mock (mɒk), *v.* Forms: 5 mokken, make, mocque, 5-6 mokken, mok, 5-7 mocque, 6- mock. [ME. *mokken*, *mocque*, ad. OF. *moquer* (F. *moquer*) to deride, jeer, a northern dialect form corresp. to the synonymous Pr. *mochar*, It. *moccare*.

According to some scholars, the word represents a popular L. **muccāre* to wipe the nose (whence F. *moucher*, It. *moccare*), f. **mucc-us* (class. L. *mucus*: see MUCUS). With the OF. (whence the Eng.) transitive use, cf. L. *ēmungere* to wipe the nose, to cheat. The reflexive use (the only one in mod. Fr.) *se moquer de quelqu'un*, may originally have denoted the derisive gesture imitative of the movement of wiping the nose. In mod. Provençal, according to Mistral, *mouca* means 'to wipe the nose', 'to strike on the nose', while *se mouca* = F. *se moquer*, and *mocado* means 'a blow on the nose', 'a humiliation'.

Another hypothesis, less plausible semasiologically, would connect the word with Ger. dial. *mucken* to growl, grumble, OHG. *irmuccazan* 'mutire' (mod. G. *mucksen* to grumble.)

By some writers used in a wider sense, so as to be applicable to any proposition in which the predicate is affirmed or denied of the subject with any kind of qualification, or which contains an adverb or adverbial phrase. Of a syllogism: Containing a modal proposition as a premiss. Esp. in various collocations, as *modal logic*, that branch of logic which is concerned with the study of modal propositions (see also *quots.*).

MCGINNIES *Social Behavior* iii. 70 Linton (1945) has conceived of national character as a modal personality structure, or configuration that appears with considerable frequency in a society. *Ibid.* 71 Identification of such modal behavior configurations makes it possible to arrive at certain generalizations about any given society and to describe more succinctly the differences between one society and another.

7. *Petrol.* Of or pertaining to the mode (sense 5b) of a rock; as indicated by a mode.

E. J. & C. G. ENGEL in A. E. J. B. sb. 1. *Logic.* A modal proposition (see A. 4).

1725 WATTS *Logic* ii. ii. §4 There is no great need of making modals a distinct sort [*sc.* of proposition]. 1827 WHATLEY *Logic* ii. III. (ed. 2) 108 When a hypothetical Conclusion is inferred from a hypothetical Premiss, then the hypothesis (as in Modals) must be considered as part of one of the Terms. 1878 S. H. HODGSON *Philos. Refl.* I. 368 It has the advantage of exhibiting the derivation of the Modals, as they are called, from the reflective mode of consciousness [etc.].

2. *Gram.* A modal verb (see A. 5).

modalism ('mɒdəlɪz(ə)m). [f. MODAL + *-ISM*.] The Sabellian doctrine that the distinction in the Trinity is 'modal' only, i.e. that the Father, the Son, and the Holy Spirit are merely three different modes of manifestation of the Divine nature.

modality (mɒdə'lɪtɪ). [ad. med.L. *modālītās*, f. *modālis*: see MODAL and *-ITY*. Cf. F. *modalité*.]

1. *a.* The quality or fact of being modal. Also, a modal quality or circumstance; the modal attributes of something; †a question or point relating to mode, manner, or method, and not to substance. *Now rare.*

a 1617 BAYNE *On Eph.* (1658) 144 Liberty in this sense, ... contingency, necessity, these are modalities agreeing to effects, as effects are in order to their second causes. 1647 M. HUDSON *Div. Right Govt.* II. iii. 87 Even the temporal part of that promise... was performed exactly in the reality, though not in the Modality thereof. 1656 *Burton's Diary* (1828) I. 44 Shall punctilios and modalities and forms, bind and tie up a Parliament? 1704 NORRIS *Ideal World* II. x. 401 We cannot conceive the modality of any substance as a Being distinct from that substance... We cannot conceive a circle as a being distinct from extension whose modality it is. 1825 *New Monthly Mag.* XIV. 474 The resemblance takes its colour from the modalities of thought and feeling of the artist by whom it is sketched.

b. In diplomacy, politics, etc.: a procedure or method; a means for the attainment of a desired end.

1957 G. F. KENNAN in *Listener* 28 Nov. 868/1 The modalities of German unification must flow from the will of the German people, expressed in free elections. 1960 *Guardian* 23 Aug. 7/6 He did hear nine members of the Council praise his statesmanship and the procedures ('modalities' is the new and foolish word) he had adopted. 1970 *New Yorker* 17 Oct. 162/2 The new word that is constantly being heard here is 'modalities'. Everyone

involved in the peace talks agrees that the military modalities of a cease-fire are more easily negotiated than the political modalities.

2. *Logic*. a. In the scholastic logic, the fact of being a modal proposition or syllogism. Also, the particular qualification by the presence of which a proposition is rendered modal.

1628 T. SPENCER *Logick To Rdr.*, The modalitie of propositions doth explicate the subject or predicate of the proposition wherein it is. 1725 WATTS *Logic* II. ii. §4 But whether the modality be natural, moral, &c. yet in all these propositions it is the mode is the proper predicate. 1843 MILL *Logic* I. iv. §2 Those distinctions among propositions which are said to have reference to their modality. 1870 JEVONS *Elem. Logic* VII. 70 All these assertions are made with a different degree of certainty or modality.

b. In Kantian and subsequent use, that feature of a judgement which is defined by the class in which it is placed when judgements are classified into problematic, assertory, and apodictic.

This is a development of the older sense 2a; the distinctive features of 'problematic' and 'apodictic' judgements being 'modalities' in the earlier sense, the term was extended to apply also to that of 'assertory' judgements. In Kant's classification 'the Categories of modality' are those of possibility and impossibility, existence and non-existence, necessity and contingency; the term is coordinate with Quantity, Quality, and Relation.

1836 *Penny Cycl.* VI. 368/1 These Categories consist of four primordial classes: 1. quantity, 2. quality, 3. relation, 4. modality; each class containing three Categories. 1884 tr. Lotze's *Logic* 53 What modality have such sentences as these, 'S will be P', 'S ought to be P', 'S may be P', 'S has been P'? No one of them affirms reality, but the unreal which is past in the last is something quite different from that which is permitted, enjoined, or future in the others. . . If all these shades of meaning had been taken into account, the forms of modality might have been correspondingly increased in number. 1949 HUTTEN & REICHENBACH tr. H. Reichenbach's *Theory of Probability* x. §80. 404 Like probabilities, the modalities must be regarded as properties not of individual propositions but of propositional sequences. 1951 G. H. VON WRIGHT *Ess. Modal Logic* 3 Related to the problems of mixed modalities are the problems of super-imposed or higher order modalities.

3. *Civil Law*. 'The quality of being limited as to time or place of performance, or, more loosely, of being suspended by a condition: said of a promise' (*Cent. Dict.* 1890).

4. *Psychol.* a. (See quot. 1909.)

1895 *Amer. Jnl. Psychol.* VII. 84 *Sinn*, sense, sensibility, modality. 1909 *Cent. Dict. Suppl.*, *Modality*, in *Psychol.*: (a) the nature or character of sensation or stimulus as determined by the sense-department to which it belongs or appeals: a term proposed by Helmholtz, to avoid a confusing use of *quality*. . . Hence (b) the sense-department itself: as, the sensations of different modalities. 1925 G. B. PHELAN (*title*) Feeling experience and its modalities. 1951 G. HUMPHREY *Thinking* II. 57 Sensory presentations of various modalities—auditory, kinaesthetic, and so on. 1971 tr. H. von Helmholtz's *Sel. Writings* XIV. 369 The most fundamental [distinction] is that among sensations which belong to different senses, such as the differences among blue, warm, sweet, and high-pitched. In an earlier work I referred to these differences in the *modality* of the sensations. 1972 D. R. KENSHALO in Kling & Riggs *Woodworth & Schlosberg's Exper. Psychol.* (ed. 3) v. 119/1 If we insist that each primary sensory modality has its own nerve pathway, the tactile, pain, and temperature senses fail to qualify as different modalities because their nerves are intermingled.

b. A term used to denote qualitatively different attributes or traits of personality.

1946 R. B. CATTELL in *Brit. Jnl. Psychol.* May 159 Three classes or 'modalities' of traits: (1) Dynamic traits, e.g. dispositions, sentiments, neurotic symptoms, ergs; (2) Temperament traits, e.g. general emotionality, surgency, preservation, hyperthyroidism, personal tempo; (3) Abilities or cognitive traits, e.g. native general intelligence, acquired perceptual and executive skills. 1962 E. R. HILGARD *Introd. Psychol.* (ed. 3) xvi. 452/2 Guilford. . . writes of seven 'modalities of traits', indicating that the kind of trait we see depends upon the direction from which we view personality. 1964 L. J. BISCHOF *Interpreting Personality Theories* XIV. 594 Formally, Cattell proceeds to divide traits into three modalities: temperament, dynamics, and ability. 1972 *Jnl. Social Psychol.* LXXXVII. 52 The conditioning events taking place during this phase leave an indelible imprint on the psychological modalities referred to as personality.

modalize ('mɔdəlaɪz), *v.* [f. MODAL *a.* + -IZE.] *trans.* To render modal. Hence *moda'lizable a.*, *modalization*; *'modalized ppl. a.*

1857 A. B. WILSON in *Oxford Ess.* 115 All dogmatic statements must be held to be modalized by greater or less probability. 1955 A. N. PRIOR *Formal Logic* III. i. 202 'Modalization' here plays a part. *Ibid.*, Provided that no propositional variable occurring in β occurs in α unless it is 'modalized', i.e. is either immediately preceded by 'M' or 'L' or occurs as part of a propositional formula which as a whole is preceded by 'M' or 'L'. *Ibid.* 209 A similar hexagon . . . could be constructed for modalized conjunctive and alternative forms. 1957 — *Time & Modality* 137 The only modalizable forms are single variables with or without a preceding sequence of N's. 1963 A. KENNY *Action, Emotion & Will* ix. 189 Descriptions of formal objects can be formed trivially simply by modalizing the relevant verbs. 1973 J. J. ZEMAN *Modal Logic* v. 80 Systems containing only a finite number of non-equivalent modalities will be called 'systems of complete modalization'. *Ibid.*, A formula is completely modalized if the prefixing of modal operators to it does not change its 'modal quality'.

modally ('mɔdəli), *adv.* [f. MODAL + -LY.] In a modal respect; with reference to mode or manner.

1647 M. HUDSON *Div. Right Govt.* II. ix. 130 Gods honour and the Kings are not really but onely modally and circumstantially different. 1704 NORRIS *Ideal World* II. i. 21 Things that are modally distinct, or distinct by a modal abstraction, that is, whose distinction is owing [etc.]. 1867 FROUDE *Short Stud., Spinoza* (ed. 2) 232 Therefore because things modally distinguished do not quâ substance differ from one another there cannot be more than one substance of the same attribute.

W. Indogermanic **mod-* (:**med-*: see METE *v.*). In branch II, a. F. *mode* fem., ad. L. *modus* (with change of gender due to the final *e*); the Fr. word had in the 16th c. developed the sense of 'fashion', and this was adopted into Eng. in the 17th c.

The F. *mode* (15th c. in Hatz-Darm.) remained fem. in all uses until the 17th c., when the masc. gender was adopted for the uses, chiefly technical, that belonged to L. *modus*. For the sense 'fashion' the fem. gender was retained. Sp., Pg., and It. have *modo* (from Latin) manner, etc., *moda* (from Fr.) fashion; the Fr. word in the latter sense has been adopted as G. *mode*, Da. *mode*, Sw. *mod.*

Metamath.* ii. 25 When the objects of the system are known only through the relationships of the system, the system is abstract. . . Then any further specification of what the objects are gives a representation (or model) of the abstract system, i.e. a system of objects which satisfy the relationships of the abstract system and have some further status as well. These objects are not necessarily more concrete, as they may be chosen from some other abstract system (or even from the same one under a reinterpretation of the relationships). 1963 W. V. Teaching* IX. 262/2 London English is a totally different thing from Received Standard: it is merely one of the many provincialisms, such as are heard in large cities, which fall under the designation of Modified Standard. 1914 — *Short Hist. English* ix. 236 It seems probable that the influence of *Modified Standard*, that is, of forms of English differentiated out of *Received Standard* by factors of social isolation, will have to be admitted and studied in the future. 1934 — in *S.P.E. Tract* xxxix. 604 Thousands of persons speak a form of English which is neither a local dialect, nor what some would call 'good English'. For this latter type, . . . I proposed the term *Modified Standard*. . . to cover all the various types of English . . . which . . . while they adhere, on the whole, to the Standard, especially in accidence and syntax, are nevertheless more or less deeply affected, either by *provincialism*, or by . . . *vulgarism*, in pronunciation. 1940 J. H. JAGGER *English in Future* i. 15 Changes [in Standard English] . . . have been mainly due to the influence of the various forms of Modified Standard—to accept Professor Wyld's terms—upon each other and upon Received Standard.

1880 *Grove's Dict. Mus.* II. 351/2 The intermediate phrases can only begin, or end, on one of another set of notes, called its Modulations. Of these Modulations, four—the Final, Dominant, Mediant, and Participant—are of more importance than the rest, and are therefore called Regular. But as the constant reiteration of these four notes would prove intolerably monotonous, in a Melody consisting of very numerous phrases, other notes, called Conceded Modulations, are added to them.

Owing to the importance of this parameter m ... it may be found useful to designate it by a special name for which we suggest the expression 'frequency modulation index'. 1931 H. RÖDER in *Ibid.* XIX. 2151 B. van der Pol has introduced the expression 'modulation index' for m_f . We shall use this term for both m_p and m_f [where m_p represents the degree of phase modulation in a wave $i = A_0 \sin(\omega_0 t + m_p \sin \mu t)$]. 1974 *Encycl. Brit. Modular housing gives you more control in the plant. 1971 [see MODULAR a. 1b]. 1971 *Real Estate Rev.* Fall 48/2 Our housing needs in the next nine years must be met with factory-built modules, assembled on site.

f. One of a number of distinct, well-defined units from which a computer program may be built up or into which any complex process or activity is analysed (usu. for computer simulation), each of which is complete in itself but bears a definite relationship to the other units.

1963 L. SCHULTZ *Digital Processing* xv. 340 Ideally, the total program system could be segmented into completely independent parts (called modules) that exhibit interdependence only through a central communication pool. 1964 FISHER & SWINDLE *Computer Programming Syst.* iv. 220 Because of such varying input/output requirements among programs and among machine configurations, it is now possible with many of the new 10cs packages to specify which modules of an 10cs [sc. an input/output control system, a set of routines for reading input and writing output data] are necessary for the most efficient processing of input/output requirements. 1965 *Economist* 17 July 272/2 This network is split up into sections or 'modules' that can be used in block form whenever a similar network is required. Shell used the example of the construction of chemical plant which the company put up around the world. The 'modules' in this instance are the particular items of plant, such as pressure vessels, which are standard. 1968 F. F. MARTIN *Computer Modeling* ix. 193 Modules are of two types: system or auxiliary. System modules simulate a specific function in system (or operation) logic . . . For example, a detection routine in a radar model is a system module that simulates the detection function of the radar . . . Auxiliary modules are nonsystem modules and are not necessarily unique to any given model. For example, a random statistical variates generator routine is an auxiliary module that may be applied in any stochastic model to generate random numbers. 1971 B. DE FERRANTI *Living with Computer* ix. 82 The computer programmer breaks his problem down into modules and gives the modules names so that they can be handled. 1973 R. M. ARMSTRONG *Modular Programming in COBOL* v. 60 The components of an operational control information system may be delineated as follows. Logistics: 1. Raw materials. 2. Production. 3. Salable product. Physical assets: 1. Property and equipment. 2. Capital projects. . . Manpower: 1. Payroll. 2. Benefits. 3. Personnel administration. We might describe these components as applicational modules at the systems level. *Ibid.* 63 In applying the above [characteristics] to a module in a computer system, a more precise definition is necessary. 1. The functions of input and output are well defined. 2. The module has a single entry point and a single exit point. 3. It exits to a standard return point in the module from which it was executed.

g. A unit or period of training or education. Cf. MODULAR a., 1 c.

1966 *Economist* 3 Dec. 1005/1 Eventually the sort of retraining envisaged could fit in with the notion . . . of periodic training 'modules', whereby skilled men would take repeated periods off productive work to renew their perhaps rusty skills and learn new ones. 1968 *Daily Tel.* 12 Nov. 19/5 A training manual for a module course on 'Repairs and Restoration' has been produced.

b. *Math.* [ad. G. *modul* (R. Dedekind in P. G. L. Dirichlet *Vorlesungen über Zahlentheorie* (ed. 2, 1871) Suppl. x. 442).] Orig., a set that is a subset of a ring and is closed under addition and subtraction; now usu. defined as a commutative additive group whose elements may be multiplied by those of a ring (usu. a ring with an identity element), the product being in the group and the multiplication obeying the

associative and distributive laws; *left, right module* (see quot. 1970¹). Formerly also *modul*.

1927 *Amer. Math. Monthly* XXXIV. 64 The class concept was introduced by Dedekind as follows. A set M of elements of $I(a)$ which is closed under subtraction, and hence under addition and subtraction, is called a module. If M be such that, if β is any element of M , and γ is any element of $I(a)$, then $\beta\gamma$ is an element of M , the module M is called an ideal. 1937 A. A. ALBERT *Mod. Higher Algebra* i. 9 An additive abelian group is frequently called a module. *Ibid.* xi. 252 A set \mathfrak{M} of elements of a ring \mathfrak{U} is called a modul of \mathfrak{U} if $a - b$ is in \mathfrak{M} for every a and b of \mathfrak{M} . . . Thus a modul is simply an additive subgroup of the additive abelian group \mathfrak{U} . 1948 O. RE *Number Theory* vii. 159 The integers $0, \pm 1, \pm 2, \dots$ form a modul, but the natural numbers $1, 2, 3, \dots$ do not. *Ibid.* 161 A ring is a modul that is closed under multiplication. 1970 HARTLEY & HAWKES *Rings, Modules & Linear Algebra* v. 70 A module over a ring R (or R -module) is an Abelian group M (almost always written additively) together with a map $(r, m) \rightarrow rm$ from $R \times M$ to M satisfying the conditions $r(m_1 + m_2) = rm_1 + rm_2$, $(r_1 + r_2)m = r_1m + r_2m$, $(r_1r_2)m = r_1(r_2m)$, $1m = m$, for all $r, r_1, r_2 \in R$ and all $m, m_1, m_2 \in M$. It would be more accurate to call what we have just defined a left R -module. There is a similar definition of a right R -module in which the elements of R are written on the right. *Ibid.* 69 A module is a construct of great versatility. It turns up in many seemingly unlikely guises and has the knack of manifesting some of the quintessential features of a wide variety of mathematical structures. 1970 *Nature* 19 Dec. 1234/2 A vector space is built up linearly by means of 'scalar' multipliers from a number field. The more general concept of a module replaces the field by an arbitrary ring (with unity) related to an Abelian group so that a 'product' is defined satisfying the usual distributive and associative laws.

In arithmetic modulo 7, 8 is equivalent to 1 in many senses. *Ibid.* 44 In number theory one must often work with very large numbers. If these can be reduced to equivalent smaller numbers, much time-consuming labor can be avoided. Herein lies one of the great contributions of modulo arithmetic. 1971 J. H. modulor ('mɒdju:lə(r)). [Fr.] A scale with initial dimensions of 7 feet 5 inches (226 cm.) and 3 feet 9 inches (114.3 cm.), devised by the French architect Charles-Edouard Jeanneret, called Le Corbusier (1887-1965), based on the proportions of a human figure six feet tall, and intended to be used for the co-ordinated design of buildings, their contents, and their surroundings. Also *attrib.*

1948 M. GHYKA in *Archit. Rev.* Feb. 39 Le Corbusier's Modulor, and the concept of the Golden Mean... The Modulor is a linear scale in the form of a tape. Its object is to provide a means by which practical realization may be given to the need for efficiency and harmony in the dimensioning of objects and their containers, in architectural design and in town-planning... The Modulor differs from such a [conventional] scale in that the markings on it are related to each other by the principle of the Golden Mean. 1954 DE FRANCIA & BOSTOCK tr. *Le Corbusier's Modulor* 5 The necessities of language demanded that the golden rule should be given a name. Of several possible words, the MODULOR was chosen... The 'Modulor' is a measuring tool based on the human body and on mathematics. 1962 *Listener* 27 Sept. 472/1 The modulor which he [sc. It... forced him to develop the shell from the inside in several stages, starting with the modulor as the smallest unit. *Ibid.* 472/2 His faithful students soon learned to assemble their modulor units to very much the same buildings they had designed before. 1964 J. SUMMERSON *Classical Lang. Archit.* vi. 46 It was not till the early years of World War II that le Corbusier created the system... which he has called the 'Modulor'. 1972 *Times* 30 Nov. Moinian ('mɔɪniən), *a. Geol.* [f. MOINE + -IAN.] Of, pertaining to, or designating the Moine series of rocks (see MOINE). Also *absol.*, the Moine series.

1938 A. K. WELLS *Outl. Hist. Geol.* vi. 50 There is nothing inherently impossible in the suggestion that the Moinian rocks may be metamorphosed Torridonian. *Ibid.*, It is as well to remind ourselves that the great overthrusts separate an area where the succession is Lower Palaeozoic rocks, on Torridonian, on Lewisian, from one. . . in which the succession is: Dalradian, on Moinian, on Lewisian. 1954 *Q. Jrnl. Geol. Soc.* CX. 46 Many bodies of Lewisian gneiss are marked on the Geological Survey maps of the Moine area of Ross-shire. Preliminary studies. . . suggest that some at least of these bodies resemble the so-called inliers of Scardroy and Fannich in being of Moinian age. 1969 BENNISON & WRIGHT *Geol. Hist. Brit. Isles* iii. 46 The Lewisian also forms the basement to the Moinian Series, a dominantly arenaceous sedimentary sequence but everywhere separated from the Torridonian by the Moine thrust. 1971 *Geol. The petrology and migmatization of the Moinian are discussed and Dalradian rocks are described for the first time from this area.

|| **moire** (mwar, mwɔ:(r), mwə(r)). Also 7 *moyre*. [F. *moire*, according to Fr. lexicographers an adoption of some form of Eng. MOHAIR.]

The OF. *moire*, the name of some textile fabric mentioned by Chrestien of Troyes (12th c.), is believed to be unconnected with the modern word.]

Originally a kind of watered mohair; afterwards, any textile fabric (but usually silk) to which a watered appearance is given in the process of calendering; a watered or clouded silk.

moire antique, explained by Fr. lexicographers to mean a watered silk of large pattern, is in Eng. use practically synonymous with *moire*, which is apprehended as a shortened form.

A. adj. a. Of silk: Watered. Also applied to other materials (as paper, linoleum) having an appearance resembling watered silk. Of metals: Having a 'watered' or clouded appearance.

b. Applied to the wavy or geometrical pattern of light and dark stripes ('fringes') that is observed when one pattern of lines, dots, etc., is visually superimposed on another similar pattern, or on an identical one that is slightly out of alignment with the first; chiefly in *moiré fringe, pattern*.

1940 *Chambers's Techn. Dict.* 553/1 *Moiré effect* (Photog.), a 'watered-silk' pattern... arising from interference between two line-screens; a defect for which occasional uses are found. 1950 *Proc. R. Soc. A. CCI.* 189 With the [diffraction] gratings made in the manner described above the moiré pattern consisted of a very complicated wavy pattern which repeated itself with great uniformity every quarter of an inch, this being the pitch of the lead-screw. 1953 H. A. CHINN *Television Broadcasting* ii. 70 The problem of a moiré pattern caused by 'beating' of the scanning lines with the lines of the target mesh does exist. 1956 J. GUILD *Interference Syst. Crossed Diffraction Gratings* p. v, Though attention was called to them by Lord Rayleigh as long ago as 1874 the fringes produced by crossed diffraction gratings, now usually termed moiré fringes, have somehow escaped mention in the textbooks of physical optics. 1963 *Sci. Amer.* May 54/3 The only general requirement for a moiré pattern is that the interacting figures have some sort of solid and open regions. The solid regions can be lines (straight, curved or wiggly), dots or any other geometric form... In the typical moiré pattern the moiré effect materializes when two sets of straight lines are superposed so that they intersect at a small angle. *Ibid.* 63/1 Moiré patterns sometimes plague the printer whenever he is obliged to print two or more halftone impressions one atop the other, which he must do in making multicolored reproductions. 1971 J. H. SMITH *Digital Logic* i. 3 Automatic programmed machines are... made to an extremely high accuracy, e.g. 5000 steps (digits) per inch are easily realised using moiré fringe devices. 1973 *Sci. Amer.* Oct. 120/2 Two sets of concentric circles that overlap generate moiré patterns in the form of radial lines. Concentric circles that overlap a grid of comparable spacing generate ellipses, parabolas or hyperbolas, depending on the angle of inclination between the plane of the concentric circles and the plane of the grid.

B. sb.

1. A variegated or clouded appearance resembling that of watered silk; *esp.* as imparted to metals for the purpose of ornament. Also a moiré pattern or effect.

1818 *Jrnl. Sci. & Arts* V. 368 On the Moiré Metallique, or Fer blanc moiré. *Ibid.*, The moiré has of late been much improved by employing the blow pipe... When the moiré has been formed, the plate is to be varnished and polished, the varnish being tinted with any glazing colour, and thus the red, blue, green, yellow, and pearl coloured moirés are manufactured. 1839 *URE Dict. Arts* s.v., *Moirée métallique*, called in this country crystallized tin-plate, is a variegated primrose appearance, produced upon the surface of tin-plate, by applying to it in a heated state some dilute nitromuriatic acid for a few seconds, then washing it with water, drying, and coating it with lacquer. 1888 *TEALL Brit. CHINN *Television Broadcasting* i. 27 The most objectionable moiré is probably that produced by the blanking pulses because they usually represent the greatest possible black-to-white contrast ratio. 1963 *Sci. Amer.* May 55 (caption) Moiré composed of beats is produced from nonintersecting parallel lines when the spacing of one set differs from that of another. 1967 E. CHAMBERS *Photolitho-Offset* xi. 160 The Agfa-Gevaert Diffusing Diaphragm is also a most useful asset in eliminating undesirable moiré and avoiding the need for excessive retouching. 1967 V. 1905 G. F. KUNZ in *Amer. Jrnl. F. *moisir* to grow mouldy;—popular Latin **mūcīre*, class. L. *mūcēre*; also Rumonsch *musch* wet, Friuli *moscid* doughy, It. *moscio* limp. molecular biology. [f. MOLECULAR a. + BIOLOGY.] Biology at the molecular level, esp. that branch of biology which is concerned with the formation, organization, and activity of macromolecules essential to life (i.e. nucleic acids, proteins, etc.).

1950 *Harvey Lectures XLVI.* 3 The name 'molecular biology' seems to be passing now into fairly common use. . . It implies . . . an approach from the viewpoint of the so-called basic sciences with the leading idea of searching below the large-scale manifestations of classical biology for the corresponding molecular plan. 1. a. *Physics and Chem.* One of the extremely minute discrete particles of which material substances are conceived to consist. molybdenum (mə'libdɒnəm, mə'lib'di:nəm). *Chem.* [mod.L., alteration of MOLYBDENA.]

a. A metallic element (symbol Mo) occurring in combination, as in molybdenite, wulfenite, etc.

When separated it is a brittle, almost infusible silver-white metal, permanent at ordinary temperatures, but rapidly oxidized by heat. *molybdenum oxide* = MOLYBDITE (Cassell 1885). *molybdenum sulphide* = MOLYBDENITE (*Ibid.*).

1816 J. SMITH *Panorama Sci. & Art* II. 408 The ore containing molybdenum has almost the appearance of plumbago. 1873 WATTS *Fownes' Chem.* (ed. 11) 512 Molybdenum occurs in small quantity as sulphide.

b. **molybdenum blue**, a complex oxide or mixture of oxides of pentavalent or hexavalent molybdenum with a strong blue colour that is produced, usu. as a colloidal solution, when an acidic solution of a molybdate is reduced, and is used in chemical analysis and occas. as a dye; also, the colour of this substance.

1901 *Jrnl. Chem. Soc.* LXXX. II. 163 Molybdenum blue does not appear to contain the dioxide, MoO₃, but the semipentoxide, Mo₂O₅. 1920 F. A. MASON tr. *G. von Georgievics's Text-bk. Dye Chem.* 542 Molybdenum blue was used experimentally for a certain time on silk and cotton materials. 1951 *Amer. Mineralogist* XXXVI. 610 Ilsemanite is soluble in water, first producing a greenish blue solution which later deepens to a typical molybdenum blue. 1952 KIRK & OTHMER *Encycl. Chem. Technol.* IX. 203 The present importance of molybdenum blue rests on the fact that several colorimetric methods depend upon it: (1) the determination of trace quantities of phosphorus or phosphates by the preferential reduction of phosphomolybdic acid; and (2) a number of other methods employing phosphomolybdic acid as a reagent (for phenols, tyrosine, tryptophan, etc.) for reducing compounds. 1965 D. ABBOTT *Inorg. Chem.* xii. 642 Molybdenum 'blue' is an oxide formed when an acidified molybdate solution is greatly reduced. It has variable composition, usually about 67-68 per cent Mo.

molybdian (mə'libdɪən), *a. Min.* [alteration of MOLYBDENIAN *a.*] = MOLYBDENIAN *a.*

1951 C. PALACHE et al. *Dana's Syst. Min.* (ed. 7) II. 1078 Seyrigit. . . A molybdian scheelite, with MoO₃ 24.01 per cent.

molybdic (məʊ'libdɪk), *a.* [f. MOLYBD-ENA + -IC. Cf. F. *molybdique*.] *a. Min.* Containing or derived from molybdenum. *molybdic ochre* = MOLYBDITE. *molybdic silver* = WEHLITE. *b. Chem.* Applied to compounds containing molybdenum in its higher valency; esp. in *molybdic acid*.

1796 HATCHETT in *Phil. Trans.* LXXXVI. 317 The yellow molybdic acid. 1807 T. THOMSON *Chem.* (ed. 3) II. 247 The molybdic acid precipitates in the state of a fine white powder. 1823 W. molybdine (məʊ'libdɪn). *Min.* Also -in. [f. MOLYBD-ENA + -INE^s.] = MOLYBDITE.

1854 DANA *Syst. Min.* (ed. 4) II. 144 Molybdine. . . An earthy yellow powder. . . Occurs with molybdenite.

molybdite (məʊ'libdɪt). *Min.* [f. MOLYBD-ENA + -ITE. Cf. F. *molybdite*.] Trioxide of molybdenum occurring in yellow capillary crystals or incrustations.

1868 DANA *Syst. Min.* (ed. 5) 185.

molybdo- (məʊ'libdɔʊ), prefix.

1. *Path.* [repr. Gr. *μόλυβδος* lead.] Used in the names of certain diseases to indicate that they are caused by the presence of lead as *molybdo-colic*, *molybdo-dyspepsy*, *molybdo-paresis*, etc.

2. *Chem.* [Taken as combining form of MOLYBDENUM.] Prefixed to names of salts, to indicate the presence of molybdenum.

1836-41 BRANDE *Chem.* (ed. 5) 905 Tersulphuret of molybdenum. . . combines with the sulphurets of the electropositive metals. . . and forms a class of sulphur-salts, which may be called molybdo-tersulphurets.

molybdous (məʊ'libdɔs), *a. Chem.* [f. MOLYBD-ENA + -OUS.] Applied to compounds into which

1796 HATCHETT in *Phil. Trans.* LXXXVI. 336 The green oxyde, which . . . I am inclined to call molybdous acid. 1826 HENRY *Elem. Chem.* II. 59 When one part of powdered molybdenum, and two parts of molybdic acid, are triturated in boiling water; . . . we obtain a fine blue powder, which is molybdous acid. 1873 WATTS *Fownes' Chem.* (ed. 11) 514 Molybdous salts in acids, are opaque and almost black.

molsite ('mɒlsɪt). *Min.* [said by Dana, the coiner of the name, to be f. Gr. *μόλυσις* stain, which was app. taken (in error for *μόλυσμα*) as the sb. corresp. to *μολύνειν* to stain, perh. by confusion with *μολύσις* scalding (f. *μολύ(ν)ειν* to scald, parboil): see -ITE¹.]

The statement in quot. 1935 as to the origin of the name is incorrect. In *Atti d. R. Accad. d. Sci. fis. e matem.* (1874) VI. ix. 43, Scacchi attributes the name *molsite* to Dana (in *Syst. Min.* (ed. 5)), and renders it in It. as *molisite* so as to make it conform to It. orthography (as he explains in *Lo Spettatore del Vesuviano* (1887)).]

Natural ferric chloride, FeCl₃, formed as a sublimation product on lavas surrounding fumaroles and occurring (before being hydrated by the air) as a yellow to red film or incrustation.

1868 DANA *Syst. Min.* (ed. 5) 118 Molsite. 1935 J. W. MELLOR *Comprehensive Treat. Inorg. & Theoret. Chem.* XIV. lxvi. 41 A. Scacchi observed in recent eruptions a yellowish or brownish-red incrustation associated with the lavas of fumaroles or steam holes. The coloration was attributed to the presence of ferric chloride, FeCl₃, and A. Scacchi called the mineral molsite, which J. D. Dana altered to molsite—from *μόλυσις*, a stain. 1968 I. KOSTOV *Mineral.* II. iii. 195 Molsite FeCl₃.

8. *Mech.* † a. = MOMENTUM 4. *Obs.*

1706 W. JONES *Syn. Palmar. Matheseos* 282 Moment . . . is compounded of Velocity . . . and . . . Weight. 1727–52 CHAMBERS *Cycle.*, *Moment, Momentum*, in mechanics, is the same with *impetus*.

b. Applied, with qualifying words, to certain functions serving as the measure of some mechanical effect the quantity of which depends on two different factors.

Thus the *moment of a force* or *a velocity* about a point is the product of the length of the directed line representing the force or the velocity, multiplied by the length of the perpendicular from the point. The *moment of a couple* is the product of either of the two equal forces into the length of the arm. The *moment of inertia* of a body about any axis is the sum of the products of the mass of each particle of the body into the square of its least distance from the axis. *moment of momentum* of a rotating body is the product of momentum into the distance from the axis.

1830 KATER & LARDNER *Mech.* x. 135 The moment of a force is therefore found by multiplying the force by its leverage. *Ibid.* 137 The product of the numerical expressions for the mass of the body and the square of the radius of gyration . . . has been called the moment of inertia. 1858 RANKINE *Man. Appl. Mechanics* 22 The moment of a couple means the product of the magnitude of its force by the length of its arm. *Ibid.* 308 This is called the *bending moment* or *moment of flexure* of the beam at the vertical section in question.

c. *Physics.* The distance between the two poles of a simple bar magnet, or the two charges of an electric dipole, multiplied by the strength of either of them (called more fully the *magnetic* and the *electric moment*, respectively); more widely, the maximum torque that any given system of poles, or charges, can experience in a uniform magnetic, or electric, field (respectively) of unit strength; more fully called (*magnetic* or *electric*) *dipole moment*. Similarly the moment of order 2 (*quadrupole moment*) is a certain tensor of rank 2, whose components are quadratic functions of the spatial co-ordinates of the poles or charges; so *octupole moment* (moment of order 3), etc. Cf. MULTIPOLE *sb.*

1865 *Phil. Mag.* XXIX. 441 The product of the strength of the poles into the length between them is called the magnetic moment of the magnet. 1884 J. T. J. BARNETT *Elements of Electromagnetic Theory* xi. 282 The quantity $M = mL = T/H \sin \theta$ is called the magnetic moment of the magnet (analogous to the electric moment of an electret). 1916, etc. [see MULTIPOLE *sb.*] 1920 *Chem. Physics* IV. ii. 19/2 A quadrupole term is related to the second-order moments of the charge distribution. . . (Various slightly different definitions of the quadrupole moment are to be found in the literature.) *Ibid.* 20/1 The spherical-harmonic addition theorem . . . permits the writing of $V_k(R)$ in the form

$$V_k(R) = \frac{1}{R^{k+1}} \sum_{m=-k}^{+k} Q_{km} F_{km}(\theta) e^{-im\phi}$$

where the 2^k -pole moment is fully described by the $2k + 1$ quantities,

$$Q_{km} = \frac{4\pi}{2k+1} \int \rho(r) F_{km}(\theta) e^{im\phi} dv.$$

1962 CORSON & LORRAIN *Introd. Electromagn. Fields & Waves* v. 210 We set $m = IS$ as the dipole moment of the current loop, where S is a vector whose magnitude is equal to the area of the loop. It is perpendicular to the loop. *Ibid.*, It is possible to generalize the concept of magnetic dipole moment to any distribution of current in space. . . For a current distribution J in a volume τ , $m = \int \tau \mathbf{r} \times \mathbf{J} dv$. 1970 G. K. WOODGATE *Elem. Atomic Struct.* ix. 177 In order to be able to discuss departures of the nuclear charge distribution from spherical symmetry we should like to attribute to the nucleus electric multipole moments. *Ibid.* 180 The quadrupole moment Q is positive if the nuclear charge distribution is elongated along the direction of I [sc. the nuclear spin] (prolate) and negative if the distribution is flattened (oblate).

d. *Statistics.* Each of a series of quantities (*first, second, etc., moment*) that express the

average or expected value of the first, second, etc., powers of the deviation of each component of a frequency distribution from some given value, usu. the mean (giving a *central moment*) or zero.

1893 K. PEARSON in *Nature* 26 Oct. 615/2 Now the centre of gravity of the observation curve is found at once, also its area and its first four moments by easy calculation. 1925 R. A. FISHER *Statistical Methods for Research Workers* iii. 70 The standard error of the variance is $\sqrt{[(\mu_4 - \mu_2^2)/N]}$, where N is the number of samples, and μ_2 and μ_4 are the second and fourth moments of the theoretical distribution. 1938 A. E. WAUGH *Elem. Statistical Method* vi. 114 The formula for the first moment about the mean involves Σx and ... it reduces to zero, since $\Sigma x = 0$. We can thus say some things about the moments of all curves in advance: (1) $v_0 = 1$, (2) $v_1 = 0$, (3) $v_2 = \sigma^2$. *Ibid.*, In any symmetrical curve the odd moments, being based on the sums of odd powers of deviations, will equal zero. 1959 G. & R. C. JAMES *Math.*

Statistical Inference* v. 102 The first moment about the origin is the mean μ of the theoretical distribution... The variance σ^2 of a random variable *Y* is defined as the second moment about the mean, the average value of $(Y - \mu)^2$.

2. An ultimate unit of being; an absolutely simple entity. Also *attrib.*

Chiefly used with reference to the philosophy of Leibniz (1646-1716), according to which the universe of existence consists of entities without parts, extension, or figure, and possessing, in infinitely various degrees, the power of perception. Those among these 'monads' which have the perceptive power in the higher degrees are souls; the rest are formed in the view of the percipient mind into aggregates, which constitute bodies. The term was adopted by Leibniz from Giordano Bruno (*d.* 1600), with whom the 'monad' has the twofold aspect of a material atom and an ultimate element of psychical existence.

1748 HARTLEY *Observ. Man* 11. i. 27 No Sensation can be a Monad, inasmuch as the most simple are infinitely divisible in respect of Time. 1785 REID *Intell. monadnock (mɒ'nædnɒk). *Geomorphol.* [The name of a mountain in New Hampshire, U.S.A., having this character.] A hill or mountain of erosion-resistant rock rising above a peneplain.

The place-name appears in Melville's *Moby Dick* (1851), 'his great, Monadnock hump'.

1893 W. M. DAVIS in *Nat. Geogr. Mag.* V. 70 The continuity of the plateau-like uplands [of New England] is interrupted in two ways; isolated mountains rise above it, and branching valleys sink below it. Mount Monadnock is a typical example of the former, with its bold summit more than a thousand feet above the surrounding plateau. . . It is simply an unconsumed remnant of the greater mass of unknown dimensions and form, from which the old lowland was carved. . . In my teaching, Monadnock has come to be recognized as an example of a distinct group of forms, and its name is used as having a generic value. A long paragraph of explanation is packed away when describing some other mountain as a 'monadnock' of greater or less height. 1900 J. E. MARR *Sci. Study Scenery* 147 The peneplain will be cut up by denudation, which may give rise to new hills, carved out of the plain, and marked at first by the possession of flat tops; to these Davis gives the name 'monadnocks'. 1935 *Geogr. Jnl.* LXXXVI. 268 Only here and there a monadnock stands out distinctly, as for instance the Umanak Rifkol, which forms a landmark 900 feet high. 1947 AUDEN *Age of Anxiety* (1948) v. 108 O stiffly stand, a staid monadnock, On her peneplain. 1968 R. Monarchian (mɒn'ɑ:kɪən), sb. and a. *Ecl. Hist.* [ad. late L. *monarchianī* pl., f. *monarchia*: see MONARCHY and -AN.]

The term *monarchianī* is merely a nickname applied by Tertullian (*Adv. Prax.* x) to certain opponents of the doctrine of the Trinity, in derision of their unintelligent use of the word *monarchia* ('Monarchism, iniquity, tenemus', *ibid.* ii). In early apologetics, ἡ μοναρχία τοῦ Θεοῦ ('the monarchy of God') was a current designation for Christian monotheism, and these heretics regarded themselves as the defenders of this cardinal doctrine against the Trinitarians.]

A. sb. One of those heretics in the 2nd and 3rd centuries who denied the doctrine of the Trinity.

Modern historians distinguish between 'Dynamistic' or 'Adoptionist' Monarchians, who regarded Christ as a man endowed with Divine power, and 'Modalistic' Monarchians, who maintained that He was an incarnation of God the Father.

1765 A. MACLAINE tr. *Mosheim's Ecl. Hist.* II. v. §20 (1833) 64/1 His [sc. Praxeas'] followers were called Monarchians, because of their denying a plurality of persons in the Deity. 1841 H. J. Relig.* II. 283 The Monarchians who reduced the whole Trias (or Trinity) only to different conceptions and relations under which the One Divine Being is viewed. 1872 MORRIS tr. *Ueberweg's Hist. Philos.* §82 I. 308 The Monarchian, Praxeas... appears... to have taught that the Father descended into the Virgin.

B. adj. Of or belonging to the Monarchians or to Monarchianism.

GARVIE *Ritschian Theol.* IV. vi. 122 In spite of the opposition of the monarchian schools, whether adoptionist or modalist.

monism ('mɒnɪz(ə)m). [ad. mod. L. *monism-us*, f. Gr. *μόνος* single: see -ISM.]

1. *Philos.* A metaphysical system based on the assumption of a single ultimate principle or kind of being instead of two or more: opposed to DUALISM and PLURALISM in various applications.

a. The doctrine that only one being exists. 1862 F. HALL *Hindu Philos. Syst.* 160 To the Vedāntins the establishment of monism, or non-duality, is most essential. They wish to make out the soul to be Brahma, and the world to be false; whence it would follow, that Brahma solely is true, and that nought but him exists.

b. A general name for those theories which deny the duality (i.e. the existence as two ultimate kinds of substance) of matter and mind.

Thus materialism and idealism or spiritualism are both species of monism; the name, however, is often applied specifically to a third variety, viz. the doctrine that physical and psychical phenomena are alike manifestations of a reality which cannot be identified with either matter or mind.

1876 tr. *Haeckel's Hist. Creat.* i. ii. 35 The Monism here maintained by us is often considered identical with Materialism. 1887 *Encycl. Brit.* XXII. 564/1 Until dualism had been thought out, as in the Peripatetic school, it was impossible that monism (or at any rate materialistic monism) should be definitely and consciously maintained. 1898 ILLINGWORTH *Div. Imman.* iii. 71 Monism . . . started from the physical side, from analysis of the cerebral conditions of thought.

c. The doctrine that there is only one Supreme Being, as opposed to the belief in a Good and an Evil Principle as co-ordinate powers.

1872 MORRIS tr. *Ueberweg's Hist. Philos.* i. 334 Against the dualism of the Manichæans . . . Augustine defends the monism of the good principle.

d. In various uses indicating a theory or doctrine of a single force, source, or system from which all particular instances devolve.

1890 W. JAMES *Princ. Psychol.* i. x. 366 The contrast between the Monism thus reached and our own psychological point of view can be exhibited schematically. 1903 B. RUSSELL *Princ. Math.* i. iv. 43 The subject is important, since the issues between monism and monadism, between idealism and empiricism . . . all depend, in whole or in part, upon the theory we adopt in regard to the present question. *Ibid.* 44 Numerical identity and diversity are the source of unity and plurality; and thus the admission of many terms destroys monism. 1949 P. A. SCHILPP *Albert Einstein* xxiii. 591 The question is still open whether it is possible thereby to arrive at a real monism; for the conversion of Joule into mkg does not prove that the two forms of energy are in essence the same. 1964 GOULD & KOLB *Dict. Soc. Sci.* 440/1 Monism is the notion . . . that in any society there must be one supreme power or authority and this must be lodged in the state. 1970 G. A. & A. G. THEODORSON *Mod. Dict. Sociol.* 93 *Cultural monism*, a doctrine that advocates the assimilation of ethnic minorities into the dominant culture of a society to attain cultural uniformity. 1971 R. F. C. HULL tr. *Jung's Psychol. Types* in *Coll. Wks.* vi. viii. 318 The idea-oriented attitude must tend towards monism.

2. (See quot.: perh. a misapprehension.)

monist ('mɒnɪst). [f. Gr. *μόνος* single + -IST.] One who holds a doctrine of monism (in any sense).

1836-7 SIR W. HAMILTON *Metaph.* xvi. (1859) i. 295 The Realists or Substantialists are again divided into Dualists, and into Unitarians or Monists, according as they [etc.]. 1862 F. HALL *Hindu Philos. Syst.* 267 Can monism be established by simply showing, that two things are different in kind? If so, the Naiyāyikas, no less than you, are monists. 1934 F. W. COKER *Recent Political Thought* xviii. 504 The pluralist charges the monists with the error of regarding all non-political associations created by the state as dependent

for their continued existence upon the will of the State. 1960 L. LIPSON *Great Issues of Politics* (ed. 2) vi. 153 The monist, too, has his problems. Desiring to provide society with an integrating focus, he must designate what this should be. 1964 GOULD & KOLB *Dict. Soc. Sci.* 439/2 In international law the monists are those who believe that international and municipal law are both parts of a single system of law. *Ibid.* 563/2 Politically, public opinion is regarded by the monists as simply the manifested general will.

Also *attrib.* or as *adj.*, of or pertaining to the doctrine of monism.

1931 *Times Lit. Suppl.* 5 Mar. 164/2 Ramanuja fought against the monist view with as intense spiritual passion as any Christian critic could have shown. 1960 L. LIPSON *Great Issues of Politics* (ed. 2) vi. 152 Both philosophies stand unequivocally against something: the pluralist, against organized unity; the monist, against anarchic diversity.

1862 F. HALL *Hindu Philos. Syst.* 251 The belief, that the internal organ, &c., the whole world, are false, is the very life of the monistic doctrine. 1866 J. JAMES *Princ. Psychol.* i. x. 367 For us it is an unpardonable logical sin . . . to change the terms without warning . . . For monistic idealism, this is the very enfranchisement of philosophy. 1903 B. RUSSELL *Princ. Math.* iv. xxvi. 221 The monistic view . . . regards the relation as a property of the whole composed of a and b, and as thus equivalent to a proposition which we may denote by (a)tr. 1926 J. C. SMUTS *Holism & Evolution* v. 108 The fundamental concept of Holism will bring us nearer to that unitary or monistic conception of the universe which is the immanent ideal of all scientific and philosophical explanation. 1957 S. AUROBINDO in Radhakrishnan & Moore *Sourcebk. in Indian Philos.* xvi. 586 In the monistic view the individual soul is one with the Supreme. 1960 L. LIPSON *Great Issues of Politics* (ed. 2) xiv. 417 There are classic instances of a monistic state combined with a controllable government. *Ibid.*, A monistic state like Britain, therefore, has its powers both centralized and integrated. 1964 GOULD & KOLB *Dict. Soc. Sci.* 563/2 The divisions . . . can be roughly classified as being between advocates of a monistic, organic view and holders of a pluralistic, numerical theory of public opinion. 1971 J. Z. YOUNG *Introd. Study Man* x. 124 Others [committed by] their addiction to a monistic science, try to find a system that avoids the separation of mind and matter. 1971 R. F. C. HULL tr. *Jung's Psychol. Types* in *Coll. Wks.* vi. viii. 301 Intellectualism is always monistic.

So 'monistical' *a.* (*Cent. Dict.* 1890); hence 'monistically' *adv.*, from a monistic point of view.

1. a. A member of a community or brotherhood of men living apart from the world under the vows of poverty, chastity, and obedience, according to a rule (characteristic of the particular order), and devoted chiefly to the performance of religious duties and the contemplative life. The different orders of monks are distinguished by habits of various shapes and colours (cf. b).

In England, before the Reformation, the term was not applied to the members of the mendicant orders, who were always called *friars*. From the 16th c. to the 19th c., however, it was usual to speak of the friars as a class of monks. In recent times the distinction between the terms has been carefully observed by well-informed writers. In Fr. and Ger. the equivalent of *monk* is applied equally to 'monks' and 'friars'.

The word properly belongs to Christian use, but is sometimes applied to persons of other religions (e.g. Muslims, Buddhists).

The MLG. version of *Reynard the Fox* (1498) has (only once, l. 6161) *Monke* as the name of the son of Martin the Ape; and early in the 14th c. the same character is mentioned as *Monnekin* (v.r. *Monnequin*) by the Hainaulter Jean de Condé in *Li Dis d'Entendement* (Scheler) 853 (the passage is also printed by Chabaille as a 'branche' of the *Roman du Renart*). As the name does not occur in any other version of *Reynard*, the Eng. word can hardly be derived from the story. But it is not unlikely that the proper name may represent an otherwise unrecorded MLG. **monke*, MDu. **monnekijn*, a colloquial word for monkey, and that this may have been brought to England by showmen from the continent. The MLG. and MDu. word would appear to be a dim. (with suffix -*ke*, -*kijn*: see -*KIN*) of some form of the Rom. word which appears as early mod.F. *monne* (16-17th c.), It. *monna* (earlier *mona*), Sp., Pg. *mona*, mod.Pr. *monno* female ape (a masc. *mono* occurs in Sp. and Pg.), whence the diminutive forms, early mod.F. *monine*, It. *monnino* and †*monicchio* (Florio). The origin of the Rom. word has not been discovered.]

I. The simian animal, and transferred uses.

1. a. In its widest application, an animal of any species of the group of mammals closely allied to and resembling man, and ranging from the anthropoid apes to the marmosets; any animal of

the order *Primates* except man and the lemurs. In a more restricted sense, the term is taken to exclude the anthropoid apes, and the baboons; in popular use associated chiefly with the greenish long-tailed species having cheek-pouches, often kept as pets.

By some writers, the word *ape* is used to express the wider of the two senses above explained, and *monkey* is confined to its narrower application. Others employ *monkey* as the wider term, restricting *ape* to the tailless and especially the anthropoid 'monkeys'.

mono- (mɒnoʊ, mɒ'nɒ), before a vowel often *mon-*, repr. Gr. *mono-*, combining form of *μόνος*, alone, only, sole, single, occurring in a number of words adopted from existing Greek compounds (as MONARCH, MONODY, MONOGAMY, MONOGRAM, MONOLOGUE, MONOPOLY), and hence used to form words, mostly scientific and technical, independently of a Greek original. The second element of these words is normally of Greek origin, but in recent formations *mono-* is often combined (instead of

UNI-) with a Latin element (as *monocellular*: see also 2 below), and occas. prefixed to an English word (as MONOLINE, MONO-RAIL). Many of these words have correlatives in *di-* (see *DI-pref.*²), *tri-*, *poly-*, etc. The more important will be found as Main words; others of less importance follow here.

2. *Chem.* Used in the names of compounds to signify the presence of a single atom or combining equivalent of the element or radical indicated by the word to which *mono-* is prefixed. Also used to indicate monomeric compounds (e.g. *mononucleotide* below).

monoethanolamine, 2-aminoethanol $H_2NCH_2CH_2OH$, a viscous high-boiling liquid used in making detergents; *mono'glyceride*, any compound consisting of glycerol esterified at only one of its hydroxyl groups; *mono'nucleotide* [ad. PROTO- has also been used with the same meaning. The nomenclature is regularly continued in the series *di-*, *tri-*, *tetra-*, *penta-*, *hexa-* (see *HEXA-* and *HEX-*), *hepta-*.

monoclinial (mɒnəʊ'klaɪnəl), a. and sb. *Geol.* [f. Gr. μόνος MONO- + κλίειν to bend + -AL¹. Cf. *anti-, iso-, synclinal.*]

A. *adj.* a. Consisting of strata that slope in the same direction and at the same angle throughout.

In *quot.* 1876 the word appears to have been used with a slightly different meaning, perh. because 'direction' was interpreted as referring to directions in a horizontal plane rather than a vertical one.

1843 W. B. & H. D. ROGERS in *Rep. 1st, 2nd & 3rd Meetings Assoc. Amer. Geologists & Naturalists* 485 While the phrases, *anticlinal dip*, and *synclinal dip*, sufficiently express the directions of the beds, due to concave and convex flexures, we propose the term *monoclinial*, to signify a sameness in the direction of the dip, and shall term a mountain or valley, in which such sameness prevails, a *monoclinial mountain*, or *monoclinial valley*. 1858 H. D. ROGERS *Geol. Pennsylv.* I. 10 The ridges... are of three orders... In geological language they are of anticlinal, synclinal, and monoclinial structure. *Ibid.* 18 *Monoclinial Valleys.* 1875 J. B. sb. a. A monoclinial fold.

1880 C. E. DUTTON *Rep. Geol. High Plateaus Utah* ii. 26 So close is the homology that we are justified in calling a monoclinial in some of its aspects a modified fault. The only difference for structural purposes is that in the case of a typical fault of the simplest form the shearing is along one plane, while in the monoclinial the shearing lies between two planes. 1886 T. M. READE *Orig. Mount. Ranges* xx. 250 The Water-Pocket flexure, one of the grandest monoclinals of the west. 1914 J. PARK *Text-bk. Geol.* ix. 140 In sharply bent monoclinals, the strata in the middle limb are generally drawn out, compressed, or deformed.

b. A monoclinial set of strata; = HOMOCLINE.

1916 *Bull. Geol. Soc. Amer.* XXVII. 92, I welcome the suggestion of the term *homocline*. The need of a term for this structure has long been felt in the United States Geological Survey, where confusion has been avoided in editing by using *monocline* for the homocline as distinct from *monocline* or monoclinial fold.

a. A monoclinial fold.

1879 GEIKIE in *Encycl. Brit.* X. 300/1 The strata are thus bent up and continue on the other side of the tilt at a higher level. Such bends are called *monoclines* or *monoclinial folds*, because they present only one fold, or one half of a fold, instead of the two which we see in an arch or trough. 1898 MILNE *Seismol.* iii. 33 The bases of monoclines are tracts where faults are frequent. 1916 [see MONOCLINAL a. and sb. B. b.]. 1940 E. S. HILLS *Outl. Struct. Geol.* iv. 70 A monocline is a local steepening of an otherwise uniformly dipping or horizontal series, and is composed of an anticlinal bend above, followed by a synclinal bend at a lower level... In oil-field geology, however, the term is used for formations in which the dip is more or less uniform in one direction. 1942 M. P. BILLINGS *Struct. Geol.* iii. 41 In plateau areas... the strata may locally assume a steeper dip... Such a fold is a monocline. The beds in a monocline may dip at angles ranging from a few degrees to ninety degrees. 1962 READ & WATSON *Introd. The former naturally require only body structure panels, whereas the latter, in addition, require many pressings to form a unit (underframe or subframe), which although ultimately part of the body, is [a] substitute for the chassis frame and has provision made for all necessary attachment points for the various mechanical units. 1961 COSTIN & PHIPPS *Racing & Sports Car Chassis Design* v. 43 All these, plus the single transverse torsion bar and the telescopic dampers, pick up on the rear bulkhead of the monocoque. 1963 *Engineering* 1 Feb. 181/1 GT cars featuring monocoque construction of laminated wooden box sections. 1968 *Daily Tel.* (Colour Suppl.) 15 Nov. 29/2 Despite the terrible force of the impact, the integrity of the cockpit area was preserved by the immensely strong monocoque chassis of his car. 1969 'D. 1. *Geol.* Oneness of origin.

1864 WEBSTER (cites *Dana*).

2. *Biol.* in various uses (see quots.).

1866 BRANDE & COX *Dict. Sci., etc., Monogenesis*. Professor van Beneden understands this term as applied to the direct development, e.g. of an Entozoon from a parent resembling itself. Prof. A. Thomson uses it as applied to descent of an individual from one parent form, containing both the sperm cell and germ cell, or male and female parent principles. 1866 *Chamb. Encycl.* VIII. 195/2 The terms

Monogenesis and *Homogenesis* have been... applied to the cases in which non-sexual reproduction takes place by fission or gemmation. 1882 OGILVIE, *Monogenesis*... 3. *Linguistics.* The theory that all languages have one common origin.

[1905 A. TROMBETTI *L'Unità d' Origine del Linguaggio* 56 Noi dunque consideriamo la monogenesi del linguaggio per lo meno come un argomento assai forte in favore della monogenesi dell'uomo.] 1936 *Science & Society* 1. 23 At various times scholars have raised the question of monogenesis as opposed to polygenesis of human speech: whether it had a single origin at a given time and place, whence it spread over the rest of the earth, or whether it was independently evolved by different branches of the human family. 1949 *Archivum Linguisticum* I. 76 The issue of monogenesis versus polygenesis is likewise evaded, although a critical appraisal of Trombetti's arguments might have been useful. 1949 M. PEI *Story of Lang.* (1952) vii. 357 A few daring linguists, like the Italian Trombetti, have strenuously asserted the thesis of the 'monogenists', or single common origin, of all the world's tongues. 1966 H. LANDAR *Lang. & Culture* xx. 153 His guess implicates a monogenesis of the world's languages, much as the Italian duck-hunter Trombetti supposed, but a monogenesis which occurred as recently as 30,000 years ago.

Hence *mono'genesisist* = MONOGENIST.

1862 *Temple Bar V.* 215 The theory of gradual climatic changes must... be abandoned, and the monogenists must... fall back upon a new line of defences... This quarrel of the mono- and polygenesisists... is a very pretty one.

2. *Biol.* Of or pertaining to monogenesis or monogenism.

1873 MAX MÜLLER in *Fraser's Mog.* July 2 There are, indeed, two schools of physiologists, the polygenetic and monogenetic, the former admitting from the beginning a variety of primitive cells, the latter postulating but one cell, as the source of all being. 1886 *Science* VII. 169/1 The monogenetic theory which believes in the original common origin of all mankind from one pair. 1896 F. B. JEVONS *Introd. Hist. Relig.* i. 7 Man's origin was monogenetic.

3. *Zool.* (See quot. 1903.)

Zool.* I. 166 In *Monocystis* the whole life-history is a single cycle... it is, in fact, monogenetic... But in many other Sporozoa... the life-cycle becomes digenetic, that is to say, it is differentiated into two distinct generations.

1893 FORSYTH *Theory of Functions* 14 The idea of a monogenic function of a complex variable and the idea of dependence expressible by arithmetical operations are not coextensive. 1902 H. F. BAKER in *Encycl. Brit.* XXVIII. 539/1 A monogenic analytical function; the word monogenic having reference to the fact that various series, in $x-c$, $x-c_1$, $x-c_{11}$, ..., which represent the function in different parts of the plane, have a single origin, namely, the series $f(x)$, all the properties of the function being virtually continued in this one series.

Crushing or heating was so unsatisfactory that keeping the distal lead on intact nerve was a preferable arrangement. 1967 L. A. GEDDES in C. C. 2. Of sound broadcasts, gramophone records, etc.: involving only one channel, so that there is only one output signal and all the sound appears to the listener to come from a single source; = MONAURAL *a.* 2. Opp. STEREOPHONIC *a.*

1958 *Newstweek* 13 Oct. 102/2 Bending an ear to a single-track (monophonic, to hi-fi devotees) record is 'like listening to a concert through a crack in the door'. 1959 *Proc. Inst. Electr. Engin.* CVI. B. Suppl. No. 14. 257/1 The monophonic reproduction on two loudspeakers appears to issue from a very small source situated between them but, when operating in a stereophonic manner, the ambient studio sound appears to fill the whole space between the loudspeakers with positional accent on the individual sound sources. 1960 *New Scientist* 4 Feb. 262/2 Such a stereo system may not be 'compatible' with ordinary monophonic receivers. 1962 A. NISBETT *Technique Sound Studio* 240 In a monophonic recording... noise at a natural level will generally sound excessive. 1968 *Consumer Reports* Sept. 502/1 Only stereo discs are reviewed, since record companies have all but stopped producing classical monophonic discs. 1968 *Times* 29 Nov. (Sound of Leisure Suppl.) p. vi/4 The sound was still monophonic: that is, it still came from a single track or radio signal and could never give us any sensation of listening to real musicians spread naturally across an audio stage. 1970 *Jnl. 1921 [see *hexasome* s.v. HEXA-]. 1944 *Genetics* XXIX. 232, 16 monosomes and five trisomes were found in the 11 aberrant offspring. 1970 *Caryologia* XXIII. 359 In this paper, we report on the rates of transmission of disomes (21 II), monosomes (20 II + 1 I), double monosomes (19 II + 2 I) and plants carrying isochromosomes and telocentric chromosomes in two aneuploid series of wheat.

2. A single ribosome attached to a molecule of messenger RNA.

1964 HASELKORN & FRIED in *Proc. Nat. Acad. Sci.* LI. 308 In a previous communication we presented evidence indicating that the addition of RNA from turnip yellow mosaic virus (TYMV) to purified *E. coli* ribosomes results in the formation of a complex containing one 70S ribosome and one molecule of RNA. We shall call such complexes monosomes. 1971 *Nature* 10 Sept. 107/2 Most ribosomes appeared as 'free' monosomes, while in the reticular cells most of them were attached to membranes in typical 'polysome' patterns. 1972 *Ibid.* 31 Mar. 237/2 Fig. 1 shows a typical distribution of monosomes and polysomes isolated from non-infected and infected Proctor barley leaves.

1926 *Univ. Calif. Publ. Bot.* XI. 61 This paper is devoted to a second form called 'fluted', which has been found on cytological examination to be a monosomic (2n - 1). *Ibid.* 67 Monosomic forms may be used advantageously for a determination of linkage groups. 1932 *Genetics* XVII. 689 Comparatively few investigations have been concerned with a study of monosomics (2n - 1 types) and their mode of inheritance. 1957 C. P. SWANSON *Cytol. & Cytogenetics* (1958) vi. 190 Probably the best known monosomic type is the haplo-IV *Drosophila*. 1961 *Lancet* 23 Sept. 723/2 The normal male is naturally monosomic for the X, and the XO-female can reach maturity in reasonably good health. 1972 *Hereditas* LXX. 132/1 A number of monosomic lines of Chinese Spring were used as pollen parents. 1974 *Nature* 19 Apr. 714/3 Monosomics and trisomics have seldom been developed in the same species.

So 'monosomy, the character or condition of having a monosomic chromosome complement.

By operation of the keyboard a paper ribbon is perforated by means of compressed air. The ribbon is fed into a caster which carries a matrix-case. This moves to different positions in accordance with the perforated ribbon and molten metal is pumped into the appropriate matrix. Cast types are ejected singly and assembled in a channel until a line is completed. 1973 S. JENNETT *Making of Books* (ed. 5) iv. 79 The type produced by the Monotype is of excellent quality, and in use is indistinguishable from founders' type.

1. a. A seasonal wind prevailing in southern Asia and especially in the Indian Ocean, which during the period from April to October blows approximately from the south-west, and from October to April from the north-east, the direction being dependent upon periodic changes of temperature in the surrounding land-surfaces.

The south-west or summer monsoon is commonly accompanied by heavy and continuous rainfall, and is therefore often referred to as the *wet* or *rainy monsoon*, the north-east or winter monsoon being known as the *dry monsoon*.

Monte Carlo (mɔnti'ka:ləu). [Name of a resort in Monaco famous for its gambling casino.]

1. a. Used *attrib.* to designate methods of estimating the solution to numerical problems that involve the random (or pseudo-random) sampling of numbers with some chosen frequency distribution.

1949 *Math. Tables & Other Aids to Computation* III. 546 This method of solution of problems in mathematical physics by sampling techniques based on random walk models constitutes what is known as the 'Monte Carlo' method. The method as well as the name for it were apparently first suggested by John von Neumann and S. M. Ulam. 1950 *Nucleonics* May 27 (*heading*) Random sampling (Monte Carlo) techniques in neutron attenuation problems. 1955 *Sci. Amer.* May 90/3 The accuracy of a Monte Carlo approximation improves only as the square of the number of trials. 1961 *New Scientist* 16 Mar. 678/3 This method of imitating the apparently random fluctuation of events in the real world which it is unnecessary or impossible to study in detail, is the crux of the Monte Carlo simulation technique. 1964 *Guardian* 19 June 6/6 (Adv.), Familiarity with Monte Carlo methods and computer programming would be an advantage. 1970 O. DOPPING *Computers & Data Processing* xx. 328 An important field of application of random numbers is in the Monte Carlo methods. They are based on

the repetition of a computation in a great number of cases, where one or more parameters are allowed to vary in a random fashion from one computation to the next. *Ibid.*, Monte Carlo methods can also be used for computing determined results. For instance, we can, in principle, calculate an approximation of $\pi/4$ by investigating which fraction of a number of points, chosen at random in a square, are inside the inscribed circle. 1972 *Computers & Humanities* VII. 39 Monte Carlo methods of simulation were applied to a population model for Paleolithic human populations.

ARGENTI *Managem. Techniques* 172 Monte Carlo is a form of simulation... and both often require the use of a computer. It is possible, however, to use Monte Carlo with pencil and paper.

c. Monte Carlo fallacy: the fallacy that the probability of any particular outcome to one of a series of repeated but independent events of chance is inversely dependent upon the previous outcomes (so that, e.g., a succession of failures is thought to increase the probability of success on the next occasion).

1957 *Sci. Amer.* Nov. 136/2 In our studies of the manifestations of subjective probability in gambling we have given particular attention to the Monte Carlo fallacy; the well-nigh unanimous belief that after a run of successes a failure is inevitable, and *vice versa*. 1973 A. J. AYER *Central Questions of Philos.* viii. 164 The notorious Monte Carlo fallacy consists in assuming that because the odds against an even number's coming up ten times in succession are over a thousand to one, there is equally little chance of the tenth spin yielding an even number, if the previous nine have done so.

2. Monte Carlo rally: an annual international car rally, first held in 1911, of which the final stages take place in Monte Carlo (also shortened to *Monte Carlo*).

1950 R. LOWRY *Monte Carlo Rally* ix. 76 There are Rallies ideally suited to such tastes but the Monte Carlo is not one of them. 1973 *Guardian* 26 Jan. 13/1 Irate Monte Carlo Rally drivers... complained about speed traps set up by the French police... In the 16-17th c. the spelling *moneth* was almost universal.]

A measure of time corresponding to the period of revolution of the moon.

1. a. Any one of the twelve portions into which the conventional year is divided. (When not otherwise determined by the context, the reference is to the 'months' inherited by Western civilized nations from the Romans, and known by the names January, February, etc.) More explicitly *calendar month*, less commonly † *calendary*, *civil*, *political*, *usual month* (for illustrations of these designations see under the adjs.).

The primitive calendar month of ancient nations began on the day of new moon or the day after, and thus coincided (except for fractions of a day) with the synodical month (see 2). Among many peoples of antiquity, however, it was from a very early period found desirable that the calendar year should contain an integral number of the smaller periods used in ordinary reckoning. Hence the true 'months' were superseded by a series of twelve periods each having a fixed number of days (on the average one-twelfth of the number in the calendar year), and thus having no relation to the changes of the moon; but this artificial period continued to bear the name of 'month'. The systems according to which the reckoning by months was brought into relation with that by years were very various. In the Julian calendar, the months in leap year had alternately 31 and 30 days, while in other years February had only 29 instead of 30. This symmetrical arrangement was under Augustus broken up by the transference of a day from February to August, and of a day from September and November to October and December respectively, producing the system now in use.

2. *Astr.* a. (In full *lunar month*.) The period in which the moon makes a complete revolution relatively to some point, either fixed or moveable.

There are thus several species of lunar month, as the time of the revolution is different according to the point with regard to which it is reckoned. Usually the term denotes the *synodical month*, i.e. the period from one new moon to the next, the length of which is 29 days, 12 hours, 44 minutes, 2.7 seconds. The other kinds of lunar month (the lengths of which are all between 27 and 28 days) are the *anomalistic*, *sidereal*, *tropical*, and *nodical month*: see those adjs.

montmorillonite (mɒntmɔːrɪlɒnɪt). [Named 1847 after *Montmorillon* in France; see -ITE.]

a. A massive rose-red silicate of aluminium. Also, any of the montmorillonoids, or these minerals collectively (see quots. 1954, 19662).

1854 [see DELANOVITE]. 1865 WATTS *Dict. Chem.*, *Montmorillonite*, a rose-red, fragile, argillaceous substance found at Montmorillon. 1866 in BRANDE & COX *Dict. Sci.*, etc. II. 534/3 s.v. *Mineralogy*. 1934 [see DELANOVITE]. 1935 *Amer. Mineralogist* XX. 482 Montmorillonite, beidellite, and nontronite form an isomorphous completely miscible series. 1949 P. C. CARMAN *Chem. Constitution & Properties Engin. Materials* xiii. 383 The main constituent is a mineral of the montmorillonite group, either montmorillonite or

beidellite. 1954 H. WILLIAMS et al. *Petrogr.* xvii. 327 By substitution of magnesium or iron for aluminium, especially in montmorillonite, the composition of clay minerals may vary considerably from the formulas given. Beidellite, for example, is essentially a magnesian montmorillonite, and nontronite is one rich in iron. 1962 *Amer. Mineralogist* XLVII. 145 Beidellites and montmorillonites should be divided at the composition at which the lattice charges from octahedral and tetrahedral substitution equal one another. *Ibid.*, The term beidellite should be used for the aluminium-rich members of the montmorillonite-beidellite series of minerals. 1966 *McGraw-Hill Encycl. Sci. & Technol.* VIII. 587/2 Montmorillonite clays have wide commercial use. The high colloidal, plastic, and binding properties make them especially in demand for bonding molding sands and for oil-well drilling muds. They are also widely used to decolorize oils and as a source of petroleum cracking catalysts. 1966 W. A. DEER et al. *Introd. Rock-Forming Min.* 111. 264 The name montmorillonite... was originally applied to a clay mineral with composition similar to that of pyrophyllite except for the presence of excess water, $Al_4Si_8O_{20}(OH)_4 \cdot nH_2O$. Chemical variation of this basic formula yields a group of clay minerals which are related by a common structure and by similarity of chemical and physical properties, and are therefore classed as the 'montmorillonite group'. According to present usage one member of this group is itself called montmorillonite and has the formula $(Na)_{0.7}(Al_{3.3}Mg_{0.7})Si_8O_{20}(OH)_4 \cdot nH_2O$. An alternative term once used for this type of clay is 'smectite', and this has now been revived to describe the group as a whole (Mackenzie, 1957a), which contains the following principal members: montmorillonite, beidellite, nontronite, saponite, hectorite and saunonite. 1971 *Nature* 15 Jan. 157/2 Montmorillonite, a silicate mineral with typical expanding layers, consists of mica-like sheets that are normally separated by one or two layers of water molecules.

b. *attrib. montmorillonite group*, the group of clay minerals (of which montmorillonite is the type) otherwise known as montmorillonoids.

1938 *Mineral. Mag.* XXV. 153 The montmorillonite group is shown to have three end-members, montmorillonite, $Al_2Si_4O_{11}$, nontronite, $Fe_2Si_4O_{11}$, magnesium-beidellite, $Mg_3Si_4O_{11}$. 1946 *Amer. Mineralogist* XXXI. 423 The minerals of the montmorillonite group are characterized by a very wide range in the ions which can proxy Si or Al within the crystal lattice. 1949, etc. [see above].

montmorillonoid (mɒntmɔːrɪlɒnɔɪd). *Min.* [f. as prec. + -OID.] Any of a group of clay minerals that comprises montmorillonite together with some chemically related minerals that likewise undergo a reversible expansion on absorbing water and have a characteristic structure in which water molecules are situated between sheets composed of two layers of silicon atoms sandwiching one nominally of aluminium, the differences between the minerals consisting in the extent and nature of the replacement of silicon and aluminium by other elements. Also *attrib.* or as *adj.*

1951 *Clay Minerals Bull.* I. 195 To avoid this confusion and also the lengthy term 'minerals of the montmorillonoid group'... the term 'montmorillonoid' was suggested [by D. M. C. MacEwan] for this group of minerals. 1951 D. M. C. MACEWAN in G. W. BRINDLEY *X-Ray Identification & Crystal Struct. Clay Minerals* iv. 86 (heading) The montmorillonite minerals (montmorillonoids). 1953 *Jrnl. Faraday Soc.* LI. 582 Considerable attention has been paid in recent years to the retention of organic molecules by clays of the montmorillonoid group. 1959 *Clay Minerals Bull.* IV. 67 The name montmorillonoid is understood as covering a continuous isomorphous series extending from montmorillonite, with ideal formula $Al_2Si_4O_{10}(OH)_2$, to beidellite, with ideal formula $(R_1H_3O)Al_2(Si_3Al)O_{10}(OH)_2$. 1966 *Canad. mood (mu:d), sb.² [An alteration of MODE sb., due to association with MOOD sb.¹]

1. Logic. a. (= MODE sb. 3 a.) Any one of the classes into which each of the four 'figures' (see FIGURE sb. 23) of valid categorical syllogisms is subdivided on the ground of the several ways in which syllogisms differ with regard to the quality and quantity of their constituent propositions.

The moods have mnemonic names (BARBARA, CELARENT, etc.), in which the three vowels represent the quality and quantity of the three propositions: A = universal affirmative, E = universal negative, I = particular affirmative, O = particular negative. (Some of the consonants also have significant functions.) The number of recognized moods is 19, viz. four in the first figure, four in the second, six in the third, and five in the fourth.

A different, probably a historically older, sense of the word occurs in some writers (e.g. Aldrich and Whately) alongside the sense above explained, and without being expressly distinguished from it. In this sense the mood of a syllogism is the type of structure to which it belongs in respect of quality and quantity alone, without regard to the figure; so that, e.g. Celarent in the first figure and Cesare in the second would be not two moods but two varieties of the same mood. (See quot. 1906, where this sense is definitely adopted to the exclusion of the other.)
