The seventeenth letter of the English alphabet developed in its present form from Latin. Its equivalent in Greek was *kappa* (κ), which became obsolete except as a numeral, and in North Semitic, it was *qoph*, which represented a guttural *k*-like sound. When adopted from the Etruscans, the Latin alphabet contained three symbols for the *k*-sound (see **C, K**), and the use of Q was limited to representing the sound (k) when it was labialized and followed in spelling by U, a practice maintained today with only rare exceptions. In Old English the Q does not appear, its labialized sound being written CW or, later, KW.
