III. To have a certain appearance. [App. in part developed from 1 c; but cf. the similar use in passive sense of other verbs of perception, like *smell*, *taste*, *feel*.]

9. a. *intr.* To have the appearance of being; to seem to the sight. (This sense when used of persons often retains some mixture of the notion of 1 c.) Const. a predicative sb. or adj., or a predicative adv. (as *well*, *ill* = 'in good, bad health').

b. with adv. of manner († or advb. phrase): To have a certain look or appearance.

This use is often indiscriminately condemned, but is justly censurable only where *look* is virtually equivalent to *seem*, so that it requires a predicative complement and not a qualification of manner. (So, e.g., in quot. 1645.) Owing, however, to the prejudice excited by the inaccurate use, *look* now rarely occurs with advs. of manner other than *well*, *ill*,

badly. In some early instances the apparent adv. may possibly be an adj. in -LY¹.

loop (lup), *sb.*¹ Forms: 5-6 loupe, 6 loppe, *Sc.* loupe, 7 lope, loope, 7- loop. [Of obscure etymology.]

Prof. Skeat (*Concise Etym. Dict.*) suggests that the word may be a ON. *hloup, hlaup LEAP sb.*, comparing the Sw. *löp-knut*, Da. *lob-knude, lob-øie*, running-knot. These compounds, however, seem to be merely modern Germanisms; the relevant sense of the verb, Sw. *löpa*, Da. *løbe*, being app. foreign to early Scandinavian, and due to the influence of the corresponding G. *laufen* (LG. *löpen*). Further, the mod.Sc. form of ON. *hloup* would be regularly *loup*, pronounced (lup), whereas the word *loop* is in Sc. pronounced (lup); the spelling *loope* in G. Douglas is ambiguous, but prob. represents (lup); cf. *drowpe* = droop. The Irish and Gael. *lub*, formerly suggested by Prof. Skeat, presents at least a noteworthy resemblance of sound and meaning to the Eng. word.]

g. Skating. A curve crossing itself, or any of several elaborations upon this.

1869 VANOERVELL & WITHAM *Syst. Figure-Skating* x. 187 The Large Loop. This being done entirely on one edge throughout, requires some medium degree of speed. **1901** *Encycl. Sport* IV. 370/1 Loops are of three kinds—the ordinary variety, the turn loop, and the bracket loop. **1935** *Encycl. Sports* 560/1 'Loop' is effected by over-balancing the body and recovering equilibrium by a quick turn of the foot. **1962** T. D. RICHARDSON *Art of Figure Skating* vii. 60 Loops are not skated in the normal positions... and what is more, they require an entirely different timing. **1973** *Times* 7 Feb. 15/8 Hoffmann was fourth in the rocker but skated the best loops.

h. A configuration in finger-prints.

1880 H. FAULDS in *Nature* 28 Oct. 605/1 The right ring-finger... has an oval whorl, but the corresponding left finger shows an open loop. **1894** 'MARK TWAIN' in *Century Mag.* June 235 The bewildering maze of whorls or curves or loops which constituted the 'pattern' of a 'record' stand out bold and black. **1938** G. W. WILTON *Fingerprints* xvi. 78 Galton had experimented only with thumbprints, grouping his lineations into three classes of arches, loops and whorls. **1970** P. LAURIE *Scotland Yard* ix. 193 There are two basic finger-print patterns: loops, where the lines turn through two right angles, and triradii.

i. A slack length of film, flexible strip, or the like left between two mechanisms to allow for a difference between the supply and take-up motions, esp. (in cinematographic equipment) one between a sprocket that turns continuously and one that turns intermittently.

1912 F. A. TALBOT *Moving Pict.* vii. 70 A slight loop is made at either end of the gate. **1939** SPENCER & WALEY *Cinema To-Day* ii. 25 A flickering motion of these loops absorbs the difference between the steady feed of the sprocket wheels and the intermittent feed of the claw. **1962** G. A. T. BURDETT *Automatic Control Handbk.* ix. 54 When metal strip is being wound or reeled it is usual to form loops in the feed line to allow for flexibility and avoid undue tension.

j. = loop aerial (see 6).

1922 GLAZEBROOK *Dict. Appl. Physics* II. 1058/1 Before the advent of high amplification, it was impracticable to use single loops of manageable dimensions. **1936** *Jrnl. R. Aeronaut. Soc.* XL. 175 To obtain a full direction finding service, it is usual to instal an external circular loop which can be rotated and orientated by the operator when taking a bearing. **1966** *McGraw-Hill Encycl. Sci. & Technol.* I. 445/2 Use of small loops concealed within the set is a standard practice for broadcast receivers in areas where signal strength is high.

k. A length of film or magnetic tape whose ends have been joined to form an endless strip, so that continuous repetition of the recording is made possible (e.g. in rehearsing the synchronization required for dubbing a foreign-language sound track).

1931 K. F. MORGAN in L. Cowan *Recording Sound for Motion Pict.* x. 151 The machine is provided with a film elevator attachment for running a continuous loop of sound track. This attachment is particularly useful for the dubbing of continuous background sounds. **1951** R. SPOTTISWOODE *Film & its Techniques* xii. 355 It is most important [in dubbing]... not to upset the recording order of an emotional scene which has had to be broken down into several loops. **1959** HALAS & MANVELL *Technique Film Animation* xix. 216 Each pencil-test is shot on negative and projected in loops so that it can be viewed over and over again. **1962** A. NISBETT *Technique Sound Studio* 258 A tape loop may be used (a) to provide a repeated sound structure or rhythm (in radiophonics), (b) for an 'atmosphere' track where this is regular in quality, (c) in tape delay techniques. **1968** *Punch* 31 Jan. 153 At the Rank Organisation's Pinewood Studios they tell how Sophia Loren dubbed sixty-four loops in an hour and a half, against an average of ten or twelve loops an hour.

l. A sequence of control operations or activities in which each depends on the result of the previous one; esp. (more fully closed loop), one in which there is feedback, the result of a later operation being made to affect one earlier in the sequence, usu. so as to maintain the output at a desired level.

1945 L. A. MACCOLL *Fund. Theory Servomechanisms* viii. 70 This procedure of adding feedback loops to internal parts of a servomechanism is employed frequently when it is necessary to take special steps to insure that the performances of those parts shall be accurate and reliable. **1948** BROWN & CAMPBELL *Princ. Servomechanisms* vii. 227 Figure... shows internal loop within a main closed loop. **1954** M. H. LAJOY *Industr. Automatic Controls* i. 9 The automatic washing machine which operates on a time basis and is not dependent upon whether or not the clothes are clean is an open loop system. **1962** F. I. OROWAY et al. *Basic Astronautics* ix. 366 There are two basic control systems: the open-loop system and the closed-loop system. The open-loop system is familiar to us all. Examples of this are... a light switch, or the horn button on an automobile... In the closed-loop system a portion of the output is sensed and fed back to the input. The input is then altered to achieve a co-ordinated response at the output... A good example is the modern air conditioning system in which room air is fed back to the thermostat control. **1971** J. Z. YOUNG *Introd. Study Man* vii. 107 Certain cells in the hypothalamus... are very sensitive to slight rises in temperature above the normal (37°C). They then discharge nerve impulses that set in action the mechanisms that cool the body, such as sweating. This cools the blood and switches off the hypothalamus. In order to study such closed-loop feedback systems engineers use the device of 'opening' the loop. This has been done... by putting heating electrodes in the hypothalamus and arranging that they keep it at a constant temperature a few tenths of a degree above normal in spite of the cooling blood.

m. Computers. A sequence of instructions which is executed repeatedly (usu. with an operand that changes in each cycle) until some previously specified criterion is satisfied.

1947 GOLDSTINE & VON NEUMANN in J. von Neumann *Coll. Works* (1963) V. 86 When a simple induction takes place, C travels during each step of the induction over a certain path, at the end of which it returns to its beginning. Hence this path may be visualized as a loop. We will call it an induction loop or a simple induction loop. **1954** *First Gloss. Programming Terminal.* (Assoc. Computing Machinery) 12 *Loop*, the repetition of a group of instructions in a routine. **1955** R. K. RICHARDS *Arithmetic Operations in Digital Computers* xii. 359 Any one program may contain many loops which may interlock one another in a complex manner. **1964** C. DENT *Quantity Surveying by Computer* iii. 28 It will be seen that s in instruction 4 is reduced by unity at every cycle of the loop, by reason of instruction 7, and that eventually... the conditional jump instruction will decide that the number stored by instruction 5 is negative. Control then proceeds with the next sequence according to instruction 9. **1969** P. B. JOROAIN *Condensed Computer Encycl.* 294 The terminating condition test is usually the last instruction of the loop, but it may be anywhere. **1970** O. DOPPING *Computers & Data Processing* xiv. 215 Loops... are basic to the economy of automatic data processing. It costs a few dollars to have an instruction written, but the computer executes it at a price

which may be only a fraction of a cent below what the same operation would cost if it were executed by a human being. The only way of amortizing programming is to arrange for most instructions to be repeated a great number of times.

n. Nuclear Engin. A system of pipes passing through or associated with a reactor that forms a closed circuit (under operating conditions).

1957 *New Scientist* 23 May 33/1 The chemical behaviour of such systems has to be investigated in a reactor by passing a pipe containing a portion of the system under investigation through or close to the reactor core. Such a pipe, with the necessary measuring equipment, is called a test loop. **1958** H. ETHERINGTON *Nucl. Engin. Handbk.* v. 142 To satisfy the demand for testing operation under conditions of high temperature and pressure in those reactors using a primary water loop, high-pressure loops have been developed. Questions of fuel stability, heat transfer, water chemistry, radiation-accelerated corrosion, fission-product leakage, and fuel stability under desired operating conditions may be answered in high-pressure water loops. **1974** *Times* 21 Jan. 15/2 The CEBG's first two plants... would be the 52nd and 53rd of their type—the Westinghouse four-loop design, in which a single reactor is linked to four steam-generating boilers. **1974** *Encycl. Brit. Macropædia* XII. 897/1 Pressurized water both cools the reactor and carries away the fission-produced heat through the primary system (or loop) to a heat exchanger... The pressurized water then circulates back through the reactor in a constant cycle. In the secondary loop (which is sealed off from the radioactive primary coolant water) the water boils and expands into steam.

o. A type of intra-uterine contraceptive device.

Cf. LIPPES LOOP.

1962 [see LIPPES LOOP]. **1965** *Guardian* 28 May 6/3 The medical council has authorized the intra-uterine contraceptive device... The IUCD would nearly always prevent pregnancy... The 'loops'... cost only a few pence. **1967** *Times* 9 Oct. 4/4 [Pakistan] Although the 1970 target of 500,000 vasectomies and five million loop insertions might seem low, the main object was to retard or halt the growing birth rate. **1971** *Petticoat* 17 July 6/4 There's one excellent method (the coil or loop) only suitable for someone who's already had a baby. **1974** *Guardian* 25 Mar. 10 Will the loop make your periods more painful? If you have comfortable periods before you have a loop fitted, you are unlikely to develop painful periods afterwards.

In practice, when wiring in conduit, the two lengths of wire forming the loop are threaded in separately and the junction is made at the switch, light, or other terminal. 1967 G. A. T. LOOSE v. + STRIFE sb.; a mistransl. of late L. *lysimachia*, also -*machion*, a Gr. λυσιμάχιον, f. the personal name Λυσίμαχος Lysimachus, an application of the adj. λυσιμαχος 'loosing' (i.e. ending) strife, f. λυσι-, combining stem of λύειν to loose + μάχη strife.

The form *λυσιμαχία (found only in Pliny's Latin transliteration) would be correct Gr. for 'the action of losing strife'. The misinterpretation of the word is ancient; Pliny, though stating that the plant was discovered by one Lysimachus, also says that oxen that are made to eat it are rendered more willing to draw together. [OE. *hláford*, once *hláfweard* (Ps. civ. 17; Thorpe's 'to hláf-wearde' is a misprint: see note in Gr.-Wülck.), repr. a prehistoric form **hlaiward-*, f. **hlaiþ* (OE. *hláf*) bread, LOAF +

**ward* (OE. *weard*) keeper (see WARD *sb.*). In its primary sense the word (which is absent from the other Teut. langs.) denotes the head of a household in his relation to the servants and dependents who 'eat his bread' (cf. OE. *hláf-æta*, lit. 'bread-eater', a servant); but it had already acquired a wider application before the literary period of OE. The development of sense has been largely influenced by the adoption of the word as the customary rendering of L. *dominus*. The late ON. *lávvarör* is adopted from ME.

With regard to the etymological sense, cf. mod.G. *brother*, lit. 'bread-lord', an employer of labour. In the mod. Scandinavian langs. 'meat-mother' (Sw. *matmoder*, Da. *madmoder*, Icel. *matmódir*) is the designation applied by servants to their mistress.

For the phonology of the OE. word see Bülbring *Ae. Elementarbuch* §§367, 411, 562. In the 14th c. the word became monosyllabic through the dropping of the intervocalic *v* and the crasis of the vowels thus brought into contact.]

The lord of the hour is the planet supposed to govern the planetary hour at the moment of a nativity, or at the time of asking a horary question. The lord of the year is that planet which has most dignities, or is strongest in a revolutionary figure. . . The lord of the geniture is. . . supposed to rule the disposition and propensities of the native.

6. a. the Lord (vocatively Lord): God. Also (*the*) *Lord God*, and occas. *my, thy, our* (now rarely: see 7), *his*, etc. *Lord*. Cf. DRIGHTIN.

In the O. T. the *Lord*, a translation of the Vulgate *Dominus*, LXX. ὁ κύριος, commonly represents the ineffable name *yhwh* (see JEHOUAH), for which ADONAI was substituted by the Jews in reading; in a few instances *Adonai* occurs in the Hebrew text.

13. a. As a prefixed title, forming part of a person's customary appellation. Abbreviated *Ld.*, formerly † *L.* (*pl.* *LL.*), *Lo.*

The rules now accepted for its use are as follows. In other than strictly ceremonial use it may be substituted for 'Marquis', 'Earl', or 'Viscount' (whether denoting the rank of a peer, or applied 'by courtesy' to the eldest son of a peer of higher rank); the word *of*, when it occurs in the more formal designation, being dropped. Thus 'Lord Hartington', 'Lord Derby', 'Lord Manvers', 'Lord Palmerston', may be used instead of 'The Marquis of Hartington', 'The Earl of Derby', 'Earl Manvers', 'Viscount Palmerston'. A baron (whether a peer, or a peer's eldest son known by the title of his father's barony) is always called by his title of peerage (either a surname or a territorial designation) preceded by 'Lord', as 'Lord Tennyson'; if the Christian name is mentioned for distinction, it comes first, as 'Alfred, Lord Tennyson'. The territorial titles given by courtesy to judges in Scotland are treated like those of barons, as 'Lord Monboddo'. The younger sons of dukes and marquises have the courtesy title of 'Lord' followed by the Christian name and surname, as 'Lord John Russell'. These rules were, for the most part, already formulated in the 16th c., but were for a long time seldom accurately observed except by experts in heraldry.

In early use the prefixed title had most commonly the form *my Lord* (see 15) or *the Lord*. The latter survives in certain formal uses, and in the superscription of letters.

Lorentz (lɔ'rents). *Physics.* The name of H. A. Lorentz (1853-1928), Dutch physicist, used *attrib.* to designate various concepts and phenomena described by him, as Lorentz (-FitzGerald) contraction = *FitzGerald contraction*; so Lorentz-contrast vb. trans.; Lorentz-covariant, -invariant adjs., covariant, or invariant, under a Lorentz transformation; so Lorentz-covariance; Lorentz transformation [named in Fr. by H. Poincaré 1905, in *Compt. Rend. CXL*. 1505], the set of equations which in the special theory of relativity relate the space and time co-ordinates of one frame of reference to those of another moving rectilinearly with respect to the first; Lorentz triplet, a group of three spectral lines produced by the splitting of a single line with the frequency of the middle one by a magnetic field (the Zeeman effect, first interpreted by Lorentz).

UDDEN tr. *Bohr's Theory of Spectra* ii. iii. 47 It follows immediately from this result according to the principle of correspondence that each fine structure component must be expected to split up into a normal Zeeman effect (Lorentz triplet). 1923 C. D. BROAD *Sci. Thought* iv. 135 The Lorentz-Fitzgerald contraction, if taken as a physical fact, affects all kinds of matter equally. 1955 R. PEIERLS *Laws of Nature* vi. 126 When one first hears of this 'Lorentz contraction' it sounds most artificial and unreasonable. 1955 W. HEISENBERG in W. Pauli *Niels Bohr* 21 Such an interpretation . . . would destroy . . . just the decisive symmetry property of the theory of relativity, namely the Lorentz invariance, and it must therefore be considered inappropriate. 1955 W. PAULI *Ibid.* 35 Lorentz-invariant quantized field theories. 1955 J. LINDHARD *Ibid.* 189 The reason for this is that the field acting on an electron is Lorentz contracted. 1964 E. A. POWER *Intro. Lorentz (lɔ'rents). *Physics.* Also (erron.) Lorentz. The name of L. V. Lorentz (1829-91), Danish physicist, used *attrib.* and in the possessive to designate the ratio $k/\sigma T$ (k = thermal conductivity, σ = electrical conductivity, T = temperature), which has approximately the same value for many metallic elements over a wide range of temperatures.

1922 GLAZEBROOK *Dict. Appl. Physics* I. 459/2 They found that for seven pure metals . . . the value of Lorentz's constant $K/\sigma T$ was nearly the same over the range 18° to 100°C. 1966 C. R. TOTTLE *Sci. Engin. Materials* v. 122 The electron influence on the thermal conductivity of metals is normally far greater than the lattice contribution. When this is the case, the Lorentz constant holds reasonably well. 1966 PHILLIPS & WILLIAMS *Inorg. Chem.* II. xix. 23 On the free-electron theory [of metals] it is predicted that there should be a direct relation between the thermal, k , and electrical, σ , conductivities. . . The Lorentz number, $k/\sigma T$, has the theoretical value of 2.45×10^{-8} watt ohm deg⁻².

[OE. *losian*, f. *los* *LOSS*, used almost exclusively *intr.* (sense 1); sometimes with indirect obj. in dative, as *me losode hit* = I lost it. The transitive use, which occurs twice in ONorthumbrian and appears in general use early in 13th c., seems to have arisen partly from interchange of function between the indirect obj. and the subj. where these were not distinguishable by case-form (cf. *LIKE* *v.*, *LOATHE* *v.*), and partly from the perfect conjugated with *be* (OE. *hit is gelosod* = it is lost), which admits of being apprehended as passive. The later sense-development of the *vb.* has been influenced by the cognate *LEESE* *v.*, with which it became synonymous, and which it in the end superseded.

The regular mod. Eng. pronunciation repr. OE. *losian* would be (looz); the standard Eng. pronunciation (lu:z) seems to be due to association with *LOOSE* *v.*, which in some contexts (e.g. *to loose hold*) closely approaches this *vb.* in meaning. Many dialects have the phoenetic form normally descending from the OE. *vb.* The *Sc.* form *loss* is prob. evolved from the *pa. t.* and *pa. pple. lost*.]

lot (lɒt), *sb.* Forms: 1 hlot, hlott, hlodd, 2-8 lott, 4-6 lote, 4-7 lotte, (4 loth, 4-6 loot, 5 loote, lootte), 2- lot. [OE. *hlot* neut. (rendering L. *sors, portio*):—OTeut. type **hluto-m*, f. the wk. grade of the root **hleut-* (: *hlaut-*: *hlūt-*) occurring in the str. vb. OE. *hliotan*, OS. *hliotan*, OHG. *liozan* (MHG. *liezen*), ON. *hlióta*, to cast lots, obtain by lot. The precise formal equivalent of the Eng. word is not found elsewhere exc. perh. in OFris. *hlot* (? neut.), MDu. *lot* neut. (also masc.), Du. *lot* neut.; but synonymous sbs. from the same root appear in all the Teut. langs. From the wk. grade are, besides those already mentioned, OHG. (*hluz* masc., ON. *hlut-r*, *hlot-r* masc. (MSw. *luter*, *loter*, Sw. *lott*, Da. *lod*), *hlute* wk. masc.; from the form **hlaut-* are OE. *hlýt*, *hlét*, *hliet* masc. (:—OTeut. **hlauti-z*), Goth. *hlaut-s* masc. (rendering κλήρος), OS. *hlót* masc., OHG. (*h*)*lōz* masc. and neut. (MHG. *lōz* masc. and neut., mod. G. *loos*, *los* neut.); cf. also ON. *hlaut* fem., blood of sacrifice. The Teut. word was adopted into the Rom. langs.: F. *lot* (whence *lotir* to divide, in OF. to cast lots), It. *lotto* game of chance, Sp., Pg. *lote* lot, Sp. *loto* 'lot' put up to auction. Probably some of the uses of the Eng. word are due to the influence of F. *lot*.

The primary meaning of the Teut. root **hleut-* is uncertain. Schrader has suggested that it may have been formed by secondary ablaut from the wk.-grade **hlut-* (repr. pre-Teut. *kl-*: see *HOLT*) in the sb. **hluto-m*, the primary sense of which would then be the piece of wood used in casting lots. But this conjecture is very doubtful, and not free from difficulties.]

1. a. An object (app. usually a piece of wood) used in a widely diffused ancient method of deciding disputes, dividing plunder or property, selecting persons for an office or duty, etc., by an appeal to chance or the divine agency supposed to be concerned in the results of chance. The 'lots', each bearing the special mark of one of the competitors, were placed in a receptacle (in Homeric Greece a helmet); according to Greek procedure the vessel was shaken, the winning lot being that which fell out first; in Scandinavia (see *Vigf. s.v. hlutr*) the winning lot was drawn out by an uninterested party. In Eng. (exc. in rare modern instances, chiefly translations from ancient langs.) the word in this sense occurs only in the phr. to cast, draw (†also lay, put, send, throw, warp) lots (or †lot); followed by *on* or *upon*, *over*, *between*, *for* (the object or objects concerned); also by *inf.* or indirect interrog. clause.

In genuine OE. idiom the vb. governing *hlot* was *weorpan* to throw (see *WARP v.*); cf. G. *das loos werfen*, L. *sortes conicere*, Gr. κλήρον βάλλειν. In ME. *werpe* was superseded by the synonymous *cast* and *throw*. The OE. use of *sendan* is a Latinism, after *mittere* of the Vulgate. The only forms of the phrase that survive are *to cast lots* (*arch.*) and *to draw lots* (cf. F. *tirer au sort*), which is interpreted as synonymous with *to draw cuts* (*CUT sb.*¹ 1).

MORSE *Vibration & Sound* (ed. 2) vi. 226 Corresponding to the physical quantities intensity and frequency are the physiological (or, rather, psychophysiological) quantities loudness and pitch. *Ibid.* 227 The bottom curve, for zero loudness, is the threshold of hearing, below which a sound.. is inaudible to the average person. 1959 *Chambers's Encycl.* XII. 728/1 It is important to distinguish between sound intensity—a physical quantity measurable in definite physical units; and loudness—the magnitude of the auditory sensation produced by that sound and therefore a subjective quantity depending upon personal judgements. 1961 G. A. BRIGGS *A to Z in Audio* 117 Although loudness depends primarily on actual intensity, it is also strongly affected by frequency. 1962 A. NISBETT *Technique Sound Studio* xi. 196 Equal loudness from the two voices will not generally be required.

2. *attrib.*, as loudness level, scale; loudness control, a device on an audio amplifier which corrects for the change in quality of reproduced sound at low volumes by boosting the bass (and often also the treble) relative to the middle frequencies, either combined with a volume control or as a separate on-off switch.

1961 G. A. BRIGGS *A to Z in Audio* 117 When the volume is turned down, music tends to sound thin and emaciated. The effect may be counteracted to some extent by bass and treble boost in the amplifier. A *loudness control is a device which automatically applies bass and treble boost as volume is reduced. 1970 J. EARL *Tuners & Amplifiers* i. 18 An idea which is popular in Europe and America (though not often liked in Great Britain) is the so-called loudness control. *Ibid.*, Some amplifiers are equipped only with a loudness control, while others feature the ordinary (non-compensated) volume control which can be changed to loudness control action by means of a switch. 1975 *Gramophone* May 2026 (Advt.), Separate loudness control. 1938 *Bell Lab. loud-speaker (laʊd'spi:kə(r)). Also **loud speaker, loudspeaker**. [f. LOUD *a.* + SPEAKER.]

1. Any instrument for converting variations in an applied electric current or voltage (of appropriate magnitude and frequency) into corresponding sound waves that are able to be heard at a distance from the instrument.

Loud-speaking (see next) was formerly the usual term employed to refer to such instruments. Quot. 1884 is an isolated early example of *loud-speaker*.

1864 F. OAKELEY *Hist. Notes* 60 The various gradations of Dissent and Low-Churchism.

Low Churchman. [Cf. HIGH CHURCHMAN.] A member of the Church of England holding opinions which give a low place to the authority and claims of the episcopate and priesthood, to the inherent grace of the sacraments, and to matters of ecclesiastical organization, and thus differ relatively little from the opinions held by Protestant Nonconformists.

The term, invented as an antithesis to *High Churchman*, was in the early part of the 18th c. used as equivalent to LATITUDINARIAN. Afterwards it fell into disuse, but was revived in the 19th c., when the designation *High Churchman* had obtained a new currency as applied to those who inclined to the theology and ritual of pre-Reformation times. In this later use, *Low Churchman* has for the most part been viewed as equivalent to EVANGELICAL, and has rarely been applied to members of the Broad Church School.

1702 *Charac. Church-Man* 18 He is for shewing the Low Church Men in their own proper Colours. 1703 DE FOE *Short. Way Peace* Misc. 463 We have had it Printed, with an Assurance I have wondred at, That the moderate Members of the Church of England, call'd Low Church Men, are worse than the Dissenters. 1708 PHENIX II. Lucas ('l(j)u:kəs, ||lyka). *Math.* The name of F. Édouard A. *Lucas* (1842-91), French mathematician, used *attrib.* to designate (a) the sequence of integers 1, 3, 4, 7, ..., formed in the same way as the Fibonacci numbers; (b) the sequences generated by the recurrence relation $u_{n+2} = Pu_{n+1} - Qu_n$ when $u_0 = 0, u_1 = 1$ (the Fibonacci numbers being a particular case corresponding to $P = 1, Q = -1$) and when $u_0 = 2, u_1 = P$, which are respectively defined by $u_n = (a^n - b^n)/(a - b)$ and $u_n = a^n + b^n$ ($n = 0, 1, 2, \dots$), where a and b are the roots of $x^2 - Px + Q = 0$.

MARTEN.

The spelling *lewzerne* (quot. 1662), if not a misprint, is conclusive evidence in favour of this derivation. Etymologists have usually supposed the word to be an alteration of the OF. *loucerve, leuserve*, female lynx, a fem. of unexplained from corresponding to the masc. *loup-cervier* repr. L. *lupus cervarius* (Pliny) lynx, lit. 'stag-hunting wolf' (*lupus* wolf, *cervarius* adj. f. *cervus* stag). But this hypothesis does not account for the form of the Eng. word, nor can it be satisfactorily referred to the OF. *loup cervin* (as if L. **lupus cervinus* = *lupus cervarius*) of which Godef. gives one example. Possibly there may have been in OF. a confusion between *loup-cervier* and an adopted Teut. synonym.]

2. The rebel archangel whose fall from heaven was supposed to be referred to in Isa. xiv. 12; Satan, the Devil. Now *rare* in serious use; current chiefly in the phrase *as proud as Lucifer*.

The Scripture passage (Vulg. 'Quomodo cecidisti de caelo, Lucifer, qui mane oriebaris?') A.V. 'How art thou fallen from heauen, O Lucifer, sonne of the morning?') is part of a 'parable against the king of Babylon' (Isa. xiv. 4); but the mention of a fall from heaven led Christian interpreters to suppose that 'king of Babylon' was to be interpreted spiritually, as a designation of the chief of 'the angels who kept not their first estate'. Hence the general patristic view that *Lucifer* was the name of Satan before his fall. The Latin word was adopted in all the Eng. versions down to 1611; the Revised version has *daystar*.

luck (lʌk), *sb.* Also 5-6 *luk*(e, 6-7 *lucke*). [a. LG. (Du., OFris.) *luk*, a shortened form of *geluk* (MDu. *gelucke* = MHG. *gelücke*, mod.G. *glück*). Parallel adoptions of the LG. word are Icel. *lukka* (14th c.), MSw. *lukka*, *lykka* (mod.Sw. *lycka*), Da. *lykke*. Probably it came into English as a gambling term; the LG. dialects were a frequent source of such terms in 15-16 centuries.

The ultimate etymology of MHG. *gelücke* (:-OHG. **giluchhi*:-OTeut. type **galukko-m*) is obscure. So far as meaning is concerned nothing could be more plausible than Paul's view (*Beitr.* VII. 133 *note*) that the word is connected with G. *gelingen* (OHG. *gihangan*) to succeed, turn out well or ill, as G. *druck* pressure with *dringen* to press, *schluck* gulp with *schlingen* to swallow, *ruck* wrench with *ringen* to wrench. But morphologically this assumption seems quite inadmissible, and most scholars deny the existence of etymological affinity in any of these instances. Formally, the word might be cognate with LOK v.¹ or v.², or with G. *locken* to entice (OHG. *lockōn*) and the synonymous OHG. *lucchen*; but no probable hypothesis seems to have been formed to connect the meaning of the sb. with that of any of these vbs.]

Senses 2–4 are common to various mod. langs.: F. *lof*, Sp., Pg. *ló*, Du. *loef* (whence LG. *loff*, G. *luw*, Da. *luw*, Sw. *luf*). The manner of their development is obscure, and it is uncertain whether they originated in Fr., Eng., or (? most prob.) Du. Sense 5 is peculiar to Eng., and it is not easy to connect it with any of the other senses.

Certain other meanings which the word has had in Du. and Fr. need to be accounted for before any hypothesis as to the primitive meaning and sense-development can be regarded as satisfactory. In early mod. Du. *loef*, *loeve* is explained as 'thole-pin' (*scalmus*, Kilian). In the 17th c. the F. *lof* or *loo* is stated to mean 'the distance from the mast to the place on the side to which the sheet is fastened when the vessel is close-hauled'. (See the quot. from Nicot in Godef., s.v.) In the existing uncertainty as to the primary meaning, the ultimate etymology remains obscure; the current view that it represents a Teut. word cogn. with ON. *lōfe* palm, LOOF *sb.*¹, depends on the doubtful assumption that the 'lof' of sense 1 was a steering paddle.]

lug (lag), *sb.*² Chiefly *Sc.* and *north.* Also (6 *Sc.* louge), 6–7 *lugg(e)*. [Of obscure etymology.]

As a synonym of *ear*, it first appears early in the 16th c., and in colloquial *Sc.* use has entirely superseded the older word. Presumably this application is a transferred use of a word that existed earlier with some other meaning. It is possible that the sense 'ear-flap of a cap', which is the earliest represented in our quotes, may really be prior to the sense 'ear'; for similar transferences of words from parts of clothing to the parts of the body covered, cf. *breech*, *crown*, *sole*. If so, the word may perh. be of Scandinavian origin, with a general sense of 'something that can be pulled or laid hold of', specialized differently in Sw. *lugg* forelock, with which cf. Eng. *dial.* (Sheffield, North Derby, etc.) 'to pull (somebody's) lugs', meaning not as in Scotland, the ears, but the hair. (See LUG *v.*)

2. *a.* = EAR *sb.*¹ 1 and 3. Now *colloq.* or *joc.*

By the 19th cent. it had become the only word in use in *Sc.* *ear* having become *obs.* exc. in combination (though it is now standard). Eng. writers of 16–17th c. use *lug* as a slang or jocular synonym (see quotes. 1592 and 1625, and cf. b).

2. [First adopted, in Fr., by A. Blondel 1894, in *La Lumière électrique* 7 July 10.] A unit of luminous flux (now incorporated into the International System of Units), equal to the flux emitted by a point source of intensity one candela (formerly, one candle) into a solid angle of one steradian.

The total flux emitted by a source of one candela is 4π (= about 12.57) lumens.

1898 *Astrophysical Jnl.* VII. 300 Luminous current is defined as the rate at which luminous energy is emitted by a point-source through a solid angle of one steradian. Unit: The luminous current of one candle, i.e., of one Hefner lamp. Name: 'Lumen'. Proposed by L. Weber. 1937 *Times* 13 Apr. p. iv/2 Electric discharge lighting . . . has been recently installed to give an even and intense illumination of 1,120,000 lumens so that any flaw or defect in the panels being produced may be detected at once. 1953 AMOS & BIRKINSHAW *Television Engin.* I. vii. 125 The efficiency of electric lamps is usually expressed in lumens per watt. . . For gas-filled lamps the efficiency increases steadily with the rating and is approximately 10 lumens per watt for 25 W lamps, 13 lumens per watt for 100 W lamps and 17.5 lumens per watt for 1 kW lamps. Thus a 100 W lamp radiates a total of 1,300 lumens and is equivalent to a source of $1,300/4\pi$, i.e., approximately 100 candle-power. 1974 *Which?* Mar. 88/3 The long-life bulbs gave a light output of about 600 lumens after one hour of life.

1925 *Trans. Illuminating Engin. Soc.* (U.S.) XX. 630 The Lumen-hour is the unit of quantity of light. It is equal to a flux of one lumen continued for one hour. 1975 *Times* 21 Mar. 20/3 The public wanted a certain package of candlepower (expressed in lumens); the industry assured certain fixed wattages, and then aimed at the minimum cost per lumen-hour for those wattages. 1930 tr. Decorative luminaires are usually in the form of an assembly of decorative components around a light source, ranging from a simple pendant to the large . . . prestige chandelier. 1973 *Times* 1 Feb. 22/8 It is preposterous for BSI to force luminaires upon us.

See Du Cange s.vv. *Luminator*, *Luminaria*.] In St. Andrews University, a student (one in each class) who was privileged to attend the professor's lectures without payment, and to receive certain dues from the other students, in return for services rendered by him.

The former Librarian of the University, Mr. J. Maitland Anderson, informed us that the first student whom he found described in the records as 'luminator' entered the University in 1697; it is, however, probable that the title goes back to mediæval times. It is supposed that the 'luminator' originally provided lights and fires to the classes; but there is no contemporary evidence of this. Between 1800 and 1827 his duties seem to have been those of a clerk (cf. quot. a 1808). The office was abolished about 1830.

It is commonly stated that the University seal contains a representation of a 'luminator' holding a candle while a professor is lecturing. But whether the object is a candle or something else (? a mace), and whether the figure holding it is meant for the 'luminator', seems to be quite uncertain.

1902 *Encycl. lunabase ('lʌj)u:nəbeɪs). *Astr.* [f. *lūna* moon + BASE *sb.*¹ (as the *sb.* corresponding to the adj. *basic*, in the petrographic sense).] The lunar maria or lowlands (the dark-coloured regions as seen from the earth).

Orig. proposed for the rock composing them (see quot. 1944).

1944 J. E. SPURR *Geol. applied to Selenology* II. iv. 20 The differently colored formations which largely make up the marking of the lunar 'map' have, in the Imbrian study (volume I), been interpreted as probably corresponding to two main types of terrestrial rock: the light-gray 'uplands' as siliceous, the dark mare as basic or basaltic.. In future descriptions the light-colored rocks may be called lunarite. The dark-gray mare.. may be called imbase.. In the mare formations south of the Mare Imbrium, a later, darker phase of presumably basic rock.. may safely, and briefly, be called novabase (later lunar basaltic rock). And the inclusive term for both would be lunabase (lunar basaltic rock). 1966 *Earth Sci. Rev.* I. 231 Spurr (1944) gave the name 'lunarite' to the more highly reflective parts [of the moon's surface], and the name 'lunabase' to the darker parts. Large areas of lunarite are referred to as 'continents', and specific areas of lunabase are called 'maria'. 1967 *New Scientist* 2 Feb. 263/2 The mountains [on the moon] end with steep terminal slopes of 20° or so, which cannot be due to erosion as a result of melting by subsequent lavas from the mare region (the dark lunabase).

luncheon ('lanʃən). Also 7 *lunchen*, *lunchion*, *lunching*, 7-8 *lunchin*, 8 *lunshin*. [Related in some way to LUNCH *sb.*²]

The ordinary view, that the spelling *lunching* represents the etymological form, appears somewhat unlikely. In our quotes the earliest form is *luncheon*, and this appears in our quotes earlier than *lunch*; and there is no evidence of a derivative verb in the 16-17th c. It is possible that *luncheon* might have been extended from *lunch* on the analogy of the relation between *punch*, *puncheon*, *trunch*, *truncheon*.]

Cattle, Sheep, Goats & Swine* II. vii. 242 The symptoms of lupine poisoning are so well known in Europe that chronic lupine poisoning has been given the name lupinosis. 1928 W. C. MILLER *Black's Vet. Dict.* 571/2 In Europe, by far the greater number of cases [of poisoning by lupines] are of a chronic type, which results in the production of a train of symptoms to which the name 'lupinosis' has been given. 1943 *N.Z. J. Agric.* LXVII. 83/3 There was considerable swelling about the head, and the skin came off the ears and the nose and also along the top of the head. These symptoms are identical with those described as occasionally occurring in cases of lupinosis. 1961 *J. Austral. Inst. Agric. Sci.* XXVII. 62/1 In 1880, 14,138 of a total number of 240,000 sheep in one district in Pomerania died of lupinosis. 1966 *Brit. Vet. J. CXXII.* 508 Lupinosis of sheep was shown to be due to the grazing of dead standing lupin roughage which had been exposed to rain after drying off in the spring. 1967 *Adv. Veterinary Sci.* XI. 86 Two distinct forms of injury are recognized in animals ingesting one or more of the several parts of lupines. The first of these is due to the pharmacologic activity of the bitter principle (a variable mixture of alkaloids) and has become variably known as lupine poisoning, alkaloidal poisoning, American lupinosis, or lupine madness. The second is an icteric disease caused by a hepatotoxin which was designated... as 'ictrogen'... The disease was called 'lupinosis', or sometimes more specifically, 'European lupinosis'. 1972 *Mycologia* LXIV. 316 Typical signs of lupinosis were produced experimentally in Merino ewes fed either naturally infected lupines or pure cultures of the fungus [sc. *Phomopsis leptostromiformis*] on autoclaved white lupine seeds.

Obviously related in some way to this Fr. word are early and dial. mod.G. *lortsch*, *lurtsch*, *lorz*, *lurz*, the name of a game, also as adj. in *lurz werden*, a phrase in various games, expressing the failure to achieve some object aimed at; MHG. *lorz*, *lurz* (also *lerz*), mod.G. dial. *lurz*, *lurtsch* left (hand), wrong, whence MDu. *loorts*, *loyrtz*, *lurs* left; MHG. *lürzen* (= OE. *belyrtan* BELIRT *v.*) to deceive, whence MDu. *lordsen*. The most plausible supposition with regard to the relation between these words is that the MHG. *lurz* left, wrong, or its derivative *lurtsch* (cf. *linksch* from *link*), was adopted into Fr. as a gaming term (*lourche* adj.), and that *lourche sb.* as the name of a game was developed from the adj. lurch (lɜ:tʃ), *sb.*³ [Of obscure origin.]

The word app. occurs as the second element of *lee-larches* in the first quot. below, for which later nautical and other dict. substitute *lee-lurches*. If *lee-larches* in Falconer be not a misprint for *-lurches*, it may represent an altered pronunciation of the older *lee-latch*, in the word of command 'have a care of the lee-latch', i.e. 'look that the ship does not go to leeward of her course' (*Milit. & Sea Dict.* 1711). It seems possible that *lurch* originated in the compound *lee-lurch*, an alteration (by association with LURCH *sb.*¹ 3) of *lee-larch* for *lee-latch*, which prob. contains LATCH *sb.*², LETCH *sb.*² inclination (for the sense development cf. the etymological note on LIST *sb.*⁵.)
