**Poiseuille** (pwazoj). *Physics.* The name of J. L. M. Poiseuille (1799-1869), French physiologist, used *attrib.* and in the possessive to designate concepts and phenomena related to his work on fluid flow, as Poiseuille's equation, expression, formula, or law, the relation between the volume  $V$  of fluid flowing per second through a long cylinder of length  $l$  and radius  $r$  under conditions of Poiseuille flow, viz.  $V = \pi r^4 p / 8 \eta l$ , where  $p$  is the pressure drop along the cylinder and  $\eta$  is the viscosity of the fluid (given by Poiseuille in *Compt. Rend.* (1840) XI. 1047, (1841) XII. 114); Poiseuille flow, laminar flow of a viscous fluid of negligible compressibility, esp. through a long, narrow cylinder.

2. a. Any substance which, when introduced into or absorbed by a living organism, destroys life or injures health, irrespective of mechanical means or direct thermal changes. Popularly applied to a substance capable of destroying life by rapid action, and when taken in a small quantity. Fig. phr. *to hate like poison*.

But the more scientific use is recognized in the phrase *slow poison*, indicating the accumulative effect of a deleterious drug or agent taken for a length of time.

**polariton** (pəʊ'lærɪtən). *Physics*. [f. POLAR(IZATION) and related words + -iton, prob. after EXCITON.] A quasiparticle in an ionic crystal consisting of a photon strongly coupled to a quasiparticle such as a phonon or exciton.

1958 J. J. HOPFIELD in *Physical Rev.* CXII. 1558/2 The polarization field 'particles' analogous to photons will be called 'polaritons'. (Excitons will be shown to be one kind of polariton. . . Optical phonons are another example of polaritons.) 1963 R. S. KNOX *Theory of Excitons* iii. 133 An external photon excites a crystal to a state described by a polariton packet. . . If this new particle of excitation fails to

interact with any energy sinks, it re-excites an external photon on the other side of the crystal. However, by virtue of its exciton component, it can decay into states which do not couple as easily to external photons (i.e., 'nonradiative' states). 1971 J. I. PANKOVE *Optical Processes in Semiconductors* i. 16 A polariton is the complex resulting from the polarizing interaction between an electromagnetic wave and an oscillator resonant at the same frequency. . . Although polaritons initially have designated the interaction between excitons and photons, they can also represent the interaction between photons and optical phonons and between photons and plasmons. *Ibid.* 17 The polariton is not to be confused with the polaron of ionic crystals, which results from an interaction between the electron and the lattice. 1972 *Physics Bull.* Aug. 490/1 Two chapters. . . cover . . . light scattering by polaritons.

**polarity** (pəʊ'lærɪti). [f. POLAR *a.* + -ITY: cf. F. *polarité* (1806 in Hatz.-Darm., 1835 in *Dict. Acad.*) A form tried earlier was POLITY<sup>2</sup>.]

1. *Magnetism*. The quality or property possessed by certain bodies, as a lodestone or magnetized bar, of turning (when free to move) so as to point with their two extremities to the two (magnetic) poles of the earth; the quality of being polar, or possessing magnetic poles.

1646 SIR T. BROWNE *Pseud. Ep.* ii. ii. 59 This polarity from refrigeration upon extremity and in defect of a Loadstone might serve to invigorate and touch a needle anywhere. 1664 POWER *Exp. Trans.* XLVII. 289 By electricity we have here frequently given polarity to needles. 1815 J. SMITH *Panorama Sc. & Art* II. 176 If the bar be inverted, the polarity will be instantly reversed; so that in all cases the lower extremity is, in this hemisphere, the north pole: but on the south side of the equator, the lower extremity is always the south pole. 1823 J. BADCOCK *Dom. Amusem.* 166 An invention. . . securing a more accurate polarity to the mariner's compass. c.1865 J. WYLDE in *Circ. 2. Hence in generalized sense: A property of matter or force, analogous or compared to that of a magnet or magnetism. *a.* The having of an axis with reference to which certain physical properties are determined; the disposition of a body or an elementary molecule to place its mathematical axis in a particular direction.

1674 PETTY *Disc. Dupl. Proportion* 128 All Atoms by their Motion of Verticity or Polarity, would draw themselves, like Magnets, into a straight Line, by setting all their Axes in *directum* to each other. 1827 ARNOTT *Physics* 33 When atoms are allowed to cohere according to their natural tendencies, they always assume a certain regular arrangement and form, which we call crystalline. Because in this circumstance they seem to resemble magnets, which attract each other only by their poles; the fact has been called the polarity of atoms. 1854 *Pereira's Polarized Light* (ed. 2) 184 In crystals it is necessary to admit, besides ordinary attraction and repulsion, a third molecular force called polarity. *Ibid.*, A molecule endowed with unequal attractive forces in different directions may be said to be possessed of polarity.

*b.* The quality of exhibiting opposite or contrasted properties or powers in opposite or contrasted directions; the possession of two points called poles having contrary qualities or tendencies.

1818 COLERIDGE *Method in Encycl. Metrop.* (1845) I. *c.* Tendency to develop in two opposite directions in space, time, serial arrangement, etc.

1848 LINDLEY *Introd. Bot.* (ed. 4) I. 165 This disposition to develop in two diametrically opposite directions, sometimes called polarity, is found in all embryos. 1853 E. FORBES *Addr. Geol. Soc.* in Wilson & Geikie *Mem.* xv. Lex.*, *Polarity*. . . applied metaphorically, e.g. to the uterus, in reference to the fact that as the fundus contracts the cervix tends to relax and *vice versa*.

*e. Biol.* The tendency of living matter to assume a specific form; the property observed in animals from which parts have been severed,

and in severed parts of animals and plants, of regenerating the missing parts.

1864 G. J. ALLMAN in *Rep. Brit. Assoc. Adv. Sci.* 1863 392 The lower segment, on the other hand, instead of pushing forth from the cut extremity a simple continuation of the coenosarc, develops from this extremity a polypite. There is thus manifested in the formative force of the Tubularia-stem a well-marked polarity, which is rendered very apparent if a segment be cut out from the centre of the stem. 1864 H. SPENCER *Princ. Biol.* I. II. iv. 181 The vitalized molecules composing the tissues, show their proclivity towards a particular arrangement. . . For this property there is no fit term. If we accept the word polarity, as a name for the force by which inorganic units are aggregated into a form peculiar to them; we may apply this word to the analogous force displayed by organic units. 1895 *Jrnl. Morphol.* X. 322 If we assume the polarity of the egg to be pre-determined from the beginning, we must admit that the polarity determines the position of the segmentation-nucleus. 1924 E. G. CONKLIN in E. V. Cowdry *Gen. Cytol.* ix. 558 The polarity of the egg is the earliest recognizable and most fundamental differentiation of morphogenesis. 1926 J. S. HUXLEY *Ess. Pop. Sci.* xviii. 251 When small pieces of a planarian regenerate, they exhibit what we may call polarity; for (with a few special exceptions) the new head is formed from that region of the piece which was nearest to the old head, the new tail from that region which was nearest to the old tail. 1975 R. L. PETERSON in Torrey & Clarkson *Devel. & Function of Roots* vii. 146 The inherent polarity in most root segments, which manifests itself by the regeneration of buds at the proximal end and roots at the distal end, may be due to the polar distribution of more than one endogenous hormone.

3. *Electr.* The relation of a body to the poles or electrodes of an electric circuit; the electrical condition of a body as positive or negative.

1849 NOAD *Electricity* (ed. 3) 353 That side of the spiral which is towards the north, acts as the north pole; and the south side has an opposite polarity. Each side powerfully attracts iron filings. 1872 C. B. FOX *Ozone* 10 One of the Peroxides is in an opposite condition of polarity to that in the other. 1879 DU MONCEL *Telephone* 16 The adjacent poles of the two rods are of opposite polarity. 1887 GUMMING *Electr. treated Experimentally* 289 Its change of polarity at each half rotation keeps up a constant rotation.

This new expression... signifies simply the modification that light has undergone in acquiring new properties, relative not to the direction of the ray, but solely to its sides, considered at a right angle, and in a plane perpendicular to its direction'. But this unfortunately assumed a sense of *pole* quite different from its use in astronomy, geography, and magnetism, with the consequence that *polarization* as applied to light and radiant heat has nothing in common with magnetic or electric polarization. ]

I. 1. *Optics. a. (trans.)* To cause the vibrations of light (radiant heat, etc.) to be modified in a particular way, so that the ray exhibits different properties on different sides, opposite sides being alike, and those at right angles to each other showing the maximum of difference.

A ray of polarized light is reflected in different degrees in different positions of the reflecting body, and transmitted by certain crystals in different degrees in different positions of the crystal, and (in each case) completely quenched in one particular position. This is accounted for by supposing the etherial vibrations to be restricted to one plane (*plane polarization*), instead of being, as in ordinary light, performed in all directions perpendicular to that of the ray. Light is also said to be *circularly* or *elliptically polarized*, or to undergo *circular* or *elliptic polarization*, when it exhibits (in a polariscope) certain colour-phenomena, or modifications of the phenomena of plane polarization, which are accounted for by supposing the etherial particles to move in circles or ellipses. Polarization is produced (variously in the case of different media) by reflection, or by ordinary or double refraction.

C. WESTON *Sight, Light & Efficiency* iv. 133 If they are placed between two thin plates of polaroid, or between crossed Nicol prisms, so that the light passing through them is polarised, the presence of strain is shown by the formation of a coloured pattern due to double refraction by the strained glass. 1956 *Nature* 3 Mar. 434/1 A cylindrical unit. . . is formed by cementing a calcite crystal between two pieces of 'Polaroid'. 1976 *Nature* 19 Aug. 709/2 All stimuli were plane polarised by a 60-cm diameter rotatable disk of polaroid positioned between the screen and the eye.

In the 16th c. the word began

to be written by some *pole-axe* (which after 1625 became the usual spelling), as if an axe upon a *pole* or long handle. This may have been connected with the rise of sense 2. Similarly, mod.Sw. *pålyxa* and Westphalian dial. *pålexe* have their first element = pole. Sense 3 may be a substitute for the earlier *bole-axe*, which was applied to a butcher's axe.]

**1.** A kind of axe formerly used as a weapon of war, a battle-axe; also, a form of this retained till the end of the eighteenth century in naval warfare for boarding, resisting boarders, cutting ropes, etc.

It probably varied in form at different times, but originally (and in naval use to the end) it was a short-handled weapon, which could be hung at the saddle-bow or held under the shield, and used in close fighting: in the quot. from Chaucer it is one of the short weapons specially forbidden at the combat. Its use to render L. *bipennis* two-edged axe, in the Promptorium and Catholicon, and by Sandys, suggests that it had usually a cutting edge or point also on the side opposite the broad face.

(The name *Commissioners of Police*, or *Police Commission*, was in the 19th c. given to the local bodies having control of the Police force in Burghs and Police Burghs in Scotland.)

polk, -e, *obs.* and dial. var. PULK, pool.

polka (ˈpɒlkə), *sb.*<sup>1</sup> [= Fr. and Ger. *polka*; of uncertain origin. The dance being of Bohemian origin (orig. called *Nimra*), it has been suggested that *polka* was a corruption of Czech *pulka* half, 'a characteristic feature being its short half steps'. Another suggestion is that the actual form, whether or not altered from *pulka*, is due to the Polish *Polka*, fem. of *Polak* a Pole: cf. *polonaise* (also a dance), and *mazurka*.]

1. A lively dance of Bohemian origin, the music for which is in duple time.

Danced at Prague in 1835, at Vienna 1839, Paris 1840, London in the spring of 1842: see *Memoirs of Anna M. W. Pickering* (1903) xvi. *polka-mazurka*, a modification of the mazurka dance to the movement of a polka; *polka-time*.

**poloidal** (pə'ləɪdəl), *a.* [f. POL(AR a. (sb.) + TOR)OIDAL a.] Being or representing a magnetic field of the form associated with a circular current loop, in which each line of force is confined to a radial or meridian plane.

1946 W. M. ELSASSER in *Physical Rev.* LXIX. 108/1 We shall now introduce names for these three types of vectors. They will be designated as scaloidal (U), toroidal (T), and poloidal (S) vector fields. The electric field and vector potential pertaining to a poloidal magnetic field are toroidal, and vice versa. 1967 *McGraw-Hill Yearbk. Sci. & Technol.* 225 The magnetic field at the Earth's surface has a radial component and is thus of the poloidal type. 1972 *Sci. Amer.* July 67/3 A toroidal electric field maintains a toroidal current that flows inside the plasma, and this current in turn generates a magnetic-field component that is poloidal... The combination of the poloidal field with the toroidal field produces helical magnetic-field lines that lie on closed magnetic surfaces (nested toroids of circular cross section). 1973 *Nature* 20 Apr. 516/2 There are on the Moon weak, local, fairly randomly oriented magnetic fields but no overall poloidal field.

Interactions* vii. 471 This simple argument forms the basis of much of the present-day thinking about strong forces: perturbation methods may not be justified in general, but they are expected to give correct results near the predicted 'resonances' or 'poles'. The theory developed along these lines has received the informal name of 'polology'. 1966 D. PARK *Introd. Strong Interactions* vii. 134 (heading) Polology and the determination of g.

DILLEY *Oriental Rugs & Carpets* ii. 44 Many of the king's rugs—the ones containing gold and silver, now called Polonaise—were woven at Kashan. 1962 C. W. JACOBSEN *Oriental Rugs* 272 All Polonaise rugs belong to the 17th century, particularly the first half. The name Polonaise dates from the Paris exposition in 1878, when several rugs of this type were exhibited by Prince Czartorski of Warsaw. 1973 M. S. F. *poltron* (also in 16th c. *poultron*) 'a knave, rascall. . . ; dastard, coward; sluggard, lazie-backe, base idle fellow' (Cotgr.), ad. It. *poltrone* 'a poltron, an idle fellow, a base coward, a lazie, lithor or slothfull sluggard, a lout' (Florio 1611), whence also med.L. *pultro*, -*onem* (S. Francis c 1220, Du Cange), Sp. *poltron*, Pg. *poltrão*; f. It. *poltro* 'sluggard, idle, lazie, slothfull' (Florio) + -*one*: see -*oon*. The 16th c. spelling may have been influenced by med.L. Originally stressed '*pultro*n; *pol'troon* (after Fr.) appears in 1664.

It. *poltro* adj. was app. from *tpoltro* couch, bed (Florio): cf. Milanese *polter*, Romagn. *pultar* resting-place, Venet. *poltrona* couch, Pg. *poltrona* large arm-chair, and It. *tpoltrare*, *poltrire*, beside *poltronare*, *poltroneggiare* 'to play the poltron, . . . to loll and wallow in sloth and idleness, to lye lazilie in bed as a sluggard' (Florio). *Poltro*, *polter*, *pultar*, are referred by Diez to OHG. *polstar* pillow, bolster. The fantastic conjecture of the derivation of *poltron* from L. *pollice truncus*, 'maimed or mutilated in the thumb' (*scil.* in order to shirk military service), was offered by Salmasius, and long passed current as an 'etymology'; it prob. gave rise in the 18th c. to the use in Falconry (sense 2.)

The progeny of a cell marked at about the time of the drawing of boundary lines never fills a compartment completely, but often occupies an appreciable proportion of it. A compartment is thus made by the descendants of a small group of cells. We propose to call the cells in the compartment a \*polyclone. Just as a clone is a group of cells which are all, without exception, the descendants of a single cell, so a polyclone is a group of cells that are descended from a certain (small) group of cells—the founder cells—which were present in the embryo at an earlier time. **1979** *Sci. As the synthesis of the messenger RNA proceeds, giving rise to a longer strand of RNA, more ribosomes attach themselves to the strand. They form a string called a polyribosome, which continues the translation of the elongating messenger RNA. 1925 *Bull. Illinois Nat. Hist. 2. In *Chemistry*, a prefixed element indicating generally the higher members of a series of *mono-, di-, tri-,* etc. compounds; sometimes including all except the primary or *mono-*member.

a. Prefixed to sbs., forming sbs. used as the names of compounds formed by the combination of two or more atoms, molecules, or radicals (sometimes with elimination of hydrogen atoms, water molecules, etc.), as POLYETHYLENE; *polyglycerin*: see quot. 1877; *polyoxide*, a binary compound containing several oxygen atoms, as a pentoxide; so *poly sulphide, polyterebene, polyterpene*, etc.

1854 J. SCOFFERN in *Orr's Circ. Sc., Chem.* 353 The designation of polysulphurets has been applied. 1866 WATTS *Dict. Chem.* IV. 687 *Polyterebenes*, hydrocarbons polymeric with oil of turpentine. 1877 WATTS *Fownes' Chem.* (ed. 12) II. 185 *Polyglycerius*. Two, three, or more molecules of glycerin can unite into a single molecule, with elimination of a number of water-molecules less by one than the number of glycerin molecules which combine together.

b. Prefixed to adjs. or sbs., forming adjs., meaning 'containing or derived from two or more molecules of the substance expressed by the second element': e.g. *polycarbic, polyethenic, polyoxygen, polysulphuretted*. See also POLYACID, POLYATOMIC, POLYBASIC, POLYTHIONIC.

1854 J. SCOFFERN in *Orr's Circ. Sc., Chem.* 353 These polysulphuretted combinations are decomposed. 1866 ODLING *Anim. Chem.* 113 We cannot doubt that corresponding acids with three and four atoms of oxygen are

also formed, as in other modes of oxidation;... such poly-oxygen acids being much less volatile. 1873 WATTS *Fownes' Chem.* (ed. 11) 621 Polyethenic alcohols... contain the elements of two or more molecules of ethene oxide combined with one molecule of water.

c. Now used esp. to form the names of polymers and other types of compound which have a number of identical groups in their structure. The second element is in some cases a suffix. Usage of the prefix is restricted by some authors to cases where the number of constituent groups is large (in contrast to OLIGO-), but there is no uniformity in this respect. The prefix is now very abundant in *Chem.*, and only the more widely occurring formations are included below.

**2. a. Arith.** Applied to the several series of numbers, each beginning with unity, and obtained by continued summation of the successive terms of an arithmetical progression whose common difference is a whole number. So called because each of these numbers, represented (e.g.) by dots, can be arranged according to a certain rule in the form of the corresponding regular *polygon* (the term being here extended to a figure of any number of sides).

Thus the A. P. 1, 2, 3, 4, 5, 6 . . . (comm. diff. 1) gives, by summation of successive terms (1, 1 + 2, 1 + 2 + 3, etc.), the series of *triangular* numbers 1, 3, 6, 10, 15, 21 . . . Similarly, with comm. diff. 2, 3, 4, etc., are obtained the series of *square*, *pentagonal*, *hexagonal*, etc., numbers. The polygonal numbers constitute the first order of figurate numbers: see FIGURATE *ppl.* a. 3b.

1704 J. HARRIS *Lex. Techn.* i. *Polygonal Numbers*, are such as are the Sums or Aggregates of Series of Numbers in Arithmetical Progression, beginning with Unity; and so placed, that they represent the Form of a Polygon. 1727-41 CHAMBERS *Cycl.* s.v. 1842 BRANDE *Dict. Sc.*, etc. s.v., A very general and remarkable property of polygonal numbers was discovered by Fermat:—Every number whatever is the sum of one, two, or three triangular numbers; the sum of one, two, three, or four squares; the sum of one, two, three, four, or five pentagonal numbers; and so on.

**polygonization** (,pɒlɪɡənə'zeɪʃən). *Metallurgy*. [f. POLYGON + -IZATION.] The formation of smaller grains within the grains of a metal as a result of the migration of dislocations following deformation and annealing.

1948 R. W. CAHN in *Rep. Conf. Strength of Solids*, 1947 137 The x-ray and microscopical results together lead to an interpretation as follows: the deformation leads to elastic bending of glide lamellae; when the crystal is annealed, the lamellae undergo 'polygonization'. 1949 — in *Jnl. Inst. Metals* LXXVI. 136 It is suggested that the process be named polygonization, to distinguish it from other forms of recrystallization. The name derives from the fact that the crystallographic direction which coincides with the wire axis, while bent along an arc before annealing, becomes part of a polygon afterwards. 1950 *Engineering* 5 May 499/3 Polygonization could be obtained in hexagonal metals only after plastic bending and not after deformation in tension. 1957 D. McLEAN *Grain Boundaries in Metals* vii. 204 The word 'polygonization' has lost its original geometrical significance and now refers to the process of dislocations gathering into stable arrays. 1976 COTTERILL & MOULD *Recrystallization & Grain Growth in Metals* iv. 74 The basic differences between the formation of a substructure by polygonization, during annealing, and the formation of subgrains, directly, during cold-work have been summarized by Byrne.

A substance polymeric with another; any one of a series of polymeric compounds. In mod. use, any substance which has a molecular structure built up largely or completely from a number (freq. very large) of similar polyatomic units bonded together.

The repeating units are often molecules of a single compound, but polymers may also result from combination of two or more different constituents; in either case linking of units may be accompanied by elimination of small molecules, and the formula and molecular weight of the polymer are not necessarily exact multiples of those of any component monomer. Also, esp. in contexts of Applied Chemistry, the use of the term is sometimes restricted to cases where the number of units in the structure is large.

**2. Genetics.** Of, pertaining to, or displaying polymery.

**1949** DARLINGTON & MATHER *Elem. Genetics* iii. 68 Genes such as those with which Nilsson-Ehle was concerned have two of the properties of polygenes. They are of similar and supplementary action. But they cannot be described as polygenes because their effects are so large as to cause a sharp discontinuity in the variation, a discontinuity which permits the analysis of the system by the mendelian method. Genes like these are often termed polymeric genes. All polygenes are therefore polymeric, but not all polymeric genes are polygenes. **1961** [see POLYGENIC *a.* 3]. **1970** *Genetika* VI. x. 124 It is established that complementary maltose factors MA<sub>1-p</sub> and MA<sub>2-g</sub> are recessive alleles of polymeric genes, MA<sub>1</sub> and MA<sub>2</sub>, respectively.

**polypary** (ˈpɒlɪpəri). Also 9 in Lat. form *polyparium* (pɒlɪˈpɛəriəm), pl. -ia; *erron.* sing. *polyparia*, pl. -iæ. [ad. mod.L. *polypārium*, f. *polypus* POLYP + -ARIUM.] The common stem, stock, or supporting structure of a colony of polyps (see POLYP 1 c), to which the individual zooids are attached, usually each in a cell or cavity of its own; also called POLYPIDOM.

1750 *Phil. Trans.* XLVII. 107 The size and shape of this polypary is sufficiently seen in Fig. A. 1835 KIRBY *Hab. & Inst. Anim.* I. v. 166 A fixed calcareous house or polypary as it is called consisting often of innumerable cells. 1861 J. R. GREENE *Man. Anim. Kingd.*, *Cœlent.* 85 The firm horny layer, or polypary, which the cœnosarc excretes in *Tubularia* and its allies. 1872 DANA *Corals* i. 17 Science is hardly yet rid of such terms as polypary, polypidom, which imply that each coral is the constructed hive or house of a swarm of polyps. 1875 HUXLEY in *Encycl. Brit.* I. 131/1 The superficial portion of the polypary. 1880 H. S. COOPER *Coral Lands* I. iii. 24 Polyparia are composed of two separate parts.

Hence **polyparian** (pɒlɪˈpɛəriən) *a.*, of or pertaining to a polypary.

**po'lypean**, *a. rare.* [f. L. *polyp-us* POLYP + -*ean*, after L. adjs. in -*eus*: see -AN.] Pertaining to, or resembling that of, a polyp.

1822 *New Monthly Mag.* V. 110 Dividing their discourses into heads—Cerberean, Polypean, and Hydraform. 1825 *Ibid.* XIII. 212 His polypean power was in his faculty of reproduction.

**polypectomy** (pɒlɪˈpɛktəmi). *Surg.* [f. POLYP + -ECTOMY.] Excision of a polyp.

1950 *Surg. Clinics N. Amer.* XXX. 661 For nasal polypectomy . . anesthesia is accomplished by painting the polyp and its area of attachment or pedicle with a saturated solution of cocaine. 1974 PASSMORE & ROBSON *Compan. Med. Stud.* III. xxviii. 43/1 The diagnosis is established by

exploration of the uterus with polypectomy forceps during diagnostic curettage.

**polyped:** see POLY-.

**polypeptide** (pɒl'peptard). *Biochem.* [ad. G. *polypeptid* (E. Fischer 1903, in *Sitzungsber. d. k. preuss. Akad. d. Wissensch.* 389, after *di-, tripeptid*, etc. (Fischer 1902: see PEPTIDE)).] Any peptide in which the number of amino-acid residues that go to make up the molecule is not small (cf. *oligopeptide* s.v. OLIGO-), but is not so large that it can be regarded as a protein; **polypeptide chain** = *peptide chain* s.v. PEPTIDE 2.

1903 *Jrnl. Chem. Soc.* LXXXIV. 1. 466 These acid chlorides combine easily with glycylglycine esters and similar compounds to form chains of amino-acids joined together by an anhydride linking. Such are termed polypeptides. 1935 R. H. A. PLIMMER in Harrow & Sherwin *Textbk. Biochem.* v. 177 Fischer held the view that the polypeptide chain was not long enough for attack by pepsin. 1949 H. W. FLOREY et al. *Antibiotics* I. i. 38 The active preparation made from this organism... contains two antibiotics, gramicidin and tyrocidine, both crystalline polypeptides. 1951 *New Biol.* XI. 99 Larger molecules that show biological activity when applied to living organisms are exemplified by polypeptides, such as A.C.T.H. (the pituitary hormone which controls the secretion of cortisone). 1959 *Times* 2 Jan. 11/3 Further evidence suggested that this particular polypeptide was a precursor of the cell wall of the staphylococcus. 1961 *Ann. Reg.* 1960 401 The polypeptide chain, the backbone of the protein molecule, was found to be coiled in a helix-like spiral spring with only a space inside. 1978 *Sci. Amer.* Dec. 68/2 A hemoglobin molecule is made up of four polypeptide chains, two alpha chains of 141 amino acid residues each and two beta chains of 146 residues each.

Hence **poly'peptidase** [-ASE], any enzyme which hydrolyses polypeptides.

L. SIMONSEN *Plant Products & Utilisation* (Univ. Nottingham: Sir Jesse Boot Found. b. Of prose: written to sound pleasant and melodious.

1916 J. G. FLETCHER in *Poetry* Apr. 35 It seems fitting that a new name should be given to these poems of hers [sc. Amy Lowell's], which, printed as prose, or as prose and verse interspersed, display all the colors of the chromatic palette. The title that fits them best is that of Polyphonic Prose. 1917 A. LOWELL in *N. Amer. Rev.* Jan. 115 Metre, cadence, and rhyme are some of the many 'voices' employed in 'polyphonic prose'. Others are assonance, alliteration, and return. 1920 H. CRANE *Lett.* 18 Aug. (1965) 41 Conrad's *Nigger of the Narcissus* seems to me all polyphonic prose. 1925 I. A. RICHARDS *Princ. Lit. The sound is obtained by attention to combinations and sequences of letters and syllables. 1977 *Amer. **polytene** (ˈpɒlɪtɪn), *a. Cytology*. [*POLY- + -TENE*.] Applied to giant chromosomes found in certain interphase nuclei, esp. in dipterous insects, and composed of many parallel copies of the genetic material, in which the active regions may be identifiable microscopically.

**1935** P. C. KOLLER in *Proc. R. Soc. B. CXVIII*. 372 We can regard these chromosomes as corresponding with paired pachytene chromosomes at meiosis in which the intercalary

parts between chromosomes have been stretched and separated into smaller units, and in which, instead of two threads lying side by side, we have 16 or even more. Hence they are 'polytene' rather than pachytene; I do not, however, propose to use this term; I shall refer to them as 'multiple threads'. **1959** C. M. M. BEGG *Introd. HARRIS *Nucleus & Cytoplasm* iv. 77 The chromosomes in these [salivary] glands are extraordinary for two reasons. The first is that they are grossly polytenic. Each chromosome contains thousands of identical parallel copies of the basic diploid genetic structure. The extent of polyteny may vary in different species, but for *Chironomus tentans* it has been estimated that each chromosome contains about 16000 times the normal diploid amount of DNA. **1974** *Nature* 29 Mar. 446/1 Mutational data also rule out simple polyteny and polyploidy, where every single gene on every chromosome is polytenised or where every chromosome is present in two or more copies. **1976** *Ibid.* 17 June 614/2 Ciliata and Diptera... show a high tendency for endopolyploidisation and polytenisation. **1976** BELL & COOMBE tr. *Strasburger's Textbk. **polywater** ('pohliwɔ:tə(r)). [*f.* POLY- + WATER *sb.*] A supposed polymeric form of water having properties markedly different from those of ordinary water and reported to have been found in fine capillary tubes.

1969 E. R. LIPPINCOTT et al. in *Science* 27 June 1482/3 The properties, therefore, are no longer anomalous but rather, those of a newly found substance—polymeric water or polywater. 1969 *Daily Tel.* 13 Sept. 22/3 American scientists have confirmed the existence of a new kind of water which freezes at 40deg C and boils at 50deg C... The new water, known as 'polywater' has a density of about 40 per cent. greater than ordinary water. 1972 *Britannica Yearbk. Sci. & Future* 1971 216 Anomalous water (or

polywater), which has attracted much attention in recent months, was shown to be not an unusual form of water but ordinary water containing ionic impurities. 1972 F. FRANKS *Water* I. i. 13 During 1969 the 'polywater' bandwagon began to roll. *Ibid.*, A climax was provided by a warning to scientists against experimenting with polywater as this might affect the oceans, turning them solid. 1975 J. CLIFFORD in *Ibid.* V. ii. 119 Defenders of the water polymer idea have suggested that polywater could be a weakly bonded complex that disintegrates under electron impact and does not appear in the mass spectrum.

*b.* Used, chiefly *attrib.*, to designate certain concepts relating to the scattering of sub-atomic particles at high energies, as Pomeranchuk pole, a special Regge pole with  $\alpha(0) = 1$  and even signature, and with zero isospin, charge, hypercharge, and baryon number ( $\alpha$  being the trajectory function); Pomeranchuk(s) theorem, a theorem according to which the reaction cross-sections for a particle and for its anti-particle incident on the same target particle should approach the same constant value as the energy of the incident particle is increased; (proposed by Pomeranchuk in *Zh. éksp. i teoret. Fiziki* (1958) XXXIV. 725); Pomeranchuk trajectory, the trajectory traced by a Pomeranchuk pole as  $\alpha$  increases.

**Pommy** ('pɒmi), *sb. (a.) Austral. and N.Z. colloq.* Also Pommie and with lower-case initial. [Origin obscure.]

*A. sb.* A derogatory term for an immigrant from the United Kingdom; an Englishman or Englishwoman, a Briton. *B. attrib.* or as *adj.* Of or pertaining to a Pommy; British, English, *spec.* (often as a term of affectionate abuse) in *Pommy bastard*. Cf. POM<sup>2</sup>.

The most widely held derivation of this term, for which, however, there is no firm evidence, is that which connects it with *pomegranate* (see *quots.* 1923, 1963). A discussion of this and of other theories may be found in W. S. RAMSON *Australian English* (1966) 63.

Furthermore, immigrants are known in their first months, before their blood 'thins down', by their round and ruddy cheeks. So we are told. *Ibid.* 164 In this way Mr Somers had to take himself to task, for his Pommy stupidity. 1926 GALSWORDY *Silver Spoon* II. iv. 137 They call us Pommies and treat us as if we'd took a liberty in coming to their blooming country. 1933 'P. † **pompelmoose**, **pampelmoose** ('pɒmp-, 'pæmp(ə)lmʊ:s). Forms: 7–8 pompelmoes, 7 pampelmoose, 8 pumplemoose, pumplemus, 8–9 pompelmoose, 9 pompel-mos, pompelmousse, -mouse, -mous; pumple-, pamplemousse, pampelmoose; also 7–9 pumplenose, 8 pumple-, pummel-, pimple-nose. [A name which arose in the Dutch Indies in 17th c., and is given by early writers as the Dutch name of the fruit. Du. *pompelmoes* is recorded from 1676; F. *pampelmousse* (now *pamplemousse*) from 1696.

There is no native name in Malaysia resembling *pompelmoes*; the Javanese name is *djerok*, the Chinese *yu*. In the opinion of Dr. Kern of Leiden, who has given special attention to oriental words, this is a compound, of which the second element is prob. *limoes* (in Fr. orthography *limousse*), a name applied to this fruit in Old Javanese, Malay, and Lampung, borrowed from the Pg. *limoes* pl. of *limão*, lemon, citron, under which the Portuguese included the species of *Citrus* found by them in the East. In Malay, *limu* or *limau* is still used in this general sense. The first element may prob. represent the Du. *pompoen* pumpkin, in reference to the large size of *Citrus decumana*, so that *pompelmoes*, *pompelmoes* may have been compressed forms of *pompoenlimoes*, i.e. 'pumpkin-like citron', an apt descriptive designation. The name *pompoen* was actually applied to the fruit by Tavernier, *Voyages aux Indes*, Paris 1676, Eng. translation, London 1677: see POMPION 2. The corrupt Tamil *bambolmas*, given by Littré and Hatz.-Darm. as source of the Fr., with the more correct Tamil *pampalimāsu*, and numerous variants cited by Watson, Yule, etc., are merely corruptions of the Du. or Fr. form. The fruit is not native to India, but was introduced from Java (app. in the 17th c.), in Ceylon under its Dutch name; in Bengal its source is indicated by the designation *Batawi-nimbū* or *nebi*, Batavian Citron.]

2. A thin tall stack of corn in the sheaf, in shape a steep cone, 9 or 10 feet high, built up temporarily in the harvest-field in wet seasons, for drying the corn before it is carried to the main rick. So generally in s.w., but in central Dorset called more definitely a 'wind-mow'. (T. Hardy.)

a 1722 LISLE *Husb.* (1757) 211 In making the wheat-pooks in Wiltshire, the sheaves are set [etc.]. *Ibid.*, In a pook may be put a load or two. 1766 *Complete Farmer* s.v. *Harvest*, In their wheat-pooks... in Wiltshire, the sheaves are set in a circle, with their ears uppermost, and another circle of sheaves is placed upon that, and so on, contracting each round, till the pile ends in a point, upon which a sheaf opened, and turned with the ears downward, is placed, like the shackle of a hive... A load, or two loads, may be thus put into a pook, which is a very good way to secure corn against rain. 1829 KNAPP *Jnrl. [*Note.* In Eng. use this word has undoubtedly from the 18th c. been identified with *POOL sb.*: see quot. 17... 1766 in sense 1, with their references to the fish in the *pool*. But the French use of *poule* for the same thing, with the fact that the French is found earlier, makes it almost certain that the term was taken from Fr., and associated with the Eng. word *pool*. F. *poule* is held to be a sense of *poule hen*, chicken, being perh. at first slang for 'booty, spoil, plunder'. Mme. de Sévigné in a letter of 29 July 1676 uses *poule* exactly in the sense of Eng. *pool*; and in a letter of 30 June 1680 says 'Si Denjean est de ce jeu, il prendra toutes les poules: c'est un aigle', a play upon the sense 'hen'. The Dict. of the Académie, ed. 1, 1694, and that of Furetière, ed. 2, 1701, also explain *poule* almost in the words in which it stands in the Dict. Acad. ed. 7, 1878: 'Poule se dit, à certains jeux, de la quantité d'argent ou de jetons qui résulte de la mise de chacun des joueurs et qui appartient à celui qui gagne le coup. La poule est grosse. Mettre à la poule. Gagner la poule'. There is perh. a similar relation between F. *fiche* a fish at cards, and the Eng. 'fish' in the 'pool'.]

[ME. *pov(e)re, pouere, poure, a.* OF. *povre, -ere, poure*, in mod.F. *pauvre*, *dial. paure, povere, poure* = Pr. *pauvre, paure*, It. *povero*, Sp., Pg. *pobre*:—L. *pauper*, late L. also *pauper-us*, poor. The mod.Eng. *poor* and *Sc.*

*puir* represent the ME. *pōre*: with mod. vulgar *pore*, cf. *whore* and the pronunciation of *door*, *floor*.

On account of the ambiguity of the letter *u* and its variant *v* before 1600, it is uncertain whether ME. *pouere*, *poure*, *pouer*, meant *pou-* or *pov-*. The phonetic series *paupere* (*m*, *paupre*, *paubre*, *pobre*, *povre*, shows that *povre* preceded *poure*, which may have been reached in late OF., and is the form in various mod.F. dialects. But the 15th and early 16th c. literary Fr. form was *povre*, artificially spelt in 15th c. *pauvre*, after L. *pauper*, and ME. *pōre* (the source of mod.Eng. *poor*) seems to have been reduced from *povre* like *o'er* from *over*, *lord* from *loverd*. Cf. also POORTITH, PORAIL, POVERTY. But some Eng. dialects now have *pour* (*paor*), which prob. represents ME. *pour* (*pu:r*).]
