festival also presents film-related lectures and gives monetary grants to promising directors from developing nations through the Hubert Bals Fund, which it administers. The San Francisco International Film Festival, established in 1957, helped blaze various trails for the growing American festival scene with its eclectic blend of major new productions, classics restored to mint condition, and retrospectives devoted to filmmakers better known by art-film enthusiasts than by the general public.

Among the more unusual American festivals is the Telluride Film Festival, founded in 1974 in a small Colorado town—once a mining community, now a popular skiing site—and considered by many to be one of the world's most intelligently programmed cinema events. It refuses to divulge its schedule until ticket-holders arrive at the festival gate, making attendance less a matter of access to particular premieres than of overall faith in the programmers. Telluride ensures the presence of celebrities—a diverse lot ranging from the actress Shirley MacLaine to the novelist Salman Rushdie—by holding tributes, complete with screenings of relevant films and the awarding of medals, to three film-world notables each year. Screenings are held in several venues including a community center and an intimate opera house where Sarah Bernhardt (1844–1923) and Jenny Lind (1820–1887) performed during the mining-boom era; the original marquee of the opera house, displaying the word "SHOW" in large letters, is still standing and serves as the festival's trademark. The legendary Warner Bros. animator Chuck Jones (1912–2002), a frequent attendee until his death in 2002, once paid his respects to Telluride's nine-thousand-foot elevation by saluting the festival as "the most fun you'll ever have without breathing."

THE FUTURE OF FILM FESTIVALS

Film festivals will most likely retain their popularity. However, they are also likely to change their selection standards and exhibition formats as technological developments in cinema—such as the increasing use of digital systems in cinematography and projection processes—alter the nature of cinema itself. Most festivals have already shown an increased willingness to judge films for potential selection on the basis of video copies rather than 35 mm prints, and many have opened the door (in

some cases grudgingly) to public screenings using video-projection systems, especially when the movie was originally shot on video. Another question that confronts the program directors of many general-interest festivals is whether they should focus primarily on the best of cinematic art—which may include obscure, difficult, and esoteric works—or turn in more commercially oriented directions. By courting movies with trendy themes, palatable styles, and major stars who may agree to make personal appearances, festivals could potentially draw larger audiences, attract greater press attention, and satisfy financial sponsors banking on association with celebrities and their projects.

The staying power of film festivals will continue to depend, in part, on providing an alternative to the multiplex. The shrinking number of art-film theaters, owing to competition from cable television and the home-video industry, also lends increasing importance to festivals. Exhibition patterns have always influenced cinematic styles, and the festival phenomenon has given indispensable exposure to new and unconventional works that might not otherwise be seen by the producers, distributors, exhibitors, and others who largely control the financial infrastructure of theatrical film. Also invaluable is many festivals' practice of spotlighting overlooked or forgotten movies from the past that would otherwise remain unknown to—or at least unviewable by—scholars and critics as well as curious movie fans. Ever since Venice commenced its festival activities in the 1930s, such events have amply proven their merit as what Richard Peña, the New York Film Festival program director, describes as "a refuge from the vicissitudes of the marketplace." Film festivals are indeed one of the vital signs of a thriving cinema.

FILM HISTORY

There is no single or simple history of film. As an object of both academic and popular interest, the history of film has proven to be a fascinatingly rich and complex field of inquiry. Coffee-table books, multipart documentaries, television networks that predominantly feature movies, scholarly monographs, and textbooks have cut different paths through this field. As a result, film history can look quite different, depending on whether the focus of attention is on individual films, institutional practices, national cinemas, or global trends. Indeed, the history of film's remarkable rise in the twentieth century has been told in a variety of ways: as the story of artistic triumphs and box-office winners; of movie moguls and larger-than-life stars; of corporatization and consumption; of auteur directors and time-honored genres; of technology and systemization; and of audiences and theaters. Taken even more broadly, the history of film becomes an account of the shifting roles and multiple effects of cinema—culturally, socially, and politically.

Across this range of options, film history confronts, implicitly or explicitly, a number of provocative and knotty questions: From a larger historical perspective, what is the role of the individual film and the individual filmmaker? What are the social and cultural contexts within which the movies were produced and consumed? What does the history of film have to do with other twentieth-century histories—of technology, business, commercial entertainment, the modern nation-state, globalization?

VARIETIES OF FILM HISTORY

Given the fact that film is at once art, industry, mass media, and influential form of cultural communication, it is not surprising that the history of film can be approached from a number of quite distinct angles. A concern with technology, for example, raises questions about the invention, introduction, and diffusion of moving picture projection systems and cameras, as well as color, sound, and wide-screen processes. Technological history has been especially prominent in discussions of the pre-1900 period, the transformation to sound in the late 1920s and the 1930s, and the struggle to compete with television during the 1950s. To explore the history of home movies and amateur film also necessarily involves questions of so-called "small-gauge" technology (most notably, 8 mm and 16 mm), and any broader overview of film exhibition must take into account the technology of the movie theater, including the projection apparatus and, from the 1980s on, sophisticated sound systems.

Technology is intimately connected to the economics of the motion picture industry, another key aspect of film history that has received considerable interest from scholars. Most attention has been given to the internal workings and the ongoing transformations of the Hollywood studio system, both in terms of how individual studios have operated and also in terms of the concerted efforts by studios to maintain monopolistic control over the industry. Economic history also takes up labor relations and unionization, government attempts to regulate the film industry through antitrust actions, and the financial framework and corporate affiliation of major studios in the United States and Europe. Equally central to any historical understanding of the economics of the industry are the complex relations among production,

distribution, and exhibition, including the role of Hollywood in exporting American films to the rest of the world. While exhibition has recently received considerable attention—as in, for example, Douglas Gomery's *Shared Pleasures* (1992) and Gregory A. Waller's *Moviegoing in America* (2002)—distribution remains understudied.

More than economics, technology also figures in what has been called formalist or aesthetic histories of film, which tend to focus on questions concerning narrative and audio-visual style and, more generally, the art and craft of cinema. This approach has tended to emphasize masterworks and great directors, celebrating their innovations and contributions to a tradition of cinematic art. The auteur theory, for example, has informed much popular film history. At the same time, more systematic (even statistically based) approaches to the history of film style have looked less at world-famous directors like D. W. Griffith (1875–1948), Sergei Eisenstein (1898–1948), and Jean Renoir (1894–1979) and more at the norms and opportunities available to filmmakers under specific conditions of production, in and out of Hollywood. Such approaches consider, for example, how editing practices, camera movement, and uses of the soundtrack have changed over time.

The historical study of film genres also takes up formal concerns, as well as other topics having to do with the cultural and ideological role of popular film. American film history has sometimes been understood primarily in terms of the changing fortunes of genres like the gangster film, western, film noir, and the musical. More interesting is the considerable amount of historical work that has been done on individual genres, offering a complex picture of how genres emerge, flourish, and decline both in terms of the films produced and the reception of these films by audiences at the time and by later generations of fans and critics. The history of film genres, as presented, for example, by James Naremore in *More Than Night* (1998), has also raised important questions about intermedia relations, that is, the way the course of film history has been significantly affected by contemporary practices in literature, live theater, radio, popular music, and television.

Popular genres, as might be expected, often figure prominently in social or cultural histories, which seek in a variety of different ways to situate film within a broader context or to shift focus away from individual films, directors, and studios to questions about how cinema is constructed, circulated, understood, and monitored in a particular class, region, or subculture or in society at large. One prominent concern of social history is the film audience: How has it been defined and policed? What is its makeup in terms of class, race, and gender? What is its reception of particular movies and cinema in general? To explore what moviegoing has meant in specific historical situations has necessarily involved a greater attention to the practices and strategies of film exhibition. From nickelodeon and picture palace to drive-in and suburban megaplex, the movie theater has proven to be a key site for exploring the place of film in the everyday life of the twentieth century and for considering how a film experience intended for a national or global audience is presented and consumed at a local level.

Other major areas of social and cultural historical research are the ideological import of cinematic representations (of race, gender, and sexuality, for example); the formal and informal processes of censorship; the role of official government cultural policy (which is of particular import outside the United States); and the connections between cinema and consumer culture, through advertising, product tie-ins, and so on. Of crucial importance in this regard is the vast amount of written material surrounding and concerning the movies, from trade journals and promotional matter to reviews, fan magazines, and—more recently—Internet sites.

TRENDS IN FILM HISTORY

The earliest film histories, like Terry Ramsaye's *A Million and One Nights* (2 vols., 1926; originally published in *Photoplay* magazine, beginning in 1921), were intended for a general audience. These works offered first-person, highly anecdotal accounts written by journalists, inventors, and filmmakers who frequently were insiders to the motion picture industry. Ramsaye, for instance, had worked as a publicist. His book and others like it set a model for a sort of film history that is preoccupied with movie personalities and filled with broad claims about the step-by-step "progress" of film as art and industry. Foregrounded in such works is the role of inventors like Thomas Edison and directors like D. W. Griffith, certain landmark films, influential stylistic innovations, and major technological advances. Much popular history concerning, in particular, classic Hollywood, carries on this tradition, offering a narrative account of movie history that features individual artists, inventors, and executives rebelling against or working securely within the demands of the commercial entertainment industry. This "great man" version of history typically goes hand in hand with a belief that the historian's task is, in part, to identify and celebrate a canon of cinematic masterworks.

Writing at the end of the silent era, the British filmmaker and critic Paul Rotha (1907–1984) took a somewhat different tack in *The Film till Now* (1930),

emphasizing distinctive national cinema traditions and giving special attention to films and filmmakers that challenged standard Hollywood practices. Both of these emphases have also frequently been features of film history textbooks. After Rotha there have been several significant attempts at world or global histories of film, like *Histoire du Cinema* (5 vols., 1967–1980), by Jean Mitry. Until recently, with, for example, *The Oxford History of World Cinema* (1999), attempts at international film history have generally been plagued by a decidedly Eurocentric, if not always American, bias. The lack of full attention to non-Western film has arisen from the assumption that film history is above all concerned with film production, filmmakers, and film studios (principally the domain of Hollywood, Bollywood, and a few European companies) rather than with exhibition, reception, and worldwide film audiences.

Most typically, film history has been understood in national terms. This is reflected in the number of books devoted exclusively to Hollywood and American cinema, beginning with Lewis Jacobs's *The Rise of the American Film* (1939) and culminating in Scribner's ten-volume *History of the American Cinema* (1990–2000), a towering achievement. Other national cinemas, too, have frequently been a key subject for historians, from New Zealand and Japan to Cuba and Canada. While specific details vary from country to country, this form of film history reinforces what is assumed to be a strong correlation between the cultural, economic, and social life of a particular nation and the films produced in that nation. National histories of film typically celebrate homegrown auteurs and award-winning titles, "new waves," and the sort of films that circulate on the international film festival circuit. More recently, however, the widespread interest in industry practices, government cultural policy, and popular genres has led to groundbreaking research on national cinemas that draws heavily on archival sources, as in Peter B. High's *The Imperial Screen* (2003), a study of Japanese film during the Pacific War era.

The 1970s and 1980s saw a major turn toward historical research in academic film studies, led in part by a new interest in early silent cinema (1895–1910), which completely reshaped our understanding of the origins of the American film industry, the audience that took up moviegoing during the nickelodeon era, and the introduction of narrative film. This type of revisionist history, which makes extensive use of primary documents (including the trade press and archival motion-picture holdings) and rejects simple notions of progress and celebrations of "great men," got a major boost in *Film History: Theory and Practice* (1985), Robert C. Allen and Douglas Gomery's assessment of the discipline and blueprint for future research. Equally significant was the publication that year of David Bordwell, Janet Staiger, and Kristin Thompson's *Classical Hollywood Cinema*, an exhaustively researched study based on a randomly selected body of films and a range of industry-related print material. This influential book set out to investigate Hollywood's evolving mode of production, its incorporation of technological change, and its elaboration of a cinematic style that served as the norm for American movies between 1917 and 1960.

Since the mid-1980s the study of film history has been strongly influenced by other major scholarly trends, notably, feminist, postcolonial, and cultural studies, as well as reception studies that focus on social identities and film-related public discourses. There has also been an increasing emphasis on historical case studies in article or monograph form that rely on significant primary research to focus in detail on a relatively narrow period, topic, or institutional practice. Works like Eric Schaefer's *"Bold! Daring! Shocking! True!"* (1999), a history of exploitation films, and Lee Grieveson's *Policing Cinema* (2004), an account of early film censorship, exemplify the highly focused yet still very ambitious research that has continued to enrich and complicate our understanding of film history in and out of Hollywood, within and beyond the walls of the movie theater.

FILM NOIR

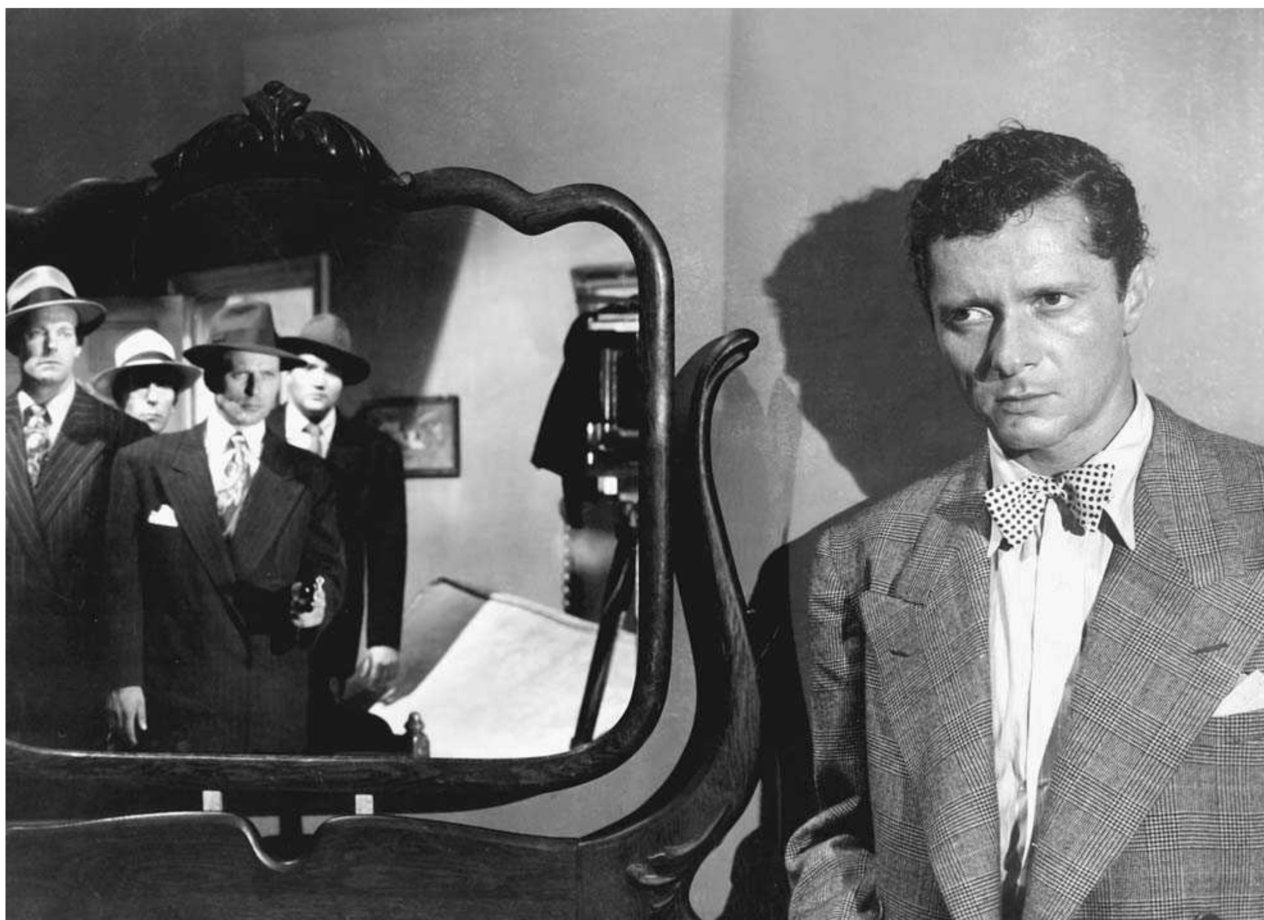
In 1946, French film critics coined the term *film noir*, meaning black or dark film, to describe a newly emergent quality in wartime Hollywood films. At that time, the term signified an unexpected strain of maturity in contemporary American film, marking the end of a creatively ossified era and the beginning of a bold new one. By the time the term achieved wide English language usage in the 1960s, however, it had come to mean dark Hollywood films of the past—films whose era and style were no longer current. Despite such a slippage in definition, *film noir* remains arguably the most protean and influential of American film forms. It has demonstrated a limitless capacity for reinvention, has undergone major cycles of redefinition, and has analogues not only in other national cinemas but also in radio, television, theater, fiction, graphic novels, comic books, advertising, and graphic design. The term has moved beyond the domain of film discourse and has been used to describe narratives in other media and genres. There is even a "*Film Noir*" lipstick.

OVERVIEW

Film noir indicates a darker perspective upon life than was standard in classical Hollywood films and concentrates upon human depravity, failure, and despair. The term also implies a cinematic style: a way of lighting, of positioning and moving the camera, of using retrospective voice-over narration. Its narrative often relies heavily on flashbacks and choice of setting—usually a seedy, urban landscape, a world gone wrong. *Film noir* has stylistic and thematic antecedents in American hard-boiled fiction of the 1920s and 1930s, German expressionist films of the 1920s, American horror films and radio dramas of the 1930s and 1940s, and French cinema of the 1930s. Its first cycle ran from the 1940s to the late 1950s. After 1960, neo-*noir* films have included a component antithetical to the earlier films: a conflicted nostalgia for the post–World War II era evoked in references to the period's sociocultural atmosphere as well as to its filmmaking practices.

Film noir emerged during World War II with films like *Double Indemnity* (1944); *Laura* (1944); *Murder, My Sweet* (1944); *Phantom Lady* (1944); *Mildred Pierce* (1945); *Scarlet Street* (1945); and *The Woman in the Window* (1945). Its foundations had been laid in the early 1940s, in films such as *Stranger on the Third Floor*, with its sinister look, nightmare sequence, and atmosphere of perverse and unstable masculinity, *The Maltese Falcon*, with its themes of widespread evil and deviant as well as manipulative sexuality, and *Citizen Kane* (1941), with its dark, expressionist look and fragmented narration.

Although reviews at the time commented on the depravity, sexual degradation, and violence in many of these films, they linked them only insofar as they manifested a gritty "realism." Other common elements among many of the films are retrospectively apparent, such as the large number of Germanic émigré directors, including Fritz Lang (1890–1976), Otto Preminger (1906–1986), Robert Siodmak (1900–1973), and Billy Wilder (1906–2002); their dark "studio" look, often employing expressionistic "mystery" lighting; their use of retrospective, voice-over narration; their engagement with potentially censorable material; their themes of unstable identity, often involving amnesia or identity alteration, and of gender instability, concentrating in particular upon *femmes fatales* and weak men; their



Expressionist style in Anthony Mann's* T-Men *(1947). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

deterministic view of human behavior; their narratives of failed enterprises; the influence of psychoanalytic concepts (such as fetishism, masochism, repression, and various compulsions) upon their characters' construction; and their atmosphere of disorientation and anxiety.

Not surprisingly, neo-*noir* films display a self-consciousness alien to earlier ones. Many creative participants in the earlier films were not being disingenuous when they claimed that they never knew they were making *films noirs* when they were making *films noirs*. The films initially appeared under many guises, only to be categorized as *film noir* at a great distance, first by the French in 1946 and then by English-speaking critics after 1960. But lack of intentionality does not mean that the filmmakers did not draw on a common sensibility and gravitate toward similar filmmaking practices. Over time, those commonalities have conferred a powerful generic status on the films that is much stronger than earlier, more diverse perceptions of them.

The first *films noirs* were made as detective films, mysteries, melodramas, social problem films, crime films, and thrillers. They were produced as A films by major studios, as products of B-movie divisions of major and minor studios, and as low-budget, independent films. Some studios, like RKO, developed divisions for the production of inexpensive genre films, many of which have subsequently been called *films noirs*. While these films were products of Hollywood's "Golden Age," they collectively deviate from popular notions of Hollywood entertainment.

INFLUENCES

Hard-boiled popular fiction gave *film noir* its narrative models, major themes, and verbal style. The genre is commonly associated with the detective fiction of writers like Dashiell Hammett (1894–1961) and Raymond Chandler (1888–1959), which first appeared in the 1920s and provided an alternative to the then-dominant British detective fiction of writers like Sir Arthur Conan Doyle, Dorothy Sayers, and Agatha Christie. The British model presumes a benign society into which crime erupts as an aberration: once a detective has solved the crime,

society returns to tranquility. Hard-boiled fiction, to the contrary, presumes a corrupt world in which crime is an everyday occurrence. Its characters are often driven by destructive urges that they can neither understand nor control. Although a detective may solve the story's motivating crime, he entertains no illusions that this small victory makes the world a better place. One narrative model that *film noir* draws from such fiction implicates the detective when the crime he attempts to solve unexpectedly draws him into its consequences. He often becomes ensnared by a *femme fatale* or gets set up as the "fall guy" for a larger crime. Nearly everyone with whom he deals is duplicitous. Hard-boiled fiction was not limited to detective fiction; Cornell Woolrich's (1903–1968) *Phantom Lady* and James M. Cain's (1892–1977) *Double Indemnity* and *The Postman Always Rings Twice* share this perspective on life and provided sources for important *films noirs*.

Hard-boiled fiction—particularly the first-person narration of Chandler's novels—introduced a cynical, doomed, and grimly poetic tone. Its verbal style is apparent in both the wisecracks of the detective and in the moody, voice-over narration dominating many of the films.

German expressionist cinema gave *film noir* a mood, a visual style, and some themes. A cinema obsessed with madness, loneliness, and the perils of a barely coherent world, it emerged after Germany's devastating defeat in World War I and reflected the despair of the times. Its first major film was *Das Kabinett des Doktor Caligari* (*The Cabinet of Dr. Caligari,* 1920). Nearly everything in it is highly stylized, particularly the set design, which appears to be part of a demented dream, not unlike the despairing mood of many *noirs*.

By the mid-1920s, expressionism had become a widely respected style, imitated by Hollywood directors like John Ford (1894–1973), and by the 1930s, many expressionist directors and technicians had emigrated to Hollywood, influencing its emergent horror genre directly. A decade later, *film noir* applied these same tropes of madness, despair, and disorientation to the world of "normal," middle-class experience.

A sophisticated use of the sound track was a defining innovation of *film noir,* drawing upon techniques developed in American network radio. Network radio and sound film both began in the late 1920s, and by the 1940s, they enjoyed great success. It was not until then that Hollywood learned to use soundtracks in genuinely complex ways, rather than simply as adjuncts to image tracks. By then, network radio had developed writers, technicians, and actors skilled at presenting stories using sound alone; its popularity had accustomed listening audiences to understand complex layerings of sound. Radio narration went beyond linear, retrospective storytelling and employed dynamic interactions between narrating voices ("It all began last Tuesday when . . .") and dramatic ones ("Who's there?"). Sometimes the same voice narrated and participated in the dramatic action—a common trope in *films noirs*, which used sound to present two versions of a single character simultaneously. The narrator's voice-over in *Double Indemnity*, for example, appears throughout the film, telling us his story at a time when he already knows he is doomed; he also speaks throughout the flashback scenes. We hear both his depressed narrating voice and his optimistic younger self, which has not yet learned what both narrator and viewer already know—that his scheme will fail. The aural and visual contrast between his optimistic self and the somber, despairing tone of his narrating self create complex layers of character.

Postwar disillusionment gave *film noir* a mood and a social context. Victory in World War II did not bring the peacetime happiness that many had anticipated. Films like *The Blue Dahlia* (1946) show wartime veterans feeling isolated after they return. This disillusionment is also evident in non-*noir* films of the era, such as that Christmas perennial, *It's a Wonderful Life* (1947), in which the ugly side of small town America drives a decent businessman to near-suicide. Its miraculously happy ending does not entirely erase the sinister darkness that its portrait of small town life creates.

Disillusionment came from many directions. Women, who had been encouraged to join the work force during the war, now felt pressured to leave it to make room for returning veterans. Labor unions, many of which had been forbidden to strike during the war, now demanded long-awaited benefits. The defeat of the Axis powers did not bring about international security, because the Cold War emerged, generating anxiety about Communist infiltration.

Technological advances made during the war allowed postwar filmmakers greater freedom from the confines of studios. Film stocks were improved, enabling cinematographers to capture a wider range of light than previously possible and, at the same time, to need less in the way of bulky lights; sound recording equipment, particularly improvements in the wire recorder, became more portable; lighter cameras with better lenses became available. Although traditionally composed films had always used location shooting, it had been cumbersome and expensive. Now these technological developments dovetailed with a public taste for "realism" in films and with critical respect for Italian neorealism, a new style from Italy that explored the unvarnished realities of contemporary life. In the United States, Louis de Rochemont (1899–1978), who had produced the *March of Time* newsreels, produced

films such as *The House on 92nd Street* (1945), *Boomerang* (1947), and *Walk East on Beacon* (1952), which used a newsreel aesthetic. These films, and others like them, deal with a world of crime and betrayal, subversion, and people on the edge. Many have been called *films noirs*, but they look and feel differently from *films noirs* like *Double Indemnity* or *Scarlet Street*. They have a strong narrating presence, but instead of the tormented voice-overs of films like *Double Indemnity* or *Out of the Past* (1947), they often employ an authoritative "Voice of God" narrator associated with a governmental institution, such as the FBI or the Treasury Department. They have a very different look from the expressionistic films mentioned earlier, although some of their scenes do have a dark look. They often advertised themselves as "real" or "true," or "pulled from the headlines." *The House on 92nd Street* prides itself on including "actual FBI" surveillance footage. These films mark the first major reinvention of *film noir*.

Clearly, the term *film noir* casts a wide net and has meant different things at different times. Certain images, narrative structures, character types, and themes are widely perceived as typifying it, however. Standard perceptions of *film noir* include atmospheric black-and-white films from the 1940s and 1950s with specific character types, such as a hard-boiled detective, a *femme fatale*, a middle-class man in a doomed affair, a rootless drifter, a slick underworld night-club owner; narrative patterns, such as an adulterous couple whose murderous plot leads to their doom, a prosperous, middle-class life unraveling into death or madness, a detective investigating a mystery that turns on him, a drifter or criminal seeking a quick score and then drawn into murder and catastrophe, a couple on the run; iconic images and settings (desolate, nocturnal, urban streets; brightly lit, art-deco nightclubs; mysterious, darkened rooms lit through Venetian blinds); shadowy shots of someone watching from a hidden place; iconic performers (wisecracking, trench-coated Humphrey Bogart; desperate, embittered Dick Powell; terrified, or arrogant, Barbara Stanwyck; sultry Lauren Bacall; Veronica Lake peering through her eye-shrouding hair; arrogant, smug Clifton Webb or George Macready; Robert Mitchum looking grimly resigned or dreamily indifferent; Dana Andrews methodically puzzling out a mystery). The overall atmosphere is one in which something—everything—has gone terribly wrong, a world heavy with doom, paranoia justified and closing in.

APPEAL

Given its doom-laden world, *film noir* offers the voyeuristic pleasure of watching transgression play itself out. Audiences saw morally compromised people doing immoral things; stories involved the forbidden, the sinful. The films pushed the boundaries of contemporary censorship: their ads promised the titillations of easy women, violent men, and doomed enterprises—cheap thrills with dire consequences. In soliciting viewers' identification with doomed people, the films court masochistic pleasure.

A cliché about classical Hollywood films is that they required happy endings. *Film noir* challenges this generalization. Many *films noirs* develop virtually no expectation of happy endings; to the contrary, they quickly establish a foreboding of disaster. Characters in many films describe themselves as walking dead men. Part of the appeal of *film noir* lies in the expectation that things will turn out very badly.

Often, the retrospective, voice-over narrative structure of many such films removes the traditional pleasure—found particularly in mysteries—of wondering how the plot will turn out. The narrator often reveals the outcome at the beginning. The narrator of *Double Indemnity*, for example, confesses as the film begins that he committed murder for money and a woman and then tells us that he didn't get the money and he didn't get the woman. For the rest of the film, then, the audience knows that his plans will fail. The central character in *D.O.A.* (1950) announces at the beginning of the film that he has been murdered by poison and has only hours to live. The audience does not have to wonder what will happen to him; they already know. What, then, is the appeal?

Much of *noir*'s appeal is voyeuristic—the pleasure of watching the specifics of how it all came to this. Tabloid journalism provides a useful narrative analogue. A headline may announce "Man murders lover and her husband for insurance money: Gets nothing." The reader knows the outcome from the beginning but reads on to savor the crime's gory details. Virtually all *films noirs* from the 1940s and 1950s were set in the present. Characters looked and generally behaved like people that audience members might see when they left the theater. *Noirs* dealt with the kinds of tragedies, scandals, and duplicities that bordered on their audience's everyday experiences and that appeared regularly in tabloids.

HISTORY

A rough overview of *film noir* begins in the early 1940s with films like *The Maltese Falcon*, which presented a new, darker perspective on the characters and themes of hard-boiled fiction. Two earlier films, the 1931 *The Maltese Falcon* and the 1936 *Satan Met a Lady*, had been based upon Hammett's novel of the same name. Both handled crime in the lighthearted manner typifying detective films in the 1930s. John Huston's (1906–1987) 1941 film brought a new, grim tone to the

ROBERT MITCHUM

b. Bridgeport, Connecticut, 6 August 1917, d. 1 July 1997

Robert Mitchum's extraordinarily long and fertile Hollywood career developed chiefly around his association with *film noir*. As an actor, the tension between his half-asleep, dreamily indifferent expression and a powerful, broad-shouldered physical presence enabled him to dominate scenes while also seeming abstracted from them. He appeared to confront either success or doom as if he didn't really care, which made him ideal for *film noir*.

After his Academy Award® nomination for portraying the heroic, doomed lieutenant in *The Story of G.I. Joe* (1945), he was signed by RKO Studios, where he starred in important *films noirs* such as *Out of the Past* and *Crossfire* (both 1947). Even the westerns he made at this time, such as *Pursued* (1947) and *Blood on the Moon* (1948), were noted for their *noir*-ish tone.

Out of the Past is possibly the most iconic *film noir*, with its voice-over narration, atmosphere of doom, chiaroscuro lighting, emasculated men and *femme fatale,* and strong influence of Freudian concepts upon character construction and narrative organization. Mitchum plays a man whose hidden past catches up with him. A former private detective hired to find a *femme fatale,* Mitchum's character falls for her, an act that sends his life spiraling into murder, betrayal, and death. Having failed in his attempt to build a new life, he orchestrates his own death. Mitchum's haunting portrayal of a man losing everything important to him is one of his most eloquent.

Mitchum's rebellious off-screen reputation, culminating in his arrest for possession of marijuana in 1948, seemed to blend with his darker roles. This image was enhanced by his skill at playing unregenerate, psychotic villains in films like *Night of the Hunter* (1955), *Cape Fear* (1962), and in the television series *A Killer in the Family* (1983). A less-discussed counterpoint to this aspect of his image was his career-long effectiveness at playing socially responsible authority figures in films like *Crossfire*, *The Enemy Below* (1957), *The Longest Day* (1962), and in the popular television miniseries *The Winds of War* (1983).

Long after the era of *film noir* ended, he contributed to the neo-*noir* revival of the 1970s, starring as Philip Marlowe in *Farewell, My Lovely* (1975) and *The Big Sleep* (1978). These films were remakes of classical *films noirs* (*Murder, My Sweet* [1944] and *The Big Sleep*, 1946), films in which Mitchum could have credibly starred thirty years earlier. By the 1970s, his very presence in a film carried with it evocations of *film noir*. While hosting a 1987 *Saturday Night Live* show, he even parodied his *film noir* image. Although he was at times mocked for sleepwalking through roles, he developed a singularly diverse and often nuanced repertory of performances.

material. RKO used Chandler's novel, *Farewell, My Lovely* (1940), as the source for *The Falcon Takes Over*, a 1942 film in the earlier detective mode. Only two years later, the same studio used *Farewell, My Lovely* as the source for *Murder, My Sweet* but that film's *noir* style gave it an entirely different atmosphere. The flowering of *film noir* came with mid-1940s films like *Double Indemnity*, *Scarlet Street*, *Mildred Pierce*, *The Blue Dahlia*, *The Killers* (1946), *Out of the Past, Detour*, *The Postman Always Rings Twice* (1946), and *The Big Sleep* (1946). At times, as in *The Stranger* (1946) and *Crossfire* (1947), *films noirs* moved beyond tormented, interpersonal issues and explicitly engaged contemporary social problems, such as fugitive Nazis and anti-Semitism. In the late

Robert Mitchum in* Out of the Past *(Jacques Tourneur, 1947). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

1940s, documentary style entered *film noir* with films like *T-Men* (1947) and *Naked City* (1948). In the 1950s, *film noir* incorporated anti-communist (*Pickup on South Street*, 1953), anti-nuclear (*Kiss Me, Deadly*, 1955), and socio-medical (*Panic in the Streets*, 1950) concerns.

By the early 1960s, with the decline of black-and-white cinematography and the collapse of the studio system, *film noir* was dying out. Various films have been cited as marking its last gasp, including Orson Welles's (1915–1985) *Touch of Evil* (1958), Alfred Hitchcock's (1899–1980) *The Wrong Man* (1956), Samuel Fuller's (1912–1997) *Underworld U.S.A.* (1961), and Blake Edwards's (b. 1922) *Experiment in Terror* (1962). Although the commercial viability of *film noir* was declining in Hollywood, its international influence was growing. This is particularly evident in films of the French *Nouvelle Vague*, such as *À bout de souffle* (*Breathless*, 1960), *Alphaville* (1965), *Tirez sur le pianiste* (*Shoot the Piano Player*, 1960), and *La mariée était en noir* (*The Bride Wore Black*, 1968). That influence later appeared in the New German Cinema, the Hong Kong Cinema, and various Latin American cinemas, among others.

By the 1970s, neo-*noir* films acknowledged *film noir* as a past form, either by setting themselves during the 1930s–1950s era or, for those set in the present, making clear references to earlier films, as for example, *Chinatown* (1974), *Body Heat* (1981), *Blood Simple* (1984), *The Long Goodbye* (1973), and *Mulholland Falls* (1996). Neo-*noir* also includes remakes of earlier *films noirs*, like *Farewell, My Lovely* (1975), *The Postman Always Rings Twice* (1981), *D.O.A.* (1988), and *Kiss of Death* (1995). Just as *film noir* was parodied during its canonical era in films like *My Favorite Brunette* (1947), so it was later parodied during the neo-*noir* era in films like *Dead Men Don't Wear Plaid* (1982).

Beginning in the 1980s, neo-*noir* began linking *noir* with dystopian science fiction in films like *Blade Runner* (1982), *Radioactive Dreams* (1985), the *Terminator* series of films, and *Minority Report* (2002). *Film noir* presents a world gone sour and presumes the failure of utopian Modernism; similarly, an enduring strain of science fiction evident since George Orwell's 1948 novel, *1984*, has depicted the future as a failed past. The central character of the futuristic *Blade Runner* speaks with a world-weary cynicism that evokes that of 1940s hard-boiled detectives.

Extensive crossover influences have appeared in other media. While *film noir* was thriving, numerous radio series drew upon its *noir* conventions, including the *Philip Marlowe*, *Sam Spade*, and *Richard Diamond, Private Detective* series. Television series, from *Peter Gunn* to *Dark Angel*, have done the same thing. Novels, such as those by James Ellroy (b. 1948) (*The Black Dahlia*, 1987), have been called *film noir* fiction, and graphic novels by writers like Frank Miller (b. 1957) (*Sin City*) also draw extensively upon *noir* stylistics. Similar patterns exist in other media.

CRITICAL PERSPECTIVES

The critical and theoretical commentary upon *film noir* has been extensive. The history of *film noir* begins with international criticism— essays written in postwar France assessing new developments in American film. The context and historical moment is important. New Hollywood films had not been available in France since the time of the German occupation in 1940. When those films at last appeared in postwar Paris, critics like Nino Frank saw evidence of a new sensibility in them, which he termed *film noir*. Frank contrasted this sensibility with the work of Hollywood's older generation—directors like John Ford. Frank's use of the term *film noir* carried with it associations of "black" French films of the 1930s, such as Marcel Carne's (1909–1996) *Hotel du Nord* (1938) and *Le Jour se Leve* (1939), as well as with Marcel Duhamel's *Serie Noire* books. The first book-length study of *film noir*, Raymond Borde and Etienne Chaumeton's

Jack Nicholson in Roman Polanski's* Chinatown *(1974), which began a wave of neo-noirs. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

Panorama du Film Noir Americain, appeared in 1955. By the time the term caught on in English more than a decade later, *film noir* had come to mean a historically superseded film movement. These three critical perspectives—that of the mid-1940s, describing a vibrant, emerging sensibility; that of the 1950s, categorizing an established cycle; and that of the 1960s, describing a historical, archival category—should not be conflated. They come with different vantage points and different assumptions. They often presume a different body of films (with the post-1960s perspective expanding the canon exponentially). The first two draw upon primarily Modernist presumptions; the last often includes a postmodern sensibility.

The expansion and academicization of film discourse in the 1960s gave *film noir* its first widespread attention in English. Important articles by Raymond Durgnat in 1970, Paul Schrader in 1972, and Janey Place and Lowell Peterson in 1974 laid groundwork for exploring *film noir*, posing major questions such as whether it is a genre or a visual style to the growing academic and journalistic film culture in Europe and the United States.

In 1981, Foster Hirsch's *The Dark Side of the Screen: Film Noir* detailed historical contexts and proposed major tropes of the form. Three years later, Spencer Selby took a virtually opposite approach in *Dark City: The Film Noir*. Lamenting what he considered to be the contemporary tendency to fit the films into grand categories, Selby provided detailed (primarily narrative) analyses of twenty-five individual films, along with appendices of historical and bibliographical data, to illustrate his premise that the films must be evaluated individually.

Since the late 1970s, psychoanalysis, particularly Lacanian psychoanalysis, has become the *lingua franca* of much discourse on *film noir*; it inflects many approaches. One such approach, as evidenced in collections of essays by E. Ann Kaplan and Joan Copjec, draws

ANTHONY MANN

b. San Diego, California, 30 June 1906, d. 29 April 1967

Although Anthony Mann's reputation as a director rests primarily upon his turbulent, complex 1950s westerns starring James Stewart, his style coalesced in the 1940s with a series of important *films noirs*. These films, with their disorienting, often baroque cinematography, malevolent environment, and violent, tortured characters, presage his later work. His Technicolor westerns of the 1950s and historical epics of the 1960s were shot with a broader palate and a resonant sense of landscape, and retreated farther into history, but they share with the *noirs* an entrapping environment populated by embattled, anguished men.

Mann began his directorial career in the 1940s making B films whose minimal budgets allowed him considerable creative freedom. Particularly in his 1940s work with cinematographer John Alton, Mann developed a distinctive visual style that made extensive use of oppressive darkness, intermittent light, and off-center, disorienting camera angles in complexly textured images. Such images are often as potent a component of the films as their characters and stories. Mann's films often erupt with shots of excruciating agony that make viewers gasp. An abrupt, low-angle shot in *Winchester 73* (1950), for example, shows Stewart brutally clawing a villain's face. The murderous savagery evident in Stewart's contorted face indicates that little difference exists between this "hero" and the villain.

T-Men (1947), perhaps the most distinctive of Mann's *films noirs,* deals with undercover US Treasury agents investigating a counterfeiting syndicate. Two scenes reveal much about Mann's compressed techniques. In one, a gangster locks an informer in a steam room to roast him to death. In a single shot, we see the trapped, terrified victim clawing at the room's window while his sadistic killer quietly watches from the other side of the window, only inches away. In the second scene, one treasury agent watches in impotent agony while another undercover agent, a close friend, is murdered. Both scenes painfully foreground the physical proximity, repressed terror, impotent psychic agony, and sadism pervading Mann's enclosed, masculine world of embittered rivalries.

T-Men is framed as a documentary-style film about an actual Treasury Department case. Its unseen narrator, unlike the tormented narrators of many *films noirs*, speaks in a declamatory, newsreel-type tone, touting the glories of the Treasury Department. Shots of the department seem to belong in a different film—brightly lit, frontal, with monumental exteriors of its Washington, D.C., headquarters. These differ radically from shots of the criminal world—the nightmare-like, dark, cramped, sweaty images classically associated with *film noir*. These two styles provide contrast within the film and also presage the open landscapes of the westerns and epics to come. Although the palate of later films is broader, their oppressive universe breeding endless, useless masculine conflict and torment remains similar to that of Mann's *films noirs*.

upon post-structuralist, feminist film discourse to examine gender constructions within the films. Another psychoanalytically inflected approach is Frank Krutnik's *In a Lonely Street: Film Noir, Genre, Masculinity* (1991), which relies on some of the tools of Structuralist genre study to focus upon issues of masculinity. Another approach is offered by Tony Williams (1988), who applies Gaylyn Studlar's work on masochism to films related to Woolrich's fiction and attempts to shift discussion of *film noir* from tropes of content to tropes of affect. This approach is also evident in recent work on trauma and anxiety done by E. Ann Kaplan and others.

In addition to gender-based approaches, recent articles dealing with racial representation in *film noir* have opened up an important new area of exploration, examining, for example, the erasure of peoples of color in many *films noirs* and the use in those films of highly coded racial imagery. As with so many other topics, this functions differently in films made during the classical *noir* period from the way it functions during the neo-*noir* era. Films made during the classical era are Anglo-centric and seldom directly engage issues of race. However, significant patterns exist in ways in which many of those films not only erase or marginalize peoples of color but also symbolically associate them with the exotic and the dangerous. Neo-*noir* films, to the contrary, often explicitly address issues of race, commonly from a perspective sympathetic (while patronizing at times) to peoples of color. A number of such films have been based upon fiction by African American authors such as Walter Mosley (b. 1952), Chester Himes (1909–1984), and Donald Goines (1937–1974).

FILM STOCK

In 1889, Eastman Kodak introduced a flexible, transparent roll film made from a plastic substance called celluloid. Kodak chemists had perfected the celluloid film that had been invented and patented in 1887 by the Reverend Hannibal Goodwin. In 1891, working under Thomas Edison (1847–1931), W. K. L. Dickson (1860–1935) designed the first motion picture camera, the Kinetograph, which used Kodak celluloid film stock. By 1911, Kodak was manufacturing over 80 million feet of film stock annually for the film industry, and the company continued to be the major supplier of film stock internationally throughout the twentieth century. With the rise of the digital age in the twenty-first century, Kodak has evolved to produce and support digital filmmaking and projection equipment.

BASE AND EMULSION

Celluloid film is made up of a flexible, transparent base that is coated with a gelatin layer (the emulsion), which contains millions of tiny, light-sensitive grains. When the film is exposed by the shutter in the lens, the grains absorb light, creating a latent image that is not visible to the naked eye. The film is then treated with developing chemicals, which cause the exposed portions of the film to become visible in a negative image of the original scene: light and dark areas in a scene are reversed. The film is then "fixed," which removes the developing chemicals, and the undeveloped grains are washed away to prevent further exposure of the film. The negative film is then printed by allowing light to pass through it onto a second strip of film, creating a positive film for projection.

Early film stock was made of cellulose nitrate, an extremely flammable plastic. Nitrate film burns rapidly, even without a supply of air, and gives off poisonous and explosive gases. It has even been known to ignite spontaneously. Cameramen had to be extremely careful when using and storing nitrate film; one spark from a cigarette could cause an entire day's work to go up in flames. In 1897, a fire broke out in a French movie theater that was projecting a nitrate-based film, killing over 180 people. In 1914, a fire began in a California film-finishing house, destroying ten buildings. Kodak introduced a flame-resistant, cellulose triacetate film stock, also known as Safety Acetate, in 1909. But the film industry resisted Safety Acetate, which was less flexible, harder to splice, and wore out more quickly than nitrate film; studios continued to use the more flammable celluloid until Kodak introduced Improved Safety Base Motion Picture Film in 1948.

A few early film cameras used paper film stock. Evidence suggests that around 1883, French photography enthusiast Louis Le Prince (1842–1890) built and experimented with a single-lens camera that used a paper negative film. Prior to 1912, the Kinora Film Company offered an amateur camera and viewing device that utilized paper film stock in a flip-book format.

GAUGE AND SPEED

Film stock is available in a number of gauges, or widths. Wider gauges project a sharper image, while smaller gauges tend to be grainier. A number of experimental widths have been used in filmmaking throughout the history of cinema, but the most common gauges still in use today are 35 mm, 16 mm, 8 mm, Super 8 mm, and 70 mm.

Thirty-five mm, the gauge used in Edison's Kinetograph, quickly became the common width for filmmakers around the world. The Lumiére Brothers (Auguste [1862–1954] and Louis [1864–1948]) also used 35 mm film in their Cinématographe camera. In 1929, the American Academy of Motion Picture Arts and Sciences declared 35 mm the standard gauge of the film industry, and it remains the standard commercial gauge.

Because of its flammability and expensive two-step developing process, 35 mm was not a viable option for amateur filmmaking. In 1914, Kodak began experimenting with 16 mm acetate film that ran through the camera twice via a reversal method that produced a positive image film that did not need to be printed from a negative. The film was designed as 16 mm so that 35 mm nitrate film could not be split in half and slipped into the camera. Kodak didn't release the new gauge until after World War I, in July 1923. In 1928, Eastman Teaching Films, a subsidiary of Kodak, produced 16 mm films for use in the classroom on a range of academic subjects. In the late 1920s, studios began reprinting 35 mm commercial films on 16 mm and selling them for home viewing. But 16 mm didn't become commercially popular until World War II, when it was used for army training, education, and entertainment. Medical and industrial companies also began to use it for research purposes.

Since the 1920s, experimental, avant-garde, and independent filmmakers have used 16 mm for artistic or professional purposes. Some notable 16 mm films in this category include *Chelovek s kino-apparatom* (*The Man with a Movie Camera*, 1929) by Dziga Vertov, *Meshes of the Afternoon* (1943) by Maya Deren, *Wavelength* (1967) by Michael Snow, and *El Mariachi* (1992) by Robert Rodriguez.

In 1932, Kodak introduced 8 mm, a gauge that used the same processing equipment as 16 mm but cost about one third as much. Eight-mm cameras used 16 mm film that ran through the camera twice, each time exposing only half the film. The film was then slit in half and the two pieces spliced together. Eight mm (sometimes called "double eight") appealed greatly to the home movie market. The gauge was intended for moderate-income families, and Kodak devised marketing strategies that

Robert Rodriguez shot* El Mariachi *(1993) on 16mm film stock. **© COLUMBIA PICTURES/COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

stressed 8 mm's ''family record'' function. The famous Zapruder film, which recorded the assassination of John F. Kennedy in 1963, was shot using 8 mm film. In 1935, Kodachrome color film stock was introduced in both 8 mm and 16 mm gauges; by the 1950s, color amateur filmmaking had become very popular.

The next significant advance in amateur film stock came in 1965, with the release of Super 8 mm. The new gauge came pre-split and loaded in a drop-in cartridge, which eliminated 8 mm's tedious threading process. Super 8 mm could also project 50 percent more image area than regular 8 mm, because of a reduction in the size of the sprocket holes. By the end of the 1960s, most film stock manufacturers had halted production of regular 8 mm production altogether. Jim Jarmusch used Super 8 mm to film *The Year of the Horse* (1997), documenting Neil Young and Crazy Horse's concert tour.

Seventy-mm film, which projects an extremely high-resolution picture, became popular for commercial use in the mid 1950–1960s. When used in the camera, this film stock is actually 65 mm wide, but the negative is printed onto 70 mm film to allow for six tracks of surround sound. Seventy-mm's wide-screen format, sharp picture, and high-quality sound made it an ideal format for epics like *Ben-Hur* (1959), *Cleopatra* (1963), and *Lawrence of Arabia* (1962). The advent of low-grain 35 mm film stock and digital soundtrack systems led to a decline in 70 mm use in the 1990s, and few 70 mm films are made today. A horizontal variant of 70 mm is now used for IMAX films.

The *speed* (sensitivity) of the film stock also affects the quality of the image in projection. Slow film stock is less sensitive to reflected light, so brighter light sources are necessary during shooting to produce sharp images. Slower stock also creates less contrast between light and dark areas within a composition; fast film stock is very sensitive to reflected light and produces distinct contrasts between light and dark within the frame. Fast stock is often used for documentaries, in settings where light options are limited, and in fiction films that try to capture a stark, documentary feel. *Film noir*, a genre popular in the 1940s, took advantage of faster film stock technology to capture striking shadows and slick, rainy, nighttime streets. Film stock is assigned a numeric value according to speed standards established by the ASA (American Standards Association), which became the basis for the ISO (International Organization for Standardization) speed system, now currently used worldwide. Doubling the value doubles the film speed, so a film stock rated 800 is twice as fast as one rated 400.

BLACK-AND-WHITE AND COLOR

Until 1925, Hollywood studios used orthochromatic Eastman Standard Negative stock. Orthochromatic film was only sensitive to the brightest natural light, so large

ultraviolet lamps had to be used during shooting. It also registered only blue light, so anything colored red showed up on the film as black. This posed a problem for actors and actresses, whose flesh-toned faces appeared darker than normal on screen. Thus began the practice of using heavy white pancake makeup on the majority of screen personalities. In 1922, Robert Flaherty shot his documentary *Nanook of the North* on orthochromatic film stock, which beautifully accentuated the harsh, colorless landscape.

In 1922, panchromatic film, which was sensitive to all colors, became available for black-and-white filmmaking. The hard-edged blue orthochromatic gave way to the softer gradations of "pan," providing much more natural-looking visuals. But the film industry was hesitant to switch formats, believing orthochromatic was "good enough" to suit its purposes. In 1926, Flaherty shot *Moana*, a documentary containing lush, tropical scenery, using panchromatic film. It convinced Hollywood to make the change, and by 1930, orthochromatic film manufacturing had been discontinued.

Color was achieved in early cinema through methods of postproduction tinting and toning. Tinting is a technique that applies one or more colors to certain areas of the film stock by hand. The practice began as early as 1895, in an Edison-produced film, *Serpentine Dances*. In the film, a woman dances in circles as her dress and scarves change colors, as if by magic. Edison's crude tinting techniques proved difficult on the eyes, but by 1905, a stenciling process was perfected that created a bit more accuracy in color distribution on the celluloid. Georges Méliès (1861–1938) used tinting in *Le Rêve d'un astrome* (*An Astronomer's Dream*, 1898) and the first version of *Le Voyage dans la lune* (*A Trip to the Moon*, 1902); *The Great Train Robbery* (1903) contained tinted sequences, including the gunshot blast directed at the audience in the last scene.

Toning imparts a color to an entire black-and-white film. By 1920, over 80 percent of all Hollywood feature films used toning to represent particular settings or emotions: for example, amber for day or interior shots, blue for nighttime, red for battle scenes. In 1921, Kodak began manufacturing pre-toned film stock in nine different colors. After the arrival of sound technology in 1927, tinting and toning were temporarily halted because the processes interfered with the soundtrack, which ran alongside the image on the celluloid. By 1929, this problem had been corrected, and Hollywood continued to use tinted and toned stock copiously until more sophisticated color filming techniques were perfected—the preview trailer for *The Bride of Frankenstein* (1935), for example, was shot on green-toned film stock.

Dozens of experimental processes were tried in the early 1900s to capture realistic color on film, but most lacked quality and were quickly abandoned. Technicolor was invented in 1917 by Herbert Thomas Kalmus (1881–1963) and Daniel F. Comstock and eventually became the industry standard in Hollywood. The first version of Technicolor superimposed two colored images (one green, one red) onto the screen simultaneously. The process was too expensive to use for an entire feature film, but Technicolor sequences in black-and-white films quickly became fashionable in Hollywood—for example, in Cecil B. DeMille's *The Ten Commandments* (1923).

In 1932, Kodak introduced a Technicolor film stock capable of reproducing a reasonable range of hues, using a three-color process. With three strips of black-and-white film running together through the camera, the color image was recorded by separating its green, blue, and red properties onto each of the corresponding color-sensitive negatives. From these three negatives, three more strips of film (known as matrices) were printed; these were used to transfer corresponding dye images onto a single blank piece of film. Walt Disney was one of the first filmmakers to experiment with this process, creating *Flowers and Trees* (1932), the first animated short in full color.

During World War II, German manufacturers produced the first single-strip color negative, which is still in use. This process used three sensitive photographic emulsion layers, or *tripacks*, coated on a single base support. The eye perceives different wavelengths of light as particular colors in the spectrum. Special chemicals sensitive only to a specific group of light wavelengths allow for an image of a different color to be processed on each layer of film (blue, green, and red). This composite image is processed, much like black-and-white film, in negative, so colors are reversed until printed in positive. By 1953 this process was well established in the film industry; by 1955, the three-strip process had disappeared from use completely.

FILM STUDIES

From the outset, motion pictures have stimulated discussion and debate as a technology, a social phenomenon, a political tool, a moral danger, and an art. The earliest discussions and debates took place outside an academic context. From noted filmmakers such as Sergei Eisenstein (1898–1948), Vsevolod Pudovkin (1893–1953), and Maya Deren (1917–1961) to eclectic thinkers and social critics such as Siegfried Kracauer, John Grierson (1898–1972), and André Bazin, a body of knowledge began to develop that would provide a launching pad for the academic study of film in the years following World War II, especially the 1960s.

These pioneers also established a tradition of commentary about film that continues to operate independent of the university. Exemplified today primarily by the circulation of relatively formulaic film reviews, biographies, profiles, and box-office statistics, these popular forms of commentary work largely to support the dominant forms of feature filmmaking and to aid consumers of entertainment in their choice of films. The devoted amateur cinephile has given way to the professional film reviewer and the university scholar, although passionate engagement with the art and politics of film can still exist in both sectors.

FILM AS AN ART AND THE HUMANISTIC TRADITION

The rise of film studies within the university has typically sought to justify itself less on the grounds of film as a commodity to be consumed with the guidance of critics and reviewers and more on the grounds of film as an art form or cultural object to be understood for its formal qualities and social implications. Film studies took root in the academy in the wake of the enormous interest in European art cinema generated during the postwar period by filmmakers such as Roberto Rossellini (1906–1977), Ingmar Bergman (b. 1918), Akira Kurosawa (1910–1988), François Truffaut (1932–1984), Jean-Luc Godard (b. 1930), Claude Chabrol (b. 1930), Michelangelo Antonioni (b. 1912), Kenji Mizoguchi (1898–1956), and many others. Their work demonstrated that feature fiction films could address the same issues of alienation, spiritual hunger, historical memory, and formal experimentation that were evident in many works of literature and visual art. It was, in fact, in various humanities departments that film studies most frequently emerged as an academic subject. An older tradition of communication studies existed, and continues to exist, as a social science discipline, but the stress given in the social sciences to institutional factors, quantitative analysis of the industries and audiences for motion pictures, television and other media, and content analysis did not satisfy the same goals as humanistic approaches, which stressed interpretation of specific films and theorization about the cinema as both art form and cultural object. For the majority of film scholars, questions of industrial organization and measurable social effects took a subordinate place to questions of film structure, style, and meaning.

Treated as an art comparable to literature, painting, or sculpture, film called for study in terms of appreciation, differentiation, and interpretation. That is, an appreciation for film meant understanding what distinguished the medium from other arts and then differentiating among the myriad of actual films those that

best exemplified the distinctive nature of the medium. The differentiation of films into clusters of various kinds also allowed for comparisons and contrasts to be made beyond the level of the individual film. Among the most significant of clusters were (1) the classic Hollywood film, from *Grand Hotel* (1932) to *Spartacus* (1960); (2) studio films—those made by MGM compared to those from Warner Brothers, for example; (3) genre film; (4) national cinemas (British, French, or Iranian cinema, for example, often with a focus on certain periods of notable achievement); and (5) the cinema of specific film directors or *auteurs*, such as John Ford (1894–1973), David Lynch (b. 1946), and Agnes Varda (b. 1926). Each choice of a cluster took support from methodological principles designed to facilitate understanding of that particular type of film, from the concept of continuity editing in classic Hollywood cinema to the concept of directorial style in *auteur* studies.

Initially, interpretation, or film criticism, revolved around an attention to details that showed how films conveyed meaning by cinematic means. Landscape, for example, was an important signifying element in westerns, whereas the jumpy editing style of Jean-Luc Godard's early films, such as *À bout de souffle* (*Breathless*, 1960), proved an essential part of his attempt to reinvent the classic style of Hollywood films. Similarly, Antonioni often conveyed alienation through his *mise-en-scène*—that is, through the way he arranged characters in space and moved them through it to suggest their isolation from each other (by looking off frame or in different directions, for example).

At a more abstract level, the art of cinema came to be identified either with editing as a quintessential element, since it allowed two different shots to produce a new impression or idea not contained in either shot by itself, or with the long take and the cinema's capacity to register the uninterrupted occurrence of an event through time. Through debates about the merits of different strategies by specific directors, critics sought to understand not only the complexity of individual films and clusters of films but of cinema itself. The broad question "What is cinema?" provoked answers that shaped what came to be known as film theory.

Efforts to develop a systematic understanding of film are almost as old as cinema itself. When these efforts took root within the university in the 1960s and early 1970s, they shared at least three characteristics with other forms of humanistic inquiry: (1) film is a medium of aesthetic importance; the most important dimension to cinema is its capacity to take form as art, just as the most important dimension of writing is its capacity to take form as literature; (2) film art, like literature, affects viewers in a similar, aesthetic manner that is removed from the contingencies of time and place; it transcends the local to attain a more timeless significance; and (3) the history of the cinema is the history of its emergence as an art form.

These characteristics set up a series of priorities that carried with them a set of consequences. The greatest emphasis went to studying fiction films, which drew upon a realistic narrative tradition to tell stories revolving around individual characters, their situation or environment, and their actions. The appreciation, differentiation, and interpretation of such stories were already a familiar part of literary analysis, and many of the tools that furthered understanding of literary form proved valuable to film study, such as the close formal analysis of specific texts by literary New Criticism.

New Criticism, represented by figures such as T. S. Eliot, John Crowe Ransom, Cleanth Brooks, and Alan Tate, was an American phenomenon that flourished from the 1930s to the 1950s. It sought to counter a sense of the evisceration of the emotional, affective dimension of life that science and technology threatened to impose by turning to literature, particularly poetry, as a social restorative. More crucially, as an influence, it took up the efforts by British critics such as F. R. Leavis and I. A. Richards to celebrate the internal coherence and experiential pleasure of the text itself. Biographical studies of the artist or author, examinations of a work's historical or social context, topical concerns, and social issues all took a back seat to close readings of the text in and of itself. The text became a virtual fetish, valued as the timeless triumph of the creative spirit.

New Criticism inspired many studies in film that aimed at appreciating the full impact of aesthetic choices made within specific films. Robin Wood has been among the best practitioners of such an approach, enriching it with a keen eye for the sexual politics of a wide range of films and a broad appreciation of fiction films from the high art of Mizoguchi and Marcel Ophuls (b. 1927) to "trash" genres such as horror films. During this period, or up until the 1980s, avant-garde cinema, which often explored cinematic form in ways that gave scant attention to narrative, and documentary, which often stressed social issues in ways that diminished the viewer's attention to cinematic technique, received less consideration.

Auteur theory, with its stress on the style or vision of the filmmaker as it emerged more from an analysis of his or her films than from biographical anecdotes or personal statements of intention, proved an extremely important aspect of film study. *Auteur* criticism was among the first of the critical methodologies to gain widespread currency in the 1950s and 1960s. The practice retains a high degree of currency some fifty years later, although its focus on close reading, the director as the sole creative

force, and thematic preoccupations that seem to be segregated from their larger social, historical context have all come in for considerable correction. *Auteur* criticism initially spread from France, most notably from critics soon to become directors writing in *Cahiers du Cinema* such as François Truffaut, Jean-Luc Godard, Claude Chabrol, Jacques Rivette (b. 1928), and others. In English-speaking countries its appearance coincided with the rise of film studies as a discipline. It dovetailed handily with literary and art historical approaches to art via the Great Man theory, which consistently gave priority to men (seldom women) whose creative genius looms above those of lesser ability.

It also coincided, in France, with a rebellion, led by François Truffaut, against the institutionalized "tradition of quality," characterized by masterful but largely literary rather than truly cinematic achievements. Such work dominated the French cinema of the postwar years. Truffaut called for a cinema that explored cinematic means of expression with verve and imagination rather than one that subordinated technique to a careful but more theatrical development of characters and their conflicts. This stress led to a distinction between "metteurs en scene," directors who simply converted a script into a film as a builder might convert a blueprint into a building, and the "*auteur,*" a director whose vision and style transformed a script into something truly cinematic that could not be envisioned on the basis of the script alone.

It fell to an American newspaper critic, Andrew Sarris, to convert the French "*politiques des auteurs*" into an international phenomenon. Sarris chose to label it the "*auteur* theory," a term that lost the original emphasis of the French phrase on a policy or politics of the author and suggested something of a far more systematic nature. His own book, *The American Cinema*, proposed to trace the history of American cinema by classifying over 150 directors in categories ranging from the "Pantheon," for Charles Chaplin, Howard Hawks, Alfred Hitchcock, Orson Welles, and others, to "Oddities, One-Shots, and Newcomers," for John Cassavetes, Francis Ford Coppola, Ida Lupino, and others, or "Subjects for Further Research," for Tod Browning, James Cruze, Henry King, and others. *Movie*, in the UK, and *Film Comment*, in the US, followed the lead of *Cahiers du Cinema* in devoting large portions of their issues to studies of individual directors, often discovering stylistic and thematic consistencies in the work of directors who had seemed to be merely the hired-hands of the Hollywood studios.

Auteur criticism provided a conceptual framework not only for the analysis of the work of directors who clearly possessed a distinct visual style, such as Robert Bresson (1901–1909), Yasujiro Ozu (1903–1963), Bernardo Bertolucci (b. 1941), or Peter Greenaway (b. 1942). Even more valuably, it prompted the discovery of filmmakers of vision who might have otherwise been buried within the Hollywood system on routine assignments or as specialists in various genres. Once compared with the work of others working in the same genres, the films of Howard Hawks (1896–1977), Preston Sturges (1898–1959), Vincente Minnelli, Anthony Mann (1907–1967), and Robert Aldrich (1918–1983), for example, gained coherence for their thematic and stylistic continuity. Hawks, whose style was extremely conventional, nonetheless used westerns and action films to focus on rituals of male bonding that involve getting the job done with stoic determination, whereas his comedies explore the hilarious results of men falling under the sway of women who isolate and feminize them.

The emphasis on film as a transcendental art with an autonomous history took shape within a strongly national context, in keeping with the almost universal role of the humanities in cultivating a sense of national identity. American, British, French, Senegalese, Iranian, Japanese, Brazilian, Argentine, and many other national cinemas qualified as transcendental art with distinctive history but did so within a national context. The greatness of a German film in the 1920s might be tied to its distinct use of the Expressionist techniques common in German art at the time—a quality, for example, that distinguished German film from the montage principles of 1920s Soviet cinema. Similarly, American films were often said to exemplify the pursuit of individual happiness or the obstacles to its attainment, a consistent theme in American art and literature.

HUMANISTIC INQUIRY AND POLITICAL SIGNIFICATION

These types of film studies held sway during the transitional period during which film became accepted as a disciplinary focus and a departmental entity within the university. Even at this time, during the 1960s and 1970s, the field was not as homogenous as this account so far implies. The question of "What is cinema?" also took a turn toward the political, asking how film mattered within the larger social arena. At the same time, a wave of European critical theory exerted considerable influence throughout Europe and North America. This work tended to shift emphasis away from content analysis per se, as it was practiced in the social sciences, where form or style was of little importance, and instead stressed the mechanisms by which content arises in relation to specific institutional practices and linguistic or semiotic forms. Artistic expressiveness, or style, came to be considered less a matter of individual creativity and more a matter of institutional systems, which establish a context and set limits within which specific forms

of expressivity can occur. Stress on the psychology of individual characters, for example, might be seen as a function of a realist tradition that tends to give priority to the individual as the primary social and historical force. Such a tradition, in turn, could be considered an ideology—a particular way of seeing the world that can be subjected to the same close scrutiny as the style of individual films.

Initially associated with structuralism and then with poststructuralism, continental theory posed numerous challenges to the humanistic tradition. Language itself, including the language of cinema—its narrative codes, formal structures, and expressive techniques—became regarded less as a vehicle for expressing already conceived ideas and more as a mechanism that actually generated the impressions that they only appear to represent. Realism, for example, serves to make its view of the world transparent, as if the world obviously and naturally exists in a certain way. Continuity editing, which tends to go unnoticed, reinforces such a view. Modernist techniques, on the other hand, question this naturalness and stress the disjointed, subjective, incommensurate view of the world that different individuals might have. Jump cuts and strange juxtapositions between people and places reinforce this view. In this regard, *The Best Years of Our Lives* (1946) exemplifies the realist film as *L'Année dernière à Marienbad* (*Last Year at Marienbad*, 1961) exemplifies the modernist film.

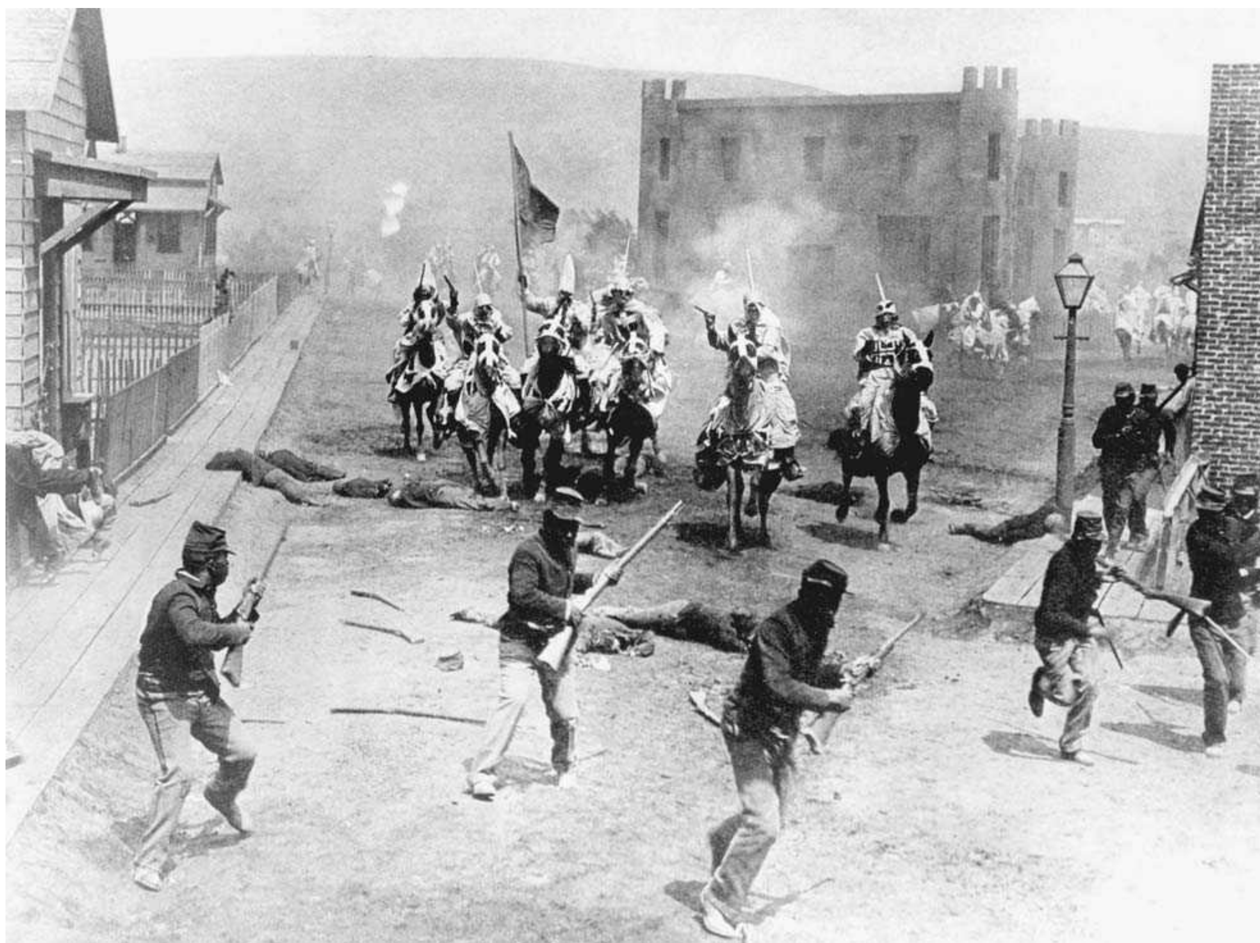
The idea that meaning is always tightly related to a specific context and to a specific form of expression was carried beyond the film itself and applied to the artist and viewer. In this case, artistic vision or individual identity was seen as always tightly related to the specific institutional mechanisms that generate a sense of self-expression and identity. Traditional literary and film criticism held that the creative artist possessed special powers that led to artistic excellence. Structural and post-structural theory instead proposed that all subjects—artists and filmmakers, critics and viewers—were constituted as subjects within specific cultural and institutional frameworks that set goals and limits for creativity. These frameworks served the specific needs or interests of an existing social system—that is, they were ideological. For the French political theorist Louis Althusser, this idea led to the influential argument that the very idea of an independent subject was itself the product of an ideological operation: individuals think of themselves as free, subject to no one, within a social field that makes this notion the cornerstone of a free-market economy in which shared awareness and collective action represent a limitation or diminution of a subject's individuality.

Althussser's most forceful statement of the idea of the individual subject as a product of ideology was his essay "Ideology and the Ideological State Apparatus" in *Lenin and Philosophy*. His line of thought was extended to the cinematic apparatus as an ideological device for the reinforcement of the status quo by French theorists at *Cahiers du Cinema* such as Jean Louis Baudry. Althussser stressed how the individual internalized assumptions about his status as a subject that inevitably placed an emphasis on how this internalization occurred. In film study, this led to a large quantity of work in the 1970s that attempted to make use of psychoanalytic theory to account for the effects of cinema on the viewer. *Screen* magazine, from the UK, became the leading proponent of this effort. One of the most influential articles on ideology and the subject was Laura Mulvey's essay, "Visual Pleasure and Narrative Cinema," first published in *Screen* in 1975 and anthologized many times since. The essay is discussed further in the next section.

The dominant narrative cinema came to be seen as serving an ideological function that confirmed the individual as a subject. The nature of the star system, the system of continuity editing, and narrative realism worked to make stories of individual characters and their fate appear to simply tell themselves as a natural expression of an obvious fact: individuals are the key creators of social structure and historical change. The mechanism that actually animates these individuals, narrative storytelling or, as it came to be known, the cinematic apparatus, remains basically unacknowledged, off-screen. Like a puppet master, it creates the illusion of an imaginary world and fictitious characters that have independent lives of their own.

Film theory thus identified the cinema as a system whose formal elements contribute to the ideology of the individual. Feminist film theory carried the analysis one step further. Laura Mulvey, in her pioneering essay, "Visual Pleasure and Narrative Cinema," noted that the individual subject who takes action in films—embarking on quests, courting a partner, solving a mystery, and so on—is almost invariably male, and the individual who awaits the outcome of such actions is almost invariably female. Paralleling this distinction, the camera encourages identification with the male hero; his look becomes the camera's look. We see the world from his point of view or from a point of view that places him front and center. Simultaneously, among the things the male hero sees when he looked out at the world around him is the female lead. She is there to be seen; she represents, in the words of Laura Mulvey, "to-be-looked-at-ness," a passive position that can be understood as a symptom of a social hierarchy between the sexes.

Whereas structuralism gave emphasis to the text itself and the principles that structured it, poststructuralism emphasized the context within which a film is



D. W. Griffith's* The Birth of a Nation *(1915) is formally inventive but racist in its representation. **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

received. A given structure to a text was no longer seen as fully determining meaning. Interpretation and meaning vary; formal qualities of the text set limits but do not predetermine meaning. The primary context is the actual viewing situation and the relation of the spectator to the screen. The differentiation between male and female spectators is one example of the way in which poststructural and feminist analysis have given added specificity to ideas about an ideological effect to cinema in general. The camera's gaze no longer affected all viewers equally, regardless of sexual identity. In many ways this represented the first of many cracks in the three basic assumptions that had underpinned much of the initial effort to introduce film studies into the university.

THE STUDY OF FILM AND POSTSTRUCTURALISM

By the 1980s poststructural theory and criticism had begun to adopt a new set of guiding assumptions. The new characteristics ascribed to cinema were three: (1) the social impact of films on specific viewers matters more than the general qualities of film as art; (2) art is not essentially transcendent but always tied to a social and historical context within which different responses and interpretations occur; and (3) the history of film is the story both of its rise as an art and of its social impact and political significance as a mass medium.

Rather than appreciating the art of cinema outside of any particular context, the new emphasis called for situating the art of any film in a specific context. The importance of *The Birth of a Nation* (1915) for the art of cinema because of its inventive use of cross cutting between simultaneous events to create suspense must now be situated in relation to the actual suspense created: would members of the Klu Klux Klan rescue the endangered white women from the clutches of an evil black man? This racist theme itself belonged within the historical context of race relations in the early twentieth

century, when prejudice and stereotypes took different shape and had different status than they do today. Situating film within a specific context has also added new impetus to the study of documentary film. Extraordinarily popular compared to its more marginal status up until the early 1980s, documentary film study now consistently addresses aesthetic issues in relation to socially specific goals and effects.

The differentiation of films into various groupings continued as before but with an added emphasis on the historical context to which genres, movements, waves, the work of specific directors, and historical phases of national cinemas belonged. The attempt to understand "What is cinema?" became a question posed less in relation to traditional arts and more in relation to newer media like television, installation and video art, digital, interactive media, and the Web. Forms of overlap and convergence among these various forms made the isolation of cinema as a distinct medium a less compelling question than the continuities and discontinuities among a wide array of moving image media.

"Identity politics," which places great stress on defining the qualities that characterize a given group, often with a stress on the issue of stereotypes, the need for "positive images," and the search for alternative forms of narrative more commensurate with the group's shared values, gave rise to a flowering of film theory, criticism, and history from the perspective of African American, Native American, ethnic, and queer (a combination of gay and lesbian) perspectives.

This shift in emphasis from the close reading of texts isolated from their context began in the 1970s as an aspect of a cultural studies approach to film and other media. It gained strength in the 1980s as identity politics—in this case, the examination of cinema from the distinct perspective of a specific group—became an important aspect of political debate in the larger society. Anthologies such as *Unspeakable Images: Ethnicity and the American Cinema* and *Screening Asian Americans* provide a wealth of critical analysis devoted to issues that had gone largely unexplored by either *auteur* study or by ideological study that focused on the subject rather than the larger social system to which the subject belonged. Attention to a more socially and historically situated perspective challenged qualities previously taken for granted, such as heterosexual marriage as a marker of the happy ending, stereotypic representation of groups from Latinos and Latinas to Jews, and identification with male heroes but desire for female stars: the reversal of these conventions by gay and lesbian viewers, who desire differently, has undercut the universalizing claims of traditional film theory.

Also beginning in the 1980s, a call for a return to the history of film cast doubt on the received wisdom of existing film histories. Studies such as Miriam Hansen's *Babel and Babylon: Spectatorship in American Silent Film*, David E. James's *Allegories of Cinema: American Film in the Sixties*, and Jane M. Gaines's *Fire and Desire: Mixed-Race Movies in the Silent Era* all depart radically from the earlier tradition of tracing the rise of film as an art within various national contexts. Revisionist histories such as these set out to apply a more finely tuned analysis of the larger context in which films arose. They took into account the social, historical, economic, and ideological factors that both a more traditional emphasis on the rise of film as an art and *auteur* theory with its stress on the centrality of the author as understood solely from films themselves failed to do.

The new assumptions listed above that sought to contextualize the understanding of films also called for interpretations that differentiated among the responses of specific audiences and compared the responses of different audiences. African American women, for example, were far more receptive than white males to Julie Dash's *Daughters of the Dust* (1991), which tells the story of an African American family poised to embark upon profound changes at the start of the twentieth century. Even popular, mainstream films could no longer be understood from a single perspective. Different groups were shown to often read against the grain of the preferred meaning assigned by critics and marketers and to instead discover alternative meanings: slasher films, for example, which make violence against women grizzly "fun," often lead to male adolescents identifying, across the gender divide, with the "Final Girl," who vanquishes the male villain and restores order. The critic's own alignment in relation to the particulars of ethnicity, class, and gender has also become a more openly acknowledged aspect of film study since the universalizing voice of traditional criticism has become increasingly associated with a white, heterosexual male perspective that treats its own social viewpoint as normative.

Film studies scholars today continue to formulate theories about the broad patterns that characterize the cinema, but they do so in a form that gives heightened attention to the specificities of time and place. "Thick" interpretations, which attempt to grasp the multiple perspectives and divergent meanings that a given work conveys and prompts, have gained a stronger foothold than theorizations that view the cinema as a medium that functions in predetermined ways and produces consistent responses. Rather than serving as a form of social glue for the construction of a unified nation-state, the cinema has come to be seen as part of a highly contested cultural zone that no longer coincides with a single understanding of national or any other identity. The stakes of specific, often

underrepresented groups seeking to claim a space within the cultural arena generally and film studies specifically have taken on great importance. Combined with mostly European theories of poststructuralism, these forces have altered the shape of film studies, proposing new ways to answer the perennial question, "What is cinema?"

FINE ART

The cinema has engaged in a dialogue with the traditional fine arts—visual art, literature, music, theater, and architecture—from its inception to the present. The relationships between cinema, the "seventh art," to the other arts is indeed vast and complex. Film's ability to build convincing worlds with spatial depth recalls the functions of architecture, while music lends film its power to arouse abstract emotions that neither words nor images can fully express. The movies' emphasis on the body and human emotions connects it with the theater and poetry. Film's narrative emphasis has obvious affinities with prose fiction, and of course the medium's visual aspect aligns it with painting. Further, the ways in which cinema references art informs a variety of cultural discourses.

Born out of the circus, vaudeville, and the Grand Guignol, the cinema engaged in a dialogue with the arts and high culture during its early or primitive period, when one shot with movement inside the image was enough to capture the viewer's attention. The pioneers of filmmaking were well aware of the arts: Georges Méliès (1861–1938) was educated as an academic painter, and the Lumière brothers (Auguste Lumière [1862–1954] and Louis Lumière [1864–1948]), although trained as engineers and photographers, restaged the commonplaces of French Impressionist painting in their depiction of leisure time and daily life. The films of Méliès and the Lumières are marked by jokes, puns, parodies, puzzles, anagrams, riddles, and charades about the clichés of painting. Louis Lumière's short *Partie d'écarte* (*Card Game*, 1895), for example, recalls a trope familiar from Flemish genre painting to Cézanne's *The Card Players* (1890–1892). *D'écarte*, from the verb *écarter* (to separate), is a pun for *des cartes* (referring to cards). The card game in this particular party represents the unpredictable nature of life, with its promises and surprises.

NATIONAL CINEMAS

Through the traditions of national cinemas, cultures represent themselves to audiences both at home and abroad. Hence the function played by the arts in the development of national cinemas is most significant. Before and after World War I, the various national film industries in Europe distinguished themselves through allusions to domestic aesthetic traditions. In Italy, for example, Giovanni Pastrone's epic *Cabiria* (1914) draws on the grand tradition of Italian opera, complete with monumental sets and masses of extras. In Germany, Robert Wiene's *Das Cabinet des Dr. Caligari* (1920) and F. W. Murnau's *Nosferatu* (1922) tap German romanticism's interest in origins and subjectivity while also drawing on the visual style of German expressionism. Both films cast the upheavals of the self in the jagged angles and skewed shapes familiar from German expressionist painting; the sets make visible a sense of spiritual anguish, and their natural locations suggest peaceful surfaces concealing mysterious evils. One of the most famous German expressionist films, Fritz Lang's *Metropolis* (1927), is an architectural film built on psychoanalytic allusions and images of industrial regimentation. In his direction of the actors and his handling of crowds, Lang was influenced by the theater of Max Reinhardt, who used sculptural groupings of automaton-like actors. By designing and streamlining the scenes featuring crowds—a feat of directorial control and vision—Lang evokes a sense of dehumanization.

In comparison to the expressionist taste for the supernatural, the so-called French impressionist avant-garde of the 1920s preferred a more psychological understanding of interiority. Germaine Dulac's *La Souriante Madame Beudet* (*The Smiling Madame Beudet*, 1922) uses musical allusions and visual effects to suggest the psychological complexities at the core of an unhappily married woman, thus depicting a feminine self torn by erotic repression and a desire for domestic rebellion. In the 1920s and 1930s, French surrealism thrived on unexpected analogies and unsettling disruptions of objects. The development of the surrealist director Jean Cocteau's esoteric shifts between word and image, tactile and visual references in *Le Sang d'un poète* (*Blood of a Poet*, 1930), anticipate many of Jean-Luc Godard's collages in *Pierrot le Fou* (1965). More generally, surrealism's taste for disruption anticipates the French New Wave's playful orchestration of literary, pictorial, musical, and popular sources in film. Before and after the revolutionary upheavals of May 1968, the French New Wave directors, especially Godard, wove together the legacies of different periods of film history, ranging from surrealist word–image games to the montage ensembles developed out of Soviet Constructivist art.

With film impressionism, surrealism, and expressionism, the national cinemas of France and Germany embraced the agendas of modernist avant-garde movements. Furthermore, around 1914 the Italian futurists published a manifesto about the cinema (they also made a few films, most of them lost). However, the silent Italian film industry steered away from avant-garde experimentation in favor of a more popular, operatic cinema based on great books and paintings of high culture. This edifying approach from Italy became a model for the development of the cinema in Hollywood as well. The Italian compromise between mass spectacle and famous works, populist entertainment and an attention to pictorial values, reappears in the work of the American director D. W. Griffith, notably *The Birth of a Nation* (1915), *Intolerance* (1916), and *Broken Blossoms or The Yellow Man and the Girl* (1919). Set in Victorian England and replete with opium dens and Buddhist references, *Broken Blossoms* is a melodrama whose artistic aspirations are confirmed by its tragic ending in which all three protagonists die. The film deals with alcoholism, family abuse, and racial miscegenation, deploying the style of Pre-Raphaelite painting in its representation of the self-effacing but sensuous character of the girl Lucy (Lillian Gish).

GENRE

By upgrading the melodrama with art-historical references, Griffith's *Broken Blossoms* paved the way for the stretching of genre films from formulaic narrative to more aesthetically complex works. Whether the narrative deals with the biography of a famous artist (the biopic) or with a famous battle (the historical film), it is possible to elevate genre to the "art" film. As the scholar Charles Tashiro has pointed out, some historical films depend on pictorial citations as period sources, including William Dieterle's *Juarez* (1939), with its literal restaging of Goya's 1814 painting *Executions of the Third of May 1808*, and Stanley Kubrick's *Barry Lyndon* (1975), which is informed by eighteenth-century portraiture and genre paintings ranging from Joshua Reynolds to John Constable. Bo Widerberg's *Elvira Madigan* (1967), though it does not recall any specific picture, is steeped in the colors, landscapes, fabrics, and atmospheres of impressionist painting.

American biopics devoted to the life of an artist, such as John Huston's *Moulin Rouge* (1952), about Henri de Toulouse-Lautrec, and Vincente Minnelli's *Lust for Life* (1956), about Vincent van Gogh, can be considered art films in a very loose sense. These films tend to recycle society's cliches about artists—notions of genius, madness, recklessness, inner torment, exile, and romance. Films as different as *Legal Eagles* (1986) and *Modigliani* (2004) suggest that making art goes hand in hand with living intensely, talent with struggle. As is apparent from the character of Waldo Lydecker (Clifton Webb) in *Laura* (Otto Preminger, 1944), Hollywood traditionally represents artistic figures and environments in a self-destructive or corrupting light; painting specifically is the equivalent of excess, color, femininity, vice, and solipsism. The French director Maurice Pialat takes a more sociological and existential approach to his subject in *Van Gogh* (1991), where art-making is still all-consuming and self-destructive yet leaves room for friends, family, and colleagues. As conceived by Pialat, Van Gogh is subjected to the value judgments of his period about the artist—entailing notions of femininity, creativity, and individuality—but he is not the embodiment of corruption and decadence.

The Hollywood musical, with its emphasis on costume, color, and set design along with music and dance, is a genre that evokes the relation of art and film through visual style. In *An American in Paris* (1951), for example, the set designs evoke the style of French impressionism. In another genre, film noir, chiaroscuro lighting and Gothic architecture show the influence of German expressionism, a sensibility that migrated from Europe to Hollywood. Another notable instance of generic reference to visual art is in the thrillers of Alfred Hitchcock, which from *Psycho* (1960) onward includes references to the paintings of Edward Hopper (1882–1967), an American artist famous for his deserted diners at night, lonely motels, uninhabited vistas, and isolated individuals.

The look of **Barry Lyndon** ***(Stanley Kubrick, 1975) is informed by the painting styles of the eighteenth century.*** **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

And in a science-fiction film with noirish underpinnings like Ridley Scott's *Blade Runner* (1982), the eclectic mix of architectural citations from various periods and styles endows the film with a strange nostalgia for a more authentic historical past in such a way as to calibrate the loss of memory and a jaded sensibility.

CINEMA AND ART

The marriage of art and cinema through genre in American cinema often resulted in the identification of art with elitism and deception. In European film history, the post–World War II art film developed in the film industries of France, Germany, and Italy. The film theorist and historian David Bordwell has argued that the "European art film" is more of a mode than a genre because its stylistic conventions stem from a general opposition to the rules of Hollywood cinema. Bordwell argues that films such as Michelangelo Antonioni's *L'Avventura* (1960) and Ingmar Bergman's *Persona* (1966) were born out of the rejection by Italian neorealism of Hollywood's causal storytelling, goal-oriented protagonists, and emphasis on narrative closure. By choosing ambiguity, unresolved narratives, directorial expressivity, location shooting, and existential malaise with a social consciousness, the European art film was an alternative to Hollywood in the 1950s.

Andre Bazin's influential role as a critic enabled the rise of Italian neorealism and the French New Wave. François Truffaut relied on artistic citations from French impressionism and early modernist painting in such films as *Jules et Jim* (1962) and *Les Deux anglaises et le continent* (*Two English Girls*, 1972); by contrast, Roberto Rossellini's neorealism has traditionally been praised for its newsreel look and rejection of art-historical sources. However, the argument that Italian neorealism exists outside of art history is naïve. In the Naples episode of *Paisà* (*Paisan*, 1946), for example, the relationship between figure and ground, with the big soldier and the small child sitting among the ruins, invokes the end of Renaissance painting's anthropocentric model. The urban landscape is an image of destruction and rubble, yet the two characters occupy the center of the frame so that the ruins amid which they sit acknowledge in reverse the humanist function of architecture in the Italian pictorial tradition.

Michelangelo Antonioni's **L'Avventura** ***(1960) is an example of the European art film.*** **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

Bordwell's model of the European art film applies to the self-reflexive, modernist films of the sixties but does not include the pastiche-like postmodernist films that began to appear in the 1970s and 1980s. *Back to the Future* (Robert Zemeckis, 1985) contains many references to Duane Hanson's hyperrealist sculptures, while Bernardo Bertolucci's *Il Conformista* (*The Conformist*, 1970) uses René Magritte's sleek irony and art-deco interiors. Lina Wertmüller's use of spaces suspended in time for *Film d'amore e d'anarchia* (*Love and Anarchy*, 1973) echoes the metaphysical atmosphere found in the paintings of Giorgio de Chirico. It is also important to remember that there are many other art films that, on the one hand, do not entirely follow Bordwell's model and, on the other, may have little to do with postmodern nostalgia. Thanks to their understanding of art-historical categories, these films are neither simply citational texts nor superficial and seductive pastiches compensating for an increasing sense of loss of memory and authenticity. And, finally, they are not always structured as travelogues of human alienation, a penchant triggered by neorealism's use of vignettes or sketches rather than coherent, causal narratives.

Filmmakers such as F. W. Murnau, Eric Rohmer, Alain Cavalier, and Andrei Tarkovsky are aware of the history of art to the extent that they move beyond it, treating it as a convenient storehouse of images. Their films can be called "visual form" films because these filmmakers incorporate the insights of pictorial genres into their own work. By taking seriously the links between landscape painting and subjectivity in, for example, *Nosferatu*, Murnau models his images on Caspar David Friedrich's vistas with precipices and fogs, eerie peaks and huge rocks. Murnau frames from behind small and lonely human figures, which he juxtaposes against vast natural spaces filled with a sense of the sublime; the director's insertion of an internal viewer matches Friedrich's use of the so-called *ruckenfigur*, a lone figure in a landscape, to underline how that landscape can be a figment of someone's mind yearning for the divine or sensing the possibility of horror. *Nosferatu* is therefore an example of the crossover between film and art in the context of silent German expressionism as a national cinema. Visual form is relevant to the tension between neoclassical and French romantic painting in Eric

Rohmer's *Die Marquise von O . . .* (*The Marquise of O*, 1976), an adaptation of Heinrich von Kleist's novella. By juxtaposing the sensuality of the word to the introspective qualities of the image, Rohmer questions the opposition of Enlightenment rationality and romantic impetuousness. Tarkovsky in *Andrei Rublev* (1969) uses fluid camera movements and shots of doors and windows to explore the hypnotic power of religious icon painting. Likewise, by using many close-ups on objects and an austere color scheme, Alain Cavalier in *Thérèse* (1986) links the genre of still-life painting to the humility of servants and the subordination of femininity.

Films that are part of a national cinema tradition (with or without a link to an avant-garde movement), modernist art films and postmodern pastiches, and visual-form films overlap the flexibility of these categories and bears witness to the richness of the encounter between art and film. Although the heyday of the European art film is over, cinema from Asia, the Middle East, Latin America, and Africa deserves much closer examination in the light of the relation between film and art. For example, the Iranian filmmaker Abbas Kiarostami's use of detailed images and vast landscapes relies heavily on the style of Persian miniature painting in his films *Ta'm e guilass* (*A Taste of Cherry*, 1997) and *Bad ma ra khahad bord* (*The Wind Will Carry Us*, 1999). Sergei Parajanov's *Sayat Nova* (*Color of Pomegranates*, 1968) combines Russian folk culture with performance art, while some of his compositions could easily be called installations and move from the screen to the art gallery. Although most of the critical work on film and art has relied on European case studies, it has become especially urgent to tackle Islamic and African visual traditions in order to achieve a better understanding of the art films that these areas of the world have produced. Japanese and Chinese cinema has drawn heavily from national traditions of woodblock printing and scroll painting.

American avant-garde filmmaking of the 1960s and 1960s was heavily influenced by minimalism in the visual arts. The films of Andy Warhol, Michael Snow, Hollis Frampton, and Paul Sharits are related to the work of artists such as Carl Andre, Robert Morris, Donald Judd, and Robert Smithson, all of whom worked in a variety of media. In the light of this awareness that what goes on in the art gallery relates to what happens on the screen, the American artist Eleanor Antin (b. 1935) coined the expression "black box, white cube"—the first term referring to cinema, the second to the art gallery. This phrase has been increasingly used by artists working in film and video, perhaps because so many mixed-media installations have blurred the boundaries between sculpture, film, architecture, video art, and painting.

FINLAND

During its heyday between 1930s and 1950s, domestic film production in Finland developed into a miniature image of the Hollywood film industry, yet with certain national characteristics based on the country's historical and political situation. Thus, for instance, due to Russian repression while Finland still was a Grand Duchy under the rule of Czarist Russia, film production was initially regarded as a national project aimed at reinforcing the identity of the Finnish people on the one hand, and at presentation of the country and its people to foreign nations on the other hand. Therefore, the first films made in Finland were short documentaries about the country's natural and industrial sites.

BEGINNINGS

Finland was an autonomous but oppressed part of the Russian Empire from the early nineteenth century until it became an independent republic in 1917. The first feature made in Finland, *Lönnbrännarna* (*Bootleggers*), premiered in 1907. The film, of which there remain only a few stills, was a result of a script contest aimed at creating a national cinema. However, Russian oppression and in its aftermath, the civil war—fought between Russian-inspired Bolsheviks and right-wing nationalists in 1917–1918—discouraged other serious efforts. The struggles for the new independent republic of Finland, ruled by the nationalists, delayed the advance of the film industry for another decade. From this period there also exists one of the world's oldest film censorship authorities (Suomen Elokuvatarkastamo), a state office that came to influence the development of the objectives and quality of Finnish film. It had the authority to decide specifically not only which films could be exhibited, but which were "valuable" enough to be freed from the amusement tax. Throughout the early decades, a strong public notion in the country regarded cinema as "amusement"—as in opposition to art—dispensable, and hence, taxable.

One of the central figures in the early history of Finnish filmmaking was Erkki Karu (1887–1935), who founded the production company Suomi-Filmi in 1919 and directed a handful of successful rural melodramas. The decade of the 1930s was a consolidating period for the domestic film industry, during which Suomi-Filmi—together with Suomen Filmiteollisuus, also established by Karu—became fully integrated production companies, dominant in the field until the period of decline in the 1960s. Other important producers of features were Adams Filmi and Fennada-Filmi, while companies such as Aho & Soldan specialized in high-quality documentaries.

Toward the end of the silent era a handful of films were produced, many of which were Finnish plays and dramatic novels transformed into films. Apart from rural melodramas such as *Koskenlaskijan morsian* (1923) or classics like *Kihlaus* (1922), contemporary comedies in urban milieus, such as *Kaikki rakastavat* (1931), starring Finland's leading romantic leads Tauno Palo (1908–1982) and Ansa Ikonen (1913–1989), became fashionable.

Many were hesitant about investing in sound equipment in the early 1930s but what looked like a risk turned into a gold mine soon enough, for the Finnish people loved to hear their language spoken on the silver screen. The first sound film, *Aatamin puvussa ja vähän Eevankin* (*Dressed Like Adam and a Bit Like Eve, Too*)

was released in January 1931. Successful foreign films, often Swedish, were adapted into Finnish milieux, and popular novels were transformed into film scripts. For the first time, domestic films could compete with foreign productions. However, few countries imported Finnish films. One of the most well-known films from the pre–World War II period, *Varastettu kuolema* (*Stolen Death*, 1938), was to represent Finnish cinema in retrospectives and festivals, but it was exported to Sweden only. Its director, Nyrki Tapiovaara (1911–1940), directed but four features, and his heroic death during the last days of the Winter War of 1939–1940 has contributed to the myth of him as the lost genius of Finnish cinema. *Varastettu kuolema* was photographed by Erik Blomberg (1913–1996), who would direct *Valkoinen Peura* (*The White Reindeer*, 1952), one of the country's internationally acknowledged productions, which won the International Prize at the Cannes Film Festival in 1953 and the Golden Globe in the United States in 1957.

The production pace was hectic during the war years (1939–1944) in spite of the impossible conditions, with a lack of film stock, the constant bombing of Helsinki, and many photographers and other male technicians called to the front. Due to obstacles such as commercial embargos, the influx of foreign films diminished, and distributors begged for new films. A number of costume melodramas such as *Kulkurin valssi* (*The Vagabond Waltz*, 1941) and *Katariina ja Munkkinimen kreivi* (*Catherine and the Count of Munkkinimen*, 1943) were made in response, as were popular military farces. Toward the end of the war, these farces pointedly ridiculed the hostile Soviet army, as in a series featuring two friends in arms called *Ryhmy and Romppainen* (1941, 1943, 1952). After the peace treaty between Finland and the Soviet Union in 1944, the authorities withdrew the two first films from the market in order not to offend the Eastern neighbor, now an important trading partner.

POSTWAR CINEMA

Apart from the control executed through the much-resented amusement tax, another means of state interference in the film industry was the grants and awards that were introduced during the latter half of the 1940s. After the establishment of the Finnish Film Foundation in 1969, the state also became a significant part in the production process—indeed, a prerequisite for the existence of a film industry in the country. But far from gaining control as in "totalitarian state propaganda," the establishment of the Foundation was foremost a protectionist move reflecting nationalist sentiments. By the 1960s, the attitudes toward cinema had changed in Nordic countries and to an increasing degree it was perceived as art in its own right. According to common understanding, therefore, the government is responsible for providing support for the artistic development of film as well as for literature and the fine arts.

The Finnish authorities produced newsreels reporting on the current political situation during World War II, and the documentary stock produced by the Finnish Army and now stored in their archives is quite extensive. The government-financed *Suomi maksaa* (Leistelä, 1951), a report of the nation's efforts to pay the heavy national debts caused by the war against the Soviet Union, was a typical documentary during the late 1940s and 1950s. Finnish people were extremely proud of being the only nation in the post–World War II world that repaid the restoration loans guaranteed by the US government. The film breathes pride and self-confidence, not unlike the documentaries made during the early period of independence.

The disillusionment that followed World War II affected the topics of feature films: light comedies and romantic stories gave way to social dramas depicting the problems of people living in the shadows of urban backyards. Edvin Laine (1905–1989), one of the most significant of the postwar generation of film directors, produced *Ristikon varjossa* (*Hunting Shadows*) in 1945, and *Laitakaupungin laulu* in 1948. Laine also directed the most popular Finnish film ever, *Tuntematon sotilas* (*The Unknown Soldier*, 1955), the first realistic account of the war. The commercial success of the film unintentionally contributed to the crisis that ultimately brought about the bankruptcy of Suomen Filmiteollisuus: to avoid paying tax on the millions in profit the film generated, the company invested in too many hastily made new films of lesser quality.

On top of the insecure situation during the 1960s, with increasing production costs and declining film attendance that necessitated closing down movie theaters, the film industry was hit by a strike initiated by the Actors' Union, which was displeased with actors' salaries. The strike did not stop film production, however, but instead, introduced a whole new generation of actors, most notably in *Käpy selän alla* (1966), directed by Mikko Niskanen (1929–1990) with a script written by Marjaana Mikkola. Women screenwriters are not uncommon in the history of Finnish film: already in the 1920s, plays by dramatists such as Minna Canth (1844–1897) and Maria Jotuni (1880–1943) were adapted into films, and Valentin Vaala's (1909–1976) popular comedies in the 1930s to 1940s were the results of his cooperation with his leading lady, Lea Joutseno (1910–1977), and the writer Kersti Bergroth (1886–1975).

Yet it is hard not to see the history of Finnish cinema as a cavalcade of a handful of men: Risto Orko (1899–2001), the CEO of Suomi-Filmi, and Toivo Särkkä

Aki Kaurismäki's* Leningrad Cowboys Go America *(1989) was an international hit. © ORION FILMS/COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.

(1890–1975), the head of Suomen Filmiteollisuus, dominated the country's screens as directors for over thirty years. The first women directors appeared in the early 1960s. Ritva Arvelo (b. 1921) won the state award (an unnamed monetary award) with *Kultainen vasikka* (1961). Yet another twenty years would pass before women were able to establish themselves in the industry: Tuija-Maija Niskanen (b. 1943), the director of *Suuri illusioni* (*Grand Illusion*, 1985), and Kaisa Rastimo (b. 1961) with her *Säädyllinen murhenäytelmä* (*A Respectable Tragedy*, 1998) are among the most important. One of the most successful women in Finnish cinema since the early 1980s has been Pirjo Honkasalo (b. 1947), whose documentaries *Atman* (1996) and *Melancholian 3 Huonetta* (*The 3 Rooms of Meloncholia*, 2004) have received awards at numerous film festivals around the world.

The establishment of the Finnish Film Foundation contributed to structural changes within the industry during the 1970s. The old companies with their complex administration systems disappeared and smaller companies, often managed by the filmmakers themselves, emerged. This was in line with the contemporary view of the film director as *auteur* with full control over production, including right to the final cut. Such a view brought about a generation of independent film directors writing their own scripts and, like Jörn Donner (b. 1933), establishing their own production companies, Donner, also a well-known author, directed films such as *Sixtynine* (1969) and *Perkele! Kuvia Suomesta* (1971), examples of the soft porn wave of the period, whereas Risto Jarva's (1935–1977) productions reflected the era's social criticism with films such as *Bensaa suonissa* (*Gas in the Veins*, 1970) and *Jäniksen vuosi* (*The Year of the Hare*, 1977).

By the end of the millennium yet another significant change had taken place. It was clear that no Nordic country alone could generate the funds needed for the production of a feature film; cooperation was needed between the countries and their respective film institutes

and television companies. The result was lengthy fund-raising and decision-making processes whereby only prestigious ''heritage''-style productions became possible to realize, such as *Talvisota* (*The Winter War*, *Pekka Parikka*, 1989) with its painstaking and elaborated mass scenes depicting the battles of the Winter War.

From the 1980s on, the Finnish solution to the situation was provided by another generation of film directors with Aki (b. 1957) and Mika Kaurismäki (b. 1955) in the lead, making-low budget films with small, mobile units. While Mika Kaurismäki has invested in an international career, Aki has stayed in Finland faithful to his austere, stylized, and self-reflexive style in films such as *Tulitikkutehtaan tyttö* (*The Match Factory Girl*, 1990) and *Mies vailla menneisyyttä* (*The Man Without a Past*, 2002). In his films Aki Kaurismäki has tended to scrutinize nostalgic sentiments addressing the popular collective memory of the postwar Finnish generations. Other directors of his generation utilize heightened realism with postmodern tendencies such as split narrative and pastiched characters. Timo Koivusalo's (b. 1963) biopic *Rentun ruusu* (2001), about the life of popular 1970s protest singer Irwin Goodman, or Pekka Lehto's *Tango Kabaree* (*Tango Cabaret*, 2001), featuring the dancer and celebrity Aira Samulin, are but two examples. Such forms of remembrance have not always ended up as box-office hits, whereas films depicting the wars of independent Finland always seem to manage to cover their costs.

FRANCE

Since World War I, French cinema has defined itself through its ambivalent relations with Hollywood cinema. Although French cinema was the dominant force in the international market until World War I, its influence extending as far as Australia, in the decades that followed the industry struggled to maintain its hold on French audiences. French stars, valued for their independence and their ability to represent ''Frenchness'' globally, have played an important role in this crusade. Though many would argue that this has been a losing battle, French product continues to dominate French screens, though, as often as not, it is the television screen that viewers watch today. Yet, initially, it was the French who discovered cinema as we know it.

SILENT CINEMA: 1895–1929

The invention of the cinema was credited to Auguste (1862–1954) and Louis Lumière (1864–1948), two brothers, who organized what is widely believed to be the first film screening on 28 December 1895, at the Grand Café in Paris, using the Lumière brothers' *Cinématograph*, which was both camera and projector. Though the American inventor Thomas Edison (1847–1931) had created film stock itself as early as 1889, it was the Lumière brothers who invented cinema as a mass entertainment event in which spectators were seated in front of a projected image, showing films such as *L'Arrivée d'un train à la Ciotat* (*Arrival of a Train at La Ciotat*, 1895), *La Sortie des usines Lumière* (*Employees Leaving the Lumière Factory*, 1895) and *Demolition d'un mur* (*Demolition of a Wall*, 1896). Their cinematographers, who traveled throughout the world shooting notable events, assembled a catalog of over one thousand films during the next two years. In France, their major competitor was Georges Méliès (1861–1938), with his *Kinétograph*. His production company Star Film, founded in 1896, specialized in fantastic, magical tales, in contrast with the Lumìre brothers, who concentrated on *actualités*. After making between six hundred and eight hundred films, Star Film went bankrupt in 1914, and Méliès ceased producing films in 1919.

A third significant figure in the development of French cinema was Charles Pathé (1863–1957) with his *Eknétographe*. Pathé founded Pathé Frères with his brother Émile in September 1896, and from 1902 his emblem, the red rooster, was synonymous with cinema around the world. Charles Pathé left France for the United States in 1914 because several of the most important branches of his company were located in territory occupied by the Germans. One of Pathé's major contributions to the development of cinema was to inaugurate in 1907 the tripartite system of production, distribution, and exhibition that characterizes the modern film industry. Under this system, exhibitors rent films through distribution companies. The number of film production companies quickly multiplied to include that of Léon Gaumont, who boasted the *Chronophotographe* and the first film director, Alice Guy (1873–1968).

The period of 1908 to 1914 is generally considered the golden age of comedy. During this era such stars as Max Linder (1882–1925), a brilliant comic actor who exerted a strong influence on comedians such as Charlie Chaplin and Harold Lloyd, and such directors as Jean Durand (1882–1946), as well as the animator Émile Cohl (1857–1938), came to the fore. Adaptations of novels were common, and feature-length films began to

appear in 1911, as well as detective serials, associated with director Louis Feuillade (1873–1925). This period also saw the advent of Le Film d'Art, a company founded in February 1908, partly funded by Pathé. Le Film d'Art was noted for its production of quality filmed historical drama, such as *L'Assassinat du Duc de Guise* (*The Assassination of the duc de Guise*, 1908), directed by André Calmettes (1861–1942) and Charles Le Bargy (1858–1936) (who also took a leading role), with music by Camille Saint-Saëns.

Competition from American and Scandinavian producers had already weakened French international hegemony by 1912. Beginning in August 1914 with the onset of World War I, French film production dropped virtually to zero. After six months of inactivity, film production began again slowly with films like Feuillade's serial *The Vampires* (1915), which introduced one of the silent cinema's greatest stars, Musidora (1889–1957), who achieved great popularity in her role as the vamp Irma Vep.

POST–WORLD WAR I

The most salient feature of post–World War I France for future film scholars was the coalescence of the film culture around France's first cinéphiles and first avant-garde. Inspired by the influx of Hollywood films, a generation of young intellectuals took an interest in the cinema. An avant-garde sensibility emerged, championed by the journalist turned director, Louis Delluc (1890–1924), that had a profound influence on the development of cinema as a national art form, most notably on the New Wave in the post–World War II era. Although Delluc died in 1924, he gave his name to a prestigious prize for best film, and his writing influences French thought and film scholarship to this day.

For Delluc, cinema must be "cinematic" and "French." It must express the specificity of the cinematic medium as an art form while countering the tendencies of film as entertainment. Impressionism, associated with Delluc, was a loose and often inconsistent body of thought. The Impressionists reacted against the pictorial-realist tradition of French cinema by seeking inspiration in the editing and camera styles of new Hollywood directors, who had evolved away from a strictly documentary or theatrical presentation of story. Though often dismissed as melodramatic by contemporary audiences, films such as *La Roue* (*The Wheel*, Abel Gance, 1923) and *L'Inhumaine* (*The New Enchantment*, Marcel L'Herbier, 1923) exploited rhythmic editing, point-of-view shots, soft focus, and optical devices such as superimpositions to convey subjective experience. Writer-filmmakers associated with the movement such as Germaine Dulac (1882–1942) pursued the idea that film functioned like a language; however, the conviction that film was an art form rather than merely a vehicle for entertainment was Impressionism's most important legacy. Following his death, Delluc's influence was evident in the work of such directors as Dulac, Jean Epstein (1897–1953), Abel Gance (1889–1981), and Marcel L'Herbier (1888–1979), who remained affected by Impressionism goals while often moving in different directions. Dadaism and surrealism inspired a second avant-garde in 1923 and 1924. The American photographer Man Ray (Emanuel Rabinovich; 1890–1976) and the painter Fernand Léger (1881–1955) created experimental films that resembled the essay films of Dulac and the fantasies of the Brazilian expatriate director, Alberto Cavalcanti (1897–1982). Two directors who would leave their mark on French cinema as part of this movement were René Clair (1898–1981) and Luis Buñuel (1900–1983).

Though largely ignored by intellectuals, French cinema as a popular narrative form thrived during this period. Rarely exported, French popular film continued to appeal to French audiences, with serials such as *L'Enfant roi* (The Child King, Jean Kemm, 1923), or *Fanfan-la-Tulipe* (*Fanfan the Tulip*, René Leprince, 1925). Successful directors of the period included Julien Duvivier (1896–1967), Raymond Bernard (1891–1977), and Jacques Feyder (1885–1948). Facing increasing production costs, studios during this time inaugurated the European co-production, often working with German production companies.

Two of the most influential production companies, Ermolieff Films and Alexander Kamenka's L'Albatros, were founded by Russian émigrés, and produced films destined for the émigré audience as well as French works. This group of émigré Russians, known as *les Russes de Montreuil* (the Russians of Montreuil), included such directors as Yakov Protozanov (1881–1945), Victor (Vyatcheslaw) Tourjansky (1891–1976), and Alexander Volkov (1885–1942), as well as technicians and actors and actresses. Kamenka produced notable works of French cinema, such as Clair's *Un Chapeau de paille d'Italie* (*An Italian Straw Hat*, 1928), and *Les Deux timides* (*Two Timid Souls*, 1928). Later Kamenka produced *Les Bas-fonds* (*The Lower Depths*, Jean Renoir, 1936), which won the Louis Delluc Prize.

During this period, many stars were recruited from the stage or cabarets, including Maurice Chevalier (1888–1972), already a star of the Parisian music halls, who attained prominence in a series of movies foreshadowing the great success he would achieve in America in the 1930s. Other stars from theater included Michel Simon (1895–1975), Gaby Morlay (1893–1964), and Albert Préjean (1893–1979). Simon, in particular, represented the French tradition of the "monstre sacré," or

"eccentric," the flamboyant character actor with a singularly striking physiognomy, used to great effect in, for example, Renoir's *Boudu sauvé des eaux* (*Boudu Saved from Drowning*, 1932).

By the end of the 1920s, French cinema had recovered from the effects of World War I. Though the battle with Hollywood at the international box office had been lost, French cinema had acquired the position of a national art form that was distinct from the entertainments produced for the masses. Paradoxically, Hollywood films, because of their impact on the avant-garde during the war years, were a primary influence in creating a French cinema that was cinematic and French, in the terms defined by Delluc. It is in Hollywood film that the Impressionists found their inspiration—in the camera work and editing of D.W. Griffith (1875–1948), the lighting of Cecil B. DeMille (1881–1959), and the dreamlike scenarios of Charlie Chaplin (1889–1977). And it is Hollywood that left its imprint on the foundational avant-garde films of the dadaists and the surrealists—films such as Dulac's *La Coquille et Le Clergyman* (*The Seashell and the Clergyman*, 1928), and Buñuel's *Un Chien andalou* (*An Andalusian Dog*, 1929)—setting French cinema apart as the international forerunner of the "film-as-art" movement, a place that France arguably retained throughout the remainder of the twentieth century.

Although Hollywood was the object of polemical discussion, other national cinemas such as Russian cinema, particularly through émigré producers, and German cinema, in terms of financial backing, also influenced the directions of French cinema. French popular cinema—in the form of comedies and serials, as well as the popular *policier* (later known as the *polar*) or police film—continued to be effective in French theaters, constituting a parallel strand to the higher profile films praised by the intellectual elite. With the advent of sound, French cinema as art would encounter its biggest challenge.

SOUND FILM AND THE CLASSICAL ERA: 1929–1940

The first sound studios opened in France in the autumn of 1929, inaugurating the golden age of filmed theater, and also precipitating an aesthetic crisis manifested in heated debate about the nature of cinematic art. While adherents to the legacy of Impressionism, such as Gance and L'Herbier, clung to the primacy of the image as the fundamental element of film language, directors like Duvivier and Renoir embraced sound as integral to the film medium. The film industry was also subject to financial crisis and over the decade was reorganized around companies like La Société Nouvelle des Établissements Gaumount (the SNEG) and the Société Nouvelle Pathé-Cinéma (SNPC). Nonetheless, some of the great films of the French cinema were produced between 1934 and World War II, in part as the result of an influx of directors and technicians fleeing the Nazis from other countries. One such figure was the German director Max Ophüls (1902–1957), creator of the film *La Tendre ennemie* (*The Tender Enemy*, 1936), who became a French citizen in 1938. The production of feature films stabilized at about 100 to 120 films per year, a level of production that remained more or less the norm for the rest of the century.

Two directors who forged their own style within the confines of the filmed theater genre were Marcel Pagnol (1895–1974) and Sacha Guitry (1885–1957). Pagnol, a successful director, writer, and producer, established his own studios in the South of France and produced a body of work associated with that region. Films for which he wrote the screenplay include the "Pagnol trilogy," made up of *Marius* (1931), *Fanny* (1932), and *César* (1936), dealing with the "little people" of Marseilles. The success of these films owed much to the superb performances of the actors, including (Jules) Raimu (1883–1946), Pierre Fresnay (1897–1975), Fernand Charpin (1887–1944), and Orane Demazis (1894–1991). Because of the subtlety and originality of his productions, and also because of the way that his work constituted an early exploration of regional identity, Pagnol's talent was recognized by critics such as André Bazin who, in principle, opposed the filmed theater style. Renoir's *Toni* (1935), a pivotal film in the development of the Italian neorealism, is one of the many films that demonstrated the importance of Pagnol's work for the future of French cinema. Both Pagnol's films and novels would influence the development of what is commonly called heritage cinema in the late 1980s and early 1990s. Guitry, less well known outside of France, was an actor and writer as well as a director. In his films of this period, he captured the essence of Parisian light comedy, a genre that disappeared during World War II. During this period French cinema also continued to borrow from the tradition of the music hall with films such as *Zouzou* (1934), starring the African American singer-dancer Josephine Baker (1906–1975).

In May 1936 the Popular Front, a historic alliance of leftist and radical interests, came to power, ruling until October 1938. This period, which saw the introduction of major social changes, such as paid holidays, trade union rights, and a public health service, unleashed a burst of creative intellectual and artistic energy, especially at the cooperative Ciné-Liberté, of which Renoir was a member. The rise and ascendancy of the Popular Front manifested itself in films that emphasized the worker. Renoir, for example, directed *Le Crime de Monsieur Lange* (*The Crime of Monsieur Lange*, 1936), the story of a worker's cooperative, the epic *La Marseillaise* (1938),

MARCEL CARNÉ

b. Albert Cranche, Paris, France, 18 August 1909, d. 31 October 1996

Marcel Carné is a controversial figure in French cinema, for while many see in his work an outmoded classicism that was transcended by the directors of the French New Wave, others find in it evidence of the vitality of studio filmmaking in the 1930s. Carné trained as a photographer and worked in journalism before hiring on as an assistant to René Clair and Jacques Feyder. Carné's first feature, *Jenny* (1936), starring Françoise Rosay, marked the beginning of his long and productive collaboration with the poet and scriptwriter Jacques Prévert.

Carné's genius lay in his ability to gather a team of creative artists: screenwriters (including Prévert), designers (including Alexander Trauner), composers (Maurice Jaubert, Joseph Kosma), and a bevy of French actors, including Jules Berry, Louis Jouvet, Michel Simon, and Arletty (Arlette-Léonie Bathiat). His most famous film is *Les Enfants de paradis* (*Children of Paradise*, 1945), which portrays the love affair between a *demi-mondain* (courtesan) and an actor.

From the mid-1930s until the late 1940s, Carné was one of the most respected and powerful directors in France. He initially influenced the direction of French cinema through his writing in *Cinémagazine*, inspiring poetic realism. Poetic realism, which Carné later called *le fantastique social* (social fantasy), espoused a pessimistic view of the human condition, which he conveyed through artful composition, careful *mise-en-scène*, polished acting, high-key lighting, and tragic endings. His films in this style include *Hôtel du Nord* (1938), *Le Jour se lève* (*Daybreak*, 1939), and *Le Quai des brumes* (*Port of Shadows*, 1938), which sparked controversy for its morbid subject matter.

For better or for worse, Carné and his team communicated to a popular audience a pervasive atmosphere of melancholy that remains a milestone in French cinema. Following the end of his partnership with Prévert with *Les Portes de la nuit* (*The Gates of Night*, 1946) and *La Marie du port* (*Mary of the Port*, 1950), Carné lost his best collaborators, and his subsequent films were less accomplished.

and was involved in the making of *La Vie est à nous* (*The People of France*, 1936), a communist propaganda film. Though light comedies and musicals were more popular with the public, these films were praised by critics and film historians. With the defeat of the Popular Front, the melancholic tendencies of poetic realism became more marked and were reflected in narratives dealing with doomed love affairs, betrayals, and murders, usually set in Paris in working-class settings. Such films are exemplified by *Le Quai des brumes* (*Port of Shadows*, 1938) and *Le Jour se lève* (*Daybreak*, 1939) by Marcel Carné (1909–1996). Both films starred Jean Gabin (1904–1976), who, with Arletty (Arlette-Léonie Bathiat; 1898–1992), came to incarnate French working-class values, especially in terms of their spoken delivery, which was marked by a strong demotic accent. In addition to Carné, directors associated with this style were Renoir, Duvivier, and Jean Grémillon (1901–1959).

Renoir, who began his career with films like *La Fille de l'eau* (*Whirlpool of Fate*, 1925) and *Nana* (1926), both with the actress Catherine Hessling (1900–1979), is considered by many to be the most significant director of this period. His films ran the gamut of possible genres, from poetic realist films to avant-garde films, from comedies to popular melodramas, and from literary adaptation to Popular Front propaganda. Renoir's *La Grande illusion* (*The Grand Illusion*, 1937) and *La Bête humaine* (*The Human Beast*, 1938), both with Gabin, and his masterpiece, *La Règle du jeu* (*The Rules of the Game*, 1939), with Marcel Dalio (1900–1983), were box-office

triumphs. His career was interrupted by World War II, which he spent in Hollywood.

THE WAR YEARS: 1940 TO 1944

Though films were banned if deemed too demoralizing, the film industry was active during the nine months of French-German hostility in 1939 and 1940. Film production stopped completely during the summer of 1940; however, this hiatus inaugurated one of the most prosperous, if not the most creative, periods of French cinema.

Following the surrender of France to Germany, a new government was established at the small spa town of Vichy, in the unoccupied zone of central France, under the leadership of Maréchal Henri Philippe Pétain (1856–1951). Although autocratic and reactionary, the Vichy regime initiated an ambitious program to restore France to her former glory, including an effort to construct a quasi-mystical idealized vision of France grounded in a conservative social agenda and a focus on youth. The Vichy regime was quick to recognize the strategic importance of the film industry in advancing this agenda and almost immediately put in place structures that both supported and regulated the industry. In 1940, the Comité d'Organisation des Industries du Cinéma (Committee for the Organization of the Film Industry) was established, as was the COIC, which would become the Centre National de la Cinématographie (National Center for Cinematography), the CNC, in 1946. The COIC immediately set up regulations for the film industry and also a system of state support. Notably, the COIC created what would become IDHEC, Institut des Hautes Études Cinématographiques (Institute for Film Studies) in 1944, under the direction of L'Herbier.

Financially, the COIC had a positive effect in terms of underwriting the French film industry, although it also served as a censorship arm of the Vichy government. In particular, it had an important function in terms of imposing restrictions on the activities of Jews in the film sector. A number of members of the film community fled to the United States, including such directors as Renoir, Clair, Duvivier, and Ophüls, as well as such actors as Gabin and Michèle Morgan (b. 1920). Others, like Pierre Chenal (1904–1990) and Louis Jouvet (1887–1951), took refuge in Latin America. In certain respects French cinema in 1941 was severely handicapped; nonetheless, the Vichy period proved to be a prosperous time for the industry overall. Cinemas were a popular haven from the cold and from the political and social pressures of the period. British and then American films were not available. For three years Hollywood was not a competitor in the French market, so audiences chose between German films, French films, and a few Italian films. A single national market encouraged big-budget productions, such as *Les Enfants du paradis* (*The Children of Paradise*, 1945), which was begun by Carné in 1943 as an Italian co-production.

The 220 feature-length films that constitute the Vichy cinema are not linked by any specific style or topic. The number of films that espoused right-wing views was no higher than during the prewar years (1934–1940); however, there was no counterbalancing progressive or leftist perspective. The settings lacked specificity—German uniforms and flags were rarely present within the frame—and the past, especially the nineteenth century, was preferred to the present. Popular genres included light comedies, thrillers, musicals, costume dramas, and a few fantasy films. A significant number of directors from the 1930s continued working through the 1940s, including Guitry, Pagnol, Grémillon, and Carné. New directors emerged from the ranks, including Jean Delannoy (b. 1908), Louis Daquin (1908–1980), André Cayatte (b. 1909), Claude Autant-Lara (1901–2000), Jacques Becker (1906–1960), Henri-Georges Clouzot (1907–1977), and Robert Bresson (1901–1999). Significant Vichy films include *La fille du puisatier* (*The Well-Digger's Daughter*, Pagnol, 1940), *Lumière d'été* (*Light of Summer*, Grémillon, 1943), *L'Assassin habite au 21* (*The Murderer Lives at Number 21*, Clouzot, 1942), and *Les Anges du péché* (*Angels of the Streets*,

Bresson, 1943), based on a screenplay by Jean Giraudoux.

LEGACY AND REGENERATION: 1944 TO 1959

The end of the war and Liberation would present yet another challenge to the film industry. With Liberation came the creation of the Committee for the Liberation of Cinema and a journal, *L'Écran français* (French Screen), which appeared in July 1945. In the immediate postwar period, the French film industry was in crisis. Its equipment was outmoded or destroyed by the war and its personnel dispersed and demoralized. Most felt that the only solution was continuing the state regulation and support inaugurated by Vichy. In 1946 the CNC was created as an autonomous institution with the mandate of regulating and supporting the French film industry. It was funded through taxes levied on the industry itself. In the same year the Blum-Byrnes agreement was signed, which stipulated that during four weeks out of the year only French films could be shown in a given theater. In 1948, the period was extended to five weeks. In 1949, France signed an agreement with Italy that gave certain advantages to Franco-Italian co-productions. This agreement in turn supported the development of what came to be known as the Tradition of Quality.

The creation of the CNC, the regulations providing state-mandated support, the normalization of relations with the United States, and the creation of a film market enlarged initially by the addition of Italy laid down the basis for what has come to be known as the French mode of production—a compromise between state regulation and free trade under the guidance of the CNC. If, through its inception, this system was subject to controversy, in time it garnered strong popular support, particularly when other national cinemas in Europe suffered marked decline in the 1980s.

Though economically healthy, the industry was rigid, and from an artistic perspective it languished during the immediate post–World War II period. French cinema remained under the threat of censorship throughout the 1950s, when it touched on politically sensitive current events, such as the economic situation, the aftermath of World War II, the Cold War, the war in Indochina, and the Algerian War. This censorship program was effective particularly in terms of fostering a climate of self-censorship among directors and producers. By tacit agreement, there was little or no material produced that reflected on the war years or, more specifically, the problem of collaboration.

The French film industry was characterized by inflexibility, not only in terms of subject matter, but also in terms of personnel. Films were stylized, reflecting the domination of the industry by cinematographers and technicians who were protected and nurtured by the unionized structures of the big studios. Directors typically served long years of apprenticeship and were often forty years old before making a first film. One of the few directors to emerge in this period was Yves Allégret (1907–1986), who remained limited by his adherence to the traditions of the past. New, more notable actors and actresses included Simone Signoret (1921–1985), Gérard Philipe (1922–1959), and Madeleine Robinson (1916–2004).

This period was identified with the Tradition of Quality—dismissed by young critics of the period, such as François Truffaut (1932–1984), as "cinéma de papa" (daddy's movies). The Tradition of Quality emphasized craft over innovation, privileged established directors over new directors, and preferred the great works of the past to experimentation. Literary adaptation provided fertile ground for this decade, on the part of those who were anxious to prove the cultural superiority of French film in the face of a massive influx of Hollywood movies into the French market. Grémillon, Guitry, Pagnol, Renoir, Clair, and Duvivier continued to make films, as did the new generation that emerged during the Occupation. Autant-Lara, Clément, Georges Rouquier (1909–1989), Clouzot, Becker, Ophüls, Jean Cocteau (1889–1963), Bresson, and Jacques Tati (1908–1982) made significant films during this period. Characteristic Tradition of Quality films include *Douce* (*Love Story*, Autant-Lara, 1943), *La Symphonie pastorale* (Delannoy, 1946), and *Casque d'or* (*Golden Marie*, Becker, 1952). Actors associated with the Tradition of Quality are Philipe, Martine Carol (1922–1967), and Simone Signoret. Philipe's polished acting style and the sophisticated mature femininity of Carol and Signoret contrasted the youthful insouciance of the actors who would be used by the directors of the later New Wave.

The ciné-club movement, inaugurated by Delluc in the 1920s, became a significant force in French culture and in the development of French cinema. The cinéphile—the amateur fanatic of film and film history—appeared as a distinct character on the French cultural scene and was defined as specifically French, as the word itself suggests. The ciné-club produced a new type of film spectator, film critic, and eventually director, preparing the way for the French New Wave. Such film critics as André Bazin, Alexandre Astruc, Truffaut, and Ado Kyrou (Adonis Kyrou) revived the debates of the Impressionists in the context of post–World War II France. *Cahiers du Cinéma* (1951) and *Positif* (1952) replaced *L'Écran français* (1943–1953) and remained important venues for discussion about film throughout the twentieth century. This lively intellectual climate was a major force in the dramatic changes in film aesthetics and the film industry that subsequently took place.

The government also played a role in fostering a new generation and a new type of director. A regulation eliminating the double-bill (two feature-length films) created a renaissance of short films, as did the new system of supporting film projects based on quality that had been inaugurated by the CNC during this period. Such directors as Alain Resnais (b. 1922), Georges Franju (1912–1987), and Pierre Kast (1920–1984), later known as part of *le groupe de trente* (the group of thirty), were already making short films that fell outside the Tradition of Quality. These short films were distributed via the ciné-clubs and the *art et essai* theaters, that is, small theaters that were the equivalent of the art house theater in Great Britain and the United States. By the end of the 1950s, the old guard had been successfully challenged in the popular arena by young filmmakers, such as Roger Vadim (1928–2000) with *Et Dieu… créa la femme* (*And… God created Woman*, 1955). Critical reception of the outsider filmmakers was equally positive, as in the case of Jean-Pierre Melville's (1917–1973) *Le Silence de la mer* (Silence of the Sea, 1949), Astruc's *Le Rideau cramoisi* (*The Crimson Curtain*, 1953) and *Les Mauvaises rencontres* (*Bad Liaisons*, 1955), *La Pointe-courte* (Agnès Varda, 1956), *Ascenseur pour l'échafaud* (*Elevator to the Gallows*, Louis Malle, 1958), *Un Amour de poche* (*Girl in His Pocket*, Kast, 1958), and *Goha* (Jacques Baratier, 1958). Some of these films, such as *La Pointe-courte*, starring Philippe Noiret (b. 1930), encountered legal problems that forced them to be shown clandestinely in the first instance and prevented widespread distribution until many years later. On the whole, however, most members of the CNC were sympathetic to the ideals of the young filmmakers and were instrumental in supporting the changes to the cinema that characterized the late 1950s and early 1960s.

FRANÇOIS TRUFFAUT

b. François Roland Truffaut, Paris, France, 6 February 1932, d. 21 October 1984

As a director, François Truffaut incarnates the virtues and weaknesses of the French New Wave. Much of his work reflects the troubled circumstances of his early life—illegitimacy, abandonment, and foster care. At age sixteen, Truffaut came under the influence of André Bazin, who served as a father figure and introduced him to the film society Objectif 49, a group that would become a forum for New Criticism. A noted critic from 1950, Truffaut wrote many periodical articles, including "Une Certaine tendance du cinéma française" (1954), in which he attacked the Tradition of Quality and set the agenda to revitalize French cinema.

Truffaut's work as a director is uneven. His first film, *Les Quatre cents coups* (*The 400 Blows*, 1959), starring Jean-Pierre Léaud as Antoine Doinel, was considered a triumph for a new generation of filmmakers because in it Truffaut introduced a more personal, spontaneous style that thumbed its nose at the stilted academic work of the studio directors who had dominated French film production during the postwar years. This film was financed by Truffaut's first wife, Madeleine Morgenstern, whose father owned one of the most powerful French distribution companies of the time, Cocinor. Despite his obsessive love of other women, she supported him throughout his career and was at his bedside when he died of a brain tumor at age fifty-two.

In a number of subsequent films, Truffaut used the Doinel character (played by Léaud) as an alter ego to mirror his own life, from the misunderstood child and troubled delinquent of *The 400 Blows* to the tormented lover and failed husband approaching middle age in *L'Amour en fuite* (*Love on the Run*, 1978). Truffaut is at his best when immersed in the study of character, as in *Jules et Jim* (*Jules and Jim*, 1962), in which the innocence, generosity, and tenderness of the three main characters is very sensitively captured, and at his worst when he attempts to imitate Hollywood directors such as Alfred Hitchcock, for whom he professed a strong admiration. An example of an unsuccessful effort to imitate a Hitchcock thriller is *La Mariée était en noir* (*The Bride Wore Black*, 1968), which even Truffaut declared he did not like much.

Truffaut's influence on cinema was international in scope. He conveyed in his films and in his writing an apparently inexhaustible and infectious enthusiasm for the possibility of authentic personal expression in the cinema. Perhaps his most moving film after *The 400 Blows*, *L'Enfant Sauvage* (*The Wild Child*, 1970) stars Truffaut as a scientist who attempts to communicate with an abandoned autistic child. Throughout his life, Truffaut believed that human communication could transcend language and culture. No doubt, his influence on young filmmakers derives from this faith.

By the end of the 1950s, French cinema had undergone a major transformation from a free-market economy to an economy largely submitted to state control. Stagnation had set in, provoking harsh criticism from a generation of film critics who had grown up with film as a major cultural force. The ciné-clubs had developed a

highly literate audience for film, sophisticated in their tastes, and informed about the historical issues governing the development of film. In the post–World War II years, debates about the status of film as art were reanimated by a new generation of critics writing for journals, such as *Cahiers du Cinéma,* and concerns about quality had become a paramount issue at the CNC. Polemical debates about the rigidity of the old guard created an environment receptive to a new kind of filmmaking, one that once again would define itself against Hollywood while looking to a number of Hollywood directors who had gained the status of *auteur* for inspiration.

THE FRENCH NEW WAVE AND ITS AFTERMATH: 1959 TO 1969

The term ''New Wave'' (Nouvelle Vague) was coined by the journalist Françoise Giroud in a series of articles published in *L'Express* during 1957, based on surveys conducted by the magazine. The term was taken up again by *L'Express* in 1959 to describe a new group of directors who showed films at the Cannes Film Festival that year. The epithet ''New Wave'' was exploited by Unifrance-film, an official arm of the CNC, to popularize and distinguish these new French directors abroad and eventually became permanently associated with a group of young directors who emerged roughly at the end of the 1950s through the beginning of the 1960s. Also known as la Bande des Cahiers, these filmmakers were loosely united around a number of critics turned directors, such as Truffaut and Jean-Luc Godard (b. 1930), who published in *Cahiers du Cinéma*.

Though a few directors associated with the French New Wave made films before 1959, such as Roger Leenhardt (1903–1985) and Melville, the first films of 97 of the 192 new French filmmakers cited by *Cahiers du Cinéma* in the New Wave special issue (1962) appeared between 1958 and 1962. Truffaut's *Les Quatre cents coups* (*The 400 Blows*, 1959), often considered the benchmark film of the New Wave, was in fact preceded by films such as *Le Beau Serge* (*Handsome Serge*, 1958) and *Les Cousins* (*The Cousins*, 1959) by Claude Chabrol (b. 1930). The years 1958 and 1959 saw the deaths of a series of great directors who had produced significant work during the previous two decades—Ophüls, Grémillon, and Becker,

Jean-Pierre Leaud in François Truffaut's landmark New Wave film,* Les Quatre cents coup *(*The 400 Blows, *1959).

leaving a number of studio-trained successors in the wings: Edouard Molinaro (b. 1928), Claude Sautet (1924–2000), and Michel Deville (b. 1931) had solid careers and often migrated to features destined for television in the late 1960s and 1970s. However, the hegemony of the old studio system was drawing to a close.

Popular cinema, *le cinéma du sam'di soir* (Saturday night movies), remained a significant box-office force, often in the form of star vehicles for actors such as Fernandel (1903–1971) and Gabin. The growing impact of television resulted in lower numbers of ticket sales, but cinema still overshadowed television as the single most popular form of mass entertainment. The big-budget Tradition of Quality films suffered the most, though the genre was kept alive through Italian co-productions and was revived as the heritage film in the 1980s.

The productions, values, and techniques of the French cinema industry changed radically in the years that followed, opening up a new mode of production grounded in the small-budget film that made way for a new generation of directors with a different artistic conception of film. New lightweight equipment and more sensitive film stock permitted young filmmakers who saw themselves as *auteurs* to begin making films. These new technologies freed filmmakers from the constraints of the large studio-based, heavily unionized film crews that were integral to the film style associated with the Tradition of Quality.

The New Wave filmmakers might be said to share a certain sensibility—one that stood in stark contrast with the controlled *mise-en-scène,* trained performances, and studio lighting of the Tradition of Quality. By and large, New Wave directors favored improvisation and the use of available light, location shooting, direct sound, and vernacular language. Perhaps more importantly, this sensibility was associated with a mode of production, the small-budget film that gave the director complete artistic control, establishing him or her as the author or *auteur* of the work. The notion that the director functioned as the artistic creator of the film, with the film serving primarily as a vehicle for his or her vision, had a significant influence not only on film production but also on the way in which films were evaluated—in particular, in the context of a developing academic discourse on film.

New character types emerged with the New Wave, along with a more spontaneous acting style. Although the New Wave directors turned their backs on the established stars, the New Wave developed stars of its own, such as Jean-Paul Belmondo (b. 1933) and Jeanne Moreau (b. 1928), both of whom would go on to have international careers and have a significant impact on French cinema by sponsoring projects and taking a role in decisions about policy. Male stars such as Jean-Pierre Léaud (b. 1944) and Belmondo specialized in playing antiheroes, and together they formed the masculine face of the New Wave. Women stars such as Moreau, Bernadette Lafont (b. 1938), Anna Karina (b. 1940), and Brigitte Bardot (b. 1934) played either gamine embodiments of youthful sensuality, or dark, neurotic intellectuals.

Strategies used by the French New Wave, such as direct sound and location shooting, were also part of the *cinéma vérité* movement that developed during the same period, associated with figures such as the anthropologist-filmmaker Jean Rouch (1917–2004). Again, the relatively low budgets associated with this genre of filmmaking made it attractive to intellectuals interested in interrogating social norms and circulating anti-establishment political statements. Not since the early days of cinema had it been possible for so many people to make so many films. A new pattern was established: directors no longer necessarily spent years working in the industry and perfecting their craft before embarking on a solo project. A director might make one or two more or less successful films before moving to some other activity. Though in fact New Wave directors worked with small, well-established crews maintained from one film to the next, they were the significant driving force behind the look, structure, and feel of the films.

JEANNE MOREAU

b. Jeanne Moreau, Paris, France, 23 January 1928

As a star, a woman, and a national figure, Jeanne Moreau exemplifies the ideal of the French film actress in the post–New Wave era. Though overshadowed in the popular press by such stars as Brigitte Bardot and Catherine Deneuve, both of whom served as the model for Marianne, the official statue that represents France, Moreau, through her image as well as her position in the French film industry, embodied French femininity for a generation of film lovers. She personified the intelligent actress whose dark, mature, and potentially dangerous sensuality stood in stark contrast to the blonde sex kitten that dominated Hollywood screens. Moreau was considered un-photogenic, a *jolie laide*, whose personal magnetism and speaking voice overshadowed her features.

Her early background in theater lent credibility to her career in cinema, which began in 1948 and which includes over one hundred films. Her roles in films associated with the New Wave, such as *Ascenseur pour l'échafaud* (*Elevator to the Gallows*, 1958) and *Les Amants* (*The Lovers*, 1958), both directed by Louis Malle, gave her international prominence. Her portrayal of Catherine in *Jules et Jim* (*Jules and Jim*, 1962), directed by François Truffaut, New Wave director par excellence, solidified her star image. International films, including Michelangelo Antonioni's *La Notte* (*The Night*, 1961), Orson Welles's *Une Histoire immortelle* (*The Immortal Story*, 1968), Anthony Asquith's *The Yellow Rolls-Royce* (1964), and Carlo Diegues's *Joanna Francesa* (1973), also have featured prominently in her career.

Moreau took a substantial risk in choosing to work with young, relatively unknown directors in the late 1950s and the 1960s. Throughout her career, she made choices that reflected her sense of cinema as an art and, as a result, she is universally respected for her professionalism and commitment. In addition to awards for specific roles (Cannes, 1960; Académie du cinéma, 1962; Célsar, 1990), she has received lifetime tributes from the Cannes Film Festival (1992), the Venice Film Festival (Golden Lion, 1992), and the American Academy of Motion Pictures Arts and Sciences (1998).

Moreau has been involved in all aspects of French cinema. She was twice Présidente of the Jury at the Cannes Festival, and in 1993, she was appointed Présidente of the Commission d'Avances sur Recettes, a body of experts that advises the Centre National de la Cinématographie. She has also supported Equinox, an organization she created in 1993 that holds annual workshops for new scriptwriters. Moreau has directed two films herself, *Lumière* (1976), a portrait of four film actresses, and *L'Adolescente* (*The Adolescent*, 1979), the evocation of a visit by a girl to her grandparents in Avignon on the eve of World War II. Moreau was elected a member of the Academy of Beaux Arts in 2001.

FURTHER READING

Vincendeau, Ginette. *Stars and Stardom in French Cinema*. London: Continuum, 2000.

Hilary Ann Radner

The New Wave philosophy did not mean that big-budget filmmaking was over in France or elsewhere, but it did introduce a parallel tradition that would make film-making more accessible to a wide range of individuals who declined to see cinema as mass entertainment, preferring to use film primarily as a form of personal or aesthetic expression. Within the New Wave, two equally important groups contributed to the rise of this new style in filmmaking: the very vocal group emerging out of *Cahiers du Cinéma*, including Chabrol, Truffaut, Godard, Jacques Rivette (b. 1928), Eric Rohmer (b. 1920), and Jacques Doniol-Valcroze (1920–1989); and the equally productive, if less polemical, filmmakers who espoused a more personal vision, including Franju, Jean-Pierre Mocky (b. 1929), and Claude Lelouch (B. 1937). *Un homme et une femme* (*A Man and a Woman*, Lelouch, 1966) was arguably the most influential French film of the 1960s. Directors whose work was closely aligned with the new directions of current

literature, such as Renais and Buñuel, were sympathetic to the New Wave if not technically among its members and contributed to the aesthetic fecundity of the period. Resnais, though often associated with the New Wave, is distinguished from the typical New Wave directors by his willingness to efface himself through the adaptation of works by other writers, and by his highly intellectualized approach. His major films from the late 1950s and 1960s include *Hiroshima mon amour* (*Hiroshima, My Love*, 1959), with a script by Marguerite Duras (1914–1996), and *L'Année dernière à Marienbad* (*Last Year at Marienbad*, 1961), produced in collaboration with Alain Robbe-Grillet (b. 1922), starring the cult actress Delphine Seyrig (1932–1990), and with costumes by Coco Chanel.

While the new breed of filmmakers was lionized at festivals, the career directors of established French cinema turned to television. The Buttes-Chaumont Studios, in particular, continued the Tradition of Quality in its productions for television. Directors emerged from the studio tradition, often the same age as the adherents of the New Wave, continued their careers—such as Delannoy, Gilles Grangier (1911–1996), and Denys de La Patellière (b. 1921). At Buttes-Chaumont these directors produced work that maintained the technical standards of the previous decades. Paradoxically, given France's reputation for intellectual fare, the biggest French box-office hit of all time was a popular comedy, *La Grande Vadrouille* (*Don't Look Now We're Being Shot At*, 1966), directed by Gérard Oury (b. 1919) and starring Bourvil (1917–1970) and Louis de Funès (1914–1983).

The strikes and upheavals of May 1968 had an immediate if not necessarily lasting effect on French cinema, when demonstrators disrupted the Cannes Film Festival. Plans to reform the processes of production and distribution were put forward but eventually discarded. Individual reactions were varied: Malle gave up fiction film for two years in order to make documentaries; Godard threw himself into collective productions that were never commercially distributed.

CINEMA IN FLUX: 1970 TO 1989

By the early 1970s, the effects of the New Wave and of May 1968 had dissipated. Certain directors, such as Truffaut, were reintegrated into the French mainstream and directed films that clearly continued the tradition of French cinema associated with figures like Guitry and Renoir. Conversely, Godard and Rivette experimented with form and content, while others, like Bresson—never part of the New Wave—steadfastly pursued a personal itinerary. Directors like Louis Malle pushed the boundaries of film content with productions like *Le Souffle au coeur* (*Murmur of the Heart*, 1971), about incest, and *Lacombe Lucien* (1974), about a young peasant who collaborates with the Germans. In the aftermath of the New Wave, a new generation of young filmmakers emerged that included Maurice Pialat (1925–2003), Jacques Doillon (b. 1944), and Jean Eustache (1938–1981), who continued the auteurist tradition inaugurated by the *Cahiers* group. More importantly, the role of cinema in French culture changed irrevocably, as it was no longer the primary medium of mass entertainment. By the end of the 1970s, more people watched films on television than in theaters.

By the mid-1970s, French culture had freed itself from the rigid hierarchies and social behaviors that previously characterized everyday life; however, the utopian environment anticipated by the activists in the 1960s did not become a reality. Censorship policies were abandoned (though the category *X* was created for taxation purposes). The result was a flourishing tradition of softcore pornography, exemplified by *Emmanuelle* (1974), directed by Just Jaeckin (b. 1940). Global consumerism appeared as if it would successfully colonize French culture, which seemed in danger of losing its specificity.

An exception to this trend was the growing tradition of women's cinema, which gravitated to the Festival international de films de femmes (French International Women's Film Festival), established in Sceaux in 1979 and moved to Créteil in 1985. A number of significant women filmmakers emerged from the woman's move-

ment during the 1970s and went on to make important contributions to French cinema, including Yannick Bellon (b. 1924), Diane Kurys (b. 1949), and Coline Serreau (b. 1947). The influx of women filmmakers such as Christine Pascal (1953–1996) and Brigitte Roüan (b. 1946) who emerged through festivals and as graduates of French film schools, continued to grow over the next two decades. Significant women directors who appeared in the 1980s and 1990s include Josiane Balasko (b. 1950), Claire Denis (b. 1948), and Catherine Breillat (b. 1950).

During these years Hollywood film gained new ground, further diminishing an audience already depleted by television. Nevertheless, French cinema remained a force in French culture. Popular comedies such as *Les Aventures de Rabbi Jacob* (*The Adventures of Rabbi Jacob*, 1973), starring Louis de Funès, continued to have strong box-office appeal. But by the late 1980s, Hollywood films systematically outperformed French films at the French box office. The growing prominence of the Césars, the French "Oscar" (first awarded in 1976 and initially dismissed by the international film industry), testified to the continuing importance of film within French culture, despite diminishing box-office returns. By the 1990s, half of the French population would watch *la nuit des Césars* (the night of the Cesars) on television.

The government's sustained support for the film industry in France reflected this centrality. Under the socialist government (1981–1995), support was stronger than ever before, ensuring the survival of the industry during a period in which the European cinema as a whole suffered a serious decline. Initiatives inaugurated by Minister of Culture Jack Lang (b. 1939), including the creation of eight *maisons de la culture* (regional cinema centers), encouraged regional filmmakers. However, on the whole, Paris remained at the heart of French feature-length production through the 1970s and 1980s. A significant diversification of perspective resulted from the number of foreign directors who exploited the favorable conditions offered to the film industry by the French government. Directors such as Joseph Losey, Ettore Scola, Otar Iosseliani, Hugo Santiago, Edgardo Cozarinsky, Raoul Ruiz, Andrzej Zulawski, Andrzej Wajda, Krzysztof Kiéslowski, and Emir Kusturica all made films in France, financed, at least partially, by French money.

During the 1980s, encouraged by the Socialist government, the liberalization of French culture and society continued, manifested in cultural pluralism and cultural sensitivity. For example, under the leadership of French comedian and film actor Coluche (Michel Colucci; 1944–1986), the artistic community created Les Restos du Coeur, which provided free meals for the homeless. In general, the 1980s were marked by disillusionment with social reform and economic change, leading to the rise of individualism of the 1990s and the gradual disappearance of the political film in France.

Until the mid-1980s, the success of popular cinema in France depended in large part upon film series co-produced by stars such as Belmondo, Alain Delon (b. 1935), and Funès. By the mid-1980s, this generation of stars had died or aged, and French cinema moved away from formula-driven production. Films such as *Trois hommes et un couffin* (*Three Men and a Baby*, 1985) and *La Vie est un long fleuve tranquil* (*Life Is a Long Quiet River*, 1987), box-office successes, were exceptions rather than the rule and did not fit any well-defined template. The number of box-office entries continued to fall, and by 1993 box-office receipts for French films were significantly less than for their Hollywood counterparts. The strategies and financial incentives promoted by Lang during this period insured that French filmmaking remained financially healthy; however, the industry's hold on French minds and culture waned. In particular, the youth segment that dominated audiences was more interested in foreign productions than in French material, an attitude that was reflected in the rise of international co-productions.

DISTRIBUTION AND THE EFFECTS OF TELEVISION: THE 1980s

By the end of the 1980s, it could no longer be said that cinema dominated the French cultural landscape. It had become merely one medium among many that appealed to French audiences. Beginning in the late 1970s, French cinema became part of *le paysage audiovisuel français* (the French audiovisual landscape). Though certain established film stars retained their impact, the new generation of French film stars failed to achieve the cult status of their predecessors. The national film star was eclipsed by international celebrities from a variety of media, including music and television. Certain French stars, such as Juliette Binoche (b. 1964) and Gerard Depardieu (b. 1948), achieved world standing through participation in international co-productions; however, it was the rare French star who migrated to Hollywood, where male stars such as Charles Boyer (1899–1978), Chevalier, and Louis Jourdan (b. 1920) had achieved success during the classical era. Other French stars, for instance Isabelle Huppert (b. 1955), extended their audience by appearing in theater productions. In general, French stars continued to cross between a variety of media, including film, television, café-theater, and advertising. New French stars, however, failed to achieve the kind of international notoriety conferred by the paparazzi on the likes of Bardot, Catherine Deneuve (b. 1943), Belmondo, and Delon in previous decades.

In the late 1970s and 1980s, television became a significant distribution network for film through the development of privately owned television stations, pay-

TV, and cable networks. Indeed, television became a repertory theater devoted to screening the entire archive of French cinema from the silent era onward. Theaters were unable to compete, and even *art et essai* theaters, with their niche audiences, were threatened with extinction.

Television channels were extremely competitive and quickly began producing films as well as distributing them, especially in order to offer new material during highly desirable time slots. The first attempts of this type date to 1959, but it was not until 1976 that television co-productions became popular, and by the beginning of the 1980s few films were produced without some sort of support from Canal Plus, a subscription-based, encrypted television distribution network and subsidiary of Vivendi, a multinational media company. Beginning in 1984, the television industry was taxed, and these new revenues offset the decline of ticket-entry based levies, which had been one of the primary sources of support for French cinema since the inauguration of the CNC and its policies.

The film industry received a further boost in 1985 when Lang created the Société de Financement des Industries Cinématographiques et Audiovisuelles program (SOFICA), which offered tax shelters to companies investing in the film industry. Despite a steady decline in cinema attendance throughout the 1980s that reached its nadir in the early 1990s, these efforts succeeded in providing a sound financial basis for the French film industry. Yet the rise of international co-productions threatened the distinctiveness of French films while contributing to the industry's health and stability. Television had a paradoxical effect on cinema in France: on the one hand, it successfully challenged film as the primary form of mass entertainment; on the other, it was a source of financial support that enabled the film industry to continue to produce French films for a French public while encouraging the development of financially advantageous international co-productions.

With the rise of television, the distributor became a major force in the French film industry. Family-owned theaters disappeared and were replaced by multiplexes. In 1970, Pathé and Gaumont jointly created a network of over four hundred theaters under an umbrella organization, G.I.E. In 1971, the theaters grouped under UGC, l'Union générale des cinémas (the General Union of Film Theaters), which had been requisitioned by the state after World War II, privatized and became the heart of a network of several hundred cinemas. Another network, Parafrance, developed with the support of the CNC. But this system was unstable. In 1983 the CNC, empowered by a decree issued by Lang, dissolved G.I.E. Pathé-Gaumont. By 1984, Parafrance was no more; however, Pathé and Gaumont reorganized, partitioned, and consolidated their shares of the market. The multiplex system became—the CNC's efforts notwithstanding—one of the formative influences on the further development of French cinema.

The major distributors were averse to taking risks. They evolved a system that maximized profit by saturating the national market with promotional materials and supporting multiple premieres in the most commercially viable locations. After 1989, it was not unusual to make eight hundred prints of a single film, which would then be shown simultaneously at ten percent of all theaters. The rising production costs made the financial risks greater, but the multiplex system also enabled producers to enjoy enormous financial rewards if they did have a box-office success. The incentive to produce blockbusters grew while the possibility of enjoying a modest success in a niche market diminished. Either a film made it big during the first week of its release or disappeared from the screen. Under this system, French cinema became even more vulnerable to the threat posed by Hollywood movies, particularly in the form of the blockbusters.

DEFEAT AND RENEWAL: SINCE 1990

Supported by Lang, heritage cinema, which favored literary adaptation, historical topics, costume dramas, and high production values, initially appeared as though it might revitalize the theatrical release. *Cyrano de Bergerac* (1990), by Jean-Paul Rappeneau (b. 1932), was a financial, critical, and popular success and was preceded by the successes of *Jean de Florette* (1986) and *Manon des sources* (*Manon of the Spring*, 1986) by Claude Berri (b. 1934). But this apparent trend immediately reversed itself. Big productions, such as *Jean Galmot, aventurier* (*Jean Galmot, Adventurer*, Alain Maline, 1990), bombed, while low-budget films, such as *La Discrète* (*The Discreet*, Christian Vincent, 1990), were box-office successes. The most obvious trend in this period was the grouping of individual filmmakers in terms of generations, beginning with an established group of still-active directors dating from the French New Wave period that included Bresson, Chabrol, Godard, Resnais, Rohmer, Rivette, and Varda. Other groups of younger filmmakers comprised those who positioned themselves as continuing the New Wave (André Téchiné [b. 1943], Benoît Jacquot [b. 1947], and Claude Miller [b. 1942]), those who saw themselves as reviving the cinema of quality (Michel Deville, Claude Sautet, Bertrand Tavernier [b. 1941]), and, finally, those who conceived of themselves as pursuing an individualist vision (Doillon, Maurice Pialat [1925–2003], Philippe Garrel [b. 1948], and Alain Cavalier [b. 1931]). Another group of very heterogeneous filmmakers is made up of directors united by their interest in social issues. Often referred to as *le jeune cinéma français* (young French cinema), this group includes

women directors such as Breillat, as well as directors associated with *cinéma beur*, also known as cinema of the Mahgreb (such as Mehdi Charef [b. 1952] and Malik Chibane [b. 1964]), the *cinéma de banlieu* or neighborhood (such as Mathieu Kassovitz [b. 1964]), and regional cinema (Bruno Dumont [b. 1958]). This group also incorporated directors like Varda and Tavernier, whose more recent work, such as Varda's *Jane B. par Agnès V.* (*Jane B. for Agnes V.*, 1987) and Tavernier's *L. 627* (1992), were influenced by this new sensibility. This mulidirectional development suggests the ways in which as the millenium approached and passed, the ideal of French culture as homogeneous and grounded in French language and French heritage no longer reflected the lived experience of the younger generations of French citizens.

Perhaps the most obvious testimony to the transformation of the French cultural landscape is found in the *cinéma du look* (cinema of the look), a film genre influenced by cartoons, advertising, and music videos. This genre is sometimes associated with the Forum des Halles, referring to the designer chic, ultra-modern shopping complex in central Paris that became a focal point for youth culture after its opening in 1979. The obsession of the cinéma du look with style, inaugurated by *Diva* by Jean-Jacques Beineix (b. 1964) in 1981, repeatedly threatened to run out of steam, but it nevertheless maintained its impetus through the mid-1990s and beyond—often in the form of Hollywood productions, as in the case of Luc Besson (b. 1959). Besson, who emerged as one of the Forum des Halles directors alongside Beineix and Leos Carax (b. 1960), remained through the turn of the twenty-first century one of France's most bankable directors, even though his later films were often made abroad. In addition to slick, stylized framing, composition, lighting, and editing imported from the world of advertising, the films had in common a rejection of society and its values, emphasizing instead the individual's pursuit of happiness. Although routinely rejected by established French critics, these films and their directors proved so successful, especially in an international context, that eventually scholars of French culture were forced to take them seriously. Both heritage films—which tended toward costume super-productions, such as *La Reine Margot* (*Queen Marguerite*, 1994) or *Le*

Hussard sur le toit (*The Horseman on the Roof*, 1995) and the *cinéma du look*—fall into a category often referred to as "the new spectacular cinema," which depended on big budgets, heavy marketing, and concept promotion for its success. Attempts to mobilize these strategies pepper the French cinema of the 1990s and early 2000s, achieving variable success. In fact, the big successes of the early 2000s were by and large, relatively low-budget productions by Hollywood standards, such as *Le Fabuleux destin d'Amélie Poulain* (*Amélie*, 2001) by Jean-Pierre Jeunet (b. 1955), when French film outsold Hollywood film at the French box office for the first time in over a decade.

Equally significant were the number of French directors earlier in the decade, such as Jeunet and Jean-Jacques Annaud (b. 1943), who alternated between making Hollywood films for a global audience and French films for a French audience. Although heavily attacked for selling their "art," these directors maintained a profile as *auteurs* that can be identified as French. The consistency of their work depended upon an informal group of actors and actresses as well as crewmembers and even composers whose contributions were critical to reproducing a distinctive look and feel attributed to a given director.

While individual directors systematically represented French cinema abroad, typically the highest grossing French films at the French box office have been social comedies, such as *Marriages* (Catherine Martin, 2001). Comedies and romantic comedies, usually revolving around social mores and often featuring well-known actors and actresses, remained popular with French audiences; however, they were not formula-driven. These films were rarely attractive to foreign audiences, yet the increasing number of Hollywood remakes of French films since the early 1980s, usually comedies, such as Edouard Molinaro's *La Cage aux folles* (1978), remade by Mike Nichols as *The Birdcage* (1996), and Serreau's *Trois hommes et un couffin* (1985), remade by Leonard Nimoy as *Three Men and a Baby* (1987), indicate the sustained global interest in French cinema.

At the end of the twentieth century, French cinema appears to have revived. Its existence, though precarious, has been assured through vigorous state sponsorship. Films such as François Ozon's (b. 1967) *Sous le sable* (*Under the Sand*, 2000) and *The Swimming Pool* (2003) have pursued the *intimiste* subjects that characterized French cinema of the late twentieth century; however, the critical and intellectual hegemony spawned by the New Wave was displaced in the late 1990s and early 2000s by a more popular, less angst-ridden cinema with such films as *Amélie* (2001), Christophe Barratier's (b. 1963) *Les Choristes* (*The Chorus*, 2004), and Jeunet's *Un long dimanche de fiançailles* (*A Very Long Engagement*, 2004). This movement produced box-office successes that brought French cinema out of the slump that it had experienced in the early 1990s. The major challenge that faced the French cinema at the turn of the millenium was maintaining its position in a global market while preserving its identity as a French cinema for French audiences.

France successfully upheld the status of audiovisual productions as "cultural exceptions" in General Agreement of Trade and Tariffs (GATT through 1993) and subsequent World Trade Organization (WTO) negotiations. The results were favorable conditions for French film in France and in Europe through the imposition of protective tariffs as well as quotas. Because of these and other measures on the part of the State, such as cross-subsidization from the television industry, the French share of the French box office has stabilized at about one third, after a few difficult years at the beginning of the 1990s. In spite of this success within the French market, France's share of the foreign market has continued to decline, particularly in terms of television rights. French producers have countered by co-producing more English-language films, such as Roman Polanski's *The Pianist* (2002).

The privileged status that French film has retained in the WTO negotiations might seem to be a victory for cultural purists. The French government, nonetheless, required the industry to be fiscally responsible and has directed its policies with a view to financial as well as cultural soundness. In the late 1990s, French film became more sensitive to box-office demand, producing, for example, a greater number of comedies geared toward a popular audience. Unfortunately, these films rarely did well abroad. Another strategy, more successful in terms of exportability, was the move toward higher-budget, more sophisticated films geared toward a younger audience, such as Kassovitz's *Les Rivières pourpres* (*Crimson Rivers*, 2000) and *Les Rivières pourpres: Les anges de l'apocalypes* (*Crimson Rivers 2: Angels of the Apocalypse*, 2004).

The *auteur* directors traditionally associated with French films were forced to produce films on ever-diminishing budgets and often resorted to film shorts. Aesthetic and formal experimentation moved out of the cinema into the museum, often crossing over into video and other media, as in the case of Godard's series *Histoire(s) du cinéma* (1989–1998). Some critics feared that this more personal and intellectual filmmaking might permanently disappear, to be replaced by films the likes of the "Crimson Rivers" series, that is, sensationalist star vehicles. Similarly, these same critics expressed concerns about whether this commercially viable cinema was really French. *The Pianist*, for example, does not feature a French director, a French star, or the French language. The question remained: would a popular French cinema be able to retain its hold on the French

imagination as the cultural exception, as a cinema that challenged the global dominance of Hollywood, not simply within an economic arena but as the arbitrator of taste and culture? This question was first raised in the aftermath of World War I, and it has continued to be the crucial question facing French cinema at the turn of the millenium.

GANGSTER FILMS

Gangster films are films about gangsters, professional criminals who have banded together to commit crimes. This much is simple, and indeed a great deal of the genre's enduring appeal lies in its bold simplicity. As Robert Warshow noted fifty years ago, gangsters act out movie audiences' most violently untrammeled fantasies of unlimited upward mobility by following the golden rule of prototypical gangster hero Tony Camonte in *Scarface* (1932): "Do it first, do it yourself, and keep on doing it." Commentators from Carlos Clarens to Eugene Rosow have observed how movie gangsters plot, steal, and kill their way to economic and social supremacy until, like Cody Jarrett in *White Heat* (1949), they are alone at the "top of the world," though their meteoric rise is unfailingly followed by an even swifter fall. Yet the very name of the gangster film indicates three decisive complications at the heart of the genre: the gangster's status as both villain and hero; the chicken-and-egg relationship between gangsters and their gangs; and the variously reflective relationship between gangs and the societies against which they wage their criminal wars.

These problems are illustrated by the work of two acknowledged masters of the genre, Raoul Walsh (1887–1980) and Howard Hawks (1896–1977). Despite, or because of, the best efforts of the FBI, which rose to prominence by publicizing its pursuit of real-life gangsters in the 1930s, gangsters are perversely heroic figures, larger-than-life lawbreakers who triumph, at least for a time, over the laws of a community less vibrant than they are. Yet they are defined first and foremost as members of a gang more powerful than any one member. Whether Walsh and Hawks are directing westerns, war films, or gangster films (Walsh's *High Sierra*, 1941, and *White Heat*; Hawks's *Scarface*), they repeatedly explore the resulting tension between the heroic individual, almost always a male, and the community from which he derives his potency. In the case of the gangster film, a further complication, as Fran Mason has noted, emerges from the fact that criminal gangs, formed for the express purpose of providing a lawless alternative to the law-abiding social order, invariably cast themselves as imitations of the larger society in all its weaknesses. The resulting contradictions between heroism and heroic villainy, individual and communal identity, and lawless gangs and the laws necessary to their operation are the engine that drives the gangster film.

FROM NOBLE SAVAGE TO SOCIAL PROBLEM

Film gangsters are as old as film narrative. *The Great Train Robbery* (1903), with its twelve-minute story of a railroad heist marked by meticulous planning, unexpected violence, and condign punishment, would be acknowledged as the first gangster film if its gangster credentials were not overshadowed, as in similar films to come (*Jesse James*, 1939; *Rancho Notorious*, 1952; *Man of the West*, 1958), by its western *mise-en-scène*. Silent gangster films, however, were less likely to follow *The Great Train Robbery* than *The Musketeers of Pig Alley* (1912), in which the Snapper Kid, a tough, violent, personable criminal denizen of a New York ghetto, forms a momentary but touching alliance of convenience with the film's law-abiding heroine before returning to his life of crime. The leading gangsters of the American silent screen were noble savages, from the eponymous hero of *Alias Jimmy Valentine* (1915) to the economically successful but romantically doomed Bull Weed in

James Cagney at the "top of the world" in* White Heat *(Raoul Walsh, 1949). **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

Underworld (1927), a film whose influence on countless poetic French gangster tragedies of the 1930s (*Pépé le Moko*, 1936; *Le Jour se Lève* [*Daybreak*, 1939]) was almost as pervasive as on its American successor, the virtual remake *Thunderbolt* (1929), with Josef von Sternberg (1894–1969) again directing George Bancroft as the gangster star.

It is hardly surprising that these early films so inveterately romanticize the gangster. Urban lawbreakers living on the edge of polite society had a great deal in common with the working-class, largely immigrant audiences who followed their adventures in movie theaters. This subversive identification with the gangster hero was fostered throughout the 1920s by the Volstead Act, which made the sale of alcoholic beverages illegal from 1920 to 1933. So long as Prohibition was the law of the land in America, law-abiding citizens could get liquor only from underworld contacts. Hollywood's response was to paint the gangster as the disavowed Other of American society, the outsider without whom the social machinery lubricated by alcohol would have ground to a halt.

In the early 1930s, however, the image of the Hollywood gangster was dramatically transformed. The Great Depression, ushered in by the stock market crash of 1929, upended previously stable stratifications in American culture, ruining dozens of paper millionaires and throwing millions of Americans out of work. The Hollywood gangster, often based closely on the career of such real-life criminals as Al Capone (1899–1947) and John Dillinger (1903–1934), emerged as the logical hero for such a desperate moment, a rags-to-riches success story fueled by the dreams of audiences across the country. At the same time, a new complication emerged with

the industry's widespread adoption of synchronized sound. Sound, as Jonathan Munby has pointed out, gave gangsters a voice, and that voice in such gangster classics as *Little Caesar* (1930), *Public Enemy* (1931), and *Scarface* was not only laconic and brutal but identifiably ethnic. No longer an urban Everyman, the gangster became the object of sociological study, a promethean overachiever whose ambition and greed doomed his aspirations to ethnic assimilation. Although James Cagney (1899–1986) as Tom Powers, the definitive Irish gangster in *Public Enemy*, and Paul Muni (1895–1967) as Tony Camonte were both given hand-wringing mothers as moral counterweights, their cautionary tales, along with that of Edward G. Robinson (1893–1973) as Rico Bandello in *Little Caesar*, strongly implied that ethnicity was fate.

Since 1930, Hollywood studios had subscribed to a Production Code designed to prevent government censorship. It was not until 1934, however, that the Code was widely enforced under public pressure organized in large part by the Catholic Legion of Decency. The effect on gangster films was immediate. The Code forbade many of the visual trappings on which gangster films had relied: drug use, automatic weapons, protracted scenes of violent death. More fundamentally, the Code ruled that crime was always to be punished, never presented as appealing. Overnight, gangster films like *The Story of Temple Drake* (1933) were pulled from release; post-Code gangsters like Duke Mantee in *The Petrified Forest* (1936) were less sympathetic and more vicious than their predecessors of a year or two earlier; and much of the energy that had once gone into gangster films was poured into police films like *"G" Men* (1935), whose fast-talking hero, Brick Davis (James Cagney), is given all the trappings of a gangster: fast cars, lethal firepower, and suspicious ties to organized crime. By the end of the decade, films like *Dead End* (1937) and *Angels with Dirty Faces* (1938) were treating the gangster as a deviant social problem to be explained rather than a mirror image of official American culture.

A METAPHOR FOR ALL SEASONS

The repeal of Prohibition in 1933 made the bootlegging gangster an instant anachronism, and the FBI's assault on organized crime throughout the decade drove the gangster underground. But he remained as a powerfully metaphoric figure that could be adapted to many uses. *High Sierra* squeezed weary but honorable ex-con Roy Earle (Humphrey Bogart) between the faithless gang that has sprung him from jail for one last job and the all-American girl who rebuffs his fatherly romantic advances. *The Phenix City Story* (1955) buried a plea for good government in the semi-documentary story of an Alabama town run by a criminal syndicate. *The Killers* (1946), taking its cue from Ernest Hemingway's short story about a man who refuses to run from the two hit men looking for him, supplied a backstory for the doomed hero that used the expressionistic techniques of film noir to intensify its tale of an innocent hero caught in the toils of a gangster and his sultry girlfriend. Don Siegel's (1912–1991) 1964 remake of the film reimagined the hit men themselves as detectives defying their anonymous criminal client to figure out why their target failed to run. Most influentially of all, *The Asphalt Jungle* (1950) charted an urban landscape whose most respectable citizens were double-dealing hypocrites dependent on the honor of the petty criminals they used as pawns. *The Asphalt Jungle* inaugurated a new kind of gangster film: the heist or caper film in which the gang is assembled only for the purpose of pulling off a single job—an organization far more unstable than the gangs dominated by Tom Powers and Tony Camonte. Across the Atlantic, such pickup gangs became the subject of comedies in England (*The Lavender Hill Mob*, 1951; *The Ladykillers*, 1955) and Italy (*I Soliti ignoti* [*Big Deal on Madonna Street*, 1958]) as well as the existential melodrama *Rififi* (France, 1955).

The gangster might have continued indefinitely as an all-purpose metaphor for social deviance if not for three developments in the movie industry. First, the gradual decline of the studios after the Paramount decrees of 1948, requiring them to disband their vertically integrated monopolies, left movie stars, once treated as chattel, with ever more power over their projects. Second, the emerging medium of broadcast television pushed film studios to provide experiences television could not match. And third, a series of challenges to the Production Code during the 1950s and 1960s led to a new ratings system in 1969 that broke with the longstanding Hollywood practice of releasing only films every possible audience could watch to mark different films as appropriate for different audiences. The result throughout the industry was a series of star-driven vehicles with rapidly escalating budgets and increasingly liberal doses of sex, violence, and harsh language. It was a climate ripe for the reemergence of the gangster as a major figure.

Bonnie and Clyde (1967) and *The Godfather* (1972), the two films that most decisively marked the return of the gangster, both treated their heroes frankly as anachronisms in order to reveal the mythopoetic power beneath the genre's realism. For all the seedy glamour of their 1930s outfits and stolen cars, Bonnie and Clyde are children of the 1960s, counterculture heroes for a generation that no longer trusted the social institutions of the democratic state; the capitalistic economy; and their servants, the police. Michael Corleone, the dark hero of *The Godfather* and its two sequels (1974, 1990), was

JAMES CAGNEY

b. James Francis Cagney, Yonkers, New York, 17 July 1899, d. 30 March 1986

The toughest, most likable, and most endlessly imitated of all American film gangsters, Cagney was a paradoxical figure. His screen persona was a diamond in the rough, but he was also gifted at farce (*Boy Meets Girl*, 1938), physical comedy (*A Midsummer Night's Dream*, 1935), and song and dance, winning an Academy Award® for his role as George M. Cohan in *Yankee Doodle Dandy* (1942). Cagney's ruthless gangsters—Tom Powers in *The Public Enemy* (1931), Eddie Bartlett in *The Roaring Twenties* (1939), and Ralph Cotter in *Kiss Tomorrow Goodbye* (1950), among others—seem driven at once by their harsh environment and by a psychopathology that was purely amoral, a force truly beyond their power to control. Yet from the beginning, audiences found Cagney's insouciance irresistible. Even when he led the Dead End Kids astray in *Angels with Dirty Faces* (1938) or shoved half a grapefruit into Mae Clarke's face in *The Public Enemy*, he came across as somehow fundamentally decent.

Cagney's best movies show him driven by uncontrollable forces. In *White Heat* (1949), Cody Jarrett's snarling violence is consistently linked to both headaches that periodically incapacitate him and catastrophic disturbances in the physical world, like the climactic explosion at a gas refinery that finally sends Cody to a memorably suicidal apotheosis at the "top of the world."

Cagney was the most energetic, unreflective, and physically straightforward of all the great Hollywood studio stars. His proletarian heroes seem impatient with any thought that cannot immediately be translated into physical action. Unlike his contemporary Edward G. Robinson, another bantamweight who could play a hero of almost any ethnic background, Cagney was invincibly Irish. Indeed, many of Cagney's fans were convinced that he was always playing himself, an unpolished mick from New York who had been in plenty of scrapes on the way to the top. Yet interviewers invariably found Cagney courteous, withdrawn, and essentially private. Like Cody Jarrett, who weeps on his mother's lap and then goes into the next room to resume the role of psychotic gang leader, Cagney perfected a style of acting that concealed artifice under the guise of self-expression. Although he never parodied his screen image as actors from Robinson to Marlon Brando did, his signature gangster persona brought a hard edge to heroes as different as FBI agent Brick Davis in *"G" Men* (1935) and C. R. MacNamara in *One, Two, Three* (1961), where he ran the Berlin operation of Coca-Cola exactly as if it were a gang and he were the last gangster in the world.

presented even more forthrightly as a microcosm of the American dream, its promise to newly arrived immigrants, and its betrayal by the drive to assimilation and respectability. Both films weigh the gangster against the gang, a family ultimately destroyed by the very loyalties the gangster struggles to honor.

The cycle of nostalgic gangster films, including the French films *Borsalino* (1970) and *Stavisky* (1974) and culminating in Sergio Leone's epic *C'era una volta in America* (*Once Upon a Time in America*, 1984), yielded in turn to a return of realism fueled by widespread public fear of urban crime in a civic culture apparently as intent on eradicating drug use as an earlier generation had been on criminalizing alcohol. Martin Scorsese (b. 1942), who had already anatomized criminal life in New York's Little Italy in *Mean Streets* (1973), attacked Francis Ford

James Cagney. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

Coppola's (b. 1939) idealized portrayal of a mob family in the *Godfather* films in his sharply revisionist *GoodFellas* (1990), which ended with its coked-up hero ratting out the friends who planned to kill him. Both films, along with *The Godfather, Part II*, helped establish Robert De Niro (b. 1943) as successor to Humphrey Bogart (1899–1957), the definitive gangster hero of his time: moody, barely controlled, and often psychotic.

But De Niro's Italian American gangster found a highly influential African American counterpart in the gangstas of *New Jack City* (1991), *Boyz N the Hood* (1991), *Menace II Society* (1993), *Sugar Hill* (1994), *Clockers* (1995), and *Dead Presidents* (1995). Still another international influence was supplied by the Hong Kong action films of John Woo (b. 1946), beginning with *Ying hung boon sik* (*A Better Tomorrow*, 1986), whose geometric opposition of cops to killers suggested a supercharged remake of such genre classics as *"G" Men.* Quentin Tarantino (b. 1963) combined the Hong Kong aesthetic of Woo and Johnny To (b. 1953) (*Dung fong saam hap* [*The Heroic Trio*, 1993] and other films) with an interracial gang and his own fashionable nihilism, choreographing Raoul Walsh to a laugh track in presenting the criminal heroes of *Reservoir Dogs* (1992), *Pulp Fiction* (1994), *Jackie Brown* (1997), and the two "volumes" of *Kill Bill* (2003, 2004) as just one more group of people going about a difficult job. The release of gangster films from all over the map, from recycled capers like *Heist* (2001) and *The Score* (2001) to Scorsese's opulently violent period piece *Gangs of New York* (2002) to the searing portrait of bored, overachieving Asian American high-school criminals in *Better Luck Tomorrow* (2002), show the gangster film flourishing in the new century even as American paranoia turned outward from domestic crime to international terrorism.

ORGANIZATION MEN

Gangster films have been categorized and theorized in many ways. Perhaps the most illuminating categories concern the different relations between gangster heroes and their organizations and between gangs and the larger society.

The earliest films to emphasize the fearsome power of gangsters came from abroad. In *Fantômas* and its four sequels (France, 1913–1914), Louis Feuillade (1873–1925) presented the gangster as a master of disguise capable of thwarting the police at every turn, a pattern expanded to epic length and complexity in Fritz Lang's (1890–1976) German film, *Dr. Mabuse, der Spieler: Ein Bild der Zeit* (*Dr. Mabuse, the Gambler*, 1922). These films present the gangster as an octopus and his organization as a vast, omnipotent conspiracy seen as if from a great distance. This paranoid pattern, common in American political thrillers, is rarely found in American gangster films; the closest American analogue is *The Phenix City Story*.

Far more common is the view of the gangster as a once-normal citizen corrupted by greed, lust, or a masculine drive to power. Films that begin their stories before the gangster's rise usually offer sociological explanations for the hero's moral deviance. *The Public Enemy* sets the pattern for gangster films that root organized crime in economic deprivation among urban immigrants. Despite its gangster trappings, most of the seven murders in *The Big Sleep* (1946) are committed to protect or avenge a lover or a spurned offer of love. The four heroines of *Set It Off* (1996) are driven to bank robbery by racism and the oppression of the white men who control their financial destiny. Criminal gangs in these films, as in *Once Upon a Time in America* and *Gangs of New York*, are often fatal extensions of generational rivalries or childhood friendships—a particularly prevalent motif in gangsta films like *Boyz N the Hood* and *Menace II Society*.

Against this view of criminal gangs as a deformed version of childhood gangs may be set the strictly professional view of gangsters in *The Asphalt Jungle*, in which each member of the gang is recruited for a particular skill

and paid a set wage, "like plumbers." American heist films, less brutal and romantic than French prototypes like *Rififi*, adopt a view of society at once technologically advanced and socially atavistic and ultimately ascribe the gang's failure to the unstable nature of the capitalistic ties that hold its members together. Frankly comic capers like *Ocean's Eleven* (1960, 2001), *The Hot Rock* (1972), *Bank Shot* (1974), and *Ocean's Twelve* (2004) get laughs by emphasizing the impossibility of the gang's task and the ingenuity of means taken to succeed. When the job looks easy, Hollywood caper films allow the gang to disintegrate under its own pressure, as in the obligatory double crosses of *The Killing* (1956), *Heist*, and *The Score*.

More broadly, criminal gangs can be framed explicitly as images of the societies they oppose. In comic versions like *The Ladykillers* (1955, 2004) and *A Fish Called Wanda* (1988), the gang's organization reflects the social order as it might be distorted by a funhouse mirror. But parody also informs less obviously comic versions like *The League of Gentlemen* (England, 1960), *Fargo* (1996), and Brian De Palma's (b. 1940) *Scarface* (1983), whose criminals, like the childlike, simian Tony Camonte in Hawks's *Scarface*, provoke laughter by their ill-informed attempts to mimic the behavior of the society whose most basic rules they are flouting. Still less comic versions like *The Godfather* films and *GoodFellas* exemplify John Baxter's premise that criminals are created by the society against which they think they are rebelling. Eugene Rosow has traced the closeness with which pre-Code gangsters reflected their audiences' fears and desires. More recently, the iconic gangster played by *Godfather* alumnus Al Pacino (b. 1940) in *Donnie Brasco* (1997) is destroyed by the undercover cop he adopts as his protégé as surely as the iconic gangster played by Robert De Niro in *Heat* (1995) faces off against the iconic cop played by Pacino as fully his equal, a potentially tragic figure destroyed by his mirror image. Like *"G" Men*, *Heat* reminds viewers that Hollywood cops are created in the image of Hollywood gangsters, not the other way around. The gangs and gangsters in these films, like Tom Hanks's doomed hit man in *Road to Perdition* (2002), are marked by the incompatible drives toward loyalty, equality, assimilation, and unlimited upward mobility characteristic of all American culture. Indeed Jack Shadoian, taking his cue from Robert Warshow, has called the gangster the archetypal American dreamer whose doomed trajectory reveals the futility of the American Dream.

Finally, gangsters can be portrayed as frankly heroic rebels against a corrupt or bankrupt society, more sympathetic, like Frankenstein's monster, than the society that has spawned and rejected them. The doomed robbers in *The Asphalt Jungle*, *Bonnie and Clyde*, *They Live by Night* (1949), and its remake, *Thieves Like Us* (1974), approach the frontier of the gangster film, a frontier crossed by outlaw films like *The Adventures of Robin Hood* (1938) and *Thelma and Louise* (1991). Tarantino's ironic spin on this pattern is to create a world in *Pulp Fiction* and *Kill Bill* from which the law and its representatives have vanished, leaving criminal culture, for better or worse, as the only game in town. Whether these films can truly be called gangster films is open to question. A world whose criminals provide the last best hope for the social order is a world in which gangsters like Robin Hood no longer seem like gangsters, no matter how many laws they break.

GAY, LESBIAN, AND QUEER CINEMA

The study of gay and lesbian cinema became a growing concern in the wake of 1970s feminist film theory and the discipline's increasing attention to issues of representation—of women, of racial and ethnic minorities, and eventually of gay and lesbian people. While there had been a few attempts to discuss onscreen homosexuality prior to that period (such as Parker Tyler's *Screening the Sexes: Homosexuality in the Movies* [1972]), the seminal text on the subject was Vito Russo's *The Celluloid Closet: Homosexuality in the Movies* (first published in 1981, revised and updated in 1987). In it, Russo examined over eighty years of film history, exploring the ways and means in which gay and lesbian people had been portrayed at the movies. Those images carried considerable cultural weight; for many people, these images were all they ever "saw" or "knew" about homosexuality before the sexual revolution of the 1960s.

The so-called Stonewall Riots that occurred in New York City in June 1969 are sometimes said to be the start of the modern gay and lesbian civil rights movement—the fight for civil rights and an end to discrimination. Before that time, gay and lesbian people were routinely fired from their jobs, denied housing, harassed, or arrested simply for being homosexual. They were classified as mentally ill by the psychiatric and military communities, and during the Red Scare of the 1950s they were considered national security risks. Like the struggle for racial or gender equality, the fight for gay and lesbian equality continues to this day, and the images that popular film and television create of homosexual people continue to influence both public perception and governmental policy.

In the last twenty years, the study of gay and lesbian cinema has expanded greatly beyond simplistic image analysis. Within academia, the development of third wave feminism and queer theory across many disciplines in the humanities has sought to rethink basic concepts about human sexuality, demonstrating the complexity of a subject that encompasses not only personal orientation and behavior but also the social, cultural, and historical factors that define and create the conditions of such orientations and behaviors. The term "queer," once a pejorative epithet used to humiliate gay men and women, is now used to describe that broad expanse of sexualities. Queer should thus be understood to describe any sexuality not defined as heterosexual procreative monogamy (once the presumed goal of any Hollywood coupling); queers are people (including heterosexuals) who do not organize their sexuality according to that rubric.

Recently, many of the theoretical issues raised by queer theory have found their way into gay and lesbian independent filmmaking, within a movement known as New Queer Cinema. Queer theory also helps us interrogate and complicate the category "gay and lesbian cinema." For example, the very meaning of the words "gay" and "lesbian"—how they are used and understood—has changed greatly over the decades, as have the conditions of their cinematic representation. There are great cultural and historical differences between films made by queer directors in 1930s Hollywood and those made by early twenty-first-century independent queer filmmakers. The characteristics that mass culture has used to signify homosexuality have also changed. While present-day films can be relatively forthright about sexuality, older films could only hint at it in various ways. Thus, many classical Hollywood performances, directors, and genres might be considered queer rather than gay, in

that they do not explicitly acknowledge homosexuality, but nonetheless allow for spaces in which normative heterosexuality is threatened, critiqued, camped up, or shown to be an unstable performative identity.

THE CLASSICAL HOLLYWOOD BASELINE

Classical (and pre-classical) Hollywood films (those produced between the 1910s and the 1950s) had little interest in dramatizing homosexual lives or homosexual issues. The very structure of Hollywood narrative form was and is heterosexist: it almost always contains a male–female romance, regardless of story line or genre. If and when homosexual characters appeared in Hollywood films prior to the sexual revolution, they were almost always relegated to walk-on parts or small supporting roles. One notable early exception was *A Florida Enchantment* (1914), a comedy wherein female characters eat magical sex-changing seeds that turn them into women-chasing lotharios. Much more common was the stereotype of the "pansy," an effeminate male supporting character—often a butler, designer, or choreographer. When the Hollywood Production Code (which specifically forbade the depiction of what it called "sex perversion") was put into effect in 1934, these characterizations were forced further into the realm of connotation. Hollywood cinema under the Code continued to suggest queerness via the presence of effeminate men and mannish women, but these characters were never explicitly acknowledged as homosexual. Actors such as Edward Everett Horton (1886–1970), Eric Blore (1887–1959), and Franklin Pangborn (1888–1958) made careers for themselves by playing such roles.

Female characters in pre-Code cinema were stronger and more sexually forthright than in post-Code cinema, and occasionally they too gave off a queer aura. For example, Greta Garbo's (1905–1990) *Queen Christina* (1933) wears pants, runs a country, and kisses her chambermaid rather passionately on the lips—before she falls in love with a man. Similarly, in *Morocco* (1930), Marlene Dietrich's (1901–1992) character wears a tuxedo and vamps both men and women. Both actresses—Garbo and Dietrich—had large queer fan bases and many rumors surrounded their "real life" sexualities. Obviously, many queer actors and actresses worked (and continue to work) in Hollywood. Leading silent film stars Ramon Novarro (1899–1968) and Billy Haines (1900–1973) were gay, but as the Production Code was enforced and Hollywood grew more homophobic, their careers faded. Haines was fired from Metro-Goldwyn-Mayer because he refused to go along with studio publicity designed to hide his homosexuality. Such arranged publicity stunts included dates and even weddings—the so-called "marriage of convenience." For example, Rock Hudson (1925–1985) was briefly married in the 1950s to persuade his fans that he was indeed heterosexual.

Queer people also worked behind the camera in Hollywood, many in costume design (Orry-Kelly [1897–1964], Adrian [1903–1959]), set decoration (Jack Moore [1906–1998], Henry Grace [1907–1983]), and choreography (Charles Walters [1903–1982], Jack Cole [1911–1974]). There were also successful producers and directors who led quiet homosexual lives, including David Lewis (1903–1987), Ross Hunter (1920–1996), Mitchell Leisen (1898–1972), Edmund Goulding (1891–1959), Irving Rapper (1898–1999), Arthur Lubin (1898–1995), James Whale (1889–1957), George Cukor (1899–1983), and Dorothy Arzner (1897–1979). The last three of these are the best known, perhaps because their film work does show more obvious touches of a homosexual sensibility. Whale directed four of Universal's classic horror films (*Frankenstein*, 1931; *The Old Dark House*, 1932; *The Invisible Man*, 1933; and *Bride of Frankenstein*, 1935) with gay wit and innuendo. Arzner, one of the few women to direct in Hollywood during the classical era, made films such as *Christopher Strong* (1933) and *Dance, Girl, Dance* (1940) that showcased strong women and celebrated the bonds between them. Cukor, one of the classical era's most prolific directors, became known chiefly for his women's films and musicals, including *Camille* (1936), *A Star Is Born* (1954), and *My Fair Lady* (1964). Cukor's *Sylvia Scarlett* (1935) managed to skirt the Code's injunctions against "sex perversion" even as it featured a cross-dressing heroine (Katherine Hepburn as a young woman impersonating a boy) and all sorts of same-sex infatuations.

Queer filmmakers and fans were often drawn to the musical and the horror film, two genres that often acknowledged queer characters and seem to be steeped in queer sensibilities. The musical, although almost always containing a (highly contrived) heterosexual romance, creates a bright carnivalesque world in which fantasy and reality shift and blur. Real-life hatreds and biases are banished, and people are free to be expressively emotional and physical in nonviolent ways. *The Wizard of Oz* (1939), starring gay favorite Judy Garland (1922–1969) and a cast of misfit effeminate men, has become an iconic film in gay culture. The horror film often uses queer traits to characterize its monsters and mad scientists. For example, in *Mad Love* (1935) Peter Lorre's effeminate madman quotes Oscar Wilde, and vampires (like *Dracula's Daughter*, 1936) are almost always queerly sexual, seducing both men and women with their unnatural kisses. In fact, the lesbian vampire was the most common image of lesbians on American film screens before the 1980s. The need for queer spectators to rewrite such distorted images and reappropriate others

BARBARA HAMMER

b. Hollywood, California, 15 May 1939

Barbara Hammer is by far the most prolific lesbian filmmaker, having made over sixty films and videos since the late 1960s. Hammer's films are excellent examples of New Queer Cinema practice. They cross borders (between documentary, fiction, and experimental filmmaking), and focus on the complexities of human sexuality—especially the ways in which those sexualities have been socially constructed across time and place. Hammer's films explore love, sex, identity, humor, community, relationships, nature, and spirituality. Almost all are deeply personal, drawing on autobiographical elements and centering on the filmmaker as well as her friends and lovers.

Hammer's earliest films are set in and around San Francisco and reflect the mythic femininity that many lesbian-feminists of the 1970s were trying to reclaim. For example, *Menses* (1974) makes use of bold symbolism (blood, eggs), optical printing, and sound loops in order to exalt the essentially feminine process of menstruation. *Superdyke* (1975), in which a group of self-identified "Amazon" women wearing "Superdyke" T-shirts joyously overrun San Francisco, is even more playful in tone and form. In *Women I Love* (1979), Hammer experiments with pixilation (the animation of objects) as dancing fruits and vegetables unveil their inner selves to the camera, just as do the women in her life.

By the 1980s, Hammer was exploring and experimenting with digital technology. In *No No Nooky TV* (1987), she used computer-generated sounds and images to investigate technology's male biases, as well as to suggest how those forms might be reclaimed for lesbian feminist goals. She tackled the AIDS crisis directly in *Snow Job: The Media Hysteria of AIDS* (1986) and more indirectly in *Endangered* (1988), an abstract aural and visual collage that draws a connection between endangered species and the precarious nature of her own experimental film work wherein media technologies threaten to eradicate their living subjects altogether.

In the 1990s, Hammer made a series of longer, more theoretically informed films that investigate lesbian representability. The first of these, *Nitrate Kisses* (1992), begins with a consideration of how the American novelist Willa Cather's sexuality has been erased from history. The film explores queer sexualities hitherto hidden, including lesbian relationships during the Holocaust and gay male iconography of the 1930s. Hammer counters those historical musings with contemporary treatment of sexualities still considered taboo (even by many queers), including footage of two older women lovers and a sadomasochistic duo. As an interracial male couple has sex, Hammer overlays the written text of the Hollywood Production Code, in effect forcing that document to confront what it had censored for so long. Funny, complex, thoughtful, and challenging, the work of Barbara Hammer expands our notions of both film form and human sexuality.

gave rise to the camp sensibility, the practice of ironically decoding and making fun of heterocentrist culture. As such, many gay men of the pre-Stonewall generation simultaneously mocked and venerated Hollywood stars such as Maria Montez (1917–1951), Bette Davis (1908–1989), Joan Crawford (1904–1977), and Lana Turner (1921–1995), actresses who always seemed to be performing—even in their real lives.

HOLLYWOOD AND THE SEXUAL REVOLUTION

Hollywood responded to the nation's changing sexual mores throughout the 1950s and 1960s by slowly amending and then eventually replacing the Hollywood Production Code with the Motion Picture Association of America (MPAA) Ratings System. In 1961 the Code Administration agreed to allow onscreen homosexuality, as long as it was treated with "care, discretion, and restraint." What that really meant was that homosexuality could be represented, but that it should also be condemned. For example, the British import *Victim* (1961), which centered on a gay blackmail case and argued that social prejudice against homosexuals was wrong, was denied a Seal of Approval. The first few American films dealing with homosexuality that were approved by the Code suggested that homosexuality would only lead to tragedy. For example, in *Advise and Consent* (1962), a past gay relationship is shown to be cause for suicide, and in *The Children's Hour* (1962), a young woman hangs herself after admitting that she is a lesbian.

Throughout the 1960s, homosexual innuendo became a staple of smarmy sex comedies (*That Touch of Mink*, 1962; *Staircase*, 1969; *The Gay Deceivers*, 1969), and functioned as a signifier of ultimate villainy in action and adventure films (*Lawrence of Arabia*, 1962; *From Russia with Love*, 1963; *Caprice*, 1967). A few films attempted to deal with sexuality in more complex ways: *Reflections in a Golden Eye* (1967) and *The Sergeant* (1968) centered on (repressed) homosexuality in the military, even as their queer characters still met death and destruction. Two of the most famous (and least offensive) Hollywood films dealing with homosexuality during this era were *The Killing of Sister George* (1968, about lesbians in the British television industry) and *The Boys in the Band* (1970, about a group of gay friends in New York City). Both of these films had been based on successful stage plays and explored issues of romance, the closet, the possibility of blackmail and job loss, internalized homophobia, and the burgeoning (but still mostly underground) gay and lesbian culture of many cities. While these films may seem overly melodramatic or stereotypical by today's standards, they did capture a certain slice of reality for many urban homosexuals of their era. Perhaps most importantly, no one died at the end of them.

Throughout the 1970s, as homosexuals were becoming more visible in the real world, they once again retreated from American movie screens. Queers were occasionally seen as minor supporting figures, when they were seen at all. Then, in the early 1980s, another small cycle of gay-themed films appeared. Several of these reworked the old queer psycho-killer stereotype: in *Dressed to Kill* (1980), *Cruising* (1980), and *The Fan* (1981), queers slashed their way onto multiplex movie screens. Perhaps to atone for such images, Hollywood also released a handful of films that featured sympathetic queer characters. *The World According to Garp* (1982) featured a male-to-female transsexual, while *Personal Best* (1982) dramatized a lesbian relationship and issues of bisexuality. Twentieth Century Fox released *Making Love* (1982), a melodrama about a married couple coming to terms with the husband's latent homosexuality. By far the most popular of these films was the old-fashioned musical sex farce *Victor/Victoria* (1982), a film that featured Julie Andrews as a cross-dressing nightclub performer and Robert Preston as her flamboyantly gay best friend.

ALTERNATIVES TO HOLLYWOOD

Gay and lesbian concerns and characters often found more varied (and less pejorative) representations outside the Hollywood industry, in foreign, experimental, and documentary filmmaking. One of the first films ever to feature homosexual love as its theme was the Swedish film *Vingarne* (*Wings*, 1916), directed by Mauritz Stiller (1823–1928; who was himself homosexual). Carl Theodor Dreyer's *Mikaël* (1924), filmed in Germany a few years later, was drawn from the same source novel. In fact, Weimar Germany was home to gay directors like F. W. Murnau (1888–1931) (*Nosferatu*, 1922) and produced the first film to make a plea for homosexual rights and freedoms. *Anders als die Anderen* (*Different from the Others*, 1919) was made in conjunction with early sexologist and gay rights pioneer Magnus Hirschfeld (1868–1934). A few years later G. W. Pabst's famous film *Pandora's Box* (1929) featured a lesbian subplot. Perhaps the most well-known German film of this era to deal with homosexuality was *Madchen in Uniform* (1931), a film about a schoolgirl's crush on her teacher. It should be noted that if and when these films played in America, they were often censored in ways that elided their homosexual content.

French avant-garde filmmaking also offered an alternative to Hollywood form and content. Poet and playwright Jean Cocteau's (1889–1963) film *Le sang d'un poète* (*Blood of a Poet*, 1930) explored homoerotic themes, and Jean Genet's (1910–1986) *Un chant d'amour* (*Song of Love*, 1950) centered on the homoerotic bonds between men in prison. One of the first American avant-garde films to deal with homosexuality was James Watson (1894–1982) and Melville Webber's (1871–1947) *Lot in Sodom* (1933). In the postwar era, Kenneth Anger's (b. 1927) *Fireworks* (1947), a surreal psychodrama about a young man's homosexual desires, both scandalized and inspired a new generation of filmmakers. Although Anger lived abroad for most of the

1950s, he returned to America to make his most famous film, *Scorpio Rising* (1964), a film that combines found footage, contemporary pop songs, and a host of other cultural artifacts to examine the homoerotic cult of the motorcyclist. Also making queer avant-garde films in the 1960s were Jack Smith (1932–1989) and Andy Warhol (1928–1987), two artists who were associated with the New York underground film scene. Jack Smith's *Flaming Creatures* (1963) featured characters (slave girls, vampires, Roman guards, etc.) and overly dramatic music drawn from exotic Hollywood melodramas. Andy Warhol's films (including *Haircut*, 1963; *Couch*, 1964; and *Lonesome Cowboys*, 1967) also parodied Hollywood style and conventions; his actors (many of whom were drag queens) called themselves "superstars" and behaved as if they were Hollywood royalty.

In the 1970s, prolific lesbian feminist filmmaker Barbara Hammer (b. 1930) began to make short experimental films. Her early work, made in and around San Francisco, captures the feel and spirit of the 1970s lesbian feminist community as it was then defining itself. Other lesbian feminists of the 1970s, including Greta Schiller (b. 1954) (*Greta's Girls*, 1978) and Jan Oxenberg (*Home Movie*, 1973), made films that documented the movement, and more recent experimental work by Su Friedrich (b. 1954), Michelle Citron, Michelle Parkerson (b. 1953), and Sadie Benning (b. 1973) forge important links to the New Queer Cinema movement of the 1990s.

The burgeoning gay and lesbian civil rights movement of the 1970s and 1980s was not confined to America: many western European nations and Canada also began to produce films that acknowledged or reflected the movement. In Germany, Rainer Werner Fassbinder (1946–1982) directed over forty films about race, class, and (homo)sexuality, while Rosa von Praunheim (b. 1942) and Ulrike Ottinger (b. 1942) made even more surreal excursions into the politics and pleasures of homosexuality. In England, Derek Jarman (1942–1994) made a series of highly stylized films (*Sebastiane*, 1976; *Jubilee*, 1977) that critiqued sexual repression and the British Empire. In Spain, Pedro Almodóvar (b. 1949) became one of the world's best known queer filmmakers, repeatedly winning international film prizes for his films. In Canada, John Greyson (b. 1960) made a series of short films and then features (*Moscow Does Not Believe in Queers*, 1986; *Pissoir* [*Urinal*, 1988]) that dealt with homophobia and the AIDS crisis. While a few foreign films dealing with homosexuality (including *La cage aux folles* [*Birds of a Feather*], 1978; and *Kiss of the Spider Woman*, 1985) became art-house hits in America during this era, many of the more queerly provocative works made abroad remained very difficult to see.

Starting in the 1970s, documentaries made by and about gay and lesbian people began to be produced. One of the first and most important of these, *Word Is Out* (1978), was made by a collective of gay and lesbian filmmakers, and told the stories of a cross-section of queer Americans. (The film remains a fascinating time capsule of 1970s culture and the nascent gay liberation movement.) Since then, gay and lesbian documentaries have brought to light stories and issues that mainstream media routinely ignores. Some of these films, such as *Before Stonewall* (1985) and *Silent Pioneers* (1985), documented forgotten aspects of gay and lesbian history. The Oscar®-winning documentary *The Times of Harvey Milk* (1984) chronicled the rise to power of the first openly gay city supervisor, as well as his eventual assassination by an unhinged right-wing politician. Other documentaries, such as *Common Threads: Stories from the Quilt* (1989) and *Silverlake Life* (1993), explored the AIDS crisis, and activist video collectives made pieces that helped spur education and organization. Marlon Riggs's (1957–1994) personal video documentary *Tongues Untied* (1989) remains the definitive statement on what it was like to be a black gay man in the 1980s. Countless other documentaries, such as *One Nation under God* (1993), *Ballot Measure 9* (1995), and *It's Elementary* (1996) continue to explore gay and lesbian lives and issues.

NEW QUEER CINEMA

The production of foreign, experimental, and documentary films that centered on queer issues eventually helped spark the production of gay and lesbian independent feature film production in America. The first batch of these films, including *Buddies* (1985), *Parting Glances* (1986), and *Desert Hearts* (1985), used realistic storytelling conventions to explore coming out, romance, and AIDS. Then, in 1991, a new crop of gay and lesbian films made waves at several international festivals. These films (including *Poison*, *Swoon*, *Paris Is Burning*, *The Living End*, *Edward II*, and *My Own Private Idaho*, all released in 1991) were made by more activist and theoretical filmmakers: Todd Haynes (b. 1961), Tom Kalin, Jennie Livingston (b. 1960), Gregg Araki (b. 1959), Derek Jarman, and Gus Van Sant (b. 1952). The films, many fueled by 1980s AIDS activism, engaged with concepts being formulated within queer theory, and collectively they became known as the New Queer Cinema. Christine Vachon (b. 1962), who has been dubbed the "Godmother of New Queer Cinema," produced several of these first films and has since then produced many more, including *Go Fish* (1994), *Postcards from the Edge* (1994), *Stonewall* (1995), *Boys Don't Cry* (2000), *Hedwig and the Angry Inch* (2001), and *Far from Heaven* (2002). Other important New Queer films include John

TODD HAYNES

b. Los Angeles, California, 2 January 1961

One of the most successful writer-directors of the New Queer Cinema, Todd Haynes was raised in California and studied semiotics and other aspects of cultural theory at Brown University, where he began to make short films. Haynes's work, like most New Queer Cinema, explores the cinematic representation of queer desires by foregrounding both history and film form.

The first Haynes film to garner widespread attention was *Superstar: The Karen Carpenter Story* (1987), a 45-minute biopic that explored the life and death (from anorexia nervosa) of 1970s singer Karen Carpenter. Audaciously, Karen Carpenter's life is enacted in the film by Barbie dolls, and is intercut with documentary-like inserts that describe and explore the medical and social implications of anorexia. While the very premise of *Superstar* creates a campy tone, the film is far from facile or condescending. Instead, the film asks its viewers to consider the connections between the ideals of feminine beauty, celebrity, mental illness, and middle-class repression. Its unlicensed use of the Carpenters' music (and perhaps its unflattering portrait of Karen's family) led to a lawsuit, and the film remains very difficult to see.

Haynes's first feature-length film, *Poison* (1991), was one of the defining films of the New Queer Cinema movement. It recalls the audacity of *Superstar*, and was itself the center of considerable controversy. *Poison* interweaves three separate but related stories, each shot in a different cinematic style. The first, "Homo," is based on the writings of gay writer Jean Genet, and explores the violent sexuality of men in prison. The second, "Horror," is about a scientist who accidentally ingests a sex-hormone serum, and is filmed as a pastiche of 1950s monster movies. The third story, "Hero," is a pseudodocumentary about a young boy who shoots his father and miraculously flies away from the scene. *Poison* was publicly denounced by some members of Congress (it had received some funding from the National Endowment for the Arts) even as it won the Grand Jury Prize at Sundance.

Haynes's next feature, *Safe* (1995), starred Julianne Moore as a woman suffering from a viral-like illness that may or may not be psychosomatic. Exploring issues of contamination, isolation, and the toxic atmosphere of everyday life, the film was both an AIDS allegory and a critique of American self-obsession. *Velvet Goldmine* (1998), another queer art-house hit, examined the 1970s "glam rock" phenomenon in relation to sexuality, celebrity, and style. In 2002, Haynes's *Far from Heaven* (2002) was nominated for several Oscars®, including Best Original Screenplay. The film invokes the visual style of a lush 1950s melodrama, but explores issues that were taboo for films of that era: interracial romance and repressed homosexuality. As with the best of his work, *Far from Heaven* explores the intersection of film form and film content, showing how the discourse of cinematic style can create, contain, or otherwise influence the representation of queer desire.

Greyson's *Zero Patience* (1993) and Cheryl Dunye's *Watermelon Woman* (1996).

New Queer Cinema has been called "Homo Pomo," because the movement's films make use of postmodern styles and ideas (as does queer theory itself). In most of these films there is a focus on permeable formal boundaries—the crossing of styles and genres. New Queer Cinema often questions essentialist models of identity, and shows how the terms "gay" and "lesbian" are inadequate when trying to define actual human experience. New Queer Cinema simultaneously draws on minimalism and excess, appropriation and pastiche, the mixing of Hollywood and avant-garde, and even the mix of fictional and documentary style. For example, *The Living End* reappropriates the Hollywood buddy/road movie for HIV-positive queers, while *Zero Patience* is a ghost story musical about AIDS. *Watermelon Woman* is a mock documentary about an African American lesbian actress who played "Mammy" roles in 1930s Hollywood; the film is a witty interracial lesbian romance as well as a thoughtful meditation on queer visibility and historical erasure.

New Queer Cinema is not without its detractors. Some have accused the movement of recirculating negative stereotypes such as the queer psycho-killer. Although films like *Swoon* and *The Living End* attempt to show how social forces and sexual repression can and do cause violence, some filmgoers still saw them as reconfirming harmful stereotypes. New Queer Cinema has also been charged with elitism, since it is frequently engaged with issues of queer and postmodern theory. As such, New Queer Cinema can be rigorous and difficult both thematically and formally, and many queer spectators, like straight spectators, prefer "feel good" Hollywood-style movies with happy endings.

Those "feel good" movies are also now being made by gay and lesbian independent filmmakers. For example, *The Incredibly True Adventure of Two Girls in Love* (1995), *Beautiful Thing* (1996), *Edge of Seventeen* (1998), and *Billy's Hollywood Screen Kiss* (1998) draw upon the conventions of Hollywood narrative form and the genre of the romantic comedy, placing lesbian and gay lovers into previously heterosexual roles. Films such as *Love! Valour! Compassion!* (1997) and *The Broken Hearts Club* (2000) mix humor with a few tear-jerking moments, and represent predominantly upper-middle-class white male characters. Independent lesbian films remain fewer in number, although films like *Better Than Chocolate* (1999) and *But I'm a Cheerleader* (1999) have been hits on the film festival and art house circuits. Queers of color and transgendered people have also been the subjects of recent American independent features, in films such as *Latin Boys Go to Hell* (1997), *Punks* (2001), and the Oscar®-nominated films *Before Night Falls* (2000) and *Boys Don't Cry*.

HOLLYWOOD TODAY

The rise of New Queer Cinema did not go unnoticed by Hollywood, and they briefly tried (unsuccessfully) to market a few films that explored more open parameters of sexuality, such as *Three of Hearts* (1993) and *Threesome* (1994). For the most part, when dealing with queer characters (which it still rarely does), Hollywood still prefers its previously succesful formulas and comfortable stereotypes. Queer gender-bending traits are still used to signify villainy—even in Disney films like *The Lion King* (1994) and *Pocahontas* (1995). The social problem film *Philadelphia* (1993), while a major critical and box office hit, was still a variation on the "tragic-homosexual-who-dies-at-the-end-of-the-film" stereotype. And drag queens are center stage in occasional comedies like *To Wong Foo, Thanks for Everything, Julie Newmar* (1995) and *The Birdcage* (1996). But in an era of nostalgic Hollywood blockbusters based on fantasy novels and comic books, Hollywood films that deal with actual gay and lesbian lives and issues are relatively rare.

A few new trends dealing with queer issues in Hollywood briefly surfaced in the late 1990s. The first was the reworking of the Hollywood buddy film formula so that it now comprised a straight female lead and her gay male best friend (allegedly bringing both women and gay men to the box office). Films such as *My Best Friend's Wedding* (1997), *The Object of My Affection* (1998), and *The Next Best Thing* (2000) explored the close bonds of friendship that often exist between gay men and straight women. (This is also the formula of the popular and award-winning TV situation comedy *Will and Grace* [NBC, 1998–2006]) While no one dies tragically in these new-age buddy films, and some of them have been moderate box office successes, they still tend to chafe at Hollywood films' need for happy heterosexual closure. Another recent trend in Hollywood's treatment of homosexuality is represented by a handful of films that explore the destructive dynamics of internalized homophobia. *American Beauty* (which won many Oscars® in 1999 including Best Picture) dramatized how repressed homosexuality can lead to vicious homophobia, violence, and murder—a theme also found in *The Talented Mr. Ripley* (1999), several recent documentaries, and even the Comedy Central TV show *South Park* (premiered in 1997—). Most recently, the highly acclaimed film *Brokeback Mountain* (2005) poignantly dramatized how homophobia and heterosexism can destroy human lives.

In Hollywood today, being openly gay or lesbian remains difficult for most actors. Many actors (and their agents and advisors) still fear that the public will not accept an openly gay or lesbian actor in a heterosexual role. However, in the late 1990s, a few Hollywood stars, including Ellen Degeneres (b. 1958), Nathan Lane (b. 1956), Rupert Everett (b. 1959), Rosie O'Donnell (b. 1962), and Sir Ian McKellen (b. 1939) led the way in being openly queer media personalities. Still, the vast majority of queer Hollywood actors remain in the closet, a fact that reinforces the notion that there is something wrong or shameful about being gay or lesbian. Behind the camera, more and more Hollywood queers are finding the space and acceptance to be who they are, making films and especially television shows in unprecedented numbers. The popular situation comedy *Ellen* (ABC, 1994–1998) broke down many barriers and has made television more gay-friendly than Hollywood film. Furthermore, subscription TV channels such as HBO and Showtime, because they do not have to sell their projects to America one film at a time, have also been able to produce more queer-themed work in recent years, including *More Tales of the City* (1998), *Common Ground* (2000), *Queer as Folk* (begun in 2000), *If These Walls Could Talk 2* (2000), and *Soldier's Girl* (2003). Mainstream Hollywood film, so often behind the rest of the media industries in relation to these issues, still continues to marginalize gay and lesbian lives and issues.

GENDER

Traditionally, the term "gender" refers to the grammatical categories of masculine, feminine, and neuter, but in recent usage it refers more widely to sex-based social categories. Social scientists and anthropologists commonly distinguish gender, which is applied to social and cultural categories, from sex, which is reserved for biological categories. The distinction between sex and gender is underpinned by theories in the life and social sciences about the respective roles of nature and culture in the creation of human identity. Debates around sex and gender have tended to be controversial, and in recent years these have been intensified by medical and scientific research that has provided grounds both for and against the mapping of biological sex onto gender. Some of the most interesting perspectives on sex and gender have come from researchers studying intersexuality. In an influential paper published in 1993, biologist Anne Fausto-Sterling posits the existence of not two but five sexes—male, female, and three degrees of hermaphroditism. In the ensuing debate, which has practical bearings on gender assignment for hermaphrodite children as well as on a whole array of gender-rights issues, it has become clear that the variety of possible sexes and genders is greater than traditionally thought. Within most cultures, however, binary gender division is a persistent norm.

GENDER AND FILM

Feminist arguments against the concept of biologically determined gender identity began with the assertion by Simone de Beauvoir (1908–1986) that women are not born but made. The sex-gender paradigm was taken up widely in the 1970s and 1980s in feminist arguments for rights denied to women and girls on spurious biological grounds. The emphasis of feminist analysis was thus skewed toward deconstructions of gender, while sex itself remained relatively unexamined. Some feminist positions took advantage of the notion of a "real" or "natural" femininity that existed prior to the impositions of capitalist patriarchy, although ultimately all arguments for women's equality were undermined by such essentialism, to a greater or lesser extent.

In a groundbreaking essay published in 1975, Gayle Rubin coined the term "sex-gender system" to describe the ways in which societies transform biological sex into cultural gender and align the processes of human reproduction with those of economic production. Rubin's analysis places marriage, kinship systems, and heterosexuality at the heart of the sex-gender system. Her hypothesis exposed certain contradictions and differences that were particularly marked within American feminism at the time. One of these concerns the legacy of African Americans, whose slave ancestors were denied marriage and kinship and therefore a place in the sex-gender system as Rubin describes it, and for whom gender consequently has different meanings. The situation of African Americans draws attention to the need to conceptualize gender and its relationship with other social systems within historically specific frameworks. Lesbians also fall outside the gambit of Rubin's sex-gender system: by opting out of heterosexuality and its attendant kinship structures, they become radically other to the system. Although this outsider status legitimated lesbianism as a logical and effective expression of feminist dissent, it also contributed to the creation, in the 1980s, of an idealized image of lesbian sexuality that was widely rejected by queer culturalists in the 1990s. The "sex-gender system"

failed as a universal paradigm but succeeded in establishing the importance of mapping convergences between particular social and economic systems in the production of gender.

The recognition that differences among women are at least as important to feminism as differences between women and men has enriched feminist thinking massively, but it has also placed the fundamental assumption of feminism—the commonality of women—under great pressure. Postmodern critical theorists see this as a good thing, potentially enabling the emergence of multiple and mutable sexual identities. In *Gender Trouble* (1990), the most widely influential deconstruction of gender identity published in the 1990s, Judith Butler argues that feminist assertions of the commonality of women as a group unwittingly contribute to the regulation of gender relations. Membership of the class of women, according to Butler, is not the inescapable consequence of biological femininity. Gender identities are not expressions of an essential core but performances built from citations and imitations specific to a given context. The hegemony of patriarchal heterosexuality is therefore neither natural nor inevitable. Butler argues that performances that subvert, confuse, or ironize gender norms have the power to unsettle or even unseat those norms. However, this reformulation of gender is not without drawbacks. Its dissolution of the concept of women as a class or category could be premature. Feminism is the struggle for women as a class and for the disappearance of that class, but it is possible that women as a class might disappear from postmodern feminist discourse while continuing to exist in all their diversity within other discursive and social formations. Further, the notion of gender identity as "free-floating" and flexible needs to be circumscribed by a recognition of the effects that normative social forces and their uneven application have on people of different cultures and conditions. Individualistic subversions of gender norms are not equally possible for all and do not necessarily benefit those who are left behind in the ghetto of women.

GENDER ON THE SCREEN

The absence of the physical body of the actor, and indeed, the relative unimportance of the spectator's own body, in the experience of film viewing should make cinema the perfect medium for the performance of diverse and free-floating gender identities, but the converse is more generally the case: the extent to which images of men and women are conventionalized in the cinema demonstrates the power of gender norms. Nevertheless, the history of cinematic representations of gender is characterized by tensions, contradictions, and change.

Between its invention in 1895 and the imposition of the Production Code in the early 1930s, American cinema was torn between the modern idea of the New Woman and the antimodern Cult of True Womanhood—a Victorian ideology that prescribed for women the four cardinal virtues of purity, piety, domesticity, and submission. In early cinema, before the stabilization of industry standards and norms and while cinema still lacked respectability, women on the screen were often active, sexual, and even feminist. Three types of movies were especially popular with women in the 1910s: serials such as *The Perils of Pauline* (1914), white slave films, and suffragist films. The possibility that these genres encouraged active, curious, militant female spectatorship was the cause of some social concern at the time, especially in the case of the white slave films. There was also concern that the movie theaters were drawing women into new and unsafe public spaces. Early cinema formed part of a modern urban cultural scene in which women's increased mobility was both cause and effect of changes in their social roles.

In later silent cinema, the dialectical tension between old and new model femininities can be most clearly seen in the contrasting stereotypes of the virgin, personified by stars like Mary Pickford (1893–1979) and Lillian Gish (1893–1993), and the vamp, most notoriously embodied by Theda Bara (1885–1955) and Clara Bow (1905–1965). D. W. Griffith (1875–1948), the director most prominently associated with the development of longer narrative films and with the effort to establish the cultural respectability of cinema, consciously drew on the theatrical and literary melodrama of the nineteenth century, in which heroines were virtuous, passive, and long-suffering. However, flapper films of the 1920s, such as *The Dancing Mothers* (1926) and *It* (1927), depicted and addressed the modern, active, independent women of the decade that began with their enfranchisement. The Hollywood libertarianism that made stars of Greta Garbo (1905–1990), Marlene Dietrich (1901–1992), and Mae West (1893–1980) and that created the new and violent masculinity of the gangster film seemed to have carried the day when, in the early 1930s, under pressure from the Legion of Decency, the Production Code came into force, installing sublimation and double standards at the heart of the Hollywood aesthetic.

The impact of historical events on gender roles often appears in indirect and mediated ways in Hollywood cinema. The Depression and the New Deal generated an ethos of selflessness that arguably informed maternal melodramas such as *Stella Dallas* (1937), although the film makes no explicit reference to the economics or ideology of the times. Many critics have noted the influence of World War II on gender roles in the woman's film and film noir, genres that have been said to participate

RUDOLPH VALENTINO

b. Rodolpho Alfonzo Raffaelo Pierre Filibert Gugliemi di Valentina d'Antonguola, Castellaneta, Italy, May 6, 1895, d. New York, New York, August 23, 1926

In his short career as a leading man, Rudolph Valentino was one of the great idols of the silent era and also one of its most controversial, splitting the audience along gender lines between women who adored him and men who loathed him.

After stints of begging, dishwashing, and taxi dancing, Valentino went to Hollywood, where he got his big break in 1921 when he was cast as the lead in Rex Ingram's *Four Horsemen of the Apocalypse*, the box-office hit that made him a star. At screenings of *The Sheik* (1921), women fainted in the aisles, inflamed by its heady cocktail of slavery, capture, peril, and romance. Valentino's star image was established by *The Sheik* in the form of a split personality: the hard-eyed wild man who, once wounded, could be tamed by the love of a good woman.

Valentino acquired a scandalous reputation as a result of bigamy charges brought by his first wife, Jean Acker, gossip about his sexual proclivities and competence, and a second marriage to the domineering Natacha Rambova, whose gift to him of a slave bracelet and whose friendship with lesbian actress Alla Nazimova undermined the star's protestations of "caveman" virility. On the release of *The Son of the Sheik* (1926), an editorial in the *Chicago Tribune* famously called him a "pink powder puff" and a "painted pansy." Women felt otherwise: after his death from peritonitis at the age of thirty-one, thousands of women took to the streets for his funeral, grieving hysterically. For a number of years, he remained the object of a posthumous cult with intimations of necrophilia.

Valentino's star image is a fascinating condensation of desires and anxieties popularized in the 1920s. His ethnic "otherness" was sublated into an erotic glamor that mobilized both desire for the exotic and fear of the alien. His sleek and muscular body was adorned and displayed in ways that triggered expressions of anxiety about the nature of manliness. His sexual persona combined aggressiveness and passivity, sadism and suffering, active seduction and objectification in such a way as to make his films polymorphously perverse fantasies for female spectators frustrated by the conditions of their lives and their usual exclusion from active, desiring spectatorship in the cinema. If manliness in the cinema depends on the conventional deployment of a fetishistic gaze and stardom always invites a degree of fetishization, perhaps contradictions are inevitable in the notion of a manly film star. In Valentino's star image, with its visual emphasis on smooth, hard physicality and glamorous costuming, these contradictions coalesce, so that instead of exercising a fetishistic gaze, he became a fetish himself.

in the complex postwar readjustments of social roles for both men and women. The twin figures of the war veteran misfit and the woman whose contribution to the workforce is no longer required have been said to inform the maladjusted femininities and masculinities of many films of the late 1940s that otherwise lack explicit sociological content, including *Leave Her to Heaven* (1945), *Mildred Pierce* (1945), and *Out of the Past* (1947).

Genre (which shares its etymological root with the word "gender") plays a crucial role in constructions of gender in classical Hollywood films. In the musical and the romantic comedy, the genders are represented as

Rudolph Valentino in* Son of the Sheik *(George Fitzmaurice, 1926). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

ultimately complementary to each other, whatever initial incompatibilities might exist. In the western, gender divisions tend to be mapped onto archetypal oppositions between civilization and wilderness, posing a dilemma for the male hero, while the female characters are one-dimensional embodiments of the virtues and shortcomings of civilized society, above all in the stereotypes of the good-hearted saloon girl and the frontier wife and mother. The woman's film is defined by its female protagonist and the "feminine" concerns to which it gives pride of place; men are both extremely important in determining the fate of the heroine and somewhat peripheral to the dramatic interest of the film. Femininity is defined paradoxically in the woman's film, which conveys its undoubtedly conservative morality through cautionary tales of women who break its selfsame rules. Thus Bette Davis (1908–1989) in *Jezebel* (1938), Joan Crawford (1904–1977) in *Mildred Pierce*, and Lana Turner (1921–1995) in *Imitation of Life* (1959) offer female spectators a vicarious escape from ordinary, dutiful lives as wives and mothers, while the punitively moralistic endings of the films reinforce the ideological correctness of conventional lives.

The end of the Production Code in the 1960s allowed for more sexualized renditions of established gender roles but did not necessarily give rise to more flexible and varied constructions of gender. The desublimation of Hollywood cinema resulted not only in more complex and adult female characters, like the neurotic prostitute (Jane Fonda) in *Klute* (1971), but also in the notorious sexual violence of *Straw Dogs* (1972). The most extreme transgressions of orthodox gender roles in this period occurred not in the films with liberal social values and realist aesthetics, but in those that engaged most profoundly with fantasy and desire. In *Psycho* (1960), for example, the Hitchcockian motif of the double operates across the gender divide, not only in Norman Bates's identification with his mother but also in the parallels that are established between Norman and Marion Crane. Although for Hitchcock the merging of male and female personalities signifies psychosis and death, *Psycho* nevertheless articulates the mutability of identity and the artificiality of the gendered self. More recently, the *Alien* films (1979, 1986, 1992, 1997) have developed this tradition, giving forceful expression to a wide range of (progressive and regressive) fantasies and anxieties about gender through the figure of Ripley (Sigourney Weaver), the female hero, and her alter ego, the shape-shifting, alien brood mother.

Hollywood constructions of gender have worldwide significance because of the global reach of the US film industry, but they are also part of American national culture. Ideologies such as "Momism" inflect femininity and masculinity in ways unique to US culture. Outside of Hollywood, configurations of gender are shaped by other cultural histories. In Polish cinema, for instance, representations of men and women are influenced by the iconography of the historic struggle for nationhood, in which the purity and selflessness of the mother serves and motivates the heroism of the son. In French cinema, conversely, it has been suggested that one of the most common Oedipal narrative tropes is the father–daughter relationship, in which female subjectivity is centered but also framed by paternal control. The distinctiveness of configurations of gender in national cinemas confirms the importance of conceptualizing gender in film studies within concrete historical and specific cultural terms.

THE GENDERED GAZE

The study of gendered representations in the cinema began in the early 1970s with Molly Haskell's *From Reverence to Rape: the Treatment of Women in the Movies* (1974). Haskell looks at images of women in movies made from the 1920s to the 1970s (the 1980s are included in the second edition), mainly—but not exclusively—in Hollywood. The book's scope is ambitious,

Representations of the feminine (Jennifer Jones and Lillian Gish) in **Duel in the Sun** *(King Vidor, 1946).* EVERETT COLLECTION. REPRODUCED BY PERMISSION.

identifying major themes in American cinema such as ''The flight from women and the fight against them in their role as entrappers and civilizers'' (p. 61). Haskell's critical method, which maps genres and stars historically, has been questioned subsequently by academic film theorists, although some of her ideas, such as the notion of star images as ''two-way mirrors linking the immediate past with the immediate future'' (p. 12), are more sophisticated than her detractors might suggest.

The study of images of women was crucial to the development of feminist film culture in the early 1970s but was superseded in the feminist film theory that emerged in the middle of that decade by textual approaches concerned less with the manifest content of films than with the ideological predispositions embedded in their syntax and in the apparatus itself. Drawing on post-structuralism, semiotics, and psychoanalysis, Claire Johnston developed a theory of cinematic representation based on an understanding of film narrative as a mythic system that naturalizes conventional gender relations. Within this system, the figure of woman functions not as a representation of female subjectivity but as the object of male desire. Thus Johnston's remark that ''despite the enormous emphasis placed on woman as spectacle in the cinema, woman as woman is largely absent'' (p. 26). However, rather than calling for the production of realistic or positive images of women, she argues that the more stylized and unrealistic a film's iconography, the more it de-naturalizes both itself and the ideology it serves. Unlike many feminists in the 1970s, Johnston does not reject popular cinema as a ''dream machine'' but embraces its contradictory possibilities. In her comments on the films of Dorothy Arzner (1900–1979), one of a very few female directors in the studio system, Johnston lays claim to a reflexive and critical strain within Hollywood cinema.

Working within the same feminist framework, in 1975 Laura Mulvey wrote what is perhaps the most

celebrated and contentious essay in the history of film studies, "Visual Pleasure and Narrative Cinema." Mulvey's essay is also concerned with Hollywood but concentrates on looking at relations as they are systematized by mainstream conventions. In mainstream cinema, Mulvey contends, a gendered division of labor allies the male hero with the movement of the narrative and the female figure with its spectacle. The cinematic apparatus aligns the gaze of the spectator with that of the camera, and editing conventions subsume the look of the camera into that of the protagonist. This system of looks assumes narcissistic identification with the male protagonist of the narrative and voyeuristic enjoyment of the female object of the gaze. This enjoyment is, however, ambivalent, because of the castration anxiety engendered by the sight of the woman. The two forms of pleasure associated with the female image are also defenses against this threat: sadism, which acknowledges sexual difference and takes pleasure in investigating woman's guilt, and fetishism, which disavows sexual difference and worships woman (or a particular body part or item of clothing) as phallic substitute. Mulvey concludes her essay with a radical attack on the pleasures of mainstream cinema and calls for a cinema of "passionate detachment" in terms that strongly evoke the materialist avant-garde and the political counter-cinema of the 1970s. This analysis has been revisited and modified by many theorists and historians, including, on several occasions, Mulvey herself, and from this debate film studies has developed a complex understanding of cinema as a social technology of gender.

The initial emphasis on femininity in the study of gender in cinema clearly resulted from the political impulse to identify and work against gender inequalities. However, as Steve Neale and a number of other critics have argued, it is also important to analyze cinematic masculinities in order to better understand not only how these function to reinforce normative gender relations but also how they may transgress or destabilize them and in what ways they may be subject to transformation. Neale finds numerous instances in mainstream cinema of the male body functioning as visually pleasurable spectacle, but he argues that these images are encoded so as to disavow their eroticism—for instance, in shoot-outs in westerns or in fight sequences in epics. Rather than disputing Mulvey's account of gendered looking relations in mainstream cinema, Neale confirms it but points out the high degree of contradiction within an apparently normative system. Peter Lehman argues more trenchantly that in the proliferation of critical discourse on sexual representations of the female body and the relative paucity (until the 1990s) of critical discourse on sexual representations of the male body, film studies actually replicated the sexual ideology it aimed to deconstruct.

Scholarship on masculinity in films has clustered around a number of themes, including the idea of a crisis in masculinity during the postwar period and after, the fine line between homosociality and homosexuality, and the effects on male subjectivity of psychopathologies, such as hysteria and masochism. The notion of masquerade, initially introduced into feminist film theory by Claire Johnston and Mary Ann Doane, and developed in relation to Judith Butler's theorization of gender performativity, has been applied to cinematic masculinities by film theorists. Male masquerade is a notion with interesting implications, destabilizing hegemonic masculinity and effectively rendering all gender identities and relationships relational and contingent. The notion of male masquerade has been taken up most productively in historical work, such as Gaylyn Studlar's study of male stars of the silent era, which relates their performances of masculinity to specific cultural manifestations of the gender ideology of the times, ranging from the idealized masculinity of Douglas Fairbanks (1883–1939), contextualized in the movement to reform "boy culture" and resist the perceived threat of feminization, to the transgressive appeal of Lon Chaney (1883–1930), whose association with the grotesque and the liminal grounded his popularity with male fans.

Unlike the feminist criticism of the 1970s and 1980s, scholarship on masculinity in cinema has tended to focus on highly specific, often historical, examples rather than on developing a general theory, partly because of the prevailing fashion for historical rather than theoretical inquiry in film studies since the early 1990s, but also because it lacks the political impetus that feminist theory derived from the women's movement. Against the backdrop of declining feminism and resurgent, retro-styled masculinity in postmodern popular culture, there is a risk that critical discourses on masculinity in the cinema will lapse, unintentionally or otherwise, into conservatism and nostalgia. This risk is confronted directly and effectively by Sharon Willis's work on race and gender in contemporary Hollywood film, especially her essay on Quentin Tarantino (b. 1963), which uses a psychoanalytic framework to argue that his admiring imitation of African American masculinity is inflected by the conflict played out in his films between Oedipal structures (borrowed style, aging male stars) and ferocious preoedipal impulses (relentless bathroom references, anal rape). Tarantino's postmodern recycling of popular cultural masculinity, Willis notes, is self-consciously multicultural but inflected by regressive fantasies: his sense of the past from which he takes his reference points is nostalgic and private rather than historical and shared. Tarantino's films stand as a salutary reminder that irony, pastiche, and sexual transgression are not in themselves

guarantees of a progressive or transformative critique of gender identities and relations.

TRANSGENDER IDENTIFICATIONS AND LOOKS

Until the late 1980s, theories of gendered spectatorship were characterized by a strong demarcation between the genders; transgender identification, when it was mentioned as a possibility, was understood as an imposition of patriarchal ideology or, at best, a tactic by which the female spectator might accommodate herself within the binary system of gendered looking without disturbing the hierarchical relationship between its basic terms. However, studies of stars and genres that seem to appeal to spectators across gender lines have enabled critics to develop complex models of cinematic identification that are more complex, fractured, and mutable.

Miriam Hansen's study of the massive popularity of Rudolph Valentino (1895–1926) among women concludes that the sexual ambiguity that became central to his image offered a space of resistance and rebellion to a particular group of female spectators caught up in the social and ideological contradictions of New Womanhood and the particular contradictions of Hollywood in an era in which female audiences were being recruited to the cinema as passive witnesses to their own subordination. In his films and in the star discourse around him, Valentino functioned as the focal point of a remarkably fluid field of sexual possibilities—a public fantasy figure whose constant shifts between sadism and masochism, potency and impotence, heterosexuality and homosexuality, femininity and masculinity, subjectivity and objectification allowed for complex and multiple permutations of desire and identification. The "Valentino syndrome," according to Hansen, is an example of a female subculture that, although distorted by consumerism, gave temporary expression to female desire and even a kind of female fetishism.

Transgender identification is even more central to the hypothesis offered by Carol J. Clover in her study of horror films made since the late 1970s. Overturning the common-sense view that horror films in which female characters are terrorized by male killers encourages male spectators to take sadistic pleasure in violence against women, Clover argues that the predominantly adolescent male audience of slasher films actually identifies with the female victim-hero, or "Final Girl," as Clover calls her, who after a terrifying ordeal, eventually overcomes the villain. Clover observes that both of the principal characters in the genre may be ambiguously gendered—the killer taking on aspects of a monstrous phallic femininity, for example, while the Final Girl is often a tomboy. Clover distinguishes between the actual gender of the characters and their figurative gender—that is, the ways their significant attributes can be correlated to gendered subject positions. On this basis, she argues that the Final Girl is figuratively a boy whose suffering allows the majority audience to explore castration anxiety within the relative safety of vicariousness. Clover is reluctant to make any claims for the progressiveness of horror films on the basis of these insights, but her approach does highlight the mobility of cinematic identification and the permeability of the boundary between genders.

Yvonne Tasker argues that in the 1980s masculinity became more visible, a marked category in American action cinema signified by the "built" body created by the performer rather than by nature. The knowing performance of masculinity by the built male star enacts but also questions and parodies a previously naturalized gender stereotype. Moreover, the performance of masculinity is not the automatic prerogative of biological males. Tasker coins the term "musculinity" to describe the body type associated with the action hero, regardless of actual gender, and discusses the ways in which female bodies take on masculine functions in recent action cinema, as well as the ways in which male characters are sometimes reinscribed as feminine. Tasker concludes her study with a discussion of the films of Kathryn Bigelow (b. 1951), including *Blue Steel* (1990), a psychological thriller that consciously and critically explores the role of women in action cinema. *Blue Steel* uses cross-dressing rather than muscles to indicate the female hero's assumption of certain masculine functions while problematizing her relationship to these functions: Megan Turner (Jamie Lee Curtis) joins the police department in order to share in its patriarchal authority, but when the phallic power of her gun attracts a psychotic soul mate, she finds herself alone and under suspicion. Through this exploration of the antagonistic relationship between the female hero and patriarchal law, Bigelow constructs an allegory of the dilemma with which action cinema confronts both the female spectator and the feminist director. A noticeable difference between *Blue Steel* and the alternative feminist cinema of the 1970s is that rather than rejecting the idea of a woman acting like a man, the film simply points out that this is not institutionally sanctioned behavior.

Cross-dressing is a recurrent trope in both the women's films and the feminist theory of the 1990s, making the composite figure of the transsexual or the woman who passes for a man an emblem of social and sexual change for feminism as well as for queer cultural politics. In a short contribution to a debate about *Boys Don't Cry* (Kimberly Pierce, 1999) in the British journal *Screen*, Judith Halberstam suggests that the film is significant because, in a brief sequence, it requires the spectator to adopt a transgender gaze. The film is a fictionalized account of the life and death of Brandon Teena (Hilary Swank), a girl who passed for a boy and was raped and

KATHRYN BIGELOW

b. San Carlos, California, 27 November 1951

Among women directors, Kathryn Bigelow is exceptional for her acceptance by critics and audiences as an *auteur* and for the sustained and intelligent way she has engaged with traditionally "male" action genres. She trained as a painter at the San Francisco Art Institute and through the Whitney Museum's Independent Study Program before going on to study film at Columbia University, where she encountered critics Andrew Sarris and Peter Wollen. Her work has often been described as "painterly" for its stylish and controlled visual composition, but this is misleading praise insofar as it overlooks the equally controlled complexity of her well-crafted stories. Her first film, the experimental short *The Set-Up* (1978), deconstructs screen violence and established concerns she has pursued in her feature films. Like a number of female directors, Bigelow began her career in independent film in the 1980s, crossing over to Hollywood in the 1990s.

Bigelow's first feature, *The Loveless* (1982), co-written and co-directed by Monty Montgomery, is a revisionist biker movie that pays homage to the iconography of *The Wild One* (1954). The film's slow pace and formal style, characterized by long takes with a static camera, introduce a meditative distance on the subject matter. Its treatment of female characters suggests a nascent interest in exploring the place of women in a "male" genre. *Near Dark* (1987) is a generic hybrid—a vampire western in which the sympathetic outlaws are again subcultural outsiders, with the main female character a point of articulation for a complex clashing and blending of the generic codes of the western and the vampire film. *Blue Steel* (1990) is Bigelow's most explicitly feminist film, a psychological thriller that explores the position of the female hero in the action film. The ambivalence of Bigelow's engagement with action cinema is less pronounced in *Point Break* (1991), perhaps because of the film's emphasis on its male characters, although it does foreground the genre's submerged homoeroticism. A critical attitude to screen violence re-emerges in the neo-noir *Strange Days* (1995), in which the invention of a virtual reality device for recording and replaying sense impressions gives rise to an underground economy dealing in extreme experiences, which are inevitably violent, sexual, or both. The central male character is made to experience sexual violence from the perspective of both perpetrator and victim, undergoing a transgender identification in the process, but as an allegory of voyeurism, *Strange Days* is ultimately unclear.

After a five-year break from directing for the cinema, Bigelow returned with *The Weight of Water* (2000), a surprising feminine thriller that was neither a critical nor a box-office success, and *K-19: The Widowmaker* (2002), a return to action, spectacle, and masculinity. Although the career difficulties that Bigelow has encountered since *Strange Days* are by no means entirely due to her situation as a woman director, the material with which she has worked most successfully emerged from a particular convergence of art, feminism, and cinema, and these may not adapt well to changed times.

murdered when his/her biological sex was discovered. The film presents Brandon's gender in an interesting way, showing the spectator right at the beginning how Brandon constructs his masculinity through costume and performance. Most spectators nevertheless suspend disbelief in Brandon's masculinity and, like his girlfriend Lana (Chloe Sevigny), accept him at face value for much of the film's duration. Knowledge and belief are thus made issues within the film's diegesis and for the audience, coming to a crisis in the sequence in which Brandon's attackers strip him naked in front of his friends. Lana refuses to look at Brandon's genitals, while Brandon escapes into fantasy in what Halberstam takes to be a representation of an "out of body" experience: he sees himself, fully clothed, amongst the onlookers, gazing at his naked body. The transgender gaze, Halberstam suggests, is a divided look, split between a self that is castrated and a self that is not. The deployment of a transgender gaze in conjunction with an empowered female gaze, according to Halberstam, establishes the authenticity of Brandon's masculinity, at least until the film's conclusion, when, Halberstam argues, Lana's acceptance of Brandon as a woman reestablishes normative gender conventions within a humanist perspective.

Transgender identification in the cinema is not a new phenomenon, but its occurrence in the context of the overt and positive representation of a transgender subject is, indicating that significant changes in the social organization and cinematic representation of gender have taken place. These changes, however, have not affected all aspects of society equally, as a glance at current statistics on the employment of women in the film industry shows.

In early cinema, before the production of film became a vertically integrated industry, women directors were common. Almost all of their careers ended with the transition to sound, which required massive financial backing and resulted in a reorganization of the film industry that closed down many of the small companies in which women directors worked. Between the late 1920s and the late 1970s, only a handful of women directors worked in Hollywood. With the impact of the women's movement, a number of female directors emerged through avant-garde and independent filmmaking, but most of them have had difficult careers, and their presence has not greatly altered the gender balance or macho character of the film industry (although it is interesting to note that in the last two decades, women have been comparatively successful as producers). In 2004, women comprised only 5 percent of all directors working on the top-grossing 250 Hollywood films (the figure rises to a still low 16 percent if executive producers, producers, writers, cinematographers, and editors are taken into account). Internationally, film is a male-dominated industry, although there are two countries with larger numbers of women directors: France and Iran. It is perhaps significant that both of these nations treat cinema as an art as well as a business, offering state support to filmmaking that is culturally distinctive in style and concerns. The slowness of change in gendered employment patterns in the film industry, compared to the relative speed with which the impact of feminism has been assimilated at the level of the cinematic image, shows how complex and uneven social and ideological changes can be.

GENRE

Genres are categories of kinds or types of artistic or cultural artifacts with certain elements in common. In film, common generic elements include subject matter, theme, narrative and stylistic conventions, character types, plots, and iconography. In film studies, the term serves simultaneously as: (1) An industrial approach, in which production, especially during the Hollywood studio era (1920s–1950s), is standardized, and marketing is geared toward concept labeling and packaging; (2) A consumer index, providing audiences with a sense of the kind of pleasures to be expected from a given film; and (3) A critical concept, a tool for theorizing relations between films and groups of films and for understanding the complex relationship between popular cinema and popular culture, and for mapping out a taxonomy of popular film.

Genres preceded cinema but were fundamental to it. The western, for example, was already established in literature before the invention of film, while the musical took much from preexisting theatrical forms. Classical literary theory distinguished differences between literature and popular writing and assumed judgments based on underlying assumptions of aesthetic value. Popular art, including film, is formulaic, and it has often been similarly criticized for lacking originality. However, genre theorist John Cawelti suggests that all art be thought of as existing on a continuum between invention and convention—a perspective that allows for a greater appreciation and understanding of genre texts and how they work.

Because genre movies are collaborative efforts that require the work of many individuals, they have been commonly understood as particularly good barometers of cultural attitudes, values, and trends. This is true not only of individual genre movies, but also of the changing patterns and popularity of different genres and of the shifting relationships between them. For whether they are set in the past or in the future, on the mean streets of contemporary New York City or long ago in a galaxy far away, genre movies always are about the time and place in which they are made.

ELEMENTS OF GENRE

Fundamental to defining any genre is the question of corpus, of what films in fact constitute its history. In *Theories of Film* (1974), Andrew Tudor identifies a major problem of genre definition, which he terms "the empiricist dilemma," whereby a group of films are preselected for generic analysis to determine their common elements, although their common elements should be identified only after they have been analyzed. Tudor's pragmatic solution to this problem of definition is to rely on what he calls a "common cultural consensus," that is, to analyze works that almost everyone would agree belong to a particular genre and generalize out from there. This method is acceptable, he concludes, because "Genre is what we collectively believe it to be" (p. 139).

Nevertheless, while various genres have been established by common cultural consensus, a further problem is that different genres are designated according to different criteria. Such genres as the crime film, science fiction, and the western are defined by setting and narrative content. However, horror, pornography, and comedy are defined or conceived around the intended emotional affect of the film upon the viewer. Linda Williams has referred to horror, melodrama, and pornography as

"body genres" because of the strong physical response—fear, tears, and sexual arousal, respectively—elicited by each. The extent to which films of these genres produce the intended response in viewers is commonly used as a determining factor in judging how good they are. Ultimately, whatever criteria one uses to establish a genre should allow for a productive discussion of the stylistic and thematic similarities among a group of films, and definitions should be flexible enough to allow for change.

In any art form or medium, conventions are frequently used stylistic techniques or narrative devices typical of (but not necessarily unique to) particular generic traditions. Bits of dialogue, musical figures, or styles and patterns of *mise-en-scène* are all aspects of movies that, repeated from film to film within a genre, become established as conventions. Conventions function as an implied agreement between makers and consumers to accept certain artificialities in specific contexts. In musicals the narrative halts for the production numbers, wherein characters break into song and dance; often the characters perform for the camera (rather than for an audience within the film) and are accompanied by off-screen music that seems suddenly to materialize from nowhere. Conventions also include aspects of style associated with particular genres. For example, melodrama is characterized by an excessively stylized *mise-en-scène*, while film noir commonly employs low-key lighting. Mainstream cinema also features numerous aural conventions on the soundtrack involving dialogue, music, and sound effects. Film scoring in all genres typically features Wagnerian leitmotifs associated with particular characters or places and is commonly used to enhance a desired emotional effect in support of the story. Different types of musical accompaniment are conventional in particular genres: sweeping strings are often used in romantic melodramas, for example, while electronic music or the theremin is used in science fiction for its futuristic connotations.

The familiarity of conventions allows both for parody and subversive potential. Parody is possible only when conventions are known to audiences. Much of the humor of Mel Brooks's (b. 1926) parodies depends upon viewers being familiar with specific genre films. In *Young Frankenstein* (1974), for example, when the monster and the little girl he meets have tossed all their flowers in the lake and she innocently asks what to throw in now, the monster looks at the camera, as if to ask the viewer to remember that in the original *Frankenstein* (1931) he stupidly drowned the girl, thinking she too would float. As well, conventions also can be used by filmmakers for disturbing purposes precisely because viewers expect them. George Romero (b. 1940) undermines numerous conventions of the classic horror film in *Night of the Living Dead* (1968), which is one of the main reasons the film had such a powerful effect on audiences when first released.

The setting, the space and time when and where a film's story takes place, is more a defining quality of some genres than of others. Musicals, for instance, can take place anywhere, from the actual docks and streets of New York City in *On the Town* (1949) and *West Side Story* (1961) to the supernatural village in *Brigadoon* (1954). Romantic comedies and dramas, like some science fiction, may span different eras, as in *Somewhere in Time* (1980) and *Kate and Leopold* (2001). Horror movies often use isolated and rural settings and old dark houses with mysterious basements for psychological effect, but films such as *Rosemary's Baby* (1968) and *Dark Water* (2005) work by violating convention and setting their stories in contemporary and familiar locales rather than in exoticized foreign spaces like Transylvania. By contrast, the western by definition is temporally restricted to the period of the Wild West (approximately from 1865 to 1890) and geographically to the American frontier (broadly, between the Mississippi River and the west coast). Movies that change this setting to the present, such as *Lonely are the Brave* (1962) and *Hud* (1963) or "easterns" like *Drums along the Mohawk* (1939) and *The Last of the Mohicans* (1936, 1992), are considered exceptions to the norm; they are westerns for some viewers but not for others. Yet movies such as *Coogan's Bluff* (1968) and *Crocodile Dundee II* (1988), which import elements of the western into the contemporary urban East, are generally not thought of as westerns.

Character types are also important to genre films. Discussing characters in literature, novelist E. M. Forster distinguished two kinds of fictional characters: flat and round. Flat characters, which also may be "types" or "caricatures," are built around one idea or quality; it is only as other attributes (that is, "depth") are added that characters begin "to curve toward the round" (*Aspects of the Novel*, p. 67). In genre movies, characters are more often recognizable types rather than psychologically complex characters, as with black hats and white hats in the western, although they can be rounded as well. The femme fatale is a conventional character in film noir, like the comic sidekick, the schoolmarm, and the gunfighter in the western. Ethnic characters are often stereotyped as flat characters in genre movies: the Italian mobster, the black drug dealer, the Arab terrorist, the cross-section of soldiers in the war film's platoon. Flat characters are usually considered a failure in works that aspire to originality, but in genre works, flat characters are not necessarily a flaw because of their shorthand efficiency. In genre movies, character types often provide similar kinds of actions and purposes within the story.

EDWARD G. ROBINSON

b. Emmanuel Goldenberg, Bucharest, Romania, 12 December 1893, d. 26 January 1973

Of short stature and lacking the conventional handsome look of leading men, Edward G. Robinson nevertheless was one of the great male stars of the studio era. Along with James Cagney and Humphrey Bogart, he defined Hollywood's image of the tough guy for Depression-era audiences. Beginning his acting career in the theater, Robinson made his film debut in 1923 at age thirty in *The Bright Shawl* (1923). He became famous in 1931 in the archetypal gangster film *Little Caesar*, portraying the criminal Enrico Caesar Bandello, a hoodlum who rises to the top and then makes his inevitable fall.

With the success of *Little Caesar*, Robinson went on to play a string of criminal characters in a series of Warner Bros. films through the 1930s. Robinson sought to escape genre typecasting and expand his range, playing such roles as the title character in the biopic *Dr. Erlich's Magic Bullet* (1940), about the nineteenth-century scientist who developed a cure for syphilis, and the steadfast and paternal insurance agent Barton Keyes in the classic film noir, *Double Indemnity* (1944). However, a number of these subsequent roles clearly depended on Robinson's established gangster persona, such as the gruff ship's captain Larson in the adventure film *The Sea Wolf* (1941) and the cruel Dathan in *The Ten Commandments* (1956).

In John Ford's *The Whole Town's Talking* (1935), Robinson played a dual role as a gangster boss and a meek, law-abiding citizen, at once providing the pleasure of his established image as a criminal and exploiting his star appeal by making him a sympathetic protagonist with whom the audience could comfortably identify. Similarly, in Fritz Lang's masterful film noir *Scarlet Street* (1945), Robinson plays a mild-mannered clerk and henpecked husband who is driven to robbery, adultery, and finally murder. The film periodically references Robinson's gangster persona, as in the opening dinner party scene, which initially looks like a similar scene in *Little Caesar*; but it then reveals his character, Christopher Cross, as a shy and repressed cashier who handles other people's money. Only later does he become a criminal, ironically making the initial mistaken impression, based on genre expectations, in fact true.

In the 1950s Robinson experienced a difficult divorce that forced him to sell much of his prized art collection. He was also called to testify before the House Un-American Activities Committee but was ultimately exonerated of Communist Party affiliation. Despite these troubles, he continued to make credible crime dramas throughout the decade. His subsequent career was irregular, but his final appearance in the science-fiction film *Soylent Green* (1973) allowed him to die onscreen in a fitting finale to one of Hollywood's most distinguished careers.

Of course, characters are embodied by actors, all of whom have distinct physical characteristics. The hard-boiled detective, Philip Marlowe, is different as played by Dick Powell (*Murder, My Sweet*, 1944), Humphrey Bogart (*The Big Sleep*, 1946), or Elliott Gould (*The Long Goodbye*, 1973). Some actors (for example, Paul Muni [1895–1967], Gary Oldman [b. 1958], and Johnny Depp [b. 1963]) are known for chameleon-like performances, but many, whether they are featured stars or supporting actors, often play variations of a type. For

Edward G. Robinson in the mid-1930s. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

this reason, they are often cast in similar films within the same genre and become associated with it. Fred Astaire (1899–1987) is always thought of in relation to the musical, Cary Grant (1904–1986) with screwball comedy, and of course John Wayne (1907–1979) with the western, even though all these actors also appeared in other kinds of films. Clint Eastwood's (b. 1930) strong association with the western lent such subsequent non-western roles as the tough detective Harry Callahan in *Dirty Harry* (1971) and its sequels added mythic depth.

Character actors contribute to the look of particular genres, populating the worlds of genre movies and becoming part of their iconography. Often they are known to viewers as vaguely familiar faces rather than by name. Richard Jaeckel (1926–1997), Jack Elam (1918–2003), Chill Wills (1903–1978), Paul Fix (1901–1983), and Slim Pickens (1919–1983) all appeared in countless westerns, so when they are in the same cast and many of them die in *Pat Garrett and Billy the Kid* (Sam Peckinpah, 1973), the film may be read as being as much about the death of the genre as it is a story about particular characters. Stars and genres reinforce each other, some actors offering definitive performances that forever associate them with a particular role and genre, as was the case with Bela Lugosi's (1882–1956) portrayal of Dracula. Actors who succeed at playing a certain generic type are often trapped by such roles, fated to be typecast as similar characters. On the other hand, while Dick Powell (1904–1963) began as a romantic (juvenile) lead in several Warner Bros. musicals in the early 1930s, he managed to reshape his image entirely in the following decade, playing a tough guy in such noirs as *Murder, My Sweet*, *Cornered* (1945) and *Pitfall* (1948).

Because actors may become typecast, they can be cast in genre movies against type, as in the case of William Holden (1918–1981) playing the leader of *The Wild Bunch* (1969) or Tom Cruise (b. 1962) as a hit man in *Collateral* (2004). In the famous opening of *C'era una volta il West* (*Once Upon a Time in the West*, Sergio Leone, 1968), a Mexican family enjoying a pleasant picnic meal in front of its hacienda is suddenly and brutally gunned down by unseen assailants. In a long take, the killers ride in from the distance, and eventually we are able to discern that the leader is a grim-faced, blue-eyed Henry Fonda (1905–1982)—the same soft-spoken face that was Abraham Lincoln in *Young Mr. Lincoln* (1939) and Tom Joad in *The Grapes of Wrath* (1940). The moment has a greater emotional impact than it would if the actor had been a familiar Hollywood heavy.

Conventions, settings, and characters are part of a genre's iconography. Icons are second-order symbols, in that their symbolic meaning is not necessarily a connection established within the individual text, but is already symbolic because of their use across a number of similar previous texts. Ed Buscombe concentrates on the iconography of the western in drawing a distinction between a film's inner and outer forms. For Buscombe, inner form refers to a film's themes, while outer form refers to the various objects that are to be found repeatedly in genre movies—in the western, for example, horses, wagons, buildings, clothes, and weapons. The cowboy who dresses all in black and wears two guns, holster tied to either thigh, is invariably a villainous gunfighter. Just as religious icons are always already infused with symbolic meaning, so is the iconography of genre films. In a horror film, when the hero wards off the vampire with a crucifix, religious iconography works in support of film iconography: symbolically, such scenes suggest that the traditional values embodied in Christianity (and, by extension, western culture generally) are stronger than and will defeat whatever threatening values are assigned to the monster in any given vampire film.

Of course, while the icons of genre films may have culturally determined meanings, the interpretation or value attached to them is hardly fixed. Rather, the particulars of their representation in each genre film marks the

relation of outer form to inner form and are indicators of the film's attitude and theme. Although a crucifix in a horror film is an icon of Christianity and dominant ideology, the film itself may either critique or endorse that ideology. In the western, the town always represents civilization, but every film will have a different view of that civilization. The town in, say, *The Gunfighter* (1950) has children and domestic spaces, representing the familial stability that the aging gunman can only long for, while in *McCabe and Mrs. Miller* (1971), the town springs up around a muddy, makeshift brothel, suggesting that base desire is at the core of civilization.

Finally, spectators are a crucial element of genre movies, for they address viewers in a particular way. Almost from the beginning, movies have been promoted in the media primarily through their generic affiliations. They signal to prospective viewers the type of story as well as the kind of pleasure they are likely to offer and assist them in choosing which movies or which kind of movie to see. Fans of particular genres comprise communities of readers: fans of horror films, for example, form a distinct subculture, with their own fanzines, memorabilia, websites, and discussion lists. Genre films work by engaging viewers through an implicit contract, encouraging certain expectations on the part of spectators, which are in turn based on viewer familiarity with the conventions. As Robert Warshow observes, the familiarity of viewers with generic convention creates "its own field of reference." In other words, familiarity with a generic field of reference allows spectators to enjoy variations, however slight, in a given film. The act of reading genre films implies active readers who bring their generic knowledge to bear in watching movies. A postmodern horror pastiche like *Scream* (1996) depends upon its viewers being generically literate.

THE CLASSIC STUDIO SYSTEM

For decades Hollywood produced appealing fantasies in an industrial context. Regularized film exhibition developed as a result of the popularity and rapid growth of nickelodeons, the first venues devoted exclusively to cinema exhibition. The steady demand for new films made year-round production schedules necessary and provided the impetus for the development of a factory-based (Fordist) mode of production. In the studio era, all members of cast and crew were workers under contract to the studio, and the different kinds of work—editing, music, script, and so on—were divided into departments.

Within this industrial context, genre movies are dependable products, assembly line products with interchangeable parts. The James Bond series has continued because of the formula—lots of action, fancy gadgets, beautiful women, and colorful villains—despite the changes in directors, writers, and even the actors playing Bond himself. Individual genre films may lift elements from one genre and put them into another, as *The Band Wagon* (1953) incorporates film noir and the detective film into the climactic ballet, "The Girl Hunt." Hybrid genre movies like *Abbott and Costello Meet Frankenstein* (1948) and *Billy the Kid versus Dracula* (1966) mix elements from seemingly disparate genres. More recently, movies like *Freddy vs. Jason* (2003) and *Alien vs. Predator* (2004), both of which are simultaneously hybrids and sequels, show the same process at work despite the end of the studio era. But hybridity has always been characteristic of genre films. *Stagecoach* (1939), one of the most famous and important westerns ever made, was described as a "*Grand Hotel* on wheels" on its release, and it also contains elements of the road movie and disaster film as well. Movies such as *The Thing* (1951), *Alien* (1979), and the movie on which it was in part based, *It, The Terror from Beyond Space* (1958), all combine elements of science fiction and horror, visually turning spaceships and laboratories into the equivalent of haunted houses.

Genre filmmaking thus developed quickly, with producers seeking maximum acceptance at the box office through the repetition and variation of commercially successful formulas. The formulaic qualities of genre films meant that studios could turn them out quickly, and audiences could understand them just as quickly. Genre movies allow for an economy of expression through conventions and iconography. This system of signification, developed over time and with repetition, served well the fast pace of classic narration in films intended to be shown as part of a double feature.

In the studio era, directors were employees, like the other members of a film's cast and crew. Even those few directors who wielded some degree of clout in Hollywood, like Frank Capra (1897–1991) and Alfred Hitchcock (1899–1980), had to work within the parameters of the producing studio's dominant style or genre. Directors, like actors and electricians, rarely had the right to final cut. Yet while some directors floundered against the pressures of the studio system, many in fact flourished, using the rules of genre as convenience rather than constraint, as guidelines from which to deviate or deepen rather than as blueprints to follow. By providing the received framework of genre, Hollywood gave filmmakers a flexible tradition within which to work. Some directors developed their vision within particular genres, such as Sam Fuller (1912–1997) with the war film, John Ford (1894–1973) with the western, and Douglas Sirk (1897–1987) with the melodrama. The auteur approach provided a way of looking at directors' style foregrounded against the background of genre.

Kurt Russell in John Carpenter's* Escape from New York *(1981), an action film with elements of the western and science-fiction film genres. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

Despite its constraints, the studio system provided a stable context for filmmakers to work with consistency and to be expressive. As Robin Wood notes in *Howard Hawks* (1968), Hollywood is one of the few historical instances of a true communal art, "a great creative workshop, comparable to Elizabethan London or the Vienna of Mozart, where hundreds of talents have come together to evolve a common language" (p. 9). The justly famous opening scene of *Rio Bravo* (Howard Hawks, 1959) tells us almost everything we need to know about the heroes played by John Wayne and Dean Martin (1917–1995) well before the first word of dialogue is spoken. Director Hawks (1896–1977) uses the conventions of the western to express his sense of professionalism, heroism, and self-respect, which would not have been possible without the established conventions of the genre as his raw material.

MYTH AND HISTORY

Traditionally, the word "myth" refers to a society's shared stories, usually involving Gods and mythic heroes, that explain the nature of the universe and the relation of the individual to it. Such mythic narratives embody and express a society's rituals, institutions, and values. In the twentieth century, genre films, with their repetitions and variations of a few basic plots, were our mass-mediated mythic tales. Comparable to myths, genre movies may be understood as secular stories that seek to address and sometimes seemingly resolve our problems and dilemmas, some specifically historical and others more deeply rooted in our collective psyches. Structural anthropologist Claude Lévi-Strauss (b. 1908) claimed that all cultural myths are structured according to binary pairs of opposite terms. This approach is inviting for the analysis of genre films, which tend to work by reducing complex conflicts to the equivalent of black hats versus white hats. In his influential 1970 study of the western, *Horizons West*, Jim Kitses maps out a series of clear binary oppositions that are all variations of the conflict between wilderness and civilization.

Genre movies are always about the time in which they are made, not set, for entertainment inevitably

contains, reflects, and promulgates ideology. It is in this sense of entertainment as ideology that Roland Barthes (1915–1980) conceives of myth. For Barthes, cultural myths endorse the dominant values of the society that produces them as right and natural, while marginalizing and delegitimizing others. In genre movies, as Barthes says of cultural myth generally, the Other becomes monstrous, as in horror films, or exoticized, as in adventure films. In westerns, for example, Indians are either demonized as heathen savages or romanticized as noble savages, but they are rarely treated as rounded characters with their own culture.

From this perspective, genre movies tend to be read as ritualized endorsements of dominant ideology. So the western is not really about a specific period in American history, but the story of Manifest Destiny and the "winning" of the West. The genre thus offers a series of mythic endorsements of American individualism, colonialism, and racism, as well as a justification of westward expansion. The civilization that is advancing into the "wilderness" (itself a mythic term suggesting that no culture existed there until Anglo-American society) is always bourgeois white American society. Similarly, the monstrous Other in horror films tends to be anything that threatens the status quo, while the musical and romantic comedy celebrate heteronormative values through their valorization of the romantic couple.

Still, the complex relation of genre movies to ideology is a matter of debate. On the one hand, genre films are mass-produced fantasies of a culture industry that manipulate us into a false consciousness. From this perspective, their reliance on convention and simplistic plots distract us from awareness of the actual social problems in the real world. Yet it is also true that the existence of highly conventional forms allows for the subtle play of irony, parody, and appropriation. Popular culture does tend to adhere to dominant ideology, although this is not always the case. Many horror films, melodramas, and film noirs, among others, have been shown to question if not subvert accepted values. Pam Cook takes a similar view of B movies and exploitation films, arguing that their production values, less sophisticated than those of mainstream Hollywood movies, are more readily perceived by viewers as representations.

Walter Brennan, John Wayne, and Dean Martin in Howard Hawks's* Rio Bravo *(1959). **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

Genre movies take such social debates and tensions and cast them into formulaic narratives, condensing them into dramatic conflicts between individual characters and society or heroes and villains. Thomas Schatz observes that "All film genres treat some form of threat—violent or otherwise—to the social order" (Schatz, p. 26). The gangster, the monster, the heroine of screwball comedy all threaten normative society in different ways. Some genre theorists argue that the overriding theme of genre films is some version of the individual in conflict with society, and that this tension represents the ongoing negotiation we all make between desire and restraint (what Freud called "civilization and its discontents"). The extent to which a genre film achieves narrative closure is an important factor in reading its political implications. Closure, usually in the form of an upbeat or happy ending, is—like all conventions—artificial, since life, unlike such stories, continues. For this reason, a lack of closure, suggesting that the lives of the characters carry on after the film ends, is associated more with realist films like *La Grande illusion* (*Grand Illusion*, 1937) and *Ladri di biciclette* (*Bicycle Thieves*, 1948) than with genre movies. Because films with closure leave the viewer with no unanswered questions about the fate of the major characters or the consequences of their actions, they are viewed as providing tidy but unrealistic solutions to real problems. Yet while closure may be provided by a film, it can be ironic, thus undercutting its own pretense at resolution, as some have argued about the psychiatrist's explanation for Norman as an aberrant "case" at the end of *Psycho* (1960).

Genres are neither static nor fixed; they undergo change over time, each new film and cycle adding to the tradition and modifying it. Some critics describe these changes as evolution, others as development, but both terms carry evaluative connotations. Some genre critics accept a general pattern of change that moves from some early formative stage through a classical period of archetypal expression to a more intellectual phase in which conventions are examined and questioned rather than merely presented, and finally to an ironic, self-conscious mode typically expressed by parody. However, generic phases do not fall into convenient chronological and progressive periods, but often overlap significantly. For some, the western evolved from the supposed classicism of *Stagecoach* to the end of the intellectual trail with *The Wild Bunch* just thirty years later and then to Brooks's *Blazing Saddles* (1974), marking the end of the classic western and the beginning of the parody or baroque phase. But the western was already parodied even before this intellectual period in such films as Buster Keaton's *Go West* (1925), *Destry Rides Again* (1932, 1939), and the Marx Brothers's *Go West* (1940). Tag Gallagher argues that there is no evidence that film genres evolve toward greater embellishment and elaboration; he cites, for example, the scene in *Rio Bravo* where a wounded villain's hiding place on the upper floor of the saloon is revealed by blood dripping down, but he points out that the same device was used by John Ford in *The Scarlet Drop* (1918) decades earlier and even then dismissed by critics as "old hat." Gallagher insists instead that even "a superficial glance at film history suggests cyclicism rather than evolution" (Gallagher in Grant, *Film Genre Reader III*, pp. 266–268).

In the 1970s, as Cawelti notes, there were particularly profound changes in American genre movies. Aware of themselves as myth, genre movies of the period responded in four ways: humorous burlesque, nostalgia, demythologization, and reaffirmation. This development was the result in part of the demise of the Hays Office in 1967 and the continuing breakup of the traditional studio system, allowing directors greater freedom in a more disillusioned and cynical era. Films like Francis Ford Coppola's (b. 1939) *The Godfather* (1972) and *Apocalypse Now* (1979); Martin Scorsese's (b. 1942) *Mean Streets* (1973) and *New York, New York* (1977); Robert Altman's (b. 1925) *McCabe and Mrs. Miller*, *The Long Goodbye* (1973), and *Nashville* (1975); and Brian de Palma's (b. 1940) *Sisters* (1973), *Phantom of the Paradise* (1974), and *Obsession* (1976) were genre movies by directors who had grown up watching genre movies on television and studying them in academic film programs. With a more contemporary sensibility, these filmmakers inevitably made genre films that were burdened by an awareness of generic myth. For Cawelti, the changes in the period's genre films were so profound that he wondered whether the traditional film genres had exhausted themselves and hypothesized that "the cultural myths they once embodied are no longer fully adequate to the imaginative needs of our time" (Cawelti in Grant, *Film Genre Reader III*, p. 260).

GENDER AND RACE

Among their conventions, genre movies feature standard ways of representing gender, class, race, and ethnicity. Into the 1980s, genres and genre movies remained almost exclusively the cultural property of a white male consciousness, the center from which any difference regarding race, gender, and sexuality was defined and marginalized. In all the action genres, it was white men who performed heroic deeds and drove the narrative. In every type of action film, women and visible minorities assumed subsidiary and stereotyped roles, serving such narrative functions as helper or comic sidekick for the heroic white male. The hypothetical viewer of Hollywood genre movies traditionally was, like almost all of the filmmakers who made the movies, white, male,

JOHN CARPENTER

b. Carthage, New York, 16 January 1948

John Carpenter is known primarily for his slick action sequences, which have established him as one of Hollywood's most skillful directors of violence and suspense. Working mostly in the horror and science fiction genres, Carpenter also works on the scripts, special effects photography, and electronic music scores for his films.

While a graduate student in film at the University of Southern California, Carpenter made several short films, including *The Resurrection of Bronco Billy*, which won an Academy Award® for Best Short Film in 1970, and, with classmate Dan O'Bannon, *Dark Star*, which he expanded into his first feature in 1974. Shot on a minuscule budget, *Dark Star* offers a blackly comic view of men in space overwhelmed by technology. Carpenter's follow-up, *Assault on Precinct 13* (1976), an audacious blend of Howard Hawks's western *Rio Bravo* (1959) and George Romero's cult horror classic *Night of the Living Dead* (1968), established the director as a promising young auteur. Carpenter's commercial breakthrough came with *Halloween* (1980), which launched a series of sequels (by other directors) and a cycle of similar slasher films. *Halloween* makes deft use of such techniques as the handheld camera and tension between foreground and background in the *mise-en-scène* to generate suspense and fear.

Carpenter works comfortably within genres, as with *Halloween*; but he also sometimes mixes conventions and iconography, as with *Escape from New York* (1981), a science fiction action film; *Big Trouble in Little China* (1986), a comic martial arts fantasy; and *Ghosts of Mars* (2001), a science-fiction horror film. At times Carpenter's action sequences seem to transcend their narrative constraints to become pure cinema. Sequences such as the famous lengthy point-of-view shot that opens *Halloween* and the astronaut's chase of a mischievous alien creature through the ship's elevator shaft in *Dark Star* show Carpenter's undeniable command of action and suspense through rhythm, editing, and use of music.

Thematically, Carpenter's films are concerned with issues of communication and isolation. In *Dark Star*, as the ship's crewmen grow apart through boredom and indifference, outer space becomes a metaphor for the psychological isolation of the crew. The final images of Carpenter's remake of *The Thing* (1982) show the last two surviving men warily sitting opposite each other, separated by the wide-screen composition, their mutual distrust graphically rendered in the image. *They Live* (1988), a science-fiction action film, cleverly offers a critique of mass culture in its story of a blue-collar worker who discovers a pair of sunglasses that allows him to see the subliminal messages, secretly delivered by aliens busily stripping the Earth of natural resources, encouraging political passivity and consumerism in all forms and media of popular culture.

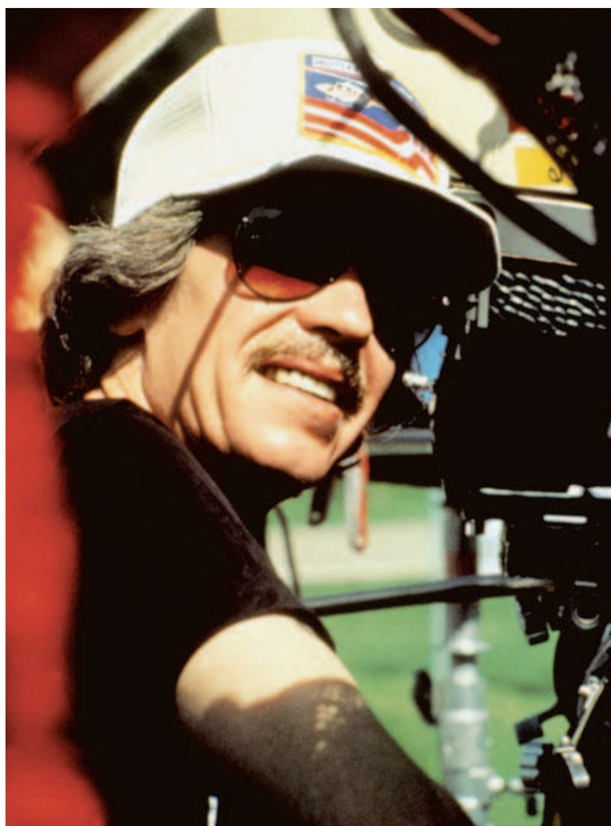
and heterosexual. This white masculine perspective was an inextricable part of the genre system, which was built on certain gendered assumptions. Generally, the action genres—adventure, war, gangster, detective, horror, science fiction, and of course, the western—were addressed to a male audience, while musicals and romantic melodramas (also known as "weepies") were marketed as "woman's films." This distinction bespeaks wider patriarchal assumptions about gender difference in the real world.



John Carpenter on the set of Starman *(1984).* EVERETT COLLECTION. REPRODUCED BY PERMISSION.

By the 1990s many genre movies were attempting to open up genres to more progressive representations of race and gender, often deliberately acknowledging and giving voice to groups previously marginalized by mainstream cinema. The film that provided the impetus for this new generic transformation was *Thelma and Louise* (1991), about two women who, finding themselves on the wrong side of the law, lead the police on a chase through the Southwest. A big hit at the box office, *Thelma and Louise* is a generic hybrid of the western, the buddy film, and the road movie—three genres traditionally regarded as male. After *Thelma and Louise*, many genre films seemed content merely to borrow its gender gimmick, simply plugging others into roles traditionally reserved for white men. But in reversing conventional representations, these films were prone to fall into the trap of repeating the same objectionable values. The question of whether female action heroes such as Sigourney Weaver's Ripley in *Alien* (1979) and its sequels, Linda Hamilton's Sarah Connor in *Terminator 2: Judgment Day* (1991), or the assassins played by Geena Davis in *The Long Kiss Goodnight* (1996), Uma Thurman in the *Kill Bill* films (2003, 2004), and the trio of actresses in the *Charlie's Angels* films (2000, 2003) are progressive, empowering representations of women or merely contain them within a masculine sensibility has been a matter of considerable debate.

Race, ethnicity, and nationality are commonly stereotyped in genre films, sometimes together. African Americans have traditionally been cast in supporting roles as clearly recognizable types. Except for such subsidiary and subordinate roles as maids, black faces also were largely absent from Hollywood movies. Issues of race appeared, safely coded within generic conventions, particularly in the western, which on the surface relegates the topic more safely to the nation's past rather than the present. Asian Americans have been largely absent from genre movies, as were Latinos until *West Side Story*. Since the 1990s, generic Arabs have been depicted in action movies as terrorists, as in *True Lies* (1994), *Executive Decision* (1996), and *The Siege* (1998). By contrast, Russians are friendlier in Hollywood movies following the collapse of the Soviet Union and the end of the cold war, as in *The Hunt for Red October* (1990) and *Enemy at the Gates* (2001).

Outside Hollywood, there were separate but parallel Yiddish and black or "race" cinemas. The height of Yiddish film came in the 1920s and 1930s, and black cinema peaked in the 1930s and 1940s. Both were institutionalized forms of cinema, with their own stars, directors, exhibition circuit, and audiences, and both were organized along generic lines similar to Hollywood. There were, for example, black melodramas, musicals, and westerns featuring African American stars. Hollywood, too, tried all-black musicals such as *Hallelujah* (1929), *Cabin in the Sky* (1943), and *Carmen Jones* (1954) as well as dramatic films such as *The Green Pastures* (1936). The practice of segregating casts by race was a reflection of the segregationist and discriminatory practices of the era in which they were made.

Encouraged by the success of *Cotton Comes to Harlem* (1970), a cop film featuring two black detectives (Godfrey Cambridge and Raymond St. Jacques), a cycle of blaxploitation films followed. The term blaxploitation was coined by the trade paper *Variety* to describe these films, which appeared from the late 1960s through the mid-1970s. As the civil rights movement gained momentum and became more militant, many black viewers rejected the more accommodating images of established black stars like Sidney Poitier (b. 1927) and Harry Belafonte (b. 1927) and welcomed the newer action movies with more macho black stars, such as ex-football Hall of Famer Jim Brown (b. 1936) in films like *Black Gunn* (1972) and *Slaughter* (1972). Richard Roundtree (b. 1942) became famous as the suave black detective

John Shaft in *Shaft* (1971), billed as "the new James Bond," as did Ron O'Neal (1937–2004) as *Superfly* (1972). Pam Grier (b. 1949) in *Coffy* (1973) and *Foxy Brown* (1974) and Tamara Dobson (b. 1947) in *Cleopatra Jones* (1973) applied the same formula to female characters. The question of the extent to which blaxploitation was politically progressive has been a matter of debate, but the films did pave the way for a cycle of "salt-and-pepper" buddy movies beginning with *48 Hrs.* (1982) and the wider acceptance of black action stars such as Wesley Snipes (b. 1962) and Denzel Washington (b. 1954).

Although black cowboys existed on the frontier, their history has been suppressed by the predominately white iconography of the western. One of the most popular genres of race films was the western, with the first possibly being *The Trooper of Troop K* (1917), with black star Noble Johnson (1881–1978). In the late 1930s Herb Jeffries (b. 1911) appeared in a series of independently produced all-black musical westerns including *The Bronze Buckaroo* (1939) and *Harlem Rides the Range* (1939). In 1960, Ford's *Sergeant Rutledge* starred Woody Strode (1914–1994) as a cavalry soldier being court-martialed because of his race. During the blaxploitation era several westerns were made, the most notable being *Buck and the Preacher* (1972), directed by Sidney Poitier, about white bounty hunters looking to return former slaves to work on southern plantations after the defeat of the South in the Civil War. Starring Harry Belafonte along with Poitier, *Buck and the Preacher* employed many conventions of the genre while foregrounding issues of race relations. But for the most part, blacks had been absent from the Hollywood western—an absence so complete that it can serve as one of the major jokes in *Blazing Saddles*, which stars African American actor Cleavon Little (1939–1992) as a black Bart with his Gucchi saddlebags. *Posse* (Mario Van Peebles, 1993) overtly challenged this mythic erasure. It opens with a black man speaking directly to the camera, presenting the entire story in flashback, a framing device borrowed from *Little Big Man* (1970), an earlier revisionist western, here featuring Strode, an iconic actor who had appeared in several of Ford's westerns, including *Sergeant Rutledge*.

NATIONAL CINEMA AND GENRE

Although a good deal of contemporary theoretical work has questioned hegemonic concepts of the nation, and hence of the idea of national cinema, the genre approach is useful for approaching the idea of national cinema generally as well as for conceptualizing the contours of specific national cinemas. As Ella Shohat and Robert Stam point out, the movie audience is a "provisional 'nation' forged by spectatorship" (p. 155), and genre audiences form what Altman describes as "constellated" communities—groups of individuals who "cohere only through repeated acts of imagination"—in the context of cinema, an imagined connection among geographically dispersed viewers who share similar spectatorial pleasures and generic knowledge (*Altman*, pp. 161–162).

In developing a distinctive and vital national cinema, most countries have been forced to confront the global cultural domination of American film in some way. Hollywood, especially since the end of World War II, has successfully dominated numerous foreign film markets on every continent. Inevitably, then, national cinemas must find space in the market, both at the local and international level, in the context of Hollywood. Because Hollywood cinema is overwhelmingly a cinema of genre films, this means, in effect, working within the genre system. The frame of genre allows filmmakers the multiple benefits of working in forms familiar to audiences both at home and abroad, and thus it offers more lucrative potential to producers for foreign distribution. Distribution in other countries is particularly important in nations where the population is insufficient to sustain an indigenous film industry, for it provides the only hope for films to return a profit. At the same time, however, accepting generic forms from Hollywood also suggests the loss of any distinctive national features that might be expressed in cinema. This dilemma has informed the discourse of national cinema in many countries, especially Australia, Canada, Great Britain, and New Zealand, all of which share the English language with Hollywood.

Filmmakers from around the world have responded to the domination of American film by adopting Hollywood genres and "indigenizing" or reworking them according to their own cultural sensibility. Examples are the Italian "spaghetti western" or Hong Kong martial arts films. Other national cinemas have created their own genres. For example, German cinema in the 1920s and 1930s developed a distinctive genre of the mountain film, involving a character or group of characters striving to climb or conquer a mountain. The Heimatfilm, or Homeland film, is another genre of sentimental, romanticized movies about rural Germany and its inhabitants. In Indian cinema, *masala* (or mixed spice) films combine a variety of heterogenous generic elements, as by inserting musical sequences in a dramatic film in a way uncharacteristic of Hollywood.

In turn, Hollywood genre filmmaking has been influenced by some of these non-American genres. For example, Japanese samurai films gained popularity in Japan after World War II and became known in the West primarily through the films of Akira Kurosawa (1910–1998) starring Toshiro Mifune (1920–1997),

including *Rashomon* (1950), *Shichinin no samurai* (*The Seven Samurai*, 1954), *Yojimbo* (*Yojimbo the Bodyguard*, 1961), and *Tsubaki Sanjûrô* (*Sanjuro*, 1961). *Red Sun* (1971) paired Charles Bronson (1921–2003) and Mifune in a buddy film in the American West, and several American genre movies have been remakes of these samurai films: *The Magnificent Seven* (1960) was based (as was the science fiction film *Battle Beyond the Stars*, 1980) on *The Seven Samurai*; *The Outrage* (1964) was based on *Rashomon*; and both the spaghetti western, *Per un pugno di dollari* (*A Fistful of Dollars*, 1964), and the action film, *Last Man Standing* (1996), with Bruce Willis, were based on *Yojimbo*. Although many international genre movies remain largely unknown to western audiences, as the film industry and popular culture generally become increasingly globalized and populations become more multicultural, inevitably genres will interact more intensively across national boundaries.

GERMANY

German cinema, in its widest sense what the Germans call *Filmkultur* (film culture), illustrates many aspects of Germany's history, culture, commerce, and politics over more than a hundred years. Any account of world filmmaking must acknowledge the range of the German cinema's technical and aesthetic innovation, its difficult yet fascinating evolution, and the influence of its leading figures and works. Today it operates in a mediascape extending to European and global perspectives, and integrates into a converging network of production and consumption.

One index of German cinema's identity is public funding. At the national level, support is channeled by Filmförderungsanstalt (FFA, Federal Film Subsidy Institute) in Berlin; from Munich, the capital of the state of Bavaria, the Export Union promotes its image and sales abroad. Cinema as a cultural export is one of the functions of the Goethe-Institut München, combined with the Inter Nationes Bonn, in the state of Northrhine-Westphalia. All sixteen federal states, and many regional authorities, support film and media exhibition, education, training, and production by maintaining museums, archives, and municipal theaters, like the Stiftung Deutscher Kinemathek in Berlin or the Deutsches Filmmuseum in Frankfurt/Main, or by offering prizes, grants, and loans to filmmakers. Such complex networks of support and subsidy are also key elements in economic planning aimed at replacing failing industries, like steelmaking and mining, with expertise in media technology and production. For German *Filmkultur*, Berlin and Munich still dominate, but centers in the Rhineland cities of Düsseldorf, Cologne, and Karlruhe and in the North German port of Hamburg have arisen to challenge them.

EARLY YEARS: 1895–1918

In early 1895 Ottomar Anschütz (1846–1907) had paying audiences for his Tachyscope, an optical device capable of producing movement in single pictures, and on 1 November that year the Skladanowsky brothers projected what was arguably the first film show as public entertainment. The Skladanowskys' "Bioskop" projector was not, however, technically equal to that of the French Lumière brothers (Auguste [1862–1954] and Louis [1864–1948]), who are generally credited with the first authentic film show on 28 December 1895. Cinema originated as part of variety performances, and the first generation of exhibitors traveled around existing entertainment venues showing, between live acts, a mixture of short items featuring acrobatics, nature scenes, local events, and so on. Many of these items were realist documentation, but filmmakers were already developing film's capacity for the fantastical.

The most significant pioneers of German cinema were Oskar Messter (1866–1943) and Guido Seeber (1879–1940) in Berlin. Messter refined the technology, inventing the Maltese cross to synchronize film frames behind the projector's lens, and also a sound system using gramophones. He shot his own material, including regular newsreels, and initially used it to sell his equipment. Messter moved into exhibition and distribution and by 1913 was producing full-length features. As a director and cinematographer, Seeber developed German cinema's potential in lighting and effects photography, but

perhaps his major contribution was to supervise the building in 1912 of the first major German studio at Babelsberg, a suburb of the city of Potsdam, just southwest of Berlin.

Up to 1906 German exhibitors made or bought their material, but by 1910 a second stage of development was under way with longer, multi-reel narratives, together with a change in ownership rights toward distributors, who now began renting prints. Cinema was moving out of its initial novelty phase and into premises built specifically to show films, some of which, like the Marmorhaus (Marble House) in Berlin, copied the opulence of established theater in an attempt to share its cultural recognition. Filmmakers strove to increase cinema's cultural capital by attracting bourgeois audiences, which would in turn serve to moderate censorship restrictions and entertainment taxes and to counter the efforts at controlling them by reform movements like those established in 1907 and again in 1917. Such movements promoted preventive censorship, requiring that films justify their right to be shown, and sought to co-opt the new medium for their own educational, reformist, or nationalist purposes. Filmmakers responded by producing what have come to be known as "authors' films." These might be adaptations from literature, with screenplays written by recognized authors—such as Hanns Heinz Ewers's scenario for Stellan Rye's (1880–1914) *Der Student von Prag* (*The Student of Prague*, 1913), a fantasy on the motif of the alter ego, and Paul Lindau's (1839–1919) version of his play *Der Andere* (*The Other*, 1913)—or films with rights to plays by renowned dramatists like Gerhart Hauptmann (1862–1946) or Arthur Schnitzler (1862–1931). Recognized names from the theater also came to act and direct, like the actor Albert Bassermann and the stage-director Max Reinhardt.

Most films functioned as popular entertainment, which demanded the recognizable patterns of genres with known stars and directors. Established popular traditions, such as fairy tales, operettas, and serial novels, made film dramas, melodramas, and comedies easily accessible, and fantastic narratives appeared alongside historical epic and costume extravaganzas. *Der Steckbrief* (The wanted poster, Franz Hofer, 1913) combined the fashion for detective stories with stylized settings. Hollywood provided models for slapstick comedy and even for a group of imitation westerns, some adapting the Wild West tales of the German nineteenth-century writer Karl May (1842–1912). Stars of the period included Paul Wegener (1874–1948), Bassermann, Henny Porten (1890–1960), and, above all, Asta Nielsen (1881–1972).

With the outbreak of World War I in 1914, the German industry moved into its final founding stage, consolidation. Nationalism had always marked German filmmaking, with groups like the Deutsche Flottenverein (Society for a German Fleet) and colonial societies producing films to promote their policies. And the German emperor, Wilhelm II, figured so frequently in newsreels that he was nicknamed the nation's first film star. As foreign competition declined, domestic production and exhibition expanded and came under increasing state influence aimed at harnessing the established entertainment function as both a distraction from the war's realities and as a vehicle for nationalist propaganda. Newsreel and documentary film adopted narratives supporting the war effort rather than depicting the realities of the Front. The military formed its own Bild-und Filmamt (Office for Photography and Film) in 1917, seeking to control all German filmmaking. Defeat nullified such ambition, but not before it generated the most famous studio in German cinema history. The Universum Film Aktiengesellschaft (Ufa) brought together private and state investment to buy up large parts of the industry, like Messter's studios and the German division of the Scandinavian Nordisk company, and dominated German *Filmkultur*, even through the Third Reich.

THE GOLDEN AGE: 1919–1933

Defeat brought two to three years of social and political turmoil until the Weimar Republic (named after the provincial town to which the postwar government fled to escape the upheavals in Berlin) stabilized Germany. Then the Great Depression of 1929 undermined the fragile economy and democracy, paving the way for Nazism. Yet this short period is known as the Golden Age of German cinema.

Initially, the German economy spiraled into inflation, which was not controlled until the US Dawes Plan guaranteed the currency in 1923. Yet the film industry remained active, with hundreds of production companies and distributors, and it expanded with the Emelka studios in Munich, later the Bavaria AG, the second traditional site of German filmmaking. The other major studio, Ufa, prospered initially, establishing prestige cinemas in Berlin and Hamburg and later building the leading soundstage at Babelsberg. The new republic rapidly established direct control over production with film assessment offices in Berlin and Munich, freeing individual films from the preventive censorship applied by law. However, the same body could also promote its educational criteria via tax breaks for "particularly valuable" films.

Yet German filmmakers' greatest advantage was international, as exported German films gained acclaim abroad. With foreign films also coming in, international opportunity meant negotiating with what was already the dominant global film industry, Hollywood. In 1921 a

European Film Alliance came about between the Hollywood company Famous Players and a group of ex-Ufa filmmakers, such as the entrepreneur Paul Davidson (1867–1927) and the directors Ernst Lubitsch (1892–1947) and Joe May (1880–1954). However, its management could not cope with the pressures of inflation and quickly declared bankruptcy. A few years later, Ufa, led by the most successful producer of the day, Erich Pommer (1889–1966), made the Parufamet agreement with the Paramount and Metro-Goldwyn studios. Ufa contracted for twenty US films each season and guaranteed the American studios 75 percent of its cinema's programs, and the Americans agreed to take ten Ufa films each. The German side needed the deal, as it also came with a loan of $4 million to pay off Ufa's debts. Unfortunately, it was not enough.

Already in 1919 Ufa had launched the first German international success for over five years with Lubitsch's costume drama, *Madame Du Barry*. Under the title *Passion*, this became a huge hit in the United States the next year, so that the director left for Hollywood in 1923 and never worked in Germany again. In early 1920 Robert Wiene's (1881–1938) *Das Kabinett des Doktor Caligari* (*The Cabinet of Dr. Caligari*), the film that came to characterize German expressionism, the dominant avant-garde art movement of the times, premiered in Berlin. It abandoned any attempt at realism, depicting the machinations of an evil doctor and showman with his exhibit, a sleepwalker, through bizarre, painted sets and exaggerated costume and acting styles, not least from the young Conrad Veidt (1893–1943), who also later left for Hollywood and is perhaps best known for his role as the Nazi commander in *Casablanca* (1941). *Caligari*'s theme of the corruption lurking behind respectability was so potentially controversial that the producers forced the addition of a conciliatory ending before release. Unlike Lubitsch's film, Wiene's made an international impression as innovative filmmaking, even if it did not enjoy the same popular success. Other examples are Fritz Lang's (1890–1976) *Dr. Mabuse, der Spieler* (*Dr. Mabuse: The Gambler*, 1922), centered on a mad criminal mastermind, and above all his *Der Müde Tod* (*The Weary Death*, also known as *Destiny* and *Between Two Worlds*, 1921), a film exploring the mysteries of life and death and displaying Lang's ability to visualize transcendent scenes architecturally. F. W. Murnau (1888–1931) made twenty-two films from 1919 to 1931, when he died in the United States. *Nosferatu, ein Symphonie des Grauens* (*Nosferatu the Vampire*, also known as *Nosferatu, a Symphony of Horrors*, 1922) is one of the most well-known expressionist films, while *Der Letzte Mann* (*The Last Laugh*, 1924) displayed a masterful use of the moving camera that did away entirely with the need for subtitles to tell its tale of a once-proud hotel doorman who finds himself unemployed. Murnau came to the United States on the strength of these films, but with the exception of the exquisite *Sunrise* (1927), he was unable to find success within the Hollywood studio system. Expressionism was nearing its end in *Das Wachsfigurenkabinett* (*Waxworks*, Paul Leni, 1924), which told three fantastical tales with magnificent sets and featured three of the era's great stars: Veidt, Emil Jannings (1884–1950), and Werner Krauss (1884–1959).

In 1924 Fritz Lang adapted the expressionist style for the historical epic *Die Nibelungen*, which depicts the greatest German folk-myth. With his penchant for monumental effect combined with expressionistic devices, Lang made another of the milestone films of the Weimar Republic, *Metropolis*, in 1927. With two of German cinema's leading stars, Heinrich George (1893–1946) and Brigitte Helm (1906–1996), supported by an army of extras, the story shows an apocalypse averted in a supercity of the future and an idealistic conclusion uniting management and workers. Although it confirmed Ufa's technical prowess, the film also came close to bankrupting the company, precipitating eventual takeover by conservative, nationalist interests. However, *Metropolis* had impressed Dr. Josef Goebbels (1897–1945), who, as the Nazi propaganda minister after 1933, offered Lang a leading position in the industry. Lang left for Hollywood, where he managed a reasonably successful transition, producing films like *Fury* (1936), the anti-Nazi story *Hangmen Also Die* (1943), *Rancho Notorious* (1952), and *The Big Heat* (1953). He never reintegrated into the German industry after the war, although he accepted invitations to return to Germany to direct *Der Tiger von Eschnapur* (*The Tiger of Bengal*, 1959), *Das indische Grabmal* (*The Indian Tomb*, 1959), and *Die Tausend Augen des Dr. Mabuse* (*The Thousand Eyes of Dr. Mabuse*, 1960), reprising a motif from his early career.

In the late 1920s expressionism gave way to the technically and ideologically more sober style of the New Objectivity, which found cinematic expression in such films as Kurt (1902–2000) and Robert (1900–1973) Siodmak's *Menschen am Sonntag* (*People on Sunday*, 1930) and G. W. Pabst's (1885–1967) *Die freudlose Gasse* (*The Joyless Street*, 1925). The latter, a social drama set in a proletarian district of Vienna, combined social commentary with moralistic melodrama to show the corruption of speculators and the rescue of the heroine by an American Red Cross officer. It was also the film debut of Greta Garbo (1905–1990), who shortly afterward left for Hollywood and became a screen goddess. In the same genre, but ideologically uncompromising, is *Mutter Krausens Fahrt ins Glück* (*Mother Krause's Journey to Happiness*, 1929), made by director Piel Jutzi

F. W. MURNAU

b. Friedrich Wilhelm Plumpe, Bielefeld, Germany, 29 December 1888, d. 11 March 1931

Murnau took his professional name from a town in southern Bavaria favored by noted artists in the early part of the twentieth century. He earned a reputation as a creative genius who contributed to the German film industry's international ascendancy, but also as a director unable to manage the shift to Hollywood and all that such a move entailed.

After World War I, he became an apprentice to the theater director Max Reinhardt in Berlin. He directed his first film, *Der Knabe in Blau* (*The Boy in Blue*), in 1919 and had his first success with the romantic melodrama *Der Gang in die Nacht* (*The Dark Road*) in 1921. With the screenwriter Henrik Galeen, he made one of the signal films of German expressionism, *Nosferatu, eine Symphonie des Grauens* (*Nosferatu the Vampire*, 1922), the forerunner of the vampire genre and a cult film today. Murnau worked in a variety of styles but is best known for his expressionist films: *Herr Tartüff* (*Tartuffe*, 1926), from the seventeenth-century French comedy by Molière, and *Faust* (1926), from the celebrated play by Johann Wolfgang von Goethe.

Murnau's *Der letzte Mann* (*The Last Laugh*, 1924), one of the most significant films of the period, combined elements of expressionism and the subsequent New Objectivity. Murnau had Karl Freund, a leading cameraman of the day, shift his camera around and through the scenes, even going so far as to have Freund strap the unwieldy equipment onto his body. The film's groundbreaking visual effects support a story told from the perspective of the protagonist, a hotel doorman powerfully portrayed by Emil Jannings. *The Last Laugh* displays technical prowess, eschewing any title cards to support its narrative.

Murnau received official recognition at the premiere of *Faust* in 1926, but he left for the United States and a contract with Fox studios. There he made *Sunrise: A Song of Two Humans* (1927), an expressionist story of infidelity and murder with a visionary, dreamlike style, often ranked as one of the greatest silent films. It was a critical but not a commercial success. After *Four Devils* (1928) and *City Girl* (1930), Murnau quit the mainstream industry and took a loyal team to the South Pacific to produce *Tabu* (1931), a tale of love and death in paradise. He was killed in a car accident a week before its Hollywood premiere.

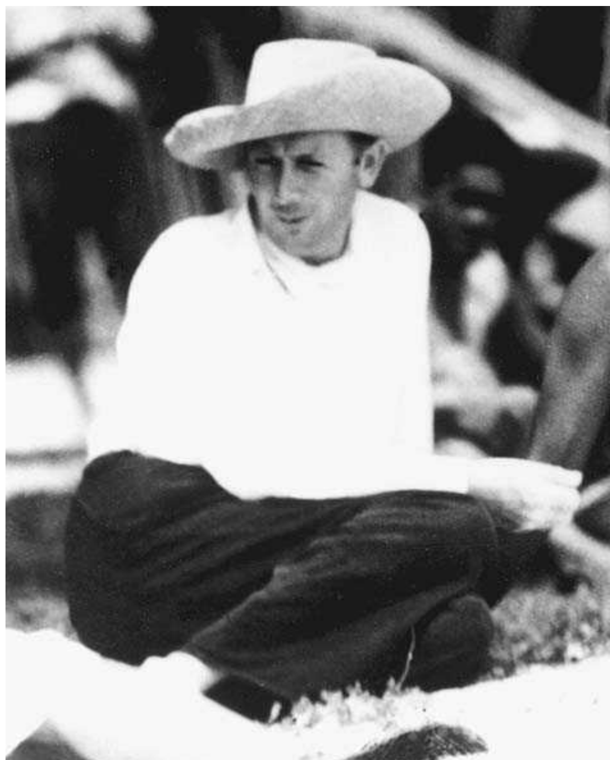
Stan Jones

(1896–1946) with the Marxist film collective, Prometheus. The film depicts a mother's suicide after her family is destroyed by unemployment and poverty and advocates working-class solidarity.

Lang also depicted the same milieu for his first sound film, *M—Eine Stadt sucht einen Mörder* (*M*, 1931), but used it for a crime thriller based on an actual case of a serial killer of children. *M* launched another significant star, Peter Lorre (1904–1964), who soon went on to prosper in Hollywood. In *M*, and in much of the earlier expressionist filmmaking from *Caligari* onward, the critic Siegfried Kracauer identified in the German culture and nation a significant reflection of individual and social psychoses, which would find an overt form in Nazism.

The introduction of sound in 1927 radically changed the longer-term prospects for German films internationally, as possibly the only rival industry to Hollywood now operated through a minority language. The first German sound film exhibited was Walter Ruttmann's (1887–1941) *Melodie der Welt* (*Melody of the World*, 1929), a travelogue dominated by music.



F.W. Murnau on location for* Tabu *(1931). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

The shift to full use of sound's potential came with Josef von Sternberg's (1894–1969) *Der Blaue Engel* (*The Blue Angel*, 1930), starring Emil Jannings as a bourgeois schoolmaster seduced by a cabaret performer and Marlene Dietrich (1901–1992) as the seductive singer, Lola Lola. To counter the inevitable restriction to the natural territory of the German language, films like *The Blue Angel* and Ewald Dupont's (1891–1956) *Atlantic* (1929) were shot in several language versions simultaneously. By the end of 1930, sound films were the norm in production and exhibition.

The only declared Communist film produced in the whole period, *Kuhle Wampe oder: Wem gehört die Welt?* (*To Whom Does the World Belong?*, 1932), directed by Slatan Dudow (1903–1963) and written by the renowned playwright Bertolt Brecht (1898–1956), just managed to get a premiere in Berlin in 1932 after being refused three times by the censors. It depicts an encampment of the unemployed in the forests south of Berlin and is highly critical of state and religious authorities. Also typical of the times is the film version of Brecht's play, *Die Dreigroschenoper* (*The Threepenny Opera*, 1931); Brecht sued the director, G. W. Pabst, and his producers, claiming they had falsified the political message he sought from a story of the collaboration of crooks, police, and banks. Brecht himself left Germany early in 1933, exemplifying the devastating impact of political developments on the nation's entire creative intelligentsia.

FASCISM: 1933–1945

On taking power in 1933, the Nazis brought all aspects of production together under the Reichsministerium für Volksaufklärung und Propaganda (Reich Ministry for Popular Enlightenment and Propaganda), led by propaganda minister Goebbels. Filmmakers, together with all writers, artists, musicians, and so on, had to belong to the Reichskulturkammer (Reich Chamber for Cultural Affairs). Consolidation of production companies meant that the studios Ufa, Tobis, Bavaria, and Terra soon came to produce more than 80 percent of all features. Prominent names, like so many anonymous individuals, had to leave or were threatened with literal destruction. Billy Wilder (1906–2002), Max Ophüls (1902–1957), Robert Siodmak, Erich Pommer, Detlef Sierck (Douglas Sirk; 1897–1987), Alexander Korda (1893–1956), and Arnold Pressburger (1885–1951) joined those who had earlier emigrated to other European countries or to Hollywood; but now they were in exile, with no guarantee of ever returning home. Those who stayed, like the actors Emil Jannings, Hans Albers (1925–1999), Kristina Söderbaum (1912–2001), Brigitte Horney (1911–1988), and Heinz Rühmann (1902–1994), or the directors Veit Harlan (1899–1964), Wolfgang Liebeneiner (1905–1987), and Leni Riefenstahl (1902–2003), could have successful careers if they obeyed the rules.

The onset of Nazi rule, like its downfall in 1945, marks a crucial shift in German history. But it did not happen overnight; rather, it was a transition to circumstances long foreseeable and thus meant a degree of continuity, at least initially. Possibly the world's most sophisticated industry lost much of that indeterminate factor vital in all filmmaking—talent—but it could still produce impressive films for its popular market, propagandistic tracts as features or as pseudo-newsreels, and some of the most vicious imagery ever screened. The Reich also carried on the Weimar Republic's assessment policy, granting films conducive to its ideology tax breaks, although these could not compensate for the loss of export markets, especially in the United States, which immediately declined. There were, however, some advantages, as foreign film imports declined, although never disappeared completely, with the major competitor, Hollywood, banned only in 1939. And, of course, from the later 1930s the expanding Reich brought captive audiences. By 1937 major parts of the industry were nationalized, and any independent filmmaking was banned in 1941, when the final consolidation created

Marlene Dietrich became a star in Josef von Sternberg's **Der Blaue Engel *(*The Blue Angel, *1930).*** **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

an Ufa monopoly and meant direct rule by Goebbels from his ministry.

Popular entertainment continued with dependable genre films, comedies, musicals, and exotic adventures, all keeping to the classic conventions and styles of Hollywood while incorporating specifically German folklore, popular literature, and music. A satirical comedy such as *Amphitryon* (Reinhold Schünzel, 1935) could even imply social criticism, but was protected by its origin in a play by Heinrich von Kleist (1777–1811), a literary icon. *Heimat* (*Homeland*, Carl Froelich, 1938) starred Heinrich George in a melodrama of family relations. The film musical found an extreme form in *Wir tanzen um die Welt* (We Are Dancing Around the World, Karl Anton, 1939), combining revue, "backstage" musical, and love story with mass choreography reminiscent of Busby Berkeley spectaculars. The most successful popular entertainment was Veit Harlan's *Die goldene Stadt* (The Golden City, 1942), set in occupied Prague, a melodrama of betrayal and suicide with a strong message of local patriotism. Yet perhaps the high point came with Josef von Báky's (1902–1966) *Münchhausen* (*The Adventures of Baron Munchhausen*, 1943), an opulent fantasy adventure based on the "Baron of Lies" from popular German literature and intended to celebrate Ufa's twenty-fifth anniversary while displaying to the embattled Germans, and the world at large, the German industry's prowess, not least in color photography.

Epic filmmaking had already come in for nationalist exploitation in the "Prussia Films." It continued into the Third Reich, as Harlan produced *Der grosse König* (*The Great King*, 1942), in which a Germany at war in the seventeenth century parallels contemporary circumstances. The epic genre expanded to encompass various sorts of "great men" and "leaders" like the playwright

MARLENE DIETRICH

b. Maria Magdalene von Losch, Berlin, Germany, 27 December 1901, d. 6 May 1992

Appearing in over a dozen films by such renowned directors of the day as Maurice Tourneur, Curtis Bernhardt, and Alexander Korda, Marlene Dietrich achieved international stardom when, as the dance-hall girl Lola Lola, she stole *Der Blaue Engel* (*The Blue Angel*, 1930) from star Emil Jannings. In the film's final scene she scans the cabaret audience with a knowing smile and a provocative stance that established the outline of the iconic star she was to play all her life.

In 1930 she followed Josef von Sternberg, the director of *The Blue Angel*, to Hollywood. For five years at Paramount, von Sternberg and Dietrich collaborated on six films, from *Morocco* (1930) to *The Devil Is a Woman* (1935), establishing her as a screen goddess. The films experiment with expressionist lighting and texture even as they explore the nature of femininity. Dietrich learned a great deal from von Sternberg about constructing her own image, and although she could devise her own lighting arrangements for the most suitable effects, she could mock it too, as in Fritz Lang's *Rancho Notorious* (1952) and, memorably, in Orson Welles's noir masterpiece, *Touch of Evil* (1958).

Dietrich was approached by the Nazis but did not return to German filmmaking, becoming instead an American citizen and taking a public stance against fascism as a celebrated entertainer of Allied troops. She returned to Germany in 1945 for her mother's funeral but was unpopular because of her wartime allegiances. She appeared in a key role in Stanley Kramer's *Judgment at Nuremberg* (1961), for which she worked again briefly in Germany. However, she did not attend the Berlin premiere, which was a disaster, with the film opening and closing that same night. It was her last major film role, although she maintained a career in cabaret until an accident in 1973. Her last appearance on film was as a madame managing gigolos in post-1918 Berlin in *Schöner Gigolo, armer Gigolo* (*Just a Gigolo*, 1979). Not long before the end of her life, France awarded her its most prestigious decoration, the Légion d'Honneur, and the city paid for the Paris apartment where she lived for over twenty years. In Joseph Vilsmaier's *Marlene* (2000), a biopic with elements of pure invention, Katja Flint vainly tries to capture something of Dietrich's aura. Dietrich and her legend are remembered not only in her films but in Dietrich Square, off Potsdamer Platz in Berlin, and an archive devoted to her in the nearby Stiftung deutscher Kinemathek.

Friedrich Schiller (1940), the inventor Rudolf Diesel (1942), and the physician Robert Koch (1939). However, the climax of this propagandistic adaptation of history came with Harlan's *Kolberg* (1945), a retelling of the defense of a Baltic port city against the French in the early nineteenth century. As the advancing Red Army took the actual town in 1944, Goebbels diverted resources of money, men, and materials—even interfering in the scriptwriting—to a spectacular war film designed to bolster the Germans' will to resist. The film itself, with its message of endless sacrifice and its production history, provides many insights into the self-destructive megalomania at the heart of Nazism.

Although far from *Kolberg* in style, Leni Riefenstahl's work, which is certainly better known today, is equally revealing of the Third Reich. Her pseudodocumentary, *Triumph des Willens* (*Triumph of the Will*, 1935) can still exert a dubious fascination with its narrative montage of the Nazis' annual rally in Nuremberg, for which Riefenstahl commanded significant resources to create an

Marlene Dietrich, 1936. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

eerily operatic celebration of the mystical union of Führer and *Volk* (people) as if it were staged precisely for her cameras. Nazi filmic propaganda reached its malevolent depths with depictions of the Jews. *Die Rothschilds* (The Rothschilds, Erich Waschneck, 1940) on the history of the famous financiers in England, was not a commercial success, but Harlan's *Jud Süss* (*Jew Süss*) of the same year brought the racist message very close to home by recounting the history of the eighteenth-century German financier Oppenheim via a bourgeois melodrama. *Der ewige Jude* (*The Eternal Jew*, 1940) shifts to pseudodocumentary to compile at the behest of the ministry a horrendous montage of allusions, false allegories, and arguments to convince viewers of a Jewish conspiracy for world domination. These films are straight propaganda, as the Nazis had by that time decided on the Final Solution to exterminate the Jews and all other undesirable groups and individuals. The propaganda pitch continued when the German-Jewish director Kurt Gerron (1897–1944), having been arrested by the Nazi SS and sent to the Theresienstadt concentration camp, was ordered to shoot a pseudodocumentary on the camp. *Der Führer schenkt den Juden eine Stadt* (*The Führer Gives a City to the Jews*, also known as *Theresienstadt*, 1944) presents the camp as a model community as a smokescreen for international opinion. Having delivered the product, Gerron and his team were duly murdered.

SINCE 1945

The year 1945, unlike 1918, brought total defeat and occupation zones, permanent loss of territory and resources, floods of refugees, and a burden of historical guilt that still shapes German society today. The French, British, and Russian allies governed the country in increasingly uneasy cooperation until 1949, when two German states emerged, the Federal Republic of Germany (FRG) in the Western zones and the German Democratic Republic (GDR) in the Eastern, Soviet zone. With the building of the infamous Berlin Wall in 1961 and the sealing of the internal border, two Germanies were locked in stasis and integrated into their respective power blocs, NATO and the Warsaw Pact. In November 1989 the East German state finally collapsed and was rapidly absorbed into the Federal Republic.

Filmmaking carried on amid the ruins, not least because the occupying powers wanted it to, although they were themselves distracted by dismantling and profiting from the remains of Ufa. As early as May 1946, the Deutsche Film Aktiengesellschaft (DEFA, the German Film Company Limited) received a license from the Soviets for the Babelsberg studios. DEFA became the East German state's film company and thus the monopoly producer. Its first film, *Die Mörder sind unter uns* (*Murderers Among Us*, 1946) by Wolfgang Staudte (1906–1984) premiered as the first postwar German film. Dealing with the heritage of Nazism, it came to be known as a *Trümmerfilm* (rubble film), after its setting in ruined Berlin. Shot in film noir style with Hildegard Knef (1925–2002), one of the postwar cinema's major stars, it established antifascist filmmaking at DEFA. At the same time, private companies were appearing in the Western zones, such as Central Cinema Company-Film (CCC) and Berolina-Film in West Berlin, Filmaufbau in the provincial university town of Göttingen, and Real-Film in Hamburg. In Munich the Bavaria studios remained in public ownership until 1956.

Distribution companies in West Germany also acquired licenses from the Western allies and could import large quantities of foreign material that was new to Germany. This meant, above all, B pictures from Hollywood, thus reestablishing the abiding presence of the American industry. Audiences' preference for dubbing into German dates from this time. Some filmmakers, like Staudte, were able to work in both Germanies for a while, and until the Wall went up, West Berliners could work in Babelsberg. However, there was little cooperation between the two industries. The deterioration of relations between the former allies soon

turned into the Cold War and meant that the Federal Republic at first banned all DEFA films, shifting to a more selective approach in the 1960s. Filmmaking came to reflect the *Wirtschaftswunder*, the rapid economic recovery of West German manufacturing and trade. Scarcely any films dealt with the division of Germany, and most tackled the problem of Nazism under the broad attitude of a liberal humanism, presenting ordinary Germans as victims of anonymous historical forces. This stance also enabled condemnation of Communism as a nonpolitical evil rather than acknowledging East Germany as any sort of comparator. Ufa style merged with that of Hollywood genres to offer "great men" films, *Heimatfilme*, popular depictions of idyllic local cultures, nostalgic historical costume dramas depicting "the good old days," and melodramas focusing on questions of personal identity and relations within families. These latter might ostensibly deal with social, even political, problems of the day but tended to deflect them into questions of emotional attachments and moralizing. Something of an exception were films dealing with young people, as they referred to the significant impact of US culture on the *Wirtschaftswunder* society, such as Georg Tressler's *Die Halbstarken* (*The Hooligans*, 1956), a depiction of young criminals notable for its realist style and for introducing new actors like Horst Buchholz (1933–2003), who went on to achieve stardom. Popular music featured in *Schlagerfilme* (pop films) catered to a youth audience alongside the remakes of musicals, revues, and operettas for more conservative tastes.

West German films from the 1950s did not export well, had few successes at international festivals, and always had to cope with competition from Hollywood. Filmmakers concentrated on what suited the domestic market. The state supported them by introducing the first of the permanent subsidy programs, levying tickets sold and offering production guarantees with the money, thus propping up a declining industry for reasons of cultural politics. As German consumers became increasingly affluent, chief among the new offers was television, with the first channel being established in 1954. By the early 1960s German film attracted less than a third of its home market, and its inadequacy was confirmed when the 1961 Berlinale (the Berlin Film Festival) refused to award the annual German film prize at all.

THE NEW WAVE

In the 1960s a young generation of West Germans began to reject the filmmaking of their parents (and even grandparents), as they were beginning to reject many of the premises on which their parents had reestablished their version of Germany. In 1962 a group of young filmmakers published the *Oberhausen Manifesto* at the festival in the town of that name. They wanted a radical shift in *Filmkultur* to recognize cinema as an art equivalent to other arts and thus equally deserving of public support. The Young German Film sought new forms of expression while looking back to prewar cinematic traditions. It embraced American popular culture while criticizing much of American politics, particularly internationally. It turned to German literature for inspiration while rejecting notions of high and low culture and consciously stressing an auteur cinema.

The German state responded by expanding support agencies, subsidies, and training institutions. The Kuratorium Junger Deutscher Film (Board for Young German Film) offered, from 1964 on, interest-free loans to screenplays found worthy of support, yet first-time filmmakers still found it difficult to find distribution and exhibition. Established industry circles countered by securing loans from the Filmförderungsanstalt for companies demonstrating box-office success, which led to a flurry of cheap, often sensationalist productions. The new generation's films began to appear in 1966 with *Abschied von gestern* (*Yesterday Girl*) by Alexander Kluge (b. 1932), a film-essay challenging genre cinema with a fragmented narrative and a critique of social norms. Volker Schlöndorff (b. 1939) began his literary adaptations with his *Der junge Törless* (*Young Torless*, 1966) based on the famous novella by Robert Musil (1880–1942). Social realist, even documentary style went together with experimental and avant-garde developments and a wide-ranging critical stance toward modern mass culture and media. Jean-Marie Straub (b. 1933) and Danièle Huillet (b. 1936) influenced their contemporaries, although they never found a large audience, with films like *Chronik der Anna Magdalena Bach* (*The Chronicle of Anna Magdalena Bach*, 1968), which refused narrative authority and examined the relationship of time and space in film.

Parallel to these developments, mainline popular cinema carried on by producing pop music films, low-level porn under the guise of social comment on sexuality, detective stories, and even remakes of the Karl May westerns. However, by the early 1970s, with new filmmakers gaining recognition overseas, cinema rapidly became one of Germany's cultural export flagships under the title New German Cinema, and was then validated by foreign opinion. German public identification with the new wave—some even proudly hailed it as a new "Golden Age"—was mixed with unease at the filmmakers' potential excesses. The generation of the early 1960s stressed the *Autorenfilm* (author's film) as programmatic, as it privileged individual creativity against commercial and industrial expertise. This meant that filmmakers were not only their own directors but

scriptwriters, producers, and editors as well. In 1971 these filmmakers launched a short-lived attempt to secure their own distribution by founding the Filmverlag der Autoren, but it was never able to compete with mainline companies.

Rainer Werner Fassbinder (1946–1982) was by far the most prolific and controversial filmmaker of this generation, with a formidable productivity from the late 1960s to his early death in 1982. He was also an important figure in radical German theater. His *Angst essen Seele auf* (*Ali: Fear Eats the Soul*, 1974) is still provocative in its depiction of love between a middle-aged German woman and an immigrant worker from North Africa. His *Chinesisches Roulette* (*Chinese Roulette*, 1976) offers remarkable shot compositions to support its melodrama, and his *Lili Marleen* (1981) takes up the theme of Nazism through an examination of the way Nazi media promoted a star cult. Probably his best-known film is *Die Ehe der Maria Braun* (*The Marriage of Maria Braun*, 1979), where his own "star" actress, Hanna Schygulla (b. 1943), portrays the career of a woman during the German "economic miracle," displaying the sexual politics that paralleled socioeconomic developments. With *Lola* (1981) and *Die Sehnsucht der Veronika Voss* (*Veronika Voss*, 1982), *The Marriage of Maria Braun* forms the "Trilogy of the Federal Republic," a tableau of the history, politics, culture, and style of Fassbinder's homeland.

Wim Wenders (b. 1945) is internationally celebrated and engages in the politics of *Filmkultur*. His *Im Laufe der Zeit* (*Kings of the Road*, 1976) set many of his thematic and stylistic trademarks, like his fascination with American culture and the figure of the lone male wanderer as hero, which resurfaced in his *Paris, Texas* (1984), made in the United States with French financing. After several years in the United States (including a notable but flawed cooperation with Francis Ford Coppola on *Hammett*, 1982), Wenders returned home and shot his masterpiece, *Der Himmel über Berlin* (*Wings of Desire*) in 1987, combining remarkable images from Berlin just before the Wall collapsed with a mythical love story of an angel and the woman for whom he forsakes immortality. Wenders returned to the United States to shoot *The Million Dollar Hotel* (2000), a bizarre detective story set in a rundown residential hotel in Los Angeles. Applying his trademarks to an American cast in an American setting, Wenders continues German cinema's tradition of interaction with the United States and its filmmaking. *In a Land of Plenty* (2004) has its title borrowed from poet/songwriter Leonard Cohen, and results from cooperation with US writers, producers, and cast on a US theme: the continuing legacy of Vietnam. Technologically, Wenders also broke new ground by shooting mainly digitally. *Don't Come Knocking* (2005) meant working with Sam Shepard again and with a US cast, including Shepard himself, Tim Roth, and Jessica Lange. Its narrative resembles *Paris, Texas* in tracing the wanderings of a loner-male and his attempt to salvage his disastrous family relations. Wenders has also cooperated with Ry Cooder, on the documentary *Buena Vista Social Club* (1999), and with Martin Scorsese to contribute *The Soul of a Man* (2003) to Scorsese's TV series on the blues.

Werner Herzog (b. 1942) is regarded as one of the most eccentric figures of *das neue kino*. His films feature inspiring landscapes and controversial actors (the flamboyant Klaus Kinski [1926–1991], the strange Bruno S. [b. 1932]) at odds with their world. Herzog is also well known for the making of his films, whether hypnotizing the entire cast in *Herz aus Glas* (*Heart of Glass*, 1976), dragging a boat through the Amazon jungle for *Aguirre, der Zorn Gottes* (*Aguirre, the Wrath of God*, 1972), or feuding with actor Kinski. Other significant figures from this generation are Volker Schlöndorff, whose Oscar®-winning adaptation of Günter Grass's novel *Die Blechtrommel* (*The Tin Drum*, 1979) is a remarkable treatment of a powerful exploration of German identity, and Hans-Jürgen Syberberg (b. 1935), whose *Ludwig, Requiem für einen jungfräulichen König* (*Ludwig, Requiem for a Virgin King*, 1972) and *Hitler—ein Film aus Deutschland* (*Hitler: A Film from Germany*, 1978) present richly textured visions exploring the legacies of German Romanticism and nationalism, controversially depicting a particular German identity through irrational and nihilistic imagery.

Paralleling the New German Cinema, in the 1970s *Frauenfilm* (women's filmmaking) arose. Directors like Helke Sander (b. 1937), Helma Sanders-Brahms (b. 1940), Margarethe von Trotta (b. 1942), Ulrike Ottinger (b. 1942), and Jutta Brückner (b. 1941) have sought to redefine the practice and politics of filmmaking while criticizing the oppression and discrimination directed against women in the Federal Republic. The combination of national and family history in *Deutschland bleiche Mutter* (*Germany Pale Mother*, 1980), by Sanders-Brahms, sparked controversy. Von Trotta's *Die bleierne Zeit* (*Marianne and Juliane*, also known as *The German Sisters*, 1981) took up the story of the Ensslin sisters for a subtle examination of the effect of terrorism on daily life by combining radical politics with personal history.

The German New Wave petered out in the early 1980s, around the time of Fassbinder's death. The political climate had changed from the idealism of the 1960s to the violence of the "extraparliamentary opposition" of the 1970s, with countermeasures by the state, together with public opposition to projects like nuclear power and the presence of US nuclear weaponry on West German

WERNER HERZOG

b. Werner Stipetic, Munich, Germany, 5 September 1942

Werner Herzog, one of the leading figures of the New German Cinema, has remained a radical individualist and a cinematic visionary for over forty years. His films disturb by their questioning of the bases of human civilization and its values. He first attracted notice with *Lebenszeichen* (*Signs of Life*, 1968), a war story set on a Greek island, which depicts an individual soldier's futile revolt against his situation. Herzog won the Berlin International Film Festival prize that year for a first work, as well as a German Film Award for outstanding feature film.

In *Jeder für sich und Gott gegen Alle* (*The Enigma of Kaspar Hauser*, 1974) he commented on fundamental social values via the historical account of a strange foundling child in nineteenth-century Germany. Herzog also tackled a difficult play by Georg Büchner, from the mainstream of German theater, in *Woyzeck* (1979). Herzog's favorite actor, Klaus Kinski, draws on his characteristic intensity to portray the destruction of a simple little man caught in an absurd, authoritarian society. In *Nosferatu, Phantom der Nacht* (*Nosferatu*, 1978), an homage to the director F. W. Murnau, Kinski gives a remarkably nuanced portrayal of the Dracula figure as a lonely and driven predator envious of his victims for their human relations. With Kinski, Herzog also explored megalomania in *Aguirre, der Zorn Gottes* (*Aguirre, The Wrath of God*, 1972) and again in *Fitzcarraldo* (1982) and *Cobra Verde* (1987). *Fitzcarraldo* is an allegory of colonialism in its treatment of the actual historical events surrounding the hero's obsession with building an opera house a thousand miles up the Amazon River in the Peruvian jungle. During the shooting of this film, Herzog became involved with dangerous local politics, and one of his crew was killed while filming a wild ride down river rapids. *Cobra Verde* deals with the eighteenth-century slave trade between South America and Africa, with Kinski reprising his role of the obsessive adventurer who perishes through his overreaching ambition. After this film, Herzog and Kinski parted ways, as it was becoming increasingly difficult for the director to work with the erratic star.

Herzog also has produced several highly personal documentaries in Germany and elsewhere, and has done mainstream work for German TV. Among his impressive documentaries are *Mein Liebster Feind—Klaus Kinski* (*My Best Fiend*, 1999), about the director's tumultuous working relationship with Kinski; *Wheel of Time* (2003), about the Dalai Lama and Tibetan Buddhist rituals; *The White Diamond* (2004), about exploring the rainforest in a unique airship; and *Grizzly Man* (2005), about an actor who filmed himself living among grizzly bears and who, along with his girlfriend, was killed by one.

Stan Jones

soil. Many of these issues are reflected in *Deutschland im Herbst* (*Germany in Autumn*, 1978), a collaborative project between several directors to depict the impact on German society of terrorism and the state's response to it.

When a more conservative government was elected in 1982, the subsidy system ceased to favor art cinema, even as the new technologies shaping video and TV continued to reduce cinema audiences. Mainline filmmaking enjoyed a boost with Wolfgang Petersen's (b. 1941) film *Das Boot* (*The Boat*, 1981), a melancholy antiwar story of a doomed U-boat toward the end of World War II. The film's international success and the director's subsequent hit *Die unendliche Geschichte* (*The Never-Ending Story*, 1984) launched Petersen on the well-trodden trail to Hollywood. In the 1990s Roland Emmerich (b. 1955) followed him, becoming a top US director, with *Universal Soldier* (1992) and *Independence Day* (1996). Other filmmakers found support through

Werner Herzog. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

closer collaboration with TV and, revisiting staple genres, the music industry.

Renewed public interpretation of the Third Reich was also reflected in filmmaking, as in *Die weisse Rose* (*The White Rose*, 1982) by Michael Verhoeven (b. 1938), which depicted the courage of an actual student resistance group in Munich. He revisited the Third Reich in 1990 with a controversial film, *Das schreckliche Mädchen* (*The Nasty Girl*, 1990), which used a mixture of techniques to focus on the difficulties experienced by a schoolgirl investigating her hometown under the Nazis. *Sansibar oder der letzte Grund* (Sansibar, or the True Reason, 1987) by Bernhard Wicki (1919–2000) explores difficult questions of guilt and responsibility through the allegory of an artwork rescued from the Nazis by a Communist and a Jewish woman. The most celebrated historical revision was Edgar Reitz's (b. 1932) *Heimat—Eine deutsche Chronik* (*Homeland: A German Chronicle*, 1984), an epic depiction of a village in central Germany from the 1920s to the 1950s that was made for both TV and cinema release. Reitz's sequel, *Die Zweite Heimat—Chronik einer Jugend* (*The Second Homeland: Chronicle of a Youth*), thirteen episodes shot from 1988 to 1992, continued the story into the 1960s. Both gained attention abroad and caused much debate in Germany as to the cinematic depiction of memory and its relevance for German identity. (*Heimat 3* was aired on German TV in 2004.) The particular parochialism of the state of Bavaria appears in the work of Herbert Achternbusch (b. 1938), such as *Servus Bayern* (*Bye-bye, Bavaria!*, 1977). In the United States Percy Adlon (b. 1935) adapted this story in *Out of Rosenheim* (*Bagdad Café*, 1987), which teamed the Bavarian actress Marianne Sägebrecht (b. 1945) with the American actor Jack Palance and achieved enormous international success. However, the most successful West German filmmaker of the 1980s was a newcomer, Doris Dörrie (b. 1955), whose comedy *Männer...* (*Men...*, 1985) combined a feminist viewpoint with borrowings from Hollywood genres in an international hit that set the stage for the more entertainment-oriented filmmaking of the 1990s.

DEFA

From 1945 to 1990, when the company, along with the state that owned it, disappeared, DEFA produced over seven hundred films. When DEFA acquired the Ufa premises in Babelsberg it took on a large number of staff from the Third Reich. In 1953 the Soviets relinquished any ownership, and under the Ministry of Culture DEFA came to control all East German filmmaking. Alongside those allowed to continue working, exiles like Slatan Dudow (1903–1963) and Wilhelm Dieterle (1893–1972) were encouraged to return. Thus the GDR's film establishment was at odds with the official doctrine of representing that German tradition and identity, which had always abjured fascism. Whereas the West German industry avoided political references in its films, the East German industry had to include them in all films, but only in forms dictated by the ruling Socialist Unity Party.

Already in 1951, with the continuity afforded by folding Ufa into DEFA, Staudte was able to put out an accomplished account of German imperial history, *Der Untertan* (*The Kaiser's Lackey*), adapted from the novel by Heinrich Mann. Slatan Dudow was one of the few filmmakers to examine the brutality of the Third Reich, as he depicted the price paid by resistance circles in his *Stärker als die Nacht* (Stronger Than the Night, 1954). Paralleling the antifascist tradition, filmmakers were also required to depict the reconstruction of the state on socialist lines in a "socialist realist" style. When the cultural climate thawed after Soviet dictator Joseph Stalin's death in 1953, genre filmmaking became easier (even allowing the development of a subgenre of westerns told from the viewpoint of the American Indians). In 1958 the climate changed again as the Socialist Unity Party attacked many DEFA filmmakers for undermining socialism with critical viewpoints. Even well-established directors like Kurt Maetzig (b. 1911), Konrad Wolf (1925–1982), Jürgen Böttcher (b. 1931), and Heiner Carow (1929–1997) had to negotiate with the ideological

demands of their political masters; like many technicians, writers, and musicians, they were functionaries of the state on permanent contracts, and so faced changing demands for films that could educate, inform, and persuade, yet also entertain. However, filmmakers were not isolated from developments in other countries. Thus Frank Beyer (b. 1932) made his debut with *Fünf Patronenhülsen* (*Five Cartridges*, 1960), which showed influences from Russian filmmaking in its story of the International Brigade in the Spanish Civil War. The film featured Manfred Krug (b. 1937), the biggest star in the East German industry until his departure for the West in 1977 after a conflict with the party.

In 1965 the party intervened drastically by banning twelve completed films and dismissing some management at DEFA. Maetzig's *Das Kaninchen bin ich* (*I Am the Rabbit*, 1965) had passed all the censors, but, together with Frank Vogel's *Denk bloss nicht ich heule* (Just Don't Think I'm Crying, 1965), it was publicly criticized for being too skeptical and failing to contribute to a positive identity for the state and banned anyway. Required conformity with established ideology and systems pushed formal and thematic innovation further toward what the authorities considered an elitism. At the same time mass audiences sought genre products, even those coming from Hollywood, as entertainment, or turned to TV (which itself could be risky if one's aerial pointed west). In this climate a group of films came to be known as *Regalfilme* (shelved films), of which *Spur der Steine* (*The Trace of Stones*, 1966), by rising star Frank Beyer, is the most celebrated. The film, which depicts an anarchic but effective band of carpenters at work on a major construction site, and their involvement with the site management and the party, implies that there might be a range of personal contributions possible under socialism. Although allowed a limited release, the film raised too much popular interest for the party to tolerate and thus was shelved. On its reappearance, in perfect condition twenty-five years later, it immediately became a German cinema classic.

The party became somewhat more confident of itself in the 1970s, particularly under Erich Honecker, who presided over increased international recognition and responded to Willy Brandt, the Chancellor of the Federal Republic, by allowing more contact with the West. Another thaw followed, on the basis of the GDR's having become a fully developed socialist society. In 1975 Frank Beyer's *Jakob, der Lügner* (*Jacob the Liar*) appeared and in 1977 became the only DEFA film ever nominated for an Oscar®. Adapted from a novel by Jurek Becker, it tells of resistance in the Warsaw Ghetto that was based on invented radio reports of imminent liberation by the Red Army.

By the end of the 1970s it was growing ever clearer that the state and the party had little support among the populace. Citizens were withdrawing into private spheres, or becoming outright dissidents, or simply leaving the country. In filmmaking the discontent was reflected in an alternative film culture centered in Berlin, Leipzig, and Dresden. DEFA had to accept increasing marginalization in public life, with very few films, like *Solo Sunny* (1980), co-directed by Konrad Wolf (1925–1982) and Wolfgang Kohlhaase (b. 1931), attracting any significant box office, particularly against mainstream Hollywood films. Films like *Das Fahrrad* (The Bicycle, 1982), directed by Evelyn Schmidt (b. 1949), one of the few women filmmakers in the East, or *Grüne Hochzeit* (Green Wedding, Herrmann Zschoche, 1989) were marked by disillusionment about any improvement in individual lives. DEFA's one success was in films for children, such as *Das Schulgespenst* (The School Ghost, Rolf Losansky, 1986), which deals with a young girl's identity problems through the motif of changing places with a ghost.

DEFA celebrated its fortieth anniversary in 1986, which artificially stimulated productivity, some of it already in anticipation of the GDR's own fortieth anniversary in 1989. In 1988 a group of young filmmakers put out a manifesto demanding an independent studio. It was suppressed, but the dissidents were allowed to form their own working group; their discontent thus was focused, but they had no time to make anything of it. Among the last products of DEFA's filmmaking were Heiner Carow's *Coming Out* (1989), the only East German film ever to deal with the official discrimination against homosexuals; *Letztes aus der DaDaeR* (The Last of the Gee-Dee-Arr, Jörg Foth, 1990); and *Das Land hinter dem Regenbogen* (The Country Beyond the Rainbow, Herwig Kipping, 1992), committing the studio's last resources to reckonings with the GDR. The direction for any remaining *Filmkultur* became apparent in *Der Bruch* (The Break, 1989), written by Kohlhaase and directed by Beyer, a straight crime-comedy genre product with no ideological trappings, based on a case from 1951 and featuring a range of noted West German actors.

SINCE 1990

In July 1990 the West's currency replaced the East's, and by early October performances in downtown Berlin of Beethoven's Ninth Symphony and a massive fireworks display signaled the end to two Germanies. The shift back to Berlin as the sole capital heralded a shift in the political landscape, as the conservative government in power since 1982 gave way in 1998 to a center-left coalition of the Social Democrats and the Green Party, the most durable product of the dissenting generation of the 1960s. The Federal Republic subsequently joined the European common currency zone, and thus has continued its role as the pivotal state in an expanded European Union.

Established filmmakers—Beyer; Herzog; Wenders, going back and forth between Berlin and the United States; Schlöndorff; Kluge, with his social commentaries through private TV; and von Trotta—continue to make films. They have been joined by another generation: Tom Tykwer (b. 1965), Doris Dörrie, Christoph Schlingensief, Carolina Link, Romuald Karmakar, Andreas Dresen, Fatih Akin, Angela Schanelec, Jürgen Vogel, and Oskar Roehler. Some, like Tykwer, have had remarkable success in the mainstream, even internationally, whereas others operate domestically, not translating out of the natural German territories.

All depend in various ways on German cultural politics and government subsidy and financing measures. In 1997 several German films did well, managing over three million viewers, through sheer box office appeal: *Rossini* (1997), Helmut Dietl's satire on the vanity of Munich's film establishment; *Knockin' on Heaven's Door* (1997), by Thomas Jahn; and *Kleines Arschloch* (*The Little Bastard*, 1997), by Michael Schaack and Veit Vollmer. The industry remained dependent on TV productions, with the attendant influence of producers on content and on exhibition rights. To address this issue, Michael Naumann, on becoming Minister for Culture and the Media, called a meeting of interested parties in an attempt to reform the subsidy system away from its commercial emphasis, a move not favored by TV interests. At the same time, large amounts of investment were actually leaving Germany to buy rights in foreign productions. As many deals would simply never see a return, this phenomenon became known in the United States as "stupid German money," and the bubble subsequently burst.

Four categories of subject matter have most closely reflected Germany's circumstances at the turn of the century: reworkings of late-twentieth-century history, especially that of East Germany; comedies of social manners and gender relationships among young West German urban professionals; depictions of immigrant

and foreigner populations; and depictions of Berlin after the Wall. The wider historical past continues to circulate, more or less in the mainstream, and detective thrillers and road movies retain their appeal. Among the "reworkers," Andreas Kleinert (b. 1962) finished his training at DEFA just as it ceased to exist; yet he managed, in *Neben der Zeit* (Outside Time, 1995), to present an image of East Germany left behind by events and clinging to outdated habits. In 1999 he intensified that motif in a bleak picture of psychosis, *Wege in die Nacht* (*Paths in the Night*), which shows a former manager for the GDR leading an increasingly violent vigilante campaign against what he sees as the moral decay of the new Germany, until he himself becomes criminal and commits suicide. *Stilles Land* (*Silent Country*, 1992) by Andreas Dresen (b. 1963) takes a very "art house" form to show a provincial theater-group in the East overtaken in the midst of their rehearsals by the opening of the border, which confronts them with the existential question about their function in an indeterminate future. Tackling East Germany from a Western viewpoint, Detlev Buck's (b. 1962) *Wir können auch anders* (*No More Mr. Niceguy*, 1993) is a road movie about two country brothers who set off from the West to find their inheritance in the East; after hilarious adventures avoiding the law, they simply keep on heading east until they find an idyllic life in a Russian peasant community. *Goodbye Lenin!* (2003) by Wolfgang Becker (b. 1954) is an ironic tale of a young man who must pretend that East Germany still exists so as not to shock his fragile mother, who has just awakened from a coma that began before the fall of the Berlin Wall.

The mainstream of German production in the first half of the 1990s was characterized by lightweight comedies such as *Der bewegte Mann* (*Maybe, Maybe Not*, Sönke Wortmann, 1994), dealing with male gender identities and launching Til Schweiger (b. 1963) as the star of the time. Rainer Kaufmann's (b. 1959) *Stadtgespräch* (*Talk of the Town*, 1995) starred his partner, Katja Riemann (b. 1963), in a comedy of marital complications. Detlev Buck's *Männerpension* (*Jailbirds*, 1996), Sherry Horman's (b. 1960) *Frauen sind was Wunderbares* (Women Are Something Wonderful, 1994,) and Wortmann's *Das Superweib* (*The Superwife*, 1996) are all examples of a highly successful subgenre that presented German society as a sort of well-heeled sitcom driven by neurotic wisecracking. In the same general category of social comedy, Doris Dörrie has maintained her position, but her films, such as the episodic *Bin ich Schön?* (*Am I Beautiful?*, 1998), have a harder satirical and critical edge, depicting a society—as well as personal relations—given to meaningless consumerism.

Helmut Dietl's (b. 1944) satire *Schtonk!* (1992) is a darker film that returns to one of postwar filmmaking's regular motifs, Nazism. The film mocked the gullibility of editors of the popular magazine *Stern*, who were duped by forgers purporting to have Hitler's wartime diaries for sale. In it Götz George (b. 1938), a TV and film tough-guy star since the late 1960s, makes an outrageous appearance in a monstrous corset and dressing gown purported to be that of Hitler's henchman Hermann Goering. In 2004 *Der Untergang* (*The Downfall: Hitler and the End of the Third Reich*) by Oliver Hirschbiegel (b. 1957), which presents the last days of Hitler and his inner circle in the bunker under central Berlin, became an international success. The film was also the subject of much public debate for what some see as its relatively sympathetic treatment of Hitler as a human rather than as a monster. The director Joseph Vilsmaier (b. 1939)—whose films include *Stalingrad* (1993), *Comedian Harmonists* (1997), and *Marlene* (2000), the last two ostensibly biopics on a famous singing group and on Marlene Dietrich—produces for the mainstream, with significant production values; his work filters historical perspectives through personalities.

With the onset of the "Berlin Republic"—a concept arising from the post–Cold War relocation of the German government to that city—Berlin itself has become the focus of many films. Andreas Dresen's *Nachtgestalten* (*Night Shapes*, 1999) reveals the city's ugliness, its patient narrative the counterpart of the frenetic comedies of the early 1990s. By far the most widely acknowledged Berlin film has been Tom Tykwer's *Lola rennt* (*Run Lola Run*, 1998). Using parallel narratives and other devices from computer games, Tykwer's story of lovers threatened with extinction by their existence on the fringes of the underworld cemented his reputation internationally as one of German cinema's representative directors and propelled the film's female lead, Franka Potente (b. 1974), toward Hollywood.

In the mainstream genres, the thriller continues to appear and is especially prevalent on German TV. Examples include *Solo für Klarinette* (*Solo for Clarinet*, 1998), *Schattenboxer* (Shadow Boxer, 1992), *Kurz und schmerzlos* (*Short Sharp Shock*, 1998), and *Die Mutter des Killers* (The Mother of the Killer, 1996), and parodies like *Die Musterknaben* (The Favorite Sons, 1997) and *Zugvögel— . . . einmal nach Inari* (*Train Birds*, also known as *Trains'n'Roses*, 1998). Psychological thrillers include *Der Totmacher* (*Deathmaker*, 1995) and *Die Unberührbare* (*No Place to Go*, 2000), both German film prizewinners. *Die innere Sicherheit* (*The State I Am In*, 2000), also a prizewinner, investigates the 1960s generation, whose revolutionary visions are reduced to the shiftless existence of a couple still sought for alleged terrorism, together with their daughter, who knows no other existence than the one "underground." In 2004 *Die Fetten Jahre sind vorbei* (*over the Edukators*), the first

German film for eleven years in competition at the Cannes Film Festival, took up the topic of activism and opposition in present-day Germany. In a satisfyingly ambiguous conclusion, the possibility of partnership across the generations is left open.

The industry maintains its own Spitzenorganisation (SPIO) in Wiesbaden as an umbrella for the major professional organizations. SPIO also supervises patents and copyrights and the TV rights to films, and decides on the German industry's entries for local and international festivals. It can also enforce the rulings of the Freiwillige Selbstkontrolle, the industry's voluntary self-censorship organization, established in 1949 after the model of the American Motion Pictures Producers and Distributors of America. In 1951 a film evaluation office, the Filmbewertungsstelle Wiesbaden, was established, the assessments of which can promote a film's chances of subsidy or block any hope of distribution. Germany's constitution guarantees freedom of expression, forbids censorship, and declares the federal states' rights to administer local exhibition; given the system of self-censorship, coupled with the subsidy system, government at various levels has great, if indirect, influence on what can be made and shown.

The Spitzenorganisation also produces a yearly compilation of statistics on the industry. In 2004 figures for premiered films for 1993 to 2003 show a gradual increase to around eighty per year, with a relatively constant proportion of foreign co-productions. The fragmented nature of the industry is evident in the fact that scarcely any production company managed more than one premiere; and the crucial importance of support from the film industry's rival, TV, is evident in the almost 50 percent of co-productions with companies in this sector. Showings of film on TV have burgeoned since the mid-1980s and, together with video production, sales, and rentals, show the biggest returns. This contrasts with the film industry's employment structure, where the overwhelming numbers, about 25,000 out of 37,000 members, are in film and video production. Regarding average production budgets, the German film industry is a global second-rank industry. Internationally, the chief market

for German films is, not surprisingly, Europe, with over three times the turnover of exports compared with the next biggest market, the United States. The cinema audience is overwhelmingly young: ages fourteen to twenty-nine, with a sharp decline from about thirty up. For cinema visits, Germany ranks under the EU average, with scarcely two per head in 2003, and far behind the United States, at 5.4. However, the bottom line for the German industry is the dominance of the US product over the German home market: over 40 percent of films exhibited in 2003, and almost 80 percent of the total turnover, were from the United States.

For the foreseeable future *Filmkultur* is likely to remain a secondary, "foreign-language" cinema, dominated at home and abroad by the English-speaking industry led by Hollywood. In 2003 the introduction of film study in the German school system added to the ongoing debate on what constitutes the German artistic canon. Thus questions about the role of German cinema—in terms of national identity, high versus low culture, social relevance, commercial status, and international significance—have achieved an unprecedented public prominence.

GREAT BRITAIN

Any consideration of the cinema of Great Britain raises two key problems. First is the dominance of Hollywood cinema. English is the primary language of British cinema and, of course, of Hollywood. Britain's decline in the twentieth century has been matched by the rise of the United States as an economic power. As a key American export, Hollywood film served as a considerable influence on and a hindrance to the development of cinema in Great Britain. The absence of any language barrier made the British market an attractive one for Hollywood. Throughout most of its history, British cinema has struggled to compete against the Hollywood monolith.

The second problem is the very notion of Great Britain itself, which is hardly a unified whole, but rather is composed of other nations, prominently England but also Scotland and Wales. Additionally, Northern Ireland—which together with Great Britain constitutes the United Kingdom (UK)—must compete with other UK films as well as with the burgeoning film industry in the Republic of Ireland. In both a critical and popular sense, it is England that has been equated with Britain, and it is the English film industry, with its economic base in London, that has dominated British cinema. A further complication is the United Kingdom's ties to the European Union, which has led to an increase in co-productions where aspects of national identity tend to become subsumed.

Presently, the United Kingdom averages about one hundred feature films per year, but this number includes co-productions in which British interests may comprise only a minority stake. In the 1980s the average number of features produced was only forty-three, so current numbers represent a substantial rise. Changes in funding practices, as well as increased emphasis on co-productions, are leading causes of this apparent production boom. Funding was previously much more closely tied to exhibition, or at least to the possibilities of exhibition, either theatrically or on television. Current funding is primarily through the National Lottery, the monies from which are doled out by various regional film bodies, which are able to encourage production but rarely provide exhibition outlets. Anxiety over the state of the British film industry has been a recurring issue throughout the industry's history. In reality, Great Britain shares fears of Hollywood dominance with numerous other nations and yet, despite an ongoing inferiority complex, has a cinema history that is rich, varied, and reasonably successful.

EARLY CINEMA PIONEERS

Great Britain was a key early adopter of emerging cinema technology. In fact, it could be argued that British cinema history predates even the arrival of the Lumière Brothers in 1895. Augustin Le Prince (1842–1890), who disappeared in 1890 while returning from a visit to his brother in his native France, was reputed to have successfully experimented with motion pictures. Patents for which Le Prince applied, as well as remnants of his work, suggest that his experiments were successful, yet his work seems to have had no real influence, and he remains a curious cinematic footnote. Instead, it is the first Lumière show, in London in February 1896, that may be said to have inaugurated cinema exhibition in Great Britain.

It was not long after this that homegrown British films began to emerge. There were three main centers of

production for these early films: London, Yorkshire, and Brighton and Hove. The period between 1895 and 1905 can be seen as one of great productivity and influence, with the early British films being as innovative and prolific as their counterparts in France and the United States. Perhaps it was the influence of music hall traditions that enabled British film to emerge quickly as a world leader. Certainly, a great deal of the content of the films was derived from existing music hall acts, and undoubtedly the two popular forms shared audiences, particularly in more provincial towns and cities. Robert W. Paul (1869–1943) constructed a makeshift studio on the rooftop of the Alhambra theater in Leicester Square, making frequent use of music hall performers within his films. Another London-based company, the British Mutoscope and Biograph Company, constructed its film studio at the rear of the Tivoli Music Hall. In addition to the music hall, magic lanternists and other late-nineteenth-century showmen quickly adopted film as a new form of entertainment.

One of Great Britain's most significant film pioneers was Cecil Hepworth (1874–1953), the son of a renowned magic lantern showman. Hepworth began his film career assisting another key pioneer, the inventor and sometime filmmaker Birt Acres (1854–1918), who had collaborated with R. W. Paul (before the two bitterly fell out). After working for transplanted American producer Charles Urban at Maguire and Baucus, Hepworth founded his own company, along with his cousin, Monty Wicks, in 1899, under the name Hepworth and Company, building a studio in the back garden of a house in Walton-on-Thames, a suburb of London. In 1904 the company became the Hepworth Manufacturing Company, and Hepworth turned his attention away from directing and worked exclusively as a producer. His company was responsible for a number of key early films, the most notable of which was *Rescued by Rover* (1905), directed by Lewis Fitzhamon (1869–1961). This film, with its narrative of a "gypsy" kidnapping of a baby followed by its rescue, seems to have been the inspiration for D.W. Griffith's first film, *The Adventures of Dollie* (1908). In technical terms, *Rescued by Rover* was a major innovation, and it was also a tremendous audience pleaser. Despite its groundbreaking elements, the film arrived near the end of the early period of British innovation; so rather than heralding a move forward, it seems more the peak of a primitive mode of filmmaking that would soon be eclipsed by technological and economic developments in other countries.

Other early British filmmakers also influenced developments elsewhere. A key figure in Brighton and Hove was James Williamson (1855–1933), a pharmacist and photographer who began making films in 1897 under the Williamson Kinematograph Company name. Williamson's *Fire!* (1901) was a tableaux film that employed the local Hove fire service in constructing a rescue narrative that included shots from both outside and within a burning building. The film was an obvious influence on Edwin S. Porter's later American film, *Life of an American Fireman* (1903). Williamson enjoyed success with his comedies as well as increasingly complex dramas until 1910, when changes in the economic models of international cinema led him to place his focus on the manufacture of camera equipment. George Albert Smith (1864–1959) of Brighton had enjoyed earlier success as an innovative operator of magic lantern shows, and he brought this same flair for innovation to the cinema. His films seem to have been less influential than those of some of his counterparts; rather, it is his technical developments that had the most lasting effect. Smith made innovative use of close-ups in such early films as the rather self-explanatory *As Seen through a Telescope* (1900) and *Grandma's Reading Glass* (1900); he also successfully incorporated trick elements such as reverse motion in *The House That Jack Built* (1900). His later career was devoted to the development of color in film through a two-color additive process known as Kinemacolor that he promoted along with Charles Urban.

This first decade of British film saw other noteworthy pioneers emerge, including the aforementioned R. W. Paul, whose Paul's Animatograph Works produced films by a number of other key figures. These included the magician W. R. Booth (1869–1938), whose films, including *The "?" Motorist* (1906), employed trick photography in the mode of Georges Méliès. Additionally, Frank Mottershaw's *A Daring Daylight Burglary* (1903), made for his Sheffield photo company, is a fast-paced action film that is said to have influenced Porter's *The Great Train Robbery* later that same year.

Still, despite its early influence, British cinema seemed to wane as other cinemas became more progressive and technically innovative. A reliance on adaptations of noted British novels and stage plays, while appeasing nationalist sentiments, left the British cinema stagy and wooden, with proscenium arch framing and side-to-side, stage-style movement dominating the structures of films. As the market for cinema changed, British companies were either reluctant or ill-prepared to meet the needs of the industry. Even before World War I, American companies were establishing offices in Britain, and exhibitors soon had an abundance of well-made titles at their disposal. Most of the early British pioneers had ceased making films, while those who continued, such as Hepworth, struggled. His one-hour version of *Hamlet* in 1913 was indicative of the reliance on stage adaptations. In 1923 he adapted Helen Mathers's 1875 novel, *Comin' Thro the Rye*, his second adaptation of the novel,

and his company, renamed Hepworth Picture Plays, was unable to survive its critical and commercial failure. While it was an intrinsically British film in terms of subject matter, *Comin' Thro' the Rye* was made in a style that was outmoded, and it was no competition for the much slicker products arriving from Hollywood and elsewhere.

QUOTAS, QUOTA QUICKIES, AND SOUND

Responding to growing concerns over the increasing American dominance of the domestic market for films in Britain, Parliament in 1927 passed the Cinematograph Films Act, the first government intervention aimed at protecting the British film industry. The passage of this legislation was linked to the development of a growing cinema culture in Great Britain, which was also expressed through the founding of The Film Society in London in 1925 and the growing critical attention paid to film in the print media, including the specialist film magazine *Close Up*, which first appeared in 1927. The Act introduced a quota mandating a minimum allotment of screen time to British films that began at 5 percent in 1927 and was to rise to 20 percent by 1936.

The immediate effect of the legislation was a sharp rise in the number of British production companies, including British International Pictures, founded by John Maxwell as part of the vertically integrated Associated British Picture Corporation (ABPC) and the Gaumont-British Picture Corporation (GBPC), which merged a number of distribution, production, and exhibition companies under the auspices of Isidore Ostrer. The majority of the new companies floundered because their output was largely of inferior quality. The arrival of sound further hastened their demise. British International succeeded, as its Elstree studio was an early adopter of sound recording equipment. The larger company (ABPC) also controlled ABC Cinemas, a major British chain, guaranteeing itself an exhibition outlet for its productions. Gaumont-British survived because it too held extensive exhibition interests, and also because of a deal that Ostrer had struck with American producer William Fox, although the company remained under British control. This retention of control was not always the case in the industry. Significantly, the quota applied to films that were produced by a company constituted in the British Empire rather than specifically British-controlled companies. This led to the development of "quota quickies," films that satisfied the basic requirements of the quota system but that did not require large investment; these were frequently made by subsidiaries of the existing American majors, either within Britain or in some cases in Canada. While many critics have dismissed the bulk of these quota quickies, there is no doubt that they resulted in a boom in British cinema production. In fact, exhibitors regularly exceeded the quota requirements that had been established.

The era saw the development of a viable and sustainable film culture in Britain. Numerous key figures emerged at this time, figures who would continue to be influential in British cinema in the ensuing decades. Gaumont-British had joined forces with Gainsborough Studios in 1927 and Gainsborough co-founder Michael Balcon (1896–1977) became head of production for both companies. Gaumont-British focused on the "quality" films, while Gainsborough was to create works with more popular appeal. Among the directors who had worked under Balcon at Gainsborough was Alfred Hitchcock (1899–1980). Hitchcock had his start in the film industry working on design and creating titles for the London office of the American firm Famous Players-Lasky (later Paramount). When the firm left London, Hitchcock moved to Gainsborough, where he was exposed to its German-based productions through the company's ties to Ufa. As part of his work for Gainsborough, Hitchcock was on the set of F. W. Murnau's *The Last Laugh* (1924), and the influence of German expressionism is evident in his early British work, including *The Lodger* (1927).

Hitchcock directed Britain's first feature-length sound film, *Blackmail* (1929). He actually shot two simultaneous versions of the film—one with sound, the other silent, as many theaters were not yet equipped with sound technology. The film was made for British International Pictures, which had lured Hitchcock away from Gainsborough with a large contract, expecting that Hitchcock would shoot only a portion in sound, but the director instead shot most of the film in sound. The film was a huge critical and commercial success, with even *Close Up*, whose critics were so often harshly critical of British film, willing to offer praise. Following his association with British International Pictures, Hitchcock returned to his working relationship with Balcon, making, among other films, *The Man Who Knew Too Much* (1934) and *The 39 Steps* (1935) for Gaumont-British. After Balcon left to become head of production at MGM-British, Hitchcock made *The Lady Vanishes* (1938) for Gainsborough, though the film was commissioned by MGM. The latter film was the third screenplay written by Frank Launder (1906–1997) and Sidney Gilliat (1908–1994), who would continue to be significant contributors to British cinema in writing, directing, and producing well into the 1970s.

Gaumont-British and Gainsborough aided the careers of other significant figures within British cinema. Among these were the directors Anthony Asquith (1902–1968) and Victor Saville (1895–1979). As a founding

ALEXANDER KORDA

b. Sándor Lászlo Kellner, Pusztatúrpásztó, Austria-Hungary (now Hungary), 16 September 1893, d. 23 January 1956

Hungarian-born, Korda became a naturalized British subject in 1936 and was the first film industry figure to be knighted, in 1942. Yet the issue of nationality and his relationship to the British film industry has always been a thorny one. Undoubtedly Korda played a central role in the development of the industry in Great Britain. His *The Private Life of Henry VIII* (1933) represented a major breakthrough for British cinema, paving the way for successes in the American market. At the same time, Korda's devotion to "prestige" pictures, ambitious costume films that most frequently chronicled key historical figures and that made use of theatrical traditions, encouraged the industry to strive for production standards it could not sustain, contributing to the industry's economic collapse in 1937.

By the time Korda came to Britain he had already established his filmmaking credentials in Hungary. After World War I, the unstable political situation and the rise of anti-Semitism in Hungary led Korda first to Vienna and then to Berlin, where his films enjoyed success. Then, after three dismal years in Hollywood, Korda moved to Britain in 1931.

His first British film was the quota quickie *Service for Ladies* (1932), soon followed by his first film for his own company, London Pictures, *Wedding Rehearsal* (1933), a film that established Korda's use of cherished national symbols in its opening shots of the Houses of Parliament and Westminster Abbey, as well as his use of familiar national sterotypes amongst his characters. Following the success of *The Private Life of Henry VIII*, Korda continued to make lavishly produced biopics, such as *The Private Life of Don Juan* (1934) and *Rembrandt* (1936). Neither film came close to matching the commercial success of *Henry VIII*, although *Rembrandt*, featuring another memorable performance from Charles Laughton, who had won an Acdemy Award for his portrayal of Henry VIII, is considered by many critics to be Korda's finest directorial effort.

After the commercial failure of the latter two biopics, Korda turned his attentions to producing, running London Films as well as the large studio he had built at Denham. At the outbreak of World War II, Korda was back in the United States (some commentators have suggested he was there covertly on behalf of the British government). He returned to directing with *That Hamilton Woman* (also known as *Lady Hamilton*, 1941), a period piece about the affair between Admiral Nelson and Lady Emma Hamilton that actually served as a propaganda film, with Napoleon established as an obvious parallel to Hitler. Korda's final two directorial efforts came after the war, with *Perfect Strangers* (1945) and the Oscar Wilde adaptation *An Ideal Husband* (1947). He died of a heart attack in London.

RECOMMENDED VIEWING

As Director and Producer: *Wedding Rehearsal* (1933), *The Private Life of Henry VIII* (1933), *Rembrandt* (1936), *The Lion Has Wings* (1939), *That Hamilton Woman* (1941), *An Ideal Husband* (1947); As Producer: *The Ghost Goes West* (1935), *The Drum* (1938), *The Four Feathers* (1939)

member of The Film Society, Asquith was able to incorporate his firsthand knowledge of Hollywood with his knowledge of European cinema. Asquith's early career indicated promise but was not met with much critical acclaim. In 1932 he joined Gainsborough, where he was involved in a range of projects and duties. Later in the decade he co-directed *Pygmalion* (1938), an adaptation of the George Bernard Shaw play, with the film's star, Leslie Howard. With this film Asquith finally received the break that would help propel him to greater recognition

Alexander Korda. **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

through films such as *Fanny By Gaslight* (1944), made for Gainsborough, and *The Importance of Being Earnest* (1952), which starred Michael Redgrave (1908–1985), as well as a number of collaborations with playwright Terence Rattigan, including *The Winslow Boy* (1948) and *The Browning Version* (1951).

Gainsborough and Gaumont-British were more significantly involved in the early career of Victor Saville. Saville had first entered film as a producer, along with Michael Balcon, in 1923 with *Woman to Woman* (directed by Graham Cutts). When Balcon became head of production at Gaumont-British, Saville became the studio's most prolific director with films such as *Hindle Wakes* (1931) and *Evergreen* (1934). After a brief time as an independent producer, Saville found himself producing films for MGM, including *The Citadel* (1938), a very successful adaptation directed by the American, King Vidor, followed by an even more successful *Goodbye Mr. Chips* (1939), directed by Sam Wood. The start of World War II found Saville in Hollywood, where he remained producing and then directing films for MGM—except for a brief stay as a director at Columbia—until his return to Britain, briefly, to shoot films in 1949 and 1952, and then permanently in 1960.

The success enjoyed by the likes of Saville, and by studios such as Gaumont-British and British International, was overshadowed by the breakthrough success of a film made by an independent company affiliated with United Artists. Alexander Korda's *The Private Life of Henry VIII* (1933) was produced by Korda's own London Films. United Artists was willing to take a chance on a British film being acceptable for the American market and had a true success on its hands when the film became the biggest international British hit to that point. Despite the fact that Korda was Hungarian and had previously failed in his attempt to make it in Hollywood, the film's subject matter was resolutely British. The success of the film led to renewed enthusiasm within the British film industry and indicated that it was possible for British film to compete with Hollywood. Korda's film has the distinction of being the first British film to win an Academy Award®, with Charles Laughton taking the Oscar® for Best Actor. Unfortunately, Korda's subsequent films could not match the success of *The Private Life of Henry VIII*, and the industry's optimism quickly waned as the creation of lavish "prestige" pictures could not be sustained and further success in the American market did not seem to be forthcoming. Ironically, it was more frequently in the quota quickies where the next generation of British film talent cut its teeth. Directors such as Michael Powell (1905–1990) as well as actors including Laurence Olivier (1907–1989), Vivien Leigh (1913–1967), John Mills (1908–2005), and James Mason (1909–1984) all found opportunity in the low-budget sector.

While American-affiliated companies continued to churn out the low-budget quickies, the British companies invested more heavily in expensive films aimed at cracking the American market. Asquith moved to London Films to shoot *Moscow Nights* (1935), while Saville's Victor Saville Productions was among those who made films for Korda in this era. In 1937 the bubble burst, and by 1938 the boom was definitely over. Denham Studios, which Korda had constructed for the production of "prestige" pictures, was losing money and eventually was merged with J. Arthur Rank's Pinewood Studios. The second Cinematograph Films Act was passed in July 1938, and among its regulations was an attempt to end the practice of quota quickies by instituting a minimum cost of £7,500 and permitting films that cost three times the minimum to count for double quota assessment. The onset of World War II, following a severe decline in production after the bust of 1937, meant that the effects of the 1938 act were never really felt.

JOHN GRIERSON AND THE DOCUMENTARY MOVEMENT

Parallel to the developments in feature filmmaking, another influential response to American dominance of British cinema emerged. The British documentary movement, led by the Scot, John Grierson (1898–1972), offered a distinctive riposte to Hollywood by focusing on fact and public information. While studying in the United States under a Rockefeller fellowship from 1923 to 1927, Grierson developed his interest in mass communication, in which he perceived the potential to educate the public and influence opinion. By making films that were not dependent upon box-office receipts, Grierson saw an opportunity to address social and political issues that were unlikely to be covered by the commercial film industry. At the same time, however, his reliance on government and industrial sponsors created restrictions on subject matter, and most of the films made under Grierson's auspices seem like public-relations exercises rather than cinema providing any sustained social or political analysis. Nonetheless, many critics see Grierson's influence as crucial in the development of British cinema. His approach to documentary filmmaking has positioned a "realist" orientation as one of the fundamental tenets of what is often identified as British cinema. This is in sharp contrast to some of the more escapist tendencies seen in many of the "prestige" productions of commercial cinema in Britain during the 1930s.

Grierson was the director of only one film, *Drifters* (1929), a documentary about herring fishing in the North Sea. In 1929 he helped set up the documentary film unit of the Empire Marketing Board under the direction of the board's secretary, Stephen Tallents. The development of such official and public-sector film units is a key component of Great Britain's cinema history and has served as a model for subsequent developments in both the public and private spheres. In 1933 the Empire

Marketing Board was dismantled and the film unit was moved to the General Post Office. Following the outbreak of World War II, the unit was taken over by the Ministry of Information and became the Crown Film Unit. By 1940 Grierson was in Canada, where he helped found the National Film Board.

Despite its ties to the "real," the documentary film movement in Great Britain was in many ways an innovative form, concerned with aesthetics and a vital contributor to the development of an identifiable national cinema. With films such as *Industrial Britain* (1933), Grierson introduced a top-down, voice-of-god narration style whose purpose seemed to be public education. *Industrial Britain* was initially directed by Robert Flaherty, and Grierson had persuaded Gaumont-British to distribute the film. Unsatisfied with Flaherty's methods, however, particularly the American's tendencies toward lyrical images, Grierson took control of the film, shot additional material, and added the authoritative voice-over that is characteristic of his work. Two GPO films, *Coal Face* (1935), directed by Alberto Cavalcanti (1897–1982), and *Night Mail* (1936), directed by Harry Watt (1906–1987) and Basil Wright (1907–1987), make use of the poetry of W. H. Auden and the music of Benjamin Britten in an attempt to combine more formal aesthetic concerns in addition to addressing a sense of "Britishness." Two of the figures to emerge within the movement were Cavalcanti, who succeeded Grierson as director of the GPO unit in 1937, and Humphrey Jennings (1907–1950), whose early collaborations with Cavalcanti at the GPO were often criticized as too experimental. The Brazilian-born Cavalcanti had been involved with the French avant-garde cinema of the 1920s, while Jennings was a leading modernist and surrealist with concurrent interests in painting, poetry, and theater, among other pursuits.

It was in his wartime documentaries that Jennings truly shone. His contributions to the Crown Film Unit's efforts are among the most memorable and critically discussed of the era. These include *Listen to Britain* (1942, with co-director Stewart McAllister), a film without commentary that instead relies upon associative montage to connect varied images through sounds, helping to create a sense of social cohesion through mass observation. *Fires Were Started* (1943) stretches the definition of documentary by presenting a fictional narrative shot in a documentary style so that it seems to capture the reality of London during the blitz. *A Diary for Timothy* (1945) comes after the end of the war but is without doubt a wartime documentary. The film uses the fictional diary of a baby, Timothy, who was born in 1944 and whose first year of life has been connected to the end of the war, to "observe" the nation while also addressing the future and reinforcing sense of community, the heart of all of Jennings's films.

WARTIME FEATURE FILM PRODUCTION

In 1940 Cavalcanti left the Crown Film Unit to become an associate producer and director at Ealing Studios. That such a key figure of the British documentary movement could operate within one of the country's emerging commercial production companies reinforces the influence that documentary realism was to have on the future of British cinema. After taking over as head of Ealing in 1938, Balcon had brought in a number of documentary filmmakers as part of his attempt to have the studio make films that would more accurately reflect the national character than had been the case before. Ealing was one of only three pre-war British studios to continue operating during the war, along with Korda's London Studios and Gainsborough. All three studios made films supporting the war effort and reinforcing a sense of community, largely through representing the lives of ordinary Britons in wartime. The film that perhaps best embodied this approach is the aptly titled Gainsborough production *Millions Like Us* (1943), scripted and directed by Launder and Gilliat. The film focuses primarily on a group of ordinary women who take wartime work in an airplane factory. The film employs numerous conventions drawn from documentary traditions and points to the increasing significance of social realism as a hallmark of British film. The importance of community and the everyday is also evident in Cavalcanti's Ealing film, *Went the Day Well?* (1942), in which a small Oxfordshire village is infiltrated by Nazis before the villagers realize it and strike back. The film's incorporation of idealized aspects of everyday village life, alongside moments of action and violence, reinforces the manner in which national character was being reflected.

While the turn toward realism is a significant aspect of British cinema in this period, it was not the only option pursued by producers or favored by audiences. It has been argued that critics championed realism, and hence it was films that corresponded to realist ideals that received the most critical acclaim, particularly in discussions related to a national cinema, both at the time and among the subsequent generation of scholars and critics. For filmgoers, though, the consensus was not so clear: Gainsborough made numerous popular escapist melodramas in this period. The theatricality favored by Korda in the 1930s had not entirely disappeared following the slump of the late 1930s. While the Gainsborough melodramas were frequently derided as too far-fetched, with settings either in exotic locales or a "fantasy" past, they did have a particular appeal for audiences, especially the female audience for which the war had brought a new

Roger Livesey and Wendy Hillier in* I Know Where I'm Going *(Michael Powell, 1945). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

economic and sexual independence. Stars such as James Mason (1909–1984) and Margaret Lockwood (1916–1990) came to embody aspects of sexual desire that were not being found elsewhere on British screens. The escapist, melodramatic nature of the wartime Gainsborough films was perhaps most evident in *Madonna of the Seven Moons* (Arthur Crabtree, 1945), which is set in what is meant to be 1930s Florence but seems more an exotic admixture of southern European stereotypes and English mannerisms and accents. Despite its many contrivances, *Madonna of the Seven Moons* was a commercial success, indicating that British audiences were more than happy to indulge in artifice and escapism.

Key purveyors of such artifice were Michael Powell (1905–1990) and his collaborator Emeric Pressburger (1902–1988). Powell had already directed a number of quota quickies and low-budget features before first collaborating with Pressburger in 1939. While their early wartime propaganda features, such as *49th Parallel* (1941), set in Canada and starring Laurence Olivier, helped establish their reputation, it was the more lavish spectacles they created for their own production company, The Archers, that truly made the pair vital figures in British cinema. The mysterious and spiritual *A Canterbury Tale* (1944), in which a group of modern-day pilgrims makes its way to Canterbury cathedral against the backdrop of World War II, demonstrated the pair's willingness to push boundaries both narratively and visually. In *Black Narcissus* (1947) and *The Red Shoes* (1948), Powell and Pressburger operated even more concretely within an expressionist mode of cinema; the former film was a sensual melodrama set in the Himalayas, while the latter was set in the world of ballet, where an ambitious young ballerina is torn between love and ambition.

Other "quality" films of the era reflected this dynamic between realist and expressionist modes of cinema. For example, a film that seems, at first glance, to be

a "heritage" costume drama is Laurence Olivier's *Henry V* (1944), which uses the Shakespearean play to create a propaganda film. Henry's leadership of an English army defeating a European foe after crossing the English Channel had obvious parallels to events of the day, particularly the Normandy campaign. The film itself is dedicated "To the Commandos and Airborne Troops of Great Britain," making the ties even more explicit. Yet this Technicolor extravaganza also works well as a form of popular entertainment and taps quite effectively into the aspects of heritage Britain mined by Korda a decade earlier.

Henry V was produced by Two Cities films, a company that had come into being in 1937 and was guided by an Italian, Filippo Del Giudice. Not unlike the Hungarian-born Korda, Del Giudice was a non-Briton spearheading a company that primarily focused on making quintessentially British films. In order to secure adequate financing for the ambitious *Henry V*, Del Giudice allowed the Rank Organisation to obtain a controlling interest in Two Cities. It was one of numerous acquisitions made by the ever-expanding Rank company. The Rank Organisation, under the leadership of its founder J. Arthur Rank, was the dominant British film company throughout much of the 1930s, 1940s, 1950s, and into the 1960s. By 1946 Rank's holdings included five studios, a number of production companies, a distribution arm, and more than 650 cinemas. Rank's vertical integration gave it a position of prominence in Britain comparable to the Hollywood majors in the US. Among the production companies that Rank acquired was Gainsborough in 1936. For the first decade Gainsborough was run relatively autonomously, but starting in 1946 Rank intervened more directly in the operations at the studio, and it slowly lost its autonomy as the Rank Organisation's consolidation began to point to an era where making films with wide appeal, rather than innovative films, would become an increasingly dominant trend.

POSTWAR FILM

The successes of the wartime cinema suggested that the cinema of Great Britain had reached a new level of maturity and was poised to flourish and possibly escape from the shadow of Hollywood. There were some notable successes, including two films adapted from Graham Greene (1904–1991) novellas. One, *Brighton Rock* (John Boulting, 1947), starred a young Richard Attenborough (b. 1923) as Pinky Brown, the teenaged leader of a gang of Brighton thugs. The second, *The Third Man* (1949), directed by Carol Reed (1906–1976), was a thriller set in divided postwar Vienna and starred Joseph Cotton and Orson Welles; some have claimed it as the greatest British film of all time. Yet while the immediate postwar years held a great deal of promise, the cinema of that era did not necessarily live up to the expectations for it. By the 1950s the British market was effectively controlled by two firms, Rank and Associated British Picture Corporation (ABPC). Additionally, cinema attendance declined from the peak of the war years. As indicated by Rank's increased intervention in Gainsborough, consolidation meant that costs could be reined in, so that while money was still lavished on quality films being made by bigger-name directors, the bulk of the company's output was material that would fill out programs in Rank-owned theaters. Rank also hoped to make greater inroads into the American market and saw the bigger-budgeted epics as a means of achieving this. A number of Britain's key directors in effect became independent contractors to Rank, and producing such films as Powell and Pressburger's *Black Narcissus* and *The Red Shoes* and David Lean's (1908–1991) *Brief Encounter* along with his subsequent success, *Great Expectations* (1946).

Most key personnel left Gainsborough after Rank began his interference in 1946. Rank named Sydney Box the new head of Gainsborough, hoping that Box could continue the studio's commercially successful tradition of melodrama. Box, however, was more interested in social realism, and the period of Box's leadership, in which he was hampered by a myriad of organizational problems, saw a dramatic decline in the studio's box-office appeal until Rank closed Gainsborough in 1950. One key personnel move made by Box during his short tenure was the appointment of his sister, Betty Box (1915–1999), to head of production at Gainsborough's Islington studio. While she struggled under difficult conditions, Box established herself as a significant producer, and once Gainsborough closed, she continued to work for Rank at Pinewood Studios. Her biggest success was with *Doctor in the House* (1954), the first film in a long-running series. *Doctor in the House* starred Dirk Bogarde (1921–1999), whose success in the title role helped establish him as the "Idol of the Odeons." Bogarde dominated the British box office and popularity polls through much of the 1950s, reprising his Doctor role in three sequels as well as starring in another Betty Box–produced film, *A Tale of Two Cities* (1958), an adaptation of Dickens's novel. Bogarde's later career was marked by more serious roles, beginning with *Victim* (1961), the first British film to deal explicitly with homosexuality, and including Joseph Losey's (1909–1984) *The Servant* (1963) and *Accident* (1967).

Bogarde's popularity in the 1950s was tied to his involvement in genre films, which had become a commercial staple of the British market. Ealing Studios under Michael Balcon had emerged from the war with a

MICHAEL POWELL and EMERIC PRESSBURGER

Michael Powell, b. Bekesbourne, Kent, England, 30 September 1905, d. 19 February 1990
Emeric Pressburger, b. Miskolc, Austria-Hungary, 5 December 1902, d. 5 February 1988

As Britain's most famous producing-directing team, Powell and Pressburger divided critical opinion between those who demanded social realism within cinema and those who supported an auteurist vision. With the rise of auteur theory in journals such as the UK-based *Movie*, the work of Powell and Pressburger received a more positive critical reevaluation. At the box office, the duo's fantastical, mystical tales enjoyed great success.

A pair of propaganda films, *49th Parallel* (1941) and *One of Our Aircraft Is Missing* (1942), early in World War II won them admiration. In 1943 they established their own production company called the Archers, for which they made a succession of popular and significant films. The first was another propaganda film, *The Life and Death of Colonel Blimp* (1943), but as it was critical of the British military leadership, it was frowned upon by the War Office as well as by Winston Churchill.

A tale of modern-day pilgrims, *A Canterbury Tale* (1944) opens with a shot that suggests a Chaucerian past but then pans up to an airplane flying overhead. The film combines the duo's trademark stylistic flair with mysticism. That mysticism returned in *"I Know Where I'm Going!"* (1945), a romance shot in the Scottish islands with the war kept in the distant background. After the war the team continued to explore the exotic and fantastic with two classic melodramas, *Black Narcissus* (1947), about nuns establishing a religious community in the Himalayas, and *The Red Shoes* (1948), based on a Hans Christian Andersen fairytale about a ballerina torn between the composer she falls in love with and her tyrannical balletmaster. Both films enjoyed international success and were a key part of the brief postwar boom in British cinema. After 1949 the pair began making films for Alexander Korda, and the Archers name disappeared. Although they had some moderate successes as they tried to help Korda crack the international market, their success was nowhere near that of the previous decade. The pair went their separate ways after *Ill Met by Moonlight* flopped in 1957.

Before teaming with Pressburger, Powell had directed the thriller *Two Crowded Hours* (1931), followed by numerous quota quickies. The producer Joe Rock then allowed Powell to make a film of his own choosing, *The Edge of the World* (1937), shot in the Scottish Hebrides, the locale to which he would return for *"I Know Where I'm Going!"*. Following the end of his collaboration with Pressburger, Powell made the notorious *Peeping Tom* (1960). The negative reaction to his somewhat sympathetic portrayal of a sadistic killer all but ended Powell's career, though some critics later hailed the film as a masterpiece.

RECOMMENDED VIEWING

Powell: *The Edge of the World* (1937), *Peeping Tom* (1960); Powell and Pressburger: *49th Parallel* (1941), *One of Our Aircraft Is Missing* (1942), *The Life and Death of Colonel Blimp* (1943), *A Canterbury Tale* (1944), *"I Know Where I'm Going!"* (1945), *Black Narcissus* (1947), *The Red Shoes* (1948), *The Tales of Hoffman* (1951)

continued focus on representing national character. The studio had a highly favorable financing and distribution deal with the Rank Organisation that afforded it a great deal of autonomy, so it was Balcon's personal vision that largely drove the studio. It was in the genre of comedy, and specifically the emergence of what came to be known as the "Ealing Comedy," where the studio truly flourished.

When Ealing Studios was sold to the BBC in 1955, Balcon unveiled a plaque that read: "Here during a quarter of a century were made many films projecting Britain and the British character." This sensibility is what

Michael Powell (right) and Emeric Pressburger. **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

drove the Ealing Comedies and made them unique. They captured an almost quaint sense of Britishness, employing national stereotypes and placing realistic characters in unexpected situations, usually representing everyman's struggle against authority. Ealing had produced earlier comedies, but it was in 1949, with the successive release of *Passport to Pimlico* (directed by Henry Cornelius), *Whisky Galore!* (directed by Alexander Mackendrick), and *Kind Hearts and Coronets* (directed by Robert Hamer), that the Ealing Comedy tradition became firmly established. A number of successes followed, including Mackendrick's *The Man in the White Suit* (1951), *The Maggie* (1954), and *The Ladykillers* (1955) and Charles Crichton's *The Lavender Hill Mob* (1951). While the Ealing Comedies enjoyed success in both the American and Continental European markets, Balcon had hoped to produce films that would help to export his particular vision of British character. Charles Frend's biopic, *Scott of the Antarctic* (1948), and Basil Dearden's *The Blue Lamp* (1950), a crime thriller that had been a British success, failed to have the impact for which Balcon had hoped. As the British market declined in the 1950s, overseas markets became more important for the economic health of British studios. Balcon's inability to adequately gauge those markets is what inevitably led to the closing of Ealing Studios in 1955.

Another particularly British comic success has been the Carry On films, created by the team of producer Peter Rogers and director Gerald Thomas, which began with *Carry On Sergeant* (1958). This first film introduced the series's tendencies to poke fun at familiar British institutions, in this case National Service (which is somewhat akin to the American National Guard). As the series progressed, the humor became bawdier and the targets for satire extended beyond institutions and into other facets of British life, including familiar film and television genres in films such as *Carry on Screaming!* (1966) and *Carry on Spying* (1964). In many ways, once one gets beyond the sexual double entendres and other outlandish humor, the Carry On films seem to further Balcon's notions of "projecting Britain and the British character."

Carry on Screaming! and *Carry on Spying* spoof two other key genres to emerge in the 1950s and into the 1960s, the Hammer horror film and the James Bond spy thrillers, respectively. Hammer Films was established in 1948 when a company called Exclusive Films wound down. The managing director of Hammer was James Carreras (1909–1990), the son of one of Exclusive's co-founders. Carreras's attitude was that films were commercial products and thus needed to be profitable. He sought ways to cut costs while retaining quality, and the genre film was the answer. Horror was not the initial focus; rather, the company concentrated on producing films with characters already known to the audience, presuming that there would be a ready-made market. Characters were drawn from familiar radio shows and from well-known myths and legends, including figures such as Robin Hood and Dick Turpin. Later, using the familiar characters of Count Dracula and Baron Frankenstein, the studio established the genre for which it is best known. Following the success of a science-fiction-horror film, *The Quatermass Xperiment* (1955, directed by Val Guest), Carreras decided that Hammer should focus on another horror subject, leading to *The Curse of Frankenstein* (1957), directed by Terence Fisher. This was soon followed by another Fisher film, *Dracula* (1958), starring Christopher Lee. The company's continued willingness to adapt to the changing whims of the horror market, exploiting each subsequent trend, has kept it in business up to the present day, although it suffered through some lean times.

Another enduring British genre has been the cycle of James Bond films. While changing key actors over the years, including the lead on a number of occasions, and making changes that reflect shifting social and cultural norms, the series has remained relatively stable in terms of structure. James Bond, secret agent 007, represents a sophisticated, cynical, sexy, and stylish British masculine ideal. Starting with *Dr. No* (1962), directed by Terence Young, the series—based on the novels of Ian Fleming

(1908–1964)—has seen twenty official Bond films made as of 2002. The first actor to play Bond was a Scot, Sean Connery (b. 1930), who has remained a fan favorite. The ongoing significance of the Bond character, not only within Britain but also worldwide, was evident in popular debate in 2005 over the choice to play the next Bond; there was much dismay when producers opted for the Englishman Daniel Craig (b. 1968) for the role. The franchise started by producers Albert "Cubby" Broccoli (1909–1996) and Canadian Harry Saltzman (1915–1994) has created an enduring legacy within British cinema and around the world.

Saltzman came to the Bond franchise after having been a significant player in the emergence of a British New Wave in the 1950s. He had been a co-founder of Woodfall Films along with theater and television director Tony Richardson (1928–1991) and playwright John Osborne (1929–1994). The initial aim of Woodfall was to adapt the stage plays of Richardson and Osborne. Richardson's association with cinema involved friendships with some of the young writers from the influential critical journal *Sequence*, including the journal's co-founder, Lindsay Anderson (1923–1994), and Karel Reisz (1926–2002). It was with Reisz that Richardson co-directed his first film, *Momma Don't Allow* (1956), a Free Cinema documentary capturing the youthful energy of the Wood Green Jazz Club in North London. Free Cinema gained its name because it operated outside of the constraints of the commercial cinema. The name was originally appended to a showing of short films programmed by Anderson, Reisz, and Richardson, including their own work. The name soon came to apply to the work itself of Anderson and his cohorts. Significant to the success of Free Cinema was the funding the films received from the British Film Institute's (BFI) Experimental Film Fund. The BFI was involved in film production in Great Britain from 1952 until the closing of its Production Board in 1999. The fund was initially aimed at promoting technological development in film and supporting new filmmakers for whom other support would be hard to come by. By the end of the 1950s it was this latter initiative that became the primary focus of the Fund. The key figures of the Free Cinema movement were among the first to benefit from this initiative, which helped launch the careers of many notable British directors, including Ridley Scott (b. 1937), his brother Tony (b. 1944), Peter Watkins (b. 1935), Ken Russell (b. 1927), and numerous other figures who would make their mark on British and world cinema in the ensuing decades.

The approaches to drama of Osborne and Richardson closely matched the concerns of the Free Cinema filmmakers, and Richardson's films became a key part of the social realism movement. He adapted two of Osborne's plays, *Look Back in Anger* (1958) (a play that contributed to the coining of the term "angry young men" to describe the key players of the era) and *The Entertainer* (1960), before turning more resolutely to a realist aesthetic in *A Taste of Honey* (1961) and *The Loneliness of the Long Distance Runner* (1962). These latter two films were part of the New Wave cinema referred to as "kitchen sink films," in reference to the frequency in which drab locations such as working-class kitchens appeared in the films as markers of class and place. These films tended to focus on the plight of working-class males as they came to terms with a shifting economy, moving away from heavy industry and toward consumerism. This was certainly the focus of Reisz's *Saturday Night and Sunday Morning* (1960), set (and shot) in Nottingham, whose main character, Albert Finney's Arthur Seaton, came to embody the epitome of the genre's Northern working-class male.

A key issue here was voice. While earlier films had represented the working class, the workers were—much as in Griersonian documentaries—spoken for or represented on screen by others, who spoke with theatrical pronunciations (often called Received Pronunciation [RP] English, or more colloquially, BBC English). In the British New Wave, real working-class lives and concerns were placed on screen. The relaxation of censorship toward the end of the 1950s, and the fact that these initial films were not as constrained as others by commercial interests, meant that authentic issues could be brought to the screen and authentic voices and dialects could be heard. This was a key era for the development of social realism in British cinema, helping to cement the importance of social realism as part of a national cinema in Britain.

THE 1960s AND 1970s

The year 1960 saw the release of Michael Powell's *Peeping Tom*, a film in which serial killer Mark Lewis (Carl Boehm) films his female victims, hoping to capture the expression of fear at the moment of their deaths. The film's addressing of issues such as voyeurism and sexuality, and its somewhat sympathetic portrayal of the killer, led to a harsh critical backlash against it; quite abruptly, the film all but ended Powell's career. Revisionist critics have hailed *Peeping Tom* as a disturbing masterpiece that cleverly addresses the voyeuristic impulses that drive cinema itself. Critical response aside, the film indicates that British cinema was not devoted solely to social realism. Boehm's Mark Lewis was one of a number of cinematic anti-heroes found in 1960s British cinema. Michael Caine's title character in *Alfie* (1966), a carefree womanizer, was another, earning him an Academy Award® nomination.

The more positive response to *Alfie* may also have been part of a more open discussion of sexuality that was part of the dramatic social upheaval of the 1960s and points to the "swinging London" image that appeared in the latter half of the decade. A crucial musical influence on this era were The Beatles, and the overt adoration of them by their female fans has been considered by some commentators as one of the aspects of the sexual revolution. The Beatles were the focus of two films, *A Hard Day's Night* (1964) and *Help!* (1965), both directed by Richard Lester (b. 1932), and an animated feature, *Yellow Submarine* (1968), directed by George Dunning. The Lester films became a cultural phenomenon, particularly *A Hard Day's Night*, which combined the kinetic filming style and rapid-fire humor of the Carry On films with location shooting and other aspects of social realism.

While British popular cinema incorporated a range of styles throughout the 1960s, social realism was still significant during the entire decade as some of the young filmmakers to emerge in the late 1950s continued to mature in their work. Lindsay Anderson followed up on his 1950s Free Cinema documentaries with two key 1960s features. *This Sporting Life* (1963) starred Richard Harris (1930–2002) as a troubled rugby player. The film was shot in the area around Wakefield, Yorkshire, and Anderson's use of location and the authenticity in his evocation of working-class life makes this one of the most significant of the New Wave films. With *If* . . . . (1968), Anderson seemed to capture the zeitgeist. The figure of Malcolm McDowell (b. 1943) as a well-armed schoolboy atop the roof of the Cheltenham school (Anderson's own alma mater) offered a memorable image in a year rocked by student uprisings in the Western world. The impact of social realism was also evident in Ken Loach's (b. 1936) critically and commercially successful *Kes* (1969), the story of a working-class boy whose grim future prospects are alleviated as he gains personal satisfaction in learning to train and fly a kestrel. This was only Loach's second feature film, the first being *Poor Cow* (1967), but he had honed his skills working in television, making a number of films for BBC's *The Wednesday Play*. Loach's television success indicated the important role television was to have in nurturing British filmmakers. Numerous British films that were made for television saw theatrical release in other countries, even when they received no, or very limited, theatrical release in Britain. This has remained the case even with more recent Loach films such as *The Navigators* (2001), a drama focused on the plight of laborers within Britain's privatized railway system.

The 1970s have been viewed critically as yet another period of crisis within British cinema. Attendances continued to drop, Hollywood influence was significant, and the innovation and promise of the New Wave was becoming an increasingly distant memory. Yet there was still innovation and controversy too as censorship restrictions were further relaxed, opening up debates around the influence of cinema on society. One director who was clearly caught in this crossfire was Stanley Kubrick (1928–1999). Although American-born, Kubrick had taken up residence in the UK in order to make his films far from the reach of meddling studio heads. *A Clockwork Orange* (1971), Kubrick's adaptation of Anthony Burgess's novel, became a controversial touchstone for debates over cinema censorship and regulation. When a number of local authorities opted to ban the film after alleged "copycat attacks" mimicking the film's ultraviolent youth, Kubrick withdrew it from the British market. A unique quirk in the British regulatory system allows films that have approval from the British Board of Film Classification to be rejected by local authorities, as was the case with *A Clockwork Orange* and more recently, Canadian David Cronenberg's *Crash* (1996). An earlier controversy had erupted around *The Devils* (1971), directed by Ken Russell. Russell had already made cuts to appease the censorship board, but the film was still banned by a number of local authorities. Russell's tendency toward graphic cinematic displays made him one of the most notorious and interesting figures of the era. The reputation he had garnered for films such as *Women in Love* (1969), his adaptation of D. H. Lawrence's novel, and *The Music Lovers* (1970), which focused on the sex life of the composer Pyotr Ilich Tchaikovsky and his wife, was cemented with the release of *The Devils*. This seemed to inspire Russell to pursue extravagance, such that his later films like *Lisztomania* (1975) and *Valentino* (1977) seem almost to be parodies of his earlier works, courting further controversy.

Another controversial figure was Nicolas Roeg (b. 1928), whose work was notably graphic at times but also, in structure, decidedly anticommercial and confrontational. Roeg first made a splash with *Performance* (1970), co-directed with Donald Cammell. The film follows a gangster on the run from the mob who takes refuge in the home of a reclusive rock star, played by Mick Jagger. Increasingly, the identities of the two men become blurred, both narratively and visually, as the film works constantly to disorient the spectator. Roeg's first solo film as director was *Walkabout* (1971), which follows three children lost in the Australian outback. This was followed by the taut psychological horror, *Don't Look Now* (1973), perhaps best remembered for its graphic conclusion. Roeg's later films have been somewhat uneven, and as is the case with Russell, he has had difficulty recapturing the level of critical acclaim he had enjoyed earlier in his career.

The ensemble crew of Monty Python also courted trouble with censorship bodies, particularly for parodying

GLENDA JACKSON
b. Birkenhead, England, 9 May 1936

Glenda Jackson received her training at the Royal Academy for Dramatic Art and commenced a stage career in 1957. Her first major stage success was her performance as Charlotte Corday in *Marat/Sade*, a 1964 production by Peter Brook's Theatre of Cruelty; she recreated the role in the 1967 film version of the play. Jackson's intensity in her roles in the films of Ken Russell, which at the time pushed boundaries in popular cinema, brought her attention and admiration. She won her first Academy Award® for Best Actress for her portrayal of Gudrun Brangwen in Russell's controversial adaptation of the D. H. Lawrence novel *Women in Love* (1969). She later portrayed Brangwen's mother, Anna, in Russell's adaptation of Lawrence's *The Rainbow* (1989).

Jackson gave a memorable performance, displaying intense physicality and sexuality, as Tchaikovsky's nymphomaniac wife in Russell's *The Music Lovers* (1970), yet she was also adept at comedy, winning her second Oscar® for her performance in Melvin Frank's *A Touch of Class* (1973) alongside George Segal. In a memorable television role, Jackson cut a stunning figure by shaving her head to play Queen Elizabeth I in the BBC television miniseries *Elizabeth R* (1971), for which she won two Emmy Awards.

It is Jackson's repeated portrayals of strong women that helped make her stand out from among her contemporaries. Her theatrical training is evident in her willingness to devote herself wholly to each role she plays. In addition to her Emmy and Academy Award® honors, Jackson has been nominated for Broadway's Tony Awards on four separate occasions. Other honors include being named a Commander of the Order of the British Empire in 1978 and having a theatre named in her honor in Birkenhead. Jackson's film career was preempted by her move into politics in 1992, when she became a member of Parliament for Hampstead and Highgate in London. She ran unsuccessfully for the position of mayor of London in 2000 but remains active in Labour Party politics. In May 2005 she was reelected MP for the fourth time.

the story of Christ in *Life of Brian* (1979). The film used the story of Brian, whose life parallels that of Christ, to provide typical "Monty Python" humor as it had been developed in their sketch television show, *Monty Python's Flying Circus* (1969–1974). The troupe's first cinematic effort, *And Now for Something Completely Different* (1971), directed by Ian McNaughton, is a compilation of their television work. With Terry Jones as director, the troupe became more ambitious and cinematic by tying its unique brand of comedy to narrative, first in *Monty Python and the Holy Grail* (1974), which was co-directed by Terry Gilliam; then *Life of Brian*; and finally *Monty Python's The Meaning of Life* (1983). The troupe employed absurdist humor, which at times could be quite graphic, as part of a broader satire of contemporary British society and mass culture more generally.

The 1970s also witnessed a rise in art cinema with directors such as Derek Jarman (1942–1994) and Sally Potter (b. 1949) emerging. Jarman had been a set designer on Russell's *The Devils*. His first series of features were all low-budget affairs shot on Super 8mm. *Sebastiane* (1976), co-directed with Paul Humfress, was notable for its portrayal of homosexual desire as it traced the martyrdom of St. Sebastian. Jarman's work was known for its anachronistic flourishes, evident in *Jubilee* (1977), which captures the punk ethos in its exploration of Queen Elizabeth II's jubilee year as seen through the eyes of Queen Elizabeth I and her astrologer magician, John Dee. Jarman followed this with *The Tempest* (1979), adapted from Shakespeare, although Jarman's most noted work is likely the beautifully shot *Caravaggio* (1986). Jarman's eye for the beautiful is also evident in *The Last of England* (1988), which saw him return to the Super 8mm format in an effort to visually depict the rot he perceived to be at the core of Thatcher's England.

Potter's *Thriller* (1979) was a short film written, directed, edited, and produced by Potter herself with funding from the Arts Council of Great Britain. Potter consistently challenges viewers and has been a particular favorite of feminist critics for her willingness to deconstruct the masculine values of cinema. The success of *Thriller* permitted Potter the opportunity to make her first feature, *The Gold Diggers* (1983). She did work for television through much of the 1980s before returning to the screen with the ambitious *Orlando* (1992), starring Tilda Swinton (b. 1960). *Orlando* adapts the Virginia Woolf novel and updates it to the 1990s as it follows its lead character through four hundred years of history (including a sex change) in its episodic exploration of social and gender roles. Potter has continued to work within mainstream art cinema with *The Tango Lesson* (1997); *The Man Who Cried* (2000), which featured Johnny Depp; and *Yes* (2004).

FROM THE 1980s TO THE PRESENT

If the 1970s saw the critical estimation of British cinema at a low ebb, then the tide rose very quickly at the beginning of the 1980s. The breakthrough commercial success for British cinema was Hugh Hudson's *Chariots of Fire* (1981), which follows the stories of two British athletes, Harold Abrahams (Ben Cross) and Eric Liddell (Ian Charleson), at the Paris Olympics in 1924. The film's Academy Award® for Best Picture, followed by a win for Richard Attenborough's *Gandhi* (1982), suggested a resurgence for British cinema on the international stage. These two award-winning films were both epic period pieces that recalled the Korda era. Their success helped revitalize the industry, but the significant changes were occurring on a much smaller scale.

The most significant development was a shift in funding. It was the funding provided by Channel Four that seemed to bring new vitality to British cinema. It also brought an increased regional sensibility as funding was no longer concentrated in the hands of London-based producers. It was not only different regions but different underrepresented groups whose voices were finally becoming part of British cinema. As its name implies, Channel Four was the fourth terrestrial television channel launched in Britain, first appearing in 1982. In an effort to maintain its arts-focused mandate and to provide quality material for the channel, a separate films arm, Film on Four, was established. During the years of Margaret Thatcher's Conservative governments, which were not at all kind toward the arts, the money, support, and exhibition provided by Channel Four were vital to the British film community.

A number of key films, and key figures, in British cinema of the 1980s and 1990s emerged as a result of the Films on Four funding. Among the first successes of the program were Peter Greenaway's *The Draughtsman's Contract* (1982); Neil Jordan's *Angel* (1982); and Stephen Frears's *My Beautiful Laundrette* (1985), written by Hanif Kureishi. *My Beautiful Laundrette* suggested the potential of the Channel Four films to uncover new voices within British cinema. Kureishi's script, which explores the burgeoning gay relationship between two men, one white and one Pakistani, opens up many questions around identity in Britain and highlighted some of the difficulties that second-generation immigrants had in negotiating between cultural traditions and a British way of life. A number of key films emerged in the following two decades that explored the South Asian diasporic experience. Among these were Gurinder Chadha's *Bhaji on the Beach* (1993), which uses an outing to a typical British seaside resort to focus on the experiences of Asian women of different generations; the comedic, yet touching *East Is East* (1999), directed by Damien O'Donnell and based on the semiautobiographical play by Ayub Khan-Din; and *Bend it Like Beckham* (2002), which continues Chadha's exploration of gender issues in its focus on an Asian girl who would rather play soccer than learn traditional Indian cooking methods.

Other cultural groups in Britain have also found filmic means of making their voices heard. In 1983 a

Sally Potter and Pablo Veron in Potter's* The Tango Lesson *(1997). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

group of black independent filmmakers established the production collective Sankofa. With funding from the Greater London Council (a progressive political body disbanded by Margaret Thatcher in 1986) and Channel Four, the members of Sankofa sought ways of telling stories employing their own cultural voices. The most notable member of the collective has been Isaac Julien (b. 1960), whose early films for the group included *Who Killed Colin Roach?* (1983); *Territories* (1985); and his meditation on the gay, black American poet Langston Hughes, *Looking for Langston* (1988). With funding from the BFI, Julien was able to make his debut feature, *Young Soul Rebels* (1991), a thriller that offers a rather idealistic portrait of racial togetherness among London's various music subcultures in the late 1970s.

Funding through bodies such as Channel Four and the BFI kept British filmmakers independent of Thatcherism and more recently of the New Labour ideals of Tony Blair. The filmmakers' response was films that were largely critical of the dominant vision of Britain. These films began to break the hegemonic representation of Britishness that had dominated the national cinema by opening up issues of gender, sexuality, race, and class. This is not to say that there have not been investments made in more commercial cinema. FilmFour, as Film on Four came to be called in the 1990s, invested in international hits such as *Four Weddings and a Funeral* (1994, directed by Mike Newell). The "heritage" film also became a major staple of British popular cinema and a successful international export. A number of Ismail Merchant (1936–2005) and James Ivory (b. 1928) co-productions were staple fare for this genre. The Ivory-directed *A Room with a View* (1985) followed on the heels of *Chariots of Fire* and *Gandhi* and helped to establish the key stylistic parameters for the genre. Later successful heritage films such as Shekhar Kapur's *Elizabeth* (1998) and John Madden's *Shakespeare in Love* (1998), another Oscar® winner for Best Picture, helped to cement the reputation of this area of British cinema.

In contrast to these versions of heritage Britain, the trend toward social realism has remained strong in many of the smaller British films that have been made in recent decades. Among the filmmakers who have consistently

employed this strategy has been Mike Leigh (b. 1943). Leigh's first feature was *Bleak Moments* (1971), but subsequently he turned to television, where his improvisational methods were more readily funded. He worked there until making his second feature, *High Hopes*, in 1988. Yet another film supported by Channel Four, as well as British Screen, the film is a family drama that is used as a poignant rejoinder to the consumerism spawned by Thatcherism. Leigh's focus on the working class continued in a series of social realist films, including *Life is Sweet* (1990), *Naked* (1993), *Secrets and Lies* (1996), and *Career Girls* (1997). All of these films focused on contemporary Britain, but Leigh demonstrated his ability to explore similar themes around class and British society employing historical subjects, as in *Topsy-Turvy* (1999), which examines the world of Gilbert and Sullivan, and *Vera Drake* (2004), which examines abortionist Drake's clash with British society in the 1950s.

While the films of the 1960s New Wave had focused on Britain's working class, more recent films have traced the lives of the underclass, former members of the working class who have been left behind in the new, technological economy during the reigns of Thatcher and Blair. Films such as Peter Cattaneo's *The Full Monty* (1997), Mark Herman's *Brassed Off* (1996) and *Little Voice* (1998), and Carine Adler's *Under the Skin* (1997), along with the continued work of Ken Loach, explore the desperate attempts at survival for those who have been cut off from Britain's economic boom. While such films offer positive moments, their use of location shooting and devout attention to detail do much to reveal the dark underbelly of Britain's current success.

Since the winding down of Channel Four's funding of films in 2002, the funding model in Great Britain has continued to evolve. The UK Film Council was set up in 2000 by the Labour government. The role of the council is to dispense money raised via the National Lottery to nine different regional screen agencies in England as well as the Welsh Development Agency, Scottish Enterprise, and the Department for Enterprise, Trade and Investment in Northern Ireland, each of which administers its own film-funding initiatives. The result is an increased regional diversification within British cinema.

SCOTLAND AND WALES

While earlier efforts such as those of the New Wave in the 1960s had moved their focus beyond London and the Home Counties, the regionalism on offer extended north to cities such as Nottingham but still remained predominantly English in nature. With the emergence of alternative funding bodies such as Channel Four, and more recently the National Lottery, a greater awareness of regionalism has become necessary for any understanding of British cinema. It is nearly impossible today to conceive of one single cinema of Great Britain.

Scotland as a setting has been employed in numerous British films, notably Ealing films such as *The Maggie* and *Whisky Galore!*. It has of course also featured in the telling of Scottish legends, such as those of Shakespeare's Macbeth or Rob Roy. Additionally, Scotland provided a number of key figures to the British industry, among them John Grierson. An indigenous Scottish film industry, however, took far longer to develop. While much of the UK and Ireland prospered from the shifting economy of the 1980s and 1990s, former industrialized areas in Britain's north—particularly in Scotland—and in parts of Wales, where heavy industry and mining had been dominant industries, struggled immensely. Using cinema to voice the concerns of underrepresented contemporary Scots was a significant breakthrough. One director who managed to do so successfully was Bill Forsyth (b. 1946). After having made short documentaries, Forsyth directed his first feature, *That Sinking Feeling* (1980), about a group of unemployed Glasgow youth involved in a robbery of stainless steel sinks. This was followed by *Gregory's Girl* (1981), which used a social realist aesthetic and a tale of adolescent love to explore life in Scotland's postwar "new towns." Perhaps Forsyth's most successful film was the low-key comedy, *Local Hero* (1983), produced by David Puttnam. The film evoked the humor of the Ealing comedies as it explored the clash between contemporary consumerism, represented by an American oil company, and traditional Scottish values, represented by a local fishing village. Forsyth later spent time working in the United States before returning to Scotland to make *Gregory's Two Girls* (1999), a sequel to *Gregory's Girl*.

Restless Natives (1985), produced by Channel Four and directed by an American, Michael Hoffman, is a film that essentially modernizes the myth of Rob Roy. It follows two Edinburgh youth who, cut off from the new economy, turn to robbing the tour buses that seem now to dominate their landscape, only to find that their exploits become a bigger tourist draw than any scenery the Highlands has to offer. The main characters of *Restless Natives* are possibly the comedic predecessors of the youth of Danny Boyle's *Trainspotting* (1996), a film adapted from a stage play that itself was adapted from a novel by Irvine Welsh. The film's dry wit, its harrowing portrayal of heroin abuse among the disenfranchised youth of Edinburgh, its contemporary soundtrack, and Boyle's slick shooting style resulted in *Trainspotting* becoming one of the main exports of mid-1990s "Cool Brittania"—this despite the fact that its extensive use of working-class Scottish slang and authentic dialect meant that it had to be offered with subtitles in many other English-speaking markets (particularly the United

States). Another film that required subtitles was *Ratcatcher* (1999), directed by the photographer-turned-filmmaker Lynne Ramsay (b. 1969). Set during a garbage strike in Glasgow of the 1970s, the film's use of local dialect, along with its attempts to make use of costume and other authentic historic elements, make the film an ironic sort of heritage film, uncovering a heritage that official Britain may prefer be left forgotten.

Perhaps Wales's biggest claim to film culture has been in the figures that it has exported to Hollywood, including the likes of Richard Burton (1925–1984), Anthony Hopkins, and Catherine Zeta-Jones. The Welsh industry has been small and itself is split between English-language films made in Wales and Welsh-language films that have, understandably, a very limited audience. Likely the most popular Welsh-language film of all time is *Hedd Wyn* (1992), directed by Paul Turner, which was nominated for an Academy Award® for Best Foreign Language film. Endaf Emlyn (b. 1944) directed the Welsh-language feature *Gadael Lenin* (*Leaving Lenin*, 1993), a film that explored relationships among a group of Welsh youth on a school trip to Russia. Justin Kerrigan's *Human Traffic* (1999) captures the youthful vibrancy of contemporary Cardiff. Only one of the film's main characters possesses a Welsh accent; the rest are from various other parts of the UK. In this way, Kerrigan is able to address the changing nature of the Welsh capital as it has become a key center of technological development and has undergone a boom that has transformed it from a Welsh city to a UK city. Other films have focused on the Welsh underclass. *Twin Town* (1997), directed by Kevin Allen, is in the British underclass film tradition in its representation of a dysfunctional working-class family in Swansea.

Given an increased focus on regional filmmaking, a migratory and multicultural population, the ever-increasing economic significance of the European Union, and the growth of co-productions as part of the global cinema market, any secure definitions of what constitutes a British cinema can no longer exist. Instead, Great Britain can now be seen as a significant cinema center where a multitude of voices can be found.

GREAT DEPRESSION

The Great Depression refers to that period of American history between the stock market crash of October 1929 and the US entry into World War II following the Japanese bombing of Pearl Harbor on 7 December 1941. Although the United States had experienced other significant depressions before—the periods between 1839 and 1843, 1873 and 1879, and 1893 and 1896 offer three examples—the Great Depression was particularly sustained and persistent. The only major depression to take place after the movies were firmly established as an industry and popular art form in the United States, it generated considerable economic strain on the industry—especially in the early 1930s—eroding the audience and encouraging the industry to win back its audience in a variety of ways, some of which led to tensions between the industry and certain segments of American society. The film industry responded to its critics, and as the decade wore on, a resurgent national confidence in the system coincided with some shifts in the films produced by the industry.

THE DEPRESSION AND INDUSTRY FINANCES

The economic downturn of the Depression was precipitated by a rapid decline in values of stock at the New York Stock Exchange in the fall of 1929. Black Thursday (24 October) and Black Tuesday (29 October) were key moments in the collapse. Overall, the Dow Jones Industrial Average dropped from a high of 381 on 3 September to a low of 198 before the end of the year. The economy continued to decline through 1932, when the Dow Jones industrial average bottomed out at 41. Between 1929 and 1933, when Franklin Delano Roosevelt (1882–1945) assumed the presidency, consumption had plummeted 18 percent, construction by 78 percent, and investment by 98 percent. National income had been cut in half, five thousand banks had collapsed, and over nine million savings accounts evaporated. Nonfarm unemployment reached 25 percent in the United States, and most farmers were struggling to survive because of severely depressed prices for the crops they grew and livestock they raised.

Inevitably, such an economic climate hit Hollywood hard. The industry had enjoyed a period of prosperity in the 1920s, building luxurious movie palaces and, from 1927 on, cashing in on the novelty of the newly developed technology of talking films. Between 1930 and 1933, however, movie attendance dropped from around ninety million admissions per week to sixty million admissions, and average ticket prices dropped from 30 cents to around 20 cents over the same span. Industry revenues dropped from $720 million in 1929 to $480 million in 1933, while total company profits of $54.5 million in 1929 gave way to total company losses of $55.7 million in 1932.

At the time of the stock market crash the film industry was organized by a studio system, and most of the important films produced in Hollywood in the 1930s were made by five studios that owned theater chains and three smaller studios that did not. The "Big Five" that owned theaters faced particularly pronounced strains following the crash because of the investments they had made in building theaters in the 1920s. Of that group, RKO, Fox, and Paramount all went into bankruptcy or receivership in the early 1930s, Warner Bros. managed to stay afloat only by selling off nearly one-quarter of its assets, and only MGM—which had much smaller theater

holdings than Paramount—continued to make a profit, although its profits dropped from $15 million in 1930 to $4.3 million in 1931. (Fox returned to stability by merging with the independent production company Twentieth-Century in 1935.)

The "Little Three" managed a bit better. Both Columbia and Universal, production companies that owned no theaters, survived in part by making low-budget "B movies" that were often shown as double features. Columbia did better from 1934, when Frank Capra's (1896–1991) *It Happened One Night* became a hit. Universal was in constant financial difficulty, recording small losses each year between 1932 and 1938, although the popularity of their horror films early in the decade and Deanna Durbin (b. 1921) musicals later on kept the losses from growing even higher. United Artists, essentially a distribution company for its owners, such as Charlie Chaplin (1889–1977), and talented independent producers such as Samuel Goldwyn (1882–1974) and Walter Wanger (1894–1968), lost money only in 1932, although its profits in the later 1930s were very modest.

Movie exhibition was also affected by the economic downturn. One major effect was the decline of construction of new theaters following the boom of movie-palace building in the 1920s. As movie attendance began to decline significantly in the early 1930s some theater owners also began to offer giveaway programs (like "dish night") or games of chance (SCREENO, a variety of bingo, was the most popular), particularly on the traditionally slow nights of Monday and Tuesday, to get more people back into the theaters. Theater owners also sought to reduce costs by cutting staff—hiring fewer ushers, for example—or, in the bigger urban theaters, by eliminating live shows that supplemented the movie program. Some theaters turned to double features, thus boosting the demand for B movies by companies such as Monogram and Republic. The only major new expense made by many theater owners in the Depression, especially in the South and West, was the installation of air conditioning, which because of technological advances became more affordable than it had been in the 1920s. By the end of the decade attendance inched back to 1929 levels. In this improved financial environment, the giveaway programs and the games of chance began to disappear.

Indeed, the industry began to rebound after the dark years of 1932 and 1933, in part because of New Deal legislation. President Roosevelt's National Industrial Recovery Act (NIRA) went into effect in June 1933, and its strategy for recovery was in part to permit certain monopolistic practices by major industries, including the film industry. Even though the Supreme Court eventually struck it down in 1935, the NIRA also authorized the organization of labor unions and collective bargaining, a tendency strengthened with the passage of the Wagner Act in 1935. From 1933 on various groups of Hollywood workers sought and eventually succeeded in establishing unions recognized by the studios, including the Screen Actors Guild (recognized in 1937), the Screen Directors Guild (1939), and the Screen Writers Guild (1941). By the time the United States entered World War II, the industry was largely unionized.

The evolution of the industry through the Depression can be grasped in part through numbers. Box-office receipts bottomed out in 1933 at $480 million, gradually growing to $810 million in 1941, which slightly exceeded the $720 million receipts of 1929. Total company losses of $55.7 million in 1932 were reduced to losses of $4.9 million in 1933, after which the bottom line improved to profits of $9 million in 1934, up to $34 million in 1941. Only in 1943, however, with profits of $60.6 million, did Hollywood exceed the $54.5 million of profits in 1929. In the most general terms, after spiraling downward from 1929/1930 to 1932/1933, the economic condition of the industry reversed itself and gradually improved for the rest of the decade, even though attendance and profits did not return to 1929 levels until after World War II was well underway. The economic conditions of the Depression surely tested the movie industry.

THE MOVIES OF "PRE-CODE HOLLYWOOD"

The period from the 1929 stock market crash until the establishment of the Production Code Administration in June 1934 has been called "pre-code Hollywood." Although film historians have argued about how different pre-code films were from films made later in the decade, a solid argument can be made that there was a distinctive difference. Andrew Bergman suggests in *We're in the Money* that the popular cycles of pre-code Hollywood—such as gangster films, fallen-women films, backstage musicals, social-problem films, and "anarchic" comedies—were distinctly connected to the economic distress of the early 1930s and the social-psychological anxieties it produced. Robert Sklar extends this argument in *Movie-Made America*, labeling the early 1930s the "golden age of turbulence" and the post-code Depression films the "golden age of order." Although Richard Maltby has usefully suggested that the majority of films in pre-code Hollywood were tamer and more conventional than the films Bergman and Sklar highlight, it does seem that during the early 1930s, more so than just before and just after that period, filmmakers were more likely to make, and audiences were more likely to respond to, films that called into question dominant attitudes toward sexuality, upper-class respectability, and the institutions of law and order.

PARE LORENTZ

b. Leonard MacTaggart Lorentz, Clarksburg, West Virginia, 11 December 1905, d. 4 March 1992

Pare Lorentz was the most influential maker of and advocate for government-sponsored documentary films in the United States during the Great Depression. After studying journalism at West Virginia Wesleyan College and the University of West Virginia, Lorentz left for New York in 1925 and adopted his father's first name, Pare. From 1927 to 1932 he reviewed films for the magazine *Judge*. After that, he continued to write movie reviews and essays for a variety of publications for the rest of the decade. Some of this work was collected in *Lorentz on Film* (1975).

In 1934 Lorentz published *The Roosevelt Year: 1933*, a book of photographs with accompanying text that sought to dramatize the Depression and the emergence of the New Deal. Lorentz originally had hoped to make a film, but had been unable to arrange financing. However, in June 1935 Rexford Tugwell, head of the US Resettlement Administration, hired him to make films about the plight of farmers in the Depression. The first film project focused on the Dust Bowl. Made for less than $20,000, *The Plow That Broke the Plains* (1936) demonstrated how the drought, dust storms, and market collapse forced Great Plains farmers to leave the land, then concluded with the government's plan of resettlement and soil conservation. Although the film garnered generally positive reviews, Hollywood caused difficulties for Lorentz, making it hard for him to obtain stock footage and discouraging theaters from showing a government-sponsored film that would compete with its newsreels. Lorentz's next film, *The River* (1938), featured footage of the devastating floods in early 1937 to depict the problems of flooding, soil erosion, and poverty in the Tennessee and Mississippi Valleys and to suggest how the establishment of the Tennessee Valley Authority confronted those problems through flood control, electrification, and conservation measures. More positively reviewed and widely distributed than *Plow*, *The River* received the best documentary award at the Venice Film Festival in 1938, winning over Leni Riefenstahl's *Olympia*.

That year President Roosevelt named Lorentz director of the US Film Service. In that capacity he oversaw the making of Joris Iven's *The Power and the Land* (1940) and Robert Flaherty's *The Land* (1940) and made one film himself, *The Fight for Life* (1940), an account of infant mortality, malnutrition, and child poverty in the United States that won the National Board of Review's best documentary award. Its controversial topic and critical subject matter angered many congressmen, however, and the US Film Service was eliminated when Congress refused to fund it in the spring of 1940. Lorentz's next project, a documentary on unemployment called *Ecco Homo*, was never made.

Charles J. Maland

The classic gangster films, whose plots were drawn to a greater or lesser extent from headlines about real gangsters such as Chicago's Al Capone, offer a good example. In them an ethnic American, usually of Italian descent, such as Rico in *Little Caesar* (1931) or Tony Camonte in *Scarface* (1932), or Irish extraction, such as Tommy Powers in *Public Enemy* (1931), rises from rags to riches by consolidating power in the prohibited liquor trade, only to be killed in the film's climax, a victim of his ambition, ruthlessness, and notoriety. James Cagney (1899–1986) and Edward G. Robinson (1893–1973) became closely associated with this genre. In the fallen-women films a woman is driven by economic circumstances to become a prostitute or kept woman. Greta Garbo (1905–1990) (*Susan Lenox, Her Fall and Rise*, 1931), Joan Crawford (1904–1977) (*Possessed*, 1931, and

Rain, 1932), Marlene Dietrich (*Blonde Venus*, 1932), Jean Harlow (1911–1937) (*Red Dust* and *Red-Headed Woman*, both 1932), and Barbara Stanwyck (1907–1990) (*Baby Face*, 1932) were among the best-known actresses who appeared in films of this cycle. The backstage musicals, most notably *The Gold Diggers of 1933* and *42nd Street* (both 1933), achieved popularity by combining Busby Berkeley's production numbers with a plot about a producer and cast working together to put on a show despite the depression economy. The story type from pre-code Hollywood that embraced the era most directly was the social-problem film, a type common in the 1910s but much less so in the 1920s. *I Am a Fugitive from a Chain Gang* (1932) was one of the most acclaimed at the time, but also noteworthy were *Wild Boys of the Road* (1933) and the independently financed *Our Daily Bread* (1934). Finally, the irreverence of the anarchic comedies such as the Marx Brothers's *Duck Soup* (1933) satirized political authority and respectability, while Mae West's (1893–1980) comedies such as *She Done Him Wrong* (1933) and *I'm No Angel* (1934)—which she both wrote and starred in—featured a self-confident, voluptuous woman who openly uses her charm and physical allure to wrap men around her finger, refusing to accept the culture's prescribed role for female respectability.

THE BATTLE OVER CONTROL AND "POST-PCA" DEPRESSION MOVIES

The popularity and pervasiveness of the gangster films, the fallen-women films, and West's brazen comedies played a significant role in the protests by a variety of pressure groups against the movie industry between 1932 and early 1934. Among the most prominent of the protesters was the Legion of Decency, a Catholic organization that sought to pressure the movie industry to follow the guidelines of the Hollywood Production Code of 1930. The Studio Relations Committee, an industry self-regulation body, was ostensibly charged with seeing that the studios followed that code, but it did not possess adequate power to compel the studios to adhere to it. Desperately seeking to find ways to reverse the decline in attendance, the studios regularly ignored the code in many of their productions. When the Legion of Decency began to threaten a widespread national boycott of the movies early in 1934, however, the studios decided that it would be in their best interests to set up a body that would enforce the code more strictly. They did so in June 1934 by establishing the Production Code Administration (PCA) and appointing as its director Joseph Breen. From that point on, the PCA more strictly enforced the code by reviewing and making suggestions on all studio scripts before they went into production, then doing the same with all completed films before issuing a PCA certificate. Member studios agreed not to release any film before the PCA granted it a certificate.

Regular monitoring of studio films by the PCA, as well as a gradual restoration of national confidence engendered by Roosevelt's New Deal programs between 1933 and 1935, contributed to some shifts in movie cycles after 1934. For example, Warner Bros. revised the gangster formula by making the protagonist not a gangster but a law-enforcement official in *G-Men* (1935), starring James Cagney. It was one of the top ten highest-grossing films of 1935 and paved the way for similar films, such as *Bullets or Ballots* (1936), starring Edward G. Robinson as a police detective, and *Marked Woman* (1937), starring Humphrey Bogart (1899–1957) as a crusading district attorney. The fallen-woman and Mae West films, which were either forbidden or seriously constrained by the PCA, made way for one of the most popular and accomplished genres in the late 1930s, the screwball comedy. The surprise success of Capra's *It Happened One Night* (1934), which was made before the PCA was established, helped establish the cycle. An unlikely comic romance about a spoiled heiress (Claudette Colbert) and a gruff and pragmatic newspaper reporter (Clark Gable), the film became the first movie to win the five major Oscars®—for film, director, actress, actor, and screenplay (Robert Riskin)—and set the stage for a variety of successful screwball comedies. Noting the code's prohibitions against overt portrayals of sexuality, Andrew Sarris has called the genre the "sex comedy without sex," suggesting that instead of turning the female protagonists into sex objects, the screwball comedy endowed them with spontaneity, wit, vitality, and often professional achievements in the working world (p. 8). Capra's *Mr. Deeds Goes to Town* (1936), Gregory La Cava's (1892–1952) *My Man Godfrey* (1936), Leo McCarey's (1898–1969) *The Awful Truth* (1937), George Cukor's *Holiday* (1938), and two films by Howard Hawks (1896–1977), *Bringing Up Baby* (1938) and *His Girl Friday* (1940), are among the many accomplished films of the genre. In their focus on a rocky but ultimately successful romance, these screwball comedies resembled the Fred Astaire–Ginger Rogers musicals of the middle and late 1930s—including *Top Hat* (1935), *Swing Time* (1936), and *Shall We Dance* (1937)—which replaced the backstage musicals popular in the early 1930s. Each of these emerging cycles—law-official crime films, screwball comedies, and romantic musicals—exhibited more confidence in the prevailing order than had many of the popular cycles of the early 1930s.

Another shift following the establishment of the PCA (and the gradual improvement of economic conditions) was the move toward more expensive, "prestige films." These films were expensive to make, but they also were most likely to appear on *Variety*'s list of the top ten

The Joad family in* The Grapes of Wrath *(John Ford, 1940), adapted from John Steinbeck's novel. **® ™ AND COPYRIGHT © 20TH CENTURY FOX FILM CORP./COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

highest-grossing films in the last half of the decade. The prestige films encompass a variety of different story types, but they included adaptations of literary classics and best-selling novels, swashbuckling adventure stories, and ''biopics''—biographical films about famous people. The first group included cinematic versions of Shakespeare's plays, such as *A Midsummer Night's Dream* (1935) and *Romeo and Juliet* (1936), adaptations of nineteenth-century novels, such as *David Copperfield*, *A Tale of Two Cities*, and *Anna Karenina* (all 1935), and adaptations of twentieth-century novels such as *The Informer* and *Mutiny on the Bounty* (both 1935), *Anthony Adverse* (1936), *Lost Horizon* and *The Good Earth* (both 1937), the monumentally successful *Gone With the Wind* (1939), and the critically acclaimed *Grapes of Wrath* (1940). Successful costume/adventure films appeared with *Captain Blood* (1935) and *Anthony Adverse* (1936), and crested with *The Adventures of Robin Hood* (1938). The biopics portrayed the lives of people as different as Jesse James, Alexander Graham Bell, and Thomas Edison, but one particularly effective set were three films starring Paul Muni (1895–1967): *The Story of Louis Pasteur* (1936), *The Life of Emile Zola* (1937), and *Juarez* (1939).

The popularity of two child stars in the middle and latter part of the decade suggests that American movies were playing a role in the reconsolidation of American culture—in restoring confidence in the system—as the country began to pull out of the Depression. From 1935 to 1938 Shirley Temple (b. 1928), thanks to the success of such films as *Curly Top* (1935) and *The Littlest Rebel* (1936), topped the Quigley Publications poll of top box-office stars in the United States. From 1939 to 1941, Mickey Rooney (b. 1920)—MGM star of the Andy Hardy series, *Boys Town* (1938), and "let's put on a show" musicals such as *Babes in Arms* (1939)—topped the list. In both cases the child actors showed vitality, resilience, and good cheer in overcoming whatever obstacles they confronted.

As the United States moved into the latter part of the decade, Hollywood, like American culture as a whole, began to exhibit a reawakened interest in defining national traditions and values. This trend emerged in part as a response to the growing international threat of fascism in Germany and Italy. The Los Angeles area, which became home to many prominent refugees from Germany, became a center of antifascist activity in the United States, led by groups such as the Hollywood Anti-Nazi League. The movies participated in this exploration of national traditions and critique of fascism both domestic and, eventually, foreign. *Fury* (1937), directed by refugee Fritz Lang (1890–1976), explored the psychology of a mob action that led to lynching. Capra's *Mr. Smith Goes to Washington* (1939) and *Meet John Doe* (1941) confronted a prototypically American hero with a sinister antagonist whose wealth, power, and ambition threatened to disrupt the democratic system. The historical settings of films such as *Young Mr. Lincoln*, *Drums Along the Mohawk*, and *Gone With the Wind* (all 1939) were central to their narrative concerns. The reappearance of the "A" western in late-1930s movies such as *Dodge City*, *Union Pacific*, and *Stagecoach* (all 1939) also contributed to the interest in American national traditions. Other important films from the end of this period include *The Grapes of Wrath* (1940), which shows how the Joad family are victimized by the dust bowl and a harsh economic system, and Orson Welles's (1915–1985) audacious, probing critique of an American tycoon, *Citizen Kane* (1941). Although the PCA discouraged filmmakers from making films that criticized other nations—in part because it hurt foreign rentals—overtly anti-Nazi films gradually began to appear even before the United States declared war in December 1941, most notably in *Confessions of a Nazi Spy* (1939) and Chaplin's satiric attack on fascism, *The Great Dictator* (1940).

If one surveys American movies during the Depression in an extreme long shot, two impulses come into clear focus. One impulse, an aesthetic of movies as entertainment, which had established itself firmly during the 1920s, held that movies should enable viewers to escape from their problems for two hours. However, a counter impulse, which emerged from the distressing social and economic conditions following the stock market crash, pressured filmmakers to acknowledge and grapple with the social realities of the day. Although the latter impulse never became dominant, in part because of the industry's constant attention to the box-office potential of projects, it did lead to some of the most disturbing and powerful films of pre-code Hollywood and to the most critically acclaimed and widely discussed films later in the decade. With the American entry to World War II in December 1941, the industry officially moved out of the Depression and into a new era.

GREECE

The history of the Greek cinema is inextricably bound to the complex political history of Greece in the twentieth century. What constituted the legitimate Greek state was still at issue in the early part of that century. Millions of culturally Greek individuals lived under the rule of the Ottoman Empire, Italy, Britain, and other nations that controlled regions of mainland Greece and numerous Greek islands. The problematics of who and what is Greek remain a perennial challenge for Greek cinema.

THE EARLY YEARS

When "moving pictures" arrived in Greece in 1897, one- or two-reel films were usually presented as acts in variety shows or as carnival attractions. These foreign imports included the pioneering work of filmmakers such as Georges Méliès (1861–1938) and the Lumière brothers (Auguste [1862–1954] and Louis [1864–1948]). The first known Greek film, *Gyanikes pou klotoun* (*Women Weaving* or *The Weavers*, 1905), was made by the Manakia brothers (Yannakis [1879–1954] and Miltos [1881–1964]), whose identity and importance would be the subject of Theo Angelopoulos's (b. 1935) *To Vlemma tou Odyssea* (*Ulysses' Gaze*, 1995). One year after *Women Weaving [The Weavers]*, the tradition of the Greek "journal" film—a fusion of genuine newsreel footage with more formal documentary elements—took form with a short celebrating that year's Olympic games. In 1907, a second journal film and the first with a title, *Eorti tou Vasileos Georgiou I* (The Festival of King George I), celebrated the virtues of the Greek king. The first movie theaters opened in Smyrna and Athens at this time. Actor Spiros Dimitrakopoulos founded Athini Films in 1910 and began to produce comedic shorts and documentaries celebrating archeological sites.

Golfo, the first Greek feature, was released in 1915. Based on a pastoral play, it is a kind of Romeo-and-Juliet story in a Greek mountain setting. Three more features appeared shortly after *Golfo*, but the public was far more taken by journal films that dealt with the Balkan Wars of 1912 and 1913 and then World War I. These Greek films contain most of the only surviving footage of events such as the burning of Smyrna in 1922. The immediate impact of *Golfo* had been negligible, but the mountain romance was destined to be a popular genre. In 1932, *Golfo* was remade as the first Greek talking picture. In 1955, there would be three more remakes, one enjoying a huge box office success; and in 1975, Angelopoulos would feature the play as a central theme in *O Thiassos* (*The Traveling Players*).

Greek cinema began to find a more regular audience with a series of comedies made in the early 1920s. The Greek comedians usually offered characters resembling those associated with American film personalities such as Charlie Chaplin and Roscoe "Fatty" Arbuckle. The industry's first feature to become a box-office hit was *Fate's Disowned Child* (1925), an urban melodrama, and the foundations of a viable industry began to take shape shortly thereafter with the establishment of Dag Film in 1927. Thirty silent features were produced between 1925 and 1935 by production companies located in Athens, Patras, and Thessaloniki. Some films drew as many as forty thousand viewers, and the concept of a movie star began to take hold. *Daphne and Chloe* (1931), a lyrical romance in which the pubescent heroine

appears nude during a bathing scene, may constitute a first in cinema, since it precedes the better known ten-minute nude sequence in *Ecstasy* (1933) that featured Hedy Lamarr.

Despite its limited successes, Greek film production and exhibition through the 1920s and 1930s remained hostage to political events. From 1924 to 1928, there were eleven coups and three general elections that produced no less than ten prime ministers. A relatively stable period during the regime of Eleuthérios Venizelos (1928–1932) was then followed by constant military intrigues that were capped by the dictatorship of General Ioannis Metaxas (1936–1941). Further social disruption was caused by the absorption of 1.5 million refugees from Asia Minor into a population of less than 10 million. In this climate, film production remained chancy, and post-production often had to be done abroad.

During the occupation of Greece in World War II, Greeks generally boycotted German and Italian films, but when Filopoimin Finos (1908–1977), who had produced and directed *The Song of Parting* (1939), was able to produce the Greek-language *The Voice of the Heart* (1943), it drew a stunning 102,237 admissions. Attending a screening of this film was seen as an assertion of Hellenic identity during an occupation that caused the death of 10 percent of the population. Five other films were made during the occupation, but production was curtailed when Finos and others were arrested by the Germans for participating in the resistance. Finos survived and became the leading producer of Greek films for nearly two decades.

From the end of the occupation until the late 1960s, a Greek film industry modeled on the Hollywood studio system produced well over one thousand films. Although directly serving a small language group, Greek cinema of the studio era produced filmmakers and actors such as Melina Mercouri (1920–1994), Michael Cacoyannis (b. 1922), and Irene Papas (b. 1926) who gained international fame and won a world audience for bouzouki musicians such as Manos Hadjidakis and Mikis Theodorakis. It also produced national stars such as George Foundas (b. 1924) (melodrama), Aliki Vougouhlaki (1934–1996) (musicals), and Thanassis Vengos (b. 1927) (comedy).

During the postwar era, the Greek government used a variety of means to discourage political dissidence in the arts. While most of the film industry was content to churn out musicals, comedies, and melodramas that caught the popular pulse without raising any political critiques, a number of filmmakers on the edge of the industry used indirect discourse to challenge the political status quo. *Magic City* (1954), for example, used a crime film format to deal with the issues of the 1922 refugees and the poor of Athens. *Stella* (1955) championed working-class music and feminist ideals. *O Drakos* (*The Ogre of Athens*, 1956) used a theme of mistaken identity to critique society. *To Koritsi me ta Mavra* (*The Girl in Black*, 1956) addressed the tensions between rural and urban Greek values with gripping portraits of artists, fishermen, and village women.

THE NEW GREEK CINEMA

The advent of television in the mid-1960s coincided with a coup d'etat by Greek colonels on 21 April 1967. The increasingly mediocre fare being churned out by the studio system was not attractive enough to compete with the new medium, and the strict censorship of the junta kept any socially engaging films off Greek screens. The studio system imploded, and the only group left making films in Greece consisted of a handful of young writer-directors who desired to take Greek cinema in an entirely new direction. They loudly and even rudely rejected the populist art of the studio system with visions of an ultramodernist cinema driven by auteurs. Although this group began making films during the junta years, their movement blossomed in the ten years following the summer 1974 fall of the junta.

What became known as the New Greek Cinema was largely committed to a modernist aesthetic that disdained the star system, montage, the three-act narrative, and other Hollywood norms associated with popular cinema. Many of the new writer-directors also had a leftist political orientation and greatly admired Italian neorealism. A persistent problem for them was that their political positions impelled them to seek a mass audience while their aesthetics often drove that audience away. By far the most successful in resolving this contradiction of content and form were Pantelis Voulgaris (b. 1940) and Theo Angelopoulos. Voulgaris stayed closer to the neorealistic standard in what proved to be his most successful films, *To Proxenio tis Annas* (*The Engagement of Anna*, 1972), *Petronia Chronia* (*Stone Years*, 1985), and *Ola Ina Dromos* (*It's A Long Road*, 1995). Angelopoulos, on the other hand, undertook one aesthetic experiment after another. He achieved both a massive popular audience in Greece and international critical acclaim with his *The Traveling Players*, a film that rewrote Greek political history from a leftist perspective.

Greek social problems received an engaging expressionistic treatment in Nikos Papatakis's (b. 1918) *I Voski* (*Thanos and Despina*, 1968). Similar concerns were given surrealistic treatment in Nikos Panayotopoulos's *I Tembelides tis Eforis Kiladas* (*The Slothful Ones of the*

THEO ANGELOPOULOS

b. Theodoros Angelopoulos, Athens, Greece, 27 April 1935

Theo Angelopoulos is the most important filmmaker in the history of Greek cinema. In contrast to both avant-gardists who disdain politics and leftists who appropriate popular genres, Angelopoulos has insisted that to have a revolutionary impact, both the form and content of a film must challenge convention. His signature trademarks are slow pacing and continuous shots that can last for many minutes. His four-hour long *O Thiassos* (*The Traveling Players* 1975), which appears on most lists of the greatest films of the twentieth century, uses less than one hundred shots to explore the history of mid-century Greece. Angelopoulos is also fond of manipulating time, sometimes going chronologically backward and forward within a single shot. His films often include dead spots that invite the viewer to think about what has just transpired on the screen. Motionless tableaus and direct address to the camera by actors shedding their film identities are other favored techniques.

Angelopoulos received his film training in Paris, where he worked with Jean Rouch. Upon returning to Greece, he was a film critic for left-wing journals. His first feature film, *Anaparastassi* (*Reconstruction*, 1968), examined a murder through multiple tellings in the manner of Akira Kurosawa's *Rashomon* (1950). In *Meres tou 36* (*Days of 36*, 1972), *Oi Kynighoi* (*The Hunters*, 1977), and *Megaleksandros* (*Alexander the Great*, 1980), he offered a history of Greece from an anti-authoritarian leftist perspective. In *Taxidi sta Kithira* (*Voyage to Cythera*, 1984), *O Melissokomos* (*The Beekeeper*, 1986), and *Topio stin Omichli* (*Landscape in the Mist*, 1988), Angelopoulos weighed traditional Greek values against those of the emerging new Europe. *To Meteoro Vima tou Pelargou* (*The Suspended Step of the Stork*, 1991), *To Vlemma tou Odyssea* (*Ulysses' Gaze*, 1996) and *Mia Aioniotita kai mia Mera* (*Eternity and a Day*, 1998) examined the problems of national borders and ethnic identity. Almost all of these films won prestigious international prizes, a pattern crowned by the Palme d'Or for *Eternity and a Day*.

With the onset of a new century, Angelopoulos announced the most ambitious project of his career—a trilogy that would comment on the history of Europe in the twentieth century through the prism of the experience of the Greek nation. He told reporters, "I breathe in epic terms. This is my fate." The first of the trilogy, *To Livadi pou Dakryzei* (*The Weeping Meadow*, 2004), done in a manner that reflected the sweep of *The Traveling Players* but with more of the character development in films such as *Eternity and a Day*, deals with refugees from Asia Minor in Greece through the end of the Greek civil war in 1949. Part two of the trilogy will carry the story to the Soviet Union.

RECOMMENDED VIEWING

Anaparastassi (*Reconstruction*, 1968), *O Thiassos* (*The Traveling Players*, 1975), *Megaleksandros* (*Alexander the Great*, 1980), *Mia Aioniotita kai mia Mera* (*Eternity and a Day*, 1998), *To Livadi pou Dakryzei* (*The Weeping Meadow*, 2004)

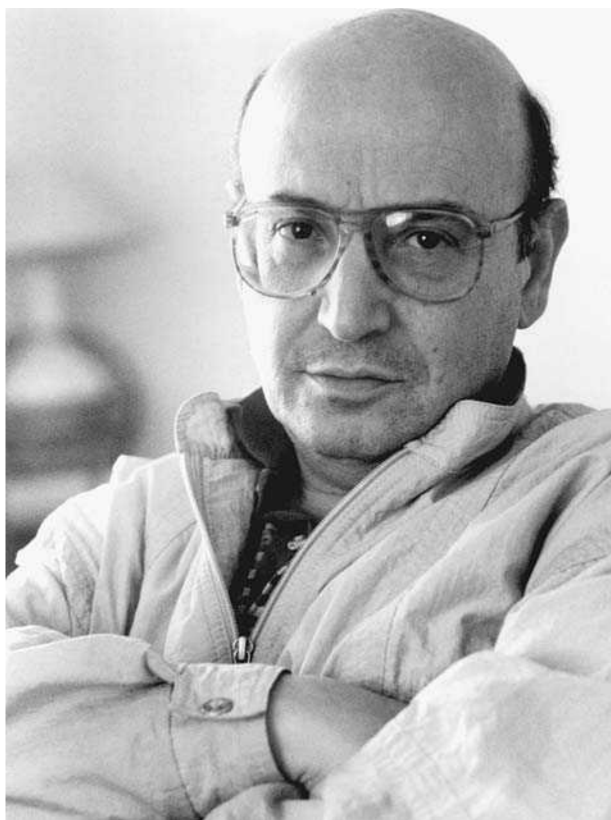
Fertile Valley, 1978). Yorgos (George) Katakouzinos's *Angelos* (*Angel*, 1982) created a sensation with its explicit homosexual themes, and *Timi tis Agapis* (*The Price of Love*, 1984) by Tonia Marketaki (b. 1942) set a new cinematic standard for Greek feminism with a historical romance set at the turn of the twentieth century. Generally speaking, however, as a group the filmmakers of the New Greek Cinema failed to achieve the consistent quality of Voulgaris and Angelopoulos.

An important new force in Greek filmmaking appeared in 1981 when the government offered significant financial assistance with the establishment of the Greek



Theo Angelopoulos at the time of* Topio stin omichli *(*Landscape in the Mist, *1990). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

Film Centre in order to fund and promote Greek cinema. Ten years later, the annual national film festival held in Thessaloniki since 1960 became the Thessaloniki International Film Festival. While national production remained a major element in the festival, broader Greek film culture was nourished by the annual presentation of hundreds of foreign films and dozens of foreign filmmakers. The festival saw its mission as the promotion of artistic rather than commercial cinema. Among its priorities was providing considerable space to Balkan filmmakers, first-time directors, and various regional cinemas.

Although coproductions with other nations became common by the 1990s, the New Greek Cinema lost momentum. Directorial idiosyncrasies, eccentricities, and excesses were often passed off as style and individual vision. The national audience began to avoid Greek-language films. While American films usually drew more than 500,000 admissions and 85 percent of all screens, the majority of Greek films drew less than 10,000, and any Greek film that drew more than 100,000 was considered a success.

An unexpected development was that the old studio films being shown regularly on television proved very appealing to a generation that had not even been born when they were made. As the twentieth century came to an end, a new generation of filmmakers began to challenge the political economy of the Greek film world by aiming for popular audiences with independent productions that often employed new low-cost technology. *No Budget Story* (Renos Haralambidis, 1998) and *O Orgasmos tis Ageladas* (*The Cow's Orgasm*, Olga Malea, 1996), films dealing with the problems of the contemporary generation, captured the popular imagination with formats akin to the American independent cinema of the 1950s. *I epitesi tou yiyantiaou mousaka* (*The Attack of the Giant Moussaka*, 2000), a send-up of science fiction films that combined criticism of Greek mass media with a hilarious gay subtext, reached beyond Greece to find an international cult audience. Even Angelopoulos became slightly more conventional by casting international stars and shortening the length of his films to more traditional running times. *I Earini Synaxis ton Agrofylakon* (*The Four Seasons of the Law*, Dimos Avdeliodis, 1999) successfully revived some of the elements of studio comedies. The surprise pop hit of the 1990s, however, was *Safe Sex* (1999), a soft-core porn film that leaped to the top of the Greek charts with over one million admissions. Its drawing card was that it used actors from Greek television sitcoms in dicey sexual situations. While critics rightly denounced its vulgarity, *Safe Sex* brought mass audiences back to Greek-language films. Subsequently, an increasing number of Greek-language films began to pass the 100,000 admissions mark.

During the first years of the twenty-first century, Greek cinema often dealt with the cultural identity problems associated with the new Europe, especially the unprecedented influx of refugees fleeing collapsing states in the region. A hit of 2003 was *Politiki Kouzina* (*A Touch of Spice*, Tassos Boulmetis, [b. 1957]), which dealt with the expulsion of Greeks from Istanbul in the 1950s. The following year Voulgaris released *Nyfes* (*Brides*, 2004), a film about a group of picture brides who emigrated to America in 1922. Both films were box office sensations with more than one million admissions. Angelopoulos took up a related theme in a trilogy that sought to reflect the history of Europe throughout the twentieth century by focusing on the history of the Greeks. The first film of the trilogy, *To Livadi pou Dakryzei* (*The Weeping Meadows*, 2004), begins with Greeks from the Black Sea fleeing the Bolshevik Revolution and continues through the end of Greek civil war in 1949.

One new element in twenty-first-century Greek film is a group of women who have raised feminist concerns

within an art form long dominated almost exclusively by male directors. Award-winning works include *Alexandria* (Mario Illioú, 2001), *Tha to Metaniossis* (*Think It Over*, Katerina Evangelakou, 2002), *Diskoli Apocheretismi: O Babas Mou* (*Hard Goodbyes: My Father*, Penny Panayotopoulou, 2002), and *Close, So Close* (Stella Theodoraki, 2002). Other women have reached the forefront of the avant-garde scene and the documentary genre. Lucia Rikaki (b. 1961) offered a rare look at the deaf community in Greece with her *Ta logia tis siopis* (*Words of Silence*, 2002) and Lydia Carras addressed ecological themes in *Foni Aegeou* (*The Voice of the Aegean*, 2004).

Amid these dynamic trends, the old auteurist ideal has remained in place, maintaining considerable resistance to any thinking about film as a collaborative enterprise and to conventional narrative formats. Nevertheless, both established and emerging filmmakers continue to pursue and reach popular audiences at home and abroad, seeking formats that fuse the integrity and artistry of the auteurist ideal with the populist verve of the best studio-era productions.

GUILDS AND UNIONS

Labor unions and guilds have been organized in film industries in many countries. Typically, these organizations have focused on specific types of workers, such as actors, directors, and technical workers—for example, the Alliance of Canadian Cinema, TV and Radio Artists (ACTRA), the Directors Guild of Great Britain (DGGB), and the Australian Theatrical & Amusement Employees' Association (ATAEA).

In the early history of film, workers often were organized by trade unions from related industries, such as the theater and the electrical industry. Eventually unions and guilds were formed specifically to organize film workers, and most of these labor groups are still active in film and television industries. Like other labor unions, film labor organizations represent their members in negotiations for wages, benefits, and working conditions, in addition to providing a variety of other services. Some guilds also become involved in negotiating royalty payments, conditions for screen credit, and other issues. Unions and guilds also engage in political activities through lobbying or election campaigning.

Also like other labor organizations, film unions and guilds continue to be challenged by political and economic developments in society in general and film industries in particular. For instance, the global expansion of the film industry during the last few decades of the twentieth century had an impact on film workers in various ways. While film labor organizations around the world have developed and are organized similarly, the focus of this article is on US unions and guilds both as an exemplar and because of the current global prominence of Hollywood films and companies.

While unions and guilds were active in the US film industry early in the twentieth century, the more specialized labor organizations, such as the Screen Actors Guild (SAG) and the Directors Guild of America (DGA), emerged in the 1930s during an especially intense period of labor organizing. Although film labor groups in the US were challenged in various ways by the anticommunism of the late 1940s and early 1950s, the groups survived and expanded to include television workers in the 1950s and 1960s. Trade unions and guilds continue to play major roles in the current US entertainment industry.

Film workers in the US represent a highly skilled and specialized labor force, but unemployment is high. For instance, it has been estimated that 85 percent of actors are out of work most of the time. There are some unusual or unique characteristics of film work, as well. Some workers, such as writers, directors and actors, share in the profits of films through profit participation deals. Others may become employers themselves through their own independent production companies or in projects where they serve as producer or director. For example, Billy Crystal worked as an actor in *City Slickers II: The Legend of Curly's Gold* (1994), but also was the film's producer. There also are keen differences between above-the-line and below-the-line workers, with consequent differences between the labor organizations that represent these different types of labor. Above-the-line labor organizations involve "creative" workers (writer, director, actors), while below-the-line labor refers more to "technical" laborers (camera operators, editors, gaffers, etc.). The organization of entertainment unions along craft

lines rather than as a vertical, industrial structure has tended to inhibit labor unity within the industry.

Generally, motion picture production is labor-intensive, meaning the largest part of the budget is spent on labor. The cost of key talent (especially actors and actresses) is a significant part of the budget for a typical Hollywood film. Above-the-line talent can often represent 50 percent of a production budget, and has been identified as one of the key reasons why the costs of Hollywood films have skyrocketed.

ABOVE-THE-LINE GUILDS

The Writers Guild of America (WGA) is the collective bargaining representative for writers in the motion picture, broadcast, cable, interactive, and new media industries. The guild's history can be traced back to 1912 when the Authors Guild was first organized as a protective association for writers. Subsequently, drama writers formed a Dramatists Guild and joined forces with the Authors Guild, which then became the Authors League. In 1921, the Screen Writers Guild was formed as a branch of the Authors League, although the organization operated more as a club than a guild.

Finally, in 1937, the Screen Writers Guild became the collective bargaining agent of all writers in the motion picture industry. Collective bargaining actually started in 1939, with the first contract negotiated with film producers in 1942. A revised organizational structure was initiated in 1954, separating the Writers Guild of America, west (WGAw), with offices in Los Angeles, from the Writers Guild East (WGAE), in New York.

While it may be difficult to determine how many people claim to be Hollywood screenwriters, it is even more difficult to assess how many writers in the industry actually make a living from their writing efforts. According to the WGAw, 4,525 members reported earnings from writing in 2001, while 8,841 members paid dues in at least one quarter of that year. Based on these figures, the guild reported a 51.2 percent employment rate. However, only 1,870 of those reporting earnings were designated as "screen" writers, and that group received a total of $387.8 million in 2001. The Guild also points out that there is a 20 percent turnover among their members each year.

While the minimum that a writer must be paid for an original screenplay was around $29,500 in 2001, much higher amounts are often negotiated. Writers also receive fees for story treatments, first drafts, rewrites, polishing existing scripts, and so on. Other important earnings come from residuals and royalties.

Another area of crucial importance to writers (and others involved in film production) is the issue of screen credits, or the sequence, position, and size of credits on the screen, at the front and end of a film, and in movie advertisements. Credits are a vital issue for many Hollywood writers not only because of their impact on their reputations, but because bonuses and residuals are based on which writers receive final credit. Credits or billing issues may be significant negotiating points in employment agreements and the guilds have developed detailed and often complex rules. The WGA rules generally require a 33 percent contribution to the screenplay from the first writer for credit, while subsequent writers must contribute 50 percent. However, when an executive on a project also becomes a subsequent writer, that executive must contribute "more than 50 percent" to receive credit or, if part of a team, "substantially more than 60 percent" for credit.

The Directors Guild of America (DGA) represents directors, unit production managers, assistant directors, and technical coordinators in television and film. The Guild was formed in 1960 from the merger of the Screen Directors Guild and the Radio and Television Directors Guild. The organization's membership was about 13,100 in 2005.

While the producer manages the overall film project, the director is in charge of production and is usually considered the "primary creative force" in a film's manufacture. The director controls the action and dialogue in front of the camera and is therefore responsible for interpreting and expressing in a film the intentions of the screenwriter and producer as set out in the screenplay. The director is usually hired by the producer, although some directors also become involved as some kind of producer in some films. Interestingly, most directors make only one movie, while only a handful make ten or more.

The DGA negotiates a basic agreement for its members, who then arrange individual contracts with the producer or producing company with terms and conditions applicable to a specific film. Director's agreements include employment terms (salary, and so forth), but also issues relating to creative control such as details regarding the director's cut and final cut of a film. Prompted especially by the introduction of colorized films, the DGA has lobbied strongly for a moral rights law for creative personnel to prevent changes in their work.

The Screen Actors Guild (SAG) was organized in 1933, after several other organizations had attempted to organize film performers, including the Academy of Motion Picture Arts and Sciences (Clark and Prindle). The history of SAG was at first dominated by the attempt to establish a guild shop (a system under which all actors employed on a film must join the guild), and then by gaining compensation for actors in the constantly expanding forms of distribution (television,

video cassettes, etc.). SAG's concern with such compensation is not an insignificant issue considering that its members gained more than $1 billion in 1987 merely from residual payments for TV reruns of old films. Much more revenue has been earned from home video and other new distribution outlets.

Like the DGA, SAG negotiates a basic agreement for its members; however, individual actors and actresses also contract for individual films, sometimes using agents or managers to represent them.

In 1992 the 3,600 members of the Screen Extras Guild (SEG) became a part of SAG's union coverage, primarily because SEG lacked the clout to deal with producers and most extras were working nonunion. Serious discussions of a merger have also taken place between SAG and the American Federation of Television and Radio Artists (AFTRA). AFTRA was formed in 1937 to represent radio and then television performers. The organization's primary jurisdiction is in live television, but AFTRA shares jurisdiction with SAG for taped television productions. As of 2005 AFTRA represents over 70,000 performers in radio, television, and sometimes, film.

The American Federation of Musicians (AFM) represents musicians across many industries, including film. The trade group, which was formed in the 1890s, has negotiated contracts with the film industry since 1944, and has been especially concerned with new technological developments in sound recording.

BELOW-THE-LINE UNIONS

The International Association of Theatrical and Stage Employees (IATSE or IA) has been the most powerful union in the US film industry. Formed at the end of the nineteenth century, IATSE organized stage employees in the United States and Canada. As the entertainment industry expanded, IATSE grew to include motion picture projectionists and technical workers at the Hollywood studios and film exchanges throughout North America. When television was introduced, IATSE organized technical workers in the new medium. IATSE's history includes some dismal chapters from the 1930s when racketeers and criminals extorted funds from union members, as well as assisting in the ugly blacklisting activities that tainted Hollywood in the 1940s.

IATSE represents technicians, artisans and craftspersons in the entertainment industry, including live theater, film and television production, and trade shows. More than 500 local unions in the US and Canada are affiliated with IA. IATSE has a tradition of local autonomy, with a variety of craft-based locals involved in collective bargaining agreements. However, nationwide agreements for film production personnel are negotiated, as well. Moreover, Local 600, the International Cinematographers Guild—which was formed in 1996 through a merger of regional groups—is national rather than local in its membership.

IA covers a wide range of employees in film production distribution and exhibition. Among the classifications of workers represented are art directors, story analysts, animators, set designers and set decorators, scenic artists, graphic artists, set painters, grips, electricians, property persons, set builders, teachers, costumers, make-up artists, hair stylists, motion picture and still camerapersons, sound technicians, editors, script supervisors, laboratory technicians, projectionists, utility workers, first aid employees, inspection, shipping, booking, and other distribution employees. IA's bargaining strength comes from this "complete coverage" of all the crafts involved in the production of theatrical, motion picture, or television products, with workers involved in every phase of a production, from its conception through every aspect of its execution.

The National Association for Broadcast Employees and Technicians (NABET) grew first out of radio, and then television broadcasting. The union was organized at the National Broadcasting Corporation (NBC) as a company union (an industrial organization rather than craft oriented) as an alternative to the larger and more powerful International Brotherhood of Electrical Workers (IBEW) (Koenig, *Broadcasting and Bargaining*). NABET's relatively militant history is replete with skirmishes with IBEW and IATSE, as well as continuous rumors of a merger with the larger IATSE.

In 1990, NABET's Local 15, which organized 1,500 freelance film and tape technicians in New York, merged with IATSE. Then, in 1992, most of the other NABET locals joined the Communication Workers of America (CWA), effective January 1994. About 9,300 NABET members became a part of the much larger CWA, which by 2005 represented over 700,000 workers in telecommunications, printing, broadcasting, health care, and other fields, in both the private and public sectors. While most of NABET's members were to be moved to an independent broadcasting arm within CWA, NABET's West Coast Local 531 agreed to merge with IATSE because of its 500 members' closer affiliation with the film industry. Thus, IATSE became the only union in the United States to represent behind-the-camera film workers.

The International Brotherhood of Teamsters is the largest and strongest union in the US and also is active in the motion picture industry, organizing studio transportation workers on the West Coast and various other workers. In 2005 the Teamsters claimed a general membership of over 1.4 million in the United States and Canada; its Hollywood Local 399 had over 4,000

members working as drivers, location scouts, and other personnel in the film industry. Casting directors also joined the Teamsters in that year.

PRESSING ISSUES FOR HOLLYWOOD UNIONS AND GUILDS

Some of the biggest headaches facing Hollywood unions and guilds are the proliferation of nonunion production, the relocation of production sites all over the country and the world (runaway production), and the growing strength of the entertainment conglomerates that own the Hollywood majors.

The issue of nonunion production begins in the film capital itself. While film and television production around Los Angeles seems to ebb and flow depending upon a number of different factors, there has been an increase in the amount of nonunion production in Hollywood. For instance, only 40 percent of the permits issued by the City of Los Angeles for film work in January 1989 were for unionized productions. However, more recently, IATSE claimed that less than one-third of the films released in the United States are made with union labor. Not only is nonunion labor typically considered less costly, but the established entertainment unions often are perceived as uncooperative and too demanding. It might be noted that independent productions sometimes try to avoid union labor, however, most of the larger and more successful independent companies still work with the unions due to their continuing role in the overall industrial process of Hollywood.

Runaway production has been an ongoing problem for Hollywood labor unions and guilds. The lure of lower budgets with nonunion workers has attracted producers to right-to-work states, such as Florida, as well as other states that have recognized film and television production as a boost to local economies. Meanwhile, foreign locations, such as Eastern Europe and parts of the Third World, offer low budgets and exotic locations. Most recently, Canada has lured film and television production away from Hollywood with offers of trained workers, tax breaks, and a favorable exchange rate. Pressure from the availability of a nonunion option and runaway production has forced the unions to make concessions during contract negotiations, as well as to push for government remedies.

Both of these situations can be explained by film companies' attempt to lower labor cost, in addition to the ready supply of nonunion workers, both in Hollywood and other locations. The abundance of available labor also may be related to the popularity of media in general. The growth of media education at universities and colleges, as well as the increased visibility of film and television production in the popular press, means that there is a glut of eager workers for Hollywood companies to employ, very often without union affiliation. Hollywood also seems to have a fantasy quality, as even "regular" work in the film industry seems glamorous.

While studios try to blame unreasonable union demands for the increase of nonunion production and the flight to nonunion locations, labor leaders (especially from below-the-line unions) claim that they are not the problem. Rather, they point to the skyrocketing costs of above-the-line talent, with especially high salaries going to high-profile actors and actresses. Some union officials point out that film costs will not come down unless studios control above-the-line costs, especially the huge salaries of some stars. The lack of unity among entertainment unions also has been blamed for the growth of nonunion filming. Some of the mergers mentioned previously may help to alleviate this problem, yet the organization of labor along craft lines still exacerbates the situation.

While Hollywood companies have become more diversified, union representation also has followed. The different types of businesses incorporated by Hollywood companies have involved further differentiation of labor, making it difficult for workers to form a united front against one corporation. For instance, workers employed by Disney include animators at the Disney Studio, hockey players on Disney's hockey team, the Anaheim Mighty Ducks, and Jungle Cruise operators at Disney's various theme parks. The differentiation of labor is especially apparent at the theme parks owned by many Hollywood companies, in particular Disney, Universal, Paramount, and Time Warner. Workers at these sites are represented by a wide array of labor organizations, many of which are unrelated to those unions active in the film industry.

Generally, then, the trend toward diversification has contributed to a weakening of trade unions' power as well as a further lack of unity among workers. More than one observer has noted that in the twenty-first century films are produced and distributed by conglomerates that own businesses outside of entertainment. Thus, if film production is halted because of labor problems, the conglomerate's income may slow a bit, but it can still survive with money from other sources.

So the pressures are mounting on labor organizations in the entertainment field. Hollywood unions and guilds have faced difficult struggles in the past, combating a range of problems from difficulty of gaining union recognition in the 1930s to ideological assaults such as the blacklisting period of the 1940s and 1950s. They continue to face further challenges from antiunion sentiments, nonunion workers, and runaway production, as

well as power struggles with diversified corporations actively involved in international markets.

HERITAGE FILMS

L. P. Hartley's *The Go-Between* (1953), the novel that inspired what may have been the first contemporary heritage film, offers the perfect epigram for the form: "The past is a foreign country. They do things differently there." Significantly, many of the hallmarks of the heritage film are present in this early example: directed in 1970 by Joseph Losey (1909–1984), a transplanted American (many heritage films emanate from national "outsiders"), *The Go-Between* is a stately, handsome adaptation of a respected novel set in a pre-war English country house and involving the sexual maturation of its young protagonist. Moreover, many of the questions arising from attempts to define the heritage film are also present in this example. Is it a form that has served to bolster the British film industry? or Does it represent a kind of filmic colonization of British stories and screens by Britain's former possessions? Does the form manifest geographical limitations that mean that it might be better denominated the English heritage film?

Film scholars cannot even agree on whether heritage films constitute a genre, partly because such films share only loosely associated tropes or iconographical elements and partly because they so readily appear to collapse into neighboring genres, such as the costume film, the historical film, the war film, and the prestige literary adaptation. In practice, the heritage film ranges widely over source material (from E. M. Forster and Henry James to working-class autobiographies from World War II), era, and nation: there are French heritage films, including *La Reine Margot* (*Queen Margot*, Patrice Chéreau, 1994) and *Manon des sources* (*Manon of the Spring*, Claude Berri, 1986), and now German heritage films dealing with the Holocaust, such as *Aimée & Jaguar* (Max Färberböck, 1999). The locus classicus of the heritage film nonetheless remains the narrative of pre–World War I or interwar England; it is often an adaptation of an esteemed literary property and typically invokes what might be termed heritage landmarks, such as Oxbridge colleges and National Trust properties.

GENRE?

It is in part through their treatment of landscape that heritage films as a group begin to display what might be viewed as generic characteristics. John Hill suggests that the heritage film typically focuses on the relationships among a group of characters rather than on the destiny of a single character; and has a slow pace, a preference for dialogue over action, and an approach to *mise-en-scène* that exceeds motivations found in the narrative or that does not necessarily express characters' emotions (1999, p. 80). Places and objects are displayed rather than dramatized, leading to what Andrew Higson calls "heritage space"—the film serves as a jewel box for the arrangement and contemplation of heritage properties (Higson in Friedman, p. 117). This approach to technique often emphasizes *mise-en-scène* over other cinematic elements, such as editing, and is a large part of the pleasure in spectacle to be found in such films.

Critical response to this stylistic aspect has been divided, with conservative critics arguing that British film should explore and valorize a glorious past, and left-leaning critics expressing concern over the often limited heritage on display, particularly in terms of the exclusion of working-class experience. Working-class characters may function merely as observers or chorus members in dramas often consumed with the problems of those

"Heritage space" in **The Remains of the Day** *(James Ivory, 1993), with Anthony Hopkins.* © COLUMBIA PICTURES/COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.

possessing or seeking an independent income. The Thatcher government's investment in the projection of heritage culture as a manifestation of a revived Britain (witnessed by the National Heritage Acts of 1980 and 1983) added to the ideologically suspect nature of heritage films in the eyes of some critics (Higson, pp. 51–54). Lutz Koepnick has argued that the heritage film produces "usable and consumable pasts . . . history as a site of comfort and orientation" (p. 51)—hence the occasional dismissal of heritage films as the "Laura Ashley school of filmmaking." A number of critics have noticed that the heritage film's desire for authenticity and its close attention to the look of objects create a kind of break between images and narrative, with objects constituting a conservative commentary on what might have originally been a work of social satire (such as the 1988 adaptation of Evelyn Waugh's *A Handful of Dust* by Charles Sturridge [b. 1951]).

Heritage films' characteristic contest between the consequences of using period objects and the critical projects of their source texts may further intensify the critical uncertainty about whether such films genuinely or reliably constitute a genre. One way of addressing that uncertainty has been to consider what kinds of audiences consume these films, a question considerably complicated by the international flavor of the production and consumption of heritage films. While at first blush the project of the heritage film would appear to be to bring Britain's glorious past to the screen, viewers may be struck by British heritage films' exceptional reliance upon American audiences not only for their ultimate global box-office success but also for access to *British* audiences. The average Briton attends one film in a theater annually; most film consumption in Britain takes place via the television and VCR—Britons have one of the world's highest rates of VCR use. Consequently, any "British" cinema is necessarily mediated by television and probably influenced by the tastes of other Anglophone audiences. In a pattern that heritage films pioneered but that now transcends genre, theme, and film style, British films are often given only limited or no release at all domestically until an American run has established their marketability, at which point they are re-exported to their country of manufacture.

THE HERITAGE FILM AND THE UNITED STATES

If British television pioneered the production of handsome adaptations of popular pre-war narratives, American public television trained American audiences to consume them. American series such as *Masterpiece Theatre* and *Mystery!* showcased quality British television programming from the 1970s; film and television production reinforced each other (and established a pattern of crossover labor), with, for example, Sturridge's lush Granada Television adaptation of *Brideshead Revisited* appearing in the same year (1981) that *Chariots of Fire* took American movie theaters by storm. Less obvious is that success on the small screen should translate to success on the large screen. Nonetheless, the heritage film spoke to the institutional needs of both British and American filmmakers and distributors in the 1980s. The modest budgets by American standards made heritage films attractive to US distributors, who found that the films could be gratifyingly profitable in extended runs at a limited number of well-chosen theaters, such as the Paris in New York City, before going on to stepped releases elsewhere in the nation. In the British context, heritage films operated as a heaven-sent solution to the financing problems created by the introduction of the Films Bill in 1984–1985, which removed earlier government supports to the film industry (Quart in Friedman, p. 23). Because of its connection to a small but reliable niche audience in the United States and in Britain, the heritage film could expect to recuperate its costs outside the UK, which most British films must hope to do to become profitable.

The heritage film in fact operated internationally as a kind of highly accessible art film. It was frequently distributed through small art cinemas, promising a kind of reliable upper-middlebrow visual pleasure without necessarily demanding the kinds of interpretive effort typical of films such as *L'Année dernier 'a Marienbad* (Alain Resnais, 1961). Rapturous acclaim via the Oscars®, such as was received by *Chariots of Fire* (four Academy Awards®, seven nominations) and for James Ivory's *A Room with a View* (1985) (three Academy Awards®, seven nominations), coupled with good box office, did not merely add to the films' prestige: on some level, American involvement and reception helped constitute the constellation of characteristics that typified the heritage film. For example, James Ivory (b. 1928), an American director—his collaborators, producer Ismail Merchant (1936–2005) and screenwriter Ruth Prawer Jhabvala (b. 1927), are respectively Pakistani and German by birth—is responsible for seven of the iconic heritage films of the 1980s and early 1990s.

NEW UNDERSTANDINGS OF THE HERITAGE FILM

So is the heritage film merely light entertainment for export—a kind of film tourism that reflects American expectations about a Britain ossified in a long Edwardian summer? Does it undermine any hope of representing Britain in all its complexity and change? Claire Monk argues that critics who dismiss the heritage film as ideologically suspect, boringly predictable, or merely a creature of American taste approach it too reductively. Part of the problem is indeed the capaciousness of the term "heritage film," coupled with the assumption that it describes a stable, unchanging genre (2002, p. 7). Monk has attempted to periodize heritage films, separating those of the 1980s and early 1990s from later entrants, which she characterizes as "post-heritage" by virtue of their self-conscious foregrounding of strategies designed to subvert the supposed conservatism of the heritage film or to undercut the primacy of the potentially too-dominant *mise-en-scène* (Monk in Vincendeau, p. 7). She argues that critics too readily assume that heritage films operate in ways entirely analogous to, say, National Trust landmarks—that a heritage film has a unitary, conservative meaning derived exclusively from its setting. As Monk observes, this approach hardly allows for the complexity of the interactions among a film's characterization, narrative, and dialogue, all of which may undercut the potential conservatism of reviving the past by filming its surviving material manifestations (2002, p. 188). Monk thus sees important distinctions among heritage films—for example, *A Room with a View* is considerably less conservative than *Chariots of Fire*, because the former permits its female protagonist to come to an important understanding about her agency and the nature of her sexual desires while the latter offers a less complex story line concerned with the creation and training of the British Olympic team in 1924.

Critics such as Monk and Richard Dyer see an exploration of sexuality, including homosexuality, as key to many heritage films. At the very least, it is fair to say that one of the major plot engines of the heritage film is the *Bildungsroman*, the coming to maturity of the young protagonist, typically dramatized at a moment of difficult self-discovery, as in *Maurice* (Ivory, 1987), *The Wings of the Dove* (Iain Softley, 1997), or *Elizabeth* (Shekhar Kapur, 1998), all of whose protagonists possess desires that are difficult, if not impossible, to reconcile with social expectations. Stories of homosexual desire and illicit female pursuit of agency or control fit very naturally into the framework of the *bildungsroman.*

Characteristically, even the earliest cycle of heritage films offers the spectacle of desire often frustrated but sometimes achieved, causing critics to debate the question of the heritage film's progressivism or lack thereof. Are the films progressive because they offer the spectacle of gay men or women longing for things they ought not to have (but sometimes get)? Are they conservative

MERCHANT-IVORY

James Ivory, b. Berkeley, California, 7 June 1928
Ismail Merchant, b. Ismail Noormohamed Abdul Rehman, Bombay, India, 25 December 1936, d. London, England, 25 May 2005
Ruth Prawer Jhabvala, b. Cologne, Germany, 7 May 1927

As a production team, Merchant-Ivory was responsible for more than thirty films over 42 years, making the partnership of director James Ivory, producer Ismail Merchant, and novelist/screenwriter Ruth Prawer Jhabvala among the most productive and durable of independent filmmakers. While the team remained active through 2005, Merchant also increasingly directed his own projects, including three features since *Cotton Mary* (1999).

The team's first feature, *The Householder* (1963), was the first to involve Jhabvala's services as screenwriter; showing the influence of Indian director Satyajit Ray, it led to further projects exploring Indian life and celebrating the sensibility and richness of its cinema. *Shakespeare Wallah* (1965) narrates the fortunes of a troupe of traveling players, both English and Indian, in the post-Independence, movie-mad 1960s, while *Bombay Talkie* (1970) analyzes the disastrous association between an English novelist played by Jennifer Kendal and an Indian film star played by her real-life husband, Shashi Kapoor. This sequence of films set in India showcased a number of persistent production strategies, namely the foregrounding of ensemble playing, an ability to enlist the help of more established filmmakers (such as Ray, who wrote the music for *Shakespeare Wallah*), a feel for identifying up-and-coming talent (when he worked with Merchant-Ivory, Kapoor had not yet become a major star), and an anthropological sense of place and social fabric reflecting not only the team's interests but also Ivory's beginnings in documentary.

Possibly as a result of their own disparate national and social backgrounds, Merchant-Ivory consistently pursue the question of what a character experiences when he or she attempts to penetrate a closed social milieu, ranging from the desire to master the mores of a foreign culture to the aspiration to control the hierarchies of theater stage or film screen. The indispensable closed social milieu is the sexual couple or close friendship that becomes a sexual triangle with the arrival of an outsider, permitting the intense exploration of patterns of domination within friendship and amorous coupling. Merchant-Ivory films often concern the failure to read social codes, be they those of privileged pre-war Anglophones (*Heat and Dust*, 1983; *Howards End*, 1992; *The Remains of the Day*, 1993; *Savages*, 1972), or of modern New York City (*Jane Austen in Manhattan*, 1980). Refreshingly, Merchant-Ivory films can imagine that defying social codes does not invariably result in happiness; sometimes their films examine the costs of desire for both the desiring character and society at large.

because they appear to admire the past in which these things were often denied to these people?

Recent heritage films are striking for the large number that foreground activities such as painting (as in *Carrington* [Christopher Hampton, 1995]) or theater (for instance, *Topsy-Turvy* [Mike Leigh, 1999] and *Finding Neverland* [Marc Forster, 2004]) in order to dramatize creative work or activities that might be described as play. In these examples, the heritage film offers the best possible motivations for the minute inspection of *mise-en-scène*: either it proves to be the very fabric of the narrative, as when Dora Carrington gradually paints every square inch of her cottage in a kind of autobiography of her attachment to Lytton Strachey, or it

presents the details of late nineteenth-century theatrical production as part of the exploration of grown men (W. S. Gilbert and J. M. Barrie) sojourning in extended, profitable fantasy. The heritage film here signals one of its major attractions—that the denial of desire can be perversely sexy, even progressive, particularly when coupled with the satisfactions of carefully wrought spectacle and performance. In short, one of the great appeals of the heritage film is that it bridges the fabled divide in English cinema between fantasy and realism.

HISTORICAL FILMS

Beginning in 1915 with *The Birth of a Nation*, directed by D. W. Griffith (1875–1948), the historical film has been one of the most celebrated forms of cinematic expression as well as one of the most controversial. As a genre, it has maintained a high degree of cultural prominence for nearly a century, and it has established itself as a major form in nearly every nation that produces films. But it has also consistently provoked controversy and widespread public debate about the meaning of the past, about the limits of dramatic interpretation, and about the power of film to influence popular understanding and to promote particular national myths.

The historical film has often served as a vehicle of studio prestige and artistic ambition, and many distinguished directors have made major contributions to the genre. Steven Spielberg (b. 1946), Martin Scorsese (b. 1942), Oliver Stone (b. 1946), John Sayles (b. 1950), Edward Zwick (b. 1952), Bernardo Bertolucci (b. 1941), and Roman Polanski (b. 1933) have made important and powerful historical films that have reawakened interest in aspects of the past that were not previously well-represented or understood. For many societies, the historical film now serves as the dominant source of popular knowledge about the historical past, a fact that has made some professional historians anxious. Other historians, however, see these films as valuable for the discussions and debate they generate. Films such as Spielberg's *Schindler's List* (1993), and Stone's *JFK* (1991), for example, have fostered a widespread and substantial public discussion that has contributed to historical appreciation and understanding.

Although several types of film can be grouped under the heading of the historical, Natalie Zemon Davis usefully defines the historical genre as being composed of dramatic feature films in which the primary plot is based on actual historical events, or in which an imagined plot unfolds in such a way that actual historical events are central and intrinsic to the story. This broad, plot-based characterization of the genre captures the specific and unique character of the historical film, which depends for its meaning and significance on an order of events—historical events—that exist outside the imaginative world of the film itself. Within this somewhat narrowed framework, however, there are still large variations in the types of films that can be considered historical films. Because the genre overlaps with other well-established genres, it is useful to consider the historical film in terms of several subtypes. These include the epic, the war film, the biographical film, the period or topical film, and what might be called the metahistorical film—films such as *JFK* or *Courage Under Fire* (Zwick, 1996) that present the past from multiple, conflicting viewpoints in an attempt to illustrate the complexity of representing the historical past.

THE BEGINNINGS OF THE HISTORICAL FILM

Epic films made in Italy between 1910 and 1914 were the first to capture the spectacular power of the cinema to recreate the past, and the first to extend the screening time of films to two and three hours or more. Films such as *Quo Vadis?* (1912), *Cabiria* (1914), and *Spartaco* (1913) were vast, sweeping depictions of the ancient world that united spectacle, lavish set design, and narrative in a way that had an enormous influence on film style, and that brought an extraordinary amount of publicity to the

Oliver Stone's* JFK *(1991) is a metahistorical film. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

films even prior to their release. The Italian epics of the early silent period were a particular incentive to D. W. Griffith, who after seeing *Quo Vadis?* in 1913 decided to make a two-reel biblical film, *Judith of Bethulia* (1914). The grandest of the Italian epics, *Cabiria*, by Giovanni Pastrone (1883–1959), commanded such public attention for its length, epic form, and massive sets that just hearing about it prompted Griffith to begin planning his own epic, *The Birth of a Nation* (1915). And after seeing *Cabiria*, Griffith began planning an even larger-scale narrative that would interweave four historical periods, resulting in the ambitious *Intolerance* (1916).

The Birth of a Nation is generally credited with inaugurating the genre of the historical film in the United States. Although films that used historical settings and included historical characters were fairly common by 1915, they could not be considered serious attempts to understand or explain the past; rather, they consisted of romances, costume dramas, tales of adventure, or small historical vignettes set within larger dramatic narratives, such as the scene in *Uncle Tom's Cabin* (1903) with Little Eva looking down from heaven on the divisive events of American history. *The Birth of a Nation*, on the other hand, attempts to offer an explanation and interpretation of the most troubled and divisive period in US history; despite its offensive stereotypes and obvious racism, it poses serious questions and makes serious interpretations about the meaning of the past.

In its ambitiousness, notoriety, and insistence on presenting a serious, if deeply flawed, interpretation of the meaning of the past, *The Birth of a Nation* brings into relief the distinctive characteristics of the genre and provides a blueprint for the future development of the historical film. It melds an elaborate family romance with a story of national trauma and national reconciliation; it employs a visual vocabulary consisting of wide panoramic shots, elaborate cross-cutting, and the use of close-ups as a form of historical commentary and analysis; and it insists on the authenticity of its representations by closely imitating battlefield daguerreotypes, by asserting the fidelity of its depiction of Lincoln's assassination, and by dwelling on the lived spaces of the historical past, the porches, picket fences, and dirt roads of the South. Although it was challenged at the time, its depiction reflected the beliefs of the most powerful school of American historians of that era, including President Woodrow Wilson (1856–1924),

who after a private screening purportedly commented: "It's like writing history with lightning. And my only regret is that it is all so terribly true."

The negative publicity generated by *The Birth of a Nation* intensified Griffith's ambition to make a great historical film. *Intolerance*, over three hours long, combines four stories set in different time periods and interweaves the stories in a complex arrangement, like a musical fugue. The thematic link among these stories is the idea of intolerance through the ages and its overcoming through love. By cutting these four stories together through parallel editing—which up to that time had been used strictly for cutting between parallel actions in the same time frame—Griffith tried to articulate a universal historical patterning, one that linked the story of Christ's crucifixion with a modern story of injustice, together with the fall of ancient Babylon, and the story of the St. Bartholomew Day Massacre in sixteenth-century France. This innovative use of parallel editing to link and harmonize four separate historical narratives was a dazzling conceptual breakthrough, but the film was not well received by the public and became a massive commercial failure.

Griffith's influence on the development of a cinematic style of historical narration is perhaps best seen in the Soviet cinema of the 1920s. Sergei Eisenstein (1898–1948) expanded on Griffith's formal innovations in editing to create an even more advanced visual aesthetic known as montage editing, a style characterized by rapid, dynamic combinations of shots of very short length. Eisenstein used this style to create a history or, better, a foundational mythology for the fledgling Soviet Union. In *Bronenosets Potyomkin* (*Battleship Potemkin*, assistant-directed by Grigori Aleksandrov, 1925), Eisenstein takes a small-scale historical incident—the mutiny by a small group of sailors on board the battleship *Potemkin* during the czarist period—and turns it into a stirring dramatization of the power of the proletariat to overcome oppression and create a revolution. In *Oktyabr* (*Ten Days that Shook the World* and *October*, assistant-directed by Grigori Aleksandrov, 1927), also known as *Ten Days That Shook the World*, Eisenstein presents the turbulent events of the ten days of the Bolshevik Revolution. The film combines close attention to the actual events with an elaborate set of visual ideas including the use of visual metaphors, repetition, humor, and a highly charged sense of movement and dynamism.

The Soviet filmmakers were experimental in their treatment of the historical past, exploring ways of creating a revolutionary historiography for a revolutionary time. The style of historical narration that they pioneered had an impact on the Latin American cinema of the 1960s and, later, on Stone's *JFK* and *Nixon* (1995).

THE EVOLUTION OF THE HISTORICAL FILM: THE WAR FILM

The war film is one of the great modes of cinematic expression. Many war films have been lauded for their realism and their focus on the cruelties of war, as well as for their portraits of heroism. Outstanding examples of the subgenre include formidable Hollywood productions such as *The Charge of the Light Brigade* (1936), *The Longest Day* (1962), *Tora! Tora! Tora!* (1970), *Glory* (1989), and *Saving Private Ryan* (1998), but also more subdued treatments of war and resistance such as Roberto Rossellini's (1906–1977) *Roma, città aperta* (*Rome, Open City*, also known as *Open City*, 1945) and *Paisà* (*Paisan*, 1946).

The Big Parade (1925) and *All Quiet on the Western Front* (1930) were extraordinarily successful works that established the war film in the United States as an important subgenre of historical filmmaking. *The Big Parade*, directed by King Vidor (1894–1982), contains memorable World War I battle sequences, especially a night battle scene that captures the nightmarish aspect of war on the western front, and became the model for many subsequent films. Lewis Milestone's (1895–1980) *All Quiet on the Western Front* won international and popular acclaim, as well as Oscars® for Best Picture and Best Director in 1930, for its portrait of the horrors of war as experienced by a young German soldier. The film marked the first time Germans were treated sympathetically in Hollywood films made after the war. In the most extensive use of moving camera in a sound film up to that time, Milestone used a mobile crane to create elaborate moving camera shots for the battle scenes. The film not only established the power and commercial viability of the war film, but it also established the Great War as an enduring emblem of human loss. Posing serious questions about ideals such as nationalism, patriotism, and the dehumanizing effects of war, *All Quiet on the Western Front* articulated the antiwar sentiment later taken up by war films such as *Paths of Glory* (1957), *Born on the Fourth of July* (1989), and *Apocalypse Now* (1979).

Darryl F. Zanuck's (1902–1979) *The Longest Day* initiated what has become a historical film staple of combat spectaculars. The combination of extraordinary realism in the battle scenes and exceptional attentiveness to the small dramas unfolding among the individual soldiers provided the model for many films to come, among them *Apocalypse Now* and *Saving Private Ryan*. The film also set a new standard for authenticity in the historical genre, in some scenes replicating the Normandy invasion so closely that stills taken from the shooting of the film

ROBERTO ROSSELLINI

b. Rome, Italy, 8 May 1906, d. 3 June 1977

One of the most influential filmmakers in the history of world cinema, Roberto Rossellini followed an idiosyncratic artistic path that brought him world attention. Over the course of his career, Rossellini continually defied expectations and consistently forged his own creative path, a quality that gives his work an unequaled variety and range. Following an apprenticeship making films for the fascist government of Italy in the early 1940s, Rossellini first achieved renown with his neorealist films *Roma, città aperta* (*Rome, Open City*, 1945) and *Paisà* (*Paisan*, 1946). In the 1950s he made a series of films with actress Ingrid Bergman, including *Viaggio in Italia* (*Journey to Italy*, 1953), which opened a new creative focus on the psychology of the couple. In the 1960s and 1970s he changed course again, making a series of didactic films on the history of western civilization for Italian and French television.

Rome, Open City, represents a fundamental breakthrough in film style and subject matter. Using the streets and apartments of Rome directly following the Nazi occupation, and employing a largely nonprofessional cast, *Rome, Open City* crystallized the emerging aesthetic of neorealism, which became one of the most celebrated film movements of the twentieth century, the emblematic filmic expression of the harsh social and psychological conditions of modern life. Rossellini followed with two additional films dealing with the devastation of World War II, *Paisan* and *Germania anno zero* (*Germany Year Zero*, 1948), that employed the look and feel of documentary and merged it with the dramatic plotting of the fiction film to create a powerful sense of social truth.

After seeing *Rome, Open City* and *Paisan* in New York, the actress Ingrid Bergman wrote to Rossellini expressing her admiration for his work. They married in 1950 and began a collaboration that would result in several important films, including *Stromboli* (1950), *Europa '51* (*The Greatest Love*, 1952), and *Journey to Italy*. At this point in his career, however, Rossellini's critical reputation was suffering from his supposed turning away from overtly social subjects to more psychological, "involuted" concerns. Critics in France, however, especially those associated with *Cahiers du cinéma*, argued that these films represented a fresh and liberating approach to filmmaking, one that was psychologically complex and daring.

In 1964, Rossellini again changed direction and began a series of "didactic" history projects for Italian and French television. These films, including *La Prise de pouvoir par Louis XIV* (*The Rise to Power of Louis XIV*, 1966), *L'Età di Cosimo de Medici* (*The Age of the Medici*, 1973), and *Agostino d'Ippona* (*Augustine of Hippo*, 1972), among others, were explorations of the historical past shorn of dramatic fictional plotting. Concentrating on the behavioral details of the period, Rossellini foregrounded his own "didactic" role as historian-narrator by using a zoom lens, called the Pancinor, to highlight certain elements of the scene.

and stills taken from the actual invasion are nearly indistinguishable.

In the late 1970s the American cinema began to take on the subject of Vietnam. Francis Ford Coppola's *Apocalypse Now* and Michael Cimino's *The Deer Hunter* (1978) both portrayed the war as a pathological endeavor that foreboded the ruin of a generation of young Americans. It was not until 1986, however, with the release of Oliver Stone's *Platoon*, that the Vietnam subgenre began to flourish as a dominant mode of cinematic expression. Stone followed *Platoon* with *Born on the Fourth of July*, an antiwar film that dealt with the trauma of the returning Vietnam veteran. A sober and scathingly critical work, *Born on the Fourth of July* followed in the tradition of *The Best Years of Our Lives* (1946) in illustrating the profound alienation of returning veterans who have been traumatized by the experience of war.

The traditional war film experienced a resurgence at the turn of the century with films such as *Saving Private Ryan*, *Black Hawk Down* (2001), *Glory*, *Pearl Harbor* (2001), and *The Patriot* (2000), which together reestablished the power and appeal of films that crystallize the heroism and sacrifice that war entails. Noted for the authenticity of its battlefield sequences as well as for its evocation of nostalgia for the certainties of the "last good war," *Saving Private Ryan* resurrected the traditional war film, which had fallen into disrepute in the post-Vietnam period, and reestablished it as a dominant form in American cinema. *Saving Private Ryan* also broke new ground in its technological innovations, most evident in the Omaha Beach landing sequence, in which the film blends computer-generated imagery, live-action photography, reenactments of documentary photographs and sequences, accelerated editing, slow-motion cinematography, and electronically enhanced sound design. The film combines the traditions of the war film—stressing the importance of the individual soldier and the success of the collective endeavor mounted on his behalf—with advanced visual and acoustic techniques that give it a powerful claim to battlefield authenticity and realism.

THE EPIC

Giovanni Pastrone's *Cabiria* was quickly followed in Italy by many films dealing with ancient Rome and Greece. In America, after *The Birth of a Nation* established the viability of longer, ambitious historical films, MGM in 1925 released *Ben-Hur*, directed by William Wyler (1902–1981), which became a commercial blockbuster. Cecil B. DeMille's (1881–1959) *The Ten Commandments* (1923) established Hollywood as the major producer of epic films in the 1920s.

In the 1930s and early 1940s, however, the epic form waned as audience tastes turned to contemporary subjects, exemplified in the sophisticated musicals and comedies of Hollywood and in the Italian "white telephone" comedy genre (films about the rich and idle). But the form returned full force in the early 1950s, with *Quo Vadis* (Mervyn LeRoy, 1951), and *The Robe* (Henry Koster, 1953), and the first film to be shot in CinemaScope. The epic, with its lavish sets and mass choreography of crowds and armies, lent itself to the widescreen format that was one of Hollywood's responses to the threat of television. For most critics *Ben-Hur* represents the high point of the style. *King of Kings* (Nicolas Ray, 1961), and *El Cid* (Anthony Mann, 1961), were also accomplished works, as was DeMille's *The Ten Commandments* (1956), which marked a return to the subject he had first treated in 1923.

The epic form in Hollywood reached its zenith in the early 1960s with three films: *Spartacus* (Stanley Kubrick, 1960), *Cleopatra* (Joseph L. Mankiewicz, 1963), and *The Fall of the Roman Empire* (Mann, 1964). (*Spartacus*, which gave screenwriter credit to Dalton Trumbo [1905–1976], a prominent leftist who had been blacklisted in Hollywood for refusing to cooperate with the House Un-American Activities Committee, became known as "the film that broke the blacklist.") However, *The Fall of the Roman Empire* did poorly at the box office, and from 1964 until the mid-1990s the epic was decidedly out of fashion. With *Braveheart* (Mel Gibson, 1995) and *Gladiator* (Ridley Scott, 2000), the epic renewed itself in a way that heralded a return to cultural prominence. *Gladiator*, in particular, provides a fascinating example of the use of new visual technologies to narrate the past. Its elaborate use of computer-generated imagery recreates

OLIVER STONE

b. New York, New York, 15 September 1946

One of the most accomplished filmmakers working in contemporary Hollywood, Oliver Stone is also one of the most controversial, creating vivid dramas of American history and politics that have provoked equal parts admiration and outrage. His film about the Kennedy assassination, *JFK* (1991), for example, created a searing controversy that led to denunciations by leading politicians, journalists, and historians. Ultimately, however, it resulted in legislation authorizing the Assassination Records Review Board, which assembled and made available millions of pages of documents on the assassination previously withheld from the public. In 1998 the Review Board specifically credited *JFK* with arousing public opinion to pressure Congress into passing the legislation. Arguably, no American work of art, with the possible exception of Harriet Beecher Stowe's *Uncle Tom's Cabin* (1852), has had as direct or consequential an impact on American history as *JFK*.

Asserting his political orientation with his first major films, Stone's early works combine an explicitly political viewpoint with dramatic plotting and sympathetic characters. *Salvador* (1986) and *Platoon* (1986) are emotionally wrenching depictions of the conflicts in El Salvador and Vietnam. Following *Platoon*, which won Academy Awards® for Best Picture and Best Director, Stone made two films dealing with domestic American life, *Wall Street* (1987) and *Talk Radio* (1988). *Born on the Fourth of July* (1989) took up the subject of Vietnam again and won for Stone his second Oscar® for Best Director. A powerful film about the loss of national ideals and purpose, rendered through the experiences of a wide-eyed, all-American hero who comes home a disillusioned paraplegic, the film reads as a culminating statement against the war and its pointless sacrifice of a generation of young people. Stone completed his Vietnam trilogy with *Heaven and Earth* (1993), a beautiful and highly stylized portrait of a young Vietnamese woman and her experiences during the war and its aftermath.

With *The Doors* (1991), *Natural Born Killers* (1994), and *Nixon* (1995), Stone extended his stylistic range, which had largely been tied to realist modes of representation, to include an array of subjective, dreamlike devices including disorienting, rapid-fire montage, superimpositions, and elaborate layering of the sound track. In these films, Stone creates an expressionistic portrait of American reality, dramatizing the frenzied, driven, and ultimately self-destructive aspects of American culture. His more recent films, including *Any Given Sunday* (1999) and *Alexander* (2004), represent a departure from the political focus of his major works, which stand among the most provocative and powerful in cinema history.

RECOMMENDED VIEWING

Salvador (1986), *Platoon* (1986), *Born on the Fourth of July* (1989), *JFK* (1991), *Natural Born Killers* (1994), *Nixon* (1995), *World Trade Center* (2006)

the Colosseum, the Roman Forum, and an exceptional sense of realism in its gladiator contests. With varying degrees of critical and box-office success, twenty-first-century directors have made more films in the epic genre, including *Troy* (Wolfgang Petersen, 2004), *Alexander* (Stone, 2004), and *The Passion of the Christ* (Gibson, 2004).

THE BIOGRAPHICAL FILM

The biographical film, or biopic, also has a long and distinguished history in world cinema, with several works attaining high status for their critical as well as their commercial success. For example, *The Private Life of Henry VIII* (Alexander Korda, 1933) was the British

Oliver Stone during production of* Alexander *(2004). **© WARNER BROTHERS/COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

cinema's first international success; Charles Laughton (1899–1962) won a Best Actor Oscar® for his portrayal of the monarch. The French film *Napoléon* (Abel Gance, 1927) brought a similar sense of national pride to a country whose film industry had been devastated by World War I. Still regarded as one of the most outstanding achievements in the history of the cinema, *Napoléon* was seen as the culmination of the French cinema's rise from near annihilation in 1914. *The Last Emperor* (Bernardo Bertolucci, 1987), which won nine Academy Awards®, was the first film to be shot on location in Beijing's Forbidden City, heralding a more open era in Chinese–Western cultural relations.

The biopic emerged as a recognizable subgenre in the 1930s. The first biopic is generally considered to be the George Arliss (1868–1946) vehicle *Disraeli* (1929), marketed as a Warner Bros. prestige production. Arliss also starred in *Alexander Hamilton* (1931) for Warner Bros. and in *Voltaire* (1933). The commercial and critical accomplishment of these works paved the way for several later Warner Bros. films directed by William Dieterle (1893–1972), including *The Story of Louis Pasteur* (1935), for which Paul Muni (1895–1967) won the Oscar® for Best Actor; *The White Angel* (1936), the story of Florence Nightingale; and *The Life of Emile Zola* (1937) and *Juarez* (1939), both also starring Muni.

Biographical films are often driven by a national, myth-making impulse. *Young Mr. Lincoln* (1939), starring Henry Fonda (1905–1982) in his first film with John Ford (1894–1973), and *Abe Lincoln in Illinois* (1940), starring Raymond Massey (1896–1983), were not so much historical as mythological exercises, as neither film was particularly accurate with regard to the actual events of Lincoln's life nor to his character. Nevertheless, *Young Mr. Lincoln*, in particular, succeeded in elevating Lincoln's early years to the level of national myth.

Eisenstein's *Ivan Groznyy I* (*Ivan the Terrible, Part One*, 1944) focused on an individual protagonist, rather than the collective protagonist of his earlier films, in part to rally the Russian people during World War II by giving them a historical hero who had unified Russia, fought off treachery, and defeated external enemies in the sixteenth century. Unlike his earlier *Aleksandr Nevskiy*

La Prise de pouvoir par Louis XIV *(*The Rise to Power of Louis XIV*, 1966) was one of several historical biographies Roberto Rossellini made for television.* EVERETT COLLECTION. REPRODUCED BY PERMISSION.

(*Alexander Nevsky*, co-directed by Dmitri Vasilyev, 1938), however, which focused on the story of a thirteenth-century prince who defeated an invading Teutonic army, *Ivan the Terrible, Part One* is less a symbol of the Russian people than a portrait of a fully rounded character, complex and beset by internal conflicts. Although *Ivan the Terrible, Part One* received the Stalin Prize, *Ivan Groznyy II* (*Ivan the Terrible, Part Two*, co-directed by M. Filimonova, 1958) was condemned by Stalin and suppressed. *Ivan the Terrible, Part One* has long been considered one of the most important and original films in world cinema in terms of its formal design; the two parts taken together may also be the first biographical film to explore the darker side of its main character.

As the biopic matured as a form, its subjects became more complex. *Lawrence of Arabia* (David Lean, 1962), starring Peter O'Toole, for example, paints an arresting portrait of its main character that shows him as both heroic and fatally flawed. *Patton* (Franklin Schaffner, 1970) took a similar approach, with George C. Scott (1927–1999) depicting the main character as both a noble warrior and vainglorious egomaniac. The complex and subtle shadings of character that distinguish films such as *Lawrence of Arabia* and *Patton* are also found in later examples of the form. Works such as Bertolucci's *The Last Emperor* and Stone's *Nixon* are distinguished examples of films that take a complicated view of the link between the individual subject and the historical process, refusing to see the individual agent as simply the crystallized expression of historical forces. *Malcolm X* (Spike Lee, 1992) and *Gandhi* (Richard Attenborough, 1982) as well as *Schindler's List*, consider the question that is at the heart of the biographical film: the relationship between the currents and forces of history and the charismatic individual who strives to shape those forces.

THE TOPICAL FILM

Many important historical films center on a particular incident or focus on a specific period rather than on the grand narratives of war, heroic individual action, or the

emergence of a race or nation in the form of the epic. The topical, or period, film is exemplified by such celebrated works as Rossellini's *Rome, Open City* and *Paisan*, *Senso* (Luchino Visconti, 1954), *La Marseillaise* (Jean Renoir, 1938), *Danton* (Andrzej Wajda, 1982), *Gallipoli* (Peter Weir, 1981), and *Titanic* (James Cameron, 1997). Two other notable examples, *Eight Men Out* (1988) and *Matewan* (1987), are the work of the independent filmmaker John Sayles. Commenting on *Matewan*, Sayles explained that, rather than recreate an entire fifteen-year period in American labor history, he focused on the Matewan Massacre, an incident in the mining industry, as one episode that epitomized that period. Similarly, *Eight Men Out*, a film that focuses on the Black Sox scandal of 1919, in which several players conspired to throw the World Series, dug under the surface of the incident to show the period as a moment of cultural transition in which sports, advertising, public relations, gambling, leisure, and mass communications were beginning to transform the nation from an agrarian culture to an urban, commodity-based society.

Other historical films are important for their exactitude of period detail and for their deep understanding of the difference between the past and the present. Such films fully express a cultural order that, organized according to different allegiances and beliefs, has become remote. These include *Le Retour de Martin Guerre* (*The Return of Martin Guerre*, Daniel Vigne, 1982), *Black Robe* (Bruce Beresford, 1991), and *Daughters of the Dust* (Julie Dash, 1991). *Black Robe* centers on the challenges facing Jesuit missionaries in French Canada in the 1600s, in particular the attempt by one young priest to travel to a distressed mission in the Ottawa River Valley, a journey that becomes an ordeal. The film captures the strangeness and sense of otherness that the priest experiences while traveling among the Algonquins who serve as his trading partners and guides, but it also gives us the perspective of the Indians and effectively opens a window onto their cultural sensibility. Each culture is presented to the viewer in its unfiltered strangeness, as it was to the other in 1634.

THE METAHISTORICAL FILM

Certain films can be called metahistorical because they offer embedded or explicit critiques of the way history is conventionally represented. *Courage Under Fire*, for example, employs multiple flashbacks from different points of view to piece together a disputed account of a female air force officer's death. *Walker* (Alex Cox, 1987) brings present-day objects from consumer culture into its collage-like narrative of the nineteenth-century adventurer William Walker, who declared himself emperor of Nicaragua. What these films have in common is the attempt to interrogate the process of historical representation, both written and filmed. *JFK* presents a provocative interpretation of the assassination of John F. Kennedy in a highly charged, polemical style that mixes idioms, splices together documentary and historical footage, and uses montage editing to disorient and "agitate" the viewer in a manner that calls into question accepted interpretations of the past. *Hitler—ein Film aus Deutschland* (*Hitler: A Film from Germany*, also known as *Our Hitler*, Hans-Jürgen Syberberg, 1978) attempts to confront the German amnesia concerning Hitler by rendering the phenomenon of Hitler's rise as a disorienting operatic production, calling to mind the German fascination with and investment in this form. The film's extreme length (seven hours and nine minutes), its use of dolls, dummies, and caricatures—Hitler is portrayed variously as a house painter, Chaplin's Great Dictator, a Frankenstein monster, and Parsifal—underscores the way historical events and characters take on meaning through their representations in the media.

In a very different way, a series of films that Rossellini made for French and Italian television late in his career can also be seen as metahistorical works. In these "history lessons," Rossellini explored the lives and times of various historical personages in a studiously nondramatic, nonpsychologized way. His films *La Prise de pouvoir par Louis XIV* (*The Rise of Louis XIV*, 1966), *Socrate* (*Socrates*, 1970), and *L'Età di Cosimo de Medici* (*The Age of the Medici*, 1973) were made with nonprofessional actors and avoid following the dramatic arc of most fictional historical films. Rossellini attempts to capture the dailiness of life in past historical times, bringing an almost documentary approach to the treatment of the past.

THE COSTUME DRAMA

The costume drama can be distinguished from other variants of the historical film by virtue of its fictional basis. Its plot is most often based on a fictional literary source, and it does not depend on actual historical events as its main focus or framing material. Nevertheless, the costume drama provides many pleasures for viewers, for it often features a sumptuous recreation of a historical period and setting, with the density of detail in the costumes and décor providing a source of sensual pleasure that equates history with emotion and passion. The Gainsborough Studio in the 1940s produced a number of notable costume dramas, including adaptations of literary works such as *The Man in Grey* (1943), *Fanny by Gaslight* (1944), and *The Wicked Lady* (1945).

Costume dramas such as *The Mask of Zorro* (1998) and *Dangerous Liaisons* (1988) employ historical settings for their aesthetic value, allowing the viewer to become a

voyeur of the past. Historical films in general appeal to this emotional, voyeuristic interest on the part of the spectator, but the costume film allows its fullest expression, untrammeled by the sociopolitical conflicts that dominate the plots of films that deal with actual historical events.

THE DOCUDRAMA

The docudrama, another type of visual narrative dealing with the past, has gained a significant place in television broadcasting, with such well-known titles as *Brian's Song* (1971), *Roots* (1977), and *Everybody's Baby: The Rescue of Jessica McClure* (1989). The genre in its original form combined documentary and drama, categories usually conceived as separate. According to Janet Staiger, the docudrama derives from the early US television program *You Are There* (1953–1957), which featured staged interviews with actors representing the actual participants in historical events, such as the conquest of Mexico. The "you are there" form, however, has fallen into disuse, and most docudramas employ mainstream forms of dramatic representation and apply them to historical events. They combine fictional narrative techniques with an explicit claim to record or report "reality," a characteristic of television broadcasting in general. In blending narrative and documentary style, the docudrama sets forth a moral view of reality, an ethical response to the "real world," which is initially presented as disordered and irrational.

CONCLUSION

The historical film emerged as a strong genre form very early in cinema history and has renewed itself many times over the course of the twentieth century and into the twenty-first. Although the world of the past is its subject, the genre is often in the vanguard in terms of visual style and cinematic technique. The dramatic, compelling portraits of the past that are brought to life in the historical film have made it one of the most prestigious as well as one of the most controversial genres in film. It provides both a lens onto the past, which it frequently recreates with exquisite attention to detail and period style, while also reflecting the cultural sensibility of the period in which it was made. Above all, the historical film provides an emotional connection to history in a way that foregrounds the power and importance of the past in shaping the cultural imaginary in the present.

HOLOCAUST

Holocaust films narrate or document the persecution and genocide of Jews and others under the Nazi Third Reich of Adolf Hitler (1933–1945). From the 1935 Nuremberg Laws that excluded Jews from citizenship of the Reich, to the 9 November 1938 *Kristellnacht* attacks on Jews, their synagogues, and their businesses, to the 1941 Wannsee meeting at which Nazis planned the final solution, to the rounding up of Jews not only in Germany but in all German occupied territory, to the operation of the Nazi death camps and other acts of mass murder, these most tragic and traumatic events in modern history constitute the Holocaust, or as it is also called, the Shoah.

REPRESENTATION AND THE HOLOCAUST

Ever since the appearance of Steven Spielberg's (b. 1946) *Schindler's List* (1993), only eight years after Claude Lanzmann's (b. 1925) *Shoah* (1985), these two films have come to represent the polarities in a debate on how cinema should tell stories about the Holocaust. Lanzmann's film gathers first-person reports that center on the process of systematic arrest, transport, internment, and annihilation of Europe's Jewish population; it eschews dramatization in favor of the setting of these interviews against the contemporary landscapes at the sites in which the tragic events took place. It strategically refuses to recreate past horrors except through verbal tellings, so that the visual in this film rests only on the speakers and on landscapes that are otherwise silent about the events that once occurred there.

These contemporary landscapes mark the terrain of a refusal to fill an absence, a refusal to take us back to a history that in its magnitude exceeds any examples that would partially serve to represent it. The Shoah must be unrepresentable, beyond figuration, beyond parable, or even symbolization. Yet *Shoah* is a documentary concerned with documents, and with oral history as a form of documentation. Its goal is to highlight the alibis that can distort historical memory, that can allow populations to deny the Shoah. Lanzmann's interviews cover some material already recorded in histories, such as Vrba's testimony. To hear such testimony directly, presented with all its emotional weight for the victims, is newly compelling. The secretly recorded interviews with former Nazis need to be heard in the context of the victims' interviews, to hear in contrast the emotional withdrawal and denial that occurred, especially vivid when the former Nazis report facts that coincide with the victims' accounts. The interviews with Polish peasants and workers reveal not only anti-Semitism and complicity in the past, but lingering anti-Semitism embedded within their narratives. Chillingly, the brunt of this anti-Semitism is steeped in Christian references; the cultural framework through which they view Jews has not changed.

Schindler's List, by contrast, fictionally amplifies a fragment of Holocaust history for emotional affect. In flamboyant *mise-en-scène* and camerawork often reminiscent of Orson Welles's *Citizen Kane* (1941), Spielberg employs the tropes of Hollywood filmmaking to frame an individual act of resistance on the part of one-time Nazi sympathizer Oskar Schindler (Liam Neeson) to save the Jewish slave laborers he employed at his armament factory. However late in the war and perhaps self-interested his acts might have been, the film highlights his conversion into hero. Enfolded within this story, images of

deportation and a death camp give us the backdrop of the cataclysmic events that surrounded Schindler's Jews, yet even this aspect remains controversial for certain misleading representations. One such instance is a concentration camp shower sequence that the prisoners fear will be a gassing, but it turns out in this case to be only a shower. The sequence is disturbing for how it conforms, however temporarily, to Holocaust denials. *Schindler's List* met with some critical disdain not only for such narrative moments, but also for the melodramatic style used to connect to a mass audience.

These cornerstones of recent Holocaust representation follow many other documentaries and fiction films that have told various aspects of Holocaust history. The long history of both documentaries and fiction films has a cumulative resonance. The Holocaust as historical trauma that took place at so many different locales and created so many specific and individual tragedies, has not one story to tell, but many.

Alain Resnais's (b. 1922) *Nuit et brouillard* (*Night and Fog*, 1955), filmed at Auschwitz, features a voice-over essay by survivor Jean Cayrol in montage with black-and-white documentary images (both those the Germans took to document their atrocities and those liberators took as evidence) and Resnais's evocative color footage of the deserted remains of the camp. Some of the documentary footage was first shown at the Nuremburg trials and would later be featured in *Judgment at Nuremburg* (1961) by Stanley Kramer (1913–2001). In Resnais's film, it is presented with bitter irony as the film strives for both a poetic discourse and reflexively addresses the dynamic of witnessing itself. Controversially, it does not focus on Jewish annihilation (Cayrol was a Catholic victim), but it is haunting philosophical commentary on evil and responsibility.

Die Mörder sind unter uns (*Murderers Among Us*, 1946), a German film made in the Soviet-controlled sector of Berlin, may be the first fiction film about the Holocaust. A survivor of the camps, again a Catholic, returns to her apartment only to find that she must share it with the former Nazi soldier who now occupies it. The film's title accuses the guilty, but its narrative works to expiate guilt and offer redemption, strategies that fit a communist agenda for the construction of what would become the German Democratic Republic.

In contrast, it was not until *The Diary of Anne Frank* (1959), directed by George Stevens, that a US filmmaker produced a major feature about the Holocaust. Adapted from the Broadway hit, the film garnered three Academy Awards® and was nominated for five others, including Best Picture and Best Director. Capturing the tension of hiding from the Nazis in an Amsterdam attic, the film also works as a serious family drama about intergenerational conflicts and coming of age, although this aspect, found in Anne Frank's original diary, led some to argue that American filmmakers could only approach the Holocaust in terms that were familiar to families of the 1950s.

East European Jewish survivors were able to write and to film Holocaust narratives for their State industries, with Poland and Czechoslovakia providing particularly stunning works. For example, *Obchod na korze* (*The Shop on Main Street*, Ján Kadár, 1965) employs a surrealist sensibility to present Slovak townspeople welcoming the Nazis. A microcosmic look at how economic gain can combine with prejudice to engender a Holocaust, the film is set in a dry goods store run by an aged Jewish widow, played by Yiddish theater star Ida Kaminska (1899–1980). *Pasazenka* (*The Passenger*, Andrzej Munk) is another superb film, completed in Poland in 1963, after the filmmaker's untimely death. When a Polish Auschwitz-Birkinau survivor recognizes a German woman on a passenger ship as her former captor, the film's main story enfolds in flashbacks to the camp. Through its calm, complicit witnessing, similar to that of *Shoah*, this film effectively portrays mass murder in the banal guise of a day's work.

Perhaps influenced by some of this fine European work, Sidney Lumet (b. 1924) made *The Pawnbroker* (1964) from a novel by Edward Lewis Wallant. This film takes a stunning look at the Holocaust trauma of survivor Sol Nazerman (Rod Steiger), once a professor of history in Germany (Poland in the novel), now a pawnbroker in New York, whose memories intersperse the narrative. He recalls an incident from the camp in which an escaped prisoner, Nazerman's friend, who has been tracked down by the German guards and their dogs, is tortured and killed in front of the other prisoners. Another flashback memory shows Nazerman's wife being forced to service Nazi soldiers, a memory evoked by a black prostitute's offering her services to him at his pawnshop. Such associative montages set up a metaphoric parallel between the concentration camp and urban poverty, as well as explore the nature of a survivor's guilt and trauma.

American television has played an important role in representing the Holocaust, notably with the mini-series *Holocaust* (1978) and *Playing for Time* (Daniel Mann, 1980). Melodramatic tropes structure *Holocaust*, as they do *Schindler's List*, but the earlier television serial tries to give a more extensive view of different localities of the Holocaust. By following various members of a Jewish family named Weiss and interweaving their stories with a German lawyer, Eric Dorf, who eventually joins the SS, throughout Hitler's reign in Germany, the serial interweaves victims' and perpetrators' perspectives. Only one of the Weiss's sons survives World War II, while the fate

of the other family members allows the multi-part drama to portray the Warsaw ghetto and three different camps: Auschwitz, Buchenwald, and Terezienstadt. Such multiple-perspective mechanisms are repeated in another television serial, *The Winds of War* (1983), directed by Dan Curtis (1927–2006) and adapted by Herman Wouk from his novel, as well as by its sequel, *War and Remembrance* (1988), again by Curtis and Wouk. Across the two serial works (1,600 minutes in total), we follow Jewish characters who become Holocaust victims, Natalie Jastrow-Henry and her uncle Aaron Jastrow (both played by different actors in the second series—Ali McGraw then Jane Seymour, John Houseman then John Gielgud). Later films, such as *Sunshine* (István Szabó, 1999), used a family melodrama to narrate different perspectives on a sweep of history. Arthur Miller (1915–2005) adapted the autobiography of Fania Fénelon, a member of the Auschwitz prisoners' orchestra, for the TV movie *Playing for Time*. Scenes of an orchestra also appear in *The Passenger*; both films use the existence of the orchestra to underscore the horrendous cultural contradictions in Nazi ideology and practice. These films highlight the ways appreciation of classical music (the Nazis established five orchestras in Auschwitz alone, and each camp had its performing ensembles) coexisted with the ability to commit atrocities, thus underscoring that Western cultural values did not foreclose barbarism. They also highlight the dilemma of the cultural Kapo, the performers who, like the Jewish concentration camp workers, were allowed to live while others died. Against their will, the Kapo were forced to contribute to the running of the camp, to become complicit in genocide. *Playing for Time* dramatizes the anguish of this treacherous position.

Many documentaries, including numerous Academy award winners, have chronicled many aspects of the Holocaust. *Let My People Go* (John Krish, 1961) treats the liberation of the camps, as does *Ihr zent frei* (Dea Brokman and Ilene Landis, 1983). *Genocide* (Arnold Schwartzman, 1981) attempts a comprehensive overview by combining still images and clips with letters and memoirs read as voice-over. *The Long Way Home* (1997) by Mark Jonathan Harris (b. 1941) looks at postwar Jewish refugees. His *Into the Arms of Strangers: Stories of the Kindertransport* (2000) joins a more personal retelling in Melissa Hacker's *My Knees Were Jumping: Remembering the Kindertransports* (1996), about the Jewish children sent to Britain in order to survive.

RECENT HOLOCAUST FILMS

With all the controversy surrounding Holocaust dramas, it is no wonder that a Holocaust comedy whose second half is set in a concentration camp, Roberto Benigni's (b. 1952) *La Vita è bella* (*Life is Beautiful*, 1997), evoked bitter criticism. The film has been likened to the satire in Charlie Chaplin's *The Great Dictator* (1940), although the context through which Chaplin's deflation of Hitler earned its acclaim differs. A scene early in the film in which the hero, Guido (Benigni), comically disrupts a fascist classroom in particular merits the comparison. Like *Schindler's List*, *Life is Beautiful* tries to wrench from the Holocaust context an uplifting narrative of survival and redemption, here specifically by focusing on the extended conceit of a father shielding his son from the horrors of their exportation from Ferrara and internment in a concentration camp by spinning innocent fantasy explanations for horrible events. The film works best as a fantasy because such a shielding would never have been possible, and the truth of the Shoah is that even young children in the camps knew the pain of their existence all too well. To follow this film, one must grant it its moment-to-moment ironies, as each new atrocious aspect becomes a comic fantasy. Whether or not one finds such irony compelling, a fascinating image appears at the end of the film, after the liberation: father and son rejoin the wife on a hill, symbolically reclaiming the land.

In an Italian cultural context, the film can be seen as celebrating Italian Jewish survivors. For Italy, like France, offers a different setting for Holocaust films, one with questions specific to national cultural history. American audiences embraced, but sometimes misunderstood aspects of an earlier Italian film about the Holocaust, Vittorio De Sica's (1901–1974) *Il Giardino dei Finzi-Contini* (*The Garden of the Finzi Continis*, 1970), adapted for the screen by Giorgio Bassani from his important novel, set in his hometown, Ferrara, Italy. The film focuses on an upper-class family in Ferrara, who under the rise of Italian fascism retreat to their enclosed villa, yet where they entertain a few close friends with tennis and social gatherings. Many wondered about the depiction of Jews as upper-class blonds, ignoring the specificity that the film and the novel before it address Jewish assimilation in Northern Italy. The film traces the arrest and deportation of the family along with other Jews. The garden of the title represents the passivity of this family of means, living too long in denial.

Roman Polanski's (b. 1933) *The Pianist* (2002), adapted by Ronald Harwood from Wladyslaw Szpilman's autobiography, masterfully witnesses the Holocaust from hiding. It tells the story of an accomplished musician who becomes subject to the Nazi anti-Jewish laws. Szpilman (Adrien Brody) and his family are forced to move to the Jewish ghetto of Warsaw, and when his family is deported to a death camp, Szpilman is sent to a German forced labor compound. He witnesses the Warsaw ghetto uprising in 1943,

Adrien Brody in Roman Polanksi's* Le Pianiste *(*The Pianist*, 2002). © FOCUS FEATURES/COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.

followed by the revolt throughout the city begun in August 1944. In an encounter between Szpilman and a Nazi officer among the ruins of one of his hideouts shortly before the Nazi defeat in Poland, the officer begs him to play once more—and lets him live—a sign of the officer's own alienation.

The return of music at the end of *The Pianist* is an example of a trend in some recent Holocaust films to emphasize the return to decency after the depraved onslaught of barbarity. These recent endings contrast with those especially of earlier East European Holocaust films, such as Andrzej Wajda's (b. 1926) *Kanal* (1957), about Warsaw's resistance. This shift cannot just be assumed to come from the passage of time alone, for the pressure of commercial distribution to a contemporary world market weighed on Polanski in ways that were not a factor for his compatriot Wajda. It is striking that Polanski, himself a Holocaust survivor as a child, returned to Poland to tell this story, finally, at this late stage in his career, thus releasing his survivor pain.

HONG KONG

Hong Kong cinema is shaped by two major factors—geographical location and politics. As a major port and trading center, Hong Kong was the first Chinese city exposed to the invention of cinema. During the "Chinese war against Japanese aggression" (World War II), due to its geographical marginality from China, Hong Kong became the wartime filmmaking capital. Hong Kong's British colonial status also protected it from the subsequent Chinese civil war and the eventual takeover of mainland China by the Communist Party in 1949. The subsequent exodus of money and talents from the mainland provided the base for a permanent filmmaking capital. In the 1980s, after the Sino-British Joint Declaration affirmed the coming (1997) reunification of Hong Kong with China, anxiety permeated the political climate, and Hong Kong cinema, which had established its own subjectivity, found itself in crisis. The new challenge became the process of internationalization, which has required a commercial strategy for combating global competition and a political position to fend off interference from China.

EARLY CINEMA: 1896–1923

According to Hong Kong film historian Yu Mo Wan, among all Chinese societies (the China mainland, Taiwan, Hong Kong, and the diasporic communities overseas), Hong Kong was the first to encounter cinema. During early 1896 the Lumière brothers came to Hong Kong to shoot *actualités*—scenes of city life—thus marking the beginning of cinema in China. Later that year the Edison Company also came to shoot film in both Hong Kong and Shanghai, and it edited the footage to form two films, *Shanghai Police* and *Hong Kong Street Scenes*. Their exhibitions were the first commercial screenings in Hong Kong and Shanghai.

Between 1896 and 1903 all film activities (production and exhibition) in Hong Kong were carried out by Westerners. Short films, which came mostly from the United States, were shown in open spaces beside crowded markets. But the rainy weather of Hong Kong proved too much of a challenge, and soon screenings were moved indoors to restaurants and Cantonese opera houses. In 1901 Hong Kong opened its first nickelodeon, He Lio Garden (Joy Garden), a few years ahead of the opening of a similar theater in Shanghai.

Most film scholars take 1909 as the real beginning of Hong Kong cinema. That year saw the first (Hong Kong) Chinese-directed narrative film, *Tou Shao Ya* (Stealing the Roasted Duck), a comedy about a poor man who steals a roasted duck from its plump owner and is eventually caught by the police. It was produced by the Asia Motion Picture Company (headquartered in Shanghai and owned by the American Benjamin Polaski), directed by Leung Sui Bor, and shot in Hong Kong. In 1913 Polaski met another Hong Kong Chinese, Li Man Wei (1893–1953), and together they formed the Wah-Mei (China-US) Production Company. Li would later become the "father" of Hong Kong Cinema.

In 1923 Li, along with his friend Leung Sui Bor, his cousin Li Hai Tsan, and his brother Li Pei Hai, formed the first Hong Kong Chinese-owned production company, Man Sun (Minxin) Motion Picture Production Company. A few years later, he built theaters and studios, thus setting up vertical integration, a complete (albeit unstable, because of the politics of China) infrastructure

for film production. With Man Sun as a model, smaller film companies rapidly formed. Between 1930 and 1937, the eve of the Japanese invasion of China, some fifty small film companies were making Cantonese films and screening them in Hong Kong, Macau, southern China, Malaya, Singapore, the Philippines, and Chinatowns in Australia, the United States, and Canada. Most of these films were genre movies made with shoestring budgets: comedies, dramas, swordplay epics, and Cantonese operas. Many of these small companies survived for no more than one or two films.

WARTIME AND POSTWAR CINEMA

The Japanese bombed Shanghai in 1932, disrupting film production. By 1937 the film industry in China dispersed from Shanghai to Chungking (the wartime capital) and Hong Kong. Between 1933 and 1941 four hundred Cantonese films were made in Hong Kong, many with patriotic themes. When the Japanese occupied Hong Kong in 1941 production abruptly ceased, though the screening of films, mostly American, continued. By 1943 the occupying Japanese formed a coalition and began to make pro-Japan films without the participation of Hong Kong film companies.

Immediately after World War II ended the Great China Film Company, which had existed before the war, resumed filmmaking in both Cantonese and Mandarin. One year later, a new company, Yung Wah (Yonghua), was formed by a rich, well-educated film enthusiast, Lee Tsu Wing from Shanghai. Yung Wah made Mandarin films that were lavishly supported by money, stars, and directors from Shanghai. Among them were the excellent actresses Li Li-Wah and Lin Dai, and directors Li Han Hsiang (Li Hanxiang; 1926–1996) and Chiang Nam. All of these talents stayed in Hong Kong after the collapse of the company in the early 1950s and became the core group of filmmakers for the later, dominant Shaw Brothers company. Yung Wah's first film, *Guo hun* (*Soul of China*, 1948), was a box-office success. It was directed by Shanghai's Po Man Chun, who later would become one of the most important directors in Chinese film history. In contrast, Cantonese films were made with much less money by smaller companies, and the quality was usually poor.

During this time, a number of left-wing filmmakers came from China to Hong Kong to make films, includ-

WONG KAR WEI
b. Shanghai, China, 1958

Among the Hong Kong New Wave filmmakers, Wong Kar Wei is perhaps the most celebrated by critics. He is a winner of many awards, including a best director award at the Cannes Film Festival for *Chun guang zha xie* (*Happy Together*, 1997). Wong's films are usually narrated by characters' internal monologues, which creates a seemingly haphazard, fragmented postmodern style. They reflect modern living, urban alienation, lost opportunities, transient love relationships, and acute melancholy.

At the age of five Wong and his parents moved to Hong Kong from Shanghai. Since he could not speak the local (Cantonese) dialect, his first few years were spent going to movie houses, which later became his obsession. Upon graduating from Hong Kong Polytechnic, where he studied graphic design, he joined TVB, the most popular local TV production and broadcasting channel at the time, becoming a scriptwriter for TV drama series. The popular TV soap opera series "Don't Look Now" ("Ge Dou Bou," 1982), of which Wong was one of the major writers, attracted quite a bit of attention at the time because of its unusual story. Wong started his film career as a scriptwriter, making his directorial debut with *Wang jiao ka men* (*As Tears Go By*, 1988), which was shown during the critics week at the Cannes Film Festival in 1989. It was unique in its untraditional narrative structure and visual style.

His second film, *A Fei zheng zhuan* (*Days of Being Wild*, 1991), marked the beginning of his long-term partnership with cinematographer Christopher Doyle. It is set in the 1960s, a period that continued to attract Wong in his later films. Although *Days* won five Hong Kong Film Awards, including for best film and best director, its unfamiliar style and story (or, for some, lack thereof) led to its box-office failure. Four years later, Wong tried his hand at a period martial-arts genre film, *Dong xie xi du* (*Ashes of Time*, 1994). During a break from the frustrating production of this film Wong made a quickie, *Chong qing sen lin* (*Chungking Express*, 1994), essentially a prank of two consecutive love stories in which no one seems to get it right. The film, which was endorsed by Quentin Tarantino but was reluctantly distributed by Miramax, soon became a cult film in the United States and Europe, and it raised Wong to auteur status.

Wong works with the same crew and cast (mostly superstars such as Tony Leung, Maggie Cheung, and Andy Lau) for most of his films. His work is marked by mesmerizing visuals that draw attention to themselves and refuse any deep historical reading. His images almost always reside in the contemporary time period even when they are images of the past. Using the strengths of Doyle, whose hand-held camera effectively translates light and shadow into mood and style, Wong's films are about lost moments that sink deeply into one's emotional memory, a (lost) past filtered through the desire of the present. Thus, *Days of Being Wild* is a memory of the 1960s constructed through the experience of modern living in the 1980s, *Chungking Express* is about the 1970s imagined from the metropolitan view of the 1990s, and *Happy Together* is an old-style romance conducted through the culture of twenty-first-century global migration.

ing the well-known directors Tsoi Chu San, Hsieh Tung San, Pai Yen, and Oa Lin. Among some of their works were *Wild Fire and Spring Wind* (*Ye Huo Chun Feng*, 1948) and *Floating Family* (*Fu Zhai*, 1949).

After 1949, the shipping tycoon Loke Wan To began to pay attention to Hong Kong. Loke's Cathay Organization (headquartered in Singapore), which already controlled the entertainment industries in

Malaya, Singapore, Sarawak, and Brunei, began to buy up theaters in Hong Kong. Later, Loke set up Cathay Film Production in Hong Kong, and was able to dominate the domestic industry between 1957 and 1961. After Loke was killed in a plane crash in 1964, his rival Run Run Shaw soon gained the upper hand.

THE SHAW (MANDARIN) EMPIRE

In 1934, largely due to the unstable political situation in China, the second son of the Shaw family, Runde, had been sent to Hong Kong to set up a branch of Tin Yat, Shaw's film company in Shanghai. From the late 1930s until the Japanese occupation of Hong Kong, a good number of Cantonese films were produced in Tin Yat's Nan Yang Studios, including such classics as *The Tearful Bauhinia* (*Qi Jing Hua*, 1934), *I Have Wronged My Loved One* (*Ge Ge Wo Fu Ni*, 1935), and *Poison Rose* (*Du Mei Gui*, 1935).

In 1954 Cathay (Wah Mou) and Yung Wah, the two biggest companies at the time, were busy building big studios, and preparing even bigger budgets and more lavish (Mandarin) films. (Yung Wah soon went bankrupt, having lost the China market due to ideological clashes with the Communists.) Meanwhile, Runde's company, now called Shaw and Sons, had only two Mandarin directors, Li Han Hsiang (1926–1996) and Ho Meng Wah. Furthermore, he sold the Nam Yang studios and did not do much with his new project, the Clear Water Bay studio construction. Seeing no promising plan from Runde, in 1958 younger brother Run Run Shaw (b. 1907) left Singapore for Hong Kong and became the managing director of the company. He immediately planned for twenty Mandarin films and twelve Cantonese films, and began the construction of the Clear Water Bay studio complex, clearly preparing for serious competition with Lee and Loke. But the swift action of Run Run was not appreciated by Runde, who took over the company again while Run Run started another company, Shaw Brothers (SB). The inaugural film of Shaw Brothers was *Jiang shan mei ren* (*Kingdom and the Beauty*, 1959), directed by Li Han Hsiang and starring Lin Dai (1934–1964), who later became the biggest female star in Hong Kong cinema history. This mega-budget (Mandarin) film was a colossal success, establishing the dominance of Shaw Brothers. By 1961 Run Run Shaw had completed Clear Water Bay (which was run by a staff of close to two thousand), bought up theater chains, built up his star system, established an acting school, and set up technician-training classes. In doing so, he became the first and only person to ever have full control of every aspect of filmmaking in Hong Kong.

During this time and until the 1970s Mandarin films were mainstream. The large population of Chinese refugees who fled the Communist rule in the mainland constituted the majority of the audience. They favored nostalgic stories of their homeland and did not mind—indeed, some preferred—the use of Mandarin in their films. Furthermore, many of the filmmakers themselves were from the mainland, so Mandarin was also their preferred dialect. With strong financial backing from both previously wealthy Shanghai families and the nationalist government in Taiwan, as well as strong talent, Mandarin cinema prevailed even in this Cantonese-speaking community. Some of the classics of the time included *Bu liao qing* (*Love Without End*, 1960), *Liang shan ba yu zhu ying tai* (*Love Eterne*, 1963), *Dubei dao* (*One-Armed Swordsman*, 1967), *Long men ke zhen* (*Dragon Gate Inn*, 1966), and *Hsia nu* (*A Touch of Zen*, 1969). The key directors of the time included Li Han Hsiang, Chang Cheh (1923–2002), and King Hu (1931–1997), with Li being the most versatile in making films in several genres.

Even though Run Run Shaw was a hardworking and insightful leader, his accomplishments owed much to his right-hand man of twenty years, Raymond Chow (b. 1929), who left Shaw in 1970 to form his own company, Golden Harvest. Chow, who was well educated, had a different management style: instead of tight personal control in the manner of Run Run Shaw, Chow adopted a more hands-off approach. Chow's new company became competitive with Shaw when it formed a distribution partnership with Cathay and later contracted Bruce Lee (1940–1973) as its major actor. Its first success was Bruce Lee's *Tang shan da xiong* (*The Big Boss*, 1971). With the sudden death of Lee in 1973, Golden Harvest declined until the arrival of a rising star, the social satirist Michael Hui (b. 1942). In 1974 Hui's wildly popular comedy *Gui ma shuang xing* (*Games Gamblers Play*) proved to be a forerunner of the Hong Kong New Wave. From then on, Golden Harvest was Hong Kong's dominant production house, forming partnerships with US studios and international distributors, including Columbia Tristar and New Line Cinema. Golden Harvest was also successful in its international productions, with box-office hits such as *Enter the Dragon* (1973), *Cannonball Run* (1980), and the *Teenage Mutant Ninja Turtles* television series (1990–1993). It also produced almost all of the films featuring Jackie Chan (b. 1954) during the 1980s and 1990s.

HONG KONG NEW WAVE: 1979–1984

The Hong Kong New Wave burst onto the international film scene in 1979. During the late 1970s the film industry in Hong Kong suffered a serious decline in audience numbers, largely due to the popularization of television. Most studios were desperate to find solutions

***Maggie Cheung and Tony Leung in Wong Kar Wei's international hit,* Hua yang nain hua *(*In the Mood for Love*, 2000*).**
EVERETT COLLECTION. REPRODUCED BY PERMISSION.

and therefore were willing to innovate. In addition, a new class of nouveau riche formed during the economic take-off of the 1970s were interested in investing in the film industry. Thus, between 1979 and 1980 about thirty to forty new directors made their debuts. All of their films used Cantonese, and many were technically superior to earlier films made by the established studios, and more contemporary in style and theme. Important examples include *Feng jie* (*The Secret*, Ann Hui, 1979), *Liang zhu* (*Butterfly Murders*, Tsui Hark, 1979), *Ming jian* (*The Sword*, Patrick Tam, 1980), and *Fu zi qing* (*Father and Son*, Allen Fong, 1981). Although these films are generically and stylistically heterogenous, one common characteristic of these New Wave films was that they shared a "Hong Kong–centered" sensibility, unlike the films of their refugee predecessors, who had taken Hong Kong as a temporary residence before their final return to China. This generation that grew up in Hong Kong fundamentally changed the look and the nature of its cinema.

Many New Wave productions were creative explorations of social issues and cinematic traditions, but not all were commercially successful. For instance, after several commercial failures Tsui Hark (b. 1950), one of the leading directors of the New Wave, found himself working for a newly formed commercial studio, Cinema City Company, which specialized in combining action with comedy. Its style combined glamorous visuals, fast editing, and modern urban settings. By using big budgets, big casts, and extensive packaging and publicity, it quickly rose to the top in the 1980s. Among its most successful hits were *Zuijia Paidang* (*Aces Go Places*, 1982) and its four sequels. New successful production houses such as Cinema City began to replace the old studio system of Shaw Brothers, which officially closed down production in 1986. Since then the financing of films usually have come from one of the three companies—Golden Harvest, Golden Princess (financier of Cinema City), and D&B Company—which control both production and distribution.

Because industry financing came from a small number of companies, it is not surprising that the New Wave's freedom from strict commercial demands would be short-lived. By the mid-1980s a "Second Wave" was taking shape, working more within the confines of the commercial system while continuing the technological

advances and the social sensibility of the First Wave. The Second Wave was composed of some of the New Wave directors such as Tsui Hark, Yim Ho (b. 1952), and Ann Hui (b. 1947), as well as younger directors such as Mabel Cheung (b. 1950), Clara Law (b. 1957), and Wong Kar Wei (b. 1958). Second Wave films dealt with contemporary issues, particularly those related to the 1997 reunification of Hong Kong with China. Like their First Wave predecessors, many of the Second Wave's works were shown on the international festival circuit, at the Cannes Film Festival, New York Film Festival, and Tokyo International Film Festival. Some major works of this period include *Center Stage* (*Ruan Linguy*, 1992), by Stanley Kwan (b. 1957) and *Floating Life* (*Fu Sheung*, 1996), by Clara Law. Many of its popular productions, such as the *Aces Goes Places* series, beat Hollywood films at the domestic box office. During this time, Hong Kong films dominated the markets of Korea, Japan, Taiwan, and mainland China.

THE CHALLENGE OF GLOBALIZATION

Prompted by anxiety over the imminent 1997 reunification with China, a significant number of Hong Kong's film producers, directors, scriptwriters, actors, and actresses emigrated throughout the 1980s and early 1990s. Some were drained by Hollywood, but many simply gave up their careers. In addition to talent loss, Hong Kong suffered a serious economic downturn during the 1990s, and even the bigger studios such as Golden Harvest were affected. As well, pirated tapes, VCDs, and DVDs flooded the local market. By 1999 audience attendance had hit bottom; the only films that attracted a wide market were Hollywood blockbusters such as *The Lion King* (1994) and *Titanic* (1998).

At the same time, the commercial potential of Hong Kong cinema drew international attention. The success of *Ying xiong ben se* (*A Better Tomorrow*, 1986) by John Woo (b. 1946) in the United States had a lasting impact, popularizing Chinese kung fu in American action movies. Since then, many Hong Kong films have been shown in mainstream (versus art) cinemas in the United States. Directors such as John Woo and Tsui Hark, and actors such as Jackie Chan, Chow Yun-fat (b. 1955), and Jet Li (b. 1963) frequently work in Hollywood on films for global distribution. Chan's *Ngo si sui* (*Who Am I?*, 1998), for example, attempts to connect Hong Kong with the international community in its action-packed story involving a transnational mafia, the CIA, and locations in Africa and Amsterdam. Like many other films made during the 1990s, it also considers the question of identity, but seeks to answer it through a superficial connection with global communities. Since then, Chan has continued to build his world cinema either through local producers, with Hollywood financing (*Rush Hour*, 1998), or by coproduction (*Bor lei jun* [*Gorgeous*], 1999, and *Shanghai Noon*, 2000). Since the late 1990s and early 2000s, coproduction became increasingly necessary, for financing and to facilitate world distribution.

Amidst the gangster fantasies, ghost stories, and absurd comedies (especially those by the popular comedian Stephen Chow [b. 1962]) of the 1990s and 2000s, there were a number of important realist films made by a little-known loner, Fruit Chan (b. 1959), the first and arguably the only independent feature filmmaker of the period. *Xianggang zhizao* (*Made in Hong Kong*, 1997), *Qu nian yan hua te bie duo* (*The Longest Summer*, 1998), and *Liulian piao piao* (*Durian Durian*, 2000) have neither big action nor big stars, but their observations of the lives of ordinary Hong Kong citizens is poignant. The significance of these films for independent filmmaking, which was previously almost absent in Hong Kong, is still unknown. Major companies such as Golden Harvest and other production houses founded in the 1980s are still trying to find ways to adapt to the challenges of the twenty-first century.

HORROR FILMS

Horror films take as their focus that which frightens us: the mysterious and unknown, death and bodily violation, and loss of identity. They aim to elicit responses of fear or revulsion from their audience, whether through suggestion and the creation of mood or by graphic representation. Horror paradoxically provides pleasure, providing a controlled response of fear that is presumably cathartic. Stories of fear and the unknown are timeless, no doubt beginning around the prehistoric campfire. It is around such a fire on the beach at night that John Houseman dramatically recounts the scary legend of Antonio Bay to the engrossed children in the opening of John Carpenter's *The Fog* (1980). With roots in such precinematic forms as medieval woodcuts, Grand Guignol theater, and the gothic novel, the genre has been popular since the beginning of cinema, as evidenced by the fantastic films of Georges Méliès from the first years of the twentieth century. Many of Méliès's short trick films dealt with monsters (a dervish in *Le Monstre*, 1903), ghosts (*Le Revenant, 1903*), magic (*La statue animée*, 1903), and the devil (*Les trésors de Satan*, 1902)—subjects that were to become central to the genre as it developed over time.

Horror films address both universal fears and cultural ones, exploiting timeless themes of violence, death, sexuality, and our own beastly inner nature, as well as more topical fears such as atomic radiation in the 1950s and environmental contamination in the 1970s and 1980s. As Stephen King observes, horror "is extremely limber, extremely adaptable, extremely *useful*" (p. 81). Horror addresses that which is universally taboo or abject but also responds to historically specific concerns. Both kinds of fears are addressed by the main categories of horror, as Roy Huss and T. J. Ross usefully group them: gothic horror, monster terror (overlapping here with science fiction), and psychological thriller. Because horror provides us with manageable experiences of fear, it is one of the most sustained of film genres, as popular today as it has ever been.

EARLY HISTORY

Unlike such genres as the musical and the gangster film, which had to wait for the development of sound, horror movies were an important genre in the silent era. Mary Shelley's *Frankenstein* (1818) was filmed as early as 1910, and in France, Louis Feuillade's serial *Les Vampires* (1915–1916) made use of earlier narratives with female vampires. Audiences were familiar enough with horror conventions that by 1927 they were being parodied in *The Cat and the Canary*.

The first significant cycle of horror films appeared in German expressionist cinema, a movement that began with the influential *Das Cabinet des Dr. Caligari* (*The Cabinet of Dr. Caligari*, 1920), directed by Robert Wiene. Its plot involves an evil mesmerist who forces a somnambulist to commit murder. Designed by expressionist artists Hermann Warm, Walter Reiman, and Walter Röhrig, the film contains almost no right angles in its distorted buildings and streets; shadows were painted directly on the walls and floors rather than created by lighting, and the make-up and acting are deliberately stylized. The film's design visualizes the madness of the inmate in the insane asylum who narrates the story. *Caligari* was a significant international hit and inspired the many films to follow.

A specific period or movement of German silent cinema in the 1920s, German expressionism eschewed realism in favor of projecting onto the exterior world abstract representations of intense inner emotion, whether of characters in the narrative or of the artists themselves. Characteristic techniques of German expressionist cinema include an emphasis on extreme angles, chiaroscuro lighting, distorting lenses or sets, and stylized acting and makeup. The films were shot mostly in the studio, many at Universum Film Aktiengesellschaft (Ufa, the largest studio in the country), with an artificial look that deliberately sought to exclude the natural world. Thus German expressionism was a style ideally suited to the horror film, and many of the films dealt with the popular horror themes of psychological breakdown and madness and the supernatural, including *Der Golem, wie er in die Welt kam* (*The Golem: How He Came into the World*, 1920); *Der Müde Tod* (*The Weary Death*, also known as *Between Two Worlds*, 1921); *Nosferatu, eine Symphonie des Grauens* (*Nosferatu, a Symphony of Terror*, also known as *Nosferatu the Vampire*, 1922), the first adaptation of Bram Stoker's *Dracula* (1898); *Der Student von Prag* (*The Student of Prague*, 1926); and *Faust* (1926). Production of expressionist films in Germany peaked in the mid-1920s, and the movement dissipated in the early 1930s with the coming of sound and the emigration of many German directors, cinematographers, actors, and other film workers to the United States as the Nazis rose to power. In Hollywood they worked their way into the studio system, where they contributed significantly to the development and look of the horror film, particularly those produced at Universal, and later in the 1940s to the distinctive style of film noir.

In contrast to German cinema, the comedies and westerns already characteristic of Hollywood in the silent period expressed upbeat and open moods that were unsuitable to the dark and claustrophobic worlds of traditional horror. It was not until much later that Hollywood would turn for inspiration to the strong vein of horror that ran through American literature, from the demonization of native Americans and the wilderness in the fiction of Charles Brockden Brown, James Fenimore Cooper, Nathaniel Hawthorne, and others to the more straightforward horror tales of Edgar Allan Poe and H. P. Lovecraft. But while horror was not a Hollywood priority in this period, Lon Chaney (1883–1930), known as "The Man of a Thousand Faces" for his mastery of makeup, emerged as the first American star of the genre in such roles as Quasimodo in *The Hunchback of Notre Dame* (1923) and *The Phantom of the Opera* (1925), and in eight collaborations with the director Tod Browning. Unique among silent film stars, Chaney was known for portraying monstrous, physically deformed, and psychologically tortured characters.

HORROR IN THE STUDIO ERA

Dr. Jekyll and Mr. Hyde (1920), starring the highly regarded stage actor John Barrymore, helped legitimize the genre in Hollywood, but the genre was not clearly established until shortly after the arrival of sound when Universal Studios produced a cycle of horror films, notably Browning's *Dracula*, with Bela Lugosi, and James Whale's *Frankenstein*, with Boris Karloff, both released in 1931. Lugosi and Karloff became the great horror stars of the 1930s, attaining iconic status in American popular culture. For three decades the studio produced a series of loose sequels and spinoffs, including *The Bride of Frankenstein* (1935), *Frankenstein Meets the Wolf Man* (1943), and *House of Frankenstein* (1944), ending in the 1950s with parodies featuring Abbott and Costello, another important Universal asset. The Universal films were heavily influenced by the *mise-en-scène* of German expressionism: for example, *The Mummy* (1932), another Karloff vehicle, was directed by German cinematographer Karl Freund, who had photographed *Der Golem* and Fritz Lang's *Metropolis* (1926), among others, before emigrating to Hollywood in 1929. Universal was run by Carl Laemmle, himself born in Germany. The popular mythology of Frankenstein's creature, the vampire, the werewolf, and the mummy (the latter invented by the movies) were established and reworked in the studio's horror films.

Although other studios produced the occasional big-budget horror film, such as Paramount's remake of *Dr. Jekyll and Mr. Hyde* (1932) with Fredric March and RKO's *King Kong* (1933), Universal dominated the genre during this period. The major exception was MGM's *Freaks* (1932), directed by Browning. The story involves a traveling circus sideshow and the cruel woman trapeze artist who exploits them. Browning used a group of people with actual physical oddities, and the climax, in which they pursue the trapeze artist in the rain and mud, is particularly chilling. Uniting in camaraderie, the "freaks" are depicted as more humane than the physically normal characters, anticipating the reinterpretation of the monsters that would characterize horror films from the 1960s onward. Evidently this was a radical reversal that was ahead of its time: the film was severely cut for its American release and banned for thirty years in Great Britain.

The war years saw the unwelcome intrusion of real horror on a global scale, and Hollywood movies accentuated the positive to boost morale on the home front. From 1942 to 1946 at RKO, the producer Val Lewton (1904–1951), a former script editor for David O. Selznick,

LON CHANEY

b. Leonidas Chaney, Colorado Springs, Colorado, 1 April 1883, d. 26 August 1930

Known as "the man of a thousand faces," Lon Chaney was the first major star of the horror genre. As the child of deaf-mute parents, Chaney learned the expressive possibilities of pantomime, a skill he brought to the silent screen in a series of bizarre characters, often featuring some variation of grotesque distortion.

After his beginnings as a comedian and dancer in the theater, Chaney went to Hollywood in 1912. He appeared in a steady stream of films from 1914 on, playing villains in formula Westerns as well as a variety of other strange characters, from a French Canadian in *Nomads of the North* (1920) to Fagin in *Oliver Twist* (1922) to a one-eyed hoodlum in *The Road to Mandalay* (1926). Chaney was famous for his skill with makeup, and publicly emphasized the extremes that he would undergo to create his monstrous, distorted outsiders. In *The Penalty* (1920), he plays a criminal kingpin whose legs had been mistakenly amputated, requiring him to wear a painful leg harness so that he could walk on his knees as if they were stumps; in *The Unknown* (1927) he played Alonzo the Armless, a circus knife-thrower, with his arms strapped tightly to his body. As Quasimodo in *The Hunchback of Notre Dame* (1923), he wore a hunch in a harness that had a combined weight of seventy pounds.

Chaney made eight films with director Tod Browning, beginning with *The Wicked Darling* in 1919, and including *The Unholy Three* (1925), *The Unknown*, and *West of Zanzibar* (1928), their last film together. Chaney's skill at physical metamorphosis combined with Browning's gift for macabre horror stories to create a series of films about masochistic men ridden with castration anxiety. This preoccupation reached a peak in *The Unknown*, where the viewer finally discovers that Alonzo really does have arms, which he keeps secret, but then amputates them in a doomed attempt to win the sympathy of the woman he loves.

Chaney's last role was as Echo, a criminal ventriloquist in the remake of *The Unholy Three* in 1930, his only talking film. He used five different voices in the movie, showing that he could make the transition to talkies. But shortly after the film's release, Chaney died from a hemorrhage in his throat. After Chaney's death, his son Creighton changed his name to Lon Chaney Jr. and followed in his father's footsteps by starring in a series of horror films, the most notable of which was his tragic Larry Talbot in *The Wolf Man* (1941).

made a series of nine horror films with several directors, including *I Walked with a Zombie* (1943), directed by Jacques Tourneur, and *The Body Snatcher* (1945), directed by Robert Wise, that exploited ambience and suggestion through economical means. Tourneur's *Cat People* (1942), for example, concerns a young woman, Irena (Simone Simon), who believes the superstition of her Old World village upbringing that she will turn into a dangerous leopard when emotionally or sexually aroused; but there is no transformation scene such as those in horror movies about werewolves and adaptations of *Dr. Jekyll and Mr. Hyde*, in which such scenes are not only a convention but a visual centerpiece. In one scene the woman Irena sees as her rival, swimming alone in an indoor pool at night, hears faint footsteps and sees an indistinct shadow cross the wall, and when the cold and frightened woman goes to retrieve her robe, she finds it shredded, as if it had been ripped by the claws of an animal. Similarly, in *The Leopard Man* (1943), also directed by Tourneur, we hear the violent death of a

teenage girl attacked by the title creature, but all we see is her blood oozing under the locked door of her house.

In the 1950s horror overlapped significantly with science fiction. Cold War and atomic age anxieties produced numerous monster movies with creatures that had mutated or reawakened from eons of slumber because of nuclear radiation and testing. Monsters such as the giant dinosaur of *The Beast from 20,000 Fathoms* (1953), the giant ants of *Them!* (1954), and the creature in *Behemoth, the Sea Monster* (also known as *The Giant Behemoth*, 1959) all are the results of nuclear testing, as is the radioactive cloud that causes *The Incredible Shrinking Man* (1957) to shrink and *The Amazing Colossal Man* (1957) to grow. *The Thing from Another World* (1951) set the tone for the decade's monster movies. Based on a novella by the science fiction writer John W. Campbell, the film sacrifices almost all the scientific reasoning featured in the story to emphasize instead the inarticulate howlings of a vegetable-like creature, who somehow possesses technological knowledge way beyond that of earthlings and is bent on killing humans for their blood.

By the mid-1950s the youth audience had emerged as a significant consumer group, particularly for moviegoing, and many horror films, from *I Was a Teenage Frankenstein* (1957) and *I Was a Teenage Werewolf* (1957) to *The Horror of Party Beach* (1964), were produced with the aim of appealing to adolescent viewers. American International Pictures (AIP), an American film distribution and production company founded in 1954 by James H. Nicholson and Samuel Z. Arkoff, specialized in B movies—teen pics, exploitation films, and horror films such as *The She-Creature* (1956), *Terror from the Year 5000* (1958), and *Attack of the Puppet People* (1958). A few of these were directed by Roger Corman (b. 1926), including the campy *A Bucket of Blood* (1959). One of the independent companies that showed the way in the 1950s toward the strategy of targeting market segments, AIP moved from distribution into production and eventually began making movies with higher production values, beginning in 1960 with Corman's *House of Usher*, a loose adaptation of a Poe short story, which starred Vincent Price and was shot in color and Cinemascope. Corman made several other films for the company based on Poe themes with Price, including *The Masque of the Red Death* (1964), which features cinematography by the British cult director Nicolas Roeg. Also in the 1950s and early 1960s, the exploitation master William Castle (1914–1977) moved from thrillers and westerns into horror with a series of gimmicky horror films including *The Tingler* (1959), *Thirteen Ghosts* (1960), and *Mr. Sardonicus* (1961).

In England, Hammer Film Productions Ltd. released several classic science fiction films along with their other dramas, including *The Quatermass Xperiment* (1955) and *X the Unknown* (1956), but launched in earnest into the production of horror with *The Curse of Frankenstein* (1957), directed by Terence Fisher (1904–1980), a studio stalwart. Hammer went on to produce a substantial series of horror films that revisited the monsters of old, including Frankenstein's creature, Dracula, and the Mummy, through the 1970s, as well as inventing new ones (*The Gorgon*, 1964). The Hammer films revitalized the genre by revisiting but also updating its traditional gothic iconography with a bold use of color and a decidedly modern dose of sexual content. Many of these films starred Peter Cushing and Christopher Lee, who were the most familiar and consistently productive horror stars of the period.

BODY HORROR

The British film *Peeping Tom* (1960) and *Psycho* (1960) radically reconfigured the genre by focusing on psychologically disturbed characters in mundane contexts rather than supernatural situations in gothic settings. *Psycho*, directed by Alfred Hitchcock and adapted from Robert Bloch's 1959 novel, which in turn was based in part on the real-life exploits of multiple murderer Ed Gein, has proven to be perhaps the most influential horror film ever

Michael Redgrave as the ventriloquist attacked by his dummy in the omnibus British horror film* Dead of Night *(Alberto Cavalcanti, Basil Dearden, Robert Hamer, Charles Crichton, 1945). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

made. Set in contemporary motel rooms, hardware stores, and used car lots, Hitchcock's film imagined the site of horror in the quotidian world of the viewer, showing that horrifying violence was an integral part of middle-class America, repressed beneath its seemingly placid exterior. Roman Polanski's *Rosemary's Baby* (1968) and William Friedkin's *The Exorcist* (1973) continued in the same direction, depicting satanism in contemporary New York and Washington, respectively. Both films were big-budget commercial blockbusters, and they helped bring horror more squarely into the mainstream.

In 1968 came the phenomenal box-office success of George A. Romero's independent *Night of the Living Dead*, one of the first midnight movies (which theaters scheduled for special midnight showings after the mainstream films had finished). Made in black-and-white on a small budget, the film became a huge cult success. Its low-budget aesthetic, combined with a new graphic representation of bodily violation—we are shown cannibalistic zombies eating steaming entrails—and its uncompromising violation of numerous horror conventions resulted in the film's powerful effect on viewers. Following in the style of graphic bodily violation introduced by Herschell Gordon Lewis in such films as *Blood Feast* (1963) and *Two Thousand Maniacs!* (1964), Romero's sequel, *Dawn of the Dead* (1978), took graphic violence to a new level, and instituted a cycle of so-called splatter films that focused on bodily violation. A few years before *Dawn*, Tobe Hooper's *The Texas Chainsaw Massacre* (1974) devoted most of its running time to the sadistic torture of its female protagonist. The Canadian filmmaker David Cronenberg made several horror films concerned with bodily invasion, including *Shivers* (also known as *They Came from Within*, 1975), with its repulsive sluglike parasites that enter the body through the range of human orifices; *The Brood* (1979), featuring scenes of monstrous parturition; *Scanners* (1981), in which heads explode in a spray of gristle and blood; and his version of *The Fly* (1986), in which a scientist's body slowly falls away as he metamorphoses into an insect. Splatter was taken to comic extremes in Peter Jackson's *Braindead* (also known as *Dead Alive*, 1992) and Sam Raimi's *The Evil Dead* (1981). Clive Barker's *Hellraiser* (1987) focused intently on the pain of the flesh with scenes of flaying, bondage, and torture.

Following Romero, several young directors established their reputations by working primarily in horror, most notably Brian de Palma (*Sisters*, 1973; *Carrie*, 1976; *Dressed to Kill*, 1980), Wes Craven (*The Last House on the Left*, 1972; *The Hills Have Eyes*, 1977; *A Nightmare on Elm Street*, 1984), Larry Cohen (*It's Alive*, 1974; *God Told Me To* [also known as *Demon*], 1976), and John Carpenter (*Halloween*, 1978; *The Fog*, 1980; *Christine*, 1983, based on Stephen King's novel). Many of these horror movies, like *Psycho* and *Night of the Living Dead*, subverted the genre's traditional distinctions between good and evil, normal and monstrous, critiquing the horrors of mainstream society rather than projecting the monstrous onto the exotic "other." Horror films were thus a significant part of the overall reexamination of genre movies that took place in American cinema in the 1970s.

However, the huge commercial success of Carpenter's *Halloween* spawned a cycle of slasher films that bespoke a much more conservative vision. Most featured elaborate serial killings strung together by weak plots. Slashers typically feature psychotic males, frequently masked like Jason Voorhees in *Friday the 13th* (1980) and its sequels, who set about systematically to kill an isolated group of people, usually teenagers. Often the killer is motivated by a past sexual trauma activated by the sexual promiscuity of the victims he stalks, and the killings often seem to be a punishment for being sexual active or precocious, as is the case in the famous opening tracking shot of *Halloween*. Commonly a handheld camera is used to signify the killer's point of view, yet to what

GEORGE A. ROMERO

b. New York, New York, 4 February 1940

A key figure in the new wave of horror films in the 1960s and 1970s, George A. Romero brought an entirely new sensibility to the genre, drastically reinterpreting some of its classic monsters and infusing it with a political consciousness and ironic self-awareness, as well as a level of explicit gore that had been largely lacking before. His first film was *Night of the Living Dead* (1968), which established a new zombie mythology that has spawned an entire subgenre.

Romero made industrial and commercial films in Pittsburgh before directing *Night of the Living Dead*, which became a cult favorite and one of the first midnight movies. Often serving also as cinematographer, editor, or screenwriter for his films, Romero is clearly an auteur with an original approach to the horror genre. Romero's vision comes through in the offbeat *Knightriders* (1981), a non-horror film that he wrote, edited, and directed. Its far-fetched story about an itinerant band of motorcyclists who operate a fair like a medieval guild is silly as drama, but makes perfect sense as an auteurist expression of the theme of group solidarity against the threat of cultural homogenization—a theme that also runs through his four zombie films.

Romero's earlier horror films, made on minimal budgets, deconstruct many of the conventions of classic horror and examine their ideological assumptions from a more critical and distanced perspective. *Martin* (1977), for example, is a vampire film without a true vampire. The young man of the title has been warped by Old World superstition, his grandfather raising him to believe that he has been cursed to be a vampire. Forcing transfusion on his victims to fulfill what he believes to be his vampiric fate, Martin has been made monstrous by irrational fear. *Hungry Wives* (*Season of the Witch*, 1972), similarly, shows that the very concept of the witch is grounded in patriarchal oppression of women.

Romero's later films, for which he tended to have bigger budgets, have also been less adventurous thematically. *Creepshow* (1982), written by Stephen King, and *Monkey Shines: An Experiment in Fear* (1988) are more conventional and lack the daring of Romero's zombie films, a territory that he has mined for almost forty years. A decade after *Night*, *Dawn of the Dead* (1978) was an apocalyptic masterpiece that raised the bar for splatter effects. Romero also combined comedy and horror in a striking blend that introduced a generation of subsequent horror directors, most notable among them Peter Jackson. *Land of the Dead* (2005) brought the political satire in these films about the American populace as soulless cannibals to the fore.

extent this use of the subjective camera encourages a seemingly amoral identification on the part of the viewer with the murderer rather than his victims has been a subject of much debate. It was slasher films that to a large extent spurred a censorship debate in Great Britain and prompted the passage of the Video Recordings Bill. By the mid-1980s the slasher film was in decline, but self-conscious postmodern slashers such as *Scream* (Craven, 1996) and its sequels, in which the characters are as familiar with the conventions of the genre as the audience, have proved popular.

Horror has been a Hollywood staple since the 1930s, but, in addition to Hammer horror in Great Britain, there are also other national cinemas with rich horror traditions. In Italy, for example, *giallo*, graphic thrillers and horror films, flourished in the 1950s and 1960s.

George Romero at the time of **Dawn of the Dead** *(1978).* © UNITED FILM/COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.

Predating slasher films, the *giallo* ("yellow") takes its name from the color of the covers of pulp detective novels published in Italy in the 1940s and 1950s. The genre includes both police films (*giallo-poliziesco*) and horror films (*giallo-fantastico*), featuring an overtly expressionist stylization. The Italian directors Mario Bava (1914–1980), with films such as *La Maschera del demonio* (*Black Sunday*, 1960) and *Terrore nello spazio* (*Planet of the Vampires*, 1965) and Dario Argento, with such films as *L'Ucella dalle piume di cristallo* (*The Bird with the Crystal Plumage*, 1970), *Profondo rosso* (*Deep Red*, 1975), and *Tenebre* (*Unsane*, 1982) have become cult figures.

In Japanese cinema, both horror films, like *Kurutta Ippeji* (*A Page of Madness*, 1926), *Onibaba* (*The Demon*, 1964), and ghost films, like *Kwaidan* (*Ghost Stories*, 1964), and *Ugetsu monogatari* (*Tales of Ugetsu*, 1953), were prominent. A new wave of Japanese horror films includes Hideo Nakata's *Ringu* (*Ring*, 1998) and *Honogurai mizu no soko kara* (*Dark Water*, 2002), both of which were remade, with mixed success, in Hollywood.

CRITICAL DEBATES

For the film scholar Siegfried Kracauer, German expressionist cinema was both a harbinger and a cause of the rise of fascism in Germany. The films' avoidance of the real world, both visually in the use of stylized studio sets, and narratively in the frequent appearance of monstrous figures like Caligari and Nosferatu who command the will of others, was symptomatic of the German people's turning away from political responsibility and an explanation of their embrace of Hitler. There has been more critical commentary on horror than any other film genre, with the possible exception of the western; and although today Kracauer's interpretations seem rather reductive, they share with all subsequent critical analyses of the genre the fundamental assumption that horror films, like most genre movies, reflect the values and ideology of the culture that produced them. Don Siegel's *Invasion of the Body Snatchers* (1956), for example, about an invasion of alien seed-pods that replace people with emotional replicas, is typically discussed in relation to American contemporary culture in the 1950s. Unlike earlier horror films, *Invasion of the Body Snatchers* imagines infection on an apocalyptic rather than personal scale, as in the vampire myth, a clear reflection of Cold War fears of nuclear destruction. But even as Americans felt threatened by possible nuclear war and Communist infiltration, the film also expresses a fear of creeping conformism at home. *Invasion* makes the commonplace seem creepy, and in the climax a mob of plain-looking townsfolk pursue Miles and Becky out of town in a horrific evocation of the kind of witch-hunting mentality witnessed in the United States just a few years before the film's release. The film's ambiguous ending (how could the FBI or anyone possibly contain the pod invasion, which by now has spread much wider than the town of Santa Mira?) initiated a trend that would continue in the revisionist horror films of the 1960s and 1970s, and is indicative of larger cultural tensions.

In a number of essays published in the late 1970s, Robin Wood set the critical agenda for much of the theory and analysis of horror. He offered a structural model of horror, informed by Freudian theory, built around a fundamental binary opposition of normal and monstrous. Wood was responding to the progressive wave of horror films by such directors as Romero, Hooper, Craven, and Cohen. For Wood, "the true subject of the horror genre is the struggle for recognition of all that our civilization *re* presses or *op* presses" (as quoted in Britton et al., p. 10). He argued that the manner in which any given horror narrative resolves this conflict reveals its ideological orientation, and further, that most movies will be conservative, repressing desire within the self and disavowing it by projecting it outward as a monstrous Other. The monster thus is usually understood as the "return of the repressed." This interpretation applies particularly well to horror stories featuring the premise of the beast within, like *The Wolf Man* (1941) or

Just plain folks turn into zombies in George Romero's apocalyptic **Night of the Living Dead** ***(1968).*** **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

the various versions of *Dr. Jekyll and Mr. Hyde*. According to such a reading, the monster (representing a challenge to the dominant values of heterosexual monogamy), must be defeated by the male hero in order for him to take his proper place in patriarchy by successfully pairing with the inevitable female love interest, typically represented as the attractive daughter of the scientist or lovely lab assistant. Horror films such as *Frankenstein*, *Dracula*, and *Creature from the Black Lagoon* (1954) follow this narrative pattern.

Wood provides a list of specific Others in the horror genre: women, the proletariat, other cultures, ethnic groups, alternative ideologies or political systems, children, and deviations from sexual norms. All of these have been taken up by critics of the genre over the last two decades, although the last category—deviations from sexual norms—has been the one most frequently explored. However, some feminist critics have shown how horror monsters may be read as projections of masculine desire and anxiety over sexual difference. Following from Wood's perspective, many horror films are about anxieties over masculine performance, with women as the victims of male aggression. However, Carol Clover has argued that horror is potentially empowering for women. Her emphasis on the one female, or "final girl," who often survives the killer's rampage in slasher movies, transforming from terrified screamer to active heroine, killing the killer, has influenced numerous readings of horror films from *Halloween* to *Alien* (1979) and its sequels. Finally, some readings, such as that offered by Harry Benshoff, find in the genre a consistent monstrous representation of queerness and challenges to normative masculinity.

Perhaps because horror tends to raise questions about gender and its "natural" boundaries, women have been relatively important in the genre, first as consumers of gothic novels and later as makers of horror films. Significantly, although women have found it difficult

throughout film history to become directors, they are noticeably prominent in horror film production, as evidenced by Stephanie Rothman's *The Velvet Vampire* (1971) and *Terminal Island* (1973); Amy Jones's take on the slasher film, *The Slumber Party Massacre* (written by Rita Mae Brown, 1982); Katt Shea Rubin's two *Stripped to Kill* movies (1987, 1989) and *Poison Ivy* (1992); Mary Lambert's two *Pet Sematary* movies (1989, 1992); Kristine Peterson's *Body Chemistry* (1990); Fran Rubel Kuzui's *Buffy the Vampire Slayer* (1992); Kathryn Bigelow's *Near Dark* (1987); and Mary Harron's *American Psycho* (2000).

Critics have also examined representations of class and race in horror films. Mark Jancovich has persuasively linked the development of horror to the rise of the bourgeoisie and the dialectic of class. A classic horror film like *King Kong* (1933) evokes the fear of racial miscegenation in the figure of the dark ape, the beast in love with the (white) beauty, while fundamental to Dracula's appeal is his suave aristocratic bearing. Some late-twentieth-century horror films, such as *The People Under the Stairs* (1991), *Candyman* (1992), and *Tales from the Hood* (1995), covering territory explored only occasionally in earlier films such as *I Walked with a Zombie* (1943) and *Blacula* (1972), have addressed issues of racial difference in horror. Questions of race in horror emerged with the casting of a black actor as the hero in *Night of the Living Dead*: killed by redneck vigilantes at the end of the film, his body is unceremoniously tossed onto a bonfire in freeze frames that evoke the contemporary racial violence then erupting across America.

Some critics have extended the psychoanalytic approach to horror beyond the texts themselves to account for the spectatorial pleasures of watching horror films, an act that on the surface might seem inexplicable given that the experience arouses fear rather than pleasure. Critics have also argued that horror films are particularly enjoyed by adolescents because in their awkwardness they can easily empathize with the monsters, who are social outcasts, and because they express in metaphoric form the physical changes—the hairiness of the werewolf, the sexual drive of the vampire—that occur with the onset of puberty. Certainly horror films do function as adolescent rites of passage and socialization, but such theories do not account for the appeal of all horror films. Whatever the particular fears exploited by horror films, they provide viewers with vicarious but controlled thrills, like the fright one gets from an amusement park ride. It is no accident that so many theme park rides are horror oriented. As Bruce Kawin says in his essay "Children of the Light," "A good horror film takes you down into the depths and shows you something about the landscape." Like Charon, who in Greek mythology ferries the souls of the dead, the horror film takes you on "a visit to the land of the dead, with the difference that this Charon will eventually take you home, or at least drop you off at the borders of the underworld" (p. 325).

HUNGARY

For a small country with a post–World War I population of around ten million, whose history is filled with wars, revolutions, political repression, and foreign domination, Hungary's achievement in filmmaking is extraordinarily impressive. This history itself has provided a major source of thematic material, as has Hungary's rich literary tradition. Almost from its beginnings, film has been taken seriously as an art in the country. Even in the decades from 1950 to 1990, when the film industry was completely under government control, this control was exerted more lightly and with a greater respect for artistic achievement than in any other country of the Soviet bloc. It might even be said that the market-driven policies that have dominated since 1990 have had a detrimental effect on the overall quality of the country's cinema.

In addition to fiction feature film, Hungary has a strong tradition of documentary filmmaking and also of animation, the latter primarily through the work of the Pannónia Studio and directors such as Sándor Reisenbüchler (1935–2004) and Marcell Jankovics (b. 1941). And, though Hungarian cinema is freely acknowledged to be a director's medium, much of the credit for the achievement of its best films must go to such fine actors as Zoltán Latinovits (1931–1976), Miklós Gábor (1919–1998), Mari Törőkcsik (b. 1935), and György Cserhalmi (b. 1948), and to such superb cinematographers as György Illés (b. 1914), János Kende (b. 1941), Elemér Ragályi (b. 1939), and Lajos Koltai (b. 1946).

THE SILENT ERA

An estimated 460 films were made in Hungary during the silent period, almost all considered lost. Recent rediscoveries and restorations, however, have brought a few representative works to light.

Hungarian film exhibition began with screenings of films by Louis Lumière and Georges Méliès in Budapest cafés. The Urania Scientific Society is credited with the first Hungarian-made film, *A Táncz* (*The Dance*), in 1901. The National Association of Hungarian Cinematographers had been formed by 1909, and some 270 permanent cinemas had been established throughout the country by 1912. The first Hungarian feature film, *Ma és holnap* (*Today and Tomorrow*), directed by Mihály Kertész (1886–1962) (who later gained Hollywood fame as Michael Curtiz), appeared in 1912. Production then expanded rapidly, as did serious intellectual interest in film as expressed in specialist film journals. There was also room for escapist melodramas such as those produced by the prolific Alfréd Deésy (1877–1961), which had little specifically Hungarian about them. His surviving films, *Aphrodite* and *The Young Wife* (both 1918), revel in an "international" style of languid eroticism among wealthy characters, but with a moralistic and even sentimentally religious conclusion. The surviving work of Jenö Janovics (1872–1945) also falls into the category of sexual/moralistic melodrama, with *Din Grozaviile lumii* (The Specter of the World, 1920) issuing dire warnings of the dangers of syphilis.

Sándor (later Alexander) Korda (1893–1956) was a major figure of the time, as critic, director, and producer, though only one of his twenty-four films from this period, *Az Aranyember* (*Man of Gold*, 1918), is known to survive in full. Based, like many other Hungarian films, on a book by the popular nineteenth-century novelist Mór Jókai, it achieves an epic scale through exciting

camerawork, vigorous characterization, and atmospheric lighting, prefiguring Korda's films of the 1930s in Britain. Counterbalancing "entertainment" films were those that focused on social and political injustices. *A Megfagyott gyermek* (*The Frozen Child*, Béla Balogh, 1921) provides an unusual perspective on poverty-stricken, working-class life in Budapest through the sufferings endured by two abandoned children.

The year 1919 saw a major turning-point in the history of Hungarian film, with the nationalization of the film industry under the short-lived Communist government of the Republic of Councils. Thirty-one films were shot or completed in this four-month period, until the overthrow of this government and the White Terror that followed forced many of the most talented members of the film industry to flee abroad. Those who left, then or during a later period, included the directors Korda, Kertész, and Pál Fejös (later Paul Fejos; 1884–1960), the scriptwriter Lajos Biró (1880–1948), and (using the names by which they became commonly known), the actors Peter Lorre (1904–1964), Bela Lugosi (1882–1956), Paul Lukas (1895–1971), and Vilma Banky (1898–1991). Another prominent exile at this time was the film theoretician and scriptwriter Béla Balázs (1884–1949), author of the classic *Theory of Film* (English translation, 1953). After 1991, under the repressive right-wing government, film production declined steadily until, by the end of the 1920s, it was almost nonexistent.

STAGNATION AND CENSORSHIP: 1930–1963

A partial recovery of the industry—in quantity though not in quality–took place throughout the 1930s, assisted by a government levy on the foreign films that now swamped the market. The emphasis was largely on glossy romantic comedies, erotic melodramas, and musicals, the most popular of which was *Meseauto* (*The Dream Car*), directed by Béla Gaál (1893–1944) in 1934. The film with the most lasting appeal was the comedy *Hyppolit, a lakáj* (*Hyppolit, the Lackey*, István Szézely, 1931). In contrast to this trend are two fine films by Paul Fejos, who returned to Hungary after some years in Hollywood to make *Tavaszi zápor* (*Spring Shower*, also known as *Marie, a Hungarian Legend*) and *Ítél a Balaton* (*The Judgment of Lake Balaton*, both in 1932. Official disapproval of the films' explicit social criticism, however, drove Fejos to leave Hungary once more, this time for good. *Hortobágy* (*Life on the Hortobagy*, Georg Höllering, 1936), a mixture of fiction and documentary set on the Hungarian *pustza*, or great plain, is another major work of the period.

The outbreak of World War II, in which Hungary found itself allied with Germany until it made a disastrous attempt to change sides near the end, saw an unexpected increase in film production, combined with a ban on importing American films in 1942. Production increased to a total of some forty or fifty films annually by 1944, almost all of them thrillers, comedies, or sentimental dramas, often with a strongly nationalistic streak and subjected to strict, politically based censorship. Almost the only film of lasting quality to emerge from this period was *Emberek a havason* (People on the Alps, 1942), directed by István Szöts (1912–1998), with its magnificently photographed mountain scenery and a strong social theme based on the contrast between city and country values. The film was attacked by both left and right, and Szöts was unable to make another film until 1947, when his almost equally impressive *Ének a búzamezökröl* (*Song of the Cornfield*) was promptly banned by the Communist-controlled government. Szöts finally left Hungary for Austria in 1957.

In the immediate postwar period, a devastated and barely functioning film industry made only fourteen films between 1945 and 1948. Though private financing of film continued for a time, the feuding members of the postwar coalition government struggled for control of the industry, culminating in a second nationalization by the successful Communists in 1948. The only worthwhile film of this period (apart from the banned *Song of the Cornfield*) was another lasting classic, *Valahol Európában* (*It Happened in Europe*, Géza von Radványi, 1947), with a script by Béla Balázs, who had returned from exile to help reestablish the country's film industry. It is a moving and unsentimental account of how the moral influence of an elderly musician helps a group of boys, orphaned and made homeless by the war, go on to lead civilized and socially productive lives.

Nationalization brought, as for other film industries in the Soviet bloc, a demand for "socialist realism" in the style and content of the cinema: straightforward, uncomplicated narrative, with a clear distinction between "good" (Communist) and "evil" (reactionary and capitalist) characters, and subject matter inspired by "the new spirit of a new era," charting the inevitable victory of Communism over its internal and external enemies. For a few years overt propaganda of this type predominated, occasionally modified and given greater sophistication by the more talented directors. The first film of the new system, *Talpalatnyi föld* (*Treasured Earth*, Frigyes Bán, 1948), is actually one of the better examples, telling its standard story of class conflict in a restrained and powerful manner.

Film directors wishing to work in the industry now had first to graduate from the Academy for Theater and Film Art, established in 1948, and, until 1959, they could offer their services to only one studio, Hunnia (later called Mafilm). The training received in the

Academy was excellent and wide-ranging, and in 1963 four new studios were created, usually headed by a respected figure in the industry rather than a bureaucrat, offering more freedom of subject matter to directors. Nevertheless, throughout this whole period, until the collapse of the Communist system in the early 1990s, every script had to pass over a series of bureaucratic hurdles before acceptance, with the same process being repeated for the finished film.

Hungary's Stalinist years of the early 1950s, marked by political repression, show trials, and imprisonment or execution of "enemies of the people," produced few films of note before 1954–1955, when Felix Máriássy's (1919–1975) *Budapesti tavasz* (Springtime in Budapest, 1955), set during the Soviet "liberation" of the city in 1945; Zoltán Fábri's (1917–1994) *Hannibál tanár úr* (*Professor Hannibal*, 1956); and Zoltán Várkonyi (1912–1979) and Károly Makk's (b. 1925) *Simon Menyhért születése* (The Birth of Menyhért Simon, 1954) infused some freshness, intellectual integrity, and genuine humanity into some of the mandated themes. Várkonyi's *Keserû igazság* (*The Bitter Truth*, 1956), however, which dealt openly with official corruption and negligence, was immediately banned and not released until 1986. The 1956 revolution (officially termed the "Counterrevolution" for the next three decades) against Communist control, and savagely repressed by Soviet tanks, brought a relatively brief clampdown, during which filmmakers concentrated on safe literary adaptations or offered psychological studies on private, nonpolitical themes. Even in this atmosphere, however, *Bakaruhában* (*A Sunday Romance*, also known as *In Soldier's Uniform*, Imre Fehér, 1957), and Fábri's *Körhinta* (*Merry-Go-Round*, 1955), brought a genuine breath of fresh air into the inevitable theme of class conflict.

In 1959 the Béla Balázs Studio was created to allow young filmmakers to produce experimental short films with considerable freedom of style and content. This, together with the impact of neorealism, the French New Wave, and the films of Ingmar Bergman, Federico Fellini, and Michelangelo Antonioni, led to the appearance of a new generation of directors, ready to take advantage of the relaxation in cultural policy at the time, and with a sophisticated understanding of what was happening in the world of cinema outside their own country. It was these filmmakers who inaugurated the great period of Hungarian cinema.

INTERNATIONAL SUCCESS: 1963–1989

By 1963 an overall pattern had emerged under which directors were allowed considerable latitude in subject matter and style, provided they did not directly challenge the government's authority and steered clear of controversial treatment of the 1956 revolution. Although the finest films of this period were rarely box office successes within Hungary, the government promoted and supported them for the cultural prestige they earned abroad, especially at major film festivals, and also out of a genuine respect for their artistry. They were adequately funded, and comparatively few films were banned; the most notorious example, the satire on 1950s bureaucracy, *A Tanú* (*The Witness*, Péter Bácsó, 1969), was finally released ten years later.

The films of this period fall mainly into two groups: the so-called parables, which took some historical incident from Hungary's past and interpreted it so that it had clear affinities with the present day, and films set in the present, which offered cautious criticism of the gulf between official rhetoric and the often grim realities of Hungarian life. One way or another, almost all the major films had a political as well as a private dimension, as in the early, semiautobiographical films of István Szabó (b. 1938), such as *Álmodozások kora* (*The Age of Daydreaming*, also known as *Age of Illusions*, 1964) and *Apa* (*Father*, 1966), which the director himself described as "the autobiography of a generation."

The strongest international impact in the 1960s was made by Miklós Jancsó (b. 1921). Films like *Szegénylegények* (*The Round-Up*, 1965), *Csillagosok, katonák* (*The Red and the White*, 1967), and *Még kér a nép* (*Red Psalm*, 1971), while often dealing with obscure incidents from Hungarian history, fascinated audiences elsewhere with their direct presentation of political oppression and brutality, the stark black-and-white photography of the earlier films, and the sinuously balletic, lengthy camera movements of the later ones. István Gaál's (b. 1933) powerful *Magasiskola* (*The Falcons*, 1970) provided a more abstract, less historically specific allegory of the totalitarian mentality. The theme of collectivization—the forced transfer of individual peasant ownership of the land to collective farming—was handled with intelligence and objectivity by Sándor Sára (b. 1933) in *Feldobott kö* (*The Upthrown Stone*, 1969) and, in visually spectacular but more ambiguous fashion, by Ferenc Kósa (b. 1937) in *Tízezer nap* (*Ten Thousand Days*, 1967). Károly Makk's *Szerelem* (*Love*, 1971) dealt movingly with the return home of a political prisoner in the early 1950s, while *Hideg napok* (*Cold Days*, András Kovács, 1966) tackled head-on one of the most shameful Hungarian actions in World War II, the massacre of hundreds of Serb civilians by Hungarian soldiers in what is now Novi Sad.

A reorganization of production and loosened bureaucratic control in the 1970s brought new themes and approaches. The so-called Budapest School combined the revived interest in documentary with a fictional

MIKLÓS JANCSÓ

b. Vács, Hungary, 27 September 1921

Jancsó grew up in the Hungarian countryside and developed there an interest in folk art that exercised a strong influence on his films. He studied law and ethnography at the University of Kolozsvar and, after a period as a Soviet prisoner-of-war toward the end of World War II, he graduated from the Academy of Theater and Film Art in 1950.

His earliest films were documentaries that conformed to the official requirements of the period, and this was also largely true of his first two features. With *Szegénylegények* (*The Round-Up*) in 1965, however, he abandoned almost completely the dogmas of socialist realism both in theme and style. Set in the aftermath of the Hungarian War of Independence in 1848, it adopts the "Aesopian" tactics favored by directors of the time of using a period setting to comment obliquely on current political and social trends. This was followed by *Csillagosok, katonák* (*The Red and the White*, 1967), set in postrevolutionary Russia in 1918, as small groups of pro- and anti-Soviet soldiers skirmished continuously. *Csend és kiáltás* (*Silence and Cry*, 1967) is set in Hungary in 1919 following the suppression of the short-lived Communist government that seized power after the end of World War I. These films attracted international attention, despite their obscure (to non-Hungarians) subject matter, for their astonishing visual power and the universality of their themes. The cruelties, humiliations, and atrocities inflicted on their victims by those in power are presented in a cold, almost impersonal manner, controlled by rigorously formal framing and complex camerawork.

Over much of the next decade Jancsó divided his time between Hungary and Italy, producing a series of films that continued his investigations into the nature of repressive political power and how to resist it, while moving toward a style that is often purely symbolic and ritualistic, relying heavily on intricately choreographed and lengthy sequence shots. The finest film of this period is acknowledged to be *Még kér a nép* (*Red Psalm*, 1971), set during a period of peasant agitation for land reform at the end of the nineteenth century.

With *Szörnyek évadja* (*Season of Monsters*, 1987) Jancsó moved to a contemporary setting and to visual motifs based on ubiquitous television screens that record the action and also present different perspectives on it. The themes of such films as *Jézus Krisztus horoszkópja* (*Jesus Christ's Horoscope*, 1988) and *Kék Duna keringö* (*Blue Danube Waltz*, 1992) challenge the assumption that freedom from Soviet control in the "New Hungary" will automatically end corruption and the abuse of political power. After returning to documentaries for most of the 1990s, Jancsó resumed feature filmmaking in 1998 with a series of satirical and anarchic comedies. These have proved the most popular of his films to date within Hungary, and the director has been adopted as a guide and inspiration by a new generation of filmmakers.

approach to produce a series of "pseudodocumentaries" in which an actual incident was recreated using nonactors whose own lives resembled those of the original people involved. *Filmregény* (Film novel, István Dárday, 1977) is perhaps the best-known example of this style, which was also adopted in the early films of Béla Tarr (b. 1955), such as *Családi tüzfészek* (*Family Nest*, 1979). Other trends of the period involved a closer examination of the 1950s and 1956 in particular, with Pál Gábor's (1932–1987) *Angi Vera* (1978), *Szerencsés Dániel* (*Daniel Takes a Train*, Pál Sándor, 1983), Péter Gothár's (b. 1947) *Megáll az idö* (*Time Stands Still*, 1982), and the first of Márta Mészáros's (b. 1931) four "Diary" films, *Napló gyermekeimnek* (*Diary for My Children*, 1984) enjoying considerable international success. Meanwhile, *Szindbád* (*Sindbad*, Zoltán Huszárik, 1971), *Meztelen vagy* (*The Legend about the Death and Resurrection of Two Young Men*, Imre Gyöngyössy, 1971), and *Kutya éji dala* (The Dog's Night Song, Gábor Body, 1983), though not ignoring social issues, presented them in dreamlike, almost surrealistic fashion. And controversial topics such as lesbianism and incest were broached in Makk's *Egymásra nézve* (*Another Way*, 1982) and *Visszaesök* (*Forbidden Relations*, Zsolt Kézdi-Kovács, 1983), respectively.

Increasing financial stringency throughout the 1980s led several directors to make co-productions with other European countries. With the exception of István Szabó's Central European trilogy, beginning with the Oscar®-winning *Mephisto* (1981), few of these films were successful either financially or artistically.

POST-COMMUNIST BLUES: 1989 TO THE PRESENT

The end of Communist rule from 1989 onward also meant the end of government subsidy and control of the film industry. Directors could no longer rely on adequate financial support, entailing no pressure to be commercially successful as long as their work had artistic merit. Moreover, their "oppositional" subject matter, whether direct or oblique, no longer had much relevance in a newly democratic system. The move toward privatization of the film industry was confusing and erratic, complicated by a flood of Hollywood movies that dominated the newly constructed multiplexes, as well as by the challenge of video and television. Co-productions in one form or another became almost mandatory, with a consequent dilution of one of the main strengths of the country's cinema, its strongly nationalistic character.

The immediate result was a drastic drop in the number of feature films produced annually, rarely numbering more than fifteen to twenty, though there was a corresponding increase in documentaries and short films, which could be shot cheaply on 16mm or video. Many of the older generation of directors proved unable or unwilling to adapt to these new circumstances and fell silent. Younger directors tried to compete with Hollywood by choosing overtly commercial subjects filled with crime, violence, explicit sex, and car chases but lacked the technical resources and expertise to carry these through successfully. Yet a tradition of quality filmmaking has continued, helped to some extent by a recent levy on television profits aimed at supporting the film industry, and by the creation in 1991 of the Motion Picture Foundation of Hungary, which provides competitive and partial subsidies to projects considered to have artistic merit.

Some degree of international success in this period was achieved by such films as *Az én XX. századom* (*My Twentieth Century*, Ildikó Enyedi, 1989), *Gyerekgyilkosságok* (*Child Murders*, Ildikó Szabó, 1993), *Woyzeck* (János Szász, 1994), *Szenvedély* (*Passion*, György Fehér, 1998), *Bolse Vita* (Ibolya Fekete, 1996), and *Csinibaba* (*Dollybirds*, Péter Timár, 1997), but the overall bleak and pessimistic tone of many of these films gives them little popular appeal. István Szabó's Canadian co-production *Sunshine* (*A Napfény íze*, 1999), an English-language film, won and was nominated for several European and American

Miklós Jancsó's* The Red and the White *(1967). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

film awards, and Miklós Jancsó attained unprecedented popularity at the age of eighty with a series of anarchic comedies. The most influential of contemporary directors, however, is Béla Tarr, whose films *Sátántangó* (*Satan's Tango*, 1994) and *Werckmeister harmóniák* (*Werckmeister Harmonies*, co-directed by Ágnes Hranitzky, 2000) have attained cult status abroad. Their often inordinate length, however (*Sátántangó* is almost seven hours long), their bleak and melancholy atmosphere, and the slow pace filled with lengthy camera movements have generally restricted their appeal to film festivals and showings at cinematheques and film museums. They prove, however, that the tradition of challenging and subversive Hungarian cinema is not yet dead.

IDEOLOGY

The concept of ideology is often associated with the work of Friedrich Engels (1820–1895) and Karl Marx (1818–1883). In general, Marxists approach cultural forms as emerging from specific historical situations that serve particular socioeconomic interests and that carry out important social functions. For Marx and Engels, the cultural ideas of an epoch serve the interests of the ruling class by providing ideologies that legitimate class domination. "Ideology" is a critical term used in Marxist analysis that describes how the dominant ideas of a ruling class promote the interests of that class and help mask oppression and injustices. Marx and Engels argued that during the feudal period, piety, honor, valor, and military chivalry were the ruling ideas of the reigning aristocratic classes. During the capitalist era, values of individualism, profit, competition, and the market became the dominant ideology of the new bourgeois class, which was then consolidating its class power. Because ideologies appear natural and commonsensical, they often are invisible and elude criticism.

Marx and Engels began their critique of ideology by attempting to show how ruling ideas reproduce dominant societal interests and relations and serve to naturalize, idealize, and legitimate the existing society, its institutions, and its values. In a competitive and atomistic capitalist society, it appears natural to assert that human beings are primarily self-interested and competitive, just as in a communist society; it seems natural to assert that people are cooperative by nature. In fact, human beings and societies are extremely complex and contradictory. Ideology smoothes over contradictions, conflicts, and negative features, idealizing human or social traits like individuality and competition, which are then elevated into governing concepts and values.

MARXIST APPROACHES TO CULTURE AND IDEOLOGY

Many later Western Marxists developed these ideas, although they have tended to ascribe more autonomy and importance to culture than classical Marxism did. Within the Marxian tradition, a more positive concept of ideology, developed by Vladimir Lenin (1870–1924), sees socialist ideology as a positive force for developing revolutionary consciousness and promoting socialist development (Lenin, 1987). For the Italian Marxist theorist Antonio Gramsci (1891–1937), the ruling intellectual and cultural forces of an era constitute a form of *hegemony*, or domination by ideas and cultural forms that induce consent to the rule of the leading groups in a society. Gramsci argued that the unity of prevailing groups is usually created through the state—for instance, the American revolution or the unification of Italy in the nineteenth century. The institutions of "civil society" also play a role in establishing hegemony. Civil society, according to Gramsci, includes the church, school, media, and other forms of popular culture. Civil society mediates between the private sphere of personal economic interests and the family and the public authority of the state, serving as the locus of what Jurgen Habermas (b. 1929) described as "the public sphere."

Gramsci defined ideology as the ruling ideas that constitute the "social cement" unifying and holding together the established social order. While Marxist cultural critics like Gyögy Lukács (1885–1971) tended to see ideology as a manipulative force that helps ensure the rule of the dominant class, Ernst Bloch (1885–1977) instead stressed the utopian dimensions of Western culture and the ways in which cultural texts encode

yearnings for a better world and a transformed society. Bloch's hermeneutic approach to Western culture in books like *The Principle of Hope* (1986) sought out visions of a better life in cultural artifacts ranging from the texts of Homer and the Bible to modern advertising and department store displays. Bloch's utopian impulse challenged film and cultural studies to articulate how culture provides alternatives to the existing world and how images, ideas, and narratives can promote individual emancipation and social transformation.

Bloch developed a type of cultural theory and ideology critique that is quite different from Marxist models that presents ideology critique as a tool for demolishing bourgeois culture and ideology—in effect, conflating bourgeois culture and ideology. This model—found in critiques by Lenin and most Marxist-Leninists—interprets dominant ideology primarily as a process created through mystification, error, and domination. This is contrasted to scientific or Marxist critical theory, in which ideology critique demonstrates the errors, mystifications, and ruling class interest within ideological artifacts, which are then smashed and discarded by the heavy hammer of the ideology critic.

Bloch, however, was more sophisticated than those who simply denounced all ideology as false consciousness or stressed the positive features of socialist ideology. Rather, Bloch sees emancipatory-utopian elements in all living ideologies, and deceptive and illusory qualities as well. For Bloch, ideology is "Janus-faced," or two-sided: it contains errors, mystifications, and techniques of manipulation and domination, but it also contains a utopian residue or surplus that can be used to critique society and to advance progressive politics. Bloch also perceived ideology at work in many phenomena usually neglected by Marxist and other ideology critiques: daydreams, popular literature, architecture, department store displays, sports, clothing, and other artifacts of everyday life. He believed that ideology critique should examine everyday life, as well as political texts and positions and the manifestly political ideologies of films, television, and other forms of mass-mediated culture.

Drawing on Bloch, Herbert Marcuse (1898–1979), and other neo-Marxist theorists, Fredric Jameson (b. 1934) has suggested that mass cultural texts often have utopian moments. He has proposed that radical cultural criticism should analyze both the social hopes and fantasies in film as well as the ideological ways in which fantasies are presented, conflicts are resolved, and potentially disruptive hopes and anxieties are managed (Jameson, 1979, 1981). In his reading of *Jaws* (1975), for instance, Jameson notes that the shark stands in for a variety of fears—uncontrolled organic nature threatening the artificial society; big business corrupting and endangering community; disruptive sexuality threatening the disintegration of the family and traditional values—that the film tries to contain through the reassuring defeat of evil by representatives of the current class structure. Yet *Jaws* also contains utopian images of family, male bonding, and adventure, as well as socially critical visions of capitalism articulating fears that unrestrained big business would inexorably destroy the environment and community.

THE FRANKFURT SCHOOL

The term ''Frankfurt School'' refers to the work of members of the *Institut für Sozialforschung* (Institute for Social Research), which was established in Frankfurt, Germany, in 1923 as the first Marxist-oriented research center affiliated with a major German university (Kellner, 1989). The Frankfurt School coined the term ''culture industry'' in the 1930s to signify the industrialization of mass-produced culture and the commercial imperatives that constructs it (Adorno and Horkheimer, 1972). Its critical theorists analyzed mass-mediated cultural artifacts as products of industrial production, demonstrating that commodities of the culture industry exhibit the same features as other mass-produced objects: commodification, standardization, and massification. The culture industry has the specific function, however, of providing ideological legitimation of existing capitalist societies and of integrating individuals into its way of life.

The critiques of the culture industry developed in T. W. Adorno (1903–1969) and Max Horkheimer's (1895–1973) famous *Dialectic of Enlightenment* (1972) contain many, albeit unsystematic, references to Hollywood film. Film in the culture industries has been organized like industrial production and uses standardized formulas and conventional production techniques to mass-produce films for purely commercial, rather than cultural, purposes. Films reproduce reality as it is and thus encourages individuals to adjust and conform to the new conditions of industrial and mass society:

> They hammer into every brain the old lesson that continuous friction, the breaking down of all individual resistance, is the condition of life in this society. Donald Duck in the cartoons and the unfortunate in real life get their thrashing so that the audience can learn to take their own punishment. (Adorno and Horkheimer, 1972, p. 138)

The positions of Adorno, Horkheimer, and other members of the inner circle of the Institute for Social Research were contested by Walter Benjamin (1892–1940), an idiosyncratic theorist loosely affiliated with the Institute. Benjamin, writing in Paris during the 1930s, discerned progressive aspects in new technologies of cultural production such as photography, film, and radio. In "The Work of Art in the Age of Mechanical

Reproduction" (1934), Benjamin noted how new mass media were supplanting older forms of culture; mass reproduction of photography, film, recordings, and publications was replacing older emphasis on originality and "aura" in works of art. Benjamin believed that freed from the mystification of high culture, mass culture could create more critical individuals capable of judging and analyzing their culture, just as sports fans can dissect and evaluate athletic activities. In addition, Benjamin asserted that processing the rush of images of cinema helps viewers create subjectivities better able to parry the flux and turbulence of experience in industrialized, urbanized societies.

For Benjamin, the proliferation of mass art, especially through film, would bring images of the contemporary world to the masses and would help raise political consciousness by encouraging scrutiny of the world. Benjamin claimed that the mode of viewing film breaks with the reverential mode of aesthetic perception and awe encouraged by the bourgeois cultural elite, who promoted the religion of art. Montage and "shock effects" in film, mass spectatorship, discussion of issues that film viewing encourages, and other factors in the cinematic experience produce, in Benjamin's view, new social and political experiences of art that erode the private, solitary, and contemplative aesthetic experiences encouraged by high culture and its priests. Against the contemplation of high art, the "shock effects" of film produce a mode of "distraction" that Benjamin believed makes possible a "heightened presence of mind" and cultivation of "expert" audiences able to examine and criticize film and society (pp. 237–241).

Benjamin wished to promote a radical cultural and media politics able to create alternative oppositional cultures. Yet he recognized that media such as film could have conservative effects. While he believed that the loss of "aura," of magical force in mass-produced works is progressive and opens out cultural artifacts to increased critical and political discussion, Benjamin recognized that film could also create a new kind of ideological magic through the cult of celebrity and techniques like the close-up, which used film technologies to fetishize certain stars or images. Benjamin was thus one of the first radical cultural critics to look carefully at the form and technology of media culture while appraising its complex nature and effects.

POST-STRUCTURALISM AND THE POLITICS OF REPRESENTATION

Reacting against existential and Hegelian Marxism and the ultra-left political groups influenced by it, Louis Althusser (1918–1990) and a school of structural Marxists developed more "scientific forms" of Marxism and ideology while maintaining their commitment to revolutionary politics. A member of the French Communist Party, Althusser argued in *For Marx* (1970) that Marxism provided scientific perspectives on capitalism that made possible a revolutionary transition to socialism. In *Reading Capital* (1997), he maintained that Marx's scientific critique of capitalist political economy provided the foundations for a theory of society. Althusser's "structuralist Marxism" analyzed relations between the structures of the economy, state, ideology, and social institutions and their grounding in capitalist relations of production—"in the last instance" the determining force of all social life.

Althusser helped shift the discussion of "ideology" to focus on the everyday practices and rituals organized by social institutions that he termed "ideological state apparatuses" (schools, religion, the family, the media, and others). Their material practices, he argued, are parts of a closed system in which individuals are constantly "interpellated" into a social order, becoming unconsciously constituted as subjects by dominant social institutions and discourses. His most widely read essay, "Ideology and Ideological State Apparatuses," outlines his basic assumption that experience, consciousness, and subjectivity are themselves effects of an imaginary relationship between an individual and his/her real conditions of existence—a relationship that is constructed by the ideological state apparatuses, which reify social hierarchies and induces people to consent to systems of oppression.

Structuralists, like members of the Frankfurt School, were soon criticized for being too deterministic, for having an impoverished concept of subjectivity, and for missing the complexities and vicissitudes of history. A post-structuralist turn therefore found theorists like Roland Barthes (1915–1980) and the *Tel Quel* group in France turning toward history, politics, and active and creative human subjects, as well as developing a more complex model of textuality. The post-structuralist turn moved away from the more ahistorical, scientific, and objectivist modes of thought in structuralism. The post-structuralist moment was a particularly fertile one, with important theorists like Barthes, François Lyotard, and Michel Foucault writing groundbreaking works on culture and ideology, and younger theorists like Jacques Derrida, Jean Baudrillard, and Paul Virilio entering into their productive periods.

In *Mythologies* (1972, 1957), Roland Barthes critically dissected a wide range of contemporary forms of culture, demonstrating his unique method of ideological interpretation and critique. According to Barthes, the mythology dissected in his essay "Operation Margarine," for example, embodies the fundamental rhetorical and ideological operations of French bourgeois culture. Margarine, in Barthes's account, is a highly artificial substance transfigured by

advertising into a natural, beneficial, and acceptable substitution for butter. Analyzing ads that admit margarine's deficiencies and then trumpet its benefits, Barthes claims that such advertising techniques provide an "inoculation" against criticism of its imperfections. A similar operation, he claims, is typical in discourses on topics like the military, church, and capitalism, in which their limitations are mentioned in order to highlight their necessity and importance for the social order.

Likewise, mythologies obscure history, transforming contingent factors into natural essences, as if it were natural that an African soldier salute the French flag, in Barthes's famous example of a photograph that erases all of the evils of French colonization in an idealized image. Constructing an argument that anticipates postmodern emphasis on difference and otherness, Barthes points out how myths erase what is different and dissimilar, assimilating otherness to nature, as when the image of the French soldier folds the African into the French empire, or margarine ads assimilate an artificial substance into the order of culinary appropriateness. Barthes's method of analyzing rhetorical strategies of media culture and taking apart the mythologies that colonize social life help to produce a critical consciousness in his reader.

Sophisticated new theoretical approaches to the production of the works of film and its production of ideology began emerging in the 1960s, including those analyses published in *Cahiers du cinema* and the extremely influential British journal *Screen*, which translated many key *Cahiers* texts and other works of French film theory, including those of Roland Barthes and Christian Metz. These generated much more sophisticated formal approaches to film (Metz, 1974; Heath, 1981). The *Cahiers* group moved from seeing film as the product of creative *auteurs*, or authors (their *politique du auteurs* of the 1950s), to focusing on the ideological and political content of film and how film transcoded dominant ideologies. At the same time, French film theory and *Screen* focused on the specific cinematic mechanisms that helped produce meaning. These theorists and others analyzed how ideology permeated cinematic form and content, images and narrative, symbols and spectacle (Nichols, 1981; Kellner and Ryan, 1988).

Post-structuralism stressed the text's openness and heterogeneity, its embedded in history and desire, its political and ideological dimensions, and its excess of meaning. The conjunction of post-structuralism in the academic world and new social movements stressing the importance of race, gender, sexuality, and other markers of group identity led to expansion of the concept of ideology to many new dimensions and thematics. British cultural studies, for instance, adopted a feminist perspective, paid greater attention to race, ethnicity, and nationality, and sexuality in response to social struggles and movements (Kellner, 1995).

Earlier Marxist concepts of ideology presupposed a homogenous ruling class that unambiguously and without contradiction articulates its class interests through a monolithic ideology. Since its class interests were thought to be predominantly economic, ideology in this model referred primarily to ideas that legitimated the class rule of capitalists. Ideology was thus viewed as that set of ideas that promoted the capitalist class's economic interests. During the 1960s and 1970s, however, this model has been contested by theorists who have argued that an orthodox Marxist concept of ideology is reductionist because it equates ideology solely with those ideas that serve class or economic interests, leaving out such variable and significant factors as sex and race. Reducing ideology to class interests makes it appear that the only significant domination in society is one of class or economic domination, whereas many theorists argue that sex and race oppression are fundamentally important and indeed intertwined in fundamental ways with class and economic domination.

READING RAMBO IDEOLOGICALLY

Thus many critics have proposed that ideology be extended to cover theories, ideas, texts, narratives, and images that legitimate domination of women and people of color by white men and that thus serve the interests of ruling powers. Such ideology critique criticizes sexist and racist ideology as well as bourgeois-capitalist class ideology. To carry out an ideology critique of *Rambo: First Blood Part II* (1985), for instance, it wouldn't be enough simply to attack its militarist or imperialist ideology and the ways that the militarism and imperialism of the film serve capitalist interests by legitimating intervention in Southeast Asia (Kellner, 1995). To carry out a full ideology critique, one would also have to examine the film's sexism and racism, showing how representations of women, gender, the Vietnamese, the Russians, and so on are a fundamental part of the ideological text of *Rambo*.

In regard to gender, for instance, one might note that Rambo instantiates a masculinist image of gender that defines masculinity in terms of the male warrior with the features of great strength, effective use of force, and military heroism as the highest expression of life. Symptomatically, the woman characters in the film are either whores, or, in the case of a Vietnamese contra, a handmaiden to Rambo's exploits who functions primarily as a seductive force, seducing Vietnamese guards (a figure also central to the image of woman in *The Green Berets*, 1968), or a destructive one, when she becomes a woman warrior, a female version of Rambo. Significantly, the only moment of eroticism in *Rambo*

Sylvester Stallone as John Rambo in* First Blood *(Ted Kotcheff, 1982). © ORION/COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.

(brief and chaste) comes when Rambo and his woman agent kiss after great warrior feats. Seconds after the kiss, the woman herself is shot and killed—the moral being that the male warrior must go it alone and must thus renounce women and sexuality. This theme obviously fits into the militarist and masculinist theme of the film as well as the representation of ascetic male heroes who must rise above sexual temptation in order to become maximally effective saviors or warriors.

The representations and thematics of race also contribute fundamentally to the militarist theme. The Vietnamese and Russians are presented as alien Others, as embodiments of Evil, in a typically Hollywood manichean scenario that presents the Other, the Enemy, "Them," as evil and "Us," the good guys, as virtuous, heroic, good, and innocent. *Rambo* appropriates stereotypes of the evil Japanese and Germans from World War II movies in its representations of the Vietnamese and the Russians, thus continuing the manichean Hollywood tradition of substituting past icons of evil for contemporary villains. The Vietnamese are portrayed as duplicitous bandits, ineffectual dupes of the evil Soviets, and cannon fodder for Rambo's exploits, while the Soviets are presented as sadistic torturers and inhuman, mechanistic bureaucrats.

The stereotypes of race and gender in *Rambo* are so exaggerated, so crude, that they point to the artificial and socially constructed nature of all ideals of masculinity, femininity, race, and ethnicity. Thus, expanding the concept of ideology to include race and sex helps provide a multidimensional ideology critique, which expands radical cultural criticism while enriching the project of ideology critique.

Ideologies should be analyzed within the context of social struggle and political debate rather than simply as purveyors of false consciousness whose falsity is exposed and denounced by ideology critique. A diagnostic ideology critique looks behind the façade of ideology to see the social and historical forces and struggles that require it and to examine the cinematic apparatus and strategies that make ideologies attractive. Such a model of ideology criticism is not solely denunciatory; it also looks for

socially critical and oppositional moments within all ideological texts, including conservative ones. As feminists and others have argued, one should learn to read texts "against the grain," yielding progressive insights even from reactionary texts.

INDEPENDENT FILM

"Independence" is in many ways the Holy Grail in the film business—something most everyone who makes movies strives for but can never quite attain. To be independent in the film business denotes a freedom from something, whether the vicissitudes of the commercial market or the matrix of companies that dominate the production and distribution of motion pictures in America. Such an independence can be attained only by degree. So long as a feature is screened in commercial theaters and/or aired on pay or network TV, so long as it carries a PCA seal or MPAA rating system designation, independence is a relative term.

What then is meant by the term "independent film"? At bottom, independence is attained within either or both of the two principal and intersecting characteristics of the movies as a medium: the artistic and the commercial. Huntz Hall (1919–1999), an actor famous for his appearances in the Bowery Boy B movies of the 1940s, once mused that you can recognize an independent film with a simple test: if the whole set shakes when someone slams a door it's an independent film. Though reductive and true for only the least ambitious of independent pictures, Hall's quip hints at the larger budgetary concerns of the vast majority of independent films. What we have come to recognize as an independent aesthetic—small-ensemble casts, limited use of exterior and location shooting, and an emphasis on conversation over action and exciting special effects stems primarily from an effort to stay within tight budgets. There is a mantra shared by independent directors: "Talk is cheap; action is expensive." When budget considerations loom over a production, it is always cheaper to film two people talking in a room than a car chase or a UFO landing in Washington, D.C.

Independent films are also recognizable by how they are "platformed" in the entertainment marketplace, by the way promotion and advertising is handled, and by selective versus saturation distribution. Big films are released into thousands of theaters all at once, while with some independent titles, only a handful of prints are available for screening at any one time, and they are screened almost exclusively in small, so-called art-house theaters. At every stop along the way in the various commercial venues available for films in the United States, independent films are at once marginal and marginalized. Independence thus assumes a distance from the commercial mainstream that is systematically and industrially maintained.

Two Hollywood adages that inform independence are worth considering here. The first is a bastardization of an H. L. Menken quip: "When they say it's not about the money, it's about the money." In other words, what makes a film independent is its stake in the commercial marketplace: limited access (to big commercial venues) results in almost every instance in limited box office. An independent film is thus defined by the money it makes (not a lot) and the audience it reaches (a select, small group). The second adage is even more to the point: "You take the money, you lose control." It is generally believed that independence has something to do with a refusal to make concessions. To that end, the Independent Spirit Awards, founded by FINDIE (the Friends of Independents) in 1984, annually celebrate the "maverick tradition" of independent film in America. But such a maverick tradition, evinced in some producers' and directors' refusal to kowtow to industry pressures, is founded on the relative commercial inconsequence of the films in question. A degree

of independence is possible only when films make so little money they simply are not worth the studios' time or effort to own or control. The strange fact of American filmmaking, especially in the modern era, is that a director—even an unknown and inexperienced director—can expect to enjoy far more creative autonomy working on a $1.5–3 million so-called independent film than on a $15–30 million studio picture. The minute significant studio investment is in play, the minute significant box-office is at stake, a filmmaker's independence is subject to second-guessing by executives whose primary task is to protect the company's bottom line.

While the relation between independent and mainstream or commercial cinema has been an important question in every nation that has had an established film industry—Japan, India, France, Italy, and the United Kingdom, for example—what follows surveys the history of American independent cinema beginning with the very first alternatives to Edison's early films and the cartel he subsequently founded. Of interest as well are the niche films that proliferated in the early years of studio Hollywood, the Poverty Row B-genre pictures of the 1930s–1950s, exploitation cinema from the 1920s through the 1960s, the so-called new American cinema avant-garde in New York in the 1960s and 1970s, and the various independent cinemas that emerged as Hollywood conglomerized and monopolized the entertainment market after 1980.

INDEPENDENCE IN EARLY AND SILENT AMERICAN CINEMA

So far as most American film histories and the US Patent Office are concerned, movies in the United States began with Thomas Edison (1847–1931). First there were the patents on the Edison Kinetograph (the photographic apparatus that produced the pictures) and the Kinetoscope (the "peep show" viewing machine that exhibited them) in 1891. And then there was the first public demonstration of the Edison motion picture apparatus at the Brooklyn Institute of Arts and Sciences in May 1893, the place and date of what most agree was the first publicly exhibited movie. The speed at which things moved from this first showcase (which included the screening of Edison's crude moving picture *Blacksmith Scene,* showing three men, all Edison employees, hammering on an anvil for approximately twenty seconds) to the production of entertaining and occasionally edifying short movies was astonishingly fast. Edison had his Black Maria Studio in New Jersey fully outfitted by the time the Brooklyn Institute showcase was held. His first full slate of movies was available for screening by January of the following year.

In the spring of 1894, Edison renamed his company the Edison Manufacturing Company. The new name highlighted the business of making and selling Kinetoscope equipment that seemed so promising in 1894, and also clarified Edison's vision about the medium and his role in it. Movies were produced not by artists but by experts in the technology of motion picture production. They were made much as other products of industry were made on assembly lines, by nameless, faceless workers toiling on behalf of the company whose name was featured prominently on the product.

American cinema was initially just Edison, but domestic competition in the new medium emerged fairly soon thereafter. Viewing independent cinema as an alternative to a commercial mainstream, it is with these first companies that took on Edison that independent American cinema began. Edison's first real competitor was the American Mutoscope Company, later renamed the American Mutoscope and Biograph Company (routinely referred to simply as Biograph). Biograph was a particularly irksome competitor for two reasons: (1) one of the principals in research and development at the company was William K. L. Dickson (1860–1935), an inventor who resigned from his position at Edison in 1895 after doing most of the work on the Kinetograph and the Kinetoscope; and (2) the company worked in 70mm, a superior format that provided four times the image surface of the Edison and international industry standard of 35mm. With its first slate of films, Biograph courted the carnival crowd. While Edison stuck mostly to documentary short subjects, the Biograph company founders Harry Marvin, Herman Casler, Elias Koopman, and Dickson viewed cinema as first and foremost an attraction. Their first films featured boxing bouts and demonstrations of fire-fighting equipment, but soon thereafter their "bread and butter" became crude gag films (that is, short films that played out a single comic skit).

Once the movies caught on—and it did not take long—several other film companies emerged. In December 1908, when it became clear that such a free market (of independent film producers and distributors) might quickly cost Edison his prominent role in the industry, the inventor created the Motion Picture Patents Company (MPPC) trust. The trust linked the interests of Edison and nine of his competitors: Biograph, Vitagraph, Essanay, Kalem, Selig Polyscope, Lubin, Star Film, Pathé Freres, and Klein Optical. The MPPC effectively exploited key industry patents on motion picture technology to fix prices, restrict the distribution and exhibition of foreign-made pictures, regulate domestic production, and control film licensing and distribution. The trust was supported by an exclusive contract with the Eastman Kodak Company, the principal and at the time the only dependable provider

of raw film stock. By the end of 1908, the ten film companies comprising the MPPC owned and controlled the technology and maintained exclusive access to the raw material necessary to make movies. In 1910, the General Film Company, the key middle-man in the film production/distribution equation, joined forces with the MPPC trust, making an already strong cartel even stronger. With the help of General Film (which purchased studio films and then leased them to theaters) exhibitors could more quickly and more systematically change their programs. To meet the increase in demand for product, the studios ramped up production. Everyone made more money.

But despite such intra- and inter-industry collusion, the MPPC trust's domination of film production, distribution, and exhibition was short-lived. The first big problem for the MPPC arose in February 1911, when Kodak, miffed that it did not have a profit interest in the trust, exploited a clause in the original agreement and began to sell film stock to local independents. These independents had organized into a cartel of their own: the Motion Picture Distributing and Sales Corporation (or Sales Company). The Sales Company "independents," led by Carl Laemmle (1867–1939), William Fox (1879–1952), and Adolph Zukor (1873–1976), were well organized and fiercely competitive.

After the Kodak defection, non-MPPC production units boasted record revenues; by the end of 1911 they accounted for approximately 30 percent of the film market, a reasonably large piece of the pie in the absence of fair and free trade in the film market. To attract such a considerable market share, the independents introduced an alternative product: the multi-reel picture. As early as 1911, the independents were moving toward producing feature-length films. The MPPC trust maintained throughout its existence a strict single-reel, 16-minute standard.

In a landmark case, *The Motion Picture Patents Company v. IMP* (Laemmle's Independent Motion Picture Company), decided in August 1912, a US Circuit Court gave the independents access to formerly licensed and restricted equipment. The victory in court put the independents on a level playing field with the MPPC. By 1914, the MPPC was out of business and the so-called independents took over. Laemmle founded Universal, Fox founded Twentieth Century Fox, and Zukor founded Paramount. In the years to follow, what independent cinema would be independent of, and from, would be the very companies that first insisted upon independence from Edison and his cartel in 1911.

INDEPENDENCE IN CLASSICAL HOLLYWOOD

When the so-called independents successfully bucked the MPPC and became the ruling cartel in the film business, independent cinema became the province of small outfits making movies for small and specific target audiences. For example, as early as 1915, Noble Johnson's (1881–1978) Lincoln Film Company produced films made by and for African American audiences. These so-called "race films," like those directed by the entrepreneurial auteur Oscar Micheaux (1884–1951) (who went door to door to raise money to shoot his movies), played in select urban venues and on the "chitlin circuit" (venues in the Southeast where daily life featured a strict racial segregation). Another alternative independent cinema, Yiddish films, emerged to serve the many Eastern European immigrants in the urban northeast. Featuring dialogue in Yiddish, a language that combines elements of German and Hebrew and was spoken by many first-generation Jewish immigrants, these films had their own stars and exhibition venues. Over forty Yiddish language "talkies" were made between 1930 and 1950.

After the advent of sound, the studios standardized the film program. Going to the movies in the 1930s routinely involved seeing an A (big budget) and a B (low budget) feature, along with a newsreel, perhaps another live-action short (often a comedy) and/or a cartoon. The studios made their own B movies, which were distributed primarily to fill out a bill headlined by the studio's A attraction.

As demand for films to fill out double bills increased, smaller film companies emerged, giving rise to "Poverty Row." Most of the Poverty Row companies were headquartered in Gower Gulch, a small area in Hollywood that was home to the soon-to-be-major studio Columbia, as well as a handful of well-organized and financed smaller studios such as Republic, Monogram, Grand National, Mascot, Tiffany, and some more transient production outfits like Peerless, Reliable, Syndicate, Big-Four, and Superior. The Poverty Row companies filled out film bills with inexpensive formulaic genre pictures. Though far less ambitious than the bigger studios, they made films faster than their better financed counterparts. Speed proved a distinct advantage when responding to fads, such as the singing cowboy rage in the mid-1930s. Republic was quick to exploit the fad with films featuring Gene Autry (1907–1998), such as *Tumbling Tumbleweeds* (1935), and Grand National banked on their singing cowpoke Tex Ritter (1905–1974) in *Sing, Cowboy, Sing* (1937). The B western was extremely popular in the 1930s, as were cowboy stars such as Johnny Mack (1904–1974), Harry Carey (1878–1947), Hoot Gibson (1892–1962), Tom Mix (1880–1940), and the soon-to-be A-list movie star, John Wayne (1907–1979).

B action-adventure films were made to take advantage of the popularity of a previous studio film or current radio show. For example, Republic made an adventure

SAMUEL Z. ARKOFF

b. Fort Dodge, Iowa, 12 June 1918, d. 16 September 2001

In 1979, the Museum of Modern Art in New York held a retrospective tribute to the producer Samuel Z. Arkoff and his company American International Pictures (AIP). At the time, Arkoff seemed an unlikely choice for such an honor. For well over twenty years in the film business he had clung to a single guiding principle: "Thou shalt not put too much money into any one picture." The sorts of films he produced at AIP were as far from the high art world of the museum as one could imagine.

A quick look at Arkoff's oeuvre at AIP between 1954 and 1979 presents daunting evidence of his success as a purveyor of a particular sort of teen-oriented exploitation cinema. He made over 500 films, including *The Fast and the Furious* (1954), *The Day the World Ended* (Roger Corman, 1956), *Hot Rod Girl* (1956), *Shake, Rattle and Rock* (1956), *I Was a Teenage Werewolf* (1957), *The Cool and the Crazy* (1958), *The Pit and the Pendulum* (1961), *The Raven* (1963), *Beach Party* 1963), *Dementia 13* (1963), *Summer Holiday* (1963), *The T.A.M.I. Show* 1965), *The Wild Angels* (1966), *What's Up, Tiger Lily?* (1966), *The Trip* (1967), *Wild in the Streets* (1968), *Three in the Attic* (1968), *Bloody Mama* (1970), *The Abominable Dr. Phibes* (1971), *Boxcar Bertha* (1972), *Blacula* (1972), *Dillinger* (1973), *The Little Girl Who Lives Down the Lane* (1976), and following the sale of AIP to Filmways, *Love at First Bite* (1979), *The Amityville Horror* (1979), and *Dressed to Kill* (1980).

With his long-time partner James Nicholson, Arkoff, a lawyer by training but a huckster by instinct, clung to a simple template, the so-called "A.R.K.O.F.F. formula": *A*ction (excitement and drama), *R*evolution (controversial or revolutionary ideas), *K*illing (or at least a degree of violence), *O*ratory (memorable speeches and dialogue), *F*antasy (popular dreams and wishes acted out), and *F*ornication (sex appeal, to both men and women). Though best known today for the Beach Party films (1963–1965) and his adaptations of Edgar Allan Poe stories (all directed by Roger Corman between 1960–1965), Arkoff should be remembered more for the opportunities he provided over the years to talented writers, directors and actors struggling to make it in Hollywood, including Francis Coppola, Martin Scorsese, Peter Yates, Woody Allen, Robert Towne, Peter Fonda, Bruce Dern, and Jack Nicholson. AIP films inevitably bore the Arkoff stamp, no matter who wrote, directed, or starred in the feature. Though he never directed a film, Samuel Z. Arkoff was one of the most prolific and influential independent filmmakers of the twentieth century.

RECOMMENDED VIEWING

The Fast and the Furious (1954), *The Day the World Ended* (1956), *The Pit and the Pendulum* (1961), *The Raven* (1963), *Beach Party* (1963), *The Wild Angels* (1966), *The Trip* (1967), *Wild in the Streets* (1968), *Three in the Attic* (1968)

film set in India titled *Storm Over Bengal* (1938), after *Lives of a Bengal Lancer* (1935) and *The Charge of the Light Brigade* (1936) were successful for the major studios. Grand National produced a series of films featuring "The Shadow," a character on a popular radio suspense show. A tendency to reflect (writ small) the work being produced at the major studios dominated independent B-movie production at the time, suggesting a dependence on (rather than independence from) the studios for raw material. This commitment to simple genre entertainment mirrored the less ambitious aspects of studio filmmaking. Thus the notion that B-movie studios provided an alternative to studio fare seems, at least in the studio era, inaccurate.

Samuel Z. Arkoff. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

While the B-movie studios made films to fill out programs headlined by studio A pictures in exchange for a quick, modest payoff, exploitation filmmakers like Kroger Babb (1906–1980), a savvy carnival huckster, made films that openly defied the strictures of the MPPDA production code. Kroger is best known today for his sex-hygiene film *Mom and Dad* (1945), which dealt with material (venereal disease and teen pregnancy) that mainstream films could not, and did so with frankness and explicitness. Because of its prurient content, *Mom and Dad* could not be shown as part of a larger, legitimate film program. Instead Babb traveled with his film, renting out theaters for a weekend (an arrangement called "four-walling"), and staging his own film shows. Babb advertised his shows with lurid posters (which would have been forbidden by the mainstream industry's Production Code) promising just what the studios could not deliver: "Everything shown. Everything explained." To give the show a semblance of respectability, for many of the screenings of *Mom and Dad* Babb hired an actor to play the part of the noted sexologist Dr. Elliot Forbes, who, after the screening, answered questions from the crowd. Like any good huckster, Babb made a lot of money by never overestimating the intelligence and taste of his audience.

Throughout its existence, exploitation cinema depended upon an apparent defiance of commercial Hollywood, a defiance signaled by its promise of material prohibited in more mainstream fare. One popular exploitation genre in the 1950s was the nudist colony film. Films such as *Garden of Eden* (1955), *Naked As Nature Intended* (1961), and *World without Shame* (1962) showed ample on-screen nudity, which was forbidden by the Production Code. Claiming documentary status of a sort, nudist colony films successfully challenged previous limitations on First Amendment protection for cinema. In the precedent-setting 1957 case *Excelsior Pictures v. New York Board of Regents* attending a New York ban on screenings of *Garden of Eden*, a state appeals court found that nudity per se on screen was not obscene. Such a ruling freed exploitation cinema to go even further. In 1959, the independent filmmaker Russ Meyer (1922–2004) produced *The Immoral Mr. Teas*, a film about a man who gets conked on the head and acquires a gift of sorts, the ability to see through women's clothing.

Meyer's film—made very much with the Excelsior decision in mind—spawned a brief new wave of independent exploitation pictures. These more visually explicit films included a variety of colorfully termed new genres: nudie cuties (suggestive, often light comedies with nudity but no touching, such as *Mr. Peter's Pets* [1962], *Tonight for Sure* [1962], and *Adam Lost His Apple* [1965]); roughies (depicting anti-social behavior as well as nudity, as in *The Defilers* [1965] and *The Degenerates* 1967); kinkies (with revealing titles such as *Olga's House of Shame* [1964], *The Twisted Sex* [1966], and *Love Camp 7* [1969]); and ghoulies (merging kink with gruesome humor, as in *Satan's Bed* [1965] and *Mantis in Lace* [1968]). The common element among all these independent exploiters was on-screen nudity.

Striking a less salacious note, another group of independent filmmakers in the 1950s and 1960s took aim at the burgeoning youth culture and found a ready and willing audience. Chief among the purveyors of this slightly tamer exploitation cinema were Samuel Z. Arkoff (1918–2001) and Roger Corman (b. 1926), who together and then separately released films under the American International Pictures (AIP) and New World banners. Notable among Arkoff's oeuvre as a producer and distributor of low budget exploiters are two film

Peter Fonda (standing, center) in* The Wild Angels *(Roger Corman, 1966), produced by Samuel Z. Arkoff. **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

franchises, the Beach Party films (*Beach Party* [1963], *Muscle Beach Party* [1964], *Bikini Beach* [1964], *Beach Blanket Bingo* [1964], and *How to Stuff a Wild Bikini* [1965], all directed by William Asher [b. 1921]); and a series of adaptations of Edgar Allan Poe stories starring the veteran horror film actor Vincent Price (1911–1993) (*House of Usher* [1960], *Pit and the Pendulum* [1961], *Tales of Terror* [1962], *The Raven* [1963], and *The Tomb of Ligeria* [1965], all directed by Corman). While the vast majority of Arkoff's films, bearing titles such as *The Beast with a Million Eyes* (1956) and *Dr. Goldfoot and the Bikini Machine* (1965), were produced quickly and cheaply and paid off modestly at the box office, a few of his later titles—*The Wild Angels* 1966), a motorcycle film starring Peter Fonda that foreshadowed and foregrounded *Easy Rider* (1969), and the sex-farce *Three in the Attic* (1966)—were top-twenty films for their year of release.

With producer credit on well over 300 films in over forty years in the business working for Arkoff at AIP and then at his own company, New World Pictures, Roger Corman became the most important and most successful purveyor of low-brow independent cinema in American motion picture history. Key titles in Corman's oeuvre (in addition to those mentioned above) include his own *A Bucket of Blood* (1959), *Little Shop of Horrors* (1960), and *The Trip* (1967), as well as *Dementia 13* (1963), Francis Coppola's first film as a director.

Another important exploitation filmmaker is George Romero (b. 1940) whose series of zombie films—*Night of the Living Dead* (1968), *Dawn of the Dead* (1978), *Day of the Dead* (1985), and *Land of the Dead* (2005)—have acquired for the director a cult status of sorts. The bloodletting in Romero's films is so extreme that many in his intended audience—young horror film fans, mostly—find them funny. Despite an almost campy appeal,

terrible acting, and low-end production values, many serious critics and reviewers seem drawn to his films as well. They have found the films profoundly political, even "important," contending, for example, that *Night of the Living Dead* offers a commentary on race relations, with its black American hero who is hunted in the end by a white sheriff and his vigilante posse, or that *Land of the Dead* should be seen as a metaphor to post-9/11 hysteria. Romero is unusual among American auteurs in that he has displayed a commitment to his adopted hometown of Pittsburgh, Pennsylvania, where he shoots and sets most of his films. Romero is one of America's few regional auteurs.

While exploitation filmmakers like Arkoff, Corman, and Romero offered an alternative, independent cinema that pushed the boundaries of good taste and resisted the strictures of content regulation, in the 1960s a group of New York filmmakers emerged offering their own independent alternative to commercial Hollywood filmmaking. The filmmakers in this so-called "New American Cinema" borrowed from avant-garde theater and visual art and from documentary cinema to produce an alternative to the escapist cinema produced on the West Coast. Filmmakers such as Robert Frank (b. 1924) and Alfred Leslie (b. 1927) (*Pull My Daisy*, 1958), Michael Roemer (b. 1928) (*Nothing But a Man*, 1964), Shirley Clarke (1919–1997) (*The Cool World*, 1964), and most famously John Cassavetes (1929–1989) (*Shadows*, 1959; *Faces*, 1968) made avowedly personal films with a seeming disregard for box-office appeal. Employing realist aesthetics and improvisational acting, these films provided an antidote of sorts to the fantasy world perpetuated by the mainstream studios.

Of these New York–based filmmakers, only Cassavetes enjoyed any significant crossover success. For almost three decades, Cassavetes financed his independent films in part from money he made as an actor in mainstream pictures such as *Rosemary's Baby* (1968) and he brought an actor's sensibility to his work. In an effort to create the impression of realism, Cassavetes asked his actors to think, talk, and behave in character. Such an emphasis on improvisation made his films seem slow and talky to the uninitiated, but they nonetheless felt "real" and packed a profound emotional punch. In addition to *Faces* and *Shadows*, notable among his films as a director are *A Woman under the Influence* (1964), *The Killing of a Chinese Bookie* (1976), and *Gloria* (1980), all films about otherwise unexceptional people brought to the end of their rope by the pressures of everyday life.

Historians routinely locate the roots of Cassavetes's rebellion against commercial Hollywood in the avant-garde cinema of the 1930s and 1940s (filmmakers like Ralph Steiner [1899–1986], Paul Strand [1890–1976], and Maya Deren [1917–1961]), but a more proximate source lay in the various, mostly thwarted efforts at independence by movie stars and directors to gain more control over their films and by extension their careers during the so-called classical or studio era. For example, James Cagney (1899–1986), one of Warners' biggest stars, bristled at continued typecasting and broke with the studio. In 1942 he established (with his brother, the producer William Cagney) Cagney Productions, an independent production outfit. Though the move gained Cagney a modicum of freedom and independence, the cost of releasing a film made a distribution deal with a studio a necessity and thus made real independence impossible. The director Fritz Lang (1890–1976) similarly broke with the studios to establish independence, but like Cagney, Lang could not get his films into the marketplace without studio help. Cassavetes seemed to learn from the frustrations of Cagney and Lang and scaled his productions down so significantly that he maintained a degree of autonomy on the far margins of the studio system.

INDEPENDENCE IN THE NEW HOLLYWOOD

During the 1970s, a period historians have since termed the "auteur renaissance," an independent spirit emerged within mainstream, commercial cinema. Directors like Francis Ford Coppola (b. 1939), Martin Scorsese (b. 1942), Robert Altman (b. 1925), Stanley Kubrick (1928–1999), Peter Bogdanovich (b. 1939), Terrence Malick (b. 1943), Brian De Palma (b. 1940), Steven Spielberg (b. 1946), and George Lucas (b. 1944) enjoyed an independence within the system that was unique in American film history. Auteur films like Altman's *M*A*S*H* (1970), Coppola's *The Godfather* (1972), and Spielberg's *Jaws* (1975) made a lot of money for the studios, all of which were struggling after an almost generation-long box-office slump. But the studios' indulgence of the auteur theory was by design temporary; it held executives' interest only as long as was necessary. Once the studios got back on their feet at the end of the decade, they abandoned the auteurs in favor of more formulaic films produced by directors who required and/or demanded less autonomy and independence.

Most of the 1970s auteur directors struggled in the 1980s: Coppola, Scorsese, and De Palma made fewer films and their work had far less impact after 1980; Altman adapted stage plays for art-house release; and Kubrick, Bogdanovich, and Malick went into semi-retirement. The only two directors to continue their ascent were Spielberg and Lucas, and consequently their particular brand of entertainment cinema became the industry template.

Maggie Cousineau-Arndt and David Strathairn in John Sayles's* Return of the Secaucus Seven *(1980). **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

It was counter to this Spielberg-Lucas template that a renaissance of sorts in independent cinema took shape in the 1980s. This indie scene became the site for a new American cinema, one that again mirrored on a smaller scale what had taken place in bigger films, for bigger stakes, just a decade earlier. Consider, for example, the top studio films of 1984: *Ghost Busters*, *Indiana Jones and the Temple of Doom*, *Gremlins*, *Beverly Hills Cop*, and *Star Trek III: The Search for Spock*, all of which depended on special effects and/or star-power and were platformed as event films in wide distribution strategies that only a major studio could afford to mount.

The studios' collective embrace of the so-called event film enabled an independent film market to emerge, or perhaps it just made necessary. At a time when the studios were committed to a kind of bottom-line thinking that emphasized cost–benefit analysis (typical of production units under conglomerate ownership in any business), independence became once again a matter of cash and content. Independent films produced and released in 1984 included Jim Jarmusch's (b. 1953) stagey, offbeat comedy *Stranger Than Paradise* (shot in overlong single takes and in black and white); Wayne Wang's (b. 1949) small ethnic picture *Dim Sum: A Little Bit of Heart*, a character study of Chinese Americans; Gregory Nava's (b. 1949) unflinching chronicle of Mexican "illegals," *El Norte*; John Sayles's (b. 1950) futurist parable *Brother From Another Planet*, which tells the story of a drug-addicted alien loose in New York City; Alan Rudolph's stylish neo-noir *Choose Me*; veteran independent filmmaker John Cassavetes's melodrama *Love Streams*; and Robert Altman's adaptation of a one-man stage play about Richard Nixon's last days in the White House, *Secret Honor*.

Independent films the following year included *Blood Simple*, the stark, deadpan neo-noir by the Coen brothers (Joel, b. 1954, and Ethan, b. 1957) that was the talk of the 1985 New York Film Festival; Susan Seidelman's (b. 1952) punk-inspired romantic comedy *Desperately Seeking Susan*; Horton Foote's (b. 1916) regional comedy adapted from his stage play *The Trip to Bountiful*; and Martin Scorsese's *After Hours*, a film that tracks a single eventful night in the life of one very unlucky New Yorker. That a filmmaker of Scorsese's reputation had to turn to the indie scene to make a movie speaks volumes on the state of the industry at the time.

While independence afforded these filmmakers a degree of creative freedom, it also relegated their films to a modest art house release. Very few independent films have crossed over into commercial theaters in any big way. Among the few that have are *Pulp Fiction* by Quentin Tarantino (b. 1963), distributed by Miramax in 1994, which grossed over $100 million, as did the surprise 1999 teen horror picture *The Blair Witch Project* for Artisan. A few film festival winners like Steven Soderbergh's (b. 1963) *sex, lies and videotape* (1989) or David Lynch's (b. 1946) *Mulholland Drive* (2001) have crossed over to modest mainstream commercial successes, but these are rare exceptions. For every crossover success such as *Napoleon Dynamite* (2004), a droll comedy produced for $400,000 that earned over $40 million, there are hundreds of independent films that reach only small audiences and are hurried into DVD and video release. These films seldom turn much of a profit.

Niche films (that is, films produced by and for a very specific and small target market) comprise essential indie product lines, but almost never enjoy crossover success. For example, lesbian-themed films such as *Go Fish* (1994), *The Incredibly True Adventure of Two Girls in Love* (1995), *High Art* (1998), and *Better than Chocolate* (1999), which are thematically similar but very different in tone and content, all earned about the same amount ($2 million). Such relatively dependable but modest payoffs await any reasonable effort at meeting the needs of the lesbian audience, which might be acceptable for a small outfit like TriMark, distributor of *Better than Chocolate*; but for the big studios in the 1990s such action was distinctly small time.

Niche films are consistent, modest moneymakers because niche audiences are starved for films about people like themselves. Many of these films are written and directed by women and people of color—who, in Hollywood studios, are seriously underrepresented behind the camera and in the front office. The ranks of 1980s and 1990s indie filmmaking is a who's who of "minority" and distaff filmmakers: Charles Burnett (*The Glass Shield*, 1995), Lisa Cholodenko, Martha Coolidge (*Valley Girl*, 1983), Sofia Coppola (*The Virgin Suicides*, 2001, and *Lost in Translation*, 2003), Rusty Cundieff (*Fear of a Black Hat*, 1994), Vondie Curtis-Hall (*Gridlock'd*, 1997), Julie Dash (*Daughters of the Dust*, 1991), Tamra Davis (*Guncrazy*, 1992), Cheryl Dunye (*The Watermelon Woman*, 1996), Carl Franklin (*One False Move*, 1992), Leslie Harris (*Just Another Girl on the IRT*, 1992), Nicole Holofcener (*Walking and Talking*, 1996, and *Lovely and Amazing*, 2001), Reginald Hudlin (*House Party*, 1990), Leon Ichaso (*Crossover Dreams*, 1985), Tamara Jenkins (*Slums of Beverly Hills*, 1998), Spike Lee, Kasi Lemmons (*Eve's Bayou*, 1997), Jennie Livingston (*Paris is Burning*, 1991), Maria Maggenti, Gregory Nava, Kimberly Pierce (*Boys Don't Cry*, 2000), Matty Rich (*Straight Out of Brooklyn*, 1991), Nancy Savoca (*True Love*, 1989, and *Dogfight*, 1991), Penelope Spheeris (*The Decline of Western Civilization*, 1981), Susan Seidelman (*Smithereens*, 1982), Jill Sprecher (*The Clockwatchers*, 1997, and *Thirteen Conversations About One Thing*, 2001), Julie Taymor (*Frida*, 2002), Robert Townsend, Rose Troche, Luis Valdez (*Zoot Suit*, 1981), Wayne Wang, and Anne Wheeler. Add to the list above openly gay male directors or directors who specialize in gay-themed films, such as Gregg Araki (*The Doom Generation*, 1995) and Todd Haynes (*Poison*, 1991), and it becomes clear how much and how completely independent cinema, which is showcased almost exclusively at art houses and/or in limited theatrical runs, is at once marginal (to the commercial cinematic enterprise) and marginalized.

Most of even the best-known indie titles—including those that fall into more traditional commercial genres—make far less of an impact at the box office than one might suspect. *The Addiction* (1995), *Bodies Rest and Motion* (1993), *Box of Moon Light* (1997), *The Clockwatchers* (1998), *Fear of a Black Hat* (1993), *Federal Hill* (1994), *Female Perversions* (1997), *Heathers* (1989), *The House of Yes* (1997), *Just Another Girl on the IRT* (1993), *Killing Zoe* (1994), *Matewan* (1987), *Men With Guns* (1998), *Naked in New York* (1994), *Party Girl* (1995), *Simple Men* (1992), and *The Underneath* (1994) are among the most highly regarded, well-known, and popular films, but they all made $1 million or less at the box office—1/100 as much as the average blockbuster.

INDEPENDENCE IN CONTEMPORARY HOLLYWOOD

Auteurism and independence converged in the early 1980s as Hollywood conglomerized and the new Hollywood studios devoted their attention to blockbuster filmmaking. The audacity and creativity that had fueled the Hollywood renaissance of the 1970s got pushed out

JOHN SAYLES

b. Schenectady, New York, 28 September 1950

John Sayles is one of the most important [of] contemporary independent filmmakers. Because his loyal fan base shares his politics, Sayles has consistently been able to provide an alternative to the big bang of the often politically conservative Hollywood blockbuster. Making movies that depend on meaningful conversation and tackle significant moral issues, Sayles has produced films of ideas at a time when they seem sadly lacking in mainstream cinema.

Like his fellow cineastes Francis Coppola and Martin Scorsese, John Sayles got his first big break from exploitation impresario Roger Corman, for whom he wrote a screenplay for the tongue-in-cheek gore-fest *Piranha* (1978). A year later, Sayles earned legitimate success, winning a Los Angeles Film Critics Award for his more personal screenplay, *The Return of the Secaucas Seven* (1980), his debut as a writer-director. *The Return of the Secaucas Seven*, the story of a handful of twentysomethings trying to make sense of contemporary America, established something of a template for Sayles with its emphasis on dialogue and multiple intersecting narratives.

With the money earned for his screenplays for the Corman-produced sci-fi quickie *Battle Beyond the Stars* (1980) and the excellent werewolf film *The Howling* (1981), Sayles wrote and directed *Lianna* (1983), a film about a young woman struggling with her sexual preference. At a time when Hollywood dealt with lesbianism as either kinky or aberrant, Sayles handled the issue with an admirable matter-of-fact realism.

Sayles took on another hot-button issue, labor relations, with his subsequent film *Matewan* (1987), a historical reconstruction of an ill-fated West Virginia coalminers' strike in the 1920s. And in his next film *Eight Men Out* (1988), about the infamous "Black Sox Scandal" of the 1919 World Series, Sayles delivered a similarly heartfelt pro-union message—noteworthy because at the time the anti-union sentiments of Reaganomics held sway in America. While the story pivots on a moral transgression, Sayles focused instead on the exploitation of the players by team owner Charles Comiskey. Though what the players do is wrong, Sayles renders the story in terms that make one crime an inevitable response to another.

Sayles cemented his reputation as a political filmmaker by focusing his attention on race issues. *The Brother from Another Planet* (1984) told the story of a black alien who lands in the inner city and gets hooked on drugs. The ironically titled *City of Hope* (1991) focused on the thorny issue of affirmative action in a small metropolis. *Lone Star* (1996), for which Sayles received an Academy Award® nomination for Best Screenplay, examined Mexican-American relations in a border town and *Sunshine State* (2002) took a long look at the human cost of gentrification at an old Florida beachfront town abutting the one beach where African Americans could swim during segregation.

RECOMMENDED VIEWING

Return of the Secaucus Seven (1980), *Brother from Another Planet* (1984), *Matewan* (1987), *Eight Men Out* (1988), *Lone Star* (1996), *Sunshine State* (2002)

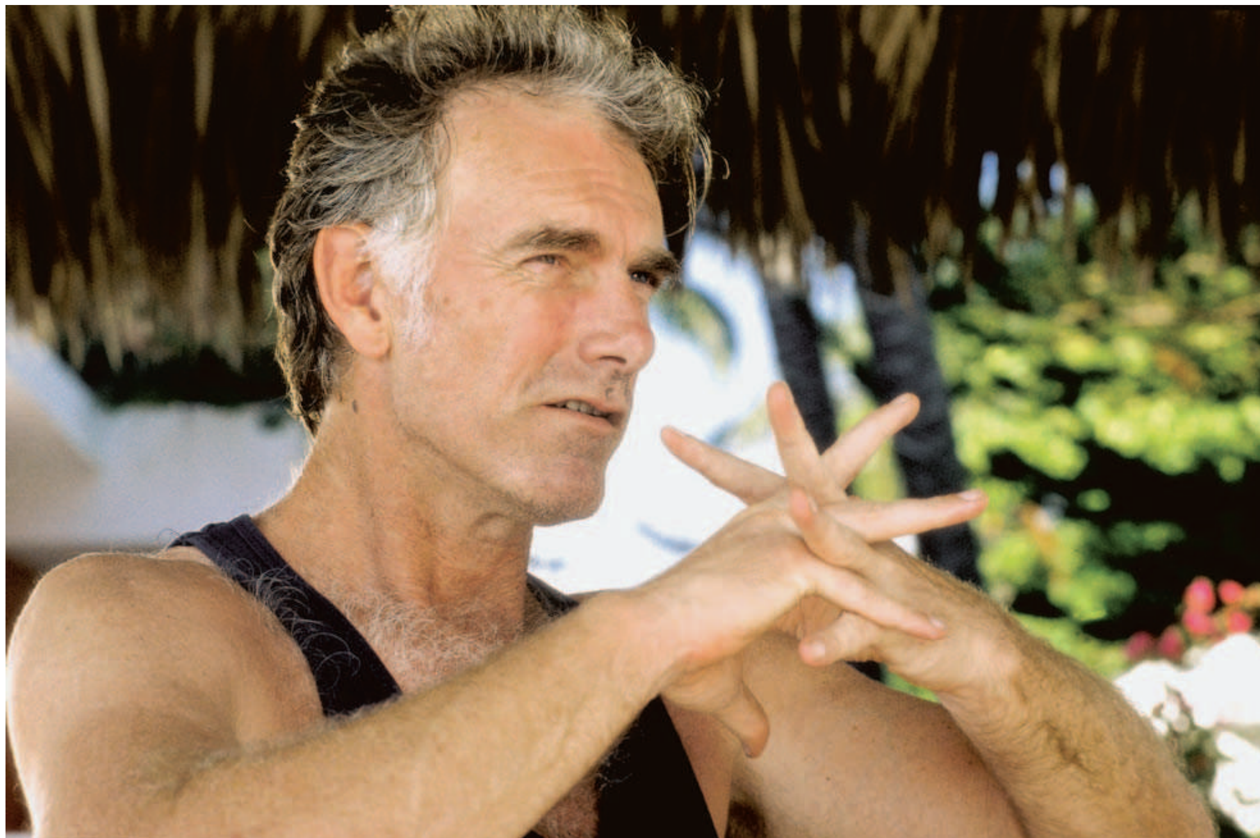
Jon Lewis

of or at least found a new home on the margins of the studio mainstream. This remained an accurate description of the Hollywood/indie divide throughout the subsequent twenty-five years even as the independent landscape slowly changed.

In the 1990s, in an effort to cash in on the "alternative market," several of the big studios added boutique, so-called indie-labels to their vast entertainment industry holdings. For example, Sony spun-off Sony Classics and Fox added Fox Searchlight. Disney expanded its holdings



John Sayles on the set of Casa de los Babys *(2003).* © IFC FILMS/COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.

by boldly acquiring Miramax, and in doing so diversified the former family-friendly company into the world of edgy independent fare. These corporate moves rendered "independent" a profoundly misleading term. The studio-owned and operated boutique houses had vast capital resources and even though, like their more independent indie predecessors, they acquired for distribution modest-budgeted, independently produced films often picked up at so-called independent film venues like the Sundance and Toronto Film Festivals, by century's end they had all but cornered the art-house market.

The notion of independence has always been conditional (one is always independent of or from someone or something) and partial (the marketplace has always required certain concessions to the commercial mainstream). But however these contemporary "independent" films were made and marketed they continued to offer a degree of creative freedom and market access to directors working outside the commercial mainstream.

A quick look at the important independent films in the contemporary era reveals a wide range of auteur pictures, genre movies, and niche-audience projects. Prominent among the auteur projects were two films by Quentin Tarantino—his two-part postmodern revenge fantasy *Kill Bill, Vol. 1* (2003) and *Kill Bill, Vol. 2* (2004). Though Tarantino was by 2003 something of a household name and certainly a Hollywood A-list director, his continued association with Miramax and his self-promotion as a renegade Hollywood player was consistent with the concept if not the fact of independence. Much the same can be said for Steven Soderbergh, who continued to alternate projects between the studio mainstream (the popular biopic *Erin Brockovich*) and the more marginal (the political tour de force *Traffic*, 1999).

Other directors similarly interested in forging a place for themselves outside the commercial mainstream and in doing so establishing a unique and uncompromised auteur signature followed Tarantino and Soderbergh's lead. Here again the fact of independence was less significant than the indie reputation one gained by associating oneself with even a boutique indie label. Key players here include the playwright/filmmaker Neil LaBute (the surreal comedy *Nurse Betty*, 1999), Darren Aronofsky (the wildly stylized study of drug addiction, *Requiem for*

a Dream, 1999), Christopher Nolan (the thriller *Memento*, 2000, about a man with no short-term memory caught in the middle of a murder mystery), and Todd Solondz (the sexually explicit college-set drama *Storytelling*, 2001). While opportunities for women directors remained scant in mainstream Hollywood, a number of young female auteurs got the opportunity to direct low budget indie features. Some delved into contemporary questions regarding gender identity (Kimberly Peirce's *Boys Don't Cry*, 1999), while others explored growing up female (Catherine Hardwicke's *Thirteen* and Sofia Coppola's *The Virgin Suicides*, 1999).

A number of indie titles were marketed to large niche audiences, most significantly the youth audience. The most popular indie film of all time was the teen-horror picture *The Blair Witch Project* (1999), a film that to great effect aped the look and style of a typical student film. Several more polished alternative teen horror films followed, many of them played with equal amounts of thrills and satire: Wes Craven's popular *Scream* series–*Scream* (1996), *Scream 2* (1997), and *Scream 3* (2000) and the *Scary Movie* franchise–*Scary Movie* (2000), *Scary Movie 2* (2001), and *Scary Movie 3* (2003)–were all distributed by Miramax's teen-label Dimension Films. While bawdy teen comedies like *American Pie* (1999) and its sequels (*American Pie 2*, 2001, and *American Wedding*, 2003) continued to be a staple among the major studio release slates, a series of darker, more troubling teenpics appeared on the indie circuit, films like Richard Kelly's exploration of adolescent madness *Donnie Darko* (2001), the disconcerting coming of age film *Igby Goes Down* (2002), the nerd satire *Napoleon Dynamite* (2004), the anti-establishment road trip picture *Harold and Kumar Go to White Castle* (2004), and the generation-next coming of age movie *Garden State* (2004).

Making a film on the indie circuit also offered opportunities to mainstream performers, especially movie stars, to acquire something akin to "indie cred." At the very least, it allowed glamorous movie stars a chance to showcase their talent playing "against type." For example, the beautiful African American actress Halle Berry won an Academy Award® for her performance in Marc Foster's *Monster's Ball* (2001). With an unflattering haircut, little makeup, and dingy clothes, Berry played a waitress who has an affair with a racist jailer after her husband is executed. Two years later, the South African model turned star actress Charlize Theron followed Berry's lead winning an Oscar® for her portrayal of the serial killer Aileen Wuornos in Patty Jenkins's *Monster*.

Diversifying into the small indie market has had its advantages for the major film companies. Though many of their boutique titles have not made them much money, they have added much-needed prestige to industry release slates otherwise dominated by empty action pictures. When boutique releases win prizes at festivals like Sundance, Cannes, Venice, Berlin, and Toronto or awards at the Golden Globes or Oscars®, they boost the studio's reputation. Control over the indie-sector also gives the major studios something very close to complete control over the entire American cinema landscape, a degree of control that in the 21st century renders the term "independent" not only conditional but perhaps even obsolete.

INDIA

The fact that India annually produces more films than any other nation is frequently acknowledged but easily misunderstood. "Indian cinema" identifies a diverse range of popular and art cinemas regularly produced in at least half a dozen languages for large but distinct audiences within and outside India. For much of the West, Indian cinema was long identified almost exclusively with the work of the Bengali director Satyajit Ray (1921–1992), whose realist films consciously differed from the majority of those made in India. Increased international awareness of the popular Hindi-language film industry in Bombay (now officially Mumbai), known with both affection and condescension as Bollywood, can lead to the inference that all Indian cinema adheres to a song-filled melodramatic formula. Yet reducing Indian cinema to either Ray's art films or a generic *masala* (spicy mix) model misrepresents Indian cinema, as international film critics have begun to point out. Moreover, the complex history of cinema in India—with roots in ancient culture, material origins under British colonialism, and local dominance following independence—also challenges easy generalizations about what is among the world's most heterogeneous as well as prolific national cinemas.

EARLY INDIAN CINEMA

The deepest cultural roots of Indian cinema may be ancient: the Sanskrit epics the *Mahabharata* and the *Ramayana* remain familiar sources for film narratives and allusions, and classical *rasa* (juice, or flavor) aesthetics is sometimes cited to explain the mixture of diverse elements found in popular Indian films. The central visual interaction of Hindu worship, *darshan* (viewing), has also been identified as a cultural source for the regular formal reliance on frontal framing and direct address in popular cinema. Theatrical forms such as the Westernized Parsi (or Parsee) theater and the Marathi Sangeet Natak (musical theater) immediately preceded the arrival of cinema and provided more direct sources for some of the techniques (such as the regular incorporation of song and dance) that distinguish Indian cinema, and these also supplied many of the new medium's first performers and financiers. The mass-produced lithographs of Raja Ravi Varma (1848–1906), often depicting Hindu gods and goddesses in naturalistic forms and settings, were also influential transitional works encouraging the adaptation of Indian visual traditions into the realistic media of early photography and film.

Cinema itself first appeared in India when the Lumière Cinématographe was exhibited in Bombay at Watson's Hotel on 7 July 1896. Screenings in Calcutta and Madras soon followed, and by 1898 the Indian photographers Hiralal Sen (1866–1917) (founder of the Royal Bioscope Company in Calcutta) and H. S. Bhatavdekar (b. 1868) began producing short films and recording popular theater performances. Although he was not the first Indian to shoot or exhibit films, the "father of Indian cinema" is justifiably identified as Dhundiraj Govind (Dadasaheb) Phalke (1870–1944), whose *Raja Harishchandra* (1913), drawn from a story in the *Mahabharata*, initiated feature-length narrative films of distinctively Indian character. According to legend, viewing a film depicting the life of Christ inspired Phalke to put Hindu gods on screen, a motive that aligned him with the *swadeshi* (indigenous) movement demanding independence from Britain through boycott of foreign

goods. Following Phalke's lead, well over a thousand silent films were produced in India, but the fact that few have survived frustrates accurate accounts of the first decades of cinema produced in India.

In 1906 J. F. Madan's Elphinstone Bioscope Company in Calcutta began regular film production, and by 1917 Baburao Painter established the Maharashtra Film Company in Kolhapur. For the following two decades, an expanding studio system would ensure steady film production throughout India: by the early 1930s, major studios such as New Theatres (Calcutta), Prabhat (Pune), and the Bombay-based Kohinoor Film Company, Imperial Film Company, Wadia Movietone, Ranjit Movietone, and Bombay Talkies offered audiences commercially differentiated genres and distinctive stars. Himansu Rai's Bombay Talkies, organized as a corporation, relied on European financing, technology, and talent (notably the German director Franz Osten [1876–1956]); in 1940 Rai's widow and the studio's biggest female star, Devika Rani (1907–1994), took over the company. India's first sound film, *Alam Ara* (1931), directed by Ardeshir M. Irani (1886–1969) for Imperial, firmly established the importance of song and dance sequences in popular Indian cinema as well as the future identification of Indian films along regional lines determined by language. By the following year, V. Shantaram (1901–1990) began to direct innovative films in both Marathi and Hindi for Prabhat (often starring the legendary actress Durga Khote [1905–1991]), demonstrating Indian cinema's quick adjustment to new sound technologies as well as different linguistic markets. However, as Bombay became the center of Indian film production, a variety of spoken Hindi—or Hindustani—would soon establish itself as Indian cinema's dominant screen language.

INDIAN CINEMA AFTER INDEPENDENCE

Amid the deprivations of World War II (including shortages of raw film stock), increased colonial censorship, a devastating famine in Bengal, and the traumatic partition of India and Pakistan upon independence in 1947, the studio system in India came to an end. But the optimism of the era embodied by the first prime minister, Jawaharlal Nehru (who served from 1947 to 1964), also led to a revitalized Hindi cinema under the impact of new independent production companies established by key directors like Mehboob Khan (1907–1964) and Bimal Roy (1909–1966). In addition, actor-directors like Raj Kapoor (1924–1988) and Guru Dutt (1925–1964) became brand names in the industry: Kapoor created R. K. Films; Sippy and Rajshree Films became the banner for several generations of the Sippy and Barjatya families, respectively; and brothers B. R. (b. 1914) and Yash Chopra (b. 1932) created their own B. R. Chopra and Yashraj production companies. Previously unknown artists dislocated by Partition arrived from the newly created state of Pakistan and rose to stardom as actors, directors, or producers, becoming urban legends. The rich body of films produced in the 1950s, the decade following independence, frequently balanced entertainment and social commentary, the latter often supplied by an infusion of talent affiliated with the leftist Progressive Writers Association and the Indian Peoples' Theatre Association, a talent pool that marshaled cinema for covert political messages before independence and continued to project Nehru's optimism about nation-building for about a decade after independence. Driven by stars and songs, the popular cinema firmly established itself in the daily lives and cultural imaginations of millions of Indians as well as audiences in the Soviet Union, China, and elsewhere. This "golden age" of Hindi cinema was ending just as Satyajit Ray's first films were receiving international attention, and the 1960s would draw sharp distinctions between formulaic commercial cinema and what would be called the New Indian Cinema, the latter signaling both a shift in form and content as well as a reliance on state-sponsored financing never available to mainstream cinema.

The 1970s was a period of rising worker, peasant, and student unrest. In this changing political climate, films became more strident in addressing endemic corruption and the state's inability to stem it, and upheld the victimized working-class hero as challenging the status quo. These films, including *Deewar* (*The Wall*, 1975) and the massive hit *Sholay* (*Flames*, 1975), became the insignia of superstar Amitabh Bachchan (b. 1942), who embodied the "angry young man" during Prime Minister Indira Gandhi's "Emergency" clampdown on civil liberties (from 1975 to 1977) and into the mid-1980s. They departed significantly from 1950s films in their lack of optimism and from 1960s films in the radically truncated attention to the hero's romantic love interest. However, from the late 1980s on, the eclipse of Bachchan's centrality coincided with the revival of romance that returned to the screen as a culture war between the youthful (often Westernized) couple in love and their tradition-bound parents. In record-breaking hits like *Dilwale Dulhania Le Jayenge* (*The Brave Hearted Will Take the Bride*, 1995) and *Hum Aapke Hain Kaun* (*Who Am I To You?*, 1994), balancing the rights of rugged individualism and duty toward family and community took center stage.

These films arrived against the backdrop of the Indian state's abandoning forty years of Nehruvian socialism for a market-driven "liberalized" economy at the end of the Cold War. Alongside these romance films about the changing family and the private sphere were

RAJ KAPOOR

b. Ranbirraj Kapoor, Peshawar, India (now Pakistan), 14 December 1924, d. 2 June 1988

Raj Kapoor is the quintessential Bombay industry filmmaker of the Nehru era. His career spans the first four decades following independence, from 1947 to 1988, coinciding with Nehruvian socialism. In 1991 socialism was abandoned in favor of "liberalization," opening India's economy to the West. In the 1950s Kapoor translated his own admiration and his generation's enthusiasm for Prime Minister Nehru's vision into extremely popular Hindi films, which he infused with his unique mix of populist politics and sentimentality.

Raj Kapoor's father, Prithviraj Kapoor, was an established film actor by the 1940s, and Raj's career developed rapidly. After minor roles and his debut as a leading man in *Neel Kamal* (Blue Lotus, 1947), he acted in and directed *Aag* (*Fire*, 1948), followed by successes as actor in and director of *Barsaat* (*Rain*, also known as *The Monsoons*, 1949), and as actor in *Andaz* (*A Matter of Style*, 1949), the latter two films pairing him unforgettably with the actress Nargis. In 1951 he launched his own studio, R. K. Films, which his son, Randhir, took over in 1988 (his granddaughters, Karisma and Kareena Kapoor, also joined the film industry in the late 1980s and 1990s, respectively).

Kapoor chose dramatic dichotomies to play up the conflicts that Hindi films emphasize: between city and country, modernity and tradition, West and East, rich and poor. His protagonists, inevitably underprivileged, are drawn inexorably to the city, only to discover the pervasive corruption and danger lurking beneath its glossy surface. This exposition reinforces the protagonist's moral fortitude to surmount his travails and, together with his love interest, surge toward a joyous future while at the same time apparently valorizing "Indian" values. Conscious of international cinema, Kapoor paid homage to Charlie Chaplin by adapting the figure of the tramp, and the narratives unfold from his point of view in the greatest R. K. Films of the 1950s, *Awaara* (*The Vagabond*, 1951) and *Shri 420* (*Mr. 420*, 1955), both of which he starred in and directed. Kapoor became an unofficial ambassador of Indian cinema; he was warmly received in the Soviet Union when he visited in the 1950s, and his popularity spread in the Middle East, China, and Africa, where songs from his films were translated into local languages.

In the postwar era stars were powerful figures, and their offscreen lives mediated the public discourse on morality. Raj Kapoor's extended affair with co-star Nargis was a scandal he circumvented by staying in his marriage and representing himself in the public eye as a "family man," a family that is now virtually a film industry empire built over four generations. Deftly combining "art and commerce"—his functional definition of popular cinema—Kapoor was a phenomenal success in the 1950s and 1960s. In the 1970s and 1980s his output dwindled dramatically. Barring the hit teen romance *Bobby* (1973), in which he did not appear, his often ambitious and thinly autobiographical films from these decades lost touch with the popular mood and failed at the box office, oddly paralleling the troubles besetting the Nehruvian project.

slick portrayals of the urban (and occasionally the rural) underworld in proliferating gangster films such as *Satya* (1998) and *Company* (2002), which mapped a decaying public sphere and audaciously represented onscreen the actual infiltration of the offscreen film world by underworld "black money" financing and extortion. Although cinema remains extremely popular in India, the increased availability of a films (via video, digital technology, and cable television) outside of India has illuminated the importance of a film's international circulation among

the nonresident Indian (NRI) or diasporic audience in Africa, Australia, Britain, Canada, the Caribbean, and the US. At the same time, hints of a growing non-Indian audience for Indian cinema are evident, in some measure through the emergence of a body of serious criticism on Indian cinema being published internationally.

Critical writing on Hindi cinema has come to focus on how it both reflects and fuels the project of constructing a nation and national identity. Popular cinema, often mistaken for being formulaic and repetitive, mobilizes the nation to maintain the dynamic work of self-reinvention. Hindi film narratives are typically about a protagonist, his family, and a set of stock characters: the hero; his love interest, the heroine; a comic figure, often the hero's sidekick; and the villain, a foil in the narrative, the obstacle the hero overcomes to attain his goal.

The villain's representation is particularly fascinating for the way it changes over the decades: from urban tycoons and village money-lenders in the 1950s and 1960s to "smugglers" violating India's tariff policies in the 1970s, unyielding patriarchs in 1980s romance films, and politicians or terrorists in the 1990s. Villains anchor national discourse, becoming emblematic of threats the nation faces and anxieties the films rearticulate in public discourse. Films from the 1950s tend to cast the rich as powerful and corrupt; the 1970s and 1990s versions of these films display a stylistic sophistication in their exposition of the links between financial and political power held by mobsters and politicians. If the 1950s hero was a benign figure, resolute in his ideals to work with "the system," the 1970s hero openly rebelled against its unfairness or made it work for him. In the 1990s gangster films, the hero's pathology, descent into crime, and fatal end are often the central point of the narrative. A variation on the gangster films tracing the underworld's fascinating topography are the 1990s films tracking the rise and fall of youth, victims of religious fundamentalism turning to terrorism, and action films in which the hero represents state power (law enforcement or the armed forces) putting down such terrorists. Villains and heroes are antagonistic forces: one represents the threat to the nation, the other its containment, thereby keeping the nation center-stage.

In addition to heroes and villains other figures trace the national imaginary. The woman in her role as a mother often stands in for the nation, a figure to be rescued and protected. The mother as an object of pity, exhorting her sons to save her, is rooted in an older moment of nineteenth-century cultural renaissance when Indian art and literature was imbued with anticolonial nationalist fervor. The nation is personified as the mother (*Bharat Mata* or Mother India) in numerous plays, novels, poems, posters, and paintings. Popular Hindi cinema seizes upon this figure and the mother–son bond has powerful cultural resonance, recurring in seminal films, from Mehboob Khan's remake of *Aurat/Woman* (1940) as *Mother India* (1957) to Yash Chopra's *Deewar/Wall* (1975). In the heroine/love interest role, the woman is cast as the repository of the "East," signifying anti-individualism, family and community values, and tradition, as distinct from the "West" and its woman.

TRENDS AND GENRES

The early desire to put Indian stories on screen led pioneers like Phalke to mine the rich tradition of Hindu religious and folk narratives to produce "mythologicals," films that dramatized the popular stories of gods and goddesses. (Eventually rare in Hindi cinema, the mythological would reemerge most prominently via massively popular television serials in the 1980s.) By the 1930s, mythologicals competed with "devotionals" like New Theatre's *Meerabai* (1933) and Prabhat's *Sant Tukaram* (1936), which recounted the inspiring stories of Hindu poet-saints. However, such distinctive religious genres were balanced by the regular production of dramas, comedies, and popular stunt films that translated Western serials and the films of Douglas Fairbanks into Indian locations and idioms. The Anglo-Indian star Fearless Nadia (1908–1996) dominated the stunt genre in films for Wadia Movietone like *Hunterwali* (1935) and *Miss Frontier Mail* (1936). "Historicals," set in the near or distant past, became an especially effective form to both affirm cultural traditions and introduce vast spectacles: historicals set in the Mughal period (1526–1858) like *Shiraz* (1928) or *Humayun* (1945), entranced audiences with their luxurious sets and ornate costumes.

However, following independence, most popular Hindi films would be broadly identified as "socials," set in the present and confronting the meaning of modern Indian identity and society. The roots of 1950s socials can be traced to successful 1930s films in which romantic love faces caste boundaries, as in Rai's *Achhut Kanya* (*Untouchable Girl*, 1936), or class divisions, as in *Devdas* (1935), a film remade prominently in 1956 and again in 2002. By the 1950s, socials, poignant narratives about the crippling effects of cultural barriers in a society rebuilding itself, would parallel contemporaneous Hollywood melodramas dealing with the aftermath of war or the politics of race. Hindi films from this period regularly examined caste, feudalism, the dispossession of peasants, the trauma of urban migration, and alienating urban culture, all within a popular format driven by a star system and the promise of song sequences. These include Guru Dutt's *Pyaasa* (*Thirsty One*, 1957) and *Kaagaz Ke Phool* (*Paper Flowers*, 1959), Raj Kapoor's *Awara* (*Vagabond*, 1951) and *Shri 420* (*Mr. 420*, 1955),

and Bimal Roy's *Do Bigha Zameen* (*Two Acres of Land*, 1953) and *Sujata* (1959), to mention a few.

At the same time, socials maintained their function as entertainment, featuring songs, comic bits, and massively popular stars along with social messages. For instance, the production company Navketan specialized in urban thrillers, such as *Taxi Driver* (1955) and *C.I.D.* (1956), starring co-founder Dev Anand (b. 1923). A notable subgenre of "Muslim socials" explored the significance of India's most prominent minority identity, often relying on the romantic and poetic traditions of Urdu literature to elevate such narratives with stunning song and dance sequences in films like *Mughal-e-Azam* (*The Grand Emperor*, K. Asif, 1960) or *Mere Mehboob* (*My Love*, Rawail, 1963). However, despite this history of distinct genres, the popular Indian film eventually adhered to a formula, the *masala* film, which combined comedy, drama, romance, and action, along with a requisite number of song sequences, in a mix of "flavors" that critics have traced to ancient Sanskrit dramaturgy and aesthetics. For Western viewers, such films can seem fragmented and incoherent because of their shifts in tone and style; but for Indian viewers expecting a range of carefully coordinated attractions, the combination yields a satisfying whole, unlike Western films narrowly confined to a single mood. Typically running three hours and divided by an often cliff-hanging interval (intermission), the mainstream *masala* film allows for both repetitious formula and creative variation.

NATIONAL CINEMA AND REGIONAL CINEMAS

Hindi, a language common to northern India but that varies by region, has had a complex relationship with cinema and national politics. Declared a national language after independence, Hindi has met powerful resistance in southern states. Yet the popularity of Hindi cinema has allowed it to cut across regional and linguistic divisions, giving Bombay cinema a national or "all-India" status distinct from regional language cinemas that usually remain limited to audiences within the states in which they are produced. Emerging as a language of trade in colonial and multilingual Bombay, Hindi was popularized through cinema as Hindustani, a hybrid of Persian-based Urdu and northern Indian dialects, arguably more native to cinema than any distinct region. After independence strains of Urdu associated with Muslim influence were slowly diluted and replaced by Sanskrit vocabulary, identified with the majority's Hindu culture. Hindi film songs especially drew heavily on Urdu, which lends itself to poetry and drama; although this reliance has been reduced in the postindependence period at the cost of some poetic flair, many of the key terms in cinema, especially for discussing the varieties of love, retain Urdu influences. At the same time, some Hindi films have successfully employed the regional Bhojpuri dialect (popularly associated with rustics), and the street slang of contemporary Mumbai has also cropped up in film, commonly mixed with English words and phrases; these trends continue to undermine the easy identification of "Hindi" cinema strictly in terms of its language.

Although Hindi cinema emerged as India's most prominent and broadly popular form, its dominant status as a national commodity has often been challenged by or threatens to obscure the steady production of films in India's regional cinemas, often in annual numbers rivaling or exceeding Bombay's figures. (The claim that India leads the world in film production depends on collapsing these differences into a total national figure.) Although the arrival of sound in Indian cinema eventually isolated the production and distribution of films by linguistic regions, early sound studios often produced films in multiple languages before dubbing became a common practice. Films produced in the major South Indian languages of Tamil and Telegu have generated some crossover artists, exemplified by Mani Ratnam (b. 1956), maker of the controversial *Roja* (1992) and *Bombay* (1995), and the prolific composer A.R. Rahman (b. 1966), both active in the Bombay industry. Ratnam is also among the leading filmmakers who bridged the divergent popular and art cinema by melding their aesthetics in superbly crafted films.

In addition to the Bengali art cinema associated internationally with Satyajit Ray, Ritwik Ghatak (1925–1976), and Mrinal Sen (b. 1923), the regular production of popular Bengali cinema has challenged Hindi cinema in a major urban market like Calcutta. Films produced in the southwestern state of Kerala in the Malayalam language also reflect that state's distinct leftist political history, with the work of directors G. Aravindan (1935–1991) and Adoor Gopalakrishnan (b. 1941) receiving international acclaim. Although relatively small in number, films produced in languages such as Kannada (from Karnataka), Marathi (from Maharastra, which includes Mumbai), Assamese (from Assam), or Oryia (from Orissa) round out an unusually diverse linguistic map, rendering the typical association of a national cinema with a single national language entirely untenable for India. In a few cases, prominent figures such as the actor-director-writer Kamal Hassan (b. 1954) have traversed regional cinemas and worked in Hindi cinema, whereas others find immense success only within a particular context. Moreover, art cinemas produced within any region often share stylistic and thematic affiliations that override the linguistic distinctions that otherwise distinguish popular films by region.

SATYAJIT RAY

b. Calcutta, India, 2 May 1921, d. 23 April 1992

The American premiere of Satyajit Ray's first film, *Pather Panchali* (*Song of the Little Road*), at New York City's Museum of Modern Art in 1955 elevated the director into the pantheon of the world's great humanist filmmakers, and he remains India's most internationally known director. Although the West viewed Ray's first films as essentially Indian, within India Ray's films clearly demonstrated his inheritance of the modernist values of the cosmopolitan Bengali renaissance. Ray was nurtured within a notably artistic family with close connections to the Nobel laureate Rabindranath Tagore (whose work Ray would later frequently adapt to film), and as a young man Ray's taste in movies was fully international.

As a co-founder in 1947 of the Calcutta Film Society, he was a keen student of Soviet and European cinema, especially the Italian neorealist films that directly inspired his first film and their sequels, *Aparajito* (*The Unvanquished*, 1956) and *Apur Sansar* (*The World of Apu*, 1959). Together eventually known as the Apu Trilogy, the three films trace the development of the eponymous central figure from childhood to maturity and fatherhood as he moves from his remote village in Bengal to the holy city of Benares and finally to modern Calcutta, replicating the urbanization of many modern Indians. The Apu Trilogy featured music composed and performed by Ravi Shankar, who would become internationally famous soon thereafter. In the final film of the trilogy, Ray introduced the actors Soumitra Chatterjee and Sharmila Tagore, who would become regular members of Ray's troupe of collaborators, with Chatterjee eventually appearing in fifteen of Ray's films.

The remarkable achievement of the Apu trilogy has sometimes obscured Ray's other works, many of which, including *Jalsaghar* (*The Music Room*, 1958) and *Devi* (*The Goddess*, 1960), function more as psychological explorations than realist dramas. Another group, including *Charulata* (*The Lonely Wife*, 1964), *Shatranj Ke Khilari* (*The Chess Players*, 1977), and *Ghare-Baire* (*The Home and the World*, 1984), explore the social complexities of the recent colonial past with meticulous attention to detail. The full range of Ray's achievement, which his international reputation elides, includes documentaries as well as a series of remarkable and immensely popular children's films featuring the comic duo Goopy and Bagha, characters created by Ray's grandfather decades earlier. Ray was also a writer, publisher, and painter.

FILM MUSIC

Along with extremely popular stars, commercial Indian cinema attracts its massive audience through prominently featured songs, and elaborate song-sequences, in virtually all popular films. Although early sound films relied on singing actors, like the stars K. L. Saigal (1904–1947), Noorjehan (1926–2000), and Suraiya (1929–2004), the eventual development of "playback" recording technology isolated the voice and body, creating an offscreen star system of "playback singers" who provide the singing voices of onscreen stars. Among these, the sisters Lata Mangeshkar (b. 1929) and Asha Bhosle (b. 1933) have virtually defined the female singing voice in Hindi cinema for decades; male playback singers like Mukesh, Mohammed Rafi (1924–1980), and Kishore Kumar (1929–1987) were often closely associated with the

leading men for whom they regularly voiced songs. Prominent and prolific music directors such as Naushad, S. D. Burman (1906–1975), and the team of Laxmikant–Pyrelal (Laxmikant [1935–1998] and Pyrelal [b. 1940]), as well as lyricists (often prominent poets), are also familiar to fans and frequently more famous than the actors they support.

Although film songs have been criticized for their impure borrowing of styles (especially in the hands of pop maestros like R. D. Burman, famous for his rock and jazz inflections), they often rely on traditional Indian instruments and song forms (such as the Urdu *ghazal* and Hindu *bhajan*), even as instances of prominently featured electric guitars and disco beats have increased. For a while All India Radio banned film songs in favor of classical music, leading millions to tune in Radio Ceylon, which featured film songs until the national service reconsidered its stance. Dance in Indian cinema also draws on classical traditions as well as the latest Western fads in roughly equal measure. Film songs regularly extend their significance well beyond specific films, and the latest hits as well as evergreen favorites can be heard throughout India as the music of everyday life as well as special occasions. Hit film songs also provide a storehouse of references and allusions for later films, which often evoke familiar lyrics in their titles.

Among the principal attractions of Hindi cinema is the song sequence, commonly referred to as "picturization," which crosses the boundaries between genres. Almost all popular Indian films feature a number of picturized songs, but it is misleading to identify such films as "musicals." Songs rather than films are often grouped by style and narrative function: love songs dominate, but devotional, comic, and patriotic songs all have their place in Indian cinema. A number of the most famous dance sequences in Indian cinema are celebrated for their sheer scale or intricate choreography of dance and camerawork. Some directors have expressed resentment at the unofficial requirement to include song sequences in every film, but others are famous for their ability to creatively picturize songs. Guru Dutt is now legendary for his intricate and highly cinematic song and dance sequences, whereas Yash Chopra initiated a popular trend of picturizing songs in exotic, often European, locations despite the Indian settings of his narratives. Other directors, such as Subash Ghai (b. 1943), are known for wildly comic songs (often allowing the otherwise serious Amitabh Bachchan to cut loose), whereas Mani Ratnam has dared to place his dancing stars among the riot-scarred locations of contemporary political violence.

STARS

Like Hollywood, Indian cinema recognized the commercial value and appeal of stars early on, even though early debates questioned whether respectable women should appear in films. Early stars often had backgrounds in theater, but the first major female stars of Indian cinema before Devika Rani (1907–1994) (the leading lady at Bombay Talkies and eventual head of the studio) were often Anglo-Indian, including Patience Cooper, Sulochana (Ruby Meyers; 1907–1983), and the stunt queen Fearless Nadia (Mary Evans). The melancholic singer K. L. Saigal was the first great male star of the sound era, to be displaced by the more talented actor Ashok Kumar (1911–2001), whose film career lasted for decades. Two of the greatest directors of 1950s Hindi cinema, Raj Kapoor and Guru Dutt, were also stars who conveniently represented opposites poles of light and dark moods. The golden age's female stars, including Nargis (1929–1981), Madhubala (1933–1969), and Waheeda Rehman (b. 1936), often balanced on the tightrope between traditional Indian femininity and Hollywood glamour, while the romantic and often tragic Dilip Kumar emerged in the same period as perhaps Hindi cinema's most enduring leading man. Typically, male stars in India enjoy long careers, whereas many female stars drop out of films when they marry, perhaps to return later to play "mother" roles.

Even the artistically ambitious New Indian Cinema was not immune to a star system, which included actors

such as Shabana Azmi (b. 1950), Smita Patil (1955–1986), and Naseeruddin Shah (b. 1950) (all rising to prominence in the films of Shyam Benegal [b. 1934]). But the overwhelming significance of the Indian film star became most apparent in the mid-1970s, when Bachchan's status as an "angry young man" demonstrated the importance that a single charismatic actor could have for an entire industry. Bachchan's massive popularity defined an era and a new kind of hero through a series of blockbuster films. Following Bachchan's decade-long reign, younger male stars, including Shah Rukh Khan (b. 1965), Aamir Khan (b. 1965), and Hritik Roshan (b. 1974), often represent a globalized and commercial youth culture, while recent female stars such as Madhuri Dixit (b. 1967) and Aishwarya Rai (b. 1973) continue to represent the tension between traditional Indian values and feisty, often erotic, independence.

The popularity of film stars has also led to prominent political careers, especially in Tamil Nadu, where the Tamil film superstars Shivaji Ganesan (1927–2001), Jayalalitha, and M. G. Ramachandran (1917–1987) (known as MGR) balanced film and political careers for decades, frequently blurring their on- and offscreen roles. In Andhra Pradesh, the Telegu cinema superstar N. T. Rama Rao (NTR; 1923–1996) enjoyed a similar career. Some Hindi film stars, including Bachchan, have also dabbled in politics, often controversially, but with less long-term success than that of their South Indian counterparts.

THE STATE AND CINEMA

Although some film stars succeeded in politics, popular Hindi cinema has had an uneasy relationship with the Indian state. The resistance to state-imposed Hindi in education, public administration, radio, and television starkly contrasts with the commercial Hindi cinema's pan-Indian popularity and national status. This is even more significant in the case of Hindi film song lyrics, which are embraced across both linguistic and class boundaries, including the privileged, English-speaking upper echelons, who otherwise typically disdain popular cinema.

State-controlled radio's bid to exclude Hindi film music failed, but historically the state's efforts to regulate the industry through taxation and censorship, though contentious, have been more successful. The Motion Picture Association of India (IMPA), the official body representing industry interests, has consistently but unsuccessfully negotiated for lower taxes. A few low-budget artistic films and occasionally a popular feature film deemed "educational" might receive exemption from the stiff entertainment tax, but a certification by the Censor Board is mandatory for all general theater film releases and appears onscreen. The state assumes moral regulatory authority, insisting on cutting what it deems inappropriate representations of sexuality and violence as well as overtly political content. Hindi cinema has devised awkward strategies to circumvent censorship related to sexuality, creating its own unusual conventions, reminiscent of Hollywood films produced under the Production Code. A ban on screen kissing initially derived from the British censorship code was subsequently accepted by the industry in a curious mode of self-regulation that contrasts with the erotically charged "wet sari" scenes common in song sequences. Standing in for the kiss or intimate love scenes, lyrics, gestures, and body movements creatively suggest the erotics of romance and desire. The Indian state's role as an arbiter of morality and taste is most clearly seen in the patronage it offered cinema through the Film Finance Corporation (FFC), a financial and distribution platform established in 1960 (reconstituted as the National Film Development Corporation, an amalgamation of the FFC and the Indian Motion Picture Export Corporation in 1980), and the Film and Television Institute of India, a training school set up in 1961. Together these contributed to the emergence of art cinema in India suited almost exclusively to the taste and sensibility of the Indian literati.

ART CINEMA

In the 1950s Satyajit Ray's films placed regional Bengali cinema (received as Indian cinema) on the international map, and although other Bengali filmmakers, such as Ritwik Ghatak and Mrinal Sen, shared some of the national attention, Ray's international status gave him undisputed standing as the master of this cinema. The three films of Ray's Apu trilogy—*Pather Panchali* (*Song of the Little Road*, 1955), *Aparajito* (*The Unvanquished*, 1957), and *Apur Sansar* (*The World of Apu*, 1959)—derive their strength from Ray's ability to create indelible moments from a naturalistic, understated style and simple narrative. Each film forces Apu to confront painful losses, which are offset by moments of quiet joy. Critics praised the films for their universal humanism, whereas the former Bombay star Nargis, serving as a member of Parliament, famously denounced Ray for "exporting images of India's poverty for foreign audiences." In 1970 an official art cinema developed in India, helped in no small part by state subsidies and promotion at international film festivals. A handful of directors emerged, filling the space occupied almost exclusively by Ray in the two preceding decades. A pan-Indian and growing middle class expanded Ray's audience beyond Bengal, and in 1977 he made *Shatranj Ke Khiladi* (*The Chess Players*) for a national audience.

Pinaki Sen Gupta (right) as young Apu in Satyajit Ray's* Aparajito *(*The Unvanquished*, 1957). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

Subsequently, other art film directors who emerged in the 1970s created a distinct niche in Indian cinema termed "New," "Parallel," or "Art" cinema. Subsequently, other art film directors emerged in the 1970s—Govind Nihalani, Ketan Mehta, Saeed Mirza, M.S. Sathyu, and the most notable among them, Shyam Benegal. Benegal's trilogy *Ankur* (*Seedling*, 1974), *Nishant* (*Night's End*, 1975) and *Manthan* (*The Churning*, 1976) marked the beginning of the twenty-odd feature films he went on to direct. Art cinema's financing, distribution, aesthetics, and audience were in sharp variance with popular cinema. Eschewing popular cinema's musical and melodramatic formulas, the new cinema embraced realism in terse dramatic narratives that were often exposés of corruption among powerful rural landlords, urban industrialists, politicians, or law enforcement authorities. Although its output was a small fraction of that of popular cinema, art cinema received disproportionate attention in part because of its influential consumers, the Indian literati and middle class, but also because its novelty generated genuine enthusiasm in film critics. Critical commentary on cinema emerged along with this cinema, marking the beginnings of Indian cinema literature. Unfortunately, this literature polarized the relationship between popular and art cinema and favored the latter. During the 1990s state subsidies for art cinema diminished considerably, and the search for commercial success led some directors to pay closer attention to popular cinema, at times even adopting its aesthetic strategies.

By the 1990s art cinema had become repetitive and somewhat stagnant and began to morph under the influence of new entrants—diasporic filmmakers, some of whom were second- and third-generation Indians located in Canada, the United Kingdom, and the United States. These films' central theme is the cultural dislocation created by migration to the metropolitan centers in the postcolonial era of accelerated globalization. If Ray was the precursor to a broader art cinema that took off in

the 1970s, the antecedent to the generation of diasporic filmmakers is Merchant-Ivory Productions—the combined effort of the producer Ismail Merchant (1936–2005), from India, the director James Ivory (b. 1928), from the United States, and the writer Ruth Prawer Jhabvala (b. 1927), of Polish-German descent, who together have made films about Indo-British encounters during and after the mid-1960s using a more or less fixed ensemble of Indian and British actors. Diasporic cinema since the late 1980s has focused instead on the experiences of middle- and working-class immigrants in their host countries, in particular the ways in which they negotiate cultural distance from the homeland. The audience is both the Indian diaspora and the middle class, a section of which dwells in both domains. Although the quality of these films varies, some auteurs stand out: Srinivas Krishna (b. 1913) and Deepa Mehta (b. 1950) in Canada, Gurinder Chadha (b. 1966) and Hanif Qureshi (b. 1954) in the United Kingdom, and Mira Nair (b. 1957) in the United States. Some auteurs have forged international collaboration around financial investment, distribution, and even talent. In searching for their own distinctive aesthetic, some have tried to appropriate or pay homage to popular cinema by adopting its most significant insignia, the song and dance sequence, whereas others have chosen realism, comedy, or lampoon as their preferred style.

In the twenty-first century, some in Hollywood have been carefully following the lead taken by diasporic filmmakers in collaborating with the mainstream Bombay film industry. Hindi cinema and Hollywood, long functioning in parallel global markets, have begun to take stock of the mutual benefits collaboration might bring. Hollywood is driven by its interest in novelty, lower production costs, and cheaper talent, the same forces behind globalization. For the Bombay industry's new generation of filmmakers, who since the 1990s have energetically experimented with commercial cinema, this presents an opportunity to tie in new sources of international capital, especially after the spectacular losses the industry suffered in 2002, and the lure of a crossover market beyond its domestic and diasporic audience. However, some Indian filmmakers are keen to win this market on their own terms, which to them means preserving the charm, romance, and aesthetic of popular Hindi cinema.

INTERNET

Although the origins of the Internet can be traced to the 1960s with the founding of the Advanced Research Projects Agency Network (ARPANET) by the US Department of Defense, the medium's significance for the film industry began with the proliferation of the World Wide Web in the mid-1990s. Before the development of the Web, Internet use was limited to text-based communication by a relatively small number of people over slow modem connections. Since the late 1990s, however, high-speed access through Digital Subscriber Lines (DSL) and cable modems into US homes has opened up possibilities for promoting and distributing digitized films and videos over the Internet to a mass audience.

MOVIE PROMOTION ON THE INTERNET

In the summer of 1995, media and advertising executives announced that the Internet had become the "new frontier" in film promotion. Marketing *Batman Forever* (1995), Warner Bros. was the first to promote a major feature film using a Website as the campaign's centerpiece. The Web address (or URL) was included on posters, print and television advertisements, and radio spots, and the *Batman Forever* logo appeared with the URL without elaboration at bus and train stations. The film's Website offered a hypertextual narrative that linked to plot twists and hidden pages for users to discover by correctly answering a series of concealed questions posed by the Riddler, one of the film's main characters. The *Batman Forever* Website also cross-promoted ancillary products from its sister companies, including the soundtrack recording and music videos.

In June 1995 Universal Pictures partnered with leading Internet service providers American Online and CompuServe to present the first live interactive multisystem simulcast to promote a film on the Web with *Apollo 13* star Tom Hanks and director Ron Howard before the premiere. The Website later included special Internet video greetings from some of the film's stars and digital still pictures from the film's Los Angeles premiere. Another notable early example of Internet promotion was the Website for *Mars Attacks!* (1996), by Warner Bros., which included an original fifteen-minute Internet "radio play" about a truck driver who evades Martians while attempting to deliver the only print of *Mars Attacks!* in time for the premiere. In late 1996, the *Star Trek: First Contact* Website received over 30 million hits during its first week of release, at that point the largest traffic ever for a film Website, and by the end of 1996, movie trailers, digitized stills, actor and filmmaker profiles, and computer screensavers were available online for almost every major film released. Web addresses were also commonly included in theatrical trailers, TV commercials, print advertisements, and posters. In 1997 studios were spending approximately $10,000 to produce an independent film's Website and at least $250,000 for blockbuster studio films, which accounted for an extremely small portion of the overall promotional budget.

In 1999 studios began to coordinate Website tie-ins with pay-per-view orders, allowing viewers to "play along" at home through synchronized Web content. Viewers who purchased the December 1999 pay-per-view release of New Line Cinema's *Austin Powers: The Spy Who Shagged Me* were offered an interactive television experience synchronized over the Web. For the

DVD release of *The Matrix* (1999), Warner Bros. scheduled a synchronized screening and Internet chat session with the film's directors. In 1999 Apple Computer launched its very popular movie trailer Web page to promote its QuickTime video software, receiving over 30 million downloads for the Web-based trailers for *Star Wars: The Phantom Menace* (1999) alone.

Throughout 1999, the major studios also established online retail stores in partnership with their studios' other Web operations. Increasingly since the 1980s, the film studios have become part of larger transnational media conglomerates that often have holdings in other industry sectors. The Web is thus inordinately well suited to this structure of convergence and integration, providing a retail and cross-promotional portal to sister and parent company products, services, and subsidiary media outlets.

THE BLAIR WITCH PROJECT PARADIGM AND ONLINE FAN DISCOURSE

The Blair Witch Project (1999) was one of the most profitable films in history when measured by its return on the initial investment. Made for approximately $50,000 and grossing over $100 million in US theatrical box-office alone, this financial victory of a low-budget independent film over the major studio blockbusters instigated a paradigm panic among Hollywood executives due in large part to the important role of the Internet in the film's commercial success. When the mainstream film industry had already begun to create content specific to the Web, Internet promotion was still considered to be supplementary to established media outlets, and the theatrical film was still the main component of the brand or franchise. For *The Blair Witch Project*, however, the Web became the central medium or the primary text for the film's narrative and its reception, as well as its marketing or "franchising" beginning more than a year before the film's major theatrical distribution. In this sense, the Web functioned in the 1990s for *The Blair Witch Project* in the same way that newspapers and magazines did in relation to the earliest commercial cinema in the 1890s by playing a primary role in the film's narrative and its meaning for the audience.

Directors Daniel Myrick and Eduardo Sánchez originally launched *The Blair Witch Project* Website in June 1998 on their production company's Website, Haxan.com. When the independent distributor, Artisan Entertainment, bought *The Blair Witch Project* for $1.1 million from directors Myrick and Sánchez at the Sundance Film Festival in January 1999, the company envisioned exploiting the medium of the Web to compensate for its relative lack of funds for promotion. On April Fool's Day, Artisan relaunched *The Blair Witch Project* Website with additional material, including footage presented as outtakes from "discovered" film reels, police reports, the "back story" on missing film students, and a history or mythology of the Blair Witch legend. The next day Artisan sent 2,000 *The Blair Witch Project* screensavers to journalists and premiered its trailers on the "Ain't It Cool News" Website instead of on television or in theaters.

Although the low-budget or "no budget" quality of *The Blair Witch Project* became an integral part of the film's marketing strategy, shortly after acquiring the distribution rights to *The Blair Witch Project* Artisan spent $1.5 million on Web promotion as part of its $20 million campaign (a significantly greater percentage of the promotional budget than mainstream studio films). Resonating with the film's "mockumentary" style, at the heart of the Web campaign was the blurring of the boundaries between actual and fictional documents through additional "evidence" on the Web and the omission of any explicit admission or demarcation of the promotional material as fiction or as promotional advertising. In addition to the official *Blair Witch Project* Website, unofficial Websites and fan pages elaborated the film's mythology and offered original narratives. Hundreds of *Blair Witch Project* video parodies were distributed through the Web, and several of the film's detractors launched an anti–*Blair Witch Project* Web ring that included a Web page created by a group of citizens from Burkittsville, Maryland, "to explain to the world that Burkittsville was being harmed by a fictional movie set in [their] town." Debates about the film's authenticity filled Web boards, Usenet newsgroups, and online chat rooms.

In an attempt to differentiate its promotion, the May 2001 Internet campaign for the film *Artificial Intelligence: A.I.* adopted *The Blair Witch Project*'s strategy of passing off fictional Web material as the real thing, when the marketers integrated several Websites with hundreds of pages and days' worth of material that mimicked the aesthetic of real sites, such as the Website for the fictional Bangalore World University. These Websites contributed to a larger pretend Evan Chan murder mystery that complemented the film and took place in the future after the film's narrative. These fictional Websites were updated daily and, like the Web campaign for *The Blair Witch Project*, none revealed that they were part of a marketing campaign for *A.I.* Similarly, in August 2001 director Kevin Smith constructed a fake Website bashing his own film *Jay and Silent Bob Strike Back*, replete with fictional testimonials and video from crew members. Many fans mistook it for the real thing and posted emails to the site's creator. For the most part, these attempts to recreate the same kind of marketing success and financial return of *The Blair Witch Project* have been unsuccessful, and it remains an

Heather Donahue in* The Blair Witch Project *(Daniel Myrick and Eduardo Sanchez, 1999), the first film to be promoted largely through the Internet. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

important and exceptional case in film history. Largely abandoning attempts to manufacture authentic word-of-mouth (or word-of-text) interest for their films, it is now common for the major studios to hire agencies and pay employees and fans (or "street teams") to promote films and to spread positive word of mouth online in chat rooms, movie review sites, and discussion boards.

The failure or success of a Web campaign depends in large part upon the target audience and the film's genre. Indeed, many of the examples included here are from genres that appeal to boys and young men, a demographic that comprises a large portion of overall Internet users. To offer another example from the fantasy genre, in 2001 the *Wall Street Journal* maintained that the Website for *The Lord of the Rings: The Fellowship of the Rings* was the most elaborate and visited to date, offering audio and video clips in ten languages, an interactive map of Middle Earth, chat rooms, screensavers, interviews with members of the cast and crew, and links to some of the thousands of existing fan sites. In 2004, the narrative for the *Matrix* trilogy was extended beyond the final filmic installment, *Matrix Revolutions*, in the form of *The Matrix Online*, a video game that also uses the Internet to allow thousands of *Matrix* fans to role-play within and to develop the film's fictional world.

While the *Matrix* is a deliberate example of franchising a brand across different media, films also live on beyond their official narratives through creative fan communities, such as the thousands of pages of online fiction that continue the storyline of *Titanic* (see http://www.titanicstories.com) and hundreds of other films (see http://fanfiction.net), or the active online culture surrounding the *Star Wars* and *Star Trek* films that includes online writings, artwork, games, and fan films or videos. When Lucasfilm threatened legal action against a teenage college student for creating one of the earliest and most

visited *Star Wars* fan Websites, other fans deluged Lucasfilm with angry emails, prompting Lucasfilm to apologize to its fans for the "miscommunication" in a letter posted on the Web. Lucasfilm has since created an official partnership with the Website AtomFilms.com to distribute the many *Star Wars* videos and films produced by fans.

MOVIE DISTRIBUTION AND THE INTERNET

The Internet quickly became a significant retail outlet for the distribution or sale of DVD releases, and by 2001 all of the major film companies had partnered with the Internet Movie Database, or IMDb (www.imdb.com), and leading online retailer Amazon.com to promote new theatrical films, personalize movie showtimes, and sell DVDs. In October 1990, IMDb started as the Usenet newsgroup bulletin board rec.arts.movies to which volunteers would post information about films and discuss movies with other fans. With the advent of the Web, the bulletin board was transformed into one of the most visited sites on the Internet, averaging over 30 million visitors each month and containing over 6 million individual film credits, including information on over 400,000 films, 1 million actors and actresses, and 100,000 directors. The IMDb has also built a strong sense of community among its almost 9 million registered users, who can post to the public discussion forum available for each film and rate a film between 1 and 10. All of this information lends itself to the customized links available for celebrity news and gossip, images of stars, box-office and sales statistics, and Amazon.com for DVD purchases.

In addition to providing easy access to detailed information about films and convenient ways for consumers to purchase DVDs, the Internet also provides a distribution method for alternative or independent fictional films and documentaries. The technical and economic advantages of digitization and online distribution have benefited academics and researchers through the availability of digitized film archives like the Library of Congress Paper Print Collection and the Internet Archive's Movie Archive, which includes the Prelinger Archives. The Internet also serves as a significant medium of distribution for multimedia art, Flash movies, film parodies, home movies or videos, and animated political cartoons. In addition, the distribution and sale of pornographic films and videos online totaled over $1 billion in 2005 and comprised a large portion of total Internet file-sharing volume.

Due to technical limitations of bandwidth and connection speeds as well as legal obstacles surrounding the Internet rights to distribute Hollywood films, the independent "short" has become one of the most common categories of film distributed online, including a large selection of animated shorts. One of the most popular sites for viewing online films is AtomFilms.com, which launched "AtomFilms Studio" in January 2006 to fund independent producers looking to create short films specifically for Internet broadband distribution. In 2005, in addition to streaming content, AtomFilms.com's major competitor, IFILM.com, expanded its distribution methods to deliver video-on-demand (VOD) to cellular smartphones and personal digital assistants (PDAs).

In 2001 BMW premiered its eight-part online promotional series of big-budget, short action films titled *The Hire*, made by such established international film directors as David Fincher, John Frankenheimer, Ang Lee, Guy Ritchie, Kar Wai Wong, Alejandro González Iñárritu, and John Woo, and such stars as Clive Owen, Stellan Skarsgård, Madonna, Forest Whitaker, and Gary Oldman. On its Website, BMW boasted that the films had been viewed over 100 million times before they were removed from the site in 2005, despite the fact that the films were released on DVD in 2003.

Although technical and infrastructural obstacles related to bandwidth and video quality and size may be overcome, Internet copyright issues, Internet distribution rights, and Internet release time "windows"—which traditionally go from theaters, video/DVD, pay-per-view, premium cable, network television, and basic cable—have also complicated online distribution. For instance, the major rights holders (that is, Hollywood studios and entertainment conglomerates) have prevented companies like Netflix from shifting their distribution and rental methods to on-demand streaming and downloading over the Web, although the online DVD-by-mail rental service is still one of the more profitable Web ventures, ending 2005 with about 4.2 million subscribers and sales approaching $1 billion.

Responding to increased consumer demand, and in response to the fact that only 15 percent of worldwide Hollywood film revenues come from box-office profits, and that two-thirds of the income for the six major studios now comes from the home theater divisions, the majors have begun to pursue their own online distribution options by offering feature-length films already available on DVD for legal downloading, including MovieLink (http://www.movielink.com), a joint venture of MGM, Paramount, Sony, Universal, and Warner Bros.; and CinemaNow (http://www.cinemanow.com), financed in part by Lions Gate and Cisco Systems. In December 2005, Apple Computer also began to distribute animated short films from Pixar (co-owned by Apple CEO Steve Jobs), Disney-ABC television programs, and music videos through its popular iTunes music download service. While no feature-length films are included in

Apple's library, the January 2006 purchase of Pixar by Disney may facilitate the distribution of Disney's feature films through Apple's service.

By the end of the summer of 2005, industry analysts and mainstream news outlets were announcing the "death of the movie theater" as industry figures and independent film companies began to question and challenge traditional film release windows. Director and producer Steven Soderbergh (*sex, lies, and videotape* [1989], *Traffic* [2000], *Erin Brockovich* [2000], *Oceans Eleven* [2001]) entered into an agreement with 2929 Entertainment, HDNet Films, and Landmark Theatres to produce and direct six films to be released simultaneously to theaters, DVD home video, and on HDNet high-definition cable and satellite channels. For the 26, January 2006, "stacked release" of the first film from that venture, *Bubble*, 2929 Entertainment agreed to share 1 percent of the home video DVD profits with theater owners who exhibited the film. Another new distribution model of simultaneous releases was announced in July 2005 by ClickStarInc.com, a Web venture between Intel Corp. and Revelations Entertainment, co-founded by actor Morgan Freeman. ClickStar will offer legal downloading of original feature films before they are released on DVD and while they are still in first-run theaters. Freeman's considerable star power, which he is lending to several of the ClickStar films, may give a film enough exposure through its Web release to be distributed through other media, like cable television.

It remains to be seen whether or not the major studios will welcome these new methods of exhibition and release windows for distribution. History suggests that the mainstream entertainment corporations will resist this model since it would change the established profit-making system. Even if video-on-demand over the Web becomes widely adopted, like the rapid adoption of television by consumers in the 1950s and 1960s, predictions about the impending death of the movie theater may be exaggerated or misguided. The film and entertainment industries have a long history of appropriating newly established models of production, distribution, and exhibition, as well as purchasing independent companies that pose a significant threat, as the acquisition of many formerly independent studios by the Hollywood majors attests. In addition, the same companies that own the major film production, distribution, and exhibition outlets are horizontally and vertically integrated companies that already have oligopolies in many of the other media sectors that will distribute these films in the future, including television, cable, and the Internet.

IRAN

Most of the directors and films from Iran that are familiar in the West come from postrevolutionary Iran; little is known about the cinema of Iran before the revolution. Yet Iranian cinema is in fact prolific and accomplished. Even though many filmmakers moved out of Iran after the revolution, they still base their films on the people, the culture, and the landscape of Iran.

EARLY YEARS

Mazaffaro Din Shah introduced the moving image to Iran in 1900. Over the first few decades of the new century there were a number of theaters established in the major cities of Iran, but going to the cinema was considered a pastime only for the upper class. One reason was that many of the films being made during this time were commissioned by the shah to document the events of the royal family. With no other films being made, theaters needed something to show, so many foreign films were imported and subtitled in Farsi. The first Iranian feature film was a silent film, *Abi va Rabi* (*Abi and Rabi*, Avanes Ohanian, 1930), and the first Iranian sound film, *Dokhtare Lor* (*The Lost Girl*, Ardeshir Irani, 1932), was made in Mumbai. Its release and box-office success encouraged the production of other films.

In the 1940s film studios were set up in Iran. The Pars Film Studio was owned by Esma'il Kushan, who later directed many other sound films made in Iran, *The Tempest of Life* (1948) and *Prisoner of the Emir* (1949) among them. During World War II strict censorship was imposed on art (including film), and most films of the period derived from traditional Iranian folklore and epic literature, although the few Western films that had infiltrated Iran were also shown. The 1950s saw the studios flourish, but with an emphasis on profit, filmmakers were making cheap films with low production values. It was also at this time that film became more acceptable in Iranian society. In a notable change from the 1940s, films now depicted a society that had been heavily influenced by Western culture and had lost traditional Iranian values. Iran began to produce comedies, melodramas, and action-hero films such as *Velgard* (*Vagabond*, Mehdi Rais Firuz, 1952).

In the 1960s the state finally took control of the entire film industry, and Iranian-made films did not attract the audiences that Western films did. In 1969 two films ushered in what is now known as the Iranian New Wave: *Qaisar* by Mas'ud Kimai (b. 1941) and *Gav* (*The Cow*) by Dariush Mehrju'i (b. 1939). New Wave cinema was popular and influenced many films and filmmaking up until the Iranian revolution in 1978, but most Iranian films were made primarily for domestic audiences.

POSTREVOLUTION

The revolution (1978–1979) had a profound impact on Iranian arts. Films came to be viewed as products of the West and consequently were banned, and many theatres were burned down. Slowly, in the early 1980s, film production began again, but there was heavy censorship imposed on both production and exhibition. Many filmmakers left the country in exile but continued to produce films for the Iranian diaspora. In Iran, censorship guidelines followed strict Islamic doctrines, which demanded the banning of women onscreen as well as behind the

ABBAS KIAROSTAMI
b. Tehran, Iran, 22 June 1940

Abbas Kiarostami is perhaps the most famous of Iranian directors, as well as a poet and photographer. After studying painting at Tehran University, he began designing posters and illustrating children's books, founding the filmmaking section of the Institute for the Intellectual Development of Children and Young Adults (also known as Kanoon), where he made educational films for children and directed commercials while formulating his own aesthetic approach to cinema.

Kiarostami's first feature film was *Nan va Koutcheh* (*The Bread and Alley*, 1970). Although he did make some award-winning films before the Iranian revolution in 1978 to 1979, it was only afterward that Kiarostami's work began to be noticed in the West, winning plaudits from both critics and established directors such as Martin Scorsese and Jean-Luc Godard. In 1997 *Ta'm e guilass* (*A Taste of Cherry*) shared the coveted Palme d'Or at the Cannes Film Festival.

Nearly all of Kiarostami's films are inspired by his immediate experiences, and he always uses nonprofessional actors. The distinction between documentary and fiction is often blurred in his work, and Kiarostami himself resists their neat separation. In the first film of his acclaimed Koker trilogy, *Khane-ye doust kodjastt* (*Where Is the Friend's Home?*, 1987), Kiarostami focuses on a young boy who attempts to return a friend's school notebook before the teacher discovers it missing. The second film, *Zendegi va digar hich* (*Life, and Nothing More*, 1991), depicts the director of the first film and his son returning to the town where the first film was made to look for the actors from the earlier movie, but never finding them. *Zire darakhatan zeyton* (*Through the Olive Trees*, 1994), the final film of the trilogy, is about a film crew making an important scene from *Life, and Nothing More*. All three films are based on real-life events but are fictional and made without a script and with a small crew.

Kiarostami's films break away from conventional narrative, and are completely self-referential, often eschewing a strict chronological structure. *Bad ma ra khahad bord* (*The Wind Will Carry Us*, 1999) is about a filmmaker who thrusts himself into a small town, with the aim of filming a folk ritual that is to take place upon an old woman's imminent death, but it is more about mortality and the director's relation to the material he hopes to film. Employing simple imagery of daily life with an emphasis on the Iranian landscape, Kiarostami is a master of using visual imagery to convey abstract philosophical ideas and his characters' inner struggles of the soul.

RECOMMENDED VIEWING

Nan va Koutcheh (*The Bread and Alley*, 1970), *Khane-ye doust kodjastt* (*Where Is the Friend's Home?*, 1987), *Zendegi va digar hich* (*Life, and Nothing More*, 1991), *Zire darakhatan zeyton* (*Through the Olive Trees*, 1994), *Ta'm e guilass* (*A Taste of Cherry*, 1997), *Ten* (*10*, 2002)

camera. Love, which had been an integral theme in Iranian cinema before the revolution (a clear influence of Persian poetry), could no longer be depicted in movies after the introduction in 1983 of Islamic guidelines for filmmakers. Later, when restrictions were slightly loosened and women were allowed back onto the screen in 1987, there was still heavy censorship; for example, actors of opposite sexes were not allowed to touch each other unless they were related in real life. Around this time women filmmakers began to emerge, including Rakhshan Bani-Etemad (b. 1954) (*Kharej az mahdudeh* [*Off Limits*], 1987) and Puran Derakhshandeh (b. 1951) (*Paraneh kuchak khoshbakhti* [Little Bird of Happiness], 1988). In 1987 the Farabi Cinema Foundation was established to ensure that films being produced were of a high quality and not motivated merely by profit.

The end of the Iran-Iraq war in 1988 and the death of Ayatollah Khomeini in 1989 brought change to Iran, and the election of Mohammad Khatami in 1997 gave filmmakers slightly more freedom—Khatami was a

Abbas Kiarostami. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

supporter of the Iranian New Wave and the work of many local directors. Iranian films were seen by more people around the world and won prestigious prizes at film festivals. Jafar Panahi's (b. 1960) *Badkonake Sefid* (*The White Balloon*, 1995) won the Camera d'Or at the Cannes Film Festival, and in 1997 Abbas Kiarostami's (b. 1940) *Ta'm e guilass* (*A Taste of Cherry*) won the festival's Palme d'Or. Many women came out of the shadows and began to establish themselves once again in the industry. Some key figures include Tahmineh Milani and Derakhshandeh.

Most films of this time were funded by the government, though once made, they often were banned from screening in Iran. In terms of style and subject matter, many directors took their lead from European cinemas and movements, particularly Italian neorealism. This is evident in such films as *Kelid* (*The Key*, Ebrahim Forouzesh, 1987) and *The White Balloon*. Social commentary, brought into the arena during the New Wave, continued after the revolution, and many of the films that were not banned revolved around stories of the revolution disguised as adventure stories, such as *Nun va Goldoon* (*A Moment of Innocence*, 1996). These films, based on local people suffering from circumstances not of their own making, tread a fine line between documentary and fiction. Due to budget constraints, a majority of these films were shot on location.

Many filmmakers had opposed the shah during Iran's revolution, believing that if his government were overturned they would be given free reign to produce the films they wanted, and not necessarily purely for profit, but the new, clerical government took away equipment, film stock, and resources from filmmakers in order to control filmic representations of Iranian society. Every film's synopsis, screenplay, cast, and crew, and the completed film, all have to be approved by the censorship board if the film is to be made and exhibited in Iran. Although the Islamic government began a process of Islamization of the arts in 1979, filmmakers and other artists have managed to free themselves from the constraints of official ideology. One way in which artists managed to do this was by moving out of Iran and making diasporic films. Others based their films around children and adventure stories with heavy undertones of heroism and liberal principles. There was a shortage of film theatres in the country due to the burning of cinemas during the revolution, while many that still existed were in very bad condition. With the government in debt and with the United States–led boycott of Iran, the rebuilding and refurbishment of film theatres was low on the government's list of priorities. However, over time, theatres were rebuilt and refurbished. There are many film theatres in the large towns and cities in Iran, but not many in rural areas.

Among the most important directors of the New Wave, Mohsen Makhmalbaf (b. 1957) came to the fore in the 1980s with films such as *Dastforoush* (*The Peddler*, 1987) and *Arousi-ye Khouban* (*Marriage of the Blessed*, 1989). Many of his films were banned from exhibition in Iran: *Gabbeh* (1996), for example, was banned for being rebellious, but his films have been released internationally and very well received. Makhmalbaf has established a production company that allows him to coproduce films with France, and it was under this production house that he produced the directorial debut of his daughter, Samira Makhmalbaf (b. 1980), *Sib* (*The Apple*, 1998). Makhmalbaf's *Safar e Ghandehar* (*Kandahar*, 2001), one of his most popular films, tells the story of Nafas, an Afghan journalist who is exiled to Canada and returns to Afghanistan to find her sister, who is fed up with the Taliban regime. Like many of Makhmalbaf's films, *Kandahar* is a combination of documentary and fiction, using a hand-held camera and other techniques associated with documentaries to give it a greater emotional power. Abbas Kiarostami (*A Taste of Cherry*, 1997) is one of the best-known Iranian directors internationally, although he is not as popular in Iran. Like many other Iranian directors, Kiarostami blends

fact and fiction, using both nonprofessional and professional actors in his films. Along with Makhmalbaf, Kiarostami was one of the founders of the New Wave movement before the revolution. Kiarostami not only directs but also writes his screenplays and edits some of his films. With their combination of painting, poetry, and philosophy, they have been compared to the great works of such directors as Akira Kurosawa and Satyajit Ray.

IRELAND

The indigenous film industry in Ireland tentatively emerged in the 1970s, but it was not consolidated until two decades later, when government funding arrangements were implemented to support production on a long-term basis. Irish filmmakers produce up to ten feature films per year, as well as dozens of shorts. In this regard, Irish filmmaking resembles that of most other medium- and small-scale European industries in which production is the result of a complex structure of national and transnational (especially wider European) funding initiatives. Like so many other European industries, state support for film production in Ireland is designed to promote an indigenous film industry and to develop a more pluralist film culture in a country in which cinema screens are dominated overwhelmingly by Hollywood films.

The fact that filmmaking in Ireland is a fairly recent phenomenon should not, however, disguise the fact that Ireland and the Irish have maintained a major presence in American and British cinema since its inception. This presence has been manifested in terms of personnel (especially actors and directors), but most specifically in terms of theme, setting, and plot. The relatively high profile of Irish themes and stereotypes in American and British cinema has ensured that the representation of Ireland and the Irish has been a major concern for film studies in Ireland. Two traditions in particular have been identified. On one hand, Ireland has tended to be represented in romantic rural terms with great emphasis placed on its beautiful landscapes and seascapes. This has been the most enduring cinematic tradition and one that has recurred with remarkable consistency over time. John Ford's 1952 romantic comedy *The Quiet Man* is the screen's most famous and most enduring example of this tendency. The romanticization of Ireland and the Irish landscape is ingrained in the cinematic cultures of both Britain and America and frequently emerges in both nations' film industries, for example, in the British production *Waking Ned Devine* (1999) or the American *The Match Maker* (1997). Even Robert Flaherty's historically important documentary *Man of Aran* (1934), received initially as a realist documentary on the hardships of Irish rural life, later appeared to viewers as overly heroic and romanticized.

Ireland's long and fractious political relationship to Britain has provided the other recurring cinematic view of Ireland—a land of urban violence and sectarian hatreds where a proclivity to violence seems to form part of the Irish character and to have locked the Irish into an endless and meaningless cycle of murder and revenge. Ford again provided one of the early and most enduring examples of this tendency in his expressionist view of a strife-torn Dublin in *The Informer* (1935). The most celebrated British version of this stricken Ireland is Carol Reed's equally expressionistic Belfast in *Odd Man Out* (1947). In the 1970s and 1980s, when political violence in Northern Ireland escalated, this image appeared with more regularity, sometimes merely as a plot device in otherwise conventional thrillers, such as *Patriot Games* (Phillip Noyce, 1992) or *The Devil's Own* (Alan J. Pakula, 1997).

That indigenous filmmaking developed slowly meant that these two dominant traditions went largely unchallenged in cinematic terms and therefore tended to circulate as markers of a general Irish identity. However, in the twenty-first century these traditional and recurring

images of the Irish have marked a point of departure for indigenous filmmakers attempting to forge a recognizably contemporary Irish cinematic identity.

CINEMA AND THE IRISH DIASPORA

The extraordinarily high levels of emigration from Ireland to the United States during the Irish famine years of the late 1840s meant that the Irish and Irish-Americans made up a significant percentage of early American cinema audiences, especially in the eastern cities, where they tended to congregate. During the early silent era film producers pandered to these audiences with sentimental tales and romantic adventures set in Irish-American communities or in Ireland. These early two- and three-reel films attracted a range of Irish and Irish-American actors, who perfected the stereotypes that defined the cinematic image of the Irish for decades. Although many of these films are now lost, their titles remain to evoke the world of Irish ethnic comedies—Biograph's "Hooligan" one-reelers from 1903, longer comedies and dramas like those made by the Kalem Film Company between 1908 and 1912, and hundreds of films that featured the words "Ireland" or "Irish" in their titles from the 1910s. A randomly chosen selection of such titles includes *The Irish Boy* (1910) and *The Lad from Old Ireland* (1910), *All for Old Ireland* (1915), *A Wild Irish Rose* (1915), *The Irishman's Flea* (1920), *Luck of the Irish* (1920) or the "Cohens and the Kellys" cycle (1920s), the last of which was aimed simultaneously at two ethnic audiences. These films were peopled by amiable drunks and aggressive brawlers, corrupt politicos and honest but dumb cops, Catholic priests and angelic nuns, long-suffering mothers, feisty colleens, and vulnerable, naïve maidens. Although established in the very earliest days of silent cinema, these stereotypical characters continued to populate American genre cinema throughout the twentieth century. They were played by a range of character actors and stars who were either native-born Irish, such as Colleen Moore (1900–1988), Maureen O'Hara (b. 1920), Barry Fitzgerald (1888–1961), Peter O'Toole (b. 1932), Richard Harris (1930–2002), Liam Neeson (b. 1952), Pierce Brosnan (b. 1953), and Colin Farrell (b. 1976), or had an Irish ancestry upon which to draw when necessary: James Cagney (1899–1986), Victor McLaglen (1883–1959), Spencer Tracy (1900–1967), Anthony Quinn (1915–2001), and Errol Flynn (1909–1959).

The Irish diaspora also provided some influential pioneers of American film. In the formative years of Hollywood, for example, Irish-born director Rex Ingram (1892–1950) was a particularly noted stylist who made Rudolph Valentino a star with *The Four Horsemen of the Apocalypse* (1921). Herbert Brenon (1880–1958) was one of the most critically acclaimed of silent film directors, although his career foundered with the advent of sound. The most famous and most enduring of the early pioneers was a second-generation Irish-American, John Ford (1894–1973). Ford was one of the great genre directors of Hollywood who lived his Irishness openly in life as well as on the screen. He peopled his westerns and other non-Irish films with many of the stereotypical characters that early cinema had established. More than anyone, he helped to prolong a romantic Irish-American sense of identity, of which the ultimate expression is *The Quiet Man*, in which he manages the not inconsiderable achievement of both celebrating and gently undermining the outrageous stereotypes of Ireland and the Irish.

The considerable presence of the Irish in early audiences resulted in another historically important development for American cinema. In 1910, the Kalem Film Company became the first American company to shoot on location outside of the United States when it made *The Lad from Old Ireland* in Killarney. The film was produced and directed by Irish-Canadian Sidney Olcott (1873–1949), who recognized the commercial value of showing authentic Irish locations to a nostalgic and homesick audience in the United States. He brought Kalem back to Ireland for two more summer visits in 1911 and 1912, making a range of one- and two-reel films based on old Irish melodramas or depicting historical moments in Ireland's long nationalist struggle against Britain. These fictional films made in Ireland established the use of Ireland as a theme and a location for filmmaking by American and British producers, while little effort was made to develop indigenous production.

INDIGENOUS CINEMA AND NATIONAL IDENTITY

There was one brief period of indigenous filmmaking during the silent period when the Film Company of Ireland made two well-regarded features, *Knocknagow* (1918) and *Willie Reilly and His Colleen Bawn* (1920). Subsequently, except for some semi-amateur films or B-movie quota quickies in the 1930s and government-sponsored informational films in the 1950s, little cinema of any significance was made in Ireland until the mid-1970s. The reasons were mainly economic. Until the 1970s Ireland was a relatively poor country with little capital available for investment in film production. However, there were political and cultural factors as well. The independent Ireland established in 1922 was built on a nationalism that was conservative in politics, Catholic in religion, and almost xenophobic. Because the political and religious establishment regarded the

Jaye Davidson and Stephen Rea in Neil Jordan's* The Crying Game *(1992). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

cinema with suspicion and distaste, it subjected it to the most rigid censorship in Europe until the more liberal 1970s. There also existed a cultural bias against the cinema, which is hardly surprising in a country that celebrates a strong literary and theatrical tradition.

During the early period of Irish independence—from the 1920s to the 1970s—most of the cinematic representations of the country came from the outside. Although some attempts had been made in this period to attract both political and economic interest in filmmaking. The most notable of these were the semi-amateur production *The Dawn* (Thomas Cooper, 1938) and *Guests of the Nation* (Denis Johnston), based on Frank O'Connor's short story of the same title. Both the story and film later inspired Neil Jordan's (b. 1950) highly influential *The Crying Game* (1992). In Northern Ireland in the 1930s actor Richard Hayward attempted to start the film production industry, but there was little economic or political interest, and after a number of small-scale comedies (*The Luck of the Irish* [1936] and *The Early Bird* [1936], indigenous feature filmmaking in Ireland ceased to exist for the next four decades.

During these years, Ireland continued to attract both Hollywood and British productions, and the Irish government established a studio at Bray in County Wicklow to facilitate such inward investment and to encourage further location shooting. The presence of such "outsider" productions inevitably gave rise to aspirations within Ireland itself for a more indigenous form of filmmaking. In the 1960s and 1970s, an increasingly vocal lobby emerged. It was supported in large measure by two influential directors who remained in Ireland after shooting some of their films there: John Huston, an American, and John Boorman, an Englishman. The Irish government finally began to provide very modest state funding for filmmaking in the 1970s and early 1980s. It is hardly surprising that the generation of Irish filmmakers that emerged would respond to both the dominance of cinematic stereotypes from abroad as well as the legacies of the nationalist traditions internally. In other words, the films they produced constituted a radical reassessment of Irish identity. This first wave of indigenous filmmakers included a group of Dublin-born directors—Robert Quinn (b. 1942), Joe Comerford

(b. 1949), Pat Murphy, Cathal Black (b. 1952), and Thaddeus O'Sullivan (b. 1947)—who evinced an avant-garde sensibility and whose films were aesthetically as well as politically challenging. Jordan and Jim Sheridan (b. 1949) were more commercial in their approach and quickly established themselves as directors of international standing. Sheridan's *My Left Foot* (1989) won two acting Academy Awards® for Daniel Day-Lewis and Brenda Fricker, and Jordan won a Best Original Screenplay Award for *The Crying Game*, which long remained the most successful Irish film in the United States.

By 1993, the Irish economy was booming and Ireland had become an affluent society, enjoying the fruits of sustained economic growth. The Irish Film Board, set up originally in 1980, was relaunched with improved funding by a government impressed by the international success of Jordan and Sheridan and committed to the cultural development of Irish cinema. A number of tax incentive schemes were implemented to further stimulate indigenous production, as well as to attract large-scale location shooting to Ireland. The result has been the most sustained period of indigenous film-making ever in Ireland with over 100 feature films produced since 1993. Ireland also continued to attract international productions to its famed locations. Sometimes these were for Irish-themed films, like Ron Howard's lavish *Far and Away* (1992) or John Sayles's more modest *The Secret of Roan Inish* (1994), but often the policy attracted big-budget productions that merely took advantage of the tax concessions and the scenery. For example, Steven Spielberg shot his celebrated Normandy beach scenes for *Saving Private Ryan* (1998) on the beaches of Wicklow, and in 1995 Mel Gibson took advantage of tax incentives to move the production of *Braveheart* from Scotland to Ireland.

The younger directors who emerged in the 1990s proved to be much more commercial in their approach than their predecessors of the 1970s and 1980s and as a result often have produced more light-hearted and youth-oriented films. Nonetheless, the nature of Irishness and a number of other themes stand out. For example, a substantial body of films about urban Ireland exists compared with a cinema once dominated by rural imagery. Such films as the contemporary sex comedy *About Adam* (Gerard Stembridge, 2000), the subversive crime comedy *Intermission* (John Crowley, 2003), and the controversial lesbian/gay view of contemporary Dublin *Goldfish Memory* (Elizabeth Gill, 2003) re-imagine urban Ireland very differently from traditional notions and challenge in both an entertaining and intellectual manner the very notion of "cinematic Ireland." Because the Catholic Church in Ireland was rocked by scandals beginning in the 1990s, a number of films have explored the nature of Ireland's Catholic past, especially the dominance of the Catholic Church in mid-twentieth-century Ireland: *Hush-A-Bye-Baby* (Margo Harkin, 1990), *A Love Divided* (Sydney Macartney, 1999), and *The Magdalene Sisters* (Peter Mullan, 2002). A particular brand of Irish coming-of-age film that, read metaphorically is a comment on Irish society emerging from a period of uncertainty, also emerged: *The Last of the High Kings* (David Keating, 1996) and *The Disappearance of Finbar* (Sue Clayton, 1996). Finally, both established and emerging Irish filmmakers have attempted to revisit the vexed question of violence in Northern Ireland and to explore the legacy of Ireland's militant nationalism in such films as Jordan's *Michael Collins* (1996), Sheridan's *In the Name of the Father* (1993) and *The Boxer* (1997), and David Caffrey's *Divorcing Jack* (1998).

Most of these themes, and many more besides, are treated in the most complex film to emerge in the 1990s. Jordan's *The Butcher Boy* (1997), a film rich in visual imagination that disturbs the audience, subverting the traditional Irish mythologies. At the same time, the complexity and artistic achievement of the film confirm that Irish cinema has emerged from obscurity and assumed a cultural role as significant as the nation's more lauded literary and theatrical traditions.

ISRAEL

Filmmaking in Israel can be traced to the early twentieth century with the documentation of the land by solitary pioneers, such as Murray Rosenberg's *The First Film of Palestine* (1911) and Ya'acov Ben-Dov's *The Awakening Land of Israel* (1923). Commissioned by Zionist organizations, these films were screened in front of Jewish communities worldwide. They showed an embellished image of the land, emphasizing its redemption by the Zionist movement by beginning with images of ruined Jewish historical sites in a desolated land and culminating in lively images of new towns in the Jewish *yishuv* (settlement).

The more prolific filmmaking of the 1930s focused upon Jews who had shed their Diaspora "nonproductive" way of life in favor of communal life and agricultural labor, reflecting the predominance of Zionist socialism. The major filmmakers of this period, such as Baruch Agadati (1894–1976) and Nathan Axelrod, were Russian-Jewish immigrants strongly influenced by Russia's October Revolution (1917). Agadati's *This Is the Land* (1933) is dynamically structured along the lines of the montage sequences of Dziga Vertov and Sergei Eisenstein, contrasting an arid past to a present filled with a vast multitude of Jews, of industrial plants working at full steam, culminating in a call to leave the cities in favor of collective agricultural work on the kibbutz. Axelrod's travelogue *Oded the Wanderer* (1933) emphasizes the social and material progress that the Zionist socialist project has brought to the region. This theme also dominates Aleksander Ford's (1908–1980) *Sabra* (1933), which deals with a drought that sparks an escalating conflict over water between a socialist Jewish commune and an Arab tribe headed by a despotic sheikh. The conflict is resolved when water gushes from the Jews' well for the benefit of all, and is followed by a Soviet-styled epilogue showing tractors ploughing the land, superimposed with the silhouettes of agricultural workers marching toward a utopian future.

Following World War II, the Holocaust became a major theme in the cinematic forging of national identity, by presenting Israel as the last haven for persecuted Jews (while later presenting the state as besieged and facing annihilation). These films, aimed at justifying the need for a Jewish state following the Nazi atrocities, were invariably concerned with the integration of the recently arrived immigrants through their transformation by working the land within a collective. *Earth* (Helmer Lerski, 1946), for example, offers a plethora of images panning an open and fertile land that enfolds the protagonists, infusing in them a sense of liberation from the terrifying past of the ghettoes and death camps still resonating in their minds.

CINEMA SINCE STATEHOOD

The establishment of the State of Israel in 1948 amidst war with the surrounding Arab countries generated deep sociopolitical changes, mostly due to the doubling of the Jewish population within three years of independence (1949–1951) following the massive immigration of Jews from Islamic lands. Prime Minister David Ben-Gurion (1886–1973) shifted his party's Zionist socialism to a centralizing policy termed *mamlachtyut* (statism), which allowed for the rapid industrialization of the country in the course of absorbing the massive immigration. However, this policy resulted in the correlation of ethnic

origin and class, whereby the newly arrived Jews from Islamic lands came to form the lower classes. The state's dominant ideology shifted accordingly, and the image of the *ideal sabra* (native-born Israeli) changed from being a socialist revolutionary to an ethnically mixed Jew who is a loyal citizen and soldier within a beseiged nation. The 1948 "War of Independence" became a central subject in statist ideology and was replicated by a dependent cultural apparatus. Thorold Dickinson's (1903–1984) film *Hill 24 Doesn't Answer* (1956) portrayed the war as part of the long history of Jewish persecution, yet also presented it as the means through which the situation of the Jewish people was changing due to Israel's military resolve, its national independence, and the East–West condensed Jew forged by the inseparable experiences of war and sociocultural intermingling. This intermingling was interestingly dealt with in *Tent City* (Leopold Lahola, 1955), which also absolved the government of any wrongdoing toward the immigrants by blaming the Diaspora past for present hardships and ethnic strife, and by presenting government officials as impartial and authoritative, yet kind and dedicated civil servants. The film also promised a brighter future by showing through rhythmically accelerating editing patterns the ethnically varied citizenry harmoniously joining hands in different projects carried out during the rapid industrialization of the country in the 1950s, a subject recurring in other films that were mostly funded by Israel's major workers' union, Ha'Histadrut.

The expansion of the urban middle classes in the early 1960s, along with a relative geopolitical calm, dated the collectivist rhetoric of the government and the cultural establishment distanced itself from the government. Uri Zohar's (b. 1935) experimental *Hole in the Moon* (1965) and ethnic comedy *Sallah Shabati* (Ephraim Kishon, 1964), for example, offered parodies of Zionist socialism and statism by showing their incompatibility with the daily reality of a grotesquely depicted, yet "real" commercially oriented society. These emergent trends involving notions of art for art's sake and of art as industry gradually began to replace the earlier politically committed and propagandistic films, coming to full fruition after Israel's swift victory in the war of June 1967. Following this war Israelis had a sense of euphoric freedom at the lifting of a previously perceived siege due to the expansion of Israel's borders and the ensuing economic improvement, a function of increased US aid and the cheap Palestinian labor force that poured in from the newly occupied territories. Individualism thrived in the new economic and political situation, and a new generation of filmmakers influenced by the French New Wave and Hollywood began to produce films characterized by excess and lack of subtlety: war films, *burekas* films (comedies focused on interethnic relations), and personal films.

War films celebrated the victory and disavowed the threatening geopolitical implications of the war, focusing upon the heroic and successful deeds of free-spirited, valiant, and arrogant protagonists—in sharp contrast to the collectivist soldier of the films of the 1950s. Uri Zohar's tellingly named film *Every Bastard a King* (1968) includes an unusually long tank battle scene showing the valiant rescue under fire of a wounded soldier by the individualistic hero. Burekas films deceptively reduced the mounting class–ethnic tensions of the period to comic or melodramatic capitalist competition over money and women. *Katz and Carraso* (Boaz Davidson, 1971), which revolves around the competition between an Oriental Jewish family (Carasso) and a Western Jewish one (Katz) over a fat government insurance contract, is emblematic. Personal films reduced interpersonal relations to conflicts stemming mostly from accomplished or frustrated sexual desires. Despite articulating these subjects through the use of New Wave techniques (jump-cuts, asynchronous sound–image relations), the complex existentialism, politics, and subversion of the original films were reduced mostly to voyeuristic glances at Westernized protagonists detached from Israeli reality. A particularly extreme example of this tendency is the experimental *A Woman's Case* (Jacques Katmor, 1969), which offers voyeuristic looks at the naked body of its peculiar woman protagonist through close-ups of her body parts and jump-cuts between them.

AFTER THE 1977 POLITICAL TURNOVER

The threatening social and political processes that began to ripen during the early 1970s erupted into the Israeli consciousness and found filmic expression only after the political turnover that brought the right-wing Likud party to power in 1977 after the sixty-year hegemony of Labor parties. The change resulted from the disillusion with a government that had failed to predict the outbreak of the 1973 October war and remained undecided on the future of the occupied territories, as well as from the resentment toward the Labor party felt by low-income Jews from Islamic lands. This overturn shocked the Labor-leaning populace to which most of the filmmakers belonged and led to their radical politicization. The main focus of fiction films produced during the 1980s was criticism of the Israeli occupation of the densely Palestinian-populated West Bank and Gaza Strip following the intensification of Jewish settlements in these territories and Israel's invasion of Lebanon in 1982. This criticism, however, was confined to a narrow and melodramatic moral resentment, reflecting the overall paralysis of the left in its dead-end conception of reality. Most films

Dana Katz and Arnon Zadok in Uri Barbash's* Beyond the Walls *(1984). **© WARNER BROS./COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

offered a similar story line: a Palestinian Arab and an Israeli Jew, driven by a vague idea that solidarity between the two peoples is possible, decide to act accordingly. However, irrespective of the grounds upon which this solidarity is based, whether academic as in *Fellow Travelers* (Judd Neeman, 1984) or class-revolutionary as in *Beyond the Walls* (Uri Barbash, 1984), their coming together generates reactions from Israeli secret agents, soldiers, and policemen, as well as from Palestinian terror groups, which invariably lead the protagonists to a bitter end. This storyline is played out in jails, mental institutions, or army barracks presented as claustrophobic, labyrinthine, shadowy, and violent, depicting a society under constant threat, whose members are suspicious of each other's conspiracies. The films evidence the split in Israeli society and the paralyzing fear engendered by this split.

The outbreak of the first Palestinian *intifada* (uprising) in 1989 ended this focus on the Israeli-Palestinian conflict, perhaps because Israeli filmmakers recognized that their moralistic stand was futile. Israeli films from the 1990s on, produced by a new generation of filmmakers, depicted a decentered Israeli culture through a self-representation of ethnic others that previously had had no voice, evidencing the splintering of Israeli society into various power groups. *Jana's Friends* (1998), directed by Russian-born Arik Kaplun, focuses on the 1990s Russian immigration to Israel, while *Shchur* (1995), scripted by Israeli Moroccan-Jew Hanna Azulai-Hasfari, exalts the return of its protagonist to the mystical aspects of Jewish-Moroccan ethnicity in reaction to her forced secular Israelization during the 1950s. *Late Wedding* (2003), directed by Georgian-born Dover Kozashvili, furthers this splintering trend in its representation of a peculiar Georgian-Jewish ethnicity without any mention of an Israeli-dominant national culture. Most of this film is spoken in Georgian, and most of it is shot in ethnically decorated Georgian interiors, while the few exterior shots

are of parking lots, empty sidewalks, and building staircases alien to the characters. These contemporary Israeli multicultural films mark the dialectical evolution of the representation of ethnic relations from a desired intermingling in the 1950s to today's ethnic splintering, perhaps also implying a dissolution of Israeli cinema's traditional forging of national identity as being that of a besieged nation.

ITALY

Given Italy's unparalleled contributions to the visual arts from the twelfth century to the present, it would have been unusual, indeed, if its culture had not made fundamental contributions to the development of film art from the silent era to the present. After being identified with the historical epic in the silent cinema, Italy's film culture was virtually ignored during the fascist period, but the advent of postwar Italian neorealism after 1945 threw Italy into the forefront of modern European filmmaking. Subsequently, a number of the individuals associated with neorealism developed into *auteurs*, and Italy produced several generations of Europe's best art film directors. Italy also contributed a great deal to commercial film genres, such as the spaghetti western, the sword and sandal epic, the *giallo* (horror-mystery), and even the cannibal and zombie cult movies of the late twentieth century.

BEGINNINGS: THE SILENT PERIOD

On 11 November 1895, Filoteo Alberini (1865–1937) applied for a patent on an early device, the Alberini Kinetograph, and between 1909 and 1916, the Italian silent cinema represented a major force in world cinema before the hegemony of Hollywood was firmly established, with major production centers in Turin, Rome, Naples, and Milan. Alberini produced the first feature film with a complex plot—*La Presa di Roma* (*The Taking of Rome*, 1905)—which was based on a patriotic theme, the annexation of the Eternal City in 1870 to the new Italian republic. The next year, CINES, a major production company, was founded, and it rapidly allowed Italian silent films to capture an enormous international market share for a brief period. While Italian silent films reflected a variety of genres, including Roman costume dramas, adventure films, comedies, filmed drama, even experimental or avant-garde works by the Futurists, there is little question that the success of the costumed film set in classical antiquity was responsible for much of the industry's early success. Italy's Roman past, the wealth of classic ruins and grandiose monuments all over Italy, the favorable climate and natural light of the peninsula, plus the relatively low labor costs for huge crowd scenes, all encouraged on-location shooting of costume dramas and interior scenes with lavish neoclassical decors. Important works in this epic vein include *Gli Ultimi giorni di Pompeii* (*The Last Days of Pompeii*, 1908) by Luigi Maggi, *Quo Vadis?* (1913) by Enrico Guazzoni, and the silent cinema's most famous epic by Giovanni Pastrone (1883–1959), *Cabiria* (1914), whose majestic treatment of the Second Punic War introduced the use of the dolly into cinematic practice, influenced D. W. Griffith's *Intolerance* (1916), and subsequently inspired many neomythological or *peplum* films, a staple export item of the Italian industry in the 1950s and 1960s.

In addition to historical epics and filmed versions of themes taken from drama, opera, and history, the Italian cinema quickly developed the star system (the *diva*), a development that naturally led to an increased use of close-ups to convey passionate emotions. Italian *femme fatales* such as Lyda Borelli in *Ma l'amor mio non muore* (*But My Love Won't Die!*, 1913) by Mario Caserini, Maria Carmi in *Sperduti nel buio* (*Lost in the Dark*, 1914) by Nino Martoglio, and Francesca Bertini in *Assunta Spina* (1915) by Gustavo Serena, set an international standard for melodramatic passion. The most memorable male lead was the muscular former

dockworker and taciturn protagonist of *Cabiria*, Bartolomeo Pagano (1878–1947), whose character in that film, Maciste, spawned numerous subsequent imitations that often changed *Cabiria*'s classical setting. For example, Maciste became an Italian soldier during World War I in *Maciste alpino* (*Maciste the Alpine Soldier*, 1916), a modern tourist in *Maciste in vacanza* (*Maciste on Vacation*, 1920), a detective in *Maciste policioho* (*Maciste the Detective*, 1917), and even a visitor to Dante's Inferno in *Maciste all'inferno* (*Maciste in Hell*, 1926) by Guido Brignone, which included memorable special effects and tinted colors to represent the punishments of Hell.

During the silent period, the cinema also attracted the critical attention of key Italian intellectuals. The avant-garde Futurist movement devoted a Futurist manifesto to cinema in 1916, calling for this new art form to avoid the slavish imitation of other art forms and to concentrate on its novel and innovative visual effects (exactly the opposite of what the industry actually did, since it privileged literary adaptations). Some Futurist short films were produced. Other popular writers, such as Gabriele D'Annunzio (1863–1938), who provided the intertitles for *Cabiria*, or Nobel Laureate and playwright Luigi Pirandello (1867–1936), who wrote a famous novel about a movie camera operator and worked to film a number of his successful plays, helped to bring respectability to this upstart art form that had only recently emerged from the atmosphere of the circus and vaudeville show. After World War I, American and European competition almost destroyed the Italian industry completely, forcing production to drop from 220 films in 1920 to less than a dozen works in 1927, just before the introduction of the talkies.

CINEMA UNDER FASCISM: THE ADVENT OF SOUND AND THE INCREASE OF NATIONAL PRODUCTION

From 1922 to 1943, over 700 films were produced, most not really "fascist" films at all but primarily entertainment. Indeed, the fascist regime admired the Hollywood model, not the totalitarian cinemas controlled by dictators in Germany and Russia. When it desired pro-regime propaganda, Mussolini's government relied on radio and short filmed documentaries prepared by LUCE (the Union of Cinematographic Education) and screened with the feature films designed for entertainment. Even in wartime, Italy averaged some 72 films annually between 1939 and 1944, a figure that gives some idea of the large local market for film and its role as popular entertainment. When the Italian industry nearly collapsed after World War I, Italian movie theaters (numbering at one point some 3,000 theaters) were forced to show only foreign films, a situation that was intolerable for the Fascist regime, whose official economic policy was self-sufficiency—that is, autarchy—in all matters economic and cultural. When the Italian government moved to block Hollywood's near monopoly of film distribution within the Italian market, the Hollywood "Big Four" (20th Century Fox, Paramount, MGM, Warner Bros.) withdrew from the Italian market in protest. No longer forced to face overwhelming American economic pressure, the Italian film industry eventually rebounded, filling the void of Hollywood products with nationally produced films.

Outside of Italy, little was known of Italian cinema during the fascist period, and this ignorance encouraged the erroneous idea abroad that the post–World War II Italian cinema had arisen miraculously from the ashes of the war. In retrospect, many important achievements of this era are more clear. Mussolini himself was fond of saying that the cinema was the most powerful art form developed in the modern era. Mussolini's son Vittorio played a major role as the editor of an influential film journal (*Cinema*) that involved such collaborators as the future postwar leftist directors, Luchino Visconti (1906–1976), Michelangelo Antonioni (b. 1912), and Giuseppe De Santis (1917–1997), and it was Vittorio Mussolini's friendship that enabled Roberto Rossellini (1906–1977) to begin to work in the industry. The regime founded a major film school, the Centro Sperimentale di Cinematografia (1935); and it built one of the world's great film production complexes, Cinecittà, inaugurated by Mussolini in 1937. Both of these institutions are still in operation, and with their vast archives, they also serve as repositories of Italian cinematic history. *Bianco e nero*, the official organ of the Centro, and *Cinema* helped to spread information about foreign theories and techniques through translations and reviews. The regime also sponsored university film clubs (Cinegufs) that helped to create a generation of cinephiles. Most of the great directors, actors, technicians, and scriptwriters of the neorealist period received their training during the fascist period, and some postwar stars made their first films in the service of a regime whose policies they would later repudiate after the fall of Mussolini in 1943.

The first Italian sound film was *Canzone dell'amore* (*The Song of Love*, 1930) by Gennaro Righelli (1886–1949). With the advent of the talkies, Italian cinema was dominated by two important directors: Mario Camerini (1895–1981) and Alessandro Blasetti (1900–1987). Camerini's stylish comedies stressed role playing in society, enjoyed intelligent and lively scripts, and first brought together Vittorio De Sica (1902–1974), as an actor, and Cesare Zavattini (1902–1989), as scriptwriter in a classic comedy, *Darò un milione* (*I'd Give a Million*, 1935). Long before De Sica became identified by his neorealist masterpieces scripted with Zavattini, he was

the most popular actor in fascist Italy, playing roles similar to those performed in Hollywood by both Cary Grant and James Stewart. Camerini's most important comedy, *Il Signor Max* (*Mr. Max*, 1937), starring De Sica, established a level of craftsmanship and witty sophistication that rivals the best products of the Hollywood studios during the same period. Blasetti's career represents an entirely different approach to cinema. Frequently abandoning the sound studios at Cinecittà so crucial to Camerini's work, Blasetti created his masterpiece *1860* (*Gesuzza the Garibaldian Wife*, 1934), a patriotic film about Garibaldi. In its original uncut edition, he linked Garibaldi's Redshirts to Mussolini's Blackshirts, first made use of nonprofessional actors and on-location shooting, and pursued film realism—all supposedly original features of the immediate postwar period. Blasetti's *Vecchia guardia* (*The Old Guard*, 1935) employs a similar documentary style in portraying Mussolini's rise to power. Yet, Blasetti also made one of the most beautiful and imaginative of all films during this era, *La Corona di ferro* (*The Iron Crown*, 1941), in which ornately stylized studio sets testify to the technical prowess reached at Cinecittà. Its call for universal peace at a time when the entire world (including Italy) was at war demonstrates how fascist censorship was quite loosely applied to the commercial cinema. Moreover, Blasetti's *Quattro passi fra le nuvole* (*A Stroll in the Clouds*, 1942) prefigured the poetic style of De Sica's postwar neorealism in its simple plot and a Zavattini script.

Italian films made during the fascist period were usually not "fascist" in tone, although they were often nationalistic and patriotic, much like their Hollywood counterparts. The search for realism in the Italian cinema thus began not with the postwar period and the neorealists but, rather, with directors working in the 1930s and the 1940s before the end of World War II. In an important manifesto published in 1933 ("The Glass Eye"), pro-Mussolini journalist Leo Longanesi called for Italian directors to take their cameras into the streets and to produce a non-Hollywood version of Italian everyday life, a film realism that was authentically Italian in content. This interest in realism was specifically the goal of the left-wing Italian fascist intellectuals associated with Vittorio Mussolini's journal *Cinema*, and after the war and the fall of his father's regime, these same individuals continued their interest in film realism but pursued this goal with a Marxist, not a fascist, twist. Not only talented *auteurs* such as Blasetti, but other directors took up Longanesi's call, and the advent of the war added urgency to a realistic view of Italian life on celluloid. A marriage of fact and fiction, documentary and fantasy, soon became the formula for successful films about the war. Francesco De Robertis (1902–1959), his protégé Rossellini, and Augusto Genina (1892–1957), all contributed to this search for realism while making war films. Genina's *Squadrone bianco* (*The White Squadron*, 1936), a film about Italian colonialism in Libya, was shot on stupendous desert locations; his *L'Assedio dell'Alcazar* (*The Siege of the Alcazar*, 1940), a celebration of the Falangist defense of the Alcazar fortress by Franco's troops during the Spanish Civil War, also employed real locations and documentary footage.

The realistic war films of Genina, De Robertis, and Rossellini adopted the formula of the *documentario romanzato* (fictional documentary), combining a fictional-emotional-romantic theme (usually the love affair between a soldier and his lady friend) with the documentary-historical-realistic theme (the war film genre, real locations, documentary photography, some nonprofessional actors). De Robertis's *Men on the Bottom* (1941), made for the Italian navy, employs an editing style indebted to Eisenstein's montage (the Russian's theories had been discussed and partially translated by the film journal *Cinema*) and used nonprofessional actors, the men on board an Italian submarine, to great effect. Rossellini actually produced a trilogy of pro-regime films that we label today his "fascist trilogy," which may be contrasted and compared to the more celebrated "war trilogy" he made in the immediate postwar neorealist period. The first of these three works, *La Nave bianca* (*The White Ship*, 1941), the dramatic tale of life on a hospital ship saving brave Italian soldiers, was shot in collaboration with De Robertis; Vittorio Mussolini collaborated on the script. It was followed in short order by two other films supporting the war effort (the soldiers, sailors, and airmen doing the fighting and the dying, not necessarily the fascist regime): *Un Pilota ritorna* (*A Pilot Returns*, 1942) and *L'Uomo dalla croce* (*The Man With a Cross*, 1943). These three nationalistic films shot to support the troops represent important precursors of Italian neorealism, and another appeared in 1943, the year that witnessed the downfall of Mussolini's regime: *Ossessione* (*Obsession*) by Luchino Visconti (his first feature). Based on a pirated version of James Cain's novel, *The Postman Always Rings Twice* (1934), Visconti created a truly unusual antiheroic protagonist who can easily be seen as a homosexual. This character was indebted to American hard-boiled novels and was diametrically opposed to the kind of "manly" protagonists fascist censors might have preferred. Visconti's long takes and languorous rhythms reappeared in his postwar work and represented a style that was set apart from the more rapid editing techniques in Rossellini's neorealist classics.

POSTWAR NEOREALISM: A BRIEF DECADE

With the fall of Mussolini and the end of the war, international audiences were suddenly introduced to

Italian films through a few great works by Rossellini, De Sica, and Luchino Visconti that appeared in less than a decade after 1945, such as Rossellini's *Roma, città aperta* (*Rome, Open City*, 1945) and *Paisà* (*Paisan*, 1946); De Sica's *Sciuscià* (*Shoeshine*, 1946), *Ladri di biciclette* (*The Bicycle Thieves*, 1948), and *Umberto D.* (1952); and Visconti's *La Terra trema* (*The Earth Trembles*, 1948). Italian neorealist films stressed social themes (the war, the resistance, poverty, unemployment); they seemed to reject traditional Hollywood dramatic and cinematic conventions; they often privileged on-location shooting rather than studio work, as well as the documentary photographic style favored by many directors under the former regime; and they frequently (but not always) employed nonprofessional actors in original ways. Film historians have unfortunately tended to speak of neorealism as if it were an authentic movement with universally agreed-upon stylistic or thematic principles. While the controlling fiction of the best neorealist works was that they dealt with universal human problems, contemporary stories, and believable characters from everyday life, the best neorealist films never completely denied cinematic conventions, nor did they always totally reject Hollywood codes. The basis for the fundamental change in cinematic history marked by Italian neorealism was less an agreement on a single, unified cinematic style than a common aspiration to view Italy without preconceptions and to employ a more honest, ethical, but no less poetic, cinematic language in the process.

These masterpieces by Rossellini, De Sica, and Visconti are indisputably major works of art that capture the spirit of postwar Italian culture and remain original contributions to film language. But with the exception of *Rome, Open City*, they were relatively unpopular within Italy and achieved success primarily among intellectuals and foreign critics. In particular, De Sica was criticized for "washing Italy's dirty laundry in public" by Giulio Andreotti, a Christian Democratic politician who was later to become one of Italy's most powerful prime ministers. One of the paradoxes of the neorealist era in Italian film history, an epoch that lasted no more than a decade, is that the ordinary people such films set out to portray were relatively uninterested in their self-image. In fact, of the approximately eight hundred films produced between the mid-1940s and the mid-1950s in Italy, only a relatively small number (about 10 percent) could be classified as neorealist, and most of these few works were box-office failures. After years of fascist dictatorship and the deprivations of war, Italians were more interested in being entertained than in being reminded of their poverty.

A number of less important but very interesting neorealist films were able to achieve greater popular success by incorporating traditional Hollywood genres within their narratives, thereby expanding the boundaries of traditional film realism. This group of commercially successful works include *Vivere in pace* (*To Live in Peace*, 1947) by Luigi Zampa (1905–1991), a comical view of Germans, Italians, and Allied soldiers at war that cannot help but bring to mind the World War II TV sitcom *Hogan's Heroes*; *Senza pietà* (*Without Pity*, 1948) by Alberto Lattuada (1913–2005), a daring *film noir* about the black market, prostitution, and American racism in postwar Livorno; *Riso amaro* (*Bitter Rice*, 1949) by Giuseppe De Santis, a vaguely Marxist film about proletarian class solidarity that gave birth to the phenomenon in Italy of the "sweater girl" known as the *maggiorata*, making Silvana Mangano (1930–1989) an overnight sensation; and *Il Cammino della speranza* (*Path of Hope*, 1950) by Pietro Germi (1914–1974), a film about poor Sicilian miners migrating to France in search of work. These four films reflect a shift from the war themes of Rossellini to the interest in postwar reconstruction typical of De Sica's best efforts, but they are even more important as an indication of how the Italian cinema moved gradually closer toward conventional American themes and film genres.

THE "CRISIS" OF NEOREALISM AND EXPLOSION OF STYLES AND GENRES

In spite of the fact that Italian intellectuals and social critics preferred the implicitly political and sometimes even revolutionary messages of the neorealist classics, the public preferred Hollywood works or Italian films made in the Hollywood spirit, and even the neorealist *auteurs* soon became uncomfortable with the restrictive boundaries imposed upon their subject matter or style by well-meaning leftist critics. In Italian cinema history this transitional phase of development is often called the "crisis" of neorealism. In retrospect, the period from the mid-1950s to the mid-1960s can be described more accurately as a natural evolution of Italian film language toward a cinema characterized by many different styles and concerned with psychological problems as well as social ones. Crucial to this historic transition are a number of 1950s films by Rossellini, Michelangelo Antonioni, and Federico Fellini (1920–1993). In Antonioni's first feature film, *Cronaca di un amore* (*Story of a Love Affair*, 1950), he borrows a plot indebted to Cain's *The Postman Always Rings Twice*, American *film noir*, and *Obsession,* but his distinctive photographic signature is already evident: characteristically long shots, tracks and pans following the actors; modernist editing techniques that reflect the slow rhythms of daily life; and philosophical concerns with obvious links to European existentialism. Antonioni continued to develop this kind of narrative into the next decade, eventually emphasizing image over narrative storyline.

FEDERICO FELLINI

b. Rimini, Italy, 20 January 1920, d. 31 October 1993

Acclaimed film director, accomplished screenwriter, and cartoonist, Federico Fellini is one of Italy's most celebrated filmmakers. In 1943 he married actress Giulietta Masina, who starred in several of his films.

When World War II ended, Fellini wrote important neorealist screenplays, including Roberto Rossellini's *Roma, città aperta* (*Open City*, 1945)—work that earned him his first Academy Award® nomination, *Paisà* (*Paisan*, 1946) and *L'Amore* (*Ways of Love*, 1948), which contains "Il miracolo" ("The Miracle"); Alberto Lattuada's *Senza pietà* (*Without Pity*, 1948); and Pietro Germi's *Il Cammino della speranza* (*The Path of Hope*, 1950). Subsequently, Fellini launched a series of major works dealing with Italian provincial life that won him international fame, including *Lo Sceicco bianco* (*The White Sheik*, 1952), *La Strada* (*The Road*, 1954), and *Le Notti di Cabiria* (*The Nights of Cabiria*, 1957). The last two films won Oscars® for Best Foreign Language Film. Shortly thereafter, Fellini completed one of the most successful of all postwar European films, *La Dolce Vita* (*The Sweet Life*, 1959), his first collaboration with actor Marcello Mastroianni. The film's title became synonymous everywhere and in numerous languages with the society life depicted by Rome's gossip-column photographers or *paparazzi*, a word Fellini contributed to the English language. Fellini's often imitated but never equaled masterpiece *8½* (1963) cast Mastroianni as Fellini's alter ego and earned a third Oscar® for Best Foreign Film.

Fellini's later films became more personal and thus are linked to the postwar European art film. They deal with such themes as the myth of Rome—*Satyricon* (*Fellini's Satyricon*, 1969) and *Roma* (*Fellini's Roma*, 1971); Italy under fascism—*Amarcord* (1973), a film that won Fellini his fourth Oscar® for Best Foreign Film; and the very nature of art and creativity itself—*E la nave va* (*And the Ship Sails On*, 1983); *Ginger e Fred* (*Ginger and Fred*, 1986); and *Intervista* (*Fellini's Interview*, 1987). As Fellini's art developed beyond his neorealist origins, it began to explore dreams or surrealistic fantasies and to exploit the baroque imagery and sumptuous Cinecittà sets for which his cinema has become justly renowned.

During the last years of his life, Fellini made three television commercials for Barilla pasta, Campari Soda, and the Banco di Roma. They are extraordinary lessons in cinematography and reveal not only his genius, but also his grasp of popular culture. He also exhibited his sketches and cartoons, many of which were taken from private dream notebooks, thus uncovering the source of much of his artistic creativity—the unconscious. Fellini received numerous honors during his lifetime, including twenty-three nominations for Oscars® in various categories (eight of which were successful and four of which were for Best Foreign Film); a special fifth Oscar® for his career achievement (1993); the Golden Lion Career Award from the Venice Film Festival (1985); and dozens of prizes from the world's most important film festivals.

RECOMMENDED VIEWING

Lo Sceicco bianco (*The White Sheik*, 1952), *La Strada* (*The Road*, 1954), *La Dolce Vita* (*The Sweet Life*, 1959), *8½* (1963), *Giulietta degli spiriti* (*Juliet of the Spirits*, 1965), *Satyricon* (*Fellini's Satyricon*, 1969), *Amarcord* (1973), *Intervista* (*The Interview*, 1987)

Fellini's early works also continue an evolution beyond neorealist preoccupation with social problems. In *I Vitelloni* (*The Vitelloni*, 1953), a film to which Martin Scorsese's *Mean Streets* (1973) is deeply indebted as a model, Fellini provided a portrait of six provincial slackers, their miserable daydreams, and their humble existence. Instead of indicting his characters for their limited perspectives, Fellini, as in his later films, focused upon the clash of illusion and reality in the dreary lives of his comic figures. Soon afterward, two masterful films

***Federico Fellini on a crane shooting* Roma, (Fellini's Roma, *1972*).** EVERETT COLLECTION. REPRODUCED BY PERMISSION.

established his international reputation as an *auteur*: *La Strada* (*The Road*, 1954) and *Le Notti di Cabiria* (*The Nights of Cabiria*, 1957). Both works won an Oscar® for Best Foreign Film, and in them both, Fellini moved beyond mere portrayal of provincial life to reveal a new emotional dimension, one motivated by a personal poetic vision and a particular Fellinian mythology concerned with spiritual poverty and the necessity for grace or salvation—concepts that seem to be Catholic but that, in Fellini's works, take on a strictly secular and vaguely existentialist connotation. As Fellini once remarked, he believed the story of one's neighbor was just as important as a narrative about a stolen bicycle (an obvious allusion to De Sica's neorealist masterpiece), and Fellini became the standard-bearer for the transcendence of neorealism by Italian film.

Although he was the neorealist director most directly associated with contemporary events and the use of documentary techniques and nonprofessional actors, Rossellini also joined Antonioni and Fellini in moving Italian cinema toward what he called "a cinema of the Reconstruction," most particularly in a number of films he made with his wife Ingrid Bergman: *Stromboli* (1950), *Europe '51* (*The Greatest Love*, 1952), and *Viaggio in Italia* (*Journey to Italy*, 1953). In each of these important but unpopular films, Rossellini employed one of the most glamorous and famous Hollywood stars in intimate roles that played completely against any traditional treatment of the female movie star in Hollywood, a technique lionized by Rossellini's New Wave fans but rejected by popular audiences as uninteresting.

THE TRIUMPH OF THE INTERNATIONAL ART FILM

In the years between the mid-1950s (when the "crisis" of neorealism had clearly passed) and the mid-1970s (a time of violent social and political upheavals in Italy), the Italian cinema achieved a level of artistic quality, international

popularity, and economic strength that it had never before achieved before and that it would never again reach. Film production continued at well above two hundred films for a number of years, while a prolonged crisis in the American industry reduced Hollywood competition within the domestic market and abroad. Italy could boast a number of distinguished *auteurs* (Antonioni, Fellini, Visconti, De Sica, Rossellini) who were producing their greatest masterpieces. Their films not only fascinated critics and festival audiences but also were highly successful commercially. Such hits as Visconti's *Rocco e i suoi fratelli* (*Rocco and His Brothers*, 1960), *Il Gattopardo* (*The Leopard*, 1962), *La Caduta degli dei* (*The Damned*, 1969), and *Morte a Venezia* (*Death in Venice*, 1971); Fellini's *La Dolce Vita* (*The Sweet Life*, 1959), *8½* (1963), *Satyricon* (*Fellini Satyricon*, 1969), and *Amarcord* (1973); Antonioni's trilogy on modern love *L'Avventura* (1960), *La Notte* (*The Night*, 1961), and *L'Eclisse* (*The Eclipse*, 1962) in black and white and the important color films *Il Deserto rosso* (*Red Desert*, 1964) and *Blow-Up* (1966); and De Sica's *La Ciociara* (*Two Women*, 1960) and *Il Giardino dei Finzi-Contini* (*The Garden of the Finzi-Contini*, 1970) all show highly complex stylistic shifts in films created by four *auteurs* whose origins evolved beyond the simpler neorealist approach of their early work.

De Sica's two films were awarded Oscars® and are highly wrought commercial films, skillful adaptations of literary works that might well have been made in Hollywood. *Two Women* portrayed a woman's horrifying experiences during the war and provided a successful star vehicle for a performance by Sophia Loren (b. 1934) that earned her an Oscar® for Best Actress. *The Garden of the Finzi-Contini* presented a moving portrait of the Holocaust in Ferrara. Both films were far removed from the spirit of the simple storylines about humble people that established De Sica as neorealism's most poetic director. Visconti's films portrayed broad historical themes with lush, opera-like *mise-en-scène*: *The Leopard*, for example, was a pessimistic interpretation of Italy's national unification, while *The Damned* and *Death in Venice* both examined different aspects of German national character from the standpoint of European decadence and modernism. Visconti's films often seem as if they could easily unfold on the operatic stage of La Scala. In Antonioni's films, both those in color and in traditional black and white, photography preempted the central function of traditional plot and character, as his characters came to grips with a sense of alienation and futility in the modern industrial world. Antonioni was particularly brilliant in relating characters to their environments, and he framed his shots as if he were a contemporary abstract painter, asking his audience to consider people and objects as equally important and meaningful.

Fellini's baroque style in *La Dolce Vita*, or his celebration of artistic creativity in *8½*, present broad strokes of fantasy, informed by the analysis of the director's own dreams and his desire to recreate his own bizarre fantasy world. For Fellini, the imagination, rather than reality, had become the cinema's proper domain because only fantasy fell under the director's complete artistic control. Since cinema entailed expression, not the communication of information, its essence was imagery and light, not traditional storytelling. The film *8½* also made an important statement about the nature of film art itself. The harried protagonist of the film, the director Guido, possesses many of Fellini's own traits. The narrative employed by Fellini in this work moved rapidly and disconcertingly between Guido's "reality," his fantasies, and flashbacks to the past of dreams—a discontinuous story line with little logical or chronological unity. Considered by many directors to be the greatest and most original film ever made (*Citizen Kane* may be its only true rival), *8½* has been imitated by directors as different as François Truffaut, Spike Jonze, Joel Schumacher, Woody Allen, Martin Scorsese, Bob Fosse, and Peter Greenaway, not to mention certain episodes of David Chase's TV series *The Sopranos*. *Fellini Satyricon* presented a psychedelic version of the classic novel by Petronius, while *Amarcord* offered a bittersweet portrait of Italian provincial life under fascism, the main characters of which may be considered the parents of the postwar slackers in *The Vitelloni*. *Amarcord* asserted Fellini's belief that Italian fascism displayed the nation's arrested development, its paralysis in adolescence, and the average Italian's wish for a delegation of moral responsibility to others, an unusually ideological position taken by a director who was often criticized for ignoring social problems by his leftist critics.

THE SECOND WAVE: A NEW POST-NEOREALIST GENERATION OF AUTEURS

If Visconti, De Sica, Antonioni, and Fellini dominated the cinema of the period, their international prestige coincided with the rise of an extremely talented group of younger men and women whose early works were indebted to neorealism but characterized by more ideological intentions. The best examples of such works are *Il Vangelo secondo Matteo* (*The Gospel According to Matthew*, 1964) by Pier Paolo Pasolini (1922–1975); *Battaglia di Algeri* (*The Battle of Algiers*, 1966) by Gillo Pontecorvo (b. 1919); *Prima della rivoluzione* (*Before the Revolution*, 1964) by Bernardo Bertolucci (b. 1940); *La Cina è vicina* (*China Is Near*, 1967) by Marco Bellocchio (b. 1939); *Salvatore Giuliano* (1962) by Francesco Rosi (b. 1922);

SOPHIA LOREN

b. Sofia Scicolone, Pozzuoli, Italy, 20 September 1934

Sophia Loren transcended illegitimacy and poverty to become the most famous film star in Italy. After working for Italian pulp magazines, Loren debuted in the movies as an extra in Federico Fellini's *Luci del varietà* (*Variety Lights*, 1950) and then as a slave girl in Mervyn LeRoy's *Quo Vadis?* (1951), shot by MGM in Rome. She first attracted serious attention in a filmed version of the Verdi opera *Aïda* (1953), in which she lip-synched Renata Tebaldi's singing. Loren's busty physique made her one of Italy's most famous *maggiorate* (sweater-girls), along with Gina Lollobrigida and Silvano Mangano.

At first Loren's beauty overshadowed her very real talent as an actress. In Vittorio De Sica's *L'oro di Napoli* (*The Gold of Naples*, 1954), her performance already commands respect. With the help of her husband, producer Carlo Ponti, Loren played a number of Mediterranean roles for Hollywood films, including Stanley Kramer's *The Pride and the Passion* (1957) and Melville Shavelson's *Houseboat* (1958), in which she worked with Cary Grant. In 1957 Loren and Ponti married in Mexico, but Italian divorce law did not recognize the marriage. As a result of marital and financial problems, the couple became the target of Italian paparazzi, and Loren even spent several weeks in an Italian prison in 1982 for tax evasion, a crime that only increased her popularity in Italy.

Loren's Hollywood films with such major stars as Grant, Alan Ladd, Anthony Perkins, and William Holden gave her international visibility. She appeared in both epic costume dramas, such as Anthony Mann's *El Cid* (1961) and *The Fall of the Roman Empire* (1964); in westerns, such as George Cukor's *Heller in Pink Tights* (1960); and in romantic comedies, such as Charlie Chaplin's *A Countess from Hong Kong* (1967) and Robert Altman's *Prêt-à-Porter* (*Ready to Wear*, 1994). No doubt, her Hollywood exposure helped her win an Oscar® for Best Actress in Vittorio De Sica's *La Ciociara* (*Two Women*, 1960), in which she played the courageous mother of a teenaged girl during World War II. Two other De Sica films showcased Loren's talent for film comedy, pairing her with another Italian film icon, Marcello Mastroianni: *Ieri, oggi, domani* (*Yesterday, Today and Tomorrow*, 1962), winner of an Oscar® for Best Foreign Film; and *Matrimonio all'italiana* (*Marriage, Italian Style*, 1964).

Loren delivered the greatest performance of her late career for director Ettore Scola in *Una Giornata particolare* (*A Special Day*, 1977), in which she plays an unglamorous and world-weary housewife in fascist Italy, who falls for Mastroianni, only to discover that he is a homosexual. Loren received two career awards: an Oscar® from the American Academy of Motion Picture Arts and Sciences (1991), and a Golden Lion from the Venice Film Festival (1998).

Il Posto (*The Sound of Trumpets*, 1961) by Ermanno Olmi (b. 1931); *Indagine su un cittadino al di sopra di ogni sospetto* (*Investigation of a Citizen Above Suspicion*, 1969) by Elio Petri (1929–1982); *Padre Padrone* (*Father and Master*, 1977) and *La Notte di San Lorenzo* (*Night of the Shooting Stars*, 1982) by Paolo Taviani (b. 1931) and his brother Vittorio (b. 1929); *Il Portiere di notte* (*The Night Porter*, 1974) by Liliana Cavani (b. 1933); and *Pasqualino Settebellezze* (*Seven Beauties*, 1976) by Lina Wertmüller (b. 1926).

Olmi's touching examination of the loneliness of a young office worker named Domenico in *The Sound of Trumpets* seems closest to the tone of Christian humanism that neorealist films frequently espoused. In its use of nonprofessional actors, its emphasis upon expressive deep-focus shots in office interiors, and its concentration

upon moments of crisis in the protagonist's life where film time coincides with elapsed narrative time, this simple masterpiece owed an obvious debt to De Sica. Olmi's *L'Albero degli zoccoli* (*The Tree of the Wooden Clogs*, 1978), one of many examples of successful films financed by Italian state television Radiotelevisione Italiana (RAI), an increasingly important source of funding for major Italian works or for co-productions with other national cinemas, returned to a neorealist recreation of peasant life on a farm near Bergamo at the turn of the nineteenth century, employing nonprofessional peasants from the area who speak their local dialect. Its three-hour length allowed Olmi to recreate the slow rhythms of life in a pre-industrial peasant culture much as Visconti did earlier in *The Earth Trembles*.

In contrast to Olmi's simple touch, Rosi moved beyond neorealist presentation of nonrhetorical facts to what he termed a "documented" method of making films. *Salvatore Giuliano* was less a work of fiction than an investigation (*inchiesta*) into the ambiguous historical circumstances surrounding a Sicilian bandit whose career, under the director's close scrutiny, reflected the machinations of the Christian Democratic party, as well as the Mafia. Rosi combined a documentary style with a series of ingenious flashbacks to present a legal brief against Italian political institutions. It was the first of many Italian political films with an anti-establishment tone that appeared during the next two decades. He continued the richly documented briefs against the political system that he began with *Salvatore Giuliano* in a series of excellent works: *Lucky Luciano* (1974) was a probing look into the link between American politicians and the rise of the Mafia in Sicily; *Cadaveri eccellenti* (*The Context*, 1976) contained a chilling Kafkaesque parable about the connection between political power and corruption in Italy, adapted from the novel *Il Contesto* by Leonardo Sciascia, where the image of the Mafia is transformed into a universally comprehensive metaphor for corrupt, absolute power everywhere in the world. Most indebted to the simple storylines of neorealist narrative was Rosi's *Tre fratelli* (*Three Brothers*, 1981), a view of contemporary Italian life seen through the lives of three brothers who return to southern Italy for the funeral of their mother.

Like Rosi, Pontecorvo employed a documentary style in *The Battle of Algiers*, with a narrative structure that used flashbacks and flash-forwards to provide critical commentary on the "facts" the film presents. His careful recreation of a case history of Third World revolution owed an important debt to the style of Rossellini in his early war films and employed a variety of techniques—highly mobile, hand-held cameras employing fast film stock; telephoto lenses common in television news reporting; duplicating the negative of the film in the lab to reproduce the grainy, documentary texture of *Paisan*—to produce a hybrid style indebted not only to Rossellini's photography but also to Eisenstein's special form of ideological montage. Rossellini's neorealist model may also be discerned in *Father and Master* and *Night of the Shooting Stars* by the Taviani brothers. The first work was based upon an autobiographical account of how an illiterate Sardinian shepherd struggled to become a professor of linguistics. The acquisition of standard Italian thus became a metaphor for the acquisition of full citizenship in modern Italian society. *The Night of the Shooting Stars* is a postmodernist reinterpretation of Italian neorealism, a remake of Rossellini's *Paisan*. The Taviani brothers set Rossellini's realistic depiction of the meeting of American GIs and the partisan Resistance during World War II within a child's world of fantasy and imagination.

Although Bertolucci, Bellocchio, and Pasolini were indebted to Rossellini, they were also influenced by the aesthetics of Berthold Brecht (1898–1956) and the cinematic practice of Jean-Luc Godard and the French New Wave. Their relationship to their neorealist heritage was therefore far more ambiguous than might be suggested by

The self-reflexive world of imagination in Federico Fellini's* 8 ½ *(1963). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

simple influence. Pasolini accepted many of the features of neorealism—nonprofessional actors, on-location shooting, contemporary themes, natural lighting—but rejected any attempt to create naturalist cinema that would ignore the mystery of life embodied in religion. He described his love for reality as "philosophical and reverential," not naturalistic. For Pasolini reality included mythology, religion, and dream. The style he developed in *The Gospel According to Matthew*, a biblical film made by a Marxist atheist, can be best described as pastiche, mixing the most disparate cultural and thematic materials. Nothing is more striking about this highly original work than its editing and sense of rhythm, for it is with a continuous process of rapid cuts and the juxtaposition of often jarring images that Pasolini forces us to experience the life of Christ through a new perspective. In his later films, such as *Medea* (1969) or *The Decameron* (1971), Pasolini moved beyond any simple neorealist vision of society and employed literary texts as platforms to launch his theories about how modern capitalist societies have destroyed the virtues of his beloved lower class characters from non-industrial and economically underdeveloped cultures. In the first film, he interpreted Euripides's play as a mythic portrait of the exploitation of the preindustrial regions of the Third World (Medea's world) by Western capitalism (Jason's world). In the second film, Pasolini transformed Boccaccio's panoramic portrait of Florentine middle-class, mercantile culture into an amusing portrayal of the way in which the sexual freedom enjoyed by lower class types from Naples represents a form of human liberation not possible in modern industrialized society.

Bertolucci and Bellocchio presented a fresh view of Italian politics in their youthful works. With *Before the Revolution* Bertolucci adapted Stendhal's *The Charterhouse of Parma* in a poetic and highly lyrical study of a young bourgeois intellectual from Parma who toys with Marxism and eventually prefers a safe, middle-class marriage to revolution or an incestuous love affair with his aunt. Fabrizio, the protagonist of the film, is clearly a reflection of many of Bertolucci's own personal concerns, and like

Bertolucci, he suffers from the "nostalgia for the present." He lives in an era *before* the revolution and is doomed, like so many of Bertolucci's characters, to embrace the coming workers' victory but never to take an active role in it. Bellocchio's artistic perspective is angry and provocative rather than lyrical and elegiac. While Bertolucci's Fabrizio retreats into the protective womb of the Italian family, *China Is Near* attacked the very institution of the family itself, as Bellocchio portrayed a thoroughly dislikable middle-class family in a satire of Italian political corruption. The result was a political allegory attacking the historic compromise between the right and the left in Italy, viewed from the microcosm of a small, provincial family. Bertolucci's *The Conformist* (1970), perhaps his most beautiful work, employed a complicated plot with frequent flashbacks and reliance upon psychoanalytic theories indebted to Wilhelm Reich on the link between homosexuality and fascism, to analyze the birth of a fascist mentality. Bertolucci's mature grasp of his craft was evident in the famous tango scene between two women, with its quickly shifting camera angles, positions, graceful motions, and skillful editing. Bertolucci's controversial *Last Tango in Paris* (1972) continued his exploration of psychoanalytic themes, with a masterful performance by Marlon Brando as an American expatriate who has a deadly love affair with a young girl in Paris.

Elio Petri's *Investigation of a Citizen Above Suspicion*, blending an ideological message with suspense and slick commercial presentation, was awarded an Oscar® for Best Foreign Film. It combined the generic conventions of a police thriller with those of a more abstract, philosophical parable in the manner of Kafka. Like the film inquiries of Rosi, Petri's cinema aimed at a fundamental critique of Italian political power. Two Holocaust films by Cavani and Wertmüller presented radically different views of Nazi concentration camps, the most extreme form of political power ever exercised. In *The Night Porter*, Cavani narrated a controversial story about a female camp inmate who has an affair with a Nazi officer and then reunites with him years later in a sadomasochistic love affair ending in death in postwar Vienna. It is, as the Nazi says, a "Biblical" story, because the young woman asked for the head of another inmate who was annoying her and then danced nude for her Nazi lover in imitation of Salomé. In an entirely different and comic vein, Wertmüller's *Seven Beauties* (1975), for which she received the first Oscar® nomination for a female director, moves in from wartime Nazi Germany to prewar Fascist Italy (Naples). Its main character is a Neapolitan dandy who lives by his wits but whose nefarious deeds eventually cause him to be sent to the eastern front and ultimately to a concentration camp. There, in order to survive, he desperately seduces the obese commandant of the camp, who then forces him to murder his best friend in order to save his own life. Wertmüller's film thus portrays a man whose sole reason for living is to survive, even at the expense of neglecting all moral values. Both *The Night Porter* and *Seven Beauties* explored the moral implications of survival in the evil world of the Gunskirchen Lager concentration camp.

THE *COMMEDIA ALL'ITALIANA*: SOCIAL SATIRE AND CULTURAL CRITICISM

Much of the Italian film industry's success during its most prosperous years was based upon the popularity of film comedies, the *commedia all'italiana*. These genre films were dominated by some excellent commercial directors who acquired auteur status by virtue of their comic genius: Mario Monicelli (b. 1915), Luigi Comencini (b. 1916), Dino Risi (b. 1916), Ettore Scola (b. 1931), and Wertmüller. Furthermore, these directors enjoyed the collaboration of great scriptwriters, such as Age (Agenore Incrocci [1919–2005]), Furio Scarpelli (b. 1919), Tullio Pinelli (b. 1908), and Scola himself. These directors and scriptwriters had at their disposal a troupe of great comic actors and actresses no national cinema outside Hollywood could match: Alberto Sordi, Vittorio Gassman, Marcello Mastroianni, Nino Manfredi, Ugo Tognazzi, Claudia Cardinale, Sophia Loren, Monica Vitti, and Stefania Sandrelli. Once denigrated by Italian leftists as merely "commercial" films without artistic pretensions, Italian comedies often contained more trenchant social criticism than the more acceptable ideologically oriented "art" films of the period. The many excellent works produced from the late 1950s to the end of the 1970s provide an accurate mirror of changing Italian customs and values. They helped to force the average Italian into a greater awareness of conflicting values, by attacking age-old prejudices and questioning the inept rule of governing elites and institutions. They often embodied a black, grotesque vision of contemporary Italian society, and the laughter in these works was bittersweet.

The film that best reflected the combination of comedy and social criticism typical of the *commedia all'italiana* was Germi's *Divorce, Italian Style* (1961). Made before Italian law admitted legal divorce, Germi's satire of Sicilian sexual mores chronicled the comic attempts of a Sicilian nobleman to force his hated wife into adultery, so that he can murder her, receive a light sentence for a crime of honor (hence the film's title), and marry his mistress. Utilizing a complex narrative juxtaposing the director's critical view of this affair with the Sicilian's biased justification of his misdeeds, Germi recreated the oppressive atmosphere of Sicilian provincial life that forces men and woman to commit violent crimes

LINA WERTMÜLLER

b. Arcangela Felice Assunta von Elgg Spagnol von Braueich, Rome, Italy, 1928

After an early career as an actress and puppeteer, Wertmüller encountered Federico Fellini and worked as his unaccredited assistant on *8½*. Immediately afterward, she directed her first feature film, *I Basilischi* (*The Lizards*, 1963), a work that recalls Fellini's *I Vitelloni* (*The Young and the Passionate*, 1953) in its focus upon provincial slackers. After making several comedies under the name George H. Brown featuring singer Rita Pavone and actor Giancarlo Giannini—*Rita la zanzara* (*Rita the Mosquito*, 1966) and *Non stuzzicate la zanzara* (*Don't Sting the Mosquito*, 1967) that met with some success at the box office—Wertmüller made the spaghetti western, *Il Mio corpo per un poker* (*The Belle Starr Story*, 1967).

Her international renown came about because of five incredibly popular political comedies that introduced the pairing of Giannini and Mariangela Melato. *Mimì metallurgico ferito nell'onore* (*The Seduction of Mimi*, 1972), a farce about sex and politics, made the two performers famous, and the subsequent *Film d'amore e d'anarchia* (*Love and Anarchy*, 1973) was a box-office sensation. *Travolti da un insolito destino nell'azzurro mare d'agosto* (*Swept Away*, 1975) aroused the ire of many feminists. This comedy of a rich woman abandoned on a deserted island with a member of the Italian proletariat and their subsequent love affair still arouses passions. A comparison of Wertmüller's *Swept Away* with the embarrassing 2002 remake underscores the quality of Wertmüller's early comic films. Wertmüller's cinematic style was influenced as much by popular Italian culture as by the cinema: a love for puppetry and the *commedia dell'arte* tradition informs her films, most of which employ stereotypical comic figures to criticize society.

Wertmüller's masterpiece, *Pasqualino Settebellezze* (*Seven Beauties*, 1976), which combined political comedy with a dark vision of the Holocaust, received the first Academy nomination for Best Director bestowed on a woman.

Following the unparalleled critical and commercial success of this film, Wertmüller signed a contract to direct English-language films, but her international popularity fell off dramatically with the appearance of *La Fine del mondo nel nostro solito letto in una notte pienad pioggia* (*A Night Full of Rain*, 1979). Subsequent Italian-language films—*Fatto di sangue fra due uomini per causa di una vedova* (*Blood Feud*, 1978), *Scherzo del destino in agguato dietro l'angolo come un brigante da strada* (*A Joke of Destiny*, 1983), *Io speriamo che me la cavo* (*Ciao, Professore!*, 1993), and *Metalmeccanico e parrucchiera in un turbine di sesso e di politica* (*The Worker and the Hairdresser*, 1996)—demonstrated her combination of politics and humor but never matched the popular and critical success of her 1970s films. Besides work in the cinema, Wertmüller has directed operas and made films for Italian television. Since 1988, she has served as an administrator at Centro Sperimentale di Cinematografia, the film school in Rome.

in order to obtain sexual fulfillment. Another excellent example of *commedia all'italiana* was *Bread and Chocolate* (1973) by Franco Brusati (1922–1993), a grotesque indictment of the conditions experienced by Italian "guest workers" in Switzerland. Perhaps the most interesting comic director was Ettore Scola, who began working in the cinema as a scriptwriter on dozens of comic films produced in the 1950s and the early 1960s. In *We All Loved Each Other Very Much* (1974), *Dirty, Mean and Nasty* (1976), and *The Terrace* (1980), Scola employed a

sophisticated metacinematic narrative (a narrative about movie making) to treat the history of Italian cinema itself, examining not only the heritage of neorealism (especially his model Vittorio De Sica) but also the assumptions of *commedia all'italiana*. *We All Loved Each Other Very Much* was the most complex of these films, combining a consideration of the many social and political changes Italy has undergone since the fall of the Fascist regime with an equally comprehensive survey of major developments in the history of postwar Italian film. *Dirty, Mean, and Nasty* presented a humorous remake of De Sica's proletarian fairy tale, *Miracle in Milan* (1950). However, Scola completely altered De Sica's fanciful utopian shantytown and his happy poor, for in Scola's contemporary shantytown every positive characteristic of the poor in De Sica's classic work is reversed. Instead of patient, long-suffering, and downtrodden people, Scola shows us vicious, brutish, mean, and nasty individuals without any redeeming moral values who have become what they are because of a desperate economic system. In *The Terrace* Scola examined the genre so crucial to his own career as a director and scriptwriter, the *commedia all'italiana*, continuing his metacinematic examination of Italian film history by questioning the very possibility of making film comedies.

With a style indebted to Fellini's baroque imagery, Italy's commedia dell'arte, and a political perspective critical of contemporary Italian society, Lina Wertmüller established herself in the 1970s as Italy's most important female director. Her best works were all typical of the *commedia dell'italiana* genre: *The Seduction of Mimi* (1971); *Love and Anarchy* (1972); *Swept Away* (1974); and her previously discussed masterpiece, *Seven Beauties*. Wertmüller's comedies, filled with stock characters and presented with the typical vulgarity of traditional Italian slapstick farce, treated controversial political subjects, such as feminism, women's rights, working-class chauvinism, and the opposition of love and anarchy, with grotesque humor. They frequently highlighted the acting talents of a pair of brilliant comedians, Giancarlo Giannini (b. 1942) and Mariangela Melato (b. 1941). Other important examples of this genre include four films by Monicelli: *Big Deal on Madonna Street* (1958), a parody of a bank robbery film; *The Great War* (1959), a satirical attack on

Sophia Loren and Marcello Mastroianni in* Yesterday, Today, and Tomorrow *(Vittorio de Sica, 1963), a comic look at Italian sexual mores. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

patriotism; *The Organizer* (1963), a very funny account of a Socialist labor organizer; and *My Friends* (1975), a classical hilarious collection of cruel Tuscan practical jokes played on stupid people. Equally well-crafted works containing interesting social commentary may be found in Comencini's *Everybody Home!* (1960), a comedy about Italy's withdrawal from World War II; and in two works by Risi: *The Easy Life* (1962), a portrait of postwar Italian cynicism, and *The March on Rome* (1962), a send-up of a fanatic believer in Mussolini who persists even after the fall of Il Duce's regime.

KINGS OF THE Bs: ITALIAN GENRE FILMS

Between the mid-1950s and the 1970s, the Italian film industry produced an enormous number of genre films. The first of these specifically Italian versions of themes more often identified with Hollywood than with Rome was the sword-and-sandal epic, also called the neomythological or peplum film, accounting for 10 percent of Italian production between 1957 and 1964. *Hercules* (Pietro Francesci, 1958) gave birth to a flood of muscle-men pics with body-builders (often Americans, such as Steve Reeves or Gordon Mitchell) playing the lead roles and bearing the classically associated names of Hercules, Maciste, Ursus, Spartacus, and Samson, to name only a few. Perhaps the most skilled of the directors who worked in this genre was Vittorio Cottofavi (1914–1998), whose *The Warrior and the Slave Girl* (1958) and *Hercules and the Conquest of Atlantis* (1960) are classic examples of the genre. Set vaguely in classical times and populated by mindless musclemen and buxom damsels in distress, these works appealed to a predominantly male audience that thrived on violent action and strong, anti-intellectual heroes. The genre flourished during the 1960s and then again briefly in the 1980s, but its production values were far removed from similar works

made in Hollywood, and these films rapidly became cult favorites and the butt of jokes on *Saturday Night Live* satirical skits, which poked pun at the cheap dubbing that allowed actors to speak without moving their lips and to fall silent when they did move. In Italian film history, such films made conscious reference to the far older tradition of silent film epics, such as *Cabiria*.

The other remarkably successful commercial genre during this period was the ''spaghetti'' western, dominated by a great director, Sergio Leone (1929–1989), who virtually revived a dead Hollywood genre with *A Fistful of Dollars* (1964) by a conscious departure from what had come to be known as the ''classic'' western formula. Leone's film owed a debt both to Akira Kurosawa's *Yojimbo* (1961) and to Carlo Goldoni's play *The Servant of Two Masters* (1945). The Stranger, or The Man with No Name (a part that was to make Clint Eastwood an international star), leaves prison and cleans up a border town infested by two rival families: American gunrunners and Mexican bootleggers. Leone plunges his audience into a violent and cynical world far removed from the traditional West of John Ford or Howard Hawks. His hero is motivated by the same greed as the evil bandits, and graphic violence is accompanied by grotesque comic gags and mannered close-ups indebted to Eisenstein. A crucial artistic element is the skillful music of Ennio Moricone (b. 1928), whose unusual sound track composed of gunfire, ricocheting bullets, cries, trumpet solos, Sicilian folk instruments, and whistles became an international best-selling record. The classic western gunfight became, in Leone's hands, a ritualistic act that concludes a narrative cycle and employs a crescendo of music not unlike the close of an aria in a grand opera. This international hit was followed in close order by four other films of the highest quality: *For a Few Dollars More* (1965), *The Good, the Bad, and the Ugly* (1966), *Once Upon a Time in the West* (1968), and *Duck, You Sucker!* (1971). The link between popular film genres in the Italian industry may be discerned from the fact that Leone's first film before he began making his westerns was a colossal peplum, *The Colossus of Rhodes* (1961), no doubt inspired by the success of the Hollywood production of *Ben Hur* filmed in Italy in 1959. More than a few links exist between the musclemen of the peplum and the strong, silent gunfighters of the spaghetti western. Between 1963 and 1973, over four hundred Italian westerns were produced, but none of them had the impact of Leone's works or were made with the same high production values and fine acting. Like the peplum genre, the lesser Italian westerns followed a formulaic pattern, focusing upon a single gunfighter hero, such as Sabata, Django, Ringo, Sartana, and Trinity. Eventually, the genre began to parody itself in such interesting films as *My Name Is Nobody* (Tonino Valerii, 1973); or to incorporate radical political themes, such as *A Bullet for the General* (Damiano Damiani, 1966) or *Don't Touch the White Woman* (Marco Ferreri, 1975). Again, as was the case with the peplum film, the high-water mark of this genre was reached within approximately a decade.

Another popular and low-budget genre that generated enormous profits for the industry and, like the peplum and the western, became an object of cult attention, was the so-called spaghetti nightmare or Italian horror film, often also called the *giallo* (the name being derived from the yellow covers that Italian publisher Mondadori employed on their mystery novel series). Pioneers in this genre were Mario Bava (1914–1980), Lucio Fulci (1927–1996), and Riccardo Freda (1909–1999), whose directorial debut, *Black Sunday* (1960), turned little-known British actress Barbara Steele into a cult-figure ''scream queen.'' Perhaps the most highly regarded horror director is Dario Argento (b. 1940), whose successful works include *The Gallery Murders* (1970), *The Cat o' Nine Tails* (1971), *Deep Red* (1975), and *Suspiria* (1977). Argento's work combined the excessive gore and splatter violence of the traditional B-horror film with extremely elaborate and baroque visual settings. Because of the praise these spaghetti horror films have received from American directors Quentin Tarantino, George A. Romero, and John Landis, as well as writer Stephen King, the best and the worst representatives of this Italian genre remain popular and still command cult followings even larger than those that exist for the peplum or the spaghetti western.

THE DECLINE AND FALL: THE MID-1970s TO THE END OF THE CENTURY

The international success of Bertolucci's *Last Tango in Paris* and Fellini's *Amarcord* may mark the high-water mark of Italian cinema's commercial and artistic success. From the dawn of Italian neorealism to the beginning of the 1970s, Italian cinema was universally regarded as one of the most original and innovative national cinemas, often rivaling Hollywood in its artistic achievements if not always in its commercial success. Subsequently, in 1976 both Bertolucci and Fellini attempted big-budget films, romantic epics more typical of Hollywood productions, the former with *1900*, a historical treatment of the rise of Italian socialism with touches of *Gone With the Wind*, and *Fellini's Casanova*. In spite of their undeniable qualities, neither lived up to expectations. Leone attempted the same leap from Italian production norms to Hollywood blockbuster standards with *Once Upon a Time in America* (1984), challenging the association of American gangsters with Italians by telling the story of Jewish gangsters. Finally, with *The Last Emperor* (1987),

Giancarlo Giannini and Shirley Stoller in Lina Wertmüller's* Pasquelino Settebellezze *(*Seven Beauties*, 1976). **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

Bertolucci scored a bulls-eye, winning nine Oscars® for his epic portrayal of the Emperor of China who eventually becomes a simple citizen and dies during Mao's Cultural Revolution. But the artistic merits of such films could not detract from the air of crisis circulating throughout the industry. Gradually the old lions, the great art film directors, disappeared one by one or simply ceased making interesting films; the economically profitable genre films, such as the peplum, western, or horror film, dried up and became no longer events at the box office but cult collectors' items on video and DVD. International co-productions, such as *Last Tango* or *The Last Emperor*, to cite only the most profitable examples by Italian directors, raised the embarrassing question of whether such films ought to be considered really "Italian" or whether they were more accurately to be labeled as Eurofilms.

Talented Italian directors, actors, and technicians did not disappear (indeed, there was a migration of Italian cameramen, makeup artists, special effects people, and set designers to Hollywood during this period). But Italian film theatres began to close: in 1985, almost 5,000 theatres existed; by 1998, that number was reduced to 2,600. Basically, individual great films continued to be produced, but these films were created within an industry that had become increasingly weaker. In the mid-1970s, Italian-produced films controlled approximately 60 percent of its home market, but by 1993, that figure had dropped to 13 percent. During the 1990s, some 140 to 180 Hollywood films circulated in Italy as opposed to around 100 Italian films, but the Hollywood products gained almost 75 percent of the market share. In 1999, the year that witnessed the international success of *Life Is Beautiful* by Roberto Benigni (b. 1952), only 14 percent of Italian production had any life at the box office at all; many were never distributed or were only screened in ten cities or less. In spite of this depressing situation, Italian films continued to produce some authentic gems in spite of its weak industrial base and the dearth of energetic and skillful producers.

THE THIRD WAVE: A NEW GENERATION FOR THE TWENTY-FIRST CENTURY

A third generation of Italian directors is slowly appearing as younger artists begin to test their strength at the box office and at international film festivals. Their success may well hold out the promise of another Italian "Renaissance" in the cinema in the new century. This group may be described as the "postmodern" generation,

since their works so often cite other films in the Italian or Hollywood cinematic traditions. Such new faces include Benigni; Gianni Amelio (b. 1945), Maurizio Nichetti (b. 1948), Nanni Moretti (b. 1953), Giuseppe Tornatore (b. 1956), Gabriele Salvatores (b. 1950), Silvio Soldini (b. 1958), Marco Tullio Giordano (b. 1950), Giuseppe Piccioni (b. 1953), Gabriele Muccino (b. 1967), and Ferzan Ozpetek (1959). Benigni's *Life Is Beautiful* combined comic techniques learned from Charlie Chaplin's *The Great Dictator* (1940), Fellini's visual style, and Wertmüller's *Seven Beauties* to create a moving but tragicomic vision of the Holocaust. Nichetti married visual techniques learned from television advertising with a parody of De Sica's neorealist classic *Bicycle Thieves* in *The Icicle Thief* (1989). Giuseppe Tornatore's *Cinema Paradiso* (1989) owed much to both Fellini's example and the history of Italian cinema, and like Scola's *We All Loved Each Other Very Much,* it viewed contemporary Italy through the prism of the cinematic past, garnering an Oscar® for Best Foreign Film and enormous audiences all over the world in the process. Salvatores's *Mediterraneo* (1991), another recent Oscar® winner for Best Foreign Film, employed formulas from the *commedia all'italiana* (particularly the satires of patriotism in *The Great War* and *Everybody Home!*) to produce a funny account of inept Italian occupiers of a Greek island in World War II. Salvatores's most recent *I'm Not Scared* (2003) has been widely praised as a moving thriller. Nanni Moretti is perhaps the most idiosyncratic and most talented of this entire generation, producing bittersweet comic works that are closer to film essays than to fictional films. His *Dear Diary* (1994) won the Grand Prize at the Cannes Film Festival: it combined ideas about simple storylines from Zavattini's neorealist theory, political ideas from Pasolini's work, and Fellini's choice of the "mockumentary" genre form. His more recent work, *The Son's Room* (2001), the winner of the Palme d'Or at Cannes, moved from Moretti's usual egocentric but sympathetic narcissism to treat the devastating effects of a young boy's loss on his parents. Piccione's *Not of This World* (1999); Muccino's *The Last Kiss* (2001) and *Remember Me, My Love* (2003); and Soldini's *Bread and Tulips* (2000) are all worthy successors to the glorious *commedia dell'italiana* tradition. Monica Stambrini's *Gasoline* (2001), a lesbian thriller that was a hit at various film festivals around the globe, may be the debut of another Italian feminist director that is even more outrageous than Lina Wertmüller and as equally talented. A number of excellent works by Gianni Amelio—*Open Doors* (1970), *The Stolen Children* (1992), *Lamerica* (1994), and *The Way We Laughed* (1998)—and by Marco Tullio Giordano—*One Hundred Steps* (2000) and *The Best of Youth* (2003)—all offer eloquent testimony that Italian cinema's penchant for social realism has not disappeared.

Perhaps the most unusual of the new faces to appear on the horizon is Turkish-born director Ferzan Ozpetek, whose films are resolutely Italian in character, language, and style but whose Levantine origins are also apparent in their themes: *The Turkish Baths* (1997), *Harem* (1999), *His Secret Life* (2001), and *Facing Windows* (2003). His ability to work within the Italian film industry while coming from another national culture recalls the success of another recent Italian hit with an international flavor, *Il Postino—The Postman* (1994), directed by non-Italian Michael Radford. Incorporating a moving performance by a dying Italian comic star, Massimo Troisi (1953–1994), *Il Postino* was Italian in every conceivable respect but its director's nationality. Perhaps one way Italian cinema may survive into this new century is to become more international and less deeply rooted in native traditions of cinematic art. But such a globalization of Italian cinema would deprive the world of one of the most original and unique film traditions to have arisen in the century-old existence of the cinema.

JAPAN

The Japanese cinema was the first of the great East Asian cinemas to make its way out of the local and into the global. As early as the 1930s one finds Japanese co-productions with Germany, such as *Atarashiki tsuchi* (*The New Earth*, 1937), while Japanese films were winning awards at the Venice International Film Festival in that same decade. Of course, these co-productions and festival appearances link Japan with its wartime Axis allies. Still, though, it indicates Japanese desires for an international presence in the world of cinema. This cinematic globalism is in keeping with Japan's more sinister and tragic desires for a global presence among the imperialist powers starting in the late nineteenth century. It may be no surprise, therefore, to find that Japan—the first East Asian world power of the modern era—is also the first East Asian world cinematic power. Its interest in competing with the advanced industrial nations for a cinematic presence both locally and globally was very much in keeping with its desires for territories and colonies. It is no coincidence, then, that very early in the twentieth century, a popular subject for Japanese films was the Russo-Japanese War (1904–1905), and that both documentary and fiction filmmaking were central to Japan's war efforts in the Pacific theater of the 1930s and 1940s, whether celebrating Japan's early victories against the United States or continuing propaganda efforts to convince citizens at home and abroad of the essential justifications for Japan's conquests. At the same time that these cinematic celebrations of war and conquest were being produced, Japan also created a cinema of unique beauty and sensitivity, and it is these films, made just prior to World War II and in the postwar era, for which the Japanese cinema is famously and justifiably celebrated.

EARLY DEVELOPMENTS

As in the rest of Asia, the Japanese were introduced to the cinema through the cameras and cameramen of the globe-trotting Lumière Brothers Company. Film came to Japan in 1897 with the Japanese still flush with victory from the Sino-Japanese War (1894–1895), the first mark that the Japanese campaign of modernization (which meant in some measure increased industrialization and westernization) was working to make Japan an equal member of the European new world order. The Russo-Japanese War (1904–1905) was the culmination of this initial phase of societal transformation. Along with increased industrialization and the need for Western-style higher education came increased urbanization, an influx of people into Japan's already rather impressively populated urban centers such as Tokyo and Osaka—moves that proved particularly useful for the growth and development of the new urban entertainment form known as the cinema. This introductory phase of the cinema found Japan the object of the Western gaze as the Lumière cameramen turned an Orientalist eye on Japanese life. As the Japanese themselves began to shoot motion pictures—they began their own efforts around 1898 and by 1900 were manufacturing their own projectors modeled on the Edison machines—it seems inevitable that they, too, would shoot with an eye for the exotic, the uniquely Japanese. This seems a twofold strategy: to see themselves through the eyes of the West, to give the West back an image of Japan created in the West's image through its own technology, but also to begin that process of Nihonjinron (the study of the essence of "Japaneseness"), which would culminate in the actual promulgation not only of specific laws regarding

the content of film, but actual invocations to create a kind of intrinsic or idealized Japan as the 1930s gave way to the 1940s and the expansion of the Pacific War. Even into the modern era, debates over what is (and what therefore is not) "typically" Japanese have continued to swirl around films and filmmakers working in this contested terrain.

The earliest films of geisha dances, popular street scenes, and other bits of exotica were typically exhibited at fairs or in traditional amusement districts in Tokyo, Osaka, and Kyoto. This pattern quickly asserted itself, and by the middle of the first decade of the twentieth century, film in Japan had become primarily an entertainment-oriented, commercial enterprise whose appeal was largely to the urban working and lower-middle classes. With the rapid growth of the larger cities during this period, there was an ample audience not only of the working and middle classes, but also of young people. In other words, the movies could not have asked for a more perfect situation in which to insert itself, and indeed, before too long permanent theaters were built to accommodate film, and companies arose that specialized in the production of motion pictures. The Kinki-kan was converted from live theater to film in 1900, while in 1903 the Denki-kan became the first theater built specifically for film. The Yoshizawa Company, which had started as an equipment manufacturer and turned to production with proto-documentaries at the turn of the century, built a film studio in Tokyo in 1907. At this same time, the Yokota Company began its foray into fiction filmmaking, so that by the end of the first decade of the twentieth century, Japanese cinema was actively engaged in producing and exhibiting films for an increasingly voracious audience. The innovations of the M Pathé Company in 1905—larger theaters, uniformed usherettes, higher admission prices, and the establishment of a trust organization that merged the four top production companies, leading to the formation of Nikkatsu Studios—set the tone for the monopolistic practices that helped the Japanese cinema grow and develop along organized Fordist models of mass production, economies of scale, and contract labor.

Films of this era generally fell into two dominant modes: Kabuki stories and (semi- or pseudo-) documentaries. The Chinese Boxer Rebellion (1898–1900) and, especially, the Russo-Japanese War gave Japanese audiences a chance to explore the world around them with the satisfied air of newly modernized global citizens. It has been claimed that approximately 80 percent of all films made and released in Japan in 1905 were devoted to the Russo-Japanese War, but as the war faded from immediacy, the number of such films dropped. But it is arguable, too, that they dropped because audiences preferred the increasingly sophisticated storytelling of the Kabuki-derived dramas. Certainly that unique institution of the Japanese cinema, the *benshi* (or *katsuben*), derives from this moment with its roots in Kabuki and Bunraku (puppet) theater. Along with the usual musical accompaniment, this narrator, who explained the film, provided live, almost synchronized dialogue, filled in narrative gaps, and otherwise added an audio component to the visuals, giving Japanese cinema a full, multimedia presentation. Kabuki-derived stories gave audiences a chance to see famous actors recreate portions of their well-known roles and even allowed the development of the *rensa-geki* (chain dramas), which integrated filmed portions into live theatrical entertainments.

If the reliance on *rensa-geki* was short-lived as films got a bit longer and audiences became more willing to experience film for its own sake, the *benshi* became virtually institutionalized. Some argue that the relative lateness of sound's arrival in the Japanese cinema (1931) and audiences' willingness to continue to patronize so-called silent cinema was owed to the popularity of the *benshi*, as well as to their numerical strength. In 1927 there were, for example, over seventy-five hundred registered film narrators—testimony to both their popularity and clout. For commentators as otherwise different as Nöel Burch and Joseph L. Anderson, the *benshi* is in many ways the primary reason that the Japanese cinema developed unique storytelling procedures, shooting styles, and pacing. Certainly, it endowed the Japanese cinema with an available tradition where psychological realism and tightly controlled plotting give way to a series of intense scenes and revealing moments; of narrative ellipsis; flat staging; and, for all that, longer films that reproduce the pacing and techniques of Kabuki and Bunraku. Naturally, there are other traditions of Japanese art and culture from which the cinema has drawn, including the novel and painting, but some might argue that a good deal of Japanese cinema's uniqueness stems from this theatrical orientation.

The theatrical orientation of early Japanese cinema extended importantly into the 1920s with the rise of the *shimpa* (new) theater and its frequent adaptation into the cinema. Both Kabuki and *shimpa*, and so, too, the cinema, relied on so-called female impersonator actors (*onnagata*) to play women's roles. But such a convention began to break down with the more intimate presentation of the cinema; the gradual introduction of close-ups; and competition, so to speak, from the naturalist theater known as Shingeki (New Theater). The dominant mode of *shimpa* was the melodrama, a genre that, by definition, may be said to foreground women and women's issues, and so the use of *onnagata* actors became increasingly untenable. Actor-directors trained in Hollywood, such as Kisaburo (aka Thomas) Kurihara (1885–1926), also helped divorce Japan from this particular theatrical

mode, so that after 1922, with the success of *Rojo no reikon* (*Souls on the Road*, 1921), the days of the *onnagata* on film were numbered (though the tradition still continues in Kabuki).

In the early 1920s, Shochiku Studios arose as the primary competitor to Nikkatsu. Relying on Hollywood-style production practices, eliminating the *onnagata*, and producing *shimpa*-style melodramas in order to attract working-class and middle-class women, Shochiku took the competitive edge over Nikkatsu, which specialized in Kabuki-derived action and swordplay movies. It might be said that here lie the origins of Japan's two cinematic mega-genres, the *jidai-geki* (period play) and *gendai-mono* (modern story), although it is true that the Kabuki theater utilizes the same basic divisions. With stars like Matsunosuke Onoue in the 1910s and, even more importantly, Denjirô Ôkôchi (1898–1962) under the direction of Daisuke Ito (1898–1981) at Nikkatsu and Tsumasaburo Bando (b. 1950) working for Shozo Makino (1878–1929) and his son Masahiro Makino (1908–1993), the *jidai-geki* became a foundational genre for the Japanese cinema—a status it would retain well into the 1970s.

But it was in the realm of the *gendai-mono* and its numerous subgenres, such as the tendency film (or *keiko eiga*, which depicts contemporary social problems and issues treated from a generally leftist perspective), the *nansensu* (nonsense) comedies, and especially the *shomin-geki* (stories of the lower-middle class), that the Japanese cinema truly flourished, for it was here that most of the great actors, actresses, writers, and directors of the day made their mark on world cinema history.

THE FIRST GOLDEN AGE

Sound came to the Japanese cinema in 1931 with Heinosuke Gosho's (1902–1981) *Madamu to nyobo* (*The Neighbor's Wife and Mine*), but other masters of the Japanese cinema continued working in silent film into the middle of the decade. But whether silent or sound, the Japanese cinema of the 1930s marks a true Golden Age where the major studios Shochiku and Nikkatsu, along with Toho, which had joined the ranks of the former two through a series of mergers, relied on contract stars and directors who generally worked within consistent and recognizable genres—much like Hollywood in its contemporaneous Golden Age. Toho relied on popular actors and actresses like Kazuo Hasegawa (1908–1984) (who would make over three hundred films over the course of his career), Takako Irie (1911–1995), Setsuko Hara (b. 1920), and child superstar Hideko Takamine (b. 1924) (whose luster would never fade as she would work well into her sixties). Matched by directors like Teinosuke Kinugasa (1896–1982), Hiroshi Inagaki (1905–1980), and Mikio Naruse (1905–1969), Toho could work in both *jidai-geki* and *gendai-mono* to full effect. Shochiku did not have quite the star power of Toho, but its directorial stable is a "who's who" of the Japanese cinema of the 1930s, led by Yasujiro Ozu (1903–1963) along with Heinosuke Gosho, Yasujiro Shimazu (1897–1945), and Hiroshi Shimizu (1903–1966). Working at the studio's Kamata branch, these directors made the world of the lower-middle classes the studio's specialty, whether through comedies like Ozu's *Otona no miru ehon: Umarete wa mita keredo* (*I Was Born But . . .*, 1924), the bittersweet Naruse's *Tsuma yo bara no yo ni* (*Wife, Be Like a Rose*, 1935), or the child-centered masterpieces of Shimizu (for example, *Kaze no naka no kodomo* [*Children in the Wind*, 1937]).

Some directors managed to work outside of the big three of Shochiku, Toho, and Nikkatsu or to play one against the other. Naruse began at Shochiku but moved to Toho, while Sadao Yamanaka (1909–1938)—whose death in combat in China in 1938 marks the greatest directorial loss of the war years—moved to Toho as well, in his case from rival Nikkatsu. Kenji Mizoguchi (1898–1956), meanwhile, managed to carve out a nice career working for independent or semi-independent companies such as Dai-Ichi Eiga, where he made his two masterpieces of 1936—*Naniwa erejî* (*Osaka Elegy*) and *Gion no shimai* (*Sisters of the Gion*). Independent production was not unknown, either. Most famous among such films is surely Kinugasa's *Kurutta Ippeji* (*A Page of Madness*, 1926), an avant-garde film that focuses on a man who takes a job as a janitor in a mental asylum in order to be nearer to his wife, who has been confined after attempting to drown their child, featuring subjective shots of the inmates to the expressionistic locale of the institution itself. The very range of films—anarchic *jidai-geki* featuring alienated *ronin* (unemployed samurai), raucous comedies about college youth, tearful melodramas of lost love or bitter poverty, gentle romances, moving dramas of young children, even musical comedies—speaks to the success of the Japanese cinema.

While not, in fact, a major exporter of films (until it would force its films on its occupied territories during the war), Japan's large population could sustain a self-supporting film industry. Attendance by the middle of the 1930s reached 250 million annually. As was the case with Hollywood in this same period, the major studios either owned major theaters outright or controlled most of them through various contractual and legal obligations. Though this made independent production difficult and exhibition even more so (amateur films and documentary films appear with great regularity in this period but remain firmly outside traditional production and exhibition practices and venues), for the commercial filmmaker

YASUJIRO OZU

b. Tokyo, Japan, 12 December 1903, d. 12 December 1963

It is ironic that Yasujiro Ozu's films were once thought to be "too Japanese" for Western audiences to appreciate. This serious misunderstanding of either Ozu's essential universalism or the West's ability to appreciate Japanese culture made Ozu the last major Japanese director of the postwar era to have his films fully distributed in the West. But once his films became fully available (mostly by the mid-1970s), Ozu became the Japanese cinema's most respected director among film critics and scholars, as well as among a whole generation of independent filmmakers in the US and abroad. Once called "Japan's most Japanese director," Japanese critics have rejected this notion, some even claiming he is hardly very Japanese at all. It is clear that Ozu's cinema is deeply rooted in Japanese traditional culture, yet it is equally true that he has a unique approach to the cinema and an unmatched commitment to a personal worldview. His relentless examination of contemporary Japanese life as lived by ordinary people and a film style that provides endless fascination and a wry sense of humor have proven to have universal appeal and tremendous influence.

Ozu is best known for a series of films dealing with the trials and tribulations of the typical Japanese family and the shifts wrought by changes in postwar culture and the inevitability of time's passing. Thus, his families are not only impacted by the shift away from the multi-generational household amidst the continued urbanization of postwar Japan, but also by the simple fact that children grow up, marry, and start their own families. These elements are seen so unforgettably in *Tokyo monogatari* (*Tokyo Story*, 1953), where the aging parents still living in rural Japan struggle with feelings of disappointment and disillusionment when they visit their seemingly distracted and unloving children in Tokyo. In three remarkable films with essentially the same plot—a daughter's reluctance to get married causes her widowed parent to resort to a veiled threat of remarriage him- or herself to convince the child to wed—Ozu finds his essential theme. Though the father in *Banshun* (*Late Spring*, 1949) and *Sanma no aji* (*An Autumn Afternoon*, 1962) and the mother in *Akibiyori* (*Late Autumn*, 1960) will be all alone (and lonely), the parent must convince the daughter to wed; it is the nature of life, the life cycle in every sense of the term, that parents grow old and children marry so the cycle may begin again.

For all the seeming simplicity of his stories, the complex mechanisms of his narrative procedures and cinematic style endow Ozu's films with a modernist complexity. His use of ellipsis, for instance, tends to de-dramatize the plot. He typically leaves out many would-be important elements—especially in the "wedding" films, where he omits the actual wedding itself. He is also notable for his utilization of 360-degree space, which produces seeming mismatched action, both within the frame and across it. Though Ozu has a reputation for using long takes, it is actually a misperception. Certainly, the contemplative camera positioned just a few inches off the floor and the de-dramatized narratives lend his films a leisurely pace, but there is nothing especially lengthy in his typical shots. Rather, his films unfold at the speed of life and capture it in its essence.

RECOMMENDED VIEWING

Umarete wa mita keredo (*I Was Born But…*, 1924), *Chichi ariki* (*There Was a Father*, 1942), *Banshun* (*Late Spring*, 1949), *Bakushû* (*Early Summer*, 1951), *Tokyo monogatari* (*Tokyo Story*, 1953), *Higanbana* (*Equinox Flower*, 1958), *Ohayô* (*Good Morning*, 1959), *Ukigasu* (*Floating Weeds*, 1959), *Akibiyori* (*Late Autumn*, 1960), *Sanma no aji* (*An Autumn Afternoon*, 1962)

the safety net of popular stars, clear genres, and a well-oiled distribution system provided more than a modicum of freedom to give rise to one of the most remarkable creative periods in all of world cinema history—one matched perhaps only by Hollywood and France during this period, and by the Japanese themselves later in the 1950s.

Always aware of Hollywood and a major importer of American films (a situation that still remains), the Japanese were always conscious of the style and modes of the world's premier film power. One can see, therefore, the clear influence of Hollywood on Japanese cinema of the 1930s—whether in Ozu's *nansensu* comedies, which interpolated Harold Lloyd into stories of contemporary Japanese youthful ambitions, or in Mizoguchi's Warner Bros.—like low-key lighting and semirealistic dramas. Yet the particularities of Japanese film culture render their cinema, along with that of dozens of other first-rate directors, the unique expression of Japanese sensibilities. An overt stylization, what David Bordwell has called "a cinema of flourishes," was allowed to exist alongside and within clearly generic, plot-driven stories. Mizoguchi's long takes and complex camera movements certainly have no derivation from Hollywood in the 1930s—moments of stylistic excess in *Osaka Elegy* and, especially, *Zangiku monogatari* (*The Story of the Last Chrysanthemums*, 1939), are closer in spirit to the films of France's master Jean Renoir, but with a definite Japanese flavor. Yamanaka's *Ninjo kamifusen* (*Humanity and Paper Balloons*, 1938) is a brilliant melding of Shingeki theater and samurai drama to tell a uniquely Japanese story of class oppression and human tragedy. So many films from the Japanese cinema have been lost—virtually everything made before World War I, but even the output of the 1930s has been devastated—by war, by nitrate film deterioration, by carelessness; but what remains bespeaks of a cinema as vibrant as any in the world, yet one that so clearly derives from a unique cultural and aesthetic tradition.

ERUPTION AND INTERRUPTION OF WAR

By 1937, Japan was essentially at war with China. War was inevitable, to anyone with eyes to see, as early as 1931, but by 1937 the military draft and regular excursions into the Chinese heartland indicated that Japan was a nation at war. Cinematic excursions into China became increasingly common as well, with the infamous stardom of Yoshiko Yamaguchi being the most famous instance of the Japanese trying to conquer China on screen and off. A Japanese woman born in Manchuria, Yamaguchi was passed off as a Chinese actress, Li Hsiang-lan, and she appeared in a handful of overt propaganda films inevitably portraying a Chinese woman in love with, rescued by, and otherwise indebted to a Japanese soldier. The effectiveness of propaganda films like *Shina no yoru* (*China Night*, 1940) within China is more than questionable, as Chinese audiences wanted no part of such films. On the Japanese homefront, propaganda was the order of the day by 1940, but Yamaguchi-Li's talent and beauty may have overcome the otherwise obvious intentions behind the film.

Government censorship was always a factor in the production of Japanese cinema. As early as 1925, a centralized state censorship board was established to oversee film content, with particular concerns for public security and morality. Leftist filmmaking of the late 1920s and early 1930s (including many documentaries) encouraged further government intervention in the early 1930s, but it was the ever-increasing social conservatism and imperialistic militarism that led to the Pacific War and the virtual nationalization of the film industry and its heavy censorship by 1940. The production of *kokusaku-eiga* (national policy film) led to the overtly propagandistic nature of the entertainment cinema, while the government forced the merger of the major studios into three concerns: Shochiku, Toho and Daiei (which had

Yasujiro Ozu examined the dynamics of family life in such films as **Tokyo monogatari** ***(*****Tokyo Story*****, *1953).*** EVERETT COLLECTION. REPRODUCED BY PERMISSION.

taken Nikkatsu Studios under its new corporate banner). In the early period, from 1937 to 1941, a number of interesting films were produced whose overt propaganda value may be questionable. Films like *Five Scouts* (*Gonin no sekkohei*, 1938) and *Mud and Soldiers* (*Tsuchi to heitai*, 1939) seem rather grim in their portrayal of ground combat in China, while *Airplane Drone* (*Bakuon*, 1939) is a rather charming comedy. Masterpieces like Mizoguchi's *Genroku chushingura* (*The Loyal Forty-Seven Ronin of the Genroku Era*, 1941) and Ozu's *Chichi ariki* (*There Was a Father*, 1942) similarly show far less overt propaganda content than Hollywood's rabid anti-Japanese, pro-war films of the 1940s, but other, less well-known films take an anti-Western tack. Toho's all-star, big-budget *Ahen senso* (*The Opium War*, 1943), directed by the prolific Masahiro Makino and starring Setsuko Hara and Hideko Takamine, for instance, is charmingly propagandistic, with Japanese actors portraying the Chinese and British characters that make up the film. But as the war took a turn for the worse, so, too, the film industry declined—resources becoming ever scarcer and filmmakers ever subject to censorship. Ironically, when the war ended and the US Occupation forces arrived, the film industry was subjected to some of the same rigid censorship codes, though put to different ends.

THE SECOND GOLDEN AGE

It is arguable that the Japanese cinema of the 1950s is one of the high water marks in the history of world cinema, where Japan achieved a major international presence in film festivals and in art cinemas and solidified a mass audience at home that led to one of the most prolific periods of film production in the world. This Golden Age began innocently enough as, under US Occupation mandate, the Japanese cinema began producing films favoring democracy and women's liberation while rejecting feudalism and militarism. Under such circumstances, the production of *jidai-geki* took a back seat to films

examining postwar realities, though Mizoguchi's take on the famous woodblock (*ukiyo-e*) artist Utamaro, with his *Utamaro o meguru gonin no onna* (*Utamaro and His Five Women*, 1946), managed a deft combination of period exoticism and women's liberation. Akira Kurosawa (1910–1998) examined social problems in films like *Shizukanaru ketto* (*The Quiet Duel*, 1949), *Yoidore tenshi* (*Drunken Angel*, 1948), and *Nora inu* (*Stray Dog*, 1949), while Ozu continued to refine his perspective on the Japanese family in the process of solidifying an increasingly unique and challenging film style in his postwar masterpieces *Akibiyori* (*Late Autumn*, 1949), *Bakushû* (*Early Summer*, 1951), and *Tokyo monogatari* (*Tokyo Story*, 1953). Indeed, one reason for the Golden Age of the 1950s was the manner in which 1930s masters like Mizoguchi, Ozu, Naruse, and Gosho were joined by the growing ranks of a new generation of filmmakers led by Kurosawa and supported by the likes of Kon Ichikawa (b. 1915), Keisuke Kinoshita (1912–1998), and Masaki Kobayashi (1916–1996), among others.

A stellar lineup of movie stars began appearing in such genres as the woman's film, especially variations such as the *haha-mono* (mother stories), out of which Kinoshita's masterpiece *Nihon no higeki* (*A Japanese Tragedy*, 1953) emerged, and the bar-hostess film, which eventually led to Naruse's sublime *Onna ga kaidan wo agaru toki* (*When a Woman Ascends the Stairs*, 1960). Musicals reappeared in various forms, led by the extraordinary *enka* (folk) singer Hibari Misora (1937–1989), who appeared in over one hundred films in the 1950s. Tough-guy action stars in the mode of Elvis Presley, like Yûjirô Ishihara (1934–1987) and Akira Kobayashi (b. 1937), gave Nikkatsu a unique form with their action films. Toho Studios struck gold with the atom-bomb allegories in the form of the *kaiju-eiga* (monster movie), creating, literally, the biggest star of the decade with *Gojira* (*Godzilla*, 1954)—followed by sequels and fellow giant monsters galore. Daiei Studios succeeded in its own way by making films with great domestic box-office appeal while also producing films rather specifically geared for overseas appeal at film festivals and art houses.

Kurosawa's *Rashomon* (1951), a puzzling film that Toho Studios showed little interest in producing, was made at Daiei to minor recognition at home. But its success at the Venice International Film Festival in 1951 (where it was awarded the Golden Lion) and its Academy Award® for Best Foreign Film more than made up for any domestic disappointment. The film brought Kurosawa instant acclaim, Daiei a great deal of prestige, and the Japanese cinema the kind of worldwide recognition it had long desired. Daiei embarked on a campaign of producing films with an eye toward film festivals and art theater distribution and met with a good deal of success with Mizoguchi's *Ugetsu* (1953) and Kinugasa's *Jigokumon* (*Gate of Hell*, 1953). This penchant for producing period films for the export market had the unfortunate consequence of keeping many of Japan's *gendai-mono* from receiving the kind of institutional support required to break out of the domestic market. Thus, Ozu and Naruse, for instance, were little known abroad compared to Kurosawa and Mizoguchi. Nevertheless, with Daiei leading the way, other studios, too, jumped on the *jidai-geki* bandwagon so that Kurosawa's *Shichinin no samurai* (*Seven Samurai*, 1954) and Inagaki's Samurai trilogy (1954–1956) received both international distribution and prize-winning acclaim. These period films may have functioned to help redeem Japan's image from that of an imperialist power that had waged a bloody and frightful war against its Asian neighbors and against Western powers like the United States and Great Britain. Set in the past, the films clearly removed themselves from the recently completed war and presented images of an exotic culture—colorful costumes, mysterious and beautiful women, elegant interiors decorated with painted screens, and graceful Zen gardens. Yet films like *Rashomon*, *Ugetsu*, and *Gate of Hell* in fact clearly speak to the disaster of the Pacific War—the ruination of Japan's cities; the effects on innocent civilians, especially women; and the trauma of loss and defeat.

By displacing the recent war onto the more distant past, the films could be made palatable to both domestic and international audiences. But no displacement, no tricks, no hidden meanings were required to appreciate the obvious artistry on view. Drawing on pictorial traditions as venerable as *sumi-e* (black and white ink brush painting), *yamato-e* (landscape painting in the Japanese style), and *emaki-mono* (narrative picture scrolls), the Japanese cinema was characterized by a pictorial elegance not seen anywhere else in the world. A propensity for long takes and long shots gave many of the films a stately, leisurely, contemplative pacing that appealed to many young film critics and filmmakers. The creation of mood, of tone, was similarly a unique property of the Japanese cinema. Combined with many theatrical elements, the films presented themselves as the product of a culture that seemed far from the one that waged fierce war on the world. The stylistic experiments of Kurosawa (one of the rare directors who were as comfortable with dynamic montage as he was with long takes) and Ozu (a filmmaker virtually unique, but not *sui generis*, with his graphic matches, narrative ellipses, dramatic deemphases, and singular thematic concern) grew out of a prolific, varied, and exciting cinematic period. One might argue that it was precisely this combination of art film acclaim and domestic box-office appeal that defines this period as not only a Golden Age of Japanese cinema, but a Golden Age of world-class filmmaking.

Akira Kurosawa's* Rashomon *(1950) introduced Western audiences to Japanese cinema. **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

AKIRA KUROSAWA

b. Tokyo, Japan, 23 March 1910, d. 6 September 1998

Akira Kurosawa was a child when the Great Kanto Earthquake of 1923 leveled the sprawling city of Tokyo. Thus, Kurosawa grew up in a new, modern Tokyo, but one that never lost sight of its past. This struggle between the modern and the traditional is one of the hallmarks of his films—both in terms of the director's veering between period films and modern stories and the way he highlights the need for certain traditional values within modern society; at the same time he brings a distinctly modern perspective to the venerable period film.

It would be hard to imagine the modern American cinema without Kurosawa's palpable influence, whether in the action staging of Sam Peckinpah, Walter Hill, and Martin Scorsese or the distinctive editing patterns that so clearly set off the films of Francis Ford Coppola, George Lucas, and Steven Spielberg. And this is no less true of his influence on internationally acclaimed directors ranging from Italy's Western auteur, Sergio Leone, to Hong Kong's master of balletic violence, John Woo. The strategic use of slow motion, the transformation of Sergei Eisenstein's handling of crowd scenes, the use of jump-cuts on movement, the intermixing of long takes and montage, have all entered the lexicon of the modern action cinema.

It is likely that *Shichinin no samurai* (*Seven Samurai*, 1954) is the single most remade and reworked film in all of world cinema, from Hollywood to Bollywood; *Rashomon* (1951) is as responsible for the modernist move in world cinema as Bergman's *Sjunde inseglet, Det* (*Seventh Seal*, 1957), Fellini's *La Strada* (1956), or Antonioni's *L'Avventura* (*The Adventure*, 1960); and *Yojimbo* (*Yojimbo the Bodyguard*, 1961) may fairly be said to have relaunched the Western in the 1960s. Similarly, Kurosawa's Shakespearean adaptations—*Kumonosu jô* (*Throne of Blood*, 1957), *Warui Yatsu Hodo Yoku Nemuru* (*The Bad Sleep Well*, 1960), and *Ran* (1985)—are generally acknowledged as among the finest filmic transformations of the Bard's classics, *Macbeth*, *Hamlet*, and *King Lear*, respectively.

Within the strictly Japanese context, Kurosawa has been one of the few filmmakers willing to tackle an issue generally suppressed in Japanese public art—the atomic bomb. Handled typically by allegory (e.g., *Godzilla*, 1954) or via the fantastic world of anime, the Bomb has been largely taboo in Japanese cinema. Yet in the middle of his career, with *Ikimono no kiroku* (*Record of a Living Being*, 1955), and near the end, with *Hachigatsu no kyôshikyoku* (*Rhapsody in August*, 1991), Japan's best-known filmmaker squarely confronted Japan's most traumatic experience. Kurosawa's willingness to confront tradition, criticize modernization, and tackle taboo subjects made him the leading filmmaker of his generation, and his unequaled command of cinematic language made him one of the most influential filmmakers in the history of the cinema.

A NEW WAVE

Some recent critical work has come to question the perhaps too easy and quick assignation of the term "New Wave" (*Nuberu bagu*, *nouvelle vague*) to a group of filmmakers who directed their first efforts at Shochiku Studios around 1960, in particular Nagisa Oshima (b. 1932), Masahiro Shinoda (b. 1931), and Yoshishige Yoshida (b. 1933). With some stylistic and thematic similarities to the French and Polish New Waves of this period, such a comparison made sense, if only from the

Akira Kurosawa on the set of* Kagemusha *(*Kagemusha the Shadow Warrior, *1980). © TOHO COMPANY/COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.

perspective of public relations and pop journalism. Still, by adding in the contemporaneous efforts by the likes of Shohei Imamura (b. 1926) and Susumu Hani (b. 1928), one can safely claim a historical moment of a clear confluence of interests revolving around the political alignment of Japan with the United States; the alienated state of postwar youth; continued discrimination against Koreans, *burakumin* (untouchables), and the working poor; women's liberation; and the freeing of film form from the Classical and Postwar masters. And while it has been common to claim this New Wave as cresting in 1960, greater historical distance may reveal that a more interesting and truer "wave" of radical filmmaking came about at the end of the decade, not at its beginning.

The very success of the mainstream Japanese cinema of the 1950s enabled studios like Shochiku, especially, but also Nikkatsu, to allow a greater sense of directorial freedom of expression and the breakdown of classic genres. This was exacerbated when the industry began a steep decline after 1963 due, mostly, to the introduction of television. This new medium rather quickly took away one of the industry's stalwart audiences: middle-class women. One way to try and hold on to their remaining audience was the turn to younger directors and their favored theme of youth. With films like *Seishun Zankoku Monogatari* (*Cruel Story of Youth*, 1960), *Furyo Shonen* (*Bad Boys*, 1961), and *Buta To Gunkan* (*Pigs and Battleships*, 1961), among others, something like a new wave appeared. Alienated youngsters rebelling from middle-class society or unable to enter into the promise of economically resurgent Japan, and a film style characterized by neo-documentary techniques, hand-held camerawork, a rejection of the pictorial tradition, all sifted, many times, through a darkly comic lens, certainly marked a break even from those 1950s youth films that are the clear predecessors of the 1960s new wave. But as the decade wore on and the industry could no longer support the radical efforts of younger filmmakers, and as mainstream audiences continued to desert the Japanese cinema, the industry had reached a crisis by the late 1960s. The Art Theatre Guild (ATG) came to the rescue of many of the new wave filmmakers, introducing new production and distribution patterns into the Japanese

cinema. It must be beyond coincidental that the best films of Hani, Shinoda, Yoshida, and even Oshima were made at the ATG, and that even most of their subsequent films take a backseat to the truly original works made there.

The ATG began in the early 1960s primarily as an exhibitor of foreign films—though it did produce *Otoshiana* (*The Pitfall*) in 1962, the first film of acclaimed independent filmmaker Hiroshi Teshigahara (1927–2001). The distribution and exhibition by the ATG of Oshima's *Ninja bugei-cho* (*Band of Ninja*) in 1967, produced by Oshima's own Sozosha Corporation, was something of a surprise hit. Oshima used no live action film footage, but ''animated'' actual *manga* (comic books/graphic novels) panels by enlarging, shrinking, and superimposing or merely through fast editing of stills. The fact that the audience was that greeted this film enthusiastically was largely young should have been a wake-up call to film producers everywhere, but the ATG was the first to heed it. At this same time, the already well-established Shohei Imamura co-produced *Ningen Johatsu* (*A Man Vanishes*, 1967) with the ATG. The film was a modest success—again with a young, restless audience very much ready to embrace underground art, theater, and cinema. By 1968 the ATG would provide that in abundance. Films like Oshima's *Koshikei* (*Death by Hanging*, 1968) and *Gishiki* (*The Ceremony*, 1971) hit at the heart of Japan's social and familial institutions; his *Shinjuku dorobo nikki* (*Diary of a Shinjuku Thief*, 1968) captured the Japanese 1960s as no other film; and Shinoda's *Shinju ten no amijima* (*Double Suicide*, 1969) and Toshio Matsumoto's (b. 1932) *Bara no soretsu* (*Funeral Procession of Roses*, 1969) and *Shura* (*Pandemonium*, 1971) combined the most traditional of Japanese arts—Bunraku and calligraphy, among others—with a decidedly Modernist approach to film.

The importance of the New Wave in the 1960s should not diminish the significance of more mainstream genres, in particular the male-oriented films directed at young and working-class men. If women had abandoned the cinema in favor of television and the overall more home-centered lifestyle mandated in economically successful Japan, filmmakers turned to the samurai film in increasing numbers. Under the impetus of director Kenji Misumi (1921–1975) and star Raizo Ichikawa (1931–1969), a new youth orientation was introduced into the already nihilistic tale of a possessed *ronin* in *Daibosatsu Toge* (*Satan's Sword*, 1960) and two sequels (1960, 1961). This same story would be stylishly engaged later in the decade by Tatsuya Nakadai under the sure-handed direction of Kihachi Okamoto (1923–2005) in a version known as *Dai-bosatsu tôge* (*The Sword of Doom*, 1966). Akira Kurosawa contributed to this newly anarchic and violent tendency of the genre turn with *Yojimbo* (*Yojimbo the Bodyguard*, 1961) and *Sanjuro* (1962), with Toshirô Mifune (1920–1997) as the samurai-with-no-name. The star, Shintaro Katsu (1931–1997), would similarly bring a new dimension to the samurai film, appearing in over twenty films in the decade as the wandering, blind, masseur-master swordsman, Zatoichi. This new-style samurai film prospered into the early 1970s, but by then overexposure on television, the aging of the samurai stars, and the continued decline of the mainstream film industry put a halt to the routine production of these often startlingly original, beautifully realized, artistically surprising genre entries.

Coincident with the new-style samurai film was another male-oriented genre, often filled with more graphic violence than the samurai film. (Though few films can top the *Kozure Okami* series [*Lone Wolf and Cub*, 1970–1972] for sheer swordplay mayhem.) Known as the *yakuza* (gangster) genre film, it became the staple of Toei Pictures, formed in 1951. A complex morality, sometimes seen as conservative—feudalistic notions of duty, honor, and loyalty predominate—merges with a truly nihilistic flavor, as all values except male bonding and camaraderie are called into question by the time of the (inevitable) violent showdown. The superstar Ken Takakura (b. 1931) is a key figure in the genre, especially with his eighteen-part *Abashiri Bangaichi* (Abashiri prison series, 1965–1972), as is Bunta Sugawara (b. 1931), especially as guided by the wily veteran director Kinji Fukasaku (1930–2003) in the multi-part *Battles without Honor and Humanity* series (*Jingi naki tatkai*, 1973–1974). By the middle of the 1970s, overproduction, aging stars, and declining production values, as well as *yakuza* series on television, sheathed the sword of the gangster as it had the samurai earlier.

THE LOST DECADE AND A MINOR RENAISSANCE

The film industry in Japan began a decline in the early 1960s that was staved off by the occasional blockbuster hit; the long-running film series (for example, *It's Tough To Be a Man* [*Otoko wa tsurai yo*, 1969–1995]); or the intervention of independent financing, such as that of the ATG. Nevertheless, by the middle of the 1970s, the Japanese cinema was a shell of its former self, more footage being devoted to the genre of the *roman-poruno* (romantic-pornography) than all other genres combined. In the late 1960s a group of younger filmmakers, such as Koji Wakamatsu (b. 1936), utilized the genre to inject the youthful politics of the New Wave into films like *Violated Women in White* (*Okasareta byakui*, 1967) or *Tenshi No Kokotsu* (*Ecstasy of the Angels*, 1972). Nagisa Oshima took the genre to its logical heights of hard-core pornography with *Ai no Corrida* (*In the Realm of the Senses*, 1976), whose graphic imagery and challenging

TOSHIRÔ MIFUNE

b. Qingdao, China, 1 April 1920, d. 24 December 1997

If Akira Kurosawa is generally credited with introducing Japanese cinema to the West with his *Rashomon* in 1951, perhaps Toshirô Mifune should be credited with making it welcome. He was to the Japanese cinema what Marlon Brando was to Hollywood in the postwar era, a dynamic force to be reckoned with, and it is perhaps this resemblance to Brando—in spirit and dynamism—that enabled films like *Rashomon* and *Shichinin no samurai* (*Seven Samurai*, 1954) to win popular acclaim and Academy Awards®.

Mifune is most associated with Kurosawa, though he was a favorite actor of other major Japanese filmmakers, especially Inakagi Hiroshi. Still, it is undeniable that the sixteen films he made with Kurosawa have entered the annals of world film history as an unmatched body of collaborative work. He rocketed to stardom in Kurosawa's *Yoidore tenshi* (*Drunken Angel*) in 1948 and then appeared in every Kurosawa film from 1949 through 1965, save for the subtle *Ikiru* (*To Live*, 1952). While perhaps best remembered for the boisterous, youthful energy displayed in films like *Nora inu* (*Stray Dog*, 1949), *Rashomon*, and *Shichinin no samurai* (*Seven Samurai*, 1954), or the complete power and command he shows in films like *Kakushi-toride no san-akunin* (*The Hidden Fortress*, 1958), *Yojimbo* (*Yojimbo the Bodyguard*, 1961) and *Sanjuro* (1962), his range as an actor might be unsurpassed in the entire Japanese cinema. He could play a mature doctor as early in his career as 1949 with *Shizukanaru ketto* (*The Quiet Duel*) or as late in his relationship with Kurosawa as *Akahige* (*Red Beard*), released in 1965. He is desperately romantic and helpless in *Donzoko* (*The Lower Depths*, 1957); aging, weak, and tortured in *Ikimono no kiroku* (*Record of a Living Being*, 1955); a successful businessman who loses everything in *Tengoku to jigoku* (*High and Low*, 1963); and as a tormented and remorseful man in the Hamlet-derived *Warui Yatsu Hodo Yoku Nemuru* (*The Bad Sleep Well*, 1960), not to mention being acclaimed as one of the finest incarnations of Macbeth in *Kumonosu jô* (*Throne of Blood*, 1957).

With appearances in Hollywood films like *Grand Prix* (1966) and *Red Sun* (1971), it seems that Hollywood was trying to create its first Japanese star since Sessue Hayakawa in the silent era. Mifune's poor English perhaps got in the way (his voice is dubbed in the Word War II epic *Midway*, 1976), but it is also likely that his portrayal of a taciturn warrior capable of incredible and explosive violence paved the way for another Asian star, Bruce Lee, to break through into the American market just a year or so later. Over the course of his fifty-year career, Mifune appeared in over 180 films, a testament to his never-ending hard work and timeless appeal.

David Desser

sexual politics netted the film worldwide acclaim and controversy. The rare breakout hit from the *roman-poruno* world and the occasional film by Kurosawa, Imamura, and Shinoda could hardly lay claim to being any further Golden Age or New Wave–like excitement, while only a small handful of new directors emerged in the 1970s and 1980s to launch the Japanese cinema into any new areas, to find new audiences, and to garner much new respect. The situation in the 1980s was so very dismal that critics have come to call this the "lost decade" of the Japanese cinema.

The social satires of Juzo Itami (1933–1997), the son of the pioneer filmmaker Mansaku Itami (1900–1946), stand alone as a directorial achievement in this lost decade. Certainly *Tampopo* (*Dandelion*, 1985), Itami's breakthrough hit in world cinema (though the film was by no means a hit in Japan), is a worthy successor to the stylish delights of Ozu and Kurosawa, by way of the Hollywood Western. Yoshimitsu Morita's (b. 1950) *Kazoku gêmu* (*Family Game*, 1983) similarly struck universal chords with its darkly comic examination of the pressures exerted on the middle-class family by the

Toshirô Mifune. **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

notorious Japanese educational system. But such films were too few and far between. Only *anime* (Japanese animation) proved to have the sort of mainstream, blockbuster appeal on which the industry once routinely counted. With feature films, television series, and direct-to-video offerings, *anime* came to dominate the industry the way *roman-poruno* had a decade earlier. (The genre had turned to direct-to-video marketing by the late 1980s, and for better or for worse, little of it was made for the theatrical market.) Even after a mini-renaissance beginning in the mid-1990s, *anime*'s hold on the Japanese imagination remains unbreakable, with director Hayao Miyazaki continually breaking box-office records with films like *Mononoke-hime* (*Princess Mononoke*, 1997), *Sen to Chihiro no kamikakushi* (*Spirited Away*, 2001), and *Hauru no ugoku shiro* (*Howl's Moving Castle*, 2004).

Live-action cinema began its slow reappearance with the emergence of a new generation of filmmakers—trained completely outside of the traditional assistant director system—supported by entirely different modes of production. Indeed, in large measure, renaissance Japanese cinema of the 1990s is a strictly independent movement. With backgrounds in television as performers or directors, in music-video production, in film school education, or in amateur filmmaking, members of this new generation, like its New Wave predecessors, rely largely on the youth audience to support its modest efforts. Some of these films have found their way into the international film festival/art cinema market, but without sacrificing the small, but devoted, domestic audience.

The cinema has largely resurrected itself on the strength of film genres with both domestic and global youth appeal. The horror film, in particular, brought to new heights of attention by the subtle and stylish works of Kiyoshi Kurosawa (b. 1955)—such as *Kyua* (*Cure*, 1997), *Karisuma* (*Charisma*, 1999), and *Kairo* (*Pulse*, 2000)—was extended for the video-game generation with films like *Ringu* (*Ring*, 1998), *Ju-on: The Grudge* (2000), *Honogurai mizu no soko kara* (*Dark Water*, 2002), and numerous others. The Hollywood remakes of these films attest to their universal appeal and have garnered the Japanese originals perhaps even greater attention. Along with the horror film, the action film has taken pride of place in the commercial independent cinema, especially the outré films of Takashi Miike (b. 1960). While he has worked in many genres (including a horror-musical, *Katakuri-ke no kôfuku* [*The Happiness of the Katakuris*, 2001]), his greatest cult success has been with a series of incredibly high energy, ultra-violent gangster films that begin where John Woo's Hong Kong films left off. Films like *Gokudô sengokushi: Fudô* (*Fudoh: The New Generation*, 1996), *Hyôryû-gai* (*City of Lost Souls*, 2000), and *Koroshiya 1* (*Ichi the Killer*, 2001) bear little resemblance to the *yakuza* films of Ken Takakura and Bunta Sugawara, and if they seem less specifically Japanese, it is partly because times have changed and Japan is, in every respect, imbricated at the highest levels in global popular culture. Indeed, it may be that the Japanese cinema has lost its particular "flavor" in the postmodern era, although the occasional throwback film like Hirokazu Koreeda's (b. 1962) *Maboroshi no hikari* (*Maborosi*, 1995) or the increasingly important and impressive oeuvre of Takeshi Kitano (b. 1947), especially his *Hana-bi* (1997), continue to remind the world of the cultural traditions that underline one of the world's most unique and most successful filmmaking nations.

JOURNALS AND MAGAZINES

Film journals and magazines are central to cinema culture and film consumption. Such publications contain information on developments within the industry, movies in production, and the technical processes behind the creation of a particular look or effect. They also present film reviews, film criticism, and theoretical or cultural analysis, interviews and star profiles, and fan appreciation. Film journals and magazines can be divided broadly into five categories: fan magazines aimed at a specific readership with a focus that is often subcultural; populist film magazines consumed by a mainstream readership; news weeklies or daily papers—tabloids and broadsheets—that devote space to film journalism; trade publications produced for the cinema industry; and academic journals that analyze and debate film and cinema.

FANZINES

Fan magazines and fan bulletins are the most vibrant and diverse part of the film magazine market. Commonly collections of articles and short pieces written and compiled by the fans themselves, these fan publications, or fanzines, sometimes receive mainstream circulation and can be purchased from main street retailers. Mostly, however, they are acquired from speciality shops, fan conventions, or by subscription. A cottage industry of independent publishers caters to a wide variety of specialist and cult interests, with film stars, movies, and prominent genres from both the classical and postclassical periods of film attracting sustained devotion. The number of fanzines available has increased dramatically since the mid-1980s, aided by an accessibility to desktop publishing and improved mail ordering facilities, as well as the growth in cult film and media shops and the explosion in fan fairs. Moreover, since the late 1990s the fan magazine has been extended through the seemingly endless possibilities offered by the Internet and Internet publishing. Online, members of countless subcultural fan communities celebrate, debate, and recollect their movie experiences, all with the speed and directness in communications required by fans who crave immediate interaction with like-minded individuals. The hallmark of these fan sites is the fans' active consumption of, contribution to, and participation in the published text, whether paper or electronic.

The proliferation of fanzines has been greatest in the United States and the United Kingdom, where the horror, science-fiction, and fantasy genres have dominated production. The horror genre is especially suited to independent or underground publishing activities; fans often take a subcultural interest in addressing transgressive images and taboo subjects, and attempt to expose marginal films from the realms of low-budget or exploitation cinema. Two pioneering publications offered an alternative voice proclaiming a fan's passion and indulgence for the horror genre: Forrest J. Ackerman's *Famous Monsters of Filmland* (1958–1983) and Calvin T. Beck's *Castle of Frankenstein* (begun in 1959 as *Journal of Frankenstein*; final issue 1975). *Famous Monsters of Filmland*, associated with classic horror films from the 1920s, 1930s, and 1940s, reveled in nostalgia but presented articles and information in a jocular manner.

The editorial approaches of fanzines can vary widely—from the studious, nostalgic, and archival to the sarcastic or anarchic—but they all tend to give an impression of faithfulness and authority in a frank and opinionated way. Notable horror and exploitation

fanzines from the United States include the New York–based *Sleazoid Express* (originally 1980–1983) and *Gore Gazette*, magazines with a fascination for assaultive films from cinema's grindhouses, and for either distinctly low-budget horror or productions with a high visceral content. The Baltimore-based *Midnight Marquee* (begun in 1963 as *Gore Creatures*), focuses on obscure, older, and neglected horrors; in 1995 it also successfully ventured into book publishing. Similarly, Michael Weldon's book *The Psychotronic Encyclopedia of Film* (1983) emerged from his fanzine *Psychotronic*, which was originally established with the intention of reviewing the more unusual films being shown on New York television. Later, in 1989, Weldon aimed for widespread coverage of all films of a bizarre or extreme nature with his second fanzine *Psychotronic Video*. *Video Watchdog*, begun in 1990 by Tim Lucas, has from the beginning carried the cover label "The Perfectionist's Guide to Fantastic Video." Aimed at providing "information" and a "consumer-orientated guide," this unique publication has become an authority on the different prints and versions of films in circulation, providing detailed reviews of video and DVD releases. *Asian Cult Cinema* (begun in 1992 as *Asian Trash Cinema*), like *Video Watchdog*, moves freely beyond the horror genre, providing expertise in the areas of film on which it centers, and most significantly displaying an ambition to provide pan-Asian coverage of genre cinema.

The boom in 1990s horror fanzines was most apparent in the United Kingdom. The two key pioneers were *Shock Xpress* (1985–1989) and *Samhain* (1986–1999). Both began as basic typed and photocopied publications, with *Samhain* in particular carrying fans' artwork; but later they evolved into more sophisticated fanzines with quality reproduction images and color covers. The fanzines that followed include *Dark Terrors* (1992–2002); *Flesh and Blood* (1993–1997); *Necronomicon* (1993–1994); *Delirium* (1993–1997), subtitled "The Essential Guide to Bizarre Italian Cinema"; *The House that Hammer Built* (1996–2002), "The Fanzine that builds into a comprehensive guide to Hammer's Fantasy Films"; and *Uncut* (begun in 1996). British horror fanzines have displayed a much stronger concentration on European horror cinema (especially British and Italian movies) and film and video censorship than their American counterparts. Hammer films have also attracted significant attention with special fanzines such as *Dark Terrors* and *Vintage Hammer*, devoted to discussing and detailing seemingly everything connected to the studio. However, the focus of fanzines on Hammer extends back to the 1970s with the seminal publications *Little Shoppe of Horrors* (begun in 1972 and published in the United States) and *House of Hammer* (1976, later *Halls of Hammer*, final issue 1984, published in the United Kingdom).

PROZINES AND POPULIST FILM MAGAZINES

With the wider availability of new technologies for production, modern fanzines have moved beyond the earlier mimeographed and photocopied publications. *Shock Xpress*, *Flesh and Blood*, and *Necronomicon* continued as edited books; *Samhain* edged closer to the style and content of prozines such as the British-published *Starburst* (begun in 1978), *Fear* (1988–1991), *The Dark Side* (begun in 1990), and *Shivers* (begun in 1992). Prozines, commercially produced publications with a fan focus, exist between fanzines and populist film magazines (those that offer a general cinema coverage). They often feature the work of paid journalists or regular writers and present news coverage, interviews, and images from current film productions supported by publicists. The prozine developed in the 1970s, beginning with the US-based *Cinefantastique* (begun in 1970), with its commitment to scrutinizing the technical and professional aspects of current fantasy film productions, and *Starlog* (begun in 1976), which led a batch of fan publications centered on the new wave of late 1970s science-fiction films. In August 1979 the horror prozine *Fangoria* emerged as a sister publication to *Starlog* and the short-lived *Future Life* (begun in 1978); it became synonymous with the new style of glossy magazines, containing graphic and color images from the horror new wave of the 1980s and celebrations of the ingenious work of the special effects artists.

The British prozines *Starburst* and *Shivers* are published by Visual Imagination, a company with a portfolio of fan and film afficionado magazines that includes *Xposé*, *Ultimate DVD*, *Movie Idols*, and *Film Review*. The latter began in 1950 as *ABC Film Review* and is now the United Kingdom's longest-running general film monthly. Initially sold in the lobbies of the ABC cinema chain, it carried reviews and features on current film releases as well as special items on in-vogue film stars. Such populist film magazines, essentially promotional publications for the film industry, exist in symbiotic relationship with studios, with these film monthlies giving celebrity exposure, film production updates, and generous coverage for new releases, all supported by special access to sets, production shots, and exclusive stories. Fans do actively contribute to the publications through competitions, readers' letters, pen pal ads, and "wanted" notices, but, compared to fanzines, the pages show greater regulation (with content controlled by both the publisher and the film industry).

Among the very first film magazines was the American publication *Photoplay* (1911–1980), which was to go through several name changes in its history and spawn a version designed specifically for the British market. *Photoplay* initially published fiction and novelizations of recent films, a content imitated in cinema's early years

by publications such as *Photo-Play Journal* (1916–1921) and *Photo-Play World* (1917–1920). The first film star, Florence Lawrence, emerged in 1910, and with the increasing interest in film stars throughout the teens and 1920s, magazines came to be dominated by star portraits and profiles, celebrity news and gossip. *Picturegoer* (1913–1960) was the most successful film magazine of its time in the United Kingdom, often featuring special supplements targeting a particular film star. Its name changed several times over the decades, incorporating key words such as "theater," "film," or "picturegoers," reflecting a period of cinema history when film magazines were initially attempting to establish an identity against other popular cultural pursuits. The magazine merged with competing titles as the market adjusted to a field led by fewer magazines. The replacement of some film monthlies with film weeklies indicates the popularity of both cinemagoing and film magazines in the peak period of the late 1920s to the early 1950s. Film magazines' popularity can also be seen in the diversification of titles into those aimed at specific sections of the cinemagoing audience: for instance, the British publications *Boy's Cinema* (1919–1940), which incorporated *Screen Stories & Fun & Fiction* (1930–1935), and *Girls' Cinema* (1920–1932), which was incorporated into *The Film Star Weekly* (1932–1935).

In the 1950s movie ticket sales fell dramatically. Cinema attendance grew again in the mid-1980s, partly as a result of the wave of expensive studio blockbuster films. A new breed of populist film magazines coincided with this change in the film industry, with publications often dealing more with the spectacle of the films and the work of popular directors than with film stars. This is not to say, though, that stars ceased to be marketable factors for film magazines, as magazine covers remain highly dependent on star portraits for their consumer appeal. The new magazines include the US publication *Premiere* (begun in 1987) and the British film magazines *Empire* (begun in 1989) and *Total Film* (begun in 1996). With the postclassical film industry marked by high levels of synergy with other media forms, it is not surprising that these publications devote space not just to films but also to DVDs and relevant books, soundtracks, and Websites, as well as television and computer games. Such magazines are also showing greater confidence in the types of film reviews they print, with reviewers expressing more independent opinions and adopting a style that is a combination of the fanzine writer and the newspaper critic. In fact, these reviewers often write simultaneously for these different publications.

NEWS WEEKLIES, NEWSPAPERS, AND TRADE JOURNALS

Film critics can be powerful figures within the cinema industry. In the United States, for instance, as members of bodies such as the New York Film Critics Circle and the Los Angeles Film Critics' Association, they have voting rights for annual awards ceremonies; winning such awards can greatly enhance the marketability of a successful film. Critics also exert power by publishing reviews in newspapers, news weeklies, and popular magazines and by appearing on television programs. Many of these critics have become celebrated and respected, some notorious, with their opinions at times believed to be a prominent factor in a movie's popular reception. The influential and impassioned critic Pauline Kael, who wrote for the weekly magazine *The New Yorker* from 1967 to 1991, was noted for her independent—often idiosyncratic—opinions. For instance, she was highly critical of *West Side Story* (1961), winner of multiple Oscars®; yet she championed the widely attacked *Last Tango in Paris* (1972). Andrew Sarris and later J. Hoberman reviewed films for New York's weekly newspaper *The Village Voice*. Sarris was initially a writer for the more academic journal *Film Culture* (1958–1992), which was the primary publication for the American film avant-garde. It was in that journal in 1962 that Sarris first employed the term "auteur theory," initially put forth in 1954 by François Truffaut in the French film journal *Cahiers du Cinéma* (begun in 1951). After *The Village Voice*, Sarris served as a critic for the newspaper *The New York Observer*.

Other notable American critics include Jonathan Rosenbaum, film reviewer for the alternative weekly *Chicago Reader*, and Roger Ebert, whose reviews have appeared in the *Chicago Sun-Times* since 1967 and in wide syndication. In the United Kingdom, Alexander Walker served as film critic for London's *Evening Standard* from 1960 until his death in 2003. Like Kael, Sarris, and Rosenbaum, Walker was a respected writer of film books, including a study of the director Stanley Kubrick and a trilogy of books on British cinema. A prolific writer, Walker was not afraid to give a controversial opinon, and as such he was associated with notorious reactions to films such as *The Devils* (Ken Russell, 1971), *Crash* (David Cronenberg, 1996), and *Ôdishon* (*Audition*, Takeshi Miiki, 1999). Christopher Tookey of the *Daily Mail* is also known for condemning certain films deemed confrontational. Many saw Walker, along with reviewers such as Derek Malcolm, who was film critic for *The Guardian* from 1970 until his retirement in 2000, as among the last of a band of journalists to have a genuine knowledge of cinema history. In the United Kingdom and the United States contemporary film reviews often seem designed to provide attention-grabbing quotes for movie advertising. Also, the Internet is growing into an immensely powerful tool in a film's success; the critic Harry Knowles of the Website

PAULINE KAEL

b. Petaluma, California, 19 June 1919, d. 3 September 2001

Pauline Kael was an outspoken, witty, and often unpredictable film critic who wrote for the weekly magazine *The New Yorker* from 1967 to 1991. Regarded as arguably America's greatest film critic, she influenced many, with her group of devotees called the "Paulettes." Her books include *I Lost It at the Movies* (1965), *Kiss Kiss Bang Bang* (1968), *The Citizen Kane Book* (1971), *Deeper into Movies* (winner of a National Book Award, 1973), and *5001 Nights at the Movies* (1982).

After studying philosophy, literature, and the arts at the University of California at Berkeley, she ran an art-house cinema in San Francisco in the late 1950s while broadcasting film reviews for a Berkeley radio station. She wrote film reviews for *Vogue*, *Life*, and *The New Republic* and the film journals *Sight and Sound* and *Film Quarterly*. Although her work, both for film journals and general-interest publications, exhibited an intellectualism, her writing style was notable in that she incorporated her personal experiences as well as slang and put-downs. She was avowedly anti-theory, assailing supporters of the auteur theory for what she saw as their attempt to advance Hollywood directors to the status of artists. She entered into a notorious public debate with Andrew Sarris about the auteur theory, ridiculing Sarris's proposed auteur "theory" with a persuasive deflation of auteurism's critical assumptions, and later on published *The Citizen Kane Book* (1971), in which she offered an account of the production of Orson Welles's film that attempted to show that it was less the product of a single towering auteur than a collaboration among several important artists.

An advocate of good storytelling and powerful acting, she was critical of the conceptual work of European filmmakers such as Alain Resnais, Robert Bresson, and Ingmar Bergman. Drawn to popular culture and films with energy that engaged the viewer's emotions, she blamed television for superficiality in movies after the 1950s and particularly disliked Hollywood's move toward event movies or big action films. She praised the Hollywood genre productions of the 1930s and 1940s and the realism and humanism of the European directors Max Ophüls, Jean Renoir, Roberto Rossellini, and Vittorio de Sica. These values coalesced in a group of films that emerged in the late 1960s and 1970s by maverick directors whom Kael championed, such as Robert Altman, Arthur Penn, and Sam Peckinpah, and the early films of the Hollywood new wave of Francis Ford Coppola, Brian de Palma, and Steven Spielberg. Kael had a sociological approach to movies that took into account the reactions of the general filmgoer. Considering the cinema as essentially an entertainment experience, some would argue that she was less a critic than a reviewer.

Ian Conrich

www.aintitcoolnews.com has attained the status of a minor celebrity for his unorthodox postings.

Trade journals, the earliest of film publications, are not generally recognized for their film reviews but rather are designed to support the industry through business news and advice on equipment and technical issues. Among the first were the American titles *Moving Picture World* (1907–1927) and *Motion Picture News* (1911–1930) and the British title *Bioscope* (1908–1932). In comparison to other film publications, trade journals have been marked by their longevity, in particular *Motion Picture Herald* (1915–1972); *American Cinematographer* (begun in 1921); *Hollywood Reporter* (begun in 1934), the film industry's first daily trade paper; and, most noticeably, *Variety* (begun in 1905). The latter has become an industry institution: its film reviews are influential, and its style of journalism, consisting of a jargon composed of abbreviations, alliteration, or a rhyming structure, has regularly been adopted as media-speak. *Variety* has even provided a "slanguage"

Pauline Kael. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

dictionary on its website. In the United Kingdom, *Screen International* (begun in 1975) is the key surviving trade publication. Its history can be traced back to *The Daily Film Renter* (1927–1957), which merged with *Today's Cinema: News and Property Gazette* (1928–1957) and became *The Daily Cinema* (1957–1968); *Today's Cinema* (1969–1971); and *Cinema TV Today* (1971–1975). The other major UK trade journal, *Kine Weekly*, which began in 1904 as *Optical Lantern and Kinematograph Journal* and went through several name changes, ceased publication in 1971.

ACADEMIC JOURNALS

Scholars working in the field of film studies, who publish articles on various aspects of film, often rely on trade journals as an archive of information for research on aspects of cinema's history. Historical and empirical perspectives on film are the focus of *Film History* (begun in 1987), the *Historical Journal of Film, Radio and Television* (begun in 1981), and *Early Popular Visual Culture* (begun in 2005, formerly *Living Pictures* [2001–2002]). Other publications are known for their left-wing political positions, such as *Cineaste* (begun in 1967), *Afterimage* (1970–1987), *Jump Cut* (begun in 1974, since 2001 an online journal), *Framework* (published since 1975, but particularly political between 1980 and 1992), and the early issues of *CineAction* (begun in 1985). These journals have been predominantly concerned with independent and experimental fimmaking, Third Cinema, race and gender, and art cinema and documentary film.

Third Cinema is also the concern of a large number of regional publications. In fact, the majority of film journals offering analysis and academic discussion are concentrated on national or regional cinemas. *Cinemaya* (published since 1988 in New Delhi) has been a sustained local voice on the broad questions of cinema across the Asian continent. The Sri Lankan–produced *Cinesith* (begun in 2001) and the New Zealand–produced *Illusions* (begun in 1986) largely deal with contemporary film developments. *Asian Cinema* (begun in 1986), *East-West Film Journal* (1987–1994), and *Journal of British Cinema and Television* (begun in 2004) publish a range of cultural, historical, and theoretical studies across periods in film.

Established academic film journals include *Film Quarterly* (begun in 1945); *Cinema Journal* (begun in 1959); *The Velvet Light Trap* (begun in 1971), concerned mainly but by no means exclusively with American film; *Post Script* (begun in 1971); *Journal of Popular Film and Television* (begun in 1972), concerned with mainstream, often genre-based cinema; and *camera obscura* (begun in 1976), which focuses on the topics of gender, race, class, and sexuality. Although central to film studies, these journals have not been associated with a particular critical school or position.

Screen (begun in 1969), founded by the Society for Education in Film and Television, was noted by the mid-1970s for its important articles on realism, formalism and poststructuralism, theories of ideology, aesthetics, and approaches to semiotics and pyschoanalysis. The journal, which published the first English-language translations of key texts by important theorists including Christian Metz, Roland Barthes, and Bertolt Brecht, inspired publications such as *The Australian Journal of Screen Theory* (1976–1985) and indeed gave rise to the term "screen theory." *Cahiers du Cinéma* was the other major journal to have had a lasting impact on film studies. Established in 1951 by André Bazin, this French journal (available additionally in English for just twelve issues from 1966 to 1967), was responsible for publishing not just debates regarding the *politique des auteurs*, but crucial discussions on film editing and *mise-en-scène*. Its writers included Claude Chabrol, Jean-Luc Godard, and Jacques Rivette, who, together with several other important directors, were later recognized as the French New Wave.

Cahiers du Cinéma was an influence on *Movie* (1962–2000), a British journal that admired a large

group of Hollywood directors (above all Howard Hawks and Alfred Hitchcock) for what it saw as their authorial skill and personal vision. *Movie* paid particular attention to *mise-en-scène* and held that critical analysis in existing British journals, such as the orthodox *Sight and Sound* (begun in 1932), was lacking. *Sight and Sound*, a publication of the British Film Institute, absorbed the *Monthly Film Bulletin* (1934–1991), a sister journal that was a film credits and reviews listing, only a year after the demise of a main UK competitor, *Films and Filming* (1954–1990). *Sight and Sound*'s equivalent American publication was *Film Comment* (begun in 1961), published by the Film Society of Lincoln Center in New York. *Sight and Sound* and *Film Comment* cover foreign films and also devote in-depth discussions to new releases and developments in mainstream cinema. With the Internet now so central to culture, and with film magazines devoted to popular movies dominating the market, these film studies journals face the challenge of remaining both commercially attractive and critically cutting-edge.

KOREA

The South Korean film industry—producing anywhere between fifty and two hundred feature-length films annually—has been historically one of the world's most active national cinemas. The annual ticket sales figure in 2002 was $105 million (US), $50 million of which were for admissions to domestic Korean films. Between 2003 and 2005 in South Korea, attendance at domestic Korean films exceeded attendance at Hollywood imports, a rarity in a movie-going culture dominated by multiplex theaters. The cinema in Korea has strong roots as a privileged cultural form that has attracted the interests of diverse talents, including novelists, performers, musicians, artists, and intellectuals.

As an economic, political, and military ally of the United States throughout the post–World War II period and during the Korean War (1950–1953), South Korea was exposed to American popular culture through the US military forces and American clubs. Despite import and screen quotas that held foreign films in check, American films could always rely on strong audience identification. Running up against the impressive Hollywood scale of production, Korean films were forced to compete at the box office through low-budget genres like comedies, melodramas, and horror films. Surprisingly, interest in these domestic popular films was quite strong during the postwar years. The only anomalous period was from the mid-1970s to the early 1990s, when the film industry—like other cultural sectors—was placed under vigilant censorship by the military government. A strong strand of auteur-driven films with historically sensitive themes emerged in the 1990s. Most art films are now funded by the Korean Film Commission, which was established by the liberal government of President Kim Dae-jung (1998–2002).

After decades of volatility, the distribution system stabilized in the early years of the twenty-first century. A local conglomerate, Samsung, is one of the largest investors in the Korean film industry. Its subsidiary company, CJ Entertainment, makes direct investment, produces films, distributes local and imported films, operates the CGV multiplex theater chain, and sells the distribution and broadcasting rights of its products on the foreign market. Another film company that has demonstrated impressive growth is Showbox, a financing and distribution firm of entertainment contents, that also operates the Megabox theater chain. These two companies share about 50 percent of the total box office revenue in Korea. Though the passage of a new Motion Picture Law in 1986 has allowed Hollywood companies to distribute their films directly in Korea, the business performances of American companies like Columbia, Twentieth Century Fox, and Warner Brothers in Korea lag far behind CJ Entertainment and Showbox.

EARLY HISTORY

A film screening held in 1899 at the Kyŏngbok Palace in Seoul, when American cinematographer Burton Holmes visited King Kojong, is widely accepted as the first instance of film exhibition in Korea. Though these early film exhibitions were limited to court circles, they soon aroused general curiosity and became widespread mass-entertainment events. Newspapers, as early as 1903, began to aggressively advertise motion picture screenings, sponsored by Western cigarette companies. These public screenings generated so much excitement that the Seoul Electric Company converted its garage in Dongdaemun into a formal movie theater within months of the initial

screenings. Though these exhibition records in Korea are relatively well documented, complications cloud the exact exhibition date of the first Korean film. Japanese colonialism, which began in Korea in 1910, contributed to the loss of records of early Korean films (including the disappearance of all Korean narrative films made before 1943). Many films made in Korea during the colonial period, which lasted thirty-five years, were financed, supervised, and distributed by Japanese entrepreneurs and personnel. Strict film censorship, enacted in 1926, also required every film to obtain approval from the Japanese authorities before it could be screened in Korea. With one notable exception (Tansŏngsa, which still remains in business), all of the successful theaters in Seoul were also owned by the Japanese during the first half of the twentieth century.

Throughout the 1910s and 1920s, efforts were made by Korean businessmen and artists to establish independent film production companies that would free them from Japanese financial and technical dependence. Most of their films struggled to compete against foreign films, but their resilience eventually paved the path for a renaissance of Korean filmmaking. The first filmmaker to achieve true national recognition was Na Woon-gyu (1902–1937), whose film *Arirang* sparked an intense nationalistic film movement. Released in 1926, *Arirang*—written and directed by (and starring) Na Un-gyu—was perhaps the most popular film screened in Korea during the colonial period. A simple story that pits a Korean student against a villainous local bureaucrat who collaborates with the colonial government, the film found loopholes in Japanese censorship. Though he was not a particularly attractive man, Na's persona as an enraged common man tapped into the fury and frustration of colonial Korea. He was not only Korea's first legitimate "pop" icon, he was also the first modern celebrity who was not of *yangban* (aristocratic) origin.

By the time sound technology had arrived in Korea during the mid-1930s, Korean cinema had already suffered a precipitous fall. Once the war escalated in China during the 1930s, Japan abandoned any policies that had allowed expression of Korea's indigenous culture. Less than a handful of films were produced per year during this decade. Na Woon-gyu died in 1937, while only in his thirties; two years later, the Japanese authorities banned the Korean language and Korean names from official use. Though audiences cheered upon hearing dialogue in their native language in the first Korean "talkie," *Chunhyang* (1935, a film based on a popular folktale), the eventual prohibition of the Korean language virtually robbed Koreans of the opportunity to establish their own national identity during the early sound era. Ironically, this delay of the arrival of sound enabled Korean *pyŏnsa*s (*benshi*, live commentators of silent films) to find work even as late as the postwar years. Meanwhile, the Japanese-run Manchurian Film Company, Man-Ei, active during the war years, provided a fertile training ground for many Korean filmmakers who would later become the most important producer-directors of the Korean cinema's Golden Age.

THE GOLDEN AGE OF CINEMA IN SOUTH KOREA

Though several notable films were made during the liberation period (1945–1950), cinema became a mature industry only after the Korean War (1950–1953) had ended. Known as the "Golden Age," cinema was easily the most popular entertainment form during the two decades that followed the Korean War. It had posed some serious competition for Hollywood, not only locally but also in other parts of Asia, including Hong Kong. Throughout the 1960s and the early 1970s, Ch'ungmuro, a district in Seoul, was home to one of the most profitable and active industries in the world, producing at its peak (1968–1971) over two hundred films a year. Nearly half of the 170 million tickets (the entire population was just over 30 million) in 1972, for instance, were sold for the screening of local films.

Among the films that still receive critical attention, most of them were produced around 1960. The creative vacuum that the intellectual community had suffered during the Korean War—through deaths, psychic injuries, and mass defections to the North—had begun to change by the late 1950s and the early 1960s. The trauma of war—along with a rapid pace of modernization, changing roles of gender, and postwar recovery—was a source of dramatic inspiration for many young filmmakers. The films that best represent this unique era, *Hanyŏ* (*The Housemaid*, Kim Ki-young, 1960), *Sarangbang sonnim kwa ŏmŏni* (*The Houseguest and My Mother*, Shin Sang-ok, 1961), *Obalt'an* (*The Stray Bullet*, Yu Hyun-mok, 1961), and *Mabu* (*The Coachman*, Kang Tae-jin, 1961) were all released within a two-year period.

Though every genre of films imaginable—horror, comedy, action thrillers, martial arts, and even musicals—were made and viewed during this period, it was melodrama that was by far the most powerful and successful genre. Caught between the modern ideals of freedom and the traditional mores of chastity and virtuous motherhood, women were often the protagonists whose personal dilemmas punctuated the film's central theme. In Shin Sang-ok's (1926–2006) *The Houseguest and My Mother*, for example, a widow still clothed in traditional *hanbok* has a love affair with a schoolteacher who is a boarder at her house. The film's narrative naturalizes the modern-day desire that drives the mother and the houseguest together, challenging the orthodox moral codes that require widows to remain in mourning their entire lives.

This vibrant cinematic period came to a screeching halt in 1973 when the military government radically restructured and censored the film industry. For the next twenty years, all surviving production companies had to meet strict government guidelines, which required them to devote themselves, at least partially, to the moral revamping of the nation. As it turned out, these requirements forced the film industry to churn out, on one hand, government propaganda films and "quality films" (awards given to the best adaptations of major literary works), which almost always lost money, and on the other, B-grade erotic movies, which served to make up for this loss.

THE NEW KOREAN CINEMA

When Park Kwang-su (b. 1955) and Jang Sun-woo (b. 1952), the two key directors of the New Korean Cinema, began their careers in 1988, Ch'ungmuro had already lost its earlier glory. Most Korean moviegoers shunned domestic films in the 1980s. Throughout that decade and most of the 1990s, the percentage of the domestic market share for Korean films fell below 20 percent, while Hollywood films brought in the overwhelming majority of box office receipts. The Korean film industry was forced to reinvent itself, against the background of a restless sociopolitical climate. The spirit of democratization during the 1980s influenced many young filmmakers to seriously challenge the status quo. The activist film movement in turn helped cultivate a generation of cinephiles, who were instrumental in the success of film festivals in Pusan, Puchon, and Jeonju and in the diversification of Korean film. Some of the films that best represent this period include Park Kwang-su's *To the Starry Island* (*Kŭ sŏm e kagosipta*, 1993) and *A Single Spark* (*Arŭmdaun ch'ŏngnyŏn Chŏn T'ae-il*, 1996), which are realistic films set against grim historical backgrounds. Jang Sun-woo, on the other hand, refused to be tied to realism and has instead explored questions of representation through the issues of sexuality, desire, and power. Both wry and cathartic, his films, such as *To You, from Me* (*Nŏ ege na rŭl ponenda*, 1994) and *Timeless Bottomless Bad Movie* (*Nappŭn yŏnghwa*, 1997), feature young people in crisis and reveal a strong

IM KWON-TAEK

b. Chang-sŏng, Korea, 2 November 1934 (lunar calendar; by certificate, 1936)

Having begun his career in 1961, Im Kwon-Taek has, as of 2006, directed ninety-nine films, and he remains one of the rare directors to have achieved success in both the domestic box office and international film festivals.

Success eluded Im Kwon-Taek until he was nearly fifty years old. Though a proficient director of various popular genres during the "Golden Age" of the 1960s and the 1970s, Im was considered merely a B-grade studio director. His maturation as a director of art films had been impeded by several factors: government censorship, his social class, his family's ideological affiliations (as leftists), and his regional background (he was born in Chŏlla province, which has historically suffered political oppression). Im imposed self-censorship throughout the early stage of his career, and he steered away from making personal films until the democratization of the 1980s and the 1990s removed sanctions on sensitive political subjects.

Im Kwon-Taek's career is as paradoxical, dramatic, and tumultuous as the history of modern Korea itself. During the 1960s and early 1970s, Im directed films for small companies, often shooting as many as eight films per year. By 1973, the government had centralized the film industry, and Im began to develop as a director by refining his trade without the pressure of the box office. He became known as the director of "quality film," making numerous adaptations of period novels in such films as *Chokpo* (*The Genealogy*, 1978) and *Kippal ŏmnŭn kisu* (*The Hidden Hero*, 1979). From 1981, his films began to garner international recognition. During the 1990s, they diverged along two paths: one that would remain close to art film subjects and another that would utilize genre conventions for popular consumption. For instance, *Sopyonje* (1993) tells the story of an itinerant family of musicians who practice a dying traditional art (*p'ansori*), and the *han* (pent-up grief) that underpins both their music and their lives. While aesthetically uncompromising, the film also tapped deep into the melodramatic impulses that had been lurking beneath the tragic history of modern Korea.

Korean audiences were drawn to *Sopyonje*; it shattered the local box office record, created a national fanfare around *p'ansori*, and restored—albeit briefly—confidence in the commercial viability of art films. Im returned to his successful roots of *p'ansori* seven years later with *Chunhyang* (2000), a musical based on a one-man vocal performance of the famous folktale about a loyal courtesan who remains faithful to her true love. *Chunhyang* and his subsequent film, *Chihwaseon* (*Strokes of Fire*, 2002), a real-life story about a maverick painter of the nineteenth century, garnered commercial successes in the United States and France, and it remains one of the biggest box office successes for Korean films in those two countries.

Kyung Hyun Kim

inclination to debunk cinematic conventions. Both Park and Jang also hold the ignominious record of making two of the most commercially disastrous films in the history of Korean cinema: Park's *Uprising* (*Yi Che-su ŭi nan*, 1999) and Jang's *The Resurrection of the Little Match Girl* (*Sŏngnyang p'ari sonyŏ ŭi chaerim*, 2002).

Widely regarded by critics as the best contemporary Korean director, along with Im Kwon-Taek (b. 1936) and Park Chan-wook (b. 1963), is Hong Sangsoo (Hong Sang-su, b. 1960), whose work is distinguished by deeply personal dramas. Hong's films also often manipulate the linear flow of time, splitting time into segments and repeating them without disrupting the narrative center. The characters in *The Power of Kangwon Province* (*Kangwondo ŭi him*, 1998) and *Virgin Stripped Bare by Her Bachelors* (*O! Sujŏng*, 2000) are unforgettable, as his *mise-en-scène* masterfully selects the intolerably sublime moments from the insignificant everyday.

In the early twenty-first century, it became routine in Korean cinema to distribute a single film to more than

Im Kwon-Taek. © CAROLE BELLAICHE/SYGMA/CORBIS.

500 screens in multiplexes, following aggressive marketing campaigns, to maximize the return of opening weekend box office results. *Shiri* (1999), a spy thriller about North Korean infiltration in the South, sold over 5.7 million tickets, several million more than the previous record holder. This practice radically restructured the entire film industry; in the early 2000s, it was not unusual for local blockbusters to gross over $20 million. Since 2003, Korean films consistently outdraw their Hollywood competitors, representing one of the highest shares of domestic movie consumption in the world. Lee Chang-dong (Yi Ch'ang-dong), the winner of the director's award at the Venice Film Festival for *Oasis* (2002), was appointed minister of culture in 2003.

Korean cinema is at a crossroads: in addition to the international blockbusters, such as *Shiri* and *Silmido* (Kang U-sŏk, 2003), there are provocative independent films, like *Camel(s)* (Park Ki-yong, 2002) and *Invisible Light* (*Kŭ jip ap*, Kim Gina, 2003), which are not included in the standard distribution circuit. Multiplex theaters have redefined what was once a comprehensive film culture, and the box office is ruled by crass comedies about gangster families and oversexed teenagers, making investors reluctant to finance films that are outside the scope of low-risk genre films. The New Korean Cinema, which has the potential to stimulate audiences intellectually, waned at precisely the moment that the industry became commercially rejuvenated.

NORTH KOREA

Though the severe economic hardship of the 1990s forced the centralized film industry to curtail its productivity, cinema continues to serve an important function in North Korean society. Kim Il-Sung, the former leader, and Kim Jong-Il, his heir, took great interest in movies. Kim Jong-Il began his career in the Department of Culture and Propaganda, writing several guidebooks on filmmaking methods during the 1970s that still remain relevant today. Severe limitations on subject matters are imposed because cinema must serve explicit political purposes and underscore official *juch'e* ideology. A North Korean averages about ten trips to see movies per year, but most of these screenings are held as an auxiliary part of cultural or sociopolitical events sponsored by the state. Some of the most accomplished films were produced during the late 1960s and early 1970s. *Sea of Blood* (*P'ibada*, 1968) and *The Flower Girl* (*Kkot p'anŭn ch'ŏnyŏ*, 1972), two classic films of the era, both depict the Manchurian armed resistance of the 1930s during which Kim Il-Sung built his reputation as a young leader of the independence movement.

LATINOS AND CINEMA

Latinos/Hispanics are people with ancestry in Latin-American countries or the US Southwest, which was part of Mexico prior to 1848. The term "Hispanic," which has been used by the US government since the 1970s, includes people whose ancestry can be traced back to Spain and other Spanish-speaking countries; it tends to emphasize European ancestry. Because many people choose not to trace their ancestry back to Europe, or hail from Latin-American countries that are not Spanish-dominant, the term "Latino" is increasingly a preferred term for individuals of Latin-American heritage. "Latino" also is written as "Latino/a" or "Latina/o"; this designation combines the male designation of Latin*o* in Spanish with the female designation of Latin*a* to emphasize reference to both women and men. For the sake of clarity, the term "Latino" is used here to refer to both women and men.

As individuals with ancestry in countries with radically different histories, cultures, and relationships to the United States, Latinos are a diverse group. These histories contribute to widely varied situations for Latinos in the United States in terms of class, education, and citizenship. Latinos also span a range of races as defined by the US census. Mexican Americans made up the largest group of Latinos in the United States in 2000, comprising about 58.5 percent of all Latinos, followed by Puerto Ricans (10%), Cuban Americans (3.5%), and smaller but rapidly increasing numbers of Latinos of Central and South American descent. While Spanish-language usage is at times a commonality among Latinos, that is not always the case, as US Latinos may or may not speak Spanish.

Latinos have undergone an eventful evolution both behind the scenes and on the screen in American film. The participation of Latinos in American film is increasingly important to film scholarship, as the Latino population in the United States continues to grow rapidly. Latinos currently are the largest nonwhite group in the United States, comprising an estimated 13.7 percent of the population in 2003, according to the US Census Bureau.

LATINOS AND HOLLYWOOD FILM

Historically, Latinos have seldom been the protagonists of Hollywood film stories, and their characters typically have been marginal and underdeveloped when they do appear. The use of stereotypes has been a major facet of Latino film representation, particularly in the era of classical Hollywood. In past decades, Latino characters often were presented as especially sexual, childlike, or aggressive. Although some films exhibited more positive or complex imagery of Latinos, the overall history is not fully known because scholarship in this area is relatively new. Prominent scholars of Latino film representation include Chon Noriega, Charles Ramírez Berg, Ana M. López, Clara Rodríguez, and Rosa Linda Fregoso.

The early negative stereotyping of Latinos in film has a direct relationship to the history of Latinos, and specifically Mexican Americans, in the United States. Mexicans and, later, Mexican Americans were often seen as impediments to the move westward by European settlers in the 1800s; notions of "Manifest Destiny" circulated in frontier literature, and other artifacts of popular culture tended to pose Mexican Americans as inferior in intelligence and integrity and thus unworthy of the rights of citizenship. Early films merely rearticulated these

"American" stereotypes in their imagery of Mexican Americans and Mexicans. Films of later decades extended such stereotypes to Central and South Americans.

In the first few decades after the birth of American film in the late 1890s, a few Latinos in fact were involved in filmmaking or appeared as actors in films. These individuals were all from economically privileged backgrounds and had predominantly Spanish ancestry, however. In this time period there was no centralized film industry; rather, filmmaking consisted of entrepreneurs scattered around the country making silent motion pictures. A few Americans of Latino descent who made early silent films in this capacity included the actresses Myrtle Gonzalez (1891–1918) and Beatriz Michelena (1890–1942), who also produced the adventure films she starred in. As a small number of film production companies rose to dominate the industry in the 1910s and 1920s, Latinos working behind the scenes in film production virtually disappeared, however. They did not reappear in substantial numbers until the 1970s.

The earliest Latino characters appeared in silent westerns; they often played the villainous "greaser" opposing the white hero. Films that capitalized on this storyline included *Tony the Greaser* (1911) and *The Greaser's Revenge* (1914). The term "greaser," which was in popular usage at the time, was then used to describe Mexican bandits and other lazy, untrustworthy Mexican characters. Such representations began the Hollywood pattern of establishing Latino characters as "others" in contrast to whites. These images were not exported to Latin-American countries without protest, however. Complaints and a boycott of Hollywood films by the Mexican government in the early 1920s eventually led film producers to take care to disassociate negative Latino characters from identification with any particular country, leading to pan-Latino representations that typically still were denigrating.

In the mid-1920s there was a boom in opportunity experienced by a few, light-skinned Latino actors and actresses. Inspired by the immense popularity of the Italian actor Rudolph Valentino (1895–1926), the original "Latin Lover," film producers provided opportunities to a few Latinos, including Mexican-born Ramon Novarro (1899–1968), Dolores Del Rio (1905–1983), Gilbert Roland (1905–1994), and Lupe Velez (1908–1944). These actors and actresses were cast in major roles, often as passionate, sensuous Latin Lover types, and became international stars in silent films of the mid- to late 1920s. The Latin Lover image capitalized on notions that Latinos were innately passionate and sexual, particularly in comparison with their Anglo-Saxon counterparts, with this sensuality at times paired with more negative traits of aggression or sadomasochism. These often were actually not Latino roles, moreover, but in fact characters of other ethnicities and nationalities. Latino film characters still were typical villains or servants in this era.

CHALLENGES IN SOUND ERA HOLLYWOOD

The intense popularity of the Latin Lover ended in the early 1930s. In this period, the transition to sound film and shifting American ideologies after the onset of the Great Depression resulted in Latino actors and actresses generally losing the chance to be promoted as stars equal to white Americans. "All-American" stars were favored over foreign or ethnic actors, while Latino actors suffered in relation to American scapegoating of Mexican Americans during this period of unemployment crisis. Now that accents could be heard, Latino actors and actresses generally found themselves marginalized in minor roles or exaggerated their accents to comic effect, as was the case for Lupe Velez in such roles as that of the daffy "Mexican Spitfire" in a popular early 1940s film series. In addition, Latinos typically were not cast in "white" roles, regardless of how fair-skinned they might be. This Hollywood standard reinforced an imaginary racial hierarchy that deemed Latinos nonwhite and non-American. Hollywood film roles for Latinos in the sound era often included only violent and shiftless Latino bandits and cantina girls in westerns. The Latino actors who were cast in more challenging roles and maintained the busiest careers in the studio system–dominated decades of the 1930s and 1940s included former silent film stars Dolores Del Rio and Lupe Velez, Cuban actor Cesar Romero (1907–1994), and Mexican-Irish newcomer Anthony Quinn (1915–2001).

The few leading Latino roles in films often were cast with Anglo actors, a Hollywood tradition that has continued (but decreased) in recent years. Cases of Anglo actors in "brownface" over the decades have included Paul Muni as a hotheaded Mexican American lawyer in *Bordertown* (1935), Marlon Brando's turn as Mexican revolutionary leader Emiliano Zapata in *Viva Zapata!* (1952), Natalie Wood's role as a young Puerto Rican woman in *West Side Story* (1961), and more recently, the casting of non-Latinos in multiple Latino roles in *The House of the Spirits* (1993) and *The Perez Family* (1995).

Some new opportunities arose in "Good Neighbor" films of the 1940s, however. This cycle of films, with story lines set in Latin-American locales, was released just prior to and during the war years of the early 1940s. During this period of the US government's Good Neighbor Policy, the United States sought to encourage ongoing political ties with Latin-American countries. In support of these efforts, Hollywood studios produced and exported films that emphasized the celebration of

Latin-American cultures and themes of friendship and cooperation. They also hoped to recoup some of the financial losses they were incurring while European markets were closed to US film exports. The films produced as a part of this cycle included biographical dramas and Latin-themed musicals, such as Disney's animated film *The Three Caballeros* (1945) and the Twentieth Century Fox musical *Weekend in Havana* (1941). Actors such as Cesar Romero, Lupe Velez, and Ricardo Montalban (b. 1920) found opportunities in this cycle of films, although generally only in minor Latin Lover roles, playing second fiddle to white American leads. Several stars with musical abilities were imported from Latin America to perform in musical numbers and play supporting roles in Good Neighbor musicals. Among the most successful were Cuban performer Desi Arnaz (1917–1986) and singer-actress Carmen Miranda (1909–1955), who was born in Portugal but had grown up in Brazil. Miranda, known for her exaggerated costumes and performance style, appeared in many musicals of the cycle. In musical numbers such as "The Lady in the Tutti Frutti Hat" Miranda came to symbolize the comic, tropical Latina, a stereotype that is widely known today.

A new genre of films that at times represented US Latinos and their social issues, the social-problem film, also appeared in the late 1940s and 1950s. This postwar cycle of films strove for realism and emphasized exposing real-life social inequities. Some of the social-problem films that addressed discrimination faced by Mexican Americans in their communities included *A Medal for Benny* (1945) and *The Ring* (1952). The genre began to wane with the federal government's hunt for communists in Hollywood in this same period. This had a chilling effect, particularly as the film industry blacklisted film professionals whose political beliefs were considered too critical of the United States. The best-known social-problem film with a focus on Mexican Americans, *Salt of the Earth* (1953), in fact was made by blacklisted filmmakers. It related the true story of Mexican-American miners and their wives who had managed to successfully strike against a zinc mine company for unsafe and exploitive working conditions.

As studios became disinterested in making Latin-themed films and social-problem films, Latino actors and actresses again had fewer opportunities. Some, in attempting to maintain their careers, downplayed their Latino heritage. Actors such as Anthony Quinn and the Puerto Rican actor Jose Ferrer (1909–1992) often did not address their heritage in their publicity during these years. Similarly, in later decades actors such as Raquel Welch (b. Jo Raquel Tejada in 1940) and Martin Sheen (b. Ramon Estevez in 1940) changed their names to avoid Hollywood typecasting. Others, such as the Puerto Rican performer Rita Moreno (b. 1931), who began her Hollywood career in 1950, tried to stay true to their ethnic roots, but they struggled with limited opportunities and roles that continued to play on previous stereotypes. Beginning in the 1960s these roles included juvenile delinquents and gang members in urban dramas such as *Blackboard Jungle* (1955) and *West Side Story* (1961), and new versions of the bandit role in Italian and Hollywood westerns, such as Sergio Leone's *Il Buono, il brutto, il cattivo* (*The Good, The Bad, and the Ugly*, 1966) and Sam Peckinpah's *The Wild Bunch* (1969).

ORIGINS OF CHICANO AND LATINO CINEMA

In this same time period, Latinos were beginning to take matters into their own hands with respect to filmmaking. Latino feature filmmaking has its roots in political activism of the late 1960s and early 1970s, and in particular the Chicano and Puerto Rican civil-rights movements. In the 1960s many Mexican Americans and other Latinos became involved with civil-rights activism, fighting for equal rights and respect for Latinos in US social institutions, including the mass media. It was during this period that the term "Chicano" began to be embraced as a label of pride by many Mexican Americans.

The fight for more positive film representations was fought on two main fronts by Chicano, Puerto Rican, and other Latino activists. On one front, Latino media-advocacy groups such as CARISSMA and JUSTICIA protested images that were seen as negative stereotypes and demanded training opportunities and employment for Latinos in the US television and film industries. On another front, some Chicano and Latino activists began producing short films in conjunction with their activism. These films are generally considered the first wave of Chicano, Puerto-Rican, and Cuban-American cinemas. These early activist-filmmakers included Moctesuma Esparza, Sylvia Morales, Jesus Salvador Treviño, Susan Racho, and Luis Valdez (b. 1940). Some were also among the first Latinos to be able to enter film schools and receive formal training.

These films of early Chicano and Latino cinema are notable for their anti-Hollywood and pro-movement ideals of promoting ethnic political consciousness and pride. Manifestos written by proponents and practitioners of early Chicano cinema, for instance, note its aim to serve as an antidote to how Latinos historically had been represented and employed in film. To this end, the tenets of Chicano cinema included a focus on education and uplift of Chicanos and the aim to serve as a countercinema to Hollywood. Many early Chicano films in fact were documentaries produced on shoestring budgets that highlighted social issues and celebrated Mexican-American culture and identity. Such films included

LUIS VALDEZ
b. Delano, California, 26 June 1940

Writer-director Luis Valdez has often been described as the father of Chicano theater and cinema; he also is notable for creating bridges between these creative worlds and Hollywood cinema. The son of migrant farm workers in California, Valdez began his creative career as a playwright while a student at San Jose State University in the early 1960s. When a boycott of California grapes in support of Mexican-American farm workers began in 1965, he returned to his childhood home to participate in the efforts of the United Farm Workers (UFW). In support of the UFW he founded Teatro Campesino (the Farmworkers Theater) in 1965. The theater group served to inform, encourage, and entertain Chicano farm workers with its humorous and socially incisive skits called "actos," often performing on flatbed trucks in the fields. He also produced the short film *I Am Joaquin* (1969), based on an epic poem by Rudolfo "Corky" Gonzales, which celebrated Chicano identity and became an anthem of the Chicano movement.

Several of Valdez's theatrical projects made their way to film and television over the years. The first was *Zoot Suit*, a retelling of the early 1940s "zoot suit riots," during which Mexican Americans suffered injustices at the hands of white American servicemen in Los Angeles. Drawing from interviews and archival research on the related 1942 trial of Henry Leyva and eight other Mexican-American youths in the Sleepy Lagoon murder case, Valdez crafted a play that foregrounded Chicano voices and experience in regional and national theater. *Zoot Suit* was the first play by a Mexican American to be produced on Broadway. As a film, *Zoot Suit* (1981) starred Valdez's brother, Daniel, and costarred Edward James Olmos in one of his first starring roles. Shot in just two weeks on a low budget, the film deftly brings the energy and theatricality of a full-scale musical to the screen. It is seen as a masterpiece of Chicano cinema and has served as an inspiration to a new generation of Latino filmmakers.

The critical success of *Zoot Suit* led to Valdez's second feature film, *La Bamba* (1987), about the 1950s Mexican-American rock singer Ritchie Valens. *La Bamba* was one of the first films distributed by a major studio in an effort to reach the Latino audience; both English- and Spanish-language versions were released by Tri-Star Pictures. Both *Zoot Suit* and *La Bamba* were instrumental in the growing interest in and openness to Latino filmmakers, actors, and film projects.

Valdez continues to live and work with Teatro Campesino in San Juan Bautista, California. He also teaches at California State University, Monterey Bay.

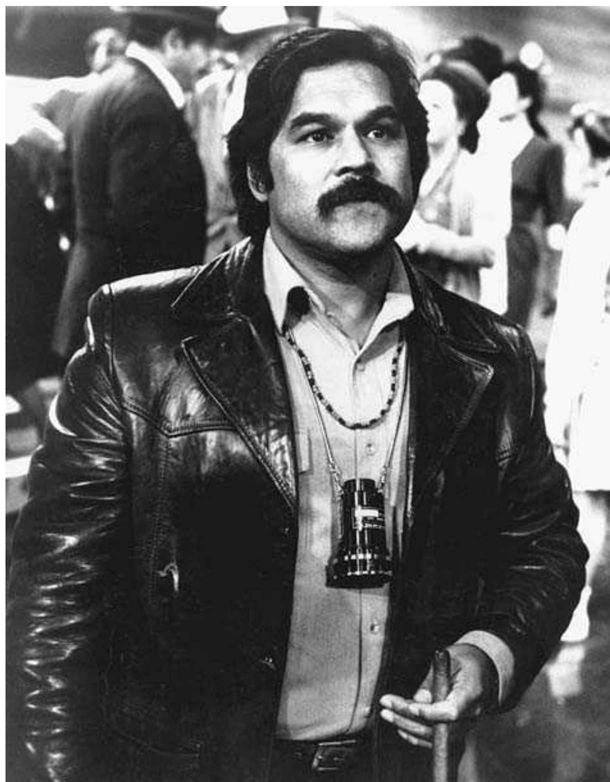
NEW OPPORTUNITIES SINCE THE 1980s

The 1980s and 1990s brought new opportunities for Latino filmmaking and Latino film representation. These shifts took place because of the rising cadre of Latino film professionals entering the mainstream film industry, many of whom had gotten their start in Chicano and other Latino cinemas, as well as the industry's rising interest in the Latino audience. A substantial number of feature films directed by Latino filmmakers were distributed by the major studios in the 1980s; these films were by and large critically acclaimed and earned respectable box-office profits. They included Valdez's *Zoot Suit* (1981) and *La Bamba* (1987), Gregory Nava's



Luis Valdez. © UNIVERSAL PICTURES/COURTESY EVERETT COLLECTION.

(b. 1949) *El Norte* (1983), *Crossover Dreams* (Leon Ichaso, 1985), *Born in East L.A.* (Cheech Marin, 1987), and *Stand and Deliver* (Ramón Menéndez, 1988). (Latina filmmakers, while they did exist, tended to produce short films outside the Hollywood system during this time period.)

The visibility of Latino-themed feature films led the news media to dub the 1980s the "Decade of the Hispanic" late in the decade. While the period did witness the breakthrough of Latino filmmaking in Hollywood, it did not necessarily amount to long-term change on the part of the studios, as filmmakers continued to struggle mightily to secure financing and distribution of Latino-themed feature-film projects. But the few films that did get made offered Latino actors and actresses some of their most interesting and well-developed roles ever, catapulting several to stardom. Actors and actresses who were showcased in Chicano and Latino films in the 1980s and 1990s included the Mexican Americans Edward James Olmos (b. 1947), Lupe Ontiveros (b. 1942), and Elpidia Carrillo (b. 1963). A number of Latino actors of a variety of nationalities also broke into the mainstream in this decade, playing both Latinos and non-Latinos; they included the Cuban actor Andy Garcia (b. 1956), the Puerto Rican Raul Julia (1940–1994), the Irish-Cuban Mercedes Ruehl (b. 1948), and Maria Conchita Alonso (b. 1957), a Venezuelan of Cuban descent.

With respect to Latino filmmaking, an even greater diversity has been seen in Latino-themed film projects since the 1990s, reflecting the divergent interests of the newest generation of Latino filmmakers. Successful films with Latino themes since the 1990s include *American Me* (1992), directed by Olmos; *My Family/Mi Familia* (1995) and *Selena* (1997), both directed by Nava; and *Real Women Have Curves* (2002), directed by the Colombian filmmaker Patricia Cordoso. Perhaps the most successful Latino filmmaker today is the Mexican-American Robert Rodriguez (b. 1968), who has established a busy and fruitful career working from his studios in Austin, Texas, on projects that include Latino themes and actors but also aim to appeal to a broad US and global audience. His films have included *El Mariachi* (1991), *Desperado* (1995), *Sin City* (2005), and the family-friendly *Spy Kids* series beginning in 2000.

The rising visibility and status of Latinos in the industry, combined with increasing desire on the part of film studios to court the Latino audience, has created a virtual "Latinowood" within the traditionally white Hollywood star system. Since the 1990s the roster of Latino actors with name recognition among non-Latinos and Latinos alike has grown exponentially, and these stars often have greater status and opportunity than Latino actors of previous eras. Contemporary Latino stars include Salma Hayek, Benicio del Toro, Jay Hernandez, Rosario Dawson, Benjamín Bratt, and Michelle Rodriguez. The most powerful and highest-paid Latina in Hollywood today is Nuyorican (New York–born Puerto Rican) multimedia performer Jennifer Lopez. Having found her first opportunities in film and television products helmed by Latinos and African Americans, including the sketch-comedy series *In Living Color* (1990–1994) and the films *My Family/Mi Familia* and *Selena*, Lopez has risen in status to headline her own film projects, often breaking through former ethnic barriers to play roles written for non-Latinas in such films as *Out of Sight* (1998), *The Wedding Planner* (2001), and *Angel Eyes* (2001).

Despite the stardom of a handful of Latinos, the majority of Latino actors continue to face particular challenges, however. A number of factors play into a Hollywood mindset that still puts Latinos at a disadvantage. These include the dearth of Latino film executives and talent agents, and a corresponding lack of Latino creative professionals who might create more complex and positive roles for Latinos to portray. As was documented by a 1999 Tomás Rivera Policy Institute study commissioned by the Screen Actors Guild (SAG), most

A somber scene depicting life in a troubled Guatemalan village in* El Norte *(Gregory Nava, 1983). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

Latino actors and actresses find it extremely difficult to secure talent management or find employment in film or television. In 1998 Latinos comprised only 4.3 percent of total SAG membership, and worked on average only 2.9 percent of actors' work days. Latino actors also were generally cast in supporting rather than leading roles, particularly in comparison to white and African American actors. In addition, Latino film stars still tend to be promoted in ways that echo former stereotypes. This includes an emphasis on a supposed, inherent sexiness and passion and the use in publicity of descriptors related to tropical climates, such as "heat" and "spice." Latino actors and actresses thus often still cannot escape age-old patterns of representation, despite their growing status and the wide diversity among them.

Focusing on all of these fronts, several advocacy groups continue to lobby for more positive and complex portrayals of Latinos in film and television and increased Latino employment and promotion in acting, production, and executive roles. These groups include the National Hispanic Media Coalition, the Imagen (image) Foundation, the National Hispanic Foundation for the Arts, and the National Association of Latino Independent Producers. The actors' group Nosotros (us), founded decades ago by the actor Ricardo Montalban, also serves to provide support to Latino actors and actresses in Los Angeles. In addition, a number of industry professionals have emerged as strong advocates for Latino opportunity in film, including the producer Moctesuma Esparza, writer-director Gregory Nava, and actor-producer Edward James Olmos, who are among the handful of Latinos who have the ability to spearhead large-scale feature films today.

LIGHTING

To begin to appreciate the ways in which lighting can shape the ways we respond to a film, consider the scene in Alfred Hitchcock's *Suspicion* (1941) where a young wife (Joan Fontaine) lies ailing in her bed while her mysterious newlywed husband (Cary Grant) slowly ascends the stairs to her room, advancing through a spiderweb of foreboding shadows. On a small tray he carries a glass of milk that glows with an eerie luminosity. The scene invites us to wonder whether he might be trying to poison his wife. Such mistrust assuredly does not arise from the popular actor's star image; instead, the ominous shadows cast across the set and the covert placement of a light bulb inside the glass combine to arouse unease.

Lighting has come to be an important component of cinema's visual design. It is widely recognized that in film, as elsewhere, it can create a substantial emotional impact. A primordial response to darkness and light is a deep-seated element of human psychology that filmmakers have harnessed in order to influence the ways viewers respond to narrative development. On the one hand, deep shadows can make a character seem untrustworthy or conceal a host of horrors. On the other, bright, diffused lighting can provide comfort and reassurance or create the impression of an angelic countenance. Extremely bright light can cause discomfort, though, and can even be used as a weapon, as in *Rear Window* (1954) and *The Big Combo* (1955), where it dazzles the villains and halts their advance.

Brightness is only one variable of lighting that can contribute to the effect of a scene. The choices the cinematographer makes about what kinds of lights will be used, how many there will be, and where they will be placed all require careful consideration. Moreover, color and black-and-white cinematography each allows for different lighting effects. Colored lighting can give rise to a range of subjective impressions that may be systematically used throughout a film for atmosphere, as in the moody and heavily stylized *Batman* (1989), or for metaphorical significance, as in *Vertigo* (1958) when Scottie (James Stewart) persuades Judy (Kim Novak) to transform her appearance into that of the dead Madeleine (Novak). When she emerges from her bathroom made over into Madeleine's image, she is bathed in a green light, its supernatural associations accentuating the uncanniness of the resurrection of her alter ego.

Film lighting has three main purposes. The first is clarity of image. It is important for viewers to be able to discern all the important elements in the frame. These might range from facial expressions and physical gestures to the presence of significant props. In early cinema this was the sole purpose of lighting, but around 1905 other factors came into play. Lighting's second purpose is a quest for greater realism. Films began to introduce visual schemes that suggested that the lighting came from logical sources within the world depicted. The use of "effects lighting," as it was known at the time, paved the way for the third purpose: the creation of atmosphere or emotional effect. The development of lighting technique as a significant element of *mise-en-scène* became an important tool for manipulating audience responses to characters and narrative events. Increasingly, a repertoire of standardized lighting techniques came to be used for particular dramatic situations and particular lighting styles came to be strongly associated with film genres.

Suggestive lighting in Alfred Hitchcock's **Suspicion** *(1941), photographed by Harry Stradling.* EVERETT COLLECTION. REPRODUCED BY PERMISSION.

LIGHTING CREWS AND THEIR COLLABORATORS

The person responsible for the design and execution of a film's lighting is the director of photography (known in Britain, tellingly, as the "lighting cameraman"). This feat cannot be accomplished alone, however, so directors of photography, or cinematographers, need to work closely with their own support teams as well as with a range of collaborators in other departments. The cinematographer's main assistant is the gaffer, who is responsible for designing and supervising the rigging of the lights that are required to produce the effects the cinematographer desires. The gaffer is, in turn, assisted by the best boy and a range of electricians and grips who handle the often substantial array of equipment.

The range of lights used can, in themselves, require a large crew. First they must be positioned round the set, either on stands or supported overhead, a task performed by the riggers. During filming, the lights need to be operated, which may include dimming or moving them. Some types of light, such as carbon arcs, require constant monitoring by a dedicated operator. As well as the lights themselves, the lighting department uses a wide range of other apparatus that needs to be set up, monitored, and maneuvered. Flags or gobos, screens that come in a wide range of shapes and sizes, each with a different name, are used to prevent light from shining into the camera lens or onto areas of the set where shadows are required. They also may be used to help prevent microphone stands and other set equipment from casting shadows into the frame. Reflectors are widely used, especially for outdoor shooting, to redirect light in the desired direction. The different colors and substances used to make reflectors determine the type of light reflected. A choice can therefore be made between a sunlight and moonlight effect, for instance. Diffusers—translucent screens, often made of fine mesh or textured glass—are used to soften a hard light source. When shooting with artificial lights, it is possible to place a small diffuser close to the light source, but for sunlight shooting far larger screens may be needed.

Whereas gaffers and grips deal with the mechanics of delivering the lighting, its design is a product of the cinematographer's collaboration with the director. Although some directors have only a limited understanding of lighting equipment and technique, most have clear ideas of the kinds of effects they are looking for. Normally, they seek to create a particular atmosphere as part of their film's look. They also direct the movements of the actors and the camera, and the lighting must respond to each of these for reasons of visual clarity as well as compositional effect. The lighting styles of some directors can be as individually distinctive as those of top cinematographers. Josef von Sternberg (1894–1969), for instance, had very specific ideas about the way his protégé Marlene Dietrich should be lit in films such as *Dishonored* (1931) and *Shanghai Express* (1932) (both photographed by Lee Garmes [1898–1978]) and *Blonde Venus* (1932) and *The Scarlet Empress* (1934) (photographed by Bert Glennon [1893–1967]). More recently, Clint Eastwood's work as a director has been defined by unusually low-key lighting, irrespective of film genre. Like Sternberg and many other directors, Eastwood has shown a preference for repeatedly collaborating with cinematographers who are experienced in delivering his preferred visual style. His most regularly used cinematographer in the 1970s and early 1980s was Bruce Surtees (b. 1937), who was responsible for such films as *The Outlaw Josey Wales* (1976) and *Sudden Impact* (1983). Surtees's former camera operator, Jack Green (b. 1946), then continued in the same visual tradition for thirteen films including *Bird* (1988) and *Unforgiven* (1992). He, in turn, was later replaced by his former chief lighting technician, Tom Stern, who photographed *Blood Work* (2002), *Mystic River* (2003), and *Million Dollar Baby* (2004).

The camera operator is another crew member with whom the cinematographer must work closely. In America, the director of photography often supervises all aspects of cinematography, including the camera and its operator. In Britain there is a greater separation of roles so that the operator is more likely to take instructions from the director. Irrespective of the line of command, though, a close relationship between lighting and camera is crucial. This is partly because the lighting design and camera placement must respond to one another, but also because the film speed (the type of film stock used and the amount of light it needs to register a clear image) affects the level of light required. The exposure time (the duration that the camera aperture is open) and the lighting levels must also be in accord with one another.

Furthermore, the cinematographer must collaborate with the members of the crew who are responsible for the appearance of the people and objects that are to be lit. Early discussions between the production designer and/or art director and the cinematographer can prove immensely beneficial, although they do not always occur. Set design can have important implications for the type and number of lights that are used, and for their positioning. The presence or absence of walls and ceilings in studio sets are especially critical in determining where lights can be positioned. Sets may be designed in such a way as to conceal light sources within the frame. Alternatively, they may incorporate visible light sources, such as table lamps, that suggest a logical motivation for the lighting used. Sometimes the set design may even include cheated lighting effects, such as painted shadows.

Expressionist lighting in* The Big Combo *(Joseph H. Lewis, 1955), photographed by John Alton. **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

The use of particular colors in set design, costume, and makeup may also have ramifications for lighting design. Most lights are not pure white but have a slightly colored hue, known as their "color temperature," which can change the appearance of the colors in front of them. This affects black-and-white as well as color photography, since two very different colors may photograph identically in monochrome, or else the same color may appear quite differently depending on the color of the light. For trick effects this has occasionally been used to advantage. One of the most famous instances of a special effect achieved through colored light was the transformation scene of actor Frederic March in *Dr. Jekyll and Mr. Hyde* (1931), which was accomplished without any cuts or in-camera trickery. Instead, the effect was obtained by painting the actor's face with colored makeup. During filming, different-colored filters were moved in front of the lights, the technique gradually revealing the dark shadowed effect of his face paint.

The juxtaposition of dark and light surfaces may also raise lighting issues, since providing the correct amount of lighting for extreme contrasts can prove difficult. White bed sheets, for instance, may "burn up" in a dazzle of reflected light. Illuminating the scene at a lower level is likely to result in the face of someone in the bed appearing underexposed. Colored linen has often proved preferable, therefore, especially when shooting in a black-and-white, a situation that requires cooperation between the cinematographer and the art department.

As well as collaborating with other members of the production crew, the director of photography will normally try to foster a close relationship with the laboratory that develops the film. Both the apparent lighting levels and the color tones can be adjusted during the process of timing

(or grading, as it is known in Britain). By deciding in advance how far this potential will be exploited, the cinematographer can choose to forego difficult on-set lighting setups in favor of emulating their effects in the lab.

LIGHTING TECHNOLOGY AND FILM STYLE

There has always been a reciprocal relationship between technology and film style. The development of different types of lighting equipment and the introduction of new film stocks have both expanded the range of lighting methods and effects available to the cinematographer. Many types of lighting units were first developed for nonfilmic uses, such as street lighting or searchlights. Only later was their potential for producing cinematic lighting effects explored. Although certain styles of film lighting arose in response to technologies that already existed, many other technical innovations were the result of experiments by enterprising cinematographers and gaffers. In some instances, the name of a certain lighting effect has derived from its first use in film. One example is the "obie," a small spotlight that was designed by the cinematographer Lucien Ballard (1908–1988) during the filming of *The Lodger* (1944) in order to conceal the facial scars of actress Merle Oberon. The history of film lighting is a complex chronicle of intersecting influences involving technological and aesthetic innovations, periods of relative stasis, and the gradual development and refinement of existing techniques.

The lighting techniques used in the early cinema of the late 1890s and the first years of the twentieth century were astonishingly primitive in comparison with those used in still photography. Filmmakers of that era did not adopt the range of artificial lighting that was already standard equipment in photographic studios and widely used by photographers to enhance the aesthetic appearance of their work. Instead, filmmakers relied almost entirely on bright daylight. For this reason, when films were not shot on location they were filmed on rooftop sets, or else in studios built with either an open air design or a glass roof. Thomas Edison's famous Black Maria studio, built in 1892, was based on a rotating structure that allowed its glass roof to be maneuvered to follow the direct sunlight. A greenhouse-like studio built by the French filmmaker Georges Méliès (1861–1938) in 1897 that featured both glazed roof and walls and a series of retractable blinds proved to be an influential model for the design of later studios. The availability of many hours of bright sunlight was so important to early filmmakers that it has often been cited as one of the reasons that the American film industry shifted its base from New York to California (although other reasons, such as the wide range of landscapes California could offer for location shooting, also were important).

The use of daylight as the main source of illumination provided visual clarity. It did not allow as many opportunities to create dramatic effects as artificial lighting did, however. Nor did it permit indoor or night-time cinematography. The first uses of artificial lighting have been traced back as far as 1896, when the pioneering German filmmaker Oskar Messter (1866–1943) opened his indoor studio in Berlin. By 1900 the Edison studio in America had begun to make regular use of artificial light to complement naturally available light. Examples of this practice can be found in *Why Jones Discharged His Clerks* (1900) and *The Mystic Swing* (1900). Although the use of artificial lighting was initially confined to replacing or augmenting sunlight in order to provide a clear image, by 1905 filmmakers had begun to explore the creative possibilities of artificial light. In spite of the fact that the technology had long been available, the potential value of harnessing it to further the aesthetic development of film style does not appear to have been recognized in the early cinema.

Two main sources of artificial light were used at this time. One source was arc lights, which produced illumination by means of an electric spark jumping between two poles of carbon. The other was mercury vapor lights, which worked in a way similar to modern fluorescent lighting tubes. These sources allowed the creation of directional lighting, meaning that a chosen area of the set could be lit more brightly than the other parts. As the practical and aesthetic benefits of electric lighting came to be accepted both in America and abroad, some producers adopted it as their primary source of lighting, and the first "dark studio" opened in Turin, Italy, in 1907.

In America, experiments with lighting effects continued, both indoors and out. A range of new techniques were discovered, although no significant technological innovations appear to have been introduced until the 1910s. The director D. W. Griffith (1875–1948) and his cameramen were particularly active in their exploration of lighting effects, which can be found in such films as *Pippa Passes* (1909), *The Thread of Destiny* (1910), and *Enoch Arden* (1911). The last of these is often cited as the film that introduced a significant new technique: the creation of a soft lighting effect on faces by using reflectors to redirect strong backlight. The innovation was claimed by the cameraman Billy Bitzer (1872–1944), although questions have been raised as to whether he was really the first to use this strategy. In the mid-1910s, Griffith also began to make increasing use of high contrast lighting that cast deep shadows across characters and sets. This style had emerged a few years earlier in the Danish and German cinemas. Due to its earlier use by the famous Dutch painter, it is sometimes known as Rembrandt lighting, a term attributed to the Hollywood director Cecil B. DeMille (1881–1959),

who used the technique in films such as *The Warrens of Virginia* (1915) and *The Cheat* (1915).

During the latter half of the 1910s, filmmakers adopted two significant new techniques, both derived from other art forms. One was the use of carbon arc spotlights, which had previously been used in theater and which allowed a strong light to be directed from a distance onto a particular actor or area of the set. The other was the use of diffusing screens, which already belonged to the repertoire of the still photographer. Diffusers could be used to transform a hard light into a soft light that did not cast such severe shadows. The increasing use of soft lighting techniques, whether they relied on reflectors or diffusers, had particular benefits for facial lighting. Soft lighting produced more flattering effects and, with the rise of the star system during this decade, it was becoming ever more important to make the actors look attractive.

The range of lighting sources that were used in film, and a growing appreciation of their potential to create specific effects, encouraged the development of more sophisticated lighting styles. It became common to use a combination of several lights to create a pleasing aesthetic that flattered the appearance of the actors and the sets as well as serving the film's narrative requirements. One of the best known lighting setups is the so-called three-point system, which was used primarily for figure lighting. The brightest of the three lights was the "key" light, which was directed toward the actor's face from the front-side. If this light were used on its own it would leave one side of the face in virtual darkness and cause the actor's nose to cast a large, unflattering shadow. To prevent this from happening, a second softer light known as the "filler" light was directed at the other side of the face. This light was normally positioned close to the camera, on the opposite side from the key light. It helped to balance the composition, reducing the dark shadows cast by the key light while preserving the facial sculpting. A third "backlight" was positioned behind the actor in order to create a halo of light around the hair. This served to separate the actor from the background and also helped to emphasize the fairness of blonde hair, which did not otherwise show up well on the monochromatic film stock that was used until the late 1920s.

A third type of light that came to be used in conjunction with the arc and mercury vapor lights was the incandescent light, which used a glowing metal filament, much like most modern domestic lighting. The cinematographer Lee Garmes (1898–1978) claimed to have used this type of light as early as 1919, although its first use is more commonly identified in Erich von Stroheim's *Greed* (1924), which was photographed by Ben Reynolds (c. 1891–1967) and William Daniels (1901–1970). Whatever the case, it was not until the introduction of panchromatic film stock in 1926 that it came into common use, when it was found that the color temperature of incandescents, or "inkies," was better matched to this stock than was that of the arc lights. Studios were quick to embrace the benefits of incandescents, as these lights required less electrical power and less manpower than other forms of electrical lighting. It was widely predicted that their use could halve the cost of film lighting as well as significantly reduce the amount of time spent in setting up and operating lights during the film shoot. A further decisive factor in the wide adoption of incandescent lights was the temporary abandonment of arc lighting with the coming of sound. Filmmakers discovered that the humming noise emitted by arc lights was picked up by recording equipment. Only in the early 1930s, after a way was found to silence them, were arcs reintroduced as a supplement to the incandescents that had taken their place as standard studio equipment.

The wide range of easily governed incandescent spotlights introduced in the 1930s allowed an ever more precise control of lighting effects. Complex systems were designed to ensure that every detail of the image was carefully governed. In his 1949 textbook, *Painting with Light*, the Hollywood cinematographer John Alton (1901–1996) described an eight-point system for close-up lighting (p. 99). It was based on the three-point system described above but included some extra lights that helped to improve the aesthetic effect. Three were directed at the actors: an "eyelight," which brought out a sparkle in the actors' eyes; a "clothes light," which showed up the details of their costumes; and a "kicker light," which added further definition to their hair and cheekbones and was normally positioned between the backlight and the filler light. Additionally, a "fill light" provided diffused lighting for the entire set while a "background light" illuminated the set behind the actors.

Around 1947 a new lighting aesthetic was introduced that had arisen in response to the techniques used for shooting newsreels during World War II. Shooting combat footage did not allow filmmakers any opportunities to create complicated lighting setups; instead, they had to rely on daylight, or else on a handful of powerful lights that provided a general illumination. The photofloods first introduced in 1940 were ideal for this purpose. Some fictional films began to emulate this rough and ready aesthetic. A wave of documentary-like thrillers ensued, which eschewed such complicated schemes as the eight-point lighting system in the service of greater realism. Many of these, such as *Boomerang* (1947) and *Call Northside 777* (1948), were based on real events and filmed on location.

The 1950s saw a further erosion of the dominance of the lighting techniques that had characterized films of the

JOHN ALTON

b. Johann Altmann, Sopron, Hungary, 5 October 1901, d. 2 June 1996

Regarded as one of Hollywood's most eminent cinematographers, John Alton is best known for his work in film noir during the 1940s and 1950s. His contribution to more than a dozen noirs helped to define their characteristic style of high-contrast black-and-white photography. Alton was also responsible for some very fine work in color, and he received an Oscar® for the ballet sequence of the lavish musical *An American in Paris* (1951). His enduring reputation was cemented further by the publication of his classic textbook *Painting with Light* in 1949, the first book on lighting technique by a Hollywood professional and still one of the most revealing and readable.

Alton's work is characterized by a tendency to use as few lights as possible, an approach that allowed him to create arresting images both quickly and cheaply. The speed with which he worked and his refusal to follow in the established traditions of lighting technique reportedly made him extremely unpopular with other cinematographers and lighting crew members. Nevertheless, his economical working practices and the innovative effects he achieved made him the cinematographer of choice for such renowned directors as Anthony Mann, Vincente Minnelli, Richard Brooks, and Allan Dwan.

John Alton entered the film industry as an MGM lab technician and soon became a cameraman, working for some years in Europe and then in Argentina before returning to Hollywood. The film that first propelled him to the status of an A-list cinematographer was *T-Men* (1947), although he had previously racked up well over forty credits. *T-Men* was the first of his six collaborations with Mann, which would later include *Raw Deal* (1948) and *Border Incident* (1949). While it is considered one of the first "documentary-style" noirs, at times Alton's highly stylized lighting aesthetic anticipates his most famous work: *The Big Combo* (1955).

Like most of the films on which he worked, *The Big Combo* was a low-budget affair whose apparent production values were greatly elevated by the accomplished lighting technique. Alton's sparse lighting sources sometimes bathed faces in light against backdrops of blackness, or else concealed them in deep shadow. In the final shot, now seen as one of noir's most iconic images, he silhouetted the characters against a dazzling white haze. In this scene, as elsewhere, the set dressing is virtually insignificant since the players act out their parts in a world delimited by little other than darkness and light. For the seventeen-minute ballet sequence of *An American in Paris* Alton used some of the same techniques including silhouetting and deep shadows. These effects were sometimes used to draw attention away from cuts, producing dramatic results. Throughout the sequence, the rapid shifts between different lighting effects and colors within a single shot are dazzling.

1930s and 1940s. One reason for this was the growing popularity of color filmmaking. The range of different hues meant that fewer lights were needed to differentiate between one surface and another. The backlight, which had been used to separate figures from the background plane, passed into near redundancy for a time. It still had other uses, though, one of which was to illuminate rainfall, far more visible when lit from the rear than when lit frontally. Some of the other changes in lighting technique during the 1950s can be attributed to the rapid expansion of television production. Television relied heavily on the use of live, multi-camera shooting on a studio stage. The lighting style that best suited this mode of production was one that offered a bright, even illumination of the whole set. Even though theatrical films continued to light shots with greater individual care than did TV productions, the high-key style associated with television became a widely accepted norm.

John Alton on the set of* The Brothers Karamazov *(1958) with actress Maria Schell. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

In the 1960s and 1970s further changes in the dominant lighting styles of American cinema derived their main influences from trends in European filmmaking. The films of the French New Wave and, in particular, the work of the cinematographer Raoul Coutard (b. 1924), proved especially influential. Coutard first used his trademark technique of "bounced light" when photographing Jean-Luc Godard's *Le Petit Soldat* (1963). It entailed directing photoflood lights toward the ceilings of interiors so that a bright, even light was reflected down onto the scene. This technique came to be widely emulated. A contrasting trend of the late 1960s and 1970s saw many color films adopt a darker, more low-key style than had been used in earlier years. This aesthetic was integral to the somber and pessimistic tone of the narratives that flourished in this era, and Bruce Surtees's work for Eastwood can be seen to typify this vogue.

The most significant change of the late twentieth century was the introduction of HMI (hydrargyum medium arc-length iodide) lights. The HMI was a form of arc lamp that was centered on halogen gas enclosed within quartz and that had the same color temperature as sunlight. After some initial unreliability was solved, HMIs became increasingly popular throughout the 1980s. They remain one of the most popular forms of film lighting today, for both indoor and outdoor cinematography, as they are easy to use and consume relatively little power for the amount of light they produce.

At the beginning of the twenty-first century, the advent of digital cinema began to have a significant impact on the lighting requirements for certain types of filmmaking. While most theatrical features continue to be produced on 35mm film, which requires far higher levels of light than does the human eye, digital cameras are able to produce a clear image with a very low level of available light. This facility has proved especially popular with documentary filmmakers, as even indoor scenes can now be shot without additional lights. For compositional purposes, supplementary lighting is often preferred, however. Digital filmmaking using available light also has gained favor with filmmakers wishing to adopt a documentary style in the service of enhanced realism, as in the case of Michael Winterbottom's *9 Songs* (2004), a digital feature that was shot entirely on location using only available light.

Fashion in lighting style has varied considerably over the years. Nevertheless, in spite of this historical variation, certain conventions concerning lighting styles have developed.

In *Painting with Light*, John Alton identified three main lighting aesthetics that he designated "comedy," "drama," and "mystery." Comedies, he argued, should be brightly lit with low contrasts in order to create an overall mood of gaiety; dramas should vary their lighting schemes according to the tonalities of the narrative situation; while mystery lighting, used in thrillers and horror films, is characterized by a low-key approach that swathes much of the set in deep shadow. Countless films confirm the dominance of this way of thinking, from the cheerfully illuminated comedies, *Way Out West* (1937) and *Les vacances de Monsieur Hulot* (*Monsieur Hulot's Holiday*, 1953), to the moody chiaroscuro of horror movies like *The Black Cat* (1934) and *La Maschera del demonio* (*Black Sunday*, 1960). The continued relevance of this model is borne out by a project at the University of Central Florida where researchers in the Department of Computer Science have made significant headway in developing a computer system to identify film genres in contemporary American cinema. The programmers used lighting as one of the four formal criteria by which to differentiate genres (the others being color variance, average shot length, and the level of movement within the frame). Such a measurable relationship between lighting and different kinds of narrative shows the extent to which filmmakers have adopted lighting as an important narrational tool, and emphasizes the

Chiaroscuro lighting in* The Black Cat *(Edgar G. Ulmer, 1934), photographed by John J. Mescall. **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

fundamental role that lighting plays in shaping the experience of films.

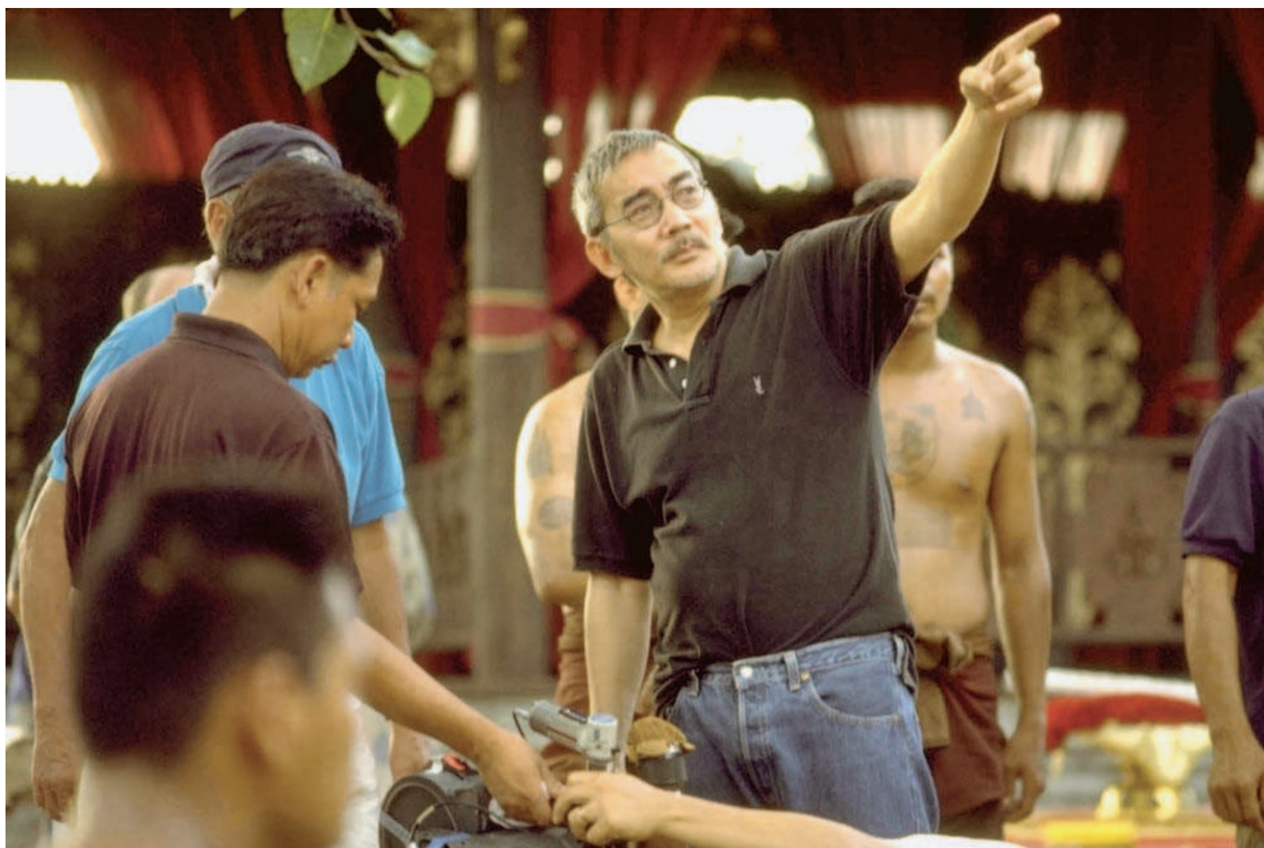
MAINLAND SOUTHEAST ASIA

While the film industries of the countries of mainland Southeast Asia (Cambodia, Laos, Myanmar, Thailand, and Vietnam) are all distinct, their films and histories do have numerous points of contact, and can be partly understood in regional terms. For example, the films share reference to a common and often tumultuous regional history and a common terrain, and many of them possess themes that bespeak the regional sway of Theravada Buddhism, as well as the former influence of Western colonizers and/or allies. More recently, the industries have all partaken of international financing opportunities and have been influenced by the availability of new, lower-cost video technologies for production and distribution of films.

THAILAND

Within mainland Southeast Asia, the film industry with the most extensive history, as well as with the most activity at present, is that of Thailand. Film screenings put on by traveling foreign exhibitors have been present in Thailand since 1897. A Japanese businessman opened a permanent cinema in Bangkok in 1905, and others followed soon afterwards. Although broadly popular, film was not necessarily seen as a lower-class form of entertainment: not only did its foreign origins endow it with a certain cachet, but members of the royal family also took an interest in it from the time of its arrival. Indeed, it was a member of the royal family, Prince Sanphasat Suphakit, who is credited with being the first Thai filmmaker, shooting footage of royal ceremonies from early as 1900. While a number of filmmakers, both Thai and foreign, shot documentary footage in the silent era, records show only a modest number of fiction films made in Thailand at that time, including the American-produced *Suvarna of Siam* (1923). *Survana* was followed in 1927 by the Thai-produced fiction feature *Chok Sorng San* (*Double Luck*), followed by sixteen other silent features, none of them extant. In 1932 a Thai-produced sound film, *Long Thang* (*Going Astray*), was produced, and in the subsequent decade both films with recorded soundtracks and features with soundtracks performed live, Thai-produced and foreign-made, could be found in Bangkok cinemas.

Perhaps the most remarkable development of the post–World War II era was a turn to shooting feature films in economical 16mm, rather than 35mm, without recorded soundtracks. Just as in earlier decades, these films were presented with live performers offering dialogue and sound effects, and this remained the dominant mode of production through the 1960s. Film viewing took place in traditional film theaters as well as in temporary, open-air cinemas run by traveling exhibitors. Such screenings were commonplace through the 1970s and indeed can still occasionally be found. The most popular movie star in this era was undoubtedly the ever-suave Mitr Chaibancha, who appeared in hundreds of movies between 1956 and 1970 before he died while filming a helicopter stunt. A key director to emerge in this era was Rattana Pestonji, who tried to promote the use of 35mm through his own independent studio. Rattana produced the first Thai film to achieve international festival recognition (*Santi Weena*, 1954), then went on to direct and photograph a handful of stylish films considered key achievements in Thai cinema, including the comedy drama *Rong Raem Narok* (*Country Hotel*, 1957) and the crime film *Prae Dum* (*Black Silk*, 1961).



Prince Chatrichalerm Yukol on the set of* Suriyothai (The Legend of Suriyothai, *2001). © SONY PICTURES CLASSICS/ COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.

The 1970s were a time of substantial political and social unrest in Thailand: national power changed hands, sometimes violently, on a number of occasions, and the decade ended with a military-backed administration in power and many left-leaning activists forced into hiding. It is in part out of the turmoil of the decade and the resulting raised social consciousness that a significant new tendency toward making social-issue films arose in the Thai industry. One senior figure (who had worked in the industry since the 1950s) exemplifying this trend was director Vichit Kounavudhi (b. 1922), who distinguished himself with films examining the difficulties faced by women in Thai society (for example, in the melodrama *Mia Luang* [*First Wife*, 1978]) and the hardships of northern ethnic groups (*Luuk Isaan* [*Son of the Northeast*, 1982]). Among the newly emerging directors focusing on social woes at this time were Prince Chatrichalerm Yukol (b. 1942), Euthana Mukdasanit (*Thepthida Bar 21* [*The Angel of Bar 21*, 1978] and *Peesua Lae Dokmai* [*Butterfly and Flowers*, 1986]), and Manop Udomdej (*Prachachon Nok* [*On the Fringe of Society*, 1981] and *Ya Pror Me Chu* [*The Accusation*, 1985]). Though not equally focused on contemporary political issues, Cherd Songsri also distinguished himself at this time as a director concentrating on rural and historical dramas, especially with his highly successful film *Plae Kao* (*The Scar*, 1977).

The start of the 1990s was not, on the whole, a good time for Thai cinema (save perhaps for teen films), in part because of competition from both the video market and Hollywood films, which soon achieved even greater domination on the screens of the multiplexes that started to be built in mid-decade. From 1997, however, feature films from a group of new, younger directors, largely with backgrounds in the Thai advertising industry, began to achieve recognition at international festivals and attention from foreign critics. The first new director to appear on the scene was Nonzee Nimibutr, with his highly successful 1950s crime drama, *2499: Anthapan Krong Muang* (*Dang Bireley and the Young Gangsters*, 1997). He followed this with the box-office record-breaking period horror film *Nang Nak* (1999), which also proved a favorite with festival audiences and achieved some measure of international (especially pan-Asian) distribution. Penek Ratanaruang (b. 1962) made the first in a

PRINCE CHATRICHALERM YUKOL

b. Bangkok, Thailand, 29 November 1942

Prince Chatrichalerm Yukol's work exemplifies a number of trends in modern Thai cinema, such as the interest in social issues in the 1970s, teen-oriented drama in the mid-1990s, and historical drama in the early twenty-first century. At the same time, however, Chatrichalerm is an exception in the attention he has received abroad, his sustained and regular production of films, his films' characteristic use of stylistic flourish, and his willingness to embrace controversial subject matter and imagery (this last made possible in part because of the prince's exceptional social status as the nephew of a former king).

Chatrichalerm's exposure to film began early: his father was a sometime filmmaker, and the prince studied at the University of California–Los Angeles (UCLA), at which time he also worked as an assistant to Merian C. Cooper, the producer of such film classics as *King Kong* (1933) and *The Searchers* (1956). His knowledge of world film history is clear from his films themselves: his first feature, and Thailand's first science-fiction film, *Mun Ma Kab Kwam Mued* (*It Comes with the Darkness*, 1971), is clearly informed by the plots of classic 1950s US science-fiction films, while his *Thongpoon Khokepho* (*Citizen*, 1977), a feature about a taxi driver in search of his stolen vehicle, is a kind of Thai take on *Ladri di biciclette* (*The Bicycle Thieves*, 1948). *Issaraparb Kong Thongpoon Khokepho* (*Citizen II*, 1984) thematically recalls the films of John Ford, a favorite director of the prince.

These international inspirations, however, have been put in the service of distinctively Thai concerns—the second of Chatrichalerm's *Citizen* films, for example, concerns the difficulties of underclass existence in rapidly developing Bangkok, particularly for rural migrants. Before 2001, Prince Chatrichalerm was best known for his social-issue films, dating back to his *Khao Cheu Chan* (*Doctor Kan*, 1973), with its then daring theme of an idealistic young physician facing official corruption; his prostitution drama, *Thepthida Rong Raem* (*Angel*, 1974), with its memorable montage of an upcountry girl's sex work intercut with construction of the rural family home for which her work is paying; and the more recent, harrowingly graphic drama of teen drug abuse, *Sia Dai* (*Daughter*, 1995).

Suriyothai (2001) was unprecedented in both the prince's work and Thai cinema for the massiveness of its budget and scale. Based upon years of research and supported and bankrolled by the royal family, the film goes to great pains to authentically represent the times of the sixteenth-century queen of its title. The film was wildly successful in Thailand, but its international-release version, produced under the supervision of Prince Chatrichalerm's UCLA classmate, Francis Ford Coppola, did not fare as well. The prince subsequently began work on another big-budget historical epic, *King Naresuan*, scheduled for completion in 2006.

series of quirky, highly stylized dramas of contemporary Thai life in 1997, *Fun Bar Karaoke*, following it up with the dark comedy *6ixtynin9* (1999). Both directors have continued to make films on a regular basis, and both have also been able to garner international co-financing for their films.

As Nonzee and Penek experienced success, producers gradually started investing in more local productions from more new directors. Yongyooth Thongkonthoon's comedy about a (real-life) transvestite volleyball team, *Satree Lek* (*Iron Ladies*, 2000), managed the up to then rare feat of garnering a theatrical release (albeit limited)

in the United States. The co-writer and cinematographer of that film, Jira Maligool, then had a terrific local success as director of a comedy of rural life, *15 Kham Duen 11* (*Mekhong Full Moon Party*, 2002), and went on to produce the even more successful comic-nostalgic childhood romance, *Fan Chan* (*My Girl*, 2003). Aside from comedy, other popular genres have included crime films, horror films, and historical dramas; most significant among the historical dramas has been Prince Chatrichalerm's *Suriyothai* (*The Legend of Suriyothai*, 2001) and Thanit Jitnakul's epic of eighteenth-century Thai-Burmese battles, *Bang Rajan* (2000). Since 2002, Thai producers have also started to release substantial numbers of new direct-to-video features on video compact disc (VCD) and DVD, primarily for the domestic market.

One recent film that seems to hold the potential to raise international awareness of Thai cinema is the martial-arts film *Ong-Bak* (Prachiya Pinkaew, 2003), which made substantial money in Asia and Europe and received a modest release in the United States. Some of the international festival and art-house favorites, however, have paradoxically garnered little interest in their home country. Wisit Sasanatieng's nostalgic, spaghetti-western inspired *Fah Talai Jone* (*Tears of the Black Tiger*, 2000), for example, while generating much interest at Cannes and getting released in DVDs in several markets, was a financial flop domestically. And the stylistically unconventional (and often sexually frank) feature films of Apichatpong Weerasethakul (b. 1970) (*Sud Sanaeha* [*Blissfully Yours*, 2002]; *Sud Pralad* [*Tropical Malady*, 2004]) received only limited play in Thailand until the director won repeated awards at Cannes.

FORMER SOUTHEAST ASIAN COLONIES

As a former colony of France—the country often credited with the invention of cinema—Vietnam was host to film screenings early in cinema history: even in 1898, screenings occurred regularly in metropolitan areas. By the 1920s, major Vietnamese cities had movie theaters showing foreign-produced films, among them films featuring Vietnamese actors and/or locales. A handful of feature films and documentaries were made by Vietnamese producers in the period immediately prior to the Japanese occupation of 1940, but this work was halted in the World War II years. In the subsequent years of war against the French occupiers (1945–1954), culminating in the partition of the country, some 16mm documentaries were made by the resistance, but the birth of modern Vietnamese cinema dates from Ho Chi Minh's establishment of a state-run film organization in 1953. In 1959 the first post-colonial Vietnamese feature, *Chung Mot Dong Song* (*On the Same River*, Nguyen Hong Nghi and Pham Ky Nam), the story of the hardships of a young couple living on opposite sides of the river separating North Vietnam from South, was completed. In North Vietnam in the decade following, various government-sponsored film groups produced a range of features emphasizing revolutionary themes (for example, the struggles against the French; postwar social and economic development), as well as documentaries and scientific films (on topics such as government, construction, and agriculture), and animated films. As fighting with American forces escalated, this struggle became a major theme, and the balance of production shifted more toward documentary, including some works shot on actual battlefields. Some film production was also carried out in the South at this time; among the films were administration-sponsored, anticommunist documentaries and nonpoliticized features, such as romances and comedies.

Within a few years of reunification in 1975, film production levels were on the rebound and filmmakers were increasingly able to address the hardships of wartime life and postwar readjustment in more complex and nuanced fashion. One of the most successful films of the time was *Canh dong hoang* (*The Wild Field*, 1979), a fiction feature by established documentary filmmaker Hong Sen, which closely follows a small family under attack by American soldiers. A key director to emerge during this period and one who has remained active ever since was Dang Nhat Minh, whose *Bao gio cho den thang muoi* (*When the Tenth Month Comes*, 1984) and *Co gai tren song* (*The Girl on the River*, 1987) detail the sacrifices made by women in the war and its aftermath. The latter film concerns a prostitute who is ultimately betrayed by the communist official she had saved during the war. In 1986 a shift in state policy encouraged development of a market economy, which in the case of film meant bringing an end to state subsidies. Given the dearth of available funding, the films that emerged in this context were commercial genre vehicles, often shot on video. Concern arose about the evident decline in the quality of locally produced films, and as a result, new policies were instituted from 1994 to once again subsidize filmmaking, a move that resulted in an increase in feature production. Among the new directors to gain attention in the 1990s for films dealing with contemporary social problems were Le Hoang, Vuong Duc (b. 1957), and Nguyen Thanh Van. But government concern over the low appeal of Vietnamese films locally led to another shift in policy in 2003, with censorship controls relaxed—preapproval is no longer required for scripts—and privately financed production permitted. That the first product of such policies, Le Hoang's *Gai nhay* (*Bar Girl*, 2003), broke all prior box-office records with its depiction of prostitution, drug use, and HIV infection suggests the extent to which

Suppakit Tangthatswasd in Prince Chatrichalerm's epic* Suriyothai *(*The Legend of Suriyothai, *2001). © SONY PICTURES CLASSICS/COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.

earlier films may have lacked appeal for popular audiences.

In spite of the substantial amount of production activity taking place in Vietnam, the name Western audiences would be most likely to associate with Vietnamese cinema is that of expatriate director-screenwriter Tran Anh Hung (b. 1962), whose skillfully crafted films, while starring Vietnamese actors, are French-financed productions filmed by French technicians. *Mui du du xanh* (*The Scent of Green Papaya*, 1993) was even shot in French studios standing in for Vietnam.

The most internationally visible exponents of Cambodian cinema are likewise those involved in internationally financed works. The best known, both at home and abroad, is the former king himself, Norodhom Sihanouk (b. 1922), a pivotal figure in Cambodia's mid-to-late twentieth-century history. Sihanouk's preferred modes have been documentary and melodrama, the latter generally based around specific events in contemporary Cambodian history; these films often take a tragic turn (as is the case, for example, in *My Village at Sunset*, 1992). His films celebrate traditional Khmer culture and heritage and Buddhist values, though Sihanouk also alludes to Western literature, and valorize those who have worked hard for the nation in times of strife. Another Cambodian filmmaker to whom international audiences have been exposed is the award-winning documentarian Rithy Panh (b. 1964), who fled the Khmer Rouge as a teenager and now resides in France. His work, such as the formally accomplished and unsettling *S21: The Khmer Rouge Killing Machine* (2003), often focuses on the lasting repercussions of the Khmer Rouge rule on Cambodian life.

Records indicate that film screenings first occurred in Cambodia, both in cinemas and in traveling exhibitions, in the 1910s. Sihanouk himself is the first Cambodian filmmaker, having had the means to acquire cinematographic equipment after being placed on the throne by French colonial authorities in 1941. Foreign features were shown in Cambodia with some regularity in the 1950s, in particular contemporary Thai films; these films continued to be a staple until 2003, when the (evidently spurious) reporting of a slight by a Thai actress precipitated anti-Thai riots. By the early 1960s, a few

enterprising filmmakers and producers (Ly Bun Yim being one of the first and most successful) found that locally produced films generated much interest among Cambodian audiences; this audience demand, along with government tax incentives, led to a quick rise in local production. However, many of these films were lost and the industry destroyed during the tumult of the early 1970s and the subsequent period of Khmer Rouge rule. An attempt to resurrect the industry was made in 2001 with the Thai co-production *Kuon Puos Keng Kang* (*Snaker*, Fai Sam Ang). This was a remake of a popular title from the earlier era of Cambodian feature production and based upon a local snake-woman legend similar to those that have been the source of a number of Asian horror films. The pan-Asian success of that film, along with the attention brought to Cambodian shooting locales by the international Hollywood blockbuster *Lara Croft: Tomb Raider* in the same year, helped spur a new boom in local production on digital video. While some have bemoaned the quality of these new, low-budget productions, their popularity has fostered the opening of more than a dozen cinemas since 2001.

Little scholarship has been produced on the cinemas of Laos or Myanmar, though in the case of Laos this is clearly in part because the country has seen only limited filmmaking. Information on the early years of cinema in Laos, a French colony until 1949, is sketchy; the oldest partially extant film is a documentary from 1956. In the period from 1960–1975, when there were internal battles between Western (especially American) and communist-backed regimes, various factions produced propagandistic documentaries supporting their causes. Ten features by independent filmmakers were reportedly produced in this period, but these films did not survive and little is known about them. Subsequently, the government of the Lao People's Democratic Republic (PDR), formed in late 1975, has provided minimal funding to support filmmaking. The most important film to emerge from the Lao PDR has been the 1988 35mm feature *Buadaeng* (*Red Lotus*), a love story focusing on the hardships of life during the civil war era, which has screened at a number of international festivals. That film's Czechoslovakian-trained director, Som Ock Southiphonh, subsequently worked on a number of independent, foreign-financed video documentaries.

Myanmar (formerly Burma), in contrast, has produced many films, but little is known about them. Films were being screened in what was then British-controlled Burma as early as 1910. The first Burmese-filmed documentary is attributed to U Ohn Maung in the 1910s; he went on to direct the first Burmese feature, *Myitta Nit Thuyar* (*Love and Liquor*) in 1920. The first "talkie" by a Burmese director, Toke Kyi's *Ngwee Pay Lo Maya* (*It Can't Be Paid with Money*), was made in 1932. During the 1930s, Burma had numerous independent film producers and screening venues; one estimate puts the number of Burmese films prior to 1941 at 600. While subject to British censorship, some of these films did deal with controversial topics or suggest nationalist sentiments opposed to British policy. Though production naturally fell during World War II, it picked up again following independence in 1948, with on the order of 80 films a year being produced during the 1950s. The industry suffered considerably, however, when a coup brought a socialist military government to power in 1962, after which production houses were nationalized and very strict censorship—which still exists—applied to films. Few contemporary Burmese films have been able to make their way to international festivals; a rare, recent exception is *Chit Chin Nye Paying* (*True Love*, Kyi Soe Tun, 2005), a Japanese co-production about Burmese expatriates living in Japan. A new phenomenon beginning in 2003 that may give a boost to the local industry is digital video, released to theaters on DVD, which offers both lower production costs and improvement in equipment quality over the aging film cameras generally available in the country.

MAKEUP

There are three kinds of makeup artists: straight makeup, sometimes called "street," which enhances an actor's features using cosmetics and corrective makeup; character makeup, which transforms an actor through facial prosthesis and other devices; and special effects (FX) makeup, employing mechanical devices such as robotic inserts. All three work closely with the director, cinematographer, and costume designer. Incorporating these three divisions, makeup's complex work can be loosely broken into the two categories of cosmetics and special effects. The former also radicalized the cosmetics industry. Often the two merge, but the makeup industry began with the need to accentuate the face and to deal with the drastic differences between stage and cinema.

Film makeup received no formal recognition until the 1940s and no Academy Award® recognition until 1981, although William Tuttle (b. 1911) was given an honorary Oscar® for *7 Faces of Dr. Lao* (1964) and John Chambers (1923–2001) received one for *Planet of the Apes* (1968). It is now a highly regarded art with a large fan base that follows the careers of artists like Rick Baker and Tom Savini. The craft began in the nascent film industry with stage techniques but quickly adapted to cinema's peculiar problems, especially those posed by film stock, cinematic lighting, and the close-up. The introduction of color in the 1930s caused more difficulties. Technicolor distorted complexion tones and registered color reflections from costumes, even those thrown from one actor's clothing onto another's. As makeup artists addressed a continuous parade of new challenges, makeup evolved by the early 1920s into an indispensable studio department that oversaw wigmakers; hair stylists; cosmetologists; harness makers; wood carvers; and sculptors in plaster, wax, metal, and wire. By the 1960s, science-driven special effects became a major part of makeup, and specialists in all kinds of prosthetics, latexes, rubbers, plastics, solvents, structures, and devices have come under makeup's jurisdiction ever since. Despite its artificial composition, makeup's constant challenge is to seem natural. If it is prosthetic it has to move as if real flesh; if it is historical, it has to conform to the period's look, whether involving heavy makeup or no makeup at all. It also must be remarkably durable, lasting through sweating, kissing, and fighting, under water or fierce lighting. In horror films, it must be powerful enough to scare an audience yet bearable for an actor to wear.

From the beginning, makeup artists have sought to draw out a character's psychology. To do this they have adapted (or contributed) to cosmetic and technological inventions, coped with color problems, and been experts on human anatomy and the potential effects of all varieties of artificial face, skin, and hair. Although makeup covers every kind of look—from well to ill, old to young, hip to demented, gorgeous to hideous—it is the latter two, the gorgeous and the ghastly, that have been emphasized throughout the history of cinema.

HISTORY

Makeup has a long theatrical history. The early film industry naturally looked to traditional stage techniques, but these proved inadequate almost immediately. One of makeup's first problems was with celluloid. Early filmmakers used orthochromatic film stock, which had a limited color-range sensitivity. It reacted to red pigmentation, darkening white skin and nullifying solid reds. To

counter the effect, Caucasian actors wore heavy pink greasepaint (Stein's #2) as well as black eyeliner and dark red lipstick (which, if applied too lightly, appeared white on screen), but these masklike cosmetics smeared as actors sweated under the intense lights. Furthermore, until the mid-teens, actors applied their own makeup and their image was rarely uniform from scene to scene. As the close-up became more common, makeup focused on the face, which had to be understood from a hugely magnified perspective, making refinements essential. In the pursuit of these radical changes, two names stand out as Hollywood's progenitor artists: Max Factor (1877–1938) and George Westmore (1879–1931). Both started as wigmakers and both recognized that the crucial difference between stage and screen was a lightness of touch. Both invented enduring cosmetics and makeup tricks for cinema and each, at times, took credit for the same invention (such as false eyelashes).

Factor (originally Firestein), a Russian émigré with a background in barbering, arrived in the United States in 1904 and moved to Los Angeles in 1908, where he set up a perfume, hair care, and cosmetics business catering to theatrical needs. He also distributed well-known greasepaints, which were too thick for screen use and photographed badly. By 1910, Factor had begun to divide the theatrical from the cinematic as he experimented to find appropriate cosmetics for film. His Greasepaint was the first makeup used in a screen test, for *Cleopatra* (1912), and by 1914 Factor had invented a twelve-toned cream version, which applied thinly, allowed for individual skin subtleties, and conformed more comfortably with celluloid. In the early 1920s panchromatic film began to replace orthochromatic, causing fewer color flaws, and in 1928 Factor completed work on Panchromatic Make-Up, which had a variety of hues. In 1937, the year before he died, he dealt with the new Technicolor problems by adapting theatrical "pancake" into a water-soluble powder, applicable with a sponge, excellent for film's and, eventually, television's needs. It photographed very well, eliminating the shine induced by Technicolor lighting, and its basic translucence imparted a delicate look. Known as Pancake makeup, it was first used in *Vogues of 1938* (1937) and *Goldwyn's Follies* (1938), quickly becoming not only the film industry norm but a public sensation. Once movie stars, delighting in its lightness, began to wear it offscreen, Pancake became de rigueur for fashion-conscious women. After Factor's death, his empire continued to set standards and still covers cinema's cosmetic needs, from fingernails to toupees.

The English wigmaker George Westmore, for whom the Makeup Artist and Hair Stylist Guild's George Westmore Lifetime Achievement Award is named, founded the first (and tiny) film makeup department, at Selig Studio in 1917. He also worked at Triangle but soon was freelancing across the major studios. Like Factor, he understood that cosmetic and hair needs were personal and would make up stars such as Mary Pickford (whom he relieved of having to curl her famous hair daily by making false ringlets) or the Talmadge sisters in their homes before they left for work in the morning.

He fathered three legendary and scandalous generations of movie makeup artists, beginning with his six sons—Monte (1902–1940), Perc (1904–1970), Ern (1904–1967), Wally (1906–1973), Bud (1918–1973), and Frank (1923–1985)—who soon eclipsed him in Hollywood. By 1926, Monte, Perc, Ern, and Bud had penetrated the industry to become the chief makeup artists at four major studios, and all continued to break ground in new beauty and horror illusions until the end of their careers. In 1921, after dishwashing at Famous Players-Lasky, Monte became Rudolph Valentino's sole makeup artist. (The actor had been doing his own.) When Valentino died in 1926, Monte went to Selznick International where, thirteen years later, he worked himself to death with the enormous makeup demands for *Gone With the Wind* (1939). In 1923 Perc established a blazing career at First National-Warner Bros. and, over twenty-seven years, initiated beauty trends and disguises including, in 1939, the faces of Charles Laughton's grotesque Hunchback of Notre Dame (for RKO) and Bette Davis's eyebrowless, almost bald, whitefaced Queen Elizabeth. In the early 1920s he blended Stein Pink greasepaint with eye shadow, preceding Factor's Panchromatic. Ern, at RKO from 1929 to 1931 and then at Fox from 1935, was adept at finding the right look for stars of the 1930s. Wally headed Paramount makeup from 1926, where he created, among others, Frederic March's gruesome transformation in *Dr. Jekyl and Mr. Hyde* (1931). Frank followed him there. Bud led Universal's makeup department for twenty-three years, specializing in rubber prosthetics and body suits such as the one used in *Creature from the Black Lagoon* (1954). Together they built the House of Westmore salon, which served stars and public alike. Later generations have continued the name, including Bud's sons, Michael and Marvin Westmore, who began in television and have excelled in unusual makeup, such as in *Blade Runner* (1982).

MGM was the only studio that the Westmores did not rule. Cecil Holland (1887–1973) became its first makeup head in 1925 and remained there until the 1950s. Originally an English actor known as "The Man of a Thousand Faces" before Lon Chaney (1883–1930) inherited the title, his makeup abilities were pioneering on films such as *Grand Hotel* (1932) and *The Good Earth* (1937). Jack Dawn (1892–1961), who created makeup for *The Wizard of Oz* (1939), ran the department from the 1940s, by which time it was so huge that over a thousand actors could be made up in one hour. William

Lon Chaney did his own makeup for* Phantom of the Opera *(Rupert Julian, 1925). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

Tuttle succeeded him and ran the department for twenty years. Like Holland, Chaney was another actor with supernal makeup skills whose horror and crime films became classics, notably for Chaney's menacing but realistically based disguises. He always created his own makeup, working with the materials of his day—greasepaint, putty, plasto (mortician's wax), fish skin, gutta percha (natural resin), collodian (liquid elastic), and crepe hair—and conjured characters unrivalled in their horrifying effect, including his gaunt, pig-nosed, black-eyed Phantom for *Phantom of the Opera* (1925) and his Hunchback in *The Hunchback of Notre Dame* (1923), for which he constructed agonizingly heavy makeup and body harnesses.

AESTHETICS

Makeup helps express narrative elements, and a makeup artist decides how best to convey this information. A historical period's cosmetic oddities, or its lack of them, have to be plausibly recreated for a modern audience. The presentation can be faux-historical, as in *Satyricon* (*Fellini Satyricon*, 1969), which though set in ancient Rome, was conceived, on the director Federico Fellini's insistence, as dreamlike by the consummate costume designer, Piero Tosi (who did not create costumes for the film, only the makeup). Lois Burwell's and Peter Frampton's makeup for *Braveheart* (1995), set in about thirteenth-century Scotland, was accurate though it looked fantastical. Fantasy makeup, such as Benoît Lestang's for *La Cité des enfants perdus* (*City of Lost Children*, 1995) or John Caglione Jr.'s for *Dick Tracy* (1990), sets the mood for the film. Oppositely, Toni G's makeup for Charlize Theron as a hardened prostitute in *Monster* (2003) was a feat of realist metamorphosis that made her look like Aileen Wuornos, the convicted killer on whom the film was based.

Cinema makeup has been an unusual but very effective arena for issues around public prejudice, regarding women's social and sexual status. In the early twentieth century, women benefited from the new caché of stunningly made-up stars on screen. Though creams, powders, and rouges were widely used and advertised (endorsed by theatrical idols such as Gaby Deslys, Sarah Bernhardt, and Lillian Russell), overt makeup had been questioned as déclassé or degenerate by fashion mavens since the turn of the twentieth century. Film makeup revolutionized the social acceptance of cosmetics as early as 1915, making them increasingly respectable for women to wear, and in every decade since, trends in makeup have thoroughly altered society's aesthetic concept.

The makeup artist has at times launched new looks. In the late 1920s the style established by Greta Garbo's arched eyebrows, deep eyes with black-lined eyelid indents, and full mouth banished the tight, down-sloping eyebrows and bee-stung lips of Mary Pickford and the Gish sisters that had been popular in the 1910s. In 1930 Marlene Dietrich's face, already beautiful, was adapted for the top lighting favored by her frequent director, Josef von Sternberg. Paramount's Dottie Ponedel, the first woman in the Makeup Artists guild, plucked Dietrich's eyebrows into single elevated lines, which became the signature look of the 1930s. Shading under her cheekbones accented them until they were hollow enough to appear so on their own. A white stroke under her eyes made them appear bigger. A silver one down her nose diminished its curve. Dietrich passed this trick on to the Westmores, who used it frequently and, when eye shadow was still greasepaint smudges, she showed Ern Westmore how to make it from match soot and baby oil and apply it in the gradual upward motions still used today. Ponedel went to MGM in 1940 to work exclusively for Judy Garland. Ern Westmore gave Bette Davis her signature "slash" mouth (where her top lip's indent was covered by lipstick), and Perc remade her face in over sixty films. "I owe my entire career to Perc Westmore," Davis once stated. Perc Westmore also cut Bette Davis's and Claudette Colbert's trendsetting bangs and Colleen Moore's classic Dutch boy bob, twisted Katharine Hepburn's hair into her ubiquitous top knot, and introduced the red-haired Ann Sheridan to a perfect match of orange lipstick. Sydney Guilaroff (1907–1997), head of hairstyling at MGM from 1935, originated the signature haircuts of Louise Brooks and Marilyn Monroe. Some changes were more drastic. Helen Hunt, Columbia's key hairstylist, painfully raised Rita Hayworth's hairline by electrolysis. A scene in *A Star Is Born* (1954) satirizes these beautifications when Judy Garland accidentally goes through the makeup department's process to suddenly emerge with new features.

Another dimension to social change appears in the provocative use of makeup to disguise race. White men typically have pretended to be black or Asian, often as figures of fun or malice, but by the end of the twentieth century, social ambiguity or political comment underlay some of these representations. The trope of white (and even black) players "blacking up" as racial stereotypes for nineteenth-century minstrel shows passed into vaudeville and film. Though Bert Williams, one of the few black vaudevillians, wore blackface in *Darktown Jubilee* in 1914 because he did so in his stage act, the common character of a white with blackface appeared in such important films as *The Birth of a Nation* (1915) and *The Jazz Singer* (1927). This image has continued through the twentieth century into the twenty-first. Caucasians masqueraded as Asian in the Charlie Chan films of the 1930s and 1940s, and Boris Karloff's (1932) and Christopher Lee's (1965) characterizations as the arch villain Fu Manchu are especially well known. African Americans at times used makeup to modify their skin tones. In the films of African American director Oscar Micheaux from 1919 to 1948, a lightskinned black actor might wear makeup to appear even lighter. In other circumstances, a light-complexioned black actress such as Fredi Washington would wear dark makeup because she photographed too white. In the 1970s, whiteface on black actors began to appear, often to raise questions about racism. In *Watermelon Man* (1970), Ben Lane made up African American actor Godfrey Cambridge as a white man who suddenly becomes black. In the 1980s, 1990s, and early 2000s, "whiting up" appeared in films such as *Coming to America* (1988), where Rick Baker transformed young African American actors Eddie Murphy and Arsenio Hall into old white men; *The Associate* (1996), where Greg Cannom turned Whoopi Goldberg into a middle-aged white man; and *White Chicks* (2004), where Cannom transformed Shawn and Marlon Wayans into young, white, female twins.

Transvestism in films can also have a social dimension, and since the 1990s there has been a shift in its representational meaning as seen in Linda Grimes's transformation of Wesley Snipes, Patrick Swayze, and John Leguizamo into sexy transvestites in *To Wong Foo, Thanks for Everything, Julie Newmar* (1995) and Morag Ross's of Jaye Davidson in *The Crying Game* (1992). More conventional transvestitism appeared in the earlier *Some Like it Hot* (1959), where Emile LaVigne (1913–1990; makeup) and Agnes Flanagan (hair) transformed Tony Curtis and Jack Lemmon into cute women and in *Mrs. Doubtfire* (1993), where Greg Cannom changed the slight Robin Williams into a dowdy, overweight matron. Women have played men less often, but Katharine Hepburn, made up by Mel Berns (uncredited) in *Christopher Strong* (1933), and Hilary Swank, made up

JACK P. PIERCE

b. Janus Piccoulas, Greece, 5 May 1889, d. 19 July 1968

Jack P. Pierce (also known as Jack Pearce or Jack Piccolo) invented the iconic images of Frankenstein, Dracula, the Werewolf, the Mummy, and the Invisible Man during his twenty-one years at Universal Studios. Pierce emigrated to the United States, hoping to be a baseball player, but instead he found itinerant jobs as a nickelodeon manager, cameraman, actor, and stuntman. He entered the world of film makeup in 1910, working for various independent companies until the early 1920s, when he went to Vitagraph and then Fox. In 1926 he came to Universal and in 1928 became its head of makeup when Carl Laemmle Jr. took over the studio.

Pierce's first notable design was the silhouette for Bela Lugosi's Dracula in Tod Browning's *Dracula* (1931). Pierce's genius flourished on James Whale's 1931 version of *Frankenstein*, with Boris Karloff in the lead. For Karloff he made, arguably, the most famous face in cinema. Departing from previous monkeylike Frankenstein depictions (as in Thomas Edison's 1910 *Frankenstein*), Pierce imagined what a nineteenth-century scientist might have created. For months he made sketches and models while researching surgical procedures and electrical experiments of the time. It took Pierce four hours a day to apply Karloff's makeup, layering his head with padding, greasepaint, cotton, and collodian (a solvent that hardens into a shiny elastic), coloring it blue-green to photograph as dead gray, then covering it in paste and baking it to make a flaky appearance. Karloff's forty-pound costume (seventy including the cement shoes) was also made by Pierce. The effect was so successful, the opening credits did not include Karloff's name, only that The Monster was acted by "?" trying to give the impression that perhaps the monster was not an actor but real. The Mummy, also played by Karloff, in Karl Freund's *The Mummy* (1932), was Pierce's favorite. His research of Egyptian embalming and processes of decay brought him to make a crepelike, parchment skin that took eight hours a day to apply.

Pierce was an impeccable example of collaboration with the cinematographer, making lighting integral to his monsters' effect. Light on the Frankenstein visage, with its square head, ridged forehead, and heavy jawline, gave the monster's menace a necessary pathos. Lighting also malevolently animated the Mummy's crinkled skin.

Having never been given a contract, he was fired in 1947 when Universal downsized. Despite the 1950s surge in science-fiction subjects, Pierce never worked again on projects requiring his true ingenuity, only on low-budget films and television programs like *Mister Ed* (1961–1966). Although he died virtually forgotten in 1968, appreciation of Pierce's work was renewed in the first years of the twenty-first century with a DVD tribute, *Jack Pierce: The Man Behind the Monsters* (2002).

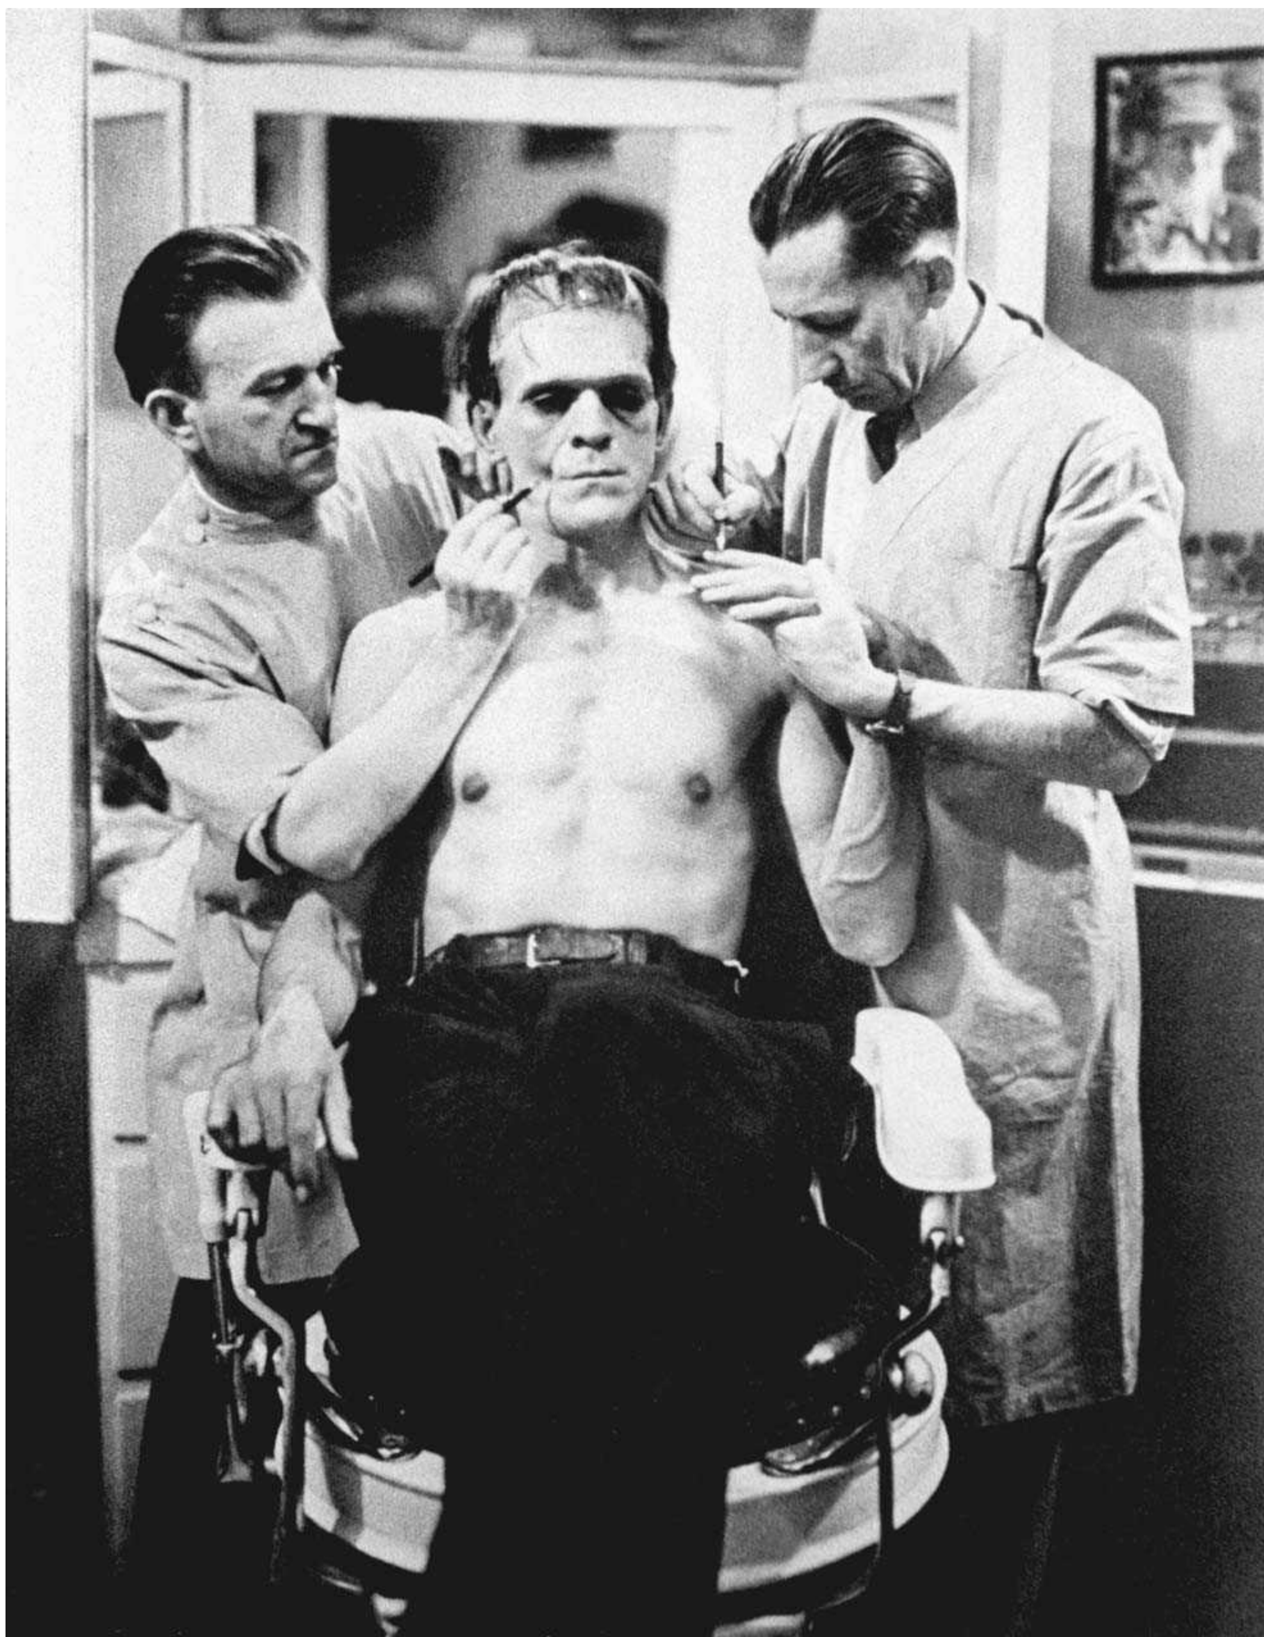
Drake Stutesman

by Kalen Hoyle in *Boys Don't Cry* (1999), made memorable attempts in films with political undertones.

From the outset, some lasting relationships have existed between stars or directors and their makeup artists. Maurice Seiderman (1907–1989), another Russian with a background in wigmaking, worked with Orson Welles on *Citizen Kane* (1941), *The Magnificent Ambersons* (1942), and *Touch of Evil* (1958). Seiderman invented techniques for aging the Kane character and other principles, involving three-dimensional casts, which were painted in layers to achieve a striking realism. The director Clive Barker has often had FX makeup artist Bob Keen create his unusual villains, such as Pinhead in *Hellraiser* (1987). Chris Walas developed much of David Cronenberg's scare makeup and special effects (*Scanners*, 1981, and *The Fly*, 1986) and Rob Bottin, whose talents run from science fiction to the historical, has collaborated with John Carpenter (*The Thing*, 1982, and *The Fog*, 1980).

Modern FX—using materials such as latex, gelatine, and mechanization—can be traced to the ingenuities of Lon Chaney in the 1920s and those of Jack P. Pierce



Jack Pierce (left) and assistant putting makeup on Boris Karloff for Frankenstein *(James Whale, 1931).* EVERETT COLLECTION. REPRODUCED BY PERMISSION.

(1889–1968), who in the 1930s devised prototypical monsters in *Frankenstein* (1931), *The Mummy* (1932), and *The Werewolf of London* (1935) for Universal Studios. Pierce and Chaney not only defined the look of their monsters forever but made makeup a box-office draw.

The advent of violent films in the 1960s, including *Bonnie and Clyde* (1967) and *The Wild Bunch* (1969), led the way for the 1970s taste in not-for-the-squeamish horror, while monkey men in films like *Planet of the Apes* (1968), *2001: A Space Odyssey* (1968), and *Star Wars* (1977) brought a resurgence of the FX monster. With the popularity of special effects films, most late-twentieth-century FX makeup artists have made specialty careers. Beginning in television (for serials like *Dark Shadows*, 1966–1971), Dick Smith (b. 1922) changed prosthetic makeup forever when, to enable the actor greater mobility, he broke down the basic "mask" into components (nose, chin, eyes) with his groundbreaking work on *Little Big Man* (1970), where a young Dustin Hoffman ages into a very old man, and *The Exorcist* (1973). Rick Baker won the first Oscar® for Best Makeup for his *American Werewolf in London* (1981), considered another makeup landmark. His range of work is wide, from the hairstyles in *How the Grinch Stole Christmas* (2000) to the aging of Cicely Tyson into a one-hundred-year-old woman in *The Autobiography of Miss Jane Pittman* (1974), but he specializes in apelike beings. Stan Winston, who has a star on Hollywood Boulevard, is a master of mechanized human creatures such as the leads in *The Terminator* (1984) and *Edward Scissorhands* (1990). Tom Savini is known as the "King of Splatter" for his work on bloody films such as *Martin* (1977), *Friday the 13th* (1980), and *Dawn of the Dead* (2004).

The latest technological shift in the movie industry, which considerably affects makeup, is digital film. The digital enhancement process can do what was once the provenance of the makeup artist—manipulation of the actor's skin color, texture, and every other aspect of his or her experience. It remains to be seen, though, to what extent makeup's hands-on ability to camouflage, identify, and beautify will be superceded by this technology.

MARTIAL ARTS FILMS

In common parlance, "martial arts" refers to Asian martial arts—judo, karate, kung fu, tae kwan do. Though the Occident may boast of fighting techniques, both armed and unarmed—boxing, fencing, archery—the term "martial arts" retains its association with Asia. Thus, the martial arts genre is derived from Asian films that focus on the skills, exploits, and philosophies revolving around these particular fighting styles when employed by various recurring figures. Yet if the martial arts as an all-encompassing rubric has come to be applied to any number of fighting styles within and outside of Asia, so, too, the martial arts film has made its way into global film culture. If the martial arts film was originally the specific product of Chinese cinema in the late 1920s, carried over into the Hong Kong cinema after World War II, and reaching its height in the early 1970s in the former British colony, then by the 1980s one could truly claim something like a transnational martial arts genre with films from Japan, Korea, Thailand, India, and the US (among others) clearly working with motifs, character types, and choreography inspired by or derived from the Chinese originals.

The ubiquity of martial arts in films since the 1970s—in the action, police thriller, comedy, war, and science fiction and fantasy genres—makes defining a separate genre difficult. Nevertheless, the genre relies upon a protagonist skilled, generally, in Asian martial arts, whose specific skills must be put to the test in bringing about the resolution of the plot. There are typical and recurring motifs such as an early defeat or setback, receiving further training in the martial arts (usually by an older Asian master), and then testing those skills on lesser opponents along the way to the climactic duel. As a specific genre, the martial arts film has given rise to numerous stories about the training for and participation in a climactic martial arts tournament—a motif derived from Hong Kong films, but one popular in Hollywood as well.

WU XIA PIAN

Chinese martial arts film came to be known as "*wu xia pian*," meaning "films of chivalrous combat." This genre may be said to begin in the popular Shanghai cinema with *Romance of the West Chamber* in 1927. Derived, like many early martial arts films, from a literary source, the film was a sophisticated entertainment in every respect, relying on fairly elaborate special effects and Beijing Opera–style fight choreography. The film's success spawned immediate imitators that drew upon the swashbuckling adventures of Douglas Fairbanks (1883–1939), Chinese literary classics, and the popular martial arts fiction of the period to create a virtual tidal wave of stories of knights-errant and their derring-do. *The Burning of the Red Lotus Temple* (1928) set the pattern for the true martial arts genre with its story of warring martial arts factions, liberal use of special effects, and the presence of women warriors over the course of its (alleged) twenty-seven-hour running time. (The film was released serially.) Governmental dissatisfaction with the escapist and fantastic nature of the series put a hold on the production of martial arts movies in China, a situation further exacerbated by the Japanese occupation of Shanghai during the Pacific War.

The chivalric warrior re-entered Chinese cinema in postwar Hong Kong, with the unprecedented production

of dozens of films starring Kwan Tak-hing (1905–1996) as the legendary doctor–martial artist–Cantonese hero Wong Fei-hung. He is South China's national hero. A historical figure who died in 1924, his students taught students who then became many of the central martial arts directors in the Hong Kong cinema. Rejecting the fantastic, effects-driven, and Beijing Opera–style fight choreography of Republican-era Shanghai, these films featured actual kung fu fighting styles and set the tone for a certain strand of martial arts film—the trained martial artist fighting for the underdog in realistic, if unspectacular, fight scenes.

Made in the Cantonese dialect and with increasingly lower budgets, the Wong Fei-hung films of the 1950s and early 1960s gave way to the bigger-budget, high-intensity cinema developing at the Shaw Brothers studios in the mid-1960s. Turning away from their literary costume pictures, the Mandarin-language studio hit pay dirt with the New Style *wu xia pian* of directors King Hu (1931–1997) and Chang Cheh (1923–2002). King Hu's *Da zui xia* (*Come Drink with Me*, 1966) re-introduced the female knight-errant into Chinese cinema and, although it relied on Beijing Opera–style choreography, its level of violence and the dynamism of star Cheng Pei-pei (b. 1946) proved an immediate jolt to the genre. King Hu continued his career in Taiwan, making stylish swordplay movies like *Long men ke zhen* (*Dragon Gate Inn*, 1967) and *Hsia nu* (*Touch of Zen*, 1969), which slowly introduced acrobatics into the form, especially with the use of trampolines and a deft sense of eye-line matches and spatial contiguity. But it was the films of Chang Cheh, beginning with the Japanese-influenced *Bian cheng san xia* (*Magnificent Trio*, 1966), that revolutionized the genre. Japanese cinema was an important precursor to many of the motifs introduced by Chang Cheh. Akira Kurosawa's (1910–1998) *Sugata Sanshiro* (*Judo Saga*, 1943) pioneered the motif of warring martial arts factions, but it was banned after World War II by American authorities because of its nationalistic undertones. His *Shichinin no samurai* (*Seven Samurai*, 1954) introduced a kind of *wu xia*—gritty, realistic, sometimes grim—to international audiences with its story of heroic, self-sacrificing swordsmen. But it was the Zatoichi films, the Blind Swordsman series beginning in 1962, that set a standard for spectacular swordplay, not to mention the use of a hero with disabilities. Chang Cheh borrowed choreographic and visual motifs from the Japanese cinema and added to this mix a group of athletic young men with martial arts training to form a core of star players who appeared together in film after film featuring violent sword fights within stories of male camaraderie, brotherly revenge, and youthful rebellion. Wang Yu, Ti Lung, David Chiang, Chen Kwan-tai, and Fu Sheng lit up the screen with their intensity, fighting skills, and nascent sense of a new China on screen.

The previously understated sense of a new Chinese masculinity became overt with the appeal of Bruce Lee (1940–1973), whose success in the Hong Kong cinema outshone even that of Chang Cheh's hugely popular films. Rejecting the King Hu style of fight choreography and the big-budget aesthetics of Chang Cheh's Shaw Brothers epics, Lee brought a down-and-dirty look and a new fighting style to films like *Tang shan da xiong* (*The Big Boss*, aka *Fists of Fury*, 1971) and *Jing wu men* (*Fist of Fury*, aka *The Chinese Connection,* 1972). With both power and speed not seen before in martial arts cinema, and a magnetism comparable only to the likes of James Dean, Lee became an instant worldwide success that spread even to Hollywood and helped bring the genre to the fore with *Enter the Dragon* (1973).

EVERYBODY WAS KUNG FU FIGHTING

Early twentieth-century America certainly had its own "martial arts" cinema tradition. Douglas Fairbanks, whose films influenced the Shanghai martial arts movies of the 1920s, virtually invented the swashbuckling, action-adventure genre featuring acrobatic stunts and demonstrations of martial arts like fencing and archery (for example, *The Mark of Zorro*, 1920; *The Three Musketeers*, 1921; *Robin Hood*, 1922; *The Thief of Bagdad*, 1924; and *The Black Pirate*, 1926), setting the tone for the later swashbuckling careers of Errol Flynn, Tyrone Power, and Burt Lancaster.

Yet it was Asian martial arts that really caused a stir upon their introduction into American films in the postwar era. American GIs returning from Asia and the increased Asian presence in the US following the liberalization of the Immigration Act of 1965 began the spread of martial arts across the country. Films like *White Heat* (1949) and *The Crimson Kimono* (1959) drew the connection between the GIs' encounter with Asia and the importation of martial arts into the US. But it was *Bad Day at Black Rock* (1955) that clearly established both the Asian connection with martial arts and the image of a one-armed man easily dispatching opponents bigger and stronger than he. One might argue that this World War II veteran, so memorably portrayed by Spencer Tracy, in turn influenced the famous disabled warriors of the Japanese and Chinese martial arts cinema. Later, Bruce Lee, teaching Hollywood celebrities his evolving kung fu style in the 1960s, memorably introduced the Chinese martial arts through his co-starring role in TV's *The Green Hornet* (1966–1967) and through guest appearances in film and television. While working in Hong Kong for Golden Harvest, Lee expressed interest in starring in the made-for-TV movie *Kung Fu* (1972), but with David

BRUCE LEE

b. Li Xiaolong, San Francisco, California, 27 November 1940, d. 20 July 1973

Bruce Lee is to the martial arts film what Charlie Chaplin is to the silent comedy, what James Dean is to the teen film, and what John Wayne is to the Western, with something of all of them in his timeless screen persona. Decades after his death he remains an icon of international screen culture, still invoked in films the world over.

Lee's family moved to Hong Kong from San Francisco after World War II, and Bruce became a child star in the low-budget Cantonese cinema. Legend has it that he lost street brawls constantly, which inspired him to study Wing Chun kung fu from one of the local masters. Philosophy studies at the University of Washington helped Lee refine the connections between his martial arts and his way of life. His US show-business break came with the role of Kato in the 1966 television series *The Green Hornet*. Legend also has it that Lee's martial arts moves were too fast both for his co-stars to react to and for the broadcast image to reproduce. Lee also began to teach celebrity clients his evolving martial arts style. Hollywood, however, was not yet ready for him.

A trip to Hong Kong in 1971 revealed to Lee that he had become something of a major celebrity based on *The Green Hornet*, which was called "The Kato Show" in the territory. Former Shaw Brothers production chief Raymond Chow, building up his Golden Harvest Studio, offered Lee a much more flexible and lucrative deal than his former bosses, and they produced *Tang shan da xiong* (*The Big Boss*, 1971). More realistic, less polished, and more contemporary in attitude than anything the Shaw Brothers were making, *The Big Boss* was a smash success. It was quickly followed by Lee's most important film, *Jing wu men* (*Fist of Fury*, aka *The Chinese Connection*, 1972). Set against the background of the Japanese occupation of China, the film expresses Lee's rebellious spirit and the best demonstration yet of Lee's flexible martial arts style—including the spectacular use of a little-used weapon in previous martial arts films, the nunchaku, or nunchuks, which came to be as much associated with Lee as his bright yellow track suit.

Lee directed *Meng lon guojiang* (*Way of the Dragon*, aka *Return of the Dragon*, 1972), employing former karate champion and friend Chuck Norris for the film's famous climax in the Roman Colloseum. Then Hollywood called with *Enter the Dragon* (1973), and Lee had his first big-budget smash, but by the time it was released he had died of a cerebral edema. Lee's Hong Kong films show his spirit far better than the slick James Bond–inspired high jinks of *Enter the Dragon*, though arguably the film enabled Lee to reach a wide audience that he has never lost.

Carradine in the starring role of the half-Chinese, half-American Shaolin priest may have demonstrated that if America was not ready for an Asian-American television star, it was ready for Asian martial arts. Its four-season run on network television gave American audiences a glimpse into many of the traditions of Shaolin kung fu while enabling the term "grasshopper" (the nickname Master Po gives the young Kwai Chang Caine) to enter comic parlance for a continuing source of humor across genre and media.

The independent smash success, *Billy Jack* (Tom Laughlin, 1971), further helped pave the way for the martial arts genre in the US. Billy Jack, a disillusioned Vietnam War veteran, is a master of the Korean martial art hap ki do, and he uses his deadly skills in the protection of a counterculture, racially mixed school. The theme of corrupt law enforcement running up against an alienated veteran highly trained not only by US Special Forces but also in traditional Asian martial arts set a pattern for a new generation of protagonists.

The *Kung Fu* film and TV series demonstrated American interest in Asian martial arts, and Bruce Lee's starring role in *Enter the Dragon* confirmed it, making Lee a star in Hollywood. Lee's film also set another trend

Bruce Lee in* Enter the Dragon *(Robert Clouse, 1973). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

in motion: the use of multinational, multiracial casts. White, black, and Asian characters in *Enter the Dragon* seemed calculated to bring in the widest possible audience. That all three actors were trained in the martial arts, especially Jim Kelly in his screen debut and, of course, Lee himself, brought a level of intensity and believability to this otherwise fanciful story, which also borrowed a common Hong Kong film structure: the martial arts tournament.

Alienated Vietnam veterans, real martial artists, and the tournament structure would help build a true American martial arts genre, but not before a reliable audience could be identified. Such an audience came from the African American community, which consumed both the Hong Kong imports in the wake of the success of films like *Five Fingers of Death* (1973) and Lee's early efforts. Kelly's stardom (for example, *Black Belt Jones*, 1974) and many low-budget co-productions with Hong Kong studios featuring black and Asian stars (the career of actor Ron Van Clief as "the Black Dragon" is exemplary) show the appeal of kung fu films to black audiences—audiences who would very much help the future careers of white stars like Cynthia Rothrock (whose career began in Hong Kong) and Steven Seagal beginning in the late 1980s.

The rise of the American martial arts film genre, whether through blaxploitation or the films of Chuck Norris in the late 1970s, kept Hong Kong martial arts films off American screens compared to their stunning success from 1973 to 1975. Norris's role in *Good Guys Wear Black* (1978) continued the theme of post–Vietnam era images of highly trained veterans using their violent skills to exorcise the ghosts of Vietnam and to display the cinematic suitability of martial arts. By the middle of the

1980s, martial arts had made its way so far into the mainstream that *Rocky* director John G. Avildsen could turn his attention to a far more unlikely action hero in the diminutive form of Ralph Macchio and turn *The Karate Kid* (1984) into a smash success and another iconic cultural marker. Its training sequences, clear differentiation between the right and wrong way to use martial arts, and climax at a martial arts tournament clearly confirmed that a definitively Asian form had claimed an American counterpart.

MARTIAL ARTS IN GLOBAL CONTEXT

The decline of Hong Kong kung fu cinema in the late 1970s turned out to be temporary. Forever looking for "the next Bruce Lee," Hong Kong cinema finally found him in Jackie Chan (b. 1954), a Beijing Opera–trained martial artist and acrobat whose everyman persona, stunt-happy performances, and Buster Keaton–like use of props returned martial arts to the forefront of Hong Kong cinema beginning with films like *Drunken Master* and *Snake in the Eagle's Shadow* (both 1978). Chan soon after emerged as the most popular star in Asia. Aborted attempts to break into the American market by co-starring in low-budget Hollywood films in the 1980s did not work out—fortunately for him, because when he had finally established a worldwide appeal his next Hollywood forays, like *Rush Hour* (1998) and *Shanghai Noon* (2000), were worthy of his talents.

Chan and Lee were not the last foreign martial artists to make their way into American martial arts film stardom. Jean-Claude Van Damme, "the muscles from Brussels," parlayed his karate champion background into a film career, bursting into stardom with a fairly routine yet extremely violent version of the standard tournament-style film, *Bloodsport* (1988). Films like *Kickboxer* (1989), *Lionheart* (1990), and *Streetfighter* (1994) continued to rely on the tournament structure, although Van Damme did help tie together science fiction with martial arts in successful films like *Cyborg* (1989) and *Universal Soldier* (1992). If Van Damme was a foreign import, Seagal was

Bruce Lee (left) in* The Big Boss *(Lo Wei, 1971). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

an American master of the Japanese martial art of aikido, and he showed it off to good form in a series of police and military actioners, especially *Above the Law* (1988), *Out for Justice* (1991), and his best film, *Under Siege* (1992). Both Van Damme and Seagal saw their careers decline by the turn of the century, but that may be the fate of all aging martial arts stars—even Jackie Chan's career saw a shift away from fighting to special effects stunts.

The popularity of martial arts films in America did not go unnoticed in Hong Kong where the likes of Tsui Hark (b. 1950), Tony Ching Siu-Tong (b. 1953), Johnnie To (b. 1955), and John Woo (b. 1946) revitalized the genre. This time it was the stylistics of King Hu that inspired them in the creation of literally fantastic swordplay films like the *Swordsman* trilogy (1990–1992), *New Dragon Inn* (1992), and *The Heroic Trio* (1993). Women stars like Brigitte Lin, Maggie Cheung, Anita Mui, and Michelle Yeoh—who would become the most important female martial arts star since Cheng Pei-pei—also helped revitalize the genre. Kung fu was kept alive with Jet Li's incarnation of Wong Fei-hung in the *Once Upon a Time in China* series (1991–1997), but in a form far different than anything Kwan Tak-hing would have recognized—though the ideology remained the same. The special effects, acrobatics, and wire work (leading some to call this "wire fu") culminated in the King Hu–inspired international blockbuster *Crouching Tiger, Hidden Dragon* (Ang Lee, 2000). For audiences that disdained the likes of Jean-Claude Van Damme or Steven Seagal and who knew nothing of the wonders of *Touch of Zen*, Lee's film brought respectability, if not originality, to the genre. World-class filmmaker Zhang Yimou (b. 1951), anxious to bring a bit more "Chineseness" back to the decentered form, released *Hero* (2002) and *House of Flying Daggers* (2004)—both successful, indicating that for all its Chineseness, the martial arts genre belongs to the world.

MARXISM

Karl Marx's three-volume study *Das Kapital* (1867, 1885, 1894), along with the earlier *Manifest der kommunistichen Partei* (*The Communist Manifesto*, 1848), which he co-wrote with Friedrich Engels (1820–1895), and other works, were important to the nineteenth and twentieth century's numerous class struggles and wars of national liberation. Marx (1818–1883) argued that capitalism, although responsible for technological development and some social achievements, was fundamentally defective in that it was based on profit and human exploitation. Marx believed that capitalism would necessarily become outmoded, although his writings, especially the exhortative *Manifesto*, expressed the conviction that communism—the public control of the means of production—would occur only through human agency, namely revolution; those who benefit from capitalism would not simply step aside and allow the system to be replaced by a system beneficial for workers, the enormous and most productive class that communism would assist. For Marx, who wanted to develop a scientific understanding of the impact of economic systems on humanity, reformism and acts of charity would do little to transform a fundamentally exploitative system such as capitalism into a more just one such as socialism.

Later Marxists such as Vladimir Lenin (1870–1924), Leon Trotsky (1879–1940), Mao Zedong (1893–1976), and Che Guevara (1928–1967) would develop programs of revolutionary action, as would numerous non-Marxists aligned with anticapitalist movements such as anarchism. After Joseph Stalin (1879–1953) established himself as dictator of the Soviet Union following Lenin's death, various Western Marxists such as Antonio Gramsci (1891–1937), György Lukács (1885–1971), Louis Althusser (1918–), Herbert Marcuse (1898–1979), Theodor Adorno (1903–1969), and Max Horkheimer (1895–1973) would rethink Marxism relative to the political issues of the twentieth century, often linking Marxism to such movements as Freudianism to bolster Marxism's radical essence and to challenge forms of social injustice beyond economic formulations of base and superstructure. By the mid-twentieth century Marxism had become connected to the defeat of racism and endorsement of gender equality and sexual liberation. Walter Benjamin (1892–1940), a member of the Frankfurt School of political and social thought, became important to film theory for his essay "The Work of Art in the Age of Mechanical Reproduction" (1935–1936), in which he argued that the "aura" of great works become diminished by the process of reproduction. Although this process had a democratizing aspect, it also tended to remove an artwork from its historical-political context. Benjamin followed a solidly Marxist argument that the artwork was very much conjoined to class assumptions.

MARXISM AND EARLY CINEMA

Marxist ideology is anathema to the business-driven film industry of the United States, but its outlook appears in one form or other in a variety of American films. Although the US government and business sector have been adamantly opposed to all forms of socialism, notions of class struggle have appeared in cinema from its inception. Filmmakers partaking of progressive discourse tend in general to appeal to notions of charity and social equality rather than to Marxist revolution. D. W. Griffith's (1875–1948) *Intolerance* (1916) can be

read as one long plea for social justice. One of the epic's highlights is the Jenkins Mill episode, a loose recreation of the Ludlow Massacre of 1914, during which Rockefeller financial interests hired National Guardsmen to assault and kill striking workers at a chemical plant in Colorado; this event outraged many, including conservatives such as Griffith. Early film comedy, especially the works of Charles Chaplin (1889–1977), have strong anti-authoritarian and socialist themes, from Chaplin's short farces such as *Easy Street* (1917), which portray in Dickensian fashion the life of the urban poor, to his feature-length spoof of industrial capitalism, *Modern Times* (1936).

Post–World War I European cinema, especially that of Germany, showed both the effects of the war and the alienated and helpless condition of people under the German class system. Expressionist horror films such as *Das Cabinet des Dr. Caligari* (*The Cabinet of Dr. Caligari*, Robert Weine, 1920) conveyed a modernist sense of humanity's twisted, tormented situation under the standing economic order. Fritz Lang's pioneering science-fiction masterpiece *Metropolis* (1927), with its seminal vision of an ornate city resting atop the underworld city of the workers who maintain it (a notion derived from H. G. Wells's 1895 novel *The Time Machine*), would foreground anxieties over the class struggle that had propelled Russia's October 1917 Revolution.

Indeed, the Soviet Union after the October Revolution would produce the key films extolling the virtues of socialism and communism; these films would also become landmark contributions to the development of the cinema. Lenin, the leader of the Bolshevik revolution, saw cinema as "the most important art," a phrase often repeated in histories of film. Lenin thought that cinema's ability to communicate through images had an innately democratizing aspect, one crucial to the Soviet Union's numerous ethnicities and languages. This idea was intuited by the pioneers of the Soviet cinema, including Lev Kuleshov (1899–1970), whose famous "Kuleshov experiment" emphasized the importance of film editing by demonstrating how the interrelationship of images affected the consciousness of the spectator. The Soviet cinema for the decade following the October Revolution was among the most avant-garde in the world and established a place in artistic modernism. The key figure of the Soviet cinema, and a giant of film history, is Sergei Eisenstein (1898–1948), who fused Marxist dialectics with art movements such as Cubism and Constructivism to produce a challenging, dynamic cinema that served the agitation purposes of the Soviet revolution. His major films, especially *Stachka* (*Strike*, 1925), *Bronenosets Potyomkin* (*Battleship Potemkin*, 1925), and *Oktyabr* (*Ten Days that Shook the World* and *October*, 1927), broke cleanly with the static melodrama characteristic of early cinema—even the innovative films of Griffith—to create a style based on montage, or cinema built around rapidly cut sequences whose images were charged with symbolism and interacted with each other with remarkable sophistication.

Eisenstein's theory of montage became crucial to the cinema, owing its intellectual basis to Marxist dialectics. In contrast to his colleague Kuleshov, Eisenstein felt that images should "collide" rather than merely be "linked" through editing. Eisenstein applied classical dialectical thinking of thesis opposed by antithesis, leading to synthesis, borrowing from Marx the idea that the standing thesis (problem) of society was capital, its antithesis the worker, synthesis the revolution. Eisenstein translated this into an editing structure wherein the thesis is, for example, images of Czarist troops in the Odessa Steps sequence of *Battleship Potemkin*, the antithesis shots images of the population. The ultimate synthesis is not revolution, but rather the awakening of the spectator. Clearly Eisenstein's films, even before his famous montage theory was formulated, were focused on agitation (as is evident in *Strike*, his first major film).

Other important early Soviet directors included Dziga Vertov (1896–1954), whose *kino pravda* ("film truth") movies inspired the *cinema verité* movement first in France and then internationally. Vertov sought to change the style of the documentary and the notion of the real as depicted in bourgeois art. His most radical accomplishment was *Chelovek s kino-apparatom* (*The Man With a Movie Camera*, 1929), which recorded a day in the life of a Soviet city. What could have been a prosaic film was a radical departure for the documentary, embodying various forms of modernism along with the Marxist aesthetics of theorists such as Bertolt Brecht (1898–1956). Vertov used split screens, superimpositions, animation, and above all an attempt to incorporate the viewer into the very process of filmmaking by showing us the operation of the camera and including self-reflexive jokes such as an image of the filmmaker floating with his camera over the city. Vertov challenged bourgeois realism as well as conventional notions of perspective inherited from the Renaissance, which Vertov, like other Marxist artists, believed lulled the audience into a sense of self-satisfaction and consolation as it accepted the singular vision of one inspired "genius."

EUROPEAN CINEMA BEFORE AND AFTER WORLD WAR II

Other manifestations of a Marxist cinema in Europe include the work of the Spanish director Luis Buñuel (1900–1983). His early films *Un Chien Andalou* (*An Andalusian Dog*, 1929) and *L'Âge d'or* (*The Golden Age*, 1930), made in collaboration with the surrealist painter Salvador Dali (1904–1989), combined a Marxist slap at

the bourgeoisie with surrealism's contempt for all social norms. Deeply affected by European fascism, Buñuel, throughout his long career, continued to lambaste bourgeois society with extraordinarily witty satires, the most notable of which include *Belle de Jour* (1967), *Le charme discret de la bourgeoisie* (*The Discreet Charm of the Bourgeoisie*, 1972), *Le Fantôme de la liberté* (*The Phantom of Liberty*, 1974), and *Cet obscur objet du désir* (*That Obscure Object of Desire*, 1977).

Surrealism, like many art movements of the post–World War I avant-garde, had a strong if conflicted Marxist orientation. Buñuel and his old schoolmate Dali had a falling out during their collaboration on *L'Age d'or*: Buñuel, who at the time had strong communist sympathies, meant the film as a deliberate undermining of all bourgeois institutions. Dali, who eventually supported the Spanish fascist dictator Francisco Franco (whose rule ran from 1936 to 1973) and various figures of the European aristocracy, wanted merely to cause a scandal through the use of various scatological and anti-Catholic images. André Breton (1896–1966), the author of the 1946 work *Manifestoes of Surrealism* and the movement's leading theoretician, visited Trotsky in Mexico during the Bolshevik leader's exile in the late 1930s from the Stalin-controlled Soviet Union. During that visit Breton had a brief association with Frida Kahlo, Diego Rivera, and other Mexican avant-garde painters. Breton's concern was to place surrealism as a movement in service of revolutionary action by creating works that would transform bourgeois consciousness. Yet many aspects of Breton were conservative and exclusionary, especially on the subjects of gender and the rendering of sexuality. Breton did not hesitate to "expel" surrealists whose works he deemed effete or gratuitously sexual.

Jean Renoir (1894–1979), perhaps the greatest figure of the French cinema, was a member of the French Communist Party, then a supporter of the Popular Front coalition of various leftist factions. He examined prewar French society from a sophisticated left perspective. His most acclaimed film, *La Règle du Jeu* (*The Rules of the Game*, 1939), offers a class critique in depicting the deceptions and self-deceptions of a marquis, his wife, and their circle of friends, servants, and hangers-on. The film, influenced by Pierre-Augustin Beaumarchais's *The Marriage of Figaro* (1784), presents a decaying bourgeois civilization in microcosm, showing how the facade and cavalier appetites of this society reflect the dominant assumptions that bring about both the horrors of war and the taken-for-granted forms of repression and denial that are the substance of capitalist life. In the 1930s Renoir directed films regarded by many to be his most self-consciously political, including *Boudu sauvé des eaux* (*Boudu Saved from Drowning*, 1932), about a derelict who disrupts a bourgeois household, and *Le Crime de Monsieur Lange* (*The Crime of Monsieur Lange*, 1936), in which a collectively owned comic book company becomes an allegory of communist society and its internal and external opposition.

The German filmmaker Max Ophuls (1902–1957), who worked in Germany, France, Italy, and the United States, is one of the first directors to introduce the ideas of the Marxist playwright and aesthetician Bertolt Brecht to the cinema. Ophuls, like Renoir, took as his subject the examination of bourgeois mores, especially assumptions pertaining to gender relations (which he saw as foundational to economic and all other relations). He used a high degree of camera artifice both to engage the audience and focus it, in the manner of Brecht's theories, on ideas rather than the melodramatic content of his films, from *Liebelei* (*Flirtation*, 1933) and *La Signora di Tutti* (*Everybody's Woman*, 1934) to *La Ronde* (Roundabout, 1950), *Madame de ...* (*The Earrings of Madame de ...*, 1953) and *Lola Montès* (1955), and even his American films. *The Reckless Moment* (1949) is a deceptively simple but comprehensive analysis of American postwar bourgeois society, especially its impact on the female. *Letter from an Unknown Woman* (1948) is one of the cinema's most perceptive meditations on gender relations under patriarchal capitalism, exemplifying the fusion of psychoanalysis and feminism with Marxism in artistic discourse.

Bertolt Brecht, the distinguished Marxist playwright and theorist, was influential on a host of left-oriented filmmakers beyond Ophuls. Brecht's notion of "distanciation," the idea that the illusionist tricks of the filmmaker or theater director should be revealed to the audience so that it might become fully engaged with the assumptions of the author, would influence a generation of artists on various continents. The cleverly anti-bourgeois Hollywood melodramas of Douglas Sirk (1897–1987), especially *All that Heaven Allows* (1954) and *Written on the Wind* (1956), show the Brechtian influence on the expatriated German director through his deliberately artificial-looking color and set design. The French New Wave filmmaker Jean-Luc Godard (b. 1930) is Brechtian through most of his films in the 1960s and early 1970s, which invite the spectator to interrogate the conventions and codes of representational cinema.

In the postwar period the Italian cinema became noticeable for its strongly progressive, leftist sentiment as Italy became so strong a center of European communism that it was targeted for disruption by the US government. The neorealist movement represented by directors Vittorio De Sica (1902–1974) and Roberto Rossellini (1906–1977) (both of whom were Christian and humanist in their orientation—their works were nevertheless embraced by much of the left) became the

most influential style of the period, with its focus on the plight of the poor. De Sica's *Ladri di biciclette* (*The Bicycle Thieves*, 1948) is representative. Luchino Visconti (1906–1976), whose career began within the neorealist style, made *La Terra Trema* (*The Earth Trembles*, 1948), about the hardships of a Sicilian fisherman and his family, with funds from the Italian Communist Party. Visconti, an aristocrat with Marxist convictions, applied his analysis of class to two early-1960s masterpieces, *Rocco e i suoi fratelli* (*Rocco and His Brothers*, 1960) and *Il Gattopardo* (*The Leopard*, 1963). His later films, *La Caduta degli dei* (*The Damned*, 1969) and *Morte a Venezia* (*Death in Venice*, 1971), focused on the decadence and irredeemable nature of the bourgeoisie. *The Damned* drew a connection between industrial capitalism and the rise of fascism. Visconti's work was strongly influenced by Lukács, the Marxist literary theorist, who argued against avant-garde modernism, which he saw as metaphysical and obscurantist in nature, and in favor of realism, for the portrayal of class conflict in art. Visconti's "Lukacsian epics" stick close to the conventions of the nineteenth-century novel, with attention to material reality through period detail to portray the aristocracy and bourgeoisie in various states of decline.

Bernardo Bertolucci (b. 1940) was, until the 1980s, another identifiably political Italian director, whose best-remembered films were very much influenced by the political activity of the 1960s in Europe and the United States. From his first feature, *Before the Revolution* (1964), his films display nostalgia for the old order simultaneous with its denunciation. The disintegration of macho masculinity in the face of a (potentially) revolutionary Europe was central to *Ultimo tango a Parigi* (*Last Tango in Paris*, 1972), Bertolucci's most controversial film, rated "X" in the United States for its rather explicit sex acts and portrayal of sexual relations. Bertolucci's epic *1900* (1976), a portrayal of the rise of Italian communism and the struggle of the peasantry against the aristocracy, may be his defining political statement, after which he gradually abandoned many of his radical convictions.

Gillo Pontecorvo (b. 1919) is among the most prolific and committed of the Italian Marxist directors of the 1960s, his most stunning film being the Italian-Algerian co-production *La Battaglia di Algeri* (*The Battle of Algiers*, 1966), a documentary-like recreation of the Algerian revolt against French colonial occupation. A subsequent film, *Queimada* (*Burn!*, 1968), which gained brief notoriety in the United States because of Marlon Brando's starring role, is a meditation on imperialism in its colonial and neocolonial phases.

France's most radical filmmaker of the 1960s and 1970s is without question Jean-Luc Godard, the central figure of the French New Wave, who combined Brechtian aesthetics with a love of American genre cinema to challenge traditional representational practices and their ideological underpinnings. A writer for the influential French film journal *Cahiers du Cinéma*, Godard was among the critics who championed a reevaluation of the American cinema. *Le Mépris* (*Contempt*, 1963) is Godard's Brechtian reflection on the film industry, for which he had both nostalgic sentiment and considerable revulsion. *Les Carabiniers* (*The Carabineers*, 1963) is Godard's radical condemnation of warfare and imperialism. His most political, antirealist gesture appeared in *Weekend* (1967), an apocalyptic agit-prop collage of events suggesting the decline of capitalist society into barbarism. After the events of May 1968, Godard, by then a committed Maoist, along with Jean-Pierre Gorin (b. 1943), formed the Dziga Vertov Group, a loose filmmaker cooperative that rejected all forms of conventional representation and hierarchal film practices. *Le Vent d'est* (*Wind from the East*, 1970) was the group's anti-Western, a Maoist parable tied to the genre in part through the presence of Gian Maria Volonte (1933–1994), a leading figure of the Italian Communist Party who made an international reputation as the star of Italian Westerns. *Tout va bien* (*All's Well*, 1972) is Godard and Gorin's exploration, done in non-narrative, declamatory style, of events in post-1968 France through a satiric portrayal of a strike in a sausage factory. Although termed Maoist, *Tout va bien*, like other Godard–Gorin films, owed more to Brecht and the early Soviet avant-garde than the socialist-realist works of Maoist China. The film's companion piece, *Letter to Jane* (1972), is composed of one still of the radicalized actress Jane Fonda (featured in *Tout va bien*), her star image and radical posture deconstructed in a voice-over analysis. Since the 1970s, Godard's radical politics have greatly receded, his recent films, such as *Notre Musique* (*Our Music*, 2004), concerned with issues of representation and human conflict, but from a humanist rather than Marxist perspective.

A key filmmaker of the 1960s Marxist tradition is Jean-Marie Straub (b. 1933), who worked for much of his career in Germany. With his wife and colleague Danièle Huillet (b. 1936), Straub created a Marxist aesthetic far closer to minimalism and structural-materialist film than the montage aesthetic of Eisenstein and the Soviet avant-garde. In fact, Straub sought to do away with montage altogether along with most forms of representationalism as he made films composed almost exclusively of prolonged static shots so as to engage the spectator with the material phenomenon of the image, as well as with their own experience of watching the screen. Among the more famous Straub–Huillet films are *Chronik der Anna Magdalena Bach* (*The Chronicle of Anna Magdalena Bach*, 1968) and *Moses und Aron* (*Moses and

PIER PAOLO PASOLINI

b. Bologna, Italy, 5 March 1922, d. 2 November 1975

Pier Paolo Pasolini is among the most challenging and important directors of the postwar European Marxist cinema. A prolific poet and essayist, Pasolini was sometimes confusing in his ideological convictions. His open homosexuality and support of the Vatican's views on abortion caused his expulsion from the Italian Communist Party. His belief in a progressive reading of Christianity motivated his reverential, multicultural film about the life of Jesus, *Il Vangelo secondo Matteo* (*The Gospel According to Saint Matthew*, 1964). Yet his Marxism was caustic, complex but uncompromised.

Accattone (*The Scrounger*, 1961) is Pasolini's tribute to neorealism, with its grim story of a young homeless man begging for money in an urban slum. *Edipo Re* (*Oedipus Rex*, 1967) updates Sophocles's play with a framing device featuring a young soldier's jealous rivalry with an infant boy, making concrete Freud's ideas about the structures of power within the male group. *Teorema* (*Theorem*, 1968) breaks entirely with neorealism in its story—often seen as a radical *Shane* (1953)—of an angelic young stranger who arrives in a bourgeois household, the mere presence of his androgynous countenance tearing the family to bits, suggesting Pasolini's view of the fragility of heterosexual capitalist life. *Porcile* (*Pigsty*, 1969) is a neo-Brechtian film combining a story about a young barbarian in a medieval wasteland with an inter-cut narrative about the machinations of fascist industrialists determining the fate of a perverse son from their palatial neoclassical chateau.

Pasolini's "celebration of life" films, *Il Decameron* (*The Decameron*, 1971), *I Racconti di Canterbury* (*The Canterbury Tales*, 1972), and *Il Fiore delle mille e una notte* (*Arabian Nights*, 1974), exemplified his belief, common to postwar Marxism, in fusing sexual liberation to class struggle, as well as his insistence on narrative experimentation. His final film, *Salò o le 120 giornate di Sodoma* (*Salo, or The 120 Days of Sodom*, 1975), is one of the most controversial works in cinema history. The film recreates the four protagonists of the Marquis de Sade's novel as representatives of the church and state under fascism. They stage an orgy at Mussolini's final outpost in northern Italy, during which they subject a group of captured young people to all manner of sexual degradation, torture, and murder. The film has no specific basis in historical events but is Pasolini's meditation on the psychology of the fascist mind. Through this exploration of sexual libertinage, Pasolini questions the relative sexual freedom of the present world and whether any authentic liberation can exist in a society based on consumerism and exploitation.

Pasolini was brutally murdered on a highway in 1975, ostensibly by a gay hustler, although the case remains open as of this writing. His work remains a milestone for radical cinema. With Godard, he set a standard for innovative, critical uses of Marxism in art.

Christopher Sharrett

Aaron, 1975). Straub's films were and are infuriating even to committed radicals because of their extremely slow, non-narrative style and apparently apolitical content—Godard was upset with *The Chronicle of Anna Magdalena Bach* for its refusal to engage with the events of the late 1960s, although Straub responded that the film was his contribution to the people of Vietnam in support of their struggle against the United States invasion.

Constantin Costa-Gavras (b. 1933) might be seen as a crossover figure in the international leftist cinema, working in the United States and France as well as his native Greece. Costa-Gavras made an impression with his 1968 film *Z*, about a coup in Greece that brought a military dictatorship in the 1960s. *Z* resonates with various events of the 1960s, including the assassination of John F. Kennedy. His 1982 film *Missing* was a fictionalized account of the 1972 United States–sponsored coup against Chilean president Salvador Allende and its consequences on a meek American businessman and his family. Since the 1980s Costa-Gavras's political commitments and artistic achievements have been inconsistent.

HOLLYWOOD AND THE LEFT

Marxist and other radical ideologies tended to find their way into the United States cinema following the devastating impact of the Great Depression of the 1930s on American capitalism. Some films embraced a point of view reflecting merely the liberal social policies and outlook of President Franklin Roosevelt (1933–1945), whose New Deal defined the social worldview of several generations. Liberalism, designed to co-opt and diffuse a rising tide of Marxist and socialist activity in the United States during the 1930s, appeared in the films of conservative directors, including John Ford's *The Grapes of Wrath* (1939), and the various populist films of the less reactionary Frank Capra (1897–1991), such as *Meet John Doe* (1941) and *Mr. Smith Goes to Washington* (1939). Films such as *Our Daily Bread* (King Vidor, 1934) celebrated the collectivist spirit that accompanied phases of the New Deal and seemed to invoke the stylistics of the Soviet cinema.

World War II caused Hollywood to take complex political turns. Because the Soviet Union was allied with the United States in fighting Nazism, the film industry, working with the Office of War Information, made films that burnished Stalin's image and even helped justify his purges of many of the original supporters of the October Revolution. The most famous and rather bizarre example is *Mission to Moscow* (Michael Curtiz, 1943), about the globetrotting of Ambassador Joseph Davies that becomes a paean to Stalin as ally. After World War II, the Hollywood studios would renounce such films while helping the government condemn various directors, screenwriters, and producers as part of an international communist plot. In the climate of the Cold War, members of the film community were called before the House Un-American Activities Committee, which aimed to root out suspected communists but also to roll back the pro-union, pro-socialist activity of the Great Depression as well as delegitimate Roosevelt's progressive social programs. A "blacklist" was created to purge communists and "fellow travelers" from the cinema. The most notorious phase of this process was the case of the Hollywood Ten, a group of writers and directors including Ring Lardner Jr. (1915–2000), Alvah Bessie (1904–1985), John Howard Lawson (1894–1977), Herbert Biberman (1900–1971), Dalton Trumbo (1905–1976), Albert Maltz (1908–1985), Samuel Ornitz (1890–1957), Edward Dmytrk (1908–1999), Adrian Scott (1912–1973), and Lester Cole (1904–1985), who were sent to prison for refusing to tell HUAC their political sympathies or to "name names" of suspected communists within the industry. Dmytrk and others cooperated with HUAC when released from prison and were therefore allowed to return to work. Others were kept on the blacklist and forced either out of or to the margins of the industry. HUAC activity continued well into the 1950s, gaining new momentum with the activity of Senator Joseph R. McCarthy, a late-coming opportunist to the anti-left crusade.

By the late 1950s the hold of the Cold War on Hollywood tended to loosen somewhat with the censuring and early death, in 1957, of McCarthy, and the attempt by high-profile stars and producers to break the

Yves Montand and Jane Fonda in the midst of a workers' strike in* Tout va bien *(*All's Well, *Jean-Luc Godard and Jean-Pierre Gorin, 1972). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

blacklist. Kirk Douglas hired Dalton Trumbo to write the screenplay for his epic *Spartacus* (1960); at approximately the same time, Otto Preminger hired Trumbo to write *Exodus* (1960). Some of the blacklisted filmmakers worked on low-profile projects that received little distribution in their day, such as Herbert Biberman's *Salt of the Earth* (1954), with a screenplay by Michael Wilson (1914–1978; also blacklisted—he would write *Lawrence of Arabia* [1962] but did not gain screen credit for it until years after the film's release), produced by Paul Jarrico (1915–1997), another victim of the witch hunt. *Salt of the Earth*, which recreates a strike by white and Hispanic mine workers in New Mexico, cannot be termed Marxist since it does not challenge the mine owners' right to control resources; but the film has powerful left sentiments and is rather pioneering in its views of race and gender liberation as necessary to class struggle.

American cinema in the postwar period, though rarely explicitly Marxist, often contained powerful condemnations of the intellectual and spiritual bankruptcy of the bourgeois life extolled by 1950s conservatism. Sirk's melodramas are perceptive comments, made by a European émigré observing the scene, on the limits of American middle- and upper-class life, with its social and economic contradictions and forms of repression. The melodrama is, in fact, the filmic site that seems to show, in the context of the 1950s, deep skepticism toward the American ideological program of restoring a sense of normality shattered by the Great Depression. *Picnic* (Joshua Logan, 1955), *Rebel Without a Cause* (Nicholas Ray, 1955), *Bigger than Life* (Ray, 1956), *Some Came Running* (Vincente Minnelli, 1958), *Home from the Hill* (Minnelli, 1960), and *Strangers When We Meet* (Richard Quine, 1960) are all stunning rebukes of American patriarchal bourgeois civilization. Even the Western, Hollywood's traditionally conservative genre, showed the cracks in the postwar ideological facade in films such as *High Noon* (Fred Zinneman, 1952) and *Man of the*

West (Anthony Mann, 1958). Rather like the films of Renoir, Buñuel, and Pasolini, these films and later works of Hollywood seem less involved in offering a revolutionary solution than diagnosing the maladies of life under the capitalist social order.

THE THIRD WORLD

The cinema of Latin America, Asia, and Africa has produced what many critics argue to be the most radical cinema, despite often meager production resources of the overexploited nations interested in participating in cinematic discourse about Western imperialism. Many Third World films of a radical orientation enjoy little if any distribution within the United States; as a consequence, the work of Marxist directors from Latin America or Africa are often lost to all but the most diligent radical scholars. A key example of the problem is *Hora de los hornos* (*The Hour of the Furnaces*, 1967), by the Argentine director Fernando Solanas (b. 1936), with Octavio Getino (b. 1935) and Santiago Alvarez (1919–1998), one of the most radical condemnations, in agitprop form, of American and European imperialism ever filmed, which has yet to appear in the United States in a serviceable video or DVD version. The Cuban filmmaker Santiago Alvarez is perhaps the most renowned documentarian working in a communist country. His rather modest, often satirical agitprop films, such as *LBJ* (1968), and the tributes to Che Guevara and Ho Chi Minh, *Hasta la victoria siempre* (Until the Victory Always, 1967), and *79 primaveras* (*79 Springs*, 1969), are remarkable works partaking fully of the avant-garde tradition in their satirical montage, their caustic condemnation of imperialism, and their celebration of the international struggle for liberation. Another Cuban filmmaker, Tomás Gutiérrez Alea (1928–1996), offers a sophisticated meditation on liberalism and its hypocritical equivocations in *Memorias del subdesarrollo* (*Memories of Underdevelopment*, 1968).

Africa's most renowned radical director is perhaps the Senegalese filmmaker Ousmane Sembene (b. 1923), whose films offer sublime, understated challenges to Western imperialism in a career spanning almost forty years. His *Emitai* (God of Thunder, 1971) is representative of his project of reclaiming African identity as it forces the Western viewer to understand her or his own imagination, and the ways by which this imagination has been projected on Africa. Concerned with the French occupation of Senegal during World War II and a resultant massacre, the film is among the most important postwar challenges by an African filmmaker. Sembene's film *Xala* (*The Curse*, 1975) deconstructs the colonialist mindset as internalized by the colonized—as such, *Xala* is a kind of cinema reflection on the essential thesis of Frantz Fanon's pivotal 1961 study *The Wretched of the Earth*. *Guelwaar* (1992) is an especially relevant comment on conflicts between the Muslim and Christian worlds in contemporary Africa, as it foregrounds the ongoing struggle for freedom from colonialism.

In the Middle East, Iran at the beginning of the twenty-first century seems to have the strongest potential for the production of a radical cinema despite its theocratic government. Dariush Mehrjui (b. 1939) appears an heir to Buñuel in such films as *Baanoo* (*The Lady*, 1999) and *Dayereh mina* (*The Cycle*, 1978). The prolific filmmaker Abbas Kiarostami (b. 1940) has enjoyed much acclaim in recent years for his largely humanist films.

THE 1960s AND AFTER

During the Vietnam War, which by the late 1960s brought a major wave of dissent in the United States, the Hollywood cinema tended to portray a society on the verge of disintegration: Arthur Penn's *The Chase* (1965) and *Bonnie and Clyde* (1967), Dennis Hopper's *Easy Rider* (1969), and Sam Peckinpah's *The Wild Bunch* (1969). Penn's *Alice's Restaurant* (1969) showed sympathy for the youth counterculture of the 1960s. During the 1970s audiences that had witnessed the Vietnam War and the Watergate scandal were drawn to disaster films such as *Earthquake* and *The Towering Inferno* (1974), whose pleasures resided in watching the destruction of symbols of mainstream society. In the horror genre, *The Texas Chainsaw Massacre* (1974) and *Dawn of the Dead* (1978) portrayed the monstrousness of post-Vietnam America. Several films examined the war and its consequences, the most famous of which are *The Deer Hunter* (1978) and *Apocalypse Now* (1979). In the late 1980s, Oliver Stone (b. 1946) made two films about the war, *Platoon* (1986) and *Born on the Fourth of July* (1989), showing the coming-apart of American myth and the social confidence that permitted the war to occur. A common critical view of Marxist film scholars is that few if any Vietnam films examine the role of imperialism and colonialism in shaping war policy.

The Hollywood cinema from the 1960s until the presidency of Ronald Reagan (1981–1989) tended to offer challenges to the American ideological system that sometimes had obvious Marxist aspects. This was due in part to the collapse of the studio system, the rise of independent cinema, and the American crisis in ideological confidence. The tendencies of this new cinema may be best represented in *Heaven's Gate* (Michael Cimino, 1980), an epic rethinking of the Western that saw the winning of the West as class struggle. A new, corporatized studio system developed in the 1980s and 1990s, and adversarial cinema saw a gradual demise simultaneous with the public embrace of the status quo following

the collapse of the Soviet Union. Still, challenges to the political-economic-social order, sometimes of a limited or compromised nature, occasionally appear in the commercial cinema of the new century, including, among others, the films of Todd Haynes, David O. Russell's *Three Kings* (1997), and David Fincher's *Fight Club* (1999).

MELODRAMA

Few artistic movements have provoked such strong emotions as has melodrama over the years. From sneers of derision to tears of empathy, melodrama has the peculiar facility to divide and polarize popular and critical opinion. The study of the origin and influence of melodrama in cinema has likewise generated more heated and contradictory debate than perhaps any other area of enquiry within film scholarship and criticism. Melodrama cannot be defined simply as a genre, as it frequently defies attempts at generic classification. Rather, the history of the term's use in film scholarship demonstrates many of the debates and limitations of genre theory.

MELODRAMA AND MEANING

Melodrama is a word with at least three distinct meanings and there has been a tendency in critical debate to slip from one context to another in using the term.

First, melodrama refers to a specific theatrical genre that emerged in Europe, especially France and England, during the late eighteenth century and became extremely popular during the nineteenth century. The term was originally used by Jean Jacques Rousseau (1712–1778) to describe his play *Pygmalion* (1770). Rousseau wished to distinguish between the staging of his own production and the popular Italian opera, using the term "mélodrame" to describe a form of drama where music would accompany the spoken word to embellish and accentuate the emotional content of the dialogue. While Rousseau's dramatic innovation was a short-lived phenomenon, it eventually provided the name for a new and popular theatrical genre that emerged as a consequence of licensing legislation introduced for the regulation of theater in the two countries. A further distinction began to be made during the late eighteenth century between the licensed, "legitimate" theater that was legally able to stage plays and the "illegitimate," popular theaters where the spoken word was not permitted. It was in such theaters that a new form of entertainment started to emerge that combined music, dance, drama, and older folk entertainment forms such as pantomime, circus, and harlequinade in ever more sophisticated and spectacular forms. Thus the melodrama was born.

At a narrative level, the melodrama of the period was marked by its concern with complex and sensational narratives involving devices such as mistaken identities, twins separated at birth, stolen inheritances, star-crossed lovers, and the eternal struggle between good and evil, often represented by the virtuous poor being oppressed by decadent aristocrats and, increasingly during the nineteenth century, by the heartless industrialist. Although the licensing acts that contributed to the emergence of melodrama were repealed during the final years of the eighteenth century in France and the early nineteenth century in England, melodrama's popularity was such that it became perhaps the most ubiquitous of theatrical forms during the nineteenth century, developing, during the course of that century, an increasingly sophisticated formal language. Elaborate staging techniques, including the development of technological innovations that enabled rapid scene changes, the use of revolves and pulleys (to produce the effect of parallel action and scenes) and, above all, the use of spectacle became central features of theatrical melodrama. All of these narrative, stylistic, and technical devices,

well established by the late nineteenth and early twentieth century, clearly influenced the development of early narrative cinema, which drew very clearly on the established and popular theatrical genre of melodrama. The work of D. W. Griffith (1875–1948), for example, is clearly indebted to theatrical melodrama; indeed, several of his films, most notably *Orphans of the Storm* (1921), were adaptations of popular theatrical melodramas.

Second, melodrama and "melodramatic" are terms that have a popular, common-sense usage as pejorative descriptions usually relating to a specific performance or narrative style regarded as artificial, excessively emotional, unrealistic, or anachronistic. This use of the term sees melodrama as formulaic, sentimental, old-fashioned, and inferior to "serious" drama; it is often equated with soap opera. This value judgment regarding melodrama has frequently been applied to cinema aimed at a female audience and/or films featuring female protagonists. There is a clear yet problematic link made in such usage between excessive emotion, sentimentality, and the feminine or feminine concerns. This is an issue that many feminist film scholars have discussed, most notably Christine Gledhill, Pam Cook, and Laura Mulvey, all of whom have noted that ostensibly male critics and directors have designated the many so-called "woman's films" of Classical Hollywood as melodrama and as a consequence have diminished the female point of view and the concerns that such films attempt to address. *Stella Dallas* (1937), for example, and *Mildred Pierce* (1945), both regarded as "maternal melodramas," tell stories of mothers who struggle to achieve financial and social acceptance and security primarily for the sake of less than grateful children. *Now, Voyager* (1942), *Dark Victory* (1939), and *Letter from an Unknown Woman* (1948) are archetypical examples of the woman's film as melodrama, with their suffering heroines, themes of lost or unrequited love, and overt emotional appeal. While such films at points perhaps have lacked critical respectability, they have been consistently popular with audiences and closely associated with a group of female stars who continue to epitomize a very particular stylized and emotional performance style associated with film melodrama. Successful actresses such as Joan Crawford (1904–1977), Bette Davis (1908–1989), Barbara Stanwyck (1907–1990), Lana Turner (1921–1995), and Jane Wyman (b. 1914) consolidated their careers starring in such films. Likewise, a succession of directors became associated with the woman's film, including George Cukor (1899–1983), Max Ophuls (1907–1957), Irving Rapper (1898–1999), John Stahl (1886–1950), King Vidor (1894–1982), William Wyler (1902–1981), and Mervin LeRoy (1900–1987).

MELODRAMA AND FILM STUDIES

Melodrama is also a term that has currency within film studies debate that has a sometimes uncomfortable connection with the two understandings of the term already discussed.

The term entered the lexicon of film studies initially through auteurist interests in the work of European émigré directors working in Hollywood during the 1950s, particularly a group of films made by Douglas Sirk (1897–1987) during his years as a contract director at Universal, among them *Magnificent Obsession* (1954), *All That Heaven Allows* (1955), *Written on the Wind* (1956), and *Imitation of Life* (1959). Sirk used the term melodrama to describe a form of drama characterized by high emotion and its affective qualities in an unambiguous and rather ironic manner in order to articulate his own distaste for their overtly sentimental plots. Melodrama at this point was seized upon by a generation of scholars to describe this "rediscovered" form of cinema, and Sirk's films were regarded as the epitome of a newly identified, though far from clearly defined, genre that was more complex ideologically than previously had been thought.

In 1971 Thomas Elsaesser, taking Sirk's lead, argued that the focus of film melodrama of 1950s Hollywood is the bourgeois family and that it is distinguished by a strong sense of ideological contradiction reflecting wider uncertainties, fears, and neuroses prevalent in postwar Eisenhower America. For Elsaesser, this ideological contradiction is expressed in the family melodrama primarily through *mise-en-scène*, music, and performance. From this perspective, *mise-en-scène* is perhaps the most important melodramatic device, filling in the gaps, as it were, between what the characters are unable or unwilling to express. For Elsaesser and other scholars such as Paul Willemen and, later, Thomas Schatz, the *mise-en-scène* in melodrama becomes overburdened with meaning. Anxieties and contradictions not explicitly expressed within the narrative are displaced onto objects, constructing the bourgeois home as a stifling environment for its inhabitants, as in Sirk's and Vincente Minnelli's films. Later in the 1970s Geoffrey Nowell-Smith and Laura Mulvey expanded on this argument, suggesting that the ideological contradictions contained in the family melodrama were so marked that at moments of high tension, narrative coherence breaks down. In effect, they claimed, these contradictions become so intense that they actually ruptured the cohesiveness of the classical narrative structure. As Nowell-Smith notes, "The undischarged emotion which cannot be accommodated in the action, subordinated as it is to the demands of family/lineage/inheritance is traditionally expressed in the music and in

DOUGLAS SIRK

b. Detlef Sierck, Hamburg, Germany, 26 April 1897, d. 14 January 1987

No other director has been more closely associated with the concept of melodrama in cinema than Douglas Sirk. His best known and most financially successful films, produced by Ross Hunter for Universal Studios during the mid-1950s, have become for critics and scholars the archetypical examples of what Thomas Elsaesser describes as family melodrama.

Born into a middle-class family in Hamburg at the turn of the century, Detlef Sierck began his career in the German theater during the years of the Weimar Republic, directing plays by Bertolt Brecht, Georg Kaiser, and Kurt Weill, among others. He became involved in the cinema working as a director for the state-run studio Ufa, directing such notable works as *Zu neuen Ufern* (*To New Shores*, 1937) and *La Habanera* (1937). While many of his contemporaries fled Germany under the Nazi regime, Sierck did not leave until the end of the 1930s. Arriving in Hollywood at the start of the 1940s, Sierck (now known as Douglas Sirk) initially worked for Columbia before becoming a contract director for Universal in 1946. As one of Universal's house directors, he worked on a diverse range of projects ranging from war films and thrillers to westerns, comedies, and musicals, but it was the films he made with Hunter in the 1950s that established Sirk's reputation as the quintessential director of Hollywood melodrama. *Magnificent Obsession* (1954), *All That Heaven Allows* (1955), *Written on the Wind* (1956), and *Imitation of Life* (1959), featuring lavish production design and convoluted narratives concerning doomed romances, improbable coincidences, and tear-jerking denouements, made stars of Rock Hudson, Robert Stack, and Dorothy Malone as well as consolidating the careers of Jane Wyman and Lana Turner.

While popular with audiences, Sirk's films were often condemned by contemporary film critics as examples of the sensationalism and sentimentality of popular cinema. However, in France, the critics of the influential *Cahiers du Cinèma*, notably François Truffaut and Jean-Luc Godard, praised Sirk's distinctive visual style. In the early 1970s a new generation of film scholars, notably Thomas Elsaesser, Paul Willemen, Geoffrey Nowell-Smith, and Fred Camper, "rediscovered" Sirk's films, hailing them as supreme examples of a subversive critique of postwar American society expressed through stylized *mise-en-scène* drawing on irony and Brechtian alienating devices. Sirk's work has influenced many subsequent filmmakers including Rainer Werner Fassbinder, Martin Scorsese, John Waters, Pedro Almodóvar, Jonathan Demme, and Todd Haynes.

the case of film in certain elements of the *mise-en-scène*" (Nowell-Smith, p. 73).

Throughout the 1970s and well into the 1980s, critical discussion of film melodrama was constrained by two theoretical paradigms, psychoanalysis and neo-Marxist ideology, framing debate around the terms of reference, concerns, and generic features of melodrama for nearly thirty years, as well as Sirk's preeminent place as director. This critical view of melodrama has additionally had a significant influence on a generation of filmmakers who emerged during the period when film theorists were rediscovering Sirk's work. The most prominent figure to have been influenced by this theoretically informed notion of melodrama was the German New Wave director, writer, and actor, Rainer Werner Fassbinder (1945–1982). Legend has it that Fassbinder first saw a retrospective of Sirk's Hollywood films at a festival in Berlin in 1971 and was so inspired that he instantly drove to

Douglas Sirk. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

Switzerland to speak with the retired director in person at his home in Lugano. It is certainly true to say that Fassbinder's work demonstrates some degree of debt to the stylization, alienating devices, and subversive social critique that critics attribute to Sirk's films. This influence is very apparent in films such as *Angst essen Seele auf* (*Ali: Fear Eats the Soul*, 1974) often, incorrectly, seen as a remake of Sirk's *All That Heaven Allows*, in which a socially unacceptable relationship between an older woman and a younger man causes disruption. However, in Fassbinder's film the older woman is an elderly cleaner (Brigitte Mira) who falls in love with a Moroccan laborer (El Hedi ben Salem) rather than Jane Wyman's glamorous widow falling for Rock Hudson's brooding, free-spirited gardener, as in Sirk's film. Throughout Fassbinder's short but extremely prolific career (he made nearly forty films in less than ten years), Sirk's Hollywood melodramas were to become stylistic touchstones that provided a rich source of inspiration. Sirk's use of reflections and onscreen space, for example, are apparent in Fassbinder's *Die Bitteren Tränen der Petra von Kant* (*The Bitter Tears of Petra Von Kant*, 1972) and *Chinesisches Roulette* (*Chinese Roulette*, 1976), the garish use of color is evident in *Lola* (1981) and *Querelle* (1982), ironic social criticism is evident in *Händler der vier Jahreszeiten* (*The Merchant of Four Seasons*, 1972) and *Faustrecht der Freiheit* (*Fox and His Friends*, 1975) and the suffering female protagonist in *Sehnsucht der Veronika Voss* (*Veronika Voss*, 1982) and *Die Ehe der Maria Braun* (*The Marriage of Maria Braun*, 1979).

Sirk's melodramas have also been cited as influences on the work of an even more disparate range of directors, from Martin Scorsese (b. 1942) to John Waters (b. 1946). In recent years the work of the internationally acclaimed Spanish director Pedro Almodóvar (b. 1949) clearly demonstrates the influence of Sirk's films through the use of lavish stylization, lurid color schemes, convoluted narratives, and mannered performances. In films such as *Mujeres al borde de un ataque de nervios* (*Women on the Verge of a Nervous Breakdown*, 1988), *La flor de mi secreto* (*The Flower of My Secret*, 1995), and *All About My Mother* (1999), Almodóvar shows himself to be the natural successor to both Sirk and Fassbinder through his interest in female protagonists and highly emotionally charged and lavishly mounted productions. Todd Haynes (b. 1961), one of the leading figures of the so-called New Queer Cinema and another figure inspired by both Sirk and Fassbinder, gained commercial and critical success with his own revision of Sirk's *All That Heaven Allows* with *Far from Heaven* (2003). For the problem of class, the obstacle that faces the lovers in Sirk's original film, the film substitutes the even more problematic and inflammatory issues of race and sexuality, subjects that the production code would have made it impossible for Sirk's source text to discuss.

RECENT DEVELOPMENTS IN FILM THEORY

Christine Gledhill's forensic introduction to her 1987 edited collection of essays on melodrama, *Home is Where the Heart Is*, outlined the range of debate on the subject until that point and began to open up the possibility for a reconsideration of film melodrama. Primarily, Gledhill discussed the feminist intervention in the debate and pointed to the largely unsuccessful attempts to reconnect film theory with the historical roots of theatrical melodrama. She noted that film studies' notion of melodrama, which is concerned primarily with the domestic and the feminine, has little in common with the theatrical genre of melodrama, which is focused on action, incident, and jeopardy. She called for a more progressive and encompassing engagement with what melodrama is and does in cinema, a call that initially remained largely unanswered, as the model of family melodrama remained entrenched.

By the late 1980s and 1990s, however, such theorists as Linda Williams, Steve Neale, and Rick Altman, as well as Gledhill herself, revisited melodrama to examine these generic assumptions. Steve Neale, for example,

Douglas Sirk's mise-en-scène reveals entrapment and oppresssion in* All that Heaven Allows *(1955). **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

investigated the uses of the term melodrama in the trade press during the Classical Hollywood period in order to find evidence of the term being used to describe the same films that scholars now identified as melodrama. His findings suggested that the term usually was not applied to films set in the domestic environment, with feminine concerns, as it is today. In fact, when the term was used it was typically to describe action-orientated films such as those that would now be called gangster films or thrillers. Second, Neale noted that the so-called "woman's films" of Classical Hollywood were not, as had been suggested, considered inferior to male-oriented genres but often were regarded as serious, high-quality dramas in contemporary reviews. Neale thus called the Film Studies account of melodrama as a genre into question, an issue that he expanded upon more fully in a chapter dealing with the problems of identifying melodrama and the "woman's film" as genres in *Genre and Hollywood* (2000). There Neale called fundamental debates around the notion of genre into question by arguing that film scholars should return to industry-based genere definitions and categorization. While the issues that Neale raised are of considerable importance for the development of film scholarship, their implications seem to be opposed to equally important scholarship.

This point was made by Rick Altman, who questions Neale's approach to genre and suggests that his reliance on industrial classification limits the ways in which films can be read and understood. Altman notes that Neale's research is based on a study of the trade press and not of the film industry itself, which Neale seems to regard as interchangeable. Rejecting Neale's idea of relying on industrial classification as the way to identify genre, Altman argues that film scholarship should open up cinema to interpretations that are not limited by industrial factors. For Altman, melodrama is one of the best

VINCENTE MINNELLI

b. Lester Anthony Minnelli, Chicago, Illinois, 28 February 1903, d. 25 July 1986

Minnelli began his career in the 1930s as a theater costume and set designer in Chicago and on Broadway. The exuberant love of theatrical spectacle, evident in all of Minnelli's work, led to his early employment as a set designer for Busby Berkeley and others before he gained his first chance to direct with the musical *Cabin in the Sky* (1943). Minnelli is perhaps best known to a wide audience as a director of some of the most successful Hollywood musicals of the 1940s and 1950s, including *An American in Paris* (1951), *Ziegfeld Follies* (1946), *The Pirate* (1948), *The Band Wagon* (1953), *Kismet* (1955), *Gigi* (1958), and *Meet Me in St Louis* (1944), the most famous of several creative collaborations with his wife, Judy Garland.

In addition to his considerable popular reputation and commercial success as MGM's premier director of musicals, Minnelli also made a series of dramas that many critics have seen as typifying Hollywood melodrama, including the sensationally lurid *The Bad and the Beautiful* (1952). *Two Weeks in Another Town* (1962) is an overheated depiction of of the Hollywood film industry, while *The Cobweb* (1955) is set in a mental institution and stars Richard Widmark, Gloria Grahame, and Lauren Bacall in a complex love triangle. Others include the family melodrama *Home From the Hill* (1960); *Some Came Running* (1958), with Frank Sinatra as a disillusioned writer returning to his hometown following the war; and the notorious *Tea and Sympathy* (1956), a tellingly repressed and neurotic depiction of homosexual confusion in a boys' school.

Minnelli's films, especially his melodramas, have been the focus of attention for film theorists for a variety of reasons. For some, the rhetoric of Minnelli's musicals exemplifies the stylistic and narrative strategies of the genre; while for others the filmic devices of both Minnelli's musicals and his melodramas demonstrate repressed ideological conflicts and tensions that erupt at moments of high drama through music and *mise-en-scène*. From this perspective, the films may be read through recourse to the psychoanalytic concept of conversion hysteria, which accounts for the excessive and stylized quality of Minnelli's work. For still others, Minnelli stands as a good example of the distinction between the auteur, whose work possesses and is governed by a consistency of artistic vision, and the stylist or metteur en scène, the category that Andrew Sarris claims Minnelli typifies.

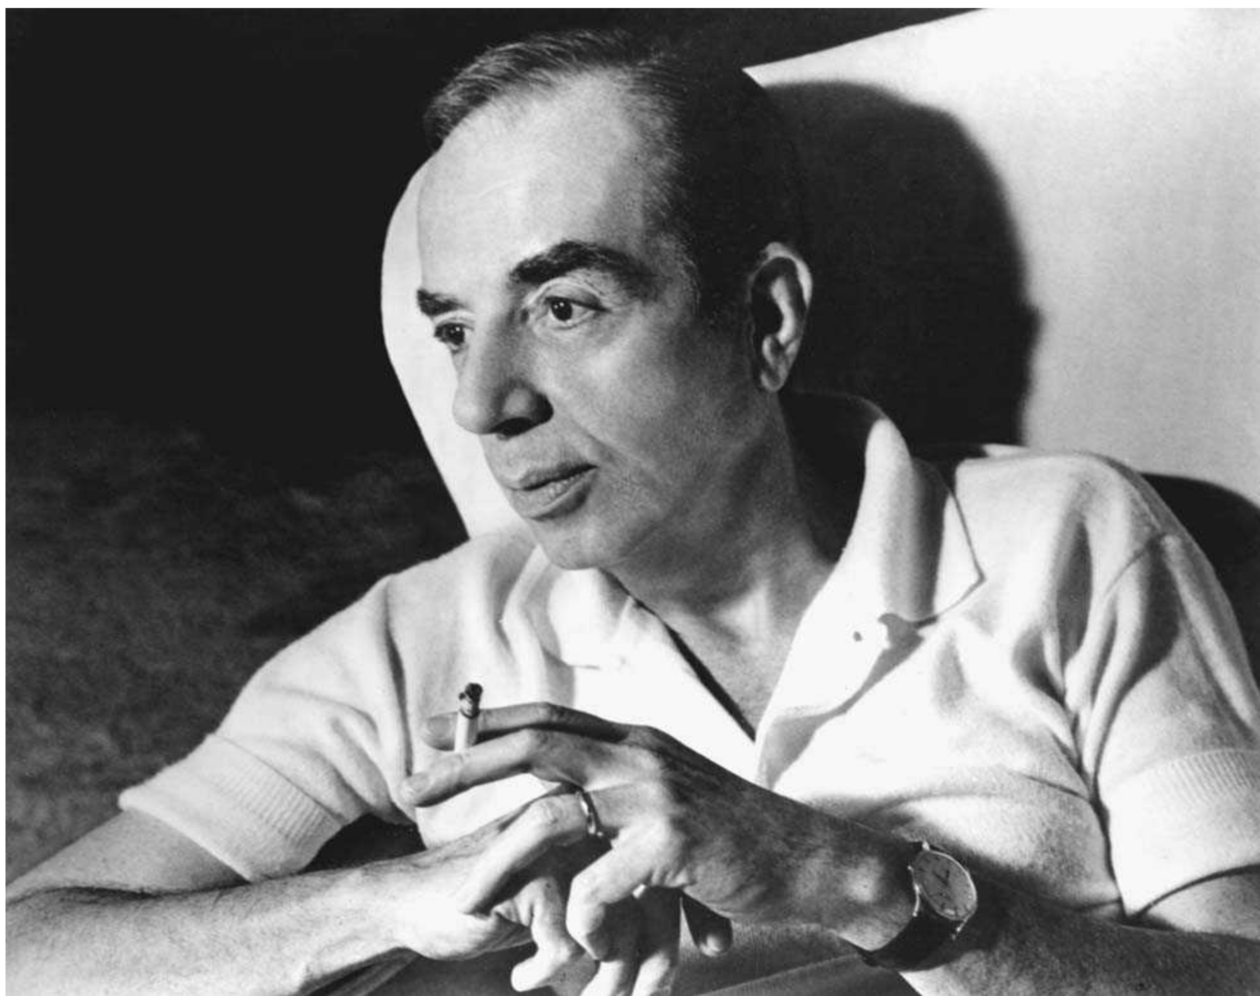
examples of a category largely constructed through film scholarship that has enabled critics to discuss a range of otherwise disparate films. Altman also usefully argues that while film theorists may have formulated the notion of the family melodrama, this idea is not antithetical to the more traditional notion of melodrama based on high drama and action that Neale notes was the industry-based classification. Altman's arguments about melodrama and questions of genre more generally open up a far more inclusive and sophisticated notion of both theoretical terms, which acknowledge that different groups (the film industry, film critics, scholars, audiences) have different conceptions of genre and that specific film genres can be understood only by recognizing them all. Barbara Klinger builds upon this idea in an analysis of Sirk's "classic" melodramas (1993). She suggests that



Vincente Minnelli. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

there is no single definitive meaning to any film or group of films, that in fact all films operate in a "network of meaning" based on the discourses within the film industry and among scholars, film critics, and audiences alike.

The most significant contemporary developments in the melodrama debate have been offered by Linda Williams and Christine Gledhill, both of whom have made an invaluable contribution to understanding of the form, particularly as it relates to issues of feminism. The work of both theorists is informed by Peter Brooks's important study of theatrical and literary melodrama, *The Melodramatic Imagination* (1976), which argues that melodrama is a rhetorical strategy that articulates the struggle between moral forces in the modern world. For Gledhill and Williams, as for Brooks, melodrama is primarily concerned with morality and uses a heightened emotional, visual, and stylistic language to convey and articulate moral dilemmas. Both Gledhill (in *Reinventing Film Studies*, 2000) and Williams argue that it is necessary to look beyond generic boundaries to discuss melodrama and suggest that it is more useful to think about melodrama as a "modality" or an "expressive code." Melodrama is thus more than a genre and is not confined to the established categories of the "woman's film" or the family melodrama, but is a narrative and stylistic register that appears across a wide range of cinematic texts. Williams (1998) goes even further by claiming that melodrama is not merely one of a range of rhetorical devices, but is in fact the dominant mode of American filmmaking.

Williams argues that melodrama is a central feature of American cinema and American culture more generally and can be traced from its roots in the theater through nineteenth-century sentimental and romantic literature, through early cinema in the work of Cecil B. De Mille (1881–1959) and D. W. Griffith and Classical

Hollywood, to the contemporary work of directors such as Francis Copolla and Steven Spielberg. As examples, Williams analyzes Vietnam films such as *The Deer Hunter* (1978) and *Platoon* (1986) as contemporary articulations of the melodramatic mode. This encompassing notion of melodrama opens up a far wider range of texts for analysis as examples of melodrama, enabling the discussion of action films such as *Die Hard* (1988) and *Gladiator* (2000) with their male protagonists and seemingly masculine concerns, within this context. This wider view of melodrama also makes it possible to look outside mainstream Hollywood cinema to find melodrama in, for example, popular Hindi cinema, Chinese cinema, and cinema aimed at marginalized groups in society such as gays and lesbians, testifying to the form's continuing influence and relevance as a distinctive form of cinematic expression.

MERCHANDISING

While there has been merchandise associated with Hollywood films since at least the 1930s, the deliberate production of additional commodities associated with motion pictures has become more common since the 1970s, and accelerated tremendously during the last few decades of the twentieth century. For some films, merchandise provides a lucrative source of additional profits for film companies, sometimes even contributing production funds.

HISTORICAL BACKGROUND AND DEFINITIONS

Until the 1960s and 1970s, relatively little merchandising activity took place in Hollywood, except by the Walt Disney Company. Merchandising started for the Disney brothers with the tremendous success of Mickey Mouse's *Steamboat Willie* (1928). In 1929 the company was offered $300 to put Mickey Mouse on writing tablets. The extra income helped to finance expensive production at the Disney studio. Thus, during the 1930s, a wide range of Disney products appeared in markets around the world, everything from soap to ice cream to Cartier diamond bracelets. Mickey Mouse is often claimed to be the most popular licensed character in the world and still appears on thousands of merchandise items and publications.

Disney continued to develop merchandise connected with its films and film characters over the years. But the Disney Company was the exception, rather than the rule. Though the motion picture industry may have been relatively slow to pick up on merchandising, this type of activity accelerated dramatically during the 1990s and early twenty-first century. The current phase of film-based licensing can be traced back specifically to the merchandising successes of *Star Wars* (1977) and *E.T. the Extra-Terrestrial* (1982), but has continued with the blockbuster, action-figure based films of the 1990s (for instance, *Batman* [1989] and *Spider-Man* [2002]), as well as the successful franchise films in the early twenty-first century (such as *The Lord of the Rings* [2001–2003] and *Harry Potter* [beginning in 2001]). Further merchandising opportunities and close relationships between products and films are presented in films such as *A Bug's Life* (1998) and *Toy Story* (1995), where the film is about toys or characters particularly suitable for toys.

The distinction between tie-ins and merchandise is often blurred, as some merchandise is produced for tie-ins. Merchandise can be defined as commodities based on movie themes, characters or images that are designed, produced, and marketed for direct sale, and not connected to established products or services, as is the case with tie-ins. An example of a tie-in is represented by the promotion of Disney films at McDonald's restaurants, even though there may be some merchandise items involved in such activities. Licensing is the legal act or process of selling or buying rights to produce commodities using specific copyrighted properties. Merchandising can be thought of as the mechanical act of making or selling a product based on a copyrighted property.

There is an extremely wide variety of movie-based merchandise, including items based on a specific movie, character, or theme, or ongoing movie characters and themes. While there has been a strong emphasis on children's toys, games and other items (lunch boxes, school supplies, and so forth), and on video games, other movie-based merchandise includes home furnishings (clocks, towels, bedding, mugs, telephones), clothing, jewelry, stationery items, print material (novelizations

and posters, for example), food (especially cereals and candy), and decorations (such as Christmas ornaments). There are also other, more unusual, less mass-produced items that sometimes accompany (or follow) movie releases, including "art objects" such as prints, sculptures, ceramic figures, and animation sets. For instance, in 2005 one could purchase sculptures of most of the characters from *Lord of the Rings*, including a bronze statue of Gandalf for around $6,500. Other merchandise is based on the celebrity status of Hollywood stars (for instance, products with images with Marilyn Monroe and James Dean are plentiful), or generic movie or studio themes. Indeed, many of the majors feature studio tours, complete with well-stocked gift shops offering a wide range of merchandise featuring their familiar corporate logos.

Movie-based merchandising can be viewed as part of the proliferation of commercialization in Hollywood, the increase in animated features, and the rerelease and remaking of films with readily identifiable, ongoing characters and themes (or franchises). However, this type of activity also is part of a larger, more general merchandising and licensing trend. For instance, entire TV programs and characters—especially those aimed at children—are an obvious and prevalent form of merchandising, while sports teams and players, rock stars, and musical groups have long histories of licensing and merchandising activities.

Licensed products represented $66.5 billion in retail sales in North America in 1990, but had grown to around $110 billion by 2003, according to the International Licensing Industry Merchandisers' Association (LIMA). While exact statistics on the film industry's merchandising revenue are nearly impossible to find, LIMA's *Licensing Letter* estimates that $16 billion is derived annually from sales of entertainment merchandise; another estimate cites $2.5 billion in royalties from entertainment properties in 2001 (Goldsmith, 2002, p. 7).

It is especially difficult to measure the precise revenue from movie licensing accurately due to the move toward

long-term relationship agreements between licensors and licensees. Although entertainment licensing in the merchandising industry has been influenced by the emergence of merchandise based on other types of properties, there is little question, according to many experts, that film licensing continues to dominate the licensing market. Entertainment licensing is also the most concentrated type of merchandise business, with just a few large players (the major movie studios and broadcasting companies, such as Disney, Fox, and Viacom) dominating the licensing activity.

THE MERCHANDISING PROCESS

Film producers and distributors rarely manufacture film-related products themselves, but license the right to sell these products to other companies (called licensees). In most instances there is no risk to the producer or distributor (the licensor) because the licensee incurs all manufacturing and distribution expenses. The producer/distributor typically receives an advance payment for each product, as well as royalty payments, often between 5 and 10 percent of gross revenues from sales to retailers (in other words, the wholesale price). If the movie does not succeed and the products do not sell, the manufacturer is responsible for the loss (Cones, 1992).

The owners of licensable film properties are most often the major film studios. Special licensing divisions often are organized to handle the company's own copyrighted properties, and sometimes those owned by others as well, for example, Warner's Licensing Corporation of America (LCA) and Disney's Consumer Products division. But even smaller successful film producers sometimes become involved in licensing, as represented by Lucasfilm Licensing. Studios' revenues from merchandise vary greatly depending on the films released in any one year. However, these companies have serious interests in merchandising and consumer goods, as indicated by the $2.5 billion revenues reported by Disney's Consumer Products division in 2004, and the 3,700 active licensees handled by Warner Bros. Consumer Products division.

The major studios realize that not only can the sale of movie-related products generate substantial revenue, but the presales of merchandising rights can sometimes contribute to a film's production budget, as in the case of *Lord of the Rings*, when 10 percent of the budget for the trilogy was apparently raised by selling rights to video games, toys, and merchandise companies. In addition, these products can be useful in promoting films and thus movie-based merchandise is often part of the massive, coordinated promotional campaigns often started months before a film's release. Typically, 40 percent of movie merchandise is sold before a film is released.

Although movie-related merchandise often is common, products based on films are sometimes considered risky for merchandisers, as they ultimately may not be successful and often have short life-spans. Licensees may have to take further risks initially by sinking money into a film that is not completed (or sometimes not even started). On the other hand, a studio may need to change a release date, especially to coincide with the lucrative Christmas season or to avoid other competing films.

In addition, studios and licensees have been cautious after some significant losses in the past. For instance, most agree that the huge number of products associated with *Star Wars: Episode I—The Phantom Menace* (1999) was ultimately unproductive. One problem is that Hollywood-related merchandise has a relatively short time to prove itself on retail shelves before the next big property arrives. As Andrea Hein, Viacom's president of consumer products, explains: "Licensing is all about wanting a piece of something. You've got to have the time and place for that property to be nurtured" (Goldsmith, 2000). Evidently, the success of the merchandise is tied directly to the success of the film. A representative of LIMA states that, ". . . marketing and merchandising is [sic] never the major driving force behind a film. If a film's no good, no one will buy the product" (Monahan).

It might be noted as well, that many, if not most, movies do not translate well into merchandise and thus have limited merchandising potential. While the *Star Wars* and *Harry Potter* films produce additional revenues from a seemingly endless stream of merchandise, films like *Saving Private Ryan* (1998) and *Life is Beautiful* (1997) have much less merchandising potential. Musicals such as *Saturday Night Fever* (1977), *Grease* (1978), and *Dirty Dancing* (1987) can earn substantial revenues from soundtrack recordings. Moreover, a hit song can promote a film. In fact, music videos have become important marketing tools. The ideals, of course, are film franchises such as *Star Wars*, *Harry Potter*, and other similar films that continue to inspire additional commodities, and thus, additional profits.

Thus, for many films, licensing represents a potential source of income to film companies and merchandisers. The potential merchandising bonanza represents sizable profits as sales of merchandise licensed from movies continue to grow. While the first *Batman* in 1989 grossed $250 million at the box-office and earned $50 million in licensing fees, subsequent films have generated even more products and produced even more revenues. Recently, the *Lord of the Rings* trilogy is said to have attracted over $1.2 billion thus far in merchandising revenues.

CASE STUDY: *SPIDER-MAN*

The first *Spider-Man* film, released in spring 2002, represents an interesting case of movie merchandising. The character of Spider-Man has existed for almost 40 years,

GEORGE LUCAS

b. George Walton Lucas Jr., Modesto, California, 14 May 1944

Early in his life, George Lucas was interested in car racing; however, a serious accident changed his plans. He studied film at the University of Southern California film school, where he made several student films, including the prize-winning *THX–1138: 4EB* (1967). In 1969, Lucas and Francis Ford Coppola formed American Zoetrope, which produced the full-length version of *THX 1138* (1971).

Lucas went on to form his own company, Lucasfilm Ltd., and in 1973 released *American Graffiti* (written and directed by Lucas). The widely acclaimed and innovative *Star Wars* was released in 1977, after Lucas had established ILM (Industrial Light & Magic) to produce the visual effects. The movie had been turned down by several studios before Twentieth Century Fox agreed to distribute it. In a fortuitous move, Lucas agreed to forgo his directing salary in exchange for 40 percent of the film's box office and all merchandising rights. The movie broke box office records and earned seven Academy Awards®, as well as selling so much merchandise that the *Star Wars* series is credited with influencing the growing trend of merchandise accompanying blockbuster films, and has created huge profits for Lucas.

In 1979, Lucas Licensing was formed to oversee the licensing of products and characters from Lucas's films and claims to be one of the most successful film-based merchandising programs in history. Lucas was also involved with Steven Spielberg in creating the *Indiana Jones* series, another blockbuster series accompanied by merchandising handled by Lucas Licensing. The company claims over $8 billion in consumer sales worldwide, including, according to its website, the best-selling boys' action toys of all time, 60 million books in prints, and more than 60 *New York Times* best sellers, and merchandise sold in over 100 countries. In recent years, Lucasfilm has emphasized entertainment software (a Lucasfilm term commonly applied to video games), which is developed and published by LucasArts, formed in 1982.

Lucasfilm, Ltd. handles the business affairs of the companies in George Lucas's empire, including THX, Ltd., Skywalker Sound, Industrial Light & Magic, and Lucas Productions. It not only produces film and television products, but is also involved with visual effects, sound, video games, licensing, and online activity. Important technical developments from Lucas's companies have included the THX System for motion picture sound, plus many developments in visual effects. The company's creative and administrative headquarters is located at Skywalker Ranch in Northern California.

Lucas is considered one of the most successful directors in the industry, and Lucasfilm can arguably be called one of the most successful Hollywood production companies, with five of the twenty highest-grossing films of all time and seventeen Academy Awards®. The company is estimated to have received $1.5 billion in sales in 2001.

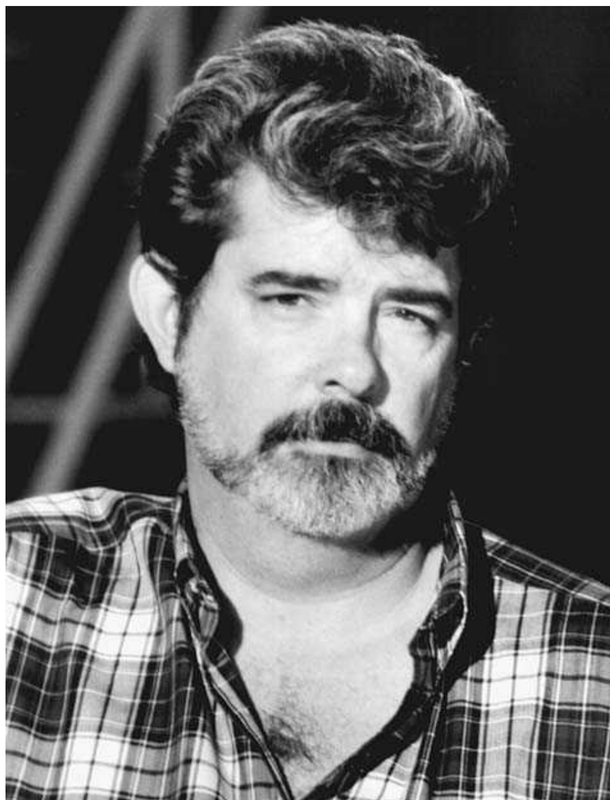
created at Marvel Comics in the early 1960s. Prior to its film debut in 2002, the character had been featured in comic books, multiple cartoons, and briefly, a live-action television show. The comics alone are sold in more than 75 countries and in 22 different languages. In spite of this, it took more than fifteen years for a movie on the character to be made. After a complex history, *Variety* reported that Columbia/Sony acquired the rights to produce a feature (including sequels) and rights to produce a live-action TV series for a cash advance of $10–15 million.

With such a long history, it is not surprising that the film was so highly anticipated. Sony Pictures arranged extensive promotion and planned wide-ranging merchandise for the $139 million blockbuster. *Spider-Man* was to be, as the *Business Week*'s Hollywood reporter put it, "the



George Lucas. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

holy grail" for Sony: a film that would create opportunities for endless tie-ins in the form of fast food, video games, toys, and sequels. The film debuted in May 2002, earning almost $115 million in its opening weekend and over $400 million by the end of November 2002, making it the highest grossing comic book adaptation as well as the highest grossing movie of the summer. Such numbers are particularly impressive in light of estimates that as much as 80 percent of a film's revenue now comes from the sale and rental of videos and DVDs, as well as other merchandising opportunities.

Not surprisingly considering the long, convoluted history that brought Spider-Man to the big screen, the licensing deals for the film were complex as well, with Marvel Enterprises and Sony sharing the royalties in a 50/50 deal managed by the newly formed Spider-Man Merchandising L.P., created in early 2002 to manage the character. In a separate deal, Marvel Enterprises—the publisher of the *Spider Man* comics—also granted the company rights to the comic book version of the hero.

And, so, the merchandising began. The rights to produce every kind of product imaginable were licensed to hundreds of different companies: everything from action figures, games, and dolls to skateboards, bicycles, and birthday party supplies. Spider-Man costumes became the odds-on favorites around Halloween, and "Spidey" images adorned everything from boxer shorts to sheets and comforters. The video game rights were sold to Activision, which produces games not only for Sony's Playstation 2, but also for the Microsoft-owned rival X-Box system and for home computers as well. Sony, Marvel, and the various licensees have benefited greatly from the merchandise bonanza, which continues to attract revenues (as well as prompting lawsuits over the dispersal of these revenues). For instance, a company spokesman reported that toys from Spider-Man (the movie) generated over $100 million in total revenue for Marvel in 2002. Subsequently, *Spider-Man 2* appeared in 2004, generating huge box-office returns and additional merchandise, as well as reinvigorating the market for previous Spider-Man products generally. *Spider-Man 3* began filming in 2005 for planned release in 2007.

MEXICO

The history of Mexican cinema parallels and is inexorably connected to the social and political history of twentieth-century Mexico. Emerging during the modernization project of President Porfirio Díaz (1898–1910), Mexican cinema documented the pomp and circumstance of that dictatorship. It followed the various armies of the Mexican Revolution of 1910–1917 into battle and participated in the post-Revolutionary construction of the nation. Since 1930, the industry's national and international successes and failures have been dependent on the state's ever-changing relations with the United States and on the loyalty and support of its domestic audience. Recently, a number of films have experienced unprecedented international critical and economic success. Yet production levels remain historically low and the bulk of financing is dependent on cautious private investors. Like many national film industries, Mexican cinema faces an uncertain future in the face of the increased globalization of Hollywood.

SILENT CINEMA

As soon as the technology of cinema reached Mexico City in 1896, Mexican entrepreneurs were shooting their own versions of the Lumière brothers' "documentary views" and exhibiting them in theatrical venues to upper-class audiences and in hastily erected tents in isolated villages spread out around the vast rural expanse of Mexico. Mexican film historians have remarked on the itinerant nature of these first film entrepreneurs who traveled across the nation to bring this new cinema of attractions to the Mexican people.

By the end of 1899, there were over twenty-two venues in Mexico City where films were exhibited, and new theaters devoted exclusively to film projection were being constructed. In 1911 the number of motion picture theaters in the capital had jumped to forty. Although the nonfiction genre dominated Mexican cinema during these first two decades, a significant number of fiction films were also produced. The production of narrative films ceased during the Mexican Revolution, but documentaries about strategic encounters between Revolutionary factions and government forces proved very popular with Mexican audiences.

Feature filmmaking resumed after the end of the military phase of the Revolution. In 1917 the actress Mimí Derba (1888–1953) and the producer Enrique Rosas (1877–1920) established Azteca Films and produced five films in that one year. Two years later, Azteca Films released the film—based on a famous public incident—that was to go down in history as the first feature-length "specifically Mexican" narrative film, Rosas's *El automovil gris* (*The Grey Automobile*, 1919). But while Mexican filmmakers produced over one hundred silent features and documentaries between 1898 and 1928, the combination of American control over distribution and lack of state support threatened the future of the Mexican film industry. By 1928, 90 percent of all films exhibited throughout Mexico (as well as the rest of Latin America) were produced in the United States.

SOUND AND THE GOLDEN AGE OF MEXICAN CINEMA

The introduction of sound and the ensuing development of well-equipped film production studios in the 1930s (bankrolled by private investment, government loans, and US money) fostered the Golden Age of the

Mexican film industry. In 1929 and 1930, a total of approximately ten feature films along with numerous shorts and newsreels accompanied by some form of synchronized sound were released. The ultimate success of the industry was made possible with the support of President Lázaro Cárdenas (served 1934–1940). Cárdenas established a protectionist policy that included tax exemptions for domestic film production, and his administration created the Financiadora de Películas, a state institution charged with finding private financing. He also instituted a system of loans for the establishment of modern film studios.

Two major types of films emerged during this period: first, a state-supported cinema that promoted the ambitions of Cárdenas and projected a nationalistic aesthetic and ideology exemplified by films such as *Redes* (*The Waves*, 1936) and *Vamanos con Pancho Villa!* (*Let's Go with Pancho Villa*, 1936), and second, films produced primarily for commercial reasons that resembled Hollywood films in terms of narrative strategies, cinematic aesthetics, and modes of production but drew on Mexican literature, theatrical traditions, and contemporary Mexican themes. Measured in terms of box-office receipts, it was the commercial cinema that proved to be the most popular among Mexican audiences in the 1930s. In 1936 the wildly successful film by Fernando de Fuentes (1894–1958), *Allá en el Rancho Grande* (*Out on the Big Ranch*), was filmed in Mexico City. *Allá en el Rancho Grande* introduced one of the most popular genres in Mexican film history, the *comedia ranchera*, a Mexican version of a cowboy musical that incorporated elements of comedy, tragedy, popular music, and folkloric or nationalistic themes. While the *comedia ranchera* became the most popular genre (in 1937 over half of the thirty-eight films released were modeled on de Fuentes's film), other Mexican genres also enjoyed relative success, including the historical epic, the family melodrama, the urban melodrama, and the comedies of Tin Tan (1915–1973) and Cantinflas (1911–1993).

Despite foreign control of exhibition, domestic film production managed to increase from forty-one films in 1941 to seventy films in 1943. What is more important, Mexico's share of its own domestic market grew from 6.2 percent in 1941 to 18.4 percent in 1945. This period was marked by the emergence of an auteurist cinema practice represented by directors such as Emilio Fernández (1903–1986), whose films included *Flor silvestre* (*Wild Flower*, 1943), a revolutionary melodrama, and *Salón México* (*The Mexican Ballroom*, 1949), an example of the *cabaretera* or dancehall film set in the poor urban barrios (neighborhoods) of Mexico City. Another auteur was Luis Buñuel (1900–1983), who made over twenty films in Mexico between 1939 and 1960, including *Los Olvidados* (*The Young and the Damned*, 1950), *Abismos de passion* (*Wuthering Heights*, 1954), and *Susana* (*The Devil and the Flesh*, 1951).

In 1948 the most popular Mexican film of the Golden Age was released. *Nosotros los pobres* (*We the Poor*), directed by Ismael Rodríguez (1917–2004), starred Pedro Infante (1917–1957) as Pepe el Toro, a widowed carpenter raising his sister's daughter, Chachita, as his own, and caring for his invalid mother in the poor, sprawling neighborhoods of Mexico City. Incorporating elements of comedy and tragedy as well as popular music, Rodriguez's film romanticizes the position of the urban underclass at the same time that it reveals many of the adverse conditions they encounter on a daily basis: prostitution, alcoholism and drug addiction, violence, and disease.

Under Miguel Alemán (1946–1952), Mexico established the Crédito Cinematográfica Mexicano (CCM), whose purpose was to help finance the nation's largest film producers. The CCM quickly moved into production and distribution, buying up studios and movie theaters, challenging the exhibition monopoly held by the American financier William O. Jenkins (1878–1963). The government also instituted a number of protectionist measures that nationalized the Banco Cinematográfico and the CCM and exempted the industry from paying state taxes. In addition, it supported the establishment of state distribution with the institutionalization of Películas Nacionales, S.A., in 1947.

These actions were not enough, however, to prevent the subsequent decline of Mexican cinema in the early 1950s, both in terms of quality and quantity. It became very difficult after World War II for small countries like Mexico to enforce import quotas on foreign films. Hollywood's European markets reopened and the United States withdrew its wartime support of the Mexican film industry. Because all sectors of the industry were either owned or capitalized by foreign investors, this removal of support had an immediate, although temporary, effect on Mexican cinema. Film production dropped from seventy-two films in 1946 to fifty-seven in 1947 while, at the same time, producers turned to tried-and-true formula pictures to draw audiences and ensure profits.

The Banco Cinematográfico became fully nationalized by the 1960s and was responsible for generating most of the financing for feature film production in Mexico. Financing was restricted to those producers who could turn the highest profits, and thus low-budget "quickies" became the films of choice in the industry. Producers who were businessmen rather than filmmakers restricted their product to genres such as soft porn, *rancheros*, and the masked wrestler films that appealed to a largely urban, lower-class audience. In the end, the government's measures did nothing to further the

ARTURO RIPSTEIN
b. Mexico City, Mexico, 13 December 1943

Arturo Ripstein, the son of film producer Alfredo Ripstein Jr., studied filmmaking at Mexico's first film school, the Centro Universitario de Estudios Cinematográficos (CUEC), which opened in 1963 at the National Autonomous University in Mexico City (UNAM). A new generation of filmmakers, including Ripstein, was influenced by Grupo Nuevo Cine, a group of young Mexican film critics who published a journal by the same name in the 1960s, and the films of the French New Wave. According to Ripstein, he decided to be a film director after seeing Luis Buñuel's *Nazarín* (*Nazarin*, 1959). In 1962 Ripstein worked as an assistant to Buñuel on *El Ángel exterminador* (*The Exterminating Angel*), and fours years later he directed his first film, *Tiempo de morir* (*Time to Die*, 1966). One of the most prolific and influential directors of the 1970s and 1980s, Ripstein has directed over twenty-five feature films as well as documentaries and shorts. His films have been screened at many international film festivals, including Cannes, and five of them have been awarded "Best Film" at Mexico's version of the Oscars®.

Ripstein's early films, such as *El Castillo de la pureza* (*Castle of Purity*, 1973), *El Lugar sin límites* (*The Place without Limits*, 1978), and *Cadena perpetua* (In for Life, 1979), introduced two themes that would dominate his films over the next twenty years: the repressive nature of the nuclear family and the destructive nature of Mexican codes of masculinity. His films explore central social and cultural topics such as state and familial authoritarianism and homophobia and feature characters doomed by jealousy, guilt, and a nihilistic worldview.

In 1985, with *El Imperio de la fortuna* (*The Realm of Fortune*), Ripstein began a fruitful collaboration with the screenwriter Paz Alicia Garciadiego. One of their most successful collaborations, *Profundo carmesí* (*Deep Crimson*, 1996), which narrates the love story of an aging gigolo and a homely nurse who embark on a killing spree, is based upon a well-known series of murders that took place in the United States during the late 1940s. *Principio y fin* (*The Beginning and the End*, 1993), also written by Garciadiego, and adapted from the novel by the Egyptian author Naguib Mahfouz, returns to Ripstein's earlier themes as it traces the disintegration of a family following the death of the father. His most recent films include *El Evangelio de las maravillas* (*Divine*, 1998), a Buñuelian-influenced work, and an adaptation of Gabriel García Márquez's novella, *El Coronel no tiene quien le escriba* (*No One Writes to the Colonel*, 1999).

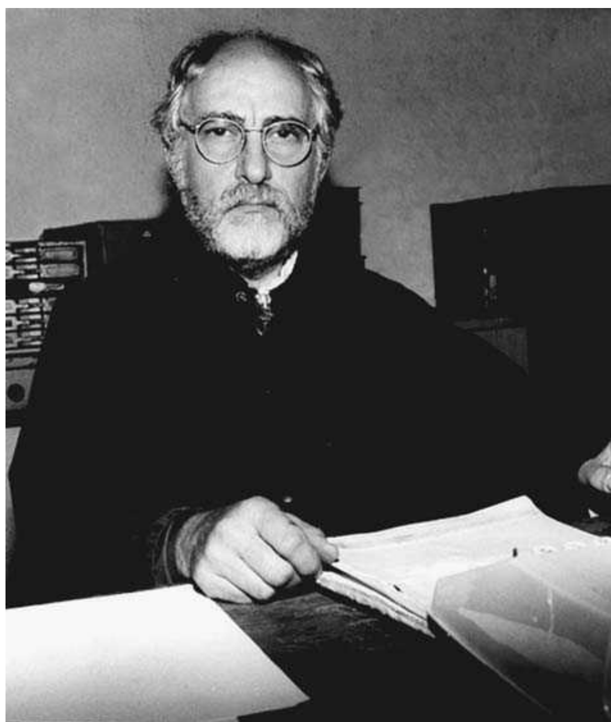
development of Mexican cinema. Jenkins's monopoly ultimately bought out new distributors and the import quotas were never carried out. Out of 4,346 films screened in Mexico between 1950 and 1959, over half were North American and only 894 were Mexican. This situation continued through the 1960s.

President Luís Echeverría Alvarez (served 1970–1976), who campaigned on a platform of populism and reform, superficially promoted the development of a strong film industry devoted to "national cinema." He supported younger filmmakers who had been left out of the equation during the previous decade and advocated an opening up of Mexican cinema to new ideas. Echeverría oversaw the creation of a national film archive, the Cineteca Nacionál, and the establishment of three state-supported production companies,



Arturo Ripstein. © IMCINE/COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.

CONACINE, CONACITE I, and CONACITE II. He encouraged co-productions among these studios, private investors, film workers, and foreign companies. Between 1971 and 1976 the number of state-funded feature films increased from five to thirty-five, while privately funded films dropped from seventy-seven to fifteen as private investors refused to invest their money in "socially conscious films" that had little box-office attraction. In 1974 Echeverría oversaw the establishment of the first national film production school, the Centro de Capacitación Cinematográfica, which facilitated the emergence of a new generation of film directors.

However, the next president, José López Portillo (served 1976–1982), reactivated a policy of privatization, thus reversing Echeverría's successes. The Banco Cinematográfica was formally dissolved, and its functions were transferred to a new state agency. López Portillo appointed his sister, Margarita López Portillo, to head the agency. She immediately reduced state financing of films and closed down CONACITE I and II. Again, the Mexican film industry was dominated by low-budget and lucrative comedies, soft porn, and *narcotráfico* (drug traffic) films.

Miguel de la Madrid assumed the presidency in 1982. The creation in 1983 of the Instituto Mexicano de la Cinematografía (IMCINE), whose role it was to manage Mexico's film policy, was hailed as a significant breakthrough for Mexican cinema. However, while IMCINE helped to finance and promote a few independent films, it had a very small budget and could only support one or two films per year. The Institute's first director, filmmaker Alberto Isaac, reorganized the state-run production and distribution companies and the state film school but proved to be a poor manager, and the tenure of his successor, Enrique Soto Izquierdo, was riddled with corruption. Soto Izquierdo failed to implement a workable state film policy and, as a result, most of the films that saw any kind of fiscal success were low-budget "quickies" funded by private investors.

The election in 1988 of Carlos Salinas de Gortari, a Harvard-educated economist, signaled a profound change in the direction of the Mexican economy. Salinas was committed to a free-market ideology, and in 1990 he began negotiating the North American Free Trade Agreement (NAFTA) with the United States. Ignacio Durán Loera, the new director of IMCINE, attempted to increase state financing of production through the creation of the Fondo para el Fomento de la Calidad Cinematográfica (Fund for the Promotion of Quality Film Production). While Durán was able to solicit co-production financing from Spain and other foreign investors, it was not enough to keep the industry afloat as state-owned studios and movie houses shut down at the same time that private investors withdrew from the industry. Film production dropped from one hundred films in 1989 to thirty-four in 1991.

However, the international success of IMCINE-financed films such as *Como agua para chocolate* (*Like Water for Chocolate*, 1992), *Amores perros* (*Love's a Bitch*, 2000), and *Y tu mamá también* (*And Your Mother, Too*, 2001) gave Mexican filmmakers recognition and thus access to international financing. (*Amores perros* won numerous awards and grossed $10.2 million in Mexico and $4.7 million in the United States alone.) Perhaps in response to these successes, the Mexican government in 2003 set up a permanent fund with a preliminary budget of $7 million that aims to attract co-production money to support film production. However, today, most of the films and videos in Mexico are still imported from Hollywood. In addition, the Mexican film industry is not just competing with American films or French films, but with multinational co-productions that can generate products with a guaranteed international appeal. It seems that the future of a viable Mexican film industry is dependent on its ability to produce films that appeal to a global audience.

MGM (METRO-GOLDWYN-MAYER)

Created via merger in 1924, Metro-Goldwyn-Mayer (MGM) was in many ways the consummate studio during Hollywood's classical era. With superb resources, top filmmaking talent, and "all the stars in the heavens," MGM factory-produced quality films on a scale unmatched in the industry. The key operatives in that factory system were MGM's producer corps—easily the biggest and the best in the industry—and its studio executives, Louis B. Mayer (1882–1957) and Irving Thalberg (1899–1936), who translated the economic policies and market strategies of parent company Loew's, Incorporated, into a steady output of A-class star vehicles that enabled MGM to dominate and effectively define Hollywood's "Golden Age."

MGM's dominion faded in the postwar era, however, when it failed to meet the monumental challenges facing Hollywood in the 1950s and 1960s. Thus MGM was prey to takeover, and like Paramount, Warners, and United Artists, it was acquired by another firm during the industry-wide recession of the late 1960s. Whereas the other studios were bought by diversified, deep-pocketed conglomerates that enabled them to keep producing and distributing films, MGM had the misfortune to be acquired by real estate tycoon Kirk Kerkorian (b. 1917), who exploited the MGM library and brand name but let the studio languish. Kerkorian would buy and sell MGM three times over a thirty-five-year span, steadily dismantling the studio in the process. A consummate irony of recent film history, in fact, has been the long, slow death of MGM from the 1970s onward, while the industry at large underwent a massive resurgence. Equally ironic in the longer view is MGM's utter collapse in the "New Hollywood," in stark contrast to its dominion over the industry during the classical era.

THE RISE OF METRO-GOLDWYN-MAYER

The creation of MGM was orchestrated by Marcus Loew (1870–1927), who began building a chain of vaudeville and nickelodeon theaters in 1904 and 1905; by 1919, when it became Loew's, Incorporated, it was the leading chain of first-class theaters in the United States, concentrated in the New York area. Loew began to expand beyond film exhibition with the 1920 purchase of Metro Pictures, a nationwide distribution company with modest production facilities in Los Angeles. Two major acquisitions in 1924 completed Loew's expansion into full-scale, vertically integrated operation. The first was Goldwyn Pictures, an integrated company whose major component was its sizable production plant in Culver City. Built in 1915 by studio pioneer Thomas Ince (1882–1924) as the home of Triangle Pictures, the forty-acre expanse featured glass-enclosed stages, a three-story office building, and a full complement of labs, workshops, dressing rooms, storage facilities, and staff bungalows. Cofounder Sam Goldwyn (1882–1974) had been forced out in an earlier power struggle, so Loew was in need of top executives to manage the studio. Thus the second acquisition involved Louis B. Mayer Productions, a small company that focused on A-class pictures and was capably run by Mayer and his young production supervisor, Irving Thalberg (then age twenty-five), who had already supervised production at Universal.

Metro-Goldwyn, as it was initially termed, was run out of New York by Nicholas Schenck (pronounced

LOUIS B. MAYER

b. Eliezer Meir, Minsk, Russia (now Belarus), 4 July 1885 (or possibly 1882), d. 29 October 1957

Mayer was dubbed "Hollywood Rajah" by his biographer, *New York Times* film critic Bosley Crowther, and indeed he was the consummate power not only at MGM but throughout Hollywood during its vaunted Golden Age. Perhaps less creative than the other studio moguls and lacking their passion for movies, Mayer was nevertheless a shrewd administrator with a knack for surrounding himself with top talent—including production executives like Irving Thalberg and his son-in-law David Selznick—and also for maintaining a factory operation that consistently produced quality pictures. He rarely read a script (for that he relied on Kate Corbaley, his personal reader and "storyteller"), nor did he bother with MGM's filmmaking operations. And yet Mayer's taste for high-gloss, wholesome, escapist entertainment, his conservative values, and his naive sentimentality permeated MGM's pictures. He regarded the studio as one big family and himself as its beneficent patriarch, and although he could be a ruthless, quick-tempered tyrant, those within the MGM fold were rewarded with the highest salaries and the best filmmaking resources in Hollywood.

Born in Russia, Mayer migrated to the United States via Canada as a boy, and he broke into the film business with the 1907 purchase of a nickelodeon. He later moved into distribution and eventually went west to start his own production company. Louis B. Mayer Productions was a minor ingredient in the 1924 Metro-Goldwyn-Mayer merger, and it was Mayer's management skills and his capacity to turn out first-class pictures that secured him the role of vice president and general manager. While Mayer ran the studio and managed its legions of contract talent, his protégé Thalberg supervised filmmaking. Together they engineered MGM's rapid rise, with Mayer's administrative acumen, fiscal and ideological conservatism, and predilection for star-studded glamour effectively countered by Thalberg's creative instincts, penchant for risk-taking, cynical romanticism, and confident rapport with writers and directors.

By the 1930s MGM ruled the industry and Mayer was, without question, Hollywood's most powerful figure. MGM's dominance began to slip after Thalberg's death, however, particularly in the 1940s as Mayer relied on an ever-expanding staff of producers and refused to modify the studio's entrenched but increasingly untenable factory operation. The postwar arrival of Dore Schary to oversee production signaled the beginning of the end for Mayer. The two quarreled bitterly, and in 1951, twenty-seven years after presiding over its inauguration, Mayer left the MGM lot without a trace of fanfare. He tried his hand at independent production, without success, and also tried to regain control of a struggling MGM in 1957, but the effort failed and he died a few months later.

"skenk"), the chief executive of Loew's, while all production operations were managed by the "Mayer Group"—Mayer, Thalberg, and attorney Robert Rubin—whose value was underscored by an exceptional merger agreement giving them 20 percent of the studio's profits, and also by the addition of "Mayer" to the official studio title in 1925. MGM made an immediate impression with two major hits that year, *Ben-Hur* and *The Big Parade*, and it began a rapid rise to industry dominance in the late 1920s alongside Paramount, Fox, and the equally fast-rising Warner Bros. Key to that rise were its astute management and efficient production operations, its well-stocked star stable and savvy exploitation of the star system, and its effective coordination of production and marketing strategies.

The entire MGM operation was designed to deliver a steady output of A-class star vehicles to the first-run (major metropolitan) market, and particularly to Loew's theaters. The merger brought a few established stars like Lon Chaney (1883–1930), Lillian Gish (1893–1993),

Ramon Novarro (1899–1968), and Marion Davies (1897–1961) to MGM, which quickly developed a crop of new stars including John Gilbert (1899–1936), Joan Crawford (1904–1977), Norma Shearer (1902–1983) (who wed Thalberg in 1927), and Greta Garbo (1905–1990). MGM also signed New York stage stars Marie Dressler (1868–1934) and brothers John (1882–1942) and Lionel Barrymore (1878–1954), enhancing the prestige value of its films while also appealing to Loew's predominantly New York–based clientele. During the 1920s, Mayer and Thalberg developed a dual strategy of lavish spectacles and more modest star vehicles, with the latter frequently centered on romantic costarring teams. After Gilbert burst to stardom in the downbeat war drama *The Big Parade* and rapidly developed into a romantic lead, for instance, MGM successfully teamed him with Swedish import Greta Garbo in *Flesh and the Devil* (1926), *Love* (1927), and *A Woman of Affairs* (1928).

MGM was among a group of leading studios that resisted the move to sound—Thalberg in particular deemed it a passing fad—but it had the resources and capital to convert rapidly once the talkie boom exploded. By mid-1928 sound effects and musical scores were added to its films (along with three roars from trademark Leo the Lion before the opening credits), and a year later MGM's full conversion was punctuated with its "All Talking! All Singing! All Singing!" musical, *Broadway Melody*, a huge hit that won the 1928–1929 Academy Award® for best picture—the first of many top Oscars® for the studio during the classical era. Other early sound hits included *Anna Christie* ("Garbo Talks!"), Greta Garbo's 1930 sound debut opposite sixty-year-old Marie Dressler playing a hard-drinking waterfront floozy, and *Min and Bill* (1930), a waterfront fable costarring the unlikely team of Dressler and Wallace Beery (1885–1949), which carried them both to top stardom.

By 1929 MGM was on a par with Paramount, Fox, and Warner Bros. in terms of revenues and resources, but with one notable exception: Loew's theater chain, which was crucial to MGM's domination of the industry during the Depression. In the early 1920s, Loew and Schenck had decided against wholesale theater expansion, holding the number to about 150 first-class downtown theaters while Warner and Fox pushed their totals above 500 and Paramount to well over 1,000. The decision to maintain a relatively small theater chain meant that the cost of sound conversion was considerably lower and, even more importantly, Loew's/MGM was not saddled with the enormous mortgage debt that devastated its chief competitors when the Depression hit.

RULING 1930s HOLLYWOOD: DEPRESSION-ERA DOMINANCE

MGM's domination of the movie industry in the 1930s was simply staggering, fueled by both the consistent quality of its films and the economic travails of its rivals. Three of the five integrated majors, Fox, Paramount, and RKO, declared bankruptcy, and Warners forestalled that same fate only by siphoning off a sizable portion of its assets. Loew's/MGM, meanwhile, turned a profit every year during the 1930s while its assets actually increased. From 1931 to 1940, the combined profits of Hollywood's Big Eight studios totaled $128.2 million; MGM's profits were $93.2 million, nearly three-quarters of the total. Equally impressive was the consistent quality and critical recognition of MGM's films. During the 1930s, MGM accounted for nearly one-third of the Academy nominees for Best Picture (27 of 87 pictures), winning four times; its actors drew roughly one-third of the best actor and best actress nominations as well, with six male and five female winners. During the first ten years of the Motion Picture Herald's Exhibitors Poll of top box-office stars (1932–1941), just under one-half (47 percent) of those listed were under contract to MGM—including Clark Gable (1901–1960), the only actor listed all ten years.

GRETA GARBO

b. Greta Lovisa Gustafsson, Stockholm, Sweden, 18 September 1905, d. 15 April 1990

The first and most important of MGM's remarkable pool of female stars during the classical era, Greta Garbo personified the studio's notion of glamour and style. A beautiful but large and ungainly woman, she was most often photographed either from a distance or in close-up—the better to display the elegance of her surroundings (she often appeared in costume dramas or in exotic locales) or, more importantly, to capture her exquisite face and ethereal personality. She appeared in only two dozen Hollywood films, all of them at MGM, before her sudden retirement in 1942. By then she was already a living legend whose myth had transcended her stardom—a myth that only intensified after her retirement.

Born and raised in poverty in Stockholm, Garbo stumbled into film acting, enjoyed early success (as Greta Gustafsson) in Sweden and Germany, and in 1925 was recruited by Mayer while he was scouting talent in Europe. She became Greta Garbo at MGM and was an immediate success in *The Torrent* (1926), and then broke through to top stardom teamed with John Gilbert in *Flesh and the Devil* (1926). The two reteamed in several huge hits, although Gilbert's star faded while Garbo's rose even higher in the sound era—beginning with *Anna Christie* (1930), in which MGM announced "Garbo Talks!"—as her husky Swedish intonations added to her exotic, aloof mystique.

Garbo was MGM's most valuable (and highest paid) star in the 1930s, and her films were virtually assured of box-office success not only in the United States but overseas as well, particularly in Europe. Her forte was lavish dramas of ill-fated romance that emphasized her remote, enigmatic beauty. Indeed, Garbo herself was a larger-than-life figure who excelled playing legendary historical and literary heroines in films like *Mata Hari* (1931), *Queen Christina* (1933), *Anna Karenina* (1935), *Camille* (1936), and *Conquest* (1937). She worked with a wide range of leading directors, including Clarence Brown in a half-dozen films, but her key MGM collaborators were those responsible for the "look" of her films, notably cinematographer William Daniels, costume designer Adrian, and art director Cedric Gibbons, all of whom worked on nearly every one of them.

Garbo's career took two significant, unexpected turns during the prewar era: first in her successful shift to romantic comedy ("Garbo Laughs!") in *Ninotchka* (1939), and then her sudden retirement after another comedy, *Two-Faced Woman* (1941). The latter was a rare box-office disappointment, due largely to cuts demanded by the Catholic Legion of Decency. Garbo spurned repeated efforts to coax her out of retirement in later years, living out her signature entreaty, "I want to be alone."

A prime example of MGM's house style in the 1930s was *Grand Hotel*, an all-star ensemble drama featuring Garbo, John Barrymore, Joan Crawford, Wallace Beery, and Lionel Barrymore; it was a solid commercial hit and won the Oscar® for Best Picture of 1932. The film emphasized glamour, grace, and beauty in its polished settings as well as its civilized characters—all of whom are doomed or desperate, but suffer life's misfortunes with style. Indeed, *Grand Hotel* in many ways was about the triumph of style, expressed not only by its characters but also by cinematographer William Daniels (1901–1970), editor Blanche Sewell (1898–1949), recording engineer Douglas Shearer (1899–1971), art director Cedric Gibbons (1893–1960), and costume designer Adrian (1903–1959). Each was singled out, along with director Edmund Goulding (1891–1959) and playwright William Drake (1899–1965), in the opening credits of the film, aptly enough, because they were in fact the key artisans of the distinctive MGM style, vintage 1932.

Greta Garbo in **Anna Karenina** *(Clarence Brown, 1935).* EVERETT COLLECTION. REPRODUCED BY PERMISSION.

The one individual whose name did not appear was Irving Thalberg, who disdained screen credit but was, without question, the chief architect of the MGM house style. In the 1920s and early 1930s, the studio exemplified the "central producer system" that dominated Hollywood at the time. While Louis Mayer handled studio operations and contract negotiations, Thalberg and his half-dozen supervisors (chief among them Harry Rapf [1882–1949], Hunt Stromberg [1894–1968], and Bernie Hyman [1897–1942]) oversaw the actual filmmaking. And although Thalberg eschewed screen credit, his importance to the studio was widely recognized. A 1932 *Fortune* magazine profile of MGM flatly stated: "For the past five years, M-G-M has made the best and most successful motion pictures in the United States," and that success was directly attributed to Thalberg. "He is what Hollywood means by M-G-M, … he is now called a genius more often than anyone else in Hollywood." The studio's success was due in part to "Mr. Thalberg's heavy but sagacious spending," noted *Fortune*, which ensured "the glamour of M-G-M personalities" and the "general finish and glossiness which characterizes M-G-M pictures."

There were other subtler components as well. Thalberg was obsessed with "story values," taking an active role in story and script conferences, and assigning up to a dozen staff writers to a film. He also relied heavily on preview screenings to decide whether a picture required rewrites, retakes, and reediting, and thought nothing of assigning different writers and even a different director to the task. This evinced an ethos of "teamwork" at MGM and generated remarkably few complaints, since the contract talent was so well compensated and so deftly handled by Thalberg and Mayer. Thalberg also had a penchant for "romance" in the form of love stories or male-oriented adventure—or preferably both, as in costarring ventures like *Red Dust* (1932) and *China Seas* (1935) with Gable and Jean Harlow (1911–1937). Another important factor was Thalberg's impeccable and oft-noted "taste," which was evident not only in his inclination for the occasional highbrow prestige picture but also in his ability to render frankly erotic stories and situations (as in the Gable–Harlow pictures just mentioned) palatable to Hollywood's Production Code and to mainstream audiences.

While many of these qualities remained essential to MGM's house style well into the 1940s, Thalberg's overall control of production diminished by the mid-1930s. His ill health and an internal power struggle at Loew's/MGM, spurred by both Mayer's and Schenck's growing resentment of Thalberg's authority, led to a shake-up in studio management in 1933 and a steady shift to a unit-producer system, whereby a few top executive producers—principally Thalberg, David Selznick (1902–1965) (Mayer's son-in-law), and Hunt Stromberg—supervised high-end features, while Harry Rapf and a few others handled the studio's second-rank films. Thalberg went along with the change, and both he and Selznick thrived under the new setup, particularly in the realm of prestige-level costume dramas and literary adaptations—Thalberg's productions of *Mutiny on the Bounty* (1935), *Romeo and Juliet*, and *Camille* (both 1936), for instance, and Selznick's *David Copperfield* (1934), *Anna Karenina*, and *A Tale of Two Cities* (both 1935). Stromberg proved especially adept at launching and maintaining successful star-genre cycles, as with the Jeanette MacDonald–Nelson Eddy operettas (for example, *Naughty Marietta*, 1935, and *Rose Marie*, 1936) and the Thin Man series with William Powell (1892–1984) and Myrna Loy (1905–1993). Many of Stromberg's productions were directed by the prolific W. S. (Woody) Van Dyke (1889–1943), including the first four Thin Man films and six MacDonald–Eddy musicals; Van Dyke's thirty Depression-era credits also included *Tarzan the Ape Man* (1932), *San Francisco* (1935), and *Andy Hardy Gets Spring Fever* (1939).

MGM's success continued under this new production regimen, and in fact its profits in 1936–1937 returned to the record levels enjoyed before the

Depression. But the studio was severely shaken by Selznick's departure for independent production and, far more importantly, by Thalberg's sudden, untimely death (at age 37) in September 1936, which marked the end of an era for MGM and a far more radical change in both the production operations and the studio's distinctive style.

THE MAYER REGIME

Mayer assumed complete control of MGM after Thalberg's death, managing the studio as well as production through a committee system that swelled rapidly in the late 1930s, adding several levels of bureaucracy to the filmmaking machinery. Where Thalberg had managed production with a "staff" of a half-dozen supervisors, Mayer by 1940–1941 required forty highly paid producers and production executives. This was a disparate lot, including some with no filmmaking experience, although it also included some of Hollywood's premier producers and hyphenates—Joe Mankiewicz (1909–1993) and Dore Schary (1905–1980), who rose through the screenwriting ranks, for instance, or Robert Z. Leonard (1889–1968) and Mervyn LeRoy (1900–1987), who came up as directors (LeRoy at Warner Bros.). Despite the freedom and authority being enjoyed by top directors at other studios, not to mention the growing ranks of independents, MGM remained a producer's studio where even top directors like King Vidor (1894–1982), George Cukor (1899–1983), and Victor Fleming (1889–1949) had very little authority over their pictures. And under Mayer's production-by-committee system, the producers themselves enjoyed little creative leeway as MGM's output became increasingly conservative and predictable. There were occasional exceptions, like LeRoy's first MGM project *The Wizard of Oz* (1939), an ambitious, innovative, and costly film that was distinctly out of character for MGM at the time. In fact, the studio's only other notable high-risk project was David Selznick's independent production, *Gone with the Wind* (1939), which MGM partially financed and distributed.

The clearest indication of the conservative turn and risk-averse market strategy under Mayer was MGM's increasing reliance on upbeat film series like the Hardy Family films that rolled off its assembly line at a remarkable rate—one every three to four months from 1938 to 1941—and vaulted Mickey Rooney (b. 1920) to the top position on the Exhibitors Poll of box-office stars, just ahead of MGM's Clark Gable and Spencer Tracy. The Hardy films, along with the Dr. Kildaire, Thin Man, Tarzan, and Maisie series, were produced by Joe Cohn's low-budget unit. Mayer prohibited any use of the term "B film" on the lot, and in fact the casts, budgets, running times, and access to the first-run market of MGM's series films qualified them as "near-A's" by industry standards. Mayer let Dore Schary create a unit to produce high-quality, moderately budgeted films, and its two biggest hits, *Journey for Margaret* (1942) and *Lassie Come Home* (1943), developed two new child stars—Margaret O'Brien (b. 1937) and Elizabeth Taylor (b. 1932), respectively—and reinforced the wholesome family values espoused by the Hardy films.

Mayer also favored more wholesome depictions of love, marriage, and motherhood, as seen in the rapid wartime rise of Greer Garson (1904–1996) and her frequent costar, Walter Pidgeon (1897–1984), in *Mrs. Miniver* (1942), *Madame Curie* (1943), and *Mrs. Parkington* (1944). Garson and Pidgeon were among several costarring teams that embodied Mayer's idealized version of on-screen coupling—a far cry from the hard-drinking, wise-cracking Nick and Nora Charles of the early Thin Man films, let alone the openly sexual (and adulterous) Gable and Harlow in films like *Red Dust* and *China Seas*. As Rooney began to outgrow his Andy Hardy role, he teamed with Judy Garland (1922–1969) in a cycle of energetic show-musicals—*Babes in Arms* (1939),

Vivian Leigh and Hatti McDaniel in* Gone with the Wind *(Victor Fleming, 1939), distributed by MGM. **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

Strike Up the Band (1940), *Babes on Broadway* (1941), and *Girl Crazy* (1943)—directed by Busby Berkeley (1895–1976) and produced by Arthur Freed (1894–1973). A more mature and far more credible couple, Katharine Hepburn (1907–2003) and Spencer Tracy (1900–1967), began their long-time partnership in *Woman of the Year* (1942), the first of six teamings for MGM in the 1940s.

During the war, MGM reduced its output by about 30 percent and benefited from the surging movie business along with other major studios, but to a lesser extent due to its continued output of high-gloss, high-cost productions and its smaller theater chain. In fact, Loew's/MGM revenues during the war years were not significantly higher than in the peak Depression years, and in 1946, the height of the war boom, MGM's profits of $18 million were dwarfed by Paramount's $39.2 million. MGM continued to spend lavishly, but its dominion over the industry clearly was ending, as its profits lagged far behind Fox and Warners as well as Paramount in the late 1940s, and its critical cachet faded as well. Oscar® nominations and critical hits became rare, and the MGM house style looked increasingly anachronistic in the postwar era of film noir and social-problem dramas.

One bright spot for MGM was its musical output, which during the postwar decade comprised one-quarter of its releases (81 of 316 films) and more than half of Hollywood's overall musical production. Several staff producers specialized in musicals, including Joe Pasternak (1901–1991) and Jack Cummings (1900–1989), but the individual most responsible for MGM's "musical golden age" was Arthur Freed, who after the Rooney–Garland cycle had a breakthrough with *Meet Me in St. Louis* (1944), an ambitious Technicolor production starring Garland and directed by Vincente Minnelli

(1903–1983). That film's success enabled Freed to assemble his own unit whose distinctive emphasis on dance utilized the talents of choreographers Gene Kelly (1912–1996), Stanley Donen (b. 1924), and Charles Walters (1911–1982), all of whom Freed developed into directors.

The currency of the Freed unit's "dance musicals" was established in late-1940s films like Minnelli's *The Pirate* (1948), Walters's *Easter Parade* (1948), and Donen-Kelly's first co-directing effort, *On the Town* (1949), and the cycle reached a sustained peak in the 1950s with such classics as *An American in Paris* (Minnelli, 1951), *Singin' in the Rain* (Donen-Kelly, 1952), *The Band Wagon* (Minnelli, 1953), *It's Always Fair Weather* (Donen-Kelly, 1955), and *Gigi* (Minnelli, 1958). Freed's musicals were critically and commercially successful, but they also were symptomatic of the profligate production operations that were squeezing MGM's profit margins. The studio could scarcely afford *not* to produce them as its postwar fortunes ebbed, however, and thus the cycle became, in effect, the last bastion of MGM's classical-era operations and house style, the last manifestation of its fading industry rule.

Mayer was a major advocate of Freed and the lavish musical cycle, predictably enough, and one of the acute ironies of MGM's postwar era is that the Freed unit far outlasted the Mayer regime—and subsequent regimes as well. By 1948 Nick Schenck realized that Mayer was fundamentally incapable of adjusting to the rapidly changing postwar conditions. He stubbornly adhered to the studio's entrenched production policies and bloated management setup, he openly criticized the industry trends toward realism and social drama, and he was reluctant to work with the growing ranks of independent filmmaking talent. Schenck was equally concerned about other developments, particularly declining theater attendance, the government's antitrust campaign, and the emergence of television, which threatened the studio system at large. In an effort to cut costs and bring MGM in sync with the changing industry, Schenck demanded that Mayer "find another Thalberg." Thus Dore Schary, the RKO production chief and former MGM writer-producer, was hired in 1948 as MGM's vice president in charge of production.

The Mayer–Schary union was troubled from the start, due to Mayer's adherence to the studio's entrenched operations and the two executives' very different sensibilities. Schary's liberal politics irked the arch-conservative Mayer—no small matter in the age of the House Un-American Activities Committee (HUAC), Senator Joseph McCarthy, and the nascent Cold War—but even worse, in Mayer's view, was Schary's taste in films and his proclivity for freelance talent. The rancor reached a flashpoint over Schary's support of two projects with freelance writer-director John Huston (1906–1987), *The Asphalt Jungle* (1950) and *The Red Badge of Courage* (1951). The former was a downbeat, realistic crime thriller with an all-male ensemble cast that Mayer publicly castigated. But the film was a hit, prompting Schary to approve *The Red Badge of Courage*, an adaptation of Stephen Crane's bleak Civil War novel. Mayer refused to finance production, forcing Schary to go to Schenck for approval, and when the film ran over budget and then died at the box office, Mayer demanded Schary's ouster. Schenck backed Schary, however, and in May 1951 Mayer was forced out of the studio that bore his name.

STRUGGLE, DECLINE, AND DISMEMBERMENT

Mayer's departure scarcely improved MGM's fortunes. Schenck and Schary were both out by the mid-1950s, leading to a quick succession of top executives at both Loew's and MGM. Mayer himself attempted to regain control in 1957, but the effort failed and he died late that year—just before MGM announced the first annual net loss in its history. The studio moved very tentatively into TV series production and was among the last to open its vault to television syndication, although MGM did lease *The Wizard of Oz* to CBS for a color broadcast in October 1956, making it the first Hollywood film to air on prime-time network television. The program was a ratings hit, and another signal of an industry transformation that was leaving MGM behind. Loew's/MGM fought the Supreme Court's 1948 *Paramount* decree, the anti-trust ruling that mandated theater divorcement, to the bitter end, with Loew's finally divesting of MGM in 1959. The studio enjoyed one of biggest hits ever that year in *Ben-Hur*, but subsequent big-budget remakes of *Cimarron* (1960), *King of Kings* (1961), and *Mutiny on the Bounty* (1962) were disappointments.

MGM produced a few major hits in the 1960s, notably *Dr. Zhivago* (1965) and *2001: A Space Odyssey* (1968). The latter, directed by Stanley Kubrick (1928–1999), provided major impetus to the auteur-driven New American Cinema of the late 1960s, as did MGM's earlier release of Michelangelo Antonioni's (b. 1912) *Blow-Up* (1966). But the studio had no real stake in this movement, nor did it pursue any other production or marketing trends during the late 1960s, when it was plagued by frequent changes in leadership and struggles for corporate control. These struggles culminated in 1969, a year in which MGM posted its biggest loss ever ($35 million) and was taken over by Las Vegas mega-developer Kirk Kerkorian. Though Paramount, Warner Bros., and United Artists were acquisition targets as well, they were bought by diversified conglomerates, which

allowed them to continue operations despite the industry-wide recession. Kerkorian, conversely, was a financier and real-estate tycoon who was primarily interested in MGM for its brand name and the value of its library, and had no inclination to underwrite its failing movie production–distribution operation.

Kerkorian immediately installed former CBS president James T. Aubrey (1918–1994) to run the studio, with instructions to cut costs and reduce output. One result was MGM's successful run of low-budget "blaxploitation" films, notably *Shaft* (1970) and its various sequels and television spinoffs. But soon Aubrey began to dismantle the studio, auctioning off a treasure trove of memorabilia and archival material, and selling the MGM backlot for real-estate development. The most drastic move came in 1973, the year that Kerkorian opened his MGM Grand Hotel and Casino in Las Vegas (then the largest hotel in the world), when Aubrey sold MGM's distribution operation to United Artists, which had been acquired in 1967 by Transamerica, and announced that MGM would produce only a few pictures per year.

Thus, just as the movie industry began its economic recovery, MGM ceased operating as a major Hollywood producer-distributor. Its most successful pictures at the time, aptly enough, were *That's Entertainment!* in 1974 and its 1976 sequel, documentary celebrations of MGM's past glories. While MGM foundered in the late 1970s, Kerkorian's real estate business thrived, enabling him to purchase United Artists in 1981 when that studio was reeling after the *Heaven's Gate* debacle, as huge cost overruns on an unreleasable film forced UA into bankruptcy. Returning to active distribution, Kerkorian ramped up production at "MGM/UA" after the merger, although few films of any real note were produced by the company until 1986, when it was purchased by Ted Turner (b. 1938)—who then promptly sold UA and the MGM trademark back to Kerkorian, and sold the MGM lot to Lorimar, a major television producer.

Thus began an even more intense period of chaos, confusion, and legal wrangling for MGM, during which time the company repeatedly changed hands, was in continual litigation over the ownership of its library and several of its key movie franchises, and was increasingly difficult to define as a "studio"—particularly after Lorimar sold the lot (in 1989) to Warner Bros. MGM produced a few hits like *Thelma & Louise* (1991) and was involved in the theatrical or home-video distribution of many others, including United Artists' James Bond films (*Golden Eye*, 1995; *Die Another Day*, 2002). After ownership passed from Turner to Kerkorian and then in the early 1990s to Italian financier Giancarlo Parretti (then owner of Pathé's film operation) and to Credit Lyonnais (which foreclosed on Parretti), Kerkorian put together a consortium to repurchase MGM in 1996. That led to further acquisitions, particularly in MGM's library holdings, which became sufficiently robust to attract multiple offers. In 2004 Kerkorian sold MGM to a media consortium whose principals included Sony (which bought Columbia Pictures in 1989) and the cable giant Comcast for $4.8 billion.

This acquisition finally aligned MGM with a global media conglomerate, but it scarcely signaled a return to active motion picture production. Sony and Comcast clearly were interested in MGM for much the same reason as Kerkorian had been previously—that is, for its brand name and library holdings (along with the James Bond and Pink Panther franchises that MGM acquired via UA). And the amount the new owners paid well indicates the value of "branding" and "software" in the current media era. Thus, even as the Sony group announced plans to reduce MGM's output to only a few films per year, it is quite likely that the Metro-Goldwyn-Mayer name (and logo), along with its classic films, will maintain their currency, and will serve too as constant reminders of Hollywood's Golden Age.

MISE-EN-SCÈNE

Mise-en-scène is what we see in a film; editing is what we do not. These are simplified definitions, but they emphasize two essential things: the basic building blocks of a film—the shot and the cut—and the complexities of each that allow a film to achieve its texture and resonance. Mise-en-scène concerns the shot, though we need to keep in the back of our minds that editing—putting two shots together—affects not only how a film's narrative is structured but how the shots are subsequently understood by viewers.

The term "mise-en-scène" developed in the theater, where it literally meant "put into the scene" and referred to the design and direction of the entire production, or, as "metteur-en-scène," to the director's work. The term was brought into film by a group of French film critics in the 1950s, many of whom would become directors and constitute the French New Wave in the 1960s. One of these critics-turned-directors, François Truffaut, used the term negatively to describe the directors of the French "Tradition of Quality," the rather stodgy French films that appeared after World War II. New Wave theorists felt that these films merely translated novels into movies. André Bazin, perhaps the most influential film critic since Sergei Eisenstein (1898–1948) (the revolutionary Russian filmmaker who, despite his theoretical focus on a particular form of editing called montage, was a master of mise-en-scène), was much more positive in his use of the phrase, and the discussion of mise-en-scène here flows from his observations.

ELEMENTS OF MISE-EN-SCÈNE

Mise-en-scène is generated by the construction of shots and the ways that they lead to visual coherence, across the edits from shot to shot. It includes all the elements in front of the camera that compose a shot: lighting; use of black and white or color; placement of characters in the scene; design of elements within the shot (part of the process of production design); placement of camera vis-à-vis characters in the set; movement of camera and/or actors; composition of the shot as a whole—how it is framed and what is in the frame. Even music may be considered part of mise-en-scène. While not seen, at its best music enhances the visual and narrative construction of the shot.

Cinematic mise-en-scène refers to how directors, working in concert with their cinematographers and production designers, articulate—indeed, create—the spatial elements and coordinates in the shot and succeed in composing well-defined, coherent, fictional worlds. Composition and the articulation of space within a film carry as much narrative power and meaning as its characters' dialogue. Mise-en-scène is thus part of a film's narrative, but it can tell a larger story, indicating things about the events and characters that go beyond any words they utter.

Mise-en-scène can also be an evaluative term. Critics may claim a film does or does not possess mise-en-scène. For example, if a film depends entirely on dialogue to tell its story, if its visual structure is made up primarily of a static camera held at eye level on characters who are speaking in any given scene, if its lighting is bright, even, and shadowless, it lacks mise-en-scène. On a more subjective level, if a viewer's eyes drift away from the screen because there isn't much of interest to look at, the film lacks mise-en-scène. Such a film may succeed on other levels, but not visually; it is constructed not in the camera

but in the editing room, where the process is much cheaper because actors are absent. Films with good dialogue, well-constructed narrative, and scant mise-en-scène can still be quite effective. But these are rare—as rare as well-written films.

Journalistic reviewers may care little about mise-en-scène. They are rarely concerned with the look of films and focus mostly on whether or not the story or characters seem "real." They may term visually centered works "arty" or say they have interesting "camera angles." Filmgoers may simply want to be entertained and not care about how a film is constructed. But dedicated filmmakers and filmgoers, like talented novelists and readers, want complete, self-contained, detailed cinematic worlds that are at the time open to the viewers' own worlds and experiences. Such people will find satisfaction in the visual complexity of mise-en-scène.

FILMMAKERS AND MISE-EN-SCÈNE

Mise-en-scène has preoccupied filmmakers in several countries and periods. German expressionism developed immediately following World War I. In painting, writing, and filmmaking, expressionism was a mise-en-scène cinema, expressing the psychological turmoil of the characters in terms of the space inhabited by its characters. Major representatives of German expressionism in film include Robert Wiene's *Das Kabinett des Doktor Caligari* (*The Cabinet of Dr. Caligari*, 1920) and F. W. Murnau's *Nosferatu, eine Symphonie des Grauens*, the first Dracula movie (1922). These and many others created a dark and anxious visual field, uneasy and frightening. German expressionism had enormous influence when its practitioners moved to the United States: Murnau's *Sunrise* (1927); Universal Studio's horror films of the early 1930s such as *Frankenstein* (1931), *Dracula* (1931), and their sequels; *Citizen Kane* (1941); the film noir genre of the 1940s; *Psycho* (1960); and *Taxi Driver* (1976). These, among others, borrowed their idea of mise-en-scène from German expressionism, though it was not the only influence on these films.

Later directors developed highly individualized mise-en-scènes. Michelangelo Antonioni (b. 1912), for example, created an extremely intricate and eloquent mise-en-scène in films such as *Il Grido* (*The Cry*, 1957), *L'Avventura* (*The Adventure*, 1960), *La Notte* (*The Night*, 1961), *L'eclisse* (*The Eclipse*, 1962), *Il deserto rosso* (*Red Desert*, 1964), *Blow-Up* (1966), and *Professione: reporter* (*The Passenger*, 1975). As Rosalind Krauss has noted in *The Optical Unconscious*, Antonioni, like the American abstract expressionist painters of the time (Jackson Pollock and Mark Rothko, for example) reversed the usual conventions of foregrounding the human figure against a background (pp. 2–27). Antonioni believed that the background—or, in his case, the character's environment—should be foregrounded, the characters constituting only one part of the mise-en-scène, which defined them by where they were, what was around them, and how they were observed by the camera.

Architecture is Antonioni's essential point of reference; the themes of his films were not reducible to plot but rather explore how the spaces inhabited by his characters explain their predicaments—something they themselves cannot adequately do in words. Antonioni framed characters in windows and often composed them among buildings that loomed strangely over them. In his color films, color itself defined situations. The belching yellow smoke from factories in *Red Desert*, the camera that unexpectedly drifts away from a character to follow a blue line running along the ceiling in the same film, create moods that allow viewers to understand the characters visually in ways that they don't understand themselves. Like an abstract expressionist painter, Antonioni worked to rid his work of the individual human figure. At the end of *The Eclipse*, the two central characters promise to meet at a certain location. They do not, and the last ten minutes of the film are composed of a collage of almost abstract cityscapes peopled, when at all, by anonymous faces. The camera's attention, however, focuses on things: water dripping from a drain; sprinklers watering a field; a horse-drawn sulky carrying a man across the street; a building wrapped completely in mats. This is an abstract vision of unexplained, anxiety-producing images. A hint is offered in a newspaper headline that reads "Atomic Bomb." Free-floating anxieties of the post-atomic world diminish the human figure in light of events not under the control of individuals.

HITCHCOCK

Alfred Hitchcock (1899–1980) was a master of suspense achieved through mise-en-scène. In his best films, the actors were part of a greater visual plan. *Psycho* (1960) is a perfect example. It holds an almost involuntary, hypnotic grip on viewers because it touches on a primal fear of unknown terror and seemingly unstoppable madness. It works profoundly and economically because Hitchcock makes a convincing visual case for a claustrophobic world of fear and psychosis communicated not merely through action but through the visual construction of that world.

Hitchcock built his mise-en-scène with abstract visual pattern of verticals and horizontals—like Antonioni, he drew upon modern techniques of painting. The pattern is prefigured in the credit sequence and provides a blueprint for almost every shot that follows, culminating in the horizontal presence of the motel against the verticality of the old dark house. This rigid pattern is partly responsible for the shock that occurs when the pattern is

Expressionist mise-en-scène in F. W. Murnau's American film,* Sunrise *(1927). ® ™ AND COPYRIGHT © 20TH CENTURY FOX FILM CORP./COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.

broken, as in the arcing thrusting of the knife, or Marion Crane's blood flowing in circles down the drain in the shower. Visual rhymes abound throughout the film: movements up and down the stairs; the famous parlor scene where Norman Bates and his stuffed birds silently expose the "surprise" of the film's climax. The entire film is shot within a tightly controlled gray scale—a dull, oppressive world in which the normal, "outside" world barely existed. Sequences like the opening one in the hotel room, Marion's office, and her road trip to the Bates motel were composed to make Marion seem entrapped. When Hitchcock's camera creeps up the steps or tracks from Marion's dead eye to the money on the table, it does not open out space but further closed it down. Everything is of a visual piece; the film's puzzle gets pulled together before our eyes.

In *Vertigo* (1958), Hitchcock, like many mise-en-scène filmmakers, created a careful color scheme and situated characters in the frame so that viewers knew what was happening to them by the way they were seen. The characters were part of the larger, carefully articulated spatial configurations that Hitchcock developed in order to indicate to the audience what was not said outright. The main character of the film, James Stewart's Scottie, reacts during the first half of the film under the influence of a lie and his infatuation based on that lie; in the second half, he responds through a kind of psychosis caused partly by having being fooled. This crucial narrative information is presented to us through spatial placement: the way he is seen in the frame, what he looks at, who looks at him. He is not an actor as much as he is part of the mise-en-scène.

MOVING CAMERAS AND LONG TAKES

The moving camera is a major factor in the creation of mise-en-scène, because it opens up space, traversing and

Characters are only part of the mise-en-scène in Michelangelo Antonioni's **La Notte (The Night,** ***1961*****).** EVERETT COLLECTION. REPRODUCED BY PERMISSION.

redefining it. The camera can pursue characters or precede them, show them as powerful, or reduce their power. The moving camera does what cutting cannot do: make space whole. Orson Welles (1915–1985) and Stanley Kubrick (1928–1999) were masters of the moving camera. Welles's *Touch of Evil* (1958) and his adaptation of Kafka's *The Trial* (in the film *Le procès* [*The Trial*, 1962]) created dark, nightmarish worlds through which his camera snaked and insinuated itself, allowing nothing to escape the viewer's gaze, while at the same time creating confusing spaces that seemed to be unconnected. Both Welles and Kubrick created labyrinthine spaces—literally: in Kubrick's *The Shining* (1980), the camera snakes its way through the hedge maze, where Jack becomes trapped and freezes; figuratively, in *The Trial*, Joseph K. wanders through the dark maze of the Law. Movement in both of these directors' films creates a mise-en-scène of ultimate entrapment; their characters are swallowed up in the world the camera creates for them.

Along with the moving camera, another important element of mise-en-scène is the long take. Nowhere is the opposition between shot and cut more apparent than when a filmmaker allows a scene to continue unedited, actors acting, viewers observing. The long take can be used for sheer technical brilliance, as in the over-four-minute take in the Copacabana sequence of Martin Scorsese's *GoodFellas* (1990), where the camera moves with the characters down the stairs, through the kitchen, and into the club, all kinds of action and dialogue occurring along the way. It can be deadly serious, as in the tracks through the trenches in Kubrick's *Paths of Glory* (1957) or the extraordinary movement with the jogging astronaut in the centrifugal hall of the spaceship in *2001: A Space Odyssey* (1968). Neither of these sequences is especially long, though the track through the trenches is

persistent, intercutting shots of Col. Dax's intent face moving through the line of soldiers with his view of them. But these and all moving-camera long takes are marked by intensity and energy—visual signs of their character's purpose and ultimate failure, not to mention their director's creativity.

LATER USES OF MISE-EN-SCÈNE

Mise-en-scène remains somewhat rare in Hollywood filmmaking, because it is expensive, and worst of all (in the studio's eyes), it calls attention to itself rather than allowing the screen to become a transparent space in which a story gets told. But some contemporary directors are emerging with a recognizable visual style that is all but synonymous with mise-en-scène. David Fincher (b. 1962) is one. *Se7en* (*Seven*, 1995), *The Game* (1997), and *Fight Club* (1999) set up consistent visual palettes and compositional structures for their fictional worlds. *Seven* was filmed in color, but Fincher and his cinematographer, Darius Khondji, manipulated it so that almost every shot is washed with a yellow-green tint—an unpleasant look that, along with the darkness and unending rain, express the grimness of the film's universe. Fincher also used a pattern to control his mise-en-scène: here and in other of his films, he constructed his shots along a horizontal line to complement the wide-screen format he used. As in *Psycho*, everything was bound: composition and camera movements occur along the line that set boundaries for an otherwise unlocalized world. *Seven* is set in an unnamed city, gray and always raining. At the end of the film, after a relatively short drive, the characters find themselves in a desert strung with power lines. Like an expressionist film, *Seven* creates a state of mind, but not an individual one. Instead, like *Psycho*, its mood is one of universal anxiety.

The most important reason to emphasize mise-en-scène was and remains a director's sense of opposition to the largely anonymous style of Hollywood filmmaking and its rapid, invisible editing. The creation of a coherent and articulate mise-en-scène is a means to personal expression. From the quiet domestic spaces of the Japanese director Yasujiro Ozu (1903–1963), who defines his characters by what surrounds them, to the vertiginous, shadowy spaces of the worlds created by Orson Welles, to the abstract cityscapes of Antonioni and the imprisoning interiors of the German filmmaker Werner Rainer Fassbinder (1945–1982), to the expressive compositions and camera movements created by Martin Scorsese (who uses Fassbinder's cinematographer, Michael Ballhaus), creative filmmakers have developed alternatives to Hollywood's illusory realism through mise-en-scène. The technique, like other modernist ones, foregrounds rather than hides the medium's processes. Choosing angles, moving a camera, deciding how the camera should be positioned and the scene dressed and lighted are among the things that cinema, and no other single art, can do. These cumulative aesthetic decisions are the marks of great filmmakers as they create complete and coherent fictional worlds.

MUSIC

"Film music" as a term has come to refer to music composed or expressly chosen to accompany motion pictures. The practice of pairing music and image is as old as cinema itself. In fact, Thomas Edison imagined motion pictures as visual accompaniment to the music produced by his phonographs. From the first motion pictures projected to Paris audiences in 1895 to the widescreen, Dolby Digital Surround Sound films of today, music has been a persistent element in the filmic experience. It has been improvised and it has been scored; it has been experienced as live and as recorded performance; it has consisted of both original and previously composed music; and it operates differently from country to country, culture to culture, and genre to genre. The musical, for instance, like the concert film and the musical biopic, has a set of conventions that foreground music. Through all of its various guises, however, film music can be characterized by its expressive power to shape the meaning of the image and to connect the audience to the film.

Film music serves many purposes: it grounds a film in a particular time and place; creates mood and heightens atmosphere; characterizes the people on-screen and helps to define their psychology; delineates abstract ideas; relays the film's theme; and interacts with the images to sell a film economically. Film music engages with the deepest and most profoundly unconscious levels of the audience; it is a crucial part of the apparatus through which a film engages with cultural ideology; and it largely serves these purposes without drawing conscious attention to itself.

Of course, differences in historical and cultural traditions shape music's effect on the film audience. For instance, in the classical Hollywood style, certain of film music's functions have been emphasized over others, giving Hollywood scores a distinctive and recognizable structure. But music's expressive power crosses many borders, and the ability to resonate emotion between the spectator and the screen may well be film music's most distinguishing feature. Films, of course, have various techniques for conveying emotion, including dialogue, expressive acting, close-ups, diffuse lighting, and aesthetically pleasing *mise-en-scène*. Film music, historically, has been the most reliable and efficient of them. Music embodies the emotion that the image represents, prompting audiences to recognize that emotion and connect to the characters on the screen. Film music thus engages audiences in processes of identification that bond them to the film. The tremolo strings accompanying a suspenseful murder or the pop song heard under a love scene both embody the emotion that the on-screen characters feel and prompt the audience to identify with and share that emotion.

HOW FILM MUSIC WORKS

How film music works in relation to the image was a lively subject of debate among the first critics to consider the subject seriously. Beginning in the 1930s, classical film theorists as well as the first historians of film music posited that film music either paralleled or counterpointed the visual image. Even today, much popular writing on film music perpetuates this model, limiting film music's function to commentary: music either reinforces or undercuts the visual image. But in the 1940s, the composer Hanns Eisler (1898–1962) and the philosopher and music critic Theodor Adorno, in one of the

earliest and most important studies of film music, *Composing for the Films* (1947), raised objections. Eisler and Adorno pointed out the futility of conceptualizing film music in terms of the image: "A photographed kiss cannot actually be synchronized with an eight-bar phrase" (p. 8). The model based on the assumption that music either parallels or counterpoints the image, of course, cannot account for music that responds to what is not evident in the image, its subtext; moreover, it assumes that the visual image is a direct and unproblematic form of representation. Contemporary film music scholars have posited a different model for film music's operation in which music and image are interdependent, sharing power to shape meaning. As Claudia Gorbman put it in her pioneering study, film music works by anchoring the image, shutting off certain readings and emphasizing others, policing the ways in which the audience interprets the film.

Film music is, of course, music, and as such it brings to its functioning in film the basic principles of music: melody, harmony, rhythm, meter, volume, tempo, form, timbre, and instrumentation. Music derives its power largely from its ability to tap into conventions derived from these principles. Conventions, shared between composers and audiences, harness musical affect to concrete meaning through the power of association; through repetition, conventions become ingrained in a culture as a kind of collective musical experience. Composers can use conventions as shorthand to produce specific and predictable responses on the part of listeners. For example, brass instrumentation, because of its association with the military, is linked to heroism and became a staple of Hollywood scoring in historical epics, especially swashbucklers. When John Williams (b. 1932) relies on the brasses in his score for *Star Wars* (1977) rather than electronic instrumentation or futuristic musical sounds, he underscores the heroic arc of the film and connects the narrative, not to the genre of science fiction, but to the great swashbucklers of the classical Hollywood era. Composers can also deliberately contradict conventions to unsettle an audience. The waltz, for instance, has historical associations of lyricism and romance; yet Bernard Herrmann (1911–1975) chooses a waltz to accompany the deterioration of a marriage in the breakfast montage of *Citizen Kane* (1941), an unconventional choice that dramatically underscores the couple's failed romance. Film music also has at its disposal the conventions of song, especially lyrics. When Quentin Tarantino chooses the 1970s pop rock hit "Stuck in the Middle With You" to accompany a graphically violent scene in *Reservoir Dogs* (1992), his unconventional musical choice, coupled with the song's innocuous lyrics, creates disturbing effects.

Musical conventions change across history and culture and operate differently from one musical style to another. Some composers depend on conventions more than others, and some refuse to use them at all. But musical conventions generate responses so strong that listeners are affected by them whether they are consciously aware of it or not. In fact, film music can short-circuit listeners' processes of conscious recognition and create meaning on something less than a fully conscious plane. Thus film music is one of film's most potent tools to shape and control our response to what we see.

The origins of musical accompaniment to moving images, and the evolution of this pairing over the course of film history, point to a psychic realm that needs to be considered in order to understand fully the ways in which film music works. This realm is the unconscious. Psychoanalysis seeks to understand the operation of the unconscious and in the 1970s and 1980s French and North American theorists used psychoanalysis to bring music into focus. From our earliest moments inside the womb, we experience the elements of music: the rhythmic patterns of our mother's heartbeat, breathing, and pulse as well as the pitch and dynamics of her voice. After birth, the newborn continues in a blanket of aural stimulation, including and especially the mother's voice experienced as music. (Think of the ways in which language itself incorporates musical elements such as rhythm, pitch, dynamics, and intonation.) From a psychoanalytic viewpoint, the reason why music is so pleasurable and indeed a central part of human experience is that it is experienced as repressed longings for a return to the original state of fusion with the mother. For critics adhering to this approach, film music both stimulates and encourages us to regress to that complete sense of satisfaction and pleasure. This facet of film music transpires in the unconscious and is thus inaccessible to our conscious selves. But it cannot be discounted in a study of what pleases and engages us when we listen to film music.

A theoretical investigation into the pleasures and power of film music also, however, leads in an outward direction, into culture. Beginning in the 1920s, Marxist critics associated with the Frankfurt School, especially Adorno, and other German intellectuals such as the playwright Bertolt Brecht (1898–1956) and the composer Ernst Bloch (1885–1977), began to examine the nexus of economics, politics, and culture that shapes music as a social discourse. The Frankfurt School maintained that all art, including music, is a form of cultural ideology, largely reinforcing but potentially resisting or subverting the dominant ideological values of a culture. In staking out this position, the Frankfurt School attacked long-held assumptions about music's autonomous function,

BERNARD HERRMANN

b. New York, New York, 29 June 1911, d. Los Angeles, Calfornia, 24 December 1975

Bernard Herrmann was a Hollywood rebel—cantankerous, combative, and brilliant. Working both inside and outside the studio system, he managed to put his unique stamp on a series of films for a variety of directors. His scores, sometimes brooding and anxious, sometimes sweeping and lyrical, sometimes jarringly modern, and sometimes lushly romantic, are always inventive (and some of them are decidedly more interesting than the films they "accompany").

Arriving in Hollywood with Orson Welles and the Mercury Theater in 1941, Herrmann scored *Citizen Kane* and, in 1942, *The Magnificent Ambersons*. Angered by studio changes to his *Ambersons* score, he insisted that his name be removed from all prints of the film. He would in later life proclaim that Welles was the only director he worked with who knew anything about music. He is most well known, however, for a series of films he scored for Alfred Hitchcock.

Herrmann championed modern music throughout his life, and his music for Hitchcock bears its imprint: unusual instrumentation (the all-string ensemble for *Psycho* [1960]; the all-brass ensemble for the discarded *Torn Curtain* [1966] score); arresting rhythms (the opening moments of *Psycho*, the fandango from *North by Northwest*, 1959); dissonant harmonies (the shower scene from *Psycho*), and polytonality (the famous *Vertigo* [1958] chord—two perfectly conventional chords, in two different keys, played together). Never reticent about expressing himself, Herrmann parted ways with Hitchcock over the *Torn Curtain* score, which Herrmann completed but Hitchcock discarded under pressure.

Reclusive and uncompromising, Herrmann spent a significant portion of his creative life working outside Hollywood, scoring films internationally and composing and conducting music for the concert hall and operatic stage. He adamantly protested being defined as a film composer, preferring instead to be known as a composer who also scores films. At the end of his life, Herrmann found himself rediscovered by the young directors Brian De Palma and Martin Scorcese. He died the night he finished conducting his score for Scorcese's *Taxi Driver* (1976). Herrmann's final collaboration with Scorcese would be a posthumous one: the director reused Herrmann's 1961 score for *Cape Fear* when he remade the film in 1991.

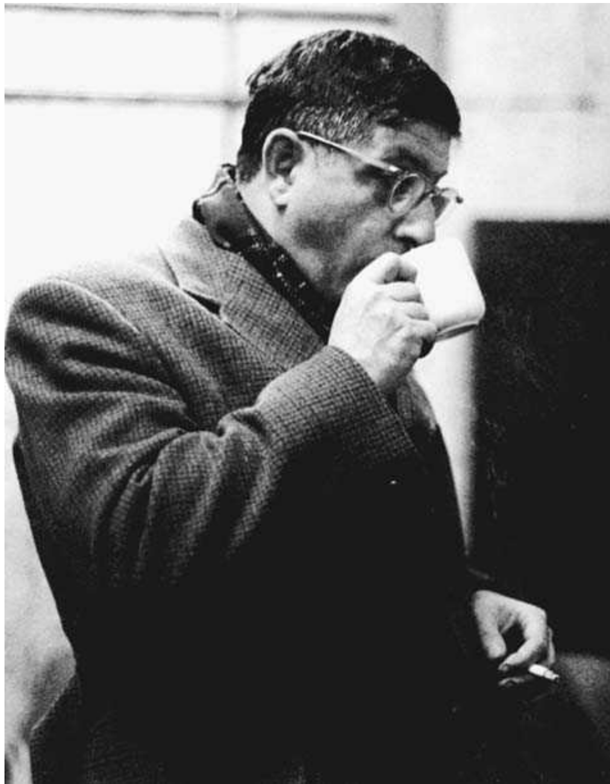
the unique creativity of the composer, and the ability of the individual subject to resist cultural ideology. For these critics, music served a political function under advanced capitalism: to pacify dangerous, anarchic impulses by lulling listeners into an acceptance of (or at the very least, a diversion from) their social conditions, thereby supporting the status quo. Even something as seemingly countercultural as rock music has been studied through this perspective by contemporary British and American cultural studies critics. Adorno, in collaboration with Eisler, extended this argument to the film score. Music holds the film together and masks its material constitution as a technological product. Film music's adhesion stems from its exceptional ability to create and resonate emotion between the screen and the spectator. In so doing, film music distracts spectators from the two-dimensional, often black and white, and sometimes silent images. Thus film music fulfills a potent ideological function: to promote the audience's absorption into the film. The audience is thus positioned to accept, uncritically, the ideology circulating through the film. Indeed, Eisler and Adorno refer to film music as a drug.

That art serves a political function was a radical notion, and in postwar America it raised suspicions.



Bernard Herrmann. THE KOBAL COLLECTION. REPRODUCED BY PERMISSION.

Eisler, working as a composer in Hollywood, paid the price for his leftist views. He became a target of the Communist "witch hunts," was summoned before the House Un-American Activities Committee for alleged communist activities, and deported. That art is inextricably tied up with politics is clearly evidenced in the lives of many of the composers cited here, whose music, careers, and even lives were threatened and sometimes claimed by political events of the twentieth century.

Considering the form and practice of film music as an ideological mechanism has profound consequences for our understanding of how film music works within individual films as well. This ideological function of film music has been an especially rich site of investigation for contemporary film music scholars who have examined how such ideologically loaded concepts as gender, sexuality, race, and ethnicity are encoded through music. Cultural ideology manifests itself in a work of art in indirect ways, operating on less than a conscious plane. Yet the results of that process, though complex, sometimes contradictory, and often elusive, are clearly audible. Can you recognize North American "Indian music" when you hear it and what does it mean when you do? Hollywood composers depended on a set of clichéd musical conventions to represent Indians on screen but also to encode a response consistent with the dominant cultural ideology of the era. Tomtom rhythms, descending melodic contours, and harmonies built on fourths and fifths were powerful indicators of the primitive, the exotic, and the savage. (It should be noted here that genuine native American music is not on offer.) In *Stagecoach* (1939), for instance, when the camera pans from the stagecoach wending its way through the western landscape to the Indians poised on a bluff, the "Indian music" we hear tells us not only of the Indians' presence but of their threat. Despite the fact that *Stagecoach* takes place during a period of western history when the government repeatedly reneged on its treaty obligations to many tribes, it is the Indians who are positioned as savage and untrustworthy. As culture changes, however, so does the film score. In *Dances with Wolves* (1990) the cliches for "Indian music" have been replaced by John Barry's (b. 1933) symphonic themes for the Lakota composed in the romantic idiom of the classical Hollywood film score.

MUSIC IN SILENT FILM

Film music was largely live in the silent cinema but its practice was specific to the various cultures and nations where it was heard. In the United States phonograph recordings were sometimes used in early film exhibition; in Japan the tradition of live narration extended throughout the silent period. The notion of pairing film and music had a number of antecedents, among them the nineteenth-century stage melodrama. The conventional explanation for the use of music in silent film is functional: music drowned out the noise of the projector as well as talkative audiences. But long after the projector and the audience were quieted, music remained. Music eventually became so indispensable a part of the film experience that not even the advent of mechanically produced sound could silence it (although for a few years it looked as though it might). Film is, after all, a technological process, producing larger-than-life, two-dimensional, largely black and white, and silent images. Accepting them as "real" requires a leap of faith. Music, with its melody, harmony, and instrumental color (not to mention the actual presence of live musicians), fleshes out those images, lending them credibility. Further, music distracts audiences from the unnaturalness of the medium. Adorno and Eisler even posit that film music works as a kind of exorcism, protecting audiences from the "ghostly" effigies confronting them on the screen and helping audiences, unaccustomed to the modernity of such sights, "absorb the shock" (*Composing for the Films*, p. 75).

The history of musical accompaniment in the United States has yet to be fully written, but this

Bernard Herrmann scored the shower scene in Alfred Hitchcock's* Psycho *(1960) entirely for strings. **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

important work has begun. Martin Marks, a musicologist and silent film accompanist, finds that original scores existed as early as the 1890s. The scholar Rick Altman shows that in the crucial early periods of silent film exhibition, continuous musical accompaniment was not the normative practice, and he provides compelling evidence that accompaniment was often intermittent and sometimes nonexistent. The US film industry began to standardize musical accompaniment around between 1908 and 1912, the same period that saw film's solidification as a narrative form and the conversion of viewing spaces from small, cramped nickelodeons to theatrical auditoriums. Upgrading musical accompaniment was an important part of this transformation; attempts to encourage the use of film music and monitor its quality can be traced to this era. Trade publications began to include music columns that often ridiculed problematic accompaniment; theater owners became more discriminating in hiring and paying musicians; and audiences came to expect continuous musical accompaniment.

Initially, accompanists, left to their own devices and untrained in their craft, improvised. Therefore the quality of musical accompaniment varied widely. The single most important device in the standardization of film music was the cue sheet, a list of musical selections fitted to the individual film. The most sophisticated of them contained actual excerpts of music timed to fit each scene and cued to screen action to keep the accompanist on track. As early as 1909, Edison studios circulated cue sheets for their films. Other studios, trade publications, and entrepreneurs began doing the same. Musical encyclopedias appeared, containing vast inventories of music, largely culled from the classics of nineteenth-century western European art music and supplemented by

original compositions. Encyclopedias like Giuseppi Becce's influential *Kinobibliothek* (1919) indexed every type of on-screen situation accompanists might face. J. S. Zamecnik (1872–1953) composed the *Sam Fox Moving Picture Music* series (1913–1923). It included not only a generic "Hurry Music," but "Hurry Music (for struggles)", "Hurry Music (for duels)"; and "Hurry Music (for mob or fire scenes)." Even treachery was customized for villains, ruffians, smugglers, or conspirators. Erno Rapee's *Encyclopedia of Music for Pictures* (1925) offers music for scenes from Abyssinia to Zanzibar (and everything in between). Popular music of the day was also featured in silent film: in illustrated songs during the earliest periods of film exhibition; as ballyhoo blaring from phonographs to lure passersby into cinemas; and in "Follow the Bouncing Ball" sing-alongs, popular in the 1920s. It is not surprising that popular music crossed over into accompaniment.

Much more work needs to be done on the impact of geography (neighborhood vs. downtown settings; the urbanized east coast vs. the less populated western states) and ethnicity and race (the place of folk traditions, ragtime, jazz) on musical accompaniment. By the teens, however, silent film accompaniment had developed into a profession, and the piano emerged as the workhorse of the era. The 1920s saw the development of the mammoth theatrical organ, like the Mighty Wurlitzer, and motion picture orchestras, contracted by the owners of magnificent urban picture palaces. Orchestral scores, music transcribed for the orchestra, developed during the late silent era. Orchestral film scores based on original compositions were rare in the United States, but there are some famous international examples (not all of which, unfortunately, have survived): Camille Saint-Saëns's (1835–1921) *L'Assassinat du duc de Guise* (1908), Arthur Honegger's (1892–1955) *Napoléon* (1929), Dmitri Shostakovich's (1906–1975) *Novyy Vavilon* (*The New Babylon*, 1927), Erik Satie's (1866–1925) *Entr'acte* (1924), and Edmund Meisel's (1894–1930) *Bronenosets Potyomkin* (*Battleship Potemkin*, 1925), blamed for causing riots at the German premiere and banned. Most orchestral scores, however, were compiled from existing sources, largely nineteenth-century Western European art music. The first American orchestral score, generally acknowledged as *The Birth of a Nation* (1915), was a compilation by Joseph Carl Breil (1870–1926) and the film's director, D. W. Griffith, raiding such classics as Richard Wagner's (1813–1883) *Ride of the Valkyries*, from his opera *Die Walkure*, and Edvard Grieg's *In the Hall of the Mountain King*, from his *Peer Gynt* suite no. 1.

Wagnerian opera and Wagner's theory of the *Gesamtkunstwerk* (total artwork) were early influences on accompanists. Wagner argued that music in opera should not be privileged over other elements and should be composed in accordance with the dramatic needs of the story. Accompanists envisioned film music as performing the same function. Especially influential was Wagner's use of the leitmotif, an identifying musical passage, often a melody, associated through repetition with a particular character, place, emotion, or even abstract idea. Silent film accompanists often used the leitmotif to unify musical accompaniment, and during the period of film's transformation into a narrative form, leitmotifs became an important device for clarifying the story and helping audiences keep track of characters. However, Eisler and Adorno, among other critics, argued that the leitmotif was inappropriate for such short art forms as films.

Spurred by reconstructions in the 1970s of silent film scores by scholar-conductors such as Gillian Anderson and by screenings of the restoration of Abel Gance's *Napoléon*, silent film has enjoyed a resurgence. The rebirth of the silent film with musical accompaniment has made it possible for audiences today to feel something of the all-encompassing nature of the silent film experience. Original scores have been rescued from oblivion, and new scores have been created. Some of these restorations exist in recorded form and boast the original music: *Broken Blossoms* (1919), scored by Louis Gottschalk (1864–1934); *Metropolis* (1927), scored by Gottfried Huppertz; *Chelovek s kino-apparatom* (*The Man with a Movie Camera*, 1929), with a recreation of the director Dziga Vertov's (1896–1954) score by the Alloy Orchestra. Other restorations feature newly composed scores: *The Wind* (1928), scored by Carl Davis; *Stachka* (*Strike*, 1925), scored by the Alloy Orchestra; and *Sherlock, Jr.* (1924), scored by the Clubfoot Orchestra. Giorgio Moroder (b. 1940) used disco in his restoration of *Metropolis* in 1985. But the most exciting development has been the success of silent screenings with live musical accompaniment at film festivals, in art museums, on college campuses, and sometimes even in renovated silent film theaters.

THE CONVERSION TO SOUND

Most filmmakers responded to the coming of sound by transplanting the live, continuous musical accompaniment of silent film to the mechanically produced soundtrack. Standardizing and upgrading the quality of musical accompaniment was one of the most compelling reasons for Warner Bros. to invest in Vitaphone, an early sound reproduction system. Warner Bros. hired the New York Philharmonic to record the studio's first sound feature, *Don Juan* (1926). Al Jolson's ad-libbing in their second Vitaphone venture, *The Jazz Singer* (1927), not only put the "talk" in "talking pictures" but ushered in a new aesthetic possibility: realism. Sound, specifically dialogue

and sound effects, could now be used to heighten the impression that films captured reality. Musical accompaniment challenged this aesthetic, and thus the common practice in Hollywood in the transition years between silent and sound expunged background music entirely. Most films made during this period either have no musical score at all or include only music visibly produced within the world of the story. And yet the power of film music could not be ignored. Many films go to absurd lengths to include musical accompaniment "realistically." In Josef von Sternberg's crime drama *Thunderbolt* (1929), for instance, prisoners just happen to be practicing music in their cells (von Suppe's *Poet and Peasant*) during the film's climax.

Some filmmakers and composers proved more adventurous. In Hollywood, the composer Hugo Riesenfeld (1879–1939) used two different musical mediums simultaneously (a jazz band and a small orchestra) for distinctive effects in *Sunrise* (1927). Charlie Chaplin (1889–1977), who composed the music for some of his films, continued the practice of continuous musical accompaniment well into the 1930s for films such as *City Lights* (1931) and *Modern Times* (1936). In France, the director René Clair (1898–1981) used musical effects to replace naturalistic sound in *Le million* (*The Million*, 1931) and *Sous les toits de Paris* (*Under the Roofs of Paris*, 1930); Maurice Jaubert (1900–1940) used electronic manipulation to produce an arresting musical cue for a slow-motion sequence in Jean Vigo's *Zéro de conduite* (*Zero for Conduct*, 1933). Eisler scored Joris Ivens's documentary *Nieuwe gronden* (*New Earth*, 1934) using naturalistic sound for the machines but music for the humans. In Britain, Arthur Benjamin (1893–1960) experimented with orchestration techniques to compensate for the problems in early sound recording, reducing the number of strings and even creating pizzicato from tuba and piano. And in Berlin, at the German Film Research Institute, experiments in scoring techniques for sound film produced filmic equivalents for musical principles, such as the dolly-in and dolly-out for crescendo and decrescendo and superimpositions for dissonant chords. Perhaps it was these experiments that Arnold Schoenberg (1874–1951) was thinking of when he was approached by Hollywood. The story goes that he expressed interest if he could complete his score first and the film could be made to fit his music. It is tempting to consider Fritz Lang's *M* (1931) in this light, where the mesmerizing circularity of the motif from Grieg's *In the Hall of the Mountain King*, whistled by the murderer, finds its reflection in a series of circular visual motifs.

By the 1930s it was clear that sound film would replace silent film as the norm, and that film music fulfilled an important function in sound film. Sometimes cautiously and sometimes boldly, filmmakers began reintegrating background music. In Hollywood, music could be heard connecting sequences, underscoring dramatic moments, and providing accompaniment for the credit sequences (main title and end titles). But ultimately it was a giant gorilla that taught Hollywood the importance of film music. Worried about the credibility of the eighteen-inch models used in the creation of the monster in *King Kong* (1933), the film's director, Merian C. Cooper (1893–1973), asked Max Steiner (1888–1971) to write music to bring Kong to life. And bring Kong to life he did, scoring over three-quarters of the film's one-hundred-minute runtime. The success of *King Kong* validated Steiner's saturated scoring techniques. In 1934 the Academy of Motion Picture Arts and Sciences added the originally composed film score as an award category.

THE CLASSICAL HOLLYWOOD FILM SCORE

Hollywood has dominated filmmaking as an institutional practice, and its model for the use of music in film has had a determining influence on the history of film music. This influence can be traced to the classical studio era, roughly from the early 1930s to the 1960s. A wave of academic interest in film music that began in the 1980s has focused on the classical Hollywood film score with several important books devoted to the subject. In the 1930s several key composers—most importantly Steiner, Erich Wolfgang Korngold (1897–1957), and Alfred Newman (1901–1970), but also Dmitri Tiomkin (1894–1979), Miklós Rózsa (1907–1995), Bronislau Kaper (1902–1983), and Franz Waxman (1906–1967)—rose to prominence for their work in films. All but Newman had emigrated from Europe, many fleeing Hitler and the rise of fascism. (Korngold was Jewish, and his family had a narrow escape from Austria.)

The classical Hollywood film score follows a set of conventions so as to help tell the film's story and to engage the audience in the world that the story creates. To this end, music was subordinated to narrative and rendered unobtrusive through techniques developed both to mask its entrances and exits and to subordinate it to dialogue. Music served several important functions nonetheless: sustaining narrative unity by covering over potential gaps in the narrative chain (such as transitions between sequences and montages); controlling connotation; fleshing out mood, atmosphere, historical time, geographic space, and characters' subjectivity; connecting the audience emotionally to the film; and heightening screen action, often through mickey-mousing, or directly synchronizing screen action and music. (The term comes from the making of Disney animated films, where characters move in exact time to the music—think of Mickey conducting the brigade of brooms in *The Sorcerer's*

Apprentice sequence in *Fantasia* [1941]). The medium of the classical film score was symphonic; its musical idiom derived from late romanticism, with its structure dependent on the leitmotif. Outstanding examples of the form are too numerous to list, but highlights include Korngold's *The Adventures of Robin Hood* (1938), Newman's *Wuthering Heights* (1939), and Steiner's *Gone with the Wind* (1939), the last with over three hours of music.

Studio filmmaking in the classical Hollywood era emphasized efficiency, following an assembly-line mode of production with a highly specialized division of labor. Work on the score began when the film was in rough cut and was usually completed within three to six weeks. (There were exceptions: Korngold, for one, got more time.) The process began with a spotting session to determine in which "spots" to place the music. Composers produced sketches of the music, but orchestrators (and sometimes arrangers for songs and choral material) produced the finished version of the score. (Again there were exceptions: Herrmann orchestrated all his own film scores.) The top Hollywood composers established long-term relationships with orchestrators or arrangers they trusted: Korngold with Hugo Friedhofer (1901–1981) (who would go on to become an important composer himself), Tiomkin with choral arranger Jester Hairston (1901–2000). Some composers had the privilege of conducting their own work, but usually it was the studio's musical director who conducted. Often, especially on "B" pictures, teams of composers, arrangers, and orchestrators worked together, so screen credit can be misleading. On *Stagecoach*, five composers shared screen credit, seven worked on the score, and four received the Academy Award® that year for Music (Scoring). Ultimately, the producer had the final approval over the score and the studio owned any music written for its films.

Hollywood's mode of production did not accommodate individuality, perfectionism, or complaint. And yet some composers managed all three. Caryl Flinn argues that it was just these conditions and the sense of artistic frustration that they fostered that drove Hollywood composers to romanticism, with its idealized focus on the individual, the transformative nature of creativity, and art's transcendence over social and historical reality.

The symphonic film score remains an option for composers, especially in studio big-budget, action-adventure films and historical epics. The phenomenal success of John Williams's scores, such as *Jaws* (1975), *Close Encounters of the Third Kind* (1977), and especially the first *Star Wars* trilogy (1977–1983), has been instrumental in revitalizing both the symphonic medium and a neoromantic idiom. Composers who work in the form include Jerry Goldsmith (1929–2004), Danny Elfman (b. 1953), James Horner (b. 1953), and Howard Shore (b. 1946), as well as composers who established their careers abroad, such as John Barry, Nino Rota (1911–1979), Ennio Morricone (b. 1928), Maurice Jarre (b. 1924), Georges Delerue (1925–1992), and Patrick Doyle (b. 1953), to name but a few. Even in films with more contemporary musical styles and instrumentation, it is interesting to note the extent to which classical scoring principles remain. Amid the rock scoring of *The Matrix* trilogy (1999–2003), for instance, the leitmotif for Neo, the protagonist, can be heard in a classically inflected, symphonic arrangement.

THE CLASSICAL SCORE AND BEYOND: INSIDE AND OUTSIDE HOLLYWOOD

In the 1940s and 1950s the classical film score began to undergo an evolution when the next generation of film composers arrived in Hollywood. With them came more contemporary musical language from the worlds of art music and popular music that opened up the stylistic possibilities of the Hollywood score. Largely American by birth and by training, composers such as Herrmann, David Raksin (1912–2004), Alex North (1910–1991), Elmer Bernstein (1922–2004), Leonard Rosenman (b. 1924), and Henry Mancini (1924–1994) incorporated American vernacular music (folk song and jazz), elements of modernism (dissonance, polytonality, serial music), and the popular song in their film scores. Later, composers from the world of art music brought postmodern musical techniques. And in the 1950s, concurrent with many of these developments, rock 'n' roll arrived.

Folk song had become a subject of interest to American art music composers in the 1930s. Rejecting the experimental techniques of modernism, composers such as Aaron Copland (1900–1990) sought to define a uniquely American idiom and turned to folk song and its distinctive melodies and harmonic textures. Copland's *Billy the Kid* (1938), *Rodeo* (1942), and *Appalachian Spring* (1942) are prototypical examples of this "American" sound, which crossed over into film in the scores for *Of Mice and Men* (1940) and *Our Town* (1940), by Copland, and for the documentaries *The Plow That Broke the Plains* (1936), *The River* (1938), and *Louisiana Story* (1948), by Virgil Thomson (1896–1989). Perhaps because the western as a genre focuses so transparently on American values, its scores have tended to favor this approach. Tiomkin's scores for *Duel in the Sun* (1946) and *Red River* (1948), and Richard Hageman's (1882–1966) for several John Ford westerns, especially *Fort Apache* (1948) and *She Wore a Yellow Ribbon* (1949), are exemplary. A more recent example of the use of this American sound can be heard in Randy

JOHN WILLIAMS

b. Long Island, New York, 8 February 1932

With well over a hundred major feature films to his credit to date, the American-born and -trained John Williams may well be the most recognizable film composer in the Western world. He began his career as a studio pianist and arranger, working with the composers Alfred Newman, Dimitri Tiomkin, Franz Waxman, Bernard Herrmann, and Henry Mancini, and went on to become Hollywood's most successful composer as well as one of its most prolific (although he has not caught up with the legendary Max Steiner and his 350-plus credits). Largely responsible for the revival of the symphonic film score written in a neoromantic style, and for adapting the film orchestra to the modern recording studio, Williams is a connection to Hollywood's classical era.

More important, Williams has raised the visibility (or to be more precise, the audibility) of the film score. In an era when much of the music heard at the movies is almost immediately forgotten, Williams's music has entered the popular consciousness—the shark motif from *Jaws* (1975), the theme from *Star Wars* (1977), the five-note melody through which aliens and earthlings communicate in *Close Encounters of the Third Kind* (1977). Indelibly identified with the *Star Wars* films, Williams has scored all six of them. He once described them as silent movies, and indeed the music is an important part of these films' success. At the age of seventy-three, he completed over two hours of music for the last installment, *Revenge of the Sith* (2005).

In 1975 Williams began what would prove to be his most enduring partnership, with the director Steven Spielberg. This collaboration on over two-dozen films across a variety of genres has given Williams a premiere showcase for his work. Although less known for his art music, Williams has pursued a career on the concert stage as a composer and conductor, wielding the baton at the Boston Pops from 1980 to 1993. He remains Hollywood's preeminent film composer.

Newman's (b. 1943) score for *The Natural* (1984). Contemporary composers have opened up the focus on American folk song to include various types of world music. Elliot Goldenthal (b. 1954), for instance, himself a student of Copland, uses Mexican folk traditions and indigenous instruments in *Frida* (2002).

Beginning in the 1950s, jazz proved another possibility, especially for films set in urban environments. In edgy urban dramas, jazz exploded onto the soundtrack in scores such as *A Streetcar Named Desire* (1951), by Alex North (1910–1991); *The Man with the Golden Arm* (1955), by Elmer Bernstein; *Touch of Evil* (1958), by Mancini; and in numerous biopics about (white) jazz artists such as *Young Man with a Horn* (1950) and *Rhapsody in Blue* (1945). Krin Gabbard makes the case that this focus on white jazz artists provides a key to understanding American ideology of race, gender, and sexuality. Later filmmakers such as Robert Altman (b. 1925) and Clint Eastwood (b. 1930) (who also composes film scores) have used jazz to great effect. Hollywood did turn its attention to black jazz performers in *Mo' Better Blues* (1990) and biopics such as *Lady Sings the Blues* (1972), about the singer Billie Holiday, and *Bird* (1988), about the saxophone legend Charlie Parker. Jazz on the soundtrack was initially associated with urban decadence; the extent to which it has shed this association remains an interesting question. A number of jazz artists have themselves scored films: Duke Ellington (*Anatomy of a Murder*, 1959), Charles Mingus (*Shadows*, 1959), Herbie Hancock (*Death Wish*, 1974), and Joshua

Redman (*Vanya on 42nd Street*, 1994), among others. But the premiere showcase for African American jazz performers in American film may well have been the live action and animated shorts, produced in the 1930s and 1940s, featuring jazz greats Duke Ellington, Cab Calloway, Louis Armstrong, Fats Waller, Bessie Smith, and Billie Holiday. The racism of the era is strongly in evidence in many of them. In cartoons produced by the Max Fleischer studio, for instance, jazz artists found themselves captured not only by animated form (Cab Calloway was a walrus) but by numerous racial stereotypes.

The introduction of rock 'n' roll occurred simultaneously with these developments. First heard on a feature film soundtrack when Bill Haley's song "Rock Around the Clock" was used under the titles of *The Blackboard Jungle* (1955), rock 'n' roll was initially limited to teen pics and used to target young audiences. In the 1970s soul could be heard on the soundtrack in films like *Shaft* (1971), for which Isaac Hayes wrote the songs as well as the background score. Rock 'n' roll ultimately functioned as a pressure point on the classical Hollywood film score and was an important influence in a new type of scoring that would emerge in the 1960s, the compilation score.

In the 1940s and 1950s, modernist musical techniques, such as dissonance, atonality, striking rhythms, and unconventional instrumentation, made their way into Hollywood film scores such as Rózsa's for *Spellbound* and *The Lost Weekend* (both 1945, and both making use of the theremin, one of the first electronic instruments), and Rosenman's for *East of Eden* (1955) and *Rebel Without a Cause* (1955). The cutting edge of modernism, serial music, can be heard in Rosenman's score for *The Cobweb* (1955). Initially, electronic instrumentation was limited to horror films and science fiction or used for specific psychological effects (dream sequences, for instance), but it moved into the mainstream and high visibility with Giorgio Moroder's score for *Midnight Express* (1978) and Vangelis's for *Blade Runner* (1982). In the late twentieth century Philip Glass (b. 1937) brought minimalism out of the world of art music and into the film score. Characterized by repetitive musical

figures that disturb conventional notions of rhythm and time, Glass's mesmeric music first attracted attention in *Koyaanisqatsi* (1983) and *The Thin Blue Line* (1988). Glass's work in Hollywood has been limited (*The Hours* in 2002 is his most high-profile score), but not his influence: the distinctive techniques of minimalism (but with more conventional tonality) can be heard in many Hollywood films.

THE USE OF POPULAR SONG

The rise of the popular song precipitated the most fundamental and lasting changes to the Hollywood film score. Popular music had been used in film accompaniment from the beginning; by the 1920s studios began promoting songs written expressly for their films, known as theme songs, through sheet music and record sales. Popular songs appeared in sound film, too. Sometimes they were performed on-screen, as by Dooley Wilson, singing "As Time Goes By," in *Casablanca* (1942), and sometimes they were heard emanating from on-screen nightclubs or radios. In the 1930s and 1940s, songs were sometimes culled from a score's themes with lyrics hastily added to tap into additional profits. Raksin's leitmotif for the title character of *Laura* (1944) became "Laura," with the addition of Johnny Mercer's lyrics. The large-scale promotion of theme songs, however, was a product of the 1950s and the phenomenal success of Tex Ritter's "Do Not Forsake Me" from *High Noon* (1952). Theme songs were everywhere, now heard in films complete with their lyrics, cross-promoted on radio, television, and on record, and generating huge revenue for the studios.

The popularity of soundtracks dates from this era, although there are some interesting earlier examples, such as Disney's *Snow White* (1938). Often composed in advance of the score, theme songs had a determining influence on both the shape and sound of Hollywood films in the 1950s and 1960s. Mancini created many of the most memorable songs of the era, such as "Moon River" from *Breakfast at Tiffany's* (1961). Yet Mancini never defined himself as a songwriter, considering song melodies as motifs to be exploited in the scoring process. Jeff Smith argues persuasively that the theme song did not undermine classical scoring principles, positing that scores based on theme songs fulfilled the primary

functions of classical film music: to attend to the needs of the narrative and to connect the audience to the film emotionally and psychologically. Classical scoring depended to a large extent on musical conventions to generate audience response and to lend meaning. Theme songs shifted away from those conventions to make use of popular culture, with lyrics providing an additional layer to make the meaning of a film resonate.

In the 1960s, new scoring possibilities produced a hybrid of the theme score and rock 'n' roll—the compilation score. Compiled scores consist of a collection of existing songs, often used in their original recorded format and largely derived from noncinematic sources (usually popular music but also opera and classical music); these can be supplemented by original songs and orchestral background scoring. The compilation score has brought cinema full circle, harking back to the days of silent cinema when accompanists would select music from a variety of sources, including popular song. The compilation score for Quentin Tarantino's *Kill Bill: Vol. I* (2003), for example, contains Nancy Sinatra's cover of Sonny and Cher's "Bang Bang" and songs by Isaac Hayes, Tomoyasu Hotei, Charlie Feathers, Al Hirt, Quincy Jones, Meiko Kaji, and a cue from Herrmann's score for *Twisted Nerve* (1968). Other notable compilation scores feature various kinds of popular music: rock 'n' roll (*Easy Rider*, 1969), disco (*Flashdance*, 1983), rap (*Dangerous Minds*, 1995), country (*Nashville*, 1975), popular standards (*Sleepless in Seattle*, 1993) and eclectic mixes (*Apocalypse Now*, 1979, which includes Wagner's *Ride of the Valkyries* and the Rolling Stones' "[I Can't Get No] Satisfaction.") Cross-promoted on radio, MTV, and various recording mediums, soundtracks now precede a film's release and may produce higher profits than the film itself.

Compilation scores have brought dramatic changes to film scoring. Responsibility shifts from the composer to the producer or director (to name just two examples, Tarantino and Woody Allen), who select the music for their films themselves. The choice may fall to a music supervisor, whose job includes clearing copyright for the final selections. Compilation scores also present some formidable challenges to traditional film scoring. Because songs have a structural autonomy of their own, they sometimes do not correspond directly to the image track. Additionally, audiences may perceive songs on a more conscious level than background orchestral scoring. Preexisting songs also trail with them not only a cultural history, but often a personal history, triggering memories and experiences that may be at odds with the film's dramatic needs. Anahid Kassabian views this change as liberating, as compilation scores have opened up possibilities for alternative voices (especially women and minorities) to be heard. Interestingly, the job of music supervisor has opened up economic space for women. While female composers' access to Hollywood has been limited in the past (Elizabeth Firestone and Ann Ronnell found some work in the classical studio era) and more are doing so at present (Shirley Walker, Rachel Portman, Anne Dudley), women now dominate the ranks of music supervisors in Hollywood and thus have more access to film music than they had in the past. But even with these changes, compilation scores continue to respond to the image track, exploiting the associations that songs generate to fulfill some of music's most conventional functions: to create mood, heighten atmosphere, aid in characterization, establish time and place, and relay theme.

INTERNATIONAL FILM: OTHER TRADITIONS, OTHER PRACTICES

Outside Hollywood, national cinemas the world over have adopted and adapted film music to fit their own particular needs, sometimes emulating conventional Hollywood practice, sometimes departing from it in distinctive ways, sometimes ignoring it altogether. As compared to Hollywood, international film, historically, has been characterized by a less capital-intensive and elaborate machine for the production and distribution of film. Funding is different, relying more on government subsidies than sales, and many national cinemas have been or are protected from competition by legislation (import quotas, for instance). International directors have also been more interested in using composers from the world of art music, resulting in more stylistic diversity. In Britain, Arthur Bliss (1891–1975), Arthur Benjamin, and William Walton (1902–1983) each composed important early film scores. Most memorable are the scores for the futuristic *Things to Come* (1936), by Bliss; *The Man Who Knew Too Much* (1934), by Benjamin and containing his original composition "The Storm Cloud Cantata" (retained by Herrmann in his score for the remake in 1956); and several of Laurence Olivier's adaptations of Shakespeare, including *Hamlet* (1948) and *Henry V* (1944), by Walton. Benjamin Britten and Ralph Vaughn Williams (1872–1958) composed scores for British documentaries in the 1930s and 1940s, with *Song of Ceylon* (1934) an important example. Michael Nyman (b. 1944) scored a series of films for Peter Greenaway, including *The Cook, the Thief, His Wife & Her Lover* (1989), and Patrick Doyle did the same for Kenneth Branagh, including his adaptations of *Henry V* (1989) and *Hamlet* (1996).

Maurice Jaubert worked prominently in early French sound film, with Jean Vigo, René Clair (*Quatorze Juillet*, [*July 14*, 1933]), and Marcel Carné (*Le Jour se lève*, [*Daybreak*, 1939]), before his untimely death during

SERGEI PROKOFIEV

b. Sontsovka, Ukraine, Russia, 23 April 1891, d. Moscow, USSR (now Russia), 5 March 1953

It is sometimes described as one of the greatest film scores ever written; it is often described as one of the worst soundtracks ever recorded. The score for *Alexander Nevsky* (1938), one of three films that the Russian composer Sergei Prokofiev scored for the legendary director Sergei Eisenstein, is to this day one of cinema's most striking and memorable film scores.

Like many international film composers, Prokofiev, born in Ukraine but raised in St. Petersburg, had an established reputation in art music when he turned to film scoring. His work with Eisenstein on *Nevsky* was a collaboration in the fullest sense of the word: some of the film was shot to Prokofiev's music and some of Prokofiev's music was composed to Eisenstein's footage. In *The Film Sense*, Eisenstein wrote that Prokofiev found the inner essence of the images, capturing the dynamic play of the frame's graphic content instead of merely illustrating action on the screen. The film was conceived to honor a medieval Russian hero and to ignite Soviet passions against Germany on the eve of World War II. Eisenstein, in trouble with Soviet authorities, had not made a film in years; Prokofiev, who lived extensively abroad before returning to Moscow in 1936, was finding his career similarly stalled. When Stalin himself asked to see the film, Eisenstein and Prokofiev hastily finished a rough-cut of the film's image track and soundtrack to meet with his approval. (Stalin liked the film, at least initially; *Nevsky*'s fortunes would rise and fall with the Soviets' shifting political alliances during World War II.) In fact, it is highly likely that this rough-cut version is the film we see and hear today. Given the state of Soviet sound recording in the 1930s, the speed with which the score was recorded, and the size of the orchestra that performed it, the soundtrack is crude at best. Today, symphony orchestras around the world have accompanied screenings of *Alexander Nevsky* live in the concert hall, giving Prokofiev's score the performance it deserves.

On what turned out to be his last concert tour of the West in 1938, Prokofiev found himself in Hollywood, with his wife and children back in Moscow as collateral against his return. Touring Disney Studios, he met with Walt Disney himself to discuss the animation of *Peter and the Wolf*, one of Prokofiev's most enduring concert pieces, for *Fantasia* (1940). That idea would come to fruition not in *Fantasia*, however, but in *Make Mine Music* (1946), in which the *Peter and the Wolf* segment becomes Prokofiev's only "Hollywood" film score.

World War II. But George Auric (1899–1983) proved France's most prolific and versatile composer of the pre- and postwar eras. In France he scored *Le Sang d'un poète* (*The Blood of a Poet*, 1930), *La Belle et la bête* (*Beauty and the Beast*, 1946), and *Orphée* (*Orpheus*, 1950) for the avant-garde filmmaker Jean Cocteau; in Britain, *The Lavender Hill Mob* (1951); and in Hollywood, *Roman Holiday* (1953). Maurice Jarre established his career in France in the 1950s and 1960s and catapulted to the top of the international "A" list with scores for *Lawrence of Arabia* (1962) and *Doctor Zhivago* (1965). The French New Wave brought a new set of French composers to the fore, including Pierre Jansen (b. 1930), who scored over thirty films for Claude Chabrol, and Georges Delerue, who worked with Jean-Luc Godard (*Le Mépris*, [*Contempt*, 1963]), Alain Resnais (*Hiroshima mon amour*, 1959), and François Truffaut (eleven films, including *Jules et Jim*, 1962) before embarking on an international career, scoring *Il Conformista* (*The Conformist*, 1970), and eventually settling in Hollywood. Among the most striking film scores of the twentieth century are those for several Godard films that capture the unconventionality and iconoclasm of the director's filmmaking style: Martial Solal's (b. 1927) jazzy score for *À bout de souffle*

Sergei Prokofiev. © BETTMANN/CORBIS.

(*Breathless*, 1960); Michel Legrand's (b. 1932) truncated theme and variations for *Vivre sa vie* (*My Life to Live*, 1962); Antoine Duhamel's (b. 1925) score for *Weekend* (1967), which features a concert pianist in a barnyard; Gabriel Yared's (b. 1949) score for *Sauve qui peut (la vie)* (*Every Man for Himself*, 1980), where characters in a shoot-out run past the orchestra playing the score; and *Prénom Carmen* (*First Name: Carmen*, 1983) with its mix of Beethoven, Bizet, and Tom Waits. The much-noticed score for *Diva* (1981) features a stylish mix of opera and techno, with recording itself becoming a part of the plot.

Hans Eisler worked in Germany and France before and after his stint in Hollywood, composing original and unconventional scores such as those for *Kuhle Wampe oder: Wem gehört die Welt?* (1932) and the documentary *Nuit et brouillard* (*Night and Fog*, 1955). Peer Raben (b. 1940) lent a distinctive sound to the work of Rainer Werner Fassbinder in several films, including *Die Ehe der Maria Braun* (*The Marriage of Maria Braun*, 1979) and *Berlin Alexanderplatz* (1980). In Italy, Nino Rota forged an extremely important collaboration with Federico Fellini, as did Ennio Morricone with Sergio Leone. In the Soviet Union, Shostakovich continued to score films, including Grigori Kosintsev's *Hamlet* (1964) and *King Lear* (1975). Serge Prokofiev's (1891–1953) famous collaboration with Sergei Eisenstein resulted in the scores for *Alexander Nevsky* (1938) and *Ivan Groznyy* (*Ivan the Terrible*, part 1, 1944; part 2, 1958). In India, Ravi Shankar (b. 1920) scored Satyajit Ray's (1921–1992) Apu trilogy, and Ray himself scored his *Ashani Sanket* (*Distant Thunder*, 1973) and *Ghare-Baire* (*The Home and the World*, 1984). In Indian popular cinema, composers, arrangers, and "playback singers" like Lata Mangeshkar and Asha Bhosle (who dub songs for the stars), rank high in a film's credits and achieve enormous popularity in their own right: a film's success can often depend on the "hit" status of its songs. In Japan, Fumio Hayasaka (1914–1955) collaborated with Akira Kurosawa on many of his early films, including *Rashômon* (1950), *Ikiru* (*To Live*, 1952), and *Shichinin no samurai* (*Seven Samurai*, 1954). Tôru Takemitsu (1930–1996), whose extraordinary range encompasses a variety of historical styles, worked in Japan with Hiroshi Teshigahara on *Suna no onna* (*Woman of the Dunes*, 1964), with Kurosawa on *Dodesukaden* (1970) and *Ran* (1985), and with Nagisa Oshima on *Tokyo senso sengo hiwa* (*The Man Who Left His Will on Film*, 1970); in France he worked on the omnibus film *L'Amour à vingt ans* (*Love at Twenty*, 1962); and in Hollywood, at the end of his life, he scored *Rising Sun* (1993). The director Teinosuke Kinugasa (1896–1982) composed and recorded a score for his 1926 surrealist film *Kurutta Ippeji* (*A Page of Madness*) almost fifty years after its initial release. And Ryuichi Sakamoto crossed over from the world of popular music to the soundtrack with his score for Oshima's *Merry Christmas Mr. Lawrence* (1983).

MUSIC AND ANIMATION

Music for animation has long suffered from critical neglect despite being the form of film music that many viewers first encounter. It diverges significantly from other film music practices. In the United States, for instance, although it developed concurrently with classical scoring principles (sometimes, as in the case of Warner Bros., at the same studio) and even shared composers and techniques, music for animation operates in a fundamentally different way. From the beginning, music for animated films was characterized by stylistic diversity (jazz, swing, pop, modern, and even serial music), an eclectic approach to musical genres (mixing opera, jazz, pop songs, and classical music), and an indifference to the leitmotif and other unifying strategies (in Warner Bros. cartoons, for instance, music emphasizes the cuts). Animated films were often created in "reverse," with the music composed in advance of the images, and decades before the classical score exploited popular songs, the

Sergei Prokofiev worked closely with filmmaker Sergei Eisenstein on the score for* Alexander Nevsky *(1938). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

cartoon soundtrack was filled with them. The golden age of film animation in the United States spans the years from the conversion of sound to the breakup of the studio system, and during that period Disney Studios pioneered a number of important technical advances: mickey-mousing, a crucial model for the integration of music and action for classical Hollywood composers; the tick system, which facilitated precise synchronization and which developed into the click track, a standard operating procedure in Hollywood; and the forerunner of today's surround sound, Fantasound, a stereophonic multitrack recording and playback system that surrounded the audience in sound by positioning speakers around the theater.

But, ultimately, it was the composers who defined the form. Carl Stalling (1891–1972), who composed over six hundred cartoon scores in his career. Stalling began in the late 1920s with Disney scoring many of the early Mickey Mouse shorts and helped to inaugurate the *Silly Symphony* series, where classical music was accompanied by animated images. (The trajectory of the *Silly Symphonies* led to *Fantasia*, a box office failure at the time but much beloved today.) Later at Warner Bros., Stalling transformed the house style by creating a pastiche of quotes, some only a few measures long, from a number of sources and in a variety of styles. Scott Bradley (1891–1977) at MGM experimented with twelve-tone composition for *Tom and Jerry* cartoons, once stating, "I hope that Dr. Schoenberg will forgive me for using *his system* to produce funny music, but even the boys in the orchestra laughed when we were recording it" (quoted in Goldmark, p. 70). At UPA in the 1950s, Gail Kubik (1914–1984) adroitly exploited percussion in his scores for the *Gerald McBoing Boing* series. The rise of television and the cost-saving measures attending the breakup of the studios signaled the end of the golden age, when the US animation industry, with some exceptions, transferred largely to television. The renaissance of Disney feature animation in the 1980s continued the practice of modeling Disney films and their scores after musicals, although as *South Park: Bigger, Longer, & Uncut* (1999) reminds us, animated musicals do not have to be conventional. Internationally, music for animation has achieved high visibility in Japan, where soundtracks for Japanese animation, anime, have become

an important part of the Japanese recording industry. Some of these soundtracks mix traditional Japanese and Western musics in interesting ways. Shoji Yamashira's *Akira* (1988), for instance, combines Buddhist chant, taiko drumming, and synthesizers. Film scholars and musicologists have begun to turn their attention to "cartoon music," and books on animation now often include attention to the score.

CONCLUSION

Film music, as the composer David Raksin (1912–2004) put it, "makes the difference. There's no doubt about that. All you have to do to get the point of film music across to the skeptical is to make them sit though the picture *without* the music" (quoted in Kalinak, p. xvii). This is exactly what Herrmann did during the production of *Psycho*. Hitchcock did not think the shower sequence should be accompanied by music; Herrmann thought otherwise and asked for the opportunity to score it. Hitchcock, not entirely satisfied with the shower sequence himself, was open to the experiment. Later, Herrmann screened two versions: one accompanied only by sound effects, the other, accompanied only by music. Hitchcock chose the latter, resulting in one of cinema's most powerful and arresting moments, a grisly murder made even more horrific by the shrieking violins that accompany it. Not all films use music, but the vast majority of films from every corner of the globe from the nineteenth century to the twenty-first have exploited it. All evidence points to its persistence well into the future.

MUSICALS

As a distinct genre, the film musical refers to movies that include singing and/or dancing as an important element and also involves the performance of song and/or dance by the main characters. Movies that include an occasional musical interlude, such as Dooley Wilson's famous rendition of "As Time Goes By" in *Casablanca* (1942), generally are not considered film musicals. By this definition neither would *American Graffiti* (1973), which, while featuring a continuous soundtrack of rock oldies coming from car radios in the nostalgic world of the story, has no performances by its ensemble cast.

The movie musical exploits more fully than any other genre the two basic elements of the film medium—movement and sound. In melodrama, although the characters' intense emotions are expressed through stylistic means (*mise-en-scène*, lighting, music), their feelings are often repressed; by contrast, in film musicals characters are uninhibited and outwardly express emotion through song and dance. Gene Kelly's (1912–1996) famous refrain in *Singin' in the Rain* (1952), "Gotta dance," refers not only to his own inclination in that specific film but to the genre as a whole. Classical musicals depict a utopian integration of mental and physical life, of mind and body, where intangible feeling is given form as concrete yet gracious physical action. Whether the characters in musicals are feeling up or down, whether they are alone or in public, they are always able to fulfill their desire or to feel better by dancing or singing. In his influential discussion of entertainment, Richard Dyer cites the film musical specifically for its utopian sensibility, which he defines as its ability to present complex and unpleasant feelings in simple, direct, and vivid ways (Altman, 1981).

With the exception of some comedies, the musical is the only genre that violates the otherwise rigid tenets of classic narrative cinema. Just as Groucho Marx addresses some of his wisecracks directly to the camera, so characters sing and dance to the camera, for the benefit of the film viewer, rather than any ostensible audience within the film's story. As well, often the music accompanying singing stars conventionally comes from "nowhere"—outside the world of the film—another violation of the rules of realism that govern almost all other genres. The scene in *Singin' in the Rain* where Kelly adjusts the lighting and switches on a romantic wind machine on an empty soundstage to set the mood before proclaiming his love for Debbie Reynolds in the song "You Were Meant for Me," acknowledges the conventions of artificiality that characterize performance in musical films.

THE RISE OF THE FILM MUSICAL

In the United States the film musical, with its combination of song and dance numbers woven into a narrative context, evolved from the non-narrative entertainment forms of minstrelsy, vaudeville, Tin Pan Alley, British music hall, and musical theater. Many of the composers of musicals wrote popular tunes for sheet music published by the numerous music companies located on the block of 29th Street between Broadway and Fifth Avenue in New York City, commonly known as Tin Pan Alley. Minstrel shows, the most popular form of music and comedy in the nineteenth century, featured white actors performing in blackface. Minstrelsy, which lasted well into the twentieth century, was built on comic racial stereotypes, and its influence may be seen directly in early film musicals starring Al Jolson (1886–1950) and

Eddie Cantor (1892–1964), both of whom performed in blackface on the stage and then carried their "burnt cork" personas into film. The last of three parts in any minstrel show was a short comedy sketch with music, often a parody of a contemporary hit, and it was also a clear predecessor of what would evolve into musical theater as epitomized by Broadway in New York City and then in Hollywood cinema. Minstrelsy's practice of racial segregation (there were both all-white and all-black minstrel shows) was mirrored by the practice of producing segregated film musicals featuring all-black casts, like *Hallelujah* (1929), *Cabin in the Sky* (1943), *Carmen Jones* (1954), and *The Wiz* (1978).

The film musical has always borrowed from musical theater. Many film adaptations drew on theatrical musicals, or contain songs borrowed from them, and many performers, choreographers, composers, lyricists, and directors moved from musical theater to film musicals. Jerome Kern (1885–1945) and Oscar Hammerstein II's (1895–1960) *Show Boat* was adapted for the screen no less than three times—in 1929, 1936, and 1951.

When synchronized sound was introduced in 1927, the musical immediately became one of the most popular film genres. Opening in October 1927, *The Jazz Singer*, often cited as the first feature-length sound film and the first film musical, was a sensational hit. The movie, which featured established Broadway star Al Jolson, was in fact mostly a silent film with seven musical sequences added, including such signature Jolson tunes as "Mammy" and "Waiting for the Robert E. Lee." The story of a young Jewish man who abandons his future as a cantor and, against his father's wishes, becomes a popular singer was the stuff of melodrama; it was the talking and singing that audiences remembered.

Jolson's famous ad-libbed line, "You ain't heard nothin' yet," seemed to announce not only *The Jazz Singer*, but the arrival of the musical genre itself. In the 1930s numerous Broadway composers, including Irving Berlin (1888–1989), Cole Porter (1891–1964), Richard Rodgers (1902–1979), Lorenz Hart (1895–1943), and George (1898–1937) and Ira Gershwin (1896–1983), happily came to work in Hollywood on the many musicals suddenly being churned out by the studios. Hollywood pundits observed that Greta Garbo and Rin Tin Tin were the only stars who were not taking singing lessons. The rush of the studios to convert to sound and to produce musicals to exploit the new technology is treated humorously in the plot of *Singin' in the Rain*: when the attempt to make a sound film with silent film star Lina Lamont (Jean Hagen) results in disaster because of her thick Brooklyn accent, Don Lockwood (Gene Kelly) and Cosmo Brown (Donald O'Connor) save the film by changing the romantic adventure they were making, "The Dueling Cavalier," into a musical titled *The Dancing Cavalier* and dubbing Lamont's voice with that of Kathy Selden (Debbie Reynolds). Ironically, Reynolds's own voice was in actuality dubbed by another singer, Betty Royce.

As the industry quickly converted to sound, several distinct subgenres of the musical emerged. Revue musicals, containing a loosely joined series of acts with a minimal plot, carried over the variety format of vaudeville. *The King of Jazz* (1930), for example, is structured around a series of songs, dances, and comedy sketches by popular stars of the day introduced by bandleader Paul Whiteman; the various numbers and acts have no relationship or connection apart from Whiteman's claim that many of the disparate performances have combined in the great "melting pot of music" to create the new sound of jazz. *The Hollywood Revue of 1929* featured almost every star in MGM's famed lineup (as well as the debut of Nacio Herb Brown's "Singin' in the Rain"), while Warner Bros. trotted out many of its stars for *Show of Shows* (1929) and Paramount did the same with *Paramount on Parade* (1930). Operettas also were popular, with Sigmund Romberg (1887–1951) and Oscar Hammerstein II's *The Desert Song* (1929), starring John Boles and Myrna Loy, the first to be filmed. By 1934, the operetta was already the target of parody in *Babes in Toyland*, with comic duo Stan Laurel and Oliver Hardy. Later came musical biographies such as MGM's lavish *The Great Ziegfeld* (1936), starring William Powell as legendary American impresario Florenz Ziegfield, Jr. (1867–1932); *Yankee Doodle Dandy* (1942), with James Cagney cast against type as songwriter George M. Cohan (1878–1942); *Night and Day* (1946), with Cary Grant as composer Cole Porter; and *Love Me or Leave Me* (1955), starring Doris Day as singer Ruth Etting.

The first film director to distinguish himself in the musical genre was Ernest Lubitsch (1892–1947), a Jewish-German director who came to Hollywood in 1923. Lubitsch made a series of musicals and comedies that combined sophistication and sex. *The Love Parade* (1929), set in the imaginary European kingdom of Sylvania, paired French star Maurice Chevalier (1888–1972) and Jeanette MacDonald (1903–1965). In 1932, Lubitsch reunited Chevalier and MacDonald in *One Hour with You* (co-directed by George Cukor), a remake of his own earlier hit comedy, *The Marriage Circle* (1924). Another of Lubitsch's comedies, *Ninotchka* (1939), was remade as *Silk Stockings* (1957) by Rouben Mamoulian, who in the 1930s had followed Lubitsch's lead and paired Chevalier and MacDonald in *Love Me Tonight* (1932).

The backstage musical, in which the story is set in a theatrical context involving the mounting of a show, has

proven the most durable type of film musical. The premise provides a convenient pretext for the inclusion of the production numbers that, after all, constitute the film musical's primary appeal. MGM's *Broadway Melody* (1929), the first genuine film musical, was a backstage musical about two sisters seeking fame in the theater. The film won the Academy Award® for Best Picture in 1929 and established the formula for the many backstage musicals to follow, including such memorable Warner Bros. musicals as *42nd Street* (1933), and *Golddiggers of 1933* (1933). Although the backstage format declined with the rise of the "integrated musicals" in the 1950s, it continued through the war years and informed such later and otherwise different musicals as Baz Luhrmann's (b. 1962) *Moulin Rouge* (2001), starring Nicole Kidman and Ewan McGregor, and *8 Mile* (Curtis Hanson, 2003), starring rap singer Eminem and Kim Basinger.

POLITICS AND FANTASY

In the 1930s, musicals proved to be a particularly amenable genre both for addressing and escaping the urgent problems of the Great Depression, into which America had plunged only two years after the appearance of *The Jazz Singer*. The very nature of dance itself suggests a sense of social harmony, for dancing partners move in step with each other, and in film musicals (unlike live theater) dances are always done perfectly and with apparent spontaneity. Yet while dance was a useful metaphor of communal order, the lavish spectacles created by Hollywood musicals also took audiences' thoughts away from the deprivations in their own lives.

The backstage musicals offered optimistic stories of disparate characters working together for the common good that served as timely social fables. In these musicals, the narrative problems encountered in putting on the show become a metaphor for the necessary national effort and sacrifice required to turn around the troubled economy. In *42nd Street*, for example, as the show's opening approaches, everyone sacrifices in the interest of the collective goal. The ambitious chorus girl (Ginger Rogers) declines her golden opportunity to play the lead part because she knows Ruby Keeler is better suited for the job, and the intended star (Bebe Daniels), now sidelined with a broken ankle, overcomes her jealousy and resentment toward Keeler and sends her onstage with a stirring speech. This pro-social thrust of the Depression-era musical is explicit in the climatic "Shanghai Lil" number of *Footlight Parade* (1933) when the chorines, like a college football cheering section, turn over cards to reveal first the Blue Eagle of the National Recovery Administration, and then the face of Franklin Delano Roosevelt.

At the same time, musicals are entertaining fantasies that tend to deal with social issues metaphorically, through the dynamics and musical performance, rather than directly. The climactic number of *Gold Diggers of 1933*, "Remember My Forgotten Man," about jobless veterans of World War I and featuring a parade of tired and wounded soldiers as part of Busby Berkeley's (1895–1976) choreography, is a startling exception that proves the rule. By contrast, during World War II Betty Grable (1916–1973) lifted the morale of American servicemen with such charming, nostalgic musicals as *Tin Pan Alley* (1940) and *Coney Island* (1943), while Bob Hope and Bing Crosby starred in a series of musical comedy "road" pictures, beginning with *The Road to Singapore* (1940), that tacitly endorsed American imperialism around the world. It is no coincidence that, during the height of the war in 1943, 40 percent of the films produced in Hollywood were musicals.

In 1957 *Silk Stockings* managed to reduce the contemporary political tensions of the Cold War to the play of heterosexual seduction and conquest. "Music will dissolve the Iron Curtain," asserts the confident, red-blooded American (Fred Astaire [1899–1987]) as he sets out to woo the cold-blooded commissar (Cyd Charisse [b. 1921]). But the image in *Swing Time* (1936) of Astaire riding a freight train in top hat and tails graphically suggests the extent to which social reality in the film musical was pushed aside in favor of upbeat fantasy. It is precisely in such romantic fantasies, rather than in social consciousness, that the film musical discovered its essential charm and appeal.

LOVE, ROMANCE, AND SEX

Just as the primary subject of popular music is love, so the great theme of the film musical, like Shakespearean comedy, is romance, which it tends to depict according to the honeyed clichés of pop music. Typically, love in the musical from *Flying Down to Rio* (1933) to *Moulin Rouge* is of the wonderful "some-enchanted-evening" variety, where lovers are depicted as destined for each other, and after an inevitable series of delays and obstacles, they get together and presumably live happily ever after. In *An American in Paris* (1951), Gene Kelly is inexplicably blind to the obvious charms of Nina Foch but irredeemably smitten with Leslie Caron upon his first view of her.

The film musical allows dance to work as a sexual metaphor, for when a couple dances well—as they always do in musicals—two bodies move in graceful harmony. As a sexual metaphor, dance offers an appealing fantasy, for it suggests that making love is always as smooth as, say, dancing is for Astaire and Rogers. Also, the dance metaphor neatly solved the problem of censorship for

Hollywood better than the discreet but more obvious and cumbersome cliché of a kiss and a fade-out.

Beginning with the cycle of nine musicals starring Astaire and Ginger Rogers (1911–1995) made by RKO in the 1930s, the genre offered a series of model romantic relationships. Typically in the Astaire–Rogers films, the two stars are initially attracted to each other but unable to come together due to some comic misunderstanding. The narrative conflict is resolved when the couple's differences are reconciled, generally through the mediating power of musical performance, resulting in the couple's union. Rogers makes this clear enough to Astaire in the first film of their series, *The Gay Divorcee* (1934), when she sings to him about "The Continental," in which "You tell of your love while you dance." In *Top Hat* (1935) Astaire and Rogers play out their courtship through dance in the "Isn't This a Lovely Day (To Be Caught in the Rain)?" number, where the pair tests each other out through dance steps and then finally dance together on an empty bandstand, where they are waiting out a thunderstorm. The Astaire–Rogers films worked so well because the two performers were equal partners in the dance numbers, neither one dominating the screen when they danced together.

In the Astaire–Rogers films, as in many musicals, the male character represents unchanelled sexual desire, but inevitably he becomes monogamous and romantic in the end. In *Top Hat* Astaire is a ladies' man who proclaims, in response to comic foil Edward Everett Horton's suggestion that he get married, that he has "No Strings," that "I'm fancy free and free for anything fancy." Later, his aggressive dancing in his hotel room disturbs Rogers in the room below, and when she comes up to protest, he immediately falls in love with her. After she leaves, he sprinkles some sand on the floor and does a soft-shoe that soothes her to sleep, his initially aggressive and indiscriminate desire literally softened by her femininity. Similarly, when Astaire sings "They Can't Take That Away from Me" in the climax of *Shall We Dance* (1937) amid a sea of women all wearing identical

Ginger Rogers masks ("If he couldn't dance with you, he'd dance with images of you," she is told), Rogers joins the crowd, momentarily reveals her true self, and then makes Astaire search her out by unmasking and rejecting the others before they can dance alone.

In *The Pirate* (1948) Serafin (Gene Kelly) is initially depicted as sexually active and indiscriminate. His first song, "Niña," expresses his desire for all beautiful women, whom he refers to with the Spanish word for the generic "girl." Kelly's athletic dance in this number gives a choreographed shape to his robust masculinity as he climbs poles and trellises. By the end of the film Manuela (Judy Garland) tames Serafin with romantic love, so that they can come together and joyously perform the finale, claiming, "The best is yet to come." If the western hero rides off into the sunset and the detective hero walks alone down those mean streets, in the film musical characters are almost always united in the end. The genre's vision of romance is nothing less than, to quote the title of one film musical, *Seven Brides for Seven Brothers* (1954).

THE "GOLDEN AGE"

In musicals the energy and effort put into the musical numbers have always tended to outweigh the requirements of the narrative or "book." Already in 1933 the choreography of *Flying Down to Rio*, featuring a musical climax wherein the "dancers" perform with their waists and feet anchored to the wings of swooping airplanes, clearly exceeded any sense of narrative realism and, as such, paved the way for Berkeley's more elaborate choreography. In Berkeley's musicals, the scale of the production numbers could not possibly be mounted in the constricted space of the theater stage on which they are supposedly taking place, and his giddy overhead shots do not disguise the fact that the production numbers are designed for the cinema, not the audience within the film.

Such musicals as *Broadway Revue of 1929*, *The Great Ziegfeld*, and *The Goldwyn Follies* (1938) pushed the musical more toward spectacle than story. By contrast, producer Arthur Freed (1894–1973), who produced more than thirty quality musicals between 1939 and 1960, mostly for MGM (and who also wrote many of the lyrics, including those for "Singin' in the Rain"), tended to approach the film musical instead as an organically integrated whole. In Freed's musicals, beginning with his first, *The Wizard of Oz* (1939), the book and the musical numbers have strong connections; songs, often initiated by a character's strong emotions, arise out of the story and even advance the plot, rather than merely interrupt it, as was too frequently the case in the genre. In *The Bandwagon* (1953), for example, Astaire's performance of "A Shine on Your Shoes" enables him to acknowledge the loneliness he feels upon his return to Broadway, which he thinks has passed him by, while in *It's Always Fair Weather* (1955), an advertising executive (Dan Dailey), disgruntled about the superficial banter in the advertising agency where he works, finds rhythms in his colleagues' jargon ("Situation-wise and saturation-wise") and turns it into a cathartic song and dance.

According to critical consensus, the musicals produced by Freed represent the height of the genre's Golden Age, roughly from the end of World War II through the 1950s. Freed's unit at MGM included, among others, performers Kelly and Judy Garland, directors Stanley Donen (b. 1924) and Vincente Minnelli (1903–1986), choreographer Michael Kidd (b. 1919), and screen-writing duo Betty Comden (b. 1919) and Adolph Green (1914–2002). These artists, along with many others, were collectively responsible for such recognized classics as *The Wizard of Oz*, *Cabin in the Sky*, *Meet Me in St. Louis* (1944), *On the Town* (1949), *An American in Paris*, *Singin' in the Rain*, *The Bandwagon*, *It's Always Fair Weather*, and *Silk Stockings*, among others.

Television, which was introduced commercially in the United States in 1947, had by the 1950s become serious entertainment competition for Hollywood. Partly in response, Hollywood embraced technology as yet unavailable to film, particularly color and wide-screen format, both of which became more common. The wider image was particularly appropriate for the lavish scale of many film musicals, as were the exaggerated hues of Technicolor for the idealized fantasies of the musical's production numbers. *An American in Paris* exploits color in its production design inspired by French Impressionist paintings, while the climactic twelve-minute "Girl Hunt" ballet in *The Bandwagon*, a homage to hard-boiled detective fiction, is rendered in appropriately garish colors that accent the pulp quality of the novels.

DECLINE AND CHANGE

Despite the utopian optimism of the genre, the musical began to founder later in the 1950s. Beginning in the second half of the decade, the genre began to suffer a surprising decline in production, quality, and popularity. In 1943, Hollywood studios released 65 musicals, but a decade later the number was down to 38, and in 1963, only 4. It is true that by the late 1930s, rising costs were making the production of lavish musicals prohibitive; yet it was not this economic constraint that threatened the musical's existence. After he left Warner Bros., Berkeley made musicals at MGM, beginning in 1939 with *Babes in Arms*, showing that even with greatly reduced budgets musicals could still be both innovative and commercially

successful. People may have had more reason to sing in the rain in the immediate postwar period than during the tensions of the Cold War in the 1950s and 1960s, but the difficulties of the Depression and the war years had stimulated the musical rather than stifled it.

Rather, the rapid decline of musicals in the late 1950s was at least partly the result of an ever-widening gap between the music used in the movies the studios were making and the music an increasing percentage of the nation was actually enjoying, namely, the new rock 'n' roll. After World War II, the big bands became economically unfeasible, and small combos began electrifying their instruments and playing uptempo rhythm and blues, which white artists such as Bill Haley and Elvis Presley popularized with mainstream white audiences. The 1950s witnessed the invention of the teenager, a demographic that for the first time was the targeted audience of movies, as suggested by developments in other genres during the period, such as the cycle of horror films that included *I Was a Teenage Werewolf* (1957), *Teenage Monster* (1958), *Teenage Cave Man* (1958), and *I Was a Teenage Frankenstein* (1959). By the 1960s, the youth audience—the same group that constituted rock's primary audience—accounted for the majority of the commercial film audience. Obviously Hollywood needed to incorporate rock music into its films in order to attract the majority of its potential audience. In addition, by the 1970s Hollywood studios were being bought by entertainment conglomerates that also owned record labels. Within less than twenty years, rock came to dominate the genre's big-budget glossy releases, either in terms of the music or of the stars. As a result, the genre changed drastically from the classic musicals of the 1930s and 1950s.

In the late 1960s, after the British invasion had made rock music even more popular, such musicals as *Doctor*

BUSBY BERKELEY

b. William Berkeley Enos, Los Angeles, California, 29 November 1895, d. 14 March 1976

Busby Berkeley was an innovative choreographer who freed dance in the cinema from the constraints of theatrical space. In Berkeley's musical numbers, the confining proscenium of the stage gives way to the fluid frame of the motion picture image, and dances are choreographed for the ideal, changing point of view of a film spectator, rather than for the static position of a traditional theatergoer.

Berkeley conducted drills for the army during World War I and trained as an aerial observer—two experiences that clearly shaped his approach to dance on film, in which the chorines are deployed in symmetrical patterns and manipulate props rather than execute traditional dance steps. After the war Berkeley gained a reputation as a Broadway choreographer, which in1930 led to an invitation from Sam Goldwyn to direct the musical sequences of *Whoopee!*, starring Eddie Cantor. In "The Indian Dance" sequence of the film, Berkeley shot the Goldwyn Girls from overhead, creating an abstract, kaleidoscopic effect—a technique that would become his most famous trademark.

Several more musicals for MGM (Metro-Goldwyn-Mayer) with Eddie Cantor followed, as well as a few dramatic films, before Berkeley moved to Warner Bros., where over a period of six years from 1933 to 1939 he choreographed and/or directed 19 musicals, including *42nd Street* (1933), *Gold Diggers of 1933* (1933), and *Dames* (1934). After returning to MGM in 1939, Berkeley made another string of inventive hit musicals, beginning with *Broadway Serenade* (1939) and including three films starring Judy Garland and Mickey Rooney. The plots of Berkeley's musicals are relatively slight, little more than pretexts for the dance numbers wherein Berkeley allows his visual imagination to soar.

Feminist reviewers have criticized Berkeley's choreography for making women the objects of erotic voyeurism. For example, *Gold Diggers of 1933* opens with the chorines, including a young Ginger Rogers, singing "We're in the Money" clad in nothing but large coins. The "Pettin' in the Park" number in the same film features Dick Powell using a can opener to gain access to Ruby Keeler's metal-clad body. The famous sequence from *The Gang's All Here* (1943), featuring Carmen Miranda as "The Lady in the Tutti-Frutti Hat" and a line of chorus girls waving giant bananas, may be the essential Berkeley sequence, combining his surreal visual style with an overblown Freudian symbolism that prefigured camp. Nevertheless, in a commercial cinema dominated by narrative and the conventions of realism, Berkeley managed to free the camera from the mere recording of surface reality to create a lyrical vision of musical plenitude that has never been equaled.

Dolittle (1967), *Hello, Dolly!* (1969), *Paint Your Wagon* (1969), and *Goodbye, Mr. Chips* (1969) were commercially unsuccessful while, by contrast, the two Beatles films directed by Richard Lester, *A Hard Day's Night* (1964) and *Help!* (1965), brought an invigorating freshness to the genre and were huge box-office successes. In the early 1970s, with the exception of *Fiddler on the Roof* (1971), most other musicals in the classical mold, such as *1776* (1972) and *The Little Prince* (1974), did not fare well commercially. Conversely, *Woodstock* (1970), a documentary about the legendary 1969 rock concert, and *American Graffiti*, with its soundtrack of rock oldies, were big hits at the box-office.

The romantic ideology shared by the classic musical and traditional pop music was threatened by the more straightforward eroticism of both rock music and

Busby Berkeley. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

contemporary dance. The first rock song to appear in a movie was Haley's "Rock Around the Clock" in *The Blackboard Jungle* (1955), where it is associated with juvenile delinquency rather than romance, and in its day was considered shocking. Certainly by the time of *Dirty Dancing* (1987), dancing "cheek to cheek" meant something entirely different than when Astaire sang it to Rogers in *Top Hat*. Even so, eventually rock was made more acceptable by the romantic vision of the musical genre, as shown in nostalgic rock musicals like *Grease* (1978).

Because of their race, black rock musicians did not appear in mainstream musicals as leads. In the musicals in which they appear, Chuck Berry and Little Richard portray themselves, not unlike Louis Armstrong did in *High Society* (1956). White rock star Presley played fiery, rebellious characters that spoke to his real-life persona in his first films, *Loving You* (1957), *Jailhouse Rock* (1957), and *King Creole* (1958); but in time Presley was transformed into a nice all-American boy in a series of largely indistinguishable and innocuous musicals with tepid pop music, the best of which are *G. I. Blues* (1960) and *Blue Hawaii* (1961). In Presley's final film, *Change of Habit* (1969), he is cast as a crusading ghetto doctor, socially acceptable enough that Mary Tyler Moore can contemplate leaving the convent for a secular marriage with him without alienating the movie audience. Teen idol Frankie Avalon appeared with former Musketeer Annette Funicello in a series of beach musical comedies like *Beach Blanket Bingo* (1965) that were similarly inoffensive.

With the exception of *The Girl Can't Help It* (1956), which featured established Hollywood stars and excellent production values, early rock musicals were for the most part low-budget affairs that betrayed the film industry's condescending attitude toward rock music. Most of these films fell back on the old backstage formula, featuring several rock acts built around a story of a rock concert being mounted at the local high school. In *Don't Knock the Rock* (1956), for example, rock 'n' roll has been banned because adults distrust it. Alan Freed arrives to host "A Pageant of Art and Culture" by the town's teenagers, displaying classic paintings and then performing a series of traditional dances, concluding with a demonstration of the Charleston. The old squares see the folly of their ways and come to accept rock 'n' roll, which is depicted as harmless fun. In these rock musicals, reminiscent of earlier backstage musicals, people of different generations and with different values come together, closing the generation gap through the binding power of musical performance.

Some rock musicals were adapted from the stage, such as *Jesus Christ Superstar* (1973) and *Hair* (1979), while a few sought to achieve a unified experience of music and visuals, most notably Ken Russell's *Tommy* (1975), adapted from the rock opera by The Who, and Alan Parker's *Pink Floyd: The Wall* (1982). The psychedelic style of these films influenced the postmodern style of music videos that in turn has influenced contemporary film musicals. Whereas the dancers in earlier musicals are presented in long takes and full shots that displayed their performances in real time, dance numbers in such musicals as *Flashdance* (1983), *Moulin Rouge* (2001), and *Chicago* (2002) tend to be built from numerous short shots combined with dizzy montage effects and peripatetic camera movement. *Flashdance*, which stars Jennifer Beales as an improbable dancer and steel welder, thus was able to substitute a body double for Beales in the dance sequences. In case viewers might suspect trickery because of its editing, the film *Chicago* includes a note in the end credits that explicitly states that all the actors, including normally dramatic performers such as Richard Gere, sang and danced for themselves. This more dynamic visual style seems a suitable accompaniment for the more frenetic types of contemporary dance that have replaced the older styles of tap and ballroom dancing represented by Astaire and even by the more modern dance of Kelly.

FINALE

Partly because of the nature of their national cultures, some countries have produced almost no film musicals.

GENE KELLY

b. Eugene Curran Kelly, Pittsburgh, Pennsylvania, 23 August 1912, d. 2 February 1996

An actor, dancer, choreographer, and director, Gene Kelly was a key figure in the golden age of the Hollywood musical, particularly for the string of musicals he made in the 1940s and 1950s at MGM. Whereas Fred Astaire was the master of ballroom dancing, Kelly, with his background in sports, brought a more muscular style to dance in film.

Having established himself on Broadway starring in the stage musical *Pal Joey*, Kelly was brought to Hollywood by the producer David Selznick. His film debut was in Busby Berkeley's *For Me and My Gal* with Judy Garland in 1942. After appearing in several minor musicals, such as *Thousands Cheer* (1943); dramatic features, such as *The Cross of Lorraine* (1943); and the noirish *Christmas Holiday* (1944), in which he plays a murderer, Kelly was lent to Columbia to co-star with Rita Hayworth in *Cover Girl* (1944), in which he dances with his own reflection to visualize his character's inner conflict.

As a result of *Cover Girl*'s success, MGM cast Kelly in *Anchors Aweigh* (1945), for which he earned an Academy Award® nomination for best actor. Subsequently he emerged with the producer Arthur Freed's unit as a leading man and star of some of the greatest American film musicals of all time. Some of Kelly's best dances were only possible on film. In *Anchors Aweigh* Kelly dances with an animated Mickey Mouse; in *Singin' in the Rain* (1952), which he co-directed with fellow choreographer Stanley Donen, he dances in a studio downpour, splashing his feet in holes arranged in advance to catch the rain in puddles; and in *It's Always Fair Weather* (1955, also co-directed with Donen), Kelly, Michael Kidd, and Dan Dailey dance on a studio street with metal garbage can lids on their feet. The location photography in the opening montage, accompanied by singing on the soundtrack, was also a first for a Hollywood musical.

For his work in *An American in Paris* (1951), Kelly received a Special Academy Award® for his "extreme versatility as an actor, singer, director, and dancer, but specifically for his brilliant achievements in the art of choreography on film." In the latter part of his career, Kelly directed the big-budget musical *Hello, Dolly!* (1969), starring Barbra Streisand, and several specials for television, including a musical version of *Jack and the Beanstalk* (1967), as well as a number of nonmusicals, including *The Tunnel of Love* (1958); *Gigot* (1962), showcasing Jackie Gleason as a mute janitor; and the mild sex comedy *A Guide for the Married Man* (1967). In the 1970s Kelly became less active but was introduced to a new generation of moviegoers in the compilation films *That's Entertainment* (1974) and *That's Entertainment II* (1976).

Germany produced some operettas in the 1930s but largely avoided the genre subsequently. In France, René Clair (1898–1981) experimented with the musical early on with *Sous le toits de Paris* (*Under the Roofs of Paris*, 1930) and *À nous la liberté* (*Liberty for Us*, 1931), and Jacques Demy (1931–1990) updated the operetta with *Les Parapluies de Cherbourg* (*The Umbrellas of Cherbourg*, 1964), in which all the dialogue is sung. Yet apart from the United States, the only other country to have produced a sustained tradition of film musicals is India, which is also the largest film-producing country in the world.

Within Indian cinema, the idea of a film musical is rather different than in the Hollywood tradition, but the genre's cultural impact has been even greater. About 90 percent of commercial feature films made in India have incorporated musical production numbers. Indian films

typically have several song and dance sequences as part of their entertainment appeal, whether the genre is a romantic melodrama or a crime film. And just as the genres are disparate, so are the musical styles, mixing traditional Indian dance music, American jazz, or Caribbean rhythms. In Indian popular culture, film music holds a prominent place, dominating sales of discs and tapes. Indian movie stars lip-sync the songs, and the actual vocalists, known as "playback singers," such as Lata Mangeshkar have become recording stars in their own right.

In the United States, the similar centrality and importance of the film musical in American film history is clear when one considers the many stars who became famous primarily or initially through their roles in musicals, including Judy Garland, Mickey Rooney (b. 1920), Shirley Temple (b. 1928), Jeannette MacDonald and Nelson Eddy, Fred Astaire and Ginger Rogers, Gene Kelly, Deanna Durbin (b. 1921), and Cyd Charisse, as well by the fact that a number of directors, particularly Vincente Minnelli, Stanely Donen, Busby Berkeley, Ernst Lubitsch, and Baz Luhrmann also became known for their work in the genre, the latter two producing important musicals after integrating into the Hollywood system. Many singers have crossed over from popular music to movies, from Frank Sinatra and Elvis to Madonna, Johnny Depp, and Eminem.

Despite the vast cultural changes that have taken place since the 1930s, when the film musical first appeared, the genre has remained popular. After Malcolm McDowell shockingly sang "Singin' in the Rain" while brutally raping and beating a defenseless couple in their home in Stanley Kubrick's *A Clockwork Orange* (1971), some musicals such as *Pennies from Heaven* (Herbert Ross, 1981) and *Dancer in the Dark* (Lars von Trier, 2001) have sought to give the film musical a darker and more cynical vision of the world rather than the genre's traditional utopianism. *Chicago*, which shares with these two musicals a bitter view of the world as corrupt and brutal, won the Academy Award® for Best Picture in 2003. While film musicals likely will never be as popular as they were during the 1930s through 1950s, the genre has continued to adapt to the demands of popular culture.

NARRATIVE

Perhaps no term is more central to film history, criticism, and theory than "narrative." Yet narrative is hardly specific to the cinema. Storytelling is a defining trait of human experience and communication. Much of the world's information has always been delivered in story form, whether recounted as personal experience, historical events, imagined fiction, or a mix of all three. Art, entertainment, and instruction have all relied on narrative structures regardless of their form or media, yet the cinema, appearing as it did in the late 1800s, quickly proved itself particularly adept at incorporating and adapting a wide variety of narrative strategies from literature, theater, photography, journalism, and even comic strips. From the beginning, telling stories clearly was a major concern for filmmakers. Almost as quickly, the cinema's ability to present intriguing stories was evaluated by critics and audiences alike. Thus, narrative has always been a key component in how we watch, think about, and write about the cinema, and the history of that narrative theory is a fascinating side of film studies.

DEFINING FILM NARRATIVE

Among the first widely seen motion pictures were the amazing fifty-second films by Louis Lumière (1864–1948) and his camera operators. One of the more famous was the *Arrivée d'un train en gare a La Ciotat* (*Arrival of a Train*, 1896), in which the camera records the train pulling into the station, passengers descending and boarding, and bystanders interacting with the travelers. But does a single shot of a train arriving count as a narrative? For most critics, the minimal criteria for determining the presence of narrative include a series of events in some cause–effect order. Causality suggests temporal, spatial, and thematic links as well. Thus these events, "a train arrives, doors open and passengers climb out, a woman runs past holding a small child's hand, a man with a bundle walks after them," provide only the barest markers of narrative. One contemporary newspaper reporter actually embellished his account of the film: "The travelers all look pale, as if they were seasick. We do not recognize characters so much as known types: the petite maid, the butcher boy, and the young man with a humble bundle who has left his village in search of work" (Aubert, p. 225). In recreating the film experience for the readers, the reporter has inserted tiny bits of inferred story material, even generating a feeling of malaise for the arriving passengers and a personal history and goal for the man with the bundle, who now becomes a central character. Thus, critical definitions of film narrative necessarily touch on formal elements of storytelling, but also upon the audience's role in perceiving and comprehending the presented material in those tales.

Narrative is generally accepted as possessing two components: the story presented and the process of its telling, or narration, often referred to as narrative discourse. Story is a series of represented events, characters (or agents for some), and actions out of which the audience constructs a fictional time, place, and cause–effect world, or diegesis. In the Lumière short, the material elements include the arrival of the train, the scurrying of rushed passengers, the gestures of the railway workers, the steam emitted from the engine, even the moving shadows beneath people's feet. Out of these rather minimal visual objects and actions, the viewer generates tiny story events, including any effects that the train has on the people on the platform. The narrative discourse is

evident in strategies of presentation, especially the camera position, which offers a view of the action that emphasizes perspective and depth, but also allows the viewers to watch the faces and movements of a number of the people involved. However, Lumière's film offers a very low level of narrative development, in part because of the short length and paucity of story events, but also because of the absence of other narration devices, including plot ordering, *mise-en-scène* choices, editing, sound effects, intertitles, or camera movement. As films expanded in length and technical options, narrative strategies increased as well. Stories could develop more complex characterization, thematic concerns, and temporal development, along with increasing devices for the narrator to manipulate and present those events.

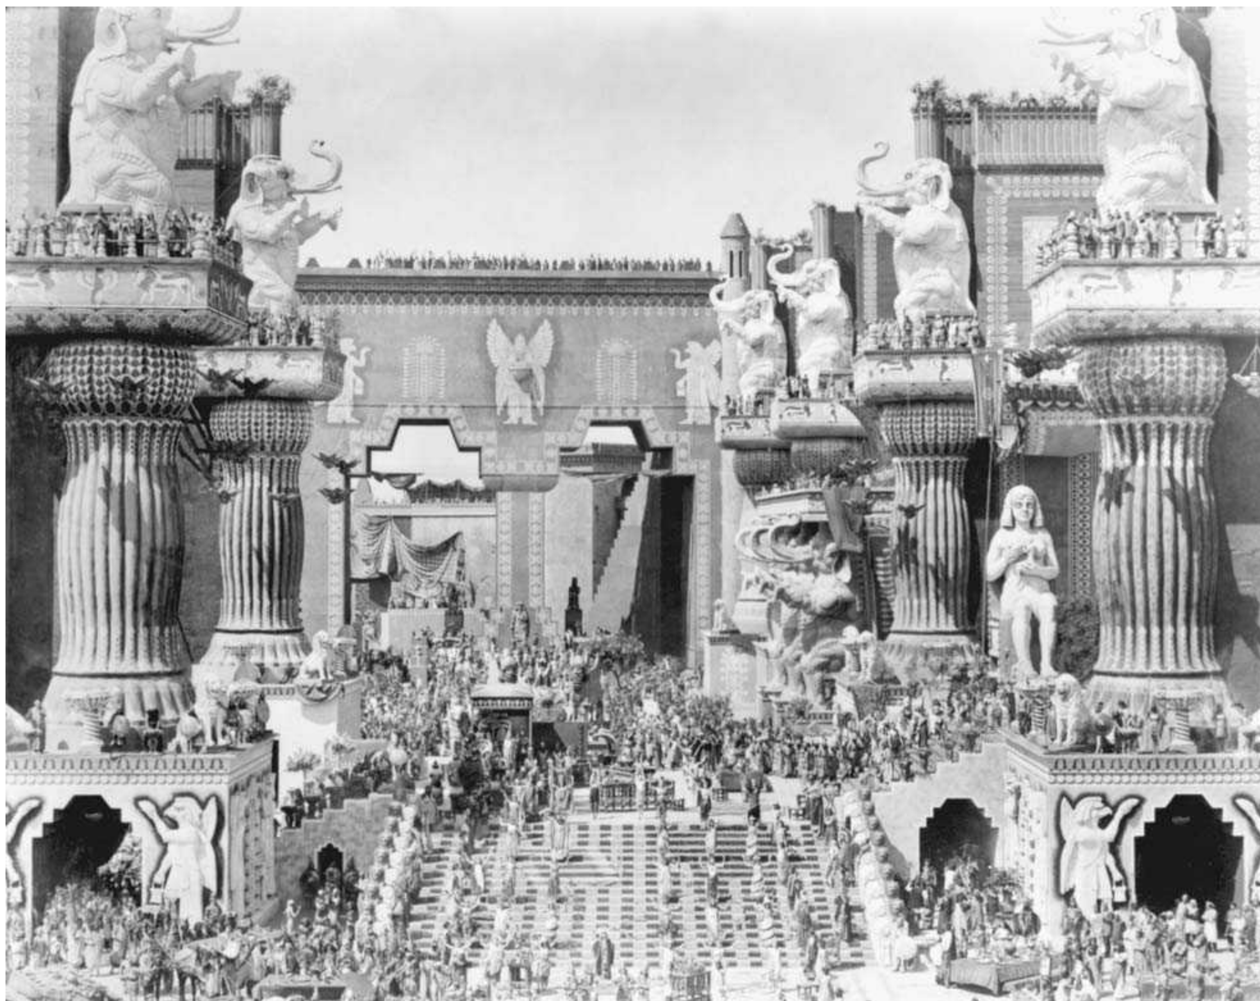
While many sorts of films employ some storytelling strategies, when we speak of narrative film we are typically referring to fiction films. However, before moving to fiction films completely, we should acknowledge that French film theorist Christian Metz has famously argued that on one level, all films are fiction films. All cinematic experience is based by definition on illusion. Motion pictures are fundamentally still images projected onto a flat screen. Nothing moves and there is no real depth of space, yet we cannot help but "see" movement and spatial cues as the film is projected. The entire process is based on a fiction that what we see is actually present. We know Cary Grant is long dead, we know that we are only seeing his shadowlike image projected on a screen, and yet we see and hear him in an illusory three-dimensional world in which he moves in front of and then behind his desk, right there in front of us. Lumière films, Cary Grant laughing, or a bird chirping in a sex education documentary are all based on an illusion, an absence, that is only possible thanks to the cinematic apparatus and the audience's perception system. From this perspective, the fiction film is a specific type of cinema based on the content of the images and sounds rather than their material traits. The fiction film, the subject of narrative history, theory, and criticism, assumes a spectator who not only sees movement where none really exists, but also constructs characters, time, space, and themes.

Narration is a set of representational, organizational, and discursive cues that deliver the story information to the audience. The fiction film should be thought of as a text, a collection of narrative systems, each of which functions and exists in its own history, with its own stylistic options. For instance, during the 1940s, it became stylistically fashionable for American crime dramas to tell their stories out of order, often with voice-over narrators recounting some past events via flashbacks. Many of those crime dramas were also filmed with increasingly expressionistic sets, lighting, and acting styles. The resulting film noir movies are distinguished by certain shared, generic, story events and discursive strategies alike. Their narrative context was quite different from that of Lumière's train film. Narratives must always be studied in relation to history, including the history of film style, modes of production, and the history of narrative theory itself.

TOWARD A HISTORY OF FILM NARRATIVE

While the cinema was born out of a collection of scientific, industrial, and aesthetic initiatives, its narrative potential quickly came to drive its commercial viability. Alongside "actuality" (*actualité*) movies, such as most of the Lumières, there quickly grew short chase films and "trick" films, including the many highly influential movies by Georges Méliès (1861–1938). Méliès pioneered an entire subgenre of movies in which camera tricks combine with theatrical settings to allow characters to disappear before our eyes, fly through the air, or even lose their heads. *Le Voyage dans la lune* (*A Trip to the Moon*, 1902) proved exemplary in presenting a series of scenes, edited end to end, each filled with a combination of painted stage sets equipped with trap doors and fantastic transformations exploiting in-camera editing tricks. He brought the spectacle of magic acts into the cinema, exploiting film's abilities to exceed the limits of real time and space in the theater. Similarly, chase films quickly became a staple of early filmmaking, in part because they too were well suited to a medium with no sound and only fledgling techniques for characterization or plot development.

Chase films followed the logic of comic strips, with a simple initial situation that leads through a series of accumulating visual gags. A typical scenario might include a dog stealing a string of sausages from a butcher, who gives chase, knocking over pedestrians as he goes, who then pursue him as he pursues the dog, with the number and variety of collisions and participants increasing steadily. One version is Pathé Studios' *La Course des sergents de ville* (*The Policemen's Little Run*, 1907). These films, like more melodramatic variations, such as *Rescued by Rover* (1905), take full advantage of early cinema's strengths, including its ability to show rapid movement and edit together a string of chronological events. These films were structured much like live-action comic strips, with individual shot sequences replacing the static comic frames. Many early narratives retold formulaic tales or condensed stories that were already well-known to the audience, so that there would be no need to explain character relations or motivations. Simplified reenactments of the crowning of a monarch, scenes from famous plays (*Hamlet*, for example) or novels (such as *Uncle Tom's Cabin*), or even Bible stories could be just as comprehensible as chase films full of visual gags.



Ancient Babylon as depicted in one of the four stories in D. W. Griffith's* Intolerance *(1916). **EVERETT COLLECTION. REPRODUCED BY PERMISSION.**

The film historian Tom Gunning has found early cinema's tendency toward spectacle and illusion as evidence that it is more a "cinema of attractions" than a cinema straining to tell stories. Many cinema pioneers shared the same impulse as that of carnival or vaudeville acts. Their task was to present highly exhibitionistic entertainment shows that would grab and hold the spectator's attention. Films would be organized as a series of displays, occasionally linked by some story line that allowed for a logic of scene-to-scene ordering. Characterization, however, was often kept to a minimum, and the films' success was measured more by their effects than their stories or themes. Previously, some film histories had simplistically reduced much of early cinema to a series of baby steps toward an arsenal of effective fictional devices. More recently, however, historians of early cinema have labored productively to clarify the differences between film practice before 1910 and the subsequent, more narratively constructed, and voyeuristic silent cinema. Nöel Burch has labeled the early tendencies toward a unique film practice as a Primitive Mode of Representation, a mode that repeatedly defies and frustrates narrativity.

From the beginning, cinema was exploited for its ability to display processes in real time, which privileged documentation and instructional filmmaking, but most exploration of the medium, including avant-garde investigations of film's more abstract or formal potential, has historically been reworked and adapted for narrative purposes. The 1910s was a transitional decade for motion pictures throughout the world. The exhibition of films became more standardized into programs, typically featuring narratives to anchor the screening, though the bill also included documentaries and eventually animated

cartoons. By the middle and late 1910s, it was the feature narrative presentation that lured audiences to the movies, thanks in large part to new theaters, stars, and the establishment of new genres that all attracted more middle-class spectators. With the increased length of films and the rise of specialized motion picture studios, American cinema, in particular, came to be built on corporate models, with division of labor, boards of directors, and prescribed slates of annual production quotas. Along with that, it began to concentrate on predictable, efficient stories and styles. Internationally, specialized film studios were being built that allowed more evocative lighting designs and facilitated increasingly intricate camera movements and set construction. A more conventional, commercial narrative cinema was in place by 1920 that was easily distinguishable on every level from the shorter, now somewhat radically diverse films of 1910. This new norm for narrative filmmaking became known as the classical realist cinema, and its dominant American form was the Classical Hollywood Cinema.

CLASSICAL REALISM

The rise of this more realist cinema owes to a great many factors and influences, but it is clearly tied to the increasingly industrial base of the cinema that built upon narrative traits from the nineteenth-century novel and the well-made theatrical play. Narrative unity was built around character psychology within a rational world where events were relatively plausible, even in genres such as the adventure film. The "realism" of classical realist cinema was a product of numerous cultural and now cinematic codes and conventions. Further, the specific ability of the cinema to record and edit representational images lent great power to the credible presence of the characters and their fictional actions and worlds. The steady development toward an increasingly narrative cinema brought some more conservative forces to bear on film practice, especially with the more industrial, studio production norms. Burch and others label this an Institutional Mode of Production because of its privileging of consistent thematic, spatial, and temporal parameters. Clearly, the most successful model for this international classical realist cinema was the Classical Hollywood Cinema.

The formation of classical Hollywood narrative has been explained by David Bordwell, Janet Staiger, and Kristin Thompson, who argue that classical story construction went hand in hand with developments in the mode of production and new conventions in film style. The classical narrative is organized around a goal-driven protagonist whose desires determine the cause–effect ordering of the plot, which often comes to include a second, embedded plot line. Saving the western town from the outlaws may also involve helping out and finally falling in love with the school marm, for instance. Minor characters typically help or hinder the protagonist's progress. Moreover, the time and space serve the story, which is often generic or formulaic, and there is clear closure with the protagonists achieving or failing to achieve their goals. During the 1910s in particular, Thompson points out that the move to feature-length films forced filmmakers to look to short stories and novels more and more for guidance in character and plot developments. Simultaneously, film techniques had to adapt to the challenges posed by longer narratives. Editing and camera techniques, along with lighting, acting gesture, and even set construction, worked toward clear methods of delivering story information.

With the rise of studio productions and more standardized storytelling, writers and directors functioned increasingly as narrators, guiding the audience's attention with film language as well as written inter-titles. More and more, unity of purpose and even redundancy were built into the presentation of fictional worlds, moving storytelling away from the series of tableau shot sequences and lack of closure that characterized much of the primitive film aesthetic. Increasingly, time and space were constructed around characterization, themes, and plausible plot ordering, with eyeline matches or dissolves clearly delineating the protagonist's perceptual attention or thoughts. Analytical editing, and especially shot-reverse shots, concentrated the audience's attention upon the interplay between actors while systematically unifying a functional diegetic time and space, or the world of the fictional character. After the established dominance of the classical cinema, first in the United States and then internationally, the free play of tableau space and other key components of the primitive aesthetic only resurfaced in consistent form in various avant-garde movements. Classical realist cinema, building as it did upon representational codes for verisimilitude and stories that stressed plausibly motivated human agents, became the foundation for commercial narrative cinema worldwide.

The arrival of sound added greatly to narrative cinema's arsenal. Recording natural sound, which later became known as direct sound, provided "real" documentary-quality sound. However, sync-sound recording was quickly found to require some manipulation to appear natural and at the same time serve the story. Sound design was tested for ways it could reinforce the narrative, delivering essential information such as dialogue and key sound effects and music, while repressing potential distractions. Sounds were carefully selected to guide the spectator's attention to specific characters or events and to fit the diegetic space. Even interior scenes began to have distinctive mixes, so that a conversation inside an office building in one scene should have a

D. W. GRIFFITH

b. David Wark Griffith, La Grange, Kentucky, 22 January 1875, d. 21 July 1948

D. W. Griffith's status in the history of the cinema is unique. Griffith grew up in a family that romanticized the mythic Old South and its values—his father was a Confederate Civil War hero—and he also prized Victorian literature and melodrama. Initially an actor, Griffith pursued playwriting, then shifted into writing for motion pictures, quickly earning a job as director at Biograph in 1908. No other director's career has gone through such extreme shifts in critical reception. For most of the twentieth century, Griffith was heralded as the founder of American cinema's narrative traditions, thanks primarily to his steady stream of over four hundred innovative short films and then *The Birth of a Nation* (1915). Subsequent features, especially *Intolerance* (1916) and *Broken Blossoms* (1919), were also praised for their story construction and technical sophistication. He was credited with adapting nineteenth-century narrative devices for the cinema and bringing genre, character development, and continuity editing into Hollywood movies. Publicity surrounding Griffith helped forge the mythical image of the motion picture director as creative genius.

Griffith's career parallels the growth of narrative cinema. He was there every step of the way as movies shifted from shorts to spectacular features, from a cottage industry to the classical studio system. Starting in 1908, Griffith brought together an efficient production team. Their films, including *The Lonely Villa* (1909), *The Lonedale Operator* (1911), and *The Musketeers of Pig Alley* (1912), reveal a constant updating of techniques for delivering story information clearly and emotionally. Griffith refined staging, shot composition, scene-to-scene organization, and editing rhythm to build character, suspense, and logical time–space relations. *The Birth of a Nation*, *Intolerance*, and *Broken Blossoms* exploited early cinema's full arsenal of storytelling techniques, including cross-cutting, rhythmic editing, and manipulative *mise-en-scène. The controversies surrounding The Birth of a Nation* also proved the cultural power of cinema. However, by the 1920s, Griffith's career was uneven at best. His two early sound films were failures, and after *The Struggle* (1931), he never directed again.

Since the 1980s, Griffith's status has been in nearly steady decline, or at least dramatic reassessment. An important renaissance of early film history has systematically rediscovered and reinserted other individuals, films, and social forces as crucial formative influences on the development of American and world cinema. Moreover, the insights of cultural studies made it impossible to continue forgiving the sexism and vicious racism at the core of his work while at the same time praising his craft and romanticizing his life. For many today, Griffith represents much that was wrong with Hollywood, American ideology, and even dominant film histories of the past. Nonetheless, Griffith's films remain key texts for understanding the development of narration in cinema. Theorists interested in film language point to their shot scale and editing patterns as important markers of a developing cinematic code system, while others look to Griffith as a canonical source of gender and genre construction in cinema.

different timbre than dialogue in a restaurant or a phone booth. For instance, early on in *His Girl Friday* (Howard Hawks, 1940), Walter (Cary Grant) and Hildy (Rosalind Russell) walk through a busy newspaper office to meet Bruce (Ralph Bellamy). In an earlier scene the newspaper office was louder, with typewriters banging away in the background, establishing the diegetic space. But this time the sound effects are more muted, since the louder noises would distract from the conversation. Similarly, when the characters move on to a lively restaurant setting, the noises are reduced to clinking plates and glasses on their table only. When Walter is surprised by some bit of dialogue, the entire restaurant seems to go silent, ensuring that the audience notice how the normally chatty Walter is suddenly rendered speechless. The editing rhythm and shot scale reinforce the importance of this moment, as Walter has to think fast to change the course of the conversation and thus events. When he leaves the table to call his office from a small phone booth, the sound ambiance reflects a supposedly cramped space, though of course Grant is merely crouching in a set on a large sound stage. Conventions for classical sound mixes were established quickly to generate stable sound–image relations for delivering a causally motivated, codified, and classical diegesis.

Not all realist cinema had to be so formulaic and generic, however, and one of narrative cinema's most important theorists, André Bazin, specifically analyzed the realistic value of cinematic technique. Bazin, while often very complimentary of conventional narrative cinema, preferred films that broke away from formulaic tropes. He believed that the essence and strength of the cinema lay in its ability to capture key aspects of lived experience. Cinema's narrative potential would be best fulfilled by films that engage the spectator in ways comparable to real-world perception and understanding. The world is complex and often ambiguous, thus cinema should exploit tactics that can preserve some degree of those rich qualities and reward the spectator's active attention. Longer takes were often preferable to manipulative editing. In fact, Bazin lamented that classical Hollywood cinema had become too predictable in its editing by the late 1930s, reaching what he labeled its equilibrium profile, the point at which Hollywood films moved too smoothly forward, like a mature river, without digging deeper into the terrain. Cinema, to connect with reality, had to renew itself constantly, and Bazin found that by the 1940s, rejuvenation was occurring in the use of long takes and deep space compositions by Orson Welles (1915–1985) and William Wyler (1902–1981) in the United States, but especially in movies by Jean Renoir (1894–1979) in France and the neorealists in Italy. These directors carried the cinema back to its mission of delivering time and space in more authentic ways. For realist critics such as Bazin, once classical realism became so widespread, it lost much of its ability to reveal spontaneity and truth to the spectator.

A wide array of directors and national cinemas forged alternative styles in reaction to or isolation from the classical conventions of realism as well. Post–World War II film practice in particular boasted a lively and engaged modern art cinema. Directors as varied as Federico Fellini, Ingmar Bergman, Akira Kurosawa, Alain Resnais, and Agnès Varda offered more subjective fictional worlds with complex, even contradictory characterization. The Art Cinema foregrounded stylistic choices and the filmmaker's presence, often constructing diegetic worlds full of ambiguity. Some modernist directors touted their experimental styles as closer to the uncertainty of lived experience, while others distanced themselves from concern with the real world and explored the cinema's formal potential. Working in their wake, the classical realist cinema incorporated some of these innovations, and its notions of plausibility and complexity certainly changed across time, but it typically remained centered on generic tales of goal-oriented protagonists. Since the 1980s, American independent cinema has tended to bridge the extremes of classical cinema and previous modern art film tactics.

NARRATIVE THEORY

Under the influence of more modernist film practice, as well as political and culturally inspired theory of the 1960s and 1970s, film criticism began to question systematically the cinema's ideological functions. Classical realism was one of the first sites to be investigated. In the pages of the British journal *Screen*, Colin MacCabe was representative of the growing resistance toward notions of classic realism, a resistance motivated by French Marxist and psychoanalytic theories, especially the work of Louis Althusser and Jacques Lacan. MacCabe and others argued that cinema cannot reveal the real as if it were some transparent window onto the world. Rather, film must be analyzed as a set of generally contradictory discourses. Theorists pushed for analyzing the wide range of discursive markers in realist films, which had become the dominant aesthetic of narrative cinema, but they also renewed attention to films that violated the classic realist norms and thus worked against easily consumed notions of the real.

The French journal *Cahiers du cinéma* had already turned much of its attention in the late 1960s and early 1970s away from conventional narrative cinema and toward the more marginalized forms of cinema verité, Third World political cinema, and especially the narrative experimentation by Jean-Marie Straub (b. 1933), Danièle Huillet (b. 1936), and Jean-Luc Godard (b. 1930). For *Cahiers*, film practice was only valuable if it undercut the illusionism of classic realism and foregrounded the labor of production. *Tout va bien* (*All's Well*, 1972), which opens with a scene in which Godard writes checks to cover the necessary expenses of film production, became an exemplary film for critics attacking classic realist narratives. It constantly acknowledged its constructed nature, it overtly concerned itself with the politics and economics of everyday decisions, was made by a collective (the Dziga Vertov Group), and defied representational norms of both documentary and fiction filmmaking. By this point, *Cahiers du cinéma* was so actively opposed to conventional narrative norms that it had stopped reviewing any commercially released movies. Much of this highly politicized narrative theory prided itself on its strict Marxist foundations, but others, including the director François Truffaut (1932–1984), argued it had become so elitist that the articles were impenetrable for anyone lacking a Ph.D. in political science. The discourse of film theory and criticism had entered a new, more academic phase that drew from the demanding changes in the fields of linguistics, philosophy, and psychoanalysis.

One of the most significant shifts in narrative analysis began in the 1960s with the French theorist Christian Metz, who built upon linguistic theory, including that of Ferdinand de Saussure, to bring structural analysis into film scholarship. Metz, along with Roland Barthes, set the groundwork for much of subsequent work on narrative, including the shift toward discourse analysis. Adopting methodology from the field of semiotics, Metz began looking for how the cinema could be said to signify, or generate, meaning. Signification is a dynamic process that depends upon material signifiers, which for cinema include representational images, titles, spoken language, dissolves, and music and their range of signifieds, or denotative and connotative meanings. Signifying practice became the term for how movies told stories. Metz started by evaluating cinematic equivalents to language and systematically defined codes at work in cinema, much as Roland Barthes defined codes in literature. With *S/Z* (1970) in particular, Barthes pointed out that realism depended upon a system of textual, intertextual, and extratextual codes. Narrative analysis must include breaking down a text's codes of signification, but it also involves looking at cultural contexts and restrictions.

The assumption is that language is a social force struggling to shape how we think and act. Realism was a suspect mode of culturally determined, ideological discourse, and the reader or spectator must struggle to decode the text's systems or risk blindly submitting to its logic. If realist novels offered an illusory, coherent bourgeois worldview to naturalize culture's status quo, classical cinema, with its visual and audio power to "represent accurately," would have even more cultural power. Thus, realist cinema had to be attacked for its strategies of masquerading the fictional as natural. Metz and many others began to analyze the convincing "impression of reality" generated by strong cinematic cues, and a second stage of structuralism, more interested in intertextual and extratextual codes of spectatorship and ideology, became a central component of narrative theory.

In the 1970s and 1980s, many narrative theorists increasingly shifted from defining the narrative instance to explaining the process known as enunciation. One influential linguist was Émile Benveniste. For Benveniste, story (*histoire*) tries to hide its marks of communication, presenting itself in an impersonal, objective manner. By contrast, discourse includes markers of narration. In literature, the difference could be simplified down to whether the narration presents its information as given facts or includes references to a narrator, as in "I-you." The process of address, enunciation, structures the spectator's relation with the text. The enounced is always a product of enunciation, which, like language, is a social process. The analyst uncovers these marks of communication, which many classic realist films try to disguise and cover over. Thus, enunciation theory concentrates on syntax and

cinematic modes of address that might be equivalent to those in verbal communication and calls for unmasking texts that pretend to tell their stories naturally. From this perspective, classic realist texts deceitfully pretend to be objective when they are actually complex, culturally determined discourses.

Renewed debate surrounding the specificity of cinema merged with interest in linguistics, psychoanalysis, and cultural studies and localized attention onto the cinematic apparatus and the spectator, or film subject. French and British theorists as varied as Jean-Louis Baudry, Colin MacCabe, Raymond Bellour, Jean-Louis Comolli, and Stephen Heath became increasingly concerned with the cinema's ability to "position the subject." Lacanian notions of subjectivity, based in part on the developmental move from imaginary to symbolic stages, privileged interest in point of view structures in the cinema. One assumption was that just as the young human subject was positioned by cultural structures, the film subject was determined by cinema's forms and modes of address. Baudry and others questioned the camera lens as a tool of ideology, built as it was to replicate monocular perspective and transform the social individual into a spectatorial subject. Now, Lumière's film of a train pulling into the station could be seen as a means for organizing and perhaps taming the social spectator. Further, Bellour explored how character desire and its submission to the "law" in classical cinema, and the films of Alfred Hitchcock in particular, structure narrative films as Oedipal journeys, replaying our inherent struggles for subjectivity. Metz too investigated the cinema as an "imaginary signifier" that satisfied, repeatedly, the spectator's regressive, voyeuristic drives.

The cinematic spectator was not only defined by the visual structures of the cinema, but narratives became evaluated for how they reinforced or challenged dominant cultural issues. If spectators were positioned visually, they were also positioned culturally within the mythic or symbolic structures of dominant ideology. Narratives, and commercial classical narratives in particular, became suspect for reinforcing bourgeois, typically patriarchal perspectives. The spectator could thus be doubly positioned, once by the apparatus, a second time by socially determined, and determining, narrative structures. Narrative and spectatorship thus became key concerns for feminist theorists. Laura Mulvey, Mary Ann Doane, and Annette Kuhn in particular directed feminist attention beyond the narrative surface of patriarchal mainstream cinema. Issues of race, class, and gender went beyond cataloging types of representations and were analyzed throughout the cinema's camerawork, editing, soundtrack, and plot structures.

While much of the theoretical legacy of enunciation theories of narrative, psychoanalysis, and cultural studies continues to thrive and inform film studies, it often reduces narrative analysis to serving as symptoms for larger social issues. Some narrative theorists, including Seymour Chatman, remained focused on the processes specific to cinematic narration. Work on intertextuality and narrative, much of it inspired by the literary theorist Gérard Genette, proved particularly pertinent to film studies. Moreover, the theorist and historian David Bordwell argued that enunciation theory remains too deeply indebted to verbal communication to be fully applicable to the cinematic experience. These new perspectives have led to rigorous investigation into motion picture narratives and challenges to recent theories of spectatorship. Many narrative theorists refused to reduce spectators to passive, predetermined subjects, but rather posited active participants in the production of meaning. Bordwell argued for a cognitive-based investigation of film practice and found that Russian Formalism, with its precise attention to story, plotting, and style, provided a methodology that functions well with cognitive vocabulary to reveal how spectators perceive and process cinematic images and sounds to comprehend narrative. Films deliver motivated cues and spectators apply an array of cognitive schemata to construct and understand fictional film worlds. Murray Smith enlivened the area of spectator identification, offering a highly functional grid to understand how films cue audiences to sympathize and identify with fictional characters. Cognitivism has contributed strongly to the rethinking of narrative films in relation to concrete models of human perception and comprehension.

CONCLUSIONS

There are many ways to think historically about narrative cinema. There is the history of storytelling itself, from presenting a train pulling into a station to the rise of the classical realist film, the modern art cinema, and the thousands of alternative individual filmmakers working to challenge the limits of mainstream narrative. But there is also the intricate history of how film criticism and theory have addressed the cinema. Strangely, within the debates over realism, artifice, personal expression, and cultural determinations, certain directors return over and over as examples. Two of the most important filmmakers, for a wide range of narrative critics, have been Alfred Hitchcock and Jean-Luc Godard. No other directors figure so prominently in narrative theory of the past fifty years. Hitchcock's masterful narration provides many of the most canonical scenes for analysis from any perspective, and Godard's work has systematically challenged both commercial narrative cinema norms and film criticism's vocabulary. The heart of narrative

film is still the cinematic practice that makes defining story, narration, and the role of the spectator so fascinating. The history of narrative film remains forever intertwined with the history of film production, film criticism, and the theorizing of the spectator, whose glorious task remains to perceive, decipher, and finally comprehend the stories generated by those still, two-dimensional images flashing upon the movie screen.

NATIONAL CINEMA

Before investigating the constituent elements of "national cinema," the concept of the nation must first be broached. Contrary to its attendant mythology, the nation is not an organic, homogeneous, unitary entity. Through political struggle, the unitary notion of nation is produced culturally, selected into existence from such heterogeneous and conflicting materials as language, race, ethnicity, religion, social class, gender, and sexuality to masquerade as the oneness that is the mythical terrain of the national. For Etienne Balibar, social formations reproduce themselves as nations in part by fabricating a "fictive ethnicity" that stands in for the national ethnic composition (p. 96), while Homi Bhabha views the nation as "an impossible unity" (1990, p. 1). One of the most influential contemporary theorists of nation, Benedict Anderson, maintains that nations are "imagined communities," arguing that the advent of "print-languages laid the bases for national consciousness" by making possible a symbolic gathering of the nation (pp. 6, 44). Adapting Anderson's notion of the nation as a "horizontal comradeship" produced by print culture, Ella Shohat and Robert Stam suggest that the movie audience "is a provisional 'nation' forged by spectatorship" (p. 155). Noting that Anderson's thesis is premised on literacy, Shohat and Stam argue that cinema could play a more assertive role than print culture in fostering group identities, as it, unlike the novel, is not dependent on literacy and is consumed in a public space by a community of spectators (p. 155).

Anderson and Shohat and Stam are gesturing toward the work ideology performs through cultural forms in hailing or recruiting subjects to recognize themselves as members of the national community, as national subjects. In the case of cinema, one of the most infamous examples of this kind of ideological work is found in the Nazi propaganda film *Triumph of the Will* (1934), which disciplines its audience members to recognize themselves as subjects of a new National Socialist, Aryan Germany. Here cinema is a component of what Balibar describes as "the network of apparatuses and daily practices" instituting the individual as "*homo nationalis* from cradle to grave" (p. 90). Implicit in every national cinema, however, is its antination (Rosen, p. 391)—in the case of Nazi Germany, the Jews, homosexuals, and gypsies whose differences from the fictitious heterosexual Aryan nation cast them out of the terrain of the national and into the death camps. Historically, part of cinema's nation-building role has been to document the nation's others as those held at the limit of national belonging, as abject: for example, the African American in D.W. Griffith's *The Birth of a Nation* (1915), the Native American in Edward Sherriff Curtis's *In the Land of the Headhunters* (1914), or the Arab American in James Cameron's *True Lies* (1994) and Edward Zwick's *The Siege* (1998).

NATIONAL CINEMA, POLITICAL ECONOMY, AND IDEOLOGY

National cinema frequently takes on the responsibility of representing the nation to its citizens for the purpose of communicating what constitutes national identity in the context of an overwhelming flow of cinematic images from a globally aggressive Hollywood industry. In 1993, a year in which all the major Hollywood distributors earned more theatrical revenues offshore than domestically, some prominent European filmmakers

insisted that the new General Agreement on Tariffs and Trade (GATT) treaty include national film-importation quotas. This was not the first time quotas have been implemented to protect fragile national film cultures from the most financially successful film producer on the planet. The United Kingdom, for instance, attempted to protect British and British empire filmmakers from Hollywood with the Cinematograph Films Acts of 1927, 1938, and 1948. One of the most extreme examples of Hollywood's monopolistic incursions into foreign markets is Canada, which the US industry views as part of its domestic market and where less than 2 percent of all screen time is given over to Canadian film. In the interests of nation building and maintaining national cultures, countries such as Canada (National Film Board of Canada, Telefilm Canada), Australia (Australian Film Development Corporation), Britain (National Film Finance Corporation), France (Centre nationale de la cinématographique), and Italy (National Association for the Cinema and Similar Industries) have created various state institutions to fund and produce national cinemas. This suggests that these states see cinema beyond its commodity value, as, after Fredric Jameson, a socially symbolic act where "the production of aesthetic or narrative form is to be seen as an ideological act in its own right, with the function of inventing imaginary or formal 'solutions' to unresolvable social contradictions" (*The Political Unconscious*, p. 79).

The idea that Hollywood is somehow alien to the film cultures of most nations is troubled, however, by a number of prominent film studies scholars such as Thomas Elsaesser, Stephen Crofts, and Andrew Higson. Elsaesser argues that Hollywood is a major component of most national film cultures where audience expectations shaped largely by Hollywood are exploited by domestic producers. Many national cinemas translate Hollywood genres into their own national contexts, or, as Tom O'Regan writes, "indigenize" them (p. 1). Perhaps the most obvious and well-known examples of indigenizing genres are the Italian "spaghetti" westerns of Sergio Leone and Sergio Corbucci starring Clint Eastwood. Canadian and Australian directors have also adapted the western to narrativize national cultural materials in *The Grey Fox* (1982, Canada) and *Road to Saddle River* (1993, Canada) and, more famously, *Crocodile Dundee* (1986, Australia). Another highly successful Australian indigenization of Hollywood genre is the *Mad Max* series (1979, 1981, 1985, Australia) and its reconfiguration of the road movie in a postapocalyptic antipodean context.

One of the more critically and commercially successful practitioners of genre indigenization is France's Luc Besson. Besson first ventured into Hollywood territory with *Nikita* (1990), a made-in-France variation on the American action film. Following the international box-office success of *Nikita*, Besson took on the American film industry by shooting *The Professional* (1994), a French version of the Hollywood gangster drama, in English on location in New York, with French lead Jean Reno. The film went on to gross more than $19 million in the US market alone. Besson's subsequent film, *The Fifth Element* (1997), was a $90 million science-fiction epic starring Hollywood actor Bruce Willis. With the involvement of US distributors Columbia Pictures and Sony Pictures Entertainment, *The Fifth Element* opened widely, on 2,500 American screens in its first weekend of release. These shifts in setting from Paris to New York, to a futuristic New York and, finally, to outer space, beg the question of whether or not the term "French national cinema" is a useful or adequate descriptor to apply to these two films, for in what ways may they be said to represent the nation space of France?

A similar problem is raised by the work of Australian director Baz Luhrmann, who played with American genre and capital when his production company coproduced *Moulin Rouge* (2001) with Twentieth Century Fox. Although the film is shot on a Sydney soundstage with Australian lead Nicole Kidman and a largely Australian production team, the film is not set in the nation space of Australia, but the mythical, digitally generated space of *fin de siècle* Paris as seen through the lens of the Hollywood musical as reimagined by an Australian auteur. An Australia/United States co-production, *Moulin Rouge* ruptures the "stable set of meanings" or codes that Higson associates with conventional understandings of the term "national cinema" (Higson, 1989, p. 37). *Moulin Rouge*, not unlike Besson's *The Professional* and *The Fifth Element* in their ambiguous relationship to France, steps outside of an easily recognizable Australian nation space. Commenting on what he views as the limiting imagination of "national cinema," Higson argues that "when describing a national cinema, there is a tendency to focus only on those films that narrate the nation as just this finite, limited space, inhabited by a tightly coherent and unified community closed off to other identities besides national identity" (Higson, 2000, p. 66). Besson's films and *Moulin Rouge* are what Higson would term "transnational" on the bases of their production and distribution; but just as importantly for Higson, their variant receptions globally as these are inflected by cultural context (pp. 68–69). This difference in cultural context exists not only outside of nations, but also within them.

COLONIAL/POSTCOLONIAL CINEMAS

Cinema was exploited by imperialist nations such as Great Britain to represent Britannia's globalizing domination of its dominions and territories in films such as the Empire Marketing Board's *One Family: A Dream of*

Real Things (1930), in which a white child travels the empire but makes identifications only with white settlers. In the 1920s nascent nations such as the Dominion of Canada, a former colony in the act of becoming a nation, practiced a cinema of internal colonialism that legitimated the white domination of the country's indigenous peoples in ethnographic documentaries such as *Nass River Indians* (Marius Barbeau, 1928).

Postcolonial cinema attempts to disrupt such national cinemas and denaturalize them as colonizing entities, thereby articulating the discourse of contested indigenous nations. In Canada, Abenaki filmmaker Alanis Obomsawin documents the continuing violence of the Canadian nation-state against Indigenous First Nations in *Kanehsatake: 270 Years of Resistance* (1993) and *Incident at Restigouche* (1984). In Australia, *Rabbit-Proof Fence* (Phillip Noyce, 2002) tells the story of the white Australian nation's attempt to steal a generation of Aboriginal children from their culture, while Tracey Moffatt's *Nice Colored Girls* (1987) represents the exploitation of Aboriginal women by white men. New Zealand filmmaker Lee Tamahori explores the tensions between Maori identity and contemporary New Zealand culture in *Once Were Warriors* (1994). Moffatt's and Obomsawin's oppositional work might well be considered in the context of Third Cinema's anti-imperialist ideology and aesthetic. Although Third Cinema is generally understood to engage the neo-neocolonial paradigm of a hegemonic US cinema, the vision of two of the movement's foundational thinkers, Fernando Solanas and Octavio Getino, is certainly in line with the films of Moffatt and Obomsawin.

NATIONAL/TRANSNATIONAL CINEMAS: UNITED STATES, INDIA, HONG KONG

Cultural context frames an understanding of US cinema as both national and transnational. Within the United States, Hollywood produces a national cinema characterized by what Ulf Hedetoft, after Mette Hjort, describes as a thematic national "aboutness": films shot through with an American worldview (p. 281). The example par excellence of this US national cinema is, of course, the classical Hollywood western, a colonizing narrative of national becoming and belonging, a nation-building genre articulating the aggressive and perpetual US expansionism of Manifest Destiny that displaces Native Americans in films such as *Stagecoach* (1939), *The Searchers* (1956), and *How the West Was Won* (1962). While the Hollywood western can and has been received as a celebratory visualization of historical nation by a majority of Americans, it represents the genocidal destruction of indigenous nations for the American Indian.

Outside of the United States, Hollywood, as US transnational cinema, is a sign of US global expansion economically and ideologically. *Independence Day* (Roland Emmerich, 1996), a film with a worldwide gross of more than $813 million, sees the convergence of the American national and the global through its transformation of July 4, a national holiday celebrating the birth of the American nation, into a global holiday marking a US-led world order of "liberation" from oppressive forces: this time, aliens from outer space. Such films, however, are translated into different viewing cultures by their audiences. Using the American, French, and Danish receptions of Steven Spielberg's patriotic epic *Saving Private Ryan* (1998) as case studies, Danish critic Ulf Hedetoft argues that "foreign" audiences reinterpret US national cinema from within their own cultural optic: "'Hollywood' (as well as other national cinemas of international reach) is constantly undergoing a (re)nationalization process, temporally and spatially, a process which does not stamp out the US flavor of these cinematic products, but which negotiates their transition into and assimilation by 'foreign' mental visions and normative understandings" (pp. 281–282).

US national/transnational cinema cannot be reduced to Hollywood product, however dominant it may be. It is also comprised of the kind of independent and regional filmmaking that often troubles dominant US understandings of gender, sexuality, race, class, and history, and that is celebrated by Robert Redford's Sundance Film Festival. However, independent cinema is increasingly coopted by Hollywood, as was evidenced by the "mainstreaming" of independent producer Miramax in its 1993 sale to Disney. The potential cost of such mainstreaming of independents materialized in Disney's controversial refusal to distribute Miramax's *Fahrenheit 9/11* (2004), Michael Moore's anti-Bush documentary, through its subsidiary Buena Vista. Hollywood itself is certainly not a bounded homogeneous entity, and has produced such nation-demythologizing films as *The Parallax View* (1974), *Three Days of the Condor* (1975), *Missing* (1982), and *Good Night, and Good Luck* (2005).

It is important to remember that US cinema is not the sole national cinema to extend its reach globally, to function transnationally. Indian cinema, principally Bollywood, has the second largest market share in global film distribution next to the United States. The Indian industry eclipses Hollywood in its staggering rate of production: in excess of 25,000 features since 1931. The notion of a pan-Indian national cinema centered in Bombay further complicates our understanding of the term "national cinema." Since the end of the 1980s, 90 percent of India's domestic film production has been in regional languages. In addition to the cinema of Bombay (vernacular Hindi/Urdu), Indian cinema is composed of at least eight regional cinemas: Bengali, Tamil, Telugu, Kannada, Malayalam, Assamese, Manipur, and Oriya.

Gurinder Chada's **Bend it Like Beckham** ***(2002) challenges assumptions about British national cinema.*** ®™ AND COPYRIGHT © 20TH CENTURY FOX FILM CORP./COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.

India exports its cinema to global diasporic audiences, as well as taking sizeable market shares in West Africa, Egypt, Senegal, China, Russia, and other territories.

Hong Kong is in some ways a national cinema without a nation, a transnational cinema that has functioned historically as an export industry servicing a global Chinese diaspora and making successful incursions into the markets of Indonesia, Malaysia, the People's Republic of China, Singapore, South Korea, Taiwan, and Thailand. In 1993 Hong Kong was the world's third largest producer of films, surpassed only by India and the United States. Given its formation within a British colonial territory (1898–1927), Hong Kong and its cinema has long functioned as other to national Chinese cinemas produced by the People's Republic of China and Taiwan, offering conflicting visions of Chinese imagined communities.

DIASPORIC CINEMAS

The myth of the nation as a homogeneous, bounded, unitary, static, and stable entity is exploded in what Rosen would term its antinational cinema or the cinema of its others as this can be located in queer cinema such as Canada's *Zero Patience* (1993), and diasporic cinema such as the United Kingdom's *Khush* (1991), a film that combines sexual difference from the British mainstream with the racial and cultural differences of the South Asian diaspora living in England. Cinema of the diaspora disrupts and re-visions the national cinema along lines of heterogeneity and plurality by representing those others to the nation who have been dispersed from their homelands through economic migrancy and the legacies of colonial imperialism.

For example, Gurinder Chadha's documentary *I'm British But . . .* (1989) challenges essentialist notions of Britishness and its constituent elements—Englishness, Irishness, Scottishness, and Welshness—by tracking the lives of four Brits of Asian heritage living in the United Kingdom's four countries. When these people of color speak their identifications with the countries in which they live, they do so in the distinct dialects of England, Northern Ireland, Scotland, and Wales, thus inhabiting what had, historically, been overdetermined as a white linguistic space. Chadha's subsequent film *Bhaji on the*

Beach (1993) further inhabits the symbolic order of British national space by inserting Indo-English women into Blackpool, Britain's archetypal holiday space, and in *Bend It Like Beckham* (2002) football (soccer), Britain's national game, historically a white patriarchal preserve, is played by a South Asian girl. Not unlike *Khush* or *Zero Patience* and their queering of the national, *Bend It Like Beckham* also grapples with sexual difference through both South Asian and white middle-class British responses to homosexuality. This example of a diversified British screen has been embraced by both British and international audiences, making it one of British cinema's most commercially successful films.

In Canada questions of belonging, racism, and intergenerational and cultural conflicts shape Mina Shum's exploration of the Chinese-Canadian community in Vancouver in *Double Happiness* (1994). Not unlike *Khush*, Richard Fung's tape *Orientations* (1984) challenges any notion of a homogeneous diaspora in his interviews with Asian lesbians and gay men living in Toronto. Srinivas Krishna's satirical *Masala* (1991) circles around the question of home for the diasporic Indo-Canadian community in the wake of the 1985 Air India bombing by exploring the failures of official multiculturalism and their ramifications for two families. Krishna's film challenges historically fossilized understandings of Canada as a white nation by combining a diverse range of cultural materials including Bombay cinema, music video, Hollywood cinema, Canadian hockey, and Canadian state apparatuses. Deepa Mehta complicates further these blurred lines of national cinema identity with *Sam and Me* (1991) and *Bollywood/Hollywood* (2002), films about racial and cultural difference set in multicultural Canada, as well as Canadian-produced films set in India and Pakistan. For example, Mehta charts the painful and violent birthing of India and Pakistan nations through her representation of the 1947 partition in *Earth* (1998), while *Fire* (1996) explores a claustrophobic, regulatory heterosexuality forbidding sexual intimacy between two Hindu women. Mehta's queering of the Hindu nation, of "Mother India," resulted in Hindu fundamentalists setting fire to cinemas in India projecting the film. Production on the third film in Mehta's "elemental" trilogy, *Water*, was shut down in 2000 by Hindu extremists anxious about this Indo-Canadian's representation of the Indian nation.

National cinema, then, is clearly a multifaceted and conflicted object of study. National cinema refers to a group of films produced in a specific national territory, and also serves as a descriptor for the intellectual work of academics who attempt to read and write a critique of national cinema as a field of inquiry given that the nation is less unitary than heterogenous.

Christopher E. Gittings

NATIVE AMERICANS AND CINEMA

The representation of Native Americans in mainstream films throughout movie history corroborates the story of colonization of indigenous peoples and their homelands beginning in the sixteenth century, with Spain, France, England, and Portugal claiming ownership of "America" and the "New World." There are more films than books written about Native Americans, whose designated film role became known as the "Indian." The "Indian" in movie portrayals established a film stereotype that continues to serve the marketing interests of the highest-grossing entertainment industry today. In 1995, with reported earnings of $31.9 billion that year, the Walt Disney Company released an animated version of *Pocahontas*, a story perpetuating the view of "Indians" as obstacles to British explorers arrived to civilize the "New World."

MOVIE INDIANS

The popular use of the term the "American West" by early historians was a natural segue for what became the "western" film genre identified by film historians. Classic "westerns" in the 1930s and 1940s featured recognizable plots in which tension and ambiguity are expressed by white settlers as they came into contact with the wilderness and "Indians" who were portrayed as uncivilized and violent. John Ford (1894–1973), the master European American filmmaker who began making movies during the silent era, produced many western films; his most famous silent western, *The Iron Horse* (1924), featured eight hundred Pawnee, Sioux, and Cheyenne Indians along with twenty-eight hundred horses, thirteen hundred buffalo, and ten thousand Texas steers. The film was a mythic version of the completion of the transcontinental railroad in 1869. Ford almost singlehandedly rewrote American Western history by codifying conventions of the western genre, including those related to the representations of Indians in such films as *Stagecoach* (1939), *Drums Along the Mohawk* (1939), *My Darling Clementine* (1946), *Fort Apache* (1948), *She Wore a Yellow Ribbon* (1949), *Rio Grande* (1950), *The Searchers* (1956), and *Cheyenne Autumn* (1964), his farewell to the western film tradition he helped found.

Of the Ford films, *The Searchers* openly promoted a white European American perspective, invoking a deep-seated anti-Indian sentiment buried in the character of Ethan Edwards, portrayed by actor John Wayne. The story concerns the murder of white families and children and the theft of a surviving female child by Comanche "Indian" raiders. While professing to understand the Indians, Ethan demonstrates a racist thirst for revenge, as when he points and shoots at the eyes of an already dead Comanche warrior so that, according to "Indian" belief, he cannot enter heaven. This is in marked contrast to the next scene, showing a proper Christian burial for a white man. The film offers numerous negative biases regarding the "Indian," whereby viewers begin to think that Indians deserve to be punished or exterminated to make way for white settlement. This is most obvious in the story line's focus on the search for the stolen child, Debbie, who is now a young adult (Natalie Wood). Ethan's open hatred for Indians plays into his derision for Martin (Jeffrey Hunter) who was taken in by Debbie's family and has Cherokee blood. Martin's compassion for Indians is brought to a standstill during their search when Martin is given a fat Indian wife who is used as comic relief. The Indian woman expects to sleep with Martin but instead he kicks her, causing her to roll down

a hill, making her the butt of the joke. Ethan and Martin continue their quest by locating Debbie, who is found living in an Indian camp with an Indian chief, Scar (Henry Brandon). The unacceptability of this scenario is such that Ethan would rather see her dead than allow her to stay with her Indian captors. It is true that Ethan changes his mind about killing Debbie at the last moment, but this "rescue" is an ironic happy ending that at once provides narrative closure and invites questioning about Ford's use of racist stereotypes to promote sympathy for white settlement in the West.

Ford's films are often cited for his cinematic use of the Southwest's desert topography, which he made famous by framing his characters within the naturally sculptured land formations called Monument Valley. Ford's use of that landscape also established the West as an empty wilderness just prior to being colonized by white settlement. Similarly, Ford's *Cheyenne Autumn* endorses Manifest Destiny in that the wilderness must be "tamed" by the imprisonment of Cheyenne Indians by the US military. Although numerous film critics have suggested that *Cheyenne Autumn* was Ford's apology to Indians for his earlier negative portrayal of them, this view is not warranted. In the film, defeated Indians fight with one another, captured by the army and held captive until their fate is decided by a US official in Washington, D.C. Also, white actors portrayed key roles as Cheyenne chiefs in the film and a Mexican woman who gave birth to Cheyenne sons was played by the Mexican actress Delores Del Rio.

The popularity of the major studios' western films peaked during World War II; the commercial availability of television in the late 1940s led to a reduction in the number of big-budget westerns filmed on location. Actual Native Americans appearing in Hollywood westerns as warring "Indians" became victims of exploitation by white filmmakers, who transported them from their reservations to work in Hollywood, paying them with alcohol and tobacco to appear in battle scenes. The history of Indian movie extras being financially exploited and mistreated by white filmmakers was consistent with the mass exploitation of Native Americans during the "settling" of the West. Since the inception of Hollywood cinema, not one Native American has sustained a career as a film director, including James Young Deer (d. 1946), a Winnebago (a tribe also referred to as Ho Chunk) who directed *Yaqui Girl* (1910), and Edwin Carewe (1883–1940), a Chickasaw, who directed the first version of *Ramona* (1928).

NATIVE AMERICANS IN MOVIES

Despite the fact that a diversity of indigenous peoples had a legal and historical significance in the formation of every new country founded in the western hemisphere, in the United States and Canada the term "Indians" became a hegemonic designation implying that they were all the same in regards to culture, behavior, language, and social organization. The view of Indians as savage and uncivilized was repeated in early films and crystallized the image of "Indians" as dangerous and unacceptable to the normative lives of European immigrants whose lives appeared in films to be more valuable than those of the indigenous people they were colonizing. Mainstream films featuring Indians have been glacially slow in changing any part of this running narrative of conquest. Native Americans today seek to rectify and balance the one-sided, stock image of Indians as ignorant, distrustful, and undesirable through continued work in the film industry.

The availability of acting roles for Native Americans to portray "Indians" in films was essentially limited to westerns, which came complete with stock accoutrements of feathers and buckskin dress that accommodated at least four distinct Indian tribes: Apache, Cheyenne, Comanche, and Sioux. In the 1950s and into the 1960s, western films featured more sympathetic native characters, but even here Indians were played by white actors, including Jeff Chandler, who received an Academy Award® for his portrayal of Apache leader Cochise in *Broken Arrow* (1950).

By 1970, divided social opinion about the Vietnam War gave further impetus to this trend in films such as *Little Big Man* (1970). The film featured Native American chief Dan George (1899–1981), an Aboriginal Squamish from Canada, as one of the main characters. Directed by Arthur Penn, *Little Big Man* received high acclaim for Chief George, but it was the white actor Dustin Hoffman who received the most attention as the film's primary protagonist, Jack Crabb. However, *Little Big Man* was a breakthrough in that it was a major film with a Native American in a major speaking role. In the 1960s, the political upheavals in the United States resulting from both antiwar protests and civil rights issues set a precedent for agitated Native Americans who became involved in open resistance in an effort to call attention to the social consequences of colonial policies that left many Native Americans destitute and impoverished on Indian reservations. The American Indian Movement (AIM) held protests in front of theaters showing films about Indians they felt glamorized the demise of Indians, such as *A Man Called Horse* (1970). Also, during the early 1970s, other commercial films that capitalized on the social climate of the times involved a retelling of a historical massacre of the Cheyenne in *Soldier Blue* (1970), and the story of a half-blood Indian Vietnam War veteran named *Billy Jack* (1971).

Kevin Costner and Graham Greene in Costner's* Dances with Wolves *(1990), which seemed a step forward in its depiction of Native Americans. © ORION PICTURES/COURTESY EVERETT COLLECTION. REPRODUCED BY PERMISSION.

In the 1990s *Dances with Wolves* (1990), directed by and starring Kevin Costner, was perhaps the most popular western of the decade that featured Indians. Costner's film changed the shooting location of earlier westerns, using some one thousand buffalo, five hundred Indians, and as many horses in the high plains of South Dakota, the homeland of the Sioux, rather than Monument Valley. The film used native actors to speak Lakota, the indigenous language of the Sioux, and often positioned the camera inside Indian tipi lodges and in the encampment where a white female, captured as a child, was now fluently speaking and behaving as an Indian; these features added to the film's feeling of authenticity. The film almost romanticizes the ending scene where the Lakota are hiding out in the mountains, trying to escape their inevitable fate at the hands of Manifest Destiny as the US Cavalry pursues them, the last free Sioux Indians on the Plains. *Dances with Wolves* signaled to Native Americans that no major change had actually taken place in films, as the basic tenets of white domination and colonization were still shown as inevitable, even if tragic, and Indians forever resigned to defeat on reservations set aside for them by a colonial power.

In the early 1970s the anthropologists Sol Worth and John Adair taught a group of Navajo youths how to shoot and edit films, and left to their own approach, they produced a series of seven films described in the book, *Through Navajo Eyes*, originally published in 1972. In the 1990s young, educated, and highly motivated Native Americans were encouraged by the success of *Dances with Wolves* to seek to produce their own successes. However, the opportunities to work in mainstream films were limited to working as "Indian extras"; thus, few chances to actually produce or direct their own films did not materialize. However, the desire by individual Native Americans to make their own films became stronger. Between 1990 and 2000, a Native American film movement was born, with numerous Native Americans enrolled in film schools while others strived to complete college degrees in all fields of study, with particular emphasis in law, medicine, and the sciences.

The director Chris Eyre and the writer-producer Sherman Alexie embarked on a film project that could have only happened after many previous and unsuccessful attempts by other Native Americans to produce a feature film backed by a major studio or production company. Eyre graduated from New York University's film program, and Alexie received a degree from Washington State University and became a writer. His critically acclaimed serial novel, *The Lone Ranger and Tonto Fist Fight in Heaven* (1993), provided the groundwork for Eyre to collaborate with Alexie on *Smoke Signals* (1998), about a contemporary native community with a mostly native cast. The film was purchased by Miramax Films distribution after its debut at the Sundance Film Festival and released in mainstream theaters. Since its success, Eyre and Alexie have continued to produce films independently. Eyre's subsequent films include *Skins* (2002) and *Skinwalkers* (2002), and Alexie directed *The Business of Fancydancing* (2002). Hopefully, these and subsequent native-made films will in time help reframe the historical misperception of indigenous peoples.

NATURE FILMS

Nature filmmaking has a long and mobile history, from its pre-cinematic roots in nineteenth-century photographic traditions to its current status as a genre found most commonly on television, and perhaps most spectacularly in large-format IMAX cinema. Now only rarely seen in conventional theatrical release, nature films have alternatively enjoyed significant popular presence and languished in obscurity. Despite the genre's uneven presence in theaters, its thematic occupations can be clearly periodized. From the earliest years of cinema through the 1930s, nature filmmaking most often took the form of expedition travelogues, in which flora appeared as terrain to be crossed over, and fauna as objects to be filmed, captured, or killed. Meanwhile, noncommercial scientific filmmakers developed techniques through which animal behaviors could be observed and recorded for scientific study. Post–World War II nature filmmaking returned with the animal as subject, the human rendered either invisible or on standby as steward of the most fragile facets of an invaluable environment. Near the end of the twentieth century, the genre, on screens small and large, proliferated in new forms, fusing readily with reality-based and fictional genres.

EARLY HISTORY

Nature filmmaking derived from experiments in representing animals by motion-study photographers such as Eadweard Muybridge (1830–1904) and Etienne Jules Marey (1830–1904), naturalist-photographers such as Cherry Kearton (1871–1915), and Victorian "camera-hunters," who shot photographic images instead of or as well as trophy kills while on safari in colonized regions of Africa. Early-cinema actualities were often filmed using exotic captive animals, as in Louis Lumière's *Lions, London Zoological Garden* (1895); during hunting expeditions, as in *The Polar Bear Hunt in the Arctic Seas* (Pathé Frères, 1910); or in feature action-oriented conflicts between human society and domesticated animals, as in Edison Kinetoscope's *Cockfight* (1894), *The Burning Stable* (1896), and *Electrocuting an Elephant* (1903). For the latter film, Edison staged the execution of Topsy, an elephant at Coney Island's Luna Park, who had killed an abusive handler. Violent sensationalism was thus already established as a defining feature of the nature film by the dawn of the twentieth century.

Nickelodeons and early movie theaters showed these films as newsreels. Some were comprised of authentically gathered footage. Others were staged using captive animals in controlled settings and passed off as films of fact to unsuspecting audiences. *Hunting Big Game in Africa* (1909), shot in William N. Selig's Chicago studio, employed a Teddy Roosevelt look-a-like, several African American actors who posed as African porters, and an off-screen gunman whose job it was to kill a lion that Selig's studio had bought from a zoo. The film, released while the ex-president was on safari, was far more successful than *Roosevelt in Africa* (1910) by Cherry Kearton, who did travel briefly with "T.R.'s" party. Critics for *Variety* and *The Moving Picture World* panned Kearton's authentic short as dull and, erroneously, as partly faked, further reinforcing the high standards for blood-spilling action to which the genre would be held—as well as its low ethical standards, in a market that too often failed to distinguish nefarious hoax from natural history.

Staged or authentic—often in combination—the expedition film adapted rapidly to a changing marketplace,

soon appearing in the form of footage meant to accompany live lectures, feature-length silent and sound films. As early as 1912, the feature-length *African Hunt* (Paul J. Rainey), earned a respectable half million dollars. By the 1920s, the market for such films was dominated by the prolific husband-and-wife team of Martin (1884–1937) and Osa Johnson (1894–1953).

Martin Johnson first sailed to the South Pacific as a cook aboard Jack London's *The Snark*. Back home in Kansas, he met and married Osa Leighty at the theater where he gave slide-lectures featuring photographs taken on the trip. The couple soon sailed to the New Hebrides (now Vanuatu). Footage from the trip became *Among the Cannibal Isles of the South Seas* (1918). Martin lectured alongside the film for a week at the Rivoli Theater in New York; a two-part version was distributed with intertitles replacing the live lecture. While these projects were dubious renderings of Melanesian social practices, critics were enthusiastic. Nevertheless, distributors who tended to see the ethnographic mode as too commercially risky encouraged the Johnsons to seek more tried-and-true subjects.

The Johnsons first turned to wildlife in *Jungle Adventures* (1921), shot in Borneo. Impressed by their work, Carl Akeley, the innovative taxidermist then collecting specimens for the American Museum of Natural History (AMNH)'s Hall of African Mammals, offered the Johnsons support on behalf of the museum. With AMNH's support, the Johnsons completed their best-known film, *Simba* (1928), which they made over the course of a four-year expedition and which featured cavalcades of animal species (and indigenous tribespeople, employed as porters and encountered in the course of the expedition) little known to American moviegoers. Despite its ostensibly educational mission, the film also contained the action that audiences expected: the intrepid couple approach their subjects armed with both camera and rifle. Martin cranks the camera as rhinoceros, later elephant, and eventually lion charge. At the last possible moment, Osa appears to kill each oncoming animal. Most animals killed in the Johnsons' films actually fell to off-screen marksmen, and cutaways of Martin helming the film camera and Osa aiming her weapon were staged following the filmed encounters.

The Johnsons' success—*Simba* earned some $2 million—would not last. Concerned that as independents they would find fewer opportunities as the powerful studio system increasingly integrated production, distribution, and exhibition, the Johnsons produced their next film, *Congorilla* (1929), for the Fox Film Corporation. Scenes poking fun at indigenous Africans and reports that the Johnsons had captured gorillas for use in the film without proper authority from the colonial government of the Belgian Congo sullied their reputation and standing with the AMNH. The Johnsons continued to make films (*Baboona*, 1935; *Borneo*, 1937) until Martin's death in 1937; subsequently, Osa cobbled together *Jungles Calling* (1937) and *Tulagi and the Solomons* (1943) from old footage, and then reworked the same material as a syndicated television series in the early 1950s.

But the controversy surrounding the Johnsons' work paled compared to that elicited by the titillating *Ingagi* (1930), banned by the Motion Picture Producers and Distributors of America for attempting to pass off the Selig Studio in Los Angeles as an African location, a costumed actor as a gorilla, and white actresses in blackface as indigenous Africans.

While *Congorilla* and *Ingagi* scandalized, Paul L. Hoefler's *Africa Speaks* (1930) strove to reinvigorate the expedition film, touting its use of sound technology as a first for the genre. The much-parodied *Africa Speaks* (Edgar Bergen and Charlie McCarthy, Abbott and Costello, and Porky Pig appeared in send-ups of the film) drew on genre traditions, mixing wildlife with ethnographic footage as racist comic relief, using rear-screen projection to enhance dramatic action, even incorporating staged scenes in which the party's Maasai gun bearer appears to be killed by lions, which are then shot by Hoefler and sidekick Harold Austin.

This decline into hoary formulae occurred alongside shifting patterns of production and distribution, economic and political conditions that affected the leisure travel from which these films derived, and new priorities for independent nonfiction filmmakers. Nevertheless, remarkable nature filmmaking continued to take place, much of it outside the United States. Noteworthy figures from British scientific and cinematic worlds collaborated on *The Private Life of the Gannet* (1934), an unusual divergence from the expedition format. The film focused on a colony of diving birds located on an island off the Welsh coast rather than on the adventures of the naturalist-filmmakers trekking after them. The biologist Julian Huxley (1887–1975) wrote the script for the short film, which was produced by Alexander Korda (1893–1956) to be released with his own *Scarlet Pimpernel* (1934); John Grierson (1898–1972) shot the final scenes.

Meanwhile, scientists and naturalists produced vast stores of nature films that would be used by researchers and distributed within the largely educational, nontheatrical market. These films tended to focus on single species—most notably *Ethology of the Greylag Goose* (Konrad Lorenz, 1938) and *The Social Behavior of the Laughing Gull* (Gladwyn Kingsley Noble, 1940), which skillfully captured animal behaviors on film and made them available to specialists, students, and interested amateurs for future study. In France, the experimental filmmaker Jean Painlevé (1902–1989) advanced

ARNE SUCKSDORFF

b. Stockholm, Sweden, 3 February 1917, d. 4 May 2001

Arne Sucksdorff was Sweden's leading documentary filmmaker. His career began with studies in the natural sciences and painting, but he devoted himself as a young man to photography and film. His first short film, *Rhapsody in August* (*Augustirapsodi*, 1939), completed when he was only twenty-two years old, led to a contract with Svensk Filmindustri, then Sweden's leading studio.

Throughout the 1940s, Sucksdorff examined Swedish wildlife in short films produced for the studio, including *En Sommarsaga* (*A Summer's Tale*, 1941), *Reindeer Time* (1943), *Gull* (*Trut*, 1944), and *En kluven värid* (*A Divided World*, 1948). Foreshadowing the direction his work would take in the 1950s, *The Shadow of the Hunter* (1947) and *Shadows on the Snow* (1949) staged encounters in which hunters track but decline to shoot deer and bear, respectively. These works closely observed and dramatized animal behavior, treating animals as characters locked in life-or-death struggles, punctuated by humor and tenderness, and carried along by florid musical scores. Sucksdorff accomplished first what Walt Disney's True-Life Adventures are often credited with innovating—and without the advantages of Disney branding or budgets; while the True-Life Adventures hit the silver screen in Technicolor, Sucksdorff worked throughout his career in sumptuous black-and-white tones and eschewed windy voice-over narration in favor of pictorial storytelling.

Sucksdorff also took on urban and ethnographic subjects in the Oscar®-winning *Människo i stad* (*Rhythm of a City*, 1946), *Uppbrott* (*The Open Road*, 1948), and *Vinden och floden* (*The Wind and the River*, 1950). In *Journée scandinave* (*The Living Stream*, 1950), the filmmaker traced the flow of goods and services throughout Scandinavia in a project co-produced by the Economic Cooperation Administration to promote the postwar Marshall Plan. He first tackled feature filmmaking with *Det stora äventyret* (*The Great Adventure*, 1953), casting his sons and himself in important roles. In the film, which won awards at the Cannes and Berlin film festivals, nature and culture collide as two young farm boys raise an otter that must eventually be returned to the wild. Sucksdorff followed *The Great Adventure* with *En Djungelsaga* (*The Flute and the Arrow*, 1957) and *Pojken i trädet* (*The Boy in the Tree*, 1961), his last film shot in Sweden.

In 1962 Sucksdorff relocated to Brazil to teach filmmaking under the aegis of UNESCO. He stayed for nearly three decades, writing volumes but completing only one film, *Mitt hem är Copacabana* (*My Home Is Copacabana*, 1965), which earned the Best Director Guldbagge Award back in Sweden. Sucksdorff did, however, contribute charmingly intimate scenes of penguins nesting, mating, and raising their chicks to the otherwise tedious fiction film, *Cry of the Penguins* (*Mr. Forbush and the Penguins*, 1971).

RECOMMENDED VIEWING

underwater cinematography with shorts such as *The Sea Horse* (1934) and *Freshwater Assassins* (1947). In Sweden, Arne Sucksdorff (1917–2001) completed the first film of his prolific and innovative career in 1939. At the end of the 1940s, nature filmmaking would return, in new forms, in the United States.

THE NATURE FILM IN THE POST–WORLD WAR II PERIOD

How Walt Disney (1901–1966) got into nature filmmaking is the stuff of Disney legends. Disney's inspiration for the True-Life Adventures may have been wildlife footage that Disney animators sketched from while

***Arne Sucksdorff in 2001 with the Oscar® he won in 1949 for* Rhythms of a City.** AP IMAGES/LEIF-ERIK NYGARD.

developing *Bambi* (1942). Maybe Disney was inspired by nature itself, while on vacation in Alaska. Or perhaps the move was more calculated: nature filmmaking provided an affordable means (compared to labor-intensive animated films) through which Disney could continue to produce new titles during a general downturn in the film industry. In any case, Disney hired the amateur filmmakers Alfred and Elma Milotte to gather the footage that would become *Seal Island* (1948). In 1949, this short bacame the first of many in the True-Life Adventure series to win an Academy Award® (in a documentary category) and to enjoy a surprisingly lucrative theatrical release. To capitalize on its success, Disney expanded the series to include the shorts *Beaver Valley* (1950), *Nature's Half-Acre* (1951), *The Olympic Elk* (1952), *Water Birds* (1952), *Bear Country* (1953), *Prowlers of the Everglades* (1953), and *Islands of the Seas* (1960), as well as the features *The Living Desert* (1953), *The Vanishing Prairie* (1954), *The African Lion* (1955), *Secrets of Life* (1956), *White Wilderness* (1958), and *Jungle Cat* (1960).

The series repopularized the nature film in a form that was new in a number of ways. First, the True-Life Adventures melded close observations of animal behavior that was already endemic to scientific nature films, footage gathered through both patient fieldwork and frequently imperceptible stagings, and dramatic storylines derived from already classic Disney formulae. While the series employed scores of scientific advisors and nature filmmakers, it was overseen by directors and writers such as James Algar (1912–1998), who had worked on Disney classics such as *Fantasia* (1940) and *Bambi*. Under Disney control, the classic form of the nature film shifted from expedition travelogues based on human activities to the struggle for survival or the coming of age of anthropomorphized animal protagonists.

Most of the True-Life Adventures featured North American wildlife and landscapes, whereas pre–World War II expedition films had emphasized more exotic locations. The True-Life Adventures hinted far more often than their expedition predecessors that wild species were not endlessly plentiful and expendable but instead threatened by shrinking habitats and other factors as well as inherently valuable. They also infused explicit conservationist values into the genre. Despite these innovations, which influenced later generations of nature filmmakers, Disney jettisoned the constraints of nonfiction and launched a short-lived True-Life Fantasy series with the squirrel story *Perri* (1957). In the long term, the Disney studio favored fictional stories employing trained animals—mostly cats and dogs—interacting with humans.

NATURE AS A TELEVISION GENRE

Even as Walt Disney returned nature films to movie theaters, the wider film industry began facing competition from the new medium of television in the post–World War II era. In 1945, the Lincoln Park Zoo's director, Marlin Perkins (1905–1986), began taking animals to a Chicago TV station for occasional live broadcasts. By 1949, Perkins had convinced the local NBC affiliate, WNBQ, to help transform the staid show-and-tell format by shooting at the zoo itself, under the title *Zoo Parade*. By the time the show was cancelled in 1957, a few episodes had also been filmed in African conservation parks. Perkins and other nature filmmaking pioneers, such as Jacques-Yves Cousteau (1910–1997), who began contributing oceanographic segments to CBS's *Omnibus* series in 1954, and David Attenborough (b. 1926), in his first of many series for the BBC, *Zoo Quest* (1954–1964), moved out of the studio and zoo and into the field with film crews in tow. The technological, aesthetic, and narrative features of cinematic and televisual nature filmmaking for a time became more or less indistinguishable. Perkins's next series, *Mutual of Omaha's Wild Kingdom*,

which premiered on NBC in 1963 and continued in syndication until 1988, visited conservation parks worldwide, where his crew sometimes participated in tagging animals for research purposes, adding fast-paced chase scenes and action, harking back in style (if differing in purpose) to pre-war expedition films.

Nature filled a niche for programming that was educational as well as entertaining. CBS launched the long-running *National Geographic Specials* in 1965; ABC began to host *The Undersea World of Jacques Cousteau* specials in 1968; Bill Burrud's *Animal World* (1968–1980) and a host of imitators joined *Wild Kingdom* in the market for half-hour syndicated programs after the Federal Communications Commission forced the networks to acquire some of their programming from independent sources. But in the 1970s, with the relaxation of the federal Financial Interest and Syndication Rules, commercial demand for the genre waned. The Public Broadcasting System (PBS) became the primary home in the United States for nature filmmaking: in 1974, the science-oriented series *NOVA* premiered with Oxford Scientific Films' "The Making of a Natural History Film," which had been made for BBC-2's series *Horizon* as its first episode. In 1975, the series *National Geographic Specials* moved to PBS. In 1982, PBS redoubled its commitment to nature subjects, adding the series *Nature* (produced by WNET and frequently airing programs acquired from or coproduced with the BBC Natural History Unit), David Attenborough's *Life on Earth*, and Marty Stouffer's *Wild America* to its schedule.

It took a booming cable television industry to reposition nature as a TV genre with commercial potential. In 1985, The Discovery Channel went on the air with a schedule full of nature, science, and exploration documentaries. The cable Discovery Channel was then a fledging upstart; it eventually became one of the most widely distributed of cable channels, reaching almost 90 million homes in the United States and another 385 million homes in some 160 countries. Discovery used nature as a kind of flagship, consolidated under the series title *Wild Discovery*. Thanks to its heavily promoted, high-rated specials, such as the annual Shark Week, other cable channels began to follow suit. These successes laid the groundwork for the launch of a spin-off channel, Animal Planet, in 1996. Animal Planet is a joint venture involving the BBC in global markets and features classic wildlife filmmaking. It has made minor celebrities of a new generation of on-camera hosts (foremost, Steve Irwin of *The Crocodile Hunter*, a hit for the channel launched in 1996); provides hours of programming about pets as well as "wild" animals; eagerly hybridizies nature with other genres, including so-called reality TV (*Animal Cops*, beginning 2002), game, and talent shows (*Pet Star*, beginning 2002); and frequently consists of productions shot on video rather than on film. The Discovery–BBC alliance has also resulted in high-profile programs such as *Walking with Dinosaurs* (1999) and *Walking with Prehistoric Beasts* (2001), speculative dramatizations about the daily lives of long-extinct life forms rendered through computer-generated imagery, and *Blue Planet: A Natural History of the Ocean* (2002), a gorgeously produced eight-part survey of marine life.

When Animal Planet reached global markets, National Geographic Television countered by partnering with NBC and News Corporation to launch its own cable channel, first shown in the United Kingdom, Europe, and Asia in 1997–1998, and reaching US markets in 2001. Nature now sprawled throughout television, as both broadcast and cable channels experimented with cost-cutting "reality-based" and other nonfiction genres and competed ever more fiercely for demographic niches (especially for that of young adult males) thought to cluster around this kind of programming. In 1991, the Turner Broadcasting System (TBS) hosted Attenborough's popular BBC series *The Trials of Life*; the highbrow *National Geographic Specials* returned to NBC in 1995; the Fox broadcast network dabbled with lowbrow miniseries and specials such as *When Animals Attack* (1996–1997); and MTV's *Jackass* crew remade itself as *Wildboyz* (2003–2004), which set its roughhousing stunts amid wildlife (and sometimes ethnographic) filmmaking conventions.

NATURE ON BIG (AND REALLY BIG) SCREENS

While animal programming boomed on TV, nonfiction nature ventures in theatrical distribution remained scant, with the exception of an emerging specialty market. In the 1970s, the IMAX Corporation had introduced a new 70mm cinema format; theaters capable of screening the towering image were installed mainly in natural history and science museums. Both format and context proved particularly friendly to sweeping land- and seascapes. Accordingly, many IMAX films have featured nature subjects, such as *Beavers* (1988), *Blue Planet* (1990), *Everest* (1996), *Island of the Sharks* (1999), *Jane Goodall's Wild Chimpanzees* (2002), and the 3-D *Bugs!* (2003). Occasionally the format has turned to computer-generated imagery and dramatic storylines, as in *T-Rex: Back to the Cretaceous* (1998) and *China: The Panda Adventure* (2001).

Once animal TV proliferated and nature subjects found new outlets in large-format cinema, filmmakers with careers in other genres began straying into nature productions. For example, the French-German television network Arte premiered *Impressionen unter Wasser* (*Impressions of the Deep*) by Leni Riefenstahl

Bart the Bear (right) and York the Bear starred in Jean-Jacques Annaud's* The Bear *(1988). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

(1902–2003), director of Nazi propaganda films including *Triumph of the Will* (1935) and *Olympia* (1938), as part of a celebration of Riefenstahl's hundredth birthday in 2002. After waterbound dramatic features such as the aquatic sci-fi flop *The Abyss* (1989) and the stunning success of *Titanic* (1997), James Cameron (b. 1954) began to experiment with documentary and undersea projects in the IMAX format, eventually directing *Aliens of the Deep* (2005). Others borrowed nature filmmaking techniques and aesthetics for animal-centered dramas. *L'Ours* (*The Bear*, 1988), by the eclectic French director Jean-Jacques Annaud (b. 1943), employed Bart the Bear, who also appears in *Legends of the Fall* (1994) and a dozen other films, as an adult male who adopts an orphaned cub. Entirely a fiction, *The Bear* contains many features derived from classic Disneyana: as in *Bambi*, the animal protagonist's mother is killed, while the surrogate father and the cub evade hunters; the coming-of-age narrative also echoes elements of the True-Life Adventures. Annaud's second dramatic wildlife feature, *Deux frères* (*Two Brothers*, 2004), features an equally unlikely tale of twin tiger cubs, separated upon their mother's death, abused in captivity, then reunited and returned to the wild.

Few late twentieth- and early twenty-first century nonfiction feature films enjoyed theatrical releases: *Microcosmos* (1996), a lush exploration of insect life produced by the French actor Jacques Perrin, was distributed by Miramax in the United States to disappointing earnings of $1.4 million. Discovery briefly tried its hand with *The Leopard Son* (1996), filmed by the Baron Hugo van Lawick, which opened even more modestly and was quickly recast as a Discovery Channel special and home video title. Still, nature filmmakers continued to brave the theatrical market. *Le Peuple migrateur* (*Winged Migration*, 2002), produced and directed by Perrin and released by Sony, earned $10 million in the United States. The film, containing footage obtained from inventive aerial camera units, and sometimes using imprinted geese, ducks, cranes, and storks hand-raised for use in the film, suggested that significant audiences could still be drawn to theaters around especially spectacular nature projects. Miramax timidly edged the BBC Natural History Unit's *Deep Blue* (2005), a less impressive

follow-up to the *Blue Planet* series by veteran Alastair Fothergill, into theaters, while *La Marche de l'empereur* (*March of the Penguins*), directed by Luc Jacquet for Bonne Pioche, was released in the United States by Warner Independent and National Geographic films in 2005 to wide acclaim. *March*, said to have been made for $2 million, earned $70 million in the United States within three months, was awarded an Academy Award® in 2006, and became a best-seller as a home video release. Despite these exceptional theatrical releases, nature remains in the twenty-first century a predominately televisual genre.

NEOREALISM

The period between 1943 and 1945 in the history of Italian cinema is dominated by the impact of neorealism, which is properly defined as a moment or a trend in Italian film, rather than an actual school or group of theoretically motivated and like-minded directors and scriptwriters. Its impact nevertheless has been enormous, not only on Italian film but also on French New Wave cinema and on movies in diverse parts of the world.

HISTORICAL ORIGINS OF ITALIAN NEOREALISM

With the fall of Mussolini's Fascist regime in 1943 and the end of World War II, international audiences were suddenly introduced to Italian films through a few noteworthy works by Roberto Rossellini (1906–1977), Vittorio De Sica (1902–1974), and Luchino Visconti (1906–1976). Italian directors, newly freed from Fascist censorship, were able to merge a desire for cinematic realism (a tendency already present during the Fascist period) with social, political, and economic themes that would never have been tolerated by the regime. Neorealist films often took a highly critical view of Italian society and focused attention upon glaring social problems, such as the effects of the Resistance and the war, postwar poverty, and chronic unemployment. Continuing a trend toward realism that had already been initiated during the Fascist period by prewar directors such as Alessandro Blasetti (1900–1987), Augusto Genina (1892–1957), and Francesco De Robertis (1902–1959), these new postwar faces—dubbed neorealists by critics who praised the "new" realism they believed such directors sought to create—rejected, in some instances, traditional dramatic and cinematic conventions associated with commercial cinema in both Rome and Hollywood. Some (though very few) even wanted to abandon literary screenplays altogether to focus on improvisation, while most preferred to chronicle the average, undramatic daily events in the lives of common people with the assistance of a literate script. But almost all neorealists agreed that the "happy ending" they associated with Hollywood was to be avoided at all costs.

Neorealism preferred location shooting rather than studio work, as well as the grainy kind of photography associated with documentary newsreels. While it is true that, for a while, the film studios were unavailable after the war, neorealist directors shunned them primarily because they wanted to show what was going on in the streets and piazzas of Italy immediately after the war. Contrary to the belief that explains on-location shooting by its supposed lower cost, such filming often cost much more than work in the more easily controlled studios; in the streets, it was never possible to predict lighting, weather, and the unforeseen occurrence of money-wasting disturbances. Economic factors do, however, explain another characteristic of neorealist cinema—its almost universal practice of dubbing the sound track in post-production, rather than recording sounds on the supposedly "authentic" locations. Perhaps the most original characteristic of the new Italian realism in film was the brilliant use of nonprofessional actors by Rossellini, De Sica, and Visconti, though many of the films accepted as neorealist depended upon excellent performances by seasoned professional actors.

Some film historians have tended to portray neorealism as an authentic movement with universally agreed-upon stylistic or thematic principles. In fact,

Italian neorealist cinema represents a hybrid of traditional and more experimental techniques. Moreover, political expediency often motivated interpretations of postwar neorealism that overlooked the important elements of continuity between realist films made during the Fascist era and realist films made by the neorealists. After 1945, no one in the film industry wanted to be associated with Mussolini and his discredited dictatorship, and most Italian film critics were Marxists; neorealism's ancestry was thus largely ignored.

The most influential critical appraisals of Italian neorealism today emphasize the fact that Italian neorealist cinema rested upon artifice as much as realism and established, in effect, its own particular realist conventions. All too many early assessments of Italian neorealism focused lazily upon the formulaic statement that Italian neorealism meant no scripts, no actors, no studios, and no happy endings. In the 1964 edition of his first resistance novel, *Il sentiero dei nidi di ragno* (*The Path to the Nest of Spiders*, 1947), Italo Calvino (1923–1985) reminded his readers that Italian neorealism was never a school with widely shared theoretical principles. Rather, it arose from a number of closely associated discoveries of an Italian popular culture that had traditionally been ignored by "high" Italian culture. Neorealist film and literature replaced an official cinema and literature characterized by pompous rhetoric and a lack of interest in the quotidian and the commonplace.

Critics unanimously regard a small group of films as the best examples of this brief moment in Italian film history: Rossellini's *Roma, città apperta* (*Rome, Open City*, 1945) and *Paisà* (*Paisan*, 1946), both of which were scripted by Federico Fellini (1920–1993); De Sica's *Sciuscà* (*Shoeshine*, 1946), *Ladri di biciclette* (*The Bicycle Thieves*, 1948), *Miracolo a Milano* (*Miracle in Milan*, 1951), and *Umberto D* (1952), all scripted by Cesare Zavattini (1902–1989); and Luchino Visconti's *Ossessione* (*Obsession*, 1943) and *La terra trema: Episodio del mare* (*The Earth Trembles*, 1948), respectively, loose adaptations of James Cain's 1934 novel *The Postman Always Rings Twice* and Giovanni Verga's *I Malavoglia* (*The House by the Medlar Tree*, 1881).

In retrospect, the appearance of Visconti's *Obsession* made it clear that something original was brewing within Italian cinema. Assisted by a number of young Italian intellectuals associated with the review *Cinema*, Visconti took Cain's "hard-boiled" novel (without paying for the rights) and turned the crisp, first-person narrative voice of the American work into a more omniscient, objective camera style, as obsessed with highly formal compositions as Visconti's protagonists are by their violent passions. Visconti reveals an Italy that includes not only the picturesque and the beautiful but also the tawdry, the ordinary, and the insignificant. Simple gestures, glances, and the absence of any dramatic action characterize the most famous sequence in the film: world-weary Giovanna (Clara Calamai) enters her squalid kitchen, takes a bowl of pasta, and begins to eat, reading the newspaper, but falls asleep from exhaustion. Postwar critics praised neorealist cinema for respecting the duration of real time in such scenes. Equally original in the film is Visconti's deflation of the "new" man that Italian Fascism had promised to produce. Even though the film's protagonist, Gino, is played by Fascist Italy's matinee idol, Massimo Girotti (1918–2003), his role in the film is resolutely nonheroic, and he has implicit homosexual leanings as well. Even Visconti's patron and friend Vittorio Mussolini rejected such a portrayal of Italian life. Interestingly enough, Vittorio's father, Benito Mussolini, had screened the film and did not find it objectionable.

Though *Obsession* announced a new era in Italian filmmaking, at the time very few people saw the film, and few realized that the aristocratic young director would have such a stellar career. It was the international success of Rossellini's *Rome, Open City*, which so accurately reflected the moral and psychological atmosphere of the immediate postwar period, that alerted the world to the advent of Italian neorealism. With a daring combination of styles and moods, Rossellini captured the tension and the tragedy of Italian life under German occupation and the partisan struggle out of which the new Italian republic was subsequently born. *Rome, Open City*, however, is far from a programmatic attempt at cinematic realism. Rossellini relied on dramatic actors rather than nonprofessionals. He constructed a number of studio sets (particularly the Gestapo headquarters where the most dramatic scenes in the film take place) and thus did not slavishly follow the neorealist trend of shooting films in the streets of Rome. Moreover, his plot was a melodrama in which good and evil were so clear-cut that few viewers today would identify it as realism. Even its lighting in key sequences (such as the famous torture scene) follows expressionist or American film noir conventions. Rossellini aims to provoke an emotional rather than an intellectual response, with a melodramatic account of Italian resistance to Nazi oppression. In particular, the children present at the end of the film to witness the execution of partisan priest Don Pietro (Aldo Fabrizi) point to renewed hope for what Rossellini's protagonists call a new springtime of democracy and freedom in Italy.

Paisan reflects to a far greater extent the conventions of the newsreel documentary, tracing in six separate episodes the Allied invasion of Italy and its slow process through the peninsula. Far more than *Rome, Open City*, *Paisan* seemed to offer an entirely novel approach to film realism; in fact, when future young directors would cite Rossellini as their inspiration, they would almost always

CESARE ZAVATTINI

b. Luzzara, Italy, 29 September 1902, d. 13 October 1989

Italian journalist and writer of screenplays for Italian neorealist cinema, Cesare Zavattini is known especially for his collaborations with director Vittorio De Sica. After completing a law degree at the University of Parma, Zavattini wrote two successful novels—*Parliamo tanto di me* (Let's Talk A Lot About Me, 1931) and *Il poveri sono matti* (The Poor Are Crazy, 1937)—before writing the script for Mario Camerini's classic social satire, *Darò un milione* (*I'll Give a Million*, 1935), starring Vittorio De Sica. In his lifetime, Zavattini completed 126 screenplays, 26 of which were for De Sica as director or actor.

He also provided screenplays for such figures as Alessandro Blasetti, Giuseppe De Santis, Luchino Visconti, and Alberto Lattuada, but his work with De Sica established Zavattini as the leading exponent of Italian neorealism in the decade immediately following the end of World War II. But it was the four neorealist classics created by the two friends that made film history: *Sciuscà* (*Shoeshine*, 1946), an account of the American occupation that earned the first award for foreign films bestowed by the American Academy of Motion Picture Arts and Sciences; *Ladri di biciclette* (*The Bicycle Thieves*, 1948), a tale of postwar unemployment that received an Oscar® for Best Foreign Film; *Miracolo a Milano* (*Miracle in Milan*, 1951), a fantastic parable about the class struggle in a fairy-tale Milan; and *Umberto D* (1952), a heart-rending tragedy about a lonely pensioner and his dog.

Zavattini became the outstanding spokesman for neorealism, advocating the use of nonprofessional actors, a documentary style, authentic locations as opposed to studio shooting, and a rejection of Hollywood studio conventions, including the use of dramatic or intrusive editing. He wrote contemporary, simple stories about common people. In particular, he felt that everyday events provided as much drama as any Hollywood script could produce by rhetorical means or that any special effects and dramatic editing might create. Nevertheless, after neorealist cinema evolved in the late 1950s, Zavattini wrote screenplays for De Sica that enjoyed great commercial success: *Ieri, oggi, domani* (*Yesterday, Today, and Tomorrow*. 1963), a social satire that garnered an Oscar® for Best Foreign Film and featured a legendary striptease for Marcello Mastroianni by Sophia Loren; *La ciociara* (*Two Women*, 1960), an adaptation of an Alberto Moravia novel about the horrible effects of war, which won Loren an Oscar® for Best Actress; and *Il giardino dei Finzi-Contini* (*The Garden of the Finzi-Continis*, 1970), the narration of the destruction of the Jewish community in Ferrara before World War II, which won De Sica his fourth Oscar® for Best Foreign Film.

refer to *Paisan*. Its grainy film, the awkward acting of its nonprofessional protagonists, its authoritative voice-over narration, and the immediacy of its subject matter—all features associated with newsreels—do not completely describe the aesthetic quality of the work. Rossellini aims not at a merely realistic documentary of the Allied invasion and Italian suffering. His subject is a deeper philosophical theme, employing a bare minimum of aesthetic resources to follow the encounter of two cultures, resulting in initial misunderstanding but eventual brotherhood.

The third part of Rossellini's war trilogy, *Germania anno zero* (*Germany Year Zero*, 1948), shifts the director's attention from war-torn Italy to the disastrous effects of the war on Germany. It was shot among the debris of the ruins of Hitler's Berlin before reconstruction. The director's analysis of the aftereffects of Hitler's indoctrination of a young German boy, who eventually commits suicide, reflects Rossellini's ability to empathize with human suffering, even among ex-Nazis.

Compared to the daring experimentalism and use of nonprofessionals in *Paisan*, De Sica's neorealist works

Cesare Zavattini. DAVID LEES/TIME LIFE PICTURES/GETTY IMAGES.

seem more traditional and closer to Hollywood narratives. Yet, De Sica uses nonprofessionals—particularly children—in both *Shoeshine* and *The Bicycle Thieves* even more brilliantly than Rossellini. In contrast to Rossellini's dramatic editing techniques, which owe something to the lessons Rossellini learned from making documentaries and studying the Russian masters during the Fascist period, De Sica's camera style favored the kind of deep-focus photography normally associated with Jean Renoir and Orson Welles. *Shoeshine* offers an ironic commentary on the hopeful ending of *Rome, Open City*, for its children (unlike Rossellini's) dramatize the tragedy of childish innocence corrupted by the world of adults, the continuation of a theme De Sica began in one of his best films produced before the end of the war, *I bambini ci guardano* (*The Children Are Watching Us*, 1943). The moving performances De Sica obtains from his nonprofessional child actors in *Shoeshine* arise from what the director called being "faithful to the character": De Sica believed that ordinary people could do a better job of portraying ordinary people than actors could ever do.

De Sica's faith in nonprofessional actors was more than justified in his masterpiece, *The Bicycle Thieves*, which also employs location shooting and the social themes of unemployment and the effects of the war on the postwar economy. The performances of Lamberto Maggiorani as Antonio Ricci, the unemployed father who needs a bicycle in order to make a living hanging posters on city walls, and Enzo Staiola as Bruno, his faithful son, rest upon a plot with a mythic structure—a quest. Their search for a stolen bicycle—its brand is ironically Fides ("Faith")—suggests the film is not merely a political film denouncing a particular socioeconomic system. Social reform may change a world in which the loss of a mere bicycle spells economic disaster, but no amount of social engineering or even revolution will alter solitude, loneliness, and individual alienation. De Sica derived an equally eloquent performance from a nonprofessional in *Umberto D*, a heart-breaking dissection of the terrible effects of poverty and old age in Italy during the Christian Democratic postwar period, when pensions were destroyed by inflation. Even though De Sica was never a leftist (his concern for the poor and his desire for social change were motivated more by charity than by ideological fervor), such works as these two neorealist masterpieces were viewed very negatively by conservative politicians, such as future premier Giulio Andreotti, who remarked famously that dirty laundry is not washed in public.

De Sica's *Miracle in Milan* abandons many of the conventions of neorealist "realism." Not only does the film rely upon veterans of the legitimate theater for its cast, but De Sica also employs many special effects not generally associated with neorealism's pseudodocumentary style: superimposed images for magical effects, process shots, reverse action, surrealistic sets, the abandonment of normal notions of chronological time, and the rejection of the usual cause-and-effect relationships typical of the "real" world. In spite of the fact that Zavattini, De Sica's scriptwriter, once made a famous pronouncement that "the true function of the cinema is not to tell fables" (a view that became associated with Italian neorealism and that tended to obscure the very real fables that this cinema invented), *Miracle in Milan* is, in fact, a fable that begins with the traditional opening line, "Once upon a time ..." and revolves around a comic parable about the rich and the poor. The result is a parody of Marxist concepts of class struggle. De Sica and Zavattini show us poor people who are just as selfish, egotistical, and uncaring as some wealthy members of society once the poor gain power, money, and influence. At the conclusion of the film, the poor mount their broomsticks and fly off over the Cathedral of Milan in search of a place where justice prevails and common humanity is a way of life. *Miracle in Milan* stretches the notion of what constitutes a neorealist film to the very limits.

Maria Pia Casilio and Carlo Battisti in Vittorio de Sica's* Umberto D *(1952), scripted by Cesare Zavattini. EVERETT COLLECTION. REPRODUCED BY PERMISSION.

Visconti's *The Earth Trembles* reflects both the literary theories of naturalism in Verga's fiction and the Marxist views of Antonio Gramsci. Praised by Marxist critics in Italy for its progressive stance, Visconti's adaptation of the well-known novel by Giovanni Verga conforms to the traditional definition of Italian neorealism better than other equally famous works of the period. No studio sets or sound stages were used, and the cast was selected from the Sicilian fishing village of Aci Trezza, the novel's setting. Visconti preferred the more realistic effects of the Sicilian dialect and synchronized sound to the traditional Italian practice of postsynchronization of the sound track. While the film's theme underscores the need for revolution among Italy's poor, the visuals of this unusual masterpiece stress the cyclical, timeless quality of life in Aci Trezza—a Homeric view of the world rather than a Marxist one. There is a formalism in Visconti's camera style: slow panning shots with a stationary camera and long, static shots of motionless objects and actors bestow dignity and beauty on humble, ordinary people.

CRITICAL RECEPTION AND LEGACY

While the key works of Italian neorealism helped to change the direction of the art form and remain today original contributions to film language, they were, with the exception of *Rome, Open City*, relatively unpopular in Italy. They were far more successful abroad and among filmmakers and critics. In addition, it became more and more difficult to make neorealist films, as political pressures to present a rosy view of Italy limited government financing from the ruling Christian Democratic party. One of the paradoxes of the neorealist era is that the ordinary Italians whom such films set out to portray were relatively uninterested in their onscreen self-image. In fact, of the approximately eight hundred films produced

between 1945 and 1953 in Italy, only a relatively small number (about 10 percent) could be classified as neorealist, and most of these works were box office failures. The Italian public was more interested in Italian films that employed, however obliquely, the cinematic codes of Hollywood or in the vast numbers of films imported from Hollywood itself.

When recognizable traditional Hollywood film genres were mixed with neorealist themes, greater box office success was assured. Examples of this development within neorealism toward commercial film genres include *Vivere in pace* (*To Live in Peace*, Luigi Zampa, 1947); *Senza pietà* (*Without Pity*, Alberto Lattuada, 1948), scripted in part by Fellini; *Riso amaro* (*Bitter Rice*, Giuseppe De Santis, 1948)—the neorealist exception, a box office hit; and *Il cammino della speranza* (*The Path of Hope*, Pietro Germi, 1950). Films such as these continued the shift away from the war themes of Rossellini to the interest in postwar reconstruction typical of De Sica's best efforts, but they are even more important as an indication of how the Italian cinema moved gradually closer to conventional American themes and film genres. Neorealist style in these films becomes more and more of a hybrid, combining some elements identified with neorealism with others taken from the commercial cinema of Hollywood or Rome.

Besides resistance at the box office, where ordinary Italians preferred Hollywood works or Italian films with a Hollywood flavor, even the most famous neorealist directors soon grew restless at the insistence on the part of Italian intellectuals and social critics that films should always have a social or ideological purpose. In Italian cinematic history this transitional phase of development is often called the "crisis" of neorealism. In retrospect, it was the critics who were suffering an intellectual crisis; Italian cinema was evolving naturally toward a film language concerned more with psychological problems and a visual style no longer defined solely by the use of nonprofessionals, on-location shooting, and documentary effects. Three early films by Michelangelo Antonioni (b. 1912), Fellini, and Rossellini are crucial to this development. *Cronaca di un amore* (*Story of a Love Affair*, 1950), Antonioni's first feature film, is a film noir in which the director's distinctive photographic signature is already evident, with its characteristic long shots, tracks, and pans following the actors, and modernist editing techniques that attempt to reflect the rhythm of daily life. Fellini's *La Strada* (1954), awarded an Oscar® for Best Foreign Language Film, is a poetic parable that explores a particular Fellinian mythology concerned with spiritual poverty and the necessity for grace or salvation (defined in a strictly secular sense). Rossellini's "cinema of the reconstruction" in *Viaggio in Italia* (*Voyage in Italy*, 1953), starring Ingrid Bergman, marks his move away from the problems of the working class or the partisan experience to explore psychological problems, middle-class protagonists, and a more complex camera style not unlike that developed by Antonioni.

Neorealism's legacy was to be profound. The French New Wave (Jean-Luc Godard, François Truffaut, Jacques Rivette, Eric Rohmer) embraced neorealism as proof that filmmaking could be possible without a huge industrial structure behind it and that filmmakers could be as creative as novelists. In particular, they appreciated the psychological move beyond neorealist themes in Antonioni and Rossellini. In India and Latin America, the classics of neorealism inspired filmmakers to shoot simple stories about ordinary people. In Brazil, for example, the Cinema Novo movement was clearly indebted to Italian neorealism, especially in such works as Nelson Pereira dos Santos's *Rio 40 Graus* (*Rio 40 Degrees*, 1955) or Anselmo Duarte's *O Pagador de Promessas* (*Payer of Promises*, 1962). In India, Satyajit Ray's debt to Rossellini, Visconti, and De Sica in the so-called "Apu trilogy"—Pather Panchali (1955), *Aparajito* (1957), and *Apur Sansar* (1959)—has been frequently confirmed by the director's own testimony. Even in Hollywood in the immediate postwar period, such important works as Jules Dassin's *The Naked City* (1948) and Edward Dmytryk's *Christ in Concrete* (1949) show the direct influence of neorealism's preference for authentic locations within the American tradition of film noir.

Most importantly, however, a second generation of Italian directors reacted directly to the model of the neorealist cinema. The early films of Pier Paolo Pasolini (1922–1975), Bernardo Bertolucci (b. 1940), Marco Bellocchio (b. 1939), Paolo (b. 1931) and Vittorio (b. 1929) Taviani, and Ermanno Olmi (b. 1931), particularly those shot in black and white, returned in some measure to the conventions of documentary photography, nonprofessional actors, authentic locations, and social themes. But this second generation also combined lessons from their neorealist predecessors with very different ideas taken from the French New Wave, and they were far more committed (with the exception of Olmi) to an aggressively Marxist worldview. Olmi continued to be true to the neorealist preference for nonprofessional actors in such important works as *Il posto* (*The Sound of Trumpets*, 1961), *I fidanzati* (*The Fiancées*, 1963), *L'albero degli zoccoli* (*The Tree of the Wooden Clogs*, 1978), and *Il mestiere delle armi* (*Profession of Arms*, 2001). The neorealist heritage may still be detected, with a postmodern twist, in the cinema of Nanni Moretti (b. 1953), such as *Caro diario* (*Dear Diary*, 1993) and the more recent *La stanza del figlio* (*The Son's Room*, 2001).

NETHERLANDS

About one thousand feature-length fiction films and some hundreds of long documentaries have been made in the Netherlands, with heydays for the fiction film in the teens, 1930s, 1970s, and 1990s. In spite of this rather modest production, Dutch cinema may boast of several international achievements: such directors as Joris Ivens (1898–1989) and Paul Verhoeven (b. 1938) are internationally known, such films as *De Aanslag* (*The Assault*, Fons Rademakers, 1986) and *Karakter* (*Character*, Mike van Diem, 1997) won Academy Awards®, and Dutch animated film as well as the Dutch Documentary School stand in good international repute.

EARLY DUTCH CINEMA

The Netherlands has always been more a country of film exhibition and distribution than of film production. French cinema, and subsequently other, mostly European, films dominated Dutch screens in the early years. After a modest start, the number of cinemas and the demand for film exploded in the Netherlands after 1910. F.A. Nöggerath Jr. made several dramas, among which was the first feature fiction film, *Ontrouw* (*Infidelity*, Louis Chrispijn Jr., 1911), and Alfred Machin (1877–1929) made fiction films full of clumps, mills, and fishermen for Pathé. A first heyday occurred during World War I, when the country's neutral status created possibilities for producers. The most prolific was Maurits Binger's Hollandia Studio, whose stars, Annie Bos (1886–1975) and Adelqui Migliar (1891–1956), were beloved, yet it ran into trouble after the war. Of the silent Dutch films only a mere fraction are extant.

In 1921, exhibitors and distributors united in the Dutch Cinema Union (NBB), bastion of the Dutch film world for half a century; in the same year Abraham Tuschinski opened his Amsterdam movie palace. In the 1920s–1930s, American and German cinema dominated the Dutch screens. From 1927, the Dutch Filmliga started to show avant-garde films, including the marvels of modernist editing, Ivens's *De Brug* (*The Bridge*, 1928), about a Rotterdam railway bridge turned into a constructivist work of art, and *Regen* (*Rain*, 1929), a city-symphony-like cine-poem about a shower in Amsterdam. During the Depression, Ivens made such sociopolitical documentaries as *Borinage* (1933), about miners in South-Belgium, followed by antifascist documentaries in Spain and China. In 1934, Ivens added *Nieuwe gronden* (*New Earth*), an anti-capitalist comment on his former rather apolitical—if visually dynamic—documentary *Zuiderzeewerken* (*Zuiderzee*, 1930). After the closing of the inner sea and the winning of the land, the grain harvested there was dumped into the sea to keep prices artificially high during the Depression. In order to make his statement, Ivens interspliced his own images with newsreel footage, a strategy that he often used subsequently. In 1946, *Indonesia Calling*, Ivens's plea for the independence of Indonesia, caused a split with the Netherlands. For ten years, he worked on union films in Eastern Europe, and he won the Golden Palme at the Cannes Film Festival with the lyric *The Seine Meets Paris* (1957). He described the effects of the Cultural Revolution in China in *Comment Yukong déplaça les montagnes* (*How Yukong Moved the Mountains*, 1976), and he also made his last film, *Une Histoire de vent* (*A Tale of the Wind*, 1988), in China.

The sound film arrived relatively late in the Netherlands. Distributors opted for subtitling instead of dubbing, but audiences wanted to hear Dutch. The period piece *Willem van Oranje* (*William of Orange*, 1934) was the first Dutch sound feature, but audiences preferred *De Jantjes* (*The Tars*, 1934), based on a popular musical. Until 1940, thirty-seven Dutch features were made, of which twenty-one were directed by German immigrants, including Ludwig Berger, Max Ophüls, and Douglas Sirk. When in 1934 Dutch technicians protested against the many foreigners, the immigrants were required to have Dutch assistants. Film was private investment; the government had implemented censorship in 1928, but it did not stimulate production. The influence of the stage was stronger in Dutch cinema than elsewhere; most actors were stage players and scripts were based on plays. The German occupation ended this productive period. However, during the Occupation eighteen German fiction films were produced in the Netherlands, and though thirty-two Dutch cinemas were bombed, spectators flocked to see films. Attendance grew massively during the war years, 1942–1943. The immediate postwar years were a golden era for exhibitors, as attendance increased drastically, reaching in 1946 an all time high of 88.7 million admissions. It then remained stable around 63 million from 1950 on, apart from a peak in 1956, partly due to the Dutch box-office hit *Ciske de Rat* (1955). It then gradually went down each year from the late 1950s on, suffering from the rise of television, introduced in 1951. In the postwar era, American cinema absolutely ruled Dutch screens, with Dutch cinema second in line in the 1970s and in the most recent years.

POSTWAR CINEMA

In the 1950s, few Dutch fiction films were made for lack of money and equipment, but the Dutch documentary flourished instead. In 1952, Bert Haanstra (1916–1997), Max de Haas, Ytzen Brusse, and Herman van der Horst (1910–1976) received a collective award at the Cannes Film Festival; Van der Horst was awarded the Grand Prix for his *Shoot the Nets* (1952). This Dutch Documentary School made films about postwar reconstruction in the Netherlands and about nature. The documentarists created rhythmic plays of image and sound, using extreme camera angles and spectacular editing. A highlight was Haanstra's *Glas* (*Glass*, 1958), which won an Academy Award® in 1960. His candid camera films, including *Alleman* (*Everyman*, 1963), were internationally popular. His fiction film debut, *Fanfare* (1958), remained the best-attended film in Holland until the release of Verhoeven's *Turks fruit* (*Turkish Delight*, 1973).

In 1956, the NBB and the government founded the Production Fund in order to stimulate feature film production. Fons Rademakers (b. 1920) made his debut with *Village on the River* (1958), a playful series of stories about a country doctor, which received an Oscar® nomination; eventually, Rademakers won an Academy Award® for *The Assault*. In *Als twee druppels water* (*The Spitting Image*, 1963), he demythologized the role of "resistance heroes" during World War II, and in *Max Havelaar* (1976) he treated another national trauma: the colonial past. With these tasteful literary adaptations Dutch fiction film came to maturity.

In 1958, the Dutch Film Academy was founded. The first wave of graduated students were inspired by the French New Wave. Within a few weeks and with a minimal budget, Pim de la Parra (b. 1940) and Wim Verstappen (1937–2004) produced *De Minder gelukkige terugkeer van Joszef Katus naar het land van Rembrandt* (1966), shown in Cannes. They pleaded for continuous film production and produced thirteen feature films from 1965 to1973. Martin Scorsese was co-writer for their thriller *Bezeten—Het gat in de muur* (*Obsessions*, 1969). *Blue Movie* (1971) candidly shows how an ex-convict, who missed the sexual revolution, catches up. Verstappen defended himself successfully against a ban of the film, which sped up the ending of traditional censorship. Frans Weisz (b. 1938), who studied at both the Dutch Film Academy and the Roman film school Centro Sperimentale di Cinematografia, made his feature debut with the experimental *Het Gangstermeisje* (*A Gangster Girl* or *Gangstergirl*, 1966), then achieved commercial success with genre movies, such as *De Inbreker* (*The Burglar*, 1972). From *Charlotte* (1980) on, Weisz worked in a more personal style, in which the theater, the Holocaust, and the traumas of Jewish survivors are recurrent subjects.

Experimental documentary makers broke new ground in the early 1960s. In contrast to earlier Dutch documentary, humans were treated less as metaphors and more as individuals. Louis van Gasteren (b. 1922) analyzed his own shots of police violence against an innocent student in *Omdat mijn fiets daar stond* (*Because My Bike Stood There*, 1966). Jan Vrijman's (1925–1997) *De Werkelijkheid van Karel Appel* (1962) was reviled in the Netherlands but won a Golden Bear in Berlin. In 1988, Vrijman co-founded the International Documentary Film Festival, which, together with the International Film Festival Rotterdam (founded 1972), is the biggest Dutch film festival. Johan van der Keuken (1938–2001) made intimate portraits, such as *Beppie* (1965), after which more socially engaged, associatively edited, and metadocumentary-like documentaries followed. He reassembled his images drawn from reality into recalcitrant,

Jeroen Krabbé and Rutger Hauer in Paul Verhoeven's popular* Soldaat von Oranje *(*Soldier of Orange*, 1977). EVERETT COLLECTION. REPRODUCED BY PERMISSION.

poetic, or contemplative compositions, such as *I Love $* (1986) and *Amsterdam Global Village* (1996).

Until the 1970s, animation cinema meant commissioned filming. For Philips, George Pal (1908–1980) made puppet animation in the 1930s, and Joop Geesink (1913–1984) and Marten Toonder (1912–2005) peaked their animation production in the 1950s. Since the 1970s, Paul Driessen and Gerrit van Dijk have produced free animation films for adults. In addition, *Le Château de sable* (*The Sand Castle*, Co Hoedeman, 1977), *Anna en Bella* (Børge Ring, 1984), and *Father and Daughter* (Michael Dudok de Wit, 2000) have won Academy Awards®.

The year 1971 was a turning point in Dutch film history. The success of *Blue Movie* was surpassed by Verhoeven's *Wat zien ik* (*Diary of a Hooker*, 1971), and his *Turkish Delight* (1973) is the most successful Dutch film ever, with 3.3 million spectators. The film, about a wild but doomed romance, caused a sensation with its energetic pace, its new stars Rutger Hauer (b. 1944) and Monique van de Ven (b. 1952), and its explicit nudity. Thanks to these and Verhoeven's subsequent all-time high Dutch box-office hits, such as *Keetje Tippel* (1975) and *Soldaat van Oranje* (*Soldier of Orange,* 1977), Dutch cinema knew palmy days, with films focusing on the German occupation, the colonial past, and (homo)sexual emancipation. Such actors as Rutger Hauer and Jeroen Krabbé (b. 1944) broke through internationally. Verhoeven and his director of photography, Jan de Bont (b. 1943), left for Hollywood. In the United States, Verhoeven made the science fiction films *RoboCop* (1987) and *Total Recall* (1990) and the erotic thriller *Basic Instinct* (1992), among others. His films were criticized for their provocative use of sex and violence. De Bont established his Hollywood reputation with the action thrillers *Speed* (1994) and *Twister* (1996).

From 1971, Dutch cinema attendance went slightly up again, reaching a minor peak in 1978—the year of *Grease* and *Saturday Night Fever*. Hereafter it dropped

again and this time more radically, lasting through the early 1990s. The lowest attendance was in 1992 (13.7 million), after which it slowly rose. After 1976, Dutch cinema gradually changed with the rise of a new generation of film directors, including Ate de Jong (b. 1953) and Orlow Seunke (b. 1952). Jos Stelling (b. 1945) adapted the medieval play *Mariken van Nieumeghen* (1974), but he switched afterwards to absurdist tragicomedies, like *De Illusionist* (*The Illusionist*, 1983). In 1981, he founded the Dutch Film Festival, where the most important awards for Dutch cinema are given. In the early 1980s, many films flopped; too many directors were beginners and money was lacking. The government provided two new financial injections, the Fund for Dutch Cinema and the Coproduction Fund Internal Broadcasting. In 1993, the former merged with the Production Fund into the Netherlands Film Fund, which saw an increase in ways of film funding. The prestige of Dutch cinema rose with Academy Awards® for Rademaker's *The Assault*, Marleen Gorris's (b. 1948) *Antonia's Line* (1995), and Mike Van Diem's (b. 1959) *Character*. The comedy hit *Flodder* (1984) by Dick Maas of First Floor Features (FFF) inspired two sequels and a TV series, yet public attendance at both FFF productions and at Dutch films in general remained variable. The FFF produced some twenty films, among which number two absurdist comedies by Alex van Warmerdam, *Abel* (*Voyeur*, 1986) and *De Noorderlingen* (*The Northerners*, 1992). FFF built a studio complex in Almere (near Amsterdam), but it was sold after a series of flops.

In 1998 the Ministry of Economics introduced the CV-arrangement, which allowed private investors a tax reduction. The film industry thus received 200 million Euros in five years. Expensive productions such as *The Discovery of Heaven* (2001) by Krabbé became possible. The share of Dutch films screened domestically rose from 3.7 percent in 1997 to 13.6 percent in 2003. In 2003, 20 percent of Dutch-released productions were children's films; in 2004 this was 25 percent. Since the 1950s, Henk van der Linden (b. 1925) directed films for children matinees, and since 1972 Karst van der Meulen specialized in the genre too, just as Ben Sombogaart (b. 1947) has done more recently. Sombogaart's *Abeltje* (1998) was the first adaptation of the popular children's books of Annie M.G. Schmidt by producer Burny Bos (b. 1944). Bos also produced the sparkling film *Minoes* (Vincent Bal, 2001), in which a cat changes into a girl. Johan Nijenhuis's youth-oriented film *Costa!* (2000), was popular, in part, because of its young soap stars, Katja Schuurman and Georgina Verbaan.

With little means, new directors made unusual films: Robert Jan Westdijk made *Zusje* (1995), Paula van der Oest made *Zus* (2002), and Eddy Terstall made *Simon* (2004). An imported trend is that of refilming classic TV series, such as *Ja zuster, nee zuster* (*Yes Nurse, No Nurse*, 2002). Another trend is films based on true events, such as *Van God Los* (*Stir Crazy*, 2003), about a criminal youth gang in the Catholic South, and *06/05* (2004), about the murder of politician Pim Fortuyn. Shortly after the shooting of the later film, director Theo van Gogh (1957–2004) was himself murdered by a Muslim extremist. The problems of a multicultural Dutch society are the focus of Van Gogh's *Cool!* (2004), and *Shouf shouf habibi!* (Albert ter Heerdt, 2004) takes an ironic but endearing look at Dutch Moroccans. The CV-arrangement ended in 2003, and although the budget of the Film Fund was raised, the result has been lower attendance, less productivity, and a bleak future for Dutch cinema.

Nowadays, some 30 Dutch films per year are produced and shown, against an average of 115 American movies and 70 European movies (Dutch films excluded). In 2004 75% of the distribution market was taken in by the Dutch distribution branches of American companies (UIP, Warner Bros., Disney/Buena Vista, Columbia/TriStar, and Fox); UIP owns 20% of the market. The biggest independent Dutch distributors are A-Film and RCV. The American majors distribute Dutch films occasionally. In 2004, the Netherlands had 243 cinemas and art houses, with 690 screens and 114,880 chairs. Fewer Dutch citizens visit the cinema, but those who do tend to go more frequently.
