2. *a.* Of plants, esp. of grass: Succulent, and luxuriant in growth.

The literary currency of this sense (which seems still to exist in s.w. dialects) is due to the recollection of the instance in Shaks. (quot. 1610). A conjecture of Theobald's, adopted by Johnson and many later editors, substituted 'lush woodbine' (*metri gr.*) for 'luscious woodbine' in *Mids. N. II. i. 251*. The conjecture is now discredited, but the passage as emended has had many echoes in 19th c. literature.

Lushington ('lʌʃɪŋtən), *slang*. [Punning use of the surname *Lushington*, with allusion to LUSH *sb.* 2]

The 'City of Lushington' was the name of a convivial society (consisting chiefly of actors) which met at the Harp Tavern, Russell Street, until about 1895. It had a 'Lord Mayor' and four 'aldermen', presiding over 'wards' called Juniper, Poverty, Lunacy, and Suicide. On the admission of a new member, the 'Lord Mayor' (of late years at least) harangued him on the evils of excess in drink. The 'City' claimed to have existed for 150 years; if this claim be well-founded, the existence of LUSH *sb.* 2 will be authenticated for a date considerably earlier than that of our first quot. Our information is from 'Sir' B. Davies, the last 'Lord Mayor of Lushington'.]

luteotropic ('l(j)u:təʊ'trəʊpik), **-tropic** (-'trəʊpik, -'trəʊpik), *a.* *Physiol.* [f. LUTEO- b + -TROPIC, -TROPIC.] Maintaining or capable of maintaining the *corpus luteum* in being during pregnancy and thus counteracting luteolysis; **luteotrop(h)ic hormone**, such a hormone which in rats and mice is produced by the adenohypophysis and which is probably identical with the hormone prolactin of other animals, including man (though attempts to demonstrate that prolactin is luteotropic in these other animals have failed) (abbrev. LTH (L 7)).

1941 E. B. ASTWOOD in *Endocrinology* XXVIII. 310 In speaking of a substance which will maintain the functioning of formed corpora lutea it has been found convenient to use the term 'luteotropic' substance or 'luteotrophin'. 1955 *Jnl. Endocrinol.* XIII. 19 Cutuly (1941) found that luteotropic hormone stimulates corpora lutea of hypophysectomized rats sufficiently to allow implantation. 1961 *Recent Progress Hormone Res.* XVII. 120 The luteinizing hormone . . . may be luteotropic in animals other than rats and mice. 1964 H. Hence **luteotrophin**, -'tropin, any substance exerting a luteotropic effect; *spec.* = **luteotrop(h)ic hormone**.

1941 [see LUTEOTROPIC a.]. 1945 *Index-Catal. Library Surg.-General's Office, U.S. Army* 4th Ser. IX. 1323/1 Luteotropin: see Pituitary hormone. 1961 *Recent Progress Hormone Res.* XVII. 120 LH may have the dual role of causing ovulation and of acting as a luteotropin. 1961 W. C. YOUNG *Sex & Internal Secretions* (ed. 3) I. viii. 530/2 The term luteotrophin was proposed by Astwood (1941) to refer to a substance that maintains function of corpora lutea, in distinction to substances that cause them to form. It is now conceded that the substance described in that paper was probably the lactogenic hormone. . . Although lactogen seems to be the hypophyseal luteotrophin in rats, such is not necessarily true for all species. . . Nevertheless, the expression luteotrophin in the generic sense continues to be desirable. 1965 *Endocrinology* LXXVI. 1218/1 It therefore appears . . . that a hypophysial luteotropin is only necessary for a short period after ovulation.

Lutheran ('l(j)u:θərən), *a.* and *sb.* Also 6 *lutherane*. [f. proper name *Luther* + -AN.]

A. adj. Pertaining to the German reformer Martin Luther (1483-1546), his opinions and followers.

In the 16th c. the designation was used by Roman Catholic writers as coextensive with PROTESTANT; applied, e.g., to the reformed Church of England. Now chiefly

applied to doctrinal views held by Luther in opposition to other reformers, e.g. his doctrine as to the nature of Christ's presence in the Eucharist (see CONSUBSTANTIATION), and as the appelland of those churches, principally in Germany and Scandinavia, which accept the Augsburg Confession as their official doctrinal symbol.

lux ('laks), *sb.* *Physics.* Pl. *lux*. [L., = 'light'.] A unit of illumination (now incorporated into the International System of Units) equal to the illumination of a surface all of which is one metre from a uniform point source of light of unit intensity (now one candela), i.e. (as now defined) one lumen per square metre.

1889 *Engineering* 13 Sept. 313/1 Mr. Preece was not.. fortunate with his unit of surface illumination, the 'lux' being the illumination produced by a lamp of one Carcel power at a distance of one metre, which is practically the same illumination as that afforded by an English standard candle at a distance of 1 ft... It is probable, sooner or later, that such a unit will be adopted. 1897 *Jrnl. Inst. Electr. Engin.* XXVI. 638 It was proposed by the Committee of the International Congress of Geneva that M. A. Blondel should present a report, with.. a complete system of defining the dimensions and units of photometry... This report was submitted for examination of a commission.. and was accepted... Lux = Lumen/Square metre. 1911 A. P. TROTTER *Illumination* ii. 17 Sir William Preece.. adopted the Carcel-metre, and he showed that it was equal to a standard candle of 1.058 foot. At the Paris Electrical Congress of 1889 he adopted the name 'lux' for this... The unit of illumination produced by a bougie-décimale at a metre has been called a bougie-metre, and the name 'lux' was revived at the Geneva Congress of 1896 and was applied to this unit... This lux is, roughly, one-twelfth of a foot-candle, or about one-fourteenth of Preece's lux. The illumination produced by a Hefner at a metre has also been called a 'lux', and it seems probable that the International candle at a metre may be called an International lux. 1927 *Forestry* I. 87 Experiments carried out.. in a light intensity of 48,000 lux. *Ibid.*, The lux is a light intensity produced by a light of one candle-power at a distance of one metre. Forty-eight thousand lux is roughly equivalent to full sunlight at noon in midsummer in Germany. 1953 AMOS & BIRKINSHAW *Television Engin.* I. 279, 1 lux = 1 lumen per square metre = 0.0929 foot-candle. 1970 *Nature* 26 Dec. 1349/2 On many days during the growth of these plants light intensities reached 80,000 lux.

-ly, suffix¹. (Forms: 1 -lic, -lic, 2-5 -lich, 4-5 -liche, 3-5 north. -lik(e), (3 *Orm.* -lic, -lij, -like), 3-6 -li, 4- -ly), appended to sbs. and adjs. to form adjs., represents the OE. *-lic*, corresponding to OFris., OS. *-līk* (Du. *-lijk*), OHG. *-līk* (MHG. *-līch*, mod.G. *-lich*), ON. *-lig-r*, *-leg-r* (Sw., Da. *-lig*), Goth. *-leik-s*:—OTeut. *-līko-*. The phonology of the OE. form, as also of the mod.G. and the ON. forms, is somewhat abnormal, the frequency in use of the suffix having caused loss of the original secondary stress, with consequent shortening of the vowel, and in ON. also voicing of the guttural. A further irregularity appears in the phonetic development in ME. The normal representation of OE. *-lic* was *-lik* in northern dialects and *-lich* in southern dialects. These forms are found as late as the 15th century; but the form *-li*, *-ly*, which (though parallel with the reduction of OE. *ic* to *I*, and of ME. *everich* to *every*) seems to be chiefly due to the influence of the Scandinavian *-lig-*, occurs in northern and midland dialects as early as the 13th c., and before the end of the 15th c. had become universal. In the *Ormulum* (c 1200) *-lic* (rarely *-like*) is used before a vowel and at the end of a line, and *-lij* before a cons.; the inflected form *-like* (disyllabic) seems often to be used, for metrical reasons, where grammar would require the uninflected form. In the comparative and superlative (OE. *-licra*, *-e*, *-licost*) the ME. form had regularly *-k* according to phonetic law in all dialects (in the south the usual 13-14th c. form was *-lukere*, *-lokere*); but where the positive had the form *-li* new comparatives and superlatives in *-lier*, *liest* were regularly formed from it.

The original Teut. adjs. in *-līko-* were compounds of the sb. **līkom* appearance, form, body (see LICH). Thus **mannlīko-* ('manly') means etymologically 'having the appearance or form of a man'; **gōðolīko-* ('goodly') 'having a good appearance or form', or 'having the appearance or form of what is good'. The primitive force of the suffix may therefore be rendered by 'having the appearance or form indicated by the first element of the word'; but while in the historical Teut. langs. it has remained capable of expressing this meaning, it has in all of them acquired a much wider application.

When appended to sbs., the most general senses of the suffix in all Teut. langs. are 'having the qualities appropriate to', 'characteristic of', 'befitting'. In English of all periods it has been a prolific formative; the adjs. formed with it are most frequently eulogistic, as in *kingly, knightly, masterly, princely, queenly, scholarly, soldierly* (cf. *manly, womanly* with *mannish, womanish*); among the examples with dyslogistic sense are *beastly, beggarly, cowardly, dastardly, rascally, ruffianly, scoundrelly*. In OE., as in other Teut. langs., the suffix had often the sense 'of or pertaining to'; but the adjs. have, so far as this meaning is concerned, been to a great extent superseded by synonyms of Latin or Romanic etymology. Thus *manly* formerly admitted of the senses now expressed by *human* and *masculine*; for one of the older senses of *timely* we must now say *temporal*. Another use of the suffix, common to English with other Teut. langs., is to form adjs. denoting periodic recurrence, as *daily, hourly, monthly, nightly, weekly, yearly*.

When *-ly* is appended to an adj., the resulting derivative adj. often connotes a quality related to or resembling that expressed by its primary; cf., e.g., OE. *lēof* 'dear' with *lēoflic* 'lovely' (or, as it might be rendered, 'such as becomes dear'). The diminutive sense found in mod.G. *gelblich* yellowish, *süsslich* sweetish, though a very easy development from the original sense of the suffix, does not seem ever to have existed in English. Even in OE. *-lic* had app. ceased to be used in new formations from adjs.; the new adjs. f. adj. + *-ly* that have arisen in ME. or in mod.E. seem to be from the advs.

-ly, suffix². (Forms: 1-2 -lice, 2-5 -liche, 4-5 -lich, 3-5 north. -like, (3 *Orm.* -like, -lij), 3-6 -li, 4- -ly), forming adverbs, represents OE. *-lice*, corresponding (functionally if not morphologically) to OFris. *-like*, OS. *-līko* (M.Du. *-like*, Du. *-lijk*, MLG. *-like*, mod.LG. *-lik*), OHG. *-līchō* (MHG. *-liche*, mod.G. *-lich*),

ON. *-liga*, *-lega* (MSw. *-lika*, *-leka*, in mod.Sw. superseded by *-ligt*, *-ligen*; Da. *-lig*), Goth. *-leikō*, derived from *-līko-* (see -LY¹) with an adverb-forming suffix, O'Teut. *-ō*, according to some repr. the ending of the abl. fem. (pre-Teut. *-ād*) or neut. (pre-Teut. *-ōd*); according to others that of the instrumental neut. (pre-Teut. *-ōm*).

The form-history of the suffix in Eng. is similar to that of -LY¹: in ME. the OE. *-lice* was normally represented by *-liche* (southern), *-like* (northern), the compar. being *-liker*, *-luker*, *-loker* (superl. *-est*).

The form *-li*, *-ly*, which was current in East Midland English in the 14th c., and became general in the 15th c., is probably due to the influence of the ON. *-liga*. In the strongly Scandinavianized dialect of the *Ormulum* (c 1200) *-lij* and *-like* are used indifferently, according to the requirements of the metre. Where the positive ended in *-li*, *-ly*, the comparative and superlative ended in *-lier*, *-liest*. In the 15-17th c. forms like *falslyer*, *traitorouslyer* (Malory), *softlier*, *justlier*, *widelier* (Long *Barclay's Argenis* 1625), *easilier*, *-est* (R. Baxter *Saving Faith* 1658) were common, but in later use the advs. in *-ly* are compared with *more*, *most*, the inflexional forms being only employed in poetry or for rhetorical effect.

In O'Teut. an adv. with this suffix must have implied the existence of an adj. with the suffix corresponding to -LY¹. In OE., however, there are several instances (e.g. *bealdlice* boldly, *swétlice* sweetly) in which an adv. in *-lice* has been formed directly from a simple adj. without the intervention of an adj. in *-lic*. In ME. the number of these direct formations was greatly increased, and when the final *-e*, which was the original OE. adverb-making suffix, ceased to be pronounced, it became usual to append *-ly* to an adj. as the regular mode of forming an adv. of manner. It was, down to the 17th c., somewhat frequently attached, with this function, even to adjs. in *-ly*, as *earlily*, *godlily*, *kindlily*, *livelily*, *lovelily*, *statelily*; but these formations are now generally avoided as awkward, while on the other hand it is felt to be ungraceful to use words like *godly*, *goodly*, *lovely*, *mannerly*, *timely*, as advs.; the difficulty is usually evaded by recourse to some periphrastic form of expression. In examples belonging to the 16th and 17th c. it is sometimes difficult to determine whether a writer intended the adv. *goodly* to mean 'in a good manner' or 'in a goodly manner', and there are other instances of similar ambiguity. In the words denoting periodical recurrence, as *daily*, *hourly*, the adj. and the adv. are now identical in form. A solitary example of an adv. f. sb. + *-ly*² with no related adj. is *partly*. From the early part of the 16th c. the suffix has been added to ordinal numerals to form advs. denoting serial position, as *firstly*, *secondly*, *thirdly*, etc. (cf. F. *premièrement*, etc.).

When *-ly* is attached to a disyllabic or polysyllabic adj. in *-le*, the word is contracted, as in *ably*, *doubly*, *singly*, *simply*; contractions of this kind occur already in the 14th c., but examples of the uncontracted forms (e.g. *doublely*) are found as late as the 17th c. *Whole* + *-ly* becomes *wholly*, but in all other similar instances the written *e* is retained before the suffix, e.g. in *palely*, *vilely*, *puerilely*. Adjs. ending graphically with *ll* lose one *l* before *-ly*, as in *fully* (in southern Eng. commonly pronounced with a single *l*, but in Scotland often with double or long *l*), *dully* ('dull), *coolly* ('ku:ll). Adjs. of more than one syll. ending in *y* change *y* to *i* before *-ly*, as in *merrily*; in formations from monosyllabic adjs. the usage varies, e.g. *dryly*, *drily*; *gayly*, *gaily* (cf. *daily*, which is the only current form); *slyly*, *slily* (but always *shyly*); *greyly*, *grayly* has always *y*. Another orthographical point is the dropping of the *e* in the two words *duly*, *truly*. It is unusual to append *-ly* to an adj. in *-ic*; the ending of the adv. is nearly always *-ically*, even when the only current form of the adj. ends in *-ic*.

Lyman ('laɪmən). *Physics.* The name of Theodore Lyman (1874-1954), U.S. physicist, used *attrib.* to designate a series of lines (individually designated alpha, beta, etc.) discovered by him in the ultraviolet part of the spectrum of atomic hydrogen, with wave numbers represented by the formula $R(1 - 1/m^2)$ (where R is the Rydberg constant and $m = 2, 3, \dots$), the first line of which has a wavelength of 121.6 nanometres.

1922 *Encycl. Brit.* XXXII. 559/2 The formulæ for the hydrogen series are as follows:—Lyman series: $\nu = N/1^2 - N/m^2$ ($m = 2, 3, \dots$). Balmer series: $\nu = N/2^2 - N/m^2$ ($m = 3, 4, \dots$). Paschen series: $\nu = N/3^2 - N/m^2$ ($m = 4, 5, \dots$). 1929 J. K. ROBERTSON *Introd. Physical Optics* xviii. 359 Lines of the Lyman series arise from electron drops from outer orbits to the innermost or normal orbit, for which $k = 1$. 1959 *Sunday Times* 5 Apr. 8/3 The sun itself has been photographed in the extreme ultra-violet (the Lyman-alpha) region of the spectrum. 1967 W. R. HINDMARSH *Atomic Spectra* II. 13 Ritz . . . proposed his well-known combination principle in 1908; he recognized that the wave-numbers of the lines could always be represented as a difference between two terms. . . It was with the use of this principle that the Paschen, Lyman, Brackett and Pfund series in the spectrum of hydrogen were predicted . . . before they were known experimentally. 1968 G. M. B. DOBSON *Exploring Atmosphere* (ed. 2) viii. 158 Another possibility is that the very strong radiation which is given out by hydrogen in the sun, at a wavelength of 1216 Ångstrom units (known as the Lyman alpha line) produces the D region [of the ionosphere].

lymphocyte ('limfəsart). *Phys.* [f. *lympho-* comb. *f. LYMPH* + -CYTE.] A kind of small leucocyte which has a single round nucleus and little or no granulation in the cytoplasm, constitutes about a quarter of the total leucocytes in the blood stream, is found in large numbers in the lymph nodes and other lymphoid tissue, and is a major agent in most immunological processes. *large lymphocytes*, which constitute a small proportion of the total number of lymphocytes, are larger than and apparently the precursors of the *small lymphocytes*, which constitute the bulk of them.

1890 *Jrnl. Morphol.* IV. 108 It is quite generally agreed that the origin of the white corpuscles of the blood is to be found in the lymph leucocytes, or lymphocytes, to borrow a convenient term. .. The lymphocytes are characterized by a vesicular nucleus, usually with a nucleolus and a scanty reticulum, and by a very small protoplasmic envelope. 1891 *Rep. Lab. R. Coll. Physicians* Edin. III. 118 If this view of the nature of leucocytes is accepted, we at once realise the futility of the attempts .. to establish distinctions between the leucocytes found in different situations, — the white blood corpuscles, the wandering cells in the tissues, the lymphocytes of the lymph, lymph-glands and spleen, the thymus-cells, the marrow-cells, &c. 1896 *Allbutt's Syst. 1924 J. SCHAUHMANN in *Brit. J. Dermatol.* XXXVI. 515 When in November 1914, I described the disease I proposed designating by the anatomico-clinical name of benign lymphogranuloma, I had already detected the essential characteristics, which justified its classification amongst lymphadenic affections. 1932 DEWOLF & VAN CLEVE in *J. Amer. Med. Assoc.* 24 Sept. 1065/1 They [sc. Durand, Nicolas, and Favre] chose the name 'subacute inguinal lymphogranulomatosis' for the disease, a rather unfortunate designation because of the confusion to which it may lead. We have chosen the shorter designation, 'lymphogranuloma inguinale', as this name is becoming more widely used by European writers. 1958 R. W. RAVEN *Cancer* II. xxiv. 473 Few medical terms can have such different meanings in different countries as lymphogranuloma. When used without qualification, in English-speaking countries, 'lymphogranuloma' usually refers to 'lymphogranuloma inguinale' (Nicolas-Favre disease); in most European countries it implies Hodgkin's disease ('lymphogranuloma malignum') but in Scandinavia it refers to sarcoidosis ('lymphogranuloma benignum'). 1960 J. These, which are commonly arable, are popularly called *lynchets*... lynch law. Orig. U.S. Also Lynch law; in early use Lynch's (Linch's) law. The practice of inflicting summary punishment upon an offender, by a self-constituted court armed with no legal authority; it is now limited to the summary execution of one charged with some flagrant offence.

The origin of the expression has not been determined. It is often asserted to have arisen from the proceedings of Charles Lynch, a justice of the peace in Virginia, who in 1782 was indemnified by an act of the Virginia Assembly for having illegally fined and imprisoned certain Tories in 1780. But Mr. Albert Matthews informs us that no evidence has been adduced to show that Charles Lynch was ever concerned in acts such as those which from 1817 onward were designated as "Lynch's law". It is possible that the perpetrators of these acts may have claimed that in the infliction of punishments not sanctioned by the laws of the country they were following the example of Lynch, which had been justified by the act of indemnity; or there may have been some other man of this name who was a ring-leader in such proceedings. Some have conjectured that the term is derived from the name of Lynche's Creek, in South Carolina, which is known to have been in 1768 a meeting-place of the "Regulators", a band of men whose professed object was to supply the want of regular administration of criminal justice in the Carolinas, and who committed many acts of violence on those suspected of "Toryism". (N.E.D.)

The particulars supplied by Ellicott, together with other evidence, clearly establish the fact that the originator of Lynch law was Captain William Lynch (1742-1820) of Pittsylvania in Virginia. According to Ellicott, 'this self-created judicial tribunal was first organised in the state of Virginia about the year 1776'; an article in the *Southern Lit. Messenger* (1836) II. 389 gives the date definitely as 1780.

1811 A. ELLICOTT in C. V. Mathews *A. Ellicott* (1908) 220 Captain Lynch just mentioned was the author of the Lynch laws so well known and so frequently carried into effect some years ago in the southern States in violation of every principle of justice and jurisprudence. 1817 S. ROANE in W. Wirt *Life P. Henry* (1818) 372 In the year 1792, there were many suits on the south side of the James river, for inflicting Lynch's law. 1819 W. FAUX *Diary* 29 Nov. in *Memor. Days in Amer.* (1823) 304 The people [of Princeton, Indiana]...deputed four persons to inform him, that unless he quitted the town and state immediately, he should receive Lynch's law, that is, a whipping in the woods. 1828 J. HALL *Lett. fr. West* 291 No commentator has taken any notice of Lynch's Law, which was once the *lex loci* of the frontiers. 1835 W. IRVING *Tour Prairies* 41 'Lynch's law', as it is technically termed, in which the plaintiff is apt to be witness, jury, judge, and executioner. 1839 STONEHOUSE *Axholme* 112 The burning Reading's house was...a terrible example of what the Americans term lynch law. 1879 FARRAR *St. Paul* I. 570 They seized the opportunity of executing a little Lynch law. 1888 BRYCE *Amer. Commw.* III. 309 Lynch law, however shocking it may seem to Europeans, is far removed from arbitrary violence. 1902 J. LONDON *Daughter of Snows* 284 It's lynch law, you know, and their minds are made up. They're bound to get me. 1963 *Times* 18 Apr. 9/1 It smacks more of lynch law than the reasoned kind of wisdom one hopes for in our elected officials. 1974 *Times* 28 Nov. 8/7 Mr Jeremy Thorpe...urged...that the hijackers of the British Airways VC10 should not be handed over to the 'lynch law' of the Palestine Liberation Organization.

lyophile ('laɪfɪl), *a.* [ad. G. *lyophil* (Freundlich & Neumann 1908, in *Zeitschr. f. Chem. und Ind. d. Kolloide* III. 81/2), f. Gr. *λύειν* to loosen; see -PHIL, -PHILE.] 1. *Physical Chem.* = LYOPHILIC *a.*

1915 W. W. TAYLOR *Chem. Colloids* i. 7 The term *lyophile* has been applied to those systems in which there is a marked affinity between the phases and *lyophobe* to the others. 1927 H. S. VAN KLOOSTER *tr. Kruyt's Colloids* i. 10 Emulsoids, or lyophile colloids... form disperse systems in which the properties of the dispersing phase are considerably modified by the disperse colloid. 1941 R. J. HARTMAN *Colloid Chem.* xviii. 358 The terms *lyophobe* ('hatred' toward external phase) and *lyophile* ('love' toward external phase) were suggested by Freundlich.

2. *Biol. and Med.* Also *lyophil* (-fil). Of, pertaining to, or employing lyophilization; lyophilized.

1934 S. MUDD *et al.* in *Jrnl. Immunol.* XXVI. 341 (heading) The preparation, properties and applications of lyophile serum proteins and complement. 1949 *Jrnl. Bacteriol.* LVII. 575 The lyophil process has been shown to be a successful method for the preservation of yeast cultures in a viable state. 1958 *Angiology* IX. 189/2 The condenser system of the lyophile apparatus should be cleaned and dried before re-use. 1961 *Phytopathology* LI. 259/1 (heading) Observations on lyophil preservation and storage of Pythium species.

lyophilic ('laɪfɪlɪk), *a.* *Physical Chem.* [f. LYOPHIL(E *a.* + -IC.)] Of a dispersed colloidal phase: having an affinity for the dispersion medium; not readily precipitated out by small quantities of electrolyte. Also applied to sols containing such a phase, which generally have a lower surface tension and a higher viscosity than the dispersion medium and which give gels on evaporation or cooling.

1911 [see LYOPHOBIC *o.*]. 1938 H. L. HIND *Brewing* I. vi. 111 The complex carbohydrates and proteins belong to the class of lyophilic colloids, which is much the more important class in brewing. 1940 GLASSTONE *Text-bk. Physical Chem.* xiv. 1210 Substances which most readily form lyophilic sols are those of high molecular weight; each particle, therefore, consists of a small number of molecules and in some instances possibly of only one large molecule. 1959 [see LYOPHOBIC *a.*]. 1969 G. D. PARFITT *Dispersion of Powders in Liquids* iii. 81 Solutions of macromolecules and association colloids are of the lyophilic type and form spontaneously when the components are brought into contact.

lyophilization (laɪfɪlɪzɪʃən), *Biol. and Med.* [f. LYOPHIL(E *a.* + -IZATION.)] = FREEZE-DRYING *vbl. sb.*

1938 *Jrnl. Allergy* X. 3 The chief advantage of lyophilization lies in the means it offers to preserve antibodies and other labile serum components... over extended periods of time. 1949 E. P. ABRAHAM *et al.* in H. W. Florey *et al. Antibiotics* II. xv. 638 Solvent transfer and lyophilization still form the basis of all commercial penicillin production, processes. 1958 W. C. FRAZIER *Food Microbiol.* xvi. 214 Milk and other liquid dairy products may be dried by lyophilization. 1967 *Oceanogr. & Marine Biol.* V. 164 Lyophilization is probably the gentlest way to dry a tissue and is essential if delicate materials are to be preserved.

lyophilize (laɪfɪlɪz), *v.* [f. LYOPHIL(E *a.* + -IZE.)] *trans.* To subject to lyophilization; to freeze-dry.

1938 *Jrnl. Allergy* X. 3 In each instance a negative Kahn reaction was obtained on the 'immune' serum before it was lyophilized. 1949 A. G. SANDERS in H. W. Florey *et al. Antibiotics* II. xvi. 684 Spores from these fungi can be lyophilized, that is, dried from the frozen state, without impairing their vitality. 1973 LANDHUIS & IDE in J. A. Capella *et al. Corneal Preservation* xii. 141 Tissue lyophilized without pretreatment in glycerin became hard, took longer to rehydrate, and healed more slowly.

Hence *ly'ophilized ppl. a.*; also *ly'ophilizate* [after *filtrate, precipitate*, etc.], a substance or material which has been lyophilized; *ly'ophilizer*, an apparatus for carrying out lyophilization.

1938 *Jrnl. Allergy* X. 9 Patients to be treated with lyophilized immune serum were selected. 1963 *Problemy Gematol. i Pereliv. Krovj* VIII. vi. 62 Both homogenates and lyophilizates may be used as a source of erythroplastin in experimental research and clinical laboratory tests for hemostasis. 1967 *Oceanogr. & Marine Biol.* V. 163 In a lyophilizer the water is sublimed away during a drying period lasting several hours but the tissue is at zero degrees as long as ice is present. 1971 *Times* (Suppl.) 27 July p. iii/6 Problems concerning skin replacement in burns have been tackled... where the preparation of lyophilized (freeze dried) and deep frozen skin has been successful. 1972 *Nature* 14 Apr. 347/1 The lyophilizate was then redissolved to give a final concentration of 5 × SSC. 1972 IZAK & LEWIS *Mod. Concepts in Hematol.* 76 Lyophilization was performed in a Virtis batch lyophilizer.

lyophobe ('laɪfəʊb), *a.* *Physical Chem.* [ad. G. *lyophob* (Freundlich & Neumann 1908, in *Zeitschr. f. Chem. und Ind. d. Kolloide* III. 81/2), f. Gr. *λύειν* to loosen; see -PHOBE.] = LYOPHOBIC *a.*

1915 [see LYOPHILE *a.* 1]. 1927 H. S. VAN KLOOSTER *tr. Kruyt's Colloids* i. 10 The suspensoids, or lyophobe colloids... are systems in which most of their physical properties differ only slightly from their dispersion media. 1941 [see LYOPHILE *a.* 1].

lyophobic ('laɪfəʊbɪk), *a.* *Physical Chem.* [f. LYOPHOB(E *a.* + -IC.)] Of a dispersed colloidal phase: not having an affinity for the dispersion medium; readily precipitated out by small quantities of electrolyte. Also applied to sols containing such a phase, which generally have a similar surface tension and viscosity to those of the dispersion medium, and which on evaporation or cooling give solids which cannot readily be reconverted into sols.

1911 H. FREUNDLICH in *Chem. News* 22 Sept. 140/1 Colloidal solutions stand between these two extremes. One class, distinguished from coarse suspensions only by the ultramicroscopic dimensions of their particles, are termed 'Suspension-colloids' or 'Lyophobic Sols'. These include colloidal metals, sulphides, and many hydroxides. 'Emulsion-colloids', or 'Lyophilic sols', which include albumin, gelatin, starch, &c., approach more nearly to the true solutions. 1959 K. J. MUSELS *Introd. Colloid Chem.* viii. 181 If we consider a paraffinic solvent... the alcohol group is now lyophobic and the hydrocarbons are lyophilic. 1968 *Physics Bull.* Nov. 377/1 The stability of lyophobic colloids, like a quartz suspension or gold sol, is due to the competition between electrostatic forces of repulsion... and the van der Waals attraction.

lyotrope ('laɪtʀəʊp), *a.* *Physical Chem.* [ad. G. *lyotrop* (H. Freundlich *Kapillarchemie* (1909) 54), f. Gr. *λύειν* to loosen + *τροπή* turn, turning.] = LYOTROPIC *a.* 1.

1915 W. W. TAYLOR *Chem. Colloids* i. 8 Among the reactions in which this lyotrope influence has been recognised are the following: the catalysis of esters, the inversion of cane sugar, the setting of gelatine, and the heat-coagulation of albumin. 1965 *Biol. Abstr.* XLVI. 480/2 Hofmeister's lyotrope salts modify the molecular structure of erythrocyte stroma protein.

lyotropic ('laɪtʀəʊpɪk, -'tʀəʊpɪk), *a.* *Physical Chem.* [f. LYOTROP(E *a.* + -IC; see -TROPIC.)]

1. Associated with the change of internal pressure of a solution from that of the solvent which is caused by the solute. *lyotropic series*, a series in which ions are arranged in order of their lyotropic effects, esp. their ability to cause precipitation of a lyophilic sol.

1924 W. A. PATRICK in H. S. Taylor *Treat Physicol Chem.* II. xx. 1285 Those properties of solutions or liquids that are in causal relation to the forces of molecular attraction are termed lyotropic. We thus have two great groups of properties of solutions, the colligative, and the lyotropic. 1925 G. BARGER *tr. Freundlich's Elem. Colloid Chem.* 27 The characteristic series of cations and anions so obtained... are called the lyotropic series. 1926 H. S. HATFIELD *tr. Freundlich's Colloid & Capillary Chem.* 49 We can therefore distinguish from the group of properties which are comprehended in the van't Hoff theory a second independent group, which are due to the change of the internal pressure by the solute. These properties will be described as lyotropic; the influence of the solute upon the surface tension, the compressibility, the solubility of difficultly soluble substances, and others will be called lyotropic influences. 1937 *Chem. Rev.* XX. 170 The numbers obtained in the case of salting-out experiments with lyophilic colloids play an important part in other lyotropic phenomena. *Ibid.* 179 Since the heat of hydration of ions depends on the electric field which surrounds them, the lyotropic effects are beyond doubt caused by the different electric field strengths of the ions. 1956 *Bacteriol. Rev.* XX. 51/2 Attempts have been made to correlate the toxicity of various salts to the lyotropic... series. 1970 *Biochemistry* IX. 2802/1 We have adopted an approach to the elucidation of lyotropic mechanism in which the effects of related perturbants on a standard collagen-buffer system have been compared.

2. Of a mesophase: having its phase transitions readily effected by a change of concentration. Also applied to the mesomorphism exhibited by such a mesophase.

1933 *Trans. Faraday Soc.* XXIX. 1008 (heading) Lyotropic mesomorphism. 1966 *Molecular Crystals* II. 55 Lyotropic systems are also thermotropic and it is the co-operative action of the temperature and of the solvent which enables them to pass successively from the solid crystalline state to the liquid crystalline state and to the isotropic liquid or dissolved state. 1969 *Analytical Chem.* Nov. 26A/3 Liquid crystals are divided into two major groups. One of these is identified as thermotropic, indicating that the class is prepared by heating... Lyotropic liquid crystals constitute the second major group and are prepared by mixing two or more components. In two-component systems involving water the second component is generally an amphiphile. Lyotropic systems can be large in number and varied in composition. 1974 P. G. DE GENNES *Physics Liquid Crystals* i. 5 For all the systems listed in this section, the transitions are induced most easily by changing the concentration of rods rather than the temperature; for this reason they are commonly called lyotropic. *Ibid.* 6 Depending on which... conditions hold, amphiphilic compounds may be lyotropic or thermotropic.

lyotropy ('laɪtʀəʊpi), *Physical Chem.* [f. LYOTROP(E *a.* + -Y³.)] The change of internal pressure brought about in a solution by the solvent or solvents; the mechanism by which this is brought about.

1927 H. S. VAN KLOOSTER *tr. Kruyt's Colloids* xvii. 237 Lyotropy, therefore, is probably not a hydration pure and simple, but one that orients the dipoles of water. 1937 *Chem. Rev.* XX. 169 (heading) Quantitative lyotropy.

Lysenkoism (laɪ'sɛŋkəʊɪz(ə)m). [f. the name *Lysenko* (see below) + -ISM.] Belief in or advocacy of the views of the Russian agronomist T. D. Lysenko (1898–1976), who opposed modern genetics and advocated neo-Lamarckian views and who for a time achieved great influence in Soviet Russia. Cf. MICHURINISM.

1948 *Discovery* Nov. 325/1 The opponents of Lysenkoism did not remain silent. 1962 *New Scientist* 11 Jan. 101/2 It would mean that if genes can be offset by a non-hereditary factor, that very factor could in effect become hereditary... Lysenko vi. 136 The period of absolute domination of Lysenkoism in Soviet biology and agronomy was relatively short-lived. 1974 *Nature* 11 Oct. 558/1 A convinced anti-Lysenkoist, whose career suffered considerably during the years of Lysenkoism, Astaurov became a focus for the anti-Lysenkoist reaction.

lysergic (laɪ'sɜ:dʒɪk), *a.* *Chem.* [f. *lys* (in HYDROLYSIS) + ERG(OT *sb.* + -IC.)]

lysergic acid: *a.* A crystalline tetracyclic compound, C₁₆H₁₆N₂O₂, containing the indole nucleus and occurring in two enantiomorphous forms, the dextrorotatory one being produced by the hydrolysis of ergot alkaloids.

1934 JACOBS & CRAIG in *Jnl. Biol. Chem.* CIV. 547 A new substance was obtained... which possessed both acid and basic properties and which we have named lysergic acid. 1961 *New Scientist* 2 Nov. 278 The alkaloids of ergot are all derivatives of lysergic acid, an indole compound. 1964 D. F. DOWNING in M. Gordon *Psychopharmacol. Agents* I. xiii. 572 Lysergic acid derivatives with biological activity are... known to occur both in fungi and higher plants. The most active hallucinogenic substance (LSD-25) has, however, been obtained only by synthesis from (+)-lysergic acid. 1969 T. A. BAN *Psychopharmacol.* xviii. 347/1 Lysergic acid diethylamide, or, as commonly referred to, LSD₂₅, is a synthetic product prepared from lysergic acid.

b. Used *ellipt.* for *lysergic acid diethylamide*, or (less commonly) any derivative of the acid.

1952 *Jnl. Mental Sci.* XCVIII. 314 High doses of glucose raising the blood sugar above 200 mgm. inhibit the action of lysergic acid (LSD. 25). 1954 *Brit. Jnl. Besides LSD₂₅ there are at least eight other lysergic acid derivatives with psychotomimetic properties. 1972 *Daily Tel.* (Colour Suppl.) 11 Aug. 12/3 The acids, like the barbiturates and amphetamines, are synthetically produced, and the best known is lysergic acid, LSD.

Hence **lysergic acid diethylamide** (daɪ'ɛθɪl-, daɪ'θaɪləmaɪd), the diethylamide of lysergic acid (in which the group -N(C₂H₅)₂ replaces the hydroxyl group of the acid), an extremely powerful synthetic hallucinogen which can produce profound changes in perception (esp. vision) and mood, with psychotic symptoms resembling those of schizophrenia, and which has been given orally in psychotherapy, usu. as the water-soluble tartrate, a colourless odourless powder; also called LSD², LYSERGIDE.

1944 *Chem. This led us to consider various drugs that might induce a transitory delirious state. It was during this search that the Sandoz Company called to our attention and made available *d*-lysergic acid diethylamide (L.S.D. 25). 1955 *Sci. -lysis (lɪsɪs). A word-forming element [f. Gr. λύσις a loosening, parting] in many technical terms, primarily denoting decomposition, disintegration, dissolution.

1. In words in which the first element indicates the agent; e.g. (in *Chem.*) **ELECTROLYSIS** (c 1840), **HYDROGENOLYSIS**; (in *Biol.*) **BACTERIOLYSIS** (sense 1), **BIOLYSIS**.

2. In words in which the first element indicates the substance or object affected; e.g. (in *Chem.* and *Biochem.*) **FRUCTOLYSIS**, **GLYCOLYSIS** (1892); (in *Biol.*) **BACTERIOLYSIS** (sense 2), **HÆMOLYSIS** (cf. **LYSIS** 3). **b.** In a few terms in *Surg.* -lysis denotes surgical detachment of a part indicated by the first element, as *cardiolysis*.

3. In words in which the first element indicates some other characteristic; e.g. (in *Biol.*) **AUTOLYSIS**, **HETEROLYSIS** (sense 1); (in *Chem.*) **HETEROLYSIS** (sense 2), **HOMOLYSIS**. (**CATALYSIS** (1836) was adopted directly from Gr. κατάλυσις dissolution.)

lyso- ('lɑɪsəʊ), a comb. form of **LYSIS** (sense 3), used to form various biological and biochemical terms, as **lysolecithin** *Biochem.*, any compound obtained from a lecithin by the hydrolytic removal of one of the two fatty acid groups.

1923 LEVENE & ROLF in *Jrnl. Biol. Chem.* LV. 743 Thus the product was a mixture of several substances, which we propose to name lysolecithin and lysocephalin. Inasmuch as lecithins differ in the nature of their saturated fatty acids, it is probable that there exist several lysolecithins. **1972** *Sci. Amer.* Jan. 88/3 Lecithin, like the bile salts, is synthesized by the liver, and after it is secreted into the small intestine an enzyme secreted by the pancreas converts lecithin to lysolecithin. This substance breaks up cells by removing the lipids from their membranes.

lysogenesis (lɑɪsəʊ'dʒenɪsɪs). *Bacteriology.* [f. **LYSO-** + -GENESIS.] Orig., the production of lysis or a lysin; in mod. use = **LYSOGENY**.

1901 *Lancet* 19 Oct. 1031/1 Agglutination... is not concerned in lysogenesis, which is a function of the action of immune body to additment alone. **1902** *Encycl. Brit.* XXVI. 68/1 It has been completely established that in this phenomenon of lysogenesis [sc. dissolution of bacterial cells] there are two substances concerned, one specially developed or developed in excess, and the other present in normal serum. **1932** *Jrnl. Path. & Bacteriol.* XXXV. 855 The use of *B. sanguinarum* as an indicator of lysogenesis arose out of previous work... on the characteristics of a lysogenic enteritidis strain. *Ibid.* 862 The phenomenon of lysogenesis. **1951** *Jrnl. Bacteriol.* LXII. 293 (heading) Studies on lysogenesis. I. The mode of phage liberation by lysogenic *Escherichia coli*. *Ibid.*, The stable association of a bacteriophage with a bacterial strain, known as lysogenesis, has received scarce attention. **1968** A. L. SMITH *Microbiol. & Path.* (ed. 9) xxvi. 278/1 This kind of phage is referred to as a prophage, and this condition of mutual tolerance is termed lysogeny or lysogenesis.

lysogenic (lɑɪsəʊ'dʒenɪk), *a.* *Biol.* [f. **LYSO-** + -GENIC.] Pertaining to, or capable of producing or undergoing, lysis (sense 3); *spec.* applied to a bacterium which, without being attacked by a phage, can lyse and liberate phage, an effect which is due to the ability of such a bacterium to carry, through an indefinite number of generations, a phage which is integrated with the bacterial genome and normally replicates synchronously with it but which may, under a suitable stimulus, become detached from the

bacterial genome, replicate rapidly, and lyse the bacterial cell.

1899 [see *immune body* s.v. **IMMUNE a.** (sb.) 3 b]. **1902** *Encycl. Brit.* XXVI. 68/1 The first of these is the lysogenic action, which consists in the production of a change in the corresponding bacterium whereby it becomes granular, swells up, and ultimately may undergo dissolution. *Ibid.*, Lysogenic action is not confined to the case of bacteria, but obtains also with other organised structures. **1911** STEDMAN *Med. Dict.* 499/1 *Lysogenic*, relating to the formation of lysins. **1929** *Austral. Jrnl. Exper. Biol. & Med. Sci.* VI. 277 (heading) Observations on a permanently lysogenic strain of *B. enteritidis gaertner*. **1929** J. H. DIBLE *Recent Adv. Bacteriol.* iv. 73 Of greater interest are certain strains which, whilst themselves resistant, have incorporated with them the lytic principle, which remains present through future subcultures. These are the 'lysogenic' strains of Bordet. **1930** F. M. BURNET in *Syst. Bacteriol.* (Med. Res. Council) VII. xxxix. 494 There are some bacterial strains that it is impossible to deprive of lysogenic power. **1934** *Biol. Rev.* IX. 346 The ability of certain bacterial strains, so-called lysogenic bacteria, to liberate phage during their growth. **1953** [see **INDUCTION** 9 d]. **1953** *Cold Spring Harbor Symp. Quant. Biol.* XVIII. 71/1 It is possible that the phage population is heterogeneous, containing lytic, lysogenic, etc. phages. **1965** *New Scientist* 21 Oct. 167/2 Strains of bacteria carrying prophage DNA are described as 'lysogenic'. **1970** PASSMORE & ROBSON *Compan. Med. Stud.* II. xviii. 101/2 The prophage is normally inhibited from replication in the lysogenic state by the presence of virus-specified repressor substance that controls the operon for the structural gene. **1971** LECHEVALIER & PRAMER *Microbes* xli. 430/1 Such phages (e.g., coliphage λ) are called lysogenic viruses.

Hence **lysogenicity**, **ly'sogeny**, the state or property of a bacterium of being lysogenic; the phenomenon of lysis of a lysogenic bacterium with the subsequent release of phage.

1932 *Jrnl. Path. & Bacteriol.* XXXV. 857 Double lysogenicity, i.e. the production of two distinct phage types by a single strain, is relatively common. *Ibid.* 857 In certain important bacterial groups lysogenicity is a normal characteristic. **1934** *Biol. Rev.* IX. 347 It was found that another group of Salmonellas... did show the existence of a common type of lysogenicity. **1954** *Genetics* XXXIX. 429 (heading) Segregation of lambda lysogenicity during bacterial recombination in *Escherichia coli* K12. **1956** *Nature* 14 Jan. 92/1 The occurrence of lysogeny in *SU298* was demonstrated. **1962** *Lancet* 19 May 1054/2 Little is known about the mechanism of induction of tumours by viruses, and... it seems clear that nothing directly akin to bacteriophage lysogeny occurs. **1970** PASSMORE & ROBSON *Compan. Med. Stud.* II. xviii. 101/2 When a bacteriophage infects a sensitive bacterium, it can either replicate and lyse the host cell... or it may be incorporated in the host genome in a state of lysogeny.

lysogenization (lɑɪsəʊdʒənə'zɪʃən). *Bacteriology.* [f. **LYSOGEN**(IC a. + -IZATION).] The process by which a bacterium acquires a phage which becomes stably integrated into its genome; the establishment of the lysogenic state.

1953 *Cold Spring Harbor Symp. Quant. Biol.* XVIII. 71 (heading) Studies on lysogenization in *Escherichia coli*. **1970** *Nature* 17 Jan. 226/1 The parallels between the lysogenization of bacteria by bacteriophage and the transformation of cells in tissue culture by DNA tumour viruses are too compelling to ignore.

Hence **ly'sogenize** *v. trans.*, (of a bacteriophage) to become stably integrated into the genome of (a bacterium); also *absol.*; **lysogenized** *pp. a.*; **lysogenizing** *vbl. sb.*

1953 *Cold Spring Harbor Symp. Quant. Biol.* XVIII. 71/1 There do occur, however, lambda mutants that lysogenize poorly or not at all. *Ibid.*, Different strains of artificially lysogenized bacteria. **1957** *Virology* III. 42 (heading) Mutations in *E. coli* temperate bacteriophage affecting its ability to lysogenize *E. coli*. **1961** *Jrnl. lysol ('lɑɪsəl). [f. Gr. λύσις a loosening + -OL 3.] A solution of coal-tar oil in soap.

1891 *Brit. Med. Jnl.* 12 Sept. 598/1 Lysol differs from creoline... by its most perfect solubility in... water. **1898** P. MANSON *Trop. Diseases* viii. 163 [Of plague disinfectants] the best... are... lysol... and carbolic acid.

lysosome ('lɑɪsəsəʊm). *Biol.* [f. **LYSO-** + -SOME⁴.] A cytoplasmic cell organelle widely found in animal tissues which contains hydrolytic enzymes enclosed in a membrane.

1955 C. DE DUVE et al. in *Biochem. Jnl.* LX. 615/2 For practical purposes, it is proposed to refer to these granules as lysosomes, thus calling attention to their richness in hydrolytic enzymes. **1970** *Sci. Jnl.* Aug. 15/4 The invader is met by the lysosome, engulfed and destroyed by the enzymes.

Hence **lyso'somal** *a.*

1957 *Symp. Soc. Exper. Biol.* X. 59 All the lysosomal enzymes... were recovered to a large extent in the parenchymal cells. **1965** *Listener* 18 Mar. 404/1 Amoebae or other protozoa take particles into food vacuoles, release lysosomal enzymes into the vacuoles and so digest the particles.

lysozyme ('lɑɪsəzɑɪm). *Biochem.* [f. **LYSO-** + **ENZYME**.] Any of various similar enzymes of relatively low molecular weight which are widely found in animal and plant tissues and secretions and which are capable of hydrolysing a particular mucopolysaccharide found in the

cell walls of certain Gram-positive bacteria and hence of lysing such bacteria.

1922 A. FLEMING in *Proc. R. Soc. B. XCIII*. 306 In this communication I wish to draw attention to a substance present in the tissues and secretions of the body, which is capable of rapidly dissolving certain bacteria. As this substance has properties akin to those of ferments I have called it a 'Lysozyme', and shall refer to it by this name throughout the communication. 1934 J. H. PARSONS *Dis. Eye* (ed. 7) x. 144 The tears are not a good culture medium, and though they contain traces of lysozyme, they cannot be regarded as actively bactericidal. 1949 H. W. Biochem.* III. viii. 413 *Ficus* lysozyme is different from the egg white enzyme. 1965 PEACOCKE & DRYSDALE *Molecular Basis Heredity* xii. 144 Similar studies have been initiated on the genetically controlled structure of the lysozyme produced in bacteria infected by normal and mutant T4 bacteriophage.

||**lyssa** ('lɪsə). *Path.* Pl. *lyssæ*. [mod.L., a. Gr. λύσσα rage, rabies. Cf. LYTТА.]

M

M (ϵm), the thirteenth letter of the modern and twelfth of the ancient Roman alphabet, represents historically the Greek $m\acute{u}$ and the Semitic $m\acute{e}m$. The Phœnician form of the letter is \mathfrak{M} , whence the early Gr. and L. \mathfrak{M} , \mathfrak{M} , \mathfrak{M} . Its phonetic value has varied little; in Eng. it has always expressed what was doubtless its original sound, that of the bilabial nasal consonant, which is normally voiced, though when it is followed by an unvoiced consonant it has an unvoiced ending. Like the other nasals, m is capable of being used as a sonant or vowel, denoted by (ə) m in the phonetic notation here employed; but in Eng. this occurs only after (δ) and (z) at the end of words (of Gr. etymology), as *rhythm*, *spasm*, *schism*, and the suffix *-ism*; in these words many speakers substitute (ə) m . The letter is never silent, exc. initially before n in Gr. derivatives, as *mnemonic*.

II. Symbolical uses.

3. Used like the other letters of the alphabet to denote serial order; applied e.g. to the thirteenth (or more usually the twelfth, either I or J being often omitted) group or section in classification, the twelfth sheet of a book or quire of a MS., etc.

4. The Roman numeral symbol for: A thousand.

(In the 15-16th c. it could be substituted for the numeral word in any context; it is now rare exc. in dates.)

5. Further symbolic uses in science.

a. In *Physics* M is used to designate the series of X-ray emission lines of longer wavelength than the L -series obtained by exciting the atoms of any particular element (cf. L 7 a); these arise from electron transitions to the atomic orbit of third-lowest energy, with principal quantum number 3, which is thus termed the M -shell, and electrons in this shell M -electrons. M -capture, the capture by an atomic nucleus of one of the M -electrons.

1911 C. G. BARKLA in *Phil. Mag.* XXII. 408 From the similarity of the behaviour of all the elements we must then admit... the possibility of further series M, N, &c. 1923 H. L. BROSE tr. *Sommerfeld's Atomic Struct. & Spectral Lines* iii. 145 Electronic transitions that end in the M -shell, furnish differences of energy that correspond to emissions of lines of the M -series. 1924 *Phil. Mag.* XLVIII. 722 Krypton... has 2 K, 8 L, 18 M, and 8 N electrons. 1924 R. W. G. WYCKOFF *Struct. Crystals* ii. 72 The M -lines have been observed from the elements from dysprosium... to uranium. 1934 H. E. WHITE *Introd. P. BERTIN *Princ. & Pract. X-Ray Spectrometric Analysis* i.

27 An electron that has enough energy to expel a K electron obviously can also expel any L or M electron.

b. In *Physics* m and M denote magnetic quantum numbers, corresponding to the component of an angular momentum (often indicated by a subscript) in some physically distinguished direction (usu. that of a magnetic field). [Introduced by A. Landé 1921, in *Zeitschr. f. Physik* V. 233.]

m is usually used for a single particle, and M for an assemblage of particles.

1923 *Jrnl. Optical Soc. Amer.* VII. 415 The numbers at the left show the magnetic quantum number m characterizing each level. 1926 *Proc. R. Soc. A.* CXII. 80 It is necessary also... to take into consideration the effect of the orientation of orbits with respect to an imaginary magnetic field, and such orientation involves a fourth quantum number m , which in turn is itself composite and is equal to the vector sum of two subsidiary quantum numbers m_x and m_y . 1962 H. D. BUSH *Atomic & Nucl. Physics* ii. 38 It is necessary to characterize electrons in atoms by four quantum numbers n, l, m_l, m_s . 1967 W. R. HENDMARSH *Atomic Spectra* I. vi. 72 We can also perform a simple calculation for the case where the Zeeman splitting is large compared with the hyperfine structure but still small compared with the fine structure. In this case the quantum numbers M_y and M_z (which defines the z -component of the nuclear spin) are well defined, but not J and I .

He did not approve of the placing of any kind of foundation under the layers of stone, of the use of sand or gravel as 'binding' material, or of the smoothing of the surface by heavy rollers; though the name of 'macadamizing' is now often given to methods in which some or all of these practices are admitted.

The word seems to have been invented by Teofilo Folengo ('Merlinus Cocaius') whose 'macaronic' poem (*Liber Macaronicus*) was published in 1517. He explains (ed. 2, 1521) that the 'macaronic art' is so called from macaroni, which is 'quoddam pulmentum farina, caseo, botiro compaginatum, grossum, rude, et rusticantum.'

A. adj. 1. Used to designate a burlesque form of verse in which vernacular words are introduced into a Latin context with Latin terminations and in Latin constructions. Also, applied to similar verse of which the basis is Greek instead of Latin; and *loosely* to any form of verse in which two or more languages are mingled together. The word 'macerals' will, I hope, be accepted as a pleasantly sounding parallel to the word 'minerals', conveying the suggestions of the fundamental difference between them. *Ibid.*, The concept behind the word 'macerals' is that the complex of biological units represented by a forest tree which crashed into a watery swamp and there partly decomposed and was macerated in the process of coal formation, did not in that process become uniform throughout but still retains delimited regions optically differing under the microscope, which may or may not have different chemical formulae and properties. These *organic* units, composing the coal mass I propose to call *macerals*, and they are the descriptive equivalent of the *inorganic* units composing most rock masses and universally called *minerals*. 1970 *Nature* 11 July 194/2 The petrographic components (macerals) of coals possess different stability ranges.

macro ('mækrou), *sb.* [f. the prefix MACRO-.] 1. *Computers.* A macro-instruction. *Freq. attrib.*

1959 *Jrnl. Assoc. Computing Machinery* VI. 132 The built-in system macro instructions in SCAT presently consist of (1) two macros for generating the . . . standard entry and exit from subroutines, (2) a set of debugging macros [etc.]. 1961 LEEDS & WEINBERG *Computer Programming Fund.* iv. 103 The assembly program can be instructed to recognize this instruction sequence through the use of a single form called a macro-instruction. . . Recognition of the 'macro' form causes the assembly program to assemble the corresponding sequence of one or more machine instructions. 1963 L. SCHULTZ *Digital Processing* xi. 240 To avoid having to write the groups repeatedly, the programmer . . . instructs the machine to establish a table in which it stores the group of instructions. To identify the group, he assigns a code name, called a macro name. *Ibid.*, The programmer writes one instruction (a macro) and the machine 'generates' several. 1966 *New Scientist* 27 Oct. 162/3 In the ICT command language it is possible to define new commands in the language in terms of those already defined. An example of this 'macro' facility is given here. . . The effect is to allow the user to condense a long and complicated job description into a shorthand phrase of his own choice. The use of 'macros' in this way makes it extremely easy for the user to set up his own conventions. 1970 O. DOPPING *Computers & Data Processing* xix. 324 As an advantage of automatic coding, it is sometimes pointed out that the macros and subroutines are tested and error-free, in contrast to home-made subroutines. 1972 J. J. DONOVAN *Systems Programming* iv. 111 In employing a macro, the programmer essentially defines a single 'instruction' to represent a block of code. For every occurrence of this one-line macro instruction in his program, the macro processing assembler will substitute the entire block.

macrocosm ('mæk'rəʊkɒz(ə)m). Also rarely in L. and quasi-Gr. forms: 7 macrocosmus, 9 -cosmos. [ad. F. *macrocosme* (c 1300), ad. med. L. *macrocosmus*, repr. Gr. *μακρός κόσμος (μακρός long, great, κόσμος world). (Cf. MEGACOSM.)

Although med. L. *macrocosmus* has not been found earlier than in Higden (c 1350) it must be the source of the Fr. form recorded c 1300, and it seems to imply the prior existence of a Gr. phrase *μακρός κόσμος formed in imitation of μακρός κόσμος MICROCOSM. For the idea expressed, cf. Macrobius in *Somn. Scip.* i. xii, 'Ideo physici mundum magnum hominem, et hominem brevem mundum esse dixerunt'. From the use of *brevem* here, and the gloss 'Microcosmum... petit monde, c'est l'homme qui pou dure' (Du Cange), it may be suspected that μακρός was at first intended in the sense of 'long', interpreted with regard to duration; though the inference is not absolutely necessary, as the formal similarity of the word to μακρός would sufficiently account for its selection in an antithetic phrase. However this may be, the relation of the words *macrocosm* and *microcosm* has suggested the use of MACRO- with the sense 'on a large scale', in many modern words antithetic to words beginning with *micro*.]

1. The 'great world' or universe, in contradistinction to the 'little world' or MICROCOSM, i.e. to man viewed as an epitome of the universe.

The earliest instances of the word in Eng. occur in Lydgate's *Assembly of the Gods* (c 1420; oldest MS. a 1500), where however it is a mistake (either on the part of Lydgate or of the scribe) for *microcosm*. (See, e.g., line 1828: And as for Macrocosme, hit ys no more to say But the lesse worlde.)

1600 W. WATSON *Decacordon* (1602) 274 Throughout all this vaste Macrocosme, they finde not one patterne... like to ours. 1794 G. ADAMS *Nat. & Exp. 2. *transf.* In various occasional applications, denoting some great whole, the structure of which is conceived to be imaged on a smaller scale by that of some constituent portion of it.

1851 SIR F. PALGRAVE *Norm. & Eng.* I. 347 No population... is absolutely inert in the macrocosm of humanity. 1875 *N. Amer. HARRIS *Union with God* iii. 59 His life is the great life, and all our little lives are involved in it, Christ being the macrocosm, and ourselves the microcosm.

2. *Chem.* Containing or being a ring composed of a relatively large number of atoms.

1952 J. WALDENSTRÖM in *Adv. The term macroglobulinemia will therefore be used in this paper to refer to the presence in the serum of increased amounts of macroglobulins, regardless of the clinical associations. *Ibid.* 290/1 On paper electrophoresis, macroglobulinæmic sera yield patterns which are indistinguishable from those found in multiple myeloma. 1971 D. 1889 E. J. WALL *Dict. Photogr.* 114 *Macro-photography*, a term used to denote the enlargement of the negative. 1940 A. L. M. SOWERBY *Wall's Dict. Photogr.* (ed. 15) 438 *Macro-photographs*, term applied to photographs of small objects reproduced at or about natural size. Macro-photography occupies a position intermediate between ordinary photography, in which objects are much reduced, and photo-micrography, in which objects are shown greatly enlarged. 1958 *Newnes Compl. Amat. Photogr.* xiv. 147 Macrophotography, showing all the colour variations of a natural subject in close-up, is a fruitful field. 1964 *Times Rev. So **macro'photograph**, a photograph produced by macrophotography.

1900 DORLAND *Med. (In recent Dicts.) **mac'ropodal** a. *Bot.*, of a monocotyledonous embryo: Having the radicle large in proportion to the cotyledon. **macro'podian** *Zool.*, one of a tribe of brachyurous decapod crustaceans.

ma'cropodous a. = MACROPODAL.

macro-scale ('mækrəuskeɪl). Also **macro scale**, **macroscale**. [f. MACRO- + SCALE sb.³] A large or macroscopic scale; *spec.* in *Chem.*, the scale of macroanalysis.

Macro is freq. apprehended as an *adj.* qualifying *scale* (cf. MACRO- 2).

1931 J. W. BROWN in C. A. Mitchell *Recent Adv. Analytical Chem.* II. xv. 304 Developments in the application of general macro-scale chemical methods of qualitative and quantitative analysis to amounts of material 50, 100 or 1,000 times smaller. 1941 J. H. REEDY *Elem. Qualitative Analysis* (ed. 3) 2 Formerly chemical analysis was carried out on a 'macro' scale, using considerable amounts of material. 1964 N. G. CLARK *Mod. Org. Chem.* xxiv. 496 Quantitative analysis was originally designed to be performed on a sample of 0.4-1.0 g for each elemental determination (only carbon and hydrogen are estimated on the same sample); this is called the macro-scale. 1968 C. A. DOXIADIS *Between Dystopia & Utopia* 52 Also, we should not forget that projecting in the macro-scale... is easier than in the micro-scale. It is easier to predict where the future population will settle in one generation than what type of house, or dress, a certain lady is going to like next year. 1970 *Interior Design* Dec. 767/1 Nevertheless, changes will occur, of course, but on a micro- not macro-scale. 1972 *Physics Bull.* Nov. 668/1 A polymer crystallized from the melt will show, on a macroscale, random crystalline orientation.

macroscian ('mækrəʃkɪən), a. and sb. [f. Gr. μακρόσκιος, f. μακρό-ς long + σκία shadow. Cf. ANTISCIAN.] a. *adj.* Having a long shadow. b. sb. One having a long shadow, an inhabitant of the polar regions.

In some mod. Dicts.

macroscopic ('mækrəu'skɒpɪk), a. [f. MACRO- + -SCOPIC.] Visible to the naked eye, in opposition to MICROSCOPIC. Also *fig.*, general, comprehensive, concerned with large units.

1872 PEASLEE *Ovar. Tumours* 31 The macroscopic character of these two forms of cystoma depends on the number and size of their constituent cysts. 1897 *Athenæum* 7 Aug. 194/3 The structure of lavas, microscopic and macroscopic. 1931 M. DOBB in W. ROSE *Outl. Mod. Knowl.* II. xiv. 623 Those macroscopic, as distinct from microscopic, issues of the economic order. 1960 E. DELAVENAY *Introd. Hence **macro'scopical** a. = MACROSCOPIC a.; **macro'scopically** *adv.*, by the naked eye without the aid of a lens.

macrosegment ('mækrəusegment). *Linguistics*. [f. MACRO- + SEGMENT *sb.*] A continuous unit of speech between two pauses, with a single intonation.

1958 C. F. HOCKETT *Course in Mod. Ling.* iv. 38 The stretch of material spoken with a single intonation is called a *macrosegment*. *Ibid.* 41 Though the center of an intonation is by definition the most prominent syllable in the macrosegment, it need not carry the highest pitch. 1963 [see MICROSEGMENT]. 1964 K. L. PIKE in D. Abercrombie et al. *Daniel Jones* 430 The total phonemic phrase (i.e., the macrosegment including the sum of units between primary juncture...) in unemotional speech has an overall intonation contour. 1965 *Language* XLI. 244 A major segment (. . . Hockett's macrosegment) consists of a series of pitch levels terminated by a major juncture. 1971 *Ibid.* XLVII. 739 In the nucleus column for macro-segment and mega-segment, a O symbol occurs with no explanation given.

macroseism ('mækrəusaiz(ə)m). *Geol.* [f. MACRO- + SEISM.] A major earthquake; in mod. use (*rare*), any earthquake, as opposed to an imperceptible earth tremor (cf. MICROSEISM).

1903 *Sci. Amer.* Suppl. 2 May 2285 Prof. Milne pointed out the distinction which exists between macroseisms, or large earthquakes, and microseisms, or small earthquakes. The former he described as world-shaking disturbances. 1907 *Jrnl. Geol.* XV. 401 Great confusion exists because of the different uses of the terms 'macroseism' and 'microseism', as well as the adjectives derived from them. The usage here is that of both Milne and de Montessus, which makes 'macroseism' apply to the greater disturbance on the ground. 1924 *Bull. Seismol. Soc. Amer.* XIV. 29 Various useful compounds [of *seism*] have been suggested, such as . . . *macroseism*, de Montessus, 1907, for an ordinary sensible earthquake. 1972 *Gloss. Geol.* (Amer. Geol. Inst.) 424/1 *Macroseism*, a syn. of *earthquake*, as opposed to *microseism*.

Hence *macro'seismic a.*, of or pertaining to a macroseism or (in mod. use) those effects of an earthquake that are perceptible without the aid of instruments; *macro'seismically adv.*

1903 *Nature* 9 July 235/1 This is probably true for other phases of motion, and it has also been shown to exist for macro-seismic disturbances. 1907 *Jrnl. Geol.* XV. 408 Macroseismic origins. 1938 *Nature* 1 Oct. 624/1 The region over which the shock was felt macroseismically extended as far as the island. 1940 *Ibid.* 6 Jan. 14/1 On the basis of the macroseismic data, the accompanying sketch map showing the isoseismic lines has been constructed. 1947 K. macro'smatic, a. [irreg. f. MACRO- + Gr. *δσμή* smell.] *Zool.* Having well-developed olfactory organs. Also *fig.*

1890 W. TURNER in *Jrnl. Anat. & Physiol.* XXV. 106, I propose . . . to arrange the Mammalia in relation to the development of the olfactory apparatus into three groups:—(a) Macrosmatic, where the organs of smell are largely developed, a condition which is found . . . in the majority of mammals. [Etc.] 1894 *Proc. Zool. Soc.* 9 *Echidna* . . . is, to use Turner's nomenclature, 'macrosmatic'. 1899 *Allbutt's Syst. Med.* VI. 753 All that remains in man of the great rhinencephalon of macrosmatic mammals is the olfactory bulb and tract. 1924 *Jrnl. Comparative Neurol.* XXXVII. 318 Even macrosmatic animals like dogs and fishes locate odorous substances by random seeking reactions, not by direct orientation. 1962 *Science Survey* III. 260 Cats and dogs, most of the predators, rodents and deer, and many others are called macrosmatic because a large part of their nasal labyrinths are covered with a special olfactory epithelium. 1968 *Times* 5 Oct. 20/7 [Orwell is] a macrosmatic writer tracking down the stench of hypocrisy or the gangrene of intellectual treachery. 1971 *Nature* 16 Apr. 432/1 Groddeck argued that man is as macrosmatic as the dog.

macrosporangium ('mækrəuspɔ'rændʒ). Also in mod.L. form *-sporangium*. [f. MACRO- + SPORANGIUM.] The sporangium or capsule containing the macrospores. (Cf. MEGASPORANGIUM.)

1875 BENNETT & DYER *Sachs' Bot.* 396 If a microsporangium is about to be formed, each of the mother-cells is broken up into four tetrahedral spores, which all develop into microspores; in the macrosporangium, on the contrary, the mother-cells remain, with one exception, undivided. 1882 *Gard. Chron.* XVIII. 40 Four of these macrospores occur in each macrosporangium.

macrospore ('mækrəuspɔ'r(ə)). [f. MACRO- + SPORE.] *a. Bot.* = *megaspore* (s.v. MEGA-). *b. Zool.* One of the spore-like parts into which a monad subdivides.

1859 TODD *Cycl. Anat.* V. 243/1 The development of the prothallium commences . . . several months after the macrospore has been sown. 1870 HOOKER *Stud. Flora* 469 The macrospores of Selaginella and Isoetes develop a cellular prothallium. 1875 BENNETT & DYER *Sachs' Bot.* 335 The separation of the sexes is already prefigured by the two kinds of spores, the Macrospores being female, in so far as they develop a small prothallium. 1955 G. M. SMITH *Cryptogamic Bot.* (ed. 2) II. x. 281 The heterospory was pronounced [in the fossil fern *Archaeopteris*], the macrospores having a diameter about ten times that of microspores. 1965 [see *megaspore* s.v. MEGA-]. 1974 *Mycopathologia et Mycologia Applicata* LIII. 56 Some fungi . . . produce two spore states which are similar in type but differ in size. The large septate spores are frequently referred to as macrospores and the smaller, nonseptate spores as microspores. The term macrospore is also used infrequently as synonymous with chlamydo-spore. . . This latter usage seems undesirable.

macrosporophyll ('mækrə'spɔ'rəfil). *Bot.* [f. MACRO- + *sporophyll* (s.v. SPORO-).] = *megasporophyll* (s.v. MEGA-).

1888 *Encycl. Brit.* XXIV. 130/2 Carpel = leaf bearing macrosporangia (macrosporophyll). 1955 G. M. SMITH *Cryptogamic Bot.* (ed. 2) II. viii. 201 According to the nature of their sporangia, the sporophylls are called macrosporophylls and microsporophylls.

'macrostructure. Also *macro-structure*. [f. MACRO- + STRUCTURE *sb.*] Large-scale or overall structure; *spec.* the structure of a metal that is visible (on polished and etched surfaces) to the naked eye or under low magnification.

1920 *Glasgow Herald* 18 Dec. 4 The lecturer spoke of microscopical methods, of macro-structure, and dealt with the variation of physical properties of steel. 1930 *Engineering* 14 Mar. 357/1 Macrostructure of cast alloys. 1960 E. Such macrostructural devices as scenes and pictures . . . are integral elements by which this ideal is realized. 1964 *English Studies* XLV. (Suppl.) 188 It is strange that no one appears to have taken much interest in the macro-structural relations between his plays and those of other Elizabethan and Jacobean dramatists. 1974 B. JESSOP *Traditionalism, Conservatism & Brit. Political Culture* ii. 42 This requires macrostructural analysis as well as survey analysis.

macrothere ('mækrəθɪə(r)). Also in L. form *macrotherium*. [ad. mod.L. *macrothērion*, f. Gr. *μακρό-ς* long + *θηρίον* wild beast.] A member of an extinct European genus of the sloth tribe.

macute (mækju:t). Also 8 *macuta*, *maccute*, *macoute*, 8-9 *macuta*. [ad. native African *makuta*.]

The Rev. W. Holman Bentley, writing from the Congo Free State, informs us that *makuta* is the plural of **ekuta*, and denotes a bundle of ten mats of palm-fibre, still used as currency north of the Congo near the French frontier. Elsewhere the word survives only as the name of the Angola 'penny' piece or its value. Mr. Bentley says that it is derived from a Congo verb *kuta* to tie, now obsolete, but preserved in the reversing form *kutuhula* to untie (N.E.D.).]

At the beginning of the 18th c., said to be the name for one of the pieces of cloth used as money by the Negroes of the Congo. Subsequently used in the W. African trade as the name for a money of account (= 2000 cowries), and hence adopted by the Portuguese at Angola as a denomination in their local coinage (= 50 reis); the Sierra Leone Company also issued (1791-1805) pieces of 1, 2, 5 and 10

macutes, the silver macute being worth about 4½d. sterling. The account given by Montesquieu (quot. 1748), and adopted by Mill and other English writers on political economy, appears to be based on misapprehension.

(1752) 77 The negroes on the coast of Africa have a sign of value without money. It is a sign merely ideal. . . A certain commodity or merchandise is worth three macoutes; another six macoutes; another ten macoutes. . . The price is formed by a comparison of all merchandises with each other. They have therefore no particular money; but each kind of merchandise is money to the other. 1823 CRABB *Technol. Dict.*, *Macuta*. 1848 J. S. MILL *Pol. Econ.* III. vii. §1.

madam ('mædəm), *sb.* Forms: 3-6 *madame*, 4-5 *madaum* *Sc.* *madem(e)*, 5 *maydame*, 6 *maddame*, 4-9 *madame*, 4- *madam*. [a. OF. *madame* (in mod. Fr. written MADAME), literally, 'my lady' (see DAME, DAM), corresp. etymologically to It. *madonna*, *monna*, med. L. *mea domina*.

The spelling *madame* is still preferred by some writers, but the more general and convenient practice is to write *madam* when the word is used as English, and MADAME when it is used as a foreign title. For the plural (in sense 1) MESDAMES is now used; the Eng. plural is obs. exc. in sense 3.]

1. *a.* A form of respectful or polite address (substituted for the name) originally used by servants in speaking to their mistress, and by people generally in speaking to a lady of high rank; subsequently used with progressively extended application, and now capable of being (in certain circumstances) employed in addressing a woman of whatever rank or position. (Corresponding to SIR.)

The early occurrence of DAME in the sense of mother suggests that in AF. and early ME. *ma dame* was very commonly used by children to their mother; but in the extant examples the mother so addressed is a queen or a lady of very high rank. In Chaucer's time (*C.T. Prol.* 376) to be addressed as *madame* was one of the advantages which a citizen's wife gained by her husband's being made alderman; this probably indicates the lowest social grade in which at that time the title could be claimed as a matter of customary right. In poetry of the 14th and 15th c. the lover often addresses his mistress as *madame*. Nuns (originally only the elder ones: see quot. c 1400) were called *madame* down to the Reformation.

While in France the title has (with certain customary exceptions) been confined to married women, in England no such rule has been generally adopted, though there are traces of a tendency in the 16-17th c. to address matrons as 'madam' and spinsters as 'mistress'.

From the 17th c. *madam* has been the title normally used in beginning or subscribing a letter to a woman of any station, except where the use of the name (as in 'Dear Mrs. A.' etc.) is permitted ('my lady', etc. not being admitted in epistolary usage). In oral use the title now rarely occurs; from the 18th c. it has been, except in very formal use, largely superseded by the contracted form MA'AM, which has itself in recent years been greatly restricted in currency; however, *madam* is in London and other towns still the word

commonly used by salesmen to their female customers, and by persons in the position of servants to the public.

1. a. The title prefixed to the surname of a French married woman (corresponding to the Eng. 'Mrs.', 'Lady', etc., according to degree of rank). Abbreviated *Mme.*; in Eng. books and newspapers *Mdme.* often occurs.

In English use it is very commonly applied to a married woman belonging to any foreign nation (substituted, e.g., for the Ger. *Frau* or the Du. *Mevrouw*). It is also frequently assumed (instead of 'Mrs.') by English or American professional singers or musicians, and by women engaged in businesses such as dressmaking, in which native taste or skill is reputed to be inferior to that of Frenchwomen.

Plural, *mesdemoiselles* (medmwazel), abbreviated *Mlles*.

In early Fr. use, the prefix *mademoiselle* was applied also to married women whose husbands were below the rank of knighthood.

madrepore ('mædrɪpɔː(r)). [ad. mod.L. *madrepora* or F. *madrépore* (1710), ad. It. *madrepora*.]

The Italian naturalist Ferrante Imperato (*Hist. Nat.*, 1599) uses *poro* as a name for 'a kind of vegetable the substance of which resembles that of coral, but differs in being porous'. He evidently regarded this word as identical with the ordinary It. *poro*, ad. L. *porus* PORE *sb.*; but perh. it really represented late L. *pōrus*, a Gr. *πάρος* calcareous stone, stalactite. Among the species of 'poro' he enumerates *millepora*, *frondipora*, and 'those plants by some called madrepores (here *madripore*, but elsewhere *madrepora* occurs), which are tubular growths, issuing from a common stem, and attached together at their roots, so that they resemble a honeycomb'. The word *madrepora* (which Imperato app. did not invent) seems to be f. *madre* mother + *poro*, the ending of the latter being changed to suit the gender of the *sb.* prefixed in apposition; on this view, the other words, *millepora*, *frondipora*, etc., must have been formed later in imitation of *madrepora*. A comparison of Imperato's woodcut of the 'madrepores' with those of the other species of *poro* seems to suggest that the prefix 'mother' may refer to the appearance of prolific growth characteristic of this 'plant'.]

maelstrom ('meɪlstrəm). Also 7 [malestrand,] male stream, 8 malestrom, 9 maelström, and in Ger. form mahlstrom. [a. early mod.Du. *maelstrom* (now *maalstrom*), whirlpool, f. *malen* to grind, also to whirl round + *stroom* stream.]

The use of *maelstrom* as a proper name (also in Fr.) seems to come from Du. maps, e.g. that in Mercator's *Atlas* (1595). Dutch philologists are of opinion that the word is native. It is true that it is found in all the mod. Scandinavian langs. as a common noun, but it is purely literary, and Danish scholars regard it as adopted from Du. or LG. The earliest known instance of Da. *malstrøm* (formerly also written *maelstrøm*) occurs in 1673 in Debes *Færoa reserata*, the author of which was a pastor in the Færøe Islands. Cf. Norw. dial. *malstraum* (admitted by Aasen to be 'little used', which prob. means that he had never heard it in actual popular use), Sw. *malström*, Færøic *mal(u)streyrum* (*Hammershaimb Færøsk Anthologi*, Glossary; the vb. *mala* in Færøic means 'to grind', 'to whirl round').

The form *Malestrand* in quot. c 1560 can only be a blunder; probably Jenkinson hearing the name *Malestrom* confused it with the name of Malestrand (? meaning 'pebbly shore'), now Marstrand, in South Sweden.]

Somerset *macket* for *MAGGOT*²). Possibly the form *mak*, MAWK (a variant of MADDOCK) may have suggested a jocular application of the female nickname *Maggot* for Margaret (cf. 1. a. The pretended art of influencing the course of events, and of producing marvellous physical phenomena, by processes supposed to owe their efficacy to their power of compelling the intervention of spiritual beings, or of bringing into operation some occult controlling principle of nature; sorcery, witchcraft. Also, the practice of this art.

The 'magic' which made use of the invocation of evil or doubtful spirits was of course always regarded as sinful; but *natural magic*, i. e. that which did not involve recourse to the agency of personal spirits, was in the Middle Ages usually recognized as a legitimate department of study and practice, so long as it was not employed for maleficent ends. Of 'natural magic' as understood by mediæval writers, typical examples are the making of an image, under certain astrological conditions, in order to injure or benefit the health of the person represented; and the application of a medicament to a weapon in order to heal the wound made by it. These things, if now practised, would still be called 'magic', though the qualification 'natural' would seem quite inappropriate. On the other hand, the 'natural magic' of the Middle Ages included much that from the standpoint of modern science is 'natural', but not 'magical', the processes resorted to being really, according to the now known laws of physical causation, adapted to produce the intended effects.

1900 DAY & BUCKLE *Art in Needlework* 41 A playful variation upon chain-stitch... is effected by the use of two threads of different colour... 5. *Nuclear Physics*. Applied to a set of numbers which correspond to nuclei of exceptional stability when either the number of protons or the number of neutrons in it is equal to one of the set (now taken to be 2, 8, 20, 28, 50, 82, 126, and perhaps 184); hence applied to nuclei containing such a number of protons or neutrons; *doubly magic*, containing a magic number of protons and also a magic number (not necessarily the same) of neutrons. Occas. extended to an analogous set of numbers (see quot. 1974) for electrons in atoms.

1949 O. HAXEL et al. in *Physical Rev.* LXXV. 1766/1 A simple explanation of the 'magic numbers' 14, 28, 50, 82, 126 follows at once from the oscillator model of the nucleus. 1956 *Nature* 28 Jan. 159/1 The current work on fast-neutron capture... refines the earlier studies by D. J. Hughes of the variation of cross-section with atomic weight which... throws more light on the magic-number nuclei. 1969 *Physics Lett.* XXVIIIb. 544/2 Since the nucleon shells at $Z = 114$, $N = 184$ are not as 'magic' as those at $Z = 82$, $N = 126$, we would not expect an unusually small capture cross section for $^{294}110$. 1969 *Nature* 27 Dec. 1253/2 In calcium-40 which, like lead-208, is doubly magic and so a suitable isotope for nuclear structure calculations, the protons have been found to bunch together towards the centre of the nucleus. 1971 *Ibid.* 12 Feb. 451/2 One complication is that for heavier nuclei, the magic numbers probably differ for neutrons and protons. 1971 *Physics Bull.* Dec. 711/2 Much interest has been aroused by the prediction that the nucleus ($A = 208$, $Z = 114$) may be a doubly magic nucleus... which could involve an island of stability in the mass region around 300. 1974 *Encycl. Brit.*

Micropædia VI. 484/1 The magic numbers for atoms are 2, 10, 18, 36, 54, and 86.

magnanimity (,mægnə'nɪmɪti). [a. F. *magnanimité*, ad. L. *magnanimität-em*, f. *magnanimus* MAGNANIMOUS.]

† 1. Used (with somewhat vague meaning) as the name of one of the virtues recognized in mediæval ethics. *Obs.*

Primarily this represented the Aristotelian *μεγαλοψυχία* (see 3), but in scholastic descriptions the notion was modified in accordance with Christian ideals, and blended with elements suggested by the etymology of the L. word (*animus* being capable of the sense 'courage'); hence 'magnanimity' is often classed as a subdivision of 'fortitude' (so Aquinas, following Macrobius *In Somn. Scip.* i. viii. 57).

3. In the Aristotelian sense of *μεγαλοψυχία* (see below). Also, loftiness of thought or purpose; grandeur of designs, nobly ambitious spirit. Now *rare*.

In Aristotle the word (by modern translators rendered 'greatsouledness', 'highmindedness') expresses the attitude of one who, rightly conscious of his own great merits, is indifferent to praise except from those whose approval is valuable, regards the chances of fortune with equanimity, and, while ready to confer benefits, will seldom condescend to accept them.

It is not clear which of these two senses gave rise to the alchemical use; the brilliant lustre ascribed by the alchemists to 'magnesia' favours the latter view, and the substance seems not to have been identified with the loadstone, in spite of the resemblance of its name to the familiar word *Magnes*.]

†2. = MANGANESE I. Also *black magnesia*. *Obs.*

[This use prob. arose from the notion that manganese was a form of the 'magnesia' of alchemy. There may, however, have been some early confusion of manganese with loadstone: Pliny *N. H.* xxxvi. lxvi says that loadstone (*magnes lapis*) was used in making glass. In the Latin of early chemistry the word was applied to various other substances: e.g. *magnesia opalina* was a red sulphide of antimony (? = KERMES 3).]

3. (In early use often †*white magnesia* = mod.L. *magnesia alba*, in contradistinction to *black magnesia*: see 2.) a. Originally, and still in popular language, applied to hydrated magnesium carbonate, a white earthy powder, used in medicine as an antacid and cathartic. *calcined magnesia*: magnesium oxide (pure 'magnesia': see b) prepared by heating the carbonate. b. In modern *Chemistry*, an alkaline earth, now recognized as the oxide of magnesium (MgO).

[This application of the word seems not to be connected with the use in sense 1, but to have been suggested by the mod.L. *magnes carneus* 'flesh-magnet', applied c1550 by Cardan (*De Subtilitate* vii, Opera III. 475) to a white earth resembling osteocolla, because it was found to adhere strongly to the lips, and was therefore supposed to have the same attraction for flesh that the loadstone has for iron. 2. A chemical element, one of the 'metals of the alkaline earths', being the base of magnesia.

Though one of the most widely diffused of elements it is found in nature only in composition, and was discovered by Sir H. Davy in 1807 and first successfully separated by Bussy in 1830, as a light silvery metal, ductile and malleable, which is stable in dry air but tarnishes when exposed to moisture, and burns with a blinding white light when held in a flame. 2. a. A piece of loadstone; also, a piece of iron or steel to which the characteristic properties of loadstone have been imparted, either permanently or temporarily, by contact with another magnet, by induction, or by means of an electric current. A magnet has an axis, at the extremities of which (the 'poles') the attractive power is greatest, and at the middle of which it becomes *nil*. When suspended freely, a magnet assumes such a position that one of its poles (hence called the north pole) points approximately north, and the other (the south pole) approximately south; the like poles of two magnets repel each other, while the unlike poles attract each other.

magneto-crystallic (mæg'nitə'kristəlik), **a.** [f. MAGNETO- + CRYSTALLIC.] Of or relating to the magnetic properties possessed by crystals.

1848 FARADAY in *Phil. Trans.* CXXXIX. 30 In that case the word magnetocrystallic ought probably to be applied to this force, as it is generated or developed under the influence of the magnet. *Ibid.* 40 Both the magnetic and magneto-crystallic forces are at the same time doubled or quadrupled.

magneto-e'lectric, a. Pertaining to electric phenomena involving electric currents induced in conductors by the relative motion of these conductors with respect to either permanent magnets or electro-magnets.

Introduced, in 1831, by Faraday, who employed it in its most general sense for describing the currents induced by motion of conduction in conjunction with any of the following kinds of magnet: permanent steel magnets, ordinary loadstones, electro-magnets, the earth. He used it tentatively at first in contradistinction to the term *volta-electric*, which he applied to the induction of electricity by turning on or turning off an electric current in a stationary coil.

1831 FARADAY in *Phil. Trans.* (1832) CXXII. 139 As a distinction in language is still necessary, I propose to call the agency thus exerted by ordinary magnets, *magneto-electric* or *magnelectric* induction. *Ibid.* 173 Upon the supposition that the rotation of the earth tended, by magneto-electric induction, to cause currents in its own mass. 1833 *Ibid.* CXXXIII. 44. I had the pleasure . . . of making an experiment, for which the great magnet [a loadstone] in the museum . . . and the magneto-electric coil described in my first paper, were put in requisition. 1834 — in *Philos. Mag.* V. 349 When I first obtained the magneto-electric spark it was by the use of a secondary magnet. . . My principal was an electromagnet; Nobili's was, I believe, an ordinary magnet; others have used the natural magnet. 1839 J. F. DANIELL *Introd. Chem. Philos.* 489 Magneto-electric is the converse to electro-magnetic action. 1854 G. BIRD & C. BROOKE *Elem. Nat. Philos.* xvii. (ed. 4) 421 note. Similarly, electro-magnetic induction would mean the development of magnetism by a current, and magneto-electric induction, that of a current by magnetism. 1881 MAXWELL *Electr. & Magn.* II. 208 This is the electromotive force which must be

supplied from sources independent of magneto-electric induction.

b. magneto-electric current. Used by Faraday to distinguish currents generated mechanically by magneto-electric induction from those generated in a voltaic battery.

1851 FARADAY in *Phil. Trans.* CXLII. (1852) 137 On the employment of the Induced Magneto-electric Current as a test and measure of Magnetic Forces.

c. magneto-electric machine. First used by Faraday, in 1831, to denote a machine generating currents by magneto-electric induction. By later writers employed in variously limited senses.

The appellation continued to be used in Faraday's wide sense by various writers down to about 1867, when the improvements of Wilde, Wheatstone, Siemens, Ladd, Varley and others attracted much attention, and the term 'dynamo-electric machine' was introduced by Brooke. This term was defined by Brooke himself to denote in general a machine 'in which dynamic energy is employed to produce an electric current' (*Proc. Roy. Soc.* XV. 409, *footnote*); by others, however, it has been applied to signify only such machines as embodied the principle of self-excitation and did not contain any permanent magnets. Those who adopted the latter usage limited the meaning of 'magneto-electric machine'; some including under that term only the machines with permanent magnets of steel, while others included under the name both these and the machines with separately-excited electro-magnets. The present tendency is to confine the term strictly to the machines with permanent steel magnets. Some writers define magneto-electric machines as simply old-fashioned or rudimentary kinds of dynamos; others treat the terms as synonymous. On the other hand some writers treat 'magneto-electric machine' as a generic term, of which dynamo-electric machines form a sub-class.

1831 FARADAY in *Phil. Trans.* (1832) CXXII. 160 Two rough trials were made with the intention of constructing magneto-electric machines. *Ibid.* 163 [Under heading *Terrestrial Magneto-electric Induction*, describes as magneto-electric machines discs of copper caused to revolve, and thereby generate electric currents under the magnetic influence of the earth.] 1866 CROOKES in *Q. Jnl. Sci.* XII. 504 Magneto-electric machines, with revolving armatures, in which electro-magnets had been substituted for permanent magnets, had been constructed. 1867 WHEATSTONE in *Proc. Roy. Soc.* XV. 369 The magneto-electric machines which have been hitherto described are actuated either by a permanent magnet or by an electro-magnet. 1878 *Proc. Inst. Civ. Engin.* LII. 63 M. Alfred Niaudet remarked that he did not agree with... the distinction between dynamo-electric and magneto-electric machines. In all these instruments mechanical power was converted into electricity by the action of magnetism; consequently all were both magneto-electric and dynamo-electric. 1878 J. N. SHOOLBRED *Pres. State Electric Lighting* 6 For the older form, where permanent magnets are employed, the term 'magneto-electric' machine has been retained. 1880 A. SIEMENS in *Jnl. Soc. Electr. Engin.* IX. 93 A constant and permanent magnetic-field is, therefore, of paramount importance, and it can be produced in the way proposed by Mr. Wilde in 1863 for magneto-electric machines by employing a separate machine for exciting the field-magnets of one or more similar machines. 1882 S. P. THOMPSON in *Jnl. Soc. Arts* XXXI. 120 The arbitrary distinction between so-called magneto-electric machines and dynamo-electric machines fails when examined carefully. In all these machines a magnet, whether permanently excited, independently excited, or self-excited, is employed to provide a field of magnetic force. And in all of them dynamic power is employed. 1887 W. B. ESSON *Magneto- & Dynamo-electric Machines* 22 In all the machines yet described, the electric currents were induced by means of steel magnets, or, as in Wilde's machine, by magnets that were magnetised by the current produced in another machine. Such machines are usually called 'magneto-electric' machines, to distinguish them from the 'dynamo-electric' machines. 1889 *Chambers's Encycl.* IV. 146/2 The term 'dynamo-electric' was at first applied to distinguish those machines which were self-exciting from 'magneto-electric' machines, which had permanent magnets to give the field; but this distinction is no longer maintained. 1891 J. W. URQUHART *Dynamo-Const.* 2 A magneto-electric machine—an apparatus in which steel magnets are used to furnish the 'magnetic field'—is not strictly by common consent called a dynamo.

So **magneto-electricity** *a.*, in the same sense.

Weiss (see above)], a disused unit (equal to approximately one-fifth of a Bohr magneton) arrived at as the highest common factor of the measured magnetic moments of the atoms of various elements.

At first often regarded as a 'particle' or 'atom' of magnetism.

1963 SONETT & ABRAMS in *Jrnl. Geophysical Res.* LXVIII. 1243/2 We call the region discussed in this paper the magnetopause (the transition region between the magnetosphere proper and the interplanetary medium). 1969 *Physics Bull.* Feb. 54/1 The third spacecraft... is intended to investigate the 'solar wind' of low energy protons and electrons together with the geomagnetic cavity or magnetopause, where these particles are just in balance with the earth's magnetic field. 1971 I. G. GASS et al. *Understanding Earth* xviii. 259/2 The solar wind protons are reflected at the magnetopause, and so never enter the magnetosphere.

magnetophone (mæg'ni:təufə:n). [f. MAGNETO- + Gr. φωνή sound.]

1. A magnetic instrument used for the production of musical tones.

1883 CARHART in *Science* II. 394 The intensity of the sounds obtained by the magnetophone is sometimes so great as to be painful to the ear when the telephone is held closely against it.

2. An early form of moving-coil microphone. 1922 *Encycl. Brit.* XXXII. 528/1 The behaviour of microphones in this respect was often unsatisfactory, and telephone earpieces, or magnetophones, were frequently substituted for them. This results in diminished sensitivity, but the binaural effects are much improved. 1929 J. A. RATCLIFFE *Phys. Princ. Wireless* v. 73 A microphone of quite a different type is much used at the present day for broadcasting. It is known as the magnetophone, and consists of a small coil of very light aluminium wire attached to the back of a freely moving diaphragm. The coil is placed between the poles of an electro-magnet. 1931 *B.B.C. Year-Bk.* 445/2 The magnetophone is relatively insensitive, and its output requires considerable amplification. 1962 *Listener* 8 Nov. 765/3 Two of the earliest [sc. BBC microphones] are to be seen...: Round-Sykes 'magnetophone', [etc.].

3. Also -phon. [a. G. *magnetophon*.] A tape recorder. (Used chiefly as a rendering of the German or with reference to German machines.)

1946 *Wireless World* Feb. 53/1 The equipment, known as the magnetophone, uses a thin plastic tape, about 0.25 in. wide, coated with a metallic powder film. 1949 *Electronic Engin.* XXI. 124/3 Sound recorders of the magnetophone type make use of two oscillatory currents in the recording head. 1953 F. SPANDÖCK in E. G. Richardson *Technical Aspects Sound* I. xv. 410 After the Second World War magnetophones were built in many countries in many different forms. 1954 *Sci. Abstr.* B. LVII. 245/1 The various tests carried out on magnetophones, microphones and amplifiers are enumerated. 1974 *Encycl. Brit. Macropædia* XVII. 55/2 The Magnetophon Company of Germany succeeded in producing a magnetic film-coated tape that constituted a low-cost recording medium. During World War II the magnetophon, using the coated tape, served the Nazi propaganda organizations well.

magnetoplumbite (mæg'ni:təu'plambait). *Min.* [ad. G. *magnetoplumbit* (G. Aminoff 1925, in *Geol. För. i Stockholm Förh.* XLVII. 289), f. Gr. μάγνητ-, μάγνης MAGNET + L. *plumb-um* lead: see -ITE.] A strongly magnetic greyish black oxide of manganese, lead, titanium, and ferric iron occurring as acute dipyrnidial crystals.

1926 *Chem. Abstr.* XX. 1194 (heading) A new oxide mineral from Långban, magnetoplumbite. 1944 C. PALACHE et al. *Dana's Syst. Min.* (ed. 7) I. 728 Adelsköld, (1938), gives *C6/mmc* as the space group of an artificial material supposedly the same as magnetoplumbite... The supposed composition $PbFe_{12}O_{19}$, by analogy with so-called β -alumina, proposed by Adelsköld (1938) is not indicated by analysis. 1968 I. KOSTOV *Mineral.* II. iv. 259 Magnetoplumbite has a perfect {0001} cleavage.

magnetoscope (mæg'ni:təuskəup). [f. MAGNETO- + -SCOPE.]

†1. An instrument used by mesmerists for detecting the supposed magnetism of the human body.

1851 [see MAGNETOID]. 1852 LD. CARLISLE *Let.* 19 May in *Macaulay's Life & Lett.* (1878) II. 309 We talked a good deal about the magnetoscope.

2. 'A person supposed to see, or a thing supposed to aid in seeing, by means of magnetism; a clairvoyant, or a clairvoyant's device' (*Cent. Dict.*).

3. *Physics.* An apparatus for indicating the presence of magnetic force without measuring its amount.

(In recent Dicts.)

magnetosphere (mæg'ni:təusfiə(r)). [f. MAGNETO- + SPHERE sb.] The region surrounding the earth or a heavenly body in which its magnetic field is effective and prevails over magnetic fields due to other causes (in the case of the earth not spherical but much elongated on the side away from the sun).

1959 T. GOLD in *Jrnl. Geophysical Res.* LXIV. 1219/1 The region above the ionosphere in which the magnetic field of the earth has a dominant control over the motions of gas

and fast charged particles... is known to extend out to a distance of the order of 10 earth radii; it may appropriately be called the magnetosphere. 1962 *Flight Internat.* LXXXI. 222 Instead of distinct inner and outer [radiation] belts, the picture now appears to be of one large region in which particles of different characteristics are trapped. Different types of particles have been observed at $\frac{1}{2}$ Earth radii (from the centre of the Earth), three radii, four radii (the older concept of the outer belt) and between six radii and the outer edge of the magnetosphere, as the region is now known. The outer limit varies from day to day but is at approximately 8-12 Earth radii. 1967 *New Scientist* 26 Jan. 198/1 Like the Earth, Jupiter is expected to have a 'magnetosphere' with a 'tail' pushed away from it by the solar wind. 1971 I. G. GASS et al. *Understanding Earth* xviii. 260/1 The Van Allen belts are zones of stably trapped particles within the magnetosphere. 1971 *Nature* 13 Aug. 443/3 Much work needs to be done to investigate the kinds of plasma instabilities that can occur in the magnetospheres of neutron stars.

Hence **magneto'spheric a.**

1961 *New Scientist* 19 Jan. 167/2 What have been termed 'magnetospheric waveguides' may provide new methods of radio communication between the northern and southern hemispheres. 1969 *Physics Bull.* June 223/1 Instabilities... occur in both laboratory and magnetospheric and interplanetary plasmas. 1974 *McGraw-Hill Yearbk. Sci. & Technol.* 277/2 The so-called whistlers in the kilohertz frequency range, as well as the long-period waves... have become important tools in magnetospheric exploration both from the ground and from satellites.

magnetostriction (mæg'ni:təu'strɪkʃən). [f. MAGNETO- + L. *strictiōn-em* drawing or pressing together (f. *stringere* to draw together, draw tight).] A dependence of the state of strain of a body (and hence its dimensions) on its state of magnetization. *Freq. attrib.*

1896 *Phil. Mag.* XLI. 454 (heading) On the effects of magnetic stress in magnetostriction. 1926 *Jrnl. Iron & Steel Inst.* CXIII. 657 A reciprocal relation between magneto-contraction and the effect of stress on magnetisation was investigated experimentally. 1937 *Nature* 18 Dec. 1068/2 A magnetostriction oscillator has been developed which produces intense audible vibrations of frequencies of 8000 cycles per second, capable of fracturing glass. 1959 H. BARNES *Oceanogr. & Marine Biol.* 74 The magneto-contraction effect depends upon the fact that when certain metals, notably nickel, are placed in a varying magnetic field they undergo mechanical changes; nickel itself contracts in an increasing and expands in a decreasing magnetic field. As with the mechanical changes brought about by the piezo-electric effect, these also may be transmitted to a medium and, if they are sufficiently rapid, ultrasonic waves are produced. 1966 C. R. TOTTLE *Sci. Engin. Materials* vi. 138 Iron crystals expand along the direction of magnetization and contract at right-angles to it, whereas nickel contracts along the magnetization direction and expands perpendicular to it. This phenomenon is known as magnetostriction.

Hence **magneto'strictive a.**, of, exhibiting, or employing magnetostriction.

1911 *Chem. Abstr.* V. 1550 (heading) A study of the Joule and Wiedemann magnetostrictive effects in steel tubes. 1939 *Nature* 11 Mar. 416/1 Pierce and the late J. H. Vincent independently developed similar oscillators based upon the magnetostrictive properties of iron and nickel and their alloys. 1951 *Electronic Engin.* XXIII. 16 The maximum dimensional change is obtained when the magnetostrictive element is excited at its natural resonant frequency. 1964 T. W. McRAE *Impact of Computers on Accounting* i. 6 The Ferranti 'Pegasus' introduced the so-called magnetostrictive delay line store, whereby a mechanical stress wave passing along a wire represents a bit.

magnetron ('mægnɪtrɒn). *Electronics.* [f. MAGNET(IC a. + -TRON)] A diode with a cylindrical anode surrounding a coaxial cathode in which the flow of electrons is controlled by a magnetic field applied parallel to the axis, and now usu. designed to produce microwave pulses of high power.

1924 *Sci. Monthly* XVIII. 650 As the negatively charged grid cuts off the current of the three-element tube, so an external magnetic field will also do it in the two-element tube... Such a device, called a magnetron, was shown. 1945 *Times* 15 Aug. 2/1 In July 1940, Professor J. T. Randall, of Birmingham, produced a magnetron which was the first high-power generator of centimetric waves in the world. The magnetron remains the heart of every modern Radar equipment. 1958 *Engineering* 7 Feb. 174/3 The machine [sc. a linear accelerator] is of the travelling-wave type, using radio-frequency power generated by a magnetron valve operating at a frequency of 3,000 Mc/s. 1971 *New Scientist* 1 Apr. 36/1 Outred is developing microwave cavity sources using very high-powered (kilowatts) magnetrons for the infrared spectroscopy programme.

c. The intrinsic size of an earthquake or underground explosion (as distinguished from the intensity of its effects at any particular place), usu. expressed by a number that is a logarithmic function of the maximum resulting seismometric deflection adjusted to allow for distance.

The use shown in quot. 1830 under sense 3 c is unrelated. 1935 C. F. RICHTER in *Bull. Seismol. Soc. Amer.* XXV. 1 In the course of historical or statistical study of earthquakes in any given region it is frequently desirable to have a scale for rating these shocks in terms of their original energy, independently of the effects which may be produced at any particular point of observation. On the suggestion of Mr. H. O. Wood, it is here proposed to refer to such a scale as a 'magnitude scale'. *Ibid.* 2 The requirements of research... call for some estimate of the magnitude, in the sense here used, of each important shock in the California region. 1947 K. 3. A class in a system of classification determined by size. a. Each of the classes into which the fixed stars have been arranged according to their degree of brilliancy. Now regarded as a number on a continuous scale representing the negative logarithm of the brightness, such that a decrease of five magnitudes represents a hundred-fold increase in brightness and a decrease of one magnitude an increase of 2.512 times.

The stars 'of the first magnitude' are the most brilliant; the 'sixth magnitude' includes those that are barely visible to the naked eye; the seventh and lower magnitudes are telescopic only. The classification into 'magnitudes', originally somewhat loose, as depending on the estimate formed by the individual observer, is now a matter of photometric measurement. The word *magnitude* in this application is a literal rendering of the Gr. μέγεθος, used by Ptolemy. Formerly often denoted by the symbol m, as 2.m, 3.m.

Before decimal or fractional numbers were used there was an intermediate stage illustrated by quots. 1796, 1826 (and also 1851).

magslip ('mæɡslɪp). [said to be f. MAG(NETIC a. + *slip* (-ring).] A kind of electric motor designed so that, when it is operating as a receiver, the angular position of its rotor is maintained the same as that of the rotor of a similar motor electrically connected to it and operating as a transmitter; *orig.* applied to a particular design of receiver in which the rotor is a simple magnetic member without windings polarized by a fixed coil and moved by a three-phase stator.

This is achieved by means of a sensitive hydraulic-motor unit developed by the Admiralty, the signals being transmitted from the gyroscope to the hydraulic unit by a

main (meim), *sb.*³ Also 6-7 *maine*, *mayne*. [Of obscure history.]

From the early use in antithesis with *by* (which seems in the game of hazard to have meant the same as *chance* in the later language) the word would appear to be an absolute or elliptical application of MAIN a. (Cf. MAIN CHANCE.) The usual view that the word is a. F. *main* 'hand' has no evidence; quot. c. 1685-8 in sense 3 prob. embodies a mere etymological speculation.]

1. In the game of hazard, a number (from five to nine inclusive) called by the 'caster' before the dice are thrown.

'If he "throws in", or "nicks", he wins the sum played for from the banker or "setter"... If the caster "throws out" by throwing aces, or deuce, ace (called crabs), he loses... If the caster neither nicks nor throws out, the number thrown is his "chance", and he keeps on throwing till either the chance comes up, when he wins, or till the main comes up, when he loses' (*Encycl. Brit.* s.v. *Hazard*).

It is doubtful whether the development of the Eng. word owes anything to the influence of OF. *maine*, *maigne* great—L. *magnus*. The OFr. word is purely poetical, and occurs chiefly as an epithet of kings and nobles; it may prob. have influenced the use of *main* by ME. poets, but the only unequivocal evidence of its adoption is the 15th c. *Sc. Alexander the mane*, *Charlis the mane* (see MANE a.).]

'to take in the hand', hence 'to assume responsibility, pledge oneself'.

The Latinized form *meinprisa*, in the general sense 'undertaking, promise under penalties', is cited by Du Cange from an English charter of 1174.]

1. *gen.* The action of making oneself legally responsible for the fulfilment of a contract or undertaking by another person; suretyship.

2. *spec.* The action of procuring the release of a prisoner by becoming surety ('mainpernor') for his appearance in court at a specified time. Chiefly in phr. *to let or receive to* (or *in*) *mainprize*, *to deliver upon* (or *by*) *mainprize*, *to nim under mainprize* [= AF. *laisser par*, *mettre par meynprize*]. *without bail or mainprize*: with no permission to obtain release by finding sureties. *writ of mainprize*: see quot. 1768.

By the legal antiquaries of the 16th c., the 'taking in hand' etymologically implied by AF. *mainprize*, med.L. *manucapitio*, was supposed to denote the act of 'receiving into friendly custody' the person who would otherwise have been committed to prison (cf. BAIL *sb.* 3), and the later definitions of *mainprize* and *mainpernor*, e.g. those of Cowell and Blackstone (see MAINPERNOR) are worded in accordance with this misapprehension.

9. a. *cap* (or †*hat*) of maintenance: a kind of hat or cap formerly worn as a symbol of official dignity or high rank, or carried before a sovereign or a high dignitary in processions.

The sense of *maintenance* here is obscure. Cf. the app. equivalent *cap of estate, cap of dignity* (see *CAP sb.* 4 g). In the earliest example (c 1485) the *hat of maintenance* is worn by the members of the Holborn Quest. Afterwards the *cap of maintenance* is mentioned by contemporaries as having been given by the Pope thrice to Henry VII and once to Henry VIII; in 1551 it is referred to as one of the insignia of a prince. In the 17th c. and later it appears chiefly as borne, together with the sword, before the Lord Mayor, and before the Sovereign at his coronation. A kind of cap, with two points like horns behind, borne in the arms of certain families either as a charge or in the place of a wreath, is described by heralds as a 'cap of maintenance': cf. quot. 1700.
