neuristor (njʊə'rɪstə(r)). *Electronics.* [f. NEUR- + -istor, as in *resistor*, *transistor*.] Any device that is effectively a transmission line along which a signal will travel without attenuation (generally with a supply of energy along its length).

1960 H. C. CRANE in *IRE Trans. Electronic Computers* IX. 370/1 A novel device and its properties have been hypothesized and possible digital systems employing it are briefly outlined in this note. The device, termed Neuristor, may be used to synthesize all digital logic functions... A neuristor may be visualized as a one-dimensional channel along which signals may flow. A signal propagates along the channel in the form of a discharge... A discharge signal has the following properties: 1) attenuationless propagation, 2) uniform velocity of propagation, 3) a refractory period. These characteristics are somewhat similar to the gross properties of transmission of discharge pulses by neurons in the nervous system—hence the name neuristor. **1963** *New Scientist* 7 Feb. 285/1 The concept of devices called 'neuristors', which behave like the axon or connection process of the neuron in the brain, is exciting to medical workers. **1965** *Electronics Lett.* I. 134/1 In most cases, neuristors which can propagate pulses have been considered, but one which can only propagate a discharge has also been studied. **1972** *Nuclear Instruments & Methods* CIV. 593 (heading) On the possibility of using superconducting neuristor line as particle detector.

The adjective "neurohæmal" seems to us to be the most appropriate topographical name denoting the common feature of these organs. The organs may thus be referred to collectively as neurohæmal organs, while the adjective may be combined with any of the pre-existing names for these various organs, as, for example, 'the post-commissural neurohæmal organ' and 'dorsal neurohæmal lamella'. 1967 C. We may well continue to speak of 'neurohumors' and of 'neurosecretory materials', but it appears highly desirable to have an exclusive term, and 'neurohormone', previously used in this sense without precise definition... seems highly appropriate. *Ibid.*, The term neurohormone... may be defined as an organic compound produced by neurones and released at their endings to act as a chemical messenger or hormone, either locally or at a distance. **1965** J. 1914 [see MOTORIUM 2]. **1940** L. H. HYMAN *Invertebrates* I. iii. 169 It is probable that at least some of the fibrils of the neuromotor system are conductile and serve to coordinate ciliary activities . . ; but others are presumably of a supporting nature. **1959** W. ANDREW *Textbk. Compar. Histology* xiv. 539 The neuromotor system of Styronichia appears to be very similar to that of Oxytricha. . . || **neuron, neurone** ('njʊərɒn, -rəʊn). *Anat.* and *Biol.* [a. Gr. νεῦρον sinew, cord, nerve.]

1. The cerebro-spinal axis; the spinal cord and brain.

1884 WILDER in *N. Y. Med. J̄rnal.* 2 Aug. 114.
2. A process of a nerve-cell. *Obs.*

1893 [see DENDRON]. **1896** *Allbutt's Syst. Med.* I. 181 Golgi has shewn that every nerve-cell possesses one process, the 'neuron' which becomes the axis cylinder process of a nerve. **1897** *Med. Chron.* VII. 234 We notice that Mr. Schäfer uses the word 'neuron' in a somewhat different sense from that applied to it by Waldeyer, who used it—and we believe that in his sense it is extensively, if not universally, used—to denote a nerve cell with all its processes. Mr. Schäfer uses it to designate the axis-cylinder process of a nerve cell. **1930** HARTRIDGE & HAYNES *Histol.* 114 Nerve processes are of two kinds, long and short. The long are called axons, axis cylinders, . . and neurons.

3. A nerve-cell with its appendages. [a. G. *neuron* (W. Waldeyer 1891, in *Berliner klin. Wochenschr.* 13 July 691/1).]

The spellings *neuron* ('njʊərɒn) and *neurone* ('njʊərəʊn) are both still widely current.

1891 *Brain* XIV. 569 [Abstr. of Waldeyer, 1891] Thus a nerve element, a nerve entity, or 'neuron', as I propose to call it, consists . . of the following pieces:—(a) a nerve cell, (b) the nerve process, (c) its collaterals, and (d) the end-branching. **1896** PR. KROPOTKIN in *19th Cent.* Aug. 258 The microscopical units of which the nervous system is built up—the so-called 'neurones', whose protoplasmic ramifications intimately penetrate into the tissues. **1896** L. F. BARKER in *Johns Hopkins Hosp. Bull.* VII. 201/1 Van Gehuchten has adopted Waldeyer's word, spelling it in French 'le neurone', and French writers generally employ it. The leading investigators in Spain and Italy have also adopted the same term. . . The question arises, how is Waldeyer's form to be anglicized? Would it be justifiable to bring it into English through the French and to spell it *neurone*, pronounced *neurōne*, or could it be brought into English directly from the Greek and be so spelled and pronounced? **1899** MACPHERSON *Mental Affections* 83 Each neuron is a distinct, separate and independent organic unit, composed of a cell body containing a nucleus and nucleolus and of several processes. **1904** E. LE GROS CLARK *Tissues of Body* xii. 320 At one time the neurone theory excited considerable controversy, and even to-day some anatomists question its validity. **1972** M. L. Wholly convincing evidence in support of the Neuron Theory had to await the introduction of electron microscopy.

F. W. HUGHES *Aspects Neural Ontogeny* i. 34 The two principles which have been proposed as forces which direct the growing nerve fibre, the 'contact-guidance' of Weiss... and the neurotropism of Ramon y Cajal, both rest on inference from the behaviour of growing fibres under various circumstances, and at present on nothing more.

neutretto (nju:'trettəu). *Nuclear Physics.* [f. NEUTR(INO) + It. *-etto*, dim. suffix (see -ET).]

†a. A neutral pion. *Obs.* b. A neutral particle having low rest-mass. *rare.*

1938 ARLEY & HEITLER in *Nature* 23 July 159/1 Neutrons would have a much smaller penetrating power and there is no process known by which neutrons could produce heavy electrons in sufficiently large numbers. We therefore think that we have to deal in these experiments with the neutral counterpart of the heavy electron, for which we propose the name neutretto. *Ibid.*, A neutretto (denoted by Y⁰) can be transformed into a heavy electron, Y⁺, during a collision with a proton (P) or neutron (N) and vice versa: Y⁰ + N ⇌ P + Y⁻ or Y⁰ + P ⇌ N + Y⁺. 1939 *Physical Rev.* LV. 24 These non-ionizing particles must be much more penetrating than photons. This high penetrating power suggests their identification with the neutretos (neutral particles having mass and other properties similar to the barytron) postulated by Heitler. 1947 *Sci. News* IV. 123 A neutral meson is also expected to appear; the romantic name Neutretto is ready waiting for it. 1948 *Rev. Mod. Physics* XX. 550/1 If the neutral particle is a neutrino, the electron energy should be almost exactly one-half the rest energy of the meson, i.e., 50 Mev. If the neutral particle is considerably heavier than an electron (neutretto) the energy of the decay electron should be correspondingly smaller. 1952 R. E. MARSHAK *Meson Physics* vi. 208 If one is willing to consider the possibility of a new neutral decay particle of small rest mass (we shall call it a neutretto and denote it by μ⁰), then an alternative decay scheme would be μ⁺ → e⁺ + ν + μ⁰. 1963 *New Scientist* 1 Aug. 255 The terms 'electron neutrino' and 'muon neutrino' respectively for 'neutrino' and 'neutretto' are probably more common at present in distinguishing these two particles.

neutrino (nju:'tri:nəu). *Nuclear Physics*. [a. It. *neutrino* (E. Fermi 1933, in *La Ricerca sci.* II. 491), f. *neutro* NEUTER *a.* and *sb.*, neutral + *-ino*, dim. suffix.] Either of two stable, uncharged leptons (associated respectively with the electron and the muon) which have zero or negligible mass and an extremely low probability of interaction with matter; also, the antiparticle of either of these, one of which is produced (along with an electron and a proton) in the beta decay of a neutron.

1934 *Sci. Abstr.* A. XXXVII. 383 A quantitative theory of the emission of β -rays is explained. This admits the existence of the 'neutrino', a new particle proposed by Pauli having no electric charge and mass of the order of magnitude of that of the electron or less. 1938 *Ann. Reg.* 1937 354 The neutrino was generally accepted as a useful working hypothesis, but at least one attempt was made to show that the beta-ray spectrum could be explained without assuming its existence. 1948 *Sci. News* VI. 79 Beta decay is very slow compared to the times taken by other nuclear reactions, and one must, therefore, expect the reverse process, i.e., the capture of a neutrino, also to be very rare. On the Fermi theory, a neutrino could indeed go very many times across the interior of the earth and still have practically no chance of hitting anything. 1956 *Time* 2 July 46/3 For 20 years nuclear physicists have used neutrinos (small, uncharged particles) in their calculations... But no known apparatus has ever detected neutrinos... Last week from the Atomic Energy Commission came big news. Neutrinos do exist. 1958 *New Scientist* 25 Dec. 1567/1 Pauli produced the sorely needed explanation for the variability of the energy of beta-particles thrown out by radioactive materials. He postulated the simultaneous emission of a ghost particle which carried away part of the energy but which had no charge and virtually no mass and so was not observable directly. The neutrino... has been fully vindicated and now occupies a position of great importance in contemporary theory. 1962 *Phys. Rev. Lett.* IX. 36/1 The neutrinos we have used produce μ mesons but do not produce electrons, and hence are very likely different from the neutrinos involved in β decay. *Ibid.* 42/2 The most plausible explanation for the absence of electron showers... is then that $\nu_e \neq \bar{\nu}_e$; i.e., that there are at least two types of neutrinos. This also resolves the problem raised by the forbiddenness of the $\mu^+ \rightarrow e^+ + \gamma$ decay. 1968 M. S. LIVINGSTONE *Particle Physics* iv. 74 The muon decays into an electron and two neutrinos: $\mu^- \rightarrow e^- + \bar{\nu}_e + \nu_\mu$. 1969 *Times* 20 Feb. 17/5 Neutrinos are emitted as by-products in a great many nuclear reactions. 1974 *McGraw-Hill Yearbk. Sci. & Technol.* 306/1 The neutrino is the only known particle that has only weak interactions. Thus, the neutrino is a unique tool in the study of the weak forces, since the interactions are free of the effects of the strong and the electromagnetic interactions, which are many orders of magnitude stronger. 1974 *Sci. Amer.* Dec. 115/1 At proton accelerators muon neutrinos are produced about 100 times more copiously than electron neutrinos.

neutrodyne (nju:'trəudain). *Radio*. [f. NEUTRO- (taken as repr. *neutralize*, *-ization*) + *-DYNE*.] A type of high-frequency valve amplifier in which neutralization was first employed to prevent oscillation throughout a range of frequencies. *Freq. attrib.*

1923 *Wireless World* 21 Apr. 68/2 Professor L. A. Hazeltine has designed receivers in which the valve capacity coupling is neutralised. The capacity coupling is neutralised with the aid of fixed condensers, and the receivers are called by him 'Neutrodyne' receivers. 1924 *Mod. Wireless* II. 590/2 In the receivers to be described here, a fixed coupling is used between the anode coil and the neutrodyne coil. 1924 MOYER & WOSTREL *Pract. BOLTZ *Basic Radio* xiv. 226 This [instability] was decreased by using condensers to provide negative feed-back to nullify the positive feed-back. These were called neutralizing condensers, and the process was one of neutralization or neutrodyning.

neutron (nju:'trɒn). *Physics*. [f. NEUTRAL *a.* and *sb.* + *-ON*¹.] An electrically uncharged subatomic particle whose mass (939.6 MeV) is very slightly greater than that of the proton, which can decay into a proton, an electron, and an antineutrino (as in beta decay), and which is a constituent (with the proton) of all atomic nuclei except that of the common isotope of hydrogen; it is now usu. regarded as a particular state of a nucleon.

Before its discovery in 1932 it was conceived as a close association of a proton and an electron. Rutherford (who communicated Glasston's 1921 paper to the Royal Society) discusses this concept in a paper of 1920 cited by Glasston, but without using the word *neutron*. Harkins (of Chicago) seems to have coined the term independently. (The use in quot. 1899 is unrelated to the current use.)

[1899 W. SUTHERLAND in *Phil. Mag.* 5th Ser. XLVII. 273 If the electrons are distributed through the æther, we must suppose that in æther showing no electric charge each negative electron is united with a positive electron to form the analogue of a material molecule, which might conveniently be called a neutron.] 1921 W. D. HARKINS in *Ibid.* 6th Ser. XLII. 309 Any complex atom has a mass and weight 0.76 per cent. less than the hydrogen atoms (neutrons) from which it may be assumed to be built. *Ibid.* 315 The term neutron represents one proton plus one electron. 1921 J. L. GLASSON in *Ibid.* 597 In the ordinary atom of hydrogen we have a single electron separated from the nucleus by a distance of the order of 10^{-8} cm. It is here contemplated that a more intimate union of the two is possible... Such a particle, to which the name neutron has been given by Prof. Rutherford, would have novel and important properties. It would, for instance, greatly simplify our ideas as to how the nuclei of the heavy elements are built up. 1930 E. RUTHERFORD et al. *Radiations from Radio-Active Substances* xvii. 523 The existence of a neutron, i.e. a close combination of a proton and electron, has been suggested. 1932 J. CHADWICK in *Nature* 27 Feb. 312/1 (*heading*) Possible existence of a neutron. *Ibid.*, These results... are very difficult to explain on the assumption that the radiation from beryllium is a quantum radiation, if energy and momentum are to be conserved in the collisions. The difficulties disappear, however, if it be assumed that the radiation consists of particles of mass 1 and charge 0, or neutrons. The capture of the α -particle by the Be^9 nucleus may be supposed to result in the formation of a C^{12} nucleus and the emission of the neutron. 1938 R. W. LAWSON tr. *Hevesy & Poneth's Mon. Radioactivity* (ed. 2) ix. 94 We must regard these protons and neutrons as the ultimate constituents of the nuclei, and consider the α -particle as a kind of 'molecule' of the 'nuclear atoms' possessing especial stability, and arising from the union of 2 protons and 2 neutrons. 1950 GLASSSTONE *Sourcebk. Atomic Energy* xi. 287 One of the most striking arguments for the wave-particle duality of matter... has been provided by the diffraction of neutrons. 1951 S. DUSHMAN *Fund. Atomic Physics* xiii. 227 The U^{235} nucleus, in splitting, emits high-speed neutrons which may produce fission in other U^{235} nuclei, thus initiating a chain reaction. 1968 M. S. LIVINGSTONE *Particle Physics* ii. 25 The nucleus could now be conceived as a closely packed assemblage of protons and neutrons, with the atomic charge number Z given by the number of protons and the atomic weight number A by the total of protons and neutrons. 1972 *Physics Bull.* June 349/1 Although it is comforting and often convenient to consider the proton and neutron as elementary particles with no internal substructure, they are in fact particles in a state of continual change... The neutron divides its time between being a neutron and a composite proton-negative pion system, while remaining electrically neutral. 1973 A. J. MACLEOD *Instrumental Methods Food Analysis* vii. 684 Isotopes of an element possess different numbers of neutrons in their nuclei, but are otherwise identical.

2. *attrib. and Comb.*, as **neutron absorption**, **bombardment**, **flux**; **neutron-absorbing** *adj.*; **neutron activation**, the process of making a substance radioactive by irradiating it with

neutrons; *freq. attrib.*, esp. in **neutron activation analysis**, activation analysis in which this is employed; **neutron bomb**, a bomb that would produce large numbers of neutrons but little blast, and would consequently be harmful to life but not destructive of property; **neutron capture**, the absorption of a neutron by an atomic nucleus; **neutron chopper**, a device for converting a continuous beam of neutrons into a pulsed beam by passing it through a rotating slotted disc or cylinder; **neutron diffraction**, diffraction of a beam of neutrons; **neutron excess**, the excess of the number of neutrons in an atomic nucleus over the number of protons; **neutron number**, the mass number of a nucleus minus its atomic number, taken as being the number of neutrons it contains; **neutron radiography**, radiography in which the radiation employed is a beam of neutrons; **neutron star** *Astr.*, a hypothetical extremely dense kind of star composed predominantly of closely packed neutrons, which is believed to have a mass similar to that of the sun but a diameter of only a few kilometres; cf. PULSAR; **neutron therapy**, radio-therapy in which the radiation employed is a beam of neutrons.

2. (Written newton.) The unit of force in the metre-kilogramme-second system (now incorporated in the S.I.): the force that would give a mass of one kilogramme an acceleration of one metre per second per second; 100,000 dynes (approximately the weight of 102 grammes or 3·6 oz.). Abbrev. N.

ROBERTSON in *Electrician* 22 Apr. 25/1 The writer suggests that the name 'Newton' be given to the unit of force (10⁵ dynes). 1919 *Nature* 4 Sept. 13/2 A fourth matter... which was discussed was the proposal to adopt in future legislation for metric countries the M.K.S. system of units. ... Giorgi has provisionally used the word 'vis'. ... We venture to suggest that 'newton' would be more appropriate. 1942 H. HOWE *Introd. Physics* iv. 57 The awkwardly large numbers in Ex. 2 would have been avoided had mks units been used; the answer would have been $F = 300$ newtons. 1962 CORSON & LORRAIN *Introd. Electromagnetic Fields* ii. 29 In these units Coulomb's law is written as $F_{ab} = (1/4\pi\epsilon_0)(Q_a Q_b/r^2)/r_1$, where the force F is measured in newtons; the charges Q_a and Q_b , in coulombs...; and the distance r , in metres. 1970 *Daily Tel.* 14 May 18 In the SI the force is measured not in kilogrammes, but in newtons—spelt with a small 'n' but abbreviated with a large one, 'N'. One newton (reinforcing the legend) is roughly the pull of gravity on one apple.

OHG. is the only one of the older languages in which a fully developed adjectival use of the word exists along with the adverbial. In OE. there are very scanty traces of adjectival inflexion, *néah* being commonly employed either as a simple *adv.* or with a dependent dative: in predicative use it may sometimes be taken as an adjective, but it is more probable that in such cases also it is an adverb. It is not till the 14th or 15th cent. that the attributive use becomes common.

The original comparative of *néah* as an *adv.* is *néar*, *néor*, *NEAR adv.*¹, while the *adj.* form *néarra* finally became *ner*, *NAR a.* The OE. superlative *niēsht(a)* is latterly represented by NEXT *a.* and *adv.* After phonetic changes had obscured the relationship of these forms to the positive, a new compar. and superl., *nigher* and *nighest*, were formed, and have been in common use since the 16th cent.]

nim (nim), *sb.*² Also Nim. [Orig. uncertain: perh. suggested by NIM *v.* or G. *nimm* (imp. of *nehmen* to take).] A game in which two players alternately take one or more objects from any one of several heaps, the aim being to compel one's opponent to take the last remaining object (or, sometimes, to take it oneself).

1901 C. L. BOUTON in *Ann. Math.* III. 35 Nim. A game with a complete mathematical theory... The writer has not been able to discover much concerning its history, although certain forms of it seem to be played at a number of American colleges, and at some of the American fairs. It has been called Fan-Tan, but as it is not the Chinese game of that name, the name in the title is proposed for it. 1939 USPENSKY & HEASLET *Elem. Number Theory* i. 16 It should be interesting to present an application of the binary system .. to the theory of the game of Nim. 1955 *Sci. News Let.* 26 Feb. 134/2 A 17-year-old senior at Newton High School.. can boast of having an electronic player that almost never loses in the ancient game of wits, known as 'nim'. 1968 CORLETT & TINSLEY *Pract. Programming* iv. 66 In a game of Nim .. two players move alternately and take any number of matches from one pile, the winner taking the last match. If a player can set up a winning position, he cannot lose unless he makes a mistake in a subsequent move.

In most of its applications *nim* corresponds to various senses of the later (Scandinavian) *take*, and remained in common use down to the 15th cent. During the 16th there are few traces of it, but immediately after 1600 it reappears (with weak *pa. t.* and *pa. pple.*) as a slang or colloquial word in the sense of 'to steal', and is very common in this use throughout the 17th cent.]

|| **nisi prius** ('naisai 'pɹaiəs). *Law*. Also 8 nisi prise. [*L. nisi prius*, unless previously. The significance of the phrase is thus explained by Blackstone, *Comm.* (1768) III. 59:

'All causes commenced in the courts of Westminster-hall are by the course of the courts appointed to be there tried, on a day fixed in some Easter or Michaelmas term, by a jury returned from the county, wherein the cause of action arises; but with this proviso, *nisi prius justitiarum ad assisas capiendas venerint; unless before the day prefixed the judges of assise come into the county in question.*'

In the second statute of Westminster (1285) §30, by which the system was instituted, only the word *nisi* is used. The following is an early example of the full phrase:—

1297 *Coram Rege* Roll m. 5 dorso (1898) 30 Ideo Vicecomes habeat corpora omnium coram Rege ad prefatum terminum &c. Nisi prius R. le Brabanzon vel G. de Roubyr' vel eorum alter si prius ad partes illas &c.]
